TABLE OF CONTENTS

Initial "C" at the opening of II Chronicles in the Bible of Saint Martial of Limoges, *France, 12th century, depicting Solomon enthroned, Paris, Biblithèque Nationale, Ms. Lat. 8, Vol. II, fol. 102.*

Coh–Cz

COHEN, Italian family of majolica makers, active in Pesaro and Ancona from 1614 to 1673. The following names are known: ISAAC (Pesaro, 1613–14), JACOB (Ancona, 1654), and ISAAC (II; Ancona, 1673–77). Together with the *Azulai family, the Cohen family produced most of the majolica *seder* dishes that were made in Renaissance Italy. In the case of dishes made by Jacob Cohen, the manufacturer's mark is a crown to denote priesthood, instead of the usual Star of David.

BIBLIOGRAPHY: C. Roth, in: *Eretz Israel*, 7 (1964), 106–11.

[David Maisel]

COHEN, prominent U.S. family in the 18th–19th centuries, mostly in Baltimore. JACOB I. (1744–1823) was the first of the family to go from Oberdorf, Germany, to the U.S. (1773). He served in the Revolutionary Army, and in 1780 settled in Richmond. A successful banker and merchant, he was much honored by the citizens of his city. Like other leading Jews of that period, Jacob I. Cohen was active in Masonic affairs. He was also active in Jewish affairs and was a founder of the first Richmond synagogue, Beth Shalom. The last 17 years of his life were spent in Philadelphia. He was the pillar of the city's Mikveh Israel Congregation and served as its president during 1810–11. In his will he provided that upon his death his black slaves were to be freed and each one given $25.00. The progenitor of the Baltimore branch of the family was Jacob's brother, ISRAEL I. (1751–1803), who arrived in the U.S. from Germany around 1784. He too settled in Richmond, where he became a leading citizen and was very active in Jewish affairs. In 1808 his widow Judith (Salomon) moved with her seven children to Baltimore, where Israel's descendants became prominent as financiers, scientists, physicians, and public servants.

JACOB I. (1789–1869) eldest of Israel's sons, started out in the lottery business in Baltimore and branched out into banking, establishing J.I. Cohen, Jr. and Bros. The bank had a considerable reputation, with a branch in Philadelphia. It was also a fiscal agent of the Rothschilds. In addition to banking, Jacob I. Cohen's other enterprises included a directorship of the Baltimore and Ohio Railroad and the presidency of the Baltimore-Philadelphia Railroad. Although U.S.-born, Cohen was active in the affairs of the German Society of Maryland. He held a *minyan* for services in his palatial home. He is best remembered for his participation with Solomon *Etting in the protracted struggle for Jewish equality in Maryland. In a memorial presented by him to the legislature he stressed that Jews were not asking for privileges, but rights, and that "to disqualify any class of citizen is for the people to disqualify themselves." After the passing of the so-called "Jew Bill," Cohen was elected a councilman of the city (1826), later serving as presi-

dent of the city council during 1845–51. He never joined any Baltimore synagogue, but did participate in the organization of a short-lived Sephardi congregation (1856–58). MENDES I. (1796–1879), brother of Jacob I., was born in Richmond and spent a few years in the banking business. He then traveled abroad during 1829–35, visiting practically every country in Europe and the Near East, including Palestine. He was a prolific writer and his letters and diaries are a rich source of information about Jewish life in the countries he visited. Cohen was the first American to explore the Nile, and presented his important collection of Egyptian relics to Johns Hopkins University. Cohen also served in the Maryland State Assembly during 1847–48. BENJAMIN I. (c. 1798–1845) and DAVID I. (1800–1847), brothers of Jacob and Mendes, were noted bankers who helped establish the Baltimore Stock Exchange in 1837. As Orthodox Jews, they neither attended meetings on the board of the Stock Exchange nor transacted business on the Sabbath. Benjamin was an officer of the German Society. He served in the Maryland militia and was active in passing the Maryland "Jew Bill." JOSHUA I. (1801–1870), another brother, was born in Richmond, and became a physician and one of the early American otologists. A recognized authority in this field, he was elected president of the Medical and Chirurgical Faculty of the University of Maryland, where he was also professor of mineralogy and geology. Cohen's valuable Judaica collection, cataloged by Cyrus Adler (1887), is housed in Dropsie College. Like his elder brother Jacob, Joshua was actively engaged in securing Jewish rights in Maryland. Even after passage of the "Jew Bill", discriminatory laws remained on the books. The doctor attended the state constitutional conventions of 1851, 1864, and 1867 and struggled with limited success for equal rights. Cohen was active in Jewish communal affairs, and like his brothers was Orthodox but never joined any local synagogue. His voluminous correspondence in Isaac Leeser's *Occident* in Philadelphia contributes much on the history of the Baltimore Jewish community.

MENDES (1831–1915) son of David. Mendes was born in Baltimore. An accomplished engineer, he was president of a number of railroad companies, and served as president of the American Society of Civil Engineers. Cohen was interested in many communal affairs, especially the Maryland Historical Society, of which he was secretary (1875–1904) and president (1904–14). He purchased rare collections of documents for the society and bequeathed it $5,000. A founder of the American Jewish Historical Society, Cohen was a member of its executive council. He contributed to Jewish causes in Baltimore.

[Isaac M. Fein]

COHEN, family distinguished in Anglo-Jewish life for almost two centuries. LEVI BARENT COHEN (1747–1808) went to England from Amersfoort (Holland) in the third quarter of the 18th century. He was presiding warden of the Great Synagogue, London, and the first president of the Jews' Hospital. One daughter, Hannah, married Nathan Meyer *Rothschild and another, Judith, Sir Moses *Montefiore; a granddaughter married Sir David *Salomons and a great-granddaughter Samuel Montagu, the first Lord *Swaythling. His male descendants included AARON *COHEN, who was appointed a queen's counsel, and LIONEL LOUIS COHEN (1832–87). The latter succeeded his father, LOUIS COHEN (1799–1882), as head of the family firm of foreign bankers and brokers, and subsequently became a manager of the Stock Exchange. He was an authority on Indian railways and Turkish finance. A political Conservative, he was elected to parliament in 1885 and during his short but brilliant political career served on royal commissions on the trade depression, on gold and silver, and on endowed schools. In communal affairs, he became honorary secretary of the Jewish Board of Guardians (now Jewish Welfare Board) on its foundation and its president in 1878. He was followed in this office by his brother SIR BENJAMIN LOUIS COHEN (1844–1909), his son SIR LEONARD LIONEL COHEN (1858–1938), his niece HANNAH FLORETTA COHEN (1875–1946), and his grandson Lord Lionel Leonard *Cohen. He played a leading part in the founding of the United Synagogue in 1870. In 1881 he initiated the movement to help oppressed Russian Jewry, which led to the first relief fund being established in England on their behalf. His descendants include Sir Andrew Benjamin *Cohen (1909–1968), colonial governor and civil servant, and RUTH *COHEN (1906–1991), principal of Newnham College, Cambridge. The WALEY-COHEN family are descendants of his brother NATHANIEL (see Cohen, Sir Robert *Waley).

[Vivian David Lipman]

COHEN, family of Liverpool (England) merchants and public servants. LOUIS SAMUEL COHEN (1846–1922) was born in Sydney (Australia), and went to England in 1859. In 1864 he joined a relative, David Lewis, who owned a clothing store, becoming head of the business on the death of David Lewis in 1885 and developing it into Lewis', Ltd., one of the largest department chain stores in the north of England. A generous supporter of local charities, he was prominent in local synagogue life and Jewish institutions. He became a member of the Liverpool city council in 1895 and served as lord mayor in 1899–1900. His eldest son, HAROLD LEOPOLD (1873–1936), succeeded his father as chairman of Lewis'. Among his benefactions was a gift

of £100,000 for the building of Liverpool University Library. Another son, REX D. COHEN (1876–1928), remained in the family business and left over £1.6 million upon his death. Louis Samuel's eighth child, SIR JACK BRUNEL COHEN (1886–1956), lost both legs in World War I. From 1918 to 1931 he was a member of parliament representing Liverpool and for many years was national treasurer of the British Legion. SIR REX ARTHUR LOUIS COHEN (d. 1988), grandson of Louis Samuel (1906–1988), was chairman of Lewis' from 1958 to 1965, when the business passed from family control. For several years he was president of the Liverpool Jewish Welfare Board.

[Sefton D. Temkin]

COHEN, ABRAHAM (1887–1957), Anglo-Jewish clergyman, scholar, and communal leader. Cohen, who was born in Reading and grew up in the East End of London, was educated at London and Cambridge Universities. He became a minister in Manchester in 1909 and in 1913 minister to the Birmingham Hebrew Congregation, where he remained for 36 years. Cohen was active in the World Jewish Congress and in the Zionist movement. He was the first minister to preside over the *Board of Deputies of British Jews (from 1949 to 1955), which he greatly strengthened by a combination of firmness and diplomacy. Cohen edited the Soncino Books of the Bible, himself translating the Psalms, and participated in the Soncino translation of the Talmud and Midrash. His writings include *Everyman's Talmud* (1949[2]), *An Anglo-Jewish Scrap-Book* (1968[2]), and *Teachings of Maimonides* (1927). Cohen assisted Chief Rabbi Joseph *Hertz with his *Pentateuch Commentary*, the first English commentary written by Jews. His *Everyman's Talmud* was republished as a paperback in 1995.

BIBLIOGRAPHY: *The Times* (London, May 30, 1957); JC (May 30, 1957); Roth, Mag Bibl, 172; Lehmann, Nova Bibl, 12, 20.

[Vivian David Lipman]

COHEN, ALBERT (1895–1981), French novelist whose four outstanding novels, written over a period of four decades, form one of the most outspoken series in modern Jewish literature. Cohen, who was born in Corfu, was educated in France, then studied law in Geneva, where he became active in various international organizations and pursued a sporadic literary career. His first published work was a volume of poems, *Paroles juives* (1921), whose tone, by turns violent, opulent, tender, and lyrical, foreshadowed that of his later writing. In 1925, with the encouragement of Chaim *Weizmann, Cohen founded a short-lived periodical, *La Revue juive*. He later became the Zionist Organization's delegate to the League of Nations. During the Nazi occupation Cohen fled to London, where he became the Jewish Agency's special representative to the Allied governments in exile. After the defeat of the Nazis, he worked at the UN headquarters of the International Refugee Organization.

The most important themes in Cohen's writings are the problem of personal integrity in a world of untruth, the eternal message of Israel to humankind, and the place of the Jew in the modern world. These themes recur in various forms in the four novels: *Solal* (1930: Eng. tr. *Solal of the Solals*, 1933); *Mangeclous* (1938; *Nailcruncher*, 1940); *Belle du Seigneur* (1968), which won the Grand Prix de l'Académie française, and *Les Valeureux* (1969). In *Solal*, the eponymous hero escapes from his native Greek island of Cephalonia and narrow Jewish environment into the glittering gentile world, where he is eventually destroyed by his own success and by a fatal passion for a non-Jewess. After a terrible struggle, Solal returns to his own oppressed people, "the poetic people of genius," and finds redemption. *Mangeclous*, a Rabelaisian extravaganza, has as its setting a semi-mythical Jewish Orient peopled by grotesque but innocent and lovable inhabitants. Under the burlesque absurdity, a profound Jewish wisdom is often brought to the fore. In *Belle du Seigneur,* which returns to the *Solal* story, the hero has achieved his ultimate ambition as an undersecretary at the League of Nations, but is haunted by the impending Nazi destruction of the Jews. Aware of his own helplessness and of the nations' indifference, Solal seeks escape in an impossible romantic adventure, but the lovers fall victim to a self-destructive passion from which only death can release them. *Les Valeureux*, a burlesque sequel to the epic begun in *Mangeclous*, tells about the five jolly cousins from Cephalonia, nicknamed the "Valorous Ones." This last novel contrasts the Jewish love of life and truth to the falsity and hypocrisy of the outside world. Other works by Cohen are the one-act play *Ezéchiel* (1956), produced at the Comédie Française in 1933, and the autobiographical *Le livre de ma mère* (1954), dedicated to the author's mother, who died in occupied France, and to the simple grandeur of maternal love.

Cohen, like his hero, can best be described as extreme – extreme in his love for his people, extreme in his satire (particularly concerning international organizations), extreme in his condemnation of sexual passion. Cohen's work is original, varied, and rich, containing humor, tragedy, drama, lyricism, satire, tenderness, violence, and anger.

[Denise R. Goitein]

COHEN, ALEXANDER H. (1920–2000), U.S. producer. Cohen began investing in the theater at the age of 21, and became known on Broadway as the "millionaire boy angel." He scored his first success with *Angel Street* in 1941. Subsequently, he staged more than 30 productions in New York and London. His Nine O'Clock Theater for intimate review opened

in 1959 with *At the Drop of a Hat*, and presented such diverse performers as John Gielgud, Yves Montand, and the Karmon Israel Dancers. In 1962 he imported *Beyond the Fringe* from England, directing it himself. His production of *Hamlet*, starring Richard Burton and directed by Gielgud, won widespread critical acclaim.

His many Broadway productions included *Of V We Sing* (1942), *King Lear* (1951), *An Evening with Mike Nichols and Elaine May* (1960–61), *The School for Scandal* (1963), *Baker Street* (1965), *The Homecoming* (1967), *Black Comedy/White Lies* (1967), *6 Rms Riv Vu* (1972–73), *Good Evening* (1973–74), *Words & Music* (1974), *Comedians* (1976–77), *I Remember Mama* (1979), *A Day In Hollywood / A Night in the Ukraine* (1980–81), and *Waiting in the Wings* (1999–2000).

In 1967 Cohen won a Tony for Best Play for *The Homecoming*. That year, he conceived and originated the national Tony Awards telecast, an annual special TV presentation in which the American Theater Wing presents awards to the best plays and musicals of the season. After a long stint of producing the show (1967–86), Cohen was pressured to step down as presenter of the awards when he publicly made a disparaging remark about a particular theater critic and implied that he spoke not only for himself but for the American Theater Wing as well.

A compilation of 17 musical numbers from several editions of the Tony Awards shows Cohen produced is captured on *Broadway's Lost Treasures* (2003), a 110-minute DVD. In 1973 Cohen was honored with the Theater World Special Award for "his contribution to cultivating theater audiences by extending Broadway, not only nationally but internationally, with his exemplary television productions."

[Ruth Beloff (2nd ed.)]

COHEN, ALFRED MORTON (1859–1949), U.S. lawyer, politician, and Jewish civic leader. Cohen was born in Cincinnati, Ohio. He graduated from the University of Cincinnati Law School (1880), in the same class as his lifelong friend, William Howard Taft. At the age of 25, Cohen served the first of several terms on Cincinnati's city council and in 1896 he was elected to the state senate, where he served two terms. Cohen was a staunch advocate of equal rights for blacks and was active in the Urban League. In 1876, when he was only 17, Cohen organized a local chapter of the Young Men's Hebrew Association, and in 1890 he helped to create a national Y.M.H.A. organization, whose presidency he held for several years. A member of B'nai B'rith for over 60 years, he was president of his Cincinnati lodge (1906) and served as international president of the order from 1925 to 1938. In 1933 he helped found the Joint Consultative Council, a body composed of B'nai B'rith, the American Jewish Committee, and the American Jewish Congress, whose purpose was to achieve Jewish unity in the struggle against Nazism. That same year he represented B'nai B'rith at the World Conference of Jews held in London on the subject of German Jewry. In 1936 B'nai B'rith funded the creation of a colony in Palestine named Moledet B'nai B'rith, in tribute to Cohen.

[Robert Shostek]

COHEN, SIR ANDREW (1909–1968), British colonial administrator, brother of Ruth Louisa *Cohen. Cohen began his career in the Inland Revenue Department of the British government and a year later was transferred to the Colonial Office. During World War II he organized the food supply to Malta. In 1947 Cohen became undersecretary of state at the Colonial Office. In this post he did much to prepare the African colonies for independence at a time when it was not generally believed that independence for Africa was imminent. From 1952 to 1957 he was governor of Uganda and introduced widespread political and economic reforms, although he encountered much trouble when he deported the Kabaka of Buganda in 1953. He was the British representative on the United Nations Trusteeship Council from 1957 to 1961, and in 1961 was appointed secretary of the newly created Ministry of Overseas Development. This ministry was set up to deal with the problem of relations with newly independent states in the post-colonial period. Cohen wrote *British Policy in Changing Africa* (1959).

COHEN, ARMOND E. (1909–), U.S. Conservative rabbi. Cohen was born in Canton, Ohio, and ordained at the Jewish Theological Seminary in 1934. He spent his entire career as rabbi of the Cleveland Jewish Center (renamed Park Synagogue in 1951), which, under his stewardship, grew to some 2,000 families. A proponent of interdenominational cooperation, Cohen was active in both civic and Jewish communal affairs. He was also a staunch Zionist, serving as president of the Ohio chapter of the Zionist Organization of America and later honorary president of the entire organization. He was an advocate of pastoral psychology and lectured in the Department of Religio-Psychiatry of the Jewish Theological Seminary (1969–74), as well as at the American Foundation of Religion and Health (1965–75), which he also served as a member of its Board of Directors. As chairman of the Rabbinical Assembly's Committee on Marriage and the Family (1958–60), he lobbied successfully for marriage counseling to be provided under the auspices of the Rabbinical Assembly and the Seminary. He was also a member of the Seminary's Board of Overseers and of the Executive Council of the Rabbinical Assembly (1950–58). In 1945, he published *All God's Children: A Jew Speaks*, a collection of open letters on Jewish-Christian relations and Jewish tradition that had previously appeared anonymously in his synagogue's bulletin.

[Bezalel Gordon (2nd ed.)]

COHEN, ARTHUR (1829–1914), English lawyer. Born in London, a grandson of Levi Barent Cohen, Cohen was admitted to Magdalene College, Cambridge, after his uncle Moses *Montefiore had persuaded the prince consort to sponsor his candidacy. He became president of the Cambridge Union and was Fifth Wrangler in 1853 but was able to take his degree only in 1858, after the passage of the Cambridge University Reform Act. In that year he became the first practicing Jew to graduate from Cambridge. Admitted to the bar in 1857, he built up a substantial practice and in 1872 he was named junior counsel in the critical Alabama arbitration between Great Britain and the United States. In 1874, Cohen was made a queen's counsel and sat in Parliament as a Liberal from 1880 to 1887. In his later years he received many honors, becoming a member of the Privy Council (a rare distinction for one who held no governmental position) and being elected chairman of the Bar Council. From 1893 until 1914 he was standing counsel to the India Office.

Cohen was active in Jewish affairs and from 1880 to 1895 was president of the Board of Deputies of British Jews in succession to Moses *Montefiore.

[Moshe Rosetti]

COHEN, ARTHUR (1864–1940), German economist and statistician. Cohen was born in Munich. After studying law and economics he joined the Bavarian public finance administration. In 1906 he turned to teaching and research at the Technical University in Munich, working at the same time at the Munich Chamber of Commerce. With the advent of the Nazis in 1933 he was dismissed from his posts, but continued to live and work privately in Munich until his death. Cohen's professional interests ranged from economic history, monetary theory, and finance to agricultural and labor economics as well as to Jewish topics. He published several monographs on the history of the Jews in Munich.

[Joachim O. Ronall]

COHEN, ARTHUR A. (1928–1987), U.S. novelist, publisher, art historian, and theologian. Born in New York, Cohen received his B.A. (1946) and M.A. (1949) from the University of Chicago and then continued with studies in medieval Jewish philosophy at the Jewish Theological Seminary. He founded, with Cecil Hemley, Noonday Press in 1951; in 1956 he began Meridian Books. From 1960 to 1974, when he founded Ex Libris Publishing Company, he worked as an editor. He wrote essays, works of non-fiction on Jewish subjects, and novels.

His *The Natural and the Supernatural Jew* (1962) sets the most insistent theme of his theological writings. Since Enlightenment, he avers, Jewish thought and imagination have with ever-increasing measure focused on the "natural" Jew enmeshed in immediate social and political concerns. Cohen fears that this understandable attention to the interests of the natural Jew, abetted by secular attitudes and biases of the modern period, has led to the neglect of the "supernatural" Jew, the Jew of the covenant conscious of his transcendent responsibilities. Accordingly, the urgent task of contemporary Jewish religious thought is to develop a strategy to reintegrate the natural and the supernatural Jew, otherwise the prospect looms that although the supernatural Jew may survive, Judaism will perish. Because of the experience of the modern, secular world, however, the supernatural vocation of the Jew could no longer be naively affirmed. To be spiritually and intellectually engaging, Cohen holds, the presuppositions of classical Jewish belief must be first "theologically reconstructed." Cohen's conception of this endeavor is inspired largely by the German Jewish thinker Franz *Rosenzweig whose uncompromising affirmation of theistic belief – grounded in the experiential categories of creation, revelation, and redemption – was supplemented by an equally unyielding adherence to rigorous philosophical reflection and honesty. For Cohen, the task of theological reconstruction is rendered all the more urgent by the Holocaust, which in disclosing "the *tremendum* of evil," has so radically challenged the presuppositions of Jewish belief that to avoid this task is to relegate Judaism to blind faith and atavistic sentiment. Clearly, as Cohen argues in *The Tremendum. A Theological Interpretation of the Holocaust* (1981), the retreat to an unthinking, platitudinous posture endangers the recovery of Judaism as a supernatural vocation. These themes are echoed in Cohen's novels, among them *The Carpenter Years* (1967), *In the Days of Simon Stern* (1973), *A Hero in His Time* (1976), *Acts of Theft* (1980), and *An Admirable Woman* (1983). He coedited, with Paul Mendes-Flohr, *Contemporary Jewish Religious Thought* (1987).

[Paul Mendes-Flohr (2nd ed.)]

COHEN, BARRY (1935–), Australian politician. Born in Griffith, New South Wales, Barry Cohen was an Australian Labor Party member of the House of Representatives for the seat of Robertson in New South Wales from 1969 to 1990. During much of this time he was the only Jewish member of the Australian parliament. He held ministerial office in Bob Hawke's Labor government from 1983 to 1987 as minister for home affairs and the environment and then as minister for the arts, heritage, and the environment.

[William D. Rubinstein (2nd ed.)]

COHEN, BENJAMIN (1726–1800), Dutch financier and tobacco merchant. Taking over his father's tobacco company, he made it into one of the most prosperous and influential firms in Holland. Cohen conducted large-scale financial operations first in Amersfoort and from 1786 in Amsterdam. He owned tobacco plantations in Holland and exported to the Baltic area; in 1788 his firm contracted to import 40,000 carats of

diamonds annually from Brazil. It was then probably the only Jewish firm in Amsterdam to issue loans, and in 1793 and 1796 made two loans to the Prussian government of five and three million guilders. Via his sister Cohen was related to the *Goldsmids in London, who opened their bank for new issues in this period. He acted as financial adviser to Prince William V of Orange, who was his guest in Amersfoort in 1787 during the Patriotic Revolt. A patron of Jewish letters, he sponsored the publication of Hebrew mathematical and philosophical works, such as works by Naftali Herz Ulman. As a *parnas* of the Ashkenazi community in Amsterdam, he was one of the leading Jews and at the same time a deeply committed member of the Orangist faction in Dutch politics.

Michman, *The History of Dutch Jewry during the Emancipation Period: Gothic Turrets on a Corinthian Building* (1995), 15–16; J. Meijer, *Zij lieten hun sporen na, joodse bijdragen aan tot Nederlandse beschaving* (1964), 98–103.

[Frederik Jacob Hirsch / Bart Wallet (2nd ed.)]

COHEN, BENJAMIN VICTOR (1894–1983), U.S. lawyer and presidential adviser. Cohen was born in Muncie, Indiana. He was admitted to the Illinois Bar in 1916. Cohen served as secretary to Judge Julian W. *Mack in New York until 1917, then as attorney to the U.S. Shipping Board. During 1919–21 he was counsel to the U.S. Zionists negotiating the Palestine Mandate terms at the London and Paris Peace Conferences. Returning to New York, he practiced law, specializing in corporate reorganization and legal counseling to lawyers. As Harvard protégés of Felix *Frankfurter, Cohen and Thomas G. Corcoran became members of an inner circle of advisers to President Franklin D. *Roosevelt from 1933. They provided ideas, facts, and statistics for many New Deal programs and drafted such important legislation as the Securities Act (1933), the Securities Exchange Act (1934), the Public Utility Holding Company Act (1935), and the Fair Labor Standards ("Wages and Hours") Act (1938). Cohen, who skillfully drafted the legislation, and Corcoran, who managed it through Congress, were both bitterly attacked and highly praised for the roles they played. Cohen's offices in government included associate general counsel to the Public Works Administration (1933–34) in charge of railroad loans; general counsel to the National Power Policy Commission (1934–41); and special assistant to the U.S. attorney general in public utility holding company litigation. In 1941 he was appointed adviser to the U.S. ambassador to Great Britain. Cohen was director of the Office of Economic Stabilization (1942–43); general counsel, Office of War Mobilization (1943–45); counselor, U.S. Department of State (1945–47); legal adviser, International Monetary Conference, Bretton Woods, N.Y. (1944); and member of the U.S. delegation to the Dumbarton Oaks Conference, Washington, D.C. (1944), and to the peace conferences held after World War II in Berlin, London, Moscow, and Paris. He is reputed to have helped write the United Nations Charter, and served the U.S. delegation to the UN at several General Assemblies. In 1961 Cohen delivered the Oliver Wendell Holmes Lectures at Harvard Law School, published as *United Nations: Constitutional Developments, Growth, and Possibilities* (1961). A friend of President Lyndon Johnson, Cohen studied the problem of oil reserves during his administration.

[Julius J. Marcke]

COHEN, BERNARD (1933–), British painter; brother of the painter Harold *Cohen. Bernard was born in London. While visiting the U.S., he was profoundly impressed by Abstract Expressionism. He was included in the Venice Biennale of 1966 and a retrospective at the Tate Gallery, London, in 1973 established him as a leading contemporary British artist. Bernard Cohen is essentially a romantic painter and his quasi-mystical manner has more in common with postwar American painting (especially the work of Jewish artists such as *Rothko and Newman) than his English contemporaries. His later work sought a new purity and spirituality. The Tate Gallery in London held 48 of his works in 2004.

[Charles Samuel Spencer]

COHEN, BOAZ (1899–1968), U.S. rabbinic scholar. Cohen was born in Bridgeport, Connecticut, and in 1924 was ordained by the Jewish Theological Seminary, where he began teaching the following year and remained for the rest of his career. He was awarded a Ph.D. from Columbia University. He was secretary of the Committee on Jewish Law of the Rabbinical Assembly of America, 1933–45, and chairman, 1945–48. He wrote thousands of opinions responding to every facet of Jewish life in America as he considered the request of rabbis and the needs of their congregants, including adoption and conversion. His judgment was restrained. Halakhah could not solve every problem and its processes must be respected and its authority protected. He led a committee to study the issue of the **agunah,* but out of respect for the unity of the Jewish people would not permit unilateral action by the Conservative Rabbinate. He was a leading expert on Jewish divorce law, and at a time when denominational lines were less rigid than they are in the early 21st century, the divorce documents that he supervised were recognized and respected by Rabbi Joseph *Soloveitchik and the Rabbinical Council of America despite the fact that Cohen was on the faculty of the Jewish Theological Seminary.

A man of gentle disposition and immense erudition, his knowledge was far-ranging, including Greek and Roman, Canon, Islamic, and American law and Assyrian and Babylonian literature. Cohen was one of the first American-born and American-educated scholars to make significant contributions to the scientific study of rabbinic literature. His *Kunteres ha-Teshuvot* (1930), an annotated bibliography of the rabbinic responsa of the Middle Ages, was one of the first attempts to classify and describe the responsa literature and has remained a standard reference work. He published bibliog-

raphies of his father-in-law Israel Friedlaender (1936), Louis Ginzberg (1945), and Alexander Marx (1950[2]). In addition, he prepared the voluminous index to Ginzberg's *The Legends of the Jews* (1938). Cohen's main scholarly activity was in the field of comparative law, his principal works being *Law and Tradition in Judaism* (1959) and *Jewish and Roman Law* (2 vols., 1960). His work reveals a mastery of the relevant literature and ancient languages.

ADD. BIBLIOGRAPHY: P.S. Nadell, *Conservative Judaism in America* (1988) pp. 53–55; S. Greenberg, *Foundations of a Faith* (1967) 90–112; *Proceedings of the Rabbinical Assembly* (1969),173–75.

[Michael Berenbaum (2nd ed.)]

COHEN, CHAPMAN (1868–1954) English philosopher. Born in Leicester, Cohen became involved in the free thought movement in England as a result of the work of Charles Bradlaugh and G.W. Foote. He began writing on religious topics in the 1890s. He attacked religious beliefs and the activities of religious organizations. In 1915 he became the editor of the *Freethinker* and president of the National Secular Society. Cohen was an advocate of materialism, and lectured against and debated religious thinkers. He opposed the English laws against blasphemy. Cohen wrote many books and pamphlets including *Determinism or Free Will?* (1912), *Religion and Sex: Studies in the Pathology of Religious Development* (1919), *Theism or Atheism* (1921), *A Grammar of Freethought* (1921), *The Other Side of Death* (1922), *Materialism Re-Stated* (1927), and *Essays in Freethinking* (1923–39). In 1940 he published a work about himself, *Almost an Autobiography: The Confessions of a Freethinker*.

[Richard H. Popkin]

COHEN, DAVID (1883–1967), Dutch historian and prominent Jewish and Zionist leader. Cohen, who was born at Deventer, east Holland, was professor of ancient history at the universities of Leiden and Amsterdam from 1924 to 1953 (except for the years of Nazi occupation). His involvement in Jewish affairs started in 1903; while a student he established an organization to assist Jewish refugees from Eastern Europe who passed Deventer by train, and afterwards he became involved in a variety of local, national, and international organizations for Jewish refugees and migrants. In the 1920s, while living in The Hague, he headed the committee for the poor of the local Jewish community. A Zionist from his youth, he was for many years one of the leaders of Dutch Zionism, establishing branches and youth organizations, writing in its publications, and representing it abroad. In 1933, immediately after the ascendance of the Nazis to power in Germany, Cohen co-founded and led – with Abraham *Asscher – the Comité voor Bijzondere Joodse Belangen (Committee for Special Jewish Affairs) to combat Nazi antisemitism and policies and to help refugees from Germany; for this purpose a special Subcommittee for Jewish Refugees, headed by Cohen, was established, and became one of the most powerful organizations in Dutch Jewry of the 1930s. In this position he was instrumental in having Alfred Wiener with his documentation on Nazism and antisemitism move from Germany to Amsterdam (1933). From 1933 to 1939 he was chairman of the Jewish Central Information Office, under the auspices of which Wiener constantly enlarged his collection; in 1939 Wiener once again moved, now to London, where the collection finally settled and became known as the *Wiener Library. The Refugee Committee continued its activities also after the German invasion in May 1940. In December 1940 Cohen joined the Jewish Coordination Committee, an initiative to organize Dutch Jewry vis-à-vis the Germans. From February 12, 1941, to September 1943 Cohen acted as cochairman (with Abraham Asscher) and dominating personality of the *Joodsche Raad voor Amsterdam*, the Amsterdam Jewish Council, appointed by the German occupation authorities (see *Amsterdam), which gradually expanded its authority over all Jews in the Netherlands. In this position he conducted the controversial policies of the Council, which were characterized by servility towards the German authorities. He was finally arrested on the eve of Rosh ha-Shanah (September 1943) and sent as a "prominent Jew" to Theresienstadt, where he stayed from 1943 to 1945. In 1947 he was arrested on charges of collaboration with the Germans, but was soon released. However, a Jewish "honorary" court excluded him from participation in all Jewish functions. In 1955 Cohen published reminiscences, *Zwervend en Dolend*, dealing with his work for Jewish refugees in the 1930s; a second, planned volume, intended to explain his policies in the 1940s, was never published. However, a part of it was published in 2000 in a biography of Cohen. His and his colleague Abraham Asscher's behavior and policies have been a major theme of Dutch and general historiography as well as of popular discussion of the fate of the Dutch Jews, of whom about 75% perished during the Holocaust, and of the Jewish Councils in general.

[Shaul Esh / Dan Michman (2nd ed.)]

COHEN, DAVID (known as "*Ha-Nazir,*" the Nazirite; 1887–1972), rabbi, talmudist, philosopher, and kabbalist. Cohen was born in Maisiogala, near Vilna, the scion of a distinguished rabbinic family. In his youth he studied in the yeshivot of the Ḥafeẓ Ḥayyim (*Israel Meir ha-Kohen) in Radun, Volozhin, and Slobodka. Even then his restless and inquiring mind led him to extend his studies beyond the traditional subjects taught in the yeshivot. Thus he turned to the *Ḥorev* of Samson Raphael *Hirsch and the early writings of Rabbi A.I. *Kook. He also studied Russian to prepare himself for entrance to the university. During the Russian Revolution of 1905 he was twice arrested but was not detained. His spiritual unrest and the desire to widen his intellectual horizon led him to enroll in the Academy for Jewish Studies established by Baron David Guenzburg, where one of his close fellow students was Zalman Rubashov (Shazar), later president of Israel. From there he proceeded to Germany to study at the University of Freiburg. At the outbreak of World War I he was interned as an enemy alien, but was released and made his way to Switzerland, studying philosophy, classical literature, and Roman law at Basel University. He was for a time chairman of the Jewish Students' Society there and delivered lectures on Jewish philosophy. It was then that he took upon himself a life-long Nazirite vow, which involves complete abstention from cutting one's hair and partaking of any products of the vine. But his asceticism went much further. It included an extreme vegetarianism, which encompassed not only food but any garment made of leather, and a self-imposed silence every Rosh Ḥodesh eve (Yom Kippur Katan) and from Rosh Ḥodesh Elul to the morrow of Yom Kippur. In addition, he refused to speak anything but Hebrew. However, he was not a recluse, and did not hesitate to express his views on important topical problems.

The turning point in his life came with his meeting with Rabbi Kook, who was then in St. Galen in Switzerland (1915). "My life then stood in the balance," he noted. "I listened to him and was turned into a new man … I had found a master." He decided to abandon his secular studies and devote himself entirely to Jewish thought. In 1922 he received an invitation from Rabbi Kook, who had returned to Ereẓ Israel, to become a tutor in the yeshivah which he had established, and helped to draw up the curriculum which was also to include history, philosophy, ethics, Hebrew grammar, and Bible. He was appointed lecturer in Talmud, ethics, and philosophy. The two used to meet daily and Rabbi Kook entrusted him with the editing of his philosophical works, to which, along with disseminating Kook's ideas, he dedicated his life, hardly publishing any of his own works, although he left over 30 works in manuscript. The principal exception was the *Kol Nevu'ah*, of which the first volume appeared shortly before his death. It is the fruit of his life's work and is in two parts, "The Foundations of Jewish Religious Philosophy" and "The Foundations of Inner Wisdom." The work is based on the premise that there is an original Jewish philosophy and a spiritual Jewish system of logic which is not intuitive-speculative but spiritual-acoustic: "Sound and light are the two angels of thought which accompany man everywhere" but "hearing is greater than seeing." The prophetic power is the beginning of Jewish wisdom, and he was convinced that the renewal of Jewish life in Israel would produce a new generation to which would even be vouchsafed the return of the spirit of prophecy.

A passionate adherent of the doctrine of Rabbi Kook that the Return to Zion and its various stages, of which the establishment of the State of Israel was the latest, was itself only a stage in the fulfillment of the Divine Promise which would bring about the Complete Redemption and the Messianic Age, he did not hesitate to reprove those rabbis who did not accept this belief. He saw in Moses Ḥayyim *Luzzatto the harbinger of this redemption, pointing out that the three significant movements, Ḥasidism, Musar, and Haskalah, had each made certain of Luzzatto's works their classics, and he claimed that both Rabbi Kook and he himself followed his doctrines.

Cohen's only son, Rabbi Shear-Yashuv Cohen, was Ashkenazi chief rabbi of Haifa, and his only daughter the wife of Israeli Chief Rabbi Shlomo Goren.

In 1977 there was published a three-volume *Festschrift* in his honor entitled *Nezir Eḥav.*

[Chaim Lifschitz]

COHEN, ELI (1924–1965), Israel intelligence officer, executed by the Syrian government. He was born in Alexandria, Egypt, and educated at a Jewish primary school and a French high school. In 1949 Cohen and all other Jewish students were expelled from Farouk University. His activities in local Zionist organizations, in which he had been involved from childhood, led to several investigations on the part of the Egyptian authorities. During the Sinai Campaign (October 1956) he was arrested and detained until January 1957, and upon his release was expelled from Egypt. He settled in Israel in February 1957, thereafter serving with the Israel intelligence service. In January 1965 he was arrested in Damascus as an Israel secret agent. His public trial before a military tribunal attracted worldwide publicity. The prosecution contended that he had established close ties with various departments and high-placed officials in the Syrian government. Cohen was convicted on a charge of espionage and sentenced to death. Requests that he be represented at his trial by a foreign or even local lawyer were refused. Despite strenuous efforts to persuade the Syrian government to commute the death sentence, including the intervention of Pope Paul VI and the heads of the French, Belgian, and Canadian governments, Cohen was publicly hanged in the Damascus city square. Streets, squares, and parks in

Israel were named in his honor, but repeated requests to Syria to release the body for burial in Israel have been refused.

BIBLIOGRAPHY: Y. Ben-Porat and U. Dan, *The Spy from Israel* (1969); E. Ben Hanan, *Eli Cohen, Our Man in Damascus* (1967); Bar-Zohar, in: *Midstream*, 14, no. 9 (1968), 35–53.

COHEN, ELISHEVA (1911–), Israel art designer. Born in Frankfurt-on-Main, Cohen immigrated to Israel in 1933. She was curator of the Israel Museum and specialized in arranging three–dimensional art exhibitions in which she was considered a pioneer in Israel. In 1977 she was awarded the Israel Prize for art and sculpture.

COHEN, ELIZABETH D.A. MAGNUS (1820–1921), pioneering woman physician in the southern United States. Cohen was born and educated in New York City. Married to Dr. Aaron Cohen and mother of five children, Magnus decided to study medicine at the age of 33, following the death of her young son. She enrolled in the recently created Women's Medical College of Pennsylvania in Philadelphia, from which she graduated in 1857. She then joined her husband in New Orleans, becoming the first woman to practice medicine in Louisiana. She helped combat yellow fever epidemics in 1857 and 1858, but thereafter treated mostly women and children in her private medical practice. For two decades she was listed in the New Orleans City Directory as a midwife and then as a "doctress," but in 1876 she finally achieved recognition as Mrs. Elizabeth Cohen, physician. She retired in 1887, following the deaths of her husband and children, and lived for the rest of her very long life in the Touro Infirmary, later known as the Julius Weis Home for the Aged, where she continued to serve as a volunteer. Elizabeth Cohen was an ardent supporter of women's rights and women's suffrage; only after her death at the age of 101 did the first woman receive a medical degree in New Orleans, from Tulane University.

[Harriet Pass Friedenreich (2nd ed.)]

COHEN, ELLIOT ETTELSON (1899–1959), U.S. journalist. Born in Des Moines, Iowa, Cohen was managing editor of *The Menorah Journal* from 1925 to 1931 and headed a group of writers who gave the journal its vitality and integrity. In 1945, he became editor of the newly founded magazine **Commentary*, which was designed to be larger in scope than the previous organ of the American Jewish Committee, *The Jewish Contemporary Record.* Established as a liberal anti-Communist journal, *Commentary* had Cohen as its editor and driving force from its inception until his death. As his successor Norman *Podhoretz stated, "Everyone knows that Elliot Cohen created *Commentary* and edited it for fourteen years, but I doubt that anyone except the people who in one capacity or another were close to the actual workings of the magazine ever appreciated the extent to which *Commentary* was Elliot Cohen." Cohen wrote *Commentary on the American Scene: Portraits of Jewish Life in America* (1953).

[Ruth Beloff (2nd ed.)]

COHEN, EMIL WILHELM (1842–1905), Danish mineralogist and geologist. Born in Aakjaer, Denmark, and a convert to Lutheranism, Cohen began his career as an assistant at the Heidelberg University and in 1878 was appointed professor of petrography at the University of Strasbourg. In 1885 he became professor of mineralogy at the University of Greifswald. In 1886 he explored the gold and diamond fields of the Transvaal, South Africa, and made several geographical explorations in various countries of South America. In the Franco-Prussian War he served as a noncombatant with the Germans, although he was a Danish subject. A nickel compound, Cohenite, is named for him. Among his works are *Sammlung von Mikrophotographien* (1881, 1899^3), on the microscopic structure and chemical composition of rocks and stones, and *Meteoritenkunde* (1894–1903), a study of the structure of meteorites.

COHEN, ERNST JULIUS (1869–1944), Dutch physical chemist. His father, Jacques Cohen, also a chemist, went to Holland from Germany and founded the Netherlands Coal Tar Distillery. Ernst Julius was born in Amsterdam, and became the leading disciple of van't Hoff. From 1902 he was professor of inorganic and general chemistry at Utrecht. He explained the previously mysterious phenomenon of "tin disease" and pursued research on the polymorphism and physical metamorphosis of numerous solid substances, notably iodides. Cohen established the historical committee of the Dutch Chemical Society and its historical library, and the Dutch Society for the History of Medicine, Natural Sciences, and Mathematics. He was the first president of the Dutch Chemical Society, chairman of the Dutch Committee on Coinage, and president of the International Union of Pure and Applied Chemistry. Among his many books are *Piezochemie kondensierter Systeme* (1919), in collaboration with W. Schut, *Physico-Chemical Metamorphosis and Some Problems in Piezochemistry* (1926), and textbooks for medical students and on physical chemistry and inorganic chemistry.

In 1941 his property was seized by the Germans. Two years later he was arrested and sent to a concentration camp, but released after an appeal by the Dutch Chemical Society. Early in 1944, he was advised to flee the country, but he refused. He was arrested, and transported to the gas chambers of Auschwitz.

[Samuel Aaron Miller]

COHEN, FANNIA (1885–1962), U.S. labor movement activist. Cohen was born in Kletsk, Russia, and immigrated to the United States with her brother in 1904. After working briefly with new immigrants on Ellis Island as the representative of the American Jewish Women's Committee, Cohen began studies for entrance to a college of pharmacy before deciding to take a job at a garment factory and work in the labor movement. In 1909, Cohen was elected to the executive board of her local union; she served as its chair from 1913 to 1914. In 1914, while president of the Kimono, Wrappers and Housedress Workers Union in New York City, Cohen was among early graduates of the Training School for Women Organizers, a year-long curriculum of academic and field work. In August 1915, she led workers in the first successful strike of Chicago's dress and white goods; later that year she was the first woman elected as vice president of the International Ladies' Garment Workers Union. She went on to become one of the foremost leaders of the ILGWU Education Department, where she was a staunch proponent of Unity Centers, places for women workers to learn and socialize. In 1921, Cohen helped establish Brookwood Labor College, the first residential college for workers in the United States; in 1923, she began working with Pioneer Youth of America, which sponsored summer camps for worker's children. Cohen spent the rest of her career creating additional educational programs, opportunities, and events for workers despite declining funding and opposition from others in the labor movement. In the course of debates about organizing women workers, Cohen became isolated from radical feminists and ultimately lost much of her power base in the union. In 1925, Cohen was not re-elected to the ILGWU General Executive Board and over the next few years, to the outrage of many, the new director, Mark Starr, restricted Cohen's work almost completely. Cohen continued as a relatively powerless executive secretary until she was forced into retirement in August 1962; she died four months later of a stroke.

[Marla Brettschneider (2nd ed.)]

COHEN, FRANCIS LYON (1862–1934), British rabbi and writer on Jewish liturgical music. Born in Aldershot, England, and trained at Jews' College, London, Cohen became a recognized expert on Jewish liturgy. He was preacher at South Hackney, London (1883–85), in Dublin (1885–86), and at the Borough New Synagogue, London (1886–1904), and chaplain in the British army. Ordained a rabbi in 1905, he became chief minister of the Sydney Great Synagogue in the same year and was senior Jewish chaplain to the Australian army (1914–34). In Australia, Cohen became one of the leading anti-Zionists of the Jewish community, opposing "political Zionism" as anti-British. Using the pseudonym "Asaph Klesmer" as well as his own name, Cohen wrote articles for the commemorative volume of the Anglo-Jewish Historical Exhibition (1887) and the Jewish Historical Society of England (1894), and was music editor of *The Jewish Encyclopedia* (1901–06). He edited collections of Jewish music, including *A Handbook of Synagogue Music for Congregational Singing* (with B.L. Mosely, 1889) and *The Voice of Prayer and Praise* (with D.M. Davis, 1899, 1914[2]). His arrangements of old melodies were published in *Lyra Anglo-Judaica* (pt. 1, 1891). Cohen married the daughter of a cantor, Marcus *Hast, and one of his nieces was the pianist Harriet *Cohen.

Rubinstein, Australia I, index.

[Dora Leah Sowden]

COHEN, GERSON D. (1924–1991), Jewish historian and leader of Conservative Judaism. Educated at Camp Massad, where he cultivated a life-long commitment to Hebraism and Zionism, at the *Jewish Theological Seminary of America (JTS), and at Columbia University, Cohen specialized in the study of Jewish history and historiography. After the death of Alexander *Marx, Cohen served as librarian at JTS, also teaching Jewish history and Talmud there. He left in 1967 to succeed his academic mentor, the historian Salo W. *Baron, as director of the Center for Israel and Jewish Studies at Columbia University. After the Vietnam-era student riots at Columbia, Cohen returned to JTS as the Jacob Schiff Professor of Jewish History and inaugurated the school's Ph.D. program in Jewish history.

Cohen's scholarly work transplanted and updated the *Wissenschaft des Judentums model of research in the light of 20th-century Conservative Judaism. In his publications, he combined meticulous textual study, epitomized by his critical edition of Abraham ibn Daud's *Sefer Ha-Qaballah*, with an inter-textual focus. Cohen's scholarly essays, no less than his programmatic ones, encompassed the many permutations of rabbinic culture, both classical and medieval. He highlighted the leadership roles of Jewish intellectuals in their societies, especially in medieval Spain, but also in ancient and modern Jewish centers. Cohen's scholarly and administrative insights coincided in his thesis that Jewish continuity has always depended on the creative tension of maintaining the centrality of Jewish religion to Jewish history, on the one hand, and openness to influences from the broader cultural context, on the other. Among his books are *Studies in the Variety of Rabbinic Cultures* (1994) *and Jewish History and Destiny* (1997).

In 1971, Cohen and Bernard *Mandelbaum jointly succeeded Louis *Finkelstein as leaders of JTS. The division of the presidency and the chancellorship roles did not last for long. Within a year, Mandelbaum having resigned, Cohen became

the chancellor of JTS, leading and transforming the institution until his retirement in 1986.

Cohen's leadership of JTS featured five emphases, in part continuations of the work of Finkelstein, but in large measure representing new departures: (1) The continued development of JTS as a center for Judaic Studies, and in particular, the physical reconstruction of its world-class library devastated by a fire in the mid-1960s. (2) The continued cultivation of JTS as a force for inter-religious dialogue. While maintaining his predecessor's initiative, the Institute for Religious and Social Studies, Cohen focused on inter-faith academic collaboration, fostering arrangements for student cross-registration and scholarly interchange with the Union Theological Seminary, a leading liberal Protestant divinity school in New York. (3) The administrative restructuring of JTS and the development of an independent graduate school of Jewish Studies. In 1974, Cohen replaced the existing JTS graduate program, the Institute for Advanced Studies in the Humanities, with a non-sectarian graduate school encompassing all non-theological graduate training. Under Cohen's aegis, the JTS graduate school became the largest institution of its kind in the Diaspora, training many of the scholars filling the expanding number of Judaic Studies chairs in North American Universities in the late twentieth century. (4) The active engagement of JTS as a resource for the development of Conservative (later, Masorti) Judaism in Israel. Cohen championed the twin concepts that JTS could offer a unique contribution to Jewish life in Israel and that, to serve the movement worldwide, Conservative rabbis needed extensive first-hand experience in Israel. Cohen raised the profile of JTS in Israel, expanding the school's Jerusalem campus, Neve Schechter, creating Midreshet Yerushalayim, a Conservative *yeshivah* program there, regularizing Israel residency requirements for JTS rabbinical students and, in 1984, opening an autonomous Israeli Conservative rabbinical school, the *Beit Hamidrash Lelimudei Hayahadut.* (5) Most consequentially for American Judaism, the active reorientation of JTS to a stance of closer involvement in the development of the Conservative movement. The leading issue that precipitated this change of course was the debate over the ordination of women as Conservative rabbis. Although initially opposed to that change, in 1977, Cohen consented to a *Rabbinical Assembly resolution that JTS conduct a movement-wide study of the issue, and in the course of that process, he became an ardent proponent of women's ordination. While characterizing the proposed reform as fully within the parameters of Conservative Judaism, Cohen also argued that JTS risked forfeiting its position as "fountainhead" of the denomination if it failed to ordain women, seeing that the Rabbinical Assembly was moving closer to admitting women candidates ordained privately or at other rabbinical seminaries. Although unsuccessful in his first attempt to persuade the JTS faculty to approve the proposed reform, in 1979, four years later, when movement pressure for women's ordination had mounted and the composition of the JTS faculty had changed, Cohen succeeded in changing school policy in this regard.

[Michael Panetz (2nd ed.)]

COHEN, GEULAH (1929–), Israeli politician, member of the Eighth to Twelfth Knessets. Cohen was born in Tel Aviv. Her father immigrated to Eretz Israel from Yemen and her mother was born in Eretz Israel to a family that had arrived there in the 19th century from North Africa. As a youth, she became a member of *Betar and joined the *Irgun Tzeva'i Le'ummi in 1942. In 1943 she joined the *Loḥamei Ḥerut Israel (Leḥi), becoming its radio broadcaster. Because of her involvement in Leḥi she was obliged to leave her studies at the Levinsky teachers' seminary, was detained by the British, and was sentenced to 19 years in prison. She escaped from the prison hospital in Bethlehem, and continued to broadcast.

Cohen received an M.A. from the Hebrew University of Jerusalem in philosophy and Bible studies. In 1948–60 she was a member of the editorial board of *Sulam*, a political monthly published by Israel *Eldad. Later she wrote a social-political column in *Ma'ariv,* and was a member of its editorial board in 1961–73. After the Six-Day War Cohen was involved in the campaign for Soviet Jewry, and in 1972 joined the *Ḥerut movement. Under the auspices of the movement Cohen founded the Midrashah Le'ummit educational institution in the spirit of Leḥi. She was elected to the Eighth Knesset in 1973 on the *Likud list. In the course of the Ninth Knesset, following the political upset of 1977, Cohen became chairperson of the Knesset Immigration and Absorption Committee. Following publication of Prime Minister Menaḥem *Begin's peace proposals, she established an internal opposition within the Likud, but finally left the Ḥerut movement in 1979, and together with MK Moshe *Shamir established the Teḥiyyah-Banai parliamentary group.

In October 1979 she established the Teḥiyyah Party, which was based on cooperation among three main groups: defectors from the Ḥerut movement, the Movement for Greater Israel, and *Gush Emunim. The new party objected to Israel's withdrawal from any territories in Erez Israel.

In December 1980 Cohen proposed Basic Law: Jerusalem the Capital of Israel, and a year later the law extending Israeli law and administration to the Golan Heights. She failed to get a law passed that would extend Israeli law and administration to Judea, Samaria, and the Gaza Strip. In 1986, following the *Vanunu affair, Cohen called for the purge of left-wingers from the secret services. In the course of the Twelfth Knesset she was active in efforts to obtain the release of Jonathan *Pollard, found guilty in the United States of spying for Israel.

In the government established by Yitzḥak *Shamir in June 1990, Cohen was appointed minister of science and technology, and was active in connection with the absorption of immigrants from Ethiopia. In November 1991, following the Madrid Conference, she left the government together with her party. Following the failure of Teḥiyyah to pass the qualifying threshold in the elections to the Thirteenth Knes-

set in 1992, she returned to the Likud but failed in her efforts to get elected to its list for the Fourteenth Knesset. She wrote the autobiographical *Sipurha shel Loḥemet* ("Story of a Warrior," 1962), *Ha-Tapuz she-Ba'ar ve-Hetzit Levavot* ("The Orange That Burned and Lit Up Hearts," 1979), and *Mifgash Histori* ("An Historic Meeting," 1986). In 2003 she received the Israel Prize for her special contribution to Israeli society. Her only son, Tzaḥi Hanegbi, was a member of the Knesset for the Likud from the Twelfth Knesset and a member of several governments.

[Susan Hattis Rolef (2nd ed.)]

COHEN, GUSTAVE (1879–1958), Belgian historian of medieval French literature and theater. Cohen studied at Brussels, Liège, and Lyons, and received his doctorate from the Sorbonne. He taught at Leipzig (1906–09), was professor of French language and literature at Amsterdam (1912–19), and in 1932 was appointed professor of the history of medieval French literature at the Sorbonne. After the fall of France in 1940, Cohen fled to the United States. In 1941 he was appointed visiting professor at Yale, and in the following year he became dean of the Faculty of Letters of the Ecole Libre des Hautes Etudes which he had founded in New York. After the liberation of France in 1944, Cohen resumed his chair at the Sorbonne. Among the many honors bestowed on him was that of laureate of the Académie Française (1921) and laureate of the Académie des Inscriptions et Belles Lettres. Cohen's most important works are the *Histoire de la mise en scène dans le théâtre religieux du moyen-âge* (1906) and *La comédie latine en France au XII^e siècle* (1931). He founded and led a group called the "Théophiliens," which presented medieval plays. Cohen was decorated for military service in World War I. He was a convert to Catholicism.

[Howard L. Adelson]

COHEN, HAROLD (1928–), British painter. Harold Cohen was born in London and studied and later taught at the Slade School of Art. He represented Britain at the 1966 Venice Biennale with his brother Bernard *Cohen (1933–), with whom he shared a distinctive style, as both were influenced by traditional European expressionism and later American abstract expressionism. He designed the Ark curtains for the synagogue of Jews' College, London. In later years he lived in America and was involved, with considerable international publicity, in using computers to simulate human drawing. Bernard Cohen was also born in London and educated at the Slade School. From 1988 he was Slade Professor of Fine Art at London University and also director of the Slade School. A highly regarded abstract expressionist, he frequently exhibited in Britain and America.

[Charles Samuel Spencer / William D. Rubinstein (2nd ed.)]

COHEN, HARRIET (1901–1967), British pianist. She made her debut at Queen's Hall, London, in 1914. By the age of 20 she had established her reputation as a virtuoso whose keyboard style combined elegance with spontaneity. Her interpretations of Bach were distinguished by clarity, precision, and vitality. Edward Elgar, Ralph Vaughan Williams, Arnold Bax, and William Walton all wrote compositions for her. In 1934 she took part in a London concert to aid refugee scientists at which *Einstein accompanied her on the violin. Shortly before World War II, when she visited Palestine to play with the Palestine Symphony Orchestra, she presented a collection of music manuscript autographs to the Jewish National and University Library. In Britain, she was active in supporting Jewish, and especially Israel, causes. In 1954 she was granted the freedom of the City of London. An injury to her right wrist in 1948 almost ended her concert career. It was two years before she appeared in public again, playing a concerto for the left hand written for her by Sir Arnold Bax. Failing eyesight compelled her to retire in 1960. Her writings include *Music's Handmaid* (1936) and memoirs, *A Bundle of Time* (1968).

BIBLIOGRAPHY: *New York Times* (Nov. 14, 1967); JC (Nov. 17, 1967).

COHEN, HARRY (1885–1969), U.S. surgeon, inventor, and author. Cohen was born in Austria and taken to the U.S. as a baby. In the course of a 60-year medical career in New York, Cohen was a medical inspector for the New York Department of Health (1912–13), and a surgeon at several institutions. He invented the clamp tourniquet (1934), the ligature guide (1936), and a surgical forceps for intravesical use (1930). Cohen, who was extremely active in Jewish affairs, was coeditor of *Jews in the World of Science* (1956), and chief editor of *American Jews: Their Lives and Achievements* (1958). His other publications include: *Simon Bolivar and the Conquest and Liberation of South America* (1955); *The Religion of Benjamin Franklin* (1957); and numerous medical monographs.

COHEN, HENRY (1863–1952), U.S. Reform rabbi and humanitarian. Cohen was born in London. He studied for the rabbinate at Jews' College, interrupting his studies during 1881–83 to work in South Africa as an interpreter of native dialects. He occupied pulpits in Kingston, Jamaica (1884–85), and Woodville, Mississippi (1885–88), then was rabbi of the Reform Congregation B'nai Israel of Galveston, Texas. An important shipping and commercial center with an affluent Jewish community, Galveston was the site of a hurricane in 1900 that took the lives of over 3,500 people. Cohen achieved

national prominence for his heroic relief efforts after the disaster. In 1907 Cohen was drawn into the "*Galveston plan," which undertook to divert a part of the stream of East European Jewish immigration from the overcrowded slums of the Eastern sea board to the interior of the country, where there was a shortage of labor. Galveston was selected as port of entry, and over 10,000 Jews were served by the Jewish Immigrants' Information Bureau under Rabbi Cohen during 1907–14. Throughout his Galveston ministry, Cohen carried on a vigorous campaign against inhumane conditions in the Texas penal system and against public indifference to released prisoners. He was a pioneer in the rehabilitation of former convicts. Cohen was appointed a member of the Texas Prison Board by the governor (1927) and later chairman of the advisory committee of the Southwestern Probation and Parole Conference (1936). He was deeply involved in many other humanitarian activities.

[A. Stanley Dreyfus]

COHEN, HENRY, BARON (1900–1977), British physician. Cohen, who was born in Birkenhead, became one of Britain's leading medical administrators and was involved in the establishment of the country's National Health Service. He was professor of medicine at Liverpool University from 1934 to 1965, and his contributions to the practice of medicine, particularly in the field of diagnosis, gained him an international reputation. His innumerable appointments to medical and allied bodies included the presidency of the British Medical Association, the General Medical Council, the Royal Society of Health, and the Royal Society of Medicine. He was made a baron in 1956. In 1973 Lord Cohen resigned as president of the General Medical Council, a position which he had held since 1961, on account of ill health. He was made a Companion of Honor in the 1974 New Year's Honors List for services to medicine. In 1970 he was appointed chancellor of Hull University. Lord Cohen was active in the affairs of the Liverpool Jewish community; he was on the council of the Anglo-Jewish Association and a governor of the Hebrew University of Jerusalem. His published lectures include *New Pathways in Medicine* (1935), *Nature, Method, and Purpose of Diagnosis* (1943), *Evolution of Modern Medicine* (1958), and *Sherrington: Physiologist, Philosopher, and Poet* (1958). He also contributed many papers on biological, neurological, and other medical subjects.

COHEN, HERMANN (1842–1918), German Jewish philosopher. Born in Cowsig, the son of a cantor, Cohen studied at the Jewish Theological Seminary at Breslau, but gave up his initial plans to become a rabbi. He turned to philosophy, studying first at the University of Breslau and then at the University of Berlin. He received his doctorate at the University of Halle in 1865. In 1873 he was invited by F.A. Lange, the well-known author of *The History of Materialism*, to become a *privatdozent* (lecturer) in philosophy at the University of Marburg. Appointed full professor after only three years, Cohen taught in Marburg until 1912. He spent the last years of his life in Berlin, where he taught at the Hochschule fuer die Wissenschaft des Judentums.

Interpretation of Kant and the Marburg System

Cohen's early works were devoted to a critical evaluation of idealism as embodied in the thought of Plato and, particularly, of Kant. "Die platonische Ideenlehre" (1886; see: *Schriften zur Philosophie und Zeitgeschichte*, 1928) was followed by *Kants Theorie der Erfahrung* (1871), *Kants Begruendung der Ethik* (1877), *Von Kants Einfluss auf die deutsche Kultur* (1883), and *Kants Begruendung der Aesthetik* (1889). These critical works brought Cohen to a new interpretation of Kant's philosophy, which came to be known as the Marburg School of neo-Kantianism. This approach found its expression in his three systematic works: *Logik der reinen Erkenntnis* (1902), *Die Ethik des reinen Willens* (1904), and *Die Aesthetik des reinen Gefuehls* (1912). These works reflect Cohen's attempt to renew Kantian philosophy and place it again at the center of the philosophic discourse, despite the prevailing Hegelian philosophy.

The starting point of Cohen's philosophic system, like that of Kant's, is the existence of scientific knowledge expressed mathematically. Like Kant, Cohen believed that the task of the philosopher is to unfold the logical conditions underlying this type of knowledge. However, Cohen criticized Kant for according sensation a special role in the establishment of scientific knowledge. While Kant had maintained that the sense content of our knowledge is a "datum," which, once given, is organized and synthesized by thought, Cohen puts forth the extreme idealistic thesis that thought produces everything out of itself. According to his "principle of origin" (*Ursprungsprinzip*) objects are constructs of thought. Thus he opposed Kant's notion of the "thing-in-itself" (*Ding an sich*), according to which there lies behind the object that we know an object which can never be known as it really is. For Kant, the action of reason is confined to the creation of associations between sensations, which are given. For Cohen, sensation merely describes the problem posed to thought.

Describing the method of science, Cohen holds that the scientist posits certain basic principles which help him to determine the facts, but as his research progresses he is required to revise these underlying principles and to conceive new hypotheses, which, in turn, lead to the discovery of new facts. In accordance with this view, our knowledge of reality at any given time is determined by the particular stage of this process, and since this process has no end, a person can never have a final knowledge of reality.

Considering ethics, Cohen held that human freedom is the basis of ethics, and constructed a parallel system to that of natural science, ruled by causality. Human dignity is central to Cohen's ethical thought. A proponent of humanistic socialism, he regarded a nation's treatment of its working classes as

an index of its level of morality. While he called Marx "God's historical messenger," he rejected historical materialism as well as the atheistic trends prevalent in the workers' movement. He viewed religion, represented by the Biblical prophetic call for justice, as a revolutionary step towards systematic ethics. Cohen accordingly perceived Judaism, based on this prophetic vocation, which manifested itself in radical notions like that of the Sabbath, as a cornerstone of moral culture.

Defense of Judaism

A short time after his appointment as professor at Marburg, Cohen was obliged to declare publicly his attitude to "the Jewish question." When the historian Treitschke attacked the German Jews in his *Ein Wort ueber unser Judentum* (1879), defining Judaism as the "national religion of an alien race," Cohen countered with his *Ein Bekenntnis zur Judenfrage* (1880), in which he professed the total integration of German Jewry into the German society "without any double loyalty," yet demanding at the same time that the Jews take their religion seriously. In 1888, Cohen was called upon to testify in a lawsuit against an antisemitic teacher who had clamed that according to the Talmud, Jews are permitted to rob and deceive gentiles. Cohen published his testimony in a pamphlet called "Die Naechstenliebe im Talmud" (Love of the Neighbor in the Talmud, 1888), in which he set out to harmonize two apparently contradictory notions that are the basic of Judaism: the idea of the election of Israel, and the idea of the messianic unity of mankind. The connecting link is provided by the concept of God as the protector of the alien. The vocation of Israel begins with the fact of its chosenness, but since God is conceived from the outset as one who loves the stranger, Israel's chosenness is directed primarily at the unity of mankind.

Throughout his Marburg period Cohen viewed religion as merely a popular, nonconceptual form of ethics and believed that its aim is to be realized within ethics. Nevertheless, the idea of God played a much more central role in his ethics than in Kant's theory. Ethics provides mankind with an eternal ideal, whereas nature knows no eternity. It is here that Cohen introduces his postulate of God. This formulation of the postulate of God reflects Cohen's strong emphasis on ethics as the will to realize the ethical demand and make it part of reality, rather than the Kantian emphasis on the ethical as "practical reason."

Change in Attitude toward Religion

Cohen's move from Marburg to Berlin at the age of seventy was more than a change of place; it reflected an attempt to deepen his preoccupation with Jewish philosophy and life, and to focus on religious philosophy in general and Jewish thought in particular. This shift was manifested, among other things, in his journey to meet Polish Jewry in 1914 in order to assist in the foundation of an independent institute of higher learning for Jews who found it difficult to be admitted to universities, and his contact with the life of the Jewish masses in Vilna and Warsaw. From 1912 till his death he was primarily a Jewish philosopher and educator.

Although he had already dealt with religion in his previous books, it was only now that Cohen started to realize his old idea of dealing systematically with the role and content of religion. In 1915 he published *Der Bergriff der Religion im System der Philosophie* ("The Concept of Religion within the System of Philosophy," second edition, Zurich, 1996). In contrast with his earlier understanding of religion, Cohen now sought to determine the role and conceptual content of religion, and to define its place within the rational universe of philosophy. Religion is no longer a nonconceptual popular ethics, but rather a teaching that borders metaphysics, ethics, aesthetics and psychology. Furthermore, religion can be scientifically understood only through an analysis of these boundaries, although no solely rational approach has the capacity of exhausting its quality and content. Nevertheless, Cohen makes clear that religion can maintain this unique independent content only through its strong attachment to ethics.

At the heart of religion and of its relationship to ethics is the concept of the individual, which ethics as a philosophical system must ignore, and at the same time desperately needs. Ethics is based on the notion of duty that the individual has, his or her moral decisions and responsibility. At the same time, ethics, as it was being thus understood in the Kantian and neo-Kantian tradition, must "overcome" the individual. A deed is moral only when it is the right deed for every human being in the given situation. Neither the doer of the moral deed nor the person towards whom it is being aimed can be really seen as individuals, only as particular manifestations or examples of universal humanity. Only monotheistic religion, focusing on the correlation between the one God and the individual, can allow us to focus on the concept of the individual, and thus provide ethics with grounding and stability.

It is apparent that Cohen was not fully satisfied with his 1915 formulation of religion and reason. A very short time after releasing this book he started to work on his last book, *Religion der Vernunft aus den Quellen des Judentums*, which was published posthumously in 1919 (2nd edition, 1928; English: *Religion of Reason Out of the Sources of Judaism*, New York, 1972; also in Hebrew and other languages). Three main new focuses were emphasized in this title. First, when in the former book Cohen spoke about "religion" in general, meaning monotheism, now he clearly wishes to focus on Judaism and its sources as the *Urquelle*, ground-sources, of religion of reason. Second, the universe in which he places that religion is no longer "philosophy" but "reason" (*Vernunft*), a concept that should include not merely philosophy but also the unique teachings of religion in general, and Judaism in particular. The last emphasis is that religion can be analyzed and investigated only through a hermeneutical effort to understand its literary sources. These sources of Judaism – initially, the Hebrew Bible, but also rabbinic literature as well as medieval Jewish philosophy – bear a unique body of knowledge and reason. Analyzing religion's boundaries with ethics and aesthetics, and to a lesser extent with history and psychology, can be useful, but religion can be genuinely comprehended only from

within, from its sources. These three elements, especially the last one, deeply manifest Cohen's life-long attachment to Maimonides, an attachment that was balanced only by his parallel attachment to Kant.

Cohen's new approach to the essence of religion can be fully traced in his notion of religious love. In his early works, Cohen viewed love as a mere affection, used by religion in a way that is legitimate, but proves that religion is of no scientific, rational nature. His *Religion of Reasons* reflects a fundamental change in his approach. The book's first chapter deals with the monotheistic concept of God, and emphasizes that in the religion of reason, the qualitative uniqueness of God (*die Einzigkeit Gottes*) as the only true Being is more essential than the quantitative oneness of God (*Die Einheit Gottes*). In chapter 2, Cohen, (clearly, if implicitly, reflecting the influence of Friedrich Schleiermacher) asks how one can depict the monotheistic person. Cognition cannot suffice, for cognition always has many objects; it is only love that can determine the monotheistic focus of human life. Here, love is no longer an affection but rather a course of life and an act of reason.

Love as an approach that represents the religion of reason, is directed foremost to our fellow humans. Ethics deals only with the person that I find besides me, the *Nebenmensch*. It defines my duties to that individual without relating to her or his individuality. Religion teaches me to relate to that person as the one who is with me, my *Mitmensch*, as an individual, whose uniqueness, her or his being here-and-now, are the source of my love and responsibility to him or her. Through the *Mitmensch* one also learns to perceive oneself as an individual. The other's individuality is manifested in his or her suffering, whereas the self's individuality is manifested in his or her sinfulness. In both cases, individuality is marked by incompleteness.

Nevertheless, sin cannot and should not rule life, nor should it define the "I." Cohen, following the teachings of the prophets Ezekiel and to a lesser extent Jeremiah, places repentance and atonement at the heart of religion. Every individual can free himself or herself from sin, can recreate himself anew. Repentance is thus the ground for the correlation between God and the human, and for human freedom and responsibility. Repentance (as a human act) and forgiveness (the divine reply to this act, that expresses God's goodness) depict the essential core of religion, and the ground of ethics provided by Jewish monotheism.

The concept of correlation is a key concept in Cohen's philosophy. It appeared already in his early books, referring to a logical reciprocal relationship between concepts that are developed from each other according to the "principle of origin." In *Der Begriff der Religion* the concept was used for the first time to describe the mutual relationships between God and the human, clearly referring to both as theoretical concepts rather than personalities. In *Religion der Vernunft*, correlation plays a major role, and refers to the dynamic relationships, to the *Mitmensch* and also to the divine-human reciprocal relationship. Cohen's readers developed different understandings of the meaning of these relationships. Some scholars follow Franz Rosenzweig's reading that correlation refers here to the biblical notion of covenant, arguing that in *Religion der Vernunft*, Cohen's God is no longer mere idea but rather personality. Others stick to Cohen's usage of the concept in his early philosophy, depicting *Religion der Vernunft* as a direct continuum of Cohen's early philosophy rather than a breakthrough from his idealism.

Cohen emphasizes that Judaism is not the sole manifestation of the religion of reason, though his approach to Christianity, the only other religion being referred to in the book, is quite polemical. As a unique form of monotheism, carrying the quality of an *Urquelle*, the existence of Judaism, and hence of the Jewish people, is of universal significance. Cohen clearly views the Jews as a people rather than merely a community of faith, yet draws from this view no Zionist conclusion. To the contrary, he sharply opposed Zionism, viewing it as a betrayal of Judaism's messianic universalistic horizons, and advocated the continued existence of the Jewish people as a national minority ("nationality") within the various nation-states ("nations"). This anti-Zionist approach was expressed in his article "Religion und Zionismus" (1916; *Juedische Schriften*, 2 (1924), 319–27).

The religious significance of Jewish existence was one of the bases for Cohen's devotion to Jewish religious law. Using Kantian terminology and criteria, he argues sharply against Kant's notion of autonomy and the philosopher's negation of Jewish law. Cohen interprets "*mitzvah*" to mean both "law" and "duty." The law originates in God, the sense of duty in man. The law is at the same time duty; duty at the same time law. God issued commandments to man, and man of his own free will takes upon himself the "yoke of the commandments." With the "yoke of the commandments," one simultaneously accepts the "yoke of the kingdom of God." Thus, the law leads to the messianic ideal.

COHEN, HIRSH (1860–1950), Canadian rabbi. Cohen was born in Budwicz, Russian Poland, and was educated at the Volozhin Yeshivah. He obtained his *semikhah* from R. Jacob David *Willowski (Ridbaz). He immigrated to Montreal, Canada, in 1889 or 1890. After a short period in Chicago, during which he qualified as a *shoḥet*, he returned to Montreal as a *shoḥet*, teacher, and preacher. He became superintendent of

Montreal's Talmud Torah in 1901 and began functioning as a rabbi. Supported by his older brother, Lazarus Cohen, a prominent communal leader, and by Hirsch *Wolofsky, publisher of Montreal's Yiddish daily, *Keneder Adler*, Cohen began a protracted struggle to become preeminent in Montreal's immigrant Orthodox rabbinate in the area of the supervision of *kashrut*, facing such rivals as Rabbis Simon Glazer and Yudel *Rosenberg. His efforts culminated in 1922 with the founding of the Jewish Community Council of Montreal (*Va'ad ha-Ir*). He became head of the Council's rabbinical body (*Va'ad ha-Rabbanim*), and thus widely recognized as Montreal's chief rabbi. He struggled to maintain the integrity of the Council and its monopoly over *kashrut* supervision in Montreal in the face of numerous challenges. He was active in Jewish communal issues, in particular those related to Jewish education and Zionism. He was well known as a public speaker in Yiddish and often published his speeches in the *Keneder Adler*. He retained the title of chief rabbi to his death, though he was not active in his last years due to illness.

[Ira Robinson (2nd ed.)]

COHEN, H. RODGIN (1944–), U.S. lawyer. Born in Charleston, W. Va., Cohen graduated from Harvard University in 1965 and Harvard Law School three years later. He also earned a law degree from the University of Charleston in 1998. After two years in the Army, Cohen joined the old-line law firm Sullivan & Cromwell in 1970 and was assigned to the firm's banking practice. For more than 30 years, Cohen was a sought-after counselor to chief executives of the industry's largest institutions, including the Bank of New York, First Union, and Societé Générale, advising on 10 of the 15 largest bank mergers in the 1990s. As part of a team in late 1980, Cohen represented several banks in the exchange of billions of dollars worth of frozen Iranian assets for American hostages held in Iran. He was involved in the consolidation wave, including the mergers of Chemical and Chase Manhattan, Wells Fargo and Norwest, and First Union and Corestates. He became chairman of Sullivan & Cromwell in 1999. The firm had more than 525 lawyers and its clients included Disney, Goldman Sachs, and Microsoft, making it one of the most profitable law firms in the United States.

[Stewart Kampel (2nd ed.)]

COHEN, I. BERNARD (1914–2003), U.S. historian of science. Cohen was born in Far Rockaway, New York. He was an expert on Benjamin Franklin and Sir Isaac Newton. Most of his professional life was spent at Harvard University, where in 1937 he received his B.Sc. in mathematics, subsequently becoming the first American to receive a Ph.D. in the history of science (1947). He transformed Harvard's undergraduate and postgraduate program on the history of science into a department and in 1977 became Victor S. Thomas Professor of the History of Science. After retiring in 1984, Cohen continued to teach at Harvard, Brandeis University, and Boston College. The fruits of his polymath skills included *Science and the Founding Fathers* (1995), which deals with the contribution of scientific thought to the authors of the American Constitution, and the first English translation of Newton's *Principia Mathematica* (with Koyre and Whitman) since 1729 (1999). He served as president of the most influential national and international organizations concerned with the history of science and was accorded the discipline's most prestigious honors.

[Michael Denman (2nd ed.)]

COHEN, ISAAC KADMI (1892–1944), French Zionist writer and lawyer. Born in Lodz, Poland, and educated at the Herzliah gymnasium, Tel Aviv, Kadmi Cohen later settled in Paris, where he became a lawyer. A man of the French left, he was a Zionist of the extreme right, surpassing the Revisionists in his *Etat d'Israël* (1930), which called for a Jewish empire stretching from the Nile to Iraq. While interned at Compiègne in 1941–42, he organized the Massadah Zionist club to counteract the prevalent assimilationism of other imprisoned French-Jewish intellectuals. Believing a Nazi victory to be inevitable, he concluded that the Germans might agree to a mass evacuation of European Jews to Erez Israel and reputedly sent a memorandum to Hitler recommending this "solution." He was finally deported to the Gleiwitz concentration camp and is thought to have died in Auschwitz.

Kadmi Cohen's son by his marriage to a French Catholic was the writer JEAN-FRANÇOIS STEINER (1938–). Distressed by the terrible death of a father whom he had never known and haunted by the conflicts of his own identity, Steiner spent a year in Israel at the age of 17 in search of an answer to his dilemma. This eventually took the form of a book, *Treblinka* (1966; Eng. ed., 1967), a dry and unemotional mixture of fact and fiction based on the documents he had studied at *Yad Vashem and interviews with concentration camp survivors. Although it contained gripping descriptions of Jewish resistance to the Nazi genocide program, *Treblinka's* rejection of the Diaspora – an unconscious echo of Kadmi Cohen's views – and its underlying assumptions met with wide protest. Steiner advanced his own theory of Jewish "complicity" in the "final solution," based on his idea of the sanctity of life in Jewish tradition. The book aroused controversy and survivors whose names had been used published *La vérité sur Treblinka* (1967), in which documented facts were printed in opposition to Steiner's theory. In 1967 Steiner married the granddaughter of Field Marshal Walter von Brauchitsch, the commander in chief of Hitler's army.

COHEN, ISRAEL (1879–1961), writer and Zionist. Born in Manchester, the son of a tailor, and educated at Jewish schools, Manchester Grammar School, and London University, Cohen was active in the Zionist movement from the mid-1890s. In

1910 he became the English-language secretary of the Zionist Central Office in Cologne, which later moved to Berlin. During World War I (until 1916) he was interned in a prison camp in Germany. In 1918 Cohen rejoined the secretariat of the World Zionist Organization, and was professionally active in the Zionist movement for the rest of his career. Touring Poland and Hungary to investigate the condition of Jews after the war, he reported on the current pogroms and discrimination. On behalf of the Zionist Organization he visited the Jewish communities of Egypt, Australia, China, Manchuria, Japan, Java, India, and of other countries. From 1922 he was secretary of the Zionist Organization in London and edited the reports of the Zionist Executive to several Zionist Congresses. One of the early Zionist journalists and writers in Great Britain, Cohen published articles in Jewish, Zionist, and other English-language journals. His books include *Jewish Life in Modern Times* (1914), *The Zionist Movement* (1945), *Contemporary Jewry* (1950), *A Short History of Zionism* (1951), *Travels in Jewry* (1953), and *Theodor Herzl: Founder of Political Zionism* (1959). He also published pamphlets on Jewish affairs, Zionism, and antisemitism. In 1956 he published an autobiography, *A Jewish Pilgrimage.*

[Josef Fraenkel]

COHEN, ISRAEL (1905–1986), Hebrew literary critic and editor. Cohen spent his childhood in Galicia and Czechoslovakia and later studied in Buczacz and Lemberg. Active in Zionist youth movements, he immigrated to Palestine in 1925, and was a leading member of Ha-Po'el ha-Ẓa'ir and later Mapai. In 1934 he was appointed to the editorial board of the weekly **Ha-Po'el ha-Ẓa'ir* and was its editor from 1948 until it ceased publication in 1970. Active in the writers' association, he edited many of its publications, including the monthly *Moznayim*. Cohen wrote extensively on literature. His books include: *Ha'arakhot u-Vavu'ot* (1938) and *Gesharim* (1955), essays on the labor movement. In 1962 four volumes of his selected works appeared: *Sha'ar ha-Soferim, Sha'ar ha-Havḥanot, Sha'ar ha-Te'amim*, and *Ishim min ha-Mikra*. He also published several compilations of epigrams, including studies of parallel Hebrew, German, and English sayings (1954, 1960). Cohen's articles are excellent examples of eclectic analysis. His essays, written in an outstanding Hebrew style, generally describe and define the literary scene and the works or their authors. On his 75th birthday, Nurit Govrin edited *Sefer ha-Yovel* (1980). Cohen's correspondence with *Agnon and with David *Ben-Gurion, *Ḥilufei Mikhtavim*, appeared in 1985.

[Getzel Kressel]

COHEN, JACK JOSEPH (1919–), Reconstructionist rabbi and educator. Cohen was born in Brooklyn, New York, earned his B.A. from Brooklyn College in 1940, and received his M.H.L. and ordination from the Conservative movement's *Jewish Theological Seminary in 1943. He studied at the Hebrew University of Jerusalem even before the creation of the State of Israel and received his Ph.D. in education from Columbia University's Teachers College in 1958. He was awarded honorary D.D. degrees from both the Jewish Theological Seminary (1968) and the Reconstructionist Rabbinical College, which simultaneously bestowed on him its Keter Torah Award (2000).

After serving as educational director of the Park Synagogue in Cleveland, Ohio (1943–45), Cohen was named director of the Jewish Reconstructionist Foundation, where, for the next 10 years he oversaw the activities and institutions of the growing movement. In the cause of promoting Reconstructionist Judaism, he published educational material (such as *Zionism Explained*, *The Theology of the Jewish Prayer Book,* and a study guide for Milton *Steinberg's *A Partisan Guide to the Jewish Problem*); created *havurot*; lectured widely throughout the United States; and was associate editor of the *Reconstructionist* magazine. But his efforts to convince the Reconstructionist laity to support the opening of an office in Israel, to establish a camping program, to develop a training program for teachers, and a variety of other activities were ultimately frustrated. During his tenure, the Federation of Reconstructionist Congregations was formed. In 1953, he became educational director of the Society for the Advancement of Judaism, the Reconstructionist congregation founded in New York City 30 years earlier by Mordecai *Kaplan. In 1954, Cohen was also named rabbi of the SAJ, where he is credited with a number of educational innovations, including setting up experimental schools and establishing a year-long program of study for bat- and bat mitzvah students and their parents.

Although clearly identified with Reconstructionism, Cohen remained associated with the Conservative movement. He was a lecturer at the Jewish Theological Seminary (1955–61) and chairman of the United Synagogue Commission on Jewish Education (1960–61). In 1961, Cohen moved to Israel and assumed the directorship of the B'nai B'rith Hillel Foundation at the Hebrew University, serving until 1984. He maneuvered skillfully to permit expressions of religious pluralism while resisting Reform and Conservative attempts to import denominational divisions into Israel. He also worked to improve Arab-Jewish relations on campus and widened the scope of Hillel. In 1970, Cohen joined the faculty of Jerusalem's David Yellin College of Education (1970–83), on whose board he also served. He also taught students of the Reconstructionist Rabbinical College who were studying in Israel (1970–2002).

In 1962, Cohen was instrumental in founding the egalitarian Congregation Mevakshei Derekh, widely considered the first Reconstructionist synagogue in Israel. He served as the first chairman of Mevakshei Derekh for several decades and, although he never took the official title of rabbi, has always been acknowledged as its de facto spiritual leader. In

1984, the congregation was able to move into its own permanent building.

Cohen wrote numerous articles for Anglo-Jewish and Hebrew journals, as well as many chapters in scholarly compilations. He also wrote eight books, including several on philosophy and education. These include *The Creative Audience* (with Rebecca Imber, 1954), *The Case for Religious Naturalism* (1958), *Jewish Education in a Democratic Society* (1964), *The Reunion of Isaac and Ishmael* (1989), *Morim Lizman Navokh* (Hebrew, 1993; English version: *Guides for an Age of Confusion: Studies in the Thinking of Avraham Y. Kook and Mordecai M. Kaplan*, 1999), *Major Philosophers of Jewish Prayer in the 20th Century* (2000), *Judaism as an Evolving Civilization* (with Yosef Begun, in Russian, 2001). Cohen also served on the editorial board of the *Reconstructionist*.

In Israel, Cohen became a member of the Ministry of Education's Committee on Culture and Leisure Time and chairman of the Israel Interfaith Association, which brings together Jews, Christians and Muslims for dialogue.

[Bezalel Gordon (2nd ed.)]

COHEN, JACOB RAPHAEL (1738?–1811), U.S. *ḥazzan*. Cohen was born in North Africa. He served as *ḥazzan* in England before being sent to Montreal's Congregation Shearith Israel in 1778. Bound again for England, Cohen was detained in New York, and became minister of Congregation Shearith Israel there (1782–85). Later he replaced *ḥazzan* *Seixas in Philadelphia's Congregation Mikveh Israel, remaining in that office until his death. Cohen was frequently called upon to fulfill all ritual functions. He kept a meticulous record of marriages, circumcisions, deaths, and memorial prayers, an important source of data for Jewish history in Montreal, New York, and Philadelphia. He was assisted by his son, Abraham Hyam Cohen (d. 1841), who succeeded him.

[Malcolm H. Stern]

COHEN, JACOB XENAB (1889–1955), U.S. Reform rabbi. Cohen was born in New York City and began studying for the rabbinate only after starting a career as a civil engineer. He received his rabbinic ordination and M.H.L. degree at the Jewish Institute for Religion in 1929 and was appointed associate rabbi and executive secretary of the Free Synagogue in New York that same year. He also served as executive secretary of its philanthropic institute, the Free Synagogue Social Service Inc., and bursar of the Jewish Institute for Religion. In 1939, he became president of the New York Board of Jewish Ministers (renamed the New York Board of Rabbis in 1946) and was credited with revitalizing the organization and its various missions. He was the first to recognize the importance of public relations for the Jewish community, of cooperation with other religious and philanthropic bodies, and of the special impact of radio for educating the general public about Judaism. During his chairmanship, the Board was recognized to be on a par with the Catholic Diocese and the Protestant City Mission Society for the designation of chaplains, and Cohen was appointed the first Jewish member of the Mayor's Committee on Chaplaincy. In 1948, as chairman of the New York Board of Rabbis' Chaplaincy Committee, Cohen inaugurated, with the Psychiatric Department of Mount Sinai Hospital, a Chaplaincy Institute for the scientific training of chaplains serving in city, state, and federal institutions. An activist, Cohen was a member of the Governing Council of the American Jewish Congress, and chairman of its National Commission on Economic Problems; his widely circulated reports – *Jews, Jobs and Discrimination, Helping to End Economic Discrimination,* and *Towards Fair Play for Jewish Workers*, among many others – called attention to the issue of antisemitism in the workplace. At the same time, he spoke out about discrimination against other minorities as well. He also investigated the problem of restrictive quotas against Jewish applicants to U.S. medical and dental schools for the AJ Congress Special Committee on Discrimination in Medical Schools. He traveled widely throughout the world, interviewing government leaders in North America, Latin America, and Europe, warning about the rise of Nazism and documenting antisemitic outbreaks for the World Jewish Congress. Cohen also chronicled *Jewish Life in South America,* publishing a book under this title in 1941. He is the subject of a biography, *Engineer of the Soul*, written by his wife, Sadie Alta Cohen (1961).

[Bezalel Gordon (2nd ed.)]

COHEN, SIR JOHN EDWARD (**Jack**; 1898–1979), British businessman and philanthropist. Born Jacob Edward Kohen in the City of London, Cohen worked in his father's ladies' tailoring shop in the East End, before joining the Royal Flying Corps in World War I. After the war he used his army bonus of $150 to open a food stall in a London market. By World War II he had built up a company of over 100 grocery stores in London and in Great Britain. After the war he built a chain of more than 500 supermarkets, groceries, and discount houses. He incorporated these into Tesco Stores (Holdings) Limited and associated companies and was chairman of its board. By the 1960s Tesco was one of the best known of High Street retail chains, and Sir Jack Cohen was virtually a household name as a prominent entrepreneur. In 1967 Cohen opened the first Tesco Superstore, vastly larger than previous branches. He was an active worker for the Joint Palestine Appeal. He established the Shirene Home apartments for elderly people at Herzliyyah, Israel. Cohen was knighted in 1969 and retired in 1970.

BIBLIOGRAPHY: S. Aris *Jews in Business* (1970), index. **ADD. BIBLIOGRAPHY:** M. Corina, *Pile It High, Sell It Cheap: The Authorised Biography of Sir Jack Cohen* (1971); D. Powell, *Counter Revolution: The Tesco Story* (1991); DBB, I, 724–29; ODNB online.

COHEN, JOHN MICHAEL (1903–1988), English critic and translator. A businessman turned writer, Cohen published many Penguin Classics that bear the stamp of mature reflection and wide reading. His works include translations of Cervantes' *Don Quixote* (1950), Rabelais' *Gargantua and Pantagruel* (1955), and *Montaigne's Essays* (1958); *History of Western Literature* (1956); *The Penguin Dictionary of Quotations* (1960); *Latin American Writing Today* (1967); and a series of comic verse anthologies.

COHEN, JOHN SANFORD (1870–1935), publisher, U.S. senator. Cohen of was the scion of an old American family. His father, Phillip Lawrence Cohen (1845–1882), who had surrendered with Lee at Appomattox, was descended from Portuguese Jews who had settled in Savannah, Georgia, in the early 18th century. His mother, Ellen Gobert (Wright) Cohen, was the daughter of Major General Ambrose Ransom Wright, "a distinguished commander in the Confederate army and a lieutenant-governor of Georgia," and Mary Hubbell Savage, "a descendant of Thomas Savage (1594–1627), who came from England and settled in Virginia in 1607."

Cohen received a private education at various prep schools in Virginia and Maryland. After a year at the United States Naval Academy in Annapolis, Maryland, he returned to Augusta, where he served a two-year apprenticeship on the *Augusta Chronicle*, one of the South's oldest and most respected newspapers and long owned by Cohen's maternal grandparents. At 18, he went to Mexico as secretary to Captain William G. Raoul, the builder of the Mexican National Railroad. In 1889, he moved to New York, becoming a reporter on Joseph *Pulitzer's *New York World*. The following year, Cohen returned to Georgia, where he went to work for the *Atlanta Journal*, a connection he would maintain for the rest of his life.

During President Grover Cleveland's second administration (1893–97), Cohen became Washington correspondent for the *Journal* and private secretary to Interior Secretary Hoke Smith. On the outbreak of the Spanish-American War in 1898, he sailed to Cuba with the American fleet as a correspondent for the *Journal*. When the call went out for volunteers, he returned to Georgia and was commissioned as a first lieutenant in the Third Georgia United States Volunteer Infantry. Promoted to major, he went with the army of occupation to Cuba. After the war, Cohen became the *Atlanta Journal*'s managing editor; eventually he was named the paper's president. Under his guidance, the *Journal* became the first newspaper in the South (and the second in the nation) to establish a radio station – WSB, the "Voice of the South," which went on the air from the roof of the Journal Building in March 1922. A visionary, Cohen directed his paper to use wire-service photos as early as 1930.

"The Major," as he was known, was elected Democratic national committeeman for Georgia in 1924. He was reelected to that post in 1928 and 1932. In April 1932, Georgia's senior Senator, William J. Harris, unexpectedly died. Cohen was appointed to replace him until a special election could be held. Cohen, who had been named vice chair of the Democratic National Committee, decided not to run for the remaining four years of his Senate term. He decided that it would be better to put all his political energies into campaigning for Franklin D. Roosevelt. A patron of art, music, and education, Cohen was instrumental in reestablishing the Lee School of Journalism at Washington and Lee University in Virginia.

[Kurt Stone (2nd ed.)]

COHEN, JOSEPH (1817–1899), French publicist and lawyer. Born in Marseilles, he practiced law in Aix-en-Provence, and was delegated by the French government to study the condition of Algerian Jewry. In 1845 he was appointed head of the Algerian *consistory. He returned to Paris in 1848, thereafter devoting his time to journalism. He edited (1860–62) the first Jewish weekly in France, *La Vérité israélite*, contributed to the monthly *Archives israélites*, and was editor of *Le Pays* (1853), *La France* (1860–68), and *La Presse* (1871). His works include *Les Déicides* (1861), a critical investigation into the life of Jesus and the Gospels, and *Les Pharisiens* (2 vols., 1877). Cohen represented the Algerian Jews at the Central Consistory from 1868.

BIBLIOGRAPHY: Rosenstock, in: JSOS, 18 (1956), 41–42, 48–49, 51–52.

COHEN, JOSEPH ISAAC (1896–1981), Sephardi congregational rabbi and communal leader in Havana and Atlanta and active Zionist. Born in Istanbul, Cohen was educated at an Alliance Israélite Universelle school, the prestigious Galata Saray gymnasium, and studied law at the university. In the Turkish army, he rose to the rank of captain in intelligence and served from 1915 to 1918 in the Dardanelles, Syria, and Ereẓ Israel. He was taken prisoner by the British in Beersheba. After the war, he remained in Ereẓ Israel, working for the Jewish Agency and the Jewish National Fund; he then immigrated to Cuba in 1920. He set up a Jewish day school, Colegio Herzel, and served as its headmaster, and as an active Zionist, he was cofounder of the Zionist Organization and the Jewish National Fund in Cuba. He served as an active spokesman for the Jewish community in its dealings with the Cuban authorities. In 1930, after being ordained privately by local rabbis in Cuba, he became head of the Sephardi congregation *Shevet Ahim Union Hebrea* in Havana.

Cohen subsequently served the Atlanta Sephardi Congregation Or Veshalom of Rhodian and Turkish Jews from 1934 until his death in 1981. In 1935, he reorganized the Talmud Torah, added a Sunday religious school for pre-kindergarten until 10th grade, and hired accredited teachers for both.

He encouraged his Sephardi congregants to become active and integrate into the general Jewish community and

Federation philanthropic activities. He placed emphasis on giving to charity locally for orphans, Jewish welfare needs, and causes in Israel and elsewhere abroad, i.e., through the Jewish National Fund, and the return of *Marranos to Judaism in Oporto, Portugal.

For his efforts, he received the Bringer of Light award from the Jewish National Fund of America, and in 1969 he was elected president of the newly formed Atlanta Rabbinical Association.

Upon retirement in 1969, he was elected rabbi emeritus of his congregation and continued serving the congregation and community until his death. He was succeeded by Rabbi S. Robert Ishay, a native of Morocco, who had served previously in Manchester and Rhodesia.

[Yitzchak Kerem (2nd ed.)]

COHEN, JUDAH (c. 1700), community leader of Algiers and diplomat serving the ruler of Tunisia, Murād Bey. In 1699 Cohen was authorized by the bey and his council to negotiate a peace treaty and trade agreement with the Dutch government. This assignment involved regular contacts with Tripoli, Tunisia, Algeria, and the Netherlands. A number of Jews helped him to carry out the negotiations, but they were conducted in a careless manner and lasted six years, 1702–08, instead of the sixteen months originally stipulated. Cohen made use of his high position to benefit the Jews.

BIBLIOGRAPHY: Hirschberg, Afrikah, 2 (1965), 124–6.

COHEN, JULIUS BEREND (1859–1935), British organic chemist. Born in Manchester. Cohen taught there until 1891, when he joined the Yorkshire College, Leeds, faculty. When this became University of Leeds (1904), he was appointed its first professor of organic chemistry. He is known for three textbooks: *Chemistry* (1902); *Organic Chemistry for Advanced Students* (1907); and *Class Book of Organic Chemistry* (1917). He was a Fellow of the Royal Society.

COHEN, LEONARD (1934–), Montreal-born poet, novelist, and songwriter whose work was uniquely influential through the late 1960s and early 1970s. Cohen's background differentiated him from the Jewish writers of Montreal, who had grown up before him on the hardscrabble streets of the downtown. His family were pillars of the community, ensconced in a grand Westmount home near the hilly Murray Hill Park, which he turns into an iconic landscape in his fiction.

Although Cohen's poetic career was nurtured by the rich literary life of Jewish Montreal, and the burgeoning modernist movement centered around a few older poets and teachers, his broader impact as a writer came with his ability to enter the international scene through his songwriting. There are thus two Cohens – one a contributor to an established line of poetic inheritance, intimately linked to his birthplace; the other a pop troubadour whose songs speak to audiences in Poland, Finland, and New York as directly as they do to Canadians.

In the early 1960s this division was not so easily felt, as poems that appeared in his early books were reworked into successful songs. His first album, *Songs of Leonard Cohen*, appeared in the same year that his *Selected Poems* was published. The particular style and tone of his poetry were well suited to the blend of folk, country, and blues that informed such records as *Songs from a Room* (1969). In the early 1970s Cohen began to express a diffidence with his poetic gifts and distanced himself from his audience in the darkly ironic poems collected in *The Energy of Slaves* (1972). This persona of the divided poet returns in his collection *Death of a Lady's Man* (1978). In it, the left-hand page presents a poem, which is then critiqued on the facing page. Around the same time, Cohen released *Death of a Ladies' Man*. This project distanced Cohen from the constituency of listeners who had fallen for songs like "Suzanne" and "Bird on the Wire." Cohen's movement through poetry, novels, and on to popular songwriting suggested a restless and multitalented artist who is both drawn to and repelled by fame.

Much of Cohen's work is informed by his Jewishness, although often in shadowy and ambiguous ways. *Let Us Compare Mythologies* (1956), *The Spice-Box of Earth* (1961), and *Flowers for Hitler* (1964) revealed a voice informed by subtle humor, Judaic imagery, and pop cultural savvy. His first novel, *The Favourite Game*, is a lyrical portrait of a charmed Westmount adolescence, not unlike Cohen's own. Among his best albums is *New Skin for the Old Ceremony*, which reworks Jewish liturgical imagery (especially that of Yom Kippur) in powerfully strange and simple folk-blues anthems. Even *Beautiful Losers* (1966), Cohen's final novel, is underwritten by the predicament of what his narrator provocatively calls the "New Jew," inheritor of a tradition transformed into some grotesque yet compelling version of its once more coherent self. But the novel reaches beyond Cohen's established themes and lyrical tones for a more all-encompassing portrait of Canadian identity in a nascent multicultural era. The combination of cultural influence in the novel is representative of Montreal's mixed heritage, as French, English, Mohawk, and Jewish settlements on the banks of the St. Lawrence are explored. The book in which Cohen places the greatest emphasis on Jewish language and imagery is his last published collection of new poetry, *Book of Mercy* (1984). In short psalm-like sections, the poet returns to the familiar subject matter of private and poetic pain, yet he does so in language that repeatedly echoes traditional Jewish prayer: "Blessed are you who has given each man a shield of loneliness so that he cannot forget you."

Leonard Cohen's oeuvre stands at the end of a line of inheritance beginning with the earliest Yiddish writers who settled in Montreal, followed by A.M. Klein and Irving Layton, both of whom influenced Cohen in his youthful work. Readers have had to accept a relative silence from Cohen since the

mid-1980s, when song and his growing position as a cultural icon took precedence over literary output.

[Norman Ravvin (2nd ed.)]

COHEN, LEVI-ABRAHAM (1844–1888), Moroccan journalist. Cohen was born in Mogador and lived in Tangiers. Here he founded *Le Réveil du Maroc* and also acted as correspondent not only for Jewish papers but also for the Agence Havas and the London *Times*, for which he wrote articles on the unfortunate situation of the Jewish and Muslim masses. Supported by such personalities as Sir Moses *Montefiore, Cohen acquired a considerable influence in the political and diplomatic circles of Morocco.

[David Corcos]

COHEN, LIONEL LEONARD, BARON (1888–1973), English judge and jurist. Born in London, he was admitted to the bar in 1913, made a king's counsel in 1929, a judge of the Chancery Division of the High Court in 1943, and Lord Justice of Appeal and a privy councillor in 1946. In 1951 he was named a peer as Baron of Walmer and sat in the House of Lords as a "Lord of Appeal in Ordinary" until 1960. He was chairman of the Company Law Amendment Committee (1943–45) and acquired renown as the author of the Companies Act of 1948, which became a model for company legislation in many countries. Notable among his public offices were his chairmanship of the Royal Commission on Awards to Inventors (1946–56) and of the Council on Prices, Productivity, and Incomes (1957–59) which was known as the Cohen Committee. Cohen followed his family tradition of general and Jewish public service. He was an active president of the Jewish Board of Guardians and also president of the Jewish Historical Society of England and of the Union of Liberal and Progressive Synagogues. He was vice president of the Board of Deputies.

[Israel Finestein]

COHEN, LYON (1868–1937), Canadian businessman, Jewish community leader. Cohen was the most eminent Montreal Jew of his time. He was born in Poland and immigrated to Montreal with his family in 1871. A successful businessman, Cohen began as a coal merchant and dredging contractor. He added a brass foundry and a major Montreal men's clothing manufacturing company to his business holdings. He eventually became head of the Montreal Men's Clothing Manufacturers' Association and led this organization during the bitter labor strikes of 1916 and 1917, finally agreeing to union demands for better working conditions.

Cohen was also associated with virtually all the major causes in the Jewish community's development. In 1897, Cohen, with Samuel Jacobs, founded Canada's first Jewish newspaper, *The Jewish Times*. The paper provided the Jewish community with a window on the rest of the Jewish world, a forum for debate, and a tool for educating new immigrants. He joined the drive to obtain equal rights for Jews in Quebec elementary schools, headed the Baron de Hirsch Institute, and spearheaded efforts to create the Federation of Jewish Charities. He presided over the Canadian Jewish Congress and committees to aid World War I sufferers in Eastern Europe. Cohen was active in the *Jewish Colonization Association, the Jewish Immigrant Aid Society, the Montreal Y.M.H.A., and other welfare efforts; he served for many years as president of Sha'ar Hashamayim synagogue.

[Gerald Tulchinsky (2nd ed.)]

COHEN, MARCEL (**Samuel Raphael**; 1884–1974), French linguist and philologist. Born in Paris, he studied at the Paris School of Oriental Languages from where he went on a study mission to Algeria. The results of this mission were summarized in his book, *Le parler arabe des Juifs d'Alger* (1912). In 1910 he was sent by the French Ministry of Education to Abyssinia where he collected material for his scientific research on linguistics and ethnography. Upon his return to Paris, the following year, he was appointed lecturer in Amharic at the School of Oriental Languages. After serving for four years as a soldier in World War I, Cohen became director of Ethiopian studies at the school. In 1924 he published his *Le système verbal sémitique et l'expression du temps* and in 1936 *Traité de langue amharique*. In these works he substantiated the proofs for *Benfey's thesis that all Semitic idioms and all branches of the Semitic-Hamitic language are of the same parentage. During World War II, he participated in the underground anti-Nazi resistance movement. After resuming his academic activities in 1945, Cohen published another important work in the field of Semitic linguistics, *Essai comparatif sur le vocabulaire et la phonétique du chamito-sémitique* (1947), and founded the research center for comparative Semitics, Egyptian, etc., called GLECS (*Group linguistique d'études du chamito-sémitique*). During this latter phase of his academic career he concentrated his research on the evolution of the French language and its social and cultural functions. In 1955 Cohen's friends published a jubilee volume to mark his completion of 50 years of academic activity. This book, *Cinquante années de recherches linguistiques* (1955), contained a list of all his books, essays, and articles.

COHEN, MARY MATILDA (1854–1911), journalist, belletrist, educationist, communal worker, and proto-feminist. Cohen was born into an intellectually distinguished upper middle-class Philadelphia family. Never marrying and financially independent, Cohen devoted her energies to a variety of religious, cultural, and communal causes in Philadelphia. She was a capable and enthusiastic organizer, serving as superintendent of the large Hebrew Sunday School started by Rebecca Gratz, acting as the first corresponding secretary of

the Jewish Publication Society, sitting on synagogue committees and philanthropic society boards, and joining numerous literary and cultural organizations. Cohen was at ease among the American Orthodox elite that associated with Mikveh Israel and was accepted within Philadelphia's progressive intelligentsia. She was a prolific writer, contributing to both the Jewish and general press under her own name as well as the pseudonym "Coralie." Cohen's literary output ranged from biography, social commentary, and essays on Jewish themes to short stories and poetry. The concerns that Cohen expressed in her writing reflected those of her intellectual and social milieu. She sought to advance the acceptance of acculturated Jews within American society by authoring articles that satirized prevailing prejudicial norms and criticized creeping racial antisemitism. She also sought to counter gender inequality within the Jewish community and wider society. Cohen was an advocate of universal education and argued for open access for women to professional training. She also pushed for improved religious education for Jewish girls, a greater role for women in the Jewish public sphere, and the ordination of female rabbis.

BIBLIOGRAPHY: D. Ashton, in: *American Jewish History*, 83, 2 (1995), 153–76; H. Morais, *The Jews of Philadelphia* (1894), 316–17; *American Jewish Yearbook*, 7 (1905), 48–49.

[Adam Mendelsohn (2nd ed.)]

COHEN, MATT (1942–1999), Canadian writer. Cohen was born in Ottawa and then moved with his parents to Kingston, Ontario. Later, he moved to Toronto and took advantage of a rich cultural moment, when the few square blocks around Spadina and College were becoming one of Canada's most exciting cultural and artistic centers. Despite frequent travels abroad, Toronto remained his most intimate personal landscape.

Cohen's most sustained attention to Jewish themes appeared in a trio of novels published in mid-career. Their themes were disparate: *The Spanish Doctor* (1984) explored the experience of Spanish *Marranos, while *Nadine* (1986) and *Emotional Arithmetic* (1990) focused on postwar Jewish identity, including the Holocaust. In the posthumously published *Typing: A Life in 26 Keys* (2000), Cohen expressed frustration with the Canadian reception of these books, suggesting that it was his foray into books with overtly Jewish themes that guaranteed them a chilly reception at home. The response of the Canadian literary establishment was abrupt and largely dismissive.

Cohen's was not a career in any way circumscribed by Jewish upbringing, Jewish values, or Jewish literary influences. He swam in the waters of the late-1960s counterculture without completely committing himself to its idealism; he took part in the explosion of small press publishing in Toronto; and he guided the Canadian Writers' Union. He is best known for a set of works dubbed his Salem novels, set in the countryside around Kingston, Ontario. He received acclaim for his final two novels, *Last Seen* (1996) and *Elizabeth and After* (1999). Other literary achievements include numerous excellent short stories, poetry, translations from French to English, and popular children's books, which he wrote under the pseudonym Teddy Jam. *Typing* takes the reader by surprise, with its recollection of the impact on Cohen of his immigrant grandparents and with its portrait of the particular struggle of one Jewish writer to find footing for himself in Canadian literature.

[Norman Ravvin (2nd ed.)]

COHEN, MAXWELL (1910–1998), Canadian legal scholar and teacher, public servant, international jurist. Cohen grew up in a secular middle-class family in Winnipeg's North End, and received his B.A. (1930) and LL.B. (1934) from the University of Manitoba, and LL.M. (1936) from Northwestern University with a thesis on Habeas Corpus. In 1937–38 he was research fellow at Harvard Law School studying anti-trust law. This led to a position as counsel for the Combines Investigation Commission (1938–40) and with the Department of Munitions and Supply (1940–41). Following a year freelancing for the *Christian Science Monitor* and several Canadian journals, he joined the Canadian army, reaching the rank of major, and in 1945–46 was head of Economics and Political Science at the Khaki University for Canadian soldiers in England. Drawn to education, he joined McGill University Law School in 1946 where he became an innovative legal educator. As dean of the Law School (1964–69), he introduced the National Programme combining training in common and civil law, subsequently McGill Law School's most distinctive characteristic. An acknowledged expert in international, constitutional and labor law, in 1951 he was named special assistant to the director general of the UN Technical Assistance Program and in 1959–60 a member of the Canadian delegation to the UN. He was frequently called upon to chair public inquiries.

Wartime revelations of Nazi atrocities and the birth of Israel awakened a sense of Jewish identity, and Cohen became very active in Montreal and national Jewish life, particularly through the Canadian Zionist Federation and Canadian Jewish Congress. As an English-speaking federalist in Quebec, he joined the Liberal Party and served as adviser on foreign and constitutional policies and relations with Israel in the 1950s. In 1965 he hoped to run for election in the heavily Jewish Montreal federal riding of Mount Royal but withdrew his candidacy in favor of Pierre Elliott Trudeau. He went on to head a Special Committee on Hate Propaganda in 1965–66 and the Royal Commission on Labour Legislation in Newfoundland in 1969–72 and was special counsel on constitutional law for the Government of New Brunswick (1967–70), president of the Quebec Advisory Council on the Administration of Justice (1972–74), and chair of the Federal Advisory Committee on the Law of the Sea (1971–74). From 1974 to 1979 he chaired the Canadian section of the International Joint Commission examining Canada-U.S. boundary waters. Leaving McGill as emeritus professor in 1978, he became professor of law and

scholar in residence at the University of Ottawa (1980–89) and adjunct professor at Carleton University. From 1981 to 1985 he represented Canada as ad hoc judge at the International Court of Justice, the Hague. A prolific writer throughout his career, the range and significance of his interests are apparent from the chapters he wrote in a 1993 Festschrift: international law, human rights, dispute settlement, public law, legal history, and the theory and practice of legal education. He received honors from the Canadian Bar Association, the Canadian Council of International Law, the Council of Christians and Jews, the Manitoba Bar Association, and Columbia University, and was awarded eight honorary doctorates and the Order of Canada (1976).

[James Walker (2nd ed.)]

COHEN, MORRIS (1911–), U.S. metallurgist. Born in Chelsea, Mass., Cohen received his doctorate from the Massachusetts Institute of Technology in 1936. He then joined the staff at MIT as an assistant professor, becoming an associate professor in 1941. He became professor of physical metallurgy in 1946 and professor of materials science and engineering in 1962. In 1975 he was nominated as Institute Professor at MIT and in 1982 Institute Professor Emeritus. During World War II he was associate director of the Manhattan Project investigating atomic fission. Among his many awards he received the National Medal of Science and Presidential Award in 1977. He wrote *Heat Treatment of High Speed Steel* (1946) and *Titanium in Steel* (1949). Cohen's major works were published from 1962 to 1983 in the fields of phase transformations, metallography, heat treatment of metals, diffusion in the solid state, thermodynamics of metal systems, mechanical behavior, tool steels, age-hardening of metals, and dimensional stability. In 1994 he published *Societal Issues in Materials Science and Technology*, followed in 1995 by *Societal Implications of Microalloying Steels*.

[Gali Rotstein (2nd ed.)]

COHEN, MORRIS ABRAHAM (1887–1970), military adviser. Cohen was born in London and sent by his father to Canada at the age of 16. There he made a living as a ranchhand, peddler, gambler, and real estate speculator, ultimately drifting to Edmonton, Alberta, where he became a ward boss in the Chinese quarter of the city. He lobbied successfully in 1913 in the provincial legislature for the repeal of the head tax clause in the Chinese Immigration Act, an action that earned him the gratitude of the local Chinese population.

In 1908 Cohen had become friendly with Sun Yat-sen, the Chinese nationalist leader then in exile. Cohen joined Sun Yat-sen in China as an aide in 1922, and later was also adviser to his successor, Chiang Kai-shek. Cohen helped organize the Kuomintang Army, which awarded him the rank of general, and from 1926 to 1928 functioned in all but name as the Nationalist war minister. He took part in military campaigns against both Communist rebels and the Japanese, and carried out several secret missions to Europe to purchase arms and organize support for the Nationalist forces. He was probably known as Two-Gun Cohen. In 1941 he was taken prisoner by the Japanese after their capture of Hong Kong and two years later he was repatriated to Canada. After 1949 Cohen visited China several times in an attempt to reconcile the split Chinese factions. He subsequently settled in Manchester, England.

BIBLIOGRAPHY: C. Drage, *The Life and Times of General Two-Gun Cohen* (1954).

COHEN, MORRIS RAPHAEL (1880–1947), U.S. naturalist philosopher. Born in Minsk, Belorussia, Cohen went to New York at the age of 12. He studied at City College, and later with the Scottish philosopher Thomas Davidson. At Harvard University, where Cohen earned his doctorate, he studied under William James and Josiah Royce. Cohen, known as an outstanding teacher, was appointed professor of philosophy at City College in New York in 1912 and continued teaching there until 1938. From 1938 to 1941 he was professor of philosophy at the University of Chicago. He was president of the American Philosophical Association in 1928. In the later years of Cohen's life, as a result of the rise of Nazism, he began to champion Jewish interests. In 1933 he founded the Conference on Jewish Relations, an organization that assumed responsibility for scientific research on Jewish problems. He relates the details of this organization's activity in his autobiography, *A Dreamer's Journey* (1949), which also is valuable for its commentary on the Jews of Cohen's generation. An early interest in the plight of the working class – his parents had actively participated in the Jewish workers' movement in New York – eventually led Cohen to the study of legal philosophy. Reacting to the conservatism of American judges, who at that time tended to support anti-labor legislation, Cohen attacked the 18th-century concepts of natural law upon which this conservatism rested. He analyzed legislation strictly according to empirical criteria and his results were clearly socialistic; the sum of his work in this field is found in *Law and the Social Order* (1933). Cohen's naturalistic viewpoint and involvement with scientific methods as exemplified in his work in legal philosophy had been worked out earlier in his first, and perhaps most important, work, *Reason and Nature: An Essay on the Meaning of Scientific Method* (1931). *An Introduction to Logic and Scientific Method* (1934), written together with the American philosopher Ernest *Nagel, became a standard textbook in American universities and in the armed forces. *A Preface to Logic* (1945) is about the foundations of logic and its relation to the sciences. Cohen's interests also include ethics and the philosophy of history. In his work *The Meaning of Human History* (1947) he develops the theory that human history is expressed by a cyclical process of fruition and degeneration, not by a lineal progression. The optimistic note in this otherwise discouraging view is that

Truth, despite its continuous repression and opposition, succeeds in reasserting itself from time to time. Similar views are expressed in his collection of essays *The Faith of a Liberal* (1946). In 1939 Cohen founded the organ for Jewish social research, *Jewish Social Studies*. He was also one of the editors of the *Journal of the History of Ideas*. *Reflections of a Wandering Jew*, a collection of short essays on Judaism, was published posthumously in 1950.

[Samuel Hugo Bergman]

His son, FELIX (1907–1953), was a legal philosopher. Born in New York, he was a solicitor in the U.S. Department of the Interior, 1933–48. He wrote *Ethical Systems and Legal Ideals* (1933), *Handbook of Federal Indian Law* (1941), and *Readings in Jurisprudence and Legal Philosophy*, which he edited with M.R. Cohen (1951). After his death, a collection of Cohen's articles was published as *The Legal Conscience* (1960), edited by L.K. Cohen and with a foreword by Felix *Frankfurter. The divisions of this work show the range of Cohen's interests: Logic, Law and Ethics, the Indian's Quest for Justice, and the Philosophy of American Democracy. Like his father, Cohen was a legal realist, who insisted that law cannot escape dealing with ethics.

COHEN, MORTIMER JOSEPH (1894–1972), U.S. rabbi and author. Cohen, who was born in New York City and educated in public schools in Charleston, South Carolina, and New York, earned his B.S. at the City College of New York (1915) and was ordained at the Jewish Theological Seminary in 1919. He served as rabbi of Congregation Beth Shalom in Philadelphia. While serving as rabbi, he attended Dropsie College and earned his Ph.D. (1935). His thesis on *Jacob Emden: A Man of Controversy* was published in 1937 and described in its historical, psychological, and sociological contexts the feud between *Emden and Jonathan *Eibeschuetz.

Jews who had left older Orthodox and Conservative congregations formed Beth Shalom with 25 families, which under Cohen soon established itself as a Conservative congregation, putting up its first building in 1922. Established in the heart of Philadelphia's Jewish neighborhood in the aftermath of World War I, it boldly moved out of the city after World War II when Cohen persuaded his congregation to follow the Jewish population into the nearby suburbs. At first, it only built an educational and synagogue center in Elkins Park and services were conducted in the city and in the suburbs. As Jews moved to the suburbs in the 1950s, the suburban branch brought with it a new membership that sought to find full religious services locally. Cohen then hit upon an innovative idea and the congregation commissioned Frank Lloyd Wright, a preeminent American non-Jewish architect, to design its new sanctuary. Working closely with Cohen, whom he credited as co-designer, Wright designed an exterior that represented Mount Sinai and an impressive interior. The American Institute of Architecture recognized the distinguished quality of the design, adding greater visibility to the synagogue and prestige to the newly arrived Jews who commissioned such a brilliant building. A model of the synagogue is shown at *Beth Hatefutsoth, the Museum of the Diaspora, in Tel Aviv.

As a writer, Cohen was editor of *Pathways Through the Bible* (1946), a popular condensation of the Bible for the general reader, which went through numerous editions and was translated into Spanish and Portuguese. He was one of the founders, and editor for six years, of the Jewish Welfare Board's *In Jewish Bookland* and *The Jewish Book Annual*. He was president of the Jewish Book Council and of the Philadelphia Board of Rabbis. A man of many talents, he also composed four oratorios with the congregation's musical director Gedaliah Rabinowitz and wrote a number of plays. He also wrote on the design of the synagogue in *Beth Shalom Synagogue: A Description and Interpretation* (1959). His wife, Helen Kalikman Cohen, co-authored with P.T. Davis the story of his collaborative work with Wright in *Together They Built a Mountain* (1974).

ADD. BIBLIOGRAPHY: *The Beth Shalom Story, 1919–1969* (1969); P.S. Nadell, *Conservative Judaism in America: A Biographical Dictionary and Sourcebook* (1988).

[Jack Reimer / Michael Berenbaum (2nd ed.)]

COHEN, NAOMI WIENER (1927–), scholar of American Jewish history. Cohen was born in New York City and educated at Hunter College and the Jewish Theological Seminary of America, receiving her Ph.D. in history from Columbia University in 1955. She taught for 30 years at Hunter College and the Graduate Center of the City of New York and also served as adjunct distinguished service professor at the Jewish Theological Seminary. In 1948, she married Gerson D. *Cohen, a historian who later became chancellor of the Jewish Theological Seminary of America. Following her retirement in 1996, Cohen moved to Israel.

Cohen focused her research on various aspects of American Jewish history. One special area of interest was the German Jewish community in the United States; scholarly works in this area includes *A Dual Heritage: The Public Career of Oscar S. Straus* (1969), *Not Free to Desist: The American Jewish Committee, 1906–1966* (1972), *Encounter with Emancipation: The German Jews in the United States*, 1830–1914 (1984), and *Jacob H. Schiff: A Study in American Jewish Leadership* (1999). Cohen addressed the distinctiveness of American Zionism in three books, including *American Jews and the Zionist Idea* (1975) and *The Americanization of Zionism, 1897–1948* (2003).

Cohen also made an important contribution with her work on the complex interaction between American Jews and

Christians and on the separation of church and state in the United States. Articles on the legal arguments made by American Jews in defense of equal rights and religious freedom, as well as on their positions on religion in the public schools, appeared in the 1970s and 1980s, followed in *Essential Papers on Jewish Christian Relations in the United States: Imagery and Reality* (1990), an edited volume on Jewish-Christian relations in the United States. *Jews in Christian America: The Pursuit of Religious Equality* (1992), which details American Jews' efforts simultaneously to secure equality in American life and to protect their distinctive identity as non-Christians in a Christian country, is considered a landmark work on the separation of church and state.

Cohen received numerous awards for her work, including the American Jewish Committee's Akiba Award for Scholarship and Teaching; the Jewish Cultural Achievement Award in History; the National Federation for Jewish Culture Award in Historical Studies; and two National Jewish Book Awards for Jewish history.

[Jennifer Sartori (2nd ed.)]

COHEN, NATALIE (1912–), leading tennis player in the Southern United States and certified official of men's and women's tennis matches. Born in Atlanta, Georgia, the daughter of Dewald A. and Meta Leinkauf Cohen, she began playing competitive tennis at age eight and continued tournament play until age 81, earning the sobriquet, "Atlanta's First Lady of Tennis." At the University of California, Berkeley, where she earned a B.A. in political science, Cohen was president of the Women's Athletic Association in 1934. Cohen won numerous titles in Atlanta, Georgia, and Southern Tennis Association championships. In 1954, at age 42, she won the Georgia state singles title and the Atlanta city and state doubles titles. She competed in doubles in the 1955 National Clay Court Tennis Championship in Atlanta, reaching the quarterfinal round.

Cohen officiated for over 50 years as a United States Tennis Association stadium umpire and referee. Overcoming entrenched gender boundaries, Cohen became the first woman to serve as a chair umpire for a men's National Collegiate Athletic Association championship, and she was the first Southern woman to serve as a chair umpire at the Forest Hills Tennis Championships, the annual U.S. tennis championship. During her career she was chair of umpires for the Southern and Georgia Tennis Associations. Cohen received the Marlborough Award from *World Tennis* (founded by Gladys *Heldman) in 1962 and was selected Umpire of the Year by both the Southern and Georgia Tennis Associations. She was inducted in the Southern Tennis Hall of Fame and the Georgia Sports Hall of Fame for her distinguished career in tennis.

Weiner, "Cohen, Natalie," in: P.E. Hyman and D. Dash Moore (eds.), *Jewish Women in America: An Historical Encyclopedia*, 1 (1997), 247–48.

[Linda J. Borish (2nd ed.)]

COHEN, NATHAN (1923–1971), Canadian critic and journalist. Cohen was born in Sydney, Nova Scotia, and graduated in English from Mt. Allison University. Attracted to the left, Cohen entered journalism as a reporter for the labor press in Cape Breton. Moving to Toronto, he wrote for a number of newspapers and journals including the English-language pages of the leftist *Vokhnblat* and *Canadian Jewish Weekly*. By the late 1940s, Cohen's interests shifted from political journalism to arts review, particularly theater criticism. Increasingly respected for his uncompromising pursuit of artistic excellence, he became Canada's foremost arts and theater critic, eventually gaining an international reputation for the quality of his comments. Regarded by many as irascible and iconoclastic, his theater reviews and criticism were seldom shy about what lay behind the theater's facade.

No elitist when it came to the arts, Cohen's voice became familiar across Canada as a broadcast critic for CBC and for ten years as radio and television moderator of *Fighting Words*, a freewheeling program of social and political debate. With a well-earned reputation as broadcaster and print journalist who helped chart the course of Canadian theater, in 1959 Cohen became drama critic and entertainment editor for the Toronto *Star*, the largest circulation newspaper in Canada, an association he maintained until his death. Cohen was also a fluent Yiddishist who was known in Jewish circles for his translations of Yiddish poetry and prose.

[Harold Troper (2nd ed.)]

COHEN, NATHAN EDWARD (1909–2001), U.S. social work educator. Born in Derry, New Hampshire, Cohen took his doctorate at Harvard. He worked as executive director of the Roxbury Y.M.H.A., Boston, with the Jewish Community Welfare Fund in Springfield, Massachusetts, and as the director of various divisions of the National Jewish Welfare Board.

He became a professor at Columbia University's New York School of Social Work in 1954 and served as associate dean from 1955 to 1958. He co-founded the National Council on Social Work Education, helping to shape curricula across the country. He was then appointed dean of the School of Applied Social Sciences at Western Reserve University, Cleveland, of which he became vice president in 1963. In 1958, as a professor at Western (now part of Case Western Reserve), Cohen led a group of students to Selma, Alabama, to march with Martin Luther King, Jr.

In 1964 he was appointed professor of social welfare at the University of California at Los Angeles. Cohen formed a

team of researchers to investigate the social causes underlying the Watts riot of 1965, writing "The Los Angeles Riot Study." He served as dean of UCLA's School of Social Welfare from 1964 to 1979. Cohen stressed that professional social work must contribute to changes in society by leadership and action and that social services are an enduring function of the social economy. Cohen was chairman of the National Conference of Social Welfare and was the co-founder and president of the National Association of Social Workers. At Berkeley, he and his wife, Sylvia, founded the Association for Lifelong Learning. Practicing what he preached, Cohen continued to lead current events discussions until 2000 at age 90.

His writings include *Social Work in the American Tradition* (1958); *The Citizen Volunteer*, which he edited (1960); *Social Work and Social Problems* (1964); and *The Los Angeles Riots: A Socio-Psychological Study* (1970) as well as many articles in professional journals and collections such as *Social Work* and *The Social Welfare Forum*. At UCLA a foundation for the Nathan E. Cohen Doctoral Student Award in Social Welfare has been established.

[Jacob Neusner / Ruth Beloff (2nd ed.)]

COHEN, PAUL JOSEPH (1934–), U.S. mathematician. Born in New Jersey, Cohen was a student at Brooklyn College from 1950 to 1953 and he received his M.Sc. in 1954 and his Ph.D in 1958 from the University of Chicago. From 1959 to 1961 he was a fellow at the Institute for Advanced Study at Princeton and in 1961 he was appointed to the faculty at Stanford University. In 1964 became a professor of mathematics at Stanford University. At the same time Cohen received the Bocher Memorial Prize from the American Mathematical Society, and in 1966 Cohen was awarded the Fields Medal for his fundamental work on the foundations of set theory. Cohen used a technique called "forcing" to prove the independence in set theory of the axiom of choice and of the generalized continuum hypothesis. Cohen's main interests were set theory, harmonic analysis, and partial differential equations. He wrote *Set Theory and the Continuum Hypothesis* (1966).

[Bracha Rager (2nd ed.)]

COHEN, SIR PHILIP (1945–), British biochemist. Cohen was born in Edgware, Middlesex, and earned his B.Sc. (1966) and Ph.D., under the supervision of Michael Rosemeyer (1969), in biochemistry from University College, London. After a postdoctoral fellowship with Edmond Fischer at the University of Washington, Seattle (1969–1971), he joined the staff of the University of Dundee, where he progressed to full professor (1981) and Royal Society Research Professor (from 1984). He also became director of the Medical Research Council Protein Phosphorylation Unit and the University's School of Life Sciences. Cohen's research centered on kinases, large families of enzymes which attach phosphate to proteins, and protein phosphatases, enzymes which have the opposite effect. He made pioneering contributions to elucidating these systems, which provide signals regulating normal cell behavior and which are perturbed in many diseases, including cancer and rheumatoid arthritis. In particular, his group identified the enzymes which control the conversion of blood glucose to tissue glycogen and have major implications for understanding diabetes. These discoveries are being applied to the design of novel drugs for treating diseases such as diabetes and cancer. His publications are currently the world's second most cited in biology and biochemistry. His many honors include election to the Royal Society of London (1984), knighthood (1998), and the Bristol-Myers Squibb Award (2002). In 2005 he became president of the British Biochemical Society. His leadership had a major influence in transforming a depressed area of Scotland into a center of scientific and biotechnological excellence. He also delivered many major lectures to Israeli academic institutions.

[Michael Denman (2nd ed.)]

COHEN, PHILIP MELVIN (1808–1879), pharmacist and civic leader in Charleston, South Carolina. Cohen, born in Charleston, was the son of Philip Cohen, lieutenant in the War of 1812. During the Second Seminole War Cohen served as surgeon to a detachment of troops in Charleston Harbor (1836). In 1838 he became city apothecary. He was a member of the city board of health (1843–49), and its chairman (1850–54). Cohen was a director of the Bank of the State of South Carolina (1849–55). He was one of the citizens who served as honorary guard at the funeral of John C. Calhoun in 1850.

BIBLIOGRAPHY: A. Elzas, *Jews of South Carolina* (1905), 189.

[Thomas J. Tobias]

COHEN, PHILIP PACY (1908–1993), U.S. biochemist. Cohen was born in Derry, New Hampshire. He studied science at Tufts University, Boston, and received his Ph.D. in physiological chemistry in 1937 and M.D. in 1938 from the University of Wisconsin. His main interests were transamination reactions, nitrogen metabolism, and urea synthesis, including developmental aspects of these processes, on which he became a world authority. After graduating, he worked with Hans Krebs in Sheffield, England, and at Yale University before returning to the University of Wisconsin in 1941. He became a full professor in 1947 and Harold Bradley Professor of Physiological Chemistry in 1968. His administrative skills were also highly regarded. He was elected to the National Academy of Sciences and was a member of many key scientific committees in the U.S. and abroad responsible for research and education. He had strong research and organizational links with Mexico and many South American and Asian countries.

[Michael Denman (2nd ed.)]

COHEN, ROBERT (1889–1939), French historian of ancient Greece. He served in the French Army in World War I, was seriously wounded, and was decorated for bravery. Cohen taught at the Lycée Henri IV in Paris. He collaborated with his

former teacher, Gustave Glotz, and Pierre Roussel on the four volumes of the *Histoire générale* dealing with Greece (*Histoire grecque*, 1926–38). Other works include *La Grèce et l'hellénisation du monde antique* (1934) and *Athènes, une démocratie de sa naissance à sa mort* (1936). Cohen's work is distinguished by an appreciation of the importance of ancillary disciplines and exhaustive bibliographies to historical studies.

[Irwin L. Merker]

COHEN, SIR ROBERT WALEY (1877–1952), British industrialist and Jewish communal leader. He was the son of Nathaniel Cohen, who pioneered labor exchanges and university appointment boards in Britain, and of Julia, daughter of Jacob Waley. In 1901 he joined the staff of Shell Company under the future Viscount *Bearsted and represented the company in the negotiations which led to its amalgamation with the Royal Dutch Petroleum Company. For many years he was, in effect, second in command of "The Group." During World War I Waley Cohen played a vital part in ensuring the supply of fuel oil to the Allies and was knighted for his services in 1920.

He rose to high office in the Anglo-Jewish community and was in turn treasurer, vice president, and president of the *United Synagogue. His concept of the overriding role of the lay leadership brought him into constant conflict with the chief rabbi, J.H. *Hertz, who believed that the traditional authority of the rabbinate must be paramount. The conflict was exacerbated by the incompatibility of two dominant personalities. Waley Cohen was largely responsible for establishing in 1919 the Jewish War Memorial (later Jewish Memorial Council) for improving religious and educational conditions in the Anglo-Jewish community. In 1942 he was one of the founders of the Council of Christians and Jews. In spite of some collaboration with Chaim *Weizmann in the 1920s, he remained basically opposed to political Zionism, though he contributed to the economic development of Palestine as chairman of the Economic Board for Palestine and of the Palestine Corporation. It was he who selected the site for the Haifa oil refinery. His son SIR BERNARD WALEY-COHEN (1914–1991) was lord mayor of London 1960–61, when he was named a baronet. He was a vice president of the United Synagogue.

[Vivian David Lipman]

COHEN, ROSE GOLLUP (1880–1925?), U.S. author and memoirist, was born in Belarus, the eldest child of Abraham (Avrom) Gollup, a tailor, and his wife, Annie (maiden name unknown). Rose immigrated with an aunt to New York City in 1892, joining her father, who had arrived in 1890. The rest of the family followed a year later. Cohen's 1918 autobiography, *Out of the Shadow* (rep. 1995), offers a rich account of her childhood in Russia, immigration to the United States, and life in New York City's Lower East Side, including a detailed view of sweatshop garment work. She recounts union organizing in her shop, her attendance at a mass union meeting, and joining a union, probably the United Hebrew Trades. She also describes a brief stint as a domestic servant, her rejection of an arranged marriage, and increasing health problems. During one illness, Lillian *Wald, the noted settlement worker, visited Cohen's home and sent her to uptown Presbyterian Hospital where she met wealthy non-Jews who sponsored summer outings for immigrant children. Cohen worked successive summers at a Connecticut retreat, and, like other immigrants found herself torn between Old World traditions and broader American culture. Wald also referred Rose Gollup to a cooperative shirtwaist shop under the direction of Leonora O'Reilly, later a board member of the National Women's Trade Union League. When O'Reilly began teaching at the Manhattan Trade School for Girls in 1902, she recruited Rose Gollup as her assistant.

Little is known about Cohen's later life. She married Joseph Cohen and stopped working upon the birth of her daughter, Evelyn. She continued her education after marriage, attending classes at Breadwinners' College at the Educational Alliance, the Rand School, and University Extension at Columbia University. In addition to her enthusiastically received autobiography, which also appeared in French and Russian translations, Cohen wrote eight short pieces published in New York and Philadelphia magazines between 1918 and 1922. A short story, "Natalka's Portion," was reprinted six times, appearing in the prestigious *Best Short Stories of 1922*. In 1923 and 1924 Cohen attended the MacDowell Colony in Peterborough, New Hampshire, where she met the American impressionist painter Lilla Cabot Perry and the poet Edwin Arlington Robinson. An untimely death, perhaps a suicide, cut short her promising literary career. Her autobiography survives as her legacy, a moving account of a cultural journey shared with many other Jewish immigrant women at the turn of the 19th century.

[Thomas Dublin (2nd ed.)]

COHEN, RUTH LOUISA (1906–1991), British economist, specializing in the field of agricultural economics. The granddaughter of Louis Lionel *Cohen, she was educated at Newnham College, Cambridge, and was a teaching fellow at Stanford and Cornell universities in the U.S. from 1930 to 1932. Upon her return to England, she became a research officer of the Agricultural Economics Research Institute at Oxford (1933–39). She returned to Newnham College in 1939 and served as its principal from 1954 until 1972. She was chairman of the Committee on Provincial Agricultural Economics in 1957. In addi-

tion to numerous articles, her writings include *History of Milk Prices* (1936) and *Economics of Agriculture* (1939).

[Joachim O. Ronall]

COHEN, SAMUEL HERBERT (1918–1969), Australian labor politician. Born in Bankstown, New South Wales, of Russian Jewish parents, Cohen practiced law in Melbourne, becoming a queen's counsel in 1961. He was a member of the Victoria Central Executive and of the Australian Labor Party's foreign affairs and defense committee. Cohen was elected to the Senate in 1961 (the first Jew elected to the Australian Senate) and became deputy leader of the labor opposition party there in 1967. He was Labor spokesman on education, and was responsible for the party's state aid program in the 1969 elections. From his youth he was involved in Jewish community affairs, particularly in combating antisemitism, and was a patron of Montefiore homes and welfare projects. A leftist and an early opponent of the Vietnam War, in 1962 Cohen became involved in a fierce controversy within the Melbourne Jewish community when he failed to support an opposition measure condemning Soviet antisemitism, arguing that Soviet Jews enjoyed equal rights. Cohen's stance sparked considerable outrage in sections of the Jewish community. Despite this incident, Cohen was much respected and his early death at only 51 was widely regretted.

Mendes, "The Senator Sam Cohen Affair: Soviet Anti-Semitism, the ALP, and the 1961 Federal Election," in: *Labor History*, 57 (2000), 179–97; idem., "Samuel Herbert Cohen," in: *Biographical Dictionary of the Australian Senate*, vol. 3 (2006); W.D. Rubinstein, Australia II, index.

COHEN, SASHA (**Alexandra Pauline**; 1984–), U.S. Olympic figure skater. Cohen was born in Westwood, California, and named after Alexandra Rajefrejk, the favorite ballerina of her mother, a native of the Ukraine. Cohen began skating at age seven after first starting with gymnastics at age five and progressing to level five of the sport's 10 levels. She decided to take skating seriously at age 10, working first with coach Yvonne Nicks and then with Yvonne's husband, John Nicks. Cohen placed second at the U.S. Junior Championships in 1999, and shocked the skating world by placing first in the short program at the U.S. Senior Championships in 2000, and second overall to World Champion Michelle Kwan. A back injury limited Cohen to only two competitions in the 2000–1 season, but she bounced back to place second at the U.S. Championships in 2002, again behind Kwan. This landed her a spot on the U.S. Olympic team for the games in Salt Lake City, where Cohen sat next to President George W. Bush at the opening ceremonies and made national news when she asked him to talk on her cell phone to her mother. Cohen then finished fourth behind Sarah Hughes, Russian Irina Slutskaya, and Kwan, in a controversial competition that some felt should have included Cohen among the medal winners. Cohen then competed in her first World Championships, where she placed fourth. She won her first major international title at the 2003 Grand Prix Final, and placed fourth overall at the 2003 World Championships. A supreme stylist, she won silver medals at the 2004 Grand Prix Final and, despite coaching changes made directly beforehand, at the 2004 and 2005 World Championships. She placed second after Kwan at the U.S. Championships in January 2005, her otherwise flawless performance marred when she fell on a triple lutz jump and put her hand down on a triple loop. Cohen won a silver medal at the 2006 Winter Olympics. Her autobiography, *Sasha Cohen: Fire on Ice,* was published in 2005.

[Elli Wohlgelernter (2nd ed.)]

COHEN, SAUL BERNARD (1925–), U.S. geographer and educator. Cohen, the son of a Hebrew teacher, was born in Malden, Mass., and studied at Harvard University, where he obtained his doctorate in 1955. He taught at Boston University from 1952 to 1964, and in 1965 became the director and a professor of the Graduate School of Geography at Clark University in Worcester, Mass. In 1967 he became the dean. He served as president of Queens College of the City University of New York (1978–85), and then for ten years as professor of geography at Hunter College, also of CUNY. Among his many appointments was that of coordinator and co-chairman of the United States–Israel Geographic Research symposium held in Jerusalem in 1969. A member of the American Geographical Society, Cohen specialized in the economic and political geography of the Middle East. He was a visiting professor at the U.S. Naval War College and the Hebrew University of Jerusalem, and served as consultant on geography to the National Science Foundation. His fieldwork took him to Israel, Puerto Rico, Sweden, and Venezuela.

Cohen served on numerous government committees devoted to educational improvement. From his arrival in New York in 1978, he was involved in various city and state policy committees. He was elected to the New York State Board of Regents in 1993 and chaired the Elementary, Middle, and Secondary Committee when it established new academic standards for the schools (1995–98). He chaired the Regents Committee on Higher Education and led the effort to reform teacher education.

Cohen received awards from the Association of American Geographers (1965 and 1979). In 1990 and 1992 his work was recognized as Best Content Article by *The Journal of Geography*. In 1994 the National Geographical Society named him Distinguished Geography Educator, and in 1998 he received the Rowman and Littlefield's Author Laureate Award.

In 2004 Cohen received an honorary doctorate from the University of Haifa. Acknowledged for having laid the foundations for the field of political geography, he was praised for "his wide-ranging and in-depth scientific contribution to the study of political geography; his educational and public activity to advance the teaching of geography; his societal involve-

ment and dedication to the Jewish community in the United States; and his support of academe in Israel."

He was editor of *The Oxford World Atlas* (1973), served as geographic consultant for the fifth edition of *The Columbia Encyclopedia* (1993), and was editor of *The Columbia Gazetteer of the World* (1998). Among his publications are *Geography and Politics in a World Divided* (1963, 1964, 1973); *American Geography – Problems and Prospects* (1968); *Jerusalem – Bridging the Four Walls* (1977); *Jerusalem Undivided* (1980); *The Geopolitics of Israel's Border Question* (1986); and *Geopolitics of the World System* (2002).

[Ruth Beloff (2nd ed.)]

COHEN, SELMA JEANNE (1920–), U.S. dance historian. Cohen taught at New York City's High School of Performing Arts and later at the Connecticut College School of Dance. She wrote on dance for the *New York Times* and the *Saturday Review* and edited *The Modern Dance – Seven Statements of Belief* (1966). She was co-founder with A.J. Pischl of *Dance Perspectives* magazine (1959) as a series of monographs; she continued as sole editor from 1965 until 1976 and was the editor of the Dance Department of the *Encyclopaedia Judaica*. She was the founding editor of the International *Encyclopedia of Dance* published in 1998, which crowned her initiatives on behalf of dance scholarship.

[Amnon Shiloah (2nd ed.)]

COHEN, SEYMOUR J. (1922–2001), U.S. Conservative rabbi. Cohen was born in New York City, ordained at the Jewish Theological Seminary in 1946, and earned a Ph.D. in economics from the University of Pittsburgh in 1953. He studied at the Hebrew University of Jerusalem in pre-Israel Palestine and worked with Holocaust survivors in Italy and France (1946–47). Cohen served as rabbi of the Patchogue Jewish Community Center in Patchogue, New York (1947–51) and B'nai Israel, Pittsburgh, Pennsylvania (1951–61), before taking the pulpit at the formerly Reconstructionist Anshe Emet Synagogue in Chicago in 1961, a post he held for 29 years before being appointed rabbi emeritus. Cohen joined with other neighborhood clergy and resisted the temptation to flee the city and was instrumental in the congregation's remaining in Chicago and thus in stabilizing the renewal of the neighborhood. Although considered a scholar-rabbi and compelling orator, Cohen was also a gifted pastor who devoted much time and considerable energy to serving the needs of his congregants and others.

Cohen rose to the highest positions of leadership in several major American Jewish organizations. While serving as chairman of the American Jewish Conference on Soviet Jewry, he led the first Eternal Light Vigil for Soviet Jews in Washington D.C. (1965). As president of the Synagogue Council of America (1965–67), he worked to further Jewish-Christian relations and was founding co-chairman of the Interreligious Committee Against Poverty. As president of the Rabbinical Assembly (1980–82), he introduced a number of services benefiting working rabbis.

Also known as a scholar, Cohen edited and translated the Hebrew classics *Orchot Tzadikkim: The Ways of the Righteous* (1969, 1982[2]); *Sefer Hayashar: The Book of the Righteous* (1973), and *Iggeret Ha-Kodesh: The Holy Letter* (1976). He published two collections of sermons, *A Time to Speak* (1968) and *Form, Fire and Ashes* (1978), and wrote the book *Affirming Life* (1986). He was also the co-author (with Byron L. Sherwin) of *How to Be a Jew: Ethical Teachings of Judaism* (1982). In 1991, Abraham J. Karp, Louis Jacobs, and Chaim Zalman Dimitrovsky edited a *Festschrift* in his honor: *Threescore and Ten: Essays in Honor of Rabbi Seymour J. Cohen on the Occasion of His Seventieth Birthday*.

BIBLIOGRAPHY: P.S. Nadell, *Conservative Judaism in America: A Biographical Dictionary and Sourcebook* (1988).

[Bezalel Gordon (2nd ed.)]

COHEN, SEYMOUR STANLEY (1917–), U.S. biochemist. Cohen was born in Brooklyn, New York, and received a B.Sc. degree at CCNY in 1936 and a Ph.D. at Columbia University College of Physicians and Surgeons in 1941. He was a National Research Council Fellow in plant virology with Wendell Stanley at the Rockefeller Institute and then explored the properties of the typhus vaccine for the Army during World War II. In 1945 and 1946 he began his biochemical studies of bacteriophage multiplication in the Department of Pediatrics of the University of Pennsylvania. Following research with André Lwoff at the Pasteur Institute in Paris in 1947 and 1948, and research and teaching at the University of Pennsylvania, he was appointed American Cancer Society (ACS) Research Professor of Biochemistry in 1957, and chairman of the Department of Therapeutic Research in 1963. After initiating studies on nucleoside analogues and on polyamines, he continued work on these subjects from 1971 to 1976 as ACS Professor of Microbiology at the University of Colorado Medical School, and from 1976 to 1985 as Distinguished Professor of Pharmacology at the State University of New York at Stony Brook. In 1985 he retired to Woods Hole, Massachusetts. His studies on plant and bacterial viruses led to discoveries on the structure, composition, and metabolism of viral nucleic acids. He was the codiscoverer of a new phage pyrimidine and its biosynthesis, thereby describing a new set of viral functions, which were presented in his 1968 book *Virus-Induced Enzymes*. This phenomenon has become significant in viral reproduction generally and a key to the treatment of human viral diseases such as AIDS, herpes infections, and influenza. Cohen's studies with polyamines resulted in two books, *An Introduction to the Polyamines*, presented at the Collège de France in 1970, and *A Guide to the Polyamines* (1998). Cohen was elected to the American National Academy of Sciences in 1967. In later years he took a working interest in the history of early American science.

[Sharon Zrachya (2nd ed.)]

COHEN, SHALOM BEN JACOB (1772–1845), Hebrew writer, poet, and editor. Born in Mezhirech, Poland, he studied German and read the new Hebrew literature, particularly *Ha-Me'assef. His first book, *Mishlei Agur* (1799), was a collection of Hebrew fables in rhyme, with German translation, aimed at teaching Jewish children simple and clear Hebrew. Cohen went to Berlin in 1789 and taught in the Ḥinnukh Ne'arim school and in private homes. After the publication of several works he renewed the publication of *Ha-Me'assef* and served as its editor (1809–11). In 1813 Cohen left Germany, spent a short period in Amsterdam, and moved to London where he tried unsuccessfully to establish a Jewish school. In London, in 1815, he printed his catechism, *Shorshei Emunah* (with an English translation by Joshua van Oven), in which he stressed the divinity of the Written and Oral Law and its immutability. From London, Cohen moved to Hamburg (1816 or 1817), where he spent three controversy-laden years. In a posthumously published poem he attacked the hypocrisy of the "reformists" for their lack of religious belief and national feelings and considered the establishment of the Reform temple in Hamburg an act of blasphemy. However, he refrained from public intervention on this controversy. In 1820 Cohen was invited by Anton Schmid to serve as head proofreader in the Hebrew section of his printing press in Vienna where he remained for 16 years. In 1821 Cohen established the annual *Bikkurei ha-Ittim, three issues of which appeared under his editorship. In 1834 he published his poetic work, *Nir David*, a description of the life of King David, one of the first romantic works in Hebrew literature. In 1836 Cohen returned to Hamburg, where he lived until his death. His last extensive work was *Kore ha-Dorot*, a history of the Jewish people (1838). His other works include: *Matta'ei Kedem al Admat Ẓafon* (1807), poetry; *Amal ve-Tirẓah* (1812), an allegorical and utopian drama, a sequel to M.Ḥ. Luzzatto's *La-Yesharim Tehillah*; and *Ketav Yosher* (1820), a literary miscellany.

BIBLIOGRAPHY: Klausner, Sifrut, 1 (1960), 275–90; R. Mahler, *Divrei Yemei Yisrael*, 1, pt. 2 (1954), 275–9; Zinberg, Sifrut, 5 (1959), 267–71; 6 (1960), 25f; J.L. Landau, *Short Lectures on Modern Hebrew Literature* (1939), 121–34; Waxman, Literature, 3 (1960), 153–8.

[Gedalyah Elkoshi]

COHEN, SHAYE J.D. (1949–), leading historian of Jews and Judaism in the world of late antiquity. Cohen received his B.A. from Yeshiva College (1970), rabbinic ordination from the Jewish Theological Seminary (1974), and his Ph.D. from Columbia University (1975). He taught at the Jewish Theological Seminary (1974–91), where he also served as dean of the Graduate School, and at Brown University (1991–2001), where he served as Ungerleider Professor of Judaic Studies and director of the program in Judaic studies. From 2001 he served as Littauer Professor of Hebrew Literature and Philosophy at Harvard University.

Cohen is the author or editor of nine books, including *From the Maccabees to the Mishnah* (1987), which is widely used as a textbook in colleges and adult education courses, and *The Beginnings of Jewishness* (1999), and dozens of articles.

The focus of Cohen's research is the boundary between Jews and gentiles and between Judaism and its surrounding cultures. What makes a Jew a Jew, and what makes a non-Jew a non-Jew? Can a non-Jew become a Jew, and, if so, how, and can a Jew become a non-Jew, and, if so, how? How does the Jewish boundary between Jew and non-Jew compare with the Jewish boundary between male Jew and female Jew? Building on sources in Hebrew, Aramaic, Greek, and Latin, Cohen argues for the fluidity of identity markers in the ancient world. He also insists that the Jewish reaction to Hellenism in antiquity and to Christianity from ancient to modern times consisted of both resistance and accommodation, and both stances had a far-reaching influence on the history of Judaism.

[Jay Harris (2nd ed.)]

COHEN, SHLOMO (1947–), Israeli attorney. Born in Tel Aviv, Cohen received LL.B. (1971) and LL.M. (1973) degrees from Tel Aviv University Law School and LL.N and J.S.D. degrees from New York University School of Law (1976 and 1978). He is the founder of Dr. Shlomo Cohen & Co., a law firm specializing in intellectual property and served as adjunct professor (intellectual property) at New York University School of Law (1976–95), the Hebrew University School of Law (1980–92), and the Tel Aviv University School of Law (from 1988). He has written extensively in the field of intellectual property and chaired the Justice Ministry Committee to revise the Registered Design Act. He also served on the Justice Ministry Committee to revise the Patents and Copyright Acts and founded the Israeli Chapter of the International Licensing Executives Society (LES) and served as its president from 1994. He was a member of the Israeli Civil Rights Association, serving on its board for two terms, and was a founding member of Betselem, the human rights watch organization. Cohen was a member of the Israeli Bar Association from 1971. As its president (from 1999), he initiated a pro bono program and an annual evaluation survey by lawyers of judges and other programs. He was also a member of the Israeli Forum (an organization dealing with Israeli-Diaspora relations), serving on its board in 1988 to 1992.

[Leon Fine (2nd ed.)]

COHEN, SIMON (**Sam;** 1890–1977). South-West African businessman who was known as the "uncrowned king of South-West Africa" by reason of his extensive commercial and financial interests. Born in Russia and educated in London, he went to South Africa as a child with his father. In 1906 he went to Swakopmund, in South-West Africa (then a German colony), to run his father's store. After the South African occupation of the territory he settled, in 1916, in the capital, Windhoek, where he built up a large business organization, comprising commercial, industrial, agricultural, mining, transport, and fishing concerns, which spread to South

Africa, Rhodesia, and other neighboring countries. His energy and enterprise played a pioneering role in furthering the economic development of South-West Africa, a mandated territory under South African control. Cohen was an honorary life president of the Windhoek Hebrew Congregation.

[Louis Hotz]

COHEN, STANLEY (1922–), U.S. biochemist and Nobel Prize laureate. Cohen was born in Brooklyn, New York. After studying at Brooklyn College (B.A., 1943) and Oberlin College (M.A., 1945), he received his Ph.D. in biochemistry from the University of Michigan in 1948. From then until 1952 he worked at the University of Colorado. Cohen then proceeded to Washington University in St. Louis in 1952 where he was a fellow of the American Cancer Society. There he worked with Dr. Rita *Levi-Montalcini and they isolated the protein which is recognized as the nerve growth factor (NGF). In 1959 Cohen moved to Vanderbilt University as an assistant professor of biochemistry, where he discovered epidermal growth factor (EGF), which oversees cell development in the skin. In 1986 he shared the Nobel Prize with Levi-Montalcini for physiology and medicine for having "opened new fields of widespread importance to basic science with these discoveries."

Cohen remained at Washington University until 1967 when he became a professor of biochemistry at Vanderbilt University. He was an American Cancer Society research professor in 1976 and in 1986 a distinguished professor. He was a member of the National Academy of Science. He and Dr. Levi-Montalcini were also the co-recipients of the 1986 Lasker Award.

ADD. BIBLIOGRAPHY: Le Prix Nobel.

COHEN, STANLEY N. (1935–), U.S. geneticist. Cohen was born in Perth Amboy, New Jersey. He graduated from Rutgers University with a degree in biology and as an M.D. from the Pennsylvania School of Medicine (1960). After research training at the National Institutes of Health, Bethesda, he joined the faculty of Stanford University (1968), where his appointments included chairman of the Department of Genetics and then professor of genetics and medicine and director of the S.N. Cohen Laboratory. His early research dealt with the ability of plasmids to alter the properties of the bacteria they colonize, a subject of fundamental importance to the development of antibiotic resistance. His pioneering research interests involved isolating, cloning, and propagating mammalian genes in other species, including bacteria (also known as recombinant technology). This work laid the foundation for biotechnological techniques enabling the production of large quantities of pure proteins for diagnostic and medicinal purposes. His many honors include the Lasker Award (1980), the Wolf Prize (1981), the Albany Medical Center Prize (2004), election to the U.S. National Academy of Sciences and National Medals in both Science and Technology.

[Michael Denman (2nd ed.)]

COHEN, WILBUR JOSEPH (1913–1987), U.S. social welfare authority. Born in Milwaukee, the son of Jewish immigrants, Cohen left his home in the early 1930s to attend the University of Wisconsin. He served with the U.S. Committee on Economic Security in 1934-35 and participated in the drafting of the Social Security Act. From 1936 to 1956 he was employed in the Social Security Administration and helped secure the adoption of measures that would provide for shared financing by the federal government and the states in programs for the aged, dependent children, the totally disabled, and the blind. Cohen was responsible for the passage by Congress in 1946 of legislation enabling the federal government to offer financial aid in hospital construction. He aided Jewish organizations in their support of social security and welfare legislation. In 1952–53 he advised the Israeli government when the state undertook the establishment of its own social security program.

For five years (1956–61) he was professor of public welfare at the University of Michigan, during which time he served as consultant to the U.S. Senate Committee on Labor and Public Welfare and to the White House Conference on Aging. He returned to government service in 1961 when President John F. Kennedy appointed him assistant secretary of the Department of Health, Education, and Welfare. During the Johnson administration he was named undersecretary of Health, Education, and Welfare and saw the enactment of Medicare and Medicaid programs, which he had recommended three decades earlier. In 1968, he assumed the post of secretary of the department (1968–69). He initiated extensive changes in the department and reorganized its public health division. As a part of the reorganization, the National Institute of Health, the National Institute of Mental Health, and the National Library of Medicine were brought into a new agency called the Health Services and Mental Health Administration. In 1969, when President Johnson left office, Cohen assumed the position of dean of the University of Michigan's School of Education.

As one of the key players in the creation and expansion of the American welfare state, Cohen was dubbed by President Kennedy as "Mr. Social Security"; President Johnson praised him as the "planner, architect, builder, and repairman on every major piece of social legislation" [since 1935]; and the *New York Times* described him as "one of the country's foremost technicians in public welfare."

Cohen wrote extensively on the field of welfare. Papers he presented before the National Conference of Social Welfare appear in *The Social Welfare Forum* (1954, 1957, 1961). Among his books and articles are *Readings in Social Security* (with W. Haber, 1949); *Retirement Policies in Social Security* (1957); *Social Security: Programs, Problems and Policies* (with W. Haber, 1960); and "The Problem of Financing Social Services" in J.E. Russell's (ed.), *National Policies for Education, Health and Social Services* (1961). He was one of four contributors to *Income and Welfare in the United States* (1962). He wrote *Toward Freedom from Want* (with S.A. Levitan and R.J. Lampman, 1968), *Social Security: Universal or Selective?* (with

M. Friedman, 1972), *Demographic Dynamics in America* (with C.F. Westoff, 1977), and *The American Economy in Transition* (1980). He also edited *The New Deal Fifty Years After: A Historical Assessment* (1984).

BIBLIOGRAPHY: M.O. Shearon, *Wilbur J. Cohen, the Pursuit of Power* (1967²), incl. bibl.; *Business Week* (March 30, 1968), 35f.
ADD. BIBLIOGRAPHY: E.D. Berkowitz, *Mr. Social Security: The Life of Wilbur J. Cohen* (2000).

[Joseph Neipris / Ruth Beloff (2nd ed.)]

COHEN, WILLIAM S. (1940–), U.S. congressman, senator, secretary of defense, author. One of three children of a Russian-Jewish immigrant father and an Irish-Protestant mother, Cohen was born in Bangor, Maine, in 1940. As a youngster he came to an understanding with his father, Reuben Cohen, who ran a small local bakery: he would play basketball at the local YMCA one Saturday morning a month, and attend Sabbath services at the local synagogue the other three.

Cohen remembers that during these early years in Bangor, he had "the worst of two worlds." As a Jew, the local bigots reviled him; as the child of mixed marriage, he was not fully accepted by the close-knit Bangor Jewish community. Cohen was told, shortly before his 13th birthday, that he could not become *bar mitzvah* without first submitting to a *hatafat dam berit* (symbolic circumcision) and his mother's completing conversion. Neither event took place; Cohen never became *bar mitzvah*. The trauma of his religiously bifurcated childhood led the adult Bill Cohen to affiliate with the Unitarian Universalist Church.

In 1958, Cohen entered Bowdoin College, where he excelled both in his major, Latin, and on the basketball court, where he was named to both the All-State and the New England Hall of Fame teams. Following his graduation in 1962, he entered Boston University Law School to study for his LL.B., which he received *cum laude* in 1965. While a student at BU, he was a member of the law review and served on its editorial board. His first year out of law school, he was employed as assistant editor-in-chief of the *Journal of the American Trial Lawyers Association*.

In 1971, he was elected mayor of Bangor.

In 1972, Cohen decided to run for the United States House of Representatives. Cohen came to national attention during his first term when, as a member of the House Judiciary Committee, he "resisted political pressure by voting to recommend the impeachment of President Richard Nixon for complicity in the Watergate cover-up." Crossing party lines, Cohen cast what turned out to be the deciding vote on a Democratic motion that informed President Nixon of his failure to comply with the committee's subpoena for White House documents and tapes. Cohen's mostly Republican constituency saw his impeachment vote as a matter of conscience; he was reelected in 1976 and again 1978, this time with 77 percent of the popular vote.

In 1978, Cohen was elected to the first of three terms in the United States Senate. During his 18 years in the upper chamber, Cohen became an acknowledged expert on military affairs. From his seat on the Armed Services Committee, Cohen led the fight for a stronger, more efficiently financed American military. In 1980, Cohen ran into trouble with the American Jewish political establishments when he cast a "reluctant vote" in favor President Reagan's proposed sale of five Airborne Warning and Control System (AWACS) surveillance planes to Saudi Arabia. Heretofore a committed Zionist, his last-minute vote in favor of AWACS was seen as a betrayal of the Jewish community which, in this instance, chose to see him as being "one of the family." During his years in the Senate, Cohen became well known for both his political moderation and independence of thought. As chair of the Senate Committee on Aging, Cohen played a pivotal role in the health care reform debates of the 1990s. As a committed environmentalist, he became the only Republican endorsed by the League of Conservation Voters.

In December 1996, President Bill Clinton, seeking to fulfill his wish for a bipartisan cabinet, nominated Cohen to become the nation's 20th secretary of defense. Easily confirmed by his former colleagues in the Senate, Cohen served as defense secretary throughout the remainder of the Clinton years (1997–2000).

Throughout his more than 30 years in public life, Cohen published nearly a dozen books. Among these are two volumes of poems (*Of Sons and Seasons* and *A Baker's Nickel*), three novels (*The Double Man, Murder in the Senate*, and *One-Eyed Kings*) and several works concerning government policy.

BIBLIOGRAPHY: K.F. Stone, *The Congressional Minyan: The Jews of Capitol Hill* (2000), 63–64.

[Kurt Stone (2nd ed.)]

COHEN, WILLIAM WOLFE (1874–1940), U.S. stockbroker, congressman. Cohen was born in New York City in 1874. His father, like his mother a German Jew, was a prosperous shoe manufacturer. Following a public school education, William entered his father's business; on his 21st birthday, his father made him a partner. In 1903, a year after his marriage, William left his father's shoe manufacturing concern and went into business for himself, forming the stock brokerage firm of William W. Cohen & Co., in which he was active for the rest of his life. Cohen prospered as a stockbroker, even purchasing a seat on the New York Stock Exchange. Greatly respected by his fellow brokers, Cohen became a director of the New York Cotton Exchange and the Chicago Board of Trade and a member of the Commodity and New York Curb exchanges. Always interested in diversification, Cohen eventually bought up a copper-mining company in the American west. In the early 1920s, he decided to sell his seat on the New York Stock Exchange, netting a nearly $100,000 profit. By age 50, he was set for life.

Always active in Democratic political circles, Cohen served as chairman of the Tammany Hall Finance Committee for more than a decade. In 1926, he ran for the 17th Congres-

sional District seat being vacated by Congressman Ogden L. Mills. Cohen served a single term (1927–29), subsequently declining to run for reelection and returning to New York.

Aside from his many business ventures, Cohen was a lifelong supporter of the New York City Fire Department, who honored him by making him an honorary deputy fire chief. Active in Jewish communal organizations, Cohen served as president of the Jewish Council of Greater New York and the New York branch of the American Jewish Congress. He was also a member of the Reform Temple Emanuel and president of the American Committee for the Settlement of Jews in Birobidzhan, a remote Soviet region near Siberia.

[Kurt Stone (2nd ed.)]

COHEN, YARDENA (1910–), dancer, choreographer, teacher. Cohen was one of the pioneers of Israeli dance and in the vanguard of modern dance in pre-State Israel. She was born in Haifa, a sixth-generation Israeli. In 1929, she went to Vienna and studied at the Academy for the Arts and, after two years, left for Dresden and studied with Gert Palucca. In 1933, she returned to Haifa and began teaching.

The solo compositions Cohen produced were dramatic portraits of biblical women: *Eve in the Garden of Eden*, *Lot's Wife*, *Hannah in Shiloh*, *The Sorcerer's*, *Jephtah's Daughter*, and *Hagar* are but a few. Contrary to Central European Expressionism in dance (*Ausdruckstanz*) practiced by other dance pioneers who had recently arrived from Europe, Cohen's dance was rooted in the soil of the Land of Israel. Accompanying her on the drums were Oriental Jewish musicians. In 1937, Cohen was awarded first prize in a national dance competition in Tel Aviv.

Cohen was a forerunner in organizing the holiday pageants that took place in agricultural settlements (*kibbutzim*) where the members wanted to relive and celebrate the ancient holidays as in former times, albeit with a modern approach. The pageants took place outside and people of all ages participated. There was a medley of dancing, singing, and instrumental performances as well as readings from special texts. The "*Bikkurim*" Festival (First Fruits) (1943) and Vineyard Festival (1944) at kibbutz Ein ha-Shofet were famous, as was the pageant dedicated to the biblical story of Jael and Sisera that took place at kibbutz Sha'ar-ha-Amakim (1945), located at the spot where the narrative took place, and the "*Mayim Mayim*" (Water, Water) Festival (1947) at kibbutz Ginnegar, celebrating the installation of running water at the settlement. Some of the dances created for these pageants became folk dances.

Cohen was also a leader in the new field of dance therapy, which she called "convalescent dance." She wrote two books: *With Drum and Dance* (1963) and *The Drum and the Sea*. (1976). She continued to teach in Haifa well into her nineties.

[Ruth Eshel (2nd ed.)]

COHEN, YIGAL RAHAMIM (1940–), Israeli plant pathologist. Cohen was born in Jerusalem and received his Ph.D. in agriculture from the Hebrew University of Jerusalem, Rehovot (1969). He joined Bar-Ilan University as a lecturer in plant pathology (1969) and was a full professor from 1980. His research discoveries concern the epidemiology of plant diseases, genetic resistance to disease and their prevention by immunization, genetic selection, and pesticides and other agents. His work has important practical implications, including collaboration with seed-producing companies, and has led to the development of tomato and potato strains genetically resistant to the potentially devastating infection by the fungus *Phytophthora infestans* and muskmelon lines resistant to other fungi. He was also the first to show that certain amino acids and polyunsaturated fatty acids induce resistance against late blight. His contributions were recognized internationally and in 2004 he was among the world's 250 most cited researchers. His honors include the Israel Prize for agriculture (1999). At Bar-Ilan University he served as dean of the Faculty of Natural Sciences (1977–80), member of the Senate, and member of the Board of Trustees. He was also president of the Israel Phytopathological Society.

[Michael Denman (2nd ed.)]

COHEN GAN, PINCHAS (1942–), Israeli artist. Cohen Gan was born in Meknes, Morocco, and immigrated to Israel in 1949. In 1970 he graduated from the Bezalel Art School. He studied at the Central School of Art at London in 1971 and then joined Bezalel as a teacher. In 1973 he received his M.A. degree in sociology and history of art from the Hebrew University of Jerusalem and in 1977 an M.A. in art from Columbia University. From 1990 he was an associate professor in Bezalel. In 1968 he was severely injured by a terrorist car bomb.

Cohen Gan is considered an avant-garde artist and was a major voice in bringing back the figure and subject matter to a modern art under the influence of Pop Art and minimalism. His art reflects deep political and social concerns. It directly confronts man's condition while challenging and commenting on his fellow artists. His work is influenced by his childhood memories as an immigrant. He exhibited in many museums and art galleries the world over, among them the Israel Museum, Tel Aviv Museum, galleries in New York, and the Los Angeles Museum. He represented Israel at the Documenta in Kassel, Germany, the Sao Paulo Biennale, and the Biennale of Venice. In 1991 he published *And These Are the Names* with 100 drawings representing 100 lost Jewish communities destroyed by the Nazis in Europe and North Africa. He also participated in a traveling exhibition to Israel's provincial settlements aimed at attracting their population to art. He won an America-Israel Cultural Foundation grant in 1978,

the Isaac Stern Creativity Prize, Sandberg Prize of the Israel Museum (1979), Minister of Education Prize (1991), Eugene Kolb Prize for Israeli Graphics (1991), and Acquisition Prize of Tel Aviv Museum (1991).

[Shaked Gilboa (2nd ed.)]

COHEN GELLERSTEIN, BENJAMIN (1896–1964), Chilean diplomat. Born in Concepción, he graduated as a lawyer specializing in international law from the University of Georgetown in Washington. In 1923 he served as secretary of the Chilean delegation to the fifth Panamerican Conference. Later he served for five years as head of the Diplomatic Department of the Ministry of Foreign Affairs. In 1939 he was named ambassador to Bolivia. After his retirement he was appointed subsecretary in charge of information at the United Nations.

[Moshe Nes El (2nd ed.)]

COHEN MELAMED, NISSAN (1906–1983), authority on music and liturgical melody of Oriental Jews. Born in Shiraz, Persia, he came to Ereẓ Israel with his parents at the age of two, and as a child, became an expert in the cantillation of Oriental Jews. He studied music at the Jerusalem Conservatory of Music and did research on cantillation under Prof. Solomon *Rosowsky. In 1927 he was appointed by Chief Rabbi *Ouziel as cantor of the Sephardi Great Synagogue "Ohel Moed" in Tel Aviv and director of the Pirḥei Kehunah College for Sephardi *ḥazzanut*. From 1956 to 1962 he served as *ḥazzan* and school principal in Mexico City and as head of the Koresh Jewish School in Teheran. On his return to Israel he joined the faculty of Jewish Music of Bar-Ilan University. In 1980 the Israel Academy of Music in Tel Aviv released a recording of cantorial liturgies, cantillation of the Torah, *haftarot*, and the five *megillot*, sung by Nissan Cohen Melamed as arranged by Yehezkel Braun.

[Akiva Zimmerman (2nd ed.)]

COHEN-TANNOUDJI, CLAUDE (1933–), French physicist. Cohen-Tannoudji completed his Ph.D. in 1962 at the Ecole Normale Supérieure in Paris. He was then professor at the University of Paris in 1964–73, and from 1973 professor of Atomic and Molecular Physics at the Collège de France in Paris. He is a member of the French Académie des Sciences and a foreign associate of numerous other academies of science.

He has written about 200 theoretical and experimental papers dealing with various problems of atomic physics and quantum optics: optical pumping and light shifts, dressed atom approach for understanding the behavior of atoms in intense RF or optical fields, quantum interference effects, resonance fluorescence, photon correlations, physical interpretation of radiative corrections, radiative forces, laser cooling and trapping, Bose-Einstein condensation.

He is the recipient of many awards, including the Harvey Prize in science and technology, the Quantum Electronics Prize of the European Physical Society, and the Gold Medal of the Centre National de la Recherche Scientifique. He published the two-volume *Quantum Mechanics* (1977), written with Bernard Diu and Franck Laloë; *Photons and Atoms* (1989), an introduction to quantum electrodynamics, with Jacques Dupont-Roc and Gilbert Grynberg; and *Atom-Photon Interactions* (1992), also with Jacques Dupont-Roc and Gilbert Grynberg. He in addition published a collection of selected papers under the title *Atoms in Electromagnetic Fields* (1994) and *Lévy Statistics and Laser Cooling – How Rare Events Bring Atoms to Rest* (2001), written with Alain Aspect, François Bardou, and Jean-Philippe Bouchaud.

[Bracha Rager (2nd ed.)]

COHN, Swiss family. ARTHUR COHN (1862–1926) served as the rabbi of Basle from 1885 until his death. He was a graduate of the Orthodox Rabbinical Seminary of Berlin and the leader of Orthodox Jewry in Switzerland. In 1907 helped to found the Central Association for Observant Jewry in Switzerland. His call to Orthodox Jewry during the Tenth Zionist Congress in 1911 to establish an independent organization to deal with religious issues contributed to the founding of *Agudat Israel in 1912. Some of his essays and sermons were published posthumously in *Von Israels Lehre und Leben* (1927). His son MARCUS (Mordecai) COHN (1890–1953), jurist and Zionist leader, in the sphere of Jewish law wrote *Die Stellvertretung im juedischen Recht* (1920) on agency and *Juedisches Waisenrecht* (1921) on orphans. He was also active in communal affairs and the Swiss Zionist movement. He represented the Mizrachi party at several Zionist Congresses and from 1931 to 1936 was president of the Swiss Zionist Federation, establishing the Palestine office in Switzerland in 1933. In 1935 he became a member of the court of the Zionist Congress. He was a member of the executive of the Federation of Jewish Communities in Switzerland from 1938 until 1950, when he settled in Israel. During the last three years of his life, Cohn served as assistant attorney-general to the Israeli government.

His son ARTHUR (1928–) is a Hollywood film producer whose six Oscars is a record. His films sometimes have Jewish themes, as in *The Garden of the Finzi-Continis* (1970), based on a story by Giorgio Bassani. Cohn maintains his ties to the Swiss Jewish community, contributing to the Jewish Swiss weekly *Tachles* of Zurich.

[Uri Kaufmann (2nd ed.)]

COHN, ALBERT (1814–1877), French scholar and philanthropist. Cohn, who studied philosophy and Oriental languages at Vienna University, was fluent in Arabic, Hebrew, German, and Italian. In 1836 he settled in Paris, where he became closely associated with James de *Rothschild, and was put in charge of his philanthropic works. In this capacity he

traveled frequently to Morocco, Algeria, and Turkey, where he was instrumental in improving the condition of the Jewish communities, and to Palestine, where he promoted the establishment of Jewish hospitals and schools in Jaffa and Jerusalem. From 1860 to 1876, Cohn taught at the rabbinical seminary in Paris. He was also a member of the central committee of the *Alliance Isráelite Universelle. Cohn wrote various scholarly and religious works, including his partly autobiographical "Lettres Juives" (in *L'Univers Israélite*, 20, 1864/65).

BIBLIOGRAPHY: I. Loeb, *Biographie d' Albert Cohn* (1878).

COHN, BERTHOLD (1870–1930), German astronomer, mathematician, and historian. Cohn, who was born in Ravicz (now Poland), studied in Basle, Breslau, and Strasbourg. He was appointed astronomer at Strasbourg Observatory. Some of his astronomical publications addressed Gaussian mathematical methods; the theory of logarithms; tables on the beginning of twilight; the first visibility of the moon; determinations of the orbits of three comets; and the comparison of various star catalogues (1912). His first historical paper dealt with the structure of the Jewish calendar (in the *Zeitschrift der Deutschen Morgenlaendischen Gesellschaft*, 59 (1905), 622–4). In "Die Anfangsepoche des juedischen Kalenders," Cohn suggested that the total solar eclipse of June 6, 346 C.E. (4106), fixed the time of the original new moon (of the creation period) as the point for back-dating the Jewish calendar (*Sitzungsberichte der Koeniglich-Preussischen Akademie der Wissenschaften*, no. 10 (1914), 350–54).

[Arthur Beer]

COHN, CILLA CYPORA (née **Rabinowitz**; 1910–2005), Danish Holocaust author. Cilla Cohn was born into an Orthodox family in Austria and immigrated with her family to Denmark during World War I. She studied history and literature at the University of Copenhagen. In the *Aktion of* October 1943, Cohn was arrested together with her family, and sent to Theresienstadt, where she remained until she was liberated through the intercession of Sweden's Count Bernadotte in 1945. Her experiences of this period form the basis for her novel, *En Jodiskfamilies saga* ("The Saga of a Jewish Family," 1960), which gained considerable general popularity and is used as textbook in high schools throughout Scandinavia. In the novel Cohn discusses the general historical basis for antisemitism, at the same time taking the reader on a veritable tour of Jewish history, folklore, and customs. Her novel *Sven-Adam's Kibbutz* (1973) also uses the Holocaust as the focal point, this time for a discussion of past history, and the birth and growing pains of the State of Israel. In addition to her participation in the public debate and espousal of Jewish causes through radio appearances and many articles in various Danish publications, Cohn was consistently active in the Danish Jewish community. She was one of the founders of WIZO in Denmark and secretary of its first board, and served as a member of the Governing Board of the Federation of Zionist Organizations in Denmark. From 1975 she served as Chairman of the Association of Danish Former Inmates of Theresienstadt.

[Robert Rovinsky]

COHN, EDWIN JOSEPH (1892–1953), U.S. biochemist. Born in New York, Cohn became professor of biological chemistry at Harvard and head of the department in 1938. Cohn's fields of research were the chemistry of the liver, plasma, and other tissue proteins. He discovered a method of fractioning blood plasma, and the varied subjects of his papers included aminoacids, peptides, the separation of gamma globulin, liver extract, thrombin, fibrinogen, and isohemagglutinin. Cohn wrote *Proteins, Amino Acids, and Peptides as Ions and Dipolar Ions* (1943) and *Research in the Medical Sciences – the March of Medicine* (1946). Cohn received awards and decorations from many governments and the Medal of Merit from the U.S. government in 1948.

[Samuel Aaron Miller]

COHN, ELKAN (1820–1889), U.S. Reform rabbi. Cohn was born in Kosten, province of Posen, then in the Kingdom of Prussia. He was an orphan whose grandparents sent him to Braunschweig to be tutored in Talmud by the traditional Rabbi Isaac Eger. But there Cohn also fell under the influence of historian Levi *Herzfeld, one of the earliest Jewish practitioners of the critical method and later a prime mover in the German Reform movement. Cohn spent the decade of the 1840s in Berlin, where he earned a doctorate in classics at the university, and, studying under Leopold *Zunz among others, his rabbinical degree. He chafed under the authoritarian rule of the Hohenzollern king and supported the revolution of 1848.

In 1850 Cohn was appointed rabbi of Brandenburg. Four years later he immigrated to America and succeeded Isaac Mayer *Wise as rabbi of Congregation Anshe Emeth in Albany, New York. Cohn took part in the Cleveland Rabbinical Conference of 1855 and was elected vice president. In 1860, accepting the challenges of a frontier pulpit, he became the rabbi of Congregation Emanu-El of San Francisco, where he remained almost three decades until his death. Like his friend Thomas Starr King, the famed Unitarian minister who arrived in San Francisco the same year, Cohn preached ethical universalism, presided over the building of a magnificent house of worship, and helped "save California for the Union" during the Civil War. After Lincoln's assassination, Cohn was one of 38 distinguished citizens of the West who served as pallbearers in a large procession of mourners in San Francisco. The tribute that he delivered in his synagogue to the fallen president was a passionate oration by a man otherwise not known as a gifted speaker or powerful writer.

Congregation Emanu-El, comprised largely of Bavarians, followed the German Orthodox ritual, but Cohn, in the face of opposition from within and without the synagogue,

initiated Reform practices. His introduction of a new prayer book led to the secession of 55 families in 1864 who formed their own congregation, Ohabai Shalome, which for many decades continued to adhere to the Minhag Ashkenaz that Cohn had compromised. In the summer of 1877, shortly after Isaac Mayer Wise's eventful visit to San Francisco, Emanu-El joined the fledgling Union of American Hebrew Congregations, the first synagogue in the American West to do so. Toward the end of Cohn's tenure, he inaugurated radical reforms such as banning skullcaps, moving Friday evening services to Sunday morning, and replacing the *shofar* on High Holidays with a cornet or trombone. Although Sunday morning services lasted only a year, the Classical Reform orientation of the synagogue was firmly established and would become even more pronounced during the rabbinate of Cohn's protégé, Jacob *Voorsanger (1889–1908).

Cohn's greatest achievement was the erection in 1866 of the imposing Sutter Street Temple, modeled after the Gothic cathedrals of medieval England. With its two tapered towers, each topped with a bronze-plated dome, it was a prominent feature of the San Francisco skyline until its destruction in the earthquake and fire of 1906. The grand temple reflected the strength and style Elkan Cohn had brought to Reform Judaism in Northern California.

BIBLIOGRAPHY: F. Rosenbaum, *Visions of Reform: Congregation Emanu-El and the Jews of San Francisco*, 1849–1999 (2000); J. Voorsanger, *Chronicles of Emanu-El* (1900).

[Fred S. Rosenbaum (2nd ed.)]

COHN, EMIL MOSES (pen name **Emil Bernhard**; 1881–1948), German rabbi, writer, and active Zionist. Cohn, who was born in Berlin, was the son of the pro-Herzl Zionist Bernhard Cohn. He received both a Jewish and Zionist education at home. As a student, he organized a Zionist student group together with J.L. *Magnes, A. *Biram, and others. In 1906 he was appointed *prediger* (preacher and teacher of religion) by the Jewish community in Berlin, but was forced to resign in 1907 because of his Zionist views. The resignation caused a scandal and gave rise to much polemical literature (cf. his own statement in *Mein Kampf ums Recht*). After serving as rabbi in Kiel (1908–12), in Essen (1912–14) and in Bonn (1914–26), he returned to Berlin, where he served as rabbi in Grunewald. After several arrests by the Nazis, he emigrated to the Netherlands, then in 1939 to the U.S., where he lived until his death. Cohn published plays (mostly under the pseudonym Emil Bernhard), some of which were performed in Germany and abroad. One of them, *Brief des Uriah* (1909, printed in 1919), was performed by the *Habimah theater. He also wrote poetry, ideological essays on Judaism and Zionism, a book entitled *David Wolfsohn, Herzls Nachfolger* (1939; Eng. tr. 1944), and a translation of Judah Halevi's *Diwan* into German (1920). In the field of Zionism he was one of the editors of *Zionistisches ABC Buch* (1908) and published his Zionist and Jewish credo called *Judentum, ein Aufruf der Zeit* (1923, 1934^2). He also published *Juedischer Kinderkalender* (1928, then *Juedischer Jugendkalender* 1929–31 and 1934).

[Getzel Kressel / Marcus Pyka (2nd ed.)]

COHN, FERDINAND JULIUS (1828–1898), German botanist and pioneer bacteriologist. Cohn was born in Breslau, the eldest son of Isaac Cohn, who held the post of Austro-Hungarian consul. He joined the faculty of the University of Breslau in 1851 as a lecturer in botany and in 1872 was appointed professor, the first Jew in Prussia to be granted that rank. Cohn long advocated the establishment of botanical gardens for the rigorous study of functional botany and in 1888 founded the Institute of Plant Physiology. He is generally credited with pioneering the investigation of heat production in plants and encouraging a generation of students to pursue careers in other phases of plant physiology. Cohn's most significant work, however, involved his seminal contribution to the nascent science of bacteriology. He was the first to classify bacteria as plants rather than protozoa, and in 1872 initiated a systematic classification of bacteria based upon their morphological as well as their physiological characteristics. He devised methodological tools which not only afforded a means for assessing biochemical characteristics of bacteria but which also led to the isolation of pure cultures. As the author of the first monograph on bacteria, *Untersuchungen ueber die Entwicklungsgeschichte der mikroskopischen Algen und Pilze* (1854), he directed the attention of both medical men and biologists to the research and clinical opportunities associated with microbiology at the Botanic Institute in Breslau. He founded and for a long time edited the *Beitraege zur Biologie der Pflanzen*. Cohn was awarded the Linnaeus Gold Medal. On his 70th birthday he was made an honorary citizen of Breslau and after his death a monument was erected to his memory.

BIBLIOGRAPHY: P. Cohn, *Ferdinand Cohn: Blaetter der Erinnerung* (1901).

[George H. Fried]

COHN, FRITZ (1866–1922), German astronomer. Cohn was born in Koenigsberg, and was appointed professor at the university there in 1905. In 1909 he became director of the leading center for astronomical calculations and professor at the University of Berlin. Cohn, who did outstanding work in the field of celestial mechanics, dealt with the determination of the orbits of planets, asteroids, comets, double stars, and satellites, in his researches. He also investigated the values of the astronomical constants, the theory of errors, transit observations, fundamental star catalogs, and the orbital identification of minor planets. Cohn wrote *Neue Methoden der Bahnbestimmung* (1918), on celestial mechanics, and edited ten volumes

of the *Astronomischer Jahresbericht* (1910–20), the basic bibliographical work in astronomy.

[Arthur Beer]

COHN, GEORG (**Arye**; 1887–1956), Danish international law expert and diplomat. Born in Frankfurt-on-Main into an old Danish-Jewish family, Cohn came to Copenhagen as a child. After law studies at the University of Copenhagen, he joined the Danish Foreign Ministry in 1913, remaining there for 43 years. In 1918 Cohn was appointed head of the ministry's new department of international law; from 1921 he held the position of advisor in international law and in 1946 received the title of minister.

During World War I Cohn was instrumental in maintaining Denmark's neutrality and in arranging help for wounded prisoners of war. For these efforts he received a knighthood of the Dannebrog Order and the Danish Red Cross Award. At the League of Nations in Geneva, where he was a delegate in 1920, 1925, and 1929, Cohn was concerned with problems of neutrality for the smaller states. From that point forward, he was preoccupied with the prevention of war and the need to define a new concept of active neutrality. This is reflected in his *Neutralité et Société des Nations* (1924) and *Kriegsverhuetung und Schuldfrage* (Frankfurt, 1931) and further developed in the seminal *Neo-Neutralitet* (1937; revised as *Neo-Neutrality,* 1939). The last two works earned him doctoral degrees at the Universities of Frankfurt and Copenhagen, respectively.

From 1929 Cohn was a member of the Permanent Court of Arbitration at The Hague. He negotiated the resolution of the age-old dispute over the Oresund Straits separating Denmark and Sweden (1931). In 1932–33 he successfully presented Denmark's case at the Permanent Court of International Justice at The Hague, in the sovereignty dispute with Norway over Eastern Greenland. A part of N.E. Greenland bears his name. In 1936 Cohn was elected a member of the International Diplomatic Academy in Paris. He lectured at the Academy of International Law at The Hague in 1939.

In October 1943 Cohn fled with his family to Sweden, joining the Danish Embassy in Stockholm. Returning to Denmark in 1945, he was a delegate to the United Nations General Assembly at Lake Success (1946). In 1948 he headed the international committee which dealt with states' rights over the continental shelf. As head of Denmark's delegation to the International Red Cross conference in Geneva (1949), he strongly supported the recognition of Israel's *Magen David Adom.

An observant Jew and a founder of the *Machzikei Hadat* synagogue in Copenhagen (1910), he later received rabbinical ordination. With his brother Naphtali, a lawyer at the High Court of Denmark, he purchased the original S.R. Hirsch synagogue in Frankfurt (1924) to keep it in Jewish hands. He was among those consulted by David *Ben-Gurion on issues of religion and state. He visited Israel in 1950.

He was the recipient of numerous international awards. He edited and published with his brother the monthly law journal *Juridisk Tidsskrift* (1915–30). His legal and philosophical writings include *Platons Gorgias* (1911), *Etik og Soziologi* (1913), *Kan Krig forhindres?* ("Can War Be Prevented?" 1945), *Existentialisme og Retsvidenskab* ("Existentialism and the Science of Law," 1952).

[Emilie Roi (2nd ed.)]

COHN, GUSTAV (1840–1919), German economist. Cohn, who was born in Marienwerder, taught at the Riga Polytechnic from 1869 to 1872 and, after a few years in England, went to Switzerland in 1875 to become professor at the Zurich Institute of Technology. In 1885 he was called to the University of Goettingen, Germany, where he remained for the rest of his life. Cohn was not only a theoretician. Besides writing textbooks and studies of classical economic doctrines, he made important contributions to transportation and public finance. His investigations of the British railroad system in which he strongly advocated railroad amalgamation and public ownership became the basis of subsequent treatises on railroad theory. Together with Adolf Wagner (1835–1917), he was a leading representative of German Kathedersozialismus ("armchair socialism") during the second half of the 19th century. His publications include *Untersuchungen ueber die englische Eisenbahnpolitik* (1874–75), *Finanzlage der Schweiz* (1877), *System der Nationaloekonomie* (3 vols., 1885–98), and *Volkswirtschaftliche Aufsaetze und Nationalekonomische Studien* (1886).

[Joachim O. Ronall]

COHN, HAIM (**Hermann**; 1911–2002), Israel jurist. Cohn was born in Luebeck, Germany, and settled in Palestine in 1930. He studied at Merkaz ha-Rav yeshivah in Jerusalem, then gained a law degree in Germany in 1933. Cohn practiced law in Palestine, joining the Legal Council of the Jewish authorities in Palestine in 1947. From 1948 to 1950 Cohn was state attorney and in 1950–52 and 1953–60 he served as attorney general, contributing to the founding of the Israel legal and judicial system during the formative years of statehood. In 1952–53 he was minister of justice and in 1960 he was appointed a justice of the Israel Supreme Court. On March 5, 1980, Cohn was appointed deputy president of the Israel Supreme Court; he retired in 1981. He then became president of the Association for Civil Rights in Israel and of the International Center for Peace in the Middle East. From 1975 he was member of the International Commission of Jurists in Geneva and president of the International Association of Jewish Lawyers. His decisions were characterized by a liberal approach to problems connected with *halakhah*. During 1957–59 and 1965–67 Cohn served on the UN Commission on Human Rights. He also served as a law professor at the Hebrew and

Tel Aviv universities. He published *Foreign Laws of Marriage and Divorce* (1937); *Glaube und Glaubensfreiheit* (1967); *Mishpato shel Yeshu ha-Noẓeri* (1968; *The Trial and Death of Jesus*, 1972), dealing with the trial of Jesus in the light of contemporary Roman and Jewish law; and *Human Rights in Jewish Law* (1984). In 1980 he was awarded the Israel Prize for law. During his last years he devoted himself to issues of human rights. The Haim Cohn Institute for Legal Protection of Human Rights gives free legal assistance to people in need. Cohn was editor of the department of Criminal Law and Procedure in the *Encyclopaedia Judaica* (first edition).

[Benjamin Jaffe]

COHN, HARRY (1891–1956), movie pioneer; president and executive producer of Columbia Pictures Corporation. Born in New York, he entered show business as a piano player in nickelodeons, moved to music publishing, and then became an exhibitor of road show films. Later he was an associate producer at Universal Films. In 1919 he and his brother Jack, together with Joe Brandt, organized the CBC Film Sales Corporation, producing and distributing the *Hallroom Boys* comedies. This company was reorganized as Columbia Pictures in 1924. He acquired the Brandt holdings in 1932 and became president of the company the same year. Among the directors who worked for him were Frank Capra, Rouben Mamoulian, and Fred Zinnemann.

[Jo Ranson]

COHN, JONAS (1869–1947), German philosopher and educator. Cohn was a distinguished teacher of aesthetics, who based his conclusions on actual aesthetic experience. Born in Goerlitz, he studied philosophy under Wundt, Fischer, Paulsen, Barth, and Kuelpe at the Universities of Leipzig, Heidelberg, and Berlin. In 1901 he was appointed professor of philosophy at Freiburg im Breisgau. In March 1939 Cohn fled to England, returning to Germany after World War II. A noted neo-Kantian, Cohn developed a perceptive-critical idealism which went beyond Kant's synthesis of rationalism and empiricism and was centered between the Marburg (see Hermann *Cohen) and the South German neo-Kantian schools of thought. Cohn's most valuable contribution was in the study of aesthetics. Among his important works are his *Wertwissenschaft* (1932) and *Wirklichkeit als Aufgabe* (1955).

BIBLIOGRAPHY: J. Cohn, in: R. Schmidt (ed.), *Philosophie der Gegenwart in Selbstdarstellungen*, 2 (1923), 61–81; Earl of Listowel, *A Critical History of Modern Aesthetics* (1933), passim; J. Cohn, *Wirklichkeit als Aufgabe* (1955), appendix by J. von Kempski. **ADD. BIBLIOGRAPHY:** J. Cohn, *Jonas Cohn* (*Die Philosophie der Gegenwart in Selbstdarstellung*, vol. 11 (1923)); I. Heitmann, *Jonas Cohn – Das Problem der unedndlichen Aufgabe in Wissenschaft und Religion* (1999).

[Shnayer Z. Leiman]

COHN, LASSAR (later **Lassar-Cohn**; 1858–1922), German chemist, born in Hamburg. Cohn became professor of chemistry at University of Koenigsberg and was the head of the Jewish community there. His *Die Chemie im taeglichen Leben* (1896; *Chemistry in Daily Life*, 1896) ran to seven editions and was translated into several languages, including Hebrew. His other works included *Arbeitsmethoden fuer organisch-chemische Laboratorien* (1891), and *Moderne Chemie* (1891).

COHN, LEOPOLD (1856–1915), classical and Hellenistic scholar. Cohn was born in Zempelburg, West Prussia, and taught at Breslau University, from 1892 as professor. From 1902 he was also librarian of the university's library, and for some time he lectured at the Breslau Theological Seminary as well. Apart from studies in Greek literature, grammar, and lexicography, Cohn wrote on Judeo-Hellenistic philosophy. Together with P. Wendland he prepared an authoritative edition of *Philo's writings *Philonis Alexandrini Opera quae Supersunt* (7 vols., 1896–1915), of which he was responsible for volumes 1 (1896), 4 (1902), 5 (1906), and 6 (1915), and for the introduction. Cohn was associated with a German translation of Philo (*Die Werke Philos von Alexandria*), editing the first three volumes (1909–19) and translating most of the fourth.

BIBLIOGRAPHY: J. Guttmann, *Trauerrede fuer Leopold Cohn*. (1915). **ADD. BIBLIOGRAPHY:** D.T. Runia, "Underneath Cohn and Colson – The Text of Philo's 'De Virtutibus'," in: *Society of Biblical Literature* (Atlanta), 30 (1991), 116–34.

[Joseph Elijah Heller]

COHN, LINDA (1959–), U.S. sportscaster; anchorwoman for ESPN's signature SportsCenter news and information program. Raised on Long Island, Cohn played goalie for the boy's ice hockey team as a senior at Newfield (N.Y.) high school and on the women's ice hockey team at SUNY-Oswego college, from where she graduated in 1981. She began her career in Patchogue, N.Y., as a news anchor and sports reporter for WALK-AM/FM. She worked at radio stations WGBB-AM, WCBS-FM, and WCBS News Radio 88; as sports/news anchor and reporter for WLIG-TV on Long Island, N.Y.; and as anchor, news director, and chief correspondent for Long Island News Tonight. Cohn became the first full-time female sports anchor on a national radio network (ABC) in 1987. She was a sports anchor for WABC TalkRadio, hosted a call-in show and provided sports updates at WFAN radio in New York, was sports reporter for both SportsChannel America and News 12 on Long Island, and then moved to Seattle, where she was weekend sports anchor/reporter at KIRO-TV. Cohn joined ESPN as an anchor/reporter on SportCenter in July 1992 and has hosted ESPN's Baseball Tonight, National Hockey Night, ESPN2's NHL 2Night and RPM 2Night, and SportsCenter's NBA All-Star Game coverage. She has provided weekly "Extra Point" commentaries on ESPN Radio since 1998.

[Elli Wohlgelernter (2nd ed.)]

COHN, MESHULLAM ZALMAN BEN SOLOMON (1739–1811), rabbi and halakhic authority. Cohn was born in Rawicz (Posen region) and was orphaned at the age of four. He studied in the yeshivot of Posen and Zuelz, and in Altona, under Jonathan *Eybeschuetz who ordained him. He served as rabbi in Rawicz, Krotoszyn, Kempen, Zuelz, and finally in 1789 in Fuerth, where he remained until the end of his life. Cohn was one of the signatories of the indictment against the *Frankists in Offenbach in 1800. Questions were addressed to him from Germany, Poland, Hungary, and Bohemia, and his responsa reflect his acumen and great erudition, particularly in the area of matrimonial law and in cases dealing with *agunot*. He vigorously opposed all attempts to tamper with traditional customs. His published works are *Bigdei Kehunnah* (Fuerth, 1807), responsa; *Mishan ha-Mayim (ibid.*, 1811), an aggadic commentary on the Pentateuch; and *Naḥalat Avot* ("The Inheritance of Parents," *ibid.*, 1818), moral exhortations to his children and pupils. He wrote this last work at the age of 70 and explained its title as implying that when children walk in the way of the Lord, they bring a boon upon their parents, who, in consequence, inherit the world to come.

Rabin, *Die Juden in Zuelz* (1926), 32.

[Josef Horovitz]

COHN, MILDRED (1913–), U.S. physical and biochemist. Cohn was born in New York City and earned a B.A. from Hunter College and Ph.D. in physical chemistry from Columbia University. Her life-long interests were metabolism and enzyme mechanisms, and she was a pioneer in applying stable isotopic techniques and electron spin and nuclear magnetic resonance to in vivo metabolic studies. Her work greatly influenced other areas of research, including the development of anti-cancer agents. She worked at George Washington University (1937–38), Cornell University Medical School (1938–46), Washington University Medical School at St. Louis (1946–58), and the University of Pennsylvania in Philadelphia (1960–82), where she became professor of biophysics and physical biochemistry in 1961 and then Benjamin Rush Professor Emerita of Physiological Chemistry. Her many honors include election to the National Academy of Sciences (1971) and the National Medal of Science (1982). She succeeded in her field despite discrimination against women early in her career and worked all her life to upgrade the status of women in science.

BIBLIOGRAPHY: *Chemical and Engineering News* (Feb. 4, 1963), 92.

[Michael Denman (2nd ed.)]

COHN, MORRIS MANDEL (1898–1975), U.S. public health engineer. Cohn was born in Schenectady, New York, where he was successively sanitary chemist, sanitary engineer, director of environmental sanitation, and city manager. He lectured on public health at Albany Medical College, Union University, University of California, Georgia Institute of Technology, and was professor at City College, New York. He acted as consultant to the U.S. Atomic Energy Commission, New York State Legislature and U.S. Public Health Service, and was editorial director of *Wastes Engineering* and *Water Works Engineering*. Cohn was a consultant to several Israel institutions.

COHN, NORMAN (1915–), British historian. Educated at Oxford, Norman Cohn was a lecturer and later professor at Sussex University. He is best known for his work *Warrant for Genocide: The Myth of the Jewish World Conspiracy and the Protocols of the Elders of Zion* (1981), which presents a comprehensive history and account of the notorious antisemitic forgery. Cohn has also written on aspects of European history, in works like *Pursuit of the Millennium: Revolutionary Messianism in Medieval and Reformation Europe* (1957) and *Europe's Inner Demons* (1975).

[William D. Rubinstein (2nd ed.)]

COHN, OSCAR (1869–1936), German socialist politician. A lawyer in Berlin, he was a socialist member of the Reichstag from 1912 to 1918 and from 1921 to 1924. After the Russian Revolution of October 1917, he became legal adviser to the Soviet embassy in Berlin. He acted as counsel for the defense in the trials following the naval mutiny of 1917 and the general strike of January 1918. Cohn was often legal consultant in Jewish affairs and was active in various Jewish charity organizations. In the German Reichstag he combated the postwar campaign against the *Ostjuden*. In 1920 he went to Poland as a member of the commission set up by the International Socialist Conference to investigate the situation of the Polish Jews, and contributed to the report on their findings: *La situation des Juifs en Pologne. Rapport de la Commission d'Etude désignée par la Conférence Socialiste Internationale de Lucerne* (by Oscar Cohn, Pierre Renaudel, G.F. Schaper, and Thomas Shaw, 1920). In 1925 he was elected as representative of the *Po'alei Zion Party to the assembly of deputies of the Jewish communities of Berlin. He died in Geneva, and his remains were interred, according to his will, in kibbutz Deganyah.

BIBLIOGRAPHY: E. Hamburger, *Juden im oeffentlichen Leben Deutschlands* (1968), 503–8. **ADD. BIBLIOGRAPHY:** M. Brenner, in: *Terumah*, 3 (1987), 101–27; L. Heid, *Oscar Cohn* (Ger., 2002).

COHN, TOBIAS BEN MOSES (1652–1729), physician and Hebrew author. Tobias' father was a rabbi in Metz who died when Tobias was 9 years old. He was then sent to his relatives in Cracow, where he got a traditional Jewish education. Later he went to Frankfurt on the Oder to study medicine. He even got a scholarship from the elector of Brandenburg. He studied at the University of Padua and then went to Turkey where he served as a court physician until the age of 62, when he went to Jerusalem in order to concentrate on the study of Torah.

His main work *Ma'aseh Tuviyyah* (Venice, 1707) is an encyclopedia dealing with theology, astronomy, cosmography, geography, botany, with medicine taking up about half of the entire work. He describes the system of Copernicus but rejects it on religious grounds. On the other hand, he enthusiastically supports the Harvey system of blood circulation. At the request of friends from Poland, he deals at length with the disease then common in Poland, *plica polonica*. He stresses the chemical aspect of stomach diseases, in contrast to the then still prevalent system of Galen.

Although Tobias Cohn adhered to the old system of medicine, he was fully conscious of new trends, especially in surgery and in chemistry. He applied exact measurements in his scientific work, especially in thermometry. One of Cohn's innovations was the comparison of the human body to a house. The head was the roof, the eyes the windows, and the mouth, the doorway; the chest was the upper storey, the intestines were the middle storey, the lungs were water tanks and the legs, foundations. His remedies were laxatives, emetics, cupping glasses, and bleeding, but he demolished many superstitions and criticized the anti-Jewish professors of Frankfurt on the Oder as well as Jews who were devoted to Kabbalah and blindly believed in miracles. His theories relating to infant care and pediatrics were advanced for his age.

Ma'aseh Tuviyyah was printed in 5 different editions and is the only Hebrew work on medicine which was profusely illustrated. The work is also rich in historical references, e.g., on Shabbetai Ẓevi, and has considerable significance in the history of science.

BIBLIOGRAPHY: D.A. Friedman, *Tuviyyah ha-Rofe* (1940); A. Levinson, *Tuviyyah ha-Rofe ve-Sifro Ma'aseh Tuviyyah* (1924); E. Carmoly, *Histoire des médecins juifs* (1844), 248ff.

[David Margalith]

COHN-BENDIT, DANIEL (1945–), student leader and politician in Germany and France. Born to German-Jewish emigrants in Montauban (France), Cohn-Bendit grew up in Paris. As a young lawyer in Weimar Germany, his father, Erich, had made a name for himself defending left-wing activists and fled to France already in 1933. He returned to Germany in the early 1950s and began working as a restitution lawyer in Frankfurt, with his wife, Herta, and younger son, Daniel, following him there in 1958. After the early death of his parents and his graduation from high school (the well-known Odenwaldschule boarding school), he went on to university studies in Paris, where he became one of the leaders of the student protest movement of 1967/68 at the University of Nanterre. He founded the group "22nd March" and received the nickname "Danny le rouge" (Danny the Red). He distanced himself from Western capitalism as well as from Soviet-style communism. When he left France for a brief visit to Germany in May 1968, he was refused permission to return. On May 22, 4,000 French students marched through the streets of Paris under the slogan "We are all German Jews." He continued to study sociology in Frankfurt and remained active in the radical left student movement as founder (in 1976) and editor of the "*Sponti*" ("anarchist") journal *Pflasterstrand*. Only in December 1978 was he allowed to return to France. From the mid-1980s, he was active in the politics of the Green Party in Frankfurt, where, together with Joschka Fischer he dominated the so-called "realistic" faction against the "fundamentalists" and ran for the office of mayor in 1987. In 1989, he was appointed official for multicultural affairs of the City of Frankfurt and remained in this position for eight years. From 1994 he was a member of the European Parliament, elected both in Germany and France.

Cohn-Bendit does not identify himself as a Jew religiously but emphasizes that he identifies himself as a Jew as long as antisemitism exists. He keeps a distance from Israel, but in contrast to many of his contemporaries from the 1968 student protest he did not develop an explicit anti-Zionism. During the 1985 protests of the Jewish community against the staging of the allegedly antisemitic play by Rainer Werner Fassbinder, *Die Stadt, der Muell und der Tod*, he maintained a mediatory position between those for and against performance. In 1993 he filmed a documentary about the Frankfurt Jewish community.

[Michael Brenner (2nd ed.)]

COHNHEIM, JULIUS (1839–1884), German pathologist and pioneer in experimental histology. Cohnheim, who was born in Pomerania, held professorships in pathology at the universities of Kiel, Breslau, and Leipzig. Cohnheim discovered how to freeze fresh pathological objects for examination and how to trace nerve endings in muscles by using silver salt impregnation. His studies on inflammation and suppuration revolutionized pathology. He demonstrated that the main feature of inflammation is the passage of leukocytes through the capillary walls and that in this way pus is formed out of the blood. His work on the pathology of the circulatory system and on the etiology of embolism resulted in innovations in the treatment of circulatory diseases. He inoculated tuberculous material into the eye of a rabbit and thus demonstrated that tuberculosis is a contagious disease. A monument in Cohnheim's memory was erected in Leipzig.

[Suessmann Muntner]

COHN-REISS, EPHRAIM (1863–1943), Ereẓ Israel educator. In 1888 he was appointed principal of the Laemel School in his native Jerusalem. From 1904 to 1917, as the representative of the *Hilfsverein der deutschen Juden, he contributed greatly to the foundation and expansion of the network of modern Jewish education in Ereẓ Israel by planning and establishing the Hilfsverein's schools and kindergartens. He became

a controversial figure during the language conflict (1913–14) when he supported the Hilfsverein's insistence on German as the language of instruction for technical subjects. Gradually his opposition to Zionism as a whole became so violent that during World War I he sent letters to the Hilfsverein in Berlin, through the German diplomatic service, denouncing the Zionists. In 1917 he went to Berlin, and did not return to Jerusalem, as the "German" Hilfsverein schools had been closed by the British Army authorities. He moved to France in 1938 and died there. In 1933 he published his memoirs, entitled *Mi-Zikhronot Ish Yerushalayim*.

BIBLIOGRAPHY: Y.Y. Rivlin, in: E. Cohn-Reiss, *Mi-Zikhronot Ish Yerushalayim* (1967²), 11–25 (first pagination).

[Moshe Rinott]

COHN-SHERBOK, DAN (1945–), British professor of Judaism, author, and rabbi. Born and educated in the United States and at Cambridge University, Dan Cohn-Sherbok has held academic posts at the University of Kent and, since 1997, at the University of Wales-Lampeter in Wales, where he is professor of Judaism. An ordained Reform rabbi, Cohn-Sherbok is a truly prolific author, with more than 50 books to his credit on all aspects of Judaism and Jewish history. Among the more notable are *The Blackwell Dictionary of Judaica* (1992), *The Crucified Jew: Twenty Centuries of Christian Anti-Semitism* (1992), and *Judaism: History, Belief, and Practice* (2003). He is also the author of an amusing autobiography, *Not a Job for a Nice Jewish Boy* (1993).

[William D. Rubinstein (2nd ed.)]

COHN-WIENER, ERNST (1882–1941), German art historian. Cohn-Wiener was born in Tilsit. After studying the history of art, archaeology, and philosophy, Cohn-Wiener worked as an art historian at the *Juedische Volkshochschule* and the Humboldt Academy in Berlin. Initially a specialist in German gothic sculpture, his principal fields of interest became Islamic and Jewish art as well as study of the Near and Far East, which he visited during a research expeditions in Russia, Asia Minor, Turkestan, and China (1924–5). His chief works are *Die Juedische Kunst* (1929) and *Turan* (1930). In 1933 he emigrated to Great Britain and in 1934 to India, where he was appointed as manager of the museums and art school in Baroda. There he modernized institutions like the Gallery of Baroda and established new departments for Islamic art and Indian miniatures at the University of Bombay. His wife, Lenni, an archaeologist, assisted him. In 1939 he settled in the United States and taught at the American Institute for Iranian Art and Archaeology until his death in New York 1941. Cohn-Wiener's works on Jewish and Islamic art were seminal, but remained isolated for a long time.

COHON, GEORGE A. (1937–), U.S. entrepreneur and philanthropist. Cohon was born in Chicago, Illinois, and graduated from Northwestern University Law School. After serving in the American military, he was practicing law when he met Ray Kroc, the founder of McDonald's. Kroc offered Cohon the McDonald's franchise for Eastern Canada. In 1967 Cohon moved his young family to Toronto and began opening restaurants in Canada. In 1971 Cohon sold his rights back to McDonald's in return for company stock, becoming the second largest shareholder in McDonald's after Kroc himself. While Cohon stayed at the helm of McDonald's Canada, in 1976 he began negotiating the opening of McDonald's restaurants in the Soviet Union. His efforts culminated with the first Moscow McDonald's in 1990. In addition to introducing fast food marketing, mechanization, and management techniques to the Soviet Union, McDonald's demand for quality ingredients led to the introduction of innovative agricultural and food-processing methods to the Soviet Union. McDonald's, for example, spent over five times more building a huge food-processing plant than it did on the restaurant itself. During his prolonged period of negotiations with Soviet officials, Cohon came to know Soviet power brokers at the highest level. He quietly used these connections to advocate on behalf of Soviet Jews. Cohon was honored with the Order of Friendship from Russian President Boris Yeltsin. His philanthropic endeavors, including his work as patron for the chain of Ronald McDonald Houses which provide accommodations for families whose children are receiving medical treatment, have earned Cohon the Order of Ontario, Honorary Doctorate (Haifa), the Canadian Council of Christians and Jews Human Relations Award, Israel's Prime Minister's Medal, and an appointment as Officer of the Order of Canada.

COHON, SAMUEL SOLOMON (1888–1959), U.S. Reform rabbi and theologian. Cohon was born in Minsk, Belorussia. He received a traditional yeshivah education before his family immigrated to the United States in 1904. He received his B.A. from the University of Cincinnati (1911) and was ordained at Hebrew Union College in Cincinnati in 1912. Subsequently, he served as rabbi in Springfield, Ohio (1912–13), and in Chicago at Zion Temple (1913–18) and then at Temple Mizpah (1918–23), which he organized. In 1923 he returned to Hebrew Union College as professor of theology. He was active in the affairs of the *Central Conference of American Rabbis. Cohon took a more favorable attitude toward traditional Jewish observances, the Hebrew language, and the idea of Jewish peoplehood than did the earlier generation of American Reform

rabbis; his viewpoint is reflected in the statement of position called the "Columbus Platform," of which he was the principal draftsman and which was adopted by the Central Conference in 1937 and essentially overthrew the earlier Pittsburgh Platform of Reform Judaism. As a theologian, he built on the Reform writings of Abraham *Geiger and Kaufmann *Kohler, but parted company with them when they departed from the historical development of Judaism. Cohon participated in editing the *Union Haggadah* (1923) and the *Rabbi's Manual* (1928). He wrote *What We Jews Believe* (1931) and a number of papers in the yearbooks of the Central Conference and in the Hebrew Union College Annual. He was a significant participant in the revision of the *Union Prayer Book* and served on the Committee that revised the *Union Home Prayer Book*. He was editor of the department of theology for the *Universal Jewish Encyclopedia* (1939). In 1956 Cohon retired from HUC in Cincinnati and became a fellow at the Hebrew Union College-Jewish–Institute of Religion, Los Angeles Campus, and later chairman of its graduate department. His library collection, now housed at Hebrew Union College, is one of the finest collections of Jewish theology and philosophy on the West Coast. His *Jewish Theology: A Historical and Systematic Interpretation of Judaism and Its Foundations* was published posthumously in 1971.

COIMBRA, city in central Portugal; a major center of Jewish population until the forced conversions of 1497. The Jews of Coimbra suffered frequent attacks, the most serious occurring in 1395 under the leadership of a church prior and several priests. Coimbra was the center of considerable Marrano Judaizing in the 1530s and 1540s, and a century later Antonio *Homem, professor of canon law at the University of Coimbra, led a conventicle of distinguished Marrano Judaizers. Many Marranos in addition to Homem attended the University of Coimbra, among them the distinguished dramatist and martyr, Antonio José da *Silva (d. 1739), while others such as Antonio Fernando Mendes (d. 1734), later a convert to Judaism in England, were on its faculty. Many of the New Christians arrested as Judaizers in Ferrara in 1581 were refugees from the Coimbra region. Three of them, including Joseph Saralvo, who boasted of returning 800 Marranos to Judaism, were put to death in Rome two years later. Coimbra was also the seat of an inquisitional tribunal, one of the four operating in Portuguese territory, besides Lisbon, Évora, and Goa. The tribunal in Coimbra, which tried many distinguished Conversos, disposed of more than 11,000 cases between 1541 and 1820. The trials sometimes lasted for months or even years, during which the accused were held in prison. The accused came in great numbers from Bragança, Braga, Porto, Viseu, Aveiro, Guarda, and Coimbra. Considering the claim that the accusations were mostly motivated by the wish to confiscate the property of the accused, it is noteworthy that the most frequent professions and crafts were, in descending order, shoemakers, merchants, priests, farmers, tanners, and weavers. From the sermons preached at the auto-da-fé we learn that mothers and grandmothers were held responsible for maintaining Jewish practices and beliefs among the Conversos. Thus, during the first century of its existence, more women than men were tried by the Inquisition of Coimbra. The hardest hit were those who lived in distant and mountainous areas. As late as June 17, 1718, over 60 secret Jews appeared at an auto-da-fé there, some for a fifth or sixth time. Two were burned at the stake and the rest penanced, among them Dr. Francisco de Mesquita of Bragança and Jacob de *Castro Sarmento.

COINS AND CURRENCY.

Jewish and Non-Jewish Coins in Ancient Palestine

THE PRE-MONETARY PERIOD. Means of payment are mentioned in the Bible on various occasions; the relevant passages in their chronological order reflect the development of these means from stage to stage. When compared with the material extant from contemporary cultures of the region, these passages show that the underlying concepts were region-wide in the Near East. The earliest form of trade was barter. Certain commodities became generally accepted means of payment such as cattle and hides. This is reflected in Genesis 21:28–30: "Abraham set seven ewe lambs of the flock by themselves" (in connection with the settlement with Abimelech in Beersheba) and Genesis 13:2, "Abraham was very rich in cattle, in silver and in gold." This last quotation, however, reflects the fact that Abraham lived in the period of transition from the use of cattle to the use of weighed quantities of metal, which is the next stage in the development of the means of payment – a fact which is well illustrated when he weighs four hundred shekels of silver as payment for the cave of Machpelah in Hebron (Gen. 23:15–16). Onkelos renders 100 kesitah, paid by Jacob for a field in Shechem (Gen. 33:19), by 100 lambs (*hufrin*). Cattle as a means of payment is reflected in many usages, such as the Latin *pecunia* (derived from *pecus*, sheep), the Greek *polyboutes* ("rich in oxen," a rich man), and the cattle-shaped weights depicted on Egyptian tomb wall-paintings found in excavations. The shekel was a unit of weight of 8.4 grams in the time of Abraham, based on the Babylonian *šiqlu*, which was divided into 24 gerah (Babyl. *giru*); 60

Babylonian shekels were one minah and 60 minah one kikkar (Babyl. *biltu*).

The shape of the metal ingots varied. Egyptian tomb wall-paintings depict them as shaped like bracelets or oxhides. In Genesis 24:22 Eleazar "took a golden ring of half a shekel [*beka*] weight, and two bracelets for her hands of ten shekels weight of gold." When Joshua conquered Jericho, Achan took booty against orders, among other things 200 shekels of silver and a "golden wedge" of 50 shekels weight (Josh. 7:21). Such a "golden wedge" was discovered during the excavations of Gezer. In the pre-monarchy period the word *kesef* ("silver") was frequently used instead of shekel (Judg. 9:4; and II Sam. 18:11; et al.). During the period of the kingdoms of Israel and especially of Judah, payments are mentioned in the Bible in the shekel weight, the unit used to weigh the metal bars which were in those days the main means of payment. Jeremiah bought a plot of land and weighed his payment (silver) on scales (Jer. 32:9). Subdivisions of the shekel were the beka or half-shekel (Gen. 24:22; Ex. 38:26) and the gerah, then a 20th of the shekel (Ex. 30:13). The shekel, in turn, was a 50th part of the maneh, and the maneh was a 60th part of the kikkar, which thus was equal to 3,000 shekels. The maneh and the kikkar, however, were only units of account and remained so during the Second Temple period when the shekel became a coin denomination. Gold, silver, and bronze ingots were discovered during excavations conducted in Erez Israel and so were scales and weights of the shekel unit and its multiples and fractions.

INTRODUCTION OF COINS IN ANCIENT PALESTINE. The earliest known coins originate in Lydia in northwest Anatolia in the late seventh century B.C.E. (i.e., before the destruction of the First Temple). No coins of that period have yet been discovered in Erez Israel. The earliest coins found on Palestinian soil are from the second half of the sixth century and the first half of the fifth century B.C.E. They are Greek coins from Athens, Thasos, and Macedon, brought apparently to the country by Greek merchants. In the late fifth and first half of the fourth centuries Palestine was under Persian rule and Phoenician coins, especially those from Sidon and Tyre, circulated in the northern part of the country and the coastal strip down to south of Jaffa. At the same time there was an abundance of small coins of the obol and hemi-obol denomination, struck in the Gaza area in a great variety of types, which are also artistically interesting. During that period the Athenian coinage, bearing the head of Pallas Athene and the owl, her holy bird, were the hard currency of the eastern Mediterranean. The owl type coin was so widely imitated on a local level that the local money had the same value as the Athenian coins.

THE COINS OF JUDEA IN THE LATE FIFTH AND FIRST PART OF THE FOURTH CENTURY B.C.E. Alongside the above-mentioned issues, imitations of the Athenian coinage were also issued in Judea. These silver coins are rather rare, but at least six coin types are known with the inscription *Yehud* (Aramaic: Judea). Some follow the "head/owl" type, while others show a falcon, a fleur-de-lis, a Janus head, a god seated on a winged chariot, and a bird of an unidentified kind. It cannot be determined whether the Jewish high priest or the local Persian governor was the issuing authority. On one coin, however, the Hebrew name Hezekiah (Yeḥezkiyyah) can be deciphered and could be related to the high priest mentioned by Josephus (Apion, 1:187–9). The largest denomination of this type which has been discovered is the drachm, but the bulk is composed of oboloi and hemi-oboloi.

THE HELLENISTIC PERIOD. During the third century B.C.E. Palestine was ruled by the Ptolemies and their currency not only circulated there but was struck in local mints at such coastal towns as Acre (then already called Ptolemais), Jaffa, Ashkelon, and Gaza. This changed after the battle of Panias in 198 B.C.E., when the Ptolemies were replaced by the victorious Seleucids. The latter used the local mints of Acre, Ashkelon, and Gaza for the production of their own currency, besides the many mints they had in other parts of their kingdom. Their coins circulated in Palestine at least until the first coins were issued by the Hasmonean rulers. The Ptolemies issued gold, silver, and bronze coins, some of the latter of heavy weight in place of the small silver. Their silver standard was lighter than that of the Seleucids, which still leaned on the Attic standard.

The Jewish Coinage

THE HASMONEAN COINAGE (135–37 B.C.E.). The consecutive history of ancient Jewish coinage begins after the establishment of the independent Hasmonean dynasty in the 2nd century B.C.E. The bulk of Hasmonean coins were of the small bronze denomination, namely the perutah or dilepton. In accordance with the Second Commandment no likeness of living beings, men or animals, are found on them. Most of the emblems, for example the cornucopia – single or double – the wreath surrounding the legend, the anchor, the flower, the star, and the helmet, were copied from emblems found on the late issues of the Seleucid coinage. All Hasmonean coins bear Hebrew legends, but those of Alexander *Yannai and Mattathias *Antigonus also have legends in Greek. The Hebrew legend, written in the old Hebrew script, almost always appears in the formula, "X the high priest and the **ḥever* of the Jews" (*ḥever* probably means the assembly of the elders of the state). The Hasmonean rulers are thus styled on most coins as high priests. The only exception is Alexander Yannai who eventually also styled himself king on some of his Hebrew legends. On the Greek legends the Hasmonean rulers styled themselves throughout as "king." With one exception all Hasmonean coins are undated, which presents scholars with difficulties in arranging them chronologically, especially as different rulers went by the same names. In spite of earlier opinions, *Simeon, the first independent Hasmonean ruler (142–135), never issued any coins. According to I Maccabees 15:2–9, Antiochus VII granted Simeon the right to issue coin-

age, but it has been proved that this grant was withdrawn before Simeon could make use of it. The series of *Shenat Arba* (the "Year Four") formerly assigned to him were actually issued during the Jewish War (66–70 C.E.). It has been suggested that Simeon's son John *Hyrcanus I (135–104 B.C.E.) did not start issuing coins immediately on succeeding his father, but only considerably later, probably in 110 B.C.E. This suggestion is based on the fact that cities in Phoenicia and in Palestine received the right to coin their own money from the declining Seleucid kingdom: Tyre in 126 B.C.E., Sidon in 110 B.C.E., and Ashkelon in 104 B.C.E. John Hyrcanus' coins are the main pattern for the whole series of Hasmonean coins. The obverse depicts a wreath surrounding the legend, "Johanan [Yehoḥanan] the high priest and the *ḥever* of the Jews," while the reverse depicts a double cornucopia with a pomegranate. All his coins are of the perutah denomination. The coins of his successor, *Aristobulus I (104–103 B.C.E.), are in brass with the same denomination and type, but the name was replaced by Judah (Yehudah). At the beginning of his reign Alexander Yannai (103–76 B.C.E.) issued coins of the same type as his predecessors, changing the name to Jonathan (Yehonatan). Later, he issued another series of coins (in Hebrew and Greek) on which he styled himself king. Their emblems are star, anchor, both sometimes surrounded by a circle, and flower. A lepton or half-perutah with a palm branch, and a flower also belong to this "king" series. One type of this series, the star/anchor surrounded by a circle, is very frequent. This is the only coin type in the whole series of Jewish coins which bears an Aramaic legend written in square Hebrew letters and which has been dated. The Hebrew as well as the Greek date 25, which is the 25th year of reign of Alexander Yannai (78 B.C.E.), were recently discerned. As in the Greek legends and this Aramaic one as well, his name is given as "Alexandros." Alexander Yannai also apparently issued lead coins which belong to his "king" series. It is believed that in his final issues he reverted to the early Hasmonean coin type, styling himself again as high priest but altering his Hebrew name from Yehonatan to Yonatan probably in order to avoid the formula of the tetragrammaton. The bulk of the coins of John Hyrcanus II (67, 63–40 B.C.E.) are in the same shape as those of John Hyrcanus I. There are, however, varieties which are peculiar to his issues. Greek letters, single or as monograms, eventually appear on his coins. An A is to be found on the obverse and sometimes on the reverse; other letters are Δ, Λ or Π. These letters probably refer to the magistrates who were responsible for the mint. A change in the traditional legend, namely "Johanan [Yehoḥanan] the high priest head of the *ḥever* of the Jews," may indicate the privileges bestowed upon Hyrcanus II by Julius Caesar who confirmed him as high priest (Jos. Wars 1:194). Besides the regular coin type, Hyrcanus II also issued lepta or half perutot of the same type as did his father Alexander Yannai, bearing the palm-branch/flower. One larger trilepton shows a helmet and a double cornucopia. On all his coins he styled himself high priest.

During the short reign of the last Hasmonean ruler, Antigonus Mattathias (40–37 B.C.E.), a fundamental change occurred in the coin issue of the Hasmoneans. His Hebrew name Mattityahu (Mattathias) is only given on his perutah denomination. The pomegranate between the double cornucopia is replaced by an ear of barley. He issued two larger denominations which can be compared with the Seleucid chalcous and dichalcous. Antigonus was the only Jewish ruler who depicted the holy vessels of the Temple of Jerusalem on his coins, i.e., the table of shewbread and the seven-branched candelabrum. In his Hebrew legends he styles himself high priest and in his Greek legends "king." His Hebrew name is known to us only from his coins.

THE COINAGE OF THE HERODIAN DYNASTY (37 B.C.E.–C. 95 C.E.). The coins of Herod the Great (37–4 B.C.E.), all of bronze as those of his successors, can be divided into two groups: those which are dated and those which are not. The dated coins all bear the same date, the year three. As Herod no doubt reckoned his reign from his appointment as king of Judea by the Romans in 40 B.C.E. and not from his actual accession three years later, the "year three" is equal to 37 B.C.E. All legends on his coins are in Greek and no Hebrew legends appear on the coins of the Herodian dynasty. The legends render his name and title, Βασιλέως Ἡρώδου. The emblems on his coins are the tripod, thymiaterion, caduceus, pomegranate, shield, helmet, aphlaston, palm branch, anchor, double and single cornucopia, eagle, and galley. It may be concluded from this selection of symbols that Herod the Great did not wish to offend the religious feelings of his subjects. The denominations of his coins were the chalcous and hemi-chalcous (rare), the trilepton, and frequently the dilepton or perutah.

The coins of Herod Archelaus (4 B.C.–6 C.E.) are undated and bear mainly maritime emblems, such as the galley, prow, and anchor. Other types are the double cornucopia, the helmet, bunch of grapes, and wreath surrounding the legend. His main denomination was the perutah, but he also issued a trilepton. Herod Antipas (tetrarch of Galilee 4 B.C.E.–C. 39 C.E.) began to issue coins only after he founded and settled his new capital Tiberias. All his coins are dated. The earliest date is from the 24th year of his reign (19/20 C.E.). On his coins he is called Herod, but they can easily be distinguished as they bear his title "tetrarch." The emblems on his coins are all of flora such as the reed, the palm branch, a bunch of dates, and a palm tree. Though the emblems are the same on all denominations, three denominations can be distinguished. The obverses show a wreath that surrounds the legend "Tiberias"; only the series of the last year refers to Gaius Caligula. As the territory of the tetrarch Herod Philip I (4 B.C.E.–34 C.E.) was predominantly non-Jewish, he allowed himself to strike coins with a representation of the ruling Roman emperor and the pagan temple erected by his father in his capital Panias. His coins are dated from the year 5 to the year 37 of his reign, though not all dates occur. Three denominations can be observed, though their units cannot be distinguished.

The most common coin struck by King Herod Agrippa I (37–44 C.E.), grandson of Herod the Great, was a perutah of the year 6 of his reign (42/3 C.E.), depicting an umbrella-shaped royal canopy and three ears of barley. This coin was obviously struck for Judea. For the other districts of his kingdom he issued coins that would have offended Jewish religious feelings as they carried his own portrait or that of the Roman emperor and even gods or human beings in the Greco-Roman style of the period. On one very rare coin two clasped hands are shown; the legend seems to refer to an alliance between the Jewish people and the Roman senate. All Agrippa's coins are dated, and in his non-Jewish series two different groups of two denominations each can be discerned belonging to the reigns of Caligula and Claudius respectively. Herod of Chalcis (41–48 C.E.), brother of Agrippa I, regularly put his portrait on his coins, calling himself "friend of the emperor." Some of his extremely rare coins bear the date "year 3," others are undated; a system of three denominations can be observed in this coinage too.

From the time of the son of Herod of Chalcis, Aristobulus of Chalcis (57–92 C.E.), only a few rare specimens have been preserved. They bear his portrait and sometimes also that of his wife *Salome. His coins can be identified by their legends which mention him and his wife Salome as king and queen.

Because of his long reign, the series of coins assigned to Herod Agrippa II (c. 50–93 C.E.) is the largest and most varied among the coin series of the Herodians. Two types bear his likeness, and others issued in the year 5 of Agrippa with the name of Nero have a legend surrounded by a wreath. There are two coins which have a double date (the years 6 and 11) and which belong to the two different eras used on his coins. These double dated coins bear "inoffensive" symbols such as double cornucopias and a hand grasping various fruits. All his coins, like those of his father Agrippa I, are of bronze and dated, making it easy to arrange them in chronological order. There are however some difficulties. The first is the parallel issue of coins in the name of Vespasian and in the name of his sons Titus and Domitian. It has been accepted that all his Greek coins belong to an era starting in the year 56 C.E. The Latin series issued in the name of Domitian belongs to an era starting in 61 C.E. The bulk of his coins were struck during the reign of the Flavian emperors, with Tyche, the goddess of destiny, and the goddess of victory as emblems. A unique specimen, with the victory inscription on a shield hanging on a palm-tree, refers to the Roman victory in the Jewish War (66–70 C.E.). Agrippa thus put himself into the Roman camp against his own people. His coinage, as described above, shows the most far-reaching deviation from Jewish tradition among the ancient coinage issued by Jewish rulers.

THE COINAGE OF THE JEWISH WAR (66–70 C.E.). By the time the Jewish War broke out, the Tyrian mint had ceased to issue silver shekels but shekels were needed by every Jewish adult male for the payment of the annual Temple tax of a half-shekel (Ex. 30:11ff.; II Kings 12:5ff.). This reason and the resolve of the Jewish authorities to demonstrate their sovereignty over their own country led to the decision to strike the well-known "thick" shekels and half- and quarter-shekels dated from the first to the fifth year of the era of the war. These are the first silver coins Jews struck in antiquity. They are of an extraordinarily good quality, artistically as well as technically. The emblems are as simple as they are beautiful: a chalice with pearl rim and three pomegranates. The legends which are, of course, only in Hebrew and written in the old Hebrew script, read, *Yerushalayim ha-Kedoshah* ("Jerusalem the Holy") and *Shekel Yisrael* ("Shekel of Israel") with the abbreviated dates: שׁ׳א׳, שׁ׳ב׳, שׁ׳ג׳, שׁ׳ד׳, שׁ׳ה׳ (*shin alef, shin bet* for *sh*[*enat*], *a*[*lef*], "year one," *sh*[*enat*] *b*[*et*], "year two," etc.). Small bronze coins of the perutah denomination were struck during the second and third year of the war, and three larger denominations were issued during the fourth year, two of which indicate the denomination as *revi'a* ("quarter") and *ḥazi* ("half"). The emblems of the bronze coins are the vine leaf, the amphora, the *lulav*, the *etrog*, the palm tree, the fruit baskets, and the chalice.

THE COINAGE OF THE BAR KOKHBA WAR (132–135 C.E.). During this war the last Jewish coin series in antiquity was issued. Bar Kokhba became the head of the Jewish community, and the bulk of the coins issued bear the name Simeon and eventually his title "prince of Israel." However, other coins exist from that period which bear the name of one "Eleazar the Priest" or simply that of "Jerusalem" as the minting authority. The coins were issued over a period of a little more than three years (i.e., during the entire war). The coins of the first two years are dated, but the formula of the era changed from "Year one of the redemption of Israel" to "Year two of the freedom of Israel." During the third year and until the end of the war, the coins issued were undated and bear the war slogan "For the freedom of Jerusalem." These coin types, too, are as numerous as they are beautiful, and artistically rank first in the series of Jewish coins. During this war as well coins were issued in silver and in bronze. What makes this series exceptional from all other coin series in antiquity is the extraordinary fact that the whole issue was overstruck on coins then current in Palestine, such as on the Roman provincial tetradrachms (mainly from Antiochia) and on the Roman denarii or provincial drachms, as well as on local bronze city coins mainly from Ashkelon and Gaza. Bar Kokhba possibly obtained the gentile coins needed for overstriking by means of a public loan for the national war effort.

There are two silver denominations, the tetradrachm or sela and the denarius or zuz. The Temple front and a *lulav* and *etrog* appear on the tetradrachms, while a rather large number of emblems occur on the denarii, such as a wreath surrounding the legend, a bunch of grapes, a juglet, a lyre, a *kithara*, a pair of trumpets, and a palm branch. These emblems are used in many die combinations, thereby creating a large number of coin types. The bronze coinage can be divided into four de-

nominations, a system taken over from the city coinage then current in Palestine and which was reused for the Bar Kokhba issues. On the large denomination, which was issued during the first and second year only, a wreath surrounding the legend and an amphora are depicted. On medium bronze ʾא, which is the commonest denomination, a palm tree and a vine leaf are shown. On medium bronze a wreath surrounding a palm branch and a lyre or a *kithara* appears. The small bronze denomination shows a palm tree and a bunch of grapes. In general, the Bar Kokhba coinage is based on the tradition of the coinage of the Jewish War, 66–70. The amphora, vine leaf, and palm tree occur on the coins of that period, and the similarity of the legends is all the more striking, with the name of Zion replaced by the name Israel during the Bar Kokhba War.

Non-Jewish Coins During the Roman Rule

THE ROMAN PROCURATORS (6–37 AND 44–66 C.E.). After the banishment of Herod Archelaus in 6 C.E., his territory (Judea and Samaria) came under direct Roman rule administered by a procurator of equestrian rank. Some of these procurators issued coins of the perutah denomination as follows: coin types with a palm tree and an ear of barley; coin types with a wreath surrounding legend, a double cornucopia, olive spray, three lilies, a vine leaf or leaves, *kantharos*, amphora, and a palm branch; coin types with three ears of barley, *simpulum*, *lituus*, and a wreath surrounding the date of issue; and coin types with a wreath surrounding legend, two crossed spears, a palm tree, and a palm branch. It is believed that these coins were issued at *Caesarea Maritima, the administrative center of the Romans in Palestine. All coins bear the regal years of the respective Roman emperors and can therefore be arranged in chronological order without difficulty.

JUDEA CAPTA COINS AND LATER ISSUES OF THE ROMAN ADMINISTRATION. After the destruction of the Second Temple in 70 C.E., Palestine became a separate administrative unit called *provincia Judaea*. The Flavian emperors appointed a *legatus pro praetore* as head of the local administration and he was also the commander of the military forces stationed in the province. During the reigns of Vespasian (69–79 C.E.) and Titus (79–81 C.E.) the coins issued refer in their types and legends to the Roman victory; the legends are the Greek equivalent to the well-known legend *Judaea Capta*. Under Domitian (81–96 C.E.) four series of coins were issued, which do not refer to the victory over the Jews, but to Domitian's victories in Germany and Britain. All but the last two coin types of Domitian are undated and their chronological order was conjectural until recently.

THE PALESTINIAN CITY COINS. The following cities in Palestine proper struck coins in antiquity: *Aelia Capitolina (Roman Jerusalem), Anthedon, Antipatris, Ashkelon, Caesarea Maritima, Diospolis, Eleutheropolis, Gaza, Joppa (Jaffa), Neapolis (Shechem), Nicopolis-Emmaus, Nysa-Scythopolis, Raphia, Sepphoris-Diocaesarea, and Tiberias. Other cities beyond the border of ancient Palestine struck coins as well, such as Dora and Ptolemais (then part of Phoenicia), and the following cities in Transjordan: Abila, Dium, Gadara, Gerasa, Hippos, Kanatha, Kapitolias, Panias, Pella, Petra, Philadelphia, and Rabbath-Moab. Older cities which struck coins were Ashkelon, whose era began in 104/3 B.C.E., and Gaza, whose era began in 61/60 B.C.E. The era beginning between 64 and 60 B.C.E., which was adopted by many of the above cities, refers to Gabinius' invasion of the Hasmonean kingdom under Pompey, when many cities became independent, especially the so-called *Decapolis in the northeast. The coin types are numerous. City coins issued under Roman rule customarily had the head of the emperor on the obverse while the reverse bore images referring to the city, such as temples built there, the gods worshiped by their inhabitants, and military garrisons stationed in them. The legends frequently indicated the status of the city within the Roman empire, such as *colonia*, autonomous, etc. The archaeological finds suggest that the circulation of these coins was not restricted to the city by which they were issued, but was countrywide. In some cases (Ashkelon, Gaza, Neapolis, Sepphoris, and Tiberias) the money systems consisted of three or more denominations. Their equivalency with the Roman coin system cannot be ascertained. All these coins are of bronze. The only city in Palestine that issued an autonomous silver coinage was Ashkelon (between 51 and 30 B.C.E.) – coins bearing portraits of Ptolemy XIV, Ptolemy XV, and Cleopatra VII. The city coinage came to an end in about 260 C.E. when it became known that the value of the metal was greater than their nominal value. It was then replaced by debased Roman imperial coins.

[Arie Kindler]

Coins in Talmudic Literature

The currency system most commonly found in tannaitic literature is a syncretic one, based on the Greek drachm-obol – 6 obols = 1 drachm – but otherwise following the Roman monetary system both in terminology and metrological structure. Its standard was linked to that of the Tyrian tetradrachm (sela). In tabular form it appears as follows (above the talmudic terms are the Roman ones from which they derive.

Bronze				Silver		
Perutah	Quadrans Kardionts or Kuntrun(k)	Semis Musmis	As Issar	Dupondius Pundion	Denarius Ma'ah	Dinar
192	96	48	24	12	6	1
32	16	8	4	2	1	
16	8	4	2	1		
8	4	2	1			
4	2	1				
2	1					

There were also two (silver) tarapiks (quinarii) to the dinar, 24 or 25 dinars to the gold dinar (aureus), and 100 dinars to a maneh (theoretical unit of Babylonian origin).

The Talmud (Kid. 12a) also records what is apparently an earlier system, of uncertain origin.

Bronze			Silver		
Perutah	Shamin	Niz or Hanez	Darosa or Hadris	Ma'ah	Dinar
144	72	36	18	6	1
24	12	6	3	1	
8	4	2	1		
4	2	1			
2	1				

However, by the second century C.E. these systems were already of the nature of archaic literary heritages (from Hasmonean times, most probably), so that, for example, no ma'ot were actually in circulation. Coins in daily use were denarii and sela'im from imperial mints (Antioch, etc.), while "small change" copper coinage was minted locally in a number of cities (see above). These city coinages had their own metrological systems, still insufficiently understood, and a number of strange talmudic monetary terms, quoted much later than the coins were actually used, may be related in some way to these local systems; e.g., the trisit (tressis) of Tiberias and Sepphoris (Tosef., Ma'as. Sh. 4:13, 94), termissis (Roman as, denarius?), asper, riv'a (Roman sestertius, ¼ denarius?), tib'a (didrachm), and ragia (tridrachm, or cistophoric tetradrachm). The only silver coins minted in Palestine during this period were "revolt coins" of the Jewish War (66–70) and the Bar Kokhba War (132–135). In the Talmud those of the first war are called "Jerusalem coins," after their legend "Jerusalem the Holy," and those of the second "Kosiba coins" (Tosef., Ma'as Sh. 1:6).

The third century was one of inflation throughout the Roman Empire, so much so that by the 270s the denarius, instead of being 1/25 aureus was 1/1000 (See TJ, Ket. 11:2, 34b). The effects of this inflation were to force the closure of all local (copper-producing) mints, and by the time of Diocletian (284–309) to usher in a completely new monetary system, based on a gold standard, unlike the earlier silver-based one. A number of new terms appear in talmudic literature from the late third century onward, corresponding to units of the new system; e.g., lumma (nummus, Av. Zar. 35b), leken (leukon, meaning white, whitish silver-washed follis?; TJ, Ma'as. Sh. 4:1, 54d, etc.), follsa, follarin (follis), argaron (argurion, siliqua?; TJ, Pe'ah 8:7, 21a). Throughout the fourth century, which was one of continued economic instability, these units were subject to constant depreciation and revaluation. Even gold solidi, which had superseded the aurei, were at times viewed with mistrust because of their adulteration and pure bullion was preferred to gold coin (cf. Cod. Theod. 12:6, 13).

In Babylonia during the Sassanid period (from the early third century onward), the standard silver unit was the Sassanid drachm, called in the Talmud zuz (from Akkadian *zuzu* – "to cut," but according to Jastrow "glittering"), while smaller copper coins of varying sizes were called peshitte.

HALAKHAH. According to talmudic law, "coin" cannot effect a transfer of property; only "produce" (*pere*) can. All "coin" can do is cause an obligation to complete a contract. Hence there is much discussion on what [coins] constitute "coin" and what "produce," or in modern terminology the relative "fiduciariness" of the elements of a trimetallic monetary system (BM 44a–b, etc.). There is also some discussion as to when coins cease to be legal tender (BM 4:5; BK 97a–b, etc.).

In Post-Talmudic Literature

There are two main contexts in which monetary terms appear in post-talmudic literature, halakhic and lexicographic-metrological (partly related to halakhic), and there are also incidental references.

HALAKHIC. There were constant attempts to translate monetary *shi'urim* ("halakhic measures"), such as the five sela'im of "the redemption of the *firstborn," the perutah of the *marriage act, and the 200 zuz of the *ketubbah* in terms of contemporary coinage. Already in the Talmud (Bek. 50a) there is a geonic gloss which gives the Islamic equivalent of the five sela'im as "20 mitkalei [gold dinars], which are 28½ dirham [silver coins] and ½ danka." Though this reckoning is repeated in various early sources, subsequent commentators give a number of different calculations in terms of their own respective time and country (e.g., Persia, *Halakhot Gedolot*; Egypt, Maimonides; Aragon, Naḥmanides; etc.).

LEXICOGRAPHIC-METROLOGICAL. In several lexicographic works biblical and talmudic monetary terms are explained, for example, Jonah ibn Janaḥ's *Sefer ha-Shorashim*, Nathan b. Jehiel's *Arukh*, David Kimḥi's *Mikhlol*, etc. There are also a number of halakhic-metrological studies in which biblical and talmudic coins are discussed in current terms, as in the work of Joseph b. Judah ibn Aknin (12th–13th century) and Estori ha-Parḥi (*Kaftor va-Feraḥ* (c. 1322), ch. 16), which confusingly cites Arabic, Provençal, and French coins, right up to H.J. Sheftel's *Erekh Millim* (1906), a very rich dictionary of halakhic metrology.

INCIDENTAL REFERENCES. There are innumerable incidental references to coins in the responsa literature, for example to Islamic coins in *Teshuvot ha-Ge'onim* (ed. by A. Harkavy (1887), nos. 386, 424, 489, et al.); Spanish, in Solomon b. Abraham *Adret (responsa 2:113); Portuguese, in *David b. Solomon ibn Abi Zimra (responsa 2:651), etc. In some cases local monetary terms are translated literally into Hebrew, thus florins (*peraḥim*); gulden (*zehuvim*); albi or whitten (*levanim*); doblas (*kefulot*). Coins of pure silver are variously called *tabor*, *naki*, *ẓaruf*, *mezukkak*, or *zakuk*. Often a local term is equated with a talmudic one, at times with confusing results. Thus, for example, a pashut or pashit may stand for esterlin, sol, denier, dinaro, pfennig, etc.

[Daniel Sperber]

Currency of Palestine

EREẒ ISRAEL UNDER OTTOMAN RULE. Both Turkish and European coins circulated in Ereẓ Israel during Ottoman rule. Tokens issued by various communities, such as the Jews and the German Templers, and by some business firms, were also in circulation. The reasons for this variety of currency were lack of trust in Turkish coinage, shortage of coins, disparities in the value of Turkish coins of high denomination in different parts of the country, and the capitulations which granted special rights to some European powers and resulted in French gold napoleons and Egyptian coins being brought into circulation alongside Turkish coins. Egypt, though nominally under Turkish rule, enjoyed coinage rights from the middle of the 19th century, and its currency also circulated in Ereẓ Israel.

[Yitzhak Julius Taub]

PALESTINE UNDER THE BRITISH MANDATE 1917–48. On the British occupation of Palestine, the Egyptian pound was made legal tender in the territory. It was replaced in 1927 by the Palestine pound (œ-P), administered by the Palestine Currency Board in London. The Palestine pound was divided into 1,000 mils, and all subsidiary coins issued for Palestine were denominated in mils. A one-pound gold coin, equal to the British sovereign, was authorized but never issued. The first coins of Palestine were placed in circulation on Nov. 1, 1927. Their denominations were 1 and 2 mils in bronze, 5, 10, and 20 mils in cupro-nickel, and 50 and 100 mils in silver. The designs, prepared by the Mandatory government, were intended to be as politically innocuous as possible, the only feature besides the inscriptions being an olive branch or wreath of olive leaves. The inscriptions were trilingual, giving the name of the country, Palestine, and the value, in English, Hebrew, and Arabic. As a concession to the Jewish community, the initials, א"י ("Ereẓ Israel") appeared in brackets following the name Palestine. Perhaps in order to stress the colonial nature of the coinage, the 5, 10, and 20 mils coins were holed in the center.

The design of the Palestine coins remained unchanged, with the exception of the date, throughout the period of the Mandate. The only changes introduced from 1942 to 1944 were the minting of the 5, 10, and 20 mils in bronze due to wartime shortage of nickel, and a slight change in the composition of the 1 and 2 mils (from 1942 to 1945) in order to save tin, which was scarce. Coins were not minted annually, but according to local requirements as reported by the Mandatory government to the Currency Board. They were all minted at the Royal Mint, London. The last coins to be minted were those of 1947, but the entire issue bearing this date was melted down before leaving the Mint, except for two sets, one in the British Museum and the other in the Ashmolean Museum in Oxford. The entire series of coins actually in circulation numbers 59. Some of these exist in proof state as well. The Palestine Currency Board also issued bank notes (see Table).

[Dov Genachowski]

Denomination	Obverse design	Reverse design	Main color
500 Mils	Rachel's Tomb	David's Tower	lilac
1 Pound	Dome of the Rock	David's Tower	green
5 Pounds	Tower of Ramleh	David's Tower	red
10 Pounds	Tower of Ramleh	David's Tower	blue
50 Pounds	Tower of Ramleh	David's Tower	purple
100 Pounds	Tower of Ramleh	David's Tower	green

In the Concentration Camps and Ghettos

In the concentration camps, which had been established in Germany as soon as the Nazis came to power in 1933, the possession of currency, German or foreign, by the inmates was strictly prohibited. Amounts which they were allowed to receive every month from their relatives had to be exchanged for *Lagergeld* ("camp money"), a kind of scrip issued in denominations of 10 and 50 pfennig and 1 and 2 RM. Such camp money was in use in Oranienburg, Dachau, and Buchenwald. A substantial part, however, of the prisoners' monthly transfers was confiscated by the camp administration under the heading of "deduction for damage to camp inventory," and was channeled into the special accounts maintained by the SS.

GHETTO CURRENCY (PAPER). In several of the ghettos established by the Nazis, the Jewish administration was ordered by the SS to set up special banking and postal departments. The purpose was to deprive the Jews of all the money in their possession by forcing them to convert it into bank notes of a nonexistent currency. In the Lodz (Litzmannstadt) ghetto, established on April 30, 1940, all contact with the outside "Aryan" world was prohibited on pain of death. As early as June 1940, special 50 Pfennig notes were issued by the *Judenrat*, on orders of the ghetto commandant, in order to enable the ghetto inmates to purchase postcards bearing a postage stamp. The notes were overprinted in black with smaller denominations – 5, 10, and 20 Pfennig – which could be cut out for separate use. In July of the same year six more notes were issued, in denominations of 1, 2, 5, 10, 20, and 50 marks. This series, like the first, was printed by the German authorities outside the ghetto. The notes, called *Quittungen* ("receipts"), showed the respective denominations on one side, and the serial number, the Star of David, and the signature of the *Aeltester der Juden in Litzmannstadt* on the other; the denomination was repeated and, in addition, there was a *menorah* and a statement threatening severe punishment for any forgery of these notes. In April 1942, 10-Pfennig scrips totaling 2,000 marks were in circulation in the Lodz ghetto in order to meet the demands on its postal department. Additional series of 10 Pfennig notes were issued in the course of the year.

GHETTO COINS. The first coins specially minted for use in the ghetto, made out of an aluminum-magnesium alloy and issued in the denomination of 10 Pfennig, were put into circulation on Dec. 8, 1942. They were withdrawn after a few days because

they lacked the inscription *Quittung ueber …* ("receipt for …") and were replaced by a newly minted coin bearing the missing inscription. In 1943 more coins were minted in denominations of 5, 10, and 20 marks. On one side the coins showed the respective denomination, and on the reverse the Star of David, the word "ghetto," and the year of issue.

THERESIENSTADT "BANK NOTES". In the Theresienstadt ghetto the *Aeltestenrat* was ordered by the SS commandant to establish a ghetto bank at the end of 1942. In the spring of 1943 on the eve of a visit by a Red Cross commission, a hasty effort was made to prepare the ghetto for the visitors: shops were opened, in which items confiscated from new arrivals were put on sale; a "cafe" and "concert hall" for the "entertainment" of the starving prisoners were established; the only thing missing in the show was money. Thereupon the "technical department" of the ghetto was ordered to design bank notes on the spot, which were printed in a rush by the Prague National Bank in denominations of 1, 2, 5, 10, 20, 50, and 100 Kronen. The "money" was deposited in the ghetto "bank." Desider *Friedmann, a prominent Austrian Zionist, was appointed bank manager and was forced to report to the commission on the ghetto currency, the bank reserves, and the progress of the "savings accounts." This tragi-comedy reached its climax when the prisoners had to form a long queue in order to deposit their "money." Soon after the commission's visit, the bank and the ghetto currency became the subject of a Nazi propaganda film. Once again "banking transactions" were performed and filmed. Part of the film was discovered after the war; it shows emaciated old people waiting outside the bank in the old Theresienstadt town hall, with ghetto currency and savings books in their hands. Soon after, the "actors" in the film were sent to the Auschwitz death camp. Several series of Theresienstadt ghetto banknotes have been preserved. They vary in color and show Moses with the Ten Commandments, a Star of David, and the inscription *Quittung ueber… Kronen* on one side, and *Quittung*, a Star of David, the date of issue (Jan. 1, 1943), the signature of the *Aeltester der Juden*, Jacob *Edelstein, and the serial number on the reverse.

FORGING FOREIGN CURRENCY AT SACHSENHAUSEN. A different story altogether was the "production" (i.e., forging) of foreign bank notes by Jewish prisoners in the Sachsenhausen concentration camp for use by the Nazis. This was known as "Aktion Bernhard," after the officer in charge, *Sturmbannfuehrer* Bernhard Krueger, and began in 1942. Experts in graphic art and printing among Jewish prisoners were sent to Sachsenhausen. They were kept in a separate block, surrounded by barbed wire and isolated from the rest of the camp. A total of 130 prisoners was engaged in the work; the monthly output of sterling notes alone was as high as £400,000 but gold rubles, dollars, and foreign stamps were also forged. Shortly before the end of the war, a similar project was organized at the Mauthausen concentration camp.

[B. Mordechai Ansbacher]

The State of Israel

On the establishment of the State of Israel, the Palestine pound and its subsidiary coins continued to be legal tender until Sept. 15, 1948, when the Palestine pound was replaced by the new Israel pound (1 £, in Hebrew *lirah* (לִירָה) abbreviated ל"י). The Palestine coins continued in circulation until 1949, disappearing, however, even before their demonetization when the Iœ was devalued against the pound sterling.

LEGAL AND ADMINISTRATIVE ARRANGEMENTS IN ISRAEL. While the issue of banknotes was carried out for the State from 1948 until 1954 by the Issue Department of Bank Leumi le-Israel (before 1950 the Anglo-Palestine Bank Ltd.), the issue of coins during the same period, that is until the establishment of the Bank of Israel, was the responsibility of the government, exercised by the accountant-general in the Ministry of Finance. This responsibility was transferred to the Bank of Israel under the Bank of Israel Law, 5714 – 1954. A treasury note for 1 £4.1 million was issued to the bank on its opening day, Dec. 1, 1954, to cover the liability arising from coins in circulation on that date. This note was redeemed in 1965.

The Bank of Israel continued, between 1954 and 1959, to issue mainly the same coins issued previously by the Treasury. The first series of Bank of Israel trade coins was issued in 1960, while the first Bank of Israel commemorative coin was issued in 1958. The issue of coins is handled in the Bank of Israel by the Currency Issue Unit, charged with planning and producing the currency, while its placement in circulation comes under the Issue Department of the Bank. Coin designs are chosen by tender among qualified artists, or in some cases by open tender, by the Advisory Committee appointed for this purpose, which submits its recommendations to the governor of the bank. In order for the coins to become legal tender, the approval of the minister of finance and publication of the particulars of the coin in *Reshumot*, the official gazette, are required.

THE 25 MILS OF 5708–9. Following independence in 1948 the shortage of coins in Israel became acute. Firms, municipalities, and bus companies started illegally issuing coin-tokens, out of sheer necessity. As a result, in August of that year the Treasury decided to mint the first Israel coins. The first coin minted, denominated 25 mils (the term perutah replaced mil only later), was made of aluminum, carrying the design of a bunch of grapes taken from a coin of the Bar Kokhba War. It was at first minted by a private factory in Jerusalem, and later by one in Tel Aviv. It was not a successful coin and was placed in circulation only because of the pressure of demand. It established, however, the principle of design governing Israel trade coins – all designs are taken from ancient Jewish coins, those of the Jewish War (66–70) and of the Bar Kokhba War (132–135), and all are dated according to the Jewish year. The 25 mils coins are the only ones that were actually demonetized in Israel following the establishment of the perutah as the subdivision of the Israel pound.

THE PERUTAH SERIES. The perutah series, commencing in 1949 and ending in 1960, comprised eight denominations: 1, 5, 10, 25, 50, 100, 250, and 500 perutot. Various changes occurred during the period as regards the 10 perutot coin (minted in bronze and aluminum, four types in all), and the 100 perutot (two sizes) – there are several varieties, as distinct from types, in each coin of the series. The 250 perutot was minted in cupro-nickel for general use and in silver for sale to numismatists. The 500 perutot was minted in silver only, for numismatists' use, and was never in actual circulation. In all, the series includes 25 types for the eight denominations and numerous varieties. Until 1954 all perutah coins were minted for the Israel government by two private mints in Britain: the ICI Mint and The Mint, Birmingham. In 1954 the Israel Mint was established in Tel Aviv, as a division of the government printer, and gradually took over the minting of Israel's coins.

THE AGORAH SERIES. The law amending the Currency Order of 5719 – 1959 abolished the division of the I £ into 1,000 perutot and introduced instead its division into 100 agorot. Following this enactment, the Bank of Israel began in 1960 to issue the new series, denominated in agorot. Four denominations were introduced in 1960: 1 agorah made of aluminum, and 5, 10, and 25 agorot of cupro-nickel-aluminum. In 1963 the series was completed by the addition of half-pound and one pound coins in cupro-nickel. The one pound coin introduced that year proved unpopular owing to its similarity to the half-pound coin and its design was changed in 1967, this being the only change in the series. Complete sets of all six denominations were issued for each year since 1963 with the exception of 1964. By the end of 1968 the series comprised 47 coins. For some of these there are several varieties. Coins of the agora series were minted by the Israel Mint, the Royal Dutch Mint at Utrecht, and the Swiss National Mint, at Berne. The Israel Mint was moved from Tel Aviv to Jerusalem in 1966, and all 1967 trade coins were minted in Jerusalem, this being the first year in which no foreign mint took part in the minting of these coins.

COMMEMORATIVE COINS. The first commemorative coin of Israel was issued by the Bank of Israel in 1958 to mark Israel's tenth anniversary. It proved to be a success, and established the series of Israel's commemoratives as one of the most popular in the world. The basic series of commemoratives is the Independence Day coin, of which the 1958 coin was the first. These were issued until 1967 in the denomination of I £5 and from 1968 in the denomination of I £10, in silver. Two other series of commemorative coins were started but discontinued after a period: half-pound "half-shekel" series issued for Purim, of which two coins were issued in cupro-nickel, and one pound Ḥanukkah series, six coins also in cupro-nickel. Special (*hors-de-série*) commemorative coins were issued on several occasions: a 20-pound gold coin to mark the centenary of the birth of Theodor Herzl; 50- and 100-pound coins in gold to mark the tenth anniversary of the death of Chaim Weizmann; a 50-pound coin in gold to mark the tenth anniversary of the Bank of Israel; a 10-pound coin in silver and a 100-pound coin in gold to commemorate the victory in the Six-Day War; and a 100-pound coin in gold to mark Israel's 20th anniversary and the reunification of Jerusalem. Most of the commemorative coins were issued in both proof and uncirculated conditions. In all they were minted by four mints – the Utrecht and Berne mints already referred to, the Italian State Mint at Rome, and a private mint in Jerusalem. Under an amendment to the Bank of Israel Law, passed in 1968, the government granted the distribution rights of Israel's commemorative coins to the Government of Israel Coin and Medals Corporation. Its profits, deriving from the surcharge on the face value of coins and from the sale of state medals, are devoted to the maintenance and reconstruction of historical sites in Israel.

BANK NOTES. Until the Bank of Israel was established in 1954 there were two series of bank notes issued by the Bank Leumi. The first series bore the former name of this financial institute, Anglo-Palestine Bank Ltd., and was printed in denominations of 500 mils, 1, 5, 10, and 50 P £. A second series was printed in denominations of 500 perutah, 1, 5, 10, and 50 I £ under the new name of the bank, Bank Leumi Le-Israel. The Bank of Israel has issued two series of bank notes – the first in denominations of 500 perutah, 1, 5, 10, and 50 I £ and the second in denominations of one-half, 1, 5, 10, 50, and 100 I £. In 1969 the government of Israel voted to change the name of the standard currency from that of the Israel (pound) lira to the shekel.

°COLBERT, JEAN BAPTISTE (1619–1683), comptroller-general of finances under Louis XIV of France. Contrary to the prevailing attitude of his day, Colbert was in favor of the presence of the Jews. He believed them advantageous to the economy because of their trade, their manufactured products, and their capital investments. Therefore, he protected the *New Christians of *Bordeaux and Marseilles in the face of pressure from Catholic circles. He was also anxious that the Jews should remain in the French colonies – though at the same time restricting the public manifestations of their religious life – for the sake of their investments and the impetus they gave to agriculture.

[Bernhard Blumenkranz]

COLCHESTER, country town of Essex, England. In the Middle Ages the town harbored a Jewish community, which ranked ninth in importance among the English Jewries in the *Northampton Donum of 1194. On the organization of the *Exchequer of the Jews, Colchester became the seat of an **archa* for the registration of Jewish transactions. The Ashmolean Museum holds a mid-13th century bowl engraved in Hebrew probably owned by Joseph of Colchester. In 1277 a number of local Jews and Christians were involved together in a breach of the Forest Laws. On the expulsion of the Jews from England in 1290, nine houses owned by the Jews on Stockwell Street, as well as the synagogue, escheated to the crown. A short-lived Jewish community was established at the close of the 18th century. A congregation was established in 1957, and 27 Jews were living there in 1967. In 2004 the Jewish population numbered approximately 100.

COLE, KENNETH (1954–), U.S. footwear and clothing designer, entrepreneur, civic activist. Cole, president and chief executive officer of Kenneth Cole Productions, not only founded an international footwear and clothing business, but through his company's advertising, managed to raise social awareness of such issues as AIDS, homelessness, gun safety, and women's rights. Many of his ads carry the message: "To be aware is more important than what you wear." Born Kenneth Cohen, he was raised on Long Island and began working part time while still a teenager. He was a stock boy at a local shoe store and sold peanuts at two of New York City's most notable sports arenas, Shea Stadium and Madison Square Garden. After earning a B.A. from Emory University, Atlanta, Cole joined El Greco, his family's footwear business. Under the leadership of his father, Charles, the Brooklyn-based company produced the highly successful Candies shoes for women in the 1970s. In 1983, Cole left El Greco and launched Kenneth Cole Productions. It grew into a publicly owned corporation with more than 50 retail stores in the U.S.; distribution in Europe, Asia, and Latin America; licensees covering more than two dozen product categories for men and women; and more than a billion dollars in retail sales. Cole ran his first "awareness" ad in 1986. It depicted nine top models posing with children. The copy read: "For the future of our children … support the American Foundation for AIDS Research [Amfar]. We do." In keeping with the non-commercial aspect of the ad, the models were barefoot. Cole, a director of Amfar since 1987, is also its vice chairman and director of creative services. His company also supports HELP USA, a major provider of housing, jobs, and services for the homeless. He is married to Maria Cuomo, the daughter of former New York governor Mario Cuomo. Cole, who has received numerous awards for his innovative advertising, was named humanitarian of the year by Divine Design (1996), the Council of Fashion Designers of America (1997), and the National Father's Day Committee (2002). He wrote about his company and its ad campaigns in *Footnotes* (2003).

[Mort Sheinman (2nd ed.)]

COLEMAN, CY (1929–2004), U.S. composer, pianist. Born in the Bronx, N.Y., Coleman (Seymour Kaufman) was a child prodigy, giving a recital at Steinway Hall at the age of six and Carnegie Hall by nine. At 17 he was playing Manhattan supper clubs. While a student at the New York College of Music in 1948, Coleman turned away from classical music and formed a trio. He began to attract attention with songs recorded by Frank Sinatra, including "Try to Change Me Now," and "Witchcraft" and "The Best Is Yet to Come," the latter two written with Carolyn Leigh. The songs established Coleman's reputation as a master of the swiveling sexy come-on, a critic for *The New York Times* wrote. The partnership produced several hits and two Broadway musicals, *Wildcat*, which starred Lucille Ball, in 1960, and *Little Me*, a vehicle for Sid *Caesar in 1962.

In 1964 Coleman met Dorothy *Fields, a successful songwriter earlier in her career who was revitalized by working with the much younger Coleman. Their first project became the Broadway smash musical *Sweet Charity* in 1966 with songs like "Big Spender." They worked on two other shows, an aborted project about Eleanor Roosevelt and *Seesaw*, which reached Broadway in 1973. Fields died the following year. Coleman continued to write for the stage and produced the scores for the following shows: *I Love My Wife*, with lyrics by Michael Stewart, in 1977; *On the Twentieth Century*, with lyrics by Betty *Comden and Adolph *Green, 1978; *Barnum*, with Michael Stewart, 1980; *City of Angels*, with lyrics by David Zippel, 1989; *Will Rogers Follies*, Comden and Green, 1991 (which won a Grammy award); and *The Life*, with lyrics by Ira Gasman, 1997.

Other hits that became standards in the American songbook include "Hey, Look Me Over," "Real Live Girl," "Here's to Us," "Why Try to Change Me Now?", and "The Riviera."

[Stewart Kampel (2nd ed.)]

COLEMAN, EDWARD DAVIDSON (1891–1939), writer and bibliographer. A native of Suwalki, Poland, Coleman emigrated to the United States at a young age and studied at Harvard University. In 1931 he became the librarian of the American Jewish Historical Society and later its secretary and assistant to the president. He helped organize the Herzl Zion Club, the first Hebrew Zionist youth organization in the United States. Coleman's main scholarly interest was the Jew in English literature and American Jewish bibliography. Among his main works are *The Bible in English Drama* (1931), and *Plays of Jewish Interest on the American Stage, 1752–1821* (1934). He prepared the second volume to A.S.W. Rosenbach's *American Jewish Bibliography*, which, like most of his literary estate, has remained unpublished. Coleman's private library is now part of the Jewish National and University Library in Jerusalem.

°**COLENSO, JOHN WILLIAM** (1814–1883), English Bible scholar, Anglican bishop of Natal (South Africa). In 1853 Colenso was appointed bishop of Natal, where he learned Zulu, for which he compiled a grammar and dictionary; he also translated parts of the Bible and the New Testament into Zulu. Prompted by questions put to him by Zulus, his mind turned to difficulties and inconsistencies in the Pentateuch. He wrote *The Pentateuch and Book of Joshua Critically Examined* (7 parts, 1862–79), in which he denied the Mosaic authorship of the Pentateuch; Deuteronomy, he asserted, was written by Jeremiah. Such views caused much scandal and controversy; he was repudiated by his church but continued to minister to his followers. For a long time he was a solitary English representative of Higher biblical criticism. The popular *Speaker's Commentary* on the Bible was issued mainly to combat Colenso's views. In the English-Jewish community his views also caused a stir, and Chief Rabbi Hermann *Adler and A. *Benish joined his critics.

COLLATIO LEGUM MOSAICARUM ET ROMANARUM (or **Lex Dei**), one of the rare examples of a systematic comparison of two different legislations, the Jewish and the Roman. It was probably compiled in Rome, between the years 294 and 313 C.E. At one time the author was thought to have been a Christian; however, Volterra's view that the author was a Jew who wanted to prove the priority and superiority of the teachings of Moses (*Scitote, iurisconsulti, quia Moyses prius hoc statuit*, Coll. 7:1) appears to be preferable and is accepted by Levy. The *Collatio* contains 16 chapters dealing particularly with penal law; the first extract in every chapter is the biblical one, normally preceded by the phrase *Moyses dicit* ("Moses says") or *Moyses Dei sacerdos haec dicit* ("Moses, the priest of God, says the following"), followed by the paragraphs from the Roman jurists and the imperial constitutions. The biblical extracts (taken exclusively from Exodus, Leviticus, Numbers, and Deuteronomy) are carefully translated into Latin, probably by the same author, who used the text of the Septuagint and Latin translations before Jerome, frequently comparing the Hebrew text and also bearing in mind at times the traditional Jewish interpretation. The author often alters the text in order to make it more comprehensible juridically, or to make it agree with Roman precepts. Cassuto assumed that the translation of the biblical texts contained in the *Collatio* might be a reflection of "the tradition of the Italian Jews" who needed a Latin translation of the Bible for use in their synagogues and schools (*Annuario di Studi Ebraici*, 1 (1934), 105). The work, preserved in three manuscripts, was discovered in the 16th century and first published by P. Pithou (Basel, 1574). Among the principal editions should be mentioned those by Bluhme (Bonnae, 1833), by Mommsen (Berlin, 1890), by Girard (4th ed., Paris, 1913), by Hyamson (Oxford, 1913), and by Baviera (2nd ed., Florence, 1940).

COLLEGIO RABBINICO ITALIANO, Italian rabbinical college, the first modern institution of its kind, inaugurated in 1829 at Padua under the name Istituto Convitto Rabbinico through the efforts of I.S. Reggio and under the direction of L. Della Torre and S.D. Luzzatto. Among its alumni were L. Cantoni, S. Gentilomo, A. Lattes, E. Lolli, F. Luzzatto, A. Mainster, and M. Mortara. After Luzzatto and Della Torre's deaths, the institute underwent a series of crises and closed in 1871. It was reopened in Rome under its above name in 1887 and was directed by M.M. Ehrenreich. In 1899, after a period of suspended activity, it was moved to Florence under the direction of S.H. Margulies, with H.P. Chajes and I. Elbogen among its teachers; under them the college flourished. Among its alumni were E.S. Artom, U. Cassuto, D. Disegni, A. Pacifici, and D. Prato, who all exerted a marked influence on Italian Judaism. After the death of Margulies in 1922 the college, whether in Florence or in Rome, was never the same again. Back in Rome in 1934 and directed by the rabbi of the Rome community, R.A. Sacerdote, the collegio had U. Cassuto, I. Kahn, and D. Lattes among its teachers. After being closed during the later

stages of the Fascist regime, the college was reopened in 1955. It published the *Rivista Israelitica* from 1904 until 1915, and the *Annuario di Studi Ebraici*, at intervals 1935–1969.

COLLINS, LOTTIE (1865–1910), British actress and music hall singer. Collins' family name was originally Kalisch. Her father, William Alfred Collins, was a wood turner and music hall entertainer. Lottie Collins gained fame in London in 1891 with the song, "Ta-ra-ra-boom-de-ay," originally a boating song from the lower Mississippi. She accompanied it with a swift, high-kicking dance and made it her main act for years. Her daughter, JOSE COLLINS (Cooney; 1887–1958), also became famous in musical comedy, especially in *The Maid of the Mountains* (1917) which ran for three years. She used the title for her memoirs (1932). They were relatives of the architect HYMAN HENRY COLLINS (c. 1832–1905), one of the few Jewish architects in Victorian Britain. Hyman Collins built several London theaters, including the Strand Music Hall, and worked extensively on housing projects for the poor. He was also a major synagogue architect, building at least five synagogues in London and several others in provincial cities. The well-known Hollywood stars JOAN COLLINS (1933–) and her sister JACKIE COLLINS (1939–), also a best-selling author, are members of this family.

COLM, GERHARD (1897–1968), U.S. economist. Colm, who was born in Hanover, served in World War I as an officer in the German Army and was decorated. In 1922 he began his professional career as a government statistician and became deputy director of the Institute for World Economy in Kiel. In 1933, with the advent of Hitler, he emigrated to the United States, and was professor of economics at the New School for Social Research in New York, 1933–39, and an adviser to the Department of Commerce, Bureau of the Budget, and the Council of Economic Advisers. In 1952 he joined the National Planning Association, and was frequently called upon as consultant to the government. His publications include: *Economic Theory of Public Finance* (1927); *Economic Consequences of Recent American Tax Policy* (with Fritz Lehmann, 1938); *Essays in Public Finance and Fiscal Policy* (1955) contains a list of his writings; *The Economy of the American People* (1958); and *Integration of National Planning and Budgeting* (1968).

[Joachim O. Ronall]

COLMAR, capital of Haut-Rhin department, E. France, in Germany until 1681. Jews probably settled in Colmar toward the middle of the 13th century; they are mentioned as living there in a document from 1278. In 1279, the synagogue was destroyed by fire but it is not known whether through foul play or an accident. The Colmar community became the refuge of the Jews from *Rouffach in 1293, and from Mutzig and other localities in 1330 and 1337–38 during the *Armleder persecutions. The first community owned a synagogue, a *mikveh*, a "dance hall," and a cemetery. The Jewish quarter was situated between the western rampart, the present Rue Chauffour, and the Rue Berthe Molly (formerly the Rue des Juifs). In 1348, at the time of the *Black Death persecutions, all the Jews of Colmar were condemned to death and at the beginning of 1349 were burnt at the stake, at the place which is still called "Judenloch." From 1385, Jews were again admitted into Colmar, and town officials allowed them to establish a cemetery. The community was said to include at least 29 adults (or possibly heads of families) in 1392. Their number decreased from the second half of the 15th century, however, until in 1468 there were said to be only two families. In 1510, the emperor authorized the town to expel its remaining Jews, though the expulsion was not carried out until 1512. Nevertheless, Jews from Colmar who had settled in the surrounding localities continued their commercial relations with the burghers of the town. From 1530 they were forbidden to lend to the burghers except against movable pledges. In 1534 they lost the right to trade within Colmar, and in 1541 were forbidden to enter its bounds even when markets and fairs were held. It was as a result of this decision that *Joseph (Joselmann) b. Gershon of Rosheim brought an action against the town which went on for several years, the result of which is unknown. The Jews of Alsace maintained commercial relations with the burghers of Colmar throughout the 16th century, however, as evident from the numerous court cases recorded in that period (*Archives Communales de Colmar*, esp. pp. 33 and 39 ff.). In 1547, about sixty Marranos from the Low Countries were arrested in Colmar. They were only liberated after having taken the oath that their destination was a Christian country, and not Turkey.

The attitude of the burghers toward the Jews remained unchanged, even after Colmar was formally annexed to France in 1681. From the 18th century, a few Jews were authorized to live in eating houses and inns in the town in order to prepare ritual food for Jews visiting Colmar to trade. As late as 1754, the Jew Mirtzel Lévi of the neighboring city of Wittelsheim was martyrized after an iniquitous trial. After the outbreak of the French Revolution in 1789, Jews were again allowed to settle in Colmar. In 1808 it became the seat of a *Consistory, with 25 dependent communities. In 1823 Colmar also became the seat of the chief rabbinate of Alsace (Haut-Rhin). The Jewish population numbered approximately 1,200 in 1929.

[Bernhard Blumenkranz / David Weinberg (2nd ed.)]

Holocaust and Postwar Periods

The Jews in Colmar shared the fate of the other Jews in Alsace and Moselle in World War II. They were expelled from their homes, and their synagogue, which was built in 1843, was completely ransacked. After the war the survivors rebuilt the

Jewish community, restored the synagogue, and set up new institutions, including a community center. In 1969 there were over 1,000 Jews in Colmar.

COLOGNA (De), ABRAHAM VITA (1754–1832), Italian rabbi. Cologna, then serving in *Mantua, was a delegate to the *Assembly of Jewish Notables convened by Napoleon in 1806. In 1807 he was appointed vice president *(ḥakham)* of the French *Sanhedrin and in the following year one of the three *Grand Rabbins* of the central *Consistory, of which he was president from 1812 to 1826. In 1827 Cologna became rabbi of Trieste. He published a collection of sermons and apologetic writings, besides many occasional poems.

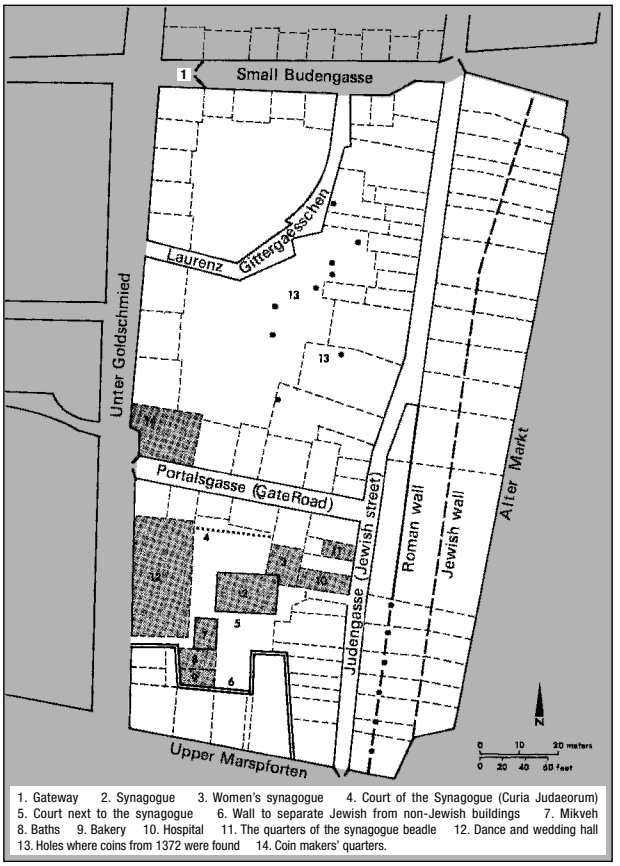
[Attilio Milano]

COLOGNE (Ger. **Köln**), city in Germany. Founded in 50 C.E. as the Roman Colonia Agrippinensis, seat of the provincial and military administration, it is likely to have attracted a Jewish population at an early date. A Jewish cemetery, assumed to have existed from Roman times, is attested there from the 11th century. It was in use to the end of the 17th century and came to light in the 1930s. Two edicts of Constantine (Cod. Theod. 16:8, 3–4) of 321 and 331 respectively imposed the onerous *Curia* duties on the Jews of Cologne and exempted the officials of their community from the obligations incumbent on the lower class of citizens. No further information on Jews in Cologne is available until the 11th century.

In 1012 (or 1040) a synagogue was erected which, though destroyed, was three times rebuilt on the same site, until, after the expulsion of 1424, it was turned into a chapel, though it served various purposes in the course of time. Allied bombing during World War II laid bare the foundations of the ancient building where unique examples of a *genizah* cellar under the *bimah* and a cistern (in the forecourt?) have been discovered. During the 12th century rabbinical opinion was divided over the religious propriety of its stained glass windows depicting lions and serpents. A chronicler of the first half of the 12th century describes the Cologne community at the end of the 11th century as "a distinguished city… from where life, livelihood, and settled law issued for all our brethren scattered far and wide" (Solomon b. Samson in *Sefer Gezerot Ashkenaz ve-Ẓarefat*, ed. by A.M. Habermann (1945), 43). The central importance of the Cologne fair and the community there for Jewry throughout the Rhine valley is further attested by the description of the *synods held in the city: "all the communities came to Cologne to the fairs three times a year and delib-



Medieval Jewish quarter in Cologne. Zvi Asaria, Die Juden in Koeln, *1959.*

erated at its synagogue" (*ibid.*, 47). The First Crusade of 1096 brought death and destruction to Cologne Jewry. Though the archbishop tried to protect the Jews of the diocese, many were massacred; the Jewish quarter and synagogue were sacked and burned down. The number of those killed indicates a community of approximately 1,000. The martyrs included Moses Kohen Ẓedek, rabbi and cantor, originating from France and respected for his scholarship and piety, as well as other scholars. One of the martyrs had come from Italy, another was a proselyte. A few saved their lives by accepting baptism, but were subsequently permitted by imperial decree to return to Judaism. However, a group of converts remained, who, themselves or their descendants, attained positions of importance in the Church and civil administration.

The community was afterward reconstructed. When a new city wall was built in 1106, the Jews were assigned their own gate (*Porta Judaeorum*) for the defense of the city. In the Cologne land register (*Schreinsbuch*), from 1135, the extent to which Jews owned property there is revealed: from 30 houses at the beginning of the period, to 48 in 1170, 50 in 1235, 60 in 1300, 70 in 1325, and 73 in 1349. Many also lived in leased or rented houses. The land register also yields information on the provenance of the Jews of Cologne, mentioning over 20 places in the Rhineland and beyond (such as Frankfurt, Wuerzburg,

Arnhem in Holland, and even England). The Second Crusade of 1146–7 left Cologne Jewry more or less unharmed, due mainly to Archbishop Arnold, who put the fortress of Wolkenburg at their disposal as a refuge. The imperial Jewish tax as well as the jurisdiction over Jews for serious criminal offenses were in the hands of the archbishops. From 1252 onward they issued periodical letters of protection or privileges to the Jewish community, by which the Jews were assured of protection of life and limb, freedom of commerce and worship, freedom from forcible conversion, and the right to untaxed burial for any Jew in the Jewish cemetery. The rabbinical courts had exclusive jurisdiction over cases involving Jews. For these "privileges" they had to pay heavily in the form of taxes or lump sums. The 1266 privilege, granted by Archbishop Engelbert II, was engraved on stone and can still be seen in the wall of the cathedral. During the 14th century power in the city passed from the archbishop to the patrician city fathers who had defeated him in the battle of Worringen (1288); subsequently the latter were asked to endorse the archepiscopal privileges granted to the Jews, and in 1321 the city itself issued them a letter of protection valid for ten years. It is an indication of the growing insecurity of Jewish life in Cologne that this sort of charter had to be frequently reissued. The cost of the letter of protection to the Jewish community was the considerable sum of 1,600 marks in 1321, rising to 1,800 in 1331. From 1341 acquisition of property by Jews required the consent of the city council, which also intervened in internal disputes.

Disaster overtook Cologne Jewry during the Black *Death. The plague had reached the city in the summer of 1349; the mob stormed the Jewish quarter on St. Bartholomew's Night (Aug. 23–24), letters of protection notwithstanding. Part of the community had assembled in the synagogue; they themselves set fire to it and perished in its flames. The rest were murdered. Among the martyrs were the last three "Jews' bishops" of Cologne (see below) and a number of distinguished rabbis. The archbishop, the municipality, and the count of Juelich now laid claim to the derelict Jewish property. When the "protectors" had at last settled their quarrel, the property was sold and the proceeds used for church and city buildings.

In 1372 Jews were readmitted to Cologne, once more under a privilege from the archbishop renewed in 1384 and every ten years until 1414. The city council also granted a privilege similar to earlier ones, stipulating that no claims could be raised arising out of property owned prior to 1349. Interest rates were limited to 36 1/2% per annum. A new spirit of discrimination was shown in the special dress regulations introduced for Jews and the prohibition on employing Christian nurses, contained in documents of 1384. The golden penny (*goldene Pfennig*) poll tax, imposed on German Jewry in 1342, is recorded as being collected in Cologne in 1391. The post-1372 community was small, never comprising more than 31 taxpaying households and 200 persons. All the more burdensome was the enormous tax which this small group had to pay, though it must have included some fairly rich people. However, the days of the community were numbered. The city refused, after prolonged pleadings before the archbishop, emperor, and pope, to renew the residential privilege which expired in October 1424. This brought the history of medieval Jewry in Cologne to a close.

Communal Structure

Cologne Jewry, like other ethnic and economic groups, formed a corporation with its own council (of 12?) and leader, referred to as the *Judenbischoff* (**Episcopus Judaeorum*; seven holders of this office are known by name between 1135 and 1417), apart from its religious and judicial organization with rabbis, *dayyanim*, readers, *shoḥatim*, beadles, etc. The office of "bishop" and rabbi were not identical, though occasionally united. The Jewish quarter, its synagogue (with a separate building for women), and the cemetery have been mentioned above. Other communal property included a *mikveh* (in addition to a public bath), a dance and wedding hall (*Spielhaus*), a bakehouse, a "hospital" for wayfarers, and accommodation for officials. The synagogue court (*curia Judaeorum*) served for public assemblies, wedding ceremonies, and perhaps for the rabbinical court. A wall separated the Jewish quarter to the south from the adjoining area, while a gate led into it from the east. The *mikveh* was discovered and partly restored during the 1956–57 excavations. The Jews of Cologne were mainly merchants, and later moneylenders. The Cologne fairs, to which traders from near and far brought both raw materials and finished goods, were one of Europe's most important mercantile events. Jewish visitors came from as far as the Ukraine. Transactions at this fair form the subject of an opinion by *Gershom b. Judah (10th–11th century; *Ma'aseh ha-Ge'onim*, ed. by A. Epstein (1909), 70; Rashi's *Pardes*, ed. by H.L. Ehrenreich (1924), 73). Powerful financiers who established themselves in the banking business in the 13th and 14th centuries were largely a law unto themselves, as shown by their repeated conflicts with the community, but their wealth and ostentation often proved their undoing. Many pursued more modest trades and occupations. Some physicians are mentioned toward the end of the 14th century. Among a long line of notable Cologne rabbis (*rabbanei Kolonya*) were *Eliezer b. Joel ha-Levi of Bonn ("Ravyah"), and *Asher b. Jehiel ("ha-Rosh") who was active in Cologne before his emigration to Spain in 1303. *Alexander Suslin ha-Kohen of Frankfurt (martyred in Erfurt, 1349) lived for some time in Cologne. To the kabbalistic school belonged *Abraham b. Alexander of Cologne. The Cologne community early established its own liturgical rite, partly based on Palestinian custom. Maimonides' *Mishneh Torah* was copied in four volumes of vellum in 1295–6 by Nathan b. Simeon of Cologne. This manuscript, now at Budapest, is one of the finest examples of Ashkenazi calligraphy and miniature painting of the period.

From 1424 to the end of the 18th century Jews were rigorously excluded from residence in Cologne. Even those few admitted for business were not permitted to stay overnight, not excepting Jewish physicians who were frequently called in by the local population from nearby towns such as *Bonn

and *Deutz. In the 16th century Cologne became the center of the *Pfefferkorn-*Reuchlin controversy. The University of Cologne (founded 1388) had a chair of Hebrew from 1484.

Printing

The Pfefferkorn-Reuchlin controversy led to the publication of many books and pamphlets, some containing Hebrew letters printed from woodcuts, such as Pfefferkorn's *Judenveindt* and *Osternbuch* (1509). In 1518 a polyglot psalter (in four languages) was edited by Johann Potkin, and printed by Jacob Soter and again in 1539 by Johann *Boeschenstein. In 1553 Soter printed the books of Obadiah and Jonah with a rhymed Latin translation by the apostate Johann Isaac ha-Levi and in 1555 Jacob *Anatoli's *Ru'aḥ Ḥen* with a Latin translation also by ha-Levi. In 1563, in partnership with P. Horst, he printed the book of Malachi, with translations. The Cologne imprint of a Bible of 1603 by J. Lucius (of Helmstedt) is doubtful, and it may have to be assigned to Hamburg. A Passover *Haggadah* with German translation and music by the Cologne cantor Judah, father of the composer Jacques *Offenbach, was published in 1838 by Clouth and Company.

Modern Period

The annexation of the Rhineland by revolutionary France in 1794 brought Jewish residents again to Cologne from 1798. A new congregation, formed by 17 households, was established in 1801. Solomon *Oppenheim represented it on the *Assembly of Jewish Notables convoked by Napoleon in 1806, and its rabbi, S.B. Rapaport, on the French *Sanhedrin of 1807. Under the decree of 1808, the Cologne congregation was administered first by the *Krefeld and (from 1817) by the Bonn *Consistory.

Residential permits were required even after the Rhineland had been incorporated into Prussia in 1815; 33 were granted in 1817, and 134 in 1845, when the community numbered approximately 1,000. Among the lay leaders of this period was David Hess, father of Moses *Hess. It was not until 1861, however, the year of the opening of a new synagogue magnificently endowed by the banker Abraham von Oppenheim, that the Cologne congregation achieved the status of a public corporation under the Prussian community law of 1847. Civic equality was finally obtained in 1856. Cologne Jewry numbered 4,523 in 1880, 9,745 in 1900, and approximately 20,000 (2 1/2% of the total population) in 1933. It had four synagogues and several *battei midrash*, two elementary schools and a secondary school, apart from religious schools, a hospital, an orphanage, a children's home, a home for apprentices, and many ancillary societies and institutions. Among rabbis who officiated in Cologne before World War II were the scholars Isidor *Scheftelowitz and Adolf *Kober. From 1867 an independent Orthodox congregation (*Adass Jeshurun) was active; a Jewish teacher's training college was closely associated with it. When David *Wolffsohn, a resident of Cologne, succeeded Theodor Herzl as president of the Zionist Organization in 1904, its offices were transferred to Cologne where they remained until 1911. Max *Bodenheimer was another leading Zionist in Cologne.

[Alexander Carlebach]

After the Nazis came to power in 1933, Jews (and other political opponents) were tortured and even murdered. The turning-point in the life of Cologne Jewry was April 1, 1933, the "Boycott Sabbath." The boycott affected not only shops and businesses but doctors, lawyers, and other professionals as well. Lawyers were driven through the street on garbage trucks. The subsequent dismissal of Jews from the civil service on April 7 affected physicians, teachers, and professors as well. It was a two-way boycott, many Christian shops refusing to serve Jews and it continued in some quarters as the city ceased purchasing from Jewish merchants. On May 10, 1933, "Jewish" books were burned on the University plaza. The Jewish community reacted to all this by carefully worded protests and declarations of loyalty to Germany, but also by assisting emigration, by increased welfare efforts, and by organizing professional retraining courses and trade schools. Discrimination, including the closure of playgrounds and athletic facilities, intensified. By 1935 Jews were barred from public baths. Jews responded by emigrating, leaving Cologne if possible, but there was also movement in the other direction as Jews from the small towns and villages of the Rhineland sought refuge in Cologne. The community organized its own cultural life through the local "Kulturbund," the second largest in Germany after Berlin's. As elsewhere, religious life revived, and Jewish schools could hardly accommodate the number of pupils seeking admission. By the end of 1936 2,535 people required communal assistance. In March 1938 the two Cologne congregations were deprived of their status of public law corporations. The November 9–11, 1938, pogroms known as *Kristallnacht led to the destruction by fire or vandalism of all synagogues. Jewish shops and offices were plundered and great numbers of Jews thrown into prison or concentration camps. More than 400 Jews were arrested and sent to Dachau. Emigration intensified. Over 100 children were sent to Great Britain on the *Kindertransport*. In total, more than 40% of the Jewish population emigrated before September 1939. In May 1939 the Jewish population was 8,406 with another 2,360 *Mischlinge*, persons of mixed Jewish ancestry. When war came in September 1939, the remainder of Cologne Jewry became subject to an all-night curfew, their special food rations were far below that of the general population, they were officially forbidden to use public transport and, when allied bombing began, to use public air raid shelters. Jews had to move out of houses owned by non-Jews; later they were restricted to certain parts of the town, and finally to Jewish-owned houses or institutions, and living conditions grew steadily more desperate. Toward the end of 1941 Jews were interned at a camp in the suburb of Muengersdorf with exemptions for those working in the armament industry and hospitalized patients. Jewish hospital patients were moved into the camp on May 31, 1942, with seriously ill patients temporarily housed in the Adass Jeshurun school building.

The first deportation was that of Polish Jews in October 1938. On October 21, 1941, some Cologne Jews were deported to Lodz. Later deportations were to Theresienstadt, Lodz, Riga, Lublin, and Auschwitz. Many died or were murdered before the end of the journey. Of special note was the deportation to Minsk on July 20, 1942, of Jewish children and some of their teachers. The last to be deported in 1943 were Jewish communal workers. After that deportation the only Jews remaining were those in mixed marriages and their children, many of whom were deported in the fall of 1944. Approximately 40–50 Jews survived in hiding.

[Alexander Carlebach / Michael Berenbaum (2nd ed.)]

A new community came into being after 1945, consisting of the few survivors, displaced persons, and a trickle of returnees (600 in 1946), and in 1967 numbered 1,321. The Roonstrasse synagogue was rebuilt in 1959. Rabbis active in Cologne in the postwar period were Zvi Asaria and E. Schereschewski. The *Monumenta Judaica* exhibition, reflecting 2,000 years of Jewish history and culture in the Rhineland, was shown in 1963–64. Besides a youth center the community maintained a Jewish home for the aged. The Jewish community numbered 1,358 in 1989 and 4,650 in 2003.

COLOMBIA, South American republic; population 43,800,000 (2003); Jewish population estimated at approximately 3,400.

History

Jewish settlement in the country dates back to the arrival of the *Crypto-Jews during the Colonial Period. The first to reach the area came with the Spanish conquerors during the 16th century. From the beginning of the 17th century, in the wake of the establishment of the Inquisition in Cartagena, the dangers increased for those who practiced Judaism in secret. The Inquisition authorities also specialized in persecuting Jews captured in their ships off Spanish-held coasts, mainly in the Caribbean Sea. Merchandise was confiscated, and if the captives were *New Christians reconverted to Judaism, they were tried, and in many cases executed. It is said, however, that a secret synagogue functioned in Cartagena at the beginning of the 17th century in the house of Blas de Paz Pinto.

The church was traditionally very powerful in Colombia, even after the country achieved independence, and its status was one of the main issues of political struggle. Until 1853 Roman Catholicism was the only religion permitted. Between 1861 and 1886 the influence of the liberals brought about freedom of religion and the restriction of the church's power, but from then until 1936 Roman Catholicism was the national religion protected by the state. The constitution of 1886, reformed in 1936 and 1945, guarantees freedom of religion as long as its practice is "not contrary to Christian morals or to the laws."

It was only at the end of the 18th and the beginning of the 19th century, however, that the first Jews openly began to settle in Colombia. (See the map "Jews in Colombia.") They came from the Antilles islands of Jamaica and Curaçao and by the middle of the century had settled in Barranquilla, Santa Marta, Ríohacha, and Cartagena, as well as in other port cities. In 1844 a cemetery was established in Santa Maria. In 1853 the Jews of Barranquilla were granted a plot of ground by the government to be set aside as a cemetery; in 1874 the Jews, together with the Protestants and the Catholics, set up a new communal cemetery divided into sections. On March 6, 1874, the Caribbean Jews in Barranquilla organized themselves as the "Colombian Jewish Community." Barranquilla developed into the main Colombian port, and the important Jewish houses of the Senior, Solas, Alvarez Correa, Rorg Mendes, Cortizos, and Curiel families were founded. The originator of transport on the Magdalena River, the main artery between Bogotá and the

Map of Colombia showing 19th-century and contemporary Jewish settlement.

sea, was David Lopez Penha. The major banks were managed by Moises de Sola, and the "Company of Water Resources" was headed by Augustin Senior, in whose home the Jewish prayer services were conducted. In 1919 Colombian air transport was established by Ernesto Cortissoz.

Smaller Jewish communities existed on the Caribbean coast, Riohacha and Santa Marta. Among their members were the generals Efrain and Abraham Juliao.

In the cultural field, in the 19th century the Barranquilla Jew Abraham Zacarias Lopez Penha became one of the main Colombian poets. Raised in the valley of the Cauca was one of the most famous Latin American writers, Jorge Ricardo Isaacs (1837–1895), author of the classic novel *Maria,* who was of Jewish origin, stemming from a family that came from Jamaica. The descendants of those settlers from the Caribbean have almost completely assimilated into the local population.

The contemporary Jewish community was established at the beginning of the 20th century. Sephardi Jews from Greece and Turkey and Jews from Syria came during the post-World War I period and constituted the first group of practicing Jews in the country. They engaged in commerce in manufactured articles and founded two silk factories in Barranquilla. At about the same time, Jewish immigrants began to arrive from Eastern Europe, mainly from Poland, as well as from Palestine. At first they engaged in peddling and then gradually entered manufacturing and business, considering Colombia only a temporary haven. The rise of Nazism in Germany changed the transient character of the community and also brought the last major wave of Jewish immigrants, who came from Germany and Central Europe. Of the 3,595 Jews who arrived between 1933 and 1942, 2,347 were German. According to official population statistics, in 1935 there were 2,045 Jews in Colombia. Of those, 1,100 were in Bogotá, 400 in Cali, 150 in Medellín and Barranquilla, and the rest in other places. (See the map "Jews in Colombia.") Two years later the number was estimated at over 3,000, and by 1943 the Jewish population reached 6,625. In 1934 active anti-immigration propaganda was instigated by the Chambers of Commerce. The press voiced its unanimous opposition to aliens, and in October 1938 the government passed new laws directed especially against Jews. In 1939 immigration ceased completely, and between 1945 and 1950 only 350 Jews entered the country.

Most of the immigrants entered the fields of minor industry and crafts and have played an important role in the economic and industrial development of the country. Attempts at agricultural settlement failed for the most part; of the 200 settlers in 1938 and 1939, only 46 were left by the end of 1942. The chief causes for this failure were the difficult and unknown climatic and agricultural conditions and especially the low standard of living of the farmers in Colombia. On the other hand, Jews played a prominent role in business.

Contemporary Period

Until World War II Colombian Jewry was rather loosely organized. The responsibility for this lay to a great extent with the authorities, who in 1940 still refused to approve the establishment of a central organization of the Jews of Bogotá and Cali, claiming that such a body would prevent the community's assimilation. The Holocaust, however, spurred communal organization, and today the Jewish community is united under the umbrella organization Confederación de Asociaciones Judías de Colombia, which is based in Bogotá. The Jewish community of Bogotá (946 Jewish families in 2005) includes three main groups: the Ashkenazim, the Sephardim, and the Germans. Each has its own communal institutions: the Centro Israelita de Bogotá (founded 1928), the Comunidad Hebrea Sefaradí (reorganized 1943), and the Asociación Israelita Montefiore. In addition, other cultural and Zionist organizations such as *B'nai B'rith, *WIZO, *General Zionists and *Maccabi serve the community. The Colombo Hebrew School in Bogotá educated about 280 students from kindergarten through high school, and religious life centers around the four synagogues in the city: two Ashkenazi, one Sephardi, and one German.

The Jewish communities in the other principal cities were also well organized. A total of 344 Jewish families lived in Cali in 2005. All the organizations within the city, as well as those in the small towns in the region, have united to form the Unión Federal Hebrea, which offers religious and social services. The community has two synagogues, one Ashkenazi and one Sephardi, and a school, the Colegio Jorge Isaacs, with 120 students (2005). It also sponsors a summer camp for children, the only one of its kind in the country. In Barranquilla, which is the third largest Jewish community in the country, 203 Jewish families were counted in 2005, of whom approximately half were East Europeans, one-third Sephardim, and the rest Germans. Economically, the Jews are in a favorable position, but they are not involved in general public life. Their organizations include the Club Unión, a social organization which encompassed the community as a whole; religious institutions maintained individually by each sector; general organizations such as B'nai B'rith, etc.; and an umbrella organization that includes all the organizations. The day school has a student enrollment of 300; the number of mixed marriages is small.

The cultural life of the Jewish community in Colombia is not exceptionally active. A good part of the social life centers on institutions of entertainment and leisure. At the same time, great affinity was evinced for the Zionist Movement, whose Colombia branch was founded in 1927, and for the State of Israel. Between 1962 and 1964, 146 Colombian Jews migrated to Israel, and there were 62 youths from Colombia among the volunteers who went to Israel after the *Six-Day War (1967). Jewish participation in political life in Colombia is minimal. There are no Jewish members of parliament or Jewish statesmen. The relations between the Jews and the Roman Catholic Church are cordial and were strengthened during Pope Paul VI's visit to the country in 1969, when a delegation of leaders of the Jewish community was received by him. Throughout the years, a variety of Jewish publications

have appeared in the country. By 1970 only two remained, both in Bogotá: *Menora*, established in 1950, had a Zionist-Revisionist orientation, stressed political problems, and presented community news; *Ideal*, Zionist and nonpartisan, published cultural and general news, both local and international.

Colombia did not vote for the partition of Palestine in 1947, nor did it recognize the State of Israel immediately upon its establishment. Later, however, it maintained an embassy in Jerusalem and Israel has established an embassy in Bogotá. Cordial relations exist between the two countries. A large number of Colombians participated in technical courses offered in Israel and even established an organization called Shalom.

The very unstable security situation initiated a wave of Jewish emigration from Colombia. The number of Colombian Jews in Israel has reached almost 2,000, with others settling in the United States and Spain or in other Latin American countries. In Bogotá Jewish activity has dwindled and the Jewish day school has fewer and fewer Jewish children. The number of members in the Jewish communities in Cali, Medellín, and Barranquilla are in steady decline.

COLOMBO, SAMUEL (1868–1923), Italian rabbi and scholar. Born in Pitigliano, Colombo completed his rabbinical studies at Leghorn under Israel Costa and Elia Benamozegh and graduated from the University of Pisa. From 1900 he served as rabbi and head of the rabbinical seminary in Leghorn. In 1912 he was accused before an Italian court of having applied Jewish law by refusing to conduct the wedding of a *mamzer* (see RMI, 29 (1963), 207ff.), but he won his case. Colombo was president of the Italian Rabbinical Federation and a keen Zionist. Among his published writings are *Babel und Bibel* (1904) against Delitzsch, *Il pensiero religioso di G. Mazzini* (1905), *La coscienza di un popolo* (1923), *Una questione di Divorzio secondo il Diritto Ebraico* (1895), and *Sepoltura o Cremazione*? (1908); *Vivere per un' Idea* (1958), *L'Idea dell'Ebraismo* (1958), *Verso Sion* (1920).

[Alfredo Mordechai Rabello]

COLOMBO, YOSEPH (1897–1975), Italian educator. Colombo was born in Leghorn, the son of Samuel *Colombo; he studied philosophy and pedagogy at the University of Pisa and taught history and philosophy in high schools. He was one of the founders of the Hebrew High School of Milan and its head from 1938 to 1945, when governmental schools were closed to Jews. He taught Hebrew language and literature at the University of Milan and began editing *Rassegna Mensile di Israel* in 1965. Colombo contributed to Italian encyclopedias as well as to Italian-Jewish periodicals and Festschriften. Among his published works are *Problema della Scuola Ebraica in Italia* (1925); *Concezioni ebraiche e teorie moderne* (1926); an Italian translation of and commentary to Avot (last reprinted, 1996), the prefaces to E. *Benamozegh's selected writings, *Scritti Scelti* (1955), and his work on the immortality of the soul in the Pentateuch (1969).

[Alfredo Mordechai Rabello]

COLON, JOSEPH BEN SOLOMON (c. 1420–1480), Italian halakhist, surnamed Trabotto, also known as **Maharik**. Colon was raised in Savoyard, capital of Chambéry, where his family had migrated after the expulsion of the Jews from France (1394). Colon's primary teacher was his father, an eminent talmudist in his own right, though he mentions having studied under other scholars in Chambéry. In his early thirties he migrated to the Piedmont, where he maintained himself through a combination of teaching children and older students and occasional loan-banking. In the late 1450s he headed a yeshivah in Savigliano. Subsequently, we find him in Mestre (before 1467), Bologna, and Mantua (apparently from 1467). According to a report in Ibn Yaḥya's *Shalshelet ha-Kabbalah*, in Mantua he and *Judah b. Jehiel Messer Leon became involved in a dispute, as a result of which they were both banished by the authorities. Colon afterward moved to Pavia, where he continued to teach and write responsa until his death. From an early age, scholars from Germany, Turkey, and Italy sought his decisions on Jewish law. After his death his responsa were collected and have since been frequently reprinted and published (Venice, 1519 etc.). His decisions had massive influence upon all subsequent legal development. His influence is particularly notable in the Ashkenazi orbit, as reflected in Moses Isserles' glosses on the Shulḥan Arukh. Colon was the central pillar of later Italian *halakhah*, and there is scarcely an Italian rabbi of the 16th, 17th, and 18th century who does not quote him.

Colon's responsa are distinguished by his encyclopedic knowledge and methodical analysis of sources. He attempted to identify the basic principles underlying his sources and to elucidate the conceptual framework within which he rendered his rulings. His legal method also resembled the mode of analysis known as *pilpul*. Established custom played a unique place in his thinking and he defined its authority. In this context, he served as the defender of a uniquely French school of Ashkenazi law and lore. The *Mishneh Torah* of *Maimonides enjoyed a preeminent place in his writings. His extensive comments thereupon, scattered throughout his responsa

and lecture notes, helped to set the agenda for later scholars. Colon's responsa are marked by tremendous deference to authorities of the past. Hesitating to decide between them, he resorted to methods of legal determination which removed or minimized this necessity (e.g., *Halakhah ke-Batra'i*). Possessed a strong sense of justice, he spoke out courageously against decisions that were widely accepted at that time, but that he deemed unjust. He also displayed great independence *vis-`a-vis* his contemporaries. Firmly, though respectfully, he reproved Israel *Bruna for overstepping the bounds of his authority. When a blood libel was made against some Jews of Regensburg, and the neighboring communities refused to be taxed for their ransom (although agreeing to make voluntary payments), Colon decided that it was their duty, to pay the tax. Colon's zeal for halakhic truth and integrity led him into a dispute with Moses b. Elijah *Capsali of Turkey. Having been wrongly informed that the latter had made grievous errors in decisions concerning marital law, Colon wrote to the leaders of the Constantinople community, threatening to place Capsali under a ban if he did not cancel his decisions and do public penance. This unprecedented attack on the rights of the community aroused a furor in Constantinople. Capsali answered the attack vehemently. Soon many of the leading rabbis of the day were embroiled in the dispute, which ended when Colon learned that he had been the victim of intrigue. With this discovery, Colon's remorse was as swift and thorough as had been his rebuke, and he did all within his power to make amends to the victim of his unjust attack, to the degree of sending his son Perez to travel to Constantinople and beg forgiveness of Capsali. In addition to his previously published responsa, new material under the title *She'elot u-Teshuvot u-Fiskei ha-Maharik ha-Ḥadashim* has been edited by E.D. Pines (1984[2]). Colon was the author of a commentary on the *Sefer Mitzvot Gadol* of *Moses b. Jacob of Coucy, part of which was published in Munkacs (1899). A fuller edition was also published by E.D. Pines under the title, *Hiddushe u-Ferushe Mahatrik* (1984). His *Seder ha-Get* appeared in Judah Minz's *She'elot u-Teshuvot* (Venice, 1553). Other material has been published in various journals, while a significant amount remains in manuscript.

[Abraham Hirsch Rabinowitz / Jeffrey R. Woolf (2nd ed.)]

COLONNE, JULES EDOUARD (**Judah**; 1838–1910), French violinist and conductor. Born in Bordeaux, he learned to play several instruments there. In 1855 he went to Paris and in 1857 entered the Paris Conservatory, where he won first prize for harmony and for violin. He became the leading violinist of the Paris Opéra and in the Lamoureux Quartet. In 1873 he founded the Organisation du Concert National, which became the Concerts du Châtelet, and finally the Concerts Colonne, which under his conductorship played an important role in fostering the performances of works by contemporary French and foreign composers; it was on performances of the works of Berlioz that his success was based. He was also the conductor of the official ten concerts at the Trocadero during the Paris Exposition Universelle of 1878, and appeared as visiting conductor in Europe and New York. In 1892 he joined the Paris Opera as artistic adviser and conductor.

[Amnon Shiloah (2nd ed.)]

COLOPHON, inscription at the end of a manuscript, of a book or part of a book written by the copyist, in which he records details of his work. Colophons were not added to every manuscript, and many of them have been lost because usually the last (and first) pages of the book were damaged. The colophon contains a number of details for the study of the text, for history in general, for the history of culture, and for paleography. It is generally written in the first person and tends to include the following details: the name of the copyist, the title of the work, the date of the completion of the copying, the place where it was copied, the name of the person for whom the work was copied or whether the scribe copied it for himself, and good wishes for the owner and for the copyist. Not all these details are included in every colophon, and their order is not always the same. Some colophons are very extensive. Others are brief, containing only the date of completion.

Names and Formulas of Blessings

The names mentioned in colophons usually include that of the father and at times also the family name. In Yemenite and Karaite manuscripts, several generations and even very lengthy genealogies are listed. The names are accompanied by colorful expressions of blessings for the living and the dead, which almost always take the form of *abbreviations. Some of these formulae are common to various cultural regions of the Middle Ages, while others are characteristic only of the land of origin. For example, the formula of blessing for

the living, יי"א (= יִרְאֶה זֶרַע יַאֲרִיךְ יָמִים אָמֵן), "May he see his seed prolong his days" – based upon Isa. 53: 10 – and ישר"ו (= יִחְיֶה שָׁנִים רַבּוֹת וְטוֹבוֹת, "May he live many and pleasant years," or יַעֲמֹד וְיִחְיֶה שָׁנִים רַבּוֹת, "May he exist and live many years"), is characteristic of Italy, probably only from the middle of the 14th century. The formula of blessing for the dead, רו"ת (= רוּחַ ה' תְּנִיחֶנּוּ, "May the Spirit of the Lord cause him to rest" – Isa. 63:14), is characteristic of Oriental countries. The copyist often bestows flowery honorific titles on his customer. In later Yemenite manuscripts, it became customary for the copyist to precede his name by expressions of humility.

Places of Origin and Dates

The copyists were accustomed to note, in addition to the place of the copying, their own or the owner's places of origin, thus providing interesting historical information. Details of this category are especially found in manuscripts written in Italy. For example, an Oxford manuscript (Bodleian Library, Ms. Opp. Add. 302, fol. 37), was copied in Ancona in 1402, by a copyist from Perpignan for someone from Rome then living in קסא. The date was given according to the eras customary among Jews. In Italy, from the 15th century onward, a mixed date consisting of the Jewish year and the Roman month came to be employed. In Hebrew manuscripts written by apostates, the Christian year is also to be found. In many manuscripts, especially from the 15th century onward, the year is given in the *gematria* form of a word or words from a biblical verse. In many colophons, the day of the week and of the month is also given, thus making it possible – with the help of chronological tables – to verify the dates. In some manuscripts, the dates in the colophons were forged by changing the letters or by erasing and re-writing the date with the aim of antedating the manuscript. In others, whole colophons, which do not belong to the copyist, have been added, but these can be identified by the difference of handwriting. It appears that only in about one-third of the medieval manuscripts which have colophons is the place of copying mentioned. This is most often omitted in manuscripts written in Germany. It is sometimes difficult to identify the name of the place, because of the Hebrew spelling of the special Hebrew appellation of localities during the Middle Ages.

Felicitations

The final part of the colophon, the concluding felicitations, is often the longest. In manuscripts written for a specified person, it contains good wishes and blessings addressed to the future owner, and in many cases there are some for the copyist particularly when the manuscript is written for himself. Most express the wish that the owner or the copyist, his children, and his descendants would be allowed to study the book. Appropriate biblical verses were also added, the most popular being Joshua 1:8, as in one of the oldest European manuscripts (Prophets, Codex Reuchlin 3 of the Badische Landsbibliothek, Karlsruhe): "This Book of the Prophets, the Targum and the Text, was completed by Zerah b. Judah, the most humble of scribes, in the year 4866 of the Creation [1105/6] and in the year 1038 of the Destruction of the Temple, may it be speedily rebuilt in our days; may we be granted to study them [the Prophets] and to teach [them] without affliction or misfortune. May the verse be fulfilled in him: 'This book of the law shall not depart out of thy mouth, but thou shalt meditate therein day and night, that thou mayest observe to do according to all that is written therein; for then thou shalt make thy ways prosperous, and then thou shalt have good success.'"

Concluding Formulas

Next to the colophon, the copyists usually wrote further concluding formulas containing praises to the Creator or a blessing for the copyist. Various formulas are known, some written out in full and others in abbreviated form, either before or after the colophon. Some formulas of this category are, for example: בד"ח לב"א (= ברוך דיהב חילה לעבדיה בר אמתיה, "Blessed be the All Mercifull Who hath given strength to His servant the son of His maidservant"), בנל"כ ואע"י (= בָּרוּךְ נוֹתֵן לַיָּעֵף כֹּחַ וּלְאֵין אוֹנִים עָצְמָה יַרְבֶּה, "Blessed be He Who giveth strength to the faint and to him that hath no might increaseth power" (Isa. 40:29)); בילא"ו (= בָּרוּךְ ה' לְעוֹלָם אָמֵן וְאָמֵן, "Blessed be the Lord forever, Amen"); יְשַׁע יִקָּרֵב ("May salvation come soon"); ברוך רחמנא דלצלן מריש ועד כאן ("Blessed be the All Merciful Who helped us from the beginning till now"); לְבוֹרֵא עוֹלָם [תְּהִלָּה] תַּם וְנִשְׁלַם שֶׁבַח ("[It is] finished and completed, praise [or "glory"] unto the Creator of the world"); ת"ל (= תּוֹדָה לָאֵל, "Thanks unto the Lord"); חֲזַק הַכּוֹתֵב וְאַמִּיץ הַקּוֹרֵא ("Strengthen the writer and give courage to the reader"); כְּבוֹדְךָ ה' ("Thy glory, O Lord!"); and many others. One of the most famous formulas is חֲזַק וְנִתְחַזֵּק, הַסּוֹפֵר יָזֵק לֹא הַיּוֹם וְלֹא לְעוֹלָם עַד אֲשֶׁר יַעֲלֶה חֲמוֹר בַּסֻּלָּם אֲשֶׁר יַעֲקֹב אָבִינוּ חָלָם ("Be strong and let us be strengthened, may the writer not come to any harm, neither today, nor ever after, until the ass ascends the ladder, of which Jacob our father dreamt"), which is found first in Ashkenazi manuscripts but which may have its origin in anti-Muslim polemics (cf. A. Altmann, in *Studies in Mysticism and Religion presented to G. Scholem* (1967), 1–33). Copyists usually inserted their names in this formula as well.

The Oldest Colophon

The most ancient colophon known is at the end of a manuscript of prophetical books of the Bible, found in the Karaite Synagogue of Cairo. It was written by Moses b. Asher in Tiberias in the year 827 after the destruction of the Temple (895/6 C.E.). This lengthy colophon contains all the details and rhetorics which are likely to appear in a colophon. In Ashkenazi manuscripts, the tendency is to write the colophon in very large letters. According to *Sefer Ḥasidim* (ed. Wistinetzki-Freimann, (1924), no. 700), it is forbidden to write the colophon in the actual manuscript of the biblical text. Colophons were also written in the form of poems, especially during the late Middle Ages, with the name of the copyist or the owner in acrostics. At times one can find in the colophon other valuable details, such as the time taken by the copyist (*Maḥzor Worms*, Jeru-

salem National Library, Ms. Heb. 4° 781) in the colophon of the year 1272 (it was copied in 44 weeks); the salary of the copyist; his adventures and biography; echoes of historical events and valuable information for the criticism of the text, the condition and quality of the original from which the copy was made, working conditions. Occasionally the copyist apologizes for mistakes made. The information as to whether the manuscript was copied by a professional copyist or not is naturally of importance for the criticism of the text. Besides the colophons of copyists, those of masoretes and punctuators in biblical and liturgic manuscripts are also found. In case the copyist also wrote the masorah and punctuated the manuscript, he usually pointed this out explicitly, as in a Jerusalem manuscript (Heb. 8° 2238): "I, Isaac ben Abraham ha-Levi, have written, punctuated, and added the masorah, with the aid of the Almighty, in the year 1418 of the Seleucid era [1106/7 C.E.]." The colophons of masoretes are sometimes hidden in letter decorations of the masorah. On rare occasions, the proofreader wrote the colophon. Those who completed the missing parts of manuscripts sometimes added their own colophons.

[Malachi Beit-Arie]

In Printed Books

When books were first printed, the colophon was used by the printer to convey information about himself and his assistants and about the date of the beginning and/or finishing of printing, as was the practice of manuscript copyists. It often contained apologies for mistakes or self-praise for their absence and sometimes, paeans in honor of the new and wonderful art of printing. One also finds in colophons the name of the ruler under whose protection the production took place, thanks to financial backers of the venture, the number of copies printed, and so on. The Jewish printer also used the colophon to give thanks to God for permitting him to accomplish his holy task and to pray that he might be enabled to continue his work and witness the restoration of the Temple. Warnings to respect the printers' copyright for a stated number of years, with references to the sanctions of rabbinic law, such as excommunication, were also inserted in the colophon. These appeared later in the approbations (see **Haskamot*). The formulas were much the same as those used in manuscripts. For the date the Jewish era was normally used, the year being given in general by complicated chronograms, which lead to much confusion in determining the exact dates.

The colophon in printed books is a source not only of bibliography but of the history of printing and Jewish genealogy in general, e.g., the colophon of Judah Halevi's *Kuzari* (Fano, 1506), which provides important data on the Yaḥya family. Colophons varied in size: in Rashi's commentary on the Pentateuch published by Soncino (Rimini, c. 1525) the colophon occupies a whole page. The length and shape was influenced by the space available, the idea being that, as in the Scroll of the Law (Sof. 1:12), no blank space must be left at the end. In works appearing in several volumes one occasionally finds a different colophon at the end of each volume, e.g., Meshullam Cusi's *Turim* (Pieve di Sacco, 1475 and after). Colophons were sometimes rhymed verse with an acrostic giving the name of the printer or even the proofreader.

The type used for the colophon was sometimes larger than that in the text, e.g., the Augsburg *Turim* (1540) or Ẓahalon's *Yesha Elohim* (Venice, 1595). Sometimes the colophon was printed in the shape of funnel, diamond, goblet, pyramid, or, very often, an inverted cone, the lines tapering off to a short line or a word. At a later stage the more elaborate title pages and approbations made the use of colophons superfluous.

COLORADO, U.S. state. Colorado was still an untamed wilderness when the discovery of gold near Pike's Peak in 1858 brought the area to the nation's attention. By the spring of 1859, fortune seekers began to arrive in droves. During the "big excitement," as the year of the gold discovery was called, at least 12 Jews of German descent migrated to Colorado to join the hunt for freedom, new opportunities, and wealth. Few Jews were miners, but most established small businesses in new towns and mining camps throughout Colorado. The first Rosh Hashanah service was held in Denver in 1859, and as men married and children were born, the fledgling Jewish community began to stabilize. Colorado Jews soon established a burial society, and in 1872 B'nai B'rith was founded in *Denver followed by the incorporation of Congregation Emanuel in 1874. Smaller Jewish communities were established in towns around the state such as Leadville, Cripple Creek, Central City, Colorado Springs, Trinidad, Ft. Collins, and Boulder, and synagogues were formed in each of these towns.

Jews became a vital component in the economic, social, and political development of Colorado. Fred Salomon opened the first general mercantile company in Colorado in 1859, David May located the first store of what was to become the May Company chain in Irwin, Colorado, in the 1870s, and in 1910 Jesse Shwayder and his brothers opened a small luggage factory that became one of the largest producers of luggage in America – the Samsonite Corporation. Wolfe Londoner, Denver's Jewish mayor, took office in 1889 and Simon *Guggenheim, part of the illustrious family whose fortune was rooted in mining activity in Leadville, Colorado, served as Colorado's only Jewish senator from 1906 to 1912.

By the turn of the century, Colorado had also become a mecca for health-seekers, primarily victims of tuberculo-

sis, and was nicknamed the World's Sanitorium. The Jewish community was the first to step forward with aid for consumptives. Frances Wisebart *Jacobs, known as "Colorado's Mother of Charities," spearheaded a movement that resulted in the founding of National Jewish Hospital for Consumptives, largely by German Reform Jews, which opened in 1899. A large percentage of the health-seekers were East European Jews, who flocked to Colorado after 1900 and significantly augmented the state's Jewish population and established Denver's west side Orthodox Jewish community. In 1904, a second Jewish sanitorium, the Jewish Consumptives' Relief Society, was founded by East European Jews who wished to provide a more traditional Jewish setting for its patients. Both hospitals gave their services free of charge, served patients from throughout the United States, and were formally nonsectarian, although the vast majority of patients at both sanatoria were Jewish.

From the first, most of Colorado's Jews resided in its capital, the "Queen City" of Denver, although active Jewish congregations still exist in Boulder, Colorado Springs, Pueblo, Ft. Collins, Greeley, and Grand Junction, and newer small congregations have been established in the resort towns of Aspen, Vail, Steamboat Springs, Breckenridge, and Durango. While metro Denver hosts nearly 25 congregations, Boulder now claims five synagogues as well as a growing Jewish day school. Chabad is active in most Colorado communities. A small group of Jews was active in Aspen from its beginnings as a mining town. Hyman Avenue, one of the central thoroughfares in Aspen, is named in honor of Jewish pioneer David Hyman, an early investor. Because of their beautiful mountain locations, both Aspen and the much newer ski town of Vail have been popular sites for many national Jewish conferences and meetings.

A wide array of Jewish religious, cultural, and educational institutions abound. Denver hosts several day schools. Hillel Academy, the oldest of the day schools, was organized in 1953 as an Orthodox elementary school; Herzl Day School is described as a community Jewish day school; the Denver Academy of Torah is a Modern Orthodox elementary school. On the high school level, Yeshiva Toras Chaim is an Orthodox yeshivah high school for young men with a talmudic college-level religious studies program as well, and Beth Jacob High School serves young Jewish women. The Rocky Mountain Hebrew Academy (RMHA) is a co-ed private Jewish day school for secondary school students. In the late 1990s, Herzl and RMHA combined forces to open the new Denver Campus for Jewish Education. The Central Agency for Jewish Education serves as a coordinating agency for a number of Jewish educational programs in the area, and the Center for Judaic Studies at the University of Denver provides a variety of courses in Jewish studies for college students as well as housing the Rocky Mountain Jewish Historical Society and Beck Archives, and the Holocaust Awareness Institute. The Hillel Council of Colorado sponsors Hillel branches for Jewish students at the University of Colorado at Boulder, CU – Denver, Colorado State University, and the University of Denver.

Today, Colorado also hosts many charitable and social service organizations, some with a long history such as the Allied Jewish Federation of Colorado, B'nai B'rith, Hadassah, the National Council of Jewish Women, the American Jewish Committee, The Anti-Defamation League, the Jewish Family Service, and Shalom Park, an award-winning continuum retirement complex and nursing home. The last formal population survey conducted in 1998 estimated the Jewish population of the state as approximately 63,000, and in 2004, informal estimates placed the Denver-Boulder population alone at between 65,000 and 70,000.

[Jeanne E. Abrams (2nd ed.)]

COLORNI, VITTORE (1912–), Italian jurist. Born in Mantua, he lectured on the history of Italian law at the University of Ferrara, where he was appointed professor in 1956. Colorni was much esteemed as a pioneer in the study of the legal situation of the Jews in Italy from the Roman period to medieval times. In his major work, *Legge ebraica e leggi locali* (1945), Colorni examined the special status of the Jews and how far Jewish private law was recognized in Italy, tracing the history of rabbinical courts in the medieval Italian states. Colorni also wrote many articles on Mantuan Jewish history, on the names and history of ancient Jewish families, and on subjects of general interest, including "Teologi cristiani dell' Ottocento, precursori del Sionismo" (RMI, 21 (1955), 170–85) and the books, *Gli ebrei nel sistema del diritto comune fino alla*

prima emancipazione (1956) and *L'uso del greco nella liturgia del giudaismo ellenistico* (1964).

COLUMBUS, capital of Ohio, U.S. The Jewish population of Columbus and the rest of Franklin County was estimated at 22,000 out of a total of 1,080,000 (roughly 2% of the total population) in 2001. Chosen for its central location, Columbus was founded in 1812 to serve as the state capital and was incorporated as a city in 1834. By 1840, the first Jewish families, the Nusbaums and the Gundersheimers, settled in the city. They had emigrated from the village of Mittelsinn in the northwest corner of Bavaria (Lower Franconia), and they earned their living in Columbus as peddlers and merchants. They were soon joined by a few other families from Mittelsinn and elsewhere in Germany. In 1851 the first congregation, B'nai Jeshurun, was organized. Orthodox services were held in a variety of locations and were led by educated laymen such as Simon Lazarus, who volunteered to serve as the new congregation's first religious leader. The following year, the city's first Jewish cemetery was established. By 1868, religious tensions led to a split in the small community, and 19 families organized a Reform congregation, B'nai Israel (now Temple Israel). Those supporting Reform included all of the surviving founders of B'nai Jeshurun, men who were now prosperous and well-established Columbus merchants. Within two years, B'nai Israel hired the city's first full-time ordained rabbi and dedicated the city's first synagogue building. Soon thereafter, B'nai Jeshurun folded and its members joined B'nai Israel. The growth of the congregation to over 100 families required a larger synagogue, which was completed in 1904 among the grand homes of the city's Olde Towne East neighborhood.

The arrival of Jews from Eastern Europe beginning in the 1880s brought greater diversity to religious life. In 1889, Agudas Achim was incorporated as an Orthodox congregation, formalizing a *minyan* that had been meeting for several years. Other Orthodox congregations developed to represent a particular ethnic group or style of worship. Those familiar with the Polish-Sephardi ritual (instead of the Ashkenazi ritual in place at Agudas Achim) organized Beth Jacob congregation in 1897. Hungarian immigrants formed Tifereth Israel in 1901. In 1913, another group desiring to use the Polish-Sephardi ritual created Ahavas Sholom. These congregations initially lacked the wealth and resources of Temple Israel. Their services took place in locations in the impoverished neighborhood where most East European Jews lived, immediately south and east of downtown. Agudas Achim dedicated its first synagogue building in 1896, moving to a larger structure in 1907. In 1908, the congregation hired its first ordained rabbi. Beth Jacob laid the cornerstone for its first synagogue in 1909. Tifereth Israel established its first permanent house of worship in 1915, while a converted stable next door to Agudas Achim served as home to Ahavas Sholom. Tifereth Israel joined the Conservative movement in 1922 and built a synagogue in 1927 in Olde Towne East. The structure, with additions and renovations in subsequent years, remains Tifereth Israel's home. It is the oldest synagogue building in continuous use in Columbus.

After World War II, most Jews moved farther east into the prosperous suburban enclave of Bexley and the surrounding Columbus neighborhoods of Berwick and Eastmoor. This area is still home to the greatest concentration of Jewish institutions: the Leo Yassenoff Jewish Center, Wexner Heritage Village (a care and housing facility for the elderly), Jewish Family Services, the Columbus Community Kollel, as well as synagogues Agudas Achim, Ahavas Sholom, and Beth Jacob. The Orthodox congregation Torat Emet was established in Bexley in 2001. Agudas Achim joined the Conservative movement in 2004. Although the East Side remained the heart of the Columbus Jewish community, in the early 21st century a majority of Jewish households lived in the suburban and fast-growing northern section of Franklin County. Temple Israel moved to the Far East Side of Columbus in 1959, and two more recent Reform congregations are located in northern Franklin County suburbs. Beth Tikvah, founded in 1961, is in Worthington. Temple Beth Shalom, founded in 1977, is in New Albany. Most of the Jews living in the northern suburbs, however, were unaffiliated and did not actively participate in Jewish communal organizations.

In the early 21st century, Columbus natives represented only a minority of the Jewish community. Most Jews had moved to the area, with steady population growth accelerating in the decades after World War II. Between 1975 and 2001, the Jewish population of Franklin County grew by an estimated 60 percent and included the resettlement of more than 1,400 Jews from the former Soviet Union. This rapid influx made the dynamics of the Columbus Jewish community more akin to those of quickly growing Southern and Western U.S. cities than to other Ohio communities. In fact, at the beginning of the 21st century, the Columbus Jewish community was on the verge of overtaking Cincinnati as the second-largest in the state after Cleveland. New Jewish institutions were emerging. A second Jewish newspaper, *The New Standard*, began publication in 2003, in competition with *The Ohio Jewish Chronicle*, which started in 1922. The Columbus Jewish Day School, an egalitarian elementary school modeled on the Heschel School in New York, opened in 1998 as an alternative to Columbus Torah Academy, an Orthodox K-12 day school in operation since 1958.

In the early years of the community, many Jews in Columbus earned their living in retail activities. Simon Lazarus' descendants developed his clothing store into a major department-store chain in the Midwest which continued to bear the Lazarus name until 2005, when the stores were merged into Macy's. In the early 21st century, retail and real-estate development continued as important businesses for Columbus Jews,

though many members of the community were involved in professions such as law and medicine. As a center of government, insurance, and education, Columbus provided employment opportunities for the highly educated Jewish community. In particular, Ohio State University has attracted many Jewish faculty and students (it was estimated that more than 3,500 Jewish students were attending Ohio State in 2005), and the university has a well-respected Jewish studies program, employing distinguished Jewish scholars such as Marvin Fox. The campus area is host to student centers from both the Hillel and Chabad organizations.

The Jewish community has enjoyed friendly relations with its non-Jewish neighbors. Antisemitism was restricted primarily to social organizations and was far more prevalent at the beginning of the 20th century than at the beginning of the 21st. Jews have taken prominent roles in local government in both the Republican and Democratic parties, most notably U.S. Congressman Robert N. Shamansky (Democrat, 1981–83), Columbus City Council members Melville D. Frank (Republican, 1930–37) and Maurice D. Portman (Democrat, 1966–96), Franklin County Treasurer Philip Goldslager (Democrat, 1967–73), and state representative and senator David Goodman (Republican, from 1998). For decades, Jews have regularly served as judges in elected and administrative courts in Franklin County. The community has gained international prominence through the Jewish philanthropy of Samuel M. *Melton (1900–1993), Leslie H. Wexner (1937–), and members of the Schottenstein family. Notable achievers who grew up in Columbus include cancer researcher Dr. Judah Folkman (1933–), author and columnist Bob Greene (1947–), and cabaret performer Michael Feinstein (1956–).

[Michael Meckler (2nd ed.)]

COLUMBUS, CHRISTOPHER (1451–1500), discoverer of America, thought by some to have been of Marrano extraction. He was himself mysterious when speaking of his origin, apparently having something in his background which he wished to conceal. However, he boasted cryptically about his connection with King David and had a penchant for Jewish and Marrano society. Spanish scholars have attempted to explain the fact that this great hero of Spanish history was almost certainly born in Genoa, Italy, by the assumption that his parents were Jewish or ex-Jewish refugees from Spain. In fact, the name Colon (or Colombo) was not uncommon among Italian Jews of the late medieval period. A document recently discovered suggests that Columbus was of Majorcan origin, and almost certainly belonged to a Marrano family: but the authenticity of the document still remains to be proved. On the other hand, Columbus' mysterious signature, which he adjured his son always to use, is susceptible to a Hebraic interpretation, which is no more improbable than the many other solutions that have been proposed. It is remarkable moreover that Columbus began his account of his voyage with a reference to the expulsion of the Jews from Spain; that in one document he refers to the Second Temple in Jerusalem by the Hebraic term "Second House"; that he dates its destruction as being in the year 68, in accordance with the Jewish tradition; and that he seems to have deliberately postponed the day of his sailing until August 3, while all was ready for the purpose on the previous day, which was the unpropitious fast day of the Ninth of Av commemorating the destruction of the Temple. The mystery regarding Columbus' origins is largely the outcome of his own mendacity: and as a result it is equally impossible to exclude or to confirm the hypothesis that he was descended from a Jewish or ex-Jewish family.

The fact that he ultimately received the patronage of the Spanish sovereigns for his expedition was in large measure due to the enthusiasm and help of a group of New Christians around the Aragonese court, notably Luis de *Santangel and Gabriel *Sanchez as well as to some extent Isaac *Abrabanel. It was in fact to Santangel and Sanchez that Columbus wrote the famous account of his success on his return, which was immediately published and circulated throughout Europe in two recensions – one addressed to the former, the other to the latter. On his journeys, the explorer used the nautical instruments perfected by Jews such as Joseph *Vecinho, and the nautical tables drawn up by Abraham *Zacuto. It was formerly stated that several of the crew on his first voyage were of Jewish birth, but this was true in fact of only one of them – the interpreter Luis de *Torres, who had been baptized immediately before the expedition set sail.

[Cecil Roth]

The motivations behind Columbus' travels were varied. Alongside Franciscan-Joachimite traditions of the coming Third Age, Columbus had been interested for many years in biblical prophecies. He had collected them long before his first journey and later on as well, after his discoveries had verified his expectations. These prophecies are collected in his *Libro de las profecías*, where he uses well-known Catholic medieval authors. The chiliastic plans included not only the liberation of Jerusalem but the establishment of the Temple. The gold brought from the New World was supposed to serve for the coming crusade.

Unlike his entirely negative attitude to the Muslims, Columbus saw the Jews and Jewish tradition in a more positive light, as part of the religious quest of humanity.

The discoveries of Columbus were echoed in Jewish sources; a collection of correspondence from 16th century Italy (Firenze, Biblioteca Medicea Laurentiana, Ms. Plut. 88.12 p. 13v) refers to the return of the second expedition (1496). A Hebrew translation of a book describing the discoveries in the New World was made in Voltaggio (near Genoa) in 1557, refering specifically to "the new world found by Columbus."

COMA (Koma), HERZ, *dayyan* and leader of the Vienna community at the time of the 1670 expulsion. He was one of the signatories of the letter sent by the community to Manuel Texeira asking him to petition Queen Christina of Sweden to intervene. In another effort he and Leo *Winkler offered the emperor *Leopold I 100,000 florins if he would allow 1,000 Jews to stay in Vienna. After the death of Hirschel *Meyer (c. 1673–75), Coma became the leader of the Viennese Jews who had settled in *Mikulov (Nikolsburg). Acting through the archduchess of Innsbruck, he again endeavored to obtain the return of the Jews to Austria.

COMAY, MICHAEL SAUL (1908–1987), Israeli diplomat. Born in Cape Town, Comay studied and practiced law in South Africa. He served in the South African Army from 1940 to 1945, reaching the rank of major. From 1946 to 1948 Comay represented the South African Zionist Federation in the political department of the *Jewish Agency, Jerusalem. From 1948 he held several positions in the Ministry for Foreign Affairs and from 1953 to 1957 was Israeli ambassador to Canada. In 1960 Comay was appointed Israel's permanent representative to the UN. He was named political adviser to the minister for foreign affairs in 1967 and was appointed Israeli ambassador to Britain in 1970. Comay's term of office as Israeli ambassador to Great Britain ended in 1973, when he reached the age of retirement.

[Benjamin Jaffe]

COMDEN, BETTY (Elizabeth Cohen; 1919–), U.S. theatrical writer. Born in Brooklyn, New York, Comden studied drama at New York University and graduated with a B.Sc. While a student, she acted with the Washington Square Players. She was a member of "The Revuers," a satirical nightclub act that included, among others, Adolph *Green (1914–2002). Comden went on to write the Broadway scores for *Wonderful Town* (1953), *Peter Pan* (1954), and *Do Re Mi* (1960). She was also the co-librettist for *On the Town* (1944), *Billion Dollar Baby* (1945), *Two on the Aisle* (1951), *Bells Are Ringing* (1956), *Say, Darling* (1958), *Subways Are for Sleeping* (1961), *Fade Out – Fade In* (1964), and *Hallelujah, Baby* (1967).

Joining ASCAP in 1945, she teamed up with Adolph Green as her chief lyrics, libretto, and screenplay collaborator; her main musical collaborators were Leonard *Bernstein, Jule *Styne, Morton Gould, and Andre *Previn. The team of Comden and Green became the longest-running creative partnership in theater history. They wrote the book for the Broadway play *Applause* (1970) as well as the book and lyrics for *On the Twentieth Century* (1978) and *A Doll's Life* (1982). In 1991, they wrote the lyrics for the Broadway musical *The Will Rogers Follies*. As performers, they appeared in *On the Town*, and later did an evening at the Golden Theater, entitled *A Party with Betty Comden and Adolph Green*, composed of material from their own shows and movies, and from their act, "The Revuers."

Their many film musicals include *Singin' in the Rain*; *The Band Wagon*; *On the Town*; *Bells Are Ringing*; *It's Always Fair Weather*; *Good News*; and *The Barkleys of Broadway*. Much to the credit of Comden and Green, *Singin' in the Rain* has been named one of the ten best American films ever made and, by a vote of international film critics, was chosen as number three of the ten best films of all time.

Comden's string of longstanding popular songs includes "New York, New York," "Lonely Town," "The Party's Over," "Just in Time," "Ohio," "A Little Bit in Love," "The French Lesson," "Long before I Knew You," "Never-Neverland," "Make Someone Happy," and "I'm Just Taking My Time."

Comden and Green were members of the Council of the Dramatists' Guild, were inducted into the Theater Hall of Fame and the Songwriters Hall of Fame, and received the Mayor of New York's Certificate of Excellence.

In 1953, they won the Writers Guild of America's Screen Award for *Singin' in the Rain* for Best Written American Musical and, in 1961, the same award for *Bells Are Ringing*. In 1991, they were the recipients of the Kennedy Center Honors Lifetime Achievement Award. In 2001, they received the Writers Guild of America's Laurel Award for Screen Writing Achievement. And in 2002, the Dramatists' Guild presented the duo with its third Lifetime Achievement Award in Theatrical Writing (the previous recipients included Arthur Miller and Edward Albee).

Comden received the Theatre World Award (1945), the Woman of the Year Award from the Alumni Association of New York University, and the Kaufmann Center's Creative Arts Award (2003).

As for Comden's own work, *Wonderful Town* won a Tony Award for Best Musical (1953). *A Party* received an Obie Award when it was first performed (1958). *Hallelujah, Baby* won two Tonys – Best Musical, and Best Composer and Lyricist (1968). *Applause* won the Tony in 1970 for Best Musical. In 1978, *On the Twentieth Century* won Tonys for Best Original Score and Best Book of a Musical. And in 1991, *The Will Rogers Follies* won a Tony for Best Original Score, and the cast recording won the Grammy Award for Best Musical Show album. In 1995, Comden published her autobiography, entitled *Off Stage*.

[Ruth Beloff (2nd ed.)]

COMISSIONA, SERGIU (1928–), Israeli and American conductor of Romanian birth. Comissiona studied violin and conducting at the Bucharest Conservatory, making his conducting debut at the age of 17. After an early career as a violinist, he was appointed music director of the Romanian State Opera in Bucharest (1955–59). He immigrated to Israel in 1959, where he was music director of the Haifa SO (1959–66) and founder-conductor of the Ramat Gan Chamber Orchestra (1960–67). In 1963 he appeared in North America as conductor of the Israel Chamber Orchestra. A familiar figure in more than 25 countries, Comissiona led virtually all of the world's major symphony orchestras in performances acclaimed for their interpretative fire and musical and orchestral discipline. As music director, he transformed the Baltimore SO into a truly professional ensemble (1969–84) and brought the Vancouver SO back to musical health (1991–2000). He frequently conducted opera, chiefly at Covent Garden and the New York City Opera. In the early 2000s he held several important musical posts, among them as principal guest conductor of the Jerusalem SO and the Georges Enescu Bucharest Philharmonic. As conductor laureate of the Asian Youth Orchestra, he led the ensemble on its tour in the Far East (2004). Comissiona has a clear preference for Romantic and Impressionist repertory. Among his recordings are works by Saint-Saëns, Ravel, Britten, Blomdahl, and Wirén. He received honors and awards from the Romanian and French governments as well as from Johns Hopkins University and the Peabody Conservatory. Comissiona and his wife became American citizens on July 4, 1976.

[Naama Ramot (2nd ed.)]

COMITÉ DES DELEGATIONS JUIVES (**Committee of Jewish Delegations**), body established at the end of World War I, at the initiative of the Zionist Organization, to alert the Paris peace conference to the grave situation of the Jews in various European countries and to obtain international guarantees for safeguarding their rights (see *Versailles, Treaty of). Apart from the French and British delegations – who refused to join the Committee on account of its "nationalist" demands – the Committee included all the Jewish delegations sent to Paris to bring the Jewish demands before the peace conference. Among them were the representatives of the Jewish National Assemblies, Councils, and Committees formed in most East and Southeast European Jewish communities after the war – the Jewish minorities whose fate was at stake. Other delegations represented the American and Canadian Jewish Congresses, the Constituent Assembly of Ereẓ Israel Jews, the World Zionist Organization, the American Jewish Committee, and B'nai B'rith, among others. Since most of these delegations had been elected on a democratic basis, the Committee could describe itself as representing 12 million Jews.

The memorandum of the Committee, dated May 10, 1919, but officially submitted on June 10, 1919, called upon the peace conference to include in the treaties with the new states, and those whose territory was to be considerably enlarged, specific provisions guaranteeing individual rights to the members of the minorities living in these countries, and collective national rights to each minority as a group (see *minority rights). The memorandum called, among other things, for the right of all inhabitants to protection of life, liberty, and property and of freedom of religion; the right of all citizens to enjoy equal civil, religious, national, and political rights; the right of the national minorities to use their own language in their public activities and to be recognized as distinct and autonomous organizations having the right to establish, manage, and control schools and religious, educational, charitable, and social institutions; to receive a proportionate part of the state and municipal budgets for these institutions; to tax their members; and have proportional representation in state, municipal, and elective bodies. These provisions were to be embodied in the fundamental laws of the country and recognized as obligations of international concern, subject to the supervision of the *League of Nations; furthermore, every state which was a party to the treaties, and every minority affected by their violation, was to have the right of appeal to the League or to any Tribunal that might be established by the League. The memorandum was drafted in general terms, referring to all minorities in the newly created or enlarged states, and was not restricted to Jewish minorities only. It had a profound effect upon the minority treaties as they were eventually adopted. Not all of the Committee demands were accepted; thus, the term "national minority" was replaced by the more cautious phrase "ethnic, linguistic, and religious minority"; nor were the minorities recognized as autonomous bodies, as the Committee had proposed, though they did grant them certain rights relating to language and culture, which – by their very nature – were group and not individual rights.

In another memorandum, the Committee demanded of the peace conference to hold the countries concerned responsible for the pogroms that might have taken place within their boundaries since the outbreak of the war, or might take place subsequently, and to pay compensation to the victims. A third memorandum supported the historic rights of the Jewish people to Ereẓ Israel and called for the creation of political, administrative, and economic conditions that would ensure the establishment of the Jewish National Home.

The Committee was not disbanded after the Peace Conference, and it remained in existence up to 1936, when the *World Jewish Congress succeeded it. Throughout this period the Committee was active in safeguarding the rights granted to Jews in the minority treaties, in combating antisemitism, and in promoting the participation of Jews as Jews in the work of international nongovernmental organizations. In the early

postwar years the Committee concentrated on the struggle against the wave of anti-Jewish pogroms in Eastern Europe, especially the Ukraine. It also intervened to protect the right to nationality or to reasonable conditions for its acquisition by naturalization in several East and Central European countries, against the expulsion of Jewish war refugees, and against the *numerus clausus at the universities in such countries as Poland and Romania. The Committee was instrumental in the establishment of the World Jewish Aid Conference (1920), which was concerned with the economic rehabilitation of Jews in different countries. The Committee was also very active in assisting the defense of Shalom Schwarzbard, who in 1927 shot and killed *Petlyura to avenge the murder of Ukrainian Jews.

In 1933 the Committee took energetic steps following the rise of Hitler when the first Nazi anti-Jewish discriminatory legislation was introduced. Since Germany was not among the states on which the peace conference had imposed the system of international protection of minorities, there was no legal basis for bringing up before the League of Nations the question of the position of the Jews in the whole of Germany. The Committee therefore had to rely on the limited framework of the German-Polish Convention of 1922, under which Germany undertook, for a transitional period of 15 years, to guarantee the rights of all the minorities in Upper Silesia in line with the provisions of the minority treaties. On May 17, 1933, two petitions were submitted to the League of Nations: one signed by the Committee and other Jewish institutions and organizations, and the second by Franz Bernheim, a store clerk in Upper Silesia who had been dismissed under the new anti-Jewish legislation (see *Bernheim Petition). Despite all the efforts made by the Nazi representatives to prevent discussion of the affair, and even have it removed from the agenda, the Committee succeeded in having the petition publicly debated at the League. All the speakers denounced the persecution of the Jews in Germany and energetically condemned curtailment of Jewish rights.

This was the first time after Hitler's accession to power that his regime was censured from the platform of the League of Nations. Nazi Germany was forced to honor the rights of the Jews in Upper Silesia until 1937, the expiration date of the German-Polish agreement. In October 1933, as a result of the Committee's efforts, the League of Nations Assembly held a searching debate on the oppression of the Jews in Nazi Germany and decided on the appointment of a High Commissioner for Refugees (Jewish and others) from Germany; the Committee took an active part in the work of the Commissioner through its membership on the Advisory Council set up to assist him. Owing to the efforts of the Committee and other Jewish organizations, the Jews of the Saar Territory were allowed to leave the territory and take their belongings with them within one year from its return to Germany resulting from the plebiscite held in 1935.

The Committee was headed, successively, by Julian *Mack, Louis *Marshall, and Nahum *Sokolow. Its secretary-general was Leo *Motzkin, from 1924 also acting president; upon the latter's death, in 1933, Nahum *Goldmann was elected president and, in 1935, Stephen S. *Wise. During its period of existence, the Committee published a wide range of books, pamphlets, and bulletins on the Jewish problem in various languages.

[Nathan Feinberg]

COMMAGENE, small kingdom on the upper Euphrates, between Cilicia and Armenia (modern southeastern Turkey). In 17 C.E. Commagene became a Roman province. However, the monarchy was restored by Claudius (41) and Antiochus IV Epiphanes reigned there until 72, when the land was reannexed to Syria by Vespasian. Several marital ties existed between the rulers of Commagene and the Herods of Judea. Tigranes, great-grandson of Herod the Great, married his son Alexander to Jotape, daughter of King Antiochus of Commagene. Drusilla, daughter of Agrippa I, was to marry Epiphanes, the son of Antiochus, but this agreement was canceled when Epiphanes refused to convert to Judaism. Antiochus of Commagene was among the kings entertained by Agrippa I at Tiberias, a gathering that aroused the suspicions of Marsus, Roman governor of Syria. During the Jewish rebellion of 66–70 C.E., contingents from Commagene were among those which fought for Rome.

[Isaiah Gafni]

COMMANDMENTS, THE 613 (Heb. תַּרְיַ"ג מִצְוֹות, *taryag mitzvot*). The total number of biblical commandments (precepts and prohibitions) is given in rabbinic tradition as 613. R. Simlai, a Palestinian teacher, states: "613 commandments were revealed to Moses at Sinai, 365 being prohibitions equal in number to the solar days, and 248 being mandates corresponding in number to the limbs of the human body" (Mak. 23b). (See the table "613 Commandments.") The number 613 usually known by the Hebrew mnemonic, תַּרְיַ"ג (Ta-RYa-G – ת = 400, ר = 200, י = 10, ג = 3), is found as early as tannaitic times in the sayings of Simeon b. Eleazar (Mekh. Yitro, Baḥodesh, 5, only in ed. by I.H. Weiss (1865), 74 [75a]), Simeon b. Azzai (Sif. Deut 76 where the 365 prohibitions are mentioned), and Eleazar b. Yose the Galilean (Mid. Hag. to Gen. 15:1) and is apparently based upon an ancient tradition (see Tanh. B.,

A list of the commandments as enumerated by Maimonides. The subheadings do not appear in *Sefer ha-Mitzvot* but are added here as a guide to the general reader. It should be noted that the biblical sources are given according to the rabbinic interpretation, which is sometimes not the obvious meaning of the verse cited.

MANDATORY COMMANDMENTS		
	God	
1. Ex. 20:2 3. Deut. 6:5 4. Deut. 6:13 6. Deut. 10:20 7. Deut. 10:20 9. Lev. 22:32	The Jew is required to [1]believe that God exists and to [2]acknowledge His unity; to [3]love, [4]fear, and [5]serve Him. He is also commanded to [6]cleave to Him (by associating with and imitating the wise) and to [7]swear only by His name. One must [8]imitate God and [9]sanctify His name.	2. Deut. 6:4 5. Ex. 23:25; Deut. 11:13 (Deut. 6:13 and also 13:5) 8. Deut. 28:9
	Torah	
10. Deut. 6:7 11. Deut. 6:7 12. Deut. 6:8 13. Deut. 6:8 16. Deut. 31:12 17. Deut. 17:18 18. Deut. 31:19	The Jew must [10]recite the Shema each morning and evening and [11]study the Torah and teach it to others. He should bind tefillin on his [12]head and [13]his arm. He should make [14]ẓiẓit for his garments and [15]fix a mezuzah on the door. The people are to be [16] assembled every seventh year to hear the Torah read and [17]the king must write a special copy of the Torah for himself. [18]Every Jew should have a Torah scroll. One should [19]praise God after eating.	14. Num. 15:38 15. Deut. 6:9 19. Deut. 8:10.
	Temple and the Priests	
20. Ex. 25:8 22. Num. 18:4 24. Ex. 30:19 25. Ex. 27:21 26. Num. 6:23 30. Lev. 6:3 31. Num. 5:2 33. Ex. 28:2 34. Num. 7:9 35. Ex. 30:31	The Jews should [20]build a Temple and [21]respect it. It must be [22]guarded at all times and the [23]Levites should perform their special duties in it. Before entering the Temple or participating in its service, the priests [24]must wash their hands and feet; they must also [25]light the candelabrum daily. The priests are required to [26]bless Israel and to [27]set the shewbread and frankincense before the Ark. Twice daily they must [28]burn the incense on the golden altar. Fire shall be kept burning on the altar [29]continually and the ashes should be [30]removed daily. Ritually unclean persons must be [31]kept out of the Temple. Israel [32]should honor its priests, who must be [33]dressed in special priestly raiment. The priests should [34]carry the Ark on their shoulders, and the holy anointing oil [35]must be prepared according to its special formula. The priestly families should officiate in [36]rotation. In honor of certain dead close relatives, the priests should [37]make themselves ritually unclean. The high priest may marry [38]only a virgin.	21. Lev. 19:30 23. Num. 18:23 27. Ex. 25:30 28. Ex. 30:7 29. Lev. 6:6 32. Lev. 21:8 36. Deut. 18:6–8 37. Lev. 21:2–3 38. Lev. 21:13
	Sacrifices	
39. Num. 28:3 43. Lev. 23:36 44. Lev. 23:10 46. Lev. 23:17 47. Num. 29:1–2 49. Lev. 16 50. Num. 29:13 51. Num. 29:36	The [39]tamid sacrifice must be offered twice daily and the [40]high priest must also offer a meal-offering twice daily. An additional sacrifice (musaf) should be offered [41]every Sabbath, [42]on the first of every month, and [43]on each of the seven days of Passover. On the second day of Passover [44]a meal offering of the first barley must also be brought. On Shavuot a [45]musaf must be offered and [46]two loaves of bread as a wave offering. The additional sacrifice must also be made on [47]Rosh Ha-Shanah and [48]on the Day of Atonement when the [49]Avodah must also be performed. On every day of the festival of [50]Sukkot a musaf must be brought as well as on the [51]eighth day thereof.	40. Lev. 6:13 41. Num. 28:9 42. Num. 28:11 45. Num. 28:26–27 48. Num. 29:7–8
	Every male Jew should make a [52]pilgrimage to the Temple three times	52. Ex. 23:14

53. Ex. 34:23 Deut. 16:16	a year and [53]appear there during the three pilgrim Festivals. One should [54]rejoice on the Festivals.	54. Deut. 16:14
55. Ex. 12:6 56. Ex. 12:8 57. Num. 9:11	On the 14th of Nisan one should [55]slaughter the paschal lamb and [56]eat of its roasted flesh on the night of the 15th. Those who were ritually impure in Nisan should slaughter the paschal lamb on [57]the 14th of Iyyar and eat it with [58]maẓẓah and bitter herbs.	
59. Num. 10:10; Num. 10:9.	Trumpets should be [59]sounded when the festive sacrifices are brought and also in times of tribulation.	58. Num. 9:11; Ex. 12:8
60. Lev. 22:27 62. Lev. 2:13	Cattle to be sacrificed must be [60]at least eight days old and [61]without blemish. All offerings must be [62]salted. It is a mitzvah to perform the	61. Lev. 22:21
64. Lev. 6:18 66. Lev. 3:1	ritual of [63]the burnt offering, [64]the sin offering, [65]the guilt offering, [66]the peace offering, and [67]the meal offering.	63. Lev. 1:2 65. Lev. 7:1
68. Lev. 4:13 69. Lev. 4:27 70. Lev. 5:17–18	Should the Sanhedrin err in a decision, its members [68]must bring a sin offering which offering must also be brought [69]by a person who has unwittingly transgressed a karet prohibition (i.e., one which, if done deliberately, would incur karet). When in doubt as to whether one has transgressed such a prohibition, a [70]"suspensive" guilt offering must be brought.	67. Lev. 2:1; 6:7
71. Lev. 5:15, 21–25; 19:20–21	For [71]stealing or swearing falsely and for other sins of a like nature, a guilt offering must be brought. In special circumstances the sin offering [72]can be according to one's means.	72. Lev. 5:1–11
73. Num. 5:6–7	One must [73]confess one's sins before God and repent for them.	
74. Lev. 15:13–15 76. Lev. 12:6	A [74]man or [75]a woman who has a seminal issue must bring a sacrifice; a woman must also bring a sacrifice [76]after childbirth. A leper must [77]bring a sacrifice after he has been cleansed.	75. Lev. 15:28–29 77. Lev. 14:10
78. Lev. 27:32	One must [78]tithe one's cattle. The [79]firstborn of clean (i.e., permitted) cattle are holy and must be sacrificed. The firstborn of man must be	79. Ex. 13:2
80. Ex. 22:28; Num. 18:15	[80]redeemed. The firstborn of the ass must be [81]redeemed; if not, [82]its neck has to be broken.	81. Ex. 34:20 82. Ex. 13:13
83. Deut. 12:5–5 84. Deut. 12:14 85. Deut. 12:26	Animals set aside as offerings [83]must be brought to Jerusalem without delay and [84]may be sacrificed only in the Temple. Offerings from outside the land of Israel [85]may also be brought to the Temple.	
86. Deut. 12:15	Sanctified animals [86]which have become blemished must be redeemed.	
87. Lev. 27:33	A beast exchanged for an offering [87]is also holy.	
89. Ex. 29:33 91. Lev. 7:17	The priests should eat [88]the remainder of the meal offering and [89]the flesh of sin and guilt offerings; but consecrated flesh which has become [90]ritually unclean or [91]which was not eaten within its appointed time must be burned.	88. Lev. 6:9 90. Lev. 7:19
	Vows	
92. Num. 6:5 93. Num. 6:18	A Nazirite must [92]let his hair grow during the period of his separation. When that period is over, he must [93]shave his head and bring his sacrifice.	
94. Deut. 23:24	A man must [94]honor his vows and his oaths which a judge can [95]annul only in accordance with the law.	95. Num. 30:3.
	Ritual Purity	
96. Lev. 11:8, and 24 98. Lev. 11:34	Anyone who touches [96]a carcass or [97]one of the eight species of reptiles becomes ritually unclean; food becomes unclean by [98]coming into contact with a ritually unclean object. Menstruous women [99]and those	97. Lev. 11:29–31 99. Lev. 15:19
100. Lev. 12:2 101. Lev. 13:3	[100]bedridden after childbirth are ritually impure. A [101]leper, [102]a leprous garment, and [103]a leprous house are all ritually unclean. A man having	102. Lev. 13:51 103. Lev. 14:44

105. Lev. 15:16	[104]a running issue is unclean, as is [105]semen. A woman suffering from	104. Lev. 15:2
106. Lev. 15:19	[106]running issue is also impure. A [107]human corpse is ritually unclean.	
107. Num. 19:14	The purification water (mei niddah) purifies [108]the unclean, but it makes	108. Num. 19:13, 21
109. Lev. 15:16	the clean ritually impure. It is a mitzvah to become ritually clean [109]by	
110. Lev. 14:2	ritual immersion. To become cleansed of leprosy, one [110]must follow	
	the specified procedure and also [111]shave off all of one's hair. Until	111. Lev. 14:9
	cleansed, the leper [112]must be bareheaded with clothing in disarray	112. Lev. 13:45
	so as to be easily distinguishable.	
113. Num. 19:2–9	The ashes of [113]the red heifer are to be used in the process of ritual purification.	
	Donations to the Temple	
114. Lev. 27:2–8	If a person [114]undertakes to give his own value to the Temple, he must	
116. Lev. 27:14	do so. Should a man declare [115]an unclean beast, [116]a house, or [117]a	115. Lev. 27:11–12
	field as a donation to the Temple, he must give their value in money	117. Lev. 27:16, 22–23
	as fixed by the priest. If one unwittingly derives benefit from Temple	
118. Lev. 5:16	property, [118]full restitution plus a fifth must be made.	
119. Lev. 19:24	The fruit of [119]the fourth year's growth of trees is holy and may be eaten	
	only in Jerusalem. When you reap your fields, you must leave [120]the	120. Lev. 19:9
121. Lev. 19:9	corners, [121]the gleanings, [122]the forgotten sheaves, [123]the misformed	122. Deut. 24:19
124. Lev. 19:10	bunches of grapes, and [124]the gleanings of the grapes for the poor.	123. Lev. 19:10
125. Ex. 23:19	The first fruits must be [125]separated and brought to the Temple and	
	you must also [126]separate the great heave offering (terumah) and	126. Deut. 18:4
127. Lev. 27:30;	give it to the priests. You must give [127]one tithe of your produce to	
Num. 18:24	the Levites and separate [128]a second tithe which is to be eaten only	128. Deut. 14:22
	in Jerusalem. The Levites [129]must give a tenth of their tithe to the	129. Num. 18:26
	priests.	
	In the third and sixth years of the seven-year cycle, you should	
130. Deut. 14:28	[130]separate a tithe for the poor instead of the second tithe. A declaration	
131. Deut. 26:13	[131]must be recited when separating the various tithes and [132]when	132. Deut. 26:5
	bringing the first fruits to the Temple.	
133. Num. 15:20	The first portion of the [133]dough must be given to the priest.	
	The Sabbatical Year	
134. Ex. 23:11	In the seventh year (shemittah) everything that grows is [134]ownerless	
135. Ex. 34:21	and available to all; the fields [135]must lie fallow and you may not till	
136. Lev. 25:10	the ground. You must [136]sanctify the Jubilee year (50th) and on the	
	Day of Atonement in that year [137]you must sound the shofar and set	137. Lev. 25:9
	all Hebrew slaves free. In the Jubilee year all land is to be [138]returned	138. Lev. 25:24
139. Lev. 25:29–30	to its ancestral owners and, generally, in a walled city [139]the seller has	
	the right to buy back a house within a year of its sale.	
	Starting from entry into the land of Israel, the years of the Jubilee must	
140. Lev. 25:8.	be [140]counted and announced yearly and septennially.	
141. Deut. 15:3	In the seventh year [141]all debts are annulled but [142]one may exact a	142. Deut. 15:3
	debt owed by a foreigner.	
	Concerning Animals for Consumption	
	When you slaughter an animal, you must [143]give the priest his share	143. Deut. 18:3
	as you must also give him [144]the first of the fleece. When a man	144. Deut. 18:4
145. Lev. 27:21, 28	makes a ḥerem (a special vow), you must [145]distinguish between that	
	which belongs to the Temple (i.e., when God's name was mentioned	
	in the vow) and between that which goes to the priests. To be fit for	
146. Deut. 12:21	consumption, beast and fowl must be [146]slaughtered according to the	

	law, and if they are not of a domesticated species, [147]their blood must be covered with earth after slaughter.	147. Lev. 17:13.
148. Deut. 22:7	Set the parent bird [148]free when taking the nest. Examine [149]beast,	149. Lev. 11:2
150. Deut. 14:11	[150]fowl, [151]locusts, and [152]fish to determine whether they are permitted for consumption.	151. Lev. 11:21 152. Lev. 11:9
	Festivals	
153. Ex. 12:2 Deut. 16:1	The Sanhedrin should [153]sanctify the first day of every month and reckon the years and the seasons. You must [154]rest on the Sabbath day	154. Ex. 23:12
	and [155]declare it holy at its onset and termination. On the 14th of Nisan	155. Ex. 20:8
156. Ex. 12:15	[156]remove all leaven from your ownership and on the night of the 15th	
157. Ex. 13:8	[157]relate the story of the exodus from Egypt; on that night [158]you must	158. Ex. 12:18
159. Ex. 12:16	also eat maẓẓah. On the [159]first and [160]seventh days of Passover you must rest. Starting from the day of the first sheaf (16th of Nisan), you	160. Ex. 12:16
161. Lev. 23:35	shall [161]count 49 days. You must rest on [162]Shavuot and on [163]Rosh Ha-	163. Lev. 23:24
162. Lev. 23	Shanah; on the Day of Atonement you must [164]fast and [165]rest. You must	165. Lev. 16:29, 31
164. Lev. 16:29	also rest on [166]the first and [167]the eighth day of Sukkot during which	167. Lev. 23:36
166. Lev. 23:35	festival you shall [168]dwell in booths and [169]take the four species. On	168. Lev. 23:42
169. Lev. 23:40	Rosh Ha-Shanah [170]you are to hear the sound of the shofar.	170. Num. 29:1
	Community	
171. Ex. 30:12–13	Every male should [171]give half a shekel to the Temple annually. You	
172. Deut. 18:15	must [172]obey a prophet and [173]appoint a king. You must also [174]obey	173. Deut. 17:15
175. Ex. 23:2	the Sanhedrin; in the case of division, [175]yield to the majority. Judges	174. Deut. 17:11
176. Deut. 16:18	and officials shall be [176]appointed in every town and they shall judge the people [177]impartially.	177. Lev. 19:15
	Whoever is aware of evidence [178]must come to court to testify.	178. Lev. 5:1
	Witnesses shall be [179]examined thoroughly and, if found to be false,	179. Deut. 13:15
180. Deut. 19:19	[180]shall have done to them what they intended to do to the accused.	
181. Deut. 21:4	When a person is found murdered and the murderer is unknown, the ritual of [181]decapitating the heifer must be performed.	
	Six cities of refuge should be [182]established. The Levites, who have	182. Deut. 19:3
183. Num. 35:2	no ancestral share in the land, shall [183]be given cities to live in. You	
	must [184]build a fence around your roof and remove potential hazards from your home.	184. Deut. 22:8
	Idolatry	
	Idolatry and its appurtenances [185]must be destroyed, and a city which	185. Deut. 12:2; 7:5
186. Deut. 13:17	has become perverted must be [186]treated according to the law. You are	
187. Deut. 20:17	commanded to [187]destroy the seven Canaanite nations, and [188]to blot out	188. Deut. 25:19
	the memory of Amalek, and [189]to remember what they did to Israel.	189. Deut. 25:17
	War	
	The regulations for wars other than those commanded in the Torah	
190. Deut. 20:11–12	[190]are to be observed and a priest should be [191]appointed for special	
191. Deut. 20:2	duties in times of war. The military camp must be [192]kept in a sanitary	192. Deut. 23:14–15
193. Deut. 23:14	condition. To this end, every soldier must be [193]equipped with the necessary implements.	
	Social	
194. Lev. 5:23	Stolen property must be [194]restored to its owner. Give [195]charity to the	195. Deut. 15:8;
196. Deut. 15:14	poor. When a Hebrew slave goes free, the owner must [196]give him gifts.	Lev. 25:35–36
197. Ex. 22:24	Lend to [197]the poor without interest; to the foreigner you may [198]lend at	198. Deut. 23:21

	interest. Restore [199]a pledge to its owner if he needs it. Pay the worker	199. Deut. 24:13; Ex. 22:25
200. Deut. 24:15	his wages [200]on time; [201]permit him to eat of the produce with which	
201. Deut. 23:25–26	he is working. You must [202]help unload an animal when necessary, and	202. Ex. 23:5
203. Deut. 22:4	also [203]help load man or beast. Lost property [204]must be restored to its	204. Deut. 22:1; Ex. 23:4
205. Lev. 19:17	owner. You are required [205]to reprove the sinner but you must [206]love	
206. Lev. 19:18	your fellow as yourself. You are commanded [207]to love the proselyte.	207. Deut. 10:19
208. Lev. 19:36	Your weights and measures [208]must be accurate.	
	Family	
209. Lev. 19:32	Respect the [209]wise; [210]honor and [211]fear your parents.	210. Ex. 20:12
212. Gen. 1:28	You should [212]perpetuate the human race by marrying [213]according	211. Lev. 19:3
213. Deut. 24:1	to the law. A bridegroom is to [214]rejoice with his bride for one year.	
214. Deut. 24:5	Male children must [215]be circumcised. Should a man die childless, his	
215. Gen. 17:10; Lev. 12:3	brother must either [216]marry his widow or [217]release her (halizah). He who violates a virgin must [218]marry her and may never divorce her.	216. Deut. 25:5
217. Deut. 25:9	If a man unjustly accuses his wife of premarital promiscuity, [219]he	
218. Deut. 22:29	shall be flogged, and may never divorce her. The seducer [220]must be	
219. Deut. 22:18–19	punished according to the law. The female captive must be [221]treated	221. Deut. 21:11
220. Ex. 22:15–23	in accordance with her special regulations. Divorce can be executed	
222. Deut. 24:1	[222]only by means of a written document. A woman suspected of	
	adultery [223]has to submit to the required test.	223. Num. 5:15–2.7
	Judicial	
224. Deut. 25:2	When required by the law, [224]you must administer the punishment	
	of flogging and you must [225]exile the unwitting homicide. Capital	225. Num. 35:25
226. Ex. 21:20	punishment shall be by [226]the sword, [227]strangulation, [228]fire, or	228. Lev. 20:14
227. Ex. 21:16	[229]stoning, as specified. In some cases the body of the executed [230]shall	229. Deut. 22:24
230. Deut. 21:22	be hanged, but it [231]must be brought to burial the same day.	231. Deut. 21:23
	Slaves	
232. Ex. 21:2	Hebrew slaves [232]must be treated according to the special laws	
	for them. The master should [233]marry his Hebrew maidservant or	233. Ex. 21:8
234. Ex. 21:8	[234]redeem her. The alien slave [235]must be treated according to the	
235. Lev. 25:46	regulations applying to him.	
	Torts	
	The applicable law must be administered in the case of injury caused	
236. Ex. 21:18	by [236]a person, [237]an animal, or [238]a pit. Thieves [239]must be punished.	238. Ex. 21:33–34
237. Ex. 21:28	You must render judgment in cases of [240]trespass by cattle, [241]arson,	239. Ex. 21:37–22:3
240. Ex. 22:4	[242]embezzlement by an unpaid guardian and in claims against [243]a paid	241. Ex. 22:5
242. Ex. 22:6–8	guardian, a hirer, or [244]a borrower. Judgment must also be rendered	244. Ex. 22:13
243. Ex. 22:9–12	in disputes arising out of [245]sales, [248]inheritance, and [246]other matters	248. Num. 27:8
245. Lev. 25:14	generally. You are required to [247]rescue the persecuted even if it means	247. Deut. 25:12
246. Ex. 22:8	killing his oppressor.	
PROHIBITIONS		
	Idolatry and Related Practices	
1. Ex. 20:3	It is [1]forbidden to believe in the existence of any but the One God.	
2. Ex. 20:4	You may not make images [2]for yourself or [3]for others to worship or for	3. Lev. 19:4
4. Ex. 20:20	[4]any other purpose. You must not worship anything but God either	

5. Ex. 20:5	in [5]the manner prescribed for His worship or [6]in its own manner of worship.	6. Ex. 20:5
7. Lev. 18:21	Do not [7]sacrifice children to Molech.	
8. Lev. 19:31	You may not [8]practice necromancy or [9]resort to "familiar spirits";	9. Lev. 19:31
10. Lev. 19:4	neither should you take idolatry or its mythology [10]seriously.	
11. Deut. 16:22	It is forbidden to construct a [11]pillar or [12]dais even for the worship of	12. Lev. 20:1
13. Deut. 16:21	God or to [13]plant trees in the Temple.	
14. Ex. 23:13	You may not [14]swear by idols or instigate an idolator to do so, nor may	
15. Ex. 23:13	you encourage or persuade any [15]non-Jew or [16]Jew to worship idols.	16. Deut. 13:12
17. Deut. 13:9	You must not [17]listen to or love anyone who disseminates idolatry nor	
18. Deut. 13:9	[18]should you withhold yourself from hating him. Do not [19]pity such a	19. Deut. 13:9
	person. If somebody tries to convert you to idolatry, [20]do not defend	20. Deut. 13:9
21. Deut. 13:9	him or [21]conceal the fact.	
22. Deut. 7:25	It is forbidden to [22]derive any benefit from the ornaments of idols. You	
	may not [23]rebuild that which has been destroyed as a punishment for	23. Deut. 13:17
24. Deut. 13:18	idolatry nor may you [24]have any benefit from its wealth. Do not [25]use	25. Deut. 7:26
	anything connected with idols or idolatry.	
26. Deut. 18:20	It is forbidden [26]to prophesy in the name of idols or prophesy [27]falsely	
27. Deut. 18:20	in the name of God. Do not [28]listen to the one who prophesies for idols	28. Deut. 13:3, 4;
29. Deut. 18:22	and do not [29]fear the false prophet or hinder his execution.	Deut. 13:4
30. Lev. 20:23	You must not [30]imitate the ways of idolators or practice their customs;	
33. Deut. 18:10–11	[31]divination, [32]soothsaying, [33]enchanting, [34]sorcery, [35]charming,	31. Lev. 19:26; Deut. 18:10
34. Deut. 18:10–11	[36]consulting ghosts or [37]familiar spirits, and [38]necromancy are	32. Deut. 18:10
35. Deut. 18:10–11	forbidden. Women must not [39]wear male clothing nor men [40]that of	36. Deut. 18:10–11
37. Deut. 18:10–11	women. Do not [41]tattoo yourself in the manner of the idolators.	38. Deut. 18:10–11
40. Deut. 22:5	You may not wear [42]garments made of both wool and linen nor may	39. Deut. 22:5
42. Deut. 22:11	you shave (with a razor) the sides of [43]your head or [44]your beard. Do	41. Lev. 19:28
45. Deut. 16:1;	not [45]lacerate yourself over your dead.	43. Lev. 19:27
Deut. 14:1; 45.		44. Lev. 19:27
also Lev. 19:28		
	Prohibitions Resulting from Historical Events	
46. Deut. 17:16	It is forbidden to return to Egypt to [46]dwell there permanently or to	
47. Num. 15:39	[47]indulge in impure thoughts or sights. You may not [48]make a pact	48. Ex. 23:32; Deut. 7:2
49. Deut. 20:16	with the seven Canaanite nations or [49]save the life of any member of	
50. Deut. 7:2	them. Do not [50]show mercy to idolators, [51]permit them to dwell in the	51. Ex. 23:33
52. Deut. 7:3	land of Israel, or [52]intermarry with them. A Jewess may not [53]marry	53. Deut. 23:4
	an Ammonite or Moabite even if he converts to Judaism but should	
	not refuse (for reasons of genealogy alone) [54]a descendant of Esau or	54. Deut. 23:8
55. Deut. 23:8	[55]an Egyptian who are proselytes. It is prohibited to [56]make peace with	56. Deut. 23:7
	the Ammonite or Moabite nations.	
57. Deut. 20:19	The [57]destruction of fruit trees even in times of war is forbidden as is	
58. Deut. 7:21	wanton waste at any time. Do not [58]fear the enemy and do not [59]forget	59. Deut. 25:19
	the evil done by Amalek.	
	Blasphemy	
60. Lev. 24:16;	You must not [60]blaspheme the Holy Name, [61]break an oath made by	61. Lev. 19:12
rather Ex. 22:27	It, [62]take It in vain or [63]profane It. Do not [64]try the Lord God. You may	63. Lev. 22:32
62. Ex. 20:7	not [65]erase God's name from the holy texts or destroy institutions	
64. Deut. 6:16	devoted to His worship. Do not [66]allow the body of of one hanged to	66. Deut. 21:23
65. Deut. 12:4	remain so overnight.	

	Temple	
67. Num. 18:5	Be not [67]lax in guarding the Temple.	
68. Lev. 16:2	The high priest must not enter the Temple [68]indiscriminately; a priest	
69. Lev. 21:23	with a physical blemish may not [69]enter there at all or [70]serve in the	70. Lev. 21:17
	sanctuary, and even if the blemish is of a temporary nature, he may	
71. Lev. 21:18	not [71]participate in the service there until it has passed.	
	The Levites and the priests must not [72]interchange in their functions.	72. Num. 18:3
	Intoxicated persons may not [73]enter the sanctuary or teach the Law. It	73. Lev. 10:9–11
74. Num. 18:4	is forbidden for [74]non-priests, [75]unclean priests, or [76]priests who have	75. Lev. 22:2
	performed the necessary ablution but are still within the time limit of	76. Lev. 21:6
	their uncleanness to serve in the Temple. No unclean person may enter	
77. Num. 5:3	[77]the Temple or [78]the Temple Mount.	78. Deut. 23:11
	The altar must not be made of [79]hewn stones nor may the ascent to	79. Ex. 20:25
80. Ex. 20:26	it be by [80]steps. The fire on it may not be [81]extinguished nor may any	81. Lev. 6:6
	other but the specified incense be [82]burned on the golden altar. You	82. Ex. 30:9
83. Ex. 30:32	may not [83]manufacture oil with the same ingredients and in the same	
84. Ex. 30:32	proportions as the anointing oil which itself [84]may not be misused.	
85. Ex. 30:37	Neither may you [85]compound incense with the same ingredients	
	and in the same proportions as that burned on the altar. You must	
86. Ex. 25:15	not [86]remove the staves from the Ark, [87]remove the breastplate from	87. Ex. 28:28
88. Ex. 28:32	the ephod, or [88]make any incision in the upper garment of the high	
	priest.	
	Sacrifices	
89. Deut. 12:13	It is forbidden to [89]offer sacrifices or [90]slaughter consecrated animals	90. Lev. 17:3–4
91. Lev. 22:20	outside the Temple. You may not [91]sanctify, [92]slaughter, [93]sprinkle	92. Lev. 22:22
94. Lev. 22:22	the blood of, or [94]burn the inner parts of a blemished animal even if	93. Lev. 22:24
95. Deut. 17:1	the blemish is [95]of a temporary nature and even if it is [96]offered by	96. Lev. 22:25
97. Lev. 22:21	Gentiles. It is forbidden to [97]inflict a blemish on an animal consecrated	
	for sacrifice.	
98. Lev. 2:11	Leaven or honey may not [98]be offered on the altar, neither may	
99. Lev. 2:13	[99]anything unsalted. An animal received as the hire of a harlot or as	
100. Deut. 23:19	the price of a dog [100]may not be offered.	
101. Lev. 22:28	Do not [101]kill an animal and its young on the same day.	
102. Lev. 5:11	It is forbidden to use [102]olive oil or [103]frankincense in the sin offering or	103. Lev. 5:11
104. Num. 5:15	[104,105]in the jealousy offering (sotah). You may not [106]substitute sacrifices	105. Num. 5:15
107. Lev. 27:26	even [107]from one category to the other. You may not [108]redeem the	106. Lev. 27:10
108. Num. 18:17	firstborn of permitted animals.	
109. Lev. 27:33	It is forbidden to [109]sell the tithe of the herd or [110]sell or [111]redeem a	110. Lev. 27:28
111. Lev. 27:28	field consecrated by the herem vow.	
112. Lev. 5:8	When you slaughter a bird for a sin offering, you may not [112]split its	
	head.	
113. Deut. 15:19	It is forbidden to [113]work with or [114]to shear a consecrated animal. You	114. Deut. 15:19
115. Ex. 34:25	must not slaughter the paschal lamb [115]while there is still leaven about;	
116. Ex. 23:10	nor may you leave overnight [116]those parts that are to be offered up	
117. Ex. 12:10	or [117]to be eaten.	
118. Deut. 16:4	You may not leave any part of the festive offering [118]until the third	
120. Lev. 22:30	day or any part of [119]the second paschal lamb or [120]the thanksgiving	119. Num. 9:13
	offering until the morning.	
121. Ex. 12:46	It is forbidden to break a bone of [121]the first or [122]the second paschal	122. Num. 9:12
	lamb or [123]to carry their flesh out of the house where it is being eaten.	123. Ex. 12:46
124. Lev. 6:10	You must not [124]allow the remains of the meal offering to become	

125. Ex. 12:9	leaven. It is also forbidden to eat the paschal lamb [125]raw or sodden	
126. Ex. 12:45	or to allow [126]an alien resident, [127]an uncircumcised person, or an	127. Ex. 12:48
	[128]apostate to eat of it.	128. Ex. 12:43
	A ritually unclean person [129]must not eat of holy things nor may	129. Lev. 12:4
130. Lev. 7:19	[130]holy things which have become unclean be eaten. Sacrificial meat	
131. Lev. 19:6–8	[131]which is left after the time-limit or [132]which was slaughtered with	132. Lev. 7:18
	wrong intentions must not be eaten. The heave offering must not be	
133. Lev. 22:10	eaten by [133]a non-priest, [134]a priest's sojourner or hired worker, [135]an	134. Lev. 22:10
136. Lev. 22:4	uncircumcised person, or [136]an unclean priest. The daughter of a priest	135. Lev. 22:10
137. Lev. 22:12	who is married to a non-priest may not [137]eat of holy things.	
	The meal offering of the priest [138]must not be eaten, neither may	138. Lev. 6:16
139. Lev. 6:23	[139]the flesh of the sin offerings sacrificed within the sanctuary or	
140. Deut. 14:3	[140]consecrated animals which have become blemished.	
141. Deut. 12:17	You may not eat the second tithe of [141]corn, [142]wine, or [143]oil or	142. Deut. 12:17
143. Deut. 12:17	[144]unblemished firstlings outside Jerusalem. The priests may not eat	144. Deut. 12:17
	the [145]sin-offerings or the trespass-offerings outside the Temple courts	145. Deut. 12:17
146. Deut. 12:17	or [146]the flesh of the burnt-offering at all. The lighter sacrifices [147]may	
147. Deut. 12:17	not be eaten before the blood has been sprinkled. A non-priest may	
	not [148]eat of the holiest sacrifices and a priest [149]may not eat the first	148. Deut. 12:17
	fruits outside the Temple courts.	149. Ex. 29:33
150. Deut. 26:14	One may not eat [150]the second tithe while in a state of impurity or [151]in	151. Deut. 26:14
152. Deut. 26:14	mourning; its redemption money [152]may not be used for anything other	
	than food and drink.	
153. Lev. 22:15	You must not [153]eat untithed produce or [154]change the order of	154. Ex. 22:28
	separating the various tithes.	
155. Deut. 23:22	Do not [155]delay payment of offerings – either freewill or obligatory –	
	and do not [156]come to the Temple on the pilgrim festivals without an	156. Ex. 23:15
	offering.	
157. Num. 30:3	Do not [157]break your word.	
	Priests	
158. Lev. 21:7	A priest may not marry [158]a harlot, [159]a woman who has been profaned	159. Lev. 21:7
160. Lev. 21:7	from the priesthood, or [160]a divorcee; the high priest must not [161]marry	161. Lev. 21:14
162. Lev. 21:15	a widow or [162]take one as a concubine. Priests may not enter the	
163. Lev. 10:6	sanctuary with [163]overgrown hair of the head or [164]with torn clothing;	164. Lev. 10:6
	they must not [165]leave the courtyard during the Temple service. An	165. Lev. 10:7
166. Lev. 21:1	ordinary priest may not render himself [166]ritually impure except for	
	those relatives specified, and the high priest should not become impure	
167. Lev. 21:11	[167]for anybody in [168]any way.	168. Lev. 21:11
	The tribe of Levi shall have no part in [169]the division of the land of Israel	169. Deut. 18:1
170. Deut. 18:1	or [170]in the spoils of war.	
171. Deut. 14:1	It is forbidden [171]to make oneself bald as a sign of mourning for one's	
	dead.	
	Dietary Laws	
172. Deut. 14:7	A Jew may not eat [172]unclean cattle, [173]unclean fish, [174]unclean fowl,	173. Lev. 11:11
174. Lev. 11:13	[175]creeping things that fly, [176]creatures that creep on the ground,	175. Deut. 14:19
176. Lev. 11:41	[177]reptiles, [178]worms found in fruit or produce, or [179]any detestable	177. Lev. 11:44
178. Lev. 11:42	creature.	179. Lev. 11:43
	An animal that has died naturally [180]is forbidden for consumption,	180. Deut. 14:21
181. Ex. 23:19	as is [181]a torn or mauled animal. One must not eat [182]any limb taken	182. Deut. 12.23
183. Gen. 32:33	from a living animal. Also prohibited is [183]the sinew of the thigh (gid	
184. Lev. 7:26	ha-nasheh), as are [184]blood and [185]certain types of fat (helev). It is	185. Lev. 7:23

186. Ex. 23:19	forbidden [186]to cook meat together with milk or [187]eat of such a mixture.	187. Ex. 34:26
188. Ex. 21:28	It is also forbidden to eat [188]of an ox condemned to stoning (even if it has been properly slaughtered).	
189. Lev. 23:14	One may not eat [189]bread made of new corn or the new corn itself,	
190. Lev. 23:14	either [190]roasted or [191]green, before the omer offering has been brought	191. Lev. 23:14
192. Lev. 19:23	on the 16th of Nisan. You may not eat [192]orlah or [193]the growth of mixed	193. Deut. 22:9
194. Deut. 32:38	planting in the vineyard (see Mixed Species). Any use of [194]wine	
195. Lev. 19:26; Deut. 21:20	libations to idols is prohibited, as are [195]gluttony and drunkenness. One may not eat anything on [196]the Day of Atonement. During Passover	196. Lev. 23:29
197. Ex. 13:3	it is forbidden to eat [197]leaven (hamez) or [198]anything containing an	198. Ex. 13:20
199. Deut. 16:3	admixture of such. This is also forbidden [199]after the middle of the 14th of Nisan (the day before Passover). During Passover no leaven may be	
200. Ex. 13:7	[200]seen or [201]found in your possession.	201. Ex. 12:19
	Nazirites	
202. Num. 6:3	A Nazirite may not drink [202]wine or any beverage made from grapes;	
203. Num. 6:3	he may not eat [203]fresh grapes, [204]dried grapes, [205]grape seeds, or	204. Num. 6:3
206. Num. 6:4	[206]grape peel. He may not render himself [207]ritually impure for his	205. Num. 6:4
208. Lev. 21:11	dead nor may he [208]enter a tent in which there is a corpse. He must	207. Num. 6:7
209. Num. 6:5	not [209]shave his hair.	
	Agriculture	
210. Lev. 23:22	It is forbidden [210]to reap the whole of a field without leaving the corners	
211. Lev. 19:9	for the poor; it is also forbidden to [211]gather up the ears of corn that fall during reaping or to harvest [212]the misformed clusters of grapes,	212. Lev. 19:10
213. Lev. 19:10	or [213]the grapes that fall or to [214]return to take a forgotten sheaf.	214. Deut. 24:19
215. Lev. 19:19	You must not [215]sow different species of seed together or [216]corn in	216. Deut. 22:9
217. Lev. 19:19	a vineyard; it is also forbidden to [217]crossbreed different species of animals or [218]work with two different species yoked together. You must	218. Deut. 22:10
219. Deut. 25:4	not [219]muzzle an animal working in a field to prevent it from eating.	
220. Lev. 25:4	It is forbidden to [220]till the earth, [221]to prune trees, [222]to reap (in the	221. Lev. 25:4
222. Lev. 25:5	usual manner) produce or [223]fruit which has grown without cultivation	223. Lev. 25:5
	in the seventh year (shemittah). One may also not [224]till the earth or prune trees in the Jubilee year, when it is also forbidden to harvest	224. Lev. 25:11
225. Lev. 25:11	(in the usual manner) [225]produce or [226]fruit that has grown without cultivation.	226. Lev. 25:11
227. Lev. 25:23	One may not [227]sell one's landed inheritance in the land of Israel	
228. Lev. 25:33	permanently or [228]change the lands of the Levites or [229]leave the Levites without support.	229. Deut. 12:19
	Loans, Business, and the Treatment of Slaves	
230. Deut. 15:2	It is forbidden to [230]demand repayment of a loan after the seventh	
231. Deut. 15:9	year; you may not, however, [231]refuse to lend to the poor because	
232. Deut. 15:7	that year is approaching. Do not [232]deny charity to the poor or [233]send a Hebrew slave away empty-handed when he finishes his period of	233. Deut. 15:13
	service. Do not [234]dun your debtor when you know that he cannot pay.	234. Ex. 22:24
235. Lev. 25:37	It is forbidden to [235]lend to or[236]borrow from another Jew at interest or	236. Deut. 23:20
237. Ex. 22:24	[237]participate in an agreement involving interest either as a guarantor, witness, or writer of the contract.	
238. Lev. 19:13	Do not [238]delay payment of wages.	
239. Deut. 24:10	You may not [239]take a pledge from a debtor by violence, [240]keep a poor	240. Deut. 24:12
241. Deut. 24:17	man's pledge when he needs it, [241]take any pledge from a widow or	
242. Deut. 24:6	[242]from any debtor if he earns his living with it.	

243. Ex. 20:13	Kidnapping [243]a Jew is forbidden.	
244. Lev. 19:11	Do not [244]steal or [245]rob by violence. Do not [246]remove a landmarker	245. Lev. 19:13
246. Deut. 19:14	or [247]defraud.	247. Lev. 19:13
248. Lev. 19:11	It is forbidden [248]to deny receipt of a loan or a deposit or [249]to swear falsely regarding another man's property.	249. Lev. 19:11
250. Lev. 25:14	You must not [250]deceive anybody in business. You may not [251]mislead a man even verbally. It is forbidden to harm the stranger among you	251. Lev. 25:17
252. Ex. 22:20	[252]verbally or [253]do him injury in trade.	253. Ex. 22:20
254. Deut. 23:16	You may not [254]return or [255]otherwise take advantage of a slave who has fled to the land of Israel from his master, even if his master is a Jew.	255. Deut. 23:17
256. Ex. 22:21	Do not [256]afflict the widow or the orphan. You may not [257]misuse or	257. Lev. 25:39
258. Lev. 25:42	[258]sell a Hebrew slave; do not [259]treat him cruelly or [260]allow a heathen	259. Lev. 25:43
260. Lev. 25:53	to mistreat him. You must not [261]sell your Hebrew maidservant or, if you	261. Ex. 21:8
262. Ex. 21:10	marry her, [262]withhold food, clothing, and conjugal rights from her. You	
263. Deut. 21:14	must not [263]sell a female captive or [264]treat her as a slave.	264. Deut. 21:14
265. Ex. 20:17	Do not [265]covet another man's possesions even if you are willing to	
266. Deut. 5:18	pay for them. Even [266]the desire alone is forbidden.	
267. Deut. 23:26	A worker must not [267]cut down standing corn during his work or [268]take more fruit than he can eat.	268. Deut. 23:25
269. Deut. 22:3	One must not [269]turn away from a lost article which is to be returned	
270. Ex. 23:5	to its owner nor may you [270]refuse to help a man or an animal which is collapsing under its burden.	
271. Lev. 19:35	It is forbidden to [271]defraud with weights and measures or even [272] to possess inaccurate weights.	272. Deut. 25:13
	Justice	
273. Lev. 19:15	A judge must not [273]perpetrate injustice, [274]accept bribes, or be [275]partial	274. Ex. 23:8
275. Lev. 19:15	or [276]afraid. He may [277]not favor the poor or [278]discriminate against the	276. Deut. 1:17
278. Ex. 23:6	wicked; he should not [279]pity the condemned or [280]pervert the judgment	277. Lev. 19:15, rather Ex. 23:3
279. Deut. 19:13	of strangers or orphans.	280. Deut. 24:17
281. Ex. 23:1	It is forbidden to [281]hear one litigant without the other being present.	
282. Ex. 23:2	A capital case cannot be decided by [282]a majority of one.	
283. Ex. 23:2	A judge should not [283]accept a colleague's opinion unless he is	
284. Deut. 1:17	convinced of its correctness; it is forbidden to [284]appoint as a judge someone who is ignorant of the law.	
285. Ex. 20:16	Do not [285]give false testimony or accept [286]testimony from a wicked	286. Ex. 23:1
	person or from [287]relatives of a person involved in the case. It is	287. Deut. 24:16
288. Deut. 19:15	forbidden to pronounce judgment [288]on the basis of the testimony of one witness.	
289. Ex. 20:13	Do not [289]murder.	
	You must not convict on [290]circumstantial evidence alone.	290. Ex. 23:7
291. Num. 35:30	A witness [291]must not sit as a judge in capital cases.	
292. Num. 35:12	You must not [292]execute anybody without due proper trial and conviction.	
293. Deut. 25:12	Do not [293] pity or spare the pursuer.	
	Punishment is not to be inflicted for [294]an act committed under duress.	294. Deut. 22:26
295. Num. 35:31	Do not accept ransom [295]for a murderer or [296]a manslayer.	296. Num. 35:32
297. Lev. 19:16	Do not [297]hesitate to save another person from danger and do not	
298. Deut. 22:8	[298]leave a stumbling block in the way or [299]mislead another person by giving wrong advice.	299. Lev. 19:14
300. Deut. 25:2–3	It is forbidden [300]to administer more than the assigned number of lashes to the guilty.	
301. Lev. 19:16	Do not [301]tell tales or [302]bear hatred in your heart. It is forbidden to	302. Lev. 19:17

303. Lev. 19:17	[303]shame a Jew, [304]to bear a grudge, or [305]to take revenge. Do not	304. Lev. 19:18
305. Lev. 19:18	[306]take the dam when you take the young birds.	306. Deut. 22:6
307. Lev. 13:33	It is forbidden to [307]shave a leprous scalp or [308]remove other signs of	308. Deut. 24:8
	that affliction. It is forbidden [309]to cultivate a valley in which a slain	309. Deut. 21:4
	body was found and in which subsequently the ritual of breaking the	
	heifer's neck (eglah arufah) was performed.	
310. Ex. 22:17	Do not [310]suffer a witch to live.	
311. Deut. 24:5	Do not [311]force a bridegroom to perform military service during the first	
312. Deut. 17:11	year of his marriage. It is forbidden to [312]rebel against the transmitters	
313. Deut. 13:1	of the tradition or to [313]add or [314]detract from the precepts of the law.	314. Deut. 13:1
315. Ex. 22:27	Do not curse [315]a judge, [316]a ruler, or [317]any Jew.	316. Ex. 22:27
318. Ex. 21:17	Do not [318]curse or [319]strike a parent.	317. Lev. 19:14
319. Ex. 21:15	It is forbidden to [320]work on the Sabbath or [321]walk further than the	321. Ex. 16:29
320. Ex. 20:10	permitted limits (eruv). You may not [322]inflict punishment on the	322. Ex. 35:3
	Sabbath.	
323. Ex. 12:16	It is forbidden to work on [323]the first or [324]the seventh day of Passover,	324. Ex. 12:16
325. Lev. 23:21	on [325]Shavuot, on [326]Rosh Ha-Shanah, on the [327]first and [328]eighth	326. Lev. 23:25
327. Lev. 23:35	(*Shemini Azeret) days of Sukkot, and [329]on the Day of Atonement.	329. Lev. 23:28
328. Lev. 23:36		
	Incest and Other Forbidden Relationships	
	It is forbidden to enter into an incestuous relationship with one's	
330. Lev. 18:7	[330]mother, [331]step-mother, [332]sister, [333]half-sister, [334]son's daughter,	333. Lev. 18:11
331. Lev. 18:8	[335]daughter's daughter, [336]daughter, [337]any woman and her daughter,	334. Lev. 18:10
332. Lev. 18:9	[338]any woman and her son's daughter, [339]any woman and her daughter's	335. Lev. 18:10
336. Lev. 18:10	daughter, [340]father's sister, [341]mother's sister, [342]paternal uncle's wife,	337. Lev. 18:17
338. Lev. 18:17	[343]daughter-in-law, [344]brother's wife, and [345]wife's sister.	339. Lev. 18:17
341. Lev. 18:13	It is also forbidden to [346]have sexual relations with a menstruous	340. Lev. 18:12
343. Lev. 18:15	woman (see Niddah).	342. Lev. 18:14
344. Lev. 18:16	Do not [347]commit adultery.	345. Lev. 18:18
347. Lev. 18:20	It is forbidden for [348]a man or [349]a woman to have sexual intercourse	346. Lev. 18:19
	with an animal.	348. Lev. 18:23
350. Lev. 18:22	Homosexuality [350]is forbidden, particularly with [351]one's father or	349. Lev. 18:23
351. Lev. 18:7	[352]uncle.	352. Lev. 18:14
353. Lev. 18:6	It is forbidden to have [353]intimate physical contact (even without	
	actual intercourse) with any of the women with whom intercourse	
	is forbidden.	
354. Deut. 23:3	A mamzer may not [354]marry a Jewess.	
355. Deut. 23:18	Harlotry [355]is forbidden.	
	A divorcee may not be [356]remarried to her first husband if, in the	356. Deut. 24:4
	meanwhile, she had married another.	
	A childless widow may not [357]marry anybody other than her late	357. Deut. 25:5
	husband's brother (see Levirate Marriage).	
358. Deut. 22:29	A man may not [358]divorce a wife whom he married after having raped	
	her or [359]after having slandered her.	359. Deut. 22:19
360. Deut. 23:2	A eunuch may not [360]marry a Jewess.	
361. Lev. 22:24	Castration [361]is forbidden.	
	The Monarchy	
362. Deut. 17:15	You may not [362]elect as king anybody who is not of the seed of Israel.	
363. Deut. 17:16	The king must not accumulate an excessive number of [363]horses,	
364. Deut. 17:17	[364]wives, or [365]wealth.	365. Deut. 17:17

[Raphael Posner]

Deut. 17; Ex. R. 33:7; Num. R. 13:15–16; 18:21; Yev. 47b) which crystallized in the school of R. *Akiva (see A.H. Rabinowitz, *Taryag*, 38–39). Doubt as to the validity of this tradition in the eyes of the sages of the Talmud has been expressed by *Naḥmanides, Abraham *Ibn Ezra, Simeon b. Zemaḥ *Duran, Schechter, and others, but the majority of scholars, including Naḥmanides and Duran, conclude that the tradition does in fact reflect the opinion of the rabbis of the Talmud. Works enumerating the commandments are numerous (see Jellinek, *Kunteres Taryag*, 1878), but the majority of the lists conform to one of four methods of enumeration: (1) The earliest lists, those of the anonymous *azharot, are divided simply into two lists of positive and prohibitive precepts, with little attention being paid to the internal classification, e.g., *Attah Hinḥalta, Azharat Reshit, Emet Yehegeh Ḥikki*. (2) The threefold division into positive commandments, prohibitions, and *parashiyyot*, first found in the list prefacing the *Halakhot Gedolot of R. Simeon Kayyara and subsequently in almost every enumeration of geonic times. (The basis for this division is to be found in Mid. Ps. 119:1 and indirectly in PR 22:111.) The section called *parashiyyot* lists precepts involving the public body but not the individual, e.g., setting aside cities for the levites, erecting the sanctuary. (3) Classification of the precepts under the tenfold headings of the *Decalogue. This method of classifying the precepts is at least as old as *Philo (Decal.), is mentioned in the Midrash several times (e.g., Num. R. 13:15/16), and is followed by *Saadiah Gaon, Isaac *Abrabanel, Ma'amar Haskel, and many others. (4) Independent logical classification of the two lists of positive and prohibitive precepts. This is the method of Maimonides and his school. There are in addition many literary curiosities in this field. Elijah Ettinger attempted to show that the 613 precepts are contained in the four verses of Moses' prayer (Deut. 3:23–6). *Shirah le-Ḥayyim* (Warsaw, 1817) attempts to insert the 613 precepts into the 613 letters of the song of *Ha'azinu* (Deut. 32:1–43). David Vital's *Keter Torah* construes a 613-line poem, each line defining one *mitzvah* and commencing with the letters of the Decalogue as they appear in the text. A *Taryag* enumeration amounts in principle to a codification of the major elements of biblical law – the 613 headings under which all the details of Torah legislation may be classified. Extracting and identifying these headings from the complex body of biblical law is the central problem of the vast literature which has grown up around *Taryag* enumerations. In this literature the term *mitzvah* is used in the limited sense of a mandate or prohibition which fulfills the conditions necessary for inclusion among the member *mitzvot* of *Taryag*. Since early tradition gives no precise criteria, the problem is immense and no logical system hitherto proposed is free from criticism. Although preceded by the logical systems of Saadiah Gaon and Ḥefeẓ b. Yaẓli'aḥ, and subsequently criticized by Naḥmanides, the principal method of enumerating the *mitzvot* is that defined by *Maimonides in his *Sefer ha-Mitzvot*. Maimonides introduces the work with a lengthy treatise in which he lays down 14 guiding principles governing the inclusion or exclusion of a *mitzvah* in a *Taryag* enumeration. This treatise formed the basis for subsequent literature on the subject, and the divergence of different *Taryag* lists, both preceding and succeeding Maimonides, is due to differences of opinion over these principles. *Taryag* lists are by no means confined to halakhic treatment. They range over the fields of ethics (Aaron of Barcelona, and Isaiah Hurwitz, among others) homiletics (Aḥai Gaon), philosophy (*Moreh Nevukhim*), and mysticism (David b. Solomon ibn Abi Zimra). An entire (though incomplete) section of the Zohar, the "*Ra'aya Meheimna*" ("Faithful Shepherd"), is devoted to enumerating *Taryag* and offers a mystical interpretation of the precepts. Taryag lists also entered the liturgy, during geonic times, in the form of *azharot*, which form an integral part of the festival prayer book.

COMMANDMENTS, REASONS FOR (Heb. טַעֲמֵי הַמִּצְוֹת, *Ta'amei ha-Mitzvot*). The search for "reasons" for the commandments of the Torah springs from a tendency to transcend mere obedience to them by investing them with some intrinsic meaning. The Pentateuch itself offers reasons for some commandments (e.g., Ex. 22:26; 23:9; Deut. 11:19; 17:16–17; 23:4–5) and emphasizes the "wisdom" of the Law (Deut. 4:6–8). It also differentiates between *mishpatim* ("ordinances") and *ḥukkim* ("statutes") without, however, offering any clear principle of division. Classical rabbinic literature contains a more formal discussion of the problem. The *mishpatim* are said to represent laws that would have been valid even without having been "written" in the Torah, such as the prohibitions against robbery, idolatry, incest, and murder, while the *ḥukkim*, such as the prohibition of swine's flesh and the wearing of garments made of both wool and flax are "decrees" of God. It is to the latter class that "the evil inclination" and the gentiles object (Sifra, Lev. 18:4, par. 140). From the second century onward Christian attacks on "the Law" provoked many Jewish replies stressing the importance of the *mitzvot*: the commandments were given for the sole purpose of purifying man (Gen. R. 41:1 – for parallels see Theodor Albeck, ed. (1965), 424–5); they strengthen man's holiness (Mekh. 89a); they enable Israel to acquire merit (Mak. 3:16). R. Simeon b. Yoḥai is known to have favored the exposition of the reasons of Scripture (*doresh ta'amei di-kera*), but he did not go beyond offering exegetical observations (Kid. 68b, et al.). The *ta'amei ha-Torah* ("reasons of the commandments") are not revealed and should not be revealed (Pes. 119a; cf. Sanh. 21b); the "yoke of the commandments" is to be cherished without probing its reasons. No detailed rationalization of the commandments is to be found in the rabbinic sources.

[Alexander Altmann]

Although the rabbis do not present a systematic exposition of the "reasons for the commandments," and notwithstanding their presumed aversion to such "reasons," they frequently suggest the religious significance or ethical justification for the commands and their details. Thus, the "four species" held on the Sukkot festival are understood as symbolizing God or, alternatively, as different components of the Jewish people which, when held together, form an organic unity (Lev. R. 30, 9; 30, 12). Such explanations need not be symbolic: a married couple is commanded to keep apart during the woman's menstrual period so that "she returns to him as fresh as a bride on her wedding day" (Nid. 31b). This explanation – and many others – is introduced with the phrase, "Why did the Torah command?," a phrase betraying no discomfort with the enterprise of finding reasons for the commands. Frequently, it is the details of commandments that are subject to didactic moralizing: the ear of the Hebrew slave – and no other organ – is bored so as to signify the extension of his servitude (Ex. 21:6) because his ear "heard at Sinai 'the children of Israel are My servants,' yet he went and threw off the yoke of Heaven and took a human master for himself" (Tosef. BK 7, 5), a comment with an an obvious political moral as well.

[Gerald Y. Blidstein (2nd ed.)]

Hellenistic Literature

The need for a rational explanation of the Mosaic law was expressed for the first time in the Hellenistic period; it was motivated by a desire to present the Jewish religion to the pagan world as a legal system designed to produce a people of the highest virtue. The *Letter of Aristeas* describes the dietary laws and other commandments, e.g., those concerning sacrifices, wearing of *ẓiẓit,* the *mezuzah*, and *tefillin*, as divinely ordained means for awakening holy thoughts and forming character (cf. 142–4, 147, 150ff., 169). In IV Maccabees (5:23–24) divine law is identified with reason and held to be the chief aid to a virtuous life (cf. 1:15–17, 30ff.; 5:7, 25–26).

PHILO. Philo offered the first systematic exposition of the reasons for the commandments in several of his works. He presented the law of Moses as the ideal law envisaged by the philosophers, that is, the law that leads men to live according to virtue (H.A. Wolfson, *Philo*, 2 (1947), 200ff.). The laws of Moses are divided into positive and negative laws and into those relating to man and those relating to God, and they are all subsumed under the *Decalogue. Aside from these classifications, the laws of Moses also fall into the following four categories: (1) beliefs; (2) virtuous emotions; (3) actions symbolizing beliefs; and (4) actions symbolizing virtues. However, under the influence of Judaism this fourfold classification of philosophic virtues is expanded to include such religious virtues as faith, piety, prayer, and repentance. Unlike the natural law, the Mosaic law is revealed by God; nevertheless, it is in accord with human nature. Every law in it has a rational purpose (*ibid.*, 305–6). In the explanation of some laws, particularly those involving the sacrifices and festivals, Philo used the allegorical method. Elsewhere he tried to present the Mosaic legislation as a form of government that combines the best features of the three types of rule described as good by Plato and Aristotle, namely, monarchy, aristocracy, and democracy (382ff.).

Medieval Philosophy

SAADIAH GAON. *Saadiah Gaon was the first Jewish thinker to divide the commandments into those obligatory because they are required by reason (Ar. *ʿaqliyyāt*, Heb. *sikhliyyot*) and those given through revelation (Ar. *samʿiyyāt*, Heb. *shimiyyot*). In making this distinction he followed the parallel teachings of the Mu'tazilite *Kalām but also added a Platonic account. According to the Mu'tazilite exposition, the rational laws are divided into three kinds: gratitude, reverence, and social conduct; and from these three categories he derived many special laws. In his Platonic exposition he showed the rational character of certain laws by pointing out the damaging effects of the acts prohibited: theft and robbery, for example, undermine the economic basis of society, and untruthfulness destroys the harmony of the soul. Discussing the revelational laws, Saadiah holds that while they are primarily an expression of God's will, they have some rational aspects or "usefulness," although he repeatedly reminds himself that God's wisdom is superior to man's. For example, the holy seasons enable man to pursue spiritual matters and human fellowship; the priesthood guides and helps people in time of stress; and dietary laws combat animal worship (*Book of Beliefs and Opinions*, 3:5, 1–3).

KARAITES. While the Rabbanites eventually went on to formulate other "reasons of the commandments," the Mu'tazilite approach, exemplified by Saadiah, remained in force among the *Karaites throughout the medieval period. Joseph al-*Baṣīr and *Jeshua b. Judah emphasized the validity of the moral law prior to revelation. *Aaron b. Elijah differentiated between *mitzvot sikhliyyot* ("rational laws") and *mitzvot toriyyot* ("Toraitic laws"; *Eẓ Ḥayyīm*, ed. F. Delitzsch (1841) chap. 102). Elijah *Bashyazi (b. c. 1420) spoke of the rational ordinances as those precepts "established and planted in man's heart" and known prior to revelation (see L. Nemoy, *Karaite Anthology* (1952), 241ff.).

BAHYA IBN PAQUDA. Baḥya combined Saadiah's division of the commandments with another classification also derived from Mu'tazalite sources, that of "duties of the members [of the body]" (Ar. *farāʾiḍ al-jawāriḥ*, Heb. *ḥovot ha-evarim*) and "duties of the hearts" (Ar. *farāʾiḍ al-qulūb*, Heb. *ḥovot ha-levavot*). The "duties of the members" are of two kinds: duties obligatory by virtue of reason and duties neither enjoined nor rejected by reason, e.g., the prohibition of eating milk and meat together. The "duties of the hearts," on the other hand, are of an intellectual and attitudinal kind, such as belief in God, trust in Him, and fear and love of Him (*Ḥovot ha-Levavot*, Introduction). Baḥya emphasized "duties of the hearts" (3:3) and asserted that it is only on account of the weakness of the

intellect that the revelational commandments are necessary. Unlike Saadiah, however, he does not try to explain the revelational laws in terms of usefulness for specific ends; they are simply expressions of piety and, thereby, effective aids to the attainment of the perfect life of attachment to God.

JOSEPH IBN ẒADDIK. Joseph ibn *Ẓaddik stressed gratitude as the most fundamental duty to God, who out of love created the world and gave it His commandments. Accepting the distinction between rational and revelational commandments, Ibn Ẓaddik held that even the latter have a "subtle meaning" (*sod dak, inyan dak*). The observance of the Sabbath, for example, teaches the createdness of the world and points to the bliss of the world-to-come (*Sefer ha-Olam ha-Katan*, S. Horovitz, ed. (1903), 59–64).

JUDAH HALEVI. Judah Halevi's classifications of the commandments were under three headings: (1) rational laws (*sikhliyyot*), also termed psychic laws (*nafshiyyot*), such as those having to do with belief in God, justice, and gratitude (*Kuzari*, 2:48; 3:11); (2) governmental laws (*minhagiyyot*), which are concerned with the functioning and well-being of society (*ibid.*); and (3) revelational laws (*shimiyyot*), or divine laws (*elohiyyot*) whose main function is to elevate the Jew to communion with God and whose highest manifestation is prophecy. God alone is capable of determining the revelational laws, which in themselves are neither demanded nor rejected by reason (1:98; 2:23; 3:53). For Halevi the revelational laws are supreme and the rational and governmental laws are only a "preamble" (2:48).

ABRAHAM IBN EZRA. Abraham *Ibn Ezra dealt with the subject of the commandments in his commentaries on the Torah and in his small treatise *Yesod Mora*. He distinguished between laws which are implanted in the human heart prior to revelation (*pikkudim*) and laws which prescribe symbolic acts reminding us of such matters as creation, e.g., observance of the Sabbath, and the exodus from Egypt, e.g., the observance of Passover (*Yesod Mora*, ch. 5; Commentary to Gen. 26:5; Short Commentary to Ex. 15:26). In addition he speaks of "obscure commandments" (*mitzvot ne'elamot*), which have no clear-cut reason. Certain of these commandments he tried to explain as prohibitions of acts contrary to nature, e.g., seething a kid in its mother's milk, and others, as serving utilitarian purposes, e.g., the separation of the leper as a sanitary measure (Lev. 13:45–46) and the dietary laws in order to prevent injurious influences to body and soul (Comm. to Lev. 19:23; 11:43). Astrological motifs are employed in the interpretation of the sanctuary and its parts, the garments of the high priest, and the sacrifices.

ABRAHAM IBN DAUD. Abraham *Ibn Daud, who initiated the Aristotelian trend in medieval Jewish philosophy, abandoned the Kalām terms "rational" and "revelational" and replaced them with "generally known" (Ar. *mashhūrāt*, a translation of the Greek *endoxa*; Heb. *mefursamot*) and "traditional" (Ar. *maqbūlāt*, Heb. *mekubbalot*). This change of terminology reflects the Aristotelian view that good and evil are not a matter of demonstrative knowledge but of opinion (*Topics*, 1:1; cf. Maimonides, *Millot ha-Higgayon*, ch. 8; Guide 1:2). Ibn Daud assumed that the "generally known" laws, i.e., the laws of social conduct, are identical in all religions and, therefore, that the formation of states composed of different religious communities is possible, no matter how opposed their religions may be (*Sefer ha-Emunah ha-Ramah*, ed. S. Weil (1852), 5:2, 75).

MAIMONIDES. Maimonides, like Ibn Daud, discarded as illegitimate the distinction between "rational" and "revelational" laws. In his view, all laws set forth in the Torah have a "cause" (Ar. *'illa*, Heb. *illah*), that is, a "useful purpose" (Ar. *ghāya mufida*, Heb. *takhlit mo'ilah*), and follow from God's wisdom, not from an arbitrary act of His will. In some cases, such as the prohibitions against killing and stealing, their utility is clear, while in others, such as the prohibitions against sowing with diverse seeds, it is not. Maimonides identified the former commandments with the laws known as *mishpatim* ("ordinances") and the latter, with those known as *ḥukkim* ("statutes"). Although general laws, e.g., the institution of sacrifices, have a reason, particular laws, e.g., the number of animals for a particular sacrifice, do not (Guide, 3:26, 31). There are two overall purposes of the Torah: the welfare of the soul, in which man finds his ultimate perfection in this world and the next, and the welfare of the body, which is a means to the welfare of the soul. For the welfare of the soul the law promotes correct opinions, and for the welfare of the body it sets down norms for the guidance of society and the individual. To promote opinions, the law fosters two kinds of beliefs: absolutely true beliefs, such as the existence and unity of God, and beliefs necessary for the well-being of the state, such as God's anger in punishing evildoers (Guide, 3:27–28, 31–32).

Introducing a new method of interpretation of Jewish law, Maimonides regarded many *ḥukkim* of the Torah as directed toward the abolition of the idolatrous practices of the ancient pagans, as described in a tenth-century book by Ibn Waḥshiyya, known as the *Nabatean Agriculture*. He even maintained that it is the first intention of the law to put an end to idolatry (Guide, 3:29). Another method that Maimonides used to explain certain laws is described by the term "gracious ruse" (Ar. *talaṭṭuf*; Heb. *ormah*), which is borrowed from the Greek philosopher *Alexander of Aphrodisias (c. 200; see S. Pines' introduction to his translation of the Guide, lxxii ff.). Thus, for example, God graciously tolerated the customary mode of worship through animal sacrifice, but transferred it from idols to His own name and through this "ruse" effaced idolatry (3:32). However, in marked contrast to the utilitarian treatments of the commandments in Maimonides' *Guide of the Perplexed* is the deeply religious approach of his *Mishneh Torah*. The *ḥukkim*, including the sacrifices, appear in the latter work as important vehicles of the spiritual life (cf. Yad, Me'ilah, end; Temurah, end; Mikva'ot, end).

*Levi b. Gershom also set forth explanations of the com-

mandments in terms of their utility; his commentary on the Torah largely follows Maimonides' *Guide* in this respect.

HASDAI CRESCAS AND JOSEPH ALBO. The approach of Ḥasdai *Crescas is of an entirely different nature. Crescas rejected the notion, implicit in the views of his predecessors, e.g., Maimonides, that the Torah had to adapt itself to the low level of religion prevalent at the time of its revelation, an assumption which tended to render part of the commandments obsolete. He was also the first to introduce theological instead of moral or metaphysical concepts for the interpretation of the commandments. In this context it is important to recall that Crescas was concerned with refuting Christian theological notions and the charge of the apostate *Abner of Burgos that Judaism had succumbed to philosophy. In his polemic with Christianity Crescas accepted the notion of original sin (*Or Adonai*, 2:2, 6), but argued that all *mitzvot* are means of redemption from the "poison" injected into Eve by the serpent. Unlike the Aristotelians who saw intellectual perfection as the final goal of the Torah, Crescas maintained that its ultimate purpose is to instill the love of God in man (*ibid*., 2:6, 2).

Crescas' pupil Joseph *Albo continued his master's polemics against Christian attacks on the Mosaic law, arguing that it is more perfect than any other law and that the Gospels are really no law at all. Distinguishing three kinds of laws, Albo held that natural law (*ha-dat ha-tivit*) contains those rules that are indispensable for the merest association of men; that conventional law (*ha-dat ha-nimusit*) promotes virtues according to human opinion, or the "generally known" (*ha-mefursam*); and that divine law (*ha-dat ha-Elohit*) guides man to true happiness, which is the bliss of the soul and eternal life (*Sefer ha-Ikkarim* 1:7, and passim; see I. Husik, in HUCA, 2 (1925), 381ff.; R. Lerner, in *Ancients and Moderns*, ed. J. Cropsey, 1964).

A similar treatment is found in the work of Albo's predecessor, Simon b. Zemaḥ *Duran, *Keshet u-Magen* (12b). On the other hand, Shem Tov *Ibn Shem Tov in his work *Kevod Elohim* (1556) completely discarded the philosophical approach. He considered it wrong even to investigate reasons for the commandments, since the divine in principle cannot be explained by natural reasons (21b ff.). Only in a secondary sense can the commandments be called "rational"; primarily they are "decrees" based on the will of God, who must be presumed to have a purpose, but whose purpose we cannot know. This attitude became increasingly popular in the last phase of medieval Jewish philosophy and persisted until the dawn of the modern age.

Modern Jewish Thought

Modern Jewish thought, marked by a deep crisis of traditional beliefs and halakhic authority, has dealt with the subject of reasons for divine commandments on various levels.

MOSES MENDELSSOHN. Moses *Mendelssohn distinguished three layers within the body of Jewish teachings: (1) religion par excellence, consisting of eternal truths that all enlightened men hold in common; (2) historical truths concerning the origin of the Jewish nation, which faith accepts on authority; and (3) laws, precepts, commandments, and rules of life revealed by God through words and Scripture as well as oral tradition (*Jerusalem* (1783), 113–5). Revealed legislation prescribes only actions, not faith nor the acceptance of eternal truths. The actions prescribed by the revealed law are the "ceremonies," and the specific element of Judaism, therefore, is the ceremonial laws.

In opposition to *Spinoza, who considered the Mosaic legislation a state law designed only to promote the temporal happiness of the Jewish nation, Mendelssohn contended that Mosaic law transcends state law, because of its twofold goal: actions leading to temporal happiness and meditation on eternal and historical truths leading to eternal happiness (*ibid*., 116). Every ceremony has a specific meaning and a precise relation to the speculative aspect of religion and morality (*ibid*., 95). Since the Mosaic law is more than a state law, those of its parts which apply to the individual remain valid even after the destruction of the Jewish state and should be steadfastly observed (*ibid*., 127–9). Moreover, it retains its important function as a bond between Jews everywhere, which is essential as long as polytheism, anthropomorphism, and religious usurpation continue to rule the earth (letter to Herz Homberg, in *Gesammelte Schriften*, 5 (1844), 669). Mendelssohn's polemics against Spinoza were taken up again in the late 19th–early 20th century by Hermann *Cohen (cf. his *Juedische Schriften*, ed. B. Strauss, 3 (1924), 290–372).

NINETEENTH-CENTURY PHILOSOPHERS. Isaac Noah *Mannheimer and Michael *Sachs wrote against the alarming neglect of observance of the ceremonial law in the period of Emancipation. They reemphasized the significance of ceremonial law in terms borrowed partly from Mendelssohn and partly from Kant's vindication of the *cultus* as a means of furthering morality. Of great moment was Leopold *Zunz's forthright stand on behalf of the rite of circumcision, which occasioned his study of the ceremonial law as a whole (*Gutachten ueber die Beschneidung*, in Zunz, Schr, 2 (1876), 190–203). Abraham *Geiger recognized only the validity of those ceremonies which proved capable of promoting religious and moral feelings (*Nachgelassene Schriften*, ed. L. Geiger, 1 (1875), 254ff., 324–5, 486–8). Under the influence of the German philologist Friedrich Cruezer and *Hegel, theologians began to view the rituals prescribed in the Torah, especially the sacrificial cult, as merely symbolic expressions of ideas (see for example, D. Einhorn, *Das Prinzip des Mosaismus*, 1854). Defending an orthodox position, Samson Raphael *Hirsch evolved a system of symbolism based chiefly on ethical values in order to give fresh meaning to the totality of *halakhah* (*Nineteen Letters*, sections *Edoth* and *Horeb*; see *Horeb*, trans. by I. Grunfeld, 1 (1962), 108).

TWENTIETH-CENTURY PHILOSOPHERS. In the 20th century Leo *Baeck spoke of two fundamental religious experiences, that of mystery (*Geheimnis*) and that of commandment (*Gebot*), which in Judaism are intertwined in a perfect unity

(*Essays*, trans. by W. Kaufmann (1958), 171, 173). For Franz *Rosenzweig there is a difference between commandment and law. God is not a lawgiver – He commands, and each act of *mitzvah* accomplishes the task of "unifying" Him, an assertion that Rosenzweig formulated in terms of kabbalistic doctrine (*Der Stern der Erloesung*, 3rd ed. (1954), 2:114 ff.; 3:187–94).

[Alexander Altmann]

In Kabbalah

In Kabbalah the reasons for the commandments are integrated in the general system in relation to two basic principles: a symbolic view according to which everything in this world and all human acts, especially religious acts, are a reflection of divine processes and particularly those of the divine emanation; and the notion of reciprocal influence between the upper and lower worlds, which are not separated from each other but affect each other in all matters. Thus it appears that the commandments both reflect a mystical reality and the relations between heavenly forces, and also themselves influence this heavenly reality. On the one hand, a person who fulfills a commandment integrates himself into the divine system and into the harmony of the divine processes and thus confirms the order of the true universe as it should be. On the other hand, the actual performance of a commandment radiates backwards, strengthening the supernal system. Therefore there is a natural connection between the symbolic and the magical significance of every act; i.e., a direct connection between all planes of existence and the action of each plane on the others. While the symbolic evaluation gave rise to no particular doubts or vacillations and was also in tune with other religious and philosophical views in Judaism, the magical perception of reciprocal influence was bound to create problems. A major difficulty was how to define that divine world upon which the fulfilling of commandments acts. Because the kabbalists saw that world as the world of divine emanation (*Aẓilut*) which is divine, unique, and united by the ten *Sefirot* and by the other manifestations of the divine creative power, the question arose as to how anyone could presume to speak of the influence of human action on the divine world itself. The kabbalists found themselves in a dilemma on this issue: they believed in the existence of such a magical-theosophical link between God and man – a link which is the soul of religious activity – yet they shrank from an explicit and unequivocal formulation of this relationship, justifying it by weak explanations designed to soften the magical interpretation and make it seem as if it were only allegorical.

At first only a few commandments were kabbalistically interpreted in terms of the activity of certain *sefirot*. Thus the Sefer ha-*Bahir interprets the commandments involving acts (*mitzvot maʾasiyyot*) such as *tefillin, ẓiẓit*, the *lulav* of Sukkot and *terumah* ("tithe-offering") as indications of the last *Sefirah* and its relations with the other *Sefirot*, especially of *Binah* and *Tiferet* (here called *Emet*) and the *Yesod*. The early kabbalists in Spain also interpreted according to these principles only those commandments that have no rational explanations (*ḥukkim*, or, according to theological terminology, *mitzvot shimiyyot*), e.g., sacrifices and worship in the Temple in general, and the major prayers. Moral and rational commandments were not yet included. *Ezra b. Solomon of Gerona, in his commentary on the Song of Songs, was the first to explain the reasons for these commandments in a kabbalistic framework. He was succeeded by his colleagues, Jacob b. Sheshet *Gerondi and *Naḥmanides. From the late 13th century on, the reasons for the commandments became more widely discussed in the Kabbalah. Even those commandments whose principles seem manifest to reason, such as love of God, fear of God, and *yiḥud* ("the unity of God"), were interpreted in terms of man's relation to the world of the divine *Sefirot*. The reasons behind the commandments on the Sabbath, festivals, sacrifices, prayers, and many others are discussed in the main part of the *Zohar, according to the general rule that spiritual awakening on earth causes a divine awakening. The author of the Zohar saw in many commandments the act which symbolizes the union of the *Sefirah* of *Malkhut* with the *Sefirah* of *Yesod* or *Tiferet*. The details of the commandments were explained as reflecting the processes of the supernal emanation, and a man who fulfills the commandment integrates within the process of *shefa* ("emanation"), strengthening the divine life which pulsates in every creature.

Fulfilling the commandments also strengthens divine harmony in the universe; the *yiḥud* is not merely a declaration of faith in the One God but also an increase in the oneness of the living God through man's acts in the world and man's intention (*kavvanah*) during the performance of such activity. The disunited world becomes reunited by the performance of commandments. *Moses ben Shem Tov de Leon's *Sefer ha-Rimmon* (written in 1287), which deals solely with the reasons for the commandments, included interpretations of over 100 positive and negative commandments. In the same era two anonymous kabbalists also composed comprehensive and detailed works (one of which was attributed to Isaac ibn Farḥi of Salonika 250 years later), on the reasons behind the commandments; these have survived in manuscript. Around 1300 the *Raʾaya Meheimna*, a later layer of the Zohar which was highly influential, offered a lengthy exposition according to which all 613 commandments may be interpreted mystically. Two classic works on this subject were written in the 14th century: Menahem *Recanati's *Taʾamei ha-Mitzvot* (Constantinople, 1544, complete ed. London, 1963), and Sefer ha-*Kanah (Cracow, 1894) by an anonymous Spanish kabbalist who interpreted most of the commandments in detail and argued radically that the only correct interpretation of the statutes of the Oral Law, and not only those of the Torah (Written Law), is through Kabbalah. In Safed in 1556 *David b. Solomon ibn Abi Zimra wrote *Meẓudat David* (Zolkiew, 1862) summarizing previous literature.

With the development of Lurianic Kabbalah the commandments were interpreted according to its special theses; i.e., the doctrine of *tikkun* ("restitution") and the divine *parẓufim* ("countenances"). Many comprehensive works were

devoted to this subject, beginning with Ḥayyim *Vital's *Sha'ar ha-Mitzvot* (Jerusalem, 1872). Noteworthy are *Mekor Ḥayyim, Tur Bareket*, and *Tur Piteda* (Amsterdam, Leghorn, 1654–55) on the reasons for the laws in the Shulḥan Arukh by Ḥayyim ha-Kohen of Aleppo, Vital's disciple; *Ez Ḥayyim* by Judah ibn Ḥanin of Morocco (late 17th century; published in part, Leghorn, 1793); *Devar ha-Melekh* (Leghorn, 1805) by *Abraham b. Israel of Brody; and *Yalkut Yiẓḥak* (Warsaw, 1895–1900) by Isaac Zaler, an important anthology on the reasons for the commandments. Special works are devoted to the *mitzvah* of circumcision: e.g., *Yesod Yiẓḥak* (Zolkiew, 1810) by Jacob Isaac ha-Levi and *Zekher David* (Leghorn, 1837) by David Zacuto; and to the *mitzvah of sheḥitah, Pirkei ha-Nezar* (Lublin, 1880) by Eliezer Shoḥat of Zhitomir.

[Gershom Scholem]

Kabbalistic "reasons for the commandments" are integrated into the overall scholarly argument regarding the relationship of kabbalistic thought to its rabbinic forebear. As with other topics in the field, G. *Scholem finds the kabbalistic perspective at odds with the rabbinic view, which "cut ritual off from its mythic substratum … rejected all cosmic implications." But M. *Idel writes of rabbinic theurgy that "long before the emergence of Kabbalistic theosophy, Jews envisioned their ritual as a God-maintaining activity … as universe-maintaining as well."

COMMENTARY, magazine founded by the *American Jewish Committee (AJC) in 1945 as a monthly journal of "significant thought and opinion, Jewish affairs and contemporary issues." While its policies were consistent with the parent organization, especially in its early years, over time it won its editorial freedom, a situation rare in organizational life.

Eliot T. Cohen, an experienced journalist in the Jewish, communal, field was named its first editor. For a community rapidly undergoing assimilation in the postwar years, both the AJC and Cohen sought to establish ties between its intellectual class, often alienated from ancestral ties, and its emerging middle class. Cohen assembled an outstanding group of editors including Clement Greenberg, Robert Warshow, Nathan *Glazer, and Irving Kristol and invited the finest minds, both gentile and Jewish, to contribute to the publication. In a few years, *Commentary* moved to the forefront of journals of opinion not only as the major publication in Jewish life but as a critical force in the broader community as well.

Commentary was among the first publications on the liberal-left to recognize that the Soviet Union with its army sitting astride Western Europe following the war and U.S. withdrawal of troops from Europe posed a threat to the West. Under Cohen, the magazine took a leadership role in mobilizing public opinion to the threat during the early stages of the Cold War, a posture it held firmly to until the collapse of the Soviet Union.

Commentary's scope, however, was wider. It became involved deeply in the literary and cultural scene. Under Cohen and subsequent editors, it introduced to a wider public such writers as Saul *Bellow, Joseph *Heller, Bernard *Malamud, Philip *Roth, Cynthia *Ozick, and the Yiddish into English work of Isaac Bashevis *Singer.

In 1960, after a brief hiatus following Cohen's death, he was succeeded by Norman *Podhoretz, a young literary critic. Initially, Podhoretz moved the magazine to the left, publishing a number of the New Left writers of the period including Edgar Friedenberg and Christopher Lasch. His sojourn on the left, however, was brief. Before long, *Commentary* began to strike out at New Age Thought and activities, including student campus disruptions. The magazine continued and expanded its criticism of the Soviet Union. By the late 1960s and early 1970s, *Commentary* came to be known increasingly as the voice of neo-conservatism, a characterization leveled at it by its critics, but which the magazine took as a badge of honor. During and following the Six-Day and Yom Kippur wars, Podhoretz came increasingly also to focus on Israel's safety and security.

Commentary's influence reached its height during the Ford and Reagan administrations. Podhoretz's book, *The Present Danger*, became the bible of efforts to move beyond detente with the Soviet Union supported by previous Democratic and Republican administrations to efforts to bring down the Soviet Union through a rapid defense build-up and challenging Soviet imperial designs in every part of the world. Following articles that appeared in *Commentary*, a number of neo-cons, including Jeane Kirkpatrick, who wrote on authoritarian and totalitarian government, arguing incorrectly as it turned out that totalitarian governments cannot make the transition to democracy, and Daniel Patrick Moynihan, entered the Ford and Reagan administrations. Both Kirkpatrick and Moynihan served as ambassadors at the United Nations.

With Podhoretz's retirement in 1995, his long-time associate Neal Kozodoy took over the reins of the publication. His main task has been to lead the magazine into the post-Cold War era following the collapse of the Soviet Union. He has continued to emphasize, however, many of the magazine's older themes, such as criticism of left-wing influences on the campus, in the media, and in American politics. In the period following 9/11, *Commentary* became one of the most forceful defenders of the Bush Doctrine calling for the use by the nation, with or without international support, of the preemptive strike in the battle against international terrorism, a move that was implemented by the administration in Iraq.

A new generation of younger, neo-conservative intellectuals and writers emerged, including Charles Krauthammer, William Kristol, and Robert Kagan and government officials Paul *Wolfowitz and Eliot *Abrams, whom historian John Ehrman has characterized as "*Commentary*'s Children," who continued to promote many of the ideas brought forward by *Commentary*.

[Murray Friedman (2nd ed.)]

COMMUNISM, the international revolutionary Marxist movement that evolved under *Lenin's leadership from the Bolshevik faction (created in 1903 in the Russian Social Democratic Party) to become the ruling party of Russia after the October Revolution in 1917 and created the Communist International (Comintern) in 1919. The Communist movement and ideology played an important part in Jewish life, particularly in the 1920s, 1930s, and during and after World War II. Violent polemics raged between Jewish Communists and Zionists in all countries until the disenchantment with the anti-Jewish policies of *Stalin in his last years and, after his death, with the antisemitic quality of the treatment of Jews and Jewish life in the U.S.S.R., as well as the increasingly violent anti-Israel stand of Moscow in the Arab-Israel conflict.

Individual Jews played an important role in the early stages of Bolshevism and the Soviet regime. These Jews were mostly confirmed assimilationists who adopted their party's concept of the total disappearance of Jewish identity under advanced capitalism and socialism. They thus opposed the existence of separate Jewish workers' movements, particularly the *Bund and Socialist Zionism. The great attraction of communism among Russian, and later also Western, Jewry emerged only with the establishment of the Soviet regime in Russia. The mere fact that during the civil war in Russia following the October 1917 Revolution the counterrevolutionary forces were violently antisemitic, shedding Jewish blood in pogroms on an unprecedented scale, drove the bulk of Russian Jewish youth into the ranks of the Bolshevik regime. During Lenin's rule, the NEP ("new economic policy"), and the years preceding Stalin's personal dictatorship and the great purges of the 1930s, a dichotomy of Jewish life evolved in the Soviet Union and was greatly attractive to both assimilationist and secular Yiddish-oriented Jews outside Russia. On the one hand, Russian Jews enjoyed the opportunities of immense geographical and social mobility, leaving behind the townlets of the *Pale of Settlement and occupying many responsible positions in all branches of the party and state machinery at the central and local seats of power. On the other, a secular educational and cultural network in Yiddish and an economic and administrative framework of Jewish life, including agricultural settlement and Jewish local and regional "Soviets," were officially established and fostered, culminating in the mid-1930s in the creation of the Jewish Autonomous Region in the Far East (*Birobidzhan). Many Jews the world over therefore regarded the Soviet concept of the solution to the "Jewish question" as an intrinsic positive approach with the main options open for various Jewish trends – assimilation or preservation of Jewish (secular) identity and even Jewish territorialism and embryonic Jewish statehood.

During this period the position of world Jewry markedly deteriorated because of the severe economic and political crises in Palestine and the growing trend of oppressive antisemitism in the rest of Eastern Europe, Nazi and fascist influence in Central and Western Europe, and the economic crisis in the United States. Communism and support of the Soviet Union thus seemed to many Jews to be the only alternative, and Communist trends became widespread in virtually all Jewish communities. In some countries Jews became the leading element in the legal and illegal Communist parties and in some cases were even instructed by the Communist International to change their Jewish-sounding names and pose as non-Jews, in order not to confirm right-wing propaganda that presented Communism as an alien, Jewish conspiracy (e.g., the Polish slogan against "*Żydo-Komuna*" and the Nazi reiteration against "Jewish Bolshevism," etc.). Initially, the Stalin-*Trotsky controversy did not affect the attraction of Communism to Jews, though a number of intellectual Jewish Communists tended more toward Trotsky's consistent internationalism than to Stalin's concept of building "Socialism in one country" and subjecting the interests of the international working class to the changing tactical interests of the Soviet Union. The facts about the gradual liquidation of the Yiddish cultural and educational network and the stifling of the Birobidzhan experiment in the late 1930s did not immediately reach the Jewish public outside the Soviet Union. In addition, only a minority of Jewish Communists condemned the Comintern-directed policy at the end of the 1930s that branded any form of non-Communist Socialism as "social fascism" and the main enemy of the revolution, while simultaneously seeking cooperation with German Nazism. Even the Molotov-Ribbentrop Pact of August 1939 was a shock to only a minority of Jewish Communists (except confirmed oppositionists, mainly of the Trotskyite "Fourth International"). When World War II broke out in 1939, most Jewish Communists defended the Soviet anti-Western-flavored neutrality. But from June 1941, when Nazi Germany attacked the Soviet Union and the Communists in occupied Europe excelled in anti-Nazi resis-

tance, and particularly after the war, when the Soviet Union actively supported the establishment of a Jewish state in Palestine, Jewish Communists the world over achieved the highest degree of inner contentment and intellectual harmony in the whole history of the Communist movement.

The relatively abrupt disenchantment began in the late 1940s and the beginning of the 1950s, when Soviet policy toward the State of Israel gradually reversed from support to hostility and the anti-*Cosmopolitan campaign, the *Slanský Trials in Czechoslovakia, and the *Doctors' Plot in Moscow revealed the antisemitic character of the Soviet regime in Stalin's last years. The disclosures, in 1956–57, of the brutal liquidation of all Jewish institutions and the judicial murder of most Yiddish writers and artists in the "black years" (1948–53), the growing Soviet-Arab cooperation against Israel, and the anti-Jewish policy of the Khrushchev and post-Khrushchev period, which culminated in the violent "anti-Zionist" and anti-Israel campaign after the *Six-Day War and the Leningrad Trial of 1970, rendered Jewish disenchantment with Soviet-style Communism almost complete. The *New Left groups that emerged in the later 1960s and enjoyed heavy support from Jewish youth, particularly in the U.S., France, and Germany, were not Soviet-oriented.

[Binyamin Eliav]

Bolshevik Theory (1903–1917)

The Bolshevik attitude to basic questions concerning the Jews was formulated in as early as 1903, with the emergence of the Bolshevik faction during the Second Congress of the Russian Social Democratic Party in Brussels and London. The Bolshevik faction (which in 1912–13 became the Bolshevik Party) contained a number of Jews who were active mainly in the field of organization and propaganda (rather than in theory and ideology, as was the case with the Jewish Mensheviks). They included such people as Maxim *Litvinov (Wallach), M. Liadov (Mandelshtam), Grigori Shklovsky, A. Soltz, S. Gusev (Drabkin), Grigori *Zinoviev (Radomyslsky), Lev *Kamenev (Rosenfeld), Rozaliya *Zemliachka (Zalkind), Helena Rozmirovich, Yemeli *Yaroslavsky (Gubelman), Serafima Gopner, G. Sokolnikov, I. Piatnitsky, Jacob *Sverdlov, M. Vladimirov, P. Zalutsky, A. Lozovsky, Y. Yaklovlev (Epstein), Lazar *Kaganovich, D. Shvartsman, and Simon *Dimanstein. Their number grew rapidly between the Russian revolutions of February and October 1917, when various groups and individuals joined the Bolsheviks; prominent among the new adherents were *Trotsky, M. Uritsky, M. Volodarsky, J. Steklov, Adolf Joffe, David Riazanov (Goldendach), Yuri *Larin, and Karl *Radek (Sobelsohn). Most of the Jews active in Bolshevik ranks before 1917 were assimilationist intellectuals. Few Jewish workers in Russia belonged to the Bolsheviks, and propaganda material designed to recruit Jewish members was restricted to a single Yiddish pamphlet, a short report on the Third (Bolshevik) Congress of the Russian Social Democratic Party (April–May 1905), which contained a special introduction by Lenin addressed "To the Jewish Workers."

It was, indeed, Lenin, the ideological, political, and organizational leader of Bolshevism, who also determined the party's policy toward the Jews. In the period 1900–06, Lenin expressed himself on three Jewish topics: antisemitism, Jewish nationalism versus assimilation, and the relationship between the Bund and the Social Democratic Party. From its very beginnings, Russian Marxism under the leadership of Plekhanov had rejected both the anti-Jewish tendencies in Russian populism and the evasive attitude of the Second International toward the struggle against antisemitism (Brussels Congress, 1891). On the subject of antisemitism, Lenin's attitude was at all times consistent; not only did he take a definitive stand against it, but, unlike Plekhanov, he was free of any personal prejudice against Jews and would never indulge in any anti-Jewish remarks, in public or in private. This held true in spite of the many bitter arguments he had with Jewish opponents in the revolutionary movement. Although generally relying on Marx on questions of fundamental importance, Lenin did not resort to Marx's famous essay "On the Jewish Question" when dealing with Jewish affairs, because of its anti-Jewish implications. He rejected outright any suggestion that the Bolsheviks should ignore anti-Jewish policy and propaganda in czarist Russia, let alone make use of its popular appeal. Lenin regarded the czarist anti-Jewish hate campaign as a diversionary maneuver, an integral part of the demagogic campaign against "the aliens" conducted by henchmen of the czarist regime. He believed that the Jewish worker suffered no less than the Russian under capitalism and the czarist government (*Iskra*, No. 1, December 1900). Later (1905) he went even further, pointing out that Jewish workers suffered from a special form of discrimination by being deprived of even elementary civil rights. Antisemitism was designed to serve the social interests of the ruling classes, although there were also workers who had been incited. As antisemitism was clearly against the interests of the revolution, the fight against it was an integral part of the struggle against czarism and had to be conducted with "proletarian solidarity and a scientific ideology." Lenin regarded the pogroms of 1905–06 as part of the campaign against the revolution and called for the creation of a militia and for armed self-defense as the only means of combating the rioters. He also waged a special press campaign against the pogrom in Bialystok. Nevertheless, Lenin lacked a proper appreciation of the intensity of the Russian antisemitic tradition, the complexity of the factors underlying it, and the special role that it played in the political and social life of the country.

The Bolshevik attitude toward the collective identity of the Jews and their future was theoretically part of their general views on the national question. Lenin did not consider nationalism a constructive and stable social factor. His approach to it was conditional and pragmatic, subordinate to the interests of the class struggle. At the beginning of 1903 he voiced the opinion that the Social Democratic Party was not required to provide positive solutions to national problems, such as the granting of independence, federation, or autonomy, except in

a few special cases, and that it should confine itself to combating discrimination and russification of the non-Russian nationalities. The vague formula contained in the platform of the Social Democratic Party on the "right of nations to self-determination" was regarded as a mere slogan, designed to facilitate the organizational and political consolidation of the workers in the common fight against czarism and capitalism, irrespective of their national origin. Furthermore, this "right to self-determination" applied to nationalities having a territorial basis and did not refer to the Jews.

Lenin knew little of the history, culture, and life of the Jews. His view on the Jewish problem was of a casual nature and was not derived from any study or analysis of his own; this was one of the reasons for the shifts in his attitude within a single year. In February 1903 (in the article "Does the Jewish Proletariat Need an Independent Political Party?") he spoke of a Jewish "national culture," a view predicated upon the recognition of the Jews as a national entity, and said that it could not be foretold whether or not the Jews of Russia would assimilate. But in as early as October of that year (in the article "The Position of the Bund in the Party") he voiced categorical opposition to the view that the Jews are a nation and expressed the conviction that their assimilation is a desirable and necessary development. He based himself on a truncated quotation from the writings of Karl Kautsky, the Marxist theoretician, accepting the view that the Jews lack the two characteristics of a nationality: a common territory and a common language (presuming that Yiddish was not a language). The decisive motive behind Lenin's view, however, was the overriding role of the party in his conception of the political struggle and his determination to base the party on absolute organizational centralism. The Bund's demand for a federative structure of the party, in which the Bund would be "the sole representative" of the Jewish proletariat, was regarded by Lenin as counter to his revolutionary strategy. Even so, he did not regard this difference with the Bund as closed to compromise. In 1905–06, when the emphasis in the internal struggle raging in the Russian Social Democratic Party passed from matters of organization to tactical questions and the Bund's stand on certain important points proved to be close to that of the Bolsheviks, Lenin did not hesitate to do everything possible to facilitate the return of the Jewish organization to the party fold (the Bund left the Social Democratic Party in 1903). That the Bund had put even greater stress upon its demand for Jewish cultural autonomy at its sixth convention proved to be no deterrent.

Several leading members of a short-lived non-Leninist group of Bolsheviks, which came into existence in 1908, developed their own approach to Jewish questions. Thus, A. Lunacharsky, in dealing with religion, found that the Bible, and particularly the Prophets, contained revolutionary elements and that there was a link between the Old Testament and the new "Religion of Labor," the latter being, in his opinion, an essential part of socialism. The existence of the Jewish people and the contribution it had made to humanity were of vital importance (*Religiya i Sotsiyalizm*, pt. 1, 1908). Maxim *Gorky, in his condemnation of antisemitism, did not confine himself to its economic, social, and legal aspects, and his struggle against it was not motivated by mere utilitarian political considerations. His positive remarks on Zionism, first made in 1902, were reprinted in 1906, at a time when he had already joined the ranks of the Bolsheviks. He acknowledged the contribution of Jewish ethics and regarded "the creative power of the Jewish people" as a force that would be of help in establishing "the Law of Socialism" among mankind. These individual stands on the Jews taken by Lunacharsky and Gorky had a direct bearing on the attitude they were to adopt on Jewish questions, especially on Jewish culture, at a later stage, when the Bolsheviks had already come to power in Russia.

After the 1905 revolution, when there were nationalist stirrings in Russia, Lenin came to appreciate the importance of the national question and its possible use in the struggle against the czarist regime. In addition to the slogan of "the right of nations to self-determination, including separation," he also recognized the need to make concrete and positive proposals on the solution of national questions, based mainly on the concept of territorial autonomy. Lenin was ready to advocate the creation of autonomous districts based on a homogeneous national (i.e., ethnic and linguistic) composition, even on a minute scale. Such districts, he assumed, would seek to establish contacts of various kinds with members of the same nationality in other parts of Russia, or even in other parts of the world ("Critical Notes on the National Question," 1913). The pogroms and the *Beilis blood libel led Lenin to conclude that "in recent years the persecution of Jews has reached unprecedented proportions" and that "no other nation in Russia suffers as much oppression and persecution as does the Jewish nationality."

In a bill on equal rights for nationalities that Lenin drafted for presentation to the Duma by the Bolshevik faction (1914), special emphasis was put on the lack of rights suffered by the Jews. He was not, however, consistent in the terms he employed with reference to the Jews; he frequently spoke of the Jewish "nationality" or "nation" (as for example in the above-mentioned bill) and nearly always in the context of the national question in Russia. In general, he held that "the process of national assimilation as furthered by capitalism is to be regarded as a great historical advance" and that "the proletariat also welcomes the assimilation of nations," except "when this is based on force or on special privileges." "Each nation consists of two nations," and there are "two national cultures" in each national culture, including that of the Jews. He acknowledged the presence of "universal progressive qualities" in Jewish culture, such as that of "internationalism" and "the capacity to absorb the stream of contemporary progressive ideas" (the latter quality manifesting itself in the high percentage of Jews found in democratic and proletarian movements). In view of his general attitude on the Jewish question, the "progressive qualities" that he perceived in Jewish culture were of the kind that implied the impending assimilation of

that culture to "international culture." He did, however, admit that equality of national rights included the right to demand "the hiring of special teachers, at government expense, to teach the Jewish language, Jewish history, etc." The debate on Jewish nationalism, linked with the question of "national cultural autonomy" as demanded by the Bund, increasingly became a part of the internal party struggle. Lenin held fast to the idea that national cultural autonomy would result in weakening the workers' movement by dividing it according to the nationality of its members.

Similar views were also expressed by Stalin. In an essay published in 1913 under the title "The National Question and Social Democracy" (later known under the title "Marxism and the National Question"), which had Lenin's approval and was devoted in large part to the Jews, Stalin gave a dogmatic definition of the concept of nationhood: "A nation is a historically constituted, stable community of people, formed on the basis of a common language, territory, economic life, and psychological make-up, manifested in a common culture." If even a single one of these characteristics is missing, there is no "nation." On the basis of this definition, Stalin contended that the Jewish communities living in the various countries did not constitute one nation. Although every one of them might be described as possessing a common "national character," they were to be regarded as "tribes" or "ethnic entities." When the Pale of Settlement was abolished, the Jews of Russia would assimilate. There was no farming class among them and they existed only as a minority in various areas where the majority population belonged to a different nation. They are therefore to be classified as "national minorities," serving the nations among which they live as industrialists, merchants, and professionals, and were bound to assimilate into these nations. It followed that the Bund's program of "national autonomy" referred to a "nation whose future is denied and whose existence has still to be proven."

Stalin, of course, also opposed Zionism. Unlike Lenin, he did not even have any modest positive proposals to make on the solution of national and cultural problems concerning the Jews. In accordance with the Bolshevik approach, he did, however, agree that the Marxist stand on national questions was not absolute, but rather "dialectic," and depended on the specific circumstances of time and place. Another prominent Bolshevik, S. Shaumian, who generally opposed any positive suggestions about the national question, did in fact concede (in 1914) that under certain conditions it might be possible to accept "national cultural autonomy." Only one leading Bolshevik, Helena Rozmirovich, is known to have favored such a solution at this stage in the history of the Bolshevik Party.

Soviet Practice (1917–1939)

After the October Revolution, the Jewish problem in Russia ceased to be a theoretical issue in interparty strife, and the Bolshevik government and party had to assume responsibility for the specific problems affecting the existence and development of the Jewish community. During the Revolution Jews played a prominent part in the party organs. The Politburo elected on Oct. 23, 1917, had four Jews among its seven members. The Military Revolutionary Committee, appointed to prepare the coup, was headed by Trotsky and had two Jews among its five members. In the early years of the Soviet regime, Jews were in many leading positions in the government and party machinery, although, as a rule, their number did not exceed the percentage of Jews in the urban population. (The number of Jewish members of the All-Russian Communist Party was 5.2% in 1922, 4.33% in 1927, and 3.8% in 1930; the corresponding figures in the Ukraine and Belorussia in 1927 were 12.1% and 23%, respectively.) The legal emancipation of the Jews, which had already been proclaimed in the February Revolution, seemed in Soviet practice to be implemented to an extent unprecedented in any other country. Their unrestricted admission to the universities and to all categories of employment served both the interests of the Soviet regime and the needs and aspirations of the Jews. The centrifugal nationalist tendencies among the peoples of the western border republics, which endangered Soviet centralism, inspired the regime to utilize compact, Jewish masses in these areas as a counterweight, which would swing the balance in the centralist regime's favor. The cultural russification of the Jews played a significant role in this respect. In 1922, as much as two-thirds of the Jewish membership of the Communist Party in the Ukraine was Russian-speaking. The Soviet regime also derived a propaganda benefit from the legal and political equality of Soviet Jews, in contrast to the neighboring states, such as Poland and Romania, which followed an antisemitic policy in practice and sometimes also in law. In both these countries a large Jewish population was concentrated in the border regions (Western Belorussia, Western Ukraine, and Bessarabia) that the Soviet Union considered as being only temporarily detached from its territory.

Antisemitism was branded as being counterrevolutionary in nature, and persons participating in pogroms or instigating them were outlawed (by a special decree issued by the Council of Commissars in July 1918, signed and personally amended by Lenin to sharpen its tone). A statement against antisemitism made by Lenin in March 1919 was one of the rare occasions on which his voice was put on a phonograph record, to be used in a mass campaign against the counterrevolutionary incitement against the Jews. The regime made every effort to denounce the pogroms and punish the persons taking part in them, even when they were Red Army personnel. When the civil war came to an end, a law was passed against "incitement to hatred and hostility of a national or religious nature," which, in effect, also applied to antisemitism, including the use of the pejorative epithet *Zhid*.

The theoretical approach to the Jewish question adopted by prerevolutionary Bolshevism was found to be unsuited to the new situation. The denial of the collective right of the Jews to nationhood, the forecast of the desirable and unavoidable assimilation, and the negation of a Jewish "national culture" and the use of Yiddish as a national Jewish language no longer formed a part of Soviet dogma. Although not all of these

formulas were officially abolished or reinterpreted, the entire propaganda network was based on a variety of views that were often the very opposite of Lenin's and Stalin's utterances in prerevolutionary days. The list of nationalities, i.e., ethnic groups, in the Soviet Union included the Jews among the "national minorities" that had no defined territory of their own and that the czarist regime had sought to destroy by any means, not excluding the instigation of pogroms. It followed that the assurance of their right to "free national development" by the "very nature" of the Soviet regime was not enough and that it behooved the party to help "the toiling masses of these ethnic groups" utilize in full "their inherent right to free development" (Tenth Congress of the All-Russian Communist Party, 1921, speech by Stalin, Resolutions). Shortly after the Revolution Jewish affairs were officially included in the jurisdiction of the Commissariat for Nationalities; in addition, Jewish councils ("soviets") were appointed on a local, subdistrict, and district level. This trend found its clearest expression during the early stages of the Birobidzhan experiment (1928–34), when the head of the Soviet state, Mikhail Kalinin, declared that "the Jewish people were facing a great task – that of preserving their nationhood." Thus the prerevolutionary forecast of assimilation as the solution to the Jewish problem, even under advanced capitalism, was now replaced by a national and territorial solution under the new conditions created by the "dictatorship of the proletariat." Disregarding Stalin's findings in 1913 that there were no links between the Jewish communities living in various countries, the Soviet leaders now clearly took into account the influence of the Jews on the Revolution, not only in Russia itself but in other countries as well. Lenin also stressed the significance of abolishing completely the anti-Jewish discrimination practiced by the former regime (see Dimanstein, *Lenin on the Jewish Problem in Russia*, 1924), and this may well have been one of the motives for the project of establishing the nucleus of a Jewish republic (Kalinin at the second national conference of OZET). Although the party did not abandon its theoretical opposition to granting "national cultural autonomy" to ethnic groups lacking a territorial basis, the Jews were in fact permitted to develop a "national culture" of their own (in Yiddish) under the slogan of "a culture that was socialist in content and national in form." Assimilationism ceased to be an obligatory ideal for the foreseeable future. Stalin declared that "Lenin had good reason for saying that national differences will remain for a long time, even after the victory of the dictatorship of the proletariat on an international scale" (Collected Works, vol. 13, p. 7). The belief that Yiddish secular culture in the Soviet Union had a bright future became widespread the world over and attracted to the Soviet Union such non-Communist Jewish authors as David *Bergelson, Leib *Kvitko, David *Hofstein, Moshe *Kulbak, Peretz *Markish, Der *Nister, Max *Erik, Meir *Wiener, and Nakhum *Shtif during the 1920s. Jewish culture in the Soviet Union in this period recorded significant achievements in literature, linguistics, literary history, and some branches of historiography and demography.

This development of Yiddish culture and Jewish autonomy was partly influenced by the considerable influx of former members of Jewish workers' parties (the Bund, the "Fareynikte," *Po'alei Zion, etc.) into the ranks of the Communist Party, especially in the years 1918–21. Many of them tried at first to form Jewish Communist units, as, e.g., the "Kombund" or the "Komfarband," but had soon to conform to the centralist territorial organization of the party and disband all Jewish formations inside the Communist Party. They also had to abjure demonstratively their previous "nationalistic" errors and adopt the official ideology. Nevertheless, these former members of Jewish parties placed their stamp upon the party activities directed toward the Jews, especially through the *Yevsektsiya (which was shunned by the old Jewish Bolsheviks, except Dimanstein). They attempted to continue the tradition of the prerevolutionary Jewish labor parties, basing their activities on various slogans and programs that conformed to the general party policy toward the Jews, such as "productivization," the development of Yiddish culture, Soviet-Jewish territorialism, etc.

At an earlier stage, the Kombund had even had hopes of establishing Jewish organs that would enjoy a large measure of autonomy, based upon the existence of densely settled Jewish masses with a common language and a common way of life. Such endeavors were abandoned as early as 1920, when the Yevsektsiya became a simple propaganda organ of the party with the task of attracting the unorganized Jewish proletariat to the new regime. In accordance with the official line, which demanded that the Russian majority combat its own "chauvinism" and the minority nationalities overcome the "bourgeois nationalism" in their own sphere, the Yevsektsiya found its raison d'être by struggling against the "Jewish class enemy," i.e., Jewish religion, Zionism, and the use of Hebrew, and against any link with traditional Jewish culture. The last vestiges of technically legal Jewish labor groups outside the ruling party, as, e.g., the Communist Jewish Labor Party-Po'alei Zion and the legal *He-Ḥalutz, were officially closed down in 1928. The former was candidly told by the GPU (secret police): "You are disbanded, for we no longer have any need for your party." Two years later, in 1930, the Yevsektsiya itself was dissolved. The end of the Yevsektsiya, however, did not mean an immediate cessation of Yiddish cultural activities. Only in the second half of the 1930s did official policy toward the Jews undergo what was at first a gradual change and later developed into a radical departure from previous policy evolving into forced assimilation.

In the early 1930s, popular antisemitism in the Soviet Union seemed to be on the decline. This trend was used to justify omission of the subject in literature or the press. It was claimed that the "victory of Socialism" made any resurgence of antisemitism impossible. Later, during the Stalinist purges in the late 1930s, most Jewish cultural institutions, including all Yiddish schools, were closed down, and in the course of the far-reaching changes in government and party personnel, a tendency of restricting the number of Jewish cadres made

itself felt. The geographic and social changes that had taken place among the Jews, their absorption into the economy of the country, and their growing assimilation to the Russian language and culture provided additional reasons for the gradual abandonment of developing Jewish culture and Jewish institutions and for a return to the original concept of total Jewish assimilation. This time, however, the authorities would force it upon the Jews (though they seemed to disregard the fact that the obligatory registration of the Jewish "nationality" on internal documents, particularly after the reintroduction of the old "passport system" in 1932, made total assimilation even formally impossible). The conscious disregard of any manifestation of popular antisemitism inside the Soviet Union now assumed a different meaning.

Only in the short period of Stalin's anti-Nazi stance from 1934, in the "Popular Front" era, did official Soviet opposition to antisemitism again assume international significance. While Nazi propaganda identified Jews with "Bolsheviks," the Soviet government stressed its opposition to antisemitism "anywhere in the world," expressed "fraternal feelings to the Jewish people" in recognition of its contribution to international socialism, and mentioned Karl Marx's Jewish origin (an item dropped from the 1952 edition of the Soviet Encyclopedia) and the part played by the Jews in building up the Soviet Union (Molotov, 1936). At this time also, a statement made by Stalin in 1931 to a correspondent of the Jewish Telegraphic Agency that "antisemitism, as an extreme form of racial chauvinism, is the most dangerous vestige of cannibalism" was even made public in the Soviet Union itself. But in the period of Soviet-German rapprochement (1939–41), the Nazi persecution and murder of Jews in the occupied territories of Europe was hardly mentioned in the Soviet press. Even after the outbreak of war between Germany and the Soviet Union (June 22, 1941), the authorities made no efforts to combat manifestations of popular antisemitism on Soviet territory, which were a frequent occurrence both in the rear and among the partisan units.

An exceptional phenomenon during the war was the establishment of the Jewish *Anti-Fascist Committee in Moscow (created to solicit support for the Soviet war effort among Western Jewry), whose existence reinforced feelings of solidarity between Soviet and world Jewry. Another exception was the change in Soviet policy toward Jewish endeavors in Palestine; there were signs of it already in 1945 and it culminated in 1947, when it strongly supported the establishment of a Jewish state. Andrei Gromyko's statement at the UN Special Assembly (May 1947) even stressed the historic connection between the Jewish people and Palestine.

Stalin's own infection with antisemitism, however (as witnessed by his daughter, Svetlana Aliluyeva, in her books *Twenty Letters to a Friend* and *Only One Year*), tallied with his new policy of encouraging Russian nationalism, which had traditionally been anti-Jewish. This trend came into the open in the "black years" (1948–53) with the campaign against "Cosmopolitans," the murder of Solomon *Mikhoels and other Jewish intellectuals, and the destruction of the last Jewish cultural institutions. The pro-Jewish turn in Soviet policy on Palestine did not have any effect upon the internal anti-Jewish campaign. From the end of 1948 the latter was relentlessly pursued and spread to other Communist countries as well, notably to Czechoslovakia. It reached its climax in the Slánský Trials in Prague and the Doctors' Plot in Moscow.

After Stalin's death (1953) the enforced cultural assimilation of Soviet Jews, as well as their individual discrimination in the universities and certain professions, continued. Events such as the singling out of Jews for "economic trials" and the publication of antisemitic literature in the 1960s, as, e.g., *Judaism Without Embellishment* by Trofim Kichko (1963), reconfirmed the anti-Jewish line of Stalin's last years in a somewhat attenuated and disguised form. The necessity to disguise this line, especially under pressure of world opinion, including Communist and pro-Soviet circles (see below), elicited some minor concessions, such as the publication of a Yiddish journal (*Sovetish Heymland), a few Yiddish books, and a temporary lull in the propaganda against the Jewish religion (at the end of the 1950s).

A worsening of the situation resulted from the Soviet Union's complete reversal of its policy toward Israel that began in the 1950s with the supply of large consignments of modern arms to the Arab states and continued to be manifest in the sinister role played by the Soviet Union in the sequence of events leading to the Six-Day War and the arrival of Soviet military personnel in Egypt. Soviet antisemitism presented itself from then on as "anti-Zionism."

The World Communist Movement

The Comintern, established in Moscow in the year 1919 and officially dissolved in 1943, had to deal with Jewish problems throughout the period of its existence. In theory, the Comintern recognized neither a "world Jewish people" nor the existence of a world Jewish problem; it conceded that such a problem may exist in certain countries, in which case it remained the responsibility of the local section of the Comintern. Antisemitism was officially regarded by the Comintern as a counterrevolutionary phenomenon, emanating from the dissolution of the petite bourgeoisie and providing a breeding ground for fascism. Its principal danger was that it diverted the attention of the proletariat from the class struggle, and it would disappear as a matter of course as soon as socialism triumphed over fascism and capitalism. There was hardly any mention of antisemitism at the Comintern congresses, the plenary sessions of its Executive Committee, and in its press.

From the very beginning, however, the Comintern was forced to deal with the issue of its relations with the Jewish workers' movement, which was itself a kind of miniature international. The Po'alei Zion had its World Union, and the Bund, although lacking a world organization of its own, wielded great influence among Jewish workers' organizations in Europe and America. The Jewish workers' movement in prerevolutionary Russia had also exerted ideological influence upon Jew-

ish workers in other countries, and even upon Jewish groups that did not belong to the working class. Moreover, the Jewish workers' movement had intricate ties with general workers' organizations and with the international workers' movement, and it had in its ranks many experienced revolutionaries. But the rigid principles of organizational structure made any organized Jewish participation in the Comintern impossible. Efforts made by Communist-oriented groups of the Bund (the Kombund) to join the Comintern as an organization ended in failure, as did similar attempts made by the Polish Bund. The left wing of Po'alei Zion, which, unlike the Bund, had not been involved in the prerevolutionary struggle between Mensheviks and Bolsheviks, made even more determined efforts to be accepted by the Comintern; but in 1920, after prolonged negotiations, the Comintern rejected a proposal to create a Jewish section within the Comintern that would consist of all Communist bodies active among the Jewish proletariat (the Yevsektsiya, Kombund, and the Communist Po'alei Zion). Another proposal, made after the second congress of the Comintern, which provided for the World Union of Po'alei Zion to be accepted as a member of the Comintern while its branches would be permitted to form Jewish sections of the respective Communist parties and would retain a degree of autonomy in matters affecting the specific needs of the Jewish masses, was also rejected. The Comintern was ready to concede the creation of Jewish sections of local Communist parties, but was not prepared to accept the continued existence of a Jewish world union. In 1921 the executive council of the Comintern announced the formation of a bureau of Jewish affairs to direct Comintern propaganda among Jewish workers all over the world; however, nothing further was ever heard about the realization of this plan.

Another major Jewish issue confronting the Comintern was that of its attitude toward Zionism and the Jewish settlement in Palestine. The second congress of the Comintern (1920) denounced Zionism, which "by its claim to a Jewish state in Palestine, where Jewish workers form only a small minority, actually delivers the Arab workers to Britain for exploitation." The executive committee (August 1921) further elaborated upon this denunciation of Zionism by branding the idea of concentrating the Jewish masses in Palestine as "utopist and reformist," an idea "that leads directly to counterrevolutionary results, aiming as it does at settlement in Palestine, which eventually will only serve to strengthen British imperialism there." Throughout its existence, the Comintern adhered to this stand, instructing its Palestine section, as well as all Jewish Communists in other countries, accordingly. In the mid-1920s, however, the Communist Trade Union International (the "Profintern") made an unsuccessful attempt to establish ties with the Left Po'alei Zion in Palestine.

Though the Comintern did not arrive at an official definition of Jewish group identity, its general approach was expressed in the early 1930s in a widely distributed book written by a Jew, Otto Heller, *Der Untergang des Judentums* (1931). Its thesis was that West European Jewry was doomed to disappear as a result of its emancipation, the decline of religion, mixed marriages, and assimilation, and the loss of the special social functions that it had previously fulfilled in European society. A similar process was taking place in the western hemisphere countries to which many Jews had emigrated. In Eastern Europe, on the other hand, the Jews had retained certain national characteristics, and their ultimate fate was still in the balance. In the Soviet Union, they were recognized as a nationality; whether they would utilize the opportunity offered them by the Socialist regime to preserve their national existence and even advance from the status of nationality to that of a nation, with its own territory, was completely dependent on their desire to do so. Even in the Soviet Union, however, at least partial assimilation was an irresistible trend.

During the 1930s, until June 1941, the Communist parties everywhere, including Palestine, adhered strictly to the Soviet line – from its anti-Nazi stand during the Popular Front period to its denunciation of the Western powers and their "imperialist" war against Nazi Germany during the Soviet-German rapprochement (1939–41). The mental strain involved in Soviet-Nazi friendship and cooperation, particularly for Jewish Communists, vanished with the German attack on the Soviet Union and the latter's anti-Nazi alliance with the Western democracies.

IN POLAND. Communism among the Jews in Poland was of particular importance. During the early 1930s in the area inhabited by ethnic Poles (i.e., excluding the areas populated by Ukrainians and Belorussians), Jews accounted for 22 to 26% of the membership of the Communist Party. In the Comintern, the Polish Communist Party occupied a special place, being the oldest member party and providing a large share of its functionaries. Its special role was also related to Poland's geographical situation between the Soviet Union and Germany – the latter at that time being the major strategic objective of the Comintern's activities.

The Polish Communist Party (KPP) was founded at the end of 1918 by the merger of the Social Democratic Party of Poland and Lithuania (SDKPiL) and the Polish Socialist Party (PPS)-Left. Each of the two components had its own tradition of dealing with Jewish affairs. There was a large number of Jews in the leadership of the SDKPiL (among them Rosa *Luxemburg), but the party advocated full assimilation for Jews and even failed to take a strong stand against antisemitism. This attitude did not change during the first few years of the Polish republic; in spite of pogroms, antisemitic campaigns, and a special resolution adopted by it, the party remained rather indifferent to antisemitism, so much so that Comintern leaders, such as Radek and Zinoviev, found it necessary to draw the KPP's attention to this state of affairs. At its second congress (1923), 30% of the delegates were Jews, but of these, two-thirds described themselves as "Poles of Jewish descent." In the period 1919–22, groups (such as Kombund) and individuals who had previously belonged to Jewish workers' parties joined the KPP and took up important posts in it; some of

them left their imprint upon the party's activities among the Jews. They included former Po'alei Zion members, such as S. Amsterdam-Henrikowsky, Gershon Dua-Bogen, S. Zakhariash, and A. Lewartowsky; ex-members of the "Fareynikte," such as Jacob Gordin and P. Bokshorn (later also Gutman-Zelikowicz); and from the Bund, A. Minc and A. Plug. Eventually the struggle against antisemitism came to play an important role in the activities of the KPP. It did not follow the SDKPiL tradition, and called even for national rights for the Jewish minority, equal opportunities for cultural development, equal rights for Yiddish in the administration and the courts, and the establishment of secular Yiddish-language schools. The party's activities among the Jews were in the hands of special "sections," "bureaus," or "groups," the autonomy of which remained a controversial issue throughout their existence. The staff of these Jewish "sections" participated in the incessant internal struggle that marked the KPP; when the party line so demanded, these Jewish functionaries fought bitterly against the Bund, the Zionist movement, and He-Ḥalutz. A considerable number of Yiddish periodicals, ostensibly non-Communist, were in reality published by the illegal KPP, and for a while, during the 1930s, even a daily (*Der Fraynd*). A large group of Jewish writers and cultural personalities was affiliated with the KPP or linked with its periodicals. In the period 1935–37, the party made strenuous efforts to induce various political groups (among them its political rivals) to join in a common struggle against fascism and antisemitism.

[Moshe Mishkinsky]

IN THE UNITED STATES. In the United States, the Bolshevik Revolution led to factional disputes within the two main left-wing parties in existence in 1917, the Socialist Party and the Socialist Labor Party, which had significant Jewish memberships, and also within the Industrial Workers of the World (IWW). Some of the more moderate Jewish socialist and labor leaders, such as A. Lessin, A. *Cahan, J.B. *Salutzky, B.Z. *Hoffman-Zivion, and H. Rogoff, temporarily sided with the Bolsheviks after the October Revolution, in part because the alternative to Bolshevism was the violently antisemitic "white" counterrevolution, but soon adopted a firm anti-Communist stand. Other Jewish socialists threw their lot in permanently with the Communists. As a result of the first split in the Jewish Socialist Federation, a Jewish Federation of the Communist Party was founded under the leadership of A. Bittelman (October 1919). In 1921 the Jewish Socialist Federation seceded from the Socialist Party and a Jewish federation of the Communist-sponsored "Workers' Party" came into being (1922). In the same year a Yiddish Communist newspaper, **Freiheit*, made its appearance, edited by M. *Olgin and S. Epstein, two former members of the Bund. Certain socialist leaders who were steeped in Jewish culture, such as M. *Vinchevsky and K. *Marmor, also lent their support to Communism, largely because of their belief in the prospects of a national Yiddish culture developing in the Soviet Union. There was also considerable Communist influence in trade unions with large Jewish memberships. Many of the Yiddish schools founded by the *Workmen's Circle were transferred to Communist sponsorship, and in 1929 Jewish Communists founded the International Workers' Order. It is estimated that in the 1920s as much as 15% of the American Communist Party's membership was Jewish, and the percentage of Jews among the Party leadership was undoubtedly higher. Unemployed or economically marginal Jews, especially in such professions as teaching and social work, and in the fur industry and some sectors of the garment trade, were powerfully attracted by Communist ideals and the widely propagandized achievements of Soviet Russia. Jewish membership fell off slightly as a result of Communist support of the Palestinian Arabs against Jews in the riots of 1929. During the Depression, Communist influence was again on the rise and could claim many sympathizers and "fellow travelers" among the American Jewish academic youth and intelligentsia. A further rise came in the mid-1930s, when the Nazis came to power in Germany and the Soviet Union adopted the Popular Front policy. It was at this time that the Yiddisher Kultur Farband (YIKUF) was founded by Communists in the United States. In the late 1930s the Moscow trials and the acceptance by the American Communist Party of the Soviet-Nazi rapprochement (1939–41) resulted again in a sharp drop in Communist influence among American Jews, which was only partly reversed by the events of World War II. Postwar revelations of Stalinist atrocities and systematic Soviet antisemitism permanently put an end to Communism as a serious force in American Jewish life. Fears that the trial and execution of the Communists Julius and Ethel Rosenberg for espionage would tempt the anti-Communist right in the United States to adopt a platform of antisemitism proved unfounded. The list of Jews who played a prominent role in the leadership and factional infighting of the American Communist Party from its inception is a long one and includes such figures as Israel *Amter, Max *Bedacht, Benjamin *Gitlow, Jay *Lovestone, Jacob *Stachel, William Weinstone, and Alexander Trachtenberg. Many American Jewish authors and intellectuals, some of whom later publicly recanted, were active in editing Communist publications and spreading party propaganda in the 1920s, 1930s, and even later, among them Michael *Gold, Howard *Fast, and Bertram *Wolfe.

After World War II

Although the newly established Communist regimes of Eastern Europe after World War II followed the Soviet line on the Jewish question and the policy toward Israel, there existed some fundamental differences. Most of them permitted the Jews to establish countrywide frameworks for religious and cultural activities, primarily in Yiddish (see *Poland, *Romania, *Hungary, *Czechoslovakia, and *Bulgaria). But, as a rule, the recognition of the Jews as a national minority was not based upon their obligatory individual registration as members of the Jewish "nationality" on identity documents (as in the Soviet Union), and Jews were able to describe themselves either as Jews or as belonging to the respective majority

people; in theory, at least, they had the option of national assimilation. Jewish cultural institutions, whose Soviet counterparts had been liquidated in Stalin's time, continued to function, as, e.g., Yiddish theaters (in Poland and Romania), the Jewish Historical Institute in Warsaw, and a similar institute in Budapest. At one period or other, most of these countries permitted large numbers of Jews to migrate to Israel, in spite of the different Soviet policy in this respect.

Communist parties outside the Soviet bloc, including their Jewish sections and Jewish press, reflected the policy of the Soviet Union toward the Jews. In the last years of Stalin's rule, when every trace of Jewish culture and Jewish institutions had been obliterated in the Soviet Union, they tried to obscure the truth of the situation and even defended the Soviet Union against attacks by Jewish leaders and organizations against the anti-Jewish policy of 1952–53. A radical change occurred after the 20th congress of the Soviet Communist Party in February 1956, when Stalin's crimes were for the first time revealed in the Soviet Union, although the anti-Jewish element in these crimes continued to be ignored and suppressed. The first shock came with the publication (in the New York Jewish *Forward*) of news of the judicial murder of 26 outstanding Soviet Jewish writers and poets on Aug. 12, 1952. A great stir was caused in the entire Jewish world by an editorial that appeared in the Warsaw Communist newspaper, *Folkshtime*, in April 1956 headlined "Our Sorrow and Our Comfort." The article contained a detailed report of the process by which Jewish culture in the Soviet Union, its bearers, and institutions, had been liquidated, a process that had commenced in the 1930s and had reached its tragic culmination in the last years of Stalin's life. The article expressed the hope that this process would be reversed and Jewish culture and cultural institutions would enter a period of revival.

A storm of indignation swept the Communist movement in the West, especially among Jewish Communists. In Canada, the veteran Communist leader J.B. Salsberg published a series of articles in the Communist press that contained a report on the meetings of a delegation of the Canadian Communist Party, headed by him, with Khrushchev in Moscow in 1957 at which the Soviet leader's antisemitic inclinations had been clearly indicated. Salsberg seceded from the Communist Party, and many Jews and non-Jews followed his example. In Britain, another veteran Jewish Communist, Hyman *Levy, published a pamphlet entitled *Jews and the National Question* (1958), in which he denounced Soviet policy toward the Jews after an extensive visit to the Soviet Union and talks with Soviet leaders. He was promptly expelled from the party. In the United States, Howard Fast left the Communist Party under similar circumstances, stressing the Jewish aspect of his decision in *The Naked God* (1957); so did several members of the editorial staff of the *Daily Worker* (which thereupon turned into a weekly). In Latin America, sizable groups of Jews left the party and embarked upon the publication of their own organs (called, e.g., *Mir Viln Lebn*, "We Want to Live") expressing their opposition to Soviet policy of forced assimilation of Jews and destruction of Jewish culture and institutions; eventually, most of them joined Zionist Socialist parties. In non-Jewish Communist publications, such as *L'Unità* in Italy, and theoretical Communist journals in Britain, Australia, and other countries, the Soviet Union also received severe criticism of its discriminatory policy toward the Jews. In 1963, when Kichko's antisemitic book was published in Kiev, almost the entire Communist press in the West joined in a sharp protest, and the central committee of the Soviet Communist Party found itself obliged to disassociate itself publicly from the book.

Far-reaching changes also took place after the Six-Day War (1967), when the Soviet Union launched a worldwide campaign against "international Zionism" marked by violently antisemitic overtones. The Communist Party in Israel (see below) split into a pro-Israel and pro-Arab faction (Maki and Rakaḥ, respectively); a similar split, which in most cases did not, however, extend to organizational separation but confined itself to differences of political attitude, also occurred in several Communist parties elsewhere. In New York, the *Morning Freiheit* adopted a stand akin to that of Maki (which considered that in the Six-Day War Israel defended its freedom and existence), while *The Daily World* followed the anti-Israel line. In France, *L'Humanité* took a sharp anti-Israel stand, and reasserted the old Communist call to the Jews to assimilate to their host nations (editorial published on March 26, 1970), while the *Naye Prese*, the Communist Yiddish daily in Paris, was much more moderate in its attitude toward Israel and continued to affirm the Jewish right to an independent national culture. The "Jewish crisis" in the international Communist camp was further exacerbated by the events that took place in Czechoslovakia in 1968, and even more by the stringent antisemitic policy in Poland from March 1968, which was accompanied by what amounted to the expulsion of veteran Jewish Communists from the country. Adherence to the Communist Party and the affirmation of a positive Judaism of any kind had become mutually exclusive. With the collapse of Communism in Eastern Europe in the early 1990s, Jewish affiliation virtually ended, as only diehards remained associated with the small political groupings that clung to the old ideology under altered names.

[Moshe Mishkinsky]

IN EREẒ ISRAEL. A Communist group first appeared in Palestine during 1919, within the extreme left Mifleget Po'alim Soẓialistim (MPS), "Socialist Workers' Party," but it soon disintegrated. Under the British Mandate the Communist Party was outlawed. In 1921 the Palestine Communist Party was organized illegally, by a combination of extreme left splinter groups, and affiliated with the Comintern in 1924. Its entire history was a series of internal splits and secessions, as well as conflicts with Zionism and the British authorities. Its course was always clouded by alternating Jewish-Arab cooperation and friction within the Party.

From 1924 onward, on Comintern orders, efforts were

made to "Arabize" the Party, the argument being that the country would always remain Arab, since Zionism was at best utopian, and at worst a servant to British imperialism. Jewish leaders were ousted, but attempts made to recruit Arabs proved largely unsuccessful; the richer Arabs were averse to Communism, while others, if at all politically minded, favored Arab nationalism. Although sympathy with the Russian October Revolution was widespread in the Palestine labor movement, during the 1920s only a splinter group of the *Gedud ha-Avodah broke with Zionism and eventually migrated to the Soviet Union. From 1936 to 1939 the Party openly supported the Arab revolt, including the anti-Jewish terrorism. Still, in 1939 the Party was quite isolated from the Arabs, while its support of the Ribbentrop-Molotov agreement jolted the remaining Jewish members. From 1939 it operated in separate Jewish and Arab groups.

Further splits occurred over the Soviet Union's support of a Jewish state in 1948, when some of the Arab members of the party were against the Soviet Union's vote for partition. After the establishment of the State of Israel, the Party reunited under the name of "Maki" (Miflagah Komunistit Yisre'elit- "Israel Communist Party"). It operated legally, but, as an anti-Zionist party in a Zionist state, its influence was negligible. Its following among Jews rose in the 1950s, when mass immigration caused economic hardship and when a leftist splinter group of *Mapam, led by Moshe *Sneh, joined Maki; but it dwindled again with the prosperity of the 1960s. Although the party always looked for support among Israel's Arabs, it intensified its appeals to the Arabs in this period. In each election to the Knesset, Maki received greater support, proportionally, from Arabs than from Jews, e.g., in 1961 about half of Maki's 42,111 votes came from Israel Arabs, who then constituted only a ninth of the population. Some of the Arabs voted Communist in response to Soviet support of Arab nationalism, while, for precisely the same reason, many Jews refrained from supporting the Party. Tensions on this point were the main cause of the rift in Maki, generally on Jewish-Arab lines, which occurred in the summer of 1965. The Arab-led faction formed the New Communist List (Reshimah Komunistit Ḥadashah, or Rakaḥ), with a more extreme anti-government attitude and complete obedience to Moscow.

At first the Soviet Union tended to endorse Maki and Rakaḥ, but after the 1967 Six-Day War it recognized Rakaḥ only. After the split Maki took a line increasingly independent of Moscow in all matters pertaining to Israel-Arab relations, reflecting the fundamental Jewish nationalism of its membership. This became more pronounced after the Six-Day War, when Maki openly criticized Moscow's anti-Israel attitude and largely endorsed Israel government acts and policy. At its conference in 1968 Maki adopted a program which included not only pro-Israel plans but also, for the first time, a recognition that every Jew, even in a Socialist country, should be allowed to choose among assimilation, Jewish cultural life, or migration to Israel. Some Communist parties abroad, mainly in the West, but also that of Romania, continued to maintain "fraternal" relations with Maki, in spite of Moscow's denunciations of Maki's "chauvinism."

Although membership statistics were not publicized, the party would appear to have had close to 5,000 members in the 1950s and about 3,000 in the early 1960s. In 1961, according to the report of Maki's congress, 74.3% were Jews and 25.7% Arabs; 83.8% had joined after 1948 and 27% after 1957, an indication of the rapid turnover among the rank and file. The leadership, which had changed often in pre-state days, remained fairly constant from 1948 until the 1965 rift. In the late 1960s the Jewish leaders of Maki were Shemuel Mikunis and Moshe *Sneh, while Meir Wilner and the Arabs Tawfiq Toubi and Emil Habibi headed Rakaḥ. All five were Knesset members at one time or another.

The party always stressed continuous, often strident, propaganda. Many joined the V (Victory) League after June 1941, and later, the various friendship societies with the Soviet Union, several of which were front organizations. The Party's written propaganda increased before elections, and it maintained a continuous flow of newspapers and periodicals in Hebrew (*Kol ha-Am* ("Voice of the People")), Arabic, French, Polish, Romanian, Hungarian, Bulgarian, and Yiddish. After the 1965 split, both Communist parties continued publishing in Hebrew and Arabic, with Maki publishing in other languages, to reach new Jewish immigrants. After winning just one seat in the 1969 Knesset elections, Maki was transformed into Moked under Meir *Pa'il in the early 1970s and effectively vanished from the political map. Rakaḥ changed its name to Ḥadash (Ḥazit Demokratit le-Shalom u-le-Shivyon, "Democratic Front for Peace and Equality") before the 1977 Knesset elections, joined now by Jewish leftists, and was able to maintain a Knesset faction of 3–5 members into the 21st century as a nationalist Arab party, despite the disintegration of the Communist Bloc.

COMMUNITY, the designation of Jewish social units, used for the Hebrew terms *edah, kehillah*, and *kahal*. Ideally the community denoted the "Holy Community" (*Kehillah Kedoshah*), the nucleus of Jewish local cohesion and leadership in towns and smaller settlements. Particularly after the loss of independence, as the Jews became predominantly town dwellers, the community became more developed and central to Jewish society and history. From the Middle Ages on the community was a "Jewish city," parallel to and within the Christian and Muslim ones.

This entry is arranged according to the following outline:

ANTIQUITY

While the central and centralistic institutions of *kingship, *patriarchs, *prophets, *Temple, *tribe, and academies predominated – each in its time and its own way – there is only occasional mention of local leadership among the Jews. However, in *Shechem it was apparently the *Baʾalei Shekhem* who ruled the town, determining its enemies and friends (Judg. 9, passim). King *Ahab had to turn to "the elders and nobles, which are of his town, who sit with Naboth" (I Kings 21:8) and they passed judgment on Naboth (*ibid.* 11–13). It would seem that this local leadership, which combined preeminence in the town with noble family descent, was a central element in the life of the exiles in *Babylon. For more on community structure in the Bible see *Congregation (Assembly). The Book of *Judith tells of local self-government in the town of Bethulia in the days of Persian influence. The town was led by three men (*ibid.* 26) who had judicial power and the right to lead the defense of the city.

Later, under the Ptolemaic and Seleucid rule and influence, Hellenistic institutions began to shape local social life. In the Second Temple period the *Sanhedrin had the function of municipal council of the holy city, Jerusalem, as well as its more central functions in national life. From its foundation *Tiberias was a city with a decisive Jewish majority, structured and organized on the model of the Greek *polis*, with a city council and popular assemblies which sometimes met in the synagogue. At the head of the executive branch stood the archon and supervision of economic life was in the hands of the *agoranomos*. In the Hellenistic-Roman Diaspora the element of *autonomy granted by the non-Jewish sovereigns became a basic constitutive element in the life of the Jewish community, remaining central to it throughout centuries of Jewish history. In *Alexandria, Egypt, there existed a large Jewish community, which did not however embrace all the Jews living within the city; the synagogue became a center of communal leadership and at the same time a focal point for the emergence of a separate synagogue-community, existing alongside similar synagogue-communities within the same city.

By Ptolemaic times the Jews in Alexandria were already organized as a *politeuma* (πολίτευμα), one of a number of such administrative (non-Jewish) units in the city. At the head of the Alexandria community at first were the elders. In the beginning of Roman rule, the leadership of the Alexandria community was in the hands of an ethnarch; later, in the days of Augustus, the main leadership passed to the council of elders (*gerousia*), which had scores of members. The Berenice (*Benghazi) community in Cyrenaica had nine archons at the head of its *politeuma*. The Rome community seems to have been divided up, and organized in and around the synagogues. In Rome, as in other communities of the empire, there were titles like *pater synagogae, archisynagogus*, even *mater* or *pateressa synagogae*, and to a great degree such titles had become formal, hereditary, and empty. An imperial order to the *Cologne community of 321 is addressed "to the priests [*hierei*], to the heads of the synagogues [*archisynagogi*], to the fathers of synagogues [*patres synagogarum*]," thus showing that even in a distant community a wide variety of titles, some of a priestly nature, existed side by side.

Synagogue inscriptions and tombstones attest the importance attached to synagogue-community leadership. Up to the fifth century the patriarchs supervised and instructed this network of communities in the Roman Empire through sages (*apostoloi*). The epistles of *Paul are in a sense evidence

of the strength and cohesion of synagogue-community life and discipline. The nascent organization of the underground Christian Church was modeled to a considerable degree on this Jewish community life and organization. Fast-day ceremonies show clear signs of local organization and sense of identity. Sectarian organizational life, like that of the *Essenes or the *Qumran group, reveals the tendency to create a closed community structure and life on principles very similar to those of the holy synagogue-community.

Some methods of communal organization – based on autonomy, the synagogue as the local center, and the synagogue as a separate communal unit within the locality – and some of the titles (in particular the Hebrew ones like *Tuvei ha-Ir*) were carried over into medieval and modern times.

[Haim Hillel Ben-Sasson]

MIDDLE AGES

Organized local communities functioning in Babylonia were highly centralized under the control of the *geonim* and exilarchs from approximately the eighth to the eleventh centuries. However, there are many indications that local autonomy was stronger and more active than these centralist institutions. The breakup in centralized authority and the growth of new patterns formed under conditions created by the emerging cities and states, in Christian Europe in particular, brought the local community more and more into the foreground. External and internal factors provided the dynamic force leading to self-perpetuation; among the former were collective responsibility for taxes (royal or seignorial) and ecclesiastical privileges, and the corporate organization of society in general. The inner cohesive forces were equally potent, if not more so. First there were the ancient traditions of Jewish group life as expressed in a variety of institutions; most powerful of these was the *halakhah*, the firm rule of religious law. Of paramount importance was the sovereign right of each *kehillah* to adopt its own fundamental communal law as formulated in **takkanot*. The *kehillah* retained its links with the Jews in the Diaspora as a whole through its adherence to tradition and law and shared messianic hope. Probably economic concerns of Jewish artisans and merchants constituted powerful common interests, yet the predominant binding forces were religious and cultural.

Character and Structures

Up to the expulsion from Spain (1492) the pattern of only one community board, or *kahal*, prevailed. It was only in the period of resettlement after the expulsion from Spain and in the modern period that the pattern of a community centered on its own particular synagogue reemerged strongly in many areas and splintered the original community. From the beginning of the 12th century, Western European civic tendencies began to penetrate the life and thought of the adjacent Jewish communities, which attempted to close their doors to newcomers (see **ḥerem ha-yishuv*). Membership in a community was acquired by birth or granted by formal admission. In extreme cases failure to submit to communal discipline could lead to expulsion. These tendencies clashed with the feeling of Jewish solidarity and belief that charity should extend beyond the city walls. As in the gentile city, in the Jewish community too there was a patrician tendency to limit election rights and – through various election clauses – to make the ruling circle a closed and self-perpetuating one. Membership of this ruling class depended on riches, learning, and patrician descent, in most cases a combination of all three. This oligarchic system was much more pronounced in the communities of Christian Spain until the expulsion, than in those of northern France or Germany. From time to time pronounced popular dissatisfaction led to reforms in election and tax-assessment methods and community institutions and structures. Different types of voting procedure were employed at meetings and there were rarely secret and fair elections. Some officers, such as judges and charity wardens, were chosen by direct ballot, but the indirect ballot, whereby some half dozen unrelated electors (*borerim*) were drawn by lot, was most popular. They constituted the electoral college which proceeded to select the major officers.

In a very small community a single officer managed affairs. The larger communities had many more elders, who went by a large variety of titles in the vernacular or in Hebrew, such as chiefs (*rashim*), aldermen (**parnasim*), best men (*tovim*), trustees (*ne'emanim*), supervisors (**gabba'im*), and many others. Special officers acted as tax assessors (*shamma'im*), tax collectors (*gabba'ei ha-mas*), morality boards (**berurei averah*), diplomatic spokesmen (**shtadlanim*), supervisors of the synagogue, of communal schools, charities, weights and measures, and a host of others. The chief officers were sometimes "elder of the month" (*parnas ha-ḥodesh*) in rotation. In Germany, Moravia, and western Hungary this *parnas ha-ḥodesh* was subject to the control of an executive committee; in Poland and Lithuania he later had full authority to act on his own. The community board was called *kahal*. The *shtadlan*, who represented an individual community, a region, or an entire country, was found in the larger cities. He was responsible for interceding with the authorities in defense of Jewish rights and in the alleviation of abuses. He had to know the language of the country and feel at ease with king, bishop, and courtier. As the representative of a subject people in an age when ideas of freedom and equality were hardly understood, he did not fight for Jewish rights: he pleaded for them, or gained his point through bribery. He was either a wealthy Jew who acted for his people out of a sense of civic duty, or he was an official who was paid handsomely for his exacting labors.

The designation of *rabbi (*rav*) of the community appears fairly early in Western Europe. By the 12th century it was frequently used, although not then very clearly defined. Many rabbis subsisted on irregular incomes. For a long time learned laymen administered justice in some countries; judges had to be elected. After a long period of uncertainty, the authority of the rabbi gradually became established. Large communities had rabbis who specialized as judges in civil (**dayyan*) or ritual (*moreh hora'ah*) matters, heads of academies, or preach-

ers (**maggid*). Other paid communal officials were the cantor (**ḥazzan*), sexton (**shammash*), ritual slaughterer (**shoḥet*), *scribe (*sofer*), or recording secretary, who entered minutes in the **pinkas* (community register or minute-book). Some of these communal workers possessed executive authority alongside the elected elders. Thus a *shammash* might be empowered to take punitive action against a recalcitrant inhabitant without first consulting the elder of the month. In some communities he was even charged with watching for infractions of the ordinances.

Functions and Duties

The community offered religious, educational, judicial, financial, and social welfare services to its members. It thus made possible a self-determined life for segregated Jewry. The cemetery and the synagogue were the primary institutions in each community. A single dead Jew required hallowed ground and for that reason graveyards were often the first property to be acquired. Ten adult Jews could meet in any private dwelling for public worship, but they soon needed a permanent prayer house. No membership fees were paid; the synagogue largely depended on income from the sale of *mitzvot*, the main one being the honor of being called to the reading from the Torah. Every sizable community had several houses of prayer, whether communal, associational, or private, which served as pivots and centers of communal life (see *Synagogue and cf. **Bitul ha-Tamid*); these maintained and supervised the abattoir for ritual slaughter, a ritual bath (**mikveh*), the supply of kosher foods, and the sale of citrons (*etrogim*).

Though teaching children and adult study were the responsibility of the individual Jew, supervision over schools and the provision of education for the poor were assumed by the community or an association. Special imposts were levied for educational purposes. The number of students per teacher, the quality of instruction, and competition among teachers were regulated. Schoolhouses were built, mainly for poor children and for higher learning. Synagogues and schools were supplied with libraries of sacred books. The adult study groups and the general pervasive character of educational endeavors maintained the Jews as the People of the Book.

Local communities were accorded extensive jurisdiction and discretion. The principle of **ḥerem bet din*, the right of each community to final jurisdiction and its security against appeals to outside authorities, was established in northern France from the 12th century. However, appeals to outstanding rabbinic luminaries outside the community were not entirely ruled out. At first knowledgeable elders ruled in disputes; soon ritual, civil, and criminal law became the province of properly trained rabbinic judges, and court proceedings were speedy and efficient. Excommunication – religious, social, and economic ostracism – was widely applied. Capital punishment was inflicted on *informers in Spain and in Poland. In some countries execution was left to state authorities. Other penalties included expulsion, the pillory, flogging, imprisonment, and fines. The community was the fiscal agent of the ruler and the bearer of collective responsibility for the collection of taxes from the Jews. It had to treat with the ruler on the type and amount of taxes, distribute the burden among its members according to its own principles, and to collect the sum. Thus it imposed direct and indirect taxes, import and export duties, tolls, and taxes in lieu of military service or forced labor. The prevailing method of tax collection was assessment by elected officials. Tax exemptions were sometimes granted by the state to influential individuals and some scholars and community officials also enjoyed tax immunity. The fiscal system worked tolerably well in the Middle Ages when communal controls were effective, but broke down with emancipation of the individual in the modern period.

The Jewish community regulated the socioeconomic life of its members. The principle of **ḥazakah* had wide applications in such areas as rent control, the acquired right of an artisan or a merchant to retain his customer (**maʾarūfiyya*), or the right of settlement. Lavish dress and sumptuous festivities were strictly regulated, a rule more often observed only in the breach. Polygamy was combated by communal action until it was eradicated in Christian lands and sexual morality was stringently regulated: there were ordinances against mixed dancing, gambling, and improper family life. Communal and individual charity provided for the impecunious; food, money, clothing, and shelter were dispensed. Itinerant beggars were kept on the move from one community to another. The sick were comforted by visitation, care, and medicines. Some towns maintained a **hekdesh*, a hospital for the ailing poor which only too often, as usual at the time, was unsanitary. Orphans and widows were provided for. "Redemption of *captives," the ransoming of victims of imprisonment, captives of war or of pirates, was ranked first among charities. Special chests for relief in Ereẓ Israel (**ḥalukkah*) were maintained.

[Isaac Levitats]

Individual Centers

THE MUSLIM CALIPHATE IN THE EAST. By unanimous Jewish testimony the first caliphs were sympathetic toward the representatives of the supreme institutions of the Babylonian Jewish community. Following the stabilization of Arab rule in the mid-eighth century, which did not interfere with the internal affairs of non-Muslims, a state of peaceful coexistence developed between the Muslim authorities and the leaders of the autonomous institutions of the non-Muslims, so that the Jews were able to reconstitute a system of self-government. The head of the "secular" autonomous administration was the *exilarch, an office originating in Parthian times and continuing under the Sassanids. The exilarch was of Davidic stock, and the office was hereditary. After a period of instability, *Bustanai b. Ḥaninai was recognized as exilarch during the rule of Omar I (634–44) and transmitted the office to his sons. The hereditary and elected representatives of Babylonian Jewry were charged with the administration of all taxes levied on Jews, with the representation of Jewry before the Muslim rulers, with autonomous judicial functions, the enactment of

communal regulations, and the supervision of the yeshivot, etc. The traveler *Benjamin of Tudela, who visited Baghdad in about 1162, gives an eyewitness account of the honor and splendor surrounding the exilarch Daniel b. Ḥisdai (1150–74) at the caliph's court. He was received in official audience by the caliph every Thursday, when all Muslims and Jews had to stand before him; he sat beside the caliph while all the Muslim dignitaries remained on their feet. Another Jewish traveler, *Pethahiah of Regensburg, reports that the heads of the Jewish community in Mosul punished offenders even if the other party to the case was a Muslim (there was a Jewish prison in the city). Pethahiah also notes that the Jews did not pay taxes directly to the caliph, but paid one gold dinar per annum to the exilarch. When the Mongol khan Hulagu conquered Baghdad (1258), he harmed neither the Jewish community nor the exilarch, Samuel b. David. Jewish leaders of the House of David continued to reside in Baghdad until the days of Tamerlane (1401). During the decline of the Abbasid caliphate, when control was passing to the Seljuks (c. 1030), minor governments sprang up in Mosul, Damascus, and Aleppo; settling in these cities, scions of the families of the Babylonian exilarch obtained important positions which were confirmed by the governments. So dear to the people was the memory of the Davidic kingdom that the descendants of David were received everywhere with great honor: they were given the title **nasi*, and their dynastic origin placed them automatically at the head of the community as its recognized representatives. This fragmentation of the exilarchate into different territorial units began in the 11th century. The *nesi'im* collected tithes, poll tax, and other imposts, appointed communal officials and judges, and sat in judgment themselves. In contrast to their silence about other religious communities generally, and the Jews in particular, Arab sources frequently mention the exilarch. Alongside the "secular" autonomous administration was the "spiritual" administration, the **geonim*, heads of the two famous academies of Sura and Pumbedita, who also were empowered to appoint *dayyanim* in their respective districts and to supervise the administration of justice. Each of the two Babylonian academies had a *bet din gadol* ("high court") attached to it, headed by a president (*av*) who acted as deputy to the *gaon* and sometimes succeeded him after his death. Litigants from other countries could, by mutual consent, bring their cases before the *geonim* for an opinion. Moreover, by means of the responsa, the *geonim* exerted great influence over the organization, procedure, and uniformity of jurisdiction of the law courts. Characteristic of the management of the Jewish community in the medieval Muslim East (Babylon and its dependencies) was the bipolarity in the division of functions and powers between essentially central secular and essentially central religious and academic authorities; this generally persisted until the beginning of the 11th century. Afterward it was not an infrequent occurrence that the secular head (exilarch) was called upon to lead the academy and the great *bet din* attached to it as well; but on occasion the *gaon* also assumed the functions of the exilarch.

THE MUSLIM COUNTRIES IN THE WEST (EGYPT AND THE MAGHREB). More is known about the forms of organization of Egyptian and North African communities, which were different from those in the East. For political reasons the Fatimid caliphs in Egypt did not want the Jewish communities in their domains, which extended as far as present-day Morocco, to be subject to Jewish authorities outside their realm. Like the Umayyad rulers of Spain and part of Morocco, they therefore encouraged the severance of local Jewry from dependence on the Babylonian center. The several extant versions of letters of appointment of *negidim* in Egypt show that the **nagid*'s functions were partly similar to those of the exilarch in Babylonia in later times: he represented all the Jews and was their religious guide and judge; he drew up deeds of marriage and divorce and saw to it that prayers were said while facing Jerusalem, in contrast to Samaritan custom; and he was responsible for the implementation of the special measures applying to the **dhimmis* (non-Muslims given protected status). Among the best-known *negidim* were the descendants of Maimonides – five generations in all – who were the government appointed secular leaders of Jewry in Egypt and its dependencies, and, at the same time, spiritual leaders consulted on all matters of religion and law. The Egyptian *negidim* were also in charge of the fairly large Karaite and Samaritan communities. Palestinian and Syrian Jewry was headed by a local *nagid*, subordinate to the *nagid* in Cairo, whose deputy he was and without whose permission he could not be appointed. Apart from the *nagid*, two other functionaries represented the community: the minister (*ḥazzan*) and the prayer leader (*sheli'aḥ ẓibbur*). The office of *nagid* existed in Egypt until the Turkish conquest in 1517. A special situation prevailed in Egypt under Ottoman rule, when the *nagid* was appointed and sent to Cairo by the government authorities in Constantinople. In the middle of the 16th century, after 30 years of Ottoman rule, the rabbi of the Egyptian community excommunicated the *nagid* for having slighted him; the *nagid* complained to the Muslim governor, which shows that he was not empowered to anathematize him, but the dispute ended with the expulsion of the *nagid* from Egypt. Sambari, the 17th-century Egyptian chronicler, concludes: "From that day onward, he [the Muslim ruler] made it a law in Israel that no Jew who came from Konstantina [Constantinople] should be called *nagid*, but that he should be called *chelebi*; and this has been the law for Israel to this day" (Sambari, in Neubauer, Chronicles, vol. 1, pp. 116–7). Later sources indicate that the titles *chelebi*, *bazirgyan*, and *mu'allim*, still in use in early 19th-century Constantinople, were given to a prominent Jew who performed the function of official intercessor by virtue of his position in the financial and economic administration of the Egyptian rulers. Jewish dragomans in seaport towns similarly had influence with the authorities and used it for the benefit of their coreligionists.

LATER DEVELOPMENTS IN NORTH AFRICA. From the 16th century onward, regulations, chronicles of Fez and responsa written by the rabbinical authorities of Morocco mention

the *nagid*, Jewry's official representative and spokesman at the court of the ruler. The *nagid* was probably chosen by the ruler, by agreement with the Jews, from among the persons who had dealings with the court. The office was frequently hereditary. Beside the *nagid* in Fez (or sometimes in Marrakesh, the original capital of the Saʿdi's), there was a *nagid* in Meknès during the reign of Maulay Ismāʿīl, who rebuilt the city and made it his capital. Other *negidim* resided at Sefrou and Salè. Sefrou was chosen as the seat of the *nagid* because it was close to Fez, where activities were frequently suspended because of the many disturbances which occurred there. The *nagid* in Salè (Rabat) was probably Jewry's representative to the independent sheikhs and pirates in control there. Presumably there were *negidim* in other cities as well. In addition to the *nagid*, there were usually seven notables (*tuvei ha-ir*) concerned with the manifold needs of the community. Regulations required the consent of the rabbinical courts and the entire community. Although the influence of the refugees expelled from Spain is usually evident, there were certain changes resulting from political conditions and from the need to establish a system which was also acceptable to the veteran Jewish residents.

The autocratic status of the dey of Algeria affected the position of the **muqaddim*, the Jewish representative at his court. In Spain, before the expulsion, this title was borne by a member of the community's leadership, and it seems that in Algeria, too, there were at first several *muqaddimūn* who looked after the affairs of the community; they are mentioned in a *sharīʿa* document of the early 18th century in connection with the purchase of land for a cemetery. In 1735 a change was introduced in the leadership of the community, and from then onward increasing reference is made to the *muqaddim* as the community's sole representative before the dey. Henceforth, the position became a monopoly of two or three families: *Bouchara, *Busnach and *Bacri (who were related), and the famous *Duran family. Their activities at the dey's court were internationally noted, especially from the early 19th century onward. After the conquest of Algeria by the French in 1830, one of the military administration's principal measures with respect to the Jews was the curtailment of the powers of their communal courts. This was done systematically by several decrees, issued between 1830 and 1842, which gradually restricted their jurisdiction in matrimonial matters to the holding of merely symbolic ceremonies and the offering of advice and written opinions; most matters were transferred to the jurisdiction of the French civil courts. The French policy makers were assisted in their efforts by the influence, encouragement, and cooperation of the leaders of Jewish religious institutions in France and French-Jewish citizens who settled in Algeria. Throughout the French era, until they regained full independence in 1962, Algerian Muslims jealously guarded their position as an autonomous community, not subject to French law in matters of personal status. The fate of the *muqaddim*, described by Christian writers as "king of the Jews," was similar to that of the rabbinical courts. On Nov. 16, 1830, Jacob Bacri was appointed *muqqadim* and empowered to supervise all Jews in town, execute judgments, and collect taxes. In the following year he was given three advisers, and after him Aaron Muʾatti was appointed head of the Jews. However, after five years the title of the *muqaddim* was changed to deputy mayor for Jewish affairs; he became a French official, drawing a salary from the government.

The head of Tunisian Jewry, known as the *qaʾid*, was in a very strong position, since as tax collector and toll gatherer – and, in the capital Tunis, treasurer as well – he played an important part in the bey's administration. H.J.D. Azulai, in his *Maʿagal Tov* (1921–34), gives some idea of the wealth, prestige, and autocratic ways of the *qāʾid* Joshua Tanūjī. Some of the other *qāʾids* he mentions belong to the class which ruled supreme in both religious and wordly affairs of the community. The dependence of the office of the *qāʾid* on the bey sometimes resulted in its becoming hereditary. Mutually independent sources attest that the powers of the *qāʾid* as head of the community were very broad and that all matters of religious leadership, in addition to the management of communal property, were decided by him. These powers were not appreciably curtailed until the second half of the 19th century. From personal observation D. Cazès (*Essai sur l'histoire des Israélites de Tunisie*, 1888) states that the *qāʾid* represented the government authorities vis-à-vis the Jews, and that he proposed to the authorities, or himself appointed, the *dayyanim*, the seven notables, the men in charge of certain departments, the notaries, and the scribes. His signature appears first on official documents, even before that of the chief rabbi. Nothing was done in the community without his consent because he had a veto on all decisions of the *dayyanim*, the seven notables, and the leaders of the community. Every document, whether public or private, had to bear his signature or the notification that it had been drawn up with consent. The *qāʾid* was also in charge of the administration of justice among the Jews, on whom he might impose fines, whipping, and imprisonment. The city authorities were obliged to lend him their assistance, and the chief of police had to carry out his judgments. A decree of 1876 concerning the organization of the Tunis Relief and Charity Fund (the official designation of the body in Tunisia which carried out the functions of the community in the spheres of religious services and social welfare) prescribed that it should be headed by the *qāʾid* and that the chief rabbis should be subordinate to him. After long negotiations between subjects of the bey and persons under consular protection – on the distribution of the income of the abattoir among the needy – it was agreed that the committee dealing with the distribution should be headed by the *qāʾid*. A decree of the bey confirmed the agreement, of which one copy was delivered to the *qāʾid* and another to the French consul. Decrees issued by the bey up to 1898 concerning various communal matters still reflect the status and powers of the *qāʾid* as they evolved during the course of many generations. Only after the death of R. Elie Borgel in 1898 did a fundamental change occur in the powers of the head of the community. A decree of 1899 concerning the organization of the Tunis Relief and Charity

Fund mentions (in article 4) a president elected annually by the members of the board.

It may be assumed that, as in all the other eastern countries, the community of Tripoli (North Africa) was headed by a *sheikh* (an elder or chief), whose functions resembled those of the *qāʾid* in Tunisia. Nevertheless, it is not known if the *sheikh* performed the same functions – financial agent and treasurer – at the court of the pasha in Tripoli as the *qāʾid* in Tunisia or the *muqaddim* in Algeria. The only source of information is that supplied by a late chronicler on the basis of ancient material. According to him, the names of the leaders of the Jews, "both the new ones and the old ones," were not mentioned with the names of the *dayyanim* in the prayer for the dead on the eve of the Day of Atonement because they were not scholars. "Only a rich man, who was not a scholar, was elected to be the intermediary between the Jews and the government, and on his order the *bet din* would inflict the punishment of whipping on evildoers. He would, moreover, send to prison those who refused to accept his judgment or failed to pay their share of the poll tax." In another instance he notes: "The *sheikh* collects the money of the poll tax from the Jews for transmission to the government treasury. He receives no remuneration for this labor except that he is exempt from poll tax. Nevertheless, people go to enormous expense in order to obtain that office because they are ambitious, for the *sheikh* imposes and releases from imprisonment; he also has a fixed place among the governors in the council chamber where he is consulted like the other notables, and in most cases his advice is taken." The creation of the post of *ḥakham bashi* in the second half of the 19th century no doubt impaired the powers of the *sheikh* and lowered the latter's prestige with the authorities. From then onward the *ḥakham bashi* was recognized as the intermediary between local Jewry and the provincial governor and his assistants.

The duties of the recognized leaders of the community in the Maghreb, especially those of the *qāʾid* and *muqaddim*, were not easy. There is reliable evidence that these leaders included men of high moral caliber, anxious to be of service to their brethren. As regards those accused of abusing their position, it should be remembered that all communal leaders in these countries – especially in Algeria – were agents of the local rulers, in whose name and for whose benefit they engaged in a variety of dealings, sometimes dubious. All were the first target of the anger of the ruler or of incited mobs who held them responsible for every injustice in connection with taxes and toll duties, farming of government monopolies (*iltizam*), and various transactions with foreign states at the expense of the populations; particularly shocking was the fate of the *muqaddimūn* of the Busnach-Bacri family in the early 19th century (see *Bacri; *Busnach). Moreover, their position in relation to their coreligionists was not an easy one. They were responsible for the collection of the poll tax, whether it was imposed on each individual separately or whether an aggregate amount was fixed for the community, leaving it to the latter's representatives to apportion it among its members. They also had to ensure the payment of every fine or special charge the ruler saw fit to collect from the Jews. To protect themselves against serious personal loss, they made the community promise in writing to bear those disbursements. It was, of course, an unpleasant duty to have to impose internal taxes to finance the requirements of the community, although the necessary means of enforcement were available. The commonest tax of this kind was the *gabella*, an excise duty on meat, wine, etc. In Tripolitania this name was given to an internal tax (at the rate of 2–3 per mil) on imported goods. This latter impost, known also as *khābā*, served to maintain children of destitute parents at religious schools.

The wide jurisdiction of the secular authority was an outstanding feature of the Maghreb. The secular functionary appointed the *dayyanim*, or if they were elected by the people confirmed their election (incidentally, the people's right to elect *dayyanim* was limited, since according to hallowed tradition religious offices were hereditary and were limited to a few families). The *nagid* in Morocco and the holders of similar positions in the other Maghreb countries were responsible for conducting the community's relationships with the outside world.

THE OTTOMAN EMPIRE. Very little is known about the religious and secular administration of the *Mustaʿrab Jewish population in the East. Ottoman rule was extended over the Near East and Europe in the 15th and the 16th centuries. According to Sambari, Sultan Muhammad the Conqueror (1451–81) assigned three seats on his imperial divan (council) to official religious functionaries: the mufti, the patriarch, and the rabbi. The aged rabbi Moses *Capsali was appointed head of the Jews for certain purposes. Sambari continues: "And Sultan Muhammad imposed taxes on the whole country in the manner of kings: *kharāj*, *ʿawarīd*, and *rab aqchesi*. And all the Jewish communities were assessed for tax by the said rabbi, and it was collected by him and delivered to the treasury. And the sultan loved all the Jews" (Neubauer, Chronicles, vol. 1, 138). The *rab aqchesi* tax ("the rabbi's asper"), i.e., the tax of one "white" (*lavan*, silver coin) for the right to have a rabbi, contains an indirect recognition of the autonomous nature of Jewish organization. Its imposition is confirmed by Turkish archival sources.

Conforte, a contemporary of Sambari, also states that Moses Capsali was appointed rabbi and chief of the *dayyanim* of Constantinople: "He was rabbi of the *Romaniots, who were resident in the city in the time of the Greeks, and exercised jurisdiction over all Jews of the city by the sultan's command. And the *ḥakhamim* of the city in his generation were all submissive to him because of fear of the authorities and they had no power to speak to him about any matter or any decision he gave that did not commend itself to them" (*Kore ha-Dorot*, ed. Cassel, 28b). The common assertion in historical works and encyclopedias, that Capsali was appointed *ḥakham bashi*, resulted from a combination of these two reports. The title *ḥakham bashi* is not mentioned in any form in the Hebrew

or Turkish sources of that period, and it is nowhere stated that Capsali was given jurisdiction over all Jews in the Ottoman Empire and appointed chief of all *dayyanim* and *ḥakhamim*. Thus, Sambari and Conforte cannot be quoted as evidence for the early establishment of the office of a *ḥakham bashi* for the whole empire. The silence cannot be accidental, for the same situation is reflected in the sources dealing with Elijah *Mizraḥi, who succeeded Moses Capsali after his death. Sambari exaggerates when he speaks of the three seats reserved on the imperial divan for the representatives of the three religions. In point of fact, even the *shaikh al-Islam* ("grand mufti of the empire"), who was equal in rank to the grand vizier, was not a member of the divan. Nevertheless, it seems that the Orthodox patriarch was given the honorary rank of "pasha with the rank of vizier," and it may be assumed that Capsali was granted similar status; at any rate, Sambari, drawing on the analogy of the Christian representative, believed this. Sambari's statement that Capsali was the recognized head of the then small Jewish community and was responsible to the authorities for its affairs and especially for the payment of taxes appears to be a true reflection of events.

After the capture of Constantinople (1453), Muhammad the Conqueror granted recognition to the *millet (the religious communal organizations of non-Muslims in his state) and conferred broad powers on its religious leaders. This does not contradict the assumption that a Jewish communal organization was already in existence for some time in the areas occupied by the Turks in the 14th and early 15th century. Capsali's wide and exclusive powers as chief of the *dayyanim* met with opposition from the Ashkenazi and Italian rabbis in Constantinople, who requested the intervention of a noted rabbi in Italy in the matter of a judgment which they believed erroneous. (This took place considerably earlier than the expulsion from Spain.) According to the sources and his own testimony, Capsali's successor, Elijah Mizraḥi (d. 1526), had jurisdiction "over the whole city of Kostantina" for more than 40 years.

The settlement in Greater Constantinople of *ḥakhamim* expelled from Spain – who were unwilling to accept Mizraḥi's authority – led to tension between Romaniots and Sephardim, who also did not recognize the manner of authorizing rabbis which was practiced in Constantinople. Since the Spanish *ḥakhamim* refused to recognize the leading Romaniot rabbi's claim to be the chief *dayyan* of Constantinople, the position lapsed after Mizraḥi's death.

The Jewish settlements in the cities and towns of the Muslim Middle East were far from being united communities. In accordance with old traditions, every new wave of settlers continued its separate life in its own *kahal*. In North Africa the newcomers from Majorca and Catalonia (1391), Spain and Portugal (1492–97), and Leghorn (17th–18th centuries) had their own synagogues and charitable institutions (see *Gorni, Tuansa, *Maghrebi). In the East the situation was even more complicated. Besides the Musta'rabs, Maghrebis, Romaniots, Italians, and Ashkenazim, there were numerous separate congregations in the large cities of the Ottoman Empire, e.g., in Safed (1555–56) 12 congregations and in Istanbul (16th century) almost 40. In Salonika the situation was yet more complex: some congregations formed by groups who came from the same city or country were divided into sections and factions – majority and minority – which quarreled, seceded, built new congregations, and so on. Every congregation, small or large, had its own rabbi, synagogue, charity funds, and burial society; each had an independent status, was a "town" in and of itself and no rabbi or lay leader was permitted to interfere with the prerogatives of another. Although unity was achieved when a common danger faced the whole community, or funds had to be raised to redeem captives, maintain the Jews in Ereẓ Israel, etc., the rivalries between the congregations weakened the community. The situation lasted for centuries, continuing after the introduction of reforms in the organization of the millet in the 19th century, and surviving into the mid-20th century. After a prolonged delay caused by friction within the community, the draft of the "organizational regulations of the rabbinate" (*ḥakham-khāne nīzām nāmesi*) was submitted (1864) to the Ottoman authorities in Constantinople. The confirmation took place in May 1865. The regulations fall into five sections: (1) the status of the *ḥakham bashi* as the head of Jewry in the empire; his qualifications and election (clauses 1–4); (2) his powers and his replacement in the event of resignation or removal from office (clauses 5–15); (3) The general committee (*majlis 'umūmi*), its election, and powers. It consisted of 80 members, presided over by the permanent deputy of the *ḥakham bashi*. Sixty secular members were elected by the inhabitants of Constantinople according to city districts, and they, in turn, elected 20 rabbinical members. These 80 members elected the seven rabbis who formed the spiritual committee (*majlis rūḥānī*) and the nine members of the secular committee (*majlis jismānī*). The elections required the approval of the Sublime Porte. At the time of the election of the *ḥakham bashi* for the empire, the general committee was temporarily reinforced by 40 members summoned from eight districts, where each officiated as provincial *ḥakham bashi* (from Adrianople, Brusa, Izmir (Smyrna), Salonika, Baghdad, Cairo, Alexandria, and Jerusalem; clauses 16–19). It should be noted that clause 16 failed to prescribe the committee's term of office; only in 1910 was it fixed at ten years. (4) The powers of the spiritual committee: the seven rabbis were to concern themselves with religious and other matters referred to them by the *ḥakham bashi*; the committee was not to prevent the publication of books or the spread of science and art unless it was prejudicial to the government, the community, or religion; it must supervise the activities of the city-district rabbis (*mara de-atra*) who acted under its instructions; it was headed by a president, who was also the head of the rabbinical court; he had two deputies (clauses 20–38). (5) The powers of the secular committee as regards the management of communal affairs and the carrying into effect of government orders: it apportioned the communal impost and ensured the integrity of the property of orphans and endowments (clauses 39–48). The regulations remained in force for the duration of

the Ottoman Empire; under the republic they lapsed, without being officially replaced.

[Haïm Z'ew Hirschberg]

WESTERN EUROPE. At the same time the communities of the north – France, Germany, England, and northern Italy, which had been under Christian rule and out of touch with Muslim-ruled Babylonia – became the focus of experiment in community living. Lacking the solid basis of long experience, they had to build from the foundation up. Great debates ensued among the handful of renowned scholars who valiantly strove to find precedents in talmudic law for solving communal problems. As they found little to go by in the Talmud, considerable activity ensued. Most influential were the *synods of scholars and leading laymen convoked mainly in Cologne on days when the fairs were held. The influential scholars were *Gershom b. Judah, *Meshullam b. Kalonymus, Joseph b. Samuel *Bonfils (*Tov-Elem*), and *Rashi and his followers. It was understood that the final decision on their *takkanot* would rest with the local community. Justice, too, was localized by the *ḥerem bet din*. Finally, the principle was accepted that the elders were empowered to enforce communal decisions. The legality of a majority forcing its will upon a minority elicited much debate. Jacob b. Meir *Tam disagreed with it (c. 1150). The right to vote was granted only to *meliores* (*mehugganim*, "respected persons").

More specifically, the scholars in France and Germany tended to vest considerable powers in the local community and to define the rights of the individual. In religious matters the authority of the community remained undisputed. To prevent breaches of Jewish law its authority extended beyond its borders to the neighboring communities. An individual had the right of appealing to a higher court in private cases, or of suing his own community. In general, however, the community remained independent of outside interference. Each community was conceived as the Jewish people in miniature, having sovereign rights, no longer dependent on Palestinian ordination or exilarchic-geonic appointment. *Meir b. Baruch of Rothenburg, the 13th-century talmudic scholar in Germany, further elaborated the principles of community government in an intricate array of judgments. A majority could enact regulations on religious or public matters, in pursuit of their primary aim of strengthening the authority of the community over the individual.

The autonomous Jewish community in Europe developed during the period of the growth of towns. However, when burghers succeeded in obtaining for themselves supremacy as members of a *cummunitas*, of a *coniuratio* of autonomous rule, they swore an annual oath of allegiance within the community. The Jews, however, did not follow this practice since each of them was assumed to be bound by the covenant at Sinai to follow God's law and community regulations.

While the Central European communities were rather small in the 13th to 15th centuries and needed only the guidance of one scholar or of a few leaders, in the following three centuries they expanded considerably, thereby requiring a more complex structure of public institutions. Social stratification within the community based on wealth and learning also became more differentiated.

SPAIN AND RESETTLEMENT COUNTRIES. Until the persecutions of 1391 the struggle between the higher and lower social echelons was pronounced; frequent changes of leadership resulted, but in spite of this one family might rule in one locality for a century or more. Strife developed over methods of allocating taxes, the elite preferring the officers of the *kahal* to act as assessors, and the masses opting for each taxpayer's declaring his income. Sporadically contending factions had to resort to the king or governmental authorities to resolve their conflict. In general, the Spanish *kahal* was engaged in the broad function of regulating the social, economic, intellectual, and religious life of local communities.

Until the expulsion from Spain there was only one *kahal* in a community, but a new phenomenon developed in the countries of resettlement. In Holland, France, and England the Spanish refugees formed a separate congregation of Sephardi Jews if there was already an Ashkenazi community in existence, and centered their communal affairs on it.

[Isaac Levitats]

EASTERN EUROPE. The communities of Poland-Lithuania followed a way of life and experienced problems which were a kind of amalgam of Ashkenazi and Sephardi patterns (see *Councils of the Lands). Medieval forms of Jewish community organization persisted far into modern times in those countries where emancipation was delayed. In Russia the autonomous institutions of the *kahal* remained vigorous despite a tyrannical absolutist government which sought to harness it in the service of its oppressive designs. In addition to the usual burdens of collecting taxes, the *kahal* was charged with providing recruits for military service. Internally the age-old traditions of self-government retained their vitality into the 20th century. Even after the *kahal* was officially abolished by the government, the associations carried on the time-honored services. While it lasted, the *kahal* followed the procedures inherited from earlier ages, with the system of indirect elections from among the taxpayers continuing the oligarchical rule of the medieval community. The control of religious behavior and of the economic and social life of the individual by the *kahal* was powerful: the judiciary was firmly in Jewish hands and resort to non-Jewish courts was rare indeed. Many of these traditions survived up to the Revolution of 1917.

MODERN VARIATIONS

Introduction

By the middle of the 18th century signs of decline and disintegration of the autonomous Jewish community became evident. The central agencies gradually dissolved. In Germany the Jewish communities were increasingly controlled by the

state (see *_Landesjudenschaften_*). The *kahal* in Russia was officially abolished in 1844. Internally there was economic ruin, oligarchic mismanagement, class struggle, rationalist enlightenment, and judicial independence of the individual. The communities had amassed stupendous debts by deficit financing which kept transferring fiscal burdens to coming generations. Wealthy Jews gained exemption from taxes by special state privileges; the central and regional boards shifted assessments onto provincial communities without affording them due representation; tax burdens became unbearable. The small urban unit with its intimate knowledge of everyone's finances was gradually replaced by the anonymity of the larger city. The imposition of heavy responsibilities on lay leaders by governments and the inherent social structure fostered oligarchic oppression. Emergent social consciousness sharpened the class struggle of the poor and the guilds. Individualistic tendencies militated against the social control of the *kahal*. The Haskalah movement in Central and Eastern Europe became religiously iconoclastic and anti-traditional, launching its most venomous onslaught on "the forces of darkness" in control of the *kahal* and on its despotic rule. The increasing complexity of business relations after the Industrial Revolution did away with the simpler transactions of the pre-capitalist era when Jewish civil law was adequate for judges to make decisions based on talmudic law. The old ban against gentile courts was increasingly disregarded; the Jewish civil judiciary shrank. Finally, the force of religious values, which underpinned medieval social control, gave way to secularist and humanist attitudes.

These factors must be viewed in the light of the emergence of the united modern state in central and southern Europe on the one hand, and the economic and political decline of Poland (which ceased to exist as an independent state in 1795) and the Ottoman Empire on the other. The French Revolution dissolved the estates and the corporations; in their stead the state dealt directly with the individual citizen in matters of taxes and other civic responsibilities. Count *Clermont-Tonnerre, a liberal deputy and friend of the Jews, stated in 1789 in the French National Assembly: "To the Jews as a nation we owe nothing; to the Jews as human beings we give everything." All this implied the dissolution of all communal, corporate, self-governing institutions, to be replaced by an emancipated, equal citizenry. Individualism was further stimulated by early capitalism. Competition in new methods of production and distribution, private initiative, and the end of the guild system and of economic regimentation dissolved the social control of self-governing groups. The individual Jew was catapulted into gentile society, where his own institutions were of little avail. Enlightened absolutism in German-speaking areas further dissolved the corporative structures. In some countries, rabbis and religious functionaries became state officials. The ghetto community, as one of the autonomous corporate bodies, fell under the heavy blows of state control. The process of disintegration of the *kehillah* was long and tortuous; its demise was nevertheless inevitable under modern conditions.

Western Europe

In modern times, until World War II, Western Europe followed the consistorial (see *Consistory) pattern established by Napoleon in France and her conquered territories. In Paris there were Orthodox, Liberal, and Sephardi congregations. The East European Jews had their own Federation of Societies. In the Netherlands, the consistory of 1808 was replaced in 1814 by the former Ashkenazi and Sephardi organizations. In 1817 a Central Commission on Jewish Affairs was established, consisting of seven members, to work with local rabbis and elders, but it was abolished in 1848 by the new constitution which offered churches state subventions. In 1870 a new central commission was formed for ten districts, each with its independent rabbi and government subsidies. In 1917 their rights were narrowed. In Belgium the consistorial system existed from the days of Napoleon and was renewed in 1835 when membership in the community was made compulsory. In 1873 the state offered subsidies to Jewish communities. Membership was made voluntary in 1892. In 1933 a Council of Jewish Organizations was established to coordinate nationally both religious and secular institutions.

Under French occupation during the Napoleonic wars Italy introduced the consistorial system. When the old order was reestablished, it varied in the several states. In united Italy central regulation ensued. The law of 1857 applying to Piedmont and later extended to most of the country provided for community membership in the place of domicile, unless otherwise declared. The community's religious and educational activities were tax-supported. In 1911 the Jewish communities were united in the Consorzio fra le Comunità Israelitiche Italiane. Under Fascist rule, by a law of 1931, membership was made compulsory, and the central union was guided by a consultative committee of three rabbis.

The 24 Jewish communities of Switzerland organized in 1904 the Union of Swiss Jewish Communities to regulate their external and internal affairs. In Great Britain there were several national synagogue bodies. One body, largely based on synagogue representation, served as the official voice of British Jews in external matters – the *Board of Deputies of British Jews founded in 1760. The Ashkenazi congregations clustered around the *United Synagogue headed by the chief rabbi. Other congregations were affiliated with the Federation of Synagogues, the Union of Orthodox Hebrew Congregations, and Liberal, Reform, and Spanish-Portuguese congregations. There was also a Jewish Board of Guardians and welfare. In the British Commonwealth, Canada has a central representative agency, the *Canadian Jewish Congress. South Africa, too, has a Board of Deputies and a Board of Jewish Education. Australia has an Executive Council of Australian Jewry as well as State Boards of Deputies.

Central Europe

The Jewish communities of Central Europe, especially in Germany, were highly organized and enjoyed much power. Each settlement had only one community organization to which

each Jewish inhabitant belonged and paid internal taxes. The government recognized this organization by law, and in some cases helped subsidize its activities. Unions or federations of local units were formed for entire territories. The legal status of the Jewish community in Prussia was defined by a law of 1750 which made affiliation and taxation compulsory and under state control. In 1876 resignation from the community was permitted without renunciation of the Jewish faith. The Weimar constitution of 1919 relaxed government control, thus offering full autonomy to the community. Election procedures were made democratic, giving the franchise to women and providing for proportional representation. In 1921 a territorial union of communities (Preussischer Landesverband juedischer Gemeinden) was granted public legal status. Its function was to further religious life, to help financially weak communities, and to act as liaison with the government. Bavaria, Saxony, and Wuerttemberg also formed such unions. In Baden, where they were governed by a supreme council, the Jews had the power to tax members for religious needs.

In Austria, which did not have a uniform law until 1890, the situation varied. In Galicia the rabbis contested the right of laymen to control community life. Bohemia boasted a central representation of Jews, the Landesjudenschaft, while in Moravia 52 autonomous communities had their separate municipal administration and police. In the German-speaking provinces of Austria proper, mainly Vienna, Jews were empowered in 1792 to collect *Buechelgeld* for religious purposes. The law of 1890, which regulated the life of all the communities in the empire and remained in force in the republic after World War I, provided for compulsory membership and taxation, and one *kahal* in each locality to control all Jewish public activities.

In Hungary the medieval form of organization of the community was left undisturbed by *Joseph II's decree of 1783 regulating Jewish life. Until 1871 there was a struggle between Liberal and Orthodox leaders for control of the community, finally resolved by government approval of a threefold division of independent community unions consisting of Liberal, Orthodox, and "status quo," that is, those who were not involved in the struggle. Czechoslovak Jewry formed a supreme Council of the Federations of Jewish Communities in Bohemia, Moravia, and Silesia, which were later governed by the Austrian law of 1890. In the eastern provinces Slovakia had both *Neolog and Orthodox communities, but Carpathian Ruthenia was entirely Orthodox. In 1920 a state-recognized Organization of Orthodox Jewish Communities was established.

Eastern Europe

In Eastern Europe the old forms of community government were the most tenacious. As in most of Europe they persisted despite adverse government legislation. After World War I the concept of *minority rights was briefly favored and a number of countries helped maintain Jewish schools. Secularization of Jewish life produced a variety of political parties, each seeking to gain a decisive voice in communal affairs. Despite oppressive government legislation in Russia, Jewish community life retained its vigor into the 20th century. When the *kahal* was abolished (1844), the government handed over Jewish affairs to the police and the municipalities; yet the Jewish communities were still saddled with the two most burdensome responsibilities – state tax collecting and army recruiting (see *Cantonists). In 1835, government-appointed rabbis, who did not have to be ordained, were introduced to take charge of registration and other official requirements. In 1917 democratic Jewish communities were established by the provisional government. When the Bolsheviks seized power they put an end to Jewish community organization and formed a "Jewish commissariat," only to dissolve it in 1923. The *Yevsektsiya, the Jewish section of the Communist Party, was formed in 1918 and lasted until 1930. It helped suppress all traditional Jewish institutions and sought to develop a Yiddish press and Yiddish-speaking schools. In the meantime a committee (the Yidgezkom), supported by the *American Jewish Joint Distribution Committee, coordinated the vast relief activities of a number of previously existing social welfare organizations. In the short-lived, quasi-independent Ukraine wide autonomy was projected in 1917 with a minister of Jewish affairs and a national council. Bolshevik occupation put an end to these efforts.

Congress Poland (see *Poland) abolished the *kahal* in 1822, replacing it by a synagogue board (*Dozer boznicy*) consisting of a rabbi, his assistant, and three elders, whose task was limited to religion and to social welfare. After World War I the German patterns of community government were established in large parts of the new Polish state. Taxes were levied, and religious and other needs were provided for. In the sphere of social welfare the Joint Distribution Committee played an important role. Jewry became divided into factions – Orthodox, Zionist, *Po'alei Zion, *Bund, and others – each vying for a share of community control.

In the Baltic countries, the Lithuanian republic established in 1918 a Ministry of Jewish Affairs and a National Council to take charge of religion, education, social welfare, and other autonomous Jewish affairs. In 1924 these national agencies were dissolved. Autonomy granted in Latvia in 1919 extended only to Hebrew and Yiddish schools, often subsidized from municipal taxes, with a Jewish department in the Ministry of Education. In Estonia the National Cultural Autonomy Act of 1925 was the most liberal. Jewish schools received subsidies from state and municipal treasuries.

The Balkan countries exhibited a variety of attitudes to Jewish group existence. Some extended wide autonomy, especially under the provisions for minority rights; others curtailed it. Under the *ḥakham bashi*, until the abolition of the caliphate and the separation of church and state, Turkish Jewry had considerable autonomy and standing in the imperial court. In 1923 Turkey refused to honor the minority rights promised in the Treaty of Lausanne and Jewish autonomy was restricted to purely religious matters. In Greece Jews were permitted to levy compulsory taxation and were granted government sub-

sidies. The presence in some areas of local courts backed by the authorities and of central democratically elected bodies was another outstanding feature.

Romania had largely voluntary associations until 1928, when Jews were required to belong to the local community, except for the Sephardim in Moldavia and Walachia and the Orthodox in Transylvania. The government contributed toward Jewish institutions. The chief rabbi represented the Jews in the senate. In Yugoslavia conditions differed according to regions. Croatian and Slavonian communities dealt with religious and charitable affairs. In Zagreb an executive committee of 36 controlled the synagogues and other institutions. In Serbia, Macedonia, and Bosnia there were chief rabbis and religious-educational activities. In 1929 a law united the communities of Yugoslavia and offered subventions. Control was in the hands of a council. The chief rabbi of Belgrade was accorded the same rank as a bishop and had a seat in the senate. Wider autonomy was enjoyed by Bulgarian Jewry. Even before 1920, when national minority rights were granted to them, the Jews could impose taxes; their chief rabbi was paid his salary by the state. Thereafter each community was governed by a council; the larger communities had religious courts whose decisions were executed by the authorities. Centrally they were governed by a legislative congress and an executive, democratically elected Consistoire Central.

[Isaac Levitats]

Developments in North Africa from the 19th Century

In Tunisia, owing to the influence of Algeria to the west, changes were introduced in the powers and structure of Jewish religious courts even before the country became a French protectorate. The bey, Muhammad al-Ṣādiq, who organized civil courts for all his subjects, restricted the authority of the rabbinical courts to matters of personal status. In 1898 he ordered the composition and jurisdiction of the Jewish religious court in Tunis to be reorganized. The new composition of the court was as follows: the chief rabbi of Tunisia, honorary president; one rabbi, presiding judge; two *dayyanim*; two deputy *dayyanim*; and one clerk. The sessions of the court were held in public under the chairmanship of the presiding judge, with two *dayyanim* or deputy *dayyanim* as assessors. The jurisdiction of the court was extended over the whole country, and it was possible to bring any matter, from anywhere, directly before it or to appeal to it against a judgment given by a *dayyan* in a provincial town. On the other hand, the court was denied the right to deal with matters concerning the personal status of Algerian Jews, since these were French nationals, or concerning persons under the protection of a foreign state. The salaries of the rabbi, of all the *dayyanim* belonging to the court, and of the clerk were paid from the bey's treasury. The chief rabbi of Tunisia was at first given wide powers over communal organization and religious life. According to the decrees of the bey concerning the organization of the committees of the Caisses de Secours et de Bienfaisance Israélite – the official designation of the Jewish communities in Tunisia – in several provincial towns, the chief rabbi proposed the members of some of them and submitted their financial reports to the prime minister. Elsewhere this right was reserved to the *contrôleur civil*, i.e., the district governor. The chief rabbi granted *kabbalot* (certificates of competency) to ritual slaughterers and licenses of communal notaries. These powers extended over the entire country, except for the towns where they were vested expressly in the local rabbi. The chief rabbi presided over the rabbinical council attached to the chief rabbinate and the examining board for notaries. The rabbinical council set up under a beylical decree of 1922 consisted of six members appointed by the prime minister, on the recommendation of the chief rabbi, for a period of one year (the appointment was renewable). The council was to advise on all religious matters concerning Tunisian Jewry. Its meetings were attended by a government representative, who acted as an observer.

A law promulgated by the president of the Tunisian republic, Ḥabib Bourguiba, in July 1958 dissolved the community council of Tunis. On the same day the Department of Justice summoned eight Jewish notables in order to appoint them as a "Provisional Committee for the Management of the Jewish Religion." The main task of the committee was to prepare elections for the leadership of the religious society, which was to take the place of the Tunis community council. The law provided that "religious societies" of a district should be managed by an administrative council elected by all Jews of either sex of that district who were Tunisian nationals and were above 21 years of age. Every administrative council was to consist of five to 15 members, depending on the size of the society. Each district was to have not more than one religious society, and there might be one society for several districts. The provisional committee, replacing the Caisse de Secours et de Bienfaisance Israélite in the Sfax district, was appointed by the district governor in November, and the one for Gabès in December 1958.

A different development took place in the Jewish community of Algeria, which from 1830 was a part of France. A decisive role was played by the Jews of French nationality who began to stream into the country after the occupation. As mentioned, they did not content themselves with the restriction of the powers of the rabbinical courts and the abolition of the office of *muqaddim*, but wished to organize the community on the model of the consistory, the political and religious body of French Jewry established by Napoleon I and based on the principle of the priority of obligations toward the state. In 1845 the regulations for the organization of the Algerian consistory were published; their functions were defined as (1) to ensure the orderly conduct of communal affairs; (2) to supervise the school attendance of the children; (3) to encourage Jews to engage in useful crafts; and (4) to supervise endowments and charitable funds. After the regulations came into force, consistories were established in Algiers and Oran in 1847 and in Constantine in 1848. A decree issued in 1867 imposed the authority of the Consistoire Central, the supreme religious body of French Jewry, on the three Algerian consisto-

ries. From that time on, and especially after the promulgation of the Crémieux Decree conferring French citizenship on the Jews of the three northern departments of Algeria (Algiers, Oran, and Constantine) in 1870, the status and organization of the Jews inhabiting these areas resembled more and more those of the Jews in France. The *Crémieux Decree did not apply to the military region in the south; consequently, the Jewish communities in Mzab and several other oases retained their traditional structure and organization. This split had an influence on the religious life of Algerian Jewry, which developed along two different paths.

Morocco retained its sovereignty until 1912. The events of World War I slowed down France's military efforts to gain control of the interior and of the south of the country (where the occupation and the subjection of the free tribes were completed only in the mid-1930s). Nevertheless, the French administration drafted two decrees (*ḍahīr*) which were published in May 1918 – in the name of the Moroccan ruler and with the signature of the French high commissioner. One of them dealt with the organization of the Jewish communal courts and the other with the organization of the Jewish communities. At first seven rabbinical courts (*tribunaux*) of first instance, each consisting of three *dayyanim*, were set up in Casablanca, Fez, Mogador, Meknès, Marrakesh, Oujda, and Tangiers. In 1953 a court of this nature began to function also in Rabat. Simultaneously, a High Court of Appeal was established in Rabat with a bench of three: the chief rabbi as president and two judges. The dispersal of the Jewish population over a wide area necessitated the appointment of *rabbins-délégués* for provincial towns where no courts existed. Their powers were less than those of the full-scale courts. During the 1960s, when the Jewish population of Morocco dwindled to one-fifth of its previous size (about 50,000), many communities disappeared completely and numerous posts of *rabbins-délégués* ceased to exist, as did – in 1965 – the High Court of Appeal.

The second decree issued in May 1918 dealt with the organization and powers of Jewish community committees in Moroccan towns. These committees were to consist of the president of the rabbinical court, the *rabbin-délégué*, and notables who were chosen by the grand vizier from a list submitted by the communities and whose number varied according to the size of the Jewish population; in 1945 this choice of notables was replaced, in theory, by the election by secret ballot of candidates from among whom the authorities were to select the members of the committees. The term of office of the members was four years. The functions of the committees were to maintain religious services, to assist the needy, and to administer endowments. A decree promulgated in 1945 established a council of Jewish communities, which had to coordinate the activities of the communities. It consisted of the heads of the various communities and met once a year in Rabat under the chairmanship of a representative of the Directorate of Sherifian Affairs. These meetings dealt with matters of budget, housing, education, and hygiene. The question of permanent representation of the communities was also mooted. In the early 1950s a permanent bureau was set up under a secretary-general. The bureau was to guide the community committees in preparing budgets, operating services, and providing education in *talmud torah* institutions and evening classes. Most of the revenue of the communities came from charges on ritual slaughtering and the sale of *maẓẓot*, as well as from the management of public endowments, which were not many, since most endowments were family ones. The council sent six delegates to the Moroccan (natives) Committee of the Council of Government. It published a four-page monthly under the title *La Voix des Communautés*. Upon the reinstatement of Sultan Muhammad V in 1958 and the rise to power of the nationalist Istiqlāl party, the composition of the community committees was changed by appointing persons acceptable to the ruling group. With this change in policy they lost what little independence and initiative they had possessed and became tools of the government.

[Haïm Z'ew Hirschberg]

United States

U.S. Jewry, with its frequent waves of immigration from a large variety of countries, has launched many and ambitious forms of community organization. Until late in the 19th century these remained for the most part purely local in character. Wherever they settled in sufficient numbers the original Sephardi immigrants to the United States formed burial societies, benevolent and charitable associations, hospitals, synagogues and Hebrew schools, rabbinical courts, etc., all patterned originally on similar institutions in the Old World. The German immigration of the mid-19th century created a parallel series of institutions, as did the large Eastern European immigration of the years 1880–1920. In addition the immigrants from Eastern Europe originated the **Landsmannshaften*, organizations which consisted of members hailing from the same town or region and which offered sick and burial insurance, free loans, poor relief, a place to pray, and perhaps, above all, conviviality and a sense of belonging in the New World. Thus, at the end of the 19th century the American Jewish community was largely composed of a proliferation of local synagogues and organizations, frequently formed along lines of national origin and often duplicating each other's efforts with little or no coordination between them. On a local level the first attempts at centralization began to appear late in the 19th century and continued with increasing scope into the 20th. The first city-wide Jewish welfare federation in America was established in Boston in 1895; the first municipal bureau of Jewish education, in 1910. An attempt under J.L. *Magnes to establish a *kehillah* in New York lasted for about a decade before breaking up. Local YMHAS and YWHAS developed into Jewish community centers offering a wide range of educational, social, and recreational activities in many American cities. In 1970 such local Jewish federations, community councils, and welfare funds, whose function it was to coordinate Jewish communal life and regulate the disbursement of funds to it, existed in one form or another in 300 cities in 43 states in

which were concentrated at least 95% of the Jewish population of the United States. The center of local community life for the average Jewishly active individual, however, continued to be the synagogue. Far from serving exclusively or perhaps even primarily as a place of worship, the synagogue, especially in suburban areas, provided such varied services as Jewish education for children and adults, men's clubs, sisterhoods, youth and sport groups, social service, and catering private social affairs. Organization on a nation-wide level in American Jewish life originated with the German immigration of the mid-19th century. In the course of the 20th century such a consolidation has created an overall hierarchical structure of organization embracing practically every area of American Jewish life. Among the most prominent of such national organizations are the Jewish Community Centers Association (the national coordinating body of community centers, 1917), United Jewish Communities of North America (created out of the Council of Jewish Federation and Welfare Funds (1932), the United Jewish Appeal (1939), both of which went out of existence), and the American Association for Jewish Education (1939). By the second half of the 20th century few local Jewish organizations were not affiliated directly with one or another such national group, a fact that undoubtedly owed much to the general American aptitude for centralized and efficient organization. At the political level the organization of American Jewry remained relatively unstructured, a reflection of the traditional reluctance, if not inability, of the American Jewish community to identify itself as a distinct political bloc. On the whole, those Jewish organizations that have assumed political functions did so originally to defend specifically Jewish rights and interests against discrimination and prejudice both in the United States and abroad. The first organization of this type was the *Board of Delegates of American Israelites (1859–78). It was followed by the American Jewish Committee (1906), which was controlled by a wealthy elite of German Jews. In reaction to it the more representative and militant American Jewish Congress was first established in 1918 and refounded in 1930. Other such national organizations to be formed were the Zionist Organization of America (1897) and many other Zionist bodies, the Anti-Defamation League of B'nai B'rith (1913), and the *Jewish Labor Committee (1934). Conflicting outlooks and ideologies have for the most part restricted these groups' common action, but the national and local agencies concerned with Jewish public affairs and public policy established the National Community Relations Advisory Council (later the National Jewish Community Relations Advisory Council, now the Jewish Council for Public Affairs (1944)). Another body, the Conference of Presidents of Major American Jewish Organizations, established in 1954, serves as a roof organization for 51 national Jewish bodies. The mandate of the Presidents' Conference is to act as a spokesman to the Administration, on behalf of the American Jewish Community, on matters related to Israel. The Conference has issued joint declarations and has lobbied nationally for Jewish interests both at home and abroad, especially in connection with Israel. Since the 1950s many national Jewish bodies have adopted positions on a broad range of issues, of concern to the larger polity, on the public-affairs agenda.

Latin America

The transplantation of Jews with East and Central European backgrounds to Latin America, primarily in the 20th century gave rise to a replica of the European *kehillah* that did not enjoy the same official status but was tacitly recognized by Jews and non-Jews alike as the organized Jewish community. These communities had a distinct public character but were not directly recognized in public law. In the last analysis, they had relied entirely on the voluntary attachment of their members. In sum, they functioned in an environment that provided neither the cultural nor the legal framework for a European-model *kehillah*. Characteristically, the Ashkenazi communities among them, as opposed to the Sephardi communities, emphasized the secular rather than the religious side of Jewish life. Founded in the main by men who considered themselves secularists (regardless of the level of their personal religious observance), they were developed in the mold of secular Diaspora nationalism, a powerful ideology at the time of their creation. However, since the 1960s there has been a new trend, and even the Ashkenazim tend more to emphasize the religious basis of their organization.

The Latin American communities have been relatively successful in their attempt to maintain European patterns primarily because the great social and cultural gap between the Jews and their neighbors in those countries with a large population of Indian origin aided in giving the Jews a self-image as a special and distinct, indeed superior, group, which in turn helped keep them apart in a corporate way as well as individually. This fact has important implications for the character of their community organization. In the first place, while the communities themselves were all founded in the modern era, they are located in essentially homogeneous societies whose social structures originated before the beginning of that period. Moreover, they were founded by people coming for the most part from still-modernizing societies of a different kind in Europe. As a result, assimilation into the host society was far more difficult than in other countries of migration, while, at the same time, the Jewish founders were able to build their institutions upon a far stronger sense of communal self-government than that which prevailed among more emancipated Jews. The community-wide "roof" organizations they have created have thus been able to attract and keep virtually every Jewish organization and affiliated Jew within their structures on a formally voluntary basis, while gaining informal governmental recognition as the "address" of the Jewish community.

The same phenomena also contributed to the dominant pattern of organizing the Jewish immigrants according to their countries of origin. Just as the Jewish immigrants did not assimilate into their host societies, so, too, they did not assimilate among one another, following a pattern not un-

common in pre-Emancipation Jewish history by which Jews who settled in new lands frequently attempted to preserve the special cultural nuances of the lands of their birth. In the course of time, these communities loosely confederated with one another to deal with common problems that emerged in their relations with their environment, i.e., essentially those of immigration, antisemitism, and Israel. At the same time, each country-of-origin community retained substantial, if not complete, autonomy in internal matters and control over its own institutions.

In three of the large Latin American countries (including Argentina and Brazil, the largest), the indigenous federal structures of the countries themselves influenced the Jews to create countrywide confederations based on territorial divisions (officially uniting state or provincial communities which are, in fact, local communities concentrated in the state or provincial capitals). In the other 21, the local federation of the city containing the overwhelming majority of the Jewish population became the countrywide unit, usually with the designation "council of communities." The community councils of the six Central American countries (total Jewish population 5,650) have organized the Federation of Central American Jewish Communities to pool resources and provide common services.

With the revival of open Jewish settlement on the Iberian Peninsula, Jewish communities similar to the "council of communities" took shape in both Spain and Portugal, for many of the same reasons. Similarly, the small Jewish community of Monaco found that same pattern most suitable.

None of the tacitly recognized communal structures has been in existence for more than two generations, and the communities themselves originated no more than three or possibly four generations ago. Most of the smaller ones were in the 1970s entering their second generation, since they were created by the refugees of the 1930s and 1940s. Indeed, all gained substantially as a result of Nazism and the Jews' need to leave Europe before, during, and after World War II. Consequently, many, if not most, were still in the process of developing an appropriate and accepted community constitution.

The great postwar adjustment that has faced the Latin American communities centers on the emergence of a native-born majority in their ranks. This new generation has far less attachment to the "old country" way of life with its ideologies and country-of-origin communities making the whole community structure less relevant to them. Moreover, they are already beginning to assimilate into their own countries of birth, or at least into the local radical movements, in familiar Jewish ways. For them, the *deportivo*, or community recreational center, often seems the most relevant form of Jewish association. On the other hand, the host countries, whose aim is the cultural assimilation of all minorities into a common mold, are not particularly receptive to the perpetuation of communities built on a Diaspora nationalist ideology. At the same time, they are committed, at least theoretically, to guaranteeing full freedom of religion for all legitimate groups, thereby pushing Jews toward at least a formal religious identification in order to maintain their communal identity while conforming to local mores. Both developments are encouraging a trend toward a kind of associational Jewishness in place of the organic pattern of the founding generation. It is not surprising, then, that the organizational structure that at first reflected and then came to reinforce the interests of the founding generation is becoming increasingly obsolete, creating a constitutional crisis of first magnitude in the ranks of organized Latin American Jewry. To the degree that a territorially based communal structure has emerged, with its accompanying substructure of association activities whose participants are drawn in for reasons of interest rather than simply descent, this constitutional crisis is being overcome.

The tacitly recognized community structures of Latin American Jewry have become important forms of Jewish communal organization in modern times, with around 400,000 Jews living within their framework at the outset of the 21st century. Their decline during the last 30 years was provoked by occasional waves of out migration due to economic and political crises, low fertility, and out marriages. They are all located in very unstable environments, which do not necessarily encourage pluralism, although there are signs of greater tolerance in this respect. Consequently, Latin American Jewries are also more closely tied to the State of Israel as a surrogate homeland (*madre patria* is the Spanish term they use) than any others. Their attempt to create a unified communal structure on a voluntary basis under such conditions bears close examination.

COMMUNITY ORGANIZATION SINCE WORLD WAR II

Introduction

Jewish communal organization has undergone many changes since the inception of the Israelite polity somewhere in the Sinai Desert, but none has been more decisive than those which have affected it in the past four centuries, and none more significant than those of the period since the end of World War II. The inauguration of the modern era in the 17th century initiated a process of decorporatization of Jewish communal life that gained momentum in the following two centuries. Jewish corporate autonomy, a feature of Diaspora existence in one form or another since the Babylonian exile, never even took hold in the New World, whose Jewish communities were all established in the modern era. Developments after World War I weakened that kind of autonomy in Europe, where it had been on the wane for two centuries. Only in the Muslim countries did the old forms persist, until the nationalist revolutions of the post–World War II period eliminated them.

The process of decorporatization – perhaps denationalization is a better term – brought with it efforts to redefine Jewish life in Protestant religious terms in Western Europe and North America and in socialist secular ones in Eastern Europe and, somewhat later, in Latin America. In Europe,

Table 1. Total Jewish Population and Its Distribution by Continent (in thousands)

Year	1840		1900		1939		2003	
Continent	Total	%	Total	%	Total	%	Total	%
Europe (incl. Russia)	3,950	87.8	8,900	80.9	9,500	56.8	1,551	12.0
Asia	300	6.7	510	4.6	1,030	6.2	5,138	39.7
Africa	198	4.4	375	3.4	625	3.7	84	0.6
North and South America	50	1.1	1,200	10.9	5,540	33.1	6,071	46.9
Oceania	2	1	15	0.2	33	0.2	107	0.8
Total	4,500	100	11,000	100	16,728	100	12,950	100

the process was promoted both from within the Jewish community and without by Jews seeking wider economic and social opportunities as individuals and by newly nationalistic regimes seeking to establish the state as the primary force in the life of all residents within its boundaries. In the Americas, it came automatically as individual Jews found themselves with the same status and opportunities as other migrants to the New World.

Out of decorporatization came new forms of Jewish communal organization on the countrywide and local levels: (1) the consistory of post-revolutionary France (which spread to the other countries within the French sphere of influence in Europe), an attempt to create a Jewish "church" structure parallel to that of the French Protestant Church; (2) the 19th-century Central European *kehillah*, essentially a ritual and social agency chartered and regulated by the secular government as a means of registering all Jews and binding them to some "religious" grouping; (3) the united congregational pattern of England and her overseas colonies and dominions, whereby Jews voluntarily organized synagogues which then banded together to create a board to represent Jewish interests to the host country; (4) the radically individualistic organizational pattern of the United States, whereby individual Jews banded together locally (and sometimes nationally) to create whatever kind of Jewish association they wished without any kind of supralocal umbrella organization even for external representation; and, early in the 20th century, (5) separate communal associations based on the *Landsmannshaft* principle, which became the basis for voluntary affiliation of the Jewish immigrants to Latin America. The common denominator of all these different forms was their limited scope and increasingly voluntary character.

While these organizational changes were taking shape, a two-pronged demographic shift of great importance began. In the first place, the live birth and survival rate among Jews rose rapidly, causing the number of Jews in the world to soar. In the second, the Jews began to migrate at an accelerating rate to the lands on the Western world's great frontier: the Western Hemisphere and southern Africa and Australia in particular, but also, in smaller numbers, to east Asia, initiating a shift in the balance of Jewish settlement in the world. Finally, the modern era saw Jewish resettlement of the Land of Israel. The first to go to the land as founders of entirely new settlements began to arrive in the 17th century and continued regularly thereafter, pioneering new communities of a traditional character within the framework of the Ottoman Empire's millet system. They were followed, in due course, by the Zionist pioneers who created new forms of communal life, beginning in the late 19th century as part of the last stage of the modern transformation of the Jewish people.

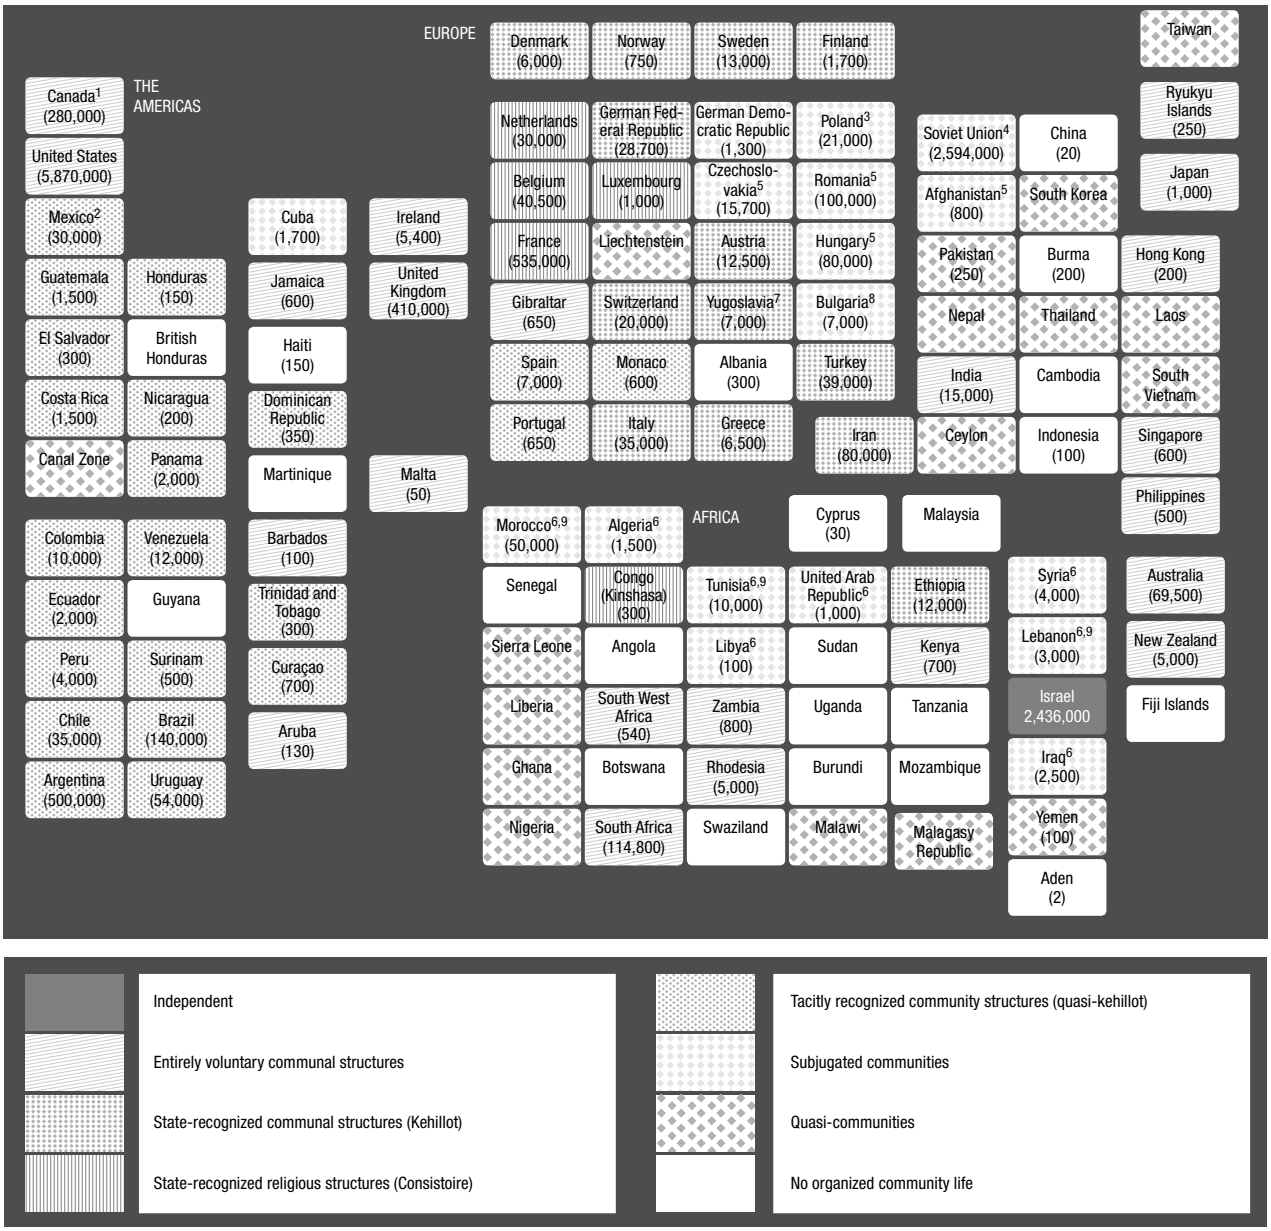
World War II marked the culmination of all the trends and tendencies of the modern era and the end of the era itself for all of mankind. For the Jewish people, the Holocaust and the establishment of the State of Israel were the pair of decisive events that marked the crossing of the watershed into the "postmodern" world. In the process, the entire basis of the Jewish polity was radically changed; the locus of Jewish life shifted and virtually every organized Jewish community was reconstituted in some significant way.

The Jewish world that greeted the new State was no longer an expanding one which was gaining population even in the face of "normal" attrition through intermarriage and assimilation. Quite to the contrary, it was a decimated one (even worse – for decimated implies the loss of one in ten; the Jews lost one in three) whose very physical survival had been in grave jeopardy and whose rate of loss from defections came close to equaling its birthrate. Moreover, the traditional strongholds of Jewish communal life in Europe (which were

Table 2. World Jewish Communities by Population, 2003

Country	Jewish Population (thousands)	Percent of Total Jewish Population
1. United States	5,300,000	40.9
2. Israel	5,094,000	39.3
3. France	498,000	3.8
4. Canada	370,500	2.9
5. United Kingdom	300,000	2.3
6. Russia	252,000	1.9
7. Argentina	187,000	1.4
8. Germany	108,000	0.8
9. Australia	100,000	0.8
10. Brazil	97,000	0.7
11. Ukraine	95,000	0.7
12. South Africa	75,000	0.6
13. Hungary	50,000	0.4
14. Mexico	40,000	0.3
15. Belgium	40,000	0.2
Total	12,606,500	97.0

Table 3. Geographic Arrangement of Countries Showing Type of Community Organization in Early Postwar Period
Numbers refer to Jewish populations in 1968



1. The Canadian Jewish Congress should be viewed as a Board of Deputies with a North American name.
2. Though Mexico is included among the neo-kehillah communities of Latin America, its lack of any overall structure uniting its region-of-origin communities in even the strictly formal sense really placed it somewhere between the common Latin American model and the pattern of the United States.
3. Poland was rapidly becoming a remnant community.
4. There was no organized Jewish life in the Soviet Union, except for services in a few synagogues.
5. The extent to which the Jewish communities of Czechoslovakia, Hungary, and Romania were actually subjugated varied from time to time but the basic fact of their total dependence upon the decisions of the Communist leadership placed them in this category. All were officially organized as modern keillot.
6. All those communities were formally traditional kehillot.
7. Though in part subject to the condition of the modern subjugated communities, Yugoslavian Jewry essentially perpetuated the kehillah pattern with formal government recognition.
8. Officially, Bulgarian Jewry was organized in a consistoire.
9. Lebanon, Morocco, and Tunisia did not officially restrict Jewish community life but in fact the communities were closely regulated.

Table 4. Early Postwar Changes in Continental Jewish Communities

Country	
Albania	Disappeared as an organized community after the Communist takeover.
Austria	Reconstructed and reconstituted with a substantially different population consisting, in the main, of World War II refugees concentrated in Vienna.
Belgium	Reconstructed and reconstituted as a consequence of a significant influx of Eastern European refugees. Brussels and Antwerp are the two major communities.
Bulgaria	Limited reconstruction after extensive emigration to the newly established State of Israel.
Czechoslovakia	Partially reconstructed and reconstituted under the Communist regime. Emigration increased after 1968.
Denmark	Reconstruction along pre-war lines with the return of the pre-war Jewish population.
Finland	Reconstituted and somewhat enlarged by the addition of a refugee population.
France	Reconstructed and reconstituted with a substantially new population from Eastern Europe immediately after World War II and subsequently further reconstituted in the wake of the North African influx of the early 1960s. Jewish population formerly concentrated in Paris and a few other major cities is now spread throughout the country to an extent unequaled since the Middle Ages.
Germany (Federal Republic)	Reconstructed and reconstituted with substantially different population including Eastern European refugees and "repatriates."
Gibraltar	No significant constitutional change or population shift.
Greece	Partially reconstructed and reconstituted around remnant population after World War II. Center of Jewish life moved from Salonika to Athens.
Hungary	Underwent partial reconstruction and limited reconstitution under the Communist regime. Flight of refugees in 1956 reduced the Jewish population somewhat but the community remains one of the largest and strongest in Eastern Europe.
Italy	Partially reconstructed after formal restoration of pre-war constitution. Jewish life divided between Rome and northern Italian communities.
Liechtenstein	Jewish community slowly disappeared through emigration.
Luxemburg	Reconstructed and reconstituted with little change in scope of communal activity.
Malta	No significant change; some population decline.
Monaco	Primarily a refugee community organized during and after World War II.
Netherlands	Partially reconstructed and reconstituted with remnant population as a far weaker community than before the war. Ashkenazi community is numerically dominant.
Norway	Reconstructed with addition of some refugees.
Poland	Extremely limited reconstruction under Communists with successive emigrations of surviving Jews culminating in the virtual expulsion of those born Jewish who had faithfully served the new regime.
Portugal	Reconstituted to include remnants of wartime refugees but essentially the same small well-integrated community.
Romania	Largest Jewish community in Eastern Europe outside the Soviet Union; underwent limited reconstitution under Communist regime after substantial emigration to Israel. Community organized on strictly religious lines.
Spain	Gained formal status as community by stages between 1931 and 1968 when it was officially recognized as a legal religious body. Wartime refugee settlers founded communal institutions in Madrid, Barcelona and Malaga.
Sweden	Reconstituted with addition of a substantial number of refugees and following the abolition of state-required community membership.
Switzerland	Reconstituted to include the few wartime refugees allowed to settle permanently.
Soviet Union	Virtually disappeared as an organized community, after World War II in the wake of the Stalin repression (1948–1952).
Yugoslavia	Reconstructed and reconstituted as a strictly ethnic community under Communist regime after substantial emigration to Israel.

also areas with a high Jewish reproduction rate) were those that had been wiped out. At the end of the 1940s, the centers of Jewish life had shifted to a decisive extent away from Europe to Israel and North America. Continental Europe as a whole ranked behind Latin America, North Africa, and Great Britain as a force in Jewish life. Its Jews were almost entirely dependent upon financial and technical assistance from the United States and Israel. Except for those in the Muslim countries (that were soon to virtually disappear), all of the major functioning Jewish communities had acquired sufficient proportions to become significant factors on the Jewish scene only within the previous two generations. Many of the shapers of those communities were still alive and in many cases still the active communal leaders. The Jewish world had been thrown back to a pioneering stage, willy-nilly.

The organization of Jewish communal life reflected these

shifts and their consequences wherever Jews were found. Thus in the late 1940s and 1950s reconstruction and reconstitution of existing communities and the founding of new ones was the order of the day throughout the Jewish world. The Jewish communities of Continental Europe all underwent periods of reconstruction or reconstitution in response to wartime losses, changes in the formal status of religious communities in their host countries, migration to Israel, and the introduction of new regimes. Table 4: Early Postwar Changes in Continental Jewish Communities summarizes these changes in the early postwar period. The most significant changes since that time occurred in Eastern Europe after the collapse of Communism. Despite large-scale emigration to Israel and the West, Jewish community life was revived in countries where it had formerly been repressed, and nowhere more impressively than in the former Soviet Union, where the Federation of Jewish Communities (founded in 1998) operates as an umbrella organization for its constituent communities, supporting an extensive network of synagogues, community centers, and day schools.

The Jewish communities in the Moslem countries were transformed in response to the convergence of two factors: the creation of Israel and the anticolonial revolutions in Asia and Africa. The greater portion of the Jewish population in those countries was transferred to Israel, and organized Jewish life virtually came to an end in all of them except Morocco. The changes in their situation are summarized in Table 5: Postwar Changes in Jewish Communities in Moslem Countries.

The English-speaking Jewries (and, to a somewhat lesser extent, those of Latin America) were faced with the more complex task of adapting their organizational structures to three new purposes: to assume responsibilities passed to them as a result of the destruction of European Jewry, to play a major role in assisting Israel, and to accommodate internal changes in communities still becoming acculturated. Their responses are summarized in Table 6: Postwar Changes in Major English-Speaking Jewish Communities and Table 7: Postwar Changes in Latin American and Caribbean Jewish Communities.

Many of the smaller Jewish communities in Asia and Africa were actually founded or received organized form in this period, while others, consisting in the main of transient merchants or refugees, were abandoned, as shown in Table 7: Postwar Developments in Asian and African Jewish Communities. Finally, all but a handful of the Jewish communities in the contemporary world have had to adjust to the new realities of voluntary choice, which, on one hand, gave Jews greater freedom than ever before to identify as Jews or not and, on the other, encouraged a wide variety of options for Jewish identification within each community.

Table 5. Postwar Changes in Jewish Communities in Moslem Countries

Country	
Aden	Entire community emigrated before Aden received its independence.
Afghanistan	Majority of the Jews emigrated leaving a small oppressed community behind.
Algeria	Virtually all the Jews fled the country in wake of the French evacuation, moving to France and Israel during the 1960s and essentially ending Jewish communal life.
Egypt	Successive oppressions and migrations to Israel after 1948 virtually ended the community's existence.
Iran	Community was reduced in size by emigration to Israel but continues to function as in the past with minor adjustment.
Iraq	Mass migration to Israel in the early 1950s reduced the community to a tiny oppressed minority which lived under severe government restrictions until the U.S. invasion of Iraq (2003).
Lebanon	With the help of a fairly sympathetic government, the community weathered the Arab-Israel conflicts but in 2005 was at the end of the process of self-liquidation through emigration, mostly to Latin America and Europe.
Libya	Migration to Israel accelerated after each Arab-Israel crisis and after the 1967 war the community finally ceased to exist as an entity. Very few Jews remain there.
Morocco	The community's slow decline through emigration to France and Israel after 1948 accelerated after Morocco received independence and picked up momentum after 1967 and 1979 wars.
Pakistan	Most of the small community emigrated, leaving a very small group to carry on minimal communal life in some cities.
Syria	Oppression after 1948 led to migration of a majority to Israel and Lebanon; government pressure increased against the remnant after the 1967 war. Practically all Jews emigrated, leaving no organized community life.
Tunisia	Despite official attempts to convince the Jews to stay, most migrated to Israel in successive waves after Tunisia's independence.
Turkey	Almost half of the 100,000 Jewish population left for Israel after 1948. The remainder were effectively reconstituted as a religious community with limited powers and under governmental supervision. Most of the Jews (nearly 20,000) live in Istanbul and a minority in Izmir (about 1,500) – the only two regularly organized communities.
Yemen	All but a tiny handful left for Israel immediately after the establishment of the state. The few remaining Jews mostly emigrated during the 1960s.

Community Structure in a Voluntaristic Environment

Whatever the form of community organization, the primary fact of Jewish communal life today is its voluntary character. While there are some differences from country to country in the degree of actual freedom to be Jewish or not, the virtual disappearance of the remaining legal and even social and cultural barriers to individual free choice in all but a handful of countries has made free association the dominant characteristic of Jewish life in the "postmodern" era. Consequently, the

Table 6. Postwar Changes in Major English-Speaking Jewish Communities

Country	
Australia	The postwar influx of refugees substantially enhanced Jewish life and necessitated changes in its communal structure, both locally and countrywide, to encompass the widened scope of Jewish activity and the more intensely "Jewish" Jews. These have continued into the 21st century, giving Australian Jewry comparatively favorable intermarriage statistics and continuing strong support for Zionism. Unlike the United States, a majority of Australia's Jews probably belonged to Orthodox synagogues.
Canada	Pressures of "Americanization," suburbanization and the general homogenization of Canadian society led to a weakening of traditional Canadian communal structure and the introduction of American-style "religious pluralism." But, characterized by a relatively strong sense of Diaspora identity, the Canadian Jewish community continued to grow, in large part through immigration. The community's center of gravity also continued to shift toward Toronto, now home to almost half of all Canadian Jews in the early 21st century. As in the United States, all of the denominations of Judaism are well represented in Canada, with the Orthodox stream very strong.
Ireland	Little significant constitutional change even though a native-born generation came to the fore. Some immigration from the former Soviet Union and elsewhere improved a declining situation.
New Zealand	Prior to about 1980, the continued emigration of the younger generation decreased the Jewish population and weakened the community structure. Subsequently, significant numbers arrived from the former Soviet Union and South Africa but emigration and assimilation continued.
Rhodesia (Zimbabwe)	The concentration of Jews from other countries of black Africa increased the size and importance of the Rhodesian community while the separation of Zambia and the Rhodesian secession increased its self-contained character. But with civil war and black independence the Jewish community began to shrink, leaving just a few Jews in the early 21st century.
South Africa	Changes in the regime and the rise of a native-born generation within the community shifted the emphasis of the communal institutions and the dominant mode of Jewish identification, weakening what had become the traditional structure. In the post-Apartheid era the tendency has been toward greater coordination and unity within the community.
United Kingdom	The rise to power of the last wave of immigrants and a native-born generation challenged the communal status quo from both left and right, weakening traditional institutions and strengthening new ones that reflected the community's greater diversity. The number of Jews in Britain has probably declined since its peak in the 1950s, with especially sharp declines in cities outside of London. On the other hand, in many respects Jewish consciousness has increased among Anglo-Jewry.
United States	The destruction of European Jewry transferred world Jewish leadership decisively to the American Jewish community. This plus the rise of a new generation and the disappearance of immigrant ideologies led to significant organizational changes to meet demands while also enabling American Jewry to become more rooted in the "religious pluralism" of the general society. Subsequently the traditional institutions, other than the synagogue became less significant as Jewishness tended more to find subjective expression.

first task of each Jewish community is to learn to deal with the particular local manifestation of this freedom. This task is a major factor in determining the direction of the reconstitution of Jewish life in this generation. The new voluntarism extends itself into the internal life of the Jewish community as well, generating pluralism even in previously free but relatively homogeneous or monolithic community structures. This pluralism is exacerbated by the breakdown of the traditional reasons for being Jewish and the rise of new incentives for Jewish association. At the same time, the possibilities for organizing a pluralistic Jewish community have also been enhanced by these new incentives and the "postmodern" breakdown of the rigid ideologies that divided Jews in the latter third of the modern era. Certainly the creation of the State of Israel has given the Jewish people a new and compelling focus that enhances the Jewish attachments of virtually all Jews. The state's crucial role as a generator of Jewish ties, regardless of other differences, was decisively demonstrated at the time of the *Six-Day War (1967).

Pluralism organized into more or less permanent structural arrangements leads to federalism, and federalism has been the traditional way in which the Jewish people has maintained its unity in the face of the pressures of diversity. This is one tradition that is not being abandoned today. The previous sections have suggested the wide variety of federal arrangements that presently exist in the organized Jewish communities of the world. In each case, the Jewish community adapts itself to the environment of the host country so that its own structure reflects local conditions while facilitating (as far as possible) the achievement of the main purposes of corporate Jewish life. In virtually every case, the structure that emerges from the adaptation is based on federal principles and uses federal forms. The pluralistic federalism of the voluntaristic community substantially eliminates the neat pattern of communal organization usually displayed as the model by those who concern themselves with rationalizing Jewish community life. Though smaller communities in different cultural settings are not likely to conform completely, more and more the seemingly anarchistic American pattern is revealed as the paradigm of their development, if not the vision of their future. Certainly the model of a hierarchic organizational structure does not offer an accurate picture of the distribution of powers and responsibilities in any Jewish community today. Even in the more formally structured communities of Central Europe and Latin America, the institution that appears to be at the top of the pyramid is really dependent upon and often manipulated by the institutions and organizations that would be placed farther down on the structure. The local

community that "should" be on the bottom is, in fact, often the real center of power. For communities like the United States, even the modified model is useless. Nor is there a central governing agent in most communities that serves as the point at which authority, responsibility, and power converge. Even in the communities ostensibly dominated by a consistory, the erstwhile central body has been shunted aside to become just another specialized institution in an oligopoly of such institutions.

The structure of contemporary Jewish communities is best understood as a multidimensional matrix (or mosaic) that takes the form of a communications network; a set of interacting institutions which, while preserving their own structural integrity and roles, are informed by shared patterns of culture, activated by a shared system of organizations, and governed by shared leadership cadres. The character of the matrix and its communications network varies from community to community, with particularly sharp variations separating the six basic types. In some cases, the network is connected through a common center, which serves as the major (but rarely, if ever, the exclusive) channel for communication. In others, the network forms a matrix without any real center, with the lines of communication crisscrossing in all directions. In all cases, the boundaries of the community are revealed only when the pattern of the network is uncovered. The pattern itself is perceptible only when both of its components are revealed, namely its institutions and organizations with their respective roles and the way in which communications are passed between them.

The pattern itself is inevitably a dynamic one; that is to say, there is rarely a fixed division of authority and influence but, rather, one that varies from time to time and usually from issue to issue, with different elements in the matrix taking on different "loads" at different times and relative to different issues. Since the community is a voluntary one, persuasion rather than compulsion, influence rather than power are the only tools available for making and executing policies. This also works to strengthen its character as a communications network since the character, quality, and relevance of what is communicated and the way in which it is communicated frequently determine the extent of the authority and influence of the parties on the communication.

[Daniel J. Elazar]

Table 7. Postwar Changes in Latin American and Caribbean Jewish Communities

1. Communities entrenching, adjusting, and moving toward greater internal unity:		
	Argentina	Guatemala
	Brazil	Mexico
	Chile	Panama
	Costa Rica	Uruguay
	El Salvador	Venezuela
2. Communities of emigration and decline:		
	Bolivia	Haiti
	Columbia	Honduras
	Cuba	Nicaragua
	Dominican Republic	Paraguay
	Ecuador	Surinam
3. Communities undergoing "Americanization" through expansion of American business and leisure interests in the Caribbean:		
	Barbados	Jamaica
	Curacao	Trinidad and Tobago

Community and Polity

The discussion in the foregoing pages has been more or less restricted to the matrix of institutions and organizations that form a community on the countrywide plane. The Jewish polity as a whole, however, functions on several planes. The federal connections between local and countrywide communities and between Jewish communities around the world have also undergone important changes since World War II, and the feedback has begun to have a significant effect on the countrywide and local communities involved.

Before the modern era, although there were no formal organizations that functioned on a worldwide basis to unite the various Jewish communities, the common allegiance to halakhic Judaism and reliance upon traditional Jewish law gave the Jewish people the constitutional unity it needed. During the modern era, this unity was shattered, and nothing comparable developed to replace it. By the end of the 19th century, all that there was in the way of an organized worldwide Jewish polity was an informal alliance and organizations of Jewish "aristocrats" in the Western world who had taken it upon themselves to try and defend Jewish interests and protect the rights of individual Jews, so as to aid in their emancipation. These inadequate arrangements effectively perished in World War I, when the world which encouraged that mode of community action came to an end.

Meanwhile, tentative steps in the direction of a reorganization more appropriate to the 20th century were beginning to be made. The World Zionist Organization and its member organizations, the *American Jewish Joint Distribution Committee, the B'nai B'rith, and later the *World Jewish Congress

Table 8. Postwar Developments in Asian and African Jewish Communities

1. Communities founded or given new form:		
	Hong Kong	Ryukyu Islands
	India	Taiwan
	Japan	Thailand
	Philippines	
2. Communities abandoned or substantially reduced in size:

began to offer more routinized and less elitist means of tying Jews together on a worldwide basis. All together, they began to create an infrastructure for a new Jewish confederation in the making.

After World War II, the structure of the Jewish confederation underwent further adaptation. This strengthening of the organizational aspects of the worldwide Jewish polity was partly a consequence of the changes taking place in its constituent communities. The other crucial factor is the State of Israel. The trend has been clear: the concentration in Israel of the major decision-making organs of the Jewish confederation and the organizations that serve it and the routing of their decision-making procedures through Jerusalem, even as the structures, centered in Israel, have at the beginning of the new century been experiencing considerable strain. This trend has become particularly noticeable since the Six-Day War, after which the Israel government began to take very explicit steps to reorganize and strengthen the institutions and organizations of world Jewry by tying them closer to the state. Israel's greater ability, as an independent state, to deal with political matters and its great stake in strengthening the worldwide Jewish confederation has led it to assume this role. Two major events – the Six-Day War in 1967 and the beginnings of the Soviet Jewry movement in 1963 – signaled that the American Jewish communal agenda would be more particularistic than it had been. Israel became the focal point of Jewish identification, the one Jewish phenomenon whose crucial importance is accepted by virtually all Jews and that has the ability to mobilize widespread public efforts in what is, after all, still a voluntary polity. Perhaps paradoxically, at the very moment that free individual choice in the matter of Jewish attachment has reached heights never previously attained, there has been a rediscovery of the Jewish polity, i.e., of the special political character of the Jewish community. In the first decade of the 21st century, however, new patterns in the American Jewish community – and especially in the consciousness of a younger cadre of Jews – had emerged. There was a diminution of the idea of a collective "community" as the meaning of Jewishness was increasingly defined in subjective individual constructs. American Jews found less meaning in formal Jewish organizations (except the local synagogue), political activity, philanthropic endeavors, and attachment to the state of Israel. The traditional institutions of community became less significant than they were to earlier generations of Jews in America. Because they feel that their identity as Jews is immutable, American Jews increasingly do not need the normative communal behaviors of the past in order to express their identity. This changing approach to "community" will have significant implications for the future of Jewish communal organizational structures, for communal fundraising, and for a range of communal involvements.

COMMUNITY TOKENS, internal Jewish currency. The special conditions under which Jews lived in the Diaspora before Emancipation and in Ereẓ Israel especially up to World War I led to a kind of community similar to a miniature state. To preserve the character of the community, whose members did not enjoy the privileges of other citizens, Jews were obliged to create and provide for their own institutions, such as synagogues, rabbinic courts, schools, hospitals, homes for the aged, soup kitchens for the poor, etc. All these institutions were administered by the community and financed by its members through ordinary and extraordinary contributions. In order to cope with these tasks, the communal leaders at times resorted to issuing tokens of their own, with an internal value only and not generally acceptable outside the community. To not raise the suspicion of the authorities, they were often cast in a style that distinguished them from legal tender. Many communities issued tokens in metal or paper, and much information about them has been lost. Whenever a new kind of token is discovered, a fresh investigation has to be carried out.

Diaspora

Perhaps the oldest Jewish metal tokens are those issued by the community of Rome in the ghetto period. These were given

to the *shoḥet* for the slaughter of a small chicken (1½ baiocchi) and a large one (3 baiocchi) and the proceeds went to the *talmud torah* fund. The Sephardi immigrants in *Constantinople had their own community centers and synagogues. They issued 5 para brass tokens on which the origin of the community is mentioned, such as Araico (Sarajevo), Shirigis (Saragossa), and Cordoba. The community of Beirut issued a brass charity token for the sick (*Bikkur Ḥolim*) in 1904. During World War I and in the first years after, many communities in Russia and Poland issued paper tokens. In the Austro-Hungarian Empire at least two metal tokens were issued: one in the Austrian community of *Mattersdorf with the initials I.G.M. (*Israelitische Gemeinde Mattersdorf*) and an equivalent abbreviation in Hebrew; and the other issued by the Hungarian community of *Satoraljaujhely in German and Hungarian (*Cultussteuer der israelitischen Gemeinde S.A. Ujhely*). In the 1830s the Jewish merchants of Belgrade obtained from Prince Milosh recognition of their custom of minting their own small change. Private issues were not uncommon; various Jewish enterprises issued their own tokens. Julius *Popper, owner of the gold mines in Tierra del Fuego, issued in El Paramo two gold coins of 1 and 5 grams respectively in his name: "Popper-Tierra del Fuego." The numismatic dealer Henry Seligmann, of Hannover, Germany, in 1921 issued porcelain tokens in the denominations of 25 and 50 Pfennig. Various Jewish enterprises in the United States, especially restaurants, circulated their own tokens.

Ereẓ Israel

Under Turkish rule in the 19th and 20th centuries, the communities in Ereẓ Israel issued a considerable number of tokens. A brass *Ẓedakah* token was issued in Jerusalem by the *Torat Ḥayyim* yeshivah, which also put out a small stamp-shaped paper token of ½ para and different kinds of paper currency in denominations of 1, 5, and 10 gold Napoleons. Other communities in Jerusalem, such as the various *kolelim*, also issued their own paper currency, as did Hebron yeshivah (in Jerusalem) during the British Mandate. There were other brass tokens, such as a square one bearing the legend שְׂכַר שְׁחִיטָה דַקָּה ("fee for the slaughter of a sheep or goat"), a rectangular one inscribed צְדָקָה תַּצִּיל מִמָּוֶת ("charity saves from death"), a round one with the legend קרש ("grush" = *piaster* = 40 para), and another round one with the abbreviation צל"ע (צְדָקָה לַעֲנִיִּים, "charity for the poor"). Turkish copper coins were also issued, countermarked with the same abbreviation. In the 1880s the colony of Zikhron Ya'akov and the agricultural school of Mikveh Israel issued brass tokens of 1, ½, and ¼ (presumably piaster), which, however, were declared illegal by the Turkish authorities. Another more primitive brass token was issued by the colony of Reḥovot, which also issued paper tokens inscribed in Hebrew and French in denominations of ½, 1, 3, 6, 13, and 26 piasters. The colony of Petaḥ Tikvah issued zinc tokens of 1 and 2 (undefined denominations), and in the early 1920s also issued paper tokens in denominations of ¼, 1, and 10 Egyptian piasters, then the legal currency in Palestine. In 1916 the city of Tel Aviv put into circulation paper tokens of 2/10, ¼, ½, and 1 beshlik and 1 franc as an emergency measure. However, this was prohibited by the Turks and had to be withdrawn. To overcome the lack of currency from 1914 to 1916, the Anglo-Palestine Co., the forerunner of the Anglo-Palestine Bank and today's Bank Leumi, issued checks in denominations of 5, 10, 20, 50 and 100 francs which were accepted by the *yishuv* as legal tender. In the early 1950s, during another shortage of small change, the Tel Aviv municipality issued paper tokens in denominations of 50 and 100 perutah respectively. The ½ mil of *kofer ha-yishuv* was a brass token that served as a self-imposed security tax during the British Mandate (from 1939) to meet the requirements of the Haganah. Paper tokens were issued by various bus companies in aid of the Magen David Adom. During the British Mandate there were private issues of small paper, mainly by restaurants.

COMO, city in Lombardy, northern Italy. In 1400 the Christian residents of Como requested the duke of Milan to segregate its few Jewish inhabitants. The Jews living in Como during the 15th century were mainly engaged in moneylending. They suffered considerably from the animosity aroused in the Christian populace by the preaching of the friars, but the duke did not yield to demands for their expulsion. However, in 1597 the Spanish government expelled the Jews from the duchy and the community in Como ceased to exist.

COMPASSION, norm governing the relationship between human beings and also regulating their behavior toward animals.

In the Bible

The biblical noun *raḥamim* and the verb *raḥam, riḥam*, frequently used to denote this behavior, are derived from the same root as is the noun *reḥem* ("womb"), hence some scholars have proposed that its original meaning was "brotherhood," "brotherly feeling" of those born from the same womb. Other terms, including *ḥesed* ("lovingkindness"), are also used, though in many instances this notion is not expressed explicitly and must be understood through the description of certain forms of conduct. For the writers of the Bible, the concept indicated an essential relation between God and Israel, rooted in the covenant: "He being full of compassion, forgives iniquity and does not destroy" (Ps. 78:38; see Ex. 33:19; Deut. 8:18; Isa. 9:16, etc.). It was made manifest by the preservation of Israel from destruction at the hands of its enemies and by divine in-

tervention on its behalf: "In Your love You lead the people You redeemed" (Ex. 15:13; see Deut. 30:3; I Kings 8:23, etc.).

The human response to the disclosure of divine compassion is to be found in man's behavior toward his fellows: "Learn to do well; seek justice; relieve the oppressed; judge the fatherless; plead for the widow" (Isa. 1:17; see Micah 6:8; Jer. 21:12). "He that is gracious unto the poor, lends unto the Lord" (Prov. 19:17). "You shall not mistreat any widow or orphan" (Ex. 22:21). Nor is the stranger excluded from this obligation: "You shall not wrong a stranger or oppress him" (*ibid.* 22:20). Animals, too, are recognized as the objects of such solicitude: "When you see the ass of your enemy prostrate under its load and would refrain from raising it, you must nevertheless raise it with him" (Ex. 23:5; see Deut. 22:4). "You shall not muzzle an ox while it is threshing" (Deut. 25:4).

In Rabbinic Literature

Rabbinic Judaism enlarged and deepened the biblical concept, recognizing it as an indispensable characteristic of the Jew (Yev. 79a): "Whoever is merciful to his fellowmen is certainly of the children of Abraham" (Beẓah 32b). The Jews were popularly called *raḥamanim benei raḥamanim* – "compassionate scions of compassionate forbears." The rabbis conceived of the practice of compassion as an *imitatio dei*, for the ways of God in which man was commanded to walk (Deut. 8:6) were those set out in Exodus 34:6–7: "The Lord! The Lord! a God compassionate and gracious, slow to anger, rich in steadfast kindness, extending kindness to the thousandth generation, forgiving iniquity, transgression, and sin." These verses were understood to sum up and explain the divine attribute of compassion, and to set the norm for human conduct: "Just as God is called compassionate and gracious, so you must be compassionate and gracious, giving gifts freely" (Sif. Deut. 49). Maimonides declared that arrogant, cruel, misanthropic, and unloving persons were to be suspected of not being true Jews (Yad, Issurei Bi'ah, 19:17). The clear tendency of the Bible requiring compassion in dealing with animals was summarized in the talmudic phrase, "[relieving] the suffering of an animal is a biblical law" (*ẓa'ar ba'alei ḥayyim de-oraita*, BM 32b). According to a Midrash (Ex. R. 2:3) both Moses and David were chosen to lead Israel because of their kindness to animals. The ḥasidic teacher R. *Moses Leib of Sasov epitomized the concept in his statement, "to know the needs of men and to bear the burden of their sorrow – that is the true love of man."

[Lou H. Silberman]

COMPOUNDING OFFENSES. The injunction: "Ye shall take no ransom for the life of a murderer.… And ye shall accept no ransom for him that is fled to his *city of refuge" (Num. 35:31–32), was interpreted as an exception to the general rule that for all other offenses you may accept a "ransom' (*kofer*), except only for the offense of homicide (BK 83b; Rashbam to Num. 35:31). It seems that the capital offense of adultery was compounded in this way (Prov. 6:35). The rule that even the worst examples of personal injury (such as blinding or mutilating) were not to be punished by way of talion (as prescribed in the Bible, Ex. 21:24–25; Lev. 24:19–20), but were to be compensated for by the payment of damages, was based on the principle that as offenses short of homicide they were compoundable by money (BK 83b, 84a). The fact that the "ransom" was in these cases translated into "damages" (cf. Maim. Yad, Ḥovel u-Mazzik 1:3), caused some confusion and overlapping between civil and criminal law in this field. By the payment of damages the offender is relieved from criminal responsibility (see *Assault), the damages operating as "expiation money" (cf. Ex. 30:12, 15, and 16) in lieu of the otherwise expiating punishment. In the same way the owner of the ox that is a habitual gorer, who, though forewarned, fails to guard it so that it kills a man or a woman is liable to "be put to death," but may "redeem his life" by paying such ransom as "is laid upon him" (Ex. 21:29–30). The dispute between the *tannaim* as to whether the ransom is to be assessed according to the value of the killed man or of the owner of the ox (Mekh. Mishpatim 10; BK 40a), as well as the parallel dispute as to whether the ransom is in the nature of damages (*mamon*) or of expiation (BK 40a), reflect the underlying difference between purely civil and additionally criminal remedies. This distinction is not affected by the talmudic interpretation of the liability of the ox-owner to be put to death, as this relates only to the law of heaven (*bi-ydei shamayim*), the theory of expiation by payment of the ransom applying to *divine punishment as well (Sanh. 15b; Maim. Yad, Nizkei Mamon 10:4).

It is because the ransom underwent this transformation into damages that the injunction not to accept a ransom in cases of homicide was interpreted as addressed to the court (*ibid.*, Roẓe'aḥ 1:4). In fact, it was not only the court but more particularly such interested persons as *blood-avengers that were enjoined from compounding homicides – as was pointed out by later authorities (e.g., *Minḥat Ḥinnukh* 412). However it appears that such compounding had already been practiced by judges in biblical times and led to accusations of corruption (cf. Amos 5:12; and contrast I Sam. 12:3) – perhaps not so much because the judges corruptly enriched themselves (see *Bribery), but because of the inequality thereby created between rich offenders, who could afford to ransom themselves, and indigent offenders who could not (cf. Prov. 13:8; cf. Job 36:18). The elimination of this inequality in cases of homicide may have made it appear even more reprehensible in other cases, at least from the point of view of judicial ethics. In later periods courts allowed offenders to compound offenses for which previous courts had imposed severe punishments (such as flogging) by making payments to the injured person or to the poor (cf. e.g., Resp. Maharyu 146; *Eitan ha–Ezraḥi 7*; *Yam shel Shelomo* BK 8:49; Resp. Maharshal 28).

[Haim Hermann Cohn]

In the State of Israel

The Israel Supreme Court dealt with the matter of "ransom" or punishments in the case of Sheffer (CA 506/88, *Sheffer v. State of Israel*, 48(1) PD 87). The Court (Justice Elon) discussed the question of whether a terminally ill patient was entitled to request that he not be given any life-extending treatment. The Court cited in this context the biblical verse (Gen. 1:27): "In His image did God make man," which is the "analytical and philosophical basis of Jewish law's unique approach to the supreme value of the sanctity of human life" (*Sheffer*, 117). "The prayer of the Jew to the Almighty in the Days of Awe acknowledges not only that 'the soul is yours, and the body is your work,' but also that 'the soul is yours and the body is yours,' for man is created in the image of God, in the image of the world's Creator. This approach also serves as the rationale for a legal ruling. Thus, Numbers 35:31 – 'Do not accept ransom for a murderer' – is explained by Maimonides in his *Mishneh Torah* (*Roẓe'aḥ u-Shemirat ha-Nefesh* 23:4) as follows: 'The Court is warned not to accept ransom money from a murderer, even if he gives all the money in the world and even if the blood avenger is willing to acquit him [for it] – since the life of the person who was killed is not the property of the blood relative but rather that of the Almighty, as it is stated: 'Do not accept ransom for a murderer.' And there is nothing that the Torah deals with more seriously than with murder, as it is stated: 'Do not defile the land, etc., since the blood will defile the land' (Num. 35: 33)." These words have become the source of disputes among halakhic authorities with regard to the fundamental question of whether medical treatment can be forced on a patient against his wishes (*ibid*., 118–19).

[Menachem Elon (2nd ed.)]

COMPROMISE (Heb. פְּשָׁרָה, *pesharah*; apparently derived from the term *pesher,* "solution," Eccles. 8:1), deciding a civil law dispute (*dinei mamonot*) by the court or an arbitral body, through the exercise of their discretion and not according to the laws governing the dispute. In Jewish law, compromise is allied to *arbitration both with regard to the way it evolved and in some of its rules and trends (the two are treated contiguously in the Tur and Shulḥan Arukh ḤM 12 and 13).

Pesharah and Biẓẓu'a

In talmudic sources the term *biẓẓu'a* is synonymous with and equivalent to the term *pesharah*. (In Scripture *biẓẓu'a* was used to mean divide or cut (Amos 9:1), and to execute or carry out (Zech. 4:9)). Gulak makes the interesting conjecture – based partly on the fact that several talmudic sources indicate that *pesharah* and *biẓẓu'a* were two distinct matters – that there was a difference of principle between the two. *Pesharah* was carried out by the court itself and in the opinion of all the scholars, was something permitted, and even desirable, for restoring peace between the litigants. On the other hand the court before which the matter was brought in the case of *biẓẓu'a* would refer investigation to other persons – knowledgeable and expert in the field of that particular matter – for its disposal by way of a compromise between the parties. Referral of a matter by the court in this way was customary in ancient law and when the Romans abrogated Jewish judicial autonomy after the Bar Kokhba War (132–135 C.E.), some scholars refrained from adjudicating according to strict law, preferring a compromise between the parties to be effected by others who were knowledgeable in the matter (TJ, Sanh. 1:1, 18b; Mekh. Yitro, 2; see also *Mishpat Ivri). Consequently there were scholars who came to regard *biẓẓu'a* as forbidden, since they looked with disfavor on the fact that the court evaded making its own decision in the matter. (Gulak stresses that a prohibition against compromising is always expressed in terms of *biẓẓu'a* and not *pesharah*, since the latter, effected by the *dayyan* himself, is a *mitzvah*.) In the course of time the difference between *pesharah* and *biẓẓu'a* came to be forgotten, as in both cases the object was to compromise between the parties and the rules laid down for the one came equally to govern the other. In this article the principles of compromise are treated in a like manner; i.e., the terms are regarded as applying to the same concept, as is the case in halakhic literature.

Desirability of Compromise

Three different opinions on the subject of compromise are found in the Talmud, all originating from the middle of the second century when the weakening of Jewish judicial autonomy encouraged a movement toward finding a replacement by way of arbitration and compromise. Joshua b. Korḥah based his opinion that "*biẓẓu'a* is a *mitzvah*" on the scriptural injunction: "Execute the judgment of truth and peace in your gates" (Zech. 8:16), commenting that justice which involved both peace and charity was to be found in *biẓẓu'a* (Sif. Deut. 17; Tosef., Sanh. 1:2–3; Sanh. 6b; TJ, Sanh. 1:1, 18b). A contrary opinion was expressed by R. Eliezer, the son of Yose the Galilean, who stated that "*biẓẓu'a* is forbidden and the *boẓe'a* ["arbitrator"] an offender… but let the law cut through the mountain, as it is written 'For the judgment is God's'" (Deut. 1:17; Tosef., Sanh. 1:2; Sanh. 6b). The third opinion, that of Simeon b. Menasya, was that compromise was neither a *mitzvah* nor prohibited, but simply permissible (Sanh. 6b). The *halakhah* was decided to the effect that it is a *mitzvah* to ascertain from the litigants beforehand whether they want their dispute resolved according to law or by compromise and that their decision must be abided by; moreover, "it is praiseworthy if a court always effects a compromise" (Maim. Yad, Sanhedrin 22:4; Tur and Sh. Ar., ḤM 12:2). It remains a *mitzvah* for the court to effect a compromise even after it has heard the pleas of the parties and knows in whose favor the suit is weighted, but once its decision has been given the court may no longer effect a compromise and "let the law cut through the moun-

tain" (Tosef., Sanh. 1:2–3; Sanh. 6b; TJ, Sanh. 1:1, 18b; Yad, Sanhedrin 22:4; Tur and Sh. Ar., ḤM 12:2).

In the geonic period it was determined that even after judgment had been given a compromise could still be effected, at the hands of someone other than a judge and elsewhere than at the place where the court was situated (L. Ginzberg, *Ginzei Schechter,* 2 (1929), 126; Sh. Ar., ḤM 12:2). Similarly, it is permissible for the court to compromise between the parties, even after giving judgment if either of them is liable in law to take an oath, in order that the need for this be obviated by virtue of the compromise (Sh. Ar., ḤM 12:2). Since the equitable oath (*shevu'at hesset*) is imposed on one of the parties in practically all legal suits, great efforts were made to induce the parties to a compromise and thus avoid the gravity of the oath (see also Sh. Ar., ḤM 12:17). Compromise was permitted to the court even if this involved some waiver of the rights of orphans "so as to shelter them from disputes" (Sh. Ar., ḤM 12:3).

The scholars extended the discussion on the merits and demerits of compromise in monetary disputes between man and his fellow to the precepts governing man's relationship with God and man's conduct in general. Thus the statement of Eliezer b. Jacob – that a man who steals wheat and then, when making bread with it, says the blessing on separating the *ḥallah, is actually blaspheming God (quoted in connection with the meaning of the word *boẓe'a*; Sanh. 6b) – was explained by Simeon Kayyara (ninth century) as an example of a defective compromise: "since he compromised with the precepts of God, acting as if robbery were permitted but that he was in duty bound to separate the *ḥallah*; this is a *mitzvah* performed as the result of a transgression, something God hates" (*Halakhot Gedolot*, ed. Warsaw, 19a). Judah's compromise in rescuing Joseph from the pit and selling him to the Ishmaelites (Gen. 37:26–28) has been interpreted as unworthy conduct: "since he should have said 'Let us return him to our father'" (Rashi to Sanh. 6b), and as worthy conduct: since this compromise was imperative in the circumstances (*Ḥiddushei Halakhot ve-Aggadot*, Sanh. 6b).

Nature of Compromise

Compromise is comparable to a judicial decision and must therefore be made after weighty deliberation. Thus, "compromise too requires an application of the mind to the decision" (*hekhre'a ha-da'at*; TJ, Sanh. 1:1); "the *dayyan* must take as much care with compromise as with a legal decision" (*Lehem Rav* 87); "just as the law should not be perverted, so it is warned that a compromise should not lean more to the one than the other" (Sh. Ar., ḤM 12:2). Some scholars interpreted the injunction, "Justice, justice shalt thou follow" (Deut. 16:20) as meaning, "Justice, once for the law and once for compromise" (Sanh. 32b and Rashi ad loc.). Other scholars interpreted the verse, "In righteousness shalt thou judge thy neighbor" (Lev. 19:15) as referring to a judgment based on the law, and Deuteronomy 16:20 as relating entirely to compromise, since in compromise there is a two-fold need for justice as the arbitrator cannot have recourse to the governing law and therefore has to exercise great care and discretion "to see who of them is telling the truth and who deserves to be treated with greater severity" (*Yad Ramah* and *Beit ha-Beḥirah*, Sanh. 32b).

The Making of a Compromise and Its Validity

Compromise is generally effected by a court of three, but the parties may consent to two judges or even a single one. The court is not authorized to compromise between the parties unless they have previously consented to the court's taking this course rather than judging in accordance with the applicable law. In special cases, when the court is satisfied that there is no means of evaluating a matter on the strength of the evidence, it may give "a judgment in the nature of a compromise … and decide as it may deem fit according to its own estimate." This is so since the court is forbidden to let a dispute pass out of its hands without having given a decision on it, as "this will increase conflict and the imposition of peace in the world is the duty of the court" (Rosh, Resp. 107:6; Sh. Ar., ḤM 12:5). Unlike a judgment of the court or of arbitrators – which is given by majority decision – compromise must be unanimously arrived at by all the judges (Sh. Ar., ḤM 12:18). The parties may retract from the compromise – even if they had previously authorized the court to adopt this course – as long as a *kinyan* (see Modes of *Acquisition) has not been performed by them and provided that they did not undertake in writing to abide by the compromise. However, once execution of the compromise decision has been begun (Sanh. 6a; Sh. Ar. ḤM 12:7), the parties may no longer withdraw.

[Menachem Elon]

The Right and the Good

In Deuteronomy 6:17–18, we read: "You shall diligently keep the commandments of the Lord and his testimonies which he has commanded you. And you shall do that which is right and good in the sight of the Lord, that it may be well with you, and so you may go and possess the good land that the Lord swore to your fathers." Commenting on this verse in his Torah Commentary, Naḥmanides writes: "This is a matter of great consequence. Given that it is impossible for the Torah to explicitly enumerate all the ways in which people relate to their neighbors and fellow men and to cover all the numerous types of business and transactions and all the things necessary for the proper ordering of society and government, it first mentioned a great many such things … and then stated generally that in all matters one should do that which is right and good. This is the basis for compromise, for going beyond the letter of the law, regarding that which was set forth in connection with giving a preemptive right to owners of adjoining land."

Compromise and Justice

In the later halakhic literature (*aḥaronim*), and more recently in rulings by Israeli rabbinical courts, compromise is used extensively to supplement substantive law, where the court is unable to provide a just solution to the matter confronting it. R. Abraham Ḥayyim Schorr (Poland, 17th century), in discussing the term "to place a compromise" (*Torat Ḥayyim* on

Sanh. 32a), states that, where the circumstances relating to the litigants are identical, and it is impossible to decide whose right should prevail, the court is *obligated* to propose ("place") a compromise, and even *compel* its acceptance by the parties. This conclusion is based on the use of the terminology, "*to place* a compromise," as distinct from "*making* a compromise." The term "to place" indicates that, having proposed a compromise which was subsequently rejected by the parties, the judge is permitted to cast ("to place") a lot as a means of determining which party will receive the right in dispute, and which party will be indemnified for his loss.

The rabbinical courts have recently issued a number of rulings based on compromise. Even in cases where there was no basis under substantive law to obligate the litigant to pay money, although there was an obligation according to "the law of Heaven." An example of this is a case in which the damage was consequential. In *Gerama and Garme the rabbinical court does not make a financial award under the *law of damages*, but rather in accordance with the law of *compromise*. The institution of compromise has been put to similar use in cases involving an act committed in breach of a negative precept, but which did not give rise to a financial obligation, such as deception in the payment of a day-worker. Additional examples are cases in which there are no grounds for imposing a financial obligation under strict law, either because in monetary matters we do not follow the majority opinion, or because the litigant invokes the *kim lei* claim (i.e., the litigant's reliance on a certain rabbinical opinion in a matter disputed among halakhic authorities, as a means of preventing a monetary ruling against him). In such cases, where the law itself offers no remedy, the rabbinical court may have recourse to compromise as a means of doing justice (see, e.g., PDR, Kiryat Arba-Hebron, vol A, p. 205, and index there; V. Goldberg, "*Shivḥei Pesharah*," *Mishpetei Erez*, 2002)

Method of Effecting a Compromise

The Rabbinical Court of Appeal, relying on the view of *Leḥem Rav,* overturned a ruling of the Regional Rabbinical Court, which had given a compromise ruling without having properly heard the claims of one of the litigants. The Court of Appeal stated that: "From the determination and ruling of *Leḥem Rav* we learn that failure to listen to a litigant's claims infringes the principle of doing justice, and that the rabbinical judge's duty to hear the parties' claims is a precondition for his ability to rule in accordance with the law, as may be inferred from the aforementioned words of the *Tur.* The rabbinical judge added that even a ruling by way of compromise is only valid if prior thereto the rabbinical judge heard the litigants' claims" (A. Sherman in File 734/59, *Judgments*, vol. 188; given in 1999).

In another ruling, the Jerusalem Rabbinical Court of Appeals nullified a compromise ruling of the Regional Court when it became clear to them that the compromise ruling had been issued as a substitute for adjudication, without either of the litigants having given their advance consent. As such, it should be regarded as *no more than a compromise proposal* (Yosef Kapach, 328/43, given 1984, published in *Mishpetei Erez* collection, 2002.)

In Israeli Supreme Court Case Law

The conception and status of compromise in Jewish Law were the basis of a number of Supreme Court rulings in recent years.

In *Sobol v. Goldman* (CA 807/77, 33 (1) PD 789), an appeal was filed in the Supreme Court against a District Court judgment, the question adjudicated being the validity of a rabbinic court judgment given by way of compromise, when the Law directs it to rule "according to the religious law." The Supreme Court's judgment (per Justice Elon) included a detailed exposition of the status of compromise in Jewish Law. The court discussed the conflicting opinions on the status of compromise in adjudication during the talmudic period (see above: "Desirability of Compromise"), and the approach that was ultimately accepted in Jewish Law in the Codes and by earlier and later authorities (*rishonim* and *aḥaronim*) regarding the positive role of compromise ruling in the world of *halakhah* and its integration as a substantive element in Jewish Law. Justice Elon added that:

> In Jewish Law the institution of compromise, its nature and its procedure, comprised many purely legal aspects. Hence it was determined that compromise cannot be the product of an arbitrary decision, but requires serious deliberation: "Compromise, too, requires careful thought" (TJ Sanh. 1:1). An entire chapter in the *Tur* and *Shulḥan Arukh* is devoted to the laws of compromise (ḤM 12), consisting of 19 sections of detailed explanation of how a compromise is effected, under what circumstances it is binding, etc. These rules establish compromise as an institution of a clearly legal character …. The conclusion of a compromise by the rabbinical court is neither in conflict with, nor beyond the boundaries of, the religious legal system in which it operates, but is in fact an integral part of it … distinguished by the clear legal principles and rules of procedure applicable to it (*ibid.*, 799, 802).

The Supreme Court was confronted with a similar question in the *Gabbai* case (HC 2222/99 *Gabbai v. Rabbinical Court of Appeals*, 54 (5) 401). In a petition submitted to the High Court of Justice, a woman contested the decision of the Rabbinical Appeals Court to affirm the regional rabbinical court's ruling on the division of property between herself and her husband in the wake of their divorce. She claimed that the ruling contradicted the "joint assets rule." The Rabbinical Court of Appeals held that the regional rabbinical court had decided between the disputants by way of an imposed compromise where there was no possibility of deciding the facts.

Justice Proccaccia elucidated the essence of compromise in Jewish Law, comparing it with compromise in the civil law. Relying on Justice Elon's ruling in the *Sobol* case (see above), she determined that compromise was an intrinsic part of the system of religious law. She further quoted statements made by E. Shochetman as to its importance, which derives from "the supreme importance conferred by Jewish Tradition to the value of making peace between man and his fellow" (p.

420 of judgment). Justice Proccaccia pointed out that, unlike civil law, Jewish law also validates a compromise concluded without the parties' agreement – even though such is generally based on the parties' consent – when there is no evidence that can tilt the law one way or another, or when the admissibility of evidence is impugned. Justice Proccaccia cites the ruling of Asheri (*Teshuvot* 107:6):

> When the judge is confronted by a matter which he is unable to resolve, it is forbidden for him to withdraw from adjudication leaving the parties to fight one another, as it states: "Execute the judgment of truth and peace (in your gates)," for justice brings peace to the world, and the judge was therefore permitted to adjudicate and to decide as he wishes, even without supporting reasons and evidence, all in order to bring peace to the world …

and the ruling of the *Shulḥan Arukh:*

> The judge must be permitted to give judgment by way of compromise in cases where the matter cannot be clarified, and he is not allowed to give a partial, incomplete judgment. (*ibid.,* 421–22).

Justice Yitzhak Englard, too, agreed that the rabbinical court is empowered to impose a compromise. He further added that a compromise should only be forced on the parties when there is a substantial doubt arising from evidence submitted by the parties, precluding judicial resolution of factual questions. (See also R. Ḥayyim David Halevi, "The Compromise Ruling Where There Is an Obligation to Take an Oath" (*Teḥumin*, 12 (5751 – 1991) 330: "There may be different levels of non-clarification. The *Rosh* apparently did not intend to rule that wherever the *Bet Din* is in doubt it should give a compromise ruling, for there would be no end to it, and there is always the possibility that one of the litigants is lying. His rule would therefore appear to be applicable only in those cases in which the evidential picture and the pleadings of the litigants create a real doubt among the *dayanim*. (*ibid*., 429).)

The dispute between the judges only related to the issue of whether the circumstances were such as to compel the rabbinical court to rule in accordance with the joint property rules (see *Husband and Wife; *Dowry).

Another matter that came before the Supreme Court (CA 61/84 *Biazi v. Levi,* PD 42 (1) 446) concerned two parties to a dispute who concluded an agreement whereby the results of a polygraph test would be considered as conclusive evidence in the determination of facts in dispute between them. This agreement received the force of a judgment. After the results were received, the party whose factual account was confuted by the test results filed an appeal in which he contested the binding nature of their agreement.

The minority view (Justice Bach) allowed the appeal, whereas the majority view (Justices Goldberg and Elon) dismissed it. The judgment regarded the agreement between the parties as a compromise agreement, relying upon the sources of Jewish Law referred to above, and additional sources. It further emphasized (Justice Elon) that:

> Many reasons have been given for the preference of compromise over strict law. As stated, compromise engenders peace between the parties, a basic goal of doing justice. A particularly apposite expression of this idea appears in the following halakhic midrash (*Mekhilta de-Rabbi Ishmael*, *Masekhta de-Amalek*, §2). Commenting on the verse in Exodus 18:15, 'When they have a dispute, it comes before me, and I decide between one person and his friend,' it states: "'And I decide between one person' – this refers to a judicial proceeding where there is no compromise. 'And his friend' – this is a judicial proceeding which involves compromise; both parties depart from one another as friends." Moreover, compromise obviates the feeling of the losing party that justice was not done and the truth abandoned. "Compromise is agreed to and chosen by the parties, which is not the case when the decision is in accordance with substantive law. The person found liable in such a case [against whom judgment is given – ME] does not waive his complaints against his adversary, even though the latter won in court (R. Samuel Edels, *Ḥiddushei Maharsha*, 17th century Poland; on *Sanh.* 6b, *s.v. ohev shalom*).

Further on, the ruling extols another benefit of compromise, which in the view of Jewish Law makes it preferable to ruling by law. Compromise ensures rapid judgment and resolution of the dispute, thereby preventing postponement of judgment that may be the result of ruling according to strict law. In support of this consideration, the judgment cites the following statement by Maimonides, in his *Introduction to the Commentary on the Mishnah*:

> He [the judge] must attempt in all cases to have the parties compromise. If he can consistently avoid deciding a case, by always effecting a compromise between the two rivals – how good and how pleasant that is; but if he is unable to do so, he must apply strict law. Neither should he be hasty [impatient and hurrying – ME], but should give the rival litigants a long time and allow each of the rival litigants to plead his case all day long – even if they are garrulous and speak nonsense …"

Maimonides' guideline is that the judge must do his best to achieve a compromise, and only if he fails to affect a compromise between the parties should he rule by strict law. In that eventuality the examination of the facts and the hearing of the parties may be a protracted process, because the judge is duty-bound to allow the parties to exhaust all of their procedural options.

It is noteworthy that the same judgment also cites U.S. Supreme Court rulings praising compromise as an efficient and commendable means of resolving disputes, in the spirit of the aforementioned sources of Jewish Law (*Holman Mfg. Completion Works. v. Dapin 193 NW 986* (1923) pp. 988; *Sanders v. Roselawn Memorial Gardens, Inc. 159 SE 2d 784* (1968), pp. 795). Further on in the judgment, Justice Elon characterizes the positive approach to the compromise agreement concluded between the parties as "what has long been regarded as appropriate legal policy … and which today may well be one of the lifelines enabling the conduct of adjudication and rulings in accordance therewith, which is the ultimate purpose of the rule of law" (*ibid.*, 480–81)

Another example of the influence and application of Jewish Law in the Israeli legal system is provided by CA 287/88 *Manof v. Saleima*, 44 (3) PD 758. This judgment concerns an application filed by a party to disqualify the judge in the previous instance, in view of the following compromise proposal which the judge made to the litigants at the outset of proceedings: "In view of the above, the Court suggests that if the background explanation provided by plaintiff's attorney is correct (and its veracity may be reasonably presumed, in view of the letters), then the defendant ought to indemnify the plaintiff for all such expenses and damages as he may specifically demonstrate to the defendant's attorney, and they will compromise on a sum to be determined by the Court …" The judge rejected the application, claiming that she had not intended to establish that the background explanation provided by plaintiff's attorney was in fact correct. Rather, she had described the proceedings and pleadings that had been raised so far and which would continue to unfold in the course of the litigation. The Supreme Court ruled (per Justice Elon) that under these circumstances there were no grounds for impugning the judge's objectivity. He further added that the judge's proposal to bring the parties to a compromise was "correct, commendable, and blessed," and that "every court that effects a compromise is deserving of praise" (MT, *Sanhedrin*, 22:4), because "it brings about peace between a man and his fellow" (*Mekhilta*, *Tractate De-Amalek*, *Yitro*, §2), and it constitutes appropriate legal policy."

The *Hoffman* ruling (HC 699/89 *Anat Hoffman v. Jerusalem Municipal Council*, 48 (1) PD 678) exemplifies the use of the same principles of Jewish Law, affirming the judicial recourse to compromise – but in this case the dispute was not between individuals, but between an individual and the sovereign authorities. The ruling concerned a petition filed by the representatives of the non-Orthodox streams of Judaism against the Jerusalem Municipality. They objected to the decision not to approve their candidacy in the elections to the Religious Council. The Supreme Court judgment invalidated the municipality's decision, and in the beginning of its judgment the Court (Justice Elon) described its efforts at persuading the parties to compromise:

> After hearing the argumentations we made a compromise proposal to the parties. Our efforts were to no avail and the file was adjourned for a number of memorandum sittings, in an additional effort to induce the parties to compromise. We felt at the time, and still feel, that the dispute before us should be resolved consensually. And what makes this case so special? Because in their pleadings before us both parties presented extensive argumentation regarding the existence of divergent streams in matters related to world-views, each according to his own path and world-view. But that was not the question confronting us, and there was neither place nor need to discuss it or anything connected therewith in order to resolve the specific dispute before us, as we shall presently explain. It was regarding circumstances of this kind that our Sages stated (*Sanh.* 6b) "Settlement by compromise is a meritorious act, for it is written, (Zech. 8:16) 'Execute the judgment of truth and peace in your gates.'" http://www.come-and-hear.com/sanhedrin/sanhedrin_6.html – Folio 6b ref. 10 Despite our efforts, we were unsuccessful, and for this I am truly sorry (*ibid.*, p. 684 of judgment).

The Law in the State of Israel

In 1992 Israeli Law was amended (The Courts Law (Consolidated Version) 5744 – 1984), by the addition of provisions which established the position of the compromise as an integral part of the judicial procedure:

> **79A Compromise**
> (a) A court adjudicating a civil matter may, with the consent of the litigants, rule on the matter before it, wholly or in part, by way of compromise.
> (b) Nothing in the provisions of sub-section (a) shall derogate from the authority of the court to propose a compromise settlement to the litigants, or to give effect, upon the litigants' application, to a compromise settlement concluded between them.
>
> **79B Arbitration**
> (a) A court adjudicating a civil matter may, with the consent of the litigants, submit the matter before it, wholly or partially, to arbitration; and the court is also permitted, with their consent, to define the conditions of the arbitration. […]
>
> **79C Mediation**
> (a) In this section "mediation" – a procedure in which the mediator meets the litigants in order to bring them to an agreement for the resolution of the dispute, without him having any powers of resolution […]
> (b) The court is permitted, with the litigants' consent, to submit the action to mediation.
> […]
> (g) Where the litigants conclude a mediation settlement, the mediator will give notice thereof to the court, and the court is permitted to grant the force of a judgment to their settlement.

The impact of Jewish Law and the Supreme Court rulings cited above are clearly discernible in the provisions of the new law. The law permits the court to suggest compromise settlements to the parties; it enables them to reach an agreement whereby the judge will not adjudicate in accordance with the substantive law, but rather by way of compromise, and his decision is binding. The law also allows the court to refer the parties to alternative proceedings outside the court: mediation, in which an attempt is made to bring the parties to a consensual settlement; and arbitration, in which a ruling is given, but not necessarily in accordance with the substantive law (see *Arbitration). The explanatory notes accompanying the draft law (HH 5751, p. 319), emphasize the efficiency of the compromise mechanism: "It is proposed to confer upon compromise frameworks – mediation and arbitration – formal standing in the principal legislation, the intention being to enable the litigants to choose additional paths for the resolution of their dispute. This establishes possibilities for speeding up the resolution of the dispute, on the one hand, and easing the burden imposed by the litigation itself, on the other."

COMPUTER SCIENCE. The term Computer Science encompasses three different types of research areas: computability, efficiency, and methodology.

General Introduction

Computability deals with the question of what is "mechanically" computable. The most natural way to describe a "problem" is as a numerical function, i.e., as an operation that gets numbers as input and produces numbers as output. A crucial observation is that there is an inherent property in functions that makes them "computable in an organized fashion," e.g., by a series of rules. Most numerical functions do not have this property and the field of computability is concerned with the functions that do. In order to rigorously define "organized fashion" one needs to define formal models of computation. The conclusion of decades of different models that were developed in the beginning of the 20th century was the "Church-Turing Thesis." This thesis states that all reasonable models of computation are equivalent. Thus the property of being "computable" is considered to be inherent to the function and not dependent on an external computing machine.

Once it is established that a function is computable, it is important to find out whether it is efficient. Efficiency is also inherent in the function, rather than the machine computing it. A faster machine will only be able to compute a function faster by a constant multiple. However, a function that is not efficiently computable will cease to be realistically computable when presented with larger inputs, even on a fast machine. Consider, as an example, the sorting problem. Given a list of n numbers, we would like to sort them in ascending order. The naive way of doing it is to choose the smallest number and move it to the front. Then choose the next smaller and move it to the front, and continue until all numbers are sorted. This scheme takes in the order of n^2 operations. Thus, sorting 1,000 numbers will require roughly 1,000,000 operations. Suppose we have two machines, one of which is 10 times faster than the other. Suppose also that someone came up with a scheme that sorts n numbers in time n, rather than n^2. The slow machine would sort the 1,000 numbers using 1,000 operations using the faster scheme. The fast machine would use 1,000,000 operations using the first scheme, but being 10 times faster than the other machine, it would do it in the time the slow machine would be able to do 100,000 operations. Nevertheless, the slow machine wins by a factor of 100.

We conclude that the computation scheme, and not the machine, is the main contributor to the efficiency of computing a function. This computation scheme is called an "algorithm" in computer science, and the efficiency of the algorithm is called its "complexity."

The fields of Computational Complexity and Design and Analysis of Algorithms are the two main fields of computer science dealing with the efficiency of programs. Computational complexity can be likened to the study of the "forest" of functions, and the different traits causing different classes of complexity. Algorithm design and analysis is the study of methods that can lead to efficient algorithms for specific problems.

The final part of the science of computing is the methodology part. In view of the above discussion one can study computability and efficiency even in a world without computers and electricity. Nevertheless, the existence of computing machines creates many new problems. A machine that computes functions must deal with numerous peripheral devices and multiple functions being computed at the same time. The best ways of organizing these tasks are studied in the research area called operating systems. People who want to write down the code for very large and complex algorithms, need ways that would make it easy to write in the most error-free ways, easy to test, and easy to maintain and understand. These topics are researched in the areas of programming languages and software engineering. Dealing with huge data sets requires ways to index, search, and retrieve data efficiently. These methods are studied in the research areas of databases and information retrieval. The field of Natural Language Processing aims at the goal of having computers understand our speech. The desire to have systems that see and react, e.g., for self-driving cars, necessitates the area of computer vision and image processing. The proliferation of computers requires that they communicate, which leads to the areas of networks and communications. Robotics and Artificial Intelligence allows machines to be able to autonomously perform a range of tasks. All above research areas are concerned with methods that enable easier, better, and more efficient use of computing machines.

Computer Science in Jewish Sources

It is clear that one will not find too many hints of the methodology part of computer science in Jewish sources, since that branch of computer science evolved around the computer. Artificial life or robotics seems to be hinted at by the golem concept. The Talmud (Sanh. 65b) mentions that *Rava created a man and sent it to Rav *Zeira. There are additional midrashic and later references to the power of creating "artificial life" by use of the Holy Name. The relationship between these passages and Artificial Intelligence is only superficial. The point made in these passages seems to be the creative power of holiness, rather than the potential of the physical sciences.

A pervasive method in web technologies and digital libraries is the hypertext method. This method has been very successfully used in Jewish literature. The traditional page

format in the Vilna Shas, for example, is a pure use of hypertext. The main text is centered in large letters, the main commentators are arranged around it in smaller letters, and links to appropriate passages in the Bible and in the main *posekim* are suitably incorporated. The printings of many other Jewish texts are in a similar format (e.g., Rambam, Shulḥan Arukh). These Jewish texts represent the most extensive use of windows and hypertext technology prior to the end of the 20th century. Some research papers in computer science were motivated by the hypertext in Jewish texts.

Computability and efficiency, especially the algorithmic part, do not require a machine, therefore it is not surprising that such topics are considered in the ancient world as well as in Jewish sources. Algorithms have a natural place in mathematics. For example, the sieve of Eratosthenes is a method for automatically finding prime numbers.

Such algorithms abound in the Judaic literature. Most of these algorithms deal with the methods of arriving at the **halakhah*. The *baraita* of Rabbi *Ishmael (Sifra 1:1) gives the 13 rules by which the Torah is interpreted. Even after the codification of the Mishnah, the problems of deciding *halakhah* were not solved, since the Mishnah leaves many issues in a state of dispute (*maḥeloket*). The Talmud, although far from settling the disputes in the Mishnah, does offer numerous rules to settling mishnaic disputes. Examples are "*yaḥid verabbim – halakhah ke-rabbim*" (in a dispute between one and many the *halakhah* follows the many), "*halakhah ke-veit Hillel*" (the *halakhah* is according to the House of Hillel), "*halakhah ke-Rav Akiva me-ḥaverav*" (the *halakhah* follows Rabbi Akiva's view when he is opposed by his colleagues). Nevertheless, in numerous places, the Talmud and its commentators have declared that *halakhah* is not to be deduced from the Mishnah (TJ, Hag. 1:8; Rashi, Sanh. 100:2, "Rava Amar Ipkha") The Rif goes further and says that *halakhah* cannot be deduced from the Talmud either (Er. 11:2). Rabbi Ovadiah *Yosef (*Yabi'a Omer*, introduction) states that it is not in our power to derive the law from the Talmud without consulting the **rishonim* and **aḥaronim*. These opinions discourage the *posek* from applying the rules as an algorithm.

A research project in Machon Lev gathered the given rules and meta-rules of deciding *halakhah* in the Mishnah and constructed a rule-based system to compare decisions deduced strictly by the algorithm with the *halakhot* as decided by the Shulḥan Arukh, or the Rambam when the Halakhah did not appear in the *Shulḥan Arukh*. The system was run and tested on Mishnayot in the tractates *Yoma*, *Ta'anit*, and *Ḥagigah*. The system achieved 90.3% success,

Jewish Contribution to Computer Science

The study of computability began in the early 20th century, before the advent of computers. Among the leading scientists who studied models of computation was the Jewish mathematician Emil Leon Post (1897–1954), who was born in Poland and educated in New York. He invented the model of computation named after him, the Post Machine, and proved results similar to those of Gödel, Church, and Turing. Post was the inventor of recursive function theory – the formal theory dealing with computability.

Most undecidability results (functions that are inherently not computable) are proved by a technique called diagonalization. In this technique values are placed in an infinite two-dimensional matrix and then a perturbation of its diagonal is proven not to be a row in this infinite matrix, leading to a contradiction. This method was first studied by Georg Ferdinand Ludwig Philipp Cantor (1845–1918), born to a Jewish Danish father, who converted to Protestantism, and a Danish Catholic mother. Cantor was the first to introduce Hebrew to modern mathematics. He used the letter א to denote infinite continuous sets, such as the total number of numerical functions, and א0 to denote countable infinite sets, such as the number of computable functions. He also proved that א0 is strictly less than א.

For a rigorous study of an algorithm's complexity, one needs a carefully defined model. The model on which most algorithmic analysis is calculated is the sequential von Neumann model. Johann von *Neumann (1903–1957) was born into a Jewish Hungarian family. He spent most of his adult life in the U.S. and was one of the original six mathematics professors at the Princeton Institute for Advanced Study. He was one of the leading mathematicians of the 20th century. His ideas on logic design were used in the development of the first computers and he pioneered game theory, fault tolerance in systems, and cellular automata.

Recently, newer models of computation have been sought. These models do not enhance the power of computation but it is hoped that they can achieve greater efficiency. For example, one of the most famous currently open problems in computer science and mathematics is the P=? NP problem. The question is whether non-determinism adds computation power. The computation in the von Neumann model is deterministic, i.e., there is a unique instruction that follows every program instruction. In non-deterministic computation the next instruction is "guessed" following certain rules. One of the scientists who introduced non-determinism is Michael Rabin (1931–) of the Hebrew University of Jerusalem. Intuitively, non-determinism should allow us to compute problems faster, using the power of the "guesses." However, it is still an open question whether there exist problems that can be computed efficiently non-deterministically yet cannot be computed efficiently deterministically. Specific efficient non-deterministic problems have a unique trait that if they can be computed efficiently deterministically, then all efficient non-deterministic problems can be efficiently computed deterministically. These problems are called NP-complete problems. The major theorem in the study of NP-completeness proves that deciding whether a logical formula can be satisfied is NP-complete. This theorem was proven independently by Steve Cook and Leonid Levin (1948–), a Jewish Russian computer scientist who emigrated to the U.S. in 1978. The theory of NP-completeness took off when Richard Karp (1935–), an

American computer scientist, published the first set of NP-complete problems.

New models of computation were suggested, which, possibly, compute efficiently problems that are inefficient in the von Neumann model. Some notable examples are Quantum Computation, pioneered in the 1980s by Paul Benioff, Richard *Feynman, and David Deutsch. The quantum model assumes that bits behave in a quantum fashion. An alternate model, basing computing on DNA, has been introduced by the American scientist Leonard Adelman (1945–).

One may mention another fundamental concept in complexity, that of Kolmogorov complexity. Kolmogorov complexity is the minimum size necessary to encode a function. It is named after Kolmogorov, who wrote a paper on it in 1965. Nevertheless, a year earlier, the Jewish mathematician Ray Solomonoff (1926–), published two papers on what is termed Solomonff induction and algorithmic probability, that independently tackle many of the same concepts.

Jewish contributions in the area of algorithms is also quite prominent. Some fundamental algorithmic methods were invented by Jewish scientists. Examples are linear programming and dynamic programming. Linear programming problems are optimization problems where one needs to optimize a linear function, i.e., a function that describes a line, subject to constraints that are also linear functions. This field of optimization is important since many problems in operations research, such as multi-commodity flow problems and scheduling problems, can be defined as linear programs. Linear programming was discovered by the Soviet mathematician and Nobel laureate in economics Leonid Vitaliyevich *Kantorovich (1912–1986). One of the most widely used algorithms for solving linear programs is the SIMPLEX method, developed by the American mathematicians George B. Dantzig (1914–2005).

Dynamic programming is a method of solving a large problem incrementally, by first solving it for small instances and subsequently constructing solutions for larger and larger instances based on previously computed solutions to the smaller cases. It is the core of many important algorithms in all areas of Computer Science. Dynamic Programming was invented by the American mathematician Richard Bellman (1920–1984).

Jewish contribution abounds in the methodology part of computer science as well. Artificial Intelligence is the science and engineering of making intelligent machines, especially intelligent computer programs, where the term "intelligent" is left as an intuitive notion. The field tries to make programs behave more as "intelligent" entities than programmed functions. among its most notable founders are the American scientist Marvin Minsky (1927–), Nobel laureate in economics Herbert *Simon (1916–2001), whose father was Jewish, and Boston scientist John McCarthy (1927–), who had a Jewish mother.

The field of cryptography deals with the ability to encrypt information. This is especially critical for information that gets transmitted publicly, as over the Internet, and is what makes electronic commerce possible. Public-key cryptography was co-invented by American computer scientist Martin Hellman (1945–). He was one of the co-authors of the Diffie-Hellman algorithm for secure key distribution over non-secure channels. The most widely used public-key algorithm today is the RSA algorithm, named after MIT scientist Ronald Rivest, Adi Shamir (1952–) of the Weizmann Institute, and Leonard Adleman (1945–).

The A.M. Turing Award is given annually by the Association for Computing Machinery to a person selected for lasting and major contributions made to the computing community. The Turing Award is often recognized as the "Nobel Prize of computing." It is sponsored by Intel Corporation and currently is accompanied by a prize of $100,000. Almost a third of the Turing Award winners to date are of Jewish descent. These are Alan Perlis (1966), Marvin Minsky (1969), John McCarthy (1971), Herbert Simon (1975), Michael Rabin (1976), Richard Karp (1985), William Kahan (1989), Edward Feigenbaum (1994), Manuel Blum (1995), Amir Pnueli (1996), Adi Shamir (2002), Leonard Adleman (2002), and Robert Kahn (2004).

It should be noted that three of the above 14 names are Israelis in Israeli universities. Indeed Israel is an international power in computer science. Israeli research is at the cutting edge of the scientific research. Five of the top 100 most cited computer scientists in the world are Israelis. Israeli universities are ranked at the top of international lists of leading computer science department.

Computer applications are not in the scope of this article, but we will mention in passing that many ubiquitous applications, such as the BASIC programming language, spreadsheets, the automated electronically switched telephone network, spread spectrum communications, the Internet, Google, and more, were co-invented by Jews.

Computer Science as an Aid to Judaism

The proliferation of electronic databases has not skipped the Jewish world. There are currently over a dozen different Jewish databases on the market, both as text and as scanned images. In addition there are numerous Internet sites on Jewish topics ranging from providing candle lighting times all over the globe to hospitality information in different communities. The first Jewish database was the Bar-Ilan Responsa Project.

The project was conceived in 1963 by Weizmann Institute scientist Aviezri Fraenkel and later migrated to Bar-Ilan University. Fraenkel was the project's director from 1963 to 1974, succeeded by Ya'akov Choueka, who headed the project from 1974 to 1986. The idea was to create an electronic library of the responsa with a search engine to enable easy access to information. The project required research and solutions in areas such as information retrieval, data compression, Hebrew computational linguistics, and Human-Computer Interaction. It led to many graduate theses and publications in computer science and for many years was at the cutting edge of technology. In its beginnings the database resided on an IBM

mainframe. From 1979, it also became usable in a time-sharing mode from terminals on the Bar-Ilan campus, in Israel, and abroad. During Uri Schild's tenure as project director, it was decided to compress the database to a single compact disk. This made the system accessible to every home, scholar, rabbi, and *dayyan*. Because of the care the Project takes in seeking error-free text, it is unique in the fact that it is indeed a tool for *pesikat halakhah*, and used by many *posekim* today.

An emotionally charged and controversial current phenomenon is the Torah codes, or *Bible codes. This issue has involved Jews and Christians, scholars, scientists, and laymen, and has even produced best-selling books such as *The Bible Code* by Michael Drosnin.

Underlying the codes is the traditional Jewish idea that there are several layers to the Torah, and that the *remez* is a valid form of learning Torah. Rabbi *Jacob ben Asher's *Baal ha-Turim* commentary to the Torah is perhaps the most famous early concerted use of this form of learning. The modern code methods involve Equidistant Letters Sequences (ELS) and the idea is to find names, dates, and "prophecies" encoded as ELS's in the Torah. The first scientific claim to the statistical validity of the codes appeared in a 1988 paper by the mathematician Eliyahu Rips. It was followed by the 1994 paper by Doron Witztum, Eliyahu Rips, and Yoav Rosenberg and generated a very emotional response. Without taking a stand in the controversy, it is important to note that this entire line of research and school of thought is almost impossible without computers.

COMTAT VENAISSIN, former papal territory in S.E. France, corresponding approximately to the present department of Vaucluse. Ceded in 1274 to the Holy See, to whom it belonged until the reunion with France in 1791, it became a distinct territory along with the town of *Avignon (though the later remained independent in local administration). Apart from Avignon, Jews do not seem to have settled in the Comtat earlier than the 12th century. The major Jewish communities, known as the "four holy communities," were those of Avignon, *Carpentras, *Cavaillon, and *L'Isle-sur-la-Sorgue. There were, however, smaller communities of a more ephemeral nature in Caromb, Entraigues-sur-la-Sorgue, Malaucène, Monteux, Mormoiron, Mornas, Pernes-les-Fontaines, and Vaison-la-Romaine. The Comtat became a haven of refuge for the Jews of the two provinces of Languedoc and Provence after various expulsions – in 1306, 1322, and 1394, and later around 1500. The Jews of the Comtat spoke a *Judeo-Provençal dialect, which they also employed in some semi-liturgic poetry, and had their own synagogue rite, now fallen into disuse (see *Liturgy). The reconstituted communities of the region, e.g., at Carpentras, were formed in the mid-20th century, mainly by Jews of North African origin.

[Bernhard Blumenkranz]

COMTINO, MORDECAI BEN ELIEZER (1420–d. before 1487), Bible commentator, philosopher, philologist, astronomer, and mathematician. Born in Constantinople, Comtino studied religion and philosophy under Ḥanokh Saporta, a distinguished Catalonian scholar. Comtino was one of the leaders of the Hebrew cultural movement that flowered in Constantinople. He considered the dissemination of general knowledge his major task. Of those who thought that learning should be confined to the Talmud, he said: "The Talmud will be of no use to them and they will not comprehend it unless they study all sciences… including exact expression, which is logic and helps us to understand the meaning of the words of the Talmud." Like most enlightened Jewish scholars of his age, he was an admirer of Maimonides and Abraham ibn Ezra; he regarded the latter as an ideal man, and wrote commentaries to most of his works. However, he did not hesitate to criticize Ibn Ezra's opinions, and to those who regarded such criticism as an insult to the "greatest of the commentators," his reply was that even a man of Ibn Ezra's caliber is capable of error. Comtino followed in the footsteps of his teacher Saporta in seeking to spread religious and secular knowledge among both the Rabbanite and Karaite Jews; he did not regard the latter as outcasts or enemies. In this he influenced the attitude of R. Elijah *Mizraḥi, one of his most eminent students (see Mizraḥi's responsa, no. 57). The Karaite sages in Turkey, such as Elijah *Bashyazi and Caleb *Afendopolo, were also among his pupils. In the 1450s, when the plague broke out in Constantinople, Comtino fled to Adrianople and remained there for a while, teaching such disciples as the Ashkenazi rabbi Isaac Ẓarfati. He had a reputation as a sage and astrologer also among non-Jews, who sometimes consulted him.

Comtino wrote many books and treatises in Hebrew on mathematics and astronomy, the manuscripts of which are to be found in the Leningrad, Parma, Paris, London, and Cambridge libraries. They include *Sefer ha-Ḥeshbon ve-ha-Middot*, on arithmetic and geometry; *Perush Luḥot Paras* ("Interpretation of the Persian Tables"), essays on the construction of astronomical instruments; *Tikkun Keli ha-Ẓefiḥah*, on the construction of the sundial; a commentary on Euclid; *Sefer ha-Tekhunah* ("The Book of Astronomy"); *Ma'amar al Likkui ha-*

Levanah…, on "lunar and solar eclipse as seen in nature, based on philosophy and the natural sciences"; a commentary on Maimonides' work on logic, *Millot ha-Higgayon*; a commentary on Abraham ibn Ezra's *Yesod Mora*; a commentary on Ibn Ezra's *Sefer ha-Shem* ("Book on the Divine Names"); a commentary on Ibn Ezra's *Sefer ha-Eḥad* ("Book of the Unity"); a commentary on Aristotles' *Metaphysics; Iggeret Senapir ve-Kaskeset*, on clean and unclean fish; and *Keter Torah*, or *Kelil Yofi*, a commentary on the Pentateuch, in which Comtino reveals himself as a scholar of wide erudition, a liberal thinker, and an unbiased critic. R. Shabbetai b. Malkiel wrote a criticism of the last-mentioned work, to which Comtino wrote a reply (*Teshuvot al Hassagot R. Shabbetai Kohen*). Two of his *piyyutim* were published by Solomon b. Mazal Tov in *Shirim u-Zemirot ve-Tishbaḥot* (Constantinople, 1545–48, 127, 220), and were adopted in the Karaite prayer book.

[Ephraim Kupfer]

CONAT, ABRAHAM BEN SOLOMON (15th century), Italian physician and one of the earliest printers of Hebrew books. Conat was probably of Ashkenazi origin. He lived in Mantua, where he may have been active as early as 1475. In 1476 he printed Jacob b. Asher's Tur *Oraḥ Ḥayyim* and began to print *Yoreh De'ah* as well; however, this was completed in Ferrara by *Abraham b. Ḥayyim of Pesaro, which suggests that Conat died about 1477. Other works printed by him (all apparently in Mantua, 1475–77) are *Sefer Eldad ha-Dani*; Jedaiah Bedersi's *Beḥinat Olam*; Mordecai Finzi's *Luḥot*, astronomical tables; Judah Messer Leon's *Nofet Ẓufim*; Levi b. Gershom's Pentateuch commentary; and *Sefer Josippon*, the pseudo-Josephus. Conat's work is particularly beautiful, and his type has been imitated in modern luxury editions. Abraham's wife, ESTELLINA CONAT, was equally active in the printing of these books and is the first woman who is named as an editor in a printing house. *Beḥinat Olam* was both arranged and printed by Estellina Conat. She is called the *kotevet* and in a colophon at the back of the book, she wrote: "I, Estellina Conat, the wife of my lord, my husband, the honored Master Abraham Conat … wrote this pamphlet, *Beḥinat Olam*, with the help of the youth Jacob Levi of Provence, of Tarascon, may he live, Amen." In the early days of printing, no Hebrew word yet existed for the process and Abraham Conat explained that his books were "written with many pens, without the aid of a miracle."

[Umberto (Moses David) Cassuto / Emily Taitz (2nd ed.)]

CONCIO, JOSEPH BEN GERSON (d. c. 1628), Italian poet, scholar, and printer. Originating from *Asti in Piedmont, Concio established a Hebrew printing press in nearby *Chieri, where he began printing mostly his own small books which were generally in verse, in 1626. These included: *Ateret Ẓevi*, together with *Ẓefirat Tifarah* (1626) broad-sheets; *Besamim Rosh* (1627), Purim songs; *Ot le-Tovah* (1627), talmudic maxims and some poems; *Arba'ah Rashim* (1628), rhymed Midrash explanations; and *Solet le-Minḥah* (1628), devotional prayers. In Asti itself Concio printed in Italian *Cinque enimmi* (1627) and *Conto di Jehudit* (1628), the apocryphal Judith story. His son Abraham, piously continued to publish his father's writings: *Divrei Ester* (1628), allegorical commentary on Esther; *Ma'gal Tov* (1628), talmudic maxims in verse; *Mareh Ḥayyim* (1629); *Mekom Binah* (1630), commentary on Job from 28:12 onward; and *Ḥelek le-Shivah* (1632), poem for Lag ba-Omer. The only book by another author known to have been printed by the Concio family at Chieri is Isaac Lattes' *Perush Ma'amar she-be-Midrash Rabbah* (1628/9).

CONCUBINE, marital companion of inferior status to a wife.

In the Bible

The term in Hebrew is *pilegesh*, the equivalent of Greek *pallakis* (παλλακίς) and Latin *pellex*. Among the Assyrians the concubine (*esirtu*) gained the rank of wife only after the veiling ceremony conducted by her spouse, if he so chose to elevate her (Assyrian Code A, 41). The legal formalities, if any, are not described in the Bible. A concubine did not always reside in her husband's home (Judg. 8:31), but such was not the general rule (Judg. 19–20). Her spouse was called the son-in-law (*ḥatan*) of her father, who was the father-in-law (*ḥoten*). Therefore, the concubinage relationship could partake of many aspects of regular marriage. Two famous concubines are mentioned in the Bible. Rizpah the daughter of Aiah the concubine of Saul (II Sam. 3:7) whose moving display of maternal love so moved David that he had her children buried in the family sepulcher (21:8–14) and the concubine of Gibeah whose rape and murder brought about the death of 25,000 members of the tribe of Benjamin and the ban against members of the other tribes intermarrying with them (Judg. 19–21).

Royal concubines were standard among the kings of Israel and Judah, just as in any ancient Near Eastern kingdom (Song 6:8–9). They were clearly distinguished from the wives (II Sam. 5:13; I Kings 11:13; II Chron. 11:21). To lie with a monarch's concubine was tantamount to usurpation of the throne (II Sam. 3:7; 16:21–22). For this reason Abner took Rizpah (II Sam. 3:7). The same concept stands behind Ahitophel's

advice to Absalom, to "go into his father's concubines" (16:21), and Adonijah's request for Abishag the Shunamite was clearly associated with this custom (I Kings 2:21–24). The harem was usually in the charge of a eunuch (Esth. 2:14; cf. II Kings 9:32). The role of the concubine as the mother of venerable ethnic groups is not overlooked in the genealogies. Their descendants are usually classed as secondary or subsidiary tribes (Gen. 22:24; 36:12), especially the Abrahamic groups (Gen. 25:6; I Chron. 1:32). Within Israel, some of the clans were also the offspring of concubines (I Chron. 2:46; 7:14). In one instance, the term concubine is applied to a handmaiden (*shifḥah* and *a'mah*) who had borne children to her mistress' husband (Gen. 35:22). Such a relationship was usually established because the legal wife was barren (Gen. 16). Ancient marriage arrangements often stipulated that if the wife was barren, she must provide a handmaiden for her husband (cf. Code of Hammurapi, paragraphs 144–5 and the adoption contract from Nuzi in Pritchard, Texts, 220). Naming the handmaiden given to the bride by her father in such cases was evidently related to this practice (Pritchard, loc. cit.; Gen. 29:24, 29). If the wife later bore children of her own, they took precedence in the inheritance over those of the handmaiden (Gen. 21:12; cf. Code of Hammurapi, 170), although the latter did receive a share (usually on condition that their father had granted them legal recognition; Code of Hammurapi, 171). Israelite law provided safeguards for the rights of Hebrew girls sold as handmaidens who were to be wed to their purchaser or to his son (Ex. 21:7–11). If the handmaiden bore children for her mistress and then sought to place herself on an equal footing, she normally could not be sold, although she could be reduced to the status of a slave again (Code of Hammurapi, 146; cf. Gen. 21:12–14, where the slave-concubine and her child are both expelled, but only on the advice of a divine oracle.).

[Anson Rainey]

In the Talmudic Period and the Middle Ages

There is no evidence of actual concubinage in the Talmud, nor is there any evidence of it in practice during the Middle Ages. In the responsa of *Asher b. Jehiel (no. 32:1) there is a reference to a concubine, but it seems to be merely the case of a man cohabiting with a woman without going through a marriage ceremony with her, and not to a formal concubine. In the Middle Ages concubinage was formally forbidden by the rabbis as immoral, only one authority, Jacob *Emden (responsum no. 15) expressing the opinion that it should be permitted.

[Louis Isaac Rabinowitz]

In Jewish Law

A concubine may be defined by Jewish laws as a woman dedicating herself to a particular man, with whom she cohabits without *kiddushin (see *Marriage) or *ketubbah. "What is the difference between wives and concubines? R. Judah said in the name of Rav: Wives have *ketubbah* and *kiddushin*, concubines have neither" (Sanh. 21a; Maim. Yad, Melakhim 4:4; Leḥem Mishneh and Radbaz, ad loc.). Not all the scholars adopt this reading, however, and Rashi, for instance, comments: "wives with *kiddushin* and *ketubbah*, concubines with *kiddushin* but without *ketubbah*" (Comm. to Gen. 25:6; see also Comm. Hagra, EH 26, n. 7). This latter reading is apparently that of the Jerusalem Talmud too (TJ, Ket. 5:2, 29d and Hagra, *ibid.*; but see *Mareh ha-Panim* thereto). The majority of the *posekim accept the former reading as the correct one (Radbaz to Yad, Melakhim 4:4; *Kesef Mishneh* and *Leḥem Mishneh*, as against the *Maggid Mishneh*, to Yad, Ishut, 1;4; Radbaz, Resp., vol. 4, no. 225; vol. 7, no. 33; Naḥmanides, commentary to Gen. 19:8; 25:6; Ralbag to Judg. 19:1; Rashba, Resp., vol. 4, no. 314). Hence a concubine is to be distinguished both, on the one hand from a married woman, i.e., by *ḥuppah* ("marriage ceremony"), *kiddushin*, and *ketubbah*, and on the other from a woman who does not dedicate herself to one particular man exclusively, but who prostitutes herself; i.e., the harlot (*Hassagot Rabad* to Ishut 1:4 and see also Rema to EH 26:1).

The Prohibition against Concubinage

There are divided opinions in the codes on the question of whether the taking of a concubine is prohibited or permitted. Some of the *posekim* are of the opinion that neither pentateuchal nor rabbinical law forbids it, if the woman observes the rules concerning the *mikveh* so that the man should not cohabit with her during her period of menstruation (Rema in the name of Rabad, EH 26:1). Others are of the opinion that although it is not legally prohibited, one should refrain from taking a concubine, and they caution against her, "lest knowledge of the permissibility encourage licentiousness and sexual relations with her at a time when she is sexually unclean" (*Sefer Teshuvot ha-Rashba ha-Meyuḥasot le-ha-Ramban*, no. 284). The majority of the *posekim*, however, are of the opinion that it is forbidden to take a concubine, although they differ as to the substantive nature of the prohibition. Some are of the opinion that taking a concubine is a transgression of a prohibition of the pentateuchal law, based on the negative command: "There shall be no harlot of the daughters of Israel" (Deut. 23:18), to be punished with lashes (Rema to EH 26:1 in the name of Maimonides; Rosh, and Tur), while others expressed the opinion that the prohibition stems from a positive command of the pentateuchal law, the Torah saying, "when a man takes a wife" (Deut. 24:1) – i.e., he should take her by way of *kiddushin*. According to another view, the prohibition is rabbinical law only. (On the different views and their reasons, see *Oẓar ha-Posekim*, EH 26:3–8.) All the foregoing applies only to a woman who is unmarried; a married woman is by pentateuchal law at all times prohibited to have sexual relations with any man but her husband (*issur eshet ish*; see Prohibited *Marriages; *Bigamy; *Marriage).

Since more recent times it is unanimously accepted that the taking of a concubine is prohibited: "At the present time a woman is permitted to no man except through *kiddushin, ḥuppah, sheva berakhot*, and *ketubbah*" (Radbaz, Resp., vol. 4, no. 225; vol. 7, no. 33). This applies even more in the case of a married man, in the same way as he is prohibited from tak-

ing an additional wife (see *Bigamy), both for the protection of his wife and because his taking a concubine – since he is aware that he must not take an additional wife – can only be for the purpose of prostituting, and this is forbidden in the opinion of all the *posekim* (Rashba, Resp., vol. 4, no. 314; *Oẓar ha-Posekim*, EH 1, n. 4; 26, n. 5).

Personal Status and Pecuniary Rights of a Concubine

Inasmuch as a concubine does not acquire the personal status of a wife (*eshet ish*: Tur EH 26; Sh. Ar., EH 26:1), she has no *ketubbah*; therefore, in accordance with the rule providing that the "terms and conditions of the *ketubbah [tena'ei ketubbah]* follow the [prescribed] *ketubbah*" (Ket. 54b; Rashi *ibid.* s.v. *tena'ei ketubbah*) she does not acquire any of the wife's pecuniary rights – especially she is not entitled to maintenance – as all those rights stem from the *ketubbah*. Nor does living with a man as his concubine create a kinship as an impediment to marriage between herself and any of the man's relatives, or between the man and her relatives, as would be the case if she would be considered to be his wife (Rosh, Resp. no. 32:1; *Oẓar ha-Posekim*, EH 26, n. 3). For the same reason there is no need in principle for her to obtain a *get* (see *Divorce) in order to be permitted to marry any other man (*Oẓar ha-Posekim*, loc. cit.; *Sefer ha-Tashbeẓ* 3:47). However in the opinion of some of the *posekim*, for the sake of appearances, in view of the parties having lived together, the matter should be approached stringently and the woman should not be permitted to marry another man without obtaining a prior "*get* out of stringency" (*get me ḥumrah*) from the man with whom she has lived; but whenever the latter's refusal to grant her the *get* is likely to entail the risk of her becoming an *agunah, she may certainly be permitted to marry without getting such *get* (*Oẓar ha-Posekim*, EH 26, n. 3). Moreover, since the prohibition against concubinage is intended solely against the concubine's connection with her spouse, this fact alone and as such does not impair the personal status of children born of the union, nor their rights of inheritance according to law (Rashba, Resp. vol. 4, no. 314).

Legal Position in the State of Israel

Since the question of concubinage touches on the issue of the requirements necessary for conferring on a woman the status of a wife, the question is a matter of "marriage" – within the meaning of the Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, no. 64 of 5713/1953 – and therefore in the case of Jews who are citizens of the State of Israel, governed by Jewish law (sec. 1). However, legislation enacted for the first time after the creation of the state has given recognition to the concept of the "common law wife," i.e. a woman living together with a man to whom she is not married, but is so regarded (erroneously) by the public (*yedu'ah ba-ẓibbur keishto*) and in some laws the same applies, vice versa, to such a "husband" – granting her certain rights, mainly with regard to pension and tenant's protection. According to decisions of the courts, such a woman is entitled to the said rights even if she is lawfully married to another man (CA 284/61, in PD, 16 (1962), 102–12). As to the actual definition of the term "a woman known to the public as his wife" and the modes of proving the necessary facts, widely differing opinions have been expressed in decisions of the courts. It is generally accepted, however, that the said legislation does not entail any change in the personal status of the woman, whose position is to some extent similar to that of a concubine.

[Ben-Zion (Benno) Schereschewsky]

Decisions of the Israel Supreme Court

The distinctions in Jewish Law regarding the status of a woman who lives with a man to whom she is not married formed the basis of the Supreme Court's ruling in the case of *Agbara v. Agbara* (CA 4946/94, 49(2) PD 508). The case concerned a divorced couple, whose divorce agreement stipulated that "the husband's obligation to pay the entire sum of maintenance … will apply until each of the children has reached 21 years of age or until the wife remarries, if she remarries, whichever the later" (p. 510 of judgment). Following the husband's remarriage and subsequent separation from his second wife – without a *get*, due to the second wife's refusal to accept it – the original couple resumed living together as "common law spouses." Eighteen years later the husband left the home. The woman claimed that the original divorce agreement was still in force, as she had not yet married, and the man was therefore liable for maintenance payments. The husband claimed that his obligation under the agreement lapsed at the point that the wife had received a secure financial framework, and that the agreement was void by implication because their actions, upon returning to live together, attested to its annulment

The Supreme Court (Justice Zvi Tal) ruled that, in accordance with Jewish Law, the agreement was no longer valid because the condition regarding the woman's remarriage had been fulfilled, and the woman was considered as both betrothed and married to the man.

> Regarding an ordinary couple who are common law spouses, there are many opinions as to whether or not the woman requires a *get*, and it also depends on the circumstances of the case. There are those who at the very least require her to receive a *get le-ḥumra* (a writ of divorce to cover possible halakhic uncertainty as to her status), based on the presumption that "a man does not intend his sexual relations to be promiscuous" and the evidentiary presumption – *anan sahadi* – that there was marital intention. On the other hand, there are those who make the application of this presumption conditional upon whether the life style of the couple in question validates its application in their particular case. Furthermore, if they could have married officially, and refrained from doing so, this is deemed as a declaration on their part that they are not interested in marrying, and hence the presumption does not apply to them.
>
> But irrespective of what the situation is regarding an ordinary couple, it differs with respect to spouses who were married, divorced, and then resumed living together. Regarding such a couple the *Mishnah* states (Git. 9:10):
>
> "If a man has divorced his wife and then stays with her overnight in an inn, Bet Shammai say that she does not require

from him a second *get*, but Bet Hillel say that she does require a second *get* from him …."

The halakhah was decided according to Bet Hillel, and codified accordingly (Maim., Yad, *Gerushin* 10.17; Sh. Ar., EH 149:1):

"Now, if this is the rule regarding one night in an inn, then *a fortiori*, it would apply to cohabitation for almost 20 years, during which time the couple were regarded as husband and wife; hence, she requires a *get* from him if she wishes to remarry. For if on the basis of one night together in an inn the woman is considered as "definitely betrothed" (the terminology of *Shulḥan Arukh*), and betrothal alone does not obligate the man to support her, then it is clear that cohabitation for close to 20 years would be deemed a marriage, creating an obligation of support. Indeed, the essence of *huppah* – which confers the status of marriage upon a betrothed woman – is their shared domicile in one house as man and wife. The fact that the couple did not remarry by way of a proper marriage ceremony with *ḥuppah and kiddushin* is not indicative of their intention not to marry, for the husband was still officially married to his second wife. It seems clear that, under the circumstances, the respondent should be considered a married woman who requires a *get* from the appellant, and as such he is obligated to support her by dint of his personal status – albeit not by force of the agreement. Regarding the divorce agreement, the condition stipulated for the termination of the agreement – "until she marries" – should be regarded as having been fulfilled, and therefore the obligation to pay support pursuant to the divorce agreement is vitiated. (*ibid.*, pp. 513–14)."

The question which the Supreme Court was required to decide in the framework of the appeal was limited to the issue of the validity of the agreement. Regarding this question, the Court's conclusion was that the agreement is invalid, inasmuch as the couple was considered as still married. Therefore, the woman can demand support from the man on the basis of her status as his married wife, but she can only do so in the framework of a separate proceeding.

It is noteworthy that Justice Tal emphasizes that the ruling does not constitute a decision on the validity of the marriage, an issue residing within the exclusive jurisdiction of the rabbinical court. The Supreme Court's decision relates solely to a secondary question, required for the clarification of the main question: the financial question of the validity of the agreement – for which the Supreme Court has jurisdiction.

CONDITIONS (Heb. תְּנָאִים, *tena'im*).

Definition

Conditions is an ambiguous word inasmuch as it refers not only to the external factors upon which the existence of an agreement is made to depend but also to the actual terms of the contract itself. Thus, one speaks of *tena'ei ha-ketubbah*, which really means the terms of the *ketubbah*. Similar ambiguities exist in English law (see G.C. Cheshire and C.H.S. Fifoot, *The Law of Contract* (19605), 118ff.). In Jewish law, there is a further contingency: *tenai* consists not only of the stipulations of the contracting parties but also refers to legislative provisions, as evident in the expression *tenai bet-din* (see *Takkanot). As to conditions proper, i.e., stipulations (qualifications or limitations) attaching to a principal agreement, the basic concept in Jewish law seems to be very much the same as that in other systems of law. For example, distinctions between conditions precedent and conditions subsequent, differentiations between affirmative and negative conditions, between authoritative, casual, and mutual conditions or between expressed and implied conditions, and much more are found in all legal systems, although in Jewish law they may not be so clear-cut terminologically.

A vital characteristic of conditions in Jewish law is the provision referred to as *tenai benei Gad u-venei Re'uven*, based on Numbers 32. This was the occasion when Moses allocated land to the tribes of Gad and Reuben (and to half the tribe of Manasseh) on the east side of the Jordan River on the condition that they crossed the Jordan and assisted the other tribes in the conquest of the Holy Land. The Mishnah notes (Kid. 3:4) that when Moses made this stipulation he used a *tenai kaful* ("double condition"), expressing himself, i.e., both in the affirmative and the negative: if they fulfill the condition, they

shall be entitled to the allocation; if they do not, they shall not. Significance is here attached to the fact that the affirmative precedes the negative (*hen kodem le-lav*). Moreover, it is required that the conditions be stipulated prior to the actual transactions – which means, according to some authorities, that, as a matter of formality, conditions should be referred to before mentioning the main transaction (*tenai kodem lema'aseh*). A fourth requirement, usually listed in the context, is that the condition must be *davar she-efshar lekayyemo*, i.e., something objectively capable or possible of fulfillment (Maim. Yad, Ishut, 6:1–13; Sh. Ar., EH 38:1–4).

It is remarkable that the codes just referred to cite these rules in the context of matrimonial law, but it is the express opinion of Maimonides (*ibid.*, 6:14) that they apply equally to other provinces of the law, e.g., to *sale and *gift, and he persists in his ruling, despite the fact that later *Geonim* (to whom he explicitly refers) would have the formal requirements of *tenai kaful* and *hen kodem le-lav* apply to *kiddushin* (see *Marriage) and *gittin* (see *Divorce) only, and not to matters covered by laws of *mamon*. Maimonides aptly argues that the biblical "precedent," from which the present law is derived, concerned *mamon* ("acquisition of property"), and it would therefore be illogical to consider it as applicable only to matrimony rather than to matters of *mamon*. Nevertheless, in light of the glosses and commentaries to Maimonides (Maim. Yad, Ishut 6:14, and Zekhiah u-Mattanah 3:8), there is good authority for restricting the said requirements to *kiddushin* and *gittin*; and there is logic, too, in freeing everyday transactions from unreasonable formal requirements, since the predominant factor should be the will of the parties – and if they want a certain condition to be fulfilled, it should stand even if formalities like *tenai kaful* have not been observed (Rabad ad loc). Moreover, *custom, which is a powerful agent in *Dinei Mamonot*, may have regarded such a requirement in the field of commercial transactions as obsolete (Haggahot Maimoniyyot to Ishut 6:14). Yet, even if the *halakhah* were to be decided as suggested by Maimonides, there still exist various means of evading the problems arising out of the formalistic requirements of *tenai kaful* and *hen kodem le-lav*. Maimonides himself notes (Ishut 6:17) that if the word *me-akhshav* ("from now") was used in the stipulation, which would seem to turn a suspensive condition into a resolutive one, the requirement of *tenai kaful* may be ignored. Equally, the use of the words *al menat* ("provided that"), as distinct from the simple *im* ("if"), has the same effect as *me-akhshav* (Sh. Ar., EH 38:3). Furthermore, if the condition is contained in a written document, the date of the document could have the effect of *me-akhshav* (Git. 77a).

Already in the Middle Ages, when most of the transactions among Jews were in chattel, there seems to have been a tendency to consider the *tenai benei Gad u-venei Re'uven*, if applicable at all, as being restricted to the transfer of landed property (as was the case, in fact, in the original "deal" with the tribes of Gad and Reuben); pure obligations (*in personam*), not involving the transfer of property, would then certainly be exempt from those rules (see Gulak, Yesodei, 1 (1922), 80). It may be mentioned in this context that some "reservations" (*shi'ur*) do not fall under the term "condition." For example, if one sells his house, but reserves the right to a certain part of it, this is not construed as the vendor having said that he would sell the house "on condition that…"; therefore the requirement of *tenai kaful*, etc., does not apply (Sh. Ar., ḤM 212:3).

The requirement that the conditions should be capable of fulfillment, which is the most reasonable requirement and applies regardless of the form of the stipulation, needs some elaboration. The consequence of stipulating an impossible condition is that the principal transaction remains valid, despite the "nonfulfillment" of the condition (Maim. Yad, Ishut 6:7). By contrast, in Roman law the whole transaction would be voided by the defect of the condition (for a further discussion of this point, see Gulak, loc. cit., 81). It should be said at once that this is not the case of a person being prevented from fulfilling a condition by reason of *force majeure* (see *Ones), but with conditions stipulating something which according to all human experience is a priori impossible. The example usually given in the sources is "if you climb to the sky." Moreover, only physical and not moral or legal impossibility is visualized in this context. For example, if one promises to give his horse to another on the condition that the prospective recipient commits a sin, the condition would stand, and if he committed the sin, he would have the horse; if not, he would not (Maim. Yad, Ishut 6:8; EH 38:4). For a discussion of the problems of *jus dispositivum jus cogens*, and illegal contract, see *Contract.

Implied Conditions

A final category, widely discussed, is that of implied conditions. The classic case is that of a man who sold his possessions because he intended to immigrate to the Holy Land, but made no mention of his intentions during the negotiations. His plans having been foiled, he then wanted to renege on the transaction, arguing that he only sold his possessions on the condition that his plans would be realized. The ruling here is that such mental reservations have no effect ("words which are in the heart are not words," Kid. 49b–50a). This does not mean that only explicit conditions are valid; in fact, it is sufficient if in the circumstances, the dependency of the transaction on certain events was clearly apparent. For example, if a person, in contemplation of death, donated all his property, it is assumed that he did so on the premise that his death was imminent (especially if the donation was made during a particular illness). Accordingly, if he survived, the donation is ineffective (BB 9:6; see also *Wills). On the general question as to whether and to what extent the parties are bound by the transaction before the condition is fulfilled (Maim. Yad, Ishut 6:15–16; Sh. Ar., EH 38:6–7), it should be noted that, here again, conditions introduced by the simple *im* would lack forcefulness, which can be remedied by the addition of *me-akhshav* or by using the formula of *al menat*, a differentiation discussed above in connection with *tenai kaful* (see also *Asmakhta). Special problems of conditions attaching to specific transac-

tions are further discussed in the respective articles on *Betrothal, *Sale, *Wills, etc.

[Arnost Zvi Ehrman]

The Law in the State of Israel

Sections 27–29 of the Contracts Law (General Part), 5773 – 1973, contain the various rules governing conditions in contracts: a suspensory condition (in which the contract only becomes valid upon the fulfillment of the condition), as opposed to a resolutory condition (the fulfillment of the condition terminates the validity of the contract); the possibility granted to a party to rely on the performance or the non-performance of such conditions; a contract whose fulfillment is conditional upon the agreement of a third party or the receipt of a license; and the date on which the contract is canceled when the condition is not fulfilled.

Decisions of the Israel Supreme Court

In a further hearing in the case of *Ben Shachar v. Yosef Machlev* (DN 22/73, 28(2) PD 89), the question adjudicated by the Court was whether, after a decision had been rendered by a court giving effect to an agreement between two parties regarding the payment schedule for a debt, it was possible to extend the dates that had been fixed for the payments, in the event that the debtor was unable to pay due to *duress. In the case at hand, the debtor was unable to pay because he had become completely paralyzed and the Court granted his son's request to extend the payment deadlines that had been fixed, and rejected the creditor's petition to evict him from his home. The Court held that it had inherent power to change the decision rendered pursuant to the agreement in order to do justice in such cases.

In addition to this holding, Justice Haim Cohn ruled that even without such power, the agreement between the parties must be read as containing an *implied condition* to the effect that "if the debtor does not discharge his obligations in the time prescribed therefore, due to illness or other circumstances beyond his control, the Court is vested with the authority to extend the time limit for his performance of those obligations (*ibid.,* p. 100). Justice Cohn invoked sources from Jewish Law in support of this ruling, stating that "the justice that we are obligated and try to do will be more secure and institutionalized when it is based on our legal tradition and the wisdom of our ancestors, of blessed memory" (*ibid.,* p. 98):

> We found a kind of *implied condition* of the sort that forms the basis of the Mishnaic rule exempting one who makes a vow from fulfilling his vow if, on the date set,… he was prevented from doing so due to circumstances beyond his control ("duress"). The Mishnah defines "vows affected by duress" as vows whose timely performance was thwarted because the one who made the vow "became ill, or his son became ill, or the river prevented him" (Ned. 3:3). Rabbi Obadiah of Bertinoro explains that "from the outset the one who made the vow had no intention to fulfill it if he were to be prevented from doing so; this proves that "words of the heart, even if unexpressed, are words." In other words, even if the one who took the vow did not make an express statement, but only thought it to himself, and generally speaking thoughts are not words, we must read into his explicit vow the condition that was not expressly stated therein, because it was in his mind, i.e., that should circumstances beyond his control prevent him from carrying it out, the vow will not obligate him. This is what the Talmud teaches: "though we [normally] rule words of the heart, even if unexpressed, are words, it is different when it is made under duress" (Ned. 28a).

Further on in his comments, Justice Cohn cites the rule stipulating that, in the case where a plaintiff presented the court with writs attesting to his rights (in other words, submitted them for execution), and prior to the completion of the process he had to return home, and therefore declared to the court and the litigant that in the event of his not returning within thirty days his rights would be annulled, and thereafter, due to circumstances beyond his control, he was unable to return, *his rights are not annulled* (Maim., Yad, *Hil. Sanhedrin* 6:10; *Tur,* and *Shulḥan Arukh,* ḤM 21.1*;* based on Ned. 27a). Regarding this case, as well, Justice Cohen suggests that the reason for this ruling is the same—namely, that the creditor's words are construed as containing an *implied condition* exempting him in the event of circumstances beyond his control (*ibid.*, pp. 98–99).

Another case in which the Supreme Court dealt with the application of an "implied condition" was that of *Behem v. the Rabbinical High Court of Appeals* (HC 609/92, 47(3) PD 288). In that case, the Court was requested to invalidate the decision of the Rabbinical High Court of Appeals regarding the apartment of a couple that had divorced due to the wife's infidelity. The rabbinical court ruled that the husband should become the sole owner of the apartment, because when the husband gave his wife half of the apartment he did so under the condition that she would be faithful to him. Even though such a condition had never been explicitly stated or written, the rabbinical court concluded that there had been an *implied condition,* based on the expectations of the parties (this, in addition to its decision that the husband was no longer bound by his compromise offer to give the wife 30% of the value of the apartment, as she had rejected that offer). The petitioner's argument was that this decision contravenes the principles of civil law applicable in the State of Israel under the Women's Equal Rights Law, 5711 – 1951, and concerning the possibility of retracting a gift pursuant to the Gift Law, 5728 – 1968; in addition, he argued that the decision violates the provisions of Basic Law: Human Dignity and Freedom.

The Court (Justice Elon) ruled that, as it had been established that the apartment was purchased with the respondent's money and the issue concerned the legal act of a gift between spouses, the only question confronting the Court was the question of "the interpretation of this legal act according to the expectations and intentions of the parties," and it does not bear upon the wife's equal rights or basic rights (ruling, *ibid.*, p. 294). The Court further held that, as the rabbinical court is vested with the jurisdiction to decide in the case, it must rule according to Jewish Law. In view of both of these rulings, the Court rejected the petition and held that the rab-

binical court had ruled in accordance with the law and that, according to Jewish Law, this gift must be viewed as a conditional gift, "subject to the understanding that if she leaves him, he would not be regarded has having given it to her" (*ibid.*).

Justice Elon showed further that, even pursuant to the civil Gift Law, a gift may be given conditionally, and that the existence of such a condition may be deduced on the basis of the parties' intentions, as reflected by the circumstances. In a number of cases the Supreme Court held that, regarding a gift to a spouse, the circumstances may on occasion indicate that a gift was given conditionally. Hence, from the moment the judicial instance interprets the contract as a conditional contract, that condition becomes part of the gift contract; it is thus clear that the rabbinical court was required to interpret the contract as containing a condition, in accordance with Jewish Law.

The Supreme Court further pointed out that [in another case] the rabbinical court had ruled that a spousal gift is given on the condition "that they will not divorce," even where the situation was the opposite – that is, where the wife gave half of her apartment to the husband, and he had to return his share of the apartment to the wife.

It bears mention that the rabbinical court views itself as bound by civil law regarding the wife's equal rights, provided that the issue concerned monetary matters and not questions of *issur ve-heter* (i.e., ritual laws of prohibited and permitted actions). This was the position taken in *Nagar v. Nagar* (BDM 1/81, 38(1) PD 365), by Rabbi Yosef Kappaḥ, a judge in the Rabbinical High Court of Appeals and one of the important halakhic scholars of recent years. (The late Rabbi Kappaḥ was a member of the Supreme Court panel that ruled in the case, pursuant to a special procedure provided by the law when a ruling is required on whether the rabbinical or civil court has jurisdiction.) Rabbi Kappaḥ stated as follows:

> The legislator's directive [to equate a woman and a man regarding any legal act, pursuant to the Women's Equal Rights Law, 5711 – 1951 – ME] was apparently given under the assumption that monetary matters do not occasion an infringement of religious law inasmuch as a legislative directive [in the civil law] has the same halakhic status as [the establishment of] a "financial condition," which is not considered as making a condition against what is written in the Torah. As such, it must be presumed that the legislator did not intend to infringe any matter that did not fall within the ambit of a financial condition (*ibid.,* p. 412).

CONE, U.S. commercial and philanthropic family. HERMAN CONE (1828–97), the father of 13 children, emigrated from Bavaria to the U.S. in 1845 and ultimately established a successful wholesale grocery business in Baltimore. His two eldest sons, MOSES HERMAN (1857–1908) and CAESAR (1859–1917), began their careers as salesmen. During their travels through the South the two brothers were struck by the unstandardized goods and disorganized marketing methods of Southern cotton mills. In 1891 they founded the Cone Export and Commission Company, with a main office in New York, which served both as a banker and distributor for the Southern textile industry. The company helped the industry both to standardize and variegate its products and to free itself of its costly dependence on Northern finishers and distributors. During the financial panic of 1893 it saved many mills from bankruptcy. Moses and Caesar Cone established a mill of their own in Asheville, North Carolina (1892), and soon after founded three more mills in Greensboro, North Carolina. Within a few years they had joined the world's leading producers of flannels and denims and controlled 3% of the entire cotton industry of the South. Both Cone brothers became active in community affairs in Greensboro. They helped found schools and a YMCA, and Moses left a large part of his estate for the construction of a hospital named after him. Caesar was vice president of the American Cotton Manufacturers Association and held important local and state philanthropic positions. After his death ownership of the Cone mills passed to his son HERMAN. CLARIBEL (1864–1929), sister of Caesar and Moses Cone, studied medicine at Johns Hopkins University and was later professor of pathology at Women's Medical College in Baltimore. Together with her sister ETTA, she built up a large collection of French impressionist and post-impressionist painting, which is now housed in the Cone Wing of the Baltimore Museum of Art.

CONEGLIANO (Heb. **קוניאן**, *Conian*, as pronounced in the local dialect), small town in Venetia, northern Italy. Jewish moneylenders settled there before 1398. Attempts made by the municipality to expel the Jews in 1511, 1518, 1560, and 1567 were opposed by the Venetian authorities. Moneylending was prohibited to Jews in Conegliano between 1538 and 1541, and finally in 1548. A talmudic academy flourished there in the first decades of the 17th century under the direction of R. Nathan Ottolengo. Following restrictions on Jewish residence, construction of a ghetto began in 1637; it was moved to a different site in 1675. The number of Jewish residents in 1752

reached 58 people, including moneylenders, traders, owners of a silk factory and stores. In 1866 Marco Grassini was elected mayor of the town. By 1866 the Jews numbered 30, and subsequently almost all of them moved elsewhere. The community of Conegliano died out completely from the 1930s and in 1931 passed under the jurisdiction of the Jewish Community of Venice. The beautiful synagogue, built in 1701 but incorporating earlier elements, was transferred to Jerusalem in 1948 and reconstructed in the Italian Synagogue in 1952.

CONEGLIANO, Italian family, many prominent members of which were physicians; the name comes from the small Italian town of *Conegliano. Some members of the family called themselves Conian, according to the pronunciation in the local dialect. ABRAHAM JOEL CONEGLIANO (17th–18th centuries), mathematician, lived in Ceneda and Verona. He wrote a reply to the polemical book by L.M. Benetelli, *Le saette di Gionata* ("The Arrows of Jonathan," Venice, 1703), to which the latter replied in *I dardi Rabbinici infranti* ("The Broken Rabbinical Arrows," Venice, 1705). ISRAEL CONEGLIANO (c. 1650–c. 1717), of Padua, was a physician and politician. In 1675 he settled in Constantinople where he was consulted by the sultan and the grand vizier. In 1682 he was appointed physician to the embassy of Venice, but when Venice joined the Holy League against the Ottoman Empire, Israel had to limit himself to his private medical practice. He succeeded, however, in keeping the senate of Venice informed of political happenings in Constantinople through his elder brother SOLOMON (see below). Between 1687 and 1690 he was again in Venice and then returned to Constantinople, where he made the arrangements under which the protection of Venetians who had remained in the Ottoman Empire was assumed by Holland, instead of France. Israel had to leave for Venice after the expulsion of all Venetians from the Ottoman Empire in 1694. He was able to continue supplying useful reports to Venice through a third brother JUDAH who had remained in Constantinople. In 1698 Israel attended the Congress of Karlowitz, at which peace was negotiated between the European powers and the Ottoman Empire; the following year, as physician and secretary to the Venetian envoy Carlo Ruzzini he took a direct part in the delimitation of the borders between Venice and the Ottoman Empire. He was honored by the Venetian senate and, with his brothers Solomon and Judah, was given Venetian citizenship and exempted from wearing the Jewish badge. SOLOMON (1642–1719), born in Padua, practiced as a physician in Venice. He acted as intermediary in the exchange of correspondence between his brother Israel and the senate of Venice. He organized preparatory courses for young students, mainly Jews, who attended the medical university of Padua. He wrote the preface to the book *Ma'aseh Tuviyyah* (1709), by Tobias b. Moses *Cohn who was his student. Another member of the family was EMANUEL CONEGLIANO (1749–1833) who assumed the name LORENZO DA PONTE. A man of letters, he lived in New York and was a well-known author of libretti for Mozart's operas. CARLO ANGELO CONEGLIANO (1868–1901) of Modena was an economist and professor of financial sciences at the University of Modena. He founded the Italian Zionist review *Lidea sionnista* (1901–10).

[Attilio Milano / Federica Francesconi (2nd ed.)]

CONFERENCE OF PRESIDENTS OF MAJOR AMERICAN JEWISH ORGANIZATIONS (Presidents Conference). The Conference of Presidents of Major American Jewish Organizations was organized in 1955 out of a growing awareness that unified action by major American Jewish organizations was essential to help strengthen American support for the state of Israel, which equated with strengthening peace and stability in the Middle East. Of all American Jewish organizations, the Presidents Conference has the highest visibility in the American media, a stature not unchallenged by other Jewish organizations such as the ADL and which is also challenged in Washington, where AIPAC is viewed as the powerful and successful key to American support for Israel. It meets on a regular basis for the purpose of receiving briefings from Israeli and American government officials, the contents of which are useful for the leadership and constituents of member organizations; and offers a number of substantive programs. The Presidents Conference carries the message of the government of Israel and the American Jewish community to the administration in Washington on Israel-related issues and on international matters, and vice versa. It is *the* address for foreign leaders who want to address American Jewish leadership and is often employed as a forum for improving relationship with the American Jewish community, which is often perceived as essential to improving relationship with the American government by foreign leaders.

There were multiple factors at work in the genesis of the Presidents Conference. The Israeli government was eager to have a table at which it could present its concerns and discuss them with the American Jewish community; the U.S. State Department, under Secretary John Foster Dulles, was not happy with the idea of many Jewish organizations coming to it with messages from the Jewish community, and was therefore receptive to the idea of a single instrumentality with which it would relate, and which would represent the multiplicity of Jewish agencies. Additionally, Nahum *Goldmann, who was also president of the *World Jewish Congress (which had no real base in the United States other than the *American Jewish Congress, which did not really serve as a vehicle for the WJC),

wanted more of a voice on the American scene. Goldmann wanted a body that could coordinate and regulate the contacts of Zionist leaders with the State Department and handle political discussions surrounding Israel with American leaders. Goldmann played a key role, together with Philip *Klutznick, at that time the president of B'nai B'rith, in the creation of the Presidents Conference.

Other factors that were instrumental in the creation of the Conference of Presidents included the facts that Israel-related issues were not, at the time, priorities on the agenda of the National Community Relations Advisory Council (NCRAC, later NJCRAC), and that there was no community-relations vehicle that embraced the Zionist organizations, which were not members of the NCRAC.

The essential question – who speaks for the Jews of America? – was not answered fully by the creation of the Conference of Presidents; but the Conference was perceived by the Administration as the authorized voice of the Jewish community on Israel.

As early as 1951 a small group of American Jewish leaders, at the urging of Israeli official Abba *Eban, in a communication to Nahum Goldmann, began meeting with key Israeli officials for briefings and consultations. In 1955 a number of major organizations called a national conference in Washington on American-Israel relations. Thereafter the leaders and staff members of these organizations began to confer on a regular basis. An organizational structure developed and the Conference of Presidents was formally established in 1959. The 15 founding member organizations included eight Zionist groups, plus a number of "defense," religious, and fundraising agencies. The mandate of the Presidents Conference, as originally defined, is to act as a spokesman (not a policy-making body) on behalf of the American Jewish community to the American Administration on Israel. (The mandate was expanded in the mid-1960s to include other international issues as well.)

Originally the Conference was more of a "Presidents' Club" than a "conference," reflecting the views of Philip Klutznick, the powerful lay head of B'nai B'rith (the largest Jewish membership organization at that time), who was against a formal centralized, binding organization; he wanted an informal structure, "a forum for presidents to debate … matters pertaining to Israel." Before too long, however, the body became a formal Conference, with by-laws and procedures. In 1966, the Conference became a body of constituent *organizations*, rather than of presidents of organizations. During the same year it also decided to establish and maintain ongoing contacts with world Jewish bodies to facilitate the exchange of information, opinions, and ideas.

As of 2005, the Conference membership consisted of 51 national Jewish organizations – Zionist, "defense," and community-relations, social-service, religious, and fundraising – whose members collectively represent the overwhelming majority of the Jewish community of the United States. The Conference of Presidents seeks to develop consensus for collective action on issues of national and international Jewish concern. It endeavors to enhance the work of its member organizations to strengthen U.S.-Israel understanding, to assist Israel and to assure the physical safety and rights of Jews and Jewish communities overseas.

For the most part the Presidents Conference is not responsible for the deliberative process of shaping strategy on public-policy issues facing Israel. This process is a function of the range of the community relations and "defense" agencies, religious bodies, and Zionist organizations. The Conference's primary role, that of a spokesperson, is to present to the Administration the public face of the American Jewish community and of Israel.

The Conference also serves as the representative body to which officials of the Executive and Legislative branches of the American government, Israeli leaders, and foreign heads of state turn in dealing with issues of mutual concern. Leaders of Jewish communities in other lands and a wide variety of prominent personalities also appear before the Conference.

Conventional wisdom has it that the Presidents Conference languished until the Six-Day War. In fact, the conference was launched at a time during which the Eastern Bloc began shipping heavy arms to Egypt, and arms sales became an issue for the first time. Activity of *fedayeen* across Israel's borders was also of increasing concern for the Jewish community and was on the Conference's agenda. The 1956 Sinai Campaign, and the need to respond to the threat of sanctions from the White House, was the first critical issue facing the Presidents Conference. The Conference, together with the NCRAC (NJCRAC), convened regional conferences around the country during those years. Over the years, the Presidents Conference has remained a significant vehicle for the Israeli government to communicate, through the American Jewish community speaking with one voice, with the Administration.

The Conference's activities and accomplishments have focused on building a broad-based educational program in support of the principle that a militarily strong, politically secure, and economically sound Israel is in the best interest of the United States and of world peace. During the period of the Six-Day War the Conference convened a mass rally in support of Israel opposite the White House. In the wake of the Yom Kippur War, the Conference worked vigorously in support of the United States resupplying Israel. With the new *Likud government in Israel in 1977 – overturning three decades of familiar *Mapai/Labor rule – the Conference President, Rabbi Alexander *Schindler, who was informed by a politically liberal philosophy, was nonetheless able to establish a cordial relationship – personally and professionally – with Prime Minister Menaḥem *Begin, and was an instrument in the process of gaining public acceptance in the Jewish community of the new government. Following Egyptian president Anwar Sadat's 1977 visit to Jerusalem, the Conference undertook numerous activities to keep up the peace momentum – including acceptance of the first invitation to an American Jewish organization to meet in Egypt with President Sadat

and other top Egyptian leaders. Throughout the 1980s the Conference opposed the sale of sophisticated arms to Arab countries at war with Israel. It worked to guarantee the rights of Jews in the former Soviet Union to emigrate and practice their religious faith and cultural heritage, and it continues to monitor the resurgence of antisemitism in the former Soviet Union and parts of Europe. The Conference also had a role in the rescue of Ethiopian, Syrian, and Yemenite Jews and other endangered Jewish communities.

The Conference worked for the rescinding of the UN resolution equating Zionism with racism, which was reversed in 1991, as well as in countering the Arab economic boycott of Israel. The Conference was a leader in the successful effort to secure $10 billion in loan guarantees for Israel in 1992 over the opposition of President George H.W. Bush, who portrayed himself as overwhelmed by the activism of Jewish groups on the issue – a manifest display, suggested Bush, of the power of the Jewish "lobby." Since the 1993 signing of the Oslo Accords, the Conference has undertaken a significant program of activities in regard to the Middle East process. As there were deep internal divisions within the organized Jewish community regarding Oslo, which was indeed a revolution, the Presidents Conference was slow to act. Dovish critics faulted the Israeli Labor government for bypassing the Presidents Conference as it did not require its enthusiastic support. The American Jewish community overwhelming supported Oslo, with the noted exception of the Orthodox community.

Other priority issues before the Conference from the mid-1990s into the 21st century are terrorism in the United States and abroad, the proliferation of weapons of mass destruction, Islamic fundamentalism, support for foreign aid, promoting tourism to and trade with Israel, strengthening the bond between American Jews and Israel, and global antisemitism.

On the "Who-is-a-Jew?" question – a successive iteration of issues that has generated divisions in the American Jewish polity – the Presidents Conference over the years studiously avoided any involvement in the issue; indeed, the Conference avoided discussion of the issue within its deliberative process. This issue was particularly sensitive for Orthodox groups in the Conference, who viewed "Who is a Jew?" as an effort by the non-Orthodox/secular camp in Israel to chip away at the hegemony of the Chief Rabbinate in "personal-status" and other matters. The view of the Conference of Presidents leadership was that, as an organization that promoted Jewish unity, having on the agenda an issue that caused painful divisions would compromise that mission.

In the 21st century the salient issues for the Conference – international terrorism, global antisemitism, the Palestinian dilemma and the peace process in Israel, Jewish communities outside the United States and Israel – have been increasingly addressed via programmatic initiatives, which had not been the case in earlier years. In the late 1980s and early 1990s some "defense" agencies felt that the Conference was moving too aggressively in functional areas rather than limiting its activities to spokesmanship and coordination. Withal, the core function of the Conference has remained one of articulating a consensus position of its member organizations. When the organization is riven with strife it cannot achieve a consensus and results can be quite embarrassing. Such was the case with regard to the response to the assassination of Israel Prime Minister Yitzhak *Rabin by a religious Israeli opposed to the peace process, and with the Oslo accords. Condemnation of the assassination was fine but no consensus could be achieved on supporting the policies of the elected government of Israel. Similarly, in 2005 there was a great reluctance, because of internal political differences and the pull of right-wing and religious-nationalist organizations, to support the withdrawal from Gaza, and the support of the Presidents Conference was lukewarm at best.

Among the programs of the Presidents Conference in 2005 were the Daily Alert, a news summary on the Middle East; Israel Campus Beat, a weekly e-mail for the university community on Israel-related issues; Secure Community Alert Network (SCAN), an integrated rapid-response system for emergency communications; and Justice for Jews from Arab Countries, a refugee advocacy arm.

In 2005 the budget of the Presidents Conference was $2 million. The chairman of the Conference of Presidents is chosen on a rotational basis, with a two-year term of office the norm. In order to be eligible for the chairmanship, an individual must have been president of his or her organization within the past three years. In 2005 James S. Tisch was the chairman of the Conference of Presidents. Chairmen have been widely regarded as *the* spokespersons for American Jews during their tenure in office. Several were particularly effective; others relied upon staff to lead. Malcolm Hoenlein has served as executive vice chairman since 1986. Hoenlein, who had been executive of the New York Jewish Community Relations Council, is considered one of the more canny, aggressive, and creative American Jewish professional leaders. He was preceded by Yehuda Hellman, a career professional, who served from 1959 to 1986. The staff is small, and the membership base is organizational and not individual. There has therefore been considerable leeway for a single able professional leader, such as Hoenlein, to shape the organization

The following is a list of the member organizations of the Conference of Presidents of Major American Jewish Organizations in 2005:

America Israel Friendship League
American Friends of Likud
American Gathering/Federation of Jewish Holocaust Survivors
American Israel Public Affairs Committee
American Jewish Committee
American Jewish Congress
American ORT, Inc.
American Sephardi Federation
American Zionist Movement
Americans for Peace Now

Amit
Anti-Defamation League
Association of Reform Zionists of America/World Union North America
B'nai B'rith
Bnai Zion
Central Conference of American Rabbis
Committee for Accuracy in Middle East Reporting in America
Development Corporation for Israel
Emunah of America
Friends of Israel Defense Forces
Hadassah, Women's Zionist Organization of America
Hebrew Immigrant Aid Society
Jewish Community Centers Association
Jewish Council for Public Affairs
Jewish Institute for National Security Affairs
Jewish National Fund
Jewish Reconstructionist Federation
Jewish War Veterans of the U.S.A.
Jewish Women International
Joint Distribution Committee
Labor Zionist Alliance
Mercaz USA, Zionist Organization of the Conservative Movement
Na'amat USA
National Committee for Labor Israel
NCSJ: Advocates on Behalf of Jews in Russia, Ukraine, the Baltic States & Eurasia
National Council of Jewish Women
National Council of Young Israel
Rabbinical Assembly
Rabbinical Council of America
Religious Zionists of America
Union of American Hebrew Congregations
Union of Orthodox Jewish Congregations of America
United Jewish Communities
United Synagogue of Conservative Judaism
WIZO
Women of Reform Judaism
Women's American ORT
Women's League for Conservative Judaism
Workmen's Circle / Jewish Labor Committee
World Zionist Executive, U.S.A.
Zionist Organization of America

Significantly enough, the Simon Wiesenthal Center, a defense, research, and advocacy organization with membership and regional operations, does not appear on the list; and for many years the American Jewish Committee did not join the President's Conference, but retained observer status. The American Jewish Committee traditionally viewed itself as a non-Zionist organization whose priorities were centered on the domestic American agenda. In 1991, with international affairs holding primacy of place on AJC's agenda, the agency joined the Conference.

Several organizations, most recently Meretz U.S.A., have been rejected for membership. Reasons offered for rejection identify membership, budget, and regionalization criteria. But critics suspect a political agenda.

[Jerome Chanes (2nd ed.)]

CONFERENCE ON JEWISH MATERIAL CLAIMS AGAINST GERMANY, umbrella organization established in New York in 1951 by 23 national and international Jewish organizations representing Diaspora Jewish life in the West. Its aims were to obtain funds for the relief, rehabilitation, and resettlement of Jewish victims of Nazi persecution, and the rebuilding of Jewish communal life; and to obtain indemnification for injuries inflicted upon victims of Nazi persecution and restitution for properties confiscated by the Nazis.

The suggestion to call the Conference was made by the Government of Israel, which in 1951 said it was entitled to claim reparations from Germany, because it was responsible for the absorption and rehabilitation of the survivors of the Holocaust. The Conference was convened by Dr. Nahum *Goldmann, chairman of the Jewish Agency; he was elected its president. West German Chancellor Konrad *Adenauer issued an invitation to negotiate in a speech on the eve of Rosh ha-Shanah 1951, when he said "unspeakable crimes were perpetrated in the name of the German people, which impose upon them the obligation to make moral and material amends."

The idea of negotiations with West Germany was strongly opposed by various Jewish circles. There were riots in the Knesset before the Israeli government narrowly agreed in January 1952 to negotiate with West Germany. Opponents argued that the wrong caused to the Jewish people by Nazi Germany was of such a nature and magnitude that it was irreparable. They also maintained that to exchange this wrong for some "blood money" was morally and historically repugnant and likely to lead gradually to a "forgive and forget" policy. The partisans for negotiations did not dispute the basic assumption of the irreparability of the wrong but emphasized the differences between material claims and moral-historical claims, the latter to remain unaffected by the former.

The government of Israel and the Conference opened formal negotiations with the German Federal Republic in March 1952 at The Hague. On September 10, 1952, an agreement signed in Luxembourg between the West German government and the Conference was embodied in two protocols. The first protocol called for the enactment of German legislation to provide compensation and restitution to Holocaust survivors. Three German Federal Indemnification Laws (known as Bundesentschädigungsgesetze, BEG) were passed between 1953 and 1965. These laws, which established the legal framework for compensation for "victims of National Socialist persecution," mandated payments for victims in the West for personal and professional injuries. The Federal Restitution Law (Bundesrueckerstattungsgesetz, BRUEG-EG) enacted in

1957 was designed to compensate Nazi victims for loss of personal valuables, bank accounts, and other movable properties confiscated by Nazi authorities. In 1964, as a result of Conference pressure, the German parliament enacted amendments to the BRUEG which enlarged the volume of compensation payments and expanded the scope of eligibility. By 2000, under the terms of the first protocol, West Germany had paid more than DM 100 billion in compensation to individual victims of Nazi persecution. The German term for the measures is *Wiedergutmachung,* which is not used by the Jewish community because the term means "to make whole."

Under the second protocol, the German government agreed to provide the Conference with DM 450 million, over a decade, for the relief, rehabilitation, and resettlement of Jewish victims of Nazi persecution. This payment was in recognition of uncompensated Jewish losses. Of the early allocations, 76% was applied to relief, rehabilitation, and resettlement of Nazi victims, 20% to cultural and educational reconstruction, and approximately 4% to administration, including costs of the Israel Purchasing Mission in Germany (see *Restitution and Indemnification). These projects included educational institutions, community and youth centers, synagogues and other religious institutions, homes for the aged, children's homes and kindergartens, summer camps, and medical institutions. Of 750,000 Jewish victims of Nazi persecution living in European countries other than the Soviet Union, 225,000 became beneficiaries of aid for relief, rehabilitation, and resettlement, often through Conference financing of programs, primarily of the American Jewish Joint Distribution Committee. Conference allocations to the *United HIAS Service assisted the migration of 49,000 Jews from European countries.

The Conference helped finance the United Restitution Organization, which provided hundreds of thousands of Nazi victims with legal aid in connection with their restitution and indemnification claims. Conference allocations for cultural and educational programs totaled $19,450,000. Four major institutions for the commemoration and documentation of the Holocaust were the principal beneficiaries of the Conference: the *Yad Vashem Authority, Jerusalem; the combined projects of the *YIVO Institute, New York, and Yad Vashem; the *Centre de Documentation Juive Contemporaire and the Memorial to the Unknown Jewish Martyr, Paris; and the *Wiener Library, London.

The Conference was the first organization to establish a special program recognizing the Jewish community's moral obligation to assist *Hassidei Umot ha-Olam*, the *Righteous Among the Nations, who at considerable personal risk had saved Jews and who later were in need of financial assistance.

Conference allocations from the second protocol ended in 1964. In 1965 the Conference established the Memorial Foundation for Jewish Culture to serve as a living memorial to the Jews who perished in the Holocaust. The Foundation activities began with a capital of $10,432,000 allocated by the Conference.

The Conference continued to negotiate with Germany for compensation for individual victims after the three indemnification laws had been enacted. It believed there were serious deficiencies in West Germany's indemnification laws, which originally were limited to certain Nazi victims who were in the West by October 1953. Scores of thousands of victims were subsequently able to flee from Eastern Europe and the Soviet Union. In 1980 the Conference reached an agreement with West Germany for the creation of the Hardship Fund, which provided one-time payments to victims, primarily from Eastern Europe, who arrived in the West after the BEG deadline. More than 250,000 victims received payments from the Hardship Fund in its first two decades.

East Germany never compensated Nazi victims. It argued that it was an anti-fascist state, and it did not consider itself a successor to Hitler's Germany. When the United States established diplomatic relations with the German Democratic Republic, the Conference initiated efforts to obtain compensation and restitution from East Germany. An agreement was not reached until after German reunification, when Holocaust survivors in the West who had received minimal or no previous compensation became eligible for annuities from Germany. A separate fund for Jewish victims in Central and Eastern Europe was established in 1998.

In its first decade, the Conference reached agreements with individual German companies – IG Farben, Siemens, Krupp, AEG, Telefunken, and Rheinmetall – to provide compensation for Jews who had been slave laborers during the Nazi era. In 2000 the Conference represented Jewish victims in a multilateral agreement with the German government and industry in which DM 10 billion was provided as compensation for slave and forced labor. Since 1952 the Conference has concluded some 25 agreements with European governments and industry.

The unified German government also designated the Conference as a "Successor Organization," which gave it title to unclaimed and heirless individual Jewish properties and the properties of dissolved Jewish communities and organizations in the former East Germany. About 80% of the funds generated by the Successor Organization were used for projects that provided social welfare services to survivors; 20% was used to finance research, documentation, and education about the Holocaust. From 1995 through 2000, the Conference allocated more than $400 million from the proceeds of heirless Jewish properties in the former East Germany to projects that aid survivors. About 60% of these funds were used in Israel, while some 25% were for projects in the former Soviet Union.

The Conference leadership and membership remained stable over a half-century. Goldmann remained president until his death in 1982; he was succeeded by Rabbi Israel Miller, who served until shortly before his death in 2002. The executive functions were subsequently divided between the president and chairman, Rabbi Israel Singer and Julius Berman,

respectively. The first director of the Conference was Saul Kagan, who served until his retirement in 1998. He was succeeded by Gideon Taylor.

Survivors organizations – the *American Gathering / Federation of Jewish Holocaust Survivors and the Centre of Organizations of Holocaust Survivors in Israel – joined the Conference in 1989. Jewish organizations from Central and Eastern Europe were not specifically admitted to the Conference, although in 2000 the board was expanded. It included one "pan-European representative" and bolstered Israel's membership with "four eminent Israeli personalities."

The Conference was sui generis in Jewish life. The founding principle – that direct compensation be paid to individual surviving victims of atrocities – was unprecedented in 1951. It was also unprecedented that a voluntary consortium of Jewish organizations would be recognized as a legitimate negotiating partner with a sovereign state, West Germany. The Conference's member organizations reflected broad religious and ideological points of view that often were antagonistic and yet collaborated to pursue assistance that ultimately benefited more than a half-million victims of the Nazis.

[Marilyn Henry (2nd ed.)]

CONFERENCE ON JEWISH SOCIAL STUDIES, U.S. organization. The idea of the Conference originated in April 1933 with Morris Raphael *Cohen and S.W. *Baron. Its objective was to create an association of scholars to assemble reliable data about the "position of the Jew in the modern world," for the benefit of both Jewish and general scholarship, as well as the public at large. It was felt that such dependable research would help in the struggle against the rapidly spreading Nazi world propaganda with its fabricated evidence and other falsehoods. Beyond the immediate issue, however, loomed the widely felt need in the Jewish community itself to possess fuller and more precise information about the Jewish population, its economic stratification, and other socially and historically relevant aspects of Jewish life. After initial conversations the Conference (until 1955 called "The Conference on Jewish Relations") was launched at a meeting in 1936, presided over by Albert Einstein, addressed by M.R. Cohen, Harold Laski, and S.W. Baron, and concluded with an appeal for funds by Henry Morgenthau, Sr. From its inception, the Conference sponsored a number of research projects and publications, among them the quarterly *Jewish Social Studies*, published regularly from January 1939. An index to the first 25 volumes was published in 1967. There have also been several organizational offshoots of the Conference, including the Jewish Occupational Council, and particularly Jewish Cultural Reconstruction, Inc., which was in charge of salvaging and redistributing throughout the world much of the Jewish cultural property (manuscripts, books, artistic and ritual objects) looted by the Nazis from communities and individuals in the occupied countries.

[Salo W. Baron]

CONFERENCES. Intercommunal consultation started early in the history of Diaspora Jewry. The dispersion on the one hand and an intense feeling of solidarity on the other combined to make the holding of conferences of Jewish leaders and representatives an acutely felt need and hence a relatively frequent occurrence.

In the Middle Ages

It is often difficult to differentiate between intercommunal conferences and predominantly rabbinical synods. A responsum of *Gershom b. Judah (c. 965–1028) relates that "the communities which were gathered there [at a certain commerical center] … framed ordinances under oath" relating to certain matters (ed. by S. Eidelberg, no. 67, p. 155). The early 12th-century chronicler of the massacres of 1096 during the First Crusade describes how in the 11th century "all the communities used to come to Cologne thrice yearly for the fairs" and that "as the heads of the communities would start to speak" at their meeting at the Cologne synagogue, the head of the host community would lead and dominate the deliberations (*Sefer Gezerot Ashkenaz ve-Ẓarefat*, ed. by A.M. Habermann (1945), 47).

In Spain few conferences are recorded. Each cluster of Aragonese communities organized as a *collecta* for tax purposes transacted its business through regular consultation. On occasion, the king assembled delegates from Aragon, Catalonia, Valencia, and other provinces to reapportion a total tax. A large assembly met in Barcelona in 1354 under the impact of the *Black Death massacres to elect an executive committee for the purpose of conducting the common affairs of the Aragonese communities and to deliberate other matters. In 1432 Don Abraham *Benveniste convoked the trustees and scholars of Castile in the city of Valladolid, aiming to restore, through detailed *takkanot*, the social and cultural life of Castilian Jewry to the high level it had attained before the catastrophe of the persecutions of 1391.

A conference held in *Mainz around 1307 sought to raise funds to settle Jewish refugees from France in Germany. Just as in England a "Jewish parliament" was called by the king in 1241 in Worcester for no other reason than to extort money, so the German emperors convoked four meetings of delegates from many communities between 1431 and 1471 for the sole purpose of collecting tax. A number of Jewish gatherings were held during the 16th century (1513, 1530, 1562, 1582, and 1603) which attempted to deal with social, legal, and moral problems in Germany (see also *Synods).

In Italian-speaking areas the first known Jewish gathering was held in 1238 on the island of Crete. On the peninsula the earliest recorded conference seems to have taken place in Rimini in 1399 to apportion taxes among the communities. Jewish delegates from the Papal States, Tuscany, Padua, and Ferrara met in Bologna in 1416, electing at the conference a

vigilance committee which met two years later at Forlì. In addition to deliberations on a serious defense problem, the meeting adopted a set of *takkanot* partly dealing with sumptuary laws. The group seems to have met again in Perugia in 1423 and once again in 1428. Rabbinical assemblies in Tivoli and Ravenna sought revocation of a hostile bull issued by Pope *Eugenius IV in 1442. In Sicily all the communities met in 1447 and resolved to remove the chief judge. Royal privileges were confirmed at the request of an assembly four years later. In 1459 further privileges were obtained; yet another conference in 1466 was granted permission to establish a central Jewish college. In 1469 and again in 1488 meetings were held by order of the viceroy to allocate taxes. A year later the viceroy again convened in Palermo a meeting of one or two delegates from each community to request funds for a substantial contribution to the king for the expedition against Granada. A similar convention in 1492 sent envoys to Spain to plead for revocation of the expulsion order. Failing that, they proceeded to help plan an orderly exodus. These Sicilian "parliaments" had their own elected permanent officers, with a treasurer empowered to pay the expenses of the delegates. The northern and central Italian communities also sought amicable agreements on tax quotas at loosely organized conferences. The *Councils of the Lands in Poland-Lithuania represent a successful combination of intercommunal conference and synod.

In Bohemia, the Jewish council leadership of Prague and its chief rabbi spread their hegemony over the entire province. Around 1659 the provincial communities established a separate council of ten elders who joined the Prague community in assessing taxes (see *Landesjudenschaften). Though the earliest extant records of a session of the council of *Moravia date from 1653, the council must have operated much earlier. Along with the chief rabbi, the council regulated Jewish communal life in the area. The *Landesjudenschaften* of Germany often held their own conferences, frequently to ensure efficient taxation and general obedience to state regulations (see also *Cleves). The *Consistory introduced in Napoleonic France can be viewed as a continuation of this type of conference.

Modern Times

In the era of individualization, assimilation, emancipation, and greater use of communication, conferences and congresses – regional, national, and international – became increasingly feasible and acceptable as units of organization and a means of working for Jewish causes and interests. The general tendency in Europe and America to act through conventions and gatherings facilitated this development. Thus in modern times a diversified and variegated Jewish society found the conference most suitable for expression of its involvement with or hesitations about Jewish identity, solidarity, and self-help. Relief work, Zionism, the Jewish socialist as well as the Orthodox movement, utilize the manifold forms of conference as vehicles for unification, activity, and continuity. The form of synod remained reserved for rabbinical gatherings, in particular those in search of an authority on which to base reform and change.

The numerous organizations participating in representative conferences include the *Board of Delegates of American Israelites (established 1859), the *Alliance Israélite Universelle in France (1860), the *American Jewish Committee (1906), the *American (1918) and *World (1936) Jewish Congress, the U.S. *Jewish Labor Committee (1933), and *COJO – Conference of Jewish Organizations. In England the *Board of Deputies of British Jews has a committee on foreign affairs. Especially active after World War I was the Conjoint Foreign Committee formed by this organization and the *Anglo-Jewish Association (1871). In its time the *Hilfsverein der Deutschen Juden (1901) was especially active in defense and relief. So was the Israelitische *Allianz of Vienna. As examples of the tremendous communal energy involved in bringing together divergent groups for international action, the evolution of the American Jewish Congress and the struggle for *minority rights are briefly outlined here.

Years before World War I, proposals for a democratic representative assembly of American Jewry were made. The first practical step was taken at an extraordinary conference of American Zionists held in New York on Aug. 30, 1914, which resolved to organize a convention to consider world Jewish problems that might result from the war. Negotiations were begun with the American Jewish Committee, which offered to cooperate. After a number of meetings by sympathetic groups, a Jewish Congress Organization Committee was formed in 1915. After many conferences and with the support of Zionist groups, the first meeting of the American Jewish Congress took place from December 15 to 18. The two major items on the agenda were Palestine and minority rights, then the focus of attention of every major Jewish group throughout the world.

Most active were the various parties in existence during and after World War I. Demands for national rights for minorities were made by groups in many countries. A Russian Jewish Congress held a preliminary conference in Petrograd (Leningrad) in July 1917. Elections were held the following winter, but the unsettled conditions caused the organization to be dissolved. In its place a Jewish National Council was formed in 1918. In the Ukraine a Jewish National Council was formed on Oct. 1, 1917. In Kiev a Ukrainian Jewish Provisional National Assembly met in November 1918. A national council of Jewish national parties of German Austria was formed in Vienna in 1918. Representatives of Hungarian communities met at Temesvar on Dec. 15, 1918. In the same month a preliminary conference of Polish Jewish communal and city councils, meeting in Warsaw, decided to convene a congress in March 1919. A council commenced operation in Lithuania early that year. In Poznan a council was formed on Nov. 11, 1918. The *Canadian Jewish Congress, like all the abovementioned, adopted a strongly national resolution at its convention in March 1919. In Paris the Jewish delegations sent from

various countries to the Peace Conference were unified after many meetings on March 25, 1919.

Fund raising and relief organizations sought to alleviate the suffering caused by Russian pogroms, the two world wars, the Nazi Holocaust, and the rebuilding of a national homeland. A host of other welfare, religious, civic, and educational organizations came into being. Foremost among the fund-raising agencies was the *United Jewish Appeal (1939) which in the United States combined the American Jewish Joint Distribution Committee (1914), the United Israel Appeal, and the New York Association for New Americans.

Another field of unprecedented conference activity is the Zionist movement, with its many factions and groups. After the First Zionist Congress in Basle in 1897 and the biennial congresses which followed several annual meetings, the movement proliferated into a complex array of organizations. There were differences along ideological lines, i.e., secularism versus religion, socialism of many varieties versus capitalism; many non-Zionist or anti-Zionist leanings emerged. Most countries have continued supporting branches of international or Israel-based agencies.

CONFESSION. Along with admissions of fact from which any criminal responsibility may be inferred, confessions are not admissible as evidence in criminal or quasi-criminal proceedings, for "no man may call himself a wrongdoer" (Sanh. 9b). This rule against self-incrimination developed from the rule that a wrongdoer is incompetent as a *witness, being presumed to be unjust and untruthful (cf. Ex. 23:1). Since some people might admit to misconduct in order to disqualify themselves from testifying, to cure this mischief the rule was laid down that no man can be heard to say of himself that he is so guilty as to be an incompetent witness (Sanh. 25a; BK 72b). The rule was originally derived from the principle that no man is competent to testify in his own favor (Ket. 27a) – his confession being intended to confer the benefit of not being required to testify.

The rule against self-incrimination dates only from talmudic times. Several instances of confessions are recorded in the Bible (e.g., Josh. 7:19–20; II Sam. 1:16; cf. I Sam. 14:43), but these are dismissed by talmudic scholars either as confessions after trial and conviction, made for the sole purpose of expiating the sin before God (Sanh. 43b), or as exceptions to the general rule (*hora'at Sha'ah*; cf. Maim. comm. to the Mishnah, Sanh. 6:2; Ralbag to II Sam. 1:14). As all instances recorded in the Bible related to proceedings before kings or rulers, it may be that they did not consider themselves bound to observe regular court procedures (cf. Maim. Yad, Melakhim 3:10). Confessions are inadmissible not only in capital cases, but also in cases involving only *flogging, *fines (Rashi to Yev. 25b), or quasi-punishments (*ibid.*; cf. Resp.Rosh 11:5). Opinions are divided on whether a *ḥerem and public admonitions could be administered on the strength of a confession only.

Varying reasons were given for the rule against self-incrimination: the earliest and commonest is that the biblical requirement of the evidence of at least two witnesses for the condemnation of any man (Deut. 17:6; 19:15) implicitly excludes any other mode of proof (Tosef., Sanh. 11:1, 5). Maimonides adds that melancholy and depressed persons must be prevented from confessing to crimes which they have not committed so as to be put to death (Yad, Sanhedrin 18:6). Another theory was based on the prophet's words that all souls are God's (Ezek. 18:4), hence no man may be allowed to forfeit his life (as distinguished from his property) by his own admission, his life not being his own to dispose of but God's (David b. Solomon ibn Abi Zimra); still another scholar held that if confessions were accorded any probative value at all, courts might be inclined to overrate them, as King David did (II Sam. 1:16), and be guilty of a dereliction of their own fact-finding task (Joseph ibn Migash). A 19th-century jurist (Mordechai Epstein) pointed out that the real difference between civil admissions and criminal confessions was that by an admission an obligation was created which had only to be enforced by the court, whereas in a criminal conviction it is the court which creates the accused's liability to punishment. While it is nowhere expressed, the reason for the exclusion of confessions may well have been the desire to prevent their being elicited by torture or other violent means: it is a fact that – unlike most contemporaneous law books – neither Bible nor Talmud provide for any interrogation of the accused as part of the criminal trial, so that there was no room for attempts to extort confessions.

[Haim Hermann Cohn]

In the State of Israel

The question of reliance upon self-incriminating confessions has often arisen in the courts. In Cr.A. 614, 5561/80 *Al Bahiri v. State of Israel* 37 (3) PD 169, Justice M. Elon reviewed Jewish law on this question, stating that "Jewish law originally maintained that a defendant's self-incriminating confession was absolutely inadmissible, pursuant to the rule that 'since a person is related to himself, no one may incriminate himself [lit. 'a person cannot make himself out to be a wrongdoer]' (Yev. 25b). The confession of a crime was absolutely inadmissible, whether the accused confessed outside or in court, and even if there was corroboration. One could not be convicted unless there was sufficient evidence and testimony to the commission of the crime. During the course of time, with the changing needs of the times and of society, various changes were made towards easing the methods of proof in criminal law. Certain witnesses were deemed qualified who had previously been legally disqualified; and circumstantial evidence was held sufficient if it was strong and substantial. Within the framework of these major changes, it also became possible to convict a de-

fendant on the basis of his confession (Resp. Rashba IV, 311), but the qualification was established that a defendant's confession alone was not sufficient unless, in addition, there had to be 'some measure of corroboration' to support the veracity of the confession: In such a case, it is the practice to accept the defendant's confession even in a capital case where there is no clear proof, in order that what he says, '*together with some measure of corroboration*, may clarify what occurred' (Resp. Ribash, 234)." The reluctance to rely upon self-incriminating confessions was due to the concern expressed by Maimonides that such a defendant may be subject to "inner pressure" to blame himself for a crime that someone else has committed: "Perhaps he is among the melancholy and depressed who wish to die [and] who thrust swords into their bellies or throw themselves down from the rooftops. Perhaps such a person will come and confess to a crime that he did not commit, in order that he may be killed" (Maim. Yad, Sanhedrin 18:6). In this case, one of the issues decided was that a failure to testify in court cannot be considered the "something in addition" which, added to the extrajudicial confession, suffices for conviction, the reason being that the very "inner pressure" that renders a confession unreliable without corroboration, may well be the basis for the defendant's unwillingness to testify in court. Moreover, in keeping with Jewish legal principles as they developed over time, the court suggested that the law be amended and that the "something in addition" required only in regard to extrajudicial confessions be also required in regard to confessions made in court. Justice Elon added that the danger of convicting an innocent man on the basis of his confession is very worrisome, and in this regard the principle was stated, "it is better and more desirable that a thousand guilty persons go free than that a single innocent person be put to death" (Maim. *Sefer ha Mitzvot*, Neg. Commandment, 290). In an earlier case that reviews Jewish law's stringent evidentiary requirements and mentions the above principle of Maimonides (Cr.A. 641, 622, 543/79 *Nagar et al. v. State of Israel*, 35 (1) PD 35 113), the question arose as to whether a conviction for murder could be based upon circumstantial evidence alone or upon an extrajudicial confession, supplemented by "something in addition." Here Justice Elon outlined the Jewish legal sources as they developed over time relating to circumstantial evidence, the admissibility of testimony of relations and of self-incriminating confessions, and showed, based on the responsa of Rashba (IV, 311) and Ribash (251, 234), that self-incriminating confessions, though inadmissible alone, could be admissible if supplemented by "something in addition." In a case at first instance in the Beersheba District Court (Cr.F. 76/93 *State of Israel v. Suleiman El Abid*), Judge N. Hendel, in a minority opinion, examined the sources of Jewish law relating to circumstantial evidence and the inadmissibility of self-incriminating confessions, linking this question, following U.S. Judge Douglas' statement that the Fifth Amendment (against self-incrimination) "is part of our respect for the dignity of man," with Israel's Basic Law: Human Dignity and Freedom, which is intended "to anchor in a basic law the values of the State of Israel as a Jewish and democratic state." Upon this foundation, the court discussed the admissibility of confessions in keeping with Jewish values, extensively examining the sources of Jewish law (Maim. Yad, Sanhedrin 18:6; Resp. Ribash, 233; Resp. Rashba III, 399; Radbaz on Sanh. 18, and R. Simeon Shkop on Ket. 18b, 5) that provide different reasons for the inadmissibility of self-incriminating confessions. The Ribash, in view of Jewish law's reservations as to ascetic behavior and its opposition to self-inflicted harm, questions the motive of one who wishes to confess; stating that it need be closely examined in case it is due to a self-destructive urge (cf. Maim. Yad, Sanhedrin 18:6) or a misplaced wish to placate the conscience. The Radbaz states that such a confession is ineffective as "his soul does not belong to him but rather to the Holy One, blessed be He" (see Ez. 18:4); thus a confession in regard to what is not his is of no effect. R. Shkop's reason for the inadmissibility of confessions is the danger that too great a weight would be ascribed to them since they seem to constitute strong evidence, with the result that the court would be dazzled and not reach a balanced judgment. However, over time in certain Jewish communities, the pressure of circumstances necessitated that confessions be admitted within the framework measures of exigency (Resp. Rashba III, 399) with the qualification that "something in addition" must supplement them (Resp. Ribash, 233). Finding the case exclusively based upon the defendant's confession, Justice Elon suggested adopting Jewish law's careful approach and in the absence of clear corroborative evidence ruled that El-Abid be acquitted. The difficulty of the case is apparent in its development: initially El-Abid was convicted (by majority) for murder and rape; on appeal to the Supreme Court, only the rape conviction remained (by majority), while in a further hearing, only the murder conviction was upheld (by majority). In another case (Cr.A. 168, 115/82 *Moadi v. State of Israel*, 38 (1) PD 197), Justice Elon held (257–65) that the rationale behind the requirement that a confession must be "voluntary" is solely to ensure the reliability and truth of the confession and that a judgment rendered in disregard of this would be contrary to the judge's duty to render a judgment that is "true to its very truth" (*din emet le-amito*) (Shab. 10a; Er. 54b; Meg. 15b; Sanh. 7a, 1 11b).

CONFESSION OF SINS (Heb. וִדּוּי, *viddui*).

Biblical Literature

In the Bible, the confession of sin committed either individually or collectively is an essential prerequisite for expiation and atonement. Such confession is often followed by divine pardon. Thus the Lord mitigates His rebuke of Cain when the lat-

ter admits his sin (Gen. 4:13). David, censured by the prophet Nathan, confesses his iniquity in connection with Uriah and Bath-Sheba and is forgiven by God. David's confession and God's mercy are the subject of Psalms 32, 41, 51, and 69 in which God's righteousness is extolled. Other instances of individuals confessing their sins are Judah publicly acknowledging his inadvertent transgression with Tamar (Gen. 38:26; Sot. 7b); Achan, who had stolen from the forbidden spoils of Jericho, at the exhortation of Joshua avowing his sin (Josh. 7:19–21); and Saul asking forgiveness for having contravened God's commandment and permitted the people to retain Amalekite booty (I Sam. 15:24–25). Examples of biblical confessions for the nation, made by the leaders of the people, are Moses after the worship of the golden calf (Ex. 32:31), the high priest's confession on the Day of *Atonement (Lev. 16:6, 11, 21), and Ezra's (9:6, 7, 15) and Nehemiah's (1:6, 7; 9:2, 33–35).

The various sin and guilt offerings prescribed by the sacrificial ritual had to be preceded by confession. The sacrifice was brought to the altar by the offender who confessed his transgressions while placing both hands upon the head of the sacrificial animal (Lev. 1:4; Maim. Yad, Ma'aseh ha-Korbanot 3:6, 14–15). No formula for the exact wording of these confessions is given in the Bible; the Mishnah, however, records the confession of the high priest on the Day of Atonement: "O God, I have committed iniquity, transgressed, and sinned before Thee, I and my house. O God, forgive the iniquities and transgressions and sins which I have committed and transgressed and sinned before Thee, I and my house, as it is written in the Law of Thy servant Moses, 'For on this day shall atonement be made for you, to cleanse you; from all your sins shall ye be clean before the Lord'" (Lev. 16:30; Yoma 3:8).

Rabbinic Literature and Synagogue Ritual

Maimonides, basing his views on biblical and rabbinic traditions, ruled that it is a positive injunction to confess one's sins before seeking atonement: "Whether it is a positive or negative commandment which the individual has disobeyed, either willingly or inadvertently, it is a positive precept for him to confess the sin when desirous of repenting…." (Maim. Yad, Teshuvah 1:1). Confession of sin became an integral part of the synagogue ritual. It is especially characteristic of the Day of Atonement where the supplication for forgiveness of sin forms the focal point of the service. Although, according to the Talmud, the simple statement "Truly, we have sinned" (Yoma 87b) is sufficient for confession, elaborate formulas have gradually evolved, the earliest dating back to the third century C.E. One such formula composed for the eve of the Day of Atonement reads, "I confess all the evil I have done before Thee; I stood in the way of evil; and as for all (the evil) I have done, I shall no more do the like; may it be Thy will, O Lord my God, that Thou shouldst pardon me for all my iniquities, and forgive me for all my transgressions, and grant me atonement for all my sins" (Lev. R. 3:3); while another states: "My God, before I was formed, I was of no worth, and now that I have been formed, it is as if I had not been formed. I am dust in my life, how much more in my death. Behold I am before Thee like a vessel full of shame and reproach. May it be Thy will that I sin no more, and what I have sinned wipe away in Thy mercy, but not through suffering" (Yoma 87b).

**Ashamnu* ("We have incurred guilt"), a confession of sin listing sins in alphabetical order known as *Viddui Katan* ("Small Confession"), and **Al Ḥet* ("For the sin which we have committed before Thee"), known as *Viddui Gadol* ("Great Confession"), are first mentioned in geonic liturgy. To the sins enumerated, additions have gradually been made to include all possible transgressions, since the repentant individual may have forgotten some of the sins which he is required to mention explicitly. Confessions, being formulated as communal prayers, are thus recited in the first person plural, "We have sinned, transgressed, and rebelled," and a worshiper may confess all the sins stated even when certain that he did not commit some of them (Isserles to Sh. Ar., OḤ 607:2). These confessional prayers are not only recited on the Day of Atonement, they also form part of the **Seliḥot* services during the weeks preceding the Day of Atonement. Under the influence of the Kabbalah, *Ashamnu* was introduced into the daily service; in the Sephardi-Oriental, the Italian, and the Yemenite rites it is recited on Mondays and Thursdays only, and in the ḥasidic rite daily. The former custom is observed in most Israeli synagogues. Conservative and Reform rites have retained the confession-of-sins prayers, particularly as part of the High Holidays services.

Individual Confessions

Confession of sins also extends beyond the synagogal sphere and can be said by individuals during silent prayer and on diverse occasions. Confession, whether collective or individual, is always made directly to God and never through an intermediary, but some 16th-century kabbalist ascetics confessed sins to each other. The most important occasion for individual confession is on the deathbed. The Talmud advises that a person who is seriously ill should be exhorted to confess his sins (Shab. 32a), and a criminal about to be executed is also urged to confess. If he is unable to compose his own confession, he is prompted to say, "May my death be an expiation for all my sins" (Sanh. 6:2), and when he is too weak to recite the confession, it should be read to him (Shab. 32a). While no special form of deathbed confession existed in ancient times, a formula has become customary (see *Death). The dying person, if he is still conscious and has the strength to do so, recites the Day of Atonement confession in the singular. A brief confession, formulated in the 13th century but which is of much earlier origin, is also recited (Hertz, Prayer, 1064). It is also customary for a bridegroom to recite the Day of Atonement confession at the afternoon service before his wedding, with the wedding day being considered a sort of judgment day for the bride and groom.

CONFINO, MICHAEL (1926–), Israeli historian. Confino's research work encompasses social, economic, and intellectual history, with emphasis on comparative history, agrarian problems, collective psychology of social groups, the structure of societies under the Old Regime, the revolutionary movements, and the evolution of the Jewish community in Bulgaria. He was born in Sofia, Bulgaria, and immigrated to Israel in 1948. From 1951 until 1953 he was *aliyah* emissary in North Africa and in 1960 in the U.S.S.R. He studied at the University of Sofia, the Hebrew University of Jerusalem, and the Sorbonne. In 1959 he joined the Faculty of Humanities of the Hebrew University and was the founder and the first chairman of the Department of Russian Studies from 1964 until 1969. In 1970 he joined Tel Aviv University and founded the Russian and East European Research Center and was its first director between 1970 and 1977. From 1980 until 1995 he held the Samuel Rubin Chair of Russian and East European History and Civilization. He was visiting professor at many universities in the United States, France, and Italy. During his academic years, Confino was president of the Israel Association for Slavic Studies, a member of the executive committee of the International Association for Slavic and East European Studies, vice chairman of the executive board and member of the scientific committee of the Yitzhak Rabin Center for Israel studies, president of the Scientific Council, and member of the Israel Academy of Sciences and Humanities. He was also involved in the Documents of Soviet History series (1995–2004). Confino wrote numerous books and scholarly articles, including *Domaines et Seineurs en Russie à la Fin du XVIII^e Siècle* (1963), *Daughter of a Revolutionary: Natalie Herzen and the Bakunin-Nechaev Circle* (1974), *Il Catechismo del Rivoluzionario* (1986), *From Saint-Petersburg to Leningrad: Essays in Russian History* (in Hebrew, 1993), and *The Power of Words and the Frailty of Reason: Propaganda, Incitement and Freedom of Speech* (Heb., 2002). In 1993 he was awarded the Israel Prize in history and in 2003 he was awarded the EMET Prize for art, science, and culture.

[Shaked Gilboa (2nd ed.)]

CONFISCATION, EXPROPRIATION, FORFEITURE. Confiscation is mentioned once in the Bible as a quasi-criminal sanction against disobedience to lawful orders (Ezra 10:8). Relying on this precedent, the rule was enunciated that courts are empowered to expropriate (*hefker bet din*; Git. 36b, Yev. 89b); and the power of the courts to impose pecuniary penalties – apart from fines, the amounts of which are already prescribed (e.g., Ex. 21:32; Deut. 22: 19, 29) – is derived from this general power of expropriation (MK 16a). This power was regarded as necessary, as the authority given to Ezra and his courts to impose pecuniary punishments (Ezra 7:26 – rendered in the AV as punishment of "confiscation of goods") is presumed to have derived from Persian and not from Jewish law. Thus, even legally prescribed penalties were already increased by talmudic courts in severe cases, e.g., for recidivists (BK 96b); and in post-talmudic times ample use was made of this expropriatory power in the judicial campaign against lawlessness and violence (Maim. Yad, Sanhedrin 24:6; ḤM 2). A talmudic source seems to indicate that semi-confiscatory powers for punitive purposes could also be vested in non-judicial authorities, e.g., a Temple inspector who found a guard asleep on duty was authorized to burn his clothing (Mid. 1:2), an authority said to be derived from the expropriatory powers of the courts (*Piskei ha-Rosh, ibid.*). In later times it was held by some scholars that the townsfolk (*benei ha-ir*) or the seven notables (*shivah tuvei ha-ir*), exercising both legislative and quasi-judicial functions in the prevention of and fight against crime, were by virtue of this expropriatory power also customarily authorized to impose pecuniary sanctions (*Rema* ḤM 2).

Judicial expropriations were not, however, confined to criminal or quasi-criminal sanctions. They were also used for public utility purposes on the authority of Joshua and the elders of his time who redistributed the land among the tribes and families (Josh. 19:51). Such redistribution presupposed not only the power to divest an owner of some of his property, but also the power to vest that property in someone else – while punitive confiscations need not, according to some scholars, result in the confiscated property being vested in anybody else (*Shitah Mekubbeẓet* BK 100a). But while punitive confiscation presupposes some guilt or blameworthiness on the part of the owner (Tos. to Yev. 90a), public utility expropriations could also lawfully deprive innocent persons of their property (Resp. Akiva Eger 105). In the perspective of legal history, the most important use made of the expropriatory powers of the court was quasi-legislative. This use is best illustrated by some examples: thus, the legal rule that a lost chattel is to be returned to the claimant although he cannot formally prove his ownership, provided he satisfies the finder as to his bona fides by means of tokens (distinctive marks, *simanim*), was explained as an expropriation by the court of any rights in the chattel in favor of the claimant (BM 27b and Rashi *ibid.*). Also, a disposition by a son of his father's property before the latter's death, in payment of his father's debts or other responsibilities, was validated as an authorized disposition of money expropriated by the court for these purposes (BM 16a). Dispositions by infants of property in their hands were – if they were to their benefit – validated as authorized dispositions of expropriated property vested in the court, where the infants were legally incapable of disposing of their own property (Git. 59a and Tos. to Git. 40b s.v. וכתב). Hillel's famous law reform, the Prosbul, which made all debts recoverable notwithstanding their remission under biblical law (Deut. 15:2), was later sought to be explained and justified by the expropriatory powers of the court (Git. 36–37). In all these (and many similar) cases, the expropriatory powers of the court were invoked in theory only, by way of legal fiction, and mostly ex post facto: the rules were not established by their actual exercise by any given court but were explained and justified by the mere existence of those powers, which, had they actually been exercised in any particular case calling for the application of the

rules, could have brought about the desired result (see also *takkanot).

These powers were also used to do justice in particular and individual cases: for instance, by purporting to expropriate an amount of money from a defendant and vesting it in a plaintiff, the court exercised a jurisdiction based on law, even where there was no law under which the plaintiff could have claimed that money (cf. Maim. Yad, Sanhedrin 24:6). Or, marriages lawfully contracted which could not (but should) otherwise be dissolved – as, e.g., the marriage of a girl abducted from under her canopy (see *Abduction) – were invalidated by retroactively expropriating from the bridegroom the money (the ring) with which he had married the bride (Yev. 110a, cf. Yev. 90b). Similarly, it was sought to validate the will of a wife, if she bequeathed her estate to a third party, by retroactively expropriating the husband's right to inherit from his wife (Resp. Asheri 55:10). A judgment already enforced, though founded on an error, was upheld because of the special circumstances of that case, on the strength of the expropriatory powers of the court (*Tummim* 25; *Milḥamot* Yev. 37b). The same consideration may have led the court to leave a widow in undisturbed possession of her husband's estate, which she had unlawfully but in good faith appropriated to herself (TJ, Ket. 9:3, 33a and Kid. 1:3, 159d).

Finally, there are expropriatory powers vested in the king (or other head of the state; cf. Ezek. 45:8 and 46:18). According to biblical law, these powers appear to have been unlimited (cf. Eccles. 2:4 and 8; 1 Sam. 8:14), whereas under talmudic law they were limited to the king's military and road-building requirements, although the king alone decided what these requirements were (Sanh. 2:4). The story that Ahab could not buy Naboth's vineyard without the owner's consent and had to have recourse to unlawful means to attain it (1 Kings 21) is explained by some scholars to the effect that since he could not purchase the land, as was his desire, in view of the refusal of Naboth to sell, he exercised his legal right of confiscation (*Haggahot Maimoniyyot* to Melakhim 4:6). Nevertheless, the claim of the king to the vineyard after Naboth's death could not be based on the royal right to forfeiture of lands and goods of persons executed by royal decree, because Naboth was executed by judicial process and as such his lawful heirs inherited (Sanh. 48b). The claim of Ahab is therefore made to depend on the fact that as a nephew of Naboth, he was in fact such an heir (Tosef., Sanh. 4:6). The law was eventually codified to the effect that the king was not allowed to confiscate money or goods (and, *a fortiori*, lands) without paying compensation for them, and if he did confiscate without this, it was sheer plunder (Maim. Yad, Melakhim 3:8); for everything that he expropriated he had to pay fair compensation (*ibid.*, 4:3, 6).

In modern legal terminology, "confiscation" and "forfeiture" usually indicate expropriations without compensation (such as smuggled goods), while the term "expropriation" is normally reserved for acquisitions for public purposes against payment of compensation.

[Haim Hermann Cohn]

CONFLICT OF LAWS (also called Private International Law) is a branch of the law dealing with the adjudication of a matter which involves some foreign element, for instance, the fact that one of the parties is a foreign citizen, or that the matter at issue arose, wholly or in part, in another country – as in the case of a contract signed in one country and breached in another – and the like. Where there is a conflict of laws, two main questions arise: does the forum in question have jurisdiction to deal with the matter; if it has jurisdiction, what law shall be chosen to apply to the matter? The choice of laws available to the forum include the following main possibilities: (1) The personal law (*lex personalis*) by which the plaintiff or defendant is governed; the personal law may be determined either by the law of the party's place of domicile (*lex domicilii*) or by his national law (*lex ligeantiae*); (2) the law of the place where obligation was established, for instance, the place where the contract was concluded (*lex actus; lex loci contractus*); (3) the law of the place where the legal act is to be carried out, for instance, the fulfillment of a contract (*lex loci solutionis*); (4) the law of the place of situation of the property forming the subject matter of the dispute (*lex situs*); (5) the law of the place of situation of the forum seized of the dispute (*lex fori*). (See A.V. Dicey and J.H.C. Morris, 1967/8.)

This entry is arranged according to the following outline:

In Jewish Law

The subject of the conflict of laws is not a defined branch of Jewish law. This is attributable to a substantive quality of Jewish law, namely that it is a personal law purporting to apply to each and every Jew, wherever he may be – even if outside

the territorial bounds of Jewish sovereignty or autonomy. For this reason the mere fact that a contract is concluded in one country but is to be fulfilled in another is of no consequence in Jewish law. Moreover, Jewish law – for the substantially greater part of its history – has functioned as a legal system generally enjoying Jewish judicial autonomy but not Jewish political sovereignty (see **Mishpat Ivri*); the result has been that in suits before the Jewish courts both parties have usually been Jews, with little occasion for questions of conflict of laws to arise in relation to the personalities of the litigants (although there are isolated *halakhot* in this regard; see below).

Nevertheless, the fundamental problems that arise in the field of the conflict of laws occur also in Jewish law, in which they derive from two material phenomena of this legal system. One is the multiplicity of diverse customs in regard to the same subject, a fact expressed in the doctrine, "all is in accordance with the custom of the country" (*ha-kol lefi minhag ha-medinah*; see below). This multiplicity was already in evidence in talmudic times and became increasingly pronounced from the 10th century onward, when in the different centers of Jewish life hegemony was no longer exercised by a single center over the whole Diaspora, thus leading to the enactment of numerous local ordinances (see **Takkanot*, especially *Takkanot ha-Kahal*), to the spread of new *customs, and to much local decision (see Mishpat Ivri). The natural outcome of this phenomenon was the problem of choosing between the different laws, for instance, when the matter at issue arose partly in one place and partly in another, not between Jewish law and other law, but between diverse customs and *takkanot* within the Jewish legal system. The second phenomenon which brought about the problem of conflict of laws in Jewish law has been the contact between Jewish law and secular law; from this contact there evolved the doctrine of *dina de-malkhuta dina ("the law of the land is law"), and pursuant to it the creation of a number of rules pertaining to the field of the conflict of laws.

Multiplicity of Legal Rules

The existence of varying rules deriving from different customs and *takkanot* on a particular legal subject is to be found in various fields of the law. Wherever this reality exists and the various stages of a legal obligation have to be fulfilled in different places where varying rules are practiced in regard to such obligation, the question arises whether to apply to the obligation, the law that is customary at the place and time of its establishment, or that which is customary at the place and time of its fulfillment, or any other law.

CONCERNING THE LAWS OF MARRIAGE. Even in ancient times varying local customs had evolved and were practiced concerning the pecuniary relations between spouses. In regard to the amount of *dowry, R. Simeon b. Gamaliel adopted the rule of "all in accordance with the custom of the country" (Ket. 6:4), and the *halakhah*, with reference to both the *ketubbah* and the dowry, was determined as follows: "a marriage without condition is transacted in accordance with the custom of the country; also the wife who has agreed to contribute (i.e., a dowry to her husband) must do so in accordance with the custom of the country, and when she comes to recover her *ketubbah* she recovers what is contained therein in accordance with the custom of the country; in all these and similar matters the custom of the country is an important principle and must be followed, but such custom must be widespread throughout the country" (Yad, Ishut 23:12; Sh. Ar., EH 66:11). Thus there were different customs concerning a widow's right to lodging and *maintenance from the estate; the custom in Jerusalem and Galilee was to make the continuation of this right a matter of the widow's choice, and only if she preferred to claim her *ketubbah* would her right to maintenance and lodging become forfeited; in Judea the custom was to leave the choice with the deceased's heirs, and if they offered to pay the widow's *ketubbah*, she would forfeit the right to maintenance and lodging (Ket. 4:12); the people of Babylonia and environs followed the custom of the Judeans, and those of Nehardea and environs followed the custom of the Jerusalemites and Galileans (Ket. 54a).

This diversity of custom created problems relating to the conflict of laws. In the case of a woman of Maḥoza (in Babylonia) who was married to a man from the area of Nehardea, it was decided that she was governed by the law as customary in Nehardea, i.e., that the deceased's heirs could not deprive her of her rights by paying her *ketubbah* as mentioned (Ket. 54a). In a case in the 13th century, husband and wife were from separate towns and married in a third town; in each of the three places different customs prevailed concerning the financial obligations between spouses. Since the latter had not themselves defined these in the *ketubbah*, Solomon b. Abraham Adret decided that the custom to be followed in their case was that of the place of celebration of the marriage, if that was where they intended to live, otherwise the custom of the place where they intended to live; if they had not decided on the place of residence, the custom at the place where the husband was resident was to be followed, since in law the husband determines the place of residence (Tosef., Ket. 13:2; Ket. 110a–b) – "for he marries in accordance with the conditions at his own place of residence, whereto he takes her" (Resp. Rashba, vol. 1, no. 662 and cf. vol. 3, no. 433). The same conclusion was reached by other scholars on the basis of the talmudic rule concerning the woman of Maḥoza who married a man from Nehardea (Nov.Ritba, Ket. 54a; see also *Beit Yosef* EH 66, toward the concl.; Resp. Maharashdam, ḤM no. 327) and thus the *halakhah* was decided – "if a person married a woman from a certain place with the intention that she live with him at his place, the custom of his place is to be followed" (*Rema* to EH 66:12). In a 17th century decision it was determined that since the amount of the *ketubbah* was 500 gold coins in Lithuania and 400 gold coins in Poland, "the custom of the place of marriage is not followed but only that of the place of domicile" (*Ḥelkat Meḥokek* 66, n. 46 and *Beit Shemu'el* 66, n. 27); moreover, the customary law of their chosen *domicile was held to be applicable to the parties even

if they had agreed that they would settle there two or three years after their marriage (*ibid.*, 66, n. 46), and opinions were divided on the question whether to follow the custom of the place of marriage or that of the place of intended domicile in the event that the husband died before their having settled in the latter place (*ibid.; Beit Shemu'el*, 66, n. 27).

Some scholars held the opinion that the customary law of the place of celebration of the marriage governs the financial obligations between spouses: "a matter must be dealt with only according to [the law of] the place where the *ketubbah* was written, the husband having only undertaken liability therefore in accordance with the law of such place" (Resp. Ribash, no. 105). It was similarly decided in regard to differing customs deriving from the different communal *takkanot* relating to heritage of the dowry on the wife's death: "in all places local custom is followed, and even if they did not stipulate at the time of marriage, they are considered to have done so, for everyone who marries does so in accordance with the custom; even if he went to a place where the custom of the communities is not practiced, the law of the place where he married her is followed" (*Rema* to EH 118:19, based on Resp. Ribash, no. 105). Clearly, if the parties expressly stipulated that the custom of the husband's place of residence be followed, their position would be governed accordingly (see *Ḥelkat Meḥokek* to EH 118:19 and *Beit Shemu'el*, 118 n. 26, in which manner the apparent contradiction between Isserles' statements, here and in EH 66:12, is reconciled).

A dispute waged between prominent 16th-century scholars centered around the claim of Hannah Gracia Mendes – one of the *anusim (Marranos) from Portugal who had reached Turkey, where they openly reembraced Judaism – for half of her husband's estate, in accordance with the custom in Portugal, the place of celebration of the marriage. The dispute concerned the validity of an undertaking made at the time of marriage which was not celebrated in accordance with Jewish law; otherwise, however, all agreed that she was entitled to succeed in her claim in accordance with the law in practice in Portugal even if this was not the law in Turkey where the hearing took place (*Avkat Rokhel*, nos. 80–81; Resp. Maharashdam, ḤM no. 327; Resp. Maharibal 2:23; see also Civil Appeal 100/49, in *Pesakim shel Beit ha-Mishpat ha-Elyon*, 6 (1951/52), 140ff.). In Israel the rabbinical court has accepted the opinion of the scholars who held that the law of the place of celebration of the marriage must be applied – even if on the basis of *halakhah* the marriage is invalid. In the case of a Jewish couple who had emigrated from Russia, having been married in Russia in a *civil marriage ceremony only, in 1942, and were seeking a divorce before the above court, it decided that their common property should be divided in accordance with the law in practice in Russia in 1942 regarding the division of property between separated spouses (PDR 5:124ff.; see M. Elon, *Ḥakikah Datit* (1968), 169–72).

Some of the scholars dealing with the Mendes matter (see above) determined, as a matter of principle, that all contracts and acquisitions of property (*kinyanim*; see *Contract and *Acquisition), made among the Marranos themselves, in accordance with the general law of their land, were to have legal validity, even after the Marranos' open return to Judaism. One of the reasons advanced for this far-reaching determination was the fact of the Marranos' interest, for the sake of proper order in business matters, in ensuring that all their commercial and economic transactions have full legal validity – "and this is as a fixed custom among them, overriding the *halakhah*" (Mabit, in *Avkat Rokhel*, no. 80; see also **Minhag*). Of particular interest is a reason advanced by Samuel de Modena, paralleling one of the general principles in the field of the conflict of laws: "for if it were otherwise, none of the *anusim* who came from there [from Portugal and Spain to Turkey] would be able to live; if the transactions they had with each other there in accordance with local custom but not according to the law of the Torah, were now reopened; this is plainly inconceivable; as regards everything that was done there, we must say: what is done is done, from now on a new reckoning" (Resp. Maharashdam, ḤM no. 327).

CONCERNING THE LAWS OF *DIVORCE. An illustration of the conflict of laws in the above field, arising in Spain in the 13th century in regard to a *takkanah* prohibiting the divorce of a wife against her will, is to be found in the responsa collection of Solomon b. Adret (vol. 4, no. 186). At that time this *takkanah* was not followed everywhere in Spain, and the question arose whether a wife could be divorced against her will in the event that the *takkanah* was in force at the place of celebration of their marriage but not at the place to which they later moved – where the divorce proceedings were taking place – Solomon b. Adret replied: "for anyone marrying at a place where a wife cannot be divorced except with her consent is so bound, and he marries her in the knowledge that he cannot divorce her except with her consent … and even if he takes her away from the place of their marriage … to another place, he may not divorce her except in accordance with the custom of the place of their marriage."

CONCERNING *LABOR LAW. In this field, too, there evolved different local customs, and the rule, "all in accordance with the custom of the country," (BM 7:1) was applied with particular reliance on the principle that "custom overrides the *halakhah*" (TJ, BM 7:1; see also *Minhag). This diversity naturally led to cases of conflicting laws. The Mishnah records that there were places where it was customary for laborers to go to work early in the morning and return late in the evening, while in other places they did not set out so early or return so late (BM 7:1). In the Jerusalem Talmud it is stated that it was not customary for the people of Tiberias to start early and finish late, but this was the case with the people of Beth-Maon; it was stipulated that residents of Tiberias hired as laborers in Beth-Maon must act in accordance with the custom in Beth-Maon and laborers from Beth-Maon hired in Tiberias must act in accordance with the custom in Tiberias – i.e., that the determining law is the law of the place of fulfillment of the obligation; nevertheless, if an employer from Tiberias

should hire in Beth-Maon laborers to work in Tiberias, they must start early and finish late according to the custom in Beth-Maon because the fact that the employer does not hire laborers in Tiberias, but comes specially to Beth-Maon for this purpose, proves his intention to find laborers who will start early and finish late, and it is as if he expressly agreed to such effect (TJ, BM 7:1).

CONCERNING THE LAWS OF PARTNERSHIP, LAND TENANCY (ARISUT), ETC. Instances of differing and conflicting customs are mentioned also in fields of the civil law such as partnership (BB 1:1, 2), lease, and land tenancy in return for a share of the crop (*arisut*; BM 9:1), etc. (see *Lease and Hire). In these cases too it was laid down that the custom of the place where the obligation is established must be followed (Resp. Rashba, vol. 1, no. 662). Of interest is the conflict of laws principle laid down in a responsum of Simeon b. Ẓemaḥ Duran, 14th-century scholar of North Africa, in relation to a business partnership (*Tashbeẓ* 2:226). A dispute between one partner and the others concerning distribution of the partnership profits was brought before "a certain merchant who adjudicated between them," i.e., a lay judge adjudicating in accordance with the trade custom and not Jewish law. In an appeal before Duran against this decision, Duran held that the merchant's judgment did not conform with that required to be given in accordance with Jewish law; the contention of the partners who succeeded in the first instance, that the matter was originally brought before a merchant-judge in accordance with the local trade custom and that his decision was binding on the parties, was answered by Duran to this effect: the custom in question, although followed in the locality where the partners then found themselves, was not in existence at the place where the partnership was established, hence the local custom of the former place, i.e., the place of operation of the partnership, was not to be applied to their case, but the matter had to be dealt with in accordance with the custom at the place of establishment of the partnership.

Confict of a Factual-Legal Nature

A conflict of laws, in the wider sense of the term, may arise not only when there are in operation divergent legal methods at the various stages of an obligation, but also when there exists, at these various stages, a divergence of legal facts.

CONCERNING BONDS OF INDEBTEDNESS. When a bond specifies a particular currency which is in circulation in two countries, but its value is greater in one country than in the other, the rule is that the amount stated is payable in accordance with the value of the currency in the country where the bond was drawn up and not its value in the country where the bond is presented for payment: "When a person seeks to recover payment of a bond from his neighbor, then, if it is recorded as having been written in Babylonia – he recovers in Babylonian currency; if in Ereẓ Israel, he recovers in the currency of Ereẓ Israel; if there is no qualification in the bond, then, if he seeks to recover in Babylonia – he recovers in Babylonian currency, and if he seeks to recover in Ereẓ Israel – he recovers in the currency of Ereẓ Israel" (Tosef., Ket. 13 (12):3 and BB 11:3; according to the version in Ket. 110b; Yad, Malveh 17:9; Sh. Ar., ḤM 42:14). The *posekim* were divided based on the reasoning for the second part of the above rule; some of them expressed the opinion that the bond is recovered according to the currency value at the place where the bond is presented for payment, because it is presumed that the bond was drawn up at the place where it is presented for payment; but if the presumption is rebutted, by proof that the bond was drawn up elsewhere, it will be payable according to the currency value at the latter place (Yad and Sh. Ar., loc. cit.; *Sefer ha-Terumot* 54:1); other *posekim* explained the rule on the basis that in the circumstances in question, the parties intentionally omit any mention in the bond of the place where it is drawn up in order that the amount be payable according to the currency value at the place where the bond shall be presented for payment, and, according to this explanation, the currency value will always be as determined at the place of presentation of the bond for payment (Ran to Alfasi, end of Ketubbot; pupils of R. Jonah, in *Shitah Mekubbeẓet*, Ket. 110b; Nov. Ritba Ket. 110b; see also *Kesef Mishneh* Malveh 17:9; *Rema* ḤM 42:14 and *Siftei Kohen* thereto, n. 34).

CONCERNING THE KETUBBAH. A similar problem was discussed in relation to payment of the amount specified in the *ketubbah*, in a case where the parties had married in Ereẓ Israel and were being divorced in Cappadocia (a country in Asia Minor which was famous for its coin mint – see S. Lieberman, *Tosefta ki-Feshutta*, 6 (1967), 389), and the same currency was in circulation in both countries, although at different values (Ket. 13:11; see also Tosef., Ket. 110b and BB 11:3). The scholars who differed from R. Simeon b. Gamaliel were of the opinion that the *ketubbah* and a bond of indebtedness were subject to different rules (Ket. 13:11). In regard to the substance of the difference, the opinions stated in the Jerusalem Talmud differ from those in the Babylonian Talmud. According to the former, the value of the currency was higher in Ereẓ Israel than in Cappadocia, and in respect of the *ketubbah* – a right of the wife flowing from the Torah, according to these scholars – the scholars were always careful to see that it was received by the wife according to the higher value, i.e., according to the value in Ereẓ Israel, even if the marriage took place in Cappadocia (TJ, Ket. 13:11). In the Babylonian Talmud it is held that the currency value was lower in Ereẓ Israel than in Cappadocia, and as far as concerned the *ketubbah* – in the opinion of these scholars a right given the wife by rabbinic enactment and not law (see *Oral Law and Written Law (*Torah)) – it was more leniently regarded by the scholars than any other bond of indebtedness, and therefore it was held to be payable in accordance with the currency in Ereẓ Israel, i.e., according to the lower value, even if the marriage took place in Cappadocia (Ket. 110b). R. Simeon's opinion, according to both Talmuds, was that the *ketubbah* was subject to the same law as any other bond of indebtedness (according

to the Babylonian Talmud because in his view the *ketubbah* was an obligation of biblical law; according to the Jerusalem Talmud because it was an obligation of rabbinical law), and it was always necessary to pay according to the currency value at the place of establishment of the obligation, i.e., the place where the marriage took place.

It may be noted that the same problem was discussed in principle in relation to other halakhic matters. Thus it was established that a person transporting – other than in Jerusalem – second tithe fruits from a cheaper to a more expensive area, or vice versa, had to redeem the fruits according to their value at the place of redemption and not as valued at the place from which they were brought (Ma'as. Sh. 4:1; see also Ned. 8:4 in TB and TJ; see also *Domicile). For the validity of documents drawn up in non-Jewish courts, see *Shetar.

Jewish and Non-Jewish Parties to the Same Suit

According to a *baraita* of the talmudic law, if in a suit between a Jew and a gentile, before a Jewish court, there exists the possibility of favoring the Jew either according to the general law or according to the Jewish law, then this should be done by the court (BK 113a; cf. Sif. Deut. 16; Yad, Melakhim 10:12). This *halakhah* is quoted in the Talmud in the context of heavy and arbitrary tax quotas imposed on the Jews (see *Taxation); it is also to be understood as a reciprocal measure, i.e., as a reaction to the unequal treatment afforded Jews in the gentile courts (in like manner to the *halakhah* in BK 4:3, see BK 38a – "because they did not take upon themselves the seven *Noachide laws"; see also Albeck and other commentators to the Mishnah and *Gemara*, loc. cit.). Thus in the 13th century it was laid down that "at any rate this [the foregoing] was not said in regard to those who follow a defined religious faith; if they come before us to be adjudged, their way shall not be barred in the slightest manner, but the law shall cleave the mountain, whether in his favor or against him" (i.e., whether in favor of the Jewish or gentile party – *Beit ha-Beḥirah* BK 38a; and this is also the interpretation given in other similar cases: *Beit ha-Beḥirah* BK 37b–38a and Av. Zar., 3a, 6b, 22a, 26a). This talmudic *halakhah* is still quoted in Maimonides' *Mishneh Torah* but in the later Codes, such as the *Arba'ah Turim* and the Shulḥan Arukh it is not mentioned at all. The very discussion of this *halakhah* ceased to be of any practical significance since the non-Jewish party was not subject to the jurisdiction of the Jewish courts and acted in accordance with the general law (in many places the central government would appoint a special judge to deal with suits between Jews and non-Jews; see, e.g., Baer, Spain, 1 (1961), 51, 83, 87, 115, 131, 310; 2 (1966), 66; *Beit Yisrael be-Polin*, ed. by I. Heilprin, 1 (1948), 58f.).

From various talmudic *halakhot* it may be deduced that in a legal transaction involving both a Jewish and a non-Jewish party, the latter acted in accordance with the foreign law – a fact that was calculated, in certain cases, to influence the manner in which the issue was decided. Thus the following problem is discussed in the Talmud: the debtor dies leaving *orphans; thereupon the surety pays the creditor before notifying the orphans of the fact of payment and then seeks to recoup this payment from the orphans (see *Suretyship). The surety's haste in paying the debt without prior approach to the orphans arouses suspicion of a conspiracy, i.e., the possibility that the debtor had paid the debt before he died in order to avoid a claim against the orphans, and that the surety and creditor conspired to recover the debt a second time, from the orphans, so as to share the money (BB 174b). In the course of the talmudic discussion the opinion is expressed that the above-mentioned suspicion only arises in the event that the creditor is a Jew, for the reason that in Jewish law the creditor must first have recourse to the debtor – hence the debtor's fear that the creditor might have recourse to the orphans and his decision to forestall this possibility by paying the debt; however, in the case of a non-Jewish creditor, there would be no reason to suspect that the debtor paid the debt during his lifetime, since according to Persian law, to which the creditor was subject, the latter might have direct recourse to the surety, and the debtor would know that the creditor was going to do so and not have recourse to the orphans (BB 174b; the contrary opinion expressed here also takes cognizance of the fact that in Persian law the creditor may claim directly from the surety). Hence it was decided, in Spain in the 14th century, that when the law applicable to the non-Jewish creditor is identical to Jewish law, the case of the latter will be no different from that of a Jewish creditor (*Maggid Mishneh* Malveh 26:6). Also recorded is the case of a non-Jew who hypothecated his courtyard to a Jew, which he then sold to a Jew (see BM 73b; Yad, Malveh 7:6; Sh. Ar., YD 172:5).

Conflict of Laws; Principles Where the Foreign Law Is Applicable

From application of the doctrine of *dina de-malkhuta dina*, rules are often derived (see above) which may serve as guiding principles in the field of the conflict of laws, of which the following two examples may be noted.

DISTINGUISHING BETWEEN MATERIAL AND PROCEDURAL LAW. Elijah b. Ḥayyim, head of the Constantinople rabbis at the end of the 16th century, determined that even in the case where Jewish law is subject, by virtue of the doctrine of *dina de-malkhuta dina*, to the foreign law, it is subject only to the material and not the procedural part of such law; hence the laws of evidence are always to be applied in accordance with Jewish law – i.e., the *lex fori*, which is the intrinsic law absorbing the foreign law. The case under discussion (Resp. Ranaḥ no. 58) concerned the question of *imprisonment for debt. Elijah b. Ḥayyim held that even on the assumption that the doctrine of *dina de malkhuta dina* was applicable (according to the accepted view, this could not have been the case since the question of personal freedom is a matter of the ritual law (*issur ve-hetter*) to which the doctrine is not applicable), only the material provision of the law of the land was to be applied, i.e., the provision that a defaulting debtor was to be imprisoned if he had the means to pay, but not otherwise; however, the

mode of inquiry into, and proof of, the debtor's financial position had to accord with Jewish law. Hence Elijah b. Ḥayyim concluded that in a case where it was not satisfactorily proved, in accordance with the foreign law, that the debtor lacked the means of paying this debt, but according to the rules of evidence in Jewish law, there was adequate proof of the debtor's lack of means to make payment, then the debtor was to be treated as such and could not be imprisoned (see M. Elon, *Ḥerut ha-Perat* (1964), 164 n. 200).

LEX DOMICILII AS OPPOSED TO *LEX SITUS*. The validity of a *will executed by a Marrano Jew in Majorca was the subject of a dispute between two 14th-century halakhic scholars, Isaac b. Sheshet Perfet and Simeon b. Ẓemaḥ Duran (Resp. Ribash nos. 46–52; *Tashbeẓ* 1:58–61). The testator bequeathed his estate to his daughters on condition that the estate pass to his wife on their death. When the daughters died, the civil court decided that the estate was to pass to the testator's widow in accordance with the will, and called on all persons holding estate assets to restore such to the widow. The heirs of the daughters challenged the will on the ground that in Jewish law, in such circumstances, the estate belonged to the natural heirs of the deceased beneficiary ("Inheritance has no interruption" – BB 129b; Sh. Ar., ḤM 248:1) and called for restoration of the estate assets to themselves. Bar Sheshet held it to be correct that the heirs of the daughters would succeed to the estate if the will "had been executed amongst Jews at a place where they judged according to Jewish law"; however, he added, "the testator was living in Majorca presumably as a gentile and the wife claiming under the will, as well as those claiming to inherit by virtue of kinship are also presumed to be living there as gentiles, and even as Jews they have been required to be adjudged in accordance with the law of the gentiles; for this has always been their practice of their own will; how then shall one of the parties go to a far place to be adjudged in accordance with Jewish law? Let them come before their own judge in Majorca, namely the bailus (*gizbar*), and whoever shall succeed and be held by the bailus to be entitled to the testator's property shall be the heir." Thus Bar Sheshet regarded the *lex domicilii* as the law which was intended by the testator to apply to the will and all concerned therewith, so that none of the possible heirs, or beneficiaries under the will, were entitled to demand that the validity of the will be judged according to any other law.

Duran took a different approach, determining at the outset that Jewish law continued to apply to all the parties, even though they had been Marranos (for the opinions of Mabit and Maharashdam in the matter of Gracia Mendes see above). He added, however, that even if the doctrine of *dina de-malkhuta dina* was applicable to the case, the fact remained that "the rulers of the land are concerned only with the property in such land"; and in regard to property outside of Majorca (i.e., North Africa in this case) "on the contrary, we must say that the same law is not to be applied on account of this very doctrine in order that the government of the land in which the property in issue is situated shall not be particular – when there are in such land those who have a claim of right – about the fact that the latter lose their right because of the opposing law of another land." In his opinion therefore the *lex situs*, the law of the place of situation of the property, was the proper law applicable to assets in a foreign country, and not the law of the place of domicile of the testator and beneficiaries, and since at the place of situation of the property there were those who claimed it in accordance with Jewish law, this law, being the *lex situs*, as well as the *lex fori*, was to be applied (see also *Public Authority; as for the interpretation of privilege granted by the central government to the Jewish community, see Resp. Ribash no. 228).

Further to our comments above (under "Concerning the Laws of Marriage") there is a noteworthy decision of the Israel Supreme Court, the *Miller* case, given in accordance with Jewish Law on the subject of conflict of laws (*Miller v. Miller* – CA 100/49, 5(3) PD 1305).

The *Miller* case involved an appeal against a District Court decision requiring the estate of the deceased husband to pay a fixed monthly amount to the respondent throughout the period of her widowhood. The deceased was British and his wife had also acquired British citizenship on the basis of her marriage to him. The deceased was a Jew, who had closed his business in England and immigrated to the Land of Israel (pre-State), where he remained, without leaving, for 13 years. These and other facts led the District Court to the conclusion that the Land of Israel was his permanent place of residence and that, accordingly, given that his personal law was Jewish law, the applicable law was therefore the law applying to Jews in the Land of Israel, namely, Jewish Law, which requires the estate to pay maintenance to the wife even if the husband provided otherwise in his will. In this case, the deceased was wealthy, and the wife was hence awarded a sizable monthly payment.

Counsel for the estate argued, inter alia, that even under the assumption that the decedent's place of residence was the Land of Israel, in view of the fact that the deceased was a British subject, the domestic court must put itself in the place of the British court and determine what the latter would have ruled in such a case: i.e., would British law have transferred jurisdiction in this matter to the place of residence. Because English Law does not recognize a cause of action in this case, the English court would not have transferred the matter for the adjudication of an Israeli court.

Justice Y. Olshan rejected this argument, citing an English decision in the matter of *De Nicols v. Curlier,* in which the facts were similar to those of the case under discussion. In that case, two French citizens married in France and moved to England, where the husband died; the House of Lords held that the French law regarding joint ownership of property was applicable, despite the fact that the English law did not recognize such rights for the widow. Regarding this issue, Supreme Court Justice Prof. S. Assaf cited the above-mentioned case of Gracia Mendes, which is astonishingly similar to those of the *De Nicols* case, as follows:

> By the way, it should be noted that a case very similar to the *De Nicols* case … is found in our Responsa literature from the middle sixteenth century, namely, the famous case involving Hannah Gracia Mendes and her younger brother-in-law. The case was brought before the halakhic scholars of the time in Turkey and in Israel, and the most important responsa are those of Rabbi Samuel of Medina (*Maharashdam*), the leading rabbi of Saloniki … and that of Rabbi Moses Mitrani, the Rabbi of Safed (*Hamabit*).

Justice Assaf also presented in detail the contents of the above-mentioned responsa, ending with the above-mentioned responsum of the Rashba, to the effect that the wedding should be performed in accordance with the law of the place in which it is performed

CONFLICT OF OPINION (Heb. מַחְלֹקֶת, *maḥaloket*; Aram. *pelugta*; Palestinian Aram. *taflugta*).

General

Rarely did a view in the Talmud go unchallenged, since every talmudic scholar was entitled to his own opinion, even if it conflicted with that of his greatest contemporaries (BK 43b). Consequently the Talmud is replete with undecided controversies. However, this was not always so. For the Jerusalem Talmud (Ḥag. 2:2, 77d; cf. Sanh. 88b; et al.) states that: At first there was no *maḥaloket* in Israel, except over the issue of ordination (**semikhah*). Then Shammai and Hillel arose (see *Bet Hillel and Bet Shammai) and they differed on four issues (cf. Tos. to Ḥag. 16a). When, however, the disciples of Shammai and Hillel grew numerous, and did not wait upon their masters sufficiently, *maḥaloket* became rife in Israel. They divided into two schools, the one declaring (something) ritually impure, while the other declared (it) pure and it (i.e., unanimity of opinion) will not return to its place until the Son of David come (cf. Eduy. 8:7). Thus from the early first century C.E. on, undecided controversies became more common, often represented by opposing schools, e.g., Hillel and Shammai, Rav and Samuel, Abbaye and Rava, etc. Occasionally, a later controversy was attributed to "pre-*maḥaloket*" personalities, even to King Saul and David (Sanh. 19b; see Urbach in bibl. and p. 54 n. 49).

The rabbis appreciated the value of positive controversy, expressing it thus: Only a *maḥaloket* which is for the sake of heaven (*le-shem shamayim*), such as those of Hillel and Shammai, will in the end be of lasting worth; one which is not for the sake of heaven, such as that of *Korah and his company, will not in the end be of lasting worth (Avot 5:17).

Rules of Controversy

Though everyone was entitled to argue his own views, there are certain rules determining which kinds of dissenting opinions are permitted. Thus a *tanna* (a sage of the mishnaic period) cannot express a view that runs counter to a biblical passage. Similarly, an *amora* cannot contradict a Mishnah or accepted *baraita*, unless he cites another tannaitic source to support his contention. However, the early *amoraim* Rav and Johanan had the right to contest mishnaic opinions (Er. 50b).

Rules of Decision

Scattered throughout the Talmud are rules on how to decide practically between differing opinions. The following are general rules: In all cases the view of the majority overrules that of the minority (Ber. 9a; et al.). If one Mishnah recorded a controversy of two *tannaim*, and a later one in the same order recorded one of those opinions anonymously (*setam*), then the opinion of the latter Mishnah is to be followed (Yev. 42b). In matters of mourning the lenient ruling is to be preferred (MK 18a); likewise in rabbinic institutions (Beẓah 3b).

Particular rules (tannaitic and amoraic) are recorded on how to decide in the case of a tannaitic controversy. Thus, with certain exceptions, Hillel's rulings are accepted in preference to those of Shammai (Er. 13b). Eliezer b. Jacob's Mishnah is *kav ve-naki* ("small in compass, but trustworthy," Yev. 49b). As Eliezer b. Hyrcanus was a *shammuti* (either "under a ban," or "a Shammaite") his views were not usually followed (Shab. 130b). Decisions of Simeon b. Gamaliel, except for three cases (Git. 38a), and likewise those of R. Judah ha-Nasi (BB 124b; cf. Pes. 27a) are always followed. Akiva and Yose b. Ḥalafta are followed rather than their opponents (Er. 46b, 51a), and Meir is followed in his *gezerot* ("decrees," Ket. 57a), but not in matters involving reasoning, as his reasoning was too subtle (Er. 13b). In a *maḥaloket* between Judah b. Ilai and either Meir or Simeon, Judah is followed, but in all laws of the Sabbath Simeon is followed (Shab. 157a). Nathan's rulings are always binding (BK 53a).

The following rules apply with regard to amoraic controversies: In civil law Rav's views overrule those of Samuel; in religious law, the reverse is the case (Bek. 49b; et al.). Similarly with R. Naḥman and R. Sheshet (Ket. 13a; cf. BK 96b; Sanh. 5a; et al.). In all controversies between Rav and Johanan, except three, Johanan is followed (Beẓah 4a). Likewise Johanan's views overrule those of Resh Lakish, in all but three cases (Yev. 36a). Rabbah's opinion prevails over that of R. Joseph in all but three cases (Git. 74b), and Rava's opinion over that of Abbaye in all but six cases (BM 22b). Perhaps the most important rule to be formulated in post-talmudic times was that of *halakhah ke-vatra'ei*, that is: wherever two *amoraim* are in conflict, and nowhere is it stated which opinion is to be followed, that of the later *amora* takes precedence (see e.g., B.M.Lewin (ed.), *Iggeret R. Sherira Ga'on* (1921), 38). There are many more such rules, but they do not apply where the Talmud expressly states the *halakhah* (Er. 46b). A considerable literature discussing these rules has grown up since the geonic

period, such as *Seder Tanna'im ve-Amora'im* (1839) and *Mavo la-Talmud* of Samuel Hophni, attributed to Samuel ha-Nagid (Constantinople, 1510).

[Daniel Sperber]

CONFORTE, DAVID (1617 or 1618–c. 1690), rabbi and literary historian. Conforte was born in Salonika into a well-known Sephardi family of rabbis and scholars. He studied rabbinics and Hebrew grammar with the leading rabbis of his time and Kabbalah with teachers in Jerusalem and Salonika. Conforte left Greece for Jerusalem in 1644, stopping for about a year in Cairo, where he studied in the *bet midrash* of Abraham Skandari, and for some time in Gaza with Moses b. Israel Najara. He stayed in Jerusalem for two years, returned to Salonika in 1648, and in 1652 once more to Jerusalem where he founded his own *bet midrash*. In 1671 Conforte was rabbi in Cairo, where Mordecai b. Judah ha-Levi was chief rabbi; the latter mentioned him several times in his responsa *Darkhei No'am* (1697–98). Conforte's major work was *Kore ha-Dorot*. The manuscript was published in Venice in 1746 by David Ashkenazi without mentioning the author's name, and it is uncertain whether the author or the publisher gave the work its title. A new edition with a biographical introduction, notes, and registers was published by David Cassel (1846, repr. 1945 and photo reprint 1969). *Kore ha-Dorot* is a chronicle of authors and works from post-talmudic times until the author's own. For the material up to 1492, he leaned heavily on his medieval predecessors' works: Abraham *Ibn Daud's *Sefer ha-Kabbalah*, Abraham *Zacuto's *Sefer Yuḥasin*, and Gedaliah *Ibn Yaḥya's *Shalshelet ha-Kabbalah*. He supplemented the information in these works with material taken partly from manuscripts that have since been lost. Conforte was the first to prepare an alphabetical list of scholars of the Tosafist period; it was supplemented in 1845 by L. Zunz in his *Zur Geschichte und Literatur* (pp. 30–60) with the help of Jehiel Heilprin's *Seder ha-Dorot* (1769). Though subsequent research findings supersede some of Conforte's information, his work remains important for the biography and times of Jewish authors and leaders. *Kore ha-Dorot* is especially important for its information about Sephardi scholars who lived in Mediterranean countries in the 16th and 17th centuries. The author knew many of them personally or received reliable information about them from descendants. He also diligently extracted names of scholars from the responsa of his time. Conforte's information on Ashkenazi scholars, however, is sketchy and sometimes wrong.

A volume of Conforte's responsa is lost, but a single responsum is preserved in the manuscript responsa collection of his contemporary Moses Judah *Abbas. Gabriel Conforte, mentioned in the same collection and in Aaron Alfandari's *Yad Aharon*, may have been his son.

[Moshe Nahum Zobel]

CONGREGATION (**Assembly**). A variety of terms are employed in the Bible for "the people of Israel" in its social, military, and sacral capacity. The most common are: "Israel," "the people" (*ha-ʿam*), "the assembly" (*ha-qahal*), "the congregation" (*ha-ʿedah*), "the children of Israel" (*benei Yisrael*), and "the men of Israel" (*'ish Yisrael*). These terms denote not the total population but the institutionalized body of Israel, that is, a given group acting on its behalf. This may be deduced from the fact that the expressions mentioned sometimes alternate with "the elders of Israel" or "the elders of the people." For example, according to Exodus 12:3, Moses is commanded to address "the congregation of Israel" (*ʿadat Yisrael*) in connection with the Passover sacrifice, while in the following passage (12:21 ff.) describing Moses' address, it is the "elders of Israel" (*zikenei Yisrael*) who are addressed (see Mekh., Pisḥa 3:11; cf. also Ex. 19:7 with 19:8; 17:5–6 with Num. 20:7; II Sam. 17:4 with 17:14). The terms discussed are used synonymously and often occur together without any possibility of distinguishing between them. In Judges 20–21, when all the tribes unite following the crime of the Gibeathites, the acting body of the Israelites is named: "the assembly," "the congregation," "the children of Israel," "the people," "the assembly of the people of God," "the men of Israel," and "the elders of the congregation." Similar expressions occur in the narrative concerning the division of the kingdom (I Kings 12): "the assembly of Israel," "all Israel," "children of Israel," "all the people," and "the congregation."

This ambiguous use of terms in connection with social institutions is characteristic of the entire area of Mesopotamia and Syria-Palestine, and is particularly conspicuous in documents from the second half of the second millennium B.C.E. The representative institutions of the cities of Syria-Palestine at the period of Israel's penetration into the area are designated by "town [*ālu*] of N," "the men [*amēlu*] of N," "the sons [*mārú*] of N," and "the assembly" or "council" (*mwʿd*). Furthermore, the interchange of "the elders" with "the congregation," which appears in the Bible, also occurs in these documents, where "the elders" (*šibūtu*) seem to be identified with "the town" (*ālu*), or the two may overlap (cf., e.g., el-Amarna Letter no. 100). As in the Bible, so also here the author may use different designations for the same representative body in the same document. A similar type of flexibility exists in the tribal-patriarchal vocabulary. The terms "clan" (*mishpaḥah*), "family" (*bet 'av*), and "tribe" (*shevet*) are interchangeable (Num. 17:17; Josh. 22:14; Judg. 13:2; 17:7; 18:19) and may even enter the semantic range of "people" and "nation" (Gen. 12:3; Jer. 33:24; Amos 3:1). However, in documents of the ancient Near East, as well as in the Bible, each of the various terms for the social institutions also has a more precise, literal meaning, but the exact interpretation of the term is always dependent on the context. For example, when the subject is a large crowd, the

term *qahal* is more suitable than the others; when the author refers to a small group of representatives, as in Leviticus 4:13, he uses "the elders of the congregation," and in a clearly military context the term *'ish Yisrael* is employed. The same applies to the tribal-patriarchal vocabulary. Although the terms for family, clan, and tribe overlap, the literal sense of each was strictly preserved when it was necessary to distinguish between the various units in the tribal hierarchy (Josh. 7:14–18; I Sam. 10:19–21). The choice of terminology was also dictated (if the documentary hypothesis is accepted), by the different scribal traditions. In the three major strands of the Pentateuch, the source JE (Jahwist-Elohist) mostly employs "the elders of Israel," the Priestly Code *ʿedah*, and Deuteronomy *qahal*.

Qahal and ʿEdah: Etymology and Semantics

Although *ʿedah* and *qahal* seem to be synonymous, they actually have different nuances: *qahal* (perhaps related to *kol (qol*, "voice"); cf. the usage of *qrʾ, ṣʿq, shmʿ* for "summon") is used in a more general sense and refers to a multitude of nations (Gen. 28:3; 35:11; 48:4), to hordes (Num. 22:4; Jer. 50:9; cf. Ezek. passim) and to masses (e.g., I Kings 8:65; Ps. 22:26). *ʿEdah* (from *yʿd*, "set a time [or place] for a meeting") has a more specific sense and a sacred connotation. *Qahal* appears in all strata of biblical literature and applies to all periods of Israelite history. *ʿEdah* mainly occurs in a sacerdotal context and is restricted to the pre-monarchic period. Its last occurrence in the historical literature is in I Kings 12:20, in connection with the division of the kingdom. Together with *ʿedah*, the term *iʾsh Yisrael* went out of use, as did the patriarchal terms "the heads of the tribes" (*rashei ha-maṭṭot*) and "the heads of the contingents of Israel" (*rashe ʾalfei Yisrael*). This fact, together with the absence of *ʿedah* in the books of Chronicles and Ezra-Nehemiah, militates against the view (e.g., of Wellhausen and Rost) that this term was coined in the post-Exilic community. When referring to Israel, *qahal* encompasses the entire population: men, women, strangers, etc. (Jer. 44:15; cf. Deut. 31:12), while *ʿedah* denotes the indigenous, mostly arms-bearing population (cf. Judg. 20:2). The laws which apply to the *ʿedah* do not apply to strangers; when the legislator wants to impose the law on the resident and the stranger alike, he makes *qahal* subject to the law (Num. 15:15).

ʿEdah: Character and Functions

In its classical sense the *ʿedah* is the assembly of the arms-bearing male population (cf. the *guruš* in the Sumerian cities and *ṣābē nagbātī* in the Hittite kingdom), and hence its military character. It connotes (especially in the Book of Numbers) a military camp moving to its goal, the Promised Land, and consisting of 12 tribes, each tribe having its place of encampment, standard, and ensigns (Num. 2:2). The center of the camp is the "Tent of Meeting" (*ʾohel moʿed*) containing the Holy Ark, which guides the people on its way. To set the divisions in motion, signals are given by priests blowing two silver trumpets (Num. 10:1–8). The conscription of the *ʿedah* is done by a census (Num. 1); the enrolled are men from the age of 20 years and upward, who are able to bear arms (cf. Judg. 20:2). A census is also carried out in connection with the casting of lots for the division of the land (Num. 26), and sometimes involves the collection of money for the building of the tabernacle (Ex. 30:11–16). The description of the congregation and the tabernacle is very schematic and utopian, with the result that the picture as a whole appears anachronistic. However, it should not be regarded as pure fiction. The organization of the tribes has prototypes in the tribal-patriarchal society of the nomadic West Semitic tribes, as reflected in the documents from *Mari, the area that seems to have been the cradle of the Patriarchs. Like the tribes of ancient Israel, those of Mari were organized on the basis of clans and households (cf. *betʾav* with *bīt abi* and *abu bīti*) and were ruled by elders (*šibūtu*) and chieftains (*sugagu*). Their military units were based on gentilic principles, and like the tribes of Israel, they lived in tents and encampments (*nawûm*). The census played an important role there and occurs in the context of conscription and division of the land as in ancient Israel. A portable sanctuary is used by the Bedouin in their nomadic way of life, and there is no justification for the denial of the existence of the tabernacle during the wanderings of the tribes in the desert. The reality of the tribal life of the Israelites is reflected in the story of the Danites' search for land for their settlement. Like "the children of Israel" in the desert, the Danites lived in a camp (cf. 600 armed men, Judg. 18:11, with the 600 *ʾelef* men in Ex. 12:37), and on their march acquired divinatory objects and a priest. Also like the "children of Israel," they sent men to spy out the land that they planned to conquer. In light of the last analogy, too sharp a line should not be drawn between the *ʿedah* of the period of the wanderings and that of the judges. Since classical stories concerning the *ʿedah* refer to the time of the wanderings in the desert, which involved preparations for the conquest, its military character prevails. However, the *ʿedah*, as the ruling body of the nation, also functioned in a judicial, political, and sacral capacity. In this respect it was not different from the so-called primitive democracies in ancient Mesopotamia and Homeric Greece. The *ʿedah* was convened in the following cases: (1) Breach of covenant with God, i.e., violations of the basic religious principles of the congregation, such as blasphemy (Lev. 24:14 ff.; cf. I Kings 21:9 ff.), desecration of the Sabbath (Num. 15:33 ff.), violation of the taboo (*ḥerem*, Josh. 7), major cultic deviation (Josh. 22:9 ff.), and grave immoral behavior (Judg. 19–21). (Cf. also Deut. 13:10–11; 17:5, in connection with pagan worship, and Ezek. 16:40; 23:46, in connection with fornication, although the last examples do not refer to the tribal assembly, but rather to the city assembly; see below.) In all these cases, the assembly acts in its judicial as well as its executive power; (2) Holy gatherings and religious ceremonies, such as Passover sacrifice (Ex. 12:47; Num. 9:2), covenantal gatherings (Lev. 19; cf. Deut. 4:10; Ex. 24:3–8, Deut. 31:12), and holy days and sacred occasions (e.g., Ex. 23:17; Lev. 23:4 ff.); (3) Political affairs: concluding treaties with foreign nations (Josh. 9:15–21), appointing a leader or a king (Num. 27:2; I Sam. 8:4; 10:17; 11:14; 12:1; I Kings 1:39; 12:1, 20; cf. II Kings 11:17), and proclaiming war (Josh. 22:9 ff.; Judg. 20:1 ff.; cf. I Kings 20:7 ff.

"the elders of the land"); (4) Tribal-patriarchal affairs: inheritance and division of the land (Num. 27:1–11; Josh. 18:1–10; cf. Micah 2:5); and (5) National crisis or natural calamity (Ex. 16:2–3; Num. 14:1–10; 17:6–7; 20:2; 25:6).

The parallel democratic institutions in ancient Mesopotamia (*puḫrum*), the old Hittite Kingdom (*pankuš*) and ancient Greece (βονλή) were convened for similar reasons, and like the *ʿedah* in Israel, the democratic institutions there decreased in importance as the kingdom became more stable. With respect to religious crimes, the *ʿedah* has more affinities with Hittite and Greek institutions. The assemblies in Greece and among the Hittites were summoned in cases of violation of major religious laws, stealing of sancta, etc. In Greece transgressors of the last type were put under the ban (κατάρατος, "accursed"), as were transgressors in ancient Israel (Deut. 27:11–26). The ban involved excommunication either through execution or exile, punishments which seem to correspond in some way to "cutting off from the congregation" (Ex. 12:19) or from the assembly (Num. 19:20) in the Bible. The classical *ʿedah* convened at "the entrance of the Tent of Meeting" (*petaḥ ʾohel moʿed*). The word *moʿed* ("meeting") refers to the meeting of God with Moses and the congregation (e.g., Ex. 25:22; 29:43–44; 30:36), but it also has the sense of assembly (Num. 16:2) and is so attested to in Phoenicia (Byblos; "The Journey of Wen Amon") and in Ugaritic literature (*pḫr mʿd*, in reference to the divine assembly). It is therefore possible that in one of the stages of its development, the *ohel moʿed* also carried the meaning of "the tent of the assembly." As already indicated, the power of the *ʿedah* decreased with the growth of the monarchy. However, a revival of the concept *ʿedah* occurs in the Dead Sea sectarian scroll of the "War of the Children of Light against the Children of Darkness." This sectarian community at the end of the Second Temple period saw itself as the true and ideal Israel living in the desert, and patterned itself after the congregation of the Exodus generation. Although the specific connotation of the *ʿedah* as the tribal assembly was gradually lost, the concept *ʿedah* continued to be employed in the sense of the local court or tribunal (cf. the Akkadian *puḫrum* in the cities of Babylonia; see, e.g., Code of Hammurapi, 5:202). Thus in Proverbs 5:14, *qahal* and *ʿedah* are the public places of judgment; the same meaning is ascribed to the expressions "to stand up in the congregation" (*qum ba-ʿedah*) in the documents from Elephantine and "I stand up in the assembly [*qamti ba-qahal*] and cry" in Job 30:28. It would seem that some of the features of the later city assembly were projected by the priestly author upon the ancient tribal assembly, and similarly, characteristics of the city influenced the description of the camp of the Israelite tribes. For example, according to the law of the cities of refuge in Numbers 35, the *ʿedah* established the right of the slayer to refuge (35:12, 24–25), whereas in the parallel law in Deuteronomy 19, it is the elders of the city who act in this case (19:12). Therefore, the *ʿedah* in the priestly account (according to the documentary hypothesis) is apparently none other than the judicial body of the city where the homicide occurred. By the same token, when the priestly legislator prescribes that those afflicted with severe skin disease shall live outside the camp (Lev. 13:45–46; cf. Num. 5:1–4), he apparently alludes to the Israelite city, which kept those afflicted outside its walls (II Kings 7:3 ff.). The *ohel moʿed* in the priestly literature, according to Kaufmann, reflects the local sanctuary of the later Israelite city.

[Moshe Weinfeld]

CONGRESS FOR JEWISH CULTURE, organization devoted to the promotion of secular Jewish culture and the recognition of Yiddish as an indispensable means of Jewish creative expression. Founded in New York in September 1948 at a world conference convoked by American Yiddish cultural agencies and Jewish labor organizations, and participated in by delegates from similar organizations in other lands, the Congress for Jewish Culture set for itself the following basic objectives: to preserve the continuity of Jewish cultural creativity; to foster Jewish education through Yiddish and Yiddish-Hebrew schools; to assist in the publication of literary and scholarly works in Yiddish; and to protect the cultural freedom of the Jews wherever their right to maintain and develop their own culture is threatened. The work of the congress since inception has been in line with these objectives. The congress is a loose confederation of organizations bearing the same names in different parts of the world. Among the publications that appeared from its main center in New York are a number of volumes of Yiddish poetry and fiction by writers who perished during the Nazi Holocaust or were executed in the Soviet Union; a lexicon of Yiddish literature and press; a two-volume encyclopedia of Jewish education; and a series of books containing selected works of leading Yiddish writers. It has granted a number of awards for outstanding literary accomplishments. Through its department of education, the Congress seeks to coordinate the activities of the various types of Jewish secular schools. Closely allied with the Congress, although operating independently, are the Yiddish monthly **Zukunft* and CYCO (Central Yiddish Culture Organization). The affiliates of the Congress outside the United States, while cooperating in the activities of the main center, conduct programs of their own. Most prominent is the Congress of Jewish Culture in Argentina, which brought out a Yiddish translation of Dubnow's history of the Jewish people

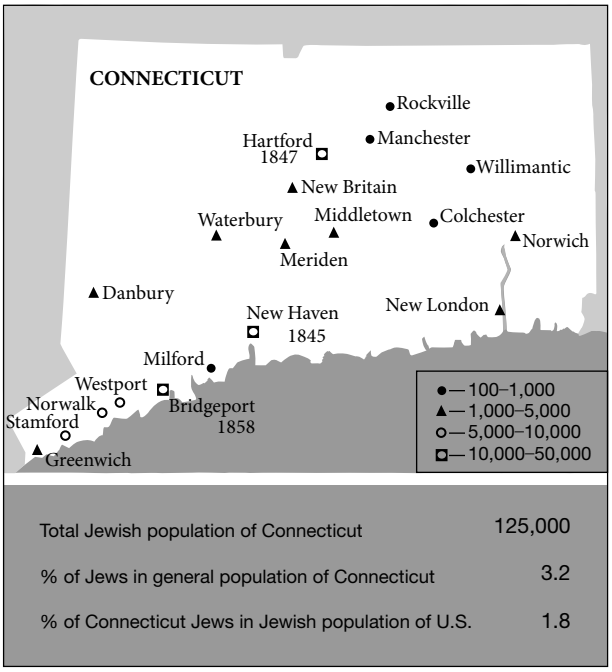
and the complete history of Jewish literature by I. Zinberg. The congress has its own house in Buenos Aires. Some of the activities of the Congress were financially supported in the past by the *Conference on Jewish Material Claims against Germany. When funds were no longer available from that source, the congress was forced to curtail activities.

[Charles Bezalel Sherman]

CONNECTICUT, one of the six New England states located in the N.E. section of the United States. The earliest reference to a Jew in Connecticut is found in connection with an entry on November 9, 1659, in the General Court in *Hartford, of one named "David the Jew" who was arrested for peddling. Shortly thereafter, in 1661, reference is made to Jews living in Hartford in the house of one John Marsh, and the extension of permission to continue to live in "ye Town for sea[v]en months."

Little or nothing is known of the first Jewish settlers and settlements in Connecticut prior to the latter part of the 18th century and the beginning of the 19th century. Jews were settled in *New Haven as early as 1759 where a family named Pinto – the brothers Jacob, Solomon, and Abraham – were living in that year. Ezra *Stiles, president of Yale College at the time, referred to these Pinto brothers as "men who renounced Judaism and all religion"; but he also refers to a new Jewish family (unnamed), who settled in New Haven in 1771 and describes them as the "first real Jews… that settled in New Haven." He says that there were about eight or ten members in this new family and reports a Sabbath service held "by themselves" as being probably "the first Jewish worship in New Haven." Despite the seeming apostasy of the Pinto brothers, they were active patriots of the community. Jacob Pinto was reported a member of an important New Haven committee of patriots in 1775. Solomon served in the U.S. Army until he retired in 1783. Solomon was one of the original members of the Society of the Cincinnati in Connecticut, which was a short-lived group of aristocratic veteran officers of the Revolutionary War. Another brother, Abraham, also served.

There is very meager information about organized Jewish communities in Connecticut prior to the 19th century. Part of that may be due to the fact that no Jewish congregations were permitted to incorporate prior to 1843, when the Statutes were amended by the addition of the following: "Jews who may desire to unite and form religious societies may have the same rights, powers, and privileges as are given to Christians of every denomination by the laws of the State" (Revised Statutes of Connecticut, 1849, Title III, Section 149). There is no doubt, however, that groups of Jews lived in the state who would assemble for worship even without statutory permission. The first Jewish congregations on record are the Beth Israel of Hartford and Mishkan Israel of New Haven. Beth Israel in Hartford was organized in 1843, but there is reason to believe that they held services as early as 1839. Mishkan Israel, in New Haven, assembled for worship as early as December 1840. By reason of population movement to the suburbs, The



Jewish communities in Connecticut and dates of establishment. Population figures for 2001.

Congregation Beth Israel of Hartford (its corporate name) was located in the late 1960s in the town of West Hartford, and Mishkan Israel Congregation was located in the town of Hamden.

The Jewish population of Connecticut grew with the influx of Jews from overseas. Thus, it is estimated that in 1877 there were 1,492 Jews in Connecticut; in 1905, 8,500; in 1917, 66,862; in 1927, 91,538; and in 1937, 94,080. In 1969 it was estimated that the Jewish population of Connecticut was approximately 105,000. In the beginning of the 21st century, there were more than 125,000 Jews residing in the state. Out of 50 states in the U.S., Connecticut was ranked 10th highest for Jewish population.

The largest growth was in the Southern part of Connecticut, considered suburbs of New York City, mostly around the Westport and Greenwich areas. It is axiomatic that the closer to New York Connecticut residents live, the more they see themselves as part of the New York community though they affiliate locally with congregations, institutions, and organizations.

According to the Jewish Federation of the Western Communities of Connecticut, the most recent growth trend has been an increase of Jewish population in the western part of Connecticut, around Litchfield Co. The increase is better than 10%. The town of Waterbury, in western Connecticut, saw especially large growth in the Orthodox community after Yeshiva Gedolah opened its doors in 2000. In five years, membership grew to include 75 families and 175 students. Students come from all over the U.S. and the world. Yeshiva Gedolah anticipated membership growth of well over 30% in 2006. Na-

tional grocery chains in the area responded by stocking kosher items for their new clientele.

The largest Jewish population in Connecticut was in Greater Hartford with 34,000 Jews. In the early 1900s, Hartford saw an influx of Jewish immigrants from Eastern Europe and at one point during the 20th century Hartford had at least 13 synagogues in the city. After World War II, Jews moved from Hartford to the suburbs and subsequently no synagogues remained in downtown Hartford. The second largest Jewish community is in Greater New Haven.

In the past, business was the major source of Jewish livelihood. Jews then moved into the professions as lawyers, doctors, and academics, and into real estate, mostly commercial. Two major real estate developers are both Holocaust survivors, David Chase and Simon Konover, with statewide and national developments.

Community Life

Connecticut had nine Jewish Federations and JFACT, Jewish Federation Association of Connecticut, a statewide government affairs office. The ADL and AJC both had statewide offices in Connecticut. The *Jewish Ledger* was a statewide Jewish newspaper. Around the state there were also 130 synagogues, six Jewish community centers (four big ones and two smaller ones in Sherman and Litchfield), three Jewish nursing homes, eight Jewish Family Service Offices, 13 Jewish day schools, and the Hebrew High School of New England. Connecticut saw a growth in Jewish day school enrollment throughout the state.

Jewish community centers were housed in splendid facilities, and the federations for the collection of philanthropic contributions were active. Mt. Sinai Hospital of Hartford was the only Jewish hospital in the state. B'nai B'rith was also active.

Connecticut Jews have played a distinguished role in the economic, social, political, and cultural life of the state. Herman P. *Koppelmann of Hartford (1933–38, 1941–43) and William M. Citron (1935–38) of Middletown served in the U.S. House of Representatives. Abraham A. *Ribicoff, who represented Connecticut in the House of Representatives (1945–52), was a member of the U.S. Senate (1962–1981), and governor of Connecticut (1955–61). Many Jews in the course of the years have served in the state legislature and on all levels of the judiciary. M. Joseph Blumenfeld of West Hartford was a Federal Court judge. Justices Samuel Melitz of Bridgeport and Abraham S. Bordon and Louis Shapiro of West Hartford served on the Supreme Court of Connecticut. Some men served as mayors of their communities, as U.S. referees in bankruptcy, and as Federal attorneys. In 2005, 14% of CT's State senators were Jewish (5 out of 36); they were Judith G. Freedman, Jonathan A. Harris, Edith G. Prague, Gayle S. Slossberg, and Andrea L. Stillman. Sam Gejdenson represented the greater New London area in Congress from 1981 to 2000. Born in 1948 in an American displaced persons camp in Eschwege, Germany, Gejdenson was the first child of Holocaust survivors elected to the U.S. House of Representatives. The most famous Connecticut political leader is Senator Joseph I. *Lieberman, who was first elected to the United States Senate in 1988, making him the first and only Orthodox Jew elected a senator. In 1994 he made Connecticut history by winning 67% of the vote, the largest ever in a Connecticut Senate race. In 2000, Lieberman was elected to a third term. He is perhaps best known as the Democratic candidate for vice president in 2000 and as the first Jew nominated for the position on a major party ticket. His career now spans more than three decades.

[Abraham J. Feldman / Robert Fishman (2nd ed.)]

°**CONON I**, one of the authors mentioned by Josephus (Apion 1:216) in the list of Greek writers who wrote in detail about the Jews. Some identify him with a writer of that name mentioned in Servius' commentary to Virgil (*Servius ad Aeneidem* 7:738), but this is doubtful. Still more doubtful is the identification of Conon with Conon II.

°**CONON II** (late first century B.C.E. and early first century C.E.), a mythographer, contemporary of King Archelaus of Cappadocia. Fragments of Conon's work have been preserved in the library of Photius. Among his tales is one linking the myth of Perseus' rescue of Andromeda with the town of Jaffa. This connection is in fact very old, and it can be traced to as early as the fourth century B.C.E. (in pseudo-Scylax).

CONRAD, VICTOR (1876–1962), Austrian meteorologist. Born in Vienna, Conrad studied under Josef Pernter, who offered him a post on the staff of the University of Vienna in the department of meteorology and magnetism. Conrad set up a section for the observation of electricity in the air. His results led the way to the discovery of cosmic rays several years later. In 1910, he was appointed head of the department of cosmic physics at the University of Czernowitz in Bukovina and worked there until the outbreak of World War I. With the cessation of hostilities in 1918, he returned to the University of Vienna and joined the Institute of Meteorology. Here he set up a seismographic station for the observation of earthquakes and other geophysical problems. From 1920 to 1938, he occupied himself to a large extent with bioclimatic questions. In 1926, Conrad was appointed editor of the geophysical quarterly *Gerlands Beitraege zur Geophysik*, which he edited until 1938. In the 39 volumes which appeared under his editorship, much important material on various problems in the field of geophysics was published. He also published two journals that dealt with physical-cosmic subjects and problems of applied geophysics. When the famous meteorologist Wladimir Koppen, who had settled in Austria after his retirement from the Meteorological Institute in Russia, began to publish his extensive *Handbuch der Klimatologie*, Conrad wrote the chapter on climatic elements and their dependence on terrestrial influences, which ran into a volume of over 500 pages. In 1938, when the Nazis annexed Austria, Conrad es-

caped to the United States in utter poverty. He lectured at the University of Pennsylvania from 1939 to 1940 and then went to Boston. There he was awarded a scholarship by Harvard University, where he remained until his death. During his years in the United States he published two works: *Fundamentals of Physical Climatology* (1942), and, together with Professor L.W. Pollak (of Dublin, Ireland), *Methods in Climatology* (1944, second edition 1950).

[Dov Ashbel]

CONRIED, HEINRICH (**Cohn**; 1848–1909), impresario. Born in Austria, he reached the United States in 1878 after a career in Germany, and directed various theaters. As manager of the Metropolitan Opera (1903–08), he achieved spectacular successes by engaging such celebrities as Caruso, Chaliapin, and Scotti, and producing operas new to the American public. He presented the first production of Wagner's *Parsifal* in the U.S. in 1903, overcoming the objections of the Wagner family, and in 1907 produced Richard Strauss's *Salome*, which aroused protests on moral grounds. He returned to Europe in 1908.

CONSERVATION.

Introduction

In consequence of the establishment in Israel of a Ministry for the Environment it is appropriate to take stock of the deep concern for the environment and its conservation which, from its earliest documents onwards, infuses Jewish tradition.

It is not our task here to analyze in detail the great ecological problems of our time or the ways in which they have recently manifested themselves in Israel, let alone to enumerate and describe the bodies, such as the Council for a Beautiful Israel, which are addressing them, or to list the contributions made by individual Jews, for instance scientists and economists, to the modern ecological movement. Rather, we seek to underpin Jewish involvement in conservation worldwide by drawing together the traditional source and highlighting their relevance to the contemporary scene.

We draw on a range of genres of traditional Jewish thought – the most distinctive is *halakhah*, or law, but history, myth, poetry, philosophy, and other forms of expression are also significant. And we must also be mindful that Judaism did not stop in the first century; it is a living religion constantly developing in response to changing social realities and intellectual perceptions. At the present time, it is passing through one of its most creative phases.

WHICH PROBLEMS ARE ADDRESSED? There is a worry prevalent today that people are destroying the environment on which living things depend for their existence. Many species are endangered as a result of human activity, the planetary climate may already have been destabilized, the protective ozone layer has been damaged, forests have been destroyed, species threatened or made extinct, and pollution in forms such as acid rain and other forms of water contamination is widespread.

Much of this destruction arises from the level of economic activity demanded by a rapidly increasing world population which is locally raising its living standards faster than ecologically sustainable levels of production.

In addition, there is a permanent worry that stockpiles of highly destructive weapons might actually be used and that the use of even a small part of the available arsenal would cause irreversible damage to the planetary environment, perhaps rendering impossible the survival of *homo sapiens sapiens* and many other species.

HOW IS RELIGION RELEVANT? It is not at first sight clear what these problems have to do with religious beliefs. After all, the only belief necessary to motivate a constructive response to them is a belief in the desirability of human survival, wedded to the perception that human survival depends on the whole interlinking system of nature. The belief is not peculiar to religions but part of the innate self-preservation mechanism of humankind; the perception of the interdependence of natural things arises not from religion but from careful scientific investigation.

Moreover, the discovery of which procedures would effectively solve the problems of conservation is a technical, not a religious one. If scientists are able to offer alternative procedures of the same or different efficiency the religious may feel that the ethical or spiritual values they espouse should determine the choice. But few choices depend on value judgments alone, and no judgment is helpful which is not based on the best available scientific information.

These considerations will be borne in mind as we examine the relevance of traditional Jewish sources to our theme.

Attitudes to Creation

GOODNESS OF THE PHYSICAL WORLD. "God saw that it was good" is the refrain of the first creation story of Genesis (chapter 1:1 to 2:4), which includes the physical creation of humankind, male and female. The created world is thus testimony to God's goodness and greatness (see Psalms 8, 104, 148).

The second "creation" story (Genesis 2:5 to 3:24) accounts for the psychological makeup of humankind. There is no devil, only a "wily serpent," and the excuse of being misled by the serpent does not exempt Adam and Eve from personal responsibility for what they have done. Bad gets into the world through the free exercise of choice by people, not in the process of creation, certainly not through fallen angels, devils, or any other external projection of human guilt; such creatures are notably absent from the catalogue of creation in Genesis 1.

Post-biblical Judaism did not adopt the concept of "the devil." In the Middle Ages, however, the dualism of body and spirit prevailed, and with it a tendency to denigrate "this world" and "material things." The Ereẓ Israel kabbalist Isaac Luria (1534–1572) taught that God initiated the process of creation by "withdrawing" himself from the infinite space He occupied; this theory stresses the "inferiority" and distance from

God of material creation, but compensates by drawing attention to the divine element concealed in all things. The modern Jewish theologian who wishes to emphasize the inherent goodness of God's creation has not only the resources of the Hebrew Scriptures on which to draw but a continuous tradition based on them.

Anthropocentrism. Certain theologians, such as Matthew Fox, are greatly exercised to replace traditional anthropocentric, fall/redemption, hence guilt-laden theologies with a "creation spirituality" of "original blessing." They invoke spirits, demons and earth goddesses, and do not rest satisfied until they have appropriated scripture itself to their purposes.

Perhaps they redress an imbalance in Catholic theology. But by what arbitrary whim do they confer authority on earth-centered Genesis 1–2:4 and deny it to people-centered Genesis 2:5–3:24? And by what further willfulness do they ignore the culmination of Genesis 1–2:4 itself in the creation of humankind in the image of God, at the apex of creation?

Do they not acknowledge that the Hebrew scriptures are a polemic against idolatry, and that the most significant feature of Genesis 1:2–4 is its denial, by omission, of the very existence of sprites, hobgoblins, demons, gods, demigods, earth-spirits, and all those motley beings that everyone else in the ancient world sought to manipulate to their advantages? There is only one power, and that is God, who is *above* nature (transcendent).

The Bible encompasses three realms: of God, of humankind, of nature. It does not confuse them. There is "original blessing" indeed – "God saw all that he had made, and it was very good" (Genesis 1:31) – but this includes people, maintains hierarchy, excludes "earth spirits," and remains subject to succeeding chapters of Genesis as well as the rest of scripture.

BIODIVERSITY. I recall sitting in the synagogue as a child and listening to the reading of Genesis. I was puzzled by the Hebrew word *le-minehu* ("according to its kind") which followed the names of most of the created items and was apparently superfluous. Obviously, if God created fruit with seeds, the seeds were "according to its kind"!

As time went on I became more puzzled. Scripture seemed obsessive about "kinds" (species). There were careful lists and definitions of which species of creature might or might not be eaten (Leviticus 11 and Deuteronomy 14). Wool and linen were not to be mixed in a garment (Leviticus 19:19; Deuteronomy 22:11), ox and ass were not to plow together (Deuteronomy 22:10), fields (Leviticus 19:19) and vineyards (Deuteronomy 22:9) were not to be sown with mixed seeds or animals cross-bred (Leviticus 19:19) and, following the rabbinic interpretation of a thrice repeated biblical phrase (Exodus 23:19, 34:26; Deuteronomy 14:21), meat and milk were not to be cooked or eaten together.

The story of Noah's Ark manifests anxiety that all species should be conserved, irrespective of their usefulness to humankind – Noah is instructed to take into his Ark viable (according to the thought of the time) populations of both "clean" and "unclean" animals.

The biblical preoccupation with species and with keeping them distinct can now be read as a way of declaring the "rightness" of God's pattern for creation and of calling on humankind not only not to interfere with it, but to cherish biodiversity by conserving species.

Scripture does not of course take account of the evolution of species, with its postulates of (a) the alteration of species over time and (b) the extinction (long before the evolution of humans) of most species which have so far appeared on earth.

Yet at the very least these Hebrew texts assign unique value to each species as it now is within the context of the present order of creation; this is sufficient to give a religious dimension, within Judaism, to the call to conserve species.

Perek Shirah. **Perek Shirah* (the "Chapter of Song," as found in large *Siddurim* (Prayer Books), particularly those of Jacob Emden and Seligmann Baer) affords a remarkable demonstration of the traditional Jewish attitude to nature and its species. The provenance of this "song" is unknown, though in its earliest form it may well have emanated from mystical circles such as those of the *heikhalot* mystics of the fourth or fifth centuries. Though occasionally attacked for heterodoxy, it is clearly rabbinic not only in its theology but even in the detail of its vocabulary and allusions.

More significant than its origin is its actual use in private devotion. It has been associated with the "Songs of Unity" composed by the German pietists of the 12th century who undoubtedly stimulated its popularity.

As the work is printed today it is divided into five or six sections, corresponding to the physical creation (this includes heaven and hell, Leviathan and other sea creatures), plants and trees, creeping things, birds, and land animals (in some versions the latter section is subdivided). Each section consists of from 10 to 25 biblical verses, each interpreted as the song or saying of some part of creation or of some individual creature. The cock, in the fourth section, is given seven voices and its function in the poem is to link the earthly song, in which all nature praises God, with the heavenly song.

We shall see in the section on hierarchy in creation that the Spanish Jewish philosopher Joseph *Albo draws on *Perek Shirah* to express the relationship between the human and the animal; yet *Perek Shirah* itself draws all creation, even the inanimate, even heaven and hell themselves, into the relationship, expressing a fullness which derives only from the rich diversity of things, and which readily translates into the modern concept of biodiversity.

STEWARDSHIP OR DOMINATION. There has been discussion among Christian theologians as to whether the opening chapters of Genesis call on humans to act as stewards, guardians of creation, or to dominate and exploit the created world. There is little debate on this point among Jewish theologians to whom it has always been obvious that when Genesis states that Adam

was placed in the garden "to till it and to care for it" (2:15), it means just what it says. As Rabbi A.I. *Kook put it:

> No rational person can doubt that the Torah, when it commands people to "rule over the fishes of the sea and the birds of the sky and all living things that move on the earth" does not have in mind a cruel ruler who exploits his people and servants for his own will and desires – God forbid that such a detestable law of slavery [be attributed to God] who "is good to all and his tender care rests upon all his creatures" (Psalms 145:9) and "the world is built on tender mercy" (Psalm 89:3).

So perverse is it to understand "and rule over it" (Genesis 1:28) – let alone Psalm 8 – as meaning "exploit and destroy" (is that what people think of their rulers?) that many Christians take such interpretations as a deliberate attempt to besmirch Christianity and not a few Jews have read the discussions as an attempt to "blame the Jews" for yet another disaster in Christendom.

Hierarchy in Creation

"God created humans in His image … male and female he created them" (Genesis 1:27). In some sense, humankind is superior to animals, animals to plants, plants to the inanimate. There is a hierarchy in created things.

The hierarchical model has two practical consequences. The first is that of responsibility of the higher for the lower, traditionally expressed as "rule," latterly as "stewardship." The second is that, in a competitive situation, the higher has priority over the lower. Humans have priority over dogs so that, for instance, it is wrong for a man to risk his life to save that of a dog though right, in many circumstances, for him to risk his life to save that of another human. Contemporary dilemmas arising from this are described in the section on animal versus human life.

The Jewish philosopher Joseph Albo (in *Sefer ha-Ikkarim*, book 3, ch. 1) places humans at the top of the earthly hierarchy and discerns in this the possibility for humans to receive God's Revelation. This is just a medieval way of saying what we have remarked. God's Revelation, *pace* Albo and Jewish tradition, is the Torah, from which we learn our responsibilities to each other and to the rest of creation.

According to Albo, just as clothes are an integral part of the animal, but external to people, who have to make clothes for themselves, so are specific ethical impulses integral to the behavior of particular animals, and we should learn from their behavior. "Who teaches us from the beasts of the earth, and imparts wisdom to us through the birds of the sky" (Job 35:11) – as the Talmud put it (TB Eruvim 100b): "R. Johanan said, If these things were not commanded in the Torah, we could learn modesty from the cat, the ant would preach against robbery, and the dove against incest." The superiority of humans lies in their unique combination of freedom to choose and the intelligence to judge, without which the divine Revelation would have no application. Being in this sense "higher" than other creatures, humans must be humble towards all. Albo, in citing these passages and commending the reading of *Perek Shirah*, articulates the attitude of humble stewardship towards Creation which characterizes rabbinic Judaism.

A Divergence Between East and West?. With regard to the hierarchical model there appears to be a radical difference of approach between Jews, Christians, and Muslims on the one hand and Hindus and Buddhists on the other.

The difference may be more apparent than real. Consider the following:

> I recall that in the year 5665 [1904/5] I visited Jaffa in the Holy Land, and went to pay my respects to its Chief Rabbi [Rav Kook]. He received me warmly… and after the afternoon prayer I accompanied him as he went out into the fields, as was his wont, to concentrate his thoughts. As we were walking I plucked some flower or plant; he trembled and quietly told me that he always took great care not to pluck, unless it were for some benefit, anything that could grow, for there was no plant below that did not have its guardian [Heb. *mazzal*] above. Everything that grew said something, every stone whispered some secret, all creation sang… (Aryeh Levine, *Laḥai Roi* (Heb., 1961), 15, 16).

Rav Kook, drawing on a range of classical Jewish sources from Psalm 148 to Lurianic mysticism, and without doubt accepting the hierarchical view of creation, nevertheless acknowledges the divine significance of all things – the immanence of God. Conversely, although Buddhists and Hindus teach respect for all life they do not conclude from this that, for instance, the life of two ants takes precedence over the life of one human being; in practice, they adopt some form of hierarchical principle.

CONCERN FOR ANIMALS. Kindness to animals is a motivating factor for general concern with the environment, rather than itself an element in conservation.

Kindness to animals features prominently in the Jewish tradition. The Ten Commandments include domestic animals in the Sabbath rest, and the "seven *Noachide laws" are even more explicit. Pious tales and folklore exemplify this attitude, as in the Talmudic anecdote of Rabbi Judah the Patriarch's contrition over having sent a calf to the slaughter (TB BM 85a and *Genesis Rabbah* 33).

Causing Pain or Distress to Animals. In rabbinic law this concern condenses into the concept of *ẓa'ar ba'alei ḥayyim* ("distress to living creatures"; see Cruelty to *Animals). An illuminating instance of halakhic concern for animal welfare is the rule attributed to the third-century Babylonian Rabbi that one should feed one's cattle before breaking bread oneself (TB Ber. 40a); even the Sabbath laws are relaxed somewhat to enable rescue of injured animals or milking of cows to ease their distress. Recently, concern has been expressed about intensive animal husbandry including battery chicken production.

Meat Eating. The Torah does not enjoin vegetarianism, though Adam and Eve were vegetarian (Gen. 1:29). Restrictions on meat eating perhaps indicate reservations. Albo (*Sefer ha-Ikkarim* 3:15) wrote that the first people were forbidden to eat meat because of the cruelty involved in killing animals.

Isaac *Abrabanel (1437–1508) endorsed this ("Commentary on Isaiah" (Heb., ch. 11 on the verse "The wolf shall lie down with the lamb."), and also taught (that when the Messiah comes we would return to the ideal, vegetarian state ("Commentary on Genesis" (Heb., ch. 2). The popular trend to vegetarianism has won many Jewish adherents though little official backing from religious leaders.

Hunting. On February 23, 1716, Duke Christian of Sachsen Weissenfels celebrated his 53rd birthday by a great hunting party. History would have passed by the Duke as well as the occasion had not J.S. Bach honored them with his "Hunting Cantata." The text by Salomo Franck, secretary of the upper consistory at Weimar, is a grand celebration of nature and its priest, Duke Christian, with no sense that hunting sounds a discordant note, and the cantata includes one of Bach's most expressive arias, *Schafe können sicher weiden* ("Sheep may safely graze").

Conditions of Jewish life in the past millennium or so have rarely afforded Jewish notables the opportunity to celebrate their birthdays by hunting parties. But it has happened from time to time and led rabbis to voice their censure.

N. Rakover sums up the halakhic objections to "sport" hunting under eight heads: (1) It is destructive/wasteful (see section on cutting down fruit trees). (2) It causes distress to animals (section on causing pain and distress to animals). (3) It actively produces non-*kasher* carcasses. (4) It leads to trading non-*kasher* commodities. (5) The hunter exposes himself to danger unnecessarily. (6) It wastes time. (7) The hunt is a "seat of the scornful" (Ps. 1:1). (8) "Thou shalt not conform to their institutions" (Lev. 18:3).

From this we see that although Jewish religious tradition despises hunting for sport, this is on ethical and ritual grounds rather than in the interest of conservation.[28]

The Land and the People – A Paradigm

Judaism, both in biblical times and subsequently, has emphasized the inter-relationship of the Jewish people and its land, and the idea that the prosperity of the land depends on the people's obedience to God's covenant. For instance:

> If you pay heed to the commandments which I give you this day, and love the Lord your God and serve him with all your heart and soul, then I will send rain for your land in season…. and you will gather your corn and new wine and oil, and I will provide pasture…. you shall eat your fill. Take good care not to be led astray in your hearts nor to turn aside and serve other gods…. or the Lord will become angry with you; he will shut up the skies and there will be no rain, your ground will not yield its harvest, and you will soon vanish from the rich land which the Lord is giving you (Deut. 11:13–17).

Two steps are necessary to apply this link between morality and prosperity to the contemporary situation: 1. The chosen land and people must be understood as the prototype of (a) all actual individual geographical nations (including, of course, Israel) in their relationships with land and of (b) humanity as a whole in its relationship with the planet as a whole. 2. There must be satisfactory clarification of the meaning of "obedience to God" as the human side of the covenant to ensure that "the land will be blessed." The Bible certainly has in mind justice and moral rectitude, but in spelling out "the commandments of God" it includes specific prescriptions which directly regulate care of the land and celebration of its produce.

To sum up – the Bible stresses the intimate relationship between people and land. The prosperity of land depends on (a) the social justice and moral integrity of the people on it and (b) a caring, even loving, attitude to land with effective regulation of its use. Conservation demands the extrapolation of these principles from ancient or idealized Israel to the contemporary global situation; this calls for education in social values together with scientific investigation of the effects of our activities on nature.

SABBATICAL YEAR AND JUBILEE.

> When you enter the land which I give you, the land shall keep sabbaths to the Lord. For six years you may sow your fields and for six years prune your vineyards but in the seventh year the land shall keep a sabbath of sacred rest, a sabbath to the Lord. You shall not sow your field nor prune your vineyard … (Lev. 25:2–4)

The analogy between the sabbath (literally, "rest day") of the land and that of people communicates the idea that land must "rest" to be refreshed and regain its productive vigor. In contemporary terms, land resources must be conserved through the avoidance of overuse.

The Bible pointedly links this to social justice. Just as land must not be exploited so slaves must go free after six years of bondage or in the Jubilee (50th) year, and the sabbatical year (in Hebrew *shemittah* – "release") cancels private debts, thus preventing exploitation of the individual.

The consequence of disobedience is destruction of the land, which God so cares for that he will heal it in the absence of its unfaithful inhabitants:

> If in spite of this you do not listen to me and still defy me … I will make your cities desolate and destroy your sanctuaries … your land shall be desolate and your cities heaps of rubble. Then, all the time that it lies desolate, while you are in exile in the land of your enemies, your land shall enjoy its sabbaths to the full (Lev. 26:27–35).

If in Israel today there is only a handful of agricultural collectives which observe the "sabbath of land" in its biblical and rabbinic sense, the biblical text had undoubtedly influenced the country's scientists and agronomists to question the intensive agriculture favored in the early years of the State and to give high priority to conservation of land resources.

CUTTING DOWN FRUIT TREES.

> When you are at war, and lay siege to a city…. do not destroy its trees by taking the axe to them, for they provide you with food (Deut. 20:19).

In its biblical context this is a counsel of prudence rather than a principle of conservation; the Israelites are enjoined to use

only "non-productive," that is, non fruit-bearing trees, for their siege works.

In rabbinic teaching, however, the verse has become the *locus classicus* for conserving all that has been created, so that the very phrase *bal tashḥit* (lit. "not to destroy") is inculcated into small children to teach them not to destroy or waste even those things they do not need. In an account of the commandments specially written for his son, Rabbi Aaron Ha-Levi of Barcelona (c. 1300) sums up the purpose of this one as follows:

> This is meant to ingrain in us the love of that which is good and beneficial and to cleave to it; by this means good will imbue our souls and we will keep far from everything evil or destructive. This is the way of the devout and those of good deeds – they love peace, rejoice in that which benefits people and brings them to Torah; they never destroy even a grain of mustard, and are upset at any destruction they see. If only they can save anything from being spoilt they spare no effort to do so (*Sefer Ha-Ḥinnukh*, Mitzvah 529).

LIMITATION OF GRAZING RIGHTS. The Mishnah rules: "One may not raise small cattle [i.e., sheep, goats, etc.] in the Land of Israel, but one may do so in Syria or in the uninhabited parts of the Land of Israel (BK 7:7). The history of this law has been researched, and there is evidence of similar restrictions from as early as the third century B.C.E.

The Mishnah itself does not itself provide a rationale for the law. Later rabbis suggest: (a) that its primary purpose is to prevent the "robbery" of crops by roaming animals, and (b) that its objective is to encourage settlement in the Land. This latter reason is based on the premise that the raising of sheep and goats is inimical to the cultivation of crops and reflects the ancient rivalry between nomad and farmer; at the same time it poses the question considered by modern ecologists of whether animal husbandry is an efficient way of producing food. (The rabbis of the Talmud, however, did not envisage vegetarianism and did not ban the raising of large cattle in the Land. They assumed that meat would be eaten but tried to ensure that its production would not interfere with agriculture).

AGRICULTURAL FESTIVALS. The concept of "promised land" is an assertion that the consummation of social and national life depends on harmony with the land.

The biblical pilgrim-festivals all celebrate the Land and its crops, though they are also given historical and spiritual meanings. Through the joyful collective experience of these festivals the people learned to cherish the Land and their relationship, through God's commandments, with it; the sense of joy was heightened through fulfillment of the divine commandments to share the bounty of the land with "the Levite, the stranger, the orphan, and the widow" (a frequent expression, for instance, Deuteronomy 16:11).

Specific Environmental Laws

Several aspects of environmental pollution are dealt with in traditional *halakhah*. Although the classical sources were composed in situations very different from those of the present the law has been, and is, in a continuous state of development, and in any case the basic principles are clearly relevant to contemporary situations.

WASTE DISPOSAL. Arising from Deuteronomy 23:13,14 *halakhah* insists that refuse be removed "outside the camp," that is, collected in a location where it will not reduce the quality of life. The Talmud and Codes extend this concept to the general prohibition of dumping refuse or garbage where it may interfere with the environment or with crops.

It would be anachronistic to seek in the earlier sources the concept of waste disposal as threatening the total balance of nature or the climate. However, if the rabbis forbade the growing of kitchen gardens and orchards around Jerusalem on the grounds that the manuring would degrade the local environment (BK 82b), one need have no doubt that they would have been deeply concerned at the large-scale environmental degradation caused by traditional mining operations, the burning of fossil fuels, and the like.

Smell (see also the following section) is regarded in *halakhah* as a particular nuisance, hence there are rules regarding the siting not only of lavatories but also of odoriferous commercial operations such as tanneries (TB BB ch. 2; codified, with subsequent developments, in Shulḥan Arukh ḤM, ch. 145). Certainly, rabbinic law accords priority to environmental over purely commercial considerations.

ATMOSPHERIC POLLUTION AND SMOKE. Like smell, atmospheric pollution and smoke are placed by the rabbis within the category of indirect damage, since their effects are produced at a distance. They are nevertheless unequivocally forbidden.

The Mishnah (BB2) bans the siting of a threshing floor within 50 cubits of a residential area, since the flying particles set in motion by the threshing process would diminish the quality of the air.

Likewise, the second-century rabbi Nathan ruled that a furnace might not be sited within 50 cubits of a residential area because of the effect of its smoke on the atmosphere (BB 1:7); the 50-cubit limit was subsequently extended by the *geonim* to whatever the distance from which smoke might cause eye irritation or general annoyance (S. Assaf (ed.), *Geonic Responsa*, (5689/1929), p. 32).

The Hazards Prevention Law, passed by the Israeli Knesset on March 23, 1961, contains the following provisions:

> #3 No person shall create a strong or unreasonable smell, of whatever origin, if it disturbs or is likely to disturb a person nearby or passerby.
> #4a No person shall create strong or unreasonable pollution of the air, of whatever origin, if it disturbs or is likely to disturb a person nearby or passerby.

The subjectivity of "reasonable" in this context is apparent. Meir Sichel, in a study on the ecological problems that arise from the use of energy resources for power stations to manufacture electricity, and from various types of industrial and

domestic consumption such as cooking, heating, and lighting, has drawn on the resources of traditional Jewish law in an attempt to define more precisely what should be regarded as "reasonable." Citing rabbinic responsa over an 800-year period he concludes that *halakhah* is even more insistent on individual rights than the civil law (of Israel), and that *halakhah* does not recognize "prior rights" of a defendant who claims that he had established a right to produce the annoyance or pollutant before the plaintiff appeared on the scene (M. Sichel, "Air Pollution – Smoke and Odour Damage," in: *Jewish Law Annual*, 5 (1985), 25–43).

In an exercise such as Sichel's there is no difficulty in applying traditional law to the contemporary context with regard to priority of rights, and also in clarifying the relationship between public and private rights. However, it is less clear that one can achieve a satisfactory definition of "reasonable," since ideas of what is acceptable vary not only from person to person but in accordance with changing scientific understanding of the nature of the damage caused by smells and smoke, including the "invisible" hazards of germs and radiation unknown to earlier generations.

WATER POLLUTION. Several laws were instituted by the rabbis to safeguard the freedom from pollution, as well as the fair distribution, of water. A typical early source says:

> If one is digging out caves for the public he may wash his hands, face, and feet; but if his feet are dirty with mud or excrement it is forbidden. [If he is digging] a well or a ditch [for drinking water], then [whether his feet are clean or dirty] he may not wash them (Tosef. BM 11:31 (ed. Zuckermandel).

Pregnant with possibilities for application to contemporary life is the principle that one may claim damages or obtain an appropriate injunction to remove the nuisance where the purity of one's water supply is endangered by a neighbor's drainage or similar works. It is significant that the *geonim* here also rejected the Talmudic distance limit in favor of a broad interpretation of the law to cover damage irrespective of distance (cited in Sh. Ar., ḤM 155:21).

Noise. Rabbinic law on noise pollution offers a fascinating instance of balance of priorities. The Mishnah lays down that in a residential area neighbors have the right to object to the opening of a shop or similar enterprise on the grounds that the noise would disturb their tranquility. It is permitted, however, to open a school for Torah notwithstanding the noise of children, for education has priority. Later authorities discuss the limit of noise which has to be tolerated in the interest of education (Rashi on TB BB 21a), and whether other forms of religious activity might have similar priority to the opening of a school (Sh. Ar., ḤM 156:3).

BEAUTY. Much could be said of the rabbinic appreciation of beauty in general. Here we concern ourselves only with legislation explicitly intended to enhance the environment, which is rooted in the biblical law of the Levitical cities:

> Tell the Israelites to set aside towns in their patrimony as homes for the Levites, and give them also the common land surrounding the towns. They shall live in the towns, and keep their beasts, their herds, and all their livestock on the common land. The land of the towns which you give the Levites shall extend from the center of the town outwards for a thousand cubits in each direction. Starting from the town the eastern boundary shall measure two thousand cubits, the southern two thousand, the western two thousand, and the northern two thousand, with the town in the center. They shall have this as the common land adjoining their towns. (Lev. 35:2–5)

As this passage is understood by the rabbis, there was to be a double surround to each town, first a "green belt" of a thousand cubits, then a two-thousand-cubit-wide belt for "fields and vineyards." While some maintained that the thousand-cubit band was for pasture, Rashi (on TB Sota 22b) explains that it was not for use, but "for the beauty of the town, to give it space" – a concept reflected in Maimonides' interpretation of the Talmudic rules on the distancing of trees from residences (see Maimonides, Yad., Shekhenim, ch. 10).

The rabbis debate whether this form of "town planning" ought to be extended to non-Levitical towns, at least in the land of Israel, designated by Jeremiah (3:19) and Ezekiel (20:6,15), the beautiful land."

The rabbinic appreciation of beauty in nature is highlighted in the blessing they set to be recited when one sees "the first blossoms in Spring":

> You are blessed, Lord our God and ruler of the universe, who have omitted nothing from your world, but created within it good creatures and good and beautiful trees in which people may take delight [in the name of Judah bar Ezekiel (third-century Palestinian) in TB Ber. 43b; a whole chapter of Sh. Ar., OḤ 226, is devoted to it.).

Sample Ethical Problems Relating to Conservation

ANIMAL VERSUS HUMAN LIFE. Judaism consistently values human life more than animal life. One should not risk one's life to save an animal; for instance, if one is driving a car and a dog runs into the road it would be wrong to swerve, endangering one's own or someone else's life, to save the dog.

But is it right to take a human life, e.g., that of a poacher, to save not an individual animal but an endangered species? I can find nothing in Jewish sources to support killing poachers in any circumstances other than those in which they directly threaten human life. If it be argued that the extinction of a species would threaten human life because it would upset the balance of nature, it is still unlikely that Jewish law would countenance homicide to avoid an indirect and uncertain threat of this nature.

Even if homicide were justified in such circumstances, how many human lives is a single species worth? How far down the evolutionary scale would such a principle be applied? After all, the argument about upsetting the balance of nature applies equally with microscopic species as with large

cuddly looking vertebrates like the panda, and with plants as much as with animals.

Judaism, true to the hierarchical principle of creation (see above), consistently values human life more than that of other living things, but at the same time stresses the special responsibility of human beings to "work on and look after" the created order (Genesis 2:15 – see section-Stewardship or Domination).

PROCREATION VERSUS POPULATION CONTROL. The question of birth control (including abortion) in Judaism is complex, but there is universal agreement that at least some forms of birth control are permissible where a potential mother's life is in danger and that abortion is not only permissible but mandatory up to full term to save the mother's life. Significant is the value system which insists that, even though contraception may be morally questionable, it is preferable to abstinence where life danger would be involved through normal sexual relations within a marriage.

What happens where economic considerations rather than life danger come into play? Here we must distinguish between (a) personal economic difficulties and (b) circumstances of "famine in the world," where economic hardship is general.

On the whole, *halakhah* places the basic duty of procreation above personal economic hardship. But what about general economic hardship, which can arise (a) through local or temporary famine and (b) through the upward pressure of population on finite world resources?

The former situation was in the mind of the third-century Palestinian sage Resh Lakish when he ruled: "It is forbidden for a man to engage in sexual intercourse in years of famine" (TB. Ta'an. 11a). Although the ruling of Resh Lakish was adopted by the codes (Sh. Ar., OḤ 240:12 and 574:4), its application was restricted to those who already have children, and the decision between abstinence and contraception is less clear here than where there is a direct hazard to life.

Upward pressure of population on world resources is a concept unknown to the classical sources of the Jewish religion and not indeed clearly understood by anyone before Malthus. As Feldman remarks:

> It must be repeated here that the "population explosion" has nothing to do with the Responsa, and vice versa. The Rabbis were issuing their analyses and their replies to a specific couple with a specific query. These couples were never in a situation where they might aggravate a world problem; on the contrary, the Jewish community was very often in a position of seeking to replenish its depleted ranks after pogrom or exile…. (*Marital Relations, Birth Control and Abortion in Jewish Law* (1974), 304)

Feldman goes on to say "It would be just as reckless to overbreed as to refrain from procreation." As the duty of procreation is expressed in Genesis in the words "be fruitful and multiply and fill the earth" it is not unreasonable to suggest that "fill" be taken as "reach the maximum population sustainable at an acceptable standard of living but do not exceed it." In like manner the rabbis (TB Yev. 62a) utilize Isaiah's phrase "God made the earth … no empty void, but made it for a place to dwell in" (45:18) to define the minimum requirement for procreation – a requirement, namely one son and one daughter, which does not increase population.

Of course, there is room for local variation amongst populations. Although as a general rule governments nowadays should discourage population growth there are instances of thinly populated areas or of small ethnic groups whose survival is threatened where some population growth might be acceptable even from the global perspective.

NUCLEAR, FOSSIL FUEL, SOLAR ENERGY. Can religious sources offer guidance on the choice between nuclear and fossil, and other energy sources?

They can have very little to say and – especially in view of the extravagant views expressed by some religious leaders – it is important to understand why their potential contribution to current debate is so small.

The choice among energy sources rests on the following parameters: (1) cost effectiveness; (2) environmental damage caused by production; (3) operational hazards; (4) clean disposal of waste products; (5) long-term environmental sustainability.

Cost effectiveness cannot be established without weighing the other factors. There is no point, however, at which religious consideration apply in establishing whether a particular combination of nuclear reactor plus safety plus storage of waste and so on will cost more or less than alternative "packages" for energy production.

It is equally clear that religious considerations have no part to play in assessing environmental damage caused by production, operational hazards, whether waste products can be cleanly disposed of, or what is the long-term environmental sustainability of a method of energy production. These are all technical matters, demanding painstaking research and hard evidence, and they have nothing to do with theology.

It is a matter of sadness and regret that extreme environmentalists are so prone to stirring up the emotions of the faithful for or against some project, such as nuclear energy, which really ought to be assessed on objective grounds. Much of the hurt arises from the way the extremists "demonize" those of whom they disapprove, and in the name of love generate hatred against people who seek to bring benefit to humanity.

GLOBAL WARMING. A very similar analysis could be made of the problems relating to global warming. The fact is that in mid-1990 no one knew the extent, if any, to which global temperatures have risen as a result of the rise in atmospheric carbon dioxide, and no one knew what would be the overall effects of the projected doubling of atmospheric carbon dioxide by the middle of the next century. Some consequences, in-

deed, may be beneficial, such as greater productivity of plants in an atmosphere with more carbon dioxide. Unfortunately, neither the techniques of mathematical modeling used to make the projections, nor the base of global observations at 500-kilometer intervals, can yield firm results. (See the summary provided by Robert M. White, "The Great Climate Debate," in: *Scientific American*, July 1990.)

So how can a government decide whether to spend hundreds of billions of dollars on reducing atmospheric carbon dioxide, and vast sums in aiding third world countries to avoid developing along "greenhouse" lines, when the draconian measures required greatly limit personal freedom and much of the expenditure might be better diverted to building hospitals, improving education and the like?

Essential steps, including better research, must be initiated, but it would be a lack of wisdom to rush into the most extreme measures demanded. It is clear that the decisions must be rooted in prudence, not in theology. Theology tends to absolutize and call for radical solutions where we have only relative and uncertain evidence, or conversely to commend us to faith in God when we ought to be taking initiatives ourselves.

DIRECTED EVOLUTION. After writing about the progress from physical evolution through biological evolution to cultural evolution, Edward Rubinstein states:

> Henceforth, life no longer evolves solely through chance mutation. Humankind has begun to modify evolution, to bring about nonrandom, deliberate changes in DNA that alter living assemblies and create assemblies that did not exist before.

The messengers of directed evolution are human beings. Their messages, expressed in the language and methods of molecular biology, genetics and medicine and in moral precepts, express their awareness of human imperfections and reflect the values and aspirations of their species. (E. Rubinstein, "Stages of Evolution and their Messengers," in: *Scientific American* (June 1989), p. 104.)

These words indicate the area where religions, Judaism included, are most in need of adjusting themselves to contemporary reality – the area in which modern knowledge sets us most apart from those who formed our religious traditions. Religion as we know it has come into being only since the Neolithic Revolution, and thus presupposes some technology, some mastery of nature. But it has also assumed that the broad situation of humanity is static, and this is now seen to be an illusion.

All at once there is the prospect, alarming to some yet challenging to others, that we can set the direction of future development for all creatures in our world. The Ethics Committees of our hospitals and medical schools are forced to take decisions; although the religious take part – and Judaism has a distinctive contribution to make to medical ethics – it has yet to be shown that traditional sources can be brought to bear other than in the vaguest way ("we uphold the sanctity of life") on the problems raised even by currently available genetic engineering.

Will religions, as so often in the past, obstruct the development of science? They need not. Jewish religious have ranged from Isaac Abrabanel, who opposed in principle the development of technology (see his commentary on Genesis 2), to *Abraham bar *Ḥiyya, who in the 12th century played a major role in the transmission of Greco-Arab science to the west. If Judaism (or any other religion) is to contribute towards conservation it will need to be in the spirit of Abraham bar Ḥiyya, through support for good science, rather than through idealization of the "simple life" in the spirit of Seneca and Abrabanel.

Conclusion – Religion and Conservation

Judaism, along with other religions, has resources which can be used to encourage people in the proper management of Planet Earth. We will now review the interaction of religion with conservation with special reference to the source cited.

1. We saw in the section on goodness of the physical world how Judaism interprets the created world, with its balanced biodiverse ecology, as a "testimony to God," with humankind at the pinnacle holding special responsibility for its maintenance and preservation. Certainly, this attitude is more conducive to an interest in conservation than would be emphasis on the centrality of the "next world," on the spirit versus the body, or on the "inferior" or "illusionary" nature of the material world.

2. One of the priorities of conservation at the present time is to control population so as not to exceed resources. Although Judaism stresses the duty of procreation we learned in the section on procreation versus population control that it offers the prospect of constructive approach to population planning, including some role for both contraception and abortion.

3. We have noted several specific areas in which Judaism has developed laws or policies significant for conservation. Prime among them (see the section: The Land and The People – a paradigm) were the laws regulating the relationship between people and land, for which the "chosen people" in the "promised land" is the model. Care of animals (section: Concern for Animals), waste disposal, atmospheric and water pollution, noise, and beauty of the environment were also treated in the classical sources. It would be neither possible nor fully adequate to take legislation straight from these sources; but it is certainly possible to work in continuity with them, bearing in mind the radically new awareness of the need for conserving the world and its resources as a whole.

4. Religions, Judaism included, discourage the pursuit of personal wealth. While in some instances this may be beneficial to the environment – if people want fewer cars and fewer books there will be fewer harmful emissions and fewer forests will be chopped down – there are also many ways in which poverty harms the environment – for instance, less research

and development means that such technology as remains (presumably for hospitals and other welfare matters) will be less efficient and the problems of environmental pollution less effectively addressed. Only rich societies can afford clean disposal of wastes.

5. Some religions remain strongly committed to evangelistic or conversionist aims which inhibit cooperation with people of other religions. Judaism is not currently in an actively missionary phase; some would say that it is unduly introspective, and needs to proclaim its values in a more universal context. All religions, however, must desist from ideological conflicts and espouse dialogue; conservation cannot be effective without global cooperation.

6. Mere information can motivate, as when someone who perceives a lion ready to pounce reacts swiftly. If ecological disaster were as clearly perceived as a crouching lion ideological motivation would be unnecessary. It is better that religions support conservation than oppose it, but the world would be safer if people would act on the basis of rational collective self-preservation rather than on the basis of confused and uncontrollable ideologies.

7. Several times, particularly in discussing energy sources and global warming, we had to stress the need to distinguish between technological and value judgments. Whether or not nuclear reactors should be built must depend on a careful, dispassionate assessment of their hazards; shrill condemnation of the "hubris of modern technology" merely hinders judgment, though it is right and proper that religious values be considered when an informed choice is made. Of course, the same need for objective assessment before value judgments are made applies to all other major conservation questions, such as how to reverse deforestation, control the greenhouse effect, restore the ozone layer.

8. Towards the end of the section on directed evolution we noted a characteristic religious ambivalence towards science. In the interest of conservation it is essential that the "pro-science" attitude of Abraham bar Ḥiyya, Maimonides, and others be encouraged. The extreme attitude of "simple life" proponents must be resisted. For a start, the present world population could not be supported if we were to revert to the simple life. Moreover, who would wish to do without sanitation, communications, electric light, books, travel, medical services and all those other benefits of "complex" civilization?

Finally, let us note that Judaism, like other religions, has a vital role to play in eradicating those evils and promoting those values in society without which no conservation policies can be effective. The single greatest social evil is official corruption, frequently rife in precisely those countries where conservation measures must be carried out. Next in line is drug addiction with its associated trade. But political animosities, such as those in the midst of which Israel finds itself, and which siphon off the world's resources into arms and destruction, surely head the list of human activities inimical to conservation. Religions must combat these evils and at the same time work intelligently for peace, not only between nations but among religions themselves.

For the Jewish contribution to the environmental sciences, see *Environmental Sciences. See also *Conservation.

[Normon Solomon]

CONSERVATIVE JUDAISM (also known as **Masorti Judaism**), one of the three principal modern Jewish religious denominations, emerging, along with Reform and Orthodoxy, in the 19th-century era of emancipation.

After the denial of emancipation to Central European Jewry by the Congress of Vienna (1815), Jews found themselves frustrated in their desire to participate in the intellectual and political transformations of the day. *Reform Judaism arose as an attempt to reformulate Judaism, no longer as a comprehensive way of life and national identity, but as a western-style religion, so as to accommodate the desire of Jews to acculturate into their host societies while resisting total assimilation or conversion to Christianity. Radical and moderate wings of Reform emerged as its leaders debated the extent of changes from Jewish tradition. Zechariah *Frankel, chief rabbi of Dresden, Germany, a proponent of moderate Reform, broke with his more radical colleagues at the Rabbinical Conference of Frankfurt (1845), over the issue of retaining Hebrew as the language of prayer. Frankel called for "positive-historical Judaism." This formula connotes, first, a predisposition to accept much of the "positive," ceremonial substance of Jewish practice while allowing for moderate changes, and second, an attitude of respect for the historical nature of Judaism. The loyalties of generations of Jews to a particular practice, no less than a proof-text from an authoritative religious source, could sanctify that usage.

In 1854, Frankel concretized his conservative yet flexible approach to Judaism in a rabbinical school that he headed, the *Juedisch-Theologisches Seminar (Jewish Theological Seminary) of Breslau. Until destroyed by the Nazis in 1938, this rabbinical school trained the institutional leaders and served as a scholarly center for "Historical Judaism" in Central Europe.

In the United States

The principal development of Conservative Judaism took place in the United States. As in Germany, Conservative Judaism in the U.S. began with the creation of a school rather than of a congregational union. Developments within American

Reform Judaism strained the alliance of moderates and radicals. In a moment of high symbolism, the 1883 banquet celebrating the rabbinic ordination of *Hebrew Union College's first graduates featured a variety of nonkosher foods and became known as "the treifa banquet." In the ensuing, contentious atmosphere, the Radical Reform wing of the movement passed its 1885 Pittsburgh Platform, dismissing biblical and rabbinic rituals regulating diet and dress as anachronisms. In response, moderate rabbis and scholars, principally Sabato *Morais, Henry Pereira *Mendes, Alexander *Kohut, and Cyrus *Adler, called for the establishment of a new rabbinical seminary, more hospitable to traditional Judaism. By January 1887, the Jewish Theological Seminary Association opened in New York City, with the mandate to preserve "the knowledge and practice of historical Judaism."

Leaders of the new seminary did not seek to create a denomination; on the contrary, they hoped their school would become the unifying institution of all opponents of Reform. In addition to the moderate reformers of Sephardi or West European background, the Seminary's founders looked to secure the loyalty of the burgeoning East European Jewish population of New York. In this hope they were disappointed. Despite participating in the 1898 creation of the *Union of Orthodox Jewish Congregations, Seminary leaders were not able to create a congregational base comparable to what the Hebrew Union College enjoyed in its *Union of American Hebrew Congregations. Without significant congregational support, the Jewish Theological Seminary Association endured precarious finances during its first 15 years and was compelled to reorganize in 1902, but not before graduating 14 rabbis and three *ḥazzanim*, including Joseph H. *Hertz, who became chief rabbi of the British Empire, and Mordecai M. *Kaplan, preeminent theologian and founder of *Reconstructionist Judaism.

THE SCHECHTER YEARS. Although, prior to its 1902 reorganization, the Seminary had not successfully engaged traditionalist Russian Jewish immigrants, a group of prominent Reform lay leaders envisioned that the school could yet serve to Americanize that group, and thus simultaneously preserve the Jewishness of the new arrivals and reduce the social tension occasioned by their "un-American" ways. After the death of Morais in 1897, Adler mobilized Jacob *Schiff, a supporter of the school since 1888, and his colleagues, including Louis *Marshall, to set the school on a firmer financial basis and thus produce the leadership for the successful acculturation of the children of the new immigrants. Specifically, they raised the funds to engage Solomon *Schechter as the president of the faculty of the new organization, the *Jewish Theological Seminary of America (JTS). Educated in a traditional fashion as well as in modern, rabbinical seminaries, a first-rank rabbinic scholar with a gift for popularization, an orator equally at home in Jewish sources and in the classics of English rhetoric, Schechter personally exemplified the envisioned cultural type. Under his leadership, JTS was to fulfill its mission among American Jewry by producing religiously observant and intellectually open-minded rabbis.

For his part, Schechter held to the dream of Morais, to unify the non-Reform elements of the American Jewish community. In 1913, Schechter created the *United Synagogue of America, hoping that it would encompass congregations across the traditionalist and moderate ideological spectrum. But he was no more successful in this regard than Morais, because American Jewish Orthodoxy was gaining self-definition at that same time, promoting its own Rabbi Isaac Elchanan Theological Seminary (see *Yeshiva University).

Schechter did succeed, nonetheless, in making JTS the "fountainhead" of what would become a full-fledged denomination, Conservative Judaism. He engaged a faculty of leading scholars, including Louis *Ginzberg, Alexander *Marx, Israel *Friedlaender, and Israel *Davidson and oversaw the creation of the preeminent Judaica library in America. He transformed JTS into a graduate-level program. "Schechter's Seminary," as it was widely known, graduated an increasing number of Jewish communal leaders, at first rabbis, then also teachers, after the 1909 organization of its Teachers' Institute under the leadership of Mordecai Kaplan.

THE ADLER YEARS. After Schechter's death in 1915, his successor at JTS, Cyrus Adler, systematized the school's administrative procedures and presided over the construction of its new campus – including the Jewish Museum – which opened in 1930. Adler maintained the school's ideological posture and social program, to Americanize traditional Judaism. Adler also succeeded Schechter at the United Synagogue, and focused its efforts on obtaining congregational placements for JTS graduates. The JTS rabbinic alumni, first organized in 1901 and renamed the *Rabbinical Assembly in 1918, collaborated with him in this endeavor. Adler's tenure was one of building the infrastructure of Conservative Judaism, while discouraging partisan ideological pronouncements that might weaken its centrist coalition.

Nonetheless, the growing movement did have ideological "right" and "left" wings. Adler himself and Louis Ginzberg, representing the traditionalist point of view, controlled the direction and official pronouncements of the movement. Ginzberg founded and chaired the United Synagogue's Committee on the Interpretation of Jewish Law (191–27) which evolved into the Committee on Jewish Law of the Rabbinical Assembly (1927–) which was led until 1948 by traditionalists such as Louis *Epstein, Boaz *Cohen, and Michael *Higger.

Mordecai Kaplan was the leader of the movement's left wing. Kaplan's "Reconstructionist" definition of Judaism as an evolving religious civilization and his call to transform the modern synagogue into a comprehensive spiritual, intellectual, and cultural Jewish center resonated even among Conservative rabbis who took issue with his rejection of supernaturalism in formulating Jewish theology. During the 1930s, Kaplan's philosophical and liturgical publications spurred controversy among JTS faculty and in the broader movement, but

the JTS administrative response, to assign Kaplan to teaching homiletics rather than Talmud, only increased his influence among generations of emerging professionals.

THE FINKELSTEIN YEARS. Conservative Judaism enjoyed its greatest period of growth during the two decades following World War II. Across the East, Midwest, and Sunbelt regions of the country, returning veterans and their growing families moved to the newly expanding suburbs, creating numerous houses of worship. Between 1945 and 1964, the United Synagogue grew from 190 to 778 member congregations. For the children of East European immigrants, the Conservative synagogue represented an acceptable balance of tradition and change.

As the movement expanded rapidly and faced the new conditions of Jewish life in suburbia, the tension between school and denomination also increased. Under the leadership of Louis *Finkelstein (1940–72), JTS aspired to influence American society at large, both Jewish and Gentile, without identifying the school's prime task as the support of its denomination; rather, it saw the Conservative movement as its own support network. Regarding himself as a "bridge-builder," Finkelstein created ecumenical institutes and expanded into radio and television programming, while further developing the school as an academic research center.

Rabbinical Assembly leaders such as Milton *Steinberg and Solomon *Goldman, critical of this focus, urged JTS to do more to build up the institutions of the movement. The Rabbinical Assembly took the lead in publishing a series of prayer books for use in Conservative congregations, more traditional than the Reconstructionist editions yet enriched with modern supplemental readings and, in selected passages, unorthodox in wording. The widespread adoption of Morris Silverman's *Sabbath and Festival Prayer Book* contributed to the nationwide scope of Conservative Judaism.

THE COMMITTEE ON JEWISH LAW AND STANDARDS. The Rabbinical Assembly's Committee on Jewish Law became the Committee on Jewish Law and Standards (CJLS) in 1948. This reorganization was a revolt against Boaz *Cohen and the traditionalists. As a result, the majority ruled in 1950 that it is permissible to ride to the synagogue on the Sabbath while a minority opinion forbade this practice. In the early 1950s, the CJLS was going to take unilateral action in order to solve the problem of **agunot* (chained women) whose husbands gave them a civil divorce but would not give them a *get* (religious divorce). Since Finkelstein did not want the CJLS to adopt a radical solution, he got Saul *Lieberman – the preeminent Talmudist at JTS – and the JTS faculty involved. Lieberman wrote the "Lieberman Ketubah" in 1954 which empowered a new Joint Bet Din of the Rabbinical Assembly and JTS – and by implication the secular courts – to force recalcitrant husbands to give their wives a *get*. The "Lieberman Ketubah" did not achieve the desired effect, but it did lead to greater cooperation between JTS and the Rabbinical Assembly.

SOCIAL AND EDUCATIONAL INSTITUTIONS. The movement provided religious and social programming for adult women and men at the synagogue level in Sisterhoods and Men's Clubs, organized nationally in the Women's League for Conservative Judaism (1918–) and the Federation of Jewish Men's Clubs (1929–).

During the post-war years of growth, Conservative Judaism developed educational and social institutions for youth. Kaplan and JTS created the Leadership Training Fellowship (LTF) in 1946 in order to prepare young men and women to study at JTS. One year later, Midwest Jewish leaders opened an educational summer camp, Ramah, and JTS became the camp's sponsor by 1948. The Ramah camp movement expanded, with numerous camps in North America, South America, Israel, and the Ukraine. It provided Hebrew and Jewish educational grounding for tens of thousands of youngsters, who became the nucleus of the lay and rabbinic leadership of the movement in the late 20th century. In 1951, the United Synagogue created United Synagogue Youth, which brought tens of thousands of young people closer to Judaism through its chapters, *kinnusim*, camps, Israel and European pilgrimages, and USY-on-Wheels.

In the formal educational setting, departing from a reliance on Sunday schools and afternoon Hebrew schools, Conservative educators such as Simon *Greenberg began to promote day schools. In 1951, Robert *Gordis opened a day school at his synagogue, Beth El of Rockaway Park, New York, and in 1965, a network of such schools formed the Solomon Schechter Day School Association. Day schools and supplemental schools currently coexist, with increasing numbers of Conservative families opting to give their children the more intensive schooling, especially in the primary grades.

UNIVERSITY OF JUDAISM. The national scope of Conservative Judaism after World War II contributed to the decentralization of denominational authority. In 1947, as America's West Coast was developing into a center of Jewish life, Mordecai Kaplan and Simon *Greenberg of JTS opened the *University of Judaism in Los Angeles, California. Under the leadership of David *Lieber, and later of Robert *Wexler, the school charted a course distinct from JTS, focused on Jewish liberal arts learning rather than professional training and on a very large adult education program. In 1996, the University of Judaism asserted its independence from JTS, by opening up its own Ziegler School of Rabbinic Studies.

THE SIXTIES. Conservative Judaism entered a more challenging era after 1965. The end of the postwar "baby boom" and the decay of urban and inner suburban neighborhoods hurt synagogue membership, and the number of United Synagogue member congregations dropped from its peak of 832 in 1971. Assimilation, including intermarriage, became more prevalent, and the social upheavals of the 1960s exacerbated the decline of the movement's appeal to young adults. Followers of Kaplan's Reconstructionist Judaism left the Conserva-

tive movement and opened their own rabbinical school in Philadelphia in 1968.

As a consequence of assimilation, the movement experienced a wide disparity between the high level of commitment to religious practice on the part of its rabbinic leadership and the lower degree observed by the majority of its laity. Moreover, the movement's minority of highly observant laity began to migrate to a revitalized American Jewish Orthodoxy. The resurgence of Orthodoxy, increasingly evident by 1970, both impressed and dismayed Conservative observers. Denominational leaders debated their response to the new conditions, traditionalists urging a reemphasis of commitment to *halakhah*, and liberals calling for outreach to the disaffected by means of bolder departures from tradition.

THE WOMEN'S ISSUE. The main subject of this debate in the 1970s-1980s was the role of women within the Conservative synagogue, an issue raised by the growth of feminism as an American social concern. In 1972, a small group of feminists named "Ezrat Nashim" came to the Rabbinical Assembly convention, demanding a greater role for women in the synagogue. In 1974, the CJLS voted in a near-tie to count women in the *minyan* (prayer quorum). From 1977 to 1983 the Rabbinical Assembly and the JTS faculty debated the ordination of women by JTS under its new Chancellor, Gerson *Cohen. After an initial defeat in 1979, women were admitted in 1983 after the death of Saul Lieberman and the defection of leading Talmud professors such as David *Weiss Halivni, Ch.Z. *Dimitrovsky, and Jose Faur. As a result, some Conservative rabbis set up the Union for Traditional Conservative Judaism in 1979 which later split from the movement as the *Union for Traditional Judaism (UTJ). It now has its own rabbinical association, law committee, and rabbinical school.

Amy *Eilberg was ordained by JTS as the first Conservative woman rabbi in 1985. Cohen's successor, Ismar *Schorsch, completed this process by admitting women to the Cantorial School in 1987. By 2004, 120 of the more than 1,500 members of the Rabbinical Assembly were women. A 2004 survey showed that women rabbis served in many rabbinic capacities, but had not yet achieved equality as congregational rabbis or in terms of compensation.

In recent years, the CJLS has debated the topic of women as witnesses. In any case, the attitude to women in Jewish law signaled a sea-change in the Conservative movement. It reflected the emergence of American-born, Conservative-movement educated faculty members as well as a greater degree of engagement between JTS and the denomination.

IDEOLOGY. The debate over gender roles within Conservative Judaism spurred both a self-definition and a reaffirmation of boundaries that the denomination had for so long avoided. In 1988, the various agencies of the movement jointly issued *Emet ve-Emunah: Statement of Principles of Conservative Judaism*. However, since it was written by a committee of 25 people from various aims and wings of the movement, many felt that it attempted to be all things to all people. Beginning in the 1970s, Conservative rabbis such as Seymour Siegel, Elliot Dorff, Joel *Roth, and David *Golinkin published a series of books and articles in which they explained and crystallized the Conservative approach or approaches to Jewish law. In 1995, Ismar Schorsch published "The Sacred Cluster" in which he enumerated seven core values of Conservative Judaism: God, Torah, *Talmud Torah*, *Halakhah*, the Land and State of Israel, *Klal Yisrael* (the collective Jewish People), and Hebrew. Interestingly enough, many of those same values were stressed by Louis Finkelstein in an address to the Rabbinical Assembly in 1927. Thus, despite many changes, the Conservative movement has maintained many of the same core values throughout its history.

COMMITTEES ON JEWISH LAW. Beginning in 1917, the Committee on the Interpretation of Jewish Law – which became the Committee on Jewish Law, which became the CJLS – became a meeting ground and a debating ground for the movement. The committee grew from five members to 15 members to 25 members and, as time went on, an attempt was made to appoint rabbis from the right, left, and center, and from the Rabbinical Assembly, JTS, and the United Synagogue. For many years, the CJLS issued majority and minority opinions. In more recent years, a *teshuvah* or responsum only became a valid opinion if it was supported by six members of the CJLS. Beginning in 1948, the CJLS and the RA developed the option of issuing Standards of Rabbinic Practice which are binding upon all members of the RA if approved by a two-thirds vote at the annual convention. To date, four standards have been adopted. A Conservative rabbi may not: participate in an intermarriage in any way; perform a wedding if the woman was divorced without a *get*; perform a conversion without circumcision and immersion; accept patrilineal descent.

PUBLICATION OF RESPONSA. From 1917 to 1975, *halakhic* authorities such as Louis Ginzberg, Boaz *Cohen, Michael Higger, and Isaac *Klein wrote hundreds of responsa both within the framework of the law committees and individually, but most of their responsa were never published. This changed drastically beginning in the 1970s as individual rabbis such as Isaac Klein, David Novak, and David Golinkin published their responsa along with the previously unknown responsa of Louis Ginzberg and six volumes of CJLS responsa.

THE VA'AD HALAKHAH. In 1985, the Rabbinical Assembly of Israel founded the *Va'ad Halakhah* chaired by Theodore *Friedman and later by David Golinkin. It dealt with halakhic questions from Israel and Europe in Hebrew, following procedures similar to the CJLS. It has published six volumes of responsa thus far, dealing with Israeli issues such as the Sabbatical year, entering the Temple Mount, and army service for women and *yeshivah* students, along with general halakhic issues such as conversion, medical ethics, and women in Judaism.

The Rabbinical Assembly's 1986 reaffirmation of the matrilineal principle of Jewish identity as a Standard of Rab-

binic Practice, and the CJLS's retention of traditional strictures against homosexuality in 1992, served as counterweights to the liberalization represented by egalitarianism. In sum, they asserted in practice a Conservative denominational identity, over and against Reform and Reconstructionism, on the one hand, and Orthodoxy, on the other. The movement's attitude towards homosexuality has remained under debate to the present, but the growing equality of women in Judaism has become, in the main, an accepted part of the definition of Conservative Judaism.

LITURGY. Since the 1970s, the Conservative movement has published a series of new liturgical publications and a new *Humash*. Creative prayer booklets of the late 1960s–early 1970s were followed by Jules Harlow's *Mahzor* (1972) and *Siddur Sim Shalom* (1985). Leonard Cahan and Avram Reisner edited the new *Sim Shalom* in two volumes (1998–2002), followed by Reuven Hammer's *Or Hadash* commentary in 2003. The Masorti Movement in Israel published *Siddur Va'ani Tefilati* in 1998, while the Schechter Institute and the Rabbinical Assembly published *Megillot Hashoah* (*The* Shoah *Scroll*), a new liturgy for *Yom Hashoah* (2003). These publications reflect a growing sensitivity to spirituality, participatory prayer, gender awareness, and the level of knowledge of the average congregant.

Humash Etz Hayyim was published by the Conservative movement in 2001 in order to replace the outdated Hertz *Humash* of 1936. Edited by some of the leading rabbis and scholars of the Conservative movement, it aims to convey a synopsis of modern, critical scholarship along with the best of traditional *midrash.*

THE COHEN AND SCHORSCH YEARS. The Cohen years at JTS (1972–86) were marked by the transition from European-born to American-born faculty. This transition was epitomized by the struggle over the ordination of women described above. Cohen also built and dedicated the new library in 1983. The Schorsch era (1986–) has seen the expansion of JTS to over 700 students, thanks in large part to the founding of the William Davidson School of Education in 1996, which trains educators for day schools and afternoon schools. Schorsch expanded the endowment of JTS while rebuilding and expanding the campus. He steered a centrist course between the left and right wings of the movement. He was an avid supporter of expanding the roles of women in Judaism, while opposing the ordination of avowed homosexuals and gay commitment ceremonies.

EDUCATIONAL AND INSTITUTIONAL DEVELOPMENTS IN NORTH AMERICA 1970–2005. Beginning in the 1970s, Conservative Jews began to found *Havurot* (small fellowship groups) as a result of the counterculture and as a reaction to large, impersonal synagogue centers. This began with *Havurat Shalom* in Boston, but soon led to *Havurot* within existing Conservative synagogues. At the same time, large synagogues began to open alternative services for specific groups such as egalitarian services, family services, learners' *minyanim*, and singles' services.

Since many Conservative Jews did not know how to perform basic Jewish rituals, Ron Wolfson of the University of Judaism developed the Art of Jewish Living Series which teaches adults how to make Shabbat, run a seder, celebrate Hannukah, and mourn for relatives.

In 1963, Noah Golinkin developed the Hebrew Literacy Campaign which taught adults how to read the prayer book in 12 weeks. Adopted by the Federation of Jewish Men's Clubs in 1978, he wrote *Shalom Aleichem* (1978) followed by *Ein Keloheinu* (1981) in order to implement to Campaign. In 1986, Golinkin published *While Standing on One Foot*, which teaches adults how to read Hebrew in one-day Hebrew Reading Marathons. To date, over 200,000 Conservative and Reform Jews have learned how to read the prayerbook using these two methods.

All of these programs acknowledge that third- and fourth-generation American Jews did not receive a thorough Jewish education and must be taught basic Judaism using entirely new, user-friendly methods.

Since 1990, with the intermarriage rate among American Jews hovering at 50%, Conservative Judaism has witnessed an erosion at its periphery, resulting in lower numbers overall. In 2000, there were slightly over one million self-identified Conservative Jews, representing only 26% of American Jewry. The percentage of Conservative Jewish families affiliating with a synagogue also dropped to 33%. Mirroring similar developments in other sectors of American Judaism, the movement has simultaneously enjoyed an intensification at its core, with members of Conservative synagogues reflecting a more substantive Jewish education and demonstrating a more positive degree of identification with their denominational choice than in the previous generation. Whether assimilatory or revival trends will predominate is the critical question facing American Conservative Judaism in the 21st century.

While Conservative Judaism is most extensive in North America, in recent decades, it has expanded worldwide: in Israel, Latin America, and to a smaller degree in Europe and elsewhere.

The Masorti Movement in Israel

Unlike Reform and Orthodoxy, each of which has had non-Zionist and anti-Zionist wings, Conservative Judaism has been warm to the Zionist enterprise throughout the 20th century. The intensification of Zionist consciousness after the Six-Day War of 1967 spurred the growth of a wider presence of Conservative Judaism in Israel. While Solomon Schechter himself had been warm to Zionism, his successors, prior to Gerson Cohen, had not attempted to commit JTS to the renewal of Jewish life in Erez̤ Israel beyond the opening of an Academic Center in Jerusalem in 1963. A handful of Conservative rabbis had made *aliyah* and founded congregations in the early 1960s, but more Conservative rabbis and educators arrived after 1967. In 1979, they created a denominational umbrella

organization, the *Masorti* ("Traditional") Movement, which has been led over the years by rabbis Moshe Tutnauer, Michael Graetz, Philip Spectre, and Ehud Bandel. This movement led the Conservative movement as a whole to become part of the World Zionist Organization as *Mercaz Olami* in 1987. Masorti has supported existing congregations and founded new ones, launched a youth movement, *Noam* (*No'ar Masorti*) and the Ramah Noam Summer Camp. By 2005, the movement had grown to approximately 50 *kehillot* (congregations) and *ḥavurot*.

Masorti Judaism continues to face political obstacles to recognition. Israeli government coalitions typically include Orthodox political parties, and under Israeli law, Orthodoxy enjoys a monopoly as the established form of Judaism. Masorti rabbis are generally not recognized by the state to perform Jewish marriages and divorces. The government has refused to register as Jews children converted by Masorti rabbis, and on four occasions, 1970 through 1997, the Knesset has entertained campaigns to change Israel's *Law of Return so as to discredit conversions conducted by Conservative and other non-Orthodox rabbis. In the wake of the last of these, the government empowered the Ne'eman Commission to explore methods of involving both Orthodox and non-Orthodox (Masorti and Reform) rabbis in conversions. Though the Israeli Chief Rabbinate rejected the commission's recommendations, the Knesset approved them and the Institute of Jewish Studies was established by the Israeli government and the Jewish Agency. It is run by Orthodox, Conservative, and Reform Jews, but the graduates are converted by an Orthodox Bet Din. Even so, the Masorti Movement continues to marry and convert people and to demand that these marriages and conversions be recognized by the State of Israel.

Masorti leaders seek to engage Israeli society beyond the movement's network of congregations. The Rabbinical Assembly of Israel's Va'ad Halakhah (Law Committee) deals with halakhic questions as described above. The movement operates special programs for *olim* (immigrants), especially those from Latin America. The Masorti Movement has also achieved symbolic recognition by being granted the use of the Robinson's Arch section of the Western Wall of the Temple Mount for worship services.

THE SCHECHTER INSTITUTE OF JEWISH STUDIES. The Seminary of Judaic Studies, later renamed the Schechter Institute of Jewish Studies, was founded in 1984 by JTS and the Masorti Movement for the purpose of training Masorti rabbis. Led over the years by Reuven Hammer, Lee Levine, Benjamin Siegel, Alice Shalvi, and David Golinkin, it slowly became the largest Conservative organization in Israel. It currently includes the Schechter Rabbinical Seminary for Israelis, which also hosts the one-year rabbinical school programs of JTS, the University of Judaism, and the Seminaro Rabbinico; the Schechter Institute of Jewish Studies, which is a graduate school for over 450 Israeli educators; the TALI Education Fund, which provides enriched Jewish Studies to over 22,000 Israeli children at over 120 TALI public schools and kindergartens; and Midreshet Yerushalayim, which provides Jewish education to thousands of new immigrants from the FSU and to Jews throughout the Ukraine and Hungary.

In Latin America

Conservative Judaism has established a major presence in Latin America. The pioneer rabbi in that region was Marshall *Meyer, a JTS graduate, who founded the *Seminario Rabbinico Latinoamericano* in 1962. Meyer later returned to New York, but the movement grew; 44 Conservative rabbis were serving in Latin America by 1999. In many Latin American countries, Conservative Judaism is the dominant stream. *Seminario* graduates have contributed to the development of the region's synagogue life, sponsoring the translation of the liturgy into Spanish and Portuguese, and fostering a modern spirit in worship, preaching, and life-cycle celebrations. *Seminario* alumni also serve in schools, summer camps, Hebrew sports clubs, and cultural centers, adding a religious component to institutions that had earlier been Jewish in a purely ethnic sense. Through the influence of the *Seminario*, Conservative Judaism has helped guide Latin American Jewry from an era of immigrant-created Jewish institutions to one in which native-born Jews express their distinctive religious identity.

In England

As in Latin America, a single rabbinic pioneer, Louis *Jacobs, was instrumental in founding Conservative Judaism in England. Denied appointment to a London synagogue by the English chief rabbi in 1963 on account of his unorthodox theological writings, Jacobs and his followers left the (Orthodox, English) *United Synagogue and opened the New London Synagogue. Members of that synagogue founded two kindred congregations closer to their northwest London homes, and in 1985, the three communities entered a formal partnership, the Assembly of Masorti Synagogues. Masorti in the United Kingdom describes its approach as "tolerant, non-fundamentalist, traditional." By 2000, the English Masorti membership had grown to 3,000 adults, led by young rabbis such as Jonathan Wittenberg and Chaim Weiner. Masorti U.K. comprised a youth movement, an organization for college students and young adults, and 11 congregations, one of which also sponsored a *ḥavurah*.

In France

Conservative/Masorti development in France began later than in the United Kingdom, despite the larger size of French Jewry. The first Masorti congregation, Adat Shalom in Paris, opened in 1988; a second congregation, in Nice, over a decade later. They are led by rabbis Rivon Krygier and Yeshaya Delsace. French Masorti Judaism faces the challenge of transplanting a movement into a new cultural milieu and engaging a largely Sephardi population.

Masorti Olami

Masorti Olami (The World Council of Synagogues) is the um-

brella organization for all Conservative congregations outside of Israel and North America. In addition to England, France, and South America, there is a long-established community in Sweden. Other Conservative/Masorti congregations have recently opened in a number of other European countries, including Spain, Germany, Australia, and the Czech Republic. Rabbinic leadership in European Masorti institutions comes from the Schechter Rabbinical Seminary in Jerusalem. Worldwide, Conservative/Masorti Judaism is achieving a higher degree of coordination, as it confronts the weakening of Jewish identity due to assimilation and, at the start of the 21st century, a rise in worldwide *antisemitism.

[David Golinkin and Michael Panitz (2nd ed.)]

CONSERVATIVE PARTY, GERMAN (**Deutsche Konservative Partei**), party formed in 1848 for defending the economical and political interests of the Prussian Junkers. In 1866 the Free Conservative Party split off, which led to its reorganization in 1876. The newspaper *Kreuzzeitung* published the party's views for many years. The Conservatives, who stood for the old feudal ideal in Prussian society in opposition to the liberal, democratic, and social political theorists, affirmed their belief in the romantic vision of a state based on the virtues of monarchy, hierarchy, and, above all, military might. They also made "positive Christianity" basic to their platform. At first a loosely knit organization which had enormous influence at court, the Conservative Party did not adopt an antisemitic program until 1892. After Bismarck's retirement, however, the party constituted the opposition and the anti-parliamentarian groups within the Conservatives, particularly the *Kreuzzeitung* group with Adolf *Stoecker and Wilhelm von Hammerstein, joined hands to eliminate "Jewish influence." On the eve of the 1893 elections, the party called its first public conference at Berlin's Tivoli Hall (December 1892) and moved to demagogic antisemitism. The first paragraph of the new Tivoli party program stated: "We combat the obtrusive and debilitating Jewish influence on our popular life… We demand a Christian authority for the Christian people and Christian teachers for Christian pupils." Thus, at Tivoli, antisemitism moved up the social ladder and became respectable. It also proved to be a powerful attractor of votes, as the elections resulted in a joint victory for the Conservative and antisemitic parties, the antisemitic candidates winning 262,000 votes (2.9% of the total), and 16 seats in the German parliament. During World War I they worked against political and social reform, which led to their dissolution at the end of the war after the breakdown of the German state in November 1918.

CONSIGLI(O), AVTALYON (**Ottavio**) **BEN SOLOMON** (c. 1540–1616), rabbi and financier of Rovigo, northern Italy. Consiglio studied under Samuel Judah Katzenellenbogen at Padua. To demonstrate his profound respect for his teacher, he commissioned an artist to paint his portrait and this was hung prominently in his *bet ha-midrash*. Like his teacher, Con-

siglio opposed **pilpul* in talmudic studies. Consiglio caused a heated controversy by disqualifying a *mikveh* in the house of his brother Jekuthiel, with whom he also had a financial dispute. The Italian rabbinate was divided on the matter. The rabbinate of Venice, headed by Hezekiah Finzi of Ferrara, strongly defended the halakhic fitness of the ritual bath in question. The matter became a *cause célèbre*, and several collections of responsa on the subject were published between 1606 and 1617, e.g., *Mashbit Nilḥamot* (Venice, 1606), *Mikveh Yisrael* (*ibid.*, 1607), and *Palgei Mayyim* (*ibid.*, 1608).

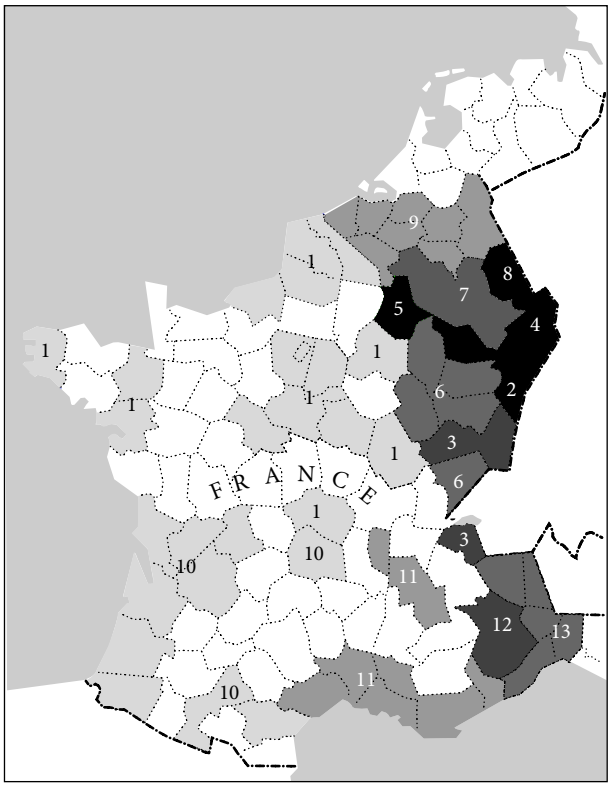
CONSISTORY (**Consistoire**), official organization of the Jewish congregations in France established in 1808. The term was borrowed from Protestant usage by the Napoleonic administration to designate the committees of rabbis and laymen responsible for the administration of the Jewish congregations at the regional and national levels. By extension, the word applies to the whole organization subject to the authority of the "consistory."

Origins

The French Revolution abolished the existing internal structure of the Jewish communities. The adherence of a Jew to his communal organization then became voluntary, and created problems for the Jewish leadership, mainly concerning communal budget. In consequence, the reforms introduced by *Napoleon I were welcomed by some of the Jewish leaders in the hope that they would confer on Judaism a legal status similar to that given to the Catholic Church by the Concordat of 1801 and to the Protestants by the "organic articles" of 1802. The emperor himself was anxious to have an instrument at his disposal through which he could effectively supervise the Jewish community and at the same time integrate the Jews as individuals within French society. The statute establishing a Jewish religious organization was drafted at the *Assembly of Jewish Notables by the commissioners appointed by Napoleon in conjunction with the nine Jewish delegates. It was finally ratified by the Assembly on Dec. 9 and 10, 1806, although not without some opposition, and promulgated by imperial decree on March 17, 1808.

The decree provided that a central consistory was to be set up in Paris to head a group of regional consistories, which in their turn would control the local communities. A subsequent decree was issued on Dec. 13, 1808, establishing the location and jurisdiction of 13 regional consistories, to include also the Rhineland and northern Italy, then part of the French Empire. For every department with a Jewish population of at least 2,000 a consistory was established. Departments having less than this number might be combined with others. In the case of Paris the consistory controlled 16 departments. The central consistory comprised three *grands-rabbins* and two



The Consistories of France according to the Napoleonic decree of 1808 (composition according to departments, darker shadings indicate greater density of Jewish population).

laymen, appointed by co-option, and the regional consistories one *grand rabbin* and three laymen. They were elected by 25 "notables" of the area who were designated by the members and confirmed in office by the local prefects. All nominations were subject to the approval of the government. Each head of a Jewish family was obliged to pay dues to the consistories. The budget was intended to cover the expenses of the Jewish religion in the narrow sense, i.e., the salaries of the rabbis and the maintenance of synagogues and their appurtenances. Welfare and educational activities were not included in the regu-

lar budget. The function of the consistories, according to the decree of 1808, was "to ensure that no assembly for prayers should be formed without express authorization, to encourage the Jews in the exercise of useful professions and refer to the authorities those who do not have an acknowledged means of livelihood, and to inform the authorities each year of the number of Jewish conscripts in the area." All those who wished to remain Jews had to register with the consistory. The duty of the rabbis was "to teach religions and the doctrines included in the decisions of the Great *Sanhedrin, to call for … obedience to the laws, especially … those related to the defense of the fatherland … and in particular, every year, at the time of conscription, to induce the Jews to consider their military service as a sacred duty" in the performance of which they were exempted from any religious observances with which it could not be reconciled. The Jewish leaders generally accepted these regulations, which restored authority to the Jewish communities and also – an innovation in Western and Central Europe – gave them a centralized organization on the national scale. The consistories appointed a "commissioner" for each congregation whose absolute and often petty-minded authority replaced the traditional authority of the *parnasim* and who often clashed with the rabbis. Later, however, the system was dropped and thus the old communal organization continued to exist.

The decree of December 1808 established regional consistories in Paris, Strasbourg, Wintzenheim, Metz, Nancy, Bordeaux, Marseilles, Mainz, Treves, Coblenz, Krefeld, Turin, and Casal. In 1810 the annexation of central Italy brought the temporary addition of three new consistories, and in 1812 the annexation of Holland and a further portion of Germany added seven additional consistories. After the fall of Napoleon the communities of Belgium, Luxembourg, and Westphalia retained the consistorial system. New consistories were created in Saint-Esprit (Bayonne) in 1846 and in Lyons in 1857. The central consistory of Algiers and the regional consistories of Oran and Constantine were founded in 1845. They were linked to the metropolitan organization as three consistories of equal status in 1867. In 1872, after the annexation of Alsace-Lorraine to Germany and the consequent influx of Alsatian refugees, new consistories were founded in Lille and Vesoul.

Serious financial difficulties had endangered the existence of the consistories from the outset. As many of the members failed to pay their dues, in 1816 it was agreed that the state treasury would assume their collection in return for a percentage of the income. In 1831 King Louis-Philippe agreed to include the expenses of the Jewish religion, in particular the salaries of the rabbis and religious officials, in the national budget. An order of 1844 introduced important organizational changes. The central consistory was to be composed of a *grand rabbin* (the chief rabbi of France) and a representative of each of the regional consistories, while the regional consistories were to consist of a *grand rabbin* and five laymen. The right of veto in religious matters was granted to the rabbis. The system of election to the consistories was also drastically revised. Although the principle of "notability" of the electors was retained, the number of "notables" was augmented in accordance with the new principles of suffrage introduced in the French electoral system. The electoral college was first enlarged in 1844. In 1848, following considerable agitation, especially by the Orthodox members for the institution of general suffrage in consistorial elections, every male Jew aged over 25 was declared "notable" with the right to vote. During the Second Empire the central consistory again succeeded in limiting the popular vote, especially in the election of rabbis. In 1871 a government decree once more ordered democratic elections, only to be rescinded the following year as regards the election of rabbis. The provision of rabbinical training became one of the chief tasks of the central consistory. The rabbinical seminary of Metz, founded in 1829, was originally simply a modernized yeshivah. Later, however, the introduction of some reforms in synagogue ritual (1856), as well as the transfer of the rabbinical seminary to Paris, marked a more radical transformation.

In France the consistory remained the official French Jewish representative organization until the separation of church and state in 1905. Afterward, it was voluntarily retained, a new name, the Union des Associations Culturelles de France et d'Algérie, was given, to which the term "Consistory" is still applied. The three departments of Alsace-Lorraine, which retained their French institutions at the time of the German annexation in 1871 and did not renounce them either in 1918 or in 1944–45, still have a consistory despite the law of separation. Following the trend set by Napoleon and embodied in the motto of the Central Consistory "Religion and the Fatherland," a number of consistorial leaders endeavored to promote Jewish assimilation and preserve only the religious differences, which also became blurred with time. Others, notably in Alsace-Lorraine, used the consistorial organization as a force for maintaining cohesion and tradition within Jewish society.

Prior to World War I there was an influx of a large number of Jewish immigrants from Eastern Europe who formed their separate organizations. In 1935, 63 French and nine Algerian communities formally belonged to the Consistoire Central, the majority of Jews displaying little interest in communal affairs. After the German occupation of Paris in 1940 the central consistory was active in the free zone of France, continuously protesting against the anti-Jewish restrictions. However, its financial resources were soon depleted, since it could no longer rely upon the support of the wealthier Jews. Despite these odds, the central consistory aided various underground bodies of both native- and foreign-born Jews. By 1965 practically the entire Algerian Jewish community had settled in France, yet the central consistory still retained the former name which included both France and Algeria, their task restricted to the custody of remaining Jewish property. In June 1968, during the student uprising, some 60 Jewish youths seized the offices of the Paris consistory in protest against the alleged domination of French Jewry by "archaic and anti-democratic institutions" and calling for "a new community based

on effective participation." The Consistoire Central continued to represent mainly Orthodox congregations in the 21st century, comprising less than 15% of France's Jews.

CONSOLO, FEDERICO (1841–1906), violinist and composer. Born in Ancona, Italy, Consolo studied violin with Vieuxtemps and composition with Fétis and Liszt, but was forced to give up his career as a violin virtuoso in 1884 after a nerve injury. He then devoted himself to composition and musical research. His most important publication was his *Sefer Shirei Yisrael – Libro dei Canti d'Israele* (1892), an anthology of synagogue chants documenting the musical tradition of the Sephardi Jews of Italy. On the title page he called himself not only by his Italian name but also "Yehiel Nahmany Sefardi."

CONSTANCE (Ger. **Konstanz**), city in Germany. The first mention of Jews is in a royal tax list of 1241; the tax paid indicates that they had settled there some decades earlier. A responsum on divorce, written in Constance and published in R. *Meir b. Baruch of Rothenburg's responsa, has been erroneously ascribed to him. King Henry VII pawned the Jewish taxes to a nobleman in 1311, and Louis the Bavarian followed suit in 1330. King Wenceslaus (after 1393), Rupert (1401–02), and Sigismund (1413) transferred half the Jewish taxes to the city. In 1414 Sigismund assigned two Constance Jews to collect a levy for the Hussite War from Upper Swabian Jewry. Records of 1328, 1375, and 1425–29 show that Jews owned orchards, gardens, and vineyards in Constance. Moneylending by Jews to clerics, villagers, townspeople, and nobles is mentioned in 1293, 1300, 1346–48, and 1420–39; to the city in the 1370s; and a minor sum to the king in 1306. The city's usury law of 1383 referred to small scale moneylending by Jews. The records of the municipal court (1423–28) show that there were also Jewish traders, tailors, and metalworkers living in Constance. Twenty-seven Jews accused of *Host desecration were murdered in 1326. During the *Black Death (1349) 350 Jews were burned to death. Following a *blood libel in *Ravensburg, the Jews were imprisoned in 1429 and after a second one in the area in 1443; they were released each time after ransom was paid. From around 1375 until 1460 the Jews enjoyed burghers' rights. By 1424 there was a synagogue in the Ramungshof. The Jews lived in several streets. During the Council of Constance, in 1417, a delegation of German Jewry met Pope *Martin V who, in 1418, granted favorable privileges, confirmed by King Sigismund. A first expulsion order, in 1432, was not generally enforced, but it became final in 1533. Afterward Jews could only enter the town temporarily, though they continued to live in neighboring villages. In 1847 a group of Jews settled in Constance. After the *Baden emancipation law of 1862 a community was founded in 1863–66. The synagogue, consecrated in 1883, was burned down in November 1938. In 1910 the community numbered 574 persons (2.7% of the total) but declined to 537 in 1925 and 443 in 1933. In October 1940 the 110 Jews still remaining in Constance were deported to the internment camp in *Gurs (Southern France), and from there the majority were transported to *Auschwitz in 1942. Some 160 Jews liberated from displaced persons' camps lived in Constance between 1945 and 1948, most of whom subsequently emigrated. By 1968 fewer than 30 Jews lived in Constance; they were affiliated to the Jewish community of *Freiburg im Breisgau. An independent Jewish community was founded in Constance in 1988. It had 102 members in 1989, and as a result of the emigration of Jews from the former Soviet Union, their number increased to 502 in 2003.

CONSTANTA (in Greek and Roman antiquity **Tomis**, until 1878 *Kustendje*, Rom. **Constanța**), Black Sea port in S.E. Romania; within the Ottoman Empire until 1878. There was a small Jewish settlement in Tomis in the third century C.E. The Ashkenazi community of Constanta was founded in 1828. After a while a Sephardi community was established. The Jewish population increased with the development of the town. A Jewish cemetery was opened in 1854. In 1878, after northern Dobruja passed to Romania, Romanian nationality was automatically granted to the Jews in the region, including Constanta. As former Turkish subjects, they found themselves in a more favorable situation than the other Jews of Romania, the overwhelming majority of whom were deprived of rights. The Romanian authorities, however, attempted to expel individual Jews from Constanta. There were 957 Jews living in Constanta in 1899 (6.5% of the total population), most of whom were occupied in commerce and some in crafts, with two schools for boys, an Ashkenazi and a Sephardi one. In 1930 the Jewish population numbered 1,821 (3.1%) in the city and 1,981 in the province. In the fall of 1940, a German military representative was placed in the city and entry of Jews to the port was forbidden. After the outbreak of war against the U.S.S.R. (June 22, 1941) all the Jews were arrested and sent to the Cobadin camp. Men and women were also sent to forced

labor. In November 1941 the Jews returned to Constanta, but to a special district. In 1942 there were 1,532 Jews in Constanta. In 1947, after the war, there were 2,400 Jews in the city, some of them refugees from *Bukovina. Until 1951 Constanta was a port of departure Jews emigrating to Israel, with the community consequently diminishing to 586 in 1956. There were 60 Jewish families in Constanta in 1969, with a synagogue and a rabbi. In 2004, 128 Jews lived there.

[Theodor Lavi / Lucian-Zeev Herscovici (2nd ed.)]

CONSTANTINE (ancient **Cirta**), Algerian town. Constantine was named after Emperor Constantine in 313. Latin inscriptions give evidence of a Jewish colony there; its surroundings seem to have been inhabited by Judaized Berbers. The Arab conquest brought little change to Constantine. The Jews maintained their identity; their "elder" (*zaken*) led his followers to war like an Arab or Berber *sheikh*. According to the 15th-century rabbis of Algeria, Constantine was one of the most important Jewish communities in Muslim countries. Local scholars in the 15th century included Maimun Najjār, author of *Kunteres Minhagot*; Joseph b. Minir, called Ḥasid, whose tomb is venerated by Jews and Muslims to the present day and whose works, now lost, were quoted by Joseph *Caro; Joseph b. David; Isaac Kagig (also Kaçiç and Casès); and Samuel Atrani; in the 16th century, the poet Joseph Zimron and Moses Allouche; and in the 18th century, Masʿud Zerbib, author of *Zeraʿ Emet* (Leghorn, 1715). In the 18th century the community built its quarter. In 1818 the Turks from Algiers attacked Constantine; they pillaged, massacred, and carried off 17 young Jewish girls whom they brought to their commander. The girls were subsequently released. There were then 5,000 Jews in Constantine. After its capture by the French in 1837, many Jews left the city, and two years later the community numbered only 3,436. By 1934 the community grew to 12,000. In that same year on August 3–5, the Muslim population, provoked by the propaganda of the French antisemites, assaulted them. Twenty-five were killed and dozens wounded. When the Jewish resistance was organized, the massacres stopped; but French forces had not intervened, despite the appeals of Muslim leaders. The Vichy government severely persecuted this community in 1940 despite its large number of heroes in the two world wars.

[David Corcos]

Traditional Jewish education prevailed in Constantine for hundreds of years. In 1849 the Consistory of Constantine was instituted coordinating Jewish community life. The 1870 *Crémieux decree that granted French citizenship to Algerian Jews further accelerated the incorporation of Jews into the French school system, placing the *talmud torah* under strict supervision. The *Alliance Israélite Universelle, which strove to combine French modernity with Jewish tradition, started operating educational institutions in Constantine in 1902. The influence of French culture led to a gradual decline in the use of the local Judeo-Arabic dialect in favor of French. An intensive effort to preserve traditional Jewish culture and the Judeo-Arabic language was conducted by Rabbi Joseph Renassia (1879–1962), who wrote and translated over a hundred volumes in Judeo-Arabic.

[Ofra Tirosh-Becker (2nd ed.)]

During the Algerian FLN (Front de libération nationale) terrorist attacks in the late 1950s grenades were often thrown into the Jewish quarter. In 1962, when Algeria received its independence, there was a massive exodus of the Jewish community, which then numbered 15,000–20,000 – mostly to France and Israel. The local *talmud torah* with its 800 students closed down in July of that year. The synagogues were turned into the general headquarters of the FLN. By the end of the 1960s only a few Jewish families remained in Constantine.

°CONSTANTINE VII PORPHYROGENITUS, Byzantine emperor, 913–959. He was known for his learning, as evidenced by his great treatises on ceremonial, administrative, and army organization. According to some scholars, in response to a letter of protest addressed to Constantine's wife Helena by *Ḥisdai ibn Shaprut, he stopped the persecutions and forced conversions of Jews initiated in the empire by his co-emperor, *Romanus I Lecapenus. He also ceased attempts to force Christianity on the *Khazars. During his reign the condition of the Jews generally improved, earning him praises in the Hebrew apocalypse, "Vision of *Daniel."

[Andrew Sharf]

CONSTANTINER, JAIME (1918–2002), leader of the Jewish community of Mexico and generous promoter of Jewish education in Mexico and in Israel. Born in Butrimonys (Butrimanz), Lithuania, Constantiner studied in the *gymna-*

sium in Kovno (Kaunas). Owing to economic difficulties in 1928 his father immigrated to Mexico, where Constantiner and his mother joined him in 1934. Ten years after his settlement in Mexico City he graduated in surgery at the faculty of medicine of the Universidad Nacional Autónoma de México (UNAM). After completing his postgraduate studies in the United States, he was appointed professor at the UNAM and taught there until 1979.

During the 1940s Constantiner commenced his activities in the Jewish community as a physician in the field of welfare as well as in education, supporting the Hebrew Tarbut school. As the chairman of its *patronato,* he promoted special enrichment programs together with the Hebrew University of Jerusalem and the introduction of many new science and Hebrew courses in the Tarbut school.

He supported the activities of many Israeli and Mexican institutions: Tel Aviv University, the Tel Aviv Museum, the Philharmonic Orchestra of UNAM, San Carlos Museum, the Technion of Haifa as well as several special projects in the Hebrew University of Jerusalem and in the city of Jerusalem. He also supported special programs for Jewish studies in Mexico. He was awarded numerous prizes by Tel Aviv University, the Hebrew University of Jerusalem, and the city of Jerusalem.

[Efraim Zadoff (2nd ed.)]

CONSTANTINI, HUMBERTO (1924–1987), Argentinian author, poet, and playwright of Sephardi-Italian heritage. From his beginning in the 1950s, his works were deeply involved with the social and political situation of his country. His identification with leftist groups led him to choose exile when a military dictatorship seized power in 1976. In Mexico, where he lived in 1976–83, he wrote his most important novels: *De dioses, hombrecitos y policías* (1979; *Gods, the Little Guys and the Police*, 1984) and *La larga noche de Francisco Sanctis* (1984;*The Long Night of Francisco Sanctis*, 1985). Both deal with the practical and moral plight of people persecuted by state terrorism, in a combination of realistic themes with an expressionist, poetic, and even grotesque style. His collections of short stories (*Un señor alto, rubio, de bigotes*, 1963; *Una vieja historia de caminantes*, 1967; *Háblenme de Funes*, 1970) include some Jewish stories in Sephardi and ancient Jerusalem settings. Jewish history and identity also appear in his collection of poetry *Cuestiones con la vida* (1986). His unfinished novel *Rapsodia de Raquel Liberman* deals with the Jewish prostitution trade in Argentina in the 1920s. Costantini's plays and dramatic monologues were published in *¡Chau Pericles! Teatro completo* (1986). His works have been translated into English, French, Hebrew, German, and Russian.

[Florinda Goldberg (2nd ed.)]

CONSTANTINOPLE (Byzantium; Heb. קושטנטיני, קושטנטינא, קושטאנדינא, קושטא), former capital of the *Byzantine and *Ottoman empires; now *Istanbul, Turkey. Under the Byzantine empire Jews were settled in various areas of Constantinople. In the fourth and fifth centuries they lived in the Chalkoprateia (copper market), where there was a synagogue as early as 318 (converted into a church in 422). From the 10th century to about 1060 they lived on the south shore of the Golden Horn. In the late 11th century they were transferred by the authorities to the suburb of Galata-Pera, the affluence of which was noted by *Benjamin of Tudela in the mid-12th century. In 1203 the Jewish quarter burned down.

There were Jewish workers in copper, finishers of woven material, dyers, silk weavers, and makers of silk garments. In the 11th and 12th centuries Jews were compelled to serve as executioners. Jewish physicians served various emperors despite church opposition to consulting them. Benjamin of Tudela also reports on the presence of Jewish tanners in the city and the complaints of wealthy Jews about the animosity among gentiles caused by the tanners.

Throughout the Byzantine period the Jews in Constantinople had close contacts with Christians. In the sixth and early seventh centuries Jews were active in the political factions of the *circus parties. In 641 Jews took part in a riot, during which the church of Hagia Sophia was broken into. Under *Leo III in 721–22, Jews were forced either to leave the city or to accept baptism. But this ruling apparently did not bring the community to an end. In about 874 *Shephatiah b. Amittai of Oria, Italy, according to a legendary report in the Aḥima'az Chronicle, went to Constantinople to plead with the emperor *Basil I to end the persecutions of Jews in Italy. Other prominent Jewish visitors to the city included a *Khazar in the 10th century, Benjamin of Tudela in the mid-12th century, and the poet Judah *Alḥarizi in the 13th century. Jews were among those banished from the city because they supported the princesses Zoe and Theodora against the emperor Michael V in 1042. Many were killed in a riot against Venetian and other Western merchants during the reign of Alexius II (1180–83). In 1204 the Latin Crusaders captured Constantinople and established the capital of the Latin Empire (1204–61) in Galata. The conflict of the great Christian powers awoke messianic expectations among the Jews of the city during the First Crusade.

In the Byzantine period the Jewish community was administered by a council of elders and by *archipherecites (heads of the academies). Benjamin of Tudela reports that five wealthy rabbis led the community. There were also religious officials, *didaskaloi* (teachers). The council of elders dealt with administrative, fiscal, and cultural-religious matters, and relations with Christians.

A Karaite community existed in Pera from the 11th century on and Constantinople became an important center of Karaite learning which attracted members of the sect from elsewhere. Celebrated leading Karaite scholars of Constan-

tinople included *Tobias b. Moses ha-Avel (11th century) and Judah b. Elijah *Hadassi (mid-12th century).

From 1275 to 1453 the Venetian and Genoese Jews lived in Constantinople under the legal jurisdiction of their respective governments. From 1280 to 1325 the Venetian Jews lived together with the Byzantine Jews, but from 1325 to 1453 they lived in the Venetian quarter on the Golden Horn. The Genoese Jews lived in the Genoese quarter of Galata from 1275 to 1453. The Jewish quarter of Constantinople existed from about 1280 to 1453 in Vlanga, on the southern coast of the Golden Horn on the Sea of Marmara. During this period (from 1280) the Jews were involved in the tanning trade. The quarter was burned by the Turks in 1453. The fall of Constantinople appeared to Jews to herald the Redemption: the Targum for Lamentations 4:21 was held to prophesy the downfall of the "guilty city"; some predicted that redemption would occur in the same year, 1453.

For later history, see *Istanbul.

CONSTRUCTION. Jewish activity in this industry was restricted in the Diaspora and was narrowed down to the construction and repair of synagogues and houses for the community. Apparently Jews worked in the building crafts, such as carpentry, masonry, and bricklaying, throughout the Middle Ages and early modern times. The trade was organized on traditional lines, with established terms and conditions such as provisions for the meals of the masters. Where moneylending became the main Jewish occupation, the number of Jewish artisans in the building trade declined along with those in other crafts. In Christian countries Jews were excluded from guild membership, but were still occasionally found in building occupations. In countries where Jewish artisans were more common, as in Spain, Portugal, and Italy, this representation was correspondingly larger. It can thus not be generally assumed that all houses, or even synagogues, in the Jewish communities were built by Jewish contractors and workers. On the other hand the scanty mention of this profession in the sources is no conclusive evidence of its complete decline. Such mention is of great geographical variety. An account of building operations carried out in 1040 at the synagogue of the Erez Israel community in Fostat (Old Cairo), Egypt, describes a Jewish master mason with his helpers, a carpenter and his "boy," and their working conditions. Jewish masons, layers of floor tiles, workers in clay, stucco workers, and their "boys," as well as their working terms, in Egypt are mentioned in Jewish sources. In Hebron, it is recorded that the whole community took part in pulling down a synagogue and erecting a new one. In the summer of 1045 seven masons in succession worked on a building. The 13th-century *Sefer Ḥasidim* castigates a Jewish householder, whose house was built by Jewish and Christian workmen, for not releasing his Jewish employees on Sabbath eve (Wistinetzky ed., no. 1499, p. 361). A contemporary Czech chronicle mentions a Jew, Podivi, who built the town of Podivin. In 1451 a Jew who won acclaim for building the royal palace in Palermo was made a master of the local Jewish carpenters' guild.

However, it was in Eastern Europe, from the 19th century on, that significant numbers of Jews first engaged in building. Visitors to backward Romania in the mid-19th century noted that the building trades, carpentry, masonry, plumbing, etc., were all exclusively represented by Jews, who built synagogues as well. Whereas no Jews engaged in the building profession in Poland before the 18th century, there were, in Congress Poland, excluding Warsaw, in 1856, 1,973 Jewish masons, 2,591 glaziers, 1,259 plumbers, and 1,289 locksmiths. In the eastern regions Jews were even more numerous in these trades, particularly for work on high buildings, steeples, and roofs, where Christian workmen were reluctant to go. Synagogues, which from the 18th century had often been embellished and decorated by wandering Jewish artisans, were now also built by them. With the rise of the *Court Jews, and the increasing numbers of Jewish army purveyors and bankers, numerous large-scale construction projects – palaces, fortresses, roads, and railroads – were organized and financed by Jews. In Poland in 1931, 23,745 Jews were engaged in the building and construction industry, about 10% of the total number, which approximated the proportion of Jews in the general population. Of these, 4,585 were glaziers (80% of the total in this occupation) and 8,034 house painters and decorators (30%); 17.7% of independent employers in these trades were Jews, representing a much lower proportion than in others, such as clothing, textiles, and foodstuffs. Within the Russian *Pale of Settlement the proportion of Jews in the industry was even higher: 28.5% in Vitebsk government (province) in 1897, and 30.4% in Mogilev government (province), although these were employed mainly on repairs and building maintenance. This trend was manifested in countries to which these Jews immigrated. Thus, in Germany, the proportion was high, the majority being glaziers, painters, and decorators in small family firms. The Haberland family (Solomon Georg (1861–1933) and Kurt), a prominent exception, built parts of Berlin before World War I, and rebuilt cities in East Prussia after the war. Julius Berger founded the internationally known firm bearing his name which constructed tunnels and bridges.

The Jewish mass emigration from Eastern Europe coincided with the New York building boom around the beginning of the 20th century, and large numbers of Jews entered the trade. Harry *Fischel encouraged Jews to enter the building trades by enabling the keeping of the Sabbath and offering half-pay for those who did not work on that day. Many left the trade again, however, either because of a chance to better themselves or because of discrimination. The unions, in particular, in effect barred Jews from the better-paid types of

construction work and forced them to become house painters, plumbers, or decorators, and to concentrate on repairs and remodeling. In 1890 there were nearly 900 Jewish house painters and carpenters on the Lower East Side, and associations of Jewish immigrants in these trades were to be found in many U.S. cities. As a result of the general upward mobility of the American Jewish population, however, few young Jews entered these occupations by mid-20th century. Similarly, in the East End of London, many Jews from Eastern Europe took up these trades around the beginning of the 20th century. Although many Jews in Britain were prominent in the development of housing schemes after World War II, they were mainly occupied in acquiring sites and developing new housing estates and modern blocks of offices. The actual construction was carried out by non-Jewish firms, but there was one large construction company, one of the foremost of its kind, "Bovis" founded by Sir Samuel *Joseph. Their managerial and financial abilities and experience also led Jews in the 20th century to enter the mass-construction industry in America through real estate brokerage, and Jews were especially prominent in the New York, Chicago, and Miami building booms of the 1920s. In New York City, the major part of the Bronx and the Borough Park and Bensonhurst neighborhoods of Brooklyn were built by Jewish contractors. Louis J. *Horowitz became president and general manager of the Thompson-Starrett Construction Company, builder of many skyscrapers in New York and other cities. Real-estate investors and developers who played a prominent role in reshaping the face of 20th-century America's cities and their environs include William *Zeckendorf, Benjamin *Swig, Percy and Harold *Uris, William *Levitt, and Samuel *Lefrak. The latter two in particular, the first in the suburbs and the latter in the central city, pioneered new approaches to mass-scale, low-cost housing that have permanently altered the American urban landscape. Builders of office space in major cities were involved in significant projects that also shaped the city skylines. And other major builders made their marks in other parts of the country, including Eli Brod on the West Coast, who built vast housing projects.

In the 19th and 20th centuries Jews developed real estate on an increasing scale. The large number of Jews who took up engineering and architecture had a place in the planning and supervision of construction projects (see *architecture, *engineering, etc.). In Ereẓ Israel building became an important Jewish enterprise. The building concern *Solel Boneh developed into a big construction and industrial combine. It and *Rassco built agricultural villages and housing estates designed for middle class settlement. Both these firms as well as a number of private ones have built roads, bridges, and public buildings in Asian and African countries.

CONSUMER PROTECTION. Consumer protection is a new area of law; hence, the term does not appear in classical sources of Jewish law. The meaning of the concept is implied in the term itself: our generation is one of abundance, with great demands, numerous consumers, and extensive consumption. The consumers are not organized; each one consumes for himself and his household. On the other hand, there are large producers and distributors: manufacturers, monopolies, chain stores, merchants, suppliers, and agents of various kinds who are familiar with the markets and dictate its terms, including, inter alia, the consumer culture itself. Consequently, the consumer requires legal protection, as he does not always receive fair value for his money, both in terms of price and quality of goods.

This question is not confined to the sphere of commerce, but arises in the context of services as well. Contemporary society regards services as a commodity, and the service provided is not always commensurate with the price received for it.

But the term *consumer protection* is not only a matter of the relationship between consumer and supplier, or consumer and service provider, in terms of the contract between them and its execution. *Consumer protection* must be considered as part of the overall economic system. Does the economic system protect or even benefit the consumer? This question extends beyond the scope of our discussion, and we will only touch upon it briefly.

Although, as mentioned, the term *consumer protection* does not appear in our sources, Jewish law does deal with these problems. Some of the laws in the field relate to the overall economic system and the maintenance of fair trade, while others are designed to protect various weak parties, including the consumer. Most of the laws mentioned below also appear in the context of other entries, such as *Ona'ah (overreaching or misrepresentation), *Hafka'at She'arim (profiteering), and *Mistake; hence, we will treat those topics more briefly, referring the reader to the aforementioned entries for fuller discussion.

The Economic System

There are two major contemporary economic systems, albeit on a practical level each one includes elements of the other.

The first system, capitalism, advocates a free, competitive market, functioning according to the principles of supply and demand, without governmental involvement. The second, socialism-communism, espouses governmental involvement in the market economy, through the setting and supervising of prices, distribution and direction of the means of production, even to the extent of nationalization.

Each system has its advantages and drawbacks. The former system, practiced in the West, and most notably in the

United States, is attractive and alluring, but does not ensure wealth and happiness to all; there are many indigent people in need of welfare services. The latter system, in its extreme form, collapsed in the U.S.S.R. A number of reasons contributed to its collapse, among them the indomitable human spirit, man's yearning for freedom, including freedom of initiative, business, and property rights.

Jewish law takes the middle road. It accommodates initiative and competition, but in a limited fashion, thereby assuring the possibility of acquiring wealth, but without excessively impinging upon the poor and weak. This approach is manifested in a series of different laws. Given the casuistic nature of Jewish law, which deals with the particular and the concrete, inductive reasoning is necessary in order to infer general principles from the particular cases.

We will briefly mention a few pertinent laws in this field.

Interest-Bearing Loans

One who gives a loan fulfills a positive commandment (Ex. 22:24; and Rashi loc. cit.). Loans are also a vital element in economic development. One person has capital, while another has initiative and productive abilities, but requires capital by way of a loan in order to realize these potentials. Thus far, the loan serves the borrower's interest: if he is poor, it provides him with his immediate needs; if he has initiative, it provides him with the means for setting up a factory or business. However, the loan is also in the interest of the loaner. In addition to the kindness involved, he hopes to profit from the interest to be accrued. The risk involved is that the benefit attained by the borrower will instead become a source of damage, as the borrower who does not succeed in his business will need to pay back the principal and interest without any economic justification,. which the lender receives unconditionally, at no personal risk. The lender thus becomes enriched at the borrower's expense, while the latter becomes impoverished. Biblical law intervenes and forbids the taking of interest, thereby preventing the widening of the gap between the two. Biblical law thus protects the interest of the borrower, who is also a consumer. Other laws promote freedom and initiative, on the one hand, and concern for the poor and weak, on the other. These include the sabbatical and jubilee laws, and in particular the cancellation of debts in the sabbatical year, various forms of charity, limits on commercial competition and against unjustified withholding of wages, the right of the worker to terminate his service before the completion of work, and others.

Hafka'at She'arim (Profiteering)

A number of laws are intended expressly for the consumer's protection. They are intended to ensure fair prices within the framework of a free market, where there is an accepted, standard market price. Whoever deviates from the market price without the other's knowledge transgresses the prohibition on deceit, as explained below. Jewish Law also intervenes in the setting of prices. In a free market, there is a danger that manufacturers and merchants will employ artificial means to influence prices. Jewish Law therefore prohibits profiteering. The Talmud (Meg. 17b) states that the blessing in the *Shemoneh Esreh* prayer for the year's produce was instituted by the sages against "profiteers," on the basis of the verse, "Break the arm of the wicked," which Rashi explains there as referring to "those who overprice produce and inflate prices." In other words, they artificially hike up prices in order to profit at the expense of the poor. For example: merchants who hoard their wares in order to market them at exorbitant prices when there is a shortage. There are also merchants who market their wares through agents, thereby increasing the price paid by the consumer (BB 90b). The Talmud further states (ibid., 90a): "A merchant should not make a profit of more than one sixth." However, these laws only refer to those goods which are considered essential or "life supporting," and the authorities dispute whether this category includes all foodstuffs or only some of them (see *Maggid Mishneh* and *Kesef Mishneh* on Maimonides, Yad, *Hilkhot Mekhirah* 14:2; *Me'irat Einayim* on ḤM 231:36). Regarding all other goods, the market is free and "he can charge as much as he likes" (Maimonides, ibid.).

Another category of articles subjected to regulation includes items required for the fulfillment of positive commandments, such as shofar, lulav, tefillin, matzah, etc. With respect to this category the sages adopted supply-promoting measures that lead to price reductions: inter alia, by issuing lenient halakhic rulings (see Mish., Ker. 1:7 concerning the post-natal mother's sacrifice, and Suk. 34b regarding pruned myrtles on Sukkot). For details of the laws on this subject, see *Hafka'at She'arim (Profiteering).

The Services Market

In addition to protecting consumers of commodities Jewish Law also protects consumers of services from paying in excess of the value of the services rendered. Here, too, the tendency is to provide the consumer with the opportunity to receive essential services at reasonable prices. The policy of ensuring cheap prices for religious commodities also applied to religious services.

The Talmud (Ned. 37a) interprets the verse: "'God commanded me at that time to teach you … just as I [teach you] free, so shall you [teach others] for free." In other words, there is a positive obligation to teach Torah gratis. Similarly, the Mishnah states (Bek. 4:6) that payment is not to be accepted by persons fulfilling a positive commandment, such as a judge, witness, or one who prepares the waters of ritual purification (*mei ḥatat*) or sprinkles them on the ritually impure. The Talmud distinguishes, however, between wages paid for the actual performance of a commandment, and those paid for various preparatory labors involved in its performance. It is thus permitted to accept wages for transporting the ashes of the red heifer or for filling up the water used in that ritual. Similarly, the Mishnah states that one who, in order to perform a commandment, is compelled to take time off from work, may accept compensation for time lost. Thus, in the case of a judge adjudicating a legal dispute (even where there was no prior

agreement to that effect), we estimate what proportion of a person's wages he would be prepared to forgo (in accordance with the wage level and the difficulty of his work) in order to fulfill a commandment rather than working (see Sh. Ar., ḤM 9:5). This method enables those who spread Torah, such as rabbis, judges, teachers, as well as doctors, to receive payment for their work. According to another view, it is permitted to take payment when paid by the community rather than by individuals (see Tos. citing R. Tam, Ket. 105a).

The level of the judge's wage is "enough for his livelihood" (Ket., ibid.). The Talmud does not consider the possibility that he might demand more than this. Maimonides adds: "Their livelihood: for them, their wives, their children, and the members of their households" (Maim., Yad, *Shekalim* 4:7).

Regarding the fulfillment of commandments by the consumer, such as one who requires the services of a scribe to write a Torah scroll, tefillin, or mezuzah for him, mention should be made of the appeal made by the *Tiferet Yisrael*, based on the Mishnah (Bek., ibid.) "… that it is not fitting to burden people [monetarily] too much in matters of Torah and mitzvot," i.e. special care is required not to financially burden people with respect to items they need to purchase for the performance of commandments.

Wage Rates in Private Sector

In general, wages in the free market are fixed according to supply and demand. Nevertheless, in two situations Jewish Law does intervene:

(a) Determination of fees by service providers. A professional association can determine a price for services provided by its members to the public. The danger is that the price may be excessively high, without economic justification. Jewish Law responded to this situation by requiring the approval of "an important person" to protect the consumers' interests (BB 9a; and Sh. Ar, ḤM 231:28).

(b) Where a private person charges more than the accepted price for his services. In certain cases, the consumer pays a higher price due to his ignorance of the accepted price (see the discussion of overreaching, below). On other occasions, he is aware of the accepted price but may be forced to pay an exorbitant price. This issue is discussed in Yevamot 106a:

> If he [an escapee] was fleeing from prison and reached a ferry and he said [to the ferryman]: "Take a dinar [which is an inflated price] and take me across," he [the ferryman] is entitled only to his [normal] wage.

The Talmud explains that the person who undertook to pay can say to the ferryman: "I was fooling with you [and did not intend to pay the inflated price]" (see Maim. Yad, *Hilkhot Gezelah ve-Avedah* 12:7; Sh. Ar., ḤM 264:7). However, the exemption is dependent on the fulfillment of two conditions: first, that the service provider inflated the price due to the customer's distress; second, that the service provider had other work at that time, which he lost because of the client.

Accordingly, the *Shulḥan Arukh* (ḤM 264:7) rules: "In addition, someone fleeing from prison … he [the service provider] receives only his [normal] wage, and if he [the service provider] was a hunter and he [the client] said to him: 'Stop hunting and help me across,' he must pay him whatever they agreed upon, and this applies to other similar cases." The Rema adds: "Some authorities contend that the ruling that he [the service provider] is only entitled to his [normal] wage applies exclusively to instances in which it is not customary to pay a high price, but where a high price is the norm – for instance, with swearing by demons (to find a lost article) or for medical treatment – he must pay him whatever they agreed upon."

Ona'ah (Overreaching)

This is another rule that protects the consumer, although the original intention was to protect both sides: the seller and the buyer. The Torah states (Lev. 25:14): "When you sell an item to your friend, or buy from your friend, do not defraud each other." The sages derived the law of overreaching from this verse. That is, if it transpires that the price of the transaction deviated from the accepted price by one-sixth of its value or more, the aggrieved party has the option of imposing a sanction upon the offender, irrespective of whether he acted intentionally or accidentally (see Sh. Ar., ḤM 227; and *Ona'ah).

Nowadays, due to the aforementioned market conditions, it is usually the consumer who is the overreached party, and the laws of *ona'ah* are intended to protect him from exaggerated prices.

Mistaken Transactions

We have thus far focused on issues of pricing, but at times the problem relates to the nature or identification of the transaction. In this context, Jewish Law protects the consumer in a variety of fields.

MISTAKEN IDENTITY: In some cases the contract may be legally executed, but at the time of performance a discrepancy emerges between what was agreed upon and the concrete situation. In this context, the Mishnah states (BB 5:6): "He sold him … olive wood and it turned out to be sycamore … both are entitled to cancel the deal." This is a case in which both parties make a mistake.

A MISTAKE IN THE OBJECT OF THE TRANSACTION: Sometimes the object of the transaction is transferred as required, but the consumer claims that there is a mistake related to the object of the transaction. We may distinguish between two different situations:

A. A Mistake relating to Quantity:

> Sometimes the seller permits himself a small deviation in terms of measure, weight, or quantity from a large number of customers, to "compensate himself" for his small profit margin. Therefore, the Torah warns (Lev. 19:35): "Do not defraud, in measurements, in weights, or in measuring; fair scales …" The in judgment sages' exegesis of this verse indicates the extremity of the measures taken in order to prevent the offense: first,

> extreme accuracy is required: the Talmud (BM 61b; BB 89b) interprets the verse as follows: "'In measurements' [of an] area of land – he must not sell to one during the summer and to another during the winter." This is because the rope used for measuring length is not the same length in the summer as in the winter. 'In weight' he should not dip the weights in salt. [Tosafot, in the name of Rabenu Tam, explained that this is because "salt lightens the weights").] 'In measure' [teaches] that one must not cause [the liquid] to foam. This means that it is forbidden for the seller to pour the wine from a height into the client's measuring vessel, because it foams … and appears full" (see Rashbam on BB, ibid.).

The passage clearly proves that the margin of accuracy required is 1/63 of a *log*, and the *Shulḥan Arukh* (ḤM 231:6) rules: "Even if [the measure] is very small, so that the foam is not worth one penny." Secondly, there are restrictions that extend beyond the strict scope of the prohibition: Not only is defrauding forbidden, but there is an a priori obligation to ensure the accuracy of the scales. Therefore: "Weights must not be made of tin, lead, or other types of metal, because they wear" (BB, ibid.). Moreover, based on the verse "you shall not have in your pocket …" the rabbis deduced that it is forbidden to possess an inaccurate measure in your house, so that it does not become an inadvertent stumbling block (Sh. Ar., ibid., 3). The court is responsible for taking precautions, by appointing inspectors charged with ensuring the accuracy of weights and measures (ibid., 2). Thirdly, in case of doubt, the seller must err in favor of the customer. This is derived from the verse (Deut. 25:15) "A full and righteous stone [weight] …" According to rabbinic exegesis: "Be righteous from yourself and give to him" (Sh. Ar., ibid., 14)

What remedy does the consumer have when he receives less than the agreed quantity of goods?

The Talmud (Kid. 42b) rules that the transacted object is returned. The authorities disagreed over the meaning of this ruling. Some hold that the transaction is annulled (Tos., BB 104a). Some distinguish between real estate and chattel: only with real estate must the defrauder supplement the amount or reduce the price as appropriate (Rashbam, BB, ibid.). Others distinguish between situations in which he can make up the lack, as with a shortfall in the weight or amount of a given product, and others which cannot be corrected, such as a house which is smaller than the agreed-upon size, in which case the transaction is annulled (see Naḥmanides on BB 103b; Sh. Ar., Ḥ.M. 232:1; *Me'irat Einayim* 4 and the novellae of the Gaon of Vilna, *ad loc.*). According to some authorities, if the transaction was made on the understanding that it is complete, but turns out to be deficient, the transaction is annulled. If, however, a sale of 100 eggs is agreed upon and it turns out that some are missing, the lack must be made up (Rabad's glosses on Maim., *Hilkhot Mekhirah* 15:2). According to another view, the transaction is always upheld, and the seller must make up the amount or, if this is not possible, reduce the price (Rashba, BB 103b).

B. A MISTAKE RELATING TO QUALITY.

The Mishna (BB 5:6) states: "If he sold him good wheat and it turned out to be bad, the purchaser may renege." Here, there is no remedy of supplementing the transaction, the only remedy is the annulment. Maimonides gives the following explanation (*Mekhirah* 15:2):

> We do not calculate the loss of value due to the fault … If the fault reduces its value by an *issar* [a negligible amount] he returns the vessel, and the seller cannot say to the buyer, "Take an *issar* in compensation for the loss of value" because the buyer can say to him, "I want a perfect item."

But not every change in the attributes or quality of goods annuls a transaction. Some changes are small, in which case the remedy lies in compensation or repair. Thus, for example, the *Shulḥan Arukh* rules in accordance with R. Asher regarding someone who sells a house in a different city, where it transpires that before the sale was complete Gentiles destroyed the windows and doors. In such a case, the transaction is not annulled. This is considered a "passing fault" that can be repaired. Therefore: "He [the seller] reduces the payment so that the buyer can restore the house to its previous state" (Sh. Ar., ḤM 232:5). There is also the case of a fault that is extraneous to the transaction and which can be remedied. For instance, if it transpires that a canal runs by the house, or another party has a right of passage through the house, the seller must remove this "obstacle," and the transaction is not annulled (Rema, ibid.).

What are the criteria for determining a mistaken transaction?

The more the customer details his original demands, the greater his opportunity to claim a mistaken transaction in the case of disagreement over the interpretation of the contract. A prior condition can serve to illuminate the parties' intentions (see Sh. Ar, ḤM 214:1). But regarding an actual fault, no prior stipulation is required: "It is assumed that any buyer wants a perfect article with no faults." In this context, a fault includes: "anything that the local residents agree is a fault, such as annuls a transaction of this kind" (Maim. Yad, *Hilkhot Mekhirah* 15:5; Sh. Ar., ḤM 2:6).

It follows that the local custom establishes the limits for a claim of mistaken transaction. The designated use of the item also influences the result of the consumer's claim. If a customer purchases a slave with a hidden blemish which does not prevent him from carrying out his work, such as a wart, he cannot claim this as a blemish, because the slave is intended for work and for no other purpose (Sh. Ar., ibid., 10). But if the item can serve several purposes, and the buyer failed to stipulate the purpose of his purchase, then even if the majority of consumers purchase it for the purpose he claims "we do not follow the majority in monetary matters." Hence, if someone purchases an ox, and it turns out to be a goring ox suitable for slaughter only and not for plowing, he cannot annul the transaction on the grounds of mistaken purchase (Sh. Ar., ibid., 23).

In some instances, the claim of mistaken purchase is contingent on the behavior of the purchaser: (a) If he knew in advance that the concrete reality did not conform with the terms of the agreement, the claim of nonconformity is not accepted, unless he made a condition to that effect (Rema, ḤM. 220:10; Gra, ibid.); (b) If the purchaser used the item after seeing the fault he is considered "as if he has waived [his claim], and it is not annulled" (Sh. Ar., ibid., 3). Some hold that it is the purchaser's responsibility to check the item so that he can later claim that it is unsuitable (see *Maggid Mishneh* on Maim., *Hilkhot Mekhirah* 5:3). Others, however, limit this obligation to specific circumstances (see *Netivot ha-Mishpat* on ḤM. 232:1; *Pitḥei Teshuvah* ad loc.).

The seller, for his part, can protect himself from the claim of mistaken transaction if he makes an appropriate condition in advance to the effect that the buyer waives his right to annul the transaction in that particular instance (see Sh. Ar., ḤM 232:7–9).

Commercial Advertising

The principal requirement of the seller relates to his presentation of the goods. He must be careful not to mislead the buyer. Not only is lying forbidden: concealing relevant information and misleading the buyer are similarly prohibited. Thus Maimonides rules (Yad, *Hilkhot Mekhirah* 18:1): "It is forbidden to defraud people in business or to mislead them. This applies equally to Gentiles and Jews. If he is aware of a fault in his merchandise, he must inform the buyer."

There are various kinds of actions that amount to misleading, but for our purposes we shall quote Maimonides (*De'ot* 2:6):

> It is forbidden to sell a Gentile the meat of a carcass instead of ritually slaughtered meat, or a shoe made from [the skin of] a carcass rather than one made from [the skin of] a slaughtered animal … rather [you should have] truth in speech, an honest spirit, and a heart which is pure of all deceit and wrongdoing.

Even if there is no difference between the price of slaughtered meat and the price of a carcass, the Gentile is grateful to him for selling him what he assumes to be slaughtered meat, which is considered of a higher quality.

At times the law depends on the behavior of the seller. Hence the ruling:

> It is forbidden to apply color [or apply makeup] to a person (i.e., a Canaanite slave), or an animal, or to vessels; for example, to dye the beard of a slave about to be sold to make him look young; or to give an animal bran water to drink, which causes it to swell and its hair to stand on end, so that it looks fat … (Sh. Ar., ḤM 228:9).

This does not mean that all advertising is forbidden. Improving the external appearance of merchandise without concealing faults is permitted. The Mishnah (Ar. 6:5) states: "… although they ruled that a slave sold with clothes is worth more, so that if you buy him a cloak worth 30 dinars, it increases his value by a maneh [i.e., 100 dinars]." Rashi explains that this is so "… because good clothing enhances them and adds to their value."

In his gloss on the Mishnah, *Tiferet Yisrael* adds that coloring the merchandise with intent to deceive is forbidden, but "… to wash and anoint him [the slave] to encourage the buyers to purchase him is permitted."

In certain instances, the seller's presentation of the product can be interpreted in different ways, and if the purchaser fails to verify the true significance, he has only himself to blame. The Talmud (Hul. 94b) gives the example of an announcement for the sale of meat to Gentiles. Here it is the responsibility of the gentiles to conclude that the meat is *terefah* (not ritually slaughtered in accordance with Jewish Law).

In principle, advertising directed at the emotions and imagination is permissible. The Mishnah therefore rules (BM 4:12):

> R. Judah said: a shopkeeper must not distribute parched corn or nuts to children, because he thereby accustoms them to come to him; the sages permit it. Nor may he reduce the price; but the sages say, he is to be remembered for good.

The ruling is in accordance with the sages' view. This demonstrates that free competition is more important than the possibility of deceiving people. However, it is still necessary to beware of overly seductive advertising, which obscures relevant information. The same Mishnah states: "One must not sift pounded beans: This is the view of Abba Saul. but the sages permit it." The sages ruling was accepted as the binding rule. In other words, the assumption is that the buyer will not be deceived into overrating the importance of the removal of the debris. However, the Mishnah continues:

> … but they agree that he may not remove the debris from the face of the dish only, because this amounts to creating a deceptive appearance. (This ruling was codified in the *Shulḥan Arukh*, ḤM 228:17.)

The *Tosafot YomTov* accurately point out that the phrase "creating a deceptive appearance" (literally "stealing the eye") implies that, even if the seller informs the buyer that he only sifted the top layer, he may nevertheless be deceived by the sight of clean merchandise, and receive the wrong impression.

An additional concern pertinent to the kind of commercial advertising common today is the use of immodest pictures and signs, etc. Similarly, one must beware of applying subliminal pressure to buy unnecessary merchandise, even to the extent of turning consumption itself into a value. This contravenes the words of Naḥmanides on the verse "You shall be holy …" (Lev. 19:2), where he states: "… that we should remove ourselves from luxuriousness."

The Legal Position in Israel

There are a number of laws relating to fair trade and the required agreement between a contract and its execution. We shall mention a few of these: the Standards Law, 5713 – 1953; the Sales Law, 5728 – 1968; the Contracts (General Part) Law,

5733 – 1973; the Standard Contracts Law, 5724 – 1964; the Contracts (Remedy for Breach of Contract) Law 5731 – 1971.

However, of special significance for our purposes is the Consumer Protection Law, 5741/1981. In the introduction to the explanatory note of the bill (Haẓa'ot Ḥok, 5780 p. 301), it was emphasized that "the proposal is deeply rooted in Jewish law, which provides extensive protection for the consumer within the framework of the laws of deception and fraud." In addition to some of the sources cited above, the words of the *amora* R. Levi are quoted: "The punishment for [false] measures is more rigorous than that for [marrying] forbidden relatives" (BB 88b).

The words of the Tosefta (BK 7:2) are also quoted: "There are seven types of thieves. Foremost among them – he who deceives people." The principles of Jewish Law pertaining to the topic are also quoted, as detailed above.

[Itamar Warhaftig (2nd ed.)]

CONTEMPT OF COURT. According to the Talmud, cursing a judge is a scriptural prohibition. The verse "You shall not revile God" (Ex. 22:27) is interpreted as referring to human judges (Mekh. *ibid.*; Sanh. 66a; Maim. Yad, Sanhedrin 26:1) as is a preceding verse "… the case of both parties shall come before God: he whom God declares guilty shall pay double to the other" (*ibid.*, 22:8). In both these verses the word *Elohim* is used and was taken to mean "judges." Cursing any person is an offense punishable with *flogging (see *Slander), cursing a judge, by virtue of the extra prohibition, is punished by a double flogging (Maim. (*ibid.*, 26:2). As in every offense punishable with flogging, so in contempt of court the offender must have been warned beforehand; however, insulting a judge or the court may be punished with anathema (see **Ḥerem*) or with admonitory lashes (*makkat mardut*), even though spontaneous and not punishable by law (Maim. *ibid.*, 26:5). The court may, however, at its discretion, condone such an unpremeditated insult and abstain from taking action on it, whereas a premeditated curse must be punished according to law and no apology can be accepted (Maim. *ibid.* 26:6).

It appears that in talmudic times the administrative, and not the judicial, officers of the court were the main target of contempt of court – demonstrated both in words and violence – and detailed rules were worked out to facilitate the perilous tasks of court messengers assigned to serve summonses and to execute judgments (BK 112b–113a; Maim. *ibid.*, 25:5–11; ḤM 11). The standard punishment for contempt of court messengers is anathema (*niddui*), after three prior warnings (*ibid.*); but admonitory lashes were also administered not only for insulting process-servers (Kid. 12b, 70b), but especially for failure to pay judgment debts (Ket. 86a–b). The source for the authority to proclaim anathema was taken to be Deborah's curse on those who did not come to the help of the Lord (Judg. 5:23). One scholar, invoking the wide authority given to Ezra by the Persian king for the punishment of offenders (Ezra 7:26), went so far as to authorize the infliction of imprisonment, shackling, and confiscation of goods (MK 16a), but in practice no such severe measures appear ever to have been adopted. No witnesses were required to prove such contempt: the complaint of the court official was accepted as conclusive – and expressly excluded from the applicability of the rules against slander (*ibid.*, and Maim., and ḤM *ibid.*).

In post-talmudic times, obedience to the courts had to be enforced by more rigorous means: both admonitory lashes (cf., e.g., Resp.Rosh 8:2 and 11:4) and imprisonment (cf., e.g., *Rema* and ḤM 97:15; Resp. Ribash 484) were widely used against persons who willfully persisted in disobeying the court. However, such extreme sanctions were resorted to only where previous public admonitions (cf., e.g., Resp. Maharam Minz 38, 39, 101), the exclusion from religious and civic honors, the disqualification from suing and testifying, and similar measures (including the anathema) had been of no avail (S. Assaf, *Battei Din…* (1924), 118 and passim). It has been maintained that all these sanctions were not punitive in nature but solely designed to execute the judgment of the court or make the adjudged debtor pay his debt (Elon) – a modern distinction which in most cases is rather academic. The talmudic formula, "he shall be beaten until his soul departs" (Ket. 86b et al.), has an unmistakably punitive undertone: compelling the debtor to pay coincides with punishing him for his contempt.

[Haim Hermann Cohn]

CONTRACT (Heb. חוֹזֶה, *ḥozeh*), in general law theory a legally binding agreement between two or more parties, in terms of which one party undertakes for the benefit of the other to perform or refrain from a certain act. As such, contract is the main source of the law of *obligations. The scriptural term closest to this meaning is the word *berit* ("covenant"), although it occurs mainly in the sense of a *covenant of love between man and his neighbor (I Sam. 18:3), or a perpetual covenant between the Almighty and man or the people of Israel (Gen. 9:9; 15:18; Ex. 31:16), as well as a covenant of peace between nations (Gen. 21:32; Judg. 2:2; II Sam. 5:4; Ezek. 30:5; Hos. 12:2). The word *ḥozeh* also occurs in Scripture, but not in any strict

legal sense: e.g., "… with the nether-world are we at agreement" (Isa. 28:15). In the post-scriptural period no concrete legal significance was assigned to either of these terms, nor was there any embracing parallel term for contract in talmudic times (the word *kiẓa(h)* (Tosef. Ket. 4:7, et al.) is not a generic term for contract but represents a particular transaction only). In the rabbinical period (see *Mishpat Ivri), the term *hitkasherut* came into general use – a term rightly considered by Gulak to be a translation of the Latin *contractus* (from *contrahere*, "mutual binding together"), and one that aptly expresses the concept of contract. The term *ḥozeh* was used by I.S. Zuri (*Mishpat ha-Talmud*, 5 (1921), 1) as the equivalent of contract and this has come into general use in Hebrew legal parlance in the State of Israel.

The absence in Jewish law of a generic term for a concept paralleling that of contract in Roman law is apparently attributable to its preference for a concrete rather than abstract terminology (see *Codification of Law). The Jewish law principles of contract are to be gathered from the various laws of *sale, *lease, *gift, *loan, *suretyship, etc. and from the additional special laws accruing in the course of time.

Creation of Contractual Ties

In ancient Jewish law it was possible for contractual ties to be created in various symbolic ways, such as by "removing and handing over the shoe" (Ruth 4:7; see also TJ, Kid. 1:5, 60c) and by handshake (*teki'at kaf*, Prov. 6:1; 11:15; 17:18; 22:26; Job 17:3; see also Ezra 10: 19). The view of obligations as being of a concrete (*ḥefzi*) nature by giving the creditor a *lien over the debtor's assets (see Obligations, Law of) resulted in the fact that the modes of creating contractual obligations came to be the same as those for the creation of ownership rights in property (see Modes of *Acquisition). While Jewish law bases the conclusion of a contract on the *gemirut ha-da'at* (i.e., final intention or making up of the mind) of the parties to be bound, such intention may only be inferred from a formal and recognized *kinyan* ("mode of acquisition") executed by one of the parties. Hence, contrary to Roman law which allows for a contract to be concluded by the mere oral assent of the parties, Jewish law does not generally confer legal recognition on an obligation created merely orally (BM 94a; cf. Kid. 1:6; for exceptions to this rule, see below). Accordingly, the breach of a merely oral agreement involves "a breach of faith," carrying only moral sanction (BM 49a, opinion of R. Johanan, and Codes); and the obligation is not legally complete, even where the purchaser has paid the price but failed to observe the mode of acquisition proper to the transaction, and the sanction, if he should retract, is a "religious" one only: "He who punished the generation of the Flood and of the Dispersion will exact payment from one who does not stand by his word" (BM 4:2 and Codes). The reason for the existence of a religious or moral sanction in these circumstances is the underlying religio-moral duty of fulfilling a promise, i.e., an oral undertaking made without the execution of a formal *kinyan* (Ket. 86a; see also BM 9:7 and Pes. 91a).

Consideration

Jewish law attaches a great deal of importance to the existence of consideration in the creation of contractual ties, and in this respect shows an interesting similarity to English law (see Gulak, Yesodei, 2 (1922), 40ff.). This requirement finds expression mainly in the fact that the contract is only concluded upon the actual passing of the consideration, such as the borrower's receipt of the loan money, or the performance of an act representing the receipt of the subject matter of the transaction by the purchaser, donee, hirer, or borrower. Even with regard to the creation of a bailment, which gives the bailee no right in the property itself or its fruits, it was laid down that an act of *meshikhah* (lit. "pulling," see Modes of *Acquisition) of the subject matter established the obligation (BM 99a; see **shomerim*). Similarly, a contract of *partnership for profit-making purposes is concluded when each of the partners performs an act of receiving part of the subject matter of the partnership belonging to the other partners – whether in money or chattels (Ket. 10:4) – the rule being: "partners acquire one from the other a common interest in the partnership capital in the same manners that the purchaser acquires [from the seller]" (Maim. Yad, Sheluḥin, 4:1). In the same way, a contract for the hire of a laborer is concluded upon the laborer commencing his work, the work being the contractual consideration (Tosef. BM, 7:1; BM 76b). None of the obligations normally deriving from any of the above-mentioned transactions, such as payment of the price by the purchaser and the seller's responsibility for the subject matter, or payment of the bailment money by the bailor and the obligation of the bailee to take care of the bailment, etc., will be legally binding on any of the parties, except upon their execution of the act of *kinyan* offering some exchange of consideration.

A number of contractual obligations were originally capable of being established merely orally – these cases being explained on the basis of a "spiritual" consideration. Thus, in the case of a *dowry it was decided that the mutual promises of the parties achieved legal validity upon mere oral agreement ("matters concerning which *kinyan* is effected by a mere verbal arrangement," Ket. 102b); "owing to the pleasure in forming of a mutual family tie, they finally make up their minds to allow one another the full rights of *kinyan*." The distribution among the partners of partnership assets by lottery, even though effected orally only, was held to be legally binding for a similar reason (BB 106b). Similarly, the oral establishment of a suretyship obligation was justified because, "on account of the pleasure of being trusted [by the creditor, or court appointing him] he finally makes up his mind to undertake the obligation" (BB 173b, 176b).

The requirement of consideration for the creation of an obligation served to complicate the modes of formation of contractual ties, just as the need for real modes of acquisition complicated the manner of gaining a proprietary right. Beginning with the amoraic period, mention is made of "acquisition by the kerchief" (*kinyan sudar*) as a method both for the acquisition of a proprietary right and for the establishment of

an obligation. This mode required that the promisee give the promisor some object belonging to him in return for which, as it were, the latter undertook the obligation; this procedure involved the handing over of a fictitious consideration – as the value of the object bore no relationship to the measure of the obligation and on completion of the formalities the object was returned to the promisee. Because it was convenient and easily executed, this procedure came to be widely followed from amoraic times onward as the mode of creation of different obligations (see BM 94a; BB 3a; etc.). In order to create mutual obligations between the parties, a *kinyan* would be effected by each in respect of his own undertaking.

Obligation by Admission (Hoda'ah) and by Deed

*Admission offered a further means for the creation of an obligation without consideration. Originally admission was an aspect of the procedural law: i.e., a man's admission that he was indebted to another or that a specified object of his belonged to another was enough to establish liability without any further proof, in terms of the rule that "the admission of a litigant is as the evidence of a hundred witnesses" (Kid. 65b). Accordingly, admission created no new obligation but merely confirmed an already existing one. Out of the procedural form of admission, Jewish law developed an admission of a substantive nature capable of creating a new obligation, so that the mere admission of liability for an obligation established its existence without further investigation, even if it was known not to have existed previously (Ket. 101b). In the opinion of most commentators, obligation stemming from admission may be created orally (before witnesses) without any need for a formal *kinyan* even if it is known by both parties and the witnesses that there was not any debt in existence (Maim. Yad, Mekhirah, 11:15; Sh. Ar., ḤM 40:1). The scholars found a basis for the existence of a unilateral obligation in a suretyship undertaking (see Ket. 101b; Yad and Sh. Ar., loc. cit.; and Siftei Kohen, ḤM 40:1, n.7). Admission, like a formal *kinyan*, served not only to establish an obligation but was also a method of alienation (*hakna'ah*) of property (BB 149a); in both events it was required that an oral formula be adopted, making clear the fact of an admission (*keẓot ha-ḥoshen*, ḤM 40:1). A written undertaking was also recognized by the majority of the commentators as a means of creating an obligation without consideration (Ket. 101b; BB 175b; Yad, Mekhirah 11:15; Sh. Ar., ḤM 40:1).

Obligations in Respect of Something Not Yet in Existence (Davar She-Lo Ba La-Olam)

The tenet of Jewish law that a person cannot transfer title of something not yet in existence or not in his possession (*She-eino bi-reshuto*; see Modes of *Acquisition), severely inhibited the development of trade. This problem was already referred to in tannaitic times in the statement: "one who declares, 'whatever I shall inherit from my father is sold to you, whatever my trap shall ensnare is sold to you,' has said nothing" (Tosef., Ned. 6:7); if however he says: "'whatever I shall inherit from my father to-day, whatever my trap shall ensnare to-day,' his statements are binding" (*ibid.*). Although in both cases the subject matter of the transaction is not yet in existence, the rule in the latter case resulted from a rabbinical enactment aimed at providing the promisor with money for the burial of his dying father, or for his own sustenance on that day (BM 16a–b). Similarly, it may be inferred from the plain meaning of the statement: "whoever sells products to his neighbor believing them to be in his possession, and it is then found that they are not, the other [party] does not have to lose his right" (Tosef. BM 4:1) that the seller is still legally obliged to deliver products to the purchaser, as undertaken (see also TJ, Ter. 6:3, 44b, statement of Abbahu). However, this *halakhah* was interpreted by the Babylonian *amoraim* as referring to the tradition of the moral sanction, "He who punished…" (BM 4:2) and not to a legal obligation (BM 63b; see also S. Lieberman, *Tosefot Rishonim*, 2 (1938), 111–2 on the wording of the Tosefta statement and attitude of the *rishonim* to it; cf. also BB 69b and Rashbam, ad loc.).

In the amoraic period an exception had already been stipulated to this general rule – something not yet in existence could be charged in a creditor's favor, even though no one could alienate it or transfer title to it; and the debtor could charge in favor of a creditor property which the former might acquire in the future (BB 157a; see *Lien). Out of this proposition there developed, in relation to something not yet in existence, a basic and substantive distinction between proprietary right and a right of obligation. Thus Solomon b. Abraham Adret (Rashba) made clear that a person who undertakes to give his neighbor all that he might earn in the following 30 days and charges all his property (whether existing or to be acquired in the future) to the latter is legally obliged to fulfill his undertaking, since this is not a case of transferring title of something not yet in existence, such as the fruit of the palm-tree, but a personal undertaking to give whatever the palm-tree shall produce during a specified period in the future; and "so far as obligations are concerned… the question of something that is not yet in existence is of no moment… because of the responsibility of the person himself" (Resp., vol. 3, no. 65; Rashba found a basis for the distinction in a man's undertaking to provide maintenance for a certain period which is valid even if he lacks the means for it at the time of the undertaking: Ket. 101b). The *halakhah* was also decided to the effect that the rule concerning something not yet in existence applied to a disposition couched in the language of sale or gift. If, however, it was couched in the language of obligation (e.g., "be witness that I oblige myself to *peloni* ["so-and-so"] for such-and-such"), the obligation in question would be effective and binding (Tur. and Sh. Ar., ḤM 60:6), because "the obligation rests on his person and he is in existence" (Sma, ḤM 60:6, n. 18).

Substantive Change in the Nature of Contractual Obligation in Jewish Law

The distinction described above was a convenient way in which the contractual obligation could be used to meet the

requirements of a developing commercial life. Although it had its roots in talmudic *halakhah* (Rashba, loc. cit. and see also *Sefer ha-Terumot*, no. 64:2), the distinction was apparently accepted as an explicit legal principle only from the 13th century onward (Maimonides, for instance, does not mention it at all). Until its acceptance, the main emphasis in regard to an obligation was placed on the real nature of the right of lien over the debtor's property, but recognition of the validity of an undertaking, even one relating to something not yet in existence, strengthened the personal aspect of the obligation, for it was founded on the actual existence of the debtor's person.

This concept was developed further during the same period. A corollary of the "real-right" aspect of an obligation had been the legal conclusion that an undertaking could not be legally created unless the promisor owned property at that time, which would become charged in favor of the promisee. The statements of the *amoraim* concerning the extension of the lien to include assets which would be acquired subsequent to creation of the debt meant that the lien would take in such assets in addition to those owned by the promisor at the time the debt was created. Arising from this, the tosafists discussed the validity of the then current practice of a bridegroom's written undertaking in favor of his bride, "for a hundred pounds even though he does not have a penny," and they confirmed this practice for the reason that, "the subjection of his person established the debt forthwith" (R. Elijah, Tos. to Ket. 54b; Rosh, *ibid.*). The result was to shift the emphasis in a contractual obligation to the personal aspect of the undertaking – "even for something he is not liable for and even if he has no assets, since he binds and holds responsible his own person" (*Beit Yosef*, ḤM 60, no. 15). This doctrine was even more explicitly enunciated by Moses *Sofer in the 18th century (*Ḥatam Sofer,* nov. Ket. 54b). In this manner the contractual obligation underwent a substantial change, from being essentially real in nature to being essentially personal, with the property aspect subordinate to the personal.

The emphasis on the personal aspect brought in its train a series of additional halakhic rulings concerning contractual obligations. Thus, some of the *posekim* expressed the opinion that a person could validly give an undertaking in favor of someone not yet in existence – even though he was unable to transfer title in this manner – and hence it was decided, for example, that a stipulation in favor of a person yet unborn was binding "since the stipulator is at any rate in existence" (*Yad Malakhi, Kelalei ha-Dinim*, no. 127). Similarly, despite the rule that a person could not transfer title to an intangible thing, such as a right of usufruct or of occupation of a dwelling (Sh. Ar., ḤM 212:1 ff.), some *posekim* expressed the view that a person could validly give an undertaking of this nature (Resp. *Naḥal Yiẓḥak*, 60:3). The majority of the *posekim* were of the opinion that a person could validly give an undertaking in regard to an unspecified amount, such as maintenance, to extend even for a period of unspecified duration (Resp. Rashba, pt. 2, no. 89; *Hassagot Rabad* Mekhirah 11:16; Sh. Ar., ḤM 60:2; 207:21) and in the opinion of several *posekim* an undertaking could be given either to commit or to refrain from committing a certain act (Resp. Maharashdam, ḤM, no. 370; Resp. Maharsham, pt. 2, no. 18).

Developments in the Formation of Contractual Ties by Way of Custom

As has already been stated, it has been a general principle of Jewish law that mere oral assent is not sufficient to constitute the *gemirat ha-da'at* of the parties, which is a fundamental requirement for the validity of any transaction involving a proprietary right or contractual obligation and is complete only when expressed in one of the recognized modes of acquisition or accompanied by the existence of some "spiritual" consideration, except for certain exceptions laid down in talmudic law (as in the case where the parties are husband and wife or parent and child, BK 102b and Nov. Rashba, ad loc.; also in other special cases, Bekh. 18b and Tos.; see also *Ḥazon Ish*, BK no. 21:5).

By means of the legal source of custom (**minhag*), Jewish law came to recognize a way of creating orally a legally valid transaction. According to talmudic law, the existence of a trading custom whereby a transaction was concluded by affixing a mark (*sitomta*) on a barrel of wine was sufficient to render the sale legally complete, despite the absence of a *meshikhah* – the recognized mode of acquiring movable property (BM 74a). This rule was justified on the grounds that "custom abrogates the law in all matter of *mamon*" (i.e., monetary matters or the civil law; see *minhag) and therefore "acquisition is made in all manners customary among the merchants" (Rashba, nov. BM, 74a). In the course of the time it was decided, in line with the above principle, that a transaction concluded by way of a handshake or the payment of earnest money (*demei kadimah*, Piskei Rosh BM 74a) or the delivery of the key to the place of storage of the goods, enjoyed full legal validity if based on a local mercantile custom (Sh. Ar., ḤM 201). From the 13th century on the question was discussed whether a transaction concluded merely orally on the strength of local custom could be afforded full legal validity. *Asher b. Jehiel was of the opinion (Resp. 12:3) that an analogy could be made with the law of *sitomta* only so far as a custom provided for the performance of some act, like those mentioned above; but mere words alone could not suffice to conclude a transaction. In his opinion a custom of this nature could not override the basic attitude of Jewish law in requiring active formal expression of the *gemirat ha-da'at* of the parties, and custom could only vary the essential nature of the formal act. An opposing opinion was expressed by *Meir b. Baruch of Rothenburg (and R. Jehiel, quoted in *Mordekhai*, Shab., sec. 472–3) to the effect that the very existence of a custom to conclude a transaction orally justified the assumption that complete *gemirat ha-da'at* could also result from the use of words alone. This view was accepted in most of the Codes and confirmed, inter alia, in relation to an undertaking to perform a *mitzvah* (e.g., at a circumcision ceremony: Resp. Radbaz, pt. 1, no. 278) and to formation of a partnership, it having been decided that,

despite the need for a formal *kinyan*, if there was a custom of establishing partnership by oral agreement, such agreement was sufficient, since "custom is a major factor in civil law" (*ibid.*, no. 380). This view was also accepted by the later *posekim* (see *Kesef ha-Kodashim* 210:1), and in terms of this full validity was afforded to public sales (*Mishpat u-Ẓedakah be-Ya'akov*, no. 33), to sales on the exchange (Resp. Maharsham, pt. 3 no. 18), and to similar transactions decreed by custom to be capable of being created in mere oral form.

Freedom of Stipulation

According to ancient *halakhah*, a condition stipulated by the parties that was contrary to the recognized provisions of the law was invalid: "any condition contrary to what is written in the Torah is void" (BM 7:11) – even in matters of civil law. For this reason a condition that the firstborn (see *Birthright) should not inherit a double portion or that a son should not inherit together with his brother was void (BB 126b and see *Succession; the explanation given for a distinction in regard to matters of succession does not accord with the plain meaning of the Mishnah). This was still the view of Simeon b. Gamaliel (Ket. 9:1) and R. Meir (Ket. 56a) around the middle of the second century. At this time R. Judah expressed the view that only in matters of ritual law (*dinei issura*; see *Mishpat Ivri) was it forbidden to contract out of the Pentateuchal law, such as a condition exempting a wife from the need to undergo a *levirate marriage on her husband's death. In matters of *mamon*, however, such as a wife's right to maintenance, a condition would be valid: "this is the rule: any condition contrary to what is written in the Torah is valid if relating to a matter of *mamon*; if relating to a matter other than *mamon*, it is void" (Tosef. Kid. 3:7–8, Ket. 56a). This view was also followed by the scholars who stated that the husband's right of succession could properly be varied by contract (Ket. 9:1) and that a bailee could stipulate for a different measure of liability than that provided for in the Torah (BM 7:10).

The *amoraim* developed the view that regarded matters of ritual law as being in the nature of *jus cogens* and therefore not subject to contrary stipulation; unlike matters of civil law, which were regarded as being in the nature of *jus dispositivum* (Ket. 83b–84a; BM 51a–b; TJ, Ket. 9:1, 32d; BB 8:5). The law was decided accordingly in the Codes (Yad, Ishut, 12:7–9; Shemittah, 9:10; Mekhirah, 13:3–4; Sh. Ar., EH 38:5, ḤM 67:9, 227:21). Hence the rule in Jewish law is that in matters falling within the purview of the civil law, the Torah itself prescribed no obligatory rules and therefore "a party may make a waiver [i.e., contract out] since the Torah does not require him to give an undertaking save of his own free will" (Nov. Ramban, BB 126b). A necessary requirement is that the condition be worded in the proper form; e.g., "on condition that *you* shall have no [complaint of] overreaching [*ona'ah*] against *me*" and not, "on condition that there shall not be any overreaching in the deal" (Mak. 3b, Rashi and Tos. *ibid.*, and Codes.)

Matters excluded, as a matter of principle, from being the subject of a stipulation include an agreement to submit to bodily injury or the curtailment of personal liberty. Hence an agreement to cut off another party's hand or put out his eye, even though they might be causing him pain, is void (BK 8:7 and TJ, BK 8:11, 6c; but cf. Tosef. BK 9:32). This applied even in the case of an ordinary beating – concerning which the opinion was expressed that as it did not amount to serious bodily harm no compensation was payable in respect of it (BK 93a; Resp. Ribash, no. 484 and see below Illegal Contracts). Similarly, a condition that the creditor shall have the right to imprison the debtor on his failure to repay the debt is invalid, since the imprisonment of an indigent debtor for non-payment is an infringement of his personal liberty (see *Imprisonment for Debt). In this connection, the scholars disputed the validity of an agreement between husband and wife not to cohabit with one another: the opinion in the Jerusalem Talmud was in favor of it being upheld as valid (BM 7:10, 11c), and this was followed by some of the *rishonim* (see *Oẓar ha-Ge'onim*, 8 (1938), 167 (first pagination) and commentary of Rabbenu Hananel, *ibid.*, 45); other *rishonim*, however (Rashi to Ket. 56a) and the *posekim* (Yad, Ishut, 6:9–10; Sh. Ar., EH 38:5; 69:6) held such a condition to be invalid since it was a *tenai she-ba-guf* (i.e., a condition involving bodily suffering).

The scholars further restricted the freedom of stipulation in matters where they saw the need for enforcement and preservation. Thus it was decided that a stipulation between husband and wife that she should forego her *ketubbah* is void (Ket. 57b and Sh. Ar., EH 69:6). Similarly, a stipulation of the parties that they shall submit to the jurisdiction of a gentile court even in monetary matters was held to be invalid, as it was regarded as tending to undermine Jewish judicial institutions (see Tur, *Beit Yosef*, and Sh. Ar., ḤM 26). The scholars also expressed different opinions on freedom of stipulation in certain fields of the law such as *suretyship and *succession (Yad, Nahalot 6:1; cf. the sources of Maimonides' statements, which are contradictory to the plain meaning of the talmudic statements, in Meiri to BB 126b). A stipulation contrary to good public order and morals is also void. On this ground Ḥayyim Jair *Bacharach decided that an agreement between local clothiers to refrain from suing each other on a complaint of unfair competition, trespass, etc., was void, since this could only lead to increased strife and disturbance of the public order (*Ḥavvat Ya'ir*, no. 163).

Illegal Contracts

Different systems reflect a varying approach to the question of illegal contracts, such as one involving the commission of a criminal offense or one made for an illegal purpose. Some European legal systems hold such contracts to be null and void *ab initio*, whereas English law does not void them initially but prescribes that the courts shall not enforce them or grant the parties any relief, all in terms of the two Roman Law maxims: *ex turpi causa non oritur actio* and *in pari delicto melior est pars possidentis*.

Jewish law reveals a materially different approach. Although fulfillment of a contract is not prescribed if this should

involve the actual commission of an offense or transgression, the fact that it has been committed does not deprive the contract of its legal validity or preclude the court from granting relief in terms of it. Thus, in a transaction concerning lending at interest, prohibited by the Pentateuchal law to both lender and borrower (BM 61a and Codes; see *Usury), the lender cannot claim payment of the interest according to the agreement, since this involves the perpetration of the transgression itself, but the borrower may claim a refund of interest already paid by him, despite his transgression. Similarly, if the borrower has given the lender some object as a payment in lieu of interest money, the former may only claim the return of the amount of the interest but not the object itself, since "the transaction is binding and cannot be voided because it is in contravention of a prohibition" (BM 65a–b, Rashi and *Piskei ha-Rosh, ibid.*). In the opinion of R. Meir, the effect of a bond of indebtedness that includes interest is to fine the lender by precluding him not only from recovering the interest but also the principal (BM 72a); the *halakhah*, however, was decided according to the view of the other scholars, namely that the lender could recover the principal but not the interest (Yad, Malveh 4:6) except if in the bond an aggregate amount appears from which the separate amounts of principal and interest cannot be established (Sh. Ar., ḤM 52:1). The law was similarly decided with regard to any transaction prohibited in part; namely that the transaction is valid except that the illegal part must be severed from it (Sh. Ar., ḤM 208:1 and Rema thereto).

This basic approach was also followed in Maimonides' ruling that: "if a person sells or gives on the Sabbath, and certainly on festivals, even though he should be flogged, his act is effective" (Yad, Mekhira 30:7); so too with regard to an obligation contracted on the Sabbath: "if anyone performs a *kinyan* on the Sabbath, the *kinyan* is valid and the writing and handing over take place after the Sabbath" (Yad *ibid.*; Sh. Ar., ḤM 195:11; 235:28). This was held to be the case even with regard to a *kinyan* involving the desecration of the Sabbath according to Pentateuchal law (BK 70b).

This approach of Jewish law to the question of a contract involving a transgression illustrates its capacity to distinguish between the "legal" and the "religious" aspects of the *halakhah*, notwithstanding their common source and it is precisely because of the material link between law and morals that Jewish law deprives the transgressor of those additional "benefits" which result from the invalidation of the civil aspects of the contract. For the same reason the court will not grant relief to a party whenever enforcement of a transaction will, in the prevailing social circumstances, amount to an encouragement of criminal conduct. Thus the court will not order the refund of money paid for the procurement of false testimony, if the witness should fail to testify falsely (*Shevut Ya'akov*, vol. 1, no. 145; see also *Pitḥei Teshuvah*, ḤM 32:2, n. 1). A similar decision was given by the Great Rabbinical Court in a matter involving the contravention of the currency regulations in Ereẓ Israel (OPD, 63).

Stipulations in Favor of a Third Party

Unlike some legal systems, Jewish law shows no hesitation in recognizing the validity of a stipulation in favor of a person who is not party to the contract, provided that it confers a benefit and does not impose an obligation on him. In tannaitic times this rule was expressed in the doctrine that: "a benefit may be conferred on a person in his absence, but an obligation cannot be imposed on him in his absence" (Git. 1:6; BM 12a; etc.). The phrase "in his absence" (*she-lo be-fanav*) has been interpreted in the sense of *she-lo mi-da'ato* (i.e., without his knowledge or consent, Rashi to BM 12a). When the stipulation comes to the knowledge of the third party, he has the option either to accept it – in which case he may demand fulfillment by the promisor – or to reject it, since "a person cannot be compelled to accept a gift" (Yad, Zekhiah, 4:2 and *Maggid Mishneh*; Tur and Sh. Ar., ḤM 243:1–2; 190:4 in *Keẓot ha-Ḥoshen* 2). See also Law of *Agency.

Specific Performance

Each party to a contract must fulfill his obligations under the contract, from which he is exempt only in the event of *ones* ("inevitable accident or duress") and the court will generally oblige the parties to render specific performance of their contractual obligations. Hence, the sale of an object to someone other than the party to whom the vendor had previously undertaken, in a valid contract, to sell the same object at a determined price, will be set aside and the object given to the party with whom the undertaking was originally made (Av. Zar. 72a and Codes; *Torat Emet*, no. 133). If, however, the vendor has worded his undertaking thus: "If I sell, I shall sell to you at such and such a price," and later sells the same object to someone else at a higher price, the sale to the latter will be valid, since the vendor made his prior undertaking conditional on his desire to sell, and "he did not desire to sell, but sold only because of the increment given by the other, placing him in the position of one who sold under duress" (Yad, Mekhirah, 8:7; Resp. Maharik, no. 20).

In the opinion of some of the *posekim*, specific performance is not ordered unless the claimant is in possession of the object which the vendor undertook to sell to him (Rashba and author of the *Ittur,* quoted in *Maggid Mishneh* to Yad, Mekhirah 8:7). However, the majority opinion in the Codes is that specific performance is granted even if the claimant is not in possession of the subject matter of the contract (see Tur, ḤM 206 and *Baḥ* thereto, no. 1). The opinion was also expressed that both Rashba and the author of the *Ittur* were in favor of compelling specific performance, even if the subject matter of the undertaking was not in the claimant's possession, in the case of an undertaking worded in the terms: "I bind myself to sell the object to you" (Resp. *Torat Emet*, no. 133). Specific performance is not dependent on the prior payment of the purchase price and the contract must be executed even if the parties have entrusted other persons, or the court, with the determination of the purchase price (Av. Zar. 72a and Codes, *ibid.*).

Specific performance is not granted on contracts for personal service, such as a contract of employment, since compelling a person to work against his will involves an infringement of his personal liberty and a form of disguised slavery (BM 10a). This is even more so because of the general attitude of Jewish law that any engagement of a laborer, even of his own free will, is a form of restraint on personal liberty; thus the laborer has special rights for his protection (BM 10a; 77a; see also *Labor Law). Specific performance will be ordered, however, in the case of a contract of employment relating to a public service, if a breach of this would be harmful to the public. Thus, on the eve of a festival, if no other is available, a public bath-attendant, barber, or baker "may be restrained until he finds someone to replace him" (Tosef., BM 11:27; see also Resp. Maharam of Rothenburg, ed. Prague, no. 1016). Specific performance is accordingly recognized as a function of the law itself and not as a matter of equity, as in English law – from which Jewish law also differs in several other important respects on this subject.

Compensation and Penalty for Breach of Contract

Breach of contract renders the party in breach liable for the resulting damage, which, in talmudic times, generally included only compensation for the damage directly suffered by the other party and not for the loss of profit which, but for the breach, he would have earned. Since post-talmudic times, however, the tendency has been to extend liability in certain circumstances to cover also the loss of anticipated profits. Liability of this kind – i.e., consequential damages – is based on a category of damage known as *garmi* (see **Gerama*), or stems from an implied condition imputing an agreement between the parties to be liable to each other for the loss of profits in the event of either of them breaking the contract (see e.g., the statements of R. Jeroham, quoted in Tur, ḤM 176; *Beit Yosef, ibid.*, no. 21; ḤM 176:14). In order to bolster the effectiveness of contractual obligations, the practice was adopted from tannaitic times of specifying in the contract a fixed amount to be payable on breach of the contract by one of the parties (see e.g. Ned. 27b; BB 10:5). The question arose, however, whether such an undertaking was not to be regarded as defective on the grounds of **asmakhta* (an undertaking to forfeit an asset upon nonfulfillment of a condition). Since the founding basis of a contract in Jewish law is the *gemirat ha-da'at* of the parties to be bound, the scholars debated the validity of the additional undertaking to pay a fixed amount by way of a penalty, which they regarded as having been given solely on the strength of a "confident reliance" by the promisor on his ability to fulfill the principal contractual obligation, without his contemplating the possibility of having to fulfill the penalty obligation (BB 168a). The question was decided to the effect that in certain circumstances such an undertaking would be void for reasons of *asmakhta*, primarily if it appeared that the amount stipulated was exaggerated and beyond any reasonable estimate of the damage suffered by the other party and this would imply the lack of any serious intention by the promisor (BM 104b and Codes.)

The development of commercial life spurred on the search for a way of overcoming the invalidating effect of *asmakhta* on contractual stipulations. In talmudic times it had been decided that an undertaking effected by way of a formal *kinyan* before a court of standing excluded it from the operation of the law of *asmakhta* since in this manner the undertaking made with a complete *gemirat ha-da'at* would be clear (Ned. 27b and Codes). In the post-talmudic period the process of avoiding the invalidating effect of *asmakhta* on a penalty-undertaking was furthered by the enactment of a *takkanah* by the scholars of Spain. Thus the parties might undertake to pay each other, unconditionally, an amount specified in advance, each agreeing in advance to release the other from this undertaking in the event of the fulfillment of the principal obligation under the contract. Since, in terms of the *takkanah*, the undertaking to pay the amount fixed in advance is an unconditional one, it is valid and unaffected by the effect of *asmakhta* (Yad, Mekhirah 11:18; Tur and Sh. Ar., ḤM 207:16). Another way that was found to avoid the effect of *asmakhta* was by strengthening the penalty-undertaking with a vow, oath, or ban (Sh. Ar., ḤM 207:19). It was also decided that the law of *asmakhta* did not apply to certain obligations, such as an undertaking to pay a penalty for breach of a marriage promise (*betrothal) or for breach of contract by a teacher without his finding a replacement, these being valid undertakings.

In the State of Israel

In Israel the law of contract is based on various different sources – Ottoman and Mandatory law, as well as legislation after the foundation of the state. English Common Law and Equity represents an important source of the law of contract in Israel in all cases where the existing law provides no answer to the problems that arise (i.e., *lacunae*; cf. 46, Palestine Order in Council, 1922–1947). Various directions in the law of contract have been included in a number of laws of the Knesset, among them Contracts (Remedies for Breach of Contract), 1970; Hire and Loan Law, 1971; Contracts (General Part) Law, 1973; Contract for Services Law, 1974; and Insurance Contract Law, 1981.

[Menachem Elon]

A proposition has recently been put forth (see Bibliography, B. Lifshitz) that during the mishnaic and talmudic periods, and up to and including Maimonides, there was no recognition by Jewish Law of the binding nature of a promise. Contractual obligations, as currently understood, were not accorded legal effect. This indeed was the subject of a dispute between R. Yose and R. Judah, which the Talmud explains as being based on the question whether **asmakhta* is binding. (BM, 61a, BB 168a). The term *asmakhta* signifies reliance or support. The Hebrew equivalent of this Aramaic term is *devarim* (BM 47a–48a, BB 3a). Until the time of Maimonides (Mishneh Torah, Mekhirah, ch.11), the explanation for denying legal effect to promises was the subject of dispute: Was

it due to the absence of a deliberate and final intention to be bound (*semikhut da'at*) or some other reason. Those who sought to make promises binding in particular instances adopted the first explanation, as did Maimonides, thus resulting in giving legal effect to a promise when there was a full intent to be bound.

In any case, according to the basic view of R. Judah as elucidated by the *geonim*, a transaction can be made binding only by giving it a contemporaneous effect, or assigning it a property character, or establishing a particular status for the obligor, such as borrower, bailee, debtor, employee, guarantor, etc, which would produce the result of a binding obligation. But there was no way to enforce a promise to perform an act in the future, simply as a promise, such as a promise to marry.

According to this approach, the creation of such a status is expressed in the formula, "He has concluded to bind his person" (*gamar – 'meshabed nafshei,* BB 173, etc.). In this way, the promise is comparable to an act of acquisition – *kinyan* – which attaches to the obligation and takes effect contemporaneously. "From the present time" thus becomes a key phrase in making a promise binding. It should be pointed out in this connection that establishing an obligation under Jewish Law is thus a unilateral act and not a bilateral undertaking, as in modern contract law.

Illegal Contracts

The Jewish Law on illegal contracts was elucidated and applied in the case of *Jacobs v. Kartoz*, 9 PD 401 (1955) in an opinion by Justice Silberg of the Israeli Supreme Court.

The plaintiff was a landlord who sued to evict a tenant on the ground that the lease of the apartment violated an important government regulation governing the amount of rent to be paid. Justice Silberg concluded that under the principles of Jewish Law, the claim of the landlord should be rejected.

This result is reached even though the tenant is essentially arguing that an illegal contract should be upheld. Jewish Law however distinguishes between the prohibition involved and the legal consequences of the transaction; the transaction is valid as long as it can be carried out in a permissible manner. For example, a sale effected in violation of a prohibition of the price to be paid is nevertheless valid, and the permitted price is to be paid.

As stated by Justice Silberg:

> Jewish Law deals very carefully with one who violates the law. Undoubtedly, the reason for this is the desire to avoid the unjust results which clearly follow from a rule that uniformly fails to recognize the legal validity of an illegal contract… The concept that the court should not "dirty its hands" by dealing with such claims has not been widely accepted in the philosophy of Judaism.

Howard v. Miarah., 35 (2) PD 505 (1980) involved a contract for the sale of land. At the request of the seller, the price stated was lower than the actual price, with the difference paid in cash. Upon discovering that part of the land had been expropriated by the municipality prior to the signing of the contract, the buyer requested a reduction in the price. When this was refused, the buyer stopped payments. The seller, claiming a material breach, rescinded the contract. The buyer thereupon sued for restitution of all sums paid.

The defendant seller argued that a transaction in which the true price is hidden is an illegal contract and the court should not hear a claim based on such a contract, both parties being *in pari delicto.* Justice Elon, however, found that under Jewish Law, the plaintiff buyer was entitled to restitution of the money paid.

The applicable principles of Jewish Law are that an illegal contract is generally valid as a matter of civil law; the parties should be held to their contractual obligations to the fullest extent permitted, and a wrongdoer should not be rewarded.

Comparing English Law to Jewish Law, Justice Elon stated:

> Under the English rule, the court does not dirty its hands by dealing with such a [n illegal] contract, and prefers to let the loss resulting from non-performance lie where it falls. This rule has caused great injustice … Under Jewish Law, an illegal contract is generally not invalid as a matter of civil law, and each party to the contract is entitled to pursue his remedies, so long as this does not result in the performance of the illegal act itself.

A decision by the Rabbinical Court of Appeals illustrates the view of Jewish Law that when it appears in a particular situation that giving effect to a transaction would serve to encourage the commission of an illegal act, the court should not lend its assistance to the enforcement of the contract.

In the case of *A v. B* (Warhaftig, *Ossef Piskei Din*, p.63, 1945) A sued B for a sum of money, alleging that A was entitled to the money as a result of the purchase of foreign currency, which B bought on A's behalf. At that time, trading in foreign currency was prohibited. The court held that since the claim was based on a transaction that violated a fundamental law of the state, the court should not entertain the action.

The Principle of Good Faith (Tom Lev)

Roth v. Yeshufeh (*Construction) Ltd*, 33 (1) PD (1979) was an action for damages for breach of contract. The claim was based on the failure of the defendant to transfer an apartment within the time period fixed in the contract. The apartment had been transferred to the plaintiff six months late.

The defense to the claim was based on a clause in the contract that provided that the purchaser's acceptance of possession shall serve as conclusive and final proof of the fulfillment of the seller's obligations under the contract. On the basis of this clause, the lower court rejected the claim.

On appeal to the Supreme Court, the decision was reversed and the case was remanded to the lower court.

The majority opinion was greatly influenced by the principles of Jewish Law. Israeli contract law provides that "a contractual obligation shall be performed and a right arising out of a contract shall be exercised in good faith" (*tom lev*). The opinion of Justice Elon examined the meaning of the term

"good faith" (*tom lev*) in the light of the principles of Jewish Law.

In his opinion he explained:

> When we set out to interpret fundamental conceptual terms contained in the laws of the State of Israel, such as "good faith," which have a universal character, and which reflect legal and value judgments in every civilized legal system, we must examine the meaning of those terms primarily in the light of the principles of Jewish Law and the Jewish heritage. A universal principle such as this [good faith] manifests itself in the various legal systems of our own day, but its roots are embedded in the fundamental values which are humanity's heritage from ancient legal systems … And if this is so with respect to the legal systems of other nations, it certainly applies to the laws of the State of Israel, whose fundamental principles are rooted primarily in its ancient heritage …
>
> The very term "good faith" (*tom lev*) is an original Hebrew term… For this reason, when interpreting this term we are obliged to refer, first and foremost, to Jewish Law, which serves as the main source for understanding its content and meaning.

Among the Jewish Law sources cited were the following:

1. Mekhilta (Be-Shallah, Tractate De-Va-Yassah, sec. 1 Horowitz-Rabin ed., p.158): "If one is honest in his business dealings … it is accounted to him as though he had fulfilled the entire Torah."

2. Shabbat 31a: "Rava said, When a man is brought in [before the Heavenly Court] for judgment, they ask him: 'Were you honest in your business dealings.'"

3. Deuteronomy 6:18: "Do what is right and good."

4. Nahmanides, Commentary on Leviticus, 19:2: One who obeys only the technical and formal sense of the law is a "scoundrel within the bounds of the Torah (*naval bi-reshut ha-Torah*)." The Torah states, "Do what is right and good" to establish an affirmative commandment to behave with uprightness and fairness.

The lower court was directed to determine whether the defendant acted in good faith, and if not, whether the conduct was sufficiently egregious to have legal consequences.

In the case of *Laserson v. Shikkun Ovedim Ltd*. 38 (2) PD 237 (1984) Justice Elon established that there are limits to the application of the principle of "good faith."

The issue in the case was whether the defendant was obligated to install a generator in the building it had constructed, which was necessary to operate the elevator in an emergency. The contract required the building of a chamber for a generator but it did not mention the generator itself. The question arose whether the obligation to perform the contract in good faith meant that the generator also had to be supplied.

In his opinion, Justice Elon pointed to the inherent problem in applying the principle of "good faith" – the tension between stability and flexibility in business transactions, and between predictability and uncertainty in the law. Thus in applying the command "Do what is right and good" great caution is required.

The conclusion reached was that for "proper and reasonable legal policy" the "good faith" principle should not be used to create new legal obligations which the parties did not contemplate and did not include in their contract. The principle should govern only the fulfillment of the obligations that were agreed upon.

In applying the command "do what is right and good" Jewish Law established some duties as legal obligations, and other duties as ethical precepts.

The rationale for refraining from categorizing all duties the performance of which may be considered to be "right and good" as legal obligations is given in the opinion as follows:

> The legal system cannot exist with the instability that would result from imposing unexpressed obligations never even contemplated by the parties … One may discern in the Jewish legal system, in which morals and law combine in a unique pattern of decision making … the utmost care that the principle of good faith should not extend the limits of legal enforceability further than is desirable and practical …
>
> If it were otherwise, then a person would not – and could not – know what will be the end of the contract that he signed, and what new obligations are likely to be created in its framework, unbeknownst to him. The result would be that even a person of good faith would never know what obligations he undertook and how far they extended.

In this case, the lower court should determine whether in view of all of the circumstances, the contract could be interpreted as itself containing an implied agreement that the defendant should install the generator.

In regard to the basic principle of "good faith" in Jewish Law, the opinion quotes the characterization of "good faith" given by Professor R. Powell, who refers to the Hebrew terminology (Powell, *Good Faith in Contracts*, 9, *Current Legal Problems*, 16 (1956), 37–38):

> In the Hebrew language there is a simple phrase which satisfies that requirement. It is *derekh erez*. It means "way of the land" but is also means "good manners."

INTERPRETATION OF DOCUMENTS. Various rules of Jewish Law govern the interpretation of contracts and other legal instruments. For example: The later part of a contract controls situations in which there is an inconsistency between an earlier and a later clause, which cannot be reconciled. It is presumed that the earlier statement was reconsidered and the later clause states the final intention.

Another rule is that if there is a doubt as to the meaning of a clause in a contract, the doubt will be resolved in favor the obligor. For an obligee to succeed, his claim must be free from doubt. However, this rule is applied only when the result will not destroy the essential validity of the instrument.

This rule was applied in the case of *Alperovitz v. Mizrahi*, 34 (4) PD 129 (1980), which involved an agreement for the purchase of an apartment. A memorandum of purchase fixed the price. It was accompanied by an initial payment and was to be followed by five additional payments. Possession was to be transferred at the time of the final payment.

The purchaser's contention that the memorandum implied that a detailed contract was to be executed was accepted by the court. The question that remained was when the further contract was to be made. Clearly this would not be at the end of all of the payments. But prior to which of the payments did the parties intend that the contract be executed?

The rule that doubtful questions are to be decided in favor of the obligor supported the conclusion that the contract was to be executed before any of the additional payments. Additionally, there was no logical basis for choosing the time of any one of the payments over the others.

The opinion by Justice Elon cited a responsum of R. Asher b. Jehiel (Resp. Asheri #68:14; beginning of the 14th century). A obligated himself to pay a sum of money to B "after Passover." The question was: which Passover does this refer to – the next succeeding Passover or the last Passover in the history of the world? There was no logical basis for choosing any Passover in between. In this instance, R. Asher b. Jehiel did not apply the rule that ambiguities should be resolved in favor of the obligor, because to do so would completely nullify the agreement.

The twelfth of the thirteen canons of (biblical) interpretation of R. Ishmael is that "an ambiguous word or passage is explained from its context or from a subsequent expression." This principle was the basis for the decision in *Katan v. Municipality of Holon*, 32 (1) PD 494, 1978.

The municipality sent out an invitation to a group of contractors to bid for a job. The invitation stated: "To validate the bid, the contractor shall provide a bank guarantee… for a period of sixteen months." An unsuccessful bidder claimed that the successful bidder did not provide the guarantee at the time it submitted its bid. The latter argued that the guarantee was not required to be submitted until the contract was awarded.

The court, in an opinion by Justice Elon, cited R. Ishmael's canon of interpretation, and held that in view of the context of the document and the surrounding circumstances, the successful bidder was correct. The duration of the work was set as sixteen months from the time of acceptance. The sixteen months of the bank guarantee was meant to cover the time during which the work was to be performed. The guarantee was thus to be submitted when the contract was awarded, not when the bid was submitted.

In addition, the submission of a guarantee is necessary to assure a degree of seriousness on the part of the bidder. In this case, the invitation to bid was not sent to the public as a whole, but to a limited number of contractors. It was therefore not necessary to assure the seriousness of their bids by requiring a guarantee at the time of the submission of the bids.

CONTRACTORS. Persons contracted for army supply and building, mainly road construction. While the initial possession of financial and commercial expertise and substantial resources was a necessary prerequisite for engaging in this occupation, it provided a successful means of enrichment and also opened the way to a certain measure of social acceptance and political influence from which as members of a hated group Jews were otherwise excluded. In Christian Spain Jews were prominent as military suppliers to kings. A noted example was Judah de la *Cavalleria, who supplied arms to the king of Aragon in 1276 for his wars against the Muslims in Valencia. The *Ravaya brothers supplied arms to King Pedro III of Aragon (1276–85) in his wars against the rebel nobility of Catalonia. The wealthy Muça de *Portella also supplied arms to Pedro III of Aragon. Isaac *Abrabanel was military supplier to Ferdinand and Isabella from 1489 to 1492, while Abraham *Senior was the chief supplier of military equipment to the Spanish troops who fought in Granada. Jews also played a prominent role in the production of military equipment, metal casting, and armaments manufacture. There is evidence of Jewish arms manufacture in Spain, and in 1495 large numbers of Jewish arms manufacturers entered Portugal after the king had promised them special rights, such as payment of only half the sum for entry imposed on Jewish immigrants from Spain. Portuguese chroniclers, among them Damião da Goes, recount that some members of the king's council opposed the expulsion of the Jews from Portugal on the ground that the Jews possessed many secret methods of armaments manufacture which should not be allowed to pass into the hands of the Turkish infidels. The Jewish chronicler Elijah *Capsali describes the exiles from Spain as having introduced firearms to the Ottoman Empire and army, this being one of the reasons why they were well received by the sultans. Among the experts on cannon and gunpowder manufacture in the 16th century were Jews who had immigrated to Ottoman territory after the Spanish expulsion.

Probably Jews served as military suppliers during this period in Central Europe also; there is no lack of evidence for their participation in the arms trade: a decision of the Bruenn (Brno) tribunal permitted the Jews of Uherske Hradiste to trade in arms. A number of Jewish military suppliers operated in Germany in the 16th century. Isaac Meyer was permitted to

reside in Halberstadt in 1537 in order to supply the monastery with weapons. *Joseph (Joselmann) b. Gershon of Rosheim in 1548 was granted a writ of protection by the emperor which also specified his activities as a military supplier.

Portuguese Jews in Amsterdam in the 17th and 18th centuries were active as military suppliers to the armies of Holland, Morocco, and England. The internal wars in Morocco during the 17th century enabled many Dutch Jews, who acted as military suppliers to all sides involved in the conflict, to enter the arms trade. Amsterdam was the place of residence of Solomon Michael David, military supplier of Hanover in the second half of the 18th century.

The *Court Jews were regarded by their rulers as capable of supplying the whole range of military equipment: horses, food, uniforms, and weapons. Jewish commerce in Germany and Austria consequently prospered. Although the Court Jews themselves constituted only a minute proportion of the Jewish population, they required a widespread network of subcontractors, petty merchants, etc., who were also Jewish, in order to fulfill their functions as major contractor-suppliers, especially in wartime. Large-scale provisioning was achieved through contacts with Jewish dealers in agricultural products from Eastern Europe. Antisemites contended that in Germany at this time "all the military suppliers were Jews, and all the Jews were military suppliers." Samuel Julius was military supplier to Frederick Augustus, elector of Saxony. The *Model family were court suppliers and military contractors to the duchy of Ansbach during the 17th and 18th centuries. Joseph Suess *Oppenheimer acted as military supplier first to the landgrave Ernest Augustus of Hesse-Darmstadt, and then to Charles Alexander, duke of Wuerttemberg. The *Gomperz family of Cleves acted as military contractors and commercial agents to six Prussian rulers, notably Elias Gomperz, who founded his firm in Emmerich in the second half of the 17th century. His contemporary Israel Aaron, who had close commercial ties with Pomerania, Mecklenburg, Amsterdam, and Hamburg, also acted as military supplier to Prussia. The *Wertheimer, Mayer, and Herschel families, as well as others who were permitted to settle in Vienna during the rule of Emperor Leopold, also acted as military contractors.

The ability of the absolutist rulers to maintain organized and well-regulated armies under their control and command may be attributed to a considerable degree to both the acumen of the Jewish contractors and their connections with fellow Jews. The part played by Jews in supplying the armies of England in the 17th and 18th centuries was no less decisive. Abraham Israel (Antonio Fernandez) *Carvajal was the most important military contractor during the rule of Cromwell, and one of the five London merchants to sign a contract to supply the army with wheat in 1649. William of Orange was enabled to sail to England in 1688 by an interest-free loan of two million crowns made to him by Francisco Lopez Suasso of the Hague, while another Jew, Francisco de Cordova, was in charge of military supplies for the campaign in partnership with Isaac Pereira. Solomon de *Medina, military supplier to the Duke of Marlborough's troops, was granted a title in 1700 for his services to William III. In Ireland the firm of *Machado and Pereira provisioned the Duke of Schomberg's armies. During the War of the Spanish Succession, Robert Harley was accused of ruining the economy of England in order to enrich Jewish military suppliers. Joseph Cortissos, formerly a resident of Amsterdam, was in charge of military supplies during Peterborough's campaigns against the Spanish.

Jews can be found among French military suppliers as early as the 16th century. A number of Jewish families were permitted to settle in Metz in 1567 by Marshal de Vieilleville on the condition that they undertook to supply his troops, but their activities were limited to small-scale local operations. The part played by some of the wealthiest French Jews in military supplies reached considerable proportions during the reign of Louis XIV. Jacob Worms was chief military contractor to Louis XIV, and in the latter half of the 18th century Herz *Cerfberr rose to prominence in this field. When in 1776 it was decided to end the system of private contracting for military supplies, an exception was made in the case of Cerfberr, who remained the supplier for the army in Alsace-Lorraine. In 1785 he divided the management of his business enterprises, allocating his banking activities to his sons and sons-in-law, while concentrating his own efforts on military supplies. Moses Belin, military supplier in Metz, and Moses Eliezer Liefmann *Calmer of Hanover, military supplier from 1769, were among many other Jews prominent in this field in France. Most important was the wealthy Abraham *Gradis, who acted as military supplier to the French army in Canada and did much for French troops there, especially during the Seven Years' War. From 1748 to 1779 he organized, with the assistance of Raphael Mendes, Benjamin Gradis, and other Jewish shipowners, the embarkation of French warships from Europe to Canada.

Jews played a prominent part in supplying weapons and provisions to the English army in the colonies. Mathias Bush supplied the Pennsylvanian troops in the war against the French. The *Franks family, with branches in London and New York, acted as contractors to the English army in the American colonies. David Franks continued to serve the English crown even after 1775, supplying provisions and uniforms to English prisoners of war. Among other Jews, the Sheftall family of Georgia were suppliers to the American army as well.

In Russia in the 19th century contracting for construction of army buildings – fortifications and barracks – and for provisions was frequently combined with contracting for the construction of state-built roads and *railroads. The modern Jewish "white collar" worker first emerged in the network of offices as clerks or works supervisors of these contractors. Such a worker is Faby, the hero of J.L. *Gordon's poem *Koẓo shel Yod*, which in an indirect way chronicles the impact of railroad building on the various strata of Jewish society in the *Pale of Settlement in the second half of the 19th century. Several Jewish entrepreneurs rose in this way from the poverty of the Pale to opulence, such as Judah Opatow. After their ini-

tial success many of these contractors – better known under the Russian designation "Podryachiki" – combined contracting with banking, as for instance the houses of *Kronenberg and *Poliakoff.

[Joseph Kaplan]

CONVERSOS, designation used in Christian Spain and Portugal for Moorish or Jewish converts to Christianity. It was sometimes applied also to their descendants. Unlike the epithets *Marranos, *alboraycos, or *tornadizos*, the term Conversos has no derogatory implications.

COOK, SAMUEL (1907–1998), U.S. Reform rabbi. Cook was born in Philadelphia, ordained at Hebrew Union College in 1934, and received an honorary D.D. from HUC-JIR in 1959. He was director of the B'nai B'rith Hillel Foundation and a member of the faculty at the University of Alabama (1934–36) before assuming positions at congregations in Philadelphia and Altoona, Pennsylvania. After serving as U.S. Army chaplain in the Pacific (1943–46), Cook became director of the youth department at the Union of American Hebrew Congregations. In this capacity, he officially founded the National Federation of Temple Youth (NFTY), an organization he had conceived in 1941 in Pennsylvania, where he had formed and combined Reform youth groups of neighboring cities. His innovation had laid the cornerstone of the Middle Atlantic Federation of Temple Youth and marked the beginning of the regional structure system for NFTY (later renamed the *North American Federation of Temple Youth). Cook spearheaded the building of a summer camp system that grew to number 12 camps across the United States and Canada. He introduced experiential travel programs for teenagers to Israel, cementing a Reform commitment to Zionism for generations. Cook also instituted international exchange programs and social action projects. He chose a motto from the prophet Joel for the movement: "Your old shall dream dreams and your youth shall see visions" (3:1). In 1967, Cook was named executive director of the Union of American Hebrew Congregations Department of College Education, a position he held concurrently with the NFTY directorship until his retirement in 1973. In 1999, in recognition of his contributions the Reform movement established the Rabbi Samuel Cook Award for Outstanding Achievement in Youth Work, which is presented by the Central Conference of American Rabbis annually.

[Bezalel Gordon (2nd ed.)]

°COOK, STANLEY ARTHUR (1873–1949), English Semitic scholar and historian of religion. Cook taught religion, Hebrew, and Aramaic at Gonville and Caius College, Cambridge, and was regius professor of Hebrew at Cambridge from 1932 to 1938. He served on the editorial staff of *The Cambridge Ancient History* and *The Encyclopaedia Britannica*, and was editor of the *Palestine Exploration Fund Quarterly* (1902–32).

Cook's main contribution was his archaeological, philological, and comparative religion studies. In a series of articles that appeared in 1903 he discussed the then oldest Hebrew biblical manuscript written in square Hebrew, the *Nash Papyrus. His *A Glossary of the Aramaic Inscriptions* (1898) was a study of Semitic epigraphy and Hebrew philology. The importance of historical methodology and archaeological research in the treatment of religious data was emphasized in his Schweich lectures of 1925, which were published as *The Religion of Ancient Palestine in the Light of Archaeology…* (1930). The fruit of his erudition was contained in copious notes to the third edition of W. Robertson *Smith's *Lectures on the Religion of the Semites* which Cook annotated in 1927. His views of the Bible and its religion as a whole were summed up in *The Old Testament: A Reinterpretation* (1936), a historical and anthropological assessment of the Israelite religion. He wrote important works on the study of religious methodology (1914), and he analyzed in the light of comparative religion the prophetic ideal of ethical monotheism (1932). He compared the laws of the Pentateuch with the Code of Hammurapi (1903), edited the Book of 1 Esdras in R.H. Charles' *The Apocrypha and Pseudepigrapha of the Old Testament* (1913), and wrote an introduction to the Bible (1945).

COOKBOOKS, JEWISH. These compendia of instructions and recipes for the preparation of Jewish cuisine and/or guidelines for the Jewish cook constitute the single largest genre of literature created almost entirely by and for Jewish women.

Prior to 1900

By the first half of the 19th-century, a few Jewish manuscript cookbooks appear in Yiddish (Bohemia, Moravia, or neighboring areas); German ones appear in greater numbers throughout the century; and by the 1890s, there are Osmanli ones from Salonika. The first known published volume is J. Stolz's *Kochbuch der Israeliten, oder prakt. Unweisung, wie man nach dem juedischen Religionsgruenden alle Gattungen der feinsten Speisen kauscher bereitet* (Carlsruhe, 1815). During the 19th century, over a dozen Jewish cookbooks were published in German,

more than in any other language. The most successful, *Kochbuch fuer Israelitische Frauen: Enthaltend die verschiedensten Koch- und Backarten, mit einer vollständigen Speisekarte so wie einer genauen Anweisung zur Einrichtung und Fuehrung einer religioes-juedischen Haushaltung* (Berlin, 1856) by Rebekka Wolf (née Heinemann), went through 14 editions. In print for almost 80 years, it was translated into Dutch (1881) and Polish (1904), and influenced the first known cookbook published in Yiddish, Ozer Bloshsteyn's *Kokhbuch far yudishe [sic] froyen* (Vilna, 1896; New York, 1898). These kosher cookbooks, which emphasized fine cuisine and gracious living, were part of a larger adaptation of mainstream bourgeois domestic values within an acculturating modern Orthodox community.

The first published English cookbook, *The Jewish Manual, or Practical Information in Jewish and Modern Cookery: With a Collection of Valuable Recipes & Hints Relating to the Toilette* (London, 1846), by "A Lady," aimed to refine the kosher table, but with an English and Western Sephardi emphasis. The anonymous author was recently identified as Judith Lady *Montefiore, who dedicated some of her philanthropic energies to educating Jewish girls for domestic service by establishing cookery classes at a Jewish orphanage and school. This book appeared in a single edition, although parts of it were reprinted, without attribution, in 1864 and 1867 in Australia. By the last decade of the 19th century, kosher gourmet cookbooks also appeared in Dutch, Hungarian, Russian, and Italian, and the German volumes were becoming larger and more elaborately bound. The grandest, Marie Elsasser's *Ausfuehrliches Kochbuch fuer die einfache und feine juedische Kueche unter Beruecksichtigung aller rituellen Vorschriften in 3759 Rezepten* (Frankfurt, 1901), was over 900 pages. The custom of giving cookbooks to brides accounts in part for the lavishness of such volumes.

American Cookbooks

The first known Jewish cookbook published in the United States is the *Jewish Cookery Book: On Principles of Economy, Adapted for Jewish Housekeepers, with the Addition of Many Useful Medicinal Recipes, and Other Valuable Information, Relative to Housekeeping and Domestic Management* (Philadelphia, 1876) by Mrs. Esther Levy. This volume brought a scrupulously kosher, yet elegant Anglo-Jewish cuisine to Philadelphia's well-to-do Jews.

Much more popular than *Jewish Cookery Book*, which appeared in only one edition, was the decidedly non-kosher, "*Aunt Babette's*" *Cook Book, Foreign and Domestic Receipts for the Household, A Valuable Collection of Receipts and Hints for the Housewife, Many of Which are not to be Found Elsewhere* (1889). "*Aunt Babette's*" *Cook Book* went through several editions in its first year, and stayed in print until the beginning of World War I. "Aunt Babette," the pseudonym for Mrs. Bertha F. Kramer, instructed her Reform Jewish readers in the niceties of the "Pink Tea" and in a non-halakhic approach to Jewish diet. "Aunt Babette" was by no means indifferent to *kashrut*. She declared, for example, that "NOTHING is '*Trefa*' that is healthy and clean," thus giving precedence to hygiene over ritual purity. At the same time not everything that is *treyf* made it into her cookbook. Shellfish, bacon, and rump roasts did, but lard did not. Ideology and hygienic purity aside, certain non-kosher foods were rejected on aesthetic grounds, a remnant of the internalization of religious taboo.

Many late 19th and early 20th century English cookbooks were intended to prepare Jewish girls, especially immigrants, for domestic service in kosher households. Marie Kauders' cookbook (Prague, 1891) and cooking school-trained cooks for Jewish restaurants and wedding catering. *The "Settlement" Cookbook* (Milwaukee, 1901), by Lizzie Black Kander, a German Jew, was written to prepare East European Jewish women for household employment and to raise money for the Settlement house where the classes were held. This remarkable volume has sold more than 2,000,000 copies and proceeds are still directed to charitable causes. Like "*Aunt Babette's*" *Cookbook* and the many German Jewish fundraiser cookbooks that appeared in the United States during this period, *The "Settlement" Cookbook* was a "*treyf* cookbook" and included recipes not only for Passover dishes, but also for oysters.

The first Yiddish cookbook published in the United States, apart from the 1898 New York edition of Bloshteyn's *Kokhbuch far yudishe [sic] froyen*, is Hinde Amkhanittski's *Lehr-bukh vi azoy tsu kokhen un baken* (1901), which was reprinted a few years later. The Yiddish cookbooks that followed, well into the 1930s, tried to Americanize Jewish eating habits, consistent with current nutritional ideas and an Anglo-American diet. Some promoted vegetarianism; Yiddish vegetarian cookbooks appeared in Europe as early as 1907 (Drohobitsh) and as late as 1938 (Vilna). Food companies used cookbooks, often bilingual in Yiddish and English, to market their products. Manischewitz's cookbooks, for example, showed how to use *mazẓah* as an ingredient in everything from strawberry shortcake to tamales all year round.

By the end of World War I, with the mass immigration of Jews from Eastern Europe, the market for American Jewish cookbooks had changed. In response, Bloch Publishing replaced "*Aunt Babette's*" *Cook Book* with the strictly kosher *The International Jewish Cook Book: 1600 Recipes According to the Jewish Dietary Laws with the Rules for Kashering: The Favorite Recipes of America, Austria, Germany, Russia, France, Poland, Roumania, Etc., Etc.* by Florence Kreisler Greenbaum, an instructor in cooking and domestic science. Greenbaum made nutritional science palatable in Jewish terms. This cookbook and its successors, including Mildred Grosberg Bellin's many revised and enlarged editions, endured well into the 1980s.

Europe Between the Wars

While home economists were trying to reform the immigrant diet, Suzanne Roukhomovsky, a literary figure, waxed nostalgic for what she called "la cuisine maternelle" in *Gastronomie juive: cuisine et patisserie de Russie, d'Alsace, de Roumanie et d'Orient* (Paris, 1929). A year later a pirated translation of this book, with a few significant changes, appeared in Yiddish as

Di yidishe kukh in ale lender: poyln, rusland, rumenyen, daytshland, elsas, maroko, tunis, amerike, a.a.v. Dos beste un praktishe bukh far yidishe virtins (Warsaw, 1930). While Roukhomovsky's 36-page introduction offered a literary pastoral on traditional Jewish life, B. Shafran's "A word to our Jewish wives," in *Di yidishe kukh* advises Polonized Jewish women not to turn the health of their families over to servants but to pursue the culinary arts themselves.

During the interwar years, the *Juedischer Frauenbund (1904–38) offered home economics courses and published cookbooks, consistent with their emphasis on religious observance, Jewish national consciousness, and careers for women that were extensions of their traditional domestic roles. As M. Kaplan has noted, the Frauenbund's goal was to prepare unemployed East European Jewish women to work as domestics, supply middle-class families with qualified servants, create a pool of administrators and food specialists for public institutions, and make women better managers of their own homes. Their strictly kosher cookbooks included not only modern recipes, but also suggestions for children, invalids, and vegetarians, menus for institutional kitchens, recipes from "great-grandmother's kitchen," and "national dishes," as well as recipes from organizations in Palestine, many of them for eggplant. By 1935, after the Nazis enacted laws against kosher slaughtering, the Frauenbund published a cookbook to address difficulties in buying kosher meat which went through four editions in one year.

Palestine and Israel

Erna Meyer, a pioneer in kitchen ergonomics, brought her ideas from Germany to Mandate Palestine, where she published *Wie kocht man in Erez Israel?* (Tel Aviv, 1936) in German, Hebrew, and English, followed by a slim cookbook (Tel Aviv, 1940) dedicated to recipes and menus for cooking in a time of crisis. Meyer's cookbook was intended for the urban, urbane, and largely Central European cook in Mandate Palestine, who needed to learn to use a primus stove and local produce while maintaining high culinary standards and a Central European culinary repertoire. *Wie kocht man in Erez Israel?* was one in a series of *WIZO cookbooks that appeared in separate German and Hebrew editions as late as 1954.

Lillian Cornfeld wrote about Israeli cusine in *Complete Hebrew Cook Book* and *Ani Mevashelet.* Her *Israeli Cookery* (Westport, Connecticut, 1962) is organized by region, devotes several chapters to *sabra* foods and includes recipes from Israeli hotels and restaurants. In her preface, Cornfeld, who immigrated in the 1920s from Canada to Mandate Palestine, supervised domestic science for WIZO and worked as a food columnist and nutritional advisor, noted several challenges to the emergence of national cuisine in Israel. These include the diverse population, simplicity as a practical necessity (and ideological principle), and the absence of professional chefs. Her cookbook addressed the "urgent incentive to create an Israeli cuisine," by collecting recipes from national and international organizations that were actively trying to create a national meal pattern, as well as from kibbutzim. Molly Bar-David, a food columnist and culinary advisor for El Al, wrote *The Israeli Cookbook: What's Cooking in Israel's Melting Pot* (1964), based on recipes she collected on the airline's routes and in interviews with immigrants in Israel.

Since the 1980s, numerous Israeli cookbooks, many lavishly produced, have appeared. Individual volumes are dedicated to salads, soups, desserts, cakes, or breads, or to a particular fruit or vegetable. Each community's traditional cuisine (Yemenite, Kurdish, Moroccan) is celebrated, popular international cookbooks are translated, and special diets are the focus of their own cookbooks. In contrast with the austere *yishuv* outlook and Central European emphasis of earlier cookbooks, these new volumes are part of Israel's increasingly sophisticated and international culinary culture. Some of the cookbooks are also nostalgic, whether for foods associated with the *yishuv* and early years of the state or for the traditional cuisines of the country's many immigrant groups. Most recently, *The Arab-Israeli* Cookbook (London, 2004), a play and a cookbook based on the research of Robin Soans, Tim Roseman, and Rima Brihi in Israel, Gaza, and the West Bank, explores the everyday reality of conflict through the stories and recipes of those they met.

Fundraiser Cookbooks

This most prolific genre of Jewish cookbooks originates in Jewish women's voluntary associations, ranging from local efforts to support a hospital or Jewish school, to international organizations (*National Council of Jewish Women, *Hadassah, *ORT, WIZO) with local chapters. Spanning more than a century, such cookbooks have been published in locales ranging from New Zealand, Zimbabwe, India, and Panama to Turkey. While some are handwritten, others are professionally produced; some are illustrated with naïve drawings while others have full color plates. The earliest known example is *The Fair Cookbook* (Denver, 1888), published for a charity fair in support of the local synagogue, Temple Emanuel. Most often these cookbooks were created by women who were not professional cookbook writers. Some authors, like Suzie Fishbein, author of *Kosher by Design* (Brooklyn, 2003), a popular kosher gourmet cookbook published by ArtScroll, got their start working on a fundraiser volume.

The Home as Sanctuary

Starting in the 1920s, some cookbooks published by women's organizations, including *The Center Table* (Sisterhood Temple Mishkan, Boston, 1922) and *A Treasure for My Daughter: A Reference Book of Jewish Festivals with Menus and Recipes* (Ethel Epstein Ein Chapter of Hadassah, Montreal, 1950), presented cookbooks as a vehicle for transmitting Jewish religious observance from mother to daughter. *The Jewish Home Beautiful* (National Women's League of the United Synagogue of America, New York, 1941) provided recipes and a pageant script organized around aesthetically arranged holiday tables that was performed at synagogues and churches as well as in the Temple of Religion at the 1940 New York World's

Fair. According to the foreword to the third edition (1945), this book was used by Jewish service men and women during World War II.

New Trends

In the second half of the 20th century, Jewish cookbooks appeared in large numbers and variety, including comprehensive volumes by Florence Greenberg, Evelyn Rose, and Claudia Roden in the United Kingdom, and Joan Nathan and Gil Marks in the United States. Many recent volumes engage cuisine as heritage, including *Cookbook of the Jews of Greece* (1986) by N. Stavroulakis, *Bene-Israel Cook-book* (Bombay, 1986), *Recipes from the Jewish Kitchens of Curaçao* (Netherlands Antilles, 1982), Sephardi cookbooks in English, French, Hebrew, Spanish, and Turkish, and a cookbook devoted to the Marranos, *A Drizzle of Honey* (New York, 1999), by D.M. Gitlitz and L.K. Davidson.

Autobiographical cookbooks include Mimi Sheraton's *From My Mother's Kitchen: Recipes and Reminiscences* (1979) and Colette Rossant's *Memories of a Lost Egypt: A Memoir with Recipes* (1999). The most poignant examples of "memory cookbooks" are those created by women who, while starving to death in Nazi concentration camps, tried to appease their hunger by recalling recipes for delicious dishes they once cooked. They include *Ravensbrueck 1945: Fantasy Cooking behind Barbed Wire*, recipes collected by Edith Peer (Sydney, 1986), and *In Memory's Kitchen: A Legacy from the Women of Terezín* (Northvale, N.J., 1986), a translation of the recipe collection that Mina Paechter, who died in Terezín (Theresienstadt), entrusted to a friend with instructions that it reach her daughter, which it did, miraculously, around 1970. *Miriam's Kitchen* (1998), a memoir by Elizabeth Ehrlich, mixes recipes from the author's mother-in-law, a Holocaust survivor, with a story of personal reinvention.

Communities without a history of publishing cookbooks, particularly ḥasidim and *ḥaredim*, have now joined the fray. *The Spice and Spirit of Kosher-Jewish Cooking* (Brooklyn, 1977; revised edition, 1990) prepares the Lubavitcher *ba'alat teshuvah* to create a Jewish home, while *The Balebuste's Choice: Kosher Cookbook* (Brooklyn, 1999), published by Pupa ḥasidic women, raises money for *ẓedakah*. *Fun der mames kokh* (Jerusalem, 2003) by Sh. Zisl, in memory of her pious mother, appeared in Yiddish. *Out of Our Kitchen Closets: San Francisco Gay Jewish Cooking*, published by Congregation Sha'ar Zahav, communicates their "recipe for success" (San Francisco, 1987).

With the advent of new technologies, future Jewish "cookbooks" might take the form of online databases, such as the Yahoo group *jewish-food*, or Centropa's online recipe archive of the culinary culture of Central European Jews. Some contemporary blogs record an individual's daily culinary musings, including recipes, a practice reminiscent of writing recipes down in personal notebooks, the earliest form of Jewish cookbook.

°COOKE, GEORGE ALBERT (1865–1939), English Bible scholar and Semitist. He taught at Oxford and was canon of Christ Church (1914–36). Cooke is remembered principally for *A Text-book of North Semitic Inscriptions* (1903), a pioneering effort to collate and interpret Hebrew, Moabite, Phoenician, Punic, Nabatean, Palmyrene, and Old Aramaic Semitic inscriptions. His commentaries for the "Cambridge Bible for Schools and Colleges" (Joshua, Judges, and Ruth, 1913) underscored the importance of philology in textual criticism. In his important commentary on the Book of Ezekiel (ICC, 1936, 1951), he argued that the book was written by one and the same hand with very little editorial expansion. Among his lesser-known works are an exposition on the Song of Deborah (1892), a study of the problem of revelation (1911), and a critical second edition of E.A. Edgehill's Book of Amos (1914).

[Zev Garber]

COOKING AND BAKING. In biblical times cooking or baking was generally done in the courtyard or kitchen, either in a hearth or an oven. In seasons of intensive labor in the field people encamped in the fields (Gen. 37:17), while in other seasons they returned to their homes. Accordingly, these conditions led to the development of cooking utensils for both the permanent kitchen and for the open field.

Cooking

As a rule, cooking utensils were made of earthenware (Lev. 6:21). Special attention was given to the preparation of these utensils, which had to be able to withstand heat. The clay was mixed with coarse solid matter, such as pebbles, shells, or sherds, in order to reduce the porosity of the utensil and to prevent its cracking under heat. Metal cookingware was rare in the biblical period. However, *sir* (סִיר) means specifically a copper pot (cf. Ezek. 24:11). Cooking vessels were of simple practical forms, usually without decoration. The bases of the vessels were rounded and wide to bring as much surface as possible into contact with the fire and to allow the heat to be distributed equally over the entire surface. As vessels were not placed on the ground or on a flat surface, the bases did not have to be flat. Instead, they were placed on stones, on a stand, or on any noncombustible object which held the utensils over the flame. Excavations in Palestine have revealed various methods of supporting cooking vessels. The simplest was a small pit in the ground with an opening at the side, which permitted feeding and fanning of the fire. A more sophisticated method was a low mound of rocks arranged in the shape of a horse-

shoe. The fire was fed through the opening and the utensil was placed on the rim. On the floors of rooms and kitchens at many sites small pits have been found which were coated with clay seared by the fire which continuously burned inside them. Each of these pits also contains an opening through which the flame could be reached. Beginning with the Early Bronze Age well-made portable stands of baked clay appear in the shape of a thick, high horseshoe with a flat base enabling it to stand on a flat surface. On the rim were at least three protrusions for supporting the cooking-pot. In later periods, beginning with the Middle Bronze Age, stands of cylindrical shape with openings for feeding and fanning the fire were widespread. These stands were designed to protect the fire from wind and to concentrate the heat under the base of the vessel. From the Early Bronze Age onward, handleless vessels with the width of the base greater than the height appear. These pots stood on stands while cooking, as well as during the meal, when the cooked food was scooped out with another vessel and served. In the Israelite period (Iron Age) various types of cooking vessels were common, some without handles, some with two handles, and some with more than two handles. In addition, smaller cooking vessels with only one handle were widely used. Apparently, vessels without handles were placed in the permanent pits or on fixed stands, where they could remain standing while the food was ladled into bowls for eating. Vessels with two or more handles were used in a slightly different manner: by means of a rope tied to the handles, they were hung from a tripod, with the fire beneath them. These vessels were perhaps used during the seasons of outdoor labor. The smaller one-handled vessels served for both cooking and pouring, the cooked food being poured into the eating vessels after its removal from the fire. Possibly, these vessels were used for thinner foodstuffs in contrast to the larger cooking vessels. While fruits and certain vegetables were eaten fresh, lentils and legumes, such as kidney beans, broad beans, and chick-peas, were made fit for eating by cooking them in water (as were eggs) and mixing them with other vegetables and seasonings, such as onions and garlic. This preparation was known by the general name *nezid* ("stew"; II Kings 4:38). Meat was a scarce commodity. Most frequently used was mutton, goat meat, or fowl, but sometimes veal or other types of meat were prepared. Meat prepared in various ways was served principally at special festive meals in which the entire family or tribe took part. One way to prepare meat was to boil it in water with seasonings. Softened by boiling, meat could easily be separated from the bones. Other methods of preparation were roasting on the open flame, baking in the oven, or frying in oil. It is not known whether meat was salted or smoked, but it is possible that these procedures were practiced.

Baking

While cooking hearths were open, baking ovens (Heb. *tannur*) were usually closed. The Hebrew word אפה, "to bake," and its derivatives specifically refer to the baking of bread (Gen. 19:3; Lev. 26:26; Isa. 44:15) and cakes (Ex. 12:39, I Kings 17:12–13), including the baking of the bread of display (Lev. 24:5) and baked offerings (2:4ff.). Baking, like cooking, was from the earliest periods an integral part of the everyday household chores. Only in later periods was baking somewhat industrialized and done by experts, or in national bakeries. The simplest method of baking involved placing the dough on glowing coals which baked it from below, while coals were spread also on top of the dough to bake it from above (Isa. 44:19). In a second method a bowl was placed upside down over the fire and when it was sufficiently heated, the prepared dough was placed on it for baking. Excavations of Middle Bronze Age settlements have revealed specially designed baking trays which are perforated in order to preserve the utensil for a long time and prevent the bread from sticking to it. The baking oven was a more sophisticated piece of equipment. Ovens made of clay or built of brick or stone have been found in various shapes – cylindrical, hive-shaped, semicircular and square.

Dough was stuck to the inner wall of the oven, while a fire heated the oven from the outside, thus baking the bottom of the bread; a fire inside the oven baked the top of the bread. A more perfected oven had two levels; the fire was kindled in the lower level, while the dough was placed on the floor of the upper level. Ovens operated in this manner served the needs of industrialized baking. As portrayed in ancient Egyptian paintings, an oven of this type was operated by two people; one fanned the flame and the other inserted and removed the bread. The oven had three openings: one for feeding the fire, the second for inserting and removing the bread, and the third for fanning the flame and letting out the smoke in the oven. The oven was heated with dried dung, with wood that had been gathered or chopped from trees and then dried, or with charcoal.

COOPER, ALEXANDER (c. 1609–1660), English miniaturist; a convert to Judaism. Cooper was born in London, the brother of the better-known Samuel Cooper, the outstanding English miniaturist of his day. Alexander also worked in this medium. His sitters included members of the royal family and nobility. From 1647 he was at work in Sweden, where he was known as Abraham Alexander Cooper "the Jew." He apparently converted to Judaism shortly before this time, possibly in Amsterdam. There is no reason to believe that his brother Samuel had any connection with Judaism.

COOPER (Kuper), EMIL ALBERTOVICH (1877–1960), conductor. He studied violin with Hellmesberger in Vienna and composition with Taneyev in Moscow. After 1898 he conducted opera at Kiev, Moscow, and St. Petersburg, and between 1909 and 1914 conducted the Diaghilev troupe at its appearance in London and in the first Paris performance of Mussorgsky's *Khovanshchina* (1911). After the Russian Revolution he was director of the Petrograd Philharmonic Orchestra and the Mariinsky Opera Theater and taught at the Petrograd Conservatory. In 1924 he left Russia, and worked mainly in the United States, conducting at the Chicago Civic Opera (1929) and at the Metropolitan Opera in New York (1944–50).

COOPER, JACKIE (**John Cooper Jr.**; 1921–), U.S. actor. Cooper was born in Los Angeles. His father abandoned the family when he was two years old and his mother, Mabel, a stage pianist, then married Charles J. Bigelow, a studio production manager. With the help of his uncle, *Boys Town* director Norman Taurog, Cooper's entry into Hollywood was almost guaranteed. Between 1929 and 1931, he appeared in 15 Hal Roach *Our Gang* shorts and was cast in the title role of Tuarog's film *Skippy* (1931), which earned him an Academy Award best actor nomination (until 2004, the only actor below the age of 18 so honored). Cooper went on to star in *The Champ* (1931), *Treasure Island* (1934), *Tough Guy* (1935), *Streets of New York* (1939), and *Ziegfeld Girl* (1941). In 1943, he joined the Navy and rose to the rank of captain. After World War II, he moved to television as an actor, producer, and director. He directed episodes of *The Rockford Files*, *Kojak*, and *Quincy*, and received Emmys for an episode of *M*A*S*H* (1973) and the pilot of *The White Shadow* (1978). Before his retirement Cooper appeared as Perry White in the *Superman* series (1978–87) starring the late Christopher Reeve.

[Adam Wills (2nd ed.)]

COOPER, LEON N. (1930–), U.S. physicist and Nobel laureate. Cooper was born in New York City, where he got his B.A. (1951), M.A. (1953), and Ph.D. (1954) from Columbia University. After appointments at the Institute of Advanced Study (1954–55), the University of Illinois (1955–57), and Ohio State University (1957–58), he joined Brown University, where he became professor, and (from 1974) Thomas J. Watson Sr. Professor of Science and (from 1973) director of Brown University's Institute for Brain and Neural Systems. Cooper's earlier research was in theoretical physics. He was awarded the Nobel Prize in physics (1972) jointly with John Bardeen and Robert Schrieffer for providing a theoretical basis in quantum terms for the behavior of electrons whereby they "pair up" during superconductivity, the state in which electrical resistance reduces to zero at very low temperatures. Subsequently he led an interdisciplinary organization concerned with understanding learning and memory through theoretical models and experiment. While he remained interested in basic problems such as the limits of the laws of physics in understanding the universe, he also concentrated on the application of theoretical systems to drug development, electronics, and communications, including major involvement in industrial organizations with the same objectives. His many honors include the Comstock Prize of the U.S. National Academy of Sciences (1968).

[Michael Denman (2nd ed.)]

COOPERATIVES. The Jewish cooperative movement began toward the end of the 19th and beginning of the 20th century. Its development was part of the general spread of cooperatives throughout the world at that time, and was spurred additionally by the rising socialist and nationalist trends. The specific position of the Jewish artisan, often hemmed in by a hostile society and government, and having traditions as well as actual need of mutual help, led the Jewish cooperative movement from its beginning to lean heavily on artisan producer cooperatives and free-loan cooperatives (*gemilut ḥesed* associations). The main center of the Jewish cooperative movement before World War I was Russia, but it also began to develop in Galicia, Austria, and Bukovina, as well as countries outside Europe, especially Argentina (for Israel, see below Cooperative Movement in Israel).

Between the two World Wars the Jewish cooperative movement developed rapidly in Poland, Romania, and the Baltic countries, Soviet Russia (in the 1920s), other countries in Eastern and Western Europe, and Latin America. It became then an important instrument of Jewish defense against discrimination and efforts to oust Jews from their economic positions. Much financial help was extended to the movement by the *American Jewish Joint Distribution Committee. The Holocaust put an end to the Jewish cooperative movement in Europe, although in several countries, Poland, for example, efforts were made to revive it after the war. The movement continued to develop in South America, especially Argentina.

Russia

The growth of the Jewish cooperative movement in Russia was comparatively rapid, especially in the form of credit cooperatives, owing to the difficult credit terms that burdened the small Jewish trader and artisan (with compound interest as high as 30% or 40%). While in 1900 the number of Jewish credit cooperatives in Russia did not exceed 20, in 1914 there were 678, with a total membership of approximately 400,000, of which 36.0% were small merchants and shopkeepers; 32.6% craftsmen; 7.8% middlemen or agents; 7.4% farmers; 3.1% laborers; and 13.1% in miscellaneous occupations; the overwhelming majority of members came from the middle classes. With the members' families, about 1.5 million persons were served by Jewish cooperatives, approximately one-third of the total Jewish population in Russia. In addition to granting credit, the cooperative societies often engaged in ancillary activities, such as the provision of tools and instruments to artisans on long-term credit, the provision of storage facilities, as well as mutual insurance in case of death. Out of this latter

service special insurance societies developed, which in 1912 numbered 95, with a membership of 52,000.

World War I and the subsequent civil war and pogroms in Russia resulted in the destruction of the Jewish cooperative movement there. However, when in 1922 the Soviet government introduced its New Economic Policy (NEP) a renewal took place. In 1929 the *Jewish Colonization Association (ICA) supported 208 cooperatives in the Soviet Union, with a total membership of 67,351. During this period the character of the Jewish cooperatives changed. Only wage earners were allowed to join. In 1929, 93.5% of the membership of the 400 Jewish cooperatives in existence were artisans, about half of the total number then in Russia. The societies' main activity was no longer the supply of credit, but of raw materials, a major problem at that time. Nevertheless, from 1930, Soviet legislation as well as the economic development during the following decade led to the gradual liquidation of the Jewish cooperative movement in the U.S.S.R.

Poland

Efforts made soon after World War I resulted in the establishment in independent Poland of 445 cooperative societies by 1925 and 774 by 1929, mainly saving and loan societies. Attempts to establish producer and consumer cooperatives mostly failed. This fast growth was interrupted during the 1930s partly as a result of the general economic crisis and partly because of anti-Jewish discrimination (see anti-Jewish *boycott).

Of 775 cooperative societies in Poland in 1938, 734 were loan and credit societies; 27 producer cooperatives; 9 agricultural cooperatives; 2 consumer cooperatives; and 3 miscellaneous. The total membership in 1937 was 143,608, serving some 600,000 persons (one-fifth of Polish Jewry).

Other European Countries

A comparatively strong Jewish cooperative movement existed in Romania between the two World Wars. In 1931 there were 88 Jewish cooperative societies having a membership of 67,000, with 30,000 living in Bessarabia, where even before World War I a ramified Jewish cooperative movement already existed. During the 1930s a sharp decline set in, mainly as a result of an economic crisis and antisemitic sentiments. By 1937 the total membership dropped to 52,000. In Czechoslovakia after World War I, a series of Jewish cooperative societies was established, which had a total membership of 7,136 in 1924, rising to 17,772 in 1937. In Bulgaria the first Jewish cooperative (Geulah) was established in 1921; by 1940 there were 23 Jewish cooperatives, of which 20 were credit cooperatives.

The Jewish cooperative movement in the Baltic countries, especially in Lithuania, was highly developed during the period between the two World Wars. In 1937 there were 85 Jewish cooperative banks, with a membership of 15,728. Low-interest loans were available especially to Jewish farmers and artisans. A central bank was established which serviced this cooperative network. Its credit policy aimed at enhancement of productivity. A special agricultural information center was established. In the late 1920s a Jewish cooperative movement began to develop also in Central and Western Europe. In 1928 there were in Germany a cooperative people's bank, Ivriah, which served especially emigrants from Poland and Russia, and a Jewish cooperative society for trade and commerce, founded largely by Berlin Jewish artisans. In the early 1930s efforts were made to establish Jewish cooperative societies in other German towns. At the same time, two cooperatives were established in Paris to assist Jewish migrants from Eastern Europe. Several Jewish cooperatives were also established in London, England.

Argentina

In Argentina the Jewish cooperative movement attained broad diversification.

AGRICULTURAL COOPERATIVES. These cooperatives developed in the Jewish agricultural settlements of Argentina from 1907, and dealt mainly with crop marketing (especially grain), as well as supply purchasing for farmers. Their activity in the sphere of credit was of secondary importance. These cooperatives declined in number as a result of the constant decrease of the Jewish agricultural population in Argentina.

COOPERATIVE BANKS. During the early 1960s there were some 40 Jewish cooperative banks in Argentina. Of special importance was the Jewish People's Bank in Buenos Aires, established in 1921. It developed rapidly, and by 1953 the number of shareholders reached 14,885. Another cooperative institution of this kind was the Mercantile Bank founded in 1917.

PEDDLER STORAGE COOPERATIVES. An original attempt was made to provide a convenient base and supply center for the Jewish peddler in Argentina. Storage depots were opened in various cities. The peddler could obtain his wares on credit with easy payment terms. Thus he could take samples to houses of far-flung customers, come with their orders to the depot, and supply the demand. He could also direct his clients straight to the cooperative stores in the city where they could make their wholesale purchases on the basis of the samples and recommendations of the peddler. There are also other Jewish cooperatives in Argentina, such as manufacturer societies (for manufacturers of wood products, fur products, knitted products, etc.) mainly for purchase of raw materials from a primary source. The total number of Jewish cooperatives exceeded 100 in the early 1960s. However, economic decline of the cooperatives set in after the bankruptcy of many of them at the beginning of 1970s.

United States

Jews have been particularly active in the general cooperative movements of the United States. During the first decade of the 20th century, the activity of the New York Cooperative League, whose members were mostly Jewish, stimulated consumer cooperatives throughout the United States. The League controlled a number of cooperative millinery stores and a hat factory. It developed a wide information activity, which had great influence among cooperative movements in the United

States which were largely Jewish, or had Jewish leadership, included the Growers Marketing Cooperative (serving Jewish farmers in the New York area), producer cooperatives, and housing cooperatives.

[Shaul Zarhi]

In Postwar Poland

One of the most important tasks that the Lublin Jewish Committee (see *Poland) took upon itself immediately after the defeat of the Nazis was to find productive employment for the Jewish survivors. As soon as the Central Committee of Polish Jews was established in Warsaw, economic subcommittees were appointed for each of the larger Jewish communities. They acted as a labor bureau; established a series of cooperatives, several trade schools, agricultural farms; and provided assistance to all those who decided to rebuild their workshops on an individual basis. According to the report of these subcommittees (August 1946), 27 cooperatives, with a membership of 753, were established during the first year of their activity. When the American Jewish Joint Distribution Committee (JDC) resumed its activities in Poland (July 1945), many of these cooperatives received assistance in the form of equipment, and *ORT provided facilities for retraining the Jewish survivors in the skills that were necessary under the new conditions. The coordinating body, known as Solidarity, provided raw materials and marketed the finished products. By the end of 1947 there were 200 cooperative societies with a membership of 6,000, according to the chairman of the Jewish Cooperative Association. The societies' membership grew to more than 9,000 in the following year and reached its peak of 15,500 members in 1949. During the period of Stalinization many of the Jewish economic achievements, which were made possible by the help of the JDC and ORT, were practically liquidated under the pretext of "unification" with the general Polish cooperative movement. With Wladislaw Gomulka's accession to power in 1956 and with the influx of some 40,000 Jews from the Soviet Union, the activities of the JDC and ORT were temporarily resumed and some of the Jewish cooperative societies, especially in Silesia and *Lodz, were revived. In their new form, the Jewish cooperatives maintained a certain liaison with their Polish counterparts. About 20% of their profits were earmarked for cultural and social work. In 1967–68, during the renewed anti-Jewish campaign in Poland, the Jewish cooperatives were once again "unified" with their Polish counterparts.

[David Sfard]

Cooperative Movement in Israel

BACKGROUND. The circumstances surrounding the birth of the cooperative movement in Erez Israel were different from those in other countries, where the purpose of such movements was to combat the negative aspects of the capitalist system that resulted from the industrial revolution. Two factors in particular should be mentioned: Jewish settlement in Erez Israel was a national movement. It was not modeled on colonization movements initiated by individuals (as in the United States, Australia, etc.), but was based upon a united effort of manpower concentrated into original forms of cooperation. Under the conditions prevailing in Erez Israel, cooperation was the only way of facilitating mass settlement. Second, the ideological foundation of the cooperative movement in Erez Israel differed from its European or American counterpart. It did not have its roots in socialism, anarchism, or any other political theory dedicated to ousting a repugnant and unjust order; rather, it was forced upon the Jewish settlers by extremely harsh conditions in the country that could not be overcome without the cooperative factor.

To these factors must be added the rapid development of the economy of Erez Israel, in which cooperative enterprises and organizations played a particularly active and dynamic role (see *Israel, Economic Development), and enabled the cooperative movement to gain important advantages in various branches of the economy. Cooperative bodies were also able to record substantial achievements in the realm of technological progress and the modernization of production methods, as well as in vocational guidance and training of its members. These achievements were particularly important in the consolidation and progress of agricultural settlement. Furthermore, the cooperative movement received a special impetus from the inadequate growth rate of production and employment, which failed to keep up with the growing rate of immigration. A large number of immigrants, as well as some older settlers, could not be absorbed by the private sector and quite frequently solved their problem by joining cooperative establishments. It follows, therefore, that in addition to pursuing the aim held in common by cooperative movements around the world (i.e., improvement of the conditions of life for large numbers of people), the cooperative movement in Erez Israel played an important role in the development of the economy, the advancement of agricultural settlement, and the absorption of immigrants, which has resulted in its present strength in the economic and social life of Israel.

BEGINNINGS OF THE COOPERATIVE MOVEMENT. The beginnings of cooperative organization were discernible in the economy of Erez Israel as early as the second half of the 19th century. During that period, cooperative groups were instrumental in building new residential quarters, especially in Jerusalem, and the first signs of cooperative organization also appeared in the Jewish villages. However, it was not until the beginning of the 20th century that cooperation in its modern sense began to develop. At that time, the cooperative movement in the Jewish community displayed two distinctive branches: a "workers' sector," linked to the labor movement; and a "private sector," composed of agricultural smallholders and middle-class groups in the towns. The branch linked to the labor movement showed a substantial development in the period of the Second Aliyah (1904–14). Special organizational efforts were made in four fields: consumers' societies, contracting, agricultural settlement, and industrial cooperatives in the towns. The first efforts at cooperative consumption

were the establishment of workers' kitchens, clubs, laundries, etc.; but these did not endure. The first consumers' cooperative, founded in Reḥovot in 1906, was also unable to survive. Other consumers' cooperatives were established in 1911 (in Jaffa) and 1915 (in Petaḥ Tikvah). During this period, small groups of workers, such as the stone-cutters' groups in Jerusalem, the Ḥaderah commune, etc., banded together to lead a completely cooperative life in the field of consumption. The single most important event in the history of cooperative consumption in Ereẓ Israel was the founding of the national consumers' cooperative, *Hamashbir, in 1916.

The first groups of organized contractors also appeared during this period, accepting projects and carrying them out on a cooperative basis. Numerous groups of this kind, usually of a temporary nature, established themselves in moshavot to undertake work in the orange groves and vineyards. In 1914 the contracting group "Aḥavah" ("brotherhood"), consisting of about 100 workers, was founded in Petaḥ Tikvah. Some workers' groups were also established in the towns, and others undertook projects on the farms that were then being established by the Zionist Organization. One of the latter groups, known as the "The Collective," undertook the cultivation of the training farm at Sejera in 1908 for the period of one year without a manager representing outside interests to direct it. The success of this enterprise received wide acclaim. A similar experiment was undertaken by the farm at *Kinneret in 1908, and the cooperative settlement *Deganyah, which became the first kibbutz in Ereẓ Israel, was founded there in 1909. On the eve of World War I, 14 kibbutz-type settlements existed, all based on complete collectivism.

Finally, this period also witnessed the beginnings of urban production cooperatives linked to the labor movement, such as the cooperative printing press Aḥdut (1910) and a cooperative shoe factory in Jaffa (1912). The development of "private" cooperatives actually preceded the cooperative labor movement. The first impetus toward the establishment and consolidation of private cooperatives arose from the needs and problems of the agricultural sector in the moshavot. The first such cooperative was apparently the Pardess cooperative society for the marketing of citrus, founded in Petaḥ Tikvah in 1900 by a small group of orange growers. Two years later, two more citrus-marketing societies were established in the moshavot. In 1906 the Association of Wine Growers of *Rishon le-Zion and *Zikhron Ya'akov was founded, taking over the vineyards originally established by Baron Edmond de *Rothschild. Other cooperative societies established in the moshavot before the war dealt with the marketing of milk and almonds, the development of irrigation, land amelioration, etc. From 1905 onward a network of cooperative credit societies began to develop in the moshavot and the towns, most of which had no connection with the labor movement. By 1914, 45 such societies were in existence, with a total membership of 1,833. Most of these societies were too weak to overcome the difficulties caused by the war and had to dissolve.

1918–1939. As a result of the intensive demographic and economic development in Palestine during the interwar period, the cooperative movement and its relative importance to the economy greatly expanded. This development was especially true of the labor-linked cooperative movement, whose growth was facilitated by the unification of the labor movement and establishment of the *Histadrut (General Federation of Labor). In the early years of the Mandatory regime, the cooperative movement concentrated mainly on two spheres of activity: agriculture and public works. The network of cooperative agricultural settlements grew in number and form: in addition to the constant increase of kibbutzim, moshevei ovedim ("workers' settlements") came into being, combining the principle of family holdings with marked cooperative tendencies such as mutual help and cooperative purchasing and marketing. The first moshav ovedim, *Nahalal, was founded in 1921. In 1926, a special cooperative organization, *Tnuva, was established to serve as the marketing instrument of the cooperative settlements. Public works, another important sphere of activity in the 1920s, were being carried out on a large scale. Some of the projects were contracted to groups of Jewish workers that functioned on a cooperative basis. In 1921, the Histadrut established an office for public works and building projects in order to centralize the work of these contracting groups. In 1924 this organization became the contracting firm *Solel Boneh, which operated in its initial phase as a cooperative organization.

From the middle of the 1920s, with the accelerated urbanization and industrialization, the cooperative movement began to branch out into new areas. Cooperation in production and services developed at a rapid pace, and a number of industrial enterprises, as well as transport and other service agencies, were formed. The number of workers in the cooperative enterprises dealing with production and services grew from 800 in 1926 to 2,796 in 1936 and 4,625 in 1946–47. The year 1925 also marked the first developments in a network of savings and loan institutions under the auspices of the Histadrut. Against the background of settlement in the towns and increased building activities, cooperative building societies that engaged in the founding of workers' residential quarters also appeared. A wide network of consumers' cooperatives was established, especially from 1930 onward. Simultaneously Hamashbir was reorganized into a cooperative company for centralized wholesale supply; in World War II, it also embarked upon large-scale industrial production. "Private" cooperatives also showed a considerable growth. In the moshavot, the cooperatives for the marketing of agricultural produce were strengthened and diversified, particularly as regards citrus and other kinds of fruit, and wine. The rapid growth of the Pardess cooperative was characteristic of this development: at its start, in 1903–4, it exported a total of 22,500 cases, whereas in 1938–39 its exports of citrus amounted to 3,300,000 cases. A new network of private credit institutions also arose in the 1920s in the towns and the moshavot; most of them were associated with the Merkaz supervisory union. The number of

members of the credit institutions affiliated with Merkaz grew from 17,200 in 1930 to 58,706 in 1946.

1948–1970. Following the establishment of the State of Israel and the ensuing general growth of the population and the economy, the cooperative movement also grew remarkably. The existence of a relatively large cooperative sector became an outstanding characteristic of the economy and social fabric of the country, particularly in the field of agriculture. The population of the cooperative villages, which numbered 84,400 in 1948, rose to approximately 208,000 by the end of 1966. Cooperative villages continued to form the great majority of the rural population of the country (app. 80% in 1966); they retained their hegemony in agriculture, and their share in industrial production also rose (from 3% of the gross national industrial product in 1951 to 8% in 1965). Internal shifts, however, took place within the sector of cooperative settlement: the kibbutzim, which represented 64% of the total population of cooperative villages in 1948, represented 40% of the population at the end of 1966, while the percentage living in moshavim rose proportionately. The number of consumers' cooperatives also increased: in 1948 they served 140,000 persons, but by 1966 the figure had risen to 750,000, about a third of the total population. Similar growth was also recorded in other branches of cooperative enterprise.

Nevertheless, the general trend of the cooperative movement in this period was not toward further growth. Some branches of cooperation, especially industrial and credit cooperatives, ran into difficulties and were unable to compete with the private sector of the economy. The number of industrial cooperatives decreased from 287 in 1950 to 102 in 1966, and the number of their employees from 5,042 to 2,997; the number of credit cooperatives also declined, from 94 in 1955 to 17 in 1967 (as a result of the merger of Histadrut-affiliated cooperatives with Bank Hapoalim – the Workers' Bank – and the dissolution of most of the "private" credit cooperatives). This trend appeared to be the outcome of the growing process of concentration and the rise of large industrial and banking concerns. Housing cooperatives also began to lose their importance. Although the cooperative movement was still able to maintain its importance in the rural sector, it ran into great difficulties in urban areas. It also faced increasing social problems after the establishment of the state, particularly the employment of hired labor, which violated the movement's principles. This question also had economic implications stemming from the scarcity of manpower in the cooperative villages, which was caused by the slow growth of their population and the seasonal aspects of agriculture. Hired labor was also a pressing problem for the great transport cooperatives *Egged and Dan.

STRUCTURE OF THE COOPERATIVE MOVEMENT AND ITS PLACE IN THE ECONOMY. The scope of the cooperative movement and its activities in this period are reflected in the following data on the various cooperatives at the end of 1967:

After the establishment of the state, a new network of Arab cooperatives came into being. Whereas during the Mandatory period the Arab cooperatives concentrated on credit and marketing, they now engaged in irrigation and water supply (64 societies), general agriculture (10), production and services (20), and housing (16). It is estimated that approximately 30% of the population, i.e., some 800,000 people, were members of cooperatives.

From the functional aspect, cooperative societies in Israel can be divided into three kinds: (1) consumer cooperatives, which are not the source of their members' livelihood, but provide them with certain benefits – this group includes the consumers' societies, credit societies, housing cooperatives, etc.; (2) productive cooperatives, such as agricultural and industrial cooperatives; (3) "integral" cooperatives, which combine production and consumption. In Israel this group includes the kibbutzim, moshavim shittufiyyim, and the moshevei ovedim in their original form. The predominance of productive and "integral" cooperatives is characteristic of the cooperative movement in Israel, while the consumer cooperatives played a lesser role than in other advanced countries.

COOPERATIVE AGRICULTURAL VILLAGES. Cooperative agricultural villages exist in three forms – kibbutzim, moshavim, and moshavim shitufiyyim. In 1966 there were 228 kibbutzim in existence, comprising a population of 82,000. Most of the kibbutzim belonged to one of the following settlement movements: Iḥud ha-Kibbutzim ve-ha-Kevuẓot, Ha-Kibbutz ha-Arẓi, ha-Kibbutz ha-Me'uḥad, and Ha-Po'el ha-Mizrachi (see *Kibbutz movement). There were 365 moshavim including 22 moshavim shitufiyyim, with a total population of 126,000; most of them belonged to the *Moshav Movement or to the moshav union of Ha-Po'el ha-Mizrachi. The cooperative settlement movement established a diversified network of institutions and organizations designed to aid it in its economic and social activities that includes the central settlement organs, which engage in organization and policy making and have a distinct ideological trend; the regional councils in the areas settled by cooperative villages, which carry out municipal and economic activities within these areas; regional purchasing organizations, which serve to improve the flow of supplies and reduce their costs; financial institutions and various funds, which finance the operations of the cooperative villages; and trade organizations, which deal with specific problems of the various branches of agriculture. Apart from the agricultural settlements and their organizations, there were about 375 agricultural societies engaged in various aspects of agriculture – marketing, supplies, irrigation, mechanization, processing, etc. The central marketing organizations – Tnuva, Tenne, and Pardess Syndicate – played an important role in the economy of the country.

During the past three decades, the agricultural cooperatives have undergone profound changes. While in the 1960s and 1970s they enjoyed great prosperity, the inflationary 1980s brought on a severe crisis. Many of the kibbutzim failed to

manage themselves efficiently and were faced with such nationwide processes as strong pressure for privatization, the decline in the power of the Histadrut, and the general economic crisis with its ruinous interest rates in a sector that lived by credit. The economic crisis was accompanied by social problems, such as an exodus of the young generation, who chose to live their adult lives elsewhere. The net result was a shift, starting in the 1990s, from collective living to a more privatized way of life, including paid salaries and the development of nonmember housing. This process was still unfolding in the first decade of the 21st century.

The moshavim also faced a severe economic crisis as a result of the general economic situation in the 1980s, accompanied by a cutback in subsidies for agriculture products and the opening of the market to the import of fruits and vegetables from abroad. Many moshav residents liquidated their farms and turned to tourism (letting out rooms) or rented their land to commercial enterprises, as well as seeking employment outside the moshav. Some of the moshavim shitufiyyim dissolved the collective structure and distributed common property among their members. Moshavim became attractive options for city dwellers seeking to live in the country without the onus of operating farms, and as a consequence moshav real estate prices soared.

In 2001 there were 268 kibbutzim in Israel with a population of 115,800, representing 1.7% of the general population; 409 moshavim with 163,300 inhabitants (3%); and 43 moshavim shitufiyyim with 13,100 inhabitants (0.2%). Of the central marketing organizations, only Tnuva survived, operating as a large-scale food corporation.

CONSUMER SOCIETIES. At the beginning of 1967 there were 219 consumer societies in operation, with a combined total turnover of IL 173,000,000. They were spread over 55 cities, development towns, and moshavot. During the 1960s they underwent a far-reaching reorganization: the total number of societies was reduced (due to the low turnover of some) and a comparatively large number of supermarkets and self-service stores were established. At the end of 1966 there were 40 supermarkets and approximately 130 self-service stores operated by consumer societies. Hamashbir Hamerkazi served as the central wholesale supplier both to the consumer societies and to the entire labor-controlled sector of the economy. It was also the largest commercial firm in the country, supplying the needs of a third of the population. In the 1990s, as the Histadrut sold off its assets, it passed into private hands.

THE PRODUCTIVE AND SERVICE COOPERATIVES. The productive and service cooperatives included a number of industrial concerns and service cooperatives that played a central role in the economy, particularly in the field of transport. Ha-Mashbir ha-Merkazi le-Ta'asiyyah was founded in 1963 in order to facilitate the development of consumer-goods industries linked to the labor sector of the economy; in 1966, the total sales of the factories owned wholly or in part by this company amounted to IL 103,000,000. They included the Shemen edible-oil factory, flour mills, metal, paper and food processing factories, etc. The service cooperatives and factories in this group belonged to a central body organized for this purpose, the Merkaz ha-Kooperaẓyah. Most of the industrial cooperatives were to be found in the food processing industry (35), metal and electrical industry (16), wood (15), and printing and paper (12). Over the years the majority of these factories were sold to private investors, and Ha-Mashbir ha-Merkazi le-Ta'asiyyah ceased to exist.

The cooperative transport companies play the leading role among the service cooperatives. *Egged runs the interurban bus lines in the country, operating 2,200 buses and employing 6,600 persons at the beginning of 1968. It also had a fleet of 200 tourist buses, 42 local offices, 8 subsidiary companies, and 20 modern garages. The second large transport cooperative is Dan, which serves the largest urban concentration in the country, with a population of 900,000 (including the cities of Tel Aviv, Ramat Gan, Petaḥ Tikvah, Bat Yam, Ḥolon, etc.). The company operated 795 buses on 80 urban lines with a combined length of 1,375 miles, transporting about a million passengers a day (at the end of 1967). In addition to the passenger transport companies, there were 24 cooperative freight forwarding companies operating all over the country and employing some 1,500 workers at the beginning of 1967. In 2004 Egged employed 6,309 workers, of whom 2,452 were Egged members. It owned 3,332 buses and operated on 1,308 bus routes. In all, it made 44,957 daily runs on these routes, serving about a million people over 810,000 km of roads. Dan employed about 2,400 workers in 2004, among whom 830 were members. The company served about 640,000 passengers a day. Most of the cooperative societies were linked to the labor movement. They could also be grouped as follows: institutional cooperatives, which included Hamashbir Hamerkazi, Tnuva, mutual aid credit cooperatives and others; and the cooperative economy, which included the cooperative agricultural settlements of various kinds (kibbutzim, moshavim, and moshavim shittufiyyim), as well as the productive and service cooperatives. Also included were the cooperative enterprises linked directly or indirectly to the cooperative settlements. Table: Cooperatives shows the extent of the activities of the two groups.

In its heyday the labor-affiliated cooperative sector occupied a relatively important place in the economy of Israel. In 1966 it employed 64% of the workers in the entire labor sector and about 15% of the total number of persons employed in the economy of the country. The percentage was higher in certain branches especially agriculture, where, as has been stated, labor-affiliated cooperatives were predominant. In transport, for example, the cooperatives employed 21% of the total; in commerce, banking, and finance, they employed 8–9% of the total; and in industry, 7% (especially industry based on the cooperative settlements).

COPÉ, JEAN-FRANÇOIS (1964–), French politician. Born in the Paris suburb of Boulogne-Billancourt, Copé studied civil government at the École Nationale d'Administration (ENA), France's most prominent school for civil servants. He wrote several reference books about local finances and was elected mayor of Meaux in 1995; from 1998 he held elective positions in the local government of the Ile-de-France region and he was a representative for the Seine-et-Marne subdivision in the national parliament from 1995 to 1997. This experience of local government led him to publish in 1999 a book describing the everyday life of a mayor and reflecting on the problems of civil service. Actively committed to the center-right RPR Party, in which he was given the position of deputy general secretary, he acted from 2002 to 2004 as the spokesperson for the French government before beginning a ministerial career: home secretary in 2004; deputy minister for state budget and budgetary reform from 2004 to 2005.

[Dror Franck Sullaper (2nd ed.)]

COPELAND, LILLIAN (1904–1964), track and field athlete, Olympic gold and silver medalist, member of the U.S. Track & Field Hall of Fame. One of the greatest field competitors in women's track and field history, Copeland was born in New York City to Polish immigrants. Copeland's father died when she was young, and after her mother married Abraham Copeland, the family moved to Los Angeles. Copeland excelled in all throwing events, especially in the shot put, winning the AAU championships in that event five times (1925–28, 1931) and setting the shot-put record in 1928 at 40' 4.25" (12.30 m.). Copeland also won the AAU discus throw title in 1926 with a 101′ 1″ (30.81 m.) world record, and again in 1927, and the javelin throw title in 1926 and 1931, breaking the world record in the javelin three times in 1926 and 1927. After setting a world discus record of 115′ 8.5″ at the U.S. Olympic trials in 1928, Copeland won the discus silver medal at the Olympic Games, the first Olympics to include women's track and field events (though not yet the shot put and javelin throw). Copeland also helped set a world record in the 440-yard relay at the 1928 time trials. Copeland then attended the University of Southern California Law School and semi-retired from competition, but she came back for the 1932 Olympics, where she won gold in the discus on her last throw of the day with a world record toss of 133' 2" (40.58 m.). She competed in the 1935 Maccabiah Games, winning the gold medal in discus, shot put, and javelin. Though planning to defend her discus gold medal at the 1936 Olympics in Berlin, Copeland joined the movement to boycott Hitler's Games.

[Elli Wohlgelernter (2nd ed.)]

COPENHAGEN (Dan. **København**), capital of *Denmark. The first Jewish congregation in Copenhagen was founded in 1684 when two Ashkenazi Jews, the court jeweler Israel David and his partner Meyer Goldschmidt, both of Hamburg, were permitted "to conduct morning and evening prayers in their homes on condition that these devotional exercises took place behind closed doors and without any sermon." In 1687 Abraham Salomon of Rausnitz in Moravia was appointed the first rabbi in Copenhagen. The first Jewish cemetery in Møllegade, established in 1693, is the oldest cemetery in northern Europe. Religious services – in some cases according to the Sephardi tradition – were held in private homes until 1766 when a synagogue with 320 seats was built in Laederstraede. This first synagogue was destroyed by the great fire of 1795, and services were thereafter held in 15 private homes. In 1827 the Liberal Party deemed it a matter of necessity to procure a rabbi with an academic education, and Abraham Alexander *Wolff, at the time *Landesrabbiner* in Upper Hessen, was appointed. A new synagogue in Krystalgade was built in 1833, on the initiative of Rabbi Wolff. A few strictly Orthodox members of the community were dissatisfied with some innovations introduced into the ritual in the new synagogue in Krystalgade, and a chapel was established in a private home in Laederstraede, where services in accordance with the traditional Polish rite were held from 1845 to 1955. After the consecration of the Krystalgade synagogue, the former Sephardi prayer rooms in Copenhagen were abandoned. There is no Reform synagogue in Copenhagen. The congregation *Mahzike Hadas*, established in 1910, and since 1914 affiliated with *Agudat Israel, maintains a synagogue in Ole Suhrsgade on a private basis.

The community is governed by a council of 20 delegates elected by approximately 1,800 dues payers; by a board of seven directors elected by the council; and by a board of seven trustees. The first old-age home, Meyers Minde, next to the synagogue, was erected in 1825 and rebuilt in 1925 and 1966. Three other old-age homes were erected in 1902, and a new old-age home and infirmary on the outskirts of Copenhagen were dedicated in 1961 in the presence of Queen Ingrid of Denmark. All Jewish welfare work in Copenhagen was carried out under the jurisdiction of the Jewish community until 1932, when Jews became subject to the same general social welfare legislation as all other Danish citizens. The Jewish community in Copenhagen, however, still has philanthropic institutions of long standing and applies the income from legacies to supplementary relief, medical aid, recreation, scholarships, dowries for needy brides, and assistance to Jewish transients. The all-day schools for boys and girls, founded respectively

in 1805 and 1810, were united into one coeducational school, Carolineskolen, with 140 pupils after World War II. At the end of the 20th century its student body numbered close to 200 pupils. A Lubavitcher yeshivah founded in 1958 closed down, but 1997 saw the arrival of the first *Ḥabad representative in Copenhagen. In June 2004 the Danish Jewish Museum was inaugurated by the Queen of Denmark. The opening display showcased not only the exhibits but also Daniel Libeskind's architecture; it presented a far-ranging story of Jewish life in Denmark, emphasizing coexistence and identity over four centuries.

During World War I, the *World Zionist Organization established a central office in Copenhagen, and on Oct. 25, 1918, issued the Copenhagen program. This program contained the claims of the Jewish people which were to be presented to the Paris Peace Conference. A museum of ceremonial art objects was established in 1902. The Bibliotheca Judaica Simonseniana, part of the Royal Library in Copenhagen, is one of the great Jewish libraries of Europe. It comprises the library of Chief Rabbi David *Simonsen, the collection of the Danish maecenas Simon Aaron *Eybeschutz, and the library purchased from Lazarus *Goldschmidt. Rafael *Edelmann became its chief librarian in 1938.

For Copenhagen from the Holocaust onward, see *Denmark.

COPISAROW, MAURICE (1889–1959), British chemist. Copisarow was born in Manchester. In World War I his research for the Ministry of Munitions was responsible for ending a succession of disastrous explosions in TNT factories. He also discovered methods of converting dangerous waste materials into dyestuffs and other useful products. Copisarow's continuous experimentation with TNT and phosgene, however, soon resulted in blindness, and he was forced to confine himself to theoretical work. This was both original and fruitful: he propounded a general theory of allotrophy and established new relationships between inorganic and living forms. In World War II Copisarow helped to meet Britain's food problems by his work in connection with grassland improvement, the reclamation of the brackenland, and fruit and vegetable preservation. After the war, he investigated enzyme and virus activity, and the biochemistry of influenza and of cancer.

[Samuel Aaron Miller]

COPLAND, AARON (1900–1990), U.S. composer. Copland was born in Brooklyn, studied with Rubin *Goldmark in New York, and with Nadia Boulanger in Paris. Returning to the U.S. in 1924, he became active as a composer, teacher, and conductor.

In his early years Copland attracted the attention of Serge *Koussevitzky, then conductor of the Boston Symphony Orchestra, who became an ardent champion of his music. His *Piano Concerto*, which he played with Koussevitzky in 1927, shocked the staid Boston audience by its aggressive jazz idiom. But Copland's talent soon won for him universal acceptance. At Koussevitzky's invitation, he joined the faculty of the Berkshire Music Center in Tanglewood, and for 25 years was the head of its composition department (1940–65). He traveled extensively in Europe, visited Russia in 1960, toured Latin America, and was guest conductor in Israel several times. Copland stopped composing abruptly and completely in 1970, but remained active as a conductor and lecturer until the mid–1980s. There were performances throughout the world to mark his seventieth, seventy-fifth, eightieth, and eighty-fifth birthdays, and New York City honored him with a "Wall-to-Wall" Copland Day tribute. He published several books: *What to Listen for in Music* (1939); *Our New Music* (1941); *Music and Imagination*, a collection of lectures delivered at Harvard University (1952); and *Copland on Music* (1960). In 1964 he received the Medal of Freedom from the U.S. government. Many of his works, such as the ballet *Billy the Kid* (1938), *Lincoln Portrait* for speaker and orchestra (1942), and the ballets *Rodeo* (1942) and *Appalachian Spring* (1944) were based on distinctly American themes. *El Salón México* (1937) for orchestra made use of authentic Mexican dance tunes, united in the form of a rhapsody; *Danzón Cubano* for two pianos (1942), a similar stylization of Cuban rhythms, was also arranged for orchestra.

Copland wrote much chamber music, notably: *Vitebsk* for piano, violin, and cello, based on a popular Jewish theme (1929), *Concerto* for clarinet, strings, harp, and piano (1950), *Piano Quartet* (1950) and *Nonet* for strings (1960). His piano works include *Variations* (1930); *Sonata* (1941); *Fantasy* (1957). In 1962, for the opening concert of Lincoln Center in New York, Copland wrote his first work explicitly composed in the 12-tone technique, entitled *Connotations*. He also wrote music for the play *Quiet City* and several film scores.

[Nicolas Slonimsky]

°**COPONIUS**, first procurator of Judea, from 6 to 9 C.E. Of equestrian rank, he was sent to Judea by Augustus after the banishment of *Archelaus. He was accompanied by the Syrian governor, Quirinus, who was sent to take charge of Archelaus' property and to take a census in order to determine taxation. This census was customary in every land which became a Roman province, but the Jews, incited by *Zadok the Pharisee and *Judah the Galilean, regarded it as a sign of servitude and protested against it. Josephus mentions Judah as the founder

of a new sect which has been identified variously with the *Zealots and the *Sicarii. As a result of the intervention of *Joezer b. Boethus, the high priest, the people were pacified and the census taken. During Coponius' period of office some Samaritans penetrated into the Temple and scattered human bones through its chambers, which led to an intensification of the vigil at the Temple (Eduy. 8:5; Tosef. Eduy. 3:3). No specific complaints were raised against Coponius as was the case with his successors, and he is believed to have maintained a satisfactory relationship with the Jews. One of the gateways to the Temple Mount, "the door of Coponius," was apparently named after him (Mid. 1:3).

[Lea Roth]

COPPERFIELD, DAVID (1956–). U.S. magician. As David Seth Kotkin, the son of Russian-Jewish immigrants (his father owned a small clothing store), Copperfield grew up in Metuchen, N.J. His grandfather taught him card tricks as a boy. Before his bar mitzvah he was performing magic at local community centers. He became the youngest person to be admitted to the Society of American Magicians. As a teenager, he said, he taught courses in magic at New York University. A week into his first year at Fordham University, he won the lead in the Chicago production of the musical *Magic Man*, and it launched his career. Under the name David Copperfield, suggested by a friend, he sang, danced, acted, and created all the magic in the show, which became a long-running production. His role led to his own television series, *The Magic of* ABC. CBS then signed him for a series of specials, *The Magic of David Copperfield*, and with each new special he introduced a new feat, always performing before a live audience. In one of his most famous tricks, in 1983, he seemingly made the Statue of Liberty vanish. He also walked through the Great Wall of China and escaped from the prison at Alcatraz, a trick no real prisoner ever managed to perform. Over 20 years his television specials were said to have reached more than three billion people. His face is on a postage stamp in four countries. His abilities as a businessman, as well as illusionist, paid off: he became one of the highest paid entertainers in the world. Copperfield, who was cited by the Library of Congress in 2000 as a living legend, started Project Magic, a program to help hospitalized people with physical and developmental disabilities.

[Stewart Kampel (2nd ed.)]

COPPER SCROLL, designation popularly given to the document at *Qumran officially listed as 3Q15. It was found in March 1952 in Cave 3, about two kilometers north of Qumran, in a much deteriorated condition. The use of the term "scroll" is perhaps incorrect, in so far as it was not intended to be frequently opened, read, and then rolled up like the rest of the Dead Sea scrolls. One suggestion is that it should be designated as a "rolled-up copper plaque."

Discovery and Unrolling

The document seems originally to have been a plaque of soft copper-base metal, about 8 × 0.9 ft. (2.46 m. × 28 cm.), made from three pieces riveted end to end. A hasty or clumsy attempt had been made to roll the plaque up, but the second row of rivets ceased to hold while this was being done, and the piece that remained was rolled up separately. The two scrolls were found embedded in the floor of Cave 3 in 1952. The writing, which had been punched out with about ten punching blows to a letter, was on the inside of the scrolls. From an examination of the lettering visible from the outside K.G. Kuhn concluded in 1953 that the document contained an inventory of the Qumran community's treasures and the places where they were hidden when its headquarters were abandoned. The metal was so utterly corroded and brittle that unrolling the scrolls or applying heat to reverse the process of decomposition was out of the question. The only means of exposing the inscribed surfaces was to cut the scrolls into strips, and even this was a precarious exercise in view of their condition. This was successfully achieved under the direction of H.W. Baker, then professor of mechanical engineering in the College of Science and Technology, Manchester, England. A spindle was put through the scrolls; they were coated with adhesive, warmed to 40°–50°C, and cut into 23 strips with a tiny high-speed circular saw. Each strip was photographed as it was cut, and dust and débris were removed from the remaining part stage by stage, by vacuum suction and a dental brush. When the strips were laid side by side with their inner surfaces exposed, the inscription could be read. It consisted of about 3,000 letters, and so carefully and skillfully had the operation been carried out that not more than five percent of the text was destroyed, while of the rest only about two percent was illegible. The language was colloquial mishnaic Hebrew; the writing was of the period 25–75 C.E., as suggested by various scholars, notably by Frank Moore Cross.

Contents and Significance

The first announcement of the contents of the document was made in 1956. It was said to contain an inventory of 64 hoards of treasure which had been deposited in various places, chiefly in the Buqeiʿa (Vale of *Achor) and its neighborhood and in the Jerusalem region. K.G. Kuhn's inferences from the limited amount of text visible in reverse in 1952 were vindicated. Three samples of the inventory were published in this first release: "In the cistern which is below the rampart, on the east side, in a place hollowed out of rock: 600 bars of silver" (item 11); "Close by, below the southern corner of the portico at Zadok's tomb, and underneath the pilaster in the exedras, a vessel of incense in pine wood and a vessel of incense in cassia wood" (item 53); "In the pit nearby toward the north, near the graves, in a hole opening to the north, there is a copy of this book, with explanations, measurements and all details" (item 64). A French translation of the whole text was published by J.T. Milik in 1959; a transcription of the text with English translation and notes was published by J.M. Allegro in 1960, while

the official edition of text, translation, introduction, and notes by J.T. Milik, with photographic plates, appeared in 1962. One contribution of value made by this document concerns the topography of the areas where the treasures are said to have been deposited. For example, the name of the pool of Bethesda (mentioned in John 5:2) has been the subject of much debate because of the variant readings of the manuscripts; now it can be said definitely to be Bet-'eshda, "the place of outpouring," because this form (in the dual, Bet-'eshdatain) is mentioned under item 57 as the place where a cache of precious wood and resin was deposited. Some of the places mentioned are known either by geographical identification or by literary reference elsewhere (or both); others remain unknown. The references to sites around the Temple area are of particular interest. It is surprising to find one hiding place as far away as Mount Gerizim; there, "under the entrance to the upper pit," lot 61 was stored ("a chest with its contents and 60 talents of silver"). Josephus mentions the pretender in Pilate's time who promised to show the Samaritans the sacred vessels which Moses had hidden there (Ant., 18:85), but it may be that a hill in the vicinity of Jericho is meant (there is some patristic evidence for such a location).

A special problem is posed by the huge amounts of some of the caches; the gold and silver as listed would yield a grand total of about 200 tons or 200,000 kg. If the reference is to a collection of legends of buried treasure, there is nothing surprising in such a fantastic total; if the inventory is intended to be factual, it would have to be concluded that the amounts in some cases are in code for more realistic figures. Such use of a code is the less improbable because there are various cryptic signs and Greek letters in the document which appear to be intended to convey some meaning to those in the know. If the inventory is indeed intended to be factual, it may be asked if it lists the treasure seized from the Temple and elsewhere by the defenders of Jerusalem in the closing phases of the First Revolt to be used as sinews of war against Rome. The inclusion of incense, precious kinds of wood, tithe-jars, and so forth, along with the gold and silver suggests that some of the treasure may have come from the Temple. The use of such a durable material as copper for the inscription points to a factual inventory rather than to a collection of legends. But these and other questions raised by the inscription call for further examination. The fact that it was found in Qumran Cave 3 does not necessarily mean that it belonged to the Essenes or lists their property. Among other possibilities it may be considered that the Qumran headquarters were commandeered by Zealots or their Idumean allies as a useful strong point against the Romans, and that it was they who drew up the document and, at the approach of danger, rolled it up hastily and left it in a convenient hiding place. Its association with the Qumran scrolls on skin or papyrus need be no more than geographical.

[Frederick Fyvie Bruce / Shimon Gibson (2nd ed.)]

COPPER SERPENT, THE (AV, RV, "brazen serpent") (Heb. נְחַשׁ נְחשֶׁת; *neḥash neḥoshet*), a symbol set upon a standard by Moses at the Divine command (Num. 21:6–10). The instructions from the Lord followed a plague of "*seraph-serpents" sent against the people of Israel in the course of their wanderings through the desert. The purpose of the image was therapeutic; anyone bitten by a serpent could be healed by looking at it (cf. LXX, I Sam. 5:6 with MT, I Sam. 6:5). Since the peril was identified with the demonic power within the serpent, the copper image mounted on a staff constituted a counter-equivalent power which was an effective prophylaxis. Although the Pentateuch account regards the copper serpent as legitimate, King *Hezekiah broke it to pieces (II Kings 18:4) in the course of his reforms. It had come to be looked upon as idolatrous, on a par with the *bamot* ("High Places") and Asherah-groves, because the people had accepted it as a fetish, offering incense to it (the form *kitter* (*qiṭṭer*) instead of *hiktir* (*hiqṭir*) has a pejorative connotation). It is unclear from the end of II Kings 18:4 whether it was Hezekiah or the people who named the image Nehushtan. Some scholars regard the chapters in Numbers as an etiological account serving to justify the original adoption of this pre-Israelite cult-figure by the Jerusalemite priesthood, and as an attempt to emphasize the independent healing power of the Lord. The origin of the name Nehushtan is uncertain. Some regard it as having been formed from *neḥoshet* + the affirmative *-an*, and meaning "a copper object." Others note the play on words involving *naḥash* ("snake"), *neḥoshet* ("copper"), and perhaps also the verb *niḥesh* ("to practice divination"). It may be, however, that the *-an* suffix represents the Semitic dual ending.

Parallels from Other Cultures

Entwined serpents with wings indicating the equilibrium of the forces of life and death have been traced as far back as late third millennium Mesopotamia, in the design of the sacrificial cup of King Gudea of Lagash. Rituals designed to avert an evil power or concerning healing which involve serpents and images of them are known from Egypt and Mesopotamia. In addition, the serpent as a life-healing symbol was a common feature in the Canaanite fertility cult. It was associated with the mother-goddess Asherah on pendant reliefs and on incense altars. A small bronze serpent was found at pre-Israelite Gezer, and a bronze plaque with a woman flanked by two serpents was unearthed in Late Bronze Age Hazor. Finally, primitive religions frequently give examples of the conjunction of opposites, of serpents as symbols of sex and death or of death and rebirth. This concept was borrowed by the Greeks and served as the prototype of the caduceus, the staff with a handle of two intertwined serpents.

The Greek physician-god Asklepios, too, was associated with snakes.

[Michael Fishbane]

In the Aggadah

The Mishnah explains that the copper serpent was in itself ineffective as a healing agent. It merely signified that if the children of Israel would raise their eyes upward and subordinate their hearts to the will of the heavenly Father, they would be healed (RH 3:8). It also brought healing to those who had been bitten by other animals. In the case of the latter however, a casual glance sufficed for the cure, whereas in the former case they were healed only after a prolonged, insistent gaze (TJ, RH 59a). The appellation Nehushtan given to the serpent when it was destroyed by Hezekiah was regarded as a plural form, indicating that sacrifice to it involved the loss both of the present and future life (Yal., Num. 764, p. 524). The rabbis endorsed the action of Hezekiah in destroying this venerable relic, since it had become an object of idolatrous worship (Ber. 10b; Pes. 56a).

COPPERSMITH, SAM (1955–), attorney and U.S. congressman. Coppersmith, was born in Johnstown, Pennsylvania, and educated in the local public schools, attending religious school from kindergarten through confirmation at the end of the tenth grade. He had his bar mitzvah at Johnstown's Conservative synagogue.

Coppersmith attended Harvard University, where he graduated *magna cum laude* in 1976. He earned a *Juris Doctor* at Yale in 1982 and then moved to Phoenix, Arizona, where he clerked in the Ninth Circuit Court of Appeals and eventually entered private practice. From the outset, Coppersmith became heavily involved in local civic and political affairs. In 1992, prodded by the local Democratic elite, Coppersmith declared for Arizona's First Congressional District seat against incumbent Republican Jay Rhodes. In Phoenix the first Congressional District seat had been occupied by a Rhodes – Jay and father John – for more than 40 years. Running as a "new-generation Democrat" (pro-choice and business-oriented), Coppersmith coasted to an easy victory in the Democratic primary and then scored an upset victory in the November general election.

Coppersmith took seats on the Public Works Committee and Science, Space and Technology Committee. During his one term in the House (1993–94), he kept a unique campaign promise: he turned down a congressional pay raise. He also gained attention with his leadership of an effort to eliminate the "Advanced Liquid Metal Reactor Program," an effort that brought praise from experts concerned about America's plutonium policy. Although largely unnoticed at the time, Coppersmith was also the first member of Congress to wire his office up to the Internet. In 1994 he gave up his House seat in order to run for the United States Senate; he lost that race and returned to Arizona for good.

After leaving Congress, Coppersmith practiced business and real estate law in Phoenix and wrote a weekly opinion column for the *Tribune* newspaper chain. In 1996, during his tenure as chair of the Arizona Democratic Party, Bill Clinton and Al Gore became the first Democrats to win Arizona since Harry S. Truman in 1948. In late 2004 he traveled several times to the Ukraine to serve on a panel of international observers monitoring the former Soviet republic's contentious presidential elections.

Coppersmith's wife, Beth Schermer, who practiced law with him, specialized in legal issues involving health care. One of Coppersmith's sisters, Dr. Susan N. Coppersmith, became a professor of physics at the University of Chicago. Their father, Louis Coppersmith, served 12 years (1969–81) in the Pennsylvania State Senate, where he chaired the Public Health and Welfare Committee and was known as the "Conscience of the Senate."

CORAL. The ancients regarded coral as wood, because of its tree-like appearance. Only at the beginning of the 18th century was it discovered to belong to the animal kingdom and to consist of the skeletons of marine polyps. Stone corals, found mainly in southern waters including the Red Sea and the Bay of Eilat, are the skeletons of the six-armed polyps (Hexacorallia), and are distinguished by their variety of shapes and their beautiful colors. To another group belong the eight-armed corals (Octocorallia), which include the Red Coral (*Corallium rubrum*). Found in the vicinity of Sicily and along North African shores, the red skeleton of the coral colony, which is extremely hard, is used for making ornaments. Red coral is probably to be identified with the biblical *peninim*, the color of which is red (Lam. 4:7). The identification of *peninim* as "pearl" is apparently wrong. The Talmud (RH 23a) tells of Arameans who brought up coral (Aramaic: *kesita*) from the bed of the sea. In Maimonides (Yad, Kelim 13:6) and in modern Hebrew the word *almog* is used to designate coral, but the identification is mistaken (see *Algum). Red coral was an important article in the commerce of Jews, especially those of Leghorn in the 17th–18th centuries.

CORALNIK, ABRAHAM (1883–1937), Yiddish essayist and literary critic. Coralnik, who was born in the Ukrainian town of Uman, studied at the universities of Kiev, Florence, Berlin, Bonn, and Vienna. He mastered a dozen languages in the course of his travels. His main interest was philosophy. Coralnik's interest in Zionism led to his appointment as editor of the Viennese Zionist organ, *Die Welt*, in 1904. He also edited periodicals in Agram (now Zagreb, Croatian Republic) and Czernowitz, and served as correspondent for German and Russian newspapers in Rome, Berlin, and Copenhagen. In 1915 he joined the staff of the newly founded Yiddish daily *Der Tog*, for which he continued to work until his death, with a single interruption in 1917–20, when his enthusiasm for the Russian Revolution led him to edit Russian journals in Leningrad, Moscow, and Kiev. Although Coralnik was at first more at ease in Russian and German than in Yiddish, he gradually developed a lucid literary Yiddish. He claimed that civilization included far more irrational entities than rational ones and sought to explore the irrational core of artistic creation and national consciousness. In 1928 his essays were collected in five volumes, and three more volumes were published posthumously. In May 1933, he founded the American League for the Defense of Jewish Rights in response to the rise of Nazism, and with Samuel *Untermeyer organized the World Jewish Economic Conference in Amsterdam in an effort to coordinate an international anti-Nazi boycott, which met with little success.

[Sol Liptzin / Sarah Ponichtera (2nd ed.)]

CORBEIL, capital of the department of Essonne, France. Jews lived there from at least the second half of the 12th century. They were expelled in 1180 with the other Jews in the kingdom of France, but are again mentioned in Corbeil from at least 1203. They owned a synagogue (*escholle*) whose building was preserved until the 14th–15th centuries. The *Rue des Juifs*, the ancient *Judearia*, still exists. The Jews were again expelled from Corbeil in 1306 with the other Jews in the kingdom, and returned in 1315. The community ceased to exist in 1321. Corbeil was an important center of Jewish learning in the Middle Ages. Its scholars included the tosafist Judah of Corbeil, *Jacob of Corbeil "the Saint," Samson of Corbeil, *Isaac b. Joseph, and *Perez b. Elijah. At the beginning of the German occupation of France in World War II (1941), 13 Jewish families were registered in Corbeil, but there was no Jewish community there after the war.

CORCOS, family originally from Corcos in the province of Valladolid, Castile. The scholar ABRAHAM CORCOS (c. 1275) lived in Castile; his son, SOLOMON CORCOS (d. after 1331), a disciple of Judah b. Asher, wrote a commentary on the astronomical work *Yesod Olam* of Isaac *Israeli in Avila. The wealthy financier JUDAH BEN ABRAHAM CORCOS (d. after 1493) of Zamora settled in Portugal in 1492. After 1492 members of the family were established in Italy and in Fez.

ABRAHAM, ḤAYYIM, YOSE AND JOSHUA CORCOS were among the leaders of the "Spanish Exiles" in Morocco. JOSHUA (d. after 1552) vigorously defended the "Castillanos" in the question of ritual slaughter traditions. A rabbinical authority, he was one of the promoters and signatories of the *takkanot* which determined the social and religious organization of the "Exiles of Castile" in Morocco. Renowned for his erudition and his piety, MOSES BEN ABRAHAM CORCOS (d. c. 1575) of Fez was appointed *dayyan* in Tunis, where his tomb is still the object of pilgrimage. One of the rabbinical authorities of Fez, JOSEPH CORCOS (d. c. 1710) had many disciples, several of whom achieved fame. JOSEPH BEN JOSHUA CORCOS (d. after 1800) lived in Gibraltar for some time and there he wrote his *Shi'ur Komah* (Leghorn, 1809; Jerusalem, 1934) which was regularly read in Morocco on Sabbath afternoons. He also wrote a homiletic work *Yosef Ḥen* (Leghorn, 1825). ABRAHAM BEN MOSES CORCOS (d. c. 1778), a talmudist, left several works of which only some decisions and a partially published work of responsa entitled *Ginnat Veradim* are extant. JOSEPH CORCOS known also as Maharik (Morenu ha-Rav R. Joseph Corcos; d. after 1575) was a Spanish-born talmudist. He traveled to Egypt, where he was head of a yeshivah, and finally settled in Ereẓ Israel, He wrote a commentary on the *Yad ha-Ḥazakah* of *Maimonides; several extracts have been published on Sefer Zera'im. His brother (?) ISAAC CORCOS (d. before 1540), first was rabbi in Egypt and later appointed *dayyan* in Jerusalem, where he was succeeded by his son Solomon. MAIMON BEN ISAAC CORCOS (d. 1799), one of the founders of the community of Mogador and an influential merchant, was one of the pillars of British politics in Morocco. SOLOMON BEN ABRAHAM CORCOS (d. 1854) was banker and adviser to the sultan. He was accredited as consular agent of Great Britain from 1822. His sons JACOB (d. 1878) and ABRAHAM (d. 1883), were entrusted with important missions by three successive sultans. In 1862 Abraham was appointed U.S. consul in Mogador. His influence at the palace of the sultan enabled him to considerably facilitate the mission of Sir Moses *Montefiore whom he received in Morocco. MEYER BEN ABRAHAM CORCOS (d. 1929) was appointed U.S. consul in 1884. He wrote *Ben Me'ir* (2 vols. 1912 and 1925) on the laws of the Sabbath and Passover. STELLA CORCOS (1857–1948) was born in New York and married MOSES CORCOS (d. 1903). She settled in Mogador, where she founded a free Jewish school which taught in English. She contested the growing influence of the Protestant missions over poverty-stricken Jews. She was the representative of the *Anglo-Jewish Association. ḤAYYIM BEN

JACOB (d. 1923), philanthropist and scholar, supported many yeshivot in Morocco. MONTEFIORE CORCOS (d. 1958), a pilot in World War I was a wing-commander in the Royal Air Force during World War II. JOSHUA BEN ḤAYYIM CORCOS (d. 1929), banker of the sultans and their advisers, played an important political role from 1885 to 1912. FERNAND CORCOS (1875–1956), advocate and active Zionist, defended the rights of the Jews of Morocco, Algeria, and Tunisia. He wrote *Le Sionisme au Travail* (2 vols., 1923 and 1925), as well as 15 volumes of international studies.

CORCOS, DAVID (1917–1975), historian of Moroccan Jewry. Scion of the prominent Spanish-Moroccan *Corcos family of merchants and diplomats, Corcos grew up as part of the elite of Mogador and Moroccan Jewry. Educated at the French High School and Higher Institute for Economy in Casablanca, he moved to Agadir as a young man and opened an import-export company and wholesale outlet that supplied southern Morocco and the Souss region with sugar, tea, and grain. He was a large-scale exporter to Europe of carob, almonds, wool, tea, sugar, and especially grain.

He immigrated to Israel in 1959 with a rare library of 1,500 books on North African and Moroccan Jewry as well as hundreds of manuscripts passed down from generation to generation that belonged to his great-grandfather. He lectured on Moroccan Jewish history on Kol Israel radio, published many scholarly articles on Moroccan Jewry in the *Jewish Quarterly Review*, *Zion*, and *Sefunot*, and in 1976 published *Studies in the History of the Jews in Morocco.* Corcos was the editor for the Maghreb of the first edition of the *Encyclopaedia Judaica*, writing over 250 entries on Moroccan, Algerian, and Tunisian Jewry. He also contributed to the *Enẓiklopediyah Ivrit*.

[Yitzchak Kerem (2nd ed.)]

CORCOS, HEZEKIAH MANOAH ḤAYYIM (Tranquillo Vita) THE YOUNGER (1660–1730), rabbi, physician, and preacher. Corcos was a member of the Rome branch of the *Corcos family which settled there after the expulsion of the Jews from Spain, becoming eminent for their rabbinical scholarship and financial acumen. His grandfather, of the same name (1590–1650), was among the foremost Italian rabbis of his day. In 1692 Corcos was elected to the Council of Sixty, the governing body of the Rome community, and was appointed rabbi and secretary of the community in 1702, after which he devoted even greater energy to communal affairs. In 1697 he appeared before the Congregation of the Holy Office to refute the anti-Jewish calumnies spread by the apostate Paolo Sebastiano Medici. Corcos' plea to Pope Innocent XII to authorize the reduction of the onerous rents paid in the ghetto was successful (1698). He also obtained some modification of the censorship of Hebrew books (1728), and secured the withdrawal of a *blood libel in Viterbo (1705).

Besides representing the interests of the Rome community, he attended to its daily needs within the confines of the ghetto, caring for the needy sick, superintending the local yeshivah, and encouraging secular instruction as well as delivering sermons. His firm and dignified demeanor was appreciated in the Vatican and generally in Rome. Corcos was perhaps the most illustrious personality of the Rome ghetto during its three centuries of segregation.

[Attilio Milano]

CORCOS, STELLA (1858–1948), educator. Stella Corcos was the daughter of an Algerian Jewish tobacco merchant, Avraham Duran, and Rivka Montefiore (1831–1929) of the famous London *Montefiore family. Stella married Moses Corcos, one of Mogador's wealthiest merchants, in England, and settled in Mogador in 1884.

In Mogador, with the assistance of the Agudat Aḥim philanthropic association of England headed by Claude Montefiore, she founded in 1885 an English-speaking school called "Kavod ve-Ometz" for lower class Jewish girls in order that they might escape the clutches of missionaries. The school attracted attention in the region and was visited by numerous diplomats and foreign dignitaries. The school outnumbered the local Alliance Israélite Universelle school in female students and thrived until 1915, when it closed. Through the influence of the school, English filtered into the Mogador Jewish community. Stella also introduced Jewish theater in the school and played a pioneering role in the introduction of Jewish theater in Morocco.

After her husband died in 1907, she was left alone with six children; among them her daughters Florence and Winnie, who were teachers in the school, and her sons Jacob and Mas'ud, the latter a London merchant. She used her influence with the Sultan of Morocco to better the living conditions of the Jews of the Mellah (Ghetto) of Mogador. On one occasion, she met with the Sultan in Marrakesh, riding to the meeting by horse. She maintained the school during periods of economic crisis, drought, epidemics, and even after the onset of French protectorate rule in 1912.

CORCOS, VITTORIO (1859–1933). Italian portrait painter. Born in Livorno, Corcos studied with the Leghorn painter Giuseppe Baldini and from 1875 at the Art Academy in Florence. In 1877 he won a silver medal for his painting *Figura, copia dal vero*. The following year he won a scholarship for young painters. In 1880 his painting *Arabo in preghiera*, was bought by no less a personage than the King of Italy, Umberto I. In that same year Corcos left Italy for Paris, where he lived intermittently until 1886. He worked mostly for the art dealer Goupil. He presented paintings at the Salon, such as *A la brasserie* in 1881, *l'anniversaire* in 1882, and in 1885 a portrait. In 1886 he was back in Florence, where he took part in the First National Art Exhibition. He married, outside his faith, the widow Emma Rotigliano, née Ciabatti. His best-known portraits are those of the composer Pietro Mascagni (1891), the Italian poet Giosue' Carducci (1892), the German Kaiser Wilhelm II and his wife Augusta Victoria (1904), and Margherita of Savoy, Queen of Italy (1922). His last years were saddened by the death of his only son, Massimiliano, in 1916 at the front during World War I. Corcos is also remembered for his portrait paintings of beautiful women.

CÓRDOBA (**Cordova,** also **Corduba**), city in Andalusia, southern Spain. According to some sources, the Jews were entrusted with the city's defense immediately after the Muslim conquest in 711. The first references to Jewish settlement in Córdoba date from 840, in a polemical exchange between the Jewish proselyte *Bodo-Eleazar and Paul Alvarus. When Córdoba became capital of the Umayyad caliphate in Spain, it also became a center of a diversified and brilliant Jewish culture. This was due in great measure to *Ḥisdai ibn Shaprut, physician and diplomat in the service of the caliph ʿAbd al-Raḥmān III (912–961). Ibn Shaprut attracted the galaxy of philosophers, poets, and scholars, who made Córdoba a brilliant Jewish intellectual center. At this period, R. *Moses b. Ḥanokh, brought to Córdoba according to legend as a captive, was responsible for the revival of talmudic studies in Spain. A bitter dispute arose in the academy after his death when the succession of his son *Ḥanokh b. Moses was unsuccessfully disputed by his pupil Joseph *Ibn Abitur, upheld by the influential courtier Jacob *Ibn Jau.

During the 11th century, Córdoba declined as a result of the Berber conquest. After the revival of the community in the second quarter of the 11th century, Isaac b. Baruch *Albalia was the foremost rabbinical scholar in Córdoba. Scholars in the 12th century included Joseph b. Jacob *Ibn Sahl, a pupil of Isaac ibn Ghayyat, who was appointed *dayyan* of the community in 1113, remaining in office until his death in 1123. The noted poet and halakhic authority Joseph ibn *Ẓaddik served as *dayyan* from 1138 to 1149. At the beginning of the 12th century, messianic expectations were stimulated by the appearance of an Andalusian pseudo-messiah Ibn Arieh: excitement ran high until the communal leadership stopped the movement. Córdoba was the birthplace of Maimonides, born in 1135, who left the city as a result of the invasion of the *Almohades, when the Jews of Andalusia were compelled to adopt Islam and the community was destroyed.

The Jewish quarter during the Muslim period was situated near the *alcazar* ("fortress") southwest of the city; it continued in existence after the Christian reconquest and some parts may be seen today. A second quarter apparently existed in the northern part of the city, near the "Jewish gate" (*Bāb al-Yahud* – later the Talavera or León gate) which was standing until 1903. Shortly after the Christian reconquest in 1235–36 the ecclesiastical authorities in Córdoba were complaining that the new synagogue under construction was too high, and in 1250 Pope Innocent IV instructed the bishop of Córdoba to take steps against what he termed a "scandal" against Christianity. A synagogue still standing is that constructed by Isaac Moheb b. Ephraim in 1315 in the *mudejar* style. An adjacent room was probably used for teaching and the small assembly hall served for the *bet din*. The walls of the synagogue and women's gallery are embellished with quotations from the Psalms. The synagogue was declared a national monument in 1885. The Jews of Córdoba had helped to restore the economy of the city after the reconquest by Ferdinand III of Castile. Judah *Abrabanel served as a crown official there. Shortly afterward, however, anti-Jewish restrictions were introduced as elsewhere in Castile at this time. In 1254 Alfonso X ruled that Jews should pay tithes to the ecclesiastical authorities for real estate that had passed into their hands. The community in Córdoba at this period, although smaller than that of *Toledo, was evidently still important. Córdoba Jewry engaged in a wide range of crafts, specializing in the manufacture and marketing of textiles. An extraordinary measure passed by the communal board at the end of the 13th century provided that *dayyanim* were to be appointed for a period of one year only. In 1320–21 severe measures were taken by Judah *Ibn Waqar to tighten communal discipline and punish blasphemers (Resp. Rosh, 18:8). The annual tax paid by the community in 1294 amounted to about 38,000 maravedis, though the church claimed also a special annual payment of 30 denarii: this impost obviously had symbolic significance.

During the persecutions of 1391 anti-Jewish riots broke out in Córdoba in which most of the community was massacred. The annual tax of the reduced community in Córdoba in the 15th century was raised to about 1,200 maravedis in 1474 and amounted to 1,000 maravedis in 1482. A special levy of 18 gold castellanos was imposed on the communities of Córdoba and *Palma as their contribution to the war against Granada in 1485. From Córdoba, which was their headquarters during the war, Ferdinand and Isabella issued a series of anti-Jewish measures at the end of 1478. In 1483 the Jews were ordered to leave Andalusia, and except for a brief revival in 1485 the Jewish community in Córdoba ceased to exist. The Conversos living in Córdoba during the 15th century were fiercely persecuted; particularly violent attacks in 1473–74 made many flee to Sierra. The Conversos of Córdoba won a reputation for

their attachment to Judaism, and a statement before a rabbinical court anywhere that a Converso had been educated or had studied in Córdoba was deemed sufficient evidence for him to be recognized as a Jew. The tribunal of the Inquisition established in Córdoba in 1482 comprised a large area in Andalusia within its jurisdiction, including Granada between 1492 and 1526. Many Conversos were martyred in the city in the 1480s. The inquisitor for Córdoba from 1499 until 1509, Diego Rodríguez Lucero, won a reputation for cruelty. The Inquisition in Córdoba remained active until the 18th century. Abraham Athias, father of the printer J. *Athias, was martyred there in 1665.

The 800th anniversary of the birth of Maimonides was officially commemorated in Córdoba in 1935, and in 1964 a Maimonides week was held. A statue was erected to his memory and a square in the former Jewish quarter was renamed Plaza Tiberias to perpetuate the connection of his birthplace with the city in Erez Israel where he was buried.

[Haim Beinart]

CÓRDOBA

(1) Province in Argentina, area 64,894 sq. mi. (168,075 sq. km.); population 1,759,997 (1960). In 1943 Jews were living in 98 out of the 422 communities in the province. Their total number at that time was 7,675 persons. In 1964 there were organized communities affiliated with Va'ad ha-Kehillot (see *Argentina) only in seven cities and towns. The 1960 census indicated the overall Jewish population (above five years of age) in the province to be 8,639 persons, 7,409 of whom lived in the city of Córdoba. Each year large summer camps for the Jewish youth of Argentina are organized in Córdoba. There are also Jewish hotels in many villages. In Unquillo, the Liga Israelita Argentina Contra la Tubeculosis, originally in Buenos Aires, established in 1937 a large sanatorium which was transformed in 1956 into a summer resort for underprivileged children.

(2) Capital of the above province and third largest city in Argentina. Located in the center of the country, Córdoba had in 1960 a population of 589,153. The first Jewish families arrived in Córdoba at the beginning of the 20th century from the Jewish agricultural settlements in *Entre Ríos province. At the same time, the first Sephardi groups arrived from Lebanon, Syria, and Egypt. A census conducted by Jewish Colonization Association (ICA) in 1909 found about 600 Jews in Córdoba, the majority being Ashkenazim and the minority Sephardim. The same year two Ashkenazi *minyanim* and one Sephardi *minyan* were organized for the High Holy Days. A short time later the Ashkenazi community established two *kehillot* which united in 1915 to form the Centro Unión Israelita (Ashkenazi), under the presidency of Jaime Blank. The Sephardi community began to organize in 1917, when they founded the Sociedad Israelita Siria for Jews originating from Arab-speaking countries. In 1923 the Comunidad Israelita de Córdoba was established for Turkish and Greek Jews, and in the same year, with funds contributed by the Niño family, the first Sephardi synagogue was built. Each congregation has its own cemetery. In 1953 the Círculo Sefaradí was established as a social center for all Sephardi congregations of Córdoba. One of the main concerns of the community leaders has been the establishment of Jewish schools. The first Ashkenazi school, according to the annals of the Centro Unión Israelita, dates from 1917. The Sephardi community founded a school shortly after its communal organization began. A report dating from 1943 showed the city to have five supplementary Jewish schools (which gave instruction in Jewish subjects after regular school hours) whose total student enrollment was about 200. From 1944 the Centro Unión Israelita made efforts to improve school attendance by amalgamating the five schools and establishing a central day school. Their efforts finally succeeded in 1950 when the General San Martín school was officially recognized by the educational authorities of Córdoba. The establishment in 1957 of the Asociación Hebraica, which developed a club with sports facilities, has increased the social cohesiveness of the different communities. All Jewish community organizations belong to the local chapter of the *DAIA which, together with the Jewish National Fund, Keren Hayesod, and the youth movements, is housed in the large Centro Unión Israelita building. Originally employed in minor commerce (peddling, lottery tickets, cloth selling) the Jewish community has advanced to employment in the professions and heavy industry.

[Joseph Hodara]

CÓRDOBA, ALONSO FERNANDEZ DE (late 15th century), Spanish silversmith, engraver, and typecutter, probably of a Marrano family. Córdoba worked from 1473 in Valencia but after leaving there was condemned to death *in absentia*, possibly on a charge of heresy. He then entered into a contract at Murcia with the Jewish silversmith Solomon Zalmati and the notary Dr. Gabriel Luis Arinyo for the production of the works of Bishop Jaime Perez. The partners were apparently also responsible for the publication of the Saragossan Catholic prayer book, *Manuale Caesaraugustanum* (Hijár, 1486). In this work, there is a beautiful border designed by Córdoba. This is also found in the Hebrew Pentateuch printed by Eliezer Alantansi in conjunction with Zalmati at about the same time. It has been suggested that Córdoba cut the incidental decorations and perhaps the Hebrew type used in the Hijár press.

CORDOVERO, GEDALIAH BEN MOSES (1562–1625), rabbi and kabbalist; son of Moses *Cordovero, he was born in Safed and after the death of his father, when Gedaliah was eight years of age, he studied under Solomon *Sagis. Before 1584 he was in Italy where he engaged in the book trade. While in Venice he published, with the assistance of Moses *Basola (see *Basilea family) and *Menahem Azariah of Fano, various kabbalistic works of the Safed scholars, including his father's *Perush Seder Avodat Yom ha-Kippurim* and *Or Ne'erav*. It seems that Gedaliah was also active in Italy as a preacher, expounding the imminent redemption; together with Israel *Sarug he was in Modena where they urged the adoption of the Safed customs of rising early to mourn for the destruction of the Temple and to pray for the redemption. Gedaliah went to Jerusalem after 1590 and was appointed chief rabbi of Jerusalem by the authorities, holding the title *Sheikh al-Yahūd* ("Chief of the Jews") until his death. In 1607 a quarrel broke out between him and the Jerusalem scholar, Menahem di *Lonzano, who had assisted him to obtain his high office. As a result of this quarrel, Lonzano was compelled to leave Ereẓ Israel. However after a short time he returned and peace was restored between them. Gedaliah was in Italy from 1609 to 1611 as an emissary of Jerusalem. In 1625 the disturbances during the tenure of office of Ibn Faruk, governor of Jerusalem, imposed a severe strain on Gedaliah in his capacity as chief rabbi and he died while the riots were at their height.

[Abraham David]

CORDOVERO, MOSES BEN JACOB (1522–1570), the outstanding kabbalist in Safed before Isaac *Luria. His birthplace is unknown, but his name testifies to the family's Spanish origins. He was a disciple of Joseph *Caro and of Solomon *Alkabeẓ, and a teacher of Isaac Luria. His first large systematic work is *Pardes Rimmonim*, which Cordovero completed by the age of 27. Ten years later he finished his second systematic book, the *Elimah Rabbati*, and also wrote a lengthy commentary on all the parts of the *Zohar which has been preserved in manuscript in Modena.

The doctrine of Cordovero is a summary and a development of the different trends in Kabbalah up to his time, and his whole work is a major attempt to synthesize and to construct a speculative kabbalistic system. This is done especially in his theology, which is based on the Zohar, and in particular on *Tikkunei Zohar* and *Ra'aya Meheimna*. Since Cordovero considered these texts to be by one and the same author, he felt constrained to harmonize their different and at times even opposing conceptions. Cordovero follows *Tikkunei Zohar* in his conception of God as a transcendent being: God is the First Cause, a Necessary Being, essentially different from any other being. In this concept of God, Cordovero is obviously drawing upon the sources of medieval philosophy (especially Maimonides). In accordance with the philosophers, Cordovero maintains that no positive attribute can apply to the transcendent God. In his opinion, the philosophers had attained an important achievement in purifying the concept of God of its anthropomorphisms. Yet, Cordovero stresses that the essential difference between Kabbalah and philosophy lies in the solution of the problem of the bridge between God and the world. This bridging is made possible by the structure of the *Sefirot* ("Emanations") which emanate from God.

In this way Cordovero tries to unify the concept of God as a transcendent Being with the personal concept. Thus, the central problem of his theology is the relation between *Ein-Sof (the transcendent God) and the question of the nature of the *Sefirot*: are they God's substance or only *kelim* ("instruments" or "vessels")? Cordovero's answer to this question is something of a compromise between the Zohar and *Tikkunei Zohar* – the *Sefirot* are substance and *kelim* at the same time. They are beings emanated outward from God, but His substance is immanent in them. Cordovero describes the *Sefirot* as instruments or tools with which God performs His various activities in the world, and as the vessels containing the Divine substance, which permeates them and gives them life, as the soul gives life to the body. By means of this attitude Cordovero wants to preserve, on the one hand, the concept of the simple and immutable God, and on the other hand to maintain God's providence in the world. Although this providence is sometimes described as a substantial immanence of God through all the worlds, Cordovero has reservations about it. In *Pardes Rimmonim*, a distinction exists between the transcendent God, who undergoes no process, and the light emanated from Him, spreading through the *Sefirot*. This emanated expansion is not of a necessary existence, but is activated by God's spontaneous will. This makes for the involvement of the will in every Divine act – the active God is the God united in His will.

It is quite understandable, therefore, why God's will has such a decisive place in Cordovero's system. Here again, the same question arises: what is the relation between God and His will? Cordovero's answer is dialectic in its character. By itself, the will is an emanation, but it originates from God in a succession of wills which approach God's substance asymptotically.

The process of emanation of the *Sefirot* is described by Cordovero as dialectical. In order to be revealed, God has to conceal Himself. This concealment is in itself the coming into being of the *Sefirot*. Only the *Sefirot* reveal God, and that is why "revealing is the cause of concealment and concealment is the cause of revealing." The process of emanation itself takes place through a constant dynamics of inner aspects inside the *Sefirot*. These aspects form a reflective process inside each *Sefirah*, which reflects itself in its different qualities; these aspects also have a function in the process of emanation, in being the

inner grades which derive, each from the other, according to the principle of causation. Only this inner process, which is but a hypostasis of the reflective aspects, enables the emanation of the *Sefirot*, each from the other, as well. These inner processes are of special importance regarding the first *Sefirah* – the will. After the series of wills, which are the aspects of the "*Keter*" ("crown") in the "*Keter*," there appear in "*Ḥokhmah*" ("Wisdom") in the "*Keter*" aspects which express the potential thought of all the not yet actualized Being. Cordovero calls these thoughts: "The kings of Edom who died before the reign of a king in Israel." This idea appears in the Zohar, but Cordovero reverses its meaning. In the Zohar this is a mythological description of the forces of stern judgment (*din*) that were conceived in the Divine Thought, and because of their extreme severity, were abolished and died, whereas according to Cordovero these thoughts were abolished because they did not contain enough judgment (*din*). Cordovero conceives of judgment (*din*) as a necessary condition for the survival of any existence. What is too near to the abundance of God's infinite compassion cannot exist, and therefore the highest thoughts were abolished, so that the *Sefirot* could be formed only when emanation reached the *Sefirah* of *Binah* ("Intelligence"), which already contains judgment (*din*).

The whole world of emanation is built and consolidated by a double process, that of *or yashar* ("direct light") – the emanation downward, and *or ḥozer* ("reflected light") – the reflection of the same process upward. This reflected movement is also the origin of *din*.

The transition from the world of emanation to the lower world is continuous. Thus the problem of creation *ex nihilo* does not exist in relation to our world, but pertains only to the transition from the divine "Nothingness" (*Ayin*) to the first Being – the uppermost aspects of the first *Sefirah*. In spite of Cordovero's attempts to obliterate this transition, his stand is theistic: the first *Sefirah* is outside God's substance. This prohibits any pantheistic interpretation of Cordovero's system. The immanence of the Divine substance in the *Sefirot* and in all worlds is likewise clothed always in the first vessel, even though Cordovero hints several times at a mystical experience in which the immanence of God Himself in the world is revealed. In this esoteric meaning, Cordovero's system may, perhaps, be defined as pantheistic.

In addition to his two principal systematic books, *Pardes Rimmonim* (Cracow, 1592) and *Elimah Rabbati* (Lvov, 1881), the following parts of his commentary to the Zohar were published separately: the introduction to the commentary on the *Idras* in the Zohar, *Shi'ur Komah* (Warsaw, 1883); and an introduction to the Zohar "Song of Songs," *Derishot be-Inyanei Malakhim* (Jerusalem, 1945). Publication of the complete commentary has been begun in Jerusalem. Two volumes of the commentary had appeared by 1968.

Other published works are *Or Ne'erav* (Venice, 1587); *Sefer Gerushin* (Venice, c. 1602); *Tefillah le-Moshe* (Przemysl, 1892); *Zivḥei Shelamim* (Lublin, 1613), *Perush Seder Avodat Yom ha-Kippurim* (Venice, 1587); *Tomer Devorah* (Venice, 1589; tr. L. Jacobs, *Palmtree of Deborah*, 1960). In this work Cordovero laid the foundations for kabbalistic ethical literature, which proliferated in the 16th–18th centuries. In its short chapters he instructed every Jew in the right way to follow in order to come close and identify spiritually with each of the ten *Sefirot*. This short treatise influenced many later kabbalistic moralists in Safed and Eastern Europe. There are two existing abridgments of *Pardes Rimmonim: Pelaḥ ha-Rimmon* (Venice, 1600) by Menahem Azariah of *Fano, and *Asis Rimmonim* (Venice, 1601) by Samuel Gallico.

[Joseph Ben-Shlomo]

CORFU, Greek island, the second largest of the Ionian group. The town of the same name is the largest on the island. *Benjamin of Tudela, in c. 1160, found only one Jew in Corfu. The number of Jews increased during the 13th and 14th centuries with the arrival of newcomers from the mainland. The Jews on the island were subject to violent attacks and persecution; they were forced to row on the galleys, to provide lodging for soldiers, were summoned to the law courts on Sabbaths and festivals, and as elsewhere in the Byzantine orbit had to act as public executioners. From time to time the authorities were forced to publish defense orders to protect them from the hostility of the general population. When Corfu surrendered to Venice (1386), the deputation of six persons sent to arrange the terms included the Jew David Semo. A decree of 1387 reaffirmed the previous rights of Jews under Byzantine rule, but in 1406 they were forbidden to acquire land and were ordered to wear a distinguishing *badge. Jewish women had to wear yellow veils. In 1408 they were forbidden to own land worth 2,000 ducats, later increased to over 4,000 ducats. The Venetian authorities frequently imposed heavy taxes on the Jewish community in order to finance the wars against the Turks. On the other hand, the Jews sometimes gave voluntary contributions and assisted in the fortification of the walls. The Jews lived at first in two streets between the Old Town and the fortress. When this area was included in the new fortifications, the two Jewish areas were eliminated and the Jews were scattered for a while throughout the city, but in 1622 they were confined to a ghetto. Despite these restrictions, the Venetian authorities were more liberal toward the Jews of Corfu than they were toward the Jews of Venice itself.

During the 16th century there were two congregations in Corfu, that of the *Romaniots who preserved the ancient Byzantine rite (known as *Minhag Korfu*), and that of the Italians. In the course of time the Italian community was enlarged by Jews from Apulia, Spanish exiles, Portuguese Marranos, and Ashkenazim, who ultimately adopted the Sephardi rite. The eminent Sephardi Spanish courtier and religious scholar Don Isaac *Abravanel stayed in Corfu for a short time in 1594, finished his commentary on Deuteronomy, was depressed at the state of the spiritual deterioration of Spanish Jewish exiles, and

continued to Naples to reunite with his wife and other close family members. Relations between the two communities did not always run smoothly. The Romaniot community enjoyed special privileges and objected to the right of permanent residence being granted to the Italians. Between 1662 and 1664 all Jews in Corfu received equal status. Each of the communities had two "overseers" (*syndikoi*), two *kashrut* supervisors, and two *parnasim*. In 1563 the traveler Elijah of Pesaro reported that the Italians constituted the majority of the Jewish colony in Corfu. They imposed their language on all the Jews of the island, most of whom spoke the Apulian dialect interlaced with Greek words.

In 1522 there were about 200 Jewish householders; in 1558, about 400; and in 1663, 500. The Jews of Corfu engaged in dyeing, leather tanning, moneylending, trading, and the brokerage of goods between Venice and the Levant. The Jewish merchants of Corfu were granted privileges not granted to those of Venice itself. A New Testament in Judeo-Spanish was printed in Corfu in 1829, no doubt for missionary purposes. Hebrew printing by Jews began in 1853 and continued until 1896. Of 14 items published, 13 were by Joseph Nahamuli, who also supplied a Greek translation to some of the liturgical items. From 1861 to 1863, he published the Greek/Italian bilingual *Chronica Israelitika*. When in 1716 the Turks besieged Corfu, the Jews distinguished themselves in the defense of the island. The loyalty of the Jews of Corfu to the Venetian government lasted until Venetian rule ended in 1797. Under French rule of Corfu (1797–99 and 1806–15) Jews had equal rights with other citizens, and the community's rabbi enjoyed the same privileges as the religious heads of the other communities. Their condition deteriorated under British rule (1815–64); they were excluded from public office and disenfranchised, and Jewish lawyers were forbidden to plead in court. Judah *Bibas, known for his support of the ideal of the return to Zion and of the Haskalah movement, was rabbi of Corfu from 1831. He defended the regional *etrog* growers in Aya, Parga, and Rapeza in light of insinuations of non-kosher grafting by East European *etrog* importer Rabbi Eleazar Ziskind Mintz of Brody in the work *Pri Etz Hadar* (Lemberg, 1846). Rabbi Ephraim Zalman Margulies (1760–1828) of Galicia had previously defended the Corfu *etrogim*. From the late 1840s and in the 1850s, a small group of Corfiote Jewish cotton merchants settled in Manchester, attracted by its commercial and industrial growth, and were among the founders of the Cheetham Hill Road Sha'are Tefilla Spanish and Portuguese synagogue in 1873. The eminent Rabbi Israel Moses *Hazzan of Izmir succeeded Bibas and served from 1853 to 1857 before moving to Alexandria, Egypt. In 1855 the Jewish community comprised 4,000 persons and was visited by the philanthropist Sir Moses *Montefiore of England. In 1863, the Jewish community numbered 6,000, 9.23% of the local population. The local population maintained their old prejudice, and when equal rights were restored to the Jews upon the island's annexation to the kingdom of Greece in 1864, riots broke out, causing a large exodus of Jews to Greece and Italy. Despite, local Greek-Orthodox hostility toward the local Jews, the latter had significant political weight in the city of Corfu. Numerous Jews who worked as lawyers and notaries enjoyed a high public profile. Councilman and international olive oil merchant Eliias da Mordo was appointed as deputy mayor, and in 1870 he was elected mayor. In 1891, when the Jewish population of 5,000 still lived in their own quarter, a *blood libel caused a storm on the island and throughout Greece and brought in its train large-scale emigration. The ensuing riots lasted three weeks and some 22 Jews died. Foreign ships were sent to the island to quell the disturbances in light of the apathetic attitude of the Greek authorities. From then on the Jewish community waned; many Jews emigrated to Trieste and Alexandria, Egypt. The local Alliance Israélite Universelle representative, the philologist Lazaros Belleli, represented the Jewish community at the subsequent trial, which ended in a mockery in light of the acquittal of the perpetrators. Belleli did not find his place in academia in Greece and eventually migrated to London, where he became a professor of linguistics. The French novelist Albert *Cohen grew up in Corfu in the early 1890s and depicted the picturesque Jews of the island in many of his works. In 1897, the journalist and Jewish community leader Moïse *Caimis started the Zionist organization Mevasser Zion and from 1899 to 1901 edited the Zionist organ *Israelite Chronographos*. Under the influence of the Russian Hebrew teacher Bezalel Davidson, who passed through the island in 1906, the Zionist society Mekkitz Nirdamim was formed. In 1913, Haim S. Mizrahi formed the Zionist organization Tikvat Zion and in 1924 a new group, called Theodor Herzl, was formed and it eventually affiliated with the Zionist Revisionist movement. In World War I, the community suffered another blood libel with rioting mobs, but there were no casualties and the authorities assisted in the quelling of the disturbances. In 1923 about 3,000 Jews lived on the island, most of them small tradesmen who struggled to earn a livelihood. There were four synagogues in the town of Corfu all now following the Sephardi rite: the Greek synagogue, the Apulian, the Apulian-Spanish, and the Apulian *minyan*. In 1932, after Rabbi Judah Nehama failed to persuade members of the Italian Hevra to accept leadership positions in the Jewish community administration, since they refused to accept the authority of the Greek Hevra, the Supreme Court in Athens ruled that each Hevra would remain separate from the communal organization. On the eve of World War II the community numbered 2,000. During the occupation by the Italians (1941–43) there was relative quiet. The Germans occupied the island on September 27, 1943. On June 14, 1944, 1,800 Jews were deported to Auschwitz. By 1948, the number of Jews in Corfu was reduced to 170, in 1968 to 92. In the early 21st century fewer than 50 Jews remained, and only one of the four synagogues.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

CORI, GERTY THERESA (née **Radnitz**; 1896–1957), Nobel laureate in medicine and physiology. Cori was born in Prague, where she graduated in medicine from the German University in 1920. That year she married her fellow student and lifelong scientific collaborator, Carl Cori, and converted to Catholicism from Judaism. The Coris joined the staff of the New York State Institute for the Study of Malignant Disease in Buffalo, New York (1922–31), before moving to Washington University, St. Louis, in 1931 where she was professor of biochemistry from 1947 until her death. The Coris became U.S. citizens in 1928. They were awarded the Nobel Prize in 1947 (shared with Bernardo Houssay) for their work on carbohydrate metabolism in which they discovered how glucose is stored as glycogen in the liver and muscles, and broken down to glucose as an energy source (a process termed the Cori cycle). They also described the effects of insulin and other hormones on glucose metabolism. The Coris' honors included election to the U.S. National Academy of Sciences.

[Michael Denman (2nd ed.)]

CORIANDER, plant called *gad* in the Bible and *kusbar* in the Mishnah and the Targum Pseudo-Jonathan. The *manna is described as being "like coriander seed, white" (Ex. 16:31), and "like coriander seed, and in color it was like bdellium" (Num. 11:7). Rashi stresses that the comparison is "in respect of the roundness" and not of the color of coriander, which is not white. It is the *Coriandrum sativum*, an annual plant of the Umbelliferae family; it has white flowers arranged in umbels and globular beige or brown fruit, and its leaves and fruit are used as a spice. It grows wild in the Judean mountains but not in Galilee, which explains the statement of the Talmud that the inhabitants used to mock the Galileans for setting such high store upon coriander (*kusbar*), saying: "*Kusbar, kusbarta*, who classed you among the spices?" (TJ, Dem. 1:1, 21d). Since its seed has a pungent taste, it was used for adulterating pepper (Tosef., BB 5:6). The eating of coriander was regarded as ensuring "fleshy children" (Ket. 61a).

CORIAT, family of scholars originating in Marrakesh. The first known member was ISAAC (1) CORIAT (1580), *dayyan* of the community, kabbalist, and the author of works of which only fragments, published in the writings of his descendants, have survived. SOLOMON edited the *Azharot of Isaac b. Reuben *al-Bargeloni (Leghorn, 1650). The pious and learned ABRAHAM (1) settled in Tetuán, where his son JUDAH (1; d. 1788) was *dayyan*. Those of his works which survived the sack of the city in 1790 were published in a collection under the titles *Tofaḥ Saviv*, a selection of his father's religious decisions, and *Nofekh Sappir* (Pisa, 1812). His son ISAAC (2; d. Jerusalem, 1805) was the author of *Ma'aseh Rokem* (Pisa, 1806), containing (1) novellae on *Kiddushin* by Asher b. Jehiel (ha-Rosh), entitled *Simḥah La-Ẓaddik*; (2) his own commentary on *Kiddushin*, entitled *Paḥad Yiẓḥak*; (3) his commentary on *Bava Meẓi'a*, entitled *Ma'aseh Nissim*. Judah's second son ABRAHAM (2; d. 1806) was *dayyan* at Tetuán, Mogador, Gibraltar, and Leghorn. His work *Zekhut Avot* (Pisa, 1812) contains information on the Jews of Morocco and Leghorn. Abraham's son JUDAH (2; d. 1787 in Tetuán) wrote *Ma'or ve-Shemesh* (Leghorn, 1838), a collection of extracts of various kabbalistic works, including some of the novellae written by his maternal grandfather, Judah (Abenatar) *Attar, rabbi of Fez. ABRAHAM (3), son of Judah (2), was *av bet din* in Mogador, where his poems and liturgical songs were destroyed during the bombardment of the city in 1844. He also wrote sermons and responsa, published under the title *Berit Avot* (1848). The son of Abraham (3), ISAAC (3; d. 1905), merchant, philanthropist, and scholar, wrote *Naḥalat Avot* (1899) on various religious questions and on the practices and customs of the Mogador community. NISSIM, son of Isaac (3), represented Holland at the court of the sultan at Marrakesh at the beginning of the 20th century. SAMUEL CORIAT (d. 1853) was farmer-general of revenues and government treasurer in Tetuán. He played an important role in the economic life of Morocco from 1818 as purveyor to the sultan. His nephew ISAAC (d. 1890) settled in Mogador in 1862 on the instructions of the government, and he became one of the five merchants of the sultan. Isaac distinguished himself during the Spanish-Moroccan war of 1859–60 by his devotion to public welfare.

[David Corcos]

CORINTH, Greek city. The earliest evidence of Jews in Corinth is contained in Agrippa I's letter to Caligula (Philo, *De Legatione ad Caium*, 281). The apostle Paul spent one and a half years in Corinth, preaching in the synagogue on Sabbaths (cf. the two Epistles to the Corinthians), and through his influence Crispus and his family were baptized. The Jews were embittered by Paul's activities; they brought him before Gallio, procurator of Achea, who, refusing to judge in a religious matter, said they would have to resolve their differences themselves (Acts 18:2ff.). Corinthian Jewry apparently belonged to the lower classes. Aquila and Priscilla, with whom Paul dwelt, were weavers, and he worked with them for his bread. These Jews went to Corinth from Rome when Claudius expelled the Jews from the city. There were no direct links between the Jews of Corinth and Ereẓ Israel, but

Corinthian products were known in the Holy Land. Josephus (Wars, 5:201) mentions the Corinthian copper that coated one of the Temple gates, the Gate of Nicanor (whose special copper is also noted in talmudic sources, Tosef., Yoma 2:4; Yoma 38a), and he similarly mentions the Corinthian candelabra in Agrippa II's house (Life, 68). Vespasian, after his victory in Galilee, sent 6,000 captive youths to Nero to dig at the Isthmus of Corinth (Wars, 3: 540). Conceivably, some of them might have escaped and found haven in the nearby settlements including Corinth.

[Lea Roth]

When the Visigoths invaded Corinth in 395 the Jews moved to the neighboring island of Aegina. Jews suffered persecution by the Byzantine emperors during the 9th and 10th centuries. Roger II, the Norman king of Sicily, brought Jewish dyers from Corinth to Sicily in 1147, thereby founding the Sicilian silk industry. The 12th-century traveler Benjamin of Tudela found 300 Jews there; they were silk-weavers. The Corinth community existed during the 13th and 14th centuries, but it seems to have disappeared in later years. In 1923 the Jewish community of Corinth again consisted of 400 persons, but ended during World War II.

CORNEA, PAUL (**Cohn**; 1924–), Romanian literary historian and theoretician. After a short period in politics as a young Communist intellectual, Cornea devoted himself to an academic career and became one of the most important historians of Romanian literature and a specialist in comparative literature of international reputation. He wrote such important studies of Romanian romanticism as *Originile romantismului românesc* ("The Origin of Romanian Romanticism," 1972) and *Oamenii începutului de drum* ("The Men at the Beginning of the Road," 1974) as well as theoretical studies such as *Introducere în teoria lecturii* ("Introduction to the Theory of Reading," 1988).

[Leon Volovici (2nd ed.)]

°CORNILL, CARL HEINRICH (1854–1920), German Protestant Bible critic. Cornill taught at Marburg (1877–86), Koenigsberg (1888–98), Breslau (1898–1910), and Halle (1910–20). In 1880 Cornill published his first important work *Jeremiah und seine Zeit*, which became the basis of his commentary on the book of Jeremiah published in 1905. He also wrote a commentary on Ezekiel (1886). His account of Israel's prophets (*Der israelitische Prophetismus*, 1894, 1920[13]; *The Prophets of Israel*, 1895) and history of Israel (*Geschichte des Volkes Israel…*, 1898; *History of the People of Israel*, 1898) were pioneering works in their day. Cornill is remembered principally for his *Einleitung in das Alte Testament* (1895, 1905[5]; *Introduction to the Canonical Books of the Old Testament*, 1907), the first important critical introduction to the Bible based on the literary and historical approach of the J. *Wellhausen and K.H. *Graf school of biblical criticism.

[Zev Garber]

CORO, colonial city of Venezuela whose streets still preserve the characteristics of the epoch. It is the capital of the Falcón State, with a population of 244,341 inhabitants (2004). The city was recognized by UNESCO as a Cultural Patrimony of Humanity in 1993. It is considered the cradle of the Venezuelan Jewish community.

Even though the government of Nueva Granada bestowed upon the members of the *Nación Hebrea* the right to settle in the country in 1819, granting them their religious freedom, it was not until the years 1823–24 that the first Jews from Curaçao started to strike roots in Coro. David Hoheb and Joseph Curiel were soon followed by the families Senior, Henríquez, Capriles, Dovale, Maduro, López Fonseca, De-Lima, Correa, Castro, Da Costa, and others. All of them were of Sephardi origin and maintained intensive commercial ties with Curaçao and the West Indies.

The almost immediate economic success of this group aroused the envy and jealousy of the inhabitants of Coro, causing a wave of anti-Jewish outbursts in 1831 and a spree of riots, looting, and destruction of businesses and homes in 1855. Terrified, 168 Jews fled to Curaçao and made a claim against Venezuela demanding indemnity and the punishment of the guilty. Following an arrangement, they returned to Coro in 1859 and continued their activities in import-export and finances, achieving a high level of economic success and participation in the public and political life of the city, which helped bring about important changes in the region. Gradually the Jews became prominent in science, public health, journalism, finances, politics, and culture. Most of these Jews were Freemasons and Liberals. David *Curiel was among the founders of the first Masonic lodge in Coro.

By the end of the 19th century, however, the absence of a spiritual leader, intermarriage, the loss of liturgical elements and of the Hebrew language, and the assimilation of symbols of Catholic religiosity contributed to the erosion of group's identity. As a testimony to this prosperous community there remains in Coro a small room, restored in 1997, where Jewish worship was celebrated from the middle of the 19th century, and the cemetery that was founded in 1830 and is still in use. It was restored twice, in 1945 and 1970, and contains 175 graves. The first belongs to Haná Curiel, an eight-year-old girl who died in 1832, and the last to Sara Celinda López Fonseca, buried in April 2000. The cemetery, with its Angels' Corner, manifests unequivocally a process of cultural transference. Due to its exceptional characteristics, the municipal and regional authorities granted it the status of Cultural Patrimony

in 2003, and in 2004 it was declared a Historic Monument of the Falcón State.

In homage to Elías David Curiel (1871–1924), one of the greatest *falconian* poets, the Elías David Curiel Biennial of Literature has been celebrated since 1998. Alberto Henríquez (1919–1990) collected in his residence valuable paintings and artistic objects which he bequeathed to the Miranda University and which are exhibited in the museum and gallery that bear his name. The Fundación del Patrimonio Cultural Hebreo Falconiano preserves the Sephardi cultural heritage and maintains the Salomón Levi Maduro Vaz Library. Of this first community established in Venezuela, the brothers Herman and Thelma Henríquez were the only two Jews living in Coro in 2004.

CORONEL, NAḤMAN NATHAN (1810–1890), talmudic scholar, author, and bibliographer. Coronel was born in Amsterdam where he studied at the Etz Haim yeshivah. At the age of 20 he immigrated to Erez̤ Israel and settled first in Jerusalem and later in Safed, where he suffered from the looting of 1834, the earthquake of 1837, and the Druze revolt. He thereupon returned to Jerusalem, where he became active in communal affairs. He was one of the few to support the establishment of the Laemel School, the first modern school in Jerusalem, as well as of the Battei Maḥaseh founded in 1859 to enable Jews from abroad to spend their last years in Jerusalem. He served also as an emissary of Jerusalem in Europe. Coronel became interested in acquiring manuscripts and gained world-wide renown as a bibliographer. While in Vienna in 1872, he exchanged manuscripts with the emperor Francis Joseph, from whom he received a decoration. He sold many manuscripts to various libraries and published others, among them: *Beit Natan*, comprising variant readings of *Berakhot* (Vienna, 1854); *Ḥamishah Kunteresim (ibid.*, 1864); *Seder Rav Amram Ga'on* (Warsaw, 1865; repr. 1956); *Teshuvot ha-Ge'onim* (Vienna, 1871); *Piskei Ḥallah* by Solomon b. Abraham *Adret (Jerusalem, 1876); and *Alfasi Zuta*, on *Berakhot*, by Menahem Azariah da *Fano (*ibid.*, 1885). His own works comprise *Zekher Natan*, a compilation of religious laws for travelers (Vienna, 1872) and *Ḥakor Davar* on the law of *ḥallah* outside *Erez̤ Israel* (Vienna, 1871).

[Itzhak Alfassi]

CORONEL CHACON, SIR AUGUSTIN (c. 1600–1665), Marrano merchant. Born in Portugal, Coronel settled first in Bordeaux (1630–33), then in Rouen, and finally in London, where he acted as financial agent for the exiled Charles II. He was known on the Royal Exchange as the "little Jue," though it is doubtful whether he was circumcised or became a member of the later Jewish community. After the Restoration he acted as a Portuguese agent and is said to have first proposed the marriage of Charles II and Catherine of Braganza, for which he was knighted, having by now severed his Jewish connections. Subsequently he became bankrupt and was expelled from the Exchange. After a term of imprisonment he left England. His place of death is unknown. His widow was supported by the London Jewish community.

CORREA, ISABEL (**Rebecca**) **DE** (c. 1650), Dutch Sephardi poetess. Born in Portugal, she lived in Flanders and later in Amsterdam. She was the second wife of Nicolas (Daniel Judah) de *Oliver y Fullana, the Majorcan author and cartographer, who reverted to Judaism. The poet *Barrios described her as being "as celebrated for her beauty as for her wit." Isabel Correa is remembered as the translator of Guarini's *Pastor Fido* (1694) into Spanish, an enterprise that apart from its literary value is a mirror of feminine writing.

[Kenneth R. Scholberg / Harm den Boer (2nd ed.)]

CORSICA, Mediterranean island. Corsica is the only major Mediterranean island without a Jewish settlement either in ancient or in medieval times. "King" Theodore, the German adventurer who temporarily established his rule in Corsica in 1736, invited Jews and Protestants to settle under his protection, and among the accusations made against him was that he was addicted to magic and the Kabbalah and had induced Jews and Greeks to settle in his kingdom. When in 1757–68 General Paoli set up an independent Corsican regime, he attempted to encourage the settlement of Jews from Leghorn by promising them naturalization and autonomy. At the end of the 19th century a few families settled in Bastia and established a small community that maintained a stable population of up to 150 through the second half of the 20th century.

[Cecil Roth]

CORUNNA (Sp. **La Coruña, Coruniya**), Atlantic seaport in N.W. Spain. Fragments of tombstones found in Corunna show that Jews lived there in the 11th and 12th centuries. A street called Sinagoga is still to be found in Corunna. The Jewish community evidently began to expand in the 15th century along with other centers in northern Castile as Jews moved

there from the south. The Jews of Corunna engaged in maritime trade with Castilian and Aragonese ports. In 1451 the community contributed 300 gold pieces toward ransoming a Jew of Murcia who had been taken captive. A tax of 1,800 maravedis was collected from the community in Corunna and others in the vicinity in 1474 by Jacob Aben Nuñez. One of the most beautiful illuminated Hebrew manuscripts in existence, the so-called Kennicott Bible in the Bodleian Library, Oxford, was completed in Corunna, for Isaac, son of Don Solomon de Braga, in 1486. The Corunna community apparently flourished until the expulsion of the Jews from Spain in 1492.

[Haim Beinart]

CORVÉE, forced labor imposed by a conqueror on the conquered, or by a government on the citizens under its jurisdiction. Corvée labor is one of the most obvious features of the centralism in ancient Near Eastern states; it manifests itself in vast building projects requiring the labor of large forces of manpower over lengthy periods. The type of labor differed from place to place and from period to period. Various terms indicative of this function are also to be found in the context of landownership, occupations, conditions of tenancy, etc. Women as well as men could be drafted for forced labor, and even animals were requisitioned for some purposes. On the other hand, certain individuals, members of certain crafts, and various social strata and settlements might be exempted from the corvée, as a personal or collective privilege.

The diversity in the forms, terminology, and origins of the corvée is likewise reflected in the biblical text. Three separate terms are used, but they are sometimes juxtaposed, a sign that the original distinctions have become blurred (see Ex. 1:11–12): (1) *mas oved* (Gen. 49:10; Josh 16:10, etc.; "compulsory labor"), and sometimes *mas* alone (e.g., I Kings 4:6; 5:27). This expression is derived from Canaanite *massu*, "corvée worker," attested at *El-Amarna and *Alalakh. A Hebrew seal dating from the seventh century B.C.E. reads "belonging to Pelaiah who is in charge of the *mas*." (2) *sevel* (= Akk. *sablum*), a term found in the Mari documents (18th century B.C.E.). Its particularized meaning is a labor unit for emergency use. It appears three times in the Bible, I Kings 11:28; Psalms 81:7; and Nehemiah 4:11. Cognate nouns from the same stem are also found in scripture: *sivlot* ("burdens": Ex. 1:11; 2:11; 5:4–5; 6:6–7); *sabbal* ("burden-bearer": I Kings 5:29; II Chron. 2:1, 17; 34:13); *subbolo* ("his burden": Isa. 9:3; 10:27; 14:25). (3) *perekh*, sometimes said to be a term, Mesopotamian by origin, for forced labor; but its general meaning in the Bible seems to be "harshness" or "ruthlessness" (Ex. 1:11–12; Lev. 25:43, 46; Ezek. 34:4). The children of Israel became familiar with corvée labor (Ex. 1:11, et al.) in the course of their wanderings, inasmuch as the slavery in Egypt was a prolonged period of compulsory labor. During the Israelite conquest corvée labor was one of the indications of the nature of relations between the Canaanite population. According to the biblical account, sometimes the Israelites were tributaries of the Canaanites and sometimes the position was reversed (Gen. 49:15; Judg. 1:33, et al.). There are those who think that by compelling the Gibeonites to become "hewers of wood and drawers of water" (Josh. 9:21) Joshua was in fact imposing on them corvée labor. Corvée labor became a permanent institution only in the period of the monarchy. According to II Samuel 20:24, the minister who was "over the levy" was one of the highest officials in David's regime. It seems that he was a foreigner, attached to the royal staff for his expertise. The same official served Solomon and Rehoboam (I Kings 4:6; 12:18; II Chron. 10:18). Possibly, at first, only foreign elements in the country were obliged to submit to corvée labor (I Kings 9:20–22; II Chron. 8:7–9); only later was Solomon forced to demand compulsory labor from the population to carry out the vast building projects he had undertaken. Some scholars have supposed that *mas oved* was the term applied when foreign manpower was used and that *sevel* was indicative of an Israelite labor force. Yet such a distinction is not sufficiently evident, even if the corvée imposed by Solomon upon the tribes of the House of Joseph was called *sevel* (I Kings 11:28). Mendelsohn suggested that *mas* (or *sevel*) was the corvée exacted for short periods from freemen. According to his view, the term *mas oved* means "state slavery." The Bible states that Solomon sent thirty thousand men to hew cedars in Lebanon for the building of the Temple, in monthly shifts of ten thousand (I Kings 5:26–28). Similarly, he had at his disposal some seventy thousand "corvée workers" and eighty thousand "hewers in the mountains" (I Kings 5:29ff.). There is a hint of the continuation of the corvée tradition in the reign of Asa (I Kings 15:22). Asa built Geba Benjamin with stones taken by his subjects from Ramah: "Then King Asa made a proclamation unto all Judah; none was exempted…." (i.e., none could refuse the corvée). According to II Chronicles 34:13, King Josiah repaired the Temple with the labor of *sabbalim* ("corvée workers"). There was also corvée labor during the period of the return to Zion. The wall around Jerusalem was built by corvée laborers (Neh. 4:11).

[Hanoch Reviv]

CORWIN, NORMAN LEWIS (1910–), U.S. radio and film writer, director, and producer. Corwin, who was born in Boston, first achieved prominence in the 1930s with dramatic scripts for CBS radio. His highly experimental programs in the series "Columbia Workshop" and "Columbia Presents

Corwin", many of them proclaiming the menace of Fascism, blazed a trail in radio script writing. His style gave his work a literary distinction new to radio, while his production technique had a vast influence on broadcasting both in the United States and in Great Britain. Some of his scripts were collected in *Thirteen by Corwin* (1942) and *More by Corwin* (1944). His most famous radio play was *On a Note of Triumph* (1945), written to celebrate the Allied victory in World War II. In 1949 he joined the United Nations as chief of special projects in radio and later went to Hollywood to write film scripts. He wrote and directed the Broadway productions of *The Rivalry* (1959), a documentary drama based on the Lincoln-Douglas debates over slavery and national unity, and *The World of Carl Sandburg* (1961), a dramatic mélange of the poems and sayings of the American poet.

[Jo Ranson]

COSAŞU, RADU (**Oscar Rohrlich**; 1930–), Romanian writer and journalist. Cosaşu drew attention with his novels *A înţelege sau nu* ("To Understand or Not," 1965), surveying Romanian society from the bourgeoisie to the Communists immediately after the Nazi defeat, and *Maimuţele personale* ("Private Monkeys," 1968), which deals with illusion and reality. From the early 1980s, he was recognized as one of the Romania's most important novelists. One of his most favorite themes is the decline of Communist and utopian illusions, especially among Jewish families, as in *Meseria de nuvelist* ("Novelist by Profession," 1980) and *Supravieţuirile* ("Surviving," 3 vols., 2002–5). The milieu of Romanian Jews who settled in Israel is described with a sympathetic irony in *Mătuşile din Tel Aviv* ("The Aunts from Tel Aviv," 1993).

[Leon Volovici (2nd ed.)]

COSELL, HOWARD (**Howard William Cohen**; 1920–1995) U.S. sportscaster, commentator for ABC's "Monday Night Football" from 1970 to 1983; one of the most outspoken, colorful, and controversial national sports reporters and personalities in American broadcasting history. Cosell was born in Winston-Salem, North Carolina. His father had arrived in the United States from Lodz as a child and his mother was born in Worcester, Massachusetts, the daughter of a rabbi. After serving as an army major in World War II and a lawyer in New York City, Cosell joined ABC as a radio sports reporter in 1956 and first gained national attention in 1959 with his commentaries on world heavyweight fights, and then for his work on ABC's *Wide World of Sports*. But it was Cosell's relationship and interviews with the heavyweight champion Cassius Clay in the 1960s that thrust the sportscaster to the center of racial controversy in the United States. Cosell was the first person to use publicly the champion's black Muslim name Muhammad Ali, and in 1967 he vigorously defended him against charges of draft evasion. Cosell's meteoric rise as a sports journalist paralleled the equally meteoric career of Ali, as Cosell was the broadcast commentator for every one of Ali's fights in the 1960s and 1970s. But in the emotion-charged era of the Vietnam War and civil rights agitation, the relationship between the provocative black from Kentucky and the equally forthright Jewish lawyer from New York evoked a storm of protest and expressions of antisemitism, with many demanding that Cosell be fired. "I've been more vilified than [mass murderer] Charles Manson or Richard Nixon," he said.

In 1970, Cosell was hired to launch an innovative venture in television, the broadcasting of football in prime time, and the overwhelming success establishing "Monday Night Football" as an American tradition was attributed in large part to Cosell. Considered candid, opinionated, often insightful but also annoyingly verbose, his provocative style redefined sports play-by-play and "color" commentary. Cosell's shrill speaking style, incessant preaching, overbearing manner, and abrasive personality were irritants to many – "I tell it like it is" was his famous pronouncement – but they made him, according to one poll, both the most liked and most hated TV reporter in the country.

Cosell hosted his own show, *Saturday Night Live with Howard Cosell*, in the fall of 1975, but it was canceled after three months. He provided color commentary on ABC's "Monday Night Baseball" beginning in 1976 and hosted numerous other sports commentary shows on both television and radio, including *Speaking of Sports*, *Speaking of Everything*, and *Sportsbeat*. Cosell grew disenchanted with boxing and quit the sport after a brutal, one-sided fight between Larry Holmes and Randall Cobb in 1982, and he left "Monday Night Football" before the start of the 1984 season, claiming that the NFL had "become a stagnant bore." Cosell retired from ABC in 1985, and the following year he became a sports columnist for the *New York Daily News*.

Cosell was elected to the American Sportscasters Hall of Fame in 1993 and the National Sportscasters and Sportswriters Hall of Fame in 1993. In a July 2000 ranking of sportscasters of the 20th century by the American Sportscasters Association, Cosell finished second, followed by Mel *Allen.

The product of a non-religious family – his brother was bar mitzvahed though not Cosell, and his father would go to synagogue on holidays – Cosell never involved himself in the life of the Jewish community. That all changed after he covered the 1972 Olympics, with the kidnapping of Israeli athletes from Building 31 in the Olympic Village and their subsequent murder at the airport in Munich, West Germany. "I'll tell you when you know you're Jewish," he said in an interview, "you know you're Jewish when you're lying on the slope of a hill 30 feet from Building 31 and Dachau's [22] miles away. . . . When you undergo the experience that I underwent in Munich, you realize that no matter how you live, no matter what your feelings are about any formalized religion, in this world if you're born of Jewish parents you're Jewish. I married a gentile girl, my two daughters were not raised in the Jewish faith, but I'm Jewish." Cosell became a patron of the American Friends of

the Hebrew University, which built the Howard Cosell Center for Physical Education in Jerusalem.

Cosell, who appeared as himself in Woody Allen's movies *Bananas, Sleeper*, and *Broadway Danny Rose*, is the author of *Cosell* (1973), *Like It Is* (1974), *I Never Played the Game* (1985), *What's Wrong with Sports* (1991), and *Cosell on Sports: An Unexpurgated Look at American Sports in the Age of Big Money, Easy Drugs, and Fast Sex* (1991). "In my field, not in conceit but in fact, I am historic," he said in 1981. "I changed the nature of my profession totally, completely. I brought it a whole new look. I brought it education, I brought it literacy, I brought it questing, I brought it journalism, and there's not going to be another like me – because of the corruption of my industry it won't be allowed. Circumstances were right for me and I was a freak. It's not going to happen again."

[Elli Wohlgelernter (2nd ed.)]

COSENZA, town in Calabria, southern Italy. Jews were apparently living in Cosenza in 1093 or even earlier. It is reported that in 1311 pledges belonging to the Jewish moneylenders there were stolen. Repeated attempts were made in the 15th century by the bishops of Cosenza to tax Jewish assets. An important source of revenue was the fair of Maddalena di Cosenza, which also attracted foreign Jews journeying to Calabria. The presence of Jews at the fair of Cosenza is mentioned in the ordinances of King Ferrante I in 1465. In 1473 the Jews of Rossano complained that the Jews of Cosenza had fixed the tax rate for the other communities of the Duchy of Crotone, and in 1487 the Jews of Cosenza loaned money to the royal treasury. In 1495 almost all the Jews in Cosenza, then part of the kingdom of Naples, were forced to accept baptism. In 1540–41 the few remaining were expelled with the rest of the Jews from the kingdom. During World War II, in 1940, 1,500 Jews whom the Fascist authorities had declared aliens were sent to a detention camp at Ferramonti near Cosenza.

COSER, LEWIS A. (**Ludwig Cohen**; 1913–2003), U.S. sociologist. Born in Berlin, Coser left Germany in 1933 and went to France. In 1941 he immigrated to the United States, where during the war he worked for American government agencies. He taught at the University of Chicago (1948–50) and in 1951 was appointed professor at Brandeis University, where he founded the sociology department, and in 1968 at the State University of New York at Stony Brook, New York. Along with Irving *Howe and others, he founded the socialist magazine *Dissent* and was its co-editor for many years. Coser served as president of the Society for the Study of Social Problems (1967–68), the American Sociological Association (1975), and the Eastern Sociological Society (1983). He retired to Cambridge, Massachusetts, in 1987, where he was professor emeritus, first at Boston College and then at Boston University.

Coser was a leading proponent of conflict theory, as contrasted to equilibrium theory. Although he prided himself on separating his political and sociological thinking, he was critical of modern American sociology's abandonment of social criticism.

His best-known work is *The Functions of Social Conflict* (1956), which was listed in a 1997 *Contemporary Sociology* review as one of the best-selling sociology books of the century. Among Coser's other publications in political sociology and sociological theory are *The American Communist Party: A Critical History, 1919–1957*, with I. Howe and J. Jacobson (1957); *Sociological Theory*, with Bernard Rosenberg (1967[2]); *Sociology through Literature* (1963); a symposium on Simmel (1965); *Continuities in the Study of Social Conflict* (1967); *Men of Ideas: A Sociologist's View* (1970); *Masters of Sociological Thought* (1977); *The New Conservatives: A Critique from the Left* (with I. Howe, 1977); *The Pleasures of Sociology* (1980); *Books: The Culture and Commerce of Publishing* (1982); *Refugee Scholars in America: Their Impact and Their Experiences* (1984); and *A Handful of Thistles: Collected Papers in Moral Conviction* (1988).

[Pearl J. Lieff / Ruth Beloff (2nd ed.)]

COSER, ROSE LAUB (1916–1994), U.S. sociologist. Born in Berlin but educated in Antwerp, Rose Laub immigrated to New York with her parents in 1939. Three years later, she married Lewis A. *Coser (1913–2003), a fellow refugee from Nazi Europe, who, like Rose, was a committed socialist and also became an eminent sociologist. Both Cosers received their Ph.D. in sociology from Columbia University, Lewis in 1954 and Rose in 1957. Like many women in academia at that time, Rose Coser followed a much more difficult career path than her husband, working for many years as a research associate first at Columbia and then the University of Chicago and later in the psychiatry department of Harvard Medical School. She also held positions as an instructor and then assistant professor at Wellesley College (1951–59) and as associate professor at Northeastern University (1965–68). In 1968, Rose and Lewis Coser both became professors at the State University of New York at Stony Brook, where they remained until their retirement in 1987. Rose Coser published extensively and made many important contributions to the fields of medical sociology, sociology of the family, and gender roles. Her major works include *Life in the Ward* (1962), *The Family: Its Structure and Functions* (1964 and 1974), *Life Cycle and Achievement in America* (1972), *Training in Ambiguity: Learning Through Doing in a Mental Hospital* (1979), *Access to Power: Cross-National Studies of Women and Elites* (1981), *In Defense of Modernity: Complexity of Social Roles and Individual Autonomy* (1991), and *Women of Courage: Jewish and Italian Immigrant Women in New York* (1999, published posthumously). An ardent feminist and vocal supporter of affirmative action

and social justice, Coser was a founder and frequent contributor to the journal *Dissent* and served on numerous editorial boards. She was also actively involved in professional associations, serving as president of the Society for the Study of Social Problems (1973–74) and the Eastern Sociological Society (1984), as well as vice president of the American Sociological Association (1985–86). Her papers are found at the John J. Burns Library at Boston College.

COSMETICS.

In Ancient Times

Cosmetics, for the care and adornment of the body, were widely used by both men and women in the ancient Near East. The use of cosmetics was widespread among the poor as well as the wealthy classes; in the same way that they used to wash the body, so they used to take care of it with substances that softened the skin and they would anoint (from the root *swkh*) the body with oils and ointments (eg., Ezek. 16:9), as is shown by the discovery of a great deal of pertinent archaeological material, dating from the third millennium B.C.E. Since the expensive cosmetic materials were used in small quantities, special containers were produced for them, and many bottles and small flasks made of porphyry, stone, bone, ivory, and glass have been found. Commonly discovered also are flat slate slabs with depressions in the center, which were used for grinding and mixing ingredients; small mortars, usually made of stone; and long thin metal, wood, bone, or ivory spatulas used for mixing or applying the cosmetics. Good examples of these implements, often lovely and in many diverse styles, were found in Gezer, Tel Beit Mirsim, Megiddo, and Hazor.

In the ancient Near East the use of cosmetics by men was mainly restricted to the rubbing of oil into the body and the spreading of the oil over the hair of the head and the beard (Ps. 133:2), but occasionally a facial cream or lotion was used to protect the skin against the heat of the sun. Women used preparations to beautify the hair, to color eyelids, face, and lips, to anoint exposed skin and the whole body (Esth. 2:12), and to care for the nails. Cosmetics were also used medically and were sometimes connected with cultic worship and witchcraft. They were made by expert craftsmen who imported the raw ingredients, especially from Arabia and India, and adapted them for local use. The very common creams for treating the skin, particularly important in the hot climate of the east, were compounded of oils and fragrances. Sometimes the oil in these creams was extracted from olives, almonds, gourds, sesame, or other trees and plants, but animal and fish fats, which were less expensive, were more widely used. There may even have been a certain amount of wine or alcohol added to these fats to thin them and make them evaporate. Other thick base materials for cosmetics were wood ash, beeswax, and mixed oils and fats. The fragrant ingredients were usually of vegetable origin: plant leaves, fruits, buds, stalks, roots, seeds, and flowers, especially cinnamon, jasmine, rose, mint, and balsam. The fragrant components were produced by squeezing the raw materials, by cooking and afterward compressing them, or by distillation. Several early Egyptian drawings show the ingredients being placed in strong cloth sacks which could be compressed by shrinking or twisting.

Women commonly put color around their eyes (Isa. 3:16; Jer. 4:30). In addition to beautification, this seems to have had some medicinal value, for covering the sensitive skin of the lids with color prevented dryness and consequent skin diseases. For the description of eye-painting the following terms are used: *kaḥal* (Akk. *guḥlu*), e.g., "painted your eyes and decked yourself with ornament" (Ezek. 23:40); *pukh* (II Kings 9:30, Jer. 4:30). Egyptian women colored the upper lid black, the lower one green, and painted the space between the upper lid and the eyebrow grey or blue. Mesopotamian women favored yellows and reds. These colors were usually mineral-based: black often being made from lead sulfate, greens and blues from colored stones (I Chron. 29:2) or from antimony stone (Heb. *pukh*), a precious blue stone which was ground and was used along with a mixture of oil base for the application of paint on the eyes, greens from copper oxide and reds from iron oxide. Such materials were generally powdered and mixed into a preservative oil base, possibly in combination with some fragrance. They were applied either with the fingers or with a stylized spatula. Red ocher or *henna may have been used on the face, and henna was also used for dyeing the hair, which was held in place with beeswax. Lips were colored with a cream made from oil combined with red ocher, and nails were painted with pigments mixed in ash or beeswax. Cosmetic colors were also produced from burned woods, ivories, and bitumen, mixed with strong fragrant compounds to eliminate their unpleasant odors.

[Ze'ev Yeivin]

A wealth of archaeological material has been found bearing testimony to the importance of beauty treatment in Roman and Byzantine Palestine. In every archaeological museum numerous tools and receptacles used to contain and apply make-up are to be found, such as metal and bone eyebrow pencils, containers for powders and creams in the form of small cylindrical pyxes, spoons and spatulae for applying make-up, small perfume bottles, mirrors (sometimes in pairs that fitted into one another, enabling one to see the back of one's head), tweezers, pins, brooches (fibulae), etc.

[Daniel Sperber (2nd ed.)

In the Talmud

The talmudic attitude toward the use of cosmetics is basically favorable, but it is combined with warnings against its utilization for immoral purposes. This applies to ointments, perfumes, paint, and powder. Olive oil was widely used as an oint-

ment base. It was also used as a depilatory, when mixed with such substances as myrrh, flour, and chalk. The best-known ointment was the precious *balsam which was a highly praised product of the Jericho plain (Shab. 26a). Wanton women used to put it into their shoes together with myrrh, so that its scent would arouse passion in young men (Shab. 62b). This rare and costly commodity was subject to cheap imitations. There is a difference of opinion whether the biblical *ẓori* is to be identified with balsam (Ker. 6a) or whether it is a different substance (see Rashi and Naḥmanides to Ex. 30:34). However, its main use was medicinal rather than cosmetic. Besides these ointments, *rose oil, spikenard, foliatium, *laudanum, henna, most of which are already mentioned in the Bible, and others, were also utilized. Perfumes (*besamim*) were obtained in part by an admixture of dry aromatic substances to those already mentioned. The substances were both grown in Israel and imported from as far as Arabia and even India (See *Incense and Perfume). These perfumes were also utilized to sweeten the air in the home after meals (Ber. 6:6; Shab. 18a); or at weddings (Tosef. Shab. 7:16); and to perfume clothing (Ber. 53a). In the Talmud mention is made of such dyes as rouge (*sarak*), purple-violet (*pikas*, φύκες; cf. the term *pirkus*), white for the face, hair and finger- and toenails, and blue-black (*Kaḥal*) for the eyes. It was a wife's duty to beautify herself so as to appear pleasing to her husband (Tosef. Ned. 7:1, cf. MK 1:7 *ibid.*, 9b; Shab. 64b), and an enactment is attributed to Ezra that perfume peddlers should be allowed to circulate freely for this purpose (BK 82ab). The use of cosmetics during mourning (MK 20b; Ket. 4b) was forbidden. Prostitutes, of course, made a special art of painting themselves (Shab. 34a; TJ *ibid.* 8:3, 11b). For a scholar it was considered unbecoming to appear perfumed in public (Ber. 43b). An interpretation of Deut. 22:5 forbade men depilatories (Shab. 94b; Naz. 59a), which was understandable in a pagan world rife with pederasty. Against halitosis (which was a reason for divorce, Ket. 75a), women chewed peppercorns, ginger, cinnamon, and gum (Shab. 65a).

Talmudic literature contains a wealth of information on the manufacture and the marketing of cosmetic preparations. The *Avtinas family, who made the sacred incense for the Temple, took special care in its production and refused to share this art since it feared that unworthy persons would utilize its secrets for profane purposes (Yoma 38a). The Talmud also related that the women of Bet Avtinas never perfumed themselves lest people suspect that they were using sacred incense. The substances first had to be boiled in oil or seethed in water. After a time was allowed for absorption, they were poured into sealed containers, small tubes or boxes, with those for the more valuable substances made of alabaster (cf. Gen. R. 39:2). The perfume dealers had their shops in the market – Street of the Perfumers – where to this day there exists in the Old City of Jerusalem an ancient street still called by this name (*Shuk ha-Besamim*). Often such shops could be found in the "Market [street] of the Prostitutes," where the demand for perfumes was great (Ex. R. 43:7). The moral reputation of this trade was therefore not high, though it was considered indispensable and preferable to that of the tanner, who had to work with evil odors (Kid. 82a). The Mishnah decreed that a husband must give his wife ten dinars for her cosmetic needs. Rabban Gamaliel, however, said that the amount depended upon local customs (Ket. 66b). The Talmud states that Miriam, the daughter of Nakdimon b. Gorion, who lived at the time of the destruction of the Second Temple, used cosmetics to such an extravagant extent that the sages permitted her an allowance of 400 golden coins for her "perfume basket" (*Kuppah shel besamim*). The hair, both of men and women, was the subject of special care. In addition to its cosmetic aspect, there was also the hygienic consideration of keeping it free of vermin. It therefore was washed, anointed, combed, and sometimes dyed. It was cut (and thinned) regularly, and the higher the person was on the social scale the more frequently he went to the barber (Sanh. 22b). Hair was worn long, and arranged in various styles; even the special style of the high priest found ostentatious imitators (Ned. 51a). The stories of Joseph and Absalom gave the rabbis occasion to comment on the moral dangers of vanity in hairstyle (Gen. R. 84:7; Sot. 1:8). It was a religious custom to have one's hair cut before the Sabbath and festivals (cf. Shab. 1:2; MK 14a). A mourner (and someone put under the minor ban) was forbidden to cut his hair and beard for at least 30 days (MK 14aff.). Certain hairstyles, like the *belorit*, probably a kind of pigtail hanging down from the crown of the head while the rest of the hair was shorn short, and the one called *komei* (κόμη), a kind of tonsure, were forbidden to Jews "as *Amorite [pagan] custom" (Tos. Shab. 6:1), but a dispensation was made for the patriarchal family on account of its official contacts with the Roman authorities (TJ Shab. 6:1, 7d, Av. Zar. 2:2, 41a).

Beards received the same care as hair and were occasionally dyed (BM 60b; Naz. 39a). On the other hand, what was considered beautiful for men was deemed the opposite for women (TJ Ket. 7:9, 31c). Women, while not cutting their hair, would apply much care to it by arranging it skillfully in plaits and "building" it up, sometimes with the help of wigs (*pe'ah nokhrit*), using bands and nets, and adding *jewelry as well. So elaborate were these creations that it was forbidden to undo a woman's hairdo on the Sabbath because it involved transgressing the prohibitions of "building" and "demolishing" (Shab. 94b–95a). (For the requirement that married women cover their hair, see *Covering of Head.) Brides would wear their hair long on their wedding day (Ket. 2:10), as a sign of their virginity. Talmudic and midrashic sources contain much information about barbers and hairdressers, their lowly standing, and their implements and accessories. They also traded in perfumes and practiced manicure and pedicure, apart from carrying out certain medical functions such as bloodletting.

COSMOLOGY. Cosmological theories describe the physical structure of the universe. For cosmology in the Bible, see *Creation.

In the Talmud

According to R. Simeon b. Yoḥai, the earth and the heavens are like "a pot with a cover." This "cover" is the *raki'a*, the firmament. "The darkness of the firmament is that of a journey of 50 years. While the sun in the sky passes this journey of 50 years, a man can walk four miles." The distance between the firmament and the earth is the equivalent of a journey of 500 years (TJ, Ber. 1:1, 2c). The firmament is composed of water and the stars of fire, but they dwell harmoniously together (TJ, RH 2:5,58a). The heavens (*shamayim*) are an admixture of fire and water (*esh* and *mayim*) or made wholly of water (*Sham mayim*; Ḥag. 12a). Indeed, "the Holy One, blessed be He, took all the waters of the sea and with half He made the firmament and the other half the ocean. The firmament is like a pool, and above it is an arch" (Gen. R. 4:4 and 5). The earth is of the same thickness as the firmament (Gen. R. 4:5). Once every 1,656 years the firmament shakes on its foundations (Gen. R. 38:6).

There is however more than one firmament; according to R. Judah, there are two, according to Resh Lakish, seven (Ḥag. 12b). The sun and the moon are situated in the second firmament (Gen. R. 6:6). The above-quoted view of R. Simeon b. Yoḥai would imply that the world is wholly enclosed by the firmament. R. Joshua was also originally of the same opinion, that the world was "like a tent" enclosed on all sides, but later he came round to the view of R. Eliezer that it is like an *exedra*, closed on three sides only, but open on the north side, and it is from this opening that the north wind comes (BB 25b).

Originally the sun and the moon were both of the same size but God, realizing that "two kings cannot wear one crown," diminished the size of the moon. Thus what were originally "the two great luminaries" became "the greater luminary" and "the lesser luminary" of Genesis 1:16 (Ḥul. 60b). Eclipses of the sun are a sign of God's anger or displeasure (Suk. 29a). Beneath the earth is the abyss (*tehom*). There is a cavity which descends from the Holy of Holies to the abyss.

[Louis Isaac Rabinowitz]

In Medieval Jewish Philosophy

In medieval philosophy there were four types of cosmological theories: the Aristotelian-Ptolemaic, the neoplatonic, the Kalām theory, and the theory of the infinite universe.

ARISTOTELIAN-PTOLEMAIC. The medieval version of the Aristotelian-Ptolemaic cosmology asserts that the universe is a finite sphere whose center is the earth, around which nine other concentric spheres – the moon, the sun, the various planets, the stars, and the diurnal sphere – rotate. These spheres form a compact whole in which there are no gaps, or an inner vacuum, and around which there is nothing. The earth and the heavenly spheres differ in their composition. The latter are made up of a single element, ether, whose homogenous nature is free from change other than locomotion. The earth is composed of four elements, earth, water, air, and fire, whose continual transmutations make terrestrial substances subject to generation and corruption. Each of these moving spheres has a "soul," or internal moving force, which is set in motion by corresponding incorporeal substances, the Separate Intelligences. (According to some, "soul" and "intellect" are different aspects of the incorporeal substance.) According to *Maimonides, these incorporeal substances are identical with the angels (Maimonides, *Guide of the Perplexed*, 2:6). The ultimate source of motion is God, the Prime Mover, who "moves" the universe insofar as He is the most perfect substance, and therefore the object of love of all other substances (Aristotle, *Metaphysics*, 7:7; Maimonides, *Guide* 1:72; 2:1).

NEOPLATONIC. Medieval neoplatonic cosmology employs several Aristotelian notions but tries to overcome the terrestrial-celestial dichotomy inherent in the Aristotelian theory. Indeed, in some neoplatonic philosophies there is a decidedly pantheistic or monistic tendency (cf. the Christian philosopher Scotus Erigena). Solomon Ibn *Gabirol is the most neoplatonic of the medieval Jewish philosophers. In attempting to demonstrate the essential unity of the universe he applied the Aristotelian form-matter framework to every part of the universe except God and the Divine Will. The result of this extension is that every level of being that emanates from God (see *Emanation) exhibits a common universal matter and universal form. Each level of being, however, is further characterized by a specific material nature and a particular formal structure. In this way both homogeneity and diversity are accounted for. Typical of monistic cosmologies, Gabirol's system tends to be static: the emanation of the lower stages of being from God is described in non-temporal terms. The origin of the universe, as well as motion, is explained by Ibn Gabirol as the effect of God's will, which seems to serve as the mediating link between God and the universe.

KALĀM. The *Kalām cosmology employs the model of a universe consisting of atoms in a vacuum. These indivisible particles combine, separate, and recombine, forming the universe by these movements. The Kalām version of atomism differs from its Greek antecedents in that it rejects any notion of an infinite magnitude (Maimonides, *Guide*, 1:73). Atomism had virtually no impact upon the mainstream of Jewish philosophy, although a number of Karaite philosophers accepted its doctrines (see *Atomism). Abu al-Barākāt *Ḥibat Allah of Baghdad was a profound atomist but he had no influence upon Jewish thought, probably because of his conversion to Islam in his late years. Indeed, the most important Jewish representative of the Kalām, *Saadiah Gaon, was not an atomist.

INFINITE UNIVERSE – CRESCAS. One aspect of classical atomism, however, is found in the cosmology of Ḥasdai *Crescas. His philosophy constitutes a vigorous critique of Aristotle's physics and cosmology. Crescas reverts to the atomistic hypothesis of an infinite vacuum in which our universe, and perhaps others, are located. (The possibility of a plurality of universes is also found in rabbinic literature, but is rejected by Maimonides and other medieval Aristotelians; cf. Gen. R. 3; Maimonides, *Guide*, 2:30). Although Crescas does not explicitly introduce atoms into his physics, his theory of matter exhibits atomistic aspects. For example, unlike Aristotle, Crescas sees matter as requiring no external principle for its motion: bodies have a natural tendency to move. Consequently, Crescas eliminates the artificial system of intelligences as causes of motion. Finally, he rules out the distinction between the composition of the earth and the heavens in favor of the notion of a common matter characteristic of all bodies celestial and terrestrial. In several important respects Crescas' cosmology anticipates some ideas of Galileo and Newton.

"**COSMOPOLITANS**," derogatory term applied in 1949 to Jewish intellectuals in the Soviet Union, at the peak of Russian chauvinism and its struggle against Western influence in Soviet culture and science. The change to a Soviet policy directed against the Jewish people and the State of Israel had in fact begun several months earlier (November 1948) with the arrest of Yiddish writers, the closing of the periodical *Einikeyt* and the *Emes* press, and the increasing attacks on Zionism. The campaign against the "cosmopolitans," however, marked the first public attack on Soviet Jews as Jews, and is thus considered as initiating what Soviet Jews call "the Black Years," which lasted until Stalin's death in March 1953.

The campaign against "cosmopolitans" who have no homeland was initiated in articles in the central organs of the Communist Party, in *Pravda* (January 28, 1949) and *Kultura i Zhizn* (January 30, 1949). Thereafter, over a period of two months, other Soviet newspapers and periodicals, led by *Literaturnaya Gazeta* (February 12, 16, 19, 20, and March 9, 1949) published severe attacks against "cosmopolitans" with Jewish names, in the fields of art and literature (Altman, Gurevitch, Levin, Danin, and others), out of all proportion to their real importance in their respective fields. The writers of anti-"cosmopolitans" articles then began to reveal the real names of Jews using pen names, such as Yakovlev (Holzmann), Melnikov (Melman), and Zhdanov (Lifshitz), in an attempt to show that Jews were concealing their identity behind Russian names. The "cosmopolitans" were accused of hatred of the Russian people ("Altman hates anything Russian, anything Soviet") and of insulting the Russian man; of representing the Russians and Ukrainians as turning their backs on the Jews when the Germans were leading them to their death (cf. Golovanivski in his poem "Abraham"); of supporting Zionism; of insulting the memory of great Russian writers by saying that they were influenced by such "cosmopolitans" or chauvinist-reactionary writers as Heine or Bialik (cf. Isbakh in his book "Years of Life"). The wave of attacks subsided in April–May 1949, probably as a result of violent reactions in the West. Anti-Jewish policy did not cease, however, and began to take even more extreme forms in succeeding years. The term "cosmopolitans" was also applied to Jewish intellectuals in other Communist countries at later nonconformist periods.

[Benjamin Pinkus]

COSTA (**Mendes da Costa**), Anglo-Jewish Sephardi family, prominent in the 17th and 18th centuries. The founder was ALVARO (JACOB) DA COSTA (d. 1680), born a Marrano in Portugal, who escaped via Rouen to London. He was one of the prominent Anglo-Jewish personalities of the Restoration period, though he did not formally enter the community. He helped to finance Charles II during his exile. ANTHONY (MOSES; c. 1667–1747), his grandson, one of the wealthiest London merchants of his day, is (incorrectly) said to have been a director of the Bank of England. In 1727 he successfully brought an action against the Russia Company, which had refused him membership because of his religion. The company procured from Parliament a modification of its charter so as to reserve for itself the right of refusal. In 1729 he was one of the three Jewish subcommissioners appointed for the colonization of Georgia and in 1736 he was elected a member of the Royal Society. Catherine da *Costa (1679–1756), Anthony's wife, daughter of Dr. Fernando *Mendes and named after Catherine of Braganza, was a competent painter and JOHN (Abraham) was one of the three London merchants who in 1710 provided £300,000 for the provisioning of the English army in Flanders.

[Cecil Roth]

COSTA, CATHERINE DA (1679–1756), English miniature painter, daughter of Dr. Fernando Mendez, physician to Charles II. Catherine da Costa was the earliest known English Jewish artist and the first Jewish woman artist whose work has survived. A pupil of the famous drawing-master and mezzotint engraver Bernard Lens, she painted portrait miniatures of her family and of other members of the Jewish community. Among her works are portraits of her father in full 18th-century dress (1721) and of her ten-year-old son, Abraham da Costa (1714). She was married to Anthony Moses da Costa (1667/9–1747), a prosperous Sephardi merchant.

COSTA, EMANUEL MENDES DA (1717–1791), English scientist. Da Costa, who trained as a notary, became one of the eminent English scientists of his time. He was an omnivorous collector, wrote numerous papers on philosophical and scientific subjects, and belonged to several English and foreign learned societies, including the Royal Society and the Society of Antiquaries. His life was a continual struggle against adverse circumstances. In 1745–55 he was imprisoned for debt. In 1763 he was made clerk and librarian to the Royal Society, but was dismissed in 1767 for dishonesty. Subsequently, he was again imprisoned for debt in the King's Bench Prison, where much of the remainder of his life was passed. His remarkable collection of books, manuscripts, engravings, and specimens was seized and sold to pay his debts. Although his second wife was a Christian, he remained a member of the Jewish community. A large body of his correspondence with fellow savants is preserved in the British Museum (Add. Mss. 28534–44). His more important publications are *Elements of Conchology* (London, 1776), *Historia Naturalis Testaceorum Britanniae, or, the British Conchology* (1778), and an English edition of Cronstedt's *Essay Towards a System of Mineralogy* (London, 1770).

COSTA, ISAÄC DA (1798–1860), Dutch poet and writer. The precocious offspring of a distinguished Sephardi family in Amsterdam, Isaäc da Costa was brought up in the moderately Enlightened milieu that characterized the Portuguese Jewish elite of the early 19th century. In these circles much emphasis was put on the assimilation of Jews into Dutch society, and consequently Da Costa (at the early age of 13) became a member of Concordia Crescimus, a Jewish literary society. It testifies to his intellectual talents as well as to the incipient emancipation of Dutch Jewry in this period that, having obtained a higher education at the Amsterdam Atheneum, he went on to study law at the university of Leiden (1816–18). In the meantime, private tuition was provided by the Hebraist Moses *Lemans. It was Lemans who in 1813 first introduced Da Costa to the counterrevolutionary poet and philo-Judaist Willem Bilderdijk (1756–1831). In Leiden, where he attended Bilderdijk's idiosyncratic private lectures on history, Da Costa began to stress his identity as a Jew, albeit one of aristocratic ancestry. In the 1820s he expressly defended the (apparently common) belief that the Sephardim were superior by descent to the Ashkenazim. Moreover, since the Portuguese Jews had migrated to the Iberian Peninsula before the building of the Second Temple, they could not be reckoned as descendants of the Jews who had crucified Jesus. Perceiving the Enlightenment as a threat to his Jewishness, Da Costa's religious quest paradoxically resulted in his acceptance of a form of orthodox Calvinism in 1822. He shared Bilderdijk's strong interest in kabbalism and a chiliasm that focused on the second coming of Jesus Christ and the "national" conversion of the Jews. Thus, to him and to his wife, Hanna Belmonte (1800–1867), whom he had married in 1821, conversion to Christianity was both an alternative path to integration into Dutch society and a means of securing their identity as Jews. Da Costa soon became a prominent spokesman for the orthodox party within the *Hervormde Kerk* (Reformed Church). His *Bezwaren tegen de geest der eeuw* ("Grievances against the Spirit of the Times," 1823), in which he castigated contemporary Dutch society for what he regarded as its shallow liberalism, established his reputation as a disruptive controversialist. In the 1830s and 1840s, however, Da Costa concentrated on leading religious gatherings, editing periodicals, and giving private lectures on religious and historical topics. Although he had already achieved renown for his poetry, he began to be accepted as a Dutch poet of standing only after about 1840. His acclaim as a man of literature led to greater activity in public life. He developed an interest in the liberal constitution he had once rejected and labored for social and ecclesiastical reform. Da Costa always remained profoundly interested in the Jews. His *Israël en de Volken* (1848; translated as *Israel and the Gentiles*, 1850) is a history of the Jewish people from the biblical period to the middle of the 19th century, written from a Christian point of view. Many of Da Costa's poems have biblical themes. Of importance also are his studies of aristocratic Jewish families. Originally published in *Navorscher* (1857–59), they were reissued in English translation as *Noble Families among the Sephardic Jews* (1936).

[Joris van Eijnatten (2nd ed.)]

COSTA, SIR MICHAEL (born **Michele Andrea Agniello Costa**; 1808–1884), conductor and composer. Born in Naples to a family of Spanish descent, Costa studied at the Collegio Reale, Naples, and produced his first two operas for the Conservatory theater: *Il delitto punito* (1826) and *Il sospetto funesto* (1827). In 1829, he was sent by Zingarelli to the Birmingham Festival to conduct one of that composer's works (by force of circumstance he had to sing the solo tenor part instead). Subsequently he became *répétiteur* at the King's Theatre in London, which later became Her Majesty's Theatre (1830), and he was its director and conductor from 1833 to 1846, during which time he was responsible for achieving a new state of excellence in the theater orchestra and ensemble. He was thereafter conductor of the Philharmonic Society (1846) and music director of the newly formed Royal Italian Opera, Covent Garden (1847–69), which attracted several of the outstanding singers of the age – Grisi, Mario, later Lablache – from Her Majesty's Theatre.

Costa was knighted in 1869 and became the leading festival conductor in Britain, making important annual appearances at the Festivals of Birmingham, Leeds, and Bradford, among others, at which he conducted the first performances of his oratorios *Eli* (1855) and *Naaman* (1864). In 1871, he again took on the leadership if Her Majesty's Theatre, where he remained until 1879. Costa's other works include the operas *Il Carcere d'Ildegonda* (1828; for the Teatro Nuovo, Naples), *Malvina* (1829; for the Teatro San Carlo, Naples), *Malek Adhel* (1839; for the Théatre des Italiens, Paris), and *Don Carlos* (1846; for Her Majesty's); together with symphonies and much vocal music. His reputation as an opera conductor in the middle years of the last century was virtually without equal.

[Max Loppert]

COSTA, URIEL DA (**Acosta**, alias **Adam Romes**; 1583/4–1640), philosopher and free thinker. He was born as Gabriel da Costa in Oporto, Portugal, into a New Christian or Converso family, his father being a devout Catholic. After studying Canon Law at Coimbra, he became a treasurer of the collegiate church, a lucrative and prestigious position. He took minor orders and received the tonsure. In his autobiography (see below), Da Costa claimed that examining the Bible brought him back to Judaism. Then, he said, he converted his family to the version of Judaism he had worked out from the Bible. In 1614 they fled to Amsterdam to avoid persecution by the Inquisition and to practice their religion freely. Shortly afterwards, Uriel and part of the family settled in Hamburg. Very soon after his arrival at Hamburg he addressed a polemical broadside to the leaders of the Sephardi congregation of Venice, in which he criticized rabbinic Judaism as incompatible with the Torah. The Venetian rabbi Leon *Modena rebutted Uriel's theses and advised the leader of the Hamburg congregations to excommunicate him. In spite of his excommunication at Hamburg in 1618, Da Costa did not leave the city before 1623. A year later Da Costa finished his *Examen dos Tradiçoens Phariseas Conferidas con a Ley Escrita* (1624), for which he was excommunicated, arrested, and fined, and the book was burned (at least three copies must have survived, however). Even before he finished his work on the subject, an answer had appeared by Samuel da Silva, *Tratado da Immortalidade da Alma* (1623). After his banishment, Da Costa lived for four years in Utrecht. When his mother died in 1628, Da Costa returned to Amsterdam, where he sought reconciliation with the Jewish community, though he had not altered his opinions. He felt the need to belong to the group and said that he would "become an ape among apes." Having rejoined the synagogue, he soon began doubting whether there was Divine sanction for the Mosaic Law, and whether religions were more than human inventions. He was led to deism or some kind of natural religion, denying any value to institutional religion. He gave up Jewish practices, and tried to prevent two Christians from converting to Judaism. This led to his second excommunication, after which he continued to live for seven years in Amsterdam. In 1640, he rejoined the Jewish community, submitted to a public recantation of his views, received 39 lashes, and prostrated himself so that the entire congregation could tread over him. He was so shocked by what was required of him that he wrote a few pages of his autobiography, *Exemplar Humanae Vitae* (published in Limborch's *Amica collatio*… 1687, repr. 1847), and then, according to the Hamburg Lutheran clergyman Johann Mueler, committed suicide.

Da Costa became a hero of the fight against religious intolerance, and a precursor of modern Bible criticism and naturalistic thought. He has been seen as a precursor and inspirer of *Spinoza. Practically all that is known about Da Costa comes from his autobiography (Eng. tr. in L. Schwarz, *Memories of my People* (1963), 84–94). On the basis of Portuguese Inquisition archives, it has recently been proposed that Da Costa's original version of Judaism was not that of the Bible, but rather an odd kind of Marrano Judaism, that some of his mother's family practiced, and that it was only in Amsterdam that he worked out his biblical religion and his deism. Da Costa became, for the Enlightenment and the Romantic Age, a symbol of the freethinker opposing religious orthodoxy. Though his doctrines are hardly known, he has had an important influence through the story of his life on anti-religious thinkers, and has been seen as a martyr to Orthodox Jewish intolerance and as a possible source of Spinoza's views.

[Richard H. Popkin / Harm den Boer (2nd ed.)]

In the Arts

Treatment of Uriel da Costa by writers, artists, and composers has generally tended to idealize him as a victim of ob-

scurantism. The inspiring effect of a supposed link to the Spinoza case is obvious. The German dramatist Karl Ferdinand *Gutzkow, a "Young German" ally of Heine, wrote two works on the theme: the novella *Der Sadduzaeer von Amsterdam* (1834), and the five-act tragedy *Uriel Acosta* (1847). Gutzkow's heroic interpretation of the Sephardi philosopher, the first of significance in literature, inspired later works, including G. Schoenstein's brief parody in his *Humoristisch-jocoser Witz-und Lach-Almanach* (1851); a Hebrew version of the drama by S. Rubin (1856); and a Yiddish adaptation for the New York stage, with musical accompaniment, by Abraham *Goldfaden, produced in the late 19th century. Even as late as 1995 Gutzkow's depiction of Da Costa inspired the absurdist play by the Polish poet and playwright Lidia Amejko (1955–), *Męka Pańska w butelce* (The Lord's Passion in a Bottle; also produced in English and Italian). "Uriel da Costa" was one of H.M. Bien's *Oriental Legends and Other Poems* (1883), while *Uriel Acosta* (1900) was the title of a novel by the Yiddish writer John Paley. The most important 20th-century work on the subject was Israel *Zangwill's sketch in *Dreamers of the Ghetto* (1898), another idealized portrait. Later treatments of the theme were the U.S. writer Charles *Reznikoff's play *Uriel Acosta* (1921) and Yoḥanan *Twersky's biographical work of the same name in Hebrew (3 vols., 1934–45). Josef *Kastein devoted one of his literary-historical monographs to him (*Uriel da Costa, oder Die Tragoedie der Gesinnung*, 1932) and the American literary critic and poet Stanley Burnshaw (1906–) wrote an unpublished verse play entitled *Uriel da Costa* that he later made into Book I of *The Refusers* (1981).

In art there is a highly imaginative painting by Samuel *Hirszenberg depicting Uriel da Costa with the infant Benedict Spinoza. The Dutch Jewish artist Meijer Jacob Isaac de *Haan (1852–1895) is reported to have painted in 1888 the dramatic scene of his excommunication in antiquarian style.

All the musical works on the theme were inspired by Gutzkow's play, including *Uriel Acosta*, an opera by the Russian composer Valentina Serova and by general consent her most successful work, which had its première in Moscow in 1885. Subsequent compositions all took the form of stage music for Gutzkow's drama, especially for the Hebrew version by the *Habimah* company. Jacob *Weinberg's score (1921) has remained unpublished, but that by Karol *Rathaus for *Habimah's* Berlin production of 1930 has achieved a degree of permanence in the musical repertoire; later he reworked it into an independent piece in four movements.

COSTA ATHIAS, SOLOMON DA (1690–1769), founder of the Hebrew collection in the British Museum. Da Costa Athias, who is also often referred to simply as Solomon da Costa, went from Amsterdam to London as a young man, amassed a considerable fortune as a broker, and became well known for his liberal views in Christian as well as Jewish society. Some Shabbatean works which he copied are still extant. He presented the newly opened British Museum in 1759 with its original Hebrew collection of 179 printed volumes and three manuscripts which had been collected and specially bound for Charles II.

°COSTA DE MATTOS, VICENTE DA (16th century), antisemitic Portuguese writer. His book *Breve discurso contra a heretica perfidia do Iudaismo* ("A Brief Discourse Against the Treacherous Heresy of Judaism," Lisbon, 1622, 1634[2]), in 27 chapters, was intended to justify the Inquisition's burning of Judaizing *Marranos. In 1625, a second part appeared, *Honras Christãas* ("Christian Virtues"). The work is a collection of libels and invective against Judaism; the Jews are described as "the pestilence of the world" and charged with homosexuality, ritual murder, etc.

COSTA RICA, republic in Central America; general population 3,956,507 (2004), Jewish population 2,500.

History

Costa Rica was sparsely inhabited by Indians and in colonial times was considered unattractive to immigrants. Its inhabitants were mostly industrious farmers from Northern Spain who cultivated small landholdings, and their descendants are thus characteristically more European than any in any other Latin American country. There is no evidence of the presence of *Crypto-Jews in Costa Rica, and the myth of the Jewish ancestry of the Costa Ricans is not substantiated by historical evidence. In the 18th century Jews from Jamaica were involved in the illegal trade of cocoa with Cartago, but Jewish settlement in Costa Rica started only in the middle of the 19th century, with a few Portuguese Jewish families, such as Maduro, Robles, Piza, Sasso, and Chumaceiro. Originally from Curaçao and St. Thomas, these Sephardi Jews arrived in Costa Rica from Panama, which remained their religious center. Most of them settled in the capital San José, and a few in Cartago, Puntarenas, and Puerto Limón. Being affluent merchants they integrated into the local bourgeoisie, acquiring social and political prominence. A high rate of intermarriage resulted in assimilation, but a few still maintain the memory of their Jewish origin.

Following WWI and the imposition of restrictions on immigration to the U.S., a small number of Jews from Turkey ar-

rived in Costa Rica. They were followed by Jews from Eastern Europe, particularly from Poland, who became the dominant Jewish group. Immigration until 1930 was relatively free, but Costa Rica was an unkown destination. From 1931 the government required a deposit from immigrants, but relatives of former immigrants were generally exempt. In all, 556 Jews entered Costa Rica between 1930 and 1936, the largest group coming from the Polish town of Zelechow. The Polish Jews engaged in petty trade, many of them as peddlers who provided cheap merchandise on credit to the lower classes, introducing to Costa Rica the idea of installment buying. Competition and rivalry with the local merchants, many of whom belonged to other groups of immigrants, such as the Spaniards, Lebanese, Italians, and Germans, provoked a wave of antisemitism. President Ricardo Jiménez was accused by his rivals of tolerating illegal immigration of *polacos* (Polish Jews). His successor, León Cortés (1936–40), restricted Jewish immigration, and his administration was considered to represent the high point of antisemitism in Costa Rica. Nevertheless, 159 Polish Jews were admitted during his term.

During the Holocaust period Costa Rica did not become a haven for refugees. In 1937, when the Refugee Economic Corporation acquired land around the area of Guanacaste for the purpose of settling Jewish refugees from Central Europe, a court ruling decreed that the purchase of land by a foreign company for settlement purposes was illegal. Jewish immigration to Costa Rica was interrupted between 1940 and 1945, and was partially resumed in the postwar period with the arrival of refugees from Poland, probably relatives of older residents, whose number was estimated at between 165 and 250. Jewish economic security was also imperiled in 1941 in the wake of the official nationalization of all foreign-held commercial establishments, but the legislation was not enforced. Again in 1944, an abortive attempt was made to prohibit peddling, which would have been a blow to the economic position of many Jews.

Following WWII the Jews became pawns of political struggles. During the presidency of Picado Michalsky (1944–48), the government party, led by Calderón Guardia, denounced Fascism and manifested solidarity with the Jewish cause. Its Communist image, however, was used against the Jewish community by antisemitic members of the opposition, particularly by Otilio Ulate, whose election to the presidency (February 8, 1948) was not accepted by the former administration. During the civil war of 1948 Jewish houses were sacked by revolutionary forces. Two emissaries of the Jewish community, Salomón Shifter and David Sikora, approached the leader of the armed revolt, José Figueres Ferrer, and obtained his promise to respect individual liberties.

Antisemitism in Costa Rica was directed explicitly against the Polish Jews. Oubursts of anti-Jewish feeling intensified with the appointment of Ulate as president, culminating in a wave of virulent antisemitism motivated by business competition (1951–52). The Junta Patriótica Costarricense agitated for a law restricting commercial activities to native Costa Ricans, attacking Jewish homes and institutions in San José. The situation began to improve with the presidency of José Figueres (1954–58), who publicly affirmed the principle of equal rights for all Costa Rican citizens.

Communal Organization

The early Sephardi immigrants worshipped in private homes on High Holidays, but permanent communal institutions were founded by the Jews from Poland. Around 1930 they purchased a plot for a Jewish cemetery and established a *Chevra Kadisha* and two years later they established a synagogue. The communal organization, Centro Israelita Sionista, was officially founded in 1934 serving both as a religious and a Zionist center. Costa Rican Jews were not very observant, and for several years they lacked rabbinical leadership. The strongest leader of the community was David Sikora (until his death in 1968), and religious functions were filled by Herman Reifer. With time, new institutions were formed as part of the Centro Israelita Sionista – *WIZO, *B'nai B'rith, Sociedad de Damas Israelitas de Beneficencia, several Zionist and youth groups, and a social and sports club. The community maintained ties with other Jewish communities in Central America through the Federación de Comunidades de América Central.

Jewish education in a complementary framework started in 1934 on the initiative of teachers, who saw to a Jewish religious and Hebrew education. During the 1950s the school system was modernized by Heszel Klepfish, who also introduced the study of Yiddish. In 1960 the Centro Israelita opened the Jaim Weizmann day school, starting with a kindergarten and first grade. Each year a new class was opened, and in 1970 it had a full program of primary and secondary grades with 300 students. Practically all the Jewish children in San José at primary level attend the Jewish school, and the number of students remained stable at around 300. Many young Jews completed their studies in Mexican or American universities, though of late most university students preferred to complete their studies in Costa Rica.

Religious life in Costa Rica centered around the Shaare Zion Congregation, the main Orthodox synagogue in San José. The Reform Congregation B'nei Israel was founded in 1984, building its own synagogue in 1989. In addition, there was a Chabad House in San José.

Relations with Israel

Costa Rica voted in favor of the partition of Palestine and was among the first nations to recognize the State of Israel in 1948. Diplomatic relations between the two countries were friendly, based on mutual values of freedom, tolerance, and democracy, Costa Rica being the only country (apart from El Salvador) that resisted international pressure and did not remove its embassy from Jerusalem.

[Moshe Nes El / Margalit Bejarano (2nd ed.)]

°COSTOBAR, prominent Idumean of the first century B.C.E. (his ancestors served as priests of the Idumean god, Koz). At the time of Herod's capture of Jerusalem in 37 B.C.E., Costobar was given the task of blocking the city's exits to prevent the escape of all those opposing the new king. Convinced of his loyalty, Herod subsequently appointed him governor of Idumea and Gaza. Salome, Herod's sister, was given to Costobar in marriage, after her first husband's execution. Costobar seems to have plotted against the king. For twelve years he gave shelter to the sons of Baba, archenemies of Herod, and as governor of Idumea offered to support Queen Cleopatra of Egypt in her attempt to obtain control of territory. According to Josephus, he was pardoned by Herod after the plot was discovered, although he was eventually divorced by Salome, who revealed the full extent of her husband's treachery. As a result, Costobar, together with the sons of Baba, were seized and put to death (c. 25 B.C.E.).

[Isaiah Gafni]

COTA DE MAGUAQUE, RODRIGO DE (fl. 1470), Spanish Converso poet. He was related to Diego Arias de Avila, the chief paymaster of Castile. Probably in the 1480s, Cota de Maguaque, incensed at not being invited to an Arias family wedding, wrote an *Epitalamio* ("Epithalamium") satirizing the groom. This contains many allusions to Jewish customs of the period. Cota de Maguaque was not content merely to convert. He felt or feigned hatred toward his former coreligionists, and sided with the "Old Christians" in their persecution of the Conversos. This animosity inspired the bitter satire directed against him by Antón de *Montoro. Cota de Maguaque was long credited, erroneously, with the authorship of many important 15th-century Spanish poems. There is no doubt, however, about his composition of the *Diálogo entre el amor y un viejo*, the deep humanity of which is in marked contrast to the superficiality and artificiality of the poetry of the period.

[Kenneth R. Scholberg]

COTLER, IRWIN (1940–) Canadian professor of Law, human rights activist, Jewish communal leader, and politician. Cotler was born in Montreal. He studied law at McGill University and did graduate work at Yale University. Returning to Canada, Cotler accepted an appointment at Osgood Law School in Toronto and, at the same time, became a special assistant to John Turner, federal minister of justice. In 1973 Colter moved to McGill Law School to teach international and human rights law.

Active in Canadian and Jewish affairs, he was counsel to the Deschenes Commission of Inquiry in the matter of bringing Nazi war criminals in Canada to justice, a member of the International Commission of Inquiry into the Fate and Whereabouts of Raoul Wallenberg, and the Canadian Human Rights Tribunal Active in Canadian Jewish life. In the early 1980s Cotler served as president of the Canadian Jewish Congress. A Zionist and advocate of Middle East rapprochement, Cotler helped found Canadian Professors for Peace in the Middle East and long worked to promote a dialogue between Israelis and Palestinians. As a passionate champion of human rights, Cotler served as legal council to many prisoners of conscience including Andrei Sakharov, Nelson Mandela, Jacob *Timmerman, and Natan *Sharansky. In 2003 Cotler helped win acquittal for Egyptian democracy advocate Saad Ibrahim, imprisoned by Egyptian authorities.

Asked to become a candidate for the federal Liberal Party, in 1999 Colter easily won election in the heavily Jewish Montreal riding of Mount Royal and was twice reelected. Passed over for cabinet office by former prime minister Jean Chretien, Coster was appointed in 2003 by newly installed prime minster Paul Martin as justice minister and attorney-general of Canada. Among his first and more controversial tasks, Cotler had to deal with the thorny issues of legalization of gay marriage, the decriminalization of marijuana, and the monitoring of the federal government's application of its anti-terrorism legislation.

Cotler's wife, Ariela, was no stranger to the political world, having worked in the office of Israeli Prime Minister Menaḥem *Begin.

[Harold Troper (2nd ed.)]

COTTBUS, city in Germany. Jews are first recorded in Cottbus in 1448. They were expelled in 1510 and not allowed to enter the city until 1712 and 1739, when Jewish wool merchants from Poland were permitted to stay temporarily for business purposes. From the middle of the 18th century a few individual Jews were allowed to settle permanently and to open businesses, but a community was not formed until 1858. It grew from around 40 in the first half of the 19th century to 128 in 1871 and 460 in 1895. The first rabbi was Marcus Dienstfertig (1872–95), followed by Solomon Posner (1895–1935). The synagogue was erected in 1902, and in 1933 the community had two charitable institutions, two cemeteries, and five cultural societies. In 1930 a training farm was established near Cottbus, under the auspices of the Reichsbund Juedischer Frontsoldaten. In 1933 there were around 450 Jews in Cottbus. From May 1933 the Jews were prohibited from taking part in the annual fair in Cottbus, and in June all Jewish employees were ousted from the trade unions and deprived of their jobs. The majority of the Jews emigrated from Cottbus after 1933, and by May 1939 only 142 were left. Most were deported in 1942. In 1943 Polish Jews were brought to a forced labor camp at Cottbus. The community was not reinstituted after the war.

[Chasia Turtel]

COTTON, plant mentioned under the name *karpas* (derived from the Sanskrit *karpasa*) in the Book of Esther (1:6) in the description of the magnificent ornamentation of Ahasuerus' palace. In the Mishnah cotton is called *ẓemer gefen* ("vine wool") as its leaves resemble those of the vine (*gefen*). Mentioned several times in rabbinic literature, it was apparently an important crop. This is attested by the Greek scholar Pausanias, who in the second century C.E. wrote (5:5) that "the only Greek country that raises cotton is Elea. There it is delicate, like the cotton that grows in Judea, but less yellow." *Kutnah*, the modern Hebrew term for cotton, is derived, as is "cotton" itself, from the Arabic. In talmudic Hebrew and in Aramaic, however, its meaning is "flax" (cf. Shab. 110b). It is evident from the Mishnah (Kil. 7:2) that the cotton grown in Ereẓ Israel was a perennial, probably the species *Gossypium arboreum*. The annual or biannual species, *Gossypium herbaceum*, of Indian origin, began to be cultivated at a later date. Varieties of American cotton, though introduced to Israel only in the late 1950s, are grown extensively, and constitute one of Israel's major crops.

COTTON, JACK (1903–1964), British businessman. Born in Birmingham, Cotton became an estate agent in that city in the 1920s, and, after World War II, emerged as probably the best-known figure in the world of English property development. Realizing the enormous demand that peace would bring for homes and offices, he secured financing for major projects by giving a share in the development of properties to big companies which owned the land, especially banks and insurance firms. Cotton's City Centre Properties developed the Bull Ring area in central Birmingham and many areas of central London as well as the Pan Am Building adjacent to Grand Central Station in New York. A loyal Jew and Zionist, Cotton was vice president of the largest Birmingham Orthodox synagogue and donated three chairs to Israeli universities; he also funded the building of the Cotton Terraces at London Zoo.

°COUDENHOVE-KALERGI, HEINRICH VON (1859–1906), Austrian diplomat, philosopher, and author. He professed to having been an antisemite in his youth, but during a sojourn in Turkey and Japan became interested in Oriental religions and consequently in the Jewish legacy. Among 26 languages he knew Hebrew, which he acquired from the rabbi of Pobezovice (Ronsperg). Jewish scholars, among them Armand Aharon *Kaminka, were frequently guests at his castle. A practicing Roman Catholic, he used to leave mass demonstratively on Good Friday at the prayer for "perfidious Jews." In 1901 he published *Das Wesen des Anti-semitismus* (Eng. ed. 1935, *Anti-semitism throughout the Ages*), one of the most successful non-literary anti-antisemitic works of the 20th century. In this book he expressed the view that the Jews had always been a minority, first as monotheists in a polytheistic world, and later as non-Christians in a Christian world. He denied the validity of race and regarded the antisemitic movement in his day as a result of envy, semi-education, and intolerance. At present its root lay in the fanaticism instilled in the child when taught that the Jews had crucified Christ. Coudenhove welcomed Zionism but thought that Palestine was unsuitable for its aims. He suggested progressive assimilation for Western Jews and the founding of a Jewish state for East European Jews. An unsatisfactory solution of the Jewish question would endanger the future of Western civilization. His Judaic library and manuscripts were deposited in the synagogue of Pobezovice and destroyed with it by the Nazis in 1938. His son, RICHARD NICHOLAS (1894–1972), was the founder of the Pan-European movement after World War I. He re-edited his father's book with a preface of his own (1923), and in 1937 published *Judenhass*, in which he states that antisemitism in the 1920s had developed mainly as a weapon against Marxism and was an outcome of the pauperization of Central Europe. Zionism had turned the Jews from a despised caste into a hated nation. Basically the Jewish question was only one of the minority problems. It would find its solution when "nation" became a cultural definition rather than one of blood (see *Autonomism; S. *Dubnow). In 1937 he suggested Jewish colonization of Rhodesia, assuming that Great Britain might be interested in easing her position in Palestine in this way. His first wife, the Viennese actress Ida Roland (1884–1951), was of Jewish origin.

COUNCIL OF FOUR LANDS, central institution of Jewish self-government in Poland functioning from approximately the middle of the 16th century until 1764, and representing the Jewish communities associated in their respective provinces ("Lands"), principally four in number. See *Council of the Lands.

COUNCIL OF JEWISH FEDERATIONS AND WELFARE FUNDS, association of U.S. Jewish community organizations. The Council was first organized in 1932 by Jewish Federations in 15 cities, absorbing the work of two predecessor organizations: the Bureau of Jewish Social Research and the National

Appeals Information Service. The Bureau of Jewish Social Research was founded in 1919 as a merger of the Bureau of Jewish Philanthropic Research, the Field Bureau of the National Conference of Jewish Social Service, and the Bureau of Information and Statistics of the American Jewish Committee. It conducted local studies of Jewish communities and special studies affecting Jewish Federations and the service areas of their affiliates. It also compiled statistics for various fields of local Jewish service. The National Appeals Information Service was organized in 1927 by 41 Jewish Federations.

The Bureau of Jewish Social Research acted as its agent in the preparation of reports on the programs and finances of national and overseas agencies. With the organization of the Council of Jewish Federations and Welfare Funds, the functions previously performed were extended to include community planning for local Jewish services and mutual aid to Jewish Federations and Welfare Funds in conducting local fund-raising campaigns.

The Council of Jewish Federations and Welfare Funds published annual reports on developments in specific fields (*Yearbook of Jewish Social Services*, 1930–67; and *Jewish Communal Services – Programs and Finances*, 1955–68), budget digests dealing with individual national and overseas agencies, and reports dealing with budgeting, campaigning, public welfare, public relations, and business management services. When the Council of Jewish Federations and Welfare Funds was organized in 1932, there were less than 70 Jewish Federations and Welfare Funds which were raising under $10 million a year. By 1995 Jewish Federations affiliated with the Council operated in 190 headquarter-cities, serving thousands of communities, and raised about $800 million in annual campaigns. About 95% of the Jewish population of the U.S. resided in federated communities. In addition, a special effort from 1967 for the Israel Emergency Fund, which was organized in the week preceding the Six-Day War, raised hundreds of millions of dollars through associated Jewish Federations. The idea of a second line to the annual campaign was used again in the Yom Kippur War and with the resettlement of Soviet Jews and Ethiopians and Argentinian Jews. Federations are the principal sources of financial support for the *United Jewish Appeal, *United Hias Service, *National Jewish Welfare Board, and community relations agencies (outside New York City). They also provide substantial financial support to about 50 other national and overseas agencies. In addition, each local Federation supports local welfare services (family, child care, aged care, refugee care), Jewish hospitals, centers, camps, youth services, Jewish education, and local community relations. Federations were allocating less than 30% of their funds for national and overseas agencies in 1932. By 1995 overseas agencies (mainly the UJA) were receiving 38.7%; national agencies were receiving 1%; and local agencies and Federation administration were receiving 55%. The remaining 5% is due to shrinkage. This was exclusive of about $20 million provided by nonsectarian United Funds and Community Chests for the support of local Jewish services. In response to pressures from local Federations that felt that there was not enough accountability to them regarding how funds were spent overseas, complaints of a redundancy of services and bureaucracies, and with the expectation of increased efficiency and actual dollar savings as well as increased fundraising capacity, the Council was merged with the United Jewish Appeal and United Israel Appeal in 1999 to form the United Jewish Communities. One proviso stemmed the tide of decreasing contribution to Israel and overseas needs by creating a floor beneath which the overseas contributions of the Federated Communities would not fall for a specific period of time.

[Samuel P. Goldberg / Michael Berenbaum (2nd ed.)]

COUNCIL OF JEWS FROM GERMANY, organization representing the German-speaking Jewish émigrés of the Nazi period from Central Europe. Originally known as the Council for the Protection of the Rights and Interests of Jews from Germany, the Council was established in 1945 by the American Federation of Jews from Central Europe, the Association of Jewish Refugees in Great Britain, Irgun Olej Merkas Europa (formerly Hitachduth Olej Germania w'Austria) in Tel Aviv, and also joined by some refugee organizations from Belgium and France, by Centra, and the Union of Jewish Communities in Latin America in Montevideo. The Council cooperated with leading Jewish organizations dealing with restitution and compensation from Germany and Austria, and was a founding member of the Conference on Jewish Material Claims Against Germany. It has established and supports social welfare agencies and looks after the various interests of German-speaking victims of the Nazi era living outside Germany and Austria, especially in the care of aging refugees, and maintains a link with the cultural past of German-speaking Jews through publications and conferences and the support of cultural institutions. The Council initiated the establishment of the United Restitution Organization (*URO) in March 1947 and in 1954 founded the *Leo Baeck Institute, Rabbi Leo Baeck serving as the first president of the Council. The goals of the Council are to act as the organizational framework for German-speaking Jews worldwide, and to commemorate and preserve the achievements of their heritage for future generations.

[Shalom Adler-Rudel / Saul Kagan (2nd ed.)]

COUNCILS OF THE LANDS, the central institutions of Jewish self-government in Poland and Lithuania from the middle of the 16th century until 1764. The bodies in question were the Council of the Four Lands (Heb. וַעַד אַרְבַּע אֲרָצוֹת) or

council of the lands (Heb. וַעַד הָאֲרָצוֹת), the controlling body for the Jewish provinces ("Lands") of Poland, while the Council of the Land of Lithuania (Heb. וַעַד מְדִינַת לִיטָא or וַעַד הַמְּדִינָה) was the similar organization for the Lithuanian grand duchy, which was associated with the Polish crown. The two bodies were similar in structure and function. They were not constituted in either case as perpetual organizations, but were theoretically to the end ad hoc assemblies representing the permanent administrative entities, the local communities associated in their respective provinces or "Lands." The councils represent the highest form of Jewish autonomy within a regional or national framework attained by European Jewry, both in terms of territorial extent or of duration (see *Autonomy; *Poland).

Before the councils were established, the Polish government had made attempts to set up a centralized Jewish leadership. This official appointment was unpopular with the Jews. The beginnings of regional council leadership were seen in *Great Poland in about 1519. The Council of the Lands of the Polish Crown originated from the rabbinical court at the fairs held in *Lublin. It acquired the status of a central *bet din* because of its activity during the meetings of merchants and heads of the communities and because famous rabbis participated in its deliberations.

After 1533 documents refer to assemblies acting in the name of all the Jews of Lithuania. From the 1560s the tax administration of Lithuanian Jewry was centralized. In 1567 two delegates dealt with taxation matters "in the name of all Jewish communities in … the duchy of Lithuania." Ordinances originating before 1569 issued from "the elected from all Lithuania" acting on behalf "of all the communities of Lithuania whose authority is vested in us." They enjoined the holding of assemblies every three years and the election of "nine heads of the Lands and three rabbis."

Even at the zenith of the activities of the councils, the autonomy of the individual community, which had its own dependent boroughs (*sevivot*), was undiminished. The older, firmly established communities were known in Poland as *kehillot rashiyyot* ("principal communities"), and in Lithuania as *kehillot rashei bet din* ("communities of heads of the courts"), the only constituents of this council. Later, growing communities contended for the status of "principal community." Among those which succeeded after strenuous effort were *Tykocin, in Poland, and *Vilna and *Slutsk in Lithuania.

The provincial council of the *galil* ("circuit") closely resembled the Polish regional Sejmik. The relationship of the provincial council to the Council of the Lands was paralleled by that of the Sejmik to the Sejm or national diet. The Council of the Lands of the Polish Crown comprised two distinct bodies: the assembly of the *rashei ha-medinot*, elders of the provinces, and the assembly of the *dayyanei ha-araẓot* ("the judges of the Lands" or "*bet din* of the Four Lands"), composed of the rabbis representing the principal communities and provinces. The *bet din* was competent to adjudge disputes among the constituents of the council, or between the council and its constituents. The two bodies frequently functioned in conjunction. These two sections of the council also cooperated frequently in Lithuania.

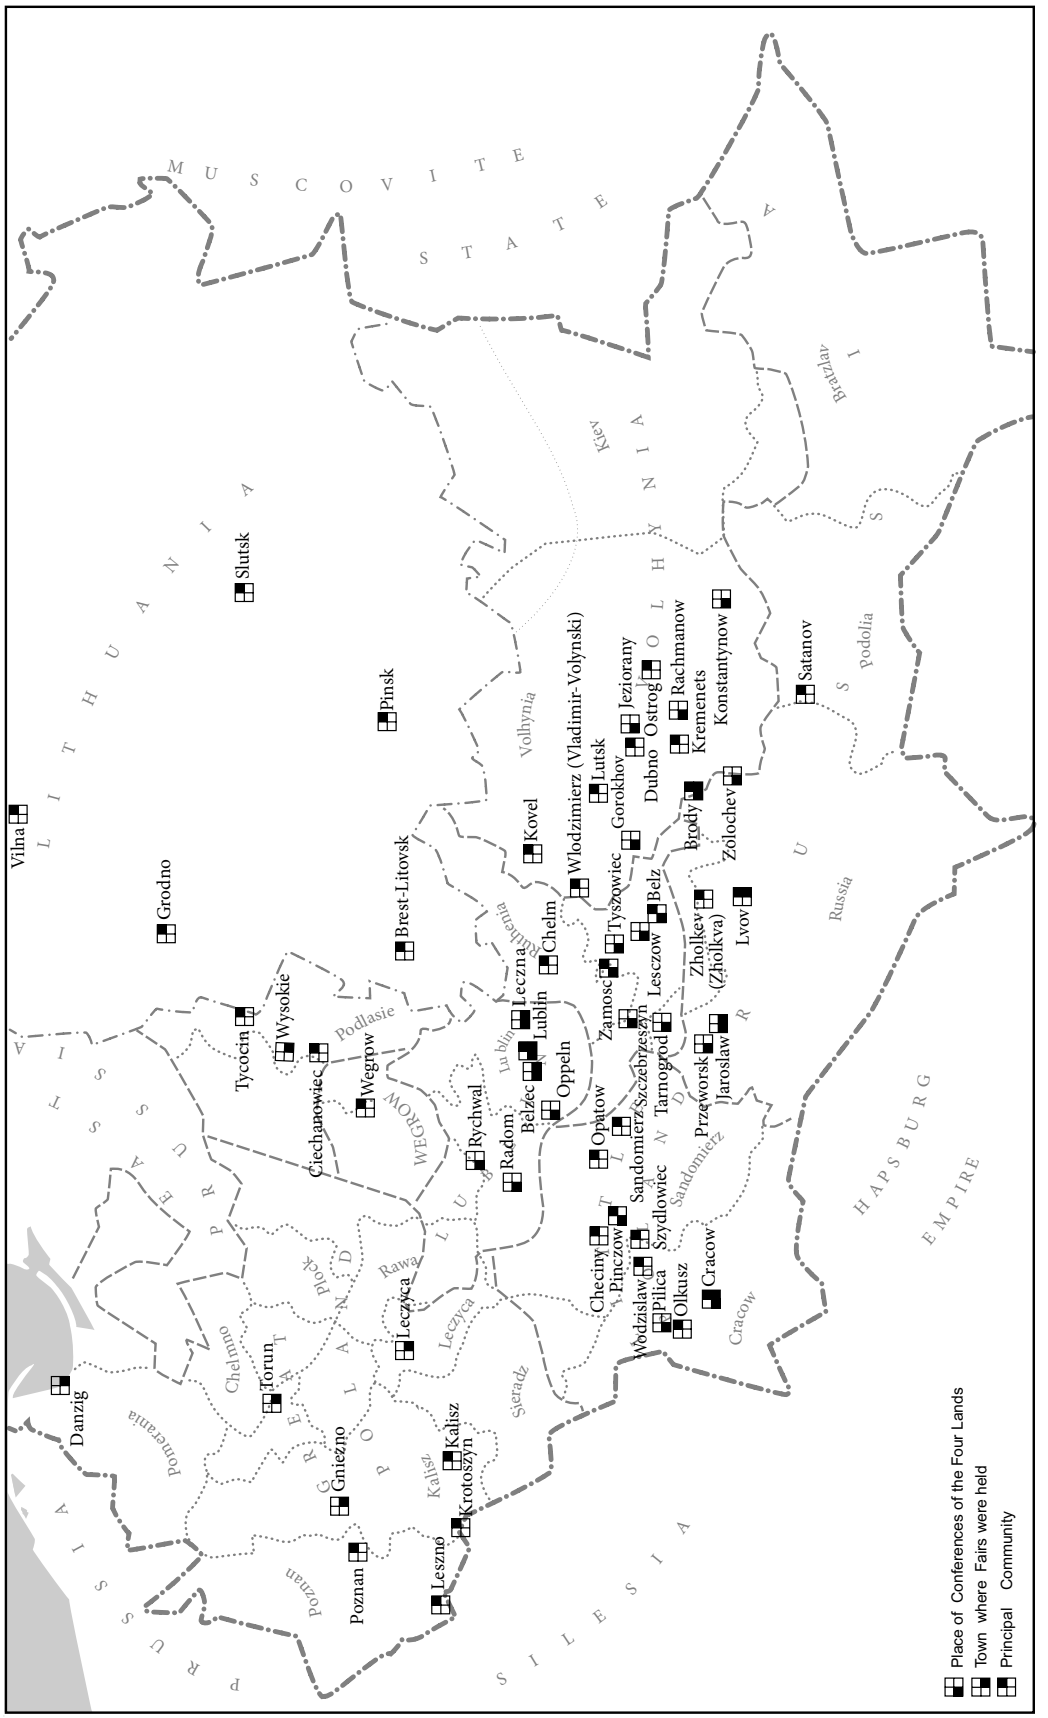
Constituents

The constituents of the council were, first, the principal communities, acting either as a recognized part of the delegation for "their province" or as an independent delegation, and, second, the provinces. The accepted designation of "Council of the Four Lands" generally denoted its principal constituents: the provinces of Great Poland (principal community: *Poznan) and Little (*Lesser) Poland (principal community: *Cracow); "the Lvov Land"; and the province of Volhynia. Reference is occasionally made to Three Lands, Five Lands, or even more. In 1717 the council comprised 18 entities, nine communities which acted in their own name and nine provinces. "The Council of the Land of Lithuania" had in 1623 three "communities of the heads of the courts": *Brest-Litovsk, *Grodno, and *Pinsk, each heading a wide area. However, even in Lithuania representatives of smaller communities were occasionally present at sessions of the council, with the right to petition on tax matters and other questions. In the regular sessions of the Council of the Lands between 20 and 30 delegates participated, in plenary sessions between 50 and 70. For the Lithuanian council a standing composition of 15 delegates was established in 1700 comprising the two heads and *av bet din* of each principal community (five at this date). The officials of the council included: (1) The "*parnas* of the House of Israel for the Four Lands," head of the council in both internal and external matters, who presided at the assemblies. He was elected from among the "heads of the Lands," not from the rabbinical delegates. (2) Second in the hierarchy was the "*ne'eman* ("trustee") of the House of Israel for the Four Lands," i.e., the treasurer and chief secretary. The position was salaried and open to rabbinical candidates. (3) The *shtadlan*, who received a high salary and was obliged to be on hand at court or at the place of the assembly of the royal Sejm to represent Jewish interests before the government. (4) There was also a *kotev* ("clerk") to the council, later joined by other clerks. (5) The function of the *shamma'im*, or assessors, was also important. The leadership of the Council of the Land of Lithuania was for a long time assumed by the *av bet din* of Brest-Litovsk. The other offices were generally similar to those of the Council of the Lands.

Both councils maintained an official minute book, a **pinkas*, which invested the record of resolutions and budgets with legal authority. Of the original *pinkas* of the Council of the Lands only a few remnants are extant (published by I. Halpern, 1945). The first detailed ordinance recorded there dates from 1580. The *pinkas* of the Council of the Land of Lithuania from 1623 until its end in 1764 is extant (ed. S. Dubnow, 1925).

The Congresses of the Councils

The Council of the Four Lands met twice yearly at the fairs of Lublin and Yarosław. During the 18th century the meetings



Main Jewish communities in Poland and Lithuania under the jurisdiction of the autonomous Jewish organization of the Council of Four Lands and the Council of Lithuania. After I. Halperin, Pinkas Vaad Arba Araẓot *(1945).*

were less regular. The venue and time of meeting of the Lithuanian council were determined as circumstances required. Between 1623 and 1764 the Lithuanian council held 37 meetings in different places; of these 15 were held in its first 30 years of existence.

The principal communities in the Council of the Lands elected their delegates under varying systems and at different intervals. The proportion of electors among the householders in the community varied with its size and the number of its dependent boroughs. The residents of the boroughs, comprising about one-quarter, or even one-third of Polish Jewry, did not have the right of election. It has been estimated that in the latter period of the council's existence approximately 1,000 householders in only 35 communities participated in the elections, i.e., about 1% of the total 92,000 adult Jewish householders. In Lithuania the percentage of electors toward the end of the council's existence for all its five principal communities was 11.3% of the total of adult householders; for Vilna 7%; for Grodno 10%; and for Pinsk 20%. In relation to the total Jewish population of Lithuania the percentage of electors was only 0.7%.

Implementation of Decisions

In 1697 responsibility for implementation of the council's decisions rested with the "heads of the Lands, who, within their borders, will ensure that all ordinances shall be implemented." In 1666–67 the heads of the Cracow community ceased to attend meetings of the council. The council was forced to resort to persuasion and threats in order to bring them back. The Lithuanian council in 1628 decided that "all the ordinances from the beginning of the *pinkas* until its end are entrusted to the care of the heads of the Lands of each community." The means of enforcement and persuasion was excommunication (*ḥerem*), which was decreed at the fairs, and by announcements in the synagogues (in Yiddish, with an admixture of Hebrew words). R. Joel *Sirkes sharply condemned imposition of the *ḥerem* by the council and recommended a general prohibition on all such decrees to be replaced by a code of sanctions, including fines, expulsion, and handing over the accused to the non-Jewish authorities. He even suggested the establishment of a central supervisory administration under the council. The heads of the communities ignored his recommendations.

In 1596 the Council of the Lands constituted itself as the supreme court for hearing appeals and sentencing serious offenders. The Lithuanian council defined its jurisdiction and authority in 1626. Each congress would henceforward introduce ordinances on its own initiative without being bound by the proceedings of earlier congresses. Unanimous agreement to the introduction of new ordinances was demanded because of the federal nature of the council.

Relations between the Council of the Lands and the Council of the Land of Lithuania were occasionally strained. The Lithuanian council was dependent on the Council of the Lands for representation before the central government, while the Council of the Lands expected Lithuania to share in its "burdens," including gifts to magnates and the sovereign, which the heads of the Lithuanian communities often thought excessive. The two bodies also disagreed over the jurisdiction of the border communities and their boroughs, and over rights of commerce.

Competence

The competence of the council lay principally in relations with the Crown and central governmental institutions, in the representation of general Jewish interests, and in formulating legislation for the communities.

The government of Poland-Lithuania was aware of the existence of the councils as independent administrative bodies and accorded them tacit recognition. Formally, the councils were only bodies administering the collection of the Jewish tax from the generality of the Jewry of the kingdom. The councils conducted negotiations, often complicated, with the authorities on the amount of the taxation to be levied. A noteworthy achievement of the Polish council was that after 1717 the amount of taxes paid by the Jews was not increased despite depreciation of the currency. This was one of the main causes of the abolition of the council by the government.

The councils divided the total of taxes due into "sympla," units of payment of equal amount. It then directed a certain community or province to pay annually a certain number of "sympla." The council based assessment and collection on tax lists and estimates. In principle, taxes were allocated according to the means of the individual. The difficulties of raising the taxes forced the councils to try different methods. The social tension entailed by tax collection increased as the debts incurred by the councils and individual communities accumulated. Especially large amounts were expended on maintaining the Jewish representation before the government, defraying the cost of bribes, and physical protection necessitating swift and unobtrusive action. Such demands gradually swallowed the greater part of the budget at the councils' disposal. They were forced to raise loans at high interest rates to meet their obligations.

At the same time the communities themselves developed a new system of taxation, the *korobka, or basket tax. This was first a commodity tax, mainly levied on *sheḥitah* and afterward extended to business transactions. In 1700 the Lithuanian council was forced to take over the basket tax. In the 18th century growing insolvency compelled the council to increase its demands while, on the other hand, the communities showed increasing independence. In 1721 it became known that a number of communities and provinces in Lithuania had united "to reject the assessment of the poll tax" which the previous council had imposed. The council issued a *ḥerem* against them. In fact, the dissidents had gone so far as to complain to the Lithuanian fiscal tribunal about the "oppressive practices" employed by the council in levying taxes. The principal communities tended to shift the burden from themselves onto the shoulders of the smaller communities and

new settlements. The revolt of the latter against the council's "acts of oppression" and the aspersion on the fairness of its apportionment expressed the accumulated bitterness of opposition to the councils. The individual community became more determined to retain the revenues under its jurisdiction. The administration of tax collection may be seen as the criterion of the councils' ability to fulfill their functions.

The councils considered themselves empowered to direct the manifold social, ethical, and legal aspects of Jewish life, and to frame ordinances regulating the affairs of the communities and the conduct of its leaders. They regarded themselves as the guardians of Jewish autonomy. The councils seldom attempted to meddle in affairs between the community and its members; they tended to uphold the authority of the leaders of the communities and the federal character of the council organization. In Lithuania the principal communities sometimes intervened between the individual member and his community. A plaintiff first had to lodge a deposit. The councils arbitrated in disputes between communities or Lands. The majority of such cases were laid before the *dayyanim* of the "Land."

Structure of Leadership

The oligarchic character of the community leadership was reflected in the councils, especially in that of Lithuania. In 1628 the Lithuanian council instructed its three constituents to ensure that "no communal administrative board shall … divulge the deliberations and confidences of the board; and shall refrain from involving individual members of the community with matters concerning the board; and shall impose severe punishment in such cases." Heads of the communities were warned against attempting to rally their own factions in opposition to their colleagues.

The council supported the leaders of the community in countering attempts at rebellion or the organization of internal opposition against the community boards. In 1623 they reaffirmed the former *ḥerem* prohibiting such actions. Severe measures were to be taken against those suspected of these attempts. Any independent organization was prohibited: a plaintiff was instructed to appear before the community board "alone, or with one other, but not more."

The councils were vehement in their censures of the "common people," the "rabble in the streets and markets" who "make light of the acts of the town optimates." It was "the duty of the leaders of every community to deter these offenders with the severest sentences, reaching even to the gates of death." This was in reaction to the continual opposition which arose because the great majority of householders in the large towns, and all Jewish residents of the boroughs, were deprived of any influence or share in the leadership. The council repeatedly issued ordinances to enforce more severe sentences for "sedition" and "scorn." Concomitantly, the problem reflected the revolt of the ascendant against the old-established communities, and in the course of time it reflected the attitude of communities where lower social classes had attained leadership. In 1650 the ordinance against intrigues was extended to "communities, settlements, and boroughs" intriguing against the principal Lithuanian communities, members of the council. In 1687 "sedition" among the communities was also denounced. Opposition to the councils intensified and became more broadly based toward the end of their existence. Artisans apparently formed a major opposition group as in 1761 the council of Lithuania felt constrained to forbid expressly their participation in the main activities and institutions of the more important communities.

Economic Guidance

The councils undertook to provide guidance in the economic sphere, in particular on occupational problems originating in the 16th and 17th centuries from the leasing and management of farm estates and related branches. Consequently their legislative activity extended to both the socioeconomic aspects and the related socioreligious problems. In regard to the first, the council instituted the *ḥezkat orenda* (חֶזְקַת אוֹרֶנְדָא), its sanction of preemptive leaseholding (see *ḥazakah*); the Jewish lessee of a farm property or related enterprise from a Polish noble for a term of three years was henceforward upheld in possession against Jewish competitors for the lease, which might even devolve on his heirs. Similarly, it became possible to acquire preemption on houses rented from non-Jews and to establish a right after three years' undisturbed possession of market shops. As long as economic and social factors encouraged Jewish development, and the councils retained their influence, such regulations generally worked efficiently and prevented Jews from undercutting one another in dealings with the Polish nobility.

The councils also tried to ensure that Jewish religious precepts were strictly observed on rented properties – that Jews observed the Sabbath, refrained from employing Christian serfs on the Sabbath, from raising pigs, or gelding animals. The councils forbade isolated families to settle in the villages. In 1607, in an endeavor to reconcile economic realities with Jewish religious precepts, the council designated the rabbinical authorities to evolve a detailed code of ordinances regulating the permissibility of charging interest (see *Moneylending).

On one socioeconomic question the two councils adopted divergent approaches. The Council of the Lands prohibited Jewish contracting of customs duties, salt mining, and the like, since the Polish nobility themselves coveted such revenues and in pressing their own claims Jewish merchants could harm the whole community. This prohibition, however, was never obeyed to the letter, even within the limits of the Lands Council's jurisdiction, while the province of Great Poland evidently felt otherwise. The Lithuanian council several times expressed its opinion that the Jewish community would benefit if the customs revenues were in Jewish hands; the council promised its support to a group of Jewish contractors and accepted money from them. Nevertheless, the Lithuanian council agreed that it could be dangerous to contract for the mint and related operations.

Both councils applied strict safeguards to Jewish credit operations to inspire faith in Jewish business integrity. Special forms of credit instruments (*mamranot*) were authorized for the use of Jewish merchants. Numerous regulations dealt with the problems of absconding bankrupts, minors, or irresponsible persons who frivolously embarked on trade or contracted debts.

The Lithuanian council issued numerous **takkanot* against newcomers to protect the rights of community residence and membership (*ḥezkat *yishuv*), domicile in the towns (*ḥezkat ironut*), and business operations (see **ḥazakah*) within the communities. A similar trend is also discernible in ordinances introduced by the Council of the Lands. The foundations of Jewish solidarity became seriously undermined in the wake of the *Chmielnicki massacres (1648), when fugitives were deprived of rights in their places of asylum.

The councils maintained an effectual system of representation before the government and *self-defense to prevent the withholding of Jewish rights or to seek their renewal. They also tried to ensure that the murderer or assailant of a Jew should be brought to trial; similarly, they defrayed the cost for defense against anti-Jewish libels. On the other hand, the Lithuanian council warned, "Whosoever out of the violence of his heart shall go to provoke or assault a non-Jew … shall not be helped by a single penny, even if as a result he should be executed." The councils actively rebutted *blood libels and charges of desecration of the *host. Toward the end of their existence, they sent a representative to Rome to obtain papal declarations against the blood libel and undertook their publication.

Torah Study

Study had a prominent place in the councils' concerns. They attended to the supply of teachers and the fundamentals of Torah education. Similarly, by giving their approval to the publication of books, the rabbis participating in the council could exercise control over publications intended for the Jewish public. Great care was devoted to the *yeshivot. In 1652 the Lithuanian council ruled that "every congregation having a rabbi shall maintain a yeshivah for adults and youths according to their capacity, as formerly laid down: all existent agreements with the rabbi to diminish the numbers of the yeshivah shall be null and void." This instruction was endorsed in later assemblies. Scholars were exempted from paying tax. Yet the attitude toward scholars fluctuated, pointing to a certain tension; there were also changes in the definition of "scholar."

Social Problems

Social problems dealt with by the councils included assisting poor girls to marry and regulating matchmaking. Communities were directed to care for the fugitives driven from the west in the Thirty Years' War, and from the east of Poland-Lithuania after the Chmielnicki massacres. A nascent class-consciousness broke through sometimes in the ordinances relating to charitable matters: the poor bride was to be provided for – after doing service in a Jewish home. Jews were instructed to preserve modesty in dress and feasting so as to prevent dangerous excess of show. The councils arranged for the collection and dispatch of "money for Ereẓ Israel," and notables who went there were given assistance.

The authority of the councils was also recognized to some extent in Jewish communities outside Poland and Lithuania. The councils were consulted in the *Eybeschuetz-*Emden controversy, while the old established community of Frankfurt sought the advice of the Council of the Four Lands.

The councils' assemblies were brought to an end by a resolution of the Polish Sejm in 1764, which established a different system for collecting the Jewish poll tax. The resolution concluded: "Whereas the comprehensive Jewish poll tax, established by statute in 1717, is abrogated … henceforward there shall be no assemblies, apportionments or other kinds of injunctions, levies or compulsions relating to the Jews as customary hitherto … from Jan. 2, 1765 … we abolish them in perpetuity." The councils did not convene again. A committee authorized by the Sejm met in Warsaw for two years to wind up the commitments of the Council of the Four Lands. A similar committee was appointed for the Lithuanian council. The provincial councils continued to convene ad hoc, but no longer functioned regularly.

The Jews of Poland and Lithuania saw the councils as an expression and symbol of social majesty and political power. After the Chmielnicki massacres Nathan Nata *Hannover depicted them as "the pillar of justice in the Land of Poland, as in the days before the destruction of the Temple in Jerusalem"; "the *parnasim* of the Four Lands were like the Sanhedrin of the Chamber of Hewn Stone (see *Temple) and they had authority to dispense justice to all Israel in the kingdom of Poland, to safeguard the law, to frame ordinances, and to inflict punishment as they saw fit." Idealization though it was, this still reflected the Jewish attitude. When the councils were terminated in 1764, a burning shame was felt that their "captains, the heads of the Lands, have been dispossessed of their mite of greatness, and even this small honor has been taken from Israel." In later generations the councils served as a paradigmatic ideal, and were invested with exemplary qualities, especially by the advocates of Jewish *Autonomism, Simon *Dubnow and his followers, at the end of the 19th and in the 20th centuries. Exponents of this ideology represented the councils as the pilot institution for national organizations of central Jewish autonomy in the Diaspora.

[Haim Hillel Ben-Sasson]

COURANT, RICHARD (1888–1972), German mathematician. Born in Silesia, Courant studied at the universities of Breslau, Zurich, and Goettingen. He remained at Goettingen as an instructor in mathematics until the outbreak of World War I, when he served in the German army. He taught at Muenster from 1919 to 1920 and then returned to Goettingen as professor of mathematics and director of the mathematics institute. Driven from his chair by the Nazi regime in 1933, Courant taught for a year at Cambridge, England. In 1936 he settled in the United States, becoming professor and head of the department of mathematics at New York University, where he remained until his retirement in 1958. In collaboration with David Hilbert, he developed methods of applying the theories of quantum mechanics to the problems of physics, which are credited with later paving the way for the practical use of electronic computers.

During World War II Courant organized a team of scientific scholars who worked on military projects. After the war he established an institute for mathematics and mechanics at New York University, which developed into one of the largest establishments of its kind in the Western world. In 1958 it was renamed the Courant Institute of Mathematical Sciences, and New York University established a Richard Courant Lectureship in his honor. On the occasion of its inauguration, Niels Bohr observed that "every physicist is in his debt for the vast insight he has given us into mathematical methods for comprehending nature and the physical world." On the occasion of his 60th birthday, a volume of *Studies and Essays* was tendered to him. Courant wrote many scholarly books and papers.

[Sefton D. Temkin]

COURLAND (Ger. **Kurland**), region of West and South Latvia, between the Baltic Sea and Western Dvina River. Throughout the centuries control of this region frequently changed hands and the attitude toward Jewish settlement there varied accordingly. During the 12th century, the local tribes were subdued by the Livonian Knights whose statutes prohibited the presence of Jews within their territories. Jewish tombstones of the 14th century confirm that there were exceptions in the case of individual Jews. The Order could not withstand its external enemies and was liquated in 1561. Under the suzerainty of Poland, Courland became a duchy. The act of surrender of the Order to Poland stipulated that "it is forbidden for the Jews of Livonia to engage in commerce or to lease the collection of taxes"; yet it was impossible to close to them the southern border between Courland and Poland-Lithuania where Jews had settled from the 13th century.

Duchy of Courland

Internal political partition resulted in a varied attitude toward Jewish settlement within the duchy. The region of Piltene, owned by the head of the Church of Courland, was regarded as the bishop's private property. The promise of gain induced him to authorize wealthy Jews to settle there. Because of its geographical position, Jewish merchants also arrived in the region by sea, from Prussia. In 1559 the bishop sold the region to the king of Denmark, who transferred it to his brother, Duke Magnus von Holstein. Piltene thus became a kind of enclave within the duchy of Courland – a situation which resulted in disputes, including military clashes with Poland. In 1585 the region was sold to Poland and two provinces were formed from the area: the province of Piltene with a Jewish population under the jurisdiction of Poland, and the other parts of Courland, where the prohibition of 1561 remained in force. The Jews in the province of Piltene were permitted to found organized communities and engaged in commerce and crafts. Following an alliance between the duke of Courland and the province, the status of the Jews deteriorated, and in 1717 an annual tax of two talers per person was imposed; it was doubled in 1719. Between 1727 and 1738, expulsion decrees were issued, but they were only partially applied. In 1750 the Polish Sejm decided to authorize Jewish residence in the province in exchange for a payment of 1,000 albertustalers. Its collection was entrusted to Jewish tax farmers. In 1783 the tax was fixed at 400 talers and the Sejm published an order on the "maintenance of the civic and economic rights of the Jews" since they paid the taxes levied on them. In 1795 when the province, together with Courland, became part of Russia, the Jews were authorized to register themselves in the merchant guilds and participate in the municipal elections, although without elective rights. In 1817 they were granted the same rights as the other Jews in Courland.

In the parts of Courland outside the province of Piltene, the number of Jews increased during the 17th century. They were regarded as "foreigners" and subjected to open hostility, especially on the part of the merchants and craftsmen, who considered them rivals. The attitude of the nobility was more tolerant: Jews acted as intermediaries in the sale of the agricultural produce of the estates of the landowners, and imported goods which were not locally manufactured; the sums collected from them to authorize their residence, or from fines, enriched the treasuries of the nobility. In times of emergency, even the duke did not refrain from leasing the collection of customs and interest to the Jews – an act which aroused the opposition of the Landtag, the legislative council of the duchy, on which sat delegates of the Church, the nobility, and the towns. In 1713 an expulsion order was issued and Jews who remained despite the order were compelled to pay one taler a day both for themselves and for those who did not pay. In 1719 Jewish residence was authorized in exchange for an annual payment of 400 talers. The payments were not made as agreed, and by 1727 the arrears amounted to 2,000 talers. The collection of these arrears was often a subject of discussion at

meetings of the Landtags. Jewish assessors were appointed to collect the tax. In 1730 the residence of Jewish craftsmen and persons engaged in commerce was authorized. This did not prevent the publication of expulsion orders in subsequent years. The situation especially deteriorated in 1760, when the expulsion was brutally carried out. During the last years of the duchy's existence, the question of granting rights to the Jews was a subject of controversial polemics.

Within Czarist Russia (1795–1917)

In 1795, after the third partition of Poland, Courland passed to Russia. The number of Jewish males in Courland numbered 4,581 in 1797. When the Senate in St. Petersburg requested information on the number of Jews, their occupations, and the existing laws with respect to them from the governor of the province, the governor, influenced by the German inhabitants, sent a negative report. The "foreigners" had been living in the region illegally for several centuries; their economic situation was degenerate, and it was doubtful whether they could be transformed into useful citizens. The Senate was not convinced by his conclusions and issued instructions that regulations similar to those applicable in other parts of the country be prepared. In 1799 a law was ratified according to which the Jews of Courland became citizens with the right to reside in the province, to establish communities, and to engage in commerce and crafts. Courland was not included within the *Pale of Settlement in 1804, and the law of 1799 was therefore interpreted as applying only to those Jews who had lived in Courland at the time of its publication and to their descendants. By 1850 the number of Jews had increased to 22,734. Their material situation was unfavorable, and 2,530 persons immigrated to the agricultural colonies of southern Russia in 1840.

With the Russian economic recovery in the second half of the 19th century, the condition of the Jews in Courland improved. Their share in the import and export trade, and in commerce and industry, increased, and many Jews from neighboring areas settled there illegally; under the instructions issued in 1893, they were authorized to remain. The Jewish population of Courland numbered 51,072 (7.6% of the total population) in 1897, and approximately 68,000 on the eve of World War I. Several communities, notably those of Libava (*Liepaja), Mitava (*Jelgava), and Vindava (*Ventspils), were prosperous. Links with nearby Lithuania had some influence on Jewish life in Courland. A number of noted rabbis officiated in communities there; prominent rabbis of *Bauska included Mordecai *Eliasberg and Abraham Isaac *Kook.

In conformity with agreements with the other minorities, Courland sent a Jewish deputy to all the *Dumas which sat during the czarist period. The defeats suffered by the Russian Army during World War I aroused unfounded suspicions that the Jews were involved in treason. This resulted in the expulsion of the Jews from western Courland in May 1915. The number of those expelled to the provinces of the Russian interior reached 40,000. In 1918 Latvia, which included Courland, was proclaimed an independent republic. Some of the refugees and expellees returned, and in 1925 – when the highest Jewish population is recorded in Latvia – the number of Jews in Courland amounted to 22,548, still a decrease of 65% compared with the pre-war figure. For the history of the Jews in Courland from 1918, see *Latvia.

The prolonged duration of Jewish settlement in the same provincial locality, strict observance of Jewish tradition without profound comprehension of its relevance, and German Romantic cultural influences combined to create a specific type of "Courland Jew" who spoke a "Courland Yiddish" vernacular with more German elements.

COURNOS, JOHN (1881–1966), U.S. novelist. Born in Kiev, Cournos was raised in Philidelphia, where he experienced economic hardship. His earliest work of fiction was a trilogy based on his own life: *The Mask* (1919), *The Wall* (1921), and *Babel* (1922). His difficult years were described in his *Autobiography* (1922). Cournos converted to Christianity and in *Open Letter to Jews and Christians* (1938; Brittish edition, *Hear Oh Israel*, 1938) he appealed to other Jews to follow his example.

COURT JEWS (**Court contractors and suppliers**). Medieval princes used the commercial and financial services of individual Jews. However, as an institution, the Court Jew is a feature of the absolutist state, especially in Central Europe, from the end of the 16th century onward. Trying as far as possible to extend his power over the whole of his territory, the ruler set up a centralized administration as part of his court, which at the same time became the power center, presenting a lavish display of luxury. Economically, a Jew could be of great service to such a ruler. In Poland many landed estates were administered by Jews (see *Arenda) and a large part of the trade in agricultural products was in their hands (see *Agriculture). This, combined with the emergence of early Jewish capitalist commercial activity by Sephardim in the *Netherlands, with their connections with Levantine trade through Jews in the Ottoman Empire, made the Jew in Central Europe particularly suited to be an agent for provisioning armies with grain, timber, and cattle, as well as a supplier of diamonds and other goods for conspicuous consumption. As tax-collecting and enlargement of the scope of taxation often lagged considerably behind the growing expenditure of court, army, and bureaucracy, this type of regime developed an almost chronic financial deficit. Here the Jews with their organizational skill and their far-reaching connections could help, through the frequent supply of commercial credit or ready cash, as also through the supply of foodstuffs, cloth, and weapons for the army, the most important instrument of the prince's power. The institution of the Court Jew did not emerge suddenly but

developed gradually during the 16th and 17th centuries. Early Court Jews like Michel *Jud and the mintmaster *Lippold were exceptions. Another phase is represented by Jews who were entrepreneurs of the mints during the "*Kipperzeit*" (a period of economic instability at the beginning of the Thirty Years' War, 1618–48, characterized by galloping inflation). The best known of this period, Jacob *Bassevi von Treuenberg of Prague (1570–1634), was the outstanding minting entrepreneur. Several Jews in the Hamburg region maintained close contacts with the courts of the neighborhood, such as Samuel Herscheider with the court of the archbishop of Bremen, Nathan Spanier with the count of Bueckeburg, and Alvaro Dinis with King Christian IV of Denmark. In the Thirty Years' War Jews were employed as army provisioners and spies by both the Swedish and imperial forces. It was only during the second half of the 17th century, with the further evolution of the mercantilist policy and baroque culture of the absolute state, that the Court Jew became a kind of requisite of the princes' court, a member of the group of officials through whom the state or territory was governed. Court Jews were then found in most of the principalities of the Holy Roman Empire, and in some of the adjoining states, such as Poland and Denmark. In some places they lived near the court, and in others the court made use of their services in one of the great commercial centers like Frankfurt or Hamburg. They were given a great variety of titles: *Hofjude, Hoffaktor, Hofprovediteur, Hoflieferant, Hofagent, Kabinettfactor, Proviantlieferant, Kommerzienrat, Kommerziendirektor*, and the higher appellations of *Oberhoffaktor, Obermilizfaktor*, or *Generalprovediteur*; many had titles from several princes. Their rights were similarly various; the chief privileges included a limited official standing, sometimes combined with a salary, direct access to the prince, exemption from the jurisdiction of the rabbinical courts (and submission to the jurisdiction of the royal court – *Hofgericht*), and freedom to travel and settle anywhere in the empire. Their highly varied activities included finance, commerce, and diplomacy, but they were responsible especially for providing the prince and his court with merchandise and money, supplying metal for the mint, provisioning the army, undertaking commercial and diplomatic missions, and investigating proposals for the promotion of trade and industry, e.g., tobacco.

Industrious and often restless, the Court Jews showed a strong drive toward success, both in business and social status, with the allied urge "to assimilate as completely as possible to his environment in speech, dress, and manners" (S. Stern, *Court Jew* (1950), 11). A decidedly dynastic attitude led them to prefer marriages with the families of other Court Jews and to attempt to secure their positions for their descendants, both contributing factors to the tendency of their families to form a particular group within Jewry. The personal relationship between the prince and the Court Jew was based not only on common interests but also on the isolation in which both lived: the prince in his omnipotence and inaccessibility and the Court Jew because of his descent and religion. Thanks to his privileged position, the Court Jew was often able to act as *shtadlan for the Jewish groups; frequently, he was the head of the community and could procure the right to establish new settlements and prepare the way for emancipation. On the other hand, his often adventurous and risky career, necessarily involved with the court intrigues, could end abruptly on the death of the prince, with the gravest consequences for the Court Jew's property, and even life.

Protestant and Catholic princes alike opened their courts to Jews. Among the earliest were Frederick William, elector of Brandenburg from 1540, and Christoph Bernhard von Galen, who was elected prince-bishop of Muenster in 1650. The latter, partly influenced by tolerant motives, was at the same time eager to include the Jews in his mercantilist-expansionist policy: in the 1650s he employed the services of the *Gomperz family on the lower Rhine; Nini Levi was made *Judenbefehlshaber* in 1651, and later Abraham Isaac became Court Jew. In the bishopric of Minden Behrend *Levi gained access to the court. From 1655 Israel Aaron was an army factor in Prussia; he was permitted to live in Berlin in 1663 and two years later became a salaried servant of the court. His widow Esther Schulhoff married Jost *Liebmann, who then succeeded to Israel Aaron's position and supplied the court with jewels. At the same time Simon Model, whose brother-in-law Bonaventura Sachs was influential at the court of Saxony, was Court Jew to the margrave of Ansbach, and Leffmann *Behrends served the court of Hanover; the latter's contribution was instrumental in the elevation of Hanover to an electorate, and he also made substantial loans to the Hapsburgs and other dynasties. Other Court Jews were his cousin Behrend *Lehmann at Halberstadt, who also gave financial assistane to Elector Frederick Augustus II of Saxony, and Aaron Beer at Frankfurt. Behrend Lehmann and his cousin both helped Frederick Augustus of Saxony to gain the throne of Poland, where he also employed Jewish factors. Samuel *Oppenheimer and Samson *Wertheimer made their careers at the imperial court in Vienna, where later they were followed by members of the *Arnstein, *Eskeles, and Pereira families. Emperor Charles VI favored employing Jews in his court; Prince Eugene of Savoy, commander of the Austrian army, depended heavily on Jewish army purveyors. During these decisive years, when Austria rose to the status of a great power through her wars with the Turks, Jewish loans probably accounted for one-third of the annual revenue. The Karlskirche in Vienna was financed by Jewish loans, as was Schoenbrunn Palace built by Maria Theresa. Five generations of the Gomperz family served at the Hohenzollern courts; later, members of the *Ephraim, Isaak, and Itzig families were mint masters. Also influential were Marx Assur, who received the title of *Hoffaktor* in Saxony and Sweden, and Behrend Lehmann's brother-in-law Jonas Meyer, who took up residence in Dresden, where Lehmann's son Lehmann Behrend also lived. The Saxon court probably used the services of the largest number of Jews; around 1707 it had connections with about 20 Jewish jewelers. At the court of Brunswick the David family, especially Alexander David, became firmly established.

As in the south, the greater number of Court Jews came from Frankfurt, so in the north, Hamburg (with Altona and Wandsbek) became a similar center. Various members of both the Sephardi and Ashkenazi communities were in the service of the Danish court, beginning with Alvaro Dinis (Samuel Jachia) at Glueckstadt; later, members of the de Lima and de Casseres families served as factors and financial or diplomatic agents. Gabriel Gomez (Samuel de Casseres) was made *Generalfaktor und Hofprovisor* by Christian IV, retaining his position on the succession of Frederick III and later being appointed *Finanzkommissarius* as well. Diego Teixeira de Sampaio (Abraham Senior) and his son Manuel (Isaac Ḥayyim) served Queen Christiana of Sweden as financial agents and resident ministers. In the service of the crown of Portugal abroad, notwithstanding their religious status, similar positions were held by Duarte Nuñes da Costa (Jacob *Curiel), his son Manuel, and his brother Jeronimo (the latter of Amsterdam), while Manuel Bocarro (Jacob *Rosales) was in the service of Spain, and Daniel and Joshua *Abensur in that of Poland. However, they were employed in diplomatic or consular, rather than financial, functions. From 1683 Jacob Mussafia, a mint master, was Court Jew of Duke Christian Albert of Schleswig-Holstein-Gottorp and later of Duke Frederick IV and his prime minister Wedderkop; he was followed by his son Joseph, who was involved in a famous law suit following the fall of Wedderkop. Other outstanding families of Court Jews in Hamburg were the Fuersts and the Goldschmidts: Samuel Fuerst served Bernhard and Johann Asolf, dukes of Schleswig-Holstein-Sonderburg; Jeremiah Fuerst became Court Jew of Duke Christian Louis of Mecklenburg in 1679 and of Sachsen-Lauenburg; Israel Fuerst served the court of Holstein-Gottorp. Bendix Goldschmidt and the Hindrichsen family were financial associates of the Fuersts; remaining in Hamburg, Goldschmidt became an agent of Goertz and later served the Danish court as a *Kammeragent*, while the Hinrichsen family took up residence in Mecklenburg-Schwerin. Ruben Hinrichsen became the salaried *Hofagent* of Duke Leopold II; Moses Josephs (Moses Wessely) of Glueckstadt was in the service of Peter I of Russia, and at the same time had dealings with the Danish court. All the petty German courts had their Court Jews: there was Moses Benjamin Wulff, Saul Samuel, and Moses Heyman at Weissenfels; Berend Wulff and Assur Marx at Sachsen-Merseburg and Sachsen-Zeitz; Samson von Baiersdorf at Bayreuth; the Van Geldern family at Duesseldorf; Simon Baruch at Kurkoeln; and the Heine family at Bueckeburg. Noah Samuel Isaac of Sulzbach, who helped finance the marriage of the Wittelsbach prince-elector Charles Albert to Princess Maria Amalia of Austria in 1722, was at the same time a banker of the elector of Cologne and of the Teutonic Order.

Joseph Suess *Oppenheimer, court factor of Duke Charles Alexander of Wuerttemberg, had dealings with many other rulers, including the elector of Cologne, the landgraf of Hesse, and the elector of the Palatinate, but it was in Wuerttemberg where his financial influence reached its peak. At the same time, he saw possibilities of political action which would transform the duchy into a modern absolutist state based on mercantilist principles. He failed, however, and was executed in 1738. By then the zenith of the Court Jew had already passed. Although Jews served the German courts as mint entrepreneurs well into the first half of the 19th century, in general, the French Revolution and the Napoleonic Wars, which gave rise to wide-ranging changes in patterns of finance, commerce, and international trade, put an end to the epoch of the Court Jews.

In all their varied activities, the Court Jews played a remarkable part in the development of international credit facilities especially in the Central European states and to some degree in northern Europe also, from the mid-17th to late-18th centuries. Generally, they were agents who arranged transfers of credit rather than possessors of vast capital in their own right; through their far-reaching commercial relationships and their organizing skill, they were able to provide funds more swiftly than most Christian bankers. Because of their specialization in the money business, they were able to furnish the silver for the mints more easily and could better act as army purveyors, once more because of their ability to organize and their network of family relationships. With their entrepreneurial spirit, they contributed in part to the process of industrialization within the frame of mercantilist policies. There is no doubt that they were instrumental in the growth of the modern absolute state, and at the end of the era there emerged a group of several important Jewish private bankers (see *Banking and *Bankers) who exemplify the transition to modern methods of economy and government, primarily the Rothschilds, the Goldschmidts, the Oppenheimers, and the Seligmanns. However, it should not be forgotten that the courts had their Christian bankers, entrepreneurs, and army agents, too, who also played a part in this development.

[Hermann Kellenbenz]

COUTINHO (also **Cotinio**, **Cothino**, **Cotinsio**, **Cutinho**, etc.), Portuguese *Marrano family, branches of which settled in Amsterdam, Hamburg, Brazil, and Jamaica in the 17th and 18th centuries. Notable among the Amsterdam branch were MOSES BEN ABRAHAM MENDES COUTINHO who in 1696 bought the printing house of David de *CastroTartas, which he owned until 1711. Among the works he printed was an edition of the Torah with the Targum Onkelos and Rashi's commentary, in 5,000 copies; SEBASTIAN COUTINHO (17th century) was one of the largest importers of sugar from Portugal and England in the 17th century; FRANCISCO DE SOUSA COUTINHO was representative of the king of Portugal in Holland and took part

in an embassy sent by the king to the Scandinavian countries in 1641. The Amsterdam Jewish journal *Neiuwsblad voor Israëliten* was published by the firm S.M. Coutinho Jr. between 1884 and 1894.

GONSALVO LOPES COUTINHO (17th century) was among the first Portuguese Jewish settlers in *Glueckstadt near Hamburg, where he established a sugar refinery, an oil mill, and a soap factory. The brothers Abendana of Hamburg were sons of Manoel Pereira Coutinho of Lisbon, five of whose daughters were nuns in a convent in that city. The family HENRIQUEZ CUTINHO was among 12 Jewish families who settled in Curaçao 16 years after the Dutch conquest in 1634. LOURENÇA COUTINHO, the mother of the poet Antonio José da *Silva, was arrested by the Inquisition in Rio de Janeiro in 1713 as a Judaizer and taken to Lisbon. She was again arrested in 1737, and subsequently died in prison.

COVENANT, a general obligation concerning two parties. It was confirmed either by an oath (Gen. 21:22 ff.; 26:26 ff.; Deut. 29:9 ff.; Josh. 9:15–20; II Kings 11:4; Ezek. 16:8; 17:33 ff.), by a solemn meal (Gen. 26:30; 31:54; Ex. 24:11; II Sam. 2:20), by sacrifices (Ex. 24:4 ff.; Ps. 50:5), or by some other dramatic act such as dividing of an animal and the passing of the parties between the portions (Gen. 15:9 ff.; Jer. 34:18 ff.). The etymology of the Hebrew word *berit* is uncertain. Most probably it was used in the sense of binding (cf. Akkadian *birītu*, "fetter"), since the terms for covenant in Akkadian (*riksu*) and in Hittite (*išḫiul*) also signify binding. Hebrew has two additional terms for covenant, *ʿedut* (cf. the parallel terms *luḥot ha-ʿedut* and *luḥot ha-berit*) and *ʾalah*. These also have their counterparts in the cognate languages: *ʿdy[ʾ]* in old Aramaic (Sefire) and *adê* in Akkadian on the one hand, and *lʾt* in Phoenician, *māmītu* in Akkadian, and *lingai* in Hittite on the other. *ʾAlah* and the corresponding terms in Akkadian and Hittite connote an oath which actually underlies the covenantal deed. The terms *berit* and *ʾalah* often occur together (Gen. 26:28; Deut. 29:11, 13, 20; Ezek. 16:59; 17:18), rendering the idea of a binding oath, as does the Akkadian hendiadys *adê māmīt* or *adê u māmīte*. For concluding a covenant the Bible uses the expression "cut (*karat*) a covenant." The same idiom is used in Aramaic treaties in connection with *ʿdy* (cf. *gzrʿdy* in the Sefire treaties) and in a Phoenician document in connection with *lʾt* (cf. the incantation from Arslan Tash). It is quite possible that this idiom derives from the ceremony accompanying the covenant, viz., cutting an animal. The expressions *hekim* (*heqim*) *berit* and *natan berit* should not be considered synonyms of *karat berit*, used by different sources. The first term means "to fulfill a covenant (already made)"; the second signifies "the voluntary granting of special privileges."

Covenants are established between individuals (Gen. 21:22 ff.; 31:44 ff.; I Sam. 18:3; 23:18), between states or their representatives (II Sam. 3:13, 21; I Kings 5:26; 15:19; 20:34), between kings and their subjects (II Sam. 5:3; II Kings 11:4, 17), and also between husband and wife (Ezek. 16:8; Mal. 2:14; Prov. 2:17). The term is used figuratively in a covenant between men and animals (Job. 5:23; 40:28; cf. Hos. 2:20) and also a covenant with death (Isa. 28:15, 18). The covenant does not always constitute a mutual agreement; sometimes it represents a relationship in which a more powerful party makes a pact with an inferior one freely and out of good will. In this case the superior party takes the inferior under his protection, on condition that the latter remain loyal to him. The covenant of the Israelites with the *Gibeonites (Josh. 9) and the covenant requested by the people of Jabesh-Gilead (I Sam. 11:1–2) from the king of *Ammon belong to this category. That the covenant of the Israelites with the *Canaanite population was of a similar nature is shown in Deuteronomy 7:1–2: "When the Lord your God brings you to the land… and delivers them [the Canaanites] to you and you defeat them, you must doom them to destruction: do not cut a covenant with them [*loʿ tikhrot lahem berit*] and do not be gracious to them." J. Begrich (see bibl.) observed that this type of covenant is distinguished by the form "to cut a covenant to somebody," *karat berit le* –, in contrast with the other type of covenant which is phrased as "to cut a covenant with somebody," *karat berit ʿim*. Another type of covenant is that established through the mediation of a third party, especially when a covenant with the Deity is involved. Thus Moses (Ex. 24) and Joshua (Josh. 24) mediate the covenant between God and Israel. The priest *Jehoiada fulfills the same function (II Kings 11:17), when he serves as a mediator in a double covenant: that between God and king plus people on the one hand and between the king and the people on the other (apparently because the king was still a minor). Another example of this kind is mentioned in Hosea 2:20 where God is to establish a covenant between the people and the beasts of the earth, etc.

Sometimes the covenant is accompanied by an external sign or token to remind the parties of their obligations (cf. Gen. 21:30; 31:44–45; 52; Josh. 24:27, etc.). The "sign of the covenant," *ʾot berit*, is especially characteristic of the Priestly source of the Pentateuch. The *Sabbath, the *rainbow, and *circumcision are the "signs" of the three great covenants established by God at the three critical stages of the history of mankind: the *Creation (Gen. 1:1–2:3; cf. Ex. 31:16–17), the renewal of mankind after the *Flood (Gen. 9:1–17), and the beginning of the Hebrew nation. Circumcision came to be regarded in Jewish tradition as the most distinctive sign of the covenant, and is known as *berit milah* – "the covenant of circumcision."

The Covenant between God and Israel

The covenant par excellence in the Bible is that between God and Israel. Until recently this has been considered a relatively late idea (cf. J. Wellhausen). But S. Mowinckel (*Le Décalogue*, 1927), adopting the form-critical approach and *Sitz im Leben*

method of investigation, concluded that it reflected an annual celebration involving a theophany and proclamation of the law. His arguments were based mainly on Psalms 50:5ff. and Psalms 81, where theophany is combined with covenant-making and decalogue formulas (cf. Ps. 50:7, 18–19; 81:10–11). He was followed by A. Alt (see bibl.) who argued that the so-called apodictic law had been recited at the Feast of Tabernacles at the beginning of the year of release (cf. Deut. 31:10–13) and that this periodical convocation was a solemn undertaking by the congregation which is reflected in the Sinai covenant. G. von Rad (see bibl.) inquiring into the significance of the peculiar structure of Deuteronomy – history (ch. 1–11), laws (12:1–26:15), mutual obligations (26:16–19), and blessings and curses (ch. 27–29) – suggested that this structure, and similarly that of the Sinai covenant – history (Ex. 19:4–6), law (20:1–23:19), promises and threats (3:20–23), conclusion of the covenant (24:1–11) – reflects the procedure of a covenant ceremony. This opened with a recital of history, proceeded with the proclamation of the law – accompanied by a sworn obligation –and ended with blessings and curses. Since according to Deuteronomy 27 (cf. Josh. 8:30–35) the blessings and curses had to be recited between Mounts Gerizim and Ebal, von Rad identified Shechem as the scene of the periodic covenant renewal in ancient Israel.

Although no real evidence for a covenant festival has been discovered so far, the observation made by von Rad that the literary structure of Deuteronomy and Exodus 19–24 reflects a covenantal procedure has been confirmed by subsequent investigations. It has become clear that the covenant form, as presented in these texts and especially in Deuteronomy, was in use for centuries in the ancient Near East. G. Mendenhall in 1954 found that the Hittite treaty has a structure identical with that of the biblical covenant. The basic common elements are: titular descriptions; historical introduction, which served as a motivation for the vassal's loyalty; stipulation of the treaty; a list of divine witnesses; blessings and curses; and recital of the treaty and deposit of its tablets. The Sinai covenant described in Exodus 19–24 has indeed a similar structure, although it is not completely identical. Thus, the divine address in chapter 19 opens with a historical introduction stressing the grace of God toward the people and its election (19:4–6), followed by the law (23:20–33), and finally the ratification of the covenant by means of a cultic ceremony and the recital of the covenant document (24:3–8).

Admittedly the analogy is not complete, since what is found in Exodus 19–24 is not a treaty, as in the Hittite documents, but rather a narrative about the conclusion of a covenant. Nevertheless, it is clear that the narrative is organized and arranged in line with the treaty pattern, which emerges in a much clearer fashion in Deuteronomy. This book, which is considered by its author as one organic literary creation (cf. the expression *Sefer ha-Torah ha-zeh*, "this Book of Teaching") and represents the covenant of the plains of Moab, follows the classical pattern of treaties in the Ancient Near East. Unlike the Sinai covenant in Exodus, which has no list of blessings and curses, Deuteronomy (like the treaties and especially those of the first millennium B.C.E.) has an elaborate series of blessings and curses and likewise provides for witnesses to the covenant, "heaven and earth" (4:26; 30:19), which are missing altogether in the first four books of the Pentateuch. Deuteronomy also makes explicit references to the deposit of the tablets of the covenant and the book of the Law in the divine Ark (10:1–5; 31:25–26). The Ark was considered in ancient Israel as the footstool of the Deity (the cherubim constituting the throne), and it was indeed at the feet of the gods that the treaty documents had to be kept according to Hittite legal tradition. As in the Hittite treaties, Deuteronomy commands the periodical recital of the Law before the public (31:9–13) and prescribes that the treaty be read before the king or by him (17:18–19).

The historical prologue in Deuteronomy (1–11) recalls to a great extent the historical prologue in Hittite state treaties. In this section the Hittite suzerain recounts the development of the relationship between him and the vassal, specifying, for example, the commitments and the promises of the overlord to the vassal's ancestors. This theme is echoed in Deuteronomy's recurring references to the promise made to the Patriarchs (4:37–38; 7:8; 9:5). The prologue also dwells on the insubordination of the vassal's ancestors and its consequences, a feature expressed in the historical introduction of Deuteronomy which deals fully with the rebelliousness of the generation of the desert. The Hittite historical prologue frequently refers to the land given to the vassal by the suzerain and its boundaries, a theme fully elaborated in Deuteronomy (3:8ff.). In a fashion similar to the Hittite sovereign, who urges the vassal to take possession of the given land, "See I gave you the Zippašla mountain land, occupy it" (Madduwataš, in: *Mitteilungen der vorderasiatisch-aegyptischen Gesellschaft* (= MVAG), 32 (1927), 17, 19, 46), God says in Deuteronomy: "I have placed the land at your disposal, go take possession of it" (1:8, 21). In this context the Hittite king warns the vassal not to trespass beyond the set boundaries. Thus for example, Muršiliš II says to Manapa-Dattaš: "Behold I have given you the Seḫa-river-land… but unto Mašḫuiluwaš I have given the land Mira… whereas unto Targašnalliš I have given the land Ḫapalla" (MVAG, 30 (1926), no. 3:3; MVAG, 34 (1930), no. 4:10–11). The historical prologue similarly states: "See, I place the land at your disposal" (1:21), "I have given the hill country of Seir as a possession to Esau" (2:5), "I have given Ar as a possession to the descendants of Lot" (2:9), "I have given [the land of the Ammonites] as a possession to the descendants of Lot" (2:19). The purpose of these reminders is to justify the command forbidding the trespass of the fixed borders of these nations.

Analogies have been drawn mostly from Hittite treaties as these have been preserved in fairly large numbers and in relatively good condition. However, the few treaties known from the first millennium B.C.E., i.e., the Aramaic treaty from Sefire, the treaty of Ashur-Nirâri V with Mati'el of Bīt-Agushi, and the treaty of Esarhaddon with his eastern vassals, do not differ in

principle from those of the Hittites, and it seems in fact that there was a continuity in the treaty pattern for approximately 800 years. This might explain the fact that in a late book, according to the documentary hypothesis, like Deuteronomic elements are preserved which also occur in the Hittite treaties from the 14th–13th centuries B.C.E. In spite of this continuity, careful analysis reveals certain significant differences between the treaties of the second millennium and those of the first. This applies to the political treaties in the ancient Near East as well as to the theological covenants in Israel. While the Hittite treaties and similarly the Sinai covenant have a very short list of curses, those of the first millennium and the covenant in Deuteronomy have long lists. Furthermore, Deuteronomy has preserved in chapter 28 a series of curses which has an exact parallel in the Neo-Assyrian treaty Esarhaddon made with his eastern vassals regarding the coronation of his son Ashurbanipal (concluded in 672 B.C.E.). An investigation of these curses has shown that their origin is to be sought in Assyria, since their order can be explained by the hierarchy of the Assyrian pantheon while the order in Deuteronomy has no satisfactory explanation (see M. Weinfeld, *Biblica*, see bibl.). It has been supposed that a series of Assyrian treaty curses was incorporated into the section of curses in Deuteronomy, thereby making it clear that the pledge of loyalty to the Assyrian emperor had been henceforward replaced by the pledge to YHWH, a transfer which is to be understood against the background of *Josiah's liberation from Assyrian dominion. The shift of fealty, as it were, from one suzerain to another may also explain the striking similarity between the laws of sedition in Deuteronomy 13 and the warnings against sedition in the treaties of the first millennium B.C.E. and particularly in those of Esarhaddon with his vassals; compare also the Aramaic treaty of Sefire. Like the vassal treaties of Esarhaddon, Deuteronomy 13 warns against a prophet inciting rebellion and against any member of the family conspiring to break faith with the overlord. In the Aramaic treaty from Sefire there is a clause concerning a rebellious city which, like Deuteronomy 13, commands its destruction by the sword. In both sources the wording is almost identical: והן קריה הא נכה תכוה בחרב, "and if it is a city, you must strike it with a sword" in the Sefire treaty, and הכה תכה את ישבי העיר ההיא לפי חרב, "you must strike the inhabitants of this city with the sword" in Deuteronomy 13:16. Furthermore, the exhortations to keep faith with God in Deuteronomy are very close in form and style to the exhortations in the political treaties. As has been shown by W.L. Moran, the concept of "love of God" in Deuteronomy actually expresses loyalty, and it is in this sense that "love" occurs in the political documents of the Ancient Near East. The Book of Deuteronomy abounds in terms originating in the diplomatic vocabulary of the ancient Near East. Such expressions as: "to follow with the whole heart and with the whole soul," "to hearken to the voice of," "to be perfect with," "to go after," "to serve," "to fear (to revere)," "to put the words in one's heart," "not to turn right or left," etc. are found in diplomatic letters and state treaties of the second and first millennia B.C.E. and are especially prominent in the vassal treaties of Esarhaddon, which are contemporaneous with Deuteronomy. The scene of the concluding of the Josian covenant in II Kings 23:1–3 and the scene of the concluding of the covenant in Deuteronomy 29:9–14 are presented in a manner which is very close to the descriptions of the treaty ceremonies in Neo-Assyrian documents. The section stipulating the perpetual validity of the covenant occurs twice, both in the Esarhaddon treaty and in the Deuteronomy covenant, before the conditions and after them. The end of chapter 29 in Deuteronomy reads: "And the generations to come… and the foreigners… will ask 'Why did the Lord do thus to this land?…' and they will be told: 'Because they forsook the covenant of the Lord'" (21–24). The theme of self-condemnation (Deut. 29:21–24) is also encountered in the Neo-Assyrian texts in connection with a breach of a treaty. Thus the annals of Ashurbanipal state: "'The people of Arabia asked one another saying: 'Why is it that such evil has befallen Arabia?' and they answered: 'Because we did not observe the valid covenant sworn to the god of Ashur'" (Rassam Cylinder, 9:68–72).

The difference between the Deuteronomy covenant, which reflects the treaty pattern of the first millennium B.C.E., and the earlier covenants reflecting the pattern of the second millennium will be appreciated if the covenant ceremonies in Genesis and Exodus are compared with that of Deuteronomy. The patriarchal covenants, secular and religious alike (Gen. 15:9 ff.; 21:22 ff.; 26:26 ff.; 31:44 ff.), and the Sinai covenant (Ex. 24:1–11) are validated by sacrifices and holy meals, similar to the covenants of the third and second millennia B.C.E. In the Deuteronomy covenant, on the other hand, as in the contemporary Assyrian and Aramaic treaty documents, it is the oath which validates the covenant and no mention is made of a sacrifice or meal (cf. especially Deut. 29:9 ff.).

The Covenant with Abraham and David

Aside from the covenant between God and Israel described in Exodus and Deuteronomy, two covenants of a different type are found in the Bible. These are the covenant with *Abraham (Gen. 15, 17) and the covenant with *David (II Sam. 7; cf. Ps. 89), which are concerned respectively with the gift of the land and the gift of kingship and dynasty. In contradistinction to the Mosaic covenants, which are of an obligatory type, the Abrahamic-Davidic covenants belong to the promissory type. God swears to Abraham to give the land to his descendants and similarly promises to David to establish his dynasty without imposing any obligations on them. Although their loyalty to God is presupposed, it is not made a condition for God's keeping His promise. On the contrary, the Davidic promise as formulated in the vision of Nathan (II Sam. 7) contains a clause in which the unconditional nature of the gift is explicitly stated (II Sam. 7:13–15). By the same token, the covenant with the Patriarchs is considered as valid forever (*'ad 'olam*). Even when Israel sins and is to be severely punished, God intervenes to help because He "will not break his covenant" (Lev. 26:43).

In the same way as the obligatory covenant in Israel is modeled on the suzerain-vassal type of treaty so the promissory covenant is modeled on the royal grant. The royal grants in the Ancient Near East as well as the covenants with Abraham and David are gifts bestowed upon individuals who distinguished themselves in loyal service to their masters. Abraham is promised the land because he obeyed God and followed His mandate (Gen. 26:5; cf. 22:16–18), and similarly David is rewarded with dynastic posterity because he served God with truth, righteousness, and loyalty (I Kings 3:6; 9:4; 11:4, 6; 14:8; 15:3). The terminology employed in this context is very close to that used in the Assyrian grants. Thus the grant of Ashurbanipal to his servant reads: "Balta… whose heart is whole to his master, stood before me with truthfulness, walked in perfection in my palace…. and kept the charge of my kingship… I considered his good relations with me and established [therefore] his gi[f]t." Identical formulations are to be found in connection with the promises to Abraham and David. With regard to Abraham it is said that "he kept my charge" (Gen. 26:5), "walked before God" (24:40; 48:15), and is expected "to be perfect" (17:1). David's loyalty to God is couched in phrases which are even closer to the Assyrian grant terminology: "he walked before the Lord in truth, loyalty, and uprightness of heart" (I Kings 3:6), "followed the Lord with all his heart" (I Kings 14:8), etc. Land and "house" (i.e., dynasty), the subjects of the Abrahamic and Davidic covenants, are the most prominent gifts of the suzerain in the Hittite and Syro-Palestine examples; like the Hittite grants, the grant of land to Abraham and "house" to David are unconditional. Thus, the Hittite king says to his vassal: "After you, your son and grandson will possess it, nobody will take it away from them; if one of your descendants sins, the king will prosecute him… but nobody will take away either his house or his land in order to give it to a descendant of somebody else." The promises to Abraham and David, which were originally unconditional, were understood as conditional only at a later stage of Israelite history. The exile of northern Israel appeared to refute the claim to eternity of the Abrahamic covenant, and therefore it was stressed that the covenant is eternal only if the donee keeps faith with the donor. A similar interpretation is given to the Davidic covenant in the Books of Kings (I Kings 2:4; 8:25; 9:4–5).

Covenant Theology

Long before the parallel between the Israelite covenant and the Ancient Near Eastern treaty had been brought to light, W. Eichrodt recognized the importance of the covenant idea in the religion of Israel, seeing in the Sinai covenant a point of departure for understanding Israel's religion. Eichrodt explains that basic phenomena like the kingship of God, revelation, the liberation from myth, the personal attitude to God, etc. are to be explained against the background of the covenant. The discovery of the treaty pattern in the Ancient Near East strengthened this hypothesis, new developments in covenant research throwing light on the idea of the kingship of God. It now becomes clear that God as King of Israel is not an idea born during the period of the monarchy, as scholars used to think, but, on the contrary, is one of the most genuine and most ancient doctrines of Israel. In the period of the judges the tribes resisted kingship because of the prevailing belief that God was the real King of Israel and that the proclamation of an earthly king would constitute a betrayal. This is clearly expressed in Gideon's reply to the people's offer of kingship (Judg. 8:22–23), but is even more salient in Samuel's denunciation of the request for a king (I Sam. 8:6–7; 10:18ff.; 12:17). Earthly kingship in Israel was finally accepted, but this was the outcome of a compromise: David's kingship was conceived as granted to him by the Great Suzerain (II Sam. 7, see above). The king and the people alike were thus considered as vassals of God, the real Overlord (I Sam. 12:14, 24–25; II Kings 11:17).

It seems that this suzerain-vassal outlook has its roots in the political actuality of the period of the judges. As is well known, Syria-Palestine of the second half of the second millennium B.C.E. was dominated by two great political powers, the Egyptian and the Hittite empires, in turn. Either the king of Egypt or the king of the Hittites was overlord of the petty kingdoms in the area. The lands and the kingdoms of the latter were conceived as feudal grants bestowed on them by the great suzerain, in exchange for the obligation of loyalty to the master. Israel's concept of its relationship with God had a similar basis. The Israelites believed that they owed their land and royal dynasty to their suzerain, God. Furthermore, as the relationship between the suzerain and the vassal has to be based on a written document, i.e., a treaty, so the relationship between God and Israel had to be expressed in written form. It is not surprising, therefore, that the tablets of the covenant played so important a role in the religion of Israel. As already noted, the tablets had to be deposited in the sanctuary at the feet of the deity, a procedure known from the Hittite treaties. Moreover, it appears that, as in the judicial sphere, the written document expresses the validity of the given relationship. When the covenant is no longer in force the document must be destroyed. Thus the worship of the golden calf, which signifies the breaking of the covenant, is followed by the breaking of the tablets by Moses, the mediator of the covenant (Ex. 32). Indeed, the term for canceling a contract in Babylonian legal literature is "to break the tablet" (*tuppam ḫepū*). Following the judicial pattern, the renewal of the relationship must be effected by writing new tablets, which explains why new ones had to be written after the sin of the golden calf, and why the ritual decalogue was repeated in Exodus 34:17–26 (cf. Ex. 23:10–19). Renewal of a covenant with a vassal – after a break in the relationship – – by means of writing new tablets is an attested fact in Hittite political life.

The Covenant in Prophecy

This new examination of the covenant elucidates basic phenomena in Israel's prophetic literature. The admonitory speeches of the prophets are often formulated in the style of a lawsuit (Isa. 1:2ff.; Jer. 2:4ff; Hos. 4:1ff.; Micah 6:1ff.). God sues the people of Israel in the presence of witnesses such as

heaven and earth, and mountains (Isa. 1:2; Micah 6:1–2), witnesses which also appear in the Ancient Near Eastern treaties and in the Deuteronomy covenant. International strife in the Ancient Near East provides parallels to prophetic denunciations; for example, before going out to battle with the Babylonian king Kaštiliaš, the Assyrian king accuses the latter of betrayal and violation of the treaty between them, and as proof he reads the treaty in a loud voice before the god Šamaš. In a similar way the prophetic lawsuit represents God's accusation of Israel before He proceeds to destroy the people for violating the covenant. This is clearly expressed in Amos 4:6–11, where a series of punishments, similar to those enumerated in Leviticus 26, is proclaimed, in the nature of a warning, before the final judgment or encounter (cf. Amos 4:12: "Be ready to meet your God, O Israel"). The warnings in Israelite prophecy are reminiscent of the curses in the Ancient Near Eastern treaties. Thus the calamities predicted in the prose sermons of Jeremiah are paralleled in contemporary treaty literature. The most prominent curses are (1) corpses devoured by the birds of heaven and the beasts of the earth; (2) cessation of joyful sounds; (3) exile; (4) desolation of the land and its becoming a habitation for animals; (5) dishonoring of the dead; (6) children being eaten by their parents; (7) the drinking of poisonous water and the eating of wormwood; and (8) cessation of the sound of the millstones and the light of the oven (or the candle). The treaty curses aim to portray the calamities that will befall the vassal as a consequence of his violation of the treaty. This is usually expressed through literary similes and also by a dramatic enactment of the punishment which will be visited on the transgressor. Both devices were in fact employed by the prophets. In the prophetic literature also the similes are drawn from various spheres of life, as for example Amos 2:3; 3:12; 5:19; 9:9. The dramatization of the punishment is also very close in form and content to the dramatic enactment in the treaties; compare, for example, the Sefire treaty, "As this calf is cleft so may Mati'el and his nobles be cleft," which is reminiscent of Jeremiah 20:2–4; 34:18 – "I will make the men who have transgressed my covenant… [like] the calf which they cut in two and passed between its parts."

The Origin of the Covenant

The idea of a covenant between a deity and a people is unknown from other religions and cultures. It seems that the covenantal idea was a special feature of the religion of Israel, the only one to demand exclusive loyalty and preclude the possibility of dual or multiple loyalties; so the stipulation in political treaties demanding exclusive fealty to one king corresponds strikingly with the religious belief in one single, exclusive deity.

The prophets, especially *Hosea, Jeremiah, and Ezekiel, expressed this idea of exclusive loyalty by speaking of the relationship between God and Israel as one of husband and wife, which in itself is also considered covenantal (cf. above and especially Ezek. 16:8). Although the idea of marital love between God and Israel is not mentioned explicitly in the Pentateuch, it seems to be present in a latent form. Following other gods is threatened by the statement: "For I the Lord your God am a jealous God" (Ex. 20:5; Deut. 5:9; cf. Ex. 34:14; Josh. 24:19). The root (קנא, *qn'*, "jealous") is in fact used in Numbers 5:14 in the technical sense of a husband who is jealous of his wife. Similarly the verb used in the Pentateuch for disloyalty is *zanah ʾaḥarei*, "to whore after." Furthermore, the formula expressing the covenantal relationship between God and Israel, "you will be my people and I will be your God" (Lev. 26:12; Deut. 29:12, etc.), is a legal formula taken from the sphere of marriage, as attested in various legal documents from the Ancient Near East (cf. Hos. 2:4). The relationship of the vassal to his suzerain or of the wife to her husband leaves no place for double loyalty, and they are therefore perfect metaphors for loyalty in a monotheistic religion.

The concept of the kingship of God in Israel also seems to have contributed to the conception of Israel as the vassal of God. It is true that the idea of the kingship of God was prevalent throughout the Ancient Near East; nevertheless, there is an important difference between the Israelite notion of divine kingship and the corresponding belief of other nations. Israel adopted the idea long before establishing the human institution of kingship. Consequently, for hundreds of years the only kingship recognized and institutionalized in Israel was the kingship of God. During the period of the judges YHWH was actually the King of Israel (cf. Judg. 8:23; I Sam. 8:7; 10:19) and was not, as in other religions of the Ancient Near East, the image of the earthly king.

[Moshe Weinfeld]

COVETOUSNESS, condemned and prohibited in the tenth commandment of the Decalogue (Ex. 20:14; Deut. 5:18), and throughout the Bible and Jewish ethical literature, particularly in the Book of Proverbs (e.g., 3:31, 14:30, etc.). Since envy may be defined as a state of mind which wishes to change existing relations, there is an inherent relationship between the condemnation of covetousness and the maintenance of established social and economic conditions. Greed is regarded as the root of all social injustice (see Micah 2:1 ff.; Hab. 2:9, etc.). The talmudic rabbis and medieval thinkers as well as modern scholars argue, for example, that the tenth commandment summarizes all the previous ones (Pes. 107a ff.; Meg. 6; Naḥmanides' commentary on Ex. 20:14, etc.), because it is envy which leads to all the other sins. Avot 4:2 states that desire causes covetousness, which leads to robbery and tyranny (see also *ibid.*, 2:11, 28; Mekh. to Ex. 20:14; BM 107, etc.). In the 20th century, too, Hermann *Cohen repeated that greed causes envy which, in turn, causes hate, that leads to war (*Religion der Vernunft aus den Quellen des Judentums* (1929), 522). Since there is no limit to the objects of greed, envy is never sated, but is rather self-aggravating (Prov. 27:20; Eccles. 5:9; Eccles. R. 1:34; Ibn Ezra's commentary on Ex. 20:14, etc.), which explains the ethical warning that covetousness leads to the self-destruction of the one prey to it (Prov. 28:22; Sanh. 106; Sot. 9a). The cure for limitless greed lies in contentment and humbleness (Avot 4:1: "Who is rich? He who delights in his share"). Jewish tradition acknowledges, however, that the final abolition of envy will occur only with the advent of the messianic, i.e., the totally just society (see M.Ḥ. Luzzatto, *Mesillat Yesharim*, ch. 11, based on Isa. 11:13).

[Steven S. Schwarzschild]

COVILHÃ, city in central Portugal. A Jewish community existed there from the middle of the 12th century until 1496–97. A rabbi, called *ouvidor,* appointed by the **Arraby Mor* for the province of Beira Alta, resided in Covilhã. After 1497 Covilhã became an important Crypto-Jewish center. In 1543 a large *auto-da-fé was held in Covilhã with many judaizers sentenced to the stake. A number of the Crypto-Jewish families of Covilhã, such as the Mendes, De *Castro, Sousa, *Pinto, *Seixas, and *Mesquita families, emigrated from Portugal to other Western European countries, the Netherlands and England, where they returned to Judaism. The governor of Brazil in 1549 was Tomé de Sousa. The ambassador of Portugal in London in 1643 was Antonio de Sousa. Another important Crypto-Jewish family from Covilhã was that of Silvas. Some of the Silvas today live as Jews. During the civil wars in Portugal from 1806 to 1830, the Crypto-Jews of Covilhã were persecuted by the clergy, which suspected them, with good reason, of supporting the liberal side. It was stated that a Jewish community was established there at that time with its own rabbi. Due to the activities of A.C. de *Barros Basto and S. *Schwarz, many New Christians openly returned to Judaism under the republican government in the 1920s. The third community to be established in the country was in Covilhã (July 1929), where there were reported to be 6,000 Crypto-Jews. According to Slouschz, about a third of the city's population was of New Christian origin. Many of them still lived in what used to be the Jewish quarter before the forced conversions of 1497. A synagogue was established there named Sha'arei Kabbalah ("The Gates of Tradition"). With the establishment of the dictatorship in 1932 Jewish missionary activity among the descendants of crypto-Jews decreased in Covilhã as elsewhere in Portugal.

Dias, *Notas biográficas de Simão Pinheiro Morão, escritor médico luso-brasileiro, natural de Covilhã* (1961).

COVO, family originating from Covo near Milan, which produced many rabbis who flourished mainly at Salonika. Among the most important are the following: (1) JUDAH (d. 1636), rabbi of Salonika. For the privilege of residing in Salonika the leaders of that community had undertaken to pay the Turkish authorities a special annual tax. Owing to the difficulty of finding the sum in cash, the authorities had agreed to accept in lieu clothes manufactured by Jewish craftsmen. Year by year a delegation of leaders of the community brought quantities of clothes to Constantinople where they were publicly sold and the proceeds made over to the authorities. In 1636 R. Judah headed the delegation. Because the clothes brought that year were regarded by government officials as inadequate in quantity and in value, R. Judah was summarily put to death and the other members of the delegation imprisoned and cruelly punished (Rosanes. Togarmah, 3 (1937/38), 396–8). (2) ELIJAH (d. 1689), rabbi and *rosh yeshivah* at Salonika. He was the author of *Aderet Eliyahu*, responsa and halakhic decisions. Together with those of Joshua Handali, they were published under the title *Shenei ha-Me'orot ha-Gedolim* (Constantinople, 1739). (3) JOSEPH BEN SHEMAIAH (d. 1727), chief rabbi of Salonika. He wrote a letter in support of the Shabbatean Nehemiah *Ḥayon, and was the author of *Givot Olam* (Salonika, 1784), responsa and homilies. (4) JOSEPH HEZEKIAH BEN ISAAC (d. 1762), rabbi at Salonika. Toward the end of his life he immigrated to Ereẓ Israel. He was the author of *Ben Porat Yosef* (Salonika, 1797) on the Shulḥan Arukh. On several occasions he traveled abroad on missions for Jerusalem. He was the father of (7), but is identified by some as father of (6). (5) RAPHAEL ḤAYYIM ABRAHAM (d. 1792), chief rabbi of Salonika from 1772. He wrote *Ḥayyei Abraham* (Salonika, n. d.), consisting of responsa on Jacob b. Asher's *Tur.* (6) ISAAC BEN HEZEKIAH JOSEPH called BEKHOR (d. 1807), *dayyan*. From Salonika he went to Jerusalem where he studied Talmud under Samuel Meyuḥas, the author of *Peri ha-Adamah*. He later became a member of Yom Tov Algazi's *bet din*. His signature appears on halakhic rulings, and on the *takkanot* of Jerusalem. (7) ISAAC BEN JOSEPH HEZEKIAH, called MORENU (1770–1854). In 1805 he went to Turkey as an emissary of Jeru-

salem. In his old age he returned to Ereẓ Israel and in 1848 was appointed *hakham bashi* in Jerusalem. In 1854, at the age of 83, he set out as an emissary of Jerusalem to Egypt and died in Alexandria. On an earlier mission he visited Germany. His writings have remained in manuscript. A brochure by him, entitled *Degel Maḥaneh* on the *Maḥaneh Efrayim* of Ephraim Navon, was published in the *Ateret Zahav* (vol. 2, Jerusalem, 1898) of Isaac Badhav. (8) RAPHAEL ASHER (1799–1875), chief rabbi and *rosh yeshivah* at Salonika. He was the author of responsa *Sha'ar Aḥer* (2 pts., 1877–79). (9) JACOB JOSEPH (d. 1899), rabbinic scholar and *dayyan* at Salonika. (10) JUDAH (d. 1907), chief rabbi of Salonika. He worked for the development of Jewish settlement in Ereẓ Israel and was the author of *Yehudah Ya'aleh*. (11) JACOB HANANIAH (1825–1907), chief rabbi of Salonika, where he established a yeshivah called Bet Yosef and a *talmud torah*. He was greatly respected by the Turkish authorities by whom he was decorated several times.

COWEN, SIR FREDERIC HYMEN (1852–1935), conductor and composer. Born in Jamaica, Cowen was taken to London as a child, and performed his own piano concerto there at the age of 13. He conducted the London Philharmonic Society, Halle Orchestra of Manchester, and many other orchestras. His works include four operas, four cantatas (including *The Veil*, 1910), six symphonies, orchestral and chamber works, songs, and marches. He published an autobiography, *My Art and My Friends* (1913); a humoristic glossary of musical terms, *Music as She is Wrote* (1915); and biographies of several composers. He was knighted in 1911.

COWEN, JOSEPH (1868–1932), a founder and leader of the Zionist movement in Great Britain. Born in Davenport, Cowen was initially indifferent to Jewish affairs. Persuaded to attend the First *Zionist Congress by his relative, Israel *Zangwill, he thereafter devoted himself to the Zionist movement, becoming *Herzl's chief associate in all matters concerning Great Britain and the Jewish community there. He was the moving spirit behind the foundation of the British Zionist Federation in 1899, and served several times as its president. Cowen accompanied Herzl during his audience with the Turkish sultan (1902), and Herzl made him a major character in his novel *Altneuland*, called Joe-Joseph Levy. He became director of the *Jewish Colonial Trust upon its foundation and held the post until his death. During World War I, Cowen was one of the few Zionist leaders to support Vladimir *Jabotinsky in his efforts to create a *Jewish Legion and was *Weizmann's right-hand man during the preparatory political work leading to the *Balfour Declaration. He was also a member of the *Zionist Commission to Palestine in 1918, treasurer of the Zionist Organization, a member of the Zionist Executive in 1921–22, and head of *Keren Hayesod in Great Britain. He should not be confused with his non-Jewish namesake Joseph Cowen (1829–1900), a prominent radical member of Parliament.

[Getzel Kressel]

COWEN, PHILIP (1853–1943), U.S. publisher and author. Cowen was born in New York City, the son of German immigrants. He entered the printing business in 1878, and the following year, in cooperation with a group of distinguished New York Jews, founded the Anglo-Jewish weekly **The American Hebrew*. As its editor and publisher for 27 years, Cowen participated actively in the major issues and campaigns arising during the era of Jewish mass immigration. He was instrumental in publishing the works of such figures as Oscar S. *Straus, Max J. *Kohler, Henry Pereira *Mendes, Emma *Lazarus, Mary *Antin, and Alexander *Kohut. From 1905 to 1927 Cowen served as an official of the U.S. Immigration Service at Ellis Island and in 1906 went to Russia on a special mission to report on the causes of immigration from Eastern Europe, with emphasis on Jewish problems. His book *Memories of an American Jew* was published in 1932.

[Morton Rosenstock]

COWEN, ZELMAN (1919–), Australian jurist and authority on constitutional law. Cowen, who was born in Melbourne, joined the Royal Australian Navy in 1941. After the war he was an adviser on constitutional problems to the British and U.S. military governments in Germany. From 1947 to 1950 he was a tutor at Oriel College, Oxford. In 1951 Cowen was appointed professor of public law at the University of Melbourne and was also dean of the faculty. In 1967 he became vice chancellor of the University of New England in New South Wales. Cowen's books on public law include *Australia and the United States: Some Legal Comparisons* (1954), *Federal Jurisdiction in Australia* (1959), and *The British Commonwealth of Nations in a Changing World: Law, Politics and Prospects* (1965). He also wrote a biography of Sir Isaac *Isaacs (1967) and numerous articles on constitutional problems. Cowen was president of the Adult Education Association of Australia. He was active in Jewish communal life. In 1970 he became the vice chancellor of the University of Brisbane. Cowen received a knighthood in 1976, and in November 1977 was appointed governor-general of Australia, the second Jew – Sir Isaac *Isaacs was the first – to occupy this position. Cowen took up this post at a critical time. In 1975 the previous governor-general, Sir John Kerr, had controversially dismissed the elected government of Gough Whitlam, although it continued to enjoy a majority in the Australian House of Representatives. The post of

governor-general was thus under the spotlight. There is wide agreement that Cowen, who served as governor-general until 1982, did much to restore the post. Cowen subsequently lived in England for some years, where he was provost of Oriel College, Oxford from 1982 to 1990, and chairman of the British Press Council, before returning to Melbourne. He has received no fewer than 20 honorary degrees from universities around the world.

°**COWLEY, SIR ARTHUR ERNEST** (1861–1931), English Orientalist and bibliographer. Cowley's main interest from his school days was Hebrew and Jewish studies, but at Oxford he studied classics and his Semitic scholarship was largely self-taught. He became A. *Neubauer's assistant in the *Bodleian Library in 1896, succeeded him in 1899, and from 1919 was himself the Bodleian's librarian. Cowley's achievements in Jewish scholarship are paleographical, bibliographical, and interpretative. He published (at first with Neubauer) recovered Hebrew portions of Ecclesiasticus (1897, 1901), and (at first with A.H. Sayce) the Assouan (*Elephantine) Jewish-Aramaic papyri (1906, 1923). He completed vol. 2 of Neubauer's catalog of Bodleian Hebrew manuscripts and produced a concise catalog of its Hebrew printed books (1929, reduced from Steinschneider's catalog). Besides the papyri, Cowley edited – as his main work – *The Samaritan Liturgy* (2 vols., 1909). He taught rabbinics for the university, and a lectureship at Oxford in post-biblical Hebrew commemorates his name.

COZBI (Heb. כָּזְבִּי, Akkadian *Kuzābatum*, "voluptuous, well developed"), the daughter of Zur, who was one of the tribal leaders in Midian (Num. 25:15). When the Israelites committed harlotry with the Midianite women in the desert of Moab, *Phinehas son of Eleazar killed Cozbi together with her consort *Zimri son of Salu, a Simeonite chieftain. As a result of Phinehas' act, the plague which had afflicted the people was checked (*ibid.* 25:6–15).

COZEBA (Heb. כֹּזֵבָא). (1) Locality in Judah mentioned in I Chronicles 4:22. Some scholars identify it with Khirbat al-Dilba, 15 mi. (c. 24 km.) north of Hebron near ʿArrūb. Its name has been preserved in the neighboring Kirbat Kuwayziba. (2) Name of a dry river bed, now called Wadi al-Qilt. It is mentioned in the Dead Sea *Copper Scroll as one of the places where treasures were hidden. Many monasteries and hermitages were established there in Byzantine times, from the fifth century onward (Cyrillus Scythopolitanus, *Vita Sabae*, 44; John Moschus, PG, vol. 87, pt. 3, p. 2869). The Theotokós ("Mother of God") Chouzibiótissa, a Greek monastery, dedicated to St. George, still stands at the Deir (Dayr) al-Qilt.

CRACOW (Pol. **Kraków**; Heb. קראקא, קרקא, קראקוב), city in S. Poland (within the historic region *Lesser Poland (Malopolska); in Western *Galicia under Austria). Cracow was the residence of the leading Polish princes during the 12th century, and later became the capital of Poland (until 1609). It was for many centuries the home of one of the most important European Jewish communities. It acquired the status of a city on the German model in 1257, and its situation on the Vistula river and the commercial route to Prague attracted an influx of immigrants from Germany, with whom the first Jews arrived. In 1335 King *Casimir the Great founded the rival city of Kazimierz near the southern extremity of Cracow (enclosed by a wall in 1422) and Jews settled there soon after its establishment. By the beginning of the 14th century (see below) they had an organized community, headed until the close of the century by an elected (or appointed) *Episcopus Judaeorum*; the first mentioned as such, in 1369, was a prominent financier, Samuel (Smoyl). A "Jewish Street" (*Platea Judaeorum*; now St. Anna street) in Cracow is mentioned in 1304. A synagogue, bath house, *mikveh*, and cemetery are first recorded in the 1350s; and a "Gate of the Jews" (*Valvae Judaeorum*) is mentioned in a deed of sale of 1366 as one of the gates of the city. From 1312, there is evidence that Jews acquired houses and building plots not only in their own quarter but also in neighboring parts of the city. The economic success and consolidation of the Jews in the city awakened among the townspeople an active hatred, already traditional among the burghers of German origin who were unused to Jewish commercial competition; the ownership of real estate by Jews was resented. The first protest against Jewish activities was submitted in 1369. In 1392 the municipal council requested that Jews should be allowed to sell their houses only to Christians.

15th Century

The struggle with the citizenry intensified during the 15th century (during 1408–70, 18 Jewish houses were sold to Christians), especially during the reign of Ladislas II Jagello (see also Zbigniew *Oleśnicki, Jan *Dlugosz). The assignment in 1400 of a building in a "Jewish street" to the university not only added to the overcrowding of the Jewish quarter, but for generations was a constant source of friction and danger to the Jews who were frequently attacked by students. A banker (*kampsor*), who was forced to provide loans to the students on interest not exceeding 25%, had to be appointed from among the Jews. In addition, the students extorted special payments from the Jews known as *kozubalec*. Mob outbreaks against the community and *blood libels also occurred (1407, 1423). In the 15th century Cracow Jews developed commercial ties with Breslau, Danzig, Lwow (Lvov, Lemberg), and Constan-

tinople. The visit of the Franciscan preacher Johanes (Jan) *Capistrano to Cracow in 1454 led to severe anti-Jewish riots in which many Jews were killed and extensive damage was caused to property. In 1464 there were renewed disturbances. The heavy fines and financial sureties imposed by King Casimir IV Jagiello on the municipal council did not diminish the antagonism toward the Jews. In 1469 the community leaders had to sign an agreement to evacuate the street on which the university was located and to transfer their buildings to the university in exchange for a plot of land near the synagogue in Spiglarska Street (now St. Stefan Square). When a fire broke out in the city in 1477, the Jewish community was attacked. In 1485, its leaders – Moses *Fishel, Jacob b. Alexander, and Mordecai b. Jacob – were compelled to accept the dictates of the municipal council and signed "of their own free will and without coercion" an agreement to the effect that Jews would not compete in most branches of commerce and would only trade in pledges whose term of redemption had lapsed; this business was to be carried on only in their own houses, with the exception of Tuesdays, Thursdays, and market days, when they would be permitted to display the pledges publicly. Poor Jews and Jewesses were permitted to sell shawls, hats, and collars of their own manufacture. The Cracow Jews did not intend to abandon commerce, and a continuous struggle developed between the community and the burghers, in which both sides turned to the royal court for intervention. A fire which spread from a street inhabited by Jews to the Christian quarters in June 1494 led to riots against which the Jews took up arms in self-defense. The king ordered the arrest of the communal leaders, who were later set free largely through the intercession of the courtier and celebrated humanist Filippo Buonaccorsi (Callimaco Esperiente). The townspeople continued to insist on the expulsion of the Jews from the city. In 1495, the king expelled the Jews from the capital and they moved into adjacent Kazimierz.

Amalgamation with Kazimierz

The Cracow community amalgamated with that of Kazimierz, and, as customary after local expulsions, continued to visit Cracow from "their town" of Kazimierz and maintained a regular and often flourishing commerce there. For over four centuries, until the grant of emancipation in 1868, the Jews of Kazimierz continued the struggle, generally achieving some success, for rights to trade and work in Cracow. The Kazimierz community was already well established when it merged with that of Cracow. At the end of the 14th century construction was begun of a magnificent synagogue in Gothic style, completed about 1407, known as the Alte Schul. It is the oldest medieval synagogue still preserved in Poland. In the 1480s a Jewish bathhouse, a Jewish marketplace (*Circulus Judaeorum*), and a cemetery are mentioned in Kazimierz, all situated on the Breite Gass ("Broad Street"). From the 15th century on, the community was led by four elected "elders," who in 1454 were already empowered to judge lawsuits between Jews. On Feb. 27, 1494, the "elders" (*seniores*) Mark Simeon of Sącz, Joseph Kopelman, Moses Fishel, and Ulryk Samuel signed an agreement with the Christian butchers' guild (ratified by the *judex Judaeorum* Jan Goraj) which limited the number of Jewish butchers to four; they were forbidden to employ any assistants, either Jewish or Christian, or to sell meat to Christians, except wholesale.

Little is known about Jewish learning in Cracow-Kazimierz until the end of the 15th century (although the scholar Yom Tov Lipmann *Muelhausen had reputedly stayed there earlier in that century), when Jacob Pollak settled in Kazimierz and founded the first yeshivah from which talmudic learning spread throughout Poland. Several physicians lived there, including Moses of Przemysl, mentioned in 1465, who was also one of the community elders; Isachko, who practiced in Kazimierz after the expulsion from Cracow; Bocian, founder of the distinguished *Popper family; and Isaac of Spain (d. 1510) who served as court physician.

16th Century

At the beginning of the 16th century many Jews from Bohemia-Moravia settled in Kazimierz, but their desire to retain their separate cohesion and style of life was opposed by the Polish Jews, led by the *Fishel family. In the overcrowded conditions of the Jewish town tension between the two groups led to bitter conflict. After the resignation of Jacob Pollak from the Cracow-Kazimierz rabbinate the Polish congregation elected Asher Lemel, a friend of the Fishel family, while the Bohemian Jews elected another rabbi. In 1509 the king imposed financial sureties on both parties to compel them to maintain the peace. In 1519 he recognized the two congregations as autonomous communities, each electing its own rabbi, two elders, and a mediator to collaborate in the administration of the Jewish town. After the deaths of the two rival rabbis, this duality disappeared and the rabbinate was transferred to Moses Fishel of the Polish section. In addition to those from Bohemia-Moravia a large number of immigrants arrived in Kazimierz in the 16th century from Germany, Italy, Spain, and Portugal. These included wealthy men and physicians, some of whom acquired special personal privileges from the king of Poland exempting them from their financial obligations as members of the Jewish community. It was only in 1563, after numerous appeals from the communal leaders, that the king undertook to cease this practice.

Intensification of the overcrowding resulted in 1553 in official agreement to a small extension of the Jewish town and permission for the erection of a second synagogue. In 1564 a privilege was granted preventing non-Jews from acquiring residential or business premises in the Jewish town. By the 1570s, the Jewish population of Kazimierz numbered 2,060, and further extension of the Jewish quarter became urgent. In 1583 an agreement between the community and the municipality of Kazimierz on the expansion of the Jewish area was ratified by the king. The Jews undertook to erect the Bochnia Gate in the city walls and to liquidate the arrears in tax payments to the municipal treasury.

17th Century

In 1608 the king ratified an agreement with the municipality on the sale of an additional number of building sites and houses to Jews in return for an annual payment of 250 zlotys by the community to the municipality. The attempt of the community to retain control over the new acquisitions of real estate failed because of opposition from both Jews and Christians, and Jews were permitted to acquire real estate individually. By 1635, 67 houses, mainly occupied by wealthy persons (Isaac *Jekeles, Wolf *Popper, among others), had been erected in the section recently joined to the Jewish town. Throughout this period, the fierce struggle for Jewish commercial rights continued, in particular when Jewish traders had "invaded" the Christian sectors. In 1609 the community reached an agreement which in practice enabled the Jews to trade freely in Kazimierz and nearby Stradom, to rent shops and warehouses in the Christian city, and to engage in the fur and tailoring crafts for supply of their own requirements. They were prohibited from innkeeping and trade in fodder. Jewish economic activity within the limits of Cracow proper was dependent on bribery and the search for patrons among government and church circles or within the municipal council. While Christian property owners of Cracow were interested in Jewish trade in the town because they could lease warehouses and shops to Jews at exorbitant prices, the small tradesmen and craftsmen regarded the Jews as dangerous rivals. In 1576 the king had recognized the Jewish trade existing in the town through granting his protection to the practice. The struggle continued with varying success for both sides. The campaign against Jewish trade in Cracow was expressed in the polemic literature of the period in an anti-Jewish pamphlet by Sebastian *Miczyński. However, despite the influence of this tract and anti-Jewish outbreaks, Jewish trade in Cracow developed further in the 17th century, and was recognized de facto by royal decisions.

The 16th and first half of the 17th century was also a period of considerable cultural achievement in the Cracow-Kazimierz community. By 1644 the community had seven main synagogues, among them the Alte Schul and the Rema Synagogue (called after Moses *Isserles), erected in part by private persons and in one case with contributions from the goldsmiths' guild. From the second half of the 16th century a number of yeshivot were founded in Kazimierz whose fame made Cracow a most important center of Jewish learning. Among principals of the yeshivot during the second half of the 16th century were Moses Isserles, Mordecai b. Jacob of Cieplice, Joseph b. Gershon Katz, Nathan Nata Shapiro, Joshua b. Joseph Katz, Isaac b. David ha-Kohen Shapira, *Meir Gedaliah of Lublin, and Joel *Sirkes. About the middle of the 17th century Yom Tov Lippman *Heller was rabbi there. In 1666 the Shabbatean movement deeply stirred Cracow Jewry. The reformation movement among the Cracow burghers gave rise to charges of Judaizing, both true and unfounded, against its own radical wing. An earlier martyr of such accusations was Catherine *Weigel. The religious ferment and strife among the Christians made a strong impression on the Cracow Jews.

Communal Organization

By the end of the 16th century the patrician class had gained an oligarchic control of the communal administration mainly due to the exclusive system of elections. A statute for the community was formulated through various enactments, known after its main corpus as "the ordinances of (5) 355" (i.e. the year 1595; cf. M. *Balaban, "*Die Krakauer Judengemeinde-Ordnung von 1595 und ihre Nachtraege*," in JJLG, 10 (1913), 296–360; 11 (1916), 88–114). The community was headed by four *rashim* ("heads"), five *tovim* ("*boni vires*" or "notables"), and 14 *kahal* ("community council") members, a total of 23 leaders, i.e., the number constituting a "minor Sanhedrin." The duties of actual administration and supervision were assumed in rotation; every month one of the *rashim* publicly took an oath to fulfill his duties as *parnas ha-ḥodesh* ("leader for the month") conscientiously. Defined competencies and functions were assigned to other institutions of the community leadership. The community had numerous functionaries, some honorary and some paid, most of whom worked in committees and were allocated specific tasks, such as tax assessment, supervision of charity, and public market order. The persistent oligarchic trend inherent in the 1595 ordinances is shown in their regulation of judicial procedure which reveals a hierarchical system of three law courts, whose competence was graded according to the sums involved in the case, and payment was made to the two lower ones by both sides. These arrangements differ from strict halakhic conceptions of judicial practice.

Cracow-Kazimierz was one of the principal communities in the *Councils of the Lands; it headed the province (*galil*) of Lesser Poland. Taxes to the state were paid through and in conjunction with the Councils of the Lands (see also *Poland-*Lithuania). Provision for the regulation of internal taxation for providing defense against local persecution, for upkeep of officials, official functions, and charity is made in the 1595 ordinances and others (see B.D. Weinryb, "Texts and Studies in the Communal History of Polish Jewry," in PAAJR, 19 (1950), 77–98).

In the 1630s large numbers of Jews fled from Germany to Cracow during the Thirty Years' War. In addition, many others from Ukraine and Podolia sought refuge in Cracow in 1648–49 from the *Chmielnicki massacres.

The second half of the 17th century was a troubled period for the Cracow community. It suffered during the Swedish invasion, and in 1655, when Kazimierz was captured, many Jews fled. The Poles commanded by Stefan *Czarniecki looted Jewish shops and property, causing damage estimated at 700,000 zlotys. Much harm was also done to Jewish property during the two-year Swedish occupation. With the restoration of Polish rule, a monetary contribution was imposed on the Jewish community, who were accused of collaborating with the Swedes. The Jews of Cracow first had to pay large sums to the Polish army commanders, and, in the fall of 1657, 60,000 zlo-

tys to the king; they were also charged 300 zlotys a week toward maintenance of the fortress garrison and the municipal guard, and were fined 10,000 zlotys following an accusation that they had handed over sacred objects from the cathedral to the Swedes. The Kazimierz Jews were excluded from Cracow under various pretexts.

During this period, attacks on Jewish houses by the students and the local population became increasingly frequent, while the royal authorities were powerless to take action against them. There were a number of blood libels. In 1663 Mattathias *Calahora was martyred at the stake. In 1664, the anti-Jewish outbreaks reached a new climax and intervention by the king and the fines imposed on the municipal council proved unavailing. In 1677 about 1,000 Jews in Kazimierz died of plague and the Jewish quarter was abandoned by most of its inhabitants. The stricken community could not pay its taxes; by 1679 the arrears of the poll-tax payments amounted to 50,000 zlotys and the king had to grant the Cracow community a moratorium on its taxes and other debts. The community began to reorganize in 1680 and reopened its yeshivah, but in 1682 anti-Jewish rioting by the populace and students again broke out accompanied by murder and looting, and army units had to be called in. The king punished the rioters severely and imposed heavy fines on the university, and the Jews were granted a further moratorium on their debts to the state treasury and individuals. The Cracow citizenry renewed its demands that Jews should be prohibited from practicing trade and crafts on the basis of the 1485 agreement (see above). Jews were prevented from entering Cracow on Sundays and Christian festivals. The most outstanding of the community's rabbis in the second half of the 17th century was Aaron Samuel *Koidanover.

18th Century

The history of the community in the 18th century was marked by fluctuations in the struggle of the Cracow citizenry to close the city, trade, and crafts to the Kazimierz Jews. In general, the Jews were able to withstand this pressure, with the support of the magnates and the king, since it was in their interest to have Jews acting as suppliers and financiers in Cracow itself. Anti-Jewish restrictions imposed by the city were mainly ineffectual and reflect the penetration of Jews into an increasing number of branches of trade and crafts, such as the trade in furs and hides, wax, soap, salt, tobacco, and haberdashery. Jews also traded in silver and gold, worked as goldsmiths, and engaged in large-scale import and export business, finance, and the lease and management of estates of the gentry (see *arenda). However the economic rise of the merchant and financier circles of the community was accompanied by increasing impoverishment among the majority of Kazimierz Jewry. These factors, combined with the growth of the artisan element, sharpened social tensions within the oligarchically led community. The expenses incurred in the struggle with the Cracow citizenry for providing defense against libels and for the constantly increasing requirements of charity forced the community to take loans and it thus became indebted to wealthy Christians and the Church. In 1719 the community owed a total of approximately 600,000 zlotys, of which about 350,000 was owed to churches and monasteries and the remainder to Polish noblemen and merchants. With the decline in status of the Kazimierz community its influence among the communities of the province also began to wane, and at the beginning of the 18th century these became largely independent of the mother community. In 1761 the Senate of Poland ratified a decree enforcing the prohibitions against Jewish commerce in Cracow. An attempt made by the municipality to confiscate the contents of the Jewish shops in the city was stopped by the authorities. During the troubled period between 1768 and 1772 the Jews in Kazimierz suffered at the hands of both the Polish and Russian armies. Many members of the community were arrested. One of its leaders, Gutman Rakowski, was tortured to death by the Poles. The Kazimierz community numbered 3,500 in 1775, and owned 212 houses; their property was valued at about 1,100,000 zlotys.

After the Polish Partitions

In 1772–76 Kazimierz passed to *Austria, while Cracow remained within Poland. The Austrian authorities demanded that Jews should be permitted to cross to Cracow, but the municipality tried to prevent them. In 1776 Kazimierz was returned to Poland, but the Senate prohibited Jewish commerce in Cracow and imposed a heavy sum on the Kazimierz community. Tension within the community continued under the new rule, and factions were formed among the oligarchy (see also *Jekeles family). Most of the Jews left Cracow and transferred their affairs to Kazimierz. The 92 Jews who remained were engaged in banking or moneylending, or owned inns. They occupied 38 houses. At the end of 1776 the king ratified an agreement between the community and the Kazimierz municipality extending Jewish commercial rights there. The Cracow municipal leaders then offered certain concessions to Jewish merchants in the city to prevent the complete transfer of Jewish business to Kazimierz. By the end of the 1770s, the 350 Jewish merchants and shopkeepers established in their new center at Kazimierz included 45 bankers and moneylenders, 52 textile merchants, 17 chandlers, 18 innkeepers, and several tailors, bakers, and furriers. In 1788 an explosives factory was established by a Jew in the vicinity of Cracow, and in 1790 a tannery. Many wealthy Jews left Cracow for Warsaw and other towns during this period.

During the 1780s the influence of *Ḥasidism began to penetrate to Cracow. This first circle of supporters of the movement in the city was established by Kalman *Epstein. In 1785 a *ḥerem* ("ban") was imposed on the Cracow Ḥasidim. Ḥasidism gained many adherents among the poorer classes of Jews in Kazimierz. Special houses of prayer were organized by the Ḥasidim, and the *Mitnaggedim* imposed a second *ḥerem* on them in 1797.

In 1795 Cracow and its environs were annexed by Austria, and in 1799 the Austrian authorities ordered the removal

of all Jewish businesses from Cracow proper. Subsequently the communal leadership and nomenclature changed under the Germanizing influence and with the spread of *Enlightenment. The Austrian government attempted to introduce the specific taxes imposed on Jews within its territories, as well as the special systems of restriction and supervision of the number of Jewish families and marriages. The authority of the five *Vorstehers*, as the communal leaders were henceforth termed, was restricted to the synagogue, charities, and responsibility for the collection of taxes and the conscription of the quota of army recruits demanded from the Jewish quarter of Kazimierz. From 1800 both electoral and elective rights were determined by payment of the *candle tax, a new impost which constituted a heavy burden on the poorer sector in particular. This system required the payment of tax on at least seven candles a week in order to acquire the passive vote, and on eight candles to be eligible for election. Eligibility for the office of rabbi or *Vorsteher* required payment on ten candles a week.

This system did not change the social structure of the communal leadership. At the elections of 1807 there were only about 40 votes. In 1801 the income of the community from both direct and indirect taxes (e.g., on milk and butter) amounted to 55,000 zlotys and balanced its expenses. In 1806 it remained with a deficit of almost 30,000 zlotys, the income from direct taxation amounting to 8,000 zlotys. The community's deficit and debts rose with its increasing needs and the mounting rate of interest, and it was forced to increase the indirect taxes imposed on basic commodities.

In 1809 Cracow was incorporated into the grand duchy of Warsaw. Although certain of the regulations and restrictions imposed by the Austrian authorities were abrogated, others were introduced in their place. On Aug. 26, 1813, flood from the river caused extensive damage to the Jewish quarter of Kazimierz.

Cracow Republic

At the Congress of *Vienna the Cracow Republic (1815–1846) was established. The new state immediately issued regulations governing the position of the Jews there. They were permitted to reside in the Jewish part of Kazimierz and in some streets of the Christian sector. Only "cultured" Jews, entitled to civic rights, were permitted to acquire houses on the main street of the Christian sector. Outside Kazimierz only those Jews who qualified by a certain defined degree of education, who were assimilated in their dress, and who owned more than 5,000 zlotys were permitted to reside. (Only 196 out of a total of 13,000 Jewish residents qualified for this alleviation in 1848.) In addition, the community organization was abolished and replaced by a Committee for Jewish Affairs headed by a Christian chairman, a rabbi elected for three years and required to have a fluent knowledge of the Polish or German languages and to have gained a matriculation certificate, and two delegates elected by the highest category of taxpayers only. After some time, two deputy delegates were also included in the committee. The annual budget of the committee required the ratification of the republic's Senate. Collection of taxes from the Jewish inhabitants was placed under state administration. The books of the committee were kept in Polish. Among the 297 Jewish merchants and craftsmen in Kazimierz in 1811 there were 97 shopkeepers, 47 innkeepers and restaurateurs, about 20 market stallholders, 14 grain merchants, 12 textile and haberdashery merchants, 5 spice merchants, 5 hatters, 3 owners of timber depots, 3 goldsmiths, 3 barbers, 2 furriers, and one surgeon. 10,820 Jews were living in Cracow in 1833 (28% of the total population), 2,373 paid approximately 40,000 zlotys a year in taxes (income tax and business taxes), while of the 27,000 Christian inhabitants 2,296 paid approximately 25,000 zlotys a year in taxes. An elementary Jewish school was opened in 1830 and a number of commercial and vocational classes for boys and girls were added in 1837. In 1836/37, 146 boys and 239 girls were enrolled in this institution. Because of the lack of Jewish teachers, general subjects were taught by Christians. From 1832 the rabbi of Cracow, Dov Berush *Meisels, was the main influence in the community despite some opposition led by Saul Raphael Landau, who was elected rabbi by the Ḥasidim. In 1844 the Republic introduced a complicated system of its own for supervision of Jewish marriages, mainly to ensure that any additional Jewish families to the permitted number should be those with ample means; they were also to have a recognized non-Jewish education, and at least – in the case of poorer Jews – to discard their specific Jewish dress, and have reached the age of 30. In 1844 the first *Reform synagogue (Temple) was opened in Cracow. Some Jews were involved in the fighting in 1846 that preceded the liquidation of the Cracow Republic and its reversion to Austria.

Under Austria

The Austrians imposed a contribution of 55,000 guilders on the community and a tax on meat. The status of the Jews did not change basically, and their economic position became critical. The Jews of Vienna raised 6,000 guilders for distribution among 1,800 needy Jewish families in Kazimierz. During the 1848 revolution 12 Jews were elected to the municipal council of Greater Cracow, and the secretary of the community, Maurycy Krzepicki, was coopted to the municipal council. The Cracow Jews expressed their dissatisfaction with the communal system by demanding that the Jewish Committee should open its meetings to the public, and stormed the community building. They also demanded abolition of the kosher meat tax and the removal of its lessee, proposing instead taxation of poultry, which was mainly consumed by the wealthy, as well as reduction in the salaries of religious officials, abolition of all privileges of the oligarchy, and transfer of the hospital from the control of the *ḥevra kaddisha* to the Committee. In the 1848 elections to the parliament of Austria, Meisels was returned as deputy for Cracow. During the revolutionary ferment of 1848 the "Society for the Spiritual and Material Liberation of the Jews," an association with emancipatory and Polish-assimilationist aims, led by M. Krzepicki and A.J.

Warschauer, played a prominent role. The right of Jews to own real estate in the Christian sections of Cracow-Kazimierz was again restricted in 1853. When Meisels left Cracow for Warsaw, the struggle for the Cracow rabbinate ended in the election of the ultra-Orthodox Simeon Schreiber *Sofer, who later came into sharp conflict with the Reform-assimilationist group led by Joseph Ettinger and the rabbi of the Reform synagogue, Simon Dankovich. During the early 1860s the upper circles of Cracow Jewry inclined increasingly toward Polish assimilation. Many of them actively sympathized with the Polish rising of 1863–64.

The Period of National Awakening

After the grant of emancipation in 1867/68 to the Jews of Cracow, which carried with it the unrestricted right of settlement in Cracow itself, the community institutions were abolished and a Jewish Religious Council established in which the assimilationist *maskilim* and intelligentsia replaced the oligarchic leadership. In 1870, Simon Samuelsohn became chairman of the council. In 1869 there were 25 Jewish students (13% of the total) studying at the law faculty of the university, 14 (7%) at the faculty of medicine, and 10 at the technical college. During the early 1870s, about 200 Jewish pupils attended secondary schools and teachers' training colleges in Cracow. The first secular Hebrew public library in Cracow was founded in 1876. The first Hebrew school in the town, headed by the *av bet din* Ḥayyim Aryeh Horowitz, was established by the Shoḥarei Tov ve-Tushiyyah Society in 1874. A branch of the Alliance Israélite *Universelle was established at Cracow in 1867. In 1876 a talmud torah was founded and remained open until 1881. Later a school for the teaching of crafts was established by the Baron de Hirsch *Fund, as well as a vocational school financed by Arnold Rapoport, a member of the Austrian parliament.

Toward the close of the 19th century, the Jewish educational system of Cracow included *ḥadarim* and yeshivot (see also *Mahzike Hadas), as well as elementary and secondary schools with Polish and German as the languages of instruction. While Ḥasidic influence remained strong among the mass of Jews, with the influences of emancipation, *Haskalah, and assimilation many Jews became prominent in the Polish-German cultural and social life of Austrian Cracow, among them the professor of philology Leon Sternbach, the painter Maurycy Gottlieb, the jurist Joseph Rosenblatt, and the physicians Philip Eisenberg and Isidor Jurowich, who became director of the Jewish hospital in Cracow (see also *Aguddat Aḥim). Several Jews made fortunes in financial and industrial enterprises, notably Maurycy Datner, who became president of the Chamber of Commerce and Industry of the city. The Jewish population numbered 25,670 in 1900 (28% of the total), and 32,321 in 1910 (21%). (See Table: Jewish Population in Cracow 1900–2004.) A considerable number earned their livelihood in the grocery, haberdashery, leather, textiles, and clothing businesses. In addition to owning shops or stalls, many were occupied in hawking and the purchase of pig bristle and horsehair in the surrounding villages for industry. The wealthier Jewish merchants, a minority, owned wine and textile warehouses and were mainly engaged in the export of timber, feathers, and eggs. Among the artisans, most numerous were tailors, glaziers, and carpenters. There were 52 Jewish physicians in Cracow (out of the total of 248) and 47 Jewish lawyers (out of 110) in 1900.

Jewish Population in Cracow 1900–2004

Year	Jewish Population	Total Population	%
1900	25,670	91,310	28
1910	32,321	143,000	21
1921	45,229	164,000	27
1931	56,800	219,286	26
1938	60,000	237,532	25
1948	5,900	299,565	2
1955	4,000[1]		
1968	700[1]		
2004	150[1]	760,000	

[1] Approximation.

*Antisemitism grew in Cracow at the close of the 19th century, amid the national rivalries in the city and demands that Jews should identify themselves with the Polish or German elements. At the same time the Jewish national revival began to penetrate to Cracow. The first *Ḥibbat Zion society, Rosh Pinnah, was established during the 1880s under the leadership of Simeon Sofer and Aaron Markus. During this period, the concepts of Hebrew revival were propagated; from 1892 the Sefat Emet Society and the Ḥevrah Ivrit le-Tarbut ("Hebrew Society for Culture"), headed by Israel Krasucki, the publisher of the periodical *Ha-Maggid he-Ḥadash* (published in Cracow), Jacob Samuel Fox, and later by the journalist Simeon Menahem Lazar, editor of *Ha-Miẓpeh*, was active there. From 1897 political Zionism won supporters, amoung whom Osias *Thon and Julius Schenweter were prominent, and an academic national society, Shaḥar, was founded. In 1906, the Jewish Nationalist Group was founded in Cracow. The organ of the Po'alei Zion, *Der Yidisher Arbeter,* was published in Yiddish in Cracow between 1905 and 1914. In 1900 the Group of Independents fighting for civic equality and the rights of the Jewish population was established, headed by Ignaz Landau and Adolf *Gross. The Committee of the Delegates of the Zionist Organizations of Western Galicia was established in Cracow under the leadership of Joseph Margolioth in 1905. During this period Cracow became an important center of Jewish cultural activity, with the historians Ḥayyim Nathan *Dembitzer and Feivel Hirsch *Wettstein, scholars such as Shlomo Rubin, the Hebrew author David Rotblum, and the popular Yiddish poet Mordecai *Gebirtig, who became celebrated in connection with the Holocaust.

After World War I

The rise of Polish nationalism and the movements connected with the upheavals of World War I, widespread unemployment, the return of armed soldiers and deserters, and famine

throughout the city and vicinity, combined to intensify antisemitism. In 1918 the community was threatened with an outbreak of pogroms. The Endeks (*Endecja) elements attempted to direct the discontent of the Polish masses against the Jews. The Jewish youth in Cracow organized *self-defense, led by Jacob Billik and Y. Alster, and were joined by Jewish soldiers who had returned from the front. The entry of the troops of the antisemitic Polish General *Haller into Cracow set off a wave of riots which were warded off by the Jewish self-defense groups, who at the end of 1918 and the beginning of 1919 had a number of clashes with the rioters.

The Jewish population of Cracow numbered 45,229 in 1921, and according to the 1931 census, 56,800 (25.9% of the total), of whom 31% were occupied in industry and crafts (compared with 30% among non-Jews), 46% in commerce and insurance (non-Jews: 11%), 7% in communications (non-Jews: 8%), 2.5% in education and culture (non-Jews: 4%), approximately 1% in domestic employment (non-Jews: approximately 8%), and 13% in other professions (non-Jews: approximately 36%). Between the two world wars Cracow became an important center of Jewish political and social life in Poland. The Polish-language Zionist daily **Nowy Dziennik*, which had considerable public influence, was published there. Zionist movements were active. General Zionism, led by Osias Thon, who served for many years as rabbi of the liberal congregation, and by I. *Schwarzbart, had a strong following. The Bundist monthly *Walka* was published in Cracow between 1924 and 1927. In this period, as in former years, the mass of poorer Jews were concentrated in Kazimierz. Educational institutions included an elementary and a Hebrew secondary school in Cracow – during the school year 1937–38, 1,332 pupils were enrolled in these two institutions – a Hebrew *ḥeder,* the Taḥkemoni secondary school, a Jewish commercial school (opened in 1933), and the Orthodox women's teachers seminary for the Beit Yaakov girls schools in Poland. The president of the community between the two world wars was Raphael Landau. Antisemitism increased in Cracow from the early 1930s, especially among the Polish youth and the extremist (Fascist) Polish nationalist organizations, who made frequent attacks on Jewish shops and stalls, as well as on Jewish students at the university and technical high school.

[Arthur Cygielman]

Hebrew Printing in Cracow

Hebrew printing was first introduced in Cracow in 1534 by the brothers Samuel, Asher, and Eliakim Halicz, who had learned the craft with Gershom Kohen in Prague, whose style their productions betray. They printed the first edition of Isaac of Dueren's *Sha'arei Dura* – in Rashi type and with a beautifully decorated title page – in 1534, the year in which they received a license from King Sigismund I of Poland. A few other works followed, until in 1537 the three brothers converted to Christianity, which did not prevent them from continuing to print Hebrew books (a *mahzor* and the first two parts of the *Tur*), but their products were boycotted by the Jewish community. Eventually the king forced the Jewish communities of Cracow, Poznan, and Lvov to buy the Halicz's entire stock. Great success was attained by the Hebrew press set up in 1569 by Isaac b. Aaron of Prostitz (Prossnitz), who was trained in Italy and received a 50 years' license from Sigismund II Augustus. He acquired his equipment from the Venetian printers Cavalli and Grypho and also brought with him from Italy the scholarly proofreader Samuel Boehm. In the next 60 years Isaac and his successors (sons and nephews) produced some 200 books, of which 73 were in Yiddish. The Babylonian Talmud was printed twice (1602–08; 1616–20); a fine edition of the Jerusalem Talmud in 1609; Alfasi's *Halakhot* together with *Mordekhai* in 1598; and several editions of the Shulḥan Arukh with Isserles' annotations. Among kabbalistic literature was a Zohar (1603), and some of Moses Cordovero's writings. Other works included a Pentateuch and *haftarot* with the classical commentaries (1587), *Yalkut Shimoni* (1596), and *Ein Ya'akov* (1587, 1614, 1619). In his title-page decoration Isaac copied the Italian style. His printer's mark was first a hart, but from 1590 fishes. For the next four decades (1630–70), prominent Hebrew printers in Cracow were Menahem Nahum Meisels, his daughter Czerna, and his son-in-law Judah Meisels, a grandson of Moses Isserles. Menahem Nahum took over Isaac b. Aaron's equipment which he enlarged and improved, but he returned to the Prague style of printing, with Judah ha-Kohen of Prague as his manager. There was no Hebrew press active in Cracow in the 18th century. Between 1802 and 1822 Naphtali Herz Shapiro and his son Aaron Solomon issued such works as the *Midrash Tankhuma* (1803) and *Midrash Rabbah* (1805). Some "modernist" literature was also printed by Shapiro's son. Karl Budweiser printed various books between 1867 and 1874, before moving on to Lemberg (Lvov). Joseph Fisher, at first in partnership with B. Weindling, printed a good deal of Haskalah literature from 1878 until 1914, including a number of Hebrew periodicals such as *Ha-Tor, Ha-Zeman*, and *Ha-Maggid*. S.N. Deitscher and son were active as Hebrew printers from 1890 to 1940 and A. Lenkowitch from 1897.

Holocaust Period

There were 56,000 Jews living in Cracow on the eve of World War II. Persecution began soon after the German occupation (Sept. 6, 1939). On Sept. 17, 1939, Marek Bieberstein and Wilhelm Goldblatt became chairmen of the Jewish community and tried to restore community activities. The first *Aktion* took place on Dec. 5 and 6, 1939, when the Eighth District, inhabited mainly by Jews, was cordoned off, and searches and mass confiscations were carried out. The Germans burned down the Jewish Community Council building and several synagogues. That month the Germans appointed a *Judenrat, consisting of 24 members, including 11 of the former *kehillah* council and headed by Artur Rosenzweig. In April 1940, the German authorities issued an order for most of the Jews to evacuate the city within four months. Some 35,000 left, while about 15,000 Jews received special permission to remain. Another group was forced to leave in February 1941. About the

same time, Cracow's two rabbis (Kornitzer and Rappaport) were murdered by the Nazis. On March 21, 1941, the ghetto was erected and close to 20,000 Jews, including 6,000 from neighboring communities, were crowded in. The physical extermination began in June 1942 when 5,000 victims were deported to the *Belzec death camp in three successive "selections." Several hundred were put to death in the ghetto itself. Among the deportees were Artur Rosenzweig and the 60-year-old poet Mordecai Gebirtig. The 70-year-old painter Abraham Neumann was shot in the street. In the next *Aktion* (Oct. 28, 1942) 7,000 Jews were shipped to Belzec, while the patients at the Jewish hospital, the old-age home inmates, and the 300 children at the orphanage were murdered on the spot. After new refugees arrived the ghetto population was now about 10,000, some of whom were in the work camp cordoned off from the rest of the ghetto by barbed wire. Final liquidation came in the middle of March 1943, when the inhabitants in the work camp were transferred to the nearby *Plaszow labor camp, and anyone found hiding was shot. The majority of the Jews in the other section were either killed on the spot or dispatched to *Auschwitz.

Resistance

The Cracow Jews began organizing resistance activities at the end of 1940. Their initially passive resistance soon turned into two organizations for armed resistance and sabotage: Bnei Akiva, consisting of Zionist youth and headed by Laban Leibowitz, Szymon (Shimon) Draenger and Adolf (Dolek) Liebeskind, which published a clandestine weekly in Polish; and a Ha-Shomer ha-Ẓa'ir group organized by leftist leaders H. Bauminger and Benjamin Halbrajch. The Bnei Akiva group established a base for military operations at a nearby village in the vicinity of the famous salt mines of Bochnia. Soon afterward both groups merged into the countrywide ŻOB ("Jewish Fighting Organization"). On Dec. 22, 1942, they attacked a group of German officers at Cracow's "Cyganeria Club," killing a dozen. This attack took on great significance. Several sabotage acts followed, including the derailment of trains. The Cracow ŻOB maintained contact with Jewish partisan groups in the Kielce district and with the *Warsaw Ghetto ŻOB leaders, one of whom, Yitzhaak Cukierman, was active in the Cracow ghetto for a period. When the Cracow ŻOB dissolved due to the final liquidation of Cracow Jewry, some of its members continued their activity at the Plaszow labor camp.

[Danuta Dombrowska / Stefan Krakowski]

Contemporary Period

By the end of World War II, only a few Jews who had been in hiding were saved. Only by the end of 1945 and in 1946 did Jews return to Cracow from Russia, where they had found refuge during the war years. The Jewish quarter of Kazimierz, however, was not reestablished by the Jews after the war because 3,000 among them sought residence elsewhere in the town, fearing the outbreak of a pogrom. The last Jew left Kazimierz in 1968. The new Jewish community used four of the ancient synagogues for their religious services. The oldest synagogue, "Hoyche Schul," was transformed into a Jewish museum. The old cemetery was renewed and reformed as a result of contributions from American and Canadian Jews. After the exodus of 1967–69, 700 Jews, mainly elderly ones, remained in the city. A few hundred were still present in the 1990s and just 150 or so in 2004.. A memorial book on Cracow Jewry, *Sefer Kraka Ir va-Em be-Yisrael*, was published in 1959.

CRAFTS.

In the Bible

Genesis 4:2, 17, 20–22 describes Cain and four of his descendants as the first to engage in crafts. Cain worked the land, Enoch engaged in building, Jubal, in music, Jabal (like Abel) was a shepherd, and Tubal-Cain worked with metals (i.e., copper and iron).

This division apparently reflects the social development of the ancient world from around the fifth or fourth millennium B.C.E. This period saw the beginning of the development of agriculture and the increase and diversification of the types of crafts connected with it. During this period, there was increased knowledge of each individual occupation, and many types of work were undertaken by experts who handed down their professional know-how from father to son as a family tradition or as a closed tribal tradition. For example, in the 12th century B.C.E., the Philistines held the monopoly in the processing of iron and the sharpening of iron implements (I Sam. 13:19–22).

The first known crafts were directly connected with the production and preparation of food. Other crafts that were also connected with agricultural production were the tanning of *leather and the manufacture of clothing. Examples of textiles preserved since the Bar Kokhba period were found in the *Judean Desert Caves. Evidence of weaving and dyeing are the loom weights and dye vats discovered in excavation. This group of crafts also included braiding, which consisted of the production of ropes and mats, and other similar industries. The development of agriculture and allied crafts also gave rise to the development of tools, such as the manufacture of plows, digging implements, vehicles of transportation, leather implements, and so on (see *Agriculture; *Carts and Chariots).

Another group of crafts are the various artistic crafts: the making of jewelry and of fine vessels of wood, stone, and ivory inlaying; the production of hammered metal objects; embroidery; and so on. There are biblical references to the work of the potter and many examples have been found in excavations (see *Pottery). This group of crafts developed with the building of palaces and temples:

> And I have filled him [Bezalel son of Uri] with the spirit of God, in wisdom, and in understanding, and in knowledge, and in all manner of workmanship. To devise skillful works, to work in gold, and in silver, and in brass. And in cutting of stones, to set them, and in carving of timber, to work in all manner of workmanship (Ex. 31:2 ff.).

Artisans of various types were numbered among the slaves of the kings of Egypt, Mesopotamia, and other permanent settlements. The Bible does not mention craftsmen of this type, apart from *Bezalel, who worked on the construction of the Tabernacle, and the people of Tyre, who participated in the construction of the Temple in Jerusalem (I Kings 5:15–25). Gold and silver were used for vessels etc. to be used in the temples or palaces, for jewelry, figurines, sewing implements, pins and clasps, etc. These metals were processed by means of casting or hammering, and separate parts were joined together by means of welding and coating. Other products, especially jewelry and tiny vessels of precious metals, were formed from different shapes, such as squares, circles, and rectangles, which were welded together in various patterns, or joined together on a chain (II Chron. 3:16). Another artistic craft consisted of inlaying fine vessels and jewelry with precious and semi-precious stones as a decoration or for finishing other items. The biblical term *millu'at* apparently refers to this technique of inlaying (e.g., Ex. 28:17). Metal frames inlaid with precious stones have been found, dating to the second millennium B.C.E. Inlaid furniture and tablets dating to the third millennium B.C.E. have also been found, as well as another example of metal inlaid with stones from the second millennium B.C.E. and others. The Bible describes the stones of the breastplate (Ex. 28:15 ff.) as being inlaid within their frames. Inlaying ivory ornaments into wooden furniture, walls, and other fine objects was also prevalent during the second millennium B.C.E. In general the Bible conveys the picture of the development by the Jewish people in Erez Israel of manifold skills in the arts and crafts which they later carried with them throughout the Diaspora.

[Ze'ev Yeivin]

Post-Biblical and Talmudic Period

There is little information about crafts in the period between the return from the Babylonian captivity in 538 B.C.E. and the talmudic era. Carpenters and masons are explicitly mentioned in Ezra 3:7 as being among those who returned from the Babylonian exile, and they must have been active in the building of the Temple. Among those who took part in the building of the wall of Jerusalem under the guidance of Nehemiah are mentioned the *zorefim* ("refiners and workers in gold and silver"; Neh. 3:8 and 31), the perfumers (3:8), and the builders, who, in addition to the stonework, "set up the doors, the bolts, and the bars" of the various gates. Little is known of the life of the Jewish people in Judea during the period after Nehemiah until the establishment of Seleucid rule in 198 B.C.E. Discoveries at Tell al-Naṣba indicate that the manufacture of pottery was carried on by entire villages during this period. Aristeas described Jerusalem as "a city rich in crafts" (*Aristeas to Philocrates*, ed. M. Hadas, p. 147). Ben Sira (Ecclus. 38:27–32) describes in some detail the work of the various craftsmen of his time, wood carvers, signet engravers ("whose art is to make every variety of design; he is careful to make the likeness true"), metalsmiths, and potters, and concludes, "All these are deft with their hands, and each is wise in his handiwork; without them a city cannot be inhabited, and wherever they dwell they hunger not."

Arts and crafts were greatly fostered by the Hasmonean kings, as a result of the extensive building operations which they undertook. Simeon built the port of Jaffa to attract seaborne commerce, and the increased maritime trade also promoted the development of crafts. The description of the mausoleum which he erected for his parents and brothers in Modi'in (I Macc. 13:25) makes it certain that skilled craftsmen of every kind were employed in its erection and embellishment. The huge building projects undertaken by Herod, both in Jerusalem and Caesarea, but above all the rebuilding of the Temple, so vividly described by Josephus (Ant., 15:380 ff.), called for skilled workers in many spheres – masons, carpenters, metalworkers, weavers and embroiderers, goldsmiths and silversmiths. Jews were employed for the building of the Temple as is specifically mentioned. Priests were trained as masons and carpenters for the edifice itself – as Josephus states, "Into none of these did King Herod enter, for he was forbidden, because he was not a priest. However, he took care of the cloisters and outer enclosures" (15:419–20). Excavations in Jerusalem have revealed the sarcophagus of "Simeon, the builder of the Sanctuary."

There were some families of craftsmen who were experts in skills required for the Temple service itself. The *Bet Garmu specialized in the preparation of the *shewbread and the house

of Avtinas prepared the incense. These families actually monopolized their position. When they demanded higher wages, the Temple administration dismissed them and summoned shewbread and incense makers from Alexandria to take their place. The experiment failed because of the inefficiency of the new craftsmen, and the houses of Garmu and Avtinas were reinstalled. They only resumed work after receiving double their previous salary (Yoma 3:11, 38). That Jews engaged in the building of pagan edifices is specifically mentioned in the Mishnah with regard to the problems of conscience and *halakhah* for the Jewish workers. The sages ruled that "none may help them to build a basilica, scaffold, stadium, or judges' tribunal; but one may help them to build public baths or bathhouses, yet when they reach the cupola in which the idol is placed, it is forbidden to help them to build it" (Av. Zar. 1:7).

In ancient Jerusalem, before the city fell in 70 C.E., specified streets, markets, and districts were inhabited by artisans of the same trade. Bakers, cheese-makers, blacksmiths, goldsmiths, leatherworkers, dyers, weavers, fullers, potters, and other craftsmen were concentrated in their own quarters. The different trades seem to have had synagogues of their own. When passing through the city or a nearby village, the artisan was recognized by the distinctive badge he wore: the tailor had a needle stuck in the front of his dress; the worker in wool showed a woolen thread; the dyer carried different colored threads from which patrons could select the desired shade; the carpenter displayed a ruler; the leatherworker was recognized by the apron he wore; and the weaver carried a small distaff behind his ear and the scribe, a pen. Eleazar b. Azariah said of this practice of wearing badges: "There is something grand about artisanship; every artisan boasts of his trade, grandly carrying his badge in the street" (ARN^2 21, 45); and the rabbis stated that he who does not teach his son a craft, teaches him brigandage (Kid. 29a). The rabbis classified leather dressing among the coarser trades, but quilting or stitching in furrows was considered a clean and easy craft (Kid. 82a–b). The tanners of Palestine, like those of ancient Greece, practiced their trade outside the cities because of the unpleasant odor. Gold and silversmiths produced articles for the household as well as ornaments. An ornament produced for women was a "golden Jerusalem," which contained the picture or the engraving of Jerusalem (Shab. 59a). The institution of apprenticeship was frequently mentioned in rabbinic literature. The master was called *rav* and the apprentice, *talmid* or *shulyah*. The term of apprenticeship was agreed upon between the master and the parents of the boy. The son of an artisan generally followed the trade of his father, and orphans were instructed by members of the guild of their late fathers.

An impressive description is given by the rabbis of the massive basilica synagogue in Alexandria. The worshipers did not occupy their seats at random, but goldsmiths, silversmiths, blacksmiths, metalworkers, and weavers all sat together in groups so that when a poor man entered the place he recognized the members of his craft and on applying to that quarter obtained a livelihood for himself and for the members of his family (Suk. 51). The guild of Jewish weavers in Alexandria was registered according to Roman law as a corporation (J. Juster, *Les Juifs dans l'empire romain*, vol. 2, 306), and the Jewish coppersmiths of Alexandria were renowned. According to the Talmud the coppersmiths were employed to repair the bronze utensils in the Temple and were commissioned to make doors of Corinthian bronze for the Temple which "shone like gold" (Yoma 38a). The craftsmen of Jerusalem used to come out in groups to welcome the pilgrims bringing their first fruits to the Temple (Bik. 3:3). Both the Jerusalem and the Babylonian Talmuds have many references to craftsmen of every kind in Erez Israel after the destruction of the Temple and an echo of their prosperity to which Ben Sira refers in the third century B.C.E. is heard in the proverb, "though a famine lasts seven years it does not pass through the gate of the artisan" (Sanh. 29a).

The textiles of Beth-Shean, referred to in the Talmud (TJ, Kid. 2:5) were famed for their quality and praised by Roman writers; Sepphoris had a synagogue of the weavers. Dyeing was a particular Jewish occupation; to the statement of a fourth century work, *Totius Orbis Descriptio*, that purple silk was manufactured in Sarafand, Caesarea, Shechem, and Lydda, the Talmud (Sot. 46b) adds a village, Luz, in Galilee, where the famous purple dye was made. As mentioned, whole villages engaged in pottery making, and Tiberias was a center for glass. Many beautiful mosaic pavements have been uncovered in Israel; that of the sixth-century synagogue in Bet Alfa is inscribed with the names of the craftsmen *Marianos and his son Ḥanina. In Babylon also, Jews worked in a multitude of crafts, including weaving, dyeing, tapestry making, leather work, metalwork, and wicker work (BB 22a; cf. Pauly-Wissowa s.v. *Babylonia*). Pumbedita was a center for the weaving of linen (Git. 27a; BM 18b). Josephus (Wars, 5:212) describes in detail a "truly wonderful" Babylonian-made curtain (*parokhet*) in front of the Holy of Holies in the Temple. The frequent references in the Babylonian Talmud to *rashei ommanot* ("heads of crafts") suggests that the craftsmen were organized in guilds, and in fact there are references to guilds of basketmakers and to weavers (Sot. 48a). Perfumers, carpenters, and art metalworkers were apprenticed (Krauss, Tal Arch, vol. 2, 255–6). Glassblowing seems to have been an occupation among Jews not only in Erez Israel, but also in Egypt and Rome. Although a reference in the Talmud (Men. 28b) to Alexandrian goblets does not mention that they were of Jewish manufacture, names of Jewish glassblowers have been found in Oxyrhynchus and Thebes, and Roman glasswork of the third and fourth centuries decorated with typical Jewish symbols, the ark, the *menorah*, the Temple, and the *sukkah*, strongly suggest Jewish craftsmen in glass (*Classical Review*, 51 no. 4 (1937), 144–6).

From the Middle Ages to the End of the 18th Century

The Jewish occupational structure was gradually eroded with the destruction of the ancient Jewish social pattern and with the change in social attitudes through the relentless pressure

from the Christian church, from the fourth century on. With the burgeoning of city life in the lands of Islam and the gradual exclusion from and relinquishment by Jews of agriculture under both Muslim and Christian rule, a process which had been accomplished more or less by the eighth century, crafts became almost the only economic sphere where Jews still worked with their hands. The respect paid to crafts in the period immediately preceding this profound change in Jewish life waned in the atmosphere of the medieval cities, where the merchant and trade had a more honored status.

Two entirely different patterns in the practice of crafts and their place in Jewish life and society are discernible throughout the Middle Ages. One characterizes the communities in countries around the Mediterranean, including in the south those in the continents of Asia and Africa, and in the north extending more or less to an imaginary demarcation line from the Pyrenees to the northern end of the Balkans. The other, in the Christian countries of Europe, was more or less north of the Pyrenees-Balkans line.

SOUTH OF THE PYRENEES-BALKANS. In the ancient places of Jewish settlement, crafts continued a major occupation of a large part of the Jewish population. The Karaite Benjamin b. Moses al-*Nahāwendī described in the ninth century those who "come to another's house, do his work and make what he needs for him for pay – like the tailor and the launderer, the worker in iron, in copper, tin, and lead, the dyer and the weaver as well as every other artisan" (in his *Massat Binyamin* [1834], 4b). There was thus a wide range of itinerant Jewish craftsmen in Persia and its vicinity. In the same century a hostile Muslim denigrated the Jews because among them are found "only dyers, tanners, bloodletters, butchers, and cobblers." This limitation in Jewish society must have been a figment of his imagination, but in any case he must have found many Jews in these occupations in Egypt and its surroundings in his time. The responsa of the *geonim* contain ample evidence of Jewish crafts and craftsmen throughout the Muslim Empire in the 10th and 11th centuries.

In the 11th and 12th centuries extensive Jewish activity in crafts is attested. S.D. Goitein has shown (*A Mediterranean Society*, 1 (1967), 362–7) how widespread and ramified were partnerships in crafts. He stated (p. 87) that these partnerships "range in date between 1016 and 1240…. Concerned are gold and silversmithing and other metal work…, dyeing (purple… indigo… silk),… the manufacture of glass vessels,… weaving,… silk work,… the making of wine,… and cheese, sugar factories,… and a pharmacy." The amounts of money and quantities of materials involved in these partnerships and in other craft enterprises (*ibid.*, 80–89) indicate a wide range in scale of the work. Sometimes the equipment of such a workshop is mentioned:

> An inventory of the workshop of a silk-weaver, dated 1157, contained 32 items… He possessed four looms, three combs connected with silk-weaving, three cylinders of wood on which the woven materials were rolled, two irons, one for the pressing of robes and another for the pressing of fabrics worn as turbans, wickerwork baskets full of warps, various quantities of bleached and other linen (which was woven together with silk), a small pot with weaver's reeds, copper threads covered with silver, and other items not preserved. The instruments taken away from a silk-weaver in Dahshū (the village famous for its pyramids) counted 26 items, of which nine were different from those just mentioned (*ibid.*, 86).

Most workshops were smaller, like the one whose "weaving tools" were sold for 12 dirhem only (J. Blau (ed.), *Teshuvot ha-Rambam* (1961), 85–86, no. 52).

*Benjamin of Tudela began to find Jewish craftsmen on his travels only on reaching Greece. At Thebes he found "about two thousand Jews. They are the good masters for preparing silk and purple clothes in the land of the Greeks, and among them are great sages in Mishnah and Talmud" (M.N. Adler (ed.), *Itinerary of Benjamin of Tudela* (1907), 12, Heb. section). He also found the Jews of Salonika, numbering about 500, among them scholars, "and they busy themselves in silk work" (*ibid.*, 13). At Constantinople he was told that Jews are hated mainly "on account of the tanners, who work in hides, because they throw out their dirty water into the streets at their doorsteps and they befoul the Jewish quarter. Therefore the Greeks hate the Jews, the good ones as well as the bad ones" (*ibid.*, 16). Benjamin's information not only expressed the usual superiority of merchants toward craftsmen in a medieval city, but also gave evidence of differing attitudes – an inimical one, toward "base" professions, like tannery, and a more friendly one, toward "better" professions like silk manufacture and dyeing, among Jews.

Throughout the later Middle Ages and up to modern times the same structure of Jewish society persisted in Islamic countries, in which a broad layer of various Jewish craftsmen was a distinct feature. Several crafts – like silk work and dyeing, in some countries also silver and gold work (e.g., in Yemen) – were considered a Jewish specialty.

Not only Sicily under Norman and Hohenstaufen rule relied on Jews for silk work and dyeing, but in Italy there were many Jewish craftsmen, in particular in the south. It would seem that Thomas Aquinas was referring to them in his letter *Ad ducissam Brabantiae* (March 7, 1274), advising Christian rulers that "they would do better to compel the Jews to work for their living as is done in parts of Italy" (*ut Judaeos laborare compellerent ad proprium victum lucrandum, sicut in partibus Italiae faciunt*). The same situation was found about 200 years later, by Obadiah of *Bertinoro. Writing in 1488, he describes the community of Palermo, which "contains about 850 Jewish families…. They are poverty-stricken artisans, such as coppersmiths and ironsmiths, porters and peasants… despised by the Christians because they are all tattered and dirty… They are compelled to go into the service of the king whenever any new labor project arises; they have to drag ships to the shore, to construct dykes, and so on. They are also employed in administering corporal punishment and in carrying out the sentence of death" (ed. A. Yaari, in *Iggerot Ereẓ Yisrael* (1943), 104). He

found a similar situation at Messina, where he counted "about four hundred Jewish family heads… better off than those of Palermo, all of them craftsmen, though a few are merchants" (*ibid.*, 108). As in the 12th century, so in the 15th century, the Jewish onlooker from the north expresses shock at and a sense of superiority toward this artisan Jewish society.

CHRISTIAN SPAIN. In the kingdoms of Christian Spain, craftsmen made up a large and important sector in Jewish occupations and society. The family name Escapat, Scapat, derives originally from an Aramaic term for a shoemaker. In many communities artisans were the majority or formed at least half of the income earners. In Segovia, in the late 14th century, out of 55 Jewish earners, "23 were artisans – weavers, shoemakers, tailors, furriers, blacksmiths, saddlers, potters, and dyers" (Baer, Spain, 1 (1961), 198). "There was a street known as Shoemakers' Lane in the *judería* of Toledo in the 14th century" (*ibid.*, 197). "Conspicuous in Aragon are Jewish bookbinders, scientists who devise scientific instruments, and gold- and silversmiths" (*ibid.*, 426). Baer assumes that in the 14th century "at least half of the Jews of Barcelona… were artisans: weavers, dyers, tailors, shoemakers, engravers, blacksmiths, silversmiths (including some highly esteemed craftsmen who made Christian religious objects), bookbinders (who bound the registers of the royal chancery), workers in coral, and porters" (*ibid.*, 2 (1966), 37). The same holds more or less true for Saragossa (*ibid.*, 55–56). The anti-Jewish laws of 1412 stated that "Jewish artisans (blacksmiths, tailors, shoemakers, etc.) might not serve Christian customers" (*ibid.*, 168).

There is every reason to assume that the main outlines of Jewish society in the kingdoms of Christian Spain were a continuation of its structure in the kingdoms of Muslim Spain. The importance of artisans was evident in Jewish social and even cultural life there. The artisans were the mainstay of the opposition led by the mystic trend to the rule of the rationalist patrician stratum in Spanish communities. Artisan *guilds were behind many of the demands for democratization of community leadership and for equal distribution of taxes in communities like Saragossa and Barcelona in the 13th and 14th centuries. Shocked by the catastrophe of the persecutions of 1391, the moralist Solomon ibn Laḥmish *Alami demanded in 1415 of the Spanish Jew: "Teach yourself a craft, to earn your living by your work… for it is to the honor of men to live off their work and toil, not as the proud ones thought in their foolishness" (*lggeret Musar*, ed. A.M. Habermann (1946), 29).

The artisans had always been the most faithful element in Spanish Jewry. During the mass conversions of 1391–1415, many devout artisans remained steadfast" (Baer, Spain, 2 (1966), 354). No wonder that King Alfonso V stated in 1417 that community leadership had passed to "the artisans and the little people" and Solomon *Bonafed complained about this time that in Spanish Jewry "the tailors render judgment, and the saddlers sit in courts (quoted by Baer, *ibid.*, 248).

The workshop of the Jewish artisan in Spain was not always a small one. Mention is made of workshops (*operatoria*) on a large scale for the manufacture of clothes in Saragossa and Huesca (Baer, Spain, 1 (1961), 425). About the beginning of the 14th century there came before *Asher b. Jehiel (the *Rosh*) the case of a dyer or saddler "who has an annual expense in the form of gifts to the judges and officials, to keep them from trumping up charges against him – the usual contribution that craftsmen are required to make out of their handiwork" (quoted by Baer, *ibid.*, 201). At the other end of artisan society there would be the case of that "worthless scamp among the artisans [who] will marry a woman here today and then become enamored of another and go and marry her elsewhere and return brazenly to his home town" (responsum quoted by Beer, *ibid.*, 424).

After the expulsion from Spain the exiled artisans merged into the artisan class of the communities in North Africa and the Ottoman Empire. It would seem that many other exiles took up crafts in their new straitened circumstances; some would even see it as a moral obligation, as formulated by men like Solomon ibn Laḥmish Alami (see above). The Safed community in its days of glory in the 16th century was based on a broad stratum of craftsmen practicing on a large and small scale. Stories about Isaac b. Solomon Ashkenazi *Luria (Ari) tell much about the social relationships and place of artisans in this holy community. One of the exiles who went to Jerusalem advised his correspondents: "Let anyone who wants to, come. For they can live out their lives earning through crafts. These are the worthwhile crafts here – gold- and silversmithery, tailoring, carpentry, shoemaking, weaving and smithery… I who know no craft except for my learning derive my needs from Torah study" (A. Yaari (ed.), *Iggerot Ereẓ Yisrael* (1943), 181).

NORTH OF THE PYRENEES-BALKANS (INCLUDING NORTHERN AND CENTRAL ITALY). Crafts played a very small role as a Jewish occupation, from the inception of Jewish settlement in this part of Europe. Around the beginning of the 11th century mention is made of a Jew in northern France who owned a furnace and made his living by working it with Christian hired men and letting it out for baking to other people (S. Eidelberg (ed.), *Teshuvot Rabbenu Gershom* (1956), 61–63, no. 8).

Neither the documents of privileges granted to Jews in these countries up to the 15th century nor their own writings reveal much concern with crafts or the presence of craftsmen. Certainly the Christian guilds prevented the growth of a Jewish artisan class in the cities of Western and Central Europe up to the 15th century. Since moneylending brought various articles in pawn into Jewish houses, to be able to return them undamaged or to sell them profitably the Jew had to learn to repair them and keep them in good condition. Hence a part-time, unspecialized kind of "pottering" artisanship always existed in those countries and times where Jews were engaged in moneylending. Jews attempted to maintain their own butch-

ers for the sake of *kashrut*, although Christian butchers' guilds always tried, often with success, to thwart this aim. It is reasonable to assume that there were always at least part-time tailors among Jews everywhere, to avoid using the forbidden admixture of wool and flax (*sha'atnez*).

From these beginnings there developed from the 15th century a resumption of crafts among communities in Southern and Central Europe (Bohemia, Moravia, and Austria) and especially in Poland-Lithuania.

Rabbinical responsa tell of women – widows or spinsters – who worked in shawl-making and thread-making for gentile customers. Jewish craftsmen are mentioned in Poland in 1460. In 1485 the municipal council of Cracow permitted "poor Jewesses to sell every day shawls and scarves made by their own hands and craft." Jews increasingly penetrated crafts in the towns of Poland in the 16th century as the constant complaints of guilds and municipal councils abundantly show. The same development is reflected even more strongly in the various royal decisions and agreements between municipalities and Jews, or Christian guilds and their Jewish counterparts, all of which combine to give a picture of consistent, even if much hampered, penetration of Jews into various crafts.

In the grand duchy of Lithuania, the Jews of Grodno already had permission in 1389 in their charter of privileges "to exercise different crafts." In time, crafts became a well-developed sector of the Jewish economic structure. When needy, displaced refugee children from Germany arrived in Lithuania in the wake of the destruction of the Thirty Years' War, the Council of Lithuania (see *Councils of the Lands) gave the compassionate instruction: "It has been resolved and decided to accept 57 boys into our country to be under our protection, to divide them among the communities to feed them, to clothe and shoe them. Boys to whom God has granted wisdom that their study will be successful shall be induced to study Torah at school; boys whose abilities are not sufficient for the study of the Torah shall be induced to take service or to learn the work of some craft" (S. Dubnow (ed.), *Pinkas ha-Medinah* (1925), 73, no. 351). This indicates both that there was opportunity for learning a craft, and the disregard in which it was held by the leaders of Jewish society. Accordingly crafts are associated with intellectual incapability; it would be a sin, it seems, to send an able boy to be apprenticed to an artisan. The council also dealt with supervision of Jewish tailors to ensure that they should not transgress Jewish law in their work (*ibid.*, 178, no. 728). The increase in craftsmen is reflected in the hostile decision of the Council of Lithuania in 1761 forbidding craftsmen in all large communities from taking part in the assemblies of the community (*ibid.*, 268, no. 983). Indeed, in the bitter divisions in the Vilna community in the second half of the 18th century craftsmen played an important role in the opposition groups and activities.

Despite a general disparagement of crafts, *printing was considered an honorable profession. The Cracow community is found in 1595 trying to defend the printers of Cracow and Lublin against competition from Italian printers (M. Balaban, in jjlg, 11 (1916), 93, no. 79).

In the rapidly developing southeast of Poland a Jewish craftsman named Kalman, mentioned as a proficient tanner and furrier (*in arte pellificiaria bene versatus*) in *Przemysl, was important enough to be granted a special privilege by King Stephan Báthory in 1578 (M. Schorr, *Żydzi w Przemyślu* (1903), 88–89, no. 12). In the same town – which was certainly not exceptional in economic structure – the king defended in 1638 "the Jewish craftsmen who do their work for Jews only" against restrictions by the municipal authorities (*ibid.*, 143, no. 71). The Jews, however, penetrated the Christian market there. In 1645 the same king ratified an agreement between the municipal authorities and the Jews, paragraphs 5–14 of which show Jewish craftsmen as serious competitors to the Christian craftsmen in the branches of tanning, furriery, tailoring, barbering, goldsmithery, painting, cobbling, saddlery, baking, candle-making, hat-making, and sword-making; some of their products were intended by the Jewish craftsmen for the Jewish market only – or so their Christian competitors demanded. Some were entered on the Christian market with the reluctant agreement of the guilds (*ibid.*, 150–1, no. 74). By the end of the 17th century the citizens of Przemysl prepared a complaint which generalized that "every Jew is either a merchant or a craftsman." They state that the Jews had "totally ruined the goldsmiths', the tailors', the butchers', and the bakers' guilds." The method of competition used by the Jews is described. They employ mobility and initiative. "They [i.e., the Jews] have totally eradicated the barber-bloodletters' guild for there are several Jewish barbers who go with their physicians to the manor houses to the patients there letting blood, putting on suctions cups (*bańki*); the same they do in town. There were not a few Christian soap-makers; now there remains only one, and at that, very poor. But there are several Jews who make soap, carrying it down river and selling it in town too" (*ibid.*, 206–8, no. 129). In this town, as in others, Jewish guilds developed, and from the last quarter of the 17th century various ordinances and regulations are extant of the Przemysl Jewish tailors' guild – which called itself grandiloquently "the holy society of the dressers of the naked ones" (חברא קדישא דמלבישי ערומים) – showing relations between masters and apprentices, and between masters and hired workers, and demonstrating the strict supervision by the community and rabbi over the observance of *sha'atnez* laws by the tailors (*ibid.*, 259–74, nos. v–xxiii).

The situation in the west of Poland-Lithuania, i.e., Great Poland, is seen clearly in various ordinances of the Poznan community. In 1535 a council of community elders – usually very conservative and patrician in its attitude – admonished the Jews in their jurisdiction

> To remember for their good the clothes makers of Świerzeniec community, a reminder of help and mercy, to look upon some among them with care and particular supervision – for we have seen that crafts are diminishing daily and many of our people have deserted craftsmanship, hence it is fitting to strengthen

> the hands of the artisans, not to let them fall, for this is a great benefit and an important rule for the entire society (D. Avron (ed.), *Pinkas ha-Kesherim shel Kehillat Poznan* (1966), 55–66, no. 273).

The same council devised in 1747 a set of model ordinances for guilds in the community and for regulating their relations with other community institutions (*ibid.*, 398–403).

By the end of the 18th century the Poznan community had a well-developed artisan class. In 1797 there were in the town 923 Jewish and 676 Christian tailors; 22 Jewish goldsmiths and 19 Christian; 51 Jewish hatters, 24 Christian; 52 Jewish buttonmakers, 6 Christian; 238 Jewish ironsmiths, 6 Christian; 51 Jewish bakers, 607 Christian. In total there were 1,592 Jewish craftsmen, about one-third of the 4,921 craftsmen in Poznan in this year.

In Bohemia-Moravia also, as well as in southern Germany, Jews increasingly engaged in crafts. A community like that of Prague had long-standing and well-developed Jewish guilds by this period based on a ramified craft structure and professional life and organization.

Some circles of these craftsmen developed a specific ethos and pride in their own calling. As early as the 17th century there were tailors in Poland-Lithuania who asked to be buried with the boards of their tailoring tables, being certain of the honesty and righteousness of their life's work.

Modern Times

In the aspirations for emancipation of the Jews and spread of Enlightenment – and as a corollary of the program for "productivization" of the Jews – occupation in crafts became an issue of the ideological and political strivings for change and betterment in legal status and social standing. Christian W. von *Dohm regarded the encouragement to enter crafts as part of his proposals for "betterment of the Jews." Emperor *Joseph II included encouragement of crafts among Jews in his legislation for them.

Yet, the practical changes in crafts did not eventuate from this ideology or legal enactments, but from the actual economic and social situation among the masses of Jews in Poland-Lithuania and later on in the Pale of Settlement in czarist Russia. In the 18th century many Jewish craftsmen in the private towns of the Polish nobility began to bring their products to fairs and market days in the main royal towns. The general tendency, in which craftsmen were now working for the open market instead of producing to order, encouraged this development. The Jewish craftsman – being outside the guild structure – was unattached and ready to prepare stock and sell it in free competition. He thus became anathema to the Christian craftsmen and the guilds.

In the early 19th century Jews in the impoverished and overcrowded *shtetl* in the Pale of Settlement tended either to continue in the old crafts – mainly tailoring, textiles, and cobbling – or to enter new professions where not much training or outlay on equipment was needed, such as leather work, and carting. Many of those craftsmen peddled their work in villages around the townlets. Through the 19th century a specific Jewish crafts structure developed in Eastern Europe, as reflected in Table 1 for the end of the century.

This situation made for hardship and competition among Jewish crafts in the Pale of Settlement. It also gave rise to a specific way of life, and even folklore among the masses of Jewish workers. By the end of the 19th century, Eastern Europe had a strong element of class-conscious Jewish craftsmen who through their poverty and hardship formed an embryonic Jewish proletariat. Much of the force of the Jewish revolutionary movement and sentiment, the bitterness and impulsion to social activity, came from this stratum of Jewish society. The writings of *Shalom Aleichem and other writers of this generation immortalize the spirit of "*amkho, sher un eyzen*" ("our folk of the scissors and flatiron").

In the same period of the 19th and early 20th centuries, Jewish crafts in the old centers, for instance Prague and in Bavaria, disintegrated under the impact of flourishing capitalism and the crossing over of Jews in Central and Western Europe to the more profitable and "respectable" professions of the middle class. Emancipation in these countries brought about not productivization but practically the end of Jewish participation in crafts.

Jewish emigration in the second half of the 19th century, and in a large measure up to the 1930s, was predicated on and characterized by this craftsmen element.

Among the Jewish immigrants to the United States before World War I, over one-third were craftsmen, mostly tailors, whereas among non-Jews only 20% of the immigrants had a

Table 1. Crafts Structure in the Pale of Settlement, 1898

Crafts	Masters	Hired Workers	Apprentices	Total
Garment	108,527 (43.3%)	80,402 (32%)	61,923 (24.7%)	250,852
Food	43,665 (75.5%)	9,675 (16.7%)	4,547 (7.8%)	57,887
Woodwork	25,653 (51.7%)	14,119 (28.5%)	9,816 (19.8%)	49,588
Metalwork	25,499 (52.1%)	12,892 (26.4%)	10,530 (21.5%)	48,921
Construction	19,791 (62.7%)	7,094 (22.4%)	4,705 (14.9%)	31,590
Textiles	10,589 (57.4%)	4,582 (24.9%)	3,257 (17.7%)	18,428
Leather	6,123 (50.9%)	3,953 (32.8%)	1,964 (16.3%)	12,040
Paper and Print	5,998 (51.3%)	3,343 (28.6%)	2,354 (20.1%)	11,695
Chemicals	2,764 (76.4%)	594 (16.4%)	259 (7.2%)	3,617
Other Crafts	10,787 (65.9%)	3,874 (23.7%)	1,707 (10.4%)	16,368
Total	259,396 (51.8%)	140,528 (28%)	101,062 (20.2%)	500,986 (100%)

skilled profession. Of 106,236 Jewish immigrants to the United States in 1903–04 there were 16,426 tailors, 4,078 carpenters, 2,763 cobblers, 1,970 glaziers and painters, 1,400 butchers, 1,173 bakers, and 14,830 in miscellaneous crafts. (See Table 2: Jewish Craftsmen in New York, 1890). In Paris in 1910 Jewish immigrants from Eastern Europe included 16,060 craftsmen of whom 11,460 (71.4%) were in garment manufacture – 7,000 tailors, 2,000 hatters, 1,900 furriers, 1,200 cobblers – 2,700 (16.8%) iron workers, 1,000 (6.2%) wood-workers, 600 (3.7%) leather workers, and 300 (1.9%) in other crafts. The same structure held good for Eastern European Jewish immigrants in England as well as other countries.

Table 2. Jewish Craftsmen in New York, 1890

Tailors (General) 9,595	**Tailors (Women's Coats)** 2,084	**Tailors (Wholesale)** 1,043	**Cigarette Manufacturers** 976
Haberdashers 715	**Painters** 458	**Carpenters** 443	**Tinsmiths** 417
Butchers 413	**Gold + Silver Smiths** 287	**Bakers** 270	**Glaziers** 148
Typesetters 145	**Machinists** 143	**Shoemakers** 83	**Musicians** 67

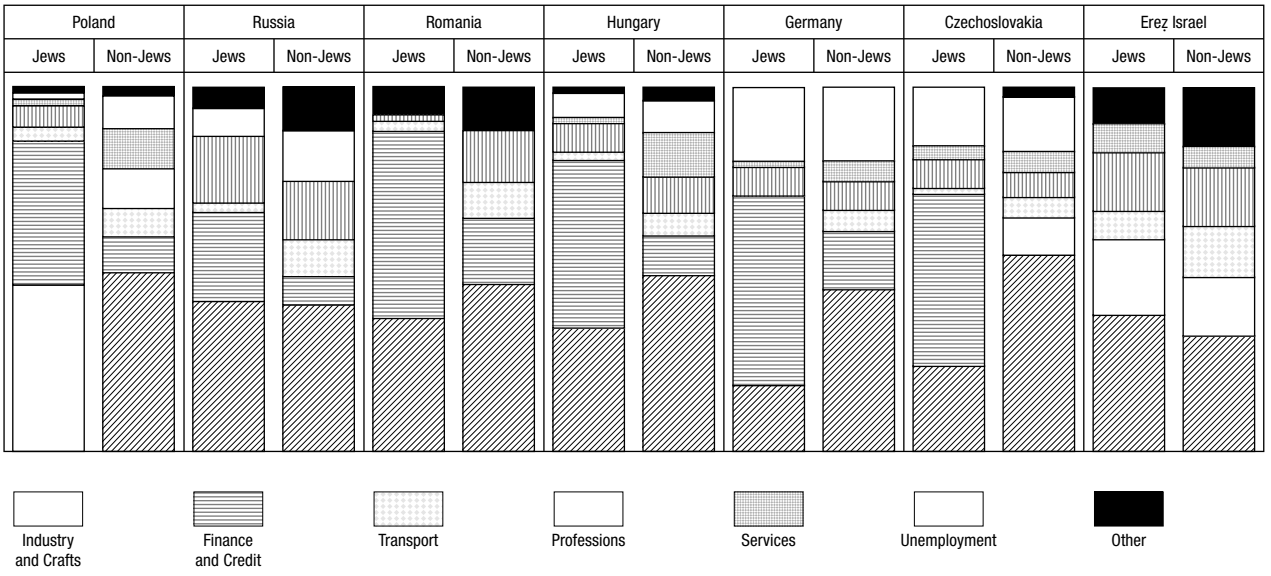
Thus the sweatshop of New York, London, and other centers of Jewish immigration and the preponderance of Jews in tailoring and ready-made clothes businesses in countries of large immigration from Eastern Europe derived from the structure of the Jewish crafts world which had taken shape during the 19th and early 20th centuries in Eastern Europe.

This situation underwent many changes, mostly destructive, between the two world wars. In Soviet Russia the general trend against the practice of the independent craftsman and the industrialization of the country diminished the role of crafts among Jews. In the countries built on the ruins of the empires of czarist Russia and Austria-Hungary – like Poland, or Lithuania – the old enmity of the Christian craftsmen rapidly reasserted itself in modern guise. Jews were pushed out or barred from crafts either explicitly or more frequently by seemingly innocuous demands by the trade unions or authorities. Entry to the trade, for instance, was made conditional upon proper apprenticeship with proper masters (and Christian masters only were usually recognized as such); stringent demands for modern equipment and modern conditions of work were usually formulated in a way that hampered the Jewish craftsman in particular. The response of Jewish crafts to this challenge was pioneered by *cooperatives and loan banks; a stimulus was given to schooling and the establishment of educational systems; vocational training was provided by the *ORT organization.

In modern Erez Israel the pioneering spirit of exaltation of work did not noticeably turn in the direction of crafts. Enthusiasm was mainly reserved for agricultural work and manual labor.

By the end of World War II, a large segment of Jewish craftsmen had disappeared as a result of the Holocaust. The specific technical requirements and social structure of the State of Israel and its growing prosperity, with the predominance of the middle-class, liberal and administrative professions governing the structure and ethos of Jewish economy and society in the countries of the West (Western Europe, the United States, Great Britain and the Commonwealth, South Africa, South America), have created a situation where in many places Jewish occupation in crafts is at a vanishing point, and in others they play an increasingly minor role. The large

Table 3. Professional Structure of Jewish and non-Jewish Population between the Two World Wars (approx.)



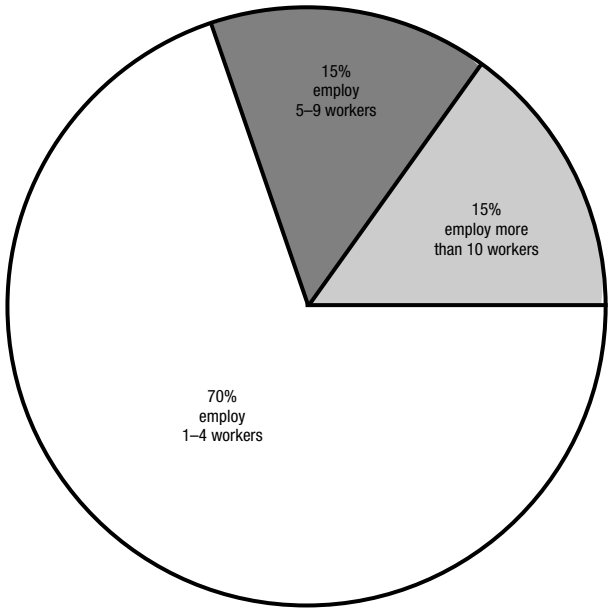


Figure 1. Share of small- and medium-scale enterprises in crafts and industry in Israel, 1968 (includes artisans' workshops – 24,500 workers)

concentrations of Jewish tailors and tailoring in New York, London, and elsewhere have almost disappeared in the lower echelons of the craft in particular.

A 1957 survey conducted by the U.S. Bureau of the Census found that 9% of employed male Jews were working in crafts. A similar breakdown in Canada put the percentage at 14%.

On the other hand, the large scale immigration of Jews from Near Eastern countries to Israel and the entry of survivors of the Holocaust to Israel and some western countries brought a certain temporary revival of Jewish crafts there as shown by Table 4. Craftsmen among Immigrants to Israel.

An indication of ORT activity in assisting young Jews to train for modern and sophisticated crafts in the postwar period is shown by Table 5. Crafts Specialization among Graduates of ORT. In keeping with this trend, from the late 1960s ORT schools began moving toward comprehensive education, academic as well as vocational, with an emphasis on technological occupations.

It now seems that despite efforts at modernization and the near disappearance of many of the old inimical forces, Jewish occupation in crafts and the role of craftsmen as an important factor in Jewish society are disappearing, as in other societies, through the influence of modern industrial techniques and organization.

CONCLUSIONS. Throughout the medieval and modern periods crafts played an uneven role and were differently evaluated in the various Jewish centers. The greatest continuity in position and constancy of attitudes toward crafts is found in the countries of the Middle East up to the end of the 19th century. Crafts and craftsmen weighed most importantly in the social and economic structure of the Jewries of Christian Spain (to the end of the 15th century) and those of Eastern Europe in the late Middle Ages and modern period. For a relatively brief interval they played a dynamic role in the new urban centers of Jewish immigration in the West.

Whereas in the Near East and Spain crafts were accorded – even if sometimes grudgingly – a positive evaluation and craftsmen had a certain recognized influence in Jewish

society, in the centers of Ashkenazi Jewry, even in Eastern Europe, they had to wait until the late 19th century and for modern revolutionary tendencies to attain some positive evaluation and social standing. It would seem that both the slighting of crafts in modern Zionist thought, even if this is subconscious, and the ephemeral character of their prosperity in the West, are not solely to be ascribed to the advent of modern techniques and industrialization but also to the legacy of this long-standing negative Ashkenazi attitude.

CRAIOVA, city in S. Romania. Sephardi Jews were living there from the first half of the 17th century. In 1790 they founded a *ḥevra kaddisha*, a Romanian landowner having granted them land for a cemetery. Ashkenazi Jews settled in Craiova in the mid-19th century, though their community was not officially founded until 1913. They owned two synagogues, the first built in 1842 and the other in 1880. Craiova was a center of Judeo-Spanish culture. In 1865 the Ashkenazi community established a boys' school which functioned until 1948. The Sephardi community maintained a separate school until 1887, when both schools were joined. There were 82 Jewish families in Craiova in 1831; 490 persons in 1860; 2, 891 in 1891; and 2,274 in 1930 (3.6% of the total population). In the Holocaust period, beginning in 1940, many Jews of Craiova were pauperized. Eighteen hundred Jews from northern Moldavia were forcibly transferred to Craiova.

After the war, the Jewish population was augmented by the influx of refugees from northern Bukovina, who chose not to return to their former homes under Soviet rule. A few years later the majority settled in Israel. In 1969, some 75 Jewish families lived in Craiova; they had a synagogue. In 2004, 89 Jews lived there. An Institute of Jewish Studies was established at the University of Craiova in 1998.

CRANE (Heb. עָגוּר, *agur*), the bird *Grus grus* (*Megalornis grus*), which passes over Israel twice a year, in autumn on its migration to Africa, and in spring on its return to Europe. At these times large flocks of cranes in arrowhead formation can be seen in the skies of Israel. Their name, based on Hebrew and Aramaic (*kurkeyah*), probably derives onomatopoetically from their cry. Hezekiah, king of Judah, says in his illness he cried out like a crane (Isa. 38:14), while Jeremiah (8:7) refers to the crane's precise knowledge of the times of its migrations. The gray crane is the tallest bird in Israel (55 in.; 140 cm.). It feeds on insects, worms, and water-plants, and resembles the stork, except that it is gray-colored and has a black neck.

CRANGANORE, leading port and commercial center in ancient and medieval India, associated with the ancient port of Miziris, north of *Cochin. Medieval travelers (including *Benjamin of Tudela) refer to it as Shingli, Shinkali or Ginjalek. In the historical tradition of the Malabar Jews, Cranganore is regarded as their original home and chief dwelling place. Jewish immigrants reputedly established their first foothold on the Malabar coast, and from there branched out into neighboring places and villages. According to tradition, the leader of the Jewish settlement in Cranganore, Joseph Rabban, was accorded by the Hindu emperor a charter and privileges engraved on copper plates still in the hands of Cochin Jews. The suggested date of these inscriptions ranges from the 4th to the 11th centuries C.E. The Jews of Cranganore enjoyed cultural and religious autonomy under their leader, called *mudaliar,* appointed by the rajah. Their number may have given rise to the widely circulated notion that the Jews had an independent kingdom in Cranganore. Given the fact that Muziris was an important port, it is possible to suppose that the Jews of the town were engaged in trade. Another argument in support of this view is that when in 1341 the harbor of Cranganore became silted up and the town lost its significance as a port, the Jews moved to Cochin. The conquest of Cranganore by the Portuguese in 1523 led to the

complete destruction of the Jewish community. As a result there was another wave of emigration to other places in Malabar, from which the city of Cochin benefited in particular. The memory of the Jewish settlement in Cranganore/Shingli has survived until today. Until recently there was a tradition of placing a handful of earth from Cranganore in the coffin of a deceased Cochin Jew. The Shingli form of pronunciation is a specific feature of the liturgy of the Cochin synagogue.

CRANKO, JOHN (1927–1973), ballet choreographer and director. Cranko's father, Herbert, a lawyer in South Africa, was Jewish; his mother, Grace Hinds, was not. Cranko was born in Rustenburg, South Africa, and studied dancing in Johannesburg and Cape Town, where he joined the University of Cape Town Ballet (1942). His first creative work was a version of Stravinsky's *Soldier's Tale* (1942). Moving to London in 1946, he entered the Sadler's Wells Ballet school and company, directed by Ninette de Valois. Soon he was creating ballets, the first of which was *Tritsch-Tratsch* (1946). After his great success with *Pineapple Poll* (1951), he became resident choreographer of the Sadler's Wells Ballet (which later merged with the Royal Ballet). Subsequently, he did a series of works for the Royal Ballet Company, including *Bonne Bouche* (1952), *The Lady and the Fool* (1954), and his first full-length ballet *The Prince of the Pagodas* (1957).

Meanwhile, Cranko had also choreographed works for the New York City Ballet (*The Witch*, 1950), the Paris Opera Ballet (*La Belle Hélene*, 1955), the Ballet Rambert (*Variations on a Theme*, 1954), and La Scala, Milan. He also wrote a revue, *Cranks* (1955), which had a successful run in London. In 1960, he was invited to produce *The Prince of the Pagodas* in Stuttgart, following which he was appointed ballet director there, and created a company that ranked among the foremost in the world. The Stuttgart Ballet, which staged only Cranko's works, appeared at the Edinburgh Festival (1963) and made tours in America, Europe, and the Soviet Union.

Cranko first visited Israel with the Stuttgart Ballet in 1970. The programs included Romeo *and Juliet* and several shorter pieces. His second visit was in 1971 to create *Song of My People – Forest People – Sea* (set to Hebrew poems) for the Batsheva company, and lastly in 1972 to revise the ballet.

Cranko's choreography did not escape criticism. He was inclined to allow his inventiveness to crowd his work and to let his theatrical sense become too prominent. In his later works, however, and especially the short ones, he learned to prune his ideas. Although his *Romeo and Juliet* had enchanting moments, his most successful long ballets were *The Taming of the Shrew* (applauded for 20 minutes in Moscow) and *Onegin*. His greatest achievement was as the creator of the Stuttgart Ballet, which served to raise the standard of continental ballet. He died in an airplane crash when returning from the United States with the company.

°CRASSUS, MARCUS LICINIUS (d. 54 B.C.E.), prominent Roman toward the end of the republican period. Crassus served as consul together with Pompey in 70 B.C.E. He was consul again in 55, and was appointed proconsul of Syria for five years in order to wage war against the Parthians. The war began in 54 B.C.E., and continued until the following year, when Crassus was defeated and killed by the Parthians. Crassus was the first Roman to seize the funds of the Temple, to the amount of 2,000 talents of gold, despite the golden ingot offered him by Eleazar, the priest in charge of the curtains of the sanctuary.

[Menahem Stern]

CREATION AND COSMOGONY IN THE BIBLE. The Hebrew Bible commences with a majestic cosmological account of the genesis of the universe. According to Genesis 1:1–2:4a (the P account according to the documentary hypothesis), God created the world in six days and rested on the seventh day. The verb *br'* used in the very first sentence of the creation story does not imply, as most traditional commentators believed, *creatio ex nihilo*, a concept that first appears in II Maccabees 7:28, but denotes, as it does throughout the Bible, a divine activity that is effortlessly effected. The opening sentence in the story – many commentators think (but see Cassuto, *Genesis*, 1, pp. 19–20) – begins with a temporal clause, "When God began to create the heaven and the earth" (Gen. 1:1), continues with a circumstantial clause telling of the existence of the darkness and void (1:2), and then in two main clauses (1:3) relates the first act by which God, by divine fiat, created cosmic order out of primeval chaos: "God said, 'Let there be light,' and there was light." The six days of creation fall into a symmetrical pattern of three days each, in which the creation of light and of day and night on the first day, of the sky on the second, and of dry land, seas, and vegetation on the third are complemented by the creation of the luminaries on the fourth day, living creatures in the sea and sky on the fifth, and land animals and man on the sixth. The refrain "And God saw that it was good; and there was evening and there was morning" usually follows the completion of each day's activity. The final act of creation, man, is preceded by a solemn declaration of purpose announced in the heavenly council, "Let us make a man in our image, after our likeness" (1:26). Man is then blessed by God, "Be fertile and increase, fill the earth and master it," and entrusted with sovereignty over the "fish of

the sea, the birds of the sky, and all the living things that creep on earth" (1:28). God, having found that all He had made was very good, ceased from further acts of creation and blessed and sanctified the seventh day (2:2). Another story of creation, Genesis 2:4b–24 (the J account according to the documentary hypothesis), describes a much more anthropocentric version of the origin of life on earth: with the ground watered at first only by a subterranean flow; the first man formed from the earth of the ground and animated by a breath blown into his nose, the first woman created from a rib of the man; and the two placed in the *Garden of Eden.

The main differences between the two accounts, whose sources reflect different epic traditions, are (1) the names of the deity: Genesis 1, *'Elohim*; Genesis 2, YHWH; (2) in the first account the creation of plants (1:11ff., third day) precedes the creation of man (1:26, sixth day), but in the second before man there was no shrub in the field and the grains had not yet sprouted (2:5–7), trees being created only after the creation of man (2:8–9); (3) in Genesis 1:20–21, 24–25 animals were created before man, but in Genesis 2:19, after man; (4) the creation of man is repeated in the second account, but whereas in Genesis 1:27 male and female were created together, the woman was fashioned from a rib of the man in 2:21ff. The second account does not mention the creation of day and night, seas, luminaries, marine life, but commences immediately with the forming of man from the dust of the earth.

Conception of God

Though the style of the first account is much more hymnlike and sublime than the second, it does not reflect, as is usually assumed, a completely abstract, transcendental conception of God. First of all, though creation by divine fiat is found in connection with light (1:3), firmament (1:6), gathering together of the waters into one place and the appearance of dry land (1:9), vegetation (1:11), luminaries (1:14), marine life and fowl (1:20), animal life (1:24), there are also references to the actual making or creating of the firmament (1:7, *wa-y'aas*), luminaries (1:16, *wa-y'aas*), sea monsters, fish, and fowl (1:21, *wa-yivra'*), land animals (1:25, *wa-y'aas*), and most important, the pinnacle of creation, man (1:26ff. *n'aaseh, wa-yivra'*). Moreover, creation by divine fiat is not an abstraction first conceived by the author of the P account, but is found in earlier Egyptian (Pritchard, Texts, 5) and Babylonian cosmogonies. Second, that man was created in the image and likeness of the divine beings (Gen. 1:26) is interpreted by many modern exegetes in a physical sense, although the expressions must have lost their original corporeal sense in the biblical context (see Cassuto, *Genesis*, 1, p. 56). (For the image of the deity, cf. Ex. 24:10; 33:20–23; Isa. 6:1; Ezek. 1:26.) The terminology employed here has Near Eastern prototypes: In Egyptian literature, specifically in a cosmogonic context, man is described as being the image of his creator god (Wildberger; Pritchard, Texts, 417); in Mesopotamian literature the king is sometimes called the "image" (Akk. *ṣalmu*, Heb. *ẓelem*) or "likeness" (Akk. *muššulu*, Heb. *demut*) of his deity (for the views of Horst, Loewenstamm, and Wildberger, see bibliography). In Israel a "democratization" (Horst) took place in that not only the king but all of mankind is conceived as being created in the divine image. If this idea originally goes back to royal ideology, it would further explain man's unique task on earth. Just as the divine likeness of the king in Mesopotamia empowers him to be the sovereign of his people, so mankind is entrusted "to rule the fish of the sea, the birds of the sky, and all the living things that creep on earth" (Gen. 1:28). Finally, the plural verb *na'aseh* ("let us make") and plural nouns *be-ẓalmenu* ("in our image") and *ki-demutenu* ("after our likeness"; Gen. 1:26) may refer to the divine council with which God consults before the important step of creating man; though other feasible explanations have been advanced (see commentaries). (For other references to the divine council, see Gen. 3:22; 11:7; I Kings 22:19ff.; Isa. 6:2 ff.; Job 1–2; Dan. 7:10; for the deity's taking counsel before creating man, see *Enuma Elish* 6:4, in Pritchard, Texts, 68.)

Mesopotamian Prototypes

The two versions of the creation story have often been compared to Mesopotamian prototypes. The translation given above in Genesis 1:1ff. and 2:4bff., "when … then," is analogous to the introductory style of Mesopotamian epics. Tracing a theme to the creation of the universe is a feature also found in as trivial a work as the "Incantation to a Toothache" (Pritchard, Texts, 100–1), and in as major a composition as the Sumerian King List (*ibid.*, 265–6), "history" commences with the dynasties before the Flood.

ENUMA ELISH. For specific cosmogonic details the most important piece of Mesopotamian literature is the Babylonian epic story of creation, *Enuma Elish* (*ibid.*, 60–72). Here, as in Genesis, the priority of water is taken for granted, i.e., the primeval chaos consisted of a watery abyss. The name for this watery abyss, part of which is personified by the goddess Tiamat, is the etymological equivalent of the Hebrew *tehom* (Gen. 1:2), a proper name that always appears in the Bible without the definite article. (It should be noted, however, that whereas "Tiamat" is the name of a primal generative force, *tehom* is merely a poetic term for a lifeless mass of water.) In both Genesis (1:6–7) and *Enuma Elish* (4:137–40) the creation of heaven and earth resulted from the separation of the waters by a firmament. The existence of day and night precedes the creation of the luminous bodies (Gen. 1:5, 8, 13, and 14ff.; *Enuma Elish* 1:38). The function of the luminaries is to yield light and regulate time (Gen. 1:14; *Enuma Elish* 5:12–13). Man is the final act of creation – in *Enuma Elish*, too, before his creation the gods are said to take counsel (*Enuma Elish* 6:4) – and following the creation of man there ensues divine rest. There is, furthermore, an identical sequence of events: creation of firmament, dry land, luminaries, man, and divine rest. Thus, it appears that at least the so-called P account echoes this earlier Mesopotamian story of creation.

Another reflection of very ancient traditions is found in Genesis 1:21. Since the entire story of creation refers only

to general categories of plant and animal life, not to any individual species, the specific mention of "the great sea monsters" alongside, and even before, "all the living creatures of every kind that move about, which the waters brought forth in swarms" is striking. It is most likely part of the biblical polemic against the polytheistic version of a primeval struggle between the creator god and a marine monster which was the personification of chaos (see below). In Genesis this story has been submerged and only appears in the demythologized reference to the sea monsters as being themselves created by God, not as rival gods.

The second creation story, too, has Near Eastern prototypes: The creation of man from the dust of the earth (Gen. 2:7) is analogous to the creation of man from clay, a motif often found in Mesopotamian literature, e.g., the Gilgamesh Epic; the Hebrew name of the underground flow, *'ed*, that watered the Garden of Eden, is related to either a cognate Akkadian word *edu* or to the Sumerian word *ÍD*, "river"; and the creation of woman from a rib may reflect a Sumerian motif (see Kramer).

Differences between Genesis and Enuma Elish

Nevertheless, the differences between the biblical and the Mesopotamian accounts are much more striking than their similarities; each of them embodies the world outlook of their respective civilizations. In Genesis there is a total rejection of all mythology. The overriding conception of a single, omnipotent, creator predominates. Cosmogony is not linked to theogony. The preexistence of God is assumed – it is not linked to the genesis of the universe. There is no suggestion of any primordial battle or internecine war which eventually led to the creation of the universe. The one God is above the whole of nature, which He Himself created by His own absolute will. The primeval water, earth, sky, and luminaries are not pictured as deities or as parts of disembodied deities, but are all parts of the manifold works of the Creator. Man, in turn, is not conceived of as an afterthought, as in *Enuma Elish*, but rather as the pinnacle of creation. Man is appointed ruler of the animal and vegetable kingdoms; he is not merely the menial of the gods (*Enuma Elish*). The story in Genesis, moreover, is nonpolitical: Unlike *Enuma Elish*, which is a monument to Marduk and to Babylon and its temple, Genesis makes no allusion to Israel, Jerusalem, or the Temple. Furthermore, the biblical story is non-cultic: unlike *Enuma Elish*, which was read on the fourth day of the Babylonian New Year festival, it plays no ritual role whatsoever in the religion of Israel.

EGYPTIAN ANALOGUES. In addition to Mesopotamian substrata, there are several Egyptian analogues to the biblical stories of creation, e.g., the existence of primeval water and its division; the breathing of life into the nostrils of man; man's being formed in the image of the creator god; the creation of plants, animals, fowl, and fish; and the light of day (see "Instruction for Meri-Ka-Re," Pritchard, Texts, 417; Junker, Hermann in bibl.).

OTHER BIBLICAL TRADITIONS. Outside Genesis there are a number of allusions to the vanquishing by YHWH of a great sea monster and his minions, with some traces of a belief that this was connected to the creation of the world. In the biblical version of this combat, known from Mesopotamia (Marduk-Tiamat) and Ugarit (Baal-Yamm), the forces of the watery chaos, called Yam, Nahar, Leviathan, Rahab, or Tannin, are either destroyed or put under restraint by God (cf. Isa. 27:1; 51:9–10; Jer. 5:22; Hab. 3:8; Ps. 74:13–14; 89:10–11; 104:6–9; Prov. 8:27–29; Job 7:12; 9:13; 26:10–13; 38:8–11). Recently it has been suggested (see Jacobsen) that this epic account, whose source was thought to be in Mesopotamia, may actually have originated in the West (though where in particular is not clear), and subsequently influenced both biblical and Mesopotamian literature. It is noteworthy, however, that the stories of Genesis meticulously avoid the use of such legendary material, even eschewing metaphorical figures of speech based on this mythological conflict.

Another poetic version of creation is reflected in Proverbs 8:1–31, where Wisdom relates that she attended God during the creation.

Weinfeld has drawn attention to the fact that four mythological motifs of Genesis 1 – the existence of primordial material (1:2); God's working and His rest; the council of God (1:26); and the creation of man in God's image (1:26–27) – are repudiated in the cosmogonic doxologies of Second Isaiah.

[Shalom M. Paul]

RABBINIC VIEW OF CREATION

"*Ma'aseh Bereshit,*" "Act of Creation," was regarded in the Talmudic period, particularly the tannaitic, as belonging to esoteric lore, and the Mishnah (Ḥag. 2:1) states that it was "not to be expounded before two people." The Jerusalem Talmud, however (Ḥag. 2:1, 77c), explains that this was the view of R. Akiva, whereas R. Ishmael permitted it to be expounded. In point of fact, the interpretation of the first verse of Genesis, which is the basis of talmudic cosmogony, is the subject of a discussion between those two rabbis (Gen. R. 1:14), from which it is clear that R. Akiva was concerned with refuting gnostic views that God alone did not create the world, and the discussion of cosmogony during the tannaitic period seems to be concentrated on refuting gnostic and other heretical views which maintained either the eternity of matter or that God was not the sole creator. This emerges clearly from another passage: "A philosopher said to Rabban Gamaliel that God found good materials which He used in the creation of the world, '*Tohu, Bohu*, darkness, water, wind, and the deep' to which Gamaliel vigorously replied 'Woe to that man! The term creation is explicitly used of them'" (*ibid.* 1:9). This reply refutes both the existence of primordial matter and the view that God was not the sole creator.

There is a difference of opinion between Bet Shammai and Bet Hillel on two aspects of creation. The former maintained that the heavens were created first, and then the earth, while Bet Hillel maintained the opposite (*ibid.* 1:15). The for-

mer maintained that the intention ("thought") of creation was at night and the act by day, while Bet Hillel maintained that "both intention and act took place by day" (*ibid.* 12:14). On both of these statements, however, R. Simeon b. Yoḥai uses the identical words: "I am astonished! How could the fathers of the world differ" on this point. In the first case "both were created together like a pot and its cover," and in the other, "the intention was both by day and by night while the fulfillment was with the waning of the sun." It seems from this statement that by the time of Simeon b. Yoḥai, a disciple of R. Akiva, the need, so to speak, to disregard the prohibition against cosmogonical speculations was limited to the acceptance of one standard doctrine, the simultaneous and sole creation of heaven and earth, the "intention" being more important than the act, to which the Mishnah adds the avoidance of all metaphysical speculation: "What is above, what is below, what was before and what was after." The preeminence of the intention over the act is affirmed by the many passages, based on such verses as "By the word of the Lord were the heavens made" (Ps. 33:6), which emphasize that creation needed no action but merely the will of God ("not by labor, but merely by word," Gen. R. 3:2). The best-known expression of this belief is: "With ten words was the world created" (Avot 5:1). Especially vigorous was the rabbis' refutation of the gnostic idea that the world was created by angels. The angels were created by God (Gen. R. 1:3, 3:8) and it is specifically stated that "all agree that nothing was created on the first day, that no one should say that Michael stretched out [the firmament] in the south and Gabriel in the north, and the Holy One, blessed be He, made its measurements in the center" (the reading in Tanh. B., Gen. 1:12 is "that the sectarians should not say"). The angels were variously created on the second, or fifth days (Gen. R. 1:4). To this should be added the theory, which Philo attributes to the Stoics, that the present world was created after a number of previous experimental worlds were created, only to be destroyed (*ibid.* 3:7). R. Abbahu, for example, maintained that there were successive creations (Gen. R. 3:9; Eccles. R. 3:11, Mid. Ps. 34).

The world was created either in Nisan or Tishri (RH 11a). Special attention was paid to the problem of the creation of light, in view of the fact that the sun was not created until the fourth day. The anonymous sages opine that the luminaries were created on the first day, but they were not "suspended" until the fourth, while R. Jacob as well as R. Eleazar are of the opinion that the light created on the first day was a special light with which "one could see from one end of the world to the other," but it was hidden away and reserved for the righteous in the time to come because of the future corruption of the world in the days of the flood and the Tower of Babel (Ḥag. 12a). Only in the amoraic period does one find a distinct and strongly mythological element enter into rabbinic cosmology. Such statements as that of Judah in the name of Rav, "When the Holy One, blessed be He, desired to create the world, He said to the angel of the sea 'open thy mouth and swallow all the waters of the world,' to which he replied, 'Lord of the Universe, it is enough that I remain with my own.' Whereupon he struck him with his foot and killed him" (BB 74b), to which there are different variants in amoraic times (cf. PR 20:95), have no parallel in the tannaitic periods.

E.E. Urbach (see bibl.) sums up his comprehensive study of rabbinic cosmogony as follows:

"During the amoraic period the area of discussion was extended, and ideas which were previously regarded as esoteric penetrated into public discourses and into the teachings of the schools. There was a direct controversy against sectarian and other non-acceptable cosmogonies, but this polemic was not without influence and results. Ideas which prevailed in the hellenistic world found their place in the world of the rabbis. It seems that not a little of rabbinic exegesis on this subject are fragments of these cosmogonical and cosmological speculations. There are also notices of famous Babylonian *amoraim* of the fourth century who combined their cosmogonical speculations with theurgic and magic activity, but we do not know whether these esoteric doctrines attained a literary form."

He points out that it was only in the later kabbalistic literature such as the Sefer *Yeẓirah and the *baraita* of *Ma'aseh Bereshit* that a system was evolved (see *Kabbalah).

[Louis Isaac Rabinowitz]

Bible Commentators

Various attempts were made to explain the difficulties in the story of creation. Two general statements may be made: (1) the narrative was not generally taken literally as an act of creation in six days, and (2) the rabbis were fully aware of the difficulties which modern biblical criticism attempts to solve with the documentary theory, such as the different names of God and the double or treble parallel accounts, but they answered them on the basis of the unity of the account of Creation.

Although the fact of creation remains a prime article of faith, there is no uniform or binding belief as to how the world was created. Rashi interprets the first verse of the Bible as meaning that "when in the beginning the Lord created Heaven and Earth" and is not a chronology of creation. Similarly the differences in the names of God were fully recognized but it was explained that *Elohim* means God in His attribute of justice, the Tetragrammaton God in His attribute of mercy (Philo says the reverse), and the different nomenclatures and their combination teach that God first attempted to base the world on justice, but found that impossible; He then attempted to base it on mercy alone, but with similar results; and thereupon created it on the principle of justice tempered by mercy. Cassuto accepted the theory that the different names depict different attributes of God. Another explanation of the different accounts of Creation is the principle that at times the Bible states a generalization and later gives its details. Accordingly, the story of the creation of Adam in Genesis 1:27 relating that Adam and Eve were created together is a general description whose details are listed in 2:21ff., where it is related that the woman was formed from Adam's rib (Yal., Gen. 16).

Similarly, the brief description of the creation of animals in Genesis 1:24–26 is expanded in 2:19–20, and chapter 2 commences immediately with the creation of man from the dust of the earth in order to expand the narrative of the Garden of Eden. The contradiction between the statement in Genesis 1 that the plants were created on the third day and that of Genesis 2:5 that there were no shrubs in the field when Adam was created is answered in various ways. Rashi, in accordance with R. Assi (Yal., Gen. 8), explains that their creation took place on the third day but their growth began on the sixth. Naḥmanides makes the first apply to "plants of the earth," i.e., wild plants, while the second reference is to "plants of the field," i.e., cultivated plants which depended on man's activity. Malbim is the first of the modern traditional commentators to accept the view, later adopted by Cassuto and other scholars, that the biblical narrative is a conscious attempt to refute known mythological accounts of creation (see his commentary on Gen. 6:4).

CREATION IN PHILOSOPHY

Ever since the initial confrontation of the Jewish religion with Greek philosophy, Jewish philosophers have attempted to harmonize the biblical account of creation with philosophical theories that lend themselves to harmonization, and defend it against those theories that are incompatible with it.

Philo Judaeus

*Philo, for example, based his theory of creation on Plato's doctrine of creation in the *Timaeus*, but removed certain ambiguities, thus making Plato's theory compatible with the scriptural doctrine of creation (see H.A. Wolfson, *Philo*, 1 (1948), 180–380, passim.). Philo accepted Plato's conception of an eternal God who brought the world into existence, but he could not accept the Platonic theory that God created the world out of eternal preexistent matter. He solved the difficulty by stating that God created both the preexistent matter out of nothing, and the world out of the preexistent matter. The link between God and the created world is, according to Philo, the *logos. Beginning its existence as part of the essence of God, the logos was given by God an existence of its own. As this separate, incorporeal existence the logos contains within itself, and is the mind of, the intelligible world and the ideas which constitute the intelligible world. While both Plato and Philo described the creation of the world as an act which God "willed," they had differing notions of what is meant by the "will" of God. To Plato, God's "will" meant the necessary expression of God's nature, which led him to assume that God created the world by force of necessity, and that the world thus created could not have been any different. Philo, however, following the scriptural conception of God as an all-powerful free agent, interpreted God's "will" in creating the world to mean that the very act of creation was by God's free choice, as was the type of world created. This meant, according to Philo, that had God so willed, He could have either not created the world or created another kind of world.

Medieval Philosophy

In the subsequent development of Jewish philosophy the most pressing challenge came from the defenders of the Aristotelian-neoplatonic doctrine of the eternity of the universe, and most medieval Jewish philosophers had to come to grips with this claim. Since there were various philosophical frameworks within which medieval thinkers operated, it is possible to delineate several different philosophical accounts of biblical cosmogony in medieval Jewish philosophy: (1) Saadiah's version of the Kalām; (2) neoplatonic emanationism; (3) the "agnostic" approach of Maimonides; (4) the "Platonism" of Levi b. Gershom; and (5) the unique theory of Ḥasdai Crescas.

SAADIAH. The first systematic treatment of creation is to be found in *Saadiah Gaon. Employing the arguments of the *Kalām, Saadiah attempted to prove that the universe is created in time, that its Creator is other than it, and that it is created *ex nihilo*. In behalf of the first thesis Saadiah marshals four arguments in his *Book of Beliefs and Opinions*. According to the first argument, it is claimed that since Aristotle admits that the universe is finite in size, he cannot then say that it moves for infinite time, i.e., that it is eternal; for a finite body cannot have infinite power. The second proof is a variant of the argument from design: the combination and order of the parts of the universe imply the existence of a creator. The third argument purports to demonstrate creation on the grounds that the existence of accidental, i.e., contingent, properties in the universe implies that the universe itself is also contingent and hence not eternal. Finally, the thesis of eternity implies that past time is infinite. But if this were so, then since an infinite magnitude cannot be completed, past time would never reach the present, which is absurd. Saadiah's arguments for creation *ex nihilo* are designed to show that the assumption of an eternal primordial matter out of which the universe is allegedly created leads to various absurdities. For example, why should we expect that an eternal matter should be amenable to divine creative activity? (Saadiah, *Book of Beliefs and Opinions* 1:1–2).

NEOPLATONISM. The next major philosophical influence was *neoplatonism, of which Isaac *Israeli and Solomon Ibn *Gabirol were notable examples. Since neoplatonism exhibits a monistic tendency, it is not surprising that neoplatonists attempt to close the gap between God and the world. This tendency does not, however, easily accommodate itself to the biblical stress upon the hiatus between God and nature. Thus, in Jewish neoplatonism the problem of creation is especially vexing. Whereas the pagan neoplatonists, such as Plotinus, insist upon the eternal and necessary *emanation of the universe from God, Jewish neoplatonists were dogmatically constrained to find some place for creation *ex nihilo*. In Isaac Israeli there is a fundamental distinction between two primitive stages in the origin of the universe. In the first stage God's free creative power is manifested; whereas in subsequent phases nature and its forms necessarily emanate from the first products of God's power, primary matter and form.

In this manner Israeli adjusted the neoplatonic doctrine of emanation to the biblical conception of creation. Ibn Gabirol's version of neoplatonism exhibits this tension in a more exaggerated form. In his religious poem *Keter Malkhut* (*The Kingly Crown*, trans. by B. Lewis, 1961), he naturally stresses the doctrine of creation *ex nihilo*; in his philosophical work *Mekor Ḥayyim* ("The Fountain of Life"), he wavers between these two views, but tries to give primary emphasis to the voluntary origin of the universe. It would seem that modern scholars are more aware than Ibn Gabirol of this problem, but they have differed in their interpretations. In general, neoplatonic philosophies tend to be static and emphasize the timelessness of the emanation of the world from its ultimate source. Ibn Gabirol's venture into neoplatonic metaphysics is not free from this characteristic.

MAIMONIDES. Maimonides does not find the proofs of the Kalām convincing, chiefly because they rest upon certain physical and metaphysical assumptions that he rejects (Guide, 1:73–74). Moreover, he rejects the neoplatonic accounts of creation (Guide, 2:21). On the other hand, he argues that neither Aristotle nor his Muslim followers have succeeded in demonstrating the eternity of the universe. Hence, the issue cannot be decided on philosophical grounds alone. For Maimonides, however, it must be decided, since to adopt the eternity hypothesis is to give up belief in miracles; for the eternity hypothesis is tantamount to the claim that the universe and its laws necessarily emanate from God. The belief in miracles implies, however, that God can freely interrupt the course of nature. Thus the question of creation is especially perplexing: it must be decided, but philosophy cannot resolve it (Guide, 2:15, 21, 25). At this point Maimonides appeals to revelation as the ultimate arbitrator. In spite of this "agnostic" argument, Maimonides does present certain philosophical arguments in behalf of the creation thesis. These arguments are not decisive, he admits, but they do tip the balance in favor of the Bible. In general, these arguments attempt to show that Aristotle's theory of eternity cannot explain the existence of anomalous facts about the universe, in particular certain irregular features of the heavenly bodies. Consider, for example, the irregular motion of the planets or the difference in color exhibited by various stars. Given Aristotle's hypothesis that the universe is eternal, and that every natural phenomenon is explicable in terms of necessary law, it is difficult, as Aristotle himself admits, to account for these irregular facts; for why should one star give off bluish illumination and another reddish (Guide, 2:22, 24). However, if it is assumed that the universe has been freely created by God, all these irregular features of the heavens can be attributed to God's free will. Thus, although a decisive proof in behalf of the creation thesis is not available, the latter hypothesis can explain the phenomena more easily than the thesis of eternity, and hence can be accepted on philosophical grounds as well as for religious reasons. With respect to the question whether creation occurred *ex nihilo,* Maimonides claims that this issue is not crucial for religious faith. From the textual point of view the Bible states unequivocally that the universe is created; it is not so unambiguous on the details of creation. Nor does it matter on purely theological grounds, since even the Platonic theory of creation from primordial matter is compatible with divine freedom and the existence of miracles. Since the Platonic theory has not been proven, and the Jewish tradition has generally interpreted Genesis as implying creation *ex nihilo*, Maimonides follows tradition. However, it should be noted, he would be prepared to reinterpret Scripture if a proof of Plato's theory were forthcoming (Guide 2:25).

LEVI BEN GERSHOM. Maimonides' doubts about the provability of creation were dispelled by his two great successors, *Levi b. Gershom and Ḥasdai Crescas. Both of these philosophers attempt to prove creation, although they do so in different ways. According to Levi b. Gershom, Aristotelian physics implies creation, even if it is the case that Aristotle did not recognize it. For Aristotle's system is teleological: it ascribes ends and purposes to nature (Aristotle, *Physics*, 2). A teleological conception of nature, however, implies a creator who fashions the universe according to specified ends (Levi b. Gershom, *Milḥamot Adonai*, 6:1, 7). Moreover, Aristotle's laws of dynamics are falsified if the eternity hypothesis is accepted. For example, according to Aristotle, the velocity of a planet is a function of the number of rotations it makes around the earth in a given period of time; but if past time is infinite, the number of rotations for every planet in past time is the same – an infinite number of rotations. Consequently, the velocities of each planet would be identical; but this is false (*ibid.*, 6:1, 11). Unlike Maimonides, however, Levi b. Gershom maintains that God created the universe from an eternal formless matter (cf. Plato, *Timaeus*, 49ff.). Were creation *ex nihilo* adopted there would be no way to explain how God, who is incorporeal, could create a physical universe. Moreover, the theory of creation *ex nihilo* implies that prior to creation there was a vacuum, i.e., empty space. According to Levi b. Gershom, however, the notion of a vacuum has been proven to be absurd. He believes that the doctrine of an eternal formless matter is taught by the Torah and is, therefore, compatible with Jewish dogma (*ibid.,* 6:2, 1; Abraham Ibn Ezra also suggests the Platonic theory in his commentary on Genesis).

HASDAI CRESCAS. Crescas' doctrine of creation exhibits a different use of the term "creation" and displays an ambivalence on the issue of the eternity or temporal beginning of the universe. Whereas Maimonides and Levi b. Gershom construe "creation" as implying temporal beginning, Crescas understands this concept as meaning causal dependency. Accordingly, the universe is created insofar as it is causally dependent upon God, a thesis that Aristotle himself accepts. Creation so construed is a temporally neutral concept, such that the question of eternity is not decided by a proof that the universe is created. Indeed, for Crescas, "creation" means creation *ex nihilo* (cf. Thomas Aquinas, Summa Theologica, 1, question 44, a. 1–2; question 46, a. 1–2. There might have been some in-

fluence of Thomas' ideas upon Crescas). Insofar as the entire universe depends upon God, who is the only absolutely necessary being, everything is created *ex nihilo,* including matter, regardless of whether it is eternal or not. With respect to the question of eternity Crescas rejects all the arguments of Maimonides and Levi b. Gershom in favor of the temporal beginning of the universe. Indeed, he maintains that the teleological characteristics of the universe, which to the latter philosophers are evidence for temporal beginning, can be explained on the hypothesis of the eternity of the universe so long as we conceive of the universe as manifesting intelligence and perfection. This line of argument, then, would seem to suggest that Crescas believed in the eternity of the universe. Yet he claims that the traditional biblical view is that the universe had a temporal beginning. Perhaps the solution to this apparent inconsistency is to be found in his sympathy for the doctrine of eternal re-creation of many universes, a view that is found in rabbinic literature (see above). This doctrine preserves Crescas' predilection for the eternity thesis insofar as it postulates infinite time and is consistent with the traditional doctrine that our universe had a temporal beginning. Crescas actually relegates this problem to a secondary position: it is not, as it was for Maimonides, a doctrine whose denial undermines Judaism. What is crucial for Crescas is the belief that everything depends upon God, which for him means creation *ex nihilo* (Crescas, or Adonai 3:1, 4–5).

[Seymour Feldman]

IN MODERN THOUGHT

Baruch Spinoza's monistic system denies all medieval notions of creation, declaring God and Nature to be one substance (*Deus sive Natura*). The denial of creation serves as the basis of Spinoza's negations of most of traditional Jewish (and Christian) notions, like free will, providence, commandments, etc, and hence gives creation a significance that had a decisive impact on modern Jewish thought. In many of the 19th and 20th century Jewish philosophies, creation was treated as a theoretical concept, describing the nature of the world and its relationships to God, rather than a cosmogonist concept. According to Salomon Ludwig *Steinheim, the perception of nature as creation ex-nihilo is the substantial teaching of revelation, the decisive difference between true religion and idolatry, and the ground for human free will as well as that of God. In Hermann *Cohen's *Religion of Reason out of the Sources of Judaism* (*Religion der Vernunft aus den Quellen des Judentums*, 1919, ch. 3) creation is understood as the correlative logical relationship between God, the only *Sein* (Being), and the world, the eternal *Werden* (becoming). Using his *Ursprungsprinzip* (the concept of primary source) on the one hand, and the Maimonidean notion of negative Divine attributes on the other hand, Cohen refers to this concept as pointing not only to the unbridgeable gap between God and the world, but also as establishing the common context that combines them. In a similar way, revelation (see *ibid.*, ch. 4), namely the creation of reason, depicts the basic correlative relationships between the human (*Mensch*) and God. Franz *Rosenzweig depicted creation as the first of three relational theological events, alongside with revelation and redemption. Creation, like revelation and redemption, is at the heart of faith, namely the mutual context of Judaism and Christianity. Philosophy, as Rosenzweig maintained in the first part of *The Star of Redemption* (*Der Stern der Erloesung,* 1921), can perceive God, world, and *Mensch* only as isolated elements, and as theoretical concepts that have no common context. Nevertheless human experience, based on the very notion of revelation, depicts each of those three as relating to the two others, and as being revealed through the encounter with them. For the world, creation is the present status all the things, all the worldly phenomena, as "existence" and as creatures that are subject to Divine providence; for God creation is an absolute past. The only Divine attribute that Rosenzweig accepts is "Creator." Creation of *Mensch* in the image of God, the peak of the biblical narrative of Genesis, points to the strong connection between creation and revelation, between the consciousness of God's providence and that of His love (see *ibid.*, part II, 1–2). In Mordecai *Kaplan's reconstruction of Judaism, the value-concept of creation is "revaluated," and means that the "conception of creative urge" and self-revival reveal God within human life and endow life with Divine significance. The myth of creation intends to confront and deny pessimism and fatalism, without ignoring suffering and evil, and endorses human responsibility and progress (see *The Meaning of God in Modern Jewish Religion*, 1937, ch. 1).

[Yehoyada Amir (2nd ed.)]

IN THE ARTS

The biblical account of Creation formed the basis of episodes in various medieval mystery plays, including the 15th-century French *Mistère du Viel Testament* and the English Chester and York cycles. In England, too, there were the lesser-known Cornish mysteries, *Origo Mundi* and *Gwreans an bys* ("Creation of the World," ms. dated 1611, in the Bodleian Library, Oxford). Of the literary interpretations of the Creation story, the epic *Semaine* (1578) by the French Protestant *Du Bartas is one of the most celebrated and the most ambitious. In translation it had a great influence on later writers, particularly in England. Du Bartas' fellow Huguenot, the militant Agrippa d'Aubigné (1552–1630), also wrote his epic *La Création* on this theme, combining a kind of dictionary of Calvinist theology with a handbook of 17th-century scientific knowledge. Anders Arrebo (1587–1637), called the "father of Danish poetry," freely adapted the Du Bartas poem as *Hexaemeron* (1661).

In art, the Creation story is usually represented as a sequence, not so much following the biblical account as presenting pictorial combinations and condensations of the Six Days. Some early examples of this cyclic treatment are to be found in two manuscripts: the fifth-century Vienna Genesis and the seventh-century Ashburnham Pentateuch (Paris). Throughout the Middle Ages, the theme continued to inspire works of major historical and artistic significance, notably the bronze

door of San Zeno at Verona, the mosaics of Monreale in Sicily, and the frescoes of Saint-Savin (12th century); the mosaics of San Marco in Venice, sculpture at Chartres, Laon and Salisbury, and stained glass windows in the Sainte-Chapelle in Paris (13th century); sculpture in the cathedral of Orvieto and the Florence Campanile (14th century); Ghiberti's doors in the Florence Baptistery (15th century); and Michelangelo's frescoes on the ceiling of the Sistine Chapel and the Vatican Loggia frescoes after designs by Raphael (16th century). An outstanding Jewish treatment of the Creation theme is the 14th-century Spanish *Sarajevo *Haggadah*, where the six days of creation are depicted with strength and boldness.

Musical compositions inspired by the Creation include various 18th-century settings of the "Morning Hymn" from *Paradise Lost* by John Milton, none of them of lasting importance. Milton was the inspiration behind Klopstock's *Morgengesang am Schoepfungsfeste*, which was set to music several times, mainly as a cantata. These included one by Carl Philipp Emanuel Bach (1784). An English libretto by an otherwise unknown Mr. Lidley (or Linley), written shortly before Handel's death in 1759, was intended to have been offered to him. The libretto was accepted by Haydn when he visited England in 1797, and his setting of the libretto as translated and revised by Gottfried van Swieten was privately performed in Vienna in April 1798. The worldwide popularity of Haydn's *Creation* began with its first public performance there in the following year. Some later works on the creation theme are a Norwegian one, J. Haarklou's *Skapelsen* (1891; first performed 1924); *The Creation* (1924) by Louis *Gruenberg; a ballet by Darius *Milhaud, *La création du monde* (1923), scored for 17 solo instruments in a jazz idiom and inspired not by the Bible, but by African creation myths; *In the Beginning – The Seven Days of Creation* (1947) by Aaron *Copland; and the oratorio *Genesis* (1958) by Franz *Reizenstein.

CRÉHANGE, ALEXANDRE (1791–1872), French author and communal leader. Créhange, who was strictly Orthodox in religious matters, was politically a republican and an advocate of universal suffrage. At the outbreak of the 1848 Revolution, Créhange and his Orthodox friends organized the Jewish Club Démocratique des Fidèles, with its own periodical, *La Vérité*. The club successfully demanded the reorganization of the Jewish *Consistories through democratic elections. Créhange was the oldest of the ten founders of the *Alliance Israélite Universelle and secretary of the Paris Consistory. He published several religious works, including an illustrated edition of the Psalms (1858). He edited two periodicals: *La paix, revue religieuse, morale et littéraire* (1846) and *Annuaire parisien du culte israélite* (1851–71). He also adapted the *Ẓe'enah u-Re'nah into French under the title *La Semaine israélite* (2 vols., 1846).

CREIZENACH, MICHAEL (1789–1842), German mathematician, educator, and proponent of Reform. In his native Mainz, Creizenach received a traditional Jewish education as well as training in mathematics and philosophy. He founded a Jewish boys' school in Mainz and conducted it according to the principles of Reform Judaism. When the school closed, he continued his studies at Giessen University. Creizenach was

appointed teacher and preacher at the Philanthropin high school in Frankfurt in 1825. During his tenure there he exercised a decisive influence toward the adoption of Reform. The Reform services he led attracted many worshipers, and an annual confirmation of boys was held at the school. The young rabbis, impressed when they went to preach there, spread the school's influence throughout Germany and beyond. Creizenach's publications cover a wide area of interest. He wrote a mathematical textbook for use in schools and participated in the editing of the periodical *Wissenschaftliche Zeitschrift fuer juedische Theologie* with Abraham Geiger (vol. 1 in 1835), *Israelitische Annalen* with J.M. Jost (1839–41), and the Hebrew periodical *Zion* (1840–42), also with J.M. Jost. He also published a periodical, *Geist der pharisaeischen Lehre*, of which only six issues appeared (1823–24). He edited Abraham ibn Ezra's *Yesod Mora* with a Latin and German translation (1840). Creizenach's most important work of Jewish interest was *Schulchan Aruch oder Enzyklopaedishe Darstellung des Mosaischen Gesetzes…* (4 vols., 1833–40). In this work he tried to prove that talmudic Judaism was a reform of biblical Judaism and, thus, that the Reform Judaism of his own time was a legitimate approach to Judaism.

[Getzel Kressel]

CREMATION. Disposal of the dead body by burning is not a Jewish custom and inhumation is considered by traditional Jews to be obligatory and a religious commandment. The passage in Deuteronomy (21:23) "his body shall not remain all night upon the tree, but thou shalt surely bury him the same day" has been advanced as a scriptural proof, as well as other biblical sayings such as "for dust thou art, and unto dust shalt thou return" (Gen. 3:19). Cremation, however, was not unknown to the early Hebrews, and "burning" was one of the four death penalties imposed by the biblical code for a number of offenses (Lev. 20:14; 21:9). The ancient rabbis, however, found the execution of this death sentence so abhorrent that they refused to interpret the injunction literally (Sanh. 7:2 and TJ, Sanh. 7:2, 24b). In biblical times, cremation was clearly considered to be a humiliation inflicted on criminals (Josh. 7:15, 25; Isa. 30:33) and the practice as such was reprobated, even when it involved the burning of the remains of an Edomite king (Amos 2:1). I Samuel (31:11–12) seems to refer to the cremation of the remains of King Saul and his sons by the men of Jabesh-Gilead; but this is an isolated incident and the literal reading of the verse has been challenged by Driver who reads *sarap* ("anointed with spices") for *saraf* ("burnt"; ZAW, 66 (1954), 314–15; also Koehler-Baumgartner, supplement, 175). I Chronicles (10:12) merely records that "the bodies were buried." According to the Roman historian Tacitus, the Jews "bury rather than burn their dead" (Hist. 5:5). The Mishnah (Av. Zar. 1:3) considers the burning of a corpse to be an idolatrous practice, and the Talmud (Sanh. 46b) deduced that burial is a positive commandment prescribed in Deuteronomy (21:23). This is the ruling followed by Maimonides (*Sefer ha-Mitzvot*, 231, 536, positive command), and by the *Shulḥan Arukh* (YD 362). Tykoczinsky (*Gesher ha-Ḥayyim*, 2 (1947)) quotes the rabbinic idea that cremation is a denial of the belief in bodily resurrection and an affront to the dignity of the human body. On the other hand, some authorities permitted calcium to be spread over bodies already in the grave in order to stimulate decomposition (Responsa Rashba, pt. 1, no. 369; Isserles to Sh. Ar., YD 363:2). Others even suggested that interment was but a custom, supporting their statement with a passage from *Midrash va-Yosha* (Jellinek, *Beit ha-Midrash*, 1 (19382), 37) in which Isaac begs his father at the sacrifice to be cremated completely. It was also suggested that as long as the body is brought into contact with the earth as soon as possible (in conformity with the injunction *Teikhef le-mitah kevurah*; "immediate burial after death"), it does not matter how the corpse is disposed of.

Modern European Orthodox authorities have insisted that burial is the proper method of disposal of a corpse, a view taken by the Italian chief rabbinate (see *Vessillo Israelitico*, 23 (1875), 12) and, in 1895, by the rabbi of Wuerttemberg (REJ, 32 (1896), 276). Chief Rabbi Marcus Nathan *Adler of Britain, though opposed to cremation, permitted the ashes of a person who had been cremated to be interred in a Jewish cemetery in 1887. The decision was sustained by his successor, Herman *Adler (1891), who quoted the authority of Rabbi Isaac Elhanan Spector. It was also the attitude of Chief Rabbi Zadoc *Kahn of France. American Reform rabbis, in accordance with a decision made at the Central Conference of American Rabbis in 1892, are permitted to officiate at cremation ceremonies. Reform rabbis of Europe also often officiate at cremations. A regulation of the United Synagogue of London Burial Society states that "if the ashes can be encoffined, then interment may take place at a cemetery of the United Synagogue, and the Burial Service shall be conducted there at the time of the interment." Ultra-Orthodox communities, however, do not permit the ashes of cremated persons to be buried in their cemeteries.

CRÉMIEU, village E. of Lyons, France. Remains of the medieval gate leading to the Rue Juiverie could still be seen in the middle of the 19th century: the cemetery was near the Porte de Quirieu. The community apparently suffered during the *Black Death (1348–49): a Jew called Abraham "l'Espagnol" was imprisoned in Crémieu in 1349 and later brought to trial. A member of the community named Croissant contributed 500 francs of the total of 610 levied on the community in 1388.

From 1441, the Jews began to move away; in 1449, to induce them to return, the Dauphin Louis appreciably reduced taxes, but failed to attract them back. From the 16th century onward many Jews with the name Crémieu or Crémieux, Carmi, etc., resided in the area, especially in Carpentras, Avignon, and northern Italy.

[Bernhard Blumenkranz]

CRÉMIEUX, BENJAMIN (1888–1944), French author and literary historian. Born in Narbonne, Crémieux was descended from an old Jewish family originating in the Midi. While serving in the French Army during World War I, he was wounded three times. After the war he became an authority on Italian literature and translated Luigi Pirandello into French. Crémieux was secretary-general of the French Institute in Florence and secretary of the French PEN Club. His best known works were *Le vingtième siècle* (1924), essays on contemporary writers, and *Inventaires; inquiétude et reconstruction* (1931), an essay on post-World War I writing. In his only novel, *Le premier de la classe* (1921), Crémieux tells the story of young Blum, the son of a Jewish tailor, who maintains his ancestral allegiances. After the French collapse in 1940, Crémieux joined the French underground and became a leader of the *Maquis*. He was captured and executed by a Nazi firing squad.

[Arnold Mandel]

CRÉMIEUX, ISAAC ADOLPHE (1796–1880), French lawyer and statesman. He was born in Nîmes of an old Comtat family which had adopted the revolutionary cause. He was among the first Jewish pupils to be admitted to the Lycée Impérial in Paris. He later studied at the University of Aix-en-Provence and was admitted to the bar at Nîmes in 1817. As a Jewish lawyer, Crémieux was required to take the humiliating *oath *more judaico* in court but he refused and won his case. He subsequently supported many liberal causes. In 1827 he won two cases brought against Jews who had refused to take the oath *more judaico*, and this finally led to its abolition. Crémieux thus acquired a reputation as a defender of Jewish rights. In 1828 he became a member of the College of Notables of the Marseilles Consistory. In 1830 he settled in Paris, where he became a member of the Central Consistory. He became vice president of the Central Consistory in 1834. In 1840, the *Damascus Affair and the consequent revival of antisemitism in Europe aroused intense emotion in all the Jewish communities of Europe. Crémieux accompanied Moses *Montefiore on a delegation to the East and secured the release of the Jews imprisoned in Damascus. Their success was the first step toward the new feeling of self-confidence in West European Jewry, based on the renewed sense of solidarity among Jews in different countries.

In 1842 Crémieux entered the Chamber of Deputies and became one of the main leaders of the opposition. On behalf of the Central Consistory he helped to draft the law of May 25, 1844, which was to regulate the life of French Jewry until 1848 and after 1905. Crémieux became president of the Central Consistory in 1843 but had to retire in 1845 when it became known that he had allowed his wife to have their children baptized. He took an important part in the 1848 revolution and until June 1848 was minister of justice in the provisional government. As such he was instrumental in promoting, among other things, the abolition of the death penalty for political offenses and of slavery in the colonies. Although he had supported the election of Louis Napoleon to the presidency of the republic, Crémieux opposed the latter's coup d'état. On Dec. 2, 1851, he was consequently arrested and remained for some time in prison. He returned to parliament in 1869 as one of the members for Paris. Again a leader of the opposition, he became minister of justice after the fall of the Second Empire. During his enforced retirement from public affairs, Crémieux concentrated on Jewish affairs. In 1864 he was elected president of the Alliance Israélite Universelle, and lent all the weight of his authority and political experience to many of the steps taken by the Alliance to help oppressed Jewish minorities. From 1866, Crémieux was active on behalf of Moroccan, Romanian, and Russian Jewry. In 1866 he traveled to St. Petersburg and intervened successfully in behalf of the Jews accused in the *Saratov blood libel.

After his return to the government Crémieux did not forget the problems encountered by Algerian Jewry. At that time French policy aimed at the complete assimilation of the Algerians, a process in which the Jews were also included. As minister of justice he signed the decree afterward known as the Décret Crémieux (1870) by which the Jews of Algeria received French citizenship en bloc. Defeated in the 1870 elections, he became deputy for Algiers in 1872 and sat on the left with the Union Républicaine. He was elected a life senator by the National Assembly in 1875. Despite old age, he continued to take an active part in the work of the Alliance as president. His interest in the Jewish communities of North Africa and the Orient was unfailing.

With his strong Jewish sense, Crémieux was the archetype of the extreme assimilated Jew who demonstrated that it was possible to combine a sense of Jewish pride with deep involvement in the affairs of his country.

CREMIN, LAWRENCE ARTHUR (1925–1990), U.S. educator and authority on the progressive school system. A native of New York, Cremin received his Ph.D. from Columbia University in 1949 and began to teach at the university's Teachers' College. In 1957 he was appointed a full professor. In 1958 he became chairman of the department of philosophy and social sciences. In 1961 he became the Frederick A.P. Barnard Professor of Education as well as a member of Columbia's history department. He was president of the History of Education Society in 1959 and the National Society of College Teachers of Education, and then became vice president of the National Academy of Education. He directed the Teachers College's Institute of Philosophy and Politics of Education from 1965 until 1974, when he became the college's seventh president (1974–84). In that capacity, he established new centers, created new professorships, and raised funds while at the same time building on the college's existing strengths. He retired from the presidency in 1984 to return to teaching and research. In 1985, while remaining on the Columbia and Teachers College faculties, he became president of the Spencer Foundation, a Chicago-based educational research organization.

During his four decades at Teachers College, Cremin helped broaden the study of American educational history by promoting a more comprehensive approach: he examined the other agencies and institutions that educated children, integrated the study of education with other historical fields, and compared educational methods across international boundaries. He also played a leading role in many professional, governmental, and philanthropic organizations, including the U.S. Office of Education's Curriculum Improvement Panel, and the Carnegie Commission on the Education of Educators.

Cremin wrote *The Transformation of the School; Progressivism in American Education, 1876–1957* (1961), a history of the progressive education movement in the United States, for which he was awarded the Bancroft Prize in American History in 1962. His major work was a three-volume comparative history of education in the United States entitled *American Education*. The second volume, covering the period from 1783 to 1876, won the Pulitzer Prize for history in 1981. His other major works include *The American Common School: An Historic Conception* (1951), *A History of Education in American Culture* (with R.F. Butts, 1955), *Public Schools in Our Democracy* (with M.L. Borrowman, 1956), *The Republic and the School: Horace Mann on the Education of Free Men* (1957), *The Genius of American Education* (1965), *Isaac Leon Kandel (1881–1865): A Biographical Memoir* (1966), *Public Education* (1976), *Traditions of American Education* (1979), and *Popular Education and Its Discontents* (1990).

[Abraham J. Tannenbaum / Ruth Beloff (2nd ed.)]

CREMONA, city in Lombardy, N. Italy. Jews are first mentioned in Cremona in 1278 as loan bankers. The Jews were given protection by the Visconti dukes of Milan, who in 1387 granted the right of residence in Cremona. The Jews of Cremona did not confine themselves to banking but also engaged in commerce and farming, becoming the largest Jewish community in Lombardy. In about 1466 the commune requested that no more Jews be admitted into Cremona. Under the Sforza dukes, and after during the Venetian domination (1499–1509) and also during the French occupation, in 1509 and again later, the commune asked that the Jews should be excluded, but the requests were not met. In addition, the Jews suffered from the antisemitic preachings of the friars until Pope Paul III (1534–49) intervened to moderate their attacks. A few years previously (1525) the duchy of Milan (to which Cremona belonged) had passed to the iron rule of Spain. The *bull issued by Pope *Julius III in 1553 ordering that all copies of the Talmud should be burned was at first opposed by the governor of Milan. Cremona was then a center of Jewish scholarship. R. Joseph *Ottolenghi (d. 1570) gave special luster to the local talmudic academy and from 1556 printing of Hebrew works began. In 1557 the Inquisition urged the authorities of Cremona to enforce the bull of 1553. Although at first unsuccessful, the efforts of the Holy Office bore fruit in 1559. Following a dispute between the apostate Vittorio Eliano (in which he supported the equivocal Joshua de' Cantori) and Joseph Ottolenghi, the Inquisition seized 12,000 Talmudic codex and 10,000 Hebrew books and consigned them to the flames. In the same year, the archbishop of Milan, Carlo *Borromeo, enforced some of the anti-Jewish restrictions recently renewed by the Vatican, prohibiting Jews from lending money and compelling them to wear the Jewish *badge. In 1590, there were 456 Jews living in Cremona and most of them were moneylenders, traders of second-hand and dealers of new textiles. In 1591 Philip II, king of Spain, ordered all the Jews to leave the duchy of Milan. Several stays of the order were granted until 1597. In 1629 only the family Soave resided in Cremona as loan bankers and traders. Attempts to induce Jews to return to Cremona in 1619, 1626, and 1633 failed. Parts of the communal archives are preserved in the Montefiore Collection in London (Ms. 94).

Hebrew Printing

During the second half of 15th century were copied out some siddurim and commentaries. In 1550 Meir da Padova copied out some Torah scrolls for Joseph *Ottolenghi. The Christian Vincenzo Conti printed about 40 Hebrew books in Cremona between 1556 and 1567, the best known being the *Zohar* in 1559. The first production was Isaac b. Joseph of Corbeil's *Ammudei Golah* for which Conti had as his associates Samuel Boehm and Zanvil Pescarol. From 1558 until 1567 Conti continued to print Hebrew books whose contents had been sanctioned by the Inquisition. Until 1559 Conti used almost exclusively "Rashi" (cursive) type, as in his first edition of *Ẓiyyoni* by Menahem b. Meir, of which the Inquisition destroyed 1,000 cop-

ies. From then onward he used square type, as in the *Zohar* and the second edition of *Ẓiyyoni*. In Cremona Conti finished the Ashkenazi *Maḥzor* begun in *Sabioneta in 1557, while books printed there for Conti by Zifroni in 1567 (*Pirkei de-Rabbi Eliezer, Halikhot Olam, Ẓeidah la-Derekh*, and an Ashkenazi *siddur*) are continuations of Cremona work. Conti used a variety of title page decorations: in 1556, faun and nymph with the coat of arms of Cremona; 1557–67, the typical Cremona tailpiece inscribed SPQR; 1565–66, portals with turkey cocks; and, for folios, portals with *Akedah illustration. In 1576 another Christian printer, Cristoforo Draconi, printed (with the help of Solomon Bueno) Eliezer Ashkenazi's *Yosef Lekaḥ*.

[Attilio Milano / Federica Francesconi (2nd ed.)]

CRESCAS (**Cresques**; Heb. קרשקש), personal or family name common among the Jews of southern France and Catalonia. It apparently comes from the Latin verb *crescere* ("to grow, increase"); compare the name Dieutecresse ("may God increase") common among the Jews of N. France and pre-Expulsion English Jewry, which is probably a French form of Joseph (["may God] increase," Gen. 30:24). Bearers of the family name include Ḥasdai *Crescas. It was also used as a personal name, e.g., by Crescas Solomon, a signatory of the communal regulations adopted for Aragonese Jewry in 1354; Magister Crescas Elijah, physician to Pedro IV of Aragon; and the astrologer *Cresques de Vivers and the Majorcan Jewish cartographer Cresques Abraham, mistakenly known as Abraham Cresques.

CRESCAS, ASHER (**Bonan**) **BEN ABRAHAM** (first half of 15th century), author of religious and philosophical commentaries. Crescas lived in Provence. Before 1438 he wrote a commentary on Maimonides' *Guide of the Perplexed*, first printed with the Sabbioneta edition of 1553. In his commentary he quotes Shem Tov Ibn *Falaquera's *Moreh ha-Moreh*, a treatise by *Jedaiah ha-Penini (perhaps his *Midbar Kedemot* to the 25 propositions of Maimonides), Joseph *Caspi, *Levi b. Gershom, and *Alḥarizi's translation of the *Guide*. Crescas also wrote *Avvat Nefesh*, a supercommentary on Abraham *Ibn Ezra's commentary on the Pentateuch, extant in numerous manuscripts. Steinschneider identifies Crescas with Asher b. Abraham, the author of several liturgical writings still in manuscript in Cod. Paris 706.

[Moshe Nahum Zobel]

CRESCAS (or **Cresques**), **ḤASDAI BEN JUDAH** (c. 1340–winter 1410–11), Catalonian rabbi, philosopher, and statesman. Crescas was born into an old Barcelonan family of rabbis and merchants. He studied Talmud and philosophy there under Rabbi *Nissim b. Reuben Gerondi (c. 1310–1376) and together with Nissim's other outstanding disciple, Rabbi *Isaac b. Sheshet (1326–1408). In the 1360s, he served as one of the *ne'emanim* or "secretaries" of the Jewish community. By the 1370s, he was recognized as an authority on talmudic law, was requested by King Peter IV of Aragon to adjudicate certain cases concerning Jews, and received legal queries from Jews throughout the Kingdom of Aragon and abroad. He wrote poetry, and in 1370 participated in a competition between the Hebrew poets of Barcelona and those of Gerona. With the accession in 1387 of King John I and Queen Violante, he became a familiar of the royal household. In 1389 he moved to Saragossa, seat of the main royal court, and served there as rabbi. In 1390 he was empowered by the throne as judge of all the Jews of the Kingdom of Aragon. During the anti-Jewish riots of 1391, he worked together with the king and queen to protect the Jewish communities of the kingdom, but with only partial success: hundreds of Jewish communities in Valencia, Majorca, and Catalonia were destroyed, thousands of Jews killed, and more than 100,000 were converted to Christianity; but the Jewish communities in Aragon and Roussillon were saved. Despite Crescas' efforts to have his family protected, his only son was murdered in Barcelona. Crescas prepared a Hebrew chronicle of the massacres addressed to the Jews of Avignon, dated October 19, 1391 (trans. in Fritz Kobler, *Letters of the Jews through the Ages*, London 1952, pp. 272–75). The chronicle was presumably intended to provide information for Jewish intercessors meeting with the Avignonese pope. Its terse Hebrew bears theological allusions: the desolated centers of Jewish piety and learning become Jerusalem; and Crescas' son, "my only son, a bridegroom, a lamb without blemish," becomes Isaac. In the wake of 1391, Crescas, supported by the king and queen, devoted himself to the reconstruction of the devastated Jewish communities of the Kingdom of Aragon. He also secured passage for thousands of **Conversos* on ships sailing for places outside Christendom, like North Africa or the Land of Israel, where they could legally return to Judaism. He made efforts to reform the system of communal representation in Saragossa, and in 1396 framed regulations (no longer extant) for the community, which strengthened the powers of its administrators. Certain modifications were introduced to them in 1399 by Queen Violante, who extended the respon-

sibility of the administrators and allowed the lower classes a greater share in the representation. Crescas helped to effect similar regulations in other communities. His influence was not confined to Aragon. Before 1391 he and Isaac b. Sheshet were approached for advice with regard to the succession of the chief rabbinate of France. Later his opinion was solicited by Joseph *Orabuena, chief rabbi of Navarre. In 1401 Crescas spent several weeks in Pamplona, perhaps to discuss with King Charles III the resettlement of Jews there. A document from Olite, the royal residence in Navarre, acknowledges the receipt of 40 florins from the king, and bears Crescas' signature in Hebrew and Spanish. After the martyrdom of his son, he received royal permission in 1393 to take a second wife, his first being no longer able to have children; and she bore him one son and three daughters. He died in Saragossa.

[*Encyclopaedia Judaica* (Germany) / Warren Zev Harvey (2nd ed.)]

Works

Crescas had limited time for writing, and what he did write was motivated by his commitment to salvage Judaism in Spain. As part of a campaign to combat the prodigious Christianizing literature aimed at Jews and Conversos he wrote his *Refutation of the Christian Principles* (1397–98) in Catalan (trans. D. Lasker, Albany, 1992). This work has survived only in Joseph ben Shem Tov's Hebrew translation entitled *Bittul Ikkarei ha-Noẓerim* (1451, 1860, 1904, 1990; trans. D. Lasker, Albany, 1992). He also composed at least one other Catalan work combating Christianity which is now lost, and he influenced Profiat *Duran to write his *Kelimmat ha-Goyim* ("Disgrace of the Gentiles"), another work criticizing Christianity. The *Refutation* is a non-rhetorical logical critique of ten principles of Christianity: original sin, redemption, the Trinity, the incarnation, the virgin birth, transubstantiation, baptism, the messiahship of Jesus, the New Testament, and demonology. Even his philosophic treatise *Or Adonai* ("Light of the Lord"), an anti-Aristotelian classic, written in Hebrew and completed in 1410 (Ferrara, 1555; Vienna, 1859–60; Johannesburg, 1861; Jerusalem, 1990), was conceived as a polemic. In this work Crescas attacked Aristotelianism because Aristotelian arguments had been used by Jewish intellectuals to justify their desertion of Judaism. Also extant is a philosophic and halakhic Sermon on the Passover (*Derashat ha-Pesah* or *Ma'amar Or le-Arba'ah 'Asar*, ed. A. Ravitzky, Jerusalem 1988), which contains a discussion of miracles, faith, and choice. Among Crescas' students were: Joseph Ḥabib, Joseph *Albo, *Zerahiah b. Isaac ha-Levi, Mattathias ha-Yiẓhari, Moses ibn *Abbas, and *Astruc ha-Levi. The last five scholars were delegates to the disputation of *Tortosa.

Or Adonai

Crescas had planned to write a comprehensive work *Ner Elohim* ("Lamp of God") which was to have been a reaction to the teachings of *Maimonides. He envisaged that the work would be composed of a philosophic-dogmatic part, *Or Adonai*, and a halakhic one, *Ner Mitzvah*; however, the latter section was never written. *Or Adonai* was directed against the *Guide of the Perplexed*, the main work of Jewish Aristotelianism. Crescas praised the immensity of Maimonides' learning, and acknowledged the desirability of his intent, but in justification of his critique he cited the rabbinic dictum, "… wherever the divine name is being profaned no respect is to be shown to one's master" (Er. 63a). *Ner Mitzvah* was to have superseded Maimonides' *Mishneh Torah* as a concise systematization of *halakhah*. The work was to have included Crescas' own novellae, and was to have incorporated logical and methodological features lacking in Maimonides' work, namely: alternate halakhic opinions, references to sources, and principles which would permit the application of commandments, general in their nature, to particular cases. Since this halakhic compendium was never written, Crescas is remembered as a philosopher, not a halakhist.

The disengagement of philosophy and belief from *halakhah*, symbolized by the projected two parts of his work, was crucial to Crescas. For example, Maimonides, combining the two, had interpreted the opening words of the Decalogue, "I am the Lord" (Ex. 20:2; Deut. 5:6), as constituting a positive commandment to believe in (or know) the existence of God. Crescas, by contrast, argued in the preface to his *Or Adonai* that it is absurd to speak of a divine commandment to believe in the existence of God, since such a belief cannot be a commandment itself, but must be a presupposition for any commandment. Before one can speak of a divine commandment one must already be convinced of the existence of a divine commander, God. Furthermore, in Crescas' psychology belief is involuntary; and one can only be reasonably commanded to do what one has the power to choose to do. Once again, therefore, belief in the existence of God is a presupposition of all the commandments, but it itself is not a commandment; it is pre-halakhic.

Or Adonai is divided into four books which analyze (1) the presuppositions or roots (*shorashim*) of Torah, (2) the fundaments (*pinnot*) of Torah, (3) other obligatory beliefs of Torah, and (4) some non-obligatory speculations. Following Maimonides, Crescas counts as roots God's existence, unity, and incorporeality. His analysis is tripartite: (1) a thorough presentation of the alleged Aristotelian roots of Torah, i.e., demonstrations of the 25 supposedly indubitable physical and metaphysical propositions that Maimonides had declared necessary premises of proofs of God's existence, unity, and incorporeality; and explanations of these proofs (cf. *Guide*, 2, Introduction); (2) a disproof of Aristotelianism, i.e., logical refutations of most of the propositions and all of the proofs; and (3) a new investigation of the roots. Crescas' critique of Aristotelianism was historically momentous; in arguing for the liberation of Torah, he was arguing also for the liberation of science. Crescas refutes the Aristotelian arguments against the existence of a vacuum and suggests that a medium is not a necessary condition of either motion or weight. It is not true that each element possesses an inner tendency toward its alleged natural place: rather, "all movable bodies have a certain amount of weight differing only quantitatively" and "those

bodies which move upward do so only by reason of the pressure exerted upon them by bodies heavier in weight." Refutation of the impossibility of a vacuum enables Crescas to argue against the impossibility of infinite incorporeal and corporeal magnitudes and in the process to overthrow Aristotle's definition of place. In Aristotle's theory, according to which the universe is finite, "place" was defined as the adjacent surface of the containing body (*Physics* 4:4); this definition, observes Crescas, involves absurdities, e.g., the outermost celestial sphere has no essential place and the place of the part is sometimes not a part of the place of the whole. In Crescas' conception, space is infinitely extended; it is a vacuum, except where occupied by matter. Thus, space is the place of all matter, and the "place" of a thing is defined as "the interval between the limits of that which surrounds." To the Aristotelian argument that, according to such a definition, places themselves would have an infinite number of movable places, he replies that space is one and its dimensions immovable. Crescas notes that with the refutation of the impossibility of an infinite magnitude, the impossibility of a plurality of worlds is also refuted: there is now place for them. The objection that elements of the world would spill into another is quickly invalidated, even on Aristotelian terms, for each world could have its own proper places for its elements. Crescas does not explicitly posit the existence of an infinite number of worlds, but it is inferable; he does argue for an infinite number of coexisting magnitudes, and in two theological discussions he refers to *aggadah* about God's travels in (Crescas interprets "providence for") 18,000 worlds (Av. Zar. 3b). He rejects the Aristotelian view that the existence of an infinite number of causes and effects is impossible. In categorically affirming actual infinity, he contends that its denial by Aristotle was based on the fallacious assumption that the infinite is analogous to the finite. However, he argues, while finite magnitudes have boundaries and shape, the infinite by definition has no boundaries and is shapeless; while a finite number can actually be numbered, an infinite number possesses only the capacity of being numbered; while finite whole numbers can be subdivided exhaustively into even and odd, infinite numbers are not to be described by either evenness or oddness. On the other hand, regarding measurability, it is true that the predicates "greater than," "smaller than," and "equal to" are inapplicable to infinite numbers, but they are applicable to the numbers themselves. He rejects the Aristotelian view that the celestial spheres are rational, that is that they possess intelligence, and that their motion is voluntary; he argues that motion of terrestrial as well as celestial elements is natural rather than rational. Having dismissed Aristotle's theory of absolute lightness and weight, and having interpreted motion as a function of weight, he conjectures that the circular motion of the celestial spheres is due to their weightlessness. He rejects Aristotle's identification of form with actuality and matter with potentiality, and proposes that the substratum is "corporeal form." He rejects Aristotle's definition of time as an accident of motion; in his view, time exists only in the soul and is "the measure of the duration of motion or of rest between two instants." The critique of the Aristotelian propositions was also the critique of the premises of Maimonides' proofs of the existence, unity, and incorporeality of God; and the proofs fall with the propositions. Crescas does, however, recognize one short proof of the existence of God: regardless of whether causes and effects in the world are finite or infinite, there must be one cause of all of them as a whole. For were there nothing but effects, these effects in themselves would have only possible existence. Hence, in order to bring them into actual being, they need a cause, and this cause is God. He does not accept philosophic proofs for either of the other two roots: God's unity is known only from Torah, "Hear O Israel: the Lord our God, the Lord is one" (Deut. 6:4); His incorporeality is a corollary of His unity. Crescas concludes his dissertation on the roots by remarking that while philosophy cannot establish them, it does agree with them; the argument from design (see *God) suggested the existence of a Governor to Abraham, but only God's light dispelled Abraham's doubt (cf. Gen. R. 39:1).

Fundaments

Torah, in Crescas' conception, is "the product of a voluntary action from the Commander, Who is the initiator of the action to the commanded, who is the receiver of the action." Fundaments are concepts that follow necessarily (i.e., analytically) from his conception of Torah. They include the following:

1. God's knowledge of existents, for God could not have commanded the Torah without knowing what he commanded. Crescas argues that God as Creator knows a priori all existents across all time.

2. Providence, for God's voluntary giving of the Torah was itself providential. According to Crescas, God provides for individuals not, as Maimonides taught, in accordance with their intellectual excellence, but on the merit of their love.

3. God's power, for were He powerless, He could not have given the Torah. Crescas argues that He Who created all by virtue of His will is infinitely powerful, neither restricted by nor dependent on nature.

4. Communication between Commander and commanded, i.e., prophecy, for the Torah is the product of such communication. Prophecy, maintains Crescas, is the culmination not of philosophy, as Maimonides taught, but of love for God.

5. Man's power of choice, for the concept of commandment presupposes the commanded's ability to choose to obey. Yet Crescas accepts the philosophic position of determinism, maintaining that two hypothetical individuals with identical backgrounds would in the same situation choose identically. He accepts, also, the theological position of determinism, that God foreknows all, and he affirms R. Akiva's antinomy: "All is foreseen, but choice is given" (Avot 3:19). Man, he concludes, has a will, composed of appetite and imagination, though this will is determined by external causes, among them the commandments. Because of this will man is able to choose, and, furthermore, he is responsible for his choice, which, in turn,

becomes a cause, determining his reward or punishment. However, a man is not responsible for his beliefs, for belief, in Crescas' analysis, is independent of the will; thus, at Sinai the Israelites, coerced as if God had threatened to crush them with the mountain (cf. Av. Zar. 2b), were not rewarded for believing, but for the voluntary joy attendant on their belief.

6. The purposefulness of Torah, just as objects produced by men have a purpose, so, the Torah, produced by the Prime Intellect (God) must have purpose. It is the purpose of the Torah to effect in the one to whom it is addressed love for man, correct opinions, and physical felicity, which are all subsumed under one final goal – spiritual felicity, the infinite love for God. But even for God, the Commander, the Torah has a purpose, namely to bestow His infinite love upon His creatures.

Against both Platonism and Aristotelianism, Crescas argues that God's love for man is stronger than man's love for God, for God's infinite essence is the source of both loves. Man's love for God results in *devekut* ("conjunction" or "communion") with God; for among spiritual beings, as well as among physical objects, love and concord are the causes of perfection and unity. Love, the purpose of Torah, is the purpose also of man, and, further, of all that is. Maimonides had discredited the question of ultimate purpose, asserting that one could ask the purpose of every proposed purpose. Crescas replies that there is no infinite regress, because, ultimately, goodness is its own purpose, and it follows necessarily from God's essential and infinite goodness that He should boundlessly create good and joyfully will that His creatures attain the ultimate good, *devekut*.

Other Dogmas

Of the non-fundamental obligatory beliefs, Crescas distinguishes those independent of specific commandments, which include creation, survival of the soul, reward and punishment, resurrection, immutability of the Torah, the distinction between Moses and the other prophets, the efficacy of the Urim and the Thummim, and the Messiah, from those dependent on specific commandments, which include the efficacy of prayer and of the priestly benediction, God's readiness to accept the penitent, and the spiritual value of the High Holidays and the festivals. These beliefs differ only epistemologically from the fundaments: they are a posteriori, while the fundaments are a priori. One could logically conceive of the Torah without the nonfundamental beliefs but not without the fundamental ones. Yet, since the nonfundamental beliefs are affirmed by the Torah, their denial makes one a heretic. Crescas rejects Maimonides' contraposition of eternity and creation. For Crescas, whether or not the world is eternal is inconsequential; what is crucial is that the world is created *ex nihilo* by the absolute will of God, and that only the existence of God is necessary. Creation need not be in time: God is "creating each day, continuously, the work of the beginning" (liturgy). In his discussion of eternity, as in that of determinism, Crescas accepted a theory considered fatal to religion, and, instead of arguing against it, opted to establish its dogmatic inconsequence, and to show how it could be incorporated into an orthodox theology. In his discussion of the soul, Crescas rejects the Aristotelian theory that only the acquired intellect survives death. He argues that the soul is a simple and incorruptible substance, whose essence is not the intellect but something sublime and inscrutable. Crescas' teaching concerning the Messiah states that he will be greater than Moses and even the angels. Crescas recognizes only the Diaspora of 586 B.C.E.; the period of the Second Temple, being under foreign hegemony, did not constitute a redemption for him.

CONCEPT OF GOD. "The Place" (*ha-Makom*), a talmudic appellation for God, strikes Crescas as a remarkable metaphor: as the dimensions of space permeate the entire universe, so does the glory of God. Crescas, differing from Maimonides, speaks of positive attributes of God (e.g., eternity, knowledge, and power), maintaining that terms predicated of God are not employed absolutely equivocally, but amphibolously. Their generic meaning is the same when they are applied to God as when they are applied to created beings; yet, the attributes of created beings are finite, and thus incomparable with the infinite attributes of God. Attributes are infinite also in number; yet all are mental modifications of the attribute of goodness. Crescas considers both the Averroistic and the Avicennian identifications of God's existence with His essence as tautological. For Crescas existence, whether that of God or created beings, is simply extramental non-absence; it is essential to (i.e., a necessary condition of) essence, which, by definition, has extramental reality. Similarly, the attribute of unity, which is simply nonplurality, is essential not only to God, but to every existent substance. All divine attributes are essential in the way that existence, unity, animality, and rationality are essential to man. For Crescas, God is not the *intellectus-intelligens-intelligibile*, and, as is suggested in the astounding conclusion of *Or Adonai*, He even might not be unconditionally inscrutable. He is Goodness, and His happiness is in His infinite creation of good and in His infinite love for His creatures.

Influence in and Criticism of *Or Adonai*

Or Adonai was written within the tradition of the Jewish Aristotelianism it sought to refute; it is a continuation of the discussions in Maimonides' *Guide* and *Levi b. Gershom's *Milḥamot Adonai* ("Wars of the Lord"). Crescas makes significant reference to, among other Aristotelians, *Moses b. Joshua of Narbonne. Among Jewish non-Aristotelians, he refers sympathetically to *Judah Halevi and *Naḥmanides, recommends *Jonah b. Abraham Gerondi's treatise on repentance, and cites his teacher R. Nissim Gerondi, the spirit of whose philosophy pervades his religious thought. Of the medieval Islamic philosophers, whom it is assumed he knew only through Hebrew translations, Crescas is particularly concerned with *Averroes, the radical Aristotelian, whose physics and theology he attacks vigorously. He also discusses views of *al-Farābī, *Avicenna, al-*Ghazālī, *Avempace, and *al-Tabrīzī. Crescas' arguments show affinity to the revolutionary physics then being devel-

oped at Paris by students of Jean Buridan, especially Nicole Oresme. At times he seems influenced by Thomism, Scotism, and Ockhamist nominalism. However, since he did not write *Or Adonai* for a Latin audience and did not cite Latin schoolmen, the nature of his relationships to these movements is speculative. Aspects of Crescas' discussion of the will seem based on the work of *Abner of Burgos, a Jewish convert to Christianity.

Although *Or Adonai* was written for philosophers, not mystics, it is clear that Crescas was influenced by the Kabbalah, especially by the 13th-century Aragonese masters. He cites *Sefer Yeẓirah* and *Sefer ha-Bahir* and often interprets Scripture and Midrash kabbalistically. He emphasizes infinity (although he avoids the kabbalistic term *Ein-Sof*), love, and *devekut*; and he dismisses as preposterous the Maimonidean notion that the esoteric studies of *ma'aseh bereshit* and *ma'aseh merkavah* are physics and metaphysics. Aristotelians, such as *Shem Tov ben Joseph ibn Shem Tov, who rejected Crescas' arguments as "figments of the imagination" of a "perverse fool," were convinced that he could not understand Aristotle. Even Isaac *Abrabanel, who respected Crescas for his piety, considered his philosophic views often unintelligible or simpleminded. On the other hand, Joseph *Jabez praised "Rabbi Ḥasdai, who surpassed in intellect all the philosophers of his time, even the philosophers of Christendom and Islam, and how much more so the philosophers of Israel." Giovanni *Pico della Mirandola, quoting Crescas extensively, injected his critique of Aristotelian physics into the Latin literature, which later nurtured Galileo. The *Dialogues of Love* of Leone Ebreo (Judah *Abrabanel) might be seen as a poetic adaption of Crescas' metaphysics. Giordano Bruno (1548–1600), the Christian Italian philosopher, seems to have borrowed arguments from him. *Spinoza's theories of extension, freedom and necessity, and love are marked by his close study of *Or Adonai*.

CRESQUES, ABRAHAM (d. 1387), Majorcan cartographer, son of Abraham Vidal and Astrugona. Contrary to what has been assumed in research, his name was Cresques Abraham and not Abraham Cresques. The latter is the name of his father. Hence his son Judah (son of) Cresques. In the Catalan-speaking lands and in Provence it was customary for Jews to bear two names, the second being the father's name. Cresques' grandfather Vidal Cresques was a leader of the community in Majorca. Cresques prepared maps and compasses for Pedro IV of Aragon and his son John, who conferred on him the title *magister mapamundorum et buxolarum*. His map of the world was sent by the infante as a gift to Charles VI of France in 1381. Both Cresques and his son Judah (see below) were granted royal protection in 1381 and exempted from wearing the Jewish badge. Pedro IV granted him revenues and the right to appoint the ritual slaughterers and inspectors in his community. The celebrated Catalan atlas, now in the Bibliothèque Nationale in Paris, is thought to be the work of Cresques. JUDAH CRESQUES (b. c. 1360) was also a cartographer. After his father's death he continued to make maps for John I and Martin of Aragon. He continued to reside in the *call* of Majorca, where he inherited a house from his father. During the anti-Jewish outbreaks in Spain in 1391, Judah became converted to Christianity, changing his name to Jaime Ribes. In 1394 he settled in Barcelona. From 1399 he is referred to in documents as *magister cartarum navegandi*. He is identical with the famous cartographer Mestre Jacome de Mallorca, employed in Portugal by Henry the Navigator during the 1420s.

CRESQUES DE VIVERS (d. 1391), Spanish astrologer. Cresques, who apparently came from Vivers in southern France, was invited in 1384 by John, the heir apparent to the throne of Aragon, to serve him as astrologer. Cresques arrived in Aragon in 1386. When John became king in the following year he assigned Cresques an annual income of 500 Barcelona sólidos to be defrayed by the Jewish community of Perpignan. In 1389 he granted Cresques and his household royal protection, and also appointed him tax administrator (*procurador y gestor general*) of the Jewish communities in Aragon. Cresques was killed during the anti-Jewish outbreaks in 1391. After his death, his wife and sons became converted to Christianity, and in 1392 the king ordered the community of Perpignan to continue to pay them the income formerly received by Cresques.

CRESSON, WARDER (1798–1860), U.S. religious zealot, convert to Judaism, and visionary Zionist. Cresson, born into an old Philadelphia Quaker family, became successively a Shaker, a Mormon, a Millerite, and a Campbellite, while earning a liv-

ing as a farmer outside Philadelphia. After associating with Isaac *Leeser for several years, Cresson determined in 1844 to visit the Holy Land. He received an honorary appointment as American consul at Jerusalem, but a protest by Samuel D. Ingham, a former secretary of treasury, who believed that Cresson had been "laboring under an aberration of the mind for many years," and that "his mania is of the religious species," resulted in the appointment being withdrawn. By then, however, Cresson had left for Palestine, and for a time believed that he was representing the American government. Four years of residence in Jerusalem persuaded him that he could find spiritual truth in Judaism; despite the discouragement of the chief rabbi of Jerusalem and of the *bet din*, he was circumcised and converted in 1848. Returning to Philadelphia to settle his affairs, Cresson was declared insane by a jury at the instigation of his wife and son, who felt that his conversion was an indication of mental imbalance. He appealed the decision and received a new trial, and in 1851 was found by the jury to be sane. They ruled that Judaism was a legitimate religion and that Cresson was not insane in converting. The Philadelphia Public Ledger commented that the case "settled forever … the principle that a man's religious opinions never can be made a test of his sanity." While in Philadelphia, he lived as an observant Jew and prayed at Mikveh Israel. Before returning to Palestine in 1852 as Michael Boaz, Israel ben-Abraham, he published a polemical volume entitled *Key of David, David the True Messiah* (1851). Back in Jerusalem, Cresson undertook propaganda campaigns against Christian missionary groups and on behalf of agricultural colonization of Jews in Palestine. He remained in contact with Leeser, who published many of his communications in his journal *The Occident*. Cresson lived in Jerusalem as a Sephardi and married a Sephardi wife, Rachel Moledano.

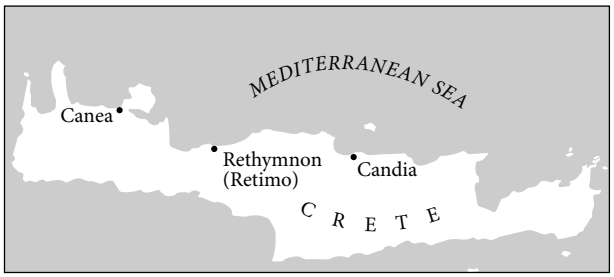
CRETE (**Candia**), the fourth largest island, 160 mi. (248 km.) long, in the Mediterranean Sea and the largest Greek island, lying 60 mi. (96 km) from the Peloponnesus. Crete is apparently identical with the biblical *Caphtor, the original home of the *Philistines (Deut. 2:23; Jer. 47:4; Amos 9:7), who themselves, or certain groups of them, are referred to in the Bible as Cherethites (Ezek. 25:16; Zeph. 2:5; this is also the obvious meaning of I Sam. 30:14, cf. 30:16). David's bodyguard, which the Bible describes as Cherethites and Pelethites (II Sam. 8:18; 15:18; 20:7, 23 (Kere); I Kings 1:38, 44; I Chron. 18:17), was probably composed of Philistines ("Peleti" being a derivation of "Pelishti" analogous to "Kereti") and Cretans who had either recently emigrated from Crete or were already settled in the land of the Philistines but were still named after their place of origin. The Septuagint also translates Cheretim as Κρῆτας



Major medieval Jewish communities in Crete.

(Ezek. 25:16; Zeph. 2:5); the verb כָּרִית in Zephaniah 2:6 is translated as Κρήτη; in Ezekiel 30:5 פּוּט is also given as Κρῆτες.

The earliest evidence of a Jewish community in Crete is to be found in a circular letter in support of the Jews, sent by the Roman Senate (142 B.C.E.) to various countries at the request of Simeon the Hasmonean. As this was also forwarded to the Cretan city of Gortyna (I Macc. 15:23), it can be assumed that there was a Jewish community in existence there. There is no doubt about the existence of Jewish settlements in Crete after its conquest by the Romans in 68–67 B.C.E. The false Alexander, who after Herod's death claimed to be his son, found ardent supporters and financial help among the Cretan Jews. *Philo of Alexandria mentions Crete among the countries with a large Jewish population (*Legatione ad Gaium*, 282). According to the New Testament (Acts 2:11) there were Cretan Jews living in Jerusalem. Josephus married, in Rome, a woman belonging to a prominent Cretan Jewish family (Jos., Life, 427). After the partition of the Roman Empire in 395, the island remained part of the Eastern Empire. Under the Byzantine emperor Theodosius II (408–50) the Jews of Crete, among others, were severely oppressed. Possibly in consequence of this in 440 they placed their faith in a pseudo-messiah, who claimed to be Moses sent from heaven to lead the Jews of Crete dry shod through the sea back to the Promised Land. Of those who did not drown after jumping from the cliff, most converted to Christianity. The Saracens, who invaded Crete in 823, founded a fortified city surrounded by a *khandak* ("ditch"), from which the city's present name Candia is derived. In 961 the Byzantines succeeded in reconquering Crete. The situation of the Jews under the Arabs and Byzantines is only vaguely known. In general the Muslim rulers gained the sympathy of the native population, while under the Eastern Empire their position, while not enviable, was probably no worse than elsewhere under Christian Byzantine rule. In the wake of the Fourth Crusade (1204) the island was sold to Venice and became known as Candia. In the period of Venetian rule (1204–1669), a fusion of various Jewish communities took place. The *Romaniots formed the upper class. Their Greek vernacular even penetrated the synagogue services. Jews settled on the island from both east and west throughout this period, and contacts with Jewish centers were maintained. In 1228 R. Baruch b. Isaac, on his way to Palestine, found a small Jewish community in Candia, which shocked him because of the laxity in observance of Jewish traditions.

A series of ordinances (*Takkanot Kandyah*; see bibliography) were then established against the abuses. In 1481 *Meshullam of Volterra found 600 Jewish families and four synagogues in Candia. The Jewish community of that city accorded a warm welcome to the exiles from Spain in 1492.

Nevertheless, even during the period of their prosperity, Cretan Jews did not number more than 1,160; they lived mainly in the harbor towns of Candia, Canea, and *Rethymnon (Retimo). The Jews formed a middle class between the Greek population and the feudal nobility, but they were nevertheless treated as *vilani* ("serfs") and depended on the favors of Venetian officials. From 1350 they were forced to reside in a specified quarter (*Ciudecca*), and not only to wear the Jewish *badge on their clothing but also to affix it to their houses. On Epiphany they had to donate a ducat a head to the church for the lighting of candles. There were also protests that the Jews had concentrated the major part of the commerce in their hands. When the Greek population rioted in 1364, the Jews of Castel Nuovo were massacred by the rebels. About a century later, in 1449–50, the Jews were accused of showing contempt for Christianity by crucifying the paschal lamb, an original departure from the *blood libel theme. Two years later, in 1452, an accusation was brought by a nun that the Jews had desecrated the *Host. Nine notables of the Jewish community of Candia were arrested, and tried in Venice, but were set free after two years' imprisonment.

In general the central government attempted to safeguard the Jews and these in turn proved their loyalty. A distasteful burden of the Jewish community was to supply an executioner. During the war with Turkey in 1538 a rumor that the Jews were hiding Turks in their quarter led to an attack by the Greek population. A massacre was averted by the intervention of Venetian troops and the day came to be celebrated as the "Purim of Candia." In 1568 the Greek patriarch in Constantinople dispatched a letter to the Christians of Candia taking them to task for their cruel treatment of Jews. However, when the fanatic Giacomo Foscarini ruled the island (1574–77), harsh anti-Jewish measures were undertaken to isolate the Jews of the island or compel them to convert. The Jewish community was heavily taxed and became the victim of extortions to finance the war against the Turks. Even so, the situation of the Jews was relatively secure. With some exceptions, they were Venetian subjects with the status of citizens. Only a limited number of them, however, were admitted to the wholesale commerce. Nevertheless they dominated the export trade of the island. They traded in sugar, wax, ironware, hides, female finery, indigo, and wine, while a certain group was engaged in moneylending and banking. These aroused considerable hostility, especially among the Greeks on the island. In 1416 Jews were restricted in the purchase of fields out of fear that all the land would come into their possession. In 1423 the Venetian senate forbade all Jews who were Venetian subjects to purchase land. Those who were already in possession of properties were required to transfer them to other owners within two years. Jews were also restricted in the renting of property. In 1433 they were forbidden to act as brokers. However, the majority of the Jewish population in Crete were artisans, such as tailors, shoemakers, bakers, silkweavers, and dyers. Some were lawyers, physicians, and book copyists. The *takkanot* of Candia (from the 13th century and the end of the 16th century) reveal that the Jews of the island had the right of self-government, especially in religious matters. At the head of the community stood the *condostablo* and after him the *ḥashbanim* ("accountants"). The *condostablo*, who was elected by the notables of the community and its wealthier members, represented the community externally, and was responsible for the efficient organization of communal affairs. He chose the *ḥashbanim*, who were responsible for financial affairs. The appointment of both the *condostablo* and the *ḥashbanim* required the approval of the government. In the city of Candia there were four synagogues: "The Great," "Kohanim," "Ashkenazim," and "The High."

The community produced many talmudic scholars and rabbis, especially of the Delmedigo and Capsali families. Among the famous scholars of Crete were the historian Elijah b. Elkanah Caspali, the philosophers Joseph Solomon *Delmedigo, *Elijah b. Eliezer, *Shemariah b. Elijah Ikriti, and Elijah Cretenses *Delmedigo, and the rabbi and poet Michael b. Shabbetai *Balbo. The Turkish period (1669–1898) marked a decline in the cultural life of the Jewish communities. In 1873 a blood libel was raised against the Jews and the French consul intervened effectively on their behalf. In 1875, local Jew Abba Delmedigo was elected to the Cretan Ottoman parliament. Abraham Evlagon served as chief rabbi from 1876 to 1934. When Crete became autonomous in 1897, it had a Jewish population of 1,150, with 200 families residing in Canea, 20 in Candia, and five in Rethymnon. In 1900 Canea had 726 Jews, speaking Greek. Crete became part of Greece after the Balkan wars of 1912–13.

Prior to World War II the community had dwindled to about 400. When the Nazis occupied Greece in 1941 many Jews fled to Crete. When Crete fell it came under direct Nazi administration. On May 20, 1944, the Jews of Canea were arrested and taken to Iraklion (Candia). On June 9, 1944, they were forced to board the *Danae* together with 400 Greek hostages and 800 Italian prisoners of war. The ship was then taken out to sea, identified by the British RAF (Royal Air Force) as a German boat without being aware of its human cargo, and bombed. After being abandoned by its German crew it sank with all on board. Only seven Jews survived the Holocaust.

[Simon Marcus]

CRIME.

INTRODUCTION

Jews in the Diaspora have generally been less involved in crime than the populations among which they lived. Their closely knit communities, cohesive family life, high educational standards, moderation in the consumption of alcohol, their solidarity, consciousness of mutual responsibility, and readiness for mutual help are regarded as the main causes for the generally low crime rates among Jews.

There are only a few countries where official crime statistics were recorded and published separately for Jews and non-Jews in certain periods. The limited data available – ranging from Czarist Russia prior to World War I to modern Canada – point to certain unmistakable trends. In the first place, crime rates were lowest where Jews were discriminated against and increased after Emancipation. Second, crimes committed by Jewish offenders were generally different in character in countries of discrimination and persecution from those committed by members of the dominant population groups. The more the Jews became emancipated and were enabled to participate in social, economic, and cultural life, the more the crimes committed by them became similar to those of the majority population.

In Czarist Russia, a country notorious for its discrimination against the Jewish minority, the conviction rate for Jews in 1907 was only about 67.5% of that for the dominant population group, while in Poland, another country where the overwhelming majority of the Jews lived in poverty and oppression, the ratio in 1937 was 63.9%. In Central Europe, Germany, Austria, and Hungary, the extent of criminality among Jews was somewhat higher. In Hungary, where the Jews were enjoying an ever-growing share in economic, social, and cultural life, the yearly average between 1909 and 1913 was 76.5%. Among German Jewry, from 1882 to 1910, when it had achieved formal emancipation and became the wealthiest and best educated Jewish community of the period, the crime rate rose from 76% to 91.7% of that for non-Jews. In Austria, in 1898, the ratio was 90%. Jacob *Lestschinsky notes that in 1918 the conviction rate for Austrian Jews was about 50% higher than for the poorer and less acculturated Jewish community of Galicia. Crime statistics for Nazi Germany in the mid-1930s seem to show that there is an inverse correlation between participation of Jews in crime and in the life of the country where they reside. However, after deducting the very high conviction rates of Jews for "racial pollution," passport exchange and industrial offenses – all results of discriminatory Nazi legislation – Jewish conviction rates for all other offenses combined were only about 30% those for non-Jews. In the Netherlands, where Jews enjoyed genuine emancipation and equality for centuries, the crime rate for Jews, which was only 67.7% in 1902, was about equal to that of the general population in 1931–33.

With the exception of Canada, no separate criminal statistics are available for most of the democratic countries, where Jews are fully emancipated. The United States' census does not register crimes committed by Jews. The only relevant data available for the United States are some prison statistics; but there the participation of Jews in crime appears to be even lower than elsewhere, as the more dangerous criminals are sent to prison, while Jews generally commit offenses of less severity. In the ten-year period 1920–29, 6,846 Jews, on the average, were imprisoned annually in the United States – 1.74% of the total of 394,080 convicted offenders. As Jews constituted 3.5% of the population at the time, their share in the more serious offenses, which were punished with imprisonment, was therefore about 50% of the general ratio. Imprisonment figures for New York and Los Angeles confirm these findings. In the early years of the 20th century, Jews represented 17–18% of the population of New York City; the percentage of Jewish prisoners was 9.2% in 1902, 9.4% in 1903, and 14.7% in 1904. In 1947, Jews made up 4.7% of the prison population in New York State, about a quarter of their share in the population. In Los Angeles, while the Jewish share in the population rose from 5.8% in 1933 to 11.9% in 1947, their share in 15 out of 18 offense groups – including murder, burglary, robbery, assault, and sex crimes – ranged from 2.8% to 3.9%. The situation has been similar in Canada. The Jewish population in the province of Quebec, where the great majority of Canadian Jews live, is 2.5% of the total, while their share in the penitentiary population during the last three decades has been never more than 1%.

In Tunisia the share of the Jews in the prison population was 60% of their share in the total population in 1939, and only 21% in 1965. (According to André Chouraqui, the situation was similar in Algeria and Morocco.) The data about the United States and Tunisia show that two Jewish populations – one wealthy, emancipated, well acculturated, and living in an affluent society, and the other generally poor, culturally segregated, and living in a backward country in conditions of oppression and discrimination – are both equally underrepresented among the prison population of their countries and commit proportionally fewer serious crimes. Not less significant is the fact that when anti-Jewish persecution and discrimination increased in Tunisia following the establishment of the State of Israel, crime among Jews declined still further. This seems to support the assumption that criminality among Jews increases with the measure of their emancipation.

Soon after the establishment of the State of Israel, it came as a surprise that Jews committed serious offenses, including murder, rape, and burglary, in their own country. It seems that the full freedom had also resulted in crime to an extent and of a character not known before in modern Jewish history. This seems to suggest that normalization of life in general also results in a "normalization" of the extent of deviant behavior.

However, given the continuing rise of crime in Israel (see below), and particularly violent crime, in the post-Six Day War period, it may be suggested that the erosion of two particular psychological barriers has also been a decisive factor, namely, the Zionist ethos and, especially among Eastern Jews, the values of the traditional Jewish home.

IN THE DIASPORA

Offenses Against the Person

In all countries of the Diaspora, Jews committed proportionately far fewer offenses against the person than did non-Jews; their share in homicide was the smallest of all. This phenomenon was generally explained by the higher educational level of the Jews and their very moderate consumption of alcohol. In Europe before World War II, the share of Jews in cases of physical assault increased proceeding from east to west. In Russia, in 1907, Jewish convictions for aggressive crimes were about 25% of the corresponding rates for non-Jews, while in Poland in 1937 the proportion was about 55%. On the other hand, of the overall figure in Germany, taking the average for 1899–1902, Jewish participation in offenses against the person was 71.4% and in the Netherlands about 70% from 1931 to 1933. Arthur Ruppin showed that the figures for the city of Amsterdam alone were even higher, and he ascribes this to the existence of a sizeable Jewish working class employed in industries owned mainly by Jews. Thus it seems that where Jews had achieved the highest measure of emancipation and equality, Jewish laborers behaved more like other working-class people.

Statistics show that on the North American continent, in the United States and Canada, convictions for assault among Jews are very low. This was explained by the fact that a generation or two after immigration, Jews had moved up to the middle class, where such aggressive behavior is less common. The same, however, applies to Jews in North Africa, who were very rarely imprisoned for physical assault, despite the fact that the great majority were impoverished and uneducated. Oppression and discrimination obviously cause Jews to contain their aggressive urges. This seems to confirm views expressed by Gustav Aschaffenburg and others that the position of the Jews as a closely knit minority group served as a crime-preventing agency, since potential offenders were constantly aware of the danger that deviant behavior by an individual could pose for the group as a whole.

Offenses Against Morality

Jews were generally less involved in aggressive offenses against morality than non-Jews: least in Eastern Europe, somewhat more in Germany, and more again in the Netherlands. United States prison statistics and Canadian offender statistics also point to the very low rates for sex offenses among Jews. Prison statistics in Tunisia, however, show that in 1955, when Jews were only 1.7% of the general population, Jewish women represented 2% of the "*filles en cartes*," or prostitutes. This is an indication of the fact that where Jewish offenders belong to the poverty class, they tend to commit offenses characteristic of such populations. In some countries, however, convictions for nonaggressive offenses against morality, such as brothel-keeping, were proportionally more numerous among Jews than among non-Jews. In the previously Austrian part of Poland, the ratio was 228% during 1924–25 and in Germany during 1899–1902 it was 127%. In the latter years, conviction rates among German Jews for "diffusion of immoral writings" were 260% of those of non-Jews. All this seems to indicate that Jews in the Diaspora were more represented in commercial offenses against morality than non-Jews. Experts explain this by the fact that Jews lived mainly in urban centers and engaged in commerce.

Offenses Against Property

The participation of Jews in the common crimes against property in the Diaspora was generally still lower than their share in offenses against the person. It was lowest in Poland, where in 1937 conviction rates for Jews were only 20% of those for non-Jews (though it is possible that thefts committed by Jews within the closely knit Jewish communities were not always reported to the hated Polish police), while in Germany, from 1882 to 1916, the ratio ranged from 30% to 40%. In the Netherlands the rates were again the highest – 97.6% of those for non-Jews in the years 1931 to 1933. In the United States and Canada Jewish participation in common crimes against property was always very low. In Los Angeles, for example, it was only about one-third of the proportion of Jews in the general population during the period 1933–1947, while in Canada (1936–37) convictions of Jews were only about two-thirds, proportionally, of the general figure. In North Africa, the participation of Jews in property offenses was much lower than that of non-Jews. Contrary to the situation in Europe and America, however, theft and drunkenness were the offenses most often committed by Jews in North Africa. Chouraqui observes that they constituted almost all the offenses with which Tunisian, Moroccan, and Algerian Jews were charged in 1948.

Fraud

False pretenses, forgery, and fraud are offenses in which Jews in the Diaspora were often overrepresented. In Russia in 1907, conviction rates for "commercial swindlers" were 143%, while in Poland in 1937 rates for fraud were 137%, and for forgery 143% of those for non-Jews, while in Germany the ratio ranged during the years 1882 to 1916 from 183% to 217%. In the Netherlands, the average for 1901–09 was 160%, rising in the period 1931–33 to 249%. In Canada the adjusted conviction rates for fraud, comparing the urban populations only, are 160%. The higher conviction rates for "commercial" offenses are generally ascribed to the much higher proportion of Diaspora Jews than the non-Jewish population in commerce and in urban areas. In Germany, for example, there were proportionately about five times as many Jews as non-Jews, and in Poland about 20 times as many, in commerce. In Poland, between 1924 and 1937, fraud and forgery represented about 21% of all offenses committed by Jews. In Germany between 1882 and 1901 these offenses were about 13%, and in the Netherlands from 1931 to

1933 only about 5%, of all offenses committed by Jews. Thus, proceeding from east to west – from conditions of discrimination in Poland to those of emancipation in Germany and still further west to the Netherlands – the proportion of fraudulent behavior in all offenses decreased and crime among the Jews became more similar to that of the majority populations.

Offenses Against Public Order and State Security

In offenses against public order, the participation of Diaspora Jews is generally different from that of the non-Jews. In countries where Jews were discriminated against, their share is greater, while in countries of emancipation it is proportionally smaller. Thus, the conviction rates of Jews for these offenses seem to be a reflection of their treatment by governments and dominant populations. In Russia in 1907, when Jews were 4% of the population, they accounted for 17.1% of offenses against the security of the state and public order, including the circumvention of discriminatory anti-Jewish laws – over four times their due share. In Poland (1924 to 1937) such offenses represented 43.6% of all the violations committed by Jews. In Germany (1899 to 1902), on the other hand, they were only 25%, and in the Netherlands (1931 to 1933) only 6.2%, of all offenses committed by Jews. (The very low figure for the Netherlands is somewhat distorted because the available statistics include only the more serious offenses against the state, in which Jews were rarely represented.)

IN PALESTINE (BEFORE 1948)

From the First Aliyah (1882) to the establishment of the State of Israel in 1948, crime figures in the *yishuv* were extremely low for all types of offenses. As it was only during the last years of its existence that the mandatory government of Palestine published separate statistics for the different communities, figures for 1940, 1943, and 1945 give some indication of the incidence of criminality among Jews in Palestine. (See Table 1: Conviction Rates in Palestine shows the crime rates for Jews and non-Jews in Palestine.) The table shows that in 1940 conviction rates of Jews were only 51.4%; in 1943, 29.4%; and in 1945, 25.7% of those among non-Jews. The very low criminality rates obviously reflect the largely idealistic and pioneering character of the *yishuv*.

The general decrease in crime among Jews and the coincident increase among non-Jews should also be seen against the background of World War II. Most young Jews served in the army or the *Haganah, which reduced the number of potential offenders in the Jewish civilian population. Non-Jews generally did not join the forces, but many of them worked in military camps as laborers, often far from the social control of their families and communities.

Table 1. Conviction Rates Per Thousand of the Population for Jews and non-Jews in Palestine, 1940, 1943, 1945

Year	Jews	non-Jews	Ratio Jews: non-Jews
1940	7.1	13.8	1:1.9
1943	5.0	17.0	1:3.4
1945	5.5	21.3	1:3.9

IN THE STATE OF ISRAEL

The First Decades

The entire structure of crime among Jews changed rapidly with the evolution of the new society in the State of Israel. Practically no feature that had been regarded as characteristic of criminality among Jews in the Diaspora appeared in Israel's criminal statistics. The common offenses against the person – such as assault, physical injury, and homicide – and against property – such as theft and burglary – which in the Diaspora were less frequently committed by Jews, account for the overwhelming majority of convictions of Jews in Israel. It seems that crime became, as E. Durkheim expressed it, one of the normal expressions of life in society. This normalization is also reflected in the fact that fraud and forgery, which had constituted in Poland about 21%, in Germany about 13%, and

Table 2. Jewish Adult Offenders in Israel, 1951–1965

Offenses		1951	1952	Average 1956–65

in the Netherlands about 5% of all Jewish crime, made up only 3.1% in Israel (the average for the years 1956–65).

Another feature of crime in Israel is the fact that after an initial rise of about 30% – from 7.5 to 10.6 per thousand of the total population during the first years of mass immigration (1948 to 1952) – the crime rates for the Jewish population did not rise for over a decade. The average crime rate for Jewish adults from 1956 to 1965 was 10.1 per thousand. In spite of the upheavals and tensions accompanying Israel's birth, including the mass immigration of diverse ethnic groups, crime in Israel is relatively moderate in extent and characterized by the absence of brutal and ruthless offenses.

The changed physiognomy of crime in Israel, as shown in Table 2: Jewish Adult Offenders, is probably a consequence of the radical change in the occupational structure of the Jews.

A study of specific offenses committed by Jews and non-Jews in Israel will illustrate this further. (Figures given are conviction rates per thousand of the adult population concerned.)

Offenses Against the Person

The rates for all offenses against the person were on the average 2.9 among Jews and 8.8 among Arabs. The rates for homicide, rarely committed by Jews in the Diaspora, remained relatively moderate among Jews in Israel: 0.4 on the average for the years 1951 to 1965. Of the homicides, 34% were due to matrimonial and other emotional conflicts, 25% resulted from quarrels between neighbors and business partners, 14% were committed in the course of robbery and 8% during quarrels among criminals, 3% were connected with "family honor" in traditional Oriental families; 15% were committed for various other motives. Aggressive offenses involving bodily harm were 7.0% of all offenses against the person in 1964 and only 5.7% in 1965, which confirms the impression that crime among Jews in Israel is still less violent and brutal than in many other countries. Offenses against the Dangerous Drug Laws were rare: about 0.1 per thousand Jews and 0.2 for Arabs. There were 133 cases among Jews in 1964 and 135 in 1965. In most cases the offenders were immigrants from North Africa, Asia, and the Levant who acquired the drug habit in their countries of origin but did not pass them on to the next generation in Israel. Among the emerging class of habitual offenders in Israel, however, there were some who used drugs, trafficked in them, or induced others to become addicted in order to exploit them.

Offenses Against Morality

Offenses against morality were never characteristic of Jews in the Diaspora, and in Israel the conviction rates are also low – e.g., 0.29 for Jews and 0.45 for Arabs in 1964, a typical year. There were very few serious and brutal sex crimes, only 2.6% of all offenses against morality during the years 1956 to 1965. There were only eight convictions of rape or attempted rape in 1963, nine in 1964, and six in 1965. Most of the offenses against morality consisted of "indecent behavior," generally against minors. Cases of brothel-keeping and soliciting were also relatively few: 41 in 1963, 67 in 1964, and 59 in 1965.

Offenses Against Property

The common offenses against property are the most widespread. The rates were 3.13 among Jews on the average for the ten years 1956 to 1965 and 8.77 among Arabs, taking the average for five alternate years from 1956 to 1964. Theft from the person, which in some European countries was sometimes described as a "typically Jewish" offense, is rare in Israel and growing rarer: there were 44 convictions in 1951, and only 37 in 1965, when the Jewish population was almost twice as great. On the other hand, a class of habitual burglars is clearly emerging: there were 379 convictions in 1963, 468 in 1964, and 501 in 1965. Robbery, which entails direct contact with the victim, physical attack, and a threat to his life, is, however, comparatively rare: there were 7 cases in 1963, 9 in 1964, and only 3 in 1965. It seems that even the habitual criminal in Israel shies away from this aggressive form of offense against property.

Offenses Against Public Order and the Authority of the State

Offenses against public order and the authority of the state represent somewhat more than a quarter of all offenses committed by Jews and just over half among Arabs. This greater representation of Arabs is partly due to the political situation, Arabs being often convicted for illegal border crossings and other offenses connected with the emergency regulations. Violent disturbances of the peace in Israel make up more than half the total of offenses against public order – a very different situation from that in the Diaspora, where Jews are not generally involved in such behavior. Many of these violations have been aggressive acts committed against public servants, mainly due to the tensions arising out of mass immigration and absorption problems. All the other offenses in this main category are much less frequent in Israel than in the Diaspora. Evasion of military service is very rare. Corruption and abuse of office do not constitute a serious problem, but the public is deeply disturbed at the thought that they are committed at all, even if only occasionally. An average of 24.2 individuals per year were convicted for such offenses during the ten-year period from 1956 to 1965, and they have been on the decline in recent years: there were 33 cases in 1962, but only 19 in 1963, 18 in 1964, and 15 in 1965.

Share of Different Immigrant Groups

Statistics indicate considerable differences between the crime rates for those born in North Africa, Asia, and Europe, respectively. (See Table 3: Jewish Adult Offenders). The conviction rates for the various ethnic groups show that these dif-

Table 3. Jewish Adult Offenders in Israel, 1959 and 1965, by Place of Birth (per thousand of population group concerned)

Year	Israel	Asia	Africa	Europe and America
1959	10.185	13.580	22.607	4.812
1965	11.088	12.595	22.601	4.272

ferences have been fairly consistent during the first years of the State of Israel.

S.N. Eisenstadt, in his study, *The Absorption of Immigrants* (1954), has pointed to some of the factors which may explain the differences in deviant behavior between European and Oriental Jews in Israel. The European immigrants, particularly in the earlier years, were inspired by the ideal of Jewish labor – the desire to engage in basic productive occupations in agriculture, industry, and public works – which implies a readiness for occupational change and a striving to create a new society based on social justice. The Orientals, on the other hand, hoped "to be able to follow more fully and securely their own way of life" (pp. 93–94) after their immigration. Thus they were not consciously prepared for radical changes in their economic and occupational way of life.

This situation was aggravated by the fact that the Oriental Jewish communities were composed mostly of a small wealthy and educated class and great masses of the poor and uneducated. The latter, due to lack of education and training, were unable immediately to make good use of the opportunities offered by Israel's expanding society and economy. Some of them resented the pioneering, vitally necessary work they were offered in distant development areas in afforestation, agriculture, road construction and the like, leaving such areas and moving into slum areas in the urban centers. Thus problems and situations of frustration and tension were created, resulting, in many cases, in crime. But there were great differences in the crime rates among the Oriental Jews themselves, which seem to have been caused mainly by the conditions under which they were absorbed and integrated and the measure in which their expectations and aspirations were fulfilled in daily life.

ASIAN IMMIGRANTS. Crime rates for newcomers from Asian countries are much lower than those for the North African countries, but they are also very similar to each other, in spite of the fact that the immigrants come from extremely different social and cultural conditions. This is particularly noticeable in the case of those from Iraq and the Yemen, respectively. Among the immigrants from Iraq, there is a substantial class of well-educated, wealthy leaders, some of whom had taken an active part in the political, economic, and cultural life in the country of their origin and often even occupied official positions of importance. The Yemenite Jews, on the other hand, had lived, with few exceptions, in a culturally backward country in conditions similar to serfdom. They were regarded as the property of the Imam; they had no political or civil rights and no modern education. These extreme differences, however, seemed to have no influence whatsoever on the crime rates for the two communities in Israel: among the Yemenites 11.5 per thousand in 1956–57 and 10.9 in 1958–60, and among the Iraqis 11.5 and 11.3 respectively.

The common factor seems to be that during the long period of their Diaspora life both communities remained deeply immersed in the lifestream of the Jewish people. Both studied and observed the religious traditions, always felt part of the Jewish people, and after the establishment of the state returned to Israel practically in their entirety (121,512 Iraqis and 45,159 Yemenites) during the very short period between May 1948 and the end of 1951. The fact that they moved to Israel as intact and cohesive communities, with their religious and political leaders, rich and poor, young and old, gave them a sense of mutual responsibility, security and pride, which sustained them through the inevitable difficulties and strains of the initial period.

Though the Iraqis found no substantial community of common origin on their arrival, and there were no officials from Iraq to receive the masses who were transplanted within a couple of years, this highly developed community, with all its trusted leaders and rabbis, intellectuals, wealthy men, doctors, bankers, nurses, and social workers enabled the sick and the dependent to turn for advice, guidance, and support in their own language to their own countrymen, who had soon found positions in hospitals and clinics, labor exchanges, housing and settlement offices, social welfare bureaus, and other agencies concerned with the absorption of immigrants. These conditions substantially helped to lessen absorption problems among the Iraqi immigrants and thus kept crime in this group down to reasonable proportions.

Yemenite Jews had settled in Erez Israel in substantial numbers (about 18,000) in the Ottoman and Mandatory periods, before the entire community of 45,000 was transferred to Israel immediately after its establishment. Although these early immigrants were unable to take up positions of influence in the newly emerging Jewish society, they had certain characteristics and skills which paved the way for smooth integration and speedy absorption after the state had been established. Most of the Yemenite Jews had been artisans and craftsmen, and some had worked on the land. As early as in the 1880s they had made a name for themselves as highly skilled, reliable, and competent workers. Their industry, cleanliness, modesty, and reliability soon made them a respected and welcome element in the pioneering laboring class. There was no need for occupational change; they were easily absorbed into the new social and economic system.

The Yemenites enjoy life in Israel as the fulfillment of their hopes and prayers and feel that they fully belong to its society. These favorable circumstances are obviously the main reason for the low crime rate among them. The similarity of the rates for the Iraqis, many of them wealthy and well educated, and the Yemenites, who came from conditions of backwardness and poverty, seems to indicate that traditional values and, in particular, the cohesiveness and solidarity of the community go a long way to explain the comparatively low crime rates among Jews everywhere. The same principle, from the opposite end, is illustrated by the North African immigrants.

NORTH AFRICAN IMMIGRANTS. Many Jews in the North African French protectorates had taken advantage of the prom-

ise of emancipation, equality, and full opportunities for participation in economic and social life offered to them by the French rulers. French became the language of every aspiring Jew and French culture was absorbed by the successful. They acquired the status of French citizens and ceased to cultivate their ethnic and religious autonomy. The younger generations of the better-educated Moroccan, Tunisian, and Algerian Jewish families thus became more and more estranged from Jewry and their own traditions. They took pride in being considered French, which they interpreted as being European. This led to severe disappointment, frustration, and tension when they came to Israel, where they were considered "Oriental" and were confronted with a society formed and led by European Jews with a background different from their own. Moreover, when the time had come for the exodus of the Jews from the North African countries – after they achieved independence and particularly with the establishment of the State of Israel – their political, intellectual, and economic leaders, with isolated exceptions, moved not to Israel but to France. The poor, the helpless, and the uneducated were left to their fate. Many of them had also lost contact with Jewish traditions, but they had been unable to acquire or share in French modern values. Hence many of them had become alienated from their own people and thus lost the moral and material support of group solidarity.

A mere thousand Jews went to Palestine from Morocco between 1919 and 1937; even in the early years of independence, 1948–51, when life in Morocco had become precarious for them, only about 45,000 immigrants came to Israel. The majority of Moroccan immigrants, about 88,000, left between 1955 and 1957, when Morocco had become independent and the Jews were threatened by mob violence. As the immigrants from North Africa consisted almost entirely of the less-educated and unskilled masses, they were unable, at first, to provide recruits for even the lower levels of Israel's political and social leadership. This fact was apparently the basic cause of the overrepresentation of North African Jews in crime in Israel. When 133,000 Moroccan Jews arrived in two waves, in 1948–51 and 1955–57, they found practically no members of their community to receive them and there were not enough educated people among them to be trained in a reasonable time to represent them in the administration and public services. This situation improved greatly with the evolvement of a local leadership in the development areas, particularly with the rapid acculturation of the young through army service and compulsory education, but the newly created slum population in the urban areas, as well as the disintegrating paternalistic structure and authority of the large families, still served as hotbeds of rebellious, antisocial attitudes, which often expressed themselves in crime (see below).

Juvenile Delinquency Before and Since the Establishment of the State

Although no reliable statistics are available on the subject, it is generally assumed that there was little juvenile delinquency among Diaspora Jews. In Mandatory Palestine as well, juvenile delinquency was probably very low, though no detailed statistics were published. During the years 1932–43, when the total Jewish population grew from about 175,000 to about 500,000, the number of juvenile offenders increased from 191 per year (average for 1932–37) to 322.5 per year (average for 1938–43). Among non-Jews the situation appears to have been similar during 1932–37, when differences in the demographic data and development are taken into consideration. During the period 1938–43, however, Arab juvenile delinquency increased by almost 100%, while the Arab population grew by less than 30%. As in the case of adult crime, this growth may be explained by the impact of the war and the opportunities for crime in and around military camps.

In the State of Israel, however, the incidence of juvenile delinquency among Jews started to increase. In 1951, the conviction rates for boys aged 9–16 and girls aged 9–18 were 4.5 per thousand of these age groups, while juvenile delinquency accounted for 12.1% of all crimes committed in Israel. Conviction rates for juveniles grew steadily to 9.8 per thousand in 1965, and juvenile delinquency now represented 23.8% of the crime total.

Of 4,453 young Jewish offenders in 1965, 430 were born in Europe or to European parents in Israel. The conviction rates were 7.4 per thousand for juvenile offenders born in Israel, 11.9 for the Asian-born, 23.0 for those born in North Africa and 3.6 for those born in Europe or America. One of the reasons for these developments has been the transition from one way of life to another. The Oriental family went through a severe crisis after immigration. The authority and functions of the family, and particularly those of the previously authoritative father, were substantially reduced or even shattered, while the young people did not yet feel the security that comes from integration into the new society. Many remained without a compelling system of values or effective social control and lived in a cultural and social vacuum. Most have cast off the yoke of religion and traditions without simultaneously achieving the educational and cultural standards of their peers of European origin. This created painful feelings of frustration and tension, which found expression in these comparatively high crime rates.

Juvenile delinquency among Jews in Israel consisted almost exclusively of offenses against property. Criminality figures for young Arab offenders were about twice those for Jews, and the forms of delinquency were also different. In 1961, for instance, only 46.7% of young Arab offenders committed offenses against property, as against 85.7% for Jewish juveniles. The other crimes were mainly offenses against the person, including acts of aggression resulting in physical injury. Trespassing on agricultural lands and illegal border crossing were also frequent. Arab juvenile delinquency is thus due partly to the traditional behavior patterns characteristic of rural societies in the Middle East and partly to tensions and conflicts arising out of the political situation in the region.

Crime Among Females

Authors always stressed the fact that crime among Jewish females in the Diaspora was very rare; some even claimed that the comparatively low general crime rates for Jews were due to the fact that crime was practically unknown among Jewish women. In Israel there has been only a slight increase in their share in crime, from 8.5% of crimes committed by Jews in 1951 to 13.8% in 1965. Crime rates for Jewish females were 1.3 per thousand in 1951 and 2.9 in 1965. Like the males, Jewish women were mainly convicted for offenses against public order and lawful authority, against the person and against property, the figures for these three types of offense being almost identical. Female juveniles committed mainly property offenses. Offenses against morality were rare: in 1961, a census year, 10 adult females and two juveniles were convicted of such offenses. The largest number of Jewish female offenders committed to prisons since the establishment of the state were sentenced for common theft, followed by disturbances of public order and common assault, including assaults on police officers. These facts also seem to reflect absorption problems in immigrant families, which express their dissatisfaction in aggressive behavior, mostly in governmental or other institutions dealing with public welfare and public health problems. Crime rates for non-Jewish females are somewhat lower than for Jewish ones due to the traditional patterns of the Arab village, where women are generally confined to the home. Offenses committed by non-Jewish females are mostly acts of assault and breach of the peace in public places, often in village feuds between clans. Offenses against morality are very rare among Arab women.

[Zvi Hermon]

After the Six-Day War

An extraordinary rise in crime in Israel was reported in 1966. During that year, the crime rate rose 13.5%, a jump not recorded by the Israel police at any other time during the decade. Two phenomena stand out in particular: growth in the number of robberies; breaking into box offices, booking offices, business firms, and private dwellings; various types of fraud; embezzlement; passing bad checks; and a rise in the crime rate among juveniles, whose share in the general crime rate reached 32.2% in that year.

The year 1966 was the climax of an economic recession, and the rise in offenses against property was possibly a consequence of the depressed condition of the economy. The rise in juvenile crime reflected the prevailing situation in the free world, though gangs of youngsters engaged in organized criminal acts, as found in other developed countries, had not been found in Israel, except small groups, organized ad hoc, for minor crime against property.

The year 1967 was one of war in Israel with the accompanying prewar and postwar periods. It is therefore possible to expect a large rise in crime, if one proceeds from the assumption that war naturally brings with it the collapse of restraints, a withdrawal from lawfulness and order, and a sense of permissiveness toward basic drives and impulses. The actual picture is therefore surprising, for in that year there was a 2.2% decline in crime. This is the only decline in the annual crime rate of the state since its establishment. It is possible that the reason for this decline is inherent in the mobilization – and thus removal from their regular activities – of the entire corpus of manpower, including the criminals; it is also probable that the general sense of danger, and the consciousness of national unity and civil cooperation, were also reasons for the drop.

Immediately afterward, in 1968, the situation returned to normal and there was another rise in the crime rate, this time of 10.6%. A study of the data proves that this percentage is approximately the average for the previous years, with slight fluctuations in both directions; but in comparison with the decline of the previous year, this was a sharp rise. It appears that the main factor behind the rise was the amnesty (albeit selective) declared after the war (July 1967), which set free a large number of criminals from prisons. More important than the widened scope of crime is that, beginning in 1968, the nature of the crimes committed became more serious. Violent crimes, involving the use of firearms and dangerous drugs, grew during that year. It appears that the rise in violent crimes (and not only those involving firearms) is more a reflection of the prevailing situation in most parts of the world, than a consequence of the war. The 1960s, which are sometimes described in other countries as the "Decade of Violence," left their mark on Israel as well. In reference to the use of arms, it is clear that many weapons, much more than in the past, were found in 1968–70 in the hands of citizens to protect their legitimate businesses (legally) and of hundreds of soldiers home on leave. Under such circumstances weapons found their way into the hands of unauthorized persons who used them to commit crimes. These conditions however, are a result of the prolonged emergency situation and only indirectly a result of the war itself.

The disturbing turn in events in the area of drugs after the Six-Day War is also merely an indirect result of the conflict. Many visitors who went to the country after the war – "volunteers" to work on kibbutzim and foreign students – brought with them drug habits and influenced some people of their age group. Another factor, which is also an indirect result of the war, is the fact that the usual routes for smuggling hashish were disrupted between the large supplier – Lebanon – and the large consumer – Egypt – by way of the Hashemite Kingdom of Jordan. As a result, many suppliers in the West Bank and East Jerusalem were left with large supplies of hashish and no marketing possibilities. This led to a drop in the prices of illegal drugs in Israel and the country therefore became a source at low prices for acquiring and smuggling hashish, which is more expensive than marijuana. The price in Israel fluctuated between $150–300 per kilogram whereas in the United States and Canada prices ran between $2,000–3,000 per kilogram.

Since the 1970s Israeli crime rates have been constantly rising, with the steepest rise in violent crime. Of the 243,719 crimes reported in Israel in 1985, 263 were cases of murder or

attempted murder and 9,994 were cases of assault. By 1994 the figures had jumped to 4,629 and 18,368, respectively. In the same period sex crimes rose from 2,133 to 2,825. Drug offenses rose from 4,367 to 11,584.

The following decade showed a continuing rise in most crime categories, with murder, sex crimes, spouse and child abuse, and drug crimes increasing. Though not the highest in the Western world, Israeli crime rates were comparable to those in Germany and Austria. While in 1996, 454,622 files were opened, in 2004 the number grew to 517,238, among which 55% were offenses against property. The number of immigrants committing crimes rose from 11,287 in 1996 to 27,747 in 2004, reflecting problems of adjustment among Russian and Ethiopian immigrants. In 2004, the Arab share in Israeli crime was 36.8%, a further reflection of social and economic malaise. A relatively new phenomenon in Israel is what has been recognized as organized crime, involving such familiar agents as local crime families, a Russian Mafia, and foreign hit men and dealing in everything from money laundering to the white slave trade (the importation of women from the former Soviet Union). Of the 173 arrests for the latter offense in 2001–4, 80% were among Russian immigrants. There was also a steep rise in juvenile delinquency. Statistics for the 1990–2002 period show an increase in every category. While in 1990, 20,552 police files were opened for juveniles, by 2002 the number had jumped to 32,067. The nature of juvenile crime had also changed. While until 1965, 80% of juvenile crimes were against property, in 1999 the rate was only 45% as violent crime and drug abuse climbed commensurately. The growth of violence among teenagers, and even younger children – murder, rape, and assault, including violence in schools and disco clubs – has become a common occurrence in Israel, with a jump from 3,508 police files in 1990 to 14,696 in 2002.

CRIMEA (Rus. **Krym** or **Krim**) (Heb. קְרִים), peninsula of South European Russia, on the Black Sea; from 1954 until 1991 an oblast of Ukrainian S.S.R. and from 1992 a republic of Ukraine.

Late Antiquity and Early Middle Ages

Jews first settled in the southeastern area and a Jewish Hellenistic community existed there by the end of the first century C.E. (based on inscriptions). *Jerome (d. 420; on Zech. 10:11, Obad. 20) heard from Jews that the Jewish settlers by the Bosporus were descended from families exiled by the Assyrians and Babylonians, and from deported warriors of *Bar Kokhba; the Bosporus was called by the Jews "Sepharad." In ancient and medieval times southeastern Crimea was linked to the Taman Peninsula, across the Kerch Strait. In the seventh to tenth centuries the *Khazar conquerors maintained their regional center there, from which they ruled much of the Crimea and confronted the Byzantine coastal base of Cherson, near the present Sevastopol. The Arab geographers Idrīsī and Abu al-fidā' call the Khazar city merely Khazariyya (Khazaria); it was located on the site of the town Sennaya (formerly Phanagoria), adjacent to the Jewish settlement mentioned by the Byzantine historian Theophanes, and is probably identical to the port Samkush (Samkerch) "of the Jews," referred to by the Arabic geographer Ibn al-Faqīh. Tombstones of Jews and Khazar proselytes have Jewish Hellenistic ornamentation. Similar Jewish tombstones have been found in Kerch and Partenit (Parthenita), near Yalta. The Byzantine chronicler Cedrinus relates that in 1016 a Byzantine Russian-assisted fleet subdued the region of Khazaria ruled by Georgios Tzoulos. The Russians were henceforth represented by a prince at Tmutorokan (Taman), while the Byzantines overlooked most of the Crimea from Cherson. The Khazars served as the prince's military auxiliaries in an inner Russian conflict in 1023, and in 1079 intervened with Byzantium in the competition for the princely office; this led to their massacre in 1083. From the 9th to 15th centuries the terms "Gazaria" (as the territory) and "Gazari" (as the population) were understood in Western Europe as the Taman peninsula and the adjacent changeable Crimean area. Gazaria is, according to Poliak, the "Kazariyya" mentioned by the 12th-century Jewish travelers *Benjamin of Tudela (in connection with the sea trade with Constantinople and Alexandria), and *Pethahiah of Regensburg (the Kuban delta). Isaac *Abrabanel commenting on Genesis 10:3 equates the "Qasari" in "Ashkenaz" with Gazaria, "below" (south of) the Azov Sea. In the 16th to 17th centuries "Gazaria" and "Crimea" were synonymous. This late usage led the Russian historian N.M. Karamzin (1816) to regard the Crimea as the ultimate domain of the Khazar kings, lost in 1016. After C.M.Y. Fraehn (1822) had dated the downfall of the Caspian Khazars to 969, the period 969–1016 was left for the duration of the mythical Crimean kingdom, considered from that point forward as Jewish. The early draft of H. *Graetz's "History of the Jews" (1860) included the history of the kingdom, written according to the manuscript discoveries claimed by the Karaite collector A. *Firkovich. After these claims had been attacked, the story was partly, but mechanically, deleted: in the late version

Major Jewish communities in Crimea, 1970.

the Crimean kingdom has a beginning but no end (Eng. ed., 3 (1949), 222ff.). Graetz's original coherent description continued to influence Jewish historians, notably S. *Dubnow (*History of the Jews in Russia and Poland*, 1 (1916), 28ff.). Firkovich also is the source of the idea that the Crimea was the cultural center which influenced the conversion of the Khazar royalty to Judaism, and that the Crimean Karaites were descended from ancient Israelite settlers and Khazar converts. The rival Karaite historian M. Sultanski (d. 1862) regarded the Crimean Karaites as purely medieval Jewish immigrants from various parts, while later Karaite authors held that they were basically Khazars-Turks. The Rabbanite *Krimchaks (i.e., "Crimeans") were also sometimes considered basically Khazars. All these views are founded on the late meaning of "Gazaria." Foreign Karaites (contrary to Rabbanites) in Khazar times never claimed that the Khazars had converted to Judaism and sometimes displayed intense hatred toward them (even expecting them to fight the Messiah in Erez Israel): the sect was then seeking to uphold the Palestinian descent of the Jews and Judaism. In late antiquity and the early medieval period, Crimean Jewish tradition and records indicate that Jewish settlement existed in the following units.

THE CHERSONESE. The Chersonese (Cherson) Jews were living there at least in the 9th to 11th centuries. Excavations have shown that the locality never recuperated from a devastation in the late 10th century by the Russians (988?), and was ultimately destroyed at the end of the 14th (by Tamerlane's raiders, 1395–96?). The Hebrew letter attributed to the Khazar King Joseph (long version) lists among his tributaries in the 950s localities from Samkerch to "Gruzin" (Cherson?), including Kerch and "Bartenit." The Hebrew "Cambridge Document" claims that under him "Shurshun" was made tributary by a counteroffensive against Byzantium after the Byzantine-instigated Russian raid on Samkerch.

"GOTHIA". This is the medieval name for the rugged mountains north of Cherson, so-called after a Teutonic tribe which had remained there following the great migrations. The city of Partenit was the coastal mart of Gothia; a Jewish tombstone inscription there mentioned "Her(i)f(r)idil [a Teutonic name] ha-kohen [priest]." Around 787 the Khazars placed their garrison in Doros, the capital of Gothia; the *Life* of Bishop John tells of the unsuccessful revolt he instigated. Doros is assumed (despite temporary doubts of archaeologists in 1928–38) to be the "eagle's nest" later called Mangup (first in Joseph's Letter, as his tributary). In Ottoman-Tatar times (1475–1783) it increasingly became an all-Jewish (mostly Karaite) town.

CHUFUT-KALE. More to the north, a similar fortress town, known under the Tatars as Qirqyer (Qirqer), became referred to more frequently as *Chufut-Kale ("the Jews' Fortress," Heb. *Sela ha-Yehudim*). Excavations of 1946–61 showed that it existed on the site from the 10th or 11th century; a Christian cemetery (late 5th to early 9th centuries) attests to the corresponding beginnings of the enormous Jewish cemetery. Here, also, it was under Tatar rule that the town definitely became all Jewish (mostly Karaite); it later had a Hebrew printing press (1734).

Tatar Times

The conquest of Eastern Europe by the Tatars (Mongols) in 1236–40 made the Crimea the foremost link for the trans-Asian caravans with the Mediterranean and Western trade. The Crimean Tatar center was Solkhat or Qyrym (from which the name "the Crimea" derives); now Stary Krym, inland near the port of Kaffa (now Feodosiya), the city was made by the Genoese the center of their activities in Gazaria and on the Black Sea. The contact of the Crimean Jews with the outside world grew. The Jew "Khoza Kokos" was Muscovy's representative there in 1472–75. According to a Russian tradition, Jews from Crimea were among the instigators of the movement of *Judaizers in 15th-century Muscovy. There was a Jewish revival in Taman, by then ethnically Circassian and ruled by the Genoese Guizolfis (1419–82), who were considered Jews in modern Jewish historiography and Christians in Russian. In Muscovite documents the last ruler is called a "Jew" and "Hebrew" as well as "Italian" and "Circassian"; if so-called after the environment, this significantly emphasizes the Jewish resurgence. However the Tatar decline commenced early. The Karaites of Poland (western Ukraine) and Lithuania later considered that they had been deported from Solkhat by Lithuanian raiders under Witold (Vitort), 1392–1430. The Genoese extended their possessions from Kaffa, and their relatively mild attitude toward other communities (including the Jews) maintained prosperity in the area despite the shrinking geographical extent of trade. From around 1420 the Tatar realm of inner Crimea developed into a split kingdom. After the Ottomans conquered the Genoese possessions in 1475, they made the inland Tatars vassals, used them for raiding Muscovy and Poland-Lithuania, and protected them from reprisals by a vast belt of scorched earth (depopulated steppe). This led to a sharp economic decline and massive emigration. The remaining population was basically Tatar, which was then a Muslim Turkish-speaking blend under leadership of Mongol descent. The remaining Krimchaks and Karaites shared their tongue and many customs, though the two communities dif-

fered somewhat in these respects both from each other as well as from the Tatars. Their divergent existence is certain from Tatar times only. The Mongol influence, which made the Karaite anthropological type distinct, must be attributed to conversions, but of the early Tatar conquerors; a point unknown to former scholars who disputed the matter. Conversions to Judaism even took place at the home of Genghis Khan. Only this can explain the transfer of strategic strongholds to Jews (mainly Karaites), and the establishment by the Crimean Tatar kings of the unfortified valley suburb of the "Jews' Fortress" as the new capital Baghche-Saray (Bakhchisarai, 1454). It officially became a distinct town only in the 17th century.

Czarist Rule (1783–1917)

During the Russian conquest of the Crimea from the Turks the Jewish communities suffered severely. Many Jews left for Ottoman territory. In 1783, when the Crimea was annexed by Russia, there were 469 Jewish families (Rabbanite and Karaite) living in the peninsula. Tatar raids into the Ukraine and neighboring districts of Poland-Lithuania in the 16th centuries, in particular during the Tatar alliance with *Chmielnicki in 1648, brought into Tatar hands many Jewish captives, who were usually ransomed by Jews. After the Russian annexation of the Crimea it was included in the *Pale of Settlement (1791), although the major centers of development were later excluded, among them the military port of Sevastopol (1829–59, later admitting wealthier Jews), and the resort of Yalta (1893). Jewish settlers from Russia soon outnumbered the small local communities (Krimchaks, Karaites). There were 2,837 Jews living in the Crimea in 1847. The Karaites' successful struggle for exemption from the anti-Jewish czarist legislation (1863), and the abandonment of the common fortress towns (now ruins) because of the economic revival in the lowlands, definitely estranged the Karaite society from the rest of Jewry. From 1867 to 1900 Ḥayyim Hezekiah *Medini officiated as chief rabbi of Crimean Jewry and did much to raise the level of the spiritual and cultural life of the community. Among the few scholars of Crimean Jewry notable were Abraham *Kirimi, author of *Sefat Emet*, a commentary on the Torah, in the 14th century, and David *Lekhno, author of *Mishkan David*, in the 18th century. In the 19th century the archaeological discoveries of the Karaite scholar A. Firkovich, part of which were found to be forgeries, caused a sensation among scholars. There were 28,703 Jews living in the Crimea in 1897 (5.1% of the total population) and 5,400 Karaites. The Krimchak Jews numbered 3,300. The large communities were in *Simferopol (8,951 persons); *Kerch (4,774); Sevastopol (3,910); *Karasubazar (Belogorsk; 3,144, nearly all Krimchaks); *Feodosiya (3,109); and Yevpatoriya (Eupatoria).

[Abraham N. Poliak]

Soviet Rule

There were 39,921 Jews living in the Crimea in 1926 (6.1% of the total population), of whom 17,364 lived in Simferopol (19.6%); 5,204 in Sevastopol; 3,248 in Feodosiya (11.3%); 3,067 in Kerch; and 2,409 in Yevpatoriya (10.6%). In 1939 there were 47,387 Jews (8.1% of the total population), of whom 22,791 (15%) lived in Simferopol; 5,988 (5.5%) in Sevastopol; 5,573 (5.3%) in Kerch; 4,249 (9%) in Yevpatoria; 2,922 (6.5%) in Feodosia; 2,060 (6.3%) in Yalta; and 1,397 (7.1%) in Dzhankoi. In the early 1920s a movement for Jewish agricultural settlement in the Crimea began, pioneered by members of *He-Ḥaluẓ, who established the *hakhsharah* groups of Tel Ḥai (1922), Mishmar (1924), and Ma'yan (1925) in the Dzhankoi area. They were followed by numerous other Jewish groups. In 1924 the Soviet government initiated a large-scale settlement project to be implemented through *Komzet with aid from the *American Jewish Joint Distribution Committee. A number of Soviet Jewish leaders who were concerned with this project, such as M.(Y.) *Larin and A. Bragin, regarded it as the nucleus for establishing a Jewish Soviet Socialist Republic in the Crimea. However, by the beginning of the 1930s, when it became clear that the unoccupied land available in the Crimea was not adequate for large-scale settlement, the movement concentrated mainly on promoting settlement in *Birobidzhan. The state allocated 342,000 hectares of land for Jewish settlement in the Crimea, on which 5,150 families had settled by 1931, including a commune, named Voya Nova, established by a group of the *Gedud ha-Avodah, who had returned from Palestine. Many of the settlers left the colonies when collectivization was introduced in the early 1930s and with increasing industrialization in the Soviet Union. Some of the settlements were organized in two Jewish national districts: Freidorf (in 1930) and Larindorf (1935). By 1938 there were 86 Jewish kolkhozes in the Crimea cultivating an area of 158,850 hectares with 20,000 inhabitants (one-third of the total number of Jews in the Crimea). With the German occupation in 1941 the Jewish settlement and colonies in the Crimea were annihilated. The Nazis organized the systematic liquidation of the Ashkenazi Jews and Krimchaks, but did not include the Karaites, who were recognized by the Germans as Jews by faith but not by race. According to a provisional report from the beginning of 1942, 20,149 Jews from western Crimea alone had already been "liquidated." On April 16, 1942, the Crimea was declared *Judenrein*.

After the war Jewish settlement in the Crimea was renewed. Efforts were made to resettle Jews as farmers, but these were quickly abandomed. In 1959, the Jewish population numbered 26,374 (2.2% of the total population), according to the official census, of whom 11,200 lived in Simferopol (6%) and 3,100 in Sevastopol. In 1970 the Jewish population of the Crimea was concentrated in Simferopol, with an estimated Jewish population of 15,000; Sevastopol, where there was one small synagogue in the Jewish cemetery; Yevpatoria, with an estimated Jewish population of 8,000–10,000; and in smaller communities, e.g., Kerch, Yalta, and Feodosia. (See the map "Jews in the Crimea.") Crimea was involved in the affair of the Jewish *Anti-Fascist Committee, which led to the execution of its members. In the 1990s many Jews immigrated to Israel and the West.

CRIMEAN AFFAIR. Name used to refer to the closed anti-semitic trial of the Jewish *Anti-Fascist Committee (JAC) held in Moscow from May to July 1952. One of the pretexts may have been a memorandum presented in the summer of 1944 by members of the Committee to the Soviet leadership containing a proposal to create a Jewish Soviet republic in the *Crimea (the Tatar population of which was exiled by Stalin by May 1944) on the territory of the former German republic of the Volga. Noting the successes of the Jewish national regions in the Crimea and in the Kerson region, the authors of the memorandum based their proposal on the lack of a geographical base of a significant part of the Jewish population of the Soviet Union and on the need to grant the Jews equality in governmental-legal terms with the other nationalities of the Soviet Union. They also expressed the hope that "the Jewish masses of all countries, in particular the United States would give substantial aid" to building up such a republic. Despite the rumors that some members of the Politburo of the Central Committee (Lazar *Kaganovich and Vyacheslav Molotov) were favorably disposed toward the idea of the "Crimean Plan," it was rejected in 1944.

The proposals of the memorandum contained nothing radically new. Projects for establishing a Jewish republic in the southern Ukraine or in the Crimea had been suggested earlier. For example, in 1923 the social leader A. Bragin had proposed that one be established on the Black Sea coast from Bessarabia to Abkhaz with its capital in Odessa, while Yuri *Larin supported, in opposition to the Birobidzhan plan, a Jewish autonomous area in the southern Crimean and Azov region centered in Kerch.

Another formal basis for initiating the case was false testimony, obtained by torture from the researchers I. Goldshtein and G. Grinberg, about the "anti-Soviet, nationalistic, and espionage activity" of the JAC secretary I. *Fefer, of the head of the Sovinformbyuro S. Lozovski, and of other members of the JAC.

After the murder by KGB agents of Solomon *Mikhoels, the chairman of the JAC, in January 1948, the arrest of JAC member David *Hofshtein in September 1948, the dissolution of the committee, and the closing of the newspaper *Eynikeit in November 1948, the liquidation of the "Emes" Publishing House in December 1948, and other centers of Jewish culture, almost all writers and artistic, social, and cultural figures with ties to Jewish life and institutions were arrested (as "bourgeois nationalists" and spies) in late 1948–early 1949. Among those arrested were D. *Bergelson, *Der Nister, B. Zuskin, L. *Kvitko, P. *Markish, I. Nisinov, I. Fefer, B. Shimeliovich (chief physician of the important Botkin Hospital in Moscow), L. *Stern, and I. Watenberg, Ch. Watenberg–Ostrovskaya, E. Teumin, and, subsequently, L. Talmi – employees of the JAC. In 1949 arrests were made of a number of Jews who were top officials in the Soviet Information Bureau (Sovinformbyuro), including Solomon Lozovski, M. *Borodin, and Yuzetovich. Since formally the Sovinformbyuro organizationally and Lozovski personally were responsible for the activity of the JAC, both groups were arrested and several years later, artificially linked in the Crimean case. Some of those arrested (Borodin, Der Nister, Nusinov, et al.) died under investigation, while another (S. Bregman, assistant minister of Goskontrol of the RSFSR) died before the trial began. At a secret trial the defendants were accused of espionage, anti-Soviet activity, and plotting the secession of the Crimea from the Soviet Union and establishing there a bourgeois Zionist republic which was supposed to become a base for American imperialism. All of the accused pleaded not guilty from the beginning with the exception of Fefer, who later retracted his testimony against others and his own admission of guilt. On July 18 the Military Board of the Supreme Court of the U.S.S.R. sentenced all the defendants to be shot (with the exception of Lina Stern, who was sentenced to five years internal exile). On August 12, 1952, the following were executed: Luzovski, Yuzefivich, Fefer, Shimeliovich, Kvito, Markish, Bergelson, Hofshtein, Zushkin, Talmi, the Watenburgs, and Teumin.

A number of additional trials involving other Jewish cultural figures and employees of the JAC were soon thereafter linked to the charges in the Crimean Affair. The Crimean Affair was the culminating act in the total liquidation of Jewish cultural and social life in the Soviet Union. It was followed by the accusations of "cosmopolitanism," which resulted in the dismissal of thousands of Jews in senior positions in almost all walks of Soviet life. It also served as a prelude to the anti-semitic Doctor's Plot (1952–53). All those condemned in the Crimean Affair were "rehabilitated" in 1955. On December 29, 1988, a Politburo commission officially declared all of the accused to have been innocent and the whole affair to have been fabricated. After the dawnfall of the Soviet regime in the 1990s, all the details of the trial was published.

CRIMINOLOGY. Traditional Jewish criminal law based the treatment of the offender on the idea of the freedom of will and on the principle that the severity of the punishment should fit the nature of the violation. Until modern times no consideration was given to the personality of the offender or any biological, psychological or socio-economic factors in crime causation and correction.

The Anthropological-Biological School

The first to stress the hereditary or biological aspect of crime causation was Cesare *Lombroso, a founder of the positivist school of criminology, who maintained that the true criminal was born as such and could be recognized in his physical fea-

tures. Among later criminologists, Sheldon and Eleanor Touroff *Glueck, in their *Unraveling Juvenile Delinquency* (1950), made use of three basic somatic (body) types and showed their relationship to delinquency, but in a subsequent study, *Physique and Delinquency* (1956), they concluded that bodily structure was no longer to be considered the most important etiological factor in criminality. They emphasized, however, that the biological aspect of criminal causation was still "a promising focus of attention."

Psychiatric-Psychological School

The psychological and psychiatric approach to an understanding of crime causation was based on the teachings of Sigmund *Freud. Although Lombroso and Freud agreed on the biological origin of antisocial impulses, they differed fundamentally on the importance of environmental influences. Freud, in contrast to Lombroso, emphasized the prime importance of infancy and early childhood in the formation of character. Freud also stressed the possibility of altering the personality through psychoanalysis. Gregory Zilboorg (1890–1959) underlined the irrationality of antisocial behavior and asserted that mere punishment, which does not take this into account, served no useful purpose ("Psychoanalysis and Criminology," *Encyclopedia of Criminology* (1949), 398–405). Psychoanalytical interpretation became important for the development of progressive methods in correction. Morris *Ginsberg defended psychoanalysis against the claim that this method tended to free the criminal from his responsibility for his misdeed, pointing out that the object of psychoanalytical treatment was to help the patient face realities and become a responsible person. Herman *Mannheim, in his *Comparative Criminology* (2 vols., 1965), warned against the great dangers which the traditional penal methods held for society. In his view the character and measure of the punishments meted out by criminal courts everywhere tended to create in the offender feelings of unjust treatment and that this led to recidivism. An important concept of Freudian theory which helped to explain criminal behavior was the psychoanalytical theory of symbolism, according to which every object, action, or person could have an unconscious symbolic value. The application of symbolism to political murder is of particular interest. Wilhelm *Stekel, one of the earlier followers of Freud, maintained that a political attentat was a "displacement of a small personal conflict into the life of nations – perhaps Booth was beaten by a drunken father – so Lincoln died." Alfred *Adler, one of Freud's disciples, who later founded his own school of individual psychology, contributed to criminological thinking by the formation of the widely known and accepted concepts of the "inferiority complex" and the "masculine protest," which, under certain conditions, could become criminogenic factors.

The Sociological School

The sociological approach to criminology emphasized the fact that most behavior, including criminal behavior, was culturally patterned, and that crime had to be defined as a result of the relationships and interactions between a given society and its individual or corporate members. The best known and most influential proponent of the opinion that the class structure is the main determinant of social pathology, including criminality, was Karl *Marx. He saw in the class struggle the main cause of criminality and, therefore, predicted that in a future classless society there would be no crime. Hermann Mannheim, in his *Comparative Criminology*, 2 (1965), 499, stated that "by far the most important, comprehensive and influential of the class-oriented theories of crime and delinquency were those based upon the concepts of the criminal subculture and anomie."

The introduction of these two basic sociological concepts into criminological thinking was one of the great achievements of Emil *Durkheim. Robert K. Merton (1910–2003), who developed and classified the ideas of Durkheim on anomie, pointed out in his writings the criminogenic forces, i.e., the anomie situation in a society which preached the democratic idea of equal opportunities for everybody but by failing to give these opportunities to all was responsible for the creation of tension and crime. An outstanding contribution to the description and explanation of the phenomenon of a criminal subculture was made by Albert K. Cohen (1918–) who, in his *Delinquent Boys* (1955), described the overwhelming weight of class differences in crime causation. In a middle class society with its middle class ethics, standards, and values, the working class youth, brought up in a different value system, would, according to Cohen, be led inevitably into conflict and confusion and – part of it – into crime. The theories of anomie and criminal subcultures are, however, not generally accepted by contemporary criminologists. Herbert A. Bloch (1904–) repeatedly expressed the opinion that the tensions which always existed between the young and the old generations were still today far more important as an explanation of the phenomenon of juvenile and gang delinquency. Bloch and Gilbert Geis (1925–), in their *Man, Crime and Society* (1962), criticized the Durkheim-Merton theory of anomie and criminal subculture, and disagreed sharply with the view that there were hardly any lawful opportunities for upward mobility among lower class male adolescents.

The pertinent question which still occupies criminologists remains the problem of "differential response." Why do certain individuals living in a generally healthy environment become delinquent, while others, who are exposed to antisocial influences, do not? Daniel Glaser (1918–) formulated the theory of "differential identification." In his "Criminality Theories and Behavioral Images" (*American Journal of Sociology* (March 1956), 433–44) he expressed the opinion that an individual would act criminally when he identified himself with real or imaginary persons, in whose view his criminal behavior appeared to be acceptable. Thus the offender may identify with criminals presented in fiction, movies, television, or in the newspapers. Simon Dinitz (1926–), together with Walter C. Reckless (1899–1988), in *Critical Issues in the Study of Crime* (1968), approached this basic problem of differential response by asking the reverse question: "Why do

some non-delinquent boys succeed in remaining within the law while living in high delinquency areas?" Their answer was that the insulation against a delinquent life consists in the self-image of the boy who experienced himself as being good. Jackson Toby (1925–), in his "Differential Impact of Family Disorganization" (*American Sociological Review* (Oct. 1957), 505–12), showed that the higher rate of broken homes among female delinquents was evidence that well-integrated families protected children against the antisocial influences exerted by neighborhood and peer gangs. The consideration of the problem of "differential response" led some sociologically orientated criminologists to the conclusion that it is impossible to explain crime exclusively in sociological terms. Sheldon and Eleanor Glueck, who spent decades in their search for the causes of delinquency, believed in multiple causation. In one of their later studies, *Family Environment and Delinquency* (1962), they provided many illustrations of the complex ways in which psychological, sociological, and biological factors might combine in one individual to produce delinquency.

Study of Criminology in the U.S.

After World War I, when crime began to become a major problem in the United States, and the study of criminology took its place in the universities, Frank Tannenbaum (1893–1969) and Nathaniel F. Cantor (1898–1957) wrote two of the first textbooks on criminology: *Crime and the Community* (1938) and *Crime and Society, an Introduction to Criminology* (1939). Later authors were Herbert A. Bloch and Gilbert Geis, *Man, Crime and Society* (1962); Richard R. Korn (together with W. McCorkle), *Criminology and Penology* (1959), gave a well balanced description of the different factors in crime causation, as did Ben Karpman (1886–1962) in *Case Studies in the Psychopathology of Crime* (1947[2]). Other significant contributions to criminology were made by Leonard Savitz, who, in his "Delinquency and Migration" (in *The Sociology of Crime and Delinquency*, ed. by M.E. Wolfgang, et al., 1962, pp. 199–205), emphasized the criminogenic effect of black migration within the United States, and Stephen Schafter, in his *Restitution to Victims of Crime* (1960) and *The Victim and His Criminal* (1968), opened the way for the development of a new chapter – victimology – in the framework of modern criminology.

Other criminologists gave new insight into problems of penology and prison reform, among them, Joseph *Eaton in his *Stone Walls Not a Prison Make* (1962) and Sol Rubin in his *Crime and Juvenile Delinquency* (1970[3]). The latter book criticized the very long prison sentences meted out in the United States and the way in which many of the prisons in that country were run. The role of the community in preventing crime was stressed by Solomon *Kobrin (1910–1996) in his research on the "Chicago Area Project, a 25-Year Assessment" (*Annals of the American Academy of Political and Social Science* (March 1959), 19–29).

The first significant work to determine systematically what psychodynamic theory could contribute to the development of more effective correctional methods was done by the New York State Department of Corrections in the late 1960s. It was carried out at the Diagnostic and Treatment Center of the Dannemora State Hospital at Clinton Prison, New York, under the direction of Ludwig Fink, a psychiatrist. He established a therapeutic community of 100 persistent offenders, subdivided into two units of 50, who received intensive psychotherapeutic treatment – in groups of ten – and in community meetings and psychodrama sessions.

British Contribution to Criminology

Much progress was made in Britain by Jewish criminologists. The great centers of criminological and penological study were all established by scholars who had emigrated from Europe. Hermann Mannheim established the first chair in criminology in the United Kingdom at the London School of Economics and was one of the founders of the Institute for the Scientific Study and Treatment of Delinquency in London. Mannheim and other outstanding psychoanalysts, including Anna *Freud, the daughter of Sigmund Freud, made notable contributions to the study of crime. Max *Gruenhut (1893–1964) was the first to be appointed to a chair in criminology at Oxford University.

Criminology in Erez Israel

Criminological study in Mandatory Palestine and later in Israel grew out of the experience of those engaged in correctional research. Menachem Amir of the Hebrew University's Institute of Criminology published a bibliography in English and Hebrew containing an impressive list of Israel writers on criminology and the titles of their contributions during recent decades. Juvenile delinquency and its treatment under the mandate and in Israel is described in detail by E. Millo in *Child and Youth Welfare in Israel* (1960). The prison system in Israel's early years in the light of the Israel humanitarian ethos is analyzed fully by J.W. Eaton in the monograph *Prisons in Israel* (1964). He notes the existence of Massiyahu camp for more trusted inmates – a minimum custody facility. Between 1970 and 1988 nine volumes of *Israel Studies in Criminology* were published. A later publication was *Crime and Criminal Justice in Israel: Assessing the Knowledge Base Toward the Twenty-First Century* (1998), edited by Robert R. Friedmann.

The dominant approach to the understanding and treatment of the offender was psychological, psychiatric and especially psychoanalytical. Research was centered in the Hebrew University Institute of Criminology, the director of which was Israel *Drapkin, and at the Institute of Criminology and Criminal Law at Tel Aviv University, headed by Shlomo Shoham (1929–). Personality and psychopathic disorders in various origin-groups in Israel and crimes of violence in relation to the period of immigration is discussed by Louis Miller in *Social Psychiatry and Epidemiology of Mental Ill Health in Israel* (1967). In the first years of the State, strenuous efforts were made in the correctional field, including probation, after-care, and prison services, to set up and develop mental hygiene

teams, consisting of psychiatrists, psychologists, and social caseworkers, who cooperated in the diagnostic and treatment process of offenders.

[Zvi Hermon]

CRIMSON WORM, biblical *tola'at shani* (Heb. תּוֹלַעַת שָׁנִי), which yields a dye, called in the Bible *shani, tola, karmil*, and in rabbinic literature *zehorit*, which was extracted from the body of the "crimson worm" (*carmine*), the *Kermes biblicus*. A brilliant, beautiful, and fast red dye, it was used for dyeing the curtains of the Tabernacle (Ex. 26:1) and the garments of the high priests (*ibid.*, 39:2); in the purification rites of a leper (Lev. 14:4–6) and of a house affected by leprosy (*ibid.*, 51–52); and it was added to the ashes of the red heifer (Num. 19:6). Crimson-dyed clothes were costly (Lam. 4:5). The Tyrians were experts in the art of crimson dyeing (II Chron. 2:6). Neither the Bible nor rabbinic literature describes the insect from which the crimson dye was extracted. The Tosefta (Men. 9:16) merely states that the best kind of crimson comes from "a mountain worm." Its color is "neither red nor yellow … it is crimson" (PdRK 98). According to Josephus, crimson symbolizes fire (Ant., 3:183; Wars, 5:213). The "crimson worm" is the "shield louse" which generally lives on a species of oak *Quercus coccifera*. In Israel, where this tree does not grow, the shield louse is found on the branches of the oak *Quercus ithaburensis*. There are two species of the insect, *Kermes nahalali* and *Kermes greeni*. In the early spring, when the females filled with red eggs and became pea-shaped, the red dye was squeezed out of them. The use of crimson dye was widespread in Ereẓ Israel until the cactus from Mexico was introduced at the end of the 17th century. The coccus, which lives on this plant, yields a red dye in larger quantities. Up to the end of the 19th century crimson dye was still used, but with the invention of synthetic dyes, it became obsolete.

[Jehuda Feliks]

°CRINAGORAS OF CARYSTUS (fl. 240 B.C.E.), elegaic poet, author of an epigram (*Palatine Anthology*, 7:645) which speaks of the philosopher Philostratus reposing under a monument on the banks of the Nile visible as far as Judea (the reading "Judea" is probable but not certain).

°CRISPIN, GILBERT (**Gislebertus**; c. 1046–1117), abbot of Westminster (England). A disciple of *Anselm of Canterbury, Crispin dedicated to him the record of a religious discussion which he had at Westminster with a Jew from Mainz with whom he had business connections. The discussion probably took place before 1096. The name of the Jew is not mentioned. Crispin commends his profound knowledge of both Jewish and Christian literature. The discussion recorded is greatly superior to others of this kind extant, in the courtesy and high intellectual standard it displays. In no other instance is so much space given to the Jewish arguments, which are often embarrassing to Crispin. The Jewish interlocutor refers to passages in the New Testament and reproaches Christians with abandoning observance of the Law. He also objects to the cult of the saints and pictorial representations of God. If the Christians refer to Isaiah and claim to find there the announcement of the coming of the Messiah, they must also agree that he has not arrived yet because the messianic era as described by the prophet (Isa. 2:4) has in no way been inaugurated. In his letter to Anselm, Crispin claims that, despite these objections, a Jew who was present at the discussion asked to be baptized. Crispin's record was rewritten during the 12th century, but in a rancorous tone and diluting the force of the Jewish arguments.

[Bernhard Blumenkranz]

CROCODILE (Heb. תַּנִּין or תַּנִּים), the largest surviving reptile, with a length of as much as 23 feet (7 m.) or more. The *tannim* or *tannin* of the Bible refers to the Nile crocodile (*Crocodylus niloticus*) and also to gigantic mythological animals said to have rebelled at the time of the creation against their Creator and hence to have been punished with extinction (Isa. 51:9; Ps. 74:13–14; Job 7:12); similar myths are found also in Ugaritic epics. The reference may be to prehistoric reptiles, remains of whose bones have been uncovered in various places in the Middle East region and which may have stirred the imagination of the ancients and formed the basis of these legends. Footprints of a prehistoric reptile have been discovered at Bet Zayit in the vicinity of Jerusalem. *Tannim* also refers to another gigantic, non-reptilian animal, the whale (cf. Lam. 4:3), usually called *leviathan, which word, however, also denotes a crocodile, as in Job 40:25–41:26, where the description, although poetical and mythical, applies to a crocodile. Thus, it is stated there that the leviathan has a tongue, a nose, enormous teeth, and shining eyes. Its head and neck are covered with protective scales impenetrable to spears. It is fearless and attacks every other animal. Mention is also made there of a bird that plays with it and of the covenant between them: this may refer to the crocodile plover (*Pluvianus aegyptius*) which pecks at the throat and teeth of the crocodile. This reptile was sacred to the Egyptians; hundreds of embalmed crocodiles have been found in cemeteries specially set aside for them. Plutarch relates that the Egyptians ascribed to them powers of prescience in that the female lays its eggs on the high water mark of the Nile. As it was a sacred animal, the Egyptians protected it, and it multiplied undisturbed in the country's waters. The sign performed by Aaron with his rod which became a *tannin* – a crocodile – (Ex. 7:9–10) may have been intended as a protest against its sanctity. Ezekiel calls Pharaoh king of Egypt "the great *tannim* that lieth in the midst of his rivers" (Ezek. 29:3; cf. Isa. 27:1), while Jeremiah (51:34) likens

the king of Babylonia to a crocodile that preys on human beings. No longer found in the Nile, the crocodile is at present indigenous only in Central Africa. At the end of the 19th century crocodiles were still found in Ereẓ Israel, and a river in the Sharon is called Naḥal ha-Tanninim.

CROHMĂLNICEANU, OVID S. (**Moïse Cahn**; 1921–2000), Romanian literary critic. An authority on Marxist aesthetics, Crohmălniceanu was, during the 1950s and the 1960s, an authoritative literary critic and editor of important literary periodicals, preaching the ideology of socialist realism. Afterwards he successfully passed beyond this phase and gained prestige as an excellent analyst of modern and contemporary Romanian literature. He published a three-volume synthesis of Romanian literature between the two world wars (*Literatura română între cele două războaie mondiale*,1967–75), based on his courses as professor of Romanian literature at the Bucharest University. Another book, *Literatura română şi expresionismul* (1971), is an original exploration of the expressionist traces in 20th-century Romanian literature. From 1992 he lived in Berlin. A book published after his death deals with the contribution of many Jewish writers and artists (e.g., Tristan *Tzara, Marcel *Janco, Benjamin *Fondane, Ilarie *Voronca, Saşa *Pană) to the Romanian avant garde movement (*Evreii în mişcarea de avangardă românească*, 2001).

[Leon Volovici (2nd ed.)]

CROHN, BURRILL BERNARD (1884–1983), U.S. physician. Crohn was born in New York City and graduated as an M.D. from Columbia University College of Physicians and Surgeons (1906). He was gastro-enterologist and head of the department of gastro-enterology at New York's Mount Sinai Hospital. There he described the chronic inflammatory diseases of the ileum (terminal small intestine) termed regional ileitis (1932) or Crohn's disease and of the colon (1938) termed granulomatous colitis and also named after him. These remain major medical problems. Crohn was prominent in Jewish charitable causes.

[Michael Denman (2nd ed.)]

CROISSET, FRANCIS DE, pen name of Frantz Wiener (1877–1937), playwright. Born in Brussels, Croisset made his reputation in Paris, where he wrote many plays of the "boulevard" type, notably *Qui trop embrasse* (1899); *Chérubin* (1901), which was set to music by Jules Massenet; *Le paon* (1904); and *Le coeur dispose* (1912). He also wrote some plays in collaboration with R. de Flers; *Nos marionettes* (1928; *Our Puppet Show*, 1929); essays on the drama; a novel, *La Dame de Malacca* (1935; *Lady in Malacca*, 1936); and travel books such as *Le dragon blessé* (1936; *The Wounded Dragon*, 1937) on the Far East.

CROIX, LA, French Catholic daily newspaper, founded in 1883 by Father Bailly and sponsored by the Assumptionist Fathers. The newspaper was a success from its start and acquired considerable popular influence. Its daily circulation rose to 11,000 in 1889, 140,000 in 1890, and 180,000 in 1893 – more than double that of *Le Figaro*. By 1894 there also were 104 provincial supplements, and 2,000,000 copies of various *La Croix* publications were printed weekly. Always anti-democratic, *La Croix* also became violently antisemitic. In 1886 *La Croix* was the first newspaper to praise *La France Juive* and its author E. *Drumont. By 1890 it had become as vociferous as Drumont's *Libre Parole* in its daily attacks against Jew's, Protestants, and Masons, and after Alfred *Dreyfus' arrest in 1894 it became even more intemperate. Following the partially successful appeal of Dreyfus (1899) and the dissolution of the Assumptionist congregation (1900), *La Croix* withdrew from the political scene and returned to essentially religious tasks. *La Croix* continued to be published in Limoges during the German occupation in World War II although its provincial supplements disappeared. Now an evening newspaper published in Paris, *La Croix*, which remains the principal organ of the French Catholic press, avoids antisemitism.

CROLL, DAVID ARNOLD (1900–1991), Canadian lawyer and politician. Born in Mogilev, Belorussia, Croll was taken to Windsor, Ontario, at the age of three. He practiced law in Windsor from 1925 to 1930 when he was elected mayor of the city. In this office, he earned a reputation for helping the unemployed and homeless; he also successfully led the drive for the amalgamation of several municipalities into one city. In 1934 Croll entered the Ontario Legislature as Liberal member for Walkerville and was appointed to hold three cabinet portfolios in the Mitchell Hepburn government: minister of labor, public welfare, and municipal affairs. He resigned from the cabinet in April 1937 in protest against the Hepburn government's refusal to recognize the Oshawa automobile workers union, then on strike against General Motors. He was quoted as saying, "I'd rather walk with the strikers than ride with Mitch Hepburn." Immediately after the outbreak of World War II, Croll volunteered with the Essex Scots regiment of the Canadian Army and, while serving in Europe, rose to the rank of lieutenant colonel. Also while in the military, he wrote a handbook on despatch riding. In 1945 he was elected to the Canadian House of Commons for the Toronto riding of Spadina, then at the heart of Toronto's downtown, Yiddish-speaking Jewish community. In 1955 Croll became the first Jews ever appointed to the Senate of Canada. He served on the Canadian delegation to the United Nations at the time of the Suez crisis in 1956. A familiar figure in Canadian Jewish

life, Croll was an enthusiastic supporter of the State of Israel, the Histradrut, and the Israel labor movement.

[Ben Kayfetz / Gerald Tulchinsky (2nd ed.)]

°**CROMWELL, OLIVER**, Lord Protector of *England, 1653–58. Cromwell was largely responsible for the readmission of the Jews to England. His puritan views, based largely upon the Old Testament, and his tolerant nature predisposed him to regard the Jews with favor; he was also quick to realize the material advantages of readmitting them. It was to Cromwell that *Manasseh Ben Israel presented his "Humble Addresses," petitions concerning the return of the Jews to England, and he was responsible for convening the Whitehall Conference in December 1655. When it became apparent that readmission would only be recommended under the most unfavorable conditions, Cromwell dissolved the conference after its fourth meeting. It was expected that he would issue a favorable reply to Manasseh Ben Israel on his own authority. However, in view of public opinion, Cromwell preferred to adopt an informal arrangement. The London Marrano community had to be satisfied with a favorable reply to a modest petition in which they merely requested authorization for the establishment of a cemetery and continuance of their freedom of worship. Cromwell's personal sympathies were manifested in the pension of £100 granted to Manasseh Ben Israel. His favorable attitude toward the Jews was so marked that, according to his enemies, Jews regarded him as their Messiah.

[Cecil Roth]

CRONBACH, ABRAHAM (1882–1965), U.S. Reform rabbi, author, and teacher. Cronbach was born in Indianapolis, Indiana. He was ordained in 1906 at Hebrew Union College. He served at congregations in South Bend, Indiana (1906–15), and was assistant rabbi of the Free Synagogue, New York, under Rabbi Stephen S. *Wise (1915–17), and at Akron, Ohio (1917–19). He was also Jewish institutional chaplain of Chicago (1919–22). During these years Cronbach developed a passion for social justice, an unshakable belief in pacifism, and a "mutualistic" philosophy embodying ethical relativity and a concept of God as supreme ideal rather than source of power. As professor of Jewish Social Studies at Hebrew Union College from 1922 to 1950, Cronbach influenced a generation of rabbis in the struggle for social justice and peace.

Cronbach, an individualist, befriended the murderer Nathan *Leopold, was rabbi to the convicted American spies for the Soviet Union Julius and Ethel Rosenberg, and supported the anti-Zionist American Council for Judaism. As such he was under constant criticism by opponents. Although he was a Hebrew scholar, he was anti-Hebraist, opposing the use of Hebrew in American Jewish religious life.

Among his many writings are *Jewish Peace Book for Home and School* (1932), on the heritage of Judaism's pursuit of peace; *Judaism for Today* (1954), his philosophy in simple and popular terms; *Realities of Religion* (1957), his philosophy of radical empiricism; *Stories Made of Bible Stories* (1961), biblical stories rewritten to conform to his philosophy of pacifism and brotherhood; *Reform Movements in Judaism* (1963); and "Autobiography" (AJA, 2 (1959), 3–81).

CRONENBERG, DAVID (1943–), Canadian filmmaker. Cronenberg was born in Toronto, Ontario. He showed an early interest in science, particularly the study of insects, and a skill for writing science fiction and fantasy short stories. He began experimental filmmaking while attending the University of Toronto, where he graduated at the top of his class with a degree in literature. He produced low-budget, psychologically intense horror films in the 1970s and mass entertainment horror/science fiction genre films in the 1980s. The release of *Dead Ringers* (1988) and *The Naked Lunch* (1991) increased Cronenberg's stature and gained him international recognition and awards. In 1999 he was chosen to chair the prestigious Cannes Film Festival jury. Cronenberg's themes explore society's collective unconscious and the boundaries of human physiology, sexuality, and psychology. Among film experts, he is considered a true auteur. His films defy easy classification; they shock, repel, provoke, and fascinate in equal measure. Throughout his career, Cronenberg wrote, directed, and produced many of his films. He also worked as an editor and cinematographer as well as acting in his own and other directors' films. He is among the very few directors who remained in Canada to make films yet achieved a solid international reputation. His films received numerous Canadian Genies as well as awards from the New York Film Critics Circle, the Cannes Film Festival, and the Toronto International Film Festival. In 1997 Cronenberg became an Officer of the Order of Arts and Letters in France. Additional films he directed are *Shivers* (1975), *Rabid* (1977), *The Brood* (1979), *Scanners* (1981), *Videodrome* (1983), *The Dead Zone* (1983), *The Fly* (1986), *M. Butterfly* (1993), *Crash* (1996), *eXistenZ* (1999), and *Spider* (2002).

[Paula Draper (2nd ed.)]

CROOL, JOSEPH (1760–1829), British scholar and writer; of Hungarian birth. Of wide if eccentric learning, he was rabbi at Manchester and Nottingham, where he published *The Importance and Necessity of a More General Knowledge of the Hebrew Language* (1805). He later taught Hebrew to members of Cambridge University. His *Restoration of Israel* (1812) resulted in controversy between him and the Anglican cleric Thomas Scott, who issued an elaborate answer (London, 1814). Crool was opposed to Jewish emancipation, fearing that it would lead to assimilation and on this subject wrote *The Last Generation* (Cambridge, 1829) and *The Fifth Empire, delivered in a discourse by Thirty-Six Men…* (London, 1829), and remained a loyal Orthodox Jew. His anti-emancipation writings were widely cited by Christian opponents of Jewish emancipation in Britain.

°CROWFOOT, JOHN WINTER (1873–1959), British Orientalist. Educated at Marlborough and Oxford, Crowfoot served as director of the British School of Archaeology in Jerusalem from 1927 to 1935 and as chairman of the Palestine Exploration Fund from 1945 to 1950. He excavated in the Tyropoeon Valley, Jerusalem, (1927–29), Jerash in Transjordan (1928–30), and Samaria-Sebaste (1931–33, 1935). Crowfoot was the author of *Churches at Jerash* (1931), *Churches at Bosra and Samaria-Sebaste* (1937), *Samaria-Sebaste* (3 vols., 1938–57), and *Early Churches in Palestine* (1941).

His wife, GRACE MARY CROWFOOT (1878–1958), was a specialist in the archaeology of pottery, glass, textiles, basketry, and mats. She contributed to the *Oxford History of Technology* (ed. by C. Singer, 5 vols., 1954–58) and also wrote about the linen wrappings of the Dead Sea Scrolls. She was the joint author (with Louise Baldensperger) of *From Cedar to Hyssop* (1935), a study of the folklore of Palestinian plants. Their daughter, Dorothy Crowfoot Hodgkin (1910–1994), was awarded the Nobel Prize in chemistry in 1964.

[Michael Avi-Yonah]

CROWN, HENRY (**Henry Krinsky**; 1896–1990), U.S. business executive. Crown was born and raised in Chicago, the son of Latvian immigrants. He left school at the age of 15 and went to work. After he was fired from his $4 a week job as a shipping clerk for dispatching a load of sand instead of gravel, he and his brothers, Sol and Irving, founded a materials supply firm. Through hard work and sound business practices, they steadily built up their company. Crown became the treasurer (1916), then the president (1921), and then chairman of the board (1941) of the multimillion-dollar Material Service Corporation in Chicago, which had become the largest materials firm in the world. During World War II Crown served as a colonel in the Corps of Engineers. The Crowns' corporation operated its own quarries, mines, lime and cement plants, and gravel and sand pits. Its fleet of tugboats traveled across Chicago's waterways, and the company's army of cement trucks churned through the streets on a daily basis. In 1959 the company merged into the General Dynamics Corporation, of which Crown served as director. He was also a director of several large firms, including Chicago Rock Island & Pacific Railroad, Hilton Hotels International, and was president and owner of the Empire State Building.

He diversified his business interests to include defense contracting, railroads, mining, farming, recreation, and trucking. With his disciplined risk-taking and financial acumen, he maximized on these investments to create Henry Crown and Company, one of the leading private investment groups in the U.S.

Crown served as director of the Chicago Jewish Welfare Fund and was a member of the Horatio Alger Association of Distinguished Americans.

The Crown family owned and managed operating companies and real estate investments. It also maintained significant investments in a broad range of publicly traded corporations, with extensive board of directors representation that includes General Dynamics, Hilton Hotels, Bank One, The Maytag Corporation, Alltel, and Sara Lee.

The Crown family established a worldwide reputation for philanthropy, donating funds to support academic and research programs. Some of the places and projects that bear Henry Crown's legacy include Henry Crown Field House on the University of Chicago campus; the Henry Crown Sports Pavilion /Norris Aquatic Center at Northwestern University; the Henry Crown Space Center Museum of Science and Industry in Chicago; the Aspen Institute's Henry Crown Fellowship Program, which seeks to develop the next generation of corporate and civic-minded leaders; the Henry Crown Symphony Hall and the Rebecca Crown Auditorium at the Jerusalem Theater; and the Henry Crown Institute of Business Research in Israel, under the auspices of Tel Aviv University's Faculty of Management, which aims to support research pertaining to business administration and management, with an emphasis on Israeli economy and society.

[Ruth Beloff (2nd ed.)]

CROWNS, DECORATIVE HEADDRESSES, AND WREATHS.

In the Bible

A crown is an ornate headdress which serves as a symbol of monarchy, high office, or some other position which marks its wearer as a distinguished person. Three different terms are used for such a headdress in the Bible: *nezer, ʿaṭarah* and *keter*. The first, *nezer* (from *nzr*), is also used to describe someone who is "God's chosen" by virtue of self-abnegation or complete devotion to worship (see *Nazirite). In biblical poetry the term is used to emphasize the dignity and independence

of Israel. The loss of this *nezer* can symbolize the destruction of national and religious sovereignty, "Cut off your hair (Heb. *nizrekh*), and cast it away," (Jer. 7:29). The second term, *ʿaṭarah* (the root *ʿtr* means "to encircle"), is not used exclusively to indicate social position. Thus, in the phrase, "Beautiful crowns upon their heads" (Ezek. 23:42), it merely indicates an elaborate headdress. In other contexts, however, it is synonymous with the royal crown, e.g., "He took the crown of their king from his head" (II Sam. 12:30). The term also applies to the crown worn by a queen (Jer. 13:18), nobles (Esth. 8:15), and the bridegroom at his wedding (Song 3:11), and is often used in the Bible as a metaphor for anything conferring honor or authority, such as grandchildren (Prov. 17:6), or wisdom (Prov. 14:24). In Ezekiel 21:31 *ʿaṭarah* appears as part of the priestly headgear. *ʿAṭarot* were apparently made of precious materials – gold, silver, expensive cloths, and skins – as indicated in Zechariah 6:11, "Take from them silver and gold, and make crowns…." In biblical poetry, *ʿaṭarah* represents personal pride, "A good wife is a crown to her husband" (Prov. 12:4); and like the term *nezer* it also symbolizes national glory, "You shall also be a crown of beauty in the hand of the Lord…" (Isa. 62:3). The third term, *keter* (from *ktr*, "to encircle"), appears only in the Book of Esther where it clearly denotes royalty, "He set the royal crown on her head and made her queen…" (Esth. 2:17).

Excavations in Erez̤ Israel have yielded some decorative headdresses mainly of the *ʿaṭarah* type. Such a headdress of the Israelite period, made of gold, and probably originally attached to a strip of cloth meant to be bound around the head, was found in Tell Jemmeh (Yurza of the Egyptian sources?; W.M.G. Petrie, *Gerar* (1928), pl. 1:1). A gold band used as *ʿaṭarah* was also found in Gaza (Petrie et al., *Ancient Gaza*, 4 (1934), pl. 14). An ivory palette on which is carved a woman wearing a decorative headdress, possibly of Assyrian origin and dating from the Israelite period, was found in Megiddo (G. Loud, *The Megiddo Ivories* (1939), pl.4).

[Ze'ev Yeivin]

In Post-Biblical Literature

The technical distinction between crowns and wreaths – the former designating a symbol of royalty and of majesty, made of gold, and the latter signifying a circlet of leaves and twigs worn as a festive symbol – is often confused in talmudic literature, the two terms being used, sometimes indiscriminately, as synonymous. Thus the Talmud makes the Mishnah (Avot 4:5), "make not of them [the words of the Torah] a wreath [*ʿaṭarah*] to magnify thyself therewith," to refer to "him who makes [worldly] use of the crown [*keter*] of the Torah" (Ned. 62a).

By transference the crown was made the symbol of dignity in other cases, and R. Simeon states, "there are three crowns, the crown of Torah, the crown of priesthood, and the royal crown, but the crown of a good name excels them all" (Avot 4:13; cf. the elaborate treatment of this passage in arn2 4, 3b).

The *aggadah* places a crown on the head of the Almighty, the "Supreme King of Kings." The archangel Sandalfon stands behind the divine chariot and wreathes a crown for his Maker, and pronouncing the divine name over it, places it on His head (Ḥag. 13b). The Midrash states that despite the fact that prayers take place at different times in different synagogues, when they are finished "the angel appointed over prayers takes all the prayers uttered in all the synagogues and makes of them a wreath which he places on the head of the Holy One, blessed be He" (Ex. R. 21:4). Although the word in that passage is *ʿaṭarah*, it is the basis of the *Kedushah* in the *Musaf* prayers of Sabbaths and festivals, according to the Sephardi ritual: "The hosts of angels above, together with Thy people Israel assembled below, make Thee a crown, O Lord our God." That wreath or crown the Holy One is destined to place on the head of the Messiah (*ibid.*, 8:1). The phrase *keter Torah* ("crown of the Torah") is also used for the ornament placed as an embellishment on top of the scroll of the law (see *Ceremonial Art, Torah Ornaments). The phrase *keter Torah* was particularly apposite because the numerical value of *keter* – כתר – is 620, which represents the 613 biblical commandments and the seven Noaḥide laws which constitute the primary message of the Torah. On this basis David Vital published his Keter Torah listing these commandments in Constantinople, 1536 (D. Sperber, *Minhagei Yisrael* 2, Jerusalem 1991, pp. 112–13).

The wreath belongs to a lower category of distinction than the crown, though like the crown, it has its place in otherworldly as in worldly matters. "In the world to come there is neither eating nor drinking but the righteous sit with wreaths on their heads" (Ber. 17a). Wreaths were worn on all joyous occasions. In the Apocrypha they are mentioned as being made of rosebuds (Wisd. 2:8) and of olives (Judith 15:13). In Temple times it was the universal custom for both brides and bridegrooms to don them, but according to the Mishnah the custom, with regard to bridegrooms, was abolished after the destruction of the Temple ("during the war of Vespasian") as a sumptuary measure or sign of mourning (Sot. 9:14). In the Talmud (Sot. 49b) Rav states that the prohibition applied only to a wreath made of "salt and brimstone," which Rashi explains as a crown made of a block of salt upon which figures were traced in brimstone. A wreath of roses or myrtle, however, was permitted. His colleague, R. Samuel, forbade the latter but permitted wreaths of reeds and rushes, while R. Levi forbade those. After the "war of Quietus" the prohibition was extended to brides, whose wreath was "a golden city" (Sot. 49a), probably a golden crown with a design of Jerusalem (cf. Shab. 59a). According to Shabbat 7d this was a three-layered gold crown (not wreath) (Abramson, *Leshonenu*, 29 (1965), pp. 75–76; cf. D. Sperber, *Leshonenu*, 40 (1976), p. 168), which R. Akiva was credited with having given to his wife. Nevertheless, at least in Babylonia the custom continued for brides to wear them. Mar, son of R. Ashi, explained to Ravina, who queried the correctness of his making a garland for his daughter, that the prohibition applied to bridegrooms (Git. 7a). The flowers used for making crowns and garlands were called in Greek στεφανβματα (Hesychius), and this term in medieval times was used for nuptials (אישטיפנומטא, responsum of Isaiah of

Trani, no. 39, Bari XIII cent.), indicating that the custom of garlanding the bride continued to be in use.

In the Mishnah (Ket. 2:1) it is stated that if a married woman could prove that on her wedding day she "went out with a *hinnumah*," it was accepted as evidence that she was a virgin. According to one opinion in the Talmud (Ket. 17b) the *hinnumah* is a myrtle wreath, and according to another a veil, but a suggestion has been made that it means "dyed with henna" (Bonfil).

Not only human beings were garlanded with wreaths. At the procession of the first fruits both horns of the sacrificial ox were garlanded with a wreath of olive leaves, and a garland consisting of either the seven species, according to R. Akiva or, according to R. Simeon b. Nanos, other species, was placed around the fruits themselves (Bik. 3:3 and 9). Wreaths of corn, which were used to adorn idols (cf. Acts 14:13), were forbidden for use by Jews (Av. Zar. 4:2).

CRUCIFIXION, mode of execution by fastening the condemned to two crossed beams. Being the form of death to which *Jesus of Nazareth was sentenced by the Roman governor Pontius Pilate between 27 and 36 C.E., crucifixion subsequently acquired momentous historical, theological, and legal significance, providing subject matter for research and discussion until the present day. Its origins cannot be traced with precision; it is thought to have preceded hanging, of which there is early evidence (see *Capital Punishment). Hanging may have been introduced as a more humane and lenient mode of execution than crucifixion; at any rate hanging superseded crucifixion in most countries of Europe, after crucifixion had been abolished by the Roman emperor Constantine in the fourth century because of its Christian symbolism. In non-Christian, especially Far Eastern countries, it was practiced until early in the 19th century. Beheading was also practiced by the Romans (e.g., the beheading of John the Baptist), and it was apparently a more dignified procedure of execution because of the swiftness of the death experience as opposed to the prolonged suffering that crucified individuals endured. Stoning was the preferred method of execution practiced by Jews in the first century and earlier (Lev. 20:2, 27; 24:16; Num. 15:35; Deut. 21:21).

There are reports of crucifixions from Assyrian, Egyptian, Persian, Greek, Punic, and Roman sources. It has been said to have first been imported into ancient Israel by the Persians (cf. Ezra 6:11), but there is no report of a single instance of a crucifixion under the powers conferred on Ezra. If the hangings reported in the book of Esther (7:10, etc.) were crucifixions, they were carried out in Persia, where crucifixions seem to have been customary. Crucifixion was the standard Roman mode of execution for non-Roman criminals and enemies of the state, and hence was practiced on a large scale in Judea under the Roman occupation. The extent of such crucifixions is demonstrated by the legal rules which had to be elaborated to meet contingencies. As the exact time of death was not ascertainable, the fact that a man was seen hanging on a cross was not sufficient evidence of his death (Yev. 16:3). It might be otherwise when wild beasts or birds had already attacked him at vital parts of the body (Yev. 120b). The reason given for the rule that the crucified cannot be considered dead is that a rich matron may still come along and redeem him (TJ, Yev. 16:3,15c), an indication of the length of time often passing before death ensued, and of the amenability of Roman officers to bribes to save the lives of executed convicts. A man hanging on the cross may order a bill of divorce to be written for his wife. Even if his body has become weak, his mind is presumed to have remained sound (Tosef., Git. 7:1; Git. 70b). On such a bill of divorce being handed to the wife, she may remarry without evidence of death being required. As the blood from a dead body is impure, the question arose as to when the blood of the crucified becomes impure (Oho. 3:5). There is one benefit apparently derived from crucifixions; the nail of a cross is considered by some to have healing effects in cases of swellings or stings, and may therefore be carried around even on a Sabbath (Shab. 6:10; Shab. 67a; TJ, Shab. 6:9, 8c). Similarly, Romans used nails from crosses on which people had been crucified for healing epileptics (Pliny, *Natural History*, 28:36).

Josephus reports many incidents of crucifixion: Antiochus IV crucified Jews in Jerusalem who would not relinquish their faith (Ant., 12:256). Two thousand rebels were crucified by Quintilius Varus (Ant., 17:295). Tiberius Julius Alexander ordered two rebels, sons of *Judah the Galilean, to be crucified (Ant., 20:102). Seven years later (about 52 C.E.) there was another wholesale crucifixion of zealots at the hand of Quadratus (Wars, 2:241); Felix crucified not only zealots and rebels, but also citizens suspected of collaborating with them (Wars, 2:253). Florus had Jewish judges tortured and crucified before his eyes (Wars, 2:306–8). When Jerusalem was besieged, Titus ordered all Jewish prisoners of war to be crucified on the walls of the city and there were as many as 500 crucifixions a day (Wars, 5:449–51). Bassus erected a huge cross on the city wall for the execution of Eleazar, a young Jewish commander, whereupon the Jews surrendered to the Romans to spare Eleazar's life (Wars, 7:201–2). Josephus also reports crucifixions at the hands of the Jewish king Alexander Jannaeus, adding that this act of cruelty was an imitation of gentile usage. While he and his concubines were carousing, he ordered 800 Pharisees to be crucified and their wives and children killed before their eyes (Ant., 13:380–1), an atrocity said to be alluded to in the Qumran commentary on the Book of Nahum (4QpNah

2:13) with the postscript: "such a thing has never before been done in Israel, for the Scripture [Deut. 21:23] designates a man hung up alive as a reproach unto God." The hanging of people on trees (i.e., on wooden crosses) is also referred to in the Temple Scroll (11Q Temple 64.6–13). Some account of the laws and customs of crucifixion is contained in most books on the trial and death of Jesus. This crucifixion could only have taken place after the execution of John the Baptist in 28 C.E. and before the High Priest *Caiaphas had been removed from his position in 36 C.E. Hence, the latest possible date for the final Passover attended by Jesus in Jerusalem must have been in the spring of 36 C.E. The accepted view is that the death of Jesus took place late in the 20s or early in the 30s of the first century. It seems reasonable, therefore, that the crucifixion took place in the year 30 C.E. when Jesus was 36 years of age, and only two years after the beheading of John.

Archaeological evidence of crucifixion in Jerusalem emerged in 1968 during the excavation of a burial cave from the first century C.E. at Givat ha-Mivtar in Jerusalem. In one of the stone burial boxes (ossuaries) were the skeletal remains of a male named Jehohanan, whose right heel bone (*calcaneum*) had been pierced by an iron nail (length 11.5 cm). The anthropological study of these remains suggests that the arms of this individual were tied to the horizontal bars of the cross and that only his feet were nailed.

CRUMB, ROBERT (1943–), U.S. cartoonist. Born in Philadelphia, Crumb began his art career by drawing greeting cards in Cleveland. He soon began to work with Harvey *Kurtzman, creator of *Mad* magazine, on his post-*Mad* humor magazine, *Help!* When that magazine folded, Crumb moved in 1967 to San Francisco, where he drew comics for underground newspapers. In 1968, with his first wife, Dana, Crumb hawked copies of the first issue of *Zap Comix* from a baby carriage in the hippie Haight-Ashbury neighborhood. Crumb's comics mixed a nostalgia for comics' rich history with a psychedelic exuberance. Crumb became known as the godfather of underground comics when he created the characters Mr. Natural and Fritz the Cat and introduced the catchphrase "Keep on truckin'," which struck a note in the collective hip unconscious. Images of the characters and their odd mode of ambulating were made into merchandise, mostly without permission.

Crumb, who is credited with single-handedly creating the underground comic-book industry, acknowledged having taken LSD and other drugs in the 1960s and 1970s when he produced what he says is his best known work: the "Keep on truckin'" graphic, which continues to be seen on mud flaps; his cover for the album *Cheap Thrills* by Big Brother and the Holding Company (featuring Janis Joplin); and Fritz the Cat, who became the star of a full-length animated cartoon made by Ralph *Bakshi. Crumb hated the film.

In 1971, Crumb married Aline Kominsky (1949–). Kominsky-Crumb became known for her very personal comics, which look at life as a humiliating, dehumanizing experience. Her work generally focuses on the plight of a naïve heroine who believes in romance and in the infinite possibility of the world to be a perfect place. The Crumbs moved to Sauve, a small village in the south of France, in 1990. The film *Crumb*, a dark portrait of the cartoonist and his family, directed by Terry Zwigoff, won the top prize for documentaries at the 1995 Sundance Film Festival.

CRUSADES, military expeditions of the European Christians in the 11th, 12th, and 13th centuries to conquer Ereẓ Israel from the Muslims or to repel their counterattacks. The explicit cause was the reports received from Jerusalem concerning the maltreatment of Christian pilgrims and the manner in which their access to the Holy Places was obstructed. In many of these reports, the malevolence of the Jews was also stressed, so that from the beginning the ground was prepared for including the Jews in the freshly stimulated animosity against the unbelievers: indeed, at the period of the analogous expeditions of French knights to assist the Spanish Christians against the Moors (c. 1065), the Jews of *Narbonne and elsewhere had been attacked notwithstanding the admonitions of Pope *Alexander II. It was originally intended that the crusaders should concern themselves solely with the success of their expedition overseas, without intervening in the affairs of the Christian countries of Europe. However, precisely because the crusaders ignored this stipulation, the Crusade was partially deflected from its initial course, with tragic consequences for the Jews of Europe.

The First Crusade

The Crusade was preached by Pope Urban II at Clermont-Ferrand (subsequently referred to as Har Afel, "the mount of gloom," by Jewish chroniclers of the Crusades) on Nov. 27, 1095, at the close of a council which had convened there. Those who obeyed the call affixed crosses to their outer garments, thus the name *croisés, crociati*, or crusaders. The Jews

termed them *to'im* ("[misguided] wanderers"). At the outset, nothing in the proclamation of Urban II seemed to threaten the Jews, but it would appear that the Jews in France sensed danger, since they sent emissaries to the Rhine communities to warn them of the possible threat. The first group of crusaders gathered in France on their way to Germany. They may already have attacked some Jewish communities on their way, possibly in *Rouen, and more certainly in *Lorraine. It was already clear that the crusaders, or at least some of them, were gathering in the Rhine valley in order to follow the traditional route to the Orient along the Rhine and Danube rivers. The community of *Mainz was more troubled about the French communities and thought that those in the Rhineland had no reason for concern on their own account. However, their sense of security was soon to be brutally shaken shortly after the first muster of the crusaders and before the Jewish communities of Germany could take whatever precautions were open to them. The sight of the wealthy Rhenish communities acted as an incentive to the crusaders, who decided to punish "the murderers of Christ" wherever they passed, before their encounter with their official enemies, the Muslims. Soon it was rumored that Godfrey of Bouillon himself had vowed that he would not set out for the Crusade until he had avenged the crucifixion by spilling the blood of the Jews, declaring that he could not tolerate that even one man calling himself a Jew should continue to live.

The first bands of crusaders arrived outside *Cologne on April 12, 1096. For a month they left the Jews in peace, perhaps because the Jews of France had given Peter the Hermit a letter asking the Jewish communities he passed through on his journey to supply him and his followers with all the food they required, in exchange for Peter's undertaking to use his influence in their favor. However, the swelling throng of crusaders, which surpassed all expectations, and the religious frenzy preceding the departure of the army rapidly induced a change of mood which rendered the influence of Peter the Hermit ineffectual. Aware of the inherent danger in the situation, the leaders of the Mainz community hastily dispatched a delegation to Emperor Henry IV, who wrote immediately to the princes, bishops, and counts of the empire to forbid them to harm the Jews. Godfrey himself replied that he had never had any such intention. For their greater security, the communities of Cologne and Mainz each presented him with a gift of 500 pieces of silver, and he promised to leave them in peace, which he did.

Meanwhile, the Crusade had evolved into a ponderous machine made up of various elements: the greater nobility, the lesser nobles such as Count Emicho of Leiningen, and the people. It was the last element which proved particularly receptive to the anti-Jewish slogans spreading rapidly among its ranks and it was less amenable to discipline. Although the bishops and prominent nobles were generally opposed to such ideas, they had no wish to see Christians fight Christians over the Jews. Frequently their assistance to the attacked Jews was passive at the most. It was in the region where the crusaders assembled that violence broke out, in the weeks between Passover and Shavuot. The rioting continued until Tammuz (June–July). On the eighth of Iyyar (May 3, 1096), the crusaders surrounded the synagogue of *Speyer; unable to break into it, they attacked any Jews they could find outside the synagogue, killing eleven of them. One of the victims, a woman, preferring death to conversion, the only choice left open by the crusaders, inaugurated the tradition of freely accepted martyrdom. **Kiddush ha-Shem*, martyrdom for the glory of God, thus became the exemplary answer of Jews threatened in their life and faith by the crusaders. On the 23rd of Iyyar (May 18, 1096) *Worms suffered a similar fate. The crusaders first massacred the Jews who had remained in their houses, then, eight days later, those who had sought an illusory refuge in the bishop's castle. The victims numbered about 800; only a few accepted conversion and survived, the great majority choosing to be killed or suicide rather than apostasy. Hearing of the massacre, the Jews of Mainz asked for the bishop's protection, paying him 400 pieces of silver to this end. When the crusaders, led by Emicho, arrived outside the town on the third of Sivan (May 27, 1096), the burghers hastened to open the gates. The Jews took up arms under the leadership of Kalonymus b. Meshullam. Weakened through fasting, for they had hoped to avert the disaster through exemplary piety, the Jews had to retreat to the bishop's castle; however the latter could do nothing for them, as he himself had to flee before the combined assault of crusaders and burghers. After a brief struggle, a wholesale massacre ensued. More than 1,000 Jews met their deaths, either at the enemy's hands or their own. Those who managed to escape were overtaken; almost no one survived. A comparable disaster occurred in Cologne, where the community was attacked on the sixth of Sivan (May 30, 1096). The bishop dispersed the town's Jews in order to hide them in nearby localities: at Neuss, Wevelinghofen, Eller, Xanten, Mehr, Kerpen, Geldern, and Ellen. The crusaders located them and a bloodbath followed. At *Trier the bishop could not protect his Jews, as he himself had to go into hiding, and he consequently advised them to become Christians. The great majority refused, preferring suicide. At *Regensburg, all the Jews were dragged to the Danube where they were flung into the water and forced to accept baptism. At *Metz, *Prague, and throughout *Bohemia, one massacre followed another. These came to an end when Emicho's crusaders were decisively halted and crushed by the Hungarians, who, incensed by their excesses when they poured through the country, had risen against them. Seeing in this the hand of God, the Jews promptly set about reconstructing their ruined communities. There had been more than 5,000 victims.

The Jews who had been baptized under duress generally continued to practice Judaism in secret. As early as 1097, Emperor Henry IV allowed them openly to return to their former faith, an action which was strongly condemned by the antipope Clement III. Henry also ordered in May 1098 an inquiry into the manner of disposal of the property of massacred Jews in Mainz thus provoking the displeasure of the local bishop. In

about 1100, Jews returned to Mainz, but their position was not yet quite secure, and the Jews of the upper town could scarcely communicate with those in the lower. In 1103, Henry IV and the imperial lords finally proclaimed a truce which, among other things, guaranteed the peace of the Jews.

THE CRUSADERS IN EREẒ ISRAEL. Meanwhile, the crusaders had reached *Jerusalem (June 7, 1099), and the siege had begun. The city was captured on July 15, with Godfrey entering it through the Jewish quarter, where inhabitants defended themselves alongside their Muslim neighbors, finally seeking refuge in the synagogues, which were set on fire by the attackers. A terrible massacre ensued; the survivors were sold as slaves, some being later redeemed by Jewish communities in Italy. The Jewish community of Jerusalem came to an end and was not reconstituted for many years, but the Jewish centers in Galilee went unscathed. However, the great community of *Ramleh dispersed, as did that of *Jaffa, so that overall the Jewish community in the Holy Land was greatly diminished.

The Second Crusade

On the loss of Edessa by the crusaders (1144) the West became troubled over the fate of the Latin Kingdom of Jerusalem, and a new Crusade to save it was preached by Pope Eugene III. The popes attempted to encourage the crusaders at the Jews' expense. Innocent III in 1198 ordered that no interest should be chargeable during the absence of crusaders on debts they incurred to the Jews and that anything already received should be returned. Since the return of a crusader was problematical, this restriction when it was observed implied at best the immobility of Jewish capital over prolonged periods, at worst the possibility of total confiscation (which was to become more widespread with the extension from the 13th century of the term "Crusade" to any campaign in any part of the world in which the popes might be politically interested). Naturally, this caused great difficulties to their Jewish creditors. In one way or another, as soon as the Second Crusade was announced, the clouds began to gather once more over the Jews of Europe. As early as the summer of 1146, a Cistercian monk, Radulph, while preaching the Crusade, violently attacked the Jewish communities of the Rhineland, exhorting the crusaders to avenge themselves on "those who had crucified Jesus" before setting out to fight the Muslims. The spiritual leader of the Crusade, *Bernard of Clairvaux, pointed out the theological error in his arguments, strictly forbidding any excess against the Jews, who were to be neither killed nor expelled. Although the anti-Jewish riots had begun before his intervention, he succeeded in preventing them from spreading so that, in the final count, they were far less extensive than those in the First Crusade. The persecution began in Elul (August–September). A few isolated Jews were put to death. At Cologne, the Jews bought the protection of the bishop and managed to find refuge in the fortress of Walkenburg. The bishop even went as far as having the leader of a mob blinded for killing a number of Jews. There were few victims at Worms and at Mainz, but more than 20 at *Wuerzburg. Scores of Jews sought refuge in the castles and the mountains. In Bohemia, about 150 lost their lives, and victims were equally numerous in *Halle and *Carinthia. As in the First Crusade, the community of France suffered less than the Rhineland communities. Jacob b. Meir *Tam was set upon by a group of crusaders, who stabbed him in five places in memory of the wounds suffered by Jesus, but he succeeded in escaping with the help of a knight with whom he was acquainted. In England, the Jews were left in peace. Everywhere, Jews who had been converted by force were allowed to return to Judaism undisturbed. By the next summer, order had been restored, and the Jewish communities had everywhere recovered.

In the Holy Land, the Second Crusade had concluded with the conquest of *Ashkelon by the crusaders. *Benjamin of Tudela and *Pethahiah of Regensburg, who visited the crusading kingdom around 1160 and 1180 respectively, found well-established Jewish communities in *Ashkelon, *Ramleh, *Caesarea, *Tiberias, *Acre, among other localities, with scattered individuals living elsewhere: it seems that the Jewish settlement of Jerusalem was restricted to a handful of individuals, though a few years later Judah *Alḥarizi (1216) found a prosperous community there. The *Samaritans seem to have remained undisturbed in *Nablus as well as Ashkelon and Caesarea. It would therefore appear that the warriors of the Second Crusade left the Jewish communities relatively undisturbed.

Meanwhile the Latin Kingdom had begun to crumble under the blows of its enemies. When Jerusalem fell to Saladin in 1187, the Jews of Europe suffered the consequences of this defeat. It had already become habitual to harass the Jews whenever a Crusade was in the offing. In 1182, Emperor Frederick I took the Jews of the empire under his protection, receiving, as was customary, substantial payment for his pains. As soon as the news of the fall of Jerusalem reached Europe, he forbade all anti-Jewish sermons and renewed his promise of protection. At the beginning of 1188, a tragedy was narrowly averted in Mainz. Drawing a lesson from past experience, the Jews of Mainz, Speyer, *Strasbourg, Worms, Wuerzburg, and elsewhere left their towns to seek refuge in the nearby fortified castles. The few Jews who remained at Mainz owed their lives to the Diet which had convened there; and in the course of the proceedings the emperor and his son forbade on direst penalties any interference with the Jews, threatening death to anyone who killed a Jew. These warnings were echoed by the bishops, who threatened excommunication for those who persecuted Jews. All this had cost the Jews of the empire huge sums, and, more than ever before, they became dependent on the favors and the passing whims of their masters.

The Third Crusade and After

In *England, the Third Crusade had the most savage repercussions. England had taken little interest and no part in the first two Crusades, but her zeal was none the less intense when Richard the Lion-hearted decided to take part in person in the third. In January the first abuses struck the port of *Lynn,

where the bulk of the Jewish community was massacred. The same occurred in *Norwich and *Stamford. At *Lincoln, the Jews were saved through the intervention of royal agents. The worst outrage took place in *York, where a number of local nobles, in heavy debt to the Jews, seized the opportunity to rid themselves of their burden. When attacked, the Jews took refuge in the Castle Keep, which the guard had opened for them; those who remained in the town were slaughtered. On their refusal to allow access to the keep, the Jews were besieged. On March 16, on the eve of Passover, the rabbi, *Yom Tov b. Isaac of Joigny, realizing that all hope was lost, asked his brethren to choose suicide rather than submit to baptism. First setting fire to their possessions, one after the other killed himself. More than 150 died in this way, and the few survivors were murdered by the mob, who also destroyed the register of debts to the Jews. In *Bury St. Edmunds 57 Jews were put to death. As the king was out of the country, where he neither could nor cared to intervene too vigorously, the perpetrators of the massacres also left England for the Crusade. There is little doubt that the Jews in England lost faith in the prospect of their continued survival in the West. The emigration in 1211 of 300 rabbis from Western Europe to the Holy Land may be connected with this general disillusionment. As the enthusiasm of the masses waned, the Jews in Western Europe were little troubled during the 13th-century Crusades. However, it appears that there was a massacre in central France around 1236 during the preparations for a Crusade; in fact, Pope *Gregory IX accused the crusaders of having slaughtered over 2,500 Jews.

Yet, at the very moment when the great wave of Crusades was ebbing, the Jewish community in France suffered most acutely from a popular Crusade, that of the *Pastoureaux (1320). Forty thousand of these "shepherds," aged on an average around 16 and without any clearly designated leader, marched through France from north to south. Although Pope *John XXII excommunicated all who set forth on this unauthorized march, this did not hinder the new crusaders from hurling themselves at the Jews in the manner of their predecessors. Their savagery was especially marked south of the River Loire, where they destroyed some 120 communities. Hoping to be protected there by the authorities, numbers of isolated Jews and small communities took refuge in the larger towns. Five hundred who had sought safety in the town of *Verdun sur-Garonne found death there. At *Toulouse there were 115 victims. In the *Comtat Venaissin, a direct papal dependency, there were many cases of forced conversion; the subsequent attempt to return to Judaism provoked the prompt intervention of the Inquisition. Meanwhile, the very abuses of the Pastoureaux aroused a violent reaction on the part of the Christian authorities: the governor of *Carcassonne even had some of the ringleaders executed. Those who had crossed the Pyrenees into Spain were routed by James II of Aragon and forced to disperse. Nevertheless, this uprising had struck a savage blow at the Jewish communities in the Midi and northern Spain.

The long era of the Crusades undoubtedly marked a turning point in the history of the Jews in medieval Western Europe. The Church herself was forced to reexamine and define her position of the problem posed by the large-scale persecution of the Jews. Clearly the situation of the Jews prior to the Crusades was not always free from danger: the animosity of the Christians toward the Jews was nothing new and the Crusades did not lead to any reappraisal of Christian doctrine. However, it was probably in the wake of the First Crusade that Pope *Calixtus II (1119–24) promulgated the bull *Sicut Judaeis*, which was renewed after the Second and Third Crusades and on at least five other occasions between 1199 and 1250. It stipulated that although no new privileges should be granted to the Jews, they should not be deprived of a single one of the rights secured to them. Christians should take special care not to endanger the lives of Jews, not to baptize them by force, and not to desecrate their cemeteries. Naturally papal protection was not extended to Jews who plotted against the Christian faith. It was sufficient for the Church to protect them from the excesses of the crusaders, especially since the latter, from the moment they took up the standard of the cross, were themselves placed under the jurisdiction of the Church. The Jews therefore requested the popes to intervene on their behalf: thus *Innocent III ordered the French bishops to take particular care that the crusaders did not harm the Jews. As mentioned, Gregory IX later (1236) accused the crusaders of conspiring to murder the Jews: such a crime committed in the name of sanctity could not be allowed to go unpunished. However, it would appear that these directives were in vain, although it is difficult to assess with any precision the measures relating to the Jews.

The Significance of the Crusades

In the memory of the Jews, the Crusades became the symbol of the opposition between Christianity and Judaism, and the tension aroused by the persecutions was far more severe than that which had existed since the origins of Christianity. The debate ceased to be a theological one, to the extent that this had ever been the case. The Christians saw the Jews as the implacable enemies of their faith and in this climate the *blood libel became widespread. From the 12th century comes the first expression of the idea of a Jewish plot against the Christian world: it was alleged that the Jews had to sacrifice one Christian each year, and held an annual council to decide the site of the sacrifice and the name of the victim. At *Blois in 1171, all members of the Jewish community were burned at the stake following such an accusation, and from the 13th century similar charges were raised in Germany.

The Jewish community found a source of inspiration in the memory of the martyrs. There being no hope of immediate vengeance, the massacre of the innocents was glorified and compared to the sacrifice of Isaac. The suicide of the martyrs was seen as a collective act for the sanctification of the Divine Name. Rather than a bitter memory of cruel affliction, it became an example of true piety and submission to the

will of God. For the succeeding generations the martyrs were an object of admiration and even of envy, for they had been the generation whom God had put to the test and they had proved themselves worthy. A man of true faith could achieve no more than to be their equal. It therefore became important for the Jews to cherish the memory of their sacrifice, to retell it, and to be inspired by it. A number of *piyyutim* on the subject were incorporated in the liturgy, especially for the Ninth of *Av. It became customary in Western communities which had been closest to the massacres to recite the prayer of the martyrs, *Av ha-Raḥamim*, on the Sabbath before Shavuot and especially to remember their sacrifice in the fast of the Ninth of Av, which had fallen during the time of the massacres. The period of the counting of the **omer* acquired an especially sorrowful significance.

It was probably this era that gave rise to the custom, originating in Mainz, of reciting in public the deeds of the martyrs on the anniversary of their sacrifice, and recording their names and dates in a **Memorbuch*, which was kept in the synagogue. The most widely known martyrs and the most severely affected communities and regions figured in the *Memorbuecher* of all communities and not only locally. The martyrs became a symbol for the whole people, not just for their own communities; more than simply an object of pride, they became a common ideal in which the whole Jewish community, despite all its humiliations, could find inspiration. Their martyrdom was transformed into victory, for they had defied torture, finding in their faith the necessary strength for preferring death to apostasy. They had chosen death rather than conversion, even though the latter need probably have been only temporary. In their martyrdom lay the very justification of the sufferings of the Jewish people. Spiritual power proved the strongest force of all and the martyrs were seen as a demonstration of the absolute truth of Judaism.

Yet in fact the massacres attendant on the Crusades were far from being the worst persecutions which befell the Jews. The communities destroyed in the Rhine valley were quickly reestablished: Worms, Speyer, Mainz, Cologne, and Treves rapidly regained their former importance. The Jewish community in the kingdom of France proper, or at least in the north, hardly suffered throughout the course of the era. Italy and Spain were almost untouched. In England the royal authorities speedily put an end to local disorders. There is nothing to suggest that during this period the Jews in Western Europe lost their sense of security in the localities where they were living: no great exodus took place in 1096 or in 1146. The majority of those converted by force, at least until the Crusade of the Pastoureaux, were able easily to return to Judaism. It would seem that the actual number of Jews in Western Europe increased in this era and several communities became larger and more populous. For Jewish scholarship the 12th century was one of the most glorious in the West: it was the age of the Tosafists, renowned throughout France and Germany. Personal relationships between Jews and Christians apparently changed little; it was only at the beginning of the 13th century that they took a new turn. It would appear that the Crusades themselves did not play a decisive role in the evolution of the condition of the Jews in Europe. Placed in a larger context, they are only an element in the whole, though a far from negligible one.

At all events, the Crusades revealed the physical danger in which the Jewish communities stood and the impotence of their ecclesiastical protectors to defend them. On the outbreak of an actual attack, they pushed the Jews into the arms of the only powers capable of protecting them: duke, king, or emperor, and these secular protectors considered that they had a duty to protect the Jews only to the extent that they derived some benefit from them. The Crusades also encouraged the Jews to move to the fortified cities, where they would be less vulnerable in the event of an attack. The reactions on Jewish economic life were in their way disastrous. The former unique position of the Jews as intermediaries between East and West was undermined; henceforth, it was commonplace for western merchants to travel backward and forward between the two worlds, while at the same time the stimulation of religious fanaticism made the path of the Jewish merchant more dangerous. Hence it was the Crusades which marked the end of the heyday – at one time quasi-monopoly – of the international Jewish merchant. At the same time, they gave a stimulus *ipso facto* to the economic degradation of the Jew and his transformation, so far as Western Europe was concerned, into the recognized moneylender of the Christian world (see *moneylending). Partly this was due to the imperative necessity of finding a new outlet for their capital; partly to the increased demands on the part of the crusaders for ready cash to equip themselves and to carry with them on their travels. From now on therefore the Jewish moneylender became the typical Jewish figure of the Western European scene.

The Crusades and their attendant degradation were firmly imprinted on the historic consciousness of the Jews. This period became singled out in the popular mind as the start of and explanation for the misfortunes of the Jews, although in fact the excesses were only symptomatic of a process which had already been set in motion earlier. The Crusades marked in various ways a turning point in the history of the Western world, and this was reflected also in Jewish history. Indeed, it is from this point only that the history of the Jews in the Rhineland and Central Europe may be said to acquire continuity: whereas before the general picture has had to be constructed from scattered fragments and documents, henceforth the record is more or less sustained and complete. As in the case to some extent with general historiography, it is only at this period, with the remarkably graphic and moving records of the Rhineland massacres in 1096, that consistent Jewish *historiography, or at least chronography, begins to be preserved, even though there are fragmentary records written earlier. The history that now unfolded was predominantly a tragic one. Whereas in European Jewish history before this date episodes of violence and persecution are occasionally known, there now began a period of intermittently recurring massacre and persecution which colored European Jewish

experience for centuries to come. The heightened religiosity of the age resulted in the sharpening of the system of anti-Jewish discrimination and of Jewish humiliation, culminating in the legislation of the Fourth *Lateran Council of 1215. The chronicles of *Solomon b. Samson, *Eliezer b. Nathan of Mainz, *Ephraim b. Jacob of Bonn, *Eleazar b. Judah of Worms, and many other whose names are not known, described the events of the Crusades, the scenes of the massacres, and the martyrs. They are also to be regarded as basic sources from which statistical accounts of the Crusades must start. Through capturing these events they magnified their significance, but thereby furnished an ideal of conduct which was constantly recalled to mind whenever severe persecutions befell the Jews.

[Simon R. Schwarzfuchs]

CRYPTO-JEWS, persons who while secretly remaining faithful to Judaism practiced another religion which they or their ancestors were forced to accept. Groups of Crypto-Jews came into existence after the forced conversions under the *Visigoths in Spain (7th century) and the *Almohads in North Africa and Spain (12th century). Other such groups were the *neofiti* in southern Italy from the end of the 13th to the 16th century, the *Conversos or *Marranos (Heb. **anusim*) in Spain after the persecutions of 1391 and the expulsion of 1492, as well as in Portugal after 1497. In Majorca these Jewish converts were known as the *Chuetas. A group coerced to adopt Islam were the *Jadīd al-Islām in *Meshed, Persia, in the 19th century. A different type of Crypto-Jew were the members of the *Doenmeh sect in Turkey and Salonika.

CRYSTAL, BILLY (1947–), U.S. actor. Born in New York, Crystal studied film and television direction under Martin Scorsese at New York University. He became known to television viewers as Jodie Dallas, the young homosexual in *Soap*, the satiric take-off on the soap opera genre (1977). In fact, Crystal made history by playing television's first openly gay character.

As a stand-up comedian on the comedy circuit, Crystal became famous for his Fernando Lamas and Sammy Davis Jr. impersonations. In 1984 he joined the cast of *Saturday Night Live*. Although he spent only one year with the show, he was one of the most popular members of the cast and was nominated for an Emmy for Best Individual Performance.

Crystal graduated to feature film work and built up a steady following with roles in *This Is Spinal Tap* (1984), *Running Scared* (1986), *The Princess Bride* (1987), *Throw Momma from the Train* (1987), and *Memories of Me* (1988), which Crystal co-scripted and co-produced with Alan *King. Crystal then catapulted to star status in the hugely popular *When Harry Met Sally* (1989), and he followed this with the equally successful *City Slickers* (1990). His next film was *Mr. Saturday Night* (1992), which he also directed. Subsequent films included *City Slickers II*, which he wrote (1994); *Forget Paris,* which he wrote and directed (1995); *Father's Day* (1997); *Deconstructing Harry* (1997); *My Giant* (1998); *Analyze This* (1999); *America's Sweethearts,* which he wrote (2001); and *Analyze That* (2002).

Crystal was the host of the annual Academy Award presentations in Hollywood from 1990 to 1993 as well as in 1997, 1998, 2000, and 2004. Widely acclaimed for his writing and performing talents, Crystal has won five Emmys and five American Comedy Awards, among many other honors and nominations. Crystal wrote *Absolutely Mahvelous* (with Dick Schaap, 1986), and the children's book *I Already Know I Love You* (2004).

[Ruth Beloff (2nd ed.)]

CSERGŐ, HUGO (1877–1944), Hungarian author and journalist. Csergő, who headed the Budapest social welfare department, was also a prominent Jewish community official. His works include *Versek* ("Poems," 1904) and the drama, *Az elsó hajnal* ("The First Dawn," 1923), but he is best remembered as editor of the anthology, *Száz év magyar zsidó költői* ("Hungarian Jewish Poets of the Last Century," 1943). He died following deportation.

CSERMELY, GYULA (1869–1939), Hungarian author. Csermely abandoned his law practice to write novels, plays, and short stories. Many of these have Jewish settings and deal with the conflict of the generations and the damaging effects of assimilation. They include *Ami két Miatyánk között van* ("Between Two 'Lord's Prayers,'" 1925), *Juda ben Tábbaj kulcsa* ("The Key of Judah ben Tabbai," 1927), and *Szent védekezés* ("Holy Defense," 1938).

CSUPO, GABOR (1952–), U.S. cartoon animator; founders/co-chair with Arlene Klasky, of Klasky Csupo. Csupo, born in Budapest, Hungary, learned animation at Pannonia Studio. He escaped Communist Hungary in 1975 and made his way to Stockholm, where he met Arlene Klasky. A graduate of California Institute of the Arts, Klasky worked as a designer for record labels such as A&M Records, served as a magazine and advertising art director, and then moved to special effects and graphics for film. The couple relocated to Los Angeles and formed Klasky Csupo, Inc. in 1982. In 1988, James L. Brooks awarded the company the job of animating *The Simpsons* for Fox's *The Tracey Ulman Show*. Klasky Csupo,

Inc. subsequently created such animated shows as *Rugrats* (1991), a cartoon told from a child's point of view, *Duckman* (1994), *The Wild Thornberrys* (1998), and *As Told by Ginger* (2000). *Rugrats* features Passover and Hanukkah episodes and its Jewish main character, Tommy Pickles, is based on Klasky's experiences with his sons Brandon and Jarrett. Feature films included *The Rugrats Movie* (1998), *Rugrats in Paris* (2000), *The Wild Thornberrys Movie* (2002), and the crossover film *Rugrats Go Wild!* (2003).

[Adam Wills (2nd ed.)]

CTESIPHON, in ancient times a city on the west bank of the Tigris, opposite the Hellenistic city of Seleucia, 25 mi. (40 km.) S.E. of modern Baghdad. Though greatly influenced by its Hellenistic origins Ctesiphon was basically a Persian city. A large Jewish community resided there and the town also served as a commercial center for the Jews of the surrounding area. When the Jews of Seleucia were persecuted about 41 B.C.E., they were able to take refuge in Ctesiphon (Jos., Ant., 18:374 ff.) and when the city was taken by Carus in 283 C.E., it was found to have a large Jewish community (T. Noeldeke (tr. and ed.), *Geschichte der Perser und Araber… des Tabari* (1879), 49, n. 1). The Talmud (Yoma 10a) identifies Ctesiphon with the biblical Resen and the Targum Pseudo-Jonathan equates the city with Calneh (Gen. 10:10, 12). The *amoraim* *Ḥiyya b. Abba and Rabba b. Ḥiyya resided in Ctesiphon, both being termed "Ketosefa'ah" ("resident of Ctesiphon," Beẓah 38b; Yev. 104a; BB 93b). For commercial and legal purposes Ctesiphon was considered as a part of Bet-Ardeshir which controlled the other bank of the Tigris. This is illustrated by the fact that the inhabitants of Bet-Ardeshir were authorized to certify the signatures on bills of divorce from Ctesiphon, but not vice versa. For purpose of **eruv teḥumin* the two cities were considered one, and carrying between them was permitted (Eruv. 57b). The Arab conquest of Ctesiphon (637 C.E.) ended the city's growth, and the founding of Baghdad (762) brought about its total ruin.

[Abraham Schalit]

CUBA, archipelago of islands consisting of Cuba, Isla de Pinos, and 1,600 smaller islands; population (2004) 11,300,000; Jewish population (2004) approximately 1,200.

The Colonial Period

Columbus discovered Cuba during his first voyage (1492). His interpreter, Luis de *Torres, was the first converted Jew to set foot in America. He was sent to explore the island and discovered the tobacco leaves smoked by the indigenous people. After the occupation of Cuba by Spain (1508–11), converted Jewish women were forcibly sent there as wives for the settlers. In 1518 the immigration of *New Christians to the Indies was banned, but the local authorities disregarded the new laws, since many of the colonists abandoned the Caribbeans for the rich empires in *Mexico and *Peru. Cuba became a marginal colony in the Spanish empire, growing cattle, tobacco, and sugar, and living on contraband trade. *Havana, however, was chosen as the assembly point of the treasure caravans on their way back to Spain, becoming a cosmopolitan port with merchants from different countries and different faiths. The local officials were more interested in their personal profits than in the economic interests of the Spanish crown, and overlooked the entrance of heretics. It is believed that Jews were present among the buccaneers that raided the island as well as among the merchants who traded with it. Groups of Jews fleeing from Dutch Brazil following the Portuguese reconquest (1654) settled in Cuba, concealing their religious identity.

Cuban historians mention the presence of converted Jews among the early producers of sugar as well as among Spanish officials, but there is little evidence for the existence of *Crypto-Jews, since there was no tribunal of the *Inquisition in Cuba. During the 16th century Cuba belonged to the jurisdiction of New Spain (Mexico), but in 1610 was transferred to that of the newly erected Inquisition in Cartagena (*Colombia). At least 15 judaizers from Havana were sent to Cartagena for trial during the 17th and 18th centuries, the first being Francisco Gómez de León, whose death sentence in 1613 was commuted to life imprisonment. With time, however, the Crypto-Jews were totally assimilated into the Catholic population, leaving only sporadic memories of Jewish ancestry among the oligarchic families.

The admission of Jews to Cuba was officially prohibited until the fall of the Spanish empire (1898). Nevertheless, a few Jews from the Caribbeans, especially *Curaçao, settled in the island during the 19th century, concealing their Judaism. A few Jews were involved in Cuba's struggle for independence, such as Louis Schlesinger, a Hungarian Jew who participated in the military expedition of Narciso López (1851). According to Jewish sources (which are not accepted by Cuban historians), General Carlos Roloff, one of the heroes of the Ten Years War (1868–78), was a Polish Jew. José Martí, the greatest leader of the Cuban people, had a friendly attitude towards the Jews, which was manifested in his writings. His Revolutionary Cuban Party (1892) received contributions from the Jews in Key West (Florida). Joseph Steinberg was decorated as captain of the Cuban Army of Liberation and was among the first Jews who settled in Cuba after the Spanish-American War (1898).

The Republican Period (1902–1958)

THE LEGAL STATUS. The legal basis for Jewish existence was established under the U.S. Military Occupation (1898–1902), which granted freedom of religion and implemented the American immigration laws. The Cuban population was generally indifferent to religious questions and tended to identify the Church hierarchy with Spanish colonialism. The first constitution of the Republic (1902) introduced the principles of religious freedom and separation of church and state. Cuba maintained an open door immigration policy until the revolu-

tion of 1933, which adopted discriminatory legislation against aliens. The revolutionary government of Grau San Martín (1933) passed a law that at least 50% of the workers in each establishment must be Cuban natives and new jobs were to be given only to Cubans. The Law of Nationalization of Labor was included in the 1940 constitution and was the basis for Cuba's immigration policy during the Holocaust. Since only persons who could prove their financial independence were granted immigration visas, the admission of refugees was made possible only within the margins of the law, as tourists or passengers in transition. In April 1942 President Fulgencio Batista prohibited further immigration from Nazi-occupied countries, but granted the refugees who were already in Cuba the right of legal residence until the end of the war. By the end of World War II almost all the Jews who remained to live in Cuba had been naturalized, enjoying legal equality with the rest of the Cuban population.

FORMATION AND INSTITUTIONAL DEVELOPMENT. *American Jews.* The first Jewish immigrants arrived in Cuba from the United States during the military occupation (1899–1902) and following the foundation of the Cuban Republic (1902). At that time American firms were deeply involved in the development of the sugar industry and in exporting consumer products to Cuba. A small group, of about 100 Jewish families, formed part of the large colony of American businessmen that was established in Cuba. In 1906 they founded the first Jewish organization – the United Hebrew Congregation (UHC) – with the objective of acquiring land for a Jewish cemetery. Among the founders were Maurice Schechter (a nephew of Solomon *Schechter), John Zoller and Louis Djurick (who were born in Romania), and Manuel Hadida (from Algiers). The UHC organized services for the High Holidays, and in the 1920s established a Reform synagogue. In 1917 the women founded the charitable Ezra Society, whose leading philanthropist was Jeanette Schechter. The American Jewish community, estimated in 1925 at around 300 persons, was mostly affluent, and charity was directed to less privileged groups, especially among the Jewish immigrants from Eastern Europe. In 1927 the American Jewish women founded the Menorah Sisterhood as an auxiliary of the UHC, which was responsible for religious life and conducted a Sunday School.

Sephardi Jews. The *Sephardim, most of whom came from European Turkey, were the second Jewish group. Their immigration started prior to World War I and continued throughout the 1920s. Attracted by the Spanish language, which resembled their native *Ladino, they worked as itinerant peddlers selling their goods throughout the island, following the expansion of the sugar industry. In 1914 the Sephardi Jews established a community organization called Unión Hebrea Shevet Aḥim, with the objective of supplying all their religious and social needs. Among the founders were Moise Bensignor, Víctor Atún, and Samuel Amon. The Sephardim used the Jewish cemetery owned by the UHC, until they were able to purchase their own cemetery in 1942. Apart from that, there was little contact between these Jewish groups, who came from different backgrounds and belonged to different social strata. In 1918 Shevet Aḥim formed two auxiliaries: Bikkur Ḥolim, which cared for the sick and was responsible for burials, and the women's charity – La Buena Voluntad. Rabbi Guershon Maya, who immigrated from Silivri (Turkey), acted as the spiritual leader of the Sephardim (1923–52).

Sephardi immigration increased after World War I, as a result of the disintegration of the Ottoman Empire. The newcomers were assisted by Shevet Aḥim, as well as by informal Sephardi networks of social help, especially in the rural areas. During the 1920s several Sephardi communities were established in the provincial towns with local cemeteries and synagogues: Camagüey and Holguin (1921); Santiago de Cuba, Ciego de Avila, Camajuani, and Manzanillo (1924); Banes (1926); Matanzas (1928); Santa Clara, Colon, and Guantánamo (1929); and Artemisa (1930). In 1924 it was estimated that the Sephardim numbered 4,000 persons – 1,500 of them in Havana.

Ashkenazi Jews. The aftermath of World War I brought over to Cuba the third – and largest – Jewish group. Immigration from Eastern Europe began in 1920–21 as a result of restrictive U.S. immigration policy. Deluded by travel agents with the promise that subsequent voyage to the land of their dreams would be easy, immigrants viewed Cuba as a transit point on their way to the United States. Most of the immigrants who arrived between 1920 and 1923 had left Cuba by 1925. But as a result of the stiffening of U.S. immigration laws in 1924, thousands of immigrants found themselves compelled to stay in Cuba. It is estimated that between 1921 and 1930, 17,700 Jews from Eastern Europe entered Cuba, but only 50% remained on the island. The arrival of the destitute immigrants coincided with the collapse of sugar prices that shattered the Cuban economy. UHC and the Ezra Society did their utmost to supply food and shelter to their hungry and helpless Ashkenazi brethren, but in view of the growing influx of refugees, they called on Jewish welfare organizations in the United States to intervene on their behalf. From the end of 1921 *HIAS maintained its representative in Havana, and in 1922–23 the American Jewish Joint Distribution Committee (JDC) added its support. Their intention was to alleviate the difficult conditions in Havana, but also to prevent further immigration, since they did not consider Cuba as a desirable destination or transit station. The Quota Act of 1924, however, convinced the American Jewish welfare agencies that passage from Cuba to the United States was ultimately blocked, and they decided to develop a program that would facilitate Jewish settlement in Cuba and prevent illegal entry into the United States. In 1925 HIAS, in conjunction with the National Council of Jewish Women, established the Jewish Committee for Cuba. Later this body, whose center was in New York, was joined by the Emergency Refugee Committee. The Jewish Community for Cuba (JCC) assisted individual Jews to establish themselves in small business, particularly in workshops for shoes and garments. In addition, it was active

in shaping local organizations, with the objective of creating a self-supporting community.

The JCC decided to turn the Centro Israelita – an organization that was founded by the immigrants in 1925 – into the central organ of the Jewish community. Led by David *Blis, Fiodor Valbe, Ben Dizik, and others, the Centro Israelita centralized a diversified range of actvities: aside from welfare assistance to immigrants, a clinic, a library, an evening language school, a student center, and a drama club. The Centro Israelita assisted in the establishment of other institutions, such as the religious Adath Israel organization (1925), the Unión Sionista (1924), and the Froyen Fareyn (1925). In the late 1920s, however, the JCC suspended its support, curtailing the activities of the Centro Israelita and causing the decentralization of the Ashkenazi sector. The Centro Israelita continued to represent the Jewish community vis-à-vis the authorities in matters of immigration, but it failed in its endeavor to become the Ashkenazi *Kehillah* – an objective that was achieved in the 1950s by the Patronato.

The religious services in the Ashkenazi sector were provided by Adath Israel, founded in 1925 by a group of Orthodox Jews who established a small synagogue in Old Havana. A rival synagogue – Knesset Israel – was established on the same street with Rabbi Zvi Kaplan as its spiritual leader (1929–39). Rabbi David Rafalín served in Adath Israel, until his immigration to Mexico (1932), where he became the spiritual leader of Nidjei Israel. Adath Israel, however, remained the central religious organization of the East European sector, with a Talmud Torah and a Chevra Kadisha.

The two major welfare institutions of the Ashkenazi sector were the Froyen Fareyn and the Anti-Tuberculosis and Mentally Ill Committee. Their functions reflect the difficult conditions of the immigrants, who suffered from diseases caused by poverty and difficulties of adaptation. The Women's Association established the Meidl Hey – a shelter for young women who arrived in Cuba alone and needed protection. Later it was converted into the Kinder Heym, where orphans or poor children of working mothers found asylum. In 1937, when poverty was less acute, the women founded the Ley Kasse – a loan fund that assisted small businessmen who needed credit.

ECONOMIC ADAPTATION AND CUBAN POLITICS. The Jewish upper class in Cuba was classified as American since most of its members were U.S. citizens who belonged to the UHC. Enjoying the tight economic relations between Cuba and the United States, they imported consumer goods, worked as high officials in American sugar companies and banks, or owned fashionable stores in the center of Havana. They resided in the fancy neighborhoods of Vedado and Miramar and adopted the way of life of the local American colony.

There were cases of rich Jews who did not belong to the Jewish community, married Catholic women, and assimilated into the Cuban bourgeoisie. One of them was Frank Steinhardt (1864–1938), who was born in Munich (Germany), immigrated to the United States, enlisted in the army, and was a sergeant during the war in Cuba. He became a successful businessman, served as U.S. consul general (1902–07), and became the owner of the Electric Railway Company in Havana.

A few of the early Sephardi immigrants were successful businessmen, like the fruit dealer Alejandro Rossich (Gabriel Cohen) from Macedonia. The majority, however, started as poor peddlers distributing consumer goods to the lower strata of the population, particularly in the provincial towns and around the sugar centers, where retail trade was scarce. Those who succeeded opened their own stores and supplied merchandise on credit to other peddlers. Though maintaining good relations with their Cuban neighbors, the Sephardim did not engage in Cuban politics. An exceptional case is that of Roberto Namer, born in Aleppo and resident of Holguin, who was appointed Cuban consul in Palestine in 1935.

Many of the Ashkenazi immigrants arrived from small shtetls in Poland, destitute, unskilled and with poor education, after having suffered the consequences of World War I. They crowded together in Old Havana in cheap hotels near the red light district of the port. According to the survey of Harry Viteles (1925), which served as the basis for the activities of the JCC, a few hundred Jews were engaged as day laborers in the construction of railroads, in the sugar centers, or on the docks. Most of them, however, were unable to cope with the physical hardships or to compete with the local cheap laborers.

Many of the early immigrants became peddlers, especially of cheap ware such as haberdashery and eskimo pie (ice-cream bars), or catered to tourists as street photographers and souvenir vendors. Among the Ashkenazim peddling was perceived as a temporary job, while waiting for an American visa, and most street vendors remained in Havana where competition was great. The retail trade in Cuba was dominated by the Spaniards, who saw the Jews as unfair rivals. Due to their influence the municipal authorities of Havana imposed heavy taxes on peddling permits and increased their control of illegal trade. In 1925 it was estimated that there were 500 East European peddlers in Havana and 300 in the interior. By 1933 there were only 150 in Havana. In addition to external pressure, the decision to remain in Cuba motivated peddlers to open a permanent business.

The economic crises that hit Cuba from 1920 on increased the demand for cheap local production that would compete with the expensive merchandise imported under the protection of the Reciprocity Treaty with the United States. Using their experience as shoemakers and tailors, East European immigrants started to produce shoes, underwear, and men's suits, especially for the lower classes. With the help of the JCC they acquired sewing machines and other working tools, opening workshops in the commercial center of Old Havana, where they employed other Jews. Morris Lewis, the director of the JCC, estimated in 1927 that there were between 1,500 and 2,000 Jewish workers in the sweatshops of Old Havana, working for low wages in the same difficult conditions that had existed in New York 25 years before.

The conflicting interests of the small entrepreneurs and their workers had an impact on political developments among the Ashkenazi Jews, especially in respect to the evolution of the Communists. The Jewish Communists established the Sección Hebrea in 1924, but with the foundation of the Cuban Communist Party (August 1925) gave up their separate organization. Three out of the ten founders of the party were Jews: Yoshke Grimberg, Avraham Simchovich (Fabio *Grobart), and Felix Gurvich. In 1926 they founded the Kultur Fareyn in order to attract Jewish workers to their banner. The rich cultural program, which included anti-religious parties on the eve of the Day of Atonement, became very popular in the Jewish neighborhood. The small, militant Communist group that led the Kultur Fareyn opened a cooperative restaurant that served as a secret meeting place for the party's activists. The Cuban CP was persecuted brutally by the government of Gerardo Machado (1924–33), especially from 1928, when the regime turned into a dictatorship. One of the first Communist victims was Noske Yalomb, a young Jewish worker from White Russia, whose body was found in Havana Bay. Four other Jews were murdered by the police between 1930 and 1933. Many others were expelled from Cuba as undesirable aliens, including the two Communist leaders Yoshke Grimberg and Chone Chazan. Grobart, who under the name of Simchovich was one of the founders of the party, returned secretly to Cuba after his expulsion, to become the liaison between the Komintern and the Cuban CP. In 1931 the Kultur Fareyn was closed by the authorities and its members were tried for revolutionary activity. In 1934 the organization was revived as the Yidishe Gezelshaft far Kunst un Kultur, but its cultural activities did not achieve their former popularity due to the decline of the Jewish working class after the 1933 revolution.

The 1933 revolution was based on a nationalist ideology directed against the domination of aliens in the domestic economy, combined with a struggle against the dictatorship and the corruption of the governing classes. The tremendous unemployment and the deplorable economic situation gave rise to an atmosphere of xenophobia. The slogan of President Grau San Martín was "Cuba for the Cubans." His decree that at least 50% of all workers should be native Cubans and that new jobs would be open only to Cubans became the symbol of the revolution. The political upheavals of 1933–34 were followed by the collapse of the revolutionary government and the intervention of the army, headed by Fulgencio Batista y Záldivar, who became the chief of staff and the strongman of Cuba (1934–40). Batista started to gain power through the repression of opposition. Among the victims of that period was Haim Grinstein, a member of the underground Joven Cuba group, who was sentenced to death by a court martial (1935). A few Jewish labor activists were imprisoned or went into exile. Moises Raigor (1914–36), son of the Yiddish printer Avraham Raigorodski, was a member of a cell of young Jewish Communists and became a leader in the Left Wing Students' Organization. After his release from imprisonment he joined the International Brigades and was killed in the Spanish Civil War.

In 1937 Batista started to build his image as a democratic leader by supporting the Spanish Republic and legalizing the CP. At the same time he adopted the banner of the Cuban revolutionary movement – the Law of Nationalization of Labor. This law restricted the rights of aliens to be wage earners, but encouraged them to engage in free enterprise that would create new jobs for Cubans. The discrimination against the Jews accelerated the process of deproletarization, since workers who were pushed out of the working class became self-employed or founded cooperatives with other associates. By 1944 there were only between 200 and 300 Jewish workers in Havana.

ANTISEMITISM AND THE REFUGEE PROBLEM. Until 1933 antisemitism was a marginal phenomenon in Cuba. The impact of the Catholic Church, and hence of religious antisemitism, was limited to the upper classes, who inherited Spanish colonial values. For the majority of the population, the *judíos* were diabolical mythical creatures who belonged to the realm of superstition, not to be associated with the immigrants from Eastern Europe whom they classified as *polacos* (Poles). Under Machado Jewish Communists were persecuted, but the Jewish community was not considered responsible for their acts. During the revolutionary period, apart from a few sporadic manifestations of anti-Jewish feeling, the Jews suffered the consequences of political agitation and anarchy together with the rest of the population.

The emergence of antisemitism was connected to the crisis of the Spanish minority after the 1933 revolution as well as with the rise of Nazi Germany. The Spaniards had enjoyed a privileged position in Cuba, and saw themselves displaced by the Jews from their traditional dominance in trade and light industry. Their classification as aliens by the revolutionary government gave rise to a wave of attacks against the Jews based on religious anti-Jewish arguments as well as on concepts of modern antisemitism. At the same time, Nazi Germany inundated Cuba with antisemitic propaganda, finding fertile ground among upper-class Spaniards who were influenced by right-wing elements in their homeland. During the Spanish Civil War the lower-class immigrants from Spain sided with the Republic together with the majority of the Cuban population, which identified the nationalist forces with their oppressors during the colonial era. The upper-class Spaniards, however, identified with Franco, establishing a Cuban branch of the Spanish Falange. Their leader was José Ignacio Rivero, editor of the influential newspaper *Diario de la Marina*, which became the most important organ in diffusing antisemitic propaganda from Nazi sources. The fierce anti-Jewish attacks had an impact on the problem of the Jewish refugees.

The refugees from Europe, who managed to slip in despite severe immigration laws and whose overall number in the years 1933–44 was estimated at about 10,000–12,000 (about 50% from Germany and Austria and the remainder from Poland and other countries), left Cuba, for the most part, after a

few years. According to an estimate, in 1949, only 15% of them remained there. After World War II Jews did not reach Cuba in large numbers. The first refugees came from the United States in 1937 for a short stay, in order to obtain American immigration visas. They were aided by the JDC, which for this purpose founded the Joint Relief Committee in Havana. The number of refugees who came directly from Europe reached considerable proportions following the annexation of Austria (March 1938) and especially after *Kristallnacht* (November 1938). At that time the German quota for the U.S. consulate in Havana was cut drastically, and refugees were forced to remain in Cuba. Refugees had obtained entry permits using loopholes in Cuba's immigration laws, in semi-official arrangements based on graft. The sale of entry permits to the Jewish refugees was complicated by internal political conflicts between President Federico Laredo Bru and the military circle around Chief of Staff Batista, which reached its peak in the famous incident of the *Saint Louis*. The voyage of the Hapag Company's luxury liner *Saint Louis* was engineered by the German Ministry of Propaganda as proof that Jews were permitted to leave the Reich, but that democratic countries refused to admit them. A sustained anti-Jewish campaign was organized and financed by local and foreign Nazi elements in collusion with the German embassy. The Government of Laredo Bru invalidated the entry permits held by most refugees before the ship sailed from Hamburg, and it interpreted the arrival of the German ship as a violation of its laws. Disagreements between the president and Batista complicated the situation, but the direct victims of internal and international conflicts were the 936 Jewish refugees who, upon reaching Cuba on May 27, 1939, aboard the *Saint Louis*, were barred from entry and forced to return to Europe, in spite of the efforts of the JDC to reach an agreement. Four countries in Europe consented to admit the refugees to prevent their return to Germany – France, Belgium, Holland, and England. Unfortunately, only the fourth group was saved. Following the invasion of Western Europe many of the passengers who found refuge in France, Belgium, and Holland were deported to extermination camps, and the story of the *Saint Louis* became a symbol of the fate of the refugees.

The administration of Laredo Bru closed the gates of Cuba on the eve of World War II, but they were reopened when Batista was elected president (1940). Between 5,000 and 6,000 refugees were able to enter Cuba from October 1940 until April 1942. Many of them had fled from Western Europe after the German invasion. Like their predecessors, they were not allowed to work, and they depended on the assistance of the JDC or became self-employed in small industry or trade. The most important contribution of the refugees to the Cuban economy was the establishment of diamond workshops by immigrants from Antwerp (Belgium) that prospered during the war years and provided employment to Cuban workers as well as to the local Jews. In 1943 it was estimated that at least 1,200 workers and 100 proprietors worked in the diamond industry.

In December 1941 Cuba declared war against the Axis and in April 1942 President Batista prohibited further entry of passengers from Nazi-occupied countries, but at the same time granted the refugees permission to remain in Cuba until the end of the war. The passengers of two ships, *São Tomé* and *Guiné,* were refused landing, but the diplomatic representatives of England and other Allied countries pressed President Batista to avoid a repeat of the *Saint Louis* incident, and the 450 refugees remained detained in the immigrant camp of Tiscornia for eight months, before they were released.

The refugees from Germany and Austria founded the Asociación Democrática de Refugiados Hebreos (1941) and the Belgians established the Asociación de Refugiados Hebreos (1942). Since German spies entered Cuba disguised as Jewish refugees, these organizations fulfilled an essential function in identifying their members as authentic Jews who as victims of Nazism defended the Allied cause.

Political threats and antisemitic attacks were correlated with the attempts of the Jewish community to establish a central organization. At first, the Jewish community did not present a united front. Moderate factions, e.g., Americans and heads of the Centro Israelita, feared that large-scale Jewish action might be interpreted as disrupting public affairs and might thus evoke police repression. Nevertheless, a certain amount of community cooperation was obtained during the 1930s through the following institutions: The Federación Israelita de Cuba (1932); Comité Intersocial (1932–35), collaborating with the Comisión Jurídica (1933–34); among its functions was the liberation of Jews imprisoned during the political disturbances; Jewish Committee of Cuba (1935–36), in which Sephardim, Ashkenazim, and Americans collaborated. The Jewish Chamber of Commerce assumed the defense against antisemitism and represented the community on official occasions (between 1936–39). Only during the *Saint Louis* incident, when the antisemitic propaganda threatened their existence, did Cuban Jews finally reach accord. The Comité Central was organized in 1939, comprising all sectors of the community, and was recognized as its representative organ by the Cuban authorities. It joined forces with anti-Fascist bodies and supported the Allies in World War II. Antisemitism, however, started to decline shortly after the foundation of the Comité Central, since the German agents who instigated the anti-Jewish campaign left the island. After the outbreak of World War II propaganda of totalitarian countries was prohibited by law. The anti-Jewish activities practically disappeared by the time of the Japanese attack on Pearl Harbor. On December 9, 1942, when news on the extermination of the Jews in Europe reached Cuba, the Senate approved a resolution condemning the persecution of the "Hebrew race" by the German government.

After World War II there were rare manifestations of social discrimination against Jews, but on the whole antisemitism did not strike roots in the Cuban population.

EDUCATION AND CULTURE. The Jewish day schools in Havana were part of a large network of private schools that served different ethnic groups as well as the middle and upper classes. The only complementary Jewish school was the Sunday School of the UHC, which provided religious education for the American children who studied in prestigious private schools.

The first Jewish day school in Havana, Teodoro Herzl, was founded by the Sephardi community Shevet Aḥim in 1924. The leading force behind it was Ezra Behar, who expressed his educational principles in *Fundamentos de la moral hebrea* (1930). The school's orientation was a combination of religious tradition with a Zionist spirit.

The largest Jewish day school was founded by the Centro Israelita under the auspices of the JCC in 1927. At that time, the policy of the school was to help Jewish children in their process of integration. Parents discovered that acculturation could lead to assimilation, and they showed a growing concern about the content of the Jewish heritage transmitted in the school. Until 1939 the Yiddish school was part of the Centro Israelita, but a series of organizational and financial crises resulted in its reconstitution as the Autonomous School affiliated with the Centro Israelita (Oitonome Shul Beim Yiddishn Zenter). The director of the Autonomous School, Eliahu Eliovich, was considered a Bundist, but the school aimed to serve the entire Ashkenazi sector and to preserve its apolitical character by compromising among the conflicting political views. Emphasis was placed on the study of Yiddish and Jewish history, with a secular interpretation of the Jewish tradition. After World War II, and especially after the establishment of the State of Israel, the school became openly Zionist. In the 1950s the Centro Israelita ceased to exist, but the Autonomous School opened a high school (1954) and remained the central Jewish school.

A private Jewish school was founded in 1935 by Joseph Abrami, a Hebrew teacher who withdrew from the school of the Centro Israelita in protest against the domination of Yiddish. Abrami, a declared Zionist, opened the Yavneh Hebrew school, which operated until 1945. In 1940 left-wing elements, led by the Communist group, opened the Sholem Aleichem Shule – a Yiddish school for the working class. It was closed in 1949 together with other Communist organizations. The religious sector reopened a Jewish school following the fusion of Adath Israel and Knesset Israel in 1948. Rabbi Meir Rosenbaum, appointed spiritual leader of the new organization, Achdut Israel, founded the Orthodox school Taḥkemoni, which combined modern and religious education. Among the central figures in Jewish education was Ida Glazer de Castiel, a graduate of Havana University, founder of the Modern Jewish School (1944), who published several articles in the Jewish press with the objective of modernizing the Jewish school system. David Pérez, a teacher in the Sephardi school, left his imprint on Jewish education with the *preparatoria* – training courses for admission to high school that encouraged children, particularly in the Sephardi sector, to continue their studies.

The first Jewish university students founded the *Circulo de Estudiantes Hebreos* in 1928 with the aim of creating a bridge between the Jewish and Cuban cultures. The students published the first Jewish periodical in Spanish, *El Estudiante Hebreo* (1929–31), but all their activities were suspended when Machado closed the University of Havana. This periodical, however, is one of the few sources that records the ideological development of the Sephardi sector.

While the American and Sephardi communities conducted their social and cultural life inside their closed circles, the East European Jews left considerable written records on their cultural activities. In the 1920s immigrants showed a strong inclination toward the theater, literary evenings, and "literary trials." In 1927 the first Jewish book was published in Cuba – the poetry of N.D. Korman, *Oyf Indzler Erd*. A year later the poet Eliezer Aronowski (1904–85) published the book *Kubaner Lieder*. Aronowski became the most prolific Yiddish poet in Cuba, accompanying in his writings all the historical events in Cuban Jewish life. His last book, *Kuba*, was published in 1983, shortly after his emigration from the island. Aronowski and I.A. Pinis devoted poems not only to Jewish subjects, but also to the heroes of Cuban history. Avraham I. Dubelman wrote short novels describing the life of the immigrants. His first anthology, *Oyf Kubaner Erd*, appeared in 1935. Other prose writers were Pinchas Berniker, Avraham Weinstein, I.B. Mankelkern, and Osher Schuchinski. Among the few books written in Spanish was the poetry of Sonia Winer, *Compañeras*.

A considerable part of this literary work was published in the Jewish press. The *Havaner Lebn Almanaque* of 1943 lists the titles of 59 journals and periodicals that were published in Cuba – 11 in Spanish (four of the Sephardi community), four in German (by refugees), and 44 in Yiddish. Among the more important periodicals were *Oyfgang* (1927–30), organ of the Centro Israelita in its heyday; *Dos Idishe Vort* (1933–35), edited by David Utiansky with a pro-Communist orientation; and *Kubaner Yiddisher Vort* (1942–50), the organ of the Jewish Communists. The central newspaper of the Yiddish-speaking Cuban Jews was the *Havaner Leben-Vida Habanera* (1932–63), edited by Sender *Kaplan, whose content was pro-Zionist and dedicated to general and Jewish news. After World War II the number of publications in Spanish increased and they were directed also to the non-Jewish population. Abraham Marcus Matterín (the librarian of the Patronato between 1953 and 1983) edited a number of periodicals, including *Israelia, Hebraica,* and *Reflejos.* Marco Pitchon, president of B'nai B'rith (founded in 1943), was editor of its organ, *Fragmentos*.

THE ZIONIST MOVEMENT AND RELATIONS WITH ISRAEL. The founder of the Zionist Movement in Cuba was David *Blis who was nicknamed "The Grandfather of the Jewish Community." He settled in Cuba in 1913 and cooperated with Shevet Aḥim in its early Zionist activities, particularly after the *Balfour Declaration. Blis presented a memorandum on the Jewish

question to prominent politicians, and thanks to his endeavors the Cuban Senate approved, on April 30, 1919, a resolution in favor of a Jewish National Home in Palestine.

In 1924 a group of East European immigrants founded the Unión Sionista de Cuba. Due to the small number of Zionists and to the constant outgoing migration, the founders decided to unite all Zionists in one organization, regardless of ideological divisions. In comparison with the lively cultural activities of the leftist circles, the beginnings of the Zionist organization were quite poor. Dr. Ariel Ben-Zion, the first emissary of *Keren Hayesod, who arrived in Cuba in 1926, had little confidence in the East European immigrants, and organized a new Zionist committee composed of a few wealthy Jews, mostly from the American sector. Ben Zion also ignored the Zionist leadership of Shevet Aḥim and founded a Cuban branch of a Zionist-Sephardi network that he formed in Latin America called Benei Kedem. This policy proved shortsighted, as both organizations vanished shortly after his departure, leaving those devoted to Zionist ideals without proper communication with the central Zionist offices in Jerusalem.

At first, the Unión Sionista was assisted by the JCC, but after a schism with the Centro Israelita it was reorganized with the cooperation of Shevet Aḥim. The president of the Unión Sionista, Avraham Kamioner (1928–34), came from Poland, but most of the board members were Sephardim. The secretary, José Cohen (Joseph Isaac *Cohen), was a rabbi from Istanbul who immigrated to Cuba from Jerusalem and served as a Hebrew teacher in the Teodoro Herzel school. Cohen conducted the correspondence of the Unión Sionista in Hebrew and published ideological articles in the local Jewish press. In 1934 he left Cuba to serve as rabbi of the Or Veshalom Congregation in Atlanta, Georgia. During its "Sephardi period" the Unión Sionista organized protests against the massacres of 1929 in Eretz Israel and against the immigration policy of the British government. It conducted small campaigns on behalf of the *Jewish National Fund and organized cultural events in Spanish. The East European Jews, however, rejected the religiously oriented Zionism of the Sephardim and the use of Spanish in their functions. New Zionist leaders from Lithuania and Poland founded the *He-Ḥalutz (1932) and *Ha-Shomer ha-Tzair (1933) youth movements with the object of reconstructing the ideological frameworks brought over from their communities of origin. The predominance of Yiddish removed the Sephardim from the common organization, and they founded their own Zionist frameworks, including the Maccabi youth movement (1934).

During the period of the Holocaust, Zionist activities in Cuba, as in other American lands, focused on campaigns on behalf of the Jews who found refuge in Eretz Israel. The tragic situation in their communities of origin, followed by destruction and extermination, increased the readiness of the Jews to contribute generously to the national campaigns, even if they did not adhere ideologically to the Zionist movement. Economic progress, particularly during the war years, increased their ability to give. The Communist group and the Zionists competed for the leadership of the Jewish community. Following the treaty between Hitler and Stalin, the Communists were expelled from the Centro Israelita and founded their own organization – Folks Tzenter. After the invasion of Russia by Nazi Germany, the Communists regained their influence, organizing campaigns on behalf of the Red Army and representing the Jewish community in Cuban anti-Nazi organizations. The Zionist movement, however, increased its influence and became the dominant factor in the Jewish community. The veteran activists, such as Chaim Shiniuk, Raphael Zilber, and Israel Luski, acted under the instructions of the Zionist emissaries sent by the World Zionist Organization. One of the most influential among them was Iosef Tchornitzky from Mexico, who organized the Keren Hayesod campaigns of 1942 and 1943. The local Zionists were also inspired by the refugees from Belgium who found temporary shelter in Cuba during the war. Many of the refugees from Belgium had been born in Poland, and they brought with them their former political and religious beliefs. The Orthodox established their own synagogue, Machazikei Torah, with Rabbi Samuel Alter as their spiritual leader. They organized a small school and a youth movement, Pirchei Agudath Isroel, which operated throughout the war. The Asociación de Refugiados Hebreos of the Belgian Jews opened a Zionist section and a youth movement, Banativ, but they were also accepted as leaders by the veteran Zionists, who admired their higher knowledge as well as their economic success in the diamond industry.

A turning point in the history of Cuban Zionism was the visit of Nathan Bistritski (see Nathan *Agmon), the emissary of the Jewish National Fund to Latin America, who reached Cuba in 1943. Bistritski focused his efforts on the ideological education of all the Jewish sectors, and at the same time established diplomatic contacts among Cuban intellectuals and politicians in order to create favorable public opinion for the foundation of a Jewish State in Palestine after the war. The Comité Cubano Pro Palestina Hebrea (CCPPH) was the first among similar organizations in other Latin American countries, and it was supported by prominent figures, including members of the cabinet, the Congress, and the Senate, from the liberal center to the Communist left. The secretary of the CCPPH was the director of the Office of War Propaganda, Ofelia Domínguez y Navarro, a Communist lawyer who remained a faithful defender of the Zionist cause under Castro's regime. One of the most ardent supporters of the CCPPH was Senator Eduardo Chibás, who passed a resolution that was approved unanimously by the Cuban Senate on October 29, 1945, that "it would view with satisfaction that Palestine, the historical homeland of the Hebrews, be constituted as soon as possible as a Hebrew independent and democratic state."

The solidarity of influential sectors, however, did not alter the decision of President Grau San Martín (1944–48) to oppose the United Nations Resolution on the Partition of Palestine of November 29, 1947, making Cuba the only Latin American state to oppose partition. Grau's decision rested on political considerations, including his bitter conflict with

Senator Chibás. When his successor, Carlos Prío Socarrás, ascended to the presidency, Cuba recognized the State of Israel and in 1951 Sender *Kaplan, editor of the periodical *Havaner Leben,* was named honorary consul, a role that he fulfilled until 1960. Raphael Zilber, one of the oldest Zionist leaders in Cuba, immigrated to Israel and became Cuba's commercial representative. Diplomatic relations between the two countries were established in 1954, with the ambassador in Mexico acting as Israel's representative. Only after the Castro revolution were the consulates converted into legations, and Israel was able to send a resident ambassador to Havana.

Towards the foundation of the State of Israel the Cuban Jewish community experienced an ideological transformation that resulted in the predominance of the Zionist movement. According to Sender Kaplan, the "Zionization" of the community was achieved through the women who founded WIZO in 1942. Organizing different committees of American, Sephardi, Ashkenazi, and refugee Jews, the women became a central factor in the education of the Jewish family. The decline of the Cuban CP during the Cold War had an impact on the Jewish Communists, and many of their longtime sympathizers changed their beliefs and embraced the Zionist cause. In 1947 two groups of Cuban Jews, almost all of them Sephardim, volunteered to fight in the War of Liberation, assisted by *Betar, which was founded in Cuba in 1940. The first group arrived onboard the *Altalena*, and two of its members – Daniel Levy and David Mitrani – were killed. Following the establishment of the State of Israel, the Sephardim founded the Consejo Pro Israel as the Zionist organ of Shevet Aḥim.

Throughout the 1950s participation in Zionist activities became the common denominator of all the Jewish sectors, which followed with zeal the development of the State of Israel. Zionist sources calculated in 1952 that the overall number of Jews in Cuba was 12,000, 7,200 of them Ashkenazim. About 75% were concentrated in Havana, and the rest were dispersed in Santiago de Cuba, Camagüey, Santa Clara, and other towns throughout the island. Only a limited number of Cuban Jews immigrated to Israel following its independence. Most of them were members of Ha-Shomer ha-Tzair who settled in the kibbutzim of Ga'ash (1949) and Devir (1954).

PROSPERITY UNDER BATISTA. The military dictatorship of Fulgencio Batista (1952–58) was a period of political upheaval and violent political repression, but for the small Jewish community it represented the peak of its achievements. Most Jews were integrated economically into the Cuban bourgeoisie and were able to raise their standard of living. The once poor immigrants residing in Old Havana moved into better residential areas, such as Santos Suarez and Vedado, or into the elegant Miramar. The Sephardim were concentrated in the provincial capitals and later moved to Havana, where economic prospects were better and where their children could find a Jewish spouse. Progress was less noticeable among the Sephardim, with a considerable number still engaged in peddling on the eve of the Castro revolution.

A growing number of the immigrants' children – Ashkenazim and Sephardim – studied at the University of Havana and turned to the liberal professions. A group of young intellectuals founded the Agrupación Cultural Hebreo-Cubana to increase understanding between Cubans and Jews. The 1940s and 1950s were a period of great political fermentation among university students, which turned into an open war against the regime of Batista. Jewish students, however, tended to avoid political participation, their integration into Cuban society being in its early stage. Only a small number of Jews took an active part in the Students' Revolutionary Directory or in Castro's 26 of July Movement. Most of them were active in Jewish organizations, such as the Ha-Shomer ha-Tzair and Ha-No'ar ha-Tziyyoni youth movements, or in the social clubs of the different communities.

Unaware of the coming revolution, the Jewish population felt confident of its future in Cuba, and its institutions moved from their rented premises into newly constructed buildings that reflected the prosperity of their members. The Orthodox sector, headed by Rabbi Meir Rosenbaum, tried to create a Kehillah – a united communal organization of the Ashkenazi sector that would rest on a religious base. After a series of conflicts a group of rich businessmen that included Herman Heisler, Leib Hiller, Isaac Gurwitz, and Julio Karity took the initiative and contributed the necessary funds for the construction of the Patronato – a beautiful modern building in Vedado, with the main Ashkenazi synagogue and spacious grounds for social and cultural functions. The Patronato – the House of the Jewish Community – was to become the representative organ of Cuban Jews and the center of all their activities.

The Orthodox Jews of Old Havana built a modern building for Adath Israel, with a large synagogue and a *mikveh*. The Unión Sionista had an old building not far from Old Havana and could not compete with the social services offered by the Patronato. The Sephardim followed the example of the Ashkenazi sector in building a luxurious synagogue in Vedado, but the new Sephardi Center was inaugurated when Castro was already in power. The American community, which celebrated its 50th anniversary in 1956, initiated a building project that never materialized. The American Jews were among the first to leave Cuba after the revolution, returning to the United States, which they considered their homeland.

The Revolutionary Period

THE IMPACT OF CASTRO'S REVOLUTION. The victory of the revolution on January 1, 1959, was welcomed by the Jewish community, which shared the euphoria of the Cuban population, believing that Fidel Castro would put an end to corruption and injustice. The new regime was not prejudiced against the Jews, and the political careers of those who were involved in the downfall of Batista were not hindered by their Jewish origin. The engineer Enrique Oltuski, who coordinated the revolutionary forces in the province of Las Villas, was appointed minister of communications (1959), becoming the first

Jewish member of the cabinet in the history of Cuban Jewry. In spite of ups and downs in his political career, Oltuski served in different governments, until recently as deputy minister of fisheries. Other Jews who were rewarded for their revolutionary actions were Máximo Berman, an activist of the 26 of July Movement, who became minister of commerce. Martin Klein and Victor Sarfati, who were both rebel revolutionaries, attained the rank of captain and colonel in the Armed Forces. The most prominent Jew was Fabio Grobart, the veteran Communist who remained a central figure in the Communist hierarchy. The revolutionary regime treated its Jewish subjects with equity and neither during the revolution nor after its success were any antisemitic attitudes adopted. But, by effecting profound changes in the social, political, and economic structure of the country, the revolution practically destroyed the economic stability of the majority of Cuban Jews.

Nationalization of private business by force, economic privations, and Fidel Castro's open identification with Marxist-Leninist ideology were among the causes of the large-scale emigration of upper- and middle-class Cubans as well as of the Jews.

Out of a Jewish population of about 12,000 before the revolution, in 1965 there remained about 2,500 Jews and in 1970 only about 1,500. In 1989 there were only 892 persons listed as recipients of products for Passover – 635 of them were Jews and 258 were their non-Jewish relatives; 82% of the Jews listed lived in Havana and the rest in provincial towns. The exodus of Cuban Jews, like that of their non-Jewish counterparts, was directed mainly towards *Miami, though many were relocated by HIAS in other cities in the United States or settled in other Latin American countries, like Puerto Rico, Venezuela, and Mexico. The Cuban government treated these emigrants as enemies of the revolution and their property was confiscated. The Jews who decided to make **aliyah* were treated with more respect, as fellow idealists. The Jewish Agency was able to charter from the Cuban Air Company three airplanes, bringing to Israel 420 *olim* (1961–62). The exodus started in 1960 with the wealthy merchants and industrialists, whose business activities were stopped by the INRA (National Institute of Agrarian Reform), but it included also the lay and religious leadership. A second wave of emigration, mostly of lower-middle-class Jews, was caused by the nationalization of small businesses in 1968.

The Jews who chose to remain in Cuba because they adhered to the revolutionary ideology preferred to stay aloof from the Jewish community, fearing that it would taint their reputations by identifying them as practitioners of religion. A relatively large number of these Jews turned to academic studies and integrated into the state economy in the liberal professions, a few attaining national fame for their remarkable achievements in science, music, literature, cinematography, and art. Among those who stayed were all the veteran Communists, whose merits were recognized by the new regime, but their attempts to represent the Jewish community were rejected by its members, who continued to identify with the Zionist movement. The new president of the community was Moisés Baldás (1961–81), born in Poland where he studied at a Tarbut school and was fluent in Hebrew. He had immigrated to Cuba in 1927 and become a successful businessman, but following the revolution he decided to dedicate himself to the declining community, presiding over the Patronato and the Unión Sionista and acting as the representative of the Jewish Agency. His functions included the protection of the Jewish community vis-à-vis the government as well as the provision of the spiritual and material necessities of those who remained affiliated with it. A large proportion of these Jews were elderly or handicapped, and they depended on the Jewish community for their sustenance. As individuals, these Jews lived in the margins of the revolutionary society, but the religious freedom of the Jewish community as an institution was protected and respected by Castro's government.

The Jewish institutions throughout Cuba were not dissolved by the government, and their existence depended on the activity of their members and not decrees from above. The five synagogues of Havana continued to function throughout the 1960s and 1970s. Temple Beth Israel of the American Jews was sold to the government around 1980 for lack of membership, and its property – including the Jewish cemetery – was transferred to Adath Israel. The three modern buildings of Adath Israel, the Patronato, and the Centro Sefaradi were permitted to rent out the unused parts of their spacious buildings to Cuban cultural organizations, so that rent received indirectly from the government covered the current expenses of the Jewish institutions. The synagogue of Shevet Aḥim in Old Havana was used until the late 1990s and was closed due to the deterioration of the building.

The Cuban government respected the Jewish dietary laws, and permitted Adath Israel not only to have their *shoḥet* use the government slaughterhouse, but also to operate the only private business – the kosher butcher shop where Jews were allowed to receive their meat rations. The Jewish community was permitted to receive packages of *matzot* and other products for Passover from abroad that were sent annually, from 1961, by the Canadian Jewish Congress. For the distribution of these products, which became the major form of identification with the Jewish community, Moisés Baldás organized the Comisión Coordinadora – a committee with representatives of the five synagogues that served as a central organization for Cuban Jewry.

The nationalization of education, in 1961, brought about the closure of all private schools, but Jews were granted special permission to impart Jewish education within the government system. The Autonomous School of the Centro Israelita was converted into a public school named after Albert Einstein, and in addition to the regular curriculum provided daily classes in Hebrew, Yiddish, and Jewish history. The government supplied transportation for Jewish children living in other parts of the city. This arrangement lasted until 1975, when it was suddenly stopped by government order. A small Sunday school was set up in the Patronato, where Baldás

taught Hebrew and Jewish culture until his immigration to Israel in 1981.

The Unión Sionista continued to exist, and its members were able to carry on various cultural and educational activities within the limits of the revolutionary regime. Cuba was among the sponsors of the United Nations Assembly Resolution equating Zionism with racism (1975). It took, however, three years before the government realized that a Zionist organization was still functioning in Cuba. In 1978 the Unión Sionista was closed by government order and its building was confiscated and handed over to the PLO.

THE REVIVAL OF THE 1990S. The fall of the Soviet Union and the Communist Bloc in Eastern Europe caused a severe crisis in Cuba and shattered its economic base. Castro's government was forced to make ideological concessions to survive, including greater religious freedom and an influx of tourists and foreign investors. In 1990, when Castro declared the emergency policy of "the Special Period," the Jewish population had already been assimilated, and it shared with the rest of the Cuban people the economic difficulties as well as the crisis of values. The small community consisted of around 800 members and the intermarriage rate was over 90%. The Jewish presence was felt only in the Havana synagogues, where elderly people participated in the daily services of Adath Israel or the Sabbath prayers in the Patronato and Centro Sefaradi, to receive the modest meals offered after services.

From 1981 the community had been led by José Miller Ferdman, a dental surgeon born in Cuba who in the 1950s was secretary of the Agrupación Cultural Hebreo Cubana – an organization of Jewish intellectuals who tried to bridge between their Cuban and Jewish identities. Miller was one of the few Jews who remained faithful to Judaism while identifying with the revolutionary regime and achieving prominence in his professional field. Miller served as president of the Patronato from 1981 and is the representative of the Jewish community vis-à-vis the authorities. Adela Dworin, the main official of the Patronato, is one of the few Cuban Jews with a Yiddish background and Jewish education. She served as the librarian and secretary of the Patronato and was appointed vice president in view of increasing activities following the Jewish revival of the 1990s.

The revival of the community was engendered by the critical situation in Cuba but was made possible by spiritual and material assistance from abroad. From the mid-1980s Jewish tourists, particularly from Latin America, started to visit Cuba, and their donations became an important source of support to the declining community. A small Sunday school was reorganized in the Patronato in 1985, with Moisés Asis and Dr. Alberto Mechulam as volunteer teachers. They were assisted by the religious emissaries of *Ḥabad, who later focused their activities around Adath Israel, which became identified with the Orthodox movement. A small group of young Jews, born in mixed families and raised under the revolution, started to search for their roots in the Jewish community and to organize spontaneously, seeking spiritual guidance.

The growing need of the new generation to rediscover its Jewishness was met by the JDC, which started to assist the Jews of Cuba through its branch in Buenos Aires, providing religious and social leaders. The most influential among them was Rabbi Shmuel Szteinhendler, a graduate of the Seminario Rabinico of the Conservative movement in Buenos Aires, who served as rabbi in Guadalajara (Mexico). Throughout the revolutionary period the Jewish community of Cuba depended on the occasional visits of religious Jews to conduct services or perform religious ceremonies. During the 1980s the community had no *mohel*, and children grew up without circumcisions and bar mitzvahs. Rabbi Szteinhendler visited Cuba several times and in addition to his performance of Jewish rituals he trained local Jews to conduct their own services. He prepared persons who identified as Jews but were not halakhically Jewish to reaffirm their religion through conversion and religious marriage. About 150 males were circumcised before they were converted by a Bet Din of three rabbis that visited Cuba for this purpose, using the *mikveh* of Adath Israel. Szteinhendler also assisted in the revival of Judaism in the provincial towns, which had remained isolated from Jewish life since the revolution. Renovated communal institutions were established in Cienfuegos (1993), Guantánamo (1994), Santiago de Cuba (1995), Santa Clara (1995), Sancti Spiritus (1996), Manzanillo (1997), and Camagüey (1998).

The Jewish renaissance was accompanied by a trickle of *aliyah*, which increased considerably after 1994 following the quota imposed by U.S. President Clinton on immigration from Cuba. The main reasons for emigration were the difficult economic situation in Cuba, and many Jews did not hide their desire to use Israel as a stepping stone on their way to Miami. Lack of official relations between Cuba and Israel resulted in a secret arrangement between Cuba and the Jewish Agency, code-named Operation Cigar. In 1999 it became known that around 600 *olim* had reached Israel, but publicity did not hinder the *aliyah*, which continued on a small scale. The community today is a center of great activity, particularly of the younger generation, as well as a focus of interest and philanthropy for Jews in the Western Hemisphere.

[Margalit Bejarano (2nd ed.)]

Cuba-Israel Relations

Following Fidel Castro's revolution in 1959, and before Castro declared his intentions of introducing into Cuba a Socialist system based on the Soviet one, there was a period of fairly intense activity, which, inter alia, found expression in a series of trade agreements signed in 1959, 1960, and 1962. During Batista's administration Israel and Cuba were represented by their honorary consuls and by non-resident ambassadors. Diplomatic relations were strengthened under Castro, with the nomination of Dr. Jonathan Prato as the first resident ambassador in Havana (1961). Castro's sympathetic attitude towards Israel was partly due to his personal relations with Ri-

cardo Subirana y Lobo (Richard *Wolf), a German Jew who had immigrated to Cuba prior to World War I and was appointed Cuba's ambassador to Israel (1961) in recognition of his generous support of the revolutionary struggle. Subirana y Lobo sent at his own expense agricultural and technical experts from kibbutzim to Cuba and used his personal contacts with Castro to protect the interests of Israel as well as those of Cuban Jews. Following the severance of diplomatic relations between the two countries (1973), he settled permanently in Israel and founded the Wolf Foundation.

The growing similarity of outlook on foreign policy between the Cuban government and the Soviet Union led to Cuban support of the Arab position. Cuba – alienated from its neighbors in the Western Hemisphere and suspended from participation in the Organization of American States – came to seek support, increasingly, among the countries of the so-called Third World, among which Egypt and Algeria played a prominent role. With the establishment in Havana of the Secretariat of the Tri-Continental Organization, which adopted the cause of the anti-Israel Palestine Liberation Movement (*PLO), Havana became increasingly active in spreading its doctrine. The press and radio of Cuba reflected this tendency, particularly after the Six-Day War (1967), in a one-sided editorial policy and selection of information. However, in spite of the heavy pressure brought to bear upon it, the Cuban government refused to break diplomatic relations with Israel and maintained its policy of recognizing Israel, and on various occasions manifested its support for Arab-Israel negotiations as a preferable means of resolving the Middle East conflict. At the United Nations, however, the Cuban government was consistent in supporting the Arab viewpoint against Israel from the mid-1960s and relations between the two countries continued to deteriorate.

In September 1973, during the Conference of Non-Aligned Nations in Algiers, Castro announced his decision to sever diplomatic relations with Israel. The attacks against Israel in the Cuban media became unrestrained, and Cuba endorsed a militant anti-Israeli and pro-Palestinian position in all the international arenas. In 1975 Castro's government co-sponsored United Nations Resolution 3379 declaring Zionism a form of racism. Propaganda against Israel and against Zionism has since been virulent, but the Cuban government was cautious not to slide into antisemitism or deny the legitimate existence of the State of Israel. The Cuban media made a clear distinction between anti-Zionism and antisemitism, and the Jewish community has never been attacked or discriminated against in spite of the hostile attitude towards Israel. Likewise, Cuba's permanent condemnation of Israel and its defense of the Palestinians were directed against the Israeli government and its policy, not against the people or the existence of the state. A Friendship League including members of the Israel Communist Party has been active since the 1960s.

The end of the Cold War did not alter Cuba's pro-Palestinian position, nor its anti-Israel pronouncements in all international forums. The official hostility towards Israel is nurtured by its close relations with the United States, manifested by its consistent voting in the United Nations in support of the American embargo. Quietly, however, there were signs of change in the economic and cultural spheres as well as a softening line in politics conditioned by prospects of peace in the Middle East. Private Israeli firms invested in Cuba's post-Soviet economy, and there were signs of rapprochement of non-political entities, such as academic and artistic institutions.

CUBAN, MARK (1958–), U.S. businessman, owner of the Dallas Mavericks basketball team. Cuban was born in Pittsburgh, Pennsylvania, his paternal grandparents having come to America from Dnepropetrovsk, Ukraine, and his maternal grandparents from near the Austrian/Russian/Polish border. Cuban began exhibiting acumen for business as a 12-year-old, when he sold garbage bags door-to-door. Attending business school at Indiana University, he put himself through school by giving disco dancing lessons and starting a chain letter that helped cover one semester's tuition. In 1983 Cuban co-founded MicroSolutions, a leading National Systems Integrator, later selling it to CompuServe, and then, in 1995, co-founded Broadcast.com, a leading provider of multimedia and streaming on the Internet, selling it to Yahoo! in July 1999.

Now a billionaire, Cuban purchased the Dallas Mavericks for $283 million on January 14, 2000, and immediately changed the face of the organization by becoming the first owner in team sports to encourage fan interaction through e-mail on his personal computer. His outspoken personality also got him into trouble with the National Basketball Association, which levied heavy fines for his criticism of officials and the league itself, totaling more than one million dollars. But Cuban's whatever-it-takes attitude and commitment to winning resulted in the team's finishing his first season, 2000–2001, with a 53–29 record and the team's first playoff appearance in 11 years. In 2001–2002, the team finished with a franchise-best record of 57–25 and an NBA-best road record of 27–14, advancing to the playoffs for the second consecutive year. In his third season the team went 60–22, and 52–30 in 2003–2004. "I spend every day thinking about the Mavericks," Cuban said. "That includes time dreaming about the Mavs while sleeping."

[Elli Wohlgelernter (2nd ed.)]

CUCUMBER. Three species of "cucumber" are mentioned in the Bible and in rabbinic literature: *kishu'im, pakku'ot,* and the *yerokat* (or *yerikat*) *ha-ḥamor.*

(1) *Kishu'im*: only the plural form occurs in the Bible, but the singular, *kishut*, occurs in rabbinic literature. The reference is to the chate cucumber (*Cucumis melo*, var. *chate*) which appears frequently in images from ancient Egypt. It was an important crop and a favorite food there, which explains the yearning of the Children of Israel for them during their sojourn in the wilderness (Num. 11:5). Botantically this "cucumber" belongs to the genus *Melon*, which is called *melafefon* in rabbinic literature (Mishnah, Kil. 1:2, regards the *melafefon* as belonging to the same species and modern Hebrew erroneously uses *melafefon* for the cucumber). In the mishnaic period the cucumber was an important crop, but its nutritious value was a matter of dispute. It was said that the large species "are as injurious to the body as a sword," while the small species "open the bowels" (Ber. 57b). A summer plant, it could be grown in the winter under special conditions. Thus it was stated of Judah ha-Nasi and the emperor Antoninus that their table never lacked cucumbers even in winter (*ibid.*). *Kishu'im* in modern Hebrew is applied to squash, which was introduced from America and was not known to the ancients.

(2) The *pakku'at sadeh* (bitter cucumber, colocynth, *Citrullus colocynthis*) is mentioned in the story of Elisha's disciple who, in time of famine, found a *gefen-sadeh* ("field vine") from which he gathered *pakku'ot*. He cooked porridge from it, which was poisonous, but Elisha provided an antidote by adding flour (II Kings 4:39–41). From the seeds of this plant the oil of the *pakku'ot* mentioned in the Mishnah (Shab. 2:2) is obtained. The bitter cucumber, a perennial plant of the family Cucurbitaceae, is widespread in the arid regions of Ereẓ Israel. It is of the same genus as the watermelon, being similar in leaf and fruit. Apparently edible, it in fact contains poisonous substances. The oil extracted from it has medicinal properties. In the coastal region south of Gaza, it is sometimes gathered for its seeds. The leaves of the bitter cucumber have an attractive shape and they appear as an artistic form in the ornamentation of ancient buildings. Some identify them with the *mikla'at peka'im* (AV, "carved knops") of the Temple of Solomon and the molten sea (I Kings 6:18; 7:24).

(3) *Yerokat ha-ḥamor* is mentioned in the Mishnah (Oho. 8:1) as a plant with crowded and hard leaves which serve as a screen against ritual defilement. The reference is to the *Ecbalium elaterium*. Its fruit resembles a small cucumber. When ripe, the slightest touch causes the fruit to burst open, squirting its juice a long distance. The mishnaic name is usually read as *yerokat ḥamor* ("the ass's vegetable"). In one manuscript, the reading is *yerikat ha-ḥamor* ("the ass's spittle") perhaps because the squirting of the juices resembled the spitting of an ass. The plant grows abundantly in Ereẓ Israel, mainly in refuse dumps.

°CUDWORTH, RALPH (1617–1688), English Platonist. Cudworth was professor of Hebrew at Cambridge from 1645. His commentary on Daniel survives in manuscript form (British Museum, Ms. Add. 4986–87), and he is known to have been interested in the translation of the Mishnah into Latin by Isaac *Abendana (Cambridge Univ., Ms. Mm. 1. 4–9); his publications, however, were theological and philosophical. In a sermon preached before the House of Commons in 1647 Cudworth advocated toleration, and he was a member of the Whitehall Conference of 1655 concerning the readmission of Jews to England. He eulogized Cromwell and his son in Hebrew, as well as Charles II on his return by contributing a congratulatory volume called *Academiae Cantabrigiensis* Σῶτρα (1660). The auction catalog of his library (February 2, 1690/91) was printed, and contains a list of his Hebrew books among many others.

CUENCA, city in Castile, Spain. Shortly after its reconquest in 1177, Cuenca was granted a *fuero* ("charter") which served as the model for other Castilian towns. This permitted Jews to settle freely and trade without restriction, but debarred them from certain offices and forbade sexual relations with Christian women, on pain of burning. Chapter XXIX in its entirety and seven scattered laws out of 983 laws of the *Fuero de Cuenca* deal with Jews. The *Fuero* establishes, in theory but not in practice, equality before the law for Christians, Jews, and Muslims. Toward the end of the 13th century the community of Cuenca numbered between 50 and 100 families, paying an average annual tax of 70,872 maravedis. The Jewish quarter was located near the cathedral. The Jews made loans to the city in 1318 and in 1326 at a high rate of interest. In 1355 there was an outbreak of anti-Jewish rioting in Cuenca led by the Christian and Muslim supporters of Queen Blanca. During the anti-Jewish riots of 1391, the leading citizens of Cuenca joined the populace in an attack on the Jewish quarter, which was completely destroyed. The community partly recovered during the 15th century. There was now also a considerable body of Conversos. A tribunal of the Inquisition began its activities in the district of Cuenca in 1489; the number of those sentenced reached into thousands. After the issue of the decree of expulsion of the Jews from Spain in March 1492, the Jews of Cuenca and Huete are said to have rioted, claiming that they had four years to leave Spain and threatening to take revenge on the Conversos. Some of the exiles from Cuenca in the Ottoman Empire adopted the name of the city as a family name. The Inquisition continued to operate in Cuenca throughout the 16th and 17th centuries. The last serious series of trials took place in the years 1718–25 when hundreds of Crypto-Jews or descen-

dants of Conversos were cruelly persecuted and prosecuted by the local tribunal. This campaign was part of a general inquisitorial move under Philip v. The reason for this campaign in the region of Cuenca may have been the socioeconomic position of the Conversos. The confiscations contributed much to the finances of the Inquisition in Cuenca.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

CUENQUE (Cuenca?), ABRAHAM BEN LEVI (b. 1648), kabbalistic author and Shabbatean. He was born in Hebron, where he joined the Shabbatean movement, remaining among its followers even after *Shabbetai Ẓevi's conversion to Islam. In 1683 he went as special envoy to Europe, crossed Italy, France, Poland, and Germany and returned in 1693. At the request of a friend in Frankfurt, Cuenque wrote in 1689 his memoirs of Shabbetai Ẓevi, whom he had met in Hebron. The work constitutes "an almost idolatrous biography and a kind of Shabbatean gospel" (Graetz). Large sections of it are included in Jacob *Emden's *Torat ha-Kena'ot* (Amsterdam, 1752) under the title *Tofes Shelishi* (or *Nosaḥ Shelishi*). Cuenque also wrote a description of his travels (which has remained unpublished). He is also the author of the following works: (1) *Avak Soferim* (3 pts., Amsterdam, 1704), commentaries on the Bible and sermons; (2) *Minḥat Kena'ot* (Ms.), about envy, also containing a dialogue entitled *Vikku'aḥ al ha-Kinah u-Se'ifeha*; (3) *Avak Derakhim* (Ms.), a collection of sermons delivered on his travels. He died in Hebron.

[Joseph Elijah Heller]

CUKIERMAN, ROGER (1936–), French banker, businessman, and community leader. Holding a doctorate in economy from Paris University, as well as a degree in law, Cukierman had a successful business and banking career in France and Israel, and headed the France-Israel Chamber of Commerce. Active in Jewish communal life and community leadership (vice president of the Alliance Israélite Universelle), he was eventually elected twice (in 2001 and 2004) to the presidency of the CRIF despite strong and sometimes controversial views on antisemitism and the future of the French Jewish community, which he does not fear to express frankly. His efforts helped promote awareness in political circles about the rise of a new antisemitism in France.

[Dror Franck Sullaper (2nd ed.)]

CUKOR, GEORGE (1899–1983), U.S. movie director. Born in New York City, Cukor began his theater career as an assistant stage manager and later directed several troupes (1921–29). His directorial work, included adaptations from novels and plays (including *Dinner at Eight*, 1933), and he directed many well-known actresses, including Katherine Hepburn, in *A Bill of Divorcement* (1932), *Little Women* (1933), *Philadelphia Story* (1940), and *Holiday* (1938); Greta Garbo, in *Camille* (1937); Ingrid Bergman, in *Gaslight* (1944); Judy Holliday, in *Born Yesterday* (1950) and *It Should Happen to You* (1954); Judy Garland, in *A Star Is Born* (1954); Marilyn Monroe, in *Let's Make Love* (1960); Audrey Hepburn, in *My Fair Lady* (1964); Anouk Aimée, in *Justine* (1969); Maggie Smith, in *Travels With My Aunt* (1973), Elizabeth Taylor and Ava Gardner, in *The Blue Bird* (1976); and Jacqueline Bisset and Candice Bergen, in *Rich and Famous* (1981).

[Jonathan Licht]

CULI, JACOB (c. 1685–1732), rabbi, editor, and initiator of an important series of *Ladino Bible commentaries known as *Me-Am Lo'ez. Born either in Jerusalem or Safed, Culi was descended on both sides from illustrious rabbinical families. His father was the son of a Cretan rabbi of Spanish origin and his mother the daughter of R. Moses ibn *Ḥabib. Culi left Safed for Constantinople in order to publish his grandfather's writings. He completed his studies under R. Judah *Rosanes (d. 1727), the chief rabbi of Constantinople, who appointed him *dayyan* as well as teacher of the community. After the death of Rosanes, Culi, who had by now published his grandfather's *Shammot ba-Areẓ* (Constantinople, 1727) and *Ezrat Nashim* (*ibid.*, 1731), the latter with two of his own responsa, was entrusted with the publication of the late chief rabbi's works. Adding introductions and notes he edited *Parashat Derakhim* (*ibid.*, 1728) and *Mishneh la-Melekh* (*ibid.*, 1731).

As the author of the *Me-Am Lo'ez* on Genesis and a portion of Exodus, Culi was one of the founding fathers of Judeo-Spanish (i.e., Ladino) literature. In this work, which he began in 1730 and in which he hoped to cover the entire Bible, Culi sought to provide the Ladino-speaking layman with translations of appropriate traditional texts. The result was an elaborate encyclopedic commentary on the Bible in the Ladino language. It dealt with all aspects of Jewish life, and cited a host of important rabbinic sources.

The success of Culi's *Me-Am Lo'ez* among the Jews of Turkey and the Balkans was unparalleled and the whole series was republished many times. Culi left, in addition to the printed commentaries on Genesis and Exodus (as far as the portion *Terumah; ibid.*, 1730–33), unpublished manuscripts of his work on other biblical books. The publication of the *Me-Am Lo'ez* continued after his death perhaps in part on the basis of his manuscript material. There were at least six editions of Genesis and eight of Exodus. New editions in Hebrew and Ladino were being prepared and published in the 1960s (see *Me-am Lo'ez).

The subsequent increase of translations from Hebrew into Ladino testifies to the great success of Culi's works and to the demand which they created. His halakhic work, *Simanim li-Oraita*, was never published.

CULLMAN (**Kullman**), family of U.S. business executives.

JOSEPH F. CULLMAN 3rd (1912–2004) was the longtime head of the giant tobacco company Philip Morris who, in the face of serious concern about smoking, built the company into one of the largest corporations in America and the maker of the best-selling product in the world. He was born into the business in New York, where his great-grandfather, FERDINAND KULLMAN, a cigar maker from Germany, settled in 1848. His son, the first JOSEPH CULLMAN, became a dealer in Ohio leaf. His son, eventually called JOE JUNIOR in the trade, led the General Cigar Company, which produced brands like White Owl, Van Dyck and Robert Burns; at one time he owned 1,800 acres of tobacco fields in Connecticut. Joe Junior had one daughter and four sons; the eldest came to be known as Joe Third.

After graduation from Yale, Joe Third spent a short time working as a clerk in a Schulte Cigar store in New York and then was sent to Havana to work at the H. Upmann cigar factory. During World War II, he spent three years as a gunnery officer aboard a cruiser that fought its way up the Coral Sea to Guadalcanal. When he returned to civilian life, he took over the management of a small company, Benson & Hedges, that his father had purchased in 1941. That company served the carriage trade with monogrammed gold-tipped and hand-rolled cigarettes. It also produced a luxury cigarette called Parliament, with a recessed mouthpiece and a cotton filter. The cigarette producer Philip Morris had no filters and other companies, perhaps with an eye on health concerns, were introducing filter-tipped cigarettes. In 1954 Philip Morris turned over stock valued at $22.4 million to Joe Junior for his interest in Benson & Hedges. In addition to the two brands, Parliament and Benson & Hedges, Philip Morris acquired Joe Third as a vice president. The next year he was named executive vice president and at the end of 1957 he became president and chief executive. He held both titles until 1967, when he was named chairman and chief executive, staying in that capacity until 1978.

From 1964 to 1969, cigarette sales for Philip Morris increased by 63 percent. One major reason was a shift in advertising. When Joe Third took over Philip Morris, the company and its flagship cigarette were represented by a short man in a hotel bellhop's uniform shouting "Call for Philip Morris," as if he were paging someone. As the company worked on a filter cigarette to challenge the industry leader, Winston, Cullman presided over the quest for the right mixture of tobacco, the appropriate filter, a new flip-top box, and the right image that would attract smokers to Marlboro, a new cigarette to be marketed under an old brand name that had once been aimed at women. The Chicago-based advertising agency Leo Burnett created a campaign involving rugged Western cowboys, inviting smokers to "come where the flavor is … come to Marlboro Country." In his memoir, Cullman said: "What was needed was a full-flavored filter brand that had a virile image." By 1983 Marlboro had become the best-selling product in the world.

Cullman had set the stage for the company's diversification in 1969, when Philip Morris acquired Miller Brewing, and then General Foods, Kraft and Nabisco Holdings, whose brands included Maxwell House coffee, Oreo cookies and Oscar Meyer sausages. Under his direction, Philip Morris rose from last in sales among the six major American producers to first in 1983, surpassing Reynolds Tobacco, the industry leader for 25 years. Philip Morris earned so much cash that it was driven to use its huge profits to acquire food giants like Kraft General Foods, Miller Beer, and Jacques Suchard and became the largest consumer products company in the world. It sold the most popular cigarette in the world (Marlboro) and the second most popular beer in America. But as the company grew, the basic product, cigarettes, was coming under increasing attack as perilous to health. As the evidence accumulated, Cullman led the company and the industry's effort to counteract those claims. He testified before Congressional committees, he deflected and delayed calls to curb cigarette smoking and advertising by scientists, public health specialists, legislators, lung-damaged plaintiffs, and personal injury lawyers. He led the unsuccessful effort against those seeking to put warnings on cigarette advertising and messages on cigarette packs. And he wrote countless letters to editors, arguing that smoking was a matter of personal choice. Cullman smoked for many years but eventually tapered off and quit.

Cullman involved Philip Morris, an $80 billion company in 2004, renamed the Altria Group, in countless philanthropies, especially in sports and the arts. He was a leader in creating the women's professional tennis tour, the Virginia Slims circuit, sponsored by one of his brands. The company gave millions each year to groups like the Dance Theater of Harlem, the Brooklyn Academy of Music, the Guggenheim and Metropolitan art museums and the Whitney Museum of American Art. An active conservationist, he was a former trustee of the New York State Nature and Historical Preserve Trust of the American Museum of Natural History and served on the national board of the Smithsonian Institution. He was also a member of the board of the World Wildlife Fund and director of the American Folk Art Museum.

One of his favorite philanthropic projects was the Gomez Mill House in Newburgh, N.Y. It is believed to be the oldest extant house in the United States built by a Jewish owner (1714). Cullman said he was a descendant of Louis Moses Gomez, who fled the Spanish Inquisition and built the house as a

fortress where he traded with the Indians. A second floor was added during the period of the Revolutionary War. Gomez's descendants also include Supreme Court Justice Benjamin *Cardozo and Emma *Lazarus, the poet.

Cullman's second wife was JOAN PALEY CULLMAN, whose grandfathers were Nathan *Straus Sr. and Dr. Bernard *Sachs, a discoverer of Tay-Sachs disease, the hereditary neurological disorder. She became a Tony Award-winning producer of Broadway plays and vice chair of Linclon Center.

Joe Third's brother LEWIS B. CULLMAN (1919–) and his wife, DOROTHY (1923–), were philanthropists. In 1963, Lewis Cullman originated the idea of the leveraged buyout, acquiring the Orkin Exterminating Company, and continued to amass a fortune with this now-common business practice. He is the founder and former chairman of Cullman Ventures, which includes the jewel in his crown, the At-a-Glance Group, a manufacturer of 90 percent of the diaries and appointment books in the United States. He sold the company to Mead in 1999 so he could devote his energies to philanthropy in the arts, science and education. His philanthropies include many of the great institutions of New York City, including Lincoln Center for the Performing Arts, the Museum of Modern Art and Central Park. Dorothy is a television producer with an interest in aiding writers and artists, reading and human rights. They pledged more than $80 million, mostly to civic and cultural institutions in New York City, including the Metropolitan Museum of Art, the New York Public Library, the American Museum of Natural History and the New York Botanical Garden.

Another brother, EDGAR M. CULLMAN SR. (1918–) was chairman of the Culbro Corporation, manufacturers of premium cigars like Garcia y Vega and Macanudo brands. In 1961, Edgar bought a controlling stake in the General Cigar Company, which had been listed on the New York Stock Exchange since 1906. In 1976, General Cigar changed its name to Culbro, an echo of the family firm name. His son EDGAR JR. (1946–) became president and designated chairman of Culbro.

HOWARD S. CULLMAN (1891–1972), brother of Joseph F. Cullman, Jr., became president of the family firm. In 1927 he was appointed to the Port of New York Authority by Governor Alfred E. Smith. He became vice chairman in 1934 and chairman a few years later, serving until 1955. In 1929, Howard, a Yale graduate, and his brother formed Tobacco and Allied Stocks to invest and trade in securities in the tobacco industry. It was the first investment trust in the field. In 1931 he was appointed by Governor Franklin D. Roosevelt as chairman of a state committee to investigate problems connected with workmen's compensation. He served as a director of major corporations, and was a commissioner-general of the 1958 Brussels World's Fair. He also held prominent positions in Jewish communal affairs, serving with ORT and the Jewish Social Service Association. With his wife, MARGUERITE W. CULLMAN (1905–1999), he invested in such Broadway shows as *Life With Father*, *Oklahoma!*, *Carousel*, *Brigadoon*, *South Pacific*, *Annie Get Your Gun*, *Fiddler on the Roof*, *Teahouse of the August Moon*, *Death of a Salesman*, and *A Streetcar Named Desire*.

[Stewart Kampel (2nd ed.)]

CULT. The Israelite cult was a system of ritual acts by which the Israelites, individually and collectively, actualized their particular relationship to the God of Israel. In the pre-Exilic period (before 587–586 B.C.E.) this activity took the form of sacrificial offerings of various types. *Prayer as later known existed as a mode of religious expression, but it had not yet attained the status of an independently sufficient means for fulfilling religious obligations or for attaining ritual objectives. After the destruction of the First Temple the greater part of Jewry was dispersed. Since the Temple in Jerusalem was inaccessible to them on a regular basis, substitute ritual forms had to be acknowledged as sufficient, and prayer began to come into its own. It did not fully replace sacrifice until the destruction of the Second Temple in 70 C.E. After the return from exile and the rebuilding of the Temple, the Jewish communities inside and outside Israel continued to maintain their relationship to the Temple, and considered its cult indispensable to their religious and national life. Most information on the early Israelite cult comes from the Bible. Talmudic and other sources report on later practice in the Second Temple, which undoubtedly bore certain resemblances to the earlier cult. Archaeological excavations have unearthed many installations and vessels intended for cultic use, but it is generally difficult to identify them precisely with those described in the Bible. Uncertainty about the exact dates of the priestly codes of the Pentateuch complicates the problem of ascertaining the exact character of the Israelite cult, since it is from these codes that most information derives. Whatever may be suggested concerning the historicity of the "tabernacle" cult presented in these sources, there can be little doubt that it mirrors the cult of the First Temple in a significant way. The prophet Ezekiel lived at the end of the First Temple period; and in Ezekiel (40 ff.) procedures are attested which closely resemble those in Exodus, Leviticus, and Numbers in much of their detail. The cult may be discussed with respect to diverse elements of Israelite culture. The concern here is to present the praxis of the cult, i.e., the principal types of sacrificial offerings and the manner of their disposition, which involved, in turn, certain vessels and tools.

Sacrifices of Animals and Fowl

The priestly codes prescribe sacrifices of large and small cattle, as well as pigeons and turtledoves (Lev. 1–7). Male animals predominate as sacrificial victims, no doubt because only a fraction of the males needed to be preserved for the reproduction of the herd. Why females are nevertheless prescribed for certain offerings is less obvious. The codes differentiate between pure and impure animals (Lev. 11; Deut. 14). An overall requirement is that sacrificial animals be free from physical defects (Lev. 22:20–25), although an animal with certain minor defects could be designated for "freewill offerings" (Lev. 22:23;

see *Blemish). In the case of the paschal sacrifice it is stipulated that the intended victims be observed for four days prior to the festival (Ex. 12:3, 6), a procedure which talmudic sages correctly understood to be for the purpose of discovering possible blemishes (Mekh. Bo, 5). The Bible says nothing of such procedures elsewhere, although they were undoubtedly necessary and widespread in the ancient Near East. Talmudic sources speak extensively of examination for defects, especially in the orders *Kodashim* and *Tohorot* of the Mishnah. The selection of sacrificial animals was also governed by consideration of age and, in certain instances, of the previous use of the animal. The requirement of physical perfection extended to the priesthood, and priests with certain physical defects could not officiate in the cult (Lev. 21:21–23; Deut. 15:21; 17:1). Once the animal was declared fit, it was designated a sacrificial animal and assigned as a certain type of offering for a particular time or occasion (cf. Lev. 16:9–10). This assignment normally involved "the laying [from the Heb. verb סמך, *samakh*] of hands" by the officiating priest on the head of the animal (Lev. 1:4; 3:2, 8, 13; et al.). Perhaps this act was accompanied by a declaration which has been lost. The method of slaughtering sacrificial animals was usually described by the verb *shaḥaṭ* (Ex. 12:6; Lev. 1:5), and in the case of fowl by *malak (malaq*; "to break the neck"; Lev. 1:15; 5:8). *Shaḥaṭ* involved the use of a knife or similar sharp instrument that would slit the gullet as well as the jugular vein, resulting in the rapid emission of most of the animal's blood. The Bible never describes the tool employed for this purpose, and the only clue is the term *ma'khelet* used in connection with Abraham's intended sacrifice of Isaac and elsewhere, but which is nowhere described (Gen. 22:6, 19; Judg. 19:29; Prov. 30:14; cf. the verb *nataḥ* ("to cut into sections") in Lev. 1:6; I Sam. 11:7; I Kings 18:23). This method of slaughtering was associated with the prohibition against eating *blood (Lev. 17:10–11). The blood of the sacrificial victim was caught in bowls (Heb. *mizrak; mizraq*) for further use in the performance of the sacrifice. In expiatory offerings some of the blood was dabbed or sprinkled on the horns of the incense altar, and in some cases on the *parokhet* ("curtain"), on the *kapporet* ("the lid [of the ark]") and elsewhere, as part of ritual procedure, usually designated by the verb *kipper* ("to perform an act of ritual expiation"; Lev. 4:6–7; 17–18; 16:14, 18–19; et al.), although the corresponding noun *kippurim* also occurs (Ex. 29:36; 30:10, 16; Lev. 23:27–28; 25:9; Num. 5:8; 29:11; see also **Kipper*). In all animal sacrifices most of the blood was poured or dashed against the side of the altar of burnt offerings so that it ran down to the ground (Lev. 1:5; 4:7). In the execution and disposition of sacrifices three principal parties were involved: the donors, the priests, and the deity. The various methods of disposition reflected the relative weight of these parties. There were two major categories of animal sacrifices: the *'olah* ("ascending offering") and the *zevaḥ* ("slain offering"). The *'olah* was burned to ashes in the altar fire, while most of the meat of the *zevaḥ* was cooked in vessels, and only certain portions, those assigned directly to the deity, were placed on the altar. According to Leviticus 1:9 ff., the *'olah* was holocaust, i.e., an offering entirely consumed by the altar fire. This is also the sense of the term *kalil* (Lev. 6:15–16; Deut. 33:10; I Sam. 7:9; Ps. 51:21, and cf. Deut. 13:17; Judg. 20:40), although the exact relationship of these two terms is problematic. Some have suggested that *kalil* is an older term, which was later replaced by the term *'olah*. The two principal types of expiatory offering, *ḥaṭṭat* and *'asham*, although classified with the *'olah* in certain respects (Lev. 6:18), represented a distinct type of sacrifice since in some cases most of the meat of the *ḥaṭṭat* was assigned to the priests (Lev. 6:22; 7:6; Num. 18:9–10; Hos. 4:8). This was true of expiatory offerings brought by individuals, and according to rabbinic law also of the *ḥaṭṭat* of new moons and festivals (Num. 28:15; et al.), whereas certain communal offerings of these types were disposed of in different ways (Lev. 4–5; 16:27–28). The exact procedures are not entirely clear. If any blood of the sacrificial victim had been brought into the tent of assembly, all but the suet and the kidneys of the animal had to be burned separately outside of the altar area, since the animal had become a source of impurity (Lev. 4:12, 20; 6:23; 8:17, 32; 16:27). Problems remain in classifying the expiatory offerings of the Israelite cult, and it is likely that in the course of time the practices were altered. The dynamics underlying the *'olah* and all offerings of which any parts were burned on the altar was that the deity breathed in the smoke of the offering and in that way was considered to have consumed the sacrifice (Gen. 8:21; Lev. 26:31; Deut. 4:28; 33:10; I Sam. 26:19; Amos 5:21). This notion is conveyed in the term *i'sheh re'aḥ niḥo'aḥ* ("a fired offering of pleasing aroma"), which is often used to describe sacrifices (Ex. 29:18; Lev. 3:16; 8:21, 28; et al.). The odor of the burning meat was believed to be pleasing to the Lord (Lev. 1:9; et al.). In cultic terms, the parts of the animal most desired by the deity were the fatty portions (*ḥelev*) which covered the inwards of the animal (Lev. 3:3; et al.). Such fatty portions were forbidden for human consumption on somewhat the same basis as the prohibition of blood, since the fat belonged to the deity (Ex. 29:13; Lev. 3:16–17; 4:8, 31; 7:23–25; I Sam. 2:15–16; Ezek. 44:7, 15). From non-cultic sources it appears that the consideration of the fatty portions as choice was pervasive in the Israelite cult (Deut. 32:38; cf. Gen. 4:4; Isa. 1:11, 43:24). In addition to separate offerings containing incense, certain aromatic substances were probably cast into the altar fire, a widespread custom in antiquity. For the purpose of burning offered meat, a wood fire was maintained on the altar (Lev. 1:7, 12), and later sources mention a special appointment for supplying this material (Neh. 10:35; 13:31). The *zevaḥ* was conceived as a sacred meal of which the worshipers and the deity partook in common fellowship. In time, the officiating priesthood appropriated some of what originally had been eaten by the donors of the *zevaḥ*, i.e., the right shank and the breast (Lev. 7:31–34; cf. Num. 18:18). Perhaps a further stage in this development, affording even more to the priests, is to be seen in the Punic cult at Carthage, as known from inscriptions of the fourth–third centuries B.C.E. The fatty portions of the *zevaḥ* were consumed by the altar fire (Lev. 4:31; 6:5;

Deut. 32:38). The rest was boiled in pots. This is known from early biblical sources independent of the priestly codes (cf. Judg. 6:19), and from the prohibition against this manner of cooking the paschal *zevaḥ* in favor of broiling, a primitive practice (Ex. 12:9). This method was apparently abolished in Deuteronomy 16:7, where the regular technique of boiling (Heb. *bashal*) is prescribed. Other sources also speak of boiling the meat of the *zevaḥ* (Ex. 29:31; Ezek. 46:20, 24; II Chron. 35:13). That meat was regularly boiled is also presupposed by the prohibition against boiling a kid in the milk of its dam (Ex. 23:19; 34:26; Deut. 14:21). Those invited to partake of the *zevaḥ* were termed *keru'im* (*qeru'im*; "those called"; I Sam. 9:13, 22; cf. Zeph. 1:7). The flesh of certain offerings could be eaten only by those in a state of ritual purity (Lev. 7:19–20; 22:3) in a sacred place (Ex. 29:31; Lev. 6:19; 7:6; 10:13; 24:9; et al.). The Mishnah (Zev. 5–6:1) limits the latter requirement to sacrifices with the status of *kodshei kodashim* (*qodshei qodashim*). In certain cases there was also a time limit for eating sacrificial flesh, and what was not consumed by that time had to be destroyed (Lev. 7:18; 19:7). The burnt offering with its blood rites is an historical problem, since outside the sphere of Syria and Palestine it was rarely used until late antiquity. The Ugaritic texts show that it figured in the Ugaritic cult as early as the 14th century B.C.E. In Ugaritic ritual texts *šlmm* (Heb. *shelamim*), the most prominent type of *zevaḥ*, is paired with *šrp* (Heb. *saraf*), the burnt offering. Burnt offerings are also mentioned in Ugaritic epics. In Mesopotamia fire was used extensively in magical rites, which were often connected with the cult, but it was not employed for sacrifices until late Babylonian times.

Grain Offerings
