Sacrificial offerings of grain prepared in various ways were widespread in the ancient Near East. In the biblical cult the most prominent form of grain offering was the *minḥah*, a general term. It was prepared from wheat or barley, normally ground into fine flour, and either baked in an oven, fried in pans, or deep fried (Lev. 2:4–7). Oil and frankincense were mixed with the dough or poured over the cakes. In contrast to other ancient Near Eastern cults, no honey was used (Lev. 2:11). As a rule the *minḥah* was made of unleavened dough *(maẓẓah)* rather than of leavened dough *(ḥameẓ)*, and the cakes were salted (Lev. 2:11, 13). The priest pinched off a fistful of the dough and placed it on the altar fire as an *'azkarah*. The meaning of this term is uncertain, but it probably conveys the notion that the deity was to be "reminded" by the ascending smoke of the burning cake. Two sizes of cakes, traditional in the ancient Near East, were prepared as *minḥah: ḥallot maẓẓot* ("loaves of unleavened dough") and *rekikei (reqiqei) maẓẓot* ("thin cakes of unleavened dough"; Lev. 2:4). The *minḥah* often accompanied animal offerings. However, other grain offerings were presented alone. These included the two loaves of the Pentecost (Lev. 23:17), the loaves of thanksgiving (Lev. 7:13), and the grain offering of first fruits (Num. 15:17–21). No part of these offerings was placed on the altar and for this reason they could be made of leavened dough. The rule was that no leaven could be placed on the altar (Ex. 23:18; 34:25; Deut. 16:3), but the converse was not consistently applied. This notion was somewhat related to the laws of Passover forbidding the eating of leaven (Ex. 12:15; 13:3, 7). The priestly codes specify that after the *'azkarah* was detached, the remaining cakes were to be eaten in a sacred place. In certain cases only the priest actually officiating at the rite could partake of the *minḥah* (Lev. 7:9–10). The *minḥah* offered on behalf of a priest was designated *kalil*, meaning that it was to be entirely burned on the altar (Lev. 6:15–16). As the Israelite cult became more standardized, procedures were probably instituted which afforded larger portions of the *minḥah* to the priests, a process also observed with respect to other types of offerings. The "bread of display" (*leḥem ha-panim*) represented another type of grain offering (Ex. 25:30; 35:13; 39:36; Lev. 24:5–9; Num. 4:7; I Sam. 21:7; I Kings 7:48; II Chron. 4:19). Twelve loaves were arranged in two rows on a table especially installed in the tent of assembly (*'ohel mo'ed*) outside the *parokhet* (Ex. 40:22–23). The loaves were removed each week to be eaten in a sacred place by the priests. A smoke offering of pure frankincense was offered in connection with these loaves in place of the *'azkarah* that usually accompanied the *minḥah*, since no part of these loaves was placed on the altar. The antiquity of the practice is attested by a story from the early career of David (I Sam. 21:7) involving the "bread of display" and by its inclusion in the Solomonic temple project (I Kings 7:48). The "bread of display" actually represents a distinct orientation to sacrifice paralleled by the offering of first fruits prescribed in Deuteronomy 26:10. Normally, the Israelite cult operated on the principle that the deity consumed sacrificial materials after they had been converted into smoke on the altar, by breathing in the smoke of the offering (see above). In the case of the "bread of display" and the first fruits the operative principle was the viewing of the offering by the deity, and his seeing it constituted either his acceptance or his actual consumption of it. The offering, therefore, was placed before him. The story of the theophany of Gideon (Judg. 6:19–21) seems to be a shift from the one principle to the other. Gideon first placed his offering before the angel, a divine manifestation, and was then told to make it a burnt offering instead. The method of sacrifice known as *tenufah*, usually rendered "wave offering," appears only in the priestly writings of the Pentateuch and though extended to mean "levy, tax" (Ex. 35:22; 38:24), its original sense derives from the act of "waving." *Tenufah* is associated with the common Near Eastern practice of showing the offering to the deity. Upon this method was imposed the more particularly Israelite practice of burning offerings on the altar instead of merely placing them there. *Tenufah* was utilized for animal as well as grain offerings, but in the case of animal sacrifices, and even of some grain offerings, the waving was only a preliminary to offering up the material on the altar fire, or to boiling part of the meat in pots (cf., eg., Ex. 29:24, 26; Lev. 7:30; 8:27, 29; 9:21; 10:15; Num. 6:20; et al.). Only in some fruit and grain offerings was showing the offering to the deity, in and of itself, a

sufficient mode of sacrifice (Lev. 23:11–14, 15, 20). This corresponds with the presentation of the "bread of display." After the deity had had the opportunity to view the offering, it was removed from Him, and assigned to the priests.

Other Types of Sacrifices

LIBATIONS (*nesekh*). Libations normally accompanied other sacrifices (Lev. 23:37; Num. 28:14, 31; 29:6, 11). The priestly codes speak of wine as the material most frequently used in libations. Beer was widely used in the ancient Near East for cultic purposes, and while an interpretation of *shekhar* as beer in Numbers 28:7 is tempting, it means simply "intoxicant, liquor" and no doubt "wine" (Heb. יַיִן *yayin*) is to be restored near the beginning of the verse, as attested by some ancient versions (it was omitted due to הַהִין, *ha-hin; ibid.*; cf. Num. 28:14 and Ex. 29:40). According to the priestly codes, oil was used only for unction and purification, as an ingredient in grain offerings, and for kindling lights, but there are indications that it may have also been used for separate libations (Micah 6:7; Ezek. 16:18–19). The libation was poured from vessels termed *kasvah* (*qaswah*; Ex. 25:29; 37:16; Num. 4:7; I Chron. 28:17) and *menakkiyyah* (*menaqqiyyah*; Ex. 25:29). There is evidence for a water libation (II Sam. 23:16 = I Chron. 11:18), and talmudic sources speak of it as an ancient practice (Shek. 6:3; Suk. 4:1, 9; Zev. 6:2, Mid. 2:6).

INCENSE OFFERINGS (*ketoret, qeṭoret*). As distinct from the other uses of incense, there was a special offering on the "altar of incense," which stood in the tent of assembly. This offering was made by the high priest (Ex. 30:1–10). The altar was of gold and had four horns at the corners. Incense altars have been found in archaeological excavations, and the four-horned altar from Megiddo is of special interest. The high priest kindled incense as part of the *tamid* or daily sacrifice (Ex. 30:8). Its purpose was to delight the deity with a pleasant aroma. A special blend of incense, designated solely for this purpose, was employed (Ex. 30:34–38). The antiquity of these priestly regulations is not known, and in this respect a distinction should be made between the use of censers (*kaf*; Num. 7:14) and stationary incense altars.

FIRST FRUITS (*bikkurim*), see *First Fruits.

THE REGULAR PUBLIC OFFERINGS. The Torah prescribes a burnt offering of a yearling lamb twice daily – in the morning and evening of every day. Each lamb was to be accompanied by a *minḥah* of a tenth of an ephah of *solet* (semolina, the hard particles within wheat grain) and a *nesekh* of a quarter of a *hin* of wine (Ex. 29:38–42; Num. 28:3–8). This is called the *ʿolat tamid* ("regular or constant burnt offering"; Ex. 29:32; Num. 28:3, 10; et al.), and simply the *tamid* in Daniel 8:11–13; 12:11, and post-biblical literature. Additional offerings (*musafim* in rabbinic terminology) for Sabbaths, new moons, and annual festivals are listed in Numbers 28–29. There are further requirements in Leviticus 17 and 23. Numbers 10:10 prescribes that sacrifices be accompanied by trumpet blasts "on your seasons and new moons," but the Torah is otherwise silent about cultic music, in contrast to some of the hymns and thanksgiving songs in Psalms and especially to many of the superscriptions to Psalms (see *Psalms; *Chronicles).

CULT PLACES, ISRAELITE, places at which sacrifices were offered to the God of Israel. Many such places are mentioned in the Bible, and modern archaeological excavations have added to the list. The definition of sacred space in the ancient Near East has seen much debate. The traditional view is that cult was characterized by permanence of location: sites noted for their sacredness, principally towns and their environs, continued to retain this attribute despite shifts in population and consequent changes in the dominant religion of the area. The Bible employs specific terms to refer to different types of cult places, although usage is not always consistent. Four general types can be identified by the terminology: *Bet YHWH* ("the house [*Temple] of YHWH"); *Mikdash* ("*sanctuary"); **Bamah* ("high place," raised cultic installation); and *Mizbeʾaḥ* ("*altar"). In archaeological contexts structures defined as temples or shrines are more easily identifiable, with the addition of objects considered "cultic," such as figurines, statuary, standing stones (*maẓẓebot*), and altars.

Bet YHWH

Synonyms are *heikhal YHWH* (e.g., I Sam. 1:9; 3:3; II Kings 18:16; Jer. 7:4) and *bet ha-Elohim* (e.g., Judg. 18:31). Apart from several unspecified references, this term is applied exclusively to two places, *Shiloh and *Jerusalem (e.g., I Sam, 1:7; I Kings 3:1). The cult place established by David to house the *Ark after it was brought to Jerusalem was also designated as a *bet YHWH* (II Sam. 12:20). Since Shiloh and Jerusalem represent two successive stages in Israelite religion, it seems that use of this term and its synonyms implied the belief that the God of Israel had only one "residence" at any given time. This notion is expressed in Psalms 78:60 ff.: "He [God] abandoned the tabernacle of Shiloh … He elected … Mount Zion which he prefers … and He made His sanctuary [*mikdash*] enduring as heaven, as the earth which He established forever."

Like the terms containing the element "house," the designation *mikdash* was also conceived of as designating a divine residence; and as in the passage first quoted, the Jerusalem Temple (and perhaps, on occasion, even Shiloh; see below) was also termed "sanctuary." All the Israelite sanctuaries so designated were founded long before the belief in a single

divine residence became official doctrine in the late monarchy. Several of these sanctuaries coexisted with the Jerusalem Temple, serving specialized functions that were not in direct competition with the Temple's unique status. Scholars believe that Shiloh was either the principal sacred center in the period of the Judges, or, alternatively, following Noth, that it was one of a series of central shrines in pre-monarchic Israel, e.g., Shechem, Bethel, Gilgal, and Shiloh. The recent excavations at the site by Finkelstein suggest that Iron Age I Shiloh was not an ordinary village with a cult place but served as a religious *temenos*. The peak of Shiloh's prosperity was in the first half of the 11th century B.C.E. After Shiloh had been destroyed in the Iron Age I there is no evidence that it was subsequently used by Israelites for cultic purposes. Thus the belief in a single chosen residence for the God of Israel gained momentum in ancient Israel, ultimately producing a movement toward the elimination of all cult places other than the Jerusalem Temple. This could only take place after the fall of the Northern Kingdom where Beth-El, and perhaps other sites, enjoyed a particular status not accorded to any of the provincial sanctuaries in Judah. Beth-El was established as an avowed rival of Jerusalem after the death of Solomon, and, in general, political considerations produced a different cultic atmosphere in the Northern Kingdom.

While information on the Jerusalem Temple is available from biblical descriptions, little is known about the temple at Shiloh. Why Shiloh was chosen as an early Israelite cultic center is not clear. The selection of Jerusalem and most other important sites follows known patterns, but there is no evidence that the early Israelites were attracted to Shiloh by virtue of its prior religious, demographic, administrative, or strategic significance. Recent excavations, however, do indicate there were earlier cultic practices at the site during the Middle and Late Bronze Ages. Shiloh is located in the Ephraimite territory, several kilometers east of the ancient main road to Shechem (Judg. 21:19). It is reasonable to assume that it was selected as a cultic center for the Israelite tribes primarily because of its imposing position, and because it was fairly central in the early area of habitation. The ancient site is surrounded by lofty hills, and encircled on three sides by verdant valleys. The top of the site gives the impression of great height, but at the same time draws the eye to the hills rising above the cult place. Some have even compared the topography of Shiloh to that of Jerusalem.

Mikdash

The Jerusalem Temple was frequently termed *mikdash* and also *bet ha-mikdash*. The cultic installation at Beth-El was termed *mikdash melekh* ("a royal sanctuary") by *Amaziah, one of its chief priests during the reign of Jeroboam II in the eighth century B.C.E. (Amos 7:13). According to Joshua 24:26 a stele was erected "under the terebinth at the sanctuary [*mikdash*] of YHWH" after a convocation of the tribes at Shechem (24:1). If this is accurate, then there was a sanctuary in Shechem during the early Israelite period. However, the passage is problematic, and the Septuagint of Joshua 24:1 has Shiloh instead of Shechem. There is, consequently, no conclusive evidence for the existence of an Israelite sanctuary in Shechem at that time.

The site of Beth-El was partially excavated by W.F. Albright and further by J.L. Kelso. Massive remains were uncovered. Ancient Beth-El (now Beitin) is situated 3,965 ft. (880 meters) above sea level, about 10½ mi. (17 km.) north of Jerusalem on a site commanding major crossroads. The archaeological remains indicate the preeminence of Beth-El in pre-Israelite times and throughout almost the whole Israelite period. Among the finds was a cylinder seal with the images of a god and goddess and the name of the goddess Ashtoreth written in hieroglyphics showing that Beth-El was undoubtedly an important Canaanite cultic site later appropriated by the Israelites for their own use. Biblical sources contain ample evidence of the importance of Beth-El as a cult place in Israelite times. The tribes convened there during the period of the Judges (Judg. 20:18, 26; 21:2), and it was one of the principal cult places at which the prophet Samuel officiated (I Sam. 7:16). After the death of Solomon and the division of the kingdom, the heterodox Jeroboam established Beth-El, along with Dan, as a cultic center of the Northern Kingdom. His reasons for doing so related not only to its age-old importance as a cult place but to its location near the southern border of his kingdom, close to Jerusalem. Genesis 28 gives the origin of the sacred nature of Beth-El by associating it with the site of Jacob's dream (Gen. 35:13). Abraham also erected an altar near Beth-El (Gen. 12:18; 13:3–4). Perhaps no other cult place, with the exception of Jerusalem, achieved a comparable place in biblical tradition. The biblical account actually describes the sanctuary erected at Beth-El by Jeroboam as a *bet bamot* ("a temple of outdoor shrines"; I Kings 12:31–32), which suggests that Jeroboam enclosed a previously constructed *bamah* which had served as an open-air cult place. Perhaps the sanctuary of Beth-El mentioned in Amos 7:13 dates from this period.

In II Kings 23:15–16 it is recorded that Josiah destroyed the "altar" and the *bamah* at Beth-El. The passage speaks of the *bet bamot* as a frequent phenomenon in cities of the Northern Kingdom, but does not specify which ones. The *bamah* was the prime target of Josiah's reformist movement, and it is likely that the terminology of this passage is imprecise. There can be little doubt that a *mikdash*, and not just a *bamah*, stood at Beth-El at this period, and that it was destroyed by Josiah soon after 622 B.C.E. (The implications of Josiah's activities will be discussed below under the heading of *bamah*.)

No other specific cult place is designated *mikdash* in the Bible, except the desert *tabernacle, which represents a different sort of cultic phenomenon. Assuming that there must have been many sanctuaries in ancient Israel, scholars have employed various criteria in assigning the status of *mikdash* to other well-known cult places. Such criteria include the elaborate nature of the cultic ceremonies performed there and the undertaking of pilgrimages to the site. It is possible, of course, but far from certain, that at one time or another a *mikdash*

used by Israelites stood at such places as Gilgal (exact location uncertain) and Mizpah, where the tribes convened in the early Israelite period, and at other places as well. It would appear that there was a sanctuary at *Nob, the city of priests, in the days of Saul (I Sam. 21:1–10).

Excavations undertaken by Y. Aharoni from 1962 to 1967 at *Arad, a Negev town in the vicinity of Beersheba, have uncovered the remains of a building that would qualify as a *mikdash* by virtue of its structure and contents, and in the light of what is known about the role of Arad during the period of the First Temple. The sanctuary building measured approximately 50 × 40 ft. (15 × 12 meters), and contained a niche with at least one *maẓẓevah* or cultic stele, a sacrificial altar, and other cultic appurtenances. It is likely that this building was in cultic use from the tenth to the late seventh or early sixth century B.C.E. The presence of levitical personnel at Arad is attested in the personal names which occur on the large numbers of ostraca found on the site. These brief communications and archival records reveal that Arad was in close communication with Jerusalem and leave no doubt that it was a legitimate cult place. Its location indicates that it was a border installation with combined cultic and administrative functions, two institutions which often go together.

The Arad excavations are of primary importance for an understanding of the ancient Israelite cult. The existence of a sanctuary near the southern border of Judah suggests that certain religious duties had to be fulfilled on departure from the land of the God of Israel. Perhaps the accounts of votive activity by the patriarch Jacob while on his flight to Syria (Gen. 28) and on his trek to Egypt (Gen. 46:1) reflect an early feature of Israelite religion, which rendered border sanctuaries necessary.

Since 1966 excavations have been conducted by A. Biran at *Dan, the site of Jeroboam's second cultic center, situated in upper Galilee. Although conclusive evidence of a sanctuary at Dan is still unavailable, there can be little doubt of its existence in ancient times. Judges 17–18 preserves a tradition about the establishment of the Israelite cult there. Indeed, a cultic temenos was unearthed by the spring at the northern flank of the site, and *maẓẓebot* were uncovered in a stone-paved piazza within the Iron Age gate.

Bamah

The term *bamah* is ambiguous. The Hebrew word (like Ugaritic *bmt*) means "back" or "shoulder." In many languages anatomical terms were transferred to architectural and topographic contexts, and in that process *bamah* ("back") acquired two related cultic connotations: (1) topographically – a high place, a cultic installation situated on a high elevation, such as a mountain top; and (2) architecturally – a raised platform, or the like.

The proverbial characterization of improper worship reflects these two aspects of the *bamah*: "Atop every high mountain [lofty hill] and under every verdant tree" (e.g., Deut. 12:2; I Kings 14:23; Jer. 3:6). The reference is undoubtedly to the **asherah* or cult pole, which was normally part of the *bamah* complex.

A well preserved pre-Israelite *bamah* dating from the early Bronze Age stands in the temple precincts at *Megiddo. It is a large circular platform of stones, with stairs leading up to it. It is likely that the altar stood on top of the *bamah* at Megiddo, since large quantities of bones and potsherds were found in the earth deposits immediately above. Elsewhere the altar may have stood in front of the *bamah*, which was kept for cultic stelae, statuaries, etc. There are biblical descriptions of cultic activity at the *bamah* that provide some details of its structure. Thus, Samuel ascended the *bamah* at *Ramah to bless the slain offering and subsequently to partake of it (I Sam. 9:13–14, 19). When the sacred meal was over, he and those "called" to the celebration descended from the *bamah* and reentered the city (9:25). The descent from the *bamah* is also recorded at Gibeah (I Sam. 10:5, 10, 13). The text even mentions a *lishkah* ("chamber") where the assembled company sat down to the meal. If all of this activity actually occurred at the *bamah*, then it was a very large and complex installation. In any event, the place of the sacrifice itself was probably an open-air installation not intended to serve as a residence for the deity, as in the case of the *mikdash*, but rather as a site that the deity would visit when invoked. The same was true of the altar. The *bamah* could, of course, be raised to the status of a residence for the deity, which is what the term *bet bamot* connotes. The Moabite *Mesha stele, in speaking of that king's cultic enterprises, uses both terms, *bamah* and *bet bamot* (Moabite *bmt* and *bt bmt*), perhaps interchangeably.

The account of Samuel at Ramah also states that the *bamah* was located outside the city. During the 1969 excavations at *Ashdod under M. Dothan a Middle Bronze installation of probable cultic function was unearthed outside the city wall, but it has not yet been fully interpreted. In 1966 the expedition under Kathleen Kenyon in the Ophel area of ancient Jerusalem discovered a cult installation with two stelae (stone monoliths) above which stood an altar. The installation was almost immediately outside the contemporary city wall. This site dates from the seventh century B.C.E., and was apparently a pagan site, one of those condemned by the writer of the Books of Kings (II Kings 23:4; cf. Jer. 31:39). The Bible also speaks of *bamotha-she'arim* ("the high places of the gates"; II Kings 23:8; cf. Ezek. 8:3).

Primarily on the basis of the *bamot* outside the city walls, Y. Kaufmann concluded that the Israelites did not convert preexisting idolatrous cult places for their monotheistic needs, but withdrew to outside the city, or to other nearby sites, and there constructed new installations. Also citing the evidence pertaining to altars located outside the towns and in the open country, he thus minimized the extent of continuity between pre-Israelite and Israelite cultic activity. A verification of such a reconstruction of early Israelite religious practice would require greater knowledge of the history of particular sites.

Historically, the main problem with respect to the Israelite *bamah* is to determine when and to what extent it was

considered a legitimate cult place by strict monotheistic standards. The "great *bamah*" at Gibeon (I Kings 3:4; cf. 9:2) was certainly legitimate when Solomon offered sacrifices and experienced a theophany there soon before construction of the Jerusalem Temple, notwithstanding the fact that the Ark had long before been brought to Jerusalem and was housed there (*ibid.*, 3:15). The redaction of the Books of Kings regards the *bamot* as illegitimate from the time of Solomon onward (I Kings 3:3; 15:14; 22:43–44; II Kings 12:4; 14:4; 15:4, 35), but these references are couched in the language of a later ideology. It is reasonable to assume that the Israelite *bamah* (as differentiated from the avowedly idolatrous one) came into official disrepute late in the monarchic era, at about the time of the Assyrian conquest of the Northern Kingdom, roughly the last quarter of the eighth century B.C.E. Ahaz came under Assyrian influence in cultic matters (II Kings 16–17), and his successor *Hezekiah actually took measures to eliminate the *bamah* as a legitimate Israelite cult place (*ibid.*, 18–19). There can be little doubt that Hezekiah's measures were aimed at bringing northern Israelites to Jerusalem, and at ridding the Israelite cult of foreign influences. Any success he might have achieved was temporary, because of the long period of Assyrian influence under King Manasseh, and it was not until *Josiah ascended the throne of Judah and Ashurbanipal, king of Assyria, died that the attempt to eliminate the *bamah*, which had become a focal point for cultic pollution, could be resumed in earnest. About the year 622 B.C.E. Josiah carried out a reformation which has correctly been considered a turning point in Israelite religion. He dismissed the priests who had officiated at the *bamot*, proceeded to destroy and render unfit for use the *bamot* in Jerusalem and its environs, and in the cities of Judah, and was especially concerned to destroy the cultic center at Beth-El, which had undoubtedly kept many worshipers from Jerusalem (II Kings 22–23).

It is interesting that Deuteronomy, which gives doctrinal expression to the illegitimacy of worship at local cult places, never uses the term *bamah* but rather *makom* ("place"; e.g., Deut. 12:3), a generic term for a cultic installation (cf. Ex. 20:21), known outside the Bible primarily in Phoenician inscriptions. There has been considerable speculation about the origin of the *bamah*-type cult place. W.F. Albright considers it to be primarily a funeral installation (cf. Isa. 53:9, and Abraham ibn Ezra's commentary), which later took on other functions. Indeed, Josiah destroyed a cemetery near the cult place of Beth-El, "there in the mountain" (II Kings 23:16–17). It is still impossible to be certain of this interpretation, however, and most of the evidence in support of it comes from Greek and other external contexts.

Mizbe'ah

The term *mizbe'aḥ* may be discussed either as a cultic appurtenance, considering its design and uses, or as the identifying feature of a cult place. It is the latter sense that will be examined here. Every cult place obviously included an altar. The problem is to ascertain whether the cult place designated as *mizbe'aḥ* was of restricted proportions and did not include a more elaborate installation such as a *bamah* or *mikdash*, or whether it did, in which case the designation *mizbe'aḥ* was imprecise. In ancient Israel a man might construct an altar at a site where he had experienced a divine revelation. Thus, Abraham set up an altar near Shechem "to the Lord who had appeared to him" (Gen. 12:7). Isaac built an altar at Beersheba after a theophany (26:25), and Jacob is commanded to go to Beth-El and to construct an altar, "to the God who appeared to you when you were fleeing from your brother Esau" (35:1). The dynamic relationship between theophany and altar-building underlies Jacob's earlier activities at Beth-El (Gen. 28), except that more was involved than simply an altar. The same dynamics applied to *Gideon at Ophrah (Judg. 6:12, 24) and to the parents of Samson at Zoreah (*ibid.*, 13:3, 19–20). Probably the most understandable circumstances for altar-building were the individual needs of worshipers for a place to offer sacrifice in proximity to their homes. Thus, Samuel constructed an altar in Ramah, where he lived (I Sam. 7:17), as did Abraham when he lived between Beth-El and Ai (Gen. 13:4), and when he pitched his tents near Hebron (Gen. 13:18), and Jacob when he purchased a plot of land in the area of Shechem (33:19–20).

Collectively, the Israelites constructed an altar when they were required to offer sacrifices at Mount Sinai, where no cultic installation stood (Ex. 24:4). Altars might be built in celebration of victory (Ex. 17:15; I Sam. 14:35), and abandoned altars could be restored as by Elijah somewhere on the Carmel range (I Kings 18). Most of this evidence indicates that altars were often built for particular purposes at cult places already noted for their importance. Of course many altars could be constructed at any one town, not necessarily in the same area. Yet it is significant that Samuel built his altar at Ramah where there was a large *bamah* installation, and the Bible clearly tells of Jacob building an altar at Beth-El, the very site where he had previously contributed to the establishment of a temple. Similarly, Isaac's altar at Beersheba was not the first "Israelite" cultic installation at that site, for Abraham had invoked God there (Gen. 21:33), and such an invocation (Heb. *kara be-shem YHWH*) is often associated with altar-building and evidently involved the offering of sacrifices. In some instances it can be assumed that the previous altar on a particular site might have fallen into disuse or been destroyed, but this cannot be said of all cases on record.

Building an altar could constitute the first step in establishing a site as an Israelite cult place. Thus, Gideon is commanded to destroy the altar of Baal and erect an altar to YHWH on the same site (Judg. 6:25–26). It seems clear that the Israelites did not use pagan altars, but they did tend to gravitate to localities considered sacred by the idolatrous peoples of the area. Scholars have tended to confuse these two aspects of the early history of Israelite religion, the sacredness of places and the fitness of cultic installations and appurtenances. Normally a locality was believed to be sacred in perpetuity, but the cultic installations of non-monotheistic peoples constituted an

abomination. Deuteronomy (12:12) lays down the harshest legislation concerning the destruction of all of the *mekomot* ("places") where idolatry was practiced. Most of the information from biblical sources on the subject of altar-building suggests that it was a feature of the earlier periods of Israelite settlement in Canaan. This is certainly the impression that Genesis aims at and it is also implicit in Joshua, Judges, Samuel, and Kings.

°CUMANUS VENTIDIUS, Roman procurator of Judea from 48 to 52 C.E. He held office at a time of increasing unrest. The *Zealots, who were already active in the time of his predecessor *Tiberius Julius Alexander, extended their activities during his period of office. The tension which accompanied his appointment is to some extent attributable to his own corruption and readiness to accept bribes. This came to light in the quarrel between the Jews and Samaritans, when he failed to punish the latter for the murder of a pilgrim from Galilee to Jerusalem. In revenge the Jews, led by the Zealots *Eleazar son of Dinai and *Alexander, set fire to Samaritan villages and killed the inhabitants. According to the report in Josephus' *Antiquities*, Cumanus was in the pay of the Samaritans; in his *Jewish Wars* Josephus gives a different account. The disturbance was reported to Quadratus, the governor of Syria, by the Samaritans. After hearing both sides Quadratus executed a number of Jews and Samaritans and ordered Cumanus and the tribune Celer to report to the emperor in Rome. Cumanus was banished, after the emperor had been influenced by both his wife Agrippina and the young king *Agrippa II, and the tribune was sent to the Jews in Jerusalem for capital punishment. Two other riots were caused, one by the indecent behavior of a Roman soldier at the Passover festival and the other when a Roman soldier set fire to a Torah scroll in the course of a punitive mission to the villages near Beth-Horon, where Jews had robbed an imperial officer. Cumanus' period of office was marked by a deteriorating relationship between Jews and Romans.

°CUMBERLAND, RICHARD (1732–1811), English playwright and novelist who tried to reverse the image of the Jew created by Shakespeare in *The Merchant of Venice*. Educated at Cambridge, Cumberland began writing plays around 1759. His first stage Jew was Naphtali in *The Fashionable Lover* (1772). This was an unflattering portrait, but by the time he wrote *The Jew* (1794), his attitude had changed completely. In the person of Sheva, Cumberland brought a new kind of Jew to the English stage. Sheva, like Shylock, is a usurer, hustled and insulted by the gentlemen of the town as "the meerest muckworm in the city of London." But by the end of the play the audience is made to realize that not one of the unflattering epithets really applies to him, and he is acclaimed as "the widow's friend, the orphan's father, the poor man's protector, the universal philanthropist." In spite of touches of melodrama and sentimentality, *The Jew* did well on the stage and had an influence on the more serious drama of the period. It has been translated into Hebrew and Yiddish. Cumberland produced a collection of essays, *The Observer* (1785), in which he introduced the saintly original of Sheva, Abraham Abrahams. He also wrote an unsuccessful comic opera entitled *The Jew of Mogadore* (1808). Cumberland's philo-Semitism paved the way for other favorable depictions of Jews in English literary works.

CUMIN (Heb. כַּמּוֹן, *kammon*; Isa. 28:25, 27), the spice *Cuminum cyminum*. In mishnaic times cumin grew extensively in Erez Israel and was even exported (Dem. 1:1), the local variety being superior to that of Cyprus (TJ, Dem. 2:1, 22b). It was used as a spice for eating with bread, and it was popular though it was regarded as a luxury and was excluded from the commodities which it was forbidden to hoard in years of fam-

ine (BB 90b). Since cumin was effective in stemming the flow of blood, it was used to stem bleeding caused by circumcision (Shab. 19:2) and the menstrual flow (Shab. 110b). Today cumin is occasionally grown as a condiment in Erez Israel. It scatters its seeds and thus grows wild in a number of places.

°CUNAEUS (Van der Cun), PETRUS (1586–1638), Dutch humanist legal scholar and poet. Cunaeus was appointed professor of Latin (1612), politics (1613), and law (1615) at Leiden University. From 1601 he had studied Hebrew under Ambrosius Regemorter at Leiden. Later he went to Franeker, where he learned Aramaic and read rabbinic texts with Johann *Drusius. His main work, *De Republica Hebraeorum libri tres* (Leiden 1617, with translations into English (1653), Dutch (1700), and French (1705)), was a comparative discussion of the political and theological institutions of the ancient Hebrews. Continuing similar studies by Carlo Sigonio and Cornelius Betram, Cunaeus forged political theory, historical research, and biblical studies into an integrated methodology. Taking *Josephus as his point of departure, he tried to show the superiority of the Israelite theocracy to the Greek and Roman polity. His exposition was one of the first to systematically rely on talmudic and medieval Jewish sources.

CUNEO, city in northern Italy. The oldest Jewish community in the territory of the House of Savoy emerged in Savigliano, not far from Cuneo, at the beginning of the 15th century. It is estimated that by the middle of the 16th century, about 400 Jews lived under the dukes of Savoy. A turning point came in 1570, when Pope Pius V expelled the Jews from Avignon, where a flourishing community, called the "Pope's Jews," had long existed in proximity to the pontifical court. Emanuele Filiberto welcomed many refugees to the region of Cuneo, perhaps with the objective of filling the demographic gap that had developed in preceding decades following persecutions of the Protestants. A period of uninterrupted stability began in a large area between Cuneo and Monferrato; local administrations profited by the financial support of small but flourishing Jewish communities. Migrations from Provence continued for several decades. In 1630 the Jews of Cuneo were permitted to participate in artisan crafts and trade without the burden of taxes higher than those levied on non-Jews. The situation became much more critical in the 18th century as a result of the rigid attitude of Vittorio Amedeo II and his son Carlo Emanuele III. This was the period of the severe application of the Regie costituzioni (1723), forced conversions, and the imposition of the ghetto, an institution that arrived two centuries later than in the rest of the peninsula. The ghetto in present-day Mondovì, for example, dates from September 1724. Surviving documents reveal oppressive schemes in other cities under Savoyard authority, including attempts to organize anti-Jewish manifestations and conflicts during Carnival. By the end of the 18th century, the Jews had been progressively isolated, removed from any contact with the surrounding society. This condition continued in the following century right up to the Albertine Statuto (1848), the document that decreed the emancipation of religious minorities (Jews and Valdesians). The census of Napoleon I indicates that 215 Jews resided in Cuneo in 1806, a number that increased to 301 by 1816. These statistics indicate a community that in the 19th century witnessed the birth of several important representatives of Italian Jewish culture, including Lelio Della Torre. A significant transformation occurred at the beginning of the 20th century, following the industrialization of the Italian state created in 1861 and the consequent urbanization that attracted a considerable portion of the Jewish community to Turin. The census of Mussolini in 1938 established for Cuneo the figure of 182 Jews, but included Jews residing in Saluzzo, Mondovì, Fossano, Busca, Moretta, and Cherasco. The Jewish community lost its juridical autonomy after 1945 and is today part of the Jewish community of Turin.

Holocaust Period

Eight kilometers from Cuneo, at the point of confluence of the valley of the Gesso and the valley of the Stura, the two principal valleys of the Maritime Alps in Italy, the Germans established a concentration camp in the commune of Borgo San Dalmazzo a few days after their occupation of the area on September 12, 1943. They selected an old military barracks a few meters from the railroad station on the Nice-Cuneo line. In the 19th century the building had housed a spinning mill. Nothing remains today of the construction that hosted 349 "foreign" Jews, refugees from Central and Eastern Europe arrested by the Germans in the Province of Cuneo on or after September 18. They were from a group of about 1,000 Jewish refugees in enforced residence in St. Martin Vesubie, France, who had followed Italian soldiers retreating from formerly Italian-occupied France after the Italian armistice with the Allies was announced on September 8. They had struggled across the Alps through the passes of the Finestre, at 2,575 meters above sea level, and Ciriegia, at 2,551 meters, expecting to find the Allies in the Cuneo area rather than the Germans.

Also in the camp at Borgo San Dalmazzo in the autumn of 1943 were some Italian Jews arrested in Cuneo, but they were freed before a circular from Minister of the Interior Buffarini Guidi demanding their arrests went into effect. The "first camp" of Borgo San Dalmazzo functioned until November 21, 1943, when the 349 "foreigners" were taken from the barracks to the station where a freight train awaited them. Passing through Cuneo, Savona, and Nice, they were trans-

ferred to Drancy, outside Paris. The majority continued on to Auschwitz in convoy 64 on December 12, 1943. Only 10 are known to have survived. Most of the others from the original group survived, however, by hiding in the surrounding mountains or by moving south to Florence or Rome. They were aided by hundreds of local Italians in a rescue effort often coordinated by Don Raimondo Viale (1907–1987), who after the war was recognized as a Righteous Among the Nations.

The camp at Borgo San Dalmazzo was reopened a few days after the departure of the Jewish refugees, so that one speaks of a "second camp" between December 4, 1943, and February 15, 1944. The reopening was ordered by the police in Cuneo on December 9 in response to a decree on December 2. This time all Jews were eligible for arrest, without distinction. Most affected were the weak, the elderly, those living alone, all those who had not been able to hide. Jews from Cuneo who had escaped deportation from the "first camp" had gone into hiding, usually in the mountains. Those of Mondovì were warned in time. The fate of the Jews of Saluzzo, where Jews taking refuge from Turin were added to the few regular residents of the area, was different and more tragic. A total of 26 Jews from Saluzzo were deported, mostly women, registered in a list dated January 31, 1944. Phonogram number 01083 of the local police, dated February 15, 1944, ordered their transfer to Fossoli, from where they were ultimately deported to Auschwitz. Then on April 25, 1945, the day Cuneo was liberated, the Germans seized six "foreign" Jews from the local prison and shot them under the arches of the bridge leading into the city.

[Alberto Cavaglion (2nd ed.)]

CUOMOTINI (Turk. **Gumuldjina**), city in northeastern Greece in the region of Thrace. Jewish settlement is known from the early 16th century when, according to a population census, the Jewish community numbered 100 people or 25 head of household. The first settlers came from Edirne and later Salonika, and a Jewish community, primarily Sephardi, existed until the Bulgarians deported the Jews of the city in World War II.

When *Nathan of Gaza, the key follower of the false messiah *Shabbetai Ẓevi, fled from Edirne and Ipsula, he found refuge in Cuomotini with Shabbateans. He was driven out of the city by opponents who placed a *ḥerem* against him.

A synagogue, immediately outside of the city walls, existed from the 18th century.

In 1786, the Jews were victims of an attack by a Turkish army rebel and his small force who revolted, attacked the walled city, locked themselves in, and forced the Jews who lived within the walls to collaborate with them and shoot at the army. They had to feed the captives and break the Sabbath. The Ḥakham Jacob saved the community by bribery and the Jewish women cared for the wounded insurgents. The Jews escaped prosecution from the authorities also by bribery, and the 22nd of Elul became a day of commemoration on which they did not work. An unfinished hymn was composed by Rabbi Daniel de Avila.

In the 1860s the Carasso, Abravanel, Nahmias, and Molho families of Salonika settled in Cuomotini. In the 1880s, the Jews lived within the walls and the gates were locked at night. According to legend, in 1888–89 the Jews did not live in the city but came daily as traders from Drama and elsewhere and were only permitted to live inside the walls after the sick wife of a Turkish official could not find a Jewish merchant who sold natural medicines, on condition that they would reside in the city permanently. Seventy houses in the Turkish Quarter were allocated to them and they were given permission to build a synagogue inside the walls.

In 1907 the Jewish community numbered 200 families. By the early 20th century, there were four philanthropic associations as well as a *ḥevra kaddisha* and a *bikkur ḥolim*. Since Jews were not admitted to Greek-Orthodox schools, a Jewish school was founded in 1889, but it closed down shortly afterward owing to financial difficulties. A boys school was established in 1899 and a separate girls school was also set up. A coeducational school was founded in 1910, which received assistance from the Alliance Israélite Universelle. In 1912 it had 246 students.

The community was under Bulgarian rule from 1912 until 1922. A branch of the Bulgarian Association for Hebrew Language and Culture was established in the city.

When Turkey ceded Thrace and Cuomotini became Greek, the Jews had to designate three buildings to house refugees. In 1928, the community numbered 1,159 people. New organizations included the cultural Cercle Israelite, the women's volunteer Rofeh Holim, and the Zionist Aḥdut and B'nai Israel. In 1934, Meir Dasa sat on the local municipal council.

In November 1940, after the commencement of the Albanian campaign, the government sequestered the Jewish school. In April 1941, the Bulgarians annexed Thrace. In early 1942, Jewish youth were seized for forced labor. The Bulgarians ran a harsh and violent occupation. While some 28 escaped, most of the Jews were arrested on March 4, 1943, and transported in 20 open train cars to the notorious Dupnitsa transit camp, and then dispatched from Lom by boat via the Danube. The Jews from Cuomotini and Kavala on the *Karageorge* were shot by the Bulgarians and the Germans; while three other boats, of which one held Cuomotini Jews, arrived in Vienna and from there the Thracian Jews were sent to Treblinka; where

they were gassed upon arrival. The Bulgarians confiscated all of the Jewish properties and possessions.

Only 18 Jews returned to the city, left with nothing. Most did not stay, leaving for Athens, the United States, or Israel. The synagogue, which had been used as a stable during the war, was returned, but served as a storage facility until 1980. In the early 1990s the roof collapsed and the municipality tore down the structure in 1994.

A Unique Case of Communal Organization and Philanthropic Consciousness," in: *Proceedings of the XIIth Congress of CIEPO, Archiv Orientalni, Supplementa VIII* (1998), 189–96; B. Rivlin, "Cuomotini," in: *Pinkas Kehillot Yavan* (1999), 339–47.

[Yitzchak Kerem (2nd ed.)]

CUPBEARER, a high ranking royal official primarily in charge of serving wine to the king. Since he was close to the person of the king, who feared intrigue and the possibility of poisoned food, the cupbearer was required to be a man of irreproachable loyalty capable of winning the king's complete confidence.

Genesis 40:1 mentions Pharaoh's cupbearer (Heb. *mashkeh, mashqeh*), who, in the next verse, is called the chief cupbearer (Heb. *sar ha-mashqim*). Indicative of the importance of the position is the fact that it was the cupbearer whom Joseph asked to intercede with Pharaoh in order to bring about his release from prison (Gen. 40:14). In I Kings 10:5 and II Chronicles 9:4, it is possible that the word *mashkav* (*mashqaw*) refers to Solomon's cupbearers who were among the king's many possessions which amazed the Queen of Sheba so much that "there was no more spirit in her." The word may, however, refer to Solomon's "drinking service," i.e., decanters and cups. Nehemiah's words, "For I was cupbearer to the king" (Neh. 1:11b), attests to a cupbearer at court as late as the Persian period.

An Aramaic inscription of the ninth century B.C.E. consisting of the word *lšqy'* ("belonging to the cupbearer"), has been found on a large stone jar at Ein Gev. It is assumed that *lšqy'* is the honorific title of a dignitary or royal official at the court of Ben-Hadad II or Hazael. The word was probably an imitation of such Assyrian titles as *šāqû*, or *rab-šāqê*, which denote an important official at the royal court. The title *rab-šāqê* appears in the Bible as *Rab-Shakeh, Sennacherib's chief cupbearer (II Kings 18:17 ff.; Isa. 36:2 ff.). That such a title could be honorary and also connected with practical duties is apparent from the context of II Kings 18:17–19 and Isaiah 36:2 where the Assyrian *rab-šāqê* challenges Hezekiah king of Israel. Assyrian palace reliefs indicate the importance of the cupbearer in relation to the king's other servants. Representations in pictorial art and literary sources show that cupbearers also existed at the courts of the various kings of Canaan.

BIBLIOGRAPHY: B. Mazar et al., in: IEJ, 14 (1964), 27–28.

CURAÇAO, an island near the northern coast of Venezuela, South America, under the Dutch Crown part of the Netherland Antilles. Sighted by the Conquistador Alonso de Ojeda in 1498, it was captured from the Spanish by the Dutch in 1634. The Dutch West India Company was interested in populating the island, and among others to attract Jews from Dutch Brazil and to stem the flow of experienced Jewish planters from Brazil to Barbados. The first organized group of Jews was headed by Joao de Yllan (1651), and a second group by David Nassi (1652). The Jews were given an area called the "Jewish Quarter," several miles from the fortress which today is Willemstadt, capital of the island. Their efforts to plant sugar cane and other tropical products were not successful on this arid island. In 1659, however, a grant was given to another group of Jews from Brazil to settle in Curaçao, led by Isaac da Costa. He received the right of free exercise of religion, the right to protection, and permission to build a synagogue. Contrary to the situation prevailing in other Dutch possessions, the Jews had to adjust to some restrictions. They were treated as foreigners and were not even allowed to be inside the fortress after nine o'clock in the evening. Upon his nomination as governor of Curaçao, Peter Stuyvesant tried his utmost to limit the Jews' rights. All this could not prevent the Jews from transforming Curaçao into the main commercial center of the entire area. The proximity of Venezuela and Colombia facilitated the promotion of so-called illicit trade with the Spanish colonies. Owing to the shortage of Spanish vessels, Jews of Curaçao dealt through the conversos in these countries for their import and export.

The community "Mikve Israel" was founded in 1659 and the Jewish cemetery consecrated that same year. The first synagogue was dedicated in 1674 and coincided with the arrival of the first Haham (rabbi), Joshiau Pardo of Salonika. The present-day synagogue was established in 1732.

Curaçao became the center of Jewish life in the Caribbean and was called "Mother of the Caribbean Jewish communities." The establishment of the yeshivah Etz Haim ve-Ohel Yahakov (1674) gave spiritual guidance of the Jewish communities in the area. Bodies of Jews who died in places with no Jewish cemetery (mainly those under Spanish colonial rule), such as Cuba, Puerto Rico, and Santo Domingo, were transported to Curaçao for burial. The *mohalim* (circumcisers) of Curaçao attended to persons who arrived from Europe or other parts of the Americas with the aim of reconverting to Judaism. Among those who came from Spain and Portugal were a Dominican friar, a Franciscan father, and a Catholic priest. This continued until 1821.

The Jewish population continued to grow. Jews came from Amsterdam and Bayonne, exiles arrived from Pomeroon (Guiana) and Martinique, and conversos from Spain and Portugal. By 1729, the Jewish population exceeded 2,000, about one-half the total white population of the island. The small island was overpopulated and this led to Jewish immigration to other areas. Curaçao, however, remained their center.

In 1693, a party of 70 Curaçao Jews joined the Jews from Barbados in Newport, Rhode Island. That same year a group of Leghorn Jews left Curaçao to found the enclave at Tucacas, on the Venezuelan coast. The enclave, with its commu-

nity and synagogue, existed until 1720, when captured by Spanish forces.

Curaçao Jews settled on the Dutch islands of Sint Maarten (Saint Martin) and Aruba; in the towns of Coro, Barcelona, Barquisimiento, Valencia, Caroa, and Puerto de Caballo in Venezuela; Carabobo, Rio Hacha, and Santa Marta in Colombia; in St. Thomas and St. Croix of the Virgin Islands; in Cap Haitien in Haiti; and in the Dominican Republic, Costa Rica, Panama, Cuba, New York, New Orleans, and Mexico City. In each location they still remained attached to Curaçao which, in turn, attended to their spiritual needs.

The commmunal importance of Curaçao has diminished today, and with it its Jewish population. Reform Judaism came to Curaçao in 1863, causing a rift and dividing Curaçao into two communities. The Reform "Temple Emmanuel" was dedicated in 1867. The dispute led to many Jews distancing themselves from the community. The conflict continued for almost 100 years, harming Jewish life. To resolve the situation, in 1964, the two communities merged to form "The United Netherlands Portuguese Congregation Mikve Israel – Emmanuel," which adopted Reconstructionism and decided "to include Sephardi rites so long as these do not conflict with Reconstructionist principles." In 1969, the Ashkenazi community "Shaarei Tzedek" was founded and an Ashkenazi synagogue built.

As of 2000, some 300 Jews lived in Curaçao, with the Ashkenazim being the majority.

Israel is represented in the Netherlands Antilles by the ambassador in Caracas and an honorary consul in Willemstadt.

CURIEL, Marrano family, active in Jewish life in Amsterdam and Hamburg under the name of Nuñez da Costa. The origin of the name is Curiel del Duero in Castile. Jews whose origin was from this village bore the name after they had left it. A certain David Curiel from Avila, who decided to leave Castile in 1492, probably settled in Coimbra, with which the Curiel family became identified. It seems that in Coimbra the family descended from Abigail Curiel, alias Guiomar da Costa, after the forced conversion of 1497. Abigail was kept as a mistress for several years by Jeronimo de Saldanha, a nobleman with some Jewish ancestry, who was the father of a son raised in Coimbra as a Jew or Crypto-Jew. Hence the claim of the Curiel family to Portuguese nobility. Part of the family moved to Lisbon, some escaped from Portugal and reverted to Judaism, others moved to the New World. Several members of the family were tried by the Inquisition in Coimbra. These trials reveal much about the Jewish practices maintained by the family. Several members of the family lived in Covilhã. The departure of the Curiel family from Portugal was the result of indiscreet correspondence between the Jewish branch of the family living in Italy and the Portuguese New Christian branch. JACOB CURIEL, alias Duarte Nuñez da Costa (1587–1665), born a Marrano in Lisbon, moved via Pisa and Florence to Amsterdam and later to Hamburg. Having made himself useful to members of the royal house of Portugal in Hamburg, he was made Portuguese diplomatic representative. His elder son, MOSES (Jerónimo Nuñez da Costa; died 1697), was Portuguese agent in Amsterdam, where he was prominent in the Sephardi community and represented his coreligionists in cases before the Dutch authorities. Jacob's younger son, SOLOMON (Manoel Nuñez da Costa), succeeded his father in Hamburg. The family held diplomatic positions in both cities until the late 18th century.

[Kenneth R. Scholberg / Yom Tov Assis (2nd ed.)]

CURIEL, ISRAEL BEN MEIR DI (d. 1577), sage of Safed. Neither the place nor the date of his birth is known. Similarly, there is no precise idea as to the date of his arrival in Safed. Di Curiel studied under R. Joseph Fasi in Adrianople, and presumably he held a rabbinic office in one of the congregations there. He evidently spent some time in Istanbul as well. In Safed, Di Curiel studied under Jacob *Berab and was one of the latter's ordainees. Together with Joseph *Caro and Moses *Trani, Di Curiel sat in the Safed *bet din*. Among his disciples was R. Bezalel *Ashkenazi. He was one of the outstanding preachers of his time . A corpus of Di Curiel's homilies was published by S. Regev in addition to his *Or Ẓaddikim* (Salonica 1799), which was mistakenly attibuted to R. Joseph *Caro. The poet R. Israel *Najara was his grandson.

[Abraham David]

CURRICK, MAX COHEN (1877–1947), U.S. Reform rabbi. Currick was born in Boston and ordained at Hebrew Union College in 1898. After serving as rabbi of United Hebrew Congregation of Fort Smith, Arkansas, he became rabbi of Congregation Anshe Hesed in Erie, Pennsylvania, a position he held from 1901 until his death in 1947. A journalist as well, Currick was editor of the *Erie Dispatch* (1910–12) and chairman of the board of editors of *Liberal Judaism*, the house organ of

the *Union of American Hebrew Congregations. In 1927, he became chairman of the *Central Conference of American Rabbis Committee on International Peace and was active in assisting victims of Nazism. Currick rose to many leadership roles in the CCAR and co-sponsored a tough (although not adopted by the rabbinic organization) resolution vehemently condemning "immorality" in Hollywood films. He was elected vice president of the CCAR in 1935 and served as president of the organization during the time of Hitler's rise to international power (1937–39), calling for greater cooperation among American Jewry to meet rising antisemitism at home and abroad. Contrary to the views of some other American Jewish leaders, however, Currick was of the opinion that no new umbrella organization needed to be formed to confront this challenge; rather, he felt, the *Synagogue Council of America, with its bedrock foundation in the houses of worship of the three streams of Judaism, should be given a broader mandate to speak out and act on issues facing American Jewry. In addition to his CCAR roles, Currick served on the Boards of Governors of Hebrew Union College and of the B'nai B'rith Home for Children.

[Bezalel Gordon (2nd ed.)]

CURRIE, EDWINA (1946–), British politician. Edwina Currie (née Cohen) was born and educated in Liverpool and then at Oxford and the London School of Economics. The daughter of Orthodox Jews, she served in Birmingham local politics and then as a Conservative member of Parliament from 1983 to 1997. Under Margaret Thatcher, she enjoyed a high profile career as under-secretary of state for health from 1986 to 1988, initiating many public and media campaigns on health matters. In December 1988 she was forced to resign from the government because of a safety scare when she unwisely declared that most of Britain's eggs were infected with salmonella. She then became a writer, producing such thrillers as *The Ambassador* (1999). Edwina Currie hit the national headlines in 2002 when she published her *Diaries, 1987–92*, which revealed that in the mid-1980s she had had a four-year affair with John Major (Britain's prime minister from 1990 to 1997) before he was a major political figure. Currie was defeated at the 1997 general election and has since become a well-known radio and television presenter. Major and Currie reportedly spent much of their time together discussing the Jews.

[William D. Rubinstein (2nd ed.)]

CURTIS, JAMIE LEE (1958–), U.S. actor. Daughter of Jewish actor Tony *Curtis (Bernie Schwartz) and Janet Leigh, Curtis spent her high school years at the Choate School in Connecticut. After graduation, she attended the University of the Pacific in California for one term before dropping out. Universal signed Curtis to a seven-year contract in 1977 that got her bit parts on television shows like *Operation Petticoat*, *Quincy*, and *Columbo*. She made her big-screen debut in John Carpenter's *Halloween* (1978), and became known as the "queen of scream" with such follow-up horror films as *The Fog* (1980), *Prom Night* (1980), *Terror Train* (1981), and *Halloween II* (1981). After portraying the lead in the TV film *Death of a Centerfold: The Dorothy Stratten Story*, Curtis followed with comedy roles in the films *Trading Places* (1983) and *A Fish Called Wanda* (1988). She married actor-director Christopher Guest in 1984, with whom she has a daughter, Annie, and a son, Thomas, both adopted. In 1989–92, she starred opposite Richard Lewis in the sitcom *Anything But Love*, winning a 1990 Golden Globe for best actress in a television comedy. A memorable performance in the film *True Lies* (1994) opposite Arnold Schwarznegger won her another Golden Globe (1995), the same year that she appeared in the screen version of Wendy *Wasserstein's *The Heidi Chronicles* (1995). She reprised her role as Laurie Strode in *Halloween H20* (1998). Curtis had a major hit with the Disney remake of *Freaky Friday* (2003) and continued her family-friendly roles with *Christmas with the Kranks* (2004). Curtis is also a successful children's book author, publishing *When I Was Little* (1995); *Tell Me Again about the Night I Was Born* (1996); *Today I Feel Silly* (1998); *Where Do Balloons Go?* (2000); *I'm Gonna Like Me* (2002); and *It's Hard to Be Five* (2004).

[Adam Wills (2nd ed.)]

CURTIS, TONY (**Bernard Schwartz**; 1925–), U.S. actor. Born in New York, the son of a Hungarian tailor, Curtis began his career on the stage in a settlement house in the Bronx. He then went from summer stock companies to off-Broadway shows, and finally to Hollywood. His first major dramatic role was in *Trapeze* (1956), followed by *Sweet Smell of Success* (1957). Adeptly handling both dramatic and comedy roles, Curtis starred in many films, including *Houdini* (1953), *The Defiant Ones* (1958), *The Vikings* (1958), *Some Like It Hot* (1959), *Operation Petticoat* (1959), *Spartacus* (1960), *The Rat Race* (1960), *Who Was That Lady?* (1960), *The Great Impostor* (1961), *The Outsider* (1962), *Taras Bulba* (1962), *Forty Pounds of Trouble* (1962), *Captain Newman, M.D.* (1963), *Goodbye, Charlie* (1964), *Sex and the Single Girl* (1964), *The Great Race* (1965), *Boeing, Boeing* (1966), *Don't Make Waves* (1967), *The Boston Strangler* (1968), *Lepke* (1975), *The Last Tycoon* (1976), *Casanova & Co.* (1977), *Little Miss Marker* (1980), *The Mirror Crack'd* (1980), *Insignificance* (1985), *Center of the Web* (1991), *The Mummy Lives* (1993), *Hardball* (1997), *Alien X Factor* (1997), *Stargames* (1998), and *Love Is a Survivor* (2004). Among his many television appearances, Curtis starred as Danny Wilde opposite Roger Moore in the adventure series *The Persuaders* (1971–72).

Adept at artwork as well, Curtis has been painting and drawing for more than 30 years. His works are on exhibit at art galleries and other venues around the world. Actress Jamie Lee *Curtis is the daughter of Curtis and his first wife,

Janet Leigh. In 1993 Curtis wrote *Tony Curtis: The Autobiography* (with B. Paris).

[Ruth Beloff (2nd ed.)]

CURTIZ, MICHAEL (1888–1962), Hungarian director. Born Mihály Kertész in Budapest, Hungary, to carpenter Ignatz and opera singer Aranka. Curtiz grew up poor and made his acting debut in 1897 in an opera his mother had been cast in. He graduated from Markoszy University in 1906 and went to work for a traveling circus as a performer. He joined the Budapest Royal Academy of Theater and Art in 1910 and studied there for two years. After the academy, Curtiz became involved in the country's growing film industry and is said to have directed the country's first feature film, *Today and Tomorrow* (1912). In 1915, Curtiz married actress Lucy Doraine (nee Ilonka Kovács Perényi), who starred in many of his films from 1912 to 1919. Curtiz, who had served in the Austrian army during World War I, signed a contract with Sascha Studios in Vienna and relocated to Austria from Hungary in 1919 after the Communists nationalized the country's film industry. In 1923, he directed the acclaimed S*odom and Gomorrah* and divorced his wife. In 1924 he directed the film *Die Sklavenkönigin*, released in the United States under the title *Moon of Israel*. The film inspired Jack Warner to extend an invitation to Curtiz to come and direct for the studio. His first films for Warner Bros. in 1926 were silent, but he gradually moved over to talkies between 1927 and 1929. Curtiz married screenwriter Bess Meredyth in 1929. In the late 1930s, he made several romantic adventures starring Errol Flynn, including *Captain Blood* (1935) and *The Adventures of Robin Hood* (1938). By 1937, Curtiz had become an American citizen, but was renowned for never having mastered the English language. Yet he directed some of the most iconic American films, such as the 1942 musical *Yankee Doodle Dandy* and what is considered the greatest American film, *Casablanca* (1942), the only film to earn him an Oscar for best director. He continued to work at a hectic pace, turning out 23 more films for Warner Bros., including the Oscar-winning *Mildred Pierce* (1945), *Life with Father* (1947), and *Jim Thorpe, All-American* (1951), but left in 1954, filming the popular *White Christmas* for Paramount that year. As the studios declined, so too did his career, but he continued to direct a wide variety of films, including Elvis Presley in *King Creole* (1958) and finishing the John Wayne film *The Comancheros* (1961) a few months before his death in Los Angeles.

[Adam Wills (2nd ed.)]

°CUSA, NICHOLAS OF (1401–1464), German theologian and philosopher. Nicholas was born in Cusa (Kues), Germany. He became a cardinal in 1448. At the ecclesiastical synod of Bamberg convened by him in his capacity of papal legate in 1451 Cusa had condoned the regulation obliging Jews to wear a distinctive *badge. His historical importance derives from his writings, in which he set forth an intensely spiritual interpretation of belief. For this task he developed philosophical concepts which enabled his work to serve as a link between the Middle Ages and early modern times. The conquest of Constantinople by the Turks in 1453 and the atrocities engendered by their fanaticism motivated him to write *De pace fidei* (1453; ed. by R. Klibansky and H. Bascour, 1956). His aim was to trace the common ground between different creeds and thus eliminate religious conflicts. In the work Nicholas portrays wise men of many nations representing a wide range of creeds and sects gathered in heaven to listen to esoteric teaching. According to it, the doctrinal essence of Christianity is defined as a cosmogonic process determining the relation of God and man, an interpretation that was intended as a basis of belief for all religions, even paganism. Nicholas knew very well that the Jews' explicit refusal to recognize the messianic character of Jesus, whose appearance on earth was the pivot of his metaphysical history, was an obstacle to the achievement of such harmony. But in the debate the Jewish speaker agrees that an understanding of the Trinity as the process of creation avoids ascribing the objectionable attribute of plurality to God (ch. 9). Further, Peter sets forth the argument that the real belief of the Jews transcends their own understanding: "They prefer death to any violation of the Law; but this attitude presupposes a belief in immortality, even though such blessing is not promised in the Torah for the mere fulfilling of the Law" (ch. 15). Nicholas' teaching was influenced by a tradition going back to the German Dominican theologian and mystic Meister *Eckhart (c. 1260–1327), whose writings introduced him to Maimonides. Nicholas' famous book *De docta ignorantia* (1440; tr. by G. Heron as *Of Learned Ignorance*, 1954) contains passages from Maimonides' *Dux neutrorum* (*Guide of the Perplexed)*, presented as the authority for the treatise's statements concerning the right approach to the understanding of the Divine Being (1:16; 26). They are identical with the corresponding quotations summarized in Eckhart's Exodus commentary. But in contrast to Eckhart, Nicholas names a Rabbi Solomon as the author of the texts. Possibly, at the time he did not wish to reveal his link with the daring 14th-century Dominican. About 1450 he made a search for a complete text of the *Dux neutrorum* and, having found it in a Dutch monastery, ordered a copy for the pope.

[Hans Liebeschutz]

CUSH (**Kush**). (1) Cush was the name of an ancient kingdom in N.E. Africa. The portion of the Nile Valley between the First and Sixth Cataracts was called Cush by the pharaonic Egyptians, though western nations preferred the Greek appellation Nubia. One of the earliest mentions of the name

Cush is found on an inscription of the early Middle Kingdom (c. 1970 B.C.E.). During the second millennium B.C.E. Cush was absorbed into the Egyptian empire, first as far as the Second Cataract under the Middle Kingdom rulers and then as far as the Sixth by the New Kingdom pharaohs. When the New Kingdom disintegrated (c. 1050 B.C.E.), Cush, which had been thoroughly Egyptianized, gained its independence under a line of native kings. It was probably the Cushite king Shabako (c. 707–696) who encouraged *Hezekiah of Judah to resist the Assyrians under Sennacherib and sent the relief army that the Assyrians crushed at the battle of Eletekh in 701 B.C.E., since Taharka (*Tirhakah), mentioned in II Kings 19:9 and Isaiah 37:9, had not yet come to the throne. In fact, the biblical account is believed by some scholars to be a conflation of two campaigns. After the Assyrian conquest of Egypt in 666 B.C.E., Taharka's successor Tanwentamani at first succeeded in freeing Upper Egypt as far as Memphis from the Assyrians in about 663–662 B.C.E., but he was driven out by the avenging armies of Ashurbanipal. The ancient capital of Thebes was so savagely plundered that 50 years later it served the prophet Nahum as an example for the forthcoming destruction of Nineveh (Nah. 3:8, 10). From this time on, Cush ceased to intervene in the affairs of Egypt.

(2) According to the Bible, Cush was the son of Ham (Gen. 2:13; 10:6–8; Ezek. 38:5; I Chron. 1:8–10) and the eponym of the N.E. African people. In several verses the name refers to other peoples; the distinction is not clear in every single case (Num. 12:1; II Chron. 14:8; 21:16). In the Septuagint the name appears in two forms: in those verses in which it designates the son of Ham it appears in the form Χους while in other cases it is Αιθιοπια, i.e., Ethiopia. Most modern translations follow the Septuagint. The whole of East Africa was called Cush by the Greeks, and in modern times "*Cushi*" is a Hebrew term for a black person.

[Alan Richard Schulman]

CUSHAN-RISHATHAIM (Heb. כּוּשַׁן רִשְׁעָתַיִם), the first oppressor of Israel in the period of the Judges (Judg. 3:8–10). Israel was subject to Cushan-Rishathaim, the king of Aram-Naharaim, for eight years, before being rescued by the first "judge," *Othniel son of Kenaz. The second element, Rishathaim ("double wickedness"), is presumably not the original name, but serves as a pejorative which rhymes with Naharaim. The combination Aram-Naharaim is not a genuine one for the period of the Judges, since at that time the Arameans were not yet an important ethnic element in Mesopotamia. In the view of some scholars, the story lacks historical basis and is the invention of an author who wished to produce a judge from Judah, and raise the total number of judges to twelve. Those who see a historical basis to the story have proposed various identifications for Cushan-Rishathaim: (1) Cushan is to be sought among one of the Kassite rulers in Babylonia (17th–12th centuries; cf. Gen. 10:8). Josephus identifies Cushan with an Assyrian king. Others identify him with one of the Mitannian or Hittite kings. (2) Cushan is an Egyptian ruler from *Cush in Africa (Nubia; cf. Gen. 10:6; Isa. 11:11, et al.). (3) The head of the tribe of Cush, which led a nomadic existence along the southern border of Palestine. Such Cushite nomads are mentioned in the Egyptian Execration Texts of the first quarter of the second millennium B.C.E. and in the Bible (Num. 12:1; Hab. 3:7; II Chron. 14:8; 21:16). (4) Aram (Heb. **ארם**) is a corruption of Edom (Heb. **אדום**) and Naharaim is a later addition. Thus, Cushan is an Edomite king who subjugated the tribe of Judah whose territory was adjacent to Edom. (5) Cushan is from central or northern Syria, and is to be identified with a North Syrian ruler or with *irsw*, a Hurrian (from the area of Syria-Palestine) who seized power in Egypt during the anarchic period at the end of the 19th dynasty (c. 1200 B.C.E.). In his campaign from the north to Egypt, he also subjugated the Israelites. Othniel's rescue of the Israelites is to be understood against the background of the expulsion of the foreign invaders from Egypt by the pharaoh Sethnakhte, the founder of the 20th dynasty.

[Bustanay Oded]

CUTH, CUTHAH (Heb. כּוּת, II Kings 17:30; כּוּתָה; II Kings 17:24), a Sumero-Akkadian and Babylonian holy and cult city; the present-day Tell Ibrāhīm, 31¼ mi. (50 km.) N.E. of Babylon, 12½ mi. (20 km.) W. of Jemdet Nasr (see *Mesopotamia). The Sumerian (or pre-Sumerian) name for Cuthah is Gudua, and the Akkadian (from which the biblical name was derived) is Kutû(m). In the Bible (II Kings 17:24, 30) Cuthah figures as one of the cities from which the king of Assyria brought colonists to the province of Samaria. The Talmud (BB 91a) and Josephus (Ant., 9:279) speak of it as a locality still known in their time. The former identifies it with the Ur of the Chaldeans, which was Abraham's original home according to Genesis (11:31; 15:7). Perhaps the modern name of the site of Cuthah, Tell Ibrāhīm, reflects this tradition. The city of Cuthah is known in cuneiform sources chiefly as the cult center of the god Nergal; his central shrine, É-MES-LAM, stood in Cuthah (cf. e.g., Laws of Hammurapi, Preamble, line 71), and the Cuthean colonists in the province of Samaria established this cult there (II Kings 17:30). Cuthah is mentioned in various hymns and cultic poems. One historical poem, formerly known as the "Legend of the King of Cuthah," is now called the "Legend of Naram-Sin" because its subject is King Naram-Sîn of *Akkad (see O.B. Gurney, *Anatolian Studies*, 5 (1955), p. 93ff.). Although Cuthah was also considered a holy city by the Assyrian kings, it was damaged and destroyed by Sargon II and Sennacherib, due to the active participation of its old and new inhabitants in the wars of independence and revolts. According to the first edition of Sennacherib's annals of his first campaign (lines 23ff.) he took the city because it

served as a center of Babylonian resistance to Assyria, and Ashurbanipal had to chastise it for the same reason. (Rassam Cylinder, 3:130 (in: D.D. Luckenbill, *The Annals of Sennacherib* (1924), 61); meanwhile Cuthah served as a minor astronomical-astrological observations station.) Either one or both of these episodes may be connected with the transplanting of Cutheans to the territory of the former rump kingdom of Ephraim reported in the already cited biblical passages (II Kings 17:24, 30; cf. Ezra 4:1–2, 10). In rabbinic sources "Cuthean" (Heb. כּוּתִי) is the fixed term of "*Samaritan."

[Pinhas Artzi]

CUTLER, BRUCE (1948–). U.S. criminal lawyer. Born in Brooklyn, N.Y., to a detective turned lawyer, Cutler graduated from Hamilton College and Brooklyn Law School, with honors, in 1974. He was supervising senior trial attorney with the Homicide Bureau of the Brooklyn District Attorney from 1974 to 1981, when he joined the private practice of Barry Slotnick, one of New York's premier criminal lawyers. In March 1985, he became the defense lawyer for John Gotti, who headed a notorious crime family by virtue of a murderous coup and flaunted his power during a flamboyant reign as a Mafia boss. Cutler provided a tenacious and highly publicized defense of Gotti against a government determined to bring Gotti to his knees. A ubiquitous presence at Gotti's side in and out of the courtroom, Cutler became almost as infamous as his client. And, as Gotti became a lightning rod for prosecutors seeking glory, reputation, or promotion, Cutler became a lightning rod for controversy. The government said Cutler may have gotten too close, and they set out to see that Cutler and Gotti paid the price. Cutler successfully defended Gotti in an assault case, a federal racketeering trial, and in a case in which he was accused of shooting a union official. But in a federal murder and racketeering trial in 1991 and 1992, with Cutler and an associate defending Gotti, the winning streak ran out. Prosecutors contended that both lawyers were house counsel for a crime family and thus became potential witnesses in the case against Gotti. They were removed at the government's behest. Cutler, the appeals court said, had "entangled himself to an extraordinary degree in the activities of the Gambino crime family." Gotti was later convicted and sentenced to life without parole. He died in 2002. A judge had warned Cutler not to talk to the media during the proceedings but Cutler did. In 1993 he was convicted of contempt for violating the court order. He was sentenced to 90 days of house arrest, ordered to perform 600 hours of community service, and fined $5,000. He was also suspended from practicing law for six months in 1995 and 1996. Eventually, Cutler returned to private practice. He wrote *Closing Argument* (2003) about his law career.

[Stewart Kampel (2nd ed.)]

CUTLER, HARRY (1875–1920), U.S. industrialist, public official, and communal leader. Born in Russia, Cutler went to the U.S. at the age of eight. He became a successful jewelry manufacturer in Providence, Rhode Island. From 1908 to 1911 he served with distinction as a state assemblyman in Rhode Island. Cutler was a colonel in the National Guard and an aide to General John J. Pershing during the Mexican border campaign in 1916. During World War I, he helped found the *National Jewish Welfare Board to serve the needs of Jewish servicemen and was chairman of its executive committee. Cutler was one of nine delegates sent by the American Jewish Congress to Paris in 1919 to represent Jewish interests at the Versailles Conference. His other communal activities were manifold, including membership in the executive committees of the American Jewish Committee, Zionist Organization of America, and American Jewish Joint Distribution Committee, as well as vice chairman of the American Jewish Congress and vice president of the Union of American Hebrew Congregations.

[Morton Rosenstock]

°CUZA, ALEXANDER C. (1857–1946), Romanian nationalist and antisemitic leader. Cuza taught political economy at Jassy University (1900). From 1890, he combined law teaching with a political career devoted to the propagation of racial antisemitism and xenophobia. In 1895, he founded the Alliance antisémitique universelle in Bucharest, with N. Iorga and J. de Biez. In 1910, together with Iorga, he formed the proto-fascist National Democratic Party (NDP), based on the "National Christian" idea. The main points of the party's program were the elimination of the Jews from professional life, the prohibition against Jews settling in the villages, and their removal from the army. Between the two world wars, Cuza was the principal promoter of "*numerus clausus" and of racialism in academic circles and students' organizations, particularly at Jassy University, which became a focal point of antisemitism in Romania. In 1923, Cuza created out of the NDP the National Christian Defense League, a fascist formation which later gave birth to *Codreanu's *Iron Guard formed in 1930. In 1925 he was among the organizers of a secret European antisemitic conference which convened in Budapest. On Hitler's rise to power in Germany, the German Nazi Party supported Cuza's party, which united with O. Goga's agrarian national party in 1935 and became the National Christian Party (Partidul naţional-Creştin). In December 1937 Cuza helped Goga to set up a government which paved the way for Ion *Antonescu's dictatorship. Among Cuza's works are *Naţionalitatea în arta* ("Nationality in Art," 1908); *Scaderea Proporaţiei Creştine şi înmulţirea Jidanilor* ("Decrease of the Christian Population and Increase of the Jews," 1910); *Jidanii în Razboiu* ("The Jews in the War," 1919); *Numerus Clausus* (1923).

BIBLIOGRAPHY: *Politics and Political Parties in Rumania* (1936), 432–5; P. Pavel, *Why Rumania Failed* (1944), index.

C.V.-ZEITUNG (*Central-Verein-Zeitung*), weekly newspaper published in Berlin between 1922 and 1938 to replace the former monthly *Im Deutschen Reich* (founded 1895) as the official organ of the *Central-Verein deutscher Staatsbuerger juedischen Glaubens (CV). One of its subtitles was **Allgemeine Zeitung des Judentums* in reference to the venerable German-Jewish newspaper founded under this name by Ludwig *Philippson in 1837 and which ceased to appear in 1922. The *CV-Zeitung*'s chief editor between 1922 and 1933 was the director of the CV, Ludwig *Hollaender, followed up to the end by Alfred Hirschberg. The gradual deletion of the paper's subtitles reflects the hostile attitude of the Nazi regime to the "assimilationist" CV and its newspaper: as early as August 1933 the subheading *Organ des Centralvereins deutscher Staatsbuerger juedischen Glaubens* disappeared from the masthead. From April 1935 on the boldface line *Zeitung fuer Deutschtum und Judentum* had had to be omitted by government order, leaving A*llgemeine Zeitung des Judentums* as the sole subtitle. The *CV Zeitung* was the most widely read Jewish newspaper in Germany, reaching a circulation of 73,000 in 1926. It ceased publication, like almost all Jewish papers, after the pogroms of November 1938.

CYNICS AND CYNICISM, Greek philosophy glorifying the unspoiled primitive life that left its imprint upon many ages and cultures. The Cynics used a fable-like witty anecdote, the *chria*, which immortalized the extreme actions and caustic *bon mots* of their favorite sages (often nonhistorical). They were followed in this by *Philo, *tannaim*, and *amoraim*, and some Church Fathers. Philo repeats many *chriae* and portrays the Jewish festivals and Moses' life in a cynicizing manner. It has recently been argued by Fischel that in the rabbinic stories of *Hillel and, to a lesser degree, *Eliezer b. Hyrcanus, *Joshua, *Meir, and *Akiva, are found cynic *chriae* or composites of chriic materials including their original social values, such as endurance, poverty, lowly toil, strenuous effort, and total non-worry (all non-biblical). Cynical invective, bawdiness, and offensive humor, however, are somewhat toned down in the talmudic stories or reinterpreted through *halakhah* and belief in a transcendental world. As in the Greco-Roman tradition these *exempla* were apparently used to increase the stature of a founder-sage.

Additional cynic-rhetorical favorites reworked in rabbinism include Heracles at the Crossroads (Eccl. R. on 1:14, etc.); the Laughing Democritus (Akiva) and the Weeping Heraclitus (Gamaliel, etc., Mak. 24a, etc.); the Forgetful Thales (Hillel, Pes. 66a, et al.); and anti-Alexander items (Tam. 31b, et al.). The cynical *thaumaston*, a *chria* on a visiting foreign sage (esp. the Scythian Anacharsis) who "marvels" (*thaumazei*) at the inner contradictions in the culture of his guests, may be the pattern for similar stories on Aesop, Jesus, and Hillel (TJ, Suk. 5:4, 55b; et al.).

The transition of cynic stances from the Greco-Roman scholar-bureaucracy to the Jewish-tannaitic one may have been facilitated by cynicism's superficial resemblance to biblical prophecy and by its critique of "paganism." Meir's reported disputations with the Cynic *Oenomaus of Gadara, although hardly genuine, may reflect some personal contacts, but then Oenomaus was a favorite target of Greco-Roman rhetoric. *Kinukos* (*kunikos*) as a destructive person occurs in the Jerusalem Talmud (Git. 7:1, 48c; et al.). Living under similar conditions the Cynics may have occasionally found rabbinic items congenial: Peregrinus Proteus' spectacular suicide at the Olympic Games of 167 C.E. resembles that of the Jewish high priest *Alcimus-Jakim according to the Midrash (Gen. R. 65:22).

CYON, ELIE DE (**Tsion, Ilya Faddeyevich**; 1842–1912), Russian physiologist. Cyon, who was born in Samara (now Kuibyshev), graduated from the University of Kiev and later studied in Berlin and France. In 1870 he became the first Jewish professor in Russia when he was appointed to the chair of physiology at the University of St. Petersburg. In 1872 he was appointed professor at the Medico-Surgical Academy in St. Petersburg and reformed the teaching of physiology by introducing the method of illustrative experiments. His work on reflexes won him international renown. As a result of political intrigues, Cyon was obliged to resign from the Academy in 1875. He thereafter gave up his scientific career and left Russia for Paris. Cyon published original work on the physiology of the nervous system and the heart, the mechanism of blood pressure, the application of electrotherapy, and a monograph on the inner ear. His treatise on new methods and techniques in physiological experiments served as a guide in many European medical centers. His publications include: *Methodik der physiologischen Experimente und Vivisektionen…* (1876); *Gesammelte physiologische Arbeiten…* (1888); *Dieu et Science: Essais de psychologie des sciences…* (1910).

[Suessmann Muntner]

CYPRESS, the tree *Cupressus sempervirens* of which two varieties are known, the horizontal *Cupressus sempervirens horizontalis* and the vertical *Cupressus sempervirens pyramidalis*. The former grows wild in the high mountains of Gilead and the slopes of Lebanon. Scholars differ as to the biblical name for the cypress. In modern Hebrew it is identified with *berosh*, but the identification appears to be erroneous since the biblical *berosh* has been identified with the *juniper. It is almost certain that both the gopher and *te'ashur* of the Bible are the cypress. (1) Gopher: It was from this wood that Noah

was commanded to build the ark (Gen. 6:14). Of all the suggestions put forward to identify this tree, the cypress seems the most likely, and its Greek name κοπάρισος appears to be related to the Semitic gopher. The wood is proofed against rot and is suitable for the building of seaworthy craft. Ships in ancient times were constructed mainly of cypress. (2) *Te'ashur* (AV "*box tree") is mentioned by Isaiah among the trees that will blossom on the way of the redeemed in the wilderness (Isa 41:19), and will be employed in the construction of the Temple (*ibid.* 60:13). Ezekiel, describing the ships of the Tyrians, states that they were made of *bat-ashurim* from the isles of the Kittites (Ezek. 27:6). Both Rashi (basing himself on the Targum) and Kimḥi read it as one word preceded by a preposition *bite'ashurim* ("with cypress wood brought from the island of Cyprus"). The cypress grows on that island, and some are of the opinion that the name of this island is actually derived from it. *Te'ashur* is apparently derived from "*yashar*" ("upright") because of the erect nature of the *C.s. pyramydalis*. The horizontal species resembles the cedar, and it would appear that the references in rabbinical literature to cedars growing in Israel are to the horizontal cypress. The cypress is not indigenous to Israel but is grown as an ornamental tree and as a windbreak in orchards. It is also planted in pine forests. The picturesque mixture of pine and cypress can be found in the forest at Sha'ar ha-Gai and at Ein Karem near Jerusalem.

CYPROS (first century C.E.), mother of *Herod. She was descended from a noble Nabatean family and married *Antipater, the Idumean, to whom she bore four sons, *Phasael, Herod, Joseph, *Pheroras, and a daughter, Salome. At the court of Herod, Cypros, supported by her daughter Salome, was in constant conflict with Herod's wife, *Mariamne the Hasmonean, and her mother Alexandra, who mocked at her descent. Cypros and Salome hence succeeded in inciting Herod against his wife. Before Herod left for Rhodes to meet *Augustus, he left the members of his family at Masada, but he sent Mariamne and her mother in the charge of two faithful servants to Alexandreion. The bitter domestic rivalry led directly to Herod's execution of Mariamne. A fortress near Jericho was named Cypros by Herod in honor of his mother (Josephus, Wars, 1:417; Ant., 16:143). The site is situated on the southern side of Wadi Qelt, opposite Nuseib 'Uweishira, 15 miles (22 km.) distant from Jerusalem. It was excavated by E. Netzer and E. Damati in 1974 revealing a sumptious palace with bathhouses (one with a large bathtub *in situ*) and reception rooms with painted walls.

[Lea Roth / Shimon Gibson (2nd ed.)]

CYPROS (first century C.E.), wife of Agrippa I, and daughter of Herod's brother Phasael and Salampsio. She bore her husband two sons, Drusus, who died in his childhood, and Agrippa, and three daughters, Berenice, Drusilla, and Mariamne. Cypros showed great loyalty to her husband whose reckless spending often caused him to get into debt. On one such occasion she prevented him from committing suicide. She then turned to his sister *Herodias, wife of Herod *Antipas, who secured a public appointment for Agrippa. He was however unable to hold it for long, and fell into debt again. Once more she came to her husband's rescue, persuading the alabarch *Alexander Lysimachus to grant a loan. Derenbourg considers that it was largely her influence which transformed Agrippa from a rather irresponsible and profligate young man into the king beloved of the rabbis.

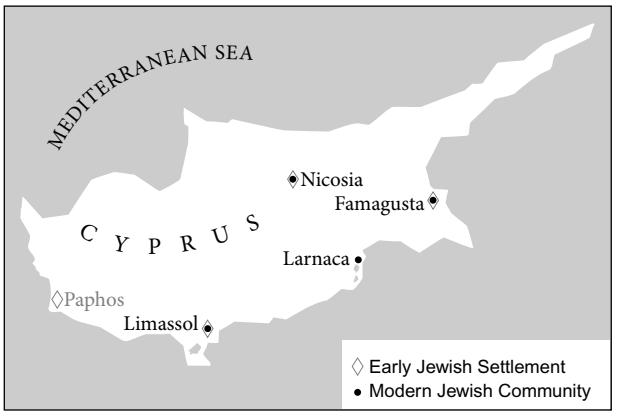
CYPRUS, an island in the eastern Mediterranean, opposite the coast of northern Syria; c. 40 mi. south of Turkey and c. 65 mi. west of Syria.

Ancient Period

According to many scholars, the name Alashiya (Elishah, אֱלִישָׁה Gen. 10:4; 1 Chron. 1:7; Ezek. 27:7) refers to the island of Cyprus or a part of it. Alashiya is described in sources of the second millennium B.C.E. (Mari, Amarna, Ugarit, and Egyptian documents) as a place from which copper was exported – parenthetically it should be noted that Greek sources also bear witness to the fact that Cyprus was a source of copper for the Mediterranean countries (see *Metals). A stele of *Sargon II has been unearthed at Citium in Cyprus (*Kitti* in Phoenician, *Kittim in Isa. 23:1, and Ezek. 27:6). Sargon and Esarhaddon mention ten kings of the land of *Iadnāna* (or *ā'ā*) who paid them tribute. The names and residences of these kings indicate that the Cypriot population was not Semitic, and a relationship with indigenous peoples of Anatolia has been suggested. The Cypriot native language and the so-called Cypro-Minoan script or Cypro-Mycenean script from the Bronze Age remain undeciphered. The majority of the inscriptions in the so-called Cypriot syllabic script – which seems to have been



Major Jewish communities on Cyprus in medieval and modern times.

employed from about the sixth to the first centuries B.C.E. – is couched in Greek, and a few are in an undeciphered language.

[Bustanay Oded]

Like Erez Israel, Cyprus came under Ptolemaic rule at the beginning of the third century B.C.E., at which period a Jewish settlement on the island apparently began to develop on a large scale. Actual evidence of such settlement, however, dates from the middle of the second century B.C.E., Cyprus being among the places to which the Romans sent letters in 142 B.C.E. requesting that the rights of the Jews there be safeguarded (I Macc. 15:23). In the days of John Hyrcanus the Jewish settlement in the island flourished (Jos., Ant., 13:284). Apart from the literary evidence that Jews lived in Cyprus in this period, Hasmonean coins have been discovered on the island. In 58 B.C.E. the island was annexed to the Roman province of Cilicia. During the Roman period there were contacts between Erez Israel and Cyprus: Herod received from Augustus a portion of the revenue from the copper mines there and was entrusted with the management of some of them (*ibid.*, 15:128). It is possible that Jews were employed at the mines in an administrative capacity, or that they were sent to work there as a punishment for criminal offenses. After the death of Herod, his granddaughter Alexandra married an aristocratic Cyprus Jew, Timius of Cyprus (*ibid.*, 18:131). The existence of a large Jewish settlement in Cyprus is attested by a letter of *Agrippa I to the emperor Caligula in which he states that Jerusalem is the capital not of Judea alone, but of all Jews, including those in Cyprus (Philo, *Legatio ad Gaium*, 282). The Acts of the Apostles (4:36; 13:4–6; 15:39) also bear witness to a large Jewish population on the island. The apostles Paul, Barnabas of Cyprus, and John preached in the synagogues at Salamis and other places. The Jews were not favorably disposed to the spread of Christianity, and a certain Bar Joshua (Barjesus) attempted to obstruct the apostles' efforts to exert their influence on the Roman governor (Acts 13:6–8).

There is some evidence, though sparse, of Cyprus Jews in Erez Israel: a Jew of Cyprus helped to persuade Drusilla, the daughter of Agrippa, to marry the procurator Felix (52–60 C.E.; Jos., Ant., 20:142); a certain Mnason of Cyprus lived at Caesarea (Acts 21:16); and there was apparently something of a community of Cyprus Jews in Jerusalem (*ibid.*, 11:19). Products of Cyprus were imported into Erez Israel (TJ, Dem. 2:1, 22b, "cumin from Cyprus"; TJ, Yoma 4:5, 41d, "wine of Cyprus"; Jos., Ant., 20:51, "dried figs imported from Cyprus by Queen Helena of Adiabene during a famine"). Under Trajan, probably in 116/7 C.E., the Jews of Cyprus, led by *Artemion, together with those of Cyrene, Egypt, and Mesopotamia revolted (Dio Cassius 68:32; Jerome, *Chronica*, 196; et al.). The causes of the revolt in Cyprus are not entirely clear, but it was apparently due in part to the friction between Jews and non-Jews and not necessarily to their relations with the Roman administration. The Jews of Cyprus are reported to have killed 240,000 people and to have destroyed the city of Salamis. Jewish losses are not mentioned. After the revolt had been suppressed by Lusius and other generals sent by Trajan, Jews were strictly forbidden to set foot on the island, but this prohibition was not apparently in force for long. The belief held by some (on the basis of an inscription on a pillar) that Jews had already returned to the island in the second century is borne out by Jewish sources that mention R. *Akiva's visit to Zifirin (TJ, Av. Zar. 2:4; 41b; 113a; et al. – if Neubauer's identification of Zifirin as a place in Cyprus is to be preferred to that of Alon, who locates it in Cilicia). Another inscription, dating probably from the fourth century, refers to the renovation of a synagogue, apparently in the third century (Frey, Corpus, 2 (197), 735). In addition, a third century Jewish candelabrum with designs of a *lulav* and *etrog* have been found there. Jews, then, had resettled in the island by that time.

[Lea Roth]

Medieval Period

In the early seventh century there was a large community in Famagusta. The 12th-century traveler *Benjamin of Tudela mentions the existence of Rabbanite and Karaite Jews and a Jewish sect that apparently celebrated Sabbath on Sunday instead of Saturday. Under the Lusignan kings (1192–1489), Cyprus had the largest Jewish settlement in the islands off Greece. It included communities in Nicosia, Famagusta, Paphos, and Limassol. (See Map: Cyprus). Jews were discriminated against in law; however, attempts by the church to forbid Christians from visiting Jewish physicians were unsuccessful. Archbishop Giovanni del Conte (1319–1332) introduced the distinguishing yellow *badge for Jews. King Peter I (1359–1369) attracted Egyptian Jewish traders to Cyprus by promising equal treatment to Jews and non-Jews. The Genoese (1373–1463) plundered Jewish property in Famagusta and Nicosia. During the 16th century 2,000 Jews are said to have lived in Famagusta. One of the island's governors during Venetian rule (1489–1571) ordered the punishment of Jews who did not pay due respect to a religious procession. In 1495 a pupil of R. Obadiah of *Bertinoro mentioned the existence of many Jews who were artisans and traders in Cyprus. In 1552 R. Moses *Basola found 12 householders, originally from Sicily, in Famagusta. An at-

tempt in 1568 to foment a rebellion on the island in favor of the Turks was attributed to the statesman Joseph *Nasi, who in 1563–64 set on foot an intrigue to offer the crown of Cyprus to the Duke of Savoy. Thanks to the efforts of Solomon *Ashkenazi a peace treaty was signed, in 1573, between Venice and Turkey which had conquered the island in 1561.

The sultans tried to settle Jews from Safed on the island in order to counterbalance the Christian element in the population, but subsequently the Jewish settlement on the island was insignificant.

Modern Period

In 1878, the English statesman Benjamin *Disraeli succeeded in having Cyprus placed under British administration. The few Jews who lived in Cyprus under British rule were mainly silversmiths and peddlers. Between 1883 and 1897 there were attempts to settle Jews from Romania elsewhere on the island. In 1900, the economist Davis *Trietsch made an attempt to settle Jews there after Herzl had failed in negotiations over Erez Israel with the Turks. In 1902 and 1903 Herzl discussed with *Chamberlain a plan to settle Jews in Cyprus, but without success. Between 1933 and 1939 Cyprus was a sanctuary for 500 Jewish refugees from Germany. In 1941 the British began to evacuate the island, mainly women and children, for fear of a German invasion, and its Jews were also evacuated. After World War II, when the stream of "illegal" immigration to Palestine of the survivors in Europe assumed mass proportions, the British government forcibly transferred many thousands of them to deportation ships and sent them to detention camps in Cyprus. Their total number, from 1946 until 1948, was about 51,500. In the camps they were assisted by *shelihim* (emissaries) of the *Jewish Agency and the *Haganah to organize health and education services as well as some military training. With the establishment of the State of Israel they were released and quickly absorbed in the mainstream of mass immigration which began to arrive in the country (see *"Illegal" Immigration). In 1951 the Jewish population numbered only 165 persons who lived in Nicosia, Larnaca, Limassol, and Famagusta. They engaged in citrus growing, trade, industry, and farming; a few were mine owners. By 1970 there were only 25 Jews on the island and there was virtually no communal life. A cemetery was maintained at Margo and second one at Larnaca was no longer used.

The community began to revive in the early 21st century as the Jewish population grew to around 1,500 (300 families), mostly consisting of Israelis working in the burgeoning information and telecom industries there, as well as Jews from South Africa and the former Soviet Union. A community center was inaugurated in Larnaca in 2005 under the auspices of Chabad, with the island's only synagogue. Israeli-born Aryeh Ze'ev Raskin, who originally arrived as a Chabad emissary to stimulate the revival, became the community's rabbi. Sunday school classes were also inaugurated.

Relations with Israel

After the establishment of the State of Israel an Israel Consulate was opened in Nicosia. When Cyprus reached independence, in 1960, diplomatic relations were established on ambassadorial level, Israel being represented by a resident ambassador, Cyprus by a non-resident one. In its relations with Israel the government of Cyprus assumed a complex and sometimes contradictory attitude. While at the United Nations its representatives mostly sided with the Arab states against Israel, mainly under Egyptian pressure and under the influence of the Greek government (see *Greece), it simultaneously fostered mass-tourism from Israel to Cyprus, which reached around 60,000 Israelis a year by the beginning of the 21st century, and non-governmental ties (e.g., between labor movements, trade unions, agricultural organizations, etc.). Trade relations developed satisfactorily. There was also some technical cooperation between the two states. At the same time, from the 1980s on, Cyprus modified its pro-Arab stance and political relations with Israel began to warm.

CYRENE, ancient capital of Cyrenaica, on the northern coast of Africa. In 321 B.C.E. Cyrene came under Ptolemaic rule, remaining part of the Egyptian empire until 96 B.C.E. when it fell to the Romans. Josephus (Apion, 2:44) relates that Jews were sent by Ptolemy I Soter (304–282 B.C.E.) to "Cyrene and the other cities of Libya" to strengthen that king's hold upon the area. Strabo, in a passage quoted by Josephus (Ant., 14:115), describes the four classes of citizens in Cyrene in the year 85 B.C.E. "The first consisted of citizens, the second of farmers, the third of resident aliens (μέτοικοι), and the fourth of Jews." The Jews of Cyrene seem to have been at odds with the local Greek population as is shown by various Roman decrees supporting the rights of Cyrenean Jewry (I Macc. 15:23). Though under the Ptolemies Jewish civic equality (ισονομία) had been guaranteed, the Jews of Cyrene were persecuted by the local population and prevented from sending their donations to the Temple at Jerusalem. Only when Augustus and Marcus Agrippa intervened in 14 B.C.E. were these rights fully restored (Ant., 16:160ff.). The Jewish community in Cyrene

maintained close ties with those in Palestine. A detailed history of the Hasmonean uprising was chronicled by *Jason of Cyrene (II Macc. 2:23), and in the first century C.E. numerous Jews of Cyrene resided in Jerusalem (Matt. 27:32; Mark 15:21; Luke 23:26; Acts 2:10; 6:9). This fact sheds light on the attempt made by some *sicarii under the leadership of a certain Jonathan to incite the Jews of Cyrene to rebellion after the fall of Jerusalem. This attempt would have been highly unrealistic had there been no intermediaries between Jerusalem and Cyrene. Though Jonathan made headway with the lower classes of the population, the leader of the Jewish community immediately reported his actions to the Roman governor, Catullus, who promptly put down the insurrection (Jos., Wars, 7:43 ff.; Life, 424f.).

Far more serious was the Jewish uprising during the last years of Trajan (115–7), which spread across North Africa. The Jews of Cyrene, under their "king" called Lukuas or Andraeas, played a leading role in these bitter revolts, referred to by Greek authors as "the Jewish war" (ὸ ουδαικός πόλεμος). Various Greek and Latin inscriptions describe the destruction caused by the "Jewish tumult," which, although finally suppressed by the Roman legions, nevertheless left Cyrene in ruins (Eusebius, *Historia Ecclesiastica*, 2; Dio Cassius 68, 32).

[Isaiah Gafni]

CYRUS (Heb. כֹּרֶשׁ; old Persian: **Kūruš**), king of Persia (reigned, 559–529 B.C.E.). At first, Cyrus II's dominion consisted of Anshan, southwest of the Iranian plateau, of which he was the legitimate king, being a descendant of the Achaemenian dynasty that had already reigned there for several generations. A number of differing accounts of his birth, youth, and ascent to the throne have come down from ancient writers (Herodotus and others), but they apparently belong mainly to the realm of legend. Extant inscriptions from his time, chiefly from Babylon, provide reliable sources of information about him (see Pritchard, Texts, 305–16). Cyrus' first important act was to conspire against Astyages, king of Media, toward which end he entered into an alliance with Nabonidus, king of Babylon. The army of Astyages betrayed him, and Cyrus seized control of the Median kingdom in 550 B.C.E. This conquest brought him into conflict with Lydia in Asia Minor, a kingdom that wished to profit from the fall of Media. In 546 Cyrus defeated Croesus and conquered his kingdom of Lydia. The conquest of Asia Minor was completed when Persia seized control of the many Greek cities on the coast. Apart from these wars with neighboring empires, he campaigned against various tribes, chiefly on the northern and eastern borders of his kingdom. In a battle with one of these tribes – the Massagetae – he was killed. His conquests had created the most extensive empire yet known.

Cyrus holds a special place in the history of Israel. He is mentioned in the prophecies of Deutero-Isaiah, in the Book of Ezra (and at the end of II Chronicles), and in the Book of Daniel (1:21; 6:29; 10:1). In these passages he appears both as one destined to save Israel and to fulfill for it a certain mission on behalf of the God of Israel (Deutero-Isaiah), and as one whose edict and command served as a foundation for the return to Zion and the erection of the destroyed temple (Ezra). Apparently the successes of Cyrus, particularly the preparations and steps that indicated that a struggle between him and Babylon was pending, were in part responsible for rousing Deutero-Isaiah to utter his prophecies on the imminent redemption of Israel and the impending destruction of Babylon. The hopes of the prophet are clearly expressed in chapter 45:1–13: God turns "to His anointed, to Cyrus," whom He helped in the past and will further help in the continuation of his activities ("I will go before you, and level the mountains; I will break in pieces the doors of bronze, and cut asunder the bars of iron"). Cyrus is to rebuild Jerusalem and restore the exilic community. While he does not yet know the God of Israel ("… I call you by your name, I surname you, though you do not know Me"), he may eventually do so, due to the great assistance he will receive from Him. Delivered before the event, this prophecy reveals the feelings and hopes of the prophet who awaits the conquest of Babylon and its punishment (cf. Isa. 46:1–2; 47). The prophecy in 44:28 apparently refers to Cyrus' edict and was certainly uttered after the event. Cyrus is mentioned in other places though not explicitly by name (e.g., 41:2, 25; 46:11). Nevertheless, the place occupied by Cyrus in Deutero-Isaiah should not be exaggerated. Although he occasioned many of the prophecies of Deutero-Isaiah, and his appearance was of great importance to the prophet, it is the people of Israel and its God that stand at the center of the prophecy. Cyrus is merely an instrument for the realization of the redemption of Israel through the will of its God. He is understandably a sympathetic figure, for he is a redeemer and not a "rod of anger," but it should not be assumed from his designation "anointed" and "shepherd" that he had an eschatological role or any function after the redemption of Israel (such as being their ruler in place of the House of David, etc.). It is doubtful if Cyrus was influenced in his congenial relationship with the Jews by the prophecies of Deutero-Isaiah concerning him, or by the part taken by the Jews of Babylon in the war between him and Nabonidus. An explanation of the relations between Cyrus and the Jews rests upon an understanding of his general policy, particularly in Babylon itself. This policy was based upon benevolence toward the conquered, support and sympathy for their gods, and a correction of the injustices done to them by the previous ruler Nabonidus, or in the case of the Jews of Babylon, by Nebuchadnezzar. In conformity with this policy, he restored the Babylonian gods to their temples, reconstructed temples that had been neglected in the time of his predecessor, and even returned exiles to their homes (see

the Cylinder Inscription of Cyrus, Pritchard, Texts, 315–6). His policy toward the Jews was similar to that toward the Babylonians. These principles find expression in the Hebrew edict issued to the Jews of Babylonia (538 B.C.E.), which appears in Ezra 1:2–4 (see also II Chron. 36:23). There Cyrus attributes his decision to erect the temple to a command of God, just as he attributed his actions in Babylon to an order of Marduk. An additional document of his concerning the erection of the Temple is more administrative in nature and deals with the architectural and financial details of building (Ezra 6:3–5); this document is even written in Aramaic, the adminstrative language. As a result of the permission given by Cyrus, some of the Babylonian exiles returned to Judah, and with their return a new chapter in the history of Israel began – the period of the Second Temple.

[Uriel Rappaport]

In the Aggadah

Contradictory opinions are held about Cyrus, the Palestinian rabbis giving a rather favorable account of him while the Babylonians censure him. He was descended from Japheth who was thus rewarded for his commendable behavior toward Noah when drunk (PR 35). He was chosen by God together with Darius as the instrument of His vengeance against Babylon. Influenced by Daniel's prophecy to Belshazzar (Dan. 5:28) Darius and Cyrus slew him and vowed that they would permit the Jews to return to the Land of Israel with the Temple vessels (Song R. 3:4). His name is regarded as an anagram of the word *kasher* ("worthy"; RH 3b). He pledged to contribute to the Temple service and discovered the treasures that Nebuchadnezzar had hidden (Est. R. 2:1). He wept at the destruction of the Temple and as a reward the Medes received the domination of the world and he was thus vouchsafed to sit on the throne of Solomon (SER 20). Although he granted the Jews permission to rebuild the Temple he permitted the use of wood only, so that it would be easily destroyed should they rebel against him (RH 3b–4a). Moreover when he noticed that the Babylonian cities became desolate because of the emigration of the Jews he forbade them to leave the country (Song R. 5:5).

°CZACKI, TADEUSZ (1765–1813), Polish historian, economist, and statesman. He is known for his book on the Jews and Karaites, *Rozprawa o Żydach i Karaitach* (Vilna, 1807), the first comprehensive historical survey of Polish Jewry. In general, Czacki's work maintains a fairly high standard of scholarship. For Polish history he makes use of archival material. He also occasionally utilized Hebrew sources in translation. For some generations his book served as the major textbook on the history of Polish Jewry. Between 1786 and 1792 Czacki held an important position in the Polish Treasury, then responsible for supervision of the affairs of the Jewish communities in the country. The last chapter of Czacki's work is based on personal experience; in addition to general data on the current Jewish position, he includes a detailed project for the amelioration of the status of the Jews, which had been drafted, as it subsequently transpired, by Czacki himself or with his active participation.

After the 1795 partition, this project was apparently brought to the notice of the imperial committee which drafted the statute of 1804 for Russian Jewry (see *Russia). In 1807 Czacki himself joined the committee, which recommended postponement of the article in the statute prescribing expulsion of the Jews from the villages. Czacki was appointed school inspector for the governments of Volhynia and Podolia in 1803, and in the course of his duties made contact with Jewish bodies. He also planned, inter alia, a Jewish teachers' seminary in conjunction with the high school which he established in *Kremenets. He was unable, however, to implement this project.

°CZARNIECKI, STEFAN (1599–1665), Polish army commander and leader of popular resistance to the Swedes in the wars with Charles X of Sweden (1655–60). In the fighting against the Protestant Swedes, Czarniecki's units, fired by Catholic fervor, attacked the Jews in many places through which they passed. They devastated synagogues and massacred important communities in Greater and Lesser Poland. A number of Jews perished as martyrs for their faith. These persecutions accelerated Jewish emigration from Poland westward. While a hero to the Poles, Jewish sources refer to Czarniecki as the *ẓorer* (enemy), *rasha* (cruel evildoer), or *talyan* (hangman) of Poland.

°CZARTORYSKI, PRINCE ADAM JERZY (1770–1861), Polish statesman and patriot. After the third partition of Poland (1795), Czartoryski went to St. Petersburg and entered the Russian government service, becoming assistant to the minister for foreign affairs during the reign of *Alexander I, with whom he was on friendly terms. Appointed a member of the Jewish committees of 1802, 1806, and 1807, Czartoryski advocated a policy of Jewish assimilation which, while disguised by liberal utterances, was in its effects on the Jewish masses to all practical purposes anti-Jewish. When in 1813 a Jewish printer from Vilna requested permission to publish a Yiddish newspaper, Czartoryski – who was responsible for education in the region – refused on the ground that the Jews should use the language of the surrounding population to bring them close

to their Christian neighbors, and eventually adopt Christianity. After Russia established the Kingdom of Poland in 1815, Czartoryski was appointed to deal with problems concerning the peasants and Jews there. He was then ready to support Jewish emancipation only after the Jews had undergone a long process of assimilation and achieved "better morals." In Paris, however, where he took refuge after the Polish insurrection of 1830–31, and became leader of the Polish émigrés, he was persuaded by the Polish writer and statesman Jan Czynski that the help of the middle classes and the Jews should be enlisted in the cause of Poland's liberation. Czartoryski then took a more positive stand on Jewish emancipation, and in a speech delivered on November 29, 1844, urged that the Jews should be given the same rights claimed by the other inhabitants of Poland. Czartoryski encouraged the Hebrew writer Mendel *Lefin (Satanover), a pioneer of Haskalah, who stayed on Czartoryski's estate and taught his children. At Czartoryski's suggestion he wrote a pamphlet in French calling for improvement of the situation of Polish Jewry.

CZECH, LUDWIG (1870–1942), leader of the German Social-Democratic Party in Czechoslovakia. Born in Lemberg, Czech was the son of a minor railroad official from Moravia. While studying law in Vienna, he came under the influence of Victor *Adler and joined the Austrian Social Democratic Party. He practiced law in Bruenn and was an active figure in politics, editing the party organ *Volksfreund* from 1897 to 1901. Czech campaigned for universal suffrage and improvement in workers' conditions. In 1901 he obtained the support of Thomas G. *Masaryk, in organizing a textile workers' strike and demanded a reduction of the working day to ten hours. Following the independence of Czechoslovakia, Ludwig Czech became vice chairman (1919) and later chairman (1921) of the German Social Democratic Party in Czechoslovakia. He led the activist wing of the party which stood for collaboration with the republic. In 1929 he was made minister of social welfare. In this capacity he issued food vouchers known as "Czechkarten" to unemployed workers, no longer entitled to regular relief, during the depression of the early 1930s. Czech became minister of works in 1934. He continued in office until shortly after the German *Anschluss* with Austria in 1938 when he resigned from both his ministerial and party posts. He was deported, already ill, to *Theresienstadt in March 1942.

CZECH MEMORIAL SCROLLS, THE. The 1,564 sacred Scrolls which came to Westminster Synagogue on February 7, 1964, had been gathered together in Prague, from the desolated synagogues of Bohemia and Moravia, by the Nazi official in charge of the Czech "Protectorate." Much more synagogue booty, books, pictures, embroidered vestments, and ceremonial objects of silver and gold were similarly collected by the Nazis, and many of these articles are now in the State Jewish Museum in Prague. The Scrolls themselves lay piled in the disused Michle Synagogue for more than 20 years. It is believed that they were originally gathered for permanent exhibition as relics of a defunct culture.

At the end of the war the surviving remnant of the Prague Jewish community lacked the resources to maintain the museum, and it came under the control of the Czech state authorities. It was maintained conscientiously as a memorial to the vanished communities, but the *Sifrei Torah* (Scrolls of the Law) proved an embarrassment; they could not be effectively displayed as museum exhibits, and it was realized that they would eventually deteriorate if they remained rolled up and unused.

In 1963, a prominent British art dealer, who enjoyed the confidence of Artia, the Czech government agency responsible for cultural property, was able to arrange for the scrolls to be acquired by Ralph Yablon, a London businessman and philanthropist, on the understanding that they would be entrusted to a responsible noncommercial body; the honorary officers of Westminster Synagogue, an independent London congregation, accepted Yablon's invitation to undertake this responsibility. After a preliminary examination in Prague by Chimen Abramsky (later professor of Hebrew and Jewish Studies at the University of London), the scrolls were carefully packed and shipped to London.

On February 7, 1964, 1,564 *Sifrei Torah* – a consignment which must have been unprecedented in Jewish history – arrived at Westminster Synagogue. There they were housed in numbered cradles in specially constructed racks, while the work of inspection and classification was undertaken. Each scroll was expertly examined and a record made of the condition of the parchment, the state of the calligraphy, and (so far as these could be ascertained) the age and place of origin of the scroll. Many of the labels attached more than 20 years before had survived and provided valuable information; and in some cases despairing messages were concealed in the scrolls. On the basis of this painstaking study, the scrolls were classified into grades, ranging from those without serious defect and thus readily usable, to those beyond satisfactory repair and therefore suitable only for commemorative use. Between these were the middle grades, comprising many scrolls which could be made usable by repair, or had some parts which it was possible to restore. The task of inspection and classification was directed by Rabbi Harold Reinhart, the minister of Westminster Synagogue, who gave devoted attention to every aspect of the project until his death in 1969. A committee had been formed to take responsibility for the scrolls, and the formidable task of administering the work of repair and distribution was undertaken by Ruth Shaffer, daughter of the Yiddish novelist and dramatist Sholem Asch.

The completion of the preliminary study and classification was marked, in June 1965, by a solemn assembly at Westminster Synagogue; this was attended by representatives of all sections of the Jewish community and by ministers and scholars of other faiths. The memorial prayers were read by then Chief Rabbi Sir Israel Brodie and a message of good wishes was received from the president of the Prague Jewish community.

In the ensuing years visitors from many parts of the world have come to Westminster Synagogue to see the scrolls and often to witness the work of restoration in progress. Jews and non-Jews alike, including parties from schools and other institutions, have been deeply moved by the human tragedy implicit in what they have seen and by the scope and importance of the project.

The arrival of the scrolls in London had been widely reported, and requests for scrolls soon reached the committee from many parts of the world; the process of allocation and distribution, which started soon after classification had been completed, has continued without interruption up to the present time. In the allocation of scrolls, priority was given from the outset to congregations needing a *Sefer Torah* for use in services, but many scrolls that could not be made acceptable for this purpose have been distributed to synagogues, educational institutions, and other bodies wishing to have a memorial to the communities destroyed in the Holocaust. The scrolls are handed to recipients on "permanent loan," and congregations are invited to make a contribution to the cost of repair and distribution. Each scroll bears a brass identification tablet and is accompanied by a certificate recording its origin.

In many cases, allocations have been made to synagogues which include among their members some who have personal or family links with the communities from which the scrolls originated. Information about the origin of the scrolls and their new locations is now being systematically recorded with the aid of a computer system.

The work of restoration, with all its traditional techniques and discipline, has been progress for more than 20 years, achieving as much repair as possible – although few scrolls have been restored to full synagogue use. It was undertaken initially by the scribes who examined the scrolls, but since 1967 one highly skilled *sofer* (scribe) has devoted himself almost without interruption to the task. It is foreseen, however, that when all possible restoration is completed, a residue of scrolls and fragments of scrolls will remain, together with binders and other appurtenances. These will form the basis of a permanent exhibition at Westminster Synagogue, devoted to the history of the project and to the memory of the Czech communities. Since 1980, the constitution and activities of the Memorial Scrolls Committee have been governed by a Trust deed.

Czech memorial scrolls are now in use in many parts of the world. The United States, as might be expected, has been the main recipient; but many requests from Israel have been met, as have others from virtually every country in which Jewish communities flourish freely. In addition, scrolls appropriate as memorials are to be found at Yad Vashem, at Westminster Abbey, in the Royal Library at Windsor Castle, and in many other places where they serve, in Harold Reinhart's words, "to live, to commemorate, to inspire a saddened but not hopeless world, and to glorify the holy Name."

[Leo Bernard]

CZECHOSLOVAKIA, republic in Central Europe. Founded in 1918, it united within its political framework the Jewries of the "historic countries" (*Bohemia, *Moravia, and part of *Silesia), connected with the *Hapsburg Empire from 1526 and under its direct control from 1620, and of *Slovakia and Carpatho-Russia (see *Sub-Carpathian Ruthenia), both an integral part of *Hungary, from the tenth century. As of January 1, 1993, Czechoslovakia ceased to exist as a separate entity and its territory became two independent nations, the *Czech Republic and Slovakia. The Jewish communities of the various regions hence differed substantially in their demographic, economic, and cultural aspects, with influences of assimilation to the Czech and German cultures prevailing in the west, and the Hungarian in conjunction with the traditional Orthodox Jewish way of life in the east.

Demographic Structure

In the western part of Czechoslovakia Jewish life was mainly regulated by Austrian legislation (of 1890) and in the eastern areas by Hungarian (of 1870). The communal leadership was initially predominantly assimilationist-oriented to German, Hungarian, or Czech culture. Czechoslovakian Jewry was distributed as shown in Table: Czechoslovakian Jewry.

By 1930, over 80% of the Jews of Bohemia and Moravia-Silesia lived in towns with over 5,000 inhabitants (60% of these in towns with over 50,000 inhabitants, i.e., *Prague, *Brno (Bruenn)). Between 1918 and 1938 the number of Jews in the small towns decreased by 20% to 50%, while the Jewish population of Prague, Brno, *Ostrava, and several industrial centers in the Sudeten area increased. In 1930, the proportion of children up to the age of 14 was 13.04% among Bohemian Jews and 14.25% among Moravian-Silesian Jews, compared with 22.63% and 26.13% respectively among the general population. The occupational structure of the Jewish population was similar to that for the rest of West European Jewry.

Table 1. Distribution of Czechoslovakian Jewry

	1921 Absolute no.	% of Total pop.	1930 Absolute no.	% of Total pop.	% of Czech Jewry
Bohemia	79,777	1.19	76,301	1.07	21.4
Moravia	37,989	1.09	41,250	1.16	11.5
Silesia	7,317	1.09			
Slovakia	135,918	4.53	136,737	4.11	38.4
Carpatho-Russia	93,341	15.39	102,542	14.14	28.7
Total	354,342	2.6	356,830	2.42	100.0 %

Major Jewish communities in Czechoslovakia from World War I to the 1980s (including involuntary settlement-ghettos as of October 1941).

During the century before World War I the number of Jews in Carpatho-Russia had increased almost fivefold because of the influx from Galicia, Romania, and Russia. In 1930, 65% were living in villages, constituting the highest proportion of rural dwellers among European Jewry. The communities in western Slovakia were closer to the way of life of the Moravian communities whose members had originally founded them. *Bratislava (Pressburg) had an individual character and was closely related to *Burgenland Jewry.

Communal Structure

The initiative to organize Czech Jewry within the new state came from Zionists. Ludwig *Singer had already suggested in November 1917 that the communities should be reorganized to provide a framework both for religious activities and toward achieving Jewish national and cultural *autonomy. On the initiative of Rudolph Kohn of the Prague *Po'alei Zion, the Jewish National Council (Národní rada Židovská) was established on Oct. 23, 1918, headed by Ludwig Singer, with the writer Max Brod and Karl Fischel as his deputies. On Oct. 28, at the proclamation of the republic, the council declared Jewish loyalty to the provisional government and put forward its principal claims: recognition of and the right to declare Jewish nationality, full civic and legal rights, democratization of the Jewish communities and expansion of their competences, establishment of a central supreme representation of the communities, cultural autonomy in Jewish education, promotion and use of Hebrew, and contact with the "center in Palestine." By November the federations of the communities of Moravia and Silesia had accepted the council's authority. On Jan. 4, 1919, a Prague conference of adherents to Jewish nationality adopted a program to convert the communities, as the "living cells of Jewish society," into the bearers of Jewish autonomy, but the program was not realized; nor could a unified communal organization be created. The conference decided to found the *Židovská Strana (Jewish party) as its instrument for electoral activities. Many communities reorganized themselves on democratic lines, granting franchise to women and to Jews from Eastern Europe who had settled there. Besides the demands urged on the authorities, as contained in the National Jewish Council's proclamation, the council also made demands on Jewish society itself, calling for a modern social policy to replace old-style philanthropy, establishment of Jewish secular schools, and provision of facilities for religious worship according to the wishes of the members of the community. The council dispatched a delegation to the peace conference in Versailles (Singer, Samuel Hugo *Bergmann, and Norbert Adler), which became part of the Jewish delegation there. Though Zionist influence predominated in the council, non-Zionists such as Alois Hilf and Salomon Hugo Lieben collaborated. The Czech assimilationist movement (see *Čechů-židů, *Svaz) and the extremist orthodox group contested the council's right to represent the whole of Czechoslovakian Jewry. The state under President Thomas Garrigue *Masaryk agreed to the council's basic claims, and the 1920 constitution expressly recognized Jewish nationality, corresponding to the conceptions of the *minority rights granted to all minorities in Czechoslovakia.

Political Affiliation

The 354,342 Jews by religion (Israelites) enumerated in 1921, and 356,830 in 1930, declared their nationality as shown in Table 2:

Adherents of the Jewish religion in 1930 represented 2.4% of the total population, and Jews by nationality 1.3%

of the total. While in general mother tongue served as the criterion for nationality, Jews could declare Jewish nationality irrespective of it: 156 persons who were not Jewish by religion declared their nationality to be Jewish in 1921, and 317 in 1930. After 1918 five regional federations of communities existed in Bohemia-Moravia; in 1926 they established the Nejvyšší rada židovských náboženských obcí (Supreme Council of the Jewish Religious Communities). It was first headed by the Czech-Jewish leader Augustin Stein and then by Joseph *Popper. The chief rabbi of Prague (then Ḥayyim Heinrich *Brody) was an ex officio member. In Slovakia and Carpatho-Russia, as in Hungary, three trends of community affiliation existed. The orthodox communities of Slovakia had an autonomous organization (confirmed in 1920) which from 1923 also included those of Carpatho-Russia. Its statute limited the franchise to dues payers. The *neologist and *status-quoante communities amalgamated into the Jeshurun federation in 1928. There was no supreme communal organization or chief rabbinate. From 1926 the salary of rabbis was augmented by the Kongrua, a government fund for the upkeep of religious life.

The Jewish party succeeded in achieving representation on a number of municipal councils. However, as it did not attain the minimum quota required for the parliamentary elections in any single electoral district, it succeeded in returning two representatives only in 1929, as a result of an agreement with the Polish minority (Ludwig Singer, succeeded after his death in 1931 by Angelo *Goldstein, and Julius Reisz) and in 1935, after an arrangement with the Czechoslovak Social Democrats (Goldstein and Ḥayyim *Kugel). The party was opposed by Czech, Slovak, German, and Hungarian assimilationists, as well as by the extreme Orthodox, who gave their votes to the strongest Czech party, the Agrarians. Jews, however, also attained leading positions in other political parties: Alfred Meissner and Lev Winter in the Czechoslovak Social Democrats, Ludwig *Czech and Siegfried Taub in the German, and Gabor Streiner in the Hungarian, Bruno Kafka in the Deutsche Arbeits-und Wirtschaftsgemeinschaft, and Rudolf Slánský and Viktor Stern in the Communist party. Jews were also active in political journalism. There were several Jewish weeklies, the Zionist *Židovské zprávy, *Selbstwehr*, and *Medinah Ivrith* in Prague, Max *Hickl's *Juedische Volksstimme* in Brno, the *Juedische Volkszeitung* in Bratislava, and the *Juedische Stimme* in Mukačevo

Table 2. Declared Nationality of Jews in Czechoslovakia

Czechoslovak	21.84	24.52
German	14.26	12.28
Hungarian	8.45	4.71
Others	1.83	1.29
	100.00%	100.00%

Education

In Bohemia, Moravia, and Silesia Jewish children attended general schools on all levels: Prague and Ostrava both had a Jewish elementary school, while the only Jewish secondary school was in Brno. In most towns of Slovakia there were Jewish elementary schools where the language of instruction was Hungarian, most adopting the Slovak language subsequently. In Carpatho-Russia, Jewish education was substantially based on the traditional *ḥeder* and yeshivah. Government records of 1931 listed five yeshivot as institutions of higher education, in Bratislava, *Komarno, *Prešov, *Košice, and *Mukačevo; but there were others, as in *Galanta, *Dunajska Streda, and *Huncovce. A network of Hebrew schools developed; the first school was opened in Torun, and then, supported by the *Tarbut organization, expanded to nine elementary schools and two secondary, in Mukačevo (1925) and *Uzhgorod (1934). In 1934 the Supreme Council of the Jewish Religious Communities established a course for cantors and teachers of religion. A large number of Jewish children in Carpatho-Russia attended the Czech schools established for the children of civil servants and police officers. Many Jews attended universities and technical colleges, which also attracted numbers of students from countries where there was a *numerus clausus*. A number of Jews were appointed to professorships in Prague at the Czech and the German universities.

Economic Life

Jews played an important role in the economy and were among the pioneers of its development, notably in the textile, foodstuffs, and wood and paper industries. (It was estimated that 30%–40% of the total capital invested in Czechoslovakian industry in the 1930s was Jewish-owned.) The firm of *Petschek and Weimann was instrumental in the development of mining in north Bohemia, and Jewish enterprise was prominent in the steel industry and mining of the Ostrava area (see Wilhelm *Guttmann), insurance, and private banking. Jews were also instrumental in the Slovak wood industry. Later the concentration of capital in the national banks, agrarian reform, the development of agricultural and consumers' cooperatives, and the preference given to enterprises set up by veterans of the Czechoslovakian army tended to limit the extent and importance of Jewish economic activity, and the number of Jews in industry and commerce declined. The slump of 1929–30 affected many Jewish businessmen. After this crisis many Jews emigrated from Slovakia and Carpatho-Russia to the West; on the other hand, after 1918 Czechoslovakia received several thousand refugees from Eastern Europe, most of them in transit. They were supported through the Židovská ústředna socialní péče (Juedische Fuersorge-Zentrale), founded in 1921. After the Nazi advent to power in Germany in 1933, several thousand Jewish refugees, of whom 4,000 held Czechoslovakian citizenship, entered Czechoslovakia. A special committee was founded for their support. A particular problem was the provision of legal aid for the many Jewish stateless persons, who were permanently in danger of losing their permits of do-

micile and work. Prominent in social welfare work in the 1930s were Joseph Popper, and the *WIZO leaders Marie Schmolka, Hanna Steiner, and Gisi *Fleischmann.

Cultural Sphere

Jews contributed to all spheres of cultural activity, whether Czech, German, or Hungarian oriented. Many were outstanding authors in the Czech language (see *Czechoslovak literature). Gifted German-language authors were Adolf Donath, Friedrich Adler, and Hugo *Salus of the elder generation, and Franz *Kafka, Max *Brod, Franz *Werfel, Ludwig Winder, F.C. Weisskopf, and Egon Erwin *Kisch, among others (see *German Literature). Authors who wrote in German did not necessarily consider themselves German nationals, and some, like Max Brod, were active Zionists. Many Jews were intermediaries between the cultures, such as Otakar *Fischer in translating from German to Czech, and Kamil *Hoffmann, Max Brod, and Pavel Eisner in presenting Czech culture to the German-reading public. Jews prominent in music included the composer Jaromir *Weinberger and on the Czech stage the actors Hugo *Haas and Jiři Voskovec. Jewish journalists were on the staff of many newspapers, excepting those of the extreme right, and in all languages. Jews were active in all types of sports, within Jewish organizations as well as clubs of the other nationalities, notably the swimmers and water-ball teams of the Hagibor association in Prague and Bar Kochba in Bratislava. The refusal of the Jewish champions to represent Czechoslovakia at the Berlin Olympic Games in 1936 was a subject of heated public discussion. Jewish youth was organized in the numerous Zionist youth and student organizations, as well as in many organizations of the other nationalities.

Antisemitism

Antisemitism among all the nationalities of the republic was of old standing. At the time of the establishment of the republic in 1918 there were antisemitic riots in Prague and *Holešov (Moravia). In Slovakia, serious antisemitic violence continued until summer 1919. Among the Czech elements it was less noticeable, mainly because of the personal example of Thomas Masaryk and Eduard Beneš, and the democratic political philosophy as expounded by them, the author Karel Čapek, and other leaders of public opinion, including the head of the Czechoslovak Church Hromádka, and the writers Milena Jesenská, Emanuel Rada, and Pavla Moudrá. However, right-wing groups such as the Národni sjednoceni (National Union, founded by Jíří Stribrný in 1927), the Česká obec fašistická (Czech Fascist Community), headed by the former general of the Czech army Radola Gajda, and the Vlajka (Flag) group explicitly supported antisemitism in their platforms. Andrej Hlinka's Slovenská Ľudová strana (Slovak People's Party) adopted an increasingly aggressive antisemitic policy. The Sudeten, where most of the Germans lived, was already a stronghold of racial antisemitism under the Hapsburg monarchy, and antisemitism grew even more violent, influenced by the rise of Nazism in Germany, the advent of Hitler to power, and the founding of Konrad Henlein's Sudetendeutsche Partei (1935). Antisemitism in Czechoslovakia was strongly associated with the general conflicts among the nationalities there: the Czechs would not forgive the adherence of many Jews to German language and culture and their support of the German liberal parties, and regarded them as a Germanizing factor. In Slovakia and Carpatho-Russia they were considered the bearers of Magyarization, and later, supporters of the Czech establishment. All groups alleged that the Jews were supporters of Communism, while the Communists claimed that they supported reaction. After Hitler's rise to power, his growing support for German extreme nationalist demands, and the enmity he manifested to the Czechoslovak establishment, the Jews drew increasingly closer to the state, which all Jewish groups supported in its stand against Nazism. Post-World War I Czechoslovakia, which was relatively progressive and stable, was a congenial milieu for Czechoslovakian Jewry. Hence, most of them failed to see the dangers threatening them even inside the country. However, the subdued popular antisemitism was soon to be rekindled. At the beginning of 1938 antisemitism gained in strength when in Romania the Goga government came to power and Jewish refugees tried to enter Czechoslovakia. Ferdinand Peroutka, the editor of a respected liberal weekly, published a series of articles in which he called for restriction of Jewish rights. A project for a rabbinical seminary, connected with the Prague Czech University, which was to begin functioning in 1938, was not realized. The problem of Jewish refugees became even more acute with the Nazi *Anschluss* with Austria, when many Jewish refugees, a large number holding Czechoslovakian passports, entered the country. Manifestations of antisemitism in Slovakia and the Sudeten area increased. At the time of the Munich conference (Sept. 29, 1938) the Jews from the Sudetenland (more than 20,000), which was handed over to Germany, fled to the remaining territory of the state. Parts of Slovakia and Carpatho-Russia, with a Jewish population of about 80,000, were ceded to Hungary by decree of Hitler and Mussolini as "arbiters" on Nov. 2, 1938. Antisemitism gained virulence in the truncated "Second Republic" mainly in Slovakia. The Second Republic did not last long. On March 14, 1939, Slovakia declared its independence and became a vassal of Nazi Germany; the next day the remaining parts of Bohemia and Moravia were occupied by the Germans and transformed into a German "Protectorate," while Hungary occupied Carpatho-Russia.

[Chaim Yahil]

Emigration and Exile (1938–45)

The emigration and escape of Jews from Czechoslovakia started immediately after the Munich conference (Sept. 29, 1938) and increased considerably after the German occupation (March 15, 1939). Half a million pounds sterling, part of a grant made by the British government to the Czechoslovak government, were earmarked for the financing of the emigration of 2,500 Jews to Palestine. In addition, about 12,000 Jews left with "illegal" transports for Palestine. Many others

emigrated to the United States and South America or escaped to neighboring Poland, from where a number succeeded in reaching Great Britain, France, and other countries. He-Ḥalutz and Youth Aliyah transferred hundreds of children and youth to England, Denmark, and the Netherlands for agricultural training. The Anglican Church and missionary institutions succeeded in removing children. When after the outbreak of World War II the Czechoslovak National Council in London, later recognized as the government-in-exile and an ally, called upon army reservists in allied and neutral countries to enlist, many Jews responded. Even in Palestine, where many Jews from Czechoslovakia had already put themselves at the disposal of the Yishuv's war effort, about 2,000 Czech and Slovak Jews enlisted in Czechoslovak army units within the Allied Middle East Forces, where Jews constituted the great majority in these units. After the recognition of Czechoslovakia by the Soviet Union in 1941, a Czechoslovak division was established in the U.S.S.R. Up to 70% of the members of some of its units were Jews, many of them from Carpatho-Russia. The high percentage of Jews in these units created some tension and antisemitic reactions. The Czechoslovak government-in-exile in London, with Eduard Beneš as president and Jan *Masaryk as foreign minister, maintained good relations with Jewish organizations and supported the Zionist cause. In the State Council, Arnošt Frischer represented the Židovská *strana (Jewish party). Other Jews on the Council were Julius Friedmann, Julius Fuerth, and Gustav Kleinberg. Imrich Rosenberg represented Slovakian Jewry.

[Meir Lamed]

Holocaust Period

SLOVAKIA. According to the 1930 census, 135,918 Jews (4.5% of the total population) lived in Slovakia. The plight of Slovak Jewry actually began with the establishment of autonomous Slovakia (Oct. 6, 1938), when the one-party authoritarian system of the clerical Slovak People's Party of Hlinka (HSL's – Hlinkova Slovenská Ľudová Strana) came to power. On March 14, 1939, Hitler made an independent state by causing the breakup of Czechoslovakia. A few days later Slovak leaders and the German Foreign Minister, von *Ribbentrop, signed the Treaty of Protection (Schutzvertrag), thus making Slovakia in effect a satellite of Germany. In the first months of Slovakia's "independence" anti-Jewish restrictions were sporadically introduced; however, fundamental changes in anti-Jewish policy occurred only after the Salzburg Conference (July 28, 1940), attended by Hitler, the Slovak leaders (Father Josef *Tiso, Vojtech Bela *Tuka, Saňo Mach) and the leader of the local German minority, the so-called Karpaten-Deutsche, Franz Karmasin. At this conference the Slovaks agreed to set up a national-socialist regime in their country.

At the end of August 1940, Dieter *Wisliceny, *Eichmann's emissary, arrived in Slovakia to act as "adviser for Jewish affairs," and with him came a score of advisers to assist the Slovak ministries. The Slovaks set up two institutes with the objective of "solving the Jewish problem": ÚHÚ – Ústredný Hospodárský Úrad (Central Office for Economy) whose task was to oust the Jews from economic and social life and "aryanize" Jewish property; the second was ÚŽ – Ústredňa Židov (Center of Jews). The ÚŽ, the Slovak equivalent of the Judenrat, was headed by the *starosta* ("Jewish Elder"), Heinrich Schwartz, chairman of the Orthodox-Jewish community. When Schwartz was arrested for non-cooperation, a more obedient *starosta*, Árpád Sebestyén, a former school director, was appointed by the authorities in April 1941. The Zionist leader Oskar Neumann replaced Sebestyén in fall 1943. The "aryanization" process was carried out by the ÚHÚ within one year: 10,025 Jewish enterprises and businesses were liquidated and 2,223 transferred to "Aryan" ownership. In order to solve the problem of employment of Jews, who were removed from economic life, the Slovak authorities ordered the erection of a number of labor centers and three large labor camps: Sered, Vyhne, and Nováky. In the fall of 1941, in an effort to clear the capital of Jews, a special ministerial order issued by Mach removed a greater part of the Bratislava Jews; some were sent to the labor camps and others to the towns of Trnava, Nitra, and to the region of Šariš-Zemplín in eastern Slovakia, where the majority of Slovak Jewry lived. Concurrently, during a visit to Hitler's headquarters, Tuka requested the assistance of the Reich in the removal of the Jews from Slovakia. News of the terrible fate of Jews in German hands filtered into Slovakia after fall 1941. At the beginning of February 1942, the German Foreign Ministry formally requested the Slovak government to furnish 20,000 "strong and able-bodied Jews." It was decided that the first transports would be composed of young men and women aged 16–35. However, on the suggestion of the Slovaks that in the "spirit of Christianity" families should not be separated, Eichmann gave his consent to deport families together. The Slovaks had to pay 500 Reichmarks "as charges for vocational training" for every deported Jew, receiving in return a guarantee that the Jews would not come back to Slovakia and that no further claims would be laid to their property. The organization of transports was performed by the Ministry of Interior, Department 14, headed by Gejza Kionka and afterward by Anton *Vašek, in collaboration with the Hlinka Guard and the Freiwillige Schutzstaffel (Voluntary Defense Squad of local Germans). The Jewish leadership, alarmed by rumors of the impending deportations, launched two appeals in the name of the Jewish communities (March 5, 1942) and in the name of the rabbis of Slovakia (March 6, 1942) warning the authorities that "the deportations mean physical extermination." On March 14, 1942, the Vatican sent a note of protest, and a few days later an oral warning was communicated on the direct instruction of Pope Pius XII by Slovakia's ambassador to Rome, Karol Sidor.

Between March 26 and October 20, 1942, about 60,000 Jews were deported as agreed with Berlin to *Auschwitz and to the *Lublin area, where they were killed. By the end of April the earliest evidence on the fate of deportees was received in Bratislava, when the first escapees from General Gouvernment of Poland arrived. Their eyewitness accounts were im-

mediately forwarded to Jewish organizations in the free world. Thousands of Jews found refuge in neighboring Hungary (in 1944 some of them returned to Slovakia when the Hungarian Jewish community was in peril). Others sought protection through conversion to Christianity. From the end of July to the middle of September the transports were suspended for various technical reasons and perhaps also due to intercessions, mainly from religious circles.

During the interim, the underground "Working Group" (Pracovná Skupina; see also *Europa Plan) arose on the initiative of Rabbi Michael Dov *Weissmandel within the framework of úž with the objective of saving the remaining Jews of Slovakia. Led by Gisi Fleischmann, the Group was composed of Zionists, assimilated Jews, and rabbis. The Jewish underground succeeded in temporarily diverting the peril of deportation in the spring of 1943 as a result of negotiations with friendly Slovak ministers and bribes to Slovak leaders. Another achievement in 1943 was the rescue of fugitives from the ghettos of Poland, who were smuggled through Slovakia to Hungary with the help of the He-Ḥalutz underground. By that time about 25,000 Jews were left in Slovakia, some of them "submerged," so that only part of them were officially registered, mostly "economically vital" Jews who were granted "certificates of exemption." About 3–4,000 persons were engaged in productive work in the Slovak labor camps, and others lived on false "Aryan" papers or in hiding. On April 21, 1944, the first two escapees from Auschwitz reached Slovakia after a miraculous flight. Their account of the annihilation process was sent on to the head of the Orthodox Jewish community in Budapest, Rabbi Von Freudiger, to alert the world and forwarded through Switzerland to Jewish organizations in the free world with an appeal by Rabbi Weissmandel demanding the immediate bombing of the murder installations in Auschwitz. The Allies rejected the appeal.

In August 1944, an anti-Fascist uprising took place in Slovakia, and subsequently the German army invaded the country. Over 1,500 Jewish men and women enlisted in the Czechoslovak armed forces resisting the Germans. Among the enlisted Jews, a regular Jewish unit of about 250 fighters, under Jewish command and the name "Camp Novaky Unit," was active. Two hundred and sixty-nine Jewish fighters fell in the resistance.

Four parachutists from Erez Israel reached Slovakia to extend help to the Jewish remnants and to organize resistance. However, the Jews had enlisted long before the arrival of the parachutists. Their cell included a woman, Ḥavivah *Reik ("Ada Robinson"). Three of the four, including Reik, were caught by the Germans, and subsequently executed. The *Einsatzgruppen* killed thousands of Jews during the Slovak revolt, and after its suppression (Oct. 28, 1944), about 13,500 of the remaining Jews of Slovakia were deported to concentration camps (including Auschwitz, *Sachsenhausen, and *Theresienstadt), under the pretext of reprisal for their participation in the revolt (October 1944–March 1945). On the eve of the liberation (April 30, 1945), there remained about 4,000–5,000 Jews in Slovakia hiding in the forests or with non-Jews or living clandestinely with "Aryan" papers. The losses of Slovak Jewry amount to over 100,000. In the part of Slovakia annexed by the Hungarian kingdom, there were about 45,000 Jews. Their fate was the same as the rest of Hungarian Jewry. In spring 1944, after the German occupation of Hungary, the Jews were deported to Auschwitz and most of them perished there. Some of those who eluded the deportations participated in the Slovak National Uprising. Only about 25,000 persons of the prewar community survived the Holocaust and the majority of them left Slovakia after the war, most of them for Israel.

[Livia Rothkirchen / Yeshayahu Jelinek (2nd ed.)]

PROTECTORATE OF BOHEMIA-MORAVIA. According to the 1930 census, Czechoslovakia had a Jewish population of 356,830 out of total of 14,000,000. Of these, 117,551 lived in Bohemia and Moravia and 102,542 in Carpatho-Russia. At the time of the Munich Agreement (September, 1938), the arrival of Jewish refugees from Germany and Austria increased the Jewish population in Bohemia and Moravia to approximately 122,000. In October 1938, when the German-speaking Bohemian-Moravian border areas were occupied by the Nazis, approximately 25,000 Jews fled their homes there to the unoccupied part of Czechoslovakia. On the basis of the Vienna arbitration decision of Nov. 2, 1938, the predominantly Hungarian parts of Slovakia and Carpatho-Russia were ceded to Hungary; these areas were inhabited by approximately 80,000 Jews. The remaining regions of Slovakia and Carpatho-Russia were granted autonomous status in the now federated Czecho-Slovakia. German pressure and a growing local anti-Jewish movement brought about increasing discrimination against Jews and persecution. In March 1939, when Slovakia seceded from the Republic, and the Protectorate of Bohemia and Moravia was established, the fate of the Jews in each of the two separate parts began to run its own course. In the Protectorate, the first synagogue, in Vsetin, was burned down on the day of the German occupation (March 15, 1939). At that time 118,310 persons in the Protectorate were designated as Jews according to the Nuremberg Laws; only 86,715, however, were members of the local Jewish communities. In the initial stage, the "Final Solution of the Jewish problem" proceeded, in part, on the basis of decrees issued by the Protectorate regime; in the course of time, Bohemia and Moravia came to be regarded more and more as part of the Reich, and the fate of the Jews in the two provinces was decided on directly by the *RSHA (Reich Security Main Office) in Berlin. The immediate consequences were the plunder of Jewish property, pogroms, and the burning of synagogues. Many Jews who were active in the general resistance movement were caught while a few Jews survived as "illegals." On July 27, 1939, Adolf Eichmann, the RSHA representative, established a branch of the Zentralstelle fuer juedische Auswanderung (Central Office for Jewish Emigration) in Prague. The Jews were forced to register for emigration, and divested of most of their property by a compulsory "Jewish emigration tax." Jewish books and peri-

odicals were banned and the *Juedisches Nachrichtenblatt* was published in their place, controlled by the Zentralstelle. Jews were excluded from economic, cultural, and political life, and denied civil rights; an estimated 12,000,000,000 Kčs (about $343,000,000) in Jewish property were confiscated and, finally, an order issued on Sept. 1, 1941, forcing Jews to wear the yellow badge, resulted in their complete isolation. The Jewish communities reacted to the planned elimination of the Jews by stepping up their activities in Jewish and general education of the youth, giving foreign language instruction; retraining; and providing medical care, consulting agencies, and social welfare. These activities, which prevented the outbreak of panic and the community's dissolution, were later continued at the *Theresienstadt concentration camp. Efforts were made to promote legal and illegal Jewish emigration and, by the time emigration was totally banned (October 1941), 26,629 persons had succeeded in escaping from the country. In October 1939, the first group, comprising 1,291 Jewish men from Ostrava, was deported for the "settlement area of Nisko on the San." The Germans decided on the establishment of the Theresienstadt Ghetto on Oct. 10, 1941, in a secret meeting at the Prague Castle, chaired by Reich Protector Reinhard *Heydrich. The minutes of the meeting contain the following passage: "From this transit camp [Theresienstadt] the Jews, after a substantial reduction in their numbers, are to be deported to the East…." The Jewish communities were ordered to concentrate all the Jews living in their respective areas into a number of cities – Prague, Budweis (Budějovice), Kolín, Klatovy, Pardubice, Hradec Králové, Mladá Boleslav, Třebíč, Brno, Olomouc, Ostrava, and Uherský Brod. In October and November 1941, 6,000 Jews from Prague and Brno were deported directly to *Lodz and *Minsk. In the period Nov. 24, 1941–March 16, 1945, 73,614 Jews were dispatched to Theresienstadt in 121 transports. In this period also, 621 Jews were sent to Theresienstadt from towns in the Sudeten areas ceded to Germany. One of the leaders of Czechoslovak Jewry, Jacob *Edelstein, was appointed the "elder" of Theresienstadt. From Jan. 9, 1942, to Oct. 28, 1944, 60,399 Czech Jews were deported onward from Theresienstadt to the extermination camps in the East – Auschwitz, *Majdanek, Minsk, *Riga, *Sobibor, *Treblinka, and *Zamosc. Only 3,227 of the Jews deported from Theresienstadt survived the war. Following the assassination of Heydrich on Feb. 19, 1942, a "penal transport" of 1,000 Jews was deported from Prague to Poland, none of whom survived.

Jews joined the Czech resistance, both the pro-Western and the Communist wings. The sorely oppressed Czech population did not demonstrate exceptional courage in assisting the persecuted Jews. In the last period before liberation of the country, Jewish *Mischlinge* ("mixed" Jews considered Jewish under German law) were gathered to be shipped to extermination camps. Most of them survived.

In 1945, 10,090 Jews registered with the Jewish communities as returning deportees, out of a total of 80,614 who had been deported; 6,392 had died in Theresienstadt, 64,172 had been murdered in the extermination camps, and of the Jews who had not been deported, 5,201 had either been executed, committed suicide, or died a natural death. On the day of the restoration of national sovereignty in Prague, May 5, 1945, there were 2,803 Jews alive in Bohemia and Moravia, who had not been deported, most of them partners of mixed marriages.

[Erich Kulka]

Postwar Jewry

DEMOGRAPHY. Various estimates of the number of Jews living in Czechoslovakia in 1945 have been given, as postwar statistics do not classify the population according to religion. Many of the surviving Jews in Sub-Carpathian Ruthenia decided to leave in the brief period between its annexation to the Soviet Union (June 29, 1945) and the closing of its frontiers (September 30, 1945). They succeeded in fleeing to Bohemia, while only a few hundred moved to Slovakia. Most of the newcomers registered with the Jewish communities only later. In 1948, 19,123 Jews were registered with the communities in Bohemia and Moravia. The number of Jews in Slovakia in 1947 was estimated at about 24,500. This brings to 44,000 the number of Jews living in the whole of Czechoslovakia in early 1948, when the Communists came to power. However, this figure has to be augmented to include those who were in no way affiliated with organized Jewish communities, but in the past were classed as Jews by German authorities and registered after World War II as victims of racial persecution. In this category there were 5,292 persons living in Bohemia and Moravia in 1948. In Slovakia their number is not known; on the other hand, about 5,500 Slovak Jews, in an effort to save their lives, agreed to *pro forma* baptism during the war. It can therefore be estimated that out of the 356,830 Jews living in Czechoslovakia (including Sub-Carpathian Ruthenia) in 1939, less than a sixth remained in the country in 1948. The Communist coup of February 1948, and the establishment of the State of Israel in May of that year, led to a mass migration of Jews from Czechoslovakia. Between 1948 and 1950, 18,879 Jews went from Czechoslovakia to Israel, while more than 7,000 emigrated to other countries. When emigration was barred by the Communist authorities, in 1950, the number of Jews still remaining had dropped to some 18,000, while some 5,500 of them were still registered for migration to Israel. There were sporadic instances of Jewish emigration after 1954 but only from 1965 were 2,000–3,000 Jews allowed to leave Czechoslovakia. After the Soviet invasion in August 1968, 3,400 Jews left the country, according to a spokesman of the American Joint Distribution Committee in Vienna. It may therefore be assumed that at the end of 1968 there were less than 12,000 Jews left in Czechoslovakia. In June 1968, Rudolf Iltis of the Council of Jewish Communities in Bohemia and Moravia gave their average age as 60, while in the 15–20 age group there were only 1,000 Jews left. He also added that "with the exception of a few communities in Slovakia, the demographic situation of Czechoslovak Jewry does not necessitate religious instruction, because there are not enough children of school age."

ORGANIZATIONAL STRUCTURE. The renewed Council of Jewish Communities in Bohemia and Moravia held its first conference after World War II, under the chairmanship of Ernst Frischer, in September 1945. Delegates of 43 communities participated. In Slovakia a similar body, the Central Union of the Jewish Communities in Slovakia, was created at the end of 1945, presided over by Armin *Frieder. With the creation of the Union, the Orthodox and the Neolog-Status Quo organizations, separate before the war, were united. Both Frischer and Frieder were Zionists. In 1947 the two organizations set up a coordinating committee. At a Council conference in November 1963 representatives from only 16 communities took part and in 1968 the editor of the Council's publications listed only seven active communities in Bohemia and Moravia (Prague, Brno, Ostrava, Plzeň, Karlovy Vary, Ústí nad Labem, and Teplice-Sanov). Ten communities in Slovakia were listed as active (Bratislava, Košice, Prešov, Nitra, Michalovce, Žilina, Galanta, Trnava, Dunajská Streda, and Ružomberok). A small number of Jews were also living in some other places where, however, Jewish life had no organizational framework. The strongest communities in June 1968 were Prague, with 3,500 members (more than 4,000 in 1945), Bratislava, with 2,000 (8,000 in 1947), and Košice with 1,800 (4,000 in 1947). Religious life was practically limited to the High Holidays. On the Sabbath few places had a *minyan*. One of the main problems was the lack of rabbis. Religious education was nonexistent. The budget of the pauperized communities was covered entirely by State subsidies. The State Bakery in Zlaté Moravce supplied *maẓẓot* from 1965. There were four Jewish old-age homes, in Bratislava, Marianské Lázně, Brno, and Poděbrady; only in the first two was kosher food prepared. Of the 800 Jewish cemeteries only those were being kept in good order where a community was still in existence. A few, like the old cemetery of Prague, had become museums. The same applied to some old synagogues. In the years preceding the Communist coup of 1948, there were still signs of Jewish political life and of contacts with Jewish bodies abroad. In Slovakia, for instance, an Organization of Victims of Racial Persecution was created under the chairmanship of Vojtech Winterstein, a leading Zionist. The Central Union of Jewish Communities in Slovakia was affiliated to the World Jewish Congress from 1946, while the Council of Jewish Communities in Bohemia and Moravia joined the WJC only at the beginning of 1948. There were organized Zionist activities, and the American Joint Distribution Committee was permitted to undertake social work among the Jews of Czechoslovakia. All this was stopped when the Communists came to power in February 1948. After the Communist coup, Action Committees composed partially of Jewish Communists took over the leadership of the Jewish communities and eliminated noncommunists from their positions. At the beginning of 1949 the Zionists still succeeded in holding a conference at Pieštany; but by the end of 1949 the ties with the World Jewish Congress were broken, and at the beginning of 1950 the "Joint" was ordered to stop all activities and its workers were expelled. The Jewish Agency closed its Prague office voluntarily the same year, after all Jewish migration from Czechoslovakia had been stopped. The organ of the Council, *Věstnik židovských náboženských obcí*, and a quarterly in German, *Informationsbulletin*, became party mouthpieces, following the official line, including the hostile attitude to Israel. Some changes for the better could be discerned after 1964. In that year the *ḥevra kaddisha* of Prague was permitted to celebrate its 400th anniversary. The small Jewish Museum in Prague was enlarged during World War II by the Germans and later was taken over by the Ministry of Culture and officially reorganized. (In 1963 it was visited by 327,000 people.) In 1966 a more liberal-minded leadership, led by František Fuchs, succeeded the dogmatic Communist group in the Council of Jewish Communities, headed until then by František Ehrmann. The Prague community created a special Committee for Youth which, for the first time in a quarter of a century, organized lectures and seminars on Jewish themes, attended regularly by dozens of Jewish students. A delegation of the Council was received by the minister of culture and submitted a detailed plan for the celebrations of the millennium of Prague Jewry and the 700th anniversary of the Altneuschul, which were to have taken place in August 1968. Contacts with Jewish communities and organizations outside Czechoslovakia were renewed. In January 1967, the presidents of the Council and of the Central Union attended a World Jewish Conference in Paris and, on their invitation, Naḥum *Goldmann visited Czechoslovakia in the spring of that year. At the time, a series of stamps depicting Jewish subjects was issued. The stamps were taken out of circulation at the time of the *Six-Day War in June 1967, when Czechoslovakia, like other countries of the Soviet bloc, broke off diplomatic relations with Israel, but were reissued after the liberal community leadership of Alexander Dubček came into power in January 1968.

JEWS IN CZECHOSLOVAK PUBLIC LIFE. Thousands of Jews fought in the Czechoslovak armies formed both in the West and in the Soviet Union during World War II and many worked in various capacities in Beneš's government-in-exile. Many of those who returned after the war continued their work in the newly formed administration. The percentage of Jewish intellectuals among the Communists was also high, and after the Communist coup of February 1948, many of them were entrusted with responsible tasks in the government machinery. Thus, in 1948 there were three Jewish deputy ministers of foreign affairs, of defense, interior, foreign trade and finance. The Party's secretary general, Rudolf Slánský, was a Jew, and Jews played an important role in the party apparatus. This led to an increase of the antisemitism which was latent especially in Slovakia. Already in 1945, a delegation of the Council of Jewish Communities led by Ernst Frischer complained to President Beneš about anti-Jewish excesses in the Slovak towns of Prešov, Bardějov, and Topolčany. In 1945, in the village of Kolbasov in eastern Slovakia, a band of Ukrainian Bendera nationalists, together with local citizens, attacked Jews

who had just returned from concentration camps, raped the women, and murdered all 14. The same year two Jews were killed in Žilina, and in 1946 and 1948 there were anti-Jewish riots in Bratislava. In Slovakia, from 1949, Benjamin Eichler generally headed the Central Association of Jewish Religious Congregations. After the emigration of his children in 1969, he was forced to resign and left the country in the wake of his children. The new leadership in Slovakia was composed of men already active in the Association. They did not act independently, until being replaced after the "Velvet Revolution" of 1989. Several congregations in Slovakia continued to carry on religious activities also after 1949, and even examined the possibility of setting up a yeshivah in Košice. Antisemitism knew no party barriers, and Communists were no more immune to it than others. As soon as the anti-Jewish line became official policy in the Soviet Union (see *Antisemitism: the Soviet Bloc), Communists in Czechoslovakia followed suit. The *Slánský Trial of 1952 had a clearly anti-Jewish character: 11 of 14 accused were Jews, and eight Jews among them were executed. In subsequent trials hundreds of Jews were sentenced to long-term imprisonment, hundreds were sent to hard labor without trial, and hundreds were dismissed from their posts. Jews became in fact, if not in law, second-class citizens. De-Stalinization was slower in Czechoslovakia than elsewhere. In April 1956, Prime Minister Široký admitted that "certain manifestations of antisemitism had been wrongly introduced in the Slánský trial," but in December 1957 the minister of justice still informed foreign correspondents that no revision of the trial was necessary; a special commission had checked the sentences and found them justified. Some Jewish prisoners were gradually released and some even rehabilitated, but in 1956 there were still about 300 Jews in jails, and their number increased in 1957, after the *Sinai Campaign, when many Jews, including 27 community leaders, were arrested as "Western spies" or on charges of "Zionist activities." It was only at the beginning of the 1960s that the way was reopened for Jewish participation in Czechoslovak public life. Not many Jews returned to the State administration or to politically important positions, though there were a few exceptions, such as František Kriegel (d. 1979), who became chairman of the National Front, and Ota Šik, the chief economic planner. The contribution of Jewish university professors, scientists, writers, musicians, theater and film artists, journalists, radio and television commentators to Czechoslovak cultural life again became considerable. A Jew, Eduard *Goldstuecker, vice rector of Prague University, was elected president of the Czech Writers Union, while the work of Jewish writers and journalists received a new impetus and became even more important after January 1968, when liberal reformers led by Dubček put an end to censorship and other fetters on spiritual freedom. This period was, however, short-lived. The Soviet invasion of August 1968 put an end to it, and a new wave of antisemitism, fed by Soviet, Polish, and East German propaganda, made further Jewish participation in public life impossible. Kriegel, the only member of the Czechoslovak delegation who refused to sign the Moscow "agreement" legalizing Soviet invasion, was, at Moscow's insistence, dropped from the Politburo and dismissed from all functions. Goldstuecker, who for a few days in August was also a member of the Politburo, and Ota Šik, deputy prime minister after the fall of Novotný, sought safety abroad. So did some 3,400 other Jews, many of them intellectuals. Antisemitism became an issue in the struggle between the liberal Communists and the pro-Moscow faction.

Czechoslovakia and Israel

Czechoslovakia was among the first countries in the world to recognize the State of Israel, though it was already ruled by Gottwald's Communist regime after the February 1948 coup. Moreover, during its *War of Independence, Israel enjoyed active and effective Czechoslovak assistance, including the supply of military equipment. The two countries exchanged diplomatic representatives. These initially promising relations rapidly deteriorated, however, when Moscow reversed her attitude to Israel. This process culminated in the expulsion of the Israel minister from Prague, Aryeh *Kubovy in December 1952. After the Slánský trial diplomatic missions of the two countries remained headed on both sides by a chargé d'affaires only, and all Israel efforts to bring about a political dialogue were frustrated by Prague. Limited trade relations continued until 1956, but after the Sinai Campaign even these were broken off, although Israel's trade with other Soviet bloc countries in the period between 1956 and 1967 showed a remarkable increase. In June 1967, Czechoslovakia, together with the rest of the Warsaw Pact countries (excluding Romania), broke off relations with Israel. The one-sided attitude adopted by Czechoslovakia in the Arab-Israel conflict, and Israel's rapid victory against an overwhelming Arab majority, caused second thoughts first among the Czech and Slovak intelligentsia and then among the whole people, and ultimately became a factor in the growing opposition to the Novotný regime. With Novotný's fall in January 1968 there was hope for an improvement in the relations between Prague and Jerusalem. Writers, students, even some political figures, openly advocated a resumption of diplomatic relations. The request found expression in the press, on television, in public debates with members of the government, and finally in a collection of signatures organized by students in the streets of Prague. New hopes also arose among the remnants of Czechoslovak Jewry. On April 7, 1968, the Council of Jewish Communities in Bohemia and Moravia adopted a resolution, unprecedented in Communist countries, expressing not only their approval of the new liberalization but also their protest against the "vehement anti-Israel campaign" of the previous Novotný regime, which was based on "unobjective, one-sided reporting, often explicable only as intentionally anti-Jewish." The resolution stated: "We cannot agree and never will agree, to the liquidation of the State of Israel and to the murder of its inhabitants. In that country, the cradle of our religion, victims of persecution found a haven. Our brothers and sisters live there, those who together with us spent years in concen-

tration camps, who together with us arose to take up the fight against Nazism." In conclusion the resolution requested that the government condemn the antisemitic pronouncements in the political trials of the 1950s and rehabilitate Jews wronged during that period by judicial or administrative decisions; place victims of racial persecution on the same level as those of political persecution in all welfare legislation; not impede contact between the Jews of Czechoslovakia and Jewish bodies abroad; not to obstruct the religious education of Jewish youth with administrative difficulties. A similar declaration, issued on the same day by the Central Union of Jewish Communities in Slovakia, contained an additional request: "It is a minimal human postulate, that everyone asking to be reunited with his family should be allowed to do so, wherever his family may be living." A few months later, with the Soviet invasion of August 21, 1968, these hopes were shattered.

[Avigdor Dagan]

Toward Renewal

The International Council of Jews from Czechoslovakia in 1978 published its first report on Post-War Jewry in Czechoslovakia. It revealed a steady decline in the number of Jews, estimated to be 15,000, half the number registered in the census of 1950. The number of localities in which Jews resided had also fallen from 193 in 1968 to 174.

The largest number of registered congregants was in Prague, which, however, showed only 644 at the end of 1977, compared with 934 in 1968. Other centers showed similar decline: Brno 237 (from 295), Ostrava 122 (from 154) and Bratislava 88 (from 314).

There were no rabbis and only 8 communities still maintained a nominal existence in Bohemia and Moravia: Prague, Brno, Usti nad Labem, Olomouc, Ostrava, Levice, Pizen, Pribram; while in Slovakia there existed the six communities of Bratislava, Kosice, Presov, Galanta, Nove Zamky, Nitra.

The Council of Jewish communities of Bohemia and Moravia continued to function. Its chairman, engineer Frantisek Fuchs, who was appointed in 1966, was compelled to resign in August 1974, following attacks on him in the Czech press on the grounds that he had refused to sign a condemnation of the State of Israel during the Six-Day War. However, it seems that the real reason for the forced resignation was the fact that his son had left Czechoslovakia for the West. In March 1975 he was succeeded by Dr. Bedrich Bass, who died in 1979.

The Council of Jewish Communities in Bohemia and Moravia and the Central Union of Jewish Communities in Slovakia continued to publish the quarterly *Vestnik Zidovskych nabozenskych obci*, as well as the German language quarterly *Informationsbulletin*. The famous Pinkas Synagogue was closed because the rise in the level of sewage water surrounding it covered the monumental slabs bearing the names of 78,000 Czech Jews who perished in the Holocaust. The synagogue itself was in danger of total collapse.

Antisemitic propaganda, in the guise of anti-Zionism, still continued and came prominently to the fore in the struggle of the regime against the "Charter 77 Movement," whose manifesto – it was alleged – was drawn up "under order of the general staffs of anti-Communism and Zionism." But the antisemitism of the Czech Press was not restricted to the struggle against the protest movement; it was evident in purely ideological discussions, and its political hostility towards Israel continued. Commercial ties, however, which were severed in 1953, were re-established, and in 1976 Israeli exports to Czechoslovakia amounted to $4.767 million, while imports from Czechoslovakia were only $541,000. The respective figures for 1977 were $3.8 million and $600,000. In 1981 there was virtually no trade between the two countries.

The situation of Czechoslovakia's 6,000–10,000 Jews changed dramatically following the "Velvet Revolution" of November 1989, which ousted the country's hard-line Communist leaders. Restoration of religious freedom was one of the top priorities of the new, freely elected government headed by former dissident playwright Vaclav Havel.

Under communism, the regime tightly controlled religious observance and maintained a shrill anti-Zionist policy. Participation in Jewish religious, cultural, or educational activities was either discouraged or banned, and community leaders were appointed by the regime.

In some respects, the rigidity began to be eased somewhat in the 1980s. A major event was the traveling "Precious Legacy" exhibit put together by the State Jewish Museum in Prague, which introduced Czech Jewish culture to foreign audiences. In the late 1980s, some younger members of the Prague Jewish community formulated a letter openly criticizing the community leadership. Just one week before the "Velvet Revolution," World Jewish Congress President Edgar Bronfman paid his first official visit to Prague.

Havel's new government in February 1990 reestablished diplomatic relations with lsrael, which had been broken after the Six-Day War in 1967, and in April 1990, Havel became the first leader from former Communist Eastern Europe to visit Israel – he took a planeload of Czechoslovak Jews with him. The trip coincided with the opening of "Where Cultures Meet," a major exhibit on the Jews of Czechoslovakia at Beth Hatefutsoth, the Museum of the Jewish Diaspora, in Tel Aviv. The exhibit was later presented in Prague and elsewhere in Czechoslovakia.

Jewish spiritual and cultural life began to blossom in the three major communities: Prague in the Czech Republic and Bratislava and Kosice in Slovakia, each of which has about 1,000 registered members. Community administrations were reorganized to rid them of their Communist-appointed leaders. In December 1989 the well-respected Desider Galsky became president of the Jews in the Czech Republic, and was highly active in restoring numerous contacts between Czech Jews and international Jewish organizations before his death in a car accident 11 months later.

New Jewish organizations, societies, clubs, publications, and study groups ranging from the B'nai B'rith lodge to a Franz Kafka Society sprang up in the three main communities, and legislation was passed that will enable Jewish communities to regain property that had been confiscated by the communists. Numerous new books on Jewish topics were published, ranging from local Jewish guidebooks to fiction by local Jewish writers to examinations of the Holocaust in Czechoslovakia. In 1991 a museum dedicated to Franz Kafka, whose works had been suppressed under the communists, was opened in Prague focusing on Kafka's Jewish identity. In the same year, a memorial museum dedicated to the Jewish Ghetto concentration camp was inaugurated at Terezin (Theresienstadt) north of Prague, and in the summer of 1992 work began to restore the Holocaust memorial in Prague's 500-year-old Pinkas synagogue – a list of every one of the more than 77,000 Bohemian and Moravian Jews who were killed by the Nazis, hand-painted on the walls of the sanctuary. Memorials commemorating Jewish Holocaust victims were erected for the first time in many provincial towns, too.

Prague became a symbol city for the rebirth of freedom. As such, it was chosen as the site of a key meeting between Roman Catholic leaders and the International Council for Interreligious Consultations (IJCIC) in September 1990, in which the Catholic leaders condemned antisemitism as a sin. The meeting issued a landmark joint statement that called for concrete measures to foster interreligious dialogue and spelled out recommendations for combating the upsurge of antisemitism in Central and Eastern Europe. In the spring of 1992, Prague hosted a major symposium on antisemitism in Eastern Europe.

One casualty of these changes was Prague-based Rabbi Daniel Mayer, the only rabbi in Czechoslovakia, who was forced to resign his post in June 1990 after he admitted he had served as a government informant for a decade under the communist regime.

In September 1992, Karol Sidon, a former dissident playwright who had been forced to leave Prague because of his views, became the new rabbi in Prague, and Australian Lazar Kleinman took up the post of rabbi in Kosice, in eastern Slovakia. Both new rabbis expressed the hope they could revive Jewish life and religious practice in the two communities. Kleinmann was later forced to resign his post because of activities which, inter alia, played into the hands of Slovak nationalists. The Jews faced many problems. Most community members were elderly. Young people, many of them just discovering or rediscovering their Jewish roots, knew little about Judaism. In the Czech Republic especially, where Jews traditionally were highly assimilated and intermarriage was common, many of the younger people who considered themselves Jews were not Jews according to *halakhah*.

Soon after the "Velvet Revolution" a number of antisemitic incidents were recorded in Slovakia, including the desecration of cemeteries, attacks in the Slovak nationalist press, and antisemitic slurs against Fedor Gal, the leader of the Slovak People Against Violence political movement, who was born in the Terezin ghetto concentration camp.

In addition, at one point there was a movement in Slovakia to rehabilitate Father Josef Tiso, the leader of the wartime clerico-fascist Independent Slovakia, which was allied with the Nazis. Nationalistic and antisemitic organizations celebrated a revival. This revival was accompanied by a wave of anti-Jewish publications, including the "Protocols of the Elders of Zion." However, the community increased its public and religious activities and renewed ties with Jewish organizations abroad.

Slovak Historiography

Slovakian Jewry was until 1918 an integral part of Magyar Jewry. Therefore, historians never paid particular attention to "Oberland Jewry" (i.e., the Jewry of Upper Hungary, as it was known), although it must have been clear that an ethnic-religious minority living within an alien population would develop special traits akin to the majority. Neither the Magyar masters nor Jews living within the Magyar nation would be willing to admit that the Jews of Upper Hungary were special and had a different life-path from the dominant Jews of Hungary.

Already during the 19th century there were Jewish figures and publicists in Upper Hungary who recognized the particularism of the Slovak nation and protested against its oppression. In several cases, this recognition was instrumental in attempts to close Jewish-Slovak ranks. This was not easy, however, given the Magyar insistence on the Magyarization of Upper Hungarian Jewry. Neither was the hostility of leading Slovak nationalists helpful.

Only the creation of the Czechoslovak Republic, and the introduction of the Slovak language into Jewish schools, spurred the development of an independent Slovakian Jewry. It was then that the Jews become cognizant of their independent tradition and existence.

The Bratislava Zionist Samuel Bettelheim was among the first to recognize the existence of an independent Jewish history in Upper Hungary, today Slovakia. He founded a historical journal, *Judaica*, and encouraged original historical research. Bratislava's archivist and librarian Ovidius Faust, not a Jew, joined hands with Bettelheim to promote Slovak-Jewish historiography. Faust compiled the first work telling the story of Bratislava's Jewry. The work of Jewish historiography was terminated with creation of the Slovak state in 1939. The publisher Hugo Gold also cherished the idea of recording the Jewish past in Slovakia. The manuscript he is said to have prepared has disappeared.

The trauma of the Holocaust created a desire to commemorate the tragic events. Immediately after the end of the war Friedrich Steiner started to gather historical evidence, which he eventually transferred to Yad Vashem in Jerusalem.

The daily press published the first descriptions of the horror. However, the Communist authorities, who singled out the Jews for hostile treatment, prevented any extensive and systematic analysis of the Holocaust. Therefore, it was Jews born in Czechoslovakia and living in Israel who were moved to look into the past of their community. Livia Rothkirchen, a native of Carpatho-Russia, published the pioneering *Destruction of Slovak Jewry, a Documentary History* in 1961. Graduates of the Hebrew University of Jerusalem, Yeshayahu A. Jelinek, Gila Fatran, Akiba Nir, and Yehoshua Robert Buechler, all survivors of the Holocaust, also described those bitter days. Thus Israel witnessed the foundation of modern Slovak-Jewish historiography. After the fall of Communism in Czechoslovakia, local historians followed in the footsteps of the Israelis. Ivan Kanenec wrote a dissertation on the Holocaust of Slovakian Jewry, but was not permitted to publish it. It only saw print in 1991 (*Po stopách tragedie*, "In the Footsteps of Tragedy"). Eduard Nižnianský commenced a systematic study of the first years of Jewish persecution in Slovakia. Katarina Hradská and Peter Salmer also devoted attention to the recent post. In Slovak academia the Holocaust is a subject of instruction and study. After escaping to Switzerland a graduate of Bratislava's university, Ladislav Lipscher, published *Die Juden im Slowakischen Staat 1939–1945* (1980). It is worth mentioning that most of this historical writing is devoted to Slovakian Jewry deals with the years 1938–45. Little has been published on its earlier history.

The most significant work on Czechoslovak (and naturally Slovak) Jewry is the American *Jews of Czechoslovakia* in three volumes (see Bibliography). It was prepared by the leading historians of Czech and Slovak Jewries living outside their native country. The most recent work on Slovakian Jewry is Yad Vashem's *Pinkas Kehillot Slovakia* (in the Encyclopedia of Jewish Communities series), edited by Yehoshua Robert Buechler and Gila Fatran (2004). Similar work has been published in Slovakia by Eugen Bárkány and Ludovit Dojč, *Židovské náboženské obce na Slovensku* ("The Jewish Religious Communities in Slovakia"). An older book of similar content is Lanyi Menyhert and Propperné Békefi Hermin's *Szlovenszkoi Zsidó Hitközsegek Törtente* ("The Story of the Slovak Jewish Communities). Dozens of books devoted to individual communities have been published in Israel, Slovakia, and overseas

The director of the Jewish Museum of Prague, Pavol Meštan, publishes the yearly *Acta Judaica Slovaca*, devoted to Jewish history in Slovakia. Meštan has published several books on the life of the Jewish community in Slovakia since the Velvet Revolution. Works on Slovak Jewry have thus become a frequent occurrence in Israel, the Slovak and Czech republics, Germany, the United States, England, Canada, Hungary, and Austria.

CZECHOSLOVAK LITERATURE. By force of historic circumstances, Jews in the Czech lands – Bohemia and Moravia – before World War I tended on the whole to identify themselves with the culture of the ruling Austrians, while Jews in Slovakia mostly absorbed Hungarian culture. Most of the internationally famous Jewish writers of Prague – Franz *Kafka, Franz *Werfel, Max *Brod, Egon Erwin *Kisch – to cite just a few examples – wrote in German. Jewish writers nevertheless also played an important part in Czech literature. It is true that a gap of 400 years separates the colorful 15th-century convert Pavel *Žídek from Siegfried *Kapper, the first modern Jewish author of significance to write in the Czech language. It must be remembered, however, that for three centuries the Czechs and Slovaks had been deprived of their national independence and that not until the 19th century was there a real revival of Czech nationalism and a consequent renaissance of Czech literature.

Long before the Czechs regained political independence Jewish writers were active in Czech cultural life, and in the period between the two World Wars the Jewish contribution

to Czech literature was out of all proportion to the small minority of Jews in the country's population as a whole. It was during this period also that Jews first began writing in the Slovak language. The Jewish writers who succeeded in escaping from Nazi-occupied Czechoslovakia contributed to Czech literature while they were in exile, and those who returned after the end of World War II went on to play an important part in the cultural life of the country.

There is a marked difference in the treatment of Jewish themes in Czech and Slovak literature before and after World War II. Before the war, gentile writers were almost invariably biased and antisemitic, and anyone who created an authentic Jewish character nearly always proved to be of Jewish stock himself. One result of the Holocaust was the large number of openly pro-Jewish literary works produced by non-Jewish Czech and Slovak writers. In many cases this went hand-in-hand with expressions of sympathy for the State of Israel.

Biblical Influences

The proportion of writers attracted in one way or another by the Jew's fate, his behavior, and his place in the life of the nation was much greater in Czech literature than in the literature of most other countries. Surprisingly few biblical themes, however, were used by Czech authors, and these occur mainly in the works of Jewish writers. With the exception of Karel Čapek's play *Adam stvořitel* (1927; "*Adam the Creator,*" 1929), Stanislav Lom's drama about Moses, *Vůdce* (1916; "*The Leader,*" 1917), and some poems by Svatopluk Čech, J.S. Machar, and G.R. Opočenský, hardly a single work inspired by the Old Testament can be found in the writings of Czech non-Jews. Practically all the significant imaginative literature based on the Bible has come from the pens of two leading writers of mixed origin – Jaroslav *Vrchlický and Julius *Zeyer. J. Vrchlický, the most prolific Czech poet, wrote more than 100 poems on Jewish themes, at least half of them biblical, including the dramatic epic *Bar Kochba* (1897). Zeyer published a biblical drama, *Sulamit* (1883), a short story about Joseph in Egypt entitled *Asenat* (1895), and poems about Moses and about Solomon and the Queen of Sheba.

The Figure of the Jews and Jewish Themes

Several factors lend a distinctive character to the treatment of Jewish themes by Czech authors. One is that modern Czech literature developed at a time when the Czechs themselves did not have a state of their own. Hence, the many allusions to the homeless Jew longing for a country of his own, whose tragedy symbolized the Czech longing for statehood. An instance of this is the romantic, Byronesque poem *Cikáni* ("Gypsies," 1835) by the greatest of the early 19th-century Czech poets, Karel Hynek Mácha (1810–1836).

Another phenomenon is the extraordinary number of writers who concerned themselves with the question of whether or not a Jew could also be a loyal Czech. The first to discuss this problem publicly was Václav Bolemír Nebeský (1818–1882), who made Czech-Jewish assimilation the theme of several of his short stories. His view, expressed in a number of essays, was that Jews who had long been settled in the Czech lands should be regarded as Czechs of the Jewish faith and that they could be just as good patriots as Czechs of any other religion. Nebeský's thesis was repudiated by the great poet, journalist, and patriot Karel Havlíček-Borovský (1821–1856), who held that the Jews belonged not merely to a different religion but that their Semitic bond was much stronger than the one that bound them to the land of their birth. Nevertheless, Havlíček-Borovský was a supporter of Jewish emancipation and repeatedly explained to his readers that the Jews were not to be blamed for their shortcomings. This did not prevent him from writing a number of epigrams in which he accused them of crimes for which, on his own showing, they could scarcely be held responsible. Josef Jiří Kolár (1812–1896) posed the question of assimilation in dramatic form in his popular historical play, *Pražský žid* ("The Jew of Prague"), which remained in the repertoire of Czech theaters for more than 50 years after its première in 1871. The central character in this play about the historic battle on the White Mountain in 1620 is a dignified Jew who is at the same time a Czech patriot.

Literary Antisemitism

On the other hand, the contribution made to this discussion by Jan Neruda (1834–1891), possibly the best Czech poet of the 19th century, could hardly be called constructive. Although he was greatly influenced by some of the German-Jewish poets, especially Heinrich *Heine, and although he was originally inclined to be sympathetic toward the Jews, Neruda became an active antisemite. In 1869 he published a pamphlet entitled *Pro strach židovský* ("The Jewish Danger"), in which he excused his prejudice on the grounds that the Jews generally sided with the Germans and were intent on world domination. Far from emancipating the Jews, he said, what the Czechs needed was to emancipate themselves from Jewish control. Similar ideas are to be found in a number of Neruda's articles and epigrams, and this author of some of the most beautiful love poetry in all Czech literature even went so far as to express his regret when in 1881 the antisemitic riots in Berlin came to an end.

The case of another great 19th-century poet, Svatopluk Čech (1846–1908), is more complicated. When he dealt with historical figures – as in the collection of verse, *Sny palestýnské* ("Palestine Dreams," 1872), in his first long poem, *Adamité* ("The Adamites," 1873), and in several of the poems in *Modlitby k Neznámému* ("Prayers to the Unknown," 1896) – he was full of respect and sympathy. As soon as he turned to the contemporary scene, however, Čech's Jew invariably became a repulsive usurer, exploiter, or villain, whose only object was to enrich himself at the expense of his Slav hosts. Examples of such figures can be found in his novels *Jabloň* ("The Appletree," 1878), *Kandidát nesmrtelnosti* ("Candidate for Immortality," 1879), and *Člověk se zlatníkem v tobolce* ("The Man with a Gold Coin in his Purse," 1883). A few other Czech writers, notably A.E. Mužík, Bohdan Kaminský, and F.X. Svoboda,

showed a more kindly attitude toward their Jewish characters, but none of them was of major literary importance.

It is another peculiarity of Czech literature that its expression of antisemitism was at least in part motivated by nationalist considerations. The fact that Jews in the Czech lands were traditionally closer to German than to Czech culture laid them open to the charge that they supported Austrian oppression of the Czechs. This is probably the first instance in literature of antisemitism being based on nationalism, whether from honest conviction or merely as an excuse for prejudice. Sometimes the two types of antisemitism – the social and the nationalist – appear together. For example, Viktor Dyk (1877–1931) wrote a poem about two Jews, the wealthy Kohn and the poor Bloch. As long as Kohn is rich, he speaks German; but when he loses all his money he begins to speak Czech, as the poor Bloch always did.

For the leading Czech social poet, Petr Bezruč (pseudonym of Vladimír Vašek, 1867–1958), the Jew was also the national as well as the social enemy. In his famous *Slezské písně* ("Silesian Songs," 1909), hatred of the Germans is repeatedly coupled with hatred of the Jews, whom he charged with committing every crime in the calendar in their dealings with the poor. Bezruč was probably the most bitter and most programmatic antisemite among the leading Czech poets, but he was certainly not the only one. The great symbolist Antonín Sova (1864–1928) wrote at least two openly antisemitic poems and the mystic poet Otakar Březina (1868–1929), who is generally regarded as the greatest of all Czech poets, made no secret in his published correspondence of his hatred of the Jews.

As far as the drama is concerned, the Jewish characters in the plays of Ladislav Stroupežnický (1850–1892), Jaroslav Hilbert (1871–1936), and F.F. Šamberk (1839–1904) are all either unpleasant or ridiculous. The rustic novel might be said to have an antisemitic tradition, originated by a Catholic priest, František Pravda (1817–1904), whose short stories are full of Jewish swindlers and opportunists battening on the Czech people. His example was followed by far more significant authors such as Alois Mrštík (1861–1925), who drew a whole series of unsympathetic Jewish portraits in his classic novel, *Rok na vsi* ("Year in a Village," 1904). Alois' brother, Vilém Mrštík (1863–1912), gave vent to anti-Jewish feelings of an even cruder sort in his short stories. It would almost seem that no Czech novel about village life could be complete without its Jewish villain, and he is to be found in such classics as *Naši* ("Our People") by Josef Holeček (1853–1929) and *Jan Cimbura* by Jindřich Š. Baar (1869–1925). Even Thomas Masaryk's close friend Ivan Herben (1857–1936) introduced a Jewish villain as a matter of course in his *Do třetího a čtvrtého pokolení* ("To the Third and Fourth Generation"). One of the most virulent antisemites in the annals of Czech literature was Rudolf Medek (1890–1940), a former general who wrote popular novels about World War I. The anti-Jewish tirades in his *Ohnivý drak* ("The Fiery Dragon," 1921) were unmatched by any other Czech author.

Hardly any figure recurs in Czech prose as often as that of the wicked Jew. The villain in the novel *Sup* ("Vulture," 1920) by Emil Vachek (1889–1964) is the old familiar stereotype; but Vachek at least appeared to realize that the Jew's faults might be attributable to his Diaspora environment. Even such important progressive social novelists as Antal Stašek (1843–1931) and Anna Maria Tilschová (1873–1957) were not above depicting negative Jewish characters in their novels.

Although he was attracted by the Jew, the Czech writer in general had too little knowledge of Jewish life and character to draw him as anything but a caricature. The few Czech writers with a wider outlook, such as Jaroslav Hašek (1883–1923) and the brothers Karel Čapek (1890–1938) and Josef Čapek (1887–1945), created Jewish characters without attempting to discuss problems affecting the Jews.

Objective Treatment

There were Czech authors, nevertheless, who created sympathetic Jewish characters. Among them must be included Alois Jirásek (1851–1928), Karel Klostermann (1848–1923), Karel Matěj Čapek-Chod (1860–1927), Gabriela Preissová (1862–1946), Josef Svatopluk Machar (1864–1942), Marie Majerová (1882–1958), Eduard Bass (1888–1946), and Benjamin Klička (1897–1943). On the whole, however, if the works of Jewish or partly Jewish authors are excluded, objective treatment was quite exceptional in Czech literature before 1945.

In Slovak literature, too, as in the realistic village novels of Martin Kukučín (1860–1928) and Jozef Gregor Tajovský (1874–1940), the Jew was most often depicted as the innkeeper and usurer who exploits the poor Slovak peasant and serves the Hungarian overlord. This generally hostile treatment of the Jews in Slovak literature virtually ceased in the democratic period between the two World Wars, but even then no Slovak author of distinction portrayed a sympathetic Jewish character. The omission was only remedied during World War II, when a leading Slovak writer, Janko Jesenský (1874–1945), in his short story *Strach* ("Fear"), and the then young author Margita Figuli (1909–1995) in her four-volume novel *Babylon*, expressed their horror at anti-Jewish persecution and their pity for the victims. Both works, of course, had to wait for publication until the war was over.

[Avigdor Dagan]

After World War II, in the years 1956–69, some Czech non-Jewish writers published stories and novels with Jewish themes and characters and wrote about Jews in a very positive way. Jan Otčenášek (1924–1979) in his short story "Romeo, Julie a tma" ("Romeo, Juliet and the Darkness," 1958) depicted a tragic love story between a Czech boy and a Jewish girl (made into a movie by the Jewish director Jiří *Weiss). Hana Bělohradská (1929–) later made her debut with the short story "Bez krásy bez límce" ("Without Beauty Without Collar," 1962) about a Jewish physician waiting for a summons to a concentration camp, which was made into a movie *…a pátý jezdec je strach* (" …and the Fifth Rider is Fear") by Zdeněk Brynych. Ladislav Fuks (1923–1994) published his novels and

stories with Jewish topics between 1963 and 1969: *Pan Theodor Mundstock* ("Mr. Theodor Mundstock," 1963), *Mí černovlasí bratři* ("My Black-haired Brothers," 1964), *Variace pro temnou strunu* ("Variations for a Dark String," 1966), *Spalovač mrtvol* ("The Burner of Corpses," 1967), and *Cesta do zaslíbené země a jiné povídky* ("The Way to the Promised Land and Other Stories," 1969). Josef Škvorecký (1924-), who in 1958 published his best novel, *Zbabělci* ("The Cowards"), which shocked the governing Communist Party establishment, published his works with Jewish themes also in those years: a short story "Legenda Emöke" ("The Legend Named Emöke," 1963), a series of stories called *Sedmiramenný svícen* ("The Menorah," 1964), and *Babylónský příběh a jiné povídky* ("A Tale of Babylon and Other Stories," 1967). Last but not least the Slovak author Ladislav Mňačko (1919–1994), well known for his antifascist and anti-Stalinist novels and stories and who openly criticized official anti-Israeli Czechoslovak government policy in 1967, published the book *Die Aggressoren* ("Agressors," 1968) and left Czechoslovakia for Israel and later for Austria. He also started to publish stories, some of them with Jewish topics, in the 1960s, such as "Jizvy zůstaly" ("Scars Left," 1966).

The Jewish Contribution to Czech and Slovak Literature

A long list of Czech Jewish writers appears already in the second half of the 19th century including Siegfried *Kapper and publicists and authors connected with the Czech-Jewish assimilation movement. Linked to its ideas is Vojtěch *Rakous, a writer who described the life of Jews in the country in a masterly fashion. The following generation included František *Gellner, an anarchist poet, one of the first victims of World War I, Otokar *Fischer, Pavel *Eisner, and many others whose critical, literary, and public activities developed freely during the two decades of Masaryk's First Republic (1918–38). Some of them, Fischer, Eisner, Otto Pick, and Rudolf Fuchs, became famous as translators and mediators between the Czech and German cultures. Jewish writers, journalists, and editors also played an important role in the press of the First Republic, promulgating Masaryk's and Beneš' so-called "Castle" policy in the public at large. Jan and Jaroslav *Stránský, Gustav *Winter, Alfred *Fuchs, Josef Kodíček, František *Langer, Richard *Weiner, Karel *Poláček and others held decisive positions in many publishing houses (for example Orbis) and newspapers such as *Národní osvobození, České slovo, Prager Tagblatt, Prager Presse, Tribuna, Lidové noviny*, and *Přítomnost*, or regularly contributed to them. The only prominent Jewish journalist and editor who opposed the "Castle" policy was Lev Borský (in 1944 he perished in a concentration camp). There was an informal "Castle" institution called *Pátečníci* ("Friday visitors") which met regularly in the years 1924–37 in the presence of Tomáš G. *Masaryk and Edvard *Beneš. A quarter of them were Jews such as Julius *Firt, Otokar Fischer, Alfred Fuchs, Camil Hoffmann, Josef Kodíček, František Langer, Arne Laurin, and Karel Poláček. Poláček, in his stories and novels, portrayed the life of people in a district town before and during World War I. Fischer and Weiner laid foundations for Czech Jewish poets who were to follow, such as František *Gottlieb and Avigdor *Dagan, who were then succeeded by Ivo Fleischmann (1921–1997), Hanuš *Bonn, and Jiří *Orten.

[Milos Pojar (2nd ed.)]

The Jewish contribution to Slovak literature was less important than to Czech literature. The only Jewish author of any significance was Gejza Vámoš (1901–1956), a gifted writer of psychological short stories, the best of which were collected in *Editino očko a iné novely* ("Edith's Eye and Other Stories," 1925). His novel *Odlomená haluz* ("The Severed Branch," 1934), about Slovak-Jewish symbiosis, was at once a protest against antisemitism and an equally vehement criticism of the bigotry, exclusiveness, and materialism of the Jewish community in which he was raised. The few remaining Jewish writers in Slovakia before 1939 were of lesser importance, but both their number and their significance increased considerably after World War II. At least some of them deserve mention. Emil *Knieža, Juraj *Spitzer, and Ladislav *Grosman won distinction with their books on Jewish suffering during the Nazi occupation, Hela Volanská (1912–1996) and Leopold Lahola (1918–1998) were held in a labor camp in Nováky during World War II; Volanská was persecuted after 1968, Lahola went to Israel and died when he returned to Czechoslovakia in the late 1960s. Scriptwriter and writer of non-fiction literature Ján Ladislav Kalina (1913–1981) died in exile in Munich, Germany.

Another notable Jewish contribution to Czech and Slovak letters has been in the field of literary criticism. Those prominent in this sphere include Josef Kodíček (1892–1954), formerly the director of one of Prague's leading theaters, Pavel *Fraenkl (1904–1985), who settled in Norway, and Eduard *Goldstuecker. Jews, furthermore, played an important part in popularizing the works of Czech authors abroad and in translating the great foreign classics into Czech, thus enriching the literary life of Czechoslovakia. Max *Brod, Pavel Eisner, Paul Selver (a Londoner who translated Čapek and Hašek into English), Gustav *Winter, Otto Pick, Willy *Haas, Rudolf Fuchs, Emil and Erik Saudek, Bedřich Adler, Edmund Gruen, Arnošt Mandler, Jan Urzidil, and, not least, Otokar *Fischer, who was both a poet of the first rank and an important drama critic – the list is a long one, and yet these are only a few of the many gifted Jews who helped to spread a knowledge of Czechoslovak culture throughout the civilized world.

[Avigdor Dagan / Milos Pojar (2nd ed.)]

World War II brought immense losses to the ranks of Czech Jewish writers, authors, and journalists. Some perished in the Holocaust: Alfred Fuchs, Karel Poláček, Hanuš Bonn, Camil Hoffmann (from a German Jewish family); Jiří Orten was killed in 1941; many went into exile: František Langer, Pavel *Tigrid, Josef Kodíček, Julius Firt, Arne Laurin, the prominent novelist Egon *Hostovský, Viktor Fischl (later Avigdor Dagan), František Gottlieb, Eduard *Goldstuecker and Jiří Langer, who died in 1943 in Palestine. Some who returned to Czechoslovakia after World War II, went into exile

again after the Communists came into power in 1948 (Tigrid, Firt, Hostovský, Fischl). Nevertheless, many Czech Jewish authors made important contributions to Czech literature after World War II, for example Norbert *Frýd, Josef *Bor, Arnošt *Lustig, František *Kafka, František R. *Kraus, Ruth *Bondy, Ivan *Klíma, who all survived the Holocaust. Some managed to escape Nazi persecution: Jiří *Weil, Ota *Pavel, Pavel Eisner, Zeno *Dostál.

The Thaw

The 20th Congress of the Soviet Communist Party and political events in Poland and Hungary in 1956 opened the gates for a more liberal period in Czechoslovakia in the field of culture, which lasted until the Soviet occupation in 1968. The Second Congress of the Union of Czechoslovak writers and its critical course, articles which appeared in *Literární noviny*, and works of young Czech and Slovak writers published in 1955–59 in the literary monthly *Květen* made it possible to start publishing "Jewish themes" again. In particular, another literary monthly, *Plamen* (1959–69), gave space to Czech and Slovak writers, publicists, translators, journalists, etc., both Jewish and non-Jewish, to publish their own stories, critical pieces, and translations pertaining to Czech-Jewish literature, the Holocaust, Jewish humor and extracts from the works of Jewish writers (Julian *Tuwim, Lion *Feuchtwanger, Isaac *Babel, Ilja *Erenburg, Franz *Kafka), philosophers, sociologists, psychoanalysts, etc. (Ernst *Fischer, Erich *Fromm, Lucien *Goldmann, Sigmund *Freud, and others). Similarly, a new bimonthly, *Světová literatura* (from 1956) started publishing works of world literature, especially those of American and Western writers, including Jews. In 1958, Pavel Eisner's translation of Kafka's *Proces* ("The Trial") appeared on the book market, followed by translations of Lion Feuchtwanger, Alberto *Moravia, Isaac Babel, Herman *Broch, and many others. In the growing liberal atmosphere of the late 1950s and 1960s (with many setbacks for new trends) Jewish writers also profited. In the beginning, they either published (from 1945) in *Věstník židovské náboženské obce v Praze* ("Gazette of the Jewish Religious Community in Prague"; from 1968 *Věstník židovských náboženských obcí v Československu*, "Gazette of Jewish Religious Communities in Czechoslovakia"), from 1991 in *Roš chodeš* or from 1954 in *Židovská ročenka* ("Jewish Yearbook") or in *Judaica Bohemiae*. Slowly, they started to publish their books, too. Ludvík *Aškenazy, F.R. *Kraus, Norbert Frýd, J.R. Pick and Jiří Weil, who could publish even in the 1940s and 1950s, were joined in the 1960s by Arnošt Lustig, Ivan *Klíma, Josef *Bor, František Kafka, František Langer, Ota Pavel, František Gottlieb, Ladislav *Grosman, Gabriel *Laub, and Efraim K. *Sidon. In these years works of deceased authors also appeared – František Gellner, Ivan *Olbracht (a staunch supporter of the Communist regime), Jiří Orten (already in 1958), Karel Poláček, and Richard Weiner. In 1963 and 1965 two international literary conferences were held in Liblice near Prague, co-organized by Eduard *Goldstuecker and others, on Franz Kafka and on Prague German literature, attended, for instance, by Anna *Seghers, Ernst *Fischer, Roger Garaudy, etc., followed by an edition of *Franz Kafka aus Prager Sicht* (1966) and *Weltfreunde. Konferenz ueber die Prager deutsche Literatur* (1967). Kafka and his work ceased to be taboo in Czechoslovakia (until 1968). In 1964 Max Brod visited Prague after 25 years. In 1963–1964 an open dialogue between Marxists and Christians came into being at the Faculty of Philosophy in Prague. It ran until 1968 and brought to Prague, among others Erich Fromm, Theodor *Adorno, Roger Garaudy. Allen *Ginsberg, J.P. Sartre, and Simone de Beauvoir. J.A. Jevtuschenko, Edward Albee, and John Steinbeck visited Prague, too. Eichmann's trial in Israel in 1961–62 and trials of German war criminals from Auschwitz in 1965 in Frankfurt were described in detail by Ladislav Mňačko and Erich *Kulka who took part in these trials, which attracted wide attention in the Czech public, including Jewish themes in general. The official Czechoslovak policy toward Israel in 1967 and after the Six-Day War brought on open criticism of Ladislav Mňačko and of some Czech writers at the Fourth Congress of the Czechoslovak writers. Three of them (Ludvík Vaculík, Milan Kundera, and Ivan Klíma) lost their membership in the Communist Party. "The Prague Spring" in 1968 lasted a mere eight months. A special board of the Czechoslovak Writers' Union discussed persecution cases of 168 authors discriminated against after 1948. Josefa Slánská (1967), Eugen Löbl, (1968), Artur London (1969), and Heda Margoliová-Kovályová (1973, from exile) published their testimonies about the *Slánský trial. Eduard Goldstuecker was elected president of the Czechoslovak Writers' Union. Censorship was abolished, books of exiled authors (for instance Egon Hostovský) were allowed to be published. Czech and Slovak writers took an active part in the process of the so-called "democratization" of the whole society. The mass media became free and the weekly edition of *Literární listy* (issued by the Czechoslovak Writers' Union) reached 300,000 copies. "The Prague Spring" was crushed by Soviet tanks in August and a process of liquidation of all the freedoms which had been achieved started and culture was not an exception. This period of "normalization" lasted 20 years with all its disastrous consequences also for Jews. An official state and party antisemitism (under the guise of anti-Zionism) emerged. The Czechoslovak Writers' Union was decimated, split into the Czech and Slovak unions, and a majority of important writers stayed outside. The ban on publication hit those who did not approve of the occupation of the country. Dozens of writers, publicists, journalists, editors, etc., went into exile, among them Ludvík Aškenazy, Ladislav Grosman, Eduard Goldstuecker, Gabriel Laub, Arnošt Lustig, Erich Kulka, and later Karol E. Sidon. Czech literature split into three sections: an official one, an underground (*samizdat*), and an exile literature published either in Czech exile publishing houses and smuggled back into Czechoslovakia or in translations in foreign languages. Some Czech Jewish authors stayed in the country and published abroad or in *samizdat* (Ivan Klíma, or Milan *Uhde); some of them (Arnošt *Goldflam, Zeno *Dostál, or Ota Pavel)

were allowed to publish at home as long as they did not emphasize their Jewishness or write about Jewish themes. From the old Jewish authors rather occasionally Orten, Poláček, Gellner or Bor appeared.

The return of freedom to Czechoslovakia after 1989 physically brought back some Czech Jewish authors from exile (Goldstücker, Lustig, Sidon). In the 1990s Czech Jewish writers started to be published again. This trend continued into the 2000s.

CZECH REPUBLIC AND SLOVAKIA. (For earlier history of these regions, see *Czechoslovakia.) Czechoslovakia split peacefully into the Czech Republic and Slovakia on January 1, 1993. Israel established formal diplomatic relations with both new countries.

Czech Republic

Jewish life in the Czech Republic continued the process of revival that began after the fall of Communism in 1989. As the only rabbi in the country, Prague Rabbi and Czech Chief Rabbi Karol Sidon, who took up his post in late 1992, was a major catalyst in this. About 3,000 Jews in the Czech Republic, including 1,300 in Prague, identified with the community in the early 21st century.

There were numerous classes, conferences, cultural and social events. An old age home was opened in Prague in late 1993, and a Jewish kindergarten opened in 1994. The ritual orientation of the community was strictly Orthodox. This alienated some people, particularly younger people, products of mixed marriages, who felt a Jewish identity but were not Jewish according to *halakhah*. A number of them gravitated to an alternative Ḥavurah group, Bet Simcha, that functioned outside the mainstream of the official Jewish community and made a point of appealing to people who were not halakhically Jewish but wanted to take part in Jewish activities. In 1994 another "liberal" Jewish group, Bet Praha, was formed, mainly appealing to the hundreds of American, English, and Canadian Jews in the city. At the High Holidays in 1994, Reform services, conducted by a visiting rabbi, were held in Prague's High Synagogue.

A new segment of Czech Jewry were Jews from Carpatho-Russia, who in the years 1946–48 opted to settle in Bohemia and Moravia rather then remain citizens of the Soviet Ukraine. They chose to settle in the big cities, like Prague and Brno, and in the region formerly called "Sudeten," where the old German community was expelled to the German Federal and Democratic Republics. Remnants of Carpatho-Russia Jewry could also be found in Karlovy Vary (Karlsbad), Liberec, Usti nad Labem, and Teplice-Sanov. The Carpatho-Russian Jews comprised the pious element of Czech Jewry.

The former pious Moravian Jews were all but annihilated. Traditional Orthodox communities of the Silesia-Teschen region and the Orthodox of southern Moravia almost disappeared. The ancient synagogue and cemetery of Mikulov is a tourist attraction but does not represent Jewish communal life.

A large part of Prague's Orthodox Jews were also immigrants, newcomers from Slovakia and Carpatho-Russia. Therefore the recurring tension between Orthodox Jews and self-identified Jews sometimes also reflected the differences between the remnants of old-time Czech Jewry and the immigrants. Thus issues of faith, the generation gap, and intellectual differences upset the communal life of the Prague congregation. The center of Bohemian-Moravian communal life was nevertheless concentrated in Prague, which offered regular educational-intellectual and social activities and preserves a modicum of religious life.

The memory of Czech Jewry is preserved in the Pinkas synagogue, on whose walls the names of all Bohemain-Moravian Jews have been inscribed. The Jewish Museum of Prague, and naturally the Altneuschul and the adjacent ancient cemetery, preserve the memory of Czech Jewry. Memorials were erected in numerous towns and municipalities also care for surviving synagogues and cemeteries, but by and large it can be said that, except for Prague and Brno, intensive Jewish life, for all practical purposes, has ceased to exist in the Czech Republic.

The Czech Republic had very good relations with the State of Israel. Economic ties are close. Restitution of Jewish property remained an issue. A number of properties that had been owned by the Jewish community in 1938 were returned to the community. The most notable was the Prague Jewish Museum, including its priceless collection of Judaica and half-dozen synagogue and other buildings in which the collections were displayed, all of which was returned to the community in October 1994.

There was continuing concern at incidents involving right-wing and skinhead groups who primarily attacked gypsies but also shouted antisemitic slogans.

[Ruth E. Gruber / Yeshayahu Jelinek (2nd ed.)]

Slovak Republic (Slovakia)

While the exact number of Jews living in Slovakia is hard to

establish, the estimate is that some 5,000 lived in the country in the early 21st century. Most of them lived in the capital, Bratislava, with the second largest Jewish community in Kosice in Eastern Slovakia.

In addition to these two congregations, nine more were active, serving all the Jews living in the towns of the vicinity. These nine were Galanta, Nove Zamky, Dunajska Streda, Komarno, Nitra, Zilina, Banska Bystrica, Presov, and Michalovce. The tendency was toward decline as the Jewish population abandoned the countryside or died out.

The British-born Lubavitcher rabbi, Baruch Myers, arrived in Bratislava in May 1993 as the city's first rabbi since the departure of Rabbi Elias Katz in 1968. He launched education and youth programs and for the first time, a huge Hanukkah menorah was in public in Bratislava in a ceremony attended by President Michal Kovac and the Israeli ambassador.

After the "Velvet Revolution" (1989), Jewish communal, religious, social, and political life received a big boost. Among the principal actors in this revolution in Bratislava were several Jews, in particular Fedor Gal, who was the leading figure in the organization called "Public Against Violence" (Verejnost Proti Nasiliu, VPN). He and other Jews were later squeezed out of political life.

The representative institution of Slovakian Jewry was the Central Association of Jewish Religious Communities in the Slovak Republic, with its seat in Bratislava. It represented local Jewry in all matters affecting its life, including activities for restoration and restitution of Jewish communal and private property, representing Jews in Slovak elected and communal bodies, organizing religious and social activity, and maintaining relations with Jewish organizations abroad, including the Israel Association of Jews from Czechoslovakia. Among its important political tasks was the struggle against frequently occurring antisemitism. Antisemitism made itself felt in the desecration of surviving Jewish cemeteries and synagogues, attempts at rehabilitation the Slovak state, the first satellite of the Third Reich, and its president Father Dr. Jozef. Also, and attacks on Jews in the media. Rabbi Myers was attacked in Bratislava on September 5, 1993, by skinheads. A survey in April 1993 showed that a large percentage of the population had negative feeling about the Jews, and this state of affairs has not changed. It also provides fertile ground for anti-Israeli Arab propaganda. Anti-Jewish publications, including "The Protocols of the Elders of Zion," are regularly published. In 1990 the Slovak Parliament made a public apology to the Jews and in October 1993 a landmark law aimed at partial restitution of property claims by churches and religious communities, including the Jews. The Jewish community listed over 300 properties, including over three dozen synagogues, buildings, and schools. In 2003 another law provided for the partial return of "Aryanized" or confiscated Jewish property.

In 2002, Slovakian authorities reached an agreement with the Association of Jewish Religious Communities on partial indemnification of Slovakian Jews who lost their property during the Holocaust. Slovakia has good relations with Israel, and Israeli figures like the president and the speaker of Parliament have visited Slovakia, as have the Slovak president and the prime minister visited Israel.

Among the important Jewish institutions in Slovakia mention should be made of the Jewish Museum, which is part of the Slovak National Museum, as well as the Holocaust Documentation Center and a variety of cultural enterprises, including the frequent publication of books of Jewish content by Jewish authors and the Ezra foundation for social and humanitarian activities. Within Comenius University an Institute for Jewish Studies is active.

Slovakia proclaimed September 9, the date of publication in 1941 of the so-called "Jewish Codex," based on the Nuremberg laws, as the National Day of Holocaust commemoration. A memorial was erected on the mass grave in Kremnicka, a memorial exhibit was constructed in Auschwitz, and in Sobibor. In Poland, where most of Slovakian Jews perished, a plaque was put up. The state supported all these undertakings financially and morally.

The Association cares for Jewish cemeteries and synagogues, including the construction of a mausoleum over the graves of famous Bratislava rabbis in the ancient cemetery, such as Moses Schreiber-Sofer (Ḥatam Sofer).

[Yeshayahu Jelinek (2nd ed.)]

CZENSTOCHOWSKI, WALTER (1924–1997), Zionist activist and leader in Venezuela. Born in Vienna in a Zionist and Yiddishist home, Czenstochowski immigrated to Palestine (Eretz Israel) with his mother in 1935 and studied in the agricultural school of Ben Shemen. He joined the *Palmach*, and when the IDF was established, he continued his military service in its air force. In 1953 he moved to Venezuela, where his father had found refuge. From that time on he participated in local Jewish public life and in political activity on behalf of the World Zionist Organization. At various times he presided over the Zionist Federation of Venezuela and the northern section of the Latin American Zionist Confederation. Czenstochowski was active in many Jewish Venezuelan organizations. He was president of the Confederación de Asociaciones Israelitas de Venezuela – CAIV (the central political organization of the Jewish community) and was a member of the Executive Committee of the World Zionist Organization as the representative of Latin America.

[Efraim Zadoff (2nd ed.)]

CZERNIAK, MOSHE (1910–1984), Israel chess master. Czerniak was born in Warsaw and in 1934 settled in Palestine. Three times champion of Israel, he was active in promoting the game in the country. He represented Israel in international tournaments and in the chess Olympics. He contributed articles in Spanish, Polish, Russian and Hebrew to many periodicals, including his chess column in *Haaretz*, and the Argentinian chess reviews *Estrategia* and *Revista Metropolitana* which he edited between 1942 and 1949. He was also editor of *64 Squares* (1956–59). His books include *El final* (1941);

Botwinnik's Best Games (1946[2]); *Sefer ha-Shaḥmat* (1963); and *Toledot ha-Shaḥmat* (1963).

[Gerald Abrahams]

CZERNIAKOW, ADAM (1880–1942), president of the *Warsaw Jewish Community Council from shortly after the outbreak of World War II and first head of the Warsaw *Judenrat. Czerniakow was born in 1880 in Warsaw to an assimilated Jewish family. He was trained as an engineer at Warsaw's Polytechnic Institute and studied industrial engineering in Dresden. His Polish was native, his German fluent, and his Yiddish more halting, which later hampered his communication with less assimilated, more traditional Yiddish-speaking ghetto inhabitants and their confidence in him. Czerniakow acquired considerable experience as a communal leader and was known especially as the organizer of the Jewish artisans, who constituted some 40% of all Polish Jewry. In 1927–34 he was an elected a member of the Warsaw Municipal Council, and ran unsuccessfully for the Polish Sejm. Before the outbreak of World War II he was a member of the Executive Council of the Warsaw Jewish community and served as its vice chairman. Several members of the Council, including its chairman, Maurycy Mayzel, fled Warsaw when the Germans invaded. Czerniakow had several such opportunities and rejected them all. It was a matter of responsibility, of basic integrity, for Czerniakow that leaders not abandon their people and save themselves.

On Sept. 23, 1939, the mayor of besieged Warsaw appointed Czerniakow to head the Jewish Community Council; his appointment was confirmed by the German authorities on October 3, 1939, when the 24-member Jewish Council (*Judenrat*) was constituted on *Heydrich's orders. Throughout this period Czerniakow kept a secret diary, notebooks containing 1,009 pages, which is an indispensable day-by-day account of his work and depicts conditions in the Warsaw Ghetto and throughout Poland.Under Czerniakow, the *Judenrat* evolved into a multi-layered municipality with a series of departments, including a Jewish police force to which he appointed Joseph Szerynski, who had converted to Christianity, as commander. It was a bad choice, made worse by the lack of trust between the ghetto inhabitants and the commander. He struggled in vain to serve two masters: the Germans, who viewed the Council as an instrument of their policies; and the Jews, whose ever-increasing needs they unsuccessfully tried to meet. Thus, his situation was compromised from the very beginning. Czerniakow was acutely aware of the precariousness of the *Judenrat*'s position. Twenty-four cyanide pills were in the drawer of his desk, one for each member of the Council. He reported to different German and Polish agencies who were in charge of ghetto operations, beginning with the leaders of Einsatzgruppe IV during the opening days of the war and then the city administration until the fall of 1940, followed by the German district administration's resettlement division as the ghetto was formed in the fall and winter of 1940–41. Much of Czerniakow's diary – especially on the buildup to the deportation – was written during the period in which he reported to the Komissar for the Jewish District Hans Heinz Auerswald. In the final days of the ghetto the SS Resettlement staff, under the leadership of Hermann Hofle, predominated. He could never be sure exactly who was his "boss": the ghetto commissar, the SS, the police, the governor of the district, the Transferstelle, or the Polish municipality.

His daily dilemma was overwhelming: how to run a municipal government that could provide adequate food and shelter, heat, medicine, religious services, education, and work to a starving population; how to care for the young and sustain the elderly; how to make life bearable in the ghettoes. The resources at this disposal were meager; his authority derived from the Germans. Funds were scarce and production, though increasing through the initiative of ghetto residents, was always inadequate to sustain the ghetto. To accomplish his task, he worked virtually all day, every day. He was preoccupied with the immediate. Seldom did he look at the larger picture or even think of the fate of his son Jas who lived in Lvov and from whom he had not heard from since the German invasion. Unlike other ghetto leaders such as Mordecai Chaim *Rumkowski of Lodz, whom he criticized, Czerniakow was not full of himself. He did not perceive himself as a grand strategist, but he tried his best. He did not deceive himself regarding his abilities or his achievements. His diary depicts his few successes and his many failures. Czerniakow, who remained at his post for nearly three years, was beset by constant budgetary difficulties and often faced contradictory demands from various offices within the Nazi bureaucracy and constant complaints from desperate individuals and competing groups within the ghetto.

As chairman of the *Judenrat*, he was charged by the Nazi authorities with effecting the community's fatal transition into a ghetto. He vigorously fought against the idea of ghettoization and the proposed boundaries of the ghetto, and so accumulated a vast documented correspondence with the Nazis. His direct exchanges with the Nazi authorities were usually held at a junior level, with lieutenants and sergeants. The chairman comported himself with dignity and honor. Nor was his position within the Jewish community a simple one. It was Czerniakow's difficult task to conciliate conflicting interests of various groups in the captive heterogeneous ghetto population. He personally did not escape Nazi brutality. He bore his situation with a certain stoicism. He often included criticism of German policy against the Jews in his memorandums and reports but they like his diary were self-censored. There were clear limits to what he could say or what he could write in private should his notebooks be discovered. He stubbornly fought for the inclusion of certain formerly Jewish streets within the ghetto limits in order to relieve the dangerous overcrowding, and also maintained open and clandestine contacts with leaders of the Polish population. He was in the words of Raul Hilberg and Satnislaw Staron, who edited the English-language version of his diary, "overwhelmingly ordinary, a non-villain, non-hero, non-exploiter, no saint and not a leader."

He encouraged secret educational and cultural activities, including technical and medical training, helped obtain food, raw materials, and tools for the artisans within the ghetto, and cared for the labor commandos outside and for their families left within, even though this required ingenious schemes of smuggling and outwitting, usually only temporarily, the Nazi authorities.

Almost until the end, Czerniakow refused to believe that the Germans were bent not on exploitation of the Jews but on their murder. He was preoccupied with the endless problems beleaguering the more than 400,000 Jews who lived in a position of increasing squalor and hunger, disease and malnutrition. He rejected the rumors and hints about the impending deportations and liquidation of the ghetto and used his influence to encourage the besieged community to be calm and continue to work and endure until the emergency would pass.

When he was asked by the Germans to sign children's deportation orders, he frantically ran to various Nazi offices in the hope that these orders might not have been issued by competent authorities and could be countermanded, but despite reassurances to the contrary from Auerswald, he realized the futility of the situation, and committed suicide by swallowing the poison which he always carried in his pocket. His final entry in the diary was: "I am powerless, my heart trembles in sorrow and compassion. I can no longer bear all this."

Even in death Czerniakow was a controversial figure. Those close to him saw his suicide as an act of personal courage that expressed his integrity and sense of public responsibility. Ghetto diarist Chaim Kaplan said: "Some people earn eternity in a single hour." Those active in the ghetto's militant underground were less charitable. Emanuel *Ringelblum, the chronicler of the Warsaw ghetto, wrote: "Suicide of Czerniakow – too late, a sign of weakness – should have called for resistance – a weak man." No doubt, he saw that his strategy of negotiations and of hoping to alleviate the plight of the Jews and to prolong their survival beyond a German defeat would not work. In the end, he chose to share the fate of his community, to die by his own hand rather than be killed by the Germans. The order for deportation appeared without his signature. On the day of his death, he completed the ninth of his notebooks. The diary has been published in Hebrew and Polish as well as English (*The Warsaw Ghetto Diary of Adam Czerniakow* [1979] and *Yomano shel Adam Czerniakow* [1968]). One notebook is missing covering the dates of December 14, 1940–April 22, 1941. The diary was probably intended to serve as source material for a book to be published after the end of the German occupation.

[Michael Berenbaum (2nd ed.)]

CZERNOWITZ YIDDISH LANGUAGE CONFERENCE, first international, interparty conference to deal with the role of Yiddish in Jewish life. It was held from August 30 to September 4, 1908. The idea of such a conference was first broached by Nathan *Birnbaum, and the original call was sent out by an organizing committee in New York consisting of Birnbaum, dramatists Jacob *Gordin and David *Pinski, the publisher A.M. Evalenko, and the philosopher Chaim *Zhitlowsky. The 70 delegates who went to Czernowitz (Chernovtsy), the principal Yiddish-speaking center of Bukovina, included representatives of all shades of Jewish opinion, from Zionist Hebraists to militant Bundists, and such diverse personalities as I.L. *Peretz, Abraham *Reisen, Sholem *Asch, H.D. *Nomberg, Noah *Prylucki, Matthias *Mieses, Mordecai *Spector, Gershom *Bader, and Esther (Lifshitz). The two leading Yiddish authors, S.Y. *Abramovitsh (Mendele Mokher Seforim) and *Shalom Aleichem, prevented by illness from attending the conference, endorsed its aims. The agenda included problems of orthography, grammar, literature, theater, press, translation of the Bible into Yiddish, and, above all, recognition of Yiddish as a national language of the Jewish people. Controversy raged between delegates who espoused Hebrew as the only Jewish national language and who looked upon Yiddish as a *galut* ("Diaspora") language to be discarded, and delegates who regarded Yiddish as the living Jewish language and Hebrew as the language solely of the past and of prayer. After long debates, a compromise resolution was adopted proclaiming Yiddish as a national language and asking for its political, cultural, and social equality with other languages. By using the expression "a national language" rather than "the national language," the conference wished to leave participants free to take any stand on Hebrew that accorded with their personal convictions. The conference aroused much discussion in the Jewish press. *Aḥad Ha-Am called it a Purim spectacle. Hillel *Zeitlin, Reuben *Brainin, and Morris *Rosenfeld ridiculed it, while S. *Niger and *Ba'al-Makhshoves defended it as an historic achievement. After the conference, Peretz, Asch, Reisen, and Nomberg undertook a tour of Jewish communities of Galicia and Bukovina to intensify interest in Yiddish language, literature, and culture. The conference heightened the prestige of Yiddish. It stimulated literary creativity, research, and publication in Yiddish, and laid the ideological basis for the later founding of *YIVO.

[Sol Liptzin]

CZESTOCHOWA (Pol. **Częstochowa**), city in Poland, approximately 125 miles (205 km.) S.W. of Warsaw; the shrine of the Jasna Góra Madonna in Czestochowa was celebrated as a center of Catholic pilgrimage. Seventy-five Jewish residents are recorded in Czestochowa in 1765 and 495 in 1808, when an organized community was established. Although Jewish residence was prohibited in certain districts, the Jewish popula-

tion in Czestochowa grew from 1,141 in 1827 (18.5% of the total) to 2,976 in 1858 (34.5%), and in 1862, with the abolition of the Jewish quarter, to 3,360 (37.3%). By 1900 it numbered 11,764 out of a total population of 39,863 (29.5%), in 1921, 22,663 and in 1939, 28,486. From the early 19th century, Jews played an important role in the development of industry and commerce in Czestochowa, and a number of Jewish social, educational and charitable institutions were established.

[William Glicksman]

Holocaust Period

The German army entered the city on Sept. 3, 1939. The next day, later called "Bloody Monday," a pogrom was organized in which a few hundred Jews were murdered. On September 16, a *Judenrat was established, chaired by Leon Kopinski. On December 25, a second pogrom took place and the Great Synagogue was set on fire. In August 1940 about 1,000 young men between the ages of 18–25 were sent to the forced labor camp in Cieszanow (Lublin Province), where almost none survived. Thousands more were sent to forced labor locally and the Judenrat managed to arrange licenses for 2,000 Jewish artisans as well as providing a wide range of community services, including the inoculation of 17,000 Jews against typhus under the auspices of the *TOZ organization. When a greater number of Jews from other parts of western Poland came to Czestochowa in 1940–41, the city's Jewish population grew by several thousands. On April 9, 1941, a ghetto was established. When it was sealed off (Aug. 23) the population suffered severe overcrowding, hunger, and epidemics. On Sept. 23, 1942 (the day after the Day of Atonement), the first of six large-scale *Aktionen* began. By October 5, about 39,000 people had been deported to *Treblinka and exterminated, while about 2,000 were executed on the spot. The ghetto, by now largely diminished and within new borders (now called the "small ghetto") had about 6,500 people, of whom about 1,000 were "illegal."

Resistance

Various Jewish underground organizations arose during the first months of German occupation, first engaging in sabotage and mutual aid activities. In December 1942, a unified Jewish Fighting Organization (ZOB) was set up. It had about 300 fighters and established contact with the *Warsaw Ghetto Fighting Organization. On Jan. 4, 1943, a group of fighters under Mendel Fiszlewicz offered the first armed resistance. Twenty-five fighters fell, while 300 nonfighting men were deported to Radomsko. The next day the Nazis shot 250 children and old people who had been living in the ghetto "illegally." On March 20, 1943, 127 of the city's Jewish intelligentsia were executed. The Jewish Fighting Organization tried to organize guerilla units in the nearby forests. Two large groups were dispatched to the forests of Zloty Potok and Koniecpol, but before they could begin partisan activities, they were murdered by Polish terrorists of the National Armed Forces (Narodowe Siły Zbrojne). A few smaller groups succeeded in contacting the Polish left-wing People's Guard and they conducted guerilla activities in its ranks. On June 26, 1943, the Germans began liquidating the "small ghetto." The Jewish Fighting Organization offered armed resistance, but they could not cope with the situation. About 1,000 people were deported and the ghetto was closed down. The remaining 4,000 Jews were transferred to two slave labor camps organized at the city's HASAG factories. On July 20, 1943, about 500 prisoners from these camps were executed at the Jewish cemetery. In 1944 the HASAG slave labor camps were enlarged, when a few thousand Jewish prisoners from *Płaszów concentration camp, Lodz Ghetto, and the slave labor camp of Skarzysko-Kamienna were moved there. Before leaving the city on Jan. 17, 1945, the Germans managed to deport almost 6,000 prisoners from the HASAG camps to the concentration camps of *Buchenwald, Gross-Rosen and *Ravensbrueck in Germany. The 5,200 prisoners who succeeded in hiding were saved by the Soviet army. The Jewish survivors tried to rebuild their community. In June 1946, 2,167 Jews lived in Czestochowa. Some kibbutzim to prepare Jewish youth for settlement in Palestine were active until 1948, a Jewish school existed until March 1946, and a Jewish Religious Society was active. After 1948 only the official communist Jewish Social-Cultural Society continued to function until the antisemitic campaign in 1968. Jews left Czestochowa and settled mainly in Israel in 1949 and 1957. After 1968 almost all those who remained left Poland. Organizations of Czestochowa Jews are active in Israel, the United States, Canada, Argentina, and France.

CZOBEL, BÉLA (1883–1976), Hungarian painter. Czobel, who was born in Budapest, went to Paris in 1903 and associated with the "fauve" painters. When his works were exhibited in Hungary, he was acclaimed as a leader of "the Eight," a group of artists who were introducing fauvism into that country. During World War I he lived in Holland and after the war moved to Berlin. He then returned to Paris, which became his base. Domestic subjects such as flowers, gardens, interiors and still lifes were among his favorites. His characteristic mood is still and meditative. Czobel's early works were influenced by Van Gogh and Cézanne and executed in flat patterns with strong outlines. His mature works are characterized by warmth and richness of color and *sfumato* effects which blur the outlines and permit the separate parts of a painting to merge.

Da–Doz

DABBŪRIYYA (Ar. دبُّورِيَّة), Muslim-Arab village in central Israel, west of Mount Tabor. A serpentine road leads from the village to the top of Tabor. First mentioned under its present name by a 13th century Arab geographer, the village has been identified with the biblical Daberath, while legend associates the village's name with the prophetess *Deborah. Remnants of a fortress and church with a mosaic floor, as well as rock-hewn tombs and cisterns, have been found there. In 1961 Dabbūriyya received municipal status. In 1968 it had 2,590 inhabitants, mainly engaged in farming, increasing to 7,690 in 2002. The village's area is 2.8 sq. mi. (7.3 sq. km.).

[Efraim Orni / Shaked Gilboa (2nd ed.)]

DABROWA GORNICZA (Pol. **Dabrowa Górnicza**), industrial town in Katowice province, S. Poland. Jews settled in Dabrowa Gornicza in the middle of the 19th century. They mainly engaged in small trade and metal crafts. There were 4,304 Jews living in Dabrowa Gornicza according to the 1921 census (11% of the total population).

[Arthur Cygielman]

Holocaust Period

The German army entered the town on Sept. 3, 1939. In the fall of 1940 several hundred young Jewish men were deported to slave labor camps in Germany. Several hundred more were deported in the course of 1941. At the end of that year a ghetto was established. On May 5, 1942, the first deportation took place in which 630 Jews were taken to Auschwitz and exterminated. In the second deportation, conducted on August 12, 1942, another few hundred Jews were sent to their death in Auschwitz. On June 26, 1943, the ghetto in Dabrowa Gornicza was liquidated and all its inmates were transferred to the ghetto in Srodula (a suburb of Sosnowiec), the only ghetto still existing in Upper Silesia. It too was liquidated and all its inhabitants, including the Jews from Dabrowa Gornicza, deported to Auschwitz and killed. After the war the Jewish community in Dabrowa Gornicza was not reestablished.

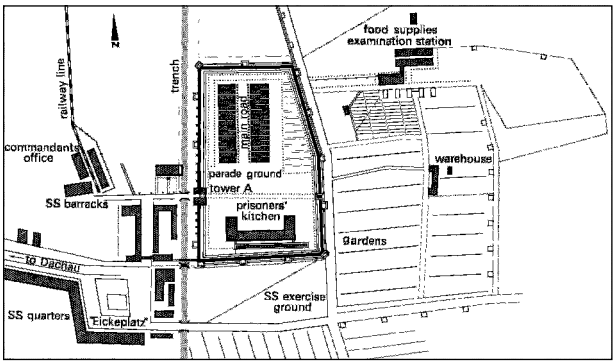
DACHAU, town near Munich, Bavaria, where the nearby concentration camp was established on March 10, 1933. It was the first of the *SS-organized concentration camps and became the model and training ground for all other camps when they were taken over by the SS in April 1933. The Dachau camp was established within 40 days of Hitler's ascent to power; it operated



Plan of Dachau concentration camp. From A.J. Grand, Turm A ohne Neuigkeit*, Vienna, 1946.*

until the day before he died, less than ten days before the end of the war, when it was captured by the Americans on April 29, 1945. During World War II, approximately 150 branches of the main camp established in southern Germany and Austria were also called "Dachau." The main camp consisted of 32 huts in two rows, surrounded by an electrified fence, in which there was a gate surmounted by the slogan *Arbeit macht frei* ("Labor Liberates"). The camp's first commandant was Theodor Eicke, who planned and organized the brutal Dachau regime. He later went on to become inspector general for all camps. It was at Dachau that permission was first given to the guards to shoot a prisoner approaching the barbed-wire fence, and this practice was encouraged by granting leave to guards who hit their target. Dachau produced commandants for other camps, including Rudolph *Hoess.

From the first, Dachau was used to incarcerate "enemies of the regime," trade unionists, and political opponents. The Nazis used Dachau as an execution site for the SA Storm Troopers caught in the 1934 purge. Later gypsies, German – and after 1938 Austrian – male homosexuals, and Jehovah's Witnesses were imprisoned there. As the Germans invaded countries, Dachau continued to serve a political function as political opponents were imprisoned there. The Jews who first came to Dachau were incarcerated for their opposition to the regime, not because they were Jewish. In fact, Jews were a distinct minority of the prisoners at Dachau though their percentage in the general population varied with the general conditions of Jews under the Third Reich. After the *Anschluss* (annexation) in March 1938, thousands of Austrian Jews were sent to Dachau. Eleven thousand were sent there from Germany and Austria in the wake of **Kristallnacht* but nearly all of them were released if they could leave the country. No Jews were released, however, after the outbreak of World War II. Late in the war, the Jewish population again increased when Dachau received Jews on the death marches. The exact number of those who passed through Dachau is unknown. In the main camp 160,000 prisoners were registered on the files and about 90,000 in the camp's branches; but, during the last several days of the camp's existence, many transports of prisoners arrived which were not registered in the file. Some inmates remained in Dachau or one of its branches; others were sent further in "death transports"; most were murdered or died from starvation. Of the more than 200,000 prisoners at Dachau, at least 32,000 died of starvation and disease, many after the typhus epidemic that broke out during the extreme overcrowding in the winter of 1945.

It was at Dachau that German doctors and scientists first experimented on prisoners. Sigmund Rasher conducted experiments on decompression, high altitude, and freezing, ostensibly to find a way to help German fliers. Of the 200 inmates whom Rasher experimented upon, 4 in 10 died. Dr. Claus Schilling conducted malaria experimentation. Many died as a result of these pseudo-scientific experiments, and those who survived were often maimed for life. Dachau claimed many victims of want and starvation. From time to time there was also a "selection" in which the weak and crippled were sent to the gas chambers in other camps. Gas chambers were built in Dachau in 1942 but were never used. The exact number of people killed in Dachau is not known.

Dachau was used as a transit center. Mentally retarded and physically infirm Germans – whose Aryan status was never questioned – were incarcerated there and sent from there to Hartheim castle, where they were gassed as part of the "euthanasia operation." Jews were deported from Dachau to the death camps in German-occupied Poland, where they were subsequently gassed after "the Final Solution" became operational in 1942. In the waning hours of the camp, seven thousand Jews were forcibly evacuated from the camp in a planned death march. They were overtaken by American troops.

Prisoners were used for labor; at first the arrangement was local, but it was later consolidated by SS industries. The SS was paid for the laborers by German industries, particularly the armament industry. The prisoners were not paid.

As American troops approached Dachau on April 29, 1945, they found 30 coal cars filled with bodies, all in an advanced state of decomposition. The doors had been locked, and they were left to die. When Dachau was occupied by the American army, one of the uses made of the camp was for the concentration of German prisoners of war and war criminals, who were to be tried in the town of Dachau. The Americans tried 40 of the concentration camp officials; 36 were sentenced to death. Of the other war criminals, 260 were sentenced to death, and 498 to imprisonment. The camp was later a transit camp for refugees and foreign citizens freed from concentration camps. Part of the camp is preserved as a memorial.

[Nachman Blumental / Michael Berenbaum (2nd ed.)]

DA COSTA, ISAAC (1721–1783), merchant and shipping agent of colonial Charleston, South Carolina. Da Costa was born in London, scion of an eminent Anglo-Jewish family

of Spanish-Portuguese origin. He received religious training from Isaac *Nieto, haham of the Sephardi congregation of London. Da Costa immigrated to Charleston in the late 1740s. He helped found Congregation Beth Elohim in 1749, serving as *ḥazzan* for some years. In 1764 he deeded a plot of land to the congregation for use as a communal cemetery, which exists today as Coming Street Cemetery, the oldest Jewish burial ground in the South. Da Costa is the earliest recorded Jewish Mason in South Carolina. He was in partnership with Thomas Farr, Jr., for about five years from 1758, handling exports of rice, indigo, lumber, and pitch, and imports and coastal shipments of European and Indian goods, rum, spermaceti, and slaves. An ardent partisan of the patriot cause, Da Costa was banished and his property seized by the British when Charleston fell in 1780. He took refuge with his family in Philadelphia, where, in 1782, he helped establish Congregation Mikveh Israel. Returning after the Revolution, he died in Charleston.

[Thomas J. Tobias]

DA COSTA, JOSEPH MENDES (1863–1939), father of modern Dutch sculpture. He was born in Amsterdam, where his father kept a stonecutting workshop, a circumstance which affected his choice of career. At the start of his career he produced a series of earthenware figures of great charm, including many on Jewish subjects, which reflected the long period he had spent in Amsterdam's Jewish quarter. He also made figures of animals, such as his *Melancholy Apes*, for which he became well known. He received an honorary degree of doctor of biology from Groningen University for this work. After 1905 Da Costa was frequently commissioned to provide sculptures for public buildings. For these he developed a highly stylized idiom. From 1907 to 1911 he sculpted portraits of famous personages, including Van Gogh, Jan Steen, and Spinoza. After 1917 he completed many important works, such as the monument to the Boer general De Wet, the bronze group "*De Liefde*" ("Love"), and the monument to President Steyn of the Orange River Republic called "*De Raadsman*" ("The Counselor"). He also sculpted a number of biblical subjects, among them *The Sacrifice of Abraham*, *Job and His Friends*, *Jeremiah*, and *David*. Da Costa's strong, robust style generally achieves expressiveness rather than outward beauty of form.

DAFNAH (Heb. דַּפְנָה), kibbutz in the Ḥuleh Valley, N. Israel, affiliated with Ha-Kibbutz ha-Me'uḥad, founded in 1939 as a "*tower and stockade" village and as the first of a complex of settlements called the "Ussishkin fortresses" (named after M. *Ussishkin). The first settlers were pioneers from Lithuania and Poland, later joined by immigrants from various countries. In 1968 the kibbutz had 540 inhabitants. In the mid-1990s Dafnah's population was approximately 639, dropping to 553 in 2002. Its economy was based on intensive farming (field crops, avocado and apple orchards, citrus groves, fishery, and dairy cattle) and plastic goods and confection factories. The kibbutz had guest rooms and a park with recreational activities. Near the kibbutz is the Ḥurshat Tal park. The kibbutz is called after the Greek name of a villa suburb of Panaeas (Caesarea Philippi, *Bāniyās) lying 3 3/4 mi. (6 km.) further east; its name means "laurel tree."

[Efraim Orni / Shaked Gilboa (2nd ed.)]

DAGAN, AVIGDOR (formerly **Viktor Fischl**; 1912–2006), Israeli diplomat and Czech writer. Born in Hradec Králové, Bohemia, he edited the Zionist weekly *Židovské zprávy* ("Jewish News"), and became secretary of the Jewish Party (*Židovská strana*) in the Czechoslovak parliament. His verse collections, notably *Jaro* ("Spring," 1933), *Kniha nocí* ("The Book of Nights," 1936), and *Hebrejské melodie* ("Hebrew Melodies," 1936), showed the influence of Otokar *Fischer. He also translated works about the history of Zionism and the poems of Franz *Werfel, Antoni *Slonimski, and a short poem by Franz *Kafka, "Praha." After the Nazi invasion in 1939, he escaped to London, where he served the Czechoslovak government-in-exile and became a close collaborator of Jan *Masaryk. His *Hovory s Janem Masarykem* ("Conversations with Jan Masaryk," 1952), published in Tel Aviv, was modeled on Karel Čapek's "Conversations with Thomas Masaryk" (1928–35) and was one of the first books reprinted in Czechoslovakia during the short-lived liberal era of 1967–68. Arriving in Israel in 1948, he joined the Israeli diplomatic service in 1950, serving as envoy to Yugoslavia and as ambassador to Poland, Norway, and Austria until his retirement in 1977. He was the *Encyclopaedia Judaica* departmental editor for Czechoslovak literature.

Dvorní šašci ("Court Clowns," 1990) was a novel about the suffering of Jews during the Holocaust. *Jeruzalémské povídky* ("Jerusalem Stories," 1991) evoked the atmosphere of post-1967 Jerusalem. Other novels included *Všichni moji strýčkové* ("All my Uncles," 1995); the autobiographical *Hrací hodiny* ("Musical Clock," 1996); *Loučení s Jeruzalémem* ("Farewell to Jerusalem," 1997); *Maškary v Benátkách* ("Masques in Venice," 1997); and *Žlutý dům* ("The Yellow House," 2003). All is prose works are written in a very poetic, clear style, in a beautiful Czech and full of warmth and optimism. A collection of poems, *Krása šedin* ("The Beauty of Grey Hair"), appeared in 1992. His translation of a number of books of the Old Testament from Hebrew into Czech was issued in 2002 under the title *Poezie Starého zákona* ("Poetry of the Old Testament"). Dagan's essays are collected in *Setkání* ("Encounters," 1994), bringing together portraits of Czech and other writers and politicians. He was awarded the T.G. Masaryk Order of Czechoslovakia in 1991 and of the Czech Republic

in 1996, the Gratias Agit Prize in 2002, and the Jaroslav Seifert Prize in 2004.

[Milos Pojar (2nd ed.)]

DAGON (Heb. דָּגוֹן, Akk. **Dagān**), the Syrian and Canaanite god of seed, vegetation, and crops. Dagon first appears as an important and widely worshiped deity – but not as a god of crops – in documents of the dynasty of *Akkad (23rd century B.C.E.), which indicate that his cult was well established in the middle and upper regions of the Euphrates around the Balikh and Khabur rivers. This region was also called "the lands of Dagon," as Dagon was recognized there as the "god-king of the land." Temples of Dagon have been located in *Mari and Terqa, the chief cities of this region. There are a number of personal names from this region compounded with the name of Dagon.

During the period of the third dynasty of Ur (21st–20th centuries B.C.E.), the cult of Dagon was introduced into Sumer, perhaps by West Semites. It is significant that the chief "cattle-park" (or, better, "state bank") of the third dynasty of Ur, which was situated near Nippur and where thousands of animals were collected and distributed for various official uses, was called *Ṣilluš Dagan* ("in-the shelter-of-Dagon"; modern Drehem); on the evidence presented by personal names of various West Semites (*Amorites and Akkadians) active in *Ṣilluš Dagan*, it is possible that this economic center was originally established by them. Dagon's popularity among West Semites may also be reflected in the fact that his cult reached its height during the Isin dynasty, one of the successors of the third dynasty of Ur in the early Old-Babylonian period (19th century B.C.E.), of West Semitic origin. It is also significant that his cult was important in the time of *Hammurapi (First Babylonian Dynasty; Hammurapi calls Dagon *"baniya"* (my creator)). However, northern Mesopotamia remained his chief center. It is clear from the Mari documents of the 18th century that Dagon's cult flourished there, since lay and cultic ecstatic prophets from Terza (c. 43 mi. (70 km.) northwest of Mari) delivered the god's words, which they heard in dreams and other ecstatic circumstances, to the king of Mari.

The *Ugaritic documents (15th–14th centuries B.C.E.) are the first to shed light on the Dagon cult among the West Semites living in Syria. There and in Canaan, the etymology of his name alludes to his origins as a god of grain: Ugaritic *dgn*, Hebrew *dagan* ("grain"). On the other hand this term, as the Hebrew vocalization shows, was separated from the name of the deity. In the Ugaritic epics, one of Baal's epithets is "Son of Dagon," and there was an important temple in Ugarit dedicated to Dagon. Perhaps he was sometimes held by the Canaanites to be identical with Il, "the father of the gods." Philo of Byblos (first century C.E.), who described the Phoenician religion according to ancient sources, identifies Dagon with Chronos, the father of Greek gods.

A number of personal names in the *Alalakh and Ugarit texts are compounded with the element Dagon. The earliest personal name from central Syria is Dagan-takala (El-Amarna Letters, nos. 317–318), which, contrary to earlier suppositions, does not belong to southern Palestine but to central Syria. All the same, proof of the Dagon cult in Canaan and the coastal regions is found in the name of the two settlements of Beth-Dagon, which are mentioned in the Bible (Josh. 15:14; 19:27), one on the eastern border of the tribe of Asher, and the second in the territory of Judah. A third "*Bit Da-gan-na*" (Dagan) is mentioned by *Sennacherib as one of the conquests in his third campaign (against the west (701 B.C.E.), including Judah), together with *Jaffa (see D.D. Luckenbill, *The Annals of Sennacherib* (1924), p. 31, 69).

According to biblical evidence, the Philistines accepted Dagon as their god and set up temples to him in Gaza (Judg. 16:23) and Ashdod (I Sam. 5:1–7). The one in Ashdod was destroyed by the Hasmonean Jonathan (I Macc. 10:83–84). In Beth-Shean there is evidence of a Philistine presence in at least the 12th century B.C.E., mainly in the form of anthropoid clay sarcophagi (see *Philistines). These Philistine mercenaries, very possibly brought to Beth-Shean by Ramses III after his victory over them, established their rule there after the collapse of Egyptian sovereignty in Canaan. They apparently found a sanctuary of Dagon in the city (on the sanctuaries see *Beth-Shean). The cult of Dagon – and among others that of *Ashtoreth – was possibly established by the Canaanite inhabitants. It is to be noted that according to an El-Amarna letter (no. 289, lines 19–20), people from Ginti (i.e., Gath-Carmel, modern Gath in the Sharon) served as a local garrison in Beth-Shean. These soldiers possibly had a part in the transplanting of the cult of Dagon to this city, but it is also possible that it came directly from central Mesopotamia or Syria (cf. *Marduk). After the battle at Mt. Gilboa, the Philistines exposed the body of *Saul at the temple of Dagon, and his weapons at the sanctuary of Ashtaroth (see I Sam. 31:10, 12; I Chron. 10:10).

DAGON (Fishko), BARUKH (Asher David; c. 1885–1957), Hebrew short-story writer. He adopted the pseudonym of Barukh while active in the Russian underground. Dagon, who was born in the province of Pinsk, went to Warsaw at the end

of the 19th century. He worked as a teacher there as well as in Lodz and other towns. In 1920 he immigrated to Palestine and taught in various settlements. His first stories were published in 1928 in *Davar* and dealt, as did most of his later writings, with the animal world. He published four books: *Nefesh Ḥayyah* (1943); *Ta'alumot ha-Ḥai* (1948); *Kanaf el Kanaf* (1956); and his autobiography *Gilgulei Ḥayyim* (1948).

[Getzel Kressel]

DAHAN (**Adhan**, **Bendahan**), patronymic of several families originating in the Sahara regions of Morocco. The kabbalist SAADIAH DAHAN (c. 1630) wielded much influence in the region of Oued Ghéris. His son SOLOMON DAHAN (c. 1650) was a rabbi and a physician, and his grandson MAS'ŪD DAHAN (c. 1680) was the *dayyan* of Tāfīlālet. The son of the latter, SOLOMON ADHAN (d. c. 1735), at first lived in Tetuán. He then left for Gibraltar and later for Amsterdam in 1720 to collect funds to redeem his family and synagogue, which had fallen into the hands of the nomad Arabs in the region of Tāfīlālet. He translated the work *Zekher Rav* of Solomon Sasportas from Hebrew to Spanish under the title *Memória de los 613 Preceptos* (Amsterdam, 1727), and wrote *Bi-Ne'ot Deshe* (Amsterdam, 1735), a book on ethics which has been frequently reprinted.

JACOB BENDAHAN (c. 1700) of Meknès wrote liturgical poems. His elder son MAIMON BENDAHAN (1756) was *dayyan* in Tetuán and his second son MOSES BENDAHAN (d. 1737) was *av bet din* in Meknès. Both brothers left many halakhic decisions, some of which were published in various Moroccan rabbinical works. *Piyyutim* by Moses are included in the *maḥzorim* of North Africa. JOSEPH BENDAHAN (d. c. 1820), *dayyan* in Tetuán, was the author of five works (commentaries, homilies, responsa, and *piyyutim*), one of which, entitled *Shufreih di-Yosef*, was published in Alexandria (1897) by his grandson JOSEPH NISSIM BENDAHAN, who added one of his own works, *Divrei Yosef*, to it. Joseph Nissim also wrote *Ma'aseh Bereshit* (Djerba, 1925).

[David Corcos]

DAHLBERG, EDWARD (1900–1977), U.S. novelist and critic. Born in Boston, Dahlberg was the illegitimate son of a Kansas City barber and had a miserable childhood, being committed first to a Catholic, and later to a Jewish, orphanage, remaining in the latter from the age of 12 until he was 17. For the next two years he led a vagabond existence, supporting himself by work in a wide range of occupations, from truck driver and cattle drover to dishwasher and clerk. He then studied at Berkeley (California) and Columbia universities, became a teacher, and moved to Europe, where he first began writing in 1926. Dahlberg's early experiences inspired the semi-autobiographical novels *Bottom Dogs* (1929) and *From Flushing to Calvary* (1932). *Those who Perish* (1934) dealt with the impact of Nazism, the rise of which he had seen in Germany, on a small American-Jewish community. With his later works – mainly "prophetic" criticism – the writer gained a considerable reputation as spokesman for the avant-garde, although he soon abandoned his political commitment to Communism. Dahlberg's other books include *Do These Bones Live* (1941); *Sing O Barren* (1947); *Flea of Sodom* (1950), an attack on modern civilization; *The Sorrows of Priapus* (1957), a study of three world cultures (illustrated by Ben *Shahn); *Truth Is More Sacred* (1961), correspondence with the English writer, Sir Herbert Read; and *The Carnal Myth* (1968). Dahlberg was considered an outstanding prose stylist and later taught at universities in the U.S., receiving various literary awards. His autobiography, *Because I Was Flesh*, appeared in 1963, and his letters, *Epitaphs of Our Times*, in 1967. Steven Moore edited *Samuel Beckett's Wake and Other Uncollected Prose* (1989), an anthology of Dahlberg's uncollected writings.

[Milton Henry Hindus]

DAIA (abbr. for Sp. **Delegación de Asociaciones Israelitas Argentinas**), umbrella organization and officially recognized representative body of Argentinian Jewry. Established in 1933 as a committee against the persecution of Jews in Germany, the organization became the Comité contra el Racismo y el Anti-semitismo in December 1934, and assumed its present name in 1935. The organization expanded from a confederation of 28 institutions from all Jewish ethnic groups, all of them in *Buenos Aires, to an institution comprising 130 organizations – congregational, political, economic, cultural, and welfare – throughout *Argentina. DAIA's principal objectives, to fight antisemitism and to represent the Jewish community vis-à-vis the world, have remained the same since its founding, and the organization's role in these two areas has been recognized by the government as well as by most Jews. From its inception, DAIA's policies supported Zionism and its leaders were Zionists. The Communists and their sympathizers refused to be a part of this framework and, except for the period 1946–53, they ran their own separate communal organization. In 1936 DAIA participated in the establishment of the *World Jewish Congress and since then has served as its representative in Latin America for many years. In 1964 the Latin American Jewish Congress was established at the initiative of the then president of DAIA, Itzhak Goldenberg.

Despite Argentina's political instability, DAIA has succeeded in its tasks and continued to survive, in great measure, because of its avoidance of any sort of political identification with any party involved in Argentina's domestic politics. At one point, during the period of the first presidency of General Juan Peron (1946–55), the Organización Israelita Argentina

(OIA), which was politically identified with the Peronist party, tried to use its influence to set itself up as the sole representative of Argentinean Jewry. Another competing organization, with much greater support than the OIA, was the Jewish Communists, who, as mentioned, had been totally disconnected from central community institutions since 1953. After DAIA's decision on Dec. 21, 1952, to denounce the *Slánský trials in Prague and to demand that all members endorse this position, the Communists and pro-Communists federated in IKUF refused to lend their voice to this condemnation, seceded, and remained detached from the organized Jewish community. From time to time the IKUF published condemnations of various actions of the State of Israel, supported Palestinian positions, and organized its own rallies in memory of the victims of the Holocaust in many cities in the country.

DAIA was the focus of later disputes within the Jewish community. In 1976–83, under the military dictatorship, the government systematically organized the "disappearance" of its opponents and thousands of people were kidnapped, tortured, and murdered. It is estimated that the number of Jews affected by these actions far exceeds their percentage in the general population. Nevertheless, the victims and their families, and some observers analyzing the events of this period, argue that DAIA did not speak out strongly enough on behalf of the regime's Jewish victims.

During the years of the Holocaust, DAIA fought against antisemitism in Argentina, emphasizing the loyalty of the Jews to the country and their contribution to its life. It participated in broad alliances with liberal and left-wing groups which fought antisemitism and racism in general, and especially against Nazi organizations. The DAIA also organized protection against attacks, both verbal and physical, by various antisemitic elements. In many stages of its existence DAIA leadership assumed a militant stand, e.g., on June 28, 1962, when a nationwide strike by Jewish commercial enterprises was declared to protest the government's inaction against spreading antisemitic violence.

Like similar organizations in other countries, DAIA has been active in protesting the injustice suffered by Jews in the Soviet Union and in Arab countries and in exerting influence in such Jewish matters as the reparations payments from Germany and Austria. Although DAIA is a member of the executive board of the *Jewish Colonization Association, and has participated in the *Conference on Jewish Material Claims, the Memorial Foundation of Jewish Culture, and the World Conference of Jewish Organizations, its main objectives are still fighting antisemitism, creating favorable public opinion toward Jews, and gaining the support of government officials.

In order to make its operation more effective, DAIA established local and regional branches throughout Argentina. The branches report local events to the leadership in Buenos Aires, and receive assistance when local action is insufficient.

The federative character of DAIA has been questioned in the recent years. Some political sectors in the community argue that the elections to its Board should be universal and not restricted to the electors in its General Assembly, in which each institution has one vote. They claim that it is not just for an institution with thousands of members to have no more influence than a small institution. Others wish to maintain the equal representation of all sectors in the community, regardless of their number.

DAIA has taken a strong public position regarding the prevention and punishment of discrimination. DAIA supported the Antidiscrimination Law prepared by the jurist Prof. Bernardo Beiderman and approved by the Congress in 1988. Since the establishment in 1997 in the Ministry of Justice of Argentina's National Institute Against Discrimination and Racism (INADI), DAIA has been a member of its advisory council.

To achieve its objectives more efficiently, DAIA has conducted sociological investigations and public opinion surveys, independently or together with other institutions like the American Jewish Committee. DAIA also issues information bulletins which have appeared sporadically since the organization's inception and are now distributed via the Internet. In an effort to reach intellectuals, it has since 1967 published more than 20 volumes of *Indice*, a compilation of essays and research articles devoted to the social sciences.

[Leon Perez / Efraim Zadoff (2nd ed.)]

DAICHES, rabbinical family, originating in Lithuania, settled in Britain. LOEB HIRSH ARYEH ẒEVI B. DAVID (d. 1891), *dayyan* and *rosh yeshivah* in Kovno, wrote a commentary on the New Year prayers, *Zivḥei Teru'ah* (1867). His son, ISRAEL ḤAYYIM (1850–1937), born in Darshunishek, Lithuania, studied at Lithuanian yeshivot and, after a short time as rabbi in a Lithuanian community, became rabbi in Leeds, England. Daiches founded the Union of Orthodox Rabbis of England. Often lenient in his opinions, Daiches tried to adapt to modern technological advances, and occasionally was subjected to strong criticism (see his *Mikveh Yisrael*, 1912). His published work mainly concerned the Jerusalem Talmud, on which he wrote annotations; the responsa of Isaac b. Sheshet (Ribash; 1879); *Ma'arḥot Yisrael*, on *Oraḥ le-Ḥayyim* by Ḥayyim Segal of Ratzki (1879); and notes added to Last's edition of *Magen Avot* by Menahem ha-Meiri (1909, 1958). Daiches also published responsa (1870) and sermons (*Imrei Yosher,* 1887), and *Derashot Maharyaḥ* (with autobiography, 1930). He edited a rabbinic journal, *Beit Va'ad la-Ḥakhamim*, during 1902–04.

His son SAMUEL (1878–1949) was a rabbinic and Oriental scholar. Born in Vilna, Samuel studied with his father and at the Berlin Rabbinical Seminary. After serving as rabbi at Sunderland, England, Daiches became lecturer in Bible, Talmud, and Midrash at Jews' College, London, in 1908. He also took an active part in the work of B'nai B'rith, the Anglo-Jewish Association, the British Board of Deputies, the Jewish Agency, and Jewish relief organizations. In his earlier days Daiches published works on Babylonian antiquity and its influence on Judaism, including *Altbabylonische Rechtsur-*

kunden (1903), *Talmudische und Midraschische Parallelen zum babylonischen Schoeffungsepos* (1903), *Babylonia and Hebrew Literature* (1904), *Balaam – A Babylonian Baru* (1909), *Jews in Babylonia in the Times of Ezra and Nehemiah According to Babylonian Inscriptions* (1910), and *Babylonian Oil Magic* (1913). His other studies include *Studies in Psalms* (1930), *Study of the Talmud in Spain* (1921), and *Divorce in Jewish Law* (1926). Daiches contributed to learned German and English journals and to the Hebrew *Ha-Shiloʾaḥ*. A semi-jubilee volume, *Ye Are My Witnesses*, was published in his honor in 1936. His *Essays and Addresses*, a memorial volume, appeared in 1955.

SALIS (1880–1945), another son of Israel Ḥayyim, was also a rabbi and author. Like his brother, he was born in Vilna and received his rabbinic education from his father and at the Berlin Rabbinical Seminary. After serving as rabbi at Hull and Sunderland, England, he went to Edinburgh (1918), where he became the spiritual leader and spokesman of Scottish Jewry. He too was active in B'nai B'rith and the Zionist movement. He published a volume of selected essays, *Aspects of Judaism* (1928), and was one of the translators of the Soncino Talmud. David *Daiches (1912–), writer and critic, was his son.

DAICHES, DAVID (1912–2005), English scholar and literary critic. A son of Rabbi Salis Daiches (1880–1945), he was born in Sunderland, and spent most of his youth in Edinburgh. After teaching at Chicago, Cornell, and Cambridge universities he was appointed professor of English and dean of the School of English and American Studies at the University of Sussex on its foundation in 1961. His works include *Robert Burns* (1952), *Poetry and the Modern World* (1940), and *Critical Approaches to Literature* (1956). He also published *Literary Essays, More Literary Essays*, and *The Novel and the Modern World* (all 1969), studies of Joseph Conrad, James Joyce, D.H. Lawrence, and Virginia Woolf. In his autobiography *Two Worlds: An Edinburgh Jewish Childhood* (1956), Daiches records his own rebellion against Orthodox Judaism, represented for him by his father, whom he deeply admired. Daiches maintained an interest in Hebraic matters in his scholarly writings, notably in his study *The King James Version of the English Bible* (1941). Daiches also produced another volume of autobiography, *Promised Lands: A Portrait of My Father* (1997).

ADD. BIBLIOGRAPHY: ODNB online for Salis Daiches.

[Murray Roston]

DAINOW, ẒEVI HIRSCH BEN ZE'EV WOLF (1832–1877), Russian preacher known as "the Maggid of Slutsk" after his native town Slutsk, in the district of Minsk. Dainow was regarded in his time as "the preacher of the Haskalah." He preached in favor of a combination of Torah with Haskalah and in popular Yiddish rebuked his compatriots for their estrangement from manual labor and stressed the need for reform in education, advocating that the *ḥeder* be abolished and Jewish children study in government schools. Dainow was widely known for his personal integrity; he was fearless in his preaching, favoring no one, not even the *maskilim*, though he regarded himself as close to them. This attitude and his criticism of the leaders of the old school roused against him widespread opposition, particularly in religious circles, and in many places the doors of the synagogue were closed to him. In his articles in the periodicals *Ha-Maggid* and *Ha-Mattif*, Dainow described the troubles and persecutions that were his lot. For a time Dainow was active throughout Russia on behalf of "The Society for the Promotion of Culture Among Jews of Russia." The Haskalah writers, including J.L. *Gordon, supported him and corresponded with him. The unremitting hostility of his opponents compelled him to leave Russia, and in 1874 he moved to London where he continued – as advised by J.L. Gordon – his role as preacher to the communities of Russian and Polish immigrants until his death. In London he was at first harassed by Chief Rabbi N.M. *Adler, but later was reconciled with him as the chief rabbi became convinced of his integrity. Dainow also founded a Hebrew school in London. One of his sermons, entitled *Kevod Melekh* in honor of Czar Alexander II, was published in 1869; he left other works in manuscript.

[Yehoshua Horowitz]

DALESKI, HILLEL (1926–), scholar of English literature. Daleski was born in South Africa. In 1944 he joined the South African army and fought in Italy. In 1947 he graduated in English and history from Witwatersrand University in South Africa. In 1948 he volunteered for *MAHAL and fought in Israel's War of Independence. In 1952 he received his M.A. in English from Witwatersrand University and settled Israel with his wife and infant daughter. In 1963 he received his Ph.D. from the Hebrew University of Jerusalem, teaching there from 1954 and becoming a professor in 1976. He also served as provost of the School for Overseas Students in 1973–76 and was twice head of the English department, in 1968–70 and 1984–85. In 1985 he was president of the International Dickens Society. He was also professor in the English departments of Tel Aviv and Ben-Gurion universities and consultant in the establishment of the English department in Haifa University. Daleski became a member of the Israeli Academy of Sciences and Humanities in 1993 and an honorary member of the American Academy of Arts and Sciences in 1999. He published numerous essays and eight books dealing with D.H. Lawrence, Charles Dick-

ens, Joseph Conrad, Thomas Hardy, and others. In 2000 he was awarded the Israel Prize for literature studies.

[Shaked Gilboa (2nd ed.)]

DALET (Heb. דָּלֶת; ד), the fourth letter of the Hebrew alphabet; its numerical value is 4. It is assumed that the earliest form of the *dalet* – as it appears in the Proto-Sinaitic inscriptions – was a pictograph of a fish (Heb. *dag*)  . This developed in the South-Arabic script into  , and the early Phoenician *dalet* became a triangle  , which survived in the *delta* of the Greek alphabet: Δ. In the later Phoenician script the left angle was curved and the right stroke developed a downward tail  . The ancient Hebrew *dalet* also has an upper stroke drawn leftward  and thus in Samaritan too:  .

While the Phoenician cursive tends to open the circular head at its lower part  , the Aramaic script opens the top of this letter  . This developed into the Jewish  . As the *dalet* resembles the *resh,* it happens that both letters were written in the same way. Thus, in Syriac only diacritic marks distinguish between them. The Arabic  is an offshoot of the Aramaic *dalet*, which developed through the Nabatean cursive.

The modern cursive Hebrew dalet is a result of emphasizing the right upper angle, in order to distinguish it from the resh, and it developed as follows:  →  → →  . See *Alphabet, Hebrew.

[Joseph Naveh]

DĀLIYAT AL-KARMIL, Druze village in Israel, on Mt. Carmel, 8 mi. (13 km.) south of Haifa. The village has existed at least since the early Middle Ages, but most of the present inhabitants' ancestors, hailing from the Lebanon, seem to have settled there under the rule of the Druze governor Fakhr al-Dīn in the 17th century. From 1882 to 1887, Lawrence *Oliphant lived there together with his secretary, Naphtali Herz *Imber. After 1948 Dāliyat al-Karmil progressed rapidly, receiving municipal council status in 1951 and attaining a population of 5,200 in 1968. Its economy was based on hill agriculture and local handicrafts, with many of the inhabitants employed as skilled laborers in Haifa or elsewhere. At the end of 2002 the population of Dāliyat al-Karmil was 13,300, with the village's jurisdiction extending over an area of 3.5 sq. mi. (9 sq. km.). In 2003 it was united with *Usafiyya as the city of Karmil.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

DALIYYAH (Heb. דָּלִיָּה), kibbutz in Israel, in the Manasseh Hills of N.W. Samaria; affiliated with Kibbutz Arẓi ha-Shomer ha-Ẓair, founded as a "*tower and stockade" settlement on May 2, 1939, by pioneers from Romania and Germany. It constituted part of the "settlement bridge" between the two principal Jewish regions of the time – the Sharon Plain and the Jezreel Valley. In 1968 Daliyyah numbered 610 inhabitants; in 2002, 739. Its economy was based on intensive farming (field crops, orchards) and two industrial enterprises: "Arad" for the production of water meters and fine mechanical instruments, and "Zohar" for soaps and detergents. Dance festivals were held every few years at the kibbutz's open-air amphitheater, a tradition that ceased to exist. The name ("vine tendril" in Hebrew) was taken from Dāliyat al-Rūḥa, a former Arab village in the vicinity.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

DALLAS, a financial and industrial center in North Texas and the second largest city in the state. First settled in 1844, the city had an estimated population of 1,188,580 in 1997, including a Jewish population of approximately 50,000. New figures released in 2003 estimate the total population for the 16-county North Texas region, which includes Dallas, to be almost six million.

The earliest Jewish settlement began in 1870 with the arrival of about 15 families. The first Jews were mainly retail merchants and several of them, among whom the Sanger and Kahn families were outstanding, played a vital role in the commercial development of the city. The first organized Jewish institution dates to 1872, when the Hebrew Benevolent Association was created; although it was primarily a charitable institution, it sponsored the first High Holiday services. A Jewish cemetery was dedicated the same year, and in 1873 a local B'nai B'rith chapter was formed.

Temple Emanu-El was Dallas' first congregation, founded in 1874 and allied with the Reform movement; it had a membership of 2,800 families in 2005. A second congregation, Shearith Israel, established as an Orthodox synagogue in 1884, became Conservative, and had 1,480 families. Another Orthodox congregation, Tiferet Israel, was founded in 1890 and had 325 families. Nearly 1,050 families belonged to the Reform Temple Shalom, which was organized in 1965. Dallas had 20 congregations – four Conservative, eight Reform, seven Orthodox, and one traditional. The Rabbinical Advisory Council founded in 1944 (now the Rabbinic Association of Greater Dallas) represents these synagogues.

There were seven Jewish day and high schools ranging from Orthodox to Reform, with a total attendance of more than 1,200 children. Thanks to a community-wide Capital Campaign which raised more than $55 million for the construction and renovation of ten agency facilities, many of these schools enjoyed new or refurbished buildings. Among them was a new state-of-the-art building for Solomon Schechter Academy and a new 8.5-acre campus for Akiba and Yavneh Academies which was slated to encompass Judaica and artwork by noted Jewish artist David Moss.

The Jewish Welfare Federation, now called the Jewish Federation of Greater Dallas, was organized in 1911 as a centralized agency for all Dallas Jewish social welfare services and fundraising for local, national, and overseas needs. It sponsors a Jewish Community Relations Council, composed of representatives of all major Jewish organizations, and a Leadership Development Group, founded in 1952. The Federation had a Jewish education department which provided teacher workshops, adult education initiatives, and programs such as Teen

Tour and Gift of Israel which enable students to travel to the Promised Land.

The Federation is a member of the United Way of Metropolitan Dallas, United Jewish Communities, the National Jewish Community Relations Advisory Council, and the Jewish Education Service of North America. Its Annual Campaign supported a network of more than 43 human and social service programs for Jews locally, nationally, in Israel, and overseas. The 2004 Annual Campaign raised an unprecedented $9.5 million for humanitarian needs.

There were three constituent agencies supported by the Federation: Jewish Family Service (JFS), the Legacy Senior Communities, Inc., and the Jewish Community Center of Dallas (the J). Jewish Family Service offered counseling, financial assistance, and job placement to both families and individuals. In 2004, 2,176 adults and children received food from the JFS food pantry. JFS relocated to new facilities in 2002 thanks to funds raised through the aforementioned Capital Campaign. The Legacy Senior Communities, Inc. is the parent company of Golden Acres-Dallas Home for Jewish Aged and the planned Legacy at Willow Bend. Golden Acres, opened in 1953, offers care and treatment for the elderly; it has adjacent apartment units for independent living and manages ECHAD, housing for low-income elderly. The Legacy at Willow Bend was planned as an up-and-coming premiere retirement community immersed in Jewish tradition and focused on independent living and an active lifestyle. The Julius Schepps Community Center, now the Jewish Community Center of Dallas, served more than 7,000 members. The J provided services which helped promote healthy individual and family living. Services included an early childhood program, programs for children and teens, an extensive physical education service, athletic leagues, a series of single adult activities, adult education classes, senior activities, cultural arts programs, and summer day camps. Funds from the Capital Campaign helped the J build a new natatorium and fitness center, which were completed in time for the Maccabi Games held in Dallas in summer of 2005. In addition to its three constituent agencies, the Federation also supported 11 local beneficiary agencies which provided a wide variety of humanitarian services.

By the 1970s, the old social and economic distinctions between the German-Jewish settlers who first came to Dallas and the later immigrants from Eastern Europe had largely been erased, and descendants of both groups participated on an equal basis in communal life and leadership. Also, the overall picture changed from the days when Jews were primarily merchants. Members of the Jewish community were engaged in a wide variety of business enterprises, including garment manufacturing, paper and air-conditioning companies, and finance. There were also a large number of Jewish professionals, including lawyers, doctors, engineers, technology professionals, and business consultants.

Jewish community relations had their stormy days in the 1920s, when the Ku Klux Klan was highly active. Even though relations improved, as late as the early 1980s there were still several social clubs that maintained an exclusionary policy toward Jews. In business and communal activities, however, the Jewish community has long been integrated into the Dallas community at large.

For more than 30 years, Southern Methodist University and Temple Emanu-El have sponsored the Community Course, which makes art, music, drama, and lecture programs available to the entire city. The Bridwell Library of the Perkins School of Theology houses two large collections of Judaica, the Sadie and David Lefkowitz Collection and the Levi A. Olan Collection. In Dallas' civic, cultural, and political life, too, Jews play a significant role. There have been Jewish presidents of the symphony orchestra, the chamber of commerce, and the Dallas Opera. In 1970 Stanley *Marcus, who was active in all of these, was a leader of the powerful Citizens' Council; Carl Flaxman was director of the Health, Education, and Welfare Office, which serves the entire southwest; and Julius Schepps was especially active in the Fair Park Association, which controls the famous Cotton Bowl (the New Year's Day football game). Dallas has also had three Jewish mayors: Adlene Harrison (1976), Annette Strauss (1987–91), and Laura Miller (elected 2002). Jewish city councilpersons in 2005 included Lois Finkelman and Mitchell Rasansky.

°DALMAN, GUSTAF HERMANN (until 1886 **G.A. Marx**; 1855–1941), German Protestant theologian, philologist, and Palestinologist. In his youth Dalman was closely associated with the Missionary Church Brotherhood ("Bruedergemeine") at Herrnhut and spent his last days with them. An important contact for him was Franz *Delitzsch, who recommended him in 1887 to the Institutum Judaicum in Leipzig, where Dalman taught for 15 years, from 1895 as assistant professor. He was the first director of the German Evangelical Institute for Antiquity in Jerusalem from 1902 to 1917 where he contributed a number of important papers and subsequently served as professor and head of the Institute of Palestinology in Greifswald (later the Gustav-Dalman-Institut). Dalman was a prolific writer in many fields including (1) Theology: *Der leidende und sterbende Messias* (1888); *Jesaja 53* (1914^2); *Worte Jesu* (1930^2); (2) Studies of Palestinian Aramaic (in which he included the Aramaic of Targum Onkelos): *Grammatik des juedisch-palaestinischen Aramaeisch* (1905^5, repr. 1989); *Aramaeische Dialektproben* (1927^2); *Aramaeisch-neuhebraeisches Woerterbuch* (1922^2, repr. 1967); (3) Historical geography and topography of Erez Israel: *Petra* (1901); *Neue Petraforschungen* (1912); *Orte und Wege Jesu* (1924^2, repr. 1967; *Sacred Sites and Ways*, 1935), a study which also treats the talmudic sources on the sites where Jesus lived and taught; *Hundert Fliegerbilder aus Palaestina* (1925); *Jerusalem und sein Gelaende* (1930, repr. 1972), a comprehensive study of the Holy City, its terrain, names of sites, antiquities, topographic identifications, and descriptions of the contemporary Jerusalem community; (4) Palestinian folklore: *Palaestinensischer Diwan* (1901), a collection of Arabic folksongs

from Palestine, Transjordan, and Syria; *Arbeit und Sitte in Palaestina* (7 vols., 1928–42; repr. 1964), dealing with all aspects of the Arab economy of Palestine, its terminology, and customs with continual references to the Bible and Talmud. From 1905 until 1926 Dalman was editor of the *Palaestinajahrbuch*. Dalman's autobiography was published in 1928. He had a profound knowledge of Jewish sources, especially the Mishnah and Talmud. Although he was (with Delitzsch) one of the few Christian theologians of the time who fought ardently against antisemitism, his position was always a missionary Christian one, convinced by the superiority of Christianity. His writings on post-biblical Judaism were especially marked by traditional anti-Judaic clichés, the Jewish denominations and intellectual trends in contemporary Germany seen only as developments leading to final conversion to Christianity.

DALTON (Heb. דַּלְתּוֹן), moshav in central Upper Galilee, 4 mi. (7 km.) N. of Safed. During most of the Middle Ages, Dalton had a considerable Jewish population and it was believed that the tomb of R. *Yose ha-Gelili was located there. In the Crusader period, *Benjamin of Tudela noted a Jewish community at Dalton. The site has remnants of a synagogue of the talmudic period and numerous ancient rock tombs and prehistoric dolmens in its vicinity. The area of the Muslim-Arab village (Dallāta), abandoned in the 1948 War of Independence, was settled in 1950 by a Ha-Kibbutz ha-Dati group which had previously maintained the settlement of *Biriyyah. In 1953 settlers from Tripolitania set up a moshav affiliated to the Ha-Po'el ha-Mizrachi Moshavim Association. Dalton's economy was largely based on hill farming. In 1968 it had 610 inhabitants. In 2002 its population was 688. Dalton became known for its boutique winery (named after the moshav), producing about 700,000 bottles a year from nearby vineyards.

DALVEN, RACHEL (1905–1992), translator from Greek to English and historian of the Jews of Ioannina, Greece, where she lived from the age of five until early adulthood and which was the community of origin of her family. She translated the Greek poet Constantine Cavafy (*Complete Poems of Cavafy*, 1961) into English when he was unknown. She also translated her cousin Yosef Eliyia, the noted Greek Jewish poet from Ioannina. Her translations were first included in her anthology *Modern Greek Poetry* (1949, 1971). In 1977, she published her translation of the poet Yannis Ritsos, *The Fourth Dimension*.

Dalven received her Ph.D. from New York University and taught drama and English literature at Ladycliff College in Highland Falls, New York. She edited the academic journal *The Sephardic Scholar* at Yeshiva University and devoted over six decades of her life to the research of the Jews of Ioannina, Greece, the largest remaining Romaniote Judeo-Greek community of the 20th century. In 1990 she published *The Jews of Ioannina* with Cadmus Press of Philadelphia. She wrote numerous articles on the traditions, culture, and history of Ioanniote Jewry. She also wrote a biography of Anna Comnena and numerous plays, including *Our Kind of People* on Greek-Jewish immigrants in the United States. In 1973 she was the recipient of the Gold Key Award of the Columbia Scholastic Press Association of the Graduate School of Journalism of Columbia University.

[Yitzchak Kerem (2nd ed.)]

DAMA, SON OF NETINA, according to the aggadah (TY Peah 1:1, 15c, Kidd. 1:7, 61b), a gentile council president (Gr. *patēr boulēs*) who lived in Ashkalon sometime in the first century C.E. According to R. Joḥanan, when R. *Eliezer was asked about the extent of the obligation to honor one's parents, he pointed to Dama as a perfect example of filial piety. The outline of the story as told in the Jerusalem Talmud is as follows: It happened once that one of the precious stones fell out of the High Priest's breastplate, and was lost. Seeking a replacement, the sages were referred to a certain Dama ben Netina who purportedly had the exact jewel they required in his possession. They offered him one hundred dinar, and Dama accepted their offer. When he went to fetch the jewel he discovered that he could not access it without waking his father. So he returned and informed his clients that he could not provide them with the item they sought. Assuming that he was trying to renegotiate the price, they increased their offer until they reached a sum of 1000 dinar. When his father finally woke up he brought them the jewel, and they were still willing to pay him their final offer of 1000 dinar. Dama, however, was only willing to accept their initial offer of one hundred, saying: "What? Do you think that I would sell the honor of my fathers for mere coins? I refuse to derive any tangible benefit from the honor of my fathers!" The Jerusalem Talmud goes on to ask what heavenly reward Dama received for such meritorious behavior. The answer given was that on that very night a pure red heifer – essential, according to Num. 19, for attaining ritual purity – was born to Dama's cow, and so the Jews purchased this extremely rare item from him for a small fortune.

In the past, Jewish historians have assumed that talmudic stories like these reflect accurate and reliable descriptions of events that occurred in the Land of Israel in the last decades before the destruction of the Second Temple. As a result some Jewish historians have sought to derive from this story, and from the parallel version in the Bavli (Kidd. 31a), important historical information concerning both the actions of the Sanhedrin (Büchler), and the forms of local Roman government (Krauss) during that period. Recent research has shown that these stories are often highly sophisticated literary works, reflecting multiple levels of editorial revision. Critical study of this story has shown that the literary and historical founda-

tion of the tale lies in what might seem at first sight to be a secondary issue: the red heifer which was born to Dama's cow as a reward for his meritorious behavior.

In the earliest level of tannaitic literature (*Sifre Zuta*, Num. 19:2, p. 300) we find a dispute between R. Eliezer and his companions, in which R. Eliezer maintained that it is forbidden to purchase a red heifer from a gentile. His companions, who held that it is permissible, brought a legal precedent in order to support their position: "There was a case in which they bought a [red] heifer from the Arabs, and they called it *damat damat*, and it would run back and forth." In the parallel version in the Tosefta (Para 2:1, p. 631) the case is described somewhat differently: "There was a case in which they bought a [red heifer] from the Gentiles in Sidon, and it was called *doma*." Neither of these two versions informs us as to R. Eliezer's response, if any, to the legal precedent brought by his opponents, and which apparently refutes his position and permits the purchase of a red heifer from a gentile.

In the Jerusalem Talmud's version of the story cited above, a number of additional changes have been introduced into the narrative. First the story has moved from Sidon to Ashkelon. Second the name *doma* has ceased to be the name of the heifer, and has become *Dama*, the name of the heifer's gentile owner. Third, and most importantly, the dramatic focus of the story has shifted. It is no longer concerned with the halakhic issue of whether or not it is permissible to purchase a red heifer from a gentile. The central issue has moved to the moral and religious plane. The storyteller in the Jerusalem Talmud wants to know through what extraordinary act of righteousness did this gentile in Ashkelon merit the almost miraculous birth of a pure red heifer from his cow in the first place. In answering this question, he has told a tale of a man whose behavior reflected universal moral values – behavior recognized and rewarded by God because of its inherent worth, not because it was explicitly commanded, and with no regard to the religious affiliation of the man himself.

This basic story line was embellished and expanded in the Jerusalem Talmud, and further refined and elaborated in the Babylonian Talmud. It was told how his mother once humiliated him in public, striking him with her shoe while he was sitting in session as the head of the city council. Out of respect for his mother, he suffered the humiliation in silence, and even bent down to pick up the shoe which had fallen from her hand to return it to her (cf. Deut. R. 1:15). The Jerusalem Talmud goes on to say that Dama would never sit upon any stone that his father had sat upon, and that even after his father's death he would continue to treat the stone as an object of reverence. The Babylonian Talmud further develops the theme of this gentile's righteousness, stating that he limited the amount he was willing to take for the red heifer born into his flock to the sum that he had given up in the previous transaction over the jewel for the priestly breastplate, "although I know that you are prepared to pay all the money in the world for it" (Av. Zar. 23b).

[Stephen G. Wald (2nd ed.)]

DAMAGES.

Assessment

In Jewish law, once the tortfeasor's liability for the damage has been established and he is ordered to compensate for the loss, the measure of damages requires determination. This is done by assessing the market price of the damaged object prior to and subsequent to sustained damage (see BK 84b on injury suffered by an animal or person); the difference is the amount which the tortfeasor has to pay (BK 11a). In this way, the party who has suffered damage is enabled to purchase on the market an object such as was his before it was damaged, which damage is thereby annulled. If the damaged object is not sold separately on the market but as part of a larger unit only, the difference between the assessed market price of the unit – i.e., undamaged and with the damaged part – is the measure of compensation. Thus, for example, the owner of an animal which has consumed a row of unripe fruit in another's field, does not pay according to the value of the fruit eaten by his animal – as no one buys unripe fruit, which is valueless. Instead – it being customary for merchants to buy a large field of yet unripened fruit – the market price of the fruit in a large field is assessed, with and without the row in question respectively, and the difference is the measure of damages. Another opinion maintains that the measure is the difference between the respective market values of the land itself when sold with and without the row of fruit (see *Yam shel Shelomo* BK 6:18). The sages of the Talmud are divided on the question of the size of the field to be taken as the standard for valuing the damaged row, i.e., whether it should be 60 times the size of the row, or larger (BK 58b, 59b). Similarly, if injury is caused to the embryo of an animal, the measure of damages is the difference between the market values of the animal, pregnant and otherwise respectively, but the embryo itself is not assessed, for it is valueless – nor is it assessed as if it were already born (*Shitah Mekubbeẓet* BK 47a, s.v. *amar rava*).

In terms of this assessment, the tortfeasor does not compensate the injured party for any future loss of profits which result from the injury (Tos. to BK 34a, s.v. *shilmale*), nor for the loss of any benefits which could have been derived from the use of the damaged object, except insofar as such may already be accounted for in reducing the market price of the damaged object, at the time the damage was sustained. This rule is consistent with the principle that the tortfeasor is liable only for such damage as he ought to have foreseen at the time of his wrongful conduct, but not for any other or more

extensive damage (see *Torts). The reason for this is that any loss of profits not reflected in the market price is a loss which is not foreseeable, and one which people accordingly do not make allowance for in the price they are prepared to pay on the market. For this reason too the tortfeasor does not compensate for any damage which the injured party could have avoided after suffering injury, since the former could not have foreseen that the latter would not do so. (Tos. to BK 10b, s.v. *lo*; BK 85b, on the failure to observe medical instructions in a case of personal injury.)

Where a person could not have foreseen that his conduct would cause damage, he is in the position of an "*anus*" (i.e., the consequences are caused by a mischance) and is absolved from liability (see *Torts); however if he benefits from the damage caused to another, as in the case where his animal eats vegetables left by another on a public road so that he does not have to feed it, he is liable to the injured party to the extent of the benefit derived (BK 20a:55b).

Assessment of Damages for Personal Injuries

A person who willfully, or by gross negligence (*karov la-mezid*), inflicts bodily harm (*ḥabbalah*) on another, must pay compensation to the latter, not only for the *nezek* ("loss," "damage") but also under four additional headings: *ẓa'ar* ("pain and suffering"), *rippui* ("medical expenses"), *shevet* ("loss of earnings"), and *boshet* ("humiliation"; detailed in ḤM 420). *Nezek* is assessed as in the case of damage to property, i.e., by comparing the injured party to a slave and estimating the respective prices he would fetch if sold as such on the market before and after the injury, the difference being the measure of compensation. This estimate takes account of the difference between the remuneration that could be earned for the heavy work he would have done if healthy and that which he shall earn for the work he can do having a disability (compare Abbaye's words "*shevet gedolah*," BK 86a; and R. Isaac in TJ, BK 8:3, 6b). *Ẓa'ar* is assessed by estimating what a person, like the injured, would be prepared to pay to avoid the pain resulting from the injury as by way of narcotics or a drug; *rippui* is an estimate of the medical expenses to be incurred by the injured in order to be cured; *shevet* is the estimated loss of remuneration which the injured could have earned during the period of his illness; *boshet* is assessed according to the social position of both parties (BK 8:1). Because of the difficulty in measuring *boshet* in monetary terms, the sages at various times determined fixed measures for various acts of *boshet*, thus, e.g., 200 *zuz* for a slap on the face, 400 *zuz* for pulling a man's hair or spitting on him – the *tannaim* already being in dispute as to whether these measures were for the rich or for the poor (BK 8:6). Where the injured party suffers damage under one or some of the five headings only, the injuring party compensates him accordingly: thus if the injured party suffers *boshet* or *rippui* only, the latter compensates him under these headings alone.

Compensation for damage under the above four headings, excluding *nezek*, is payable only in the case of bodily harm inflicted willfully, or by gross negligence, caused by the wrongdoer's person (Rashi to BK end of 26a). There is no liability for *boshet* in the absence of an intention to harm or shame (BK 8:1). The interpretation of the commentators is that there is liability for *nezek* even when resulting from mischance (*ones*), and no liability under the other four headings except when resulting from negligent or willful conduct. But it may also be argued that there is liability for *nezek* in the case of negligence only, while a man is not liable under the other four headings unless the conduct is willful, or grossly negligent. It would seem that the reason for confining liability under the aforesaid four headings to the case where an injury is willfully inflicted by one person on the body of another (and not by a person on an animal or by an animal on a person), whereas for *nezek* there is liability in all the above cases, stems from the principle that the tortfeasor's liability for compensation is confined to such damage only as he could have foreseen at the time of causing the injury. Hence, inasmuch as damage under the said four categories of compensation varies from one injured party to another, the tortfeasor cannot be required to have foreseen the measures of each relevant to the particular injured party except when he has willfully inflicted a bodily injury by his own hand, because in such case, having seen the injured party to whom he was about to cause harm, he should have known the measure of *ẓa'ar*, rippui, shevet, and *boshet* peculiar to this particular injured person. Insofar as the said four categories of damage accompany every case of *ḥabbalah* and thus their scope should therefore be foreseen by the tortfeasor, they are apparently already included in the assessment of the *nezek*. Moreover, even where compensation is payable under all five headings specifically, payment is made to the extent of the foreseeable measure of each only and in no larger measure. Thus if an assessment of compensation for an injury has been made, this amount of damages only is payable, even if the health of the injured party should thereafter deteriorate unexpectedly (BK 91a).

Already in the talmudic period – in Babylonia, and certainly in other countries – many judges would not give judgment for damages under one or more of these five categories. Some would not award compensation for *boshet*, or even *nezek*; it was not necessary as a deterrent because damage of this type was not common, and the judges outside Erez Israel, not being ordained by the rabbis of Erez Israel, did not feel themselves qualified to deal with such matters (BK 84b). Also in the post-talmudic period damages were not awarded under one or more of these categories according to law (Sh. Ar., ḤM 1:2), but rather the tortfeasor would be placed under a ban or punished in some other manner until he effected a reconciliation with the injured party and reached agreement with him on an equitable compensation (*Piskei ha-Rosh* BK 8:3).

Payment of damages may be made in money or in chattels having a monetary value and sold on the market; land, to serve as a means of payment, must be "of the best" (*ibid.* BK 7a). The damages are looked upon as a debt due to the injured party, in the same way as a loan or any other debt. How-

ever there are traces in the Talmud of a view that payment of damages is a penalty serving to punish the wrongdoer for his conduct and is not merely compensation (Albeck, *Hashlamot ve-Tosafot* to his edition of the Mishnah BK 1:3). Some sages hold the opinion that payment of "half-damages" in the case of *shor tam* (ox that has not gored before – see *Avot Nezikin) is a fine (BK 15a), and therefore payment of "half-damages" was not sanctioned in Babylonia and in other countries as from the talmudic period (BK 15b).

The law of the State of Israel determines that the damages due to the injured party are the amount required to restore him, subjectively speaking, to the position in which he would have been but for suffering the injury. The measure of damages varies therefore not only according to the damage actually incurred, but also in accordance with the individual circumstances of the injured party.

[Shalom Albeck]

A Fixed Sum for Damages

PAYMENT. As noted above, for certain types of damage the Sages assessed and determined payment of a fixed sum.

The Jerusalem District Court adjudicated a case concerning a man who publicly hit another man in the face with his fist (CA [Jer] 507/00 *Silberg u Sha'ir*, 2 PSM (5760) 289). The parties requested that the Court adjudicate their case in accordance with Jewish Law. The assailant argued that payment in this kind of case fell into the category of a fine so that in accordance with Maimonides' ruling, he should only have to pay the fixed sum determined by the halakhah: "Many blows involve humiliation and some pain, but no irreparable bodily injury. The Sages previously assigned fixed sums for such blows… and all of them constitute fines. The fixed sum paid covers pain [*za'ar*], embarrassment [*boshet*], medical expenses [*rpipui*] and lost work time [*shevet*]…" (Maim. Yad, Hovel u-Mazik 3.8)

The Court (Judge Y. Adiel) rejected the assailant's argument, relying on Bet Yosef (at Tur, ḤM 420.34;), who rules that Maimonides' comments only refer to a case in which the blow lacks the force required to cause severe bodily injury. Only then does the fixed sum replace individual compensation under each of the main headings of damage. In the case of a stronger blow, one liable to cause severe physical injury, even Maimonides would concur that compensation must be made for each of the relevant headings of damage, based upon a separate assessment for each heading.

In the case at hand, the Court determined that the blow was capable of causing severe bodily harm; hence, the payment of a fixed sum was not applicable. Even so, in the absence of any irreversible injury, compensation was only awarded under the four heads of damage. (Maim., ibid., 2.2; Sh. Ar., ḤM 420.5).

Damages – Li-Fenim mi-Shurat ha-Din (Beyond the Letter of the Law)

There are cases in Jewish law in which the strict law does not allow the court to impose payment on the assailant, yet the assailant is still liable under "the Law of Heaven" – that is, morally culpable. The authorities ruled that the practical import of such liability is that the Court must inform the guilty party that, while it cannot impose monetary payment on him, he is still morally obligated to discharge his liability and pay the plaintiff (R. Shlomo Luria, *Yam Shel Shlomo*, BK 6.6). Other authorities even ruled that he is disqualified as a witness until he pays, because he is in possession of stolen money (Me'iri, on BK 56a).

On occasion, the contemporary rabbinical courts obligate the assailant to pay part of the damages by choosing the path of compromise (see *Compromise). For example, when damage occurs by way of *gerama* (damage resulting indirectly from the assailant's action. See *Gerama and Garme). In such cases, the courts do not obligate the assailant to pay in the framework of damages, but instead rule that he must pay under the law of compromise. The rabbinical court ensures the execution of justice by resorting to the institution of compromise when the strict law does not provide a remedy (see, e.g., the rulings of the Kiryat Arba Regional Court, vol. I, page 205, and the index there; Rabbi Z.N. Goldberg, "*Shivḥei ha-Pesharah*," in: *Mishpetei Arez* (2002).

As noted, another means of achieving the same goal is by the principle of *li-fenim mi-shurat ha-din* ("being more generous than the law requires"). This issue was adjudicated in the Israeli civil court. In the Kitan ruling (CA 350/77 *Kitan v.* Weiss, PD 33(2) 785), the Israeli Supreme Court reversed a lower court's award of compensation for damages in a claim submitted by the relatives of a man murdered by a worker in a factory. The worker killed the man with a gun given him by the factory for work purposes. The respondents argued that, due to the worker's problematic mental state, the factory should have foreseen that his possession of a weapon was fraught with danger. Hence, they argued, the factory should be required to compensate the victim's family. The appeal was rejected due to "lack of the required causal connection between the appellant's (i.e. the factory's) negligence, and the killing of the deceased (page 808 of the ruling).

In terms of strict law all three presiding judges (Justices Shamgar, Witkon, and Elon) concurred with this conclusion. In his ruling, Judge Elon added that it would be appropriate for the factory to go beyond the strict law and compensate the relatives of the deceased:

> For Judaism has a tradition, and there is a fundamental principle of Jewish Law, that along with strict liability, there is an additional obligation to act beyond the dictates of strict law (*li-fenim mi-shurat ha-din*). It is of particular significance here that this obligation found its chief expressions in the field of torts in a case relating to a problem identical to the one at hand. (*ibid*., 809).

Judge Elon states further:

> In the development of the principle of "going beyond the letter of the law" in Jewish law, many halakhic authorities took the position that in certain circumstances this approach is mandatory. This is attested to by Rabbi Joel Sirkes, one of the leading

> Sages in Poland at the end of the 16th and the first half of the 17th century, in his commentary Bayit Hadash (Baḥ) on the Tur: "It is customary in every Jewish court to compel the wealthy to pay where proper and appropriate, even where the letter of the law goes against it" (Baḥ on Tur, ḤM 12.4; see Menachem Elon, *Jewish Law,* 1:155f.).

This approach is anchored in the broader worldview of Jewish law, that finds expression, inter alia, in the well-known principle that "the giving of charity may be compelled" (TB, Ket. 49b), although this principle too is only exercised under certain conditions and circumstances. As is known, this rule constitutes the basis for the duty to provide maintenance for children and relatives under certain circumstances, even when this duty does not exist under strict law (see *Jewish Law*, 1:116f).

In the Israeli legal system, no person is compelled to act more generously than the law requires; such action is left to the [personal] initiative and will of the litigant. Yet under certain circumstances, it seems appropriate for the expression of such a wish to originate with the judge sitting on the dais-and here, too, the tradition of Jewish law provides a firm basis for this approach. In this context, Justice Elon wrote elsewhere that:

> The halakhic system clearly distinguishes between normative rulings, accompanied by judicially enforceable sanctions, and rulings lacking such sanction. Yet the source and background common to legal rulings and to moral imperatives have brought about the following substantive phenomenon within the world of *halakhah*: The legal system itself; in its role as such, occasionally makes reference to a moral imperative unaccompanied by coercion on the part of the court. Hence, even when there is no legal recourse to coercion, this does not absolve the Court of its judicial responsibility in the particular case. A rabbinical authority in his responsa, and Jewish courts in their rulings, should all include the moral imperative – to the extent that it exists – as part of their response or ruling on the matter under discussion. (*Jewish Law*, I. 145f.; cf ibid., 619–620).
>
> Personally, I would hope that the appellant, whose position is supported by strict law, will act more generously, and compensate the respondents, just as he originally proposed. This will fulfill what the wisest of all men taught us: "So follow the way of the good and keep to the paths of the just" (Prov. 2:20), this being the source for the principle of going beyond the letter of the law (*Jewish Law,* I:809–10).

President Shamgar demurs from the aforementioned approach of Judge Elon "that seeks to elevate payment of compensation *li-fenim mi-shurat ha-din* to the status of a settled general principal of the law of torts," due to "the absence of clear standards"; [the danger of] "filing frivolous appeals"; and other reasons (*ibid.*, 805). This was also the position of Justice Witkon, who felt that granting compensation beyond the letter of the law should be left to the discretion of the person who would have to pay it. He explains, "I would not recommend blurring the boundaries between liability and non-liability" (*ibid.*, 807).

Further on in his judgment, Judge Elon added, in explaining his position:

> I believe that it is fitting, as I emphasized, that in certain circumstances the court should make such a request. As to the effect of that request, I completely agree with the following statement of my distinguished colleague, Justice Witkon, for whom I have the utmost respect: "I too will be happy if the respondents receive some measure of compensation, but the matter is entirely in the discretion of the appellant, and I would not propose to obscure the boundary between liability and non-liability."
>
> What are the particular circumstances in the matter before us? The District Court found the appellant liable, by law, to compensate the respondents. The appellant believed – and, it turned out, correctly – that by law he was not liable to compensate the respondents; but in consideration of the circumstances of the case he offered,to pay a certain sum *lifnim mi-shurat ha-din.* The majority of this Court held that, in fact, the appellant's negligence was proved, but that the causal connection between this negligence and the death of the respondents' relative was not proved; we therefore absolved the appellant, under the law, from liability to compensate the respondents. Why should we now refrain from expressing our wish that the appellant, who started to perform the *mitzvah* [lit. "commandment," and in colloquial usage "good deed"] of *li-fenim mi-shurat ha-din* continue and complete what he began
>
> These are the specific circumstances of the matter before us, and the Court should consider whether it is proper under the special circumstances of each case coming before it to express such a request. It need not be pointed out that appellants who think they can submit frivolous appeals will soon discover that not only will there be no suggestion by us that respondents do more than the law requires of them, but such appellants will also incur appropriate costs for conducting vexatious litigation against the respondents and for wasting the Court's time.
>
> I do not share the apprehension that it would engender confusion in the law were we to express our view and make the parties aware that in certain circumstances one should act more generously than the law requires. Courts regularly make decisions based on considerations of justice, equity, good faith, public welfare, equal protection, and locus *standi* in matters on which property and life itself depend. They are not deterred by fear that these standards are vague or, Heaven forbid, that on occasion they may reach an unfair result. It should therefore be presumed that the Courts will find their way in this matter where law and morality intersect and will be capable of soundly weighing up, in light of the circumstances of each case, whether to request – and it would be only a request – that the injured party be compensated *li-ferim mi-shurat ha-din.*
>
> If we are apprehensive about the danger of combining morality with law, we should be equally concerned with the manner in which the law itself is applied. My colleague points out that, in the case before us, the injury occurred in 1965 and the final judgment was given in 1979. How does the judgment look to the parties and to us when it is given – and to our sorrow this is not a rare occurrence – after the passage of two full sabbatical cycles [fourteen years], and we see [the injustice] yet are powerless to afford any remedy? Perhaps when parties recognize the value of acting *lifnim mi-shurat ha-din* in appropriate circumstances, there will even be a decrease in the innumerable legal actions for strictly legal relief, which are not always necessary, and thus the heavy burden on the courts may possibly be reduced somewhat (*ibid. 811*),

The gist of the aforementioned ruling was quoted again in a ruling rendered some time later (CA 842/79 *Ness and Others u Golda and Others*, PD 36(1) 204, by President Moshe Landau and Justices Menachem Elon and Dou Levin), per the comments of Justice Elon (220–221):

> There is a rule in Jewish law that when someone injures another person, and due to a lack of the required causal connection between the tortfeasor's negligence and the act itself; he is legally exempt from damage payments, under certain circumstances he will still be obligated to pay in order to "meet his Heavenly obligation" (see, for example, TB, BK 55b). It is therefore appropriate for the court to inform the litigants accordingly [i.e., of their obligation to meet their heavenly obligation] (see Ra'avan, BK 55b).
>
> This compensation for damage, whether total or partial, is likewise anchored in the great principle of *li-fenim mi-shurat ha-din.* The Sages, in fact, based that principle on a homily of the wisest of all men: 'That thou mayest walk in the way of good men, and keep the paths of the righteous' (Prov., 2:20)." (See TB. BM 83a; see *Kitan v. Weiss;* see *Ha-Mishpat ha-Ivri, ibid.*). As mentioned above, Golda's conduct provided no grounds to prevent their receiving the apartment back, for it had never left their ownership. It certainly provided no grounds to make them incur payment for the damage suffered by Davidman. Yet without a doubt, their own conduct as well played no small part, as detailed above, in making Davidman buy the apartment from Nes under his mistaken belief in good faith that Nes was the true owner. Under such circumstances, it would be appropriate for Golda to provide some compensation to Davidman for the damage caused him- his payment of £740,000 to Nes for the apartment. Ibis could be fulfilled by their returning to Davidman the entire sum that they had received from Nes for the apartment, which was now returned to them, including a sum of £50,000 lawfully owed them by Nes for having breached the contract with them. Under this strict law, C'Tolda is not bound by any such obligation. Rather, it is a request of them to act *li-fenim mi-shurat ha-din*. By such means they could "walk in the way of good men, and keep the paths of the righteous."

It would seem appropriate for this topic to emerge anew with the enactment of the Basic Laws of 1992, whose declared purpose is "to entrench within a Basic Law the values of the State of Israel as a Jewish and Democratic State." According to these laws, a prominent role is accorded to Jewish law within the values of the State of Israel as a Jewish State. A central issue in the process of combining Jewish and democratic values is the relationship between law and morality. According to these Basic Laws, Jewish values and the emphasis placed on them, precede the democratic values.

Under the law and in terms of propriety, in circumstances such as these, the Court should stress these values and incorporate them in its ruling, namely the duty stemming from these values to go beyond the letter of the law, and to compensate the victim for damages done to him.

For a detailed discussion of this, see the entry: *Law and Morality.

The Law in the State of Israel

The Civil Wrongs Ordinance (New Version) 1968 regulates the payment of compensation for damages. Section 76 provides that a victim is paid compensation "only in respect of such damage as would naturally arise in the usual course of events, and which directly arose from the defendant's civil wrong." This condition bears a certain resemblance to the position of Jewish law to the extent that it exempts the tortfeasor for indirectly caused damage (see *Gerama and Garme). On the other hand, the scope of liability in tort under section 76 is far broader than under Jewish law. Moreover, section 76 provides that awarding compensation is dependent upon the plaintiff specifying the damage he sustained.

Damages caused by traffic accidents are adjudicated under a special law – the Road Accident Victims (Compensation) Law, 5735 – 1975.

All of those laws will be interpreted in accordance with, and in light of, the values of the State of Israel as a Jewish and Democratic state, as elaborated in our discussion above.

DAMANHŪR, name of several Egyptian cities in the Middle Ages. One Damanhūr is referred to by Maimonides in his responsa as a major community in Egypt at his time. He together with other *dayyanim* decreed that anybody could marry or divorce a woman in Damanhūr without the permission of Rabbi Halfon (Bar Ula), the *dayyan* of Damanhūr. It would appear that the reference is to the present Damanhūr, which is the principal city of the Buḥayra province. This Jewish community remained in existence until modern times. In the 19th century the community was subordinated to the Jewish court of law in Alexandria. In 1901 the rabbis of Cairo visited Damanhūr and declared there the new Qisushin regulation. In the 19th century

there were no Jewish local institutions, probably because the majority of the Jewish population lived in the city only for a short time. In 1897 the community numbered 228 members, but in 1917 there were only 56. The decrease is probably accounted for by migration to nearby Alexandria. In spite of their small numbers, the Jews had many enemies in this city, and blood libels were brought against them in 1877 and 1882. The tomb of the kabbalist Jacob Abu Ḥasirah in Damanhūr was revered by the Jews of Egypt, and pilgrimages were made to it on festivals.

DAMARI, SHOSHANA (1922–2006), Israeli singer. Damari was born in the town of Damar, in Yemen, and moved to Palestine with her family at the age of two. She showed musical promise from an early age, accompanying her mother's singing at family and social gatherings on percussion. When she was 13 she joined the Shulamit school of drama in Tel Aviv and starred in her first concert in Tel Aviv three years later. In 1943 she was among the founding members of the Li La Lo theater company, and, one year later, appeared in the theater's debut production, "The Barber of Tel Aviv." Damari's principle contribution to the show was her rendition of "*Laylah ba-Gilboa*" ("A Night on Mount Gilboa") and, although the song was not a hit, Damari's soft Yemenite-inflected tones and richly textured voice stood out from the efforts of her European-born co-performers.

Damari came to national prominence following her performance in the theater company's second show, *Ra'ayon beli La Lo*, in which she sang "*Kalani'ot*" ("Anemones"), which was a huge hit and became Damari's signature song. The music for "*Kalani'ot*" was composed by Moshe *Wilensky, who, despite being born in Poland and a graduate of the Warsaw Academy of Music, incorporated Yemenite motifs in the song and in other material he wrote for Damari in subsequent years. Damari and Wilensky maintained their creative and fruitful partnership into the 1950s, when Wilensky began presenting a radio program called *Pizmon va-Zemer* ("Chorus and Song"). Every show included a song Wilensky wrote specially for Damari and was performed by her. These included such hits as "*Ha-Ro'ah ha-Ketanah min ha-Gai*" ("The Little Shepherdess from The Valley") and "*Le-Or ha-Zikhronot*" ("For the Memories").

In the mid-1950s Damari enjoyed a brief movie career, appearing in some of Israel's first movies, such as *Hill 24 Doesn't Answer* and *Be-Ein Moledet* ("Without a Homeland"), which told the story of the Damari family's move from Yemen to Palestine in the 1920s.

In the late 1940s Damari embarked on the first of many successful tours abroad. In 1947 she appeared at the famed Village Vanguard music club in New York and later performed in Canada and Cuba. In the 1960s and 1970s she appeared at many of the world's most prestigious music venues, including New York's Carnegie Hall and Lincoln Center. Despite being closely identified with her Yemenite roots, and classic Israeli songs, Damari also performed in other languages, including Spanish and even Yiddish.

In 1987 Damari's career was revived when she joined forces with crooner Boaz Sharabi, whose family also emigrated from Yemen, and the following year she received the country's ultimate accolade when she was awarded the Israel Prize. Damari subsequently appeared and recorded with Israel's other senior diva, Yaffa *Yarkoni, and with singer-songwriter Matti *Caspi. In 2005, the 83-year-old Damari surprised many by contributing two songs to young ethno-rock star Idan Reichel's second album *Mi-Ma'amakim* ("From the Deep").

Throughout her long career Damari set the standard for generations of young performers, both for her stage presence and her unparalleled vocal delivery.

[Barry Davis (2nd ed.)]

°**DAMASCIUS** (sixth century C.E.), the last head of the neoplatonist school. In his *Vita Isidori* he states that Theosebius, disciple of Hierocles, exorcised a demon from his master's wife by invoking the rays of the sun and the God of the Hebrews. He also tells in the same book that in the fifth century Marinus, successor of Proclus as chief of the neoplatonic school, was originally from Neapolis, modern Nablus (in the immediate vicinity of Shechem) a city built at the foot of Mount Gerizim, where there was a temple of Zeus Hypsistos which had been consecrated by Abraham, ancestor of the Hebrews. Marinus, he continues, was originally a Samaritan who later repudiated the doctrines of this sect (which he accused of having deviated from the faith of Abraham) and embraced Hellenism.

DAMASCUS, capital of Syria; in olden times a caravan center at an oasis in Southern Syria, on the principal crossroads between Mesopotamia-Syria and Palestine-Transjordan.

In the Bible

The name appears as דַּמֶּשֶׂק *Dammesek* (but once as דּוּמֶשֶׂק *Dummesek*, II Kings 16:10) and דַּרְמֶשֶׂק *Darmesek*, as in Chronicles (e.g., II Chron. 16:2) and also in the Dead Sea Scrolls and rabbinic sources. The meaning of the name is obscure; derivations from Semitic sources have been suggested but the etymology of the name remains uncertain. In Assyrian documents of the first millennium B.C.E. *Dimašqi* is interchangeable with the peculiar epithet *ša imérišu*, the city or land "of his donkey," though the epithet most probably refers to the country only. The Egyptian Execration Texts and the *Mari documents (18th century B.C.E.) refer to the Damascus region as the "Land of Apum," ruled by West Semitic princes. Damascus is mentioned by name for the first time in the geo-

graphical lists of Thutmosis III (15th century B.C.E.). In the El-Amarna letters (14th century B.C.E.) Damascus is mentioned several times, once explicitly, as being in the "Land of Upe" (i.e., Apu[m]); at this time its rulers bore Indo-Aryan names. The patriarchal narratives twice mention Damascus in passing (Gen. 14:15; 15:2), and the biblical account includes it within the Land of Canaan (Num. 34). Though this region lay within the Egyptian dominion until Egypt's decline in the 12th century, the Hittites sporadically penetrated and held it.

The desert oasis of Damascus became an important center for the *Arameans shortly after their appearance in Syria toward the end of the second millennium. David, in his campaigns against the Aramean confederation, conquered the city and posted Israelite governors there (II Sam. 8:5–6). Damascus cast off the Israelite yoke during Solomon's reign and became the capital of the kingdom of *Aram Damascus, remaining so until its destruction by the Assyrians in 732 B.C.E. It reached its height in the ninth century as an important political, economic, and cultural center. Even so, Damascus was forced to grant Israelite merchants special rights in the city, as indicated by the Aramean king Ben-Hadad's submission to Ahab: "… you may establish bazaars for yourself in Damascus, as my father did in Samaria" (I Kings 20:34).

The city of Damascus was repeatedly attacked by Assyria, as the latter gained power. In 841 B.C.E. and again in 838 B.C.E., Shalmaneser III besieged it, destroying the vineyards and orchards surrounding the city; later Adad-Nirari III twice (or even three times) spared the city only after being paid a heavy tribute; in 773 B.C.E. Shalmaneser IV also campaigned against Damascus, weakening it sufficiently to allow Jeroboam II, king of Israel, to impose his suzerainty over it; and in 732 B.C.E. the final blow was delivered by Tiglath-Pileser III. Reduced to the status of the capital of an Assyrian province, Damascus was still mentioned in Assyrian sources in 727, 720, and 694 B.C.E. and even as late as the reign of Ashurbanipal (668–627 B.C.E.). In the Persian period, Damascus was an important administrative center, and may have been the capital of the satrapy of Trans-Euphrates (cuneiform, *ebir nāri*; Aram. *avar nahara* [Ezra:4:10, etc.]; Heb. *ever ha-nahar* [Ezra 8:36; Neh. 2:7, 9]). The geographical position of Damascus, dominating the major trade routes, led to an economic prosperity in the biblical period, as did the fertility of the desert oasis, as reflected in the Bible (II Kings 5:12; Ezek. 27:18, where its trade in wine and wool is specified). Damascus was a cultic center for the god Hadad (cf. *Ben-Hadad, the name typical of the Damascene kings), apparently worshiped locally under the name Rimmon (cf. "the house of Rimmon," II Kings 5:18). The ancient city of Damascus has not yet been uncovered. One of the few chance finds from the biblical period is a ninth-century B.C.E. basalt orthostat depicting a cherub/sphinx in Phoenician style, which had been built into a substructural wall of the Umayyad mosque. The latter building apparently stands on the site of the ancient temple of Hadad-Ramman (cf. II Kgs. 5:18). In addition, Damascus is mentioned in an Aramaic stele, fragments of which were uncovered at *Dan in northern Israel.

From the time of Alexander the Great's invasion of the Near East in 333 B.C.E., Damascus served as a Macedonian colony, later becoming the capital of Coele-Syria and Phoenicia (from 111 B.C.E.), and then eventually becoming incorporated into the Roman Empire. Very little archaeological data is known about the pre-Classical city of Damascus, except for a few chance finds. The general plan of the present Old City may have been modeled on the general plan of the Hellenistic city, as some scholars have proposed (including Sauvaget), but there is no certainty about this. Roman remains include the architectural remains and inscriptions of the Damascene Temple of Jupiter, and a very distinctive street running east-west, which may very well be the same as the "Street called Straight" mentioned in Acts 9:11. A church dedicated to John the Baptist, which may have housed his relic head, existed in the city in the Byzantine period. Most of the ancient buildings visible today in the city are Islamic, including the impressive Great Mosque built by Caliph al-Walid in 705–15.

[Abraham Malamat / Shimon Gibson (2nd ed.]

Second Temple Period

With the advent of Alexander the Great in the east, Persian rule in Damascus was replaced by Macedonian, and later by that of Alexander's successors, the Diadochi, Seleucids, and Ptolemaids who alternately ruled over Damascus until its conquest by Pompey in 64 B.C.E. The city is mentioned several times in the Hasmonean era in connection with the conquests of Jonathan (I Macc. 11:62), who appointed his brother Simeon commander-in-chief at the Ladder of Tyre and after his conquest of Gaza in the south returned to Damascus. The army of Demetrius came to Kedesh in Galilee to thwart him but was defeated. Subsequently (*ibid.* 12:24–32) there is mention of another battle with the army of Demetrius in the land of Hamath, when Jonathan again was victorious and returned to Damascus. According to some scholars the sect known from the Covenant of *Damascus settled in the town or in its proximity after the capture of Damascus in the time of Pompey. "The land of Damascus" is mentioned several times in the book together with Damascus itself as the sect's place of residence. It may be assumed that this thickly populated commercial city situated at a major crossroads attracted Jews from various places.

Salome Alexandra attempted to extend her rule over Damascus which was threatened by Ptolemy of Chalcis but was unsuccessful (Jos., Ant., 13:418). In Damascus Pompey met with the emissaries of Hyrcanus and Aristobulus, the Hasmonean brothers who were contending for the throne, and from there he went in pursuit of Aristobulus (*ibid.*, 14:34f.). Damascus is also mentioned as Herod's place of refuge when, with the help of the high priest Hyrcanus, he fled Jerusalem when the members of the Sanhedrin were about to sentence him to death for having the Galilean rebels executed (*ibid.*, 14:177f.). In the course of time a large and important Jewish community was established in Damascus. The Jews of Damascus in the first century C.E. are mentioned in Acts 9 and II

Corinthians 11:32. In Acts, Paul states that he requested letters from the high priest in Jerusalem addressed to the synagogues of Damascus asking that they hand over to him the adherents of the new sect in order to bring them to Jerusalem. On the eve of the Roman war the Jews of Damascus were murdered by the gentile inhabitants (Jos., Wars, 2:559–561; Life, 27).

In talmudic literature Damascus is mentioned only in the economic sphere; it is called "the gateway of the Garden of Eden" (Er. 19a), reference being made to its fertile land and produce: Damascene plums, wine of Senir, etc. The quality of the waters of the rivers of Damascus and their validity for ritual ablutions are also discussed (TJ, Beẓah 3:2, 62a; Parah 8:10, "Keramyon" and "Puga"). Apparently Judah ha-Nasi had possessions to the west and south of Damascus, and on his journeys to them he visited that city as well as the Jewish communities in the vicinity (Sanh. 5b), many of which are mentioned (Ḥovah, Kokheva, Kefar Avraham, Kefar Karinos, Rom, Beth-Anath, Aratris, Ifarkoris, Sakhuta, etc.). It may be assumed that on their way from Ereẓ Israel to Babylon scholars passed through these places, but there were no institutes of learning there or in the city of Damascus, and it may be inferred that the Jews of Damascus engaged in agriculture as well as in commerce and became well known in this respect.

Roman rule in Ereẓ Israel and Syria commenced in 64 B.C.E. and continued under the Eastern (Byzantine) Roman Empire until the first half of the seventh century. During these 300 years, the Roman and Persian empires were engaged in a struggle in the region, which changed hands several times. In 613, Damascus was again captured by the Persians. They retained it only for a short time. The despotic and often religiously fanatical Byzantine administration alienated the inhabitants, even the Christians, and they certainly did not succeed in gaining sympathizers among the Jews and Samaritans. As a result all the cities submitted to the Persian armies without any opposition.

From the descriptions of the Armenian historian Bishop Sebeos (seventh century) and the book of the monk Astrategius of Mar-Saba, among others, it is learned that the Jews collaborated with the Persian conquerors against the Christians. From Damascus the Persians proceeded to conquer Ereẓ Israel, coming there together with their Jewish supporters (according to Sophronius). It may be assumed that the alliance of the Jews with the Persians was motivated by the hope for a tolerant attitude and, perhaps, even of gaining autonomy for the Jewish communities of Syria and Ereẓ Israel, as had been attained by the large Jewish community of Babylonia. The alliance of the Jews of Damascus with the Persians and their participation in the punitive actions against the Christians are evidence of their difficult situation under Byzantine rule. Although the Christian population also suffered under Byzantine rule, the mention of the Jews' participation in the campaign of suppression against the Christians, and particularly those from Tyre, testifies to fierce rivalry, and perhaps also to additional privileges granted the Christians by the Byzantine emperors so as to oust the Jews of Damascus from their position.

[Abraham Lebanon]

Under Muslim Rule

According to one tradition, the Jews were mentioned in the terms of the capitulation in 635, according to which the city was handed over to the Arabs. It is certain that the conquerors granted the Jews the southeastern quarter of the city, where they had previously dwelt. By comparison with the oppression that they suffered under Byzantine rule, there was a definite improvement in their situation. During the reigns of the caliphs of the Umayyad dynasty (661–750), the Jews, as well as the Christians, enjoyed tolerant treatment. However, with the ascent to power of the Abbasid dynasty (750–1258), they suffered from decrees against them along with an increase in the taxes levied upon them. Even so, they could observe their religious rituals openly and the ties with the academies of Palestine and Babylonia were renewed. The Damascus community was affected by events which influenced the Jewish population of the Orient. Furthermore, the sectarian movements in Babylonia found sympathizers in Damascus. According to the Karaite author *Al-Kirkisānī, there were still in his days (first half of tenth century) some remnants of the ʿIsāwiyya sect (founded by Abū ʿĪsā al-Iṣfahānī) in Damascus. At the same time, the great Muslim caliphate began to disintegrate and Iraq, which was the center of its empire, suffered from the wars between various groups and military factions. These events also marked the beginning of an important emigration of Iraqi Jews towards other countries. Damascus, like other cities in Syria and Egypt, became the home of many Iraqi Jews who established their own synagogues in the city. One of the pages in the records of the Damascus *bet din* for the year 933 contains four betrothal documents of Iraqi Jews in three consecutive weeks.

After the conquest of Damascus by the *Fatimids in 969, a period of prosperity began for the Jewish community. The Fatimids were noted for their tolerant attitude towards non-Muslims and they appointed Jews and Christians to high positions. At the end of the tenth century, Manasseh ibn Ibrahim al-Qazzāz held the position of head of the financial administration of Fatimid Syria, and used all the means within his power to further the welfare of his coreligionists. The Jews of Damascus at that time were in close contact with the Jews of Cairo and the Palestinian academies. In Damascus there were distinguished scholars such as Samuel b. Hoshana (III) of the Palestinian academy, who was a hymnologist and probably also *av bet din*. As a result of its close ties with the Palestinian academies, the community of Damascus was dragged into disputes in Palestine. It was especially involved in the controversy between the *gaon* Solomon b. Judah and his opponent Nathan b. Abraham. In the **Genizah* there are a few documents about the immigrants from Damascus to Egypt during Fatimid rule.

With the conquest of the greater part of Palestine by the Crusaders, the Palestinian academy was transferred to

*Hadrach, near Damascus, and later to Damascus itself. The first head of the academy in Hadrach was Solomon b. Elijah, who held this position during the early 12th century. The academy was then headed by *Abraham b. Mazhir and his son Ezra. The 12th-century traveler Benjamin of Tudela, who visited Damascus in about 1173, relates that there were 3,000 Jews in the city. On the other hand, his contemporary Pethahiah of Regensburg, the German traveler, maintains that there were 10,000 Jews in Damascus. These numbers seem to be exaggerated and it is unlikely that the Damascus community consisted of more than 2,000 Rabbanite Jews and about 600 Karaites. Besides craftsmen and small tradesmen, there were also physicians and intellectuals who composed Hebrew poetry. The poet Judah *Al-Ḥarizi, who visited Damascus in 1217, mentions the exilarch R. Josiah b. Yishai (Jesse) and the physicians Moses b. Ṣadaga and Isaac b. Baruch as residents of the city.

Saladin, who conquered Damascus in 1174, and his descendants, the sultans of the *Ayyubid dynasty, were indeed fervent Muslims, but even so they treated the members of other religions with tolerance. They also befriended intellectuals and employed the services of physicians. In general, the Ayyubid rule (12th–13th century) brought prosperity for the whole city. Trade relations with the European countries were strengthened as a result of the establishment of colonies of Genoese and Venetian merchants in the coastal towns of the Latin principalities. It seems that the first nesi'im, descendants of the Exilarch who settled in Damascus, were Solomon and his son Yoshiyahu in the first half of the 12th century; and in the 1180s and 1190s Judah, the son of Yoshiyahu. At the beginning of the 13th century came his relative Yoshiyahu ben Ishai. These leaders received money from the public treasury and gave the community a sense of importance but did not have any official position in the city. They traveled often to Syrian communities, Ereẓ Israel, and Egypt and received money from the local communities. Yoshiyahu was mentioned by Alḥarizi who wrote about the leadership of the community in the last decade of the 12th century and at the beginning of the 13th century, including the great nagid Obadiah and Judah Abu Alrada. The title nagid of Damascus was later given to Hillel ben Moses. In the Cairo *Genizah one finds the appointment order given in 1193 by the *Mamluk Sultan al-Malik al-Fasl ʿAlī, the eldest son of Saladin, to Obadiah. He appointed him as the head of all the Jews, Rabbanite, Karaite, and Samaritan, in Damascus and all the communities in the area of Syria.

After the Mamluks defeated the *Mongols at the battle of ʿAyn Jālūt in 1260, Syria came under the domination of the Mamluk sultans of Cairo. These sultans, influenced by fanatical theologians, agreed to issue decrees against non-Muslims. In Damascus, where many Muslim theological colleges had been founded since the reign of Saladin, the theologians had considerable influence, which they used to implant religious hatred within the general population. As a result, during the Mamluk period there was much oppression and many decrees against non-Muslims, even more than in the other cities under Mamluk rule. In 1321 the Muslims destroyed a synagogue, in 1354 there was a general persecution of non-Muslims, and in 1365 there were searches for stores of wine, as many Muslims bought wine from the Jews in spite of the Koranic prohibition of alcohol. The authorities also renewed the requirements compelling Jewish women to wear one black and one red shoe, and compelling the men to blow on a whistle when entering the public bathhouses. Periodically, the Muslims brought accusations against the Jews and forced some of them to convert to Islam. In 1392 the Jews of Damascus were accused of having set fire to the central mosque. One Jew was then burnt alive, the community leaders were tortured, and a synagogue was converted into a mosque. However, after a lapse of two years, this synagogue was returned to the Jews. In 1286 the exilarch *Jesse (Yishai) b. Hezekiah excommunicated the kabbalists of Acre, who had criticized the works of *Maimonides. There is no further mention of these exilarchs during later generations; however, a deputy of the Egyptian *nagid* had his seat in Damascus. During the whole of this period, the Jews of Damascus maintained contacts with the Palestinian population and they were accustomed to make pilgrimages to Jerusalem, as *Naḥmanides and *Estori ha-Parḥi testify.

The short occupation of Damascus by Tamerlane in 1401, the ransom which the conqueror levied upon the city, and the looting in which he engaged brought great suffering to all in the city, and the community was slow in recuperating from this calamity. However, during the second half of the 15th century, the Jews of Damascus enjoyed a period of economic prosperity. There were wealthy merchants among them and cultural activities flourished at the same time. According to the reports of Jewish travelers who came from European countries toward the end of the 15th century, there were between 400 and 500 Jewish families in Damascus at that time, besides a small *Karaite community and a community of *Samaritans. In 1435 the Italian rabbi Elijah La Massa, who settled in Jerusalem, was answering halakhic questions for Damascus Jewry. Rabbi Joseph of Montagna visited Damascus in 1481 and found an organized community including many scholars. He had the impression that no poor Jews lived in the city. A student of Rabbi Obadiah of Bertinoro visited Damascus in 1495 and was the guest of the president of the community, Moses Makran. He mentioned that the Jewish population numbered 500 families, most of them merchants, workers, and moneylenders.

During the early 16th century, the Spanish refugees of 1492 began to arrive in Damascus. This immigration increased after 1516, when Syria became a part of the *Ottoman Empire. R. Moses *Basola found 500 refugee families in the city in 1521, as well as special synagogues belonging to the Jews of Spanish, Sicilian, and Iraqi origin. There were at first some conflicts between the Spanish and Iraqi Jews. The Spanish Jews formed a separate community with independent institutions, such as a separate cemetery. The Sicilians also acted in the same fashion. The split of the Damascus community into these three groups lasted a long time, and each congregation had its own

rabbi, as well as a special *bet din*. However, in time these divisions were repaired. The influence of the Spanish Jews, among whom there were a number of scholars, increased as a result of their high cultural level. Furthermore, when the descendants of the original Spanish Jews ceased using Spanish, a major division between them and the rest of the community was removed. The Turkish authorities usually treated the Jews fairly. Some exceptions occurred, such as the destruction of the Iraqi Jews' synagogue in 1570 by a Turkish commissioner. However, even in this case the community was indemnified after a short while. The Jews of Damascus traded with other parts of the Ottoman Empire and maintained close ties with the rabbis of *Jerusalem and *Safed. Scholars from Jerusalem and Safed were appointed to rabbinical positions in Damascus and some of the rabbis of Damascus immigrated to Palestine in their old age. As a result of these contacts the study of the Kabbalah spread among the Jews of Damascus. In 1591 R. Moses *Alshekh from Safed visited Damascus as an emissary, returning a second time and serving as a dayyan in 1593. That year he returned to Safed and died soon after. R. Ḥayyim b. Joseph *Vital went to Damascus and lived there. A local rabbi in Damascus, Jacob Abulafia, was Vital's rival. R. Samuel b. Ḥayyim *Vital continued to propagate the teachings of his father in Damascus. In 1604 Safed was destroyed by the Druze and many of its Jews fled to Damascus. The influence of the kabbalists then became even more important. Two of the refugees, Isaac and Jacob, the sons of the Safed printer Abraham Ashkenazi, set up a Hebrew printing press in Damascus. In 1605 they printed *Kesef Nivḥar* ("Choice Silver"), the work of R. Josiah *Pinto, the rabbi of the Sephardi Jews in Damascus. R. Josiah Pinto wrote a series of works which reflected his kabbalistic outlook. At that time, there were also scholars and intellectuals in Damascus who wrote secular poems in Hebrew. The poet Israel *Najara settled in Damascus in 1579. In 1621 Rabbi Isaiah Halevi Horowitz (Ha-Shelah) passed through the city on his way to Ereẓ Israel and refused to serve as the local rabbi. Shabbetai *Ẓevi received some support from the Jews of Damascus. When his disciple Nathan of Gaza came to Damascus, many Jews in the city indicated that they still believed in the pseudo-messiah, despite the fact that he had already converted to Islam.

The wealthy merchants in Damascus in the middle of the 19th century (comprising around 24 merchant houses) were the richest class in the city and managed most of the local business of the *vilayet* of Damascus. There were also moneylenders who were the bankers of the city. The richest families were Levi-Stambouli, Angel, Lisbona, Farhi, Harari, Tovi, and Hason, philanthropists who helped the community.

The traveler *Benjamin II, who visited Damascus in 1848, estimated that the city had a Jewish population of 4,000, while the Austrian poet Dr. L.A. Frankl estimated that in about 1857 the population was 5,000. He mentioned the wealthiest Jew in Damascus, Raphael Stambouli, who was the host of Baron Alfonso de Rothschild in that year. He described the grandiose life of the community's elite, and noted the contempt of the Christian inhabitants for the Jews.

Frankl wrote in 1857 that the Karaite community in Damascus had been dissolved 50 years earlier. The Jewish community had eight synagogues, including "Frangi," which was the largest synagogue, founded by the Spanish settlers in Damascus; "Menesh," in which R. Hayim Vital had prayed; "Raki," in which the Farhi family had prayed (it was constructed in the middle of the 19th century); "Del Pasha"; "Halab"; "Midrash"; and "Dashabar" outside the city. Jews from Ereẓ Israel and Syria came to pray there. The great rabbi of Damascus in the second half of the 19th century was Rabbi Isaac Abulafia (died in Tiberias in 1910). Famous rabbis in the city were Nethanel Moses Chaboba, who was appointed head of the *bet din* in Damascus until his departure to Jerusalem in 1904 where he died the same year, Aaron Jacob, Solomon Sukari, and Meir Mashen. *The ḥakham bashi* in Damascus at this time was Rabbi Jacob Peretz. The massacre of Christians by Muslims and Druze in 1860 was followed by Christian accusations that the Jews had taken part in the violence and had bought their looted possessions. Many Jews were imprisoned as a result of these accusations, but later they were freed. The basic condition of the community did not change as a result of these events. However, after 1870 the economic situation deteriorated. This was due to the opening of the Suez Canal, which limited the international trade of Damascus, and the bankruptcy of the Ottoman Empire in 1875. Furthermore, local industries were ruined by the importation of manufactured goods from Europe. Economic decline was followed by a moral and cultural decline. At the turn of the century some Jewish girls became notoriously known as "singers," and the rabbis attempted to end this shame. In 1888 there was only one *talmud torah* in Damascus with 450 students, and in 1895 it was transferred to the Alliance Israélite Universelle. This organization had opened a school in Damascus in 1864, but it was closed after five years and reopened only in 1880. A school for girls was inaugurated by this organization in 1883. In 1910, 768 students were enrolled in these schools. In 1911 the Alliance Israélite Universelle withdrew its support from the schools. An 1883 report noted that 25% of the Jewish population was very poor, 50% was poor, 25% belonged to the middle class, and only one percent of community members were wealthy. Most of the Jewish inhabitants were simple workers. In 1895 there was a split in the community regarding the chief rabbinate. One group wished to dismiss the *ḥakham bashi* Rabbi Isaac Abulafia. Rabbi Solomon Eliezer Alafandari was appointed, but his 13 years in the city were marked by dissension. In 1909 he immigrated to Ereẓ Israel (and died in Jerusalem in 1930). In the second half of the 19th century there were about 20 Ashkenazi families from Europe which had assimilated into the older population of the community. In the 18th century Jews from Persia, Bukhara, India, and Iraq had settled in Damascus. In 1822 many Jews from Aleppo settled there after the earthquake in that city. It appears that the Jewish population in the city grew from 3,000 to 5,000. Many Jews from Hamah also

immigrated to Damascus between 1832 and 1840. After 1860, Jews from Hasbiya settled there. At the end of the 19th century, many Jews from Damascus immigrated to Ereẓ Israel.

Emigration from Damascus up to 1870 was minimal, with most of the immigrants leaving for Egypt. But in the last two decades of the 19th century immigration was stepped up and in the first two decades of the 20th century it became a flood. Most of the emigrants were young people who settled in North and South America, where they hoped to improve their economic situation. According to the Ottoman census of the year 1882, there were 3,177 Jewish men and 3,088 Jewish women in Damascus at the time. The first regular elections for the Va'ad Gashmi were scheduled in Damascus for the end of the 19th century. From c. 1840 to the end of the century there had been a Va'ad Ruḥani with authority in religious affairs. During the second half of the 19th century, many local Jews abandoned Jewish tradition.

Throughout the Ottoman period Damascus had the second largest community in Syria after *Aleppo. In 1870 there was some incitement by the Christian inhabitants and the British consul, Richard Barton, against the Jews of Damascus, and the latter appealed to Sir Moses *Montefiore, Francis Goldschdmidt, Rabbi Adler of London, and Charles Netter to get the consul dismissed. He was ordered by his government to return to England in 1871. During World War I the city suffered a severe economic crisis. Eliyahu Sasson reported in 1921 that only 5% of community members were wealthy, most of them merchants, 25% were workers, and almost 70% were needy. The Protestant mission was active within the community but had only limited success.

The community was unsuccessful in its efforts at maintaining a Hebrew school. There was no increase in the population of the community due to the continuing emigration of Jews from Damascus to Beirut and to both North and South America. In 1900 Damascus had 10,000 Jews. In the first decade of the 20th century 1,500 young Jews emigrated from Damascus.

In 1930 the headmaster of the Alliance Israélite Universelle estimated the Jewish population at not more than 8,000 and noted the Zionist influence on Jewish society there. In 1926 the number was the same, and in 1943 there were only 6,000 Jews in the city. The Zionists founded two Hebrew schools in Damascus, in which a majority of the pupils came from the poorer strata of the community, but in 1925 these schools were closed. In the Jewish quarter many young Jews spoke French, which helped many of them who emigrated. A number of rabbis lived and were active in Damascus at the end of the 19th century and in the first half of the 20th century. Rabbi Jacob Hacohen Trab (d. 1923), who was born in Damascus, was appointed rabbi of Beirut in 1900. Rabbi Judah Ḥayyim Maslaton was the son of the community rabbi, Ezra Hacohen Trab Maslaton. He was born in Damascus in 1872 and immigrated after World War I to Egypt (d. 1946). Rabbi Joseph Judah Dana (died in Haifa in 1973) was a student of Rabbi Isaac Abulafia and served for many years as rabbi of Damascus. He immigrated c. 1948 to Israel. In Damascus social differences were marked, and the wealthy Jews lived on a very high standard. These had a Western orientation and many of them were Francos who had *capitulation rights. Among them were the Lisbona family, which enjoyed Austrian protection, and Jacob Levi Stambouli, who had British protection. The Jewish press in Europe emphasized the poverty of the Jewish majority. The *talmidei ḥakhamim* of Damascus were exempt from community taxes, but in 1875 the government ordered them to pay property taxes. In 1918 there were 15,000–17,000 Jews in Damascus. Only two families, Laniado and Totah, were wealthy, 300 families belonged to the middle class, and 600 families were needy. In 1919 most Jewish children were enrolled in Hebrew institutions headed by Abraham Elmaliah and Joseph Joel Rivlin. But in November 1919 the Jews of Damascus began to break off contact with the Committee of Deputies and the Zionist movement. The president of the community was Moses David Totah. In 1919 an orphanage was established and the Joint began to help the community. In 1924 there were 1,359 students in the Alliance Israélite Universelle institutions. There were also Jewish students from rich families who studied in Christian schools. In 1911 the new *ḥakham bashi* in Damascus, Rabbi Jacob Danon, invited his son-in-law, Abraham Elmaliah, to the city. Elmaliah changed the *talmud torah* to a Hebrew national school and invited teachers from Ereẓ Israel. Until 1917 it had 300 students and 200 more children in the kindergarten classes. In 1924, 150 poor Jewish students studied in Protestant Mission schools. In 1925 the Jewish quarter was sacked during the Druze rebellion against the French Mandate; some Jews were murdered and dozens were injured, while many buildings and shops were plundered.

The world economic crisis of the 1930s hurt also the Jews of Damascus. A large number were not employed and many immigrated to Ereẓ Israel and other countries. In 1936 they were accused of Zionism and Jews fled from Damascus. Zionist activity continued, however. In 1942 Tuviyyah Arazi described the dire economic circumstances of many of the children and youngsters there. Most of the children aged 10–12 worked and received no education. In that year the headmaster of the Alliance Israélite Universelle school was murdered.

Since 1948

The Jews of Damascus experienced fear and discrimination after the Israeli War of Independence. In July–August 1948 the Jewish quarter was bombed and dozens of Jews were killed and injured. Of the approximately 5,000 Jews in Damascus in 1948, and 3,500 in 1958, there remained only between 1,000 and 1,500 in 1968. Most Jews left for Lebanon immediately after the outbreak of the War of Independence, settling in Beirut; others went to Israel, Europe, and America. The vacant houses in the Jewish quarter were occupied by Palestinian Arab refugees whose presence caused constant tension and

clashes with the remaining Jews. Many Jews fled from the city and secretly left for Israel and Lebanon. According to a report of the World Jewish Congress in 1954, the Jewish quarter in Damascus was full of Arab refugees. The head of the community committee was the banker Sabri Laniado, but the committee did not have any contact with the local authorities in Damascus. Only Jews who had special licenses could leave the city. Others were seized and imprisoned. The Jews were supported by the Beirut community and by the Joint Distribution Committee as well as by grants from Syrian Jews in other countries, such as Mexico, Argentina, the United States, and some in Eastern Europe. Most of the money was transferred to the authorities as bribes. Only a little of it reached the needy. Many Jews abandoned their property. In the Jewish talmud torah there were just 170 children with the funds for the school coming from the U.S. The Jews were persecuted by the authorities and frequently arrested, especially during the trial of the Israeli intelligence officer Eli *Cohen (1965) and during the Six-Day War (1967). The Muslim population also attacked Jews and planted a bomb in the synagogue in August 1949. The Jewish community suffered serious financial difficulties, most of its members being artisans or unemployed and living on the charity of the community council. A few Jews worked as clerks in the Banque de Commerce (which used to be the Zilkhah Bank), or in a Jewish-owned clothing factory. The number of conversions to Islam of Jewish girls marrying Muslims increased after the Jewish mass emigration. In 1968 the community's affairs were governed by a council of seven to nine members, whose main function was to support the needy with funds from Syrian Jews in America. Nissim Nedebo was rabbi of the community. The Alliance Israélite Universelle continued to run a school in Damascus, which had 420 pupils in 1965. Forty boys and girls attended government schools, and in 1965 there were eight Jewish students at Damascus University.

In an undercover operation in late 1994, 1,262 Syrian Jews were brought to Israel. The spiritual leader of the Syrian Jewish community from 1976 to 1994, Rabbi Abraham Hamra, was among those who left Syria and went to New York (and later Israel). Syria had granted exit visas on the condition that the Jews did not go to Israel. The decision to finally free the Jews came about largely as a result of pressure from the United States following the 1991 Madrid Peace Conference.

Many Jews worked as coppersmiths in Damascus. These artisans developed a style and technique of their own, creating masterpieces of metalwork in the course of the 20th century. With the immigration of the last artisans to Israel in 1992, this era came to an end in Damascus.

DAMASCUS, BOOK OF COVENANT OF (the **Zadokite Documents** or the **Damascus Document**; abbr. CD for Cairo Damascus), work presenting the views of the sect which is said to have left the Land of Judah and emigrated to the Land of Damascus. The work first became known through the discovery by Solomon *Schechter in 1896 of two fragmentary manuscripts of it (conventionally called *A* and *B*) in the *genizah* of a Karaite synagogue in Cairo. Schechter dated *A* to the 10th century C.E. and *B* to the 11th or 12th. They represent two different recensions of the work, to judge by the relatively small portions which overlap. When the Qumran texts were discovered in 1947 and the following years, an affinity between some of them and the Damascus Document was speedily recognized, and it soon became evident that the sect referred to in the

Damascus Document must be identified with the Qumran community. This conclusion was confirmed with the discovery of fragments of the Damascus Document in the Qumran caves – fragments of seven manuscripts in Cave 4 and further fragments in Cave 6 (6QD).

The book is written in biblical Hebrew, free from Aramaisms. The style is marked throughout by linguistic usages from the Bible; it contains also later idioms most of which are known from the Mishnah. It includes homilies in the spirit of the ancient Midrashim and material paralleled in such apocryphal and pseudepigraphic writings as the Book of Jubilees and the Testament of the Twelve Patriarchs.

The Admonition

The first part of the work, named "The Admonition" by C. Rabin, comprises moral instruction, exhortation, and warning addressed to members of the sect, together with polemic against its opponents; it serves as a kind of introduction to the second part, called "The Laws" by Rabin (see bibliography). Even in the Qumran manuscripts, these two parts are not treated as separate compositions but belong together as one work. The lack of continuity in several places in both parts suggests that the work as it now is known is an abridgment of a longer work, over and above the fact that the abridgment itself has survived in a fragmentary form.

The first part contains some details about the history of the sect as understood by the author. At the end of 390 years (cf. Ezek. 4:5) after the destruction of the First Temple there sprouted forth from "Israel and Aaron" a "planted root," the beginning of the sect. Twenty years later there arose the *Teacher of Righteousness (CD 1:11; in 20:14 he is called *moreh ha-yaḥid*, "the unique teacher" or "the teacher of the One" – or, if *ha-yaḥad* is read – "the teacher of the community"). He organized those who accepted and kept his teaching in a "new covenant." At the same time arose "the man of mockery" or "preacher of falsehood" who misled Israel; in consequence, many of those who had entered the covenanted community left it and were accordingly "delivered to the avenging sword of the covenant." "At the end of the destruction of the land," when the influence of the backsliders and adversaries of the sect became stronger, those who remained true to the covenant went out of the holy city and "escaped to the land of the north." The leader of those who "turned back [from impiety] in Israel and went out of the land of Judah to sojourn in the land of Damascus" was "the lawgiver who expounds the Torah," who enacted laws by which "those who entered into the new covenant in the land of Damascus" might regulate their lives "until the teacher of righteousness arises at the end of days." But there were also betrayers of the covenant who returned, together with the "people of mockery," and those and others like them are threatened with severe punishment.

The "people of mockery" are those who "build up an insecure wall and daub it with white plaster" (cf. Ezek. 13:10); by these the author seems to indicate the Pharisees who made a fence to the Torah (Ar. 1:2). These, he says, walked in the stubbornness of their heart (cf. Deut. 29:18; Jer. 3:17, etc.), followed the preacher of falsehood, and were caught in "fornication" – a term used by the author (and by those like-minded) of those who married two wives simultaneously or who married their nieces. To have two wives at once is, for the author, a breach of the ordinance of creation. The example of David cannot be pleaded as a defense, because in his day the Torah was inaccessible; it had been sealed and hidden in the Ark "until Zadok arose," i.e., Zadok the priest whose sons are "the chosen of Israel, men of renown." As for marrying the daughter of one's brother or sister, this is not explicitly forbidden in the Torah (for which reason it was permitted by the Pharisees), but in the circle to which the author belonged it was evidently regarded as forbidden by analogy with the prohibition of marriage between aunt and nephew (cf. Lev. 18:12–14). In addition to committing fornication in these two respects, the "people of mockery" are charged with failing to keep the laws of uncleanness as specified in the Torah; they profane the Temple and "speak abominations against the ordinances of God's covenant, saying that they are not right." Because the Temple was rendered unclean by them, those who had entered into the covenant undertook not to approach the Temple or bring sacrifices to it; that would be "kindling God's altar in vain" and they would do better to shut the Temple door altogether, in accordance with Malachi 1:10.

The Laws

The second part of the work deals with the laws of the sect and its social arrangements. These laws comprise regulations for judgment, the Sabbath, the altar, the synagogue and the city of the Temple, the attitude to worshipers of idols, forbidden foods, and uncleanness. Several of these regulations correspond to the accepted law, but others are in opposition to it and correspond rather to the laws accepted by the Samaritans and the Karaites, and all of them are inclined to be severe. The social arrangements that were fixed by the leaders of the sect put its members under a severe discipline. The members of the sect in all their "camps" are divided into four classes: priests, Levites, Israelites, and proselytes. Their names must be recorded in a book. At the head of each "camp" stands a priest who understands the "book of the *Hagu*" (a book of laws, apparently some composition of the character of the Manual of *Discipline, which seems to be older than the Damascus Document). Next to the priest stands the "inspector (*mevakker*) of the camp" whose responsibility it is to act as guide and educator of those in the camp. A distinction seems to be drawn between those who live in camps as members of a separated community and those "living in camps after the order of the earth" – which may denote associate members or sympathizers with the sect who pursued normal family life in the cities of Israel.

The Sect

Before the discovery and study of the Qumran community, many conjectures were expressed about the identity and date

of the sect of the Damascus Document. Even when it has been set in a wider context, many such questions remain undecided. The internal testimony of the work indicates that the sect existed at a time when the Temple still stood. A particularly knotty problem is presented by the reference to Damascus: is this to be understood literally (as was usually taken for granted when the Damascus Document was the only one of its kind extant) or as a "prophetic name" (cf. Amos 5:27) for the wilderness of Judah to which they had withdrawn? (For the latter view see Y. North, in PEFQ, 87 (1955), 34ff.; F.M. Cross, *The Ancient Library of Qumran* (1958), 59f.). Murphy-O'Connor suggested alternatively that it might actually refer to Babylon.

If Damascus is taken literally, it appears that when the sect fled there, some of its adversaries and enemies went there too, and instigated a number of its members to betray and forsake it. From this it may be argued that at that time Jerusalem and Damascus were controlled by separate (if not indeed opposing) governments, so that it was possible for refugees from Judah to find asylum in or near Damascus: this situation corresponds only to the time of the Hasmoneans. (It is relevant to note that the oldest manuscript fragment of the Damascus Document from Qumran has been dated by some scholars on paleographical grounds to the pre-Roman period; cf. Cross, op. cit., 59, n. 46). The flight of both members of the sect and their adversaries from Judah to Damascus under the Hasmonean regime is best related to the reign of Alexander *Yannai, to the time when his enemies (as is known from Josephus and from the Talmud) fled from the Land of Israel after his decisive victory in the long civil war. Yannai would have hated the people of the sect because they opposed the Hasmonean assumption of the high priesthood, which in their view belonged exclusively to the descendants of Zadok; and it is possible that they also participated in the war of the Pharisees against Yannai. On this basis it is possible to suggest the following time-sequence in the history of the sect: The growth of the sect ("the root") began during the reign of John *Hyrcanus I (135–114 B.C.E.), when the opposition of the Pharisees to the Hasmonean kings' exercise of the high-priestly function became manifest. Twenty years (half a generation) later arose the "Teacher" who organized the sect in a covenant, and after his death, which occurred during Yannai's reign (103–76 B.C.E.), the people of the sect fled (at the end of the civil war) to the land of Damascus. During the peace which followed under *Salome Alexandra, the "people of mockery" returned to Jerusalem as did several of the people of the sect. In that case the Damascus Document would have been written originally after Salome's death (67 B.C.E.), during the war between her sons Hyrcanus II and Aristobulus II, when Pompey was preparing to march on Jerusalem (63 B.C.E.); his invasion may be hinted at by the author in the words "He is the head of the kings of Yavan, who is coming to wreak vengeance upon them." (Pompey was by this time the master of all the rulers in the Hellenistic states, which had fallen under the dominion of Rome.)

So much can be inferred from the Damascus Document taken by itself. How far this reconstruction can be correlated with the evidence of the other Qumran texts is a subject for continuing study. Certainly the basic ideas, as well as the language and style of the Damascus fragments, correspond from every point of view with those of the Qumran scrolls. Such leading personalities as the Teacher of Righteousness and the Man of Mockery are as prominent in some of the Qumran texts as they are in the Damascus Document. One possibility to be considered is that the Damascus sect was a special branch of the Qumran *yaḥad* whose history differed somewhat from that of the *yaḥad* as a whole; another is that the Damascus Document reflects a later development of the Qumran community than that represented by the Manual of Discipline.

[Michael E. Stone / Frederick Fyvie Bruce]

DAMASCUS AFFAIR, a notorious *blood libel in 1840 in which Christian antisemitism and popular Muslim anti-Jewish feelings came to a head and were aggravated by the political struggle of the European powers for influence in the Middle East. Syria was then ruled by Muhammad Ali of Egypt, who had rebelled against Turkey. France supported Muhammad Ali, while the other powers, especially Austria and Great Britain, were interested in preserving Turkish power and in preventing the extention of French influence.

On February 5, 1840, the Capuchin friar Thomas, an Italian who had long resided in Damascus, disappeared together with his Muslim servant Ibrahim ʿAmāra. The monk had been involved in shady business, and the two men were probably murdered by tradesmen with whom Thomas had quarreled. Nonetheless, the Capuchins immediately circulated the news that the Jews had murdered both men in order to use their blood for Passover. As Catholics in Syria were officially under French protection, the investigation should have been conducted, according to local law, by the French consul. But the latter, Ratti-Menton, allied himself with the accusers, and supervised the investigation jointly with the governor-general Sherif Padia; it was conducted in the most barbarous fashion. A barber, Solomon Negrin, was arbitrarily arrested and tortured until a "confession" was extorted from him, according to which the monk had been killed in the house of David Harari by seven Jews. The men whom he named were subsequently arrested; two of them died under torture, one of them

converted to Islam in order to be spared, and the others were made to "confess." A Muslim servant in the service of David Harari related under duress that Ibrahim ʿAmāra was killed in the house of Meir Farḥi, in the presence of the latter and other Jewish notables. Most of those mentioned were arrested, but one of them, Isaac Levi Picciotto, was an Austrian citizen and thus under the protection of the Austrian consul; this eventually led to the intervention of Austria, England, and the United States in the affair. When some bones were found in a sewer in the Jewish quarter, the accusers proclaimed that they were those of Thomas, and buried them accordingly. An inscription on the tombstone stated that it was the grave of a saint tortured by the Jews. Then more bones were found, alleged to be those of Ibrahim ʿAmāra. But a well-known physician in Damascus, Dr. Lograso, refused to certify that they were human bones, and requested that they be sent to a European university for examination. This, however, met with the opposition of the French consul. The authorities then announced that, on the strength of the confessions of the accused and the remains found of the victims, the guilt of the Jews in the double murder was proved beyond doubt. They also seized 63 Jewish children so as to extort the hiding place of the victims' blood from their mothers.

The news of the atrocities in Damascus aroused the concern of the Jewish world. The first Jewish attempt to intervene in the tragic situation came from Alexandria in the form of a petition addressed to Muhammad Ali, as a result of the initiative of Israel *Bak, the Jerusalem printer. At the same time, the Austrian consul general in Egypt, A. Laurin, received a report from the Austrian consul in Damascus and also petitioned Muhammad Ali to stop the torture methods used by the investigators. Muhammad Ali agreed, and instructions were accordingly issued to Damascus by express courier. As a result, the use of torture came to an end on April 25, 1840. However, the accusation itself was not rescinded and the investigation against the Jews continued. Laurin tried to influence the consul general of France in Egypt to restrain Ratti-Menton, who was his subordinate, but he was unsuccessful. He then acted in a manner contrary to diplomatic practice by sending the report he had received from Damascus to James de Rothschild, the honorary Austrian consul in Paris. He also requested Rothschild to intervene with the French government. This did not bring any result. In order to alert public opinion in France and in the civilized world, James de Rothschild, without the authorization of Chancellor Metternich in Vienna, published the report in the press. In Vienna, his brother Solomon Rothschild approached Metternich on the issue. The latter reprimanded Laurin, but nevertheless consented to his activity, as it caused embarrassment to the representatives of France in Egypt and Syria. Laurin was then joined by the British consul general in Egypt, as well as by other European consuls, who supported him in his dispute with the French. As a result of his efforts, an order was sent to Damascus on May 3, 1840, requesting protection for the Jews from the violence of Muslim and Christian mobs.

In the meantime, Western Jewry had been shocked by what had happened, and vigorous protests were voiced. Western European Jews and, especially, the Jews of France and Britain, saw signs of a return to the darkness of the Middle Ages. The events also alarmed assimilated Jews, as was evident from their reactions, even of such Jews as the young *Lasalle, who had completely broken away from Judaism. Enlightened non-Jews also protested against the accusation through the press and mass meetings. A Jewish delegation, whose members included Moses *Montefiore, his secretary Louis *Loewe, Adolphe *Crémieux, and Solomon *Munk, left for Egypt and was received by Muhammad Ali. The delegation requested that the investigation should be abandoned by the Damascus authorities and transferred to *Alexandria for judicial clarification or that the case be considered by European judges. This request was not granted as war was imminent between Egypt and Turkey. Both Muhammad Ali and the French wished to prevent an investigation into the events in Damascus. The Jews, whose first concern was the release of their coreligionists, decided to accept the simple liberation of the prisoners without any judicial declaration of innocence. In the end it was, however, explicitly stated that their liberation was an act of justice and not merely a favor granted by the ruler. The liberation order was issued on August 28, 1840, and those prisoners who were still alive in Damascus were saved.

Montefiore and his delegation left Egypt for Constantinople, where they appealed to the sultan for the publication of a *firman* which would proclaim blood libels fallacious and prohibit the trial of Jews on the basis of such accusations. Nevertheless, the Catholics of Damascus continued to tell tourists, for many years, about the saint who had been tortured and murdered by the Jews, and how the Jews had been saved from the gallows by the intrigues of Jewish notables from abroad. The Damascus Affair also aroused Jewish awareness of the need for intercommunal cooperation, finally resulting in the establishment of the Alliance Israélite *Universelle.

[Abraham J. Brawer]

Broader Repercussions

What caused extraordinary anxiety among the Jews of the West in 1840 was not only the danger facing their co-religionists in the Middle East but also, and probably even more, the fact that the accusation of ritual murder in Damascus was initially accepted as proven fact by almost the entire press in the constitutional states of Continental Europe. Typical was a report appearing in innumerable newspapers in April declaring that "Today the truth is known: of the nine accused [Jews] … seven are united in admitting everything … the body [of Father Thomas] was suspended head down; one [of the Jews] held a tub to collect the blood while two others applied pressure to facilitate the flow. Then, once the source of blood had dried up, all of them, maddened, threw themselves on the corpse, cutting it to bits."

In Britain, such reports were treated with greater skepticism, but there the country's leading newspaper, *The Times*,

persistently advanced the thesis that given the prima facie case against their religion, the onus of disproving the ritual murder charge fell squarely on the Jews. *The Times*, like the influential German *Leipziger Allgemeine Zeitung*, now extensively reproduced the arguments frequently elaborated upon in Christian polemics since the 13th century that passages in the Talmud prescribed the sacrifice of Gentiles. Thus, an editorial article in *The Times* in June 1840 could declare the affair to be "one of the most important cases ever submitted to the notice of the civilized world … Admitting for the moment [the accusation to be true] … then the Jewish religion must at once disappear from the face of the earth … We shall await the issue as the whole of Europe and the civilized world will do with intense interest."

Adding still further to the sense of embattlement and shock that now overtook large segments of European Jewry was the situation that had developed in France by the summer of 1840. Not only was the charge of ritual murder emanating from the French diplomatic delegation in Damascus persistently and vociferously supported by the entire ultramontane Catholic press led by the influential daily *l'Univers* but, making matters much worse, the French premier, Adolphe Thiers, likewise gave his – albeit more guarded – backing to the consul in Syria, the Comte de Ratti-Menton. (Replying in June to critics in the Chamber of Deputies he declared, for example, that "you protest in the name of the Jews and I protest in the name of a Frenchman who until now has carried out his duties with honor and loyalty.") It was in the wake of the debate in the French parliament that the representative bodies of Jewry in France and Britain, the Consistoire Central and the Board of Deputies, took the difficult decision to dispatch the high-level delegation led by Adolphe Crémieux and Moses Montefiore to the Middle East. It had become all too clear, stated one prominent member of the Anglo-Jewish community, that at stake was "whether the flame of persecution … lighted up in the East … be so fed with bigotry that it shall increase … and go forth like some monster, destroying and to destroy, until the very name of Jew should be heard only with horror and disgust and their persons shall sink under cruelty, oppression and contempt … It is not merely … for humanity [and] our oppressed brethren that we are called upon to act; it is our own battle we fight."

Jewish historiography (as typically in the above entry) tended to downplay severely the extent of the verbal battering unleashed against the Jews in Europe during the course of 1840, and likewise generally ignored the fact that two radically opposed versions of the Damascus Affair were passed down to posterity and to a large extent have continued to follow their own separate courses until today. In the Jewish narrative the crisis for the most part culminated in a "happy ending," with the release of the surviving prisoners in Damascus; the issue of the firman by the Sultan in Constantinople repudiating the ritual murder myth; and the triumphant return home of Montefiore and Crémieux. However, from very early on, an alternative Judeophobic version of the affair was put into circulation. In 1846 a two-volume book was published in Paris, written by Achille Laurent (almost certainly a pseudonym), *Relation historique des affaires de Syrie depuis 1840 jusqu'en 1842*, which contained the complete protocols of the interrogation undertaken by the local and French authorities in Damascus during their investigation of the (alleged) murder of Father Thomas and Ibrahim 'Amara, as well as a large collection of documents marshaled to reinforce the thesis that the ritual murder is prescribed by Judaism (or at least practiced traditionally by some Jewish sects). The entire collection clearly emanated from the coterie which had manned the French consulate in 1840, and thus could be seen as something close to an official publication. Containing as they did a series of confessions describing in great detail how and why the Jews of Damascus had committed the murders – but omitting all mention of the extensive use of torture – the protocols once in the public domain acted over time as an effective counterweight to the version of the affair preserved in Jewish historiography and collective memory.

In the coming years and decades, the protocols were published in various editions in German, Italian, Arabic, and Russian. The idea that the ritual murder case had been conclusively proved in Damascus and the prisoners only released for political reasons or because of bribery now became a key theme repeated at length in an extensive series of antisemitic journals and books, ranging from the Jesuit *Civiltà Cattolica* to *Der Stuermer*, and from Gougenot des Mousseaux's *Le juif, le judaïsme et la judaïsation des peuples chrétiens* to August Rohling's *Talmudjude* and to Henri Desportes' *Le mystère du sang chez les juifs de tous les temps*. In 1986 Mustafa Talas, the Syrian minister of defense, issued yet another edition of the protocols together with numerous documents related to the case. The idea that the ritual charge had been authenticated conclusively in Damascus in 1840 is repeated from time to time in Arabic-language media and by diplomats representing various Arab states. The tomb (allegedly) housing Father Thomas' remains still stands in the Franciscan Terra Sancta church in Damascus and carries the statement that he was "murdered by the Jews on February 5, 1840."

°D'AMATO, ALFONSE M. (1937–), U.S. politician. Born in Brooklyn, New York, and raised on Long Island, he got his start in politics in rough-and-tumble Nassau County. D'Amato was a United States senator from 1981 until 1999 after defeat-

ing New York icon, incumbent Senator Jacob *Javits. D'Amato was popular with his more generally liberal Jewish constituents as well as other New Yorkers. Like most New York senators, D'Amato was an ardent supporter of Israel. He was well known for serving the needs of his constituents. Among the many constituents he served with dedication and determination were Holocaust survivors and their heirs in their battle to recover dormant accounts in Swiss banks. In 1996, Senator D'Amato chaired a hearing on the Swiss bank controversy before the U.S. Senate Banking Committee. He was the first to testify before the House on the necessity of investigating what happened to billions of dollars in Swiss banks from funds deposited by Jews or Jewish property looted by Nazis in the World War II era. D'Amato's work, along with that of the World Jewish Congress, forced Switzerland to face its past, its myth of wartime neutrality, and its postwar actions and to take the beginning steps towards a measure of justice in the fight for Holocaust restitution.

[Beth Cohen (2nd ed.)]

DAMAVAND, town situated at the foot of Mount Damavand, E. of Teheran, Iran. An old cemetery and ruins of a synagogue in Damavand attest to the existence of a Jewish settlement there. In the 17th century the Jews of Damavand are mentioned by the Judeo-Persian chronicler *Babai ibn Luṭf among the 18 Jewish communities which were searched for kabbalistic writings and became victims of the then current wave of forced conversion. The Shabbatean agitation in Persia is connected with one Samuel b. Aaron Damavandi. The 1871 famine which swept over Persia severely affected the Jews of Damavand, but the Jewish traveler, E. *Neumark, found some Jews still living in Damavand in about 1883–85.

DAMESHEK, WILLIAM (1900–1969), U.S. hematologist. Dameshek, who was born in Voronezh, Russia, graduated from Harvard Medical School in 1923 and became instructor in medicine there. In 1941 he became professor of medicine at Tufts College Medical School in Boston. Dameshek was appointed professor of medicine at the Mount Sinai School of Medicine and attending hematologist to the Mount Sinai Hospital, both in New York City, in 1966. He received several awards for his contributions in the field of hematology. Dameshek was founder and chief editor of *Blood*, the journal of hematology. Dameshek authored or coauthored many articles, monographs, and books. His principal studies were on agranulocytosis, acquired hemolytic anemia, hypersplenism, and Mediterranean anemia. His books include *The Hemorrhagic Disorders* (1955), *Leukemia* (1958), *Hemolytic Syndromes* (1949), and *Leukopenia and Agranulocytosis* (1944). He was president of the American Society of Hematology (1964) and the International Society of Hematology (1954–56).

[Suessmann Muntner]

°DAMIAN, PETER (**Petrus Damiani**; c. 1007–1072), theologian, canonized by the church. On the request of a correspondent named Honestus, probably a monk, Damian wrote an anti-Jewish polemic in two parts: *Antilogus contra Iudaeos* and *Dialogus inter Iudaerum requirentem et Christianum e contrario respondentem*. At first Damian had hesitated to undertake the work, for he said it would be useless, as the Jews had already almost completely disappeared from the world; he finally decided to write it lest the inexperience of Christians in religious discussion both strengthen the audacity of unbelievers and give rise to doubts in the hearts of the faithful. However, because of his lack of any real contact with Jews and ignorance of the actual subjects of the Judeo-Christian debate, Damian's work is artificial; at the end he admits that he has little hope of its proving effective with the Jews.

[Bernhard Blumenkranz]

DAMIETTA (Ar. **Dumyāt**; in the Bible: Jer. 47:4 – isle of Caphtor; and Isa. 30:4 – Hanes), city in Egypt, about eight miles from the Mediterranean Sea. In medieval times, Damietta was an important commercial town, through which goods were transferred from Europe to the Orient. Hence it had a relatively important Jewish community which is mentioned frequently in *Genizah* documents. During the tenth century emigrants from Iraq settled there.

The 11th and 12th centuries were a period of prosperity for the community. It had a regular *bet din* and supported the academy of Ereẓ Israel and other causes. At the beginning of the 11th century the Palestinian *gaon* Josiah addressed a letter to the *av bet din* Amran, the *dayyanim* Eleazar and Amram, and the other elders of the community requesting the continued support of the Damietta community for the Palestinian academy. Nathan ben Abraham, who wished to be the Palestinian *gaon*, wrote a letter from Damietta before traveling to Ereẓ Israel. Many *Genizah* documents deal with Jewish merchants who did business with Damietta in the middle of the 11th century. A mid-12th-century document recording the sums collected in various communities for a drive sponsored by the **nagid* Samuel b. Hananiah indicates that the Damietta community was of medium size. David, the son of the Palestinian *gaon* *Daniel ben Azariah, took control of the Damietta community in the second half of the 11th century. *Benjamin of Tudela reported in the 12th century that the city's population included 200 Jews. In the 12th century, when Damietta was a flourishing commercial town of international importance, Jews from Christian countries frequently visited the city.

The *Mamluks destroyed the city in the middle of the 13th century, and the mouth of the Nile was blocked to prevent attacks by European fleets. Despite the city's decline a small community of Jews continued to live there. Al-Sadīd al-Dumyāṭī (i.e., "of Damietta") was physician to the sultan al-Malik al-Nāṣir Muḥammad in the first half of the 14th century. Jews were living in the city in the 15th century and a flourish-

ing community existed there in the first half of the 16th century. David *Reuveni was a guest in the home of a Damietta Jew in 1523, and *David b. Solomon ibn Abi Zimra mentions that Jews of Damietta were engaged in international trade in the 16th century. An Ottoman order from 1577 mentions a Jew named Shemuel who was head of the money house in the city and also served as a *multazim* (leaseholder) and the tax collector in the ports of *Alexandria and Damietta. In the 16th century only one *melamed* served in the community. Rabbi Ḥayyim *Capusi (d. 1631) lived for a time in Damietta. In 1670 the vice consul of Venice in Damietta was a Jew. The community continued to flourish in the 17th century. Rabbi *Ḥiyya Rofe (d. 1618) mentions a Jew who bought grain in Egypt and sent it with his servant via Damietta to Acre. Rabbi Ḥayyim Abraham de Boton from Jerusalem was in Damietta in 1676. A Jewish court of law sat in Damietta in 1676 and dealt with an *agunah*. The court of law was dependent on the *bet din* of *Cairo. This *bet din* in Cairo boycotted a person who served as *ḥazzan*, *melamed*, and *shoḥet* in Damietta. The Jews resided in a special quarter. In 1668 the members of the *Hevra Kaddisha* in Damietta, *Rosetta, and Cairo searched for Jewish bodies in order to bury them. Until 1769 there were Jews who served as customs officers in Damietta. In 1833, 300–400 Jews lived in the city. Jacob *Saphir reported that during the 19th century very few Jews remained in Damietta; most of them went to Alexandria, which had become a great city again. In the census of 1897 there were only nine Jews in the city; in 1907, one; and in 1936, three.

[Eliyahu Ashtor / Leah Bornstein-Makovetsky (2nd ed.)]

DAMĪRA, city in Lower Egypt. A Jewish community existed there during the Middle Ages, which is mentioned in 11th- and 12th-century *Genizah* documents. It seems that *David b. Daniel first settled in this city when he arrived in Egypt. About 100 years later Maimonides addressed himself to the Jews of Damīra in a general letter to the communities of the Delta. The 12th-century traveler *Benjamin of Tudela stated that there were 700 Jews in this city; it was thus the third largest community in Egypt, after those of Cairo and Alexandria. However, the accuracy of this report is dubious because of the scarcity of documents concerning the city.

[Eliyahu Ashtor]

°**DAMOCRITUS** (possibly first century B.C.E.), Greek historian who, according to Suda, wrote a work "On the Jews," in which he claimed that the Jews worshiped a golden ass' head, and that every seven years they captured a foreigner whom they sacrificed to their god – the first occurrence in literature of the *blood libel. *Apion has a similar account. Since the Romans of that time prohibited human sacrifice, the inference made by Damocritus is that Judaism condoned superstition and misanthropy.

DAMPIERRE-DE-L'AUBE, locality in the Aube department, France, E. of Troyes. Situated a short distance from *Rameruppt, another medieval center of Jewish learning in *Champagne, Dampierre-de-l'Aube was the home of such eminent 12th- and 13th-century scholars as *Isaac b. Samuel the Elder (1120?–1185?), his son *Elhanan (martyred in 1184?), and *Isaac b. Abraham (d. c. 1209). The most important Jewish financier of Dampierre, Jacob, the son of Sanson Rufus, lent 450 livres to the Abbey of St. Loup in Troyes in 1220. Before 1224, the abbey also owed him two life annuities.

DAMROSCH, family of musicians. LEOPOLD DAMROSCH (1832–1885), born in Posen (Poznan), was a conductor and composer. He took a medical degree but devoted himself to music and the violin. As orchestral leader in Magdeburg and Weimar, and conductor in Breslau, he cooperated with Liszt, Hans von Buelow, and others, in championing the cause of contemporary composers. Settling in New York (1871), he founded the Oratorio Society (1873) and the New York Symphony Society (1878), and directed the first German opera season (1884–85) at the Metropolitan Opera House. Among his compositions were the choral works *Ruth and Naomi* (1875) and *Sulamith* (1882), and works for the violin. FRANK HEINO DAMROSCH (1859–1937), born in Breslau, son of Leopold, was organist and school music supervisor (in Denver and New York), chorusmaster at the Metropolitan (1885–91), and director of choral societies. WALTER JOHANNES DAMROSCH (1862–1950), born in Breslau, younger son of Leopold, took over his father's conducting posts at the Metropolitan Opera and Oratorio Society, and conducted the New York Symphony Society from 1885 to 1927. He also directed his own opera com-

pany (1894–99). Walter Damrosch played an important part in the development of American concert life and its rise to world standards. He toured the U.S. widely, invited Tchaikovsky to America (1891), and gave the first American performances of many important works, including Tchaikovsky's last two symphonies. From 1927 he was music adviser to the National Broadcasting Corporation and did much educational work on the radio. He appeared in two films, *The Star Maker* and *Carnegie Hall* (1947), and wrote an autobiography, *My Musical Life* (1923, 1930[2]).

DAN (Heb. דָּן).

(1) Biblical city in the Ḥuleh Valley near the sources of the Jordan. It was originally called Laish and was dominated by the Phoenicians of Sidon (Judg. 18:7, 27ff.). Laish is mentioned in the Egyptian Execration Texts of the early 18th century B.C.E. and in the list of cities conquered by Thutmose III (c. 1469 B.C.E.). Leshem is a variant spelling of Laish (Josh. 19:47). When the tribe of *Dan, under pressure from the Amorites, left their original territory and moved northward, they captured the city of Laish in a surprise raid and renamed it Dan. At the same time a sanctuary was established there with *Micah's idol and descendants of Moses acting as priests (Josh. 19:47; Judg. 1:34; 18:2ff.). The sanctuary continued to function until Tiglath-Pileser III's conquest in 733 B.C.E. and his exile of the inhabitants to Assyria (II Kings 15:29, where Dan, however, is not explicitly mentioned). The Bible anachronistically calls the city Dan already in the account of Abraham's pursuit of the four kings (Gen. 14:14) and when Moses before his death was shown "all the land, even Gilead as far as Dan" (Deut. 34:1). From the time of the Judges onward, Dan was regarded as the extreme northern point of Ereẓ Israel with Beer-Sheba as the southern (Judg. 20:1, etc.). Jeroboam erected a temple and set up a golden calf at Dan, and a second one at Beth-El (I Kings 12:29ff.); these rivals to Jerusalem were vehemently criticized by the prophets (Amos 8:14). During the reign of his successor Baasa, the city was sacked by Ben-Hadad, king of Aram-Damascus (I Kings 15:20). Dan was the gateway for all northern invasions of Ereẓ Israel (Jer. 4:15; 8:16). In the Hellenistic period it was apparently called Antioch; it marked the northernmost point of Alexander Yannai's conquests (Jos., Ant., 13:394; Wars, 1:105). The city subsequently failed to recover and remained a village called Kefar Dan in the Talmud (TJ, Dem. 1:1, 22c). Dan is identified with Tell al-Qāḍī (now Tell Dan) on one of the main sources of the Jordan.

Excavations begun in 1966 and directed by Avraham Biran have confirmed the identification of the site, with the discovery of a bilingual dedicatory inscription in Greek and Aramaic "To the God who is in Dan." The site was apparently first settled during the Neolithic period in the fifth millennium B.C.E. Strong fortifications and building remains from the Early Bronze Age have been uncovered; its name at that time may very well have been Laish (cf. Judges 18:29, which equates Laish with Dan). The Middle Bronze Age II at Dan is represented by massive fortifications, with earthen ramparts and a remarkably well-preserved mud-brick triple-arched gateway. The site prospered throughout the Middle and Late Bronze Ages. Mycenaean imports, including a complete charioteer vase, and a large quantity of vessels and ivory objects were found in a specially built tomb dated to the 14th century B.C.E. The Early Iron Age is represented at the site by a change in the character of the settlement, with vessels and other artifacts suggesting that the population was mixed, some local with others from Cyprus, Phoenicia, and southern Israel and Jordan. From the latter part of the Iron Age are the remains of a cultic high place (cf. the setting up of a golden calf at Dan by Jeroboam I of Israel; I Kings 12:20). The ninth century B.C.E. is well represented at the site by fortifications, gates, and a stone-paved piazza with standing stones (*maẓẓevot*). Fragments of an important stele inscribed in Aramaic and mentioning the "king of Israel" and the "house of David" were discovered in this area (for the various interpretations and discussions, see Bibliography below). Additional remains from the Iron Age II, as well as from the Persian, Hellenistic, and Roman periods, have also been uncovered at the site.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

(2) Kibbutz in northern Israel in the Ḥuleh Valley near the spring of the Dan River. The kibbutz, affiliated with Kibbutz Arẓi ha-Shomer ha-Ṣa'ir, was founded on May 4, 1939, one day after neighboring *Dafnah, as the second of the complex of settlements called the "Ussishkin fortress." Situated until 1967 directly on the Syrian border, Dan, together with Dafnah, had to repel enemy attacks in the early months of the War of Independence (1948). In the two subsequent decades it often came under Syrian artillery fire, particularly in the period preceding the Six-Day War. Its founders were pioneers from Romania, later joined by newcomers from various countries. The kibbutz economy was based on three industries: irrigation systems, polycarbonates, and PVC. Its farming was based mainly on fishery but also included field crops, orchards, and beehives. In the mid-1990s the population was approximately 560, dropping to 421 in 2002. Bet Ussishkin, a museum for vegetation, wildlife, antiquities, and settlement history of the region, is located there.

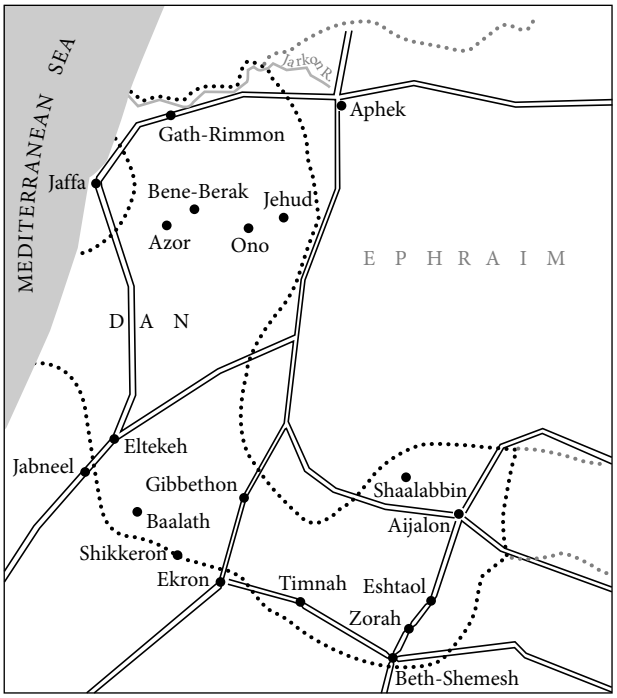
DAN (Heb. דָּן), the fifth son of Jacob and the firstborn of *Bilhah, Rachel's maid (Gen. 30:1–6).

The Name

The narrative attributes the origin of the name Dan to Rachel, who said: "God has vindicated me (*dananni*); indeed, He has heeded my plea and given me a son" (30:6). The name would thus be derived from the verb *dyn* ("to judge or vindicate"; cf. Gen. 49:16). Some scholars see in the name Dan the divine epithet *dayyan*, while others regard it as a divine name in itself. Most likely, however, the literal meaning intended by the biblical etymology is correct, and the name Dan should be regarded as a short form of Dan(ann)iel or the like.

The Tribe and Its Inheritance

Dan is listed first among the handmaid tribes in Jacob's blessing (Gen. 49:16–18), but second in the blessing of Moses (Deut. 33:22) and the Song of Deborah (Judg. 5:17). In tribal genealogies, only one clan is attached to Dan, Hushim (Gen. 46:23 or, by metathesis, Shuham, Num. 26:42). In the wilderness wanderings, the tribe encamped north of the Tabernacle together with Asher and Naphtali (Num. 2:25–29). It numbered 62,700 and 64,400 adult males respectively in the two censuses taken in this period (Num. 2:26; 26:43). The territorial inheritance of the tribe was decided by lot at Shiloh (Josh. 19:40–48). It is stated to have bordered the territory of Ephraim to the north, Benjamin to the east, and Judah to the south, and to have extended into the maritime plain. Seventeen settlements, most of which have been definitely identified, are included within the borders of Dan, but there is no unanimity as to whether the list reflects the Danite occupation before the migration northward, or a later period. Y. Kaufmann is convinced of the former, while A. Alt assigns the list of cities to the period of Josiah. Between these two extremes, B. Mazar steers a middle course by dating the list to the period of the United Kingdom. According to him, it reflects the historic and geographic development of the territory of Dan in the course of time. He divides the list of settlements into four groups or, more accurately, into four districts. The first includes Zorah, Eshtaol, and Ir-Shemesh (Beth Shemesh) in the southeast section of the coastal plain, and is the area of the initial settlement of the Danites. The second district includes Shaalabbin, Aijalon, Ithlah, and Elon in the Valley of Aijalon area. This constituted a mixed settlement, in which the struggle between the Israelites and the native population continued until the time of David. These two districts, including those cities which became Israelite, formed one administrative unit in the reign of David, and fell within the province of the second of Solomon's commissioners (I Kings 4:9). As to the two additional districts – Timnah, Ekron, Eltekeh, Gibbethon, and Baalath (i.e., the region of the Wadi Sorek and north of it), and Jehud, Bene-Berak, Gath-Rimmon, Me-Jarkon, and Rakkon, with its boundary close to Jaffa – they appear to have been annexed to the kingdom of Israel following the westward extension of its borders into Philistine territories. For these reasons, Mazar places the list of Joshua 19:40–48 in the period of Solomon.



The allotted territory of the tribe of Dan. After Y. Aharoni, Lexicon Biblicum, *Dvir Co. Ltd, Tel Aviv.*

According to Y. Aharoni, the list of Danite cities represents the earliest stage of Solomon's second administrative district, while 1 Kings 4:9 reflects the reduction in the region made toward the end of his reign. Four levitical cities situated in the territory of Dan are among the cities listed in Joshua 19:40–48, i.e., Aijalon, Gibbethon, Eltekeh, and Gath-Rimmon (Josh. 21:23–24). If the levitical cities were administrative centers and store cities built by Solomon in which he settled the levites "for all the work of the Lord and for the service of the king" (1 Chron. 26:30–32), then this would support Mazar's dating of the list of Danite cities to the days of Solomon.

The History of the Tribe

Dan was the only one of the handmaid tribes originally to settle among the tribes of Leah and Rachel. Its inheritance bordered on Ephraim, Benjamin, and Judah. It would seem that, at first, its territory was limited to the area between Zorah and Eshtaol. Here, however, they were under pressure from Amorites on the west (Judg. 1:34), and perhaps also from the house of Joseph on the east (1:35). There may even have been pressure from *Judah (15:11). At any rate, the tribe of Dan was forced to search for a new area of settlement (18:1). The story of this second attempt is related in detail in a unique narrative which may have wider significance (Judg. 18). The Danite experience possibly constitutes the paradigm for all movements and migrations of the tribes of Israel during the period of settlement. The operation began with the dispatch of scouts (cf. Num. 13) to gather information about a suitable location. Five "able men" were sent from Zorah and Eshtaol "to spy out the land and to explore it" (Judg. 18:2). The spies found Laish and its environs to be adequate to their needs because it was fertile country, rich and spacious (18:9–10). Its conquest would present no great military problems since the city was isolated due to its distance from the Sidonian metropolis (18:7, 10, 27–28). Three references in ancient Hebrew poetry reflect the history of the Danites during the period of the Judges and the beginning of the monarchy. These are the allusions to be found in Jacob's blessing (Gen. 49), the blessing of Moses (Deut. 33), and the Song of Deborah (Judg. 5), short poetic utterances in which, however, there is more that is obscure than is clear. Jacob's blessing appears to reflect the earliest period in the history of the Danites, describing a tribe which, on the one hand, is struggling for recognition, participation, and responsibility within the tribal confederacy (Gen. 49:16) and, on the other, is fighting for its survival against nomadic tribes or even the Amorites (49:17). In the Song of Deborah the tribe is berated for not having participated in the war against the Canaanites. With biting irony the question is asked, "… and Dan, why did he abide with the ships?" (Judg. 5:17). It is not clear from this verse exactly where Dan resided at the time of Deborah's war, whether in the south across from Jaffa on the coast before the migration northward (cf. Josh. 19:46), or already in the north following the migration. Scholarly opinion generally favors the presence of Dan already in the north at this time, since it appears in the Song of Deborah together with the northern tribe of Asher. In the blessing of Moses it is clear that the tribe is in its northern location, since it is described as "a lion's whelp that leaps forth from Bashan" (Deut. 33:22), and is also coupled with the northern Naphtali, its "brother" tribe (cf. Gen. 30:6–8). The *Samson narratives indirectly give information concerning the Danite families which remained in their southern inheritance during the period of the Judges (Judg. 13–16). Those families in Mahaneh-Dan between Zorah and Eshtaol (Judg. 13:25) were subjugated by the Philistines together with the tribes of the house of Joseph and Judah, though they suffered more than the others since they were the first to be affected by the Philistine eastward expansion. Samson's guerrilla activities led to a hardening of Philistine rule (15:9). At the same time, Samson's experiences show that despite the attempt to preserve the purity of the family, tribe, and nation by not intermixing with the nations of the land (14:3), social contact and even marital ties were established between the Danite clans and the Philistines. According to Y. Yadin, the biblical references prove that at a certain stage of Dan's settlement the tribe enjoyed the closest relations with the Sea Peoples, that Dan was an ancient tribe that extended over the entire east, and that during this early period it had no connection with the confederacy of the tribes of Israel. It gradually moved closer to the tribes of Israel until it was accepted into the amphictyony and became one of them. Its original area of settlement was along the coast near Jaffa, in the region between the settlements of the Philistines and those of the Tjeker mentioned in Egyptian records. In Yadin's view there is a close relationship between the tribe of Dan and the tribe of Danaoi whose members were clearly seafarers who had a propensity for the worship of the sun and whose heroes excelled in their talent for solving riddles. Factions of the tribe wandered as fighting troops, spread to different places, and founded cities which they named for the patriarchs of the tribe. These groups of the tribe of the Danaoi were particularly attracted to the east Mediterranean coast in general and the Jaffa area in particular. The similarities between their history and that of the tribe of Dan led Yadin to suggest the identification of the two. It is possible, however, to explain the parallels as resulting from contact and influence. Moreover, there does not appear to have been any contact between the Sea Peoples and the tribe of Dan before the migration of the latter to the north under Amorite pressure (Judg. 1:34). The information about Dan from the period of the monarchy until the destruction is negligible. It would seem that with the founding of the monarchy the Danite clans in the south were assimilated into the kingdoms of Judah and Israel and lost their distinctiveness. As for those in the north, they appear to have been concentrated around the city of Dan, the importance of which increased after the division of the kingdom. Jeroboam son of Nebat, the first king of Israel, established a central royal sanctuary in Dan, the northern end of his kingdom, and placed in it one of the two golden calves for the worship of the God of Israel, in an attempt to renew the ancient cultic centers and to revive the early traditions, in order to remove the members of the northern kingdom from

contact with Jerusalem and its Temple (I Kings 12:28–30). The Danite clans of the north apparently intermingled with their neighbors, especially the tribe of Naphtali (cf. I Kings 7:13 with II Chron. 2:13) and even with the people of Tyre (*ibid.*). The territory of Dan in the north constituted the northern flank of the kingdom of Israel and it suffered in the struggles and wars between Israel and Aram and between Israel and Assyria. In the time of King Baasha of Israel, the cities of Dan (Ijon, Dan, and Abel-Beth-Maacah) were conquered by Ben-Hadad, king of Aram, who had been hired by King Asa of Judah (I Kings 15:16–20). In the time of Pekah, king of Israel, the territory of Dan together with that of Naphtali and the whole of Galilee was conquered by Tiglath-Pileser III (732 B.C.E.), and its inhabitants were exiled to Assyria (II Kings 15:29). In this region, he established the Assyrian province of Megiddo.

[Isaac Avishur]

In the *Aggadah*

When Bilhah called her first son Dan ("judge"), she also prayed that it would be given to Samson, his descendant, to judge his people, and that they would not fall into the hands of the Philistines (Targ. Yer., Gen. 30:6). Similarly Jacob's deathbed blessing to Dan centered principally around Samson, who would bring victory to his people unaided (Gen. R. 98:13). In the same blessing Jacob ranked Dan equally with Judah, in that Samson's father would be of the tribe of Dan and his mother of Judah (*ibid.*; cf. Num. R. 10:5; 13:9), the Messiah to be descended from Dan on his mother's side. Dan, more than all his brothers, desired to slay Joseph hoping thereby that Jacob's love for Joseph would be turned to him (Test. Patr., Dan 1:4–7). Dan's only son was called Hushim ("rushes") because his children were destined to be as numerous as rushes (BB 143). Dan was one of Jacob's five weak sons (Rashi on BK 92a but see Gen. R. 95:4 for the opposite view). His descendants were all idol worshipers (PdRK 27b).

DAN (Gurvich), FYODOR ILYICH (1871–1947), Russian Socialist and journalist. Born in St. Petersburg, Dan was a physician by profession. He joined the Socialist movement and in 1898 was banished to Siberia for three years. At the conference of the Social Democratic Workers party in 1902 he represented the underground newspaper *Iskra*, of which Lenin was one of the editors. In the following year he was rearrested and again sent to Siberia. This time he escaped abroad and joined the Menshevik wing of the party, in which he became a prominent figure. He returned to Russia in 1905, but in 1908 he was again forced to leave the country as a political exile. When he returned to Russia in 1912, he became editor of the newspaper *Rabochaya Gazeta*. In World War I, Dan served for a short time as an army doctor but in spite of his war service he was again sent to Siberia.

The February Revolution of 1917 set Dan free. He played an important role as a member of the presidium of the Petrograd Soviet and on the executive of the All-Russian Soviet, and opened the Second Congress in 1918. But unlike the Bolsheviks, he favored the continuation of the war, and opposed their policies. He was arrested in 1922 and after a year in prison was compelled to leave the Soviet Union. In 1923 he was a Menshevik delegate at the founding of the Labor and Socialist International (in Hamburg). He was one of the editors of *Sotsialisticheski vestnik* first in Berlin and then in Paris; and after the death of his brother-in-law Julius *Martov, in 1923, he became the leading figure in the Russian Social-Democratic movement in exile. In 1940 he settled in New York.

Dan wrote the essay "Die Sozialdemokratie Russlands nach dem Jahre 1908" in Martov's *Geschichte der russischen Sozialdemokratie* (1926). His own book, *Proiskhozhdenie bolshevizma* ("The Source of Bolshevism," New York, 1946), appeared shortly before his death. In the years 1941–47 he published the magazine *Novyi Put.* He was opposed to Zionism, but as early as 1904 published an article in *Iskra* denouncing antisemitism and supporting Jewish self-defense. In his last years he sympathized with the idea of a Jewish state.

DAN, JOSEPH (1935–), scholar and educator in Jewish Studies and Thought. Born in Bratislava, Czechoslovakia, he was taken to Palestine when he was three. His family settled in Jerusalem and Dan studied at the Hebrew University where he received a Ph.D. for his thesis on "The Theological Basis of the Ethical Thought of Ashkenazi Ḥasidism."

He began teaching at the Hebrew University in 1958, initially in the Department of Hebrew Literature and later in the Department of Jewish Thought where he was appointed professor of Kabbalah in 1978.

One of the most prominent researchers in the area of Jewish mysticism, Dan's research combined a historical, philological, and literary approach. The areas he concentrated on included the beginnings of the Kabbalah, the *Heikhalot* literature, the Ashkenazi Ḥasidic movement, and ethics and Ḥasidism.

In the teaching of Jewish Thought, he developed academic projects of wide public dimensions. He was the editor of *Jerusalem Studies in Jewish Thought* and wrote the Open University course "The Theology and Ethics of the Ashkenazi Ḥasidic Movement," bridging the gap between the purely academic sphere and the broader public.

He was a member of the editorial board of the quarterly *Tarbiz* from 1981 to 1986 and was director of the Jewish National and University Library 1984–1985.

He was responsible for writing and editing the catalogue of the 12,000-volume Scholem library which houses most of the books ever published in the area of Jewish mysticism. Dan published nearly 200 studies in various scholarly journals and articles in various encyclopedias including the *Encyclopaedia*

Judaica for which he was departmental editor for medieval Hebrew prose.

His books include *Ethical and Homiletical Literature* (Heb.; 1975), *The Ḥasidic Story* (Heb.; 1975), *The Teachings of Ḥasidism* (1983), and *Gershom Scholem and the Mystical Dimension in Jewish History* (1987). In 1998 and 1999 he published his four-volume *Jewish Mysticism*, a historical and comparative study.

In recognition of his great contribution to his field he was awarded the Israel Prize in 1997.

[Elaine Hoter]

DAN, LESLIE L. (1929–), Canadian entrepreneur and philanthropist. Dan was born in Budapest, Hungary. He survived the Holocaust as a teenager with the aid of false identity papers. Still a teenager when he arrived in Canada in 1947, Dan worked as a lumberjack and waiter to put himself though the University of Toronto, where he earned a B.Sc. in pharmacy in 1954 and an M.B.A. in 1959. He began an over-the-counter drug distribution company in 1960 and in 1965 created Novopharm. When he sold it to Israel's Teva Pharmaceuticals in 2000, the company was a world leader in pharmaceutical research and manufacture. While Dan remained on the Board of Teva he went on to develop and become chair of Viventia, which specializes in the discovery and development of products for the treatment of cancer.

A widely respected businessman, Dan also turned his expertise and personal fortune to battling disease worldwide. In 1985 he founded the Canadian Medicine Aid Programme (CAN-MAP) which provides millions of dollars of medicines and other aid to the sick in the developing world. He was a donor to Yad Vashem, and his generous support of the University of Toronto is evident in the Leslie Dan Faculty of Pharmacy and the Leslie L. Dan Pharmacy Building, which was completed in 2005. Toronto's Aish HaTorah's Dan Family Building is named in his honor, and he received honorary doctorates from several universities. He was also active on the boards of several Toronto hospitals and supported a wide range of health-oriented initiatives at Canadian universities. In 1996 Dan was awarded the Order of Ontario and made a Member of the Order of Canada.

[Paula Draper (2nd ed.)]

DAN, SERGIU (originally **I. Rossman**; 1903–1976), Romanian novelist and journalist. Born in Piatra-Neamt, Moldavia, Dan began his literary career by publishing original poems at the age of 19. He later wrote for such leading Romanian periodicals as *Contemporanul, Vremea*, and *Viata Românească*, and for *Bilete de Papagal*, a satirical magazine edited by the poet Tudor Arghezi. Dan was also for a time the political editor of the newspaper *Dreptatea*. His career in fiction began in 1929 when, in collaboration with Rumulus Dianu, he wrote *Viața minumată a lui Anton Pann* ("The Wonderful Life of Anton Pan"). His own first novel, *Dragoste și moarte în provincie* ("Love and Death in the Provinces," 1931) won him a major Romanian literary prize. After this came two studies of middle-class life, *Arsenic* (1934) and *Surorile Veniamin* ("The Veniamin Sisters," 1935). In 1945 Dan published a novel, *Unde începe noaptea* ("When the Night Begins"), dealing with the fate of a Jewish family during the Hitler era and containing moving descriptions of life in the concentration camps. This was followed by *Roza și ceilalți* ("Rosa and the Others," 1947), an account of Jewish life in the provinces during the grim years of Fascist persecution. Both postwar novels are noteworthy for their penetrating psychological insight. During the next decade Dan published translations from French writers including Voltaire, Anatole France, and Aragon. Two later novels, *Taina Stolnicesei* (1958) and *Tase cel mare* ("Tase the Great," 1964), were of only minor literary significance.

°DANBY, HERBERT (1889–1953), English Hebraist. Danby went to Jerusalem in 1919, first as a librarian and later as a canon of the Anglican Cathedral of St. George, remaining there until he was appointed professor of Hebrew at Oxford in 1936. Although Danby devoted his efforts mainly to the translation of tannaitic legal codes and that of Maimonides, he was also a pioneer among Christian Hebraists in taking modern Hebrew seriously as both an academic and a literary medium, and in developing an assessment of Judaism that was not merely positive but also possessed of insight. Thus, in 1939 he published (with M.H. *Segal) an English and (modern) Hebrew dictionary. Danby's reputation rests on his English translation of *The Mishnah* (1933), which is considered a standard reference work. He also contributed books 9 ("Offerings") and 10 ("Cleanness") to the Yale English translation of Maimonides' *Mishneh Torah* (1950, 1954). He translated J. Klausner's *Jesus of Nazareth* (1925) and *History of Modern Hebrew Literature* (1932) as well as Ḥ.N. Bialik's *Biblical Legends* (1938). His first work had been a translation of the Mishnah and Tosefta of the tractate *Sanhedrin* (1919), and in 1927 he published *The Jew and Christianity*.

[Raphael Loewe]

DANBY, MICHAEL (1955–), Australian politician. Danby was born and educated in Melbourne, the son of a German Jew who fled to Australia after *Kristallnacht.* He worked for many years for the *Australia-Israel Review,* a Melbourne-based fortnightly magazine of which he was editor from 1986 to 1993, before entering the Australia parliament as the Labor member for Melbourne Ports, a heavily Jewish seat, in 1998, the only Jew in Australia's House of Representatives. He often defended Israel against critics of its policies, many from the left wing of his own party. From 2001 he served as an Opposition whip.

DANCE.

In Ancient Israel

In the Bible, Mishnah, and Talmud, dance is referred to in various contexts as an important ritualized activity and as an expression of joy. None of these references, however, contain descriptions of how the dancers actually moved. Dancing is mentioned in connection with celebrations of military victories and in rituals such as the golden calf dance and the bringing of the Ark of the Covenant to Jerusalem.

The Bible contains many Hebrew verb roots employed to describe dancing activity, four of which were used in the description of the popular but religious event of the bringing of the Ark, which inspired King David and his subjects to dance before God. David not only danced in the ordinary sense of the word *saḥek* (שחק) but also rotated with all his might, *karker* (כרכר); and jumped, *pazez* (פזז) (II Sam. 6:5, 14, 16); a slightly different version appears in I Chronicles 15:29, mentioning that he skipped, *rakad* (רקד). The other verb roots used for describing dance are *daleg* (דלג), leap or jump; *kafotz* (קפץ), jump with both feet; *savav* (סבב), go around; *pasea̒ḥ* (פסח), skip; *ẓala̒* (צלע), limp; *ḥagag* (חגג), dance in circle.

It is noteworthy that in addition to the textual descriptions we have some tangible evidence. This includes newly discovered iconographic features found in *Megiddo, *Lachish, the Negev, and other sites. For example, a number of cylinder seals from the second millennium B.C.E. show lines of dancers standing with their hands on one another's shoulders (*Near Eastern Archeology,* 66:3 (2003)). Figures on a late Bronze Age cylinder seal from Lachish have been interpreted as participants in a ritual or battle dance similar to the Arab folk "debka" still in use in our days. A. Mazar adds that "this posture is typical of seals showing dancers from various sites in Israel" (*ibid.*). T. Ilan in his study "Dance and Gender" (see Bibliography) describes dance represented in ancient iconography as an activity in which the two genders have specific defined roles.

VICTORY DANCES. Dancing to the accompaniment of drums is associated with the celebrations of military victories and welcoming home heroes who have routed an enemy. The women's role was to receive and extol the fighters. After the triumphant crossing of the Red Sea, "Miriam, the prophetess, the sister of Aaron, took a timbrel in her hand; and all the women went out after her with timbrels and with dances" (Ex. 15:20, 21). On his triumphant return from battle to Mizpah, Jephthah was greeted by his daughter with timbrels and dancing (Judg. 11:34). When David and Saul returned from the battle with the Philistines, "the women came out of all the cities of Israel, singing and dancing, to meet King Saul, with timbrels, with joy, and with rattles" (I Sam. 18:6). There is a detailed description of a victory parade, where Judith leads the women in the dance, to the accompaniment of a special thanksgiving song: "And all the women of Israel hurried to see her, and they praised her and made a dance for her… And she went out in the dance before all the people, leading all the women" (Judith 15:12, 13).

ECSTATIC DANCES. The most telling biblical evidence of the power of music inspiring ecstasy and prophetic vision is connected with King Saul. A passage from Samuel tells that Saul goes to the hill of God where he meets a group prophesizing while in motion, accompanied by several instruments. The text adds: "And the spirit of the Lord will come mightily upon thee, and thou shalt prophecy with them, and shalt be turned into another man" (I Sam. 10:5–6). There is no mention of dancing, which typically accompanies ecstatic practices, but the movement that is an inherent part of the situation described may well allude to its ritual nature.

David's dance before the Ark was an example of the religious ecstatic dance performed by men. The Psalms exhorted people to "praise God's name in the dance" – "praise Him with timbrels and dance" (Ps. 149:3; 150:4).

FOLK DANCES. Detailed descriptions have been handed down to us from the period of the Mishnah, from which we learn that there was folk dancing at religious celebrations. During the festival of Tabernacles, there was a daily procession around the altar in the Temple following the sacrifices. The celebrations reached a climax in the dances of the water-drawing festival: "Whoever has not witnessed the joy of the festival of the water-drawing has seen no joy in life. Pious men and men of affairs danced with torches in their hands, singing songs of joy and of praise, and the Levites made music with lyre and harp and cymbals and trumpets and countless other instruments" (Suk. 5:1b). During this celebration, R. Simeon b. Gamliel juggled eight lighted torches, and when he prostrated himself he dug his two thumbs into the ground, bent, kissed the ground, leaped up, and stood on his feet (Suk. 5:3a).

The Book of Judges (21:21), in describing the annual feast in Shiloh tells of the bride-choosing ceremonies. The story of the capture of brides by the surviving men of the tribe of Benjamin indicates that choosing brides during the vineyard dances was a recognized practice in Israel. Others believe it was the celebration of the vines on the Fifteenth of Av. According to the Mishnah, R. Simeon b. Gamaliel declared, "There were no holidays for Israel like the fifteenth of Av and the Day of Atonement, on which the daughters of Jerusalem went out in white dresses which were borrowed so that no one need be ashamed if she had none. And the daughters of Jerusalem went forth and danced in a circle in the vineyards. And what spake they? 'Youth, lift up thine eyes and behold her whom thou wouldst choose'" (Ta'an. 4:8).

In the Song of Songs (7:1), one finds the rather obscure mention of "the dance of the two companies," which seems to have been taken from a traditional wedding dance, and may imply two groups of dancers, a type of dancing that can still be seen at Bedouin festivities in the Middle East. In Talmudic literature (Ket. 17a) the bridal procession was regarded with great deference and was given priority on public thoroughfares requiring even a funeral procession to make way. Danc-

ing in honor of the bride at a wedding was considered an act of religious devotion. Rabbis and scholars performed it joyously, each in his own manner. R. Judah b. Ilai would take a myrtle twig and dance before the bride singing. R. Samuel b. Isaac, even when he was old, would juggle three myrtle twigs as he sang and danced. R. Aḥa danced with the bride on his shoulder (*ibid.*).

In the Diaspora

During the dispersion, the dancing associated with the normal activities of a nation in its own country ceased. The rabbinical authorities often forbade dancing in public. The many discussions in the rabbinical literature and responsa about dancing include opinions ranging from lukewarm compromise to outright hostility. At weddings and bridal feasts and for the Sabbath and particularly on Purim and Simḥat Torah and Lag ba-Omer dancing continued while taking on new forms.

In European Jewry of the Middle Ages, dancing for pleasure was an end in itself. In the medieval ghettos of France, Germany, and Poland, where living quarters were crowded, almost every Jewish community had a wedding-house or *Tanzhaus* for festive occasions. Here the *Tanzfuehrer* (dance leader or caller) was aided by hired musicians. New humorous dances came into use, some of them reflecting the surrounding cultures. Among them were the *Maien Tanz*, *Umgehender Tanz*, *Spring Tanz*, *Judentanz*, *Adam Harischon Tanz*, *DoktorFoist [Faust] Tanz*, and *Fisch Tanz*. In Spain the children played with miniature wooden horses called *kurraj.* These toys resembled the pirate's wooden battle horses that were favorites among the adults.

During the Renaissance, Jews danced for recreation and entertainment. David Reuveni describes the dancing in the home of Jehiel Nissim of Pisa in 1524. They also danced in public as in the procession in Palermo celebrating the marriage of King Ferdinand of Castille and Isabella of Aragon in 1469. In Jewish homes in Italy the Hebrew teacher taught Bible and Talmud, music, and dancing. That Jews engaged extensively in the profession of teaching in that period is emphasized by the recurring laws closing schools of dance and music conducted by Jews, such as the edicts of 1443 in Venice, and 1466 in Parma. There were Jewish dancing teachers in Renaissance Italy, the most distinguished dance master of the time being *Guglielmo de Pesaro, author of a treatise on dance dated 1463. In the 16th century, another Jew, Jacchino *Massarano, won fame as a dance master and teacher in Rome.

Oriental Jewry's Dances

There are many communities, such as the Moroccans, Georgians, Libyans, and Ethiopians, in which spontaneous group folk dancing is important, yet the Jews of Yemen and Kurdistan Jewry are among the most prominent traditional cultures attributing dynamic importance to dance in the daily and festive life of the community.

Dance among the Jews born in Yemen comprises stylistic diversity characteristic of urban and rural settlements as well as including women and men. Dancing usually takes place during ceremonies and celebrations. Fundamentally, the men's dances are composed of steps and figures executed in a very small area. The dominant line is vertical – with agile, springy bending of the knees. The very expressive hands are used for an infinite variety of gestures. One or two singers, rhythm instruments, or hand clapping always accompany the dance but no melodic instruments were used. The women's dances are less variegated and more restrained. They are accompanied by the singing of the dancers themselves, or that of two female musicians who beat the rhythm respectively on copper plate and drum.

The dances of Jews from Kurdistan are distinguished from those of all other Jewish communities in that the men and women dance together. The dances are accompanied by songs and two instruments: the *zurna*, a nasal-sounding wind instrument similar to the oboe, and the *dola*, a large double-headed drum that is beaten on both sides, with one thick and one thin stick. Most Kurdish dances are based on open or closed circles, with couples or soloists taking turns in the center where they improvise figures and steps. Some of the men brandish short swords as they dance and the women wave colorful kerchiefs.

Ḥasidic Dances

With the rise of *Ḥasidism in Eastern Europe in the 18th century, dance assumed great importance for the Jewish masses. *Israel b. Eliezer Ba'al Shem Tov, the founder of Ḥasidism, used dance to attain religious enthusiasm (*hitlahavut*) and devoted adherence to the Almighty (*devekut*). He taught his followers that "the dances of the Jew before his Creator are prayers," and quoted the Psalmist, "All my bones shall say: 'Lord, who is like unto Thee?'" (Ps. 35:10). Ḥasidic dance assumed the form of the circle, symbolic of the ḥasidic philosophy that "every one is equal, each one being a link in the chain, the circle having no front or rear, no beginning or ending." The Ḥasidim would start their dancing in slow tempo, and as the music became faster they held arms upward and leapt in the air in an effort to reach spiritual ecstasy. The accompanying melodies were composed to brief texts from either the Bible or the Talmud. *Naḥman of Bratzlav, great-grandson of the Ba'al Shem Tov, believed that to dance in prayer was a sacred command, and he composed a prayer which he recited before dancing. He and other ḥasidic rabbis called for dancing on all festive occasions and even on the solemn days of the Ninth of Av, Rosh Ha-Shanah, and the Day of Atonement. During the celebrations on Simḥat Torah, the usual processions with the scrolls reached a climax in the rabbi's own dance. Wrapped in a prayer shawl, with a scroll held high in his hands, the rabbi danced with spiritual ecstasy as the Ḥasidim sang and clapped hands in a circle around him. The Ḥasidim danced on Friday nights around the rabbi's banquet table, and at twilight on Saturday they danced with mystic fervor. Ḥasidic dancing has influenced the celebrations at Jewish festivals generally, and has served as the basis and inspiration of choreography on Jewish themes in ballet.

HILLULA DANCES. The Aramaic word *hillula* implies a joyous celebration. Certain Orthodox Jewish sects use the term to describe the annual ritual of visiting the grave of a *ẓaddik* or ḥasid on the actual or reputed day of his death. Among those whose sanctification has been recognized by the entire nation is certainly *Simeon Bar Yoḥai. Lag ba-Omer, the traditional anniversary of his death, has long been commemorated in song and dance by pilgrims gathered at his tomb at Meron, near Safed. Naḥman of Bratzlav ordered his disciples to observe the anniversary of his death by studying a chapter of the Mishnah and dancing at his grave. The Bratzlav Ḥasidim fulfilled his wish for generations at the cemetery in Uman in the Ukraine. In Alkush, in the mountains of Kurdistan (northern Iraq), *Benjamin II, a 19th-century explorer, discovered an unusual form of celebration of Shavuot at the tomb of the prophet Nahum. Pilgrims joined in the reading of the Book of Nahum and circled the shrine singing while women came dancing around the catafalque. The next morning, the men went to the summit of a nearby hill, symbolizing Mount Sinai, read from the Torah, and then descended in warlike procession, clashing weapons and simulating the great combat heralding the coming of the Messiah. The women met the men with dancing and singing to the accompaniment of tambourines.

Life Cycle Dances

BIRTH AND CIRCUMCISION. A person's lifetime, from birth to death, is filled with a succession of special occasions, many of which are celebrated in song and dance. The first is birth. In many Eastern communities, the mother and newborn son were the center of special events. According to popular belief the demons – headed by *Lilith – are jealous of those blessed with a son who would soon fulfill the *mitzvah* of the circumcision; they are increasingly dangerous as the circumcision approaches. In Morocco, Jews would perform the *taḥdid* ceremony. The term is apparently derived from the word *ḥadid*, which means iron, so named in reference to the sword used the night before the circumcision to banish the evil spirits. The sword is brandished in all corners of the house and around the beds of the mother and child, while a selection of biblical verses and appropriate psalms are chanted. In Persia, the father would engage professional dancers for the night before the ceremony. Among the Sephardi Jews of North Africa, the Tray of Elijah, used in the circumcision rite, would be carried in procession with song and dance and lighted candles, from its last place of use to the home of the newborn. In Syria and Lebanon, on arrival of the tray, seven guests would be called on to dance with the tray in turn. In Kurdistan, the Chair of Elijah would be brought in procession from the synagogue and the guests would circle it with dances. In Aden, the guests would take turns to dance with the Chair of Elijah as if dancing with the prophet Elijah himself.

WEDDING. Of all family events, the wedding and its colorful attendant ceremonies probably is the most important in the life of the individual and the community. Dancing in honor of the bride gave rise to the *Mitzvah* dances. A 16th-century source published in Venice described the *Mitzvah* dance as a form of group dance in which the men danced with the bridegroom, and the women with the bride (*Sefer Minhagim*, Venice, 1590). This conformed to the prevalent practice and the restrictions against mixed dancing in Jewish communities. Later publications describe a modified *Mitzvah* dance. Men took turns to dance with the bride after wrapping something around the hand as a symbol of separation (J.M. Epstein, *Derekh ha-Yashar,* Frankfurt, 1704). By the beginning of the 19th century it became the practice for men to dance with the bride while separated by a handkerchief held at opposite ends. In the pattern of the *Mitzvah* dance, the bride was usually seated in the middle of a circle of chosen guests while the *badḥan* ("jester"), serving as master of ceremonies, called each guest by name to step forward and dance with the bride. First honors went to the parents of the couple and to the bridegroom; then scholars and important members of the community took turns. Each would extend to the bride the tip of a handkerchief or receive one from her, then circle with her once or twice to the accompaniment of music from the orchestra. During the wedding festivities, which lasted seven days, guests and neighbors took part in the dancing and even the beggars of the town had the right to dance with the bride. Other dances performed at weddings in East European communities were *Koilich Tanz*, a dance of salutation to the bride and bridegroom performed by a woman holding a twisted white loaf and some salt to wish them abundance; *Klapper Tanz*, a dance with much handclapping; *Redl, Frailachs, Karahod, Hopke*, vigorous circle dances done by men; *Besem Tanz*, a man dancing with a broom used as horse or musket; *Flash* [Bottle] *Tanz*, dance with a bottle on the head; *Bobes Tanz* for the grandmothers; *Mechutanem Tanz* for the relatives of both families; *Broyges Tanz*, a man and a woman portraying quarrel and reconciliation; *Sher, Sherele, Quadrille*, dances based on square and longways dances performed with partners; *Lancelot, Kutzatsky, Bulgar, Pas d'Espagne, Vingerka, Waltz*, forms of popular Russian, Polish, and Romanian dances. At ḥasidic weddings, an old practice was often revived of dancing in peasant costumes, animal skins, or even Cossack uniforms. Groups of young girls would also dance toward the seated bride from three directions singing *Keitzad merakkedim lifnei ha-kallah* ("How we dance before the bride"). The young men, meanwhile, would dance around the bridegroom.

Groups of professional women musicians called *taňaderas* (drummers) in the Balkan Sephardi communities, *mughnniyat* in Yemen, *mutribat* in Kurdistan (poet-singers), and *daqqaqat* (drummers) in Iraq, conducted the ceremonies and sang to the accompaniment of drums, amusing the women and making them dance. In Morocco, a small ensemble of male instrumentalists and a singer accompany the spontaneous dancing of women relatives and guests, performing individually gestures which call to mind the belly dance: the head tilted sideways and a kerchief in each hand. In Yemen, it was considered

an honor for the women guests to dance with the *mazhera*, a bowl containing the henna dye with which the bride's hands were painted.

[Dvora Lapson / Amnon Shiloah (2nd ed.)]

Contemporary Period

Already at the early decades of the 20th century, when interest in ballet began to spread throughout the West, Jewish dancers once more made their mark. The Diaghilev Company, during its two decades in Western Europe (1909–29), had notable Jewish dancers (apart from its famous designer Leon *Bakst). The first to attract attention was Ida *Rubinstein, though she was known more for her beauty than for her skill as a dancer. More important were two women whose careers only began with Diaghilev. The first was Alicia *Markova, who became an internationally recognized ballerina. The second was Marie *Rambert, who founded one of the first classical companies in England. David *Lichine first made his name in Ida Rubinstein's company. The great Anna Pavlova (1881–1951) once confided to her American impresario, Sol *Hurok, that her father was Jewish but asked him not to reveal it before her death (see S. Hurok, *Impresario*, 1946). In Soviet Russia, Jews found opportunities that had been denied them in Czarist times. Outstanding among them was Asaf *Messerer, leading dancer and later teacher of the Bolshoi Ballet, and his sister Shulamith. His niece, Maya *Plisetskaya, became the company's prima ballerina. In America, Jewish teachers like Louis Chalif and Sandor Gluck trained performers for the classical ballet companies that formed in the U.S. in the 1930s and 1940s. Ballet Theater numbered three important women dancers of Jewish descent – Annabella Lyon, Melissa *Hayden, and Nora *Kaye, all notable not only for technical mastery but for the intensity of their dramatic portrayals. In the 1960s Bruce Marks became a leading dramatic male dancer with the company. Jewish choreographers also came to the fore at Ballet Theater. Both Michael *Kidd and Herbert *Ross, best known for their work in Broadway musical comedies, began their careers with Ballet Theater. Also from the ranks of this company came Jerome *Robbins, generally credited with winning attention for American dance in the wider world. Of major importance to American ballet was the work of Lincoln *Kirstein, founder of the New York City Ballet. The Jewish modern dancer has generally made more use of his Jewish heritage than his classical counterpart. Because the modern dance is based on the expression of individual emotion, rather than on the discipline that molds the individual to an established form (like the ballet), there emerged a search for identity through the exploration of ethnic background. Sophie *Maslow created *The Village I Knew*, depicting the life of Jews in Czarist Russia. Pearl Lang utilized her Jewish source in *Song of Deborah* and in *Legend*, based on An-Ski's *Dybbuk*; Helen *Tamiris portrayed with nostalgia the landmarks of Jewish family life in *Memoir*. Another Jewish choreographer, Anna *Sokolow, showed concern with the alienation of the individual in contemporary society. Her *Dreams* was an indictment of Nazi Germany. These Jewish choreographers made strong statements about their people and the plight of all humanity in their troubled times.

[Selma Jeanne Cohen]

Artistic Dance in Modern Israel

The pioneers of artistic dance in Erez Israel in the early 20th century had to create dance "from scratch." *Ausdruckstanz* was the style that took root in a society based on socialist values. This dance style, standing for simplicity and freedom from tradition and opting for personal expression and social involvement, spoke to the heart of this generation of pioneers.

In 1920 Agadati presented a modern dance recital in Neveh Tzedek on the outskirts of Tel Aviv. Wishing to combine Middle Eastern and Western motifs, he turned to ḥasidic and Yemenite dances. Two years after Agadati's recital, Margalit Ornstein, who had immigrated to Erez Israel from Vienna, established the first dance studio in Tel Aviv teaching Dalcroze Eurhythmics and Isadora Duncan's style. Rina *Nikova immigrated in 1924 from St. Petersburg and became ballerina in the Erez Israeli Opera, founded that year by the conductor Mordechai Golinkin. She danced on a floor covered with Oriental rugs, usually accompanied by one man and three women who constituted the corps de ballet. In 1933, she founded the Yemenite Company, where young Yemenite girls performed dances on biblical themes. The company successfully toured Europe between 1936 and 1939.

The early 1930s saw the rise of the second generation of dancers. Among them were the twins Yehudit and Shoshana Ornstein, Deborah *Bertonoff, Dania Levin, and Yardena *Cohen.

Among the immigrants arriving in Erez Israel following the Nazis' rise to power in 1933 were Tille Roessler, who had been a principal teacher at Gret Palucca's school in Dresden, and the dancers Else *Dublon, Paula Padani, and Katia Michaeli, who had danced in Mary Wigman's company. In 1935, at the peak of her artistic success as a notable dancer and creator in the *Ausdruckstanz* style in Central Europe, Gertrud *Kraus decided to immigrate to Erez Israel. She gave many recitals and founded the Peoples' Dance Opera Company, which operated from 1941 to 1947. It was the first modern dance group in the world associated with an opera house.

By the end of the 1940s the third generation of dancers started performing. Prominent dancers included Naomi Aleskovsky, Rachel Nadav, Hilde Kesten, and Hassia *Levi-Agron, who later founded the faculty of dance at the Jerusalem Academy of Music and Dance.

As opposed to *Ausdruckstanz* which was favored among the settler community, classic ballet was rejected as representing bourgeois art. Despite this, Valentina Archipova-Grossman from Latvia founded in 1936 a classic ballet studio in Haifa, giving a start to many teachers. In 1938 Mia *Arbatova, a former ballerina at the Riga Opera, founded her ballet studio in Tel Aviv, in which many choreographers and artists studied.

During World War II, all cultural links to Europe were severed and the dance artists in the *yishuv* entered a period of cultural isolation extending up to Israel's War of Independence and the end of the austerity period of the early 1950s. Thus Israel, in absorbing the Jews as a safe haven from the Nazis, ironically became one of the only countries on the globe where *Ausdruckstanz* became not only acceptable but also dominant.

Side by side with universal issues concerning man and society, the newcomers created dances inspired by the landscape of the country and biblical themes, aiming to express the link between Modern and Ancient Israel. In the newly created State of Israel, many artistic endeavors were supported by the state, but not artistic dance, which was still viewed as elitist, while folk dances were considered acceptably socialist.

In the first half of the 1950s foreign dance groups began to tour Israel. American immigrants such as Ruth Harris, Rina Shaham, and Rena Gluck had brought awareness of American modern dance. Martha Graham's historic visit, by courtesy of the Baroness Bethsabee de Rothschild, struck waves and stimulated Israeli dancers to sign up for studies at her school in New York. At the same time, there was a rapid process of rejecting *Ausdruckstanz*.

At this critical juncture, Sara *Levi-Tannai founded in 1949 Inbal Dance Theater, an artistic Yemenite traditional-culture-inspired dance group. In the 1950s Noah Eshkol had invented the *Eshkol/Wachman Dance Notation. In 1971 Amos Hetz founded "Movements," a group that utilized the Dance Notation as a means of exploring new possibilities in movement.

All attempts to establish a permanent non-funded professional modern dance group had failed. (This was the case with the Israeli Ballet Theater founded by Kraus and the Lyric Theater founded by Anna *Sokolow.) In 1964, however, Bethsabee de Rothschild founded the *Batsheva Dance Company and during the 1970s several dance companies were established, such as *Bat-Dor by Rothschild (1967), the Israeli Ballet by Berta *Yampolsky and Hillel Markman (1968), the Kibbutz Contemporary Dance Company with its artistic director Yehudit Arnon (1969), and Kol Demamah by Moshe Efrati (1978), originally employing both deaf and hearing dancers.

Between 1964 and 1976, all professional dance activities in Israel took place in professional companies. This improved Israeli dancers' technical and teaching standards and their tours placed Israeli dance on the global map. Batsheva and Bat-Dor, the leading companies, competed for important choreographers from around the world and did not readily open their doors to Israeli choreographers; local creativity diminished.

In the mid-1970s, modern dance in Israel began to show signs of weariness. The dramatic, thematic approach as well as the movement idiom and artistic concept became repetitive. At that time, several young female choreographers who had studied abroad brought with them American post-modern influences. Post-modern dance gave the legitimacy to revolt against the canons of modern American dance as performed by the major dance companies in Israel. The first fringe generation included Ruth Ziv-Ayal, Ruth Eshel, Ronit Land, Heda Oren, Dorit Shimron, and Rina Schenfeld.

In 1981 Pina Bausch came to Israel with the Wuppertal Dance Theater for the first time, and the local dance community became familiar with the *Tanztheater* style. For about five years before that visit, experimental dance works had been created in Israel, some of them in the movement-theater style, and Bausch's visit reinforced this tendency, providing local creators with more tools. The creative upsurge following Bausch's visit to Israel was immediate. The following year, Nava Zuckerman founded the Temu-Na Theater and Oshra Elkayam founded her Movement Theater. In the 1980s fringe dance in Israel was enriched by more dancers and creators, including Mirali Sharon (who was among the few choreographers who created for Batsheva and Bat-Dor), Sally-Anne Friedland, Tami Ben-Ami, Yaron Margolin, Nir Ben-Gal, Liat Dror, Amir Kolben, and the Ramleh Dance Company in 1983 (later the Tamar Jerusalem Company).

Flamenco is very popular and there are several prominent dancers such as Silvia Doran, Neta Sheazaf, and Michal Natan. A manifestation of the relation between ethnic and artistic dance is the University of Haifa's Eskesta Dance Theater, which studies Ethiopian dance and creates artistic dance inspired by folklore. The yearly Karmiel Dance Festival in Galilee, established in 1988 and directed by Yonatan Karmon, draws thousands of people who come to dance folk dances for three days and nights. The festival program includes hall performances as well as mass dances in public parks and in the streets; folk dance, ethnic dance, and artistic dance are all combined.

In the past decade, a large group of young experienced Israeli creators and dancers have worked in established big companies and in marginal fringe frameworks. Among the most notable creators and companies are Ohad *Naharin (Batsheva Dance Company), Rami *Be'er (Kibbutz Contemporary Dance Company), Nir Ben-Gal and Liat Dror (The Group), Noa Wertheim and Adi Sha'al (Vertigo Dance Company), Anat Danieli Dance Company, Amir Kolben (Kombina Company), Ido Tadmor Dance Company, Tamar Borer, Yossi Yungman, Emanuel Gat, Noah Dar Dance Company – Holon, Muza Dance Company, Inbal Pinto Dance Company, Barak Marshal Dance, and Yasmeen Godder. The Inbal Dance Theater and the Israeli Ballet are still active. In 1998 Valery Panov established the Ashdod Ballet, where all the dancers are immigrants from the Former Soviet Union.

Increasing fringe activity brought about the establishment of the Shades in Dance project (1984), in which works by young fringe artists were exposed on a professional stage, and in 1990 the first of the Curtain Up events, premieres of works by known fringe creators, took place. In 1989 the Susan Dellal Center was founded, managed by Yair Vardi, and it became the main home of Israeli dance.

[Ruth Eshel (2nd ed.)]

Contemporary American Dance

Modern dance reflected American social conventions at the beginning of the 20th century complete with quotas restricting Jewish participation; this was true of Ruth St. Denis and Ted Shawn's Denishawn Co. and schools. Their main dancers, Martha *Graham, Doris Humphrey, and Charles Weidman, broke with Denishawn over their discriminatory policies. Apparently Isadora Duncan was not so exclusive for she and her staff trained Julia Levien, Mignon Garlin, Ruth Fletcher, and Hortense Kooluris. The Denishawn star, Martha Graham, became a favorite teacher at the heart of the Jewish world in New York's Lower East Side at the Neighborhood Playhouse. Built by Irene and Alice Lewisohn as both a philanthropic and artistic endeavor, the dance classes there offered an entree into modern American culture for the children of immigrants. Jewish teachers at the Neighborhood Playhouse included Blanche Talmud and Senia Gluck-Sendor. Students included leftist Edith Segal, and Helen Tamiris, who later directed the Federal Dance Project of the WPA with her husband/partner Daniel Nagrin, and their dances often dealt with brotherhood and emancipation. Tamiris's company included many Jewish dancers such Mura Dehn, Sue Ramos, and Pauline Bubrick Tish before Tamiris went on to choreograph for Broadway. Edith Segal, on the other hand, used her dances such as "The Belt Goes Red" and "Black and White" as vehicles for social protest at rallies. Other radical leftist dancers, of whom many trained by the German emigrée Hanya Holm, include Miriam Blecher, Lily Mehlman, Edna Ocko, and Muriel Mannings, who created the New Dance Group (both a school and center for performance). Hadassah Spira, born in Jerusalem, came to New York in 1938, created several solos including "Shuvi Nafshi" and headed the Ethnic Dance Dept. of the New Dance Group. In Hanya Holm's dance company, Eve Gentry was the most prominent Jewish dancer.

Of the mainstream modern dance companies, Graham's included the most remarkable number of Jewish dancers. Most notably among them were Anna *Sokolow, Lillian Shapero, and Sophie *Maslow. Among other Jewish Graham dancers were Bertram Ross, Robert Cohan, Stuart Hodes, Linda Margolis Hodes (who later moved to Israel to oversee Graham works in the Batsheva Dance Co), and Pearl *Lang. The drive to assimilate into American culture thrust some into glorifying American folk (such as Maslow's "Dust Bowl Ballads") though many maintained Jewish concerns for social justice and especially rights for workers' and Afro-Americans. Opposition to fascism was seen in dance concerts to support Spanish democracy during in the Spanish Civil War. Even Ruthanna *Boris from American Ballet Theater joined forces with modern dancers for this cause. So, too, did *Habimah-trained Benjamin *Zemach, who worked in both New York and Los Angeles. Bella Lewitzsky did not use Jewish material in her choreography or classes nor did Gloria Newman. Anna *Halprin (a.k.a. Ann), long an experimentalist with dance improvisation, community, and healing, was driven by social concerns. Her work for her 80th birthday in 2000, "Memories from my Closet, Grandfather Dance," has Jewish references and *klezmer* music. After World War II, both Pearl Lang and Sokolow did solos using Jewish male prayer symbols such as *tefillin*.

The Nazi regime destroyed all forms of dance by the mid-1930s: professional theater dance, dance in Yiddish theater, and dance in the folk and religious life of the Jewish communities of Europe. Stars such as Ruth Abrahamowitsch Sorel (trained by the German expressionist dancer Mary Wigman) performed at the Berlin State Opera house. Margarete Wallmann, who directed Wigman's Berlin school and that of the Vienna State Opera, fled Europe. So did Gertrud *Kraus, who immigrated to Palestine in 1935. Performers from Kraus's Viennese Company who escaped and reached America during World War II included Fred *Berk, Katya Delakova, and Claudia Vall, who taught dance in Hollywood after a brief touring stint with Berk. After partnership performing with Katya Delakova and their Jewish Dance Guild, Berk established the Jewish Dance Division at the 92nd St. Y., whose emphasis was on Jews living a pluralistic life in the U.S. Joyce Mollow, a modern dancer, was also concerned with Jewish themes; a yearly lectureship at Queens College on Jewish dance was established in her memory. Hans Wierner or Jan Veen, another dancer from Kraus's Co., had settled in Boston and taught at the New England Conservatory of Music. Truda Kashmann, also trained by Wigman, escaped Germany and directed a studio in Connecticut and trained Alwin Nikolais, a gentile talent who made an important home for dance in the Lower East Side. His lead dancers Murray Louis and Phyllis Lamhat became teachers and company directors in their own right. Pola Nirenska who was expelled from the Wigman Company in 1933 with the other Jewish performers, returned to her native Poland, escaped to London, and then the U.S., where she devoted herself to choreographing and teaching. Judith Berg, another Polish dancer trained by Wigman, was known in Warsaw for her dances on Jewish themes. She choreographed and danced the role of death in the Polish film of *The Dybbuk*. She escaped to the Soviet Union and with her partner Felix Fibich toured the provinces with a Yiddish revue. She reached the U.S. in 1950 where she continued to choreograph and perform in New York's Yiddish theater.

Elsie Salomons, who had danced in Kurt Joos's German Co., reached Canada, where she trained her niece Judith Marcuse who became an established performer and choreographer in Canada.

Eliot Feld, trained in ballet, performed in Jerome *Robbins' *West Side Story*, and later created "Tzaddik" for his contemporary Feld Ballet, though he is not known for dances on Jewish themes. His mentor, the prolific genius choreographer Robbins, and his collaborators, including Leonard *Bernstein, first considered portraying Jews and Catholics in conflict for Robbins' remake of the Romeo and Juliet tragedy, *West Side Story*. However, they changed their minds and shied away from religious conflict in favor of ethnic gangs. In 1964, Robbins directed and choreographed *Fiddler on the Roof* an enormous Broadway hit, which ran for almost eight years. On

another occasion he turned to a Jewish theme creating "The Dybbuk Variations" for the New York City Ballet (1974); Sophie Maslow also choreographed her own "Dybbuk" as did Pearl Lang. Other choreographers have also been drawn to this spiritual story, including Bejart, whose company performed it in Israel. The Pilobolus Company, which specializes in group choreography, occasionally touched on a Jewish theme, especially when commissioned by the National Foundation for Jewish Culture, which sponsored their company piece called "Davenin." An offshoot of Pilobolus was Momix with Daniel Ezralow, which has choreographed for Batsheva.

Arnie Zane (1948–1988) collaborated with African-American Bill T. Jones and Zane occasionally used Jewish references in his work. Meredith Monk uses her own original music as well as choreography to encompass Jewish experience such as her epic to immigration, *Ellis Island*, or her ode to loss in World War II called *Quarry: An Opera* and *Book of Days* about the Middle Ages and Jewish life then and now. Liz Lerman has had a multi-generational, multi-racial dance company, the Liz Lerman Dance Exchange, since 1976 and often draws on Jewish themes for her dances including *The Hallelujah Project* and "Shehehianu." Like Monk, she was a MacArthur Prize recipient, a mark of American achievement, and in 2005 Lerman was commissioned by Harvard Law School to do a dance project on the Nuremberg Trials and genocide. Margalit *Oved, Ze'eva Cohen (both Israeli-American choreographer/dancers) with Risa Jaraslow, Ruth Goodman, Beth Corning, and Heidi Latsky are some who bring their Jewish experiences into their works.

David Gordon, David Dorfman, Danial Shapiro, and Stuart Pimsler use vestiges of burlesque and vaudeville in their humorous look at themselves as Jewish men through their own choreography, using autobiography and their Jewish families as a base for their choreography.

[Judith Brin Ingber (2nd ed.)]

Russian and European Dance

At the beginning of the 20th century, not a few Jews in Russia occupied a prominent place in classical ballet; yet, many of them did not reveal their Jewish origin. Sol *Hurok, the impresario of the great and most famous Diva Ana Pavlova (1881–1931), reports in his *Memories* that she told him she was the illegitimate daughter of the known Jewish banker Lazar Polakov, allowing him to disclose her origin only after her death.

The outstanding classical dancer, choreographer, and teacher Asaf *Messerer (1903–1992) belonged to a great artistic family. He was a legendary premier dancer with the Bolshoi Ballet Theater, where he performed the major roles in the most famous classical ballets. He also distinguished himself as a great choreographer and teacher, and staged ballets in Belgium. Hungary, and Poland, and he wrote two books on ballet technique.

His sister Sulamith Messerer (1908–) was a prima ballerina with the Bolshoi, where she danced leading roles in the 1930s and 1940s, often partnered by her brother Asaf. She moved to London in 1980 and was a ballet guest teacher with leading companies. Her niece, daughter of the cinema actress Rakhail (Raisa), is the legendary ballerina Maya *Plisteskaya (1925–), one of the most famous names in the history of ballet. She danced in many capitals and served as guest director at the Rome opera ballet (1984–86) and with Spanish National ballet (1987–90). She visited Israel several times.

In his autobiography *Dance – Imagination – Time*, Asaf Messerer refers to several Jewish dancers who began their career together with him, including Miriam Reisen, Lubov Bank, Raisa Stein, Feina Leisner, and others; they are all included in the *Russian Encyclopedia of Dance*.

A prominent and greatly gifted dancer was Michael Gabovitch (1905–1965), who danced leading roles with the Bolshoi, having for many years as a dance partner Galina Ulanova (1910–). In the years 1954–58 Gabovitch was the director of the Moscow choreographic school, and he is the author of books and articles on dance. His son, also called Michael, danced as soloist with the Bolshoi.

The star Alla Schelest (1919–1999) was for 25 years a tenured soloist with the St. Petersburg's Maryinsky Theater and the most appreciated dancer of the famous Jewish choreographer Leonid Yacobson (1904–1973).

The ballerina Nina Timofeyeva (1935–) made her debut with the Kirov-Maryinsky Theater in 1953 when she was 18 years old. In 1956 she became the leading soloist with the Bolshoi and was distinguished by her brilliant technique; she also made her mark in modern ballet. In 1991, she and her dancer daughter immigrated to Israel she and pursued her career in Jerusalem, first at the Rubin Academy and later, along with her daughter, she founded her own ballet company and school.

The famous Russian-born dancer Valery *Panov, who was a star with Kirov-Maryinsky in Moscow immigrated with his wife, dancer Galina, to Israel in 1974. After dancing in several Israeli venues, Valery became art director of the opera ballet in Bonn (1992–97) and also worked in South Africa. At the end of the 1990s he returned to Israel and founded his own ballet company and school in the town of Ashdod.

Another famous Russian dancer who immigrated to Israel was Alexander Lifchitz. He was a soloist with Kirov-Maryinsky Theater (1954–74), where he successfully distinguished himself with brilliant performances of character dances. After his immigration to Israel he directed a ballet school in Jerusalem until his premature death in 1998.

The prevailing antisemitism in Soviet Russia imprinted foremost the major theaters, which refused to enroll many excellent Jewish dancers; those who were lucky enough to be admitted preferred to conceal their Jewish origin; one finds among them such Jewish names as Violetta Bobet, Alexander Klein, Ella Fein, and others. Other dancers moved to cities like Novosibirsk, Kiev, and Riga, where they found recognition and favor as leading dancers

The choreographer and ballet director Boris Eifman (1946–) belongs to the generation of Soviet ballet masters

who tried at the end of the 1960s and beginning of the 1970s to change traditional Russian ballet and make it more contemporary. Eifman, a spiritual disciple of Leonid Yacobson, endowed with a creative style of his own, is considered an important force in contemporary Russian culture as the director of his own dance theater.

Among the scholars and critics of Soviet dance, the Jews occupied important place. Akim Wolinsky (born Haim ben Lev Flakser in 1861) became famous among the most influential thinkers and writers on Russian ballet art. He was the author of several books and articles on all major personalities in dance. In 1921, he founded and directed a Russian dance school in Petersburg, where many of the prominent Soviet dancers studied. Another remarkable writer and critic is Vadim Gaievski, author of books on such celebrated artists as Petipa, Balanchine, Ulanova, Plisteskaya, and others.

After World War I and the Russian Revolution, many Russian dancers and choreographers settled in Central and Western Europe and where they enjoyed intense activity as dancers and choreographers. The most prominent were those associated with Diaghilev's *Ballets Russes*. The most famous among them is Ida *Rubinstein (1885–1960), who was the star of this prestigious company in the years 1909–11 and 1920. Rubinstein also founded and directed a company of her own (Paris, 1911–13) and then a second one with Bronislava Nijinska as choreographer (Paris, 1928–29, 1931, 1934).

Another outstanding artist is David Lishem (born David Lichtenstein in 1910). Although he left Russia at an early age he absorbed the Russian ballet tradition via L. Yegorva and Bronislava Nijinski, with whom he studied. He made his debut as a soloist with Ida Rubinstein's company and had as stage partner Ana Pavlova; he excelled in character dances. He immigrated in 1940 to the U.S. and danced there with the Ballet Theater.

Mentioned should be also made of the legendary Lituanian Sonia *Gaskel, who studied in Russia and Paris and founded the famous National Dutch company in Holland.

In her book *The Blue Maiden Dancer*, Nina Tichonova describes admirably the Parisian and Berlin's ballet in the period between the two world wars, mentioning the leading Russian names, which include not a few Jews. She also refers to the extraordinary phenomenon of the Russian Romantic Ballet Theater in Berlin, whose founders were Anatoli and his son Andre Shaikovitch, who also wrote books on ballet in French and German.

[Yossi Tavor (2nd ed.)]

The dancer, teacher, choreographer, and ballet director Marie (Cyvia Rambam) Rambert (1888–1982) was born in Poland and came to Paris in 1906 where she studied free dance with Raymond Duncan and later eurhythmics with Jacques Dalcrose in Geneva. In 1913, she was dancer and teacher of eurhythmics with Diaghilev's *Ballets Russes* and the musical adviser of dancer and choreographer Vaslav Nijinski when he created Stravisky's *Sacre du Printemps*. In 1912, she settled in London, where she pioneered classical ballet and was founder and director of the Rambert Ballet School (1920) and the Ballet Rambert (1935). Among her honors are the Queen Elizabeth Coronation Award (1956); Chevalier, Légion d'honneur (France, 1957), and Golf medal of the Order of Merit (Poland, 1979).

Another outstanding ballerina is the British-born Alicia (Alice Lilian Marks) *Markova (1910–2004), who danced at the Ballet Rambert. At the age of 15 she joined Diaghilev's *Ballets Russes*. Markova created many major roles in the ballets of Balanchine and in the 1950s was the prima ballerina of the London Festival Ballet. She was made a "Dame" (female equivalent of knighthood) by order of Queen Elizabeth.

The South African dancer, choreographer, and ballet director John *Cranko (1927–1973) came to London in 1945 and joined the Sadler Royal Ballet. This master of various styles of ballet was the artistic director of the Stuttgart Ballet and chief choreographer of the Bavarian State Opera in Munich.

The French dancer and choreographer Jean *Babilée (Gutmann), born in 1923, showed astonishing technique and natural grace as a child. He was the star of Roland Petit's *Les Ballets des Champs Elisées* (1945–50) and in 1955 earned the gold star for best dancer at the International Festival Dance in Paris.

DANGERFIELD, RODNEY (1921–2004), U.S. comedian. Born Jacob Cohen in Long Island, N.Y., Dangerfield was best known for his catchphrase, "I don't get no respect," and his self-deprecating routines which featured him sweating and fidgeting with his necktie. Dangerfield first started writing jokes at 15 and was performing at amateur nights by 17. In 1941, when he was not working as a singing waiter, he was performing as a stand-up comedian in nightclubs under the name Jack Roy. He married singer Joyce Indig in 1950 and one year later decided to quit the comedy circuit to get a steady job selling aluminum siding in New Jersey. "I dropped out of show business, but nobody noticed," he remarked. After the couple divorced in 1961, Dangerfield went back to stand-up, working a day job in an office and performing in clubs at night. Dangerfield eventually auditioned for television host Ed Sullivan, who immediately signed him to his program. He made 16 appearances on Sullivan's variety show and more than 60 appearances on *The Tonight Show* with Johnny Carson. He opened the comedy club Dangerfield's in Manhattan in 1969, and spent more than 20 years as a Las Vegas headliner. The 1970s found Dangerfield releasing books, *I Couldn't Stand My Wife's Cooking So I Opened a Restaurant* (1972) and *I Don't Get No Respect* (1973), and a variety of comedy albums. In 1978, he was selected as commencement speaker for Harvard University. His screen debut came with *The Projectionist* (1971), but it was his role as real estate developer Al Czervik in *Caddyshack* (1980) that launched his film career and which he followed with such features as *Easy Money* (1983), *Back to School* (1986), *Rover Dangerfield* (1991), *Ladybugs* (1992), *Natural Born Killers* (1994), *Meet Wally Sparks* (1997), and the Adam Sandler film *Little Nicky* (2000). Dangerfield won a Grammy Award in 1981 for his comedy album *No Respect*, a lifetime achievement award during the American Comedy Awards in 1994, and Comedy Central's first Comedy Idol award in 2003. In 2004, he released an album of love songs, *Romeo Rodney*, and published his autobiography, *It's Not Easy Bein' Me*. He died in Los Angeles from heart surgery complications.

[Adam Wills (2nd ed.)]

DANGLOW, JACOB (1880–1962), Australian rabbi. Born in England, Danglow was trained at Jews' College, London. In 1905 he became minister of St. Kilda Hebrew Congregation, Victoria, where he officiated for 52 years. Danglow served as chaplain of the Australian forces in France in World War I and later as senior Jewish chaplain in Australia. He was active in many communal institutions, especially the Montefiore Home for Aged Jews and the Jewish Young People's Association, and represented the community in many civic affairs, especially the hospital fund. Staunchly opposed to "political Zionism" prior to the establishment of the State of Israel, after Israeli independence Danglow became a champion of the Jewish state and visited it in 1956. Danglow was widely regarded as the most important Jewish religious leader in Australia, and presided at the state funeral of Australia's great Jewish general, Sir John Monash, in 1931, when one-third of Melbourne's population lined the streets of the funeral procession. John S. Levi's *Rabbi Jacob Danglow: 'The Uncrowned Monarch' of Australia's Jews* (1995) is a comprehensive biography.

[Israel Porush / William D. Rubinstein (2nd ed.)]

DANGOOR, EZRA SASSON BEN REUBEN (1848–1930), Iraqi rabbi. Dangoor studied in Baghdad and was a pupil of Abdallah *Somekh. Although he devoted much of his time to religious activity, he obtained his livelihood from business. From 1880 to 1886 he was in charge of documents issued by the Baghdad *bet din*. In 1894 he was appointed rabbi of Rangoon, Burma, but ill health compelled him to return a year later to Baghdad, where he was appointed chief of the *shoḥatim*. During 1923 to 1928 he served as chief rabbi of Baghdad but resigned office in consequence of communal disputes. Many books were published under his editorship in the Hebrew press he established in Baghdad in 1904, including festival prayer books according to the Baghdad rite; *Seder ha-ʿIbbur,* calendars for the years 5665–5683 (in other presses until 5691); *Birkhot Shamayim* (1905), on the blessings for precepts and for pleasures; *Sefer ha-Shirim* (1906), containing poems by different authors. There remain in manuscript in the Sassoon collection responsa, a history of Baghdad from the years 1793 to 1928, homilies, commentaries on biblical books, laws, customs, poems, and **piyyutim*. After his death, his children published a memorial volume (1931).

[Abraham David]

DANIEL (Heb. דָּנִיֵּאל, דָּנְאֵל, "God has judged, or vindicated").

(1) An evidently pre-Mosaic saint (Ezek. 14:14, 20) and sage (28:3) and, as such, of a type conceivable in any land (14:3ff.) and assumed by Ezekiel to have been heard of by the pagan prince of Tyre (28:1–3). The publication of the Ugaritic epic of Aqhat in 1936 showed the probability that the Phoenicians had a tradition about a man Daniel who was famed for both piety and wisdom. Aqhat's father, *Dnil*, is a devout worshiper of the gods and has their ear (especially that of Baal); he is also one who, either as an elder or king, "judges the case of the fatherless, adjudicates the cause of the widow." As Cassuto pointed out, this requires not only goodness but also wisdom (cf. I Kings 3:5ff.). It is perhaps no accident that in the great majority of Ezekiel manuscripts the name of this Daniel is written without *yod* (cf. the Ugaritic *dnil*, whereas the name of all the other biblical Daniels is written דניאל). It may be assumed that in the tradition known to Ezekiel this Daniel figured as a monotheist.

(2) The name of David's second son according to I Chronicles 3:1 (according to II Sam. 3:3, Chileab).

(3) The hero of the Book of Daniel; see the Book of *Daniel.

(4) A priest of post-Exilic times (Ezra 8:2; Neh. 10:7).

[Harold Louis Ginsberg]

In the Aggadah

Daniel (no. 3 above) was a scion of the House of David. He and his three companions, Hananiah, Mishael, and Azariah, were eunuchs at the royal palace and were thus able to exonerate themselves of the charges of immorality brought against them (Sanh. 93b; PdRE 52). Although the *Mekhilta de-R. Ishmael* (Pisḥa, 1) and Josephus (Ant., 10:266ff.) count Daniel among the prophets as do Christian sources (e.g., Matt. 24:15), the Talmud denies that he was a prophet. However, he was possessed of such great wisdom that he outweighed all wise men of the world (Yoma 77a). He was an expert in the interpretation of dreams and *Nebuchadnezzar trusted him at once (Tanḥ. B., Gen. 191). Despite the many dangers and difficulties at the royal court, Daniel conducted himself with the utmost piety. He refused to partake of wine or oil of the gentiles (Av. Zar. 36a). He was prepared to sacrifice his life rather than omit reciting the statutory prayers thrice daily, and he was cast into the lion's den as a punishment when the nobles surprised him reciting the *Minḥah* prayer. The mouth of the den was sealed with a huge stone which had rolled from Palestine to Babylon. Upon this stone sat an angel in the shape of a lion to protect Daniel against harassment by his enemies. When the following morning the king went to see Daniel's fate, he found him reciting the *Shema* (Mid. Ps. to 66). On another occasion Nebuchadnezzar tried to induce Daniel to worship an idol into whose mouth he placed the diadem (*ẓiẓ*) of the high priest bearing God's ineffable name, as a result of which the idol uttered the words "I am thy Lord." Daniel, however, did not yield. He conjured the idol not to desecrate God's name, whereupon the *ẓiẓ* passed to Daniel's mouth and the idol crumbled to pieces (Song. R. 7:9).

God revealed to Daniel the destiny of Israel and the date of the Last Judgment, which was not even revealed to Haggai, Zechariah, and Malachi (Dan. 10:7). Daniel, however, forgot the *keẓ* ("end") revealed to him (Gen. R. 98:2). Despite the fact that Daniel is lauded for his virtues of piety and charity (ARN[1] 4, 11), it is also stated that he was not rescued from the lion's den because of his own merits but through the merits of Abraham (Ber. 7b). Moreover, some regard him as a sinner who was punished because he gave good counsel to Nebuchadnezzar (BB 4a). Daniel is variously identified with the eunuch Hathach (Esth. 4:5, 6; Meg. 15a; BB 4a), Memucan (Esth. 1:16; Targ. Sheni), or Sheshbazzar (PR 6:23, *et al.*). According to *Josippon it was owing to Daniel's merit that Darius issued the orders that Jews should return to Palestine and rebuild the Temple (ch. 24). Daniel asked the king to appoint *Zerubbabel in his place. Opinions differ as to whether Daniel accompanied the returned exiles to Palestine. Some state that he returned after the proclamation of *Cyrus (Song. R. 5:5) while later sources (e.g., Josippon 9d–10a) state that he retired to *Shushan where he lived a pious life until his death and was buried there. The Talmud mentions "a synagogue of Daniel" situated three miles from the city of Barnish (Er. 21a).

In Islam

Muslim legend is acquainted with both biblical Daniels; the wise man mentioned in Ezekiel 14:14 and 28:3, and the hero of the Book of Daniel. Among the commentators of the Koran, some interpret the verses of Sura 85:4–5, "The fellows of the pit were slain," and "The fire with its kindling," as referring to Daniel (Dāniyāl) and his colleagues in the fiery furnace; nevertheless, this is only one of the many explanations to these obscure verses.

[Haïm Z'ew Hirschberg]

In the Arts

The hero of the Book of Daniel early attracted the attention of writers. One of the first examples of Anglo-Saxon poetry is a seventh-century paraphrase of the Book of Daniel, and he also appears later in the English miracle play, *Ordo Prophetarum*. In the 17th century the German tragicomedy *Der siegende Hofmann Daniel* (1671) dealt with the theme. After the English writer Hannah More, whose *Sacred Dramas* (1782) included a play about Daniel, literary treatments of the story became rare. Two 20th-century reinterpretations were *Daniel* (1907) by the Polish dramatist Stanislaw Wyspiański, and "*The Daniel Jazz*" (1920), the title poem in a collection by the U.S. writer Vachel Lindsay which imitates the dramatic sermons characteristic of the Afro-American churches.

In art, Daniel was a far more familiar figure, both because of the dramatic, visual quality of the biblical episodes in which he figures and because of his adaptability to Christian typology. Daniel in the lion's den was thought to prefigure Jesus in his sepulcher and was also seen as representing the saved soul, or man under God's protection. Daniel is usually portrayed as a young, beardless, and often naked youth, sometimes wearing the Phrygian bonnet. He is seen flanked by his lions, and occasionally accompanied by the ram of his apocalyptic vision. He is often associated with other figures from the Book of Daniel (and its apocryphal addition) in a narrative cycle: giving judgment in the case of *Susannah and the Elders; preceded in the ordeal by the Three Hebrews; and twice cast into the den of lions, under both Darius and Cyrus. The cycle of Nebuchadnezzar's dreams interpreted by Daniel shows the prophet more by implication than by presence, as does the apocalyptic cycle. A vast number of works of art depict the Daniel narrative in full, in part, or in isolated episodes. Daniel appears on fourth-century sarcophagi, fifth and sixth-century church doors, woven cloths, and belt-buckles in Spain, Germany, and Italy. In the seventh century, he is seen in the *Cosmas Indicopleustès* (Vatican Library) and, from the ninth century onward, on capitals and portals throughout the Romanesque world. Examples in miniature painting are to be found in the 11th-century Apocalypse of Saint-Sever (Paris,

Bibliothèque Nationale) and Spanish Beatus manuscripts, and later in 14th- and 15th-century Bibles. After the 13th century the theme was less popular. There is a Tintoretto Daniel in the Scuola di San Rocco, Venice, and Rubens painted Daniel and the lions (1618). Bernini's sculptures of Daniel and Habakkuk (1656) are to be seen in the Chigi chapel in S. Maria del Popolo, Rome. Delacroix painted Daniel and the lions in 1849. The Nebuchadnezzar dream cycle is illustrated by Guido Reni's 17th-century painting in Santa Maria Maggiore, Rome, and the apocalyptic cycle is referred to by Rembrandt in his "Vision of Daniel" (1650, Berlin). Some other portrayals are Michelangelo's fresco in the Sistine Chapel of the Vatican, and an 18th-century statue by Aleijadinho (Francisco Antônio Lisbôa) at Congonhas do Campo, Brazil. The subject of the Three Hebrews in the fiery furnace occurs in frescoes in Roman catacombs of the third and fourth centuries C.E. In the Middle Ages this theme is found in sculpture, mosaics, and manuscripts as well as frescoes. The three men were taken to represent the elect protected from all perils, including the flames of Hell. In early representations they are often nude, despite the fact that the Bible states that they were thrown into the flames fully clothed. They are also often depicted as children, their hands raised in an attitude of prayer.

In Music

The dramatic episodes of the "Daniel cycle," including and often combining the canonical and apocryphal parts, have always been favored by composers. While the music of the 12th-century Daniel play by Hilary of Poitiers has not survived, the contemporary *Ludus Danielis* from Beauvais Abbey is completely "scored" in the manuscript (British Museum, Ms. Egerton 2615, fols. 95r–108r) with a combination of composed songs and traditional church melodies. This has become known through a recording directed by Noah *Greenberg. Notable settings of the Daniel cycle are Caldara's opera and Hasse's oratorio (both presented at the Viennese court in 1731); Darius *Milhaud's *Les Miracles de la foi* (1951), a cantata for tenor, chorus, and orchestra based on passages from the Book of Daniel; and Benjamin Britten's modern "parable for church performance," *The Burning Fiery Furnace* (1966), with text by William Plomer. Vachel Lindsay's "*The Daniel Jazz*" was set to music in the jazz idiom by Louis *Gruenberg, for tenor and eight instruments (1923); and by Herbert Chappell (1963), for unison voices and piano. The Song of the Three Children (*Canticum trium Puerorum*, Vulg. Dan. 3:52–90), included in the Catholic liturgy, has inspired many fine musical settings. There is a notable setting by Josquin des Prés (15th century); a polychoral structure by Heinrich Schuetz and Michael Praetorius (17th century); and Karlheinz Stockhausen's *Gesang der drei Juenglinge* (1956) which dissolves and reconstitutes the human utterance by electronic manipulation. On the popular level is *Shadrack, Meshack, Abednego*, a composed spiritual by Robert MacGinney (often thought to be authentic), which was made famous by the jazz trumpeter and singer Louis Armstrong.

DANIEL, BOOK OF, a book of the third division of the Hebrew Bible, the Hagiographa, named for a man Daniel whose fortunes and predictions are the subject of the book.

DIVISIONS AND CONTENTS

When the Book of Daniel is examined for content and literary character, it falls naturally into two roughly equal parts which may be designated Daniel A and Daniel B. Daniel A (chs. 1–6) comprises six stories, told in the third person, about the trials and triumphs of Daniel and his three companions; while Daniel B (chs. 7–12) consists of four accounts, cast in the first person, of as many apocalyptic revelations received by Daniel.

Summary of Daniel A (Dan. chs. 1–6)

CHAPTER 1. Nebuchadnezzar, the king of Babylon, took back with him from Judah several boys of good family, handsome looks, and promising intellect, and charged his grand vizier with the task, to be completed in three years, of rearing and educating them "in booklore and in the Chaldean tongue" (1:4) in order to qualify them for the king's service. Four of these boys, Daniel, Hananiah, Mishael, and Azariah – renamed Belteshazzar, Shadrach, Meshach, and Abed-Nego by the vizier – were so pious and so ingenious as to make an arrangement with the lower official to whom the vizier had assigned them whereby they exchanged with him the excellent rations they received from the king for raw vegetables. Finding, after a ten-day trial, that the four lads looked even healthier than the others, the official continued the arrangement indefinitely. At the end of their period of training, the king found them superior not only to their fellow students but to all the magicians and enchanters of his realm.

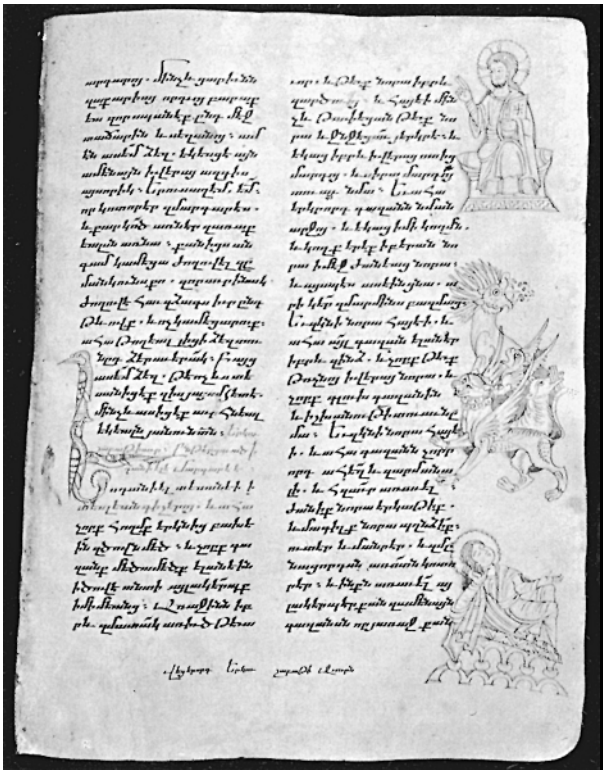
CHAPTER 2. Daniel came to the king's notice even before the three years were over. The king had had a dream which greatly perturbed him. He burned with eagerness to know what it meant, but reasoned that he could be sure that an interpretation was correct only if the interpreter was able to narrate the dream itself without being told it. Since none of his masters of occult lore was able to do this, the king ordered his captain of the guard to execute all the savants of Babylon. The officer proceeded to do so, and since Daniel and his companions came under the definition of savants, they were also to be put to death. On asking the captain of the guard for the reason

and receiving his answer, Daniel persuaded him to discontinue the slaughter for a few hours and promised that at the end of that time he would come up with the answer to the king's questions. Then he and his companions prayed, and the solution was revealed to Daniel in a dream. Brought before the king, Daniel narrated the king's dream and interpreted it to mean that Nebuchadnezzar's domination of the whole world would be followed by the successive world ascendancies of three other monarchies, after which God would set up a fifth monarchy that would destroy the four previous monarchies and would endure forever. On hearing this, Nebuchadnezzar was so filled with admiration for Daniel and his God that he appointed Daniel both supreme administrator of the whole province of Babylon and supreme prefect over all the savants of Babylon; but at Daniel's request the supreme administrative office was divided among his three companions, while he retained only the advisory one (2:49).

CHAPTER 3:1–30. As high-ranking administrators, the three companions were affected by the decree which Nebuchadnezzar issued to all the top functionaries (3:2–3) to bow down to the image which he set up, but they ignored it. Certain Chaldeans thereupon denounced them to the king. They were doubtless functionaries, subordinate – and naturally jealous – colleagues of the Jewish administrators-in-chief. Nebuchadnezzar ordered Shadrach, Meshach, and Abed-Nego thrown into a blazing furnace; but not even their clothes were singed, and again he expressed his admiration for the God of the Jews and even further exalted the three Jewish top officials.

CHAPTERS 3:31–5:30. As for Daniel the sage, he interpreted a second dream of Nebuchadnezzar, the one that portended the king's seven years' lycanthropy, and a portent of a different nature – the famous writing on the wall – concerning Nebuchadnezzar's successor Belshazzar, who had not been aware of Daniel's extraordinary gifts until informed by the queen mother. Belshazzar thereupon bestowed upon Daniel, not an academic or advisory office, but the exalted administrative one of triumvir.

CHAPTER 6. Daniel remained a triumvir (though with a different title) under Belshazzar's successor Darius the Mede, and so distinguished himself in this capacity that the king placed him in sole charge of the empire. Then it was Daniel's turn to become the butt of professional jealousy. His rivals, taking advantage of Daniel's uncompromising piety, maneuvered the king into a position in which he was compelled, to his dismay, to order Daniel thrown into a lion pit. (The plotters persuaded the king to promulgate a decree forbidding anyone to address a petition to any being but the king for 30 days: a Jewish misunderstanding of the Babylonian superstition that food offerings – and hence the accompanying prayers – offered to one's personal god in the month of Tevet were unlucky. Surely a Jew's conscience need not deter him, in such circumstances, from abstaining for 30 days from all prayer, let alone ostentatious prayer; but the plotters knew that Daniel would



Illustrations from a missal, south Armenia, 1331, showing Daniel sleeping. Jerusalem, Library of the Armenian Patriarchate, Ms. 95, fol. 142r.

under no circumstances dispense with praying on his knees three times daily at open windows – not in a New York penthouse but less than ten feet above the ground.) After expressing to Daniel the hope that the God he served so faithfully will save him, the king departs for a supperless evening and a sleepless night in his palace. At the crack of dawn, he hurries back to the edge of the pit and calls in a broken voice, "O Daniel, servant of the living God, has the God whom you constantly worship been able to save you from the lions?" And what is his joy to hear Daniel's voice and be reassured! He promptly orders Daniel pulled up and his accusers cast down, and these the beasts give short shrift. Darius issues a decree that Daniel's God must be treated with awe and reverence throughout his realm, and Daniel continues to serve with distinction as vizier to Darius the Mede and to Cyrus the Persian.

Summary of Daniel B (Dan. chs. 7–12)

CHAPTER 7. The story of Daniel here reverts to the Chaldean period, the first year of King Belshazzar. The experience of Daniel related in this chapter has nothing to do with his character and career as a savant who interprets dreams and portents for kings or as a minister of state who is the victim of his rivals' intrigues. Instead, Daniel's role is that of an apocalyptist. Here, Daniel himself has a disturbing dream, and while the fact is stated in 7:1 in the third person, it is also stated there that Daniel himself wrote an account of the dream, and 7:2 ff. (apart from the introductory phrase at the beginning of verse 2) is simply the text of Daniel's first person narrative.

(The next two revelations, chapters 8 and 9, are narrated by Daniel in the first person without a third person introduction.) Daniel's dream in 7:1, like those of Nebuchadnezzar in chapters 2 and 4, is symbolic, but Daniel is as much at a loss to interpret the symbols as Nebuchadnezzar was to interpret those in his dreams; in the dream itself, however, Daniel asks an angel to enlighten him, and the angel obliges. In doing so, the angel sketches a succession of four transient monarchies and a fifth enduring one, similar to that which the sage Daniel sketched in his interpretation of Nebuchadnezzar's dream in chapter 2. In chapter 7, however, there is the additional feature of judgment and retribution: the beast which represents the first kingdom is annihilated ("taken from the earth") at the end of its period of ascendancy (verse 4, apart from the last two clauses, which are out of place – see below); the fourth, which is of a particularly oppressive character (7, 23) is annihilated at the conclusion of a solemn judgment by the divine tribunal (9–11); but the middle two are suffered to live on even after their loss of dominion (12). It is also made clear here that the fifth, world-wide, and everlasting, empire will be ruled by a people of "saints of the Most High," i.e., the Jews.

CHAPTER 8. Daniel relates that in the third year of the reign of Belshazzar he had a vision (rather than a dream). Again the features are symbolic, and their symbolism is explained to Daniel by an angel. Again the explanation involves a succession of monarchies, and this time they are identified by name: symbolized by a ram with two tall horns that sprout successively, the later one taller than the first, are the two Iranian monarchies, the Median and the Persian respectively. Symbolized by a he-goat with first one great horn which is broken and then four great horns that sprout in its stead, are respectively the united Greek world-kingdom (i.e., that of Alexander the Great) and its successor kingdoms; and symbolized by a smaller horn which branches off from one of the four successor horns is a particular king of one of the successor kingdoms (i.e., the Seleucid king Antiochus IV Epiphanes). This branch horn is represented as performing certain antics culminating in the banishing of the *tamid* ("the constant," i.e., the daily burnt offerings) from the "stand" (i.e., altar) of "the Commander of the Host [of Heaven]" (i.e., God) and the setting up of an "offense" on that stand (11–12).

CHAPTER 9. The apocalypse, dated in the first year of Darius the Mede, is neither a symbolic dream nor a symbolic vision. The angel Gabriel visits Daniel and communicates a "word" to him (9:21–24). As it happens, the designation *angelus interpres* would not be a misnomer if applied to Gabriel in this case, for if he does not interpret symbols, he does interpret Scripture. The occasion of his coming is Daniel's prayer for enlightenment on the meaning of Jeremiah's prediction (Jer. 25:11–12; 29:10) that "the ruins of Jerusalem" (Dan. 9:2) would endure 70 years. The interpretation is as follows: a period of 70 weeks of years was decreed for the expiation of the national guilt. At the end of the seventh week, an "anointed prince" (probably a high priest) will function again; at the end of another 62 weeks, an "anointed one" will be cut off. The remaining week will be one of religious persecution, and for the duration of its second half, sacrifice and oblation will be abolished and "an abomination of desolation" (called "offense" in 8:12) will occupy their "stand" (reading *kannam* for *kenaf* in 9:27).

CHAPTERS 10–12. As in chapter 7, Daniel is introduced briefly in the third person and then proceeds in the first person. The date of this apocalypse is given as the third year of the reign of King Cyrus of Persia, and like chapter 9 it consists entirely of a "word" (10:1 – three times) communicated to Daniel by an angel. It is vouchsafed him in response to prayer, but to judge by the content of the "word," the prayer was not for an exposition of scripture but simply for information on what was going to happen from the present (i.e., the third year of Cyrus) to the redemption of Israel, though occasionally, to be sure, the phrasing indicates that some old prophetic verse is being expounded. The angel then informs Daniel (11:2bff.) that Cyrus will be followed by three more Persian kings, but that after that the ascendancy will pass on to the Greeks. There will first be one mighty Greek king (obviously Alexander the Great), but his empire will split into a separate kingdom for each of the four points of the compass. First the king of the southern succession state (Ptolemy I) will be the most powerful, but then one of his officers, the king of the north (Seleucus I), will become stronger than he. There follows (verses 6–30) a remarkably accurate account of the wars and marriages between the dynasty of the north (the Seleucids) and that of the south (the Lagids) down to the Seleucid Antiochus IV and the joint Lagid kings Ptolemy VI and VII, with the Roman intervention which compelled Antiochus to withdraw from Egypt in the year 168 B.C.E., clearly hinted at at the beginning of verse 30. Then, Antiochus' measures against Judaism from the years 168 to 166 or 165 are described from verse 31 through verse 39 inclusive. The rest of the book is concerned with what is expected to happen after that.

DATES OF COMPOSITION AND CHARACTERISTICS OF THE PARTS

Traditional View

Both the rabbis of the Talmudic Age and the Christian Church Fathers accepted the book's own statements that the four apocalypses of Daniel B were written by a man named Daniel in the last years of the Babylonian Age and in the first ones of the Persian Age, i.e., approximately in the decade 545–535 B.C.E., and they did not question the historicity of any part of Daniel A.

Critical View

GENERAL CONSIDERATIONS. If prediction of events in detail of the far future is theoretically possible, it is, on the other hand, unexampled in the Torah and the Prophets, and events so far in the future would be of no discoverable relevance to the lives of his audience or readers. This is what struck the neoplationist pagan philosopher Porphyry (3rd century C.E.). His pertinent work has been lost, but the Latin Church Father

*Jerome (early 5th century C.E.) cites him occasionally in his commentary on Daniel, and at the beginning of his introduction to that commentary he quotes him as follows: "[The Book of Daniel] was composed by someone who lived in Judea in the reign of Antiochus who was surnamed Epiphanes, and he did not predict coming events but narrated past ones. Consequently, what he relates down to Antiochus embodies true history; but if he added any surmises about the future, he just invented them, for he did not know the future." Strange to say, Porphyry (according to Jerome) did not realize that the campaign described in Daniel 11:40 was an "added surmise," but asserted that Antiochus undertook a third campaign in Egypt, which is contrary to fact. Equally significant is the inaccuracy of the book's knowledge of pre-Hellenistic history. After Cyrus there reigned over the Persian Empire not a mere three kings (11:2) but ten (1 Cambyses, 2 Xerxeses, 3 Dariuses, 3 Artaxerxeses and 1 Arses). There never was a Darius the Mede (6:1; 9:1; 11:1), and Belshazzar (5:1, 2, 30; 7:1) never was king. Though Belshazzar deputized for his father King Nabonidus during the latter's prolonged absence from Babylon, documents continued to be dated there by regnal years of Nabonidus, and Belshazzar was never designated otherwise than as "the king's son." The most charitable view of the inaccuracy in Daniel 1:1, 2 is that "third year" is a mistake for "third month" and "Jehoiakim" for "Jehoiachin" (cf. II Kings 24:8ff.). However, Porphyry erred in ascribing all of the book to a person who lived in Judea in the reign of Antiochus IV (176/5–163 B.C.E.). Daniel B was indeed composed by such a person, or rather by four such persons (see infra). Daniel A, on the other hand, is unquestionably earlier, as was recognized by an impressive array of scholars in the first half of the 20th century (as a brief statement of the case, J.A. Montgomery, pp. 89–90 (see bibl.), is admirable). Since no anti-Epiphanian propaganda is discernible in Daniel chapters two or four, let alone in the story about King Darius in chapter six, it must be concluded that Daniel A chs. 1–6 (all summarized above) antedates Epiphanes' reign. A more precise dating of Daniel A is obtained through certain later additions to chapter two, viz. 2:42–43 and the expression "and the toes" in verse 41. These additions do not only add in the middle of the dream's original interpretation (vv. 36–45) a feature absent from the preceding narration of the dream (vv. 31–35), but they correct the original interpretation of the dream in which they occur. For first, the narration in 33b states merely that the feet of the image which Nebuchadnezzar saw in his dream were partly of iron and partly of clay. Secondly, according to the original interpretation of this in verse 41, verse 33b is explained to mean that the fourth kingdom will (ultimately) be a divided kingdom, but that something of the character of iron will permeate all its parts, since the two substances are combined in both feet. This is especially clear if we omit "and the toes" (which is missing in the versions anyway): "And as you saw the feet (and toes) partly of potter's clay and partly of iron, it shall be a divided kingdom; but some of the firmness of iron shall be in it, just as you saw iron mixed with the miry clay." However, verses 42–43, on the other hand, interpret a feature which is not found in the original narration. They assert that in the dream some of the toes were entirely of iron and some entirely of clay; this signifying that, in contradiction to verse 41, one part of the divided kingdom will be firm (throughout) and the other will be fragile (throughout). The feature on which verse 41 based its view, namely, that in the feet the iron and the earthenware are combined, is – so verses 42–43 assert – to be interpreted otherwise: it signifies that the two dynasties will attempt to fuse "by means of human seed," i.e., by biological union. However, the combination was not to endure, just as iron does not mix with earthenware. Such an avowed correction of an immediately preceding interpretation can only be an interpolation, and it can only have been occasioned by a dramatic upset of the balance of power. As it happens, such an upset of the balance of power, linked to an unsuccessful attempt by two dynasties to interbreed, is known from history. In the year 252 B.C.E. Antiochus II put aside his wife (she was also his sister) Laodice and espoused Berenice, daughter of Ptolemy II, and thus was born a son in whose veins coursed the blood of both dynasties. However, Antiochus became reconciled with Laodice. His sudden death was believed to have been caused by poisoning that Laodice ordered, and the subsequent murder of Berenice's child certainly was ordered by her. In the end she disposed of Berenice as well, thereby putting an end to the very attempt at "fusion." In the year 246, however, Berenice's brother Ptolemy III avenged her by invading the Seleucid Empire, reaching Bactria; although he permanently annexed only some islands and other coastal areas, as a result of his blows Asia Minor and the enormous satrapy of Media revolted and were not reconquered by the house of Seleucus for a quarter of a century. The interpolation in chapter two must therefore date from 246 or shortly after. Of course, the main text is earlier than the interpolation. It can be dated with considerable probability at around 304 B.C.E. In this respect, verses 44–45 are particularly significant. "(44) And in the days of those [i.e., the aforementioned four] kingdoms, the God of Heaven will raise up a kingdom which shall never be destroyed, and whose sovereignty shall never be left to another people. It [i.e., the fifth kingdom] shall pulverize and annihilate all those kingdoms but shall itself endure for evermore (45) inasmuch as you saw a stone rolling from the mountain unpropelled by hands and pulverizing the earthenware, the iron, the copper, the silver, and the gold…." It is the author of Daniel chapter two who first reasoned, from the fact that all the five substances in the dream endured until the impact of the stone, that none of the first three world-dominating monarchies would be destroyed by its successor but that all three would endure, though no longer dominant, until the fifth one appeared and destroyed both them and the fourth. The interpolation (as interpreted here) along with other indications identifies the fourth kingdom as the Greek; verses 37–38 identify the first as the Babylonian or Chaldean; and in the light of verse 30 and 6:1, 29 (cf. 8:1; 9:1; 10:1; 11:3, 5, 20–21), the two middle ones can only be the Median and the Persian. The question therefore arises, when did a post-imperial Bab-

ylonian monarchy, a post-imperial Median monarchy, and a post-imperial Persian monarchy exist side by side with a single but divided Greek imperial monarchy? The answer is that they existed together after Seleucus had returned to his satrapy of Babylon in 312 and had begun to call himself king (at first, only vis-à-vis his Oriental subjects, and in 305 or 304, vis-à-vis Hellenes as well), but only while he was still confined to southern Mesopotamia, and while Ptolemy, Antigonus, and others, though fighting each other, were fighting a civil war within a theoretically united realm, that is, before 301. By the latter date Seleucus, in getting rid of Antigonus in alliance with Ptolemy, had expanded into Syria; Seleucus and Ptolemy had more or less agreed on their common border; and Ptolemy and all the other successors had also donned crowns and proclaimed themselves kings. Within this period while Seleucus was only king of Babylonia, the territories representing the residual Median and Persian monarchies were Atropatene – which Strabo also calls Atropatian Media – and Persis respectively. These persisted as semiautonomous kingdoms, or principalities, not only throughout the Hellenistic period but well into the Roman. Chapter 2 may have been integrated into the collection which we have denominated Daniel A (at which time the initial and final verses were added to it) either before or after the interpolation verses 42–43, so that the collection Daniel A may be dated roughly in "the middle decades of the third century B.C.E."

THE FOUR AUTHORS OF DANIEL B. Daniel B is in its entirety a product of the reign of Antiochus IV, but it is not all from a single hand. It is the work of four apocalyptists, who have been designated as Apoc I, Apoc II, Apoc III, and Apoc IV. Apoc I comprises all of chapter 7 minus the verses and clauses which speak of an eleventh horn and an eleventh king (namely 8, 11a [minus בֶּאדַיִן plus חָזֵה הֲוֵית עַד דִּי], 11b, 20 [from וְאָחֳרִי on], 22, 24b–25). This apocalypse represents an updating of the dream and interpretation in chapter 2. For it, the fourth kingdom is not (as in ch. 2) the Greek kingdom (it is too far removed from the time when there was a single Greek kingdom either in fact or in theory), but the Seleucid kingdom. For it says of the fourth kingdom (24a), "And the ten horns – ten kings will arise from that kingdom." The Seleucids regarded themselves as the legitimate successors of Alexander the Great, and Berosus, a subject of Antiochus I, notes that the latter is the third king after Alexander. For him to be the third, one of the joint kings who was recognized by the generals after Alexander's death – his half brother Philip and his posthumous son Alexander – must be disregarded; probably it was Philip, who died some years before Seleucus returned to Babylon, unlike Alexander, who lived to about that date, so that Seleucus could be regarded as his successor. The first ten kings of Asia, were then, according to the Seleucid canon: (1) Alexander I; (2) Alexander II; (3) Seleucus I; (4) Antiochus I; (5) Antiochus II; (6) Seleucus II; (7) Seleucus III; (8) Antiochus III; (9) Seleucus IV; and (10) Antiochus IV. There is now available a Seleucid king list from Babylonia, which apparently counts no king at all from Alexander's death to the accession of Alexander II in 317 (see Pritchard, Texts[3], 567). The essential message of Apoc I is therefore this: The days of the wicked Seleucid kingdom are numbered; its present sovereign shall be its last. Yet Apoc I does not enlarge upon the wickedness of this particular king or hint at what his wickedness consisted of. This would hardly be conceivable after the paganization of the Temple and the outlawing of Judaism, which threatened it with early extinction. It would be conceivable, however, at any time from the beginning of Antiochus IV's reign, when he began to sell the high priesthood to the highest bidder and to encourage Hellenization, through the year 169 when he plundered the Temple down to the year 168 when he crushed a Jewish rebellion and abolished the temple state of Jerusalem, and established a pagan polis on the Akra and gave it control of the Temple. In fact its *terminus ante quem* is the paganization of the Temple and the proscription of Judaism at the very end of the year 167. After the latter developments, on the other hand, the absence of a specific allusion to them would be incomprehensible. That is why the author of the secondary matter (see above) in the chapter – who probably did not know the Seleucid king list – could not imagine that Antiochus IV was included among the ten kings of the original text and so added an eleventh. It is the author of Apoc IV who made all these additions (except perhaps verses 21–22, which may be from a still later hand), which we therefore designate by the siglum I–4. (For further characteristics of Apoc I, see above, the first paragraph under the heading "Daniel B.") Apoc II comprises the original matter in chapter 8, the secondary verses being 13–14, 16, 18–19, 26a, 27b. Verses 18–19 are from the author of Apoc III and are designated by the siglum II–3; the remaining interpolations are by the author of Apoc IV and are designated by the siglum II–4. Apoc II was written after the appalling developments of December 167, which it clearly reflects and the end of whose author it predicts. It adopts the form of a vision instead of a dream because the Hebrew word for "vision" (*ḥazon*) is the one used in the sense of "prediction" in Habakkuk 2:3, and the author wishes to stress that his *ḥazon* is, like Habakkuk's, for a future date (8:17). To Habakkuk, this circumstance is offered as a reason for the divine command to write down the *ḥazon*; in Apoc II it is further stressed that the future date in question is distant, and this, i.e., the fact that the *ḥazon* has no message for Daniel's contemporaries, is the reason which is given to Daniel (8:26) for the angel's instruction to "conceal" (to be discovered and opened in due course). Apoc III is the original part of chapters 10–12. Within this Apoc IV has transposed the two half verses 10:21b and 10:21a, and added 11:1–2a, 12:5–9, and 11–12 (unless, as is probable, verse 12 is still later). It is Apoc III who is the first to dispense with symbolic dreams or visions and to substitute a simple narration of future history by an angel who draws from memory upon "that which is inscribed in the Book of Truth" (10:21). Apoc III, like Apoc II, utilizes Habakkuk 2:3, but he departs further from its original sense. What he stresses is that more *ḥazon* (by which he means scheduled events) has yet to elapse until the final redemption

(10:14; 11:27), and he has even inserted a remark to that effect in the work of Apoc II (8:19 with 8:18; cf. 10:9). But Apoc III is particularly noteworthy for identifying, on the one hand, the Assyria of Numbers 24:24 and of Isaiah's prophecies with the Seleucid Empire, and the impious Assyrian king of Isaiah with Antiochus IV Epiphanes; and, on the other hand, as follows: (a) the servant of Isaiah 52:13–53:12 with those who, during the Epiphanian persecution, instructed (it is thus that he interprets the *yaskil* of Isa. 52:13) the not willingly apostate but despairing masses in the meaning of the ancient prophecies, thereby encouraging them to resist, or "justifying" them; (b) "the many" of Isaiah 52 with those despairing masses in Daniel 11:33–34 (the last word is to be deleted as a variant of the similar one in verse 32) and 12:3; and (c) the willing Hellenizers with the wicked of Isaiah 66:24 (Dan. 11:32; 12:2; note the word דֵּרָאוֹן, which is confined to Isa. 66:24 and Dan. 12:2). Because Isaiah represents Assyria as the staff of the Lord's indignation and as destined to oppress Judah until the indignation has spent itself, Apoc III not only employs the same language about Antiochus (cf. notably 11:36b with Isa. 10:23, 25) but infers from Isaiah 26:19 ff. that the end of the indignation will be followed by a resurrection of some of the dead (Dan. 12:2) – the earliest formulation of a doctrine of resurrection. Since Apoc III knows nothing of Antiochus' departure for the East in the summer of 165 and expects instead a third expedition against Egypt, the summer of 165 is its *terminus ante quem*. Apoc IV, finally, is chapter 9. Its contribution (see above Daniel B) is the scheme of weeks of years, with the outlawing of Judaism falling in the middle of the last week. Apoc IV has interpolated this view into each of its three predecessors (7:26 ff.; 8:14; 12:7, 11[12]). In the course of his interpolation in Apoc I, the author of Apoc IV betrays the fact that he postdates the expedition, in the summer of 165, to the East, which added Artaxias of Armenia to the two kings of Egypt whom Antiochus had defeated in 169 and 168 (7:24 ff.). On the other hand, he does not know of the king's proclamation of amnesty in the winter of 164, still less of the rededication of the Temple in December 164 and of the king's death in the spring of 163; he therefore antedates these.

LITERARY GENRES AND MOTIFS

The genre to which Daniel B belongs is clearly apocalyptic. This type of literature arose in the Hellenistic period. The oldest parallel was pointed out by Eduard Meyer. It is a Demotic papyrus containing interpretations of obscure oracles. The author of these interpretations attributes them to the reign of the Pharaoh Tachos (360–359), to this king and to earlier ones who rebelled against the Persians. But he also alludes, in his interpretations, to persons and events from Tachos to his own time, which is the end of the third century B.C.E., and promises that the Greeks will be driven out of Egypt by a prince who will reign at Heracleopolis – a prediction which did not come true. The genre of Daniel A, on the other hand, is the courtier tale. There is in the Bible the story of the courtier Joseph, who was both an inspired interpreter of dreams and an admirable administrator: Daniel is the former in chapters 2 and 4 and the closely related interpreter of portents in chapter 5, and he is the latter in chapter 6. His three companions are also government officials in chapter 3. With the wise heathen courtier *Ahikar and the Jewish courtier *Mordecai, these Jewish ones have in common the trait of being plotted against by rivals who, however, are hoist with their own petard. Chapter 2 contains, so to speak, an apocalypse within a courtier tale, and the former is interesting for its utilization of borrowed motifs. The motif of four empires followed by a fifth is of Iranian origin. In the Iranian version, first the Assyrian kings ruled the world, then the Median, then the Persian, then the Greek (i.e., the Seleucid kings), but this fourth monarchy was destined to be supplanted by a fifth. No doubt the Iranians expected the fifth to be again a Persian kingdom, but the tradition reached Rome before 171 B.C.E. in a form which interprets Rome as the fifth empire. Daniel 2 merely says that the fifth kingdom will be set up by God, but no doubt it expects the Jewish people to occupy a position of honor in it. In addition, Daniel 2 substitutes Babylon or Chaldea for Assyria, which results in bad history, since the Median empire did not follow the Chaldean but coexisted with it, and, in fact, came to an end a decade before the other. The series gold, copper, silver, iron originally (as early as Hesiod, 8th century B.C.E.) symbolized the four ages of a progressively deteriorating world. The four monarchies which these metals symbolize in chapter 2, on the other hand, do not constitute a consistently descending series – the second is inferior to the first, but after that it is a rising series. Other probable and possible borrowed motifs are pointed out in recent commentaries.

THE LANGUAGE PROBLEM

In the book as it is now known, 1:1–2:4a and chapters 8–12 are Hebrew, the rest *Aramaic. Originally, it was entirely Aramaic. The popular story book Daniel A was composed in Aramaic because by the third century B.C.E. it was the language of the majority of Jews; and Daniel B, being a continuation of Daniel A, was written in the same language. That the Hebrew portions have a strong Aramaic tinge would not suffice by itself to prove that it was translated from Aramaic, but the occurrence of passages which can only be understood as translations of misread Aramaic does constitute such proof. A simple example is 12:8: "I heard but I did not understand, so I said: 'My Lord, what is the אַחֲרִית of all these things?'" The Hebrew word means "end," but "end" is pointless here. What Daniel wanted was the explanation of what he had heard. A glance at 5:12 suggests that behind אַחֲרִית is an Aramaic אַחֲוָיַת, "the explanation of," which had become corrupted to אַחֲרִית, or which the translator misread as אַחֲרִית (for further examples, see Ginsberg, in JBL, 68 (1949), 402–7).

[Harold Louis Ginsberg]

DANIEL, BOOKS OF (**Apocryphal**), additions to the biblical Book of Daniel. Among the fragments found at *Qumran were three manuscripts (4QpsDan A, B, C) containing works pertaining to the Danielic literature. Two of these (A and B) are copies of the same composition, while the third may represent a different one. The texts are very fragmentary, but the work dealt, at least, with the Flood, the Exodus, sin and the first exile, the first of the four kingdoms (cf. Dan. 2:7, etc.), the Greek period, and the eschatological age. Another Dead Sea text associated with the Danielic literature is the *Prayer of Nabonidus* which presents a tradition close to, but in some respects earlier than, that found in the canonical Daniel.

A Daniel apocryphon is mentioned in early Christian lists, and extant Christian Daniel books include various forms of the work called in Armenian *The Seventh Vision of Daniel*. This is an apocalypse particularly noted for its description of the Antichrist. Texts are known in Armenian, Greek, Coptic, and Slavonic. The Greek and Armenian forms differ from one another in many respects, but their common source is quite apparent. The Slavonic represents the same text form as the Greek. A Persian work called *The History of Daniel* also contains similar materials, and further Daniel books also exist.

DANIEL, DAN (**Margowitz**; 1890–1981), U.S. sportswriter, considered the dean of baseball writers in a career that spanned over 60 years. Born in New York City to immigrant parents, Daniel started his career in 1909 at the *New York Herald*, a year before graduating from the City College of New York. He came from a long line of doctors, and was even enrolled at Columbia's College of Physicians and Surgeons for a short time, but left to pursue a fulltime career as a sportswriter, when in 1911 he was offered $35 a week to work at the *New York Press* by sports editor Nat *Fleischer. It was there that Daniel became one of the first journalists to use a typewriter at a New York newspaper office.

When he was refused a byline early in his profession because of his Jewish surname, Daniel changed it to "By Daniel," using it in his long career at the *New York World-Telegram* and its successor, the *World-Telegram and Sun*, where he worked until the newspaper folded in 1966. He also wrote a column, "Daniel's Dope," and for 20 years conducted the well-known question and answer column "Ask Daniel" in the paper's sports section.

Daniels was by far America's most prolific baseball writer, best known for his 32 years of writing for the *Sporting News*, the Bible of baseball publications for the first half of the 20th century. Using the byline "By Dan Daniel" and "By Daniel M. Daniel," he contributed some 5,000 words a week by his estimate to that publication, having "more words published in the *Sporting News* than any other man," according to the newspaper's publisher.

Daniel was recognized as an authority on the history of the New York Yankees, having covered the club from the pre-Babe Ruth era through the days of Mickey Mantle. He was the first to recognize Lou Gehrig's consecutive games streak and was the official scorer for some 21 games during the 56-game hitting streak of Joe DiMaggio in 1941. Though there was criticism about Daniel's questionable role as the scorer in extending DiMaggio's streak in games 30 and 31, Daniel maintained, "There wasn't a hit he wasn't entitled to. I never favored him one iota and made him get his hits as I saw them."

Daniel was chairman of the Baseball Writers' Association of America, a member of baseball's rules committee, and served for many years on the Hall of Fame Committee on Baseball Veterans. In 1972, Daniel was recipient of the Baseball Writers' Association of America's J.G. Taylor Spink Award, the Baseball Hall of Fame's highest honor for sportswriters.

The versatile Daniel also covered football and was chairman of the Football Writers' Association. In addition, he wrote about boxing, serving as chairman of the Boxing Writers' Association, and was co-founder with Fleischer of *The Ring* magazine. Daniel was the author of *Babe Ruth: The Idol of the American Boy* (1930) and *The Mike Jacobs Story* (1950).

[Elli Wohlgelernter (2nd ed.)]

DANIEL, JEAN (1920–), French writer and journalist. Born in Blida (Algeria), Daniel grew up in Algeria where he completed graduate studies at the Algiers College of Humanities, going to Paris for postgraduate studies. After World War II, he was briefly attached to the Prime Minister's Office, and then turned to journalism. For ten years he was on the editorial board of the influential French weekly *L'Express*, leaving it in 1964 to launch a new paper, *Le Nouvel Observateur*, which took a radical stand on the burning issue at the time, the war in Algeria. Outspoken on civil rights and minorities, while being often the first with the news, the *Nouvel Observateur* was considered the leading magazine in France in the 1980s and was widely read abroad. Daniel was chairman of the board from 1978. Speaking for the moderate left, he often appeared on television and radio panels. He wrote several books, among them *L'Erreur* (1953); *Journal d'un journaliste* (1959); the autobiographical *Le Temps qui reste* (1973); *Le Refuge et la source* (1977); and *L'Ere des ruptures* (1979). His 2003

book *La Prison juive: humeurs et méditations d'un témoin* (*The Jewish Prison: A Rebellious Meditation on the State of Judaism*, 2005) is equally critical of Palestinian suicide bombers and Israeli settlers, faulting the Israeli government for the continuing occupation and not doing enough to create a viable Palestinian state. His collected writings on the Middle East were published in *La Guerre et la Paix: Israël-Palestine, Chroniques 1956–2003*.

[Gideon Kouts]

DANIEL (Donyel), M. (pseudonym of **Mark** or **Mordechai Meyerovich**; 1900–1940), Soviet Yiddish fiction writer and dramatist; father of the Soviet-Russian writer Yuli *Daniel. Born in Latvia of poor parents, he became a laborer and later a tutor, after receiving a traditional Jewish education. During World War I Daniel was displaced to the Urals, which provided material for his first published work, a novella, *In a Tsayt Aza* ("In Such a Time," 1924). In 1921 Daniel moved to Moscow where he completed his education at the Yiddish department at the Second Moscow State University. His early stories, which are his best work, suggest the influence of Boris Pilnyak. Prominent among the civil war themes of the stories in *Oyfn Shvel* ("At the Threshold," 1928) is that of the role of the artist in the revolution. Daniel is best known for his novel *Yulis* (1930), whence the name of his son, and its dramatized version *Fir Teg* ("Four Days"), a "heroic tragedy" which played for over three years in the Yiddish state theaters of the Soviet Union. *Fir Teg* is a romantic treatment of the defeat and death of Yulis Shimeliovitsh and other Bolshevik leaders of the Vilna Workers' Council; they committed suicide while surrounded by Polish legionnaires who seized Vilna in 1919. Though the Bolsheviks are idealized, some Soviet critics were not pleased, claiming that revolution admits no tragedy, only heroism. Daniel died in Yalta of a protracted illness.

[Leonard Prager]

DANIEL, MENAHEM SALIH (1846–1940), leader of the Baghdad community. Daniel's family, which was of Georgian origin, had left him large estates, mostly in the vicinity of the town of Hilla, Iraq. In 1876 he was elected to the Ottoman parliament, and in 1924 to the Iraqi parliament. In 1925 he was appointed representative of the Iraqi Jews in the senate, a post he retained until the early 1930s when he was succeeded by his son Ezra. His great influence in the Baghdad community was due to his great wealth, his close ties with the authorities, and especially his philanthropy. Both he and his son were opposed to Zionist activity in Iraq, fearing that it would incense the Arabs.

His son EZRA MENAHEM DANIEL (d. 1952) was a member of the Iraqi senate from the time he succeeded his father until his death. In the senate, he defended Iraqi Jews with great courage. In 1946 he refused to testify before the Anglo-American Commission of Inquiry (investigating the situation of the Jews in Palestine), despite the attempt of the Iraqi government to force him to do so.

DANIEL, VISION OF, Hebrew apocalypse written in the Byzantine Empire. Scholars differ over its date: some place the work in the 13th century, after the Latin conquest of Constantinople (1204), while others maintain that it was written in the late tenth century. The "Vision" opens with the appearance of the angel Gabriel to the prophet Daniel, continues with historical narrative, and concludes with an apocalyptic vision. The main interest of the work is historiographic: it traces the policies of Byzantine emperors toward the Jews from Michael III to *Constantine VII Porphyrogenitus (ninth to mid-tenth centuries), supporting the assertion of *Megillat Aḥimaʾaẓ* (see *Ahimaaz b. Paltiel) that *Basil I attempted to convert the Jews, that his son Leo *VI rescinded the decree, and that Romanus I Lecapenus renewed the attempt, which finally was abandoned by Constantine VII. However, it also makes the unfounded allegations that Michael III persecuted the Jews, that Basil I began by rehabilitating the persecuted, and that Romanus "troubled them by expulsion but not through destruction." It may be that the writer of the "Vision" was influenced by the historiography of Constantine VII which exaggerated the virtues of his own Macedonian dynasty (founded by Basil I) and magnified the vices of the previous one, which ended with Basil's murder of Michael III. The writer's generally positive attitude toward the state indicates a marked improvement in the position of Jews in the Byzantine Empire which is further supported by the apocalyptic section of the work. Instead of the usual prophecy foretelling the annihilation of the Christian and Islamic kingdoms, the "Vision" concludes by postulating a final struggle between Rome and Constantinople from which Constantinople will emerge victorious and the Messiah will judge the nations of the world there.

[Andrew Sharf]

DANIEL, YULI MARKOVICH (1925–1988), Soviet-Russian author, son of the Soviet Yiddish writer M. *Daniel. Although no original works by the younger Daniel had ever been published in the U.S.S.R., where he was known exclusively as a translator, mainly from Yiddish, and from Caucasian and Slavic languages, he acquired an international reputation as the author of a number of books smuggled out of the Soviet Union and published in the West in the early

1960s, under the pseudonym Nikolai Arzhak. These include the short novel *Govorit Moskva* ("This Is Moscow Speaking") and three short stories, *Ruki* ("Hands"), *Chelovek iz Minapa* ("The Man from Minap"), and *Iskupleniye* ("Atonement"). *This Is Moscow Speaking and Other Stories* appeared in an English translation in 1962. *This is Moscow Speaking*, a fanciful work describing a Soviet "public murder day" when citizens are free to kill one another, is the only work of his that treats a "Jewish" theme; a central character immediately ventures the guess that the "day" has been proclaimed to legalize anti-Jewish pogroms. Antisemitic motifs were prominent at the trial in February 1966 of Daniel and his friend and fellow "illegal" writer, Andrei Sinyavsky (who wrote under the pseudonym Abram Tertz). In spite of frail health resulting from wounds received while serving in the Red Army during World War II, Daniel was sentenced to five years' forced labor. The prosecutor and the authors of numerous articles published in the Soviet press before, during, and after the trial accused Daniel and Sinyavsky of slandering Soviet society by insinuating that it was not free of antisemitism. Andrei Sinyavsky, a non-Jew, had in fact devoted much attention to the problem of anti-Jewish prejudice in the U.S.S.R. Protests by leading Soviet intellectuals and strong international pressures failed to bring about the release of the two writers and Daniel's wife, Larissa Daniel-Bogoraz, herself received a prison sentence in the fall of 1968 for having participated in a street demonstration opposing the Soviet invasion of Czechoslovakia. Daniel continued to speak out even in prison camp, where he protested at the harsh conditions. He continued to write poems in prison which were published in the West. He was released from jail in 1970, lived in Moscow, and worked as a translator of literature under the pseudonym Yu. Prtrov.

[Maurice Friedberg]

DANIEL BEN AZARIAH (11th century), Palestinian *gaon*, 1051–62. Daniel was a descendant of one of the branches of the family of the *exilarch in Babylonia that had been banished. He succeeded Solomon b. Judah as *gaon* of Palestine on the latter's death in 1051, thus supplanting the sons of the *gaon* Solomon Ha-Kohen (b. Jehoseph). In a letter of that time he is called "*nasi* and *gaon* of Tiberias," even though the seat of the Palestinian academy was in Jerusalem. As a scion of the house of David, he was honored also in Egypt. The synagogue of the Palestinian community in Fostat (Old Cairo) was named in honor of him "Synagogue of our Lord Daniel, the Light of Israel, the Great Prince and Head of the Academy of the Majesty of Jacob." The *gaon* corresponded with R. Jehoseph, *nagid*, son of Samuel ha-Nagid of Spain, and bestowed titles of honor upon him; the latter was undoubtedly one of the supporters of the academy in Jerusalem. His son *David b. Daniel did not succeed him at his death because of his extreme youth, but in later years he was involved in a dispute over the succession to the gaonate.

[Tovia Preschel]

DANIEL BEN ELEAZAR BEN NETHANEL ḤIBBAT ALLAH, Babylonian *gaon*, late 12th–early 13th century. A book by the Arab historian Ibn al-Saʿī (1197–1275) contains the official letter of appointment dated 1208/9 given to Daniel by Caliph al-Naṣr bi-Dīn Allah. In it the caliph stated that he had learned that the *gaon* was "revered and praised by the members of his faith and has the qualities required for his office, and conducts himself with complete honesty, without flaw." It may be assumed that he took office approximately at the time of his official appointment; some scholars, however, identify him with Gaon Daniel b. R. Eleazar he-Ḥasid, whose letters of the period 1201–08 are extant, in which case he became *gaon* long before his official appointment by the caliph. It seems that Daniel died before 1220, as in approximately that year Judah *Al-Ḥarizi found Isaac b. Israel ibn al-Shuwayk holding the office of *gaon* in Baghdad. *Isaac b. Moses' *Or Zaruʿa* and Zedekiah b. Abraham *Anav's *Shibbolei ha-Leket* quote a "R. Daniel Gaon" whom some scholars have identified with Daniel b. Eleazar.

[Tovia Preschel]

DANIEL BEN ḤASDAI (d. 1175), *exilarch of Baghdad. Daniel inherited the office from his father, Ḥasdai b. David b. Hezekiah, and was already serving in this capacity before 1520, as is proved by a letter in which he confirms the appointment of *Nethanel b. Moses ha-Levi as head of "the great *bet din* in all the provinces of the land of Egypt." This letter, which was written in 1161, demonstrates his influence even in Egypt and contains many autobiographical details. He complains about his poverty, due to the political situation, and about the dissensions in his community. Later, however, it seems that his economic situation improved. The 12th-century traveler Benjamin of Tudela, who visited Baghdad a few years later, admiringly describes Daniel's personality and authority, his learning in Bible and Talmud, and his lavish hospitality. R. Abraham Ibn Ezra was also impressed by his personality. Since he had no son, after his death the leaders of the Baghdad Jewish community split into two camps over the choice of his successor (see *David b. Zakkai II).

[Tovia Preschel / Avraham David (2nd ed.)]

DANIEL BEN JEHIEL OF ROME (d. before 1101), rabbinical scholar, elder brother of *Nathan b. Jehiel. On the death of their father, in approximately 1070, he and Nathan became heads of the Rome yeshivah. Daniel wrote responsa, and many of the explanations of words in his brother's lexicon *Arukh* are quoted in his name. He also compiled a commentary on the Mishnah order of *Zera'im*. Zunz ascribes to him the authorship of the *piyyut* for the Sabbath of Ḥanukkah, beginning *Ahallel El be-Minnim ve-Ugav*, a poetical version of the Scroll of Antiochus.

BIBLIOGRAPHY: Rapoport, in: *Bikkurei ha-Ittim*, 10 (1829), 7, 19–20; Zunz, Lit Poesie, 163–4.

DANIEL BEN MOSES AL-QŪMISĪ (ninth-tenth centuries), Karaite scholar and leader of the *Avelei Zion ("Mourners of Zion"). He was born in Damghan, in the province of Qumis, northern Persia. Little is known about Daniel's life. He was evidently the first eminent Karaite author to settle in Jerusalem, where he died. Independent in theological outlook, Daniel even belittled the founder of Karaism, *Anan b. David, and dissented from certain of his halakhic principles, justifying himself by the maxim "those who come later will find the truth." Daniel also consistently maintained this principle in regard to himself. According to the Karaite scholar *Kirkisānī, "he would accept any conclusion arrived at by reasoning … and would acknowledge changes whenever they occurred in regard to opinions he had expressed in his writings…." In matters of law, Daniel was more rigorous than his fellow Karaites. On the other hand, he is said to have exempted males aged under 20 from the duty to observe all the biblical ordinances, and admitted the testimony of Muslims in matters connected with the determination of the Jewish calendar.

Daniel occupied himself to a considerable extent in biblical exegesis. While refraining from exhortation, he supplies brief comments intended to explain the simple meaning of the biblical text in a rationalistic manner. He interprets, for instance, the concept "angels" as natural forces, such as fire and water, sent as divine emissaries, and consequently negates the existence of angels. Daniel's commentaries on the Bible served him as a means of propagating his view on Karaism and asceticism. His most complete extant work, *Pitron Sheneim-Asar* (ed. by I. Markon, 1948, 1957), a commentary on the Minor Prophets, contains bitter criticism of the rabbinate and of the degeneration of the Jewish people through pursuit of worldly occupations and pleasures. Daniel blamed the prolongation of the Exile on the neglect of the divine truths – i.e., the Bible – due to the negative influence of the *Rabbanite "shepherds of the Diaspora." He especially condemned the arrogance of the rabbis and their officials, and their economic exploitation of the people. According to Daniel, the Torah was at first in the possession of a restricted group, "the priests and levites, together with the king." However, after the destruction of the First Temple it was handed over to the entire Jewish people in order that each individual should bear responsibility for his actions. Daniel became the leader and spokesman of the Avelei Zion; he was probably the author of their official program. He enjoined perpetual public mourning for the destruction of the Temple and constant supplication for redemption, all to be practiced while living in Jerusalem. He proposed the collection of funds from Karaites abroad to enable chosen members of the sect to live in Jerusalem and represent the community as mourners. "And if you do not come, because you yearn for your merchandise, send five people from each city supplied with means of subsistence, that we may form one association to appeal to God constantly from the mountains of Jerusalem."

Al-Qūmisī's homiletical commentaries (*derashot*) have been published (*Zion*, 3 (1929), 26–42), and of his brief commentary on the Bible, the part on the Minor Prophets has appeared, though its attribution to Daniel has been questioned (Marwick, in JBB, 5 (1961), 42ff.).

DAVID (ABU SULEIMAN) AL-QŪMISĪ (died c. 945), a Karaite scholar, was apparently his son. According to the Arabic scholar al-Masʿudī, David lived in Jerusalem and translated the Bible into Arabic, with explanations. He is mentioned by *Japheth b. Ali in his commentary (to Lev. 23:p 5), as well as in an anonymous Arabic commentary on Leviticus (Oxford, Bodleian Library, Ms. Heb. d. 44).

DANIEL BEN PERAḤYAH HA-KOHEN (d. 1575), head of yeshivah and author. His family, which originated in Rome, claimed descent from *Josephus. From Rome his father moved to Salonika where, until his death in 1548, he was head of the yeshivah of the Italian community, being succeeded in that position by Daniel, who also served as a *dayyan*. In addition to his talmudic learning, Daniel studied philosophy, mathematics, medicine, and astronomy. A fire that broke out at Salonika in 1545 destroyed all his books, as well as most of his writings, of which only his commentary on *She'erit Yosef* by Joseph b. Shem Tov Ḥai on intercalation has been published (Salonika, 1568). To this work he appended material by himself on a variety of subjects, and also a work on intercalation by Abraham *Zacuto with his own commentary. With the rabbis of Salonika he was a signatory in 1573 to the ban against the physician Daud, the opponent of Don Joseph *Nasi. He was an intimate friend of Moses *Almosnino. On his death he was eulogized by the poet Saadiah *Longo. He had no sons and was succeeded by his brother Samuel.

[Abraham David]

DANIEL BEN SAADIAH HA-BAVLI (known as **Daniel ibn al-Amshata**; fl. c. 1200), Babylonian talmudist. Daniel was head of the "third yeshivah" in Baghdad when *Benjamin of Tudela was there c. 1170. In 1193 he was appointed "*segan ha-yeshivah*" ("vice president of the academy"), under *Zechariah b. Berachel. Some time later, after the death of his teacher *Samuel b. Ali ha-Levi (1193–94), he moved to Damascus. There he served as a preacher, his sermons making a profound impression. Judah *Al-Ḥarizi, who heard him there in 1220, praised him (*Taḥkemoni*, 46). Like Samuel b. Ali ha-Levi, he waged a bitter campaign against Maimonides' philosophical views. Forty-seven of his criticisms of *Mishneh Torah* and 13 of *Sefer ha-Mitzvot*, which he sent to Maimonides' son Abraham from Damascus in 1213, were published, together with Abraham's answers, in *Birkat Avraham* (1859), and with the Arabic original in *Maʾaseh Nissim* (1867). Much of his criticism of Maimonides' *Sefer ha-Mitzvot* is included in Naḥmanides' criticism of the same book. Daniel also wrote a commentary on Ecclesiastes, in which he again violently criticized Maimonides' views, though not mentioning him by name. When Abraham was urged by several rabbis to excommunicate Daniel, he refused to do so, both because of Daniel's distinction and because of his own lack of objectivity in the matter. The Maimonists finally prevailed upon the exilarch *David b. Samuel of Mosul to place Daniel under the ban. Eventually Daniel recanted his views.

DANIEL BEN SAMUEL IBN ABĪ RABĪʿ (Ha-Kohen (13th century)), Babylonian *gaon*. He was appointed in 1247 in succession to R. Isaac b. Israel (Abu al-Fath or Isḥaq ibn al-Shuwayk), by Abd al-Raḥman ibn al-Lamkhani, the Baghdad *qadi*. There was opposition to Daniel, especially by R. Eli b. Zechariah, who succeeded in persuading the vizier that the office of *gaon* was rightfully his and who was, in fact, appointed *gaon* in Daniel's place in 1250. *Eleazar b. Jacob ha-Bavli, the poet, praises Daniel in one of his poems. His son *Samuel also became *gaon*.

[Abraham David]

DANIEL ḤAYYATA ("the tailor"), Palestinian *amora*. He is quoted only a few times in midrashic literature. Thus he interprets Genesis 26:14 as teaching that a man who buys slaves should work together with them to spur them on to greater efficiency (Gen. R. 64:7). He is best known for a striking Midrash in which he interprets Ecclesiastes 4:1, "But I returned and considered all the oppressions that are done under the sun," as referring to *mamzerim* ("children of forbidden unions") who are oppressed "by the Great Sanhedrin" – though in accordance with the laws of the Torah – for the sins of their parents and who will be recompensed in the world to come (Lev. R. 32:8; Eccl. R. 4:1, 1). No biographical details are known of him, but, like the other rabbis mentioned in these midrashim, he was probably of the third or fourth century C.E.

°**DANIEL-ROPS, HENRI** (pseudonym of **Jean Charles Henri Petiot**; 1901–1965), French historian and writer. A history schoolteacher by profession, Daniel-Rops was a prolific writer whose literary career extended over a period of 40 years. Among his more famous works are *Histoire sainte* or *Le peuple de la Bible* (1943; *Sacred History of Israel and the Ancient World*, 1949) and *Jesus en son temps* (1945; *Jesus in His Time*, 1955), and the 14-volume *Histoire de l'Eglise du Christ* (1948; *History of Church of Christ*, 1957–). These works, characterized by apologetics for the Catholic view of history, contain traditional anti-Jewish prejudices. On the other hand, Daniel-Rops acknowledged the bond of the Jewish people to the Holy Land and he expressed his admiration for the Zionist movement.

[Willehad Paul Eckert]

DANIELS, ALFRED (1924–1975), British painter. Daniels was born in the East End of London, and studied commercial art before World War II. While studying at the Royal College of Art, London, he was commissioned to execute a series of murals. Influenced by the American Jewish painter Ben *Shahn, Daniels always displayed a deep concern for ordinary people in everyday activity. He executed a number of paintings of East End Jewish life and combined in his work a concern for urban realism and a sense of stylization. Characteristic of his work was an exhibition devoted to buildings in London undergoing demolition, including the former Bayswater Synagogue. His work has much in common with such English painters as Stanley Spencer and Lowry, notably in the sympathetic humor with which he depicts everyday life. He was both a gifted draftsman and an active photographer, basing his compositions on these two forms of research. He exhibited regularly in London and abroad and received numerous commissions for murals and book illustrations. For some years he taught at the Hornsey College of Art, London. Daniels is represented in major collections throughout the world, including the Tel Aviv Museum.

[Charles Samuel Spencer]

DANIN (Suchowolsky), YEḤEZKEL (1867–1945), Ereẓ Israel pioneer. Danin was born in Bialystok, and settled in Ereẓ Israel in 1886, working first as a laborer in Rishon le-Zion, later in Jaffa where he started industrial plants that were among the first in the country. Danin was a member of *Benei Moshe and served as its representative in Jaffa in 1893. He was a founding member of *B'nai B'rith in Jaffa, and of the public library there (1890). His main interest was in promoting Hebrew education, and he helped found the first kindergarten in Jaffa. In 1903 Danin participated in the first conference of the *yishuv* in Zikhron Ya'akov (see *Israel, Historical Survey, 1880–1948). In 1906 he joined the Aḥuzat Bayit group which founded Tel Aviv in 1909. Danin was son-in-law of Yehoshua *Yellin. One of his sons, Ezra (1903–1984), was special adviser on Arab and Middle Eastern affairs to the Israel foreign minister for many years.

[Benjamin Jaffe]

DANKNER, AMNON (1946–), Israeli journalist and author. Born in Jerusalem, Dankner graduated in law from the Hebrew University. After a period as spokesman for the Ministry of Education, he entered journalism, becoming successively a columnist on *Davar*, *Ḥadashot*, and *Haaretz*, the last from which he was fired after writing a controversial column called "I have no Sister," which represented Sephardim in an unflattering light. He subsequently joined *Maariv* as a columnist, becoming editor in 2002. Formerly left-wing in outlook, Dankner moved towards the center and right, and once editor of *Maariv* he made corruption at the governmental and judicial levels a *cause célèbre* of the newspaper. He also wrote a number of novels, humorous works, screenplays, and nonfiction works. Most controversial was his biography of bohemian journalist and author Dahn *Ben-Amotz in 1992, alleging that Ben-Amotz had led a promiscuous life, including engaging in sex with minors, in which other well-known Israeli cultural figures had had a part. For the latter allegations he was sued for libel and apologized. He was also a permanent panel member of a popular television talkshow, "*Po-Politika,*" in the latter 1990s.

[Yoel Cohen (2nd ed.)]

DANON, ABRAHAM (1857–1925), scholar and writer. Danon studied at the Gheron yeshivah in Adrianople, his native city. His scholarly bent was nurtured by the Orientalist Joseph Halévy and Danon taught himself French, English, and German. He was one of the founders of Ḥevrat Shomerei Tushiyyah ("Society of the Friends of Wisdom"; also called Dorshei Haskalah, "Seekers of Enlightenment") in his city. In 1891 he headed the rabbinical seminary, which he had founded. During World War I he left Turkey for Paris, where he taught Hebrew at the Ecole Normale Orientale of the *Alliance Israélite Universelle and also engaged in research.

Danon edited the historical journal *Yosef ha-Da'at* (*El Progresso*), which was published in 1888 in Adrianople in Hebrew and Ladino, with the object of collating and publishing documentation relating to Oriental Jewry. He published in the *Revue des Etudes Juives, Journal Asiatique, Revue Hispanique*, etc., a number of scientific articles on the history, customs, sects, and literature of the Jews in Turkey, and translated poems and scholarly works into Hebrew. He also composed original poems. His works include *Maskil Leidan* (the latter word being the initials of his name), and *Toledot Benei Avraham*, a translation and adaptation of the *Histoire des Israélites* by Théodore Reinach, to which he added excerpts from the works of Jewish historians.

[Simon Marcus]

°DANTE ALIGHIERI (1265–1321), Italy's greatest poet. Dante's *Divina Commedia* (c. 1307–21), generally regarded as the outstanding literary work of the Middle Ages, is in three parts: the *Inferno*, the *Purgatorio*, and the *Paradiso*. From biographical or autobiographical sources it cannot be proved for certain that Dante was in close touch with Jews or was personally acquainted with them. Jews are mentioned in his *Divina Commedia* mainly as a result of the theological problem posed by their historical role and survival. Such references are purely literary: the term *judei* or *giudei* designates "the Jews," a people whose religion differs from Christianity; while *ebrei* denotes "the Hebrews," the people of the Bible. Dante knew no Hebrew and the isolated Hebrew terms which appear in the *Commedia* – *Hallelujah, Hosanna, Sabaoth, El*, and *Jah* – are derived from Christian liturgy or from the scholastic texts of the poet's day. The *Commedia* contains no insulting or pejorative references to Jews. Although antisemites have given a disparaging interpretation to the couplet: "Be like men and not like foolish sheep, So that the Jew who dwells among you will not mock you" (*Paradiso*, 5:80–81), the Jews of Dante's time considered these lines an expression of praise and esteem. In the course of his famous journey through Hell, Dante encounters no Jews among the heretics, usurers, and counterfeiters whose sinful ranks Jews during the Middle Ages were commonly alleged to swell.

In the 19th century, scholars were convinced that Dante was on terms of friendship with the Hebrew poet *Immanuel of Rome. The latter and one of Dante's friends, Bosone da Gubbio, marked Dante's death by exchanging sonnets; and the death of Immanuel gave rise to another exchange of sonnets between Bosone and the poet Cino da Pistoia, in which Dante and Immanuel are mentioned together. Twentieth-century scholars, headed by M.D. (Umberto) Cassuto, showed that there is no basis for the alleged friendship between the two

poets, but have proved Immanuel's dependence upon Dante's works. Important points of contact have also been discovered between Dante's conceptions and the views of R. *Hillel b. Samuel of Verona; hypotheses have been formulated on the resemblance of the notion of Hebrew as the perfect or original language in the *Commedia* and in the works of the kabbalist Abraham *Abulafia, and in general on the common neoplatonic element in Dante's theoretical and poetical works and in Kabbalah. Moreover, the *Questio de aqua et terra* probably written by Dante has a precedent in the discussion between Moses Ibn *Tibbon and Jacob ben Sheshet *Gerondi on the same subject a century before. Another parallel to Dante's outlook on the world may be found in the writings and translations of Immanuel's cousin, Judah b. Moses *Romano, who, within a few years of Dante's death, made a *Judeo-Italian version of some philosophical passages from the *Purgatorio* and the *Paradiso*, adding his own Hebrew commentary. Italian Jews quickly realized the lyrical and ideological value of the *Commedia* and an early edition was issued by a Jewish printer at Naples in 1477. Like Petrarch, Dante was widely quoted by Italian rabbis of the Renaissance in their sermons, and even by one or two Jewish scholars in their learned commentaries. The first actual imitation was that of Immanuel of Rome. His *Maḥberet ha-Tofet ve-ha-Eden* is the 28th and final section of his *Maḥberot* (Brescia, 1491). Here Immanuel also describes a journey to the next world, in which he is guided by Daniel, a friend or teacher who, in the opinion of some scholars, is Dante himself. A slight echo of the allegorical vision dealing with the soul's spiritual delight in the afterlife occurs in the *Maḥberet ha-Tene*, a rhymed prose work by R. *Ahitub b. Isaac of Palermo. Another important work openly inspired by the *Commedia* was *Mikdash Me'at* (written c. 1416), written by R. Moses b. Isaac *Rieti, in terza rima. This poetical meter was used for some decades by Hebrew Italian poets. By the 17th century Dante's influence on Jewish writers had weakened, and there is only a doubtful connection between the *Commedia* and Moses *Zacuto's verse-play *Tofteh Arukh* (Venice, 1715).

To mark the 600th anniversary of Dante's death, Samuel David *Luzzatto composed a Hebrew sonnet that became famous in scholarly circles throughout Europe. Many attempts have been made to translate the *Divina Commedia* into Hebrew. A translation of the first part by S. Formiggini was published in 1869; S. Sabbadini's Hebrew version of the other two parts remains in manuscript. Other partial translations were made into a more poetic and comprehensible Hebrew by Lelio della Torre (1871), V. Castiglioni (1912), E. Schreiber (1924), and V. *Jabotinsky (*Inferno*, chaps. 1, 3, 5, 33, in *Ha-Tekufah*, 19 (1923), 163–92). Immanuel *Olsvanger produced the first complete Hebrew translation of the *Commedia* (1943, 1953, 1956). Olsvanger also translated Dante's *Vita Nuova* (1957) while his *De monarchia* was translated into Hebrew by H. Merḥaviah (1961).

[Joseph Baruch Sermoneta / Alessandro Guetta (2nd ed.)]

DANTO, LOUIS (1929–), *ḥazzan*. Danto was born in Suwalki, Poland, and sang in synagogue choirs there as a child, appearing with the *ḥazzanim* Steinberg and Berman. He spent WWII in Russia and studied voice development and cello at the Minsk conservatory. He also studied at music conservatories in Lodz, Poland, and in Italy, where his teachers included Beniamino Gigli and Tito Schipa. Danto specialized in bel canto and as such his voice is known for its rare beauty, purity, and breathtaking emotional expressivity. He immigrated to the United States and studied *ḥazzanut* under Leo Loeb and Herman Zalitz. After serving with a number of congregations in the United States, he became *ḥazzan* of the Toronto, Canada synagogue Beth Emeth–Bais Yehudah. He gave concerts of classical music and *ḥazzanut* throughout the United States and in Europe, South Africa, and Israel. Danto visited the Soviet Union and sang in the Great Synagogue of Moscow. In 1998, Danto received an honorary doctorate in music from the Jewish Theological Seminary in New York City. He has made 21 recordings of *ḥazzanut*, Yiddish songs, and classical vocal pieces. Numerous contemporary composers have written for and dedicated their works to Louis Danto. In addition, he is a researcher and a champion of rare and unusual repertoire. Most of his current recordings are available though Cadenza Records.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

°DANZ (Danzius), JOHANN ANDREAS (1654–1727), German Protestant theologian and Hebraist, born in Sundhausen, near Gotha. Danz was professor of Oriental languages and theology at the University of Jena from 1685 onward. One of the foremost Christian Hebraists of his time, Danz tried to present Hebrew grammar systematically but was only partially successful, since many of the constructions were artificial. His first work, *Kelippei Egozim* ("Nutshells"): *Nucifrangibulum Sanctam Scripturae Veteris Testamenti Linguam Ebraeam Enucleans* (Jena, 1686), is divided into two parts. The first part (later also published separately, under the title *Medakdek, sive Literator Ebraeo-Chaldaeus*, Jena, 1696) deals with the etymology of the Hebrew language. Here Danz developed his *Systema Trium Morarum* (the three-beat-syllable method), and he also explains Hebrew vocalization. In the second part of the book (later also published as a separate work, *Turgeman,*

sive Interpres Ebraeo-Chaldaeus, Jena, 1694, and several editions) he is concerned with Hebrew syntax.

Aditus Syriae Reclusus (1689 and several republications) deals with difficult passages in Syriac. He also published *Spicilegium* (Jena, 1689); *Segulta de-Rabbanan, sive Rabbinismus Enucleatus* (Jena, 1699, and several editions); *Compendium Grammaticae Ebraicae-Chaldaicae* (Jena, 1699, and several editions), a Hebrew-Aramaic grammar, later translated into German by Georg David Kypke (Breslau, 1757); and *Sinceritas Scripturae Veteris Testamenti Praevalente keri Vacillans…* (Jena, 1713; annotations, *ibid.*, 1717), a book in defense of the masoretic text (*ketiv*).

DANZIG (Danziger), ABRAHAM BEN JEHIEL MICHAL (1748–1820), codifier. Born in Danzig, he studied in Prague at the yeshivot of Joseph Liebermann and Ezekiel *Landau. True to his family tradition, he refused to derive any material gain from his studies and earned his livelihood as a merchant. Although required at times to travel long distances to trade fairs in Germany, he continued to learn with great devotion. From 1794 to 1812 he served as *dayyan* in Vilna, in an honorary capacity; only in his old age, after losing his possessions, was he obliged to accept remuneration for his services. Danzig wrote a number of halakhic works, but his fame rests upon two publications: (1) *Ḥayyei Adam* ("Man's Life"), covering all the laws of the Shulḥan Arukh dealing with daily conduct, based on the *Oraḥ Ḥayyim* sections, with an addendum called *Nishmat Adam*, in which he justified his decisions which were not in accordance with the accepted view (Vilna, 1810); and (2) *Ḥokhmat Adam* ("Man's Wisdom"), covering all the laws of the Shulḥan Arukh dealing with the dietary regulations, etc., contained in the *Yoreh De'ah* section, with an addendum called *Binat Adam*, which included discussions on various relevant halakhic subjects and responsa (Vilna, 1812). Both works were initially intended for youthful students and for educated laymen not fully versed in rabbinic literature who, in attempting to determine Jewish law, found themselves unable to grapple with the intricacies of the Shulḥan Arukh and with its maze of conflicting opinions. In these works, Danzig shows himself possessed of considerable pedagogical talent. He arranges the laws methodically, defines his terms lucidly and precisely, presents the various views and their sources, and renders his own decisions and his reasons for them – all in clear, simple language. The pleasant tenor of his writing, which is suffused with unquestioning faith and true piety, contributed largely toward the acceptance of his works.

Ḥayyei Adam appeared in almost a hundred editions. Groups called "Ḥevrot Ḥayyei Adam" were formed in several communities for the regular study of the code. Danzig's merits as a codifier were recognized also by renowned rabbis and codifiers, who gave due consideration to his decisions. His books include much of historical interest with regard to the daily life of Lithuanian Jewry in his generation.

[Simon S. Schlesinger]

DANZIGER, ITZHAK (1916–1977), Israeli sculptor. Danziger was born in Berlin to Felix Danziger and Malka Rozenblit. His father worked as a surgeon in Hamburg and was active in the Zionist movement. In 1923 the family settled in Jerusalem. As a child Danziger studied at schools in Tel Aviv, Haifa, Berlin, and England. He studied sculpture at the Slade School of Fine Art, University of London. During these years he concentrated on the study of ancient cultures: Asia, Egypt, Africa, and India, especially by copying sculptures in the British Museum. In 1938 Danziger returned to Tel Aviv, where he set up a studio in his father's hospital. His studio became a meeting place and a workshop for young artists. Over the years Danziger spent time both in Israel and abroad. He created sculptures and memorials and designed gardens and environments. In 1968 he was awarded the Israel Prize.

His best-known sculpture is *Nimrod* (1938–39), placed in the Israel Museum in Jerusalem. This sculpture may be seen as constituting a manifesto and indeed it became identified with the Canaanite movement although Danziger himself was never an official member of this movement. The source of this figure was the Bible: "Like Nimrod a mighty hunter before the Lord" (Gen: 10:9). The meaning of the name in Hebrew is "rebellion," so Nimrod represents rebellion against the Lord. His figure is an antithesis of the typical image of a Jewish scholar. It symbolized the search for an alternative image, a new representation of an Israeli figure. The style of the sculpture was influenced by Mesopotamian reliefs and the choice of Nubian sandstone created the connection to local space as well as to biblical time. In the sketch for this sculpture Danziger designed the figure as a muscular giant but the sculpture itself became, after obsessive work, completely different. Gazing up, it represented an ancient idol.

Danziger was the inspiration for the second generation of Israeli artists and was considered a central figure in Israeli sculpture. He organized ecological acts, in an attempt to revitalize nature. These acts expressed the artist's perception that he was the creator of a new order of nature in a place that had been damaged by man and by time (*Rehabilitation of the Nesher Quarry*, 1971). The gardens scattered across Israel captured Danziger's heart. His actions in these gardens expressed the connection with the local place and with its inhabitants and resulted in giving Israeli art a social aspect (*The Bustan at Al Kababir Village*, Carmel)

Danziger was killed on July 11, 1977, in a road accident on his way to Jerusalem.

DA-OZ, RAM (1929–), Israeli composer. Born in Berlin, he immigrated to Ereẓ Israel in 1934 and studied piano and oboe in Haifa. He lost his eyesight while fighting in the War of Independence (1948). After the war, he studied theory and composition privately with Hajos for three years, and graduated from the Tel Aviv Academy of Music in 1953. His early compositions show tendencies toward chromatic modulations and the influence of Prokofiev and Bartok. From the 1970s, Da-Oz employed traditional styles in combination with "free tonality." Among his works for piano are *Capriccio* (1960); *Aspects, Prologue, Variations and Epilogue*; *Changing Phantoms* for orchestra (1967); *Illuminations* for violin solo; three madrigals (1967); *Rhapsody on a Yemenite Jewish Melody* for orchestra (1971); *Jubilee Chants* for choir and orchestra (1984); *I Loved a Shepherdess: Fantasy on Sephardic Melodies* for violin and piano (1991); and *Two-Part Inventions* (1995). He also composed several Israeli folk songs.

DA PONTE, LORENZO (1749–1838), poet and librettist, best remembered for his work with Mozart. Born Emanuele Conegliano, Da Ponte was given the family name of his sponsor, the bishop of Ceneda, upon the family's baptism in 1763. He was educated for the priesthood and ordained, taught briefly, and embarked upon a writer's career. Banished from Venice after a period of dissipation and a scandal, he reached Vienna in 1783 and was appointed librettist to the Imperial Opera. His first meeting with Mozart apparently came about through the Jewish banker and patron of the arts, Raimund von *Wetzlar. Da Ponte's libretti for Mozart were *Lo sposo deluso* (1783, unfinished); the oratorio *Davidde penitente* (1785, of uncertain authorship; see *David, In Music); several concert arias; and the three great operas *Le nozze di Figaro* (1784), *Don Giovanni* (1787), and *Cosí fan tutte* (1789). *Don Giovanni*, although based on previous stage works, certainly owes a spiritual debt to Da Ponte's friendship with Casanova, whom he had known in Venice. In 1790 the emperor Joseph II died and Da Ponte, who had enjoyed his favor, was obliged to leave Vienna. In Trieste he abandoned his lightly borne clerical status by marrying Nancy (Anne Celestine) Grahl, the daughter of a German-English merchant. The ceremony was said to have been held "according to the Jewish rite," but the reports are ambiguous. After further wanderings and a stay in London, where he was a librettist at Drury Lane Theater, Da Ponte and his family went to the United States in 1805. He ultimately settled in New York, engaged unsuccessfully in various commercial ventures, and for some time taught Italian at Columbia College. He earned a place in American operatic history by persuading M. Garcia's visiting troupe to give the first American performance of *Don Giovanni* in 1825. He also raised money for building the Italian Opera House in New York in 1833. His autobiography, *Storia compendiosa della vita di Lorenzo da Ponte* (New York, 1807), was republished several times in a revised edition.

[Bathja Bayer]

DARABANI, small town in N.E. Romania. Jews from Galicia settled there in 1836. After them Jews from Russia also settled there. The location of Darabani on the commercial route connecting Bukovina and Moldavia attracted further Jewish settlement. However in 1875 and 1877 the owner of the land sued the Jews, and violence broke out. Anti-Jewish riots again occurred in 1907. There were 600 Jews living in Darabani in 1838; 638 (38% of the total population) in 1859; 2,472 in 1899; 2,387 (36.8%) in 1910; and 1,917 (17.8%) in 1930. The majority were merchants or artisans. Many of them were *ḥasidim* of the *admor* of Stefanesti. Between the two world wars the economic life of the town deteriorated because of the changes in borders and commercial routes. From the onset of communal life there was friction in the community. The Russian Jews established a separate synagogue in the 1840s; between the two world wars there was dissension in the community between artisans and merchants. In 1935–40, eight synagogues and five *ḥadarim* operated in Darabani. Among the rabbis was Nahum Shemaryahu Schechter (1908–30), author of some volumes of *derashot* and on Hebrew and Jewish names. He later immigrated to Israel and died in Jerusalem in 1976. The Hebrew and Romanian poet Shimon Haran (died in Jerusalem 2004) and the Yiddish and Romanian poet Sami Weinstein-Boiangiu (A. Ebion) were born in Darabani. A Zionist organization was established in Darabani in the 1930s. A branch of the Jewish party (Partidul Evreiesc, a political organization with a Zionist national trend) was active there and had representatives on the municipal council. Apart from the *ḥadarim* the community maintained its own school (1937).

[Yehouda Marton / Lucian-Zeev Herscovici (2nd ed.)]

Holocaust Period

In 1941 there were 1,854 Jews in Darabani. They were victimized by acts of terror as early as June 1940. On the pretext that the Jews were pro-Soviet and secretly preparing to greet the Soviet Army, Romanian army detachments and police daily attacked them in the streets, searched their houses, and arrested them. In June 1941, a few days before war against the Soviet Union broke out, all Jews were ordered to leave the town within half an hour and were allowed to take only their basic belongings with them. After the evacuation, their houses were plundered. The deportees had to walk to the railroad station, a distance of 22 mi. (35 km.) and were transported by freight car to *Dorohoi; the men were sent on to the concentration camp at Târgu-Jiu and the women and children to the small town of Turnu-Severin in western Romania. On Nov. 7, 1941, they were sent together with the men from Târgu-Jiu to *Transnistria, crossing the border in sealed freight cars and

proceeding on foot to their destination, where most of them perished. At the end of 1943, a few of the survivors returned to Dorohoi and went from there to Darabani, where they were still subject to persecution. They were not permitted to engage in business, to walk in the streets, or buy food before 10 A.M., and Romanian inhabitants were forbidden to have any contact with them. After World War II survivors, joined by refugees from northern Bukovina, reorganized community life. In 1947, 990 Jews lived in Darabani, with five functioning synagogues in 1950, but their numbers diminished owing to emigration. Some ten Jewish families remained in the town by 1970 and maintained the synagogue. No Jews lived in Darabani in 1992. An association of Jews from Darabani is active in Israel, in the framework of the Association of Jewish Israelis from the former county of Dorohoi.

DARʿĪ, MOSES BEN ABRAHAM (late 12th–early 13th century), Karaite poet. The assertion that Darʿī was writing poetry as early as 843 is based on a forged date in the *Firkovich manuscript. The similarity between his poems and those of the Spanish school from Ibn Gabirol to Abraham Ibn Ezra can only be explained by his dependence upon them; Darʿī, then, must have lived after Abraham Ibn Ezra. According to A. Neubauer, he lived at the end of the 13th century, because in his poems he prays for the deliverance of Jerusalem from the Muslims and the Christians, which points to a time when both sides were desperately contending for the city. The exact period of his life depends upon the correct identification of the poet's friends mentioned in his divan (a collection of poetry); it can, however, be stated that he must have been active about the year 1200. It is known that his parents had emigrated from Spain to Darʿa (in Morocco), which accounts for the family name "Darʿī." He himself was born in Alexandria, where he spent his youth. Steinschneider and Davidson assume that he was originally a Rabbanite and only later became a Karaite. In any case, his poems contain both violent outbursts against "the people of the distorted Mishnah" and tolerant utterances. He wrote his divan in Egypt; he is also known to have stayed in Damascus and to have undertaken a journey to Jerusalem. By profession he was a physician, as is evident from numerous acrostics in his poems. Two of Darʿī's sons died during his lifetime. His poems have been preserved in a manuscript divan that originated in Jerusalem (Firkovich Collection, Leningrad). It consists of two parts: *Firdaws Azhār al-Qaṣāʿid wa al-Ashʿār* ("Flower Garden of Qasidas and Songs"); and a "Supplement" (*Al-Mulḥaq li Dīwānihi al-Asbaq*), containing – both together – a collection of 544 poems. Another manuscript of the divan with 561 poems became known in 1837 (see Geiger, in: WZJT, 3 (1837), 443, no. 9–10). More recent copies of the divan (of the 19th–20th centuries) have been preserved in a manuscript acquired by I. Davidson as well as in the Asiatic Museum of Leningrad. Moreover, various religious poems of Darʿī are preserved in manuscripts of song collections of Egypt and Damascus. Pinsker published more than 100 poems from the Firkovich manuscript in *Likkutei Kadmoniyyot* (1860), and also individual poems in the journal *Kokhevei Yiẓḥak* (26 (1861), 22ff; 27 (1862), 24–27; 28 (1862), 20–24); one poem was published by A. Neubauer (*Melekhet ha-Shir* (1865), 64). Davidson intended to publish the entire divan but only the first part appeared in *Horeb*, 3 (1936), 28–42. Both parts of the divan contain almost every poetical genre cultivated by the Spanish-Hebrew poets. To the secular poems belong epistles to friends, epithalamia, elegies, enigmas, epigrams, love lyrics, satires, etc. The religious poems are frequently arranged according to the sequence of the Sabbath reading of the Torah. Most of the poems are written in Hebrew and approximately ten are written in Arabic. Darʿī signs most of the Hebrew poems "*Moshe Rofe Kara'i, Ḥazak.*" A special group comprises poems in both languages. A so-called *maqāma* (an address, sermon, or story, told in public and written in assonant prose), named the *Maqāma of Alexandria* (*Maḥberet No-Amon Miẓrayim*, ed. 1927 by I. Davidson), has been attributed to Darʿī without any substantial reason. In general, Darʿī's technical dexterity surpassed his poetical gifts. While the language and structure of his poems are in the best tradition of the Spanish school, the contents often betray a lack of individuality.

[Jefim (Hayyim) Schirmann]

DARIUS (Heb. and Aram. (from the Elephantine papyri) דריוש; in the Elephantine papyri also דריהוש, דריוהוש; old Persian *darayavahus*), name of three Persian kings of the Achaemenid royal family.

DARIUS I (522–486 B.C.E.), a descendant of a collateral line of the Achaemenid royal family, followed Cambyses, son of Cyrus, on the throne of Persia after a period of political turmoil. He defeated Gaumata, who claimed to be Bardiya,

brother of Cambyses, and rebels elsewhere in the empire. Darius gave his account of the struggle in the trilingual Behistun inscription (Old Persian, Elamite, and Babylonian; a fragmentary Aramaic version was found at Elephantine). This inscription, as well as that on his tomb at Naqsh-i Rustam, affords an insight into Persian religious beliefs of that period. Darius extended the empire to include Lybia, Thracia, Sogdiana, and India as its borders. His attempt to conquer Greece ended in defeat at Marathon in 490. He organized the empire into satrapies and set up a network of roads and a postal system. He also reformed the laws of the provinces and consolidated internal administration and taxation. According to Ezra 6:12 Darius forbade further obstruction to the rebuilding of the Temple in Jerusalem and supplied its needs: the Temple was completed in the second year of his reign (Haggai 1:15).

DARIUS II NOTHUS (442–404 B.C.E.), son of Artaxerxes I, was essentially a weak king whose rule over the western part of the empire was often lax. During his reign there was turmoil in Media, Lydia, Syria, and Egypt. Many of the Elephantine papyri are dated by his regnal years. During his fifth year the papyrus ordering the Jews of Elephantine to observe the Passover was issued in his name (Pritchard, Texts, 491), and it was in his 14th year (410 B.C.E.) that the Elephantine temple was destroyed. The reference to Darius the Persian in Nehemiah 12:22 is in all likelihood to Darius II and permits the dating of the list of priests given there.

DARIUS III CODOMANUS (336–330 B.C.E.), the last Achaemenian king, was defeated by Alexander the Great at Issus (333) and at Gaugamela (331), an event mentioned in I Maccabees 1:1. He was murdered by the satrap of Bactria.

BIBLIOGRAPHY: P.J. Junge, *Dareios I* (Ger., 1944); Olmstead, Hist, index; R.G. Kent, *Old Persian* (1953), 107–63, 189; B. Porten, *Archives from Elephantine* (1968), index.

[Jonas C. Greenfield]

DARIUS THE MEDE, Persian king. According to the Bible in Daniel 6:1 (cf. 11:1) Darius the Mede succeeded Belshazzar as king of Babylon. The reference is historically impossible and has caused much confusion. A possible explanation may be found in the recapture of Babylon in 520 B.C.E. by *Darius I and the loose use of the term Mede for Persian by the Greeks and Mineans. A more recent explanation is based on the Achaemenian Persian doctrine of three world monarchies of which Persia was the third. The Chaldeans were assumed to be the founders of the first great empire; they were followed by the Medes and finally by the Persians. The Jews substituted the Chaldeans for the Assyrians and the Persians. Darius, who conquered Babylon, was regarded by the Judean writer as Darius the Mede, successor to the Chaldean, Belshazzar, and as the predecessor of Cyrus the Persian.

[Jonas C. Greenfield]

DARMESTETER, ARSÈNE (1846–1888), French philologist and authority in Romance languages. Darmesteter, who was born at Château-Salins (Lorraine), was appointed lecturer in Romance languages at the Ecole des Hautes Etudes in Paris in 1872. In 1877 he was appointed lecturer in French language and literature at the Sorbonne. He collaborated with Adolphe Hatzfeld in one of the most important modern dictionaries of the French language. He also taught at the Ecole Rabbinique, co-founded the Société des Etudes Juives, and the *Revue des Etudes Juives (1879), to which he contributed several articles.

Darmesteter's first contribution to Jewish scholarship was his *Le Talmud*, written in 1866 and published in *Reliques Scientifiques* (1890). He soon concentrated on the French words used by medieval Bible and Talmud commentators, *Rashi in particular. His *Glosses et Glossaires hebreux-français du moyen-âge* (in *Romania*, 1, 1872), was the first attempt to compile a dictionary of 11th-century French, based on these commentators. His most important work in this field is the dictionary of Rashi's **la'azim* in the Bible (*Les gloses françaises de Rashi dans la Bible*, 1909), and in his Talmud commentary *Les gloses françaises dans les commentaires talmudiques de Rashi* (1929). This was edited by D.S. *Blondheim, who published on his own a second volume of the work (1937). Darmesteter published the so-called *Deux élégies du Vatican*, commemorating the 13 Jewish martyrs of Troyes (1288), with a commentary (in *Romania*, 3, 1874). In 1890 his brother James published a three-part collection of Arsène's writings (*Reliques Scientifiques*), consisting of his general Jewish studies, his Judeo-French ones, and a memoir and bibliography.

His brother JAMES DARMESTETER (1849–1894), an Orientalist, was born at Château-Salins. He studied Oriental languages in Paris specializing in Indo-Iranian studies, and became professor at the Collège de France in 1886. Apart from many publications in this field, such as the translation of the *Zend-Avesta* (the sacred Books of the Zoroastrian religion) into French (1842) and English (1880), he published material on the relationship between Zoroastrianism and Judaism and a series of essays *Les Prophètes d'Israel* (1892), which was his credo. Darmesteter also prepared French editions of Shakespeare and Byron and wrote essays on English literature (1883).

BIBLIOGRAPHY: *Annuaire de l'Ecole pratique des Hautes Etudes* (1895), 17–40 (with James' bibliography); G. Paris, *Penseurs et Poètes* (1896), 1–6; A. France, in: *Vie Litteraire*, 4 (1888); A. Spire, *Quelques Juifs et demi-Juifs* (1913), 199–272.

DARMON (**Garmon**, **Jarmon**, **Jarmona**), North African family. JACOB B. ISAAC DARMON (1460) was *dayyan* of Mahdia (Tunisia) and one of the main correspondents of Ẓemaḥ b. Solomon *Duran. MORDECAI DARMON was a leading 17th-century merchant in Tunis, where the kabbalist MOSES DARMON (d. 1741) was *dayyan* of the Leghorn community. NEHORAI DARMON (1682–1760), talmudist, poet, and disciple of Isaac Lombroso, succeeded him. His literary works were destroyed

when the Jewish and Christian houses were plundered by Algerian soldiers (1752). What had been saved was published under the title *Yeter ha-Baz* (Leghorn, 1787). MORDECAI DARMON, a wealthy scholar, was treasurer and adviser to the beys of Algeria before 1772. In 1783 he was sent on a diplomatic mission to Constantinople and later established the new Oran community for which he built a synagogue. He wrote *Ma'amar Mordekhai* (Leghorn, 1781), a collection of homiletic explanations on biblical and talmudic passages. His sons-in-law, the *dayyan* Masʿud and Judah Darmon, wrote many poems. The latter also wrote an important work on the *halakhah* entitled *Gur Aryeh* (Leghorn, 1851). The poet JOSEPH DARMON was coauthor with Solomon Zarka of Tunis of *Rinnah vi-Yshu'ah* (2 parts, 1856–57). The merchant ISAAC DARMON settled with his sons in Morocco. JACQUES DARMON represented England in Casablanca and VICTOR (Ḥayyim) DARMON was Spain's representative in Mazagan. As a result of a false testimony brought by the governor of the town, he was summarily executed (January 1844). The affair had wide repercussions in Europe and was one of the causes of the 1859–1860 Spanish-Moroccan war. DAVID DARMON (1885–?), musicologist and lawyer in Tunis, wrote several works and essays among which are *Le Réalisme dans la Musique* (1906) and *La Situation des Cultes en Tunisie* (1932²) which contains much information on Tunisian Judaism.

[David Corcos]

DARMON, AMRAM (1815–1878), French soldier. Darmon was born in Algiers and was a scion of the distinguished *Darmon family. He enthusiastically welcomed the French conquest of Algeria in 1830, and in 1834 joined the French army, enrolling in the spahis, and participated in all the subsequent campaigns. As a result of his knowledge of Arabic and French and of the country as a whole, he was appointed interpreter, serving in this capacity in the various campaigns, and in 1852 was given the official appointment of Interpreter, First Class. In December of that year he was named Chevalier of the Legion of Honor. From 1853 to 1868 he was head of the Arab Bureau in Mascara, where he died. Darmon took advantage of the decree of 1866 granting Algerian Jews the right of individual naturalization, four years before the Crémieux decree of 1870 which granted them automatic French citizenship.

DARMON, PIERRE (1934–), tennis player. Born in Tunis, Darmon was a top-ranked tennis player in France from 1956 through the 1970s, including No. 1 from 1956 to 1964, except in 1958, and was ranked in the top ten worldwide by various tennis publications in 1958, 1963, and 1964. In 1963 he lost in the singles finals at the French Open and reached the semifinals there in 1964 and the quarterfinals in 1958, 1962, and 1967. At Wimbledon, he reached the finals in doubles in 1963 and the quarterfinal in 1958. Darmon was also a singles semifinalist at the Italian Championships in 1957, and a singles quarterfinalist at the 1965 Australian Championships. Darmon won the French Championship nine times between 1956 and 1969, and represented France in 68 matches in Davis Cup competitions from 1956 to 1967, holding France's record for most total wins with 47 and most singles victories with 44. In 2002, he was named recipient of the Davis Cup Award of Excellence from the International Tennis Hall of Fame and the International Tennis Federation. Darmon was the director of the European Tennis Bureau of the Association of Tennis Professionals (ATP) in 1973, a member of the ATP Board of Directors from 1974 to 1979, and a member of the Men's International Professional Tennis Council from 1974 to 1979. He also served as tournament director of the French Open at Roland Garros from 1969 through 1978.

[Elli Wohlgelernter (2nd ed.)]

DARMSTADT, city in Hesse, Germany. Jews were mentioned there from the 16th century. They were subjected to the severe restriction of the *Judenordnung* enacted for the whole of *Hesse Jewry in 1585 and reimposed in 1629. In the 16th and 17th centuries Darmstadt Jews were compelled to attend Christian missionary sermons, like the other Hesse communities. They were granted permission to assemble for prayers only in 1695. A synagogue was erected in 1737, and the cemetery was established in 1709. The community numbered 200 persons in 1771. Its *Memorbuch* encompasses the years 1711 to 1863. The community flourished after the grant of civil rights to Jews.

About 2,000 Jews lived in Darmstadt in 1913, and 3,000 in 1933, many of them immigrants from Eastern Europe. A new synagogue was built in 1876. However, the local Orthodox members seceded and in 1906 founded an independent community and synagogue, which totaled approximately 110 families in 1925. The Orientalist Julius Landsberger served as rabbi of Darmstadt at the end of the 19th century. The last noted rabbi of the Reform community of the city was the scholar Bruno *Italiener. The poet Karl *Wolfskehl, the literary historian Friedrich *Gundolf, and the architect Alfred *Messel were all born in Darmstadt. Emigration after Hitler's rise to power reduced the community to fewer than 700 by August 1938. On Nov. 10, 1938, both the main synagogue, with its 30 Torah scrolls, and the Orthodox one were burned down. The remaining Jews were deported starting in December 1940. There were 70 Jews living in the city and 30 in the district in 1967. A new synagogue was inaugurated in 1988, when there were 116 community members. Due to the immigration of Jews from the former Soviet Union, their number rose to 670 in 2003.

[Edmund Meir / Stefan Rohrbacher (2nd ed.)]

DARMSTADT, JOSEPH (d. c. 1820), early settler of Richmond, Va. Darmstadt arrived in the United States as a sutler with the Hessian troops and was captured by Continental forces. Sent as a prisoner to Charlottesville, Virginia, he renounced his foreign allegiance, presumably recognizing the assets of a democratic government. Darmstadt settled in Richmond no later than 1786. He became a successful merchant because his knowledge of the language and customs of the large German colony in the mountains west of Richmond drew the people to trade in the capital city. A popular figure, he was elected to the exclusive Amicable Society in 1789. Darmstadt was active in Masonry and was the second Jewish Mason in Virginia. He was founder of Beth Shalome Congregation.

[Simon Vega]

DAROCA, city in Saragossa province, N.E. Spain. During the period of Muslim rule the Jewish quarter of Daroca was situated on the slope of Mt. San Jorge at the eastern approach to the valley, with the Jewish cemetery nearby. After the reconquest of Daroca by Alfonso I of Aragon in 1122 Jews were granted the same rights as the Christian and Muslim residents in a *fuero* ("municipal charter"), endorsed by Count Ramon Berenguer IV in 1142. The Daroca community flourished during the 13th century. In 1210 the Jews of Daroca were exempted by Pedro II from paying certain tolls, notably those levied on entry to and exit from Moorish territory. An injunction was issued by James II in 1312 to stay the sale of property of Jews in Daroca under arrest for debt. The arrest of Jews on the Sabbath and Jewish holidays was also prohibited. Accusations were rife in 1321 that the Jews had poisoned the wells. Regulations concerning the institution and observance of the Jewish *oath in Daroca were introduced by Alfonso IV in 1330; the deponent was required to take the oath at the entrance to the synagogue, holding the Torah scroll, in the presence of three Christian witnesses only.

During the outbreaks of 1391 peasants in the neighborhood joined in the attacks on the Jews in Daroca and tried to force them to accept baptism. Although the king extended his protection to the community, only 27 taxpaying Jewish families remained in Daroca by 1398. The massacres of 1391 brought disaster to the Jews of Daroca. The Church increased its pressure on the survivors. The recovery was slow, but never complete. At the beginning of the 15th century the community of Daroca, like many others in the Crown of Aragon, was under great pressure from Christian society. The town physician at that time was Salamon Alconstantin. Joseph *Albo served as rabbi in Daroca and represented it at the disputation of *Tortosa in 1413–14, when the Jewish community was again attacked by the townspeople. By June 1414 many of the rabbinic figures of the Aragonese communities gave in and converted. Joseph Albo was one of the very few who had the courage and strength to withstand the Christians' pressure and remain Jewish. After the disputation, about 110 of the most eminent and affluent members of the Daroca Jewish community adopted Christianity. Under pressure of the Church many who belonged to the upper class, the *mano mayor,* converted. On Aug. 20, 1414, the apostates were exempted from communal fiscal liabilities by Ferdinand I. Subsequently the townsfolk of Daroca threatened to expel the remaining Jews unless they adopted Christianity; the municipal authorities seized a number of Jewish debtors on the pretext that they had been trying to abscond. The bailiff then proceeded to arrest all the Jews en masse. A number of the Jews let themselves down from the city walls by rope at night and made their escape. Of the 40 Jewish families, some 160 to 180 people, who had been living in Daroca, only nine or ten persons then remained, all in prison. Their names are known thanks to a trial initiated in January 1426. Following the mass conversion in Daroca and the flight of many Jews, a large part of the communal property and ritual objects were longer of any use. Some of the objects were put on sale. Some Jews of Daroca settled on baronial lands, such as Epila and Montalbán, or in villages in the surroundings of Daroca, Cariñena, Luco, and Anento. Some time after April 1414, the community or *aljama* ceased to exist as a juridical body. Joseph Albo left for Soria, in Castile. It seems that the majority of those who retained there Judaism came from the lower class of craftsmen.

The state of affairs evidently improved, however, and as result of Jewish immigration to the town, in 1458 the limits of the Jewish quarter were defined by John II in order to prevent Jews living alongside Christians. The Jewish community was living side by side with the Conversos, who were already showing signs of reverting to Judaism. In 1484 Ferdinand II issued a directive permitting Jews to be summoned to give evidence before the *Inquisition in cases where Conversos were accused of Judaizing. Jewish property in Daroca was looted after the issue of the edict of expulsion of the Jews from Spain in March 1492. By August the synagogue and hospital had been sold along with other Jewish communal property.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

DAROFF, SAMUEL H. (1900–1967), Philadelphia clothing manufacturer; Jewish and civic leader. Daroff joined his father's clothing business, which grew into a nationally known

firm. Daroff began his philanthropic career at the age of 27 in the Masonic Golden Slipper Club, and then gradually became known for his willingness to give time, money, and energy to good causes. He was campaign chairman of Philadelphia's Allied Jewish Appeal from 1945 to 1948. His period of communal leadership (1935–65) coincided with the coming of age and responsibility of the children of East European Jews, whom he represented in the succession to authority. One of his favorite organizations was the Philadelphia Jewish Armed Services Committee of the USO-JWB, to which he gave intense support long after interest in military and veterans' work had waned; another was the local branch of the American Jewish Congress. He was the second president of Philadelphia's Albert Einstein Medical Center (1953–57), which named its southern division for him, after his death. Daroff was active on the boards of a large number of national and international agencies and institutions. In Philadelphia he was interested in the work of the United Fund, Police Athletic League (which named one of its centers for him after his death), Hero Scholarship Fund, and Associated Hospital Service. Hundreds of honors were awarded to him, frequently in connection with fundraising efforts. Philadelphia honored him with the presidency of the Board of City Trusts, and in the state he was appointed chairman of the governor's Industrial Race Relations Committee and member of the Pennsylvania Fair Employment Practices Committee. While his personal inclinations were toward a traditional form of Judaism, Daroff was a member and supporter of many congregations – Orthodox, Conservative, and Reform.

[Bertram Wallace Korn]

°**DARQUIER DE PELLEPOIX, LOUIS** (1897–1980), French fascist and antisemite. Darquier, who served with distinction in World War I, became active in fascist organizations. In 1935 he was elected municipal councilor in Paris on a "national and anti-Jewish" platform. He was head of the Rassemblement Antijuif de France and published the fascist *La France Enchaînée*. On May 6, 1942, Pierre *Laval appointed him head of the General Commissariat of Jewish Affairs. He held this office until the end of February 1944, and collaborated closely with the Nazi occupation in the persecution of the Jewish population of France, which involved putting Jews "outside the law," spoliation of their property, and deportations. Upon the liberation of France, he escaped to Spain. He was convicted for high treason and condemned to death *in absentia* by the Haute Cour of France in 1946.

[Yehuda Reshef]

DARSHAN (Heb. דַּרְשָׁן), a professional or qualified expounder of Scripture. Originally a *darshan* expounded both halakhically and aggadically on all Scripture. *Ben Zoma, called "the last of the *darshanim*" (Sot. 9:15), is mentioned in one passage as a halakhic *darshan* (Ber. 1:5) and in another, where, with his colleague *Ben Azzai, he is referred to as a *darshan*, the exposition is mystical (Gen. R. 5:4). As the term *Midrash, which was originally applied both to *Midrash Halakhah* and *Midrash Aggadah*, came to refer to the latter only, so the term *darshan* came to be applied specifically to the homiletical interpreter of the Torah. The verse in Ecclesiastes (7:5) "It is better to hear the rebuke of the wise" is thus applied to *darshanim* in contrast to "the song of fools" referring to the **meturgemanim* who "raise their voice in song to make themselves heard by the people" (Eccl. R. ad loc.). Eleazar b. Simeon was eulogized as a "reader of Scripture, a Mishnah teacher, a *paytan*, and a *darshan*" (Lev. R. 30:1). In the Middle Ages, the word came to be applied to the professional preacher or the person who was an expert in preaching. In some of the larger Eastern European communities, a person was appointed to be the official preacher of the community, in contrast to the rabbi and the *dayyan* who occupied themselves with *halakhah*. Both the official and the itinerant preacher were usually given the title of **maggid*.

DARVAS, LILI (1906–1974), European and U.S. actress. Born in Budapest, Lili Darvas began her career in 1922 as Shakespeare's Juliet. She married the Hungarian playwright Ferenc *Molnar in 1922, and joined Max Reinhardt's company from 1926 to 1938. Immigrating to the U.S. in 1938, she played in Ferdinand Bruckner's *Criminals*. Her first English-speaking role was in *Soldier's Wife* in 1944. Subsequently, she appeared frequently on stage, screen, and television. She visited Budapest in 1965–66 to play the mother in *Olympia*, a drama that had originally been written for her by her husband.

DARWĪSH, SHALOM (1913–), Iraqi author. A lawyer by profession, Darwīsh was secretary of the Baghdad Jewish communal council (1931–44). His first volume of Arabic short stories dealt with the life of Iraq's masses and was followed by a second collection, *Baʿd al-Nās* ("One of the People," 1948). He immigrated to Israel in 1951 and settled in Haifa.

[Shmuel Moreh]

DASH, SAMUEL (1925–2004), U.S. attorney. Dash was born in Camden, New Jersey, his parents having emigrated from the Soviet Union. After graduating from Harvard Law School with a J.D. degree *cum laude*, he taught law at Northwestern University. Admitted to practice law in Illinois (1950) and Pennsylvania (1952), he was trial attorney in the U.S. Department of Justice (1951–52), and from 1952 to 1956 served in the district attorney's office in Philadelphia, rising from assistant district attorney to first assistant district attorney and ultimately to district attorney. Dash then entered private practice, specializing in criminal trial work. In 1965 he joined the law faculty of Georgetown University, Washington, D.C., and served as professor of law and director of the Institute of Criminal Law and Procedure at the Georgetown University Law Center.

As director of the Pennsylvania Bar Association Endowment Study of Wiretapping and Eavesdropping, in 1956–58 he

developed material for his book *The Eavesdroppers* (1959; with R.E. Knowlton and R.F. Schwartz), a study that covers wiretapping practices, laws, devices, and techniques by law enforcement officers, and the wiretapping practices of big business, labor, and politics. The study helped change wiretapping law in America. Subsequently Dash's book *The Intruders: Unreasonable Searches and Seizures from King John to John Ashcroft* (2004) criticized the U.S. government's expanded search, seizure, and wiretapping powers following the September 11, 2001, terrorist attacks. Dash also published on *Readings in Criminal Justice* (with Bowman and Pye, 1968).

Dash served, among many other public offices, as director of the International League for the Rights of Man, which has consultative status with the United Nations, as chair of the American Bar Association's Criminal Justice Section, and as president of the National Association of Defense Lawyers in Criminal Cases. In 1973 Dash was appointed chief counsel to the U.S. Senate Committee investigating the Watergate scandal. His book *Chief Counsel: Inside the Ervin Committee – The Untold Story of Watergate* was published in 1976. Dash served in a number of other major inquiries as well. He made headlines while serving as ethics adviser to independent counsel Kenneth Starr during the Whitewater Investigation (1994–1998). He resigned in protest when Starr testified before the House Judiciary Committee to advocate for the impeachment of President Clinton. Dash, who had helped write the independent counsel law, felt that Starr's testimony exceeded his capacity as objective investigator.

As a member of the board of directors for the International League of Human Rights, Dash served on human rights missions to Northern Ireland (to investigate the 1972 Bloody Sunday incident), the Soviet Union, and Chile. In 1985 he was the first American the South African government allowed to visit Nelson Mandela in prison, and he took part in the mediation efforts that ultimately led to Mandela's release.

[Jacob Haberman / Ruth Beloff (2nd ed.)]

DASHEWSKI, PINḤAS (1879–1934), Russian Zionist activist. Dashewski came from an assimilated family in Korostyshev, Ukraine; his father was an army doctor. He joined a Zionist Socialist student circle in Kiev in 1902. After the *Kishinev pogrom Dashewski assaulted and wounded the chief instigator, P. *Krushevan, in St. Petersburg on June 4 (17), 1903. He was sentenced to five years' hard labor but was released in 1906. The incident, trial, and Dashewski's appearance in court acted as a protest against the regime, and a call for Jewish *self-defense. In 1910 Dashewski visited Ereẓ Israel. During the *Beilis case he took part in a delegation of Russian Jews to the U.S. Dashewski, who was a chemical engineer, worked in the Caucasus and Siberia. He remained a Zionist after the 1917 Revolution and was eventually arrested and died in prison.

[Moshe Mishkinsky]

DA SILVA (Silverblatt), HOWARD (1909–1986), U.S. actor. Born in Cleveland, Da Silva at first worked as a stage actor. After learning the craft he worked at the Civic Repertory Theater in New York until 1934 and later, he played in many theatrical productions and Broadway musicals including *Alice in Wonderland, Waiting for Lefty, The World of Shalom Aleichem, Oklahoma*, and *Fiorello*. He also directed plays and wrote the Broadway comedy *The Zulu and the Zayde*. Da Silva appeared in numerous films from 1936 including *Abe Lincoln in Illinois, Nine Lives Are Not Enough, Lost Weekend, They Live by Night, David and Lisa, Topkapi, Nevada Smith*, *1776* (as Benjamin Franklin), *The Great Gatsby, The Private Files of J. Edgar Hoover, Mommie Dearest*, and *Garbo Talks*.

[Jonathan Licht (2nd ed.)]

DASSAULT (originally **Bloch**), **DARIUS PAUL** (1882–1969), French army officer, born in Paris. Dassault graduated from the Ecole Polytechnique in 1903 and joined the army, serving in artillery units and at the general headquarters of the French army in the Near East during World War I. Between 1919 and 1933 he held posts in military schools including the Centre des Hautes Etudes Militaires and in 1933 was appointed head of the technical bureau of the French artillery. On the outbreak of World War II, Dassault was put in command of the Fifth Army Corps and following the French surrender in June 1940 he joined the Resistance. When France was liberated in 1944, he was raised to the rank of *général d'armée*, the highest rank in the French army, and appointed governor of Paris. From 1945 until he retired in 1948, Dassault was general inspector of artillery. His brother was Marcel *Dassault, owner of the aircraft factory of that name.

[Mordechai Kaplan]

DASSAULT, MARCEL (1892–1986), French aeronautical engineer and industrialist. Dassault was born Marcel Bloch in Paris, the son of a physician. He was one of the first graduates in aeronautical engineering (1914). In World War I he invented an improved propeller for the Spad fighter. In 1930 he founded the aircraft company Societé des Avions Marcel Bloch, where he designed a series of civil and military aircraft including the Bloch 152, the only French fighter aircraft potentially capable of opposing the Luftwaffe. The firm was nationalized in 1936 but he remained director. He was deported to Buchenwald in 1944, where he remained until the end of the war after his refusal to collaborate with the Germans on aircraft design. After the war he changed his name to Dassault, after his brother Paul's code name in the resistance "d'assault" (derived from the French phrase "char d'assault" for tank). In 1946 he founded the Societé des Avions Marcel Dassault. In 1967 Dassault's company merged with Breguet. The new company became the dominant supplier of French military aircraft. Dassault designed the Ouragan, and the Mystère and Mirage series of jet fighters. These aircraft made a prominent contribution to Israel's military campaigns. The Ouragan was used in the 1956 Sinai campaign and the Mystère IV in the 1967 Six-Day War.

An upgraded version of the Super Mystère B2 was employed in the 1973 Yom Kippur War. He also designed military transport aircraft and the Falcon series of private business jets. Subsequently the company greatly expanded and diversified its business interests in Dassault's later years and under the direction of his son and heir, Serge. Marcel Dassault served as a deputy in the French National Assembly (1951–55) and as a senator (1957–58). He was again elected a deputy in 1958.

[Michael Denman (2nd ed.)]

DASSIN, JULES (1911–), U.S. film director. Born in Middletown, Connecticut, Dassin attended high school in the Bronx, New York, and drama school in Europe. He started his career as an actor in the Yiddish Theatre in New York at age 25. In Hollywood, he worked his way up to a directorial position in MGM's short subjects unit, where he handled an inspired 20-minute adaptation of Edgar Alan Poe's *The Tell-Tale Heart* (1941). He then graduated to directing feature films for MGM, such as *Nazi Agent* (1942), *Reunion in France* (1942), and *The Canterville Ghost* (1944). He wrote radio plays, and directed film noir gangster movies such as *Brute Force* (1947) and *The Naked City* (1948) for Universal Studios. During the McCarthy period in the 1950s, Dassin started making films abroad. The last film he directed for a major American studio was 20th Century Fox's *Night and the City* (1950), which was shot in London. He moved to France, where he co-authored, directed, and acted in *Rififi* (1954), which is regarded as one of the most influential crime caper movies. During this period he directed the films *He Who Must Die* (1957), *La Loi* (1959), both of which he wrote, and the comedy thriller *Topkapi* (1964), which he also produced. Living in Greece, he became famous with the film *Never on Sunday* (1960), a humorous study of Greek seaport life, which he wrote and directed. In it, he played opposite Melina Mercouri, whom he later married. In 1967 he directed a documentary entitled *Survival* (screenplay by Irwin *Shaw) on the Six-Day Israel-Arab War. Dassin also wrote, produced, and directed *Phaedra* (1962), *10:30 P.M. Summer* (1966), *Up Tight* (1968), and *Promise at Dawn* (1970). He wrote and directed *A Dream of Passion* (1978) and directed *The Rehearsal* (1974) and *Circle of Two* (1980). As an actor, he appeared in *Phaedra*, *Promise at Dawn*, and *The Rehearsal*.

Although he was permitted back into the U.S. studio system in the mid-1960s, Dassin chose to remain in Europe. His son, JOE DASSIN (1938–1980), was one of France's most popular singers, with hits such as "L'été indien" and "Aux Champs-Elysées."

ADD. BIBLIOGRAPHY: M. Mercouri, *I Was Born Greek* (1971).

[Linda Gutstein / Ruth Beloff (2nd ed.)]

DATHAN AND ABIRAM (Heb. דָּתָן, cf. Akk. *datnu*, "strong"; and Heb. אֲבִירָם, "my [or 'the'] father is exalted"), sons of Eliab of the tribe of Reuben, leaders of a revolt against the leadership of Moses (Num. 16; 26:9–11). According to these sources, they joined the rebellion of *Korah during the desert wanderings. Defying Moses' summons, they accused him of having brought the Israelites out of the fertile land of Egypt in order to let them die in the wilderness (16:12–14). Moses then went to the tents of Dathan and Abiram and persuaded the rest of the community to dissociate themselves from them. Thereafter, the earth opened and swallowed the rebels, their families, and property (16:25–33). Modern scholars generally regard this narrative as resulting from an editorial interweaving of originally distinct accounts of two separate rebellions against the authority of Moses. It is noted that verses 12–15 and 25ff. form a continuous, self-contained literary unit and that the former contains no mention of Korah, who is likewise omitted from the references in Deuteronomy 11:6 and Psalms 106:17. The event described served as a warning to Israel and as an example of divine justice (*ibid.*). Ben Sira (45:18), too, mentions it. However, no further details are given about the two rebels, and the narrative is clearly fragmentary. It is not unlikely that the rebellion was connected with the series of events that led to the tribe of Reuben's loss of its earlier position of preeminence.

[Nahum M. Sarna]

In the *Aggadah*

Dathan and Abiram are regarded as the prototype of inveterate fomenters of trouble. Their names are interpreted allegorically, Dathan denoting his violation of God's law, and Abiram his refusal to repent (Sanh. 109b). They were wholly wicked "from beginning to end" (Meg. 11a). They are identified with the two quarreling Israelites (Ex. R. 1:30) and it was they who caused Moses' flight from Egypt by denouncing him to Pharaoh for killing the Egyptian taskmaster, and revealing that he was not the son of Pharaoh's daughter (Yal., Ex. 167). They incited the people to return to Egypt (Ex. R. 1:29) both at the Red Sea and when the spies returned from Canaan (Mid. Ps. 106:5). They transgressed the commandment concerning the manna by keeping it overnight (Ex. R. 1:30). Dathan and Abiram became ringleaders of the rebellion under the influence of Korah, as a result of the camp of their tribe being next to that of Korah, and on this the rabbis base the statement "Woe to the wicked, woe to his neighbor" (Num. R. 18:5). When Moses humbly went to them in person in order to dissuade them from their evil designs, they were impertinent and insulting to him (MK 16a). In their statement to Moses, "we will not come up," they unconsciously prophesied their end, as they did not go up, but down to hell (Num. R. 18:10).

DATO, MORDECAI BEN JUDAH (1525–1591/1601), Italian kabbalist. He annotated *Asis Rimmonim* by Elisha *Gallico (Venice, 1601). Dato's many writings are extant in numerous manuscripts. Two manuscripts of his *piyyutim*, collected in the work *Shemen Arev*, are found in the British Museum (645, 646), but they are not completely identical. The

work published by A.W. Greenup (1910) contains the *piyyutim* of manuscript no. 645. Other manuscripts containing some of his *piyyutim* are found in: Moscow (Guenzburg 249), Cincinnati (230), Budapest (Kauffmann 414), London (Or. 10130 and 10471 = Mss. Gaster 318 and 251; and Ms. Adler 1825). The tract *Zimrat Yah* is found in Rome (Ms. Casenatense 116), and was copied by Dato's son, who transcribed his father's poems and their commentaries. Although the son claims to have written these commentaries on the basis of what he had heard from his father, there is practically no difference in the wording of these commentaries and those that were written by his father, except for a very small number of additions. This would explain the manner in which *Iggeret Levanon* was written. A work containing an entirely different kind of poem is *Sodot ha-Nekuddot* (Ms. Mantua 162, 4). Some of his *piyyutim* were included in *Ashmoret ha-Boker* (Venice, 1720/21; Leghorn, 1796), by *Aaron Berechiah of Modena.

His works include commentaries on biblical passages and sermons (Brit. Mus., Add. Ms. 27050, mainly in Italian; Ms. Add. 27007, also contains an index to the *Zohar); *Ma'amar Mordekhai*, a commentary on Esther (Ms. Add. 27097); a commentary on Habakkuk (Ms. Parma 1424); commentary on the Psalms (Moscow, Ms. Guenzburg 239) which is incomplete and is probably identical with *Shemen Sason*, which is mentioned in his other writings; a commentary on the *haftarot*, *Shemen ha-Mishḥah* (Ms. Parma 29); *Migdal David*, treating the Redemption (Bodleian Library, Ms. Opp. Add. 4ø 153); *Iggerot*, letters on Kabbalah to Ezra (perhaps Azariah da *Fano, Ms. Parma 130/5), and letters on halakhic matters to scholars in Italy (Moscow, Ms. Guenzburg, 129); *Iggeret Levanon*, containing memoirs of his visit to Safed written by his son but formulated by Dato himself; these were published by I. Tishby (*Sefunot*, 7 (1963), 137–66); *Processo* (Moscow, Ms. Guenzburg 159), on a lawsuit which he and his brother brought against the brothers Bordola.

[Efraim Gottlieb]

DAUBE, DAVID (1909–1999), jurist and biblical scholar. Daube was born in Freiburg, Baden, and studied at the University of Goettingen and Cambridge and Oxford universities. From 1938–51 he was lecturer in law at Cambridge University, professor of jurisprudence at Aberdeen University, 1951–55, and Regius Professor of Civil Law at Oxford from 1955. From 1970 he was professor at the University of California at Berkeley. Daube was considered one of the world's leading authorities on Roman law, and he made important contributions to the understanding of the history of biblical and talmudic law. His published works included *Studies in Biblical Law* (1947), which compares Roman and Hebrew law; *New Testament and Rabbinic Judaism* (1956), which sheds light on many incidents and sayings in the New Testament with information from rabbinic and sectarian Jewish sources; *Sin, Ignorance and Forgiveness in the Bible* (1960), an examination of the plea of ignorance of the law as a defense; *Exodus Pattern in the Bible* (1963), analysis of the legal themes and terms used in the story of Exodus and other biblical tales of a similar pattern; *The Sudden in the Scriptures* (1964), which lists the terms for the sudden and the unexpected in both the Old and New Testaments with further elucidations drawn from rabbinic usage; *Collaboration with Tyranny in Rabbinic Law* (1965); and *Roman Law* (1969).

ADD. BIBLIOGRAPHY: ODNB online.

°**DAUDET, LÉON** (1867–1942), French writer and reactionary politician, codirector of L'*Action Française. He was born in Paris, the eldest son of Alphonse Daudet, and inherited his father's talent as a writer if not his moral sensitivity. A bigoted Catholic and anti-Republican from the start, Daudet was influenced by Charles *Maurras' neo-Royalist doctrines and associated with Edouard *Drumont, writing for the violently antisemitic *La Libre Parole*. He was elected to the Chamber of Deputies on an extreme right-wing policy (1919–24) and in 1940 supported the Vichy regime, welcoming its discriminatory policy toward the Jews. Daudet was probably the leading French pamphleteer of his day. He wrote around 100 books and innumerable articles, sometimes signed Rivarol, in which he frequently gave vent to his hatred of Republicans, Dreyfusards, Freemasons, or whoever else did not fit into his narrow and intolerant definition of a true French citizen. On the Jews he was especially virulent, as in his *La France en alarme* (1904), *L'avant-guerre…* (1913), and *Au temps de Judas* (1933). For Daudet, Jews were "goats with human faces, trafficking in gold and dung" whom he threatened with "the vengeance they deserve." Like Maurice *Barrès and Charles Maurras, Daudet subscribed to Drumont's contention that all Jews were potential traitors and the main source of political, social, and financial trouble in France.

DAUGAVPILS (until 1893 **Duenaburg**; Heb. דינאבורג; until 1920 **Dvinsk**), city in the Soviet Republic of Latvia, on the banks of the Western Dvina (Daugava) River, in 1940–91; within independent Latvia between 1920 and 1940 and from 1991. A Jewish community was organized in 1750–60. There were about 750 Jewish artisans in the town in 1805 (compared with 393 non-Jewish artisans). The Jewish population was 1,559 in 1815, growing to 2,918 in 1847. The town developed extensively from the 1860s, with the growth of the grain, flax, and timber trade, and after becoming a railroad junction. Its factories included the Zaks match factory, which employed 600–800 (mostly Jewish girls), sawmills, distilleries, tanneries, and three button factories which employed 600 workers, most of them Jews, at the beginning of the 20th century. In 1898 there were 4,862 Jewish artisans, including 2,193 masters, 1,760 journeymen, and 909 apprentices. Many Jews were

employed in building the garrison complex and in services connected with it, railroad workshops, and the garment industry which was a source of livelihood for several thousands of Jews. Jews played a prominent part in the city's commerce and industry. Dvinsk became a center of activities of the Jewish workers' movements, principally the *Bund and *Po'alei Zion. A strong *self-defense organization was formed by the workers in 1903 which succeeded in deterring pogroms. In demonstrations during the 1905 revolution 30 people were killed or wounded, mostly Jews. Dvinsk was known as a center of Torah learning, and had a number of yeshivot. Two of Jewry's most prominent rabbis officiated there, Meir Simḥah *ha-Kohen, rabbi of the *Mitnaggedim* (1887–1926), and Joseph *Rozin, rabbi of the Ḥasidim (1889–1936). The community numbered 32,400 in 1897 (46% of the total population) and 56,000 (43%) in 1913. During World War I the city was severely damaged and was abandoned by most of its inhabitants. There were 11,838 Jews living in Daugavpils in 1921 (40.8% of the total population) and 11,106 (about 25%) in 1935. Noah *Meisel, who became a member of the Latvian parliament, headed the Bund. The Zionist movement, which had adherents in Dvinsk at the end of the 19th century and sent a delegate to the First Zionist Congress, grew considerably in the 1920s and 1930s, principally in the *Ẓe'irei Zion movement. A large section of youth was connected with Zionist youth organizations and *He-Ḥalutz, which maintained a farm for *hakhsharah*. Most Jewish children (over 2,000 at the beginning of the 1930s) attended the six Jewish schools of which five gave instruction in Hebrew or Yiddish. There were also a municipal Hebrew secondary school with several hundred pupils, a vocational training school maintained by *ORT, and a local Jewish sports organization. Communal institutions included a hospital, pharmacy, old-age home, orphanage, library, and three peoples' banks. Under the Soviets in 1940–41, all Jewish parties, organizations, and institutions were closed. Many activists and well-to-do Jews were exiled to Siberia. Instruction at Jewish schools was only allowed in the Yiddish language teaching a Soviet curriculum. When the Germans occupied Daugavpils on June 26, 1941, the Nazis, with the collaboration of the non-Jewish inhabitants, organized a pogrom on the Jews of the city. The synagogues were burned down or requisitioned by the army. During the first week of July 1,150 Jews were murdered. At the end of July a ghetto was set up at the abandoned cavalry barracks and 14,000–16,000 Jews from the city and the surrounding area were concentrated there. The first victims were the old and the sick, followed by thousands of refugees. On August 8–9, in two *Aktionen*, thousands of nonessential workers with their families and 400 orphans were murdered. By August 21, 9,012 Jews were dead. On November 7–9, 3,000–5,000 Jews were executed, including about 1,000 children. Five hundred Jews were killed on May 17, 1942, leaving alive a few hundred artisans. They were sent to the Riga ghetto in October 1943 and later confined in the Kaiserwald camp, where the Soviet army found 20 Jews on liberation day.

A community was reconstituted after the war. In the 1960s a small Jewish amateur drama group was in operation. In 1970 there were about 2,000 Jews in Daugavpils and one synagogue was still functioning. By the turn of the 21st century their number had dropped to around 400 after emigration.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

DAUPHINÉ, region and former province of S.E. France covering the present departments of Isère, Hautes-Alpes, and a small part of Drôme. The presence of Jews on its territory is confirmed from at least the beginning of the ninth century when they were to be found in *Vienne and its vicinity. Subsequently, and especially from the beginning of the 14th century, Jews are mentioned in at least 35 localities, including Briançon, *Crémieu, *Grenoble, Nyons, Serres, *Valence, Veynes, and Vizille. As a result of a *blood libel in Valréas in 1247 ten Jews were martyred there; in several other places Jews were imprisoned and their belongings were confiscated. However, when the Jews were expelled from France in 1306, the exiles were welcomed in Dauphiné, as were the Jews who arrived from the *Comtat-Venaissin in 1322. In 1348, the Jews were accused in several localities of Dauphiné of having spread the *Black Death.

In 1349, Dauphiné's existence as an independent state came to an end. In exchange for a considerable payment, the dauphin Humbert II ceded Dauphiné to the king of France, the eldest son of the king of France henceforth assuming the title of "dauphin." The undertaking to respect "the institutions and the customs of the country" was equally honored with regard to the Jews. Though they were now in the Kingdom of France, their residence in Dauphiné was not contested. In 1355 and 1404, it was explicitly stated that the Jews of newly-incorporated regions would continue to enjoy their former liberties and exemptions. However from 1355 the privileges which were granted to the Jews of Dauphiné were only valid for a limited period, even though they were renewable. These privileges specified in particular their freedom of residence, right to acquire houses, freedom of trade, and moneylending. Heavy financial burdens and the complaints against Jewish moneylending made many Jews leave Dauphiné, especially after 1390. The dauphin unsuccessfully attempted to restrain Jewish emigration by granting important fiscal advantages to the Jews who settled in the area, such as in the town of Crémieu in 1449. Yet, without any general expulsion decree ever having been applied and solely as a result of fiscal pressure and local vexations, Dauphiné appears to have had no Jews at the beginning of the 16th century after the continued emigration. At the beginning of the 18th century, some Jews,

mainly from Comtat-Venaissin, attempted to settle in localities of Dauphiné, especially Grenoble. They were expelled by a decision of the Dauphiné parliament of Nov. 15, 1717. After the French Revolution Dauphiné ceased to exist as a separate administrative unit.

DAUS, AVRAHAM (1902–1974), Israeli composer. Born in Berlin, he immigrated to Ereẓ Israel in 1936. Until 1940 he lived in Tel Aviv, and his overture to the *Sea-Gate Cantata*, performed by the then Palestine Orchestra, was one of the first local works performed by the "Philharmonic." From 1940 to 1964 Daus was a member of kibbutz Ḥefẓi-Bah, working as music teacher, composer, and choir conductor, but he eventually returned to Tel Aviv. Daus remained essentially European in style. When he returned to writing in dodecaphonic technique, his music lost none of its expressive character, as in *The Twelfth Sonnet* for cello solo. Daus's works include *Sea-Gate Cantata* (1937); *Variations on a Yemenite Theme for Flute and Piano* (1937); *String Quartet* (1953); *Concerto for Violin* (1957); *Four Dialogues for Violin and Cello* (1964); *The Twelfth Sonnet*, for cello solo (1967); *Four Improvisations while Reading the Song of Songs,* for guitar solo; and numerous songs and choral pieces.

[Uri (Erich) Toeplitz and Yohanan Boehm]

DAVAR (Heb. דָּבָר), Hebrew daily newspaper of the *Histadrut ha-Ovedim. First published in Tel Aviv in 1925 under the editorship of B. *Katzenelson, *Davar* was the first daily of the entire Israel Labor Movement (although other periodicals by various Labor parties had appeared since 1907). As an organ for workers, the paper concerned itself with all the problems of the *yishuv*, Zionism, international Socialism, world politics, and the relations of the Histadrut with the Jewish and general Labor movement, devoting much space as well to Labor movement activities in the villages and the cities. In all public disputes in Israel and within the Histadrut itself, *Davar* officially took the stand of the Histadrut majority. Among its main contributors were B. Katzenelson, Z. Rubashov (later Z. *Shazar, the third president of the State of Israel), Moshe *Beilinson, David Zakay (d. 1978), Eliezer *Steinman (from 1935), and, for many years, N. *Alterman, with his column in verse "*Tur ha-Shevi'i*." After Katzenelson's death (1944), *Davar* had the following editors in chief: Zalman Shazar (who had actually fulfilled this function even previously), Haim *Shurer (from 1952), Yehudah Gotthelf (from 1966) and Ḥannah Zemer (from 1970).

Davar published many different supplements. These included a weekly English supplement, *Davar: Palestine Labour Weekly*, edited by Moshe Shertok (later *Sharett), 1929–31, and a German supplement, *Davar* (1931), at the beginning of the *aliyah* from Germany, under the editorship of Moshe Calvary. In 1931 publication of a children's supplement also began; it appeared in its later format as the weekly *Davar li-Yladim*. Others included *Ha-Meshek ha-Shittufi* (since 1932), on economic affairs; *Devar ha-Po'elet* (its editor from 1934–1966, Rachel Katzenelson-Shazar); evening newspapers, which appeared at various periods; and vocalized supplements (1935 and after). Vocalized columns within the body of the paper gave rise to *Hegeh* (1940–47), a vocalized Hebrew daily, the first of its kind in Ereẓ Israel. Its language was generally simple, translations being supplied for any difficult words. It was revived under the name *Omer* in 1951. In 1946 *Devar ha-Shavu'a*, an illustrated supplement, began appearing. In 1984 *Davar* began to publish the satirical newspaper *Davar Aḥer*, which gained much popularity. *Davar* also maintained the publishing house Am Oved, which, from its founding in 1927 until 1970, published nearly 200 books in all fields. In addition, from 1943 to 1956 *Davar* published an annual which dealt with literary and social problems and also included information on the events of the previous year.

The newspaper's downward slide began in the 1980s. With the loss of power of both the Labor Party and the Histadrut, many readers lost interest in *Davar* and the newspaper faced a severe financial crisis. In 1995 the newspaper appeared in a new format under the title *Davar Rishon*, with Ron Ben-Ishai as editor in chief, but ceased publication in 1996.

DAVENPORT, MARCIA (1903–1996), U.S. novelist. Born in New York City, Marcia Davenport was the daughter of the lyric soprano Alma *Gluck. She herself became a music critic and joined the staff of *The New Yorker* magazine (1928–31), later working also for *Fortune* magazine. One of her marriages was to Russell Davenport, who became managing editor of *Fortune*. In 1930 she went to Prague in search of material on Mozart, whose biography she published as her first book in 1932. This was followed by two works that established her as a leading novelist: *Of Lena Geyer* (1936), the story of an opera singer, and *Valley of Decision* (1942), about life in the Pittsburgh steel mills, a bestseller that was made into a motion picture.

After the Nazi occupation of Czechoslovakia, Marcia Davenport became a close friend of the refugee Czech statesman, Jan Masaryk, and was active on behalf of the Czechoslovak cause during World War II. In 1945, at the invitation of President Beneš, she settled in Prague and remained there with Masaryk until the Communists seized power in 1948. She thereupon went to London, where she and Masaryk planned to be married as soon as he could join her but only a few days later he was found dead in mysterious circumstances. Return-

ing to the U.S., Marcia Davenport resumed her literary career, and published *My Brother's Keeper* (1954) and *The Constant Image* (1960). Her autobiography, *Too Strong for Fantasy*, appeared in 1967.

[Milton Henry Hindus]

DA VERONA, GUIDO (1881–1939), Italian novelist. Da Verona sought to disguise his origin by changing his "Jewish" surname, Verona, to the more aristocratic Da Verona. His novels met with great success in the years which preceded and immediately followed World War I: he sold more than two million copies of his novels, thus becoming the harbinger of the new phenomenon of mass literature in Italy. Influenced by Gabriele d'Annunzio, Da Verona copied his prose style and dandyish ways; his stories are based on erotic themes, pervaded with an aestheticism in which he endeavored to create environments which were aristocratic, morbid, or exotic; hedonism and contempt for bourgeois morals satisfied the tastes of a large public whom he wished to please.

His best-known novels include *Colei che non si deve amare* (1911); *La vita comincia domani* (1912; *Life begins Tomorrow*, 1923); *Mimì Bluette, fiore del mio giardino* (1916; *Mimi Bluette*, 1929), his best book; *Sciogli le treccie, Maria Maddalena* (1920); and *Mata Hari …* (1927). In 1930 he published a parody of Alessandro Manzoni's masterpiece *I promessi sposi* (*The Betrothed*), in which one can recognize an implicit, but clear, satire of the Fascist régime. Progressively abandoned by his readers, victim of the anti-Jewish campaign of the late 1930s, he committed suicide.

DAVIČO, HAJIM S. (1854–1918), Serbian author and diplomat. Born into a patriotic Belgrade family, Davičo held consular posts in Munich, Salonika, and Trieste, but is mainly remembered as the pioneer of Jewish secular literature in Serbia. His two short story collections, *Perla* (1891) and *Sa Jalije* ("From Jalija," 1898), describe life among the Belgrade Sephardim and tensions between radicalism and Jewish tradition. He also engaged in business, acting as a supplier to Prince Milosh, and was a leading member of the Sephardi community. His signature appears on various petitions that Belgrade Jews addressed from time to time to the Serbian authorities.

ADD. BIBLIOGRAPHY: Ž. Lebl, *Do „konačnog rešenja" – Jevreji u Beogradu 1521–1942* (2001), 78, 92–93.

DAVIČO, LUJO (1908–1942), Yugoslav dancer and ballet teacher. Davičo was born in Belgrade (Serbia) of a large Sephardi family and studied ballet using Jacques Dalcroze's method in Geneva. In the 1930s he worked in Belgrade as a teacher and creator of dance performances following Dalcroze's method. He choreographed ballets accompanied by rhythm movements alone. Among his choreographies are **Kharaj* (meaning Muslim land tax), *Dalcroze March*, and *League of Nation*. His choreography also used folklore elements. As a freedom fighter opposing the Nazi-Italian occupation of Yugoslavia in 1941, he escaped to Montenegro and was killed participating in an attack on a group of Italian officers. A Belgrade ballet school was named after him. The Serbian National Ballet is named for him.

[Amnon Shiloah (2nd ed.)]

DAVIČO, OSCAR (1909–1989), Yugoslav poet and novelist. Born in Šabac, Serbia, Davičo was a high-school teacher but in 1932 was sentenced to five years' imprisonment for Communist activities. During World War II, he fought with the Yugoslav partisans against the Nazis. Before the war Davičo had been prominent in Belgrade as a surrealist writer and two of his early works were collections of verse, *Anatomija* (1930) and *Pesme* (1938). Davičo's postwar verse collections, notable for their nonconformism, their fantasy, and their erudite metaphors, include *Hana* (1951), *Čovekov čovek* ("A Man's Man," 1953), and *Trg eM* ("Square M," 1968). Although Davičo's rare references to his Jewish origin were made with a certain pride, his works displayed an increasingly anti-Zionist and anti-Israel bias. With *Pesma* (1952; *The Poem*, 1959), he published the first of a series of novels about the Nazi occupation, his own prison experiences, and his country's era of reconstruction. The later ones were *Beton i svici* ("Concrete and Glowworms," 1956), *Ćutnje* ("Silences," 1963), *Gladi* ("Hunger," 1963), *Tajne* ("Secrets," 1964), and *Begstva* ("Escapes," 1966). His novel *Gospodar zaborava* ("Master of Forgetfulness") appeared in 1980. Three of his novels were awarded Yugoslavia's highest literary prize. Davičo translated Thomas *Mann's novel *Buddenbrooks* into Serbo-Croat, and some of his own works have been translated into English and other languages. He was one of the editors of the literary periodical *Delo*. He also wrote a number of poems and other lyric compositions.

[Zdenko Lowenthal]

DAVID (Heb. דָּוִד), youngest son of Jesse of the Ephrathite family that lived in Beth-Lehem in Judah (I Sam. 16:1; 20:27–28; I Chron. 2:13–15; cf. Micah 5:1).

In the Bible

SOURCES. I Samuel 16–II Kings 2 is our main source for David, supplemented by I Chronicles. Other texts name him, but in the main to emblematize either the dynasty in Jerusalem or a salvific ideal. He appears in superscriptions to many Psalms, on occasion (as Ps. 34:1) with historical references; but

it is unclear whether this phenomenon originated as a historical or as a dramatic or musical notation.

Some scholars maintain that, like King Arthur, David is a late invention. But two stelae (Tel Dan, Mesha) indicate that by 830 or so Judah was identified as "the House of David." These stelae confirm that David was an earlier state-builder, and, according to ninth-century usage, the founder of its ruling dynasty. This ninth-century evidence explains his significance in the eighth and later centuries as an icon of Judah and as the progenitor of a line of kings whom YHWH adopted at accession (Isa. 9:5; cf. Ps. 2:6–7; 89:27–28). David's place in the dynastic liturgy long antedates the Exile.

Our sources in Samuel may be divided into three or more categories. In II Samuel, we have literature that is nearly contemporary with David himself, probably produced mainly in the court of Solomon. Some of this material is continuous with materials in I Samuel. Thus, it is certain that the materials admitting David's affiliation with Achish of Gath in I Samuel and the doublets – narratives with parallel narratives in another source about the same event evincing slight variation – pertaining thereto continue into II Samuel and issue ultimately into Solomon's ability to extract fugitives from Achish's Gath in I Kings 2:39–44. Thus, at a minimum, I Samuel 25–28:2; 29–30, belong to the same general source as does 2 Samuel. Conversely, I Samuel 23:19–24:23; 28:3–25; 31 all belong to another, parallel narrative.

I Samuel 8–15 represents itself as an account of the introduction of Saul's monarchy, while chaps. 16–31 concerns David's "rise" in interaction with Saul, of the tribe of Benjamin. This text consists of two parallel sources now in combination. A representative division yields narrative sources as follows:

A. I Sam. 9:1–10:13; 13:1–14:52; 17:12–31,41, 48b, 50, 55–58; 18:1–6a,10–11,17–19, 30; 20:1b–24:23; 28:3–25; 31.

B. II Sam. 8; 10:17–27; 11–12; 15–16; 17:1–11, 32–40, 42–48a, 49, 51–54; 18:6b–9, 12–16, 20–29; 19; 25–27; 28:1–2; 29–30; II Sam. 1ff.

Both sources contain legendary material, including one version of the account of David's slaying Goliath, which II Samuel 21:19 identifies as the victim of Elhanan (Ben-Dodo, the Bethlehemite; cf. I Chr. 20:5; Josephus, Ant. 7:302). Further legendary material shared by the sources is the etiology of the phrase, "Is Saul, too, among the prophets?" in 10:11, 19:24. This was originally a proverb, "Is it asked, too, among the prophets?" denoting problematic questions.

It is the material in the B source that seems to continue directly into II Samuel. Further, the B source concedes, while the A source denies, that David worked as a subordinate of the Philistines. Thus, whether or not the account of David's youth in this source is as early as the material in II Samuel, it seems to originate earlier than the A source in I Samuel. Arguably, both sources are composite, such that some material in each is early, other material later. All the same, the compilation of the A source postdates the compilation of the B source in this context.

Both sources cover David's youth. A's narrative focuses on Saul (chaps. 13–14; 28; 31). B's narrative shifts from Saul to David in I Samuel 16, and David remains its focus. B has been understood as an anti-monarchic source stemming from a very late period. It presents the monarchy, however, as an institution adopted by humans, and tolerated by YHWH, This view programmed later Israelite views of the monarchy (see Hos. 13:10; Deut. 17:14–15; Judg. 8:22–23). The A source, conversely, treats kingship as lowered from heaven. But, as it centers on Saul, and ends with his death at the Philistines' hands, its date, often thought to be early, is not clear. This source treats Saul's monarchy as an abortion, before the establishment of David's dynasty.

II Samuel, like the B source, evinces a date roughly contemporary with the events it reports. Foremost, it rebuts charges that David joined the Philistines in Saul's last battle, and incited the assassinations of Abner, Ishbaal, Absalom, Amasa, and all but one of Saul's descendants, not to mention Uriah the Hittite; these are figures whose political relevance, and, no doubt, memory had expired by the time of the Solomonic schism. Also, II Samuel makes very modest literal claims about David's conquests (see below, achievements), while later sources (Deuteronomy, Joshua, Chronicles, Josephus, and even II Kings 14:25) make much more grandiose claims. And, poetry preserved in II Samuel, such as David's laments over Saul and Abner, and his "last words," is unquestionably antique. The syntax of complex sentences in II Samuel is not, typically, that of later biblical prose. And the order of Israel's borders and components is different than in any later, standard, source. We may add that the settlement patterns, especially of the Negev and Philistia, reflected in the B source (I Sam. 27–30) and in II Samuel reflect realities of the 10th century, but not of subsequent eras. To take a particular example, I Samuel 27:6 claims that Ziklag remained subordinate to the kings of Judah. As Ziklag lay in the hinterland of Gath, it could not have belonged to kings of Judah after the eighth century B.C.E., and was probably not even settled in the ninth–eighth centuries. Finally, II Samuel starts a continuous reportage that ends at the end of II Kings in which reports of external contact are consistently corroborated and never falsified.

In II Samuel we learn of the death of Saul, David's accession in Judah and civil war with Ishbaal (I Chr. 8:33; 9:39, versus Ishboshet in Samuel – while most commentators believe the original name to have been altered in Samuel to avoid a reference to "Baal," a title rather than a name, that was used of YHWH in Israel, it is possible, despite the absence of the divine name from attested Israelite and Judahite epigraphs, that Samuel's version of the name is correct, and that it represents the Israelite equivalent of Egyptian *sbst*, "son of Bast," not to say "bastard"). David is then elected king of Israel; he conquers Jerusalem, and brings the ark there from the Gibeonite center, Kiryath-Jearim. YHWH then promises him an eternal dynasty. There follow accounts of foreign conquests, the Ammonite war and David's affair with Bath-Sheba, the Absalom revolt and its aftermath. Interspersed are details about David's offspring, of-

ficials, and army. A report about a census and the acquisition of the ground for the temple closes II Samuel.

I Chronicles 10–21 omits much from I Samuel 31–II Samuel 24. I Chronicles 22–29 reinterprets Solomon's designation as David's heir, stressing the planning of the temple and its liturgy. Chronicles does not speak of internal tensions, from Saul's time to the end of the Absalom revolt. It contains independent information about officials, but the text is usually derivative or projects later information into the past. However, Chronicles is important as a textual witness for reconstructing early readings in Samuel.

For David's sake, Samuel and Kings claim, YHWH forbears from destroying Judah (not Israel) because of a covenantal relationship. Kings also compares Judah's kings with and sometimes to David. Various prophets – Amos, Hosea, Isaiah, Jeremiah, and Ezekiel – refer to David as the emblem of the dynasty that will rule Israel in time. After the exile, so does Zechariah (chaps. 12–13). Ezra and Nehemiah, like Chronicles, remember David as a cult founder (for example, Ezra 3:10; 8:20; Neh. 12:24–46). Proverbs and Ecclesiastes cite David as an ancestor of their authors. Ruth presents itself as a story about David's ancestors and furnishes a genealogy to prove this. And, Song of Songs 4:4 mentions one of David's public works (similarly, in a way, II Kings 11:10, against which cf. II Kings 14:26–27; 10:16–17; II Sam. 8:7).

Finally, David appears in the superscriptions of numerous psalms, usually in an indeterminate setting. Several superscriptions stipulate particular conditions (as Ps. 52:2, 54:2) and in some cases psalms incorporate aspects of David's career or status (as 78, 89, 122, 132, 144). No reference is plainly early; Psalms 89, 132 address dynastic promises. Amos, however (6:5), already in the mid-eighth century, portrays David as a poet-courtier. Is the superscription "to David" musical, then, or dedicatory? Probably it has something to do with the king's role in the cult.

In the Tel Dan stela and probably the Mesha Stone, "the house of David" refers to the state administered in Jerusalem – Judah. The audience, learning that Israel "revolted against the house of David," thus (I Kings 12:19) probably took it to mean "revolted against (the state of) Judah." This is the only event in connection with which Kings mentions "the house of David"; the phrase is common, however, in Isaiah (7:2, 13; 22:22; cf. 9:6, 16:5, also 11:1–10) and in the post-exilic era.

NAME AND GENEALOGY. *Name.* At one time, scholars misidentified a cognate of David's name in Akkadian, and took it to mean, "leader". The root is *dwd*, usually "(paternal) uncle" or "beloved." However, no text contracts the diphthong. It is always spelled *dwd* or even *dwyd* (the *y* representing a vowel of the /i/-class), never *dd* (as "uncle" is sometimes written). The possibility of its meaning "beloved" as a bi-form of the root *ydd*, the root of Solomon's prophetically assigned name, Jedidiah, therefore remains. It is unlikely that there is any relation to the term for uncle.

Several other names are related to this one: *d(w)dw* (*Dodo*, Judg. 10:1; II Sam 23:9,24; I Chr. 11:12, 26; 27:4) and *Dodaw(y)ahu* (II Chr. 20:37), in which the diphthong is, however, contracted. Mesha, the late ninth century king of Moab, claims to have taken as booty the *'r'l dwdh*, the "Ariel" of (Ataroth's) *dwd*. He may also report removing the *'[r']ly yhwh*, two or more such objects dedicated to YHWH, from Nebo. The meaning of "Ariel" is unknown. It may be a sort of hero or statue or icon of a cult founder (for Moabites, II Sam 23:20 = I Chr. 11:22; also Isa. 29:1, 2, 7, as an epithet of Jerusalem). It also appears as a name (Gen. 46:16; Num. 26:17) and an altar (Ezek. 43:15–16).

Dwd in the Mesha stela is not proprietary to Judah. The inscription attests the fortification of Atarot and Nebo by Omri and Ahab, whose dynasty lent Israel its own dynastic name ("the house of Omri"). Nevertheless, the *dwd* of Ataroth was a significant item, as singular as YHWH. Since "paternal uncle" is rare as an element in Israelite names, David's name should be understood on Mesha's model. It probably is a divine epithet or hypostasis.

Antecedents. David's father is Jesse. The Hebrew, *y_š_y* (I Chr. 2:13 '_š(y) is a hypocoristicon for a name name, like Ishbaal, "the Lord is (here)." The patronym is authentic: in direct discourse, David is called "the son of Jesse" only to derogate his claim to royalty. Of these contexts, one is Sheba's call to revolt (II Sam 20:1); the same cry recurs in I Kings 12:16, at the Solomonic schism: "We have no stake in David, nor legacy in the son of Jesse." It is first an outcry against David, but then against his dynasty (Sheba) and grandson (the Israelites at Shechem in I Kings 12). The antagonistic invocation of Jesse's name is evidence of David's paternity, as is the more positive reference to Jesse in Isaiah 11:1, 10. Finally, an archaic poem, David's Testament, describes him as "David son of Jesse" (II Sam 23:1), in terms comparable to the introduction of Balaam in oracular verse in Numbers and in the Deir Alla plaster inscriptions. Chronicles also refers to "David son of Jesse" in order to punctuate the narrative (I Chr. 10:14, 29:26; in poetry, I Chr. 12:18). However, the preservation of a patronymic suggest that David's father had an originally negative reputation of his own, or, minimally, had no proper claim to royal status. This inference dovetails with other information, concerning David's rise.

Later materials – the end of Ruth and I Chronicles 2:3–17 – trace David's ancestry back to the eponym Judah. The age of this tradition, which supplies the place of authentic royal ancestry, is probably reasonably old. It is difficult to imagine that the story of Judah's posterity in J (Gen. 38) is divorced from a concern to trace David's ancestry. Even more clearly, P, in the late seventh century, names David's ancestor, Nahshon, as a chief of Judah and husband of Aaron's sister (Ex. 6:23; Num 1:7). Some even argue that the story of David taking his parents to Moab for safekeeping (I Sam. 22:4) reflects the connection to Moab narrated in Ruth: the reverse is more likely: the admittedly peculiar reference in Samuel – which is

of a piece with its account of David's relations with peripheral ethnicities – inspired the tale of Ruth.

Every tradition (Ruth; I Sam. 16, 17:15, 58, 20:6, 28) places David's family in Bethlehem. II Samuel 2:32 refers, unselfconsciously, to the ancestral tomb of Asahel, Joab's brother, there. Around 700 B.C.E., Micah 5:1 shares the tradition. Bethlehem, despite Rachel's tomb being associated with it (Gen. 35:19, 47:8; Jer. 41), was a backwater. David's affiliation with the village is thus secure.

YOUTH. I Samuel introduces David as designee to be the next king. He moves to Saul's court, and betroths one of Saul's daughters (Merab or Michal, depending on the source). In one version, David comes to Saul's court as a musician; in the other he arrives to fight Goliath, whom he dupes by promising close combat while using his sling at a distance. II Samuel 3 continues with a story of Michal's later delivery to David from her children and former husband, and her subsequent sequestration and childlessness.

During David's service to Saul, a ditty occasions Saul's anger: "Saul has slain his thousands, and David his myriads." At the time, David is Jonathan's armor-bearer. His later preservation of Jonathan's son, when allowing the extermination of Saul's offspring, attests this early relationship. Thus, Samuel makes David Saul's ally and a killer of Philistines. The aim of the earliest versions was to deny that he acted as a subordinate to the king of Gath, and that he remained a Philistine ally throughout his reign. David's protection of Jonathan's son Mephiboshet may therefore have been calculated policy, such that the special relationship with Jonathan may have been derived secondarily by an author of one of the two literary sources of II Samuel. It is uncertain whether David served Saul. No notice relating his men's deeds (II Sam 21:15–22, 23:6 ff.) suggests that he did.

David *was* the vassal of Achish of Gath. One source claims that Achish rejected him (I Sam. 21:11–16). Another source admits that David worked for Achish but blunts the point of the embarrassment by alibiing David for the battle in which Saul perished. He *was* in the employ of the Philistine king of Gath, though driven there by Saul's rage, he *was* present, he *was* Achish's bodyguard, but was detailed to the rear; other Philistine kings dismissed him as a possible traitor; true, he was away from home, during the battle, but was chasing raiders around the south; and, he killed the messenger of Saul's death, who claimed to have killed him (I Sam. 27; 29–30; II Sam. 1).

David reigns seven years in Hebron (II Sam 2:2–4). Ishbaal reigns only two as Saul's successor. There was, however, no interregnum between Saul and Ishbaal (so II Sam 2:5–9: Abner crowns Ishbaal). Probably, David won northern constituencies after taking Jerusalem after Ishbaal's death. This explains why his alleged conflict with Philistia arises over Jerusalem. In Hebron, David's kingship was marginal, as the site's archaeology and the scant settlement of 11th century Judah suggest: he was a Philistine vassal. He was in name the same throughout his reign. But his taking of Jerusalem could be portrayed as the occasion of Israelite declarations of allegiance to him (II Sam. 5:1–3), and thus as his declaration of independence from Gath.

HISTORICAL RELATIONS WITH SAUL'S HOUSE. Reportedly on Saul's death, David penetrated into the hills of Judah (I Sam 30:1–2), establishing himself at Hebron. His expansion must reflect service to Achish, as the hills, previously, were virtually empty. From a base in Hebron, on the spine of the hills leading to Benjamin, David waged continued war with Ishbaal, Saul's son, and with Ishbaal's chief-of-staff, Abner (II Sam. 2–4). At the end of their conflict, Abner and 20 retainers brought Ishbaal's sister, Michal, to Hebron to be David's wife. (I Samuel claims she had been taken from David unjustly.) At the wedding banquet, David's general, Joab, ambushed Abner, and probably his escort. II Samuel 3 claims that Abner meant to betray Ishbaal, to hand David kingship over Israel. But here, as in the other cases in which Joab kills for David (Uriah, Absalom, Amasa), Joab suffers no penalty. Likewise, Samuel alleges that Michal was betrothed to David (I Sam 19:11–24) before being wed to Palti, an Israelite husband from whom Ishbaal delivered her to David. This narrative strategy transforms her delivery into the settlement of a contractual claim, and thus denies that it was the price of a peacemaking marriage alliance. Later, David sequestered Michal: he refused real alliance with Saul's house and limited the numbers of descendants of Saul. He also kept possession of Abner's corpse.

After Abner's murder, two "Gibeonites," from the town of Beeroth, brought Ishbaal's head to David, who thereafter maintained custody of it. David proclaimed his innocence in the matter and executed the assassins (II Sam. 4). The killers had good reason to expect a heartier reception; David had good reason for silencing them. Contemporaries must have accused him of ordering Abner's and Ishbaal's deaths.

Before Absalom's revolt, David sought an oracle about the cause of a famine. Conveniently, YHWH attributed it to Saul's war on the Gibeonites, which violated an earlier treaty (of which no one, one expects, had heard). David extradited Saul's surviving sons and grandsons for execution. Only after this did he return Saul's and Jonathan's corpses to the family tomb (II Sam. 21:1–14). His policy regarding Saulides was to export the living and import the dead.

David exempted only Saul's lame grandson, Jonathan's son. Mephiboshet (Meribbaal in I Chr. 8:34, 9:40) dwelled at the court, while a steward, Ziba, administered Saul's lands (II Sam. 4:4; 9). After the Absalom revolt, David awarded half the estate to Ziba (16:1–4, 19:25–31). The only other relation to survive the purge was Shimei, who accused David of murdering the entire family (II Sam. 16:5–10). Solomon later executed Shimei.

A final "Saulide" was David's son – if he was David's rather than Saul's – by Ahinoam of Jezreel, probably one of Saul's wives (below). Absalom assassinates Amnon, David's firstborn. Absalom's punishment is reasonably traditional,

conforming to the pattern of expulsion for murder that is reflected in the punishments of Cain and Moses: three years in exile, and two after repatriation under house arrest. Still, this murder of Amnon removes the last vestige of Saul's dynasty, in the form of a wife's son, from the succession. The coincidence seems less coincidental when the narrative reports that David's nephew suggested the rape that Absalom avenged to Amnon (II Sam. 13:1–5).

David exterminated or permitted the extermination of Saul and his descendants. His hostages (Michal and Mephiboshet), and stories of his youth at Saul's court, friendship with Jonathan, and betrothal to Saul's daughters alibi him for the assassinations of Abner and Ishbaal and the executions of Saul's other descendants. All these presentations serve to insulate David against accusations that must have stemmed from his contemporaries. Any other explanation violates the nature of Near Eastern literary history, and will be too clever by half.

RISE TO KINGSHIP. David first became king in the town of Ziklag, as an appointee of Achish (probably Achaios, or "Achaean") of Gath. After Saul's death, since he is alibied regarding residence in Ziklag for that event, he seems to have claimed sovereignty over Judah from Hebron. Judah at the time was sparsely settled, especially outside the Shephelah. Pastoralists were probably traversing the Negev from Philistia to North Arabia at the time. Judah does not appear in any clearly premonarchic Israelite tradition (especially Judg. 5:13–18). No such defined geographical entity existed before David occupied Hebron. Benjamin, "the son of the south," was then the name for Israel's southlands, Judah included.

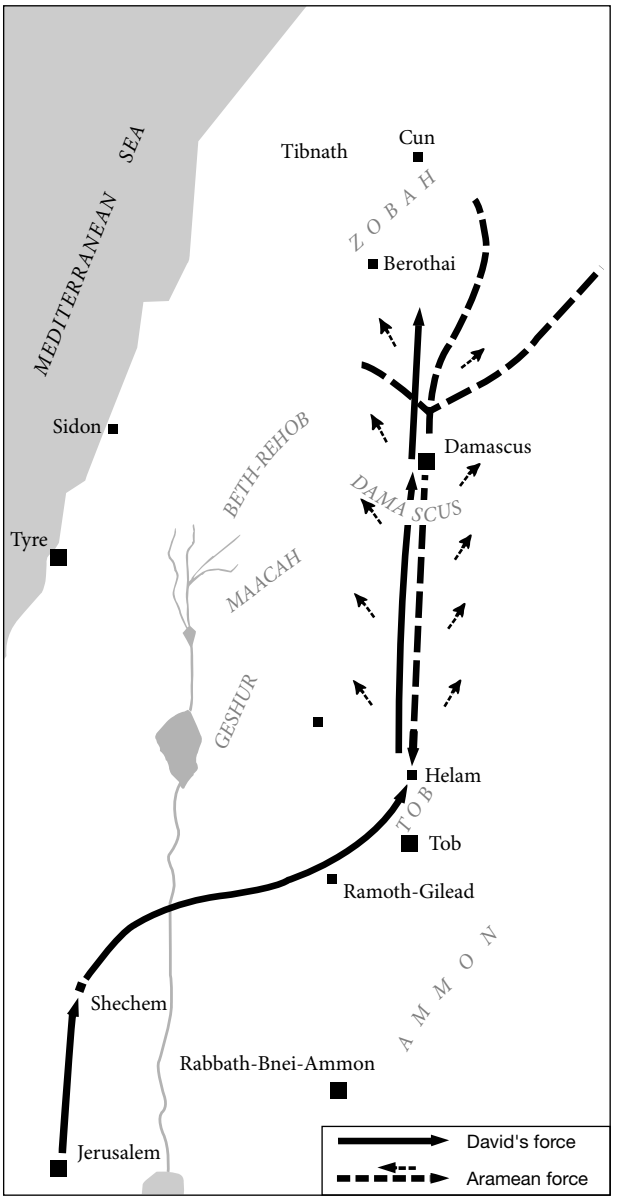


Map 2. David's conquest of Aram-Zobah and Aram-Damascus. From Macmillan Bible Atlas*, Carta, Jerusalem, 1968.*

Even in Hebron, David continued to contain Israelites from reaching or threatening the Philistine plain in the Shephelah, particularly at Gath. He may have helped to project a threat against Ekron. He also engaged in marital diplomacy. His first wife, Ahinoam, was from Jezreel in the Jezreel Valley (the southern Jezreel was unoccupied). The Bible's only other Ahinoam was Jonathan's mother: David took her from Saul. Abigail, David's second wife, was probably David's sister. Her first husband, Nabal, was a man of parts in Judah (I Sam.

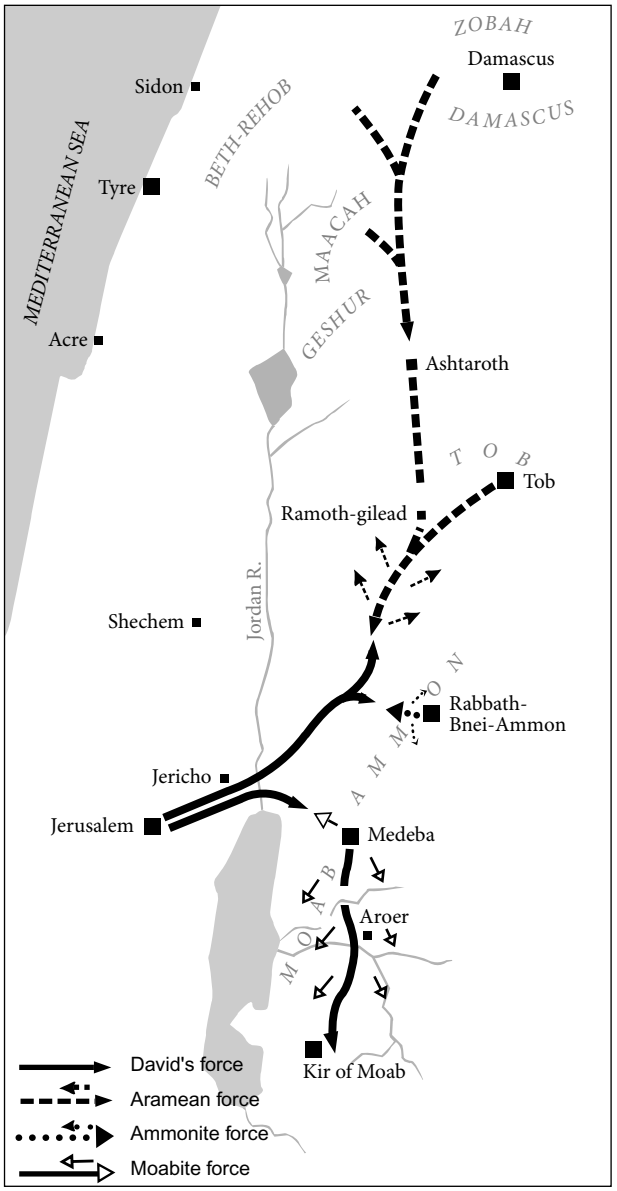
25; cf. II Sam. 17:25; I Kings 2:32; I Chr. 2:17). Marriages with Ahinoam and one of Saul's daughters (Michal/Merab) staked a claim on Saul's kingdom. Marriage with Abigail established a claim on Judah. A marital alliance with the king of Geshur (in the Golan) then surrounded Israel. David added appeals to Transjordan to defect from Ishbaal (II Sam. 2:5–7), made an early alliance with the Ammonites, and, late in his reign, made an alliance with Tyre. Combining the peripheral powers with alliances in Philistia, another border region, David engulfed the northern tribes. He enlisted Gibeonites north of Jerusalem and other mercenary elements, including "Gittites," some of whom stemmed from Kiryath-Jearim, a Gibeonite town. His coalition was directed almost exclusively against the denizens of Israel's heartland.

According to II Samuel 2, David asked Gileadites (elements in Transjordan) to recognize him as king. In Samuel the collaborators represent the whole of Israel. But the course of David's subjection of the north is far from perspicuous, and may have resulted in real control only after the Absalom result. That the coercion was an element of the process is clear from II Samuel's defense of Solomon's succession, and from Absalom's rebellion against David, including the tribes of Israel, and Jeroboam's successful revolt against Rehoboam's succession. David was, in the end, a Middle Eastern politician, and can only have ruled by division and terror.

ADMINISTRATION AND ACHIEVEMENTS. II Samuel identified David's officials by place of origin (Ittay the Gittite, for example, is probably Ittay son of Ribay from Kiryath-Jearim) or by ethnic or clan affiliations (Uriah the Hittite, among others). On the same model, I Samuel supplies a list of Saul's officers. I Kings 4 provides an even fuller list of Solomon's officials, mainly provincial administrators. Yet nothing comparable appears later in Kings, again distinguishing writing about the United Monarchy from that about its successor regimes. The reports about the course of bureaucratization attest the development of the state. Later titulature, attested in Kings and in epigraphs, indicates a far more extensive administrative apparatus.

Foreigners serving David as mercenaries, his collusion with Gibeonite aliens in exterminating Saul's house (and his enfranchisement of them in the army and the cult), and the patterns of his diplomacy, threatened Israel. I–II Samuel insist on his popular election. Still, only David's campaign for reelection after the Absalom revolt indicates a historical, not just literary, dependence on some measure of popular support. Notably, after the Absalom revolt, Joab undoes the compromise reflected in the appointment of Amasa, Absalom's commander-in-chief, to be David's chief of staff. The parallel to Abner's death will not have been lost on contemporary northerners.

The most diagnostic element of any narrative history is its omissions. Samuel is no exception. David introduced a new icon, the ark, into a new capital (II Samuel 6–7). He did not build a temple, and did not organize a centralized state.



Map 3. David's wars against Moab, Aram and Ammon. From Macmillan Bible Atlas*, Carta, Jerusalem, 1968.*

He undertook no public works. Nor did he conquer any lowland fortresses. These silences speak legions about the nature of his bandit state.

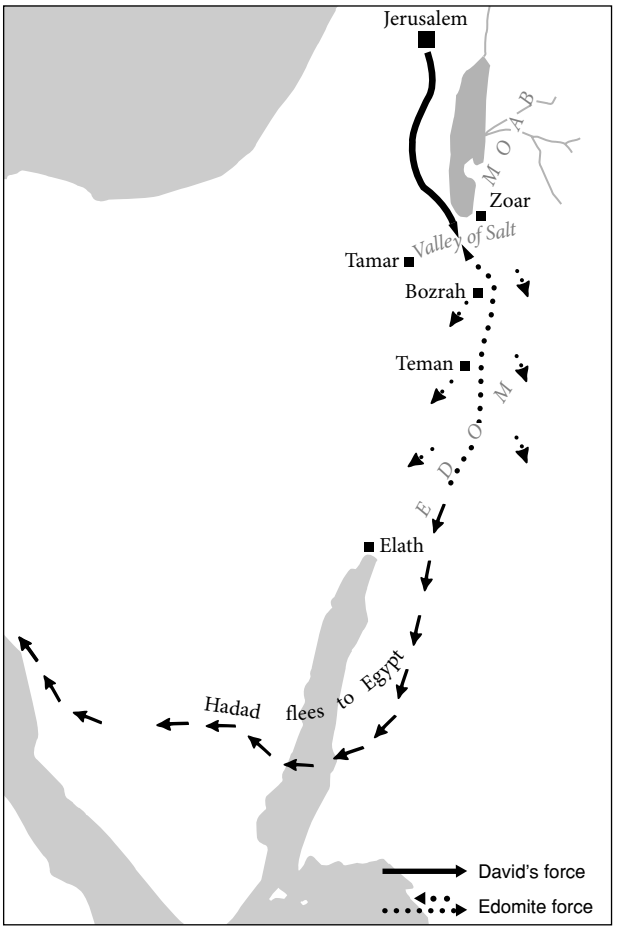
David has left the imprint as a state-builder and conqueror on Western consciousness. Still, Samuel, the earliest source about his activity, alleges little in the way of conquest. He fails to expand to Gezer, or in Philistia proper: until Solomon's day, Gezer was "Canaanite." As king, David encounters Philistines only in the vicinity of Jerusalem. He subjects Aram-Zobah, but probably on the field in Transjordan (II Sam. 10) rather than campaigning to the north. He attacks some elements of population in Ammon, Moab, and Edom. But nothing suggests a campaign north of Dan. The northernmost ac-

tivity in which David's troops are said to engage takes place at Abel Bet-Maacah. And in Transjordan his only clear achievement, by proxy, is the taking of Ammon's capital, sometime before the Absalom revolt. He garrisons some territory belonging to Damascus, not the city itself. He kills some Moabites. Only in the case of Edom is he said to have taken the whole territory – probably corresponding with the 50 or so caravan stations erected in the Negev in the 10th century.

The only instance in which a real policy history can be reconstructed is that of Ammon. David allied with its king, Nahash, an enemy of Saul's. When Nahash died, David took the capital, installing Hanun, a son of Nahash, as the latter's successor. Later, during Absalom's revolt, along with Gileadite allies, Hanun abetted David against the tribal militias of Israel and Judah. It is no coincidence, then, that Hanun's daughter became the mother of Solomon's successor, no fewer than two years before David's death. Ammon was in thrall to David, but was indispensable to his domestic authority.

Israel's expansion into the lowlands – which Solomon possessed, as texts and archaeological evidence attest – and into Transjordan should, at least in theory, have created a sense of "nationalism." Reality, however, differs from theory, and the narrative of the process of expansion covers the reality up. The mercenary base of the early monarchy kept countryside lineages in fear of losing autonomy. This fear undoubtedly fed Absalom's revolt, directed not against the dynasty, at least among the small population of Judah and that of Benjamin and southern Ephraim, but against David personally. It was a war concerning the succession.

Absalom's revolt was a war of Israel, and much of Judah, and probably parts of Philistia and Canaan, on David. Naturally, the narrative does not mention external enemies or allies – the Ammonites and Gileadites appear only to provision David in need, and the Gittites appear only in the form of David's mercenary army, not as outside supporters. Thus, the narrative does not represent the episode as involving anyone but Judah and Israel – a highly improbable scenario, but one useful for internal dissemination. II Samuel portrays the revolt as divine vengeance for the cuckolding and murder of Uriah the Hittite. This implies the rebels were on the side of the angels, so to speak. And, Absalom's daughter became Solomon's heir Rehoboam's first wife, clearly in a strategy of national reconciliation. Our text also insists that David actively campaigned for and earned reelection as king after the revolt (II Samuel 19), winning partly because he promised to replace his hatchet man, Joab, as national commander with the rebel general, Amasa. The text then blames Amasa's assassination, which follows immediately, on Joab, when Sheba son of Bichri revolts – a rebel without an army whose head is unceremoniously hurled over the wall of Abel BetMaacah, probably just then incorporated into the boundaries of David's Israel. With David's professional army dominant, the humiliating campaign for reelection and the appointment of Amasa suggest the importance of claiming popular support.



Map 4. David's conquest of Edom. From Macmillan Bible Atlas*, Carta, Jerusalem, 1968.*

David's religious policies are obscure. He adopted the ark from the Gibeonite city of Kiryath-Jearim as a state symbol. He also created two state priesthoods – one, from Judah, claiming descent from Aaron, and another from Shiloh, probably claiming descent from Moses. He naturally permitted countryside priests to continue as they had in the pre-monarchic period. While later temple liturgy (as Psalm 89) and the historiography (II Samuel 7) claim that YHWH endorsed eternal Davidic dynasty, alternative views (as Psalm 132) were fashioned in Judah to explain Israel's secession on Solomon's death.

One Davidic achievement was the establishment of control of movement in the Negev. Arabian caravan traffic to the coast assumed an immense importance at the end of the Late Bronze Age, and thereafter. The spices (including what we would call drugs, for the spice trade was in great measure the drug trade), crossed the Sinai and Negev at Egypt's expense, until Shishak's raid, five years after Solomon's death. Later, Necho, Josiah, and even Nabonidus would contest its direction.

David created a nation, Judah. His dynasty endured for almost 500 years. He also inevitably initiated a rift between popular and elite sovereignty, despite adhering, like Augustus

in Rome, to the forms of popular election. Both before and after the Absalom revolt, according to the apology in II Samuel, David insisted on election by the people, or by the people's representatives. In appearance, David deferred to an Israelite mode of hinterland living that broke the traditional link between city-state monarchies and temple building, such that the shrine was not a permanent structure in the royal capital. In introducing the ark – which Saul had not embraced, and which had previously been tended by Gibeonites, against whom Saul actually waged campaigns – into the capital, David subverted this apparent deference, creating a state shrine. And yet, David's Jerusalem was not a proper city-state – it was more of a bolt hole. It was, in fact, not even a city, as its archaeological markers are all at least in large part absent.

Indeed, more than anything, what marks David's reign politically is an ongoing linkage with and reliance on foreigners, especially Gittites and Gibeonites, and a steady aversion to public works. II Samuel attributes almost no public building to him. Nor have archaeologists uncovered remains, with the possible exception of the "stepped stone structure" in Jerusalem, that could reasonably be attributed to him. It is true that Stratum VB at Megiddo is often attributed to his reign; however, it contains no clear monumental structure, and may well either antedate his conquest of Israel or reflect a very late period of his sovereignty.

In sum, David was never a builder, never an acolyte of monumental construction. His limited kingdom did not permit him to think of himself in these terms. It was left to his successor – perhaps the son of a mercenary named Uriah – to undertake the organization of states inside Israel and to impose heavy, or usual, taxation on them, so as to undertake construction in the countryside and in the capital. Only from Solomon's time do we have reports and archaeological reflexes of monumental construction.

SUCCESSION. David played the succession close to his vest. Of his sons, the third, Absalom, killed the eldest, Amnon, and was in turn killed by Joab in his, Absalom's, revolt. The second son, by Abigail, is never mentioned after his birth. The fourth, Adonijah, was widely expected to succeed.

The succession contest recapitulated the tensions of Absalom's revolt. Popular expectation focused (hopefully?) on Adonijah and Joab's support suggests that he was David's designee. Party to the Pretender was the Elide priest, Abiathar. Thus, traditional forces, in the court and at large, stood behind Adonijah's candidacy.

Solomon's succession, sympathetically presented, remains a coup. Behind Solomon stand: Zadok, the Judahite priest; Benaiah, the mercenary captain; and, the mercenaries of the capital, such as the Gittites. Solomon's administration, with its emphasis on public works and the exactions they required, colors the contrast with David. Yet conciliatory maneuvers early in Solomon's reign – Rehoboam's marriage to Absalom's daughter, the writing of II Samuel to exculpate David from political murders and Israel's population from treason because YHWH encouraged the revolt, and even the construction of the temple with its implications of tax relief for the laborers as a form of tax remission, all suggest that the transition was gradual. Solomon began by pursuing his father's course; only when a threat materialized from Egypt, in his 24th year, did the impulse to modernization assume urgency. For this reason, public works, for example at Megiddo, were not completed before the destruction of the Solomonic layer there. What is more, the Solomonic layers may in many cases have represented facades, at Hazor, Megiddo, and Gezer, in the first instance.

REASONS FOR DAVID'S PLACE IN TRADITION. David became the template for the future identification of Judah's king as the messiah, YHWH's "anointed": he was the adopted son of YHWH, a notion that derives from the temple royal ideology during the centuries leading up to the Babylonian exile. As a dynastic founder, David personified YHWH's reign over Judah, and, by extension, Israel. Later reinterpretation of the conception of David *redivivus* – adumbrated in the comparison of Judah's kings to him in the books of Kings and Psalms – and of the enthronement metaphor of his divine sonship led to their ratification as a future hope in a period without Davidic kings (the Restoration). In addition, the image of David as cult founder, full-blown in the presentation of I Chronicles, derives from the assignment to his reign of the dynastic charter, usually associated with temple building, and from the superscriptions to the Psalms.

While Israel's golden age is usually associated with Solomon, the Davidic figure, far more swashbuckling and more tragically human, naturally attracted the attention and the affection of later readers. The glory of David is thus in his commemoration, and in the reverberation of his image through the ages. The idea of a Messiah based on David, the idea of a David in the Psalms, the idea of a David as the progenitor of David – all these things are based on the reception in Judah of the literature, and particularly the historiography, about this king. Thus the literary presentation, starting with Samuel and continuing through Chronicles and into rabbinic literature, created an image that had enduring power throughout the ages.

[Baruch Halpern (2nd ed.)]

In the *Aggadah*

David's image in the *aggadah* is many-faceted. The unique status of his monarchy – in contrast to that of the other kings of Israel – is frequently emphasized: "The sovereignty of David shall never lapse" (Yal., Num. 771). The Midrash even declares that God "looks forward to David's being king until the end of the generations" (Gen. R. 88:7), and that "whoever contends against the sovereignty of the house of David deserves to be bitten by a snake" (Sanh. 110a). In this emphasis there is an echo of the dispute which, in its time, divided Judaism after the establishment of the dynasty of the Hasmoneans, who were not of Davidic descent (see *David, Dynasty of).

PHARISAIC SUPPORT OF DAVID'S DYNASTY. The Pharisees did not deny that, according to the *halakhah*, kings who were not of the house of David could be appointed (Hor. 13a; et al.); but they made a clear distinction between them by stressing that the dynasty of the House of David was eternal, and by placing limits upon the authority of the other kings: only kings of the House of David could judge and be judged themselves, and not kings of Israel (Sanh. 19a); kings of the House of David were anointed, but not kings of Israel (Hor. 11b); and even when kings of Israel were anointed (when the succession was in dispute), oil of balsam was to be used and not the prescribed anointing oil. It was also ruled: "In the Temple court, the kings of the House of David alone are permitted to sit" (Sot. 41b).

OPPONENTS OF THE DAVIDIC DYNASTY. On the other hand there were extremists who were opposed to the Davidic dynasty. Echoes of it are heard in the talmudic discussion (Yev. 76b–77a) dealing with the permission of Ammonite and Moabite women to intermarry with Jews: "Doeg the Edomite said to Abner, the son of Ner, 'Instead of inquiring whether he [David] is worthy to be king or not, inquire whether he is permitted to enter the assembly of Jews at all.' Why? 'Because he is descended from Ruth the Moabitess!' Abner said to him, 'We have been taught that only an Ammonite [is forbidden], but not an Ammonitess, a Moabite, but not a Moabitess'" (see: *Ammonites and Moabites in the *halakhah*). According to Aptowitzer, this passage alludes to the efforts of the Sadducees in the Sanhedrin of Hyrcanus to disqualify the House of David from reigning, an effort which they were compelled to abandon by use of force on the part of the Pharisees and their supporters outside the Sanhedrin. In Aptowitzer's opinion, the reference by Josephus (Wars, 1:54ff.) to a revolt in the days of Hyrcanus is to this incident. In this connection the Midrash states (Ruth R. 8:1): "David said before the Holy One, 'How long will they agitate against me, saying, Is he not of tainted descent? Is he not descended from Ruth the Moabitess?'" In order to impress the importance of the House of David upon the consciousness of the people, the rabbis laid down that, "Whoever does not mention the kingdom of the House of David in the blessing 'Who buildest Jerusalem' in the Grace after Meals, has not fulfilled his obligation" (Ber. 48b). In the **Amidah* prayer, too, they included a prayer for the restoration of the kingdom of the House of David.

DAVID'S PHYSICAL STRENGTH. Already as a youth David displayed extraordinary physical strength, one day slaying four lions and three bears (Mid. Sam. 20:5). With only one throw of his javelin he could kill 800 men (MK 16b). It was only as a simple shepherd, however, that he confronted Goliath. The five stones came to him of their own accord. They represented God, Aaron, and the three patriarchs (Mid. Sam. 21:1). One stone alone, which was guided by an angel, sufficed to kill Goliath (Mid. Ps. to 144). David waged 18 battles – five for his own benefit and 13 on behalf of Israel (Lev. R. 1:4), always attributing his victory to God (Mid. Ps. to 144). When he went to war, David made himself hard as steel (MK 16b).

DAVID AS A POET. The rabbis speak in superlatives of David's poetic genius. "While still dwelling in his mother's womb, he recited a poem … he contemplated the day of death and recited a poem" (Ber. 10a). The biblical account of David's playing the harp before Saul is enlarged in the *aggadah*: "a harp was suspended above his bed … as soon as midnight arrived, a north wind came and blew upon it and it played of itself" (Ber. 3b). The Talmud discusses the question of whether the psalms are to be regarded as entirely David's work or as a collection of compositions by various poets, including David, who edited them. R. Meir's view is: "All the praises stated in the Book of Psalms were uttered by David" (Pes. 117a). The statement (BB 14b) that "David wrote the Book of Psalms, including in it the work of 10 elders" is understood in the light of the Midrash (Eccl. R. 7:19 no. 4): "Although 10 men composed the Book of Psalms, it is named after none of them but after David." The rabbis perceived something of a contradiction between David's preoccupation with poetry and his involvement with Torah, saying, "This is what David meant: 'Midnight never found me asleep.' Until midnight he studied the Torah; thereafter he recited songs and praises" (Ber. 3b).

DAVID AS A SCHOLAR. David was exalted by the rabbis as a halakhic authority and a Torah scholar, his diligence being such that the Angel of Death was powerless over him because "his mouth did not cease from learning," the study of Torah protecting one from death. It was only when by a ruse the Angel of Death interrupted his study that he was able to claim him (TJ, Shab. 30). David's wish was: "May it be Thy will that words of Torah be repeated in my name in this world" (Yev. 96b). His great diligence is also reflected in the statement, "David said, 'Lord of the Universe! Every day I would think of going to a certain place or to a certain dwelling, but my feet would bring me to synagogues and to places of study'" (Lev. R. 35:1); and, "David said: 'The Holy One, blessed by He, has made a covenant with me that I shall master Scripture, Mishnah, Midrash, *halakhot*, and *aggadot*'" (Yal., II Sam. 165). David appears also as a halakhic authority and *av bet din* (Ber. 4a), and the decree forbidding a man to be alone with an unmarried woman is attributed to his *bet din* (Sanh. 21b; et al.). "Every one who went out in the wars of the house of David wrote a bill of divorce for his wife, so that she could remarry, should he fail to return and her status be uncertain" (Shab. 56a). He composed many prayers and it was he who set the number of priestly divisions at 24 (Ta'an. 27a).

THE BATH-SHEBA EPISODE. The rabbis are frequently openly critical of David. With reference to the episode of Bath-Sheba, however, the general tendency is to exonerate him from all blame, both in respect to the law itself since he decreed that "every one who goes out to war shall write a bill of divorce to his wife" (Shab. 56a), and Bath-Sheba was thus a divorcee; and because of his wholehearted remorse after the deed: "David

said before the Holy One, blessed be He, 'Lord of the universe! Forgive me for that sin.' 'It is forgiven you,' He replied. 'Give me a sign during my lifetime,' he entreated. 'During your lifetime I shall not make it known,' He answered, 'But I shall make it known during the life of your son Solomon'" (Shab. 30a). Some go even further, saying: "Whoever says David sinned is mistaken … he contemplated the act, but did not go through with it" (Shab. 56a).

RABBINIC CRITICISM OF DAVID. The rabbis enumerated other failings of David. In the opinion of the rabbis, it was David's overweening self-confidence which led him to beg God to put him to the test with Bath-Sheba so that he could prove himself comparable in that respect to Abraham, Isaac, and Jacob (Sanh. 107a). They maintained that his tongue was not free from taint. David, in his entreaty to Saul, says, "If it be the Lord that hath stirred thee up against me, let Him accept an offering" (I Sam. 26:19). The rabbis consider this an unbecoming allusion to God, and, in their opinion, David came to grief because of it in the matter of the census: "The Holy One said to David, 'You call me one who stirs up; I shall cause you to stumble over a thing which even schoolchildren know, that which is written, And when thou takest the sum of the children of Israel, according to their number, they shall give every man a ransom for his soul'" (Ber. 62b). Nor was he innocent of slander. He believed in Ziba's calumniation of his master Mephibosheth, that he intended treachery against David (Yoma 22b). He rejoiced at Saul's downfall: "The Holy One said to David, 'David, you sing a song at Saul's downfall? Were you Saul and he David, I would have destroyed many Davids before him'" (MK 16b). He employed inappropriate language in reference to Torah, referring to its words as "songs" (Sot. 35a), and he is responsible for the wrong path taken by his children. "Because David did not rebuke or chastise his son Absalom, he fell into evil ways and sought to slay his father … David treated Adonijah similarly, neither rebuking nor punishing him, and therefore he became depraved, as it is written, 'His father had not grieved him'" (Ex. R. 1:1).

[Israel Moses Ta-Shma]

TOMB OF DAVID. According to the Bible, David was buried in the "city of David" presumably in the southeast of the present Siloam area (I Kings 2:10). Traditionally the later kings of the Davidic dynasty were also buried there and the Bible refers to the "sepulchers of the sons of David" (II Chron. 32:33), whose site was still known in the time of Nehemiah (Neh. 3:16). The tombs were in Jerusalem, but were never touched (Tos. B.B. 1:11). According to Josephus Herod broke into David's tomb to rob it, but when he tried to go into the inner chamber tongues of fire shot out (Jos., Ant., 16:7:1). The site is also mentioned in the New Testament (Acts 2:29). The tomb of David was probably destroyed at the time of the Bar Kokhba revolt (135 C.E.), and afterward the exact location of the site was forgotten. However, various sites were suggested by popular traditions over the ages and the one which became generally accepted was the place now called Mt. Zion. This tradition is about 1,000 years old, first being recorded in Crusader times, and was accepted in Jewish, Muslim, and Christian traditions. Benjamin of Tudela (c. 1173) reports a story about the miraculous discovery of David's tomb on Mt. Zion during the repairing of a church on the site. The site was in the hands of Muslims and Christians at various periods and came under Jewish control after the Israel War of Independence in 1948. It became a special center for Jewish pilgrims in the period from 1948 to 1967 because the most revered Jewish site, the Western Wall, was not accessible to Jews and David's Tomb was the closest point to the Old City of Jerusalem. Oriental Jews especially made pilgrimages to the site on all three festivals and particularly on Shavuot, the traditional date of David's death.

In the Liturgy

David figures in the liturgy both as the "sweet singer of Israel" and as the founder of the dynasty which according to Jewish tradition is eternal and is therefore destined to be restored. The concluding blessing to the extended **Pesukei de-Zimra* which are recited on Sabbaths and festivals – consisting as they do, both in the Ashkenazi and Sephardi rites, almost exclusively of psalms – states that it is the duty of all creatures to praise and extol God "even beyond the words of song and adoration of David the son of Jesse, Thine appointed servant." A similar reference is made in the *Kedusha* to the Sabbath morning *Amidah*. Much more prominent is the hope of the restoration of the Davidic dynasty, and, of course, it has messianic undertones. The subject of the 15th blessing of the *Amidah*, it is also implied in two passages of the *Grace after Meals. "Have mercy upon … the kingdom of the House of David Thine anointed" and "showeth lovingkindness to His anointed, to David and his seed for evermore." (The addition to the Grace for the Intermediate Days of Sukkot also prays for God to "raise up the fallen tabernacle (*sukkah*) of David" (Amos 9:11)).

The most intriguing mention, however, is in the third of the four blessings which follow the reading of the *haftarah*: "Gladden us, O Lord our God … with the kingdom of the House of David Thine anointed. Soon may he come and rejoice our hearts. Suffer not a stranger to sit upon his throne, nor let others any longer inherit his glory; for by Thy Holy Name Thou didst swear unto him that his light should not be quenched for ever. Blessed art Thou, O Lord, the Shield of David." The text of these blessings (with variations) is given in *Soferim* (13:13); that this blessing ends with "the Shield of David" is already mentioned in the Talmud (Pes. 117b). Various suggestions have been put forward to explain the connection between the prayer and the *haftarah*. It is bound up with the unsolved question as to the date and the circumstances of the introduction of the prophetic reading. Rabbi J.L. *Maimon (Fishman) puts forward the suggestion that it may have been a polemic against the Samaritans who denied both the sanctity of Jerusalem and the rights of the House of David (*Ha-Ẓiyyonut ha-Datit ve-Hitpatteḥutah* (1937), 68–69). If the view of *Abudarham, that the *haftarah* was instituted during

the persecutions of *Antiochus Epiphanes as a substitute for the proscribed reading of the Pentateuch, can be accepted, it might equally have been a kind of protest against the royal aspirations of the *Hasmoneans, who were not of royal stock. A curious reference to David occurs in the liturgy of the Blessing of the New *Moon (*Kiddush Levanah*). It includes the phrase "David, King of Israel is alive and existing." The inclusion of this phrase is undoubtedly connected with an incident related in the Talmud (RH 25a) to the effect that R. Judah ha-Nasi sent R. Ḥiyya to sanctify the moon in a place called Ein Tov and send him the news that this had been done in these words. Moses *Isserles however states that the reason is "that his kingdom is compared to the moon (cf. Ps. 89:38) and like it will be renewed" (OḤ 426:2).

[Louis Isaac Rabinowitz]

In Kabbalah

The kabbalists saw in David the man who symbolized in the "quality of Kingdom" (*middat ha-Malkhut*), the tenth and last of the *Sefirot*. In Sefer ha-*Bahir, it is stated that this quality was offered to each of the three patriarchs, but they asked that they be given their own particular qualities and it was then given to David. David's name is the regular attribute of the *Sefirah Malkhut* which found its expression in his leadership. As a counterpart to the biblical King David, God has "another David" (*David aḥra*) who is in charge of all the inhabitants of the upper world, and he is the *Shekhinah* (Zohar, 3:84a). Together with Abraham, Isaac, and Jacob, David constitutes the "fourth leg of the *Merkabah"; or of the throne, in an extension of the midrashic saying: "It is the patriarchs who are the Merkabah" (Gen. R. 47:7). The symbolism of the "kingdom" as a *Sefirah* which has no light of its own but which receives its light from the other nine *Sefirot* above it, like the moon from the sun, has a basis in midrashic legends. There it is said that David was meant to live only a few hours, but Adam foresaw this and gave David 70 years of the thousand years which were allotted to him (Zohar). His constant study of the Torah, so that "his mouth never ceased reciting the Torah," is explained in *Sefer ha-Bahir* as his being a symbol for the attribute of "Oral Law," which is also the tenth *Sefirah*. In *Sefer ha-Peli'ah* the story of David, Uriah, and Bath-Sheba is explained as a symbolic repetition of the sin of Adam, performed in order to rectify that sin; i.e., the killing of Uriah, who symbolizes the primordial serpent, rectifies the sin, since King David is the reincarnation of the first man (the name Adam being interpreted as the initials of the names Adam, David, *Messiah). Evil and the *kelippah* (lit. "husk") also find their rectification (*tikkun*) in David in another way. David was ruddy, like the wicked Esau, but while the redness of Esau was "without any mixture of goodness and beauty," David's redness was rectified by his being "ruddy and withal of beautiful eyes"; for Esau inherited the sword and the shedding of blood, but David inherited the attribute of kingship "to act with mercy and charity and to kill according to the law" (Joseph *Gikatilla, *Sha'arei Orah*). His descent from Ruth the Moabitess is also repeatedly commented upon in the esoteric manner: David, the first Messiah, like the last Messiah, had of neccessity to descend from a mixture with the *sitra aḥra* ("other side," i.e., evil) so that he should be able to overcome the evil power which is rooted in the *sitra aḥra*; for man can only overcome that which is within himself (Joseph *Caro, *Maggid Mesharim*). When the custom of a *melavveh malkah* meal, i.e., a fourth meal at the end of the Sabbath day, became widespread (under the influence of Lurianic Kabbalah) this meal was named "King David's meal."

[Gershom Scholem]

In Christianity

David's importance for Christianity derives from the fact that Jesus was considered the Messiah, son of David. In the Gospels (Mark 12:35–37; Matt. 22:41–45; Luke 20:41–44), Jesus himself does not claim to be a descendant of the House of David, nor do his contemporaries know of such a connection (John 7:41–42). The title "Son of David," bestowed upon Jesus by sufferers turning to him for help, merely denotes the Messiah, a title also bestowed upon Bar Kokhba by Rabbi *Akiva. By Paul's generation, however, Christians already believed that Jesus was descended from the House of David (II Tim. 2:8; Heb. 7:17). Consequently two distinct and very artificial genealogies of Jesus were traced (Matt. 1:1–7; Luke 3:23–38).

David, like other biblical figures, was considered by Christian authors as a "type" of Jesus, and they explained biblical stories about David as referring to him. For medieval authors, David is the supreme example of the poet. He was the patron of the poets' guild (Meistersinger). The Christians considered David a prophet as well; according to the well-known church hymn *Dies irae*, he prophesied the End of Days. As David was also the embodiment of valor to the Christians, he was regarded in medieval times as an exemplary knight. In addition he was considered an exemplary king; Charlemagne liked his courtiers to call him "the new David." The Armenian Bagratid dynasty traced their lineage to David and Bath-Sheba, as Ethiopian monarchs do to Solomon the son of David. The Church regarded David as the prototype of a king obeying its precepts, and his anointment by Samuel was the basis for that of kings and emperors by the Church during the Middle Ages.

[David Flusser]

In Islam

David (Ar. Dā'ūd, also Dāwūd) was a figure known to the poets of Arabia during the *jāhiliyya* (heathen period before Muhammad). In their poems David was considered the inventor of coats of mail; they also knew of his connection with the *zabūr* (Psalms). Occasionally, his son Suleiman (Solomon) is also mentioned as the inventor of coats of mail – various characteristics were attributed to both of them. Muhammad also says that Allah taught David how to make armor (Sura 21:80), as well as how to soften iron (Sura 34:10). Muhammad, as well, mentions that Allah gave the *zabūr* (see Islam in the *Bible) to David (Sura 17:57).

David's victory over Jālūt (*Goliath) is mentioned in Sura 2:252. David was considered Allah's substitute (*khalīfa*)

on earth in judging men with justice (Sura 38:35–38). Once, two men came to him to judge in their dispute. One of them owned 99 sheep and the second, only one; in spite of this the wealthy man also sought the sheep of the poor man (this seems to be an allusion to the episode of Uriah and the parable told by Nathan the prophet (II Sam. 11–12)). On another occasion Muhammad mentions a righteous judgment pronounced by David and Solomon in the matter of a field in which strangers pastured their flocks (Sura 21:78). The maximum brevity with which this judgment is mentioned shows that the story itself was very well known. The Midrash (Ex. R. 2:3) cites the test experienced by David who led his sheep through the wilderness, only in order to keep them from robbing [private fields]. Among the tales about David there is one which is influenced by Christianity. In Sura 5:82 it is related that David and Isa (Jesus) cursed a number of the people of Israel because they did not observe the precepts of God. The mention of David together with Jesus seems to indicate that Muhammad received this tradition from Christians. In the post-Koranic literature an important place is devoted to the life of David, which also served as a model in the elaboration of the biography of Muhammad. The events connected with the scheming of Tālūt (Saul), the revolt of Absalom, and the latter's death are cited. In Muslim legends of a later date, mention is also made of David's ties with Jerusalem and his tomb on Mount Zion. In Judeo-Arabic poetry the Davidic kingdom-to-come is referred to.

[Haïm Z'ew Hirschberg]

In Modern Hebrew Literature

David has fired the imagination of many modern Hebrew writers who have depicted different aspects of his life in a variety of literary genres. Haskalah literature did not create a character of depth. Romantic themes, whether it be romantic love or a pastoral yearning, dominated these Haskalah works. Thus the dramatis personae in *Melukhat Sha'ul ha-Melekh ha-Rishon al Yeshurun* ("The Reign of Saul the First King of Israel," 1794), a play by Joseph Ha-Efrati, primarily represent ideas and as such would tend to be one-faceted; the genius of the author however was in creating flesh and blood characters. David symbolizes the romantic yearning to return to the simple life of the shepherd and the peasant. Idealization of the rustic and the rural life is also found in the work of Shalom b. Jacob Cohen, *Matta'ei Kedem al Admat Ẓafon* ("Oriental Plants in the Soil of the North," 1807), which contains several poems on different episodes in the life of David. In one poem Barzillai rejects David's proposal to live in Jerusalem and David, at the height of his power and glory, comes to the tragic realization that a quiet rural life is preferable to the splendor and intrigues of the court. *Nir David* ("The Light of David," 1834), a romantic poem in 20 cantos, is a faithful rendering of the biblical story but shows no insight into the character or the events. The romantic yearning of the generation also finds voice in J.L. Gordon's Davidic poems: David is a sentimental romantic hero in *Ahavat David u-Mikhal* ("The Love of David and Michal," 1857), a historical epic which centers on the love of David the shepherd, later king, and the daughter of Saul. The theme is undying love portrayed through Michal. As in Shalom b. Jacob Cohen's poems, Gordon's *David u-Varzillai* ("David and Barzillai," 1851–56) portrays an older king whose scepter weighs heavy in his hand. Gordon's beautiful idyllic pastoral tableaus poignantly offset a tired king who, mourning his rebellious son's death, futilely yearns for a simple life. The national ballads of Abba Constantine Shapiro, *Me-Ḥezyonot Bat Ammi* ("The Visions of My People," 1884) mark a turning point in the ideational emphasis of David. The slumbering David, the redeemer (following the popular legend of David in the cave), awaits to be awakened so that he might save his people. Redemption is also the motif in Ya'akov Cahan's symbolic play *David Melekh Yisrael* ("David King of Israel," 1919–30, 1937). The redemptive theme, expressed in a lyrical vein, continues into the literature of the renascence period, e.g., in the poetry of Ya'akov Cahan – *Kinnor shel David* ("The Harp of David"); and of Jacob Fichmann – *Evel David* ("The Mourning of David," 1932), *Yo'av* ("Joab," 1934), and *Tefillat Erev le-David* ("Evening Prayer of David," 1960). Fichman did not choose the heroic pinnacles of David's life for subjects but rather the more human and tender episodes. *Evel David* and *Yo'av* are complementary works. The former is based on the legend that after his affair with Bath-Sheba David suffered deep melancholy for 20 years during which time he was deserted by the poetic muse. The poem, permeated by a deeply religious mood, skillfully describes the king's longing for his former state of innocence and poetic inspiration. In *Yo'av*, an older and wiser David has found his lost inspiration. His heart is again able to turn to God and his longing for God is expressed in poetry and song. But the blare of trumpets toward which Joab draws David's ear disturbs the king's regained idyll; the king's deep emotional conflict dissolves in his succumbing once again to the sound of war. Ḥ.N. Bialik in *Va-Yehi ha-Yom* ("On That Day," 1965) in the section "*Mi-Aggadot Melekh David*" ("From the Tales of King David") and Ya'akov Cahan in *Mishlei ha-Kedumim mi-Ymei ha-Melakhim* ("Tales of Ancient Times from the Times of the Kings," 1943) adapted legends, culled from folk tradition, into poetry and prose.

The more recent works on David do not follow any specific trend but are individualistic interpretations. They often are a reflection of the author's views of the fate of the Jewish people with which David has always been linked and of which he is many times the aspiring symbol. Some contemporary writers have portrayed David as a man of base qualities, others have drawn him as a man of majestic stature. *Yemei David* ("The Life of David," 1929), by Ari ibn Zahav, is a historical novel dealing mainly with David's youth, while in *Sha'ul Melekh Yisrael* ("Saul, King of Israel," 1944), a historical play by Max Brod and Sh. Shalom, David is a man whose actions are guided by the iron hand of fate. The David of Zalman Shneur's *Luḥot Genuzim* ("The Hidden Tablets," 1951) is a sly plotter, a man of intrigues and insatiable appetites. Uri Ẓevi Greenberg's majestic vision of the destiny of the Jewish people and the Land of Israel casts David and his wars (*Hod Malkhut*

David – "The Majesty of the Reign of David") as a mystical symbol of a glory to come; at the same time David is also the active symbol of an ideology culminating in the mystic symbol. Moshe Shamir's *Kivsat ha-Rash* ("The Lamb of the Poor Man," 1957), a historical novella on the life of David, centers mainly on Uriah, the Hittite, portrayed as a loyal subject who loves his king dearly. The underlying theme, explicitly stated in the epilogue by Uriah, is the poison of sin (symbolized by the poisoned arrow that killed Uriah) which seeps through the generations to come.

A number of plays in the 1960s have for theme Davidic episodes. The playwrights did not invest the characters with 20th century philosophy and social outlooks but stressed the use of language, thus illuminating a problem at the root of modern Israeli culture. Benjamin Galai's *Sippur Uriyyah* ("The Story of Uriah," 1967/8), a tragicomedy, simultaneously dramatizes the biblical tale and an apparently authentic Inca story on a similar theme with scenes alternating between the Incas and the Israelites. *Ha-Dov* ("The Bear"), later renamed and staged under the title *Mored ve-Melekh* ("The Rebel and the King," 1968), by Yisrael Eliraz, concentrates on the Absalom/David episode with David drawn as a decadent and weak king. Ya'akov Shabtai in *Keter ba-Rosh* ("A Crown on the Head," 1969) gave a comic interpretation to the biblical story. The plot, a series of intrigues, portrays in a comic-satirical vein the tension between David and his sons and the struggle between Solomon and Adonijah for the throne.

[Avie Goldberg]

In the Arts

LITERATURE. As king of Israel and psalmist, David has inspired innumerable poems and plays in many languages. Since David in Christian tradition was an ancestor of Jesus, he appeared as one of the so-called prophets in the medieval *Ordo Prophetarum*; and he also figured in the 15th-century French *Mistère du Viel Testament*. The motif gained wider popularity during the Renaissance, particularly in France, where David, with Homer and Virgil, was seen as one of the creators of the poetic art. Joachim Du Bellay (1522–1560) wrote *La Monomachie de Davidet de Goliath* (1560) and Guy *Le Fèvre de la Boderie constantly eulogized the psalmist in works such as *L'Encyclie des Secrets de l'Eternité* (1571) and *La Galliade* (1578) which include many verse paraphrases of psalms. La Boderie (in *La Galliade*, p. 112, citing the talmudic tractate *Bava Batra* 14b) also refers to the rabbinic tradition that David collected psalms composed from the time of Abraham onward. Two works by French Protestants were a dramatic trilogy by Loys Desmasures (c. 1515–1574?): *David Combattant; David Triomphant; David Fugitif* (1566), which alluded to the persecution and exile of the Huguenots; and Antoine de Montchrétien's play *David* (1601). In England George Peele's *The Love of King David and Fair Bathsabe* dealt more with Absalom than with the biblical romance.

Works of the 17th century include Abraham Cowley's verse epic *Davideis* (1656), one of the outstanding treatments of the theme, and Christian Weise's play *Vom verfolgten David* (1684). Literary interest in the figure of David was maintained in the 18th century, *Voltaire's subversive and mocking prose tragedy *Saül* (1763) dealing mainly with the second king of Israel, being balanced by *Saul* (1782), a noble and pious tragedy by the Italian poet and playwright Vittorio Alfieri. There is splendid imagery in *A Song to David* (1763), a hymn of praise to the psalmist by the English poet Christopher Smart. Some later works on the David theme were Friedrich Gottlieb Klopstock's German tragedy *David* (1722), a pious idyll; Friedrich Rueckert's drama *Saul und David* (1843); *Heine's poem "*Koenig David*" (in *Romanzero*, 1851); and the U.S. writer Joseph Holt Ingraham's religious romance *The Throne of David* (1860) which ends with Absalom's revolt. The story has retained its popularity in the 20th century, with works such as the U.S. poet Stephen Vincent Benét's *King David* (1923), and plays by D.H. Lawrence (*David*, 1926) and J.M. Barrie (*The Boy David*, 1936). Jewish writers have been prominent among modern interpreters of the motif. Lion *Feuchtwanger used the story of David and Bath-Sheba as the basis for his play *Das Weib des Urias* (1907) and Richard *Beer-Hofmann wrote a dramatic trilogy including *Der junge David* (1933). Two other plays by 20th-century Jewish writers were Israël *Querido's Dutch *Saul en David* (1914) and *Bathséba* (1940), a play by the Hungarian writer Károly *Pap.

On the whole, episodes of David's life, involving minor biblical characters, are of fairly recent date. They include Arnold *Zweig's three-act tragedy *Abigail und Nabal* (1913); *Abigail* (1916), a Yiddish play by David *Pinski; and *Abigail* (1924) by Grace Jewett Austin. An Oriental curiosity is *Abigail* (1923), a Marathi drama by Joseph *David of Bombay. Two works on related themes are "*Thamar y Amnón*," a ballad concluding the *Romancero gitano* (1928) of the Spanish poet and dramatist Frederico Lorca (1899–1936); and *Abiṣag* (1963), a dramatic poem about the Shunammite maiden who comforted the aged David, written by the Romanian Jewish author Enric Fortuna. Another work on this theme is Dan Jacobson's *Amnon and Tamar* (1970).

ART. David appears quite early in both Jewish and Christian art, where he has a major role, especially in illuminated manuscripts. As the traditional ancestor of Jesus, David is depicted from the sixth century C.E. in Byzantine manuscripts of the New Testament (Codex Rossanensis, Rossano Cathedral; Codex Synopensis, Paris, Bibliothèque Nationale, Suppl. Gr. 1286). Seventh-century Syriac Bibles portray scenes from the life of David in the Psalms, Samuel, and Kings (e.g., Paris, cod. Syr. 341). David the musician with a lyre, David the shepherd, David the lion-killer, and David the chosen anointed by Samuel became common subjects in Middle Byzantine psalters (e.g., Paris Psalter, Gr. 139). Their iconography stems mainly from late Antique, early Christian, and early Jewish art. The anointing of David is thus generally similar to the presentation in the wall painting of the third-century synagogue in *Dura Europos. Byzantine representations influenced most

West European illumination, from the Carolingian period (the Utrecht Psalter) through the Romanesques to the Gothic (St. Louis Psalter, Paris, Lat. 10525) and the Renaissance (the Breviary of Ecole D'Este, Modena, Estense Library, Lat, 424, Ms. V.G. II). In Christian illumination, David was usually depicted as a main link in the representations of the Jesse tree. In Hebrew illuminated manuscripts, David is represented as wearing a crown and playing a lyre (e.g., Leipzig *Maḥzor*, Leipzig University manuscript v. 1102), and also as the founder of the royal House of David (e.g., Kennicott Bible, Bodleian Library, Ms. Ken. 1). In medieval art David frequently appears in media other than illuminated manuscripts. The wooden doors of S. Ambrosio of Milan (fourth century) present a narrative cycle, and scenes are represented in the ninth-century frescoes of S. Maria de Castel Seprio and many 12th-century portals, capitals, and windows at Moissac, Vézelay, Saint-Benoît sur Loire, Chartres, Bourges, and Amalfi.

[Bezalel Narkiss]

The young David triumphing over Goliath was a popular subject with the great sculptors of the Renaissance. The subject gave them an ideal opportunity to express the renewed pleasure which they found in the nude, a pleasure which they shared with the sculptors of classical antiquity to whom they turned for inspiration. Some examples are the sculptures of David by Donatello (1430–32, Florence, Bargello), Andrea del Verrocchio (1476, Florence, Bargello), and Michelangelo (1503, Florence, Accademia). Michelangelo's colossal marble statue has a vehement, heroic stance alien to its ancient prototypes. A baroque version of the subject was sculpted by Bernini (1623).

There are paintings of David and Goliath by Titian (1543–44) and Caravaggio (c. 1605–06, Borghese Rome Gallery), and David's triumphal return from the fight was depicted by Nicholas Poussin (1627, Madrid, Prado museum). A painting by *Rembrandt (1628) shows David presenting Saul with the head of Goliath. Another popular representation of the young David shows him playing the harp before Saul. The subject appears in medieval miniatures, and Rembrandt painted the subject twice, in 1630 and c. 1657 (The Hague, Mauritshuis). In the latter version, the angry monarch hides his face behind a curtain, moved to tears by the music. Josef *Israels also painted this subject in the 19th century. David as king and harpist has been painted by Rubens (1610–15, Frankfurt, Stadtmuseum), Rembrandt (1651, Mannheim), and Marc *Chagall (1951).

Of the episodes of David's middle career, the subject of Abigail pleading before David was especially popular in Italy and the Netherlands in the 17th century, and was painted by Rubens and by Simon Vouet (1590–1649). The bringing of the crown to David after Saul's death and his grief over the death of Saul were depicted by Jean Fiuquet, the 15th-century French artist, in a miniature illustrating the *Jewish Antiquities* of *Josephus (Paris, Bibliothèque Nationale, Ms. Fr. 247, fol 135v.). Standing in front of his massed army, David rends his garments. The story of David and Bath-Sheba has also inspired many artists. In medieval Christian iconography David symbolized Jesus, the coveted Bath-Sheba his bride (the Church undergoing purification by cleansing), and Uriah the Hittite symbolized the devil. In medieval representations of Bath-Sheba bathing, she is shown sometimes in the nude, sometimes half-dressed, and sometimes fully clothed, washing her feet in a tub. There are paintings of the subject by the Flemish artist Hans Memling (c. 1485, Stuttgart, Staatsgalerie), Lucas Cranach (1526, Berlin, Kaiser-Friedrichmuseum), Rubens (1635, Dresden), Rembrandt (1643, New York, Metropolitan, and 1654, Paris, Louvre), and Poussin (1633–34). In a later painting, Rembrandt shows the nude Bath-Sheba deep in thought with a note from King David in her hand.

MUSIC. In the Jewish and early Christian and Muslim traditions, King David is extolled as an ideal model of musical perfection. He is remembered as a poet and musician, or poet-musician who chanted the psalms he has composed for the Glory of God. Consequently, he has become known as "The sweet psalmist of Israel." The Kabbalah invokes his constant study of the Torah emphasizing the idea of rising at midnight to perform a nocturnal singing of psalms.

Interestingly, the great merit accorded to the nocturnal chanting of David's psalms is ardently extolled in the work *Ethicon* of the well-known scholar and archbishop of the Eastern Jacobite Church Bar Hebraeus (1226–1286). One also finds important references to the virtues assigned to the singing of psalms in writings of the Church's Fathers St. Basil, St. Chrysostom, Clement of Alexandria, and St. Jerome. In Islam, David, who is usually called the prophet Da'ud, is described in the Koran as having the most beautiful voice ever created by God. The development of this motif led to later interpretations associating David's beautiful voice with the powerful charm of his singing.

The different Davidic traditions reveal an interesting case of one ideal common model: David as poet-musician is represented as a symbol of divinely inspired music. Accordingly, this music embodies a kind of universal monistic religious spirituality, which enabled leaders of the three monotheistic religions to become inspired by it in order to support their respective dogmas by means of a special interpretation. Many prominent composers of the 17th and 18th centuries (notably A. Scarlatti, R. Keiser, A. Caldara, G. Ph. Telemann, and F. Veracini) wrote oratorios and operas on David. In the 19th century, the general decline of biblical oratorio and the politically suspect associations of the nationalistic themes inherent in the subject account for the relative paucity of music works about David. A certain renaissance occurred in the 20th century, although most of the works produced, not only by Jewish composers, were of transient interest. Two more important compositions are Arthur Honegger's *Le Roi David* and Darius *Milhaud's *David*. Honegger's anti-romantic "dramatic psalm," with minimal stage equipment and action, was written in 1921 to a text by René Morax. Milhaud's *David*, with French libretto

by Armand *Lunel, was commissioned by the Koussevitzky Foundation for the 3,000th anniversary of the establishment of Jerusalem as David's capital in Jerusalem in 1954.

Descriptive compositions inspired by the figure of David include Menahem *Avidom's *David Symphony* (1947–48) and Paul Ben *Haim's *Sweet Psalmist of Israel* for orchestra (1956). David the dancer is depicted by *Castelnuovo-Tedesco in *Le danze del Re David* (piano solo, 1925). Schumann's *Davidsbuendlertaenze* (piano, op. 6, 1837) and the *March of the Davidsbuendler against the Philistines* (in *Carnival*, op. 9, piano, 1834–35) express his dislike of the musical philistinism around him. Zoltán Kodály's *Psalmus Hungaricus* (1923) for tenor, chorus, and orchestra is a poetic paraphrase of Psalm 55 combined with a 16th-century Hungarian poem. This work follows an old Hungarian biblical-historical tradition reflecting a contemporary political situation.

David was the patron of the Nuremberg Meistersinger and Hans Sachs's *Der klingende Ton* (1532) tells of Jonathan saving David from Saul's assassination attempt. Settings of David's lament over Saul and Jonathan include motets by Josquin des Prés, Pierre de la Rue, Clemens non Papa; an oratorio *David et Jonathas* (attributed to Carissimi); and Marc-Antoine Charpentier's stage music for Bretonneau's play in the 17th century. The oratorio *David's Lamentation over Saul and Jonathan* (1738) has been attributed to either John Christopher Smith or William Boyce. Johann Heinrich Rolle's oratorio *David and Jonathan*, based on Klopstock, was written in 1766. The fight between David and Goliath is commemorated in one of Johann Kuhnau's *Six Biblical Sonatas* (clavichord, 1700), while in the 20th century the theme is dealt with in Hanns *Eisler's *Goliath*, and Karel *Salmon's *David and Goliath* (1930). In folk music, an epic song with some dramatic action has been noted in the Kurdish Jewish tradition and in a Ladino ballad, "*Un pregón pregono el Rey*." The Afro-American spiritual "Li'l David play on your harp" has the David theme as its first verse and refrain. Some musical works about David, traditional or recently composed, have become Israeli folksongs. The best known of these is probably *David Melekh Yisrael Ḥai ve-Kayyam*.

The Bath-Sheba story occurs in the 18th-century oratorios (Georg Reutter, A. Caldera, Dittersdorf). Porpora's oratorio *Davide e Bersabea* (1734) was staged and written in London on the initiative of Handel's opponents. Mozart's cantata *Davidde penitente* (1785) was set to a libretto probably written by Lorenzo *Da Ponte and thus marks the start of their collaboration; the music (1782–83) is drawn largely from the Mass in C Minor (K. 427). On Abigail, the most noteworthy works are on oratorio by Francesco Durante (1736) and the oratoria *Nabal*, text by Morell, put together by J.C. Smith in 1764 with music taken from various Handel oratorios. Amnon and Tamar are the subject of a Ladino ballad, "*Un hijo tiene el Rey David*" (M.A. Attias, *Romancero Sefaradi* (1955), no. 75), and of an opera by Josef *Tal with text by Recha *Freier, which had its première in concert form in Jerusalem in 1960.

DAVID, early Canadian family. LAZARUS DAVID (1734–1776), born in Swansea, Wales, arrived in Canada about 1760 and helped found the Shearith Israel Congregation in Montreal. His eldest son DAVID DAVID (1764–1824), born in Montreal, was a founder and member of the original board of directors of the Bank of Montreal. SAMUEL DAVID (1766–1824), second son of Lazarus David, married Sarah Hart, daughter of Aaron *Hart of Trois Rivières in 1810. He fought with the

British forces in the War of 1812. His diary (unpublished) reflects the conditions of Trois Rivières in the colonial period. AARON HART DAVID (1812–1882) was born in Montreal, the son of Samuel David. He earned a medical degree at Edinburgh in 1835 and practiced medicine in Montreal, becoming dean of the faculty of medicine at the University of Bishops College, president of the Natural History Society of Montreal, and general secretary of the Canadian Medical Association; he held numerous other important medical and scientific positions. Aaron David took a leading part in Jewish life in Quebec province and served as army surgeon in the 1837 Rebellion and the 1866 Fenian Raids. These and other members of the David family were closely involved in the affairs of the Shearith Israel Congregation of Montreal and served actively in the armed forces.

[Ben G. Kayfetz]

DAVID, DYNASTY OF. The genealogy of the House of *David as a royal dynasty and as a symbol of hope for future redemption has left its mark on Jewish history throughout the ages. One may distinguish six stages in its development: (a) its origin (until c. 1000 B.C.E.); (b) the reign of the House of David (until 587 B.C.E.); (c) the dynasty during the critical period of the Exile and the Return to Zion (until c. 400 B.C.E.); (d) its disappearance (about 100 C.E.); (e) the exilarchs and the *nesi'im* (until c. 900 C.E.); (f) the aftergrowths of the Davidic genealogy.

(a) From the account of Samuel's secret anointment of David (I Sam. 16), it appears that Jesse, David's father, was one of the elders of Bethlehem (cf. I Sam. 17:12). According to the genealogy at the end of the Book of Ruth (4:18ff.) and in I Chronicles 2:10ff., Jesse was a descendant of Boaz, who was a descendant of Nahshon the son of Amminadab, and chieftain (prince) of Judah, and thus a member of one of the most respected families in the tribe. In many passages David is called "the son of Jesse"; and in Isaiah 11:1 the remnant of the House of David is spoken of figuratively as "the stock of Jesse." In the Book of Ruth, the ancestry of David from the marriage of Boaz to Ruth the Moabite is especially emphasized and this matter undoubtedly is the climax of the story. It should not be assumed that the tradition of the genealogy of the House of David from Ruth is the result of the preaching against the divorce of foreign women during the time of Ezra, as scholars during the time of A. Geiger did. On the one hand, it is not correct to say that this story intends to emphasize the ancestry of David in the mixed families living in the country. The story of Ruth, which reflects life close to the beginning of the monarchy, is based on an historical tradition concerning the ancestry of the mother of the family of David (cf. I Sam. 22:3–4 on the mission of David's father and his mother to the king of Moab when David had fled from Saul). This story intends to stress that Ruth left her people and became a part of Israel and therefore God rewarded her and her son Obed was the father of Jesse, the father of David (Ruth 4:17).

Information about the pedigree of the Davidic dynasty appears in various biblical books – particularly in Samuel and Kings. But the comprehensive genealogical table of the House of David in biblical times appears in I Chronicles 2:10–17; 3:1–24. It consists of three separate parts: a) the genealogy of Jesse, a list of his children, and a list of the sons of David born in Hebron and Jerusalem (2:10–17; 3:1–9); b) a list of the kings of Judah, from Solomon to Josiah (3:10–14); c) the sons of Josiah and their descendants (3:15–24). The first section is only a partial parallel to the data found in the Former Prophets. Thus I Samuel 16:6ff. and 17:13–14 merely list David's three older brothers, with slightly different names; and the Book of Samuel states that Jesse had eight (not seven) sons (17:12; cf. 16:10–11). The list in Chronicles of David's sons born in Hebron parallels the list in II Samuel 3:2–5 with minor changes, but includes more names of sons born to David in Jerusalem than II Samuel 5:14–16 and diverges from it in other ways. Thus, the author of Chronicles did not copy his list from the Book of Samuel, but from another source which may have been common to both books. It is worth noting that it is only from the data in Chronicles that we learn that Joab and his brothers, the sons of Zeruiah, and Amasa, the son of Abigail, were sons of sisters of David.

(b) There is only minimal information about the House of David during its reign. In the Book of Kings there is only a list of the successive kings and the names of their mothers; similarly I Chronicles 3:10–14 contains only the names of the kings of Judah, from Solomon to Josiah. Chronicles records in addition the names of the sons of Rehoboam (II Chron. 11:18ff.) and the sons of Jehoshaphat (II Chron. 21:2ff.). The list of Solomon's governors mentions incidentally two of the married daughters of Solomon, Taphath and Basemath (I Kings 4:11, 15). In I Chronicles 3:15 the sons of Josiah are listed in a different chronological order from that in the Book of Kings, and the eldest, Johanan, is not known from other sources. It should be noted that the term "king's son" is an administrative title.

In Nathan's vision (II Sam. 7) the destiny of an eternal rule over Israel for the descendants of David is clearly expressed. This idea of the eternity of the royal House of David became more deeply rooted with the continuation of the dynasty's rule over Judah. In the course of time, the rule of the House of David became the symbol of God's love for His people. Even those prophets who sharply opposed the kings of their times saw in the future the destined leadership of a descendant of the House of David. A unique archaeological find made in 1993–94 at Tel Dan in northern Israel sheds light on the House of David. The find consists of fragments of a stele inscribed in Aramaic, mentioning a king of the House of David and a king of Israel (Jehoram?), and it is dated palaeographically and stratigraphically to the second half of the ninth century B.C.E. Much controversy has surrounded the interpretation of this find (see Bibliography below).

(c) The sources during the Exile and the return to Zion make very little mention of the House of David. The books of Ezra and Nehemiah do not even note that Zerubbabel was of the House of David, although in Haggai's prophecy he is depicted as the destined ruler of Israel (2:23). From the genealogical lists in I Chronicles 3, it emerges that Zerubbabel was a grandson of Jehoiachin. It is widely believed that Sheshbazzar, the chieftain (prince) of Judah at the beginning of the Return to Zion (Ezra 1:8), was also of the House of David, and that he is to be identified with Shenazzar son of Jehoiachin (Jeconiah; I Chron. 3:18).

The list in I Chronicles 3 enumerates the descendants of the House of David after the Return to Zion. According to the Septuagint, there are 11 generations after Zerubbabel, that is to say, counting 25 years to a generation, there is documentation of the existence of the House of David until the middle of the third century B.C.E. But according to the Hebrew text the number of generations is only five or six. The difficulty revolves around the generations between Zerubbabel and Hattush (third from the end of the list). If the latter is identical with the Hattush who is named in Ezra 8:2 as one of those who returned with Ezra from Babylon (457 B.C.E.), the genealogy ends two generations after Ezra's return, or at the beginning of the 4th century B.C.E. (It is unfortunately not possible to date with certainty the passage in Zech. 12:7–14.)

The rebuilding of the Temple under the leadership of Zerubbabel (520 B.C.E.) aroused hope, which finds expression in the prophecies of Haggai and Zechariah, for a renewal of the reign of the Davidic dynasty. Nonetheless, during the age of the Return to Zion, the House of David was in decline. The reasons for this are not known. It is possible that Zerubbabel was suspected of disloyalty and was therefore recalled to Babylon. It is clear, however, that he or his descendants did return to Babylon, for among those who came with Ezra was Hattush who is related to Zerubbabel. There is no information concerning the family's status in Babylon, nor why it (or part of it) returned to Judah with Ezra. After the beginning of the 4th century B.C.E. (the end of the list in I Chron. 3), the fate of the house of David is unknown.

The clash between the descendants of the House of David and the high priesthood over the leadership of Judah at the beginning of the Return to Zion ended with the victory of the priesthood. The weakened position of the Davidic dynasty also weakened the identification between them and the future fortunes of Israel. Even during the period of the Second Temple, Judaism did not relinquish the ideal of a redeemer from the House of David, but this now became an ideal for the distant future, and no longer exerted a decisive force in the formation of Jewish history.

(d) Information about the Davidic family after c. 400 B.C.E. is slight and fortuitous. Clermont-Ganneau and others have suggested that "Akabiah bar Elioenai" (a name incised on a tomb in the cemetery of Alexandrian mercenaries from the beginning of the Ptolomaic period) should be identified with Akkub ben Elioenai, a descendant of Zerubbabel (I Chron. 3:23–24). This identification is not possible for chronological reasons – at most, one may speculate whether the Akabiah of the inscription may have been a great-grandson of the Akkub in I Chronicles. In any event, the inscription indicates that this supposed descendant of David held a position of no particular importance. The Mishnah (Ta'an. 4, 5) lists the descendants of David among the families which used to offer the wood offering. It would appear that this Mishnah belongs to the Persian period, the time when Nehemiah established this sacrifice, for all the families mentioned are known from the books of Ezra and Nehemiah and are not mentioned thereafter. Until Roman rule, there is no primary source testimony about the descendants of David. One cannot attribute historical validity to the late work (apparently from the Middle Ages) attributed to Philo and known as *Breviarium Temporum* (in *Antiquities of Berosus Chaldaeus*), which contains a list of some of the descendants of Zerubbabel and claims that the Hasmonean dynasty was of the same Davidic line.

According to the New Testament, Jesus was of Davidic descent. Two of the Gospels, Matthew (1:1–7) and Luke (3:23–38), include a genealogy tracing him directly to David. The New Testament tells of afflicted people who address Jesus as "Son of David." These sources, which date from not later than the end of the 1st century C.E., reveal that a short time after the death of Jesus there was a current Christian tradition attributing Davidic descent to Jesus. However, no historical validity can be attributed to these New Testament genealogies which are mutually contradictory in their artificiality; they merely reflect the fact that at the end of the period of the Second Temple the belief in a *messiah from the House of David (a tradition whose roots are biblical) was strong in Israel, and that consequently those who believed that Jesus was the Messiah concluded that he must be descended from David. So, when R. *Akiva hailed *Bar Kokhba as the messiah, *Johanan b. Torta added, "Akiva, grass will grow upon your cheeks and still the son of David will not have come" (TJ Ta'an. 4:2, 17d). The evidence of Eusebius quoted in the name of Hegesippus about the persecutions of the descendants of the House of David by the Caesars Vespasian and Domitian refers to the family of Jesus; it is not to be regarded as independent testimony for the existence of descendants of David among the Jews of that period (*Historia Ecclesiastica*, 3:12, 19, 32.4).

A tradition from the period of the first *amoraim* (TJ Ta'an. 4:2; Gen. R. 98:8) tells of a genealogical table dating from the period before the destruction of the Temple which was found in Jerusalem, according to which Hillel and R. Ḥiyya the Great were related to the Davidic dynasty. But investigation of the account reveals that it includes names of sages from the 2nd and 3rd centuries C.E., and the midrashic character of some of the progress indicates that this is but one of many literary genealogical traditions which arose from the time of Judah ha-Nasi and concerned the relationship of the families of the *exilarchs in Babylonia and the *patriarchs in Palestine. There is no information concerning the House of David between the 4th century B.C.E. and the 2nd century C.E.

If descendants existed during this period, they played no role in the leadership of the people. The nation's disappointment after the excitement of Zerubbabel's days was critical, and expressions of hope for the renewal of the kingdom as well as promises of a future redeemer from the House of David appear only rarely in the sources following Zerubbabel's time. (The blessing found at the end of the Hebrew version of Ben Sira, "Praised be he who causes a horn to sprout for the House of David," is only a common liturgical formulation of the hope based on the biblical promises.) A weakening of the element of a king of the Davidic dynasty is observable in the eschatological and apocalyptic literature, such as the Book of Malachi and, later, Daniel and Enoch. In this literature, the figure of a superhuman redeemer appears, and replaces the figure of the future king of the House of David. This process of the Davidic expectation continued down to the days of the Hasmoneans.

With the decline of that dynasty, the hopes for "the end of days" and the messianic ferment, which had been the hallmarks of the sects during the Hasmonean period, became widespread. Roman oppression and the unhappiness that it caused evoked a religious ferment which was bound up with the revival of the messianic hopes for a redeemer from the House of David. Thus, the author of the Psalms of Solomon, which were written about the time of the capture of Jerusalem by Pompey (63 B.C.E.), is opposed to any ruler not of the House of David, and speaks evil of the Hasmoneans who had usurped the seat of David. There is no evidence that the writer of the Psalms of Solomon knew of the existence of descendants of David in his own period; Judaism then and to this day has assumed that the redeemer, when he appears, will prove his Davidic origin by his success. When Judea came under Roman rule, the messianic consciousness gained renewed impetus, though at this time no family in Ereẓ Israel had genealogical proof of descent from David.

(e) Testimonies to a relationship to the House of David in the period following the destruction of the Second Temple mainly involve the families of the exilarchs and *nesi'im*, particularly R. Judah ha-Nasi and his contemporary, the exilarch R. Huna, and are sparse, vague, and even contradictory (Ket. 62b; TJ, Kelim 89, 32b; TJ, Sot. 87, 22a; Hor. 11a–b; and their parallels). These relatively early documents do not contain even one genealogy. A genealogical list tracing the relationship of the exilarch family to Zerubbabel appears only at the beginning of the geonic period. Even the letter of R. Sherira Gaon, who was related to the family of the exilarch, contains no information about the exilarchs who preceded R. *Huna, the contemporary of Judah ha-Nasi.

The earliest attempt to reconstruct the relationship of the exilarchs to the Davidic kings was made in *Seder Olam Zuta*, a work attributed to the 5th century C.E. The writer connects Hezekiah, who lived after the destruction of the Second Temple, and was the grandfather or great-grandfather of R. Huna, to Jehoiachin by means of a confused version of the genealogy of descendants of Zerubbabel (I Chron. 3). It follows that this source also is able to trace the pedigree of the exilarchs for only two or three generations preceding R. Huna. *Seder Olam Zuta*, in turn, was used as the basis for later genealogies of the House of David, including the genealogical tables of the Karaites. The exilarchs are the principal links between the House of David and later times, and *Seder Olam Zuta* is the earliest attempt to reconstruct the chain backward.

The traditions concerning the relationship of Davidic descent from the family of the patriarchs are secondary to the traditions concerning the pedigree of the exilarchs. They probably originated in the desire of the Jews in Palestine (and perhaps of the patriarchs themselves) not to appear inferior to the exilarchs in terms of the origin and status of their leaders. From the beginning, the exilarchs had boasted of their descent from David, and on this pedigree they based the authority they assumed over the people (see TJ Sot. 87, 22a; Hor. 11a–b). There is no possibiltiy of deciding whether the genealogical tradition of the exilarchs is reliable despite the fact that they did not have a detailed genealogical tree, or whether the authority which they exerted preceded their adoption of a David pedigree. Conceivably, the rank of exilarch in Babylonia could date from a relatively early period and the exilarchs could be descended from Zerubbabel; however, it is difficult to reconcile the antiquity of the exilarchate in Babylon with the fact that nothing is heard about them until after the destruction of the Second Temple.

(f) On the aftergrowth of the Davidic genealogy, see *Genealogy.

[Jacob Liver]

DAVID, ERNEST (1825–1886), French writer on music. David was born in Nancy and died in Paris. His works include an essay on Jewish music, *La Musique chez les Juifs* (1873). The first part deals with the instruments in the Bible, the second with the post-biblical music of the synagogue. With M. Lussy, he wrote *Histoire de la notation musicale depuis ses orgines*, including non-European systems of notation. This work was awarded a prize by the Institut de France and published in 1882. He also published biographies of Bach (1882), Handel (1884), Mendelssohn, and Schumann (1886).

[Amnon Shiloah (2nd ed.)]

DAVID, FERDINAND (1810–1873), German violinist. David, who was born in Hamburg, was a pupil of Spohr. He made his first concert tour at the age of 15, accompanied by his sister Louise, who, as Madame Dulcken, became a well-known pianist. In Berlin he was a close friend of Felix *Mendelssohn, and in 1836 was appointed leader of the Leipzig Gewandhaus Orchestra, which Mendelssohn conducted. From 1843 he was instructor of violin at the Leipzig Conservatory. David helped Mendelssohn with technical advice on his violin concerto, and gave its first performance at a Gewandhaus concert on March 13, 1845. David's main importance was as a teacher. Some of the greatest violinists of the second half of the 19th century, including Joachim and Wilhelm, were his pupils. His *Violinschule* ("System for the Violin") and his violin studies continue to be used, but his important anthology of violin masterpieces from the Baroque period to the 19th century has lost its value because his editing became outdated. The popularity of David's own compositions – which included symphonies and five violin concertos – did not outlive him.

[Josef Tal]

DAVID, FILIP (1940–), Yugoslav author and stage producer. Born in Kragujevac, David studied in Belgrade, where he eventually produced plays for television. David often used Jewish themes and figures to present universal problems. He published two short story collections (1964, 1969); dramas such as *Balada o dobrim ljudima* ("A Ballad about Good Men," 1965); and plays for television, including *Balada o povratku* ("A Ballad of the Return," 1965), *Jednog dana, moj Jamele* ("One day, My Jamie," 1968), "Fountain in a Dark Forest" (1964), "Notes on What Is Real and What Is Abstract" (1969), "Prince of Fire" (1987), and "Pilgrims of Heaven and Earth" (1995).

DAVID, JEAN (1908–1993), Israeli painter. David was born in Bucharest and studied in France. In 1927 he studied art at the Beaux Art institution at Paris and in 1930 he took advanced studies at the Grande Chaumière Academy and André Lot Academy in Paris. In 1942 he escaped to Palestine on a small schooner. He served with the British Royal Navy from 1944 to 1947 and with the Israel Navy from 1949 to 1950. During the latter period he also served as adviser on industrial design to the Ministry of Commerce and Industry. In 1954 he was one of the founders of the Ein Hod artists' village in the north of Israel. He decorated walls in the Israel pavilion at the Brussels Exhibition of 1958 and at the Canadian Expo 1967. He represented Israel at various international exhibitions. His posters, especially those executed for the Government Tourist Office, earned him an international reputation as a graphic artist. David painted murals on the passenger ships of the Israel merchant marine. He also designed jewelry and enamels. Characteristic of David's painting is a lively sense of humor, a decorative use of color, an allusive use of ancient symbolism, and a deep feeling for the life of the sea derived from his experience as a sailor. In 1960 David received the Dizengoff Prize.

DAVID, JOSEPH (**Penker**; 1876–1948), Indian playwright and director; leading showman of Bombay, where he was born to a *Bene Israel family. He used the Urdu, Hindi, Gujarati, and Marathi languages with equal facility and was the author of more than 100 plays, among them tragedies and comedies based on religious and mythological themes. For 15 years he was the producer for the Parsi Imperial Theater Company and presented many plays which raised the standard of the Urdu-Hindi stage. In 1931 he wrote the screenplay of India's first full-length talking film, *Alam-Ara,* with a cast which included Elizer Kolet (also of the Bene Israel) in one of the leading roles.

DAVID, LARRY (1947–), U.S. comedian, producer, and comedy writer. Born in Brooklyn, N.Y., and a graduate of the University of Maryland in 1970, David served in the U.S. Army Reserve and spent more than a dozen years as a stand-up comedian and television comedy writer, with little success. Along the way he worked at several jobs, including an unsuccessful stint as a bra salesman, a subject he later reprised on television. In 1989 David teamed with another comedian, Jerry *Seinfeld, to create *The Seinfeld Chronicles*, a show famously "about nothing" that combined Seinfeld's relaxed, outer-directed humor with David's intense, inner-directed humor. Renamed *Seinfeld* and televised on the National Broadcasting Company network, the show, an outgrowth of the two comedians' conversations and personal experiences, became one of the most successful in television history. The weekly half-hour program ran successfully through the 1998 season with David exercising almost total creative control through the 1996 season, when he left, although he returned for the finale. The four key characters, Seinfeld, a comedian, George Costanza (portrayed by Jason *Alexander), the over-the-top Kramer, and Elaine

Benes (Julia *Louis-Dreyfus), a book editor, became fixtures in American homes. The bumbling Costanza character, David said, was modeled after himself. David appropriated the name of a neighbor, Kramer, who lived in his apartment building in New York, for the unpredictable Kramer figure.

David himself portrayed a number of characters on the program, including George Steinbrenner, principal owner of the New York Yankees, but he was never seen on screen. When the show was sold for syndication and reruns, David stood to earn more than $200 million.

In 2000, David created *Curb Your Enthusiasm*, an outrageous half-hour comedy series in which he starred with a number of his show-business friends. With largely improvised dialogue, the main character, Larry David, lives off the proceeds of *Seinfeld* while not doing much of anything about putting another show together. The plots were ludicrous and, because the program was televised on Home Box Office, a cable network, the language was crude and the story lines irritating, offensive, and satirically blunt. Few subjects, including the Holocaust, were out of bounds for comedy. One critic called David "the Philip Roth of situation comedy, unafraid to reveal just how devious, petty, annoying, argumentative, selfish, boorish and insensitive he can be." The show won many awards during its first four seasons.

[Stewart Kampel (2nd ed.)]

DAVID, MARTIN (1898–1986), legal historian and papyrologist. David was born in Poznan, then under German rule, but his family moved to Berlin during World War I. He was drawn to the study of cuneiform law and was appointed lecturer at Leipzig in 1930. On account of the Nazi persecution, David fled to Holland and became lecturer of Oriental legal history and papyrology at the University of Leiden in 1933. During World War II, David, together with his wife and three children, was imprisoned in the Westerbork and Theresienstadt concentration camps. After the liberation he became professor of comparative ancient legal history, director of the Leiden Institute of Papyrology, and member of the Royal Dutch Academy.

Among his major writings are *Die Adoption im altbabylonischen Recht* (1927); *Assyrische Rechtsurkunden* (1929; together with E. Ebeling); *Studien zur heredis institutio ex re certa…* (1930); *Vorm en wezen van de huwelijkssluiting naar de oud-oostersche rechtopvatting* (1934); *Der Rechtshistoriker und seine Aufgabe* (1937); *The Warren Papyri* (1941; together with van Groningen and van Oven); *Papyrological Primer* (1946, 1965[4]; together with van Groningen); *Gai, Institutionum commentarii*, 4 (1954; together with H.L.W. Nelson); *Berichtigungsliste der griechischen Papyrusurkunden aus Aegypten* (together with van Groningen et al.), 1–3 (1922–58).

David wrote a number of articles on the relations between biblical and cuneiform laws, emphasizing the basic differences in the social structures in which these two systems developed, hence denying that the former were influenced by the latter.

[Ze'ev Wilhem Falk]

DAVID, SAMUEL (1836–1895), composer. David studied with *Halévy and obtained the Rome Prize for his cantata *Jephté* (1858). From 1872 until his death, he was musical director of the synagogues in Paris. Among his works are the operas *Absalon* and *I Macabei*, operettas, cantatas (*Le Génie de la terre*, 1859), symphonies, and synagogal works. For the synagogues of Paris, David published a collection of religious music entitled *Po'al ḥayey adam: musique religieuse ancienne et moderne en usage dans les Temples consistoriaux israélites de Paris* (1895).

DAVID BEN AARON IBN ḤASSIN (**Hussein**; c. 1730–c. 1790), liturgical poet, disciple and son-in-law of R. Mordecai *Berdugo. He lived at Meknès (Morocco) and his numerous *piyyutim* were popular among Moroccan and other Oriental Jews. Some of his compositions were published, with a foreword by Raphael Berdugo, under the title *Tehillah le-David* (Amsterdam, 1807; enlarged edition, Casablanca, 1931). In addition to *piyyutim*, the collection includes wedding and friendship poems, elegies, and a poetic description of the precepts of ritual slaughter, *Mekoman shel Zevaḥim*.

[Samuel Abba Horodezky]

DAVID BEN ABRAHAM HA-LAVAN (c. 1300), kabbalist who lived in France or Spain. His grandfather was rabbi in Coucy, France. David wrote *Masoret ha-Berit*, a kabbalistic-philosophic tract distinguished by its radical formulation of kabbalistic doctrines. His method of argumentation resembled that of the neoplatonic philosophers and his system was not far removed from pantheism. All things existed in the Creator's mind "in a spiritual actuality" and the difference between their state in the Creator's mind and their current state is only the fact that they have been materialized, i.e., "they took on a material form in time." All creation out of nothing is either creation out of the essence of the Glory of God or out of His word, and in any case out of the power of the first source of emanation; this *ayin* ("nothingness") is more real in its existence than any other reality. The process of emanation of all created beings by action of the Will, even the minerals, and their return to the origin of their existence in the divine Will, is called "the secret of the true transmigration."

[Gershom Scholem]

DAVID BEN ABRAHAM MAIMUNI (1222–1300), **nagid* of Egyptian Jewry and grandson of *Maimonides. David was only 15 years old when his father *Abraham b. Moses b. Maimon died (1237) and in spite of his youth, he was appointed **nagid* a few months later. A few years afterward opposition

arose against him, possibly because of his youth, and he was deposed. In 1252 he was restored to his position, received government recognition, and remained in office for several decades. David had an extensive knowledge in all branches of Jewish literature and it seems that he was also competent in medicine. He maintained a correspondence with the leading scholars of Spain, Syria, and Italy, and is the author of three known works, which are extant in manuscript. The largest of them is a collection of commentaries on the weekly portions of the Torah and *haftarot* in Arabic. The commentary on the first portion of Genesis was published in Arabic under the title *Midrash Rabbenu David ha-Nagid* (Alexandria, 1914) and in Hebrew translation under the title *Midrash David* (Jerusalem, 1947). The commentaries on the books of Genesis and Exodus were translated into Hebrew as *Midrash Rabbi David ha-Nagid* (Jerusalem, 1964–68).

*Jacob b. Hananel ha-Sakili translated some of the sermons and inserted them in his *Torat ha-Minḥah*. These commentaries became popular among Egyptian Jewry and during many generations were read in synagogues. Some scholars have expressed doubt as to whether David was really the author. Nothing, however, in these sermons refutes the tradition that he is their author apart from the fact that he makes no mention of Maimonides being his grandfather. The writer follows the ideas of Maimonides (and moreover also quotes the Zohar, being probably the earliest known author to do so). It can be assumed that these sermons were delivered by David and were later recorded by one or several members of his audience. On the other hand, they probably include additions of the transcribers. The second work attributed to David is a commentary on *Avot* which was published in Arabic (Alexandria, 1901 and Cairo, 1932) and translated into Hebrew by Ben-Zion Krynfiss (*Sefer Midrash David*, Jerusalem, 1944). A commentary on the apocalypse, *Nevu'at ha-Yeled asher Ḥazah Naḥman…* ("The Prophecy of the Child Naḥman"), is also attributed to him and is said to have been written for the rabbis of Barcelona. He also wrote homilies to the Book of Lamentations under the title *Midrash Eikhah* which were published by A.I. Katsh in *Sinai*, 65 (1969), 251–80. In his old age some enemies slandered him to the governor of Egypt and David was compelled to flee to Acre, then under Crusader rule. In 1285 the physician al-Muhadhab Abul-Hassan b. al-Muwafak was appointed *nagid* in place of David. Abraham *Zacuto relates that David issued a ban against his slanderers and that many of them died (*Sefer Yuḥasin ha-Shalem*, p. 219). After his arrival in Acre, David was involved in a violent controversy with the conservative kabbalists who wanted to forbid the study of Maimonides' writings. The leader of this faction was Solomon *Petit, who had come to Palestine from France. David requested that the community leaders of the Oriental countries intervene. In consequence, in 1286–88, R. *Jesse b. Hezekiah, the exilarch of Damascus, R. *David b. Daniel, the *nasi* of Mosul, and *Samuel ha-Kohen b. Daniel Abu al-Rabi'a, the *rosh yeshivah* of Baghdad, issued a ban against anyone who insulted the memory of Maimonides. R. Solomon b. Abraham *Adret, the rabbi of Barcelona, also intervened and finally settled the controversy. In the interim David's supporters in Egypt succeeded in changing the government's attitude toward him and in about 1290 he returned to Egypt and was reinstated as *nagid*. The poet Joseph b. Tanḥum ha-Yerushalmi wrote enthusiastic poems on the occasion of his return, but David, tired from his troubles, appointed his son Abraham to share his duties. In a document from 1291 they jointly signed as *negidim*. David died in Egypt and his remains were brought to Palestine and interred in Tiberias near the tomb of Maimonides.

[Eliyahu Ashtor]

DAVID BEN ARYEH LEIB OF LIDA (c. 1650–1696), rabbi and author; nephew of Moses b. Ẓevi Naphtali *Rivkes. He studied under *Joshua Hoeschel b. Jacob of Cracow, and in 1671 was called to the rabbinate in Lida. Subsequently he officiated as rabbi of Ostrog, Mainz (1677), and of the Ashkenazi community of Amsterdam (1681). There he was accused of Shabbatean leanings as well as of literary plagiarism in connection with his *Migdal David*, a commentary on the Book of Ruth (1680) which some ascribed to *Ḥayyim b. Abraham ha-Kohen. After being dismissed from his position, David returned to Poland, where he presented his case to the Council of the Four Lands and aired it in a pamphlet entitled *Be'er Esek* ("Well of Contention," 1684). The Polish rabbinate vindicated him and demanded his reinstatement. On his return to Amsterdam, however, his case was raised again, this time by the Sephardi rabbis, who subsequently likewise vindicated him. He returned to Poland shortly thereafter and died in Lvov. He was the author of numerous homiletic and kabbalistic works, including *Sod Adonai* (1680), on circumcision; *Shomer Shabbat* (1687), on the Shabbat; and *Ir Miklat* (1690), on the 613 commandments. A collection of 14 of his compositions was published under the title *Yad Kol Bo* in 1727. Another work on the Shulḥan Arukh *Oraḥ Ḥayyim* remains in manuscript. It is now clear that his first work, an ethical treatise, *Divrei David* (1671), was drawn from other sources, while the *Asarah Hillulim*, a commentary on Psalms (included in *Yad Kol Bo*), was incorrectly attributed to David by the publishers, having been taken from the commentary on Psalms by the Christian scholar, H.J. *Bashuysen. Much of the controversy which centered around David stemmed from his militancy and aggressiveness. Among his severest critics was Jacob *Emden.

[Jacob S. Levinger]

DAVID BEN BOAZ (also called **David ha-Nasi** or **Abu Sa'īd David ben Boaz**; 10th–11th centuries), Karaite scholar. According to Karaite tradition, David was a fifth generation removed from *Anan b. David b. Boaz. It is reported that his

father died a martyr. One tradition relates that David and his brother Josiah took part in the polemic between *Saadiah Gaon and *David b. Zakkai (930–37). However another source places his activity half a century later. Possibly the reports are not contradictory, David living to a very old age. He was the head of the Karaites in Jerusalem, a position which he inherited from his father and grandfather and bequeathed to his son Solomon (who is known to have been living in 1016). His works, written in Arabic, include (1) a translation of the Pentateuch with a commentary of which only portions on Exodus, Leviticus, and Deuteronomy have been preserved (British Museum, Ms. Or. 2403, 2561, et al.; Ms. Leningrad); in this commentary David opposes certain opinions of Saadiah Gaon, but in a restrained manner; he also appends citations from the Talmud, explanatory notes to the biblical translations, and grammatical glosses; (2) a commentary on Ecclesiastes (British Museum, Ms. Or. 2552). A work on the tenets of faith (*Kitāb-al-Uṣūl*), no longer extant, has been attributed to David. His opinions and information about him are noted by many Karaite scholars. David is said to have been the first to reject the so-called catenary theory of forbidden marriages (*rikkub*) advocated by all his predecessors. He is thus the originator of the reform in this law which was effected by *Jeshua b. Judah in the 11th century.

[Yehoshua Horowitz]

DAVID BEN DANIEL (11th century), aspirant to Palestinian gaonate; son of the *gaon* *Daniel b. Azariah. In about 1078 David immigrated to Egypt, arriving there without any financial means. Maẓli'aḥ b. Japheth, a Damascus Jew living in Damira, supported him until he left for the Egyptian capital about a year later. In Cairo the community leaders, including the *nagid* Mevorakh, supported him, but the kindness was not appreciated. David's ambition to become exilarch of the Egyptian community led him to plot against Mevorakh. This resulted in the *nagid's* temporary deposition and expulsion from Cairo. David then became leader of the Egyptian Jews and also exerted authority over those communities of the coastal towns of Palestine and Syria that were still under the rule of the Fatimids. His request to be recognized as exilarch, as well as his struggle with the rabbis of the Palestinian yeshivah (transferred to Tyre in 1071), caused a great dispute. David attempted to succeed his father as *gaon* in Palestine, but his opponent Elijah b. Solomon ha-Kohen finally became *gaon*. All these disputes are described in the letters of both sides and preserved in the *Genizah (Megillat Evyatar (Abiathar))*. In 1094 David was deposed by his opponents. According to Mann, he wrote *piyyutim* (Mann, Egypt, 2 (1922), 224–5).

[Tovia Preschel / Eliyahu Ashtor]

DAVID BEN DANIEL (fl. second half of the 13th century), exilarch in Mosul, Mesopotamia. David was descended from the exilarch Josiah b. Zakkai and a grandson of the exilarch *David b. Zakkai II. In 1288 David issued a threat of excommunication edict against R. Solomon b. Samuel (Petit), who came to Acre from France and revived the propaganda against Maimonides' works. David was supported by 11 rabbis, who accepted his authority and joined him in signing the edict.

[Tovia Preschel]

DAVID BEN ḤAYYIM OF CORFU (d. 1530), rabbi and halakhic authority, known sometimes as M**a**H**a**RD**a**K**h** (**M**orenu **H**a**R**av **D**avid ha-**K**ohen). David was born on the island of Corfu. He studied under Judah *Minz in Padua and was much influenced by the Ashkenazi method of study. He served in the rabbinate in communities in Greece (including Corfu and Patras), and was in halakhic correspondence with distinguished contemporaries, among them Elijah *Mizraḥi, Moses *Alashkar, Jacob ibn *Ḥabib, and Joseph *Taitaẓak. Among his disciples were his son-in-law, David Vital, and Samuel *Kalai. He spent the last year of his life in Adrianople, where he died. Most of his works were destroyed in a conflagration there. A few responsa were rescued and published in Constantinople in 1537 by his son, Ḥayyim; they show him to be an outstanding halakhist, with a definite tendency toward stringency. In his vehement dispute from 1520 to 1525 with *Benjamin Ze'ev of Arta with regard to permission given to an *agunah* to remarry, he took an extreme stand in opposition to the lenient attitude adopted by other rabbis (see Res. *Benjamin Ze'ev* (Venice, 1539), nos. 1–17, 239, 246–9). He also declared that those Marranos who could have fled from their persecutors and did not do so were to be regarded as apostates.

[Abraham David]

DAVID BEN HEZEKIAH (d. before 1090), exilarch in Babylonia, son of the exilarch *Hezekiah b. David. David was in Jerusalem for a period during the gaonate of *Solomon b. Judah (1025–51). It seems that he wanted to be recognized as *nasi* in Ereẓ Israel, but did not succeed. Later, still during the lifetime of his father, he apparently visited Egypt. He then returned to Baghdad, and when his father died in 1058, succeeded him as exilarch. It is not known whether, like his father, he also acted as *rosh yeshivah* of Pumbedita. In 1090 his son Hezekiah is mentioned as exilarch. His grandson David b.

Hezekiah was also exilarch and was followed in the first half of the 12th century by his son Ḥasdai.

[Abraham David]

DAVID BEN HUSSEIN (Ḥassūn, Ḥasan), ABU SULEIMAN (second half of the tenth century), Karaite scholar. He is known only from a citation in the *Sefer ha-Mitzvot* (written c. 1007) of *Levi b. Japheth (sometimes wrongly attributed to his father, Japheth b. Ali). According to this, David compiled a manual of Karaite liturgy, also comprising homiletical, exegetical, and polemical material, and including strictures on certain Rabbanite traditions concerning *shi'ur komah* ("the measure of the body" of God). Though Pinsker's hypothesis that David's father was *Ḥasan (or Hussein) b. Mashi'aḥ is possible, there is as yet no factual proof to support it.

[Leon Nemoy]

DAVID BEN JOSHUA (d. 1647), head and emissary of the *Karaite community in Jerusalem. Originally from Egypt, David settled in Jerusalem in the early 17th century, where he helped to consolidate the Karaite community, later becoming its *parnas*. The anti-Jewish measures instituted by the harsh ruler Ibn Faruk in 1625–26 also affected the Karaite community. David was sent to Karaite congregations in Turkey and Crimea and succeeded in obtaining substantial assistance from them. At the end of that summer the situation of the community in Jerusalem deteriorated when new taxes were imposed. To pay them David was forced to borrow money and was imprisoned by his Arab creditors. When he was released, he resumed his missions to the Karaite communities in Crimea, Lithuania, and Poland, bearing a letter of recommendation also from the Rabbanites of Jerusalem. This stated that if speedy aid was not forthcoming there, the Arab creditors would seize the Karaite quarter and the entire community. David reached Luck (Lutsk), where he died in the fall of 1647.

[Avraham Yaari]

DAVID BEN JOSHUA MAIMUNI (14th–15th centuries), **nagid* of Egyptian Jewry. David was the last of *Maimonides' descendants to occupy the position of *nagid*. He was a bibliophile who acquired a large library, and he encouraged the literary activity of others. It was under R. David's inspiration that R. Joseph Bonfils wrote his supercommentary *Ẓafenat Paʿne'aḥ* ("Revealer of Secrets") to the commentary of R. Abraham *Ibn Ezra on the Torah. R. David wrote an essay in Arabic on the weights and measures of the Bible. For reasons so far unknown R. David was compelled to leave for Syria in the 1370s, writing a farewell letter to the Egyptian communities, which is still extant. He lived in *Aleppo, Syria, in 1375 and 1379, and also probably for some time in *Damascus. During his absence from Egypt, the position of *nagid* was occupied by R. Amram, who is mentioned in 1377 and 1380. At the beginning of the 15th century, R. David returned to Egypt and resumed office as *nagid*, as is learned from a document of 1409.

[Eliyahu Ashtor]

DAVID BEN JUDAH (d. before 837?), exilarch in Babylonia. There was a controversy between the academies of Pumbedita and Sura concerning the candidate for the exilarchate. The academy of Pumbedita supported David b. Judah, while the academy of Sura supported his brother Daniel, supposedly a Karaite sympathizer. David b. Judah was finally appointed exilarch. This controversy degraded the prestige of the exilarchate and resulted in the decree of Caliph Maʿmun (813–33) authorizing the formation of independent religious sects. This decree strengthened the position of the Karaites, among others. In 833 David appointed R. Isaac b. R. Hunai (Ḥanina) as *rosh yeshivah* of Pumbedita. In a letter of 834 he stated that the sanctification of the new moon and the intercalation of the calendar were within the authority of the rabbis in Palestine. David's son Judah is mentioned as exilarch in 857.

[Abraham David]

DAVID BEN JUDAH HE-ḤASID (early 14th century), Spanish kabbalist. He claimed to be the grandson of *Naḥmanides and a descendant of *Judah b. Samuel he-Ḥasid of Regensburg. David wrote several books which reflect the development of the different trends in Kabbalah after the publication of the *Zohar. Besides the teachings of Naḥmanides, these also included traditions that evolved from the sayings of the Castilian kabbalists, the Zohar, and the *Ḥasidei Ashkenaz. David was the author of the first extant commentary on one part of the Zohar, *Sefer ha-Gevul* (on *Idra Rabba*). He also wrote: *Marot ha-Ẓove'ot al ha-Torah* (preserved only in part), based on the Zohar, which he quotes in Hebrew translation, with the addition of numerous sayings from other sources; *Or Zaru'a*, a lengthy kabbalistic commentary on the order of the prayers; and treatises on the mysteries of the alphabet, on the Creation, and on *Merkabah mysticism. His works, extant only in several manuscripts, were quoted by many kabbalists even into the Safed period. *Sefer Livnat ha-Sappir* (1914), published under his name, was written in 1326 by R. Joseph Angelino, to judge from a comparison between it and David's works.

[Gershom Scholem]

DAVID BEN LEVI OF NARBONNE (latter half of the 13th century), scholar in Provence. Little is known about his life and personality other than that his principal teacher was Samuel b. Solomon Sekili, also a noted Provençal scholar. His few published responsa (in A. Sofer (ed.), *Teshuvot Ḥakhmei Provence*, 1967), show his importance as an authority. His decisions influenced French scholars to alter their verdicts in accordance with his opinions. R. David is known through his *Ha-Mikhtam* (after *Mikhtam le-David*, Ps. 16:1), which exerted a strong influence on the development of subsequent halakhic literature. In his work, a commentary covering many tractates of the Talmud, he bases himself on Alfasi. Many of his decisions which were included in the commentary were later incorporated in the *Orḥot Ḥayyim* of *Aaron b. Jacob ha-Kohen of Lunel, who often quoted David, sometimes anonymously. It was through the *Orḥot Ḥayyim* and the *Kol Bo*, which is dependent on it, that David's work became known to Joseph *Caro and Moses *Isserles, who made considerable use of these two books. The *Sefer ha-Mikhtam* quotes extensively from scholars of France, Provence, and Spain but relies primarily upon Rashi, Alfasi, Maimonides, Abraham b. David, Zerahiah ha-Levi, and Meshullam b. Moses. David's commentaries to the following tractates have been published: *Berakhot* (Jerusalem, 1967); *Rosh Ha-Shanah* (*ibid.*, 1963); *Megillah* (Lemberg, 1904); extracts on *Yoma* (in *Sam Ḥayyim*, Leghorn, 1801, which erroneously attributes them to Todros ha-Levi); *Sukkah, Mo'ed Katan, Pesaḥim*, and *Beẓah* (New York, 1959, simultaneously in two editions, A. Sofer and M. Blau, with the exception of *Beẓah* which is not included in Blau).

[Israel Moses Ta-Shma]

DAVID BEN MANASSEH DARSHAN (16th century), preacher and author in Poland. He was a pupil of *Isaac b. Bezalel, Moses *Isserles, and Solomon *Luria. In 1555, David visited Italy, and traveled among the communities there. He subsequently returned to Cracow, where he gained his livelihood by various means, occupying, as a lowly preacher, a humble and solitary position in Jewish society. Among other functions, he answered queries on treating the sick and wrote amulets and letters. David left for posterity a complete system for preserving the methods of biblical exposition which he practiced himself. He also drew up a program of study for yeshivot and for revising their administration, which was revolutionary for his day. He proposed establishing an original type of *bet midrash* where he himself would be available to deal with the problems of all who turned to him in order to dispense with the usual preoccupation with authority and prestige customary in the yeshivah. He undertook to give daily instruction on a text agreed upon with his hearers to people who were not regular Torah students and to accept the unlettered masses. Study in this yeshivah would be centered around a library with over 400 volumes which David had collected and was ready to donate to the proposed *bet midrash*. Another innovation he proposed was the recording and collection of the discussions among the scholars. David's utopian plan did not materialize, but it gives an interesting picture of the organization of the yeshivah in his day and the circles which frequented it. His two published works are *Shir ha-Ma'alot le-David* (Cracow, 1571), which contains references to several of his unpublished works, and *Ketav Hitnaẓẓelut le-Darshanim* (Lublin, 1574).

[Natan Efrati]

DAVID BEN MESHULLAM OF SPEYER (12th century), liturgical poet. His father was apparently the scholar R. Meshullam who lived in Mainz in 1034. On Feb. 19, 1090, David was received in Speyer by Emperor Henry IV as representative of the Jewish community, together with Judah b. Kalonymus and Moses b. Jekuthiel. In a remarkable *seliḥah* for the eve of the Day of Atonement, beginning *Elohim al Domi le-Dami* ("God! Be not silent on my blood"), still in use in the German and Polish rituals although the original text has been mutilated by censorship, he describes the horrors of the First Crusade.

[Jefim (Hayyim) Schirmann]

DAVID (Tevele) BEN NATHAN OF LISSA (d. 1792), Galician rabbi. Born in Brody, David served as rabbi of Horochow and, from 1774 until his death, of Lissa. He was in halakhic correspondence with Ezekiel *Landau and Akiva b. Moses *Eger. In the controversy over the *Cleves *Get* he supported Israel *Lipschuetz; his responsum on this subject appears in *Or Yisrael*. Another of his responsa is found in the **Penei Aryeh* (no. 30) of Aryeh Leib b. Ḥayyim *Breslau. In 1774 David gave his approbation to the *Yein Levanon* of N.H. *Wessely, but when he realized the true aim of the educational reformers he attacked Wessely's plan in a sermon, accusing him of a desire "to stifle young children in the bud and shut the portals of Torah and faith against them" (1782). Wessely countered in letter 4 of *Divrei Shalom ve-Emet* (Berlin, 1785). Though Hirschel b. Aryeh Loeb Levin agreed to David's request to use his influence with the Berlin community to forbid the publicizing of Wessely's writings, Moses *Mendelssohn and David *Friedlaender prevented him from carrying it out. *Nefesh David*, comprising short sermons on the weekly scriptural readings,

was published posthumously by David's grandson, A.S. Amkraut, in 1878. The second part, entitled *Mikhtav le-David*, consists of learned discussion on the Talmud and Codes. ZECHARIAH MENDEL (d. 1809), one of his three sons, was appointed *dayyan* of Lissa and, after his father's death, rabbi of Inowroclaw.

[Yehoshua Horowitz]

DAVID BEN SAADIAH (11th century), Spanish scholar. David b. Saadiah was the author of *Mishpetei Shevu'ot* written in Arabic. Though he was famous as a *dayyan* in his time, the disappearance of his book has caused him to be virtually forgotten. A quotation from it is preserved in *Shitah Mekubbeẓet* (on BM 104b), from which it may be inferred that he also wrote a critical commentary on the *Halakhot Gedolot*. If he is to be identified with the R. David mentioned in the responsa of Moses b. Ḥanokh (Assaf in *Madda'ei ha-Yahadut*, 2 (1927), no. 23), as is almost certain, he also wrote commentaries on the Talmud. A fragment of *Mishpetei Shevu'ot* in the original Arabic was published by I. Friedlander in the *Israel Lewy Festschrift* (1911) where, however, it is ascribed in error to *Saadiah Gaon. It appears that *Sha'arei Shevu'ot* is merely an edited translation of David b. Saadiah's work written by Isaac b. Reuben. *Sha'arei Shevu'ot* had a very large circulation and many incomplete editions of it are extant. *Sefer Shevu'ot be-Ḥaruzim*, published by Assaf (1933), is also patterned for the most part after the *Sha'arei Shevu'ot*.

BIBLIOGRAPHY: Assaf, in: KS, 3 (1927), 295–7; idem, *Mi-Sifrut ha-Ge'onim* (1933), 12 f.; Benedikt, in: KS, 25 (1948/49), 173; Abramson, in: *Talpioth*, 5 (1952), 773–80.

[Israel Moses Ta-Shma]

DAVID BEN SAMUEL (d. after 1201), exilarch in *Baghdad before 1195, although he is only mentioned as such from 1197. David succeeded his father, Samuel of Mosul, who held the position from 1175 to 1190. He secured his appointment only with some difficulty. The head of the Baghdad academy, *Samuel b. Ali, objected to the exilarchate and wished to abolish it. It was only as a result of the pressure of the Baghdad community that the position was maintained. Samuel b. Ali opposed the appointment of David b. Samuel as exilarch on the grounds that he was not sufficiently learned. It seems that *Maimonides was opposed to this view. It is doubtful whether R. David b. Samuel or R. David of Mosul excommunicated R. *Daniel b. Saadiah, the pupil of R. Samuel b. Ali, because he had violently criticized Maimonides' opinions a short while before 1235.

BIBLIOGRAPHY: Mann, in: *Sefer Zikkaron li-Khevod S.A. Poznański* (1927), 23 f.; Mann, Texts, 1 (1931), index; Assaf, in: *Tarbiz*, 1 (1930), 126–8; Abramson, in: *Perakim*, 1 (1967–68), 16.

[Abraham David]

DAVID BEN SAMUEL HA-LEVI (known as the **Taz** from the initial letters of his work, *Turei Zahav*; 1586–1667), rabbi and halakhic authority. Born in Vladimir-Volynski (Lodomeria), Ukraine, he studied under his eldest brother, Isaac ha-Levi, and married the daughter of Joel *Sirkes. After his marriage he remained for some time in the house of his father-in-law and studied in his yeshivah. He established his own *bet midrash* in Cracow. He regarded the premature death of his children there as a punishment for establishing his home on top of the synagogue. David was appointed rabbi of Putalicze near Rawa (Galicia) in about 1618, and for 20 years he served as rabbi of Posen. About 1641 he was appointed rabbi of Ostrog in Volhynia, where he maintained a yeshivah. During the Chmielnicki pogroms (1648–49) he escaped to the fortress of Ulick. In the *seliḥot* (published in *Yalkut Menaḥem* of Menahem Mendel Biber, 1903) which he composed for the 26th of Sivan, he describes the miraculous escape of the Jews who gathered there for protection. He then went to Lublin, and finally, like many Polish scholars, wandered westward. He was consulted on halakhic problems in all the Moravian communities to which he came. When calm was partially restored in Poland, he returned there, and in 1654 was appointed rabbi of Lemberg to the community "outside the city." He participated in the meetings of the Council of the Four Lands and his signature appears on many of the rulings and resolutions issued by that body. His two sons, Mordecai and Solomon, were killed in the pogroms against the Jews of Lvov which broke out on May 3, 1664. During his last days he sent his son Isaiah and stepson Aryeh Leib b. Samuel Ẓevi to investigate the claims of *Shabbetai Ẓevi. They came back full of enthusiasm, bringing a letter and gifts for their aged father, who appears to have accepted their opinion. David died in Lvov.

His most important work, *Turei Zahav (Taz)*, is in the main a commentary on the four parts of the Shulḥan Arukh: *Even ha-Ezer* (reissued in full in Zolkiew, 1754) and *Ḥoshen Mishpat* (to section 246, Hamburg, 1692; the whole published in Berlin, 1766). The work is not a running commentary, but discussions on the *Tur* of Jacob b. Asher and the Talmud and its commentators. *Taz* on *Oraḥ Ḥayyim* was published in the margin of the Shulḥan Arukh, together with the commentary of Abraham Abele Gumbiner, under the combined title *Meginnei Ereẓ* (Dyhernfurth, 1692), *Magen David* being David's work and *Magen Avraham*, Gumbiner's. *Magen David* is a running commentary, but has a closer relationship to the *Tur* than to the Shulḥan Arukh. Various authors have written notes and glosses on this section of the *Taz*, the best-known being *Peri Megadim*, of Joseph b. Meir *Teomim. The most important and authoritative of the sections, however, is the *Taz* on *Yoreh De'ah* (Lublin, 1646). The second edition was published in the margin of the Shulḥan Arukh together with the commentary of *Shabbetai b. Meir ha-Kohen, the whole being called *Ashlei ha-Ravrevei* (Wilhelmsdorf, 1677). In the commentary David gives reasons for the rulings of the Shulḥan Arukh and examines the sources. This section became popular in all yeshivot as soon as it appeared and was accepted

as authoritative by halakhists. At the end of the book he appended *Daf Aḥaron*, containing criticism of *Siftei Kohen* on *Yoreh De'ah* by Shabbetai b. Meir ha-Kohen. Many supercommentaries were also written on this section of *Taz*, the most important again being *Peri Megadim*. David added two books containing corrections and supplements to the *Taz* (*Haggahot ve-Ḥiddushim*, Halle, 1710; *Zahav Mezukkak*, Dyhernfurth, 1725). He also wrote *Divrei David* (*ibid.*, 1689), a supercommentary to that of *Rashi on the Pentateuch. The second edition of the *Taz* on *Even ha-Ezer* as well as a collection of responsa, which were available to scholars of the generation after his death, have not survived. David's works greatly influenced practical halakhic rulings during the succeeding generations. He is credited with halakhic contributions toward a synthesis of economic practice with the laws of the Torah. His rulings occasionally reflect a practical flexibility in the face of social and economic reality. The *Turei Zahav* synagogue in Lvov was named after him.

[Shmuel Ashkenazi]

DAVID BEN SAUL (first half of 13th century), talmudic scholar who lived in Provence. David was a disciple of *Solomon b. Abraham of Montpellier and, together with him and *Jonah b. Abraham Gerondi, actively opposed Maimonides' philosophic writings. He is quoted in an anonymous commentary to *Bava Meẓia* in the responsa of Joseph b. David ibn Leb (3:60) and in those of Joseph di Trani (*Mahanit*, resp., vol. 2, YD 39).

[Joseph Elijah Heller]

DAVID BEN SHIMEON (1825–1879), Moroccan rabbi (known as "*Ẓuf Devash*"), founder of the Moroccan (Moghrabi) Jewish community of Israel. David b. Shimeon was born in Rabat, Morocco. In 1854 he left for Ereẓ Israel as part of the Moroccan immigration which had been growing continuously since the 1830s. These immigrants were mostly poor Jews who were motivated to leave by the deterioration of the position of the Jews in Morocco, the improvement of conditions in Ereẓ Israel, and messianic hopes. All attempts of the Moghrabis to establish themselves as a separate community, independent of the dominant Sephardi community, met with determined opposition on the part of the latter, who even leveled accusations at them before the Turkish and consular authorities, with the result that some of their leaders were imprisoned.

Aided by the Ashkenazim in Jerusalem, David finally succeeded in 1860 in establishing the separate Moghrabi community, arriving at an agreement with the Sephardim as to the allocation of the funds received by them from abroad. David applied himself vigorously to the needs of his community. He sent emissaries abroad on their behalf and built residential areas for them, including the suburb Maḥaneh Israel (1867), schools, and synagogues.

David b. Shimeon's works on *halakhah* and *aggadah* deal with the religious duty of settling in Ereẓ Israel. They include *Sha'ar he-Ḥaẓer* (1862) and *Sha'ar ha-Mifkad* (with additions by his son Raphael Aaron; 1908–9). His other works are no longer extant.

[Jacob Barnai]

DAVID BEN SOLOMON (**Abū al-Faḍl Dā'ūd ibn Abī al-Bayān Suleimān al-Isrā'īlī**; 1161–after 1236), Karaite physician in Cairo. He was a pupil of and secretary to Ḥibat Allāh ibn Jumayʿ (or Jamīʿ), a Jewish convert to Islam, and personal physician to the sultan Saladin. David served as physician to the sultan al-Malik al-ʿAdil. He also served on the medical faculty of the Nāṣirī hospital in Cairo. Here he had among his students Ibn Abī Uṣaybiʿa, the author of the classical history of Arab physicians, who speaks of him in the highest terms as an outstanding diagnostician and therapeutist. David wrote *Al-Dustūr al-Bīmāristānī fī al-Adwiya al-Murakkaba* (ed. by P. Sbath, Cairo, 1933), a formulary of compound medicines for hospital use, and *Risālat al-Mujarrabāt*, a tract on well-tested medicines. Prescriptions by David are frequently quoted in the standard pharmacopoeia (entitled *Minhāj al-Dukkān*) of the 13th-century Jewish apothecary Abū al-Minā al-Kūhīn al-ʿAṭṭār.

DAVID BEN SOLOMON IBN ABI (**Avi, Ben Abi**) **ZIMRA** (known as **RaDBaZ** = **R**abbi **D**avid **B**en **A**bi **Z**imra; 1479–1573), talmudic scholar, halakhic authority, and kabbalist. Abi Zimra was born in Spain into a wealthy family, but by the age of 13 he was in Safed (possibly going via Fez – see Sambari in Neubauer's Chronicles, vol. 1 (1887), 157). The most eminent of his teachers was Joseph Saragossi of Sicily who left Spain in 1492 and eventually settled in Safed. Abi Zimra moved to Jerusalem but shortly before 1513 immigrated to Egypt, apparently due to bad economic conditions in Palestine. He remained there for 40 years, first in Alexandria, then in Cairo where he joined the *bet din* of the *nagid*, Isaac Sholal. After the conquest of Egypt by the Turks (1517) and the decline of the office of the *nagid*, Abi Zimra became the official head of Egyptian Jewry. He was not only *dayyan* but also head of a yeshivah, trustee of the *hekdesh*, and administrator of charity collections. He held all of these offices in an honorary capacity, as he was financially independent. Apart from his inherited wealth Abi Zimra was apparently successful in business and

as a moneylender to non-Jews (S. Assaf, *Mekorot u-Meḥkarim* (1946), 199–203). His library, containing rare manuscripts, was famous. His was an open house; R. Isaac *Akrish lived there for many years and was the tutor of his children and grandchildren. Abi Zimra exercised a great influence upon his contemporaries which can be seen from his success in settling a quarrel between the Mustaʿrabs (the indigenous Jewish community) and the Maghrabis (the community with origins in other parts of North Africa), and in issuing many ordinances beneficial to Egyptian Jewry. The most famous of them are the abolition of the dating of legal documents according to the Seleucid era (*minyan shetarot*), and its replacement by dating according to the era of Creation (see *Calendar); formation of a *ḥevra kaddisha* (burial society; previously the dead had to be buried secretly to avoid attacks from the non-Jews); and the prohibition of the employment of non-Jews as dancers and musicians at Jewish weddings. He also tried to reintroduce into the public liturgy the recital of the *Amidah* by both the congregation and the reader (from the time of Maimonides this had been said by the reader only).

His reputation extended beyond the boundaries of Egypt and legal and religious questions were sent to him from many communities. Abi Zimra often engaged in disputations with Muslim and Karaite scholars, and his initially lenient attitude to the *Karaites became more stringent. Shortly before 1553 he decided to return to Palestine. He settled first in Jerusalem where he was dissatisfied with the local governor as well as with some of the Jews, and moved to Safed, where he remained until his death. Although Abi Zimra praised Jewish scholars who were versed in natural sciences and spoke with warm appreciation of the contribution of Jewish philosophers in promoting Jewish belief, he discouraged his students from studying philosophy (Resp. published by Assaf in *Minḥah le-David* (1935), 228–33). His negative attitude toward philosophy is more firmly expressed in his later works (Resp. no. 1616, *Migdal David* (1883), introd. and 34b; *Meẓudat David* (1862), no. 446). When asked which system of articles of faith (*Ikkarei ha-Dat*) he approved, he replied that he opposed any system, since each commandment was of paramount importance (Resp. no. 344). In Abi Zimra's view, the *aggadah*, which he regarded as equal in holiness to other parts of the Oral Law, can bear two meanings, one literal (*nigleh*) and one esoteric (*nistar*). He strongly criticized the Bible commentaries of Abraham *Ibn Ezra and David *Kimḥi who referred to a certain *aggadah* as "irrational." He believed in demons (Resp. no. 848) but strongly opposed superstitious practices, particularly those which conflict with religious laws. In some respects Abi Zimra was very stringent in religious practice, but he was also very humane and objected to imposing new restrictions.

His methods were scientific. He examined texts critically, comparing the different versions and tracing them back to their original sources, investigating their authenticity, and emending them only when necessary and no other solution could be found. A treatise on the methodology of the Talmud (*Kelalei ha-Gemara*, printed in *Me-Harerei Nemerim*, Venice, 1599; separately Zolkiew, 1749) was attributed to Abi Zimra, but modern scholarship doubts he is the author of this work. Nevertheless, a good number of his responsa are devoted to methodological principles.

Although he was a kabbalist, he introduced Kabbalah in decisions only when not in contradiction with the Talmud, or where no definite decision is laid down in the Talmud. When Kabbalah conflicted with the Talmud preference was to be given to the latter. When a young man, Abi Zimra wrote a kabbalistic work on the letters of the Hebrew alphabet (*Magen David*, Amsterdam, 1713) and in later years he composed works dealing more generally with Kabbalah. In his kabbalistic system *gematriot* ("numerical value of letters") and the doctrine of metempsychosis played important roles, the latter being reflected even in his legal decisions (e.g., on *ḥaliẓah*). He was one of the most open defenders of the doctrine of cosmic cycles in creation (*Shemittot*).

Abi Zimra's most important work is his collection of responsa (*Teshuvot ha-Radbaz*, 1882) in seven parts (see Boaz Cohen, in: *Ha-Ẓofeh le-Ḥokhmat Yisrael*, 14 (Budapest, 1930), 115–94, 211–356). Other of his responsa appear in the works of his contemporaries. Various individual responsa have been published from manuscript. A. Marx published one full of interest addressed to the Jewish community of Cochin, India, on the status of the black Jews (REJ, 89 (1930), 293–304). Eight more from the same manuscript were published by H.J. Zimmels (*Sefer ha-Yovel… S. Krauss* (1936), 178–87) and S. Assaf published a responsum in *Minḥah le-David* (*Koveẓ Maʾamarim le-Yovel… D. Yellin* (1935), 228–33). Abi Zimra's halakhic opinions were widely quoted throughout the centuries. Even in modern times, his responsa continue to have an impact on a wide variety of issues, including medical questions. Even though Abi Zimra was not a doctor, his medical knowledge was quite formidable and accurate. He was very sensitive to patients' needs and feelings, looking for leniencies wherever he could. Abi Zimra's opinion is much quoted regarding another modern issue, namely the halakhic status of Ethiopian Jewry; he affirms their Jewishness.

Abi Zimra's novellae are quoted by his pupil Bezalel *Ashkenazi in his *Shitah Mekubbeẓet* and he himself refers to his novellae to tractate *Shabbat* (*Magen David*, Introd.). His other published works are *Yekar Tiferet* (Smyrna, 1757), a commentary on those portions of Maimonides' *Mishneh Torah* on which there is no *Maggid Mishneh* commentary, i.e., on the sections *Hafla'ah, Zera'im, Kedushah*, and *Shofetim*, which were published in the Romm (Vilna) editions of the *Mishneh Torah*, and on *Sheluḥin ve-Shuttafin*, and *Avadim* by S.B. Werner (Jerusalem, 1945); *Meẓudat David* (written 1556, Zolkiew, 1862), an explanation of the traditional 613 commandments, both rational and kabbalistic; *Migdal David* (written 1560, Lemberg, 1883), a kabbalistic commentary on the Song of Songs; and *Keter Malkhut*, a *piyyut* for the Day of Atonement, which has been frequently published and is included in the Heidenheim *Maḥzor*. The remainder are still in manuscript.

[Hirsch Jacob Zimmels]

DAVID BEN ZAKKAI (I), exilarch in Iraq, 917–40. David became exilarch during a period of severe controversy, some five years after his uncle, *Ukva, had been removed from his position by the *rosh yeshivah* of Pumbedita, *Kohen Zedek, and his faction. David was appointed by the *rosh yeshivah* of Sura. The wealthy, who were influential in royal circles, were the principal opponents of the exilarchate. They probably wished to abolish the established leadership, which was based on lineage. David zealously watched over the dignity of his position and its income from distant provinces. Aided by government intervention, the exilarch collected a large sum of money from the Jews of Persia. *Nathan ha-Bavli's description of the installation ceremony of the exilarch and of his system of tax collection probably applies to David. In the early days of David's office the balance of authority in the autonomous Jewish leadership of Babylonia was disturbed by the decline of the yeshivah of Sura which was in danger of closing. Such a situation would have left Pumbedita, and the *gaon* at its head, as the only possible challenge to the authority of the exilarch. David showed initiative and a readiness to depart from traditional ways in order to save the ancient yeshivah and the double gaonate. He appointed *Saadiah ben Joseph as *gaon*, "who was not of the rabbinical body of the yeshivah, but from Egypt." David had become acquainted with him when, together, they had opposed the *gaon* *Ben Meir of Palestine over the issue of the independence of the Babylonian community in matters concerning the calendar. In this conflict Saadiah recognized David as a leader. It is related that David had been forewarned of Saadiah's irritable disposition, to which he replied: "My judgment and decision have already fallen in favor of him." The relations between David and Saadiah Gaon were satisfactory during the first two years following his appointment. Moreover, a document is extant in which the *gaon* lavishly praises the halakhic judgment of the exilarch. About 930, however, a dispute broke out between them. There are differing versions of the cause of the conflict, according to the two groups of supporters. It may be assumed that it was a struggle for the leadership between two resolute men, during a period of upheaval and tension among the ruling class of Babylonian Jewry. The consequences were grave: the wealthy supported Saadiah and appointed Josiah-Ḥasan, the brother of David, as exilarch. On the other hand, David appointed *Joseph b. Jacob as *gaon* of Sura. The struggle between the contending forces took the form of reciprocal accusations, bans, and counter-bans, and the case was even brought before the court of the caliph. David's party gained the upper hand; Josiah was expelled and Saadiah was removed from his position. David acted with excessive severity against his opponents. In the end the rivals reached a compromise (Purim, 937). David's life was a stormy one, but by the time of his death he had strengthened the authority of the exilarchate. His efforts had saved the yeshivah of Sura from extinction. Furthermore, his struggle for the prestige of his position and the maintenance of the traditional form of Jewish autonomous leadership prevented the rising wealthy class from seizing power.

[Haim Hillel Ben-Sasson]

DAVID BEN ZAKKAI (II) (d. c. 1216), exilarch in *Mosul, Mesopotamia. David and his cousin Samuel, descendants of the exilarch Josiah b. Zakkai, were community leaders in Mosul. *Pethahiah of Regensburg, who visited Mosul about 1175, states that they owned fields and vineyards and collected taxes from the local Jews. In 1174 after the exilarch *Daniel b. Ḥasdai died leaving no sons, there was a disagreement among the communal leaders in Baghdad over the choice of his successor. Some favored David, while others supported Samuel. Apparently Samuel was appointed exilarch in Baghdad and David in Mosul. It was either he or his kinsman David, son and successor of Samuel, who about 1215 complied with a request from Joseph ibn *Aknin, the disciple of Maimonides, to excommunicate *Daniel ha-Bavli for his attacks on his master. He was still alive in 1216, when he was visited in Mosul by the poet Judah *Al-Ḥarizi, but the date of his death is unknown. He was succeeded as exilarch in Mosul by his son Daniel and afterward, by Daniel's son *David ben Daniel.

[Tovia Preschel]

DAVID D'BETH HILLEL, (d. 1846), traveler and scholar, author of *Travels from Jerusalem through Arabia, Kurdistan, Part of Persia and India to Madras 1824–32* (Madras, 1832). D'Beth Hillel left his native Vilna at the beginning of the 19th century, settled with other pupils of the Gaon of Vilna in *Safed around 1815, and began his long journey to the East in 1824. He traveled through *Palestine, *Syria, and remote regions of *Kurdistan and *Persia. After spending a year in Baghdad and other communities in Mesopotamia, he sailed from Bushire to India, landing at Bombay in October 1828. He then journeyed to Cochin (*Kochi) where he remained four months, returned to Bombay for a two-year sojourn, and then traveled

through the Bombay presidency until he reached Madras in 1831. While waiting there for passage to return to Palestine, he taught Hebrew to some English clergymen, including the Anglican archdeacon T. Robinson to whom he dedicated his *Travels*. He returned to *Jerusalem in 1838, revisited India in 1845, and died the next year in Calcutta.

D'Beth Hillel was the first Jewish traveler since *Benjamin of Tudela to leave so detailed an account of the various Jewish communities in the Orient and of other Oriental sects and religions. His information and observations on the geographical distribution, the socio-economic structure, and the languages and dialects of the Jews in Palestine, Kurdistan, Persia, and India made his *Travels* an invaluable source of information on the Oriental Diaspora in the early 19th century. The book, published in an edition of only 300 copies, is extremely rare and has been used by only a few scholars.

Silver* (1963), 170–85.

[Walter Joseph Fischel]

DAVID-GORODOK (Pol. **Dawidgródek**; Heb. דוד קורדוק), town in Brest-Litovsk oblast, Belarus; until 1793 and from 1921 to 1939 within Poland. Jews are first known there from the middle of the 17th century. In 1667 David-Gorodok had an established community linked to that of *Pinsk. There were 408 Jews aged over one year living in David-Gorodok in 1766, and 386 in 1784. Main occupations were innkeeping, the sale of alcoholic liquor, trade in timber and forest produce, and cattle breeding. Jews were active in forest exploitation and the development of river navigation to the Ukraine and Baltic Sea which expanded in David-Gorodok in the 19th century, and the community increased. It numbered 1,572 in 1847, and 3,087 (40% of the total population) in 1897. In 1898, to offset the growing competition of the railroads, a number of Jewish carters there invested in a steamship. A further group founded a motorbus company in 1921. The majority in the community were **Mitnaggedim*. The local supporters of the *Bund (prominent among them A. *Litvak) and the Territorialist Socialist movement were active in the 1905 revolution and *self-defense against pogroms was organized in the community. The *Po'alei Zion party resumed activities in David-Gorodok in 1917. In the elections to the Russian Constituent Assembly in 1917, the local Zionist Organization received 740 votes and the Po'alei Zion 640 votes. The Jews in David-Gorodok suffered during the Revolution and the Polish-Soviet war (1917–1921). During Sukkot 1921 soldiers of the "White" General Bulak-Balakhovich who arrived with the Polish army were stationed there for several weeks, during which they went on a rampage of robbery, rape, and murder, receiving 100,000 rubles as ransom from the Jews. The Jewish population numbered 2,832 (28.1% of the total) in 1921. The *American Jewish Joint Distribution Committee provided considerable relief to the community. Jews owned sawmills, flour mills, and tanneries. They rented estates and lakes, and exported their products. Most of the retail trade was in Jewish hands. *He-Ḥalutz began activities in David-Gorodok in 1921, the *Mizrachi in 1925, and *Ha-Shomer ha-Ẓa'ir in 1927. A *Tarbut Hebrew elementary school was founded in 1924 (it numbered 400 pupils in 1934), and a Hebrew religious school, Yavneh, in 1927. The director of Tarbut, Abraham Olszanski, founded a group for Hebrew-speakers, Benei Yehudah, in 1931, which spread over Poland and became a movement. In 1928, when elections to the municipal councils were held in Poland under full democratic conditions, eight Jews were elected in David-Gorodok among the 24 members of the council.

[Arthur Cygielman]

Ḥasidism

There was a ḥasidic dynasty called after the township of the same name. The Ḥasidim of the Gorodok dynasty proper should be distinguished from the followers of *Menahem Mendel of Vitebsk, also sometimes called Ḥasidim of Gorodok (Yid. Horodok). The dynasty, whose followers came mainly from Polesia, was founded at the beginning of the 19th century by ZE'EV WOLFF GINSBURG (son of the ẓaddik Samuel of Kashivka (Volhynia)), the *av bet din* of David-Gorodok. He was followed by his son DAVID, his grandson ISRAEL JOSEPH HA-LEVI (d. c. 1899), the most influential member of the dynasty, and the latter's grandson ISAAC (d. 1908). The Ḥasidim of David-Gorodok were mostly artisans and simple people and their *ẓaddikim* behaved modestly. Their style of prayer was more sedate than that of most ḥasidim and they had special melodies. Isaac's descendants perished during the Holocaust.

[Wolf Zeev Rabinowitsch]

Holocaust Period

From Sept. 19, 1939, until July 5, 1941, the town was under Soviet rule and the Jewish population increased with the influx of refugees from German-occupied western Poland. The Soviet regime introduced drastic changes in economic, religious, and social life. Jewish community institutions were disbanded; the Hebrew *Tarbut school continued to function in Yiddish; private economic initiative was stifled; and artisans were organized into cooperatives. The Orthodox Jewish congregation made efforts to overcome difficulties imposed on their religious life. On the holidays, prayer services were held earlier in the morning so the men could appear at their places of work. In the summer of 1940 local Zionist and Revisionist leaders were arrested, followed in February 1941 by the arrest of over ten other community leaders. In April that year the young men were drafted into the Soviet army. When war broke out between Germany and the U.S.S.R. on June 22, 1941, Jewish groups attempted to flee to the Soviet interior. The Germans entered David-Gorodok on July 5, 1941. A local gentile delegation appeared before the Germans in Pinsk with a request to be allowed to attack the Jews. The Germans willingly acceded and issued orders for all Jewish males 14

years of age or older to appear in the square by the church. From there they were taken to the town of Hinowski where they had to dig the trenches in which they were murdered and buried. The Germans set up a ghetto for the surviving women and children. Sealed within, they suffered from disease and starvation. When the ghetto was liquidated in the summer of 1942, some of the inhabitants reached the partisans active in the vicinity. By the time Soviet forces reentered in 1944 no Jews were left alive in David-Gorodok. Later, very few survivors came back, mostly from the U.S.S.R. They all left David-Gorodok within a short time for the West and some of them settled in Israel.

DAVIDOFF, LEO MAX (1898–1975), U.S. neurosurgeon. Davidoff was born in Talsen, Latvia, and was taken to the United States in 1905. After his medical training he served as surgeon to the Byrd-Macmillan Arctic expedition of 1925. He headed the department of neurological surgery at the Jewish Hospital of Brooklyn (1937–45), the Montefiore Hospital (1945–49), and the Beth Israel Hospital (1949–54). From 1951 to 1956 he was neurosurgeon at the Mount Sinai Hospital and from 1954 to 1966 was director of neurological surgery at the Bronx Municipal Hospital Center. His academic appointments included the clinical professorship of neurological surgery at Columbia University's College of Physicians and Surgeons (1945–49) and the New York University College of Medicine (1949–54). In 1954 he began his association with the Albert Einstein College of Medicine of Yeshiva University, where he served as professor and chairman of the department of surgery (1954–58) and neurological surgery (1959–66). He was associate dean of the college from 1961 to 1966.

Davidoff was chairman of a number of medical training missions for the World Health Organization. He was a member of the medical advisory board of the *Hadassah organization and of the board of directors of the American Friends of the Hebrew University of Jerusalem. He was president of the Society of Neurological Surgeons (1951) and the Harvey Cushing Society (1957).

[Fred Rosner]

DAVID OF MAKOW (d. 1814), *maggid* and *dayyan* in Makow, born in Rovno. In his youth he was an adherent of the ḥasidic leader *Menahem Mendel of Vitebsk, but after the Ḥasidim were excommunicated by *Elijah b. Solomon Zalman, the Gaon of Vilna, in 1772, David of Makow became one of his followers and joined the *Mitnaggedim* (opponents of Ḥasidism). He warned against the danger which he saw in the teachings of Ḥasidism, considering the way of life of the Ḥasidim as a threat to normative Judaism, and was harshly critical of Ḥasidism, blaming the courts of *ẓaddikim* for the spread of religious and moral anarchy. He took to task important Ḥasidim, including *Israel b. Eliezer Ba'al Shem Tov. Two anti-ḥasidic works attributed to him (though some consider that they were written by his son, Ezekiel of Radzymin) are *Zemir Arizim* (Warsaw, 1798) and a well-known treatise which exists in three versions: *Shever Poshe'im* (Jerusalem, National Library, Ms. 8° 2405), *Zot Torat ha-Kena'ot* (Oxford, Bodleian Library, Ms. Mich. 45, fols. 106–79), and *Zimrat ha-Areẓ* (Ms. Leningrad, Asiatic Museum). David of Makow also wrote commentaries on the Bible and the Mishnah which were never published; the manuscripts were destroyed in a fire in Serock in 1893. Two letters and his will, which are still extant, are anti-ḥasidic in content. David of Makow is the most noted polemicist against Ḥasidism in the years 1772 to 1798. His style and tone express the bitterness existing between the two camps. Echoes of this criticism of Ḥasidism are to be found in *Haskalah literature, as in the writings of Joseph *Perl and Peter *Beer. David's sons were Ezekiel of Radzymin (d. 1814) and Raphael, the father of Shabbetai, who copied *Zot Torat ha-Kena'ot*. His daughter Rachel married Joshua of Makow, who also took part in the struggle against Ḥasidism.

[Esther (Zweig) Liebes]

DAVID OF TALNA (**David b. Mordecai Twersky**; 1808–1882), *ẓaddik* living first at Vasilkov and afterward at Talna (Talnoye, Ukraine). He was the most celebrated of the eight sons of Menahem Nahum *Twersky, founder of the Chernobyl ḥasidic dynasty. Thousands of people came to his "court," which he maintained in luxurious style, even retaining a court jester. According to ḥasidic tradition his house contained a silver chair bearing the inscription in gold: *David Melekh Yisrael Ḥai ve-Kayyam* ("David, king of Israel, lives and is in ex-

istence"). This gave his opponents a means of denouncing him to the Russian authorities as a rebel against the government. He was thrown into prison and freed only after numerous appeals. In spite of his aristocratic way of life, he was a man of the people; his speech was flavored with popular proverbs so that it would be more readily understood by the common people. He was fond of music and brought to his court the most famous folk singers and musicians in the region. The Talna melodies became popular among both Ḥasidim and Jews in general. He wrote *Magen David* (1852), *Birkat David* (1862), and *Kehillat David* (1882).

BIBLIOGRAPHY: P. Minkowsky, in: *Reshumot*, 1 (1925), 109–22; M.S. Geshuri, *Ha-Niggun ve-ha-Rikkud ba-Ḥasidut*, 3 (1959), 319–40.

[Avraham Rubinstein]

DAVIDS, AARON ISSACHAR (Bernard) BEN NAḤMAN (1895–1945), chief rabbi of Rotterdam (Holland). Davids, a grandson of Joseph Hirsch *Duenner, was born in Amsterdam. In his youth Davids was very active in the Mizrachi movement and influenced young people in the spirit of Zionism. While studying at the rabbinical seminary and the university he was headmaster of the Amsterdam religious school. He was ordained rabbi in 1923 and immediately invited to serve as rabbi of Leeuwarden (Friesland). In 1927 he was appointed rabbi of Groningen and in 1930 chief rabbi of Rotterdam, a post he held until 1943. Despite the increase of Nazi persecutions in Holland, he refused to leave his community. In 1943, he was taken to a concentration camp in Holland, and sent to Bergen-Belsen where he died. In spite of his rigid Orthodoxy he maintained strong ties, and cooperated with, all Jewish circles in Holland.

[Yehoshua Horowitz]

DAVIDSOHN, ISRAEL (1895–1979), U.S. pathologist. Born in Tarnopol, Austria, Davidsohn qualified in Europe before immigrating to the United States in 1923. He became pathologist and director of laboratories at Philadelphia's Mount Sinai Hospital (1926–30). He then moved to Mount Sinai Hospital, Chicago, where he was director of experimental pathology. He also taught at Rush Medical College (1934–41) and the University of Illinois College of Medicine (1941–47) and from 1947 to 1968 was professor and chairman of the pathology department at the University of Chicago Medical School. His main field of research was immunohematology.

DAVIDSOHN, ROBERT (1853–1937), historian of medieval Florence. Davidsohn engaged in business and journalism, being for a time coeditor of the liberal newspaper, the *Berliner Boersen-Courier*. He wrote an account of his early travels in *Vom Nordkap bis Tunis* (1884). When he was 33 he began to study history in earnest, and obtained a doctorate from Heidelberg in 1888. In the following year he settled in Florence and, inspired by the famous history of Rome in the Middle Ages written by his great friend, the German historian Gregorovius, decided to embark on similar study of his adopted city. The task took him over 30 years and his two most important works, *Forschungen zur Geschichte von Florenz* (4 vols., 1896–1908) and *Geschichte von Florenz* (4 vols., 1896–1927), established him as the leading authority on Florentine history. He was made an honorary citizen of the city, and an Italian translation of some of his works was published at public expense.

[Howard L. Adelson]

DAVIDSON, DAVID (1848–1933), U.S. Reform rabbi and educator. Davidson was born in Lauternburg, Germany, and immigrated to the United States in 1880 after having been educated at the University of Breslau and ordained in Europe. He served as rabbi of Congregation B'nai Jeshurun in Des Moines, Iowa, and Shearith Israel Congregation in Cincinnati, where he was invited by Isaac Mayer *Wise in 1885 to join the faculty of the recently established Union College (later renamed *Hebrew Union College). Davidson taught Talmud and exegesis at the Reform seminary from 1885 to 1892, when he was awarded a Doctor of Divinity degree by HUC and appointed rabbi of the Kahl-Montgomery Congregation in Montgomery, Alabama. In 1895, he was called to the prestigious Congregation Ahavath Chesed (later, Central Synagogue) in New York City, where he subsequently became the rabbi of Congregation Agudath Jeshurun.

Although recognized as a pioneer of Reform Judaism in America, Davidson also contributed significantly to the Conservative movement. In the early 1900s, he served as professor of rabbinics at the fledgling *Jewish Theological Seminary, without drawing a salary. There he befriended a number of students who were to make their own marks on American Jewish history, including Mordecai M. *Kaplan and Bernard C. *Ehrenreich as well as Stephen S. *Wise.

In 1901, Davidson left the active rabbinate in order to establish a private school – the Davidson Collegiate Institute, where he gave Morris Raphael Cohen his first teaching position – as well as a summer camp for boys in Pennsylvania. He was also a director of the Society for the Aid of Jewish Prisoners and lobbied for a Jewish Protectorate in Palestine. In 1931, he was elected an honorary member of the Central Conference of American Rabbis.

In addition to publishing sermons, plays, essays, and poems in both German and English, Davidson wrote several provocative works, including *Shall We Christianize the Constitution of the U.S.A.? Sabbath or Sunday?* (1889), and *The Moral Issue of the World War* (1915).

[Bezalel Gordon (2nd ed.)]

DAVIDSON, ISRAEL (1870–1939), scholar of medieval Hebrew literature. Davidson was born in Yonava, Lithuania; at a young age he became an orphan and went to live with his

uncle in Grodno, Lithuania. In 1888, after a few years' study at Slobodka yeshivah, he immigrated to the United States. There he earned a living as a street vendor, then as a shop assistant and Hebrew teacher; at night he studied English and other subjects to meet college-entrance requirements. After completing his studies at Columbia University, he was director of the Hebrew Orphan Asylum and chaplain at the Sing Sing prison. In 1905 he began teaching Talmud at the Jewish Theological Seminary, New York, and in 1915 was appointed professor of medieval Hebrew literature.

Davidson's first major scholarly publication in English was *Parody in Jewish Literature* (1907, repr., 1967). Thereafter, he wrote and edited articles and books in both English and Hebrew. Among the most important works are his editions of Joseph *Ibn Zabara's *Sefer Sha'ashu'im* with an English introduction (1914; 1925[2] with Hebrew introduction); *Saadia's Polemic against Ḥīwī al-Balkhī* (1915); *Maḥzor Yannai* (1919), published from Greek palimpsests, Davidson recognizing *Yannai's *piyyut* in the superimposed writing; *Maḥberet mi-Shirei ha-Kodesh asher li-Shelomo ibn Gabirol* (1923), Ibn *Gabirol's sacred poetry with English translations by Israel Zangwill; *Ginzei Schechter* (vol. 3, 1928), poems and *piyyutim* from the Cairo *Genizah*; and *Sefer Milḥamot ha-Shem* (1934), the arguments of the Karaite *Salmon b. Yeroham against Saadiah Gaon. He was also responsible for preparing the critical edition of *piyyutim* for *Siddur R. Sa'adyah Ga'on* (with S. Assaf, 1941). His *Oẓar ha-Meshalim ve-ha-Pitgamim*, a treasury of medieval Jewish parables and maxims, on which Davidson had worked for many years, was published posthumously (1957).

Davidson's magnum opus is the *Oẓar ha-Shirah ve-ha-Piyyut* (*Thesaurus of Medieval Hebrew Poetry*, 4 vols. and supplement, 1925–38). In this gigantic work Davidson recorded in alphabetical order the initial words of more than 35,000 poems and prayers from post-biblical times to the beginning of the Haskalah period. Each entry contains information relating to the type and structure of the poem, its author, and all available information on its publication as well as the literature about it. An author index, containing over 2,800 names, and a subject index are included. In 1936 Davidson received the first Bialik Prize for this monumental work. Davidson's *Thesaurus* has remained an indispensable work of reference for scholars.

Davidson, *Out of Endless Yearnings* (1946); S. Spiegel, in: *Menorah Journal*, 22 (1934), 69–72; S. Assaf (ed.), *Siddur Rav Sa'adyah Ga'on* (1941), 10–16.

[Abraham Meir Habermann]

DAVIDSON, JO (1883–1952), U.S. sculptor. Davidson was born in the ghetto of New York's Lower East Side to immigrant parents who had fled the Russian pogroms. Despite parental opposition, in his teens Davidson studied drawing in New York at the Educational Alliance's art school and at the Art Students' League. At 18 his parents sent him to New Haven to prepare for entrance to Yale Medical School. While in New Haven an admirer of Davidson's work showed the young man's drawings to the director of the art school. Impressed, the director allowed Davidson to take art classes at Yale free of charge. After accidentally walking into a sculpture room Davidson realized the direction his art was to take, and returned to New York to study sculpture. Further studies were undertaken in Paris, but he only remained at the École des Beaux-Arts for three weeks.

He received acclaim early on. Gertrude Vanderbilt Whitney, who later founded the Whitney Museum of American Art in New York, purchased a bust of a young girl in 1906. In 1909 Davidson had his first one-man show in New York, and in 1910 his 8-foot nude *La Terre* was exhibited and well received at the Salon d'Automne. Davidson soon began executing portrait busts of famous personalities, including military and political leaders. He sculpted presidents Woodrow Wilson (1916, bronze), Herbert Hoover (1921, bronze), Dwight D. Eisenhower (1948, bronze), and Franklin Delano Roosevelt (1933, bronze; 1951, stone). These works demonstrate Davidson's desire to provide a likeness of his sitter, and also to explore and distill the sitter's personality. His naturalistic approach combines with lively surface effects. Indeed, the vigorous and rapid modeling of clay remains apparent even after the sculpture has been cast in bronze.

Once established, Davidson traveled the world making bronze busts of figures as diverse as Gertrude Stein (1923), Charlie Chaplin (1925), Mahatma Gandhi (1931), Albert Einstein (c. 1937), and Helen Keller (1942 and 1945, half length). His nine-foot full-length bronze of the poet Walt Whitman is located at Bear Mountain State Park in New York (1936–39). Davidson visited Israel in 1951, at which time he made bronze likenesses of the country's major leaders, including Golda Meir (c. 1951), Chaim Weizmann (1951), and David Ben-Gurion (1951).

A large retrospective of Davidson's work was held in 1947, when 200 sculptures were displayed at the American Academy of Arts and Letters. Davidson's autobiography, *Between Sittings*, was published in 1951.

[Samantha Baskind (2nd ed.)]

DAVIDSON, LIONEL (1922–), English novelist. Davidson's thriller *The Night of Wenceslas* (1960) was followed by a romance, *The Rose of Tibet* (1962). Two visits to Israel inspired the story of an archaeologist's adventurous quest for "the true *menorah*," *A Long Way to Shiloh* (1966; published in the U.S. as *The Menorah Men*, 1966). *Making Good Again* (1968), a thriller set against the restitution process in Federal Germany, emphasized the ingrained Nazism of many "New Germans." Davidson settled in Israel in 1968. His *Kolmynsky Heights* (1994) was a bestseller.

DAVIDSON, MAX DAVID (1899–1977), U.S. Conservative rabbi. Davidson was born in Newark, New Jersey, and ordained at the *Jewish Theological Seminary in 1922, having received his B.A. degree from New York University in 1919. He spent his entire career as a pulpit rabbi in his native state of New Jersey, first in Asbury Park (Congregation Beth El, 1922–28) and then in Perth Amboy (Temple Beth Mordecai, 1929 until his death). Davidson rose to prominence as president both of the *Rabbinical Assembly (1950–52), after having served as treasurer and vice president of the organization during the previous three years, and the *Synagogue Council of America (1959–61), a body he had helped create. He also served as chairman of the *National Jewish Welfare Board's Division of Religious Activities, supervising chaplaincy affairs for the three major rabbinic groups in the U.S. armed services (1950–53); he had actively recruited Jewish chaplains during World War II, then spent the postwar years chairing the RA's Joint Placement Commission, in which capacity he secured congregational positions for demobilized military chaplains. As vice chairman of the RA's Membership Committee (1944–45), Davidson is credited with having streamlined the procedures for enrolling newly ordained Seminary graduates in the Rabbinical Assembly, leading to the expansion of the RA as the recognized professional association for Conservative rabbis. He subsequently chaired the Rabbinical Assembly's Ethics Committee and oversaw the adoption of the organization's Code of Professional Conduct. Even after his term as president, he continued to serve the RA as comptroller, archivist member of the Committee on Jewish Law and Standards, and chairman of the Joint Prayerbook Commission of the Rabbinical Assembly and the Synagogue Council of America. Throughout his many years in Rabbinical Assembly leadership roles, Davidson developed a reputation as a respected arbiter of disputes, a champion of freedom of conscience and diversity, and an outspoken critic of what he termed the "frightening" toll that congregational life had occasionally been shown to take on rabbinic colleagues.

[Bezalel Gordon (2nd ed.)]

°DAVIDSON, SAMUEL (1806–1898), clergyman and Bible critic. Born in Northern Ireland, he was ordained as a Presbyterian minister in 1833 and was appointed the first professor of Bible criticism at the Royal College of Belfast (1835–41). After becoming a Congregationalist, he went to Lancashire Independent College, Manchester, in 1843, as professor of biblical criticism and Oriental languages. As a result of his visits to Germany, where he met and was influenced by J. Neander, H. *Hupfeld, and other leading Bible critics, Davidson translated Julius Fuerst's *Hebrew and Chaldee Lexicon of the Old Testament* (1867). However, he fell into disfavor with the college authorities because of his liberal views on the Bible. Despite this, he published *The Text of the Old Testament Considered* (1856, 1859[2]), a commentary on the Bible (especially the Pentateuch) pioneering new theories of Higher Criticism. The book was attacked by the Lancashire College committee, mainly because it denied the Mosaic authorship of the Pentateuch. After much controversy, he resigned the following year and retired to teach in a Cheshire school. In 1862 he moved to London where he was appointed Scripture examiner in London University and also served on the Old Testament Revision Committee. Among his major works on the Bible are *The Hebrew Text of the Old Testament Revised* (1855), in which he examined the Hebrew text and ancient translation; *Introduction to the Old Testament* (3 vols., 1862–63); and *On a Fresh Revision of the Old Testament* (1873), originally written for *Encyclopaedia Britannica*, but published separately since, according to Davidson, the original had been "mutilated" by the editors. His autobiography and diary were published in 1899 by his daughter Anne S. Davidson.

[Mervyn M. Lewis]

DAVIDSON, WILLIAM (1922–), U.S. industrialist, philanthropist, sportsman. Born in Detroit, Mich., Davidson received a bachelor's degree in business administration from the University of Michigan in 1947 and a Juris Doctor degree in law from Wayne State University in 1949. Guardian Industries, a small, family windshield company owned by a relative, was 23 years old when Davidson joined it in 1955 after service in World War II and a short law career. In 1957 Davidson became president of Guardian, which bought glass and converted it into safety glass for windshields, and over the years Davidson transformed it into a multibillion-dollar, multinational company with more than 60 facilities on five continents. It now makes auto glass, fiberglass insulation, glass panels for office buildings, and other products as well as distributing building materials to retail stores. Davidson took Guardian public in 1968 and bought it back for himself in 1985. In the early 2000s it had 19,000 employees in 20 countries.

In addition, Davidson became majority owner of the Detroit Pistons professional basketball team in 1974; he owns the Detroit Shock of the Women's National Basketball Association, two arena professional football teams, the Tampa Bay Lightning professional hockey team, the DTE Energy Music Theater, the Meadow Brook Music Festival, and the Palace of Auburn Hills, the city where Guardian is headquartered. His hockey and basketball team won world championships one after the other in 2004, a fabulous achievement for a sportsman.

A high school track star, Davidson is a member of the Michigan Sports Hall of Fame and the Jewish Sports Hall of Fame. He is a longtime benefactor of the Detroit Symphony Orchestra. In 1992 he gave $30 million to the University of Michigan to set up the William Davidson Institute, which is dedicated to helping nations in Eastern Europe develop free-market economies.

Davidson gave millions to finance archaeological excavations around Jerusalem. In 1994, he gave the Jewish Theological Seminary of America $15 million for a graduate school of Jewish education, the largest donation made to a single institution of Jewish education in the United States. Davidson earlier was chairman of the United Jewish Appeal for Detroit and past president of Congregation Shaaray Zedek in Southfield, Mich.

[Stewart Kampel (2nd ed.)]

D'AVIGDOR (later **d'Avigdor-Goldsmid**), family that settled in England about the middle of the nineteenth century and became united with the prominent Jewish family Goldsmid. Among its members were ELIM D'AVIGDOR (1841–1895), engineer and author. He was the eldest son of count Salomon Henri d'Avigdor (whom Napoleon III created duke of Acquaviva) and grandson of Isaac Samuel d'Avigdor, member of the Great Sanhedrin. His mother RACHEL (1816–1896), noted for her charitable activities, was the daughter of Isaac Lyon *Goldsmid. D'Avigdor worked as an engineer in various parts of the world on construction projects, including railways in Syria and Transylvania. He wrote hunting stories under the pseudonym "Wanderer" and was publisher of the *Examiner* and *Yachting Gazette*. D'Avigdor was active in the Ḥovevei Zion (see *Ḥibbat Zion). As a member of the executive of the *Anglo-Jewish Association, he was responsible for the transference to its control of the Evelina de Rothschild school in Jerusalem, previously controlled by the Rothschild family. His son, SIR OSMOND D'AVIGDOR GOLDSMID (1877–1940), added the name Goldsmid on inheriting the estates of his cousin Sir Julian *Goldsmid. He devoted his life to public service. He received recognition for these services in 1934 when the hereditary baronetcy of Isaac Lyon Goldsmid was revived and awarded to him. In 1912 he was high sheriff of the county of Kent. Within the Jewish community, he served as president of the Anglo-Jewish Association (1921–26), president of the British *Board of Deputies (1926–33), chairman of the Jewish Colonization Association, and treasurer of the Jewish Memorial Council. Although not a Zionist, he was for many years chairman of the council of the British section of the Jewish Agency. His elder son, SIR HENRY JOSEPH D'AVIGDOR-GOLDSMID (1909–1976), the 2nd baronet, was a Conservative member of parliament from 1955 and parliamentary private secretary to the minister of housing and local government (1955–56). He was president of the Jewish Colonization Association, and chairman of the Anglo-Israel Bank. Another son, Brigadier General SIR JAMES ARTHUR D'AVIGDOR-GOLDSMID (1912–1987) headed the British Territorial Army. He later became major general and was a Conservative member of Parliament from 1970 to 1974.

[Vivian David Lipman]

DAVIN (David) DE CADEROUSSE (15th century), the first known Jew to attempt Hebrew *printing. While living in Avignon as a dyer, Davin de Caderousse met a Christian goldsmith from Prague named Procop Waldvogel. In 1446 the two entered into a notarial contract, Davin undertaking to teach the other the art of dyeing and Procop promising in return to provide him with the 27 letters of the Hebrew alphabet, cut in iron, and with the necessary instruments, in accordance with the "science and practise of writing," which he had been teaching him since 1444. The arrangement ultimately broke down, and no specimen of this earliest Hebrew printing press has survived.

[Cecil Roth]

DAVIS, ABEL (1878–1937), U.S. army officer. Born in Lithuania, Davis was taken to Chicago as a child and served in the Illinois National Guard during the Spanish-American War of 1898. He fought in France in World War I and won awards for gallantry in the battles before Amiens, St. Hilaire, and in the Argonne. He was later made a brigadier general in the Illinois National Guard. Davis was active in Jewish affairs as director

of the Associated Jewish Charities and in 1921 was chairman of the American Jewish Relief Committee conference.

DAVIS, AL (1929–), principal owner and president of the Oakland Raiders football team, member of the Pro Football Hall of Fame. Born in Brockton, Massachusetts, Davis grew up in Brooklyn and graduated from Syracuse University in 1950, where he played football, basketball, and baseball. Davis was then named line coach at Adelphi College at age 21. He subsequently went into the U.S. Army, where he was assigned as head football coach at Ft. Belvoir, Virginia. Davis joined the staff of the NFL Baltimore Colts as a scout in 1954, and then served as line coach and chief recruiter at The Citadel in 1955–56. Afterwards he spent three years at the University of Southern California. Davis was then hired in 1960 by Sid *Gillman as an offensive coach for the Los Angeles Chargers in the newly formed American Football League.

In 1963, Davis was hired by the Oakland Raiders to be the team's head coach and general manager, after the team had only won three of their previous 28 games. Davis led the Raiders his first season to a 10–4–0 record, and was named AFL Coach of the Year by AP, UPI, *Sports Illustrated*, the *Sporting News*, and his fellow coaches. The nine-win turnaround from the previous season remains the greatest such accomplishment in pro football history. Davis coached three seasons for a 23–16–3 record, and was then named commissioner of the AFL in April 1966. Though Davis was acclaimed as an instrumental figure in the historic merger between the NFL and AFL, he was personally against it. Davis stepped down as commissioner two months later when Pete Rozelle was chosen to be commissioner of the new league, returning to the Raiders as general manager and principal owner.

Known for his dark glasses, slicked-back hair, Brooklyn accent, and ferocious competitiveness, Davis was regarded as a maverick owner. He moved the Raider franchise to Los Angeles in 1982 against the NFL's objections, winning the battle in Federal District Court, and then moved the team back to Oakland in 1995. Davis' Raiders played in five Super Bowls, winning in 1977, 1981, and 1984, with the team having the best record in pro sports from 1963 to 1991. It was a reflection of his often-quoted motto: "Just win, baby."

Davis was elected to the Pro Football Hall of Fame in 1992, the fourth Jew selected after Sid *Luckman, Sid *Gillman, and Ron *Mix, later joined by Marv *Levy and Benny *Friedman.

[Elli Wohlgelernter (2nd ed.)]

DAVIS, AL "BUMMY" (**Avraham Davidoff**; 1920–1945), U.S. welterweight boxer. Born in what was then the very Jewish Brownsville section of Brooklyn, Davis learned to fight on the neighborhood streets as a member of a teenage gang while plying his trade as a pushcart peddler. It was a neighborhood rife with members of the Jewish mafia known as "Murder, Inc.," including Abe "Kid Twist" Reles and "Pittsburgh Phil" Strauss, and Davis was the younger brother of both Willie Davidoff, a lieutenant to the famous mobster Louis "Lepke" *Buchalter, and Harry, who was also involved with the mob.

Davis was discovered by manager Johnny Attell while fighting as an amateur under the name Giovanni Pasconi. Called Vroomy, a derivative of Avraham, by his family, he was Boomy to his friends, a nickname that was finally changed to "Bummy" by Attell prior to Davis' first professional fight in May 1937. Known for his great left hook, Davis defeated his first 22 opponents, 16 by knockout including 10 in the first three rounds.

As the younger brother of two racketeers, Davis was tarred and feathered in the press as a mob-controlled lowlife, and found himself booed even by his home crowd for knocking out favorites such as Tony Canzoneri. Davis added to his legend in his most famous fight, against Fritzie Zivic on November 15, 1940. Zivic was infamous for his dirty tactics in the ring, and in the first round he repeatedly thumbed Davis in the eyes. When Zivic continued in the second round, Davis hit him below the belt at least ten times, refusing to stop. Davis was disqualified in the fight, fined $2,500, and suspended from the ring by New York State for life, but he was reinstated three years later. His final record was 66 wins (47 KOs), 10 losses, and 4 draws, and he was named No. 54 on *Ring* magazine's list of the 100 greatest punchers of all time.

Davis met a tragic end at the age of 25, when he was shot dead in Brownsville while breaking up a robbery at his former bar, called Dudy's. He is the subject of a biography, Ron Ross' somewhat fanciful *Bummy Davis vs. Murder, Inc.: The Rise and Fall of the Jewish Mafia and an Ill-Fated Prizefighter* (2003).

[Elli Wohlgelernter (2nd ed.)]

DAVIS, ALEXANDER BARNARD (1828–1913), Australian rabbi. Born in England, Davis served as headmaster of Westminster Jews' Free School, London, and minister of Kingston Congregation, Jamaica. From 1862 to 1904 he officiated as chief minister of the Great Synagogue in Sydney, and succeeded in reconciling opposing groups among the community. He founded the Sabbath School and the Sydney Jewish Education Board. Davis wrote several booklets on Jewish observance, the first of their kind to be published in Australia.

[Israel Porush]

DAVIS, DAVID BRION (1927–), U.S. historian. The son of writer Claude Brion Davis and Martha Wirt Davis, David Davis was educated at Dartmouth College, Oxford University, and Harvard University, where he received his Ph.D. in 1956. He acquired a wide range of cultural and intellectual experiences before his first appointment at Cornell University, where he taught until 1978. Well into his academic career, and after years of serious thought, Davis chose to convert to Judaism.

Davis is a pioneer in the effort to understand slavery and abolition. *The Problem of Slavery in Western Culture* (1967) reflects his effort to probe slavery as a "problem" in enlightened cultures rather than simply as an evil and aberrant institution. His earliest monograph was *Homicide in American Fiction, 1798–1860* (1957).

At his retirement from Yale in 2001, he was founding director of the Gilder-Lehrman Institute for the Study of Slavery and Sterling Professor of American History. Davis has served as visiting professor at numerous universities, and has won the Pulitzer Prize, the National Book Award, and the Bancroft Prize. In 1987–88 he served as president of the Organization of American Historians.

Known as a superb lecturer and teacher, Davis supervised 60 dissertations while on the Yale faculty, and fostered the careers of dozens of leading American scholars whose work extends far beyond studies of slavery, to include almost every phase of American history. His professional and personal confession is contained in his book of essays *In the Image of God* (2001), where he builds his case as an intellectual historian and an explorer of the human spirit, identifying the seminal experiences in his life that shaped his character. The essay at the beginning of the collection conveys his sense of where his conversion to Judaism meets his passion for understanding slavery in the broad spiritual sense. The essay also tracks his seminal experience with racism during his service in Europe during World War II.

While never an apologist for the role some Jews may have played in the industry of slavery, Davis has argued against any notion of collective Jewish guilt, or any attempts to see Jewish participation in the slave trade as disproportionate to the population as a whole. In fact, Davis used this myth to highlight the significant contributions of Jews to American business, letters, entertainment, and science (*New York Review of Books*, Dec. 1994, and *New Republic*, Apr. 12, 1993).

Other books by Davis include *Problem of Slavery in the Age of Revolution, 1770–1823* (1975); *Slavery and Human Progress* (1984); *From Homicide to Slavery: Studies in American Culture* (1986); and *The Problem of Slavery in the Age of Emancipation* (2005)

[William Cutter (2nd ed.)]

DAVIS, SIR EDMUND (1861–1939), mining magnate and art collector. Edmund Davis was born in Melbourne, Australia, and educated in Paris, where he studied art. From 1879 until 1889 he lived in the Cape Colony, where he built up a fortune in guano, copper, and railroads. He became an associate of Cecil Rhodes, engaged in mining exploration in various parts of southern Africa for many years. After 1889 he lived chiefly in London, and became an important financier in developing the minerals, especially the copper fields, of Northern Rhodesia (now Zambia). Rhodes made Davis a director of the British South Africa Company. He was also chairman or director of many other companies. He accompanied Rhodes on his visit to Kaiser William II of Germany in 1898 for discussions on the Cape-Cairo cable. Davis collected early and modern paintings, and in 1915 presented a selection of pictures of the modern British school to the Luxembourg Museum, Paris. Another collection was given to the South African Art Gallery in Cape Town. Davis later settled in England, and became sheriff of Kent in 1930. He was knighted in 1937. He left large bequests to hospitals and established scholarships at London University.

BIBLIOGRAPHY: P. Emden, *Jews of Britain* (1943), 429, 434. **ADD. BIBLIOGRAPHY:** ODNB online; DBB, 2, 24–28.

DAVIS, EDWARD ("Teddy the Jewboy," 1816–1841), Australian convict and one of a handful of Jewish bushrangers. Davis was born in England. In 1832, a London court convicted him of stealing a shopkeeper's till worth two shillings and five shillings worth of coins. His sentence was deportation to Australia for seven years. After a number of unsuccessful attempts at escape, as a result of which his sentence was increased by 48 months, he finally managed to escape in 1839 and organized a bushranger gang of ex-convicts like himself who, ranging on horseback over New South Wales, raided towns and settlements and robbed travelers on the desolate roads. Davis looked upon himself as a Robin Hood: he shared the spoils with the poor and would only countenance violence in self-defense. His downfall came in December 1840, when in the course of a raid on the township of Scone one of his gang, John Shea, killed a young shopkeeper. Shea, Davis, and four others were caught, convicted of murder, and sentenced to death. Davis' appeal was dismissed by the Executive Council and, accompanied by the *ḥazzan* of the Sydney synagogue, he went penitently to the gallows at the Old Sydney Gaol. A crowd of over a thousand gathered to see him hanged.

[Morton Mayer Berman]

DAVIS, SIR ERNEST HYAM (1872–1962), New Zealand businessman and philanthropist. Davis was born in Nelson, the son of Moss Davis, an immigrant merchant, and developed his father's business, Hancock and Co., which controlled many of New Zealand's largest hotels. He was best known as one of the most important brewers in New Zealand, heading Captain Cook Brewery, the largest in the country, and was later prominent in founding the expanded New Zealand Breweries Ltd., as well as directing many other companies. Davis was one of the leaders of the anti-Prohibition movement in his country and, although a rich man, was a notable financial backer of the New Zealand Labour Party. He was mayor of Auckland from 1935 to 1941. During World War II he was chairman of the joint council of St. John and the Red Cross. His donations to Auckland included the Davis Marine Park, Davis Marine Lighthouse, and the Marion Davis Memorial Medical Library.

He also made large gifts to hospitals and other charities and to the Auckland Synagogue. Davis received a knighthood in 1937. At his death he was regarded as one of the towering figures in New Zealand's business life.

[Alexander Astor / William D. Rubinstein (2nd ed.)]

DAVIS, HENRY DAVID (1839–1915), British architect. Born in London, Davis became one of the first Jews to practice architecture in Britain, often in partnership with Barrow Emanuel (1842–1904), the son of Emanuel Emanuel (d. 1888), the first Jewish mayor of Portsmouth and the brother of Lady *Magnus. Their firm built the Clarence Pier in Portsmouth and many buildings in London, especially near Finsbury Square and in the East End, often dwellings for poor immigrants. They also built the West London Reform Synagogue (1870) and other Jewish buildings.

[William D. Rubinstein (2nd ed.)]

DAVIS, MARVIN H. (1925–2004), U.S. oil and entertainment businessman. Born in Newark, N.J., to immigrant parents (his father was a dress manufacturer), Davis moved with his family to Colorado, where he and his father bought oil and gas leases at low prices throughout the Rocky Mountains and then did extensive drilling. After taking over the business, Davis earned the nickname Mr. Wildcatter because he would drill thousands of wells in unexplored areas in search of oil or natural gas. He was a pioneer of the oil deal known as the "third for a quarter," in which an oil prospector insulates himself from risk by selling one-quarter of a well for one-third of the price of the well. Essentially, Davis drilled his own wells with other people's money. He also became a major real estate developer in Denver, acquiring a huge shopping center and office complex.

In 1981, when energy markets were peaking in the United States, he sold most of his oil and natural gas holdings for $600 million to the Canadian company Hiram Walker-Consumers Home Ltd., and turned his attention to undervalued entertainment businesses in Hollywood and real estate in California. With Marc *Rich, the financier who became a fugitive and was later pardoned by President Bill Clinton, he bought 20th Century Fox for $725 million. When he sold the company four years later to Rupert Murdoch's News Corporation, newspaper and magazine articles estimated that Davis earned a profit of $325 million. Davis also owned the Pebble Beach Company, which he sold in 1990 at a profit of millions of dollars, the Aspen Skiing Company, and the fabled Beverly Hills Hotel. He made highly publicized but unsuccessful bids on companies such as Northwest Airlines, United Airlines, CBS, and Resorts International. In 2002 he led a group of investors who tried to buy the American entertainment business of Vivendi Universal with an unsolicited bid of $20 billion but was rebuffed. In 2004, Forbes magazine listed Davis as the 30th richest person in the United States, estimating his wealth at $5.8 billion.

[Stewart Kampel (2nd ed.)]

DAVIS, MORTIMER B. (1866–1928), Canadian industrialist and philanthropist. Davis was born in Montreal, the third of seven children in a well-established Jewish family. His father was a founder of Montreal's first Reform congregation, Temple Emanu-El. After finishing Montreal High School, Davis went into the family's cigar business. As a young man he experimented in tobacco production and negotiated with the Imperial Tobacco Company of England to establish a subsidiary in Canada. Davis became the company's director and was soon involved in a variety of other Montreal business activities. He also took keen interest in charity and relief activities. Davis helped finance the integration of East European immigrants in Montreal and was one of the founders of the Mount Sinai Sanatorium, the first Jewish-community-funded hospital in the city. During World War I, Davis helped finance a Jewish battalion to fight with the British and in 1917 was rewarded with a knighthood by King George V, the first Canadian Jew to be so honored. After the war Davis, while not a religious man, was active in supporting Jewish schools in Montreal and donated a new building for the Montreal YMHA, soon known as the Davis Y. Sir Mortimer Davis died in 1928 but, feeling that Montreal should have a major Jewish hospital, he bequeathed 75 percent of his estate to be invested and used to build such a hospital. The Sir Mortimer Davis Jewish General Hospital, founded in 1934, was the result. In 1898 Davis married Henrietta Meyer of San Francisco but their marriage ended in divorce. Lady Davis, a keen businesswoman, became wealthy in her own right and remained a leading philanthropist in the Montreal Jewish community, supporting causes in both Canada and Israel.

[Gerald Tulchinsky (2nd ed.)]

DAVIS, MOSHE (1916–1996), historian and educator. Born in Brooklyn, New York, Davis was ordained a rabbi at the Jewish Theological Seminary in 1942, and was the first American to receive a doctoral degree from the Hebrew University of Jerusalem (1945). During 1946–50 he was dean of the Seminary's Teachers' Institute, then provost of the Seminary. One of the founders of Camp Massad, Davis also established the Leaders Training Fellowship and the Camp Ramah movement of the Teachers' Institute. He was the first program editor of the Seminary's radio program *Eternal Light* and the television program *Frontiers of Faith*. In 1959 Davis was founder and subsequently chairman in Israel of the Committee on Manpower Opportunities. An authority on contemporary Jewish life, especially American Jewry, Davis taught American Jewish history at the Jewish Theological Seminary, co-directed the Seminary's American Jewish History Center, and taught American Jewish history and institutions at the Hebrew University (from 1965). Having immigrated to Israel in 1959, he became the founder and head of the university's Institute of

Contemporary Jewry, the first of its kind in the world. In that capacity, he supervised studies, publications, and conferences dealing with centers of world Jewry. Within the institute he also founded the America–Holy Land Project, which became an academic sub-specialty of both American and Jewish history. Davis was the Stephen S. Wise Professor Emeritus of American Jewish History and Institutions at the Hebrew University. In 1974 he founded the International Center for the Academic Teaching of Jewish Civilization, under the sponsorship of the president of Israel.

Among his many honors, Davis garnered the Rothberg Prize in Jewish Education of the Hebrew University; the Speaker of the Knesset Quality of Life Award; and an honorary Ph.D. from the Jewish Theological Seminary of America. His publications include *Jewish Religious Life and Institutions in America* (1950); *Yahadut Amerikah be-Hitpatteḥutah* (1951); *Emergence of Conservative Judaism* (1963); *Journeys of the Children of Israel: A Guide to the Study of the Bible* (with I. Levy, 1966); *Beit Yisrael be-Amerikah* ("From Dependence to Mutuality: The American Jewish Community and World Jewry," 1970); *I Am a Jew* (1978); *Teaching Jewish Civilization: A Global Approach to Higher Education* (1995); and *America and the Holy Land* (1995). He was a consulting editor for the first edition of the *Encyclopaedia Judaica* (1971).

[Gladys Rosen / Ruth Beloff (2nd ed.)]

DAVIS, NATALIE ZEMON (1928–), U.S. historian of early modern France, scholar of women, gender, and film studies, academic leader and lecturer. Davis was born in Detroit, Michigan, daughter of Julian and Helen Lamport Zemon, both American-born children of immigrants from Eastern Europe. She grew up in a non-Jewish neighborhood and attended a private high school with few other Jewish students. Davis has suggested that this experience of mediating between two worlds may have contributed to her scholarly interest in issues of multiple and uncertain identities, fiction and storytelling, and the interplay between margins and center. After receiving her B.A. from Smith College and her Ph.D. from the University of Michigan, Davis taught at Brown University, the University of Toronto, the University of California at Berkeley, and was the Henry Charles Lea Professor of History at Princeton University from 1981 until her retirement in 1996. She received numerous honors and awards and was a fellow of the American Academy of Arts and Sciences and corresponding fellow of the British Academy. In 1987, she became the second woman to serve as president of the American Historical Association.

Davis expanded the boundaries of social history through her use of nontraditional archival sources and examinations of previously under-studied populations. She was a pioneer in cultural history and the incorporation of interdisciplinary approaches from anthropology and literature into historical scholarship. A prolific scholar, her books include *Society and Culture in Early Modern France* (1975); *The Return of Martin Guerre* (1983); *Fiction in the Archives: Pardon Tales and Their Tellers in Sixteenth-Century France* (1987); *The Gift in Sixteenth-Century France* (2000); and *Slaves on Screen: Film and Historical Vision* (2000). Davis also served as historical consultant for the successful film *Le Retour de Martin Guerre* (1982).

In the 1980s, Davis became increasingly interested in Jewish history. As in her investigations of women and gender, she wished to incorporate Jews into the broader historical narrative while demonstrating how doing so necessarily changes understandings of the past. Her insightful work on the autobiographical writings of Glikl bas Judah Leib in *Women on the Margins: Three Seventeenth Century Lives* (1995), as well as her collaboration on a volume devoted to the autobiography of Leon *Modena (*The Autobiography of a Seventeenth-Century Venetian Rabbi: Leon Modena's Life of Judah*, ed. Mark Cohen (1988)), brought together her interests in the Jewish experience and in narratives of self-fashioning.

[Jennifer Sartori (2nd ed.)]

DAVIS, SAMMY JR. (1923–1990), U.S. singer, dancer, actor. Born in Harlem, New York, to performer Sammy Davis and dancer Elvira Sanchez, Sammy Davis, Jr. began his entertainment career at the age of three. He grew up on the road with his father, who belonged to the touring vaudeville group the Will Mastin Troupe, after his mother abandoned the family in 1928. As motion pictures increasingly killed demand for vaudeville acts, Davis and his father continued alongside Will Mastin in what inevitably become a trio. In 1943, he was drafted into the U.S. Army and sent to boot camp in Cheyenne, Wyoming, where he endured violent racism. He was eventually transferred to an entertainment division, which toured military bases around the United States. After his discharge from the service in 1945, Davis rejoined Mastin and his father, headlining with such acts as *Mel Torme, Mickey Rooney, and Frank Sinatra. On November 19, 1954, Davis was nearly killed in an automobile accident that took his left eye and shattered his face. As he recovered in a Los Angeles hospital, Davis began his conversion to Judaism. The publicity following his accident was intense and boosted Davis' career; even the controversy that followed his conversion had little impact. He performed in front of sold-out shows and released his first albums under the Decca label, *Starring Sammy Davis, Jr.* and *Just for Lovers*, in 1955. Davis' star climbed higher with the Broadway musical *Mr. Wonderful* (1956) and the film adaptation of George Gershwin's *Porgy and Bess* (1959). He married Loray White in 1958, but the couple divorced the following year. By 1960, Davis was a superstar. Frank Sinatra made him part of his "Rat Pack" along with Dean Martin, Joey Bishop, and others. He starred with fellow Rat Pack

members in *Ocean's Eleven* (1960), *Sergeants 3* (1962), and *Salt and Pepper* (1968). His marriage to Swedish actress May Britt in 1960, who was Caucasian, made him a Ku Klux Klan target. In turn, Davis became a staunch supporter of the Black Power movement. B'nai B'rith named him man of the year in 1965, and he received Emmy nominations for *The Sammy Davis, Jr. Show* (1965) and *The Swinging World of Sammy Davis, Jr.* (1966). He divorced Britt in 1968 and in 1970 married Altovise Gore. Davis angered the political left in 1972 when he publicly supported Richard Nixon and performed in Vietnam. His Rat Pack drinking and drug abuse caught up with him in 1974, when Davis developed liver and kidney problems that required surgery and several months of rehabilitation. In the 1980s, Davis toured with Sinatra and Liza Minnelli. He made his final film appearance with Gregory Hines in *Tap* (1989), the same year doctors discovered his throat cancer, which would claim his life one year later.

[Adam Wills (2nd ed.)]

DAVIS, SUSAN A. (1944–), U.S. Democratic congresswoman representing California's 53rd Congressional District. Born in Cambridge, Massachusetts, Davis grew up in Richmond, California. Her father was a pediatrician; her husband is also a physician. She graduated from the University of California at Berkeley with a degree in sociology (1965). She then earned a master's degree in social work from the University of North Carolina (1968).

Between 1990 and 1994 she was the executive director of the Aaron Price Fellows Program, a program that teaches citizenship skills to multiethnic high school students, and then served on the City School Board in San Diego for nine years between 1983 and 1992, more than half of them as president or vice president. She was also active in the League of Women Voters of San Diego, eventually serving as its president.

She was elected to the California State Assembly in 1994. Her interests were in adolescence, and she championed legislation to protect medical privacy. Term-limited out, she was forced to run for another office and moved up when she was elected to the House of Representatives in 2000. Her Committee assignments in Congress reflected both her constituency and her interests. She served on the House Armed Services Committee – San Diego has major military installations – and the Education and the Workforce Committee. She focused on the issues of defense, education, environment, health care, and veterans' affairs. Defense and veterans' affairs are important concerns for the military families of San Diego, educational and health care were long-time interests of Davis.

Her primary area of concern in Congress reflected her local involvement as an educator. Like most Democrats she opposed the school voucher program but supported educational reform, most especially in areas that would improve teaching. She also endorsed increased evaluation programs for students and their teachers. In health care she supported the Patients Bill or Rights and Medicare. She was pro-choice.

[Michael Berenbaum (2nd ed.)]

DAVYDOV (Davidhof), KARL YULYEVICH (1838–1889), Russian cellist, composer, and teacher. Davydov, who was born in Goldingen, Courland, took a degree in mathematics at Moscow University in 1858, and then decided to pursue a musical career. In 1859, he became a professor at the Leipzig Conservatory and solo cellist at the Gewandhaus concerts. In 1862 Davydov returned to Russia as professor at the St. Petersburg Conservatory and joined the quartet of the Russian Music Society, with Leopold *Auer as his partner in recitals. He eventually succeeded Anton *Rubinstein as conductor of the St. Petersburg Conservatory orchestra and traveled extensively on concert tours abroad. Davydov's best known compositions are his cello works, which belong to the German romantic school. His main achievement was the establishment of the first cello school in Russia. The methods and advice given in his manual for cello students remain valid.

BIBLIOGRAPHY: L. Ginzburg, *K. Yu. Davydov* (Rus., 1950).

[Michael Goldstein]

DAWIDOWICZ, LUCY (1915–1990), U.S. historian and writer. Born Lucy Schildbret in New York City, she pursued her love for Yiddish culture as a research fellow at the YIVO Institute for Jewish Research in Vilna, Poland in 1938. On the eve of World War II she returned to New York, where the YIVO Institute was reestablished, and served as assistant to the research director of YIVO from 1940 to 1946. At the end of the war, she returned to Europe on behalf of the American Jewish Joint Distribution Committee to aid concentration camp survivors.

She returned to the United States in 1947, subsequently working as a research analyst and later research director for the American Jewish Committee. In 1969, she joined the faculty of Yeshiva University, serving as professor of Holocaust studies from 1970.

In 1967, she edited the anthology *The Golden Tradition: Jewish Life and Thought in Eastern Europe*, contributing an extensive and incisive introduction. *The War Against the Jews 1933–1945* (1975) contended that the Holocaust was not merely an antisemitic outburst but the final outcome of a ruthless totalitarian ideology whose central design was to eliminate the alien Jew.

In 1976, she edited *The Holocaust Reader*, which deals with Holocaust historiography. In *The Holocaust and the Historians* (1981), Dawidowicz attacked those who have attempted to deny the authenticity of the Holocaust.

[Susan Strul]

DAWIDSOHN, ḤAYYIM (1760–1854), merchant, community leader, and rabbi. Born in Pinczow, he was elected head of the *ḥevra kaddisha* in 1801. When the authorities dissolved the Warsaw *kehillah* in 1831 he was one of the three directors (*dozory*) appointed in its place. Himself a *Mitnagged* and Orthodox, Dawidsohn cooperated with the Ḥasidim and the assimilationists. With the incumbent rabbi of Warsaw, Sol-

omon Zalman *Lipshitz, he opposed Jews joining the city guards during the insurrection of 1831, giving as a reason that they would have to shave. After the death of Lipshitz in 1839, Dawidsohn was elected rabbi of Warsaw despite his advanced years. He burned all his writings, mainly on *halakhah*, shortly before his death, considering that none of them was worthy of publication. His eldest son, Abraham Abele, was rabbi in Biala, and his second son, Naphtali, was a wealthy merchant.

DAWIDSOHN, JOSEPH (1880–1947), physician and Zionist leader in Poland. Born in Warsaw, he was a great-grandson of Ḥayyim *Dawidsohn. In 1913 he and Stefan Mendelson founded the first Jewish newspaper in Polish, *Prezgląd Codzienny* ("Daily Review"). Dawidsohn also published *Nasz Kurier* ("Our Courier") in 1917, and *Nasze Słowo* ("Our Word") in 1931. In 1908 Dawidsohn founded the Bri'ut ("Health") association to fight tuberculosis among Jews and was its chairman until 1932. He was a member of the Polish Senate from 1928 to 1931. A year later he left for Ereẓ Israel, where he worked with the Jewish Agency's Immigration Department as inspector of medical services. He was the author of *Gminy żydowskie* (1931), a work on Jewish communities in Poland.

DAWISON (Davidsohn), BOGUMIL (1818–1872), German actor, who was regarded as one of the great actors of his day. Dawison was born in Warsaw, where he also began his career. In 1839 he began working at the theater in Lemberg (Lvov), Galicia. From 1847 he acted in Hamburg, Germany. In 1849 he was invited to the Burgtheater in Vienna, and in 1854 to the Hoftheater in Dresden. From 1864 he toured Europe and the U.S., where he arrived in 1866. His acting was dynamic and innovative, and his characterizations had great vitality. Dawison's triumphs were in the Shakespearean roles of Richard III, Shylock, Lear, and Othello; as Franz Moor in Schiller's *The Bandits*; as Mephistopheles in Goethe's *Faust*; and as Harpagon in Molière's *The Miser*.

[Noam Zadoff (2nd ed.)]

DAYAN, family in Ereẓ Israel. SHEMUEL (1891–1968), pioneer of cooperative settlement in Ereẓ Israel. Dayan was born in Zhashkov, Ukraine, and joined the Zionist movement as a youth, settling in Ereẓ Israel in 1908. There he worked as a laborer in various agricultural settlements and was a founder of the kevuẓah *Deganyah Alef and later of Deganyah Bet. In 1921 he helped found the first *moshav ovedim, *Nahalal. A leader of the *Ha-Po'el ha-Ẓa'ir Party, and later of *Mapai, Dayan represented the moshav movement in *yishuv* institutions, in the Histadrut, and at Zionist Congresses. He was a leading member of the Histadrut Agricultural Center (Ha-Merkaz ha-Ḥakla'i) and a Mapai member in the First, Second, and Third Knessets. He published books and articles about Nahalal, Deganyah, and the moshav ovedim, including *Nahalal* (1936); *Moshav Ovedim* (1945); *Pioneers in Israel* (1961); and *Man and the Soil* (1965). His wife DEVORAH (née Zatolowsky; 1890–1956) was a leader of the women's labor movement and an editor of *Devar ha-Po'elet* (women workers' weekly). Her articles appearing in the labor press were collected in the books *Asapper* (1952) and *Be-Osher u-ve-Yagon* (1959; *Pioneer*, 1968). The elder son of Shemuel and Devorah was Moshe *Dayan (1915–1981), military commander and statesman. Their younger son ZOHAR (1926–1948) died in the Israeli War of Independence. A book of his poems and letters, *Be-Eragon: Shirim ve-Iggerot*, was published posthumously in 1950. Moshe's wife RUTH (née Schwartz; 1917–) was active in the development of home industries during the early years of Israel, and was head of the Crafts Department in the Ministry of Labor during 1953–54. She was founder and managing director of government-sponsored Maskit, which produces and markets Israeli handicrafts. His daughter Yael *Dayan (1939–) wrote the novels *New Face in the Mirror* (1959), *Envy the Frightened* (1961), *Dust* (1963), and *Death had Two Sons* (1965), as well as *Israel Journal, June 1967* (1967), and also served in the Knesset. His son Assaf (Assi) *Dayan (1945–) was a film actor and director.

[Abraham Aharoni]

DAYAN, ASSAF (Assi; 1945–), Israeli actor, director, and writer. The son of Moshe *Dayan, he was born in Nahalal. He starred in a number of classic Israeli films, including *Operation Thunderbolt* (1977), the story of the Entebbe rescue operation, and *Beyond the Walls* (1984), a prison drama about Israeli-Palestinian relations. He also appeared in Joseph *Cedar's popular *Campfire* (2004) and *Time of Favor* (*Ha-Hesder,* 2000). The left-leaning actor portrayed right-wing activists in both of Cedar's films. Early on in his film career, he was cast in John Huston's *A Walk with Love and Death* (1969), opposite Anjelica Huston, but from then on Dayan appeared mostly in Israeli films. The highlight of his directing career was *Life According to Agfa* (1992), a politically charged look at the regulars of a Tel Aviv pub. *Agfa* won the Israeli Academy of Film and Television's award for best picture and Dayan was voted best director. Dayan's writing and directing credits include *The Gospel According to God* (2004) and *Halfon Hill Doesn't Answer* (1975). He acted in more than 35 films, including *Open Heart* (2002), Amos *Gitai's *Zikhron Devarim* (1995), and *The Delta Force* (1986).

[Hannah Brown (2nd ed.)]

DAYAN, MOSHE (1915–1981), Israeli military commander and statesman, member of the Fourth to Tenth Knessets. The eldest son of Shemuel Dayan, who had been a member of the First Knesset, Dayan was born in kibbutz Deganya Alef, and raised in Nahalal. As a young man, he served as a watchman in Nahalal's fields, and later joined the Haganah. During the disturbances of 1936–39, he served with the special Jewish police force in the Jezreel Valley and Galilee. He was commander of a unit of the Haganah field squads in 1938, and participated in the operations of the special night squads commanded by Orde *Wingate. Dayan was arrested in 1939, in an illegal Haganah commanders' course, and was sentenced to ten years' imprisonment for possession of illegal firearms. Released in 1941, he joined an auxiliary force of the Haganah that cooperated with the British army in the conquest of the Lebanon from Vichy forces. In the course of this operation he was wounded, and lost his left eye. The eye patch Dayan started wearing from that time on, became his trademark. After joining the Palmaḥ, he helped British intelligence set up a broadcasting network, the purpose of which was clandestine operations behind enemy lines in the event that Palestine fell into German hands.

During the 1948–49 War of Independence, Dayan commanded the defense of Jewish settlements in the Jordan Valley. In the spring of 1948 he was named commander of a mechanized battalion that fought in Ramleh and Lydda, and helped halt the Egyptian forces on the Southern front. In August 1948 Dayan was appointed commander of the Jerusalem front and reached a local cease-fire agreement with the commander of the Arab Legion in the area. In this period Dayan was viewed as Mapai's answer to generals such as Yigal *Allon, who had emerged from *Mapam and *Aḥdut ha-Avodah. Dayan and Allon remained competitors, first in the military sphere and later in politics, for the rest of their lives.

In the spring of 1949 Dayan participated in the armistice agreement talks between Israel and Jordan at Rhodes.

In October 1949 he was appointed commander of the Southern Command, and in June 1952 commander of the Northern Command. In the same period he attended a senior officers' course in Great Britain. He was appointed chief of operations at General Headquarters in December 1952, and the following year was appointed as Israel's fourth chief of staff, a post he held until January 1958. As chief of staff, Dayan concentrated on improving the military capabilities of the IDF. With the intensification of *fedayeen* terrorist attacks in the course of 1955, Dayan organized a series of reprisal raids into Jordanian and Egyptian territory, to hit *fedayeen* bases there. He commanded the Israeli forces in the *Sinai Campaign, at the end of 1956, and emerged as a national hero. Dayan retired from active army service in 1958 and spent the following year attending courses at the universities of Tel Aviv and Jerusalem. In the fall of 1959 he was elected to the Fourth Knesset on the *Mapai list. In the government formed by David *Ben-Gurion after the election, Dayan was appointed minister of agriculture, a post he held until November 1964.

Dayan supported Ben-Gurion's position in the *Lavon Affair and resigned from Prime Minister Levi *Eshkol's government to join Ben-Gurion against this background. In July 1965 Dayan broke away with Ben-Gurion from Mapai, and was one of the founders of *Rafi and elected on its list to the Sixth Knesset. In August 1966 he made an independent study tour of war-torn Vietnam and wrote of his experience in a diary, which he published. Following public pressure, Dayan was appointed minister of defense on the eve of the outbreak of the *Six-Day War in June 1967, even though Prime Minister Eshkol, who had also served as minister of defense up to that point, had wanted to appoint Allon to the post. Dayan once again emerged from the war as a hero. After the war, as minister of defense, Dayan was responsible for administering the territories occupied by Israel. He devised a relatively liberal policy for the Palestinian population in the territories, following a policy of "open bridges" to Jordan, enabling the movement of both people and goods. Unlike Allon, who started to advocate a peace plan with Jordan based on territorial compromise and the establishment of a Jordanian-Palestinian state that would include most of the territories of the West Bank and Gaza Strip, Dayan preferred a functional solution that would create a Jordanian-Israeli condominium in the territories.

In the year after the Six-Day War Dayan actively supported the formation of the *Israel Labor Party by Mapai, Aḥdut ha-Avodah, and Rafi. Dayan was still minister of defense on the outbreak of the *Yom Kippur War of October 1973, and was widely blamed for the country's lack of preparedness. Even though the *Agranat Commission established to investigate the background to the outbreak of the war (or the *meḥdal*, as the failure was termed in Hebrew) did not criticize Dayan, and did not find anything wrong in his conduct, after Golda *Meir resigned as prime minister following the publication of the Committee's interim report, Yitzhak *Rabin, who formed a government in June 1974, did not include Dayan in it. Following the 1977 "political upheaval" (*mahapakh*) Dayan, elected to the Ninth Knesset on the Alignment list, decided to leave the Alignment and join the government formed by Menaḥem *Begin as foreign minister, remaining an independent MK in the Knesset until May 1981, when he formed the Telem parliamentary group. As foreign minister, Dayan played a major role in the peace talks with Egypt that led to the historic visit of Egyptian President Anwar *Sadat to Jerusalem in November 1977, to the signing of the Camp David Accords in September 1978, and to the signing of the Israeli-Egyptian Peace Treaty in March 1979. In October 1979 he resigned from the government in protest against the appointment of Joseph *Burg as head of the team to negotiate an autonomy plan for the Palestinians with the Egyptians. The new Telem Party that he formed towards the end of the Ninth Knesset advocated a continuation of the peace process on the basis of the Camp David Accords; continued Israeli military presence in areas vital for Israel's defense; opposition to any territorial compromise in the West Bank and the Gaza Strip, on the one hand,

and the extension of Israeli sovereignty to them, on the other; self-administration for the Palestinians in the territories, on the one hand, and continued Jewish settlement on State lands and land legally purchased. Telem received only two mandates in the elections to the Tenth Knesset.

Dayan passed away in October 1981, four months after the election, and was buried in Nahalal. His daughter, Yael *Dayan, was a novelist and a member of the Thirteenth to Fifteenth Knessets.

DAYAN, YAEL (1939–), Israeli politician, writer, and peace activist, member of the Thirteenth to Fifteenth Knessets. Dayan was born in Nahalal. Her father was Moshe *Dayan and her grandfather Shemuel Dayan, a member of the First Knesset. Dayan first came to the public's notice in 1959, with the publication of her novel *New Face in the Mirror,* written in English and based on her army experiences. This was followed by *Envy the Frightened* (1961), *Dust* (1964), *A Soldier's Diary* (1967), *Death Had Two Sons* (1967), *Three Weeks in October* (1979), and *Avi, Bitoh* (*My Father, His Daughter,* 1986).

Dayan studied international relations at the Hebrew University of Jerusalem, and life sciences at the Open University.

She was first elected to the Thirteenth Knesset in 1992 on the *Israel Labor Party list and served in the Knesset until the Fifteenth Knesset. She was twice chairperson of the Knesset Committee for the Advancement of the Status of Women, where she fought relentlessly against the phenomenon of violence against women and violence in the family. Throughout her membership in the Knesset she also fought openly for the removal of the stigma and inequality of homosexuals and lesbians.

In the Labor Party primaries preceding elections to the Sixteenth Knesset, she did not finish high and together with Yossi *Beilin decided to run on the Meretz list, where she was placed 12th and therefore was not among the six Meretz candidates who won seats. In October 2003 Dayan ran successfully in the elections to the Tel Aviv municipality, subsequently serving as deputy mayor and holding the Welfare portfolio.

From the late 1970s Dayan was active in various peace movements, including *Peace Now, Bat Shalom, the International Center for Peace, and the Council for Peace and Security. She also became active in organizations fighting for human rights in general and the rights of women, homosexuals, and lesbians, in particular. She participated in many meetings with Palestinians, including meetings with Palestinian women. She was among the supporters of the Geneva Document signed by Yossi *Beilin and Yaser Abed Rabbo on December 1, 2003.

[Susan Hattis Rolef (2nd ed.)]

DAY AND NIGHT. The profound psychological effect made on man by the regular change from day to night is a theme in the *aggadah*, epitomized in Adam's fear upon watching the first sunset (Av. Zar. 8a). In the Scriptures and in the *aggadah*, night has negative associations. It is a time of fear and danger, a symbol of death and of the return to chaos (cf. Ps. 91:5–6; Song 3:8). Day has positive connotations. The converse view, however, is also expressed. The day comprehends dangers of its own ("the destruction that wasteth at noonday," Ps. 91:6), whereas night is a time for rest and the renewal of strength. God appears to man at night (Gen. 15:12; Job 4:13); it is "an acceptable time" for prayers also and most appropriate for meditation (Ps. 77:7; cf. "The night was created only for study," Er. 65a).

In contrast to pagan mythology, where sunrise represents a daily contention between opposing forces, in Jewish monotheism, the day-and-night cycle is attributed to a single God who "forms the light, and creates darkness" (Isa. 45:7), "who changes the times," and "who removes the light from before the darkness and the darkness from before the light" (beginning of the evening prayer). The special religious significance attached to this periodicity can be observed in the Temple rites of regular morning and evening sacrifices and in the benedictions over the daily cycle in the morning and evening prayers (the benediction "Creator of the luminaries" in the morning prayer, and the benediction "Who brings the nights" in the evening prayer). Every morning, when darkness disappears before the light, the initial act of creation is renewed. In biblical cosmogony, the concept that at first there was "darkness on the face of the abyss" compares with a similar view on the origin of the universe of other early cultures. In contrast to Greek mythology, however, it is not the darkness, or the abyss, that "gave birth" to the light. The day was created by the order: "Let there be light." The halakhic postulate "the day goes after the night" is based on this antecedence of darkness to light and of night to day (Gen. 1:5). The 24-hour cycle starts at sunset; Sabbath and festivals begin in the evening, and terminate at the start of the following night (a number of specific day-only fasts, however, start at dawn; see *Fast Days). Certain concepts, dating probably from the pre-biblical period, reflect the belief that day is the basis of all that is good; these concepts have entered the Bible (e.g., Ps. 104:2; Dan. 2:22; Isa. 30:26) and the Apocrypha, and more especially gnostic and other writings with a dualistic tendency. Traces of the dualist theory are found in Jewish folklore and it may be assumed that the belief that Jewish redemption will come in an era when

there is perpetual day derives from it. The concept was accepted, at least poetically and symbolically, both in the Bible (Zech. 14:7) and in the *aggadah* (Ḥag. 12a).

During the talmudic and subsequent periods, many superstitious beliefs relating to night took root in Jewish folklore. *Lilith, known in Assyrian and Babylonian mythologies as a flying demon (e.g., in the Epic of Gilgamesh), was the most feared of the evil night spirits and a fiend especially dangerous to women in confinement. Although there is no relation between her name and the Hebrew word *laylah* ("night") the phonetic similarity converted her into a night-demon threatening the lives of newborn babies, especially uncircumcised males; she is also a succubus that clings to men sleeping alone (Shab. 151b). To stave her and other diabolic creatures off, the rabbis forbade people to go out alone at night, especially on Wednesdays and Fridays (Pes. 112b). Charms, amulets, adjurations, and potions, as means of protection against "the terror by night" (Ps. 91:5), were widespread in many Jewish communities until quite recently.

The *halakhah* attaches great importance to the day-and-night cycle. Many *mitzvot* may only be performed during the day, e.g., circumcision, the sounding of the **shofar*, putting on the *tefillin* (phylacteries), *lulav* ("the taking of the palm-branch"), the laying of the hands on, and the slaughtering of, sacrifices, genuflective prayer, testimony and judgment, the construction of the Temple, and others.

The Bible does not clearly define day and night or their divisions, such as "evening, morning, and noonday" (Ps. 55:18), the watches of the night (Ex. 14:24; Judg. 7:19), midnight or half the night (Ex. 11:4; 12:29), and the notion of "hour" is not mentioned at all. The duration of a "halakhic" day is from dawn until the appearance of the stars, i.e., a full solar day; it is divided into secondary periods, according to three systems:

(a) Every day (and every night) is divided into 12 "variable" ("זמניות") hours, no matter what season it occurs in; the duration of the hour is therefore dependent on the yearly season (Sanh. 38b). Ultra-Orthodox Jews in Israel follow this system to the present day.

(b) The entire day (day and night) is taken as one unit and is divided into 24 standard and fixed hours of 60 minutes each, as in the commonly accepted time system. The division of day and night into fixed hours, with a specific duration, is mentioned for the first time in the literature of the *tannaim* (see, e.g., Mekh. SbY to 12:29: "He is seated on the sundial [a time device probably introduced into Ereẓ Israel during the Hellenistic period] and shows the hours with an accuracy that is within a hair's breadth"). The notion of an "hour" as an undefined and not standardized lapse of time has, however, been maintained in the Mishnah ("The early pietists waited an hour.…"; Ber. 5:1). Though it was only theoretical, there was also more detailed division; an *onah* ("term") is 1/24 of an hour, an *et* ("period") is 1/24 of an *onah*, and a *rega* ("moment") is 1/24 of an *et* (Tosef., Ber. 1:3). In this classification the *rega* is approximately 1/4 of a second. The rabbis, therefore, said that "a human being … does not know his *ittim* [plural of *et*], *rega'im* [plural of *rega*], and hours … but God … entered into it by a hair's breadth" (Gen. R. 10:9). A different, more precise calculation existed in Ereẓ Israel: "How much is a *rega* – 1/58,888 of an hour" (Ber. 7a). A wide literature, notably the *Baraita de-Shemuel*, deals with such time calculations within the framework of astrological research. Another division of the hour is into 1,080 parts; this is also very ancient and is based on the lunar month.

(c) The solar day (alone) is divided according to the changes in the brightness of the sunlight. In this system, the day is divided as follows: dawn, the appearance of the first morning twilight, is the starting point when all precepts to be fulfilled during the day become obligatory. *Halakhah*, however, prefers sunrise to dawn because the commencement of the day presents problems of definition; *haneẓ ha-ḥammah* ("first appearance of the sun") occurs after dawn and precedes *zeriḥah* by the period of time it takes to walk a *mil* ("mile"). At that time, the pious read the *Shema. Zeriḥah* – full sunrise – is the moment when the entire sun appears over the horizon. Sunset is the moment when the entire sun disappears below the horizon. Evening twilight is the light after sunset and it is doubtful whether this period may be called day or night, and diverse opinions have been given by the *tannaim* as to its exact nature and time (Shab. 34b). According to Maimonides (Yad, Shabbat 5:4), the evening twilight begins with sunset and lasts until the appearance of three medium-sized stars, and from then on it is night. R. Tam argues that evening twilight begins from the period it takes to walk three and a quarter *mil* after sunset to the appearance of the stars. Until then, it is still day. In the Shulḥan Arukh (OḤ 261), this second opinion is accepted as binding. According to a third opinion, held by some of the early commentators, night begins immediately with sunset and the evening twilight is a period prior to sunset, lasting the time it takes to walk three and a quarter *mil*.

The *halakhah* used systems (a) and (b), while (c), which is the most ancient and is based on the direct observation of the movement of the celestial bodies, is only of secondary importance. All the hours and time concepts associated with the precepts are "variable." According to Mordecai *Jaffe's *Levush* and *Elijah ben Solomon of Vilna, the hours of the day are calculated from *zeriḥah* to *sheki'ah* (sunset); the majority of opinions, however, maintain that the calculation is from dawn until the appearance of the stars. The Shulḥan Arukh decides in favor of the second opinion. In the same way as the day, the night is divided into "variable" hours (there are three watches in three parts of the night), but this division is devoid of any practical importance, except for "the middle of the night," which is the time for reading *Tikkun Ḥaẓot* (the midnight prayer). "To keep a man away from sin," the rabbis limited to midnight the time for performing a number of precepts which otherwise could have been fulfilled during the whole night (Ber. 1:1).

The "standard" hours (according to system b) are used in *halakhah* to set related periods of time, such as "six hours"

between the eating of meat and milk, "one hour" for the salting of meat, and many others.

[Israel Moses Ta-Shma]

DAY OF ATONEMENT (Heb. יוֹם הַכִּפּוּרִים, *Yom ha-Kippurim*), one of the "appointed seasons of the Lord, holy convocations," a day of fasting and atonement, occurring on the Tenth of Tishri. It is the climax of the "*Ten Days of Penitence" and the most important day in the liturgical year.

In the Bible

All manner of work is forbidden on the Day of Atonement, as it is on the Sabbath (being likewise called "a Sabbath of solemn rest"), and the soul is to be "afflicted" ("from the evening of the ninth day of the seventh month until the evening of the morrow"), the punishment for transgressing these commandments being destruction and extirpation (Lev. 16:29–31; 23:27–32; Num. 29:7). Special additional offerings were to be brought (Num. 29:8–11), and, apart from these, a ceremony peculiar to the day (see **Avodah*) was solemnized in the Temple (Lev. 16:1–34). The essence of the day and the reasons for the ceremony are expressed by the verse: "For on this day shall atonement be made for you, to cleanse you; from all your sins shall ye be clean before the Lord" (Lev. 16:30). In the Jubilee year the *shofar* is to be sounded on the Day of Atonement to indicate the setting free of slaves and the restoration of the fields to their ancestral owners (Lev. 25:9–10).

In the Second Temple Period

The ritual performed by the high priest in the Temple was the central feature of the Day of Atonement (see **Avodah*; *Sacrifice). When the high priest, representative of the people (Yoma 1:5), "entered where he entered and stood where he stood" (5:3), while all feared for his life (5:1), he himself was enveloped in awe, holiness, and mystery; while when he had come out, he resembled, in his majesty, "a bright star emerging from between clouds" (Ecclus. 50:6 ff.). It is certain that during the time of the Second Temple the Day of Atonement was already considered the greatest of the festivals. It is related that none of Israel's festive days compared with the Fifteenth of Av and the Day of Atonement, on which days the daughters of Jerusalem would go forth, dressed in white, and dance in the vineyards – "And what did they say? – 'Young man! Raise your eyes and behold what you choose for yourself'" (Ta'an. 4:8; and see below). According to the calendar of the Book of Jubilees, accepted by the *Dead Sea Sect, the Day of Atonement usually occurred on a different date from that kept by the remainder of Israel; and it is told that "the wicked priest" persecuted the members of the sect and "appeared amongst them just at the fixed time of the season of the rest of the Day of Atonement, to destroy them and to lead them astray on their fast day of Sabbath of rest" (Pesher Hab. 11:4–8).

In the *Halakhah*

The Pentateuch does not explain what is to be understood by "afflicting the soul" on the Day of Atonement. However, other passages in the Scriptures speak explicitly of afflicting the soul by fasting (Ps. 35:13; Is. 58:3, 5, 10; but cf., however, Num. 30:14; and see Yoma 74b). According to the sages, there are five ways in which the duty of afflicting the soul applies: by prohibitions against eating and drinking, washing oneself (for pleasure), anointing the body, wearing shoes (of leather), and cohabitation (Yoma 8:1; Yad, Shevitat Asor 1:4; 3:9). The penalty of extirpation, however, applies only to eating, drinking, and working (Yoma 74a). The same kinds of work are forbidden on the Day of Atonement as are forbidden on the Sabbath (Meg. 1:5), and danger to life (*pikku'aḥ nefesh*) overrides all the prohibitions of the Day of Atonement just as it does those of the Sabbath. Children are exempted from all modes of affliction, except the wearing of shoes. However, both in the time of the Second Temple, as well as in the Middle Ages, there were those who insisted that children also observe the "laws of affliction" in opposition to the view of the sages that it is one's duty to feed them with one's own hands (Tosef., Kippurim 4 [5]:1–2; Sof. 18:7; *Sefer ha-Yashar* of R. Tam responsa, ed. F. Roschthal (1898), 51:2, 52:2). Only a few years before they reach the age at which they are obliged to fulfill commandments (13 years for a boy and 12 years for a girl) should one begin to accustom them gradually to keep these laws. According to the *Karaites, children, too, are to be afflicted (*Eshkol ha-Kofer* of Judah Hadasi (1836), no. 135). Since the Day of Atonement is regarded as a "festive day," one is bound to honor it by wearing clean clothes (Shab. 119a; see below).

According to the sages, the goat dispatched to *Azazel as part of the Temple ritual on the Day of Atonement atones for all transgressions (Shev. 1:6), whereas after the destruction of the Temple, the Day itself atones (Sifra, Aḥarei Mot 8:1). However most of the sages are of the opinion that even the atonement of the goat was only effective for him who repented, for the Day only atones when accompanied by repentance (Yoma 8:8–9; cf. Yad, Teshuvah 1:2–4). This is the source of the custom of asking forgiveness of one another on the eve of the Day of Atonement. The sages hold that the fate of every person, which has been left pending from *Rosh Ha-Shanah, is finally determined on the Day of Atonement (Tosef., RH 1:13; cf. Yad, Teshuvah 3:3), and hence one should repent during the Ten Days of Penitence, and particularly on the Day of Atonement (*ibid.*, 2:7). The Day of Atonement is the only one of the appointed seasons which has no second day in the Diaspora. This is because of the extreme difficulty of fasting for two successive days. However, there were those who were strict and fasted both days (TJ, RH 1:4; RH 21a; Isaac b. Moses of Vienna, *Or Zaru'a*, 2 (1862), no. 281). The laws of the Day of Atonement remained essentially the same during the Middle Ages as they were in the days of the Second Temple and in the mishnaic and talmudic periods. Additions and variations were limited to the domain of customs and prayers.

Prayers

No definite knowledge is available about the Day of Atonement prayers during the period of the Second Temple. The few defective remnants of the Day of Atonement prayers among the writings of the Dead Sea Sect (Barthélemy-Milik, 1 (1955), 152–4) do not suffice to give a clear picture of the scope and content of the sect's prayers on this day. According to Philo (Spec. 2:196), it was already customary in the time of the Second Temple to spend the whole day, from morning to evening, in prayer. The Day of Atonement is the only day of the year which has five **Amidah* prayers: Evening, Morning, *Musaf*, Afternoon, and *Ne'ilat She'arim* ("Closing of the Gates," shortened to **Ne'ilah*). During the time of the Second Temple prayers were also said five times a day on *Fast days and **Ma'amadot* (Ta'an. 4:1). This is perhaps the source of the Muslim custom of praying five times a day (but see L. Ginzberg, *Peirushim ve-Ḥiddushim ba-Yerushalmi*, 1 (1941), lxxii). The prayers for the Day of Atonement begin in the evening with **Kol Nidrei*. The subject of the distinctive middle blessing of the *Amidah* prayer of the Day of Atonement is God's pardoning, forgiving, and granting atonement for Israel's iniquities (see, e.g., Sof. 19:4). The prayers of the Day of Atonement and of the New Year have many common features, and at times some of the prayers peculiar to the New Year have passed into the prayers of the Day of Atonement.

Especially characteristic of the Day of Atonement prayers is the duty of *confession. Though statutory on "the eve of the Day of Atonement close to nightfall," confession is made both prior to the last meal before the fast ("lest he become confused while eating and drinking"), and after it ("lest some mishap occurred during the meal"), as well as at each of the Day of Atonement services, the individual saying it after the *Amidah* proper and the reader in the middle of it (Tosef., Kippurim 4:14). Confession is now said once in the afternoon prayer on the eve of the Day of Atonement and ten times during the Day itself. Forms of confession are already to be found among the *amoraim* (Yoma 87b; TJ, Yoma 8:9, 45c), some of which are currently in use. Versions written alphabetically have been preserved from the early Middle Ages. The short form of confession ("We have trespassed, we have dealt treacherously," etc.) would appear to have originated already in the days of the *amoraim*, whereas the long form of confession ("For the sin wherein we have sinned," etc.) dates from a somewhat later period. However, it was already found in *Yannai (see **Al Ḥet; **Ashamnu*).

In early times many *piyyutim*, especially *seliḥot* and *raḥamim* (entreating forgiveness and mercy), were added to the Day of Atonement prayers and acquired for themselves an important role as part of the "obligation of the day." The *piyyutim* of the **Avodah* ("Order of the Temple Service") occupy a central position in the prayers. Some added special psalms before the morning prayers. Although there are differences of opinion and custom with regard to the details of the *piyyutim* to be said on the Day of Atonement, some saying more and some less, the *piyyutim* and *seliḥot* have greatly endeared themselves to the public. However, there were also rabbis who were opposed to *piyyutim*, preferring in their stead "sermons on the laws of repentance, on religious topics, on wise opinions, and on true beliefs" (Menahem Ha-Meiri, in *Ḥibbur ha-Teshuvah*, ed. A. Sofer (1950), 532). The day concludes with the blowing of the *shofar,* a series of phrases in praise of God, and ends with "Next Year in Jerusalem."

The Reading of the Torah

In the morning service six people are called to the reading of the Torah (Meg. 4:2) from the portion *Aḥarei Mot* (Lev. 16; cf. Meg. 3:5), whose subject is the Day of Atonement. The **maftir* is the section in Numbers dealing with the additional sacrifices of the Day of Atonement (Num. 29:7–11; cf. Tosef., Meg. 4 [3]:7), and the *haftarah* is Isaiah 57, from verse 15 (or 14) until 58:14 (Meg. 31a), in which the prophet describes the ideal fast. During the afternoon service three men are called to the reading of the Torah of Leviticus 18, which deals with incest prohibitions (and which is a continuation of the morning reading of the Torah according to the ancient custom which still exists in Italy). The *haftarah* is the Book of Jonah and Micah 7:18–20, whose subject is ideal repentance and its effect, and God's forgiving mercy (Meg. 31a).

Customs

Many customs have their origin in the Middle Ages, especially among the Ashkenazi Jews. Thus it is customary to arrange the table for the eve of the Day of Atonement in the same manner as the Sabbath (*Sefer Ravyah*, ed. by V. Aptowitzer (1964^2), no. 528); to adorn the synagogue with beautiful drapery (Tur, OḤ 610); to wear white clothes, either in order to resemble the angels (*Sefer Ravyah*, no. 528) or because white is the color of shrouds and will thus inspire repentance by evoking death (Isserles to Sh. Ar., OḤ 610, 4). This last custom also passed into Italy and Provence, and it became a widespread custom to wear a white robe called *kittel*. Even a confirmed repentant is forbidden to wear sackcloth (*Sefer Ḥasidim*, ed. Freimann, 646). Very significant is the custom which originated in Germany in the days of the tosafists, and which became law, to light candles at home and recite a blessing over them. In addition to this candle and to that kindled (according to ancient custom) in order to prevent cohabitation, which is forbidden this day (Pes. 4:4), it has also become customary in some places to light a candle for the souls of the living (Abraham b. Nathan ha-Yarḥi, *Ha-Manhig* (1855), *Hilkhot Ẓom Kippur,* no. 71; cf. E.E. Urbach (ed.), *Arugat ha-Bosem* of Abraham b. Azriel, 3 (1962), 572, notes 35–36) and a candle for the souls of the dead (*Sefer ha-Minhagot* of Abraham b. Saul of Lunel in S. Asaf, *Sifran shel Rishonim* (1935), 152). It also became the custom "to mention the dead on the Day of Atonement and to donate charity in their memory" (Tanḥ., Ha'azinu 1, addendum). In northern France and Germany, after the reading of the Law, they used to publicly announce charitable donations "on behalf of the living and the dead: charity on behalf of the dead is not donated throughout Germany save on this Day" (*Maḥzor Vitry*, ed. S. Hurwitz (1923), 392). The custom of do-

nating for charity was also adopted in Provence, Italy, and Spain, whereas the special prayer commemorating the dead was adopted only among the Ashkenazim and the Italians. Northern France is the place of the source of the custom of wearing a *tallit* also for the evening service, which is even put on while it is still day in order to be able to recite the blessing over it (Rashi, *Ha-Pardes*, ed. by Ehrenreich (1924), 234). In Germany it was fixed that in the evening, just at the beginning of the prayer, "absolution is granted from the ban against praying together with anyone guilty of transgressing any communal regulations" (*Sefer Ravyah*, no. 528). The formula "In the higher [i.e., celestial] assembly and in the lower assembly, with the consent of the Omnipresent and the consent of the congregation, we permit prayers being said together with transgressors" (Tur and Sh. Ar., OḤ 619) was adopted, with minor variations, throughout most of the Diaspora. It was customary, in the main, to recite the *She-Heḥeyanu* blessing in the synagogue on the night of the Day of Atonement before **Barekhu*. Some, however, said the blessing at home, or on the way to the synagogue, or even after the evening prayer. Women recite it when they kindle the festive candles. During the recital of the **Shema*, the words "Blessed be His glorious sovereign Name for ever and ever" are said aloud and not quietly as is usual (*Deuteronomy Rabbah*, ed. by S. Lieberman (1964^2), 69). In Germany the custom of saying the *Amidah* aloud was introduced, and from there comes also the custom that some remain standing during all the Day of Atonement prayers, and some even remain in the synagogue throughout the whole night, reciting psalms, hymns, and praises (*Sefer Ravyah*, 529). In many places, no break at all is made in the prayers during the course of the day, the *Minḥah* service following immediately after the *Musaf* service. Some places are most particular about the choice of a suitable reader, and some have had the custom of having two men stand one at each side of the reader during all the prayers. It is customary to smell spices, the enjoyment of pleasant odors not being forbidden.

The Eve of the Day of Atonement

A special importance was assigned to the day prior to the Day of Atonement, which was regarded already in the period of the Mishnah and Talmud not merely as a preparation for, but as an inseparable part of, the Day of Atonement. The statement, "Everyone who eats and drinks on the ninth [of Tishri] is considered by Scripture as having fasted on the ninth and tenth" (Ber. 8b) means that one should eat and drink well on the eve of the Day not merely to prepare for the fast but also to fulfill the command to rejoice in and to honor the festive day. From ancient times much meat, fowl, and fish was eaten on this day (see, e.g., Gen. R. 11:4), in which one spent less time in study and prayer. Little by little the eve of the Day of Atonement took on the character of a festival, some people desisting from doing any work then. It is customary to send gifts to the poor, and a duty to ask forgiveness from one another and to appease each other. During the geonic period, the custom of ritual immersion on the eve of the Day of Atonement after midday was introduced; this was usually performed before the *Minḥah* service, in any case before the final meal (*se'uddah mafseket*), but there were also other customs. Some said a blessing before the immersion. The opinion of most halakhic authorities, however, has been that a blessing should not be said. Even one who finds it difficult to immerse himself should endeavor to wash in hot water. It is also customary to trim the hair. In Germany and France it was customary after the *Minḥah* service to inflict 39 stripes, while the victim repeated the confession, and the one wielding the lash said "And He being full of compassion forgiveth iniquity" (*Ha-Orah* 1:95; et al.). This also became the custom among the Sephardim. Some visit the cemetery. In recent generations the custom originated in some places of blessing one's children before nightfall. (For customs from the geonic period which have an element of magic, see **Kapparot*, **Kol Nidrei*.)

Termination of the Day of Atonement

The termination of the Day of Atonement was also assigned a special status, similar to that of the eve of the Day. During the geonic era the custom of blowing the *shofar* at the conclusion of the Day of Atonement was adopted, there being differences of opinion about the number of blasts, the time (whether at the end of *Ne'ilah* or after the evening service and *Havdalah*), and the reason for blowing. There are those who contend that the purpose of the blowing is to call attention to the festive and joyous character of the termination of the Day of Atonement; in northern France and Germany, the termination of the Day was considered a festival, it being a religious duty to rejoice and eat abundantly. There were also special table-hymns for the end of the Day (*Sefer Ravyah*, no. 530; *Or Zaru'a* 2, no. 281); and there was also the custom of greeting people with the blessing "May you be answered and your entreaty granted"; "May you be inscribed for life and merit many years" (*Orḥot Ḥayyim*; cf. Judah Halevi, *Divan*, ed. by H. Brody, 3 (1910), 305, in a *seliḥah* for *Ne'ilah*: "May you merit many years, be answered, and have your entreaty granted"). Some have the custom to begin building the booths for *Sukkot as soon as the Day of Atonement terminates (Isserles to Sh. Ar., OḤ 624:5).

The Meaning of the Day – The Day of Atonement in Philosophic, Aggadic, and Belletristic Literature

In the Pentateuch there is no reference to mourning practices on the Day of Atonement. On the other hand, the Book of Jubilees maintains that the Day of Atonement, the one day in the year when forgiveness is granted to all who repent fully (Jub. 5:17–18), was established on the day that Jacob heard of Joseph's death and mourned for him. For this reason one should always be sad on this day (Jub. 34:17–18), and atonement is made with a male goat as a reminder of the male goat which Joseph's brothers slaughtered and in whose blood they dipped his shirt. This conception of the Day of Atonement as a day of sadness is peculiar to the author of the Book of Jubilees and does not appear elsewhere in Judaism except among

many Karaites who instituted mourning practices on the Day of Atonement.

*Philo was the first author to discuss profoundly the significance of the Day of Atonement. In his opinion it is the greatest of the festivals as in it, being both a festival and a time of repentance and purification, true joy is to be found. In contrast to many other people, Philo maintained that true joy is not to be found in overeating and overdrinking, feasting and reveling, and dancing and music, which in reality only stir up man's lowest desires and lusts. The Day of Atonement, on the contrary, is defined by abstinence and devotion to praying from morning to night. The purpose of the fast is to purify the heart of people who pray without being disturbed by corporal desires, and entreat their Maker's forgiveness for their past sins and His blessing for the future. Philo testifies that all, not only those devoted to piety, but even those who are not distinguished at all on other days by the fear of heaven, fear the sanctity of the Day and observe it, evildoers standing together with the good in the struggle to subdue the evil inclination (Philo, Spec. 1:186–8; 2:193–203; Mos. 2:23–24).

The sages too regarded the Day of Atonement as the supreme festival and the greatest day of the year (Gen. R. 2:3), hence its names: "The Great Day" (or, in abbreviation, "The Day"), and "The Great Fast" (Ta'an. 4:8; Tosef., Ḥul. 5 [6]:9; Sifra, Aḥarei Mot 8:9, but cf. Men. 11:9; Sof. 19:4). A day of unparalleled joy, both for God, who gave it to Israel with love (SER 1), and for the children of Israel themselves (SEZ 4), the whole purpose of the Day of Atonement is to atone for those who repent and confess their iniquity. Even one who was far from his home the rest of the year endeavored to return to his wife and family in order to spend the day and the meal of its eve together with them (Ket. 62b, 63a; Shab. 127b). According to the *aggadah*, the Day of Atonement is the day the second Tablets of the Law were given to Moses (SOR 6), and also the day of Abraham's circumcision (PdRE 29); there is also a tradition that it is the day of the **Akedah*, the Binding of Isaac. It was said that even if all the other festivals were to be abrogated, the Day of Atonement, on which the children of Israel resemble the angels, would remain (*ibid.* 46). Satan has no power to accuse the children of Israel on this Day (Lev. R. 21:4). The assembly of Israel, sullied by sins during the whole year, is cleansed on the Day of Atonement (Song R. 1:5) since it is a day of pardon and forgiveness, and atonement is promised even to the completely wicked who repent, for their Maker desires their repentance and greatly rejoices in it. The Day of Atonement is thus regarded not just as a duty but still more as a right; and side by side with the feeling of the great transcendent distance between the sinner and God there manifests itself in an emphatic fashion the conception of His immanent nearness to all His creatures ("Thou dost reach out Thy hand to transgressors; Thy right hand is extended to receive repentant sinners").

During the Middle Ages, the character of the Day of Atonement as a joyful and a festive day did not change, but emphasis was also put upon its character as a day of judgment and justice and as the hour of "signing the verdict." As did Philo and the sages, the medieval philosophers also describe the Day of Atonement as a day when the soul, freed from corporal fetters, attains the peak of its perfection in the service of God (Judah Halevi, *Kuzari*, 3:5; Maim., *Guide*, 3:43; Ha-Meiri, *Ḥibbur ha-Teshuvah*, 427–8, 430, 442; according to Ha-Meiri 439–40, eating on the eve of the Day, too, serves this purpose).

In all generations halakhic sages, thinkers, and moralists deprecated lengthy praying when achieved at the cost of understanding and devotion. At the same time, it is the prayer of the Day of Atonement which expresses the perfection and greatness of the Day. In recent generations the Day of Atonement has become the last concrete bond with Judaism for many Jews.

The honored place allotted to the Day of Atonement in the various branches of the belletristic literature and art also testifies to its leading position both among Jews and among Gentiles who write about Jews. In modern Hebrew literature the Day of Atonement appears as a symbol of Judaism, both when depicting rebellion against Judaism (as for instance in the case of Naḥman, the hero of *Le-An* by M.Z. *Feuerberg), and when depicting the yearning for it. In *Sheloshah she-Akhlu*, D. *Frischmann depicts against the background of the Day of Atonement the wealth of meaning exhibited by the perfect world of Judaism, even from the standpoint of humanity as a whole, in contrast to the ludicrous emptiness of the world of the superficial *maskilim*. In his tale *Neshamot Illemot: 4 Nissim al ha-Yam*, I.L. *Peretz depicts the Day of Atonement as the only symbol of the simple faith of Satyah, the plain common Jew living among Gentiles. However, in his story "*Niggun Ḥadash*," the Day of Atonement expresses the contradiction between the bright, heavenly ideal and the gloomy, human reality. A.Z. *Rabinovitz in *Ḥalom* brings up the significance of the Day of Atonement in the consciousness of refugees saved from the pogroms, immigrating to Ereẓ Israel, in such a way that even God, as it were, is required by them on this day to justify His conduct of the world. The Day of Atonement plays a most important part in the works of S.Y. *Agnon. Reflected against the ideal and profound nature of the perfect Day of Atonement of the past (*Ba-Derekh; Zikkaron ba-Sefer* – the introduction to *Yamim Nora'im, Days of Awe*, 1965), Agnon brings up its problematic significance in a world broken and shattered both without and within (*Ore'aḥ Natah Lalun; Im Kenisat ha-Yom; Eineinu ha-Ro'ot*). On the one hand, the power of the Day of Atonement is so great that even the dead share a part in it with the living (*Bi-Meẓulot*); that man clothes himself with a different soul (*Eẓel Ḥemdat*); and that even his sick body is healed by it (*Lefi ha-Ẓa'ar ha-Sakhar*). On the other hand, however, not everything depends upon the Day itself, for a man could forfeit the Day of Atonement without Torah and prayer – an irrecoverable and irreplaceable loss (*Pi-Shenayim; Tallit Aḥeret*).

[Moshe David Herr]

Day of Atonement as Annual Day of Purgation in Temple Times

The Day of Atonement was the annual "day of purgation." The key to the meaning of the purging is the realization that (1) the sacrifices are of one type, called *ḥattat* or "purification offering" (actually designated *ḥattat ha-kippurim* in Ex. 30:10 and Num. 29:11); and (2) the three *ḥattat* animals employed are offered on behalf of two different groups: the bull is for the priesthood (Lev. 16:6, 11) and the two goats are for the people (16:5, 15).

FIRST PURPOSE: PURGING THE TEMPLE. According to the Mishnah: "All the goats make atonement for the impurity of the Temple and its sancta.... For impurity that befalls the Temple and its sancta through wantonness, atonement is made by the goat whose blood is sprinkled within [the shrine, or Holy of Holies] and by the Day of Atonement; for all other transgressions specified in the Torah – minor or grave, wanton or inadvertent, conscious or unconscious, of commission or omission ... the scapegoat makes atonement. The atonement is alike for Israelites, priests, or the anointed [high] priest ... the blood of the bull makes atonement for the impurity of the Temple and its sancta" (Shevu. 1:4–7). Despite the expansion and reinterpretation of the ritual of the Day of Atonement during the Second Temple period, the Mishnah is a reliable guide to the interpretation of the biblical account of the ritual, because the function of the sacrifice never changed. This Mishnah shows that an objective of the slain *ḥattat* animals was to purge the sanctuary of its impurity, and that the function of the live *ḥattat* goat, the one that was dispatched to *Azazel, was to purge the people of their sins. This distinction is corroborated by the biblical text expressly declaring that the purpose of the slain bull and goat is "to purge the shrine of impurities [*mi-tumot*] and transgressions" (Lev. 16:16, cf. 16:19), and that of the scapegoat is to carry off all their "iniquities" (*avonot*) and "transgressions" (*pesha'im*; Lev. 16:21). The Hebrew word *pesha'im*, which appears twice in this context, is found nowhere else in the entire priestly code. It has been suggested that this word has been borrowed from the world of politics where the verb פשע (*pasha*) means "to rebel" (e.g., II Kings 3:7; 8:20), and its application to the ritual of the Day of Atonement would point to a further basic function of the prescribed *ḥattat* offerings, alluded to by the Mishnah: to purge the Temple and the people of their *pesha'im*, their rebellious sins.

THE PRIESTLY TEMPLE THEOLOGY. The purpose of the purification offerings of the Day of Atonement could then only be understood in conjunction with two complementary postulates: (1) Whoever brazenly rebels against God is not eligible for sacrificial expiation (Num. 15:30–31), but the Temple must be purged of his sins and impurities. Moreover, the purging is urgent since his sins, committed wantonly, possess the additional power not only of contaminating the outer altar but of breaching the sanctuary and penetrating to the very shrine (Holy of Holies). Thus, on the Day of Atonement the entire Temple complex must be purged. (2) The private purification offering (Lev. 4; see also *Sacrifices) is presented for the *she-gagah*, the inadvertent sin (and for severe physical impurity stemming from natural causes; Lev. 12–15).

THE TEMPLE AND AZAZEL. A third implication of the above Mishnah is that the two categories of purification offering – the slain, whose blood purges the Tabernacle, and the live, which expiates the people's sins – are two inseparable parts of a unified ceremonial. That this unity is not an anachronistic retrojection of rabbinic Judaism but is a verifiable biblical reality is confirmed by the coexistence of the two categories within the same ritual in both an ancient-Near-East and in another biblical ritual, which will be described below.

Temple purifications dominate the cultic landscape of Israel's environment. The ancient pagans feared impurity because they imputed to it demonic power. Impurity was an unending threat to the gods themselves, and to their temples, as revealed by the images of the protector gods (the *šêdu* and *lamassu* in Mesopotamia and the lion-gargoyles in Egypt) set before the entrances of temples and palaces and, above all, by the elaborate purgation rituals to rid the buildings of demons and prevent their return (examples from Pritchard, Texts: *Egyptian*: pp. 6–7, 12–14, 327 no. 6; *Hittite*: pp. 346, 351–3; *Mesopotamian*: pp. 33–34 lines 381–2, pp. 334–8 lines 14–16, pp. 60–72 tablet 1 lines 61–64, tablet 4 lines 61–62, 91, tablet 7 lines 32–33). The antiquity and ubiquity of the Azazel rite are even more striking. However, it has apparently not been observed that the two rites usually go together. Since impurity was demonic its exorcism was not enough: its power had to be removed. This was accomplished in one of three ways: curse, destruction, or banishment. The last was often used; rather than the evil being annihilated by curse or fire, it was banished to its place of origin (e.g., netherworld, wilderness), or to some place where either its malefic powers could work in the interests of the sender (e.g., enemy territory), or where it could do no harm at all (e.g., mountains, wilderness). Thus the scapegoat was sent to the wilderness which was considered uninhabited except by the satyr-demon *Azazel. A parallel example of banishment is found in the famous New Year festival in Babylon (Pritchard, Texts, p. 333 lines 345–61).

In these cases there is an integral connection between the actual purging (by aspersions, smearing, and incense) and the transfer of the released impurity onto a decapitated ram and its banishment via the river (see also Deut. 21:1–9). Similar motifs, common to Babylonian and biblical purification texts (especially in Lev. 14), indicate that the purgation-expulsion nexus essential to pagan magic could have obtained early in Israel's cult as well, but with a different meaning.

SECOND PURPOSE: PURGING THE PEOPLE. Though the purgation and Azazel rites of Israel's Day of Atonement differed little from their Near Eastern analogues, their meaning underwent a revolution. As scholars have noted, the rites are

discrete: the slain *ḥattat* animals suffice to purge the Tabernacle, but the live *ḥattat* carries off the sins of the people. The reasons are clear: Israel, the holy people (Lev. 11:44; 19:2; 20:26), needs the same purification as the holy place for "they shall not contaminate their camp in whose midst I dwell" (Num. 5:3b). Moreover, the monotheistic dynamic is at work here: since the world of demons is nonexistent for Israel the only source of rebellion against God is in the heart of man, and it is there that cathartic renewal must constantly take place.

The Azazel ritual stipulates that "Aaron shall lay both his hands upon the head of the live goat and confess over it all the iniquities and transgressions of the Israelites, whatever their sins, putting them on the head of the goat; and it shall be sent off to the wilderness…" (Lev. 16:21). Ordinarily, the hand-laying and confession must be performed by the offerer himself (see *Sacrifices), but the perpetrator of *pesha*, rebellious sin, is barred from the sanctuary according to the priestly rules, and must be represented by the high priest. The latter's officiation should not be regarded as inherently efficacious; the people, though excluded from the rites, must submit to fasting and other acts of self-denial (Lev. 16:29; 23:27–32; Num. 29:7). The verbal confession of the high priest must be matched by the remorse of the people. Thus, repentance purges man, as the *ḥattat*-blood does the sanctuary. Unless man makes the initial effort toward his self-regeneration, the rite of Azazel is of no avail. Nor can his purgation by repentance be a perfunctory exercise (Yoma 8:9; see also below).

This ethical achievement is, thus far, unparalled in the ancient world. True, the Babylonian New Year calls for ritual of humiliation for the king, followed by his prayer of confession, but in contrast with Israel's high priest who in his confession specifies all the failings of his people, the Babylonian king appears arrogant and self-righteous. It was only the Jew who could say that "God … has given to repentance the same honor as to innocence from sin" (Philo, Spec. 1:187).

Finally, atonement by sacrifice is only efficacious for sins against the Deity. This also holds true on the Day of Atonement. The Mishnah again has captured the ethical import: "For the sins between man and God, the Day of Atonement effects atonement, but for the sins between man and his fellow, the Day of Atonement will effect atonement only if he has appeased his fellow" (Yoma 8:9). That this spiritual principle is not an innovation of the rabbis but constitutes their legacy from biblical times is shown by its explicit presence in the *asham* offering, where restitution to man must precede sacrificial expiation from God (Lev. 5:20ff.).

THE EMERGENCE OF THE DAY. The Day of Atonement itself may not be as old as its individual ceremonial elements. For example, in distinction from all other festival prescriptions which give the date before the ritual (e.g., Lev. 23), here alone the date is not specified until the end (16:29) and the term "Day of Atonement" is lacking. It has been suggested that there is evidence that points to the evolution of an original rite for the purging of the sanctuary at an unspecified time one day a year (Lev. 16:34) into an annual day for the purging of the sanctuary and the atonement of individual Israelites (Lev. 16:29). An exact date for the named "Day of Atonement" appears in Lev. 23:27–28; 25:9.

Given the contentious nature of source analysis, scholars are not sure when the Day of Atonement came into being. Elements in the day's rituals have Hittite parallels that might point to great antiquity (COS I, 161–63). At the same time, given the general conservatism of ritual, late texts may preserve ancient elements while introducing new features, which, when identified, bring us closer to the actual time of composition. A formal indication that earlier material is being updated is the phrase *ḥukkat olam* (Lev. 16:31, 34; Knohl (1987), Sperling (1999)). Material evidence of lateness is indicated by the requirement of Aaron to wear breeches, or short trousers (*mikhnasayim*; Lev. 16:4). Trousers, mentioned only in the Priestly Code and Ezekiel, were an Iranian invention unlikely to have come to the attention of Jews before the sixth century (Sperling (1999)). Likewise indicative of lateness is the role of Aaron as priest. Although the original figure of Aaron is pre-exilic (e.g., Micah 6:4), scholars have long observed that Aaron is never identified as a priest in the prophetic literature of the pre-exilic period. Ezekiel, the priest-prophet of the exile, confers legitimacy only on the priestly line of Zadok (Ezek. 44:15–16), but knows nothing of Aaronide priests.

Yet another indication of the lateness of the Day of Atonement is its absence from the festival lists of Exodus 23, 34, and Deuteronomy 16.

The evidence from Ezra-Nehemiah is particularly significant because the book mentions Rosh Ha-Shanah and Sukkot but omits the Day of Atonement (Neh. 8–9). Inasmuch as the author of Ezra-Nehemiah was surely aware of much of the Priestly source, the Day of Atonement is most likely part of that source's latest stratum.

Thus, the Day of Atonement is later than the Exile.

DAY OF THE LORD, a definite, though undetermined, point of time in the future, when God is expected to punish the wicked and justice will triumph. The term "Day of the Lord" serves as a key word in nine prophetic passages (Isa. 13:6–13; Joel 1:15; 2:1; 3:4; 4:14; Amos 5:18–20; Obad. 15; Zeph. 1:17–18; Mal. 3:23); in others it appears in some slightly varied form (see e.g., Isa. 2:12; Ezek. 30:3; Zech. 14:1–9). The prominent feature of these passages is a dramatic sense of doom, underlined by a few characteristic motifs, such as darkness and wailing. The usual message of these prophecies asserts that the Day of the Lord is near. From the polemic of Amos (5:18–20) against those who desire the Day of the Lord it is evident that the concept was well established by the time at which the so-called "writing" prophets started to function, and that an optimistic version was somewhat popular (presumably with patriotic overtones). Scholars have tried to utilize the term for their general theories on biblical *eschatology, or to find some hypothetical, non-prophetic origin of the concept. Thus according to Mowinckel and others, the Day of the Lord was originally a New Year festival; L. Černý suggests that it was a fateful, disastrous day; and von Rad presumes that in the early sacred wars of Israel, God was considered to reveal His will in battle, and therefore any battle was called a Day of the Lord. The last suggestion can find some support in Ezekiel 13:5, where a metaphorical battle, visualized as having taken place in the past, is referred to by the term Day of the Lord.

The main, though largely undiscussed, difficulty concerning the Day of the Lord is that of its significance. The passages do not convey a concept amenable to logical analysis, nor an eschatological doctrine. The warning is given that the Day of the Lord is near, but the more abstract idea involving history's drawing to a close is not indicated. The wicked will be punished, justice established, mankind confounded, and its destiny somehow definitely changed. However, none of this seems essential to the notion itself. Nor is the concept related to expectations of theophany. The prophets simply confront their listeners with the awful certainty of future Divine action. Thus in the expression "Day of the Lord" there is a rather vague but stark and powerful concept: God will indeed act – suddenly, decisively, and directly, in a single day, with vehemence and terror.

[Jacob Licht]

DAYTON, city in S.W. Ohio. Dayton's Jewish population in the mid-1990s was estimated to be 5,500 and by 2005 some 5,000 in a total population of around 160,000, down from around 7,500 in 1970. Like many smaller cities in Ohio, Dayton has been losing its Jewish population as manufacturing and other job opportunities open up in the South and the West, elderly Jews leave for warmer climates, and young natives who go off to college do not return home.

The first Jews to settle in Dayton came from Germany in the 1840s. They founded the first synagogue, Bnai Jeshuran, in 1850. The synagogue joined in the formation of the Union of American Hebrew Congregations in 1873 and adopted the Reform ritual. The first B'nai B'rith chapter was established in 1864. Traditional Judaism began in the 1890s with the arrival of Jewish immigrants from Eastern Europe. They established two synagogues, Beit Abraham and Beit Jacob, based upon the traditions of their native Lithuania and Romania. They also established a Hebrew school and Zionist societies. Gradually many other benefit societies, women's organizations, and landsmanschaften developed. The first Federation of Jewish Charities was formed in 1910. In 1944 the various social welfare agencies of the Jewish community were coordinated into the Jewish Community Council, which became the local agency of the United Jewish Appeal and the central organization for the Jewish Home for the Aged, the Jewish Community Center, the Community Relations Council, and the Dayton Community Hebrew School. The marked differences between German and Eastern European Jews gradually faded and all segments of the community worked together, especially on behalf of Israel and overseas Jewry.

Members of the Dayton Jewish community have made important contributions to the cultural life of the general community. Paul Katz was the longtime director of the Dayton Philharmonic; Sidney Kusworm served as a member of President Truman's Civil Rights Commission, and as a national officer of B'nai B'rith; Robert Nathan served as an adviser to four American presidents; Miriam Rosenthal served as a planner for the University of Dayton. Temple Israel, which was an outgrowth of Bnai Jeshuran Synagogue, was at one time an outpost of classical Reform but in recent years it has moved toward Jewish tradition. A second Reform synagogue, Congregation Beth Or, was established in 1984 in Washington Township. Beth Abraham has affiliated with the Conservative movement. There were two Orthodox synagogues, Beth Jacob and a Young Israel Synagogue, which closed in the early 21st century; the latter had been attended mainly by scientists and professionals who had settled in the community. Chabad also serviced the community and there were several ḥavurot. There were several synagogues in nearby communities. In 1961 the Hillel Academy, a widely recognized progressive Jewish day school combining religious and secular studies, was established at the Conservative synagogue.

Among the community's amenities is the Jewish Community Complex. The Complex serves as the central loca-

tion for the Jewish Federation of Greater Dayton and its departments: Covenant House resident care facility, the Jewish Community Relations Council, the Dayton Jewish Community Center, the Dayton Jewish Education Commission, the *Dayton Jewish Observer,* Jewish Family Services, United Jewish Campaign, Women's Division, and the Dayton Jewish Federation Foundation.

In 1992, the Federation opened the JCC on Far Hills Ave. In the fall of 2002, the Federation expanded its services, with the opening of the Center for Jewish Culture and Education in Centerville to meet the needs of the South Jewish community.

Through the efforts of the community's leaders, recent years have been marked by a renewed spirit of unity among Dayton's Jewish congregations. Collaborative holiday celebrations, shared education programs, Hillel Academy Jewish day school, B'Yachad supplementary high school for Jewish studies, and the new Melton Adult Mini School are part of its educational matrix.

[Jack Reimer / Larry Skolnick (2nd ed.)]

DAYYAN, Syrian family claiming descent from King David. The Dayyan family's origin can be traced to a branch of the house of Josiah Ḥasan ben Zakkai, brother of the exilarch David (?917–940). One of his descendants, SOLOMON BEN AZARIAH, settled in *Aleppo, and his family there occupied the position of *nasi*, the title of the House of David. The first to be known with the family name is MOSES BEN SAADIAH DAYYAN in the 16th century. His son, MORDECAI (b. 1541), was a member of the *bet din* of Samuel *Laniado. Even after many Spanish refugee scholars settled in Aleppo, the Dayyan family continued to be held in great esteem. Some of them held key positions in religious and communal life.

One of the most important members of the family in Aleppo was ISAIAH (d. 1830), *ḥakham*, scribe, and *mohel*. His son ABRAHAM (d. 1876) was a distinguished rabbi and the author of *Shir Ḥadash* (1841), a commentary on Psalms; *Zikkaron la-Nefesh* (1842), ethical writings; *Holekh Tammim u-Fo'el Ẓedek* (1850), sermons and responsa; *Ta'am* (1867), sermons; and *Yosef Avraham* (1863), responsa. He also wrote sermons and commentaries on *Ein Ya'akov* and the Zohar, which are extant in manuscript. His son MOSES (d. 1901) wrote *Yashir Moshe* (1879), a homiletic commentary on Song of Songs; in the introduction to this work he traced the Dayyan family lineage. ISAIAH BEN MORDECAI (d. 1903) was head of the *bet din* in Aleppo. In 1888 he founded a Jewish press, which was administered after his death by his sons SAUL, SOLOMON, and ISAAC, and later by his grandson JOSEPH BEN EZRA. AARON (d. 1893) was chief rabbi of the community of Urfa, Turkey, during the 1880s. He was also a merchant and acted as Persian consul. He wrote a book of sermons, *Beit Aharon* (unpublished).

[Abraham David]

The best-known member of the branch of the family which moved to Ereẓ Israel was ḤIYYA BEN JOSEPH DAYYAN (late 17th century), scholar and emissary. His grandfather had emigrated from Damascus to Jerusalem where Ḥiyya was born and educated. He later moved to Hebron. As emissary of that community he traveled to North Africa (1665, 1669) and Italy (1673). While in Mantua, he met Moses *Zacuto who recommended him to his pupil, *Benjamin b. Eliezer ha-Kohen of Reggio. Both wrote poems dedicated to him. In Italy he strongly opposed the Shabbatean movement. Ḥiyya also went to Turkey and Persia as emissary for Jerusalem (1680–96). In 1696, while returning from Persia, he was attacked by robbers near Baghdad who took from him, besides his money and clothes, also the manuscript of his book *Adderet Eliyahu*. However, he found another copy he had made in Aleppo, which he took with him on his last mission to Morocco. In the introduction there is a description of his travels and an autobiography. One of his pupils in Meknès was R. Ḥayyim b. Moses *Attar the Elder.

DAYYAN (Heb. דַּיָּן; pl. דַּיָּנִים, *dayyanim*), judge. In talmudic literature the word *dayyan* (from דִּין, judgment) completely replaces the biblical name for a judge, *shofet*. Although found twice in the Hebrew portion of the Bible (Ps. 68:6 where God is called "the *dayyan* of widows" and I Sam. 24:15), it is essentially an Aramaic word and is used consistently by the Targum for *shofet*. In the Aramaic Ezra 7:25 it is coupled with *shofetim*.

It was possibly this juxtaposition, suggesting a lower status to the *dayyan* as compared with the *shofet* (translated "magistrate" and "judge"), which determined the definition given to the term in the Middle Ages that has persisted to the present day. The term is confined to the members of the *bet din* other than the head of the *bet din*, who is accorded the title of *av bet din* or *rosh bet din*, whereas they are ordinary members of the court. Sometimes elders of the community or guild functionaries were given the title of *dayyan*. **Takkanot*, such as those of *Cracow of 1595 (JJLG, 10 (1912), 331–3), show that these communities maintained courts of *dayyanim* of various degrees of competence, in monetary suits according to the amount involved in the case. In modern times the *dayyan* was also referred to as *moreh ẓedek*, in particular in Eastern Europe. In some communities, like that of *Vilna, the rabbi did not serve on the *bet din* in the modern period, several *dayyanim* being appointed to this office. Only in England has the custom been adopted of according the title *dayyan*, which is regarded as higher than that of the ordinary rabbi, to members of the official religious law courts, particularly that of the chief rabbi.

In the State of Israel *shofet* is used for a judge in the civil courts and *dayyan* for the judge of the rabbinical courts.

DAYYEINU (Heb. דַּיֵּנוּ; "it would have satisfied us"), the refrain of a song of thanksgiving in the Passover *Haggadah. The *Dayyeinu* song, in all rites, starts with the words: "How many are the favors that God has conferred upon us" and proceeds to enumerate 15 (in some rites 16) stages of the redemption of the Jews from Egyptian bondage, including their miraculous survival in the Sinai wilderness, their receiving the laws of Sabbath and the entire Torah, and finally, their being led into Ereẓ Israel and building the Temple. The origin of this litany is uncertain, although some scholars date it back to the late Second Temple period. No mention of it is made in the Talmud or in the Midrash, although some scholars see an indirect reference to it in *Shabbat* 32b. It first appears in the *siddur* of *Saadiah Gaon (ninth century C.E.). While some scholars believe that *Dayyeinu* was inspired by *Sifrei Deuteronomy* (337, 339, etc.), others hold the dependence to be in the opposite direction. The term *"dayyeinu"* is used ironically in Hebrew and in Yiddish and means "That's enough," "I've had enough."

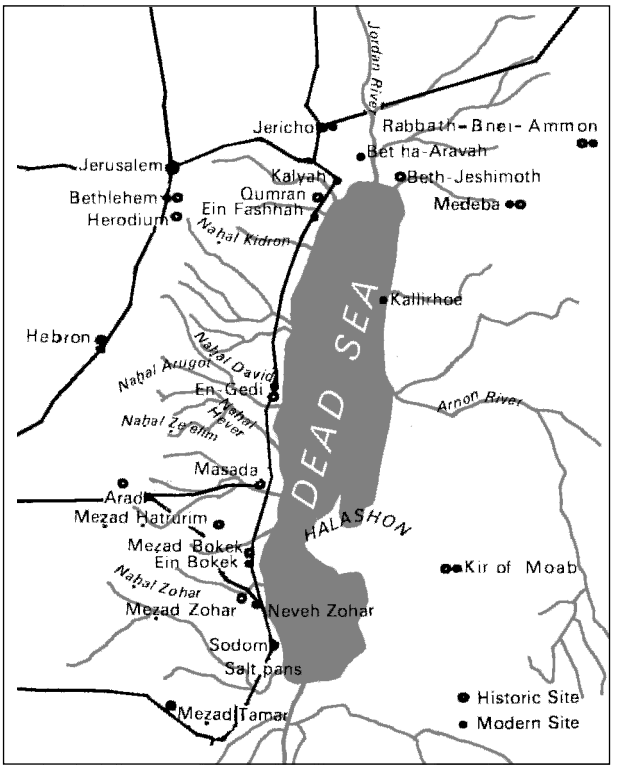
DEAD SEA (Heb. יָם הַמֶּלַח, *Yam ha-Melaḥ*; "Salt Sea"), an inland lake in central Ereẓ Israel. It was created in the Upper Pleistocene Age by the drying up of the Rift Valley Sea (except for the southern end which probably dates to historical times). The measurements of the sea are not constant; its length is about 50 mi. (80 km.), maximum width about 11 mi. (18 km.), and total area about 363 sq. mi. (940 sq. km.). It lies about 1,305 ft. (398 m.) below the level of the Mediterranean and is thus the lowest point on earth (for further details see *Israel: Mineral Resources, Dead Sea Minerals). In the Bible it is usually called *Yam ha-Melaḥ* ("Salt Sea"; Gen. 14:3; Num. 34:3; Josh. 15:2, etc.). The "bay" (Heb. *lashon*, "tongue") of the Dead Sea mentioned in the last citation probably refers to the bays on the northern and southern ends of the sea and not to the Lisān (Halashon) Peninsula which juts out from about the middle of its eastern shore. Alternative biblical names for the sea are *Yam ha-Aravah* ("Sea of the Aravah"; Deut. 3:17; Josh. 3:16; 12:3) and "eastern sea," a term used by the inhabitants of the country west of the Dead Sea to distinguish it from the Mediterranean (Ezek. 47:18; Joel 2:20). In biblical times the western shore of the Dead Sea was included within the Egyptian province of Canaan while the eastern shore was largely uninhabited until the establishment of the kingdoms of Moab and Edom in the 13th century B.C.E. With the Israelite conquest of Canaan, the eastern shore was divided between the tribe of Reuben and the Moabites, north and south of the Arnon, and the western shore was occupied by Judah (the tribe and the kingdom) until 586 B.C.E. After the Babylonian Exile, the entire eastern shore passed into the possession of the Nabateans and the western shore was divided between Judea and Idumea. The Nabateans extracted bitumen from the sea (mentioned in Gen. 14:10) and sold it to Egypt where it was used in embalming mummies. In the Hellenistic period the Dead



The Dead Sea and the surrounding areas.

Sea began to attract the attention of Greek scientists because of its peculiar natural phenomena. It is mentioned by Aristotle in his *Meteorology* (2:3, 39) and also by Strabo (5:2, 42). The common Latin name for the sea, Lacus Asphaltitis (Lake of Asphalt), is first recorded in this period. The successors of Alexander the Great, Antigonus and Demetrius, attracted by the wealth which the Nabateans derived from the sea, tried to subject them, but failed (Diodorus, 19:95–96). Alexander Yannai, on the other hand, succeeded in his military campaigns in conquering the entire area around the Dead Sea and thus secured for his kingdom the income from its products. Navigation developed on the sea in Hellenistic and Roman times; Vespasian's ships pursued the Jews fleeing by way of the sea during the Jewish War (66–70/73). The physical properties of the sea were well known by this time and are mentioned by Pliny, Tacitus, and Solinus. Vespasian ordered a bound man to be thrown into the sea to determine whether he would sink. In the Talmud the Dead Sea was called *Yammah shel Sedom*, "the Sea of Sodom"; according to R. Dimmi, "no one ever drowns in the Sea of Sodom" (Shab. 108b). It was considered the juridical boundary of Ereẓ Israel (TJ, Shev. 6:1, 36c). Throwing an object into the sea was suggested as a means of disposing of a religiously or morally undesirable advantage which a person had received unintentionally (Av. Zar. 3:9; Av. Zar. 49b; Tosef., Dem. 6:13, etc.). The name Dead Sea first appears in Roman times in writings of Pausanias (*Periegesis* 5:7, 4–5) and Galen, who made the most thorough study of the sea and its properties (*De simplicium medicamentorum facultatibus* 4:20). Docu-

ments from the time of the Bar Kokhba War (132–135) found in Dead Sea caves indicate that En-Gedi was the main supply port for the Jewish army during the final phase of the war. In Byzantine times the Dead Sea attracted pilgrims; on the Madaba Map two ships are depicted navigating the sea, one sailing northward with a cargo of salt and the second southward with wheat. The Arabs called the sea Buḥayrat Sadūm wa-ʿAmūra (the Sea of Sodom and Gemorrah) or Baḥr Zuʾār (the Sea of Zoar). The modern Arabic name for the Dead Sea, Baḥr Lūṭ (the Sea of Lot), first appears in the account of the Persian traveler Nasir-i Khusrau in 1047. In Crusader times navigation again increased on the sea; Idrīsī in 1154 mentions small boats sailing on it. Heavy customs duties were levied on goods transported across the sea; the Hospitalers obtained an exemption from them in 1152 which was renewed in 1177. The Dead Sea made a strong impression on European pilgrims who called it "the Devil's Sea." The Arab historian and geographer Yāqūt (1225) refers to it as al-Buḥayra al-Muntina, "the Stinking Sea." It was generally believed that deadly vapors emitted from the water prevented all life in its vicinity but at no time was the land along its shores wholly uncultivated. The large oasis of Zoar to the south was famous for its palm groves. A detailed account of the produce of these groves and of the methods used in their irrigation and cultivation are given in legal documents found in the *Judean Desert caves (second century C.E.) The southern part of the sea – the shallowest – was possibly created by an earthquake which occurred in historical times. This section has generally been regarded as the site of the biblical cities of Sodom and Gomorrah; some scholars, however, locate them farther north. The southern part of the western shore, although barren, was studded with fortifications, such as the Roman forts at Meẓad Bokek and Meẓad Zohar, and above all the fortress of Masada. The fertile oasis of En-Gedi north of Masada produced balsam and many kinds of semi-tropical fruits. On the northwestern shore the Essenes established themselves at *Qumran (Meẓad Hasimin) and Ein Fashkha. On the eastern shore are, from north to south, the oasis of Bet ha-Jeshimot (Khirbat al-Suwayma); the warm springs of Kallirhoe; a fort at Qaṣr al-ʿAsal; and a road station at Beit Nimrin (Rujm al-Numayra) where the road from Kerak to Zoar descends into the valley. Until 1830 a ford was reported to have existed between the Lisān Peninsula and the opposite shore but this later disappeared.

[Michael Avi-Yonah]

In the 19th and 20th Centuries

In the 19th and 20th centuries, the Dead Sea attracted many explorers and scholars. In 1806–07, the German U.J. Seetzen toured its shores and took notes on its morphology and climate. In 1837, the Irishman C. Costigan descended in a boat from Lake Kinneret to the Dead Sea, where he was caught in a storm, thrown up on the Lisān Peninsula, and died of hunger and thirst before aid could be brought. Between 1838 and 1872, the scholars E. Robinson, F. de Saulcy, and B. Tristram conducted research mainly into the region's historical geography. In 1847 the British naval officer T. Molyneux toured the Dead Sea, also going by boat from Lake Kinneret; he fell ill and died a few days later in Beirut. In 1848, an expedition of the American navy led by W.F. Lynch toured the Dead Sea area. Lynch named the two capes of the Lisān Peninsula "Cape Costigan" and "Cape Molyneux"; his own name was in turn commemorated by the German geographer C. Ritter who named the narrows connecting the southern with the northern basin "Lynch Straits." Further travelers who explored the Dead Sea include the geologists L. Lartet (France), M. Blanckenhorn (Germany), E. Hull and G.S. Blake (Great Britain; the latter was murdered by Arabs on the Dead Sea shore in 1940).

On the initiative of M. *Novomeysky, the first potash and bromine works were built in 1930 at Rabbat Ashlag near Kallia in the northwest corner of the Dead Sea by the Palestine Potash Company. A supplementary plant was opened in 1937 at the southern end of the western shore, at the foot of Mount Sedom. Among the pioneers working at both places was a group composed of members of Ha-Kibbutz ha-Meʾuḥad which called itself "Pelugat Yam ha-Melaḥ." A hotel was opened at Kallia in the 1930s. In 1939, the kibbutz *Bet ha-Aravah was established northeast of Rabbat Ashlag. In Israel's War of Independence, the Jewish workers of Rabbat Ashlag and Kallia and the settlers of Bet ha-Aravah found themselves completely cut off by the Transjordanian Arab Legion; during the night of May 19, 1948, they succeeded in evacuating the sites and sailing over the Dead Sea southward to reach the Sedom potash plant in whose defense they participated until the end of the war. In "Operation Lot" (October 1948) overland contact with Sedom was reestablished, and in March 1949 units of the Israeli Army moved along the Dead Sea shore north to the site of En-Gedi which had been allocated to the Jewish state in the 1947 UN partition plan. In 1955, the new Sedom potash plant of the Dead Sea Works began operating after the Beersheba-Sedom highway was completed. In 1995 a new plant for magnesium was established, a joint project of Israeli and German firms. Kibbutz En-Gedi was founded in 1953, and the motor road leading there from Sedom was built in 1956. The Dead Sea region was further integrated into Israel's communications network with the construction of the Arad-Sedom and Sedom-Eilat highways in 1964 and 1967 respectively. These not only aided production and marketing of the Dead Sea Works but also created conditions for the development of the tourism and recreation branch in the region. In the late 1960s a restaurant, hotel, picnic camps, and a museum of the Dead Sea Works were opened at Shefekh Zohar, two large hotels and bathing facilities at Ein Bokek making use of medicinal springs and thermal mud, a museum at the foot of Masada Rock, a nature reserve and nature study center at En-Gedi, youth hostels, etc. The occupation of the Judean Desert and the entire west coast of the Dead Sea by Israel in the Six-Day War made the region again easily accessible from Jerusalem.

According to measurements taken from 1818, the level of the Dead Sea waters rose, until 1898, by 36 ft. (11 m.), but since that time it has steadily fallen. Between 1930 and 1997, for example, the water level fell by 100 ft. (30 m.). One of the main

reasons for the drop in the water level has been the use made of Jordan River water for agriculture and industry. Another reason is the water exploitation of Dead Sea industries, which have been drying out the sea in phosphate production. Up to 1977 the Dead Sea stretched over two basins, a large northern one and a smaller and shallower southern basin. In 1977, the water level was so low that a ribbon of dry land appeared between the two basins. The southern basin became a series of steaming pools, so that the present-day Dead Sea consists in effect of only the northern basin. Recently, as a result of the low water level, a new phenomenon, large suckholes, began to appear near the shore.

At the beginning of the 21st century 2,250 people were living in the area's kibbutzim, moshavim, and urban communities. The Shefekh Zohar and Ein Bokek area had about 1,550 hotel rooms and served as the center of the region's tourism. Tourist attractions were based on the sea itself, curative sites, and wildlife.

DEAD SEA SCROLLS, the popular designation given to collections of manuscript material found in 1947 and the following years in various caves west of the Dead Sea, notably at *Qumran, *Murabbaʿāt, Khirbat Mird, together with *En-Gedi and *Masada. This entry concentrates on those found in the Qumran region (by far the greatest in bulk and probably in importance); those found at En-Gedi, Masada, and Murabbaʿāt are treated under these respective headings. For the Bar Kokhba Letters found in the Judean Desert see *Bar Kokhba, and for the *tefillin* of the Dead Sea Scrolls see **Tefillin*.

The Qumran Discoveries

Discovered by chance in 1947, the first scrolls, of which there were seven, some almost complete, came into the hands of dealers in antiquities, who offered them to scholars. The first scholar to recognize their antiquity was E.L. *Sukenik, who succeeded in acquiring three of them (the second Isaiah Scroll (B), the *Thanksgiving Hymns, the *War Scroll) for the Hebrew University. Between 1948 and 1950 he published specimens of them, his *editio princeps* of these scrolls appearing posthumously in 1955. The four other scrolls had been bought from a Bethlehem dealer (known as Kando) by Mar Athanasius Samuel, the Metropolitan of the Syrian Christian community, who had at first taken them to the American School of Oriental Research, where their importance was also recognized, in the absence of the school's director, Millar Burrows, by John Trever and William Brownlee. During the Israel War of Independence of 1948, these were brought to the United States, where they were studied by a group of scholars led by M. Burrows (d. 1980), who in 1950–51 published three of them – the first Isaiah Scroll, the **Pesher* (Commentary) on Habakkuk, and the Manual of *Discipline. Subsequently the Israel government bought these four scrolls, and thus all seven came to their permanent abode in the Israel Museum's Shrine of the Book in Jerusalem. Only after it reached Jerusalem was it possible to open the one hitherto unpublished scroll among the seven, the Genesis Apocryphon, which was published in 1956 by N. *Avigad and Y. *Yadin. In the meantime, with the West Bank now under Jordanian administration, the scrolls cave had been sought and identified, and, under the Jordanian Department of Antiquities, its director G. Lankester Harding and R. de *Vaux of the Ecole Biblique (in the then Jordanian part of Jerusalem) excavated it along with some 40 other caves in the vicinity of Khirbat Qumran and Ein Fashkha. Two years later, excavations began at the nearby ruins of Qumran, continuing until 1956, during which time the connections between the caves and the ruins became evident. Eleven more caves were discovered, some by the archeologists and some by the Bedouin, which contained scrolls, many of them highly fragmented. Many of these caves were man-made and lay on the edge of the plateau on which the settlement itself stood. By 1958 most of the material taken by the Bedouin had been purchased for the scholars, some through dealers in antiquities and sometimes with the assistance of overseas institutions. In view of the large quantity of material from cave 4, an international committee (understandably but regrettably excluding Jews) was appointed, under de Vaux, to publish the newly acquired materials in possession. Due to difficulties in deciphering, lack of funding and a declining level of enthusiasm, progress was slow, though a concordance of the Cave 4 scrolls was in fact completed in the late 1950s and early 1960s, yet was not made available, and then only to a limited circle of scholars, until 1989. Some texts were partly published in provisional articles in scholarly journals, and then gradually began to appear in definitive editions, in the series *Discoveries in the Judaean Desert* (Oxford). The first three volumes (1955, 1960, 1962) included the fragments from Cave 1, the documents from Murabbaʾat and the contents of caves 2–3 and 5–10 respectively. The intriguing and controversial *Copper Scroll had been unrolled in Manchester in 1956 and published, unofficially, by Allegro in 1960 (it has since resided in Amman). The disagreement between Allegro and his colleagues on the editorial committee foreshadowed disagreements that would later dog Scrolls scholarship. Allegro believed in rapid publication, even in provisional form, but also held controversial views about the Scrolls' significance, which he eagerly popularized. As a result he was marginalized. His views (for example, that the Scrolls helped to unmask Christianity as a fraud) have subsequently been rejected, though they have not perished; but his criticisms of the publication policy and practice of the editorial team were largely vindicated. In 1966, Sanders

published the Psalms scrolls from Cave 11 (DJD 4) and in 1968 the first official edition of texts from Cave 4 appeared (Allegro, with Andersen: DJD 5). In 1967, the majority of the scrolls and fragments, which were held in Jerusalem's Rockefeller Museum, became available to Israeli scholars, and Y. Yadin also obtained a further important document, the *Temple Scroll, which he published in 1977 (English 1983). In 1971 De Vaux died and was succeeded as chief editor by Pierre Benoit, also of the Ecole Biblique, while further DJD volumes of Cave 4 texts appeared very slowly (de Vaux [posthumously] and Milik in 1977 and Baillet in 1982). Meanwhile, those outside the editorial team were denied access to the contents of unpublished material. When Benoit resigned in 1984, the Israeli Department of Antiquities appointed John Strugnell, one of the members of the original editorial team, to oversee a more rapid publication, and several new members, including Jewish and Israeli scholars, were co-opted. But although some Harvard doctoral students published editions entrusted to their dissertation directors, wider access remained forbidden to others. Increasing protest over this situation was answered in a series of dramatic developments that began in 1990. Strugnell was replaced by Emanuel Tov as editor in chief, and in the following year a computer-generated reconstruction from the concordance of cave 4 texts (which Strugnell had released) was published, followed by an unauthorized facsimile edition of plates of all the scrolls and, finally, a decision by the Huntington Library in California, which owned a set of plates of the unpublished scrolls, to make them publicly available broke the embargo. Since then, the DJD series has been completed, and Tov was able to resign, with his job done, in 2002.

[Jacob Licht]

Description

The Qumran manuscripts were mostly written on parchment, some on papyrus. Most are in Hebrew, some in Aramaic, a handful in Greek. The Qumran caves are numbered serially, 1 to 11, in the order in which the manuscript treasure contained in them came to light. A manuscript is defined as a single scroll, usually represented by one or more fragments. A document may be represented by one or several manuscripts, and the manuscripts may contain different versions of that document. Hence the designation "Community Rule" cannot refer simply, as it once did, to the cave 1 manuscript. A more accurate method of designation is the cave number and location, such as 1QS (= Serekh [ha-Yaḥad]). However, there are several different manuscripts of this document from Cave 4, giving rise to the labels 4QS^{a}, 4QS^{b}, etc. But the preferred method of designation is by cave, location and a unique number. Some of these numbers have changed over time, so that different manuscripts of the same document may form a sequence. Hence the document popularly referred to as the Halakhic Letter is also known as 4QMMT, but is strictly a (hypothetical, in this case!) reconstruction from fragments of the six manuscripts 4Q394–99. In addition, manuscripts in Aramaic have "ar" added (6QA**poc** ar), and *pesharim* have a "p" inserted (1Q**pH**a**b**). Scrolls are written in columns, and the method of citation is by column and line (CD [= Cairo Damascus] is an exception, being represented by two codices, having pages). However, in the case of a fragment of a manuscript that cannot be fitted into its place in the original scroll, individual column numbers are assigned. Thus, a citation from 4Q**Pseudo-Jubilees**^{a}, or 4Q225, might read 4Q225 frag. 22, col. 3 line 6 – or, more simply, 4Q225 22 iii 16. As more fragments become assigned to manuscripts and documents, either the enumeration will change, or, more probably, anomalies will enter the system. Indeed, the reordering of fragments of the Cave 1 Hodayoth manuscript (1QH) has already resulted in changes to the column numbering given in Sukenik's original edition.

Six caves (3, 5, 7, 8, 9, and 10) were discovered by archaeologists; the other five (and these included the most important in respect of their contents) were discovered by Bedouin of the Ta'amira tribe. There is strong evidence to connect these caves closely with the neighboring ruin of Khirbat Qumran; a reasonable assumption is that their contents formed part of the library belonging to a community, or a movement, to which the inhabitants of Khirbat Qumran belonged (see *Qumran). The nearly 900 manuscripts are commonly thought to have been hidden during the war with Rome from 66 to 70 C.E.; but they may not have been deposited in all 11 caves on the same occasion, for, whereas those in Cave 1 were carefully placed in covered cylindrical jars, those in other caves, and especially in Cave 4, which contained the greatest quantity of manuscripts, appear to have been dumped in haste. News of their discovery aroused intense interest throughout the world and considerable controversy, especially with regard to their dating. But paleographical and radiocarbon indications, together with the few historical allusions in the texts, point clearly to the 2nd century B.C.E.–1st century C.E. as the time of their writing, with a few manuscripts (according to radiocarbon dating) as early as the 4th century B.C.E. These dates mostly fit well with the period of occupation of the Qumran site in the Hellenistic era, which began in about 100 B.C.E. and ended in 68 C.E. The manuscripts were written over a period of several generations; in several cases (including the Damascus Document, Community Rule, and War Scroll) different recensions of the same work have been found (even in the same cave), enabling some deductions to be made concerning their history, and thus possibly the history of the sect that produced them. The Qumran scrolls are generally classified in three categories: "sectarian" works (200+ manuscripts); "biblical" manuscripts (also 200+); and other Jewish writings, whether previously known or otherwise (400+).

An extensive list of Qumran scrolls with their publications in English or Hebrew (including scrolls not mentioned in this article) appears in the Index Volume of this Encyclopaedia, in the list of bibliographical abbreviations under the letter Q.

Language, Orthography, and Spelling

The Dead Sea scrolls are mostly written in Hebrew, with some

in Aramaic (a few fragments of a Greek translation of the Bible have also been found). Aspects of the evolution of ancient Hebrew from classical to Mishnaic remain disputed, in particular the relationship between written and spoken forms, and the question of dialects. The Hebrew of the non-biblical scrolls is not uniform: the majority of texts may represent a Judean dialect of spoken Hebrew or possibly a literary (scribal) language; the Damascus Document exhibits a Hebrew closer to biblical, while the Copper Scroll (and to some extent the Halakhic Letter) is very similar to Mishnaic Hebrew. As to orthography generally, the writing is often plene, characteristic forms being אמתכה, כיא, לוא. Thus the plural form of נגע is נגועים (or נגיעים); instead of הוא and היא we find הואה and היאה; קצור (= קצר), יושר (= ישר), מולאת (= מלאות), אנושי (= אנשי). Whether this points to a system of pronunciation different from that transmitted in the Tiberian masorah is not clear. Indications of weakening of the gutturals, as for example הנשי (= אנשי) probably does: but in other manuscripts, and commonly in the biblical manuscripts, the writing is defective, as in the Masoretic text. It has been suggested by Tov that the plene manuscripts come from a Qumran scribal school, though it is also found in some biblical manuscripts. Generally the square Hebrew script is used, in the stage of its development a little prior to the final one (the present day printed type). Thus the ה is closed and has a cross beam protruding slightly to the left; the ד has no protrusion to the right; the ז is a simple, straight line, sometimes with a small head on the right. The great majority of scribes make no distinction between a ו and a י (both of which resemble the numeral 1), a few however writing the י not shorter but wider. Several phases of the script can be distinguished, the three major categories being "Archaic" (as in First Temple period inscriptions) "Hasmonean" (c. 150–50 B.C.E.), and "Herodian" (50 B.C.E.–70 C.E.). In some scrolls the Divine Names (the Tetragrammaton YHWH and at times also *El*) are written in the archaic script, this being a characteristic feature of the commentaries, as also of the scroll of the Book of Psalms. The style of handwriting is also divided into formal, cursive, mixed, semicursive, and rounded. Paleography is a useful guide to the dating of the manuscripts, but because of their varied provenance, it cannot be translated into very precise dates, as is sometimes attempted. Scripts cannot be assumed to have developed uniformly in every place. Indeed, the script of an individual scribe does not necessarily change over his lifetime to reflect the latest custom, and if a scribe learns to write from a single teacher rather then in a school, he can only be assumed to continue the script that he was taught.

The Materials Used

The scrolls are written on parchment prepared from the hair side of the skin, while **tefillin* have been found written on parchment prepared from the flesh side of the skin. The skins were washed, soaked, depilated and sometimes tanned, then softened by beating, and cut. The length of a scroll varied, the longest (the Temple Scroll) being almost 9m. Longer scrolls were created by stitching skins together. Papyrus was made by cross-layering strips of the reed at right angles, gluing them together, scrubbing with pumice and cutting. Usually the surface was ruled with lines and margins to aid the scribe. Pens were fashioned from reeds, and about five inkwells (of clay, one of bronze) have been identified as coming from Qumran. The ink is almost invariably carbon-based, but ink of metallic origin was used for one scroll (the Genesis Apocryphon), which is consequently in a poor state of preservation, the ink having eaten into the parchment. In some scrolls the writing has become illegible, but various forms of photography, as well as computer enhancement, have recovered considerable areas of text. When completed, the scroll was rolled, with the beginning of the text on the outside. A tab was attached (if this had not been done during manufacture) and the scroll was bound together with a strap. Several scrolls were wrapped in linen, remnants of which have been found, and were placed in jars, some of them then sealed. However, the majority of the Qumran manuscripts were probably placed on shelves or in boxes (there are signs of shelving in Cave 4). They are now in small fragments and only a fraction of their content is preserved. Whether this fragmentary state is due only to the ravages of time and rodents, or human action, whether deliberate or accidental, ancient or more recent, can probably never be known. The matching of fragments and thus the restoration of original manuscripts was originally achieved by recognition of common content and handwriting, but another technique for correctly locating fragments within a manuscript analyzes the shape of damaged areas and matches them with the pattern of damage as reconstructed for the rolled-up scroll.

The Scrolls and Khirbat Qumran

The connection between the scrolls and the settlement at nearby Qumran, initially overlooked by the scroll hunters, has been almost universally taken for granted since excavations started there. There is no absolute proof of a connection, since the scrolls do not clearly allude to the site and the site itself contained no scrolls; but the circumstantial evidence is very strong. Two inscribed ostraca found in 1996 were claimed to contain the word *yaḥad*, the name of the sect in the Community Rule, but this has since been challenged, and no direct relation between these and the scrolls is proven. Evidence for the production and composition of scrolls at Qumran remains slight but not negligible. The suggestion by de Vaux that the nearby site of Ein Fashkha contained a tannery is now generally rejected. His view that an upper floor room of the eastern block of the Qumran settlement, whose floor had collapsed, was a *scriptorium* is still supported, though his reconstruction of a plaster table and writing benches now seems fanciful. The inhabitants of Qumran probably lived in the nearby caves; these inhabited caves show no evidence of scroll use; but cave 8 contained a collection of leather tabs, of the kind attached to the outer end of a scroll for aid in opening. It is now generally agreed that most of the scrolls were not written at Qumran, but taken there; however, the proximity of several caves to the site implies that their deposit was known to the inhabitants if

not carried out by them. Several proposals have nevertheless been made that Qumran was not the site of a religious community but something else: a palace, fortress or trading post. The numerous cisterns are not all for immersion but probably for drinking water; those that were *miqva'ot* do not necessarily attest to an exceptional level of concern with purity, as the scrolls exhibit, but certainly inhabitants following standard Jewish purification practice. In retrospect, it has emerged that the initial interpretation of the site by de Vaux can be questioned, especially concerning the earliest phase of sectarian occupation and a possible period of abandonment late in the first century B.C.E. But despite several alternative theories about the nature of the settlement, his overall assessment still has its defenders (for further details see *Qumran).

[Philip Davies (2nd ed.)]

A BRIEF HISTORY OF RESEARCH

Introduction

Initial interest in the Scrolls, in which Christian involvement far outweighed Jewish, mostly for political reasons, focused on the identification and history of the Qumran sect and its relationship to the New Testament and early Christianity. With only the contents of Cave 1 published, it seemed possible to reconstruct with some clarity where and why the sect had been formed and what its major doctrines and its organization were. After a fairly brief period of debate, a consensus quickly emerged that the Dead Sea sect had been the Essenes, as described (though not without some contradictory details) by Philo and Josephus as well as the elder Pliny who, unlike the other two authors, specifically located them near the Dead Sea. It was also agreed that, like the Pharisees and Sadducees, this sect had arisen in the Hasmonean period. The founder of the sect had been a "Teacher of Righteousness" who had, as the Habakkuk *pesher* in particular described, been persecuted by a "Wicked Priest" and forced to flee to Qumran, where he established a community with his followers. The identity of this "Wicked Priest," was disputed, but the major contenders were the Hasmoneans Jonathan and Simon. During the 1970s this consensus was initially consolidated, and some important new data emerged. From the historical point of view the identification of the Qumran sect with the Essenes was supported by the excavations by P. Bar-Adon at Ein-el-Ghuweir, south of Qumran, uncovering a settlement from the same period as Qumran, also with large buildings suitable for communal activities. (Y. Hirschfeld has more recently claimed to find the Essene settlement to which Pliny refers overlooking En-Gedi.) The cemetery adjacent to the site displays the same peculiar form of burial found in the Qumran *cemetery (or cemeteries), including skeletons of women and children. The ongoing analysis of the Qumran literary documents received new impetus with the initial publication of several major texts. The most important of these is undoubtedly the Temple Scroll, the longest scroll yet found. Its publication marked the beginning of several important changes: Israeli and Jewish interest in the scrolls increased as the scrolls were now almost all now under Israeli control in Jerusalem, while the text itself, edited and published rapidly and expertly by Yigael Yadin, illustrated the importance of *halakhah* in understanding the Dead Sea scrolls, taking a good deal of emphasis away from Christian origins. However, Yadin's conclusion that the scroll was a product of the *yaḥad* provoked strong disagreement and reinvigorated discussion of the relationship between that community and the wider movement described in the Damascus Document. This in turn led to revised theories about the origins of the Qumran community, more complex than the Cave 1 scrolls had suggested. In particular, it began to be recognized that the *yaḥad* itself arose from a wider movement with well-established roots. Because of this, the problem of speaking simply of the "Qumran community" or "the sect" or even of "sectarian writings" has been more keenly appreciated. The publication of the fragments of 1 Enoch by Milik proved that the work was indeed originally composed in Aramaic and also highlighted the Enochic character of much of the scrolls' content. The question of the origins of the sect was to be complicated further by the Halakhic Letter, whose contents were revealed (originally as a "Letter from the Teacher of Righteousness") and discussed long before its official publication in 1994. In fact the editing and publication of this document were at the center of a controversy: a draft text and translation that had been informally circulating were printed and published by Z.J. Kapera of Cracow, who, under some kind of threat, had to destroy the remaining copies. But the *Biblical Archaeology Review* had printed a page from this edition, and E. Qimron, one of the official editors, sued that journal's editor for breach of copyright. His claim to be, effectively, the "author" of the Qumran document by virtue of his reconstruction was upheld on appeal and has set an unfortunate precedent. The Halakhic Letter lists a number of disagreements between its author and the recipient, who is apparently a Jewish ruler (king, high priest or both?). It prompts the suggestion that the origins of the sectarian movement may lie in conflicts between differing priestly traditions, which were debated before the decision to segregate into a sectarian lifestyle. A comparison of the Qumran *halakhah* with rulings ascribed to *ẓeduqim* in the rabbinic literature has also prompted some scholars to suggest that the sect may have been Sadducee rather than Essene, though the claim is based on a restricted number of cases. The publication of multiple texts of the Damascus Document and Community Rule has shown, too, how their complicated recensional history must be taken into account in any reconstruction of the history of the communities they describe. With each new publication of texts, it also became more difficult to fit all the contents of the scrolls into neat doctrinal systems. In general, the confident consensus that reigned between the 1950s and early 1970s has given way to a number of competing theories, to which doubts about the nature of the site of Qumran itself have added further confusion. The availability of all the texts has, nevertheless, led to a resurgence of interest in the texts, with a growing number of younger scholars now reexamin-

ing the very broad range of questions that the scrolls are generating. Much more knowledge has been accumulated, but with it rather less overall understanding of the phenomenon of Qumran and a better appreciation of the religious climate from which both rabbinic Judaism and Christianity grew.

Contents and Character of the Qumran Scrolls

SECTARIAN WRITINGS. It would be rash to conclude that all the books in any communal or private library reflect the beliefs and practices of the community or individual to whom they belong. It is also sometimes difficult to distinguish sectarian writings from those that come from the particular milieu (represented by such works as Enoch and Jubilees) from which they emerged. The sectarian scrolls can be classified generically (or functionally) as "Rules," "Halakhic," "Exegetical," "Parabiblical" "Wisdom" and "Liturgical". "Sectarian" writings are identified as those that share a common ideology and vocabulary with three of the "Rules" that explicitly describe a sectarian community: the Community Rule (Manual of Discipline), the Damascus (or "Zadokite") Document and Rule of the Congregation (though it is perhaps a description of an idealized future Israel). These further texts comprise the Thanksgiving Psalms, the War Scroll (another "Rule"), the Temple Scroll, the Halakhic Letter, the *pesharim* (biblical commentaries), some other midrashic (the Florilegium, the Melchizedek fragments) and halakhic (Ordinances, Tohorot) compositions, and perhaps the Angelic Liturgy (Songs of the Sabbath Sacrifice). The wisdom texts are an especially interesting category: they exhibit many of the terms and themes of biblical wisdom books, but their traditional virtues and rewards, the materialistic ethic and the empirical basis of knowledge have been imbued with an esoteric flavor: there are "secrets" and an eschatological reward. These texts are not necessarily strictly of sectarian origin (the book of Daniel exhibits similar features) but they do indicate movement towards what is the clearly sectarian ethic of other scrolls. In the case of liturgical works, it is sometimes difficult to determine whether the contents are strictly sectarian. They are in any case steeped in biblical language and ideas, especially from the Psalms. The case of the Thanksgiving Hymns (Hodayoth) seems clear, however, as these are imbued throughout with a consistent, dominant sectarian ideology, including dualistic language. The main themes are that mankind is evil, its flesh polluted, but the author has been elected by God, rescued from destruction, purged, endowed with wisdom and placed among the "holy ones" (angels). He has also founded a community and suffered persecution, elements that prompt many scholars to regard them – or some of them – as compositions of a spiritual leader, such as the Teacher of Righteousness, the persecuted hero of the *pesharim* who, according to the Damascus Document, founded, or more strictly, refounded the sect. It is highly likely that they were used in the sectarian liturgy and may have provided some of the biographical data used in the *pesharim*. The Pseudepigraphic Psalms, by contrast, contain some terminology characteristic of the sectarian writings, but no distinctive sectarian ideology is present. There is a high degree of dependence on, and quotation from, the biblical psalms; one manuscript (4Q236) even contains a highly variant version of Psalm 89. There are fragments of four manuscripts containing prayers for festivals, and three manuscripts of "Words of the Lights", apparently designed for each day of the week, and another manuscript containing morning and evening prayers (4Q503). It is a reasonable guess that the sectarians inherited a rich Jewish liturgical tradition of which we would otherwise be unaware, and in this respect the Qumran scrolls make an important contribution to our understanding of the evolution of Jewish worship. From Cave 11 comes a manuscript containing four psalms apparently designed for a healing liturgy (11QPs$_{Ap}^{a}$). Finally, a number of hymn fragments (4Q434–39) contain the phrase *barki nafshi*, "Bless, o my soul," one of which (4Q434a) displays similarities with rabbinic blessings after meals and so may have fulfilled this function. Given the importance of the communal meal in the *yaḥad*, this is a plausible suggestion. Finally, a controversial hymn (contained within 4Q448) asks for blessing on "King Jonathan and for all the congregation of your people Israel who are in the four corners of heaven." This Jonathan was identified by the text's editors as the Hasmonean Alexander Jannaues (Jannai) who ruled from 103–76 B.C.E. However, he is generally considered to have been a likely enemy of the sect. G. Vermes has therefore proposed the Hasmonen Jonathan, brother of Judas (ruled 160–142 B.C.E.), who, he argues, may have once been favored by them. Alternatively, the text could be seen as originating from outside the sect: in which case, why was it copied and kept by them?

The Damascus Document, which was already known from two mediaeval manuscripts found in the Cairo *Genizah* as well as several Qumran copies, describes the origin, history and beliefs, together with its *halakhah* and organization and its rules of life, of a sectarian movement that is clearly related to, but not identical with, that described in the Community Rule. The latter contains mostly the doctrines, organization and disciplinary rules of a sect calling itself the *yaḥad* ("Union"), but without any account of its origins or history. Both texts are composite, and the various copies betray a recensional history. (For more details, see **Yaḥad*; *Dead Sea Sect; Book of Covenant of *Damascus.) One common feature of the sectarian texts seems to be the 364-day calendar that is also presented in 1 Enoch and Jubilees; the Temple Scroll in particular is constructed on this basis, and texts known as the *Mishmarot* (priestly courses) show the services of the priestly orders regulated according to a six-year cycle, which harmonizes the 26 annual courses of this calendar with the 24 of the lunar calendar. Another common thread is (temporary) alienation from the Jerusalem temple as a result of disagreement over the calendar and *halakhah* with its governing priesthood. The Angelic Liturgy (*Serekh Shirot Olat ha-Shabbat*) illustrates not only how the *yaḥad* maintained the ethos of the temple cult despite its (temporary, as it believed) abandonment of the Jerusalem sanctuary, but also throws important light on the

community's beliefs about angels and its own mystical tradition in addition to four manuscripts from Cave 4 and a further one that came to light during the excavations at Masada. The document describes a weekly sabbath liturgy, over 13 weeks, in the heavenly temple. This text has opened up a new dimension in Jewish literature and religion of not only late Second Temple times, but subsequent Jewish mystical and angelic traditions while the Melchizedek midrash from Cave 11 features an angelic high priest who leads the struggle against Belial and his associates, but also effects the redemption of Israel at the end of the final era of history on the Day of Atonement. This work shows how the Genesis figure was interpreted in some circles (similar, but not identical, to the treatment in the Epistle to the Hebrews) and also sheds light on later Jewish speculation about heavenly redeemer figures: Melchizedek was later to be identified with both *Michael and *Metatron as the highest angelic figure below God. A further characteristic of the scrolls as a whole is a belief in the angelic origin of sin, as described in the Enochic "Book of Watchers," as a result of which humans remain subject to evil angelic powers, which will be destroyed at the end of days. The Flood that was sent upon the earth as a divine response to the angelic descent seems to have functioned as a prototype of the punishment to come, and Noah is prominent as the prototype of the righteous person (his illustrious birth is described in the Genesis Apocryphon). This view of the origin of sin, the differences in calendrical and halakhic matters, and the consequent breach with the Temple cult (minimal participation by the community in the Damascus Document, complete rejection in the case of the *yaḥad*) seem to combine into a kind of Judaism that has been called "Enochic" or "apocalyptic," but in fact it probably reflects very closely the views of the Priestly source within the Torah. The solar calendar is reflected in the P material in the Flood story (thirty-day months), and in the notion, expressed in that story, of a corruption of the earth by bloodshed (rectified in the Noachic covenant), P's doctrine of sin as a universal contagion and not just disobedience of the Torah, and the inclusion of the fallen angel 'Azazel in the Day of Atonement ritual (Lev. 16:21). If this observation is correct, the unresolved problem is to explain why this ideology came to be represented in a sectarian form in the second century B.C.E. The answer may lie in the intricacies of Hasmonean politics, but we cannot be certain. Yet it is evident that the ideology adopted by the writers of the scrolls is not a sudden reaction but the outcome of a longer process betraying differences within a Second Temple Judaism that was, before the discovery of the Scrolls, thought to be rather monolithic. Nevertheless, attempts to represent the so-called "apocalyptic" character of the Scrolls as in some way a forerunner of Christianity as against rabbinic Judaism have been frustrated by the prominence given in the scrolls to scrupulous observance of Torah, a high veneration of the temple, and an emphasis on a life of ritual purity.

Biblical Manuscripts

Most of these have survived only as fragments: all but two of the 24 books of the Jewish Scriptures are represented, the exceptions being Esther and Nehemiah (it cannot be said with certainty whether their absence is accidental or significant). The number of manuscripts of each books ranges from 36 (Psalms) to 1 (Chronicles). A few are written in the archaic Hebrew script. In addition, some Septuagint fragments have been identified: Cave 4 yielded fragments of two Septuagint manuscripts of Leviticus and one of Numbers; Cave 7, fragments of the Septuagint text of Exodus and of the Epistle of Jeremiah, a pseudepigraph commonly appended to the Book of Baruch. The most important Septuagint find made in the Dead Sea region comes not from Qumran but from the "Cave of Letters" in Naḥal Ḥever (see *Judean Desert Caves): It is a fragmentary copy of a Greek version of the Twelve Minor Prophets, identified as a new Greek revision, (now known as the Kaige or Proto-Theodotion revision), which apparently aimed at revising the LXX according to a Hebrew text close to the MT. Fragments of a Leviticus Targum were also found in Cave 4. A further contribution to the biblical material from Qumran is made by commentaries (see **Pesher*) and parabiblical compositions, or rewritings of the scriptural contents. Whereas the biblical texts from caves farther south which were occupied during the Bar Kokhba Revolt (132–5 C.E.) uniformly belong to the "proto-masoretic" type (the consonantal text to which the masorah was added from the sixth to the ninth centuries C.E.), those found in the Qumran caves reflect a variety of text-types (see below).

BIBLICAL TEXT AND CANON. As evidenced by the Minor Prophets scroll from Naḥal Ḥever (see above), between 70 C.E. and the Bar Kokhba Revolt, the biblical text appears to have been standardized during the first century C.E. But at Qumran there existed no uniformity of text. At first it had been concluded that the Hebrew biblical texts at Qumran fell into three types, corresponding to the forerunners of the Masoretic, Septuagint, and Samaritan texts, each originating from three regions: Babylonian, Egypt, and Palestine respectively. But the "local text" theory and the theory of "text types' have now been abandoned. Yet a more careful analysis shows that no such grouping is possible. There is too much variation even within the different textual types; for instance, the MT uses the short text for the Pentateuch but the longer one for the Later Prophets and Writings, while the LXX employs the longer text for the Pentateuch but a short one for Jeremiah. Again, MT and LXX Jeremiah are not so much different text types as variant editions. As for the Qumran manuscripts, the textual variations reflect much more a spectrum than a set of textual types, while the Psalms manuscripts display, like Jeremiah, a variant edition rather then a different text type. The problem was perhaps more acute as long as the scrolls were all thought to emanate from a small isolated community, but if, as now believed, they originated in different places, the variety is less surprising.

Whether there was a fixed canon is also disputed: While all but two books of the Masoretic canon (Esther and Nehe-

miah) are represented, the number of manuscripts of each book preserved (see above) may suggest that not all books were equally venerated. There are numerous manuscripts of Deuteronomy, Isaiah, and Psalms, but Chronicles and Ezra are extant in only one copy. The Halakhic Letter (4Q10) runs "… in the book (*sic*) of Moses, and the books of the Prophets and in David…," the last referring probably to a collection of Psalms. However, other works may have been regarded within the sect as of a similar status and authority, such as the Book of Jubilees (cited in the Damascus Document as "The Book of the Divisions of Times into their Jubilees and Weeks" (CD xvi:4) or the Enochic writings or even the Temple Scroll. The biblical manuscripts were usually copied in the regular square Hebrew script, except for the Holy Name being occasionally written in paleo-Hebrew characters. However, some biblical manuscripts were copied in this ancient script in their entirety, as for instance, Job and Leviticus (4Q**paleoJob**, 4Q**paleoLev**).

PENTATEUCH. Of the biblical manuscripts 86 are books of the Pentateuch, 30 of which are copies of Deuteronomy. While the Genesis and Leviticus manuscripts exhibit a stable text and a single manuscript tradition, Exodus is represented in two editions, one close to the MT and LXX, the other similar to the Samaritan text (but without the two most distinctive Samaritan variants relating to the Gerizim altar (Exodus 20:17 and Deut. 12:5, etc.)). The case of Numbers is similar to Exodus, though the non-MT edition is not specifically Samaritan, but only shares some features. Deuteronomy, the best represented of the Pentateuch, exists in a wider range of texts, and, in addition, there are some manuscripts apparently consisting of excerpts, presumably for liturgical purposes. In a few cases a Qumran reading is clearly superior to the MT: thus, for example, 4QD**tq** reads for Deuteronomy 32:8 *bny'l*, as does the LXX, instead of *bny ysr'l* of the MT.

FORMER PROPHETS. Joshua is represented by 2 (possibly 3) manuscripts, one of which (4QJ**osh**^{a}) has some interesting differences from the MT: the altar-building in Josh. 8:30 (in MT) comes before ch. 5 – a sequence also followed by Josephus. Samuel likewise includes some variant passages, for example, in the Goliath story (1 Sam. 17–18). The most ancient manuscript, 4QS**am**^{b}, is dated as the mid-third century B.C.E. and is related to the LXX of Samuel. The books of Judges and Kings have survived in small fragments only.

LATTER PROPHETS. The 21 manuscripts of Isaiah present a more complex picture than was initially drawn by the two cave 1 examples, where Isaiah A is reasonably close to the MT and Isaiah B even closer. But several manuscripts also support LXX readings. Both the MT and the shorter proto-LXX editions of Jeremiah are attested. Given its ideological influence on Qumran, Ezekiel is surprisingly poorly represented with three short manuscripts, on which little can be said, while the eight manuscripts of the Minor Prophets exhibit little diversity, though they do not betray the same conformity to the MT as the Naḥal Ḥever scroll.

WRITINGS. The 36 manuscripts of Psalm collections from Qumran make this the best represented of the scriptural books numerically. This is not surprising, given their influence on the other liturgical texts found in the caves. But none of the Psalms manuscripts' various sequences unambiguously supports the MT (and basically LXX) sequence. The best-preserved of the Psalms manuscripts from cave 11 (11QP**s**^{a}) includes nine psalms not found in the MT, including what is Psalm 151 in the Septuagint, and also includes a list of "David's compositions," which attribute to him 3,600 psalms, 364 other songs, plus 52 for Sabbath offerings and yet more for festivals. (Perhaps these refer also to the so-called "Apocryphal Psalm" collections also found at Qumran.) The other Cave 11 Psalm manuscripts probably support this alternative sequence. Job has only four manuscripts, but, curiously, one is written in the archaic script, 4Q**paleoJob**. The eight Qumran fragments of Daniel do not include the apocryphal additions known from the LXX, and the points of transition from Hebrew to Aramaic and back are the same in the Qumran manuscripts as in the MT (Daniel 2:4 preserved in 1QD**an**^{a} and 8:1 in 4QD**an**^{a,b}).These manuscripts are, of course, likely to be fairly close in time to the autograph, probably composed in about 164 B.C.E.

PARABIBLICAL TEXTS. The quantity of Qumran texts that range between (but not including) biblical manuscripts and midrash is considerable, and the term "parabiblical" has been coined to denote them. They are excerpts, rewritings, paraphrases or compilations of biblical texts. To this category can be assigned *mezuzot* (8) and *tefillin* (30); these sometimes contain a text differing slightly from the MT. Another category is targums: a Targum to Job (Cave 11 with an additional fragment in Cave 4) and Leviticus, also from Cave 4 (it may be wondered why a community that read, and possibly spoke, Hebrew needed targums.) Both of these avoid the midrashic amplifications so common in other Targums. By contrast, the Genesis Apocryphon is reminiscent of the more expansionary targums, though it is not usually classified as such. The Cave 4 Testimonia is almost entirely biblical quotation (from Deuteronomy, Numbers and Joshua), apparently on the theme of leadership. The so-called "Genesis Commentary" (4Q252) is neither paraphrase nor commentary, but mixes both as it moves through the Genesis story, while the "Reworked Pentateuch" (four, maybe five manuscripts) combined topical juxtaposition with free composition. The Temple Scroll reorders biblical legislation (with some additions) into a more systematic form. A further text of this kind is a paraphrase of Joshua (4Q123), while the "New Jerusalem" text, difficult to fit easily into any of the categories, is perhaps best understood as a systematization of part of the contents of Ezekiel 40–48. While these are not biblical texts as such, they represent ways in which the biblical material was reorganized, sometimes to emphasize aspects of sectarian belief. The Book of Jubilees, also found in Hebrew at Qumran, is an excellent example. It is not believed to be sectarian, but it does emanate from the circles from which the sect emerged.

Other Jewish Writings

These may be divided (though the distinction is often accidental) between works previously known and those unknown. Among those known are a Greek portion of the Epistle of Jeremiah from Cave 7, fragments of Tobit from Cave 4 (three in Aramaic and one in Hebrew) and of Ecclesiasticus (the Wisdom of Ben Sira) from Cave 2 (in Hebrew). Fragments of this work were also found at Masada. The Book of Jubilees (ten Hebrew manuscripts from Caves 1, 2, and 4) and four of the five sections that make up 1 Enoch: The Parables or Similitudes are absent, but there is in addition an Enochic "Book of Giants" (eight Aramaic manuscripts from Cave 4). Both of these maintain the solar calendar that the sectarian writings also follow. Some of the Testaments of the Twelve Patriarchs – works extant in their entirety in a Greek recension exhibiting Christian influence – have also been identified: the Testament of Levi by some scraps from Cave 1 and fragments of three manuscripts from Cave 4 (all in Aramaic, with a text similar to that of fragments from the Cairo *Genizah*) and the Testament of Naphtali in Hebrew fragments from Cave 4. The Qumran text of both these Testaments is longer than the corresponding passages in the Greek recension.

The number of hitherto unknown works, attached to biblical figures, is impressive. They attest to a previously unsuspected richness and variety in Jewish literature during the Second Temple period. A group of writings is associated with the figure of Daniel: the Aramaic Prayer of Nabonidus (4Q**prNab**) is assigned to the second century B.C.E. It relates events similar to Daniel 4, except that the central figure is that of Nabonidus (*nbny*) and the name Daniel does not occur. Another Aramaic work, a Daniel Apocryphon (4Q**psDanar**^{a,b,c}), recounts the history of Israel. A number of works are ascribed to patriarchal figures: An Aramaic work, the so-called Visions of Amram (4QA**mram**$^{a-e}$) tells about Amram's visions in which a figure called Milki-Resa' appears. In another Hebrew fragment (4Q280 2) the said Milki-Resa' is denounced as the head of the "Sons of Darkness." The name (unknown outside the Scrolls) is the opposite counterpart of Milki-Ṣedek, the eschatological judge who is the subject of another Hebrew work, the Midrash on *Melchizedek (11QM**elch**). Another Aramaic work, the Testament of Qahat (4QTQ**ahat**), is ascribed to Qahat the son of Levi. The Apocryphon of Joshua (previously known as the Psalms of Joshua) may represent a farewell speech ascribed to the hero, and it shares with the Testimonia Joshua's curse on the man who would rebuild Jericho.

The Copper Scroll

This most unusual document, found in Cave 3, consists of a single roll of almost pure copper, broken in antiquity into two parts, each of which was rolled before storage. Identified by K.G. Kuhn, even before opening, as a list of buried treasure, the rolls were brought to Manchester, England, by J. Allegro and sliced open. The identification of the contents was then confirmed, but despite Allegro's anxiety to publish it, the task was assigned to Milik and delayed. The delay may have been occasioned by fear of what sort of treasure hunt the disclosure of its contents might provoke, and Milik aired the view that the list was fictional. The general opinion today is that the treasure was real and must have belonged to the Temple. If so – and nothing suggests that its deposit was independent of the other scrolls – the presence of this document in a Qumran cave requires some explanation, and it supports the suggestion that at least some of the scrolls may have originally come from Jerusalem (the "chief of the [sectarian] camps" according to the Halakhic Letter).

[Philip Davies (2nd ed.)]

Khirbat Mird

Khirbat Mird is a ruined Christian monastery of the Byzantine period, on the site of the earlier fortress of Hyrcanion, north of Wadi al-Nār. Here, in July 1952, the Taʿāmira Bedouin discovered manuscript material of great interest but of considerably later date than the finds at Qumran and other sites near the western shore of the Dead Sea. It included papyrus fragments of private letters in Arabic from the seventh and eighth centuries C.E., a Syriac letter on papyrus written by a Christian monk, a fragment of Euripides' *Andromache* in Greek, and a number of Old and New Testament texts in Greek and Palestinian Syriac. The Greek texts included fragments of uncial codices of Wisdom, Mark, John, and Acts (fifth–eighth centuries C.E.); those in Palestinian Syriac included fragments of Joshua, Luke, John, Acts, and Colossians (many of these were palimpsests). All the Khirbat Mird manuscripts are of Christian origin.

DEAD SEA SECT (also called **Qumran Sect** or **Qumran Community**). The name refers strictly to a Jewish community which lived in the Second Temple period and which adopted a strict and separatist way of life. It is so called because the main source of knowledge about it derives from the discovery of a settlement at Khirbat *Qumran, near the northwest shore of the Dead Sea, where it is believed to have lived, and where remnants, apparently of its library, were found in neighboring caves (see *Dead Sea Scrolls). The pottery and coins found there constitute the main external sources for establishing the date of the sect. From these, as well as from the fact that the library contains no work later than the Second Temple period, it appears that the settlement was inhabited (on the ruins of a much older settlement), from the beginning of the second century B.C.E. until its destruction by the Romans shortly after the fall of the Second Temple, around 70 C.E. The sect believed to have lived at Qumran called itself the *yaḥad* (or "Union"), and the Qumran scrolls describe its beliefs and organization. They also describe a related movement that lived in communities elsewhere. Although it has been suggested that these were offshoots of the Qumran community, the consensus is now that they represent a parent movement, from which the *yaḥad* split off, for reasons that are still debated. How much earlier that parent movement began is uncertain, though probably not more than a few decades. The occasional historical clues that the texts offer cannot be used with great confidence to describe the origins or growth of either the parent movement or the *yaḥad*, though it is possible to trace some outlines. In recent years, the suggestion has also been made that the scrolls are unconnected with the Qumran settlement, and that the site was not inhabited by a religious sect; but the circumstantial evidence linking the scrolls and the settlement is powerful if not conclusive. It has come to be realized, however, that many or even most of the scrolls were not, as once assumed, actually written at Qumran.

Its Views

The Qumran sect, like the broader Jewish movement from which it sprang, took a critical view of the established orthodoxy of its time, believing Israel to be under divine judgment, regarding itself as the true remnant of Israel and awaiting its imminent vindication at the "end of days." According to this worldview, the course of history and its epochs had been preordained by God. "… all the ages of God will come at the right time, as he established for them in the mysteries of his prudence" (Pesher Habakkuk 7:13–14). With its advent, evil would cease, the wicked would be destroyed, and the righteous would live under divine blessing. There is a strong predestinarian tone to many of the texts, which see the movement as an elect community, an "eternal [or righteous] planting," chosen and raised up by God. These views were carried to an extreme within the *yaḥad* (see also *Eschatology), which maintained that God had created mankind in two antagonistic camps of light and darkness, or truth and falsehood; each "lot" was under the dominion of an angelic figure: the "prince of light" and the "angel of darkness" (the latter also known as "Belial") respectively. Between these two, God had set "eternal enmity," which would cease only in the end of days with the destruction of the spirit of perversion and the purification of the righteous from its influence. Then the "children" of the "spirit of truth" would receive their reward. But although these "lots" are at first described as mutually exclusive, they are subsequently said to be apportioned differently among individuals: each person receives his portion, in accordance with which he is either righteous or wicked. Horoscope texts

among the scrolls show that these proportions were also believed to correspond to physiological features. The dualistic teaching is contained in the *Manual of Discipline (or *Community Rule), from which the main evidence for the organization and doctrine of the *yaḥad* is drawn.

*In the Thanksgiving Psalms (Hodayoth) a different and more personal perspective is brought to the sect's anthropology. Here the emphasis is on the absolute iniquity and degradation of even one of the "elect of God." The author of these hymns describes humanity (including himself) as "a structure of dust shaped with water, his base is the guilt of sin, vile unseemliness, source of impurity, over which a spirit of degeneracy rules"; but God has chosen him, rescued his soul from the grave, purged his spirit from a great transgression, and granted him mercy that he might "take his place with the host of the holy ones" (the angels), given him a superior wisdom, and revealed to him "deep mysterious things." The basic feeling is one of the insignificance and lowliness of humanity, of its dependence on the loving-kindness of God, without which "the way of humanity is not established." Aversion from, and despair of, the human condition oscillate between sorrow at sin and joy at election.

According to the Community Rule, members of the *yaḥad* underwent a "covenant" (probably renewed annually) to observe the "law of Moses," but they also embraced the esoteric doctrines and practices of the sect concerning the maintenance of strict holiness and communion with angels, the latter expressed in the form of worship in the "heavenly Temple" alongside celestial beings (according to the contents of the Songs of the Sabbath Sacrifice). The parent movement, which is basically described in the Damascus (also known as "Zadokite") Document (see Covenant of *Damascus), also held to a predestinarian (though not dualistic) doctrine, constituted itself by a covenant and enforced strict obedience to the laws of Moses as it interpreted them, believing itself to be living in an age of divine wrath from which its strict adherence to God's will would earn it deliverance in the coming judgment. But it also seems to have lacked the mystical tendencies that the *yaḥad* exhibits.

Although it is commonly claimed that the community, and its parent, represented a reaction against the contemporary Hellenizing culture and, later, Roman political sovereignty, its writings are more concerned with the corruption of the Jerusalem priesthood and the abandonment by God of all Israelites outside its ranks. Hence relations between the *yaḥad* and the Temple were entirely cut off, though the parent movement maintained a minimum of participation in the Temple cult. Dealings with other Jews were also minimal in both cases, since these did not live as the law of God, according to the sect, required. The Halakhic Letter, which many regard as a key to the origins of the sectarian movement as a whole, specifies a number of differences between the Jewish religious leaders and the sect on mat-ters of purity. It is possible that these differences, which may go back to opposing priestly traditions, provide the immediate cause for the formation of the sectarian movement as a whole, whether through voluntary segregation or through expulsion by the religious authorities.

Though the sect and its parent movement lived under an intense eschatological expectation, it is unclear how exactly they envisaged the future. The Community Rule with its strong dualistic and predestinarian doctrine suggests that the "children of darkness" will be punished by fire and then annihilated by angels. However, it also hints at a process of divine purification of the "children of light." The War Scroll describes a 40-year battle, fought by a combination of angelic and human forces. In a mixture of dualistic and nationalistic perspectives, the war is both between "Israel" and the "nations" and between the forces of light and darkness, with the enemy including the "Kittim" (probably the Romans). This scenario seems to suggest a future restoration of Israel (including a restored Temple) and not merely of the sect, though the end of the document is missing. The "Rule of the Congregation" (1QSa) also seems to envisage a restored nation. But how a small, celibate and segregated group living in a condition of extreme purity would become the restored Israel is unclear. In the Rule of the Congregation the leadership of Israel is in the hands of two "messiahs," one priestly and one lay. In some other Qumran texts the lay messiah is referred to as the "Prince of the Congregation" and seems to be a Davidic figure. Both "messiahs" may possibly correspond to functions within the sect, or perhaps the parent movement. However, the Community Rule neither describes nor implies such figures, and other Qumran texts present other redeemer figures or even none: in the Melchizedek Fragments the "messianic" role is assumed by a heavenly high priest who will atone for the sins of Israel on the Day of Atonement at the end of days. There are also elsewhere echoes of the more prevalent apocalyptic concept of a revolution in the manifestations of nature itself, an earthquake and a flood of fire in the entire universe (Thanksgiving Psalms 3:26 ff.). There is therefore no unanimity of views in the various writings of the sect about the nature of future redemption.

Modes of Life and Organization

The worldview of the sect formed the theoretical basis of its way of life, for from it proceeded the duty to be prepared for the coming of the end of days, which demanded a punctilious observance of the *mitzvot*, a separation from ordinary society, and maximum social cohesion. The members of the *yaḥad* (as described in the Community Rule) were to eat communally, bless communally, and take counsel communally. The *yaḥad* strictly observed the laws of ritual purity, regarded all non-members as ritually unclean, and insisted on a discipline which imposed on all members the obligation "that they show obedience of the lower to the higher." For this purpose members were listed according to their gradings. These were drawn up anew every year and laid down the order of their participation in ceremonies and assemblies. The leading places were, according to some copies of the Community Rule, reserved for "the priests the sons of Zadok." The "council of

the community" (or "community of God" and other similar designations) may have constituted, perhaps at one phase of its history, an authoritative body within the sect, but in some places the term is apparently synonymous with the sect itself. However, in charge of instruction and of the daily conduct of affairs was the *maskil*. In the parent movement, as described in the Damascus Document, it was the *mebaqqer*, or "overseer" who took charge of discipline. The principal decisions in the *yaḥad* were made by the community of the members ("the many"). It was an exclusively celibate male community, forming a single social unit, and maintained entirely by the influx of new members (as in Pliny's account of the Essenes by the Dead Sea). When "volunteers" joined the community, they had to undergo a preliminary examination and then passed two successive stages of candidature, at the completion of each of which they ascended in the degree of purification. Only on the conclusion of their candidature were their possessions put into the communal pool. Offenses against internal discipline were punished in accordance with a disciplinary code (adapted from that of the parent movement), and sanctions included reduction of rations and temporary, or even permanent, exclusion from the "purity of the many," meaning they no longer belonged to the holy "body" that the sect constituted through its intensely communal life, and especially in sharing its meals. The organization described in the Damascus Document, on the other hand, contained both married and celibate settlements (called "camps"). The latter, at least, had a less monolithic social structure, being more like a "town" inhabited by households, allowing for private property, women, and children, as also for a child's reaching adolescence in the community. The organization as a whole was looser. There are no indications of whether these settlements were subject to any higher authority: Jerusalem, according to the Halakhic Letter, was a "chief camp," but perhaps only because of the city's sanctity. The *yaḥad* apparently followed the *halakhah* of its parent movement, i.e., it interpreted according to its own tradition the *mitzvot* accepted by the Jewish people as a whole, namely the "Law of Moses"; these are found in the Damascus Document, Halakhic Letter, and several other texts. Such *Halakhot* and halakhic Midrashim similar in character to those of rabbinic Judaism, but there seems to be some specific opposition in these to the teaching of the Pharisees (and thus, later, the rabbis). A major point of halakhic dispute is the sect's adoption of a calendar of 364 days (see *Calendar, Dead Sea Sect). How it was adjusted to a 365-day year we do not know, but it is probably both realistic and ancient (it can be detected within Genesis 6–9). This calendar is known from the Book of Jubilees and the Book of Enoch, and thus offers an important clue to the social and ideological background of the sect.

The Teacher of Righteousness

While the history of the *yaḥad* and its parent, and the development of their ideas, are unclear, some details are extant about the founder of the sect (or one of its first leaders), who was given the title *"teacher of righteousness," chiefly in the Damascus Document and the Habakkuk Pesher. Attempts to identify him with a known historical person remain debatable. The Damascus Document uses the title of a future, perhaps messianic figure, but also applies it to an individual who arose some time after the foundation of the movement itself. Apparently, he led a group of followers to form the *yaḥad*, while the remainder of the movement perhaps rejected him; his death is also noted. In the Pesher literature he is presented more as a founder figure who directly clashed with an opponent called the "wicked priest," who has been identified with a number of historical personages, all Hasmoneans, but who is completely absent from the Damascus Document. Some of the biographical details of the Teacher in the Pesharim reflect allusions in the Thanksgiving Hymns, which some scholars believe to have been written by the Teacher. But these details might simply have been borrowed from the Hymns by the authors of the Pesharim.

The Identification of the Sect with the Essenes

It is widely held that the wider parent movement, as well as the *yaḥad*, should be identified with the *Essenes described by *Josephus (War 1. 78–80; 2,119–161), *Philo (Quod omnis probus, 75–91) and the elder Pliny (Natural History 5.17, 4). While Pliny locates Essenes specifically near the Dead Sea, according to Josephus and Philo they lived throughout Judea. On the manner of initiation, attitudes to women and to the Temple there are strong similarities between Essenes and the larger sectarian movement, but opinion on the identification is not unanimous. In the light of a few halakhic parallels with details preserved in the Talmud, it has recently been suggested that the sect may have been related to the Sadducees. The identification with *Zealots, once proposed, is now largely rejected, though the sect probably sympathized with Jews who fought against Rome and may have joined them.

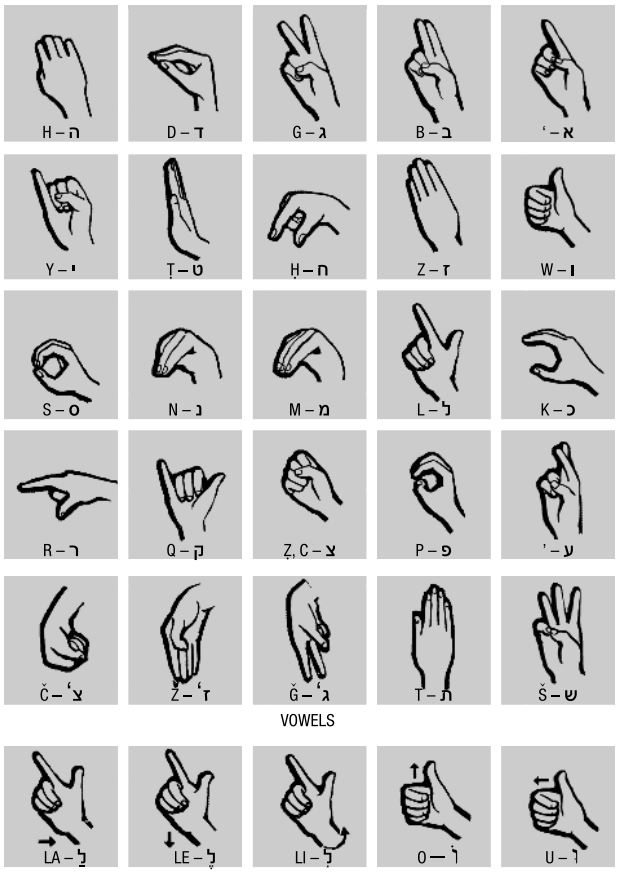
DEAF-MUTE (Heb. חֵרֵשׁ, *ḥeresh*), always classed in the Talmud together with the minor and the imbecile as being irresponsible and of no independent will, from which stem all the restrictions and exemptions applying to him, both in law and the performance of *mitzvot*. They apply only to a deaf-mute, but not to one who is either deaf or dumb (Ter. 1:2). Nevertheless, it was realized that the mental capacity of the deaf-mute was superior to that of the imbecile, and a passage in the Talmud (Shab. 153a) grades the mental capacities of these three in the descending order of minor, deaf-



Hebrew manual alphabet of the deaf.

mute, and imbecile. In particular a definite relaxation was made in the case of the marriage and divorce of deaf-mutes, as regards marriage both to a normal person and to another deaf-mute (Yev. 14:1). In the discussion of the *Gemara* of the Babylonian Talmud on this Mishnah, it is laid down that he is of "feeble mind" or "partially normal and partially *non compos mentis*" (Yev. 113a and b). A marriage in which one of the parties is a *ḥeresh* is considered to be only of rabbinic validity, and the question of divorce is thus complicated. The details of the manner in which the marriage ceremony and the divorce take place are laid down in great detail, and have been the subject of a special work (*Melekhet Ḥeresh*, by Ezekiel Ḥefeẓ, 2 vols., 1874–85).

With the successful methods of modern treatment in overcoming the problem of communication with the deaf-mute, the tendency in the past and present centuries has been to remove the stigma of retardation from the deaf-mute in *halakhah* and to regard him as normal, in addition to the fact that once he has learned to speak he ceases to be the deaf-mute of the Talmud. It is now generally accepted that he may become bar mitzvah and be called up to the reading of the Torah. The subject has been dealt with in a halakhic brochure issued by the *bet din* of London, where all the relevant halakhic literature is quoted. (L. (A.L.) Grossnass, *Publications of the London Beth Din*, no. 10., 1963 (Heb.).)

Further Developments in the 1970s

The status of deaf-mutes, according to the *halakhah*, came to the fore in February 1977 when the district Bet Din of Tel Aviv, by a majority of 2 to 1, refused to accept a deaf-mute woman for conversion on the grounds that, according to the letter of the law, a deaf-mute is regarded as mentally retarded. An appeal had been lodged before the Supreme Bet Din against this decision. The Sephardi chief rabbi, Ovadiah Yosef, submitted a ruling in favor of deaf-mutes being counted in a *minyan*.

Another event was the first World Congress of Jewish Deaf held in Tel Aviv from July 1–31, 1977, under the auspices of the Association of the Deaf in Israel. The Ashkenazi chief rabbi of Israel, Rabbi Shlomo Goren, read a paper on "The Jewish Deaf and a New Approach to the *Halakhah*," in which he pointed out that the Jerusalem Talmud takes a more lenient view of the disabilities of the deaf according to the *halakhah* than does the Babylonian Talmud, and that this approach should be accepted.

A whole session at the Congress was devoted to papers on "The Religion and Jewish Tradition in the Life of the Jewish Deaf," which covered every aspect of the problem.

The amelioration in the status of the deaf-mute, according to the *halakhah*, depends upon the established fact that with technological advances in the teaching of deaf-mutes, their "lack of comprehension," which is the basis of their disabilities, can be overcome.

What may be termed the first breakthrough in the attitude previously adopted was given by Simhah Bunim Sofer (1842–1906) in his responsa *Shevet Sofer* (Even Ha-Ezer No. 21). He disagrees with the restrictive view given by his predecessors and adds: "Indeed I heard from my father, the author of the Responsa *Ketav Sofer* (Abraham Samuel Benjamin Wolf Sofer; 1815–1871), that after he paid a visit to an institution for deaf-mutes in Vienna, at the request of the authorities, and was thus enabled to see their tuition at first hand, he was so impressed by what he saw and the curriculum and behavior of the children, that he raised the question whether they should not be considered as truly normal and obliged to fulfill the commandments of the Torah. He told me that he instructed their teachers that they should be told to don phylacteries daily since 'their actions are evidence of their mental comprehension.'"

Chief Rabbi Ovadiah Yosef pointed out in his address to the congress, that both the former chief rabbis of Israel – Rabbi I. Herzog and Rabbi Ouziel – held similar views, and concluded that one can rely upon their decision.

Moreover, a distinction is made in *halakhah* between those who have only one of the two disabilities, deafness or dumbness – who are regarded as normal – on the one hand, and the totally deaf-mute, and the question as to whether the ability of the latter to converse in sign language can be regarded as removing their dumbness.

Nevertheless, some modern authorities maintain that there is a certain mental incapacity in deaf-mutes which prevents them from being regarded as being normal and the prob-

lem has been raised as to whether a deaf-mute widow may perform the duty of *ḥalizah despite the fact she is unable able to utter the formula (Deut. 25:7 and 9). The Israeli association has set up a halakhic committee to deal with the question.

In 1977 there appeared two volumes dealing with the deaf. The first, *A New Dictionary of Sign Language* in English by E. Cohen, L. Namir, and I.M. Schlesinger, professor of psychology at the Hebrew University, uses the Eshkol-Wachmann Movement Notation system and is intended for academics. The second, *A Dictionary of Sign Language for the Deaf in Israel* by L. Namir, I. Sella, M. Rimor, and I.M. Schlesinger, in Hebrew, is based upon the former work, is intended for field workers, and gives signs for some 1,200 Hebrew words.

In the U.S. there exist several congregations of deaf-mutes in which prayers are recited in sign language. There is every hope that these facts will be taken into consideration and the existing disabilities of deaf-mutes according to *halakhah* will be removed.

°DEÁK, FERENCZ (1803–1876), Hungarian lawyer and liberal nationalist politician; minister of justice in the revolutionary government of 1848. In 1839 Deák opposed a bill prohibiting Jews from acquiring certain classes of immovable property from the nobility. In 1867, when he was active in framing the constitution, he advocated legal emancipation for the Jews. After the schism in Hungarian Jewry between the Reform and Orthodox in 1869, Deák supported the latter in their demand for a separate organization, regarding it as a matter of freedom of conscience.

DEATH.

In the Bible

The Hebrew word for death is *mavet* (*mawet*) (*Heb.* מָוֶת) from the root *mvt* (*mwt*). For the Canaanites, *Mwt* (Mot) was the god of the underworld. Details of the myth of Mot are found in *Ugaritic literature. Mot fought against *Baal, the god of rain and of fertility; he was victorious and forced Baal to descend to his kingdom in the depths of the earth. But Anath, sister of Baal, avenged her brother and killed Mot. In the end Baal and Mot both returned to life, but at different times. Most commentators interpret this myth as a symbol of the changing seasons: Baal dies at the end of the rainy season, while Mot returns to life; the contrary happens when the rains begin again. In the Bible there are traces of such a myth in the belief that death is a destructive force distinct from God (see *Demons and Demonology) with its own messengers (e.g., war, sickness, plagues, cf. Hos, 13:14; Ps. 91:5–7; Prov. 16:14). In Jeremiah 9:20 it is said, "For Death (*mawet*) has climbed in through our windows, has entered our fortresses, cutting off children from the streets, young men from the squares." *Mawet* in this verse (see also Isa. 5:14; Hab. 2:5) may be compared to the Mesopotamian demon Lamashtu, who usually attacks children and pregnant women by climbing over the walls and entering through the windows (cf. Paul in bibl., where the widely held opinion that links this passage with the Baal myth is criticized). In the Bible there are two reasons given for man's death: the first states that God made man from the dust of the earth, and to dust he must return (Gen. 2:7; 3:19; Job 10:9). Genesis 3:22–24 gives a second reason: that of sin. By his expulsion from paradise, man was deprived of access to the tree of life, and thus eternal life was lost to him. The sentence of death passed on man in Genesis 3:19, "By the sweat of your face shall you get bread to eat until you return to the ground. For from it you were taken. For dust you are, and to dust you shall return," is opposed to other biblical passages that speak of the dead who go down into the tomb and enter the region of the dead (Isa. 14:9–12; Ezek. 32:17–32; etc.). Many names are given to this region: **she'ol*, always feminine and without a definite article as is usual in proper nouns, is found in no other language; *ʾereẓ* ("earth," "underworld"; e.g., I Sam. 28:13; Jonah 2:7; Job 10:21–22), which has the same meaning in Akkadian and Ugaritic; *kever (qever*, "grave"; Ps. 88:12), whose Akkadian parallel, *qabru*, is the normal form of designating the world of the dead; *ʿafar* ("dust"; Isa. 26:6, 19; cf. Gen. 3:19); *bor* ("pit"; e.g., Isa. 14:15, 38:18; Prov. 28:17; cf. Akk. *bûru); shaḥat* ("pit"; Ps. 7:16; cf. Akk. *šuttu*); *ʾavadon* ("Abaddon"; e.g., Job 28:22); *naḥalei beliyyaʿal*, "the torrents of Belial" (II Sam. 22:5,6). This region is in the depths of the earth; it is therefore called "the nether parts of the earth" (Ezek. 31:14); "the depths of the pit" (Lam. 3:55); "the land of darkness" (Job 10:21). Note the common Akkadian expressions for the region of the dead: "house of darkness" and "country of no return." The dead all inhabit this country, even those who were not buried (Gen. 37:35; Isa. 14:19; Ezek. 32:17–32; The Epic of Gilgamesh xii: 153). The dead are also called "*Rephaim" – in Ugaritic as well – but the origin of the word is obscure (Prov. 21:16). After death there is no contact between the dead man and his god (Ps. 30:10; 88:6, 12–13). Besides the idea that all the dead share the same unhappy situation, there is the notion that their fate depends on the attention bestowed on them by the living: whether or not they are properly buried, whether or not food or drink is brought to them (but not in the Bible), and, especially, whether or not their names are remembered. In the Bible great importance is placed on *burial, especially in the family tomb (Gen. 47:29–30; 49:29; 50:25; II Sam. 21:12–14). On the other hand, not to be buried at all is a serious punishment (cf. I Kings 14:11; et al.; note the Assyro-Babylonian malediction, "May he not be buried in the earth and may his spirit never be reunited with his loved ones."). Among the unfortunate beings in the next world, Akkadian texts name "the man who has no one to recall his name" (cf. II Sam. 18:18) and "he to whom neither food nor drink is brought"; he is reduced to "drinking fetid waters

and eating the food that is thrown out by the living" (cf. The Epic of Gilgamesh xii: 154). Care of the dead is also inspired by self-interest because they can affect the world of the living either for good or for evil and can even foretell the future (I Sam. 28:15–20). In the Babylonian confessions, the spirits of the dead are mentioned along with the gods: "I honored the gods and the spirits of the dead." In the Bible, they were called spirits (lit. "gods"; I Sam. 28:13). The reticence of the Torah on matters concerning the dead is easily understandable. There is nothing about honoring the dead; on the contrary, there are prohibitions about mourning certain persons, and it is forbidden to give them alms (Deut. 26:14) and to consult them. The sacrifices to the dead, forbidden by Deuteronomy 26:14, are linked by Psalm 106:28 to idolatry: "They joined themselves also unto Baal-Peor, and ate the sacrifices of the dead." The custom of bringing meals to the dead did not however disappear, and during the Second Temple period, at least in certain devout circles, it was considered a pious work: "Pour out thy bread on the tomb of the just and do not give it to sinners" (Tob. 4:7). Ben-Sira attacks this belief (Ecclus. 30:18). For the Egyptians, the dead plow, harvest, eat, and drink – in short, do all they did while they were alive (The Book of the Dead, 110). This pessimism about the fate of man expressed in biblical and Mesopotamian texts can be most clearly felt in the words with which Siduri tries to convince Gilgamesh that there is no point in seeking eternal life, for "when the gods created mankind, Death for mankind they set aside, Life in their own hands retaining"; and she goes on advising him to enjoy this world (cf. Pritchard, Texts, 90; see also the parallel passage in Eccles. 9:7–10). The two exceptions to the biblical belief that man descends into *she'ol* and remains there forever are Enoch (Gen. 5:24) and Elijah (II Kings 2:11; cf. the fate of the hero of the Mesopotamian flood story Ziusudra/Utnapishtim). Perhaps this belief is the origin of the psalmist's hope that he would not descend to *she'ol* (Ps. 49:16). In a Ugaritic epic Anat proposes to give Aqhat immortality, but the latter does not believe in it. Similarly in an Akkadian myth it is related how immortality escapes Adapa because he follows the evil counsel of his father, Enki-Ea, and refuses to eat the bread of life and drink the water of life. Enki-Ea had led him to believe that they were the bread and the water of death (cf. Pritchard, Texts, 101–2). An epithet of Marduk in Babylonian texts is *muballiṭ mîti*, "he who gives life to the dead"; but the meaning of the expression is rather "he who cures the sick" (cf. *Ludlul bêl nemêqi* 2:47; II Sam. 9:8; 16:9). In the *Servant of the Lord poems, his sufferings are described as a death. *Resurrection in the true sense of the word is only found in Daniel 12:2, but here too resurrection is a reward and meant only for the people of Israel, while in Isaiah 66:24 punishment of the wicked is eternal, but is not connected with their resurrection. In Ezekiel 37:1–14, the return of Exiles is described as a resurrection from the dead. On the other hand, one should compare this to Genesis 2:19, which states that the body descends to the earth (cf. Ps. 104:29; Job 34:14–15). Whether the spirit of man ultimately goes upward is questioned in the late Book of Ecclesiastes 3:20–21, but 12:7 affirms that "the spirit of man returns to God, who gave it."

In Talmud and Midrash

Though so complex a subject as death was inevitably not dealt with by the rabbis in an unequivocal way, their discussions on the subject incorporate a series of closely interconnected doctrines. Death itself, though imbued with mystery – contact with the corpse, for instance, meant defilement in the highest degree – was thought of as that moment of transformation from life in this world to that of the beyond. In terms of the mishnaic image, "This world is like a corridor before the world to come" (Avot 4:16), death is the passing of the portal separating the two worlds, giving access to a "world which is wholly good" (Kid. 39b).

At death the soul leaves the body with a cry that reverberates from one end of the world to the other (Yoma 20b), to pass into a state of existence, the exact nature of which was a matter of considerable dispute amongst the rabbis (cf. Shab. 152b–153a; Ber. 18b–19a; Maim. Yad, Teshuvah 8:2, and the critical remark by Abraham b. David of Posquières (Rabad); see also *Afterlife, *Body and Soul, *World to Come). Whatever the nature of the world beyond, it was generally accepted that there the dead reap the deserts of the acts they performed while alive, that they were free from Torah and the commandments (Shab. 30b), and that death served as an atoning process (Sif. Num 112). One confession formula before death, particularly prescribed for the criminal about to be executed, is "May my death be an atonement for all my sins" (Sanh. 6:2). The atoning value of death received greater emphasis after the destruction of the Temple, with the abolition of sacrificial atonement, so that complete forgiveness for more serious sins was dependent, despite repentance, the Day of Atonement, and suffering, on the final atoning value of death (cf. the discussion in Urbach, *Ḥazal*, 380–3).

Death and birth are viewed as parallel processes: just as man is born with a cry, tears, and a sigh, so he dies. He is born with his fist clenched as if to say "the whole world is mine," and he dies with open hands as if to say, "I have inherited nothing from this world" (Eccles. R. 5:14). The rabbis considered that there were 903 forms of death, the most severe way of dying being from asthma, or croup, which is compared to a thorn being torn out of a ball of wool, and the lightest is described as "the kiss of death," specially reserved for the righteous, which is like a hair being removed from milk (Ber. 8a; BB 17a; see *Death, Kiss of). The way in which a person dies, and the day on which he dies, were thought to be significant as good or bad omens for the deceased. Thus, for example, should he die amid laughter, or on the Sabbath eve, it is a good sign, whereas to die amid weeping, or at the close of the Sabbath, is a bad omen (Ket. 103b). To die from a disease of the bowels is considered a good sign (Er. 41b), no doubt because the suffering involved was thought to cleanse a person of his iniquities. Thus it was said that many of the righteous died from bowel illness (Shab. 118b), this being an opportunity for any

sins they may have accumulated to be purged before their entrance into the next world (cf., however, what was said above about the "kiss of death"). One description of the death process relates that when the dying man sees the angel of death, who is covered all over with eyes and stands above his pillow with drawn sword, he opens his mouth in fright, whereupon the angel lets fall a drop of gall suspended on the end of his sword. Swallowing this, the person dies, and because of this drop, his corpse gives off a bad odor (Av. Zar. 20b). At the moment of death the righteous man is vouchsafed a vision of the *Shekhinah*, the Divine Presence (Num. R. 14:22; Zohar, *Midrash ha-Ne'elam*, Gen. 98a).

Concerning the very necessity of death there was some dispute amongst the rabbis. On the one hand there is the rather extreme view, which did not win general acceptance, that death was the wages of sin: "There is no death without sin" (Shab. 55a), and it is the inevitable fate of man only in that no man is sinless, "… there is not a righteous man upon earth, that … sinneth not" (Eccles. 7:20). Even Moses and Aaron died because they had sinned (Shab. 55b). The few exceptions, the really righteous such as Elijah, were thought not to have died (Lev. R. 27:4; Eccles. R. 3:15), or in other cases to have died only as a consequence of the machinations of the serpent in Eden, who caused Adam to sin and thus bring death to the world (Deut. R. 9:8; Shab. 55a; in the Talmud this view is ascribed to those who maintain that death is not dependent on sin, but the impact of the original passage is unclear; see Urbach, op. cit., 376–7). In this vein it is said that "charity delivers from death, not merely from an unnatural death but from death itself" (Shab. 156b), and that did not the truly righteous request their own death, they would not die (Mid. Shoḥer Tov, Ps. 116).

On the other hand an older view, stemming from the tannaitic period, stresses the inevitability of death, its naturalness as part of the very fabric of the world since creation. Thus when God had completed the creation of the world He saw that "it was very good" (Gen. 1:31), concerning which R. Meir remarked, 'it was very good,' that is death" (Gen. R. 9:5; see Maimonides' comment on this passage in *Guide*, 3:10). The idea behind R. Meir's enigmatic statement would seem to be that death is an integral part of the natural order, making way for new life and continued creation. The naturalness of death is also explicit in the saying that the angel of death was created on the first day of creation (Tanḥ., Va-Yeshev 4; see also BB 10a, where death is described as the strongest thing in the world). The Mishnah in *Avot* (4:22) stresses: "Those who are born will of necessity die … for perforce you were created … born … live, and perforce you will die." According to this view sin only hastens death, but does not cause it in the first place. Lack of sin therefore either enables a man to reach his predetermined span of years, thus saving him from an untimely demise, or helps him to live longer than his allotted span (Shab. 156b).

These arguments concerning the inevitability of death or its dependence on sin turn on several factors, among them possible interpretations of the account of Adam's sin in Genesis. According to one view Adam brought death into the world by disobeying God and eating the forbidden fruit. The Children of Israel had an opportunity of overcoming the power of death when they received the Torah at Sinai, but they lost this opportunity when they sinned with the golden calf (Mekh., Ba-Ḥodesh 9; Ex. R. 32:1; cf. also Num. R. 9:45). The way Adam's sin was interpreted amongst the *amoraim* may have been influenced by apologetic considerations, particularly the need to negate the Pauline doctrine of original sin as an inheritance from Adam to all mankind (Rom. 5:12). Perhaps the view that each man's sin causes his own death is influenced by the need to stress individual responsibility as opposed to the Christian position that in Adam we have all sinned (*ibid.*).

That both the wicked and the righteous die was explained as follows. The wicked perish so that they should cease angering God, while the righteous die so that they may have rest from their continual struggle against the evil inclination which has no power over them after death (Gen R. 9:5). As noted, the process of dying also may serve the righteous as a means of ridding themselves of their sins (see also Tosef., Yoma 5 [4]:6). Nevertheless, though mortality affects both wicked and righteous alike, the rabbis were sure that the whole quality of their respective lives, on this earth and in the hereafter, differed greatly. For the wicked are considered as if dead while still alive, and the righteous even in death are called "living" (Ber. 18a, b; Tanh., Berakhah 7).

Laws and Customs

Jewish tradition emphasizes respect for the dying and the dead, and deference for the last wishes of a dying man, of adherence to such last wishes: the final requests of Jacob (Gen. 49:29), and Joseph (Gen. 50:25), and the advice of David (I Kings 2:1–9) were all faithfully heeded and observed. The Talmud states that the oral testament of a *goses* (גּוֹסֵס – the term applied to a dying man) has the same legal force as written and witnessed instructions (Git. 13a; see also *Gift, *Wills). The permission to transgress the Sabbath in order to ease the discomfort of the dying, however slender their chances of recovery, is not affected by the talmudic dictum that "most *gosesim* die" (Git. 28a). A dying person should not be left alone, and it is a great *mitzvah* to be present at *yeẓi'at neshamah* ("departure of the soul"). A candle is usually lit in the presence of the *goses* to symbolize the flickering of the human soul. A sick person, nearing his end, should be encouraged to confess his sins before God. He is urged: "Confess your sins. Many confessed their sins and did not die, and many who did not confess died; and as a reward, should you confess, you will live." (D 338:1; see also Sanh. 6:2, and Shab. 32a). Should he not know a formula of confession, he should be told to say, "May my death be an atonement" (see Sanh. 6:2). This rite may be performed on a Sabbath and on holy days, but should not take place in front of women and children because it would cause them distress and thus trouble the sick person (Sh. Ar., YD 338:1). One brief confession reads: "I acknowledge unto Thee, O Lord my God,

and God of my fathers, that both my cure and my death are in Thy hands. May it be Thy will to send me a perfect healing. Yet if my death be fully determined by Thee, I will in love accept it at Thy hand. O may my death be an atonement for all my sins, iniquities, and transgressions of which I have been guilty against Thee" (Sh. Ar., YD 338:2). The confession should end with the recital of "Hear, O Israel: the Lord is our God, the Lord is One" (Deut. 6:4). The formulas of confession recited on the Day of Atonement are also used (see *Al Ḥet, *Ashamnu, *Confession). Death is presumed to occur when breathing appears to have stopped and when the absences of the peripheral pulse, the heartbeat, and the corneal reflex have been ascertained. Those present recite the blessing *Barukh Dayyan ha-Emet* ("Blessed be the true Judge"; *Bayit Ḥadash*, Tur, OḤ 223; see also Ber. 59b). The body must then be left untouched for about eight minutes. During this period, a feather is laid across the lips; those present watch carefully for the slightest sign of movement. When death is finally established, the eyes and mouth are gently closed by the eldest son or the nearest relative. Jacob was assured that Joseph would perform this final filial service (Gen. 46:4). The arms and hands are extended alongside the body, and the lower jaw is closed and bound before rigor mortis sets in. The body is placed on the floor, feet toward the door, and is covered with a sheet. A lighted candle is placed close to the head of the body. In the house of the dead it is customary to turn all the mirrors to the wall, or to cover them. Water standing in the vicinity of the corpse is poured out (Sh. Ar., YD 339:5). The custom may have originated in superstition; but it may also be a method of announcing the death to avoid actually having to articulate the bad news. None of these services discharged for the dead, however, should be performed for a *goses* (*ibid.*, 339:1). A dead body should not be left alone. It must be guarded constantly, whether on weekdays or the Sabbath, until the funeral, and, in pious circles, the Book of Psalms is continually recited. Various reasons have been advanced to explain the custom of watching the dead, which is apparently very ancient. It may have originated in a desire to keep away evil spirits, or to protect the body from rodents and body snatchers. It became a mark of respect for the dead who must not be left either defenseless or unattended.

[Harry Rabinowicz]

ORIENTAL CUSTOMS. In Tunis and other communities, the custom prevailed of putting a loaf of bread or a nail on the corpse immediately after death took place. In Yemen the *mezuzah* was removed from the door, and sacred books removed from the room of a dying man who was in great pain. It was believed that their presence weakened the power of the Angel of Death and that their removal would bring a speedier end to the suffering. Sometimes the *shofar* was sounded. The deceased was dressed in his best clothes (if a woman, in her wedding dress) under the shrouds because "he is going to meet the Messiah." Rose water was sprinkled on him and fragrant leaves put in his clothes. In Salonika the deceased was put in a coffin and his sons formally asked his forgiveness and kissed his hand. If the deceased was a rabbi the whole community did so. The custom of professional women mourners was widespread. Lime was sometimes put on the body to hasten decomposition.

DEATH, KISS OF. Scripture records that "Aaron the priest ascended Mount Hor by the mouth of the Lord and died there" (Num. 33:38); and that "Moses the servant of the Lord died there in the land of Moab by the mouth of the Lord" (Deut. 34:5). The words "by the mouth of the Lord" were interpreted literally by the rabbis; they died there by the kiss of the Lord – which was given after Moses' soul absolutely refused to leave his body (Deut. R. 11:10) – and not through the agency of the Angel of Death, who was not granted dominion over them. Miriam and the three Patriarchs were said to have died in the same manner (BB 17a). Although only these six are named, sudden death after the age of 80 was also regarded as death through the kiss (MK 28a). Further, after his death R. *Naḥman b. Jacob appeared to Rabbah in a dream and told him that his death was as easy as drawing a hair out of milk; this is the way in which the kiss of death is described (*ibid.*). The description may be compared with that in the Koran (Sura 79:1) in the commentary of al-Bayḍāwī: "When a righteous person dies, the angel of death … makes the soul leave the body like a drop taken out of a bucket of water." The kiss is the easiest of the 903 kinds of death (the numerical value of תוצאות, *toẓa'ot*, in Ps. 68:21, "to God the Lord belong the issues [*toẓa'ot*] of death").

[Harry Freedman]

DEATH MARCHES, name given by prison inmates and retained by historians to the forced evacuations on foot of concentration and slave labor camps in the winter of 1944–45. With the onset of winter and Allied armies closing in on the Nazi concentration camps – the Soviets from the East and the British and Americans from the West – desperate SS officials attempted to evacuate the camps both to remove the eyewitnesses and to conceal the crimes that had been committed. Prisoners were moved westward in the dead of winter, forced to march toward the heartland of Germany, where their pres-

ence would be less incriminating. Daniel Goldhagen has called the death marches, "the ambulatory equivalent of the cattle car." Yet this time the prisoners were not being removed from Germany but moved back into Germany, perhaps to serve as labor, perhaps also to be used as fodder for a last stand.

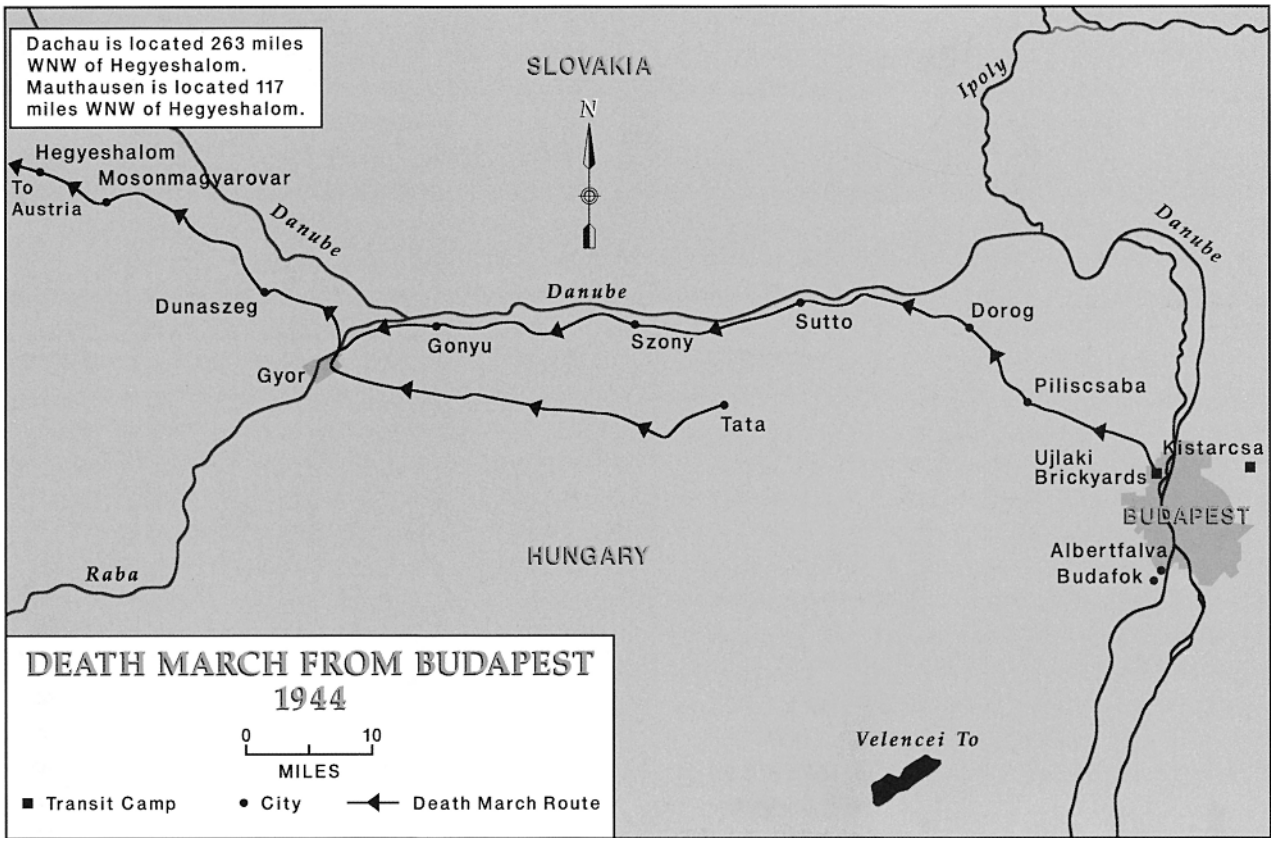
On January 18, 1945, just days before the Red Army arrived at Auschwitz, 66,000 prisoners were marched to Wodzislaw, where they were put on freight trains to the Gross-Rosen, *Buchenwald, *Dachau, and *Mauthausen concentration camps. Almost one in four died en route. On January 20, 7,000 Jews, 6,000 of them women, were marched from Stutthof's satellite camps in the Danzig region. In the course of a 10-day march, 700 were murdered. Those who remained alive when the marchers reached the shores of the Baltic Sea were driven into the sea and shot. There were only 13 known survivors.

Death marches had been used before. In 1941, hundreds of thousands of Soviet prisoners of war had been herded along the highways of the Ukraine and Belorussia from one camp to another. They too were often walked to death. By 1942, with the pressures of a long war ahead of them, Soviet POWs were preserved as laborers. In 1942 Jews in Poland were marched from smaller ghettos to larger ones. Within a year many were deported by train to death camps. Elsewhere Romanians joined the Germans as Jews from Bessarabia and Bukovina were marched to Transnistria. Thousands died en route. On November 8, 1944, Adolf Eichmann initiated a death march of tens of thousands of Hungarian Jews from Budapest to the Austrian border. Impatient to deport Hungarian Jews, he could not wait for trains to arrive in Budapest. The march lasted a month. Those fortunate enough to survive were sent to Dachau and Mauthausen.

Characteristic of these death marches were that they occurred in the dead of winter, with few provisions for food or shelter and little opportunity to rest. Many died en route from starvation, cold, and exhaustion. For the Germans they were a means of moving a population from one place to another at a time of great scarcity and when entire systems were breaking down. They also were a way of literally walking the prisoners to death. Those who fell behind or who were too weak to continue were killed on the spot; their bodies were often left on the side of the road. Those fortunate enough to continue were shipped to concentration camps that were unable to handle them when they arrived; they had broken down from the sheer numbers of inmates and an infrastructure inadequate to the task. For the prisoners, the death marches were an unending marathon testing their endurance and will to live and pushing them beyond exhaustion. Most prisoners succumbed; the death rate was often more than 50 percent and sometimes only one in ten survived.

There were 59 different marches from Nazi concentration camps during the final winter of German domination, some covering hundreds of miles. Some had a specific destination; others were continued until liberation or death.

[Michael Berenbaum (2nd ed.)]



We worked in a labor camp called Christianstadt near Auschwitz in an ammunition factory. In the beginning of February 1945, we were told the commandant wanted us to get all our things together and leave. We are going to walk. The Russians are behind us and we have to get away from them.… We had no idea where we were going. The commandant said, "How many there will be at the end is not my responsibility. I am just supposed to bring you." Some were shot on this walk. They couldn't walk anymore and some tried to run away and were shot and others got away.

We had civilian winter coats and we had a little square striped piece on the back of the coat. A square hole was made into the coat and it was sewn into the coat. But most of us had – for some reason – scissors and a needle and thread in the camp, so when we had a little free time, we put a piece of material from our coat underneath that hole and then sewed the striped piece back on. It just seemed like somebody had the idea and we all copied it.

As we marched my girlfriend and I were talking. There were so many women you couldn't keep track of who is missing. We made the plans at night if there was an opportunity the next day to run off, what our names would be and what we would say to people. So as we gathered again in rows of five, the two of us ran. Nobody saw us. We took our scissors and we cut off these pieces of striped material. We threw them in the brook and we sang songs. We got stopped by a policeman and he said, "Aren't you two girls from the Jewish group that went by?" and we made the attempt to look very surprised. How could he think that we would be two Jewish girls? After that we stayed with some people overnight. We told everybody that we were cousins, and we changed our names. So we went on our way and we joined a troop of German refugees and we went to the Sudetenland in Germany. Our German helped us and there we took jobs with some families.

From the testimony of Eva Gestl Burns,
Gratz College Holocaust Oral History Archive

Death march of Dachau prisoners, April 1945. Yad Vashem, Jerusalem.

DEBDOU, town in N.E. *Morocco in the region of Oujda near the Algerian border whose Jewish population was largely comprised of Sephardi Jews from Seville who arrived in Morocco in 1391 and, apparently, also in 1492 following their expulsion from Spain. The Jewish community was governed by several influential families who engaged in internecine conflicts and power struggles over communal leadership. The most noted families in the disputes were the Cohen-Scalis, the Murcianos, the Benhamous, the Bensusans, the Benaims, the Ha-Cohens, and the Moralis. Toward the mid-18th century the community was ravaged by a cholera epidemic resulting in several deaths and the relocation of 300 families to other parts of Morocco. Thus the community was reduced from 630 families to 330. Nevertheless the Jews made up some two-thirds of the total population.

In 1903 the Debdou community encountered hostility from Muslims in nearby Oujda and local villagers. They were thus exposed to physical danger while, at the same time, the economic decline that affected much of Morocco rendered many of them helpless. They turned to the Paris headquarters of the *Alliance Israélite Universelle (which did not open a school in their community) and asked for financial assistance to ride out the difficult times. The Alliance responded favorably and assisted Debdou's Jews partially to overcome their problems. The inauguration of the French Protectorate in 1912 eliminated their security problems and improved their economic prospects.

Though other Moroccan Jewish communities made up one-fourth to one-third of the entire population of other cities and towns – notably Sefrou and Tangier – Debdou was the only area in Morocco where Jews remained the majority of the population well into the first half of the 20th century. In fact, Debdou was unique in the sense that it was doubtlessly the only Jewish community in Muslim lands where Jews formed a majority. David Cohen-Scali served as the unofficial governor of Debdou between 1895 and 1910.

Until the mid-1950s Debdou remained a vital center of Maghrebi Jewish life. Its scribes were famous for producing Scrolls of the Law for many of the Jewish communities of northern Morocco and Algeria. Debdou had more than a dozen synagogues, which preserved the religious rituals and customs of Spain. Like other Moroccan communities Debdou's Jewry engaged in craftsmanship and included small-scale merchants, tailors, and weavers. Some, however, were shepherds. After World War II as many as 1,000 Jews still lived in Debdou. They were organized for *aliyah* by the Jewish Agency's Immigration Department emissaries in 1955–56 and settled in the moshavim of Israel's southern and northern peripheries.

DE BENEDETTI, ALDO (1892–1970), Italian playwright. De Benedetti's light, sentimental comedies betray the influence of the French theater and of the Hungarian writers László Fodor and István Fekete. He made his reputation with the plays he wrote in the 1930s, including *La resa di Tittì* (1932), *Lohengrin* (1933), and *Due dozzine di rose scarlatte* ("Two Dozen Red Roses," 1936). The latter, his greatest success, became widely known outside Italy. Almost all of his plays deal with attempts to escape from a stifling reality, to seek refuge in a romantic life. De Benedetti also worked for the cinema as a scriptwriter and director. His most successful motion pictures were *Marco Visconti* (1922), *Garibaldi* (1926), *Gli uomini, che mascalzoni* (1932), and *Mio figlio professore* (1946), which was written in collaboration with Vittorio De Sica. Due to the antisemitic laws of 1938, De Benedetti had to stop writing plays; but he wrote the scripts of some successful movies, such as *Maddalena, zero in condotta* (1941). After World War II, he dealt with more serious matters in *Lo sbaglio di essere vivo* (1945), a play reminiscent of Pirandello. In 1970 he committed suicide.

DEBENEDETTI, GIACOMO (1901–1967), Italian critic and author. Born in Biella, Debenedetti studied mathematics at the University of Torino and afterwards received degrees in law and in literature. In 1920–30 he contributed to such important literary journals as *Il Baretti*, *Convegno, Solaria*, and *L'Italia letteraria*, and published his first book, a volume of stories, *Amedeo e altri racconti*, in 1926. In 1924 he gave a series of lectures on the prophets (*Profeti*, 1998), showing particular interest in the literary style of the Bible. He was also an important film critic, and from 1937 to 1943 he worked as a scriptwriter (anonymously from 1938 owing to the Fascist anti-Jewish laws). Debenedetti proved himself an outstanding critic in a number of essays in which he subjected the principal Italian writers of the 19th and 20th centuries, as well as historians of literature like Benedetto Croce, to penetrating analysis. Some of them were collected in *Saggi Critici* (1929; 1952[2]). Analyzing the works of D'Annunzio and Pirandello in a second series of essays, *Saggi Critici* (1945; enlarged edition, 1955), Debenedetti proclaimed the need for committed, nonconformist critics to play an active part in politics. His literary criticism ended with a third volume of *Saggi Critici* (1959; 1963[2]), which contains original judgments on three French writers, Gide, Proust, and Valéry. He also gave a series of lectures and wrote articles on the narrative structure of fiction (both in literature and cinema) in modern times (*Il personaggio uomo*, 1988). He taught Italian at the universities of Messina and Rome; his university courses were published posthumously (*La poesia italiana del Novecento*, 1974; *Il romanzo del novecento*, 1998), mainly by his wife. He was also an influential advisor for important publishing houses, and a translator (among others, of M. Proust, G. Eliot, K. Mansfield, J.-P. Sartre, H. Miller). Debenedetti fell

victim to the Nazi persecution of the Jews when the Germans overran central and northern Italy late in World War II, and narrowly escaped deportation. He left two texts describing the Nazi persecution in Rome that are considered examples of engaged literature based on actual facts. In the first, *16 Ottobre 1943* (1945), he told the story of the roundup of the Jews of Rome and their deportation to the death camps. In the second, *Otto Ebrei* (1944; definitive edition, 1961), he described the notorious massacre in the Ardeatine Caves (see *Rome). In these works Debenedetti denounced not only the cruel and vile behavior of the German Nazis, but also the antifascist philosemitism of the postwar years, which continued to see the Jews as different from the rest of the Italians.

DEBIR (Heb. דְּבִיר).

(1) Canaanite royal city in the territory of Judah and originally inhabited by descendants of the Anakim ("giants?"; Josh. 12:13; 11:21). Debir is also called Kiriath-Sepher and Kiriath-Sannah (*ibid.* 15:15, 49). It was conquered by Joshua (*ibid.* 10:38–39; 12:13) but another biblical tradition attributes its capture to Othniel, son of Kenaz, Caleb's nephew (*ibid.* 15:15; Judg. 1:11–12). Debir is listed among the levitical cities (Josh. 21:15; I Chron. 6:43), which were apparently administrative centers under David. The Bible locates it in the southernmost district of the Judean hill country (Josh. 15:49). W.F. Albright's proposal to identify it with Tell Beit Mirsim, an important mound about 15 mi. (25 km.) southwest of Hebron, is usually accepted. Albright excavated the tell from 1926 to 1932, uncovering a series of strata dating from the late third millennium to the end of the monarchy. The city was strongly fortified in the Hyksos period and after a gap in occupation was resettled in the Late Bronze Age, suffering total destruction sometime in the latter part of the 13th century B.C.E. It was again occupied in the period of the Judges and provided with a casemate wall in the tenth century. Numerous dyeing plants for a textile industry were found in the city belonging to the period of the monarchy. The sequence of Bronze and Iron Age pottery found there still serves as the basis of the ceramic study of these periods. Some scholars reject Debir's identification with Tell Beit Mirsim arguing that this tell is actually located in the Shephelah ("lowland") whereas the Bible places Debir in the hill region of Judah, south of Hebron. K. Galling has suggested instead Khirbat Rābūḍ, about 8 mi. (13 km.) southwest of Hebron, an identification which appears probable following a survey by M. Kochavi which established that Khirbat Rābūḍ is a large tell of 60–70 dunams with prominent fortifications and remains dating mainly from the Late Bronze and Iron Ages (see also *Eglon).

(2) A locality on the northern boundary of Judah above the valley of Achor (Josh. 15:7). It is located near Ṭalʿat al-Damm between Jerusalem and Jericho. The ancient name may be preserved in Wadi al-Dabr.

(3) The king of the city of Eglon, south of Jerusalem, who was one of the five confederate kings in the Amorite coalition that attempted to halt Joshua's invasion (Josh. 10:3).

[Michael Avi-Yonah]

DEBORAH (Heb. דְּבוֹרָה; "bee"), wife of Lappidoth; judge and prophet during the period of the *Judges. Deborah promoted the war of liberation from the oppression of *Jabin king of Canaan (Judg. ch. 4). She is cited as the primary author of the Song of Deborah (ch. 5). Unsuccessful efforts have been made to determine the exact time and place of Deborah's war within the general framework of the conquest of Canaan and the period of the Judges or to date the song by means of geography or the political situation reflected in it. Many scholars, however, place this period at about 1200–1125 B.C.E.

Deborah is unique among the Judges because she was a woman (cf. 5:7) and a prophet (4:4); according to the text, she is also the only one of the judges who actually judged (4:5). Although tribal affiliation is uncertain, her place of residence leads to the supposition that she was an Ephraimite (4:5) or that she may have come from Issachar (cf. 5:15). Both in the narration of the events and in the Song of Deborah, she appears as a national leader, as "judging Israel" (4:4), and as a "mother in Israel" (5:7). Her home and seat of justice was at the southern extremity of the hill-country of Ephraim, between *Beth-El and *Ramah under the "palm-tree of Deborah" (4:5), an unidentified site sacred to the people and possibly identified by popular tradition with Allon-Bacuth, the burial site of Deborah, Rebekah's nurse (Gen. 35:8). Some see in the image of Deborah the *kahin* (or *kahina*), known from the nomadic Arab tribes as a judge in a sanctified place, a magician and fortune-teller who aroused the warriors to battle with a song. The Bible tells nothing about Deborah's husband Lappidoth (Judg. 4:4).

The War of Deborah

This is the only war against the Canaanite oppression of the tribes of Israel described in the Book of Judges, and it may have been Israel's last campaign against the Canaanites. The relationship between this war against "Jabin king of Canaan, who reigned in Hazor" (Judg. 4:2) and the one against "Jabin king of Hazor" (Josh. 11:1 ff.) has not yet been clarified. The sources imply a gap of several generations between the battle described in Joshua, which led to the conquest of Galilee, and the war of Deborah (cf. Judg. 2:10; 3:30; 4:3; 5:6). The narrative gives the distinct impression that the latter took place after the destruction of *Hazor itself, a problem already seen by the Radak (David *Kimḥi). Joshua's conquests had left many Canaanite enclaves in the interior of the country, especially

in the northern plains (Judg. 1–3). The Canaanites' equipment included iron chariots, which the Israelites did not yet possess (1:19; 4:3), and this advantage enabled the enemy to control passage through the valleys (cf. 1:34). These Canaanite settlements in the valleys of Jezreel and Beth-Shean formed a barrier between the mountain tribes in the center of the land and those in the Galilee. In the days of Deborah, Jabin's military headquarters was located at *Harosheth-Goiim (4:2). With a force of "nine hundred chariots of iron" headed by *Sisera, Jabin "sorely oppressed the Israelites for twenty years" (4:3).

It is surprising that the initiative to engage in a war of liberation should have come from Deborah, who lived at a distance, at the southern extremity of the Canaanite kingdom, and that she should have summoned *Barak son of Abinoam from Kedesh-Naphtali in the northern extremity, also a considerable distance from the Canaanite kingdom. Deborah appointed Barak military commander and accompanied him to Kedesh-Naphtali, where he enlisted "ten thousand men from the tribe of Naphtali and the tribe of Zebulun" (4:6). Barak climbed Mount Tabor with his army while Sisera's camp moved from Harosheth-Goiim to the Kishon valley. Despite the considerable distance between the camps, Deborah ordered Barak to exploit the flooding of the Wadi Kishon as quickly as possible (5:21) and to move down from Mount Tabor and storm Sisera's camps. The battle was joined in "Taanach, by the waters of Megiddo" (5:19), a Canaanite town located near one of the tributaries of the Kishon, some 15 mi. (25 km.) southwest of Mount Tabor. Sisera's chariots sank deep into the mire and were totally disabled, and the Israelite army put "Sisera's entire camp to the sword until not one of them remained" (4:16). Sisera himself fled to the tent of *Jael, wife of *Heber the Kenite, who lived in friendship with Jabin (4:17), and was treacherously killed by Jael (4:17–22; 5:24–27). The victory marked the permanent decline of the Canaanite kingdom and ushered in a period of 40 years of tranquillity for Israel (4:23–24; 5:31).

Both accounts of the war of Deborah – the narrative and the poetic – concur in the main, giving a fairly complete picture of events, despite some discrepancies in details. In both accounts it is clearly a war of national liberation, not of isolated tribes. Nevertheless, the narrative indicates that only the two northern tribes – Zebulun and Naphtali – participated, whereas the song cites the names of many tribes (and clans), some praised for their participation, others condemned for their abstention (5:14–18), with Zebulun and Naphtali being generously acclaimed (5:18). It is difficult to ascertain whether these discrepancies constitute contradictory accounts or differing points of view of the same event. According to the song, the war of Deborah was a war of volunteers (5:2, 9), and the victory was a woman's victory, whether attributed to Deborah, the initiator, or to Jael, the slayer of the Canaanite commander.

The Song of Deborah

The song (Judg. ch. 5) is a paean of victory attributed to both Deborah and Barak. Among the most difficult, and, according to Bible scholars, among the earliest of Hebrew heroic poems, it was apparently sung antiphonally (cf. 5:12). The presence of many feminine images supports the view that the author was a woman. It opens with an invitation to kings and princes to listen (5:3) and a prologue (5:4–5) describing the trembling of the mountains in the face of Yahweh's triumphant march out of Seir. Section two (5:6–8) describes the wretched state of the people prior to the war. The period preceding the victory is called "the days of Shamgar son of Anath" and "the days of Jael" (5:6). The judge *Shamgar is known from another source (3:31), but a woman judge named Jael is mentioned nowhere else. It is hardly likely that the name Jael, the murderer of Sisera, is intended. The postwar change becomes evident in verses 9–11, which praise the "chieftains of Israel," i.e., the national leaders whose patriotism had achieved the victory. Section four (5:12–18) applauds the leading warriors and the tribes and clans that took part in the hostilities and, conversely, mocks those who remained apathetic. Praiseworthy are Ephraim, Benjamin, Machir (Manasseh?), Zebulun, Issachar, and Naphtali; discredited (apparently) are Reuben, Gilead (Gad?), Dan, and Asher; Judah and Simeon are not mentioned. Section five (5:19–22) recounts in highly figurative language the battle at Taanach against the "kings of Canaan" and Sisera and the role of nature therein.

Joyous clamor is interrupted between sections five and six (5:23) by a curse upon the settlement of Meroz for its failure to take part in the war. This serves as a dramatic antithesis to the blessings for Jael, which opens the next section. Section six (5:24–30) combines two scenes: the first describes the death of Sisera at the hand of Jael, the wife of Heber the Kenite; the second portrays the mother of Sisera in the company of "her ladies," who try to calm her as she waits in anxiety for her son to return from the battle. The song ends (5:31) with an exultant cry for the destruction of God's enemies and the supremacy of those who love Him.

The poetic form of the Song of Deborah is characterized by parallelism and the repetition of a word, or a combination of words, in various lines of most of the verses. Also characteristic is the frequency of the tricolon, that is, the three line verse (e.g., 5:2, 3b). According to tradition, the Song of Deborah is written in a form called "blank over script and script over blank," that is, a line of three hemistiches followed by a line of two longer hemistiches, and so on (similar to the form of the Song of Moses, Ex. 15). There is, however, no established tradition on the division of the words into hemistiches in the Song of Deborah. There is great similarity between this song and Psalm 68, which appears to have been composed under the former's influence. Tradition has assigned the Song of Deborah to the *haftarah* of the weekly portion of *Be-Shallaḥ*, whose central section is Moses' Song by the Sea (Ex. 15), which, in turn, bears a direct relationship in spirit, style, and content to the Song of Deborah.

[Jacob Liver]

In the *Aggadah*

Deborah was one of the seven prophetesses of the Bible. She dispensed justice in the open air under a palm tree to avoid

being alone with a man in her house (Meg. 14a). Her husband Lappidoth is identified with Barak (SER 10), his name deriving from the fact that he made candles for the sanctuary (*lappid* = "torch"). According to one view this was his only merit because he was an ignorant man (*ibid.*). The rabbis criticize Deborah for her unbecoming arrogance in sending for Barak rather than going to him (Meg. 14b). Because of this and because of her conceit in boasting, "I arose, a mother in Israel" (cf. Judg. 5:7), she was given the unflattering name of Deborah ("bee"). The prophetic spirit departed from her for a time while she was composing her song (Pes. 66b); nevertheless she and Hannah were the two women in the world who composed praises to God unequaled by those written by men (Zohar, Lev. 19b). Deborah's great wealth enabled her to dispense justice without remuneration (Targ., Judg. 4:5).

In the Arts

The story of Deborah and the associated episode of Jael and Sisera have given rise to very few literary works. The French poet and Bible scholar Guy *Le Fèvre de la Boderie played on the Hebrew meaning of the name of the prophetess both in his epic *La Galliade* (1578) and in his poetic paraphrase of the Song of Deborah: "Debora gente Abeille / Reveille et leve toy, / Reveille toy reveille / Chante un Hymne au grand Roy…" (*Hymnes Ecclésiastiques*, 1578). From the 18th century onward, most works on these themes were texts designed for oratorios such as the *Deborah* of Handel. More attention has been paid to the motifs in the visual arts and in music. There are illustrations in 13th- and 14th-century manuscripts; the Psalter of St. Louis (French, 13th century) contains an illumination which shows the prophetess going forth with Barak and his men to make war on Sisera. In Ulm cathedral, Germany, Deborah, sword in hand, figures in the row of prophetesses on the choir stall (15th century). She also appears occasionally in baroque paintings, such as the work by Herrera Barnuevo (1619–1671) in the San Andrès church, Madrid. Jael has lent herself to even more plastic treatment, because of the dramatic qualities of her character. Usually artists have dealt with the slaying of Sisera, in which Jael, resembling Judith in appearance, wields a hammer in place of a sword. In Christian iconography she represents the Virgin's triumph over the devil or the Church triumphant, but in the misogynist art of the Middle Ages, Jael, like Delilah, exemplifies feminine duplicity. She appears in carvings and in manuscripts, including the Psalter of St. Louis (Bibliothèque Nationale, Paris) and the 14th-century Queen Mary Psalter (British Museum). There is also a fine drawing (c. 1430) after the Master of Flémalle (Brunswick Museum, Germany). During the Renaissance, Jael began to represent force and became a popular subject in Northern Europe. Some artistic treatments of this figure are a painting by the German artist Lucas Cranach, a wood-engraving by Albrecht Altdorfer, and an engraving by the Dutch artist Lucas van Leyden (all of the 16th century). Rembrandt made a pen drawing of Jael (1659), and there is a Gobelin tapestry illustrating the subject (Vienna Museum).

Deborah and Jael were popular with composers. About a dozen 17th- and early 18th-century oratorios on these themes are known, including some of historical interest, such as G. Fr. Rubini's *dialogo, Debora* (1656), which was the first demonstration of the reform of oratorio texts and structure proposed by its librettist, Spagna; and Porsile's *Sisara* (1719), Apostolo Zeno's first libretto. Handel's oratorio *Deborah*, with text by Samuel Humphreys (1739), is among the earliest works of his "oratorio period." Baldassare Galuppi's oratorio *Jahel* (Venice, 1747) featured an unusual item – an aria accompanied by two mandolins. Eighteenth-century compositions, mainly oratorios, were often performed in honor of politically active woman rulers, such as the empress Maria Theresa. Two successful later works were Josef Foerster's opera *Deborah* (1893; text after S. *Mosenthal) and Ildebrando Pizzetti's opera *Debora e Jaele* (composed 1915–21), first performed in Milan in 1922. Two settings of the verse "Thus may Thine Enemies Perish" from the Song of Deborah (Judg. 5:31) have been absorbed into the "corpus" of Israeli folksong: one by Uri Givon (with the textual variant "Thine Enemies, O Israel" instead of "O God") and another by Sara Levi-Tannai; both have also been made into folk dances. One of the Aramaic epic chants of the Jews of Kurdistan describes the story of Jael and Sisera (J.J. Rivlin, *Shirat Yehudei ha-Targum* (1959), 203–9).

DEBORIN (Joffe), ABRAM MOISEYEVICH (1881–1963), Russian Marxist philosopher. Born into a poor family in Lithuania, Deborin found employment as a metalworker and got caught up in the revolutionary spirit of the time. In 1903 he sided with Lenin's Bolsheviks against the Menshevik faction. As a student in Switzerland he came under the influence of the founder of Russian Marxism, Georgi Plekhanov, and became a Menshevik. With the success of the Bolshevik Revolution of 1917, he quit the Mensheviks and turned again to Lenin, offering the regime his services as a philosopher. Lenin cautiously

approved Deborin's appointment to the Sverdlov Communist University in 1921. By 1925 he controlled both the leading Soviet journal, *Pod znamenem marksizma* ("Under the Banner of Marxism"), and the philosophy section of the Institute of Red Professorship, the leading graduate school. In 1928 he joined the Communist Party, and became the most influential Soviet academic philosopher. However, in 1929 the second conference of Marxist-Leninist scholarly institutions adjudged Deborin's views "incorrect and un-Marxist." This, the first Soviet instance of the legislation of philosophic truth by party decree, came in the wake of a split – festering since 1924 – between the "mechanists," headed by L.I. Akselrod, who emphasized materialism, and what Stalin slightingly called the "Menshevizing idealists" headed by Deborin, who stressed Hegelian dialectics. In a sense, the Deborinists had been arguing for the integrity of dialectical materialism, and Deborin was condemned for failing to adjust from Leninism to Stalinism. After 1931 he played a modest role as philosophy member at Moscow's Academy of Science, which directed the work of some 260 Russian institutes. In 1937 many who were accused of "Menshevik idealism" were arrested and perished in camps and prisons. Deborin was spared this fate.

Deborin's earliest important work is *Vvedeniye v filosofiyu dialekticheskogo materializma* ("Introduction to the Philosophy of Dialectical Materialism," 1922). His later publications include the first volume of *Sotsialno-politicheskiye ucheniye novogo i noveyshego vremeni* ("Socio-political Doctrines of Modern Times," 1958; Sp. trans. *Las doctrinas político-sociales de la época moderna y contemporanea*, 1960), and a collection of articles, *Filosofiya i politika* (1961). In 1928, together with August Thalheimer, he published a volume for the 250th anniversary of *Spinoza's death, *Spinozas Stellung in der Vorgeschichte des dialektischen Materialismus*.

DEBRECEN, city in E. Hungary; following the Reformation it was a bastion of Calvinism (known as "Calvinist Rome"). Jews began to settle there from the beginning of the 19th century but without the agreement of the city council; official permission was eventually received in 1840. There are records of an organized community from 1851; synagogues were built in 1851 and 1865; a third – a monumental construction – was erected in 1895–97; the building was destroyed by fire in 1948. In 1870 the Debrecen community declared itself a *status-quo community; in 1886 a separate Orthodox community was formed. The Orthodox synagogue, still in use in 1970, was built in 1893. A Jewish secondary school, established in 1921, existed until 1944. The Jewish population numbered 118 in 1848; 544 in 1856; 6,200 in 1900; 8,400 in 1910; 10,170 in 1920; and 12,000 in 1940. Under the Nazi regime, the young men were sent to forced labor camps. Of these several hundred were burnt to death in the Dorosics hospital. About 7,500 persons were deported up to June 26–28, 1944: some to Auschwitz, and the rest – because the railway lines had been destroyed by bombing – to Austria.

Those who returned formed the largest community in the area, consisting of 4,640 members in 1946. In 1970 there were 1,200 Jews with rabbis and two synagogues. The status-quo community used a synagogue built in 1909–10. A small community remained at the outset of the 21st century, mostly aged and unaffiliated with Jewish organizations.

DEBRECENJI (Brunner), JOŽEF (1905–), Yugoslav author and editor. Born in Budapest, Debrecenji began his career on the editorial staff of several Hungarian newspapers and periodicals. He spent World War II in concentration camps, an experience that strongly influenced his postwar writings. From 1945 Debrecenji became a full-time writer in Belgrade, publishing poems, short stories, novels, and literary criticism. His outstanding work, *Hladni krematorijum* ("The Cold Crematorium," 1951), first appeared in Hungarian as *Hideg krematórium* (1950). Debrecenji's later works, studies of human destiny in troubled times, include the drama *Smena* ("The Shift," 1953), and collections of short stories such as *Neverovatno leto* ("The Incredible Summer," 1955) and *Ljudsko meso* ("Human Flesh," 1962) which first appeared in Hungarian.

DECALOGUE (The Ten Commandments). The statements of God quoted by Moses in Deuteronomy 5:6–18 are entitled "the ten words, or utterances" (Heb. עֲשֶׂרֶת הַדְּבָרִים *aseret ha-devarim*; LXX δέκα ῥήματα [Deut. 4:13], δέκα λόγοι [10:4]). The same title in Exodus 34:28 has traditionally been referred to the "original" version of these statements in Exodus 20:2–14 [17] but see below). Mishnaic Hebrew עֲשֶׂרֶת הַדִּבְּרוֹת *aseret ha-dibberot* reflects the specialized use of דִּבֵּר *dibber* (cf. Jer. 5:13) for divine speech.

Problems of the Literary Setting

Exodus 19:9 announces a dialogue between God and Moses (or an address by God to Moses) to be held at Sinai and overheard by the people, for the purpose of making them believe Moses "ever after." Verse 19 tells of such a dialogue – the contents of which are not specified – amid smoke, quaking, and the blare of a horn (some exegetes identify it with the colloquy of verses 20–24, others, with the Decalogue). Again, after Moses descends to the people (19:25), God speaks ("to Moses," LXX A) the entire Decalogue (20:1ff.). Frightened by the thunder, the smoke, and the blaring horn, the people fall back and plead with Moses to be their intermediary; Moses reassures the people that God wants only to train them in the fear of Him, then approaches the cloud enshrouding God (20:15–18 (18–21)).

Deuteronomy represents God summoning the people at Horeb (Sinai) to let them hear His voice in order to train them in the fear of Him (4:10). He speaks to them "face to face" out of the fire – but Moses was standing between the people and God "to declare YHWH's word to you, because you were afraid of the fire and would not ascend the mountain" (5:4–5). After hearing the Decalogue, the frightened people plead with Moses to be their intermediary (5:20 ff.).

The attempts to reconcile these accounts internally and with each other are not convincing. The accounts apparently combine different versions of the event: (a) God spoke with Moses, and the people overheard; (b) He spoke with Moses and then Moses transmitted His words to the people; (c) God spoke to the people directly. The relation of the Decalogue to God's purpose in speaking with Moses in the Exodus account is obscure; why He speaks it to the people in Deuteronomy is only slightly less so. Common to all versions, however, is the affirmation that at Sinai-Horeb the entire people heard God's voice (Ex. 19:9, 22 (?); Deut. 4:10 ff., 33, 36; 5:19 ff.; 9:10; Neh. 9:13). Medieval theologians deduced from the combination of the Decalogue and the motif of the people hearing God's voice, particularly in Exodus 19:9 and Deuteronomy 5:21, that God's purpose in proclaiming the Decalogue was achieved when "henceforth the people believed that Moses held direct communication with God, that his words were not creations of his own mind" (Judah Halevi, *Sefer ha-Kuzari*, 1:87), and hence, that the laws he subsequently communicated originated with God (Maim., Yad, Yesodei ha-Torah, 8:1 f.). This is a likely interpretation of the present form of the Decalogue narrative.

The Decalogue comprised the stipulations of the *covenant between God and Israel (Deut. 4:13). It was engraved on both sides of two stone "tablets of the covenant" (לוּחֹת־הַבְּרִית or לֻחֹת הָעֵדֻת [עֵדוּת, traditionally rendered "testimony," is to be connected with Akkadian *adū* and Old Aramaic עדא, עד(י) "treaty"] by the finger of God; Moses ascended Mount Sinai and there he remained, fasting forty days before receiving the tablets (Ex. 24:12, 18; 32:15–16; Deut. 9:9 ff.). Furious over the *golden calf Moses broke the first pair of tablets (Ex. 32:19; Deut. 9:17), after which he again ascended Sinai, remaining another forty days pleading on behalf of the people. After God forgave the people, Moses was ordered to provide a second pair of stones on which God wrote exactly what was written on the first pair (Ex. 32:30 ff.; 34:1 ff., 28; Deut. 9:18–20; 10:1–2, 10). God commanded that this pair be placed inside the *Ark of the Covenant, which was housed first in the tent sanctuary, later in the Tabernacle at Shiloh, and ultimately in the *Temple in Jerusalem (Ex. 25:16, 21; 40:20; Deut. 10:2–5; I Kings 8:9). The Ark was conceived as God's footstool (I Chron. 28:2), which is comparable (Tur-Sinai, Haran) to the custom attested in Egypt and Hatti of depositing copies of pacts under the feet of gods who had witnessed them.

The account of these events is complicated in Exodus by the intervening presence, in 34:10–26, of another set of covenant stipulations, which Moses is also commanded to write down (34:27). These concern (1) alliances with the idolatrous Canaanites; (2) molten gods; (3) the festival of unleavened bread; (4) firstlings; (5) the Sabbath; (6) the festival of weeks; (7) the ingathering festival; (8) sacrifice; (9) first fruits; and (10) cooking a kid in its mother's milk. They are presented as the terms of God's renewed covenant with Israel, and repeat the injunctions from 23:23 ff. and 34:10–19 touching on the chief offenses involved in the golden calf episode (other molten gods; an invented festival). In 34:27 and 28 references to the two distinct series of covenant stipulations are juxtaposed.

Critics have called the stipulations of Exodus 34 the "cultic decalogue," as distinguished from the traditional – or the "ethical" – decalogue, and regard it as the more ancient. This relative dating rests in large measure on the supposition that the "ethical decalogue" reflects the teachings of the literary prophets. Yet nothing of the peculiar emphases of literary prophecy (e.g., concern for the rights of the weak) appears in the "ethical decalogue," while its own ethical injunctions are found not only in pre-prophetic Israelite literature, but in extra-biblical sources as well (see below).

The interrelation of these two series of covenant stipulations is obscure; no less obscure is the relation of the Decalogue of Exodus 20 to the following law corpus (20:19–23 (22–26); 21–23) – "all the words of YHWH and all the rules" that Moses relayed to the people and wrote down in the "book of the covenant" (24:3–4, 7). Thus several entities called covenant documents appear in the formidably complex section, Exodus 19–34. Criticism has been unable to assign these documents convincingly to one or another of the narrative strands that have been analyzed in the Pentateuch (the Decalogue is often assigned to the "Elohist"). It is as likely as not that the covenant documents were preexisting entities incorporated more or less whole into the narrative. The Deuteronomic version of the Decalogue shows changes under the influence of its context and there is reason to believe that all of the covenant documents underwent changes (mostly accretions) before attaining their present form. (See Table: Decalogue 1.)

Versions of the Decalogue

In addition to the two versions of the Decalogue found in the masoretic text of Exodus and Deuteronomy, the Samaritan Pentateuch preserves slightly differing Hebrew texts. Its major innovation consists in counting, as the tenth "word," the injunction to publish the Decalogue on Mount *Gerizim – the sacred mountain of the *Samaritans (the injunction combines Deut. 11:29a, 27:2b–3a, 4a [Samaritan version], 5–7, and 11:30). This dogmatic accretion to the text reflects the notion, first attested in the Hellenistic-Jewish literature (see below), that the Decalogue is an epitome of the Law, a capsule of its chief injunctions. A Hebrew version of the Exodus Decalogue appears in the *Nash papyrus (c. second century B.C.E.) – evidently used in the liturgy, to judge from the **Shemaʿ* reading that immediately follows (see below). Nash is closely related to the Septuagint of Exodus, and is likely to be a copy from the Hebrew that underlies the Septuagint manuscript. A fragment

DECALOGUE

EXODUS	DEUTERONOMY
I YHWH am your God who brought you out of the land of Egypt: You shall have no other gods beside Me. You shall not make for yourself a sculptured image or (> D[1]) any likeness of what is in the heavens above, or on the earth below, or in the waters under the earth. You shall not bow down to them or serve them. For I YHWH your God am a jealous God, visiting the iniquity of fathers upon children (and D[2]) upon the third and upon the fourth generations of those who hate me, but showing kindness to the thousandth generation of those who love me and observe my commandments.	
You shall not utter the name of YHWH your God for a vain thing; for YHWH will not clear one who utters his name for a vain thing.	
Remember[3] the sabbath day to hallow it. Six days you shall labor and do all your work, but[4] the seventh day is a sabbath of YHWH your God; you shall not do any work[5] you and your son and your daughter, your male and your female slave[6] and[7] your[-6] cattle, and the stranger who is in your settlements. **For in six days YHWH made heaven and earth[8] the sea and all that is in them, and He rested on the seventh day; therefore YHWH blessed the sabbath[9] day and hallowed it.**	**Observe** the sabbath day to hallow it, as **YHWH your God commanded you.** Six days you shall labor and do all your work, but[4] the seventh day is a sabbath of YHWH your God; you shall not do any work[5] you and[10] your son and[10] your daughter, **and**[11] your male and your female slave **and**[11] **your ox and your ass** and **all**[10] your cattle, and the stranger who is in your settlements, **so that your male and female slave may rest as you do. You must remember that you were a slave in the land of Egypt and YHWH your God brought you out of there with a mighty hand and an outstretched arm; therefore YHWH your God has commanded you to make**[12] **the sabbath day.**[13]
Honor your father and your mother[14] that you may long endure on the[15] land that YHWH your God is giving you.	Honor your father and your mother **as YHWH your God commanded you,** [16-]that you may long endure **and that you may fare well**[-16] on the land that YHWH your God is giving you.
[17-]You shall not murder.	
(And D[2]) You shall not commit adultery.	
(And D[2]) You shall not steal[-17d]	
(And D[2]) You shall not bear false (שקר) E; (שוא) (D) witness against your fellow.	
You shall not have designs on your fellow's **house (-hold)**.[18]	**And**[2] You shall not have designs on your fellow's **wife**[23]
You shall not have designs[19] **on your fellow's wife**,[20] or[21] his male or his female slave, or[21] his ox, or his ass[22] or all that is your fellow's.	**And**[2] **you shall not desire**[24] **your fellow's house**,[25 26] **his field** or[27] his male or[28] his female slave,[26] his ox, or[28] his ass,[29] or all that is your fellows.

containing the Deuteronomic Decalogue has been found in *Qumran Cave 4 (4Q Deutm; c. first century B.C.E.).

A translation of the received Hebrew text of the Decalogue follows, paragraphed according to Norzi's Minḥat Shai. Minor divergences of D(euteronomy) from E(xodus) are in parentheses; where major divergences occur, E's version of the "word" appears on the left, D's on the right, with divergent matter in boldface. The divergences in early versions are in footnotes.

Divergences between the masoretic texts of E and D are wider than between each of them and their versions, or between the versional texts of E and D. This speaks for the priority of the masoretic text. The ground for the Sabbath in E is organically related to the opening command: reference to the Creation explains how the Sabbath is YHWH's, and why it is to be sanctified. Compared with it, D's ground – to give rest to slaves and remember the Exodus (cf. Deut. 15:15; 16:12; 24:18, 22; cf. Ex. 23:12) – is tangential. Rhetorical expansions in Deuteronomy's style occur in D's commands regarding the Sabbath and honoring parents (cf. 4:23; 20:17, and 5:26; 6:18; 12:25, etc.). The addition of ox and ass in its Sabbath command derives from the list in the last paragraph. A socioeconomic divergence appears in the last two paragraphs. E follows a general term (*bayit*; "household," as, e.g., in Gen. 18:19; 45:18; Deut. 25:9) with particulars in descending order, omitting real property. D includes real property, and so it puts wife first (as in E's particulars) and pairs *bayit*, taken as "house," with "field." D's divergences are thus of a piece with the rhetorical idiom of Deuteronomy, and reflect its post-settlement orientation.

The expansive and synthetic tendencies visible in D are carried even further in the versions, a climax being 4Q Deut. m's attachment of E's Sabbath ground onto D's (note 13). Ibn Ezra's remark on D's divergence from E applies to the entire recorded transmission of the Decalogue: "Words are like bodies, their meaning, like the soul; hence the custom of the wise… not to be too concerned with changing the words so long as their meaning stays the same."

The Division Into Ten "Words"

The entire passage in which (and in which only) God speaks in the first person is one long paragraph. *Sifrei* Numbers (112) calls it all "the first utterance" (concerning idolatry), though common opinion divides it into two (*Ḥizzekuni*: "The first two 'words' were said in a single utterance"). To make up ten, each sentence of the ban on coveting is counted a paragraph, though the cantillation connects them (cf. *Minḥat Shai* and Ibn Ezra, both of whom deprecate numbering the "words" according to the paragraphing).

Two sets of cantillations appear in the first paragraph and with the first four brief "You shall not's": the so-called "upper" set, which treats the whole paragraph as one long verse and breaks the "You shall not's" into four short ones, and the so-called "lower" set, which breaks the paragraph into four verses and unites the "You shall not's" into a single verse. The upper cantillation represents the traditional manner in which Israel heard the ten "words" at Sinai, and is used for the public synagogal reading of the Decalogue (some say, only on the Feast of Shavuot); the lower normalizes the verse-lengths, and is used on all other occasions (e.g., private reading; *Minḥat Shai, Ḥizzekuni*).

For Philo (Decal. 53ff., 66ff.) and Josephus (Ant., 3:91–92) the first "word" says that God is one and alone to be worshiped (i.e., "I YHWH" plus "You shall not make etc."). The Samaritans start the count with "You shall have no other gods" – which runs to the end of the paragraph, and adds a new tenth "word" (see above). The Samaritan notion that "I YHWH" stands outside the count had medieval Jewish proponents (see Ibn Ezra's commentary). The commonly held count makes "I YHWH" the first word (enjoining belief in God), "You shall have no other gods" to the end of the paragraph, the second (banning idolatry). The natural construction of the first sentence, however, subordinates it to the second (cf. Judg. 6:8–10; Hos. 13:2–4; Ps. 81:8–10), entailing the following count and characterization of the "words":

1. On the ground that it is He who liberated them from Egypt, God demands that Israel recognize as god no other divine beings (cf. Naḥmanides).

2. No image of any creature may be made for worship – no distinction being made between a symbol of another god and one used in the cult of YHWH. Any cult image is *ipso facto* "another god," an object of YHWH's jealousy (cf. Ex. 20:20 (23); Deut. 4:15ff.; the golden calf is in YHWH's honor, Ex. 32:5). This demand for an aniconic cult does not prohibit objects of religious art which are not intended as objects of worship (e.g., *cherubim, trees, lions, cattle (I Kings 6:23ff., 29; 7:25, 29)). If, however, such an object became venerated, it was then banned (II Kings 18:4).

3. Using God's name for a vain thing has traditionally been understood to mean false oaths (cf. Ps. 24:4; Targ.); but evil prayer (cf. Ps. 16:4) or sorcery might be intended too. Frivolous oaths (Philo, Josephus) and, finally, any idle use of God's name (e.g., as in an unnecessary benediction (Ber. 33a)) came to be included. Another possibility (Staples, Sperling) is that the phrase should be translated as: "You shall not speak the name of YHWH to that which is false." In other words, do not identify a false god with YHWH. Given the previous prohibition of having no other gods, Israelites might have been tempted to identify other gods with YHWH. To identify a false god with Yahweh was to commit a crime so severe that Yahweh would not acquit he offender.

4. Observance of the Sabbath rest, according to E, respects God's consecration of the day at the end of Creation. D's motive associates a purely ethical notion (cf. Ex. 23:12) with the general ground, expressed in the first "word," of Israel's duty to obey God's commands (cf. Deut. 6:21–24).

5. Honor is due to both father and mother (cf. Lev. 19:3; and Ex. 21:15, 17; Lev. 20:9; Deut. 21:18ff.; 27:16). Juxtaposition of this "word" to the preceding injunctions concerning God's honor was later explained by the parents' partnership

with God in creating offspring (Mekh. Sb-Y to 20:12, Naḥmanides; cf. Gen. 4:1).

6. "Murder" has traditionally rendered the Hebrew *raẓaḥ* here; for, though the verb covers non-culpable homicide as well (Num. 35:11, 27, 30; Deut. 4:42), to construe it as an absolute ban on killing would bring this "word" into conflict with the death penalty prescribed by the law for many offenses. The injunction affirms the sanctity of human life.

7. The verb *naʾaf* denotes sexual relations with a married woman by anyone but her husband (Lev. 20:10; Jer. 29:23; Ezek. 16:32). The inviolateness of a married woman is the basis of a patrilineal society.

8. Tradition understands *ganav* here to denote kidnapping, i.e., a theft liable to capital punishment – an offense of the same order as the two preceding (Mekh., Yitro, 8). But to make the legal penalty determinative in a document that ignores legal penalties throughout is unwarranted. Stealing at large is banned; the right of possession is affirmed.

9. The ban on false witness seeks to protect all transactions that require the honesty of the citizenry in the marketplace (Jer. 32:12) as well as the court.

10. Traditional legal exegesis understands *ḥamad* to involve action (Mekh., Yitro, 8, comparing Deut. 7:25; Mekh., SBY to 20:17: "one who exerts pressure to get something"; cf. Levi b. Gershom, who compares Ex. 34:24 ["no man will endeavor to take it from you"] and Micah 2:2, and concludes that "one does not violate this prohibition until he does something to obtain the object"). But (as Ibn Ezra to Deut. 5:16 observes) the verb may also be merely mental (e.g., Prov. 6:25), so that one wonders whether the actional interpretation does not arise out of misplaced legalism, i.e., the wish to define the prohibition in terms amenable to law enforcement. Since D expressly substitutes *hitavvah* (*hitʾawwah*, "desire") for *ḥamad* in the second sentence, it clearly regarded the injunction as banning guilty desires.

Original Form and Date: Critical View

The divergent grounds of the Sabbath command in E and D, the disparity caused by the uneven presence of motive clauses and particulars, and the shift from first to third person with reference to God in the third "word" and thereafter (whence the rabbinic theory that only the first two were heard "from the mouth of God" (Mak. 24a); but such shifts are common (e.g., Ex. 23:13–25; 34:11–26)) have given rise to the theory that the "words" were originally all terse and only later received, unequally, additional clauses. A representative attempt to reconstruct the original form of the "words" (Stamm and Andrew in bibl.) follows:

I am YHWH your God:
You shall have no other gods besides me.
You shall not make yourself a graven image.
You shall not take the name of YHWH in vain.
Remember the Sabbath day.
Honor your father and your mother.
You shall not kill.
You shall not commit adultery.
You shall not steal (a person, i.e. kidnap).
You shall not bear false witness.
You shall not covet.

Criteria for dating even this shortened form of the Decalogue are wanting. Monolatry, aniconism (cf. the empty cherub throne over the ark), and the sanctity of the divine name are coeval with the beginnings of biblical religion. The Sabbath as a sacred day of rest is found in the manna-story (Ex. 16 [J, 11th–10th cent.]). The ethical values of the Decalogue are common to other ancient Near Eastern civilizations. Comparisons with the Egyptian "Protestation of Guiltlessness" (a guide for the deceased during his final judgment after death) have often been made: "… I have not stolen … I have not been covetous … I have not robbed … I have not killed men … I have not told lies … I have not committed adultery, etc." (Pritchard, Texts, 35). While there is no proof of Mosaic origin, there is no ideational or substantive objection to the Decalogue's originating in Moses' time. Literary influence of supposedly later Deuteronomic and priestly material has been found in the motive clauses; but even this is questionable in the light of the possibility that the influence may have run the other way. Reminiscences of the Decalogue have been detected in Hosea 4:2; 12:10; 13:4 and Jeremiah 7:9.

Structure and Arrangement

A dual structure can be seen in the Decalogue: items one through four deal with man's relation to God; six through ten with man's relation to man; and the fifth, with relation to parents, forming a bridge between the two (Philo). The first five "words," having particularly Israelite orientation, are furnished with additional motive clauses; and they alone each contain a reference to "YHWH your God." The last five "words" have neither – being universal ethical requirements (PR 21:99).

While the biblical text gives no indication of how the "words" were distributed on the tablets, it is commonly assumed that they stood five over against five. An ingenious homily based on this assumption correlates the "words" opposite each other on the tablets thus: Murder is an injury to God whose image man is – apostasy is equivalent to marital infidelity – stealing will lead to a false oath (cf. Zech. 5:3–4, Prov. 30:9) – the Sabbath-breaker attests falsely that God did not create the world in six days and rest on the seventh – he who covets his fellow's wife will end by fathering a child who rejects his true parent and honors another (Mekh., Yitro, 8).

The "words" are ranged in a fairly clear descending order from matters divine to matters human, and within each group from higher to lower values. Duties to God come first: the obligation to worship Him alone precedes treating His name with reverence, and both precede the symbolic piety of Sabbath rest. Respect for parental authority naturally follows respect for God. The purely ethical injunctions are ranged in an obvious hierarchy: life, the family, right of possession, reliability of public statements. The last "word" – the ban on guilty attempts or desires – deals with what is both least culpable and

most ethically sensitive; it acts as a safeguard against infringing on any of the other ethical injunctions.

Setting in Life

In later times, the Decalogue pericope (Ex. 19–20) was part of the liturgy of the Feast of Shavuot – by tradition, the anniversary of the Sinai theophany (Meg. 31a; Tosef., Meg. 4:5). This provides an analogy to the modern theory that in ancient Israel a festival of "covenant renewal" existed, whose liturgy included the solemn recitation of the Decalogue (Deut. 31:11). Support for the theory has been sought in formal similarities between the categorical (apodictic) idiom of the Decalogue and passages in Hittite vassal treaties which, among other things, require regular public reading of the document. The absence of any reference to such a festival in the biblical calendars militates against the theory. Moreover, when a commemorative function is attached to a festival, it is invariably related to some mighty or redemptive act of God on behalf of man (*Creation, *Exodus), but the Sinai theophany is not counted among these acts until very late biblical times (Neh. 9:13–14). The analogy of Deuteronomy 31:11 suggests, on the contrary, that in biblical times the public recitation of covenant stipulations would have been a secondary adjunct to one of the major festivals. Only later, when the "gift of the Torah" was appreciated as a boon (not only a solemn obligation (a glimmer of this is seen in Deut. 4:8)), did it become the fit subject of a major commemorative festival.

Jeremiah 35:6–7 shows that the rule of an order (here the Rechabites) might be formally quite similar to the Decalogue. Like the founding father Jonadab ben Rechab, God defined the conduct required for the well-being of his "holy people" largely through prohibitions. Among such clusters of admonitions (cf. especially Lev. 19, "which contains the entire Decalogue" [Lev. R. 24:51] the Decalogue stands out for its generality and suggestiveness, and its balance of essential religious and ethical injunctions. Not much is known of the mode of transmission of the Decalogue and its setting in life before it was incorporated into the narratives of the Torah. The Decalogue came to be regarded as a summary of biblical law. Philo worked out the classes of law generated from each "word": the third "word," for example, covers all the rules of oaths; the fourth, all the sacred seasons and festivals; the fifth, all duties toward masters, elders, and rulers; the sixth, all sexual morality; the seventh, all bodily injury; the eighth, laws of debt, partnership, and robbery. This notion eventuated hymns for the Feast of Shavuot called *Azharot* ("Instructions"), in which the entire canon of 613 commandments was artfully distributed under the heads of each of the ten "words" (*Siddur R. Sa'adyah Ga'on*, ed. I. Davidson et al. (1941), 191–216; I. Elbogen, *Gottesdienst* (1924), 217–8).

The Nash papyrus reflects liturgical recitation of the Decalogue which was practiced in Egypt down to late times (J. Mann, in HUCA, 2 (1925), 283). **Tefillin* from Second Temple times found in the Qumran caves contain the Decalogue (see bibl.); and evidence that this practice was maintained among Babylonian Jews is found in Jerome (to Ezek. 24:15 [17]; see Habermann in bibl.).

[Moshe Greenberg]

In Rabbinical Literature

The problem of the two versions of the Decalogue did not constitute any difficulty for the rabbis. They maintained that "Remember" (Ex. 20:8) and "Observe" (Deut. 5:12), as well as all the other variations between the two versions, were uttered simultaneously, "something which transcends the capacity of the human mouth to utter and of the human ear to hear" (Shevu. 20b; RH 27a). The omission of "that it may go well with thee" (Deut. 5:16) from the Fifth Commandment in the first version was because the initial tablets were destined to be broken (BK 55a). Different opinions are expressed with regard to the number of commandments inscribed on each tablet. The prevailing opinion was that they were equally divided; the first five (relating to the duties of man to God) on one tablet and the next five (relating to the duties of man to man) on the second. Others held that each tablet contained the entire Decalogue. One interpretation of "they were written on both their sides; on the one side and on the other were they written" (Ex. 32:15) gives rise to the view that the entire Decalogue was written on both sides of the tablets (Song R. 5:14, no. 1). The Talmud, however (Shab. 104a), explains it to mean that the letters were incised right through the stone, which resulted in the comment that the *mem* and *samekh* which were in the tablets stood there by a miracle since they were completely closed letters and normally should have fallen out (Shab. 104a). As, however, the Jerusalem Talmud points out this applies only to the *ketav Ashuri* (the Assyrian script) whereas, if the Torah was written in the ancient Hebrew script, this would apply to the *ayin* (TJ, Meg. 1:11, 71c).

The first two commandments, which were stated in the first person, were heard directly from God by the people. The remaining commandments were transmitted by Moses (Mak. 24a). Every single Israelite felt as if God was announcing the commandments directly to him (Tanḥ. B. Ex., 79).

In the Liturgy

The Decalogue was originally included in the daily Temple service (Tam. 5:1). Outside the Temple, the people also wanted to include it in the daily service, but they were forbidden to do so in order to refute the contention of heretical sects (*minim*) that only the Ten Commandments were divinely given (Ber. 12a). The aggadic statement that all the 613 commandments were written on the tablets in the space between the Ten Commandments was probably also intended to dispel this view (Song R. 5:14, no. 2). As a result, the Decalogue does not form part of the statutory daily liturgy. The only emphasis given to it is that the congregation rises when it is read as part of the regular weekly portions (twice a year in the portions *Yitro* and *Va-Etḥannan*) and on the festival of Shavuot.

In some Oriental communities (e.g., in Libya), it was customary to read the Ten Commandments on Shavuot to-

gether with the Arabic translation. In many *Reform congregations, the solemn recital of the Ten Commandments is part of the confirmation ceremony which is generally celebrated on Shavuot. Likewise, at the bar mitzvah celebration in the synagogue, the boy or girl recites the Ten Commandments before the open *Ark as part of a solemn pledge of allegiance to the Jewish tradition.

For the Decalogue in *Tefillin* see *Tefillin and see also *Commandments, The 613.

[Aaron Rothkoff]

In Jewish Philosophy

In discussing the Decalogue, Jewish philosophers generally dealt with the following three topics: the nature of the Sinaitic phenomenon, the various enumerations of the Ten Commandments, and their philosophical message. The usual interpretation of the Sinaitic experience is that God willed that an incorporeal voice should come into being and pronounce the Ten Commandments in an audible and intelligible manner (*Philo, Decal. 9; *Judah Halevi, *Kuzari*, 1:89; *Levi b. Gershom, commentary to Ex. 20, etc.). Maimonides (*Guide*, 2:33) and Hermann *Cohen (*Die Religion der Vernunft* [1929], 44ff.) maintain that, since the Sinaitic experience was a prophetic one and thus could not have been experienced by those who were not qualified, it must follow that Moses alone heard and comprehended all the Ten Commandments. The people only heard an indistinguishable sound the meaning of which was explained to them by Moses. "I am the Lord" (Ex. 20:2) is generally accepted as the first commandment and the injunction against acknowledging the existence of other gods, making, or worshiping idols (Ex. 20:3–5) as the second. Philo, however, considers the prohibition of acknowledging other gods (Ex. 20:3) as the first commandment, and making or worshiping idols (Ex. 20:4–5) as the second. The Decalogue encompasses fundamental principles which contain the entire Mosaic teaching (S.D. *Luzzatto, commentary to Ex. 2; I. *Abrabanel, commentary to Ex. 20). Their aim is the perfection of the body and of the soul. Thus they include metaphysical truths and ethical rules of conduct (*Guide*, 3:17). Because of their greater importance, metaphysical truths are listed first in the first tablet (Joseph *Albo, *Sefer-ha-Ikkarim*, 3:26). The first three commandments teach the existence of God, His unity and incorporeality, His providence, revelation, and veneration (*ibid.*). The fourth commandment (Ex. 20:8–11; Deut. 5:12–15) enjoins a belief in creation, in the subordination of nature to God (*Guide*, 2:31), and in the equality of all men (H. Cohen, *Der Sabbath*, 1881). The last five commandments (Ex. 20:13–14; Deut. 5:16–18) aim at controlling emotions and desires in deeds, in words, and in intentions (Philo, Decal. 24ff.). *Abraham b. Ḥiyya, after placing the first command apart as comprehending all the others, divided the other nine (a) according to commands of thought, speech, and action, and (b) according to relations between man and God, man and his family, man and man, reaching the classification shown in Table: Decalogue 2.

Table 2. Abraham b. Ḥiyya's classification of the Decalogue

Relations between:	Man and God	Man and Family	Man and Man
Thought:	Second Command: "Thou shalt have no other God" – fear of God.	Fifth Command: "Honor thy father and thy mother."	Tenth Command: "Thou shalt not covet."
Speech:	Third Command: "Thou shalt not take the name of the Lord in vain."	Sixth Command: "Thou shalt not murder," especially one's family.	Ninth Command: "Thou shalt not bear false witness."
Action:	Fourth Command: "Remember the Sabbath Day."	Seventh Command: "Thou shalt not commit adultery."	Eighth Command: "Thou shalt not steal."

(see Abraham b. Ḥayyim, *Meditation of the Sad Soul*, tr. by G. Wigoder), 23–24, 130–9.

For Decalogue in Arts see *Moses in Arts.

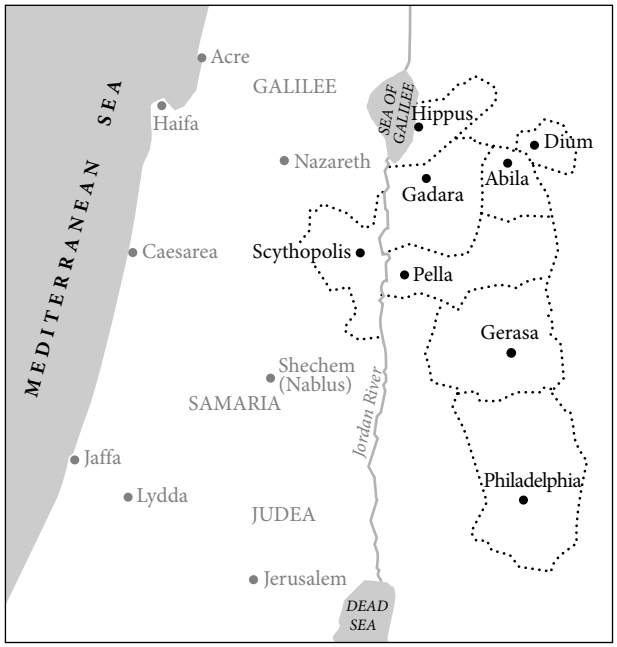
DECAPOLIS (Gr. "the ten cities"), league or administrative grouping of Syrian-Greek cities situated in southern Syria, the northern Jordan Valley, and in Transjordan in the Roman and Byzantine periods. The Decapolis which was originally attached to the Roman Province of Syria is already mentioned in the 1st century C.E. by Josephus (Wars, 3:446), who refers to Scythopolis as the largest of the cities of the Decapolis, and in the New Testament with Jesus at one point passing through the region of the Decapolis (Mark 7:31, cf. 5:20; Matthew 4:25). Pliny (*Natural History,* 5:74) indicated that the Decapolis adjoined the Province of Judaea and lists the following ten cities – *Damascus, Philadelphia (*Amman), Raphana (al-Rāfa), Scythopolis (*Beth-Shean), *Gadara (Gader, now Um-Qays), Hippus (*Susitha, now Qalʿat al-Ḥuṣn east of the Sea of Galilee), Dium/Dion (Tell al-Ashʿarī?), *Pella (Peḥal in the Talmud, now Khirbat Ṭabaqāt Fāḥil), *Gerasa/Galasa (Ge-



Map showing the eight cities constituting the continuous bloc of the Decapolis. Damascus and Kanatha lie north of this area.

resh), and Kanatha (Kenat, now al-Qanawāt in the Hauran). (See Map: Eight Cities of the Decapolis). Pliny admits, however, that other opinions existed concerning the composition of the Decapolis. Since most of the cities dated their civic eras from the time of Pompey's conquest of the area (63 B.C.E.), some scholars have suggested that Pompey founded the Decapolis when he freed the Greek cities which had been conquered by Alexander Yannai. In Hadrian's time Abila (Abel, Tell Ibil, north of Irbid) was also a member of the league. A different list of 18 cities of the Decapolis appears in the writings of the geographer Ptolemy (second century C.E.). It includes the cities mentioned by Pliny (excluding Raphana) and adds nine new places: Heliopolis, Abila, Saana, Hina, Abila Lysanias, Capitolias, Edrei, Gadora, and Samulis. In addition, the Decapolis was mentioned in the *Onomasticon* of Eusebius as a region situated near Peraea, and in the writings of Stephen of Byzantium (with a list of 14 cities).

Some of the cities of the Decapolis were situated on the sites of earlier cities (e.g. Damascus, Beth-Shean) while others were newly established in the Hellenistic period. Some claimed Greek origins (see a discussion of their foundation legends by Lichtenberger). Pompey incorporated the cities of the Decapolis into the province of Syria and granted them autonomy. In 30 B.C.E. Augustus gave Herod the cities of Gadara and Hippus; these were returned to the province of Syria after Herod's death. Kanatha and Raphana were under the control of Agrippa II. The other cities of the Decapolis were considered part of Syrian territory until 105–106 C.E. when Trajan transferred the cities in the far south to the newly established province of Arabia. In the Byzantine lists, some of the cities of the Decapolis are placed in Arabia and some in *Palaestina secunda*.

The cities of the league possessed autonomy in internal affairs as well as the right to mint coins. Only one inscription has been found to date that refers to the Decapolis. Damascus was granted the status of a Roman colony by Alexander Severus as was Gadara by Valens. Nothing is known of the legal aspects of the league in which the cities were united; at any rate, a reciprocal relationship existed between the various members. Each city had jurisdiction over an extensive area. With the exception of Damascus and Kanatha, the cities of the Decapolis constituted a continuous bloc south and southeast of the Sea of Galilee, extending from Philadelphia in the south to Hippus in the north. The cities of the league were important because they were situated along the trade routes between northern Arabia and Syria. Damascus served both economically and geographically as the northern assembling point for this trade and Scythopolis as the link connecting the trade routes with western Palestine. The cities of the Decapolis and their hinterlands formed a barrier against the Arabian desert-marauders and they also extended the agricultural belt to the east. At the same time they served as a Roman security ring around Palestine; during the Bar Kokhba War (132–135), Hadrian made Gerasa his base for attacking Judea. The establishment of the province of Arabia diverted the flow of trade from India, Arabia, and the Red Sea – which until then had passed through Petra to Gaza – northward to Damascus. This deflection increased the importance of the cities of the Decapolis and led to new economic prosperity, especially for the cities of Philadelphia, Gerasa, and Gadara. Their domination of the trade routes was further strengthened when the city of Tadmor (Palmyra) was destroyed by Aurelian in 273 C.E. In the 4th century, Gerasa and Philadelphia are described as "mighty cities" (Amianus Marcellinus).

Hellenistic culture flourished in the Decapolis in the Roman period. Among the famous residents of the cities were: Theodorus (teacher of the emperor Tiberius), Menippus the cynic, Oenomaus the stoic (who is perhaps identical with Avnimus the Gardi mentioned in the Talmud), and Meleager the poet, all from Gadara; Stephanus the historian, Plato the rhetorician, and Nikomachos the philosopher, from Gerasa; Aristotle the rhetorician came from Pella; and *Nicolaus the historian, one of Herod's ministers, from Damascus.

A large Jewish community existed in these cities at least from the time that most of them were conquered by Alexander Yannai. Some of the Jews were probably descendants of persons who had been converted by the Hasmonean king. In 44 C.E. a border dispute between the inhabitants of Jewish Transjordan and Philadelphia led to bloody clashes which were renewed on a large scale in most of the cities of the Decapolis at the outbreak of the Jewish War in 66 C.E. In Scythopolis 3,000 Jews were killed, in Damascus 10,000 or more, and there was mass slaughter in the other cities as well. According to Josephus, Gerasa was the only city which protected its Jewish inhabitants (Wars, 2:480), but remains of a

synagogue found there show that it was destroyed even before the time of Hadrian. A large Jewish population nevertheless continued to live in the Decapolis cities for many generations after the destruction of the Temple, as is proved by remains of large synagogues in Hammath Gader and Gerasa and various statements in the Talmud (e.g., TJ, Dem. 2:1, 22d etc.). According to Eusebius a group of Jews who believed in Jesus fled from Jerusalem to Pella prior to the fall of Jerusalem to the Romans in 70 C.E.

DE CASSERES, BENJAMIN (1873–1945), U.S. essayist. De Casseres began to write for Philadelphia newspapers at the age of 16 and continued as an essayist, book reviewer, editorial writer, and columnist for New York dailies. His first book of verse was *The Shadow-Eater* (1915) and his first book of prose, *Chameleon: Being a Book of My Selves* (1922). More than 20 books followed, including his collected works in three volumes (1939).

DECEMBRISTS (**Dekabrists**), group of revolutionaries in Russia. Drawn from the aristocracy and younger army officers, from 1816 it developed as a secret society and sought to abolish the despotic regime. After the death of Czar *Alexander I, the group attempted to foment a rebellion against his successor, *Nicholas I. The rebellion, which began on Dec. 26, 1825 (hence the name Decembrists), was unsuccessful and its participants were severely punished. It is assumed that most of the interest of the Decembrists in the Jewish problem was awakened by Grigori Peretz – a converted Jew among them. He was arrested and sentenced to exile. He spoke at length on the necessity of founding a society for the settlement of the Jews in Crimea or the Orient, where they would live as an autonomous nation. On his suggestion his group adopted the Hebrew word "*Ḥerut*" (freedom) as their motto. In his work *Russian Justice*, Pavel Pestel, one of the Decembrist leaders, devoted a paragraph to the Jewish problem. He negated the right of Jews to be citizens of the Russian state because "they are united by an excessive and incomparable solidarity" and "are unable to become integrated within any nation of the world." They are subjected to the rule of their rabbis and "await the arrival of the Messiah who will return them to their country." Pestel saw two ways of solving the Jewish problem: the first, "to destroy the unity among the Jews, which is harmful to the Russians" and to impose a strict supervision over them; the second, "to assist the Jews in establishing a special state somewhere in Asia Minor." For this purpose, Pestel suggested that all the Jews of Russia and Poland should be concentrated in one place and that an army be raised from their midst which would conquer a territory in Asiatic Turkey and establish a Jewish state. Another leader of the Decembrists, Nikita Muraviov, included full equality for the Jews in his proposed constitution.

DE CHAVES, AARON (d. 1705), Dutch painter and engraver; first Jewish artist recorded as working in England after the readmission of the Jews. De Chaves' painting *Moses and Aaron and the Ten Commandments* hung over the ark of the synagogue in Creechurch Lane, London, which was opened in 1656. This was the first new synagogue to be established. The painting is now in the possession of the Spanish and Portuguese Synagogue in London.

°DECKERT, JOSEPH (1846–1901), Catholic priest in Vienna and antisemitic agitator. He propagated the view that antisemitism was compatible with Catholicism. Resurrecting the *blood libel, he brought out a pamphlet on Simon of *Trent in 1893; later that year he published in *Vaterland* an account by the apostate Paulus *Meyer of a ritual murder which Meyer had allegedly witnessed in his native Ostrov in 1875. The rabbis whom he had named sued for libel, and Deckert, Meyer, and the journal's editor were found guilty and fined. Deckert's inflammatory sermons were the subject of frequent interpellations in parliament, and his travesty of the "Lord's Prayer" directed against the Jews was confiscated. However, in a trial for sedition (1896) he was acquitted. Deckert's antisemitic writings include *Kann ein Katholik Anti-semit sein* (1893) and *Tuerkennoth und Judenherrschaft* (1894[5]).

DECLARATION OF INDEPENDENCE, ISRAEL. During the five months that followed the UN Palestine partition resolution of November 29, 1947, repeated attempts were made by representatives of the U.S. State Department and others to prevent the establishment of the Jewish State. On March 19, 1948, it was announced that the U.S. Government would pro-

pose an international trusteeship over Palestine. This suggestion was categorically rejected by David *Ben-Gurion, then chairman of the Zionist Executive. At the beginning of April, the Zionist General Council and the Va'ad Le'ummi decided to establish a 13-member National Administration and a National Council of 37 members, which would, upon the departure of the British Mandatory forces, become the provisional government and legislature of the Jewish State.

On May 12 Moshe Shertok (*Sharett) returned from the United States and reported to the National Administration that Secretary of State George Marshall had revived the trusteeship proposal, though President Truman and public opinion still favored a Jewish state. Shertok proposed the formation of a government, rather than the establishment of a state, while Felix Rosenblueth (Pinḥas *Rosen) proposed the proclamation of a state within the framework of the UN decision. Ben-Gurion insisted that the proclamation should be only "on the basis" of the UN decision and opposed the demand of Rosenblueth and Bekhor *Shitreet that the frontiers of the state be specified, pointing out that the United States had not designated its own frontiers when declaring independence. If the Jews succeeded in repulsing the Arab attack, they would occupy Western Galilee and the Jerusalem Corridor, which would thus become part of the Jewish State. By a 5 to 4 majority, it was decided not to specify frontiers. A committee of five – David *Remez, Rosenblueth, Moshe Shapira, Shertok, and Aharon *Zisling – was appointed to draft the Declaration of Independence. The draft submitted by the committee on May 13 consisted of 22 articles, 12 of which began with "Inasmuch as…" It was criticized as too long and flowery, and the final wording was entrusted to Ben-Gurion, Rabbi Y.L. Fishman (*Maimon), A. Zisling, and M. Shertok. During the same evening Ben-Gurion prepared a final draft, which was approved by his colleagues on the committee.

The National Council met at 10 A.M. the next day. The Communist leader Meir Wilner proposed the addition of articles denouncing the British Mandate and opposing British military bases, but Shertok argued that such items were out of place in the Declaration. David Ẓevi Pinkas of the *Mizrachi proposed that the Declaration should begin: "The Land of Israel was promised to the Jewish people in the Torah and by the Prophets." Zisling objected to the term "*Ẓur Yisrael,*" a version of the name of God (literally "Rock of Israel"), in the final paragraph; *Mapai's Meir Grabovski (Argov) proposed the addition of the word "language" to the clause guaranteeing freedom of religion, conscience, education, and culture, to ensure that Arabic would have equal rights with Hebrew. Ben-Gurion agreed to Grabovski's proposal, but not to his reasoning. The language of the State must be Hebrew, but the Arabs would be free to use their language in all aspects of Israeli life. As to Zisling's objection, he said, everyone from Right to Left believed in the "Rock of Israel" in his own way. On a first vote, 16 voted for the draft and 8 abstained. The chairman reported that the members of the council who had been unable to leave Jerusalem, because of the battles, had met that morning and had approved the draft. He requested that the Declaration be adopted unanimously in a second vote, whatever objections members might have to a particular item or aspect, and this was done.

The council also approved a proposal submitted by Felix Rosenblueth, that the Provisional Council of State – as the National Council was to be called after independence – be the legislative authority, with the right to delegate its powers to the government for the purpose of urgent legislation. The White Paper of 1939 and the relevant Mandatory ordinances were to be repealed, but all other laws in existence on May 14, 1948, would remain in force in the State of Israel.

At 4:30 P.M. of the same day, Iyyar 5, 5708, the National Council met in the Tel Aviv Museum Hall. Among those present were representatives of the Jewish Agency, the Zionist Organization, the Va'ad Le'ummi, the Zionist funds, leaders of political parties, personalities in the various cultural fields, the chief rabbis, the Tel Aviv Town Council, the chief of staff of the *Haganah and his colleagues, and pioneers of Jewish settlement.

Ben-Gurion, who presided, announced: "I shall read you the Foundation Scroll of the State of Israel, which has been approved in first reading by the National Council." As he concluded with the appeal "Let us accept the Foundation Scroll of the Jewish State by rising," the entire audience rose. The chairman stated that any member who so desired would be able to make a statement at the next session. Rabbi Fishman thereupon pronounced the traditional blessing: "Blessed art Thou, O Lord, our God, King of the Universe, Who has kept us alive and preserved us and enabled us to reach this season." The chairman then read the resolution annulling the White Paper, which was unanimously adopted. He then signed the Declaration of Independence, and the secretary, Ze'ev Schaerf (*Sharef), read out the names of the council members in Hebrew alphabetical order. Amid enthusiastic applause, each member went up to the dais and signed, space being left for those still in Jerusalem to sign later. Ben-Gurion announced: "The State of Israel has arisen. This session is closed."

[David Ben-Gurion]

DE CORDOVA, JACOB (1808–1868), Texas pioneer. De Cordova was born in Spanish Town, Jamaica, and raised in Philadelphia. In 1834 he founded the Kingston *Daily Gleaner*, Jamaica's first daily paper, which his eldest brother's family has continued to publish. Returning to the United States in 1835, de Cordova was attracted to Texas by business, settled there, and became a citizen (1837). In 1842 he opened a large land agency. Thereafter he wrote guidebooks and lectured in New York, Philadelphia, and Manchester, England (1856–58), to attract settlers to Texas. Two years after Texas statehood (1845), de Cordova was elected to the Texas House of Representatives. Together with his brother Phineas (1819–1903), he pub-

lished the semi-monthly *Texas Herald*, along with a weekly, the *Southwestern America* (1849–52), which helped stimulate railroad building in the state.

[Edward L. Greenstein]

°**DEEDES, SIR WYNDHAM** (1883–1956), British Zionist. During World War I he served at Gallipoli and, in 1915, was a member of the British Intelligence Service in Cairo. When Chaim *Weizmann reached Palestine in 1918 as head of the *Zionist Commission, Deedes was influenced by him and became a supporter of the Zionist cause. Herbert *Samuel, appointed high commissioner for Palestine in 1920, invited Deedes to become his chief secretary. In the early stages of the administration, Deedes proved an effective brake on the hostile attitude of the British civil servants to the policy based on the *Balfour Declaration. He unofficially recognized the Haganah and introduced Jews into the Palestine Police Force. In 1921 Deedes was instrumental in saving the Jewish settlement in *Reḥovot from destruction by a mob of 10,000 Arabs. He returned to England when his term of office ended in 1923 and subsequently visited several countries on Zionist missions. In 1943 he established the British Association for the Jewish National Home, and, upon the establishment of the State of Israel, formed the Anglo-Israel Friendship Association with both Jewish and Christian members. His Zionism was motivated by profound religious belief. He was one of the most outspoken non-Jewish supporters of Zionism in Britain. Deedes was knighted in 1921.

DEEP, THE. The ancient Hebrews believed that the earth lay across an all-encompassing ocean, which they called *tehom*. The term is used in the Bible either for the primordial waters *in toto* (Gen. 1:2) or for the upper or lower portion alone (cf. Ps. 42:8). Most frequently it denotes the latter, and it is then conventionally rendered "the deep." The Canaanite myths from Ras Shamra (Ugarit) speak similarly of "the two oceans" *(thmtm)*, i.e., the supernal and the infernal, the dwelling of the supreme god El being located at their confluence, i.e., on the horizon. In the Babylonian *Epic of Creation* the primordial ocean is personified as the monstrous Tiamat, who launches battle against the supreme god Anu, but is eventually subdued by Marduk and slit lengthwise "like an oyster," the two parts of her body forming, respectively, the vault of heaven and the bedrock of the earth. This myth is echoed in several passages of the Bible (Isa. 51:9–10; Hab. 3:8; Ps. 74:13–14; 89:9–10) which speak of a primeval combat between God and a monster variously styled Leviathan, Rahab ("Blusterer"), Tannin ("Dragon"), Yam ("Sea"), and Nahar ("Stream"). In the wake of Isaiah 27:1, post-biblical legend asserts that at the end of the world this monster will again break loose, and again be defeated – a notion which recurs in Iranian lore (Yashts 19:38–44; Bundahišn 29:9), and which also leaves traces both in the New Testament (Rev. 20:1–3) and in the Talmud (BB 75a). The personification of the primordial ocean as a monster is further echoed in Genesis 49:25, where Tehom is described as "crouching below," like a beast. Rivers and springs were believed to emanate from the nether *tehom* (Targ., Eccles. 1:7; cf. Weinsinck in bibl., p. 42), and the upsurging of it was partly responsible for the Deluge (Gen. 7:11). Ecclesiastes 1:7, as interpreted by Targum and Rashi, believes that after surging up from this nether *tehom* and flowing through streams into the sea, the water finds its way back to the *tehom* through tunnels and then surges up again to the springs and repeats the cycle. The rock on which the Temple was built at Jerusalem is said in later legend (Targ. Jon., Ex. 28:30) to have covered the mouth of the deep, and the stairs connecting the two courts of the Temple were called popularly "the stairs of Tehom" (Targ., Ps. 120). Similarly, the temple of Marduk at Babylon and that of E-ninu at Lagash rested reputedly on the nether ocean. Related to this is the belief that the supreme god sits enthroned over the waters of the nether flood. Thus, in a Hittite myth the god who conquers the dragon Illuyankas is subsequently installed "above the well," while in the second century C.E. Lucian was shown a spot in the temple at Hierapolis into which the waters of the Deluge were said to have gathered. This belief is, possibly, reflected in the words of Psalms 29:10: "The Lord sat enthroned over the flood" (see Gaster in bibl., pp. 750–1, 843–54, nos. 25–31). It is related in the Talmud (Ta'an. 25b) that the angel *Rdy*ʾ, who is in charge of rain, stands midway between the upper and lower oceans, bidding the waters of the former to pour down, and of the latter to rise. In Ecclesiasticus 24:8 Wisdom is said to have walked primordially "in the depth of the abyss," and in Babylonian glossaries the name Apsu, by which the freshwater abyss is called, is fancifully etymologized as *ab-zu*, "abode of wisdom" (E. Dhorme, *Religion assyro-babylonienne* (1910), 73). Comparable is the classical notion that Proteus, the old man of the sea, is omniscient, while in ancient Mesopotamian folklore the seven sages (*apkallê*) who introduced civilization, emerge from the deep (Gaster, 324, no. 31). Job 28:12, 14 seems, however, to protest against this idea, while in Proverbs 8:24, Wisdom exists prior to the creation of the deep.

[Theodor H. Gaster]

DEER. The *ayyal*, identified with the deer (*Cervus capreolus*), is mentioned among the seven species of permitted game that chew the cud and are cloven-footed (Deut. 14:5). The word occurs several times in the Bible in the feminine form *ayy-*

alah. The tribe of Naphtali was compared to a nimble deer ("a hind let loose") with branching horns ("he giveth *imrei shafer*," i.e., whose *amirim* ("antlers") are beautiful; Gen. 49:21). Since the hind has no horns, as pointed out by Rashi in his comment on the talmudic passage that "the hind's antlers branch out this way and that" (Yoma 29a), the reference here is to the hart, which in its first year has only one branch on its horns, growing two more later. Its height at the shoulder is about 30 in. (about 75 cms.). It is extremely beautiful and delicate (cf. Prov. 5:19). It survived in Erez Israel until World War I but, despite its agility, it fell prey to hunters eager for its tasty meat. At present there are to be seen in Israel herds of *gazelle, which, although wrongly identified with *ayyal/ayyalah*, are in fact the biblical *ẓevi*, distinguished from the deer by its horns, which are hollow and do not branch out like those of the *ayyal*. Until the end of the 19th century the fallow deer (*Cervus dama mesopotamica*) was found in the Middle East. It is a larger deer, its height at the shoulder being about 35 in. (about 90 cms.), its horns broad, with five branches in those of an adult. Apparently this is the species called *yaḥmur* in the Bible. It is among the permitted game (Deut. 14:5) and was provided for Solomon's table (I Kings 5:3). In the Talmud it is identified with an important species of game akin to the deer (Bek. 7b), depicted frequently in ancient hunting scenes. In prehistoric times the European deer (*Cervus elaphus*), bones of which have been discovered in caves on Mount Carmel and in Lebanon, was also found in Erez Israel.

DEGANYAH (Heb. דְּגַנְיָה), two kevuẓot – Deganyah Alef and Deganyah Bet – in Israel, on the Jordan-Yarmuk Plain south of Lake Kinneret, both affiliated to Iḥud ha-Kibbutzim. Deganyah Alef was founded in 1909 on land that was among the first holdings acquired by the *Jewish National Fund. The initiative came from seven pioneers of the Second Aliyah who were working as wage earners at the neighboring farm of *Kinneret and who applied to Arthur *Ruppin to farm a plot of land on their own responsibility. Ruppin decided to accord them a trial period on a part of the lands east of the Jordan named Umm Jūnī. Surprisingly, the experiment succeeded economically, although the group dispersed after a year. It was followed in 1911 by the "Ḥaderah Commune" whose members (pioneers from Russia) worked out the principles of collective settlement (see *Kibbutz movement) and made Deganyah the "Mother of the Kevuẓot." A.D. *Gordon, one of the early members, played an important part in laying the ideological foundations of communal living. In the initial years, the kevuẓah suffered from frequent attacks by Bedouin robbers encamped in the vicinity. After World War I, with the arrival of Third Aliyah immigrants, Deganyah's intensified farming created a need for more hands, but preferring to maintain the frame of the small "family" kevuẓah, the settlers ceded part of the land allocated to them for the establishment of another kevuẓah, which was built in 1920 and named Deganyah Bet. In time, the two settlements further intensified farming and recognized the need, both economic and social, to absorb more members, although they were able to give a part of their land for a third settlement, the kibbutz *Afikim. During the *War of Independence (1948), the Syrian army, having taken neighboring Ẓemaḥ, attempted to continue its advance across the Jordan westward; but on May 20, 1948, it was repulsed by the vigorous defense of Deganyah Alef. One of the Syrian tanks remained stuck in the settlement's perimeter; it remained there as a memorial. In memory of its fallen members, Deganyah laid out Gan ha-Meginnim (The Defenders' Park). In 1968 the two Deganyahs had a combined population of 960, in 2002 around 1,000, equally divided between the two. Both operated intensive, fully irrigated farming (avocado, bananas, date palms, dairy cattle, and poultry) based on the hot climate and abundance of water in the region. Deganyah Alef has operated the Toolgal industrial diamond plant since the early 1970s, while Deganyah Bet operates a guesthouse. The Bet Gordon Museum and Study Center for natural sciences and agriculture is located at Deganyah Alef. Levi *Eshkol and Kadish *Luz were members of Deganyah Bet. Arthur *Ruppin, Otto *Warburg, Leopold *Greenberg, and other personalities are buried at Deganyah Alef, alongside A.D. Gordon, Joseph *Busel, and other founders of the labor settlement movement. In 1981 Deganyah Alef was awarded the Israel Prize for special contribution to Israeli State and society. The name "Deganyah" (Cornflower) is based on the Arab designation of the land, Umm Jūnī, which in turn may have its origin in the village Kefar Gun of talmudic times.

DEGGENDORF, city in Bavaria, Germany. In 1338 local burghers and members of the gentry, under the leadership of the ducal judge, set fire to the houses of the Jewish quarter and slaughtered the inhabitants. Duke Henry sanctioned the massacre by presenting the perpetrators with the Jews' property. As a result, the killing spread to 21 other places in Bavaria. The Deggendorf massacre occurred at a time of severe social unrest, which in previous years had led to waves of anti-Jewish rioting by the *Judenschlaeger* and *Armleder gangs in large parts of southern Germany. The slaughter of the Jews greatly benefited the impoverished townspeople, and a magnificent church was erected in place of the synagogue. Only at a later stage was the allegation of *Host desecration made to justify the massacre of the Jews. From the 15th century, relics of the supposed desecration were venerated in the church, and Deggendorf developed into a major place of pilgrimage in Germany. The last mass pilgrimage took place in 1843; the pictures in the church depicting the affair were covered up in 1967. In 1992 the pilgrimage was at last abolished. The small modern Jewish community (numbering 17 in 1910) was affili-

ated to that of *Straubing. Of the 500 inmates of the concentration camp established in Deggendorf on February 20, 1945, 400 were Jews. In 1946, 700 Jewish refugees were temporarily accommodated in a transit camp at Deggendorf. There is no postwar community in the city.

DE HAAS, JACOB (1872–1937), author, journalist, and Zionist. De Haas was born in London of Dutch parentage. In 1896, when Theodor *Herzl visited England to secure the support of British Jewry, de Haas, an active Zionist and editor of the *London Jewish World*, became an enthusiastic supporter of Herzlian Zionism. He was appointed "honorary secretary to Dr. Herzl," serving as the latter's spokesman and collaborator in Zionist affairs in Britain. In 1902, at the behest of Herzl, de Haas settled in the United States and was elected secretary of the Federation of American Zionists and editor of *The Maccabean*. Resigning in 1905 because of policy differences with the leadership, de Haas then moved to Boston, where he became publisher of the *Jewish Advocate*. In 1910 he met Louis D. *Brandeis and evoked his interest in Zionism, encouraging him to assume leadership of the Federation. When Brandeis was elected chairman of the Zionist Provisional Emergency Committee in 1914, he appointed de Haas director of its New England bureau. When Brandeis was appointed to the Supreme Court in 1916, de Haas returned to New York as executive secretary of the Committee to interpret and carry out the Brandeis policies. With the establishment of the Zionist Organization of America in 1918, he served as its leader until 1921 when the Brandeis administration was defeated. Subsequently, de Haas headed undertakings for Palestine launched by the Brandeis Zionist groups, including the Palestine Development Council and the Central Committee of the Palestine Development Leagues. In 1930, when the Brandeis faction regained a dominant role in the ZOA, de Haas again assumed command, but resigned within a year, realizing that the Brandeis economic program for Palestine was impractical because of the economic depression. Toward the end of his life he briefly took up the Revisionist cause. De Haas wrote *Theodor Herzl* (1927); *Louis D. Brandeis* (1927); *History of Palestine* (1934), and *The Great Betrayal* (1930, with Stephen *Wise) attacking the British Mandatory Government in Palestine. He edited the *Encyclopedia of Jewish Knowledge* (1934).

DEHOK (**Dihok**), a town in the Iraqi part of Kurdistan. According to the official census of 1930, there were 843 Jews in the entire Dehok region. Their language was the *Aramaic spoken in the mountains, *Jabalī*. They were farmers, artisans, and weavers. The *ḥakhamim* who headed the community included Joseph b. Isaac, who in 1888 completed a book of homilies, and the kabbalist *ḥakham* Elijah Abraham Mizraḥi, who translated Kurdish-Aramaic poems into Hebrew. When the State of Israel was established, the entire community migrated there.

[Abraham Haim]

DEINARD, EPHRAIM (1846–1930), bibliographer and Hebrew author. Born in Sasmakken, Latvia, Deinard wandered in his youth, collecting ancient manuscripts and books in many countries, and then established a bookshop in Odessa. In 1897 he tried unsuccessfully to found an agricultural settlement in Nevada (U.S.). An active Zionist, he settled in Palestine in 1913 where he investigated the possibilities of Jewish settlement. After being expelled by the Turks in 1916 he returned to the United States and continued his bibliographical work. His two most noteworthy bibliographical works are *Or Mayer: Catalogue of the Old Hebrew Manuscripts and Printed Books of the Library of the Hon. Mayer Sulzberger of Philadelphia* (1896) and *Koheleth America* (1926), a listing of Hebrew books published in America from 1735 to 1926. The first part of the latter work contains essays on the state of Hebrew literature in America, which are written in his unadorned, but typically acerbic, style. He laid the foundations of the Hebrew book and manuscript collections of the Library of Congress with the financial aid of Jacob *Schiff. A violent polemicist on many controversial subjects, he attacked Reform Judaism, Ḥasidism, Christianity, and Karaism. Deinard was a prolific Hebrew writer, producing more than 50 books and pamphlets often signed with his pseudonym, Adir. These included *Toledot Even Reshef* (1879; a biography of Abraham *Firkovich, whom he knew in the Crimea); *Sefer Massa Krim* (1878; on travels in Crimea); *Massa le-Ereẓ Kedem* (1883; travels in Palestine and Egypt); *Sefer Miflagot be-Yisrael* (1899; on the *Subbotniki* and *Ḥasidim); *Zikhronot Bat Ammi* (1920; a history of Russian Jewry over the previous 70 years). He also published several short-lived Hebrew and Yiddish journals, among them *Ha-Le'ummi*, one of the earliest Hebrew periodicals in America.

[Getzel Kressel]

DEIR (**Dayr**) **AL-BALAḤ**, Arab town in southern Ereẓ Israel, 8½ mi. (13.7 km.) southwest of *Gaza. It appears to have existed since Byzantine times, when it bore the name Darom or Kefar Darom and Jews were among its inhabitants. Under the early caliphates, a fortress was constructed there. It was also a crusader fortress and administrative military center. The castle was described by William of Tyre. Toward the end of the Middle Ages, the place-name was changed to "Deir" (Monastery) with the added designation "al-Balaḥ" ("of Date

Palms"). Date palms still constitute the principal produce of the town, in addition to citrus fruits, almonds, pomegranates, and grapes. The town grew from 1,600 inhabitants in 1945 to 18,000 in 1967, of whom 7,000 lived in the local refugee camp. In 1997 the population increased to 42,839 inhabitants, two-thirds of whom were refugees. The original name was revived in 1946 by the religious kibbutz Kefar Darom, on the town's eastern outskirts, which had to be abandoned in the War of Independence but was reestablished further north in 1970 as *Benei Darom. From 1948 to 1967, it was in the *Gaza Strip under Egyptian control, coming under Israeli control in the Six-Day War and reverting to the *Palestinian Authority in 1994 under the terms of the Declaration of Principles initialed in Oslo and signed in Washington in 1993.

[Efraim Orni]

DEISTS, adherents of a rationalist movement that arose in the 17th and 18th centuries as an attempt to explain the Bible and create a theology based on the rules of logic and the sciences. Deism arose in the middle of the 17th century out of the rationalist criticism of the past, and especially the religious past, which had been one element of the thinking of the Renaissance and the Reformation. It was also a result of the inevitable de-emphasis on the uniqueness of Christian Europe and its special revelation, as corollary to increasing scientific and geographical discovery, which emphasized the multiplicity of cultures and man's reason and power. The Englishman who founded Deism, Lord Herbert of Cherbury (1583–1648), made the fundamental distinction between "natural religion" and the various positive faiths, which were judged by its standards (*De Religione Gentilium*, 1663). In 1670 Baruch *Spinoza published in Amsterdam his *Tractatus theologico-politicus…* (Treatise on Religious and Political Philosophy) which subjected the Bible and even the New Testament to criticism in the name of universal principles of reason and morality available to any man by his very nature. In this debate about the Bible, others and especially Pierre Bayle (1647–1706), in articles such as his famous *Dictionnaire Historique et Critique* (Rotterdam, 1697), helped establish as a first principle of the European Enlightenment not only that the Bible was not unique but that indeed it was morally and culturally inferior and obnoxious.

In England the immediate followers of Lord Herbert argued on the grounds of comparative religion, a discipline of which they were the founders, that the basic customs of Judaism had been taken over from the Egyptians. This question, whether the Jews had taught the Egyptians or the Egyptians had taught the Jews, had been at issue in antiquity between Hellenistic Jewish writers and such of their detractors as *Manetho. Learned men such as John Spencer (1630–1693) argued against the originality of the Jews and used all the remarks in the sacred literature of both Jews and Christians that attacked the "stiff-neckedness" of the biblical Jews to paint them in the most negative colors and to suggest that their laws were a punishment visited upon them (*De legibus Hebraeorum ritualibus et earum rationibus*, Cambridge, 1685). The sources in classic antiquity of this negative estimate of the biblical Jews are even more pronounced in the work of Charles Blount (1654–1693), who renewed the ancient charge of Greco-Roman antisemites that the Jews had been expelled from Egypt as lepers. Anthony Ashley Cooper, third Earl of Shaftesbury (1671–1713), declared that the Jews "were naturally a very cloudy people" (*Characteristics of Men, Manners, Opinions, Times*, 1 (London, 1711), 29); "they had certainly in Religion, as in everything else, the least Good Humor of any People in the world" (*ibid.*, 3 (1711), 116).

The attack on the credibility of the Bible and the character of the Jews was continued in England in the 18th century by such figures as Anthony Collins (1676–1729), who, in his *Discourse of Free-Thinking* (1713), devastated the belief in biblical prophecy and repeated that the Jews were "such an illiterate, barbarous, and ridiculous people," "crossgrained brutes," in dealing with whom God had to "use craft rather than reason" (*ibid.*, 157). Such opinions were held by most of the other spokesmen of Deism in England, including Thomas Chubb (1679–1747), Thomas Morgan (d. 1743), and Peter Annet (1693–1769). They were repeated by Henry St. John, first Viscount Bolingbroke (1678–1751), the English Deist by whom *Voltaire pretended to be most influenced. The judgment of this whole school of thought was given by its most redoubtable figure in the 18th century, Matthew Tindal (c. 1655–1733). In his *Christianity as Old as the Creation* (1730) the Jews are no longer depicted as being merely ignorant and barbaric; he suggests that human sacrifice was part of their religion and that the immorality of utterly destroying the Canaanites was indicative of their true character.

All of these attacks were leveled at the biblical Jews, and their function was primarily to discredit Christianity, but this Deistic criticism of the Bible had important effects on enlightened thinking about the estate of the contemporary Jew. The century of Enlightenment, and especially the Deistic believers in universal laws of nature, held that human character was continuous, and the Jews of today were therefore as their ancestors were held to have been. English Deistic thinking had substantial influence on the most important intellectual figure of the 18th century, Voltaire, and on such other figures as Nicolas Freret (1688–1749) and Baron Paul d'*Holbach. A post-Christian seemingly rational and historical outlook in the name of which Jews could be despised was thus defined. Even on Deistic foundations anti-Jewish conclusions were not the only possible ones. John Locke was not a Deist, but he was close to such figures as Bayle, he was the tutor of Bolingbroke in his youth, and Anthony Collins regarded himself as Locke's disciple. As early as 1689 Locke, in his *Letter Concerning Toleration*, had announced that no one, not even a Jew, "ought to be excluded from the civil rights of the Commonwealth because of his religion." Locke was followed in these pro-Jewish views by his Deistic disciple John *Toland, who accepted the opinion that Mosaic legislation was borrowed from the Egyptians, but that did not prevent him from arguing that the Code

of Moses was the ideal civil constitution and that because of it the Jews had withstood their long exile to the present. Toland knew Jews personally, and as early as 1714 he published a work entitled *Reasons for Naturalizing the Jews in Great Britain and Ireland on the same foot with all other Nations, Containing also a Defence of the Jews against all vulgar Prejudices in all Countries*. Five years later, in *Nazarenus* (London, 1718, Appendix 1), he suggested, in one of the early "Zionist" statements, that the powers of the world ought to help restore the Jews to their own land. It was thus possible to see virtue in the ancient Jews and regard what was wrong with the modern ones as created by the persecution which had been visited upon them and hence to suggest that a change in their conditions would uncover the same universal human nature which is common to all men. This was the view of men such as Gotthold Ephraim *Lessing, the leading German Deist and man of letters in his time, and of a wide variety of people such as Comte de *Mirabeau the Younger, who helped create the atmosphere for the *emancipation of the Jews in France by the *French Revolution. The other opinion, that the character of the Jews was lasting and incorrigible, was the legacy of Deistic biblical criticism, especially in its recension by Voltaire, to modern secular antisemitism. With few exceptions, notably that of Toland, no one who followed Deism, or was seriously influenced by 17th–18th century rationalistic and critical currents, had any doubt that the Jews as they had been molded needed to be freed of their characteristics and traditions in order to join universal culture (which, despite its universalist self-image, was then really a Western classicizing paganism).

[Arthur Hertzberg]

DEJ (Hung. **Dés**), town in central Transylvania, N. Romania; until the end of World War I and from 1940–44 within Hungary. In 1638 Dej became known through its connection with the history of the Transylvanian Sabbatarians (Judaizers). Although Jews were officially prohibited from living in Dej until 1848, by 1805 there were already 70 Jewish residents. Jewish settlement in Dej began in 1834; previously they had been allowed to live only in a few of the surrounding villages. After 1848 many immigrants from Galicia settled in Dej who made up the majority of the community which remained Orthodox with a strong ḥasidic following. The majority spoke Yiddish as well as Hungarian (and some also Romanian). Communal life was organized around the 1850s. Members of the *Panet family served as rabbis of Dej from the beginning of the community's establishment to its end in the Holocaust. The first synagogue was built in 1863 and another opened in 1907, beside many other synagogues and yeshivot. A state Jewish elementary school was established in 1884, remaining open until 1938; the language of instruction was Hungarian and Yiddish until 1919 and subsequently Romanian and Yiddish. Zionist organizations were active from 1918. Attempts to bring out periodicals in Yiddish, Hungarian, and even Hebrew proved short-lived. The physician Nathan Friedlaender (1819–1902) settled in Dej in 1864. Meir Jehuda Majrovitz (1895–1944), the Hungarian writer, was born in Dej. Also connected to the city is the well-known Holocaust historian Randolph *Braham, who lived there and was sent to forced labor during World War II.

The change of regime of 1919 – when the Hungarians were replaced by the Romanians – caused significant changes in the life of the local Jews, mostly for those strongly assimilated to Hungarian culture and language. They had to accustom themselves to the new antisemitism brought in by the Romanian authorities. However, the Jews tried hard to adapt to the new conditions and survive. More difficult to understand was the new situation after 1940, when the Hungarian Horthiite authorities who returned to Dej turned out to be quite different from those they had known and gotten along with before 1919; the disappointment was to be very severe.

The community numbered 3,360 in 1930 (22.2% of the total population), and 3,719 (22.8%) in 1941. During World War II, the Jews were subjected to many restrictions. Jewish males were mobilized for forced labor; a number of families who could not prove their citizenship were rounded up in the summer of 1941 and deported to Kamenets-Podolski, where they were murdered. In early May 1944 the remaining Jews were placed in a ghetto set up in a forest (the Bungur), located about two miles from the city. The ghetto was liquidated with the deportation of the Jews to Auschwitz in three transports between May 28 and June 8, 1944.

The survivors who returned, with Jews from other places, numbered approximately 1,000 in 1947. The community subsequently dwindled through emigration, many leaving for Israel. In 2004 there were fewer than ten Jews there.

DE KLERK, MICHEL (1884–1923), Dutch architect. Born in Amsterdam, De Klerk became a leader of the architectural movement known as the "Amsterdam School." This school, which flourished from early in the century to the mid-1920s, proclaimed the beauty of unadorned materials and surfaces. Individual idiosyncrasy was encouraged, resulting in a rich variety of forms, and an Expressionist idiom was evolved, comparable to that developed in Germany during the same period.

The Amsterdam School became widely known through a series of low-cost housing projects. From 1911 onward De Klerk was engaged in designing workers' houses for the Eigen Haard Estate in the suburb of Amsterdam-Oost. The housing blocks were horizontal in emphasis, broken by sudden verticals, echoing the Dutch landscape. The use of brickwork created a richness of texture. Other features were the strangely shaped roofs with curious projections and whimsical details

such as corner oriels in the shape of barrels. Despite the element of fantasy, the total effect of the scheme was quiet and controlled with a human warmth rare in the workers' housing schemes of the period.

DELACRUT, MATTATHIAS BEN SOLOMON (mid-16th century), kabbalist and astronomer, born in Poland. In 1550 he went to Italy where he studied mathematics, natural sciences, astronomy, and Kabbalah in Bologna.

His works are (1) A commentary on Solomon b. Avigdor's Hebrew translation of Sacrobosco's *Tractatus de sphaera*, or *Aspectus circulorum* (*Marei Ofannim* or *Asfira ha-Gadol*, Offenbach, 1720), in which he made use of the Latin text and corrected the translation in several places. (2) *Ẓel ha-Olam* (Amsterdam, 1733), a translation of Gossouin's *Le Livre de Clergie* or *L'Image du Monde*, a treatise on astronomy and the natural sciences. On the title page Delacrut is named as the author; in his introduction he writes that this is the work of a gentile scholar which he has translated into Hebrew because of his zeal for Judaism. Some scholars believe that the work should be attributed to Ḥayyim Delacrut, a London rabbi, whose name was altered by the publisher to the better-known one of Mattathias Delacrut; others hold that Mattathias was either translator or editor. (3) A commentary on Joseph *Gikitilla's kabbalistic work *Sha'arei Orah* published posthumously by Delacrut's son Joseph (Cracow, 1600); Delacrut describes this work as eclectic but rather it is a popular exposition of kabbalist doctrines according to his individual interpretation. (4) A commentary on **Ma'arekhet ha-Elohut* (in Ms.). (5) A commentary on *Recanati (in Ms.), which Mordecai *Jaffe used in his commentary on Recanati, *Levushei Or Yekarot* (Lublin, 1595).

Delacrut was mainly absorbed in theoretical Kabbalah; at the core of his thinking lies the customary kabbalistic complex of questions concerning God, the Creation, and the relation of man to God. Man was created to serve the Creator, but not the contrary. Before the world was created, everything that was existed in the keeping of divine darkness. God accomplished the Creation by the agency of the *Sefirot*, which had always been a part of his essence and thus, in the act of creation, simply passed from the latent to the manifest plane. God created man in his own image; the soul of man acts in his body in the same way that God's qualities act in the world. The dualism of soul and body does not exist in man only but is present in the whole material world. Man stands at the median between the upper and lower world; he possesses free will and the power to decide between good or evil. Through purity of body and soul, man tries to approach nearer to God.

DE LA MOTTA, JACOB (1789–1845), antebellum southern U.S. physician. De la Motta was born in Savannah, Georgia. After getting a medical degree at the University of Pennsylvania in 1810 at the age of 21, he practiced in Charleston, South Carolina, until the outbreak of the War of 1812. Volunteering his services, De la Motta was commissioned as a surgeon in the U.S. Army. After the war he practiced in New York City and became an active Freemason, initiating his career as a leader in the medical, scientific, fraternal, political, cultural, and Jewish religious life of his times. In 1818 De la Motta set up practice in Savannah, where he did research on yellow fever, was active in politics, and continued his interest in Masonry. De la Motta returned to Charleston (1823), where he became a leading physician. He served as secretary of the Medical Society of South Carolina for ten years, as a trustee of the State Medical College, as assistant commissioner of health, and as physician for several public institutions. He set up a famous pharmacy called "Apothecaries Hall" and helped revise the *Pharmacopeia of the United States of America* (1830[2]). A Whig dissenter from the dominant nullification politics of antebellum Charleston, De la Motta ran for Congress but lost. President Harrison, whom he supported, appointed him receiver general for South Carolina in 1841. He achieved the highest Masonic office in Scottish Rite as grand commander of the Supreme Council (1844). Strongly Orthodox, De la Motta was a leading opponent of reform in Beth Elohim's ritual during the 1840s. He was a founder of the breakaway Orthodox congregation, Shearith Israel, and its first president.

DELAUNAY-TERK, SONIA (1885–1979), French painter and fashion designer. She was born in Russia and in 1906 settled in Paris. In 1910 she married the painter Robert Delaunay. Her bold use of strong primary color was only fully revealed after 1912, when she and her husband invented a form of abstract painting known as "Orphism." This was based on "simultaneous color contrasts," often expressed in their paintings by circles of contrasting hues. Their innovation had a profound effect on the applied arts, including fashion, architecture, furnishings, and the theater. She illustrated books and became a celebrated designer of fabrics, scarves, and dresses.

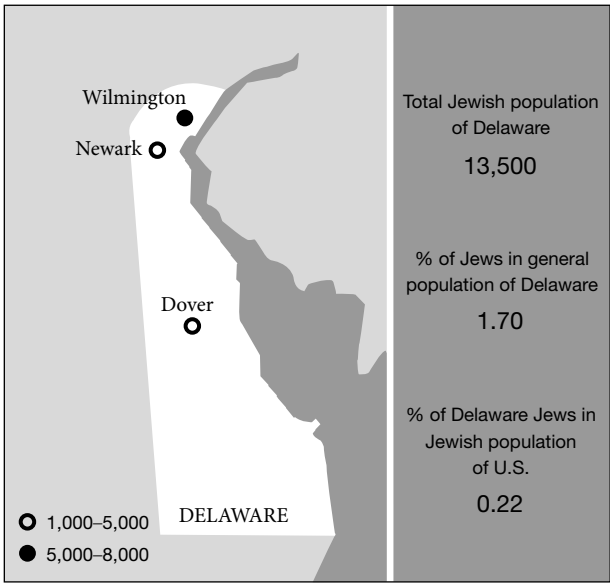
DELAWARE, U.S. state located on the Middle Atlantic seaboard. The first to ratify the United States constitution in 1787, it is the state with the second smallest land mass and the sixth smallest population. In 2001, some 13,500 Jews lived in the state and accounted for 1.7 percent of the Delaware population.

Although Jewish fur traders were in the territory that became Delaware as early as 1655, only a handful of Jews, including Jacob Fiana, Abraham Judah, and Jacob and Daniel Solis,



Jewish communities in Delaware. Population figures for 2001.

settled in the area before the middle of the 19th century when Jewish retailers from families in Philadelphia and Baltimore began opening stores in Wilmington. In 1879, 18 Jewish merchants formed Delaware's first Jewish organization, the Moses Montefiore Society, as a religious, educational, and charitable organization. Delaware became the last of the original colonies to have an organized Jewish community and worship services for the High Holidays.

Given Wilmington's prosperity and the influx of Jews from Eastern Europe, the Jewish population of Wilmington grew quickly reaching some 4,000 by 1920. The Jews formed numerous service organizations, including the Young Men's Hebrew Association (today's JCC), the Hebrew Charity Association (today's Jewish Family Service), and the Bichor Cholem Society (today's Kutz Home). By 1929, they had established three Orthodox synagogues, Adas Kodesch, Chesed Shel Emeth, and Machzikey Hadas; a Reform synagogue, Temple Beth Emeth; and a Conservative synagogue, Congregation Beth Sholom. These organizations and synagogues (Adas Kodesch and Chesed Shel Emeth merged in 1957) continued to serve the Wilmington population in 2005. Chabad-Lubavitch began conducting Sabbath services and educational activities in Wilmington and Newark in 1987.

A few Jewish students attended Delaware College, today's University of Delaware, at the end of the 19th century, but Jews did not settle in the college town of Newark until the early 20th century. The Hillel Foundation began activities at the university by 1948. In the early 21st century Hillel served some 800 students a year. The Newark Jewish Community, later known as Temple Beth El, the state's only Reconstructionist synagogue, was organized in 1954.

In the mid-19th century, a small number of Jewish retailers opened businesses in Dover, the state capital, and in several towns in southern Delaware. Jewish growth in the area was slower than in Wilmington, but by the early 20th century, Jewish retailers, peddlers, canners, distillers, and hotelkeepers lived in many towns of southern Delaware including Dover, Lewes, Georgetown, Milford, Millsboro, Seaford, and Smyrna. In 1897, with the aid of HIAS, the Isaac Benioff family settled in Kent County, becoming Delaware's first Jewish farmers. The Jewish Agriculture Society helped an additional 24 Jewish families establish farms in southern Delaware, primarily in Kent County, between 1912 and 1929. Religious services were held informally in homes until 1939 when the Jewish Congregation of Lower Delaware, a predecessor of today's Conservative synagogue, Congregation Beth Shalom, was incorporated.

In 1997, Jewish vacationers and retirees from Philadelphia, Baltimore, Washington, and Wilmington along with Jews from Lewes, Rehoboth, and the surrounding Delaware beach communities formed the Seaside Jewish Community. The group, which numbered more than 150 families in 2005, held religious services, educational programs including a Hebrew school, and social events.

Throughout the 20th century, most Delaware Jews continued to live in the Wilmington area, the focal point of Jewish life in Delaware. One Jewish federation, located in Wilmington, served the entire state. However, by the end of the 20th century, the demographics had shifted. A 1995 study estimated that 56% of Delaware's Jews lived in the Wilmington area, 32% in the Newark-Hockessin area, and 12% in southern Delaware.

Jews have become an integral part of life in all parts of the state. They have contributed to the arts, science, business, medicine, journalism, law, and public service. Irving *Shapiro became CEO of the Dupont Company in 1973 and chair of the Business Roundtable in 1976, Roxana Arsht became Delaware's first female judge in 1971, Daniel Herrmann became chief justice of the Delaware Supreme Court in 1973, and Jack Markell was Delaware's state treasurer in 2005.

DEL BANCO, ANSELMO (**Asher Levi Meshullam**; d. 1532), head of the Jewish community in Venice. Owner of several loan-banks in the Venetian territories, Anselmo took refuge in Venice (from which the Jews had been hitherto excluded) when Padua was sacked by troops of the League of the Cambrai in 1509. From then on he acted as spokesman for Venetian Jewry and was largely responsible for securing rights of residence and taxation. He represented the community also in 1516 when the senate decided to establish a ghetto. He was also involved with the Jewish community of Jerusalem, sending money and helping those who sailed there from Venice.

He also corresponded with the famous kabbalist *Abraham ha-Levi of Jerusalem on messianic subjects, and his son Shimon covered the expenses of David *Reuveni in Venice. His daughter Diamant was married to Jehiel da Pisa.

His brother VITA (Hayyim) was also a wealthy banker and philanthropist. The family members were proprietors of one of the seven Venetian synagogues, known as the Scuola Meshulamim. Some of their descendants settled in Hamburg and were among the ancestors of the *Warburg family.

DEL BENE (Heb. מַה טּוֹב, *Mah Tov*)**, ELIEZER DAVID BEN ISAAC** (d. 1635), rabbinical author, born in Mantua. In his youth Del Bene won popularity as a preacher in the local synagogue; however, he provoked fierce opposition by frequently quoting Italian poets in his sermons and as a result was forced to retire from the pulpit. He then turned to talmudic studies, instructed by Menahem Azariah da *Fano, later becoming a member of the yeshivah of *Ferrara where he lived for 36 years until his death. His work *Ir David*, responsa, sermons, and novellae, remained unpublished.

DEL BENE, JUDAH ASAHEL BEN DAVID ELIEZER (1615?–1678), rabbi and scholar who lived in Ferrara. Del Bene was considered by Isaac *Lampronti as one of the great talmudists of his time. He was the author of *Kisot le-Veit David* (Verona, 1646), a philosophical work in which he upheld basic Jewish teachings in the face of philosophical criticism. In the preface to *Kisot*, the author quotes from another, poetical work of his, *Yehudah Meḥokeki*.

DE LEE, JOSEPH B. (1869–1942), U.S. obstetrician and gynecologist. De Lee was professor of obstetrics and gynecology first at Northwestern University and later at the University of Chicago. He designed over 20 new obstetric instruments, the most important of which was the stethoscope to locate the easiest place for checking the heartbeat of the fetus. He also introduced the use of educational films to aid in teaching obstetrics. De Lee wrote three books which became standard texts in the field of obstetrics: *Notes on Obstetrics* (1904), *Obstetrics for Nurses* (1904; ten editions), and *Principles and Practice of Obstetrics* (1913; 11 editions). He also wrote numerous articles and monographs in his field. De Lee was the founder of the Chicago Lying-in Hospital and Dispensary and of the Chicago Maternity Center.

DE LEON, prominent early American Sephardi family.

DAVID CAMDEN DE LEON (1816–1872), first surgeon general of the Confederate Army, was born in Camden, South Carolina, eldest of three sons of MORDECAI H. DE LEON (1791–1848), a physician. David followed his father's profession, graduating from the University of Pennsylvania Medical School in 1836. He entered the U.S. Army as an assistant surgeon in 1838, serving in Florida during the Seminole War and then in frontier posts in the West. During the Mexican War De Leon was assigned to the invading American forces, entering Mexico City when it surrendered to General Scott. De Leon was twice cited for gallantry in action, gaining the sobriquet "the Fighting Doctor." In 1856 he was promoted to full surgeon with the rank of major. With the advent of the Civil War, De Leon, after considerable wrestling with his conscience, resigned from the U.S. Army and offered his services to the Confederacy. On May 6, 1861, he was appointed the first surgeon general of the Confederate Army but held the post only a few weeks. De Leon later served in Florida, Alabama, and Louisiana, and was named medical director of the army of Northern Virginia under General Lee, but resigned after a month. He has been characterized as an "unhappy and frustrated" man. After the war De Leon took refuge in Mexico and then returned to New Mexico, where he had been stationed and where he owned property. He planted, and also practiced private medicine until his death in Santa Fe. De Leon never married and is said to have ignored his Jewish origins.

EDWIN DE LEON (1828–1891), journalist, diplomat, Confederate agent, author, brother of David, was born in Charleston, South Carolina. Graduating from South Carolina College (now the University of South Carolina), De Leon became a journalist, and served as editor of several newspapers, including the Savannah *Republican*, the Columbia (S.C.) *Daily Telegraph*, and the Washington, D.C., *Southern Press*. In all of these he strongly advocated the institution of Negro slavery in the South. De Leon worked hard to help elect Franklin Pierce as president, and was rewarded by appointment as American consul general in Egypt, where he served ably for eight years under both Pierce and Buchanan. With the Civil War he resigned and reported to his old friend Jefferson Davis, who appointed him a confidential agent of the Confederate state department to stir up public opinion in Europe for the Confederate cause, and was given $25,000 to spend especially with the press. De Leon held no official title, representing himself as a "private citizen." His propaganda efforts failed to influence opinion in England and France, and his "gratuitous services" were ended in 1862. After the war De Leon was a freelance writer in New York. Later he returned to Egypt to live, and

was involved in the installation of the Bell telephone system in Egypt about 1880. De Leon spoke and wrote on Egypt and the new South. His books include his memoirs, *Thirty Years of My Life on Three Continents* (1878), and *The Khedive's Egypt* (1878). He was buried in a Catholic cemetery in New York.

THOMAS COOPER DE LEON (1839–1914), author and editor, brother of David and Edwin, was born in Columbia, South Carolina. After attending Georgetown University, De Leon worked as a clerk in the bureau of typographical engineers in Washington. He served in the Confederate Army during the Civil War, apparently in the Confederate capitals, Montgomery and Richmond. His social and military observations were later the basis for a book, *Four Years in Rebel Capitals* (1890). After the war he edited *Cosmopolitan Magazine* in Baltimore, translated French novels, and wrote freelance articles. In 1868 he went to Mobile as managing editor (after 1877 editor) of the *Mobile Register*. In addition to his editorial work, De Leon was a versatile writer, poet, novelist, essayist, and playwright. His best-known book, Civil War reminiscences, was *Belles, Beaux and Brains of the '60s* (1907). He wrote a successful burlesque play which ran in New York, two parody plays, and two local-color novels. Although blind for the last 11 years of his life, De Leon remained active.

[Thomas J. Tobias]

DE LEON, DANIEL (1852–1914), U.S. socialist leader. De Leon, who was born in Curaçao, Dutch West Indies, claimed descent from aristocratic, Spanish-Catholic stock. However, it is generally accepted as beyond doubt that he came from a Jewish family. He studied in Europe and went to New York in 1872. De Leon did not become concerned with labor matters until 1886, but by 1890 he had joined the Socialist Labor Party. From 1892 to his death, he edited the party's weekly *The People*, and from 1900 to 1914, the *Daily People*, becoming the single most important figure in the organization. De Leon vigorously rejected any compromise with the capitalist system, and attacked trade union leaders and socialists who were prepared to concentrate on the immediate demands of workers as enemies of the working class. He argued that only a minority would have the determination and spirit to lead the workers to Socialism, and this was the role that he assigned to the Socialist Labor Party. All who disagreed were forced from the party or left after bitter battles with De Leon. De Leon maintained that both political action and industrial unionism were necessary to spark revolutionary sentiments in the American worker. Until 1905 he laid heavy stress on political action through the Socialist Labor Party, but also organized the Socialist Trade and Labor Alliance in 1895 to provide a radical Socialist alternative to the American Federation of Labor. In 1905 De Leon helped organize the Industrial Workers of the World (IWW). At this time he placed increased emphasis on industrial unionism as a revolutionary tool. However, De Leon rejected the IWW's repudiation of political action in 1908, and he left that organization to form a rival group. Despite all disappointments, De Leon tirelessly insisted on the eventual victory of Socialism and the ultimate vindication of his methods and ideology.

[Irwin Yellowitz]

DELFONT, BERNARD, LORD (1909–1994), British theatrical manager. Born in Russia, the son of Isaac Winogradsky, he grew up in England and entered theater management in 1941. He subsequently managed many West End theaters and controlled 30 companies with theatrical, film, television, music, and property interests. Delfont became particularly well known for organizing many Royal Variety Performances, the first in 1958. He was awarded a life peerage in Harold Wilson's resignation Honours List in 1976. He was the brother of Lord *Grade.

ADD. BIBLIOGRAPHY: B. Delfont with B. Turner, *East End, West End* (1990); ODNB online.

DE LIEME, NEHEMIA (1882–1940), Dutch Zionist. Born in The Hague, the son of a *shoḥet*, De Lieme was largely self-taught, mainly in the field of actuarial mathematics and economics. In 1904 he was one of the founders of the *Centrale Arbeiders Verzekeringsbank, the first Dutch workers' insurance company and bank. Legally still a minor, he became director of the bank, which largely due to him flourished after a difficult start, until his death. Although the Centrale was essentially a social democratic affair, De Lieme was throughout his life a convinced social liberal, at the same time emotionally involved with social problems and coolly business-like in the implementation of their solutions. He had great talent for organization. De Lieme joined the Zionist movement during the Zionist Congress in The Hague (1907). In 1912, after a crisis when its founder Jacobus *Kann endorsed Zionist propaganda among Christians, he became chairman of the Nederlandse Zionistenbond (NZB), the Dutch Zionist Federation. In 1914, when *Jewish National Fund headquarters were moved from Cologne to The Hague, De Lieme became its director. Because he managed the affairs of the JNF well through the difficult war years, he became a member of the Zionist Executive in London in 1920 and was one of the three members of the Zionist Reorganization Commission, which visited Palestine to report on the state of the Jewish settlements. While pioneers proudly wished to show their cattle and fields, De Lieme

buried himself in their accounts and cemented his image as an unfeeling bookkeeper. He was highly critical of the financial management of the settlements, especially the delivery of subsidies without looking into the actual needs and into what he considered sound accounting. When the Executive in 1921 purchased the Jezreel Valley against his advice, he resigned. De Lieme's main objections were that the price of the Emek would inflate the land prices in Palestine and that *PICA already was negotiating with the owners about a purchase. With Jacobus *Kann and Siegfried *Van Vriesland, De Lieme now formed the "Hague Opposition," whose sentiments against *Weizmann's policies were shared by the *Brandeis Group in the United States: too much propaganda and bureaucracy, too little attention to the productiveness of Zionist enterprises in Palestine. For De Lieme especially the post-Balfour policy of engaging the whole Jewish and also the non-Jewish world in the building of the National Home meant a betrayal of Zionist principles. Though criticism of this opposition was largely shared by many Zionist figures in private, the Hague Opposition led a losing battle in the dynamics of the post-Balfour period, when the weak Zionist movement and scant Zionist funds required a good deal of political window dressing. De Lieme's standing within the NZB remained high despite only a brief chairmanship in 1924. He would strongly influence the Dutch Federation until 1940 in its criticism of Weizmann's policies, especially the establishment of the *Keren Hayesod and the *Jewish Agency, also later the immigration of Jewish refugees into Palestine, as would one of his successors, Fritz *Bernstein. In 1938 De Lieme, while he and his family already were preparing to immigrate to Palestine, publicly resigned from the Zionist Organization in protest against the Executive's decision to negotiate with the British Government on the partition of Palestine. From 1934 he took a great interest, financially and personally, in founding the International Institute for Social History in Amsterdam and in enabling it to purchase valuable archival material. De Lieme died shortly after the German invasion of Holland.

[Ludy Giebels (2nd ed.)]

DELILAH (Heb. דְּלִילָה), a woman from the Valley of Sorek who was *Samson's mistress and who betrayed him to his enemies (Judg. 16:4ff.). The Philistine city kings offered her a handsome bribe to entice Samson to reveal the secret of his great strength. After three unsuccessful attempts, she finally induced her lover to disclose that it was his adherence to the Nazirite abstention from cutting the hair (cf. Judg. 13:5) of his head that made him so exceptional. She thereupon induced Samson to sleep, had him shorn of his long hair, and handed him over to the Philistines, who blinded and incarcerated him. The biblical narrative does not make it clear whether Delilah was herself a Philistine. It does not suggest that she was married to Samson, or that she was treacherously motivated from the first. The meaning of the name Delilah is uncertain. Two of the more plausible explanations are (1) "temptress," deriving, as does the parallel Safaitic name *Dllt*, from the Arabic root *dll*, meaning "to entice"; (2) a shortened theophoric name, akin to the Akkadian name Dalîl (or Dilîl) Ishtar, meaning "praises [or "majesty"] of Ishtar."

[Nahum M. Sarna]

In the *Aggadah*

The name Delilah is connected by the rabbis with *dalal* דלל ("to enfeeble") because "she enfeebled Samson's strength, she enfeebled his actions, and she enfeebled his determination" (Num. R. 9:24). To wrest his secret from him she disengaged herself from him at the moment of sexual consummation (Sot. 9b). She realized that Samson was finally telling the truth when he said: "I have been a Nazarene unto God" (Judg. 16:17), because she knew that he would not take the Lord's name in vain (Num. R. *ibid.*).

For Delilah in the arts, see *Samson.

DE LIMA, JOSEPH SUASSO (1791–1858), South African writer and journalist. Member of an Amsterdam family of Portuguese origin, he qualified in law, wrote for Amsterdam publishers, and in 1816 went on a government mission to Batavia. In 1818 he settled at the Cape as printer, publisher, and translator (of Hebrew, among other languages). One of the early South African literary figures to use Dutch, he wrote poems, plays, pamphlets, almanacs, and directories. His versatility and his lameness were both butts for the enemies he made in various controversies. He defended the form of colloquial Dutch spoken at the Cape, opened the first Dutch bookshop in South Africa, and ran the first weekly paper, the satirical *De Versamelaar*, for several years from 1825. His *Gedichten* appeared in Amsterdam in 1821; his *Nieuwe Gedichten* in 1840. In 1825 he published his brief *Geschiedenis van de Kaap de Goede Hoop*, the first manual of Cape history. De Lima joined the Dutch Reformed Church in 1833, but made a donation to the building fund of the first Cape synagogue in 1849.

°**DELITZSCH, FRANZ** (**Julius**; 1813–1890), German Protestant theologian, Bible and Judaica scholar. Inspired by Julius *Fuerst to devote himself to the study of Judaism, he was appointed professor of theology at the university of his native Leipzig in 1844. Later he taught at Rostock (1846), Erlangen (1850), and again in Leipzig (1867). Though Delitzsch was a devoted Christian and the most significant figure of the Lutheran "Mission to the Jews," believing in the supremacy of the New Testament over the Old, he maintained an extraordinary understanding of, and affection for, Judaism. Well

versed in Hebrew and in Semitic languages, as well as in the Talmud and in medieval Jewish literature, Delitzsch was in close touch with the leading Jewish scholars of his time. As a devout Christian, he proselytized among the Jews, wrote several pamphlets for that purpose, and made a new translation of the New Testament into Hebrew (1877, 1901[12]; supposedly with the assistance of A.H. Weiss). In 1863 he founded the missionary magazine, *Saat auf Hoffnung* ("Seed on Hope"), which appeared regularly until 1935. In 1880 he established in Leipzig the *Institutum Judaicum* (renamed the "Delitzschianum" after his death), for the training of missionary workers among Jews, an institute which is still in existence in Muenster (Germany), but has been transformed into a purely scholarly institution. In 1884/85, a controversy erupted between Delitzsch and A. Berliner, who deplored the proselytizing spirit of his Protestant colleague's work. Delitzsch harshly silenced his criticism, asserting Christianity's theological superiority and accusing him of ingratitude with respect to his political solidarity with German Jewry. In general, his theological attitude towards Judaism implied strong traditional anti-Jewish elements, including his definition of Judaism as an obsolete stage of revelation, his verdict on "Jewish legalism," and his polemic against scholars like A. Geiger, whose criticism of Christianity appeared to him as an expression of presumptuous Jewish anti-Christianism. Despite his own ambivalent views on contemporary Judaism (*Christentum und jüdische Presse*, 1882), Delitzsch fought vehemently against defamations of the Talmud by antisemitic writers, especially against *Rohling's libelous pamphlet *Der Talmudjude* (1871). Delitzsch's first book, *Zur Geschichte der juedischen Poesie vom Abschluss der Heiligen Schriften des Alten Bundes bis auf die neueste Zeit* (1836), was the first comprehensive study of the history of Hebrew poetry and a serious attempt to deal with this subject with the accepted tools of literary criticism. In his Bible commentaries, the most important of which are those on Psalms (1859, 1894[5]), on Isaiah (1866–1889[4]), and on Ecclesiastes (1875), his approach was based upon philological analysis. He meticulously adhered to the masoretic text and, on principle, avoided critical emendations. He mitigated his traditional attitude only in his later writings, in which he accepted some of the tenets of the "source theory" of modern Bible criticism. To this subject he devoted his *Complutensische Varianten zum alttestamentischen Texte* (1878). Delitzsch assisted Seligmann *Baer in his edition of the Hebrew Bible, based upon the masoretic text. Delitzsch edited both Moses Ḥayyim *Luzzatto's *Migdal Oz* (1857) and the Karaite Aaron b. Elijah's *Ez Ḥayyim* (1841, with the assistance of M. *Steinschneider). He also wrote *Juedisches Handwerkerleben zur Zeit Jesu* ("Jewish Artisans in the Time of Jesus," 1868, 1879[2]) and *Juedisch-arabische Poesien aus vor-mohammedanischer Zeit* ("Pre-Islamic Jewish Poetry," 1874). His theological works and New Testament studies include *Die biblisch-prophetische Theologie* (1845); *System der biblischen Psychologie* (1855, 1861[2]); *Commentar zum Briefe an die Hebraeer* (1857); *Jesus und Hillel* (also in Hebrew; 1866, 1875[3]); *System der christlichen Apologetik* (1869). One of his missionary writings, *Ernste Fragen an die Gebildeten juedischer Religion* ("Serious Questions to the Educated Members of the Jewish Faith," 1888), which attempted to downplay the importance of Christology and the dogma of the Trinity in order to make it easier for Jews to convert to Christianity, also appeared in Hebrew under the title *Ha'amek She'elah* (1912[2]). The obituaries published in Jewish journals after his death reflect the ambivalence toward Delitzsch's work: scholars like D. Kaufmann expressed their deep admiration for his scholarly achievements but did not hide their resentment over not being accepted as academic equals and his denigration of contemporary Jewish identity.

°**DELITZSCH, FRIEDRICH** (1850–1922), German Orientalist, son of Franz *Delitzsch. Delitzsch was the outstanding student of E. Schrader; he served as professor of Semitic languages and Assyriology in Leipzig (1877), in Breslau (1893), and from 1899 in Berlin. Delitzsch was among the founders of modern Assyriology. In addition to his purely Assyriological studies he investigated the Hebrew language in its relation to Akkadian and the Semitic languages in relation to the Indo-European languages in *Studien ueber indogermanisch-semitische Wurzelverwandtschaft* (1873), and *Prolegomena eines neuen hebraeisch-aramaeischen Woerterbuchs zum Alten Testament* (1886). Delitzsch also published in the field of Bible. His *Die Leseund Schreibfehler im Alten Testament…* (1920) is a valuable aid to textual criticism. More controversial are his comparative studies of Babylonian culture and the world of the Bible. Their motivation was not objectively scientific but blatantly antisemitic. In 1902, Delitzsch prepared a number of lectures on the topic "Babel and Bible" (*Babel und Bibel,* 1902–05; Eng. 1906), in which he claimed the absolute superiority of "Babylonia" over "Israel" and that the Bible, in and of itself, is devoid of religious and moral value. While his views were accepted by antisemites with joy, scholars and men of religion reacted sharply to the superficiality of his conclusions and to their evil intent. But Delitzsch, who was silenced for a while, repeated his claims after World War I, and this time in an open attack on the Hebrew Bible, Judaism, and the Jews in his book, *Die grosse Taeuschung* ("The Great Deception," 1921). His actions contributed not a little to the slogans of the antisemitic movements in Germany. The most important of the polemical works against Delitzsch is E. Koenig's work *Fried-*

rich Delitzsch's "Die grosse Taeuschung" kritisch beleuchtet (1921).

[Abraham Arzi]

DELL, EDMUND (1921–1999), British politician. An Oxford graduate and Labour member of Parliament from 1964 until 1979, Edmund Dell held a series of economic ministries in the 1964–70 and 1974–79 governments. Dell served as paymaster-general 1974–76 and then entered the cabinet as trade secretary from 1976 to 1978. After leaving Parliament, he became a company director. Dell was the author of ten books, including *A Hard Pounding* (1991), about the economic crises of 1974–79, and *The Chancellors: A History of the Chancellors of the Exchequer, 1945–90* (1996).

[William D. Rubinstein (2nd ed.)]

DELL, MICHAEL S. (1965–), U.S. computer entrepreneur. Born in Houston, Texas, Dell attended the University of Texas, intending to become a physician; instead, he became the dormitory millionaire. In 1984, with $1,000, Dell started a computer company called PC's Limited in his dormitory room. The company became successful enough for Dell to drop out of college at 19 to run the business full-time. Dell's idea was to sell computers directly to the consumer without going through retailers, and in the process design and deliver a computer based upon the customer's own specifications. Previously, buying a computer invariably involved a middleman. In addition to customization, Dell provided the industry's first support and service program. Today, the Dell corporation provides products and services in various information-technology and Internet-related sectors. Building to order, Dell has almost no inventory in computers or components, selling and delivering the completed PC units directly to consumers.

Dell is considered the most profitable PC manufacturer in the world, with sales of $35 billion and profits of $2 billion in 2002. Dell has 46,000 employees in more than 170 countries around the world. Dell is known for its ability to drive down prices and the company has a hold over its vendors. In addition, Dell has been able to leverage the power of the Internet to great advantage because it is the largest supplier of PCs over the Internet. Michael Dell ranks among the five wealthiest individuals in the United States. In 1999 Dell wrote *Direct From Dell: Strategies That Revolutionized an Industry,* which details the story of the rise of the company and the strategies he has refined that apply to all businesses.

Dell, through the foundation that bears his and his wife's name, has become active in philanthropy. One of their earliest gifts was $13 million toward building a new Austin (Texas) Museum of Art. The Dells gave $1 million for a new radiology center at the Children's Hospital of Austin, and the Dell Discovery Center at the Austin Children's Museum reflects the Dells' interests in children's causes. He also gave 40 acres, worth $2.5 million, in 1994 to the Jewish Federation of Austin as a site for a Jewish community center which bears his name.

[Stewart Kampel (2nd ed.)]

DELLA SETA, ALESSANDRO (1879–1944), Italian archaeologist. Della Setta was born in Rome to Giuseppe Della Seta and Rachele Rosselli. In 1901, he took a degree in archaeology and history of Greek and Roman art under Emanuel *Loewy's direction. In 1909, he qualified for university teaching in archaeology. In addition to his prolific and remarkable scientific production he worked as inspector of the National Museum of Villa Giulia, in Rome. In 1913, he held the chair of archaeology at the University of Genoa. During World War I, he attained the rank of artillery officer and received a War Cross. From 1919, for 20 years, Della Seta was head of the Italian Archaeological School of Athens. In 1926, his university chair was transferred from Genoa to Rome. In 1930, he was made a member of the Academy of the Lincei; he was also a member of the Greek Archaeological Society and a member of the technical committee of the *Enciclopedia Italiana*, directing the archaeological section from 1925 to 1930. The anti-Jewish laws of the Fascist regime put an end to his academic career as well as to his scientific production.

Della Seta was eminent both as a field archaeologist and as an art historian. In the 1930s he directed the important excavations at Paliochni, a site on the island of Lemnos, Greece. As an art historian he was particularly concerned with tracing the origins, development, and history of ancient classical art. Among his works are *La genesi dello scorcio nell'arte greca* (1907); *Religione e arte figurata* (1912); *Italia antica* (1922), a survey of Italian civilization from prehistory onward; *I monumenti dell' antichitā classica* (1926); and *Il nudo nell'arte* (1920).

DELLA TORRE, LELIO (**Hillel**; 1805–1871), Italian rabbi, teacher, and scholar. Born in Cuneo in Piedmont, he taught at the Collegio Colonna e Finzi in Turin from 1823 to 1829, serving as assistant rabbi from 1827. Two years later, with the opening of the Padua Rabbinical College (which trained the majority of Italian rabbis), he was made professor of Talmud. He gained renown for his teaching of homiletics and for his own preaching. Aside from his volumes of Hebrew poetry, *Tal Yaldut* and *Eglei Tal*, and numerous sermons, he published a commentary on the Pentateuch, translated and annotated the Psalms, and rendered the prayers according to Ashkenazi custom in Italian. His works on scholarly and current subjects, nearly 300 in Jewish publications alone, were published in the

periodicals *Bikkurei ha-Ittim ha-Ḥadashim, Kerem Ḥemed, Kokhevei Yiẓḥak*, and *Avnei Nezer*, as well as in Italian, German, and French periodicals. Della Torre was honored by secular learned societies in Padua and Venice; his two-volume *Scritti Sparsi* appeared in 1908.

DELMAR (**De Le Mar; Lebhar,** from Arabic *al-Baḥr*, "the sea"), Moroccan family of merchants and diplomats. The first known member of the family was JACOB LEBHAR of Safi (c. 1650). SHALOM DELMAR-LEBHAR (d. after 1775), "merchant of the sultan" of Morocco in Mogador, was known as a scholar and kabbalist. Of his five sons, MORDECAI was adviser to the sultan and in 1780 was put in charge of all commerce and the port of the city. Together with his brother JOSEPH of Mogador, he was an agent for the ransoming of Christian captives. MAS'ŪD was appointed agent for the sultan in Amsterdam, where he negotiated the peace treaties of 1777. Later he went to London where he was received by George III; his negotiations resulted in the Anglo-Moroccan agreement of May 1783. His son ABRAHAM (c. 1826) was one of the directors of the *talmud torah* of Amsterdam.

[David Corcos]

°**DEL MEDICO, HENRI E.** (1896–?), scholar, writer and translator. Del Medico was born in Constantinople into a banking family. He left Turkey in 1922 and studied Semitics first in France and during World War II at the Pontifical Institute at Rome. His main interests were Jewish literature of the Roman diaspora in the early centuries C.E.; the Hittites; the Ugaritic texts of Ras Shamra, which he translated, not quite satisfactorily, into French (*La Bible cananéene, découverte dans les textes de Ras Shamra*, 1950); and especially the Dead Sea Scrolls. On these Del Medico published a number of studies, some translated into English (*Riddle of the Scrolls*, 1958), Italian, and Spanish, in which he assumes a rather later date for their origin than the majority of scholars. He also published a number of studies in Byzantine civilization and translated German, English, Italian, and Spanish works into French.

[Rene Samuel Sirat]

DELMEDIGO, ELIJAH BEN MOSES ABBA (c. 1460–1497), philosopher and talmudist. Born in Candia, Crete, Delmedigo was also known as Elijah Cretensis. While still a young man he immigrated to Italy. He received a traditional Jewish education, and studied the classics of Islamic and Jewish philosophy, particularly the works of *Maimonides and *Averroes. In addition he became conversant with classical literature. His Jewish learning was recognized by his contemporaries as can be seen from an exchange of letters with Joseph *Colon, who addressed Delmedigo in terms of high regard (see Resp. Maharik, no. 54). Delmedigo served for a time as head of the yeshivah in Padua. He also delivered public lectures on philosophy in Padua and possibly other Italian cities. *Pico della Mirandola was among Delmedigo's Christian disciples and admirers. On the basis of his reputation as a philosopher, Delmedigo was chosen, under the patronage of the Venice authorities, to act as a mediator in a philosophic dispute which arose between two schools of Italian scholars, and his decision in favor of one side aroused hostility toward him on the part of the other. In addition to this animosity on the part of the Christians, a bitter controversy on a halakhic question developed between Delmedigo and the rabbi of Padua, Judah *Mintz, and after the death of his patron, Pico, in 1494, Delmedigo was compelled to leave Italy and return to his birthplace, where he was welcomed by Jews and Christians alike. There in 1496 he completed his major work, *Beḥinat ha-Dat* ("The Examination of Religion"), which he wrote at the request of one of his disciples Saul ha-Kohen *Ashkenazi. He remained in Crete until his death three years after his return.

The main subject of Delmedigo's *Beḥinat ha-Dat* (first published in 1629 in *Ta'alumot Ḥokhmah* of Judah Samuel *Ashkenazi; published a second time, together with a commentary, by I.S. *Reggio in 1833) is the relation between religion and philosophy. Basing himself on a text of Averroes, Delmedigo holds that the study of philosophy is permissible, affirming further that in cases of contradiction between religious faith and philosophic reasoning, the philosopher may interpret religious beliefs as to make them accord with philosophic truth. This, however, does not apply to the basic principles of faith. Every person, including the philosopher, is obligated to believe in the basic dogmas of religion, even when these appear to contradict philosophic truth. Recognizing the possible contradiction between religious principles and philosophic truths Delmedigo tended toward the double faith theory of the Christian Averroists. In *Beḥinat ha-Dat* Delmedigo also described rabbinic literature and attacked the Kabbalah. He argued against the antiquity of the Kabbalah, noting that it was not known to the sages of the Talmud, or to the *geonim*, or to *Rashi. He also denies that *Simeon b. Yoḥai was the author of the *Zohar, since that work mentions personalities who lived after the death of Simeon. In addition, he attacks the extreme allegorists among Jewish philosophers. In another section of his work he discusses the reasons underlying the commandments of the Torah (*ta'amei ha-mitzvot*). Delmedigo's importance in the history of philosophy rests in his making the teachings of Averroes known to the Italian scholars of the Renaissance, especially through his Latin translations of many of Averroes' works.

He composed the following translations: a translation, no longer extant, of Averroes' commentary on Plato's *Republic*; a translation of six of Averroes' questions on Aristotle's logic (Venice, 1497); a short translation of Aristotle's *Meteorologia*, and a translation of parts of Averroes' middle commentary on

that work (Venice, 1488); a translation of parts one to seven of Averroes' middle commentary on Aristotle's *Metaphysics* (Venice, 1560); a translation of Averroes' introduction to his large commentary on Aristotle's *Metaphysics* (Paris, Bibliothèque Nationale, man. latin, Ms. no. 6508); a translation of Averroes' *De Spermate* (Venice, 1560). In addition to his translations, Delmedigo composed the following original works in Latin: *Questiones Tres*, consisting of three sections: *De Primo Motore, De Mundi Efficentia*, and *De Esse Essentia et Uno* (Venice, 1501); a commentary on Aristotle's natural philosophy (Venice, 1480); a Latin and Hebrew commentary on Averroes' *De Substantia Orbis*, in Hebrew, *Ma'amar be-Ezem ha-Galgal*, and two questions on Averroes' theory of the hylic intellect (Paris, Bibliothèque Nationale, Cod. héb., 968). A copy of Delmedigo's *Beḥinat ha-Dat* was found in the private library of *Spinoza, and it may be assumed that it influenced the development of Spinoza's ideas in the *Theologico-Political Treatise*.

[Jacob S. Levinger]

DELMEDIGO, JOSEPH SOLOMON (1591–1655), rabbi, philosopher, mathematician, and astronomer; also known as **Joseph Solomon Rofe** acronym **YashaR**) of Candia (Crete). A writer of extensive Jewish and secular learning and of encyclopedic range, he is the author of works whose number is estimated by some authorities at 30, by others at over 60. A member of a distinguished scholarly family, he was the son of Elijah Delmedigo, rabbi in Candia. In accordance with the family tradition, he was given a thorough Jewish and classical education. At the age of 15, he was admitted to the University of Padua, where he studied astronomy and mathematics under Galileo, and also medicine and philosophy, at the same time continuing his Jewish studies. While at Padua, he frequently visited Leone *Modena of the neighboring city of Venice, who, it appears, exercised a lasting influence on him. In 1613, he completed his studies at the University of Padua, and returned to Crete, where he began to practice medicine. From notes which he compiled during this period, he later began to compose his encyclopedic work *Ya'ar Levanon* ("Forest of Lebanon"), which he never brought to completion. In all likelihood he married in Candia, but there are indications that it was not a happy marriage. He soon found Candia too confining and left his homeland, never to return. Throughout his travels, he encountered misunderstanding and embitterment, since his ideas on the popularization of scientific knowledge aroused opposition and enmity.

His first stop after leaving Candia was Cairo. There he became acquainted with Ali b. Rahmadan, a renowned Arab mathematician, whom he refuted in a public disputation concerning spherical trigonometry. In Egypt, too, he met the physicist, Jacob the Alexandrian, head of the Karaite community there. Delmedigo was attracted to the Karaites by their love for secular learning and it is also possible that the hostility of Orthodox Jews caused him to turn occasionally to the Karaite sectaries for company. He was delighted to find in Egypt several works on Maimonides' *Guide*, as well as certain writings of Abraham ibn Ezra, whom he greatly admired. From Cairo, Delmedigo went to Constantinople, then a prominent center of learning. Here, again, he befriended several Karaite leaders, including Moses Mezordi, from whom he acquired many Karaite works. Here, too, he came to know some ardent followers of the Kabbalah, in particular Jacob ibn Nehemias. It may, however, be assumed that Delmedigo had already become acquainted with kabbalistic teachings while still at Padua. Yet, he approached its study more seriously during his stay in Poland. He immersed himself in the Kabbalah for two purposes: (1) To find in it solutions which philosophy could not offer, and (2) to criticize it. He wrote *Maẓref la-Ḥokhmah*, in which he allegedly refuted the attack on the Kabbalah made by his distant relative Elijah *Delmedigo, in his *Beḥinat ha-Dat*. Since, as Delmedigo himself explains, he was commissioned to write such a refutation, it is unclear whether the work reflects his true convictions. He says in this connection: "Do not presume that you can unravel the author's mind from his book" (ed. Odessa, 1864, p. 85). Leone Modena understood the *Maẓref la-Ḥokhmah* as a refutation of kabbalistic ideas, using it in his *Ari Nohem* ("Roaring Lion"), a systematic anti-kabbalistic treatise. Delmedigo next went to Poland, stopping off on the way in Romania, where he became friends with the kabbalist Solomon Arabi. In 1620, he was practicing medicine in Vilna, where he became the private physician of Prince Radziwill, and had many nobles for his patients. During the week, he used to make the circuit of the environs of Vilna to cure the sick, and on the Sabbath he would lecture in the synagogue. His nights were spent in scholastic pursuits. Though a conservative in many of his views, he was also a proponent of many new ideas. His scientific bent of mind having been stimulated by his early contact with Galileo, he was a pioneer in a number of aspects of scientific research. In astronomy, he parted company with the followers of Ptolemy to espouse the Copernician system. He was the first Jewish scholar to use logarithmic tables, which had just been invented. He preferred Platonic philosophy to Aristotelianism which had held almost unchallenged sway during the Middle Ages. In medicine and the natural sciences he emphasized the value of the empiric approach, although at an earlier stage he had criticized scientific empiricism. He spoke against the unsanitary conditions prevailing in the ghettos and the lack of organization and or-

der. He wanted to uplift the people by a renaissance of science and learning of trades and professions. His knowledge of languages, acquired as tools for his scholarly research, encompassed Latin, Greek, Spanish, and Italian. He intended to study Arabic, but gave up the idea on finding that "everything that was beautiful in Arabic was taken, with few exceptions, from Greek writings." Coming to feel that he had been a failure in Eastern Europe, he left for Hamburg, Germany. From there he went to Amsterdam, where his first printed book, *Elim*, was published by *Manasseh Ben Israel (1629). This book was written as an answer to queries addressed to him by the Karaite scholar, *Zerah b. Nathan of Troki (near Vilna, Lithuania). Delmedigo named this work, which contained 12 general, and 70 specific queries, *Elim*, an allusion to the biblical Elim (Ex. 15:27) where there were 12 wells and 70 date trees. The questions concerned religious, metaphysical, and scientific matters.

In 1629–31, his *Ta'alumot Ḥokhmah*, a collection of kabbalistic treatises, was published by his disciple, Samuel Ashkenazi, in Basle, Switzerland. The first section, *Maẓref la-Ḥokhmah*, appeared in 1629, the second, *Novelot Ḥokhmah* ("Fallen Fruit of Wisdom"), in 1631. Except for these two books, the only other material that remains of Delmedigo's colossal output is the full text of his letter to Zerah of Troki, which was published together with a German translation in 1840 by Abraham Geiger in his *Melo Chofnajim*. It is known within the corpus of Delmedigo's published work under the name of *Iggeret Aḥuz*, after the first word of the letter. This letter is merely a precursory answer to Zerah's inquiries, and was written in 1624 or 1625. Delmedigo refers, in his writings, to a number of other works, which are no longer extant. Among these works are *Bosmat bat Shelomo* on arithmetic, geometry, astronomy, geography, logic, ethics, and metaphysics; *Ir gibborim*, divided into two parts: *Gevurot Adonai* on astronomy, and *Nifla'ot Adonai*, on chemistry and mechanics; and two medical works, *Refu'ot Te'alah*, and *Mekor Binah* which contains the Hebrew translation of the Latin aphorisms of Hippocrates. Toward the end of his life, Delmedigo settled at Frankfurt on the Main, where, as community physician, he again became part of ghetto life. Thereafter, he spent some years in Prague – a period about which little is known. On his tombstone in Prague are written the words: "He practiced what he preached – he was just to everyone – the glorified rabbi, scholar, divine philosopher, and mighty one among physicians."

[Jacob Haberman]

DEL MONTE, CRESCENZO (1868–1935), Italian poet. Del Monte, who first wrote sonnets in Romanesco, the *patois* of his native Rome, also composed poems in the *Judeo-Italian dialect. His aim was to preserve the folklore and language of a Jewish world that had begun to crumble after the abolition of the ghetto and the Jewish emancipation of 1870. Del Monte's sonnets resemble an impressionistic painting of the everyday life of the Roman ghetto in the 19th century, and portray the patriarchal life, religion, and superstitions of these "Romans more ancient than the Romans of today." He successfully conveyed the vitality and everyday speech of these Jews in verse notable for its powerful expression and nostalgia. His love for their dialect led Del Monte to investigate the philology of Judeo-Italian, with which he had become emotionally and artistically involved. On the assumption that Judeo-Italian constituted an early stage of the Italian language and that, unlike the Roman dialect, it had preserved the medieval character of the language, its ancient vocabulary and Latin structure, Del Monte reconstructed its grammar. He sought in the Roman prose of the 14th–17th centuries words and expressions which corresponded to those that he had used in his own poems. In this original philological research Del Monte came close to the poet Frédéric Mistral, who sought to revive Provençal. Recent studies indicate, however, that the language spoken by the Jews of Rome originated in southern Italy. Del Monte's sonnets are, nevertheless, of philological importance because of their linguistic richness. They were published in two volumes, *Sonetti Giudaico-Romaneschi* (1927) and *Nuovi sonetti Giudaico-Romaneschi* (1933). The second volume contains a Judeo-Italian grammar as well as extracts from the old Roman dialect and their translation into Judeo-Italian. A third and posthumous volume, *Sonetti postumi Giudaico-Romaneschi e Romaneschi* (1955), includes sonnets written in the Roman dialect and an introduction by the renowned philologist B. Terracini.

[Joseph Baruch Sermoneta]

DELOS, a small island in the Cyclades, measuring just 3 miles (5 km.) north to south and nearly 1 mile (1.3 km.) east to west. Its earliest occupation dates to the third millennium B.C.E. The mythological birthplace of Apollo and Artemis, it had become the center of the Apollo cult by the seventh century B.C.E. It is mentioned in Homer's *Odyssey* and in a Homeric hymn to Apollo. In 478 B.C.E., Delos became the site of the treasury for the Delian League. By the end of the third century B.C.E., there was an influx of traders from all over the Aegean, many

of whom established their ancestral cults and associations on the island. Delos also became one of the main centers of the Aegean slave trade. As a thriving cultic, trade, and slaving center, Delos was often raided and caught between local warring factions. By the mid-first century B.C.E., disruptions on Delos had taken their toll, leaving Delos outside the commercial loop. The priest of Apollo no longer lived on Delos, and only returned once a year for the annual ceremonial sacrifice prescribed by the cult. In the second century C.E., the Emperor Hadrian attempted (unsuccessfully) to revive the old Delian festivals but by then, according to Pausanias (8, 33:2), the island was very sparsely inhabited. Delos was abandoned around the fifth century C.E.

While there is some literary evidence relating to Jews on Delos, not a single piece of it refers to the existence of a synagogue. The earliest reference to Jews on Delos is found in I Maccabees (15:15–23). The other piece of literary evidence relating to Delos comes from Josephus (*Antiquities* 14:213–16) and, interestingly, mentions the Jews on Delos being prevented from following their traditional customs, but there is no mention of a synagogue.

It was André Plassart, of the Ecole française d'Athènes who, during excavations of 1912 and 1913, identified building GD80 on Delos as a synagogue. He relied on six Greek inscriptions, the principal one having been found some 100 yds. (90 m.) north of GD80 in a residential area near the stadium. The other five inscriptions were found scattered within the two main spaces of GD80. Plassart interpreted ID2329 as reading "Agathokles and Lysimachos for the synagogue," whereas it actually reads "Agathokles and Lysimachos for a prayer/votive." It is notable that no direct evidence was found in or around GD80 to identify it as a synagogue.

Plassart also considered that the internal configuration of GD80 was similar to that of later synagogues. However, there are other buildings on Delos with the same configuration as GD80, such as Sarapeion A (GD91) and C (GD100). Coincidentally, the names *Agathokles* and *Lysimachos* are mentioned in inscriptions relating to donations to both Sarapeia in IDS 2616 and 2618, raising further doubts about the validity of the ID2329 inscription as relating to a Jewish context.

In 1979, Philippe Fraisse of the Ecole française d'Athènes found two Samaritan inscriptions on Delos not far from GD80. Both inscriptions are in Greek and are dedicated by the "Israelites who offer to Holy Argarizein," clearly indicating the presence of a Jewish and/or Samaritan community on the island. The question is where on the island that community was based and whether or not it had a synagogue or some sort of community or association hall at all.

DELOUGAZ, PIERRE PINCHAS (1901–1975), educator and archaeologist. Born in Russia, he went as a child with his parents to Palestine. Later he studied in France and the United States. His activities as field archaeologist included excavations at *Nuzi (Iraq), 1928–29; at Khorsabad (Iraq), 1929–30, where he uncovered the famous colossal bull ("father of the elephant"); in 1931 he directed the excavations at Khafaje (Iraq); and in 1952 he directed excavations at Bet Yeraḥ (Israel). In 1944 he was appointed curator of the Oriental Institute Museum at Chicago, and in 1949 became a member of the faculty of the University of Chicago (professor at its Oriental Institute from 1960). His method of teaching and research combined archaeology and literature. He considered art objects as "social documents" to be used as "evidence" in interpretations. In addition to numerous articles he published several books, among them *The Temple Oval at Khafajah* (1940), *Pottery from the Diyala Region* (1952), *Plano-Convex Bricks… Treatment of Clay Tablets in the Field* (1933), *Pre-Sargonid Temples in the Diyala Region* (1942, with S. Lloyd). On Delougaz' method and the meaning of the term "Proto-literate period," coined by him in 1942, see: R.E. Braidwood, *The Near East and the Foundations of Civilization* (1952, 1962[2]), 37, 45; I. Lloyd, *Mounds of the Near East* (1963), s.v. Delougaz, protoliterate; R.W. Ehrich (ed.), *Chronologies in Old World Archaeology* (1965), s.v. proto-literate.

[Penuel P. Kahane]

DELOUYA (**de Loya**), family of Spanish origin, which settled in *Marrakesh, south *Morocco. From this town, JAKI (ISAAC) DELOUYA (c. 1572) carried on trade relations with English merchants, to whom he was of great service. His descendants were especially distinguished as rabbis. Some of the writings of MEIR (c. 1625) were published in the works of Moroccan rabbis. ISAAC (d. 1711) was *av bet din* of Marrakesh from about 1680, heading a yeshivah which included among its pupils the talmudist Solomon Amar and the kabbalist Abraham Azulai. During the upheavals caused by the pretenders to the throne, he and his family were denounced to the sultan, Isaac was imprisoned for some time, and his two brothers, JUDAH and MOSES, died as a result (1701). MORDECAI BEN ISAAC, his son JACOB, and his grandson MEIR (c. 1780) were also scholars.

[David Corcos]

DE LUCENA, family of freemen in colonial America. ABRAHAM HAIM DE LUCENA (d. 1725), New York merchant and

cleric, was made a freeman of New York in 1708 and carried on a substantial business in general merchandise. In 1710 he unsuccessfully petitioned for the right to export wheat. De Lucena succeeded Saul *Brown as rabbi of the New York Jewish community, requesting Governor Robert Hunter in 1710 to exempt him from civic duties because he was a minister. The following year he donated money for the building of the Trinity Church steeple. His son SAMUEL (1711–?) was made freeman of New York in 1759. By 1782 he had a brokerage business in Philadelphia and was a contributor to the building of Congregation Mikveh Israel.

[Leo Hershkowitz]

DELVALLE, MAX SHALOM (1911–1979), Panamanian public figure. Born in Panama City, he entered politics in his late teens. He rapidly rose to prominence and was elected to the National Assembly. Delvalle became minister of public works and in 1964 vice president of the republic. In this latter capacity, Delvalle was the central figure of a constitutional crisis. In October 1967, President Marcos Robles announced the name of the candidate he would propose to succeed him in the 1968 elections. This led to a split in his party as the majority supported another candidate. In March 1968 the National Assembly, sitting as a court of justice, removed Robles and replaced him with Delvalle, who being the senior vice president was sworn in as president of the republic. In April, the Supreme Court decided that Robles was unconstitutionally deposed, but Delvalle denied its authority to overrule decisions of the legislature and continued to fill the presidency. In the following month, however, elections were held and a new president installed.

Max Delvalle was active in the Portuguese Jewish community of Panama, Kol Shearith Israel.

[Israel Drapkin-Senderey / Mordechai Arbell (2nd ed.)]

DELVALLE LEVI MADURO, ERIC ARTURO (1937–), Panamian intellectual, businessman, and political activist. Nephew of the ex-president of Panama Max *Delvalle, Delvalle Levi Maduro is a member of one of the most prominent Portuguese Jewish families in Panama. He was active in democratic politics and as vice president replaced the president, Dr. Nicolas Ardito Barletta, in 1985. He served as president until 1987 and was deposed by the military dictatorship of General Manuel Noriega.

[Mordechai Arbell (2nd ed.)]

DEL VECCHIO, Italian family; according to one of its traditions, it ranks among the most ancient Jewish families of Italy. In Hebrew sources it is also referred to as Min ha-Zekenim ("the old ones" – a literal translation of Del Vecchio). Its members include SAMUEL MAHALALEL DEL VECCHIO (16th century), born in Ferrara where he served as rabbi. His name and knowledge of *halakhah* are mentioned in the responsa of Jehiel b. Azriel Trabot (in manuscript). He wrote *Sefer ha-Tikkunim* or *Haggahot ha-Rif*. ABRAHAM BEN SHABBETAI (d. 1654), born in Mantua, lived for some time in Sassuolo and served as rabbi of Mantua. He wrote a number of halakhic works; several of his responsa are included in works of contemporary scholars, such as Samuel Aboab in his responsa, *Devar Shemu'el* (Venice, 1702; no. 19). SOLOMON DAVID BEN MOSES (late 17th and early 18th century) was born in Lugo, near Ferrara, where he spent most of his life as rabbi of the town. He was a contemporary of Isaac *Lampronti, who mentions him with approval in his *Paḥad Yiẓḥak* and includes two of his responsa there. One of his responsa on the laying of *tefillin* during the intermediate days of the festival is quoted by Samson Morpurgo in his responsa *Shemesh Ẓedakah* (I, 4). His name is also mentioned with esteem in *Sefat Emet* by Nissim Mattathias Terni (1797, p. 16). His pupils included his grandson, Shabbetai Elhanan b. Elisha *Del Vecchio. SOLOMON MOSES (18th century) was rabbi in Sinigaglia. His name and erudition in *halakhah* are mentioned in Isaac Lampronti's *Paḥad Yiẓḥak*.

[Guiseppe Laras]

DEL VECCHIO (Min ha-Zekenim), SHABBETAI ELHANAN BEN ELISHA (1707–?), Italian rabbi, *posek*, and preacher. In his youth Del Vecchio studied under his grandfather, Solomon David Del Vecchio, who ordained him as rabbi. In 1727 he was ordained rabbi also by the rabbis of Ferrara who included Isaac *Lampronti, with whom he was on friendly terms from his youth. He was a teacher in several Italian communities: Leghorn, Ancona, and Lugo from 1730 to 1739, when he was appointed rabbi of the town of Casale. Del Vecchio was alone among his Italian contemporaries in that 20 of his responsa were included in the *Paḥad Yiẓḥak* of Lampronti. Del Vecchio used to sign his responsa as "Malkat Sheva" ("Queen of Sheba"; from **Sh**abbetai **B**en **E**lisha). He was also on friendly terms with Ḥ.J.D. *Azulai who visited him in Casale in 1755.

His writings are still in manuscript: *Yeled Zekunim*, a collection of letters sent to him by rabbis and emissaries with his replies, some of which were published by J. Nacht (see bibl.). His halakhic works are *Ir Miklat* on the precepts; *Mishpat ha-Morim; Da'at Zekenim; Ta'am Zekenim*; and *Penei Zekenim*. Responsa and additional letters are to be found in the Jewish Theological Seminary of New York (nos. 55–915–1044).

[Abraham David]

°D'ELVERT, CHRISTIAN RITTER VON (1803–1896), Moravian historian and politician. He was mayor of Bruenn (Brno) from 1861 to 1863 and 1870 to 1876, and headed the historical section of the Moravian society for local research. The fourth volume of his *Beitraege zur oesterreichischen Rechtsgeschichte* entitled *Zur Geschichte der Juden in Maehren und Oesterreichisch-Schlesien* ("On the History of the Jews in Moravia and Austrian Silesia," 1895), with almost full bibliography, and his publication of the index numbers of all the documents in the archives of the Moravian regent concerning Jews, remain important for research on Moravian Jewry.

DEMAI (Heb. דְּמַאי, דְּמַיי), agricultural produce about which there is a doubt whether it has been duly tithed; talmudic tractate. The precise etymology of this word has not been determined with certainty, and it appears that the rabbis of the Talmud were already unclear about it. The Jerusalem Talmud connects it to the root *dmy*, in the sense of "perhaps" as in: "perhaps he prepared it, perhaps he did not prepare it" (Sot. 9:12 (24b); end of *Ma'aser Sheni*, as interpreted by H. Yalon, *Pirkei Lashon*, 346), possibly as a morphological analogy to its opposite *vadai*, "certain." In practice, the term designates produce regarding which doubts exist as to whether all the "gifts" for the priests, Levites, etc. have been set aside properly, because it was acquired from an *am ha-areẓ* ("person of the land"), an individual whose trustworthiness on these matters is questionable. Owing to these doubts, the *ḥaver* is expected to set aside the gifts, though in a manner that minimizes the financial loss. Initially, the produce was subject to *terumah* for the priests, first tithe for the Levites (a tenth of which must be given to the priest) and, depending on the year in the sabbatical cycle, second tithe which can be consumed by the owner in Jerusalem, or poor tithe. Since the *am ha-areẓ* is relied on to obey the severe Torah-based precept of *terumah*, and there is no ritual prohibition against eating the tithes due to the Levites or the poor, the *demai* procedure involved designating the first tithe only so that the priestly portion could be taken from it and given to the kohen. Because neither the Levites nor the poor could prove their respective entitlement to their tithes (since *demai* is by definition a doubtful case), these remained the property of the owner. As a result, the actual financial loss borne by the owner by re-tithing *demai* was modest.

The institution of *demai* seems to date back to early in the Second Commonwealth era and evidently reflects the fundamental identity of the Pharisees as individuals who distinguished themselves from the less rigid ritual standards of the *ammei ha-areẓ*. A. Büchler argued that the Mishnah really reflects the clashes between Judean and Galilean cultures in the second century C.E. when the rabbis cited in the Mishnah were active and Judean rabbis were migrating northward in the aftermath of the Bar Kokhba revolt; however, his view has not been widely accepted. More recent scholarship has voiced considerable skepticism about the degree to which the conceptual picture that emerges from the Talmudic texts reflects the actual social or religious situation, especially as regards its assumptions about the normative status of rabbinic *halakhah*.

A rabbinic tradition (Mishnah Sotah end; Tosefta Sotah end of Ch. 13; TJ Sotah 9:11 and end of TJ Ma'aser Sheni) speaks of *demai* as being in force in the time of Johanan the High Priest; i.e., John Hyrcanus (135–104 B.C.E.), who enforced separation of the required gifts by the producers, thereby exempting the purchasers. The *baraita* in the Babylonian Talmud (Sotah 48a), on the other hand, describes Johanan as the person who first instituted *demai* upon discovering the laxity of tithe observance.

Demai is the tractate in the Mishnah, Tosefta and Jerusalem Talmud (but not the Babylonian) that deals with the halakhic concept of *demai*, doubtfully tithed produce. An exception to the normal pattern of arranging the sequence of tractates according to the numbers of their chapters, *Demai* (with seven chapters) appears third in the Mishnah and Jerusalem Talmud, and in most manuscripts of the Tosefta, before tractates with more chapters. The Mishnah tractate contains disputes between the Houses of Shammai and Hillel, sages from Yavneh, as well as much material from the generation of Usha.

Because *demai* is a rabbinic stringency that was instituted in response to a minority of unreliable individuals, the rabbis tended to interpret doubtful cases in a lenient manner. This is the theme of much the tractate, which deals with exemptions, such as for species of produce that are not normally kept as food (1:1), produce from outside the halakhic borders of Israel (1:3, 6:11), certain types of commercial purveyors (2:4, 5:1–4, 6), etc. Similarly, tithes that were separated as *demai* are not subject to all the restrictions that would apply to fully sacred produce (1:2), especially where it is used for the fulfillment of religious precepts, such as distribution to the poor (3:1), an *'eruv* (1:4), etc.

The Mishnah (2:2) discusses how a person may be certified as a *ne'eman* (one who is deemed trustworthy with respect to tithing); or as a full-fledged *ḥaver* who is trusted on matters of purity as well (2:3).

Historians are not in agreement whether the restrictions observed by the *ḥaver* were considered obligatory or voluntary expressions of extraordinary piety. At any rate, the tractate *Demai* is addressed to a target audience of *ḥaverim* who are assumed to be observing the highest standards or tithing and purity. Because the need for *demai* results from the acceptance by some Jews of stricter standards than those followed by others, the tractate deals extensively with the relationships and interactions between the *ḥaver* and other segments of the community who are less punctilious about those matters. Thus, it provides instruction for how to proceed when obtaining foodstuffs from non-*ḥaverim* (4:1), when transferring food to them (2:3, 3:5), when eating in each other's homes (4:2, 7:1), or when operating in partnership, as sharecroppers (6:1–8) or with family relations (3:6). The general tenor of the *halakhah* is pragmatic, in that it focuses on solutions to specific techni-

cal situations, while presuming the existence of normal social and economic relations between the various groups, rather than encouraging separation from the less observant segments of the populace.

[Eliezer L. Segal (2nd ed.)]

DEMALACH, YOEL (1924–), Israeli agriculturalist. Demalach was born in Italy and settled in Palestine in 1939. He joined kibbutz Revivim where he devoted himself to Negev agricultural development and invented irrigation methods for arid zone agriculture. In 1986 he received the Israel Prize for his investigation and teaching of arid region agriculture.

DEMBER, HARRY L. (1882–1943), German physicist. Born in Leimbach, Dember was at the Dresden Technische Hochschule (1905), where he was appointed professor of physics in 1914 and also director of the Physics Institute in 1923. Driven out by the Nazis, he held similar positions at the University of Istanbul from 1933 to 1941. He later immigrated to the United States and was visiting professor at Rutgers University, New Jersey, at the time of his death. His field was the photoelectricity of crystals and one aspect of his research in this area is known as the "Dember Effect."

DEMBITZ, LEWIS NAPHTALI (1833–1907), U.S. lawyer and Jewish leader. Dembitz was born in Zirke, province of Posen, Prussia, and went to the U.S. in 1849. He completed law studies in Cincinnati and then settled in Louisville, Kentucky, where he practiced law. Dembitz entered politics early and was elected to several Republican Party offices. He was a delegate to the Republican National Convention that nominated Lincoln in 1860. In 1888 he drafted the first Australian (secret ballot) voting system. Dembitz wrote a number of books on American law, including *Kentucky Jurisprudence* (1890); *Law Language for Shorthand Writers* (1892); and *Land Titles in the United States* (2 vols., 1895). Dembitz's affiliation with Jewish life was at first through the Reform movement, and he was a member of the commission on the plan of study for Hebrew Union College. But after that institution became openly Reform, and especially after the acceptance of the *Pittsburgh Platform, he joined the Conservative movement and helped to establish the Jewish Theological Seminary. Dembitz contributed several articles on Talmudic jurisprudence and on liturgy to the *Jewish Encyclopedia* and prepared the translations of Exodus and Leviticus which were incorporated into the revised English Bible of the Jewish Publication Society (1917). His volume *Jewish Services in Synagogue and Home* (1898) was widely used. His nephew, Louis *Brandeis, who admired him greatly, changed his middle name from David to Dembitz.

[Jack Reimer]

DEMBITZER, ḤAYYIM NATHAN (1820–1892), talmudist and historian. Dembitzer was born in Cracow and became a *dayyan* in his native city. Active in financial support of the old *yishuv* in Erez Israel, Dembitzer urged scholars to renew their support for the R. Meir Ba'al ha-Nes Fund (1852). His first research was devoted to responsa literature and the tosafists. Dembitzer became noted for historical research and critical work in the field of talmudic and rabbinic literature and its leading personalities. As early as 1841 he had begun correspondence on biographical and historical subjects with such well-known rabbis as Solomon *Kluger and Ẓevi Hirsch ben Meir *Chajes. A visit to Germany in 1874 brought him in touch with such contemporary scholars as H. Graetz, Z. Frankel, L. Zunz, and D. Kaufmann, who influenced him to publish his work. His works include *Livyat Ḥen* (1882), notes and glosses on the work of Ravyah (R. Eliezer b. Joel ha-Levi); *Kelilat Yofi*, volume one (1888), a historical survey of the Lvov rabbis, and volume two (1893, repr. 1960), biographies of famous rabbis from Poland-Latvia from 1493 to 1692, including information on Polish Jewish independent government; essays on the Council of Four Lands; and *Torat Ḥen* (1895), halakhic responsa.

BIBLIOGRAPHY: Wettstein, *Toledot Meharḥan* (1893), reprinted in J. Mandelbaum, *Mafteaḥ le-Sefer Kelilat Yofi* (1968), 11–35; Brann, in: MGWJ, 39 (1895), 142; B. Wachstein, *Die hebraeische Publizistik in Wien*, 3 (1930), 11; *Aḥi'asaf*, 1 (1893), 296 (obituary).

DEMBLIN, BENJAMIN (pseudonym of **Benjamin Teitelbaum**; 1897–1976), Yiddish writer. Born in Modzicz, Poland, Demblin immigrated to the U.S. in 1921 and began publishing in various Yiddish periodicals. Three of his novels deal with the *ḥalutzim: Tsvey un a Driter* ("Two and a Third," 1943), *Tsankendike Likht* ("Flickering Candles," 1958), and *Der Tate iz Gekumen* ("Father Has Come," included in the collection *Oyf Dray Kontinentn,* "Three Continents," 1963). His book-cycle *Erev Nakht* consists of five parts: *Erev Nakht* ("Before Night," 1954), O*yf Eygenem Barot* ("On One's One," 1961), *In der Velt Arayn* ("Into the World," 1965), *A Fremde Velt* ("A Foreign World," 1973), and *In Nayem Land* ("In a New Land," 1973). His other books are *Afn Shvel* ("On the Threshold," 1933) and *Vest-Sayd* ("West Side," 1938; Heb. 1954). Demblin was a realist who depicted in epic style the social changes in Jewish and general life.

[Moshe Starkman / Tamar Lewinsky (2nd ed.)]

DEMBO, ISAAC (1846–1906), physician and communal worker, born in Ponevezh, Lithuania. He graduated from the military academy of medicine in 1870 and volunteered as a doctor in the Russian-Turkish War of 1877. Subsequently Dembo undertook a campaign to defend Jewish ritual slaughter against allegations of cruelty made by antisemites in Russia and abroad. He took part in a conference of the Russian Association for the Protection of Animals in 1891. To prove his point, Dembo also carried out experiments in Russia in the laboratory of the Russian physiologist I. Pavlov, and abroad in the laboratories of Du Bois-Reymond, Hoppe-Seyler, and Munk, among others, as well as in slaughterhouses. His *Das Schaechten* was translated into English (*The Jewish Method of Slaughter*, 1894), French, and Hebrew.

DEMETRIUS, earliest known Greco-Jewish writer. He lived during the reign of Ptolemy IV (221–204 B.C.E.). In ancient lists of Josephus and Clement of Alexandria, Demetrius is named first, followed by Philo (the Elder), and Eupolemus (Jos., Apion, 1:218; Clement, *Stromata* 1:141, 1). Without making clear whether these are Jewish or heathen, Josephus laments their inability to follow Hebrew records accurately (Josephus erroneously labels Demetrius as being from Phaleron).

Aside from Josephus' ambiguous testimony, seven remnants of Demetrius' work survive. Except for Fragment Six, cited by Clement of Alexandria, and Fragment Three, which reviews Clement's sources, the remaining texts have been salvaged in Eusebius' *Praeparatio Evangelica*, which quotes Alexander Polyhistor's monograph "On the Jews."

Fragment One, about ⅘ of all Demetrius' texts, deals with patriarchal chronology, and reveals the great fervor with which biblical studies were pursued in the third century B.C.E. By a minute analysis of Genesis, as well as by some gratuitous assumptions, Demetrius chronicles the year and month of Jacob's travels and the birth of each of his 12 sons and daughter. Jacob stayed in Haran 20 years, during 14 of which he served for Laban's two daughters (Gen. 31:41). He married both sisters after the first seven years, and Demetrius maintains that all of his children (except Benjamin) were born during the next seven years. Thus, except for one interval, Leah bore her six sons and her daughter in an exact sequence of ten months. Demetrius then proceeds to record the age of each of the children in conjunction with the events of their father's life, the clan's eventual descent into Egypt, and the death of each member. The repetitiveness of the dates suggests that Demetrius aimed at the construction of a chronological canon of biblical history, with summaries stressing significant events, such as the birth of Abraham, Jacob's descent into Egypt, and the Exodus. Demetrius' chronology from Creation coincides remarkably with that preserved in the Septuagint version: the dating of the Flood in Demetrius is 2264 compared to 2262 according to the Septuagint and 1656 by the Hebrew; the birth of Abraham is set at 3334 as in the Septuagint compared to 1948 in the Hebrew, and the Exodus is dated as 3839 versus 3849 following the Septuagint and 2668 according to the Hebrew.

The first discrepancy is apparently due to Demetrius' counting the birth of Seth two years after the flood. The obvious conclusion is that Demetrius depended on the Greek version. It is conceivable, moreover, that Demetrius' chronological scheme solves the puzzle of how the texts of Genesis 5:11 and Exodus 12:40 were altered from the Hebrew numbers into those found in the Greek. It is now agreed that the alteration was deliberate. Demetrius may have studied with, possibly even was one of, the men who produced the Septuagint.

Fragment Two traces the genealogy of Zipporah, whom Demetrius identifies with the "Ethiopian woman" whom Moses married (Num. 12:1), a view adopted by *Ezekiel the poet and the Talmud (MK 16b). Demetrius traces her descent from Abraham and Keturah (Gen. 25:1–4), making her lineage more distinguished than that of Moses. She was the sixth generation after Abraham, Moses the seventh. The chronographer was apparently defending Moses against charges of having violated his own laws against intermarriage.

Demetrius did not restrict himself to chronography. Fragment Seven relates Abraham's binding of Isaac (Gen. 22). The miraculous sweetening of the bitter waters of the desert is reported in Fragment Four. The reasonable hypothesis that Demetrius represents a school of biblical exegesis is supported by Fragment Five, where he suggests that despite the statement in Exodus 13:18 to the contrary, the Jews came out of Egypt unarmed. He bases this on their statement that they were going for a journey of three days and that after sacrificing they would return (Ex. 5:3): "Where did they get their weapons from? It appears that they obtained the arms of the Egyptians who were drowned in the Red Sea." In spite of Fragment Three, which groups Demetrius with Aristobulus and Josephus, there is no reason to assume that he addressed himself to the pagan world. Demetrius wrote for students of the Bible without any trace of apologetics. There is no evidence of his influence in the Book of Jubilees, Philo, Josephus, or the rabbinic chronological treatise *Seder Olam*, but his impact on Philo (the Elder) and Eupolemus in matters relating to chronology, as well as on Ezekiel the poet, who adopted many scenes from Demetrius, is noteworthy.

DEMETRIUS, Jewish notable of *Alexandria (first century B.C.E.). He was the second husband of Mariamne, the daughter of Agrippa I. He "stood among the first in wealth and birth" among the Jews of Alexandria, and became *alabarch of that city. Mariamne left her husband Julius Archelaus to marry him. They had a son Agrippinus.

[Edna Elazary]

°**DEMETRIUS I SOTER** (162–150 B.C.E.), ruler of the Seleucid dynasty in Syria; son of *Seleucus IV. In his youth Demetrius was a hostage in Rome. When he became aware of

the weakness of *Antiochus V and the governor *Lysias, he escaped, with the aim of wresting the Syrian crown from his cousin. Demetrius established his rule despite the opposition of the Roman Senate which did not wish to see an energetic ruler on the Seleucid throne. In consequence of the victory of his general *Bacchides over Judah Maccabee in 160 B.C.E., Demetrius reinstated the Syrian overlordship of Judea. He was also successful in crushing an insurrection in the eastern provinces led by Timarchus, governor of Babylonia. In the course of time, Demetrius, as a result of his tyranny, brought down upon himself the hatred of the Syrians. He also became embroiled with Attalus II of Pergamon and with Ptolemy V of Egypt. Finally the two kings joined forces against him in support of the pretender *Alexander Balas, who claimed to be the son of Antiochus IV. Jonathan the Hasmonean associated himself with Alexander, who appointed him high priest. The substantial concessions now made by Demetrius to the Jews availed nothing, as Jonathan did not trust him. In the end, Demetrius was defeated by Alexander and fell in battle (I Macc. 7:1–9; 10:20, 40–59; Jos., Ant., 12:389, 390, 393, 397, 400, 402–3, 415, 420; *ibid.*, 13:23, 35, 37, 39, 43–44, 47–48, 58–61).

Bellinger, *End of the Seleucids* (1949), 75–76; Y. Yadin, *Ha-Megillot ha-Genuzot mi-Midbar Yehudah* (1958²), 119–20; T.H. Gaster, *Dead Sea Scriptures* (1956), 243.

[Abraham Schalit]

°**DEMETRIUS II** (**Nicator**) (141–125 B.C.E.), ruler of the Seleucid dynasty in Syria; son of *Demetrius I Soter. In 146/5, with the support of Ptolemy V of Egypt, he defeated Alexander Balas. Ptolemy succumbed to wounds received in this battle and Demetrius, having succeeded in getting the Egyptian army to leave Syria, seized control of the country. He now came to an agreement with Jonathan the Hasmonean, whereby the latter was confirmed in his high priesthood and his annexation of the three regions of Ephraim, Lydda, and Ramathaim was officially endorsed. On his side, Jonathan was compelled to raise the siege of Acre, to cede Jaffa and Ashdod which he had captured, and to promise a tribute of 300 talents. Relying upon his army of mercenaries, Demetrius embarked upon a tyrannical rule, which eventually led to the revolt of *Diodotus-Tryphon. Tryphon made use of the young son of Alexander Balas, who until then had been under the protection of the Nabatean governor, and was successful in winning over the Syrian populace. In the civil war between Demetrius and Tryphon that now ensued, Jonathan supported Demetrius, until the latter was taken prisoner in a campaign against the Parthians in 141. Against this background of Syrian weakness, the independence of Judea was achieved under Simeon the Hasmonean. During the imprisonment of Demetrius, his brother *Antiochus (VII) Sidetes reigned over Syria. He defeated Tryphon and also the Jews, but he too came to grief on his expedition against the Parthians in 130–129. Demetrius, whom the Parthians freed in order to stir up civil war in Syria, regained the kingdom in 129, but lost it again through revolution, when Ptolemy Physcon, king of Egypt, supported the claims of one Alexander who pretended to be the son of Alexander Balas. The war between Demetrius and this Alexander came to an end after two years. Demetrius attempted to escape to Tyre, but was captured and put to death in 126/5 (I Macc. 10:67–11:56; Jos., Ant., 13:86–87, 109–62, 174, 177, 180, 184–6, 218–9, 221–2, 253, 267–9, 271).

[Abraham Schalit]

°**DEMETRIUS III EUKARIOS THEOS PHILOPATER SOTER** (96–88 B.C.E.), ruler of the Seleucid dynasty in Syria; son of Antiochus Grypus, and one of the last kings of the Seleucid dynasty. On the initiative of Ptolemy Lathyrus, king of Egypt, Demetrius was appointed king of Syria, but civil wars prevented him from consolidating his rule over the whole country. From Damascus, his capital, Demetrius intervened in the affairs of Judea. When Alexander Yannai was waging war against the Arabs and the rulers of Transjordan, the rebellious Pharisees called in the aid of Demetrius against their king. Although Demetrius defeated the army of Yannai in a battle near Shechem, he was finally forced to leave the country. The memory of these events has apparently been preserved in the *Pesher Nahum* of the Dead Sea Scrolls: "…[Deme]trius, King of Greece, who sought to enter Jerusalem through the counsel of flatterers…" In the war against his brother Philip, Demetrius was captured and exiled to the court of Mithridates II, king of Pontus, where he died in captivity (Jos., Wars, 1:93–95; Jos., Ant., 13:370–1, 376–9, 384–6).

Bellinger, *End of the Seleucids* (1949), 75–76; Y. Yadin, *Ha-Megillot ha-Genuzot mi-Midbar Yehudah* (1958²), 119–20; T.H. Gaster, *Dead Sea Scriptures* (1956), 243.

[Abraham Schalit]

DEMETZ, PETER (1922–), Czech scholar and writer. Born in Prague into a Czech-Jewish-German family, Demetz spent the last years of the war in a Nazi labor camp for *mischlinge*. After finishing his studies at Charles University in Prague, he went into exile in 1949. He settled in the United States, where in 1962 he became professor of German and comparative literature at Yale University, retiring in 1979. He lectured at many American and European universities and after 1989 also in the Czech Republic. In 2000 he was awarded the Medal of Merit by President Havel.

The existence of three cultures – Czech, German, and Jewish – in the Czech lands was always in the foreground of

his research and literary activities. Among his works are *Franz Kafka a Praha* (1947; "Franz Kafka and Prague"), including "Franz Kafka and the Czech Nation," and studies of Rilke, such as *The Czech Themes of Rilke* (1952) and *René Rilkes Prager Jahre* (1953; "Prague Years of René Rilke"; Cz. tr., 1998).

Other works include *Die Literaturgeschichte Švejks* (1989; "The Literary History of Schweik") and *Über Literaten und sanfte Revolution in Berlin und Prag* (1991; "On Writers and the Velvet Revolution in Berlin and Prague"). *Böhmische Sonne, mährischer Mond: Essays und Erinnerungen* (1996; Cz., 1997) is a collection of essays on Hašek, Rilke, Kafka, Masaryk, and others. *Prague in Black and Gold. The History of a City* (1997; Cz., 1998) is a detailed history of Prague from the early Middle Ages until the period of T.G. Masaryk, with emphasis not only on its multicultural character but also on its longstanding tradition of rationality, realism, science, and the spirit of criticism.

Demetz returns to Franz Kafka in his study *The Air Show at Brescia, 1909* (2002; Cz., 2003), in which he explores the circumstances under which Kafka wrote his article "Die Aeroplane in Brescia," published in *Bohemia* in 1909. He includes the portraits of those who took part in the air show: Max *Brod and his brother Otto, Italian poet and novelist G. d'Annunzio, the composer Puccini, and the aviators.

Additional works of Demetz deal with German literary history, including *Marx, Engels und die Dichter* (1959; "Marx, Engels and the Poets"), *Formen des Realismus: Theodor Fontane* (1964, 1966; "Forms of Realism: Theodor Fontane"), *German Post-war Literature: A Critical Introduction* (1970, 1972), and many others.

Demetz also published old tales of Prague and many translations of well-known Czech authors into German (Božena Němcová, Jiří *Orten, Jaroslav Seifert, Ludvík Kundera, etc.).

DEMILLE, CECIL B. (1881–1959), U.S. film producer and director. DeMille was born in Ashfield, Massachusetts. His parents, Henry and Beatrice, were playwrights. His father was a minister, for whom his mother, born an English Jew, converted. After his father died, when DeMille was 12, he worked for several years at his mother's playhouse. In 1913, together with Jesse Lasky and Samuel Goldfish (later Goldwyn), DeMille formed the Jesse L. Lasky Feature Play Co., the basis for Paramount Pictures. The company's debut cinematic venture was *The Squaw Man* (1914), and the three were instrumental in Hollywood's becoming the film capital of the world. DeMille, who produced or directed as many as 70 films, and discovered such stars as Gloria Swanson, is renowned for his sweeping, epic style and frequent moral content, evident in films such as *The Ten Commandments* (1923, remade 1956), *The King of Kings* (1927), *Cleopatra* (1934), *Samson and Delilah* (1949), and *The Greatest Show on Earth* (1952). He also managed to weave a persona that matched the largeness of his films, hosting the popular radio series *Lux Radio Theater* every week for more than a decade, and frequently appeared in his movies as himself, well before the director Alfred Hitchcock employed the same tactic. Perhaps the most memorable example of DeMille's famous cameos occurs in *Sunset Boulevard* (1950), starring his protégé Gloria Swanson. During the McCarthy era of that same decade, DeMille temporarily fell out of favor for his adamant anti-Communist politics, but his views did not mar his legacy as a Hollywood legend.

[Casey Schwartz (2nd ed.)]

°**DEMJANJUK, JOHN** (**Ivan**; 1920–), Nazi death camp guard. Born in the Ukrainian village of Dub Macharenzi, Demjanjuk survived the famine in the Ukraine and was drafted into the Soviet Army at the start of World War II. Sustaining an injury to the back, he was treated in several hospitals before being returned to the front. During the battle of Kerch he was taken prisoner by the Germans. Recruited in a German prisoner-of-war camp, Demjanjuk was trained to be a Nazi camp guard, an auxiliary (watchman), at the Trawniki training camp in Lublin, Poland, where he was issued identity card 1393 and was dispatched to serve at several concentration and extermination camps until the war's end. Arriving in the United States in 1952, Demjanjuk concealed his Nazi service and gained admittance to the U.S. and eventually U.S. citizenship in 1958, living in Cleveland and working at a Ford auto plant.

In 1975, U.S. officials received information alleging that Demjanjuk had been a Nazi death camp guard at Sobibor. In 1976, his picture was sent to the Israeli police for investigation. Over the following years 18 Holocaust survivors would identify Demjanjuk as a guard at Treblinka, and several would identify him to police and in court as the gas chamber operator "Ivan" at the Treblinka death camp. Beginning in 1977, a series of legal actions ensued in the United States in which Demjanjuk was denaturalized and stripped of his U.S. citizenship (1981), ordered deported (1984), and extradited to stand trial in Israel for war crimes and crimes against humanity (1986), the first person to be so charged since Adolf Eichmann in 1961.

In 1987, the District Court of Israel put Demjanjuk on trial and broadcast the proceedings live on radio and on Israeli TV. Thousands attended the trial, giving an immediacy to the horrors of the Holocaust for a new generation. The trial lasted 18 months and involved the testimony of five Holocaust survivors and many experts on history as well as forensic experts who authenticated Demjanjuk's Nazi service ID card #1393, the original of which had been uncovered in Soviet archives and delivered to the Israeli authorities. In April 1988, Demjanjuk was convicted and sentenced to death. However, during the course of the appeal to Israel's Supreme Court, depositions of former Nazi guards tried in the Soviet Union in the late 1970s identified a different person named Ivan as the gas chamber operator at Treblinka. Even though the persons who gave the

depositions were not known to be alive or cross-examined, the Supreme Court of Israel decided that this created enough of a doubt to reverse the decision against Demjanjuk. Although the court concluded that Demjanjuk himself was not innocent and had served the Nazis, nonetheless the Supreme Court of Israel ruled in 1993 that since the center of gravity of the case revolved around the six-month period between September 1942 and March 1943 when Demjanjuk was alleged to have been at Treblinka and Demjanjuk had not had a full opportunity to defend himself against charges of being at other death camps such as Sobibor, and that a new trial might contravene Israel's law against double jeopardy, and given that Demjanjuk had already spent eight years in Israeli prison in solitary confinement, the Supreme Court of Israel decided to release Demjanjuk and return him to the United States.

Back in the U.S., American courts found that U.S. prosecutors had known of these Russian testimonies and acted improperly. The courts vacated the extradition order against Demjanjuk, allowing him to remain in the U.S. (1993) and then set aside the decision to denaturalize him (1998). Accordingly, in 1999 the U.S. government filed a new denaturalization suit against Demjanjuk. In the intervening years, more Nazi era official documents had been unearthed which confirmed Demjanjuk's service at several concentration and extermination camps such as L.G. Okswo, Majdanek, Sobibor, and Flossenburg and further bolstered the authenticity of the Trawniki ID card #1393. Accordingly, Demjanjuk was again denaturalized (2002), which order was affirmed by the Sixth Circuit Court of Appeals in 2004. Demjanjuk, who continued to live in Cleveland, Ohio, appealed those decisions.

[Tom Teicholz (2nd ed.)]

DEMNAT (Fr. **Demnate**), town in the High Atlas Mountains of *Morocco, 70 miles (110 km.) east of the city of *Marrakesh. Demnat had an important Jewish community whose members settled there in the early 12th century. Living in a Berber-Muslim milieu, Demnat's Jewry engaged in agricultural activities, producing some of the best wine in Morocco, but were also craftsmen and artisans specializing in leather goods. Partial modernization and the spread of French language and culture gradually became embedded in Demnati Jewish life from the early 1930s due to the colonial presence as well as the work of the coeducational school of the *Alliance Israélite Universelle, founded in 1932. Many of the boys and girls who frequented this school subsequently adopted French names such as Robert, Jacques, Marcelle, Alice, and Jacqueline.

Judeo-Berber coexistence in Demnat remained harmonious, with no major violence against the Jews until the mid-19th century. From the early 1860s and into the mid-1880s, however, Jewish-Muslim relations were exacerbated as Jews faced a pogrom (1864) and were exposed to undue humiliations by the local governor, who instigated abuses (1884–85). Owing to the efforts of the Alliance teachers in *Fez, the French minister plenipotentiary in *Tangier, L.C. Féraud, was informed of the situation in Demnat and contacted Sultan Hasan I over the matter. Féraud's intercession led to the issuance of two *zahir*s (sultanic decrees) ordering cessation of the abuses. From the contents of the *zahir*s – for the year 1885 – it can be seen that the Jews had been compelled to buy goods from Muslims against their will, were recruited to work without receiving wages, had to give away their farm animals without receiving payment, and had to give up some of their most valuable products, particularly leather goods.

The status of the Jews improved markedly once again under French colonial domination. In the early 1950s, on the eve of communal self-liquidation and *aliyah*, conducted by the Jewish Agency for Palestine, 1,800 Jews were living in Demnat. The tides of radical nationalism, and the Moroccan struggle for independence from France beginning in August 1953, which took on a violent character in 1954–55, only hastened Jewish departures. By the early 1960s only a few Jews remained there.

[Michael M. Laskier (2nd ed.)]

DEMOCRATIC FRACTION, radical opposition faction in the Zionist movement between the years 1901 and 1904 that demanded the democratization of Zionist institutions, the organization of cultural activities by the Zionist Organization, and immediate settlement in Erez Israel. Its leaders were Leo *Motzkin and Chaim *Weizmann. Their demand that the Zionist Organization conduct cultural activities sharply contradicted the stand of the religious wing, which violently opposed such programs, fearing that they would be used for the dissemination of "secular" culture. During the Fourth *Zionist Congress (1900) it was decided at a Zionist student meeting to establish a democratic-progressive faction or party. A conference was held in Basle, a few days before the Fifth Zionist Congress (1901), attended by about 40 delegates, most of

whom were Russian Zionist students from German, Swiss, and French universities. The conference decided to establish the Democratic Fraction, which would remain within the Zionist Organization but would have separate headquarters and independent cultural activities. It was also decided to create a Jewish statistical bureau and to conduct research into suitable ways of settling Erez Israel, preferring the cooperative method. The conference also recommended the democratization of philanthropic organizations in the Diaspora and the establishment of cooperatives to provide economic self-help for workers, stressing the need to form a trade union for Jewish workers. Finally, it demanded the separation of Zionism and religion and condemned the Zionist movement's submission to its Orthodox wing. The Democratic Fraction, which appeared for the first time as an organized bloc at the Fifth Zionist Congress (1901), prompted the unification of those who opposed, for religious reasons, any cultural activities by the Zionist Organization.

An Information Bureau in Geneva headed by Chaim Weizmann served as the secretariat for the Democratic Fraction. Its activities centered around the development of the publishing house *Juedischer Verlag, the establishment of the statistical bureau, and the creation of a fund to found a Jewish university in Erez Israel.

The organization of the Fraction was weak, and it did not even hold the planned annual conference. Only a consultation of 11 men (including Weizmann, Feiwel, and Martin *Buber) was held in January 1904. When they decided to join the emerging opposition to the *Uganda scheme, the Fraction practically ceased to exist. Thereafter, its members worked individually for the overall Zionist Organization.

[Israel Klausner]

DEMOCRATIC MOVEMENT FOR CHANGE (DMC; Heb. *Ha-Tenu'ah ha-Demokratit Le-Shinu'i*), political party formed in 1976 prior to the elections to the Ninth Knesset. The DMC was basically a protest party against the *Israel Labor. Its core group was made up of former chief of staff and archeology professor Yigael *Yadin, who headed the new party, *Shinu'i (a party formed by Amnon *Rubinstein in 1974), a group of former members of the Labor Party, headed by Major General (res.) Meir *Amit, a group of former members of the *Likud, headed by Shemuel *Tamir, as well as several Sephardi and Druze personalities.

The DMC participated in the elections to the Ninth Knesset on a platform that called for electoral reform to introduce a system of single-member constituencies; the passing of a Parties Law; a drastic paring of the government bureaucracy; the decentralization of the government system and the strengthening of local government; the preparation of a constitution (see *Governance); the establishment of a Ministry of Welfare; the reorganization of the education system in order to enhance social integration and reduce social gaps; a new housing policy based on building apartments for rental; strengthening the rule of law; preference for production over services; a fairer distribution of the tax burden; a fight against "black money" (unreported income); preservation of the Jewish character of the State of Israel and of Jerusalem as its capital; a willingness to accept a territorial compromise in return for true peace; opposition to the establishment of an additional state west of the Jordan River; the fixing of Israel's security border along the Jordan River; and continued Israeli control over areas vital for the State's security.

Most of the members of the new party were hoping to form a government with the Labor-Mapam Alignment after the elections. However, for the first time in Israel's history, the *Likud formed a government and commanded an absolute majority in the Knesset together with the religious parties, even without the DMC's 15 Knesset members (elected mainly at the expense of Labor); thus, despite its impressive electoral success, the DMC started its parliamentary life without real influence. The DMC joined the government formed by Menahem *Begin several months after it was sworn in, with Yadin becoming deputy prime minister, Tamir minister of justice, and Amit minister of transportation and communications. However, none of its ministers was directly involved in either the peace negotiations with Egypt or the liberalization of the economy. Within a year and four months of the elections to the Ninth Knesset the DMC broke up into several parliamentary groups. At the time of the elections to the Tenth Knesset in 1981 five of the DMC's 15 members were members of Shinu'i – the Center Party (the only splinter of the DMC that survived); two had joined the Labor Party; one had joined the Likud; one had joined Telem; four were independent members of the Knesset; and two were single-member parliamentary factions.

The dismal failure of the DMC to take root was a blow to all those who had hoped to form a strong Center Party. It was only in the elections to the Sixteenth Knesset in 2003 that the offshoot of the original Shinu'i managed to repeat the DMC's electoral success.

[Susan Hattis Rolef (2nd ed.)]

DEMOGRAPHY. This entry is arranged according to the following outline:

INTRODUCTION

Jewish demography, like demography in general, deals essentially with the size and geographical distribution of the population, with its composition according to various characteristics (e.g., sex, age), and with population movements. The latter consist of natural movements or "*vital statistics" – births, deaths, marriages, and divorces; migratory movements (*migrations); and accessions to, or secessions from, the Jewish group. Demographic knowledge is based preponderantly on statistical data and their analysis; consequently data collection is an important part of demographic work. In recent decades, research has given increasing attention to the interrelation between demographic phenomena, in the narrow sense of the word, and cultural and economic phenomena. Since Diaspora Jews are scattered and everywhere in a minority status, and the very definition of Jewishness is today interpreted in differing ways, both the demographic profile and trends of the Jews and the study of the subject matter have peculiar aspects. Demographic work on Diaspora Jewry encounters special difficulties due to the lack of uniformity of available sources, and the need for data collection by Jewish institutions when official data are not available. Official statistics now exist only for a minority of Diaspora Jews, and even where they are forthcoming, they are mostly of a very general nature and insufficient for in-depth analysis (see *Vital Statistics).

SIZE AND GEOGRAPHICAL DISTRIBUTION OF WORLD JEWRY

Major Geographical Shifts of World Jewry

Over the last 125 years, the geography of the Jews has changed completely. As a result of the Shoah and of large-scale international migrations, many veteran Diaspora communities in Eastern and Central Europe, the Middle East, and North Africa virtually disappeared, or became small and precarious. Instead, two major demographic centers arose: the United States, whose Jewish stock arrived mainly in the period 1881–1924, and Israel, whose large-scale demographic expansion followed the establishment of the state in 1948. Several secondary Jewish population centers are now situated on either side of the Atlantic: in Western Europe, especially in France and England; in Canada, alongside the major Jewish Diaspora population in the U.S.; in South America, especially in Argentina; and in Australia.

These changes consisted largely of a westward shift of the world Jewish population. Only since 1948 was an eastward counterpull exercised by Israel. It has been calculated that, geographically, the virtual central point of world Jewry (considering both location and size of the various Jewish populations) was at the border of the Ukraine and Galicia in 1850. It shifted to a spot just west of Scotland in 1933 and toward the middle of the North Atlantic Ocean in 1960. It has since moved eastward reflecting the growing size and share of Jewish population In Israel. Likewise, the cultural-linguistic milieus in which the Jews live changed greatly. Until the onset of the modern migration movement toward the end of the 19th century, most Jews lived among peoples with Slavic languages, while other large Jewish populations had German-speaking surroundings in Europe and Arabic-speaking surroundings in Asia and Africa. All these milieus lost much of their importance for the Jews because of the Shoah and emigration. Correspondingly, there was a great rise in the proportion of Jews residing in countries whose official language is primarily English but also French or Spanish. With the growing demographic importance of Israel, Hebrew became the official as well as the everyday language of a considerable proportion of all Jews. On the other hand the diffusion of traditional Jewish languages of the Diaspora – Yiddish and Ladino – dramatically diminished in favor of the official languages of the various countries of Jewish residence. This reflected not only the special impact of emigration and the Shoah on the traditional centers of Yiddish and of Ladino in Eastern Europe and the Balkans, but also internal social and cultural processes among the Jews and changing relationships between them and the surrounding non-Jewish populations.

Table 1.

German	4	1	1
Arabic	4	1	0
Other	12	4	2

a Ranked by frequency in 2005.

Finally, the "newness" of most of the numerically important Jewish populations of the various countries deserves to be emphasized. The majority of Jews now live in countries where, some generations ago, few or hardly any Jews were to be found. The countries with the 10 largest Jewish populations that accounted for about 95% of world Jewry in 2005, accounted only for a minor share in 1850. This has implications for the relationship between the Jews and the general population of the respective countries. In fact, most of those are immigration countries where not only the Jews but a large part of the population is of comparatively recent standing. In addition, the newness of many numerically important Jewish Diaspora groups affects the sphere of internal integration and

organization, especially in view of the weakening over time of the religious factor (see *Community, Organization). The situation is obviously different in Israel, where common national aspirations and common practical needs generate stronger cohesive tendencies.

UP TO WORLD WAR I. During part of the 19th century, information on the number of Jews in various countries was unsatisfactory. Taking of official censuses was only gradually coming into use, and the completeness of some of the earlier censuses with regard to the Jews left much to be desired. There were virtually no censuses in Asia and Africa. In the Czarist Empire, which contained the largest number of Jews in the world, the first general census was taken only as late as 1897. In some countries of Western Europe and America, the Jews were not distinguished as such in the official statistics. Moreover, examination of the alleged number of Jews from successive official counts in Austria-Hungary and in some parts of the Czarist Empire makes the incompleteness of the earlier figures evident. This was apparently often due to a deliberate tendency on the part of many Jews to evade inclusion in official registrations and counts. Under these circumstances, comprehensive figures on the Jewish world population must be based partly on conjecture and cannot be viewed as more than very rough indications of an order of magnitude. A. *Ruppin estimated the total number of Jews at the end of the 18th century at 2,500,000. J. *Lestschinsky arrived at an estimate of about 3,250,000 Jews in 1825, of whom 2,750,000 (i.e., more than 80%) in Europe.

The figures on the subsequent development up to World War I, as presented in Table 2, are based (with some adaptations) on the studies of Lestschinsky.

World Jewish Population increased from about 4¾ million in 1850 to 13½ million in 1914, i.e., by 180% or by 16 per 1,000 annually. In comparison, during 1850–1900 the total world population is estimated to have grown by six-seven per 1,000 annually, and the population of Europe, North America, and Oceania by 11 per 1,000 annually. The faster growth of the Jews was due to their relatively larger natural increase, in consequence of the faster reduction of mortality among European Jewish communities. The proportion of Jews in Asia and Africa among all Jews in the world declined somewhat. This was due to their lower natural increase at that time, mainly because of higher mortality, as compared with the Jews in Europe and America (see *Vital Statistics).

A far more spectacular change in the geographical distribution of world Jewry was the increase in the proportion of Jews in America after 1880: from about 250,000 in that year to 1,175,000 in 1900 and nearly 3,500,000 in 1914, and from 3% to 11% and, by 1914, a quarter of world Jewry. The corresponding figures for the United States and Canada (together) were about 1,115,000 in 1900 and 3,360,000 in 1914. This rapid expansion of American Jewry was due to the migration of about 2,400,000 Jews during the years 1881–1914, of whom 2,150,000 went to the United States and Canada (see *Migration). Equally due to immigration, but on a much smaller scale, was the growth of the Jewish populations in South Africa and in Oceania.

While the proportion of European Jews among all the Jews in the world was reduced from 88% in 1880 to about two thirds in 1914, as a result of the heavy emigration, the absolute number of the Jews in Europe kept on growing from more than 4,000,000 in 1850 to 6,800,000 in 1880, 8,700,000 in 1900 and 9,100,000 in 1914. This numerical growth despite the heavy emigration drain – which, during the peak period of 1901–14, led to the departure of 1,600,000 Jews from Europe – is striking evidence for the natural increase of European Jews at that time. Even the number of Jews in Eastern Europe rose greatly from 1880 to 1900 and maintained itself from 1900 to 1914, though nearly all the overseas emigration consisted of persons originating from that region and there was, in addition, migration from Eastern to Central and Western Europe.

1914 TO 1939. During the period up to the outbreak of World War II, the Jewish population of the globe is estimated to have risen from about 13,500,000 to 16,500,000. The rate of growth was smaller than in the preceding period because of the reduction in natural increase caused by the spread of birth control among the Jews in Europe and America (see *Vital Statistics). The annual increase of world Jewry was about eight per 1,000. In comparison, total world population grew from 1920 to 1940 by ten per 1,000 annually, while the populations of Europe, North America, and Oceania, which underwent a demographic slowdown, grew by nine per 1,000 annually. Whereas the relative growth of the Jews had exceeded that of the peoples of Europe, North America, etc. in the 19th century, this was no longer so in the period between the two world wars.

The relative share of the European Jews among total world Jewry continued to decline from about two thirds in 1914 to 58% in 1939, mainly because of emigration to America, South Africa, Australia, and Erez Israel. For the same reason and because of the reduced natural increase, the absolute number of Jews residing in Europe grew only a little between the two world wars. On the other hand, the proportion of American Jews among world Jewry grew from about a quarter in 1914 to a third in 1939. During this period, the relative growth of the number of Jews was much greater in Latin America and South Africa than in North America. This was due to the limitations imposed on immigration into the U.S., which very strongly affected the Jews (see *Migration).

On the other hand, there was a rise in the relative share of Jews in North Africa and, especially, in Asia. The main reasons were considerable Jewish migration to Erez Israel, to the Asian territories of the U.S.S.R., and also to Egypt and an upward swing in the natural increase of the local Jewish population because of reduced mortality.

THE SHOAH. About six millions of Jews perished during the Nazi persecutions. In addition, there was a very low birth rate and survival of newborn among the Jews in the occupied territories. After the catastrophe, the total number of Jews was reduced by over one third. In consequence, a far-reaching change also took place in the geographical distribution of world Jewry. As the numerical strength of the European Jews waned, the relative shares of the Jews on the other continents rose. When it was again possible to do some statistical stock-taking in 1948, on the eve of the establishment of the State of Israel, less than a third of all Jews were found in Europe, as against more than a half in 1939. This change was essentially

due to the enormous biological losses caused by the Shoah, but there was also some emigration from Europe in the early war years and again after the end of the war.

The Shoah was most devastating in the eastern parts of Europe occupied by the Nazis. In the years after the end of the war, a movement of *Displaced Persons also took place from Eastern to Central Europe. Therefore, if the regional distribution of the Jews inside Europe in 1948 is compared with that in 1939, an enormous reduction in absolute numbers is found everywhere, but the proportions of the various regions had changed greatly. Before the war, Eastern Europe, excluding the U.S.S.R., accounted for one half of European Jewry; by 1948 its share was diminished to less than a quarter, while the Jews in the U.S.S.R. constituted one half of all European Jews. Contributory causes for this development were the enlargement of the area of the U.S.S.R. after World War II and the departure of Displaced Persons from the other East European states; but the essential cause was the differential loss of life during the Shoah, when a much larger part of the Jews was spared in Russia than in the rest of Eastern Europe. Also the proportion of Jews in Western and Central Europe among all Jews of that continent was higher in 1948 (about a third) than in 1939 (about 20%). This happened, among other things, because the Jews in England had remained safe and because of the influx of Displaced Persons.

As against the great drop in the share of European Jewry, the proportion of American Jewry rose from one third of world Jewry in 1939 to one half in 1948, and that of Asia including Palestine rose from 6 to 11%. There had been some immigration of Jews into these continents during the intervening years, but this was only a secondary factor in producing the marked changes in the respective proportions.

The direct outcome of the Shoah was the physical destruction of the majority of the Jews who had lived in Europe. Soon after the war came to an end, the vivid memory of the horrors, the renewed hostility of the non-Jews in some countries and, on the other hand, the creation of the State of Israel produced mass emigration of the survivors from Europe (see *Migration). The demographic aftereffects of the Shoah – particularly, distortions in the age and sex composition of the survivors – are conspicuous up to the present and will make themselves felt for a considerable time to come, not only in Europe, but also among those Jewish Diaspora populations elsewhere that have absorbed survivors from Europe. It has been estimated that if the expected growth of the generations that were destroyed and of those that were not born are factored in, the cumulative demographic impact of the Shoah might have ranged between 12 and 18 million lost people around the year 2000.

1948 TO 1970. After World War II, the statistical documentation available on the Jewish Diaspora based on official state sources greatly diminished. Before the War, the majority of world Jewry lived in countries (mainly in Europe) where official statistics furnished copious data on Jews. Now the situation was reversed: putting aside the State of Israel, over 70% of Diaspora Jews lived in countries without any official statistics on Jews, mainly in the United States. Besides, great conceptual problems emerged because of the growing frequency of "marginal Jews." On the other hand, over the years Jewish-sponsored efforts at collecting statistical information on Jewish populations produced a significant database for the study of Jewish demography (see *Vital Statistics). Under these circumstances, the quality of Jewish population estimates in many countries is unsatisfactory.

Since World War II, no assessment of Jewish demographic trends is possible without explaining what the data mean, particularly the statistical definition of "who is a Jew." The figures reported here usually relate to the concept of *core Jewish population*, i.e. *all those who, when asked, identify themselves as Jews; or, if the respondent is a different person in the same household, are identified by him/her as Jews*. This is an intentionally comprehensive approach, reflecting both subjective feelings and community norms and bonds. The definition

is admittedly looser in the Diaspora than in Israel where personal status is subject to the ruling of the Ministry of the Interior. The *core Jewish population* broadly overlaps but does not necessarily coincide with the *halakhic* (rabbinic) definition of a Jew as someone who *is the child of a Jewish mother or converted by appropriate religious and legal procedure*. Inclusion in the *core* Jewish population does *not* depend on any measure of a person's Jewish commitment or behavior in terms of religiosity, beliefs, knowledge, communal affiliation, or otherwise. The *core* Jewish population includes all those who converted to Judaism, or decided to join the Jewish group informally and declare themselves Jewish. It excludes those of Jewish descent who have formally adopted another religion, as well as other individuals who did not convert out but currently refuse to recognize their Jewishness.

Concurrently, the concept of an *enlarged Jewish population* includes the sum of (a) the *core* Jewish population, (b) all other persons Jewish by birth or parentage who do *not* currently identify as Jews, and (c) all the respective *non-Jewish* household members (spouses, children, etc.). The *enlarged* Jewish population is by definition significantly larger than the *core* population.

The *Law of Return – Israel's distinctive legal framework for the eligibility and absorption of new immigrants – further extends its provisions to all current Jews, their Jewish or non-Jewish spouses, children, and grandchildren, and the respective spouses. As a result of its three-generation time perspective and lateral extension, the Law of Return applies to a much wider population than *core* and *enlarged* Jewish populations alike. The Law of Return, *per se*, does not effect a person's Jewish status, which, as noted, is adjudicated by Israel's Ministry of the Interior or rabbinical authorities. In practice, while the Law of Return defines objective, clear-cut normative rules for the attribution of certain rights and prerogatives, the initiative for being entitled to its provisions normally stems from people's subjective, individual awareness of belonging (directly or indirectly) to the Jewish collective. In Germany, since the 1990s, legislation similar to the principles of the Law of Return regulates the eligibility of Jewish immigrants.

The period from 1948 onward began during the "baby boom" of early postwar years; however, it was soon followed by a renewed decline in Jewish birth rates in Europe, America, and other Western countries. Jewish populations in Europe about which there is any statistical documentation reached a state of demographic stagnation and decline, with deaths consistently outnumbering births and additional losses to the Jewish population being occasioned by "withdrawals," whether in connection with frequent intermarriages or not. In the U.S., Canada, South Africa, and Australia, the only source of any Jewish population growth was international migration, but eventually in some cases this was insufficient to compensate for the deficit of internal demographic changes (see *Vital Statistics). Though there has been persistent natural increase in Israel, changes in the overall size of the Jewish world population have been rather limited.

Very conspicuous geographical shifts in the world Jewish population occurred over the years 1948–70. Throughout the period, the Jews in America accounted for about half of world Jewry. Nine-tenths of them resided in North America. But there were marked changes in the relative shares of other regions among world Jewry. The proportion of European Jews continued to decline from about a third of all Jews in 1948 to a quarter in 1970. It would have declined even somewhat further, were it not for an influx from North Africa. The relative share of Eastern Europe excluding the U.S.S.R. dropped both among total Jews in Europe (from more than 20 to less than 10%) and among world Jewry (from 7 to 2%). Throughout this period, the Jews in the European territories of the U.S.S.R. were one half or more of all Jews residing in Europe. The aggregate number and proportion of the Jews in other countries of Europe, i.e., mainly in the west and center of that continent, were first reduced by departures of Displaced Persons and others, most of whom went to Israel. But subsequently they were raised by intermittent immigration from countries of Eastern Europe and North Africa and the Middle East.

The proportion of Jews in North Africa and, consequently, in the whole of Africa, dropped drastically during 1948–70 (North Africa, from 5.5 to 0.5% of world Jewry). This was due to large-scale emigration from the Maghreb and other Arabic-speaking states. The emigrants went mainly to Israel and in the second place to France. The drain started after Israel's War of Independence (1948) and had come near to emptying North Africa of its once numerous Jewish population by the Six-Day War period (1967). A notable episode was the exodus of over 100,000 Jews from Algeria to France, together with the European population, in 1961–62.

Similarly, the share of Asia, excluding Israel and the Asian territories of the U.S.S.R., dropped from 3 to 1% of world Jewry during 1948–70. Most of the respective Jews had resided in Arabic-speaking countries; nearly all of them moved to Israel in a spectacular mass migration soon after the foundation of the new state.

On the other hand, the total share of Asia among world Jewry doubled from 1948 (11.5%) to 1967 (21.5%). This resulted essentially from the rapid growth of the Jewish population in Israel from 650,000 in May 1948 to almost 2,400,000 by the end of 1970. The number of Jews in the Asian territories of the U.S.S.R. also increased somewhat.

In all but one of the countries of Eastern and Central Europe, the number of Jews was very much smaller in 1970 than in 1939. This was due, of course, to the successive effects of the Shoah and of emigration. The most glaring instance in this respect is that of Poland, with 3,250,000 and only about 25,000 Jews, respectively (the latter figure relates to the reduced postwar territory). The one country in that region with a relatively smaller diminution in the number of Jews is the U.S.S.R., whose territory was only partly occupied by the Nazis during World War II and much enlarged after the war and where emigration is barred. The number of Jews in the European part of the U.S.S.R. amounted to 1,900,000 in 1959,

according to the official census of that year. This number is probably below the actual figure, but there is no alternative statistical figure in existence. With regard to the 1939 figures in Table 2, those for Germany and Austria (at that time a German province) already showed the effects of Nazi rule: there were half a million Jews in Germany in 1933 and 190,000 in Austria in 1934. The number of Jews in 1939 on the enlarged post-World War II territory of the U.S.S.R. in Europe may be estimated at more than 4½ million.

In most countries of Western Europe, the number of Jews likewise declined, due to the Shoah and subsequent emigration. But the two notable exceptions are precisely the countries with the largest Jewish populations in that region. The Jews in England did not suffer directly from the Nazi persecutions; on the contrary, their numbers were swelled by the influx of refugees and survivors. The Jews in France did suffer from the Nazis and their number was estimated at only 180,000 in 1946, as compared with 320,000 in 1939. But the wartime losses were more than compensated by successive immigration from two sources: Eastern Europe (Displaced Persons, refugees after the Hungarian uprising of 1956, etc.), and North Africa, particularly Algeria.

As a result of all the demographic changes produced by the differential effects of the Shoah and of the subsequent migrations in the various European countries, a geographical polarization of the Jews in Europe has taken place. The main concentrations are now in the extreme east (the former U.S.S.R.) and in the extreme west (France, England). Over the postwar decades there was an increase in the number of Jews in nearly all countries of America, with the one conspicuous exception of Cuba, and in Oceania. The rise in the estimated Jewish population of the U.S. is shown in Table 4.

The number of Jews in South Africa increased, according to census figures, from 91,000 in 1936 to 115,000 in 1960. On the other hand, the number of Jews in each of the North African countries decreased reflecting the post-War de-colonization process.

Table 5 shows the expansion of the Jewish population in Erez Israel.

The number of Jews in the Asian territories of the U.S.S.R. was, according to the official censuses, about 220,000 in 1939 and 370,000 in 1959. On the other hand, the two Arab countries in Asia with the largest Jewish populations had been Iraq and Yemen. To judge from the subsequent immigration to Israel, in the middle of 1948 there were about 125,000 Jews in Iraq and 50,000 in Yemen and Aden.

1970 TO 2005. Since 1970, significant changes affected the geographical distribution of world Jewry and the relative weight of communities in different regions of the world. The size of world Jewry at the beginning of 2005 was assessed at 13,034,000 (by the *core Jewish population* definition). World Jewry constituted 2.04 per 1,000 of the world's total population of 6,396 million. One in about 490 people in the world was a Jew. World Jewry's overall increase from 1970 through 2005 was about 3% (or 0.06% a year), as against an increase of over 70% in total world population (about 1.5% yearly). Significantly, Jewish zero population growth worldwide was the product of two entirely different trends compensating each other. The State of Israel and the rest of the world – or the Diaspora – are the two typological components of a contempo-

Table 4.
Jewish Population in the United States of America, 1790–2005

Year	Jews	Total US	% Jews
1790	1,500	4,000,000	0.04
1820	3,000	11,000,000	0.03
1830	6,000	15,000,000	0.04
1850	50,000	24,000,000	0.21
1860	150,000	30,000,000	0.50
1880	250,000	46,353,000	0.54
1890	400,000	59,974,000	0.67
1900	1,058,000	71,592,000	1.48
1910	1,777,000	85,817,000	2.07
1920	3,389,000	103,266,000	3.28
1930	4,228,000	119,038,000	3.55

2000	4,955,000
2005	5,238,000

rary world Jewish population that responds to two quite contrasting, if not conflicting, sets of demographic determinants and consequences. The Israeli component, approaching 40% of the world total in 2005, operates as the majority within its own sovereign state. The Diaspora, about 60% of world Jewry, consists of a large number of communities of different absolute sizes, each constituting a very small to minuscule share of the total population of the respective country.

In synthesis, Israel's Jewish population grew by more than two million between 1945 and 1970, and by another 2.6 million between 1970 and 2005. Diaspora Jewry diminished by about 400,000 between 1945 and 1970, and declined by another 2.3 million between 1970 and 2005. These changes reflect in part the net transfer of over 2.2 million Jewish migrants from the Diaspora to Israel over the whole period since World War II, including about one million since 1970. A substantial contribution to total population changes, however, comes from a very different balance of Jewish births and deaths, as well as to a different impact of accessions and secessions. Especially since the 1970s, these factors produced further substantial population increases in Israel, and visible declines in the aggregate of other Jewish communities.

Trends to growth, stability, or decline in the major Jewish communities were quite variable. The Jewish population in the United States increased by an estimated 100,000 between 1970 and 1990, from 5.4 to 5.5 million, less than might have been expected considering the total amount of known Jewish immigration to the U.S. Between 1990 and 2000, the number of U.S. Jews should have increased by an additional 200,000 only due to international migration. Instead, two new surveys undertaken in 2001, the NJPS and the AJIS, found a total of 5,200,000–5,350,000 or 150,000 to 300,000 less than in 1990. Substantial numbers of Jews did move to North America from the FSU, Israel, Latin America, South Africa, Iran, and other countries, but the internal interplay of demographic, social, and cultural forces balanced out much of the expected population increase and actually created a deficit.

The about 13 million Jews estimated worldwide at the dawn of the 21st century were intimately connected to several more millions of people. Some of the latter had Jewish origins or family connections but were not currently Jewish, whether because they changed their own identification, were the non-Jewish children of intermarried parents, or were non-Jewish members in intermarried households. These non-Jews shared the daily life experience, social and economic concerns, and cultural environment of their Jewish mates. The following examples indicate the extent of variation of *core* and *enlarged* Jewish populations in selected countries. The criteria followed in the ensuing comparison were not the same in each place.

In the Russian Republic in 2001, the Jewish population was estimated at 275,000 and the enlarged population including all non-Jewish members in the respective households was estimated at 520,000 – a difference of 89 percent. In the U.S. in 2001, based on two different surveys, a core Jewish population of 5,300,000 was part of an enlarged population estimated at 8.8 to 10 million – a difference of 69 to 89 percent. In the Netherlands, a 2000 survey found 30,000 Jews by matrilineal descent and another 13,000 by patrilineal descent – a 43 percent difference. In Brazil, according to the 1991 census, the reported Jewish population of 86,000 was part of an enlarged population of 117,000 in Jewish households – a difference of 36 percent. In France, according to a 2002 survey, 500,000 Jews had at least another 75,000 non-Jewish household members – a 15 percent difference. In Israel at the end of 2001, 5,025,000 Jews were accompanied by 275,000 non-Jewish family members, mostly in families that had immigrated from the F.S.U. – a difference of 5 percent. The gap between the numbers of individuals covered by the *enlarged* and *core* Jewish population definitions tended to increase in connection with growing rates of out-marriage. In some cases an increase in the *enlarged* population could be noted along with reduction of the respective *core*.

Recently, instances of accession or "return" to Judaism can be observed in connection with the absorption in Israel of immigrants from Eastern Europe and Ethiopia, and the comprehensive provisions of the Israeli Law of Return. The return or first-time access to Judaism of some of such previously unincluded or unidentified individuals contributed to slowing down the pace of decline of the relevant Diaspora Jewish populations and some gains for the Jewish population in Israel.

Table 6 gives an overall picture of Jewish population country by country for the beginning of 2005 as compared to 1970. The number of Jews in Israel rose from 2,582,000 in 1970 to 5,237,600 at the beginning of 2005, an increase of 2,655,600 people, or 102.9 percent (more than double the initial population). In contrast the estimated Jewish population in the Diaspora diminished from 10,063,200 to 7,796,500 – a decrease of 2,266,700 people, or 22.5 percent. These changes reflect the continuing Jewish emigration from the Former U.S.S.R. (FSU) and other countries, but also the internal decrease typical of the aggregate of Diaspora Jewry. While it took 13 years to add one million to world Jewry's postwar size, over 46 years were needed to add another million. The data also outline the slow Jewish population growth rate versus total population growth globally, and the declining Jewish share of world population. In 2005 the share of Jews per 1,000 world population was less than half what it was in 1945.

b Including Monaco.
c In 1970: West Germany 28500; East Germany 1500.
d Including areas in Asia.
e Of which in 2005: Bosnia-Herzegovina 300; Croatia 1300; Macedonia 100; Serbia-Montenegro 1500; Slovenia 100.
f Including Hong Kong.
g Including other.

In 2005, over 47 percent of the world's Jews resided in the Americas, with over 43 percent in North America. Over 40 percent lived in Asia, including the Asian republics of the F.S.U. (but not the Asian parts of the Russian Republic and Turkey) – most of them in Israel. Europe, including the Asian territories of the Russian Republic and Turkey, accounted for about 12 percent of the total. Fewer than 2 percent of the world's Jews lived in Africa and Oceania.

Comparing the 2005 and 1970 Jewish geographical distributions, North America remained nearly unchanged, with some losses in the United States – mostly due to identificational assimilation – compensated by growth in Canada – mostly due to immigration. Communities in Central America had an overall increase of about 11 percent – mostly in Mexico, Panama, and Costa Rica, whereas other smaller communities diminished quite significantly. In South America there was an overall decrease of 26 percent. All countries registered a smaller Jewish population in 2005, most notably Argentina with a decrease of 34 percent. The exceptions were Brazil and Venezuela both of which, however, were past their peak and were experiencing some recent population attrition.

In Europe, the main event was the return of continental majority to Western European Jewish communities, after several centuries of East European predominance. The main determinant of such epochal change was the dissolution of the U.S.S.R. and the massive Jewish emigration that started in December 1989. Among the 15 countries of the European Union (before the enlargement of 2004 to 25 countries), between 1970 and 2005 Jewish population increased by 7.5 percent. This reflected very unequal patterns of change. Germany after reunification in 1991 experienced the most dramatic pace of growth of any Jewish community worldwide, increasing by 283 percent (nearly four times the initial size). Other communities in the EU and other Western European countries with some Jewish population increase included Austria, Denmark, Spain, and Norway. All other western countries experienced Jewish population decreases, most notably the United Kingdom with a decrease of 24 percent, and France with a 7 percent loss.

The European former Soviet republics lost overall 81 percent of their initial Jewish population in 1970. Decreases were most dramatic in Moldova (-95 percent), Ukraine (-89 percent), Lithuania (-86 percent), and Belarus (-86 percent), and somewhat less dramatic in Latvia (-74 percent), Russia (-71 percent), and Estonia (-64 percent). The Asian former Soviet republics lost overall 92 percent of their initial Jewish population. The most resilient community was in Azerbaijan, which nonetheless lost 83 percent of its Jewish population.

In other East European and Balkan countries, the Jewish population decreased overall by 56 percent, ranging between Hungary (-29 percent) and Romania (-85 percent).

The total Jewish population in Asia grew by 80 percent between 1970 and 2005, but this was due to Israel's more than doubling its Jewish population, and the rest of the continent's Jews (including the former Soviet republics) shrinking by 89 percent. In Central and Eastern Asia, the main change was a decline by 85 percent in the size of the Jewish community in Iran. Small Jewish communities tended to become established and expand in rapidly growing economic powers such as China, Japan, and South Korea.

In Africa, the total Jewish population diminished by 62 percent – 94 percent in North Africa (including Ethiopia), and 41 percent in Southern Africa, respectively. Finally, in Oceania the Jewish population increased by 56 percent – 57 percent in Australia and 40 percent in New Zealand, respectively.

In the course of time, Jewish population has become overwhelmingly concentrated in a relatively small number of countries. In 2005 two countries dominate the geography of world Jewry: the United States with about 5,280,000 *core Jewish population*, and the State of Israel with 5,235,000 (each accounting for about 40 percent of the world total). The remaining two and a half million Jews (20 percent), were highly dispersed. Four countries alone include more than one half of total non-U.S. and non-Israeli Jews: France (with an estimated 496,000 Jews in 2005), followed by Canada (372,000), the United Kingdom (297,000), and the Russian Republic (235,000). Further important Jewish communities lived in Argentina (estimated at 185,000 in 2005), Germany (115,000 in 1996), Australia (102,000), Brazil (97,000), Ukraine (84,000), and South Africa (73,000). Jewish populations of at least 100 existed in 93 countries.

To further understand the logic of the changes in geographical distribution in the course of the last quarter of a century, the main aspects of the intensive and manifold relationship that exists between Jewish communities and contemporary society at large deserve closer scrutiny. The Jewish presence – as expressed in absolute numbers and as a percentage of the total population – appears to be strongly related to major social and economic indicators of the world regions, individual countries, provinces, cities, and neighborhoods where they live. Jews simply do not move and redistribute at random, but their mobility patterns reflect the inherent attraction or repulsion of the main instrumental forces that operate in society at large.

During the early 2000s, 92 percent of the Jews globally lived in the highest ranked quintile of countries including most western nations and the state of Israel, 6.5 percent lived in the second best quintile of countries, whereas only 1.5 percent lived in the bottom three-fifths. By the same token, in the 1990s, over 59 percent of Jews in the European Union lived in the best fifth of economic regions, against 1 percent in the bottom fifth; and in 2000, 64 percent of Jews in the United States lived in the top fifth of states, against 1 percent in the bottom fifth. The different concentration of the Jewish presence out of the total population, by level of development of the environment, is thus very consistent and statistically significant, passing from densest in the wealthier and more sophisticated areas to scantiest in the poorest and more backward areas.

Dispersion and Concentration

For many centuries the Jews have been a dispersed people. Yet their dispersion was never uniform; there always developed major centers of Jewish residence with large absolute numbers of Jews and comparatively greater proportions among all Jews and among the respective general population. In this connection, the degree of urbanization of the Jews deserves particular attention. Both dispersion of the Jews and their relative concentration have been much altered in recent generations.

Dispersion of the Jews increased through the changes in geographical distribution produced by emigration from Europe and by the drastic reduction of European Jewry due to the Shoah. The intercontinental distribution of the Jews has undergone periods of growing dispersion and growing concentration. Whereas in 1880 one continent, Europe, accounted for nearly 90 percent of all Jews, during the 1960s the numerically most important continent of Jewish residence, America, contained barely one half of all Jews, while Europe and Asia comprised each more than 20 percent.

In keeping with these changes, the geographical distances involved in the dispersion of the larger Jewish populations increased greatly. Only in the 20th century did the dispersion of the Jews become a virtually global one, with the notable exceptions of East Asia and large parts of Africa. Since the 1970s the tendency of Jews to be regrouped in few countries became again predominant, with 80 percent of world Jewry residing in the United States and in Israel.

Before World War I, the Czarist empire contained 5¼ million Jews (census of 1897), Austria–Hungary, 2¼ million (census of 1910), and the number of Jews in the United States had risen from about 50,000 in 1850 to about 3¼ million at the beginning of the war. The next largest Jewish population in size, Germany, numbered about 600,000 in 1910. After the boundary changes that resulted from World War I, the United States became the country with the largest Jewish population, estimated at 4¼ million in 1927 and at 4¼ million in 1937. The Jews of Poland numbered 3¼ million (estimate for 1939; the census figure of 1931 was 3.1 million) and those in the U.S.S.R., 3 million (1939 census). The next-ranking country was Romania, with about 800,000 Jews in 1939. Germany had about half a million Jews when Hitler came to power, but far fewer on the eve of World War II. All other countries had considerably less than half a million Jews each.

The concentration of the Jews in a limited number of countries expresses itself clearly in the high proportion of the respective Jewish populations among world Jewry.

The concentration in the top group increased since the period before World War II. The three countries that then had more than one million Jews each comprised together 67 percent of world Jewry in 1931, whereas the two countries in that category now comprise over 80%. Moreover, there was and is a tendency for the countries with large populations, in absolute numbers, to also have a comparatively large percentage of Jews in relation to the general population; however, there were and are some exceptions. Before World War II, Poland was the European country with the largest number of Jews and had the highest share of Jews in the general population of all Diaspora countries (about 10 percent). Around 1970, of the ten countries with Jewish populations of 100,000 and over, nine had 0.5 percent or more Jews in their total population. The U.S. had both the largest number of Jews and the largest percentage of Jews among all inhabitants (nearly 3 percent), and the U.S.S.R., especially its European territories, came in next according to the relative frequency of Jews (1–2 percent of the total population).

The number of individual countries with sizable Jewish populations of 50,000 and over rose since the beginning of the modern Jewish migration movement in about 1880. In the last few decades, though, there has been a significant decrease in the number of those countries, as compared with the position prior to World War II, because of the effects of the Shoah and of emigration from Europe and from the Arabic-speaking countries. While in the late 1960s there were 41 countries with at least 5,000 Jews, this had diminished to 36 in 2005, in spite of the significant increase in the number of independent states following the dismemberment of the U.S.S.R., Yugoslavia, and Czechoslovakia.

Jewish population concentration occurred not only at the global level, but also regionally within countries. This partly reflected the tendency of Jews to congregate in the major cities of the various countries (see Urbanization below). In the Czarist empire, the Jews were largely segregated in the Polish provinces and in the so-called *Pale of Settlement along the western borders of Russia. According to the 1939 census of the Soviet Union, the percentage of Jews among all inhabitants varied in the main regions as follows: total, 1.8; all European Russia, 2:1; Belarus, 6.7; Ukraine, 4.9; rest of European Russia, 0.9; Asian Russia, 0.7. According to the 1959 census of the Soviet Union, three-quarters of the Jews were enumerated in the two most populous republics, the Russian S.F.S.R. and the Ukraine. The highest proportions of Jews in the general population were found in some of the republics lining the western border of the Soviet territory, in the Caucasus region, and in the Uzbek Republic in central Asia (where Bukhara is situated).

In Poland between the two world wars, concentration of the Jews was much heavier in the former Russian and Austrian provinces than in the areas previously belonging to the German empire. In the U.S., there long was a heavy concentration of the Jews in the northeastern region and particularly in New York since the inception of mass immigration. Only in the last few decades has the share of the Pacific region risen somewhat. In both 1937 and 1967, the State of New York accounted for about 45% of the entire Jewish population of the U.S., and the 10 states with the largest number of Jews comprised close to 90% of all Jews of the U.S. but somewhat less than one half of the general population of the U.S. In keeping with the rise of the total number of Jews in the U.S., the respective 10 states all had more than 100,000 Jews in 1967, while only eight did in 1937. On the whole, the respective 10

states were also those with a higher relative frequency of Jews among the general population. In 1937 the overall percentage of the Jews in the U.S. was 3.7 percent of the general population; the 10 states with the largest Jewish populations had each more than 2 percent Jews in their general population (and there were only five more such states); six of the 10 top-ranking states had more than 4 percent Jews in their population. By 1967 the overall share of the Jews in the U.S. had declined to about 2.9 percent, because of the slower growth of the Jews compared with the total population. The 10 states with the largest number of Jews all had at least 1.5 percent Jews among their general population (and there were only four more such states), while in seven of the 10 states the proportion of the Jews amounted to more than 3 percent (see Table 7). By the early 2000s, U.S. Jewry constituted less than 2 percent of total population, and the percent Jewish tended to decline all across the board of U.S. states.

In 2005, reflecting global Jewish population stagnation along with growing concentration in a few countries, 97 percent of world Jewry lived in the largest 15 communities, and, excluding Israel from the count, 96 percent lives in the 14 largest communities of the Diaspora, of which 68 percent were in the United States (see Table 8). There were at least 100 Jews in 93 different countries. Two countries had Jewish populations above 5 million individuals each (the U.S. and Israel), another seven had more than 100,000 Jews, three had 50,000–100,000, five had 25,000–50,000, ten had 10,000–25,000, and nine had 9 had 5,000–10,000. Another 57 countries had less than 5,000 and overall accounted for 1 percent of world Jewry; 22 had 1,000–5,000 Jews, and 35 had less than 1,000.

In only seven communities outside of Israel did Jews constitute at least about 5 per 1,000 (0.5 percent) of their country's total population (see Table 9). In descending order by the relative weight (not size) of their Jewish population they were Gibraltar (24.0 Jews per 1,000 inhabitants), the United States (18.0), Canada (11.7), France (8.2), Uruguay (5.7), Australia (5.1), and the United Kingdom (5.0).

By combining the two criteria of Jewish population size and density, for 2005 we obtain the following taxonomy of the 26 Jewish communities with populations over 10,000 (excluding Israel). There were five countries with over 100,000 Jews and at least 5 Jews per 1,000 of total population: the U.S., France, Canada, the U.K., and Australia; another three countries with over 100,000 Jews and at least 1 per 1,000 of total population: Argentina, Russia, and Germany; one country with 10,000–100,000 Jews and at least 5 per 1,000 of total pop-

a Source: American Jewish Year Book. Data include unknown percentages of non-Jewish members of Jewish households, and some amount of duplication of multi-residential households.

ulation: Uruguay; nine more countries with 10,000–100,000 Jews and at least 1 per 1,000 of total population: Ukraine, South Africa, Hungary, Belgium, the Netherlands, Chile, Belarus, Switzerland, and Sweden; and eight countries with 10,000–100,000 Jews and less than 1 per 1,000 of total population: Brazil, Mexico, Italy, Turkey, Venezuela, Spain, Iran, and Romania.

URBANIZATION. In the traditional countries of Jewish residence in Europe, there was even in the past a strong tendency for the Jews to live in towns. The residential location of the Jews in towns was often imposed by the authorities, but also had strong links with the economic activities of the Jews and with their religious-communal organization. Exceptions existed in some regions of Central Europe, where the Jews had been banned from the towns and settled on the rural estates of the nobility. In Eastern Europe, a considerable proportion of the Jews lived in villages and in townlets very similar to villages. But even there the share of the Jews in the urban and semiurban population was much larger than in the village population. In many of the Islamic countries as well, a high proportion of the Jews used to live in towns.

In the second half of the 19th century, when middle-sized and large towns developed in the economic centers and capital cities of Central and Eastern Europe, the Jews, who by then had obtained civic rights and freedom to settle where they pleased, participated with particular intensity in this urban evolution. Both the absolute and relative frequency of the Jews rose rapidly in the expanding larger towns (except for central Russia, where Jewish residence continued to be virtually barred). On the other hand, there was a drain away from many customary local Jewish communities in small towns and (where applicable) in villages. In the course of time, the outmigration from the smaller localities led to the extinction of an ever increasing number of Jewish communities there, some of them centuries old. In regions of Jewish in-migration – Western Europe, overseas, and, after the Russian Revolution, also central Russia – the Jews tended to settle directly in the main economic centers and capital cities.

In the 20th century, high proportions of the Jews in the world as a whole and in many individual countries are found in large towns and particularly in the very largest towns (with more than 1,000,000 inhabitants), where those exist. The respective proportions are, as a rule, much larger among the Jews than among the non-Jews of the same country. The relative frequency of the Jews is, therefore, greater in the large localities than in smaller ones. All the same, before World War II the countries of Jewish residence could be divided roughly into three groups, according to the degree of urbanization of the Jews:

1. All but a small percentage of the Jews were town-dwellers in countries of recent immigration in Western Europe, America, and the like.

2. More than 10 percent of the Jews lived in the small localities of some countries of Central Europe.

3. In Eastern Europe, the proportion of Jews resident in small localities was about 20 percent or above, e.g., 25 percent in Poland (1931), 31 percent in Romania (1930).

Under very different conditions, the Jews of Erez Israel also fell into this category at that time. There were also some other countries in Asia and Africa where a considerable percentage of the Jews lived in small localities.

a Grand total includes countries with fewer than 100 Jews, for a total of 1,100 Jews. Minor discrepancies due to rounding. Israel includes West Bank and Gaza.

By 1925 Lestschinsky found that 23 percent of all Jews in the world lived in centers of over 1,000,000 inhabitants and 45 percent lived in centers of more than 100,000 inhabitants. Fifty-five percent of all Jews could be estimated to reside in about 166 localities, each comprising at least 10,000 Jews and 29 percent of all Jews in 15 localities having each more than 100,000 Jews. Of the 166 localities listed by Lestschinsky as containing at least 10,000 Jews each in 1925, 22 had a majority of Jewish inhabitants. These places were in Eastern Europe, with the exception of only two in Erez Israel.

In the 1930s, 20 centers were estimated to have over 100,000 Jews. First and foremost among them ranked the uniquely large Jewish agglomeration of Greater New York, which was already estimated at about 2,000,000 persons – an eighth of world Jewry, exceeding the Jewish population of all but two individual countries outside the U.S. (namely Poland and the U.S.S.R.). It was estimated that the Jews formed nearly 30 percent of the total population of Greater New York. At a great interval, the next ranking group of cities had 3–400,000 Jews each: Chicago, Philadelphia, and Warsaw. Altogether, the 20 cities with more than 100,000 Jews each were geographically distributed as follows: Eastern Europe, 7 (5 in U.S.S.R., 2 in Poland); Central Europe, 3; Western Europe, 2; U.S., 6; South America, 1; Palestine, 1. The devastations of the Shoah, in terms of loss of life and uprooting of Jews; the geographical regrouping of the survivors returning to the original countries of residence; the large-scale emigration from Eastern Europe, as well as from Islamic countries – all affected the situation of

the Jews with regard to urbanization. Under the new conditions, the previously existing tendency for Jews to congregate in the major towns was further accentuated. The scattered small Jewish communities and splinter groups in townlets and villages of Eastern Europe and of the Arabic-speaking countries virtually disappeared because the Jews flocked to the larger towns of those countries – for economic, cultural, and security reasons – or emigrated altogether. The great majority of the Jews who migrated to countries other than Israel settled directly in major cities, and even Israel provides only a partial exception to this rule.

An official population survey taken in the U.S. in 1957 showed that 96 percent of the (adult) Jews lived in urban localities and no fewer than 87 percent in urbanized areas of more than 250,000 inhabitants, while the corresponding proportions in the general population were only 64 and 37 percent respectively. In the U.S.S.R., according to the 1959 census, 95 percent of the Jews, but only 48 percent of the general population, lived in urban localities. Even in Israel, where 273,000 Jews lived in 705 rural localities in 1967, they constituted only 11 percent of the entire Jewish population, while 89 percent lived in urban localities of more than 2,000 inhabitants and 54 percent in towns of 50,000 and over. Also in virtually all other countries of Jewish residence, there is now a very high degree of urbanization of the Jews.

In 1967, there were 21 cities which (together with their outskirts) contained each more than 100,000 Jews. Greater New York continued to lead this array with an estimated number much above 2 million Jews. Next in size, at a long distance, comes Los Angeles, with 500,000 Jews. Of other towns, only four more had 300,000 Jews or over: Philadelphia, Buenos Aires, Paris, and Tel Aviv. The 21 major towns of Jewish residence were divided as follows according to geographical region: U.S.S.R., 4; Western Europe, 2; North America, 10 (thereof 9 in the U.S.); South America, 1; Israel, 4. In comparison with the distribution prior to World War II, the disappearance of the large Jewish populations in cities of Poland and Central Europe was conspicuous, as was the increased prominence of Israel.

In recent decades, many of the above-mentioned towns extended far beyond their municipal boundaries through the formation of conurbations that combined the main city as well as adjacent towns or suburbs into one continuous metropolitan area. These developments affected the Jewish population no less than the general one. One notable indicator of the sensitivity to global market forces of Jewish population distribution was the overwhelming concentration in major urban areas resulting from intensive international and internal migrations. The extraordinary urbanization of the Jews is evinced by the fact that in 2005, 52 percent of world Jewry lived in only five metropolitan areas – Tel Aviv, New York, Los Angeles, Jerusalem, and Haifa – and another 25 percent lived in the next 15 largest metropolitan areas (see Table 10). The Jewish population in the Tel Aviv urban conurbation extending from Netanyah to Ashdod (2,707,000) exceeded by far that in the New York Standard Metropolitan Area (2,051,000) extending from New York State to parts of Connecticut, New Jersey, and Pennsylvania. Of the 22 largest metropolitan areas of Jewish residence, 12 were located in the U.S. (in descending order New York, Los Angeles, Southeast Florida, Philadelphia, Chicago, Boston, San Francisco, Washington, Baltimore, Detroit, Cleveland, and Atlanta), four in Israel (the three mentioned plus Beersheba), two in Canada (Toronto and Montreal), and one each in France (Paris), the U.K. (London), Argentina (Buenos Aires), and Russia (Mos-

a Most metropolitan areas include extended inhabited territory and several municipal authorities around central city. Definitions vary by country. Some of the estimates may include non-core Jews.
b As newly defined in the 1995 Israeli Census.
c Includes Ramat Gan, Bene Beraq, Petach Tikvah, Bat Yam, Holon, Rishon Lezion, Netanya, and Ashdod, each with a Jewish population above 100,000.
d Consolidated Metropolitan Statistical Area (CMSA).
e Revised estimate. Includes the whole Jerusalem District and parts of Judea and Samaria District.
f Miami-Ft. Lauderdale and West Palm Beach-Boca Raton CMSA.
g Departments 75,77,78,91,92,93,94, 95.
h Greater London and contiguous postcode areas.
i Census Metropolitan Area.
j Metropolitan Statistical Area (MSA).
k Capital Federal and Gran Buenos Aires Partidos (AMBA).
l Territory administered by city council.

cow). In these central places of world economic and cultural significance, large numbers of Jews enjoy favorable and perhaps unprecedented standards of living and can bring to fruition high levels of professional specialization.

While these trends augur well for the Jews, and set the stage and expected rules of possible geographical changes in the future, they also portend a substantial amount of dependency of the Jewish minority upon the favorable conditions created by the majority. The new situation is radically different from the one that prevailed during most of modern Jewish history when Jews were tolerated or discriminated against, and often nurtured hopes for societal changes that would benefit their political and social status. Under the more stable and attractive contemporary conditions, Jewish interests tend to increasingly coincide with the established societal order. At the end of a long transformation which brought with it political emancipation and economic achievement, the Jews find themselves in a more conservative mood facing society at large. Under these conditions Jews also face the challenge of more intensive competition with and easy access to alternative, non-Jewish cultures and social networks. At least in the Diaspora, Jewish cultural continuity appears to be a more difficult target precisely where Jews are physically more secure and where socioeconomic achievement is more easily attainable.

To conclude the topic of the residential concentration of the Jews, it must be said that there have been numerous instances of the Jews living more densely in certain areas of a city or conurbation than in others. The ghettos and mellahs of the past were cases in point. In recent generations, the tendency for urban neighborhoods with greater-than-average density of the Jews has responded to religious, organizational, and social requirements of Jewish life in the Diaspora. It has also facilitated the economic absorption of Jewish in-migrants. Whereas in the earlier part of this century there were well-known cases of quarters with many poor Jews in the large towns, the picture has more recently shifted to residential areas, often suburban, preferred by middle-class or well-to-do Jews.

POPULATION CHARACTERISTICS

Age Composition

The age structure of a population depends on several factors. The first is the vital statistics pattern. High or low levels of fertility or mortality, and any changes in these levels, are reflected in the age distribution of populations. A reduction in births leads to a diminished proportion of children in the population. At first, this increases the relative weight of the adults at age groups typical for work and demographic reproduction. But if the birth rate is low over an extended period, a more advanced stage in the process of aging may be reached, when the relative share of elderly and old persons in the population rises considerably. The impact of a sudden rise in mortality, through calamities, is usually differential according to age and, therefore, affects the age structure of the survivors. The Shoah for example carried away relatively more children and old persons than young adults among the afflicted Jews.

In turn, young adults tend to participate in migrations relatively more than children or older people. Therefore it is usual to find that the proportion of young adults goes down in populations with a negative migration balance (i.e., an excess of emigrants over immigrants) and rises in populations with a positive migration balance. Conditions may be different in the rare cases where almost an entire population is transferred from one country to another, as happened with some Diaspora Jewries that were transplanted in Israel in the first years after the establishment of the Jewish state.

Withdrawals from a Jewish population, whether through conversion to another religion or otherwise, can also affect the age structure if the relative frequency of these withdrawals varies at different ages. Accessions to the Jewish group may exercise similar influences in the reverse. As time passes after changes in the age structure were produced by any of the above factors, the effects make themselves felt in ever higher age groups. Twenty-five years after the Shoah, the particularly heavy deficiency of children originally caused by the persecutions was felt in the age groups 25–40 of the survivors.

Since many Jewish populations have been influenced by stringent birth control, the Shoah, massive immigrations or emigrations, withdrawals, etc., their age structure tends to show distortions due to these various factors and to the time intervals at which they exercised their influence.

All Jewish communities throughout history and geography can be described within a common demographic framework by observing their evolving age composition. Notably, changes affecting different communities over time were not synchronic.

In the middle of the 19th century, large proportions of children (aged 0–14) were still found among the Jews all over Europe, where data are available. With the reduction in fertility, a diminution in the proportion of children set in followed after a while by a marked rise in the percentage of elderly persons. As the decline in fertility affected the Jews in various parts of Europe at different times, so did the consequent changes in the age structure. Both developments began and proceeded at earlier dates among the more assimilated Jews of Western and Central Europe than among the great bulk of traditional Jews in the eastern part of the continent. The movement went from west to east, but before the outbreak of World War II its effects were clearly also visible among the Jews of Eastern Europe. Insofar as sufficient statistical documentation is available, the gradual aging of the Jewish population in one country or town can be observed over successive decades. Since the Jews usually preceded the non-Jews, among whom they lived, in the reduction of fertility, they also preceded them with regard to the consequent changes in age structure. Among the Jews of one country, there were frequently differences in the speed of these transitions according to their varying degree of traditionalism or assimilation. This can be seen, in the data of Table 11, through comparison of the Jews in the various provinces of Czechoslovakia in 1930 and of Jews in Polish localities of different sizes in 1931: the Jews

Table 11.
Selected Jewish Populations, by Main Age Groups, 1897–2004

Country[a]	Year	Total	0–14	15–29	30–44	45–64	65+	Median age[b]
Traditional type								
Ethiopia	1991	100	51	20	13	11	5	14.7
Syria	1960	100	43	23	12	16	6	19.6
Russian Empire	1897	100	41	28	16	12	3	19.8
Romania	1899	100	40	26	19	12	3	20.8
Transitional type								
Poland	1921	100	34	30	16	15	5	23.0
Iran	1976	100	30	28	19	17	6	25.7
USSR	1926	100	29	34	18	15	4	29.4
Mexico	1991	100	24	27	20	22	7	35.0
Venezuela	1998	100	24	19	21	24	12	35.0
USA	1957	100	24	17	21	28	10	36.6
Ageing type								
USA	1990	100	19	19	26	19	17	37.6
Prussia	1925	100	18	25	24	25	8	34.4
United Kingdom	1986	100	17	19	19	21	24	41.1
USA	2001	100	16	20	19	26	19	41.5
Italy	1986	100	14	23	18	26	19	40.8
Russian Republic	1959	100	14	19	23	36	9	41.2
Terminal type								
Russian Republic	1970	100	10	16	23	31	20	45.5
Yugoslavia	1971	100	10	23	17	29	21	45.0
Russian Republic	1979	100	8	15	21	31	25	49.2
Russian Republic	2002	100	5	11	14	33	37	57.5
Romania	1979	100	5	11	10	34	40	59.1
Israeli type								
Palestine	1931	100	33	32	19	11	4	23.0
Israel	1948	100	29	26	26	15	4	27.1
Israel	1961	100	34	22	19	20	5	25.9
Israel	1985	100	30	24	20	16	10	27.5
Israel	2004	100	25	24	19	20	12	30.8

a Countries sorted by the descending percentage of population at age 0–14. The largest age group in each population is underlined.
b The median divides the population into two equal parts: one half having higher and one half having lower ages than the median age.

of Carpatho-Ruthenia in Czechoslovakia and the Jews of the smaller localities in Poland, who adhered to a more traditional mode of life in their respective country, had preserved higher percentages of children.

In the 1930s, the great decline in births occurred in the industrialized countries and made itself particularly felt among the Jews (see *Vital Statistics). As a result, the proportion of 0–14 year-olds in the Jewish populations of Central Europe and, where statistical data are available, of Western Europe dropped below 20 percent, while the proportion of the 60 year-olds and over rose considerably above 10 percent. In Eastern Europe aging was less pronounced, though it had slightly risen there too. In the whole of Poland, the relative share of children under 15 among the Jews declined from 34 percent in 1921 to somewhat less than 30 percent in 1931. At the latter date, it was 26 percent among the Jews of Warsaw. In some Diaspora countries that had absorbed considerable Jewish immigration, the proportion of children aged 0–14 among the Jews tended to be about 20 percent in the 1930s or 1940s – though with considerable variations due to the character of each such Jewish population and the year of the respective data. On the other hand, there were still relatively few old persons and consequently a high percentage of adults in the age range 15–59. This can be seen from Jewish community surveys taken at that time in various towns of the U.S. as well as from statistics of the Jews in Canada, South Africa, Australia, etc. Among the Jews of Palestine, the proportion of children remained relatively high, because the presence of many young adult immigrants had raised the birth figures. But owing to decreasing fertility, there also the percentage of the 0–14 year-old children declined.

The ravages of the Shoah were particularly heavy among the children and the elderly. Therefore, immediately after the war, unusually high proportions of young and middle-aged adults were found among the survivors. The deficiency of birth cohorts from about 1930 to 1945 continues to make itself

strongly felt among the Jews of Europe. Because many survivors emigrated from Europe, the peculiarities of their age composition have influenced the absorbing Jewish populations, whether in Israel or elsewhere. Besides, smaller populations tend, in general, to have less regular age distributions. The drastic reduction in size of the Jewish groups extant in European countries and, particularly, in individual localities makes in itself for increased age distortions.

Outside Europe, the Jews of European origin did not suffer physical losses from the Shoah. Still, the 1930s and early 1940s were the time of the great slump in Jewish births in America and elsewhere (see *Vital Statistics). The deficiency of the birth cohorts of that time is reflected in the age distributions of the respective Jewish populations to this day. After World War II, the "baby boom" occurred among the Jews in Europe, America, Oceania, and Israel. This rise in births was similar to analogous developments in the industrialized societies of the world, but it was rather short-lived among the Jews. The bulge in the age distribution produced by the increased cohorts born in the second half of the 1940s or around 1950 still clearly appeared in many Jewish populations fifty year later. So were the effects of the subsequent renewed decline in Jewish births which led to a reduction of the child population. For example, in many Jewish populations studied in the 1960s, the 0–4 year-olds were less numerous than the 5–9 and 10–14 year-olds, respectively.

The overall age profile of Jews in Western Europe included fewer young children than adults and, more significantly, than elders in their mid-60s or early 70s. While there are some internal differences within the continent, it is quite an aging Jewish population. The age profile of Jews in the United States and Canada in the 1990s was somewhat younger. The proportion of children and young adults was larger, reflecting the rather large cohorts born during the *baby boom* of the 1950s and 1960s, and the *echo effect* of the generations born to the *baby-boomers* during the 1980s and 1990s. But ageing is well visible in the most recent North American data.

The age profile of East European Jewry, largely influenced by the FSU Jewish population, is striking. It points to the consequences for a population of prolonged very low levels of fertility, very high rates of assimilation, and selective emigration of a comparatively higher proportion of younger families, leaving behind a large share of the elderly and the very elderly. East European Jewry has lost most of its demographic basis for the future.

Because of their high fertility, the Jews in Asia and Africa used to have a younger age composition, with a high proportion (40 percent and over) of children aged 0–14 and a rather regular decrease of frequency in successively higher age groups, culminating in a small proportion (less than 5 percent) in ages 65 and over. These features can be seen in the age distributions of the Jews of Morocco and of the immigrants to Israel from Asia and Africa. Most of the Jews from Asia and Africa have left their traditional countries of residence and have settled elsewhere, especially in Israel and France. The lowering of fertility in the new surroundings (see *Vital Statistics) cannot but have its gradual effects on their age structure.

Finally, the age profile of the Jewish population in Israel provides the only example of a demographically balanced Jewish population with a larger basis of children sustaining gradually smaller shares of young adults, mature adults, and elders. This mainly reflects Israel's sustained birth rate, and to a minor extent the continuous influx of a high proportion of young adults among new immigrants.

Sex

In populations sufficiently large for standard biological trends to express themselves, there is a small surplus of males over females among the newborn, but the age-specific mortality rates are usually lower for females and, therefore, a surplus of females is to be expected in the adult population (unless external factors, such as migrations, exert a contrary influence). Where statistical data have been available, these general tendencies have been found to operate among the Jews also. Another widespread tendency is the larger participation of men than women in migrations. In this case, the proportion of males is, by the fact of migration, lowered in the population of origin and raised in the population of destination. Modern Jewish migrations have been less motivated by economic considerations and more by the search for refuge than those of most other nations, and this has reduced the sex differential; but in many cases a larger participation of men has also been found in migrations of Jews.

Jewish populations in the Diaspora are usually small, and this fact operates by itself to create irregularities in the sex-age composition. Besides, they have often been strongly influenced by migrations, withdrawals, and the aftereffects of the Shoah. Hence, distortions in the sex-age composition are frequent. For the Jewish population of entire countries, the ratio of males per 1,000 females (irrespective of age) has ranged in recent years from 833 in the U.S.S.R. (1959), where war losses of men were very heavy among the Jews (as among the general population), to more than 1,100 in some other Diaspora countries, e.g., Germany and Austria.

The sex-ratio is particularly significant in the principal ages of marriage, because under modern conditions, when the religious factor has been weakened, this ratio has an influence on the proportions of endogamic Jewish marriages and *intermarriages of Jews, respectively. It must be borne in mind, though, that on the average there is an age difference of several years between grooms and brides. When the ratio of Jewish men aged, say, 25–39 to 1,000 Jewish women aged 20–34 is calculated, marked disparities are found in some countries.

Origin Groups (Edot)

It has been customary to divide the Jewish world population into several groups, called *edot* ("communities") and distinguished according to a combination of historical, geographic, and linguistic criteria. These groups have somewhat differing liturgical usages. In countries where Jews of several origin groups resided, they sometimes established separate organi-

zational frameworks for the maintenance of synagogues and other religious and communal services. This led to the term *edah*, or its equivalents in other languages, being sometimes used not from the demographic, but from the organizational viewpoint. There has never been a generally accepted classification of all Jewish origin groups. Yet it is usual to distinguish three main groups:

1. *Ashkenazim, who constitute the overwhelming majority of the Jews in Europe (except for Italy, Greece, Bulgaria, and parts of the former Yugoslavia), North and South America, South Africa, and Oceania. In the past, a large proportion of the Ashkenazim were Yiddish-speaking.

2. *Sephardim (in a narrow sense of the term of descendants of Jews from Spain), who were concentrated in Greece, Bulgaria, southern Yugoslavia, and western Turkey and formed a considerable proportion of the Jewish populations in Lebanon and Syria, Egypt and Northwest Africa. Sephardi communities were organized in several Latin American countries. Many of the Sephardim used to speak Ladino.

3. Oriental communities. The further breakdown of this group has varied among different scholars, but the principal divisions are the following:

a) Jews of Arabic-speaking countries, especially Syria, Iraq, Yemen, Libya, Tunisia, Algeria, Morocco. Migrants from these communities created new community centers in France, Latin America (especially Mexico and Venezuela), the United States, and other western countries.

b) Jews of Persia, Afghanistan, and Bukhara, speaking Persian or related languages. Emigrants from Iran created communities in the United States and other western countries.

c) Kurdish Jews, part of whom use an Aramaic dialect.

d) Jews of the Caucasus region. With the massive emigration of Jews from the former U.S.S.R., Jews from the Caucasus resettled in the United States, Germany, and other countries.

e) Indian Jews. These include the Bnei Israel, the Baghdadi community, and the Jews from Kochin.

f) Italian Jews include the descendants of an ancient core of early settlers who reached the south European shores before and during the period of the Roman Empire, long before the notions of Askhenaz and Sepharad had even developed.

g) Ethiopian Jews, including the Beta Israel and the Falashmura community of Jewish ancestry.

More refined divisions are uncertain, because of the smallness and instability of some of the groups distinguished.

These origin groups cannot be thought of as completely separated from one another. Migrations and/or marriages between Jews of different origin often led to transfers of individuals, even between the major divisions. Besides, the linguistic criterion for group affiliation lost much of its importance in recent generations, because of the increased importance of the official languages of the various countries for the respective Jewish populations.

Special difficulties exist with regard to the distinction of Sephardim and Oriental communities. Not all Sephardim were Ladino-speaking even some generations ago. The Sephardim established in Northwest Africa had long since gone over to the use of Arabic. Moreover, there has been a tendency to broaden the concept of Sephardim so as to make it include all Jews who are not Ashkenazim. This has been so both because of the prestige which the name Sephardim commands and because, organizationally, Sephardi institutions have often also comprised the Oriental elements in Jewish populations of mixed origin. About 1930, Ruppin estimated that there were roughly 1,300,000 Sephardim and Oriental Jews, constituting 8% of world Jewry. In the past, the proportion of this group was greater, but went down in the 19th and early 20th centuries because of the higher natural increase of the Ashkenazim, i.e., the European Jews, at that time. Of the 1,300,000 Sephardim and Oriental Jews in 1930, two thirds lived in Asia and Africa, but only 3% in Erez Israel. Since then, the absolute and relative number of Sephardim and Oriental communities within Jewry has been altered. Around 2000, they were estimated at 3,400,000 or about 26 percent of all Jews. The increase in their proportion is due to the reduced number of Ashkenazim after the Shoah and to their own high natural increase during the last few decades, which recently greatly exceeded that of the Ashkenazim.

The geographical distribution of most origin groups changed completely. Two thirds of the Ashkenazim in 1930, but only about 30 percent in 1967 and 14 percent in 2000, lived in Europe. On the other hand, the share of America among the Ashkenazim rose over the same time interval from a third in 1930 to about 60 percent in 1967 and the same in 2000, and that of Erez Israel from less than 1 percent in 1930 to about 10 percent in 1967 and 26 percent in 2000. Of the Ladino-speaking Sephardim, a small number remained in only one of their traditional countries of residence, Turkey. Most of the other Ladino-speaking Sephardim either perished in the Shoah (Greece, Yugoslavia) or moved to Israel (particularly those of Bulgaria). Of the Jews of the Arabic-speaking countries, nearly all those who lived in Asia and a great part of those from North Africa found new homes in Israel. Israel has also attracted many Jews from Turkey, Iran, India, etc. Around 2000, about two-thirds of all Sephardim and Oriental Jews were in-gathered in Israel, another large section moved to France, the rest were scattered over many countries in all continents. Some of the Oriental groups transferred almost in their entirety to Israel, e.g., Yemenites, "Babylonians" (i.e., from central and southern Iraq), the Kurdish Jews, several groups from Syria, the Libyan Jews.

While the division into the traditional origin groups reflected the geographical-cultural plurality of world Jewry before the upheavals and mass migrations of recent decades, its present value for indicating demographic differences other than mere origin is rapidly disappearing. The Sephardim of the Balkan countries showed in the recent past the same demographic patterns characteristic of European populations.

Most Oriental Jews after moving to Israel and France, respectively, were exposed to the rapidly modifying influences of the respective surroundings. Israel in particular provided the meeting ground of Jews of all origin groups. The life in common there and many intergroup marriages rapidly reduced and eventually annulled any previously existing demographic differences between the various origin groups. Factors other than mere origin, such as education, occupation, and place of residence, became increasingly important for differentiation in demographic behavior in a context of general convergence. The growing impact of out-marriage and assimilation further reduced the impact of *edot* on contemporary Jewish demography. Nonetheless, the relevance of separate traditions and community organizations continued to play a significant role in the patterns of Jewish identification among contemporary Jewry.

[Usiel Oscar Schmelz / Sergio DellaPergola (2nd ed.)]

DEMONS, DEMONOLOGY. A demon is an evil spirit, or devil, in the ordinary English usage of the term. This definition is, however, only approximate. In polytheistic religions the line between gods and demons is a shifting one: there are both good demons and gods who do evil. In monotheistic systems, evil spirits may be accepted as servants of the one God, so that demonology is bound up with angelology and theology proper, or they may be elevated to the rank of opponents of God, in which case their status as diabolic powers differs from that of the demons in polytheism. Moreover, in none of the languages of the ancient Near East, including Hebrew, is there any one general term equivalent to English "demon." In general, the notion of a demon in the ancient Near East was of a being less powerful than a god and less endowed with individuality. Whereas the great gods are accorded regular public worship, demons are not; they are dealt with in magic rites in individual cases of human suffering, which is their particular sphere.

Demonology in the Ancient Near East

Defense against evil spirits was a concern in Mesopotamia from earliest times, beginning with the Sumerians, to whom much of the terminology and praxis connected with demons may be traced. There is no qualitative difference between great gods and demons; one name for demon is "an evil god." Demons, however, have less power, though occasionally myths depict them as rebelling against the great gods, with some success. Incantations often list four, or even seven, classes of demons. Demons are messengers of the lord of the underworld, and march before him. They live in deserts and near graves, and many of them are ghosts, spirits of the dead, especially of those who died by violence or were not properly buried. Sickness may be thought of as caused by demonic possession, and some demons have the name of the specific disease they bring, thus "Headache," or "Fever." *Lamashtu* is the hag who kills children in the womb and newborn babies. Like many other demons, she is depicted as a composite monster. Lilitu, the Mesopotamian succubus, is mentioned once in the Bible as *Lilith (Isa. 34:14; see below), and in later Jewish demonology. Good demons are mentioned much less frequently.

In general features Canaanite demonology probably resembled that of Mesopotamia, to judge from the rather meager evidence preserved. In a mythological text from Ugarit, the father of the gods, El, is frightened almost to death by a demon "having two horns and a tail," like the devil in later representations. A Phoenician amulet of the seventh century B.C.E., from Arslan Tash, begins: "Incantations: O Flying One, O goddess, O Sasam… O god, O Strangler of Lambs! The house I enter you shall not enter; the court I tread you must not tread." Intended to protect women in childbirth, it goes on to invoke the protection of the gods, and contains depictions of the demons mentioned: a winged sphinx, labeled "Flying One, Lil[ith]," and a wolf devouring a child. Details of the text and iconography have close parallels in Mesopotamian, Arabic, classical, and later Jewish folklore, and illustrate the wellnigh universal character of many superstitions about demons (Gaster, in: *Orientalia*, 11 (1942), 41–79).

Demonology in the Bible

Israel's official religion contrasts sharply with contemporary polytheisms in the role assigned to demons, which in the Bible is practically nil. Magic was prohibited among the Israelites from very early times, for already the oldest collection of laws, the Book of the Covenant, contains the command: "You shall not tolerate a sorceress" (Ex. 22:17 [Eng. 22:18]; cf. Deut. 18:10–12), and Saul put the practitioners of necromancy out of the land (1 Sam. 28:3). Since much of pagan magic was protective – intended to keep demons away or to expel them – obviously Israel's religion aimed at a very radical extirpation of traffic with demons. Calamities and illnesses were not from demons but from the Lord. "Shall there be evil in a city, and the Lord has not done it?" (Amos 3:6). Although God does not always accomplish His will immediately, but uses angels and spirits as agents, it is ordinarily made explicit that the spirits are under His control. The evil spirit which troubles Saul is "an evil spirit from the Lord" (1 Sam. 16:14). Therefore, one must not overestimate the importance of the numerous small traces of belief in demons which survive in the Bible, or underestimate the difficulties involved in interpreting them. Most

of the passages in question are poetic, and it is often impossible to be certain whether the demon named is part of living religious belief, or only part of traditional literary language. Just as some Mesopotamian demons have names which are also common nouns, so in biblical cases like *dever* and *mavet* (*mawet*; see below) it is hard to be sure when these are proper names and when not.

The Israelite conception of demons, as it existed in the popular mind or the literary imagination, resembled in some ways that held elsewhere. Demons live in deserts or ruins (Lev. 16:10; Isa. 13:21; 34:14). They inflict sickness on men (Ps. 91:5–6). They trouble men's minds (Saul; I Sam. 16:15, 23) and deceive them (I Kings 22:22–23) – but nevertheless these evil spirits are sent by the Lord. The mysterious being who attacks Jacob in Genesis 32:25ff. exhibits a trait which a very widespread belief associated with certain demons, who are spirits of the night and must perish at dawn. Even in Israelite popular religion, however, there seems to have been relatively little fear of the spirits of the dead. The Bible often mentions the shades of the dead, but "the congregation of the shades" (Prov. 21:16) carries on a shadowy existence below, and does not seem to trouble the living. Some features of the Israelite cult bear a formal resemblance to apotropaic measures employed in other religions. Thus, the bells on the robe of the high priest (Ex. 28:33–35) recall the use of bells in other cultures in the belief that their tinkling keeps off demons. So, also, horns (Ex. 19:16; Lev. 25:9; et al.), incense (Lev. 16:12–13), smearing of doorposts (Ex. 12:7), the color blue (Num. 15:38), written scripture-texts (phylacteries; Deut. 6:8; 11:18) – all have parallels elsewhere as devices to ward off evil spirits. In a given case, however, it is often extremely difficult to say to what extent any of these devices were consciously used for protection against demons at a particular period.

Specific Demons

Foreign gods are called *shedim* (Deut. 32:17; Ps. 106:37; cf. I Cor. 10:20), rendered "demons" or "devils" in most translations. The word is related to Akkadian *šêdu* ("demon"; good or evil).

SEʿIRIM ("hairy demons, satyrs") is also applied contemptuously to foreign deities (Lev. 17:7; II Chron. 11:15). These creatures haunt ruins, along with Lilith (Isa. 13:21; 34:14).

LILITH (Isa. 34:14; ultimately from Sumerian *lil*, "air," not Heb. *layl(ah)*, "night") was originally a succubus, believed to cohabit with mortals, but in the Arslan Tash incantation quoted above she is identified with the child-stealing demon, a character she retains in later folklore. The tradition that the name means "screech-owl" (in so many translations) reflects a very ancient association of birds, especially owls, with the demonic.

MAVET (*Mawet*), the ordinary Hebrew word for death, is also the proper name of a Canaanite underworld god (Mot), the enemy of Baal in a Ugaritic epic. The proper name, not the common noun, should probably be understood in Isaiah 28:15, 18: "We have made a covenant with Death," and Jeremiah 9:20 [Eng. 9:21]: "For Death is come up into our windows" (cf. Hos. 13:14; Job 18:13, "the firstborn of Death"; 28:22).

RESHEPH is another major god of the Canaanite religion who becomes a demonic figure in biblical literature. Resheph is known as the god of plague over much of the ancient Near East, in texts and artistic representations spanning more than a millennium from 1850 B.C.E. to 350 B.C.E. In Habakkuk 3:5, YHWH on the warpath is said to be preceded and followed by respectively Dever and Resheph. (This is similar to the picture of two divine attendants who escort major gods in ancient myths.) Just as some other names of deities are used as common nouns in biblical Hebrew (Dagon (*dagon*, "grain"); Ashtaroth (*ashtarot*, "increase [of the flock]"), etc.) so Reshef (*reshef*) has come to mean simply "plague" (Deut. 33:29; Ps. 78:48), and the fiery darts of the bow (Ps. 76:4 [Eng. 76:3]; Song 8:6), apparently from the common association of plague and arrows.

DEVER ("Pestilence") is the other demonic herald who marches with YHWH to battle (Hab. 3:5). Dever is also mentioned in Psalms 91:5–6: "Thou shalt not be afraid for the Terror (*Paḥad*) by night; Nor for the Arrow (*Ḥeẓ*) that flieth by day; Nor for the Pestilence (*Dever*) that walketh in the darkness; Nor for the Destruction (*Ketev*) that wasteth at noonday." Not only Dever but also the other words italicized above have been plausibly identified as names of demons. The "Arrow" is a familiar symbol in folklore, for disease or sudden pain, and *Ketev* (*Qetev*; cf. Deut. 32:24; Isa. 28:2; Hos. 13:14) is in this instance the personification of overpowering noonday heat, known also to Greek and Roman demonology.

*AZAZEL (*ʿAzʾazel*) occurs in the ritual for the *Day of Atonement (Lev. 16:8, 10, 26). Aaron casts lots over two goats, and the one "for *ʿAzʾazel*" is presented alive before the Lord, and then released into the wilderness. The ancient Greek and Latin versions understood *ʿAzʾazel* as "goat that departs," hence "the scapegoat" of some English versions. Most of the rabbinic commentators and some moderns take Azazel as the name of the place to which the goat is driven. The great majority of moderns regard Azazel as the personal name of a demon thought to live in the wilderness.

The vampire may be mentioned in Proverbs 30:15: "The *alukah (ʿaluqah)* hath two daughters, crying, 'Give, Give.'" Hebrew *ʿaluqah* may simply mean "leech," but since *ʿaulaq* occurs in Arabic literature as a name of a vampire, this fabulous creature and her two daughters may be referred to in this rather difficult passage.

Demons in Intertestamental Literature, Including the Dead Sea Scrolls

A great change had taken place in *angelology and demonology, at least in certain circles within Judaism, by the last centuries B.C.E. In this period the religion, while safeguarding its monotheistic character in various ways, nevertheless took on many traits of a dualistic system in which God and the forces of good and truth were opposed in heaven and on earth by powerful forces of evil and deceit. This seems to have been

under the influence of Persian religion, with its opposition of Ormuzd the good god and Ahriman (Angra Mainyu) the evil god, but at the same time Jewish *dualism drew on older, native resources in constructing a more elaborate demonology. Ancient mythological themes, and figures from the Bible only potentially demonic, like Satan, were drawn in to fill out the enlarged conception of the role of evil spirits in the cosmos. It is characteristic of this period that the evil spirits are led by a prince, often called *Belial but also Mastemah, *Satan, or other names. The spirits of good and evil also struggled within the human soul, for in this period the role of demons is often conceived of as that of tempting men to evil rather than of inflicting physical harm. As a result, in many passages it is difficult to say whether "spirit" refers to a demon external to man or to a trait within the human soul. Belial (or Beliar, a corruption of the original form) is the most common name for the leader of the demons in the Dead Sea Scrolls, and occurs in other intertestamental literature and in II Corinthians 6:15. Belial (Heb. *Beliyya'al*) is a Hebrew compound word which etymologically means "no benefit" or "no thriving" and in liberal usage is often equivalent to "scoundrel." But already in the Bible "streams of *Beliyya'al*" means "streams of destruction" (II Sam. 22:5; Ps. 18:5). In the intertestamental literature Belial is "the spirit of perversion, the angel of darkness, the angel of destruction" and other spirits are subject to him. Mastemah, which as a common noun means approximately "enmity, opposition" in Hosea 9:7, 8 and in some passages in the Five Scrolls, is a demon "Prince Mastemah" in Jubilees (11:5, 11; 17:16; et al.), and perhaps also in the Damascus Document (16:5). Watchers (Aram. *ʿirin*) are a type of angel mentioned in Daniel 4:10, 14, 20. To this class the intertestamental literature assigns the angels who, according to Genesis 6:2, 4, cohabited with women before the flood and fathered the race of giants (Test. Patr., Reu. 5:6–7; Test. Patr., Napht. 3:5; cf. *Genesis Apocryphon*, ii 2:1, 16). *Asmodeus (Tobit 3:8, 17) is a demon who had slain the first seven husbands of Sarah, who becomes the wife of Tobias son of Tobit.

Demons in the New Testament

New Testament demonology in part reflects contemporary popular belief, which turns up also in rabbinic literature, and in part the dualism attested in the sectarian literature from Qumran. Demons are called "unclean spirits" or "evil spirits," as in rabbinic literature. They are believed to inhabit waste places. Possession by demons causes, or is associated with, various sicknesses, especially those in which there is a perversion of the human personality, so that the demon, not the man himself, directs his acts and speech (Mark 1:23, 26; 9:17–29). The story of how Jesus cured a demoniac by sending a legion of unclean spirits into a herd of swine (Matt. 8:28–34; Mark 5:1–20; Luke 8:26–39) illustrates vividly the persistence of very ancient popular belief, as does the parable of Matthew 12:43–45, in which the unclean spirit after wandering through the wilderness takes seven devils with him. On the other hand, in the New Testament lesser demons have little independent personality or power, but are subject to a prince, Beelzebul or Satan, and the demonic is often presented, not as something occasional and relatively harmless, but as a cosmic reality of great importance, the enemy of God and man (Eph. 6:12). Beelzebul (Beelzebub) is a name applied to the chief demon by both Jesus and his opponents (Matt. 10:25; 12:24, 27; Mark 3:22; Luke 11:15–19). The correct explanation of the name is much disputed, and new evidence from Ugarit has not completely cleared up the etymology. The spelling Beelzebub reflects identification of Beelzebul with Baal-Zebub, god of Ekron (II Kings 1:2). Possibly there were two different original forms, Beelzebul meaning "Baal is prince" or "Lord of the shrine," and Beelzebub "Lord of flies" (cf. Ugaritic *il dbb* [in Gordon, Textbook, *ʿnt* 3:43]).

[Delbert Roy Hillers]

In the Talmud

References are made to a belief in demonology during the tannaitic period. The *mazzikim* ("harmful spirits") are said to have been created on the eve of the Sabbath of creation (Avot 5:6) but this late reference is the only one made to demons in the entire Mishnah. Among the accomplishments of both Hillel (Sof. 16:9) and his disciple R. Johanan b. Zakkai was their knowledge of "the speech of the *shedim*" ("devils," Suk. 28a). The latter also gave the analogy of a *ruʾaḥ tezazit* ("the demon of madness") entering a man and being exorcised, in order to explain to a heathen the anomaly of the laws of the *red heifer, although he agreed with his wondering disciples that it was but "putting him off with a straw" and that he himself did not accept it (PR 40a; Num. R. 19:4). Although these statements refer to Ereẓ Israel, the Jerusalem Talmud is markedly free from demonology, and in fact mentions only three general names for them – *mazzikim, shedim*, and *ruḥot*. A passage in the Babylonian Talmud specifically states that various beliefs connected with demons which were current in Babylon were ignored in Ereẓ Israel. Whereas in Ereẓ Israel they translated *shiddah* and *shiddot* (Eccles. 2:8) as "carriages," in Babylon they rendered them "male and female demons" (Git. 68a). The Palestinian R. Johanan stated that the *mazzikim* which used to hold sway in the world disappeared with the erection of the sanctuary in the wilderness (Num. R. 12:30). Demonology, however, is more prominent in the Palestinian Midrashim than in the Jerusalem Talmud. On the other hand the Babylonian Talmud is replete with demonology, obviously under the influence of the belief in demons which was widespread in Babylonia. In fact, in a responsum (published in Lewin, Oẓar, p. 20; cf. Assaf, Geonim, p. 262) *Hai Gaon states that the belief in demons was widespread in *Sura, since it was near to (old) Babylonia and to the house of Nebuchadnezzar, whereas in the more distant *Pumbedita they were far from such ideas. The Babylonian Jews lived in a world which was filled with demons and spirits, malevolent and sometimes benevolent, who inhabited the air, the trees, water, roofs of houses, and privies. They are invisible; "If the eye could see them no one could endure them. They surround one on all

sides. They are more numerous than humans, each person has a thousand on his left and ten thousand on his right" and they are responsible for various inconveniences. Yet, by taking certain steps, in the morning one can see their footprints in the shape of those of a cock (Ber. 6a). Whereas in the Kabbalah there is an attempt to systematize demonology (see below) there is no sign of such an attempt in the talmudic literature. The material is vast and inchoate, scattered in profusion and without system throughout the whole Talmud and in the Midrashim. The following details, taken except where otherwise indicated from one passage of the Talmud (Pes. 110a–112b), may be taken as indicative.

Asmodeus is the king of the demons. The queen is *Agrath bat Mahalath, who has 10,000 demon attendants, each of whom can do harm. She haunts the air. Originally she held sway at all times, but Ḥanina b. Dosa, threatening to ban her from populated areas, relented in answer to her pleas and permitted her to be active on Wednesday nights and Sabbath eves. The Babylonian *amora* Abbaye later banished her from populated areas but she still lurks in the narrow alleys. Doing things in pairs, especially drinking an even number of cups, invites the malevolent activities of demons; an exception is the four cups enjoined in the *seder* on *Passover for which reason that occasion is called "a night of guarding" (Ex. 12:42), i.e., of protection from demons. Demons are especially harmful in and around palm trees, and their malevolent attention is invited by easing oneself between a palm tree and the wall, by passing between two palms, or by sleeping in the shadow of a palm tree. The demon Palga will affect a man easing himself on the stump of a palm tree; the demon Zereda him who leans his head on one. In general one should avoid many-branched or prickly trees, but there are special trees which are the favorite haunts of the spirits. In the caperbush there resides the eyeless Ruhe. Every sorb tree harbors demons in its shade and is especially dangerous when it is in the vicinity of a town. At least 60 demons haunt it, and they can be exorcised only by a "60 demon amulet." Demons called Rishpe live in the roots of trees. The demon *Ketev Meriri* (Deut. 32:34) is active in the mornings. It was seen by Abbaye when he was in the company of Papa and Huna b. Joshua. In the afternoon, its place is taken by *Ketev Yashud Ẓohorayim* (Ps. 91:6) which looks like a goat's horns, and has wings. Both these demons are particularly active from the 1st to the 16th of Tammuz.

According to the Midrash, however, *Ketev Meriri* is active during the period of mourning from the 17th of Tammuz to the Ninth of Av, between the fourth and ninth hours of the day. As late as the 13th century Zedekiah *Anav reports that in Rome pupils were not punished during these days and hours because of *Ketev Meriri* which held sway then (*Shibbolei ha-Leket*, 1:203). It is covered with scales and hairs; it has one eye in its heart and rolls like a ball between the sunlight and the shade. Whoever sees it, collapses and falls to the ground (Mid. Ps. 91:3; from the context however it appears that the reference should be to the *Ketev Yashud Ẓohorayim*). R. Joseph and R. Papa had friendly conversation with a demon called Joseph. Demons are prone to infest food and drink left under the bed, and one should refrain from drinking water on Wednesday and Sabbath eve or from pools and rivers at night. The demon Shabriri ("blindness" – cf. Targum Onkelos, Gen. 19:11) wreaks harm on those so doing, but an incantation, consisting of an abracadabra whereby the word is repeated, successively deducting one letter from the word (Shabriri, briri, riri, etc.), is an effective antidote. Solomon made use of male and female demons to build the Temple (Git. 68b) and to bring him water from India with which he was able to grow all kinds of exotic plants not otherwise growing in Ereẓ Israel (Eccles. R. to 2:5). Scholars were immune to the evil machinations of demons while they were engaged in study, but Rashi explains a passage of the Talmud to mean that, on the contrary, they are in need of special protection since the demons are envious of them (Ber. 62a). Psalm 91 is called "the Psalm of [protection against harmful] visitations." Moses is stated to have recited it when he ascended Mount Sinai "because of his fear of *mazzikim*… and angels of destruction." It is enjoined to be recited "because the whole world is full of evil spirits and *mazzikim*" (Tanḥ., Mishpatim, end) and the midrashic interpretations of this Psalm are a veritable treasure store of demonology lore (e.g., Mid. Ps. 91; Tanḥ., Mishpatim, end; Num. R. 12:3–4). The power of demons over man and his helplessness in face of it is illustrated by the fact that the talmudic metaphor for an act performed through *force majeure* is "as though a devil [*shed*] had compelled him" (e.g., RH 28a). The talmudic commentators and codifiers accepted the belief in demons; Maimonides alone opposed it.

[Louis Isaac Rabinowitz]

In Kabbalah

The kabbalists made use of all the motifs current in the Talmud and Midrash with regard to demons. New elements were developed or added, mainly in two directions: (1) the kabbalists attempted to systematize demonology so that it would fit into their understanding of the world and thus to explain demonology in terms derived from their understanding of reality; (2) new and varied elements were added from external sources, mainly from medieval Arabic demonology, from Christian demonology, and from the popular beliefs of the Germans and Slavs.

At times these elements were linked, more or less logically, to Jewish demonology and were thus "Judaized" to some extent. However, frequently the link was only external; material was incorporated into Jewish demonology with almost no explicit Jewish adaptation. This is particularly true with regard to the sources of practical Kabbalah. There, real kabbalistic beliefs mingled with folk beliefs which in fact originally had no connection with the beliefs of the kabbalists. This combination gives the late Jewish demonology its markedly syncretistic character. The material pertaining to this kind of demonology can be found in innumerable sources, many still in manuscript. Extensive research in this field and its development is one of the important desiderata of Jewish studies.

The works of the kabbalists also contain contradictory conceptions of the demons and the power of imagination. Traditions of the past as well as the cultural environment and the intellectual outlook of each individual kabbalist contributed toward the diversification of their beliefs. The ideas of the early Spanish kabbalists on this subject were formulated clearly in *Naḥmanides' commentary on Leviticus 17:7 and their influence is visible in all subsequent literature. In Naḥmanides' opinion the demons (*shedim*) are to be found in waste (*shedudim*), ruined, and cold places such as in the North. They were not created out of the four elements but only out of fire and air. They have subtle bodies, imperceptible by the human senses, and these subtle bodies allow them to fly through fire and air. Because they are composed of different elements, they come under the laws of creation and decay and they die like human beings. Their sustenance is derived from water and fire, from odors and saps; hence necromancers burned incense to demons. Despite the element of subtle fire which they contain, they are surrounded by a coldness that frightens off the exorcisers (this detail is singled out only in later sources). By means of their flight through air they are able to approach the "princes" of the zodiac who dwell in the atmosphere and thus hear predictions of the near but not the distant future.

Naḥmanides also hints (Comm. to Lev. 16:8) that the demons belong to the patrimony of Samael, who is "the soul of the planet Mars and Esau is his subject among the nations" (the angel of Edom or Christianity). The Castilian kabbalists, *Isaac b. Jacob ha-Kohen, Moses of *Burgos, and Moses de Leon (in his Hebrew works and in the *Zohar), linked the existence of demons with the last grade of the powers of the "left-side" emanation (the *sitra aḥra*, "other side," of the Zohar) which corresponds in its ten *Sefirot* of evil to the ten holy *Sefirot*. Their writings contain detailed descriptions of the way in which these powers emanated and explain the names of the supervisors of their hosts. Their ideas are mainly based on internal development in kabbalistic circles. In the various sources entirely different names are given to the upper grades of these demonic or Satanic powers. However, they all agree in linking the hosts of demons in the subhuman world, i.e., on earth, under the dominion of Samael and *Lilith who appear for the first time in these sources as a couple. Numerous details about these grades are found in *Sefer Ammud ha-Semali* by Moses of Burgos (*Tarbiz*, 4 (1933), 208–25).

In contrast, the Zohar, following a talmudic legend, stresses the origin of the demons in sexual intercourse between humans and demonic powers. Some demons, such as Lilith, were created during the six days of Creation, and in particular on the Sabbath eve at twilight, as disembodied spirits. They sought to take on the form of a body through association with humans, at first with Adam when he separated from Eve and then with all his descendants. However, the demons who were created out of such unions also long for this kind of intercourse. The sexual element in the relationship of man and demons holds a prominent place in the demonology of the Zohar, as well as that of several later kabbalistic works. Every pollution of semen gives birth to demons. The details of these relationships are remarkably similar to the beliefs current in Christian medieval demonology about succubi and incubi. They are based on the assumption (contrary to the talmudic opinion) that these demons have no procreating ability of their own and need the human semen in order to multiply. In the later Kabbalah it is pointed out that the demons born to man out of such unions are considered his illegitimate sons; they were called *banim shovavim* ("mischievous sons"). At death and burial they come to accompany the dead man, to lament him, and to claim their share of the inheritance; they may also injure the legitimate sons. Hence the custom of circling the dead at the cemetery to repulse the demons and also the custom (dating from the 17th century) in a number of communities of not allowing the sons to accompany their father's corpse to the cemetery to prevent their being harmed by their illegitimate step-brothers.

The terms *shedim* and *mazzikim* were often used as synonyms, but in some sources there is a certain differentiation between them. In the Zohar it is thought that the spirits of evil men become *mazzikim* after their death. However, there are also good-natured devils who are prepared to help and do favors to men. This is supposed to be particularly true of those demons who are ruled by Ashmedai (*Asmodeus) who accept the Torah and are considered "Jewish demons." Their existence is mentioned by the *Hasidei Ashkenaz as well as in the Zohar. According to legend, Cain and Abel, who contain some of the impurity of the serpent which had sexual relations with Eve, possess a certain demonic element and various demons came from them. But, in practice, the mating of female devils with human males and of male devils with female humans continued throughout history. These devils are mortal, but their kings and queens live longer than human beings and some of them, particularly Lilith and Naamah, will exist until the day of the Last Judgment (Zohar 1:55a). Various speculations were made on the death of the kings of the demons, in particular of Ashmedai (*Tarbiz*, 19 (1948), 160–3). One popular view is that Ashmedai is merely the title of the office of the king of the demons, just as Pharaoh is the title of the office of the king of Egypt, and "every king of the demons is called Ashmedai," as the word Ashmedai in gematria is numerically equivalent to Pharaoh. Long genealogies of the demons and their families are found in Judeo-Arabic demonology.

Apparently, the author of the Zohar distinguishes between spirits that have emanated from the "left-side" and were assigned definite functions in the "palaces of impurity" and devils in the exact sense who hover in the air. According to later sources, the latter fill with their hosts the space of the sky between the earth and sphere of the moon. Their activity takes place mainly at night, before midnight. Devils born out of nightly pollutions are called "the stripes of the children of men" (II Sam. 7:14). Sometimes the demons poke fun at men. They tell them lies about the future and mingle truth and lies in dreams. The feet of the demons are crooked (Zohar 3:229b). In numerous sources four mothers of demons are mentioned:

Lilith, Naamah, Agrath, and Mahalath (who is sometimes replaced by Rahab). The demons under their rule go out in their hosts at appointed times and constitute a danger to the world. At times, they gather on a particular mountain "near the mountains of darkness where they have sexual intercourse with Samael." This is reminiscent of the Witches' Sabbath in Christian demonology. Male and female witches also gather at this place, devote themselves to similar deeds, and learn the art of witchcraft from the arch-devils, who are here identical with the rebellious angels who have fallen from heaven (Zohar 3:194b, 212a). The author of the *Ra'aya Meheimna* in the Zohar (3:253a) distinguishes between three types of demons: (1) those similar to angels; (2) those resembling humans and called *shedim Yehuda'im* ("Jewish devils") who submit to the Torah; (3) those who have no fear of God and are like animals.

The distinction of demons according to the three main religions is found also in Arabic demonology as well as in sources of practical Kabbalah; it is mentioned in the full, uncensored text of a section of *Midrash Rut ha-Ne'lam* in the Zohar. Another division distinguishes between demons according to the various strata of the air in which they rule – an opinion common to the Zohar and to Isaac ha-Kohen who mentions details about this. On the other hand, the Zohar mentions *nukba di-tehoma rabba*, "the maw of the great abyss," as the place to which the devils return on the Sabbath when they have no power over the world. According to *Baḥya b. Asher, the devils also found refuge in Noah's ark, otherwise they would not have been saved from the Flood.

The kings of the devils were given names, but not the members of their hosts, who are known by the kings' names: "Samael and his host," "Ashmedai and his host," etc. Ashmedai is generally considered as the son of Naamah the sister of Tubal-Cain, but sometimes also as the son of King David and Agrath, the queen of the demons. Numerous names of demons have come from Arabic tradition. Among them should be mentioned Bilar (also Bilad or Bilid), the third king who succeeded Ashmedai. Bilar is merely a misspelling of *Satan's name "Beliar" in several Apocalypses and in early Christian literature, which thus returned to Jewish tradition via foreign sources. He plays an important role in "practical kabbalistic" literature and from it, disguised as Bileth, he came into German magic literature associated with the story of Doctor Faust. The seal of this king is described in detail in the book *Berit Menuḥah* (Amsterdam, 1648, 39b). The other demons too have seals, and those who know them can make them appear against their will. Their drawings are preserved in manuscripts of practical Kabbalah. The names of the seven kings of the demons in charge of the seven days of the week, very popular in later Jewish demonology, were derived from Arabic tradition. Prominent among them are Maimon the Black and Shemhurish, judge of the demons. Other systems originating in the Spanish Kabbalah put the three kings Ḥalama, Samael, and Kafkafuni at the head of the demons (*Sefer ha-Ḥeshek*, Ms. in Brit. Mus.; cf. *A. Freimann Jubilee*). Other systems of demonology are connected with lists of the angels and the demons in charge of the night hours of the seven days of the week, or with the demonological interpretation of diseases such as epilepsy. Such sources are *Seder Goral ha-Ḥoleh* and *Sefer ha-Ne'elavim* (G. Scholem, *Kitvei Yad be-Kabbalah* (1930), 182–5). These systems are not necessarily connected with kabbalistic ideas and some obviously preceded them. A complete system of kabbalistic demonology was presented, after the period of the Zohar, in *Sibbat Ma'aseh ha-Egel ve-Inyan ha-Shedim* (Ms. Sassoon 56), which develops internal Jewish motifs. A combination of the Zohar and Arab sources characterizes the book *Ẓefunei Ẓiyyoni* by Menahem Zion of Cologne (Ms. Oxford, late 14th century); it enumerates a long list of important demons and their functions while preserving their Arabic names. This book was one of the channels through which Arab elements reached the practical kabbalists among the Jews of Germany and Poland, and they recur often, albeit with errors, in collections of demonology in Hebrew and Yiddish. One of the most important among these is Schocken manuscript 102, dating from the end of the 18th century. Among North African and Near Eastern Jews, elements of kabbalistic and Arabic demonology were combined even without literary intermediaries; of particular interest is Sassoon manuscript 290. The collections of remedies and amulets composed by Sephardi scholars abound in this kind of material. An outstanding example of a complete mixture of Jewish, Arab, and Christian elements is found in the incantations of the book *Mafte'aḥ Shelomo* or *Clavicula Salononis*, a collection from the 17th century published in facsimile by H. Gollancz in 1914. King Zauba'a and Queen Zumzumit also belong to the Arab heritage. A rich German heritage in the field of demonology is preserved in the writings of *Judah he-Ḥasid and his disciples and in Menahem Zion's commentary on the Torah. According to the testimony of Naḥmanides, it was the custom of the Ashkenazi Jews to "dabble in matters concerning the demons, to weave spells and send them away, and they use them in several matters" (*Teshuvot ha-Rashba ha-Meyuḥasot la-Ramban*, no. 283). The *Ma'aseh Bukh* (in Yiddish; English translation by M. Gaster, 1934) lists numerous details about this Jewish-Ashkenazi demonology of the later Middle Ages. In addition to current popular beliefs, elements originating in scholarly magic literature as well as the names of demons whose origins were in Christian *magic were introduced from Christian demonology. These spread, not later than the 15th century, among the Jews of Germany. Demons such as Astarot, Beelzebub (in many forms), and their like became fixtures in incantations and lists of demons. A detailed kabbalistic system of demonology is found at the time of the expulsion from Spain in the book *Ha-Malakh ha-Meshiv.* These revelations were attributed to the kabbalist Joseph *Taitaẓak of Salonika. In this system, the hierarchy of the demons is headed by Samael the patron of Edom and Ammon of No (Alexandria), patron of Egypt, who also represents Islam. Ammon of No recurs in numerous sources in this period.

Ḥayyim *Vital tells about devils who are composed from only one of the four elements, in contrast to the opinion of

Naḥmanides mentioned above. This view probably has its origin in the European demonology of the Renaissance. Isaac *Luria's Kabbalah often mentions various *kelippot* ("shells") which have to be subdued via observance of the Torah and *mitzvot*, but it does not generally give them proper names or make them into devils as such. This process reached its peak in *Sefer Karnayim* (Zolkiew, 1709) by *Samson of Ostropol, who gives to many *kelippot* names which were not found in any ancient source. This book is the last original text in kabbalistic demonology.

Some details: according to *Isaac of Acre the devils have only four fingers and lack the thumb. The book *Emek ha-Melekh* (Amsterdam, 1648) mentions demons called *kesilim* ("fooling" spirits) who misguide man on his way and poke fun at him. Hence presumably the appellation *leẓim* ("jesters") occurring in later literature and in popular usage for the lower type of demons, those who throw about household goods and the like (poltergeists). From the beginning of the 17th century the demon called *Sh. D.* (ש״ד) is mentioned, i.e., *Shomer Dappim* ("guard of the pages"); he injures a man who leaves a holy book open. According to a popular belief of German Jews, the four queens of the demons rule over the four seasons of the year. Once every three months at the turn of the season, their menstrual blood falls into the waters and poisons them, and it is therefore forbidden to drink water at the change of the seasons. A special place in demonology is allotted to the Queen of Sheba, who was considered one of the queens of the demons and is sometimes identified with Lilith – for the first time in the Targum (Job, ch. 1), and later in the Zohar and the subsequent literature (*Tarbiz*, 19 (1948), 165–72). The motif of the battle between the prince and a dragon or a demonic reptile, representing the power of the *kelippah* who imprisoned the princess, is widespread in various forms in the demonology of the Zohar. Dragon is the name of the king of the demons who is also mentioned in *Sefer Ḥasidim*. According to Ḥayyim Vital, four queens of the demons rule over Rome (Lilith), over Salamanca (Agrath), over Egypt (Rahab), and over Damascus (Naamah). According to Abraham Galante, until the confusion of the languages there existed only two: the holy language (i.e., Hebrew) and the language of the demons. Belief in demons remained a folk superstition among some Jews in certain countries.

DENAZIFICATION, the efforts made by the Allies to remove active members of the former National Socialist Party from official public office and influential positions in Germany after World War II. At the Yalta Conference Franklin Delano Roosevelt, Winston Churchill, and Joseph Stalin proclaimed their desire to wipe out the Nazi party, institutions, organizations, laws, and cultural influences from German public and cultural life once they secured the surrender of Germany. This pledge was reaffirmed at Potsdam, which declared that "all members of the Nazi party who have been more than nominal participants … are to be removed from public or semi-public office and from positions of responsibility in important private undertakings." No guidelines were issued and the procedures and criteria were not clearly enunciated. Denazification was carried out on the basis of questionnaires about activities during the period of Nazi rule that the suspects had to fill out. The four Powers occupying Germany – the United States, U.S.S.R., Britain, and France – determined varied proceedings in each area of occupation, and the results were accordingly inconsistent and served national purposes. The French used this policy to weaken their traditional enemy Germany. The British were more pragmatic and thus more lenient in their enforcement of denazification and the Americans had two conflicting tendencies: first they had a general suspicion of all Germans; because of a sense of collective guilt, they could not easily distinguish between Nazis and other Germans, even at times anti-Nazis. Secondly, they sought to reeducate Germans for democracy, which took on added importance as the Cold War began. In the Soviet zone, the goal was to consolidate Communist rule and to eliminate capitalists and even take the property of the middle class. The results were diverse policies serving divergent goals. At first, denazification had important consequences as those who were not "rehabilitated" were not appointed to important offices or granted specific licenses (for example, to publish newspapers). To consolidate the policies five categories were established in 1946: (1) major offenders; (2) offenders; (3) lesser offenders; (4) followers; (5) persons exonerated. As political conditions and political needs changed the commitment to denazification diminished, amnesties were declared, and enforcement was transferred to the Germans themselves.

The extent of denazification was criticized in view of the multitude of cases of people who were "rehabilitated" in spite of their Nazi past. Among them were many who were active in the war against the Jews in a variety of ways, e.g., professors P.H. Seraphim (active in the "Final Solution"), H.F.K. Guenther (the outstanding racial scholar of the Nazi period), who published antisemitic literature, and Dr. Hans

Globke, co-author of the leading commentary on the Nuremberg Laws.

Still, despite the criticism, in the aftermath of the collapse of a totalitarian regime, occupying powers or successor governments look for ways to preserve the social, economic, cultural, and governmental structures of the given society while condemning the deeds and actors of a previous regime, and denazification is looked upon as an inviting precedent. It just could be that a fig leaf of procedural decontamination, however inadequate, is needed for a society to be rebuilt.

DENBURG, CHAIM (1918–1991), rabbi and scholar of *halakhah* and medieval Jewish philosophy. Denburg was born in Montreal, and received his B.A. from Yeshiva College as well as his rabbinic ordination from Rabbi Isaac Elchanan Theological Seminary in 1942. He spent his rabbinic career in Montreal at Congregations Chevra Kadisha (1942–49), Bnai Jacob (1949–56), and Shomrim Laboker (1956–91). He pursued graduate studies in medieval philosophy at the University of Montreal and received his doctorate from there in 1946 for a dissertation on "The Functional Value of Matter and Form in Maimonides." He subsequently taught in the Institute of Medieval Studies at the University of Montreal for over two decades. He published an annotated translation of portions of R. Joseph Caro's *Code of Jewish Law: Shulḥan Arukh* in two volumes (1954–55). He was president of the Board of Jewish Ministers of Montreal and active in the Rabbinical Council of Montreal and the Religious Welfare Committee of Canadian Jewish Congress.

DÉNES (Springer), BÉLA (1904–1959), Hungarian physician, author, and Zionist leader. Born in Budapest, Dénes was paralyzed in both legs from the age of four after an attack of poliomyelitis. He studied medicine at the universities of Pécs and Budapest, and during the 1927 antisemitic riots there was beaten up as a result of which he became deaf in one ear. He was forced to go to Brussels, where he graduated with distinction in medicine. Dénes received medical work upon his return to Budapest, but the appointment depended on his agreeing to abandon his religion. He thus ceased work as a physician and began writing political commentary in his newspaper, entitled *Független Szemle* ("Independent Review," 1933). Dénes was an active member of the Social Democratic Party but in 1933, after prolonged disagreement with its leaders, he joined *Po'alei Zion. During the Holocaust period he was arrested (1942) for concealing and supporting Jewish refugees, and in 1944 he went into hiding. When Budapest was conquered by the Soviet army (1945), he tried to found a Zionist newspaper, *Zsidó út* ("Jewish Way"), but it was stopped after three issues through Communist intervention. Between 1945 and 1948, Dénes was the leading Zionist figure in Hungary. In 1949, after the dissolution of the Zionist Federation, the authorities granted him a passport, but he was arrested and sentenced for "spying for Israel" and spent five years in prison. In 1957 he managed to go to Israel. His most famous essays are *A háború biológiája* ("The Biology of War," 1933), *Hogyan élnek, mit keresnek Magyarországon a tisztviselők* ("How the Clerks Live in Hungary and How They Find Their Sustenance," 1937), and *Hat évszázad kulturhistóriája* ("Six Centuries of Cultural History," 1938). His autobiography, within the diary of his prison period, is extant in manuscript form and in 1945–49 he was editor of *Johud-Mapaj Haoved* pamphlets.

[Baruch Yaron]

DENIA, seaport in Valencia, E. Spain. In the 11th century Denia became the capital of the powerful and tolerant Muslim kingdom of the al-Mujāhid dynasty. Various sources, including documents from the Cairo *Genizah, tell about Jewish settlement in the town from the beginning of the 11th century, and it appears that in the middle of the century there was a substantial community there. The Jews of Denia engaged in trade both by land and by sea and established trading relations especially with Tunisian towns and with Alexandria. The correspondence of a prominent 11th-century merchant of Fostat (old Cairo), Nathan b. Naharai, attests Denia's commercial importance and the role of its Jews. The community included some of the highly respected families of Spanish Jewry, e.g., that of Ibn al-Khatūsh who also engaged in commerce and traveled to the East. In the middle of the 11th century Isaac *Ibn Yashush was the court physician. His contemporary, R. Samuel b. Joseph, was a scholar who came to Spain from Baghdad and corresponded with *Samuel ha-Nagid. The rabbi of the town, Isaac b. Moses ibn Sikhri, left Denia and moved to Babylonia where he was appointed head of the yeshivah of R. *Hai Gaon. He was succeeded in his position in the community of Denia by R. Isaac b. Reuben *Al-Bargeloni. The poet Ibn Khāzin, who lived in the town, exchanged poems with *Judah Halevi.

After the Christian conquest, only a few Jewish families, engaged in maritime trade, were left in Denia. In 1274 the Jews of Denia, together with the Jews of Orembloy, paid 100 solidos in the currency of Barcelona as an annual levy. There is no information on the fate of this community after the anti-Jewish riots of 1391.

In the Muslim period, the Jews of Denia lived in a quarter in the *alcazaba*, the old city. The place today is in complete ruins.

[Haim Beinart]

°DENIKIN, ANTON IVANOVICH (1872–1947), one of the generals and organizers of the White Army in the Russian civil war of 1918–21. His name is associated with the savage pogroms perpetrated against the Jews by his officers and soldiers in Russia and the *Ukraine during these years. Made commander-in-chief of the armed forces of the White Army of south Russia in the spring of 1919, in the fall of that year Denikin embarked on a northward-bound campaign that brought his troops, with the pogroms accompanying them, to the town of Orel, approximately 180 mi. (300 km.) south of Moscow. This initial success was followed by military collapse and rapid retreat southward. The corruption and chaos which spread among Denikin's officers and soldiers as a result of the atrocities they committed against the Jews and the property they looted were among the reasons for the military collapse. In April 1920 the remnant of the White Army took to the Crimea. Denikin transferred his command to General Wrangel and left Russia.

According to available data, which is incomplete, Denikin's armies were responsible for 213 pogroms against 164 Jewish communities during their northward advance and subsequent retreat. The number of Jews massacred reached many thousands. Although outwardly expressing regret for the pogroms, mainly because of their adverse influence on the White cause, Denikin made no serious attempt to suppress the constant antisemitic agitation which was widely regarded by the political leaders of the White Army as their main propaganda weapon against the Soviet regime. When he received a delegation from the Jewish communities in the conquered territories in July 1919, Denikin claimed that he was unable to take any action against antisemitism since his "volunteer" army was composed of the "dregs of humanity" and he had to be satisfied that they at least obeyed his military orders.

DENIS, ALBERTUS (also known as **Alavaro Diniz** and to his coreligionists as **Samuel Yahya**; c. 1580–c. 1645), court agent and mintmaster, one of the first members of the Portuguese Jewish community in Hamburg. In 1611, together with Andreas Falleiro and Ruy Fernando Cardoso, Denis purchased the Altona cemetery for the Portuguese Jews of Hamburg (the bill of sale was countersigned by him on May 31, 1611). A year later he was officially granted the right of residence in Hamburg; in the city register of 1614 he is listed as the donor of "*Twintig marck luebsch*" to the *Glueckstadt church. Denis acted as agent and mintmaster for Count Ernst of Schauenburg, and as such he incurred the enmity of the Hamburg authorities, who accused him of buying Reichsthaler coins minted in Hamburg and having them melted down in Altona. When the senate issued an order for his arrest, Denis took refuge in Altona and settled there under the protection of the count. In 1618 King Christian IV of Denmark put him in charge of the Glueckstadt mint, but it operated subsequently for only a few years. In Glueckstadt Denis also built and owned two houses and helped to introduce other Jews (see *Denmark). He remained a member of the Portuguese community of Hamburg; as their representative, he applied in 1637 to Count Otto of Schauenburg for a further extension of the cemetery privilege. Denis' minting activities contributed to the first "*Kipper und Wipper*" period of galloping inflation caused by corruption of the coinage.

With the stabilization of finances, Denis became a large-scale sugar importer and an exporter of grain through the ports of Luebeck and Danzig, where he tried to gain a foothold for his agents – often his relatives. In 1625 he obtained the right of settlement for Portuguese Jews in Troppau and Jaegerndorf in Silesia. In the 1630s he organized a news and information service for his Danish royal benefactor. His last activity was negotiating the 1643/4 settlement between Hamburg and Denmark, and he died in poverty soon after.

[Joseph Elijah Heller]

DENMARK, kingdom in N.W. Europe. It was the first of the three Scandinavian countries where Jews were permitted to settle. The first arrivals were invited by King Christian IV, who, on Nov. 22, 1622, at the request of his Jewish mintmaster Albertus *Denis, sent a message to the leaders of the Sephardi communities in Amsterdam and Hamburg inviting Sephardi Jews to settle in the recently established township of Glueckstadt on the eastern border of Elbe in his duchy of Holstein, offering them religious liberty and commercial privileges. A few accepted the invitation and began trading and manufacturing operations there. Other Sephardi Jews were also active in Denmark in the 17th century as financiers and jewelers to the royal family and members of the Danish nobility. Benjamin *Mussafia, author of the talmudic dictionary *Musaf ha-Arukh*, was appointed physician to the royal family in 1646. His son-in-law Gabriel Milan became governor of the Danish West Indies in 1684. Members of Sephardi families such as Abenzur, Franco, Granada, De Lima, Meldola, De Meza, Moresco, and Texeira de Mattos continued to engage in financial operations in Denmark during the 17th and 18th centuries, but gradually lost their mercantile significance in the state economy and their predominance in the Jewish community. Jewish communities existed in the duchies of Schleswig and Holstein, then under Danish rule, from the beginning of the 17th century, in Altona and Ottensen (now part of Altona). German Jews wishing to settle in the kingdom of Denmark proper had to produce royal authorization before entering the country. This was granted only to applicants in possession of sufficient capital to establish industrial enterprises, to deal in substantial amounts of Danish merchandise, or to build their own houses. Later, German Jews, mainly from Hamburg and Altona, who married Danish Jewesses were also permitted to settle in Denmark. Rabbis, teachers, and other communal

Danish Jewish communities in the 18th century and after World War II.

functionaries were permitted to practice in Denmark if guaranteed by leaders of the community. There were 1,830 Jews in Denmark in 1782 (1,503 in *Copenhagen).

The 19th century was a period of cultural, social, and economic progress for Danish Jewry, though there was a spate of anti-Jewish polemics between 1813 and 1819. Jews received Danish citizenship in 1814, and the last restrictive legislation was abolished in 1849 by the Danish constitution. While at the beginning of the 19th century the majority of Danish Jews were in poor circumstances, by about 1900 they mostly belonged to the middle and upper classes. The Jewish population increased steadily until, in the middle of the 19th century, there were about 4,200 Jews living in Denmark. The number subsequently declined to 3,500 in 1901 owing to intermarriage and a low birth rate. After the *Kishinev pogrom of 1903 a number of refugees from Eastern Europe entered Denmark, some in transit for the United States via Bremen and Hamburg. About 200 who arrived in 1904–05 obtained permanent residence, and their number subsequently increased to approximately 2,000. After some difficulties in social and cultural adjustment they gradually integrated into the old established Danish-Jewish society. The total Jewish population with the new immigrants numbered 6,000 in 1921 and has remained substantially the same.

On a footing of equality with their countrymen, the Jews in Denmark have been able to contribute to the development of their country in every sphere, and many have achieved international renown. They include the sculptor Kurt Harald Isenstein (see *Art), the literary critic Georg *Brandes, the botanist Nathanael *Wallich, the physicians and scientists Ludvig Levin *Jacobson, Adolph *Hannover, and Carl Julius *Salomonsen. Joseph Michaelsen, who served as postmaster-general, is considered the originator of the Universal Postal Union. Among outstanding politicians and high-ranking state officials were the minister of finance Edvard *Brandes, Herman Trier (1845–1925), a member of parliament and of Copenhagen municipal council, Moritz Levy (1824–1892), and Marcus Rubin (1845–1923), directors of the Danish National Bank, and Georg Cohn, who served as state adviser on international law. In the cultural sphere, contributions were made by the poets Meir Aaron *Goldschmidt, Henrik *Hertz, Henri *Nathansen, Louis *Levy, and Poul *Levin; the painters and sculptors Ernst Meyer, Joel *Ballin, Albert Gottschalk (1860–1906), and Theodor Philipsen (1840–1920); and the composers Fini Henriques (1867–1940), and Victor Bendix (1851–1926). Valuable contributions to science and learning in Denmark were made by the psychologist Edgar Rubin and the physicist Niels *Bohr.

Until the end of the 18th century the Jewish community remained strictly Orthodox. Influenced by the emancipation movement in Germany, however, a *Reform party was formed in Denmark by Mendel Levin *Nathanson who initiated several changes in the administration and educational system of the Jewish community of Copenhagen. The Danish Reform movement occasioned a schism within the Jewish community which was aggravated when Nathanson tried with the aid of Isaac Noah *Mannheimer, a young Danish Jewish theologian, to introduce a Reform service in Copenhagen. When Abraham Alexander *Wolff took office as chief rabbi (1829) he succeeded to some extent in reconciling the Orthodox and Reform parties. He was succeeded by David *Simonsen, the first native-born rabbi in Denmark; after ten years of office he retired to devote himself to Jewish studies and worldwide philanthropic activity. The Mahzike Hadas association was founded in connection with the retirement in 1910 of the strictly Orthodox chief rabbi Tobias Lewenstein. The succeeding chief rabbis were Max Schornstein and Moses Friediger, who was deported to Theresienstadt in 1943 but survived to return to Denmark, where he died in 1947. He was succeeded by Marcus *Melchior and in 1969 by his son Bent Melchior (1929–). The Zionist movement was introduced into Denmark in 1902 with the establishment of the Dansk Zionistforening. The World Zionist Congress headquarters moved to and operated from Copenhagen for the duration of the World War I period. Between 1933 and 1945 about 1,700 potential pioneers and members of Youth Aliyah from Central European countries received agricultural training with Danish

farmers. The Danmark Loge of the B'nai B'rith was founded in 1912. Jewish periodicals in the Danish language have appeared in Denmark since 1907, except during the German occupation in World War II. Magazines in Yiddish appeared between 1911 and 1936, and a Yiddish daily, the *Folktsaytung*, appeared during World War I. A literary periodical *Tidsskrift for jødisk Historie og Litteratur,* sponsored by the Danmark Loge, was published in Copenhagen from 1917 to 1925.

[Julius Margolinsky / Rafael Edelman]

Holocaust Period

The fate of the Jewish community under German occupation was related to several factors: the attitude of the Germans to Denmark and its population and the attitude of the Danes to the Jews within their country. The German occupiers treated the Danes with respect, a dramatic difference compared with the way they related to occupied populations in Eastern Europe. Germany invaded Denmark on April 9, 1940, as part of its expansion westward. German occupation was limited: Danish institutions remained intact, even the Danish army and navy; only foreign affairs were no longer in Danish hands. Germany respected Danish sovereignty. The German occupation was administered by the Foreign Ministry and not the SS or the Gestapo and for internal bureaucratic reasons the Foreign Ministry wanted to keep it that way. Germany could not rule by decree in Denmark and thus there developed a policy of negotiation with Danish authorities, who collaborated within limits. Denmark had a long history of religious tolerance and did not perceive itself to have a "Jewish problem." The Danes regarded the Jewish question as a Danish problem rather than one of an isolated minority. They treated the Jews as fellow citizens. Throughout the 1930s, Denmark was reluctant to receive refugees but some Jews did manage to use Denmark as a country of transit and some 1,400 refugees from Germany, Austria, and Czechoslovakia and 300 children of *Youth Aliyah remained there.

For almost three and a half years, from the day of Denmark's occupation on April 9, 1940, to the major crisis in the Danish-German relationship at the end of August 1943, the Danish Jewish community, including the refugees, remained more or less unmolested. This unusual phenomenon can be explained by the fact that while the Danes collaborated with the Germans in the so-called policy of negotiation, they simultaneously extended full political, social, juridical, and personal protection to the Jews and to their property. So convincing was the steadfast behavior of the Danish authorities and the population that the Germans did not think it wise to injure the small Danish Jewish population as long as they were interested in the smooth operation of the Danish-German Agreement of April 9, 1940. Mounting Danish resistance during the summer of 1943 eventually destroyed the popular base of this agreement, which was eventually abolished by the Germans on Aug. 28, 1943. Emergency rule was declared. Until that time the civil representatives of the German Reich, Cécil von Renthe-Fink, as well as Werner Best, who succeeded him in office, did everything they could in order to avoid a conflict with the Danes over the issue of the Jews despite repeated attempts by Nazi authorities in Germany and small groups in Denmark to raise the issue. Best's role is perplexing as he was a known antisemite. He had served as deputy head of the Gestapo and worked as part of the German military bureaucracy to organize deportations to Auschwitz. His pragmatic behavior in Denmark may be explained by a difference in the attitude of the Danish population toward its own Jews. Martin Luther, Foreign Minister Joachim von *Ribbentrop's representative at the *Wannsee Conference in January 1942, stated that action against Jews in the Nordic countries had to be postponed. Public opinion in Denmark on the "Jewish" question was unanimous and had been expressed by the leader of the United Danish Youth Movement, Professor Hal Koch, just before the conference. Reacting to some incendiary declarations by Nazi newspapers in Denmark, he proclaimed that all suggestions to the effect that Danish Jews should be molested must be categorically rejected because the issue was one of both justice and respect for the Jews and the preservation of Danish freedom and law.

The Jewish community, anxious to cooperate with the Danish authorities, kept its members as inconspicuous as possible and refrained from all illegal activity, including escape. Only a group of *ḥalutzim* tried to escape illegally with partial success. Anxious to sustain his position in Berlin and to position himself for advance, Best advocated using this opportunity of emergency rule to deport the Jews. He was appealing to two very different audiences: Nazi colleagues anxious to deport the Jews and impose the "Final Solution" and the native population and its officialdom that regarded such acts as disruptive. His plan was opposed in German circles in Denmark, and several leading German personalities tried to ensure its cancellation. Ironically, Best, who was mainly interested in the additional police force transferred to Denmark to execute the deportation, was not very eager to carry out the order once Hitler approved it. He attempted to have it canceled and then leaked news of the operation through F.G. Dukwitz, the attaché for shipping affairs, who maintained good relations with leading Danish Social Democrats and informed them of the impending danger for the Jews. The warning was quickly spread and after a slight delay it was regarded as credible by the Jewish community, which canceled Rosh Ha-Shanah services, and by Danish citizens' organizations. The Lutheran Bishop of Copenhagen, H. Fuglsang-Damgaard, openly urged Danes to protect the Jews, proclaiming:

> Whenever persecutions are undertaken for racial or religious reasons, it is the duty of the Christian Church to protest against it for the following reasons:
>
> …Because the persecution of the Jews is irreconcilable with the humanitarian concept of love of neighbors which follow from the message which the Church of Jesus Christ is commissioned to proclaim. With Christ there is no respect of persons, and he has taught us that every man is precious in the eyes of God.

> …race and religion can never be in themselves a reason for depriving a man of his rights freedom or property. We shall therefore struggle to ensure the continued guarantee to our Jewish brothers and sisters [of] the same freedom which we ourselves treasure more than life.
>
> …We are obliged by our conscience to maintain the law and to protest against any violation of human rights. Therefore we desire to declare unambiguously our allegiance to the word, we must obey God rather than man.

Seemingly overnight a rescue organization sprang up that helped 7,200 Jews and about 700 non-Jewish relatives escape to Sweden in less than three weeks. Danish captains and fishermen carried out this operation. What began as a spontaneous popular movement was developed into an organized action by the Danish resistance movement. Though the heroic nature of the rescue has become fable, still the fishermen charged for their services. The cost of the transfer amounted to about 12 million Danish crowns, of which the Jews themselves paid approximately 6½ to 7 million. The rest was provided out of private and public Danish contributions. Out of the action grew a regular flow of illegal traffic between Denmark and Sweden. Danish and Swedish Jews helped to organize it and kept it financially sound. This traffic continued until the end of the war and provided the Danish underground with a constant line of communication with the Allies.

The attitude of Sweden was also quite significant. It had informed the Germans of its willingness to accept the Jews and it made an announcement of its openness to these refugees on radio, thus independently encouraging the exodus of Jews across the narrow sea that separated Denmark from Sweden. By the fall of 1943, German troops were in retreat from El Alamein in North Africa to Stalingrad in the East. With reduced power came reduced influence.

During the night of the persecution (Oct. 1–2, 1943) and following it, less than 500 Jews were seized by the Germans. They were sent to *Theresienstadt and remained there until the spring of 1945, when they too were brought to Sweden by the action of the Swedish Red Cross, headed by Count *Bernadotte. The Danish rescue effort did not end in October 1943. Refugee property was carefully protected. Homes and their contents were inventoried and businesses placed in trust. Torah scrolls and holy objects were stored in churches and returned intact to the Jewish community after the war. Non-Jewish relatives who remained behind were supported. The Danish government was persistent in its inquiries about its citizens who were deported to *Theresienstadt. Packages were sent. In an attempt to alleviate Danish concerns, the Germans allowed a special Red Cross visit to the camp in 1944, even though what the visitors saw was a hoax. Danish Jews were the first prisoners to return home after liberation. Of the 464 Jews deported, only 51 perished. Upon their return from Sweden to Denmark at the end of the war, most of the Jews who escaped found their property intact. It may be estimated that approximately 120 people perished because of the persecution: about 50 in Theresienstadt and a few more in other camps. Close to the same number committed suicide or were drowned on their way to Sweden. Less than 2% of the Jewish population of Denmark perished.

After the war, unlike many other countries that did far less for their Jews, Denmark did not seek credit for the rescue. Yad Vashem's list of the Righteous Among the Nations of the World lists only one entry for Denmark, not one individual, but the Danish people. And Danish historians have been critical of the limited efforts to receive refugees and the improvised nature of the rescue. More should have been done, they have argued.

Why was Denmark different? The answer is still a matter of dispute though the exceptional character of Denmark is not. Danes at every level of society, from fishermen to high government officials, intellectuals to Church leaders alike have said that they simply treated Jews as the neighbors they were, and one does not allow the enemy who occupies one's country to deport neighbors. The explanation for their behavior may well be as simple as that.

[Leni Yahil / Michael Berenbaum (2nd ed.)]

Postwar Period

The Jewish population of Denmark at the end of 1968 was about the same as before World War II, i.e., between 6,000 and 7,000: 25% of the total population were descendants of the old established Danish Jews and 67% were emigrants from Eastern Europe and their descendants; 8% consisted of refugees from Germany and their children. Only 1% of the Jewish population resided outside Copenhagen. In the course of 1969 a further 1,500 Jewish refugees from Poland were taken into Denmark, mostly into the Copenhagen area. Almost all the Jews who were rescued during the war, as well as most of the deportees to *Theresienstadt and other camps, returned to Denmark at the end of the war. The birth rate continued to be low (only about 60 children born each year) and this was insufficient to keep the Jewish population at the same level. The good relations between Jews and non-Jews were maintained in the postwar period. Mutual goodwill was demonstrated on various occasions, such as the 10th and the 25th anniversaries of the rescue of Danish Jewry from Nazi persecution, or, in 1964, on the 150th anniversary of the granting of citizenship to Danish Jews, as well as by the sympathetic interest of the population in Jewish problems and in the State of Israel. Many Jews were prominent in the postwar period. Stephan *Hurwitz was appointed Ombudsman in 1955, when this high position in the administration was established; Henry *Grünbaum was minister of finance in the labor government from 1965 to 1968; and Erik Warburg was principal of the Copenhagen University from 1956 to 1958. The Jewish community was state-recognized and therefore entitled to assess all Jews in the country for taxation, unless they resigned formally from the community. This recognition also involved the rights of the rabbis to perform marriages and to register births and deaths. All community institutions were administered in a strictly traditional way. Most of the members of the Orthodox

Mahzike Hadas community belonged simultaneously to the larger Jewish community. Community affairs were directed by a board of seven members, elected by an assembly of 20, which in turn was chosen in general elections. In addition to all religious services the community maintained a Jewish day school and three kindergartens, homes for the aged, and a spacious community center. The community supported an active Zionist Federation, *WIZO, youth organizations, *B'nai B'rith, an organization of craftsmen, and two choirs. Danish Jewry participated in all efforts to aid the State of Israel and strengthened its ties with other Jewish communities through close cooperation with the *Conference on Jewish Material Claims, the *American Joint Distribution Committee, and Jewish communities in Europe.

Later Developments

It is estimated that some 3,000 Polish Jews fled to Denmark at the beginning of the 1970s as a result of antisemitism. Their arrival affected the development of Danish Jewry during the decade, although they included a comparatively high percentage in mixed marriages. Most of the Jews settled in and around Copenhagen, but hundreds were brought to Aarhus and Odense in the provinces and tried to organize some form of Jewish life in these towns. The Federation of Polish Jews in Denmark was established to represent the newcomers, but other organizations were also founded partly in opposition to the federation. A youth group with Zionist orientation called the Coordination Committee became active in organizing inter-Scandinavian seminars. Although many of the newcomers did join the Jewish community, at the elections for the Jewish Community Board in 1979 some Jews from Poland organized their own party and gained two out of the 20 seats of the Board.

The Jewish day school moved to new premises in 1974. At the end of the decade the number of pupils had risen to 325 with an additional 60 children in the kindergarten. With two other Jewish kindergartens almost 50% of the Jewish children in Copenhagen attended these day institutions. The 150th anniversary of the school was celebrated in 1980 in the presence of the minister of education and the mayor of Copenhagen; a *Festschrift* was published on the occasion.

After the death of Chief Rabbi Dr. Marcus *Melchior in December 1969, his son, Rabbi Bent *Melchior, was elected to succeed him. In 1972 he resigned because of a conflict with the board of the community after making some outspoken remarks about the tragic events at the Olympic Games in Munich. After six months of discussions, which threatened to sunder the Jewish community, a formula was found which enabled the chief rabbi to accept a new contract, and he was unanimously re-elected. Shortly after, an American-born assistant had to leave his post when he had admitted that he had traveled on an electric train on the Sabbath. He was succeeded by Danish-born Rabbi Bent *Lexner, the first rabbi of the community to be educated and ordained in Jerusalem. Upon Melchior's retirement in 1996, Lexner became chief rabbi.

The Bnei Akiva movement continued to be active in Jewish education of the young generation, and it inspired most of the *aliyah* movement. Another important educational activity was established through Dor Hemshech. Many young people were active in the work for Soviet Jewry, and the Actions Committee for Soviet Jewry succeeded in creating strong support among Danish public figures for this cause.

Arne *Melchior, for many years president of the Danish Zionist Federation, was elected in 1979 to a third term in the Danish parliament, representing the Center Democrats. The former minister of finance, Mr. Henry Gruenbaum, was also re-elected in the same elections, and a new member, Mr. Magnus Demsitz representing the Social Democrats, was elected. Dr. Rafael Edelmann, who for nearly 40 years headed the department of Hebraica and Judaica at the Royal Library in Copenhagen, resigned at the end of 1970 and went to Jerusalem, where he died in 1972. He was succeeded at the Royal Library by Ulf Haxen.

The traditional prayerbook with Danish translation was re-published in 1977. Among the very few changes was the inclusion of the prayer for the State of Israel and a new text for the special prayer used on Tisha be-Av. The same year the Jewish community began the publication of a new Danish translation of the Pentateuch, the work of Rabbi Bent Melchior.

Since the kings Christian IV and Frederick III invited the first Jews to enter Denmark in the 17th century, relations between the Danish royal family and the Jewish community have been very close. This continued during the reign of Queen Margrethe II. In 1983 she attended the festive service in the Copenhagen Synagogue on the occasion of the synagogue's 150th anniversary. A year later she participated in the celebrations of the 300th jubilee of the Copenhagen community. In 1987 the queen was host to an official state visit by Israel's president Chaim Herzog, and in 1992 she agreed to be the patron of the many 1993 events to mark the 50th anniversary of the unique rescue operation of Danish Jews in October 1943.

The good relations also reflect the general situation between Jews and Christians in the country. Although an increasing number of foreigners settled in Denmark during the 1980s and 1990s, leading to an unhappy rise in nationalistic outbursts against newcomers, the Jews in general were not affected by the negative feelings towards strangers. Many of the newcomers were Muslims, and not a few of them Arabs from the Middle East. Muslim immigration continued into the 21st century and there were occasional incidents involving young Arabs, but most have been regarded by the police as street brawls. In 2003 a leader of the Hizbut-Tahrir association in Denmark was sentenced to jail for disseminating slanderous pamphlets against Jews. The Jewish community joined forces with the majority fighting extreme right-wing forces. A small, insignificant Nazi party existed, but its "Fuehrer" fell in love with a Palestinian girl and had to resign. In 1996 the right-wing Dansk Folkeparti took the issue of *sheḥitah* to the Danish Parliament in a campaign against Jewish and Muslim ritual

slaughter. Their bill was voted down but they have brought up the issue repeatedly over the years, and in early 2005 a new bill was introduced in Parliament. This time too a majority of MPs voted against it. There was in fact no Jewish ritual slaughter in Denmark at the time because the Danish Jewish community imported its meat from Ireland and poultry from France. Nonetheless, the bill's defeat was a very important victory for the Jewish community.

The PLO did not find it easier than the Nazis to establish themselves in Denmark. They opened an office in Copenhagen in the 1980s and many people on the political left were sympathetic toward the organization, in particular after the Lebanon war and during the first *intifada.* But a plan to assassinate the Danish chief rabbi and a few other prominent Danish Jews visiting Israel not only failed but also became the beginning of the end of the office. More successful was an Arab attempt in 1985 to bomb the Copenhagen Synagogue. Strong security measures have since then been maintained around Jewish institutions.

The Jewish community tried to fight the problem of assimilation in various ways. Strong connections with Israel were being maintained and there was steady immigration of young families. The percentage of Jews making *aliyah* remained one of the highest in all Western countries. A large number of Danish Jews now have close relatives in Israel, and Danish Jews visit Israel frequently. Another major effort was made in the educational field, but the small number of children born to Jewish families has led to a decrease in the number of children attending the Jewish day school.

The Danish Jewish community included a large number of elderly people. Since the 1960s two old-age homes for sick people have been established with the help of the municipality, and in 1992 a new building was erected with modern apartments for elderly Jews. The new institution is named after the famous Swede Raoul *Wallenberg, who saved tens of thousands of Hungarian Jews from Nazi persecution.

The comparatively small community, numbering 6,400 in 2005, nearly all in Copenhagen, participated in international Jewish organizations such as the World Zionist Organization, World Jewish Congress, and B'nai B'rith. Denmark's geographical position also called for an active contribution to the effort on behalf of Soviet Jewry, and until the removal of the Iron Curtain many Danish Jews visited the U.S.S.R. to bring Soviet Jews material on Judaism and support their political struggle for freedom. Since 1989 this work has changed in character. Strong cultural ties have been established with the Jewish population of the Baltic states, and in 1992 a big operation for relief work in St. Petersburg was started in an attempt to assist the large Jewish population of that city to survive physically.

[Bent Melchior]

Relations with Israel

The relations between Denmark and Israel have been friendly and warm. Denmark was among the countries that voted for the partition of Palestine, and thus the establishment of a Jewish state, on Nov. 29, 1947, and recognized Israel soon after its establishment. Formal diplomatic relations were established on the ambassadorial level. Denmark has usually supported Israel at the United Nations and other international organizations. Of special note was its active support for Israel's right to free passage through the Suez Canal and the Gulf of Eilat, expressed in the attempt of the Danish boat *Inge Toft* to transport Israeli cargo through the Suez Canal in 1959. Trade relations developed from a modest scope to over $9,500,000 in 1968, with a balance between imports and exports, and $220 million in 2003, with Israel importing twice as much as it exported. Tourism from Denmark to Israel grew substantially over the years. The two countries maintained active friendship leagues, which concern themselves with disseminating information, caring for tourists, exchange visits of public figures, scientists, artists, etc. In most of the cities of Israel, streets or squares are named in honor of Denmark. In Jerusalem a monument to the rescue of Danish Jewry was erected on the 25th anniversary of the operation, and a comprehensive school in that city is named in Denmark's honor, and there is a King Christian X hospital at Eitanim. From the beginning of the 1960s, many thousands of Danish youth went to Israel every year for visits extending to a number of months, mostly working on kibbutzim. This movement led to the creation of a Danish organization of youth who worked on kibbutzim.

The appointment of Carmi Gillon, former head of Israel's General Security Service (GSS), as ambassador to Denmark in 2001 sparked a minor diplomatic crisis when Danish Justice Minister Frank Jensen said that Gillon would be detained under suspicion "of having participated in, attempted, or assisted in torture" in his GSS role. Within a few months, however, the situation was defused.

DENMARK, FLORENCE LEVIN (1931–), U.S. psychologist. Born and educated in Philadelphia, Florence Levin received her B.A. from the University of Pennsylvania; after her marriage to Stanley Denmark, she completed a Ph.D. in social psychology at the University of Pennsylvania in 1958. Denmark taught as an adjunct professor at Queens College while raising three young children. She began teaching at Hunter College in 1964, ultimately serving as director of the doctoral program in psychology at CUNY Graduate Center. In 1984, she was appointed Thomas Hunter Professor in the Social Sciences at Hunter and four years later she was named the first Robert Scott Pace Professor of Psychology at Pace University, where she also served as chair of the Department of Psychology.

Denmark published widely on prejudice and discrimination against women and minorities. She is internationally known for her pioneering research and contributions to the psychology of women, which she helped establish as a legitimate scholarly field. A victim of gender discrimination in the early phases of her career, Denmark was committed to empowering female students and colleagues through organizing conferences, training graduate students, and co-authoring important resource works. These include *Women: Dependent or Independent Variable?* (1975); *The Psychology of Women: Future Directions of Research* (1978); *Women's Choices, Women's Realities* (1983); and *Psychology of Women: A Handbook of Issues and Theories* (1993).

Denmark was among the founders of the Division on the Psychology of Women of the American Psychological Association in 1973 and served simultaneously as the fifth woman president of the APA (1981–82) and the president of Psi Chi, the psychology honors society. She received many honors for her outstanding contributions to psychology, including the Association for Women in Psychology Distinguished Career Award (1986); the APA Distinguished Contributions to Education and Training in Psychology Award (1987); and the APA Public Interest Award (1992). In 1985, the APA's Committee on Women in Psychology recognized Florence Denmark's achievements with a Distinguished Leadership Citation, commending her for "exceptional organizational skills, administrative expertise, political acumen, and humanitarian leadership to promote equality for women and ethnic minorities and to create new visions for psychologists."

Russo (eds.), *Models of Achievements: Reflections of Eminent Women in Psychology*, vol. 2 (1988), 279–93.

[Harriet Pass Freidenreich (2nd ed.)]

DENVER, capital of *Colorado, U.S.; also known as the "Mile High City" and "Queen City." Jews began settling in Denver, and elsewhere in Colorado, following the discovery of gold in 1858. While some Jews were afflicted with "gold fever," most saw economic opportunities in servicing those who streamed into the many new mining towns. By 1859, a dozen Jewish immigrants had arrived, originally from Germany and Central Europe; among them, the brothers Hyman and Fred Salomon, Leopold Mayer, and Abraham Jacobs.

In 1860, Denver's first Jewish organization, the Hebrew Burial and Prayer Society, was formed. It soon split into a B'nai B'rith lodge (1872), which is still active, and into Colorado's first synagogue, Temple Emanuel (Reform) (1874), today the State's largest Jewish house of worship. From these earliest efforts, the Jewish community grew in numbers, prosperity, and influence, creating organizations, synagogues, and institutions, many from necessity because of Denver's isolation from other American Jewish population centers.

While Denver's early Jewish settlers identified with Reform Judaism primarily, beginning in the 1880s, some 2.5 million (mostly traditionally religious) Jews emigrated from Eastern Europe to the United States. This migration changed the demographics of Denver. Many Orthodox Jews settled in Denver seeking a cure for tuberculosis, the "white plague." Two Jewish institutions were founded to respond to their needs and other sufferers of consumption from around the country. The National Jewish Hospital for Consumptives was opened in 1899. Its name was changed in 1985 to the *National Jewish Center for Immunology and Respiratory Medicine. It is now the National Jewish Medical and Research Center, with a worldwide reputation in the research and treatment of allergy and pulmonary diseases. The Jewish Consumptives Relief Society was established just outside of Denver in 1904 to serve the religious needs of suffering Orthodox Jews. In 1955, it changed its mission to other medical purposes.

In 1882, a farming colony of East European Orthodox Jews was settled by the Hebrew Immigrant Aid Society in Cotopaxi, Colorado. The experiment failed, with the immigrants moving to the West Side of Denver and founding its Orthodox community there. It established synagogues, *mikva'ot* (ritual baths), Jewish educational institutions, and a Yiddish theater. Descendants of many of the Cotopaxi families still occupy leadership positions in the community. Reform Jews, on the other hand, gravitated to the East Side of Denver, first to the Curtis Park area, then to Capitol Hill and Hilltop, where Temple Emanuel relocated in 1956. Emanuel founded Shwayder Camp in the Colorado Rockies in 1948.

Denver became a temporary haven for Yiddish poets who suffered from tuberculosis. Yehoash was treated from 1900–1910; H. Leivick, from 1932–33 and 1934–35. A legendary figure was Dr. Charles Spivak, long time director of the Jewish Consumptive Relief Society, a major figure in Yiddish and Jewish cultural life, and a founder of the *Intermountain Jewish News* in 1913. Rabbi Judah Leib Ginsburg, an immigrant from Dvinsk, Latvia, wrote and published major Hebrew works on the Bible and Mishnah in Denver. Max Goldberg became the leading figure in media in mid-20th century Denver. He brought network television to Colorado, pioneered in talk televison, wrote for the *Denver Post* and published the *Intermountain Jewish News*.

By the 1970s, when the Jewish population had reached 40,000, many Jews began dispersing to Denver's suburbs, but continued to utilize the many institutions they had established on both sides of the city. Among these were the Hebrew Educational Alliance (1920), Yeshiva Toras Chaim (1967), and Beth Jacob High School for Girls (1968) on the West Side; and, on the East Side, Beth HaMedrosh Hagadol Congregation (1897) and Beth Joseph Congregation (1922), which merged in 1997; Hillel Academy (1951); and Temple Sinai (1967). The Allied Jewish Federation of Colorado was organized as the Allied Jewish Council in 1942; the Jewish Family Service (so named in 1990) dates back to 1887; and Green Gables Country Club (1928) and the Jewish Community Center (1948) provide a social outlet for Denver Jews.

In the latter quarter of the 20th century, Dr. Stanley M. Wagner founded the Center for Judaic Studies at the University of Denver (1975) and its affiliates, the Rocky Mountain Jewish Historical Society, Beck Archives and the Holocaust Awareness Institute, and the Mizel Museum (of Judaica, originally) (1982). Shalom Park (1992), a state of the art Jewish nursing home and assisted living facility, was an outgrowth of the Beth Israel Hospital and old age home on the West Side (founded in 1905). The Denver Campus for Jewish Education (2002) merged Herzl Jewish Day School (1975) and the Rocky Mountain Hebrew Academy (1979).

Denver became the focus of a widespread controversy in Jewish life in 1983. The *Intermountain Jewish News* published a 12-page supplement, edited by Rabbi Hillel Goldberg. The supplement reported that the Rocky Mountain Rabbinical Council, composed of Reform, Conservative, Reconstructionist, and Orthodox rabbis, had discontinued a joint conversion program (established six years earlier). The program processed hundreds of converts, attempting to avoid a schism in the Jewish community. Personal and ideological factors brought its demise. Most Orthodox authorities around the world rejected the halakhic basis of the program despite a ruling from the Shalom Hartman Institute in Jerusalem supporting it. Some Reform and Conservative Rabbis throughout the country also opposed the idea of having to send converts to an exclusively Orthodox Beth Din. A number of years later, in January 1998, the Ne'eman Commission, established by the Israeli government to create a conversion process acceptable to all wings of Judaism, embraced a variation of the Denver program. Still, attempts to revive it failed.

Among the many persons who figured prominently in Denver Jewish history were Golda *Meir, who came to Denver in 1913, where she met her future husband, Morris Myerson; Sheldon K. Beren, an oilman, philanthropist and national president of Torah Umesorah; and Ruth M. Handler, creator of the Barbie Doll. Notable rabbis were Rabbi William S. Friedman, who served Congregation Emanuel, 1889-1938; Rabbi Charles E. H. Kauvar, who filled the Beth HaMedrosh Hagadol pulpit, 1902-1971; and Rabbi Manuel Laderman at the Hebrew Educational Alliance, 1932–1979. Jews were also active in the political life of the community. Wolfe Londoner became Denver's only Jewish mayor in 1889, Philip Winn became ambassador to Switzerland in 1986, and Larry Mizel and Norman Brownstein are major influences in, respectively, Republican and Democratic politics nationally. Robert Lazar Miller, Jesse Shwayder, A. B. Hirschfeld, and Louis Robinson, and their descendants, have been highly visible in the business community for generations. The "mother of Jewish charity work" was Francis Wisebart *Jacobs, whose portrait in a stained glass window graces the Colorado Hall of Fame in the rotunda of the State Capitol.

[Stanley M. Wagner (2nd ed.)]

DEPARTMENT STORES, an innovation first recognizable in mid-19th-century France. Similar contemporaneous developments were consumer cooperatives in Britain, and mail-order houses, chain stores, and "five-and-ten" stores in the United States. Only in Central Europe were department stores initiated and developed by Jewish entrepreneurs, except for the outstanding cases in Britain, South Africa, and the United States noted below. Of the five German department chain stores – *Schocken, *Tietz, *Wertheim, Karstadt, and Kaufhof – the first three were owned by Jews; although the last two were owned by non-Jews, they employed many Jews in top managerial positions. Jewish department stores were prominently situated in major cities; the N. Israel and Kadewe stores of Berlin and the Gerngross of Vienna were widely known. In addition, most medium and small towns had their own department stores, which were often Jewish-owned. The north German stores, founded in the last quarter of the 19th century for the sale of textiles, a field in which Jews were traditionally prominent, adapted to rapid industrialization and urbanization by expansion and diversification. Although department stores in Germany did not account for more than 4–5% of the total retail commerce, they aroused widespread and lasting hostility. The complaints and anxieties of small or specialized shopkeepers found support in conservative circles in general. Economic accusations of dishonest advertising and other unfair competitive practices merged with antisemitic attacks: the importance of the new type of Jewish shopkeeper was unpalatable to many; the very employment of Christian sales girls was distorted – they were pictured as being placed in danger of moral corruption by lustful Jewish bosses. In the late 19th and early 20th centuries this anti-department store pressure resulted in the levy of special taxes on department stores.

Under the Weimar Republic these laws were abolished and the stores entered a period of growth and expansion. Economic instability and unemployment, however, again made the stores a focus of popular resentment which the Nazis were quick to utilize. Before and especially after the Nazis seized power the stores were frequently sabotaged and their owners

attacked in the streets. The nationwide *boycott of April 1, 1933, was specifically aimed against Jewish department stores, which continued to be harassed after the boycott was called off. Julius *Streicher, as *Gauleiter* of Franconia, led a vicious campaign against the Nuremberg Schocken store. The German government was eventually forced to ease the pressure for economic reasons and even to save the Tietz company from bankruptcy. On "*Kristallnacht*" (Nov. 9–10, 1938), the department stores, as symbols of Jewish economic oppression, were burned and looted along with the synagogues.

Jews played a major role in the development and ownership of department stores in the United States. The majority of such Jewish-owned stores originated with the 19th-century German-Jewish immigration to America. Many of these immigrants began their commercial careers as itinerant peddlers or small retailers in rural areas, where they enjoyed a virtual monopoly on merchandising; from there they expanded to large general stores, which eventually developed into the modern department stores of the late 19th and 20th centuries. A typical case was the *Gimbel family: after Adam Gimbel, a native of Germany, had opened a general store in the small town of Vincennes, Indiana, his seven sons established department stores first in Milwaukee, then in Philadelphia, and finally in New York, where Gimbels ultimately became one of the city's largest retail establishments. Its greatest competitor, Macy's, was not originally Jewish-owned, but was bought out in 1887 by the *Straus brothers, Isidore and Nathan, who had started by renting its basement to display the produce of the small glassware firm founded by their father Lazarus. In Brooklyn the brothers went into partnership with another German immigrant, Abraham *Abraham, to found Abraham & Straus. Bloomingdale's in New York grew out of a small drygoods store on Third Avenue owned by the *Bloomingdale brothers. Other New York department stores, such as B. Altman, Stern, Saks, S. Klein, and Ohrbach had similar histories, the latter two founded by 20th-century immigrants. Elsewhere in the U.S. large department store empires were also frequently the creation of Jews, such as I. Magnin and Levi *Straus on the West Coast, William *Filene's Sons Co. in the Boston area, Kauffmann Brothers in Pennsylvania, and Neimann & Marcus in Texas. The Chicago company of Sears, Roebuck, which came under the ownership of Julius *Rosenwald during the 1890s, became a vast mail order firm. Sears, Roebuck and other mail order firms, together with urban growth and the automobile, brought about the virtual extinction of countryside peddling as successfully practiced by Jewish immigrants. Jewish prominence in department store ownership continued, however. A highly successful chain of discount stores founded by a syndicate of young Jewish businessmen after the Korean War was E.J. Korvette, an acronym for "Eight Jewish Korean Veterans." Also prominent was the Farkas family, which owned Alexander's department store, a major entry in the New York market through the 1950s and 1960s.

By the early years of the 21st century, the retailing environment in the United States had changed, and most of the giant chains started years earlier by Jewish merchant families had disappeared like Korvette's or were absorbed in mergers and acquisitions. Federated Department Stores, for example, started in 1929 as a combination of Abraham & Straus of Brooklyn, Filene's of Boston, F&R Lazarus of Columbus, Ohio, and Bloomingdale's of New York. The stores operated independently for decades under the Federated umbrella and Federated also included Stern's, Burdine's, Rich's, Goldsmith's, and others, but in 2004 Federated, after gobbling up the May Company, decided to unite virtually all of its 400-odd stores under the Macy's brand name. The lone exception was Bloomingdale's, which grew from its New York origins to a high-end chain in several major American markets.

Nevertheless, other enterprising merchants entered the field, including Leslie H. *Wexner, who built The Limited, a chain in Columbus, Ohio, that specialized in women's clothing. By the late 1980s The Limited had become the parent of Henri Bendel, Lane Bryant, Victoria's Secret, Abercrombie & Fitch, and the Express stores and had a majority stake in Intimate Brands, which included Bath and Body Works and the White Barn Candle Company. The Wexner family was involved in many Jewish charities, supporting youth development programs, Jewish agencies, and temples and a long roster of organizations in the United States and Israel.

In Great Britain Simon *Marks and Israel *Sieff developed Marks and Spencer, famous for its high-quality, reasonably priced goods, and Sir Isaac *Wolfson founded Great Universal Stores. The *Cohen family of Liverpool established Lewis' chain of departmental stores in the north of England. In English-speaking countries public opinion was not hostile to department stores and recognized their advantages to the community. The leading Australian department store line was founded by Sidney (Simcha Baevski) *Meyer, founder of the Melbourne Myer Emporium. Jewish businessmen and industrialists played an important part in the development of the modern department store in South Africa, sometimes called there a "bazaar." In 1927, Sam *Cohen and Michael Miller, who had been in business together for 11 years, founded the O.K. Bazaars in Johannesburg and in time made it the largest chain-store business in South Africa. In 1931, Woolworths – independent of the company of similar name abroad – was started in Cape Town by Max Sonnenberg and developed with Elie Suzman to operate in other South African cities. In 1947 they became associated with Marks and Spencer of Britain. Other department stores such as Greatermans and the Belfast Warehouse were also developed by Jewish enterprise, while the countryside pharmacies of the South African Druggists Ltd. were largely the creation of Herman Karnovsky. Jewish involvement in department stores has undoubtedly diminished but new and notable entrepreneurs in retailing have arisen both in Britain (see *Green, Philip and *Kalms, Sir Stanley) and among Australian business leaders, many of whom are former refugees, operating chain stores and shopping centers.

In Israel the Histadrut developed a chain of small department stores called Ha-Mashbir la-Ẓarkhan. The first one opened in 1947 and by 1970 there were 14 branches throughout

the country. A single large department store, Kol Bo Shalom, opened in Tel Aviv in 1965.

[Henry Wasserman / Stewart Kampel (2nd ed.)]

DE PASS, family of Sephardi Jews who settled in England in Cromwell's time. Some members migrated in the 19th century to South Africa, where they helped to develop the shipping, fishing, and sugar industries.

AARON DE PASS (1815–1877) arrived in Cape Town in 1846 with his family and his younger brother Elias, and became a merchant. He established the firm of De Pass Brothers in 1848 and, having acquired his own ships, engaged in the export of guano from islands on the southwest Cape coast. His ships developed the coastal trade as far north as Walvis Bay. In 1857 the firm, by then known as De Pass, Spence and Company, started the sealing and whaling industries. It built the first ship-repair facilities at the Cape and laid patent slipways for the government in Simonstown and Table Bay. A leading citizen of Cape Town, Aaron de Pass was appointed justice of the peace and commissioner of the municipality. He was an elder of Tikvath Israel, the first Hebrew congregation in *Cape Town. He brought the first *Sefer Torah* from England in 1847, and was founder and first *parnas* of its synagogue in 1849.

ELIAS DE PASS (1834–1913), Aaron's younger brother and partner. In 1848 he enlisted with the colonial troops in the war with the Xosa tribesmen on the eastern frontier. He served throughout the campaign and became a lieutenant. He was for a time honorary secretary of the Cape Town Hebrew Congregation and a founder-member of the first synagogue.

DANIEL DE PASS (d. 1921), son of Aaron, joined the family firm in 1860 and interested himself particularly in exploiting the Ichaboe guano islands under a government lease. He established fisheries in South-West Africa and was the first to work a copper mine there. He later acquired extensive diamond interests. He contested in the courts the German claims to the territory and succeeded in retaining the guano offshore islands and Walvis Bay for the Cape Colony. He made an important contribution to the Natal sugar industry by introducing from India a variety of sugar cane which became the mainstay of the industry. On a visit to England, Daniel De Pass raised money toward the building of the Durban synagogue, the first in Natal.

ALFRED DE PASS (1861–1952), Daniel's son, was born in Cape Town. Trained as a chemical engineer, he worked in the family business and developed its sugar interests in Natal. In Cape Town, where he spent the later part of his life, he was best known as a philanthropist and a patron and connoisseur of the arts. The De Pass collections of art treasures, donated during and after his lifetime, are to be found in South African and British galleries and museums. His bequests included sums for the upkeep of Jewish cemeteries in Cape Town and in Britain.

BIBLIOGRAPHY: L. Herrman, *History of the Jews in South Africa* (1935), index; G. Saron and L. Hotz, *Jews in South Africa* (1955), index; I. Abrahams, *Birth of a Country* (1955), index.

DE PHILIPPE (Phillips), EDIS (1918–1978), opera singer and founder-director of the Israel National Opera Company. Edis De Philippe was born in New York, and studied singing in the U.S., Italy, and France. At the age of 19 she appeared as Violetta in a gala performance of *La Traviata* in Washington before President Roosevelt. She went to Palestine in 1945 and set about founding an opera company backed by her own funds. She opened in 1947 with *Thaïs*, one of her outstanding roles. She continued single-mindedly to present opera regularly both in Tel Aviv and in other centers. From 1950 she devoted herself to production and direction, and added a ballet company in 1958.

[Dora Leah Sowden]

DE (DA) PIERA, MESHULLAM BEN SOLOMON (also called **En Vidas de Gerona**; first half of 13th century), Hebrew poet. Although Carmoly (in *Ha-Karmel*, 7, 1868/69) derived the family name of De Piera, who lived in northern Spain and southern France, from the city Fère in Burgundy, according to Neubauer it comes from the town Piera, in Catalonia, and this seems to be the most plausible explanation of the name. De Piera lived in the period of strife that raged around *Maimonides' *Guide of the Perplexed*. He first came under the influence of *Jonah b. Abraham Gerondi, the leader of the opposition, and his poems against the followers of the philosophical school stem from this period. He censured energetically all kinds of intellectualism and rationalism, and particularly that of the Maimonideans. For him, poetry was a way of defending the truth, a way to formulate his theological ideas about the most important issues in Judaism and to unmask the threat of the Maimonidean thinkers. His view of the foundations of Jewish faith brought him near to the Kabbalah and to the most traditional attitudes of Judaism. As a kind of champion of Orthodoxy and of the kabbalistic interpretation of Judaism, he even wrote against the Provençal Jews, seeing heretical trends in their ideas. He later changed his attitude however, perhaps on the advice of *Naḥmanides, and in one poem he begs his teacher, Isaac b. Zerahiah ha-Levi Gerondi, to forgive him for having opposed philosophy; the poor translations of the Arabic original, he claimed, had given him a false idea of the true content of the *Guide of the Perplexed*.

De Piera seems to have lived in Gerona for a long period and there belonged to a circle of mystics whom *Naḥmanides had gathered about him. Among his intimate friends was the Provençal poet, *Isaac b. Judah ha-Seniri of Beaucaire (c. 1220), and perhaps also Abraham *Ibn Ḥasdai of Barcelona. One of the most original Hebrew poets of his time, he abandoned many of the conventions of Andalusian poetry, dissenting from

its ideological background, and even used a very different language, far from the pure biblical Hebrew used by the Andalusian poets. From the formal point of view, for example, he renounced the classical structure of the Arabic *qasida*. De Piera employs many unusual modes of structure, language, and subject-matter in his poems that, in the opinion of some scholars, can only partly be explained as due to the influence of Christian troubadour poetry, and in particular to the most obscure and difficult art of poetry which was at the time a particular fashion among the troubadours in southern France and in Catalonia; other scholars, however, prefer to explain his peculiarities as representing an internal development of Hebrew poetry. Abraham Bedersi, in his critical poem *Ḥerev ha-Mithappekhet* (published in *Ḥotam Tokhnit* (1865), 16 line 141), speaks of him with admiration. Only a part of De Piera's poetic work has been preserved (Neubauer, Cat, no. 1970 iv); a number of poems from this collection were edited by J. Patai, while an almost complete edition with introduction and commentaries was published by H. Brody (YMḤSI, 4 (1938), 1–117). As to the literary value of his poetry in the service of his theological ideology, there are very different opinions among scholars.

[Jefim (Hayyim) Schirmann / Angel Sáenz-Badillos (2nd ed.)]

DE PIERA, SOLOMON BEN MESHULLAM (c. 1342–c. 1418), Hebrew poet of the Kingdom of Aragon, descendant of Meshullam b. Solomon *de Piera. His family was an important Jewish family of Catalonia who had its origins in Piera, a municipality of Barcelona county. He was in Cervera in 1385 (he bought the right to a seat in the new synagogue) and in 1387 he visited or stayed in neighboring Monzon. At this time he was in contact with the school of talmudists and poets of Gerona. He relates that in 1391 people attacked his house and took his own still-unmarried children away. After his children's deaths, Solomon de Piera found refuge in Saragossa, where no unrest had occurred. There he was in the service of three generations of the De la Cavalleria family. He acted as secretary to Don Solomon de la Cavalleria (Abenlavi), the patriarch of the family; he fulfilled similar functions for his son, Don Benvenist de la Cavalleria; and he was the tutor of the latter's two sons. He gave himself over completely to the art of teaching how to write verses and compose poems. Thanks to Solomon de Piera, a completely new phenomenon appeared in the history of Hebrew poetry in Spain, for he was the leader of a group of poets who gave themselves the names of *kat ha-meshorerim*, "the group of poets," and *adat o ḥevrat nogenim* "band" or "troupe of musicians." They were poets like Vidal de la Cavalleria, son of Don Benvenist, Vidal Benvenist (or Abenvenist), the author of *Efer ve-Dinah;* Moses Abbas, Moses Gabbai, Samuel al-Rabi, Vidal al-Rabi, etc., who figure in the *Dîwân* of De Piera and maintained correspondence with him. All of them composed the same type of poetry. Just like the poets around them who wrote in Romance, they sent each other letters in the form of poems and took part in disputes and competitions. This "troupe of musicians," known also as the poets of the "Circle of Saragossa," started on its path after the terrible events of 1391, flowered during the reigns of the two last monarchs of the House of Barcelona, Juan I and his brother Martin the Humane, who died in 1396 and 1410, respectively; and began its decline with Fernando de Antequera's ascent to the throne of Aragon, because of his proselytizing zeal. It ceased to exist shortly after 1414, as a consequence of the Dispute of Tortosa and the conversion to Christianity of some of its most important members, including Vidal de la Cavalleria and De Piera himself. The most important work of Solomon de Piera was his *Dīwān,* composed and edited by himself. He added headings to the poems, written in the first person, explaining the circumstances under which the poems were composed and naming their authors or addressees. The preservation of the manuscripts of De Piera's poems is due to a later literary circle of a similar kind, which flourished in Salonika in the second half of the 16th century (Saadiah *Longo and others). There exist at least six manuscripts, dating from the 15th to the 17th centuries that claim to contain the *Dīwān* of De Piera, and many others (at least 21) with some of his poems and writings. About 362 poems of Solomon de Piera are preserved in his *Dīwān*. Most have a *qasida* structure and are in conventional meters, and 35 – nearly all, liturgical compositions – are *muwashshaḥāt*. In addition to the poems, there are many texts in rhymed prose – letters and other writings that are not independent compositions but form a single unit with the accompanying poems. The nature of this material has been obscured by the fact that S. Bernstein gave the title *The Diwan* (1942) to his collection of Solomon de Piera's poems. But De Piera's original *Dīwān* was neither an anthology nor a miscellaneous collection of poems like Bernstein's edition; it was a coherent work, in which all the above-mentioned materials appeared according to a definite structure and organization. At Don Benvenist's request, De Piera wrote a "manual for composing poetry," the *Imrei No'ash,* that has not been completely preserved or completely edited. His dictionary of rhymes, however, had wide distribution, as one can see from the large number of existing manuscripts. The introductory poem and the preface to this work were published by Tauber (Kiryat Sefer, 1924–25)*;* the section *Ḥelek ha-Millim ha-Meshuttafim* was published by M. Tama in *Maskiyyot Kesef* (Amsterdam (1785), 3–23). A collection of liturgical poems by De Piera was published by S. Bernstein (HUCA, 19, 1945). Commissioned by the Jewish community of Saragossa, De Piera wrote a number of circular letters to the communities of Aragon on such matters as taxation. He also wrote letters in prose to the poet Moses Abbas (A.M. Habermann, in: *Oẓar Yehudei Sefarad.* 1964).

[Judit Targarona (2nd ed.)]

°**DEPPING, GEORGES-BERNARD** (1784–1853), French historian of German origin. Depping was born and educated at Muenster, Westphalia, and settled in Paris, where he wrote on a variety of subjects. In 1823 he participated in a prize contest of the French Academy for an essay on "The Jews of France, Spain, and Italy," which he enlarged as a book in 1834 (*Les Juifs dans le moyen âge*). It was translated into German in the same year, and republished in French in 1844. Depping's work, while in some part based on original research in the published sources and generally sympathetic to the Jewish people, propagates many of the prejudices of earlier writers and his own time, which give a distorted, unjust picture of Jewish character and the economic role played by Jews in medieval Europe, and their legal position (corrected by O. *Stobbe). Depping has been used widely as a secondary source by historians, such as H. Graetz and W. Sombart, as well as antisemitic writers. He thus influenced the historical image of medieval Jewry.

[Toni Oelsner]

DEPUTIES OF THE JEWISH PEOPLE, representatives of Jewish communities in Russia to the government during the reign of *Alexander I (1801–25). After parts of *Poland-Lithuania had been annexed by Russia, the large communities sent *shtadlanim* to the court at St. Petersburg to represent them and defend their rights. Most of the *shtadlanim* were merchants or contractors who visited the city on business. When a committee was set up to frame a "Jewish constitution" in 1802–04 it was joined by several government-appointed Jewish advisers (N.N. *Notkin, A. *Peretz, and J.L. *Nevakhovich). The government also requested some important communities to send representatives to the committee. Together they tried to influence the committee in favor of Jewish rights. In 1807 the government appointed a "Jewish committee" to implement the inimical "Jewish constitution" of 1804 and proposed that the communities elect deputies to represent the Jews before the provincial governors. The memoranda of these deputies were referred to the "Jewish committee" in St. Petersburg and were influential in obtaining a temporary halt to the expulsion of Jews from the villages. It was also proposed to abolish the prohibition on the lease and sale of alcohol by Jews. During the invasion by Napoleon two "deputies of the Jewish people," Zundel Sonnenberg and Eliezer Dillon, accompanied Alexander's military headquarters in 1812–13, and acted as liaison between the czar and the large Jewish population in the combat area. They regularly presented memoranda and petitions concerning Jewish affairs to the court and transmitted its instructions to the Jewish communities. After the war an attempt was made to convert the committee of deputies into a permanent institution. The Jewish communities were requested to send representatives to St. Petersburg to maintain permanent contact with the ministries of religious affairs and popular education. On August 19, 1818, electors from the 12 districts (*gubernia*) of the *Pale of Settlement convened and elected three deputies, Zundel Sonnenberg, Beinush Lapkovski, and Michael Eisenstadt, and three deputy representatives. In order to raise funds to cover their expenses, which probably also included furnishing bribes, the assembly resolved that every Jew was to donate the silver headpiece of his prayer shawl. The change in Alexander's policy toward the Jews at the end of his reign reduced the importance and status of the deputies. Sonnenberg was dismissed because of "impudence toward the authorities." In 1825 the Jewish deputation was officially suspended "until the need arises for a new deputation," and the institution was thereby abolished and not renewed. However, the government continued to make use of Jewish representatives. In 1840 consultative committees, chosen from among "enlightened" Jews, were created and attached to governors in Kiev and five other towns. In 1844 the function of "Learned Jew" (*uchoni yevrei*) was created, meaning an expert and consultant in Jewish religious affairs attached to the district governers and responsible for education and interior affairs.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

DERASH (or **Derush**) (Heb. דְּרַשׁ or דְּרוּשׁ from דָּרַשׁ, "to interpret"), a method of exposition of scriptural verses. In the Midrash the distinction between *derash* and the alternative method called **peshat* is not clearly defined and in parallel passages the terms are sometimes interchangeable (cf. Gen. R. 10:7 with Tanh., Ḥukkat 1). Only in the Middle Ages, probably under the influence of Rashi's Bible commentary, did *derash* come to be used for homiletical exposition in contrast to *peshat*, the literal interpretation. *Derashah* (Heb. דְּרָשָׁה) is the equivalent of the word "sermon" today. Originally it was confined to a sermon on a theme which was based on a homiletical interpretation of Scripture.

[Louis Isaac Rabinowitz]

DERASHOT HA-RAN (Heb. דְּרָשׁוֹת הָר"ן), a collection of 12 homiletic works. Traditionally, they are attributed to R. Nissim b. Reuben *Gerondi, one of the outstanding Jewish leaders in Christian Spain, known as ר"ן ("Ran," from Rabbi Nissim). The prolific writings and information on Gerondi, however, do not prove his authorship, and there is nothing in the homilies themselves to identify the author. It is therefore necessary to assume that the first initial of the writer of the work was the Hebrew letter נ (*nun*), and that later scholars attributed it to the famous rabbi of Gerona.

The homilies in the collection (first edition probably Constantinople, c. 1533; second Venice, 1592, and many subsequent

editions) belong to the tradition of philosophic homiletic literature, started by *Abraham b. Ḥiyya (12th century) and carried on by homiletic writers like Jacob *Anatoli and Isaac *Arama. Like other writers of homiletic philosophic works, the author of this collection does not exclusively follow one school of philosophy but is eclectic, basing himself on several schools. The work is nevertheless of some importance in the history of Jewish philosophy and it seems that *Ḥasdai Crescas was influenced by it in the formulation of his anti-Aristotelian philosophic system. The homilies are based on single verses from the Torah, each forming the theme of an individual homily. The method used is that of homiletic questioning of the form and content of the verses, as well as of some logical problems. The answers and homiletic interpretations are arrived at by way of the questioning itself, into which the author interweaves his moralistic and ethical system. He never approaches his ethical point directly and uses philosophic questions and answers as a bridge between the verses and the ethical conclusions. Among the philosophical problems he examines are the creation, the essence of nature, and in particular the nature of prophecy and the unique quality of the revelation to Moses (in the third and fifth homilies). In his ethical and moralistic teachings much emphasis is laid on the themes of the nature of the divine commandments, the relationship between rabbinic laws and the Torah, fear and love of God, and especially on the ways of repentance. The author took special pains to drive home to his audience that all the troubles the Jews were undergoing had some purpose in a divine design, whose end was good.

[Joseph Dan]

DERAZHNYA, town in Khmelnitski district, Ukraine. A Karaite community existed there for many years and it suffered considerably during the *Chmielnicki uprising of 1648. The *Rabbanites settled there at the beginning of the 18th century. They suffered in a *Haidamack attack in 1734. There were 316 Jews living in Derazhnya in 1784, owning 50 houses, 3,333 in 1897 (68% of the total population), and 3,250 in 1926 (57.4%). *Shalom Aleichem placed the action of his short story "The German" there. A Jewish school with 140 pupils and a library was in operation at the beginning of the 20th century. Pogroms were unleashed on December 1, 1917, and in June 1919. Between the wars there were a Jewish council, a Jewish court, and a kolkhoz in Derazhnya. A Yiddish school attended by 90% (336) of the Jewish children in the town operated there. In 1939 the Jews numbered 2,651 (41% of the total population). The Germans occupied the town on July 11, 1941, and set up a closed ghetto, exacted heavy tributes, and confiscated all valuables. In September 1942, 4,080 Jews from Derazhnya and the surrounding settlements were murdered by the Germans. Two hundred skilled workers were executed later in the year in Letichev. The community was not refounded after World War II.

DERBENT (former ***bāb al-Abwāb**), Caspian Sea port in Dagestan (Caucasus). Derbent has been erroneously identified with Terbent (טרבנת) mentioned in the Talmud (TJ, Meg. 4:5; 75b). Certainly Jews, evidently originally from Persia, were already settled in Derbent by the time that the kingdom of the *Khazars was established; some ascribe the first propagation of Judaism among the Khazars to Derbent Jews. Jewish-owned caravans used to pass through the city in this period. After the fall of the Khazar kingdom on the Volga in 969, a number of survivors took refuge in Derbent. Jews living there are mentioned in the 12th century by *Benjamin of Tudela, and in the 13th by the Christian traveler Wilhelm of Rubruquis. The first mention of Jews in Derbent in modern times is by the German traveler Adam Olearius in the 17th century. Derbent Jewry endured frightful sufferings during the wars in the 18th century; Nadir Shah of Persia forced many Jews to adopt Islam. After the Russian conquest many of the Jewish occupants of rural Dagestan fled to Derbent, which became the spiritual center of the *mountain Jews. The Jewish population numbered 2,200 in 1897 (15% of total population) and 3,500 in 1903. After the 1917 Revolution many Dagestan Jews deprived of their lands migrated to Derbent where they generally took up occupations in crafts or industry. A visitor to Derbent in the 1960s reported that some of the Jews were occupied in agriculture, principally vinegrowing. They were organized in four kolkhozes whose lands bordered on the town. The kolkhoz members lived in town; in general Jews tended to live in the same area.

[Yehuda Slutsky]

DEREKH EREẒ (Heb. דֶּרֶךְ אֶרֶץ; "way of the world"), desirable behavior of a man toward his fellows, in keeping with natural practice and accepted social and moral standards, including the rules of etiquette and polite behavior. This has become the common and accepted connotation of a term having several meanings in rabbinic literature:

(1) Natural and normal human behavior – "It is natural (*derekh ereẓ*) for the young to speak poetry; the middle-aged, proverbs; the old, despair at vanity" (Song R. 1:10).

(2) Worldly occupation – "It is appropriate to combine study of Torah with a trade" (*derekh ereẓ*) (Avot 2:2).

(3) A euphemism for sexual cohabitation – "'He saw our plight' (Deut 26:7) which means being cut off from sexual intercourse" (*derekh ereẓ*) (*Haggadah* of Passover; cf. Yoma 74b).

(4) Correct conduct and proper behavior – *derekh ereẓ* in this wide and general sense is much praised by the rabbis, and is the subject of a post-talmudic treatise, *Derekh Ereẓ* (see next entry). While its value is often equated to that of Torah itself, R. Ishmael b. Naḥman held that *derekh ereẓ*

preceded the Torah by 26 generations (i.e., the period between the creation of the world and the giving of the Torah; Lev. R. 9:3) – in other words, *derekh ereẓ* is part of the natural order of things.

Basic to *derekh ereẓ* are maintenance of family harmony and sensitive consideration for wife and family (Shab. 10b; MK 17a; et al.). The laws of *derekh ereẓ* demand that a man make it a rule to bear himself courteously toward his fellow (e.g., Avot 4:15; Ber. 6b; BM 87a), to exercise care in his words and claims, and especially to use "clean" speech (Pes. 3a). A man should eat less than his means allow (Ḥul. 84b). He should dress decently (Shab. 113a–114b, 145b). The rabbis stated "In whom mankind finds pleasure, God finds pleasure" (Avot 3:10). In agreement with this general principle, many specific instructions are found concerning proper behavior. Special stress is laid on putting the concerns of others before one's own (cf. Ḥag. 8a; et al.). Laws of *derekh ereẓ* also deal with definitions of modesty, particularly in relations between men and women, proper etiquette between teacher and pupil, table manners, reception of guests, etc. Scholars are to be particularly careful as regards *derekh ereẓ* since they serve as an example, and a fault in their behavior shames both them and the Torah. Maimonides' description based on halakhic and aggadic sources of the behavior befitting a scholar is in fact a summary of *derekh ereẓ*; it includes polite manners as well as the demand, "… he shall never in his lifetime trouble his fellow.…" It culminates in the counsel to prefer to be among the persecuted rather than the persecutors, among the humiliated rather than those who humiliate (cf. BK 93a). Such is the man described in the verse "And He said to me, 'You are My servant, Israel, in whom I will be glorified'" (Maim., Yad, De'ot 5).

Although the rabbis often found scriptural warrant for practices of *derekh ereẓ*, these were not generally included as formal laws in the great codes, since they were held to be recommendations rather than commandments, and often varied with time and place.

For "Torah with *derekh ereẓ*," see *Neo-Orthodoxy.

[Simon S. Schlesinger]

DEREKH EREẒ (Heb. דֶּרֶךְ אֶרֶץ; lit. "way of the world"; "proper deportment"), one of the minor tractates of the Talmud, published in current editions of the Talmud at the conclusion of the fourth order, *Nezikin. Derekh Ereẓ*, as its name suggests, deals primarily with morals and customs. In its current printed edition, this treatise is divided into three sections: *Derekh Ereẓ Rabbah; Derekh Ereẓ Zuta*; and *Perek ha-Shalom*, which are basically independent units and were probably collated during the late Geonic period. It belongs to a genre of literature which represents the transition between earlier wisdom literature (Ben Sira, tractate *Avot*) and the mediaeval moralistic works (e.g., *Ma'alot ha-Middot* by Yeḥiel ben R. Yekutiel ha-Rofeh, 13th cent.; *Menorat ha-Maor*, by Israel Al-Nakawa, 14th cent., etc.). Related to this body of literature is also *Pseudo-Seder Eliyahu* Zuta, ed. M. Friedman, Jerusalem 1960, and *Masekhet Kallah*, ed. M. Higger, New York 1936.

Derekh Ereẓ Rabbah contains eleven chapters. It begins with a halakhic section on forbidden marriages, to which are appended some ethical maxims. The second chapter contains two entirely different sections, the first discussing 24 classes of people, 12 bad and 12 good; the second details the sins that cause eclipses of the sun and moon, concluding with mystical remarks about God and the 390 heavens. The third chapter contains moral reflections on the origins and destiny of man. Chapters 4 and 5 list rules of conduct for the sages and their disciples. Chapters 6 and 7 detail the proper mode of conduct in society and at the table; chapters 8 and 9 deal exclusively with rules of conduct while eating and drinking; and chapter 10 covers proper behavior in the bathhouse. The final chapter enumerates practices which are dangerous to life, concluding with blessings that are recited on various occasions. This short summary of the tractate's contents indicates that the first section, laws of forbidden marriages, is quite different from the rest of the work, which treats solely of ethical behavior and customs. *Elijah b. Solomon, the Vilna Gaon, was of the opinion that this first chapter is actually the last portion of the tractate **Kallah*, which precedes it in the printed editions and whose subject is marriage, and that it was wrongly taken from there and appended to *Derekh Ereẓ.*

There are ten chapters in *Derekh Ereẓ Zuta*. The name is misleading in one respect since the word *zuta* (lit. "small") could indicate that it is a shorter version of *Derekh Ereẓ Rabbah*. In reality, the two treatises have little in common, and the appellation *Zuta* is probably of later origin. The first nine chapters all possess a certain unity, in that they consist almost exclusively of exhortations to self-examination and modesty. Temperance, resignation, gentleness, patience, respect for age, and an attitude of forgiveness are urged. The moral and social duties of the scholars are stressed throughout. The first half of the tenth chapter is devoted to eschatology while the second half reverts to moral and ethical themes. Many of this tractate's statements are cogent and concise, such as, "if you have done much good let it seem insignificant in your eyes … but let a small kindness done for you appear great" (ch. 2). Appended to these tractates is the *Perek ha-Shalom* which extols the virtue of peace, and is a totally independent work, probably compiled during the Geonic period.

It may be that portions of these tractates were already redacted during the talmudic period. R. Judah's disciples requested that he teach them a section of the laws of *Derekh Ereẓ* (Ber. 22a). It also related that Simeon b. Ba waited on his master, R. Johanan, in accordance with the etiquette outlined in *Derekh Ereẓ* (TJ, Shab. 6:2, 8a). Nevertheless the present text of these treatises dates from the post-talmudic period, and more than one editor aided in its final redaction. These tractates are also known by other names in geonic and rabbinic literature. The first chapters of *Derekh Ereẓ Zuta* were also called the tractate on "Fear of Sin"; the third chapter of *Derekh Ereẓ Rabbah* was referred to as the "Chapter of Ben Azzai"; chapters 5–8

were called *Derekh Ereẓ Zeira,* and the first chapter of *Derekh Ereẓ Rabbah* was also known as the chapter of "Forbidden Relations." These treatises were widely read, and the fact that the tractate passed through so many hands partially accounts for the chaotic state of the texts. Eighteenth-century scholars did much, by means of glosses and commentaries, toward making the texts intelligible. A critical edition and English translation of these tractates was published by Michael Higger in 1935. Another English translation was issued in 1965.

DEREN, MAYA (**Eleanora Derenkowsky**; 1917–1961), U.S. avant-garde filmmaker. Born in Kiev, Deren moved with her family to New York in 1922 to escape antisemitic pogroms in the Ukraine; at that time the family changed its surname to Deren. Eleanora undertook an arts degree at New York University, completing her master's dissertation on symbolist poetry at Smith College in 1939. Following university, Eleanora managed and toured with Katherine Dunham's dance troupe.

Settling in Los Angeles in the 1940s, Deren changed her name to Maya and made the landmark experimental trance film *Meshes of the Afternoon* (1943) with Alexander Hammid. The film, set in Hollywood, unravels in a nightmarish narrative of repetition and symbolic displacement with objects magically appearing and transforming across the cut. Shot as a silent film, it was edited to Teiji Ito's drumbeat, generating a strong sense of rhythmic form and dynamic movement. In 1943 Deren collaborated with Marcel Duchamp to produce *Witch's Cradle*. The surviving fragments reveal themes that recur throughout Deren's films: the artist's role, the influence of nature, and a fascination with ritual. *At Land* (1944) shows Deren crawling across a dining table, oblivious to the diners. Its depiction of waves descending back into the sea subverts natural rhythms. In *A Study in Choreography for the Camera* (1945) the performer and the camera become dynamic forces as the dancer's twirls bridge disparate spaces. *Meditation on Violence* (1948) focuses on a Wu Tang ritual, juxtaposing violence and stillness. In *Ritual in Transfigured Time* (1946) Deren experiments with slowed footage of two wind-swept women immersed in ritualized wool looming. Her final film, *The Very Eye of Night* (1959), is an incomplete collaboration with the Metropolitan Opera Ballet School that synthesizes dance and Greek mythology against a background of blinking constellations.

Deren organized and presented lectures at universities across the United States and in Canada and Cuba to raise the profile of experimental films. Her innovations inspired the formation of Cinema 16 and Deren herself established the Creative Film Foundation to encourage independent filmmakers. Bridging the divide between praxis and theory, Deren wrote *An Anagram of Ideas on Art, Form and Film* (1946). In 1947 she won the Grand Prix Internationale for avant-garde film at the Cannes Film Festival and was awarded a Guggenheim Foundation Fellowship, a first for a motion picture artist. This allowed Deren to travel to Haiti to film voodoo rituals and write *Divine Horsemen: The Living Gods of Haiti* (1953; rep. 1983). To mark her untimely death the American Film Institute established the Maya Deren Award to inspire independent film and video artists.

DERENBURG (**Derenbourg**), family of scholars and writers. ẒEVI HIRSCH DERENBURG, an 18th-century Hebrew writer, was born in Offenbach. In 1789 he went to Mainz as a private tutor of Hebrew and also kept a restaurant. He wrote *Yoshevei Tevel* (Oftenbach, 1789), a didactic moral drama in the style of M.Ḥ. Luzzatto's *La-Yesharim Tehillah*. The eight *dramatis personae* were apparently modeled on living figures in the Mainz community, including the rabbi who is the play's hero. JOSEPH NAPHTALI DERENBOURG (1811–1895), son of Ẓevi Hirsch, was an Orientalist. Joseph lived as domestic tutor in Amsterdam (1835–38), and then settled in Paris, where he continued his Oriental studies, while maintaining, under the influence of A. *Geiger, his interest in Jewish studies. In 1843 he became a French citizen and added an "O" to the second part of his name. He taught German at the Lycée Henri IV in 1851, became corrector at the Imprimerie Nationale in 1852, and also cataloged the Hebrew manuscripts at the Bibliothèque Nationale. In 1857 he founded a Jewish high school for boys which he headed until 1864. Derenbourg was awarded the Légion d'Honneur in 1869 and in 1871 was elected to the Académie des Inscriptions et Belles Lettres. In 1877 a chair for rabbinic-Hebrew language and literature was created for him at the Ecole Pratique des Hautes Etudes. He succeeded Solomon *Munk on the central committee of the Alliance Israélite Universelle and served later as its vice president. From 1869 to 1872 he also served as member of the Paris Consistoire.

Among Derenbourg's major contributions in the field of Oriental languages and inscriptions are: *Les fables de Loqman le Sage* (1850); *Les inscriptions phéniciennes du Temple de Seti à Abydos* (1885; in collaboration with his son Hartwig); part four of *Corpus Inscriptionum Semiticarum* (on Himyaritic and Sabean inscriptions, in collaboration with his son; 2 pts., 1889–92). His most important contributions to Jewish scholarship were: *Essai sur l'histoire et la géographie de la Palestine d'après les Thalmuds et les autres sources rabbiniques* (1867); *Opuscules et traités d'Aboul Walid Merwan ibn Djanah de Cordoue* (in association with his son, 1880); *Deux versions hébraiques du livre Kalilah et Dimnah* (1881); *Le Livre des Par-*

terres Fleuris (Jonah ibn Janaḥ's Hebrew Grammar in Arabic, 1886); an edition of Maimonides' commentary on *Seder Tohorot* (Arabic text and Hebrew translation, 3 parts, 1887–89); and *Oeuvres complètes de R. Saadia b. Joseph al-Fayyoumi*, an edition of Saadiah's writings in Arabic, also in association with his son (5 vols., 1893–99), which was Derenbourg's most important work but remained unfinished. HARTWIG DERENBOURG (1844–1908), son of Joseph, was also an Orientalist. From 1875 he lectured in Arabic at the Ecole des Langues Orientales Vivantes and on Oriental languages at the Ecole Rabbinique. In 1885 Hartwig was appointed to the chair of Arabic at the Ecole des Hautes Etudes and to that of Islam, of which he was the first occupant. In 1900 he was elected a member of the Institut de France. Among his contributions to Jewish scholarship are the following: the editions and translations of Saadiah's Arabic version of Isaiah and Job (in association with his father and W. Bacher, 1896 and 1899; in manuscript at the British Museum). Derenbourg also compiled a catalog of Arabic manuscripts in Spanish libraries, which led him to discover the sources for a history of the Crusades and the Caliphate, published in 1895. A memorial volume, *Mélanges Hartwig Derenbourg* (1909), contains a full bibliography. For the German branch of the family, see *Dernburg.

DERI, ARYEH (**Machluf**; 1959–), political leader of Shas in the years 1984–99. Member of the Thirteenth and Fourteenth Knessets. Deri was born in Meknès in Morocco, and immigrated to Israel with his family in 1968. He was educated in the Porat Yosef yeshivah and later in the Hebron yeshivah in Jerusalem. He was secretary of the *haredi* (ultra-Orthodox) settlement of Ma'aleh Amos, and in the years 1981–83 was a member of the Regional Council of *Gush Etzyon.

In 1984 Deri was instrumental in convincing Rabbi Ovadiah *Yosef, his mentor and patron, to establish Shas as a Sephardi *haredi* party, with the blessing of the Ashkenazi Rabbi Eliezer Menachem *Shach, against the background of feelings of discrimination within the Sephardi community. Deri did not stand for election to the Eleventh and Twelfth Knessets, concentrating instead on building the independent *El ha-Ma'ayan* Shas educational system, which soon provided education to tens of thousands of children from kindergarten age. In 1986 he was appointed director general of the Ministry of the Interior under a Shas minister.

Deri became minister of the interior in 1988, at the age of 29, even though he was not a member of the Knesset. In March 1990 he collaborated with the Israel Labor Party in bringing down the National Unity Government headed by Yitzhak *Shamir in a vote of no-confidence. However, after Shimon *Peres failed to form a government, he remained minister of the interior in the government formed by Shamir in June 1990. As minister of the interior he gained a reputation for his ability to make clearcut decisions on controversial issues, such as the abrogation of theater censorship or adjustment of the summer clock. He was subsequently elected to the Thirteenth Knesset, and was once again appointed minister of the interior in the government formed by Yitzhak *Rabin in July 1992, and as a result was ostracized by Rabbi Shach. Deri resigned from Rabin's government together with the other Shas ministers on the eve of the signature of the Declaration of Principles with the PLO in September 1993. At the same time criminal charges were brought against him, charging that he had transferred money from the Ministry of the Interior to various bodies established by Shas in breach of regulations, and that he had received bribes in the amount of $150,000, which he used to purchase apartments in Jerusalem, but which he claimed he had received as an inheritance from his wife's foster parents in the U.S.

The initial investigations lasted for close to three years, as Deri took advantage of his right to remain silent. Deri resigned from the government in September. The trial on the bribery charge opened in June 1994, and dragged on until March 1999, with Deri continuing to follow a strategy of remaining silent. Throughout the investigation and the trial Deri continued to lead Shas politically, and as his trial was viewed by many Sephardim as being based on discrimination, Shas won ten seats in the 1996 elections. Deri was finally found guilty of receiving bribes and sentenced by the District Court of Jerusalem in March 1999 to a four-year prison term and a fine of NIS 250,000. On appeal the sentence was reduced to three years. The affair turned Deri into a martyr within the Sephardi community. He was released from prison in July 2002. In September 2003 Deri was also found guilty of breach of trust for the illegal transfer of funds from the Ministry. However, he was not given another prison sentence.

Banned from returning to political life for a certain period, Deri resumed his religious studies. In the meantime a rift occurred between Deri and his former mentor Rabbi Ovadiah Yosef, against the background of Deri's conduct and Ovadiah's choice of Eliyahu Yishai to replace him as Shas' political leader.

[Susan Hattis Rolef (2nd ed.)]

DERNBURG, German family of jurists, editors, bankers, and statesmen. HEINRICH DERNBURG (1829–1907) was a jurist. He studied law at Giessen and Berlin and from 1854 to 1862 was professor of law at Zurich. In 1862 he became professor at Halle University which, in 1866, he represented in the Upper House of the Prussian parliament. In 1871 he became professor of Roman and Prussian law in Berlin. One of the outstanding exponents of the "Pandectic" in Roman law, his three-volume work *Pandekten* (1884–87) is still considered a classic. His books on Prussian private law, *Lehrbuch des preussischen Privatrechts, und der Privatrechtsnormen des Reichs*

(1877–80; 3 volumes), in which he emphasizes the importance of social and economic factors in the development of law, and *Das buergerliche Recht des Deutschen Reichs und Preussens* (1889–1915; 5 volumes), had a great influence on German jurisprudence. He was baptized when a child.

His brother FRIEDRICH (1833–1911) was editor of the Berlin *Nationalzeitung* and coeditor of the *Berliner Tageblatt*. He wrote travel sketches, plays, and novels. Friedrich's son BERNHARD DERNBURG (1865–1937) was trained to be a banker and began by working for the Berliner Handelsgesellschaft. Later he went to New York to join *Ladenburg, Thalman & Co., where he familiarized himself with U.S. business methods. Returning to Germany, he joined the Deutsche Bank. He became head of the bank's trust company and acquired a reputation as a reorganizer of companies in difficulties and as an efficiency expert. He then moved on to the Bank für Handel und Industrie and the Darmstaedter Bank. In 1906 he was appointed head of the German government department for the colonies and devoted his efforts to Germany's colonial expansion and, with the cooperation of leading German banks, to ensuring its financial basis. He traveled a great deal in order to increase his detailed and local knowledge of colonial problems. In 1912 he became a member of the Prussian upper house and in 1919, following Germany's collapse after World War I, served for a short time as cabinet minister. From 1920 to 1930 Bernhard Dernburg was a member of the Reichstag.

[Joachim O. Ronall]

DER NISTER (Yid. "the concealed one"; pseudonym of **Pinkhes Kahanovitsch**; 1884–1950), Yiddish writer. Born in Berdichev, Ukraine, he received a traditional Jewish education but also read secular works in Russian from an early age. His spiritual and literary growth was significantly influenced by his older brother, Aaron, a Bratzlaver Ḥasid whose personality and mysticism are echoed in the character of Luzi in Der Nister's realistic narrative, *Di Mishpokhe Mashber* ("The Family Mashber," vol. 1, Moscow, 1939; vol. 2, New York, 1948). In his youth Der Nister associated with Zionist socialist circles, some evidence of which, including his possible attendance at the Po'alei Zion conference (1905), as well as of his impression of Ber *Borochov at the conference, can be found in the novel *Fun Finften Yor* ("About the Fifth Year"), which remained in manuscript form in his literary legacy and was published in *Sovetish Heymland* (January 1964). Around 1905 he left Berdichev to avoid serving in the czarist army. Until World War I he led a fugitive existence, chiefly in Zhitomir, supporting himself by giving private Hebrew lessons. At 23, he published his first book, *Gedanken un Motivn – Lider in Proze* ("Thoughts and Motifs – Poems in Prose," 1907), which reveals what was to be a life-long preoccupation with such universal themes as the divine-satanic duality of humans, the eternal opposition between aspiration and reality, and the pendulum swings of human emotion. After having met Der Nister in 1910, I.L. *Peretz encouraged him to publish his short novel, *A Togbikhl fun a Farfirer* ("Diary of a Seducer"), which resembled a crime story, in his magazine, *Yudish*. Peretz was also instrumental in the publication of his next book of prose narratives, *Hekher fun der Erd* ("Higher Than the Earth," Warsaw, 1910), and his Kiev admirers David *Bergelson and Nachman *Mayzel assisted in publishing his first book of poetry, *Gezang un Gebet* ("Song and Prayer," Kiev, probably in 1910 or 1912). In 1917 he published a small collection of stories for children, *Mayselekh in Ferzn* ("Little Tales in Verse"; expanded and republished in 1917 and 1921 (with illustrations by Marc Chagall) and 1923). Living in Kiev, Der Nister contributed to *Eygns* (1918, 1920) and *Oyfgang* (1919), which belletristic collections served as the foundation of Soviet-Yiddish literature. In addition, he was a skilled translator of world literature; his rich fantasy and linguistic virtuosity displayed in his children's verse and stories have rarely been equaled.

In 1921 he left the Soviet Union, first for Kaunas (Kovno), then Berlin, a gathering point for literary emigrants. After some three years in Berlin, where he published *Gedakht* ("Imagined," 2 vols., 1922–3), the first collection of his visionary and fantastic tales, he moved to Hamburg where he worked for the Soviet trade mission in 1924–5. In 1926, while the Soviet Union was promoting Yiddish culture and attempting to lure émigré writers back, Der Nister returned to the Soviet Union, settling in Kharkov. Until 1929 Der Nister contributed to those periodicals still open to "fellow-traveling" writers. With the ascendancy of the "proletarian" critics in that year, his work came under sharp attack for its symbolism. For some time he published nothing, attempting in the years 1931–3 to find a place for himself on the hostile literary scene through writing *ocherki*, a form of reportage then regarded as progressive. Editing and translating continued to be the mainstays of his precarious livelihood. These were years of great anguish for Der Nister, who realized he could not adapt to the demands of realistic reportage nor abandon a style he had spent his life developing. Around the year 1935 he resolved to write his family saga, a resolve of desperation as well as a cunning stratagem on the part of a writer whose creative life was in danger. In a letter written around 1934 to his brother Motl, in Paris, Der Nister made his desperate position absolutely clear: "… the writing of my book is a necessity; otherwise I am nothing [*oys mentsh*]; otherwise I am erased from literature and from life…." The death sentence for Soviet-Yiddish literature may have been prepared as early as 1939, the year in which Der Nister won critical acclaim for the first volume of *Di Mishpokhe Mashber,* and the Soviet authorities suggested that Yiddish works appear only in translation, a danger sidetracked by the war, and one which Der Nister outspokenly opposed. The war years 1941–3 found Der Nister in Tashkent and Moscow, where he lived in great penury. During and immediately after the war he was close to the Jewish *Anti-Fascist

Committee in whose service he had accompanied Ukrainian Jewish immigrants to *Birobidzhan. There he had pressed parents to petition for Yiddish-language schools, which became one of the charges of anti-Soviet "nationalism" brought against him following the suppression of Jewish cultural life in the Soviet Union in November 1948. Not long thereafter Der Nister was arrested and died in a prison hospital.

Prior to 1929 Der Nister wrote as he wished; thereafter he worked under the shadow of repression. In the former period he wrote his highly original mystical visions and fantastic tales, developing a style unique in Yiddish literature. From the outset he had sought a universalist synthesis of the Jewish mystical tradition and world mythology, introducing into his earliest stories figures such as Buddha and the Virgin Mary, hitherto regarded as alien to Yiddish literature. His first volume, *Gedanken un Motivn*, reveals a tragic view of life wherein suffering is ultimately redeemed through love. Formally his "poetry in prose" is an attempt to combine rhymed and unrhymed passages. He employed this very peculiar compositional mixture until 1910, when many of his early works were published. His sense of the dual nature of humans finds expression in the antithetical pair of stories "Poylish" ("Polish") and "Kleopatra" (*Literarishe Monatsshriftn*, nos. 1 and 4, Vilna, 1908), where sanctified love and demonic lust are vividly contrasted through imagery derived from Jewish tradition on the one hand and classical tradition on the other. *Hekher fun der Erd* is filled with kabbalistic references and reveals Der Nister's mature literary language and reflections on the concept of creativity and its textual realization. The most intriguing composition of this volume, "Der Kadmen" ("The Original"), is a revision of the myth of creation, ending on a secularized cosmic evolutionary note. His tendency to express himself in mystical language is manifest in *Gezang un Gebet*, a volume of verse whose first poem, "Mir" ("We"), is a deeply felt meditation on the mystery of Jewishness and its destiny in the absence of spiritual guides. In these poems despair is countered by a vision of youth who rediscover the ancestral path.

Critics ignored Der Nister's first books, which they were unable to grasp; no reviews of his works were published until 1913, when the first two reviewers, Sh. *Niger and S. Rozenfeld, were essentially negative. David *Bergelson, a refined master of literary Yiddish himself, in a letter to Sh. Niger dated 1912, first recognized Der Nister's skill in shaping Yiddish language into original and innovative forms. Doubtless influenced by the criticism of Peretz, Der Nister, after 1912, de-emphasized description and introduced firm narrative structure into his visionary and fantastic tales, preserving their symbolic and ambiguous qualities while making them interesting as stories. Just as Peretz for his purposes renewed the ḥasidic hagiographic tale, so Der Nister revived the ḥasidic symbolic tale created by R. *Naḥman of Bratzlav, discovering, as had R. Naḥman before him, a popular and flexible medium for ideas which could not be broached directly. The years 1913–29, from the appearance of "A Mayse" ("A Story," in *Di Yidishe Velt*, no. 10, Vilna, 1913; later republished in *Gedakht*, vol. 1) to the sharply criticized "Unter a Ployt" ("Under a Fence," in *Di Royte Velt*, 5 no. 7, Kharkov, 1929) witnessed Der Nister's cultivation of a mode altogether congenial to him. This period marks the peak of his symbolist narrative achievement. Just as the characteristic symbols – e.g., the Well of Tradition and the Lonely Tower – and the mystic dualism of the Russian symbolists are reflected in his tales of this period, so too are the verb inversions and lyrical effects practiced by the Russian symbolists absorbed in Der Nister's Yiddish style. Set in space, in deep forests, at the margin of civilization, his stories are spun by characters without proper names, devils, wanderers, giants, drunkards, fools displaying a variety of archetypal relational patterns. Like those of his contemporary Franz *Kafka, they are paradigmatic representations of an alienated human condition. The hypnotic rhythms of his long sentences, their deliberate sound structure, the repeated use of "and" (possibly derived from the biblical conversive *vav*), and the archaic diction (derived from the *taytsh* tradition, i.e., from early Yiddish Bible translations) result in a dream-like, strangely compelling, at times surrealist atmosphere. The texture of his stories, interwoven with elements taken from the wondrous world of folk tales and, at times, of gothic fantasy, further heightens their enigmatic, unresolvable complexity. Most of the stories collected in the two volumes of *Gedakht* were reprinted in a revised one-volume edition (1929), when his last volume of symbolist stories, *Fun Mayne Giter* ("Of My Estates"), also appeared.

The extraordinarily complex "Unter a Ployt" represents Der Nister's covert protest against Soviet cultural regimentation as well as anguished self-accusation for abandoning his symbolic art. However, his subsequent efforts to write realistic reportage could not quell his characteristic impulse, and *Dray Hoyptshtet* ("Three Capitals," Kharkov, 1934) subtly resists the required orthodoxy. Aided by shifts in Party policy in the 1930s, Der Nister saved his artistic conscience by writing *Di Mishpokhe Mashber,* a family saga which appears to heed the requirements of realism while serving the author's own far from orthodox literary purposes. This novel, only two of whose three or more projected volumes have been published (a third volume may exist in manuscript somewhere in the Soviet Union), is perhaps the single greatest achievement of Soviet Yiddish prose. As suggested in its title, *Di Mishpokhe Mashber* (*mashber,* Hebrew "crisis") was conceived as the portrait of a traditional and rooted society in dissolution. Der Nister intended to portray East European Jewry from the 1870s to the revolutionary period. The two volumes published, which constitute Part One of the projected whole, cover less than a year during the 1870s in *Berdichev, the most Jewish of all Ukrainian towns. The view taken of Jewish life, and particularly the magnificent picture of Bratzlaver Ḥasidism, indicate deep sympathy rather than the prescribed anti-religious bias. What Der Nister has done in this supposedly "realistic" novel is to transform the nameless characters of his mystic tales into name-bearing particular persons. The central characters of the novel are precisely the same agonized seekers one finds in his

tales and their concerns are the same. There is a remarkable continuity in Der Nister's creative career.

His war and postwar writings are impressive for the candor and courage with which strong national feeling is expressed, but undistinguished as literature. The informer of "Flora" (in *Dertseylungen un Eseyen* ("Stories and Essays") ed. N. Mayzel, New York, 1957) is a stereotyped villain, yet the story is of immense interest in its historical context. Nowhere else in Soviet Yiddish literature is a rabbi presented in so positive a light. Der Nister dared to envisage a Jewish future linked to the Jewish past. Unpublished manuscript material of Der Nister's from various periods appeared in *Sovetish Heymland* (no. 2, 1967), including a chapter from volume three of *Di Mishpokhe Mashber,* and in the collection *Vidervuks* ("New Growth," Moscow, 1969).

°DE' ROSSI, GIOVANNI BERNARDO (1742–1831), Italian Christian Hebraist. De' Rossi was born in Villa Castelnuovo, Turin. He became a priest in 1766 and graduated in theology in Turin. He had a profound knowledge of Hebrew language and medieval Jewish literature, and held the chair of Oriental languages at Parma University from 1769 to 1821. De' Rossi's library of Jewish literature, one of the most valuable that has ever been brought together, comprised 1,432 manuscripts (some illuminated), and 1,442 printed books including many incunabula, some unique. It was purchased for 100,000 francs in 1816 by Marie Louise, duchess of Parma, who presented it to the Palatine library at Parma, where it still is. De' Rossi compiled a catalogue of his collection (*MSS. codices hebraici bibliothecae I.B. De' Rossi, accurate ab eodem descripti et illustrati*, 3 vols., Parma, 1803), and wrote valuable works on Jewish incunabula (*Annales hebraeo-typographici saeculi XV*, Parma, 1795) and 16th-century typography (*Annales hebraeo-typographici ab anno 1501 ad 1540*, Parma, 1799) as well as on other subjects of Jewish interest, including studies of variant biblical texts and polemical literature. His *Dizionario storico degli autori ebrei e delle loro opere* (2 vols., Parma, 1802; Ger. ed. Leipzig, 1839) is still of value, especially for the biographical notes on contemporary Jewish scholars.

[Ariel Toaff]

DERRIDA, JACQUES (1930–2004), French philosopher and literary critic. Derrida was born and raised in El-Biar, near Algiers. In 1942, he was expelled from school as result of antisemitic measures. In 1949 he moved to France and beginning in 1952 he studied at the École Normale Superieure, under Michel Foucault and Louis Althusser. He served in the French army in Algeria from 1957 until 1959 as a teacher of French and English. Until 1962 he hoped for the coexistence of the French of Algeria within an independent Algeria. In the same year Derrida resettled in Nice.

From 1960 to 1964, Derrida taught at the Sorbonne. From 1964 to 1984 he taught at the École Normale Superieure. In 1983, he founded the Collège International de Philosophie in Paris. In 1967 he published the first of a long series of books. He was not only a prolific writer, he also traveled extensively, lecturing and teaching. He was celebrated in the academic world, mostly in a number of American universities (e.g., Johns Hopkins, Yale, Cornell, City University of New York), but was almost excluded from the French university world. Nevertheless, his work was appreciated by many French academicians, among them Ph. Lacoue-Labarthe and J.L. Nancy, E. Levinas, and S. Kofman.

Derrida was an outspoken leftist intellectual. When visiting Israel, he had talks with Palestinian intellectuals. In 1981, he traveled to Prague for a clandestine seminar in support of the anti-totalitarian movement and was arrested by the police on the false accusation of drug possession. He was allowed to leave Czechoslovakia thanks to the intervention of François Mitterand and the French government. He also protested against apartheid in South Africa.

Among his many awards and honors he received the Nietzsche prize in 1988 and the Adorno Prize in 2001. His oeuvre has been translated into English, German, Spanish, Italian, Japanese, and other languages.

Derrida's Hermeneutics

Derrida developed a method, known as "deconstruction." Deconstructionism is neither nihilism nor destruction; it is affirmative openness towards the other. Derrida maintained that the written word is characterized by the absence of the original voice which gave it meaning. It is impossible, therefore, to know the intention behind the written word. Consequently, when one reads what is written, multiple meanings are possible: nobody has a monopoly on the "right" meaning. Letters and documents, from which the writer is absent, are open to endless interpretations, since there is no presence of the speaker who – face to face with the one who receives his words – eventually corrects his words or explains them. Texts are polyvalent and function as letters that did not reach

their destination and are now read by whoever happens to read them.

Derrida studied at the Leuven Husserl Archive, and was long occupied with Husserl, whose phenomenology he deconstructed. Protesting against a metaphysics of presence and origin, where everything is transparent, Derrida showed the multiple fissures in texts and the indecidability that is implied in any text. He initiated a new hermeneutic. In a Heraclitian and anti-essentialist way, he showed how the meaning of a text changes all the time. The text is capable of infinite signification, and receives meaning not by reconstructing the intention of its writer, but through its autonomous function. The same book or letter can be read by different readers in different ways, and a second or third reading is not equal to the first. By limiting the text to one meaning, one excludes all other possible meanings. Meanings are produced through the different contexts of the reader and through the context in which a written document is placed.

A word also possesses several meanings. This is clear when one takes into account misunderstandings. One phonetic phenomenon can result in a proliferation of meanings, as is the case in the French homophone words l'est, l'é, lait, legs, or ontologie-hauntologie. The same word can also denote something completely different in another language, as in the case of the German "Gift," poison, that is the homophone of the English "gift," present.

Derrida and Postmodernism

Derrida is one of the most provocative thinkers of our time, and his thought is part of postmodern philosophy, which does not recognize universal truth and resists the imperialism of the sciences. In postmodernism, each text is a pretext for a multitude of interpretations and is open to the fantasy of the reader. The entire world is one big text and there is no limit to its explanations. Just as in medieval paintings cathedrals are carefully placed in biblical landscapes, the modern reader places his own point of view in every text. There is no absolute, objective truth, and the only truth that is recognized is that of the interpreting person. This does not mean that everyone has his own truth. It would be inaccurate to say that Derrida was a relativist. What he strove for is the advent of the wholly other outside the horizon of the same. In his numerous writings, there is a plenitude of associations, and in his books and articles he placed different texts next to each other, so that they began "speaking."

Derrida's Judaism as Refusal of Totality

Derrida admitted that he did not know Jewish culture. This non-knowledge was then elevated to a fundamental "not belonging." In this way, he thought of himself as "the last Jew" (*le dernier des juifs*): more Jewish than the Jews in his exemplary non-belonging. To be Jewish for Derrida is coterminous with the refusal of the same and the openness towards the wholly other. This non-identification is also what comes into the fore in his deconstructive method.

Derrida was French and Jewish. He thought that he was more French than the French people, because he is not a real Frenchman. In a parallel manner, he thought that he was more Jewish than every Jew, because he lacked a concrete engagement towards Judaism. In his view, he is and is not, at the same time.

Like Edmond Jabès, Derrida regarded the basic characterisitic of Judaism as a fundamental non-belonging to an all-absorbing totality. Jabès' oeuvre can be read as a poetic commentary on Derrida. Much has been written on the Jewish elements in the writings of such "non-Jewish Jews" (the term is from Deutscher) as Kafka, Marx, and Freud. This is also the case with Derrida, who saw his Jewishness as something contingent and denied that he belonged to any concrete Judaism, but conceived of this refusal as fundamentally Jewish.

Metaphoric Judaism: Deconstruction as Judaism

Derrida's Judaism is devoid of any concrete link to history, land, or law. It is at the same time a Judaism that believes because of its openness to the unabsorbable other, and is atheistic, without concrete content. Transcending his merely ethnic Jewishness, Derrida discussed Judaism, touching on many subjects: circumcision, bar mitzvah, the law, messianism, memory, and resurrection. Yet, again, the Judaism that Derrida encircles is without nation or religion. There is a link between Judaism and deconstruction: both are searching. Judaism becomes the example *par excellence* of his deconstructive method.

Derrida does not desert faith, nor does he exclude it. His deconstructionism affirms what is beyond the possible; it affirms the impossible, the coming of the wholly other (*tout autre*). It is an engagement, a certain faith, and a-theological hope for what is coming. Derrida alters religious sources by referring them to his expectation of what should come. Writing on religious notions like circumcision, confession, eschatology, or messianism, he divests these terms of their concrete, particular meaning and transcends them by translating them into something which is not present and which is hoped for. By reinventing these terms, he escapes the foreseeable and keeps the future (*l'à-venir*) open ended. In this sense, his method is not far from that of negative theology that refuses to define the wholly other.

Derrida's openness to the gift (*le don*) of justice and of the democracy to come lends to his work a touch of hope, in what was for him the best of Jewish tradition.

Derrida's works include *L'Ecriture et la différence* (1967), *La Voix et le phénomène* (1967), *De la Grammatologie (1967), La Dissémination* (1972), *Marge – de la philosophie* (1972), *Glas* (1974), and *Schibboleth* (1986). Later writings are collected in *Jacques Derrida and the Humanities: A Critical Reader,* ed. T. Cohen (2002).

[Ephraim Meir (2nd ed.)]

DERSHOWITZ, ALAN M. (1938–), U.S. law professor and civil liberties lawyer. Dershowitz was born in Brooklyn, New York, graduated from Yeshiva University high school and Brooklyn College. He received his law degree from Yale Law School, where he was editor-in-chief of the *Yale Law Journal.* He was law clerk to Chief Judge David Bazelon, U.S. Court of Appeals, and Justice Arthur Goldberg of the U.S. Supreme Court. In 1967 he was appointed professor at Harvard Law School, where his special subjects were criminal law, psychiatry and law, and constitutional litigation. He served as consultant to the government of China on the revision of its criminal code, as a member of the President's Commission on Marijuana and Drug Abuse, the President's Commission on Causes and Prevention of Violence, and the President's Commission on Civil Disorders, and he was director of the National Institute of Mental Health. He was also chairman of the Civil Rights Commission for New England and of the Anti-Defamation League of B'nai B'rith, and was a prominent member of the board of directors of the American Civil Liberties Union.

Dershowitz lectured widely and wrote extensively (in books, magazines, and newspapers) on civil liberties and public affairs. He served as counsel in many important legal cases involving civil liberties, and became a public figure especially through his participation in television programs and interviews.

Dershowitz played a leading role in influencing Congress by promoting the theory of "presumptive sentencing," intended to obviate discrepancy in criminal sentencing for the same crimes.

Between 1967 and 1986 Dershowitz represented clients in 11 cases in the U.S. Supreme Court. Some of his cases attracted national attention, including those in which he represented Patricia Hearst, Claus von Bulow, the trial lawyer F. Lee Bailey, and Kenneth Tyson. Although stridently loyal to Jewish causes, he defended the constitutional right of the American Nazi party in 1977 to march in Skokie, Illinois, for he maintained that as a civil libertarian it was his duty to uphold the constitutional right of free speech, which includes the right to demonstrate peacefully. Dershowitz thinks of himself as a liberal in the tradition of John F. Kennedy and Hubert Humphrey. Although opposed to the philosophy and actions of the Jewish Defense League, in 1972 he successfully defended Sheldon Siegel, a member of the JDL, on a murder charge arising out of the blowing up of the offices of Sol Hurok to protest Hurok's sponsorship of Russian performers. Dershowitz succeeded at the trial of Siegel to expose the case as a police frame-up. *Time* magazine called him "the top lawyer of last resort in the country." He was on the defense team in the 1995 O.J. Simpson murder trial. *Newsweek* described Dershowitz as "the nation's most peripatetic civil liberties lawyer and one of its most distinguished defenders of individual rights."

In 2002 Dershowitz stirred up much controversy when he advocated the legalization of torture by means of a "torture warrant." He proposed that no torture be permitted without a warrant issued by a judge, his rationale being that it is practiced in any case, so better to create some parameters to monitor it. The application for such a warrant, he explained, would be "based on the absolute need to obtain immediate information in order to save lives, coupled with probable cause that the suspect had such information and is unwilling to reveal it."

From 1993, Dershowitz was Felix Frankfurter Professor of Law at Harvard Law School. His books include *The Best Defense* (1982); *Reversal of Fortune: Inside the von Bulow Case* (1982), which was made into a successful film; *Taking Liberties: A Decade of Hard Cases, Bad Laws and Bum Raps* (1988); his autobiography *Chutzpah* (1991); *Contrary to Popular Opinion* (1992); *Reasonable Doubts: The Criminal Justice System and the O.J. Simpson Case* (1997); *The Vanishing American Jew: In Search of Jewish Identity for the Next Century* (1997); *Sexual McCarthyism: Clinton, Starr, and the Emerging Constitutional Crisis* (2000); *Why Terrorism Works: Understanding the Threat, Responding to the Challenge* (2002); *Shouting Fire: Civil Liberties in a Turbulent Age* (2002); *The Case for Israel* (2003); *America Declares Independence* (2003); *Rights from Wrongs: The Origins of Human Rights in the Experience of Injustice* (2004); and *America on Trial: Inside the Legal Battles That Transformed Our Nation* (2004).

[Milton Ridvas Konvitz / Rohan Saxena and Ruth Beloff (2nd ed.)]

DÉRY (Deutsch), TIBOR (1894–1977), Hungarian author and poet. Déry's early work, which was naturalistic and romantic, was published in the journal *Nyugat* ("West"). He joined the Hungarian Communist Party in 1919. He left the country in the following year and eventually settled in Vienna, where he published verse influenced by the activist-surrealist school. His first major work, *Szemtől szembe* ("Face to Face"), a trilogy of interrelated short novels, was published in the early 1930s. In 1933 Déry began writing his trilogy *Befejezetlen mondat* ("Unfinished Sentence"), which depicts the problems of a young man of bourgeois origin seeking the road to Communism. As a result of his involvement in the workers' uprising of 1934, Déry was forced to leave Vienna and finally returned to Hungary, where he was forbidden to publish most of his work. He went into hiding during World War II, but when his works were published after the war, he won recognition both in Hungary and abroad. The works which he wrote between 1955 and 1956, short stories entitled *Szerelem* ("Love") and a

short story, "Niki," were designed to expose the evils of the "cult of personality." For his part in the short-lived 1956 revolution, as a prominent member of the Petőfi Writers' Club, Déry was sentenced to nine years' imprisonment. He was released in 1961 and, after a short interval, was allowed to resume the publication of his work.

[Itamar Yaos-Kest]

°DERZHAVIN, GABRIEL ROMANOVICH (1743–1816), Russian administrator and poet; his investigation of the Jewish problem in his role as administrator influenced the status of the Jews in Russia and Russian policy toward the Jews from the beginning of the 19th century to the end of the czarist regime. Derzhavin was sent by the authorities in 1799/1800 to Belorussia, incorporated into Russia after the last partition of Poland, to investigate the conditions of Jewish life there in connection with a famine that had hit the peasants in the region. His conclusions were influenced both by the local Polish nobility, who blamed the Jews for the sufferings of the peasants, and by the Jew Nathan Note *Notkin, who advised Derzhavin to urge the government to direct the Jews from their traditional occupations and way of life to employment in crafts and colonization of "New Russia." The report Derzhavin submitted shows that he believed the allegations made against the Jews and the Jewish character. He suggested that the Jews should be divided into four estates according to income and place of residence, and that the steppes of Astrakhan and "New Russia" should be made available for Jewish agricultural colonization. Jews should be prohibited from keeping taverns and expelled from the villages in the old *Pale of Settlement.

[Abba Ahimeir]

DESECRATION (Heb. חִלּוּל, *ḥillul*; lit., "desanctification" or "profanation").

In the Bible

Desecration occurs when the holy is replaced by the profane or impure, the difference between the two being that the impure must be purified before it can be resanctified (e.g., the purging and consecration of the altar on the *Day of Atonement, Lev. 16:19). The holy things which are subject to desecration or contamination are (1) objects, e.g., sacrifices (Lev. 19:8; 22:3), priestly dues (Num. 18:22), the sanctuary and its sancta (Lev. 21:12, 23; Ezek. 23:39; 44:7); (2) persons, e.g., priests (Lev. 21:4, 9); (3) sacred time, e.g., the Sabbath (Ex. 31:14); and (4) God's name (see below).

The paradigm of desecration is Ezekiel 22:26: "They [the priests] have desecrated My sancta: they did not differentiate between the holy and the profane and did not teach [distinguish] between the impure and pure … so that I am profaned in their midst" (cf. Lev. 10:10; Ezek. 44:23). Thus, owing to priestly negligence in protecting the holy realm, the sancta, and even God, have been desecrated. Actually, there is but one cause for desecration: the illicit contact of the holy realm with the profane or impure, as in the case of the lay person's consuming sacred food reserved for the priests (Lev. 22:15; Num. 18:22); the priest incurring forbidden impurity (Lev. 21:4); the practicing of Moloch worship (Ezek. 23:29; cf. Lev. 20:3); and foreigners entering the temple area (Ezek. 44:7; cf. Ps. 74:7). By figurative extension, desecration is also applied to whoredom (Lev. 19:29; 21:9,14; Num. 25:1) and to the violation of God's injunctions (Lev. 22:9; Ps. 89:32) and covenant (Mal. 2:10). Legitimate desecration (lit., desanctification) takes place when the Nazirite (called "holy," Num. 6:8) ends his vow and brings a purification offering to return to his former profane state (Num. 6:14), and when the fourth-year fruit harvest is dedicated to the Lord (Lev. 19:24; cf. Deut. 20:6; Jer. 31:4). The sages logically applied the term to the redemption of all property given over ("sanctified," Lev. 27:14ff.) to the sanctuary (TJ, Naz. 2:1, 51 d). The sphere of holiness is identified with God's presence on earth. Any reduction in holiness is ipso facto a reduction in the divine domain; it is therefore a *ḥillul shem YHWH* ("a desecration of God's [power or] Name"). The desecrations described above are also desecrations of God's name, e.g., those connected with priests (Lev. 21:6; 22:2), sacrifices (Lev. 22:32; Mal. 1:12), altars (Amos 2:7–8), and Moloch worship (Lev. 18:21; 20:3). One other desecration falls exclusively within this category: the false oath (Lev. 19:12; Num. 30:3; Jer. 34:16). The prophets, moreover, not only condemn Israel on this charge but turn it back upon God in their lawsuit against Him. The exile, they argue, is a desecration of God's name (e.g., Isa. 48:11) not only because the nations look upon Israel's humiliation as a sign of their God's impotence (so pleads Moses, Num. 14:15–16), but because it constitutes a violation of God's promise of the land to the forefathers. In Ezekiel this argument is especially prominent. Basing himself on the priestly promise that God's covenanted oath is inviolable (Ezek. 20:44; cf. Lev. 26:42–45), the prophet affirms that Israel will be restored to its land (Ezek. 20:37ff.; 36:20–23; 39:7) though it does not merit it (Ezek. 20:44; 36:32). The principle of intention plays a part in the penalties prescribed for desecration; if the desecration is willful, it is punishable by death (e.g., Num. 18:32), but if caused by accidental tampering with sancta (Lev. 5:14–19) or by swearing falsely (Lev. 5:20ff.), it is expiable through proper remorse and sacrifice (*'asham*). See *Sacrifices.

[Jacob Milgrom]

After the Bible

In the Mishnah sacred things could often be profaned by reciting the correct formula, a procedure obviously adopted to simplify social and commercial intercourse. It enabled the scholar to dine at the home of the **am ha-arez* who was suspected of not tithing his produce, or to partake of his own produce that he had not managed to tithe before the Sabbath (Dem. 7:1–5). Incense donated to the Temple or left over from a previous year's allocation had to be temporarily "profaned" in order to make it available in the following year for use in the Temple service, which the rabbis insisted could not be fi-

nanced by private offerings or surpluses. It was profaned by paying the salaries of the incense makers with it and then repurchasing it from them with the moneys from the obligatory annual *Shekel contributions of the community. This was in fact a purely bookkeeping operation which, however, served to impress upon the people the highest standards of probity and ritual propriety when dealing with sacred things, which could permanently revert to lay use by payment to the Temple treasury in money only, but not in labor (Shek. 4:5, 6; Tosef., Shek. 2:9).

[Aryeh Newman]

DE-SHALIT, AMOS (1926–1969), Israeli scientist and educator. Born in Jerusalem, de-Shalit received his scientific training as a pupil of Joel *Racah at the Hebrew University, Jerusalem. De-Shalit's major field of research was theoretical physics concerning nuclear structure theory, and his most important contributions were on the nuclear shell theory. In 1963 he published, together with Igal *Talmi, *Nuclear Shell Theory*. De-Shalit headed the nuclear physics department of the *Weizmann Institute of Science, Reḥovot, from 1954 to 1964. He was scientific director of the Weizmann Institute from 1961 to 1963 and its director general from 1966 to 1968. He was elected a member of the Israel Academy of Science in 1963 and won the Israel Prize for Natural Sciences in 1965. He was an outstanding lecturer and had a tremendous enthusiasm for improved science teaching, which he succeeded in communicating to others. He believed that talented youngsters were in this technological age one of a nation's greatest assets, and that every effort should be made by the community to cultivate these talents. He believed that the future of higher education in the sciences was wholly dependent on the basis given at secondary education level. On his initiative the Israel Ministry of Education set up a committee for the promotion of the teaching of natural sciences in Israel in secondary schools and he served as chairman.

DESHEH, AVRAHAM ("**Pashanel**"; 1926–2004), Israeli producer. It is hard to imagine contemporary Israeli culture without the titanic influence of Avraham "Pashanel" Desheh. The number of bands and artists who owe their start in the entertainment business to Pashanel is enormous. The *Ha-Gashash ha-Ḥiver comedy trio, the seminal rock band Kaverret, the theater and singing troupe Green Onion, comedian Sefi Rivlin, and pop singer Yardenah Arazi are just some of the top acts who in all likelihood would not have made it had it not been for Pashanel.

Pashanel was born in Tel Aviv as Avraham Greenberg. His first encounter with the world of theater was as a taxi driver, after his release from the British army, when his fares included actors from the Cameri Theater. A career in theater soon became a burning ambition and he achieved his objective in 1957, when he was appointed director of the Zirah Theater. His first major stage success came in 1957 when, along with Chaim *Topol and Uri *Zohar, he created the popular Green Onion 13-member acting-singing troupe. Pashanel, Topol, and Zohar also put out a string of successful of musicals, including *Evita, Joseph and His Dreamcoat*, and *Fiddler On the Roof.*

After the break-up of Green Onion, in 1961, Pashanel and Zohar established the Amami theater production agency, which made a number of movies directed by Zohar, such as *Ḥor ba-Levanah* ("Hole In The Moon") and *Ha-Tarnegol* ("The Rooster"). Around this time Pashanel was also instrumental in establishing the Hammam music club in Jaffa and managed the hit pop group The Roosters, which included Yehoram *Gaon, Shaike Levi, Gavri Banai, and Israeli (Poli) Poliakov. Under Pashanel's guidance, the latter three later became the long-running seminal comic threesome Ha-Gashash ha-Ḥiver.

In his capacity as a producer, Pashanel was a leading force in all areas of the performing arts. He also had a well-developed knack for creating successful teams. The leading collaborations he initiated included the confluence of Ha-Gashash ha-Ḥiver with actor-writers Shaike *Ophir, Nissim *Aloni, and Yossi *Banai, and the all-female pop trio Shokolad Menta Mastik with director-producer Tzadi Tzarfati.

In his heyday, in the 1950s, 1960s, and early 1970s Pashanel was the undisputed king of the Israeli entertainment family. In 2002 he was given a Lifetime Achievement award in recognition of his contribution to Israeli theater, and he received a similar accolade for his movie work at the 2003 Jerusalem International Film Festival.

[Barry Davis (2nd ed.)]

DESKARTA (**Diskarta, Daskarta**), Babylonian town on the river Diala, about 55 mi. (90 km.) northeast of Baghdad. Arab writers ascribe the establishment of the town to Hormizd I (reigned 272–3), though he probably only fortified an already existing village. The town was of great importance for trade with Persia, and it may be assumed that a Jewish community existed there from its reestablishment. The earliest definite references to such a community are from the fourth century. A certain Judah of Deskarta, a disciple of Rava and teacher of Pappa, is frequently mentioned. R. Huna of Deskarta was another disciple of Rava, which leads to the supposition that the Jewish community of Deskarta came under the influence of the academy of Maḥoza. At the time of Chosroes II Parveg (590–628), the town became the Sassanid capital. It was destroyed by Heraclius in 628 and its ruins are still visible south of Shahraban. The name derives from Persian *das* ("district") and Aramaic *karta* ("town"), and is also used in talmudic literature as a name for a place in general, e.g., "the *deskarta* of slaves" (Git. 40a) and "the *deskarta* of the exilarch" (Er. 59a).

[Yitzhak Dov Gilat]

DESMAESTRE, JONAH (late 14th century), Majorcan scholar. Desmaestre was the head of the local yeshivah. De-

spite his piety and full devotion to Torah and talmudic studies, he was well versed in philosophy and mysticism, mathematics and astronomy. Majorca was an important center of astronomical studies. He was the father-in-law of Simeon b. Ẓemaḥ *Duran, and his name is mentioned several times in the responsa of his descendants. In the documents of the kingdom of Aragon, he is called Biona del Maestre. Desmaestre studied in the yeshivah of Barcelona under Perez ha-Kohen. Considered one of the most pious men of his generation, Desmaestre received permission to travel to Aragon to make representations to the king on behalf of his community. With Ḥasdai *Crescas he did much to promote the interests of the Jews of the Kingdom of Aragon. He acted as the leader of the Jews of Majorca and joined forces with the leaders of the other communities in the Kingdom to improve the conditions of the Jews. In 1383, he succeeded in obtaining a grant of privilege from Pedro IV of Aragon, which reinforced the authority of the communal leadership and protected it from harassment by converts to Christianity. He vigorously defended the Jews of Lérida who had been accused of buying the consecrated Host. There is no evidence to confirm the report that Desmaestre died as a martyr in the persecution of 1391.

DE SOLA, prominent Canadian family in the 19th and early 20th centuries. ABRAHAM DE SOLA (1825–1882), rabbi, author, educator, was born into a London family of limited means. He received his general education at the City of London School and Jewish education from his father, David Aaron, and linguist Louis Loewe, secretary and aide to Moses Montefiore.

De Sola applied to be Second Hazan at Bevis Marks, but David Piza of Montreal got the job. De Sola, in turn, assumed Piza's position at Montreal's Shearith Israel in January 1847 where he used his pulpit to assert the positive value of emancipation for the Jews. He was convinced that Jews, even as they embraced the opportunities which equality offered, need never compromise their beliefs or practices but could remain what he called "consistent" Jews. De Sola lived by this credo. Looking to create a strong Montreal Jewish community, he soon organized a Hebrew Philanthropic Society, then a congregational school modeled on that of Rebbeca Gratz in Philadelphia. He was active in later incarnations of the Philanthropic Society and assumed a leadership role in the fraternal organization Kesher shel Barzel. De Sola also entered the intellectual life of Anglo-Montreal. He joined the Natural History Society, and eventually became its president. In 1848 he was appointed a lecturer in Hebrew and rabbinic literature at McGill College and in 1853 was named a professor of Hebrew and Oriental literature. He was awarded an honorary doctor of laws in 1858.

De Sola was a prolific author. He revised a catechism for use in Jewish schools in 1853, and in 1854 co-authored a Jewish calendar for 50 years, which included up-to-date information on the Jewish communities of North America. In 1873 he purchased from Isaac Leeser's estate the copyright, plates, and some stock of Leeser's Bible translations, Leeser's edition of the Sephardi liturgy (which De Sola considered superior to the Ashkenazi) as well as other works. De Sola published a number of works on the compatibility of science with Bible and Rabbinic Judaism. He joined some of Montreal's leading scientists, most notably the principal of McGill College, J.W. Dawson, in proclaiming the principles of natural theology and disdain for Darwin. De Sola outlined his views on science and religion in his portrayals of Jewish intellectuals as well as in more specialized studies, most notably his 1852–53 serialized "Observations on the sanatory institutions of the Hebrews as bearing upon modern sanatory institutions," published in 1861. De Sola also had an interest in historical issues and published derivative studies on the Jews of France, Poland, and England.

Abraham de Sola joined Montreal's Jewish patricians when he married Esther Joseph in 1852. They had seven children.

[Richard Menkis (2nd ed.)]

Abraham de Sola's eldest son, AARON DAVID MELDOLA (1853–1918), who was born in Montreal, was a Zionist, and the first Canadian-born rabbi. He studied under his father's direction, became his assistant in 1876, and succeeded him on his death in 1882 as rabbi of the Spanish and Portuguese synagogue. He was a member of one of the commissions appointed to deal with the Jewish school question in Quebec as early as 1886. De Sola, who wrote many newspaper articles in defense of Orthodoxy, was appointed first vice president of the Orthodox convention in New York in 1898 and was one of the committee of three who drew up its declaration of principles. In 1902, as vice president of the Union of Orthodox Jewish Congregations, he issued a protest against the Central Conference of American Rabbis for discussing the transfer of the Sabbath to Sunday.

CLARENCE ISAAC (1858–1920), the third son of Abraham de Sola, was a Zionist and an industrialist. De Sola, who was born in Montreal, served as president of the Federation of Canadian Zionist Societies from its inception in 1899 until his death. He was also a member of the Zionist General Council of the World Zionist Organization. De Sola was a leading figure in the Canadian shipbuilding industry and general manager of the Comptoir Belgo-Canadien, the Belgium steel and construction trust. He was responsible for the establishment of a steamship service between Montreal and Antwerp. From 1904 until his death he was Belgian consul in Montreal.

[Ben G. Kayfetz]

DE SOLA, JUAN BARTOLOMÉ (c. 1800–1858), Venezuelan general. Much confusion has existed about the place and date of birth of Juan De Sola. Presumably the son of Jeudah De Sola Nunes da Costa and of Sarah Ricardo, he was born c. 1800 on the island of St. Thomas. With the outbreak of the war for independence he joined the army of Gran Colombia (which included New Granada (Colombia) Venezuela, and Ecuador), obtaining the rank of lieutenant at the age of 19. In 1820 he was transferred to the "Bravos de Apure" Battalion, where he remained until the battle of Carabobo (1821). He was promoted to captain and decorated with the Coat of Arms of the "Vencedores de Carabobo" and with the bust of the liberator Simón Bolivar. To facilitate his marriage Juan embraced Catholicism in 1823. In the book where his conversion is registered one may read: "I proceeded to the instruction of Mr. Juan De Sola, Captain of the Battalion Apure, of the Hebrew nation, natural of St. Thomas […] I baptized him solemnly according to the Roman ritual and I imposed upon him the name of Juan Bartolomé de la Concepción." In 1830, Juan Bartolomé, then colonel of artillery, requested Venezuelan nationality, which was granted to him immediately. In 1837 he was appointed provisional governor of the Carabobo province. As president of the Provincial Delegation he sanctioned the ordinance that would create the public lighting system of the province. In 1858, he was promoted to the rank of brigadier general, but he died in Valencia (Venezuela) before he could take up the appointment.

[Jacob Carciente (2nd ed.)]

DESSAU, BERNARDO (1863–1949), Italian experimental physicist. Born in Offenbach, Germany, Dessau became an Italian citizen. He was a member of the Italian Academy of Sciences and professor at the University of Perugia (1904). He acted as *shoḥet* for the small Perugia Jewish community. An active Zionist, he founded *Il Vessillo Israelitico*, the first Italian Zionist periodical. He wrote books on wireless telegraphy, physical and chemical properties of alloys, and physics.

DESSAU, HERMANN (1856–1931), German historian and philologist. The son of the director of a Jewish school, Dessau studied under Theodor *Mommsen and became his collaborator at the *Corpus Inscriptionum Latinarum*. In 1884 he was appointed lecturer and in 1896 professor of ancient history at the University of Berlin; from 1900 he worked as the Latin epigraphist of the Prussian Academy. Dessau's principal studies were related to Latin inscriptions, the political and administrative problems of the Roman Empire, and Latin and patristic literature. He edited and published the basic book in the field of Latin inscriptions, *Inscriptiones Latinae Selectae* (5 vols. in 3, 1892–1916); his work on the Roman Empire, *Geschichte der roemischen Kaiserzeit*, remained incomplete, only the first two volumes being published (1924–30). Dessau was deeply attached to the traditional roots of Judaism. In 1919 he joined the council of the research department of the Akademie fuer die Wissenschaft des Judentums in Berlin. The last chapter of his book on the Roman Empire, entitled "Judaea und die Juden," was directed against the chapter bearing the same title in Mommsen's history of the Roman Empire. His mastery both of Roman history and of talmudic sources enabled him to attempt a reevaluation of the period of the Second Temple in the light of its Jewish character as well as in the context of general history.

DESSAU, PAUL (1894–1979), German composer. The grandson of a cantor, Dessau was born in Hamburg. He was co-répétiteur in Hamburg (1912) and conducted operetta at the Tivoli Theatre, Bremen (1913). In 1919 he became co-répétiteur and conductor in Cologne. In 1925 he was appointed principal conductor at the Stätlische Oper, Berlin, and won the Schott Prize for his Violin Concertino. He left Germany in 1933 and visited Palestine. In 1939 he settled in New York and wrote a number of film scores (such as *Adamah* in 1947), but his political convictions led him to return to East Germany in 1948 and he made his home in East Berlin. Dessau composed in several fields. His vocal music, influenced by the concise verse of Bertolt Brecht (whom he met in New York in 1943), embraced almost every genre from political song to cantata and full-length opera. The latter include the operas *Mutter Courage und ihre Kinder* (1946), *Das Verhoer des Lukullus* (1951), *Puntila* (1957–59), *Lanzelot* (1969), *Einstein* (1971–73), and *Leonce and Lena* (1977–78). Dessau wrote also functional music for theater and radio. In 1936, he composed for the synagogue an oratorio, *Haggadah,* for which Max *Brod supplied the text. His early works were in free tonality; from 1936 he was influenced by the twelve-tone technique of *Leibowitz. After the rigorous separation of West and East Berlin, he remained one of the few artists allowed to commute between the two Germanys. He became a member of the East Berlin Deutsche Akademie der Künste in 1952 and was appointed professor in 1959. He was honored by both the East and West Berlin academies, he received an honorary doctorate from Leipzig University (1974), and four National Prizes of the German Democratic Republic (1953, 1956, 1965, 1974). Among his works are operas for children, the cantata *Requiem for Lumumba* (1963), and symphonic and chamber music.

[Peter Emanuel Gradenwitz / Israela Stein (2nd ed.)]

DESSAUER, FRIEDRICH (1881–1963), German engineer, biophysicist, and philosopher. Born in Aschaffenburg, Dessauer originally worked in the X-ray industry, and in 1921 became professor of biophysics at Frankfurt. He was a Center Party member of the Reichstag from 1924 to 1933, and editor of the *Rhein-Mainische Volkszeitung und Handelsblatt*. When

the Nazis came to power he fled to Istanbul, where in 1934 he set up the biophysical and radiological institute. He became professor of experimental physics at Fribourg, Switzerland, 1937, but returned to Frankfurt in 1950 and was reappointed to a professorship there.

Dessauer wrote numerous scientific books and articles as well as many philosophical works. The chief of these were *Leben, Natur, Religion* (1924, 1926[2]), *Philosophie der Technik* (1927, 1933[3]), *Mensch und Kosmos* (1948), *Die Teleologie in der Natur* (1949), *Prometheus und die Weltuebel* (1959), and *Was ist der Mensch? Die vier Fragen des Immanuel Kant* (1959). He analyzed the assumptions of science and technology and their connections with philosophical and religious principles.

[Richard H. Popkin]

DESSLER, ELIJAH ELIEZER (1891–1954), one of the personalities of the *Musar movement. Dessler was born in Homel, Russia. His father, Reuben Baer, had been a pupil and subsequently one of the directors of the *bet ha-talmud* in the small town of Kelme (Lithuania), founded by Simḥah Zissel Ziv, the outstanding disciple of Israel *Lipkin (Salanter), founder of the Musar movement. Reuben Baer's home, however, was in Homel where he engaged in business, and there Dessler passed his early youth. At the Kelme *bet ha-talmud*, he pursued talmudic studies and his teachers included Ẓevi Hirsch Broda and Nahum Velvel Ziv, leading exponents of Musar. On the outbreak of World War I he returned to Homel, studying at the yeshivah established there by refugees from the Lithuanian yeshivot and administered by his father. In Homel he came close also to ḥasidic circles and was influenced by their ideas. In 1919 he married the daughter of Nahum Velvel Ziv and went to Riga where he engaged unsuccessfully in business. In 1929 he settled in London where he became the rabbi of a synagogue, first in East London and then in North-East London, and became the supervisor of a large *talmud torah*. He exercised a profound influence on the teaching of Musar, not only because of the profundity of his ideas but on account of his personal ethical conduct. In 1941 he accepted an invitation to become director of a *kolel* for advanced Talmud study in *Gateshead, England, where he also lectured on Musar. He served in an honorary capacity, earning his livelihood by giving private lessons. The *kolel* added to the prestige and development of the Gateshead yeshivah and his influence extended beyond England to other countries, through its graduates who served as heads of yeshivot. In 1947 Dessler accepted the invitation of Rabbi Joseph Kahaneman to become the spiritual supervisor of Ponevezh yeshivah in Bene-Berak, Israel, and there he remained until his death. His teachings were a harmonious combination of the doctrine of Musar, particularly as taught in Kelme, with the concepts of Jewish religious philosophy, *Kabbalah, and *Ḥasidism. Some of his ideas were published by his pupils, in part from his own manuscripts and in part from notes taken from his lectures, *Mikhtav me-Eliyahu* (3 vols., 1955–64). The work contains attempts at a confrontation between Jewish and general philosophy, arising from the problems raised by those of his pupils who had studied philosophy. A periodical named after him is published at irregular intervals in London by his followers, in which his ideas are discussed.

[Zvi Kaplan]

DESSOIR, LUDWIG (originally **Leopold Dessauer**; 1810–1874), German actor. He was born in Posen, the son of a merchant. Dessoir first appeared on the stage at the age of 14. From 1831 he acted in provincial theaters in character and heroic roles in classical repertoire (Shakespeare, Goethe, Schiller). He succeeded Karl August Devrients at the theater of Karlsruhe and was invited in 1849 to the Royal Theater in Berlin, where he continued his work for the next 23 years. His ability to analyze and interpret the spiritual content of a role enabled him to render many subtle characterizations. Dessoir was considered one of the finest Shakespearean actors of his time, not only on the German stage, but also in London, where he appeared in 1853. Lear, Othello, Hamlet, and Coriolanus, as well as Faust, Uriel Acosta, and Louis XI, were among his best portrayals.

BIBLIOGRAPHY: O.F. Genischen, *Berliner Hofschauspieler* (1872); G.H. Lewes, *On Actors and the Art of Acting* (1875). **ADD. BIBLIOGRAPHY:** C. Sander, *Ludwig Dessoir – Ein Schauspieler des 19. Jahrhunderts (Rekonstruktion einer Schauspielkunst)* (1967).

DESSOIR, MAX (1867–1947), German philosopher and psychologist, of Jewish origin (he described himself as a "*Vierteljude*"); son of Ludwig *Dessoir. Dessoir studied with Wilhelm Dilthey and received doctorates in philosophy and medicine. He was professor of philosophy in Berlin, 1897–1934 and taught until 1933. He only left Berlin in 1943 and returned to Germany in 1946 and taught at Frankfurt. Dessoir was particularly interested in marginal psychological phenomena, and in 1889 coined the term "parapsychology." He described and criticized the anthroposophy of Rudolph Steiner. Dessoir anticipated *Freud by introducing a theory of the subconscious, based on experiments carried out with hypnosis and dream analysis and psychological observation of daily life. Dessoir was also interested in aesthetics and "the general science of art" – a branch of study he founded. Aesthetic objects (or essences), in his view, include many phenomena in nature and in everyday life; while works of art have not only an aesthetic significance but also possess functions of meaning which embrace the whole range of culture: religious, moral, pedagogical, political, social functions, etc. Dessoir's aesthetics are mainly objectivist. He founded the *Zeitschrift fuer Aesthetik und allgemeine Kunstwissenschaft* in 1906 and was its editor for 30 years. His works include *Das Doppel-Ich* (1890); *Geschichte der neueren deutschen Psychologie* (1894); *Aesthetik und allgemeine Kunstwissenschaft* (1906); *Vom Jenseits der Seele* (1917); *Der Okkultismus in Urkunden*, 3 vols. (1925), ed. by M. Dessoir; *Beitraege zur allgemeinen Kunstwissenschaft*

(1929); *Die Rede als Kunst* (1940); *Buch der Erinnerung* (1946), an autobiography.

Steiner, *Von Seelenrätseln – Max Dessoir über Antroposophie* (1983[5]).

DETENTION.

In the Bible

The Torah does not recognize the use of imprisonment as a punishment for criminal offenses (see *Imprisonment), but it explicitly mentions the placing of a person in detention as part of the procedure of making a legal determination in the case. Thus we read about the man found gathering wood on the Sabbath – a deed which was clearly considered a very serious offense – who was placed in detention pending completion of the clarification regarding the punishment that would be imposed upon him: "And they put him in custody, because it was not specified what should be done to him [what needed to be done with him]" (Lev. 15:34). The Aramaic translations of this verse interpret the meaning of the word "custody" as holding him in jail, i.e., detention. The Midrash explains that although it was clear that he was liable for the death penalty, it was still not clear by what means he was to be executed and therefore he was put in detention in the meantime (*Sifri*, *Numbers*, 114). Similarly, a man who blasphemed the name of God – another offense that was clearly extremely grave – was placed in detention until it was clarified what should be done with him: "And they put him in custody, that it might be declared unto them at the mouth of the Lord." (Lev. 24:12). Indeed, the punishment imposed on the offender in both cases, according to the command of God, was the death penalty (see *Capital Punishment).

In Talmudic Literature

DETENTION OF THOSE LIABLE FOR CAPITAL PUNISHMENT. On the basis of these sources, tannaitic literature expanded the provisions regarding detention and it was determined that the person condemned to capital punishment should be put in detention: "To teach us that all of those condemned to capital punishment are to be placed in detention" (Sifri, Numbers, 114); However, these words do not indicate the stage at which the offender is placed in detention – whether after the completion of his trial, or when he is still only a suspect; and if at the stage in which he is only a suspect – what kind of evidence is sufficient for this.

DETENTION OF SUSPECTS IN ORDER TO ESTABLISH THE IDENTITY OF THE OFFENDER. In the opinion of Rabbi Judah (second century), detention was also utilized in cases in which the offender is located among a group of innocent people, and it is not known which of them is the murderer. His view diverged from the Sages' view, according to which in such a case all are exempt from detention, in his opinion – "they are all placed in jail" until it becomes apparent which of them is the murderer (Sanhedrin 9:3).

DETENTION OF THOSE CONDEMNED TO DEATH. A person sentenced to death was placed in detention until the sentence was carried out. The Mishna (San. 11:4) and the Tosefta (Zuckermandel edition, San. 11:7) state that the sentence of the stubborn and rebellious son, the rebellious elder, the inciter, the one who leads others astray, the false prophet and the perjured witness is not implemented immediately after sentencing but rather "he is brought up to the High Court in Jerusalem and is kept in custody until the festival and he is executed during the intermediate days of the festival." This is the position of Rabbi Akiva, with which Rabbi Judah disagrees, and he states that in order not to cause the offender to suffer a delay of justice he is to be executed immediately.

DETENTION OF THE SUSPECT ONLY WHEN THERE IS EVIDENCE; HUMAN DIGNITY. In the beginning of the fourth century, the *amoraim* of Erez̤ Israel ruled that the judge may not place a suspect in detention unless there was solid evidence that he had committed the offense. Rabbi Yose, in the Jerusalem Talmud (San. 7, 8), rejects the notion that it is permissible to detain a person in the street only because of the suspicion that he has committed murder, insofar as such an act constitutes an affront to his dignity: "Can it be that we will seize someone in the marketplace and humiliate him?" On the basis of the Mishna in Tractate Sanhedrin (7:5) Rabbi Yose rules that a person suspect of having committed a capital crime is detained even prior to being judged, but only in cases in which there are witnesses who testify that the suspect committed the murder in which case it is permissible to arrest and detain him.

KEEPING A PERSON IN JAIL UNTIL THE RESULTS OF THE OFFENSE ARE CLARIFIED. In addition to the detention of a person suspected of having committed murder, talmudic literature provides that a person may be detained even prior to a determination of his liability for the death penalty, when it is absolutely certain that he committed the offense, and as a result of which it may subsequently transpire that he is liable for capital punishment. Regarding a person who strikes and injures another, the Torah states that, once the victim gets up from his sickbed and it is clear that he will not die from the assault, the perpetrator is only liable for the various heads of damages (see *Damages): "And if men strive together, and one smite another with a stone, or with his fist, and he die not, but keeps his bed: if he rise again, and walk abroad upon his staff, then shall he that struck him be acquitted: only he shall pay for the loss of his time, and shall cause him to be thoroughly healed" (Ex. 21:18–19). The *Mekhilta* (*Mekhilta of Rabbi Ishmael*, Horowitz edition, *Mishpatim*, *Parashah* 6) rejects the possibility that the attacker "will provide guarantors and go walking in the market" until the victim recovers and it provides that "he is detained until the victim recovers."

The Babylonian Talmud cites a similar interpretation of this verse in the name of the *Amora*, Rabba, according to whom it is not possible that the Torah is teaching us that if the victim recovers, the attacker will not be executed, because this is self-evident. Consequently, the purpose of the verse in the Torah must be to teach us that the attacker is held in jail until the fate of the victim is clear; if he died – the attacker is executed and if he recovered – the attacker will only pay damages (TB, Ket. 33, 2; San. 78, 2). According to Rashi's explanation (San., *ibid.*), the purpose of the detention is to prevent the attacker from fleeing.

In the Post-Talmudic Literature

HOLDING A PERSON IN DETENTION – MERELY A PROCEDURAL TOOL OR PART OF THE PUNISHMENT. Regarding the detention of a suspect in a criminal offense, we have found a dispute from the period of the *geonim*. Their dispute dealt with the question of whether it was permissible to detain a person on the Sabbath or a holy day, and from their words we learn of a different outlook regarding the essence of detention. Rav Paltoi Gaon (Pumbedita, ninth century; Halakhic Rulings [Miller], 135) answered that he must be put in detention but he should not be flogged because flogging constitutes a desecration of the Sabbath (see *Flogging). In his opinion, the detention is for the sole purpose of preventing him from fleeing, and it does not contain any punitive element. About 150 years later, *Sherira Gaon held in an opposing opinion, that "it is not permissible to put a person in jail on a holy day, and all the more so this is impermissible on the Sabbath …" (*Shibbolei ha-Leket*, 60); according to his view, the detention itself is part of the sentence and of the punishment, and therefore it is impermissible on the Sabbath. It should be noted that the halakhic authorities continued to consider this issue, which was also dealt with by Joseph Caro (Beit Yosef, OḤ, end of sec. 263), the Rama (Shulkhan Arukh, OḤ, 339, 4) and Jacob Reischer (Responsa *Shevut Yaakov* 1:14 Germany, the 18th century).

THE AMOUNT OF EVIDENCE NECESSARY IN ORDER TO KEEP A SUSPECT IN DETENTION. The discussion in the Jerusalem Talmud, *supra*, regarding the detention of a suspect from the moment that there is evidence against him, has been interpreted in various ways: R. Nissim Gerondi (*Ḥidushei Haran*, San. 56, 1) interprets that the mere existence of witnesses is insufficient in order to place the suspect in detention; rather they must actually appear and testify before the court adjudicating the matter, and only then will it be possible to place the suspect in detention. In an opposing opinion, Rabbi Moshe *Margoliot (*Penei Moshe*, Jerusalem Talmud, *ibid.*) interprets the words of the Jerusalem Talmud as providing that it is sufficient that the existence of witnesses has been established.

OVERALL SURVEY OF THE LAWS OF DETENTION AND RELEASE ON BOND – THE RESPONSUM OF THE RIBASH. R. Isaac bar Sheshet *Perfet (Responsa of the Ribash, sec. 236) received an inquiry from the heads of the community in the city of Tiroal in the Aragon region of Spain regarding the law applicable to a Jew who was suspected of being an informer and who was prosecuted before the rabbinical court in Tiroal. In the question posed to him various problems are raised, both substantive and procedural, regarding the crime of informing, including the issue of release of the suspect from jail upon the posting of bail. The Ribash replies in a clear and leading *responsum* on this subject, and sets forth the rules of the detention:

a. The detention is only in the case of a suspect in a criminal offense for which the punishment is "a sentence pertaining to the body of the guilty party," i.e., capital punishment or imprisonment, and not when the expectation is that he "will only be obligated to pay money."

b. The rabbinical court will order the detention of a suspect only if it was convinced that "the prosecutor's claims are substantiated" – in other words, that the evidence is sufficient to support a reasonable suspicion against him.

c. The legitimate grounds for detention are (1) to ensure that the suspect will stand trial; (2) to ensure that the suspect, if convicted, will serve his sentence; (3) it is unacceptable for the suspect to be "strolling about the marketplace" while the court is adjudicating his case. This rationale could be interpreted from the point of view of "public opinion," insofar as the public is likely to be disturbed by the contradiction inherent in the fact that, while a trial for a serious crime is underway, the suspect is free to go where he pleases. However, it seems that it should be interpreted in accordance with the accepted grounds for detention that are in use in the contemporary judicial system, according to which the suspect's "walking in the marketplace" may obfuscate evidentiary material, intimidate witnesses, endanger the public inasmuch as he may commit additional crimes, etc.

d. Regarding release on bail – a suspect who is held in detention cannot be released on the basis of bail posted by others, for the reason that if he flees and does not stand trial, on the one hand the obligation to try criminals will not be fulfilled, and, on the other hand, there is no reason for those who posted the bail to pay for a crime perpetrated by another.

From the words of the Ribash, therefore, it may be stated that a suspect may be placed in detention only if the crime he is suspected of having committed would render him subject to capital punishment or imprisonment, the court is satisfied that the prosecutor has solid grounds for charging him and there is concern that if he is not placed in detention the safety of the public will be jeopardized or that there will be an obstruction of justice.

DETENTION OF A PERSON UNTIL THE CONSEQUENCES OF HIS ACTION ARE CLARIFIED. Regarding one who strikes another, when it is still not known whether the victim will die or not, the Rambam held (Hilkhot Roẓe'aḥ, 4, 3) according to the words of the Babylonian Talmud cited above, that the court must evaluate the injury; if in its opinion the victim will die from it, then "the perpetrator is imprisoned immediately and they wait for this," to see if he will indeed die, in which case the

perpetrator will be executed, and if he recovers, the perpetrator will only be liable to pay monetary damages.

In the State of Israel

In the State of Israel, the law regarding the problem of detentions has been the subject of controversy, and has even seen vicissitudes, and the provisions of Jewish law have had a decisive role in its formation. We will expand on this issue somewhat, insofar as we can learn from it the appropriate manner in which the Israeli legal system should absorb values from its roots planted in the heritage of Israel and in Jewish law, in particular regarding significant issues like detention, that have bearing on human dignity and freedom.

In the past, before governing legislation was adopted regarding this issue, there was an opinion that the court could arrest a suspect in a serious crime even if there was no apprehension regarding public safety or obstruction of justice. The main justification for this procedure was to ensure the public's trust in the effectiveness of the criminal justice system.

A thorough examination of the approach of Jewish law to the laws of detention is found in the decision of the Supreme Court in the Abukasis case (BSH 71/78, *State of Israel v. Rachel Abukasis*, 32(2) PD 240). In the wake of the appeal of the extension of the arrest order, the Court (Justice Menachem Elon) was asked to make a determination regarding the principles behind the laws of detention, and the Court discussed the position of Jewish law regarding this problem at length. The Court presented the principles that were set forth by the Ribash and adopted them, in order to rule, by way of judicial legislation, relying on "the democratic principles of our legal system and the principles of our historical and national law – the Jewish law" (BSHP 2169/92 *Suissa v. The State of Israel*, 46(3) PD 338, p. 342), that the seriousness of the crime is not sufficient in itself in order to hold a person in detention – except in cases of murder, etc., that were set forth in the legislation.

In 1988, the Knesset passed an amendment to the Rules of Criminal Procedure, which explicitly provided that the seriousness of the crime, in and of itself, would not serve as grounds for detention of a defendant prior to his trial, unless there was proof of a reasonable basis to fear that the public security would be endangered or that there would be an obstruction of justice, or, if as a result of the seriousness of certain crimes enumerated in the law, there was a presumption of such a danger.

In a later decision of the Supreme Court (the *Suissa* decision, *supra*), the Court (Justice Menachem Elon) emphasized that, in the wake of the legislation in the State of Israel of the Basic Law: Human Dignity and Freedom, whose stated goal is to solidify the values of the State of Israel as a Jewish and democratic state, "the justification for abrogating this basic right (of individual freedom) … is that if he goes free he will endanger the safety of the public or of an individual or will obstruct justice, and these alone. Our feelings of revulsion due to the seriousness of the crime or our concern regarding the effectiveness of the criminal system cannot justify abrogating a person's freedom and detaining him behind bars; the legislature designated alternatives to achieve these purposes, such as house arrest, and additional means" (*ibid.*, p. 347).

At present, the law in the State of Israel is set forth in the Rules of Criminal Procedure (Enforcement Powers – Arrests), 1996. Pursuant to this law, a judge may order the detention of a suspect before the filing of an indictment only when he is convinced that there is a reasonable suspicion that the person committed a crime whose punishment is more than three months' imprisonment, and in addition there is a reasonable basis to believe that if the suspect is not detained the result will be endangerment of the safety of an individual or of society at large or of State security or obstruction of justice or, if there are special reasons that necessitate detention, in order to carry out an investigation (sec. 13). Detention such as this, prior to the filing of an indictment, is limited in duration.

After the filing of an indictment, the Court is authorized to order the detention of a suspect until the completion of legal proceedings, when, as set forth above, there is reason to believe that otherwise an obstruction of justice will result or that the suspect presents a danger, and in addition to this, also in the case of the most serious crimes, involving serious violence, threat to public security or domestic violence (sec. 21).

A policeman is authorized to arrest a person even without a court order in circumstances in which he has a reasonable basis to believe that the person represents a threat to the security of the public or of a person, or that the failure to order his detention will result in an obstruction of justice (sec. 23). In all cases of arrest and detention by a policeman, a police officer must approve the arrest with a short time, and a judge must confirm the arrest within 24 hours.

The similarities between these detention provisions and the limits on holding a person in detention that the Ribash set out in his *responsum*, *supra* can be clearly seen.

As distinguished from the holding of the Ribash, who ruled that when there are grounds for detention the suspect may not be released on bail, the provisions of Israeli law set forth that, as long as it is possible to substitute release on bail or other restricting terms for the detention, it is obligatory to do so.

[Menachem Elon (2nd ed.)]

DETROIT, largest city in Michigan, U.S., with a Jewish population of around 103,000 (with Ann Arbor) in 2001, comprising 1.9% of the city's total population. Part of the distinction of Detroit Jews derives from the nature and history of Detroit. Its

economy, the first to emerge as distinctly 20th century American – that is, mobile, grounded in automobiles, roads, and related industries, and therefore suburbs, shopping centers, and massive industrial complexes like the Ford Rouge Plant – produced enormous wealth or the prospects of it. If Jewish immigration to the U.S. stopped in 1924, immigration to Detroit did not. Jews came from other American cities, seeking employment in the Ford factories or the related industries. Sometimes families that had been in this country for as many as 20 years picked up and left places like New York, Philadelphia, Indianapolis, Cleveland, or Baltimore to come to Detroit.

1760–1840

Jews had come to Michigan in the 18th century as fur traders and merchants. Chapman Abraham, Detroit's first known Jewish settler, arrived in Detroit in 1762 and became a successful trader for more than 20 years. Levi Solomons, partner of Chapman Abraham, was captured by the Indians near Detroit during the 1763 Pontiac Conspiracy. Chapman Abraham was captured during the 1763 Indian siege of Detroit, and after two harrowing months was released in exchange for an Indian chief. During the American Revolution Abraham fought in Canada against the invading Americans, remaining a loyalist all his life. Later records show he lived in Detroit in 1783. Hayman *Levy of New York, largest fur trader among the colonists and at one time a partner of Levi Solomons, carried on extensive business with Detroit merchants from 1774.

Ezekiel *Solomon, Michigan's first known Jewish settler, arrived in Fort Michilimackinac (today Mackinaw City) in 1761, and lived in Detroit in 1789. Moses David, of the well-known Montreal *David family, lived in Sandwich (now Windsor), Ontario, in 1792, when Sandwich and Detroit were still under British rule. Isaac *Moses joined Zion Lodge, Detroit's first Masonic lodge, in 1798, two years after Detroit's occupation by the Americans. Louis Benjamin was awarded a new plot of ground in 1808 to indemnify him for his loss in Detroit's great fire of 1805. Frederick E. Cohen, an English Jew, was in Detroit in 1837 during the Canadian rebellion, when he served in the Canadian militia. He became a prominent portrait painter, the first Jewish artist in Michigan. His self-portrait hangs in the Detroit Institute of Arts.

1840–1880

German Jews arrived in Detroit in significant numbers in the 1840s. Charles E. Bresler, a settler of the Ann Arbor-Ypsilanti area in the 1830s, moved to Detroit in 1844. He dealt in horses, furs, and wool, and made a fortune importing steel pens. He was one of the incorporators of Detroit's first Jewish congregation, Temple Beth El. Edward Kanter arrived in Detroit that same year, moving to Mackinac the following year where he was employed by the American Fur Company. Later he worked for the Leopold Brothers, pioneers on the island of Mackinac in the fishery business, and fur traders. Kanter returned to Detroit in 1852 and became Detroit's first Jewish banker and the first Michigan Jew to serve in the state legislature. Kanter Street is named after him. Simon Freedman, a settler of Adrian, Michigan, in the early 1840s, established a large dry goods business in Detroit around 1844, joined by his family. Like Besler, the Freedman brothers were among the founders of Beth El: Joseph was the first secretary of the congregation, Simon served as president, and Herman was president of the religious school board. In the 1870s David J. Wockum was the first Jew to serve on the Detroit Board of Education.

In 1850 Congregation Beth El was founded in the home of Sarah and Isaac Couzens by 12 German Jewish families. In 1851 a half acre of land on Champlain (later Lafayette) Street was purchased for a cemetery, the oldest Jewish congregational cemetery in Michigan. Beth El congregation's first rabbi, Samuel Marcus, was interred there in 1854 during a cholera epidemic. Originally an Orthodox congregation, Beth El became Reform in 1861, resulting in the withdrawal of 17 members who formed the Orthodox Shaarey Zedek congregation, later an important Conservative congregation. Beth El became a large and influential Reform Congregation, and among its leading rabbis was Kaufmann *Kohler (1869–71).

1880–1914

By 1880 there were approximately 1,000 Jews in Detroit, more than half from Eastern Europe, the others, German Jews. Detroit's Jewish population leaped during the so-called Great Migration from Eastern Europe, especially from 1880 to 1910 and from 1917 to 1924 when the government instituted its immigration restrictions. By 1920 the number of Jews in Detroit had reached almost 35,000, a 247% increase in 10 years while the general population of Detroit increased only 114%. There was one Reform congregation, Temple Beth El, and four Orthodox congregations, Shaarey Zedek, B'nai Israel (1871), B'nai Jacob (1875), and Beth Jacob (1878). Three charities existed: the Ladies' Society for the Support of Hebrew Widows and Orphans, popularly known as "Frauen Verein" (1863), Beth El Hebrew Relief Society, and Shaarey Zedek Jewish Relief Society. B'nai B'rith, Kesher Shel Barzel, and the Free Sons of Israel all had lodges in Detroit, and there was one flourishing social club, the Phoenix Social Club (1872).

Relations between the Ostjuden newcomers, most of whom were of the Orthodox tradition, and the more acculturated German Jews, primarily members of Temple Beth El, were ambivalent. Considerations of class, social standing, religious outlook, and degree of Americanization tended to keep the groups separate. However, the German community's sense of obligation to their less fortunate coreligionists overcame their feelings of antipathy, at least publicly, with the founding of two new charitable societies, the Hebrew Ladies' Sewing Society (1882) and the Self-Help Circle (1889), organized to assist the new immigrants, although many of them felt patronized. In 1896 a *Detroit News* article noted that "it is very rare that a German Israelite seeks relief from anybody," contrasting German Jews with East European Jews who needed charity. By 1903, however, a *Detroit Free Press* article pointed out that Russian Jews, while not so successful in business as Ger-

man Jews, were "making their way upward." The article listed leading Jewish businessmen and four synagogues, the Division Street Talmud Torah, the House of Shelter, and the Hebrew Free Loan Office and concluded that Russian Jews were "intelligent, sensible, hard-working people, sober and religious, of good moral character and determined to get ahead in the world. They are men with characteristics that make any nation strong." Their German counterparts rarely agreed.

Some Eastern Europeans, conscious of the gulf between themselves and the city's German Jewish community, preferred to establish communal institutions more responsive to their special needs. The most important of these were the Talmud Torah Institute (1897), Hebrew Free Loan Association (1895), and Workman's Circle (Arbeter Ring) (1907). By 1917, Branch 156 of the Workmen's Circle was not only the largest secular Jewish organization in Detroit, but the largest Workmen's Circle branch in North America. It was the first of a wave of secular Jewish institutions that included Labor Zionist organizations, the Yiddish Sholom Aleichem Institute, Hayim Greenberg, and Farband Shule and the five IWO Communist-affiliated Hersh Leckert Schools. When the Farband Shule declared itself "the non-parteische" (non-partisan) school, it meant it was not a Hersh Leckert School.

Realizing that the profusion of Jewish charities resulted in unnecessary duplication and waste, Leo M. *Franklin, rabbi of Temple Beth El (1899–1941), united the Beth El Hebrew Relief Society, Hebrew Ladies' Sewing Society, Jewish Relief Society, and Self-Help Circle into the United Jewish Charities (1899). David W. Simons was the first president and Blanche Hart was superintendent until 1923. Despite differences, the German and the East European groups managed to cooperate in communal undertakings. This was exemplified when Temple Beth El, oldest and most prestigious congregation in the city, agreed to join the Kehilla (1911) organized by the Orthodox community. Prominent rabbis of the period included Leo Franklin; Judah Leib Levin, who was instrumental in organizing the United Orthodox Hebrew Congregations in the early 1900s, and founded the Yeshivah Beth Yehuda; and Abraham *Hershman of Conservative Shaarey Zedek (1908–46), an ardent Zionist.

Starting in the 1880s, Detroit's Jewish communities concentrated most heavily in the retail and wholesale clothing trades, mostly as proprietors of their own businesses, and in the clerical or white collar occupations as salesmen, insurance agents, and office workers. While Jews did not dominate any trade the way they did the garment industry in New York, a Jewish "monopoly" in Detroit's economic life did develop in the waste material and scrap metal business. By the late 1880s Jews outnumbered gentiles in this industry, and by the 1890s it had become almost solely a "Jewish" industry. This dominance was to continue after World War II.

Jews participated in the political life of Detroit during this period. Samuel Goldwater, a city alderman in 1894 and the Democratic Party's candidate for mayor in 1895, was the major force behind the organization of the Michigan Federation of Labor (1889). David E. Heineman served as a member of the state legislature (1896–1901) and Detroit's City Council (1902–09), and was city controller during 1910–13. In 1909 he was president of the American League of Municipalities; he also designed the flag of Detroit. Charles C. Simons was a state senator (1902). David W. Simons was a member of the first nine-man city council (1918).

1915–1940

The outbreak of World War I ended European immigration to Detroit until 1920. In 1915 the Jewish communities contained one Reform and 19 Orthodox congregations and by 1940 the Jewish population had risen to 85,000 as the number of congregations rose to 48. During these years the Jews of Detroit strengthened their communal organization. A survey of communal needs made in 1923 by the Bureau of Jewish Social Research of New York resulted in the organization, in 1926, of the Jewish Welfare Federation. Its first director was Morris D. *Waldman. Eventually housed in the Fred M. *Butzel Memorial Building, the Federation included among its affiliate agencies the Jewish Community Council, Jewish Community Center, Jewish Family and Children's Service, Jewish Home for the Aged, Fresh Air Society, Hebrew Free Loan Association, Federation Apartments, Jewish House of Shelter, Jewish Vocational Service and Community Workshop, Resettlement Service, Midrasha-College of Jewish Studies, Sinai Hospital and Shiffman Clinic, United Jewish Charities, and the United Hebrew Schools. The Jewish Community Council, organized in 1936, comprised 340 organizations and immediately took an active role in urban affairs, the civil rights movement, holding joint meetings with the NAACP and African American clergy. They would later offer staunch support of Israel. The first community-wide fund drive of the Jewish Welfare Federation in 1926 had 3,185 contributors; in 1940 there were 20,440 contributors; and in 1967 and 1969 the city's Allied Jewish Campaigns raised two of the highest per capita totals in the U.S.

Jewish education received a boost in 1919 when the United Hebrew Schools was organized by a merger of two *talmud torahs*. By 1940 the United Hebrew Schools had ten branches. In 1925 Congregation Beth El opened a College of Jewish Studies, and in 1940 an Institute on Judaism for Christian Clergymen. In addition to the various congregational Sunday and Hebrew schools and the secular schools, Jewish education had been fostered by the Beth Yehuda Day and Afternoon School, the Hillel Day School, and the Akiva Hebrew Day School.

If Detroit had become known for its modern, industrial achievements, it also gained a more infamous, less savory reputation that set it apart from other cities. It was unfortunately tarnished by its social and cultural blights. Racism and antisemitism may have been common features of the American cultural landscape in the 20th century, but their malevolence in Detroit was unmatched anywhere else. Father Charles Coughlin's vitriolic antisemitic national radio broadcasts in the 1930s, Henry Ford's anti-Jewish newspaper campaign in

the *Dearborn Independent* during the 1920s, the Black Legion's night-riders and lynching, Gerald L.K. Smith and others, still evoke fear and anger in Detroit Jews. The 1930s also saw Detroit's German American Bund become fairly active. Along with news of the events in Europe, more subtle actions like department store ads from J.L. Hudson's that read "only Gentiles need apply," and public swimming pools that did not allow Jews to swim, or restrictive covenants that prevented Jews from purchasing or renting houses in Pleasant Ridge or Grosse Pointe or Birmingham, appreciably increased anxiety among Jews in Detroit.

The UJC 1923 Survey had noted: there appeared to be "no Jewish labor class consciousness in Detroit." While that lack of "labor class consciousness" may have been pervasive, organized Jewish groups, like the Jewish Community Council, the Workmen's Circle, the more than 80 *landsmannschaften*, supported the labor movement in Detroit. Perhaps the most notable example of this was the Detroit Laundry and Linen Drivers Association founded and led by Isaac Litwak in 1934. Within two years it had become Teamster Local 285 and in 1937 carried out no fewer than 12 major strikes. Unique among Jewish urban businesses, 25% of the laundry and linen workers in Detroit in 1936 were Jews. Locked out of other, more traditional Jewish enterprises like department stores because of antisemitism, Jews logically gravitated from tailoring and rag peddling to this trade. Nearly 90% of the laundry and linen industry was owned by Jews. Yet, in 1937, picket lines were attacked by goons, Litwak was severely beaten several times, once dragging himself to the line; he was arrested and joined in jail by Jimmy Hoffa, who made sure Litwak was not beaten or killed. The union triumphed in 1937 as it brought unorganized drivers earning $18/wk to contractual arrangements guaranteeing $95. The turmoil was typical of the early days of union organizing in Detroit, but with added emotional trauma in this case: although no charges were brought, it was clear that Jewish owners or their surrogates had hired Jewish hoodlums from the remnants of the notorious Jewish Purple Gang, to beat and break Jewish workers and their union.

Post-World War II

This period witnessed a growth in prosperity among the Jews of Detroit, and increasing mobility characterized by a steady move to the suburbs. The community's religious institutions were consolidated: by 1968 there were 23 Orthodox, six Conservative, four Reform, and one humanistic congregation founded by Rabbi Sherwin Wine, the Birmingham Temple, in the Detroit metropolitan area. Prominent in Jewish and general community affairs was Rabbi Morris *Adler, who served Congregation Shaarey Zedek from 1938 to 1966, when he was tragically shot in his pulpit and killed. A constant of Detroit Jewish history has been movement. By the time Jews began to move into Oak Park, the first suburb northwest of Detroit, beginning around 1948, an organized or identifiable Jewish presence in Detroit had existed for a hundred years. In that century, perhaps nothing characterized that people more than its movement – mytho-biblical in its quick, successive generational wanderings and in its group cohesion. It seemed that Jews moved en masse about every 20–30 (not to say 40) years. Morris Waldman, Federation's first executive director, who arrived in 1924, observing the rapid evacuation of the Hastings neighborhood in favor of the Westminster-Oakland area, called the phenomenon a *hegira*, a mass migration. The pattern of Jewish settlement in Detroit from 1840 to 1940 was a northwest exodus: from Lower Hastings to Upper Hastings, to Oakland between 1910 and 1940, to the Twlefth Street and Dexter areas just west of Oakland, to Northwest Detroit, from the late 1930s to the 1960s. After World War II, Oak Park, then Southfield became the greener pastures, where Jews could buy the typical brick ranch houses, in the midst of trees and open spaces, followed quickly by West Bloomfield and Farmington Hills. When correlated with generational, socio-economic upward mobility, such a prolonged series of moves seems to have sprung, in part, from a desire for larger homes, more space, and the pursuit of symbols of economic success. It mirrored the non-Jewish, upwardly mobile middle class abandonment of the central cities for the suburbs, the American dream of the 1950s: suburban life. As each generation of Jews became more educated, more successful, more American, and more assimilated, the wish to demonstrate all those features strengthened and took the form of new and bigger or better homes in new neighborhoods. Yet more than a quest for symbols of educational and economic achievement accounts for the regular relocation of whole communities. Federation surveys implied that, for all their tolerance, many Jews retained stereotypic views of African Americans and feared living in the same neighborhoods, although they often supported civil rights and defended blacks in that arena. In the Hastings Street neighborhood, long after Jews had moved their residences from there, they retained businesses. In the 1920s, 1930s, and 1940s often only Jewish merchants would allow blacks to shop in their stores. And only Jews would sell their businesses to blacks as white, non-Jewish racists grew more hostile to black neighbors – and to Jewish neighbors or businessmen. As black workers moved into Detroit, they occupied the areas in which Jews lived, and fears or prejudices on both sides fostered the Jewish moves.

A prominent Jewish community leader was Max M. *Fisher (d. 2005), long associated with the UJA, United Israel Appeal, and American Jewish Committee. As war seemed imminent in the Middle East in 1967, Fisher was flown from his yacht in the Aegean (where he was vacationing with Henry Ford II) to Tel Aviv, where he learned of Israel's needs and strategies. When he returned to his yacht, he convinced Ford to write a personal check for $100,000 and took Detroit by storm. Working with his friend Paul Zuckerman, who chaired the Israel Emergency Defense Fund, Fisher, just after a record-breaking UJA drive that had raised $5,627,136, cajoled, harangued, and convinced the Jews of Detroit to "give as you never gave before." Detroiters gave $4,700,000. Jewish Detroit had never been more united.

As Jewish professional success grew, and vestiges of anti-Jewish discrimination remained, Jews responded with specific actions. When Jewish physicians were blocked from practicing at some Detroit hospitals, Sinai Hospital was created; Jewish lawyers led the way in ending "restrictive covenants" in the Detroit metropolitan area and in reforming the civil rights codes in the Michigan Constitution. Jews were to be found in every area of the city's economic life, although despite the prominence of automobile manufacturing in Detroit, few Jews are employed in this industry. The occupational sphere where Jews have predominated is the waste industry, continuing their control of it from the 1890s. By the late 1960s almost 55 percent of those Jews who were employed could be classed in the manager or proprietor class. By 1970 almost 25 percent of the Jewish working force was in the professions, while 73 percent were white-collar workers. Less than 10 per cent of the Jewish population were blue-collar workers.

Jews prominent in political life included Melvin Ravitz, councilman (1969), and Sander *Levin, state senator and chairman of the State Democratic Committee (1969). Sander's brother, Carl, has served three terms in the U.S. Senate and Debbie Stabenow is Michigan's other senator (2000). Among noted civic leaders have been David A. *Brown (1875–1958); Max M. Fisher, who, after the Detroit Riots of 1967, led the foundation of New Detroit to try to reconstruct the city; Norman Drachler, superintendent of the Detroit Public Schools; Leonard N. Simons, president of the Detroit Historical Commission; Alfred A. May, president of the Detroit Round Table of Christians and Jews; Lawrence Fleischman, past president of the Detroit Institute of Arts Commission, and numerous others.

Detroit Jews have a distinguished record as jurists at the state and national level. Henry M. *Butzel was justice of the Supreme Court of Michigan; Charles C. Simons, a judge of the United States Circuit Court of Appeals; Lawrence Gubow and Theodore Levin, district court judges (1969); and S. Jerome Bronson and Charles Levin, judges of the state court of appeals (1969), and Avern Cohn, a federal judge. Jews of Detroit also play a prominent part in the cultural life of the city. When the Detroit Symphony Orchestra was organized in 1918, Ossip Gabrilowitsch became the principal conductor. He filled the post until his death in 1935 when Victor Kolar succeeded him. Mischa Mischakoff was concertmaster. Karl Haas was director of fine arts of radio station WJR and president of the Interlochen Arts Academy, a position then held by Robert Luby; concert pianist Mischa Kottler was director of music at radio station WWJ; Harry Weinberg hosted a long-lived Yiddish Radio Hour; Littman's People's Theatre featured everything from high drama with leading Yiddish speaking actors to burlesque. Albert *Kahn, world-renowned architect, built the city's General Motors Building, Fisher Building, and New Center Building, among many others. Charles E. Feinberg (d. 1988) was an internationally known collector of Jewish ceremonial art and authority on the poet Walt Whitman. Detroit's Jewish population remains a diverse and significant part of the city's culture.

DEUEL, HANS ERWIN (1916–1962), Swiss agricultural chemist and expert on plant gums and pectins. He was born in Leipzig, Germany, and went to Switzerland in 1934. Deuel's entire working career was spent at the Technische Hochschule at Zurich where he became professor of agricultural chemistry in 1949. He was primarily interested in the polysaccarides, relating properties such as gelation and complex formation with their structural features. In the field of soil science he investigated the ion exchange properties of plant roots, organic weathering through the degradation of clays by orthodiphenols, carbohydrates in soils, and the chemistry of humic substances.

DEUTCH, JOHN M. (1938–), director, U.S. Central Intelligence Agency (1995–96); deputy secretary of defense (1994–95). Born in Brussels, Belgium, Deutch came to the United States in 1940 with his family to escape Nazism and pursued a B.A. in history and economics from Amherst College as well as a B.S. in Chemical Engineering from Massachusetts Institute of Technology, where he earned his Ph.D. in physical chemistry (1965). He first served as a systems analyst at the Office of the Secretary of Defense and later as an assistant professor at Princeton (1967–70) before returning to MIT, where he was a professor of chemistry, dean of science, and provost (1982–90). He subsequently became an institute professor at MIT.

Deutch spent his career shuttling between academia and government service on the Cambridge-Washington axis. From 1977 to 1980 he served as director of Energy Research, acting assistant secretary for energy technology, and undersecretary of energy. In 1993, President Clinton nominated him as undersecretary of defense for acquisitions and technology. In March 1994 he became deputy secretary and then left the Defense Department to become director of the Central Intelligence Agency from May 1995 until the conclusion of Clinton's first term.

A significant security breach marred Deutch's sterling reputation. He stored top-secret information on unsecured home computers and kept private journals of his public work. Deutsch had his security clearance revoked. Criminal investigations were concluded when President Clinton pardoned him before leaving office in January 2001.

DEUTERONOMY (Heb. סֵפֶר דְּבָרִים, *Sefer Devarim,* short for סֵפֶר וְאֵלֶּה הַדְּבָרִים, *Sefer ve-elleh ha-devarim*, "The Book of 'These Are the Words'"), the fifth book of the Pentateuch. The name Deutenonomy is derived from the Greek translation of מִשְׁנֶה הַתּוֹרָה *mishneh ha-torah* (Deut. 17:8) by Τὸ Δευτερονόμιον *Deuteronomion*, "the second law" or "the repeated law," whence the Latin *Deuteronomium*. Strictly speaking, *mishneh ha-torah* in its biblical context means "a copy of the law." Nonetheless, "second/repeated law" is an appropriate name for the book, inasmuch as Deuteronomy repeats law and history, known from what in our canon are the preceding books of the *Pentateuch. The appellation מִשְׁנֶה תּוֹרָה *mishneh torah* for Deuteronomy is also common in post-biblical Hebrew sources, and it seems that the Jewish tradition stands behind the Greek term. In contrast to their view of preceding books of the Pentateuch, critics take Deuteronomy to be, for the most part, an organic literary creation. It is presented as a long farewell speech of Moses, styled in the first person singular (except for a few small digressions: 4:41–49; 27:1–26; 31:7–9, 14ff.; 32:44–45). Deuteronomy interrupts the narrative flow of the Pentateuch by delaying the death of Moses from where it might have been expected in Numbers 27, to the Priestly resumption in Deut. 33:48–52; 34:1–6. In Deuteronomy 31:9, "this Torah," which is said to have been written by Moses and delivered into the custody of the levitical priests, refers to Deuteronomy, or some form of it; not to the entire Pentateuch.

Contents

A notice indicating time and place (1:1–5) precedes the introductory discourse. The discourse contains a historical retrospect of the Israelite journey, alluding to various incidents attending the perilous journey (spies, defeat at Hormah, conquest of Sihon and Og, and occupation of the whole territory of east Jordan). The discourse stresses the Providence that brought Israel through the desert. An appeal is made to the people to observe the statutes and ordinances of God (1:6–4:40). The second discourse, which is the principal part of the book, falls into two parts. The first (4:44–11:32) consists of a hortatory introduction opening with an exposition of the *Decalogue, and develops the first commandment at great length. The second section (ch. 12–26) is the Deuteronomic Code of Laws containing special laws or statutes that supplement the Decalogue. These statutes may be divided in three categories: (a) *Ceremonial laws*: centralization of worship (12), injunction against idolatry (13), pagan mourning rites (14:1–2), clean and unclean food (14:3–21), tithes (14:22–29), year of release (15:1–18), firstling offerings (15:19–23), and holy seasons (16:1–17). (b) *Civil Laws*: appointment of judges and supreme tribunal (16:18–20; 17:8–13), selection of a king (17:14–20), regulations concerning rights and revenues of priests and levites (18:1–8), rules concerning prophets (18:9–22). (c) *Criminal laws*: homicide (19:1–13), encroachment on property (19:14), false testimony (19:15–21). From Chapter 20 on we find regulations concerning laws of war (20:1–20), statement of family rights (21:15–21), sexual purity (22:13–29) and various others. Although many scholars see randomness in the arrangement of some of the laws, Stephen Kaufman argues strongly that the laws of chapters 12 through 25 reflect the order of the Decalogue. Chapter 26 ends the series with a conclusion to the law and a formula of commitment to the covenant. Chapter 27, which interrupts the discourse and is a narrative in the third person, contains the directions for the building of an altar on Mt. Ebal and a ceremonial blessing and cursing between Mt. Ebal and Mt. Gerizim. The following chapter (28) is a declaration of the blessings and curses which will overtake the people depending on whether they observe or neglect the prescribed statutes. Chapters 29–30 include Moses' third discourse, which insists on the fundamental duty of loyalty to God and embraces an appeal to Israel to accept the terms of the Deuteronomic covenant. Chapter 31 reports the appointment of Joshua (31:7–8, 14–15) and Moses' delivery of the Deuteronomic law to the levitical priests with instruction for it to be read publicly every seven years (31:9–13). Then follows the Song of Moses (Ch. 32), Moses' blessing (Ch. 33), and the final chapter (Ch. 34), which concludes the book with an account of the circumstances of Moses' death on Mt. Nebo.

Although no biblical source explicitly credits Moses with the composition of the entire Pentateuch, passages such as Deuteronomy 31:9 were read so expansively that Mosaic authorship was taken for granted in early Jewish tradition and the New Testament. Once Mosaic authorship became an article of faith for classical Judaism and Christianity the faithful found difficulty in the last eight verses of Deuteronomy, in which the death and burial of Moses are described. Some rabbis attributed the writing of these verses to Joshua; but another opinion had it that Moses wrote these verses too at God's dictation (BB 14b–15a). Medieval commentators, such as Abraham Ibn Ezra, were sensitive to some of the anachronistic passages in Deuteronomy incongruous to the time of Moses. The following are a few examples of difficult passages coped with by medieval commentators: (1) "beyond the Jordan" (1:1), a term generally employed by people living in Palestine could not properly be used by Moses who was then situated in Moab; (2) the expressions "at that time" (2:34; 3:4) and "unto this day" (3:14) imply that a long period of time has elapsed since the past spoken of; (3) the mention of Og's bedstead at Rabbath Ammon (3:11) as proof of Og's huge proportions and giant stature implies that Og was no longer alive to be used as living proof; (4) "As Israel did unto the land they were to pos-

sess" (2:12) refers to the conquest of Canaan which had not yet taken place according to the Bible; (5) the verse, "when Moses had put down in writing the words of this teaching to the very end, Moses charged the levites…" (31:24), probably refers only to certain chapters and not to the entire book since it is inconceivable that a book would relate the author's actions after the completion of the book. Ibn Ezra accepts the talmudic position of Mosaic authorship but probably felt that several verses were added to the book after Moses' death.

Critical Assessment

Deuteronomy is the only part of the Pentateuch called "the book of the law" (*Sefer ha-Torah*), i.e., the authoritative, sanctified guidebook of Israel. In the editorial framework of the Former Prophets, which is inspired by the book of Deuteronomy, it is designated by *Sefer Torat Moshe*, "the book of the law of Moses" (cf. Josh. 8:31; 23:6; II Kings 14:6). Deuteronomy is, in fact, the only book of the Pentateuch to be ascribed to Moses (Deut. 31:9; see above) and, according to most scholars, the first book to have been sanctified publicly (II Kings 23:1–3). Only after the other books were appended to Deuteronomy was the term "Torah" applied to the whole Pentateuch. The form of "testament" given to the book looks peculiar, but has its antecedents in the Egyptian method of diffusing wisdom and moral teachings. Addresses of kings and viziers to their successors in Egypt were couched in the form of a will, and this technique may have exerted an influence on Israel's literature, especially since there exist some affinities between Deuteronomy and the Wisdom Literature (see below). In spite of its apparent formal unity, the book is not a homogeneous piece of work. It has two introductions (1:1–4:40; 4:44–11:32), two different kinds of blessings and curses (27:11–26; 28:1–68), and appendices of various kinds (chapters 29ff.). The problem of the composite nature of the book has been dealt with by many modern scholars, and no final solution has been reached. There is general agreement in regard to chapters 5–26 and 28. It is believed that these chapters constituted the original book, which was later supplemented by an additional introduction (1:6–4:40) and by variegated material at the end of the book (27:1–8, 11–26; chapters 29–30). The rest of the material is to be divided into two categories: (1) the genuine Deuteronomic material dealing with the commissioning of Joshua (31:1–8); the writing of the Torah, its use in the future, and the depositing of it at the ark (31:9–13, 24–29; 32:45–47); and the death of Moses (chapter 34); and (2) ancient material appended to the book, such as the Song of Moses 32:1–43 with its introduction 31:14–23, the Blessing of Moses in chapter 33, and the later priestly passage in 32:48–52. According to M. Noth, Deuteronomy 1:1–4:40 and 31ff. is the work of the Deuteronomist who was responsible for editing the history of Joshua-Kings. In his opinion, this historian began with Deuteronomy 1 and incorporated Deuteronomy 4:44–30:20 into his work. His own material 1:1–4:40 and 31:1ff. is concerned with the preparations for the conquest and the commissioning of Joshua, which, in fact, serves as a good introduction for the conquest, opening the so-called Deuteronomic history of the Former Prophets. Some critics asserted that Deuteronomy 9:7–10:11, dealing with the events at Horeb (not the "Sinai" of the Priestly source), originally preceded the historical account in Deuteronomy 1:6ff. If this is correct, it lends support to the theory of Noth, because in this case there is a clear division of the book: the original code with its introduction on one hand, and the historical material added by the Deuteronomist on the other. However, as attractive as this theory may be, stylistically chapters 1–30 seem to be of the same stock and are different in nature from the Deuteronomic material of the Former Prophets. The composite nature of the book is recognizable not only in its framework but also in the code which forms the basic section of the book. Thus in chapter 12, two sets of prescriptions about centralization of cult are found: verses 1–12 and 13–25. The two sets may be distinguished by their style: in the former the people are addressed mainly in the second person plural, while in the latter the address is mainly in the second person singular. This distinction has been taken, since Steuernagel, as the basic criterion for distinguishing sources in Deuteronomy, in the code as well as in the framework. Steuernagel considered these as two different sources and thus he maintained that there were three strands in the chapter. In addition, Rofé (16–17) has demonstrated that within chapter 12 there is a difference between 12:13–19, which gives blanket permission for profane slaughter, and 12:20–28, which permits profane slaughter only if one is far from the chosen place. These last verses are what would later be called *halakhic* (legally orientated) Midrash in that they harmonize the blanket permission of profane slaughter of Deuteronomy 12:13–19 with its blanket prohibition in Leviticus 17:1–7. The combination of stylistic and linguistic clues together with indicators of historical and religious context are crucial to distinguishing sources.

DATE OF COMPOSITION. Deuteronomy gives its setting an antique flavor by providing ancient geographic and ethnic names, names of ancient giants and legendary peoples and details of ancient conquests (chapters 2–3). Yet the writers inform us that they are at some distance from the events related. For example, in order to write "there never again arose in Israel a prophet like Moses" (Deut. 34:10) it was necessary to know of a long line of prophets later than Moses. The first serious modern scholarly date for the composition of Deuteronomy was established by the pioneering work of de Wette in 1805. Trying to trace the historical circumstances underlying the book of Deuteronomy, de Wette found a correspondence between the reforms of *Josiah (640–609), which according to II Kings 22–23 were motivated by the discovery of a book of *torah* (see below), and the legislation of Deuteronomy. Before Josiah places of worship throughout the land were considered indispensable for the religious life of Israel, so that, for Elijah, destroying altars of YHWH was almost tantamount to slaying His prophets (I Kings 19:10, 14). In the legislative literature in Israel, however, the demand for cult centralization occurs for

the first time in Deuteronomy. This book would therefore be an outcome, or a reflection, of the reforms of Josiah. These reforms are reflected in Deuteronomy not only in the law of centralization but also in: (1) the prohibition against pillars in the worship of YHWH (16:22), which according to the older sources is legitimate and even desirable (e.g., Gen. 28:18; 35:14; Ex. 24:4; Josh. 24:26); 2) the references to "astral worship" (*ṣeva ha-shamayim*; Deut. 4:19; 17:3), which is not mentioned in the previous books of the Pentateuch and seems to have been introduced into Judah through Arameo-Assyrian cultural influence in the eighth century B.C.E.; (3) the correspondence between the manner of celebrating Passover in the days of Hezekiah (II Chron. 30) and Josiah (see below) and the prescription in Deuteronomy 16:1–8. According to II Kings 23:22, Passover had not been celebrated in such a manner since the times of the Judges. No less important for the date of Deuteronomy is the unique style of this book, both in its phraseology and manner of discourse (rhetoric). Style such as that found in Deuteronomy (see below) is not found in any of the historical and prophetic traditions before the seventh century B.C.E. Conversely, from the seventh century onward almost all of the historical and the prophetical literature is permeated by this style. Theologically and stylistically Deuteronomy has become the archimedian point for dating the sources in the Pentateuch and the historical books of the Old Testament. On this analysis, the legal codes which do not presuppose centralization of cult must be from pre-Josianic times. In contrast, the editorial passages of Kings which evaluate the kings of Judah in accordance with their observance of centralization of cult, and those passages in Joshua-Judges which are styled in Deuteronomic phraseology cannot be from before the time of Josiah. An objective clue has thus been established for fixing the date of the editorial parts of the historic literature.

ANCIENT NEAR EASTERN TREATY FORMS AND DEUTERONOMY. A new dimension was added to the problem of the date of Deuteronomy by the discovery of the treaty between Esarhaddon king of Assyria (680–669 B.C.E.) and his eastern vassals (the longest Assyrian treaty as yet discovered). Affinities between ancient Near Eastern treaties and the biblical covenant in general had been stressed by Mendenhall in 1954 (see below), but the treaty of Esarhaddon, discovered in 1956, provided new material that is parallel only to that of Deuteronomy. The most important parallel is with the series of maledictions in Deuteronomy 28, which resemble strongly the Esarhaddon type of treaty (see Weinfeld 1965, in bibl.). The warnings against treason and inciting treason in Deuteronomy 13 closely resemble those found in the Esarhaddon succession treaty (Parpola in bibliography, 28–58) and in the contemporaneous Aramaic treaties. Especially striking is the warning against seduction by the prophet and cultic functionary, which has its parallel in the Assyrian treaty. The depiction of the scene of *Covenant and emphasis on the perpetual validity of the treaty as binding on all generations in Deuteronomy 29:9–14 also coincides with the description of the treaty scene in the Esarhaddon succession treaty and the earlier Aramaic treaty from Sefire (750–745 B.C.E.; COS II: 213–17). The stipulations demanding exclusive allegiance to the God of Israel in Deuteronomy are formulated in the conventional manner of state treaties and documents, especially those of the seventh and eighth centuries B.C.E. Thus the expression "to love with all your heart" is the standard term for being loyal to the sovereign, and, similarly, the biblical expressions: "to go after" (= to follow), "to fear" (= to revere), "to hearken to the voice of," "to do as He commands," "to act in complete truth," "to be sincere," have their exact parallels in the Esarhaddon treaties and also in the oaths of allegiance of the princes and officials of Esarhaddon and Ashurbanipal to their masters. It has been therefore supposed – e.g., by Frankena – that Josiah's covenant with God was considered a substitution for the former treaty with the king of Assyria, thereby expressing vassalship to YHWH instead of vassalship to the king of Assyria. Less convincing is K.A. Kitchen (*Ancient Orient and Old Testament*, 90ff. and especially p. 99) who argues that "the Sinai covenant and its renewals must be classed with the late second millennium covenants."

The "Discovery" of the Book of the Law

In spite of the evidence established by the conventional theory for the date of Deuteronomy, it is hard to fix the exact date of its composition, and because of its complex nature, it is also difficult to mark the extent of its original form. The canonical book of Deuteronomy contains material ranging over centuries, from pre-monarchic material ignorant of Egyptian enslavement or the gift of the law at Sinai / Horeb (Deut. 33; Seeligmann; Rofé) to the realities of the Egyptian and other Jewish diasporas (Deut. 28–68; 29:27). There also Northern Israelite elements including the ceremonies at Mt. Gerizim and Ebal north of Shechem (Deut. 11:29–30; 27:4, 12–13), as well as the linguistic and doctrinal influences of *Hosea (Ginsberg). What is beyond doubt is that the "Book of the Law (*torah*)" was "discovered" in 622 B.C.E. (II Kings 22). The identification of the "Book of the Law" with Deuteronomy is based on the following:

1) As already indicated, the term "the Book of the Torah" is not mentioned anywhere aside from Deuteronomy, where it refers to the Book of Deuteronomy itself.

2) The abolition of high places and the centralization of the cult enacted by Josiah following the discovery of the book are prescribed only in Deuteronomy.

3) Astral worship, which is referred to in detail in Josiah's reform (II Kings 23:5, 11–12), is especially marked in Deuteronomy: "the host of heaven" (17:3).

4) The Passover celebrated in Jerusalem (II Kings 23:21–23) is performed in accordance with the commands of Deuteronomy 16:1–8, in contrast to the tradition reflected in Exodus 12, according to which it was to be celebrated at home.

5) The pledge taken by the people to keep the law of this

book (II Kings 23:3) is styled in the manner of the Deuteronomic injunctions of loyalty and allegiance to God.

It seems, however, that the book "discovered" was not identical with Deuteronomy in its present form. It is unlikely that a king would sponsor a program which made condescending and uncomplimentary references to the monarchy (Deut 17:20; 28:36). It is improbable that the book in its present form was read three times in one day: by Shaphan the scribe (II Kings 22:8), by the king (22:10), and presumably by Huldah the prophetess (22:13–14). Besides, though the prologues and epilogues of the code cannot be dated, it is nevertheless highly probable that a great amount of the material in the framework of the code is quite late and even post-Exilic (cf. e.g., Deut. 4:27–31; 30:1–10). The book could then consist mainly of a small introduction, a code (including above all chapters 12–19, which embody the principles of the reform), and the admonition of chapter 28 which may well explain the horror which befell the king at the recital of the book (II Kings 22:11 ff.; Kimḥi to II Kings 22:11 quotes a rabbinic tradition that the scroll was found rolled to Deuteronomy 28:36 where the king's exile is predicted). If the idea of this basic Deuteronomy is accepted, the problem is when it was composed. The appropriate historical and religious background for the composition of this type of work is the time of Hezekiah and Josiah, with that of Josiah being more likely. Of the "good kings" only Hezekiah and Josiah are credited with both *Kultusreinheit* (cult-purification) and *Kultuseinheit* (cult-centralization). Although Hezekiah is credited with being the first king to implement the centralization of the cult, and he and his personnel are credited (like King Ashurbanipal of Assyria) with the collection of ancient literature (cf. Prov. 25:1), no book is cited as the motivation for Hezekiah's reform. The attribution of the book to Moses (directly in II Chronicles 34 and by implication in II Kings 22) would enable the proponents of centralization and purification to claim that their program was a restoration rather than an innovation. Earlier scholarship explained Josiah's religious reforms as directed against imposed Assyrian cults whose elimination was taken as political rebellion. For a number of reasons this view cannot be sustained. First, Assyria did not impose its cults on vassal states. Second, Josiah's actions were not directed against distinctively Assyrian cults but mainly against old local ones, including *Asherah. Third, in contrast to Hezekiah the Bible does not ascribe rebellion against Assyria to Josiah. Indeed, if we follow the chronology of Kings, by the time of Josiah's actions Assyria would have been in retreat. It is more likely that the religious reforms arose out of a genuine belief that Judah's troubles were due to infidelity to Yahweh. The "Yahweh-alone" movement could always adduce the fall of Samaria a century earlier in proof. No wonder, therefore, that the law book caused a national resurgence and led the people to turn back to God with great enthusiasm. The constant editing and reworking of Deuteronomy shows the great interest this book aroused. Furthermore, the religious upheaval of that time along with the contemporary antiquarian interest attested in Mesopotamia and Egypt gave impetus to the collecting of ancient traditions and putting them into a systematic historical framework. Though the so-called Deuteronomic history of the Former Prophets was not completed before the destruction of the Temple, its beginning, or the constituent stage of its crystallization, has to be sought in the Josianic period.

The Provenance of Deuteronomy

"History of Form," which opened up a new vista in biblical criticism, has also made a contribution in the field of research of Deuteronomy. The question of the "Sitz im Leben" of Deuteronomy, i.e., of the reality which gave birth to the style of its literary creation, was brought up by G. von Rad. By analyzing the peculiar structure of Deuteronomy: homily (chapters 1–11), laws (12:1–26:15), sealing of the covenant (26:16–19), and blessings and curses (27:11–26; chapter 28), he came to the conclusion that this combination of different literary genres could hardly have been invented. He assumed, therefore, that the complex literary structure must have been rooted in a cultic ceremony in which God's laws were recited by clergy. The recital opened with a homily and religious preaching and concluded with a public pledge sanctioned by blessings and curses. He claimed to find traces of an old cultic ceremony in Deuteronomy 27 and in the tradition of the Shechem covenant in Joshua 24. According to von Rad, Deuteronomy renews the cultic tradition of the old Shechem amphictyony, a theory that fits in well with the prevalent opinion about the affinities of Deuteronomy to northern traditions. As a matter of fact, in the previous century A. Klostermann had already conjectured that the homiletic style of Deuteronomy reflects a public recital, but he could not base his thesis on form-critical observations as did von Rad, and, therefore, did not connect it with the cult. In 1947 von Rad went a step further and identified the reciters of the law with the levites and moreover recognized them as the actual spokesmen of the Deuteronomic movement. He based this supposition mainly on Nehemiah 8:7, which speaks about the levites "instructing the people in law." According to von Rad's earlier study (1934), the sermons in Chronicles are the product of the levites of the post-Exilic period. Thus in seeking for the originators of the sermons in Deuteronomy, it was only natural for him to identify them also with the levites. However, Mendenhall in 1954 was the first to see the similarities between the Hittite treaties and the Israelite covenant. A treaty pattern with a common basic structure – historical introduction, stipulations, blessings and curses – was prevalent in the ancient Near East for a period of over 1,000 years. The structure of Deuteronomy would then follow a literary tradition of covenant writing rather than imitating a periodical cultic ceremony for which there is no evidence. Once it is unnecessary to assume a cultic ceremony for understanding the structure of Deuteronomy, the assumption that the levites preserved this cultic tradition becomes dubious too. If a literary pattern lies behind the form of Deuteronomy, it would be much more reasonable to assume that a literary circle familiar with treaty writing – in other words, court

scribes – composed the book of Deuteronomy. Only scribes who dealt with literary and written documents and who had access to the court could have been familiar with the structure of treaties, and what is more important, with formulas originating in the Assyrian political milieu. The means that Deuteronomy used to foster its aims are identical with those employed by scribes-wise men in Israel and other ancient Near Eastern peoples. Like the sapiential teachers and pedagogues, the author of Deuteronomy also places great stress on the education of children. The author of the book repeatedly emphasizes that children must be taught the fear of God and that this is to be done by inculcation (6:7; 11:19), that is to say, by formal methods of education. The Book of Deuteronomy does indeed contain a wealth of didactic idioms that are not encountered in any other of the pentateuchal books, but that constitute part and parcel of the vocabulary of sapiential literature which, to be sure, was composed with a pedagogical object in mind. The author of Deuteronomy holds wisdom in esteem and sets it above other spiritual qualities. This becomes particularly evident when the traditions concerning the Mosaic appointment of judges in Exodus 18 are compared with Deuteronomy 1. According to Deuteronomy (1:13) the essential traits characterizing the judge and leader must be wisdom, understanding, and knowledge (*ḥokhmah, binah, daʿat*), that is to say, the same intellectual traits possessed by the scribes, and not other personal characteristics such as social standing (e.g., *anshe ḥayil*), as in Exodus 18:21. The particular esteem with which Deuteronomy regarded wisdom explains the presence in this book of exhortations that have a sapiential character and formulation (cf. e.g., Deut. 19:14 with Prov. 22:28; Deut. 23:16 with Prov. 30:10; Deut. 25:13–16 with Prov. 20:10, 23). Wisdom has been styled "the humanism of the ancient Near East," and it is due to its impact that humanitarian laws, which have no counterpart in any other of the Pentateuchal books, found their way into the Book of Deuteronomy.

The Relation of Deuteronomy to the Tetrateuch

As to the relation of Deuteronomy to the Tetrateuch (i.e., the first four books of the Bible), critical work in Deuteronomy has indicated that this book depends on the historical and legal traditions of the preceding books of the Pentateuch, especially on the so-called Elohistic source. An exception, however, has to be made in regard to the priestly code which did not influence the laws of Deuteronomy, except its latest sections (e.g., Deut. 12:20–28). This is to be explained by the lateness of the priestly literature. Deuteronomy shows dependence especially on the *Book of the Covenant (Ex. 21–23; Deuteronomy itself also contains "the words of the Covenant," 28:69). The author makes it quite clear that at Horeb the Decalogue was proclaimed, whereas the law proper could have been given to Israel by Moses on the plains of Moab. In other words, Deuteronomy would be seen as complementing the old Book of the Covenant or supplementing it. It cannot be known whether the author of Deuteronomy had before him "the Book of the Covenant" in its present form or used a legal source in which laws of the type found in Exodus 21–23 were incorporated. What is clear is that Deuteronomy used laws identical in formulation with those of the Book of the Covenant and revised them according to its ideology. The parallels are:

Exodus 21:1–11	//	Deuteronomy 15:12–18
Exodus 22:15–16	//	Deuteronomy 22:28–29
Exodus 22:24–26	//	Deuteronomy 24:10–13
Exodus 23:4–5	//	Deuteronomy 22:1–4
Exodus 23:8	//	Deuteronomy 16:19
Exodus 23:15	//	Deuteronomy 16:3
Exodus 23:17	//	Deuteronomy 16:16
Exodus 23:18	//	Deuteronomy 16:4
Exodus 23:19b	//	Deuteronomy 14:21b

The parallels mainly pertain to the moral-religious section of the Book of the Covenant, the so-called apodictic law (Ex. 22:17–23:19). The civil section of the Book of the Covenant, the so-called casuistic law (Ex. 21:1–22:16), is not represented in Deuteronomy except for two laws (Ex. 21:1–11; 22:15–16). This may be explained in the following way: the civil law section in Exodus 21:1–22:16 constitutes the common law of the ancient Near East and has strong affinities to the Mesopotamian law codes. As in the neighboring codes, this section in the Book of the Covenant is mostly concerned with offenses against property, and even when dealing with human rights (injury, slaves etc.), it is the compensation for the damage that stands at the center of the discussion. Deuteronomy ignored these laws since the author's purpose was not to produce a civil law book like the Book of the Covenant treating of pecuniary matters but to set forth a code of laws securing the protection of the individual and particularly of those persons in need of protection. At the same time, Deuteronomy incorporated laws concerning the protection of the family and family dignity (22:11–19) which are not in the Book of the Covenant.

The only laws from the civil section of the Book of the Covenant employed by Deuteronomy are the law of the Hebrew slave (Ex. 21:1–11) and the law of the seduction of a virgin (Ex. 22:15–16). These two laws, which are located at the beginning and at the end of the section respectively, were incorporated by Deuteronomy because they contain moral implications aside from their civil aspect. Moreover, by the way these two laws are presented, Deuteronomy actually deprived them of their civil-financial character and turned them into purely moral-social laws. In Exodus 21:1–11 the rights of the master are protected no less than those of the slave (cf. the provision about the slaves born in the master's home belonging to the master, the master's right of keeping the slave in perpetuity, etc.), the main concern of the legislator there being to define the status of the slave. Deuteronomy, however, is concerned with only the slave, and, therefore, the obligations of the master to his slave (to bestow gifts, etc.) are stressed. By the same token, the law of the seduced virgin in Exodus 22:15–16 is discussed from the pecuniary point of view (the loss of the bride price) whereas Deuteronomy is concerned with the humili-

ation or moral degradation of the virgin and therefore does not deal explicitly with the bride price and does not grant the man who violated the virgin the right to refuse to marry her, but compels him to marry her forever.

In a similar way the author of Deuteronomy revised all the social and religious laws that he drew from the ancient lore. The social laws were elaborated and made to favor the distressed, as for example, the injunction not to enter the house of the debtor to take the pledge (Deut. 24:11) and the duty to take care of the loss until it is claimed by the owner (22:2), demands that seem utopian even in modern society. The religious-sacral laws were adapted to the new concept of centralization. Thus, for example, the law of the three annual pilgrimages in Deuteronomy 16:16, which is verbally identical with Exodus 23:17, is supplemented by the words "in the place that He will choose," which stresses the principle of centralization. The real meaning of the Deuteronomic law can be fully understood by comparing the religious institutions as reflected in Deuteronomy with those occurring in the other codes, including the priestly one. These show the uniqueness of the Deuteronomic law code. Though Deuteronomy deals basically with the same laws as the other codes, i.e., laws relating to sacrifices, the tithe, firstlings, the first fruits, festivals, the year of release, the cities of refuge, the judiciary, and the holy war, these appear here, according to some modern exegetes, in a completely new light and reflect a change not only in the institutions as such but in the religious concepts underlying them. Laws and institutions that have a substantially sacro-ritual character have in Deuteronomy undergone, it is held, a process of rationalization. Following the elimination of the provincial sanctuaries, the judiciary, which was closely associated with the sanctuary, was freed of its sacred ties and took on a more secular aspect. The cities of asylum that previously served as sacral places of refuge for the accidental homicide became in Deuteronomy secular cities whose exclusive function was to protect the manslayer from blood vengeance. Profane slaughtering which had been forbidden by the previous codes is allowed by Deuteronomy (12:13–19), a necessary consequence of the law of centralization. The year of release whose main essence in the earlier codes is the prohibition of the cultivation of the land (Ex. 23:10–11; cf. Lev. 25:1–7) is given here a new application, namely the remission of debts, and thus serves to ameliorate the condition of the poor (Deut. 5:1–11). All these innovations of the Deuteronomic Code, this theory maintains, revolutionized the religious life of the people, and, in fact, changed certain concepts in the faith of Israel. The sanctuary is here presented as a dwelling place of the name of God (e.g., 12:5, 11, 21), rather than the domicile of God Himself as in the ancient sources (cf. e.g., I Kings 8:13). Similarly the ark which in the previous sources is regarded as the seat of God or His chariot (e.g., Ex. 25:22; Num. 10:33–36; I Sam. 4:4) is seen in Deuteronomy only as the receptacle for the tablets (10:1ff.). A similar attitude is reflected in the descriptions of the revelation in Deuteronomy. According to Exodus 19, God went down to Mt. Sinai and from there made His voice heard to Moses and the people, whereas in Deuteronomy, God proclaimed His word from His seat in heaven, but it was transmitted to Israel through the great fire on the mount.

Deuteronomy is often characterized as monotheistic but the reality is more complex. Israelites must worship Yahweh exclusively (monolatry; Deut 5:7, 8; 6:4; 13:3–18; 28:15–20, 23–25; 30:17–18, etc.), but according to Deuteronomy 4:19, a verse that warns Israelites against worship of the heavenly bodies, it was Yahweh himself who designated the heavenly bodies as objects of worship for the Gentiles. Similarly subversive of monotheism, the belief that there is but one god in existence, is Deuteronomy 32:8–9, which informs us that when the Most High set up the boundaries of the nations he did so according to the numbers of the lesser divinities (Qumran *bny ʾl* or *bny ʾl[m]*). The existence of lesser divinities is acknowledged as well in Deuteronomy 10:17 where Yahweh is styled "god of gods and lord of lords." Deuteronomy 4:35, "It has been clearly demonstrated to you that Yahweh is God; there is none beside him," and Deuteronomy 4:39, "Know therefore this day and keep in mind that Yahweh alone is God in heaven above and on earth below; there is no other," are usually cited as denials of the existence of all other divinities. Yet the context of these verses cannot be ignored. Verse 34 asks rhetorically whether any god ever took another nation to himself as Yahweh has done for Israel. Verse 35 responds "Yahweh is THAT god; none beside him." The same sentiment is expressed in Deuteronomy 32:12: "Yahweh alone did guide him. No alien god at his (Yahweh's) side." Verse 39 is part of the same pericope, to be understood as "Know therefore … Yahweh alone is <the only> god in heaven above and on earth below, there is no other <who did these things.>"

STYLE AND PHRASEOLOGY. The style of Deuteronomy is distinguished by its simplicity, fluency, and lucidity and may be recognized by its phraseology and especially by its rhetorical character. The main characteristic of Deuteronomic phraseology is not the employment of new idioms and expressions, because many of these can be found in earlier sources and especially in the E source. Indeed, it cannot be said that in the seventh century a new vocabulary and new expressions were suddenly created. Language grows in an organic and natural way and it is not created artificially. What constitutes the novelty of the Deuteronomic style, therefore, is not new idioms and new expressions but a specific jargon reflecting the religious upheaval of this time. The Deuteronomic phraseology revolves around a few basic theological tenets such as:

1. the need to extirpate the native cults.
2. the centralization of the cult.
3. exodus, covenant, and election.
4. the repeated demand on Israel to serve Yahweh alone.
5. observance of the law and loyalty to the covenant.
6. inheritance of the land.
7. retribution and material motivation.

The editor of the Former Prophets, who was inspired by

Deuteronomy, uses the phraseology of Deuteronomy and even elaborates upon it. Like the Book of Deuteronomy so also the Deuteronomist makes use of speeches and discourses in order to express his ideology. Another branch of Deuteronomic writing may be recognized in Jeremiah's prose, where Deuteronomic phraseology is encountered and the oration is very common. According to this argument, therefore, the Deuteronomist, the editor of Joshua-Kings, and the editor of the prose sermons in Jeremiah are products of a continuous literary school starting in the middle of the seventh century and ending somewhere in the second half of the sixth century.

There are, however, less radical theories regarding the origin and date of Deuteronomy. These are reviewed in R.K. Harrison, *Introduction to the Old Testament* (1970), 631ff.

[Moshe Weinfeld / S. David Sperling (2nd ed.)]

Defenses of the Traditional View

The orthodox standpoint that Moses was the author of the Book of Deuteronomy as well as of the other books of the Pentateuch has been defended by a number of traditional scholars. These scholars maintain that the main theme of Deuteronomy is not centralization of worship, but opposition to idolatry. The struggle against idolatry could never have reached such intensity except in the age of Moses, the period of the formation of Israel's religion. It ideally fits into the period placed by tradition, immediately after Israel's apostasy to Baal of Peor (Num. 25), when the very existence of the new faith was threatened by contact with the Baal cult of Canaan. The centralization of the cult does not prove that Deuteronomy is of late origin since it may be argued that the law of a central sanctuary is quite early and primitive. Moreover, had a later author wished to impress the importance of cultic centralization he would have not failed to mention the city of Jerusalem, the main cultic center. Most of the laws repeated in Deuteronomy from the Book of the Covenant are found in one or more of the ancient Near Eastern codes, thereby testifying to their antiquity. As for the characteristic Deuteronomistic laws having no parallels in the Near Eastern codes, such as the law of release, the laws of kingship, appointment of judges, etc., there is nothing in these provisions incompatible with conditions and institutions of those early days. Not only the religious and legal but also the political background of Deuteronomy resembles that of the Mosaic and no other age. The order to destroy the Hittites, Amorites, Canaanites, Perizzites, Hivites, and Jebusites, the enemies of Israel (20:16–18), the denouncement of the inveterate enemies Ammon and Moab, the attitude toward the Edomites and Egyptians (23:8), and the omission of any mention of the Philistines or the division of the kingdom point to the political circumstances of the Mosaic age. The civil institutions are also of a nature approaching the primitive stage. There is no king. The elders of Israel are pictured sitting at the gate in judgment, while judges and clerks preside in trials in accordance with the advice of Jethro, Moses' father-in-law (Ex. 18). The book's covenantal structure fits ancient Near Eastern treaty forms; the Hittite vassal treaty form is a model by which the Book of Deuteronomy may be analyzed (see *Covenant). Linguistically, there is nothing against placing Deuteronomy in the days of Moses. Although the refined and polished style of the book may suggest a high state of development, it is probable that such a style existed in oratorical discourse, particularly in light of the perfect form of the 15th century B.C.E. Ras Shamra texts. Certain words are of an admittedly early period (נער for נערה, אל for אלה), and some of the ritual terms and practices such as *shalem* (peace offering), *kalil* (burnt offering), *maaser* (tithe), *tenufah* (wave offering), have their parallels in Ugaritic literature. Parallelism not only in poetry, but also in prose, accounts for many repetitions which higher criticism ascribes to different sources. Another principle of this sort is the change of person and the variation from singular to plural which higher critics take as a criterion for various sources, but is a general characteristic of the Bible and is common to all ancient Oriental composition. As to passages in the third person, they may be due to a late editor of the original book. Traditional scholars therefore believe that the best way to account for the book is to say that the bulk originated during the last days of Moses. The Israelites standing at the threshold of Canaan were about to graduate from a nomad group to a settled agricultural people and this change necessitated an amplification of the earlier codes of Exodus and Leviticus, which resulted in the book of Deuteronomy. The anachronisms and discrepancies may very well be explained by the reasonable assumption of later marginal notes by learned readers which in the course of time crept into the text itself and became an integral part thereof. Although the historical framework often lacks precision and strict sequence, as stated in the Talmud, "There is nothing prior or posterior in the Torah," for its chief aim is religious and moral and not purely historical.

DEUTERONOMY RABBAH, aggadic Midrash on the Book of Deuteronomy.

Name

In medieval literature the work was also referred to as *Haggadat Elleh Ha-Devarim Rabbah* and *Devarim Rabbati*, the designation "*Rabbah*" being used to distinguish it from *Deuteronomy Zuta* (see **Genesis Rabbah; **Ruth Rabbah*).

Structure

Deuteronomy Rabbah is a homiletic Midrash (**Derash*). The printed version is divided into 11 sections according to the weekly pentateuchal readings, but the division is in fact into 27 homilies, according to the triennial cycle of the reading of the Torah customary in Erez Israel in earlier times. *Deuteronomy Rabbah* is a characteristically **Tanḥuma-Yelammedenu* type of Midrash, even more so than those homilies on the Book of Deuteronomy contained in the printed editions of the *Tanḥuma* and in that of S. Buber (see below). Each homily is introduced by a halakhic question characteristic of the *Tanḥuma-Yelammedenu* type of Midrash and begins with the formula: *Halakhah adam me-Yisrael… Kakh shanu ḥakhamim* – "What is the *halakhah* for a man of Israel … thus our sages taught …" (here *halakhah* is used instead of the more usual *Yelammedenu rabbenu*, "Let our master teach us," of this type of Midrash). This is followed by a homily incorporating both *halakhah* and *aggadah*, the transition from *halakhah* to *aggadah* being introduced by the term: זה שאמר הכתוב ("This is what Scripture says"). Most of the homilies conclude with a message of consolation or redemption. The numerous transitions in lengthy homilies on the same subject are introduced by the formula *davar aḥer* … "another version…."

Different Versions

In 1895 S. Buber published from the Munich manuscript of *Deuteronomy Rabbah*, written in 1295, those homilies on the portion of *Devarim* which differ from the printed version, as well as addenda to the section *Niẓẓavim* (this manuscript omits the sections *Va-Etḥannan* and *Va-Yelekh* to the end of the Book of Deuteronomy, whereas all the remainder is identical with the printed version). A few years later a complete manuscript of *Deuteronomy Rabbah* in the possession of A. Epstein was found to be almost identical with the Munich manuscript and to contain homilies on *Va-Etḥannan* and *Va-Yelekh* different from those in the printed versions, addenda to *Ekev*, and homilies on *Haʾazinu* and *Ve-Zot ha-Berakhah* identical with those in the *Tanḥuma* Midrashim. In 1940 S. Lieberman published the Oxford manuscript of *Deuteronomy Rabbah*, which is similar to the Epstein manuscript, except for additional homilies from the *Tanḥuma* Midrashim on *Va-Etḥannan*. Manuscripts, therefore, contain homilies on *Devarim*, *Va-Etḥannan*, and *Va-Yelekh* different from those printed, as well as additional ones on *Ekev* and *Niẓẓavim*. This version is likewise mainly a homiletic Midrash of the *Tanhuma Yelammedenu* type, although several of its homilies have no halakhic introduction, and, even in those having halakhic introductions, they begin directly with the question without any *terminus technicus*, whereas the answer begins with כך שנו רבותינו ("Thus did our masters teach"). The aggadic proems are not all, as in the printed *Tanḥuma* Midrashim, anonymous; some begin with the name of an *amora*. In structure, language, and composition, the printed version of *Deuteronomy Rabbah* is a homogeneous Midrash. The same cannot be said for the manuscripts which contain a composition of several versions. It is certainly not a complete entity in itself. There were apparently extant several versions of the *Tanḥuma-Yelammedenu* Midrashim on the Book of Deuteronomy. One of these is that found in the printed edition as well as Buber's editions of *Tanḥuma*, another is the printed edition of *Deuteronomy Rabbah*, while several manuscripts of the latter work quote homilies on *Devarim, Va-Etḥannan*, and *Va-Yelekh*, and also additions to *Ekev* and *Niẓẓavim*, from another edition (C) of the *Tanḥuma-Yelammedenu* Midrashim, with homilies on *Haʾazinu* and *Ve-Zot ha-Berakhah* taken from the *Tanḥuma* Midrashim version (A). The version (C) of *Deuteronomy Rabbah* in the above-mentioned manuscripts was apparently known in the Middle Ages only to Spanish scholars (the first to cite it was Naḥmanides) and the manuscripts on which the printed version is based (B) only to the scholars of France and Germany (first being cited by Moses b. Jacob of Coucy). There were apparently manuscripts extant which contained further addenda from the *Tanḥuma-Yelammedenu* Midrashim, for medieval scholars sometimes quote statements in the name of *Deuteronomy Rabbah* which are not found in any existing version. On the other hand, they sometimes cite passages in the name of the *Tanḥuma* or *Yelammedenu* which are contained in one of the editions of *Deuteronomy Rabbah*.

Language

The language of the two versions of *Deuteronomy Rabbah* is rabbinic Hebrew combined with Galilean Aramaic and containing a liberal sprinkling of Greek words.

Redaction

Both versions of *Deuteronomy Rabbah* drew upon tannaitic literature, the Jerusalem Talmud, *Genesis Rabbah*, and *Leviticus Rabbah* (the printed version also apparently drew upon *Lamentations Rabbah*). The redaction of the material is characteristic of that of the *Tanḥuma-Yelammedenu* Midrashim. None of the sages mentioned in the work lived later than the fourth century C.E. Although certain homilies in the manuscripts are

typical of earlier times, there seem also to be allusions to anti-Karaite polemics, which would date the final redaction of even the earliest (C) version as not earlier than 800 C.E. Likewise, homilies in the printed version, which draw upon Midrash *Petirat Moshe* and are typical of the period after the Muslim conquest, were apparently redacted in the ninth century C.E. To the same century also belong the combinations found in the manuscripts. The earliest manuscript upon which the printed version is based was copied in the 13th century.

[Moshe David Herr]

DEUTSCH, ALADAR (1871–1949), chief rabbi of Prague under the Nazi occupation. He was a pupil of Solomon *Breuer in Frankfurt, and subsequently served as rabbi in several Prague synagogues, when he was active within the *Afike Jehuda association. From 1930 he served as acting chief rabbi; his appointment as chief rabbi under the Nazi regime was accompanied by all the humiliations to which Jewish leadership was then subjected. He was finally deported to *Theresienstadt, from where he returned, a broken man, to Prague. Deutsch published an essay on the Zigainer Synagogue (1907).

DEUTSCH, ANDRE (1917–2000), British publisher. Born in Budapest, Deutsch moved to Switzerland after the German *Anschluss* of Austria (where he was living) and then to England. In 1945 he founded his own publishing firm, Allan Wingate, and, in 1951, his well-known firm of Andre Deutsch Ltd. His first bestseller was the memoirs of von Papen, Hitler's diplomat, but most of the famous works published by his firm were novels and other fiction, especially books by famous American writers like Norman Mailer, Jack Kerouac, Philip Roth, and John Updike, as well as the fiction of serious British novelists like V.S. Naipaul. Deutsch was one among a number of very prominent Jewish refugee publishers who emerged in Britain after World War II, such as Paul *Hamlyn and George *Weidenfeld.

[William D. Rubinstein (2nd ed.)]

DEUTSCH, BABETTE (1895–1982), U.S. poet. Born in New York, Babette Deutsch graduated from Columbia University, where she taught English from 1944. Her first poems were published while she was still a college student; two early books of verse were *Banners* (1919) and *Honey out of the Rock* (1925). Other volumes of poetry include *Fire for the Night* (1930), *Epistle to Prometheus* (1931), *One Part Love* (1939), and *Coming of Age* (1959). She published some novels, a number of children's books, and translations of German and Russian verse. One of the most notable of these translations was the version of Aleksandr Blok's epic poem about the Soviet Revolution, *Dvenadtsat* ("The Twelve," 1918), which she and her husband, Avrahm *Yarmolinsky, produced together in 1920. A sensitive and emotional writer whose poems often touch on social problems, Babette Deutsch also won distinction as a critic with such works as *Potable Gold* (1929), *This Modern Poetry* (1935; revised as *Poetry in Our Time*, 1952), and *The Reader's Shakespeare* (1946). Her later verse collections include *Animal, Vegetable, Mineral* (1954) and *Collected Poems, 1919–1962* (1963). A new edition of her *Collected Poems*, covering the years 1919–1969, appeared in 1969.

[Sol Liptzin]

DEUTSCH, BERNARD SEYMOUR (1884–1935), U.S. lawyer, public official, and communal leader. Deutsch was born in Baltimore. He began his career as a lawyer in 1905, attaining prominence and playing an active role in judicial reform. He served as president of the Bronx County Bar Association (1927–30) and participated in the 1930 investigation of abuses of legal ethics in New York. Deutsch, an independent Democrat, was elected on Fiorello La Guardia's Fusion Party ticket in 1933 as president of the Board of Aldermen. He displayed strong leadership in reviving the moribund aldermanic council. Together with La Guardia he worked to improve city services in such areas as transportation, home relief, and labor arbitration. Long active in Jewish affairs, Deutsch became president of the American Jewish Congress in 1929 and held that post until his death. In association with Stephen S. Wise, he led campaigns to arouse public opinion on behalf of the rights of German Jews.

[Morton Rosenstock]

DEUTSCH, DAVID BEN MENAHEM MENDEL (1756–1831), Hungarian rabbi and author. Deutsch was a pupil of Ezekiel Landau. He served as rabbi of Jamnitz (1784–90), Frauenkirchen, Szerdahely, and, from 1810 until his death, of Waag-Neustadt. After he had published *Ohel David* (3 pts., Vienna, 1822), novellae on various tractates, he added various glosses to the work, and instructed that they be added to the passages indicated in every copy of the books. His novellae on *Yevamot* (Vienna, 1825) and on *Shevu'ot* (Pressburg, 1830; the latter published by his son Ezekiel, who also wrote an introduction) were brought to press through the efforts of his son-in-law, Meir Ash. Some of Deutsch's novellae were published by his grandson, Menahem Deutsch (Ungvar, 1867). Other novellae are to be found at the end of *She'elot u-Teshuvot ha-Ge'onim* (Pt. 1 responsa *Ge'onei Batra'ei*, Prague, 1816) and in part two of *Kedushat Yisrael* (Vienna, 1829) of Benjamin Wolf b. Leib (Lichtenstadt). Eleazar b. Aryeh Loeb Roke'aḥ,

Deutsch's colleague and intimate friend, mentions his responsa several times in his own work, *Shemen Roke'aḥ*.

[Yehoshua Horowitz]

DEUTSCH, ELIEZER ḤAYYIM BEN ABRAHAM (1850–1916), Hungarian talmudist and author. Deutsch was born in Petra, near Kaschau. He studied under Menahem Eisenstadt of Ungvar, Judah Aszód, and Solomon *Ganzfried. In 1876 he was appointed rabbi of Hunfalu, and, in 1897, of the important community of Bonyhad, where he founded and headed a large yeshivah. Deutsch was a leader of Hungarian Orthodoxy, and a supporter of the "Moriah" association for the advancement of Orthodox Judaism, founded in 1905 by Meir Lerner in Altona.

A prolific writer, his books are (1) *Tevu'ot ha-Sadeh* in six parts (1892–1904), novellae on talmudic themes with responsa appended to each part; (2) *Ḥelkat ha-Sadeh* (1901), glosses and notes on the *Ara de-Rabbanan* of Israel Jacob *Algazi; (3) *Peri ha-Sadeh* in four parts (1906–15), responsa; (4) *Si'aḥ ha-Sadeh* (1914), aggadic novellae on the Torah and for festivals. Published posthumously were (5) *Ẓemaḥ ha-Sadeh* (1917), novellae and responsa on the problems of *agunot*; (6) *Duda'ei ha-Sadeh* (1929, published by his son, Moses), responsa and a selection of rulings with respect to the laws of mourning. In the *Yizraḥ Or* of David *Meldola, there is an appendix by Deutsch, *Omer ha-Sadeh*, that comprises the laws for determining the New Moon. Halakhic queries were addressed to Deutsch from many parts of the world.

[Itzhak Alfassi]

DEUTSCH, EMANUEL OSKAR (**Menahem**; 1829–1873), Orientalist. Born in Neisse (Upper Saxony), Deutsch studied Jewish subjects with his uncle David Deutsch (see Israel *Deutsch) at Myslowice (Poland) and classics in Berlin. He became an assistant in the Oriental department of the British Museum in 1855. Deutsch, who possessed great ability in deciphering inscriptions, cooperated in W.S.A. Vaux's edition of *Phoenician Inscriptions* (1863) and in W. Smith's *Dictionary of the Bible* (1871) to which he contributed articles on the *Targumim*, the Samaritan Pentateuch, and other Bible versions. His essay on the Talmud in the *Quarterly Review* (October 1867) was translated into several languages. The article implied that the key to the understanding of Jesus was to be found in the study of his Palestinian background; this led to a renewed interest in the Talmud among Christians in England. A later article by Deutsch, on Islam, made less impact. He took a prominent part in the correspondence in the London *Times* which resulted from the discovery of the Mesha stele. He was also the paper's special correspondent to the Vatican Ecumenical Council 1869–70. Deutsch contributed nearly 200 articles to *Chambers' Encyclopaedia*. Some of his work was published posthumously in book form (*Literary Remains*, 1874) and edited by Lady Strangford.

BIBLIOGRAPHY: DNB, s.v.; JC (May 1873).

DEUTSCH, ERNST (1890–1969), German actor. At the age of 24, playing the main role in Hasenclever's *The Son*, Deutsch became one of the exponents of expressionism on the German stage. He had his most fruitful period at the Reinhardt Theater in Berlin, but could also be seen in films and on stage at the Burgtheater in Vienna. Deutsch played many Jewish roles, among them parts in Arnold Zweig's *Blood Libel in Hungary*, R. Beer-Hoffman's *Jacob's Dream*, and Galsworthy's *Loyalties*. With the rise of Hitler, Deutsch left Germany and worked in London and Hollywood. After World War II, he was invited to appear in Berlin and Vienna and in 1957 played in *Nathan the Wise*.

BIBLIOGRAPHY: J. Bab, *Schauspieler und Schauspielkunst*, 1928; A. Zweig, *Juden auf der deutschen Buehne* (1929). **ADD. BIBLIOGRAPHY:** G. Zivier, *Ernst Deutsch und das deutsche Theater: Fünf Jahrzehnte deutsche Theatergeschichte – Der Lebensweg eines großen Schauspielers* (1964).

DEUTSCH, FELIX (1884–1964), psychiatrist. Born in Vienna, Deutsch grew up in a liberal atmosphere without any formal religious background. Faced with the antisemitic environment of Vienna University, he joined the Zionist student organization Kadima, and became a leading figure with a reputation for fighting on the side of minority groups. He was a friend of Herzl and was one of the pallbearers at his funeral. In 1921 he lectured in medicine at Vienna University.

As early as 1919 Deutsch established a clinic for "organneuroses," a result of his scientific preoccupation with emotional factors in physical illness. This interest led him to psychoanalysis and to close association with Freud. As a result of his interest and influence, the first home of the Psychoanalytic Clinic was established in 1922 in Vienna. He produced many publications on the interaction of emotional and physical processes and became one of the pioneers of psychosomatic medicine. With the advent of Hitler, Deutsch immigrated to the United States in 1935, became research fellow in psychiatry at Harvard University, and held various teaching positions. From 1951 to 1954 he was president of the Boston Psychoanalytic Institute. He wrote articles on an astonishing variety of medical and psychoanalytical topics. Terms like "associative anamnesis," "sector psychotherapy," and "posturology" coined by him enriched the scientific language. In 1939, he published an essay on "The Production of Somatic Disease by Emotional

Disturbance," in *Inter-Relationship of Mind and Body* (published by the Association for Research in Nervous and Mental Disease), and in 1949, *Applied Psychoanalysis*. Deutsch never abandoned his Zionist ideals and his last project, cut short by his death, was a study of the art of children gathered in Israel from all corners of the world.

Hohendorf, "Felix Deutsch und die Entwicklung der psychosomatischen Medizin," in: C. Kaiser and M.-L. Wuensche (eds.), *Die "Nervosität der Juden" und andere Leiden an der Zivilisation und Konzepte individueller Krankheiten im psychiatrischen Diskurs um 1900* (2003), 207–26.

[Heinrich Zwi Winnik]

DEUTSCH, GOTTHARD (1859–1921), historian and theologian. Deutsch was born in Dolné Kounice (Kanitz), Moravia. He studied at the Breslau Jewish Theological Seminary and at Vienna University, and was ordained by Isaac Hirsch *Weiss. Deutsch first served as teacher of religion at Bruenn and as rabbi in Most (Bruex, Bohemia). In 1891 he accepted a position as professor of Jewish history and philosophy at Hebrew Union College, Cincinnati, where he became one of the leading spokesmen of Reform Judaism. Deutsch succeeded Isaac Meyer Wise as editor of the German-American monthly *Deborah* in 1901, and also contributed articles in English and German to several Jewish and general periodicals. Deutsch was known for his sympathies toward Orthodoxy despite his intellectual disagreement. He prayed at an Orthodox synagogue in Cincinnati. His German roots and appreciation of things German proved problematic at the beginning of World War I. As anti-German sentiment spread throughout the United States there was a move afoot to dismiss him from the HUC faculty. He belonged to the moderates in the Reform movement, and although not a Zionist he greatly sympathized with many aspects of Zionism. He was editor of the modern Jewish history division of the *Jewish Encyclopedia*. Deutsch, while in many ways an original historian who devoted meticulous attention to detail and motivations, did not write a major account of Jewish history, and most of his published work is in the form of essays and lectures. He wrote *Scrolls, Essays on Jewish History and Literature* (3 vols., 1917–20), *Memorable Dates of Jewish History* (1904), and *History of the Jews* (1904). Deutsch wrote a German novel, *Unloesbare Fesseln* (1903), and a historical play in English, *Israel Bruna* (1908). A son of Deutsch was HERMANN BACHER DEUTSCH (1889–1970), writer and journalist.

Raisin, *Great Jews I Have Known* (1952), 143–52; Bloch, in: *Sefer ha-Shanah li-Yhudei Amerikah*, 6 (1942), 451–61. **ADD. BIBLIOGRAPHY:** M.A. Cohen, "History," in: *Hebrew Union College-Jewish Institute of Religion at 100* (1976); K.M. Olitzsky, L.J. Sussman, and M.H. Stern (eds.), *Reform Judaism in America: A Biographical Dictionary and Sourcebook* (1993).

DEUTSCH, HELENE (née **Rosenbach**; 1884–1982), psychoanalyst and psychiatrist. Helene Deutsch was born in Przemysl, Poland, where her father, a lawyer, was at one time president of the Jewish community. Because of the restrictions on female education, she ran away to Vienna in order to train as a physician. In 1912 she married Felix *Deutsch. Helene Deutsch was the first woman assistant in Vienna University's psychiatric department, and was later made head of the female ward. After becoming acquainted with the ideas of Freud she gave up her academic career. She went through a training analysis by *Freud himself and became one of the leading figures of the so-called second generation of analysts. In 1923 she went to work with Karl *Abraham in Berlin for a year and on her return established the psychoanalytic training institute in Vienna along the lines of the Berlin institute, serving as its director until her departure for the U.S. in 1935. At the institute she introduced the "continuous case seminar," which became the clinical model for the presentation of psychoanalytical treatment. In the U.S. she settled in Boston, where she spent the rest of her career on the teaching staff of the Psychoanalytic Institute. The outstanding achievement in Helene Deutsch's scientific work is her exploration of the particularities of the female psyche, working on the basis of psychoanalytical theory and expanding the findings of Freud. Her publications in this field were summarized in two volumes entitled *Psychology of Women* (1944–45), a comprehensive monograph with arguments illustrated by numerous clinical cases from Helene Deutsch's own practice and from studies of the female character in world literature. The lucid case presentations and theoretical deductions in her *Psychoanalyse der Neurosen* (1930; *Psychoanalysis of the Neuroses*, 1932) make this one of the classics of psychoanalytic literature. Among her later publications are the book, *Neuroses and Character Types: Clinical Psychoanalytic Studies* (1965), and *Selected Problems of Adolescence* (1967).

[Heinrich Zwi Winnik]

DEUTSCH, IGNAZ (1808–1881), extremist leader of Austrian Jewish Orthodoxy. A native of Pressburg (Bratislava), he became a banker in Vienna and *gabbai* of the Polish synagogue there in 1848. To further Orthodox influence, he submitted numerous memoranda to the minister of religious affairs claiming that Orthodox Jews supported monarchical rule while Reform Jewry favored revolution. He urged the government to invest rabbis with the same powers as those enjoyed by Catholic clergymen under the concordat of 1855. In 1857 he appealed for government intervention in his unsuccessful attempt to secure the secession of Orthodox communities. Deutsch was prepared to give in to Catholics and the government over questions of Jewish rights, for instance, requesting rabbis not to support the Vienna community leadership's protest against the cancellation of the rights of Jews to own real estate (1853) and approving the pope's standpoint in

the *Mortara case (1858). His denunciation (1860) of the *Alliance Israélite Universelle as subversive led to the founding of the independent Viennese *Allianz. In 1859 Deutsch had himself appointed representative in Austria by the Jews living in Jerusalem under the protection of the Austrian consul, but his request to be granted supervision of money collections for them was refused. However, he was recognized as supervisor (*Kurator*) of the affairs of Austrian Jews in Ereẓ Israel. He denounced L.A. *Frankl for introducing reforms in the synagogue attached to the Laemel school in Jerusalem.

Gerson *Wolf's publication (under the pen name of Israel Levi Kohn) in 1864 of several of Deutsch's applications to the ministry of religious affairs in *Beitrag zur Geschichte juedischer Tartueffe* (1864), after Deutsch had publicly denied that he had written them, the failure of his bank, and his circular to the Orthodox rabbis on the Mortara affair put an end to his public career. The leader of Vienna Orthodoxy, R. (Benjamin) Solomon *Spitzer, refused to cooperate with him. Deutsch achieved government recognition of the Pressburg (Bratislava) yeshivah as an academic institution of theological instruction.

DEUTSCH, ISRAEL (1800–1853), rabbi of Beuthen (Bytom). He and his brother DAVID (1810–1873), rabbi of Muslowitz (Myslowice) and Sohrau (Zory), Germany (now Poland), were militant champions of *Orthodoxy against *Reform. They opposed Abraham *Geiger's nomination as rabbi of Breslau and wrote jointly a pamphlet attacking his views (1843). David took a strong stand against rabbinical *conferences (*Asaf Asefah*, 1846) and the use of the organ in the synagogue. He published an annotated edition (with translation) of the Book of Habakkuk (1837) and Isaac of *Troki's *Ḥizzuk Emunah* (1865). Israel's letters to Abraham Muhr (*Zera Israel*, 1855, 26ff.), written between 1837 and 1846, are indicative of Orthodox thought in Germany at that time. The sermons of the two brothers were a synthesis between the old-style *derashah* and modern preaching. A third brother, ABRAHAM, was *dayyan* at Gleiwitz (Gliwice). The Orientalist Emanuel Oskar *Deutsch was their nephew.

BIBLIOGRAPHY: J. Nordin, *David Deutsch…* (Ger., 1902); W.G. Plant, *Rise of Reform Judaism* (1963), 257–8; Toury, in: BLBI, 8 (1965), 69–80.

DEUTSCH, JUDAH JOEL (c. 1870–1918), rabbi. He was a devoted disciple of Jekuthiel Judah *Teitelbaum, rabbi of Sighet (Máramarossziget). At the age of 20 he was appointed rabbi of Ganya in Máramaros. Invitations were extended to him to become rabbi of many Hungarian and Polish communities, but his invariable reply was: "Here I acquired my knowledge and here I wish to dispense it." He wrote important works on the Talmud, as well as many responsa, but almost all his writings were lost during World War I.

His son, MOSES DEUTSCH (1887–1944), succeeded him as rabbi. Endowed with an outstanding memory and a keen mind, he was an expert in Jewish monetary law, and was particularly conversant with the responsa of Moses Sofer (Schreiber), which he quoted freely. He perished in Auschwitz.

[Naphtali Ben-Menahem]

DEUTSCH, LEO (**Lev Grigoryevich**; 1855–1941), Russian revolutionary. Deutsch was born in Tulchin (Kamenets Podolsk) and in the 1870s joined the Populist Narodniki. In 1877 he organized a revolt of farmers in the district of Chigirin (Ukraine); he was arrested but escaped to Switzerland. In 1879 he returned to Peterburg and was a member of the revolutionary organization Ẓemlia i Volia" ("Earth and Freedom"), and later of "Chornyi Peredel." In 1880 he immigrated to Switzerland, and with Plekhanov, Akselrod, and others in 1883 they founded "Osvobozhdenie Truda" ("Liberation of Labor"), the first Russian Marxist group abroad. In 1884 he was arrested in Germany and was handed over to the Russian government. After 16 years of hard labor he escaped to Switzerland again (1901). His experiences were published in *Sixteen Years in Siberia* (London, 1903; Russian ed. 1924), which was translated into many languages. He sided with the Mensheviks in 1903. In 1905 he returned to Russia, was arrested and escaped again, and lived in London from 1907 to 1911 and in the U.S. from 1911 to 1916. After the February Revolution he returned to Russia. Since his attitude toward the October Revolution was negative, he gave up politics. He concerned himself with editing Plekhanov's works. In his later years he was mainly occupied with the history of the Russian revolutionary movement. Only the first volume of his work *Rol yevreyev v russkom revolyutsionnom dvizhenii* ("The Role of the Jews in the Russian Revolutionary Movement," 1923) was ever published.

DEUTSCH, MORITZ (1818–1892), cantor and teacher. Deutsch, who was born in Nikolsburg, Moravia, was an infant prodigy in talmudic studies. Having a remarkable tenor voice, he went to Vienna to study music and cantorial singing. In 1842 he was appointed second cantor of the Liberal temple in Vienna, where Solomon *Sulzer was chief cantor. Two years later he became chief cantor at the Reform synagogue in Breslau. Here he formed and conducted a mixed choir. Deutsch taught cantorial music at the Breslau Theological Seminary for 30 years and in 1859 founded an institute for training cantors. He made original arrangements of liturgical music, aiming perhaps excessively at German choral style. His compositions include *Breslauer Synagogengesaenge* (1880) for soloist and choir, school songs, 12 preludes for organ and piano, and *Vorbeterschule* (1871).

[Joshua Leib Ne'eman]

DEUTSCH, OTTO ERICH (1883–1967), Austrian musicologist and bibliographer. He was for some time art critic of *Die Zeit* in Vienna, where he was born, and from 1926 to 1955, librarian of the important music collection of A. van Hoboken. After the *Anschluss* in 1938, he went to England, but returned to Vienna in 1956. Deutsch developed a form of "synthetic biography," which combined bibliographical and iconographical documentation. He devoted many years to the study of Schubert, producing *Schubert, A Documentary Biography* (1946) and *Schubert, Thematic Catalogue…* (1951). His later years were devoted to research on Mozart, which resulted in *Mozart – Die Dokumente seines Lebens* and *Mozart und seine Welt in zeitgenoessischen Bildern*, both in 1961. He also compiled a documentary biography of Handel (1954) and published reference works on early music printing. All Schubert's works are now designated by D (Deutsch) numbers, based on his 1951 catalog.

[Judith Cohen]

DEUTSCH, SIMON (c. 1822–1877), Austrian revolutionary. Born in Nikolsburg, Deutsch lived in Vienna, where he studied for the rabbinate, cataloged Hebrew manuscripts at the Imperial Library, and published Menahem b. Jacob ibn Saruq's *Maḥberet*. He soon turned to Socialism and after the 1848 revolution was condemned to death, but escaped via Switzerland to France. In Paris, Deutsch entered business and became prosperous, opening branches in Belgium, Romania, and Turkey, but remained a radical and associated with Michelet and Proudhon. During the 1870 Franco-Prussian War, Deutsch served in the French army. In 1871 he took part in the Paris Commune as one of the leaders of the First Communist International. After the collapse of the Commune he was thrown into prison, but was saved from death by the Austrian ambassador. In 1874 he replaced Karl Marx at the directory committee of the International. From Paris, Deutsch moved to Turkey, where he was associated in the foundation of the Young Turk movement. He died in Constantinople.

DEUTSCH DE LA MEURTHE, HENRI (1846–1919), French industrialist and philanthropist. Henri was born in Paris, and began his career as an industrialist with the Société des Pétroles, which his father, Alexander Deutsch (d. 1889), had founded. In 1866 Henri and his brother, Émile, took over joint management of the firm, and under their direction it became one of the leading French companies in the petroleum industry. Henri Deutsch de la Meurthe pioneered in advancing the commercial uses of petroleum. His work, *Le Pétrole et ses Applications* (1891), and the exhibit on the petroleum industry which he arranged at the 1889 World Fair in Paris, contributed greatly to a fuller understanding of the importance of petroleum in industry and commerce. In 1901 he encouraged the use of petroleum for aviation with an offer of a prize for a successful flight over Paris, which was won by Alberto Santos-Dumont. In 1906 he made a gift to the French government of the dirigible *Ville-de-Paris*, which Santos-Dumont had flown. He was the founder of the Aerotechnic Institute at St. Cyr for the University of Paris, and the donor of a chair in aeronautics at the Conservatoire National des Arts et Métiers. He wrote a lyric opera, *Icarus*, which was performed at the Paris Opera in 1911. He was an active member of the French Consistoire Central. A monument in his honor was erected at Ecquevilly, Seine-et-Oise, in 1923.

His brother ÉMILE (1847–1924), who also pioneered in the French petroleum industry, was born in Paris. He was the founder and first president of the Franco-American Brotherhood during World War I, and as its continuing head played an important role in giving assistance to nearly 300,000 French war orphans. In 1920 he set up the Émile and Louise de la Meurthe Foundation with an endowment of 10,000,000 francs, to build seven dormitories for impoverished students in Paris. Émile was also active in the Consistoire Central and was elected vice president of the Paris Consistory. He was a member of the central committee of the Alliance Israélite Universelle and founder of the Union Libérale Juive.

DEUTSCHER, ISAAC (1907–1967), British Marxist historian and political scientist. Born in Cracow, Poland, Deutscher had a strictly Orthodox education and upbringing. In his youth he was a Hebrew-speaking Zionist and even translated modern Hebrew poetry into Polish. From 1926 he was a member of the illegal Communist Party in Poland, ultimately serving as the party's clandestine editor of several legal periodicals which secretly accepted Communist guidance. In 1932, when he disobeyed party orders and in the periodicals refused to brand the Social-Democrats as "Social-Fascists" and the principal enemies of the working class, he was expelled from the Communist Party. For several years he displayed leanings toward Trotskyism.

In 1939, before the outbreak of World War II, he went to London, where he was on the editorial staff of the *Economist* and the *Observer* (under the pen name "Peregrine"). Later he devoted himself to historical research and acquired an international reputation as the political biographer of *Stalin and *Trotsky and an expert on Soviet Russia and Communism. Deutscher remained a Marxist although he became famous for his writings and lectures in which he exposed the brutality of the Stalin regime. In 1953 he visited Israel and showed understanding and sympathy for Jewish national independence after the Nazi Holocaust. But later he became again sharply opposed to Zionism and lost no opportunity of attacking Israel for its ultranationalism and for being nationalist in a world becoming increasingly supranational. It has been said that Deutscher's attempt to secure a chair at Sussex

University in 1963 was thwarted by Sir Isaiah *Berlin, who spoke strongly against him as a member of the appointments panel. Deutscher never held a continuing position at a British university. In *The Non-Jewish Jew and Other Essays* (published posthumously, 1968) Deutscher discussed the heritage of European Jewry as he saw it and defined such personalities as *Spinoza, *Marx, *Freud, and Trotsky as "non-Jewish" Jews; the phrase has become proverbial. Despite this attitude, Deutscher in his essays treated life in the small Jewish towns with tenderness and sympathy and had a warm feeling for the Jewish working masses.

His works include *Stalin, a Political Biography* (1949), *Russia after Stalin* (1953), *The Great Contest: Russia and the West* (1960), a trilogy on the life of L. Trotsky – *The Prophet Armed* (1954), *The Prophet Unarmed* (1959), and *The Prophet Outcast* (1963) – and *Unfinished Revolution: Russia, 1917–1967* (1967). A collection of his essays, *Marxism, Wars, and Revolution: Essay from Four Decades,* edited by Tamara Deutscher, was published in 1984.

[Moshe Rosetti]

DEUTSCHER PALAESTINA-VEREIN, German society for the study of the Holy Land. It was founded by A. Socin, E. Kautzsch, and H. Guthe in 1877 on the model of the British Palestine Exploration Fund, its aim being the "advancement of the knowledge of the history of Palestine." The society, however, did not engage in excavations but concentrated on the publication of its journal, the *Zeitschrift des deutschen Palaestina-Vereins*. Many Jewish scholars contributed to the journal until 1933. Its publication stopped in 1943 and in the following year the archives and offices of the society were destroyed during the bombardment of Leipzig. From 1949 to 1951 it published the *Beitraege zur biblischen Landes-und Altertumskunde*. The society was reestablished at Bonn in 1952 and resumed the publication of its *Zeitschrift*. Its heads have included M. Noth, A. Kuschke, and K. Galling.

[Michael Avi-Yonah]

DEUTSCH-ISRAELITISCHER GEMEINDEBUND (DIGB), union of German Jewish communities; the first all-German Jewish association. Founded in 1869 at the Leipzig *synod, the DIGB began its activities only with the establishment of the German Empire (1871). Initially its headquarters were in Leipzig, but in 1882 they were moved to Berlin. The union gradually embraced most of the German communities, but internal dissensions and legal obstacles prevented it from becoming the representative body of German Jewry. Many of the Orthodox communities withheld their cooperation even though the DIGB's constitution precluded it from dealing with religious and political issues. After World War I, when the Weimar Republic permitted the unification of religious associations, a fresh attempt at effecting a joint representation of all communities had no practical results. Instead, separate communal associations were established in the different states, the largest of which was the Preussischer Landesverband der juedischen Gemeinden. A fully representative body, the *Reichsvertretung der deutschen Juden, was established only in 1933, as a result of the pressures of the Nazi regime.

The DIGB's activities were widespread. In particular it adopted small and financially weak communities, supporting the appointment of religious teachers, providing grants for communal buildings, planning curricula, and organizing Jewish teachers' conferences. One outcome of these efforts was the creation of the Jewish Teachers' Association of the German Empire. Funds were set up to provide for communal officials and charitable institutions, including homes for neglected and mentally retarded children, and a Jewish Workers' Colony for the rehabilitation of impoverished immigrants. In 1885 the DIGB founded the Historical Commission for Investigating the History of the Jews in Germany to gather and sift sources and records for scientific research into the Jewish past. The Commission included non-Jews, such as the legal historian Otto *Stobbe, one of its first chairmen. Only three volumes of the Commission's *Quellen zur Geschichte der Juden in Deutschland* (1888–98) were published. Another important publication was the *Zeitschrift fuer die Geschichte der Juden in Deutschland*, edited by Ludwig *Geiger and published for six years (1887–92). To cover German Jewry's more recent past the *Gesamtarchiv der deutschen Juden* (subsequently transferred to Israel; see Jewish *Archives) was set up, and a statistical yearbook was published. The DIGB attempted to combat antisemitism by disseminating explanatory literature, an activity later expanded by the *Centralverein deutscher Staatsbuerger juedischen Glaubens. Presidents of the DIGB included the renowned gynecologist S. *Kristeller and the historian Martin *Phillipson.

[Reuven Michael]

DEUTSCHKREUTZ (also **Cruez**; Hung. **Keresztúr** or **Németkeresztúr**, **Sopronkeresztúr**; Heb. צלם, צעלם), town in E. Austria. Its community, one of the "Seven Communities" of *Burgenland, increased mainly at the end of the 15th century. In 1526 it absorbed Jews expelled from *Sopron. The situation of the Jews in Deutschkreutz improved when the princes Esterházy took over Deutschkreutz in 1664. In 1701 an agreement was signed between them and the community, renewed several times against payment; Deutschkreutz Jews were permitted to do business in Sopron. A synagogue was built in 1747 and rebuilt in 1834. It was destroyed by the Nazis in 1941. The community was known for its Orthodoxy; its yeshivah became celebrated, especially under Menahem *Katz-Wannfried. The composer Karl *Goldmark grew up in Deutschkreutz. When in 1921 Burgenland was finally separated from Hungary, Deutschkreutz lost its hinterland, and the commu-

nity decreased. It numbered 28 persons in 1672; 47 in 1725; 20 families in 1729; 222 persons in 1735; 100 families in 1780; 1,230 persons (37.8% of the total population) in 1880; 764 in 1911; 410 in 1929; and 433 (12.1%) in 1934. Immediately after the *Anschluss* in 1938 the Nazis expelled the Deutschkreutz Jews to Vienna. At the time there were 103 families (433 persons) there. In 1944 hundreds of Hungarian Jews were deported to Deutschkreutz to build the *Ostwall* fortifications. There were no Jews living in Deutschkreutz in 1970. A monument was erected on the site of the synagogue in 1949. The cemetery, including 286 gravesites of forced laborers from Hungary, has been fenced in and is cared for by the Vienna community. Part of the community archives has been preserved and transferred to the Burgenland state archives in Eisenstadt.

[Yehouda Marton]

DEUTSCHLAENDER, LEO (1888–1935), educationist and writer. Born in Berlin, he became head of Jewish education in Lithuania during World War I, first as appointee of the German occupation authorities. He was co-founder of the first Orthodox secondary school Yavneh in Kaunas (Kovno). When director of the Keren ha-Torah of *Agudat Israel, he helped Sara Schnirer to develop the *Beth Jacob Orthodox girls' education network, mainly in Poland, and headed its Teachers Training College for women in Cracow.

Deutschlaender's published work includes *West-Oestliche Dichterklaenge* (1919); *Goethe und das Alte Testament* (1923); *Biblisch-talmudische Sentenzen* (1931); *History of the Beth Jacob Girls Schools* (1933); and various textbooks for schools. He also wrote on education for the Hebrew and Yiddish periodicals published by Agudat Israel. He died in Vienna.

[Judith Grunfeld-Rosenbaum]

DEUTZ, former town, now a suburb of *Cologne, Germany. Jews are first mentioned in Deutz as victims of the *Black Death persecutions (1348–49). It is unlikely that the expulsion of the Jews from Cologne in 1424 had a major impact on the development of the community in Deutz, which experienced significant growth only from the early 17th century. In 1631, during the Thirty Years War, the Jews of Deutz were permitted to deposit their wealth and pledges at Cologne. The Deutz *Memorbuch* for the years 1581–1784 records the prevention of anti-Jewish riots instigated by Cologne students in 1665. Throughout the 16th and 17th centuries celebrated Jewish physicians of Deutz practiced in Cologne. Noted 17th-century physicians, who were also talmudic scholars and community leaders, included Abraham Salomo (d. 1631), his son Isaac (d. 1657), and Levi Nathan (1616–1670). A synagogue is known to have existed in Deutz from the 16th century, but there is no evidence of a rabbinate before the mid-17th century. The first **Landesrabbiner* of the Electorate of Cologne to have officiated in Deutz was Herz Bruehl (d. 1656), who was succeeded in the 18th century by Judah Mehler (d. 1751) and Joseph Juspa Kossmann (d. 1758). In 1695 the Deutz community acquired a cemetery which was also used by the Cologne community from 1807 to 1867. In 1784 the old synagogue (built in the early 18th century) was destroyed by flood; it was rebuilt in 1786 and remained in use until 1914. A new synagogue was erected in 1915. The number of Jews in Deutz possessing rights of residence increased from four in 1616 to 17 in 1634 and 19 in 1764. In 1823, under Prussian rule, there were 238 Jews in Deutz, decreasing to 233 in 1840, and 206 in 1880. In 1928 the Deutz community was amalgamated with that of Cologne. The synagogue in Deutz was destroyed on **Kristallnacht*, Nov. 10, 1938.

[Chasia Turtel / Stefan Rohrbacher (2nd ed.)]

DEUTZ, SIMON (1802–1852), French politician and son of Emmanuel Deutz (1763–1842). Emmanuel Deutz was rabbi of his native city of Coblenz then under French occupation. In 1806 and 1807 he was a member of the *Assembly of Jewish Notables and of the Napoleonic *Sanhedrin, and sat in the Central *Consistory formed in 1808. From 1822 until his death Deutz was *Grand Rabbin* of France.

Simon Deutz converted to Catholicism at the age of 23, but in his later years returned to the Jewish faith. Upon his conversion he adopted the name of Hyacinthe de Gonzague and worked for the amelioration of the condition of the persecuted Jews of Rome. Deutz was asked by Pope Leo XII to prepare a memorandum on the Jews of Rome, and he was secretary of a special commission appointed by Pius VIII to prepare a charter for them. However, the chairman, Cardinal Cappellari, known for his anti-Jewish views, consistently ignored Deutz's memoranda. In 1832 Deutz met the Duchess de Berry, then actively engaged in a legitimist conspiracy against Louis Philippe of France, and went to Spain and Portugal on her behalf to obtain arms and men. She also entrusted him with the delicate mission of securing a promise of Russian military assistance. In the end, however, Deutz, fearing civil war in France, denounced the duchess. Her arrest in 1832 was the signal for a public outcry against Deutz, the "Jewish trai-

tor," few believing that he was activated by motives of loyalty to France. Adolphe *Crémieux asked Deutz's father to protest against his son's "shameful" act, on behalf of the Jewish community. The chief rabbi refused, but in 1835 Deutz published a memorandum *Arrestation de Madame* describing his conversion and his patriotic motives in his denunciation of the duchess. By this time Crémieux and others had become convinced of Deutz's sincerity.

BIBLIOGRAPHY: Szajkowski, in: JJS, 16 (1965), 53–67; C. Roth, *ibid.*, 17 (1966), 83 f.; P. Klein, in: *Revue de la pensée juive*, 2:7 (1950/51), 87–103.

DEVEKUT (Heb. דְּבֵקוּת; lit. "cleaving"). The verb *dvk* occurs frequently in Deuteronomy (4:4, 10:20, 11:22, 13:5, 30:20) in the context of cleaving to God. The Talmud asks how it is possible for man to "cleave to God" Who is a "devouring fire" (Deut. 4:24) and answers that it is fulfilled by marrying the daughter of a scholar or assisting scholars materially (Ket. 111b). Elsewhere in answer to the same question, it answers that this is fulfilled by imitation of God, and emulating His attributes (the passage in Sotah 14a should obviously be based on the phrase "and cleave unto Him" in the verse quoted, and not on the words "Ye shall walk after the Lord your God").

Both the noun *devekut* and its verb *davok* have several theological and mystical meanings in kabbalistic literature. Sometimes it means no more than "being near to" or "to cleave." However, the most usual meaning of this term, if it can be said to have a usual meaning, is "communion with God," which is achieved mainly during the time of *prayer or meditation before prayer through using the right **kavvanot*, the mystical interpretations and meanings given to the words of prayer. Usually, *devekut* is described as the highest step on a spiritual ladder, which is reached after the believer has mastered the attitudes of fear of God, love of God, etc. The aspect in the divine world, according to the kabbalistic concept of the ten *Sefirot*, to which the mystic prays when he aspires to reach the state of *devekut*, is usually the **Shekhinah*, the tenth and lowest of the *Sefirot*, which is also the feminine element in the divine world. Usually, the kabbalists emphasize clearly that the communion achieved by the living mystic during prayer is transitory and incomplete in its nature. Only after death can a man hope that his soul will reach a complete and permanent state of *devekut* with God (again, usually with the *Shekhinah*), and the final state of bliss will not be achieved until the redemption, after the coming of the Messiah, when all just Jews will live together eternally in the state of *devekut*. This, the most conservative attitude, is expressed in the *Zohar several times (although other concepts are found in it too), and was widely accepted by the writers of kabbalistic ethical literature in the 16th–18th centuries, in Safed and in Eastern Europe. However, most kabbalists attempted to formulate a more ambitious concept of communion with God, which they described in many different symbols, revealing a wide range of spiritual attitudes toward the mystic's relationship with the divine powers.

One of the most common ideas to be found in kabbalistic literature is that *devekut* is itself a ladder, in which a man can climb from one *Sefirah* to another and raise his soul from one point to another in mystical contemplation. As the various portions and words of prayer and the various deeds that the commandments require correspond to different parts and powers in the divine worlds, so does the soul rise with the works and deeds toward the *Sefirah* to which it is intended. Thus the mystic may achieve *devekut* with the higher *Sefirot*, such as *yesod* (the ninth), *tiferet* (the sixth), *din* (fifth), and *ḥesed* (fourth) in the divine ladder. Kabbalists are more cautious when dealing with man's relationship with the highest *Sefirot*. However, there are expressions in kabbalistic literature which give the impression that *devekut* is possible even with them. In rare instances, *devekut* with the **Ein Sof*, the divine essence beyond all *Sefirot*, is also mentioned; and in some radical pronouncements (e.g., by *Isaac of Acre), it is possible to interpret the kabbalists' words as describing the possibility of achieving *devekut* with the *Ein Sof* while still living. The soul breaks all ties that bind it to the body and unites with the highest aspect of divinity. Such radical expressions, however, are very rare, and the exact meaning of *devekut* in such passages is open to different interpretations. Therefore *devekut* is not the Hebrew term corresponding to what the Christian mystic means by *unio mystica*. There are tendencies in some kabbalistic writings (and even in the Zohar itself) which point toward such a complete union with God, but usually the kabbalists were much more conservative, separating *devekut* from complete union by delaying it to the time after death and the end of days, and by limiting it to the lower parts of the divine worlds.

Early in the history of kabbalistic literature, there are expressions of contemplative, intellectual *devekut*, such as the *devekut ha-maḥashavah* ("the cleaving of thought to God"), which means the return of human thought to its origin in the divine wisdom; or the *devekut ha-raẓon* ("the cleaving of human will to God's"), achieved during prayer. However, in later kabbalistic writing, much more emphasis is placed on the union of the human soul with its spiritual origin in the world of the *Sefirot*. Sometimes there are some elements of ecstasy. The mystic's emotional state while approaching the state of *devekut* and while achieving it is described. In this case, the *devekut* is not an intellectual, contemplative state of mind, but a state of emotional exaltation. In such cases, there is sometimes a hint of a sexual element in the *devekut* between the mystic and the tenth *Sefirah*, the *Shekhinah*. However, such expressions are usually connected with the love of God, as the kabbalists interpreted it.

In most kabbalistic writings, there is a connection between the state of the *devekut* and prophecy, which is the outcome of such union between man and God. The fathers of the nation, Moses, and the prophets were described as people who achieved a lasting state of *devekut*. When *devekut* is achieved, *Ru'aḥ ha-Kodesh* ("The Holy Spirit") comes into contact with the mystic and gives him superhuman spiritual abilities. The

idea of the *devekut* as the highest spiritual achievement in religious life was popularized by the writers of kabbalistic ethical literature, and numerous people who were not mystics became familiar with this concept. The last phase of this development was reached with the ḥasidic movement, where *devekut* became not only the supreme achievement of religious life but also its starting point. *Devekut*, according to *Ḥasidism, should be the believer's constant state of mind, even while he is dealing with everyday necessities of life and not only during the high points of prayer and religious activity.

[Joseph Dan]

The ideal of *devekut* as pointing to a complete mystical union between the human intellect and the Agent Intellect or God as an intellect is central in ecstatic Kabbalah as represented in the writings of Abraham *Abulafia. He draws upon the neo-Aristotelian theory of the identity between the knowing subject and its object during the process of intellection, but assumes that God may become the subject of human knowledge.

DEVONS, ELY (1913–1967), British economist. Born in Wales and educated at Manchester University, Devons worked for the Joint Cotton Trades Organization from 1935 to 1940 when he was appointed to the cabinet's statistical office and subsequently to the economic office of the Ministry of Aircraft Production. In 1945 he returned to his native Manchester, where he held a chair until 1959 when he became professor of commerce (later economics) at the London School of Economics. His main fields were statistics, applied economics, and public policy. He questioned accepted economic theories and, because of his interest in public policy, was skeptical of the ability of governments to control and direct economic performance. His publications include *Planning in Practice* (1950), *An Introduction to British Economic Statistics* (1956), *Essays in Economics* (1961), and *Closed Systems and Open Minds* (1964), which he edited (with Max Gluckman).

DE VRIES, ANDRÉ (1911–1996), Israel physician and medical scientist. De Vries, who was born in Leeuwarden, Holland, studied in Amsterdam. After holding various appointments in Holland, he immigrated to Palestine in 1940 and at first became a farmer. Persuaded to return to medicine, he joined the staff of Hadassah Hospital in Jerusalem in 1942. In 1954 he subsequently became director of the department of internal medicine and of the institute of medical research at Beilinson Hospital near Tel Aviv. In 1960 he was appointed clinical professor of medicine at the Hebrew University of Jerusalem. De Vries was one of the founders of the Faculty of Medicine at Tel Aviv University and in 1964 became dean of this faculty. In 1970 he was awarded the Israel Prize for medical science. His main research was on the methods of production of antivenins (notably snake venoms) and the epidemiology of kidney stones in sub-tropical climates.

[Joseph W. Davis]

DE VRIES, BENJAMIN (1905–1966), Israeli educator and talmudic scholar. De Vries, who was born in Leeuwarden, Holland, studied at the Amsterdam Rabbinical Seminary (where he later lectured), and at Leyden University. After immigrating to Palestine in 1934, he worked both as a teacher and an inspector of education in the religious state schools network. In 1955 he was appointed professor of Talmud at Tel Aviv University. De Vries published numerous articles on educational and religious subjects and made important contributions to the literary and legal study of the Talmud. He also wrote a volume in Dutch on *halakhah* development, *Hoofdlijnen en motieven in de ontwikkeling der Halachah* (1959); an introduction to the Talmud, *Mavo la-Talmud* (1951; 1962²); *Toledot ha-Halakhah ha-Talmudit* (1962; 1966²); and a collection of talmudic studies, *Meḥkarim be-Sifrut ha-Talmud* (1968).

BIBLIOGRAPHY: *Benjamin de Vries Memorial Volume* (1968), includes bibliography, 334–42.

[Ze'ev Wilhem Falk]

DE VRIES, M. (19th century), South African lawyer and politician. De Vries was state prosecutor of the Transvaal in 1868 and a member of the Volksraad (parliament) in 1871 and 1875. He was chairman of the session in 1872 and 1875. Since there was a shortage of suitable officials he rose to these positions despite a provision in the Transvaal constitution barring non-Protestants from holding public office.

DEW (Heb. טַל), condensation of water vapor on an object near the ground, whose temperature has fallen below the "dew point" of the surrounding air because of radiational cooling during the night. The conditions favoring the formation of dew are clear nights, moist air, and only light winds in the surface layers of the atmosphere.

The Bible places so much importance on dew as a source of water for plant life (Hos. 14:6–8) that in its absence a drought is considered to prevail (Ḥag. 1:10–11). Dew, like rain, is a symbol of life and God's beneficence (Zech. 8:12). (It should be noted, however, that in biblical Hebrew טל may also refer to rain.) As a figure of speech *dew* expresses a source of abundance (Gen. 27:28), silent and sudden-coming (II Sam. 17:12), and ephemeral (Hos. 13:3). Several verses referring to

dew appear in the Bible, according to which the main season of dew is late spring–early summer, or harvest time (e.g., Hos. 14:6; Prov. 19:12; Isa. 18:4; Job 29:19; Song 5:2). Soon after harvest time in the Harod Valley, Gideon "wrung enough dew from the fleece to fill a bowl with water" (Judg. 6:38). This valley, however, does not receive much dew, and is situated near the hills of Gilboa which David, in his lament over the death of Saul and Jonathan, cursed to enjoy neither dew nor rain (II Sam. 1:21).

According to modern investigations, however, the value of dew in the water balance of plants is dubious. As for the distribution of dew, it is interesting to note that the Bible refers to many of the regions, on both sides of the Jordan, in which dew occurs. As some Bible scholars have pointed out, most verses which allude to dew in different regions employ similar phrases of dewiness for them. The average frequency of dew nights in Israel, according to measurements by the Duvdevani dew gauge in the period 1945–1952, was for Tel Shalom (on the Coastal Plain) 231 nights per year; at the Tavor Agr. School (Hill Region) 163; and at Dafnah (in the Jordan Valley) 115.

The largest annual number of dew nights is found in the central Coastal Plain and the northwestern Negev. The northern coastal region and Carmel beach are not favorable for dew formation. The Hill Region is not known for much dew. Mt. Carmel, being relatively low and the nearest hill to the Mediterranean, is the dewiest hill in Israel. The quantity and frequency of dew depend much on local topography: slopes receive little dew while level and concave areas receive it in abundance. In the low and level Valley of Jezreel there are many dew nights, but its western part is dewier than the eastern part, which descends to the Harod Valley. Dew is scarce in the Jordan Valley, particularly in its southern part (Jericho). However, in the flat and concave parts of the Ḥuleh and Beth-Shean valleys the conditions for dew formation are better.

A breakdown of the seasonal distribution of dew frequency in Israel indicates that the largest number of dew nights occurs in summer in the Coastal Plain and Hill Region, the lowest number occurs in winter, and an intermediate number occurs in spring and fall (see Table: Number of Dew Nights).

In the southern Jordan Valley, between the Beth-Shean Valley and the Dead Sea, the regimen of dew is opposite to that in the coastal and hill regions. Dew in the southern Jordan Valley is most frequent in winter, while in summer it is rare or absent in this low-lying region. In the northern Jordan Valley no one month shows a marked increase in the number of dew nights.

[Jacob Katsnelson]

DEW, PRAYER FOR, prayer incorporated into the liturgy because Ereẓ Israel depended on the moisture of *dew during the long, dry summers. As with rainfall, dew was held to be a heavenly blessing, and its absence a divine punishment (cf. Gen. 27:28, 39; Deut. 33:13; Judg. 6:37–40). The end of the rainy season and the beginning of summer is liturgically marked by a special prayer for dew, called *Tefillat Tal* (among Ashkenazim) or *Tikkun Tal* (among Sephardim), which forms part of the Additional Service (*Musaf*) of the first day of Passover, since it was held that the "stores of dew" are opened on this day (PdRE 32). The prayer is recited at the reader's repetition of the Additional Service *Amidah*. In the Ashkenazi ritual the prayer consists of a series of acrostic *piyyutim* (the central one *Taḥat Eilat Ofer* by Eleazar Kallir) and an invocation in six stanzas ending with: "For Thou art the Lord our God, who causes the wind to blow and the dew to descend," and with the plea: "For a blessing and not for a curse; For life and not for death; For plenty and not for famine; Amen." Nowadays, the *piyyutim* are generally omitted and in Israel the prayer is sometimes said after the Torah scrolls are returned to the ark and before the Additional Service. In Israel all rites have adopted the Sephardi custom of inserting the phrase: "Thou causest the dew to descend" (*morid ha-tal*) in every *Amidah* at the beginning of the second benediction in the period beginning with the first day of Passover and ending with Shemini Aẓeret when the Prayer for Rain is said. The Prayer for Dew and the Prayer for Rain are part of the service in all Jewish rituals including the Conservative and Reform trends who recite them, however, in shortened versions. In traditional Ashkenazi synagogues the reader wears a *kittel* ("shroud") for the Prayer for Dew (as he does on the Day of Atonement) and intones the *Kaddish* before the *Musaf* service in the melody of the Day of Atonement (Sh. Ar., OḤ 114).

DHAMĀR, one of the historic cities of Yemen; located on the road between Yarīm and Sana. Dhamār, a large town, was the seat of a famous *madrasa* ("school") of the ruling Zaydiyya sect and had a large Jewish community. The Jewish name for the city was Hadoram, according to the Judeo-Arabic translation ascribed to Saadia Gaon (Gen. 10:27). Dhamār was the main spiritual center of Yemenite Jewry in the 15th century (see R. *Zechariah ben Solomon Rofe). The community numbered about 300 families before the immigration to Israel on 1949–50. The local Jewish community continued to be the spiritual center for the surrounding Jewish communities, having seven synagogues and a permanent rabbinical court with three *dayyanim*. Prior to the Mawza' expulsion, the old Jewish quarter was within the walls of the city, but after the Jews returned from exile they built their new quarter outside the walls, later enclosed by a wall connecting it to the city. Uncharacteristically the head of the *bet din* also served as the temporal leader (*ʾāqil*), in charge of the poll tax (*jizyah*) and the *ṭuḥna* (compulsory milling of grain for the army). The Orphans Edict was

strictly enforced, but community leaders managed to smuggle the young Jewish orphans via Sana to Aden. The socio-economic structure of the local Jewish community was the same as in other urban Jewish communities: silversmiths (about a third of all Jewish craftsmen), weavers, shoemakers, millers, tailors, builders, and wholesalers. The community possessed two famous Torah scrolls to which pilgrimages were made until the whole community immigrated to Israel.

[Yosef Tobi (2nd ed.)]

DHAMĀRĪ, MANṢUR SULEIMAN (**Ibn al-Muʿallim**, Heb. **Hoter ben Solomon**; first half of the 15th century), Yemenite scholar and author. Dhamārī's major work was *Sirāj al-ʿUqūl* ("Light of the Wise"), an early Yemenite midrashic compilation containing certain Midrashim unknown from other sources. He draws mainly on the Mishnah, the Talmud, the *Sifra* and *Sifrei* and also three post-talmudic scholars: Saadiah Gaon, Maimonides, and Nethanel b. Isaiah. An interesting innovation is his use of Arabic sources – poems, and philosophical essays – side by side with the Jewish sources. Most of the book is written in Arabic, with only about a third in Hebrew. Each chapter begins and ends with one or two poems. Dhamārī's method, similar to that of other Yemenite writers, is one of midrashic commentary, but he is noteworthy also for philosophical exposition. His quotations are, however, imprecise and interspersed with interpretations, some of which are very curious. Other known works by Dhamārī are *Sharḥ ʿalā al-Mishna*, a commentary on Maimonides' exposition of the Mishnah; *Sharḥ al-Qawāʿid*, a commentary on the 13 principles; and 100 responsa, mostly collected in 1423 (all unpublished).

[Yehuda Ratzaby]

DHAMĀRĪ, SAʿID BEN DAVID (first half of the 15th century), Yemenite writer and scholar; author of *Midrash ha-Be'ur* (1441), a commentary on the Pentateuch and the *haftarot*, one of the early Yemenite Midrashim. The name of his work, he states, stems from the fact that it is an explanation (*be'ur*) of "the principles of the Torah and the oral tradition, as well as the sayings of the sages and stories about them." His sources were the Babylonian and Jerusalem Talmud, *Sifrei*, the *Mekhilta*, and Maimonides' works. Generally his teachings are identical to similar Yemenite Midrashim, but also contain important materials that Dhamārī took from earlier collections now lost. Of great significance are the differences in the versions transmitted by Dhamārī. The book as a whole is still in manuscript, but most of the weekly portion *Va-Yeẓe* was published by L. Finkelstein as an anonymous Midrash and subsequently identified by Ratzaby.

BIBLIOGRAPHY: Finkelstein, in: HUCA, 12–13 (1937–38), 523–57.

[Yehuda Ratzaby]

DHIMMA, DHIMMI, Arabic term referring to the status of Jews and Christians living in Islamic countries as protected people. This status does not apply to other peoples or religious groups, such as Hindus, for whom a strict policy of "conversion or death" is in force. The *dhimmi* must be humiliated, belittled, distinguished by his appearance: his distinctive dress indicates to the Muslim that the *dhimmi* is to be treated as an inferior.

Jewish and Christian religious leaders in Muslim lands may only serve with the permission of the Muslim authorities. The Muslim Arabs allowed the Babylonian Jews to keep an official head of the community and head of the yeshivot for several hundred years, but then abolished this office. The Turks continue to choose the Greek-Orthodox Patriarch and the Egyptian president chooses the head of the Coptic church.

It is a religious obligation of Muslims to degrade non-Muslims. When Jews used to live in Muslim lands, they could not own property. If they lived in cities, they had to pay a special tax to demonstrate their subservience. They could not serve in the army, nor carry weapons. Marrying a Muslim woman was punishable by death.

Dhimmitude is the Islamic system of governing populations conquered by holy (*jihād*) wars, encompassing all of the demographic, ethnic, and religious aspects of the political system. The word "dhimmitude" as a historical concept describes the legal and social conditions of Jews and Christians subjected to Islamic rule. *Dhimmi* was the name applied by the Arab-Muslim conquerors to indigenous non-Muslim populations who surrendered by a treaty (*dhimma*) to Muslim domination.

The Muslim empire incorporated numerous peoples which had their own religion, culture, land, and civilization. For centuries, these indigenous peoples constituted the great majority of the population in the Islamic lands. Although these populations differed, they were ruled by the same type of laws, based on the Shari'a.

This similarity, with its regional variations, created a uniform civilization developed through the centuries by all non-Muslim indigenous peoples who were vanquished by *jihād* wars and governed by Shari'a law. It is this civilization which is called Dhimmitude. It is characterized by the different strategies developed by each *dhimmi* group to survive as a non-Muslim entity in its Islamized country. Dhimmitude is not exclusively concerned with Muslim history and civilization. Rather, it investigates the history of those non-Muslim peoples conquered and colonized by *jihād*. It encompasses the relationship of Muslims and non-Muslims at the theological, social, political, and economic levels. It also encompasses the

relationships among the numerous ethno-religious *dhimmi* groups and the type of mentality they have developed out of their particular historical condition, which lasted for centuries (in some Muslim countries, until today).

Dhimmitude is a complete, integrated system, based on Islamic theology. It cannot be judged from the circumstantial position of any one community, at a given time or in a given place. Dhimmitude must be appraised according to its laws and customs, irrespective of circumstances and political contingencies.

[Shlomo Alon (2nd ed.)]

DIAMAND, HERMAN (1860–1931), Polish Socialist politician. Born in Lvov into an assimilated family, as a student he was a member of the Zionist Zion Association but afterwards left it to join the PPS (Polish Socialist Party). Diamand was one of the founders of the Polish Social Democratic Party of Galicia and Silesia. He was a member of the party's executive committee from 1897 to 1899 and from 1904 to 1909 was a member of its directorate. In 1909 he represented the Polish Socialists at the International Bureau of the Second International. Diamand sat as a Galicia representative in the Austrian parliament from 1917 to 1918. After World War I he cooperated closely with Joseph Pilsudski in fighting for an independent Poland, and from 1919 until his death was a Socialist deputy in the Sejm (Polish parliament). Diamand was much concerned with the fate of the Jewish community of Lvov, and intervened many times with the authorities on its behalf.

[Abraham Wein]

DIAMANT, PAUL JOSEPH (1887–1966), Israeli genealogist and historian of Austrian Jewry. Diamant, who was born in Vienna into a landowning family, was a devoted Zionist, and after World War I he turned his inherited estate into a training center for *ḥalutzim.* He subsequently became a leading member of the *Revisionist movement in Austria. After the *Anschluss* (1938), he took part in organizing illegal immigration. After his arrival in Palestine, he acquired a farm at Moẓa near Jerusalem. His interest in genealogy, heraldry, and history was stimulated by the fact that his family descended from Simon Michael and he was related to both Heinrich *Heine and Theodor *Herzl. He worked on a book (unpublished) on ennobled families of Jewish descent in order to refute the antisemitic *Semi-Gotha*. The material he gathered was deposited in the General *Archives for Jewish History. Diamant founded the short-lived *Archiv fuer juedische Familienforschung; Kunstgeschichte und Museumswesen* (1912–13), and in Jerusalem collaborated in establishing the Herzl Museum. He published a volume of letters written by Minna Diamant (1815–1840), *Ein Briefwechsel aus der Biedermeierzeit* (1962), and several articles in periodicals.

DIAMOND, DAVID (**Leo**; 1915–), U.S. composer. Diamond taught himself to play the violin at an early age. In 1934 he studied at the New Music School in New York, and from 1937 to 1939 he studied with Boulanger in Paris. In 1951 he was appointed to a temporary professorship at the University of Rome. He was composer-in-residence for a year at the American Academy in Rome (1971) and was appointed professor of composition at the Juilliard School of Music (1973–86). His many honors include the Guggenheim Fellowship, the Prix de Rome (1942), the Paderewski Prize (1943), a National Institute of Arts and Letters grant (1944), the William Schuman Award (1985), the Gold Medal of the American Academy of Arts and Letters (1991), the Edward MacDowell Award (1991). Diamond's symphonic works are marked by an individual style in the advanced idiom of modern music. Despite the complexity of his harmonic and contrapuntal writing, he never abandoned the tonal system. His music is always marked by a strong rhythmic drive. The impression received from his music is that of cogency and lucidity. He composed 11 symphonies, three violin concertos, a cello concerto, a piano concerto, and *Rounds* for string orchestra. Diamond excelled in chamber music, often in unusual combinations, including *Quintet for flute, string trio and piano* (1937), and *Quintet for clarinet, two violas and two cellos* (1951). He also wrote vocal music – choral and song cycles. Of Jewish inspiration are his *Ahavah* for narrator and orchestra (1954) and *Kaddish* for cello and orchestra (1987–89).

DIAMOND, I.A.L. (**Itek Domnici;** 1920–1988), U.S. filmscriptwriter. Born in Ungheni, Romania, Diamond was taken to New York, where his father changed the family name. A mathematics prodigy in high school, he studied engineering at Columbia University but took up writing and added the initials I.A.L. to his name. He wrote four college musical shows, and at graduation received an offer from Paramount studios in Hollywood. He collaborated with Billy Wilder on the film comedies *Love in the Afternoon* (1957), *Some Like it Hot* (1959), *The Apartment* (1960), *One, Two, Three* (1961), *Irma la Douce* (1963), *Kiss Me, Stupid* (1964), *The Fortune Cookie* (1966), *The Private Life of Sherlock Holmes* (1970), *Avanti!* (1972), *The Front Page* (1974), *Fedora* (1978), and *Buddy Buddy* (1981).

Some of Diamond's other film writing credits include *That Certain Feeling* (1956); *Love in the Afternoon* (1957);

Merry Andrew (1958); and *Cactus Flower* (1969). In 1961 Diamond and Wilder won the Academy Award for Best Writing, Story and Screenplay for *The Apartment*. In 1980, the Writers Guild of America gave Diamond the Laurel Award for Screen Writing Achievement.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

DIAMOND, JACK (1909–2001), Canadian businessman, thoroughbred breeder, racetrack owner, philanthropist. Born in Lubience in Galicia, Poland, Diamond learned about animals, including butchering, on his father's farm. He immigrated to Vancouver in 1926, several years after his brother. In 1939 he acquired the Pacific Meat Company and transformed it into the largest independent meat packer in western Canada. During the war he first served as a lobbyist in Ottawa for small meat packers, then as an adviser to the Wartime Prices and Trade Board on meat pricing and supplies. In 1964 he sold Pacific Meat and he and his sons established West Coast Reduction, a rendering operation. Within two decades the firm dominated rendering in western Canada. Jack Diamond was also enthralled with thoroughbred racing. In 1938 he set up his own stables and started buying and successfully breeding horses. After the war, he owned and operated two Vancouver race tracks, and in 1977 was inducted into the Canadian Horse Racing Hall of Fame.

Jack Diamond also worked for and contributed to a number of Jewish and non-Jewish causes. In the late 1940s he was instrumental in the building of a new synagogue for the Orthodox Schara Tzedeck, and also served as chair of the congregation's Cemetery Board for more than 40 years. He is credited with saving Vancouver's claim to the British Empire Games in 1954, was instrumental in the creation of the BC Heart Foundation, and served on the Board of Governors of Simon Fraser University (1967–73) and as chancellor (1975–78). Diamond and his family established the Diamond Foundation in 1984. The foundation supports, above all, local Jewish causes with an emphasis on education and has funded the Diamond Chair in Jewish Law and Ethics at the University of British Columbia, and has provided major support for a Jewish day school in the suburb of Richmond, and a Jewish high school in Vancouver. In 2005 the president of the Foundation was Jack's son Gordon and the executive director was his granddaughter Jill.

Diamond's many honors include his 2000 appointment as a Companion of the Order of Canada, the highest honor that Canada bestows on a citizen.

[Richard Menkis (2nd ed.)]

DIAMOND, JACK (1932–), architect and teacher. Diamond was born and raised in South Africa. While he came from a long line of rabbis, he studied architecture. He earned a bachelor of architecture degree from the University of Capetown, a masters in politics, philosophy, and economics from Oxford University, and a masters in architecture from the University of Pennsylvania. He went on to teach architecture at the University of Pennsylvania and work for Philadelphia-based Louis Kahn, one of the foremost architects of the mid-20th century.

Diamond immigrated to Canada in 1964, where he inaugurated and directed the Master of Architecture program at the University of Toronto from 1964 to 1970. Diamond also held appointments at York University in Toronto and the University of Texas and taught at Harvard, Princeton, and the University of California at Berkeley.

Diamond began practicing architecture in Toronto in 1965, and in 1975 he joined in forming the firm of Diamond and Schmitt Architects, which won more than 90 design awards, including six Governor General's Awards for Architecture. Award-winning Diamond projects, including many theaters and university buildings, are found in Canada, Europe, the United States, and Asia. Among Diamond's more notable architectural achievements are the Four Seasons Centre for the Performing Arts in Toronto, the Max M. Fisher Music Center in Detroit, the Citadel Theatre in Edmonton, the Canadian Embassy in Prague, the Baycrest Centre for Geriatric Care in Toronto, and the Jewish Community Center in Manhattan. Diamond's Israeli projects include the Jerusalem City Hall, the School of Computer Science and Engineering Building at the Hebrew University in Jerusalem, and the Israel Foreign Ministry in Jerusalem.

From 1986 to 1989 Diamond served as a commissioner for the Ontario Human Rights Commission and in 1996 he was appointed commissioner of the Greater Toronto Area Planning Task Force. Diamond is an honorary fellow of the American Institute of Architects and was awarded the Royal Architectural Institute of Canada's Gold Metal and appointed to the Order of Canada.

[Harold Troper (2nd ed.)]

DIAMOND, JOHN, BARON (1907–1978), British politician. The son of a cantor in Leeds, Diamond qualified as a chartered accountant and entered Parliament in 1945 as Labour member for Gloucester. From 1964 to 1970 he was chief secretary to the Treasury (a post specially concerned with the control of government expenditure) and won wide respect in the House of Commons for his mastery of detail in financial legislation and his familiarity with business problems. From 1968 until 1970 he sat in the cabinet, and, following the 1970 election, was made a life peer. He was treasurer of the Sadler's Wells Operatic Trust and was actively concerned with Jewish youth work. His brother ARTHUR SIGISMUND DIAMOND (1897–1978), a lawyer, held the senior legal post of Master of the Supreme Court and was an authority on primitive law. He was president of the Jewish Historical Society, chairman of Leo Baeck College, and president of the West London Synagogue.

Their mother, HENRIETTA (née Beckermann; 1873–1957), was an active Zionist and one of the most active supporters

of the Zebulun Seafaring Society for the training of Jewish sailors in Palestine.

[Vivian David Lipman]

DIAMOND, LOUIS KLEIN (1902–1999), U.S. hematologist. Diamond was born near Kishinev, Ukraine, and immigrated to New York City at the age of two. He graduated from Harvard Medical School, Boston (1927), where he progressed to professor of pediatrics (1967). He was medical director of the new U.S. National Blood Program for blood transfusion (1948–50). After retirement from Harvard (1968) he remained professionally active first at the University of California, San Francisco, and then at the University of California, Los Angeles Medical School into his nineties. Diamond was one of the founders of pediatric hematology. With Kenneth Blackfan he clarified the clinical manifestations and treatment of rhesus incompatibility disease in the newborn, and they described an unrelated form of congenital anemia named after them. He was a world-renowned clinician and teacher.

[Michael Denman (2nd ed.)]

DIAMOND, NEIL (1941–), U.S. singer and songwriter. Born in Brooklyn, New York, Diamond began his music career as a staff songwriter for Bang Records. He wrote hit songs for the Monkees, "I'm a Believer" (1965) and "A Little Bit Me, a Little Bit You" (1967), and then recorded his own smash single "Cherry Cherry." Diamond followed this up with a long series of Top Ten songs, including "Cracklin' Rosie," "Kentucky Woman," "Song Sung Blue," "Sweet Caroline," "I Am I Said," and "Solitary Man." He then scored the soundtrack for the movie *Jonathan Livingston Seagull* (1971) and wrote the number one single "You Don't Bring Me Flowers Anymore" (1979), which he recorded as a duet with Barbra Streisand. The two had known each other since they were students at Erasmus High School, where they had sung together in the school choir. In 1980 Diamond starred in a remake of the Al Jolson film classic *The Jazz Singer*, opposite Sir Laurence Olivier. Although the film was not a box office hit, the soundtrack album was very successful, spawning the singles "America," "Love on the Rocks," and "Hello Again." Diamond was not a hit as an actor either, becoming the first ever "winner" of a Razzie Award for Worst Actor. But he was in formidable company, having edged out such stars as Kirk Douglas, Anthony Hopkins, Michael Caine, Richard Dreyfuss, and Robert Blake for that dubious title that year. In 2000, the Songwriters Hall of Fame honored Diamond with the Sammy Cahn Lifetime Achievement Award. Diamond recorded some 75 albums and continued to go on concert tours worldwide, with members of his family performing in his back-up band.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

DIAMOND, SIGMUND (1920–1999), U.S. sociologist. Born in Baltimore, Diamond graduated from Johns Hopkins University and joined the United Auto Workers Union. In 1945 he participated in a UAW-CIO-sponsored meeting for shop stewards in Tennessee. At night he violated state law by sleeping in a dormitory for blacks, thereby integrating public sleeping quarters in Tennessee for the first time since Reconstruction. The following year Diamond was a negotiator of the UAW-CIO contract with the Bendix Aviation Corp. When it was ratified, it became the first contract to give women equal pay for equal work.

In 1949 Diamond entered Harvard University, where he earned a Ph.D. in history. He was not granted a professorship there or at any other university he applied to in the United States because he had refused to cooperate with the FBI during the McCarthy period.

In 1955, however, Diamond was appointed to the first chair in historical sociology at Columbia University. A specialist in entrepreneurial and economic history, Diamond emphasized the sociological context of economic development. His major contribution to sociology lies in his analysis of the growth and transformation of new societies on the historically virgin soil of the Americas. He remained at Columbia until his retirement as Giddings Professor of Sociology and professor of history, emeritus, in 1986. Among his many activities during his years at Columbia were founding and directing the history department's program in social history and consulting on the American Jewish Committee oral history project on the Holocaust.

Diamond's publications include "From Organization of Society: Virginia in the Seventeenth Century" (*American Journal of Sociology*, 63:5, 1958); "An Experiment in Feudalism: French Canada in the Seventeenth Century" (*William and Mary Quarterly*, 1961); *Casual View of America: The Home Letters of Salomon de Rothschild 1859–1881* (1961); *The Creation of Society in the New World* (1963); *The Nation Transformed: The Creation of an Independent Society* (1963), a descriptive analysis of capitalistic development in America; *The Reputation of the American Businessman* (1966); *In Quest: Journal of an Unquiet Pilgrim* (1980); and *Compromised Campus: The Collaboration of Universities with the Intelligence Community 1945–1955* (1992). Diamond also edited the *Political Science Quarterly.*

[Werner J. Cahnman and Alvin Boskoff / Ruth Beloff (2nd ed.)]

DIAMOND TRADE AND INDUSTRY. Jews have been prominent in the trade and in working of precious stones, of which diamonds and pearls provided the bulk, from the Middle Ages to the modern era. They took an active part in opening up the diamond markets of India and Brazil, the resources of South Africa, the London diamond market, and the diamond industries of the Low Countries. Because the diamond trade routes corresponded with the links between Jewish centers in the Diaspora – in the Ottoman Empire, the Netherlands, in some of the cities of northwest Germany, and in Poland-Lithuania in the 16th to 18th centuries – the trade was particularly suited to Jewish enterprise. Additionally, as

diamonds were still a relatively rare and new commodity in Europe up to the 16th century, this was a branch free of medieval trade and guild restrictions. Up to the 18th century the overwhelming majority of uncut diamonds came from India. Commerce and crafts pursued by Jews along the Indian Ocean trade routes, in Egypt, the Maghreb, and along the shores of southern Europe, included trade and workmanship in precious stones, pearls, and jewelry. The Fatimid caliphs were supplied with gems by the brothers *Abu Saʿd al Tustarī and Abu Naṣr al-Tustarī, influential bankers and diamond merchants in the 11th century at Cairo. As *moneylenders, Jews in Western and Central Europe had much to do with the assessment, repair, and sale of precious stones and jewelry which they received in pawn.

With the rise of *Amsterdam as a major center of the European diamond trade and industry in the 16th century, Dutch Jews, mostly members of the Portuguese Sephardi community who had been prominent in Portugal's diamond trade, played an important part in both. By the middle of the 17th century the preponderance of Jews in the newly developed trade was so marked that the resettlement of the Jews in England brought about a major shift in its structure. The Sephardi presence in London, combined with the growing ascendancy of England in the Eastern trade, resulted in the diversion of the greater part of Europe's diamond imports to England. A few years after the arrival of the first Jewish immigrants, the British East India Company, which had a monopoly of England's Indian trade, permitted independent merchants to import uncut diamonds under a system of individual licenses issued by India House. Until the end of the 18th century most Indian stones used by the European diamond industry were imported through London. The records of the East India Company show that the majority of the importers were Jewish and that they dominated the trade throughout most of this time. The diamond merchants exported silver and coral to India, the proceeds of which were invested in diamonds. The coral was first brought to London from Leghorn, mostly by Jewish merchants of that city who often had a direct share in the Indian diamond trade through Jewish agents in London. The Indian end of the trade was managed by agents of English firms – mainly English Jews who went out to India for this purpose. Around 1750 there were about ten Jewish diamond agents at *Madras.

In London the diamonds were usually sold to merchants who sent them to Amsterdam for cutting. Amsterdam remained throughout the 18th century the chief seat of the diamond industry, while *Antwerp, which was later to overshadow it, was of secondary importance, dealing mainly in stones of inferior quality. From Amsterdam the finished diamonds were distributed throughout Europe. From its inception, the diamond trade and industry of *Amsterdam was largely in Jewish hands. Portuguese Jewish diamond polishers are recorded in 1615; they later employed their poorer Ashkenazi brethren who gradually established their own businesses. Diamond cutting and polishing was a profitable profession, but suffered from the vicissitudes of an unstable market as well as an occupational disease – tuberculosis. The main demand for diamonds came from the courts of Europe, and jewel purveyance was both a stepping-stone to and a major part of the post of *Court Jew. An important stage in the transfer of precious stones from London to Amsterdam, and thence to the courts of Germany, was *Hamburg, where a sizable community of Sephardi Jews monopolized the diamond trade in the 17th and 18th centuries. One of the earliest Court Jews, *Lippold, was a supplier of gems and other luxury articles, as were almost all the Court Jews of the era. Aaron *Isaac of Sweden, the *Oppenheims of Vienna and Wuerttemberg, and the *Ephraim family all owed their success, at least initially, to their dealings in gems. *Glueckel of Hameln, a shrewd dealer in precious stones, gives a detailed picture in her autobiography both of the international commerce in precious stones and gold as well as of small-scale trading by German Jews in this sphere. After 1700 Ashkenazi Jews began to play an increasingly important role in the London center of the diamond trade. By the 1720s the investments of the Ashkenazi *Franks family in the Indian diamond trade were approximately equal to those of the biggest Sephardi enterprise – that of the brothers *Franco – and 60 years later the Ashkenazi merchant Israel Levin Salomons (Prager) attained a dominant position for a time.

The discovery of diamonds in Brazil around 1730 ended India's monopoly as a producer of uncut diamonds and for a time weakened the hold which London and its Jewish diamond merchants had on the import trade, though Brazilian stones were soon reaching London illegally in considerable quantities. In the long run this development diminished neither the prominence of Jews in the diamond trade and industry nor London's position as the chief international market for uncut diamonds. Jews continued to be dominant in the diamond-cutting industry of Amsterdam, and later of Antwerp, where in the late 19th century they constituted about one-fifth of the workers but three-quarters of the brokers and an even higher proportion of the factory owners. The diamond glut of the 1890s terminated a boom in the course of which the number of diamond workers had tripled through immigration of Jews from Eastern Europe. A period of reorganization followed, in which national and international diamond workers' unions in Belgium and Holland were organized under the leadership of Henry *Polak. The diamond workers' union spearheaded in 1893 a general strike in Belgium for a minimum wage.

The rise of Fascism in Europe created a crisis for Jews engaged in the diamond industry and trades. During World War II diamond-cutting centers were established in Erez Israel (see below), Cuba, Brazil, Mexico, and the United States by Jewish refugees. The Nazi occupation authorities in Belgium and Holland made Jewish diamond merchants and industrialists their particular victims. By 1970 Jews had still not reattained their former dominance in the field in Amsterdam, although they had succeeded in doing so in Antwerp.

Jewish enterprise had a large share in the development of the South African diamond mines, which became the chief source of diamond supply after 1870, including the formation of De Beers Consolidated Mines Ltd. (1888), which in the 1960s controlled the production and marketing of the greater part of all uncut diamonds. German Jews were among the earliest pioneers of the South African diamond rush. Among the prospectors were many from London's East End, one of whom, Barney *Barnato, was a formidable rival and later partner of Cecil Rhodes. Alfred *Beit was the architect of the De Beers syndicate which S.B. *Joel first headed. Ernest *Oppenheimer and Harry Oppenheimer successfully followed in his footsteps.

[Gedalia Yogev / Henry Wasserman]

In Israel

A diamond industry was founded in Palestine before World War II by immigrants from the Low Countries, who brought with them the necessary technical skills and commercial connections.

During World War II Palestine replaced Belgium and the Netherlands as the gem diamond center of the free world. Palestine received its supplies of rough diamonds from the De Beers central selling organization ("The Syndicate") and sold its polished products mainly to the U.S. At its peak during this period, the industry employed some four thousand polishers, mainly in Netanyah. The value of the diamond exports reached some $16,000,000 a year.

The revival of the centers in Belgium and the Netherlands after the war, the diversion of raw material by the Syndicate to these countries, and the Israel War of Independence drastically contracted the diamond-cutting industry in Israel. By 1949 it was almost at a standstill. However, the industry revived in 1950 and, in the early 1960s, became the second largest diamond gem center in the world, after Belgium. Its share of the world trade in polished diamonds was between a quarter and a third, and it maintained the same proportion in the numbers of polishers employed.

The secure and steady supply of rough diamonds was a constant concern of the industry. The De Beers Syndicate directly controls the distribution of over 80% of the world output of rough diamonds. Between 1950 and 1959 its direct sales to Israel were frozen at approximately $7,000,000 a year. The industry had therefore to obtain its supplies from other sources, the proportion of which in the total import rose from 24% in 1950 to 84% in 1959. At the end of this period the special high premium of the indirect supplies was so severe that it endangered the prospects for further development.

Israeli agencies (among them *Pittu'aḥ* (Development), a company whose shares are owned by the Israeli government) were encouraged to exploit firsthand sources of supply in western Africa. Negotiations were conducted with the Syndicate with a view to assuring the industry in Israel an adequate share of the diamonds under the Syndicate's control. As a result, from 1961, the proportion of the supply from the Syndicate rose and gradually constituted more than half of the imports.

The Israel diamond industry concentrated on the cutting of melee stones, medium-sized octahedron-shaped rough stones, which are sawed in the middle. The two pyramid shaped parts are then polished by a chain of six polishers, each specializing in particular facets, to produce a round "brilliant" with 57 facets, suitable for setting. Some stones with particular shapes are cut into "fancies" (marquises, baguettes, etc.).

In the late 1960s the industry consisted of some 400 enterprises, about half of which employed fewer than 15 workers. Only 45 enterprises had more than 50 workers and only three more than 100 workers. Over half of the enterprises, and of the workers, were located in and around Tel Aviv (where the Diamond Exchange was also located), over a quarter in Netanyah, and the rest in Jerusalem and the development areas.

[Gideon Lahav]

In the 1970s Israel passed Antwerp as the world's largest diamond wholesaler, supplying over 50% of all cut and polished diamonds. A slump in the early 1980s led to the restructuring of the industry and the creation of around 800 new and smaller manufacturing units, with sales rising from $905 million in 1982 to $1.7 billion in 1986, representing 24% of Israel's total exports. By 2003 the figure had risen to $5.5 billion and further growth in 2004 of nearly 15% brought sales up to $6.3 billion. The United States imported 67% of the stones.

DIAS, LUIS (d. 1542), Marrano messianic pretender, known as the "Messiah of Setúbal," after the seaport south of Lisbon where he was born. Dias was poor and uneducated and his notions of Judaism were confused and rudimentary. Nevertheless, he came to regard himself as a prophet and eventu-

ally announced himself as the Messiah. He acquired fame as a miracle worker and had a following of both Old and *New Christians in Setúbal, Lisbon, and other places. People meeting him kissed his hand and many sent him mystical letters. His activities, including the rumors that he circumcised the children of his followers, led to his first arrest by the Inquisition. After confessing, he was reconciled to the Church, assigned various penances, and released. When it was discovered that he had reverted to his previous activities he was rearrested by the Inquisition and eventually burned as a relapsed heretic in 1542, with 83 of his followers. Under his influence a government official Gil Vaz Bugalho became a secret Jew and even prepared a booklet on religious practice for Judaizers before his death at the stake in 1551.

DIASPORA

Introduction

The word Diaspora, from the Greek διασπορά ("dispersion"), is used in the present context for the voluntary dispersion of the Jewish people as distinct from their forced dispersion, which is treated under *Galut. As such it confines itself to Jewish settlement outside Ereẓ Israel during the periods of Jewish independence or compact settlement in their land. It therefore applies to the period of the First Temple, the Second Temple, and that subsequent to the establishment of the State of Israel. The only dispersion during the period of the First Temple of which there is definite knowledge is the Jewish settlement in Egypt referred to in Jeremiah 44. (That in Babylon following the capture of Jehoiachin in 597 B.C.E., since it was forced and was the prelude to the complete Exile after the destruction of the Temple in 586, can be classified as an exile.) By the same definition, the Jewish communities in the world at present, after the establishment of the State of Israel, constitute a Diaspora, and since that event the custom has developed of referring to them in Hebrew as the *tefuẓot*, the Hebrew equivalent of Diaspora, in preference to the word previously used, *golah*, or *galut* ("exile"; for the concept of exile, see **Galut*). For the modern Diaspora, see Jewish *History and State of *Israel; for its demographic and statistical aspects, see *Demography, *Population, and *Vital Statistics; see contemporary periods of entries on the respective countries for the aspect of interrelation between Israel and the Jews living elsewhere.

By far the most important Diaspora during the period of the Second Temple was that of the Greco-Roman world. For the populous Babylonian Diaspora during this period, see *Babylonia.

In the Hellenistic-Roman Period

THE DISTRIBUTION OF JEWISH POPULATION. The existence of a Diaspora is one of the distinguishing features of the Jewish people in the Greco-Roman period. In part this Diaspora was a heritage from the preceding era; in part it was established only in the Hellenistic period with the rise of new Jewish groups as extensions of earlier ones. Among the various factors operating to enlarge the Diaspora geographically and increase it numerically were the banishments from Ereẓ Israel, political and religious pressures there, economic prospects emerging in prosperous countries such as *Egypt in the third century B.C.E., and the proselytizing movement, whose roots go back to the beginning of Second Temple times and which reached its zenith in the first century C.E, within the framework of the Roman Empire. As early as in the Hellenistic period the *Sibyl could sing of the Jewish nation "Every land is full of you, and every sea," and, in a reference to the first century B.C.E., the Greek geographer Strabo declared that it was difficult to find a place in the entire world to which the Jewish nation had not penetrated. Literary sources from the end of the Second Temple period (Philo, Acts) assert that the Jewish people had spread to all cities and lands.

The bulk of the Diaspora came under the sway of the Hellenistic and later of the Hellenistic-Roman civilization. Shaped first by the political, social, and economic changes which fashioned the character of the Mediterranean world in the period of "the balance of power" between the Hellenistic states, its development was afterward molded by the centralizing regime of the Roman Empire. Only one large Jewish group, that in Babylonia and in the countries of the Parthian Empire, was outside the sphere of Hellenistic or Roman political rule during the greater part of the period and developed its own forms of life, which in the course of time influenced Jewry as a whole. Two countries in particular bordering on Ereẓ Israel, namely Egypt and Syria (including Phoenicia), were influenced by their Jewish populations. Already in the Persian period, the Jewish inhabitants in Egypt were considerable in number. The fact that Ereẓ Israel was under the same rule at the beginning of the Hellenistic period encouraged the migration of Jews to the Nile Valley. Living in all the cities and border districts, from the capital *Alexandria in the north to Syene in the south of Upper Egypt, the Jews in Roman Egypt numbered by the first century C.E., according to Philo, a million souls. Alexandria became one of the largest Jewish centers in the world. From the beginning of the Jewish settlement in that city they had their own quarter, voluntarily established. Later they were also especially predominant in two of the city's five districts, although they were also to be found in the other three, in which they had synagogues. Other places in Lower Egypt distinguished for their Jewish populations were Schedia near Alexandria, Xenephiris, Athribis, and Nitrae, in all of which the Jews had synagogues. Particularly important was the concentration of the Jewish population in the Heliopolite nome, east of the Delta. Distinguished for its military spirit, it even erected its own temple, "the temple of Onias," headed by descendants of the high priest Onias III. The large number of papyri discovered in the villages and towns of the district of Fayyum (Magdola, Crocodilopolis, Psenyris,

Tebtunis, Berenice-Hormos, Philadelphia, Apollonias, Trikomia, Alexandrou-Nesos, etc.) afford valuable information on Jewish settlement in that area. Among the villages of Fayyum was one named Samaria (whose founders were undoubtedly immigrants from Samaria). During the whole Roman period Jews lived continuously in Oxyrhyncus. The ostraca found in excavations have shed light also on the life of the Jews in Apollinopolis Magna (Edfu) and in Thebes in Upper Egypt. The number of Jews in Egypt presumably reached its zenith in the period of the Julio-Claudian emperors. The revolt of the Jews in the days of *Trajan dealt a severe blow to the Jewish population of Egypt both in Alexandria and especially in the provincial cities and in the villages. In many places the Jews disappeared entirely, and it was only from the third century onward that they gradually began to resettle in them.

The Jewish settlement in Cyrenaica was, as it were, a direct extension of that of Egypt, having been largely under the same rule. There were considerable numbers of Jews in the principal cities – in *Cyrene, where already at the end of the Hellenistic period they constituted an important part of the city's population, and in *Berenice – as well as in the villages. In the life of the Jewish people the Jews of Cyrenaica filled a notable function and played a leading role in the revolt in the days of Trajan.

Josephus describes Syria as the country with the highest percentage of Jewish inhabitants, which is very probably on account of its proximity to Erez Israel. There were particularly important Jewish centers in the capital *Antioch, in *Damascus, and in *Apamea. According to Philo, numerous Jews lived in Syria and in Asia Minor, where the settlement of Jews was greatly promoted by the policy of the Seleucid kings, whose rule extended over large areas of *Asia Minor. Thus it is known that Antiochus III (223–187 B.C.E.) settled 2,000 Babylonian Jewish families in Phrygia and Lydia. From the period of the Roman rule at the end of the republic and the beginning of the Julio-Claudian principate there is clear evidence of the existence of Jews in most of the important cities of Asia Minor, in Adramyttium, *Pergamum, *Sardis, *Ephesus, Tralles, *Miletus, Iasus, Halicarnassus, *Laodicea, Tarsus, and very many others, as well as in the regions of *Bithynia, Pontus, and *Cappadocia. Asia Minor was undoubtedly also a homeland, or at least a transit station, for the Jews who established the Jewish center on the northern bank of the Black Sea (Panticapaeum). No grave political crisis, such as the revolt of the Jews in Egypt and Cyrenaica, overtook the Jews of Asia Minor, and so their development in the cities of Asia could continue undisturbed. There were many Jews, too, in the various islands of the eastern Mediterranean. The first Jewish settlement there was undoubtedly in *Cyprus, close as it was to the coast of Erez Israel. But the war of the Jews against the island's non-Jewish inhabitants in the days of Trajan led to the temporary break in Jewish settlement on the island. Many Jews also lived in *Crete, Delos, Paros, Melos, Euboea, and in other islands.

*Greece proper, which at the end of the Hellenistic period and during that of the Roman Empire suffered from a declining population and a stagnant economy, attracted fewer Jewish immigrants than did Egypt and Asia Minor. Nevertheless, there were Jews in all the important urban centers of Greece and *Macedonia. The first mention of Jews in Greece, a reference to a Jewish freedman, appears on a third-century inscription from the city of Oropus in Boeotia. Inscriptions of the second century B.C.E. mention the freeing of Jewish slaves in Delphi. In the days of Philo, Jews lived in most of the important districts of Greece (Thessaly, Boeotia, Macedonia, Aetolia, Attica, and most of the areas of the Peloponnesus). According to the Acts of the Apostles, there were Jewish communities in Thessalonica, in the Macedonian cities of Philippi and Beroea, and in the famed Greek cities of *Athens and *Corinth. Inscriptions also attest to Jewish settlements in various places in the Peloponnesus (the district of Laconia, the city of Patrae, Tegea), in Athens, and in Thessaly. From Greece the Jewish settlements spread northward to the Balkan peninsula (Stobi) and reached Pannonia.

A special position was held by the Jewish settlement in Italy and principally *Rome, which became the political capital of the entire Mediterranean world. As early as the second century B.C.E. Jews were found in Rome, from which they were expelled in 139 B.C.E. because of their attempts to propagate the Jewish religion there. However, even before Pompey's conquest of Jerusalem (63 B.C.E.) their number had increased in Rome, while the Jewish captives brought to the country by Pompey and subsequent Roman conquerors hastened the process of Jewish settlement in Italy. The Jewish slaves who, on being freed, had become Roman citizens constituted a not insignificant factor in the life of the capital. By 59 B.C.E. in his speech in defense of Flaccus, the governor of Asia, Cicero was complaining of the decisive Jewish influence in the assemblies of the Roman masses. *Julius Caesar allowed them to maintain their position, and under *Augustus and his successors the Jewish population in Rome numbered thousands and possibly even tens of thousands. The administrative measures taken by Tiberius and *Claudius were ineffective in hindering Jewish settlement in the capital, and they remained a permanent factor in the life of Rome throughout the whole period of the empire. Certain areas in the city were especially noted for their concentrations of Jewish inhabitants. Gradually Jewish settlements also arose in other cities in Italy, chiefly in the south, in the port of Puteoli, in Pompeii, in the cities of *Sicily, and in the course of time in northern Italy too. More slowly Jewish groups came into existence in the other provinces of the Latin west (*Gaul, *Spain, and *Germany). Of great importance was the Jewish settlement in *Africa and especially in *Carthage.

Special features distinguished the development of Jewry in the Parthian kingdom which included the Babylonian Jewish population and its extensions in Persia, Media, Elam, etc. This Jewry was not only ancient but extremely numerous, particularly in Babylonia proper, where in some regions and

cities the Jews constituted the majority of the inhabitants. The centers of Jewish settlement in Babylonia at the end of Second Temple times were in the cities of *Nehardea and *Nisibis. There was also a considerable Jewish population in the large city of Seleucia on the Tigris, where the Jews were the counterpoise between the eastern-Syrian and the Greek inhabitants. Through the proselytization of the rulers of *Adiabene in the first century C.E. the Jewish population in the region of the Euphrates was greatly augmented.

OCCUPATIONS. The occupations of the Jews in the countries of the Hellenistic-Roman Diaspora were varied, and certainly they were not confined to only a few specified occupations, as was the case in the Middle Ages, and no restrictions were placed on them. In Judea, the Jews had been farmers from the earliest days, and, while the cultivation of the soil remained an important occupation of the Jews in the countries of the Diaspora, they also engaged in other pursuits. Numerous papyri in particular furnish considerable evidence of the part played by the Jews in the *agriculture of Egypt. Among the Jewish agriculturists in Ptolemaic Egypt were "royal farmers," tenant farmers, military settlers, and agricultural workers. There were also Jewish peasants and shepherds. Other documents show that there was a Jewish family of potters in "a Syrian village" in the Fayyum district, and also a Jewish weaver in Upper Egypt in the second century B.C.E. Jewish officials were prominent in government service, occupying positions in the police force, in the administration of the government banks, and particularly in the collection of taxes.

A similar diversity characterized the economic life of the Jews in Roman Egypt. In Roman Alexandria there were wealthy Jews, bankers with interterritorial connections, important merchants, and ship owners who filled a notable role in the Egyptian, and in the entire Mediterranean, economy. However, alongside these, Jewish artisans and poor Jews were no less prominent. The Jewish artisans in Roman Alexandria engaged in various trades, and even occupied places in the large synagogue according to their occupations. Among the Alexandrian Jews, some owned land in various places whereas others had difficulty in making a livelihood, as can be seen from the papyri of Abusir el Meleq. This picture is confirmed by documents relating to the provincial towns. Thus in Roman Egypt some Jews owned land, some engaged in cultivating the soil and in rearing sheep, some in transport on land or along the Nile where they loaded cargo for various parts of Egypt, while others were artisans. Only in military service and in the collection of taxes was there a decline in the activities of the Jews as compared with the preceding period, as a result of general changes in these spheres following the Roman conquest. More or less the same state of affairs existed in the other countries of the Mediterranean world. In Cyrenaica there were rich Jews who, after the Jewish War in 70 C.E., aroused the jealousy of the Roman governor; but there were also poor Jews, who were apparently adversely affected by the agricultural policy of the Roman regime in *Libya. There were likewise rich Jews in Puteoli and on the island of Melos. The vast sums of money which flowed to the Temple in Jerusalem from all parts of the Diaspora attest in some measure to the existence of wealthy circles among the Jews. It is however important to point out that at least in Rome itself at the zenith of the imperial period it was chiefly the poor and mendicant Jews, and not the rich ones, who attracted the attention of those who derided Jewry.

JEWISH LIFE IN THE HELLENISTIC KINGDOMS. In the period preceding the annexation to Rome of the Hellenistic kingdoms there was no uniformity in the political fortunes of the Jews in the Mediterranean Diaspora, since they lived under the rule of various states. Yet several general lines in the policy toward the Jews had already taken shape. Among these the most prominent were the toleration of the Jewish religion shown by the various Hellenistic kings, the right enjoyed by the Jews to organize themselves in their own communities, and the permission to maintain contact with the religious-national center in Jerusalem, which found expression in the contribution of the half *shekel to the Temple. Where their number permitted, such as in Egypt, the Jews also played an active part in the general political life of the country. Egypt is, in fact, the only land on which there is detailed information about the relations between the Hellenistic regime and the Jews. *Ptolemy II Philadelphus, the most renowned of the Ptolemaic kings in the third century B.C.E., was well disposed toward them. The Jewish slaves taken captive during his father's rule of Erez Israel were freed, and Jewish tradition even ascribed the inception of the Septuagint to his initiative. Some deterioration occurred apparently during the reign of Ptolemy Philopator (222–204 B.C.E.), due both to the situation in Erez Israel and to the king's religious policy in Alexandria itself; but the conflict was short-lived, and the political influence of the Jews in Ptolemaic Egypt reached its summit in the second century B.C.E. More than all the Ptolemaic kings, Ptolemy VI Philometor (180–145 B.C.E.) showed especial friendship toward the Jews. In his days the stream of emigration from Judea to Egypt increased as a result of the pressure of *Antiochus Epiphanes. Ptolemy Philometor was on intimate terms with the Alexandrian Jewish philosopher *Aristobulus, and prominent among his army commanders were men of Jewish origin. Well disposed to *Onias IV, the son of the Jerusalem High Priest Onias III, the king permitted him to build a temple in Egypt. The Jews in "the land of Onias" became in his time an organized military body and a not insignificant factor in Egyptian politics. After the death of Ptolemy Philometor, the Jewish army appeared in Alexandria to help *Cleopatra II in her struggle against her rival for the throne, Ptolemy Euergetes II (Ptolemy Physcon). As a result, the general position of the Egyptian Jews deteriorated for a time at the beginning of the rule of Ptolemy Physcon (145–116 B.C.E.). However, due to revolts and riots, the Egyptian kingdom was unable to forego the help of the Jews, and Ptolemy Physcon did not long persist in his anti-Jewish policy.

There is reason to assume that an appreciable number of Jews were granted Alexandrian citizenship by this king when his relations with the Greek population deteriorated. At the end of the second century B.C.E., in the struggle between Cleopatra III and Ptolemy Lathyrus, her son and rival for the throne, the Jews supported the queen, and Hilkiah and Hananiah, the sons of Onias IV, even commanded her army in the operations outside the borders of Egypt. At the beginning of the first century (88 B.C.E.) the Jews in Alexandria were persecuted. When Gabinius invaded Egypt the Jews on the frontier assisted the Roman army, as they also did when the army, which had come to extricate Caesar from dire straits in Alexandria, reached the gates of the country (47 B.C.E.). Their actions were undertaken under the influence of Hyrcanus II and Antipater, the rulers of Judea, who were friendly toward the Romans.

ROMAN RULE. Rome's domination of the entire Mediterranean world led to the concentration of the bulk of the Jewish people under homogeneous rule, so that the development of the various Jewish settlements followed a more uniform political pattern. The Roman regime, faced with the need to lay down a comprehensive approach to the Jewish people, based its policy on showing toleration toward the Jewish religion and doing nothing either directly or indirectly to its detriment. This Roman attitude stemmed from several factors:

(1) it was the prevailing Roman policy to refrain as far as possible from affronting the different religions in the empire;

(2) Roman conservatism tended to maintain the existing situation in the various states comprising the empire, and the Jewish community, from the period of the Hellenistic kingdoms, had been an element with its own status and claims, and toleration toward it was an established principle even before the Roman conquest;

(3) the important role played by the Jews in the life and economy of the empire and the comparatively high percentage of the Jewish population among the peoples of the empire, particularly in the east;

(4) the great unity prevailing among the various settlements of the Jews wherever they were, so that any serious attack on one of the great centers of Jewish population produced echoes in other Jewish groups;

(5) secondary factors, such as the ties of Herod and other rulers of his dynasty, and also some individual Jews, with the Roman Empire, on occasion influenced the steps taken by the governors;

(6) primarily the realization that the alternative facing Rome was either toleration or persecution, for the loyalty of the Jews to their religion was well-known, as was their readiness to suffer martyrdom for it. An attack on the Jewish religion was bound to provoke the Jews to revolt, and the emperors' tolerant policy toward the Jews constituted no injury to the empire.

This toleration found expression in several spheres: in the right granted to the Jews to organize themselves in their own institutions and to establish an autonomous system of internal administration and justice, to refrain from taking part in what they regarded as idolatry, and to be exempt from duties involving a transgression of Jewish religious precepts. The permission to refrain from idolatry also included the right to abstain from taking part in emperor worship, the chief expression of the loyalty of the peoples of the empire, abstention from which was generally regarded as treason. For this worship the Jews found a substitute by offering sacrifices in the Temple in Jerusalem for the well-being of the emperor and by prayers on his behalf recited in the various synagogues in Erez Israel and in the Diaspora. Dispensation from duties conflicting with the Jewish religion included the right of Jews who were Roman citizens to be exempted from military service, since this precluded the observance of the Sabbath and other commandments. The architects of the defined Roman policy toward the Jews were Julius Caesar and Augustus, both of whom issued a series of orders to preserve the rights of the Jews and ensure their religious freedom. Caesar explicitly excluded the organizations of the Jews from the prohibition of maintaining *collegia* "except the ancient and legitimate ones," and the representatives of the Roman regime in the islands of the Mediterranean Sea and in Asia Minor acted within the area of their rule in accordance with Caesar's approach.

After Caesar's death, the two sides in the Roman civil war virtually competed with each other in granting privileges to the Jews. The consul Dolabella, ally of Mark Antony, confirmed the right of the Jews of Asia Minor to religious freedom and exemption from military service, and made his action known to the authorities of Ephesus, the most important city in Asia Minor. Marcus Brutus, one of Caesar's assassins, adopted a similar course.

Augustus, in particular, set an example to succeeding Roman rulers. Agrippa intervened to protect the rights of the Jews against the claims of the inhabitants of the Greek cities in Asia Minor, and Augustus instituted a general arrangement whereby the Jews were permitted to send money to the Temple in Jerusalem. Any attack on this money was regarded as sacrilege. This arrangement remained in force until the destruction of the Second Temple. In general, the framework of the relations with the Jews, laid down at the beginning of the Julio-Claudian principate, was preserved during the existence of the pagan Roman Empire. The Julio-Claudian emperors, from Tiberius onward, remained faithful to the policy of Augustus. In fact, it was only during the short reign of Gaius *Caligula (37–41 C.E.) that this policy was seriously challenged. Taking his divinity seriously, the insane emperor demanded of his Jewish subjects the full observance of emperor worship. In Alexandria the Greek enemies of the Jews took advantage of the new situation to incite riots against the Jews, the first "pogrom" in the history of the Roman Empire. Caligula's attempt to introduce his image into the Temple in Jerusalem almost led to an uprising of the entire Jewish nation. Due to the intervention of Agrippa I the immediate threat against the Temple was removed and the danger of a revolt passed,

particularly after Caligula was murdered by conspirators in Rome, but the episode left a turbid sediment in the relations between the Roman regime and the Jews. At the beginning of Claudius' reign the riots in Alexandria were renewed, whereupon Jews from Ereẓ Israel and from the provincial towns of Egypt flocked to the assistance of their coreligionists. The intervention of the emperor restored the status quo, which remained undisturbed until the Jewish War. There were echoes of this war in the larger cities of the Diaspora. In Alexandria the riots between Jews and Greeks broke out again, and the Roman army under the command of the governor, Tiberius Julius Alexander, massacred numbers of Jews in the city. Difficulties were also placed in the way of the Jews in the cities of Syria: there were riots against the Jews of Damascus, and the non-Jewish inhabitants of Antioch attempted, after the destruction of the Second Temple, to deprive the Jews of their rights but were prevented from doing so by Titus' opposition. In Egypt and Cyrenaica, the remnants of the freedom fighters of Ereẓ Israel who had escaped to these countries tried to incite new riots, but their attempt was foiled by the opposition of the Jewish upper classes and the leading instigators of the revolt were executed by the Roman authorities. Nonetheless, wealthy Jews, too, suffered, especially in Cyrenaica, and many of them lost their lives in the brutal acts of the Roman governor there. In general, the destruction of the Second Temple turned Rome into a ruthless regime and an evil kingdom in the eyes of the Jews everywhere. The humiliating position to which the people had sunk in the Roman Empire found legal expression in the obligation imposed on all the Jews to pay, instead of the half shekel which they had contributed to the Temple before its destruction, a tax of two drachmas to the treasury of the temple of Jupiter Capitolinus ("the Jews' tax"). This tax, collected with particular severity under the emperor *Domitian (81–96 C.E.), continued to be an aggravating and humiliating burden on the Jews until the fourth century.

THE TRAJANIC REVOLT AND ITS AFTERMATH. The greatest crisis in the relations between the Roman Empire and the Jews of the Diaspora was the revolt in the days of Trajan. Encompassing a large part of the Jewish settlements in Mesopotamia and in the eastern basin of the Mediterranean Sea (in particular Egypt, Cyrenaica, and Cyprus), it was, in effect, the most dangerous agitation against the Roman regime in the east since the wars of Mithridates at the end of the republican period, for it jeopardized the very existence of Roman rule in the eastern lands. Various factors combined to cause the eruption. These were the hatred of Rome in consequence of the destruction of the Temple and of the humiliation suffered by the Jews, the persistent tension between the Jews and the Greek inhabitants of the large cities such as Alexandria, and eschatological-messianic expectations. The revolt continued for several years (115–117 C.E.). Apparently Cyrenaica served at first as a base of prime importance for the rebels, who were led by Andreas (or Lucuas). The war assumed large proportions. Thousands of the non-Jewish inhabitants of the country were killed, and extremely serious damage was caused to the temples and public buildings of Cyrene as well as to the entire economy of the province. In Egypt the Jewish uprising embraced all the Nile country, from Alexandria in the north to Thebes in the south. Fierce battles were fought in the capital, in the villages, and in the various provincial towns, and many years later (199–200 C.E.) the victory over the Jews was still celebrated at Oxyrhyncus in Middle Egypt. Papyri tell of the enormous dimensions of the material damage and the gravity of the war. Only after full-scale battles, in which considerable forces of Roman legions fought alongside the local population, was the revolt crushed. In Cyprus, too, a ruthless war was waged, at the outset of which the Jews, under the leadership of Artemion, massacred large numbers of the island's non-Jewish inhabitants and destroyed the city of Salamis. When the revolt was finally quelled, the death penalty was decreed against any Jew who set foot on the island. The riots in Mesopotamia were connected with Trajan's wars against the Parthians, and no direct connection has been established between these riots and the Jewish revolt in Cyrenaica and Egypt, the actions of the Jews in Mesopotamia being essentially part of the uprisings of the peoples of the east consequent on the Roman invasion of the Parthian kingdom. In any event, the Jews suffered severely from the riots, and the emperor's representative, the commander Lusius *Quietus, massacred many of the Jewish people in the region. The Jewish revolt in the days of Trajan undermined to a great extent the existence of the Jewish communities in Egypt and in Cyrenaica and for a long time put an end to the settlement of Jews in Cyprus. As a result of the revolt there was a certain decrease in the Jewish population in the east of the empire, the material basis of their existence was shaken, and their political and social influence declined.

During the reigns of Trajan and his successor *Hadrian (117–138 C.E.), suppressor of the Bar Kokhba revolt, the history of the Jews in the pagan Roman Empire reached its nadir. However, from the days of *Antoninus Pius (138–161 C.E.) a gradual improvement took place in their position. There were no more Jewish revolts in the lands of the Diaspora nor punitive actions by the imperial regime, and the Jews once more acquired a strong position in the economic life of the empire. Antoninus Pius permitted the Jews to practice circumcision, which had been forbidden under Hadrian, although with the aim of putting a stop to proselytization he prohibited them from circumcising non-Jews. This prohibition continued also under the emperor *Septimius Severus (193–211 C.E.) but in general the Severian period was marked by a reconciliation between the Jews and the imperial regime. The rights of the Jews were assured; the *nesi'im* of the family of Hillel exercised great influence over the Jewish nation throughout the Roman Empire and were officially recognized by the authorities. Alexander Severus (222–235 C.E.) was favorably disposed toward the Jewish religion, while under *Caracalla (212 C.E.) the masses of the Jews in the empire, like its other peoples, became in every respect Roman citizens. These more favorable relations between the Jewish people and the empire con-

tinued, in effect, until the beginning of the fourth century, when Christianity became dominant. The Jews certainly suffered during the political and economic crisis which affected all the inhabitants of the empire in the third century, from the frequent changes of rulers and the civil wars, the barbarian invasions, inflation, and the heavy burden of taxation and exactions, but under no circumstances did they suffer because they were Jews. They had become an accepted part of the society of the Roman Empire, although there is no evidence at this time of political activity by the Jews in the Diaspora.

ORGANIZATION OF THE JEWISH COMMUNITIES. In their various places of residence the Jews had the right of self-organization, recognized by the Hellenistic and Roman authorities. This measure of *autonomy was an expression of their religious freedom, and the background to promoting the Jewish religion and to the continued existence of the Jewish people in the Diaspora. Different names were given to the Jewish communities in different cities. At times the terms denoting them were taken from the general organizational terminology (such as the name *politeuma*), at others they were called simply "Jews," at others again they were designated "synagogue." Not only the name but also the form of organization differed among the Jews in the various cities and countries. In Alexandria, for example, as early as the Ptolemaic period, the Jews had established a unified organization, a community known as a *politeuma*, led by the elders. At the beginning of the Roman period the Alexandrian community was headed by a president (ethnarch) who enjoyed an independent status and supervised the juridical arrangements in the community. During the reign of Augustus, apparently, certain changes took place in the organization of the community, when the authority passed from the ethnarch to the **gerousia*, consisting of scores of members. In the city of Berenice, too, as shown by an inscription, the Jews were organized in a *politeuma*, headed by nine archons. In Rome the Jews were organized around their synagogues, but no proof has yet been discovered of a central organization embracing all the Jews in the city. Neither in the Hellenistic nor in the Roman imperial period did the Jews of the Diaspora have central, countrywide organizations. To the extent that there was a unified leadership for all the Jews of the empire, it was supplied by the Jewish rulers in Erez Israel and the high priests, while these existed, and afterward by the *nesi'im* and the Sanhedrin at Jabneh and in Galilee. In marked contrast to the picture among Hellenistic-Roman Jewry was the Babylonian Jews' more stable organization, which had hereditary leadership in the person of the exilarch, who traced his descent from the Davidic dynasty, was accorded official recognition by the Parthian regime, and had extremely wide-ranging authority.

The communities of the Greco-Roman world exercised fairly extensive authority, the most important aspect of which was the right to maintain a system of *battei din* with autonomous jurisdiction not only in matters of worship and religion but also in civil cases. However, from papyri it is evident that in various places, even in Alexandria itself where there was a developed system of Jewish jurisdiction, the Jews nevertheless had occasion to turn to non-Jewish law courts. Hence recourse to Jewish autonomous jurisdiction in civil cases was not compulsory. A community also had the right to hold property as a corporate legal body and to collect money from its members, since various expenses, either current or exceptional, had to be met by the communities. The current expenditure included primarily that connected with maintaining religious services, the synagogues, and other Jewish public institutions, such as schools and cemeteries. One of the characteristic features of the community was supplying the needs of the local poor from a charity fund. Exceptional expenditure comprised that associated with building new synagogues, sending delegations to the authorities, ransoming captives, and so on. Here the Jewish community was often assisted by the generosity of individuals.

One of the grave problems requiring adjustment was the relation between Jewish self-organization and the institutions of the Greek cities in the Hellenistic-Roman east organized in the form of a *polis*. Since in any event not all the inhabitants of a city were its citizens, there are no grounds for assuming that all the Jews were citizens of the Hellenistic cities in which they lived. Nor was the position identical in all cities, and in any case everywhere there were Jews with a differing civic status. At least some members of the first groups of Jews who settled in a city at the time of its establishment undoubtedly enjoyed civic rights; thus in Alexandria there were Jews who were "Macedonians." In general, however, most of the Jews who arrived in the Greek cities were presumably either foreigners or enjoyed a special status laid down for the Jewish members of the *politeuma*. Where there were special arrangements with the Hellenistic kings and the Roman emperors, the practical consequences of the status granted to Jews was no less congenial than the grant of civic rights by the Greek city itself, and this status could even be tantamount to equal civic rights. Generally the position in this respect was flexible. At times the Greek cities tried to deprive the Jews of the rights granted to them by the kings and confirmed by the emperors. On the other hand, there were also attempts by Jews, mainly by those of the upper classes, to infiltrate into the body of the citizens in such places and at such times as seemed to them expedient. It must also be noted that those men whose activities caused them to rise in the scale of the municipal leadership or in the administrative hierarchy of the Hellenistic kingdoms or the Roman Empire very often severed themselves, to a greater or lesser extent, from the Jewish world and made concessions to idolatry. Indeed the Jews who in those years attained prominence actually forsook Judaism, such as Dositheus b. Drimylus in Ptolemaic Egypt, or Tiberius Julius Alexander, Philo's nephew, who became the governor of Egypt. In the Roman Empire the special citizenship of the Greek cities gradually lost its value; all Jews became Roman citizens, and in the various cities of the empire Jews also became members of the municipal councils, a position which by then was less of an honor than a heavy financial burden.

LINKS WITH EREẒ ISRAEL. In the days of the Second Temple, as also after its destruction, the Jews of the Diaspora maintained close ties with Ereẓ Israel which found expression in several ways. Many Diaspora Jews fulfilled the commandment of going on pilgrimage to the Temple, and during the festivals Jews from all parts of the world, from Parthia and Media in the east to Italy in the west, could be found in Jerusalem. Some came to study Torah in the renowned schools, as did, for example, the apostle Paul, who studied under Rabban Gamaliel the Elder. This situation also continued after the destruction of the Temple. The greatest scholars of Babylonian Jewry came to study in the academies of Ereẓ Israel; some settling and becoming active there, while others, returning to Babylonia, made that country a great spiritual center. Among the Jews of the Diaspora who settled permanently in Ereẓ Israel were some who shaped the character of Jewish society in Jerusalem at the end of the Second Temple period, the most prominent of these being the families of Boethus and Phiabi, houses of high priests whose members had immigrated from Egypt, and *Bet Hillel and the *Benei Bathyra, whose roots lay in the Babylonian Diaspora.

Material support from the Diaspora to Jerusalem consisted primarily of the half shekel contributed to the Temple. This money was sent by Jews and proselytes, not only from the Roman Empire but also from eastern Jewry under Parthian rule. The Jews of Babylonia sent their half shekels to Nehardea and Nisibis, from where a caravan, accompanied by many thousands of Jews to defend it against possible attack by brigands, transported the money to Jerusalem. Wealthy Jews in Alexandria also made liberal contributions to enhance the outward splendor of the Temple. During the years following the destruction of the Second Temple the Jews of the Diaspora continued their financial support of the patriarchate. Important, too, was the political assistance which the Diaspora rendered to the Jews of Ereẓ Israel. As early as in the days of Alexander Yannai, the intervention of Hananiah and Hilkiah, Jewish commanders in the Ptolemaic army, was a prime factor in the development of military events in Ereẓ Israel, where the Jews derived encouragement from the large numbers and steady loyalty of the Jews in the Diaspora during the Roman Empire.

CULTURE IN THE GRECO-ROMAN DIASPORA. Although the Jewish Diaspora gave rise to considerable spiritual creativity, only a small portion of the literary productions have been preserved. They were written mainly in Greek, which in the Hellenistic period had become the principal language of the Jews of the Roman Empire outside Ereẓ Israel. The characteristic feature of these works is that they are not Greek literature produced by authors of Jewish origin, but Jewish literature written in Greek, for Jewry. Jewish history and problems are the central themes, and not the subjects typical of Greek literature. Whether it chiefly aimed at satisfying the internal needs of Jewish society or whether it was partially of an apologetic nature, intended for external purposes, it must, restrained though it sometimes is, be regarded as polemical literature. In form, however, Jewish-Hellenistic literature adopted most of the types characteristic of Greek literary productions, and among its representatives were historians, philosophers, and dramatic and epic poets. In the Hellenistic-Roman period very few authors of Jewish origin achieved fame in general Greek works unrelated to Jewry. Among these was, apparently, *Caecilius of Calacte in Sicily, an author and literary critic who was a contemporary of Augustus. Only gradually and at a later period did Jewish names begin to appear in the fields of general medicine and science, literature and art. Most of the Jewish-Greek writers were from Egypt, but other places, too, such as Cyrene (where the historian Jason of *Cyrene lived), participated in these productions. The influence of Jewish-Hellenistic literature on the development of later Jewry was scant and it became generally known chiefly through the channels of the Christian Church.

DIBBUK (**Dybbuk**). In Jewish folklore and popular belief an evil spirit which enters into a living person, cleaves to his soul, causes mental illness, talks through his mouth, and represents a separate and alien personality is called a *dibbuk*. The term appears neither in talmudic literature nor in the Kabbalah, where this phenomenon is always called "evil spirit." (In talmudic literature it is sometimes called *ru'aḥ tezazit*, and in the New Testament "unclean spirit.") The term was introduced into literature only in the 17th century from the spoken language of German and Polish Jews. It is an abbreviation of *dibbuk me-ru'aḥ ra'ah* ("a cleavage of an evil spirit"), or *dibbuk min ha-ḥiẓonim* ("*dibbuk* from the outside"), which is found in man. The act of attachment of the spirit to the body became the name of the spirit itself. However, the verb *davok* ("cleave") is found throughout kabbalistic literature where it denotes the relations between the evil spirit and the body, *mitdabbeket bo* ("it cleaves itself to him").

Stories about *dibbukim* are common in the time of the Second Temple and the talmudic periods, particularly in the Gospels; they are not as prominent in medieval literature. At first, the *dibbuk* was considered to be a devil or a demon which entered the body of a sick person. Later, an explanation common among other peoples was added, namely that some of the *dibbukim* are the spirits of dead persons who were not laid to rest and thus became *demons. This idea (also common in medieval Christianity) combined with the doctrine of

gilgul ("transmigration of the soul") in the 16th century and became widespread and accepted by large segments of the Jewish population, together with the belief in *dibbukim*. They were generally considered to be souls which, on account of the enormity of their sins, were not even allowed to transmigrate and as "denuded spirits" they sought refuge in the bodies of living persons. The entry of a *dibbuk* into a person was a sign of his having committed a secret sin which opened a door for the *dibbuk*. A combination of beliefs current in the non-Jewish environment and popular Jewish beliefs influenced by the Kabbalah form these conceptions. The kabbalistic literature of *Luria's disciples contains many stories and "protocols" about the exorcism of *dibbukim*. Numerous manuscripts present detailed instructions on how to exorcise them. The power to exorcise *dibbukim* was given to *ba'alei shem* or accomplished Ḥasidim. They exorcised the *dibbuk* from the body which was bound by it and simultaneously redeemed the soul by providing a *tikkun* ("restoration") for him, either by transmigration or by causing the *dibbuk* to enter hell. Moses *Cordovero defined the *dibbuk* as an "evil pregnancy."

From 1560 several detailed reports in Hebrew and Yiddish on the deeds of *dibbukim* and their testimonies about themselves were preserved and published. A wealth of material on actual stories of *dibbukim* is gathered in Samuel *Vital's *Sha'ar ha-Gilgulim*, in Ḥayyim *Vital's *Sefer ha-Ḥezyonot*, in *Nishmat Ḥayyim* by *Manasseh Ben Israel (book 3, chs. 10 and 14), in *Minḥat Eliyahu* (chs. 4 and 5) by *Elijah ha-Kohen of Smyrna, and in *Minḥat Yehudah* by Judah Moses Fetya of Baghdad (1933, pp. 41–59). The latter exorcised *Shabbetai Ẓevi and his prophet *Nathan of Gaza who appeared as *dibbukim* in the bodies of men and women in Baghdad in 1903. Special booklets on the exorcisms of famous spirits which took place in Korets have also been published (end of 17th century in Yiddish), in Nikolsburg (1696, 1743), in Detmold (1743), and in Stolowitz (1848). The last protocol of this kind, published in Jerusalem in 1904, concerns a *dibbuk* which entered the body of a woman and was exorcised by Ben-Zion Ḥazzan. The phenomena connected with the beliefs in and the stories about *dibbukim* usually have their factual background in cases of hysteria and sometimes even in manifestations of schizophrenia.

[Gershom Scholem]

In the Arts

There are a few significant treatments of the *dibbuk* theme in literature, one of the earliest being a story in the *Ma'aseh Book (1602; Eng. tr. 2 vols., 1934). The classic interpretation of the story is *Der Dibbuk* (1916), a play by S. *An-Ski, which inspired various artistic and musical treatments. An unusual adaptation of the old legend is the French novelist Romain *Gary's bitterly satirical *La Danse de Gengis Cohn* (1967; *The Dance of Genghis Cohn*, 1968), which tells of the haunting of an ex-Nazi by the spirit of a Jewish entertainer whom he murdered in World War II. In drama and music the *dibbuk* motif has mainly found expression in compositions associated with An-Ski's play, the *Habimah production of which, in Moscow in 1922, was both visually and dramatically a landmark. It was directed by Eugene Vakhtangov, who gave the play an expressionist interpretation; the stage sets were designed by Nathan *Altman, and Jacques *Chapiro collaborated in the production. A Yiddish film version of the play was made in Poland in 1938 and a Hebrew version in Israel in 1968.

Joel *Engel's music for An-Ski's play, like the play itself, dates from 1912, when the two men heard the old folktale from an innkeeper's wife. An-Ski constructed the play on the leitmotiv of the ḥasidic song *Mipnei mah* ("Why did the soul descend from the supreme height to the deep pit?"). The tune was used at the first performance of the play by the Vilna troupe, and was taken over by Engel. For the rest of the stage music, Engel drew on the folk melodies he had collected, mainly those of ḥasidic provenance. In 1926 Engel published an arrangement of the stage music as the Suite "*Hadibuk*" (op. 35). Bernhard Sekles wrote an orchestral prelude, *Der Dybuk* (publ. 1929). The opera *Il Dibuk* by Lodovico Rocca (text by Renato Simoni after An-Ski) had its premiere at La Scala, Milan, in 1934. Later settings include a ballet by Max Ettinger (1947), and two operas (both entitled *The Dybbuk*) by U.S. composers – David Tamkin (1951) and Michael Whyte (1962).

DIBON (Heb. דִּיבֹן).

(1) An important Moabite city in Transjordan in the *mishor* ("table-land"), N. of the Arnon River. It was located on the King's Highway and was one of the stations of the Israelites on the way to the plains of Moab during the Exodus (Num. 33:45, as Dibon-Gad). The Bible also relates that Sihon, king of the Amorites, captured it from the first king of Moab (Num. 21:30). With the Israelite conquest, it was allotted to the tribe of Gad (Num. 32:3, 33), although it is also listed in the territory of Reuben (Josh. 13:17). Dibon is identified with modern Dhiban, 13 mi. (21 km.) east of the Dead Sea and 3 mi. (5 km.) north of the Arnon River. Dibon is mentioned in an inscription of Ramses II from Luxor, together with *Btrt*, another city in Moab. In the *Mesha Stele, discovered at Dibon in 1868, Mesha, king of Moab (II Kings 3:4), calls himself "the Dibonite." Dibon was his capital, and, after his rebellion against Israel (c. 850 B.C.E.), he built the "Qarḥoh," (apparently the main citadel of the city) with a *bamah* ("high place") to Chemosh, the god of Moab. Dibon henceforth continued to be part of Moab and the Bible refers to it as a Moabite city (Isa. 15:2; Jer. 48:18, 22). In 731 B.C.E. it came under As-

syrian domination, with tribute being paid to Tiglath-Pileser III, and this continued under subsequent rulers as well. In 582 the city fell at the time of the revolt against Nebuchanezzar.

Excavations began at Dibhan in the 1950s directed by Fred V. Winnett and subsequently by William H. Morton with A.D. Tushingham, bringing to light strata from the Early Bronze Age, Iron Age (Moabite), Nabatean, Roman, Byzantine and Umayyad periods. In one area of the excavations a palace from the Moabite level had an adjoining sanctuary, with cultic vessels, incense stand and fertility figurines. Especially noteworthy is a sequence of sacred buildings – a Roman temple built on the foundations of a Nabatean temple and a Byzantine church alongside them. Perhaps the high-place of the Temple of Kemosh, the Moabite deity, lay beneath the Nabatean temple. Dibon was an important place under the Nabateans; a Roman garrison occupied the area in the third century C.E. as the remains of a bath-house and a number of inscriptions testify. The plain of Dibon is mentioned in the Tosefta (*Shev.* 7:11); in the fourth century, Eusebius refers to it as a big village near the Arnon (*Onom.* 76:17ff.).

(2) A post-Exilic town in the Negev (Neh. 11:25). It is probably identical with *Dimonah in the Negev district of Judah (Josh. 15:22).

[Yohanan Aharoni / Shimon Gibson (2nd ed.)]

DICHTER, MISHA (1945–), U.S. pianist. Dichter was born in Shanghai, where his Polish parents had fled at the outbreak of World War II. He moved with his family to Los Angeles in 1947 and began piano lessons at the age of six. Dichter studied with Aube Tzerko (a former *Schnabel student) and, later, with Rosina *Lhevinne at the Juilliard School of Music in New York. He also studied composition with Leonard Stein (a Schoenberg disciple). His crowning success came in 1966, when he won second prize in the Tchaikovsky International Piano Competition, Moscow, and he was particularly popular with Russian audiences.

After his London (June 1967) and New York (January 1968) debuts, Dichter toured widely. He performed with major American and European orchestras, and also in Israel and the Far East. An active chamber musician, Dichter frequently performed with his wife in duo-piano recitals. They gave the world premiere of Robert Starer's Concerto for Two Pianos with the Seattle Symphony. Dichter's master classes at Juilliard, Eastman, Yale, and Harvard were widely attended. A player of generous temperament and technique, he excelled in the Romantic piano repertory. Dichter's style reflects the German respect for structure and clarity and at the same time the Russian search for heroic proportion. His numerous recordings include works of Brahms, Liszt, Chopin, Mussorgsky, Schubert, Schumann, Stravinsky, and Tchaikovsky. As a writer, he contributed many articles to leading publications, including the *New York Times.*

[Max Loppert / Naama Ramot (2nd ed.)]

°**DICKENS, CHARLES** (1812–1870), English novelist. One of his first full-length novels, *Oliver Twist* (1837–38), devoted to the evils of the poor-law system, introduces a Jewish villain, Fagin, a corrupter of youth and receiver of stolen goods. With Shakespeare's Shylock, Fagin is unquestionably the best-known Jewish figure depicted in the traditional canon of English literature. The young hero, Oliver, falls into Fagin's clutches but is saved from corruption by his own native innocence and by some good-hearted friends. Fagin, like the burglar Bill Sikes in the same novel, is one of Dickens' characters of monstrous evil, a literary stereotype larger than life. As for his Jewishness, Dickens claimed that "that class of criminal almost invariably was a Jew," but Fagin in fact lacks any recognizable Jewish traits. Dickens was challenged about his antisemitic prejudices, and in reply, claimed that he had always felt himself to be a friend of the Jews. As if to prove this, his last complete novel, *Our Mutual Friend* (1864–65), featured Mr. Riah, "the gentle Jew in whose race gratitude is deep." Jews appear in other novels of Dickens, notably *Pickwick Papers* (1836) and *Martin Chuzzlewit* (1843). Dickens' contradictory portrayal of Jews illustrates something of the ambiguity of the Jewish image in Victorian England, and also the deep contradictions in Dickens' own complex character.

[Harold Harel Fisch]

DICKENSTEIN, ABRAHAM (1902–1977), Israeli banker and industrialist. Dickenstein was born in Wishniewa, Poland, and immigrated to Ereẓ Israel in 1921.

From 1921 to 1924 he worked as an agricultural laborer but entered the world of finance in 1925, when he founded the Audit Union of Credit Co-operatives and the Audit Union of Consumers Co-operatives, and in 1927 the Transport Co-operatives. From 1924 to 1935 he was assistant director of Bank Hapoalim of which he later became managing director and visited the United States in 1936 to sell shares of the bank. Encouraged by his success, he conceived the idea of establishing an American financial corporation for the purpose of mobilizing finance and investment resources among United States Jewry for the purpose of expanding the industrial and agricultural economy of Israel. The outcome was the founding of AMPAL, the American Israel Corporation, in 1941, which, with

a balance sheet of $400 million, was in the 1970s one of the most important financial organizations in Israel.

He also served as chairman of the board of the Israeli American Independent Development Bank.

DICKER-BRANDEIS, FREDERIKE (**Friedl**; 1898–1944), artist and teacher who spent the last two years of her life teaching art to children in the Theriesienstadt ghetto. Born in Vienna, Dicker-Brandeis's mother, Karolina Fanta, died by the time she was four years old. Her father, Simon Dicker, a stationery store employee, nurtured Friedl's early interest in art by providing her with supplies from his store. In her early teens, she studied graphic arts at the Experimental School of Graphics. In 1914 she began formal art lessons with Johannes Itten, a pioneer in the Bauhaus School. When Itten left in 1920 for the new State Bauhaus school of art and design in Weimar, Friedl followed him. This began a period of enormous creativity for the young woman. At the Bauhaus school, Friedl studied with Itten, Paul Klee, Georg Muche, and Lyonel Feininger. Her training and skills grew. She became accomplished in charcoals, oil painting, weaving, architecture, poster art, jewelry, bookbinding, and textiles. Because of her outstanding teaching abilities, Friedl was invited to teach Itten's basic course for freshman at Bauhaus while she was still student.

In 1923, Itten and a number of students, including Friedl, left Bauhaus. She and Franz Singer, a fellow student, opened the Workshops for Visual Arts. They designed and sold textiles, books, and jewelry. The following year, Friedl returned to Vienna and opened a new gallery. Singer followed her in 1926 and the Atelier Singer-Drucker became one of the most fashionable design houses in Vienna. In addition to interior design, the couple's business and staff expanded to include architects who designed the Montessori kindergarten and the Tennis Club in Vienna. The Atelier also worked in set design for Berthold Brecht's theater. During this time, Friedl began teaching art courses for kindergarten teachers as well.

In the early 1930s, Friedl became active in politics. She was arrested for Communist activities in 1934 and briefly imprisoned. After her release, she immigrated to Prague continuing both in art and politics. In Prague, Friedl devoted herself to more traditional modes of painting, worked as an interior designer, and taught children of German and Austrian refugees. There she also located her mother's family and, in 1936, married her cousin, Pavel Brandeis. After the Anschluss, Friedl received a visa for Palestine. Instead, she and Pavel moved to Hronov, a small town in Bohemia. As the situation worsened, Pavel and Friedl lost their jobs and were forced to move. On December 14, 1942, they were deported to Theresienstadt.

In Theresienstadt, Friedl lived in a home for girls, caring for and teaching them. She gave art lessons, lectured to art teachers, designed sets and costumes for children's productions, and, with Pavel, re-designed some of the girls' living quarters. Some of her students' artwork is included in *I Never Saw Another Butterfly*, a well-known collection of poetry and art created by children in Theresienstadt. Her work with the children is legendary and seen as the embodiment of spiritual defiance to the Nazis and the circumstances of their incarceration. When Pavel was deported to Auschwitz, Friedl volunteered for the next transport. She died in Auschwitz in October 1944.

[Beth Cohen (2nd ed.)]

DICKSTEIN, SAMUEL (1851–1939), mathematician and pedagogue, born in Warsaw. Author of many papers on mathematics and physics, from 1897 he edited *Wiadomości Matematyczne* ("Mathematical News"). One of the leaders of Polish Jewish assimilationism, he was its representative on the Warsaw Communal Council from 1884 to 1918. From 1891 to 1901 he was principal of a science-oriented secondary school (established in 1878) which had introduced Hebrew into its curriculum. It was closed by the Russian superintendent as being too Polish in orientation. In 1906 Dickstein was elected the first president of the Towarzystwo Rady Naukowej (Academic Council), the ruling body of the precursor of the Free Polish Polytechnic, and in 1915 became professor of mathematics at the University of Warsaw. His brother was the Polish Socialist Szymon *Dickstein.

BIBLIOGRAPHY: J. Shatzky, *Geshikhte fun Yidn in Varshe* (1953), index.

DICKSTEIN, SAMUEL (1885–1954), U.S. congressman. Dickstein, who was born in Vilna, Lithuania, was taken to the U.S. in 1887, when his family settled in New York's Lower East Side. In 1917 he was elected to the Board of Aldermen of New York City, and two years later to the State Legislature. In Albany he drafted several housing bills and drew up the first Kosher-Slaughtering Laws of New York State. Elected to the U.S. House of Representatives from the Lower East Side in 1922, Dickstein began a career there that spanned 22 years. As chairman of the House Immigration and Naturalization Committee, he lashed out constantly against alleged subversives both on the right and left during the 1930s and proposed that the naturalization and alien laws be used against them. A faithful member of the New York City Democratic political machine, Dickstein was elected a New York State Supreme Court justice in 1945, and served until his death.

[Richard Skolnik]

DICKSTEIN (**Dykstajn**), **SZYMON** (pseudonym **Jan Mlot**; 1858–1884), Polish naturalist and socialist theoretician. Born in Warsaw, he took special interest in new trends in natural science and was one of the translators of the works of Darwin and Spencer and was active in socialist circles. The growing repression of Polish socialists led him to immigrate in 1878 to Switzerland and later to France. Though at first influenced

by anarchist ideas, Dickstein subsequently became a Marxist and joined the "First Proletariat" (the Polish Marxist Party). He maintained close ties with leading Russian revolutionaries including Plekhanov and devoted himself to popularizing Marxist socialism. In 1881 he published one of the first popular versions of Marx's *Kapital* and in the following year translated several works of Ferdinand Lassalle into Polish. His activities as a popularizer and press columnist had a great influence on the ideology of the first workers' parties in Poland.

[Abraham Wein]

°**DIDEROT, DENIS** (1713–1784), French man of letters. He was editor in chief of the celebrated *Encyclopédie ou Dictionnaire Raisonné des Sciences, des Arts et des Métiers* (1751–80), to which he also contributed many articles. His article *Juifs (Philosophie des)* constituted the major part of the article *Juif* in the encyclopedia (vol. 9 (1765), 24–51). In this Diderot writes with admiration about what he terms the two determining characteristics of the Jewish nation: its being the oldest nation still in existence and the only one which did not pass through the stage of polytheism. He also praises the "natural" religion of the patriarchs and the personality and ability of Moses. He later states, however, that all these attributes belong "more to the history of revelation than the history of philosophy." Diderot therefore provides a lengthy description of what he considers are the history and the principles of Jewish philosophy after the Babylonian captivity. The main points he made in his description of Jewish philosophy are that the Jews are a people almost unacquainted with science; and that "we cannot expect to find among the Jews exactitude of ideas or precision in style; in short, everything which characterizes a sound philosophy. On the contrary we find a confused mixture of principles of reason and of revelation, an affected and frequently impenetrable obscurity of principles, which cause fanaticism, a blind respect for the authority of the doctors and antiquity; in short, all the defects peculiar to an ignorant and superstitious nation."

[Baruch Mevorah]

DIDI-HUBERMAN, GEORGES (1953–), French philosopher and art historian. Born in Saint-Etienne, an industrial city in the south of France, Didi-Huberman is the son of a painter of Tunisian descent who fought in the Forces Françaises Libres (FFL) Resistance group during the war and a mother of Polish descent who, together with her brother, was the sole survivor of the Holocaust in her family; her father, a workman who had come from the Warsaw ghetto to the mines of Saint-Etienne, died in Auschwitz. Georges' family played a decisive role in his intellectual career: "My childhood was placed under a dual influence. From my father, a painter, I learned the sense of beauty. His workplace was a place of colors. On my mother's side, it was the books – and the silence about the Shoah." After interrupted studies in the history of art and philosophy in Lyons and Paris, Didi-Huberman began a career in theater and dramaturgy, collaborating with André Engel or Jean-Pierre-Vincent, whom he assisted in creating a landmark staging of Bernard Chartreux's *Dernières nouvelles de la peste* at the festival of Avignon in 1983. This first career culminated with a position as playwright-in-residence at the prestigious Comédie-Française. But feeling the lack of a new language to bring to the stage, he resigned and returned to his former studies in the history of art, spending four years in Italy at the Villa Médicis in Rome, and in Venice. A disciple of Aby Warburg's school of thought, iconology, Didi-Huberman developed two main axes: specialization in the iconography of the Italian Renaissance and general, philosophical, and phenomenological reflection on the status of the image itself. From 1990, he taught at the EHESS (Ecole des Hautes Etudes en Sciences Sociales) in Paris, where he developed an anthropological approach to vision and the visual arts. His major works include *Fra Angelico: Dissemblance and Figuration* (1995); *L'image survivante: Histoire de l'art et temps des fantômes selon Aby Warburg* (2002); *Ninfa Moderna. Essai sur le drapé tombé* (2002); and *Invention of Hysteria: Charcot and the Photographic Iconography of the Salpêtriére* (2003). In 2001, after he published an essay for a Paris exhibition of photographs clandestinely taken at Auschwitz by members of the *Sonderkommando*, he entered into an acrimonious intellectual debate with Claude Lanzmann in the pages of *Les temps modernes* on the ability of images to represent the Holocaust and convey historical knowledge or ethical content. Didi-Huberman advocated a "philosophy of the unthinkable," which he related to the tradition inaugurated by Hannah *Arendt, where the visual arts and the image have a crucial role, whereas Lanzmann tended to discredit photography, relying on witnesses and documents. Didi-Huberman attempted to deal with Lanzmann's objections in *Images malgré tout* (2002), stressing the importance of image and cinematographic art in Lanzmann's own *Shoah* documentary. The relation of aesthetics to ethics was the crux of the controversy, which was reminiscent of Adorno's famous indictment of "poetry after Auschwitz."

[Dror Franck Sullaper (2nd ed.)]

DIDYMOTEIKHON (**Didumotica, Demotika**), city in W. Thrace, Greece. Dating from the Middle Ages, there was a *Romaniot synagogue in Constantinople named for the Jews of Demotikan origin. The oldest tombstone in the Jewish cemetery dates from 1456. The local Jews spoke Judeo-Spanish and maintained close relations with the Sephardi communities of nearby Edirne, Sofia, and Istanbul. In halakhic matters, the Jews were under the rabbinic authority of Edirne. In 1821, at the beginning of the Greek Revolution, there were several dozen Jewish families there. In 1897 an Alliance Israélite Uni-

verselle school was established, operating until the mid-1920s. When the Bulgarians captured the city on October 30, 1912, much Jewish property, including stores, were damaged. The economy deteriorated and the Turks captured the city on July 13, 1913. During World War I sovereignty returned to the Bulgarians, who ruled until 1919, when in accordance with the Neuilly Treaty the city came under Greek sovereignty. In about 1920, there were 900 Jews in Didymoteikhon out of a general population of 12,000. They included exporters of grains, silks, cheese, and wool, as well as small grocers. In 1920, the Solidarity youth group of school graduates was formed as an intellectual group and Zionist activity was held at the Cercle Israélite club. In 1922, a branch of B'nai B'rith was founded. In 1934–35, the later noted Athenian Rabbi Eli Barzilai was principal of the Jewish school and French was taught until 1936 when foreign language instruction was banned by dictator Ioannis Metaxas. In 1940 there were 1,000 Jews in Didymoteikhon, of whom 970 were deported during the Holocaust. In 1948, 38 Jews remained in the city, and in 1967, 21.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

DIE DEBORAH, German-language supplement of the English language weekly *The Israelite*, created by Isaac Mayer *Wise in Cincinnati in 1855. The first Jewish periodical in America devoted to women, *Die Deborah* appeared until 1902, two years after Wise's death. While ostensibly directed at women, the journal also served the larger needs of 19th century America's German-speaking Jewry, promoting a program of German identity, bourgeois culture, and Jewish Reform. The paper reported on Jewish affairs from all over the world and published essays on Jewish religion, culture, and history. It featured news from Germany and informed its readers on the cultural life of the German immigrant community in America. In particular, articles in *Die Deborah* discussed matters of schooling and education, and the journal prominently featured German literature, most commonly ghetto novels. *Die Deborah* promoted German culture, and it hailed the German concept of *Bildung* – the harmonious formation of the intellect and of the character – which was to inform true religiosity. The contributors to *Die Deborah* understood their Germanness not as an ethnic identity but as a legacy of cultural excellence, moral distinction, political progressiveness, and universalism which they wished to integrate into American society. *Die Deborah* promoted a Judaism based on a divinely inspired system of norms and values that encouraged free and rational thinking that was quite distinct from the patterns of male learning and halakhic observance of previous centuries. In this culture of middle-class propriety and enlightened German-Jewish sensitivity and religiosity, *Die Deborah* exalted the Jewish mother and wife as the pillar on which the Jewish religion rested. She instilled her children with faithfulness to Judaism and guaranteed the moral and cultural standards of Jewish family life. Domesticity, marriage, and motherhood remained central in *Die Deborah*, but the periodical also encouraged women's education, praised women's accomplishments in Jewish history, and encouraged women's activities outside the home, including professional careers. Thus, *Die Deborah* came to endorse the New Jewish Woman of the turn of the century and eventually supported women's suffrage. The importance of *Die Deborah* declined towards the end of the 19th century, as its readership achieved the integration into American society and the upward mobility that the journal had promoted.

BIBLIOGRAPHY: M.T. Baader, "From the 'Priestess of the Home' to the 'Rabbi's Brilliant Daughter': Concepts of Jewish Womanhood and Progressive Germanness in *Die Deborah* and the *American Israelite*, 1854–1900," in: *Leo Baeck Institute Year Book*, vol. 43 (1998), 47–72.

[Benjamin Maria Baader (2nd ed.)]

DIENCHELELE, from the Hebrew דיין כללי, *dayyan kelali* ("general judge"), an office instituted in Sicily in 1396 by King Martin I of Aragon. The holder of the office was both the judge and final court of appeal in cases judged according to Jewish law. The appointment was made from among those in special favor with the royal family, and since the *dienchelele* was often regarded as the actual representative of all the Jewish communities on the island, he was looked upon with suspicion by the Jews themselves. Joseph *Abenafia, personal physician to the king and queen, was appointed *dayyan kelali* in 1396 and held the office until 1407. In 1399, with the king's approval, Abenafia issued a series of ordinances that attempted to change and reform local customs. He forbade the marriage of underage girls, display of excessive grief at funerals, loaning money at interest, and gambling and he ordered that informers be punished. The holder of this office had wide powers in all matters governing community life: he appointed judges in all Sicilian communities, decided on the number of elected officials, and confirmed elections. This attempt at centralization was opposed by both the Jewish communities and the Sicilian cities because they feared it would infringe on their autonomy. Parallel to the institution of the general judge in the Kingdom of Sicily, another was appointed for the queen's lands (*Camera reginale*), an autonomous territory in the southeastern part of the island whose capital was Syracuse. The first judge appointed to this area was Rais de Ragusa, who remained in office until his death in 1414. After his death, Queen Bianca appointed Isaac son of David de Marsiglia, who was followed in 1416 by Sadone de Gaudio, all of them physicians. They, too, encountered the opposition of the local leadership. Although similar to the office of the court rabbis of Castile and Aragon, the Sicilian general judges did not enjoy the same power and they dealt only in matters concerning Jewish law, while criminal and civil jurisdiction was entrusted to a Christian official appointed as protector and judge of the Jews. In 1420 King Alfonso appointed Moses de Medici *Bonavoglia

(Hephetz) of Messina, a physician who completed his studies at the University of Padua, as general judge. His appointment was contested first by the city of Palermo, claiming that he had no jurisdiction as he was not a citizen of the city. Then, in 1421, at the request of the city councils of Palermo and Messina and their respective Jewish communities, the king revoked his appointment. Bonavoglia was reinstated in 1438 but only after a long process that necessitated the king's intervention. As a courtier, Bonavoglia intervened in 1431 to revoke the king's order of 1428 that the Jews of Sicily attend the sermons of the Franciscan Matteo Giummarra of Agrigento. Moses Bonavoglia died in 1446. He was succeeded by Joshua b. Nachrim de Manopelo of Randazzo. During his short stay in office he was accused of heresy for having summoned a priest to his sickbed and later denying the Christian faith; he was found innocent by a special commission ordered by the king. Joshua b. Nachrim was the last *dienchelele*. After having been twice in abeyance, the office was definitely abolished in 1447, at the request of the communities, in return for a heavy monetary payment.

[Attilio Milano / Nadia Zeldes (2nd ed.)]

DIENEMANN, MAX (1875–1939), German Reform rabbi and author. Dienemann was born in Krotoszyn (now Poznań province, Poland), and studied at the Jewish Theological Seminary and university in Breslau. He served as rabbi in Ratibor, Upper Silesia, from 1903 to 1919, and at Offenbach from 1920 to 1938, when he immigrated to Palestine. Dienemann was one of the leaders of Reform in Germany and an active supporter of the World Union for Progressive Judaism. Dienemann wrote *Judentum und Christentum* (1914), *Liberales Judentum* (1935), *Galuth* (1939), and *Midrashim der Klage und des Zuspruchs ausgewaehlt und uebersetzt* (1935). He also published some sermons. Dienemann contributed articles to journals including *Der Morgen*, of which he was coeditor from 1931 to 1933. On his 60th birthday the Jewish community of Offenbach presented him with a *Festschrift (Minḥat Todah) Max Dienemann* (1935), and later his wife published a memorial volume, *Max Dienemann: ein Gedenkbuch, 1875–1935* (1946); both contain bibliographies. Selections from the *siddur*, in German translation, edited by S. Guggenheim and dedicated to Dienemann's memory, were published in 1948 as *Aus den Gebeten Israel.*

DIENNA, AZRIEL BEN SOLOMON (d. 1536), Italian rabbi and halakhic authority. Dienna, who came from a French family that had settled in Italy, studied under R. Nethanel Trabot. In his youth he was a teacher in Reggio and later moved to Pavia where he remained for 15 years. For a time, he also lived in Piedmont. In 1517, or possibly earlier, he became rabbi of Sabbioneta where he served until his death. He corresponded in *halakhah* with the great scholars of his generation. His works, which are still in manuscript, include a volume of responsa, several of which have been published in various periodicals. Many of them constitute a valuable source for the history, customs, and culture of the Jews of Italy, and they also demonstrate his strong personality and stormy temperament. He was sharp and sarcastic when replying to his opponents and took an active part in the communal disputes. He was involved in 1519 in the storm occasioned in the *Norsa-Finzi controversy, coming out in defense of Abraham Mintz. His responsum on this affair was published in *Pesak ha-Ḥerem shel ha-Rav Ya'akov Pollack*, appended to *Da'at Kedoshim* (1897–98) by I.T. Eisenstadt and S. Wiener.

In the scandal which arose in 1530–32 among his contemporaries over the dismissal of *Benjamin Ze'ev of Arta, Dienna supported those who expelled and excommunicated him. In 1532–36 he was the main instigator of the expulsion of Joseph of Arles from the *Ḥaverut* (a high grade of the Italian rabbinate) as well as from the rabbinate, pointing out that the latter's conduct did not conform with his rabbinical status. In his letter to Abraham ha-Kohen of Bologna in 1531 or 1535, Dienna dissociated himself from David *Reuveni who was greatly honored in many Italian communities, yet he expressed favorable sentiments about the false messiah Solomon *Molcho. Azriel's sons – Jacob, David, Samson, and Menahem – all served in the Italian rabbinate.

DIESENDRUCK, ZEVI (1890–1940), philosopher, scholar. Born in Stryj, Galicia, he studied in Vienna. He also taught in Palestine (1913), attended the University of Berlin (1915), and in World War I joined the Austrian army. After the war, he served on the faculties of the Jewish Pedagogium (Vienna, 1918–27), the Jewish Institute of Religion (New York, 1927), the Hebrew University (Jerusalem, 1928–30), and the Hebrew Union College (Cincinnati, 1930–40), where he was professor of Jewish philosophy. Diesendruck showed a lifelong interest in Zionism, particularly the revival of the Hebrew language. He contributed to this revival with Hebrew essays, notably: the volume *Min ha-Safah ve-Lifnim* (1933); a Hebrew translation of Martin Buber's *Daniel;* Hebrew translations of Plato's *Phaedrus* (Warsaw, 1923), *Crito* (in: *Ha-Tekufah*, 24 (1924)), *Gorgias* (Berlin, 1929), and *The Republic* (Tel Aviv, 1935–36); and coedited (with G. Schoffmann) a Hebrew periodical *Gevulot* (1919). Diesendruck's chief interest was Jewish philosophy,

particularly Maimonides' *Guide of the Perplexed.* Diesendruck's philosophic writings include "Maimonides Lehre von der Prophetie" (in: *Jewish Studies in Memory of Israel Abrahams*, 1927); "Die Teleologie bei Maimonides" (in: HUCA, 5 (1928), 415–534); "Samuel and Moses ibn Tibbon on Maimonides' Theory of Providence" (in: HUCA, 11 (1936), 341–66); "On the Date of the Completion of the *Moreh Nebukhim*" (in: HUCA, 12–13 (1937–38), 461–98); *Struktur und Charakter des platonischen Phaidros* (1927).

[Alvin J. Reines]

DIETARY LAWS, the collective term for the Jewish laws and customs pertaining to the types of food permitted for consumption and their preparation. The Hebrew term is *kashrut*, which is derived from the root כשר ("fit" or "proper"). The word appears in the Bible only three times (Esth. 8:5; Eccles. 10:10; 11:6) and even then not in connection with food.

Description of Permitted Foods

Although there are laws which qualify the consumption of agricultural produce (see *Mixed Species; **Terumah*; **Orlah*; *Wine; *Idolatry), from the point of view of the dietary laws all fruit and vegetables are permitted. This is in fact the force of the first dietary directive in the Bible: "Behold I have given you every herb yielding seed which is upon the face of the earth and every tree …" (Gen. 1:29). Vegetables may also be consumed with either meat or milk (see below, Milk and Meat). The dietary laws therefore concern themselves with what animals, birds, and fish may be eaten, the way in which they must be prepared for consumption, and the fact that meat must not be consumed or cooked together with milk or other dairy products.

ANIMALS. The Bible classifies those animals permitted for consumption as *tahor* ("clean"), and those prohibited as *tame* ("unclean"). The distinction is traced to the wording of Noah's instructions. "Of every clean beast thou shalt take to thee seven and seven, each with his mate; and of the beasts that are not clean, two (and two), each with his mate" (Gen. 7:2). The criterion seems to have been the animal's sacrificial suitability, rather than pagan taboos.

Animals that chew the cud and whose hooves are wholly cloven, are "clean" (Deut. 14:6). Ten such herbivorous animals, both wild and domestic, are specifically enumerated in the Pentateuch: the ox, the sheep, the goat, the hart, the gazelle, the roebuck, the wild goat, the pygarg, the antelope, and the mountain-sheep (Deut. 14:4–5). Animals that have only one of the required characteristics (like the camel, which does not have split hooves, or the pig, which does not chew the cud) are forbidden (Deut. 14:7–8). Altogether, the Bible enumerates 42 "unclean" animals (see Table: Clean and Unclean Animals).

BIRDS. Leviticus 11:13–19 lists 20 "unclean" birds, and Deuteronomy 14:12–18 enumerates 21. From these two lists, the rabbis compiled a total of 24 "unclean" birds (Ḥul. 63a–b). All birds of prey are forbidden, such as the vulture, the osprey, the kite, the falcon, the raven, and the hawk. The Bible does not list "clean" birds. According to the Mishnah (Ḥul. 3:6), "clean" birds must have a crop, a gizzard which can easily be peeled off, and an extra talon (see Table: Clean and Unclean Animals). Today, only those birds for which there is a tradition that they are "clean" are permitted (Ḥul. 63b). With regard to certain birds there is sometimes a difference of tradition; thus in some German communities, the pheasant was regarded as "clean" whereas in others it was forbidden. There are differences of opinion also with regard to the turkey (for a complete list and discussion see: *Sinai*, 64 (1969), 258–281). Since "anything which comes from the unclean is unclean" (Bek. 7a–b), the eggs of forbidden birds are also forbidden (Ḥul. 64b). The Talmud lists among the indications for such eggs the fact that they are round rather than oval, and that the yolk is often on the outside and the albumen on the inside (*ibid.* 64a). Even the eggs of permitted birds are forbidden if they have been fertilized (*ibid.* 64a–b). That is usually seen from the fact that there is a dark spot in certain parts of the albumen. However, since there are several opinions among the authorities as to where the "danger zone" is, any spot of blood in the egg renders it unfit for consumption unless it comes from a chicken run in which there is no cock (and cannot therefore have been fertilized); it may be eaten if the spot itself is removed.

FISH. Only aquatic creatures that have at least one fin and one easily removable scale (*kaskeset*) are "clean" and permitted (Lev. 11:9–12; see Table: Clean and Unclean Animals). The Committee of Laws and Standards of the Rabbinical Assembly of America (Conservative) has ruled that both the sturgeon and the swordfish are permitted, whereas in England the Ashkenazi authorities forbid sturgeon while the Sephardi permit it (see ET, 7 (1956), 208).

INSECTS. Leviticus 11:21–22 specifically permits the eating of four kinds of *locusts. "But all other flying creeping things, which have four feet, shall be an abomination unto you" (11:23). However, since even the permitted locusts cannot be easily identified today, they are not eaten by most communities. Although the bee is a forbidden insect, its honey is regarded as "transferred nectar" and may therefore be eaten (Bek. 7b).

***Sheḥitah* ("Ritual Slaughter")**

Specific regulations govern the method by which an animal must be slaughtered before it is permitted. So complex and minute are the regulations that the slaughter must be carried out by a carefully trained and licensed *shoḥet*. It is his duty both to slaughter the animal, and to carry out an examination (*bedikah*). Should a defect be found in some of the organs, such as the brain, the windpipe, the esophagus, the heart, the lungs, or the intestines, the animal is *terefah*, and forbidden

for consumption. Defects are normally classified under eight categories (Ḥul. 43a): *nekuvah*, perforated organ walls; *pesukah*, split pipes; *netulah*, missing limbs; *ḥaserah*, missing or defective organs; *keru'ah*, torn walls or membrane covers or organs; *derusah*, a poisonous substance introduced into the body, when mauled by a wild animal; *nefulah*, shattering by a fall; *shevurah*, broken or fractured bones. It is assumed in the Talmud that any of these defects would lead to the death of the animal within one year (Hul. 3:1; see below). Only if the animal has none of these injuries, is it pronounced *kasher.* After *sheḥitah*, it is suspended head down, so that as much blood as possible may drain.

Should various sections of the animal have been removed before the *bedikah* has taken place, the animal is usually considered *kasher.* This rule is based on the fact that the majority of animals are usually found, after *bedikah*, to be *kasher* (Ḥul. 11a–b). This rule, however, does not apply if the lung has been removed. Since a large minority of animals do suffer from lung diseases that portion of the body must always be examined and if that is impossible the animal is considered *terefah*.

Sheḥitah and *bedikah* of poultry is carried out in the same careful manner. The same laws of *terefah* apply but there is no need for examination except of the intestines. There are no specific rules concerning the method by which permitted fish are to be killed.

Koshering ("Preparation of Meat")

The prohibition against the consumption of blood (Lev. 7:26–27; 17:10–14) is the basis for the process of koshering meat. The purpose of the process is to draw out and drain the meat of non-veinal blood, before it is cooked. The blood can be removed either by salting the meat, or by roasting it over an open flame.

The salting process is begun by fully immersing the meat and bones in clean, cold water (in a vessel used exclusively for this purpose), for 30 minutes. The purpose of this operation is to open the pores, and remove any blood on the surface, thus enabling the salt to draw the blood out of the softened fibers of the meat. The meat is then laid out on a special grooved or perforated board, which is slanted, in order to allow the blood to flow down. It is then sprinkled with salt. The salt should be of medium texture; neither fine (which melts away), nor coarse (which falls off). Poultry should be opened and must be salted inside and out. The meat is then left to stand, for one hour, after which it is washed two or three times in cold water. In an emergency, i.e., when the meat is intended for a sick person or when time is short on the eve of Sabbath, the periods of immersion and salting may be reduced to 15 and 30 minutes respectively.

The salting process cannot be used if more than 72 hours have elapsed since the time of the *sheḥitah*. Such meat can only be koshered by roasting over an open flame, a process which is considered to be more effective in removing the blood than salting. It is, however, customary to salt the meat a little, even if it is to be roasted over an open flame.

Before koshering, the vein which runs along the front groove of the neck must be removed or cut in several places. The heart, too, is cut in several places and the tip is cut off so that the blood may drain. The gizzard is cut open and cleaned before koshering. Salting is not considered effective enough to kosher the liver, which is full of blood. It is therefore sprinkled with salt, cut across or pierced several times, and placed on or under an open flame, until it changes color, or a crust forms.

Other Regulations Regarding Meat

FORBIDDEN PORTIONS OF CLEAN ANIMALS. It is forbidden to eat certain portions of "clean" animals. The sciatic nerve (*nervus ischiadicus*; Heb. גִּיד הַנָּשֶׁה), for instance, must be removed before any animal, other than a bird, can be prepared for consumption. The prohibition is traced back to the blow inflicted upon Jacob: "Therefore the children of Israel eat not the sinew of the thigh-vein which is upon the hollow of the thigh unto this day" (Gen. 32:33).

The fat portions (*ḥelev*), attached to the stomach and intestines of an animal, sacrificed on the altar in biblical and Temple times, are also forbidden for consumption. They must be removed by porging (*nikkur*) the organs to which they are attached. The abdominal fat of oxen, sheep, or goats, unless it is covered by flesh, is forbidden (Lev. 3:17; 7:23–25).

NEVELAH AND *TEREFAH*. It is forbidden to eat either a *nevelah* (an animal that dies a natural death, or that has been killed by any method other than *sheḥitah*; Deut. 14:21), or a *terefah* (an animal that has been torn by a wild beast; Ex. 22:30). The term *terefah* is also applied to an animal suffering from an injury which may lead within a specific time to its death (see above). Such an animal is absolutely prohibited for consumption. The Talmud (Ḥul. Chap. 3) describes over 70 such injuries and lesions (see also Sh. Ar., YD 29–60; Maim., Yad, Sheḥitah 10:9), which Maimonides describes as "the limit" and which, he says "must not be increased even though it should be found by scientific investigation that other injuries are dangerous to the life of the animal" (Maim., Yad, *ibid.* 10:12), or diminished "even if it should appear by scientific investigation that some are not fatal; one must go only by what the sages have enumerated" (Maim., Yad, *ibid.* 10:13).

ADMIXTURE OF PERMITTED AND FORBIDDEN FOODS. It is forbidden to eat any amount (no matter how minute) of forbidden foods (Yoma 74a). In the case of an accidental mixture of a forbidden food with a permitted one, however, the latter is only considered to be "contaminated" if the quantity of forbidden food inserted is large enough to affect the taste. For practical purposes, it was decided that only if the quantity of forbidden food was less than 1/60 of the permitted food with which it became mixed, is it considered not to have affected the taste. If more, the whole mixture is forbidden. If the forbidden admixture is, however, a type which is intended to affect the taste, then the mixture is forbidden even if the admixture is less than 1/60. Any leaven which becomes mixed

Tables of Clean and Unclean Animals, Birds, Fish, etc.

General Note: The purpose of this table is to give a resume of clean and unclean animals from an academic point of view only. It does not purport to lay down the *halakhah*.

MAMMALS

Characteristics: Viviparous[1], suckle their young, breathe though lungs, hairs on the skin; the body temperature is constant, four-chambered heart (two auricles and two ventricles); the chest cavity is separated from the ventral by a diaphragm.

CLEAN	UNCLEAN
Ruminants with cloven hooves *Characteristics*: herbivorous, they have incisors in their upper jaws. Ruminants, the stomach has four compartments. They have either hollow or solid horns[2]. They are cloven-hoofed, with two toes. *Examples*: buffalo, kine, goat, sheep, ibex, gazelle, deer, antelope, wild ox, wild goat, giraffe(?)[3].	**a) Cloven-hoofed but non-ruminants** *Characteristics*: They walk on their hooves, possess canine and incisor teeth. *Examples*: pig, boar, hippopotamus. **b) Ruminants but not cloven-hoofed** *Characteristics*: They have very small hooves, like nails, walk on cushion-like pads which form the soles of their feet. They have tusk-like canines on both jaws and incisor teeth on the upper jaw. Their stomach has only three compartments. *Examples*: camel, llama. **c) Solid-hoofed** *Characteristics*: They are herbivorous, have a single stomach, incisor teeth on both upper and lower jaws. *Examples*: horse, ass, mule, onager, zebra. **d) Carnivorous** *Characteristics*: They have six incisors and two sharp canine teeth on both jaws. They have four or five toes with claws on each foot and walk either on their toes or on their paws. *Examples*: cat, lion, leopard, dog, wolf, jackal, fox, hyena, bear. **e) Other mammals neither ruminants nor cloven-hoofed** *Examples*: hare[4], mouse[5], hyrax[6], bat[7], rat, elephant, ape, whale.

Notes:

1) *Mammals exist in Australia and New Zealand belonging to the order Monotermata, which lay eggs.*
2) *In this group the females have no horns. In the majority of species the males shed their horns annually. Some primitive species of cloven-hoofed ruminants are entirely without horns. There is some doubt as to whether they are clean.*
3) *The giraffe is a cloven-hoofed ruminant with a kind of horn, but there is no clear tradition as to whether it is kosher. Some hold that it is the tahash mentioned in the Bible and some the zemer of Deut. 14:5. The okapi belongs to the same family as the giraffe and has the same characteristics.*
4) *The hare is enumerated in the Bible (Lev. 11:6; Deut. 14:7) among the ruminants which are not cloven-hoofed. In point of fact it is not actually a ruminant although it appears to be one. See* *Hare.
5) *The mouse* (akhbar) *and the rat* (ḥoled) *are enumerated in the Bible (Lev. 11:29) among the "creeping things" which are forbidden for food and whose carcasses render unclean by contact. Six other "creeping things" which are not mammals but reptiles are mentioned in the same verse and context. See later.*
6) *The hyrax is listed (Lev. 11:5) with the non-cloven-hoofed ruminants. Systematically it does not belong to the ruminants but in its anatomical structure it is somewhat similar to them.*
7) *The bat is enumerated in the Bible (Lev. 11:19; Deut. 14:18) with birds, because it flies, but systematically it belongs to the mammals.*

BIRDS

Characteristics: Their bodies are covered with feathers, and their upper limbs are wing-shaped. They have no teeth, breathe through lungs, and have a constant body temperature. The heart is four-chambered (two auricles and two ventricles). They lay eggs which have a hard shell of calcium carbonate (chalk).

CLEAN	UNCLEAN
The Bible does not give the characteristics which distinguish clean birds from unclean, as it does in the case of mammals and fish. The Mishnah, however (Ḥul. 3:6), states that "a bird that seizes food in its claws is unclean; one which has an extra talon[1], a craw, and the skin of whose stomach can be peeled, is clean." To this the Talmud adds in the name of R. Nahman that "to anyone familiar with birds and their	**a) Diurnal Birds of Prey** The Diurnal Birds of Prey mentioned in the Bible are from the family Falconidae which are carnivorous and Vulturidae which feed on carrion. **Falconidae:** have hooked beaks and their talons are sharp and bent like hooks. *Examples*: kestrel, hawk, eagle, kite, buzzard.

Tables of Clean and Unclean Animals, Birds, Fish, etc. (continued)

BIRDS (continued)

nomenclature, any bird which has one of these characteristics is clean, but to one unfamiliar with them it is unclean, but if it has the two characteristics it is clean" (Ḥul. 61b–62a). However, they also posited the rule "With regard to which birds are clean we rely upon tradition. A hunter is believed when he says "my master transmitted to me that this bird is clean." R. Johanan added, "provided he was familiar with birds and their nomenclature" (Ḥul. 63b). Already in the Talmudic period varying traditions are mentioned whereby certain birds were considered permitted in one locality and forbidden in another. For this reason, at the present day the custom has been adopted to eat only such birds as have all the signs of cleanliness, and about which there is a general tradition that they are clean. In the Bible and Talmud the following birds are mentioned as clean:

a) Columbiformes: pigeon, turtle dove, palm dove.
b) Galliformes[2]**:** hen, quail, partridge, peacock[3], pheasant[4].
c) Passerinae: house sparrow[5].
d) Anseriformes: domestic duck, domestic goose.

Vulturidae: The neck is usually bare, the bill thick and solid. The talons are blunt and only slightly inclined.
Examples: griffon vulture[6], black vulture, Egyptian vulture, bearded vulture.
b) Nocturnal Birds of Prey (Strigiformes)
Possessed of large head and eyes; they have four toes, two pointing forwards and two backwards. The Mishnah (Ḥul. 3:6) declares them unclean.
Examples: owl.
c) Water and Marsh Fowls
With the exception of the goose and the duck[7], they are all regarded as unclean.
Examples: stork, bittern, heron, crane, gull.
d) Various other Birds which either have no characteristics of a clean bird, or about which there is no tradition that they are permitted.
Examples: warblers, crow, swift, hoopoe, ostrich.

Notes:

1) *I.e., the rear talon is situated higher up on the leg than the other four, or the middle talon is longer than the others. This latter is characteristic of birds which eat grain and walk extensively on the ground (see * Eagle).*
2) *To this order belong two more domestic fowls: (a) the turkey which is today everywhere regarded as a clean bird, although a few generations ago there were localities where they refrained from eating it because of the lack of any tradition that it was clean, coming as it does from the New World. To this day the descendants of Isaiah Horowitz (the "Shelah") do not eat turkey; (b) the guinea-fowl which in some localities is regarded as clean while in others it is regarded as forbidden.*
3) *For the problem of its identification see * Peacock.*
4) *In many countries there is a tradition that the pheasant is a clean bird and permitted. See * Pheasant.*
5) *This is the "deror" of the Bible (Prov. 26:2; Ps 84:4). With regard to this bird also there is a tradition, particularly in Oriental countries, that it is a clean bird and permitted.*
6) *The signs of this bird are discussed in Ḥulin 61a et seq. see Tosafot,* ibid *63a, s.v.* nez, *as to its identification.*
7) *In some countries there is a tradition with regard to other species of birds belonging to this and other groups that they are clean and permitted.*

REPTILES

Characteristics: To this class belong creeping or crawling things which have short legs or none at all. As a result they move close to the ground or drag along it. They exist chiefly on dry land, and breathe with lungs. The majority lay eggs, but with a soft shell in which the white and the yolk[1] are mixed. They are cold-blooded, i.e., their temperature adjusts itself to the environment. Their skin is covered with scales or with heavy platelets.

CLEAN

None.

UNCLEAN

In the Bible reptiles are included in the general prohibition "and every creeping thing that creepeth upon the earth shall be an abomination; it shall not be eaten. Whatsoever goeth upon the belly and whatsoever goeth upon all four or whatsoever hath many feet among all creeping things that creep upon the earth, them ye shall not eat for they are an abomination." (Lev. 11:41–42)
The crocodile is forbidden in accordance with Lev. 11:12, which forbids "whatsoever hath no fins or scales in the water." Of the eight creeping things which are forbidden as food and whose carcasses defile on contact (*ibid.* 11:29–30), six belong to the class of Reptiles. They are the lizard, gecko, skink, monitor, tortoise and chameleon.
In addition all species of snakes are forbidden food though the laws of uncleanness on contact do not apply to them.
Examples: black snake viper, cobra.

Notes:

1) *This fact is mentioned in the Talmud (Ḥul. 64a) where a distinction is made between the eggs of birds and the eggs of reptiles.*

Tables of Clean and Unclean Animals, Birds, Fish, etc. (continued)

AMPHIBIANS

Characteristics: Vertebrates, born in water: when adult living on dry land, in water, or both media. During the early stages of metamorphosis (larva-tadpole) they breathe with gills; in the adult stage either with lungs or gills. The body temperature changes in accordance with the medium in which they live.

CLEAN	UNCLEAN
None.	a) Apoda (without legs). b) Tailed – salamander, newt. c) Tailless – toad, frog[1].

Notes:

1) *The frog, like all amphibians, is forbidden, but the Mishnah (Toh. 5:1) points out that its carcass, unlike the six reptiles mentioned above, does not convey uncleanness by contact.*

FISH

Characteristics: Vertebrates, living in water and breathing through gills[1]. In some species the body is covered with bony or teeth-like scales; others have no scales. All possess fins[2]. Their body temperature changes according to their environment. They reproduce either by laying eggs or by bringing forth their young alive[3].
Fish are divided into main classes:
a) Bony skeletons (about 30,000 species).
b) Cartilaginous (about 400 species).

CLEAN	UNCLEAN
According to the Bible those fish are permitted which have "fins and scales in the waters, in the seas and in the rivers" (Lev. 11:9; Deut. 14:9). In this category only Bony Skeletons are included, since they alone possess fins and scales. The scales must be real ones, i.e., they must overlap one another and be of bony origin and not a growth of the skin. Some scales are of minute proportions; for the fish to be clean the scales must be visible to the eye[4]. Some fish have scales while young but shed them later; they are clean. On the other hand there are fish which develop scales only when they grow to maturity; they are also clean[5]. *Examples*: carp, trout, salmon, herring.	**a) Cartilaginous** (Chondrichthytes) These fish either have no scales or have thick scales like teeth, which are not however true scales as they do not overlap. They give birth to their offspring alive, or lay eggs. To this group belong all the strange-shaped fish which inhabit the ocean depths, and all species of sharks. *Example*: shark, ray. **b) Cartilaginous – Bony** (Chondrostei) They also lack true scales. Their body is unprotected, except that it is partly covered with five long rows of protective matter. It is from these fish that caviar (mainly black in color) is derived. *Example*: sturgeon (controversial, see "Fish" in text). **c) Bony Skeletons** (Holostei) Fish which have no scales visible to the eye, or which have no fins. *Examples*: catfish, eel.

Notes:

1) *An exception are the fish with lungs (Dipnoi) through which they also breathe. They are able to exist out of water. Although they have both fins and scales it appears that they are not to be regarded as fish at all, but as "creeping things," and are therefore forbidden.*
2) *In some cases the fins are minute, while in others they are broad and are used by the fish to crawl on the seabed. Some even use them for flying.*
3) *In the Talmud (Bekh. 7b) it is stated that "an unclean fish breeds, whereas a clean fish lays eggs." This rule applies to Cartilaginous fish which bear their young alive and to all bony fish in Israel, which lay eggs. In other parts of the world however there are found fish, with fins and scales, which bear their young alive. To these, for instance, belong the species of Gambusia which have been introduced in various localities as ornamental fish or as devourers of insects.*
4) *Even those Bony Skeletons which are considered unclean have minute scales which can be seen only through a microscope. They are regarded as being without scales.*
5) *As the Talmud states (Av. Zar. 39a), "Fish which have no scales at the time, but grow them later … and those which have them but shed them when drawn out of the water … are permitted." The "baraita" lists, in this category, fish such as the* אַנְסְפָּטִיָּיס *which is presumably the swordfish (Xiphias). This identification, however, is not absolutely certain and thus the permissibility of the swordfish is doubtful.*

INVERTERBRATES

Characteristics: To this group belongs the largest number of species in the animal kingdom. They have no bony skeleton. Their skin is either bare or covered with a calciferous shell or a thick chitinous membrane. They reproduce by simple division of the body, by laying eggs or by bringing forth their offspring alive. The smallest creatures of this group are the protozoa whose existence became known only with the invention of the microscope[1].

Tables of Clean and Unclean Animals, Birds, Fish, etc. (continued)

INVERTERBRATES (continued)

CLEAN	UNCLEAN
Of all the inverterbrates only a group apertaining to the order of locusts (Orthoptera) are permitted for food by the Bible. This order includes some hundreds of species (out of approximately a million other species of insects) and of it the Bible mentions only four, "Yet these may ye eat of every flying creeping thing that goeth upon all four[2], which have legs above their feet, to leap withal upon the earth; even these may ye eat, the locust after its kind, etc." (Lev. 11.21–22). The Rabbis interpret the word translated "after its kind" to include others of the same order and enumerate eight species of permitted Orthoptera (Ḥul. 65a–b cf. Maim. Yad, Ma'akhalot Asurot 1:21–22). The Mishnah gives four signs whereby permitted insects may be recognised: four legs, four wings, jointed legs and the wings covering the greater part of the body (Ḥul. 3:7). Insects of the order Orthoptera develop by stages. At first they have no wings and in the course of time they develop them. For this reason it is laid down that if they have no wings at the time but grow them later, they are permitted (Ḥul. 65a). This excludes such Orthoptera as have no wings at all. Even at the present day there are Jews in Israel from oriental countries who eat such locusts about which they have a tradition as to their permissibility.	All inverterbrates – with the exception of some Orthoptera – are forbidden[3]. Those which live in water are forbidden under the prohibition either of fish which lack fins and scales, or of "any living thing which is in the waters" (Lev. 11:10). Those which live on land are forbidden in accordance with the prohibition against "whatsoever goeth upon the belly, and whatsoever goeth upon all four, or whatsoever hath more feet" (ibid. 11:42). The main groups of forbidden inverterbrates are: **Leeches, Mollusks** (snail, oyster, squid). **Segmented Worms, Flatworms, Jellyfish, Sponges, Protozoa**.

Notes:

1) *Practically all protozoa are microscopic and invisible to the naked eye. it is obvious that food containing them is not thereby rendered forbidden. To the extent that they are visible, however, if it is clear that a certain food consists of protozoa, it would appear that one should refrain from eating it. Nevertheless it should be pointed out that until the last century the general opinion was that protozoa and insects are formed from non-living matter through spontaneous generation. This view is found in rabbinic literature with regard to certain insects, and on these grounds they regarded them as permitted.*
2) *All insects have six legs. The Bible disregards the two front legs which it regards as hands.*
3) *The Talmud lays down the rule with regard to all living things, including insects, "that which derives from an unclean animal is unclean," (Bekh. 1.2). The only exception is bee honey which, although it derives from the bee which is unclean, is nevertheless permitted as food, since "they gather it into their body but do not exude it from their body" (Bekh. 7b).*
   Human milk is of course permitted (Maim. Yad, Ma'akhalot Asurot, 3:1).

[Jehuda Feliks]

with permitted food on Passover contaminates the whole, no matter how minute the amount (see **Ḥameẓ*).

Milk and Meat

"Thou shalt not seethe a kid in its mother's milk" is a prohibition repeated three times in the Pentateuch (Ex. 23:19; 34:26; Deut. 14:21). The rabbinical elaboration of this precept defines three distinct prohibitions: cooking meat and milk together; eating such a mixture; and deriving any benefit from such a mixture (Ḥul. 115b). Together these laws are known as the ordinances of *basar be-ḥalav* ("meat in milk"). "Milk" includes all dairy products, such as cheese, butter, sour cream, and fresh cream. To create a "fence around the law" the rabbis ordained that the separation of meat from milk must be as complete as possible. Thus, separate utensils, dishes, and cutlery must be used for dairy foods and meat (*milchig* and *fleishig*, respectively, in Ashkenazi parlance). These must be stored separately, and when washed, separate bowls (or preferably sinks), and separate dishcloths (preferably of different colors to avoid confusion), must be used. If meat and milk foods are cooked at the same time on a cooking range or even on an open fire in a closed oven, care should be taken that the dishes do not splash each other and that the pans are covered.

According to the Talmud (Ḥul. 105a) one may not eat milk after meat in the same meal. However, strict observance demands an interval of as long as six hours between eating meat and dairy dishes. Most West European Jews wait three hours, whereas the Dutch custom is to wait one hour. It is permitted to eat meat immediately after milk dishes, provided that the mouth is first rinsed and some bread eaten (Ḥul. *ibid.*). After hard cheese, however, it is customary to wait a longer period (Isserles to Sh. Ar., YD 89:2). Imitation "milk" derived from coconuts and soybeans may be used with meat. Fruit, vegetables, and eggs are all neutral (*parev* or *parve*), and may be eaten together with milk or meat dishes. Fish, too, is a neutral food. However, the rabbis prohibited the eating of fish and meat together, on the grounds that such a combination impairs the health.

Milk

Strictly observant Jews drink only *ḥalav Yisrael*, milk obtained and bottled under the supervision of a Jew (Av. Zar.

2:6). This ensures both that no other substances have been added to the milk, and, more particularly, that no milk of an unclean animal has been added. However, since such practices are today generally forbidden by state laws, and since, furthermore, "unclean" milk is more expensive than "clean," many authorities permit the consumption of milk which has not been supervised.

The dietary laws are exceedingly complex and a great deal of material in the Talmud is devoted to them. The tractate *Ḥullin* deals mainly with the subject and the *Yoreh De'ah*, one of the four sections of *Jacob b. Asher's *Tur* and the Shulḥan Arukh, deals exclusively with dietary laws.

History

IN PROPHETIC LITERATURE. The Hebrew prophets repeatedly refer to *kashrut*. *Isaiah (66:17) warned that those "eating swine's flesh and the detestable thing and the mouse, shall be consumed together." *Ezekiel (4:14), in his vision, claimed, "Ah, Lord God; behold my soul hath not been polluted, for from my youth up, even till now, have I not eaten of that which dieth of itself, or is torn of beasts; neither came there abhorred flesh into my mouth." *Daniel, together with his companions Ḥananiah, Mishael, and Azariah, refused to partake of the "king's food" and of the "wine which he drank" (Dan. 1:8).

THE SECOND TEMPLE TIMES. Jews endangered their lives by their faithful adherence to the dietary laws during the Syrian rule of Ereẓ Israel, especially in the reign of *Antiochus IV Epiphanes. I Maccabees (1:62–63) records, "Many of the people of Israel adhered to the law of the Lord. They would not eat unclean things, and chose rather to die." The eating of the "unclean things" was literally equated with apostasy: "*Eleazar, one of the principal scribes, a man already well stricken in years, was compelled to open his mouth and to eat swine's flesh. But he, welcoming death with renown, rather than life with pollution, advanced of his own accord to the instrument of torture" (II Macc. 6:18). During the same period, *Hannah and her seven sons chose martyrdom rather than contravene the dietary laws. "We are ready to die," they proclaimed, "rather than transgress the laws of our fathers" (*ibid.* 7:2). In the epic story of *Judith and Holofernes, Judith affirms, "I will not eat thereof, what I have brought with will be enough for me" (Judith 12:2).

The Book of *Tobit states that the dietary laws were specifically designed to set the children of Israel apart from their neighbors: "All my brethren, and those that were of my kindred, did eat of the bread of the gentiles, but I kept myself from eating of the bread of the gentiles" (Tob. 1:10–11).

Some tolerant gentile rulers not only permitted, but even facilitated, the observance of the dietary laws. Thus, in 44 B.C.E., Dolabella, the Roman governor of Syria, exempted the Jews of Ephesus from military service so that they would not be compelled to desecrate the Sabbath or eat forbidden food (Jos., Ant., 14:223–30). However, as Josephus' documentation of the barbarities committed during the Jewish revolt reveals, such remarkable instances of Roman tolerance were unfortunately rare. The *Essenes, on the contrary, were singled out for special savagery. "They were racked and twisted, burnt and broken, and made to pass through every instrument of torture in order to induce them to blaspheme their lawgiver and to eat some forbidden thing; yet they refused to yield to either demand, nor even once did they cringe to their persecutors or shed a tear. Smiling in their agonies, mildly deriding their tormentors, they cheerfully resigned their souls, confident that they would receive them back" (Jos., Wars, 2:152–3).

IN MEDIEVAL TIMES. Despite the difficulties, and even dangers, inherent in the observance of the dietary laws during subsequent periods of severe persecution, the Jews steadfastly remained faithful to *kashrut.* A Jewish chronicler of the period of the Crusades writes: "It is fitting that I should recount the praises of those who were faithful. Whatever they ate or drank, they did at the peril of their lives. They would ritually slaughter animals for food according to Jewish tradition and remove the fat and inspect the meat in accordance with the prescription of the sages. Nor did they drink the wine of the idol worshipers" (Chronicle of Solomon b. Samson, in: A.M. Habermann, *Gezerot Ashkenaz ve-Zarefat* (1945), 57). The heroism of the medieval *Marranos in defense of the dietary laws was matched by the devotion of the *Cantonists and the inmates of the Nazi concentration camps.

Attempts to Explain the Dietary Laws

Throughout the ages, many attempts have been made to explain the dietary laws. The Pentateuch itself does not explain them, although in three separate passages in the Bible they are closely associated with the concept of "holiness." Thus, Exodus 22:30 states: "And ye shall be holy unto Me; therefore ye shall not eat any flesh that is torn of beasts in the field; ye shall cast it to the dogs." Leviticus repeats the idea: "For I am the Lord your God; sanctify yourselves therefore, and be ye holy, for I am holy; neither shall ye defile yourselves with any manner of swarming thing that moveth upon the earth" (Lev. 11:44–45). Finally, Deuteronomy 14:21 states: "Ye shall not eat of any thing that dieth of itself; thou mayest give it unto the stranger that is within thy gates, that he may eat it; or thou mayest sell it unto a foreigner; for thou art a holy people unto the Lord thy God." The Pentateuch classifies the dietary laws as *ḥukkim*, "divine statutes," which by definition are not explained in the text (Yoma 67b). It has been variously suggested that the underlying motivation for the dietary laws are hygienic and sanitary, aesthetic and folkloric, or ethical and psychological.

MORAL EFFECTS. In Ezekiel 33:25, the prophet equates the eating of blood with the sins of idolatry and murder. One interpretation of this verse teaches that the dietary laws are ethical in intent, since abstention from the consumption of blood tames man's instinct for violence by instilling in him a horror of bloodshed. This is the view expressed in a letter by *Aristeas, an unknown Egyptian Jew (probably of the first

century B.C.E.), who states that the dietary laws are meant to instill men with a spirit of justice, and to teach them certain moral lessons. Thus, the injunction against the consumption of birds of prey was intended to demonstrate that man should not prey on others (Arist. 142–7). *Philo, the Alexandrian Jewish philosopher, also suggests that creatures with evil instincts are forbidden lest men, too, develop these instincts (Spec. 4:118).

The rabbis of the Talmud rarely attempted to find rational explanations for the dietary laws, which they generally regarded as aids to moral conduct. "For what does the Holy One, Blessed be He, care whether a man kills an animal by the throat or by the nape of its neck. Hence its purpose is to refine man" (Gen. R. 44:1; Lev. R. 13:3). Commenting on the verse "and I have set you apart from the peoples, that ye should be mine" (Lev. 20:26), the *Sifra* (11:22), a halakhic Midrash on Leviticus, states, "Let not a man say, 'I do not like the flesh of swine.' On the contrary, he should say, 'I like it but must abstain seeing that the Torah has forbidden it.'"

EFFECTS ON THE SOUL OF MAN. Such mystics as Joseph *Gikatilla and Menahem *Recanati maintained that food affects not only the body but also the soul, clogging the heart and dulling man's finer qualities. Isaac b. Moses *Arama stated that, "The reason behind all the dietary prohibitions is not that any harm may be caused to the body, but that these foods defile and pollute the soul and blunt the intellectual powers, thus leading to confused opinions and a lust for perverse and brutish appetites which lead men to destruction, thus defeating the purpose of creation" (*Akedat Yizḥak, Sha'ar Shemini*, 60–end).

Samson Raphael *Hirsch wrote, "Just as the human spirit is the instrument which God uses to make Himself known in this world, so the human body is the medium which connects the outside world with the mind of man … Anything which gives the body too much independence or makes it too active in a carnal direction brings it nearer to the animal sphere, thereby robbing it of its primary function, to be the intermediary between the soul of man and the world outside. Bearing in mind this function of the body and also the fact that the physical structure of man is largely influenced by the kind of food he consumes, one might come to the conclusion that the vegetable food is the most preferable, as plants are the most passive substance; and indeed we find that in Jewish law all vegetables are permitted for food without discrimination" (*Horeb*, section 454, Eng. tr. by I. Gruenfeld (1962), 328).

HYGIENIC EXPLANATIONS. Maimonides (Guide, 3:48) noted that "These ordinances seek to train us in the mastery of our appetites. They accustom us to restrain both the growth of desire and disposition to consider the pleasure of eating as the end of man's existence." He also maintained, however, that all forbidden foods are unwholesome: "All the food which the Torah has forbidden us to eat have some bad and damaging effect on the body … The principal reason why the Law forbids swine's flesh is to be found in the circumstances that its habits and its food are very dirty and loathsome" (*ibid.,* 3:48). He gives an explanation entirely based on hygienic considerations, for the injunction against the consumption of sacrificial fat (*ḥelev*): "The fat of the intestines is forbidden because it fattens and destroys the abdomen and creates cold and clammy blood." Concerning the proscription of *basar beḥalav,* Maimonides states: "Meat boiled in milk is undoubtedly gross food, and makes a person feel overfull." He adds, however, "I think that most probably it is also prohibited because it is somehow connected with idolatry. Perhaps it was part of the ritual of certain pagan festivals. I find support for this view in the fact that two of the times the Lord mentions the prohibition, it is after the commandment concerning our festivals. 'Three times a year all your males shall appear before the Lord God' (Ex. 17:23–24; 23:17). That is to say, 'When you come before Me on your festivals, do not prepare your food in the manner in which the heathens do'" (*ibid.,* 3:48). Ancient inscriptions unearthed by archaeologists (e.g., at Ras Shamra-*Ugarit) tend to confirm that this was a fertility rite. J.G. Frazer, quoting a Karaite medieval author, writes: "There was a custom among the ancient heathens, who when they had gathered all the crop, used to boil a kid in its mother's milk" (*Folklore in the Old Testament*, 3 (1919), 117).

Abraham *Ibn Ezra maintained that the reason for the prohibition of *basar be-ḥalav* was "concealed," even from the eyes of the wise, although he added "But I believe it is a matter of cruelty to cook a kid in its mother's milk" (Commentary to Ex. 23:19; see: *Animals, Cruelty to). A contemporary interpretation, advanced by A.J. *Heschel, explains that the goat provides man with the perfect food – milk, which is the only food that can sustain the body by itself. It would, therefore, be an act of ingratitude to take the offspring of such an animal and cook it in the very milk which sustains us.

Many other scholars, however, followed in the footsteps of Maimonides. They pointed out that certain animals harbor parasites that create and spread disease. It was a fact that during the Middle Ages Jews were less prone than their neighbors to the many epidemics of the time. R. *Samuel b. Meir declared that "All cattle, wild beasts, fowl, fishes, and various kinds of locusts and reptiles which God has forbidden to Israel, are indeed loathsome and harmful to the body, and for this reason they are called 'unclean'" (Commentary to Lev. 11:3).

Commenting on the verse "Whatsoever hath fins and scales in the waters, in the seas, and in the rivers, them may ye eat" (Lev. 11:9), Naḥmanides states: "Now the reason for specifying fins and scales is that fish which have fins and scales get nearer to the surface of the water and are found more generally in freshwater areas … Those without fins and scales usually live in the lower muddy strata which are exceedingly moist and where there is no heat. They breed in musty swamps and eating them can be injurious to health." Many modern scholars give hygienic reasons for the dietary laws, since it is known that bacteria and spores of infectious diseases circulate through the blood.

Modern Views on the Dietary Laws

The dietary laws were on the agenda of the rabbinical conference held in Breslau on July 12–24, 1846. The Reform Movement appointed a committee consisting of S. Adler, D. Einhorn, L. Herzfeld, S. Hirsch, and S. Holdheim to examine this aspect of Jewish tradition. In his report published in *Sinai* (1859 and 1860), Einhorn stated that the dietary laws (with the exception of the prohibition to consume blood and animals that died a natural death) were directly related to the levitical laws of purity and the priestly laws of sacrifice and were, therefore, of a mere temporary ceremonial character and not essentially religious or moral laws. At the Pittsburgh Conference (November 16–18, 1885), the Reform Movement resolved: "We hold that all such Mosaic rabbinical laws as regarding diet … originated in ages and under the influence of ideas entirely foreign to our present mental and spiritual state. They fail to impress the modern Jew with a spirit of priestly holiness; their observance in our days is apt rather to obstruct than to further modern spiritual elevation." However, the Pittsburgh Platform did not prevent Reform Jews and Reform congregations from adopting and observing the dietary laws and some have always done so. By the late 20th century, Reform Judaism had developed a more positive attitude towards observance of *kashrut* as part of a larger pattern of return to traditional practices. The basic Reform philosophy as stated in such Union of Reform Judaism publications as *Gates of Mitzvah* (ed. S. Maslin, 1979) is that it is a Reform Jew's responsibility to study and consider the laws of *kashrut* so as to develop a valid personal position. Publications of the URJ between 2000 and 2005 suggested that Reform Jews seriously consider their dietary choices and the rationales behind them and consider whether adopting some or all of the Jewish dietary laws would enhance their domestic practice of Judaism and their spiritual lives. Out of respect for the larger Jewish community as well as their own members who observe *kashrut*, many Reform synagogues now maintain kosher kitchens.

The Conservative position is set out in such publications as *The Jewish Dietary Laws*, by Samuel H. Dresner, and *A Guide to Observance*, by Seymour Siegel (both in one volume, 1966[2]). Dresner, for instance, maintains that "*kashrut* is one of the firmest ramparts of the pluralistic aspect of Judaism. It demands sacrifice, self-discipline and determination – but what that is really worthwhile in life does not? It demands the courage to turn our face against the powerful current of conformity that almost overcomes us daily. The goal of *kashrut* is holiness, a holy man and a holy nation. It is part of Judaism's attempt to hallow the common act of eating which is an aspect of our animal nature. It likewise sets us apart from the nations. Thus it achieves its objective, holiness in these two ways, both of which are implied in the Hebrew word *kadosh*: inner hallowing and outer separateness."

[Harry Rabinowicz / Rela Mintz Geffen (2nd ed.)]

Women and Dietary Laws

The scrupulous daily observance of *kashrut* in the home has necessarily been in the hands of women as preparation of meals was traditionally designated part of "women's work." Until contemporary times, observant Jews did not eat food outside their homes unless it was in the home of a relative or of another Jew whose observance was trusted or they were ill or found themselves in dangerous circumstances. Although supervision (*hashgaḥah*) of food for sale to the public was in the hands of men, as was slaughter (*sheḥitah*) in most cases, the maintenance of proper utensils, the purchase of food, the separation of meat and dairy, the ritual salting and soaking of meat, and the cooking and serving of the food were in the hands of women. Moreover, transmission both of mundane and esoteric knowledge of these domestic processes to the next generation of daughters was entrusted to their grandmothers, mothers, and other female relatives. Communities and families had to trust and rely on women for meticulous observance, particularly in the preparation for and during the holiday of Passover.

Eloquent testimony to the devotion of Jewish women to the maintenance of the dietary laws is found throughout Jewish history. Unfortunately, this often meant the willingness to suffer when various oppressors tried to break the will of Jews by forcing them to violate *kashrut*, particularly by eating pork, as in the examples of Hannah and her seven sons and of Judith in Second Temple times, cited above. Research into Inquisition documents has shown that women were strong defenders of domestic Judaism, including *kashrut*, and that even as *Crypto-Jews who had been forced into conversion they perpetuated some of the dietary laws whenever possible.

In later eras in Western Europe, when urbanization and secularization and the drive to rise in the society led to widespread acculturation and assimilation, particularly among middle class Jews, it was frequently the women in these families who were the last to give up observance of domestic ritual practices, including the dietary laws. A decline in traditional Jewish practice, including *kashrut*, accompanied the breakdown of traditional *shtetl* culture, growing urbanization in Eastern Europe, and the dislocations caused by immigration to America and other havens. Jewish leaders exhorted women to maintain *kashrut* in books, newspapers, and magazine articles in Yiddish and English that stressed female responsibility for maintaining the dietary laws. In the first decade of the 20th century Jewish women in New York City successfully organized a boycott of kosher butcher shops to counteract the precipitous rise in the price of kosher meat. Their actions became the model for kosher boycotts elsewhere, as well as other political activism of the time in support of suffrage and against exorbitant rents in immigrant neighborhoods, particularly the Lower East Side of Manhattan.

Food, Jewish law, and ritual are inextricably entwined at the very heart of the Jewish calendar and life cycle observances. In these arenas women were the facilitators rather than the public actors, even in the home. Wives arduously prepared Passover *seder* meals while husbands led the rituals. Somewhat ironically, the foods associated with various holidays as well as

their modes of preparation have been shaped by the astonishing variety of societies, cultures, and areas of the world within which Jewish communities have been situated over the centuries. The women who have largely been responsible for Jewish cuisine have shown enduring creativity in adapting local delicacies and food ways to *kashrut*. Breads such as *maẓẓah* or *ḥallah* may be common to all, but the doughnuts fried in oil by Jewish women in the Ottoman Empire were a world away from the potato pancakes fried in oil to commemorate the miracle of Hanukkah in East European Jewish households. Even in 21st-century Israel, diverse laws governing the eating of *kitniyyot* (pulses and legumes including peas, rice, and corn) on Passover divide supermarkets and extended families in which Ashkenazi Jews have married Sephardi Jews.

Observance of the dietary laws by adults is an individual or couple's decision in an open society. However, because of the persistence of traditional gender role definitions in contemporary culture, it is generally Jewish women who continue to preside over the preparation of food, whether in households fully committed to the observance of Jewish law or in those where observance of the dietary laws is partial or mostly symbolic. Thus, the special historic connection of women to *kashrut* continues in the 21st century.

Dietary Laws and Jewish Culture

Jewish food, other than *maẓẓah*, was never standardized. In fact, in the contemporary world, the trend is to devise versions of a multitude of ethnic foods which comply with the laws of *kashrut*. Kosher pizza, Chinese, Japanese, and Indian food, or popular items such as sushi, *parve* ice cream, and margarine, and an American Thanksgiving dinner with the trimmings, may all be prepared in accordance with the dietary laws. Kosher restaurants specializing in a variety of cuisines are found in cities with substantial Jewish populations around the world and in the heart of Jerusalem, while recent kosher cookbooks offer recipes for dishes from many different ethnic fares.

Observance of the dietary laws, along with Sabbath observance connected to ritually infused meals, especially the Friday night dinner, are critical markers of Jewish identity in contemporary society. In the Diaspora in particular, they signal a willingness to maintain a particularistic identity in a multicultural society. For instance, in the demographic surveys through which American Jewish identification was analyzed from 1971 through 2001, observance of the dietary laws in the home is strongly associated with endogamy (in-marriage), other ritual observance, synagogue affiliation, providing children with formal Jewish education, and a feeling of connectedness to Israel and of responsibility for Jews around the world.

°DIEZ MACHO, ALEJANDRO (1916–1985), Spanish Catholic priest and Bible scholar. Diez was born in Villafria de la Pena. After his ordination in 1939, he studied Semitic philology at the University of Barcelona. He joined the faculty of the same university in 1944 and occupied the chair of Hebrew language and rabbinic language and literature. His doctoral dissertation, *Mose ibn Ezra*, was published in 1953. Diez' main fields of interest, in which he published many articles, are medieval Hebrew literature and biblical research, especially the Aramaic translations of the Bible. In 1957 he began publishing a critical edition of the Targums in *Biblia poliglotta Matritensia*. Diez made important manuscript discoveries regarding both the Palestinian and Babylonian Targums; his rediscovery of the famous Targum manuscript *Neofiti* aroused considerable international attention.

[Victor A. Mirelman]

°DI GARA, GIOVANNI (16th century), Venetian printer of Hebrew books. Di Gara, who went to Venice from Riva del Garda (Trent), had apparently learned the art of Hebrew printing from Daniel *Bomberg; and after the latter's death he acquired most of Bomberg's type. Di Gara's printing activity spanned a half-century (1565–1610) and covered a wide range of Hebrew literature. Nearly 300 editions came out in this period, among them the *Turim* with Joseph Caro's commentary *Beit Yosef* (1565–94); Shulḥan Arukh (1593); a rabbinical Bible (1568); Judah Halevi's *Kuzari* (1594); Elijah de Vidas' *Reshit Ḥokhmah* (1578); Naḥmanides' *Torat ha-Adam* (1595); Isaac Aboab's *Menorat ha-Maʾor* (1595–1602); and a Mishnah (1609). He also printed some Yiddish and Latin books. There was close cooperation between Di Gara and the house of *Bragadini, and their printer's marks even appeared together on the same title page. That of Di Gara was a small single crown (in some cases he used two or three crowns as well); his title page is marked sometimes by a Roman arch whose pillars are garlanded with flowers and fruit; but he also imitated those of *Foa of Sabbioneta and of Meir Sofer of Mantua. The printer Asher *Parenzo, who worked for Bragadini, also worked for Di Gara. Others who were employed by him were Isaac Gerson of Safed, who introduced tables of contents and indexes; Samuel *Archivolti, author of the grammatical treatise *Arugat ha-Bosem*; Israel Zifroni and his son Elishama; and Leone Di *Modena. As typesetters, Di Gara had to employ Christians,

which impaired the correctness of the editions. These have regularly the formula *con licentia dei superiori.* However, in 1592 Di Gara was accused by the Inquisition of having printed a book by Isaac Abrabanel without the required permission. At his death, Di Gara's types went to the Venetian printer Giovanni Cajon.

[Giulio Busi (2nd ed.)]

DIGNE (Heb. דיניא), capital of the department of Basses-Alpes, S.E. France. By the end of the 13th century there was a sizable Jewish community there; the fact that in 1311 the market contained three kosher meat stalls is proof of its importance. Throughout the 14th century, the market stalls were the subject of frequent disputes, as were the Jews' right to use the municipal bath and their contribution to the municipal taxes. The Jews of Digne cultivated agricultural holdings around the town. By 1468 there were only 20 Jewish families left there and their number continued to decrease. After the expulsion from Provence in 1498, some of the Jews of Digne found refuge in Comtat-Venaissin where the surname Digne was common. Digne's best-known scholar was R. Baruch who, in 1305, vigorously contradicted Isaac ha-Kohen of Manosque and was excommunicated by him. At the beginning of the 20th century, Joseph *Reinach represented Digne in the National Assembly. There is still a Rue de la Juiverie in Digne, but there are no Jewish inhabitants.

[Bernhard Blumenkranz]

DIJON, capital of Côte-d'Or department, E. central France. The first explicit evidence concerning the Jews there dates from 1196 when the Duke of Burgundy placed the Jews of Dijon under the jurisdiction of the commune, which he authorized to admit additional Jews. Ducal charters of 1197 and 1232 specified the authority of the town over the Jews of Dijon. They lived in the Rue de la Petite-Juiverie (today Rue Piron), the Rue de la Grande-Juiverie (Rue Charrue), and the Rue des Juifs (Rue Buffon). The synagogue and a "Sabbath house" were situated in the Petite-Juiverie, while the cemetery was in the present Rue Berlier. In this cemetery, which was confiscated after the Jews were expelled from France in 1306, over 50 tombstones were found about a century ago, apparently dating to the 13th century. Some Jews returned to Dijon in 1315, but, after the readmission of the Jews to the kingdom in 1359, a more important community was reestablished. When finally expelled in 1394, the Jews of Dijon left for *Franche-Comté. The only known scholars of Dijon are a certain R. Jacob and Simḥah Ḥazzan.

After 1789 Jews again settled permanently in Dijon, mainly from Upper Alsace. The Jewish population numbered 50 families in 1803, 100 in 1869, and about 400 persons in 1902. The community belonged to the Lyons *Consistory. Construction of the present synagogue in the rue de la Synagogue was begun in 1873; it was dedicated in 1879. The community also acquired land for a cemetery northwest of the city in 1789.

[Bernhard Blumenkranz]

Holocaust and Contemporary Periods

Dijon, an important railroad center, was under careful German surveillance during the Nazi occupation of World War II. The synagogue was emptied of its interior and served as a Nazi warehouse. Ninety Jews from Dijon perished in *Auschwitz. Dijon's returning Jews rapidly rebuilt their community after the war, and in 1960 the community was again flourishing. When Jews from North Africa settled in Dijon, the Jewish community increased to over 1,000 persons (1969) and owned a combined synagogue-communal center.

DIK, ISAAC (Ayzik) MEIR (c. 1807–1893), first popular writer of Yiddish fiction, best known by the acronym **AMaD**. Born in Vilna, Dik received a traditional Jewish education and proved an able student. He began his literary activity around 1838 with a Hebrew story "*Zifronah*" and a Hebrew parody "*Massekhet Aniyyut*" ("Tractate on Poverty," in *Kanfei Yonah*, 1848). An adherent of the *Haskalah, Dik urged Jewish school and clothing reform, and in his early years corresponded to this end with the czarist minister of education. An admirer of the reforming zeal of Czar *Alexander II, Dik devoted his energy to promoting those reforms that would bring the Jews into modern European life as equal citizens. From 1861 he thus wrote only in Yiddish in order to instruct the unlearned in practical morality and ethics, becoming the author of over 300 stories and short novels. He is best known for introducing into Yiddish literature realistic tales with sound morals, many of which were subtle adaptations of other works. Dik knew that to teach, one must entertain, and he consistently used literature to popularize the ideas of the Haskalah which advocated both modern education and traditional learning. Since he was anxious to reach the widest possible audience without alienating pious traditionalists, he drew much material from traditional folklore. In 1865 he signed a contract

with the Romm publishing house, agreeing to write a 48 page novelette each week. His engaging stories, which reveled in both sentimentality and melodrama, were eagerly read by men and women alike, who regularly bought nearly 100,000 copies of his works, many of which have not survived since they were literally read to shreds. Dik's work was characterized by the subtle use of narrative strategies and modes of discourse that worked against conventional expectations; his favorite modes were parody and satire in which he exposed the deficiencies of traditional Jewish society as he saw it. His purpose was to show Jewish people how to play productive roles in the modern world. The traditional values of Judaism nonetheless remained dear to him, and he himself remained strictly observant all his life. He popularized knowledge of the Bible, wrote on the *Haggadah*, composed a popular version of the *Shulḥan Arukh*, and published many stories on Ereẓ Israel, including a history of Jerusalem. Dik also summarized Jewish classical, medieval, and contemporary writings for the average Yiddish reader. His selected works, severely edited and modernized, were published in 1954 (*Geklibene Verk fun I.M. Dik*, ed. Sh. Niger).

DILLER, BARRY (1942–), U.S. media executive. Born in San Francisco, Calif., Diller was raised in Beverly Hills and had a good Jewish education. He skipped college and got his first job in show business in the mail room of the William Morris Agency. He moved to the programming department of the American Broadcasting Company in 1966 and was soon placed in charge of negotiating broadcast rights to feature films. He was promoted to vice president in charge of feature films and program development three years later and inaugurated the television network's Movie of the Week, which became the most popular movie series in the industry and helped ABC achieve parity with the National Broadcasting Company and the Columbia Broadcast System in the ratings. Abandoning conventional narratives like Westerns and crime melodramas, Diller ordered films that explored current issues like homosexuality, the Vietnam War, and drugs. The 90-minute films, sometimes called docudramas, were produced at the relatively low price of $350,000 each and probed current newspaper headlines and American popular culture for gripping topics aimed at young urban and adult audiences. By 1972 the genre had become an established network programming practice.

In 1974, at the age of 32, Diller was named chairman of Paramount Pictures and assembled a team that included Michael *Eisner and Jeffrey *Katzenberg. Diller had been hired by Charles Bluhdorn, head of Gulf & Western Industries, a sprawling conglomerate that had acquired Paramount in 1966. During Diller's 10-year tenure, Paramount produced such hit films as *Saturday Night Fever* and *Raiders of the Lost Ark* and such wildly successful TV shows as *Taxi* and *Cheers*. In 1984, Diller quit Paramount after a dispute with Martin S. *Davis, who had succeeded Bluhdorn, and went to work for Twentieth Century Fox. After Rupert Murdoch bought Fox, Diller was put in charge of developing the studio's new network. Starting with limited programming, Diller built Fox into a fourth network to compete with CBS, NBC, and ABC. He developed low-cost "reality" fare and balanced those shows with alternative and youth-oriented programming like *The Simpsons*.

In a surprise move, Diller quit Fox in 1992 to buy and run QVC, a television shopping network, with a $25 million stake. He made an unsuccessful bid to take over Paramount Communications in 1993 but lost to Sumner *Redstone of Viacom. Diller resigned from QVC in 1995 and acquired Silver King Communications, a small group of UHF stations, in an attempt to create a hybrid cable network that would offer a full schedule of entertainment, sports, and news. Also in 1995 he took over USA Interactive, which he expanded to include not only home shopping but a variety of successful companies that deal with interactive business on the Internet: Expedia, Inc., Hotels.com, and Ticketmaster. With these properties Diller became the leader of the online travel business. From May 2002 to March 2003 he served as chairman and chief executive of Vivendi Universal Entertainment. Diller served on the boards of several major corporations, including the Washington Post Company and the Coca-Cola Company.

[Stewart Kampel (2nd ed.)]

°DILLMANN, AUGUST (1823–1894), German Orientalist, Bible scholar, and theologian. Dillmann first studied Bible and theology and concentrated on Ethiopic studies at the universities of London, Paris, and Oxford in 1846–48. At Tuebingen he became professor extraordinary of theology (1853). He served as professor of Oriental languages at Kiel from 1854 to 1864, professor of theology at Giessen from 1864 to 1869, and at Berlin from 1869 until his death. Dillmann is best remembered for his long-standing attachment to Ethiopic studies. In 1847 and 1848 he published long neglected catalogs of Ethiopic manuscripts. He was responsible for pioneering studies on the various Ethiopic books of the Bible, Apocrypha, and Pseudepigrapha (from 1851 on). His Ethiopic grammar (*Grammatik der aethiopischen Sprache*, 1857, 1899^2), lexicon (*Lexicon linguae aethiopicae cum indice latino*, 1865), and chrestomathy (*Chrestomathia aethiopica*, 1866, 1950^2) were hailed as classics in the field. His most important works on the interpretation of the Bible are his commentaries on Genesis (1892^6) and Exodus-Leviticus (1897^3). An English translation of the one on Genesis came out in two volumes in 1897. He held that there were three independent sources in the Pentateuch (P, E, and J), and argued for the existence of an independent Deuteronomic

source based on E. Unlike many higher biblical critics of his day, he maintained the priority of a pre-Exilic P over D. His posthumously published *Handbuch der alttestamentlichen Theologie* (1895) rejected J. *Wellhausen's philosophy of the development of Israel's religion and maintained that the religion of Israel, which was centered on holiness, was unique in the ancient world.

DILLON (Zuchowicki), ABRAHAM MOSES (1883–1934), Yiddish poet. Dillon was born in Russia. In 1909 he immigrated to the United States where he experienced years of hunger and hard physical labor. As a poet, he was affiliated with the New York impressionistic movement *Di Yunge.* His melancholy lyrics were published in anthologies and in the book *Gele Bleter* ("Yellow Leaves," 1919). A more complete edition of his work, *Lider fun A.M. Dillon*, appeared in 1935.

DIMANSTEIN, SIMON (1886–1937), Russian revolutionary and Communist leader. Son of a village peddler, Dimanstein studied at the Lubavitch yeshivah with the support of a distinguished Hebrew writer, Samuel Tchernowitz, and received his rabbinical diploma from Ḥaim Ozer Grodzensky. He joined the Bolshevik faction of the Russian Social Democratic Party in 1904 and actively opposed the Bund. Between 1906 and 1910 he was arrested on several occasions and finally banished to Siberia, but escaped and went to Paris. Dimanstein returned to Russia in 1917 following the February Revolution and, after the Bolsheviks seized power, became an assistant to Stalin, then Commissar for the Affairs of Nationalities. In January 1918 he became head of the Commissariat for Jewish Affairs, and from 1918 edited the Yiddish paper *Der Emess.* The newspaper was an instrument of Communist propaganda especially directed against religion, Zionism, and the Bund. With the creation of the *Yevsektsiya (the Jewish section of the Communist Party) Dimanstein was named chairman of its central committee from October 1918. In July 1919 he signed the order abolishing all Jewish parties, organizations, and institutions. He held various official posts, including commissar for education in Turkestan and head of the administration for political education in the Ukraine, and from 1924 was director of the nationalities sector in the Central Committee of the Communist Party. At the end of the 1920s he headed the OZET society for settling Jews on the land, and he played an important part in setting up the Jewish settlement in Birobidzhan. He was editor of the anthology "Yidn in FSSR" ("Jews in SSSR") in 1935. Dimanstein was arrested during the Stalin purges and died in prison, probably in 1937.

[Abba Ahimeir / Shmuel Spector (2nd ed.)]

DIMI (Avdimi Naḥota; fl. first half of the 4th century), Babylonian *amora*. Dimi was one of the **Neḥutei*, the scholars who traveled from Palestine to Babylonia and back, conveying the teachings of the Palestinian academies to Babylonia and bringing the *halakhot* of the Babylonian *amoraim* to Palestine. His statements in the Talmud are introduced by the formula, "When Rav Dimi came, he said …." In particular, he transmitted the rulings of Johanan, *Resh Lakish, and Eleazar of the academy of Tiberias to the scholars of Pumbedita in the days of R. *Joseph and *Abbaye. Most of his statements are on halakhic topics, but he also transmits scriptural exegesis, midrashic *aggadot*, historical experiences (Ber. 44a, et al.), and particulars concerning the geography of Ereẓ Israel (Shab. 108b). He was painstakingly accurate in his reports; when he realized that he had been mistaken he sent word: "What I told you was erroneous, in fact it was said …" (Shab. 63b). He made frequent use of the expression: "In the West (i.e., Ereẓ Israel) they say …." For example, "When Rav Dimi came he said: In the West they say: 'Silence is worth twice as much as a word' (Meg. 18a). When Abbaye asked him: 'What do people avoid most in the West?' he replied: 'Putting others to shame. For R. Hanina said: "Only three categories of sinners do not reascend from Gehenna: he who commits adultery, he who publicly shames his neighbor, and he who calls his neighbor by a degrading nickname (even if the latter is accustomed to it)"'" (BM 58b). He reported, too, that in Ereẓ Israel it was customary to sing before a bride: "No powder and no paint and no styling of the hair – but she is still a graceful gazelle" (Ket. 17a). In the middle of the fourth century Dimi settled permanently in Babylonia, apparently because of the oppressive edicts of the emperor Constantine and the persecutions in the days of Gallus and Ursicinus (351).

BIBLIOGRAPHY: Hyman, Toledot, 327–31; Halevy, Dorot, 2 (1923), 467–73.

[Yitzhak Dov Gilat]

DIMI OF NEHARDEA (fl. 4th century), Babylonian *amora*, head of the academy of Pumbedita from 385 to 388. In his youth Dimi was a fruit merchant. The Talmud relates an anecdote concerning him which affords an insight into contemporary social practice. Dimi once brought dried figs to sell, apparently in the market of Maḥoza. As talmudic scholars were permitted to sell their produce before other merchants so as not to be detained too long from their studies, Rava, on the instigation of the exilarch, sent Adda b. Abba to test his scholarship and consequent right to the privilege. Adda put difficult questions to Dimi on the laws of ritual uncleanness

and as Dimi could not answer, he was not granted the privilege (BB 22a). Little is known of his relations with his contemporaries. He is mentioned as engaging in halakhic disputes with Abbaye (Men. 35a) and with Rava. Whereas Rava preferred a teacher who taught much, even at the expense of accuracy, since "errors get corrected by themselves," Dimi preferred the more accurate if slower teacher, since "an error once implanted cannot be eradicated." Dimi himself, faithful to his principle, transmitted halakhic statements with great accuracy, his version at times differing from those of his colleagues (RH 20a; et al.). Whereas Rava held that a less qualified schoolteacher should not be replaced by a superior one since the latter, relying upon his talent, might neglect his duty and come to regard himself as indispensable, Dimi held that he should be replaced, for the need to prove his ability would inspire him to greater efforts (BB 21a). Though chiefly a halakhist, he is also known for his aggadic statement: "The dispensing of hospitality is more meritorious than early attendance at the *bet hamidrash*" (Shab. 127a).

[Moshe Beer]

DIMITROVSKY, CHAIM ZALMAN (1920–), talmudist and historian. Born in Ereẓ Israel, Dimitrovsky was ordained in 1944. From 1951 he taught at the Jewish Theological Seminary in New York. In his historical writings, which deal mainly with the Jewish communities of Palestine and Italy in the 16th century, Dimitrovsky made use of halakhic works and unpublished documents in order to supplement and correct the accounts of historians and chroniclers. His analysis of a responsum and glosses concerning the legality of the renewal of *semikhah* (ordination) by the rabbis of Safed enabled him to reconstruct the facts of that controversy. Especially noteworthy historical contributions are his articles on the dispute between Joseph Caro and Moses Trani (in *Sefunot*, 6 (1962), 71–123) and on "Yeshivat *Rabbi Ya'akov Berab*" *(ibid.*, 7 (1963), 41–102). Dimitrovsky's writings in *halakhah* are devoted essentially to R. Solomon b. Abraham *Adret. He published Adret's novellae to the tractates *Megillah* and *Rosh ha-Shanah, Ḥiddushei Solomon ben Adret …* (1956 and 1961, respectively), and prepared an edition of his responsa.

[Shamma Friedman]

Dimitrovsky published (1980) *Seridei Bavli* consisting of 550 pages of a copy of the Babylonian Talmud printed in Spain between 1482 and 1497 based on an otherwise unknown version of the Talmud.

DIMONAH (Heb. דִּימוֹנָה), town in southern Israel, in the central Negev Hills, 21½ mi. (35 km.) southeast of Beer-Sheba and 25 mi. (40 km.) west of Sodom. It was founded in September 1955 to provide the employees of the *Sodom Dead Sea Works with homes in a healthy climate and at a convenient distance from their work. Laborers of the Oron phosphate field nearby also established permanent homes in Dimonah. The population grew to 3,500 in 1959 and by 1968 was 20,000. In 1969 the town received municipal status. Of the families resident at Dimonah in 1968, 65% were immigrants from North Africa, 20% from Europe, 10% from India, and the rest from Persia or born in Israel. Children below 15 years of age made up about half the population. Industry provided 65% of employment. During the 1980s the city's population began to decline, but thanks to the wave of immigration of the 1990s, it began to rise again. The population of Dimonah in the mid-1990s was approximately 30,000, rising further by 2002 to 33,700, making the city the third largest in the Negev. Its municipal area extended over 2.3 sq. mi. (6 sq. km.). At the turn of the 21st century the city's residents were employed in the textile, chemical, and electronic industries as well as in Dead Sea tourism. Some worked at the nearby atomic reactor and the new phosphate field of Ẓefa-Efeh. Income was considerably below the national average.

Dimonah is mentioned as one of the towns belonging to the tribe of Judah in the Negev (Josh. 15:22), but it is not certain whether the ancient site is identical with that of the present town.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

DINA DE-MALKHUTA DINA (Aram. דִּינָא דְּמַלְכוּתָא דִּינָא), the halakhic rule that the law of the country is binding, and, in certain cases, is to be preferred to Jewish law. The problem of *dina de-malkhuta dina* is similar to – but not identical with – the problem of *conflict of laws in other legal systems.

The Historical Background

The original significance of this rule, which was laid down by the *amora* *Samuel, can be deduced from the historical events of that era. The conquest of Babylon from the Parthians by Ardashir I, king of the Sassanids in 226 C.E., brought an end to the period of tranquillity from which the Jews in *Babylonia had benefited. Losing their political and religious autonomy, they had to adapt themselves to the powerful and centralized rule of the Sassanids. In 241 Shapur I, son of Ardashir, succeeded to the throne and granted the minorities under his rule cultural and religious autonomy which also applied to the Jews. Samuel, their leader at that time, imbued Babylonian Jewry with the consciousness that they must become reconciled to the new government, and a personal friendship was apparently established between Samuel and Shapur (Neusner, Babylonia, vol. 2; 16, 27, 30, 45, 71). Consequently Samuel's rule had important political significance, since it recognized the new Sassanid kingdom as a civilized rule possessing good and equitable laws which Jews were bound to obey, as they were to pay the taxes it imposed (*ibid.*, 69, 95).

The Principle in the Talmud

Samuel's principle is cited only four times in the Talmud (Ned. 28a; Git. 10b; BK 113a; BB 54b and 55a). Three *halakhot* that are cited by *Rabbah (according to another reading by *Rava, fourth generation of Babylonian *amoraim*), in the name of the exilarch Ukban b. Nehemiah, and are attributed to Sam-

uel deal with the relationship of Jews to the Persian government and with the relationship of Jewish to gentile law. These *halakhot* establish that the Persian law of the presumptive ownership of land is to be recognized even if it is opposed to Jewish law (see *Ḥazakah); that the sale of land confiscated by the government for non-payment of tax on the land is valid, but only if the sale is because of non-payment of the land tax and not because of non-payment of the poll tax (BB 55a; et cf. BK 113b). Additional *halakhot* adopted in consequence of *dina de-malkhuta dina* are: recognition of the Persian rules for the transfer of land even if they are not in accordance with Jewish law (BB 54b and 55a); the right of the king to sell a person into slavery for evading payment of the poll tax and the option of a Jew to buy him from the government executive officers and to enslave him (Yev. 64a; BM 73b); a prohibition against cheating tax collectors and concealing assets from them, unless the taxes are illegal for the reasons mentioned in the Talmud (Ned. 28a; BK 113a); and the recognition of bills executed by, or endorsed by, non-Jewish courts despite their being invalid according to Jewish law. The Talmud records a dispute as to the scope of the last *halakhah*. One opinion is that every type of document is to be recognized except for bills of divorce and manumission; according to another view the recognition is granted only to declaratory bills serving as evidence, such as bills of debt, but not to constructive bills such as benefactions (Git. 10b). It may be assumed that the definite but restricted recognition of the government's right to punish wrongdoers was based in part on Samuel's principle, although this is not stated explicitly in the talmudic sources. His principle was accepted as definitive *halakhah*, in the talmudic era and later. In spite of the permissiveness of the *halakhah* in adopting a foreign statute, Jewish law remained dominant in Jewish society, as is amply testified by the great legal creativity of Babylonian Jewry in the talmudic era.

The Legal Basis of the Principle

No legal basis for Samuel's principle is given by the Talmud; nor, apparently, did this problem engage the attention of the *geonim*. In one responsum of the geonic period an effort was made to establish the principle for practical religious reasons. The responder, having regard to the realities before him – Jews under a foreign government – states that it is the will of God that Jews should obey the laws of their rulers, a verse from the book of Nehemiah (9:37) being quoted in support of this view (S. Assaf (ed.), *Teshuvot ha-Ge'onim* (1942), no. 66). Later a number of legal explanations were suggested for Samuel's principle. According to one, Jewish law is able in certain cases to accept non-Jewish law because non-Jews are commanded to enact laws to preserve orderly social life (see *Noachide Laws; Rashi, Git. 9b). According to another view the reason is contractual; i.e., the inhabitants have accepted the king's statutes or the king himself: "For all the citizens accept the king's statutes and laws of their own free will" (Rashbam BB 54b), or "For the inhabitants of that country have accepted him [the king] and take it for granted that he is their master and they are servants to him" (Maim. Yad, Gezelah 5:18). A third view that has been adopted, especially by later authorities, bases the rule *dina de-malkhuta dina* on the right of the court to expropriate a person's property (*hefker bet din hefker*, see **bet din* and **takkanot*); namely, that the halakhic scholars, by virtue of their authority to enact *takkanot* in monetary matters, even in opposition to the laws of the Torah, have in certain matters recognized the customs of the kingdom and its statutes (*Teshuvot Ba'alei ha-Tosafot* no. 12; *Devar Avraham*, vol. 1, no. 1). Some scholars have compared the right of non-Jewish kings to the power of a king of lsrael (Nov. Ritba, BB 55a). Others take the view that the legality of the king's statutes derives from the simple fact that the land belongs to the king, who lays down the conditions of residence, and if Jews wish to dwell in his land they are obliged to obey his directions (Ran, Ned. 28a; *Or Zaru'a*, BK, no. 447; for an additional reason, similar but not identical, see *Or Zaru'a, ibid.* and *Devar Avraham*, vol. 1 no. 1). Still others see the halakhic validity of custom as the basis of *dina de-malkhuta dina (Aliyyot de-Rabbenu Yonah*, BB 55a). Most of these views reflect the sociopolitical outlook of the Middle Ages.

In recent times halakhic scholars have been occupied by the problem of whether the principle *dina de-malkhuta dina* derives from rabbinic or biblical law (see **Mishpat Ivri*). The accepted view is that it is of biblical authority and thus those consequences in the field of *halakhah* that derive from this conclusion must be applied to it (see *ibid.*; *Resp. Hatam Sofer*, YD, nos. 127 and 314; *Avnei Millu'im*, 28:2; *Devar Avraham*, vol. 1, no. 1).

The Nature of the Government and the Statute

The halakhic authorities did not accept every law and every kingdom for the purpose of applying the principle *dina de-malkhuta dina* and a series of conditions and qualifications were established.

(1) THE RECOGNIZED GOVERNMENT. There were scholars who held that the principle applied only where there existed a monarchist form of government (*Oraḥ la-Ẓaddik*, ḤM, no. 1). Others, however, were of the opinion that Samuel's rule included other types of authority. With changes in the forms of government and the increase of non-monarchic states, the second view gained acceptance (*Keneset ha-Gedolah*, Tur, ḤM 369).

(2) DINA DE-MALKHUTA DINA AND THE KINGDOM OF ISRAEL. Another problem is whether the principle applies to Jewish kings in the land of Israel. From talmudic sources it follows that a distinction must be made between the laws of Jewish kings and those of non-Jewish kings as far as *dina de-malkhuta dina* is concerned; this was also the opinion of most early halakhists (*Teshuvot Ba'alei ha-Tosafot* no. 12; Nov. Rashba, Ned. 28a). According to Solomon b. Abraham *Adret, those who believe that *dina de-malkhuta dina* does not apply to Jewish kings admit that it does apply to them if they rule outside Israel (Resp. Rashba, vol. 2, no. 134). This opinion corresponds with one of the reasons given for the prin-

ciple not applying to Jewish kings in Israel: "But the laws of Jewish kings are not valid because Israel was divided among [is the inheritance of] every individual Israelite and does not belong to the king, while in the case of non-Jews their law is that the whole land belongs to the king" (*Or Zaru'a*, BK, no. 447). In the course of time the school that held that Samuel's principle was to be applied to a Jewish government in Israel grew stronger (*Tashbez*, pt. 4, section 1, no. 14).

(3) THE PRINCIPLE OF EQUALITY. All agree that the law of the kingdom must apply equally to all its citizens (Maim. Yad, Gezelah, 5:14; Sh. Ar., ḤM 369:8). Resulting from the conditions of Jewish life in exile, the principle of equality was so interpreted that certain types of discrimination were recognized as valid. In one case it was decided that it is sufficient if the law does not discriminate between Jew and Jew despite the fact that Jews as a whole are adversely discriminated against (Resp. Maharik, no. 195). An additional loophole is: the king is permitted to enact special laws for "strangers, not of his own country" (*Ḥokhmat Shelomo* ḤM, 369:8).

The Scope of Laws Included in *Dina de-Malkhuta Dina*

(1) *ISSUR ("religious prohibitions") AND MONETARY LAW. All agree that the principle does not apply to religious or ritual observances (*issur ve-hetter*). This was so certain that it was not particularly stressed and is mentioned only in a few sources (*Tashbeẓ*, pt. 1, no. 158).

(2) THE KING'S INTERESTS. Some scholars limited the application of *dina de-malkhuta dina* to such matters only as were the king's interests; namely, the needs of the kingdom and not matters of purely private law (*Sefer ha-Terumot, 46:*8) but most scholars believed that the principle is applicable even in matters of pure private law (*ibid., Maggid Mishneh, Malveh ve-Loveh* 27:1; Resp. Rashba, vol. 1, no. 895).

(3) "NON-JEWISH WAYS" AND NEW LAWS OF THE KING. Some halakhists affirm that the laws of the kingdom must be recognized but not "non-Jewish ways." This concept is somewhat obscure; in medieval times when it was first discussed, it apparently meant laws that were based on local customs whose source was not the laws of the kingdom but popular usage; these had no validity since the principle is that "the law of the king is binding but the laws of his people are not binding for us" (Rashba, Resp. vol. 6, no. 149; *Beit ha-Beḥirah*, BK 113b). On the other hand most medieval halakhists held that Samuel's rule does not apply to laws introduced by the kings themselves that were not previously the law of the land (*Teshuvot Ba'alei ha-Tosafot* no. 12; Nov. Ritba. BB 55a; Nov. Rashba, BB 55a). This was under the influence of the point of view prevailing in general medieval jurisprudence, which only recognized the validity of ancient laws. Despite the fact that most of the early halakhists held this view, since Maimonides and Asher b. Jehiel apparently disagreed with it (Alfasi does not discuss it at all), Joseph Caro decided the law in conformity with their opinion (see *Codification of Law), and in the Shulḥan Arukh he makes no mention of the restriction of *dina de-malkhuta dina* to ancient law. Joseph Caro's decision served in the following generations as the basis for the extension of Samuel's principle, an imperative necessity when medieval views on the static quality of law underwent sweeping changes and the main laws of the country were no longer based upon ancient statutes but on current legislation (Sh. Ar., ḤM 369:8–10).

(4) STATE LAWS IN OPPOSITION TO TORAH LAW. According to some halakhists the law of the state is binding only when it does not oppose Torah law; i.e., only when it relates to matters not explicitly dealt with in the Torah (A. Sofer (ed.), *Teshuvot Ḥakhmei Provinzyah* (1967), ḤM, no. 49; *Siftei Kohen,* ḤM 73, no. 39, *Ḥatam Sofer*, Resp. ḤM no. 44). This distinction is not sufficiently clear, since it is difficult to find the dividing line between what is available in Torah law and what constitutes a lacuna since, according to the point of view of halakhists, the solution of every problem is to be found in the *halakhah* itself.

Taxes

The king's right to collect taxes was already recognized in the Talmud, and was strengthened by all halakhists in the post-talmudic period. Evading payment of tax is considered robbery (Tashbeẓ, pt. 3 no. 46). The authorities, however, continued to differentiate between justified taxes and confiscations and those without justification (Sh. Ar., ḤM 369:6–11). In practice the way this distinction operated was decided in every individual case, in accordance with the conditions at the actual place and with the substance of the tax. According to the talmudic *halakhah* an unlimited tax is not to be recognized, but later it was declared valid by the *posekim* if it was for "great needs," such as financing a war (*Haggahot Mordekhai*, BB no. 659). Even taxes which were "wicked and cruel" were, from sheer necessity, at times recognized as legal. Thus it was decided that the rule that taxes which have no limit are not to be recognized is to be interpreted as referring to current constant taxes whose sum is at this time greater and beyond the usual amount; when the tax was *ab initio* not fixed, the king may place an arbitrary burden upon the community (*Terumat ha-Deshen*, no. 341).

Bills Executed in Non-Jewish Courts

Beginning with the period of the *geonim* and until the 13th century the aim of limiting the acceptance of bills executed by non-Jewish courts prevailed (S. Assaf (ed.), *Teshuvot ha-Ge'onim* (1942), no. 66; Maim. Yad, Malveh ve-Loveh 27:1), but after this period most halakhists extended acceptance of these documents (Ramban, Nov., BB 55a, Rashba, Nov., Git. 10b). This approach may be inferred from the communal *takkanot.* Communities which undertook to rule in all matters according to Maimonides' *Mishneh Torah* stipulated that in three *halakhot* his ruling was not to be followed, one of the three being Maimonides' *halakhah* that benefactions executed by non-Jewish courts were invalid (A.H. Hershman, *Rabbi Isaac ben Sheshet Perfet* (Eng., 1943), 88f.). Because of this tendency it was decided – in opposition to the *halakhah* of the geonic period that permitted the collection of bills ex-

ecuted by non-Jewish courts from free assets only (S. Assaf (ed.), *Teshuvot ha-Ge'onim* (1927), no. 123) – that such a bill is to be treated like any normal bill and can be collected also from property transferred by the debtor (see *Lien; Rashba, Resp. vol. 3, no. 69; *Piskei ha-Rosh*, Git. 1:10, 11). Likewise there was an extension of recognition of non-Jewish courts in which the bills were executed. The need to establish the honesty of the courts, mentioned by the early authorities (Rif. *Halakhot* Git. Ch. 1, no. 410; Maim. Yad, Malveh ve-Loveh 27:1), was to all intents and purposes no longer demanded, the tendency being to assume the uprightness of the courts until the contrary was proved (*Piskei ha-Rosh*, Git 1:10, 11). Not only were the judges recognized but also administrative officers like notaries (Ramban, Resp. no. 46), and among late authorities all kinds of documents issued by those authorities were recognized (*Be'er Yiẓḥak*, EH, 5:4; *Sho'el u-Meshiv* pt. 1, no. 10). See also *Shetar.

Changes in the Value of the Coinage

Another problem frequently dealt with in connection with *dina de-malkhuta dina* is that of changes in the value of the coinage. Thus it was laid down that if the government decided that a debt is to be paid in a certain way this could be done despite the possibility of being involved in a breach of the prohibitions against usury or theft (*Sefer ha-Terumot*, 46:5; *Meisharim* 6:1; *Ḥatam Sofer*, Resp., ḤM, no. 58).

Appointments to Religious and Juridical Office by the Government

The question of *dina de-malkhuta dina* was also raised in connection with appointments by the government to juridical and religious office in the Jewish community. Some held that the principle applied to such appointments. The opinion that was accepted is that, though indeed there is basis for the principle even in these cases, it is the duty of one so appointed not to accept the appointment if it is against the will of the members of the Jewish community (Ribash, Resp. no. 271; Rema, ḤM 3:4; *Tashbeẓ*, pt. 1 nos. 158, 162; Rema, Resp. no. 123; *Hatam Sofer*, Resp. ḤM no. 19).

[Shmuel Shilo]

Scope and Limitations

We must bear in mind when discussing *dina de-malkhuta dina* ("the law of the kingdom is law") that it is an underlying principle in the subsequent development and creativity of Jewish law. It is apparent from the Talmud that this principle does not only govern the relationship between the individual and the authorities but also relates to civil cases between private parties. Indeed, during the talmudic era, as long as a central Jewish authority existed, this principle did not restrict Jewish law in any way. But, with the dispersion of the people to various centers and the cessation of central authority, from the tenth century onwards, Jewish law was in danger of turning into an academic subject, its development obstructed and creativity suppressed. The halakhic Sages were aware of this and prevented it by limiting the scope of the rule 'the law of the kingdom is law'. They subordinated the *halakha* to Gentile law only in particular cases and conditions and rejected its application to civil cases between private parties as discussed above. To this end, the talmudic sources implying the wider scope of the rule were harmonized and reinterpreted (*Sefer Haterumot* 46, 8, 5) and sometimes the apprehensions of undermining the Jewish legal system are explicitly stated (Meiri, *Beit ha-Beḥirah,* BK 113b). It might well be that the very limitations of the rule resulted that when it had been applied, the foreign legal elements were not merely recognized and validated but also integrated into Jewish law. (See Bibliography, Elon, (1988), 61–66; Elon (1994), 68–73.)

Criminal Jurisdiction by Non-Jewish Authorities Recognized by Jewish Law

The rule "the law of the kingdom is law" was employed for this purpose by the Israeli Supreme Court in the case of *Aloni* (HCJ, 852/86, *Aloni v. Ministry of Justice, judgment*, 41 (2), 1). The Supreme court was asked to decide whether to instruct the State to extradite to France a man charged with murder in a French court. The defendant was already declared extraditable according to Israeli Extradition Law and in accordance with the treaty between the two countries. But the Minister of Justice decided not to implement the extradition, due to the potential life-threatening situations that the defendant may face in the French jail from other prisoners. Justice Menachem Elon extensively discussed the approach of Jewish Law on the subject of extradition as it was treated throughout the Dispersion when the gentile authorities demanded from the Jewish congregations the handing over of Jews accused of severe criminal charges. The first part of Elon's opinion discussed whether Jewish Law enabled the extradition of one accused of serious crimes to gentiles on the grounds of the criminal accusation itself (pp. 76–90, of judgment; q.v. "Extradition").

The second part of the opinion relates to the issue of whether Jews have to inform the gentile authorities about criminal acts committed by Jews on the grounds that gentile jurisdiction to try all citizens is recognized within the framework of the rule "the law of the kingdom is law." The following is a brief summary of the main points of that decision. Solomon ben Abraham Adret (Rashba) in a Responsum quoted by the *Beit Yosef* commentary on *Tur* (ḤM 308/12) relates to a case in which the Jewish community was requested by the gentile authorities to investigate whether a certain Jew had committed a felony, in order that he be punished. Rashba relying on the principle of "the law of the kingdom is law" ruled that when a Jewish court was acting by license of the authorities, there was no need to observe the usual requirements of admissible evidence by Jewish law such as forewarning, competent witnesses etc. – even in capital cases because "if we do not say this, but insist on adherence to Biblical law in procedural law, the world would become a wasteland and murderers and their cronies would proliferate …" (*ibid.* according to the version published by Kaufmann in: JQR, 8 (1896), 228, 235–6; p. 90 in *Aloni* judgment).

R. Samuel *Medina (*Responsa Maharashdam*, ḤM, no. 55) upheld the opinion of a Responsum by Abraham ben David of Posquières (Rabad) and clearly states on the basis of "the law of the kingdom is law" that measures taken by the government to punish criminal felons were entirely justified, as it was within the authority of the government to legislate laws in its jurisdiction (p. 91, *Aloni* judgment).

In the 19th century R. Moses Schick (*Responsa Maharam Schick*, ḤM, no. 50) cites the abovementioned responsum by Rashba in a case where it was known, though not proved, in the Jewish community that a certain woman had murdered her husband. The question was whether to hand her over to the non-Jewish authorities. Rabbi Schick ruled that punishment meted out by the authorities was legitimate for "…all they do to improve social order is legitimate" (pp. 91–92, *Aloni* judgment).

In this context, Justice Elon also quotes R. Meir Dan Plotzki (Poland, 19th–20th cent.; *Kelei Ḥemdah*, *Mishpatim 1*) who says that the talmudic prohibition of seeking remedy in non-Jewish courts did not apply to European state courts of his time, and it was preferable to bring cases before them because *dina de-malkhuta dina*.

On the basis of these sources, Justice Elon ruled that the provision of Extradition Act 5714 – 1954 was congruent with Jewish Law which negates evasion of criminally charged suspects from standing trial, especially in capital cases, if the Jewish court was unable to adjudicate them. Numerous great halakhic authorities were of the opinion that such a suspect should be handed over to a court which had the authority to try him, either by the authority of Jewish Law itself, or under the authority of the principle *dina de-malkhuta dina*. (p. 96, *Aloni* judgment). Rabbi S. Israeli disagrees (see bibliography) with this conclusion. In his opinion the scope of 'the law of the kingdom is law' is limited to the particular country (and it cannot be invoked in an international situation). For a more extensive discussion see *Extradition.

The Validity of the Rule Concerning Israeli Law

Since the establishment of the State of Israel, rabbinical courts frequently address themselves to the relationship between Israeli Civil Law and Jewish Law. On many occasions, rabbinical courts have conferred binding authority on the state law within the halakhic discourse of Jewish Law on the basis of the rule *dina de-malkhuta dina.*

1. THE ADOPTION OF VARIOUS STATE LAWS BY RABBINICAL COURTS. The application of Israeli Law by rabbinical courts on various matters, and based on usage or community enactment, was discussed by the Israeli Supreme Court in the case of *Vilozhny* (HCJ 323/81 *Vilozhny* v. *The Great Rabbinical Court*, judgment 36(2) 733). The appellant requested the court to annul the decision of the Great Rabbinical Court which had ruled that the appellant had to vacate the apartment in which he lived with his wife, after having been granted a divorce, due to the violent behavior of the husband. The appellant argued that the court should have recognized that the apartment was occupied by him according to the Landlord and Tenant Law (Consolidated Version), 5732 – 1972, and thus not order the sale of the apartment as if it were vacant. The Rabbinical Court determined that its ruling did not contradict the landlord and tenant law "which was given the same halakhic validity as any usage or regulation enacted by the community." The Supreme Court (Justice M. Elon) relates to this comment of the Rabbinical Court, and adds that rabbinical courts in numerous instances tend to adopt Israeli Law, describing the various methods of adoption, illustrated by examples. We shall quote here implementations based on *dina de-malkhuta dina* in order to further clarify this point.

> During their decision-making process, Rabbinical Courts also make use from time to time of the principle of "the law of the kingdom is law" in order to validate various legal transactions, if they were not valid according to Jewish Law (e.g., concerning a bank guarantee defective in collaterals, app. 5725/47, RC judgment E 264, pp. 267–270; concerning the competence of a legal personality, the recognition of which was uncertain by traditional Jewish Law [in this case R.S. Dichovsky ruled that on the basis of "the law of the kingdom is law" it was possible to create new concepts in civil law, and even to create a new category of legal personalities] (case 11183/32, RC Judgment J 273, pp. 288–289); concerning entry of property at the land registry [in that case the court raised the question discussed above, whether "the law of the kingdom is law" applied in the Land of Israel]). The court ruled that since the registration was entered prior to the establishment of the State of Israel, in the time of British rule, there was no doubt about the validity of the rule (appeal 26/127, RC Judgment F 376, pp. 380–382). In some cases the Rabbinical Court even annulled transactions valid according to Jewish Law, if they have not met the requirements of the State Law (e.g., the requirement to enter a purchase in the land registry, though Jewish Law only requires an agreement (file 747/26, RC Judgment F 249 p. 252).

The court noted that "when the principle of 'the law of the kingdom is law' is evoked, the ruling by State Law is given binding validity, but it does not become a part of the Jewish Law" (p. 740 HCJ, Vilozhny).

It has to be noted that in a later ruling (file 307/38 RC judgment 12 279 p. 294) the Haifa District Rabbinical Court ruled (on the basis of Responsa Ḥatam Sofer, ḤM no. 44) that even though the applicability of *dina de-malkhuta dina* in the Land of Israel was a matter of controversy (see above), even the opponents concurred that, concerning usage and enactments with the aim of regulating trade to the public benefit, the rule applied also in the Land of Israel. Based on this principle, the court ruled that transfer of landed property which was not entered in the registry office was not valid, even if the act of acquisition had met the requirements of Jewish Law, because the law requiring registration as a precondition for a transaction of property intended to prevent fraud in land sales, and in such cases the rule of *dina de-malkhuta dina* was in force.

2. SPOUSES' JOINTLY OWNED PROPERTY PROCEDURES. A special case in which the question of using the rule of "the law of the kingdom is law" for the integration of State Law

and Supreme Court rulings into the legal system of rabbinical courts (see **bet din*) was addressed, concerned the allocation of jointly owned property of couples about to be divorced. Israeli civil courts have ruled for numerous years to divide the property in equal shares (The Procedure of Spouses' Property). After subsequent legislation (The Property Relations Between Spouses Act 5733 – 1973), this ruling became State Law also binding for Rabbinical Courts (q.v. Matrimonial Property). In this context diverging opinions have been developed among contemporary halakhic authorities. In the opinion of R. Shlomo Dichovsky, judge of the Great Rabbinical Court (*Teḥumin*, 18 (1998), pp. 18–31; 19 (1999), pp. 205–20) rabbinical courts have to adjudicate according to the Spouses' Property Procedures, by the authority of the 'law of the kingdom is law' principle. In his opinion, judgments should be made on the assumption that the principle also obtained in the Land of Israel and applied also to laws enacted by the democratic government and to the precedents set by judicial legislation. Since the Israeli Supreme Court regards its own judgments as part of the binding law, there is no difference between a judgment and a law. Therefore, in his opinion, judgments of the Supreme Court should not be subjected to the distinction, of some authorities, between an explicit state law – to which *dina de-malkhuta dina* applies – and the legal precedent of a local court to which it does not. Since all citizens of the country are familiar with and conduct their affairs according to the Spouses' Property Procedure, and since it can be supported by Jewish usage, it has to be accepted by the authority of *dina de-malkhuta dina*. This is so with regard to presumption of jointly owned property, though it originates from court rulings, and the principle of 'the law of the kingdom is law' surely has to be applied to it and cases should be adjudicated accordingly in Rabbinical Courts.

A different view is expressed by R. Abraham Sherman, also a judge of the Great Rabbinical Court (*Teḥumin,* 18 (1988), pp. 32–40); 19 (1999), 205–20). His opinion is that laws and legal definitions not prompted by circumstances or social developments to improve the administration of proper order, but by *the ideological inclinations* of legislators or judges of the state courts, do not warrant the application of *dina de-malkhuta dina*, because it contradicts the principles of the Torah. Furthermore, it cannot be factually ascertained that the Spouses' Property Procedure was unanimously accepted, and therefore presume that all marriages take place with the assumption that the jointly owned property would be divided according to this procedure. Hence, it is difficult to find a halakhic basis for the Spouses' Property Procedure. So when the issue was the allocation of matrimonial assets rather than an enactment for the public benefit, 'the law of the kingdom is law' ought not to be evoked.

3. THE RELATIONSHIP BETWEEN JEWISH LAW AND THE ISRAELI STATE LAW. Justice Elon, in his opinion on the above-mentioned Vilozhny appeal, also discussed the desirable principles for the relationship between the State (secular) and the rabbinical legal systems. The main points are as follows (pp. 740–42 HC judgment):

We may distinguish between three possible methods by which Rabbinical Courts could confer binding validity on Israeli Civil Law. One way is the recognition of the binding validity, based on the principle of 'the law of the kingdom is law' as explained above. The other method is adoption − by means of the legal basis of a custom (or usage) in Jewish Law that integrates a certain law which then becomes an integral part of it. If there was an existing public usage of a certain legal norm, this norm may be recognized in certain circumstances as part of the Jewish legal system and may even be valid in spite of contradicting a particular law in Jewish civil law. Rabbinical courts make frequent use of the legal basis of usage (*situmta* in talmudic terminology) in order to absorb various principles and laws from other legal systems (**minhag*). The third method is *legislation*; the community or its leaders enjoy a limited measure of judicial authority and may make new laws in various legal spheres. In talmudic times this was called "the authority to impose punishments" (*mesi'in al kiztan*) but in later periods it has become known as "enactment of the public." These enactments have greatly enriched Jewish Law and became an integral part of it (**takkanot ha-kahal*).

From time to time, rabbinical courts make use of the principle of *dina de-malkhuta dina* or the recognition of common usage in order to validate or absorb laws from other legal systems. However, there are rare instances in which rabbinical courts recognize a state law on the basis of an "enactment of the public." This method has a fundamental and far-reaching importance, because as we said, the law of the state thus becomes part of the Jewish legal system. In the Vilozhny appeal, the Supreme Court noted that the ruling of the rabbinical court, to which the appeal related, made use of this method with regard to the Landlord and Tenant Act, since the rabbinical court stated that "it was given the same halakhic validity as any usage or regulation enacted by the community." The court also noted that with regard to the Landlord and Tenant Law a ruling had already been given by Rabbi Obadiah Hadayah, that it should be regarded as an enactment made by the leaders of the community since "here we are not concerned with foreign laws, but with laws enacted by the government for the benefit of the people of the country…" (Responsa Yaskil Avdi, 6, ḤM no. 8).

During its development and history, Jewish Law has many times met the need to confront other legal systems, created by foreign nations. The need to cope with a different legal system created by the Jewish people itself, whose legislative and judicial institutions do not recognize the authority of the *halakhah* as their guiding principle, is a new phenomenon in Jewish history. The recognition and validation of Israeli civil law on the basis of *dina de-malkhuta dina* or even based on the authority of common usage indicate an approach that conceived the state legal system as an entity without any inherent creative connection with Jewish Law. Conversely, halakhic recognition and validation of the Jewish state based on

"enactments of the community" conceive the state legal system as a product of Jewish creativity, in accordance with one of the historical legal methods recognized by the Jewish legal system, and this is the preferable way for the future integration of Israeli and Jewish Laws.

DINAH (Heb. דִּינָה), the daughter of *Jacob and his wife *Leah (Gen. 30:21). Of her life, the Bible records only that during her family's stay in the vicinity of *Shechem, she was raped by Shechem, the son of Hamor the Hivite. Jacob's sons, *Simeon and *Levi, avenged their sister by slaughtering the male population of Shechem, carrying off the women and children, and taking their goods and livestock as spoil (Gen. 34). The biblical narrative contains divergent appraisals of this act of revenge. On the one hand, Jacob strongly disapproves of his sons' deeds, and while his immediate reaction is based on a fear of reprisal by the local population (34:30), on his deathbed (49:5–7) he once again expresses disgust at their conduct, prophesying that their descendants would be scattered in later Israel. On the other hand, the story's emphatic ending ("Should our sister be treated like a whore?"; 34:31) appeals to the reader to understand their behavior and even to approve it. This ambivalence is reflected in later Jewish tradition as well (Judith 9:2–4; Gen. R. 80:12; Yal., Gen. 134–5).

Scholars who find a historical kernel in the story point to the absence of the tribes of Simeon and Levi from the tribal list of the Song of Deborah (Judges 5) and see in Genesis 34 and Genesis 49:5–7 an etiology of that absence. Others read the chapter from the anthropological perspective of ingroup versus outgroup marriage in proto-Israelite times. Still others (see Amit in Bibliography) understand the chapter as a hidden polemic of the post-exilic period directed against the practice of conversion to Judaism. Thanks to the feminist movement, more attention has been paid to the story of Dinah than in previous generations. The question raised recently of whether the story describes an actual rape is complicated by the absence of a single term for "rape" (post-biblical *anas*) from Biblical Hebrew.

The Bible relates nothing further of Dinah's life, nor of her progeny, after this episode, although she is numbered among those who immigrated to Egypt (Gen. 46:15).

[Jacob S. Levinger / S. David Sperling (2nd ed.)]

In the *Aggadah*

Dinah was destined to be a male, but Leah, out of compassion for her sister Rachel, prayed that she be a girl, so that of the 12 sons whom she knew Jacob was destined to beget, two would be born to her sister. Leah called her daughter Dinah because of the judgment (*din*) she had thus passed on herself (Ber. 60a). Both Jacob and Leah are held partly responsible for the tragedy of Dinah. Dinah, desiring to show off her beauty to the Canaanite (Tanḥ. B. on Gen. 34:1), "went out," in the same way that her mother "went out" (see Gen. 30:16), and "as the mother so was the daughter" (Gen. R. 80:1). According to another view, however, she never willingly left her tent. Shechem made her do so through a subterfuge (PdRE 38). Jacob was to blame in that he concealed Dinah from his brother. Because he refused to give her in marriage to the circumcised Esau, she was ravished by the uncircumcised Shechem (Gen. R. 80:4). Jacob was thereby punished for staying in Shechem and delaying his departure to Beth-El (Lev. R. 37:1). According to one view, Asenath, the wife of Joseph (Gen. 41:45), was a daughter of Dinah. Abandoned by Jacob and found and adopted by *Potiphar (Poti-Phera) in Egypt, she was recognized by Joseph by an amulet which Jacob had given her; she later became Joseph's wife (PdRE 38).

DINE, JIM (1935–), U.S. painter, sculptor, printmaker, performance artist, book illustrator, stage designer, and poet. Cincinnati-born Jim Dine studied art at the Cincinnati Art Academy (1951–53), the Boston Museum School (fall 1955), and Ohio University (1954–57). He burst onto the art scene as a purveyor of artist performances known as Happenings

after moving to New York City in 1958. The 32nd performance, *Smiling Workman* (1960), was followed by *The Vaudeville Show* (1960) and *Car Crash* (1960). At this time Dine also began making assemblages – canvases that incorporate found materials. *Lawnmower* from 1962 employs an actual lawnmower on a pedestal. The handlebars of this ordinary object lean against the canvas, which is mounted on the wall and painted with thick hues of green and yellow, suggesting grass and the sun. This kind of mixed-media work is one of many that utilize the everyday objects that continue to define Dine's oeuvre.

During the 1960s Dine was associated with Pop art, but the cold impartiality of the movement went against the artist's desire to imbue his work with elements of his own personality. Throughout the years, Dine instilled new layers of meaning in the varied objects which preoccupy his art, including hearts, trees, tools, gates, the Venus de Milo, and robes. These themes are reiterated in different media and in different styles. Tools have been painted, drawn, and created as prints, as well as used in assemblages. Similarly, bathrobes – introduced in 1964 – have been rendered in many media. The empty robes are meant to be self-portraits. Painted while in Jerusalem, *Light Comes upon the Old City* (1979) is a large canvas showing a dark empty robe suffused with golden light.

Ever restless and continually experimental, in 1966 the prolific Dine designed the costumes for the San Francisco Actor's Workshop production of *A Midsummer Night's Dream*, and in 1967–68 he designed costumes for a version of Oscar Wilde's *Picture of Dorian Gray* that never reached the stage. Several illustrated volumes of Dine's poems have been published (1969, 1987). He also illustrated a version of Guillaume Apollinaire's *The Poet Assassinated* (1968) and Sigmund Freud's *The Case of the Wolf-Man* (1993), among other books. In 1998 Dine designed a heart logo for the 67th General Assembly of the Jewish Council of Federations in Jerusalem.

[Samantha Baskind (2nd ed.)]

DINER, HASIA R. (1946–), scholar of American Jewish history. Born in Milwaukee, Wisconsin, the daughter of Morris and Ita Schwartzman, she received her Bachelor of Arts degree from the University of Wisconsin at Madison in 1968 and her doctorate from the University of Illinois in 1975. In 1975 Diner became an instructor in history at the University of Maryland, College Park; she served as a research associate at Radcliffe College from 1978 to 1980. From 1980 to 1984 she taught at the American University in Washington, D.C., and then from 1984 to 1996 was professor of history in the Department of American Studies at the University of Maryland.

In 1996 Diner became the Paul S. and Sylvia Steinberg Professor of American Jewish History at New York University, and she was appointed as director of the Goldstein-Goren Center for American Jewish History at New York University in 2003. She was a visiting lecturer at numerous academic conferences and universities, including Williams College, Michigan State University, the Jewish Theological Seminary, and the University of Munich.

Diner was a specialist in immigration history and the history of relations between American Jews and other ethnic and racial groups. Her many books and articles explore various aspects of immigration, identity, women's experience, and relationships between, for example, Jewish Americans and African Americans. Her works include *In the Almost Promised Land: American Jews and Blacks, 1915–1935* (1977); *A Time for Gathering: The Second Migration, 1820–1880* (1992); *Lower East Side Memories: The Jewish Place in America* (2000); *Hungering for America: Italian, Irish, and Jewish Foodways in the Age of Migration* (2002); *Her Works Praise Her: A History of Jewish Women in America from Colonial Times to the Present* (with Beryl Lieff Benderly, 2002); and *The Jews of the United States, 1645 to 2000* (2004). *Lower East Side Memories* received warm critical reception for its exploration of the transformation of the Lower East Side from a neighborhood of Jewish immigrants to a locale of nostalgia and myth within American Jewish memory.

One of 20 living women historians included in *American Women Historians, 1700s–1900s* (1998), Diner is a fellow of the American Academy for Jewish Research and a member of the Society of American Historians; she serves on the Executive Committee of the Academic Council of the American Jewish Historical Society and on the Executive Board of the Association for Jewish Studies. She was coeditor of the *Newsletter of the Association for Jewish Studies* from 1999. As an expert in Jewish immigration history, Diner served as a consultant to numerous films and public history projects, including *They Came for Good: A History of the Jewish People in America, Jews and Blacks in the Civil Rights Movement* and "Sitting Shiva with the Rogarshevkys" at the Lower East Side Tenement Museum.

[Dorothy Bauhoff (2nd ed.)]

DINES, ALBERTO (1932–), Brazilian journalist, author, biographer, and script writer. Dines was born in Rio de Janeiro. After starting at the *Jornal Israelita* in 1952, he advanced his career in journalism (writing mainly on cinema and politics) in prestigious Brazilian publications, also lecturing on journalism at universities in Brazil, Portugal, and the United States. In 1988 he published the biography *Morte no paraíso: A tragédia de Stefan Zweig*. In 1988–94 he lived in Portugal, where he carried out research on the Inquisition, published as *Vínculos de fogo: António José da Silva, o Judeu e outras histórias da Inquisição em Portugal e no Brasil* (1992). In Lisbon he also wrote *O baú de Abravanel. Uma crônica de sete séculos até Silvio Santos* (1990). The title story of his book *Posso?* (1972) describes the positive encounter between a Jew and a Christian on Christmas Eve. In 1979 he published a second book of short stories, *E por que não eu?* In 1996 Dines established *Observatório de Imprensa* (http://observatoriodaimprensa.com.br), an internet

site on media criticism. He is director of LABJOR (Journalism Advanced Studies Laboratory) at Campinas University.

[Florinda Goldberg (2nd ed.)]

DINESON, JACOB (1856–1919), Yiddish novelist. Dineson, who was born near Kovno (Kaunas), Lithuania, received a traditional Jewish education and was influenced by the Haskalah movement. Before turning to Yiddish, he wrote Hebrew articles in *Ha-Maggid, Ha-Meliẓ*, and *Ha-Shahar.* His first Yiddish novel, *Be-Ovoyn Oves* ("For the Parents' Sins," 1876), was banned by the Russian censor. Not until 13 years later and after rebutting H. *Graetz's denunciation of Yiddish, did he publish his second novel, which won the hearts of Yiddish readers and sold more than 200,000 copies: *Ha-Ne'ehovim ve-ha-Ne'imim oder der Shvartse Yungermantshik* ("The Beloved and the Pleasant or The Black Youth," 1877). He was the pioneer of the Yiddish sentimental novel, and retained the affection of the Yiddish reading public with his *Even Negef* ("Stumbling Block," 1890), *Hershele* ("Little Hershl," 1891), and *Yosele* ("Little Yosl," 1899). He also took the lead in modernizing elementary Jewish education through secular schools which were often called Dineson Schools. A close friend of I.L. Peretz, he helped establish the latter's fame.

DININ, SAMUEL (1902–2005), U.S. educator. Born in Mogilev oblast, Russia, Dinin earned his bachelor's degree at the City College of New York in 1922 and received his master's degree and doctorate at Columbia University in 1923 and 1933, respectively. He was registrar and associate professor of education and history at the Manhattan-based Teachers Institute of the *Jewish Theological Seminary of America from 1926 to 1945. In 1945, he was appointed executive director of the Los Angeles Bureau of Jewish Education. Through his efforts in that capacity, the Bureau established the Los Angeles Hebrew High School in 1949. Elected dean of the University of Judaism in Los Angeles in 1957, he was named chairman of the faculty and vice president in 1963. He continued under the UJ's auspices as its chair of faculties and its vice president until 1974, when he retired to become the college's professor emeritus of education and history. Dinin played a key role in developing several institutional pillars of Jewish education in Los Angeles, including the West Coast's Bureau of Jewish Education (BJE) affiliate, the University of Judaism (UJ), and Camp Ramah. He wrote *Judaism in a Changing Civilization* (1933) and served as editor of *Jewish Education.*

[Leon H. Spotts]

DINITZ, SIMCHA H. (1929–2003), Israeli diplomat and politician, member of the Eleventh Knesset. Born in Tel Aviv, Dinitz served in the Haganah and the IDF. He studied political science at the University of Cincinnati in Ohio and received a B.Sc. in international relations and an M.Sc. in international law from the School of Foreign Service at Georgetown University in Washington, D.C. In 1958 he joined the Ministry of Foreign Affairs, first in the Information Department and from 1962 as deputy director general. In 1963 he was appointed as Golda Meir's political secretary and was twice a member of the Israeli delegation to the UN General Assembly. In 1966–68 he served in the Israeli Embassy in Rome and 1968–69 in Washington in charge of information. In 1972 Golda Meir appointed him director general of the Prime Minister's Office, and at the end of November 1972 he was appointed ambassador to the U.S., remaining in office through the Yom Kippur War and the beginning of the peace process with Egypt, playing an important role in arranging for the American airlift of weapons to Israel in the course of the Yom Kippur War and participating in the team that negotiated the Camp David Accord in September 1978. During his service in the U.S., Dinitz developed close relations with Henry *Kissinger when the latter served as President Nixon's national security advisor and then secretary of state. In the years 1979–84 Dinitz held the position of vice president of the Hebrew University of Jerusalem. In 1984 he was elected on the Alignment list to the Eleventh Knesset, but resigned from the Knesset in March 1988 after being elected chairman of the Executive of the World Zionist Organization and Jewish Agency, a position he held in 1986–5. In this period he oversaw the opening of the gates of the former Soviet Union to Jewish emigration, and Operation Solomon, in which 14,000 Ethiopian Jews were airlifted to Israel in a single day in May 1991.

Dinitz was forced to resign before his term was over due to charges brought against him for allegedly using a Jewish Agency credit card for personal purchases. In 1996 he was found guilty by the District Court of Jerusalem for fraudulently expropriating $22,000 in this manner, but the following year was exonerated by the Supreme Court on appeal.

[Susan Hattis Rolef (2nd ed.)]

DINITZ, SIMON (1926–), U.S. sociologist and criminologist. Dinitz received his Ph.D. from the University of Wisconsin at Madison in 1951. After his first teaching job there, Dinitz became professor of sociology at Ohio State University and research assistant in psychiatry. His special interest was the sociology of deviant behavior as expressed in delinquency and mental disorders, and he worked on the prevention of hospitalization for schizophrenics. He also served as senior fellow in the Academy of Contemporary Problems. He served as president of the American Society of Criminology (1971) as well as vice president (1968 and 1969). He capped his academic career as professor emeritus of sociology at Ohio State University.

A pioneer in the fields of sociology, psychology, criminal behavior, and public policy, Dinitz collaborated in writing such books as *Social Problems: Dissensus and Deviation* (1967); *Women after Treatment* (1968); *Critical Issues in the Study of Crime* (1968); *Schizophrenics in the Community: An Experiment in the Prevention of Hospitalization* (1967); *The Prevention of Juvenile Delinquency: An Experiment* (1972); *Schizophrenics in the New Custodial Community: Five Years After the Experiment* (1974); *In Fear of Each Other: Studies of Dangerousness in America* (1977); *The Mad, the Bad, and the Different* (1981); and *Introduction to Criminology: Order and Disorder* (1988). In acknowledgment of his lifelong dedication to improving the knowledge base of corrections and having trained many correctional practitioners, the Ohio Community Corrections Organizations created the Dr. Simon Dinitz Achievement Award, which is given to a community correctional practitioner who has made contributions to the improvement of community correction in Ohio. Similarly, the Ohio Department of Rehabilitation and Correction presents the Simon Dinitz Criminal Justice Research Award.

[Ruth Beloff (2nd ed.)]

DINUR (Dinaburg), BENZION (1884–1973), historian and educator. Dinur received his education in Lithuanian yeshivot, at Berne University, at the Berlin Hochschule, and at Petrograd University. He taught in several Jewish schools; at Jewish teachers' training colleges; and in "Oriental studies" courses. He was also active in the Zionist and Jewish Labor movements and in the problems of Jewish education. In 1921 Dinur settled in Erez Israel and from 1923 to 1948 served as a teacher and later as head of the Jewish Teachers' Training College, Jerusalem. In 1936 he was appointed lecturer in modern Jewish history at the Hebrew University and became professor in 1948 and professor emeritus in 1952. Dinur was among the founders and editors of the bibliographical quarterly *Kirjath Sepher* (1924) and of the historical annual (later quarterly) *Zion* and of such historiographical projects as the *Sefer ha-Yishuv* (2 vols., 1939–44), *Sefer ha-Ẓiyyonut* (1938, 1954[2]), and *Toledot ha-Hagganah* (1954–59). He was elected to the first Knesset on the Mapai list and served as minister for education and culture from 1951 to 1955, when he was responsible for the 1953 State Education Law, which put an end to the prevailing party "trend" education system. From 1953 to 1959 Dinur was president of *Yad Vashem. In 1973 he was awarded the Israel Prize in education.

As a historian Dinur brought a Zionist approach to the understanding of Jewish history. Central to his historical studies is the idea of the fluctuation of the Jewish psyche and Jewish community structure between establishment in the Diaspora and a yearning for redemption, with Erez Israel as the focus of these continuous tensions; this was the determining factor, which gave unity to the history of the people in the Diaspora and determined the change of periods and their character. Dinur's studies underline the national value of the Jewish communal presence in Erez Israel from the capture of Jerusalem in 70 C.E. to the Arab conquest in 636 and its end in the Crusader period. For the historiography of modern Jewish history, he stressed the importance of research into the social ideology of Ḥasidism and of the Ḥovevei Zion movement. Dinur believed it best to let the sources speak for themselves, and in some of his major works, quotations, with his introductions and notes, are collected into literary unity. The subject of the division of Jewish history into periods occupied Dinur's mind a good deal, particularly the passage from the Middle Ages to modern times. According to him the latter period began in 1700, the year of the great immigration to Erez Israel.

Among his major works are a history of the Jewish people divided into two series, of which the first part of the first series appeared under the title of *Yisrael be-Arẓo* (1938), and the second series under the title *Yisrael ba-Golah* (5 vols., 1926, 1958[2], 1961–66[3]); a history of Ḥibbat Zion, *Ḥibbat Ẓiyyon* (2 vols., 1932–34); see also *Mefallesei Derekh* (Pioneers, 1947); and *Arakhim u-Derakhim* (1958), a study of the educational and cultural problems of modern Israel. Dinur also edited the correspondence between A. Mapu and A. Kaplan (1929); the correspondence and the letters of Mapu (1970); of S.J. Rapoport with R. Kircheim, Z. Frankel and others (1928); and the Zionist writings of Hermann Schapira (1925). A collection of Dinur's miscellaneous studies appeared in 1955 under the title *Be-Mifneh ha-Dorot;* volume 1 of his memoirs under the title of *Be-Olam she-Shaka 1884–1914* appeared in 1958, and volume 2, *Bi-Ymei Milḥamah u-Mahpekhah 1914–21*, in 1960. A collection of essays, *Sefer Dinaburg*, in Dinur's honor was published by Y. Baer, J. Guttmann, and M. Schwabe in 1949 (with a bibliography up to 1948), and a volume of appreciation on the occasion of his 70th birthday (1954). In 1969 a volume of his essays appeared in English, *Israel and the Diaspora.*

BIBLIOGRAPHY: D.J. Cohen in: *Zion*, 18 (1955), 169–99; 23–24 (1958–59), 102–8; *Devarim al Prof. Benzion Dinur Sar ha-Ḥinnukh ve-ha-Tarbut bi-Melot Lo Shivim Shanah* (1954), includes biographical notes.

°DIO CASSIUS (c. 160–230 C.E.), author of a Roman history, written in Greek. Dio frequently records the religious zeal and self-sacrificing spirit of the Jews. "Such was the fervor of their piety that the first Jews made prisoners during the conquest of the Temple by *Sosius [governor of Syria under Antony, 37 B.C.E.] obtained by their supplications permission to reenter the sanctuary on the day of Saturn [Sabbath] and devote themselves with their compatriots to their temple ritual" (*Historia*, 49:22). In some respects, his account of the Jewish war (66–70 C.E.) is more favorable to the Jews than that given by *Josephus. According to Dio, during the siege of Jerusalem, Titus received an injury to his left shoulder causing permanent weakness to his left hand. Some Roman soldiers deserted to the Jews because they believed that the town was impregnable. Dio, in common with Tacitus, notes the bravery of the Jews and commented that they were happy to fall near the

Temple and in its defense. Although they were a few arrayed against the might of the Roman army, they only gave in when a part of the Temple was in flames. "All believed that it was not a disaster but victory, salvation, and happiness to perish together with the Temple" (*Historia*, 66:6). Neither Vespasian nor Titus wished to assume the title of "Judaicus" (possibly because that title might imply sympathy with Judaic teachings). Dio offers information about Jewish rebellions under Trajan and Hadrian. He loved the sensational and reports that the outbreak of Jewish revolts in the time of Trajan (115–117 C.E.) in Cyprus, Cyrene, and Egypt, was marked by scenes of stark horror (*Epitome*, 68:32). The Jews committed horrible outrages, as the papyri likewise suggest, "destroying both Greeks and Romans." The immediate cause of the Jewish revolt under *Bar Kokhba (132 C.E.) was Hadrian's intention to build a new city and temple on the ruins of Jerusalem as the official center of the colony of Aelia Capitolina. According to Dio, the defenders recruited soldiers from all countries of the Empire and beyond the Euphrates inhabited by their "fellow-nationals." The solidarity of Jews elsewhere in the Empire with the Judean rebels under Bar Kokhba is also stressed by Dio (*Epitome*, 69:13). In common with *Fronto, he reports that in the Bar Kokhba war the Romans sustained such severe losses that Hadrian, writing to the Senate, omitted the customary opening formula "I and my troops are well." Dio's remark that "all those who observe the Jewish law may be called Jews, from whatever ethnic group they derive," reflects the transformation of the Jewish nation into a worldwide religious community, with a steadily increasing number of proselytes. Like other writers of antiquity, he blames the Jews for their unsociable character and has little understanding for the practice of the Sabbath; but he pays homage to the Jews' imageless cult and their only and unique God. The Jews, he states "are distinguished from other nations by their whole mode of living, but particularly by the fact that they do not honor any of the other gods, adoring only one and with great fervor. There is no image of their divinity even in Jerusalem. They believe God to be ineffable and invisible, yet they devote to him a more fervent cult than all other mortals [see *Tacitus]. The Temple in Jerusalem is very large and beautiful. The day of Saturn on which they fulfill a number of particular rites and refrain from doing any serious work is consecrated to the Sanctuary." Dio Cassius repeats the commonplace (see *Plutarch) that Jerusalem was captured on the Sabbath because the Jews refrained from defending it on that day. He alluded to Jewish proselytism in his statement that Domitian had people put to death on the charge of "atheism," which in fact meant the acceptance of Jewish customs (*Epitome*, 67:14). The accusation of atheism was leveled against both Jews and Christians because they refused to share in the official heathen cult. Although, as mentioned, Dio Cassius shows contempt for Jewish observances and misunderstanding of the inner spirit of Judaism, he nevertheless admires the Jews' loyalty to their pure belief and their persistence in the face of repression. Jewish history in Rome may be summed up in the words of Dio Cassius: "Though often suppressed, they nevertheless mightily increase, so that they achieve even the free practice of their customs."

°**DIO CHRYSOSTOM** ("golden-mouthed," called so for his eloquence; **Dio of Prusa**; c. 40–120 C.E.), orator. According to the testimony of his biographer, Synesius (c. 365–413/414; Bishop of Cyrene), in one of his speeches Dio described the *Essenes as a utopian-like community living "in the interior of Palestine" near the Dead Sea in the vicinity of Sodom.

[Shimon Gibson (2nd ed.)]

°**DIOCLETIAN, CAIUS VALERIANUS**, Roman emperor 284–305 C.E. Diocletian is mentioned in Jewish sources on various occasions, particularly in the Jerusalem Talmud, and despite their aggadic embellishments they appear to contain at least a kernel of historical truth. Thus the fact that he was of lowly birth, the son of a humble scribe or of a slave (Eutropius, *Breviarium* 9:19, 2), is embellished in the Talmud to the effect that in his youth he was a swineherd, and the pupils of the Nasi Judah II used to mock and beat him. When he became emperor he sought to revenge himself on the Jews and summoned Judah to appear before him. Judah answered that they had derided Diocletian the swineherd but not Diocletian the emperor (TJ, Ter. 8:11, 46b). It is known that Diocletian was in Palestine, and in Tiberias, both in 286, during the patriarchate of Judah II, and during his campaign against the Persians (297–8), and it is probable that he had contact with the leading Jews there. Similarly there is an echo of the heavy taxation which he imposed in Palestine in the story that the inhabitants of Paneas went into exile as a result of these taxes, and returned only after 30 years (TJ, Shev. 9:2, 38d).

Diocletian showed a certain tolerance toward the Jews, one of the reasons probably being that Judaism – unlike Christianity – had been declared a *religio licita* by the Romans. Thus, when he imposed a tax to provide sacrifices to the gods – a fact explicitly mentioned in the Talmud (TJ, Av. Zar. 5:4, 44a) – he excluded the Jews, but not the Samaritans, from this impost. The Jews reacted favorably to this treatment. It is stated that Hiyya b. Abba, who was a kohen, crossed a cemetery in order to meet him (TJ, Ber. 3:1, 6a). Shortly after his stay in Tiberias he issued an edict against bigamy (Cod. Just. 5:5, 2) and against a man marrying his niece, but they do not appear to have been applied to the Jews. The Talmud quotes an inscription which Diocletian inscribed when he dedicated a market place to Hercules (or Heraclius) in Tyre (Av. Zar. 1:4, 39d) and that he instituted waterworks in Syria. Evidence of his stay there is confirmed from the Codex of Justinian (14:41, 9).

°DIODORUS OF SICILY (first century B.C.E.), author of a world history (called the "Library") in 40 books, from the creation of the world to Caesar's conquest of Britain in 54 B.C.E. Hecataeus of Abdera was the source for his account of the Jews (40. frag. 2). Diodorus notes that "Moyses" claimed to have received his laws from the god named Iao. He also provided a narrative on the capture of Jerusalem by the Romans in 63 B.C.E.

°DIODOTUS-TRYPHON (d. 137 B.C.E.), rebel against *Demetrius II, king of Syria. According to Strabo, Tryphon came from Casiana (according to Josephus from Apameia). He served in the army of Alexander Balas and when uprisings began against the rule of Demetrius II, he headed the insurgents in Larissa. Another step that won him wide support in Syria was his taking care of Antiochus, the minor son of Alexander *Balas, who at one time had been handed over to the Arab Malichus, ostensibly in order to prepare him for the throne. Tryphon appointed himself regent to the young king and assembled a large armed force. Demetrius was defeated by Tryphon and compelled to withdraw from Antiochia, whereupon Tryphon entered with the lad and gave him the title Antiochus VI. However the war between Demetrius and Tryphon continued.

In Judea Tryphon succeeded in attracting to his side *Jonathan the Hasmonean, whom he confirmed in the high-priesthood in the name of "king" Antiochus, and appointed his brother *Simeon strategus of the whole coast from the boundary with Tyre to the border of Egypt. Jonathan gave considerable aid to Tryphon. He won over to himself a large part of the army of Demetrius, and grew so powerful that he became suspect in the eyes of Tryphon. As far as can be seen Tryphon aimed at that time at deposing the young Antiochus and proclaiming himself king. Suspecting that Jonathan might stand in his way he decided to remove him. He encountered the high priest at the head of a large army in Beth-Shean. Unable to make an attack on Jonathan, Tryphon employed a subterfuge. He loaded him with many gifts and honors and persuaded him to send his main army away, and keep only a small force. When Jonathan came to Ptolemais with only 1,000 men, Tryphon fell upon him, murdered his men, and imprisoned him. He then proceeded to conquer Judea, but Jonathan's brother Simeon acted swiftly and with great energy, and was ready for battle when Tryphon arrived at the head of his army. Tryphon at first tried to negotiate and promised to release Jonathan in exchange for a ransom and hostages, but he did not fulfill his promises and war ensued. However Tryphon was unsuccessful in his efforts to reach Jerusalem and he retreated northward. On the way Jonathan was put to death. Tryphon also put to death the young Antiochus, who was no longer important for his purposes, and proclaimed himself king (142/143 B.C.E.). The war between him and Demetrius continued for some years, and this state of affairs was largely unchanged even after Demetrius was captured by the Parthians. Antiochus (Sidetes) seized the kingdom and succeeded in defeating Tryphon, who had fortified himself in Dora where he was besieged. Dora was compelled to submit to Antiochus, and Tryphon slipped away to Orthosia in Apamea where he committed suicide.

°DIOGENES LAERTIUS (third century C.E.?), author of "Lives of the Philosophers" (*Vitae Philosophorum*), a eulogistic account of the ancient Greek philosophers. In the prologue (1, 9) he mentions the view of some writers which traces the origin of the Jews back to the Magi. In a separate work, "Life of Socrates," Diogenes mentions that the Jewish historian Justus of Tiberias is the authority in regard to Plato's appearance at the trial of Socrates.

°DIONYSIUS VAN RYCKEL (Denis the Carthusian, Denys van Leeuwen; 1402–1471), Christian theologian and mystic, born in Ryckel, Belgium. He studied at Cologne University and in 1424 joined the Carthusian order at Roermond (Holland). A prolific and popular writer, he wrote commentaries on the Bible, the works of Boethius, Peter Lombard, John Climacus, and Dionysius the Pseudo-Areopagite, and was acquainted with the works of Greek as well as Arab and Jewish philosophers. He was also the author of works on moral theology and religious discipline. His theories concerning the Jews and their destiny appear in the seventh book of his "Dialogue on the Catholic Faith," entitled "On the Proof of the Christian Faith Based Upon the Law and the Prophets, and on the Errors of the Jews" (in his *Opera*, 18 (1896), 471ff.). Although attacking the Jews as enemies of the Church and an offense to Jesus, Dionysius considers that they should be tolerated as part of God's holy design.

DIONYSUS, CULT OF, the cult of the Greek god of wine and fertility. The non-Jews of Alexandria and Rome alleged that the cult of Dionysus was widespread among Jews. Plu-

tarch gives a Bacchanalian interpretation to the Feast of Tabernacles:

> "After the festival called 'the fast' [the Day of Atonement], during the vintage, the Jews place tables laden with different fruits in booths of thickets woven from vines and ivy. Their first festival is called by them *Sukkah* (σκηνή). A few days later, the Jews celebrate another festival, which one may simply call a Bacchanalian festival. For this is a festival on which the Jews carry fig branches and sticks adorned with ivy and carry them into the Temple. One does not know" – adds Plutarch – "what they do in the Temple. It seems reasonable to suppose that they practice rites in honor of Bacchus. For they blow small horns as the people of Argos do during the festival of Dionysus, and call upon their god. Others, who are called Levites, walk in front, either in allusion to Lysios (λύσιος) – perhaps 'the god who attenuates curses' – or because they call out 'Euius,' i.e., Bacchus."

According to Plutarch the subject of the connection between the Dionysian and Jewish cults was raised during a symposium held at Aidepsos in Euboea, with a certain Moiragenes linking the Jewish Sabbath with the cult of Bacchus, because "even now many people call the Bacchi 'Sabboi' and call out that word when they perform the orgies of Bacchus." Tacitus too thought that Jews served the god Liber, i.e., Bacchus-Dionysus, but "whereas the festival of Liber is joyful, the Jewish festival of Liber is sordid and absurd." According to Pliny, *Beth-Shean was founded by Dionysus after he had buried his wet nurse Nysa in its soil. His intention was to enlarge the area of the grave, which he surrounded with a city wall although there were as yet no inhabitants. Then the god chose the Scythians from among his companions, and in order to encourage them, honored them by calling the new city Scythopolis after them (Pliny, *Natural History* 5:18, 74). An inscription found at Beth-Shean dating from the time of Marcus Aurelius mentions that Dionysus was honored there as *ktistes*. Stephen of Byzantium reports a legend that connects the founding of the city of Rafa also with Dionysus (for the Dionysian foundation legends of cities in the region, see Lichtenberger's study). It is wrong to assume as some do that Plutarch took his account of the festival of Tabernacles from an antisemitic source, for despite all the woeful ignorance in his account it contains no accusation against, or abuse of, the Jews. It is more likely that Plutarch described the festival of Tabernacles from observation, interpreting it in accordance with his own philosophical outlook, which does not prevent him, however, from introducing into it features of the cult of the famous Temple of Jerusalem gleaned by him in his wide reading. The description as a whole, however, is of Tabernacles as it was celebrated in the Greek diaspora at the end of the first and the beginning of the second century C.E., and not as it was celebrated in the Temple, which had already been destroyed for more than a generation. The festival undoubtedly absorbed influences from the environment, so that Plutarch could indeed have witnessed what he recognized as customs of the Dionysian feast.

°**DIOS** (**Dius**; c. 2nd century B.C.E.), historian, quoted by Josephus, who refers to him as "an accurate historian of Phoenicia" (Ant., 8:146–9; Contra Apionem, 1:112–5). Dios relates that King Solomon sent riddles to King Hiram ("Hirom") of Tyre, asking him to send him others in return, on the understanding that the one who failed to solve them would forfeit a sum of money. Hiram agreed and, unable to find the solutions, forfeited a large sum. Subsequently, however, with the aid of a Tyrian named Abdemon, Hiram not only solved Solomon's riddles but sent him others which Solomon could not solve. He had then to repay to Hiram more than he received. Dios also indicates that Hiram transformed Tyre by building up the eastern side with embanked fortifications and enlarging the town, linking it by a causeway to the off-shore island with a Temple of Zeus/Baal Shamin.

°**DIOSCORIDES PEDANIUS** (first century C.E.), pharmacologist from Anazarba in Cilicy, author of *De Materia Medica*. Dioscorides has a few references to materials of medical use found in Judaea, notably the balsam, the resin of the terebinth tree, asphalt (presumably from the Dead Sea), oil made from Ban (*Balanites aegyptica*), and scammony. He also makes reference to an item called the "Jewish stone," which, when dissolved and drunk with hot water, was thought to cure stones in the bladder. Dioscorides later exercised a great influence on medieval medicine. Ḥisdai ibn Shaprut took part in the revision of the Arabic translation of his work and Maimonides may have utilized it.

DIRINGER, DAVID (1900–1975), epigraphist and Orientalist. Born in Tłumacz (Galicia), Diringer studied at the University of Florence (Italy), where he later was appointed professor (1931–33). Diringer's main interest at first was the culture of the Etruscans. As a consequence of the anti-Jewish policy of Fascist Italy, Diringer moved in 1939 to England where he taught Semitic epigraphy at Cambridge University (1948). In England he specialized in Northwestern Semitic inscriptions and the history of the alphabet. At Cambridge he founded in his home a museum devoted to the history of writing systems, which he later transferred to Tel Aviv.

Among Diringer's publications, some scholarly and some for the general public, are *Le iscrizioni antico-ebraiche palesti-*

nesi (1934); *L'alfabeto nella storia della civiltà* (1937); *The Alphabet – A Key to the History of Mankind* (1953) together with R. Regensburger; *The Hand-Produced Book* (1953); *The Illuminated Book, Its History and Production* (1958); *Writing: Ancient Peoples and Places* (1962); *The Illuminated Book* (1967²); *The Story of the Aleph Bet* (1960); *Writing* (1962); *The Alphabet* (2 vols., 1963); and *The Book Before Printing: Ancient, Medieval and Oriental* (1982).

DISCHE, ZACHARIAS (1895–1988), U.S. biochemist. Dische was born in Sambor (then Austria-Hungary, today Poland), the nephew of Leon *Reich. World War I broke out while Dische was studying at the University of Lvov and, after completing the first year of his medical studies, he was drafted into the Austrian army. He completed his medical degree in 1921 at the University of Vienna, where he became head of the chemistry laboratory of the physiological institute in 1931. Dische continued his research there until the *Anschluss* in 1938, when he was forced to flee Austria, first for Paris and later for the Medical School of Marseille. He reached America in 1941 and was appointed to the faculty at Columbia University in New York in 1947, becoming professor of biochemistry in 1957 and professor emeritus in 1963.

Dische discovered the basic reaction of the pentose phosphate cycle, the first example of feedback inhibition of a metabolic process. His contributions to scientific journals cover the biochemistry of sugars, the quantitative analysis of DNA sugars, polysaccharides in animal tissues, the cellular metabolism of blood and ocular tissues, and other biochemical topics. His analysis of the lens capsule was a model for basement membrane investigations in general. In 1965 he was awarded the Proctor Medal, the highest award in basic science in ophthalmology. He was elected to the National Academy of Sciences in 1976.

DISCIPLINE, MANUAL OF ("The Sectarian Document" or "The Rule of the Community"; Heb. סֶרֶךְ הַיַּחַד, *Serekh haYaḥad;* abbr. 1QS), one of the *Dead Sea Scrolls, found in the spring of 1947 near Qumran; now in the Israel Museum's Shrine of the Book in Jerusalem. The designation "Manual of Discipline" was coined by the American scholars Burrows, Trever and Brownlee – who were the first to study the scroll, and who published a facsimile edition in 1951 under that title. Since then at least ten fragmentary copies of the *Manual* have been discovered in two caves (IV and V) in the vicinity of the Qumran ruin where, according to most scholars, these and many other manuscripts were copied in Hellenistic and Roman times, before 70 C.E., by members of a Jewish religious community.

Description

The manuscript is about 6 ft. 2 in. (1.86 m.) long and c. 10 inches (24 cm.) high and is made up of five pieces of parchment sewn together. Originally other sheets of parchment were attached to 1QS; these fragments were later found in Cave 1 and have been labeled 1QS[a] (usually appearing as superscript a) and 1QS[b] (usually appearing as superscript b). 1QS has 11 columns of Hebrew writing (with an average of 26 lines to each column); the scroll is well preserved and contains only a few lacunae, but from the occurrence of some erasures and insertions it has been concluded that, in its present form, the text (slightly corrupt in some places) is the work of more than one scribe. The margins of the manuscript contain curious symbols some of which are also found in the First (Great) Isaiah Scroll (1QIsa[a]) found together with the *Manual*; the meaning of these symbols is unknown.

Contents

1QS is first and foremost a religious document focused on various aspects of life within "the community" (Heb. הַיַּחַד, *hayaḥad*). 1QS 1:1–18a contains a series of statements about the ideal life to which the members pledged themselves at the annual renewal of the covenant which is described in 1:18b–3:12; on that occasion the "priests" and the "levites" pronounced (a) praises to God, (b) blessings of "all the men of God's lot," (c) curses against "all the men of Belial's lot," and (d) curses against unworthy members of the movement. A communal confession of sins was an important feature of this ceremony which was followed by the priests' pronouncement of an expanded version of the *Priestly Blessing (Num. 6:24–26). This liturgical part of 1QS ends with a warning to members not to rely on the efficacy of ablutions carried out mechanically for "it is by an upright and humble spirit that sin can be atoned" (3:8). Some scholars assume that baptismal rites formed part of this annual renewal of membership although this is not explicitly stated, 1QS 3:13–4:26 is a treatise which explains in theological terms the position of the members of the community in this world, as well as their destiny in the world to come. The basic theme of the sharp division of mankind into members and those outside – already clear from the preceding homiletic and liturgical parts – is here seen as ultimately due to God's providential planning of everything from the Creation on. He has given man two "spirits" (of "truth" and "iniquity") which struggle with each other in the heart of everyone (4:23). As a result of this conflict mankind is divided into sons of "truth," "righteousness," and "light" on the one hand, and of "iniquity" on the other. The two "spirits" are not to be taken as cosmic, dualistic principles (as in Zoroastrian theology), but in accordance with the use of "spirit" in Hebrew psychology (cf. within the pseudepigraphical books Test. Patr., Judah 20:1 which affords a close parallel to the *Manual* here). Nor is the "dualism" expressed here either absolute, physical, or cosmic but ethical and eschatological: God is in control from beginning to end, and "the angel of darkness," though in charge of the "sons of iniquity," is clearly inferior to God, in the same way as the "prince of lights" rules over the "sons of righteousness" in a capacity subordinate to God,

who, for some unknown reason beyond human understanding ("according to His mysteries," 3:23), allows the "angel of darkness" enough power to cause the "sons of righteousness" to sin "during the period fixed by Him." Eventually, however, God will utterly destroy the spirit of iniquity from a part of mankind by a holy spirit (4:20 ff.). The pious, chosen by God and yet responsible for their acts, will then enjoy "healing and great peace… together with everlasting blessings, endless gladness in everlasting life … in eternal light" (4:6 ff.). The damned will suffer "eternal perdition … together with the disgrace of annihilation in the fire of murky Hell" (4:12 ff.). Neither the Messiah nor the Resurrection is mentioned. The theory of Zoroastrian influence in this treatise, although accepted by many scholars, is rejected by others, who feel that the themes of the essay are satisfactorily explained against the general background of apocalyptic circles of the time. Apart from a penal code (6:24–7:25), which contains a list of punishments for various offenses (such as cursing God, telling a lie, rebelling against authority, guffawing, and spitting in the assembly), the section 5:1–9:25 is not easily divided into subsections. In a verbose and repetitive manner, often echoing biblical language, the author enumerates the ethical ideals of the members of the community (truth, unity, humility, righteousness, love, etc.; e.g., 5:4 and 8:2 ff.), describes the community in quasi-poetical passages (e.g., metaphorically as a spiritual temple consisting of "Aaron" and "Israel," i.e., priestly and lay members, 5:6; 8:5 ff.), and alludes to the perfect lives of the members as being capable of atoning for sins, not only their own (5:6; 8:3, 10; 9:4). From such homiletic passages, aimed at impressing the lofty vocation and status of the community on the reader, the author passes on to aspects of organization, admission of members (5:7 ff.; 20 ff., 6:13 ff.; 8:16 ff.), and communal activities such as meals and deliberations (6:2 ff.); at the latter, problems of scriptural interpretation, as well as any matter of concern to the community, were discussed. This long section, indispensable for an understanding of the inner life and spiritual nature of the Qumran community or the religious movement centered there, ends with a summary of the virtues characteristic of the *maskil* ("the wise man"), the ideal member of the sect. Almost imperceptibly, transition is made to a set of at least three hymns of praise (10:1–8a; 10:8b–11:15a, and 11:15b–22) with which 1QS comes to an end. The main themes of these compositions are indicated in 10:23: "With thanksgiving hymns I will open my mouth, and the righteous deeds of God shall my tongue enumerate always, together with the faithlessness of man and his utter sinfulness." The author, as a human being, is sinful (11:9 f.), but God has forgiven him and granted him "righteousness" (10:11; 11:12), and that is the reason for praising Him at all times (10:1 ff.). (For the use of the word "righteousness" in the meaning of "Divine grace," see 11:14, 2.) These concluding hymns belong to the same literary genre as the compositions contained in the **Thanksgiving Psalms* (1QH) which were found in Cave 1 together with the *Manual*. Some scholars claim that these contents form a literary unit whereas others claim that 1QS contains a number of originally separate texts copied onto the same scroll. It is generally assumed, however, that the contents of the scroll all go back to the same religious circles; an exception to this view is that of Del Medico who has argued for the theory that 1QS not only is not a literary unit, but also that the various parts, of which in his view the text of the manuscript is made up, go back to different Jewish religious circles. It must be conceded, however, that there is a unity of language and style in the *Manual*; nor can it be said that the various sections are unrelated to each other, or that they have been put together in an entirely haphazard fashion. Furthermore, the fact mentioned above that other copies of the work are in existence suggests that a traditional form of it was copied and recopied through a fairly long period.

Language and Date

The language of the *Manual* is akin to biblical rather than mishnaic Hebrew, and its text must have been copied, or at least composed, at a time when there was little or no difference between the literary language of sacred writings (as attested by the consonantal text of the Hebrew Bible) and the spoken Hebrew of everyday life. Paleographically 1QS is dated by experts to around 100 B.C.E. and if these datings are correct other copies now lost were probably in circulation at an even earlier time (second century B.C.E.) among the many local groups within the religious movement for whom the document was intended. Linguistically 1QS is akin to the Great Isaiah Scroll (1QIsa^{a}) which is supposed by many scholars to have originated in pre-canonical times, i.e., certainly before the first century C.E. – and long before the vocalization of the standard text by the masoretes in the early Middle Ages. The two manuscripts have some characteristic features in common, such as profuse application of vowel letters, a certain resemblance to Samaritan as regards pronominal suffixes, and – in the forms of nouns and verbs – a degree of influence from Aramaic which was then spoken in Palestine. Hebrew was undoubtedly spoken by the Jews in Palestine at this time, and therefore, the occurrence of words otherwise only known from late sources is not to be taken as pointing to a late date for the *Manual*.

Life and Identity of the Religious Circles Described in 1QS

No precise information about the history of the religious movement described in 1QS is available in either the document itself or in any other related text. However, the importance attached to the priestly element within the *Yaḥad* and the explicit reference to the "sons of Zadok," are usually taken to suggest that the *Yaḥad* originated in a schism within the Jerusalem priesthood in early Hasmonean times, as a result of which some Zadokite priests established a religious center at Qumran, possibly together with sympathizers among the *Hassideans. Cut off from the sacrificial cult at the central sanctuary they devoted themselves there to the study of the Scriptures (the Law and the Prophets), whose meaning was "found" or "revealed" by an allegorizing type of interpretation an example of which occurs in 8:13 ff.: "When these become

a community by these norms in Israel, they shall separate themselves from the session of the men of iniquity by going out into the wilderness in order to clear His way there; as it is written: 'In the wilderness make clear the way of.... [four dots are used in the manuscript to indicate the Tetragrammaton], level in the desert a highway for our God.' This alludes to the study of the Law which He has commanded through Moses to do, according to everything which has been revealed time and again, and according to that which the Prophets have revealed by His holy spirit." In this passage and elsewhere (5:1, 10; 8:10; 9:5, 9, 20 ff.) the members are urged to "separate themselves" (verb נבדל) from iniquity, and a long passage (5: 11 ff.) is devoted to a denunciation of the godless with whom the pious must have no dealings: they must not get involved in arguments with them, nor disclose any of their rules of conduct to them (9:16 f.). The full members, whose exact place within the society was strictly defined according to seniority, learning, and behavior, ate, blessed and deliberated together (6:2 ff.); new members, if approved by existing members and the inspector (*ha-mevakker* or *ha-pakid*), were admitted at the end of two years after which trial period they bound themselves by oath "to return to the Law of Moses ... according to everything which has been revealed from it to the sons of Zadok, the priests who keep the covenant and seek His pleasure" (6:8 ff.). Their property was then pooled with the property of the community and they themselves were allocated a seat at the communal meals, and from then on they were entitled to take part in its deliberations (6:4). A degree of ownership of property is presupposed in some passages, and poverty does not in itself seem to have been regarded as an ideal. Women are not mentioned in 1QS, and most scholars assume that the members of the *Yaḥad* were unmarried; women are, however, referred to in other texts which were either found near Qumran or appear to have originated in related religious circles. Parts of the *Manual* (as, e.g., the liturgy of the annual renewal of the covenant) must refer to events which took place at the Qumran center; and in 8:1 ff. a special group of 15 members (12 laymen and three priests) is mentioned who can hardly have lived anywhere else. It is clear, however, from 6:3, 6 that there were local groups – some of them consisting of no more than 10 members (the required minimum) – in various parts of the country, within which the levitical laws of purity were strictly observed and the Scriptures were intensely studied. Much in the *Manual* may be taken as referring to such "Qumranian" fellowships anywhere in the country, and some Jewish scholars have attempted to establish a connection between these and the *ḥavurot* ("fellowships") of the early Pharisees which are described in the Talmud in terms which are partly identical with those employed in 1qs of the Qumran *Yaḥad*. That is not to say, however, that the Qumran "sectarians" are necessarily identified with the Pharisees. None of the designations applied in 1QS to the members contains any clue as to their exact identity; it is clear that the movement was priestly, ritualistic, legalistic, with a bent toward secrecy, mysticism, and apocalypticism, but these qualifications do not in their totality fit any of the known Jewish religious groups in late Judaism, including the Essenes, although there are suggestive similarities (as well as some differences) between Josephus' description of the latter and the *Manual.* Most scholars accept the view that the Qumran *Yaḥad* was Essene. If the theory is correct, 1QS, apart from enabling us to check Josephus' information on a number of points, adds considerably to the knowledge of a branch of Judaism which, even before the Scrolls were discovered, was thought by some to form the background out of which Christianity grew. Within the New Testament the most suggestive points of contact with the *Manual* are found in the Johannine group of writings and in the Epistle to the Hebrews.

Related Documents

A fragment containing the Hebrew title of 1QS (סר]ך היחד[; [ser]ekh *ha-yaḥad*), and 1QS^{a} and 1QS^{b} mentioned above, were all originally attached to 1QS. As, however, the bottom quarter of the last column of 1QS is left blank, the Manual clearly ends at 1QS 11:22, and has presumably always done so. That there is a literary relationship between 1QS^{a} ("the Rule of the Congregation"), 1QS^{b} (several fragments making up a collection of benedictions) and 1QS is certain in view of some degree of phraseological similarity (especially between 1QS^{a} 2:11 ff. (the messianic banquet of the Congregation) and 1QS 6:4 ff. (the daily meal of the members of the *Yaḥad*)). It is possible, however, that these texts do not all refer to the same religious circles because of differences in contents (1QS^{a}, e.g., is martial (possibly Hassidean) in character and deals with aspects of family life); it was perhaps from among the circles referred to in 1QS that the *Yaḥad* of the *Manual* arose; and at least the major part of another, larger document ("the Damascus Document," CD) also probably dates back to the time before the *Manual* was composed.

[Preben Wernberg-Møller]

A Theory of Composition

A general hypothesis of composition was proposed by J. Murphy O'Connor in 1969, with 1QS developing to meet the needs of the Community at different stages in its history, as follows: (1) 1QS 8:1–10a, 12b–16a, 9:3–10:8: with a Teacher of Righteousness proposing the establishment of the Community in the Wilderness, to serve as a spiritual temple and run by a priestly core; (2) 1QS 8:10–12a, 8:16b–9:2, interpolations relating to the attempt to deal with failures of obedience within the Community; (3) 1QS 5:1–13, 6:8–23, 6:24–7:25, the organizational redefinition of the Community as an institution, with new legislation for the assembly and for the admittance of new recruits; (4) 1QS 1:1–3:12, 3:13–4:23a, 4:23b–26, 10:9–11:22, with attempts being made to revitalize the spiritual life of the Community.

DISCRIMINATION, distinguishing between people on the basis of the group to which the person belongs rather than individual characteristics. With rare exceptions, contemporary forms of discrimination against Jews were not based upon the type of legal device and sanction that reached its apotheosis with the *Nuremberg laws. The postwar disclosure of the details of the Holocaust generated such massive popular revulsion that legal forms of antisemitism became taboo, for the gas chambers and the concentration camps were the ultimate consequence of legalized anti-Jewish discrimination. Antisemitism continued to find expression in the contemporary world in non-legislative discriminatory patterns. Sophisticated formulations to mask the antisemitic intent of the pattern were elaborated, and in no case could the pattern appear to be overtly antisemitic. Even where complete or almost complete exclusion of Jews was practiced, the rationale for such action had to be explained on grounds other than religious or ethnic discrimination. The more characteristic pattern took the form of "tokenism" (i.e., the admission of one or a few Jews into a non-Jewish milieu) or a quota system, which restricted the number of Jews to a precise or approximate percentage of the total composition.

The overall pattern of discrimination was selective in character: not all or almost all Jews were the objects of discrimination and not all or almost all spheres of public life were the loci of the discriminatory pattern. There were, however, certain major postwar exceptions to the selective character of non-legislative discrimination. During the "Black Years" in the Soviet Union (1948–53), virtually all Jews were subject to some form of discrimination, and many were even more harshly treated. A similar phenomenon occurred in Poland during 1968, with the difference that Polish Jews were permitted and even encouraged to emigrate. These anti-Jewish campaigns were deliberately masked, however, in the first case as "anti-*Cosmopolitanism," and in the second as "anti-Zionism."

Soviet Union

The Soviet Union, where in 1970 approximately one-quarter of the world's Jewish population lived, offered a classic example of how antisemitic motivation on the highest level was expressed in either exclusion, tokenism, or quota techniques. Andrei D. Sakharov, the distinguished Soviet physicist and co-creator of the hydrogen bomb, acknowledged in 1968 that "in the highest bureaucratic elite of [the Soviet] government, the spirit of antisemitism was never fully dispelled after the 1930s." A burgeoning Russian nationalism, which fed upon traditional antisemitism and was reinforced by the determination to erect barriers against Western influences and contacts, provided the motivation for the policy, as Jews, characteristically, had family as well as spiritual and cultural links with the West. Sakharov specifically mentioned the Soviet Union's "appointments policy" as the device by which discrimination against Jews was effected. That "appointments policy" excluded Jews from all key policy-making positions. Whereas the percentage of Jews in the Central Committee of the Communist Party was 10.8% in 1939, over the course of years, the percentage was reduced to almost nil – only one Jew remained in the Central Committee in 1970. There were no Jews in the Politburo, the Orgburo, or the top levels of the Secretariat. In the sensitive areas of diplomacy, security, foreign trade, and military affairs there were virtually no Jews: at the top levels, there was none at all; elsewhere in the hierarchy there were less than a handful. The political sphere, which embraced soviets on various levels and which was manipulated by the Communist Party apparatus, was characterized by "tokenism," whereby a tiny percentage of Jews was selected by the party. In contrast with the composition of the Supreme Soviet in 1937, for example, when approximately 3.5% of the deputies were Jewish (before the new "appointments policy" had been instituted), at the end of the 1960s, with a membership of some 1,500, it contained a token number of Jews – 0.25%. The same percentage obtained in the Supreme Soviets of the 15 Union Republics, in which there were 14 out of some 5,300 deputies; one or two Jewish deputies were chosen for some of the Union Republic Supreme Soviets. On the bottom of the legislative scale, the local soviets, which comprised over 2,000,000 members, received a similar token number of Jews (about 8,000). The percentage on this level approximated that of Jews in the legislatures on the republic and national levels. The quota system was used in the various branches of administration. Yekaterina Furtseva, minister of culture from 1960, explained how the system was initiated. If "a heavy concentration of Jewish people" was found in a governmental department, "steps were taken to transfer them to other enterprises …" At about the same time, Canadian Communist Party leader J.B. Salsberg was told in Moscow that the "transfer" method was applied to Jews in the "once-backward" Union Republics in order to make room for the newly trained native cadres in the administrative apparatus. In December 1962, Premier Nikita Khrushchev told Soviet intellectuals that Kremlin policy was aimed at preventing too many Jews from holding prominent posts, and in June 1963, the Party's principal theoretical journal, *Kommunist*, admitted the widespread use of the quota system in the training and placement of cadres in the various Union Republics. The quota system was most clearly expressed in university admission practices. The Soviet *Bulletin of Higher Education* (December 1963) disclosed that "annually planned preferential admission quotas" prevailed in Soviet universities. Nicholas De Witt, a U.S. specialist on Soviet educational

practices, explained that the quota system operated "to the particularly severe disadvantage of the Jewish population." In a study published in 1964, he found that "in those republics where Jews constitute an above-average proportion of the urban population, their representation among university students is well below the rate of the general population's access to higher education." Whereas in 1935 the Jewish enrollment in Soviet universities was 13% of the population, by the 1960s it dropped drastically to little more than 3%.

The pattern of discrimination against Jews in political and social life paralleled a policy that deprived the Jewish community of the ethnic and religious rights to which it was constitutionally entitled and that other Soviet ethnic and major religious groups enjoyed. It should be emphasized, however, that the pattern of discrimination, especially in the civic and political arenas, was not endemic to Communist societies. In other European Communist countries (including Poland until 1967–68), Jews held prominent positions at all levels of the party and state administration. Even in the U.S.S.R. the anti-Jewish pattern of discrimination did not extend to everyday channels of social life. Residential restrictions were nonexistent, and there were no barriers to membership and participation in the lower levels of the Communist Party, trade unions, armed forces, social services, and clubs. Employment opportunities, other than administration, in such fields as science, medicine, law, and the arts were widespread. Particularly in the crucial area of the sciences, Jews ranked high both in absolute and relative terms, although the quota system in university admission practices brought about a decline in the percentage of Jews in relation to other nationalities. With the disintegration of the Communist system, all forms of official antisemitism virtually came to an end in Russia and Eastern Europe, replaced in many cases by grassroots antisemitism.

United States

This Soviet pattern of discrimination was in striking contrast with the pattern prevailing in the United States, where in 1970 one-half of the world's Jewish population resided. Discrimination against Jews on the national political level was neither existent nor sanctioned. Jews played an important and active role in all areas of political, public, and community life, although to a lesser extent outside major population centers. Yet the chauvinism of an old, established patrician class, combined with a nativist-Populist tradition and an "in-group" phobia of those striving to protect their insecure status (in an extended period of upward social mobility), perpetuated patterns of social discrimination against Jews in non-government spheres – employment, housing, and social institutions. The techniques employed were exclusion, tokenism, and the quota system. Widespread patterns of discrimination in private industry were notable principally on the executive or management levels; no problem was apparent below that level. A study published in 1968 showed that comparatively few Jews were found in executive positions in the insurance, automobile, and shipping industries. A 1967 survey of 38 major companies in the New York City area, including utility and transportation companies, commercial banks, oil concerns, electronic firms, and stock exchanges, revealed that the proportion of Jews among the total number of executives was relatively small. Private employment agencies abetted the perpetuation of discrimination by responding positively to the real or imagined prejudices of their clients. Exclusive residential areas, both in suburbia and high-rental urban cooperatives, were often characterized by quota practices. By means of restrictive covenants, a complete ban on the sale of property to Jews could sometimes be effected. Even though the Supreme Court ruled that covenants were not legally enforceable, the device was still used, as, e.g., in certain choice locations in Washington, D.C. and Detroit. Resort hotels, especially in certain vacation areas, also erected barriers against Jews. A study in 1956–57 showed that one out of four hotels carried on such practices, with an even higher ratio in Arizona resort hotels. Particularly distinctive on the social landscape was the pattern of discrimination in country clubs and city social clubs. According to a 1961 survey, three-quarters of the former and 60% of the latter either excluded Jews or maintained quotas against them. A study released in 1969 emphasized that discrimination in these clubs led to an "almost insurmountable barrier" for Jews who strove for advancement in industry and finance. The reason for this crucial linkage between social-club discrimination and employment opportunities was the fact that top-level business executives frequented these clubs and "naturally turned to the ranks of those they knew." In local communities, social clubs were vital factors in the power structure, and the scope of Jewish participation in the local decision-making process was directly proportionate to the extent that they excluded or restricted Jews. Progress in removing barriers against Jews, however, was made gradually, especially in the employment field. Other private forms of social discrimination had greatly declined by 1970. Typical of this trend were university admission practices. An American Council on Education study in 1949 revealed that the average Jewish university applicant had considerably less chance of being accepted than a Catholic or Protestant of comparable scholastic ability. The technique generally used was a fixed quota. Since then, and especially from the 1960s, restrictions based upon religion or ethnic origin were significantly reduced, confining themselves largely to a few exclusive cooperatives, athletic or golf clubs, and law firms.

England

The American pattern of social discrimination was paralleled, at least to some extent, in the United Kingdom. In the early 1960s it was estimated that approximately one-half of British golf clubs prevented, as far as possible, the admission of Jews to membership. Usually a quota system was applied, although in Manchester nearly 100 clubs adhered to an unwritten "Aryan paragraph" providing for total exclusion. Whether and to what extent there was a decline in club discrimination from the middle and late 1960s was never studied. Private

school (called "public" school in England) enrollment was also characterized by a form of snobbish discrimination effected by the quota system. A London newspaper study in the late 1950s showed that the best-known boys' "public" schools limited the number of Jewish students to 10–15%. Some girls' "public" schools excluded Jews entirely, while others placed a 10% quota on them. The absence of careful studies on "executive suite" discrimination made judgment about employment practices in England difficult, although in the 1960s relatively few Jews were found in finance and heavy industry. It can be surmised, however, that this problem and related forms of social discrimination were less pressing than in the United States. As in America, the political sphere was virtually devoid of discrimination. The basic motivation of discrimination in England appeared to be social, a vestige of patrician snobbishness perhaps reinforced by religious considerations. The extent to which the American pattern of social discrimination was present in other Western and Latin American countries was not made the object of any scientific study.

Arab Countries

Whereas antisemitism in most parts of the Jewish-populated world was expressed by subtler forms of discrimination, in the Arab countries the necessity for pretense was not felt, especially after the Six-Day War (1967). Discrimination against Jews was open, callous, and frequently brutal. Upon the establishment of the State of Israel, all the Jews in Iraq were classed as enemy aliens. This act was accompanied by the sequestration of Jewish property and businesses and the banning of emigration. In March 1950, when the ban was lifted for one year, almost all of Iraq's 120,000 Jews fled, leaving 6,000 in the country. Further anti-Jewish discriminatory legislation was enacted in the years that followed, while the outflow of Jews continued, and, as of May 1967, the 2,500 remaining Iraqi Jews faced sharp limitations in the areas of citizenship, travel, and property. The Six-Day War brought on even more repressive measures: all Jewish homes were placed under surveillance; telephones were disconnected; personal property could not be sold; assets were frozen; licenses were canceled; the dismissal of Jewish employees was ordered; and travel from their area of residence was forbidden. A complete ban on emigration made the discriminatory pressures under which Jews lived all the more burdensome. Several Jews were publicly hanged in Baghdad, together with Muslim opponents of the regime, as "imperialist and Zionist spies." The situation in Syria was similar. Even prior to the Six-Day War, Syrian Jews were forbidden to sell property and move about beyond a one-and-a-half-mile radius from their place of residence without a special permit. Jews were required to carry special identity cards, and after the war, the 4,000 Syrian Jews were not permitted to emigrate. Just prior to the Six-Day War, the UAR conducted a registration of its 2,500 Jews and, within two or three days of the outbreak of hostilities, ordered the imprisonment of the great majority of Jewish males. Most of these prisoners were released during 1968 but others were kept in prison until 1969 and 1970. Prior to the war, the 4,000-member Jewish community in Libya was subject to a variety of restrictions, including a ban on emigration. The outbreak of war unleashed popular violence against Jews. When the ban on emigration was lifted soon after the war ended, the entire Jewish community fled. The tiny Jewish community of Aden underwent a similar experience.

DISEGNI, DARIO (1878–1967), Italian rabbi and educator. Born in Florence, he completed his general studies there, at the same time studying at the Rabbinical College under S.H. Margulies and H.Z. Chajes. He served as rabbi in several communities: Genoa (1902–06); Turin (1906–09); and Verona (1909–24). During World War I he was a military chaplain and in 1922 for a few months, the rabbi of the Sephardi congregation in Bucharest. From 1924 he was rabbi in Turin. From 1930 he was rabbi in Tripoli for six months. He was one of the organizers of the first Italian Rabbinical Federation in 1917 and the founder and director of the S.H. Margulies Rabbinical School. Some of his pupils there later taught in Israel. The school, which was of great importance in the Jewish life of Italy and for a certain time provided the Italian Rabbinical College with pupils, was subsequently directed by his successor, Sergio Joseph Sierra, and bore the name Margulies-Disegni Rabbinical School. Disegni edited prayer books for weekdays, the Sabbath, and holidays, with Italian translations and short notes. The texts are those of the communities in Milan, Rome, and Turin. Almost a century after S.D. Luzzatto's edition of the Italian text of the Bible, Disegni initiated a new Italian translation in four volumes (Turin, 1960–67), with the original text and short notes. As its editor, he obtained the collaboration of many Italian rabbis and himself contributed to the translation which met with enthusiastic approval also in non-Jewish circles. Disegni died in Turin. His writings include numerous articles in different journals and reviews. A *festschrift* in Italian and Hebrew was published in his honor in 1969.

[Alfredo Mordechai Rabello]

DISINTERMENT. Jewish law forbids the transfer of a dead body or of remnant bones from one grave to another, even when it is to a more respected site (Sh. Ar., YD 363:1; based upon Sem. 13:5–7; TJ, MK 2:4, 81b). This traditional prohibition is, however, lifted in the following cases: (a) If the dead person is to be reinterred alongside his parents or close relatives; the sanction is based on the concept that "It is seemly for a man to repose with his family, and in doing so, honor is conferred upon the deceased" (Sh. Ar., *ibid.*; Sem. 13:7). In Orthodox practice this is applicable where reinterment is in a family plot already in use, but not if a new site is acquired for future family use. Reform Judaism, however, permits disinterment for reburial in a family plot that is to be inaugurated and consecrated. Litigation on this subject took place in New York City in 1902 (*Cohn vs. Congregation She'arith Israel*) and the court sustained the congregation which refused to permit disinterment in accordance with traditional *halakhah* (see *The American Hebrew*, March 14, 21, 28, 1902, and *Jewish Exponent*, April 18, 1902). Most traditional halakhic authorities permit the removal of a dead body to a new family plot if the body was temporarily buried, i.e., with the intention of being later transferred to a family plot to be acquired. (b) Disinterment for the purpose of reburial in Ereẓ Israel was always regarded as a meritorious deed and a great honor for the deceased (Ket. 111a; Sh. Ar., *ibid.*). (c) The body of a Jew interred in a gentile cemetery may be exhumed for reburial in a Jewish cemetery. (d) Where a grave is in danger of water seepage or if it is not safe against robbers, etc., transfer is permitted.

In modern times, urban planning and the construction of railroads, highways, etc., frequently encroach on cemetery sites, necessitating disinterment by order of the authorities. Most halakhic authorities permit the transfer of the dead on condition that decent repose for the deceased is provided. A son may not be buried in a grave reserved for his father or in one vacated by his father through disinterment (Sanh. 47b; also Sh. Ar., YD 364:7); other persons, however, may be interred in a vacated grave, but it must not be used for other purposes (Sem. 13:9). On the day of the disinterment, members of the family are obliged to observe the customary mourning rites. (For the practice in talmudic times of "gathering the remnant bones" for reburial after 12 months, see **Likkut Aẓamot*.)

Under the halakhic direction of its chief rabbi, Shlomo *Goren, the Israel Defense Forces developed procedures for disinterments which are based upon those practiced during the wars fought during the period of the Second Commonwealth. Slain soldiers are temporarily buried in either nearby permanent or temporary military cemeteries (cf. Er. 17a; TJ, Er. 1:10, 19d). Only the military chaplaincy is present, and relatives do not participate in these funerals. There are no eulogies, and only a brief religious service is held. A declaration is made during this service that the interment is only temporary, and that it will therefore be permissible to rebury the deceased in a permanent cemetery. After a year has elapsed, the soldiers are reinterred in permanent military or civilian cemeteries in accordance with the wishes of their families (cf. TJ, Sanh. 6:12, 23d; Oho. 16:5). During the *Sinai Campaign of 1956, temporary cemeteries were consecrated by the military chaplaincy in the Northern and Central Negev. A year later, the remains of 132 soldiers were reinterred near their hometowns. During the *Six-Day War of 1967, temporary and permanent military cemeteries were used for the temporary burials. During June 1968, one year after the war, 475 military reinterments took place. During the reburials, special military and religious services were held in accordance with instructions issued by the army rabbinate.

[Meir Ydit]

DISKIN, CHAIM (c. 1923–), Russian army doctor and Hero of the Soviet Union. Born in Korotkie, Bryansk district, RSFSR, Diskin was drafted into the Red Army in 1941 and served as an artillery gunner. In November 1942, in the battle of Moscow, wounded and cut off from his unit, he single-handedly destroyed seven German tanks. For this feat he was decorated as Hero of the Soviet Union. In 1947 he graduated from the Medical Military Academy and was later promoted from senior lecturer to head of department and professor. In October 1981 he received the rank of major-general in the Army Medical Corps. He retired from the army in July 1988.

[Shmuel Spector (2nd ed.)]

DISKIN, MORDEKHAI (1844–1914), Ereẓ Israel pioneer. Diskin, born in Grodno, Russia, worked with his father as a market gardener. In 1882 he settled in Ereẓ Israel with his family and bought a holding in Petaḥ Tikvah that had been abandoned by earlier settlers because of malaria. He farmed there until his son shot and wounded a robber, and fear of vendetta caused him to move to Jerusalem. Diskin returned to Petaḥ Tikvah when it was resettled on the site of the neighboring village of Yehudiyyah. He became coachman in 1891, transporting passengers and goods between Petaḥ Tikvah and Jaffa, and taught Mishnah and Shulḥan Arukh in the evenings. Later he moved to Jaffa, still as a coachman, and his house became a free lodging for settlers who came to Jaffa for medical treatment. At the end of his life he became a shopkeeper, studying Torah and performing acts of charity. He was one of the founders of *talmud torah* Neẓaḥ Israel in Petaḥ Tikvah, the first modern religious school in the country. His monographs *Divrei Mordekhai* ("The Words of Mordekhai," 1889), *Ma'amar Mordekhai* ("Mordekhai's Essay," 1912), and *Yishuv ha-Areẓ* ("Settlement of the Land," 1913) are descriptions of the hardships of early agricultural settlement in Ereẓ Israel.

[Avraham Yaari]

DISKIN, MOSES JOSHUA JUDAH LEIB (1817–1898), rabbi, halakhist, and leader of the old *yishuv* in Jerusalem. Diskin was born at Grodno, where he achieved fame as a child prodigy. From 1844 he was rabbi successively at Lomza, Mezhirech, Kovno, and Shklov, and from 1873 at Brest-Litovsk (Brisk), hence his title the "Brisker Rov." As a result of a case in which he was implicated by the authorities, and in consequence of which he was imprisoned for a short period, he left Russia for France, and in the summer of 1877 immigrated to Erez Israel. He settled in Jerusalem where he served as rabbi until his death, enjoying the esteem of the whole community, among sections of which he was even more highly respected than Samuel *Salant, the rabbi of Jerusalem. He was one of the most prominent rabbis of his generation, who, in addition to a life of Torah study, was in the vanguard of Orthodox activism, leading the fight against all expressions of modernity and modern culture in Erez Israel and advocating complete dissociation of the religious from the irreligious. He repeatedly excommunicated the modern schools in Jerusalem, stating of the ban that "no one has the power to annul it, since renowned rabbis of former days ordained it.... It is, moreover, a fence around the Torah, and not even an assembly of all the rabbis is in any way able or allowed to abrogate it" (written in 1896, responsa, pt. 1, 8a, nos. 29, 30). He ruled against the controversial decision of leading rabbis in 1889 permitting the cultivation of fields during that year, which was a sabbatical year. On other occasions, however, he was reluctant to decide an issue on his own, and suggested that prominent rabbis be consulted (responsa, pt. 1, no. 47, p. 43a; no. 52, p. 45a). He was opposed to the indiscriminate use of *pilpul*, regarding it solely as an instrument to arrive at halakhic decision (pt. 1, no. 52, p. 43d; pt. 3, no. 13). He himself subjected *halakhot* to critical examination, applying himself particularly to the problem of permitting the remarriage of *agunot* (women whose husbands are missing but whose deaths have not been established).

Diskin was active in establishing several communal institutions in Jerusalem. In 1880 he founded the orphanage which still bears his name, his purpose being to "save" children from a similar institution in which foreign languages were taught, established at that time in Jerusalem. He actively supported the foundation in 1887 of the Joint Sheḥitah Board of the Ashkenazim, Perushim (the non-ḥasidic Ashkenazim), and Ḥasidim, and together with R. Salant headed that body, which abolished the separate *sheḥitah* arrangements of these communities. He directed the Ohel Moshe (now called Tiferet Yerushalayim) yeshivah, where he also taught; gave his approval to the establishment of a separate community for immigrants from America; and, initially, supported the founders of *Petaḥ Tikvah, even serving as official agent for their company. He severed all connections with them, however, when it became clear to him that the town was assuming the character of the newer settlements. In all his public activities in Jerusalem, Diskin was supported by his second wife, Sarah (Sonia) Rattner, who was known as the "Brisker *Rebbetzin.*" In some circles she was thought to dominate her husband to lead him to the adoption of extreme views; in the literature of the new settlers she was referred to disparagingly. After Diskin's death, the orphanage and later the yeshivah came under the directorship of his only son, Isaac Jeroham (born of his first wife), who, together with Rabbi *Sonnenfeld, was one of the ultra-Orthodox anti-Zionist leaders at the beginning of the national movement.

Among Moses Diskin's works are *Torat Ohel Moshe* (1902), novellae to Exodus and to the *aggadah*, including also some of the novellae of his father, Benjamin Diskin; *Likkut Omarim* (1922 and 1935), aggadic and halakhic novellae to Genesis and Exodus; and Responsa (1911), in three parts. Diskin's novellae were also published in the collection *Mafteḥot ha-Torah mi-Ẓiyyon* (1887–98). His novellae to the Babylonian Talmud – excerpted from his *Torat Ohel Moshe* – and responsa were republished in the *Hosafot le-Talmud Bavli* in two volumes (1964). Of the published eulogies on him, the following are noteworthy: B. Lempert, *Zekher Zaddik li-Verakhah* (1898) and J. Orenstein, *Allon Bakhut* (1899).

[Yehoshua Horowitz]

DISNA (Pol. **Dzisna**), town in former Vilno district, Poland, today Molodechno district, Belarus. It is assumed that the first Jews settled there in the 16th century, but an organized community was only formed in the late 18th century. The Jews numbered 412 in 1797, and many made their livings from the wholesale trade of agricultural products. The community numbered 1,880 in 1847; 4,617 in 1897 (68.3% of the total population); and 2,742 in 1921 (62% of the total). After WWI Disna was cut off from its markets in Russia (U.S.S.R.), the economy deteriorated, and the number of Jews in the town declined. Most children were enrolled in a Yiddish CYSHO school. Zionist youth movements were active, and many of their members made aliyah.

[Shmuel Spector (2nd ed.)]

Holocaust Period

Between the outbreak of World War II and the German-Soviet war, Disna was under Soviet occupation. When the German army entered on July 2, 1941, there were 6,000 Jewish inhabitants in the city, many of them refugees from central Poland. Soon after the arrival of the Germans, the synagogues were burned down. On July 14, ten Jews were murdered. On August 3, a ghetto was set up. The main *Aktion* was carried out on July 14–15, 1942, when the entire ghetto was destroyed. The inhabitants were all taken to Piaskowe Gorki where they were murdered. During the *Aktion* about 2,000 persons broke out of the ghetto and sought refuge in the forests. The Germans hunted down the escapees, but some succeeded in organizing partisan units, while other Disna Jews joined the Fourth Be-

lorussian Partisan Brigade. On Jan. 22, 1943, 17 Jewish craftsmen, the sole survivors of the *Aktion* of June 1942 to remain in Disna, were murdered.

DISPLACED PERSONS, term for the hundreds of thousands of Jewish refugees and millions of non-Jews uprooted by the devastation of World War II, a large proportion of whom wound up in Displaced Persons camps set up by the victorious Allied forces in Germany, Austria, and Italy. Today the term is often synonymous with Jewish Holocaust survivors, who in the early years after the war sometimes referred to themselves as DPs. As such it embraces both the Jewish survivors of the concentration and forced labor camps as well as those who survived the war by hiding or by fleeing east to the Soviet Union, a group that may have constituted a majority of the displaced persons.

The Allies estimated that in May 1945 the tumult of the war had displaced eight million people from their homes in virtually all the countries of Europe. But within a few months three out of every four found their way back to their cities and villages, reducing the scope of the problem significantly but still leaving masses of frail people to feed, shelter, and repatriate. Assembly centers designed for 3,000 people soon began to contain over 10,000, resulting in crowding, unsanitary conditions, and shortages of clothing and basic supplies. Historian Yehuda Bauer estimates that of the 200,000 Jews who emerged alive from the concentration or labor camps, 55,000 remained in occupied zones of Germany and Austria. Other historians say the number could be as high as 100,000. The Polish and Baltic Jews who found a wartime haven in the Soviet Union and then were allowed to repatriate more than doubled the refugee number so that at its peak in 1947 there were almost 250,000 displaced Jews in Europe.

The Jewish refugees, after learning how their families had been slaughtered and communities destroyed, could not or would not return to their hometowns and cities, and that feeling only hardened after the pogrom in the Polish town of *Kielce in July 1946 in which 41 Jews were massacred with police help. Many were helped to smuggle themselves across borders and reach the refugee camps in the Allied occupied zones by an organization of partisans and Zionists called *Beriḥah (Flight). Once in the DP camps, the refugees waited for permits that would admit them to Palestine, the United States, Canada, Australia, and a handful of countries that were willing, however grudgingly, to absorb refugees. But with immigration restrictions as stringent as they were the DPs often languished for years. As a result, camps initially set up as a short-term solution lingered as refugee settlements into the early 1950s, with one remaining open until 1957.

Initial conditions at the camps were squalid, reflecting either poor preparation by the Allies, plain negligence, or in more than a few cases outright contempt for the Jewish refugees. Some of the DP camps were set up on the very grounds of the concentration camps as they were at *Bergen-Belsen, where the German officers barracks were converted by the British for use by the refugees. Others were set up at prisoner-of-war barracks and institutional settings, though one was at a fancy hotel in the Austrian Alps. Many camps were surrounded with barbed wire as if it were the refugees who represented a threat to the neighboring population. DPs lacked underwear, shoes, toilet paper, toothbrushes and there were reports that refugees were being given less food per day than German prisoners of war had been given. Some American soldiers brought their antisemitic prejudices with them, manhandling Jewish DPs and encouraging them to return to their home countries. In some camps, German police, some of them ex-Nazis, were placed in charge, and in one famous incident in Stuttgart in 1946, 200 German policemen accompanied by dogs raided a Jewish assembly center in search of black market goods and killed one DP. Most appalling to the Jewish refugees was their intermingling in the camps with Poles, Lithuanians, Latvians, and others who had collaborated with the Nazis in the murder of Jews.

When reports about maltreatment filtered back to Congress, Earl G. Harrison, dean of the faculty of law at the University of Pennsylvania and a former commissioner of immigration, was appointed to investigate. He reported back on August 1, 1945, that conditions were so grim that "we appear to be treating the Jews as the Nazis treated them, except that we do not exterminate them." The camps under General George Patton in southern Germany were said to be particularly poorly managed. (Patton wrote in his diary in September 1945 that some believe that the Displaced Person is a human being, which he is not, and this applies particularly to the Jews, who are lower than animals.) In response to the Harrison report, a distressed President Harry S. Truman appointed an advisor to the military with sole responsibility for the camps. Jewish chaplains were also important in prodding the military to treat the refugees more humanely, as was pressure from relief workers for organizations like the *American Jewish Joint Distribution Committee and *HIAS (the Hebrew Immigrant Aid Society). A visit to the DP camps by David *Ben-Gurion, chairman of the Executive of the Jewish Agency, in October 1945 helped spur the army to concentrate Jews in their own camps and allow the entry of Jews from Poland. The United Nations Relief and Rehabilitation Administration, which had for months done an incompetent job of ministering to the refugees, was told to appoint Jewish refugees as camp administrators. Food was increased and conditions began to improve markedly.

While the discussion continued on what would be done with the DPs, whether they would be resettled in Palestine or in one of several Western countries, the refugees did not just remain idle. They started schools – including some 12,000 children at one point – and set up makeshift synagogues. They gave opera and theatrical performances and staged boxing matches. Despite the difficulty of obtaining printing presses

and Hebrew type, they started some 70 newspapers, like *Unzer Shtimme* at Bergen-Belsen, the *Landsberger Lager Zeitung* and *Dos Fraye Wort* in Feldafing. Scores of writers and editors worked on those newspapers, many who had been human skeletons just months before or had been partisans staging ambushes against the Nazis. The more entrepreneurial traded in the black market that had cropped up in the occupied zones with the connivance of GIs and bureaucrats.

In many camps, the refugees took charge of their fate, setting up camp committees to run practical matters or aiding the Beriḥah network to smuggle people across a gauntlet of European borders to Palestine. Decades later, Menachem Rosensaft, a child of Bergen-Belsen and then a leader in the so-called Second Generation movement of children of survivors, recalled how his father, Joseph, an Auschwitz survivor, governed the Bergen-Belsen camp, organizing cultural and political activities, rooting out collaborators, and defying the British overseers, as he did when they attempted to transfer two groups of refugees to squalid camps. In effect, he said, from 1945 to 1950, his father had been the mayor of a largely autonomous Jewish community with its own schools, hospitals, and police force. In some instances, refugees directed the smuggling of arms to the *Haganah army in Palestine that was pressing the British to give Jews a state or trained for the Haganah using arms given to the refugee camp policemen.

Most importantly, the refugees revived family life, marrying and bearing children. The marriages were as often arranged out of convenience and desperate loneliness as out of romance, but that they took place at all signified a determination to carry on with life. The United States Holocaust Museum and Memorial has a singular wedding dress used by Lilly (Laks) Friedman, who survived Bergen-Belsen and was married in January 1946 near that camp. Because supplies were so scarce, her husband-to-be managed to scavenge a parachute from a German airman which Lily, trading her cigarette rations for the services of a dressmaker, converted to a dress. The dress was eventually borrowed by as many as 20 other refugee brides.

The DPs, most in their early twenties and thirties, also had thousands of children, making the DP camps, by some reckoning, the world's most fertile spot between 1946 and 1948. Historian Yehuda Bauer wondered decades later how the survivors summoned the strength and spirit to recapture life with such speed after spending years in the realm of death. Sam Norich, who was born in the Feldafing DP camp and went on to become the publisher of the *Forward* newspaper in the United States, offered a theory based on the Hebrew term originally used for the DPs, the *She'arit ha-Pleitah*, the surviving remnant. They saw themselves as the remnant that perpetuates, that redeems the family and the community as a whole, the community from which they came, he said in a speech in 2002.

It seems clear that the refugees were eager to see the establishment of a Jewish state, one that at a minimum would resolve their homelessness. In July 1945, 94 delegates from Jewish assembly centers held a conference at the St. Ottilien camp near Munich calling for the immediate establishment of a Jewish state in Palestine. More official entities also focused on this solution. Harrison proposed that the British accept 100,000 Jews into the territory of the British Mandate for Palestine and what was known as the Anglo-American Committee of Inquiry recommended in April 1946 that the British government immediately grant the Jewish refugees 100,000 immigration certificates to Palestine. Despite these pressures, the refugees in the British Zone were given only 6,000 immigration certificates until the establishment of the State of Israel and other zones received only 1,460. Therefore illegal immigration became the only option for most refugees.

The moral pressure of this mass of Jewish displaced persons – a problem that could not be solved without the creation of a Jewish homeland – is now regarded as having been crucial in persuading the British to hand over its mandate in Palestine to the United Nations in 1947 and in persuading President Harry S. Truman to push for the creation of Israel despite the resistance of his own State Department. Jewish leaders in Palestine agreed to settle for a partitioned country rather than a whole loaf of the land because of the unresolved situation of the refugees.

The creation of Israel did indeed begin solving the refugee problem. By the beginning of 1950, 75,000 Jewish DPs had made their way to Israel. Meanwhile, other countries like Australia and Canada opened their doors to take in refugees. In America, admission of Jewish refugees was notably grudging. One might have thought that given the failure of the United States to admit the imperiled Jews of Germany before the war and to admit refugees during the war that after the war the doors would have been opened generously. But that was not the case. Many in Congress believed that the DP camps were filled with Communist sympathizers; other legislators simply did not want to admit more Jews. President Truman issued a directive in December 1945 mandating preferential treatment in the immigration laws for displaced persons. But as of June 30, 1947, only 22,950 visas had been issued to DPs in Germany, just 15,478 to Jews. In 1948 Congress passed a law that gave preferential admission to DPs who had held that status as of December 22, 1945, a date that effectively excluded most Jews. Provisions in the law also gave preferences for entry to Baltics, Ukrainians, and ethnic Germans, some with collaborationist backgrounds, and people working at occupations like agriculture in which Jews were not heavily represented. The law was amended in 1950, with a later cutoff date, but still only 16 percent of the 365,000 visas issued to DPs between July 1, 1948, and June 30, 1952, were issued to Jews. All told, fewer than 100,000 Jewish DPs reached the United States as a result of the Truman directive and the two DP acts, historian Leonard Dinnerstein reported.

Still, the laws produced a fresh cohort of immigrants – 140,000 of them from all sources between 1946 and 1953 – who brought an unusual spice to the American stew. These Jews were different from the more established descendants of the

so-called Lower East Side generation of the late 19th century in everything from accent to the depth of sorrowful experience. A study published in 1992 by the sociologist William B. Helmreich, *Against All Odds: Holocaust Survivors and the Successful Lives They Made in America*, found that despite the brutality of their wartimes experiences and the many years they lived in limbo afterwards, the survivors amassed an impressive record of achievement. At first the American DPs took jobs in the blue-collar industries like garment manufacturing and used their small nest eggs to purchase candy stores and laundromats, and a significant proportion went on to earn fortunes in real estate and other business enterprises. By 1989 more than 34 percent of the survivors reported earning $50,000 annually, far higher than the national average. They divorced less than American Jews and had more children. They formed strong friendships and social networks. Their children adjusted well, worked hard in school, and went on to successful lives of their own. Children of displaced persons who achieved national fame include Daniel Libeskind, who designed the Ground Zero replacement for the destroyed World Trade Center; Wolf *Blitzer, a leading anchor and correspondent for CNN; Hadassah Lieberman, wife of Senator Joseph *Lieberman of Connecticut, who ran unsuccessfully for the vice presidency of the United States often mentioning his wife's Holocaust roots; and Sam Gejdenson, who became a Democratic congressman from Connecticut. As a result, the story of the displaced persons may ultimately be seen as a story of the steely resilience of the human spirit and its ability to recover from the unspeakable.

DISPUTATIONS AND POLEMICS. This entry is arranged according to the following outline:

Up to early modern times dialogue between members of different faiths attempted either to prove the superiority and absolute validity of one faith over the other, or to defend the totality of one faith and its Holy Scriptures, or elements in them, against questioning and criticism by believers in another faith. In some cases the representative of one side has been put on a quasi-legal trial to justify his convictions, as often happened to Jews in the Middle Ages. Disputations and polemics between believers of the three monotheistic faiths – Judaism, *Christianity, and *Islam – inevitably start from and return to the common ground of the Hebrew Bible and certain religious concepts held by all three, but always in order to confute the opposing view and prove the validity of the proponent's argument.

In recording the most open public disputation to take place in the Middle Ages, that of *Barcelona in 1263, the Christian account stresses that the object of the disputation was not to question the validity of Christianity, "which because of its certainty cannot be subjected to debate" (*que propter sui certitudinem non est in disputatione ponenda*).

This was to remain the ultimate standpoint of disputants throughout the centuries. As late as 1933, a representative of Protestant Christianity, Karl Ludwig Schmidt, declared to his Jewish partner, as representative of German Jewry, the Zionist and philosopher Martin *Buber, in a Christian-Jewish dialogue before a gathering of Jews: "The evangelical theologian who has to talk to you, must talk to you as a member of the Church of Jesus Christ, must endeavor to talk in a manner that will convey the message of the Church to Jewry. He must do this even if you would not have invited him to do so. The assertion of a mission to you may have a somewhat bitter taste as if intending an attack; but such an attack precisely involves caring about you as Jews – so that you may live with us as our brethren in our German fatherland as throughout the world" (*Theologische Blaetter*, 12 (1933), 258; and see below). This liberal German theologian found it necessary to declare at the outset of the debate the missionary character of Jewish-Christian disputation.

Despite the self-assurance and aggressiveness implicit in this attitude, both sides were inevitably influenced to a certain degree by the dialectics of their opponents. At a very early stage of the Jewish-Christian debate this challenge was perceived in a Midrash which relates that "the **minim* [i.e., early Christians] were continuously disputing with Rabbi Judah, the son of Nakosa: they would ask him and he would answer them … When he was called [to Heaven] his pupils said to

him: Rabbi, you were helped from on High and were victorious. He said to them: '… Go and pray for this … basket that was full of diamonds and pearls and now is full of burnt-out charcoal'" (Eccles. R. 1:8, no. 4).

Disputations sometimes started from a casual encounter, sparked off by an actual problem or object noticed. Sometimes, in particular from the 13th century in Europe, they were formally conducted in public. Authors of polemical literature like *Judah Halevi employed the artificial framework of the disputation to set forth their arguments. Alternatively, the dialectic climate of an actual disputation led to systematic theological formulations such as the *Sefer Ikkarim* (Book of Principles) of Joseph *Albo (see below) or *Cur Deus homo* … of *Anselm of Canterbury. The reports and impressions of the actual disputations that have been preserved are conflicting. The same motifs tend to recur time after time, any variation reflecting the spirit of the times, personal interests, or particular circumstances.

The history of disputations and their content, while concomitantly a record of constant tension and deliberate animosity, is also a process of continuous mutual interpenetration of ideas and influence stimulated by this tension.

In the Pagan Environment

In biblical times, the pagan polytheism of the period precluded the holding of any discursive dialogue of this nature. Claims are made asserting the might of one deity or deities above those of others, usually uttered in the heat of war after victory. Jewish monotheistic prophecy makes frequent use of scathing and ironical polemics to denounce polytheism and idolatry.

However, in the cultural milieu of the Hellenistic Roman world, Jewish monotheism was challenged by missionary Hellenistic philosophy and beliefs. Thus the Mishnah records that pagans asked the elders (in Rome): "If God does not desire idolatry why does He not destroy it? They answered: If men had been worshipping objects unnecessary for the cosmos He would have destroyed them, but they worship the sun and moon and the stars and the planets. Should He destroy His world because of fools? They [the pagan questioners] said to them: Then let Him destroy those objects [of pagan worship] of which the cosmos has no need, and leave only those necessary for the cosmos. They answered: Then the arguments of the worshipers of those [necessary objects] would have been strengthened, for they would say: these are divinities, for they have not been destroyed" (Av. Zar. 4:7).

The exclusiveness and superiority claimed for Jewish monotheism against idolatry are developed in the following disputation: "A *philosophus* asked Rabban Gamaliel: Your Bible states 'for I the Lord thy God am a jealous God.' Is there any merit in idolatry to give rise to jealousy? A hero is jealous of a hero, a sage of a sage, a rich man of a rich man; hence there must be merit in idolatry since it provokes jealousy. He answered him: If a man called his dog by the name of his father, and wanting to take an oath takes it on the life of the dog, of whom would the father be jealous, of the son or of the dog?" (Mekh., Ba-Ḥodesh 9). Details of Jewish worship also enter the disputation, as when "a Gentile asked Rabban *Johanan ben Zakkai: Those things that you perform resemble a kind of magic – you take a cow, slaughter it and burn it, and keep its ashes; and when one of you has become defiled by contact with the dead they sprinkle him two or three times [with water mixed with the ashes] and say, 'You have been purified.'" In replying to the Gentile R. Johanan drew a comparison with similar rituals employed in exorcism. To his own pupils, however, he explained it as an act of faith: "The dead does not defile nor does water purify; it is just a decree of the King of Kings. The Almighty, Blessed be His Name, said: This is my order, this is my rule, and no man may transgress it" (PdRK 40a–b).

Gradually the motif of Jewish weakness and dispersion was introduced into the argument against Judaism. When a certain "heretic" stressed that although the Jews were at the mercy of Rome, the Gentiles refrained from destroying them, he was answered by R. *Hoshaiah: "This is because you do not know how to carry this out. If you [seek to] destroy us all, we are not all to be found within your borders. [If you seek to destroy] only those within your borders you would be reputed a maimed empire. [The heretic] answered: By the body of Rome, we are engaged constantly with this problem" (Pes. 87b). This last motif, in stressing the enmity of the Romans and the dispersion of the Jews in both the Roman and Persian empires, seems to sound the note of the emerging predominance of Christianity.

The Talmud sometimes ascribes legendary disputations to biblical figures, for instance between Abraham and Nimrod. There are also accounts of litigations, supposed to have taken place before courts of law and kings, between representatives of the Jewish people and other claimants to the Land of Israel. *Josephus tells about litigation that took place between the Jews of *Alexandria and the Samaritans "in the presence of Ptolemy himself, the Jews asserting that it was the Temple at Jerusalem which had been built in accordance with the laws of Moses, and the Samaritans that it was the Temple on Mount *Gerizim. And they requested the king to sit in council with his friends and hear their arguments on these matters" (Jos., Ant., 13:74–75; and see the argumentation, 75–79).

Some sages appear in talmudic literature as having engaged in disputations that not only concern the Jewish faith and way of life but also show to advantage the breadth of knowledge and acuity of Jewish scholarship, for instance, *Joshua b. Hananiah (see Ḥag. 5b; Ḥul. 59–60b; Bek. 8b–9a).

THE CHRISTIAN ENVIRONMENT AND MISSION The developing cleavage between Christianity and Judaism, until the final parting of the ways in the second century, led to increasing disputation between Christians and Jews. The lists of *testimonia* from the Hebrew Bible prepared by early Christian teachers consist of biblical quotations to be used not only to convince pagans but also, in most cases, to persuade Jews to accept the Christianity clauses. With the growing distance

between Christian and Jewish theological concepts and ways of life, the disputations became more formal and were noted down. The early disputations in the form of independent treatises are written down by the Christian side although fragments and impressions of such disputations are on record in talmudic literature (Mekh. Shira, 7; Ba-Ḥodesh, 5; Kaspa, 3; Mekh. Sb Y, to Shemot, p. 2; Sif. Deut. 87–91, 306; TJ, Ber. 9:1, 12d–13b; TJ, Ta'an. 2:1, 65b; TJ, Sanh. 1:1, 18a; TJ (Venice, 1523), Sanh. 13:9, 23 c–d; TJ, Sanh. 10:1, 27d–28a; Ber. 7a, 10a, 12a–b; Shab. 88a–b, 116a–b; Pes. 56a; Er. 22a; Suk. 48b; Ta'an. 27b; Ḥag. 5b; Yev. 102b; Sot. 47a; Git. 57a; Sanh. 38b–39a, 43b (in *Ḥesronot ha-Shas* in "El ha-Mekorot" ed. of the Talmud, 1963), 98b–99a, 106a–b; Av. Zar. 4a, 6a–b, 17a; Tosef., Hul. 2:2; Eccles. R. 1:8, no. 4; 2:1, nos. 1, 2; 4:8, no. 1; Song R. 7:3). The challenges and pressures of these disputations in the world of the *amoraim* (third to fourth centuries) are projected in the explanation given by *Abbahu, the celebrated disputant with the Christians at Caesarea, to Christians who questioned the learning of a scholar from Babylonia: "We [i.e., the scholars of Ereẓ Israel] who are living with you regard it as our task to study [Scripture] thoroughly. They [the scholars of Babylonia] are not so well versed" in it (Av. Zar. 4a). Representing the Christian view is a work well-known by around 500, the *Altercatio Simonis Judaei et Theophili Christiani* (ed. by A. v. Harnack, Leipzig, 1883). Although the text was subsequently lost for centuries the form of the *Altercatio* and the arguments put forward there influenced later Christian presentations of disputations with Jews.

DIALOGUE WITH TRYPHON. Of fundamental importance both for the authority it carries and the arguments met there is *Justin Martyr's Dialogue with Tryphon held about the time of the *Bar Kokhba revolt and written down between 156 and 161. While the argument of general issues and detailed points is sharp and bitter in this early discussion between Christians and Jews, the relationship between the disputants is represented as one of mutual courtesy. They part with an acknowledgment by the Jewish debater that he has "been extraordinarily charmed with our intercourse," with Justin stating that the Jews "departed, finally praying for my deliverance both from the dangers of the sea, and from all ill. And I prayed also for them, saying: I can make no greater prayer for you, Gentlemen, than this, that …you may do in all respects the same as we, acknowledging that the object of our worship is the Christ of God" (Justin Martyr, *Dialogue,* 142:1–3, Eng. trans. by A.L. Williams (1930), 289).

Even so, politeness does not hinder Justin from hurling at the Jews their harsh fate, at a time of life and death struggle with Rome, which he saw as the punishment designated by their Law: "The circumcision according to the flesh, that was from Abraham, was given for a sign, that ye should be separated from the other nations and us, and that ye alone should suffer the things that ye are rightly suffering now, and that your lands should be desolate and your cities burned with fire, and that foreigners should eat up the fruits before your face, and none of you go up unto Jerusalem. For by nothing else are ye to be known from other men, save by the circumcision that is in your flesh …. All this has happened to you rightly and well. For ye slew the Just One and His prophets before Him, and now ye reject, and, as far as in you lies, dishonor those that set their hope on Him …, cursing in your synagogues them that believe in Christ" (*ibid.*, 16:2–4, pp. 32–33). He also frequently explains other precepts as having been given to the Jews to their detriment: "Now because of your sins and those of your fathers God charged you to keep the Sabbath as a sign … and has also given you His other ordinances" (*ibid.*, 21:1, p. 42). The true meaning of the Torah and commandments enjoined in the Prophets is to be found in their Christological, spiritual-figurative sense. Physical rest could not really be enjoined on Saturday, for "you see that Nature does not idle nor keep Sabbath. Abide as ye have been born" (*ibid.*, 23:3, pp. 47–48). The stubborn and sinful Jewish people continue in existence only because God "has not yet brought the Judgment, nor has begun to bring it, because He knows that every day some [of the Jews] are becoming disciples unto the name of His Christ, and are leaving the way of error" (*ibid.*, 39:2, p. 77). Justin categorically rejects any form of Judeo-Christianity (*ibid.*, 46:1–2, p. 90; 47:1–2, pp. 93–95; see Jewish *Christian sects). A large part of Justin's argumentation consists of *testimonia* from the Prophets adduced in evidence of the validity of Christianity. His methods of dialectic and manner of presentation became the prototype of later Christian argumentation against Jewry and Judaism.

Tryphon objects in principle to the method of adducing Christological *testimonia* from the Hebrew Bible: "Why do you select for citation only such parts as you choose out of the sayings of the Prophets, and make no mention of those [that do not fit the Christian view]," and brings examples to prove his point (*ibid.*, 27:1, p. 53). Justin was fully aware that the main concern of responsible Jews at this critical period was not discussion of Greek beliefs or philosophical debate. Thus he describes how "Tryphon's companions sat down opposite, and after one of them had made a remark about the war in Judea, they conversed about it" (*ibid.*, 9:3, p. 20). However, the Jew regards philosophical paganism as preferable to superstitious Christianity: "It were better for you to continue to hold the philosophy of Plato or of some other learned man … than to have been completely led away by false speeches, and to follow men of no account. For while you remained in that mode of philosophy and lived a blameless life, a hope was left you of a better fate, but when you forsook God, and placed your hope on a man, what kind of salvation yet remains for you?" (*ibid.*, 8:3, p. 17). The Christians suffer persecution for their credulity: "You people, by receiving a worthless rumor, shape a kind of messiah for yourselves, and for His sake are now blindly perishing" (*ibid.*, 8:4, p. 19). The true hope of salvation lies in strict fulfillment of the Law: "First be circumcised, then … keep the Sabbath and the Feasts and God's New Moons, and, in short, do all the things that are written in the Law, and then perchance you will find mercy from God" (*ibid.*, 8:4, p. 17).

Not only is the Christian method of citation and evidence seen as falsifying the words of the Hebrew Bible by removing them from their context and failing to have regard for the spirit of the Hebrew language, but many of the events related by Christians and the interpretations they give are regarded as blasphemous and foolish. When Justin insulted the Jew by quoting the words of the Bible according to the version of Paul, which stigmatizes the Jews as prophet-killers, and added the remark referred to above that the Jews are still permitted to exist because of those among them who convert to Christianity, Tryphon interjected: "I would have you know that you are out of your mind when you say all this" (*ibid.*, 39:1–3, p. 77). To the long list of *testimonia* cited by Justin on the prophecies relating to Jesus and his primordial divinity, the Jew reacts: "You say many blasphemous things, thinking to persuade us that this man who was crucified has been with Moses and Aaron, and has spoken to them in a pillar of cloud, that he then became man and was crucified, and has ascended into Heaven, and comes again on earth, and is to be worshipped" (*ibid.*, 38:1, p. 75). Belief in incarnation and crucifixion in relation to the preexistent Divinity is rejected as irrational: "For your assertion that this Christ existed, and was God, before all ages, then that He was even born and became man and suffered, and that He is not man by origin, seems to me to be not only strange but even foolish" (*ibid.*, 48:1, p. 95). The Christian claims for Jesus amount to an attempt to "prove to us that the existence of another God besides the Maker of the universe is recognized by the spirit of the Prophets" (*ibid.*, 55:1, p. 108; and see also 50:1, p. 100). The interpretation given by Justin to "*ha-almah*" in Isaiah 7:14 to mean "the Virgin" (*Dialogue*, 66, pp. 138–139) is corrected by Tryphon who states that its actual meaning is "the young woman" and places the prophecy in its historical context in the reign of King Hezekiah. He adds that the Christian concept of a virgin birth is pagan in origin and character: "Among the tales of those whom we call Greeks it is said that Perseus had been born of Danae, still a virgin, by him that they entitle Zeus flowing down upon her in the form of gold. And in fact you ought to be ashamed of saying the same sort of things as they, and should rather say that this Jesus was a man of human origin, and, if you prove from the Scriptures that He is the Christ, [say] that because of his perfect life under the Law he was deemed worthy to be chosen to be Christ. And do not dare to assert marvels, that you be not convicted of talking folly like the Greeks" (*ibid.*, 67, pp. 139–140). Hence it would seem, according to Justin's rendering, that Tryphon would have found some satisfaction in a Christianity which recognized Jesus as the human redeemer of the Gentiles alone. Tryphon tries at some length to elicit Justin's attitude regarding whether Judeo-Christians should observe the Law (*ibid.*, 46:1, p. 90; 47:1–2, p. 93; and see above Justin's rejection of the Judeo-Christians). According to Justin's account, Tryphon expressly proposed: "Let Him be recognized of you who are of the Gentiles as Lord and Christ and God, as the Scriptures signify, seeing also that you have all acquired the name of Christians from Him. But as for us, who are worshipers of God who made even Him [Jesus], we do not need to confess Him or worship Him." Anger at this proposition provoked Justin into a rare outburst of personal invective against his Jewish opponent (*ibid.*, 64:1–2, p. 133). Tryphon pointed out that the messiah awaited by the Jews was a king-savior, not a redeeming God: "For all of us Jews expect that the Christ will be a man of merely human origin, and that Elijah will come and anoint Him" (*ibid.*, 49:1, p. 97). The King will come to his people, the descendants of Abraham. When Justin quotes to him from *testimonia* that the messiah will come to Israel, Tryphon asks what that implies: "Are you Israel, and does He say all this about you?" (*ibid.*, 123:7, p. 256).

This relatively early encounter between a separated Christianity and Judaism establishes the main themes and groundwork of future Jewish-Christian *testimonia*, the polemical statements by Tertullian against the Jews in the same century, and the fragments of Jewish-Christian disputation found in tannaitic and amoraitic literature mentioned above. Constantly recurring subjects in disputation from the end of the second century, therefore, are the significance of "*Bereshit*" ("In the beginning") and of "*ad ki yavo Shiloh*" (Gen. 49:10). Are the Just Men and Patriarchs who lived before the giving of the Torah to be regarded as observers of the Law or not? Why was the Law given to the Jews? For their benefit, or as a punishment? Is the true meaning of the Law and the Prophets to be elicited by a "literal" or a "spiritual" interpretation? What is the significance of the use of the plural form in referring to the Divine in the Bible? Is it intended to convey the concept of Trinity? Who is "the suffering servant of God" in Isaiah 52 and following? What is the correct translation of "*ha-almah*"? Although variations of these questions occur, this was to remain the exegetical core of Jewish-Christian disputation. The fate of the Jewish people, the course of history and empires, and war and peace in the world enter and are developed in the debate at a later stage. Although as yet not clearly defined, certain attitudes are already embryonic: the Jewish objection to the concept of the Trinity as being inherently idolatrous, and to incarnation as insulting to the divine nature of God; the insistence on the Jewish side that understanding of Scripture should be based on a comprehensive knowledge of the original language without depriving the words of their literal meaning or isolating them from their context. There also emerge the mystic-fideistic standpoint of the Christian side, the critico-rationalistic approach of the Jewish side; the universalist-individualistic claims of Church spokesmen against the Jewish concept of Israel as a national "natural-historical cell," the "kingdom of priests and holy nation" entrusted in this social pattern to carry the Divine call to the world.

CELSUS. Also dating from the early period of the disputations are the somewhat dissimilar strands of anti-Christian argumentation quoted by *Celsus in his anti-Christian polemic written about 178. There the Jew is reported to have said: "I could say much about what happened to Jesus which is true, and nothing like the account which has been written

by the disciples of Jesus" (in Origen; *Contra Celsum*, translated and edited by H. Chadwick (1953), 2:13, p. 78). Celsus' record, which contains numerous extra-New Testamentary details and innuendoes adverse to Jesus, in some way prefigures the later polemical version of Jesus' life and death, **Toledot Yeshu* (Origen; *Contra Celsum*), 1:28, pp. 27–28; 1:32, pp. 31–32; 1:38, p. 37; 1:67, p. 62; 2:8, pp. 71–72; 2:9, p. 73; 2:15, p. 81; 2:16, pp. 81–82; 2:26, p. 90; 2:27, p. 90; 2:32, p. 93; 2:34, p. 94; 2:44, p. 100; 2:46, p. 101; 2:55, p. 109; 2:70, p. 121). The Jew also repeats many of the anti-Christian arguments used by Tryphon and the *amoraim*. In addition, he is quoted as sharply condemning Jewish *apostasy to Christianity, saying: "Why do you take your origin from our religion? And then, as if you are progressing in knowledge, despise these things although you cannot name any other origin for your doctrine excepting our Law" (*ibid.*, 2:4, p. 69; and see also 2:1, pp. 66–67). He attacks the concept of the resurrection of Jesus, in particular comparing it to similar pagan legends (2:55, p. 109), and adds: "While he was alive he did not help himself, but after death he rose again and showed the marks of his punishment and how his hands had been pierced. But who saw this? A hysterical female, as you say, and perhaps some other one of those who were deluded by the same sorcery, who either dreamt in a certain state of mind and through wishful thinking had a hallucination due to some mistaken notion (an experience which has happened to thousands), or, which is more likely, wanted to impress the others by telling this fantastic tale, and so by this cock-and-bull story to provide a chance for other beggars" (*ibid.*). His attack on resurrection is continued by the argument: "But if he really was so great he ought, in order to display his divinity, to have disappeared suddenly from the cross" (*ibid.*, 2:68, p. 118). The Jew continues: "Where is he then, that we may see and believe?" (*ibid.*, 2:77, p. 126). He uses Jesus' rejection by the Jews as an argument against his divinity: "What God that comes among men is disbelieved, and that when he appears to those who were waiting for him? Or why ever is he not recognized by people who have been long expecting him?" (*ibid.*, 2:75, p. 123).

The problems raised here denote the type of argumentation used by Jews against Christians in the Christian-Judeo-Pagan triangle of the second half of the second century. When Judaism alone remained face to face with Christianity much argumentation of this category was omitted in the direct confrontation.

In the fourth century, the rise of Christianity to imperial dominion in the late Roman Empire, the shock of *Julian "the Apostate's" revolt against this domination, and the fire and smoke of internal Christian doctrinal battles, were accompanied by bitter and brutal denunciation of Judaism and the Jews, their character, and way of life by *John Chrysostom, *Eusebius, and other fathers of the Church. Not only was the concept of divine election now claimed for the Church only, as the "spiritual Israel," but it was categorically denied to the historical Jewish people, leaving the title only to those of the nation who were considered "Christians before Christ," like the Patriarchs and the Prophets. Much of the argumentation in the talmudic literature cited above was in answer to this mode of attack.

At the beginning of the seventh century, the tensions in Erez Israel between Jews and Christians, the Persian invasion, and entanglement of a Jewish revolt in the Byzantine-Persian struggle (see also *Benjamin of Tiberias, *Heraclius; *Jerusalem) are reflected in the controversial tract *Doctrina Iacobi nuper baptizati,* written about 640 (ed. by N. Bonwetsch, Berlin, 1910).

In the Christian and Muslim Medieval Milieu

GREGORY OF TOURS AND PRISCUS. The changed atmosphere at the courts of the German Christian rulers in Europe, and the standpoint of an educated Jew there, emerge in the account of a disputation recorded by Bishop Gregory of Tours in his *Historiarum Libri decem* (6:5; ed. R. Buchner, pp. 8–13). The Jewish merchant *Priscus in 581 was confronted with the bishop in the presence of King Chilperic, who initiated the disputation, in an attempt to win the Jew to Christianity. Gregory rests his argument on chapter and verse while the Jew puts questions and cites contrary biblical testimony. Priscus said to the king: "God did not enter into marriage and did not bring forth a son, neither can he have a partner to his sovereignty, as Moses says: 'See now that it is I, even I, and there is no God with Me. I put to death and I make alive; I strike and I heal'" (*ibid.*). And again: "Can God be man, can He be born of woman? Can he suffer beatings and be sentenced to death?" (*ibid.*). At this point the bishop intervened to cite lengthy Christological *testimonia*, and the Jew asks: "What necessity was there for God to suffer in such a manner?" To the bishop's explanation that He did so in order to save mankind from sin and reconcile man with God, the Jew rejoined: "Could not God send prophets or apostles who would bring man back to the way of salvation? and had He only the means of humiliating himself in the flesh?" (*ibid.*).

With the growth of Christian power, its clash with the conquering armies of Islam, and the consequent changes in the Jewish fate, theological argument was increasingly related to the actual historical situation. The letters of Archbishop *Agobard of Lyons against the Jews include fragments of disputations he had with them. The conversion of the Christian priest *Bodo-Eleazar to Judaism not only provoked his own vituperative anti-Christian polemics but is also evidence of the meetings and disputations which took place between Jews and Christians at the court of Emperor *Louis the Pious.

A large portion of both Jewish and Christian biblical exegetical literature, and Jewish liturgical works – *piyyutim, seliḥot*, and *kinnot* – contain polemical argument with religious, historical, and social overtones.

Under Islam, in particular in *Baghdad of the tenth century where both Jews and Christians were in the position of a minority, disputations between the two, as well as between Jews and Muslims, are found taking place in a relatively open atmosphere. *Saadiah Gaon's Arabic work *Book of Beliefs and*

Opinions incorporates and summarizes much of the argument in these disputations. His works also convey the main line adopted in Jewish *Rabbanite controversy with the *Karaites. The writings of the Karaites *Daniel b. Moses al-Qūmisi, Abu-Yusuf Jacob al *Kirkisānī, *Sahl b. Maẓli'aḥ ha-Kohen, and *Salmon b. Jeroham contain the Karaite attack on Rabbanite tradition. Many of the Karaite arguments against the Talmud, the anthropomorphic legends, contradictions, and immoral views found there, later became part of the Christian arsenal for attack on the Talmud.

GILBERT CRISPIN. About five years before the catastrophe brought on Jewry by the First *Crusade a disputation took place in England between the abbot of Westminster, Gilbert *Crispin, and a Jewish scholar. The latter, who had studied at Mainz, came there both for business and in order to meet Gilbert, who regarded the Jew as a personal acquaintance (*mihi familiaris*). He records, "Each time that we would meet, immediately [*mox*] we would have a talk [*sermo*] in a friendly spirit [*amico animo*] about the Holy Scriptures and our faith." Gilbert noted that the answers of the Jew seemed logical and worthy to those present at the discussions to be preserved. He therefore wrote down both sides of the disputation, and sent the text to Anselm, archbishop of Canterbury (*Gisleberti Crispini Disputatio Judei et Christiani;* ed. by B. Blumenkranz, Utrecht (1956), 27–8). It was the wish of both sides to hold the talk "in a tolerant spirit" [*toleranti animo*], as the Jew phrased it, while Gilbert calls for discussion "in a patient spirit" [*animo patienti*] guaranteeing to dispute "for the cause of faith and out of love to thee" (*fidei causa et tui amore*, 28–29). The atmosphere of tolerance in which the disputation was held makes it a valuable record. In addition to the discussion of former points raised in disputations between Jews and Christians, the Jew stresses the anomaly of the position accorded to Jews in Christian countries: "If the Law is to be kept [as the Jew had argued previously], why do you regard its keepers like dogs, pushing them with sticks and persecuting them everywhere?" (*ibid.*, 28). The troubled state of the world is brought as evidence against accepting Jesus as the messiah, since it contradicts the words of the prophet: "and they shall beat their swords into plowshares …." He states: "The iron with difficulty suffices the smiths for the preparation of weapons. All over the world, nation fights with nation, neighbor oppresses his neighbor and kills him. One king wars with the other" (*ibid.*, 34). Apparently describing paintings that he has seen in the Church the Jew points out: "God Himself you paint as the Man of Sorrows, hanging on the cross, pierced with nails – a terrible sight and yet you adore it… Again sometimes you paint God enthroned on high gesturing with outstretched hand, and around him – as if for greater glory – an eagle and a man, a calf and a lion; yet all this is forbidden in Exodus 20:4" (*ibid.*, 65). There is evidence of a certain interpenetration of ideals. The Christian responds to the Jew's condemnation of the warlike society of his environment by holding up monastic ideals: "There are many men of war and wrath who have left fighting and temporal riches and have turned to serve God in poverty" (*ibid.*, 38). When the Jew claimed that the Law was given to be observed the abbot pointed to Christian asceticism: "There are many of us who abstain not only from eating pork but from meat altogether" (*ibid.*, 35). On the other hand, the Jew not only insists that all the precepts of the Law should be observed but also reconciles it with the figurative understanding of the Scriptures: "Shall we condemn the letter [of the Law] because we listen to its figurative sense? And because we obeyed the letter, is there any sense in condemning the figure? We follow the letter and perceive also the figurative sense of the letter" (*ibid.*, 32). Even scholars who consider this dialogue a literary fiction would have to concede that in tone and content it expresses the spirit of arguments exchanged between Jews and Christians in a friendly atmosphere on the eve of the First Crusade.

CHRISTIAN RELIGIOUS DRAMA. The development of Christian religious drama in the 12th and 13th centuries permitted disputation with Jews to be presented in a popular dramatic form. In the Latin mystery play *Ordo Prophetarum*, a "reader" summons the Jews before him in the introduction to the Birth of Christ. The prophets appear one after the other, range themselves around the "reader," and quote passages considered to be Christological in content. In these debates the Jews are often led by an *archisynagogus*, while the prophets are led by the "reader" who in many plays is identified with *Augustine. Later, from the middle of the 12th century, beginning with the German *Ludus de Antichristo*, the rival disputants receive personification as *Ecclesia and Synagoga. Basically, all these dramas are disputations. The tone imputed to the Jews, particularly in later versions, is coarse and jeering.

CHRONICLE OF AHIMAAZ. Certain motifs in Jewish polemical literature which developed and changed over the centuries originated in reaction to the impressive display made by Christian religious life. The southern Italian 11th-century Chronicle of *Ahimaaz b. Paltiel tells of a disputation supposed to have taken place between the Jew *Shephatiah b. Amittai of Oria (ninth century) and the Byzantine emperor *Basil I concerning the beauty and splendor of the Church of Hagia Sophia in Constantinople. The Jew quotes from Scripture to prove that Solomon's Temple was even greater and more magnificent: "Then did the king say: 'Rabbi Shephatiah has overcome me in his wisdom'; and Rabbi Shephatiah answered: 'My lord, Scripture has been victorious over you and not I'" (*Megillat Aḥima'aẓ*, ed. by B. Klar (1944), 21).

12TH CENTURY. From the 12th century, apparently, chance encounters between Christians and Jews might often flare up into religious arguments. Both Jewish and Christian writers prepared manuals for the use of simple people of their faith when encountering arguments of the other side. In Christian literature this led to a long line of polemical writings against the Jews (*Adversus Judaeos*, a type that originated much earlier), intended for this purpose, some in the form of a dialogue.

In Jewish literature, such manuals are generally entitled *Sefer Niẓẓaḥon*, being the outcome of former chance encounters and a preparation for future ones. The subject matter of these books and the methods employed by both sides largely follow traditional lines, although concrete situations and new themes may interpose themselves.

Joseph *Kimḥi not only defends the Jewish way of life of the 12th century (see *Apologetics) but also indicates how a Jewish patrician saw the mainly feudal Christian patterns of behavior: "You cannot claim that you are circumcised in heart, for he who … murders and whores and robs and molests people, ridicules them and behaves like a brigand, is uncircumcised in heart. Hence you are uncircumcised both in heart and body and Israel is circumcised both in heart and body. For ye will not find a Jew whom they [the Jews] will hang, neither will they gouge out his eyes, nor will they mutilate one of his members for any transgression that he may have committed" (*Sefer ha-Berit*, in: *Milḥemet Ḥovah*, Constantinople, 1710, 26b). "You see with your own eyes that the Christian goes on the road to meet strangers, not to honor them but to seize all their provisions" (*ibid.*, 21a). "Even of your priests and bishops who do not take wives, it is well known that they whore" (*ibid.*, 21b).

In the 12th–13th-century *Sefer Niẓẓaḥon Yashan* there is a discussion in relation to the Cathedral of Speyer between Kalonymus and Emperor Henry II. Here the Jew again quotes chapter and verse to prove that the Temple surpassed the cathedral in greatness but the argument ended with an embittered denial of the sacredness of the cathedral precincts: "After Solomon built the Temple and finished it, it is written, 'the priests could not stand to minister by reason of the cloud; for the glory of the Lord filled the house of the Lord.' Yet if they were to load dung on a donkey and lead him through this cathedral nothing would happen to him" (J.C. Wagenseil (ed.), *Tela ignea Satanae* (1681), 41–42). Some arguments in this tract appear to be directed to Christian circles opposed to the Church establishment. The Jewish adversary is advised to cite certain verses in Isaiah to "those monks and priests that have taken into their hands the whole land … that rise early and stay late in their church for their payment that is called praebenda" (*ibid.*, 82). The problem of saint adoration and miracles performed by saints is dealt with at length (*ibid.*, 128–32). The Jewish disputant is advised to tell his Christian adversaries that one proselyte to Judaism who accepts the Jewish way of life and the Jewish fate of humiliation and suffering achieves greater glory for Judaism than many apostates to Christianity who gain materially and socially by their apostasy (*ibid.*, 242–3). As treated by Jacob of Venice (*Yeshurun*, 6 (1875), 1–34) and *Jacob b. Reuben (*Milḥamot ha-Shem*, ed. J. Rosenthal, 1963), this type of manual acquires a personal imprint. The *Sefer ha-Mekanneh* (fragments of which have been published in various learned periodicals and articles) is ascribed to three members of the Official family: the father Nathan b. Joseph *Official and his sons Joseph and Asher.

With the rise of the *Dominican order and the development of Scholasticism, disputation became the principal method of learned disquisition and was frequently used to combat the *Albigenses in the south of France.

IN MUSLIM COUNTRIES. The disputations held in the countries of Islam were, as mentioned above, much more diversified than those taking place in Christian countries. The *dhimmī (protected minorities) numbered many sects and creeds. Philosophical schools also took part in such disputations. While the argument was predicated on almost complete agreement between Muslims and Jews concerning monotheism, and opposition to Christian concepts such as incarnation, the Trinity, and icon worship, a consistently held principle of Muslim argumentation was that the Jews had falsified the original text of the Bible, having added to or subtracted from it. *Samuel b. Moses al-Maghribī, an apostate to Islam, fastened the major responsibility on Ezra the Scribe, arguing that the Torah given to Moses, which originally had been in the possession of the levites only, and known orally to the priests, had been destroyed: "When Ezra saw that the Temple of the people was destroyed by fire, that their state had disappeared, their masses dispersed and their Book vanished, he collected some of his own remembrances and some still retained by the priests, and from this he concocted the Torah that the Jews now possess. That is why they hold Ezra in such high esteem and claim that a light appears over his tomb … for he produced a book that preserves their religion. Now this Torah that they have is in truth a book by Ezra, and not a book of God. This shows that the person who collected the sections now in their possession was an empty man, ignorant of divine attributes. That is why he attributed anthropomorphism to God – regret over His past actions and the promise of abstention from similar acts in the future" (Samuel al-Maghribī, *Ifhām al-Yahūd* ("Silencing the Jews"), ed. and tr. by M. Perlmann, in: PAAJR, 32 (1964), 55). This attitude caused *Maimonides to forbid all religious disputation with Muslims "according to what is known to you about their belief that this Torah was not given from Heaven" (J. Blau (ed.), *Teshuvot Rambam* (1958), no. 149).

Apart from this problem of the authenticity of the text, and the anthropomorphisms the Torah was said to contain in its present state, Muslim-Jewish disputation mainly centered around charges of *anthropomorphism in the Talmud and attacks on the Jewish way of life, as for example made by the Muslim theologian Ibn Ḥazm. On their side the Jews attacked *Muhammad as "a madman" and described the *Koran as a book full of follies fit only for simpletons. Muslim pride and their oppression of the Jews were also bitterly castigated, in particular after the shock of the *Almohad atrocities in the 12th century.

THE 13TH-CENTURY DISPUTATIONS. By the 13th century the arguments used in ancient Christian, Karaite, and Muslim debate, and current trends of dialectic, culminated in a series of public disputations between Jews and apostates arranged with ceremonial splendor before royalty and high dignitaries of the

clergy. The first great debate of this type to be held was the disputation of *Paris (1240) between the apostate Nicholas *Donin and the tosafist *Jehiel b. Joseph of Paris, which centered on the Talmud. The arguments of the apostate were to a large extent a continuation and development of the anti-talmudic arguments of the Karaites. The Christian side regarded and conducted the disputation as a trial in which the Jews were called upon to defend their errors. It resulted in the burning of the Talmud. In 1263 there took place in Aragon the disputation of Barcelona. The apostate Pablo *Christiani led the Christian side. The Jewish side was represented by R. Moses b. Naḥman (*Naḥmanides). This disputation centered on the problem of the nature and coming of the messiah. A version of the disputation was recorded by Naḥmanides (published in various editions), who obtained the right to express himself freely in the debates. The apostate "said that he will prove from our Talmud that the messiah prophesied by the Prophets has already come." The nature and authority of **aggadah* were also a prominent issue. Naḥmanides, like the Jewish opponent of Gilbert Crispin and other Jewish disputants, not only stressed the warlike aspect of the world after the advent of Jesus but also added that war had become integral to feudal society: "And how difficult would it be for you, my lord the king, and for these your knights, if war was no longer learned." The Jew fearlessly questioned the nature of Christian authority and teaching: "The core of the contention and quarrel between the Jews and the Christians lies in that what you state concerning the dogma of the Divinity is a very bitter thing. And you, my lord king, are a Christian, the son of a Christian father and mother. You have listened all your life to what priests, Franciscans, and Dominicans tell about the birth of Jesus, and they have filled your mind, yea, your very bones, with this matter; and it has thus become ingrained in you through habit. Yet that which you believe – and it is the heart of your faith – reason cannot agree to, nature opposes, and the Prophets never said such a thing. Miracle also cannot extend to this … that the Creator of Heaven and Earth and all that is in them shall become an embryo in the womb of a Jewess, shall grow there for seven months, shall be born a tiny creature, shall then grow up and later be given over to his enemies, and that they will sentence him to death and kill him. And you say that later he has risen from death and returned to his first place. Such beliefs cannot convince either a Jew or any other human being. Thus your speeches are made in vain and emptiness, for that belief lies at the heart of our quarrel. But let us also talk about the messiah, if you want it so" (*Kitvei R. Moshe b. Naḥman*, ed. by H.D. Chavel, 1 (1963), 310–1).

15TH CENTURY. The last of these great spectacles was the long drawn-out disputation of *Tortosa (1413–14). The many representatives of Judaism, who were compelled by official command to come to Tortosa and stay there during the disputation, defended themselves with acumen, and, in the difficult circumstances following the massacres in Spain of 1391, acquitted themselves with considerable courage against the attacks and calumnies of the apostate Maestro Hieronymus de Sancta Fide (Joshua *Lorki), a former champion of Judaism in discussion and writing. The *Sefer Ikkarim* of Joseph Albo (see above), who participated in this disputation, is largely a summing up of the Jewish position taken there. In 15th-century Spain, when the Jews were subjected to the pressure of constant persecution and missionary persuasion, an impassioned polemical exchange developed. The sermons and writings of Vincent *Ferrer represent the most influential and penetrating presentation of the Christian side. Jewish writings attest that the breakdown of Jewish existence in Christian Spain seemingly contributed historical testimony in support of Christian supremacy, in addition to the traditional Christological argumentation. The persuasiveness of this line of thinking had already been strikingly demonstrated in the 14th century with the conversion of *Abner of Burgos (and see *apostasy). In the 15th century a series of Jews crossed over to Christianity to wage a bitter war on Judaism. In addition to Joshua Lorki, one of the most prominent was the former Rabbi Solomon ha-Levi, who as *Pablo de Santa Maria became archbishop of Burgos. His writings, and the sermons and argumentation of others like him, ultimately sealed the fate of Spanish Jewry. The exchange of views between estranged brethren introduced the genre of letter-exchange into the area of disputation from the 14th century.

On the Jewish behalf arose a witty and penetrating polemicist and satirist, Profiat *Duran. In his *Kelimat ha-Goyim* ("Confusion of the Gentiles") he makes a systematic attempt to show that early Christianity was a conglomeration of mistaken conceptions held by naive persons, exploited by, and supplemented with, the tales and ideas of later-day Christian "deceivers" who had shaped the present form of Christianity. His satirical *Al Tehi ka-Avotekha* ("Be not Like Your Fathers"), addressed to an apostate, presents apostasy as a process of tiredness and reaction from Jewish rationalistic, intellectual inquiry, coupled with attraction to the mystic doctrines of Christianity. These views are voiced here by the apostate who attacks the Jews: "Your fathers have inherited falsehood and were following foolishness; through overmuch inquiry their intellect has become disturbed … it appears to me [the Jew] that the Holy Spirit hovers over you [the apostate] in nightly vision and talks with you while awake …. Human reason does not draw you to its dwelling, the abode of darkness …. You regard it as alien, cruel as the serpent, the eternal enemy who injures faith … It was a reprobate who said that reason and religion are two lights. Reason has no part with us … it does not know the way towards light … Faith alone soars upward" (*Al Tehi-ka-Avotekha,* in: *Kovez Vikkuḥim,* ed. by Isaac b. Abraham Akrish, Breslau, 1844, 6b–7a).

The physician Ḥayyim Ibn Musa around 1460 wrote a systematic manual for Jewish disputation, directed formally against the writings of *Nicholas of Lyra and the works of the persecuting apostates and influenced by similar earlier works of Ḥasdai *Crescas and others. He was faced with the weight of Christian cultural achievement and theological literature in

Spain in a disputation with a Christian scholar in the presence of the grandee whom he attended as physician: "It happened that we three were sitting together and suddenly the abovementioned scholar said as an opening: 'Sir, surely you know that the Jews have one theological work only, called *Moreh Nevukhim*, whereas we have so many books on theology that even a palace as great as this would not contain them, if they were stacked from earth to heaven.' To this I remained silent. The lord ordered that I should answer him. Then I said, 'Jews have no need of such books; they need only a single page.'" Ḥayyim then briefly enumerates what he considers are the self-evident doctrines of Judaism, and continues: "In these doctrines all believe [i.e., Christians also]. Only concerning two or three dogmas is there some doubt. There is total difference in unity that you have made three … As to incorporeity, you say that the son became incarnate, but after his death everything returned to one Divinity … As to the changing of the Law, you say that he came to add and not to diminish, and our Torah says 'Ye shall not add to it neither diminish from it.' There is no quarrel between us that the messiah means salvation. Our dispute concerns only whether 'he has come' or 'he will come.' But to believe that God could not eradicate the Original Sin of Adam except through his own death, that He became incarnate in the womb of a woman, that His wisdom could not find a way to atone for this sin except through His death, that He suffered so much abuse and pain until He died – and that after all this and despite all this men still die and go to Hell, both Christians and the sinners, all the books in the world will not convince intelligent people, and in particular those who have grown up in the way of the Torah … therefore the Jew requires only a single page for theology, for its plain meaning agrees entirely with reason" … "Then both of us fell silent and the lord was amazed at this speech and ordered that we should not talk before him lest we should lead him to doubt; and we remained silent" (his *Magen va-Romaḥ*, Ms. Heb. Univ. Lib. Heb. 8° 787, pp. 67–68).

The 15th century was also a period of controversialist debate in troubled and divided Germany. The apostate monk Petrus *Nigri (Schwarz) preached to the Jews in Nuremberg and tried to dispute with them. Around 1410 Yomtov Lipmann *Muelhausen wrote his *Sefer Niẓẓaḥon* (Nuremberg and Altdorf, 1644), which sums up the traditional Jewish line of defense in disputation and also puts forward systematically the arguments for attacking Christian views. Written in a rationalistic vein, it evidences signs of the strains present in the Christian Church at this time. As often occurred, some of his argumentation shows the impress of Christian molds of thought. He writes: "The Christian mocked saying, females who are uncircumcised have no Jewish character. They [the Christian mockers] do not know that faith does not depend on circumcision but is in the heart; circumcision does not make a Jew of one who does not believe correctly, and one who believes correctly is a Jew even if he is not circumcised, although he is guilty of one transgression. And circumcision is not possible with women" (*Sefer Niẓẓaḥon,* p. 19).

Later in the 15th century, Johanan Luria represented the Jewish side in occasional disputations with courage and skill. Traces of Christian impressions of disputations with Jews are found in the writings of Hans Folz. John of *Capistrano complains that "the Jews say [apparently in disputations] that everyone can be saved in his own faith."

Renaissance and Reformation

At the Renaissance courts of Italy, in the atmosphere of excitement generated by Humanism on the eve of the *Reformation, Jewish-Christian encounters often resulted in religious argumentation; sometimes such disputations were formally arranged. Abraham *Farissol tells that "our Lord Ercole, the duke of Ferrara, and his wife and brother … ordered me many times to come before their majesties to speak and dispute with two celebrated scholars of that time and place, of the Dominican and Minorite orders. I was compelled, on their order and with their permission, to step out publicly and speak before them many times, politely and temperately … Against my will I obeyed the above-mentioned friars and the demand of certain other scholars, such as the sage bishop of Trani who compelled me to write down in detail, in a book in their language, the questions and answers during the disputation, exactly as they had asked and I had answered them. They said that they wished to see in writing whether there could be any substance in my answers so that they would be able to answer all of them, also in writing, and sum up in a book the evidence and strength of their point of view and prove their assumptions" (cf. HḤY, 12 (1928), 286). The Hebrew version of his disputations, *Magen Avraham* (largely in manuscript), touches on a variety of subjects. It can be seen that Farissol was in close touch with both heretical "Judeo-Christian" circles among Jews, in particular among the exiles from Spain and Portugal, and heretical Christian "Judaizing," or anticlerical and anti-traditional, circles of Christian society. He quotes the opinions of such circles and sometimes gives information about their leaders. Farissol indicates that leadership is necessary for man's salvation, secular or spiritual (cf. REJ, 105 (1940), 37). In this context, for the sake of argument, under the heading "That the True Messiah to Israel has not yet come," he expresses the view: "I regard it a plausible possibility that they [i.e., the Christians] may call him [Jesus] their messiah and savior. For they as well as he say that after his coming and his teachings they were saved and cleansed from the stain of idolatry. And through him, and his apostles and companions, they have come very near to believing after a fashion in the unity of the First Cause, combining other assumptions and additions and innovations to believe in the Divine Law … coming nearer to the truth than any others, for they have approached him from a very far distance, previously worshipping the dual forces that God hates" (*ibid.*, 38). Farissol proceeds to show at length that Jesus does not fulfill the conditions of the messiah promised to Israel (*ibid.*, 38–40). He also defends Jewish moneylending, arguing that in 16th-century society there could be no social or ethical reason

for differentiation between income from money and income from other sources (HḤY, 12 (1928), 290–7). He devoted a detailed chapter to criticism of the Bible translation of *Jerome (*ibid.*, 287–90).

With the rise and development of the Reformation in Central Europe, Martin *Luther and others among its originators made strenuous efforts to persuade the Jews to join their new brand of Christianity. Their failure turned Luther and *Martin Bucer (Butzer) into rabid enemies and persecutors of the Jews. From both the benevolent and the hostile standpoint they frequently had occasion to take issue with Judaism. An anonymous Jew, who early perceived the reliance placed on primary biblical sources in Lutheran argumentation, advised Jewish disputants as a preliminary to state that Jewish monotheism does not need support from texts: "The way of nature, through heart and through mind, obligates man to believe in pure monotheism. One has to believe it necessary that there be a Unity ruling the whole cosmos … And so shall you speak to them in order to purify, cleanse them – if there were [no] book in the world, what could be done [to prove Christianity]? And how can you believe in it now? For their faith is founded on our Prophets and Holy Scriptures. If we have no Prophets, they have no testimony to adduce nor Scripture to expound. Whereas we have a root and foundation, even lacking every book or writing, in nature – for we believe in His unity and greatness as the Creator through His action in first place, and because whatever we do each day cannot be done, except by His will" (cf. Ḥ.H. Ben Sasson, in: HTR, 59 (1966), 388–9).

Not only do the writings of Jewish leaders and authors in the heart of Christian Europe, such as the communal leader *Joseph (Joselmann) b. Gershon of Rosheim, the chronicler *Joseph ha-Kohen, and the kabbalist *Abraham b. Eliezer ha-Levi, contain many impressions of the Reformation movement and its ideas and actions, sometimes in a polemical vein, but there are also remoter echoes of the Christian-Jewish debate. In the first half of the 16th century, the physician Abraham Ibn Migash, living in the Muslim capital of Constantinople, tells, "there came to my house an uncircumcised Spaniard, who esteemed himself wise, and he questioned me." The ensuing dispute on the initiative of the Christian, written down by the Jew, mainly includes traditional elements of "the exegetical core" of Christian-Jewish disputation. The Jew argues in principle against basing exegesis on translations of the biblical text: "Tell me, please, where do you find in any science or teaching that a word is isolated from its meaning, as understood in the language in which it is current and fixed within the frame of that language, to give it a separate meaning taken from an alien language?… This cannot be done, for if you do so the meanings of words and concepts will change and intermingle and will not be understood immediately. Communication will cease." The Christian complains of the pride displayed by Jews in their divine election. He argues that the Law concerning the election is not eternal, and bases his argumentation on talmudic quotations. The disputation shows that the Spaniard had knowledge of Hebrew and rabbinical sources and that the Jew was well acquainted with the principles of Christianity. He ends his written report with a prayer for the conversion of the Christian (*Kevod Elohim*, Constantinople, 1585, 128b–31b; and see also his anti-Christian remarks and tales, *ibid.*, 124b–8b).

HIZZUK EMUNAH. The medieval and Reformation Jewish anti-Christian disputation is brought to perfection in the *Ḥizzuk Emunah* (ed. by D. Deutsch, 1872) of Isaac b. Abraham *Troki. The criticism of the New Testament in this work profoundly influenced Voltaire, according to his own evidence. It was written to strengthen Jews in combating Christian argumentation, being the outcome of the questions that Isaac "disputed with bishops and lords …. My speech with them was mild, to influence and not to anger …. I said nothing for which I could not provide a true biblical quotation …. I am not afraid of the multitude in writing down words of truth and good taste, for the truth is loved by every wise man …. I intended to write down those arguments which are deemed by the uncircumcised to be strong as the work of a great artist, firm and true. With their refutation, the weaker arguments will fall of themselves …. My first proposition is to explain what caused the Christian scholars, with all their great learning in the sciences known to man, to hold beliefs which are foreign to the human intellect and without authentic evidence from the words of the Prophets" (*ibid.*, 9–13). Isaac not only defends the Jewish interpretation of the Bible and points out in detail discrepancies in the Gospels but also finds much to his advantage in the controversy within the Christian camp. The anti-Trinitarian arguments of Simon *Budny and others are used by him against the Trinitarians. The innovations of Lutheranism and Calvinism, the reciprocal persecution of Catholics and Reformers, the low status of the Greek Orthodox community in Catholic Poland, and the prosperity and power achieved by Islam, all these elements perceived on Isaac's horizon are used to rebut Christian argumentation based on Jewish weakness and suffering in the Exile.

Modern Times

The first disputation under conditions which assume a certain equality between the opponents took place in the Netherlands in 1686 between the Jew Isaac (Balthazar) *Orobio de Castro and the Christian Philipp van Limborch, written down and published as an exchange of letters by van Limborch under the title *De veritate religionis christianae; amica collatio cum erudito Judaeo* (Gouda, 1687). While the discussion largely follows traditional lines, there is a difference in tone; thus the Jewish argument based on the prevalence of war and strife in the world becomes internalized and psychologized. Orobio states that so far as he can see the Christian messiah has not changed men by enabling them to love their neighbors more than they could before his coming (*ibid.*, Ch. 17). Van Limborch, on the other hand, claims that true Christians do not consider Jesus as God, but state only that he was the "Son of God," meaning that he was greater than Moses, being both prophet and messiah.

FRANKIST DISPUTATIONS. In 1757, at Kamienec (*Kamenets), and in 1759, at *Lvov, a disputation took place between Jacob *Frank and his followers and the leaders of Polish Jewry. This essentially began as an internal quarrel within the Jewish camp, as the first phase of the debate, at Kamienec, proved conclusively. The theses of the Frankists in the second phase, at Lvov, were dictated to them by their Christian patrons and a result of their own frustration and bitterness. Hence they included, as their seventh point in the disputation, the charge that Jews require Christian blood for ritual purposes at Passover, thus giving currency to the old *blood libel. On this they were answered by the chief Jewish spokesman, Ḥayyim ha-Kohen Rapoport, who cited from Christian documents and authorities refuting the libel, supported by comparisons from outside Europe: "You adduce against us this seventh point and say that you are arguing not with evil intent or out of revenge but only through love of the truth. But this [the blood libel] is not a matter relating to the Catholic Church or its faith. Here we truly perceive your evil intent towards us and your passion for revenge … Can you supply thorough evidence in support of these false claims about a matter in opposition to man's habits and nature which supposes that we, the breed of Abraham, from whom we come and to whom we shall return (after death) require and use human blood? A charge that has not been heard of in Asia, in Africa, or in Europe, or in the whole world against any other nation (even the most heretical one). And this you intended to prove against us?" (M. Balaban, *Toledot ha-Tenu'ah ha-Frankit* (1935), 256).

MENDELSSOHN AND LAVATER. Moses *Mendelssohn was shocked and dismayed when he was called upon by J.C. Lavater in 1769 either to refute the "evidence for the truth of Christianity" that he, Lavater, had translated into German from the French and published, or to do "what Socrates would have done if he had read this work and found it irrefutable." Mendelssohn, who rejected in principle the demand for public disputation, at first stated that his continued adherence to Judaism, in its present state of humiliation, and his well-known constant search for philosophical truth furnished self-evident proof that he had investigated Judaism and found it worthy to adhere to and suffer for, and that he had found no reason for turning to Christianity, even though he was well aware that this would give him full civil rights and a better social life. He thus uses its humiliation as an argument for Judaism and its ability to confer material advantages on apostates as an argument against Christianity. Mendelssohn claimed that to hold a public disputation would endanger the present status of his brethren in Christian society. He also stated that Judaism is not missionary; the proselyte is warned before he joins it: "he who is not born under our Laws need not live according to them." Mendelssohn regarded missionary work as ridiculous when addressed to intelligent people and pictured it as trying to convert Confucius to Judaism or Christianity.

As the storm raised by Lavater grew, Mendelssohn reluctantly abandoned his opposition to controversial debate. In the spirit of medieval Jewish argumentation he told his adversaries: "A single Christian who agrees to be circumcised proves more for Judaism than a hundred Jews who agree to be baptized prove for the truth of Christianity." In another context Mendelssohn is ironical about the Christian conception that Jesus had abolished the Law given by God, while not having done so expressly. When the Crown Prince of Brunswick-Wolfenbuettel respectfully asked Mendelssohn to explain his position, Mendelssohn answered in a clear polemical vein, listing four principles that he would have to accept as a Christian and that reason rejects: "(1) a Trinity in the Divine essence; (2) the incarnation of a God; (3) the physical sufferings of a person of the Divinity which would contravene its Divine majesty; (4) the satisfaction of the first Person in the Divinity through the suffering and the death of the humiliated second Person." These, and similar principles of Christianity, Mendelssohn states, he would not believe even if they were vouched for in the Old Testament. He was also unable to accept the concept of Original Sin. In addition to contending that Jesus did not abolish the Law expressly, he also points out that he, Mendelssohn, was well acquainted with the Hebrew of the Bible and could not find Christological evidence there (M. Mendelssohn, *Gesammelte Schriften*, 7 (1930), in particular 7–13, 63, 91, 299–304, 321; see also 16, (1929), 142, 148, 150–1).

Relationships between Christians and Jews in the modern environment were faced with the paradox of *emancipation of the Jews on the one hand and modern-type *antisemitism on the other. Trends toward *assimilation were confronted with *Zionism. Jews entering the environing society encountered the romantic reaction of nationalist *Volksgeist* and "Christian state" conceptions. Christian-Jewish discussion enters a new phase in the 20th century. It is held in an arena where a plethora of diverse opinions, each claiming orthodoxy for itself and heresy for the others, are argued both informally and in the public eye.

ROSENZWEIG AND ROSENSTOCK. In this dynamic climate of tension there took place the friendly but trenchant disputation between an apostate devoted to Christianity, the legal historian, philosopher, and sociologist Eugen *Rosenstock-Heussy, and the great Jewish philosopher, Franz *Rosenzweig, then a young man. During their exchange of letters both were serving in the German army, writing almost from foxhole to foxhole. Between May and December 1916 they exchanged 21 letters, originating from a spirited conversation they had had in 1913. Although intended as a private exchange of views, the correspondence contains in a nutshell the dilemmas confronting a Jewish intellectual at that time. Later, in 1917, Rosenzweig described Rosenstock as "a persistent but inexperienced missionary" and stated in retrospect that the letters "cannot be made into a 'Dialogue,' for they were not; they were simply a bombardment between two learned canons with a lyrical urge." Hence, at least in the view of the Jewish participant, this was a disputation in the subjective medieval sense.

In his letters, Rosenstock-Heussy stresses the traditional Christian arguments that the Law had been abolished and salvation lay in Christianity. Inherent in the character of Jewish Law are self-righteousness and impassivity in contrast to the true spirituality and dynamics of Christianity. Rosenstock regards as presumption the Jewish reliance on their descent and on their continued history as an argument in favor of Judaism. The Jews had crucified Him who came to fulfill the Divine promise that all the Gentiles would come to Jerusalem. Christianity had liberated the individual from the bonds of family ties and national limitations. Present-day Jews live non-Jewish lives, as present-day Christians live non-Christian lives, but to the Christian this discrepancy between the ideal and its realization is part of the cross he has undertaken to carry. What, however, is the sense to a Jew who lives a non-Jewish life, "plays the organ and thinks in a non-Jewish way"; to a Jew without the Temple and without the Law, who does not marry at the age of 18, does not evade army service; to a Jew who makes his girl a Jewess so that he can marry her; where then remain the metaphysics of "the children of Abraham"? Rosenzweig pointed out in his answer that many elements in this attack on modern Jewish life in Germany were derived from a picture taking the "true Jewish life," to mean that represented by the Jews from Eastern Europe, the despised "Ost-Jude." Rosenstock compares the *akedah* of Isaac by Abraham, the sacrifice of a son, with the sacrifice according to the New Testament whereby he who fulfills the covenant with God sacrifices himself. This is the dividing line. The synagogue has talked for two thousand years about what she has, because she has nothing; Israel in this world assumes the pride of Lucifer. Judaism is in the age of blind senility: "I know that Judea will outlive all 'the Nations,' but you have no capacity for theology, for inquiry after truth, or for beauty. Thou shalt not make any image. At this price the Eternal Jew may live because he hangs on tenaciously to the life granted to him. But he is cursed to live by the sweat of his brow, taking loans everywhere, and making loans everywhere. The Jew dies for no fatherland and for no mission. He lives because his life does not approach the margin of life. He lives in a chimerical reflection of a real life that cannot be envisaged without the sacrifice of death and the nearness of the abyss. That Judea shall live on is dependent on the success of the individual Jew, on the number of his children. He is a paragraph of the Law, *c'est tout.* You may well believe that you have your own ship, but you do not know the sea at all, otherwise you would not speak in this way, you who are never shipwrecked.… You do not know that the world is movement and change; the Christian says there is day and there is night, but you are so moonstruck that you think that the night view is the only view that exists and you consider as the ideal conception the minimum of light, the night. You consider that this encompasses day and night" (F. Rosenzweig, *Briefe* (1935), 682). Subconsciously or consciously, Rosenstock the apostate combines medieval Jew-hatred with the images and expressions of modern social and economic antisemitism. He considers that "the emancipation of the Jews is a process of self-destruction, for Europe," in its modern phase. He is violently opposed to Zionism. Even if Hebrew is made into a living language it cannot be saved in the metaphysical sense.

To this attack Rosenzweig answers that "the serious acceptance in reality in which the theological principle about Jewish stubbornness is being worked out is Jew-hatred. You know as well as I that all the realistic explanations of this hatred are only so many fashionable dressings to hide the only true metaphysical reason, which is, metaphysically formulated, that we refuse to take part in the fiction of the Christian dogma that has gained world acceptance because (although reality) it is fiction (and *fiat veritas, pereat realitas,* for 'Thou God art truth'), and, formulated in the manner of enlightenment (by Goethe in *Wilhelm Meister*): that we deny the basis of present culture (and '*fiat regnum Dei, pereat mundus,*' for 'a kingdom of priests shall ye be unto me, and a holy people'); to formulate it in an unenlightened way: that we have crucified Christ and, believe me, we shall do it again any time, we alone in all the world (and *fiat nomen Dei Unius, pereat homo*, for 'whom shall you make equal to me that I will be equal')" (*ibid.*, 670–1). Thus Rosenzweig points out that the Church is obliged to formulate the concept of Jewish stubbornness; it is part of her dogma. "Do whatever you want, you cannot get rid of us. We live on, 'the Eternal Jew,' out of a feeling of duty to life and not because of hunger for it." He agrees that there is a contrast between the sacrifice of Isaac and the crucifixion, but in a different sense from the apostate's conception. Abraham sacrificed "not a child but the 'only' son and what is more: the son of the promise to the God of that promise … the content of which is being made impossible according to human concepts through this sacrifice. We do not read this pericope on our most solemn Holy Days without reason. It is the prototypal sacrifice, not of one's own individuality (Golgotha) but of the folk existence of 'the son' and of all future sons … Abraham sacrificed all that he could be; Christ all that he was" (*ibid.*, 689). Jewish life is not the way of life of the Polish Jew as depicted by Rosenstock. "Alongside this life, which is amoral in the deepest sense and external, there exists a purely Jewish life, which is internal, one that serves all that has to be worked out internally, not bought from externally, for the sake of the preservation of the people, its 'life.' To this realm belong the internal-Jewish leadership activity, here Jewish theology, here the art of the Synagogue (so even 'beauty'). However much these phenomena may hold of the alien, Judaism cannot but help assimilate them to itself. It does so of itself even if not intending to.… The extent to which the Jew takes part in the life of other nations is not determined for him by himself, but they dictate it for him" (*ibid.*, 691). Rosenzweig relates himself to the metaphor of the ship traveling eternally on high seas. He answers Rosenstock that the Jew may give up everything "except one: hope; before God's seat the Jew, so it is said, is asked only this: Have you hoped for salvation?" (*ibid.*, 693).

This dispute is marked by a deep interpenetration of problematics and symbolism. Rosenstock demands from a

Jew that he live a full Jewish life both personally and in family life. He attacks Zionism as an evil manifestation of Judaism. Rosenzweig even as a young man was deeply influenced by Christian symbolism, which permeated his thought. He wrote in 1913, "I thought that I had Christianized my Judaism, in reality I have Judaized Christianity.… I was envious of the Church scepter because I thought that the Synagogue clings to a broken scepter" (*ibid.*, 72). The image of the Synagogue created by Church art haunts Rosenzweig. He explains it as a kind of Jewish symbol: "The Synagogue, immortal, but with a broken staff and a scarf over her eyes, must renounce all worldly work and concentrate all her strength on keeping herself alive and pure from life.… The Synagogue had a scarf over her eyes; she didn't see the world – how could she have seen the idols in it? She looked and saw only with the prophetic eye of the internal, and therefore only the last things and the farthest ones" (*ibid.*, 74–5).

In this exchange of views, rich in symbols and intellectual allusions, the turbulent, disintegrating world of the German-Jewish intellectual of the early 20th century – still craving some sort of integration – is mirrored through its divided souls.

BUBER AND SCHMIDT. The agonized, semiformal disputation between Karl Ludwig Schmidt and Martin Buber took place as the fate of German Jewry hung in the balance, at the beginning of the road to the *Nuremberg laws and the *Holocaust. The Christian, who was fully aware of the predicament which Jewry was already facing at the time the disputation was held (Jan. 14, 1933), dismissed the crucial issue by saying: "It would be ostrich policy to attempt to deny the racial biological [*rassenbiologische*] and racial hygienic [*rassenhygienische*] problems which arise with the existence of the Jews among other people" (*Theologische Blaetter,* 12 (1933), 264). He rightly considered it a courageous act to invite Jews to brotherhood with Christians, which he repeatedly urged in this disputation, although only as sons of a Germany united through the Christian conception of the Church as the spiritual Israel (*ibid.*, 258, 259, 264, 272, 273). He was sure that "the Christian message says in this context: God has willed all this; Jesus, the Messiah rejected by his people, prophesied the destruction of Jerusalem. Jerusalem has been destroyed, so that it will never again come under Jewish rule. Until the present day the Jewish diaspora has no center" (*ibid.*, 262). Not only is the ancient Christian argument from Jewish suffering and loss of political existence invoked here in the year 1933 of the Christian era, but it was made with an eye on Zionism, which Schmidt looked upon as even worse than the old simple Judaism: "The modern world reacts to Zionism, which is national or even racist [*oder gar voelkischen*], on its own side in a racist way; of course it must not be forgotten that racist antisemitism in the modern world is pre-Zionist" (*ibid.*). Schmidt asks why the Jews participate so actively in revolutions when so much is said about their conservatism (*ibid.*, 263). He declares to the Jews, or perhaps warns them, "that the Church of Jesus Christ has again and again shown her want of this Jewry, demonstrating her patience by waiting in hope that finally the Jews also … will be able to perceive that only the Church of the Messiah, Jesus of Nazareth, is the people of God, chosen by God, and that the Jews should become incorporated in it, if they indeed feel themselves as Israel" (*ibid.*, 264). He assures the Jews that "if and when the Church becomes more Christian than it is today, its conflict with Judaism will also become sharper, as it can and may do now. This sharp conflict has been present from the beginning of the history of Christianity." The conflict expresses the hurt and pain of the first Christians, Jews themselves, at the rejection of the Messiah by their brethren in the flesh (*ibid.*, 272). Schmidt strongly and courageously repudiates the racist attitude against the Jews and glorification of the State. To Buber's assertion that in the present condition of the world the signs of salvation are lacking, Schmidt answers with the hope of the second coming of Jesus (*ibid.*).

Toward the end of the disputation Buber answered the Christian from the plane of spiritual strength and pride derived from existential and material weakness and humiliation, in the ancient tradition of Jewish disputation: "I live not far from the city of Worms, to which I am bound by tradition of my forefathers; and, from time to time, I go there. When I go, I first go to the cathedral. It is a visible harmony of members, a totality in which no part deviates from perfection. I walk about the cathedral with consummate joy, gazing at it. Then I go over to the Jewish cemetery consisting of crooked, cracked, shapeless, random stones. I station myself there, gaze upward from the jumble of a cemetery to that glorious harmony, and seem to be looking up from Israel to the Church. Below, there is no jot of form; there are only the stones and the dust lying beneath the stones. The dust is there, no matter how thinly scattered. There lies the corporeality of man, which has turned to this. There it is. There it is for me. There it is for me, not as corporeality within the space of this planet, but as corporeality in my own memory, far into the depths of history, as far back as Sinai.

"I have stood there, have been united with the dust, and through it with the Patriarchs. That is a memory of the transaction with God which is given to all Jews. From this the perfection of the Christian house of God cannot separate me, nothing can separate me from the sacred history of Israel.

"I have stood there and have experienced everything myself; with all this death has confronted me, all the dust, all the ruin, all the wordless misery is mine; but the covenant has not been withdrawn from me. I lie on the ground, fallen like these stones. But it has not been withdrawn from me.

"The cathedral is as it is. The cemetery is as it is. But nothing has been withdrawn from us" (*ibid.*, 273).

Israel, strong and united in its national-religious continuity, cannot accept the Christian view that the world has been redeemed with the coming of Jesus. Buber in Nazi Germany declares: "We also know, as we know that there exists air that we take into our lungs, that there exists the plane on which we move; nay, deeper, more truly we know that world history has not yet been probed to its roots, that the world is

not yet redeemed. We feel the unredeemability of the world" (*ibid.*, 267). Israel is both a nation and a religion, hence it is different from all other nations and religions. Man's confrontation with God demands nationality "as the precondition of the whole human answer to God. There must be a nation in which the human answer can be fulfilled in life in its entirety, to which public life also belongs. Not the individual as an individual, but only the community as a plurality and unity, working together … can give God the full life-answer of man; therefore … there is Israel" (*ibid.*, 268). The European community of nations has agreed, by accepting emancipation, to accept Jews as individuals. It rejects Jewish participation in creative life as a nation. Hence the stress placed by Zionism on the national aspect as a counter-balance to the prolonged denial of this aspect in modern times (*ibid.*, 270). To Schmidt's question, or insinuation, concerning Jewish conservatism and revolutionary activity, Buber answers that Jewish messianism calls forth both these aspects. Viewed from the standpoint of messianism, every state, however structured, is a problematical model of the divine state in the *eschaton*. But this same messianism always demands the Jew to see the other, questionable side of the state, its failure in realizations of the ideal: "Israel can never turn away its face from the state; it can never deny it; it must accept it; at the same time it must long for the perfection of the state, which is only so unsatisfactorily hinted at by every realization it achieves. Both the conservative and the revolutionary Jewish attitudes stem from the same [messianic feeling]" (*ibid.*, 271).

To the harsh and uncompromising postulate that the Jews can live in Europe only on acceptance of Christian conditions and conceptions Buber presents his thesis of open dialogue between Israel as a nation and religion, and Christianity as a religion for other nations. He proposes personally "to accept what others believe against our existence, against our consciousness of existence, as their religious reality, as a mystery. We cannot judge its meaning because we do not know it from the inside as we know ourselves from the inside" (*ibid.*, 266). "God's gates are open to all. The Christian need not come to them through Judaism. The Jew is not obliged to go to them through Christianity in order to arrive at God" (*ibid.*, 274). "No man that is not of Israel understands the mystery of Israel, and no man that is not of Christianity understands the mystery of Christianity; but unknowing they may acknowledge each other in mystery. How it can be possible that mysteries exist alongside each other is God's mystery" (*ibid.*, 267).

With these words Buber opened a way to divesting religious disputation of the polemical form it had assumed throughout most of its history and presenting it as an open and friendly meeting, ecumenical in the fullest sense. He had ancient Jewish ideological precedents for looking upon plurality of creeds and customs as "God's mystery" (notably the statements by various Jewish disputants in the 15th to 16th centuries and Maimonides' views on Christianity referred to above). Buber, however, reformulated this conception in modern terms, where it assumes a validity through anguish that disregarded fear, facing danger and humiliation.

Jewish-Christian disputation thus began in the meeting of Justin and Tryphon under the shadow of the Bar Kokhba revolt. The darkness and flames of the Holocaust and the light from Zion may illumine the pilgrimage to ecumenical conversation on equal terms, toward understanding and harmonious living, waiting for God to solve His own mystery in history.

[Haim Hillel Ben-Sasson]

DISRAELI, BENJAMIN, EARL OF BEACONSFIELD (1804–1881), British statesman and novelist. His father, the historian and essayist Isaac *D'Israeli, quarreled with the London Sephardi community, and had his children baptized when Benjamin was 13 years old. Disraeli received a Christian upbringing, but his Jewish origins had a marked influence upon him. After unfortunate business ventures and after an abortive attempt to publish a morning newspaper, he wrote a number of satirical novels on English political society, starting with *Vivian Grey* (1826). This gave him an entry to London society, where his original dress and other extravagances made him a conspicuous figure. In 1828–31, an extensive tour of the Near East helped to determine his future attitude on foreign affairs and imperialism. A visit to Jerusalem made him conscious of the link between Judaism and Christianity and aroused his sympathy for the Ottoman Empire, where Jews were tolerantly treated. The literary harvest of this journey was *Alroy* (1833), a novel about Jewish messianism in the 12th century, in which the Jewish hero, David *Alroy, fails in his attempt to create a Jewish empire in Asia because it lacks the inspiration of Zion.

Disraeli's social ambitions drew him inevitably into politics, but it was not until 1837 that he was elected to Parliament as a Tory. Thereafter throughout his political career he followed a consistent line. His political philosophy is expressed in his *Vindication of the English Constitution* (1835), a development of the Conservative ideology evolved by Bolingbroke and Burke in the 18th century. On the one hand, he regarded the nation as a historically developed organism, whose well-being depended upon a balanced hierarchical structure of crown, church, and aristocracy. On the other hand, he wanted to restore the Tory party to its original historical role of leadership, guiding the way to national popular reform. He wished to transform the party from a purely aristocratic one to a popular movement embracing the working class. At first, Disraeli was met with suspicion and hostility, both within his party and outside, but within a few years he had made his mark as a brilliant parliamentary debater. In 1841, in reaction to his failure to receive an appointment in Peel's cabinet and in rejection of its bourgeois policy, he became leader of a group of young Conservative politicians, the "Young England" movement. A romantic party of revolt, which dreamed of gathering the people around the crown and the church under aristocratic leadership, it was hostile both to the middle class and to capitalism. Once again his personal experience found literary expression, this time in three major novels in which Disraeli's specific Tory outlook is the dominant theme. In *Coningsby* (1844), the rich banker Sidonia, who represents the outlook of the Jewish people, can be recognized as an idealized self-portrait merged into an idealized Rothschild. In the second, *Sybil* (1845), he warns against the contradiction between capital and labor, denounces the horror of the factory system and the division into two nations, rich and poor, mutually antagonistic. He looks back to a patriarchal medievalism with its natural aristocratic leadership and forward to the future with its demand for new thinking and new solutions. The hero of *Tancred* (1847), a young aristocrat, seeks to reestablish the harmony of English society. He goes to Palestine to restore to the Christian Church its Jewish foundations which are the bases of European civilization and to revive its moral and religious force.

The year 1846 was a turning-point in his political career. His opposition to the repeal of the Corn Laws, which protected the farmer whom he regarded as the backbone of English society, split the Conservative party; this led Prime Minister Peel to resign and left Disraeli as one of the acknowledged leaders of the Protectionist party.

When, in 1848, Baron Lionel de *Rothschild was elected to Parliament but was not permitted, as a Jew, to take his seat, Disraeli supported his right to be admitted. This he did not on the Liberals' grounds of religious tolerance, but rather because of the debt which Europe, and especially England, owed Jewry from whose midst the Christian savior had come. Although this angered high personages in his party, he boldly and constantly reminded them of his own Jewish origin and of their debt to this people.

Disraeli stressed his theory of the link between Judaism and Christianity in his biography of Lord George Bentinck (1852). He regarded the Semitic race as superior, and the Jews as its elite because of their spirituality. This spirituality, in his view, was ultimately and most finely embodied in the Church, in contrast to the materialism characteristic of the northern races. Disraeli attributed the preservation of Jewish vitality and power from ancient times to their purity of blood and their natural conservative attitude toward religion, aristocratic privilege, and property. With this theory he underlined his Toryism; on it he based his belief in the bond between the English people and the Jews. Moreover, the institutions and laws of English society, as well as those of Europe, were based on Semitic principles, and the debt owed to Jews had to be recognized and their proper place fully accorded them.

In 1852 the Tory party came to power under Lord Derby, and Disraeli became chancellor of the exchequer and leader of the House of Commons. He announced his party's rejection of protection but attempted to compensate the protectionists in his budget: when this was defeated after days of acrimonious debate, the government resigned. In 1858, he had another brief taste of power in Derby's second administration, and in June 1866 returned again to office. Disraeli's ideological views were reflected in his political career. Hence in 1867, as leader of the Commons, he proposed and carried an electoral reform bill extending the franchise to the industrial classes. This "leap in the dark" was in conformity with his view that the Conservative party should be popularly based. In 1868, on Lord Derby's resignation, Disraeli had his first brief term as prime minister and consolidated the warm friendship which he had already established with Queen Victoria. Ironically he was defeated at the general election based on the new suffrage. In 1874, he became prime minister once again after a decisive Conservative victory. During his six years of office, he applied the social principles for which he had always stood. He tried to bridge the gap between capital and labor by social and factory legislation directed toward a paternalistic rather than a modern welfare state. His foreign policy was guided by the desire to restore to England the glory which he thought had been weakened by Liberal pacifist policy. An important part of this policy was the attempt to enhance the British Empire, as the stronghold of culture, peace, and liberty. India was for him the heart of the Empire, and the acquisition of shares in the Suez Canal from the khedive of Egypt in 1875 with the financial help of the *Rothschilds was designed to ensure English control over the vital route to India.

In 1876 the Queen was proclaimed Empress of India and Disraeli was rewarded by being created Earl of Beaconsfield. In the ensuing developments, the central problem was Anglo-Russian rivalry. Disraeli adopted an aggressive policy, designed to check Russian penetration into the Mediterranean as well as to preserve the Ottoman Empire as a barrier. Critics of his policy asserted that its criterion was the attitude of these powers to Jews. When the Treaty of San Stefano (1878) resulted in

the domination of Russia over the Balkans, he insisted that the agreement be submitted to the great powers, and at the subsequent Congress of *Berlin, Russia was forced to renounce all her acquisitions. This Congress was considered a personal triumph for Disraeli. He also supported the inclusion in the treaty of a clause granting rights to the Jews of the new Balkan countries. However, the anonymous memorandum prepared in 1878 for submission to the Congress, proposing the creation of a Jewish State in Palestine and once ascribed to Disraeli, is now proved to have been written by J.L. *Gordon. Economic crises and failures in Africa and Central Asia led to a Conservative defeat at the polls in 1880 followed by the resignation of the government. In his enforced leisure, Disraeli completed his *Endymion*, the most fascinating of his political novels.

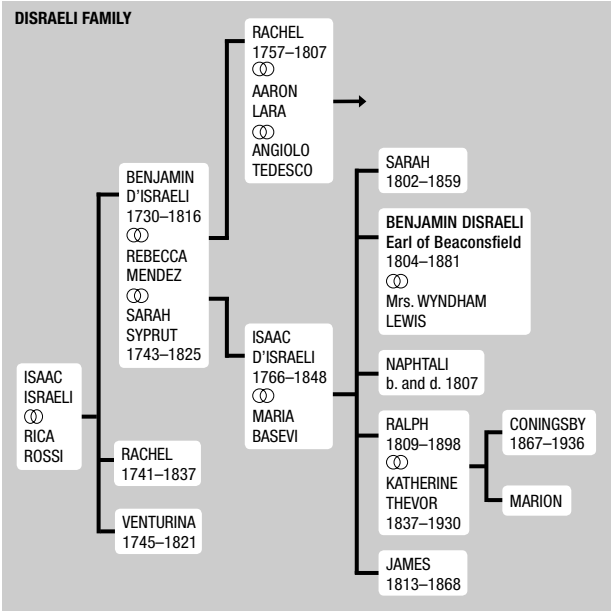
The attitude of historians to Disraeli has been ambivalent. Some have seen him as an outstanding statesman, others as a political adventurer. He is now felt to have had a coherent philosophy and clearly defined political aims. The extravagant enthusiasms which marked his writings and his life, as well as his practical acumen, aroused suspicion. Yet despite many failures, Disraeli remained an optimist. His knowledge of Judaism was negligible, yet he gloried in his Jewish origin. His effort to prove that Christianity was a continuation of Judaism and his attempts to find a common denominator of Judaism and Christianity were misguided. His theory of race was wholly unscientific. A vaguely Zionist idea, that the Jew and Palestine are linked by destiny, runs through all his novels. A characteristic passage occurs in *Tancred:* "The vineyards of Israel have ceased to exist, but the eternal Law enjoins the children of Israel still to celebrate the vintage. A race that persists in celebrating their vintage although they have no fruits to gather, will regain their vineyards."

[Zvi Adiv]

As a Novelist

Disraeli's novels are closely related to his political career and ideology. They are not propaganda, but rather visionary statements of those same ideas and beliefs which underlay his special brand of Toryism. From a literary point of view, his works represent a somewhat strange mixture. They look back to the exotic Gothic novels of the late 18th century in their use of extravagant episode and high-pitched language. At the same time, they look forward to a new style later to be practiced by such writers as Mrs. Gaskell and Charles Kingsley, in which the novel deals with practical, social, and political issues with a view to righting wrongs.

In Disraeli's case, the inspiration is to be found in his desire to set up a new political movement (*Coningsby*, 1844), in his desire to improve the condition of the people in the new industrial towns (*Sybil*, 1845), and in his wish to revitalize the Church so as to make it a more effective moral and religious force (*Tancred*, 1847). There is also a certain Jewish strain of messianism in Disraeli's writing. In *Tancred* he proclaims his wish to set up a theocratic form of government, and his hero desires that the British might "conquer the world with angels at our head." Disraeli's conception of the British Empire is in fact



nourished – unconsciously no doubt – by Jewish sources, but his Judaism is reflected through a distorting glass. He sometimes speaks of Christianity as if it were a slightly modified form of Judaism.

Disraeli also directly discusses Jewish matters in a *Life* of his friend Lord George Bentinck (1852), as well as in *Alroy* (1833). In both *Coningsby* and *Tancred* he introduces the Jew Sidonia, who is always at hand to assist the hero with his wisdom, munificence, and vast international connections. In *Tancred* also, Disraeli speaks out energetically in favor of restoring national independence to the Jews, criticizing Jewish assimilationists "ashamed of their race and not fanatically devoted to their religion." Disraeli's style, through its extravagance and enthusiasm, provoked parodies by W.M. Thackeray and A. Trollope.

[Harold Harel Fisch]

It seems clear that Disraeli was obsessed by his Jewishness, just as were most of his contemporaries, for whom a Jewish political leader in Britain was a virtually unimaginable novelty. Historians have recently paid attention to the considerable antisemitic hostility faced by Disraeli, flowing from both the traditional Tory right wing and, more surprisingly, from many Victorian liberals, with an overt or covert evangelical Protestant worldview. Disraeli overcame all obstacles and prejudices to climb to "the top of the greasy pole." Probably only in Britain among Western nations in Victorian times was his career possible. That Disraeli was an iconic figure on the British right – not the left – the founder of the modern Conservative party, probably ensured to a significant degree that, in the troubled 20th century, British Conservatism never acquired an antisemitic tone or edge. In the final analysis, Disraeli's career was truly *sui generis.*

D'ISRAELI, ISAAC (1766–1848), English writer; father of Benjamin *Disraeli. In 1748 his father, a Sephardi Jew, settled in London, where Isaac was born. D'Israeli entered commerce, although he was financially independent. His *Curiosities of Literature* (1791, and often reprinted), which made him famous, reveals a remarkable acquaintance with the by-ways of English literature. His *Amenities of Literature* was completed in 1840, after he had become blind. Although he was a free-thinker, D'Israeli maintained a formal connection with the Spanish and Portuguese Synagogue in London. However, as a result of a dispute over a fine of £40 imposed on him by the Sephardi elders, he formally withdrew from that community in 1817 and had his children, including the future Earl of Beaconsfield, baptized as members of the Church of England. Although he did not become a Christian, his *Genius of Judaism* (1833), as well as some incidental remarks in his novel *Vaurien* (1797), testify to his estrangement from Judaism. D'Israeli's view of English history was pro-Tory. He defended the Stuart kings against the Whigs in a way which might well have influenced the outlook of his celebrated son. In his lifetime, D'Israeli was already a well-known and much admired name, a point which is often ignored by those who regard Benjamin Disraeli as a complete outsider.

DISSENTCHIK, ARYEH (1907–1978), Israeli journalist. Born in Riga, Dissentchik worked in daily journalism in his home city. Active from his youth in the Revisionist movement, he served in Paris in the early 1930s as Ze'ev *Jabotinsky's secretary. After he immigrated to Palestine in 1934, he worked on the Revisionist newspaper *Ha-Yarden*, moving after its closure to the *Ha-Boker* newspaper. In 1948 Dissentchik joined *Maariv* as deputy editor to its founding editor-chief, Dr Azriel *Carlebach. When Carlebach died in 1956 Dissentchik replaced him, serving in the post until 1974. Dissentchik was a hardened newsman, widely connected with the Israeli political establishment, who ensured that *Maariv* maintained its dominant position as the country's largest-selling newspaper at the time as well as providing serious in-depth coverage and commentary. He was also the Israel correspondent of the Associated Press news agency for 10 years and a member of the world board of the International Press Institute. In 1978 he won the Sokolow Prize for outstanding journalism. One of his sons, Iddo, later became editor of *Maariv* as well.

[Yoel Cohen (2nd ed.)]

DITTENHOEFER, ABRAM JESSE (1836–1919), U.S. lawyer. Dittenhoefer, born in Charleston, South Carolina, son of German immigrants, was raised in New York City where he practiced law. A recognized authority on theatrical and copyright law, Dittenhoefer served as counsel to leading corporations and to the New York City Board of Aldermen. He was a judge of the City Court (1862–64). A lifelong Republican, Dittenhoefer cast an electoral vote in 1864 for Abraham Lincoln, was a delegate to Republican party national conventions, and served as chairman of the central committee of German Republicans for many years. He wrote *How We Elected Lincoln: Personal Recollections of Lincoln and Men of his Time* (1916).

DIUM (**Dion**), city in Transjordan called after a Macedonian town and mentioned by Pliny (*Historia Naturalis*, 5:16). The city was captured by Alexander Yannai (Jos., Ant., 13:393) and later incorporated into the *Decapolis by Pompey (Ant., 14:75; Ptolemy, 5:14, 18). The coins of the city show that Zeus, identified with Baal-Hadad, was worshiped there. It should probably be identified with Tell al-Ashʿarī, 15 mi. (24 km.) northwest of Edrei; other suggestions, such as Dahāma or Tell al-Ḥusn, seem less likely.

DIVEKAR, SAMUEL EZEKIEL (**Samaji Hassaji Divekar**; d. 1797), soldier and benefactor of the Bene *Israel community in Bombay, India. Divekar enlisted with his brothers in a British native regiment where he rose to the rank of a native commandant or captain (*Subedar*). During the Anglo-Mysore wars he was taken prisoner by the notorious Tippoo Sultan, and according to one tradition was released through the intervention of some *Cochin Jews led by David Rahabi, who took him to Cochin. According to another legend, he was set free by Tippoo Sultan's mother who heard that he was a Bene-Israel.

Both stories state that he vowed to build a synagogue in Bombay for his own community in thanksgiving for his delivery. His "Sha'ar ha-Raḥamim" synagogue, the first in Bombay, was built in 1796 on present-day Samuel Street. It was renovated in 1860 and is still in use. Divekar was appointed *muqaddim* by his community and the office was assigned to his family on a hereditary basis. He died on a journey to Cochin, where he went to obtain Torah scrolls and liturgical appurtenances.

[Walter Joseph Fischel / Yulia Egorova (2nd ed.)]

DIVIN (Pol. **Dywin**), town in Polesie district, Poland; now Brest-Litovsk district, Belarus, A small number of Jews lived there from the mid-16th century and an organized settlement existed from the end the century, as attested in a document from 1631. In 1634 the Polish king Wladislus IV ratified the ancient rights of Jews in Divin to acquire houses and building plots, and to engage in commerce. The local community owned a synagogue, a bath house, and a cemetery. In the framework of the Lithuanian Council, Divin was under the jurisdiction of the community of *Brest-Litovsk. In 1656 the Jews in the town were given one-third of the revenues from the municipal leases (they had requested one-half); supervision over these was entrusted to a committee consisting of two Christians and a Jew. There were 221 Jews living in Divin in 1756 and 556 in 1847. During the 19th century, the Jews there mainly engaged in small-scale commerce and crafts. The community numbered 1,094 in 1897 (3,737 the total population) and 786 in 1921 (34.1%). The laying of railways and roads at a great distance from Divin in the second half of the 19th century caused economic hardships and the Jewish population dropped. Divin was occupied by the Germans in the beginning of World War II. An open ghetto was established, and Jews from the villages were brought in, the number of its inhabitants reaching about a thousand. At the end of summer 1942 they were all murdered outside the town.

[Arthur Cygielman / Shmuel Spector (2nd ed.)]

DIVINATION. Man, by nature, longs to know what the future holds for him, either out of inherent curiosity or in order to anticipate the dangers that await him. Therefore, in all ancient civilizations – and even in some cultures of today – there were diviners who used various methods to predict the future. It is possible to distinguish between practitioners who use external means to guess the future and persons who perceive the future simply through their own awareness. The prediction of the future through technical means is closely akin to *magic, and the line between them is sometimes blurred. What distinguishes the one from the other is that divination only attempts to predict future events, while magic also professes to influence and change them for good or bad. In any case, man believed that prediction of the future was possible, and that it was bound up with superhuman, demonic, or divine powers, from which the diviner received his knowledge either directly or indirectly. This belief rested on the assumption that there were powers – spirits or gods – that knew the future and with which man could communicate in order to receive this knowledge. It was believed that some men have a natural talent for receiving revelations, either in a waking state or in dreams, and in the manner in which the future is revealed to them, such men resemble the prophets, at least outwardly. Others, who predict the future through signs, had to learn the signs and the means by which to interpret them. Divination was of both general and individual concern. In Mesopotamia fortune-tellers first appear in the service of the community. Egyptian documents indicate that diviners served the needs of the country and the king, as well as the everyday needs of the individual. This is also the case in the biblical world. The Bible mentions that the *Urim and Thummim were consulted on the needs of the community (Num. 27:21; I Sam. 14:41; et al.), and the prophets for a prediction of the future (I Kings 22:5ff.; II Kings 3:11ff.); prophets were also sought after for the needs of the individual (I Sam. 9:10, 19). Among the masses, it was a widespread practice to seek false prophets and fortune-tellers, as is known from the polemics of the true prophets against them (Ezek. 13:17ff.; Micah 3:11; et al.).

The Prophet as a Mantic

There is a certain relationship, at least externally, between the mantic, who foretells the future by means of internal awareness, and the prophet (see *Prophets and Prophecy). Knowledge of mantics is drawn from Greek and Roman literature. The mantic achieved ecstasy through music, by use of intoxicating drugs, and by other means. Sometimes he ate the principal organs of a living animal upon which a magical act had been performed. Of all these methods only the use of music is found among the prophets, and that only twice: Saul is told that he will meet a band of prophets "with harp, tambourine, flute, and lyre before them, raving" (I Sam. 10:5); and when Elisha was asked to prophesy about the results of the war with Moab, he requested a minstrel – "And when the minstrel played, the power of the Lord came upon him" (II Kings 3:15). In some cases, the prophet performs the functions of the mantic. In Deuteronomy it is stressed that the prophet is to take the place of various types of fortune-tellers (Deut. 18:14ff.). The criterion given for distinguishing between true and false prophets is the fulfillment of the prophecy or its non-fulfillment (18:20–22). The prophets were also consulted on matters of a type that a mantic would answer. In the story of Saul and the asses, the servant says of Samuel the seer: "All that he says comes true" (I Sam. 9:6), i.e., the seer envisions the future and

does not err. Jeroboam sent his wife to Ahijah of Shiloh to inquire whether his son would live (I Kings 14:1ff.), Jehoshaphat asked the prophets to tell him the outcome of the battle at Ramoth-Gilead (22:5ff.), and Elisha was asked to predict the outcome of the war with Moab (II Kings 3:11). This consultation of the prophets replaced the consultation of the *ephod found in earlier periods (cf. I Sam. 23:2–6, 9–12). Following Kuenen and Wellhausen, current theories hold that the early Israelite seer resembled the pre-Islamic Arab priest (*kāhin*), who understood omens and had dreams, but was not an ecstatic prophet. However, there is no evidence in the Bible that the Israelite men of God were ever guided by omens, and even the false prophets were not accused of this (although their prophecy is contemptuously called divination; Ezek. 13:7, 23; Micah 3:6, 7). The seer (Heb. *roʾeh*, as in I Sam. 9:9; I Chron. 9:22; II Chron. 16:7, 10; et al.; or *ḥozeh*, as in II Sam. 24:11; et al.) did not use technical means, although their use was customary among the priests, who wore the ephod under the breastplate upon which the Urim and Thummim were placed (see below).

Methods of Foretelling the Future in the Bible

In the Bible *dreams and consultation of the Urim and Thummim were considered valid means of inquiring into the future. The dream as a source of divine revelation was widespread in all ancient civilizations, and there are even books of dreams from Egypt and Mesopotamia. The dream informs the dreamer of what awaits him in the future, as in the examples of the dreams of Joseph (Gen. 37:5–9), the cup-bearer and the baker (40:5ff.), Pharaoh (41:1ff.), and many others; however, it does not explicitly reveal the future, and must be interpreted (41:8ff.). To do this, one must know what the phenomena in the dream symbolize and to what they are directed. Books of dreams were written in Egypt and Mesopotamia for the purpose of teaching the interpretations of dreams according to their symbols, and it is reasonable to assume that a system of dream-interpretation (oneiromancy) was also known in Israel. In some passages the phenomenon of the dream is negatively evaluated: "the dreamers tell false dreams, and give empty consolation" (Zech. 10:2), and "for when dreams increase, empty words grow many" (Eccles. 5:6; cf. v. 2).

The Urim and Thummim, a type of lot oracle, were placed in the breastplate over the ephod of the priest. He who consulted the Urim and Thummim sought to determine between only two possibilities, as in the case of David: "Will the men of Keilah surrender me into his hand? Will Saul come down? … And the Lord said, 'He will come down.'" (The Urim and Thummim answer only the second question.) "… Will the men of Keilah surrender me and my men into the hand of Saul? And the Lord said, 'They will surrender you'" (I Sam. 23:10–12). Egyptian documents indicate the manner in which the oracle worked. The appointed priest would call out to the divine oracle two answers to his question, and the god would react to one of them. By another method, the priest would call out a list of names of suspects to the god, who would react to the name of the guilty one. Thus, for example, in a description of consultation of the statue of Pharaoh Amenhotep I, who became a divine oracle after his death, the god is asked to clarify who is guilty of the theft of clothing belonging to the complainant. The priest called out the names of all the households in the village before the statue of the god, and the house of the thief was identified (cf. I Sam. 10:19ff.). In Egypt, the reply was given by the idol-bearers, who stepped backward to signify a negative answer, and forward for a positive one. Lucian relates a similar method of replying, in which the statue of Apollo carried in a chariot would gallop forward to indicate a positive answer (*De Dea Syria*, 36). Several terms for diviners, who are connected with the consultation of the spirits of the dead, appear in the Bible (Isa. 19:3): *ʾov, yiddeʿoni*, and *iṭṭim.* The Hebrew word *ʾov*, which is derived from the Hittite *a-a-bi*, means the pit from which the spirit of the dead rises, or the spirit of the dead which rises from the pit (cf. I Sam. 15:23; Isa. 29:4). The *yiddeʿoni* ("wizard") is apparently synonymous with the *baʿal ʾov* ("medium"), either because of his ability (*yadaʿ*, "to know") to call up the spirit of the dead or his knowledge of the future. *Iṭṭim* appears to be a synonym for *ʾov*, and is explained according to the Akkadian *eṭemmu*, the spirit of the dead. Consultation of the *terafim* is also mentioned in connection with divination (Judg. 17:5; 18:14; Ezek. 21:26; Hos. 3:4; Zech. 10:2). The word *terafim* is derived from Hittite *tarpi(sh)*. The primary sense of the word is "spirit," and from this it came to designate the object that served as the symbol of the spirit, e.g., a statue or statuette. The size of the *terafim* was not defined. Those which Rachel stole from Laban were small enough to be concealed in a camel-saddle (Gen. 31:34), while those in David's house were large enough for Michal to place in bed and delude Saul's messengers who came in search of David (I Sam. 19:13). Some scholars hold that the *meʿonen* or *ʿonen* ("soothsayer"; Deut. 18:10, 14; Isa. 57:3; Jer. 27:9; Micah 5:11) also consults the dead to foretell the future, and they explain the root *ʿnn* according to the Arabic *ʿanna* ("to appear"). The *meʿonen*, therefore, is one who causes the spirit of the dead to appear. However, since the *meʿonen* and his activity are mentioned a number of times together with divination (the Heb. verb *naḥesh* and noun *naḥash;* Lev. 19:26; Deut. 18:10; II Kings 21:6; II Chron. 33:6), the term possibly refers to a special type of divination.

The techniques of divining mentioned in the Bible are with a goblet, with arrows, by attaching a pre-agreed significance to the manner in which one was addressed, by the inspection of a liver (hepatoscopy), and by astrology. Divination by means of a goblet is mentioned in the story of Joseph who divined with his silver goblet (Gen. 44:5). This method was apparently based on the patterns formed by drops of water in a cup of oil (lecanomancy), or by beads of oil in a cup of water; in some cases they also divined from the patterns formed in a cup of wine. This type of divination is known from Babylonian documents dated as early as the 18th century B.C.E. Divination by arrows (balomancy) is explicitly mentioned in Ezekiel 21:26, according to which Nebuchadnezzar, king of Babylon, "shakes the arrows, he consults the teraphim.…"

The word *qilqal* ("shakes, flings") shows that this method of divination involved the shaking of arrows. Mesopotamian documents indicate that it was customary to cast lots by flinging arrows into a quiver. Divination by arrows was practiced by Arab tribes before Islam and was prohibited by the Koran (Sura. 5:4, 92). According to the testimony of scribes, during the "period of ignorance" (*jāhiliyya*), the Arabs divined with blunt arrows in the sanctuary. They would place the arrows in a quiver and fling it until an arrow fell from it. The first arrow to fall was the one that expressed the will of the god. There is also evidence that the arrows were named according to the answers that they represented, and were cast before the statue of the god. It is possible to interpret the above passage concerning Nebuchadnezzar to mean that he consulted the *terafim* by casting lots with arrows in front of them. Bronze arrowheads of the 11th–10th centuries B.C.E., on which the word *ḥeẓ* ("arrow") was written, were found near Beth-Lehem, in Galilee, and in the Valley of Lebanon. S. Iwri interprets the word *ḥeẓ* here as "luck, good luck" (according to Arabic and Ugaritic), but this is only a surmise. The Bible also mentions fortune-telling or divination of the type known in Akkadian as *egirru* and in Greek as *klēdōn*, by which an interpretation was given to a conventional word that was seen as a sign. In this way, one can understand the peculiar sign conceived by Jonathan when he went to fight the Philistines: "If they say to us, 'wait until we come to you,' then we will stand in our place, and we will not go up to them. But if they say, 'come up to us,' then we will go up; for the Lord has given them into our hand. And this shall be the sign to us" (I Sam. 14:9–10; cf. v. 12). The same holds for the sign given by the servants of Ben-Hadad when they went to Ahab to beg for the life of their master (I Kings 20:32–33): "… and they went to the king of Israel and said, 'your servant, Ben-Hadad …' and he said, 'Does he still live? He is my brother.' Now the men were watching for an omen … and said, 'Yes, your brother Ben-Hadad.'"

Hepatoscopy and astrology were more advanced methods of divining the future. The study of the liver is mentioned in Ezekiel 21:26. This custom was widespread in Mesopotamia, in the land of Canaan, among the Hittites, Greeks, and Romans, and, in a later period, also among the Arabs. The qualified augur inspected, in an established order, all the internal organs of an animal sacrificed to a god, in particular the liver. According to the signs that he found in the liver, and which were learned in schools established for that purpose, he predicted the future. "The astrologers, the star-gazers," are mentioned in the prophecy concerning Babylon in Isaiah 47:13. Some scholars explain the Hebrew word for astrologers *hoverei shamayim*, according to the Arabic *habara* ("to cut into large parts"). That would indicate that astrologers divided the sky into star-families, as did Babylonian astrologers, and were identical with stargazers. Others interpret *hoverei shamayim* according to the Ugaritic *hbr* ("to bow") and consider *hoverei shamayim* to be those who bow to the celestial bodies; thus the passage connects the worship of stars with astrology. The observation of celestial bodies or other heavenly signs is referred to in Jeremiah 10:2: "Learn not the way of the nations, nor be dismayed at the signs of the heavens …"

The Biblical Attitude Toward Divination in General

Divination is included among the abominations of the nations which the Israelites were forbidden to learn and practice (Deut. 18:9–11). Leviticus 19:26, 31 also contains the prohibition against the use of magic to tell the future: "You shall not practice divination or soothsaying" and "Do not turn to ghosts and do not inquire of familiar spirits to be defiled by them." The punishment for those who do consult them is excommunication (20:6). However, in response to human nature, the Bible allowed consultation of the Urim and Thummim on the one hand and the prophets on the other, and considered them the only proper means of inquiring into the future. The Book of Deuteronomy designates the prophet to satisfy the needs that were met among the nations by fortune-tellers using systems of magic (Deut. 18:14ff.). The dream was also a proper method of prophesying the future (cf. I Sam. 28:6; et al.), since God would often reveal Himself to His chosen ones in a dream (See *Dreams). According to the prophets Jeremiah and Ezekiel, fortune-tellers and mantics predicted the future in the name of God (Jer. 27:9–10; 29:8–9; Ezek. 22:28; cf. 12:24; 13:6–9). They probably functioned in the area of popular religion, and the prophets saw them as falsifying the word of God and therefore fought them. That fortune-tellers were persecuted is known from the story of the medium and Saul, who removed the mediums and "wizards" and cut them off from the land (I Sam. 28:3, 9). In contrast to Saul's act, which he performed in accordance with the precepts of the Torah, Manasseh, king of Judah, introduced idolatry into Jerusalem: "[he] practiced soothsaying and augury, and dealt with mediums and with wizards" (II Kings 21:6; II Chron. 33:6). The cultic reform of Josiah put an end to these (II Kings 23:24).

[Shmuel Ahituv]

In the Talmud

The rabbis adopted an ambivalent attitude toward divination. On the one hand there is the clear prohibition of the Bible (see above); on the other the rabbis, particularly the Babylonian *amoraim*, lived in an environment which was the classic home of divination, where it was extensively practiced. To some extent they overcame the difficulty by distinguishing between *naḥash* (divination proper), which was forbidden, and *simanim* ("signs"), which were permitted.

The *Sifra Kedushim* 6 and the *Sifrei Deuteronomy* 171 give different examples of divination. The former merely talks of divination by "weasels, birds, and stars," apparently referring to the cry of the animal and the bird, the bird in flight, and the stars in their courses. The latter is more explicit, giving examples of a man regulating his conduct by omens, "For instance, if he says that bread has fallen from his mouth, his staff from his hand, a snake passed on his right and a fox on his left and his tail crossed his path [which are considered bad omens], or if he refuses to do something because it is the New Moon, or the eve of the Sabbath, or Saturday night." The same pas-

sage, however, includes the enchanter (*kosem*) in the category of divination: "the enchanter is one who seizes his staff [and decides according to the direction in which it falls] whether I will go or not." The Talmud (Sanh. 65b) combines these with some variations and adds other bad omens, e.g., if a raven croaks at a man or a deer crosses his path. These are enumerated in Maimonides (Yad, Akum 11:4).

The dividing line between divination and signs is indicated by the statement, "Any divination which is not as the divination of Eliezer the servant of Abraham at the well [Gen. 24:14] or Jonathan the son of Saul [I Sam. 14:9–10] is no divination" (Ḥul. 95b). There is, however, a curious difference of opinion among the medieval commentators as to the import of this statement. Maimonides (Yad, loc. cit.) regards it as meaning that divinations of this kind are forbidden. Abraham b. David of Posquières (ad loc.) roundly disagrees with him, stating emphatically that the passage means that this kind of divination is permitted. Similarly, the *tosafot* (Ḥul. 95b) agree with Maimonides, while Isserles adopts the view of Abraham b. David, though with reservations (Sh. Ar., YD 179:4). The former view seems to be more in accordance with the text and context, and the difference between divination and signs seems to be that in the cases of Eliezer and Jonathan the course of action taken was dependent on the happening, whereas a "sign" merely interprets an event as an omen for good or evil and is permitted.

Thus it is specifically stated in the name of R. Simeon b. Eleazar, "A house, a child, and a wife, though they do not constitute divination, do act as signs" (Ḥul. 95b); i.e., good or bad fortune immediately following the purchase of a house, the birth of a child, or marriage may be regarded as auguries of future success or failure. In the same context comes a special kind of divination which was regarded as permitted: the custom of asking a child to recite "his" biblical verse (Ḥag. 15a; Gitt. 57a et al.) and interpreting the answer as a sign. One interesting example is given by the Talmud (Ḥul. 95b). R. Johanan decided to visit Samuel in Babylon after the death of Rav. He asked a child to quote his verse and the child cited, "Now Samuel was dead" (I Sam. 28:3). Johanan took this as a sign but the Talmud adds, "It was not so. It was only that Johanan should not be put to the trouble of visiting him." The special importance of this form of divination is provided by two passages in the Talmud, one to the effect that "since the destruction of the Temple prophecy was taken from the prophets and given to fools and children" (BB 12b) and the other "if a man wakes up and finds that a scriptural verse has fallen into his mouth, it is a minor prophecy." David ha-Levi presumably combines these two sayings when he justifies this form of divination as "minor prophecy" (*Taz*, YD 179:4). The Talmud is replete with "signs" which do not belong to the category of divination, and the same applies to the Middle Ages, particularly in the *Sefer Ḥasidim* of Judah he-Ḥasid.

Nevertheless the distinction between divination and signs is sometimes so fine as to be almost imperceptible. When Rav was on a journey and came to a ford, if he saw the ferryboat coming toward him he regarded it as a good omen, if departing from him a bad one (Ḥul. 95b). Similarly it is difficult to decide whether the knowledge of "the language of birds" and "the language of the palm-trees" belongs to divination or not. Although, as has been stated, the *Sifra* specifically forbids divination by the cries of birds, and the third of the *Sibylline books (224) states, "the Jews do not consider the omens of flight as observed by the augurs," the Talmud tells the story of R. Ilish for whom the language of the raven was interpreted; he refused to obey it since the raven is a lying bird, but when a dove repeated the message he did (Git. 45a). Of *Johanan b. Zakkai it is related that among his accomplishments was a knowledge of "the language of palm-trees" (Suk. 28a; BB 134a). The following explanation is given by Nathan b. Jehiel in the *Arukh* (s.v. *si'aḥ.* The text here given is by B.M. Lewin (*Oẓar ha-Ge'onim*, 6 pt. 2 (1934)), Sukkah, no. 67, which is slightly different): "On a completely windless day, so still that even when a sheet is spread out it does not sway, he who understands the speech of the palms takes up his position between two adjacent palms and watches how their branches turn toward one another, and there is in this movement signs from which he can recognize many things." It is also said of R. Abraham Kabassi Gaon (who lived in the year 828) that he was an adept in the speech of the palms, and as a result used to communicate "great and wonderful things, the truth of which was attested by many."

Moses *Isserles qualifies the permissibility of such divinations as that of Eliezer and Johanan (see above) with the reservation, "But he who trusteth in the Lord, mercy compasseth him about" (Ps. 32:10), and the Talmud (Ned. 32a) states "He who refrains from practicing divination is brought within a [divine] barrier which even the ministering angels are not permitted to cross." Generally speaking, the view of the halakhic authorities is that divination, like all the other forms of superstitions mentioned in the Bible in this context, such as sorcery, necromancy, and "familiar spirits," is possible but forbidden. A strikingly different, rational, view is taken by Maimonides. After faithfully detailing their laws as found in the Talmud he concludes: "But all those things are lying and falsehood and it is with them that the ancient idolaters led astray the nations of the lands that they should follow them. It is not fitting that the people of Israel, who are wise and perspicuous, be attracted by those follies or imagine that they are of any effect, as it is said, 'For there is no enchantment with Jacob, neither is there any divination with Israel' (Num. 23:23); and it is also said, 'For these nations which thou art to dispossess, hearken unto soothsayers and unto diviners; but as for thee, the Lord thy God hath not suffered thee to do so' (Deut. 18:14). Whosoever believes in those matters and their like and imagines that they are true, and matters of wisdom, but the Torah has forbidden the practice of them, is but of the fools and the retarded and in the category of women and minors whose mind is not whole. Those who possess wisdom and are of wholesome mind, however, know clearly that all these things which the Torah has forbidden are not words of wisdom but confusions and van-

ity to which those lacking in knowledge are attracted and as a result they have forsaken all the ways of truth. For this reason the Torah, when it warns against all these follies, says (Deut. 18:13), 'Thou shalt be wholehearted with the Lord thy God'" (Yad, Akkum 11:16). *Elijah b. Solomon, Gaon of Vilna, however, criticized Maimonides for this rational approach, saying that "accursed philosophy led him astray."

[Louis Isaac Rabinowitz]

In the Middle Ages

OMENS. During the Middle Ages, both Jews and Christians readily read omens from bodily phenomena. The following passages by *Eleazar b. Judah of Worms seem to derive from non-Jewish sources: "Just as the astrologers foresee events from the stars, so there are some who can foretell the future from human signs. If the flesh under one's armpit quivers, they will be broaching a match to him soon … If the sole of one's foot itches … he will be journeying soon to a strange place … if his palm, he will hold in his hand gold or silver … itching in any part of the body is an omen … God apprises man, through bodily phenomena, of what will transpire" (*Ḥokhmat ha-Nefesh*, 25d). Another powerful omen was sneezing. The behavior of animals was also regarded as a portent for the future. A dog howling mournfully is a clear sign that the angel of death is walking through a town; similarly, a dog dragging his hindquarters along the floor toward the door is an indication of the approach of death.

A number of occurrences betokened good or ill fortune; it was unlucky to open the day or the week with an action involving loss, for it was possible that this action could color the whole subsequent period. For this reason, it was considered undesirable to pay the tax-collector or repay a debt on the first day of the week. Other such superstitions include a seminal pollution on the Day of Atonement which was generally believed to herald death within a year, though the talmudic authorities differed in their interpretation of this; a Pentateuch falling to the ground was so bad an omen that it was customary to try to counter it by a period of fasting; making a mistake in prayer also heralded disaster; in the Rhineland it was believed that when the flames on the hearth leap unusually high, a guest will shortly arrive. If the fire is doused with water, the visitor will be drowned (Yoma 88a; Responsa Maharil, 83a–b, etc.; Balu, 149; Grimm, vol. 3,467, para. 889).

Particular tokens of good fortune were some foods. The main meal on Rosh Ha-Shanah included a number of foods symbolizing happiness and prosperity: a lamb's head, "that He may put us at the head and not the tail-end" of things; fat meats, and sweets such as apples dipped in honey, "that the new year may be prosperous and happy"; pomegranates, "that our merits may be as numerous as its seeds"; fish, which are proverbially symbols of fruitfulness, and others. The practice of eating on New Year's Day foods specially chosen for their good influence on the future probably initially reflected Roman custom, and it was also widespread in Christian Europe in the Middle Ages and modern times.

THE ART OF PREDICTION. The desire to know the future was not satisfied through interpretations of omens alone. The active creation of signs and portents was also widely practiced. Although, like leading non-Jewish thinkers, religious and lay, the rabbis forbade these practices on moral and religious grounds, their more or less open recognition that such "evils" bore results made all their prohibitions ineffectual. Medieval Jewry was acquainted with a considerable variety of means of divination deriving from Oriental and Greco-Roman sources as well as from contemporary Christian practice, and they resorted to many of these. One method was to place a lighted candle during the ten days between Rosh Ha-Shanah and the Day of Atonement (traditionally regarded as the period when the fate of each man is determined in heaven) where no draft could extinguish it. If the light went out, then the man in question would die before the year's end; if the candle burned to the end, then he could count on at least one more year of life.

On the night of *Hoshana Rabba, when it was believed that the decision concerning men's fate during the new year was finally and irrevocably set out in the heavenly book of records, it was a widespread practice among medieval Jews to go out into the moonlight to see if the shadows they cast were lacking heads, for the absence of a head was a certain sign that what had happened to the shadow would soon befall the body. The earliest Jewish reference to this custom is made by Eleazar of Worms, and Naḥmanides also mentions it, as well as many later German-Jewish writers.

Like Christians, Jews occasionally used the Bible as a method of divination. They followed the usual procedure of opening the Bible at random and taking as a portent the first word or sentence that met the eye, but in the Middle Ages they also adhered to a practice common in talmudic times of asking children what verses they had studied in school that day and taking them as good or bad omens.

Divination through casting lots was common throughout the Middle Ages. Although it was usual to employ simple devices like tossing a coin or throwing dice, even in these cases the procedure was complicated by rules governing when the operation could be performed, how the lot was to be held, and how the results should be interpreted, as well as prescribing what prayers or charms should be recited. The Hebrew "books of lots," like their Christian counterparts, were of Arabic origin; the Jewish versions seem to have been composed mainly in southern Europe and in the Orient.

The method of divination most common among Jews, which was well known in Oriental and classical antiquity, was also frequently practiced by medieval Christians. By this method a young child was made to gaze into a polished or reflecting surface until he saw figures that revealed the desired information. While this method of divination appears to have been most frequently used for detecting theft, it was also employed to divulge future events.

CALLING UP THE DEAD. Two kinds of necromancy are recognized in the Talmud, that of raising the dead man by nam-

ing him, and that of questioning him through the medium of a skull. Although both types were often referred to in the Middle Ages, it is doubtful if they were still employed. Other methods seem to have been more popular, such as the practice of two friends agreeing that the first to die should return to reveal the secrets of heaven to the other, appearing either in a dream, or during waking hours.

Other methods described in the sources include: (1) "incantations" at the grave, which were apparently frowned upon, for the word *laḥash* usually refers to a forbidden kind of magic; (2) spending the night on a grave, distinctively dressed and burning spices "until one hears an exceedingly faint voice from the grave responding to his questions"; this method was also considered unacceptable for it was included in the forbidden category of magic; (3) "A man and a woman station themselves at the head and foot of a grave, and on the earth between them they set a rattle, which they strike while they recite a secret invocation; then while the woman looks on the man puts the questions, and the deceased reveals the future to them"; (4) an apparently acceptable method which invoked the dead through the use of angelic names: "Stand before the grave and recite the names of the angels of the fifth camp of the first firmament, and hold in your hand a mixture of oil and honey in a new glass bowl, and say 'I conjure you, spirit of the grave, Nehinah, who rests in the grave upon the bones of the dead, that you accept this offering from my hand and do my bidding; bring me N son of N who is dead.'"

DIVINING TREASURE. It was widely believed in the Middle Ages, particularly in Germany, that treasure lay hidden in the earth. Many northern European folktales recount how a ghostly blue flame sometimes flickers on the ground above the hiding place of a hoard. However, since such capricious signs were a rare occurrence, people were not content to wait patiently for the chance appearance that would make them rich. A surer way of reaching the earth's treasures, therefore, was provided by the divining-rod. Several 15th-century Jewish formulas for making and using a divining-rod, which follow closely the texts of German recipes, have been printed. The language of spells, the names used in them, and the very belief on which they are based, are clear indications that they were borrowed from German originals. Not only buried treasure but also sought-after information could be revealed by this method. The preparation of the rods followed the same pattern, but the invocations were altered to suit the differing needs.

DIVINE PUNISHMENT. In a system of law based on divine revelation all punishment originally and ultimately derives from God. Even though human agencies may be entrusted with authority to inflict punishments in certain prescribed cases, God's own overriding punishing power remains unaffected, and the ways and means of divine punishment are as numerous and varied as they are of catastrophic unpredictability (cf. the punishments threatened for "rejecting God's laws and spurning His rules" in Lev. 26:14–43 and Deut. 28:15–68). God punishes whole peoples (the Flood: Gen. 6; Sodom and Gomorrah: Gen. 18; Egypt: Ex. 14:27–28; et al.) as well as individuals (Cain: Gen. 4:10–15; Aaron's sons: Lev. 10:1–2; Miriam: Num. 12:6–10; Korah and his company: Num. 16:28–35; et al.); and visits "the guilt of the fathers upon the children, upon the third and upon the fourth generations of those who reject" Him (Ex. 20:5; Deut. 5:9). The fear of God is inculcated in those tending to be cruel or callous (Ex. 22:26; Lev. 19:14, 32), and specific retaliatory punishments will be inflicted by God for mistreating widows and orphans (Ex. 22:21–23).

Originally, divine punishment was independent of and additional to judicial punishment; there are several biblical instances in which *capital punishment is prescribed for a particular offense and yet the threat of divine punishment is superadded (e.g., Ex 31:14). In one instance, the law explicitly states that where the prescribed capital punishment is not carried out, God will himself set His face "against that man and his kin and will cut off from among their people both him and all who follow him in going astray after Molech" (Lev. 20:2–5). This juxtaposition of divine and judicial punishments appears conclusively to disprove the view that *karet* ("cutting off") was not a divine punishment of death, but rather a judicial punishment of excommunication. While, in the nature of things, all judicial punishment is uncertain, depending on the offender being caught, evidence against him being available, and the "people of the land not hiding their eyes" from him (Lev. 20:4), divine punishment is certain and inescapable, and thus a much more effective deterrent; the omniscient God will not suffer His laws to be disobeyed with impunity (cf. Deut. 32:41). The fundamental injustice underlying the ideas of inherited guilt and deferred punishment and unbounded wrath is, from the

point of view of penal policy, a lesser evil than God's failure to mete out deserved punishment.

For a good many offenses, the divine *karet* is the only punishment prescribed. It has been suggested that they are such offenses as are committed in private, for which eyewitnesses will not usually be available, such as, for instance, the eating of fat or blood (Lev. 7:25–27; 17:10, 14), or various sexual offenses (Lev. 20:17–18; 18:29), or the nonobservance of the Day of Atonement (Lev. 23:29–30) or of Passover (Ex. 12:15, 19). Others maintain that these offenses are mostly of a religious or sacerdotal character, such as failure to circumcise (Gen. 17:14) or to bring certain sacrifices (Num. 9:13), as well as the nonobservance of the religious festivals already mentioned; and that for such religious sins any judicial punishment was thought inappropriate (cf. Sifra 1:19). There are, however, some offenses, punishable by *karet* only, that do not fit into either of these categories as, for instance, public blasphemy (Num. 15:30–31). This fact – together with the gravity of some of the sexual offenses so punishable – led some scholars to assume that *karet*, even though a threat of divine punishment, was at the same time an authorization of judicial capital punishment (cf. Ibn Ezra, Lev. 18:29). This theory is strengthened by the fact that some of the offenses punishable with *karet* are stated to be also judicially punishable (Ex. 31:14; Lev. 20:6).

Apart from *karet*, divine punishment is expressed in terms of simple death (e.g., Num. 18:7) as well as of "bearing one's iniquity" or guilt (e.g., Lev. 5:1; 7:18; 17:16; 20:19; 24:15; Num. 5:31). Sometimes "he shall bear his guilt" is followed by "and he shall die" (Ex. 28:43; Num. 18:32); sometimes it is combined with the threat of *karet* (Lev. 19:8; 7:20), and sometimes joined with the threat of childlessness (Lev. 20:20). It has therefore been suggested that where the "bearing of guilt" stands alone, it is meant only as imposing the duty to bring a sacrifice to God (Tosef., Shevu. 3:1).

With the development of jurisprudence, it was sought to purge divine punishment from apparent injustice (Jer. 31:28–29; Ezek. 18:2–29), and it was later relegated altogether to the realm of homiletics; people were warned that premature death (at the age of 50), or death without leaving issues, were signs of the divine *karet* (Sem. 3:8; MK 28a; Rashi and Tos., Shab. 25a–b), and that every undetected murderer would meet with "accidental" death at the hands of God (Mak. 10b). By talmudic law, *karet*, though interpreted as divine capital punishment, was absolved by the human judicial punishment of *flogging (Mak. 13a–b; Yad, Sanh. 19:1); having been flogged, the offender has expiated even his divine capital crime (Mak. 3:15). This substitution of flogging for divine capital punishment was in legal theory founded on the notion that God would forgive offenders who had repented, and in His mercy refrain from punishing them; undergoing the flogging was regarded as tantamount to repentance. By being flogged, the offender could avoid divine punishment since he cannot be punished twice for the same offense (Mak. 13b). The recidivist, who after having twice been flogged again committed the same offense, was given up – presumably because the supposed repentance could not have been genuine – and was imprisoned and kept on a diet of barley until his belly burst (Sanh. 81b; Yad, Sanh. 18:4).

Where a lesser penalty, such as a *fine, is merged in the larger penalty for the same offense and will not therefore be recoverable, it is sometimes held that in order to satisfy divine law (*Dinei Shamayim*) as well as human law and not be liable to future divine retribution, one should pay also the lesser penalty, especially where it is payable to the victim (cf. BM 91a; Tos. to BK 70b–7 la; Tos. to Ḥul. 130b).

[Haim Hermann Cohn]

Divine Punishment in Civil Law

In the framework of the laws of damages, in a number of cases in which the strict letter of the law does not allow the court to impose payment on the damager, it has been stated that the tortfeasor incurs divine punishment. Tosefta (Zuckermandel Edition; Shebu. 3:2–3), quoting Rabbi Yehoshua, enumerates four such types of damage, regarding which "according to the strict letter of the law, there is no obligation to pay, yet Heaven will not forgive the damager until he pays." Following are the cases, in the manner in which they were explained by the sages of the Babylonian Talmud (BK 55b–56a) and brought down as law (Maim., Yad, Edut, 17:7; Nizkei Mamon, 14:14; Sh. Ar., ḤM, 28:1; 32:2; 418:11,17): (1) if someone knows testimony that can help his fellow yet does not provide it, either testimony in which one witness suffices, or in which two are required (see entry: *Witness); (2) if someone hires false witnesses to testify in favor of one's friend; (3) if someone trains his neighbor's field in the direction of a fire in such a way that an especially strong wind will make the field catch fire, or if he sees fires nearing his neighbor's field and he covers the field in such a manner that the one who lit the fire will be exempt from paying damages, and he thereby prevents the victim from receiving payment; (4) if someone breaches a rickety fence thereby enabling his neighbor's animal to leave, and it goes out and does damage.

The Babylonian Talmud (ibid.) enumerates other cases in which the damager is "exempt by human law but liable by divine law": (1) if someone does work with *mei chatat* [water earmarked for use with the Red Heifer in purifying people who had physical contact with the dead; such work disqualifies the water as a purifying agent (see *Red Heifer); (2) if someone sets poison before his neighbor's animal; (3) if someone leaves a burning ember in the charge of a deaf person, imbecile or minor; (4) if someone frightens his neighbor, without physical contact, and thereby causes him to become sick; (5) if someone's pitcher breaks in a public thoroughfare and he abandons the water and the broken shards, and someone else comes along and is injured by them (see Tosefta, [Zuckermandel edition], BK 6:16–17, where other cases are brought; see *Torts).

The legal responsibility of physicians is a special case. According to Tosefta (Zuckermandel, BK 6:17), "A licensed physician who, with the authority of *bet din* treated a

patient [and committed an error], is exempt by human law but is subject to divine law." Nahmanides, himself a physician, explains that a physician who inadvertently commits injury will be liable by divine law only where he finds out that he has erred and knows what his error was. If, however, he never becomes aware of his error, he is not liable by divine law. Rabbi Simeon ben Zemah *Duran (Algiers, 14th century; Responsa *Tashbeẓ*, 3:82) distinguishes between an inadvertent error during an operation, in which case he will be liable by divine law, and an error in prescribing medication, where not even liability by divine law is incurred. (See also *Assault.)

As far as the meaning of this incurrence within divine law, the *posekim* determined that a bet din has to inform the guilty party that, while the court cannot, in fact, sentence him to pay, he still incurs an obligation vis-à-vis divine law (Rabbi Shlomo Luria, *Yam Shel Shlomo*, BK 6:6). Some held that he is disqualified from bearing witness until he pays, because he is holding stolen money in his possession (Me'iri, Sofer Edition, BK 56a).

In the Kitan ruling (CA 350/77 *Kitan v. Weiss* PD 33(2) 785), the Israeli Supreme Court reversed a lower court's award of compensation for damages in a claim submitted by the relatives of a man murdered by a worker in a factory. The worker killed the man with a gun given him by the factory for work purposes. The respondents argued that, due to the worker's problematic mental state, the factory should have foreseen that his possession of a weapon was fraught with danger. Hence, they argued, the factory should be required to compensate the victim's family. The appeal was rejected because the causal connection between the appellant's (i.e., the factory's) negligence and the killing of the deceased was too weak. Judge Elon suggested in his ruling that the court should recommend to the factory to go beyond the letter of the law. In making this suggestion, Judge Elon relied on the principle of a divine punishment being incurred where, due to the lack of the causal connection required for a torts conviction, there is no possibility of sentencing by a human court. In the opinion of many Sages, under certain circumstances a human court can even force payment, going beyond the letter of the law, upon the defendant (Baḥ on Tur, ḤM 12:4). Even so, civil courts, in accordance with Israeli law, lack the authority to do this. Hence Judge Elon suggested to the defendants to follow this practice (ibid., pages 809–810). (See also CA 842/79 *Ness v. Golda*, PD 36(1) 204, page 220.)

In 1992, the Knesset adopted basic laws whose stated purpose was "to entrench within a Basic Law the values of the State of Israel as a Jewish and Democratic state." In accordance with these laws, a prominent role is accorded to Jewish law within the values of the State of Israel as a Jewish state. Today, all of this having occurred, the position of Jewish law should be given priority. It would appropriate for the courts to adopt this approach of making such recommendations to litigants, and under suitable conditions even of compelling them to go beyond the letter of the law.

For a detailed discussion of this, see *Damages; *Law and Morality.

DIVORCE (Heb. גֵּרוּשִׁין), the formal dissolution of the marriage bond.

IN THE BIBLE

Divorce was accepted as an established custom in ancient Israel (cf. Lev. 21:7, 14; 22:13; Num. 30:10; Deut. 22:19, 29). In keeping with the other cultures of the Near East, a Hebrew in early biblical times could divorce his wife at will and send her from his home. This is reflected in the use of such terms as *shalle'aḥ* (e.g., Deut. 21:14; 24:1, 3), *garesh* (e.g., Lev. 21:7; Ezek. 44:22), and *hoẓi'* (Ezra 10:3; cf. Deut. 24:2) for divorce actions. It also accounts for the survival of the view down to the Christian era that "the woman goes out (*yoẓe'ah*) whether she pleases or not, but the husband sends her out (*moẓi'*) only if it so pleases him" (Yev. 14:1).

The biblical, like the Mesopotamian, law codes did not set down the law of divorce in all of its details. Instead, some of its provisions were stated in brief – almost in passing – within the context of a law restricting the right of a man to remarry his divorced wife (Deut. 24:1–4). Specifically, the husband was required to write her "a bill of divorce" (*sefer keritut*), hand it to her, and send her away from his house (Deut. 24:1; cf. Isa. 50:1; Jer. 3:8). The content of this document is unknown, though it has been conjectured that it contained the formula, "she is not my wife nor am I her husband" (Hos. 2:4). Z. Falk is probably right in assuming that biblical divorce remained essentially an oral declaration, witnessed by the writ. This accords with the actual Sumerian practice which required the husband to pronounce the formula "you are not my wife" and to pay his wife half a mina of silver before he dismissed her from his home. Moreover, as others have shown, the term *keritut* itself may be derived from the ancient Sumerian ceremony requiring the husband to cut the corner of his wife's garment to symbolize the severance of the marriage bond (cf. Ruth 3:9). In any event, biblical law was concerned with the finality of the divorce action and its attendant publicity, so that there might be no questions raised later with regard to the remarriage of the divorcée. Furthermore, the requirement that a bill of divorce be issued in writing and that the wife be formally sent out of her husband's house before the marriage was dissolved, kept him from acting rashly in a moment of anger. The prohibition of remarrying the same woman, if, in the interim, she had married another (Deut. 24:4; Jer. 3:1) acted, similarly,

as a moderating influence. Finally, it has been suggested that a woman was entitled to some kind of a financial settlement in the event of an arbitrary divorce action. This is not clearly stipulated in the biblical texts. Still, the existence of such a requirement appears likely from its prominence in other Near Eastern codes (cf. e.g., *The Code of Hammurapi*, 137–140; in: Pritchard, Texts, 172). It also helps explain a husband's willingness to defame his wife despite the scandal to his household and the possible punishment to himself (Deut. 22:13–21), because presumably he could thus rid himself of her without any penalty. The Bible records only two types of situations in which the husband was stripped of his right of divorce. The first is the one just mentioned, in which he falsely accused his wife of prenuptial intercourse. The second resulted from his having ravished a virgin who had never been engaged to another man (Deut. 22:28–29). These instances and the requirements mentioned above were the only limitations set on a man's authority to dissolve his marriage. Bet Hillel was clearly correct in its interpretation of *ervat* (*'erwat*) *davar* (Deut. 24:1) as any kind of obnoxious behavior or mannerisms, and in concluding that a man was not restricted to grounds of sexual offense in seeking to divorce his wife (Git. 90a; cf. Deut. 23:15). Still, there are no instances in the Bible when a man sent his wife away lightly. On the contrary, Abraham is depicted as resisting the expulsion of his concubine (Gen. 21:11–12), Paltiel wept when he had to give up Michal (II Sam. 3:14–16), and Ezra encountered significant opposition when he called on the men to give up their foreign wives (Ezra 10:3 ff.). The ideal of marriage was that of a permanent union (cf. Gen. 2:24) and conjugal fidelity was praised (Eccles. 9:9). Divorce did remain a necessary evil and was probably resorted to most often in the event of the barrenness of the marital union (cf. Gen. 30:1). There were instances, however, when living together must have been unbearable, and women did abandon their husbands (cf. Judg. 19:1–3; Jer. 3:20) since they had no legal recourse. The Torah did recognize, though, that a man had to discharge certain obligations toward his wife, and she, presumably, had the moral right to leave him if he refused to do so (cf. Ex. 21:10–11). The lot of the divorcée was not a pleasant one (cf. Isa. 54:6). Generally she returned to her father's home (Lev. 22:13), leaving her children with her former husband. Special arrangements were probably made for suckling infants; in later law, boys, at least, had to be returned to their father's home by the time they were six years old (Ket. 65b). The divorcée was free to remarry, but was prohibited to a priest (Lev. 21:7), indicating that some stigma was attached to her. Moral anguish speaks out of Malachi's denunciation of the frequency of divorce in Judea in the fifth century B.C.E. (2:13–16). At about the same time, the Jewish military colony in Elephantine seems to have adopted practices from their Egyptian neighbors which strengthened the woman's position in her marriage. In the three complete marriage contracts of this colony published to date (see bibl.: Cowley, 15, and Kraeling 2, 7), each spouse had full power to dissolve the marriage without establishing any grounds in "matrimonial offenses." The husband had to return his wife's dowry regardless of who had initiated the divorce proceedings, and he had to give her all of her possessions before she was required to depart from his home. These practices, however, had no basis in biblical law, though some scholars have found echoes of them during the talmudic period and later.

[David L. Lieber]

IN LATER JEWISH LAW

Talmudic literature also uses the terms *shalle'aḥ*, *hoẓi'* (see above). Divorce must be distinguished from a declaration of nullity of marriage in which the court declares that no marriage ever came into existence so that all rights and duties flowing therefrom – personal or pecuniary – are rendered inoperative *ab initio* (i.e., in the case of a marriage prohibited on account of incest according to biblical law). It must also be distinguished from an annulment of marriage, i.e., the retroactive invalidation thereof by decree of the court (see **Agunah*; *Marriage). "A man takes a wife and possesses her. She fails to please him because he finds something obnoxious about her, and he writes her a bill of divorcement, hands it to her, and sends her away from his house" (Deut. 24:1). This verse, stated in relation to the prohibition against a man remarrying his divorced wife after her marriage to another man (see *Marriages, Prohibited), provides the basis for the system of divorce practiced according to Jewish law, i.e., there is no divorce other than by way of the husband delivering to his wife – and not vice versa – a bill of divorcement, in halakhic language called a *get pitturin* or simply *get* (a word having the meaning of *shetar*, or bill: see Maim. Comm. to Mishnah, Git. 2:5). The rabbis stated that "whosoever divorces his first wife, even the altar sheds tears" (Git. 90b; cf. Mal. 2:14–16), and therefore she should not be divorced unless "he found something obnoxious about her" – an expression whose exact meaning was the subject of a dispute between Bet Hillel, Bet Shammai, and Akiva (Yev. 112b; Git. 90a). However, in terms of a rabbinical enactment known as the *Ḥerem de-Rabbenu Gershom* (see also *Bigamy, *Monogamy) it became prohibited for the husband to divorce his wife against her will (*Rema* EH 119:6; for the text of the *ḥerem* in relation to divorce see PDR 1:198). In Jewish law, divorce is an act of the parties to the marriage, whereby it is to be fundamentally distinguished from divorce in many other systems of law, in which the essential divorce derives from a decree of the court. In Jewish law the function of the court – i.e., in the absence of agreement between the parties – is to decide the question whether and on what terms one party may be obliged to give, or the other receive, a *get*. Even after the court has thus decided, the parties nevertheless remain married until such time as the husband actually delivers the *get* to his wife. At the same time, it is the function of the court to ensure that all the formalities required for divorce are carried out according to law.

Divorce by Mutual Consent

Jewish law shows a further distinction from many other legal systems in that the mere consent of the parties to a divorce,

without any need for the court to establish responsibility for the breakup of the marriage, suffices for its dissolution, i.e., for delivery of the *get*. It must be given or received by them, however, of their own free will and not out of fear that they may be obliged to fulfill any obligations which they undertook in the agreement in the event of their not being divorced (*Pitḥei Teshuvah* EH 134, n. 9; PDR 3:322–4; 4:353f.). Hence, if either party withdraws from the agreement and satisfies the court of a genuine desire for matrimonial harmony, the other party will likewise continue to be subject to all the recognized matrimonial obligations. In this case, however, the pecuniary conditions which the parties may have stipulated in the event of either of them failing to uphold the agreement may nevertheless be valid and enforceable (*Pitḥei Teshuvah* loc. cit.; PdR 2:9; 6:97; PD, 20, pt. 2 (1966), 6, 12f.). It is also customary to make provision in the divorce agreement for matters such as custody of the children and their maintenance, and in principle there is no reason why such conditions should not have binding validity vis-à-vis the legal relationships between the parties themselves (PDR 4:275, 281). On the question whether and to what extent such conditions are binding in respect of the children, see *Parent and Child.

Divorce other than by Consent

In the absence of an agreement between the parties to a divorce, the court is required to decide whether or not there is a basis for obliging or – in cases where this is permitted by law – for compelling the husband to give, or the wife to receive, a *get*.

The decision of the court is dependent upon the existence of any of the grounds recognized as conferring a right on the wife or husband to demand a divorce.

RIGHT OF THE WIFE TO DEMAND A DIVORCE. The wife is entitled to demand a divorce on the grounds of (a) physical defects (*mumim*) in her husband or (b) his conduct toward her.

Physical Defects as Grounds for Divorce. In order to obtain a divorce on the grounds of physical defects the wife must prove that these preclude him, or her, from the possibility of cohabitation, e.g., because he suffers from a contagious and dangerous disease – "afflicted with boils and leprosy" – or because the defects are likely to arouse in her feelings of revulsion when in his proximity, and the like. In the case of the unreasonable refusal of the husband to comply with the judgment obliging him to give his wife a *get* of his own free will in these circumstances, the court may compel his compliance (Ket. 77a and codes; PDR 3:126). The question whether judicial coercion is possible in the case of epilepsy is disputed, and the practice of the courts is to oblige – but not compel – a divorce on this ground (PDR 1:65, 73f.; 2:188, 193), save in exceptional cases, e.g., where there is the danger of the wife becoming an *agunah* (PDR 4:164, 171–3). The wife is also entitled to a divorce if she is childless and claims that she wishes to have a child but that her husband is incapable of begetting children (Yev. 65a/b and codes; Resp. Rosh 43:4; PDR 1:5, 8; 2:150). The wife must satisfy the court, as a precondition to divorce on this ground, that she is not seeking the divorce for pecuniary reasons or because she has "set her eyes on another" (Yev. 117a and codes; Resp. Rosh 43:2; PDR 1:364, 369). Similarly, she must prove her claim that her husband is the cause of her childlessness; the lapse of ten years from the time of her marriage without her having been made pregnant by her husband establishes a presumption that there are no longer any prospects of her bearing her husband any children (Yev. 64a and codes; PDR 1:5, 9, 10, 369). If the husband claims that the cause does not lie with him, he may demand that the matter be clarified by submission of himself and his wife to a medical examination; if his claim is established, he is exempted from paying his wife's **ketubbah* (Yev. 65a; Resp. Rosh 43:12; Sh. Ar., EH 134; *Beit Shemu'el* 134, n. 14). A comparable cause of action arises from the wife's claim that her husband is impotent (i.e., he lacks *ko'aḥ gavra*; see *Marriage). The claim is grounded not on the wife's desire to raise a family but on her right to sexual relations as such, and it is therefore of no consequence that she already has children, nor is she required to wait for ten years (Yev. 65b and codes; PDR 1:5, 9, 55, 59, 82, 84; 5:154). If the evidence leaves room for the conclusion that medical treatment may possibly lead to the husband's recovery, the court will refrain from obliging the husband to give a *get* immediately (Yev. 65b and codes; PDR 1:81, 84–89; 5:239). In principle, the wife's claim as to her husband's impotence is accepted as trustworthy in terms of the rule that she is believed in matters between her husband and herself; however, corroboration of her statements is required (*Rema* EH 154:7, PDR loc. cit.). In the opinion of some authorities, a wife who succeeds in her claim would also be entitled to the sum mentioned in her *ketubbah*, since her trustworthiness extends also to the pecuniary aspect (*Pitḥei Teshuvah* EH 154:7; *Ha-Gra, ibid.*, n. 41); according to others, full proof is required with regard to the latter aspect (Tur and Sh. Ar., EH 154 and commentators thereto). However, should the wife have married her husband with knowledge of his defects, or if she acquired such knowledge after their marriage and nevertheless continued to live with him, she is considered to have waived her objections unless she is able to show that the defects became aggravated to an extent which she could not have foreseen (Ket. 77a and codes; PDR 1:5, 9, 10; 2:188, 192; 6:221, 223). If she is able to account for her delay on grounds which negate any waiver of rights on her part (such as failure to approach the court because of her embarrassment), her right to a divorce is likely to remain unaffected even if considerable time has elapsed since she first became aware of her husband's defects (PDR 1:11–12). No claim can be based on defects or circumstances which, however serious they may be, do not preclude the wife from cohabiting with her husband – e.g., his loss of a hand, leg, or an eye, etc. – whether occurring after the marriage or before, unless she proves that she did not know or, despite investigation, could not have known of the existence of the defect, and provided that she claims a divorce within a reasonable period after becoming aware thereof (Ket.

77a and codes; Resp. Rosh 42:2; *Maggid Mishneh* Ishut 25:11; *Beit Shemuel* 154 n. 2; PDR 1:5, 11, 65, 71).

Conduct of the Husband as a Ground for Divorce. Unjustified refusal of conjugal rights on the part of the husband entitled his wife to claim a divorce (Sh. Ar., EH 76:11; for her ancillary or alternative rights in this case, see **Moredet*). Similarly, the wife may claim a divorce on the ground of her husband's unjustified refusal to maintain her when he is in a position to do so, or could be if he was willing to work and earn an income. In this event she may also claim *maintenance without seeking a divorce (Ket. 77a, according to Samuel, contrary to Rav). The court will not decree that a divorce should be given on the husband's first refusal, but only if he persists in his refusal after being warned and obliged by the court to pay her maintenance (PDR 5:329, 332). Were the husband totally unable to provide her with the minimum requirements ("even the bread she needs"), some authorities are of the opinion that he can even be compelled to divorce her, whereas others hold that there is no room for compulsion since his default is due to circumstances beyond his control (Yad, Ishut 12:11; Sh. Ar., EH 70:3 and commentators; PDR 4:164, 166–70). The husband will not however be obliged to grant his wife a divorce if he maintains her to the best of his ability, even if this be the measure of "a poor man in Israel" and not in accordance with the rule that "she rises with him but does not go down with him" (see *Maintenance; Sh. Ar. and commentators, loc. cit., PDR loc. cit.). Unworthy conduct of the husband toward his wife with the result that she cannot any longer be expected to continue living with him as his wife constitutes a ground for her to claim a divorce ("a wife is given in order that she should live and not to suffer pain": Ket. 61; *Tashbeẓ*, 2:8). The ground is established when his conduct amounts to a continued breach of the duties laid down as a basis for conjugal life, i.e., "let a man honor his wife more than he honors himself, love her as he loves himself, and if he has assets, seek to add to her benefits as he would deal with his assets, and not unduly impose fear on her, and speak to her gently and not be given to melancholy nor anger" (Yad, Ishut 15:19, based on Yev. 62b; see also *Marriage). Thus the wife will have a ground for divorce if, e.g., her husband habitually assaults or insults her, or is the cause of unceasing quarrels, so that she has no choice but to leave the common household (*Rema* EH 154:3; *Ha-Gra, ibid.*, n. 10; *Tashbeẓ*, loc. cit.; PDR 6:221). The same applies if the husband is unfaithful to his wife (Sh. Ar., EH 154:1 and commentators; PDR 1:139, 141); similarly, if he "transgresses the Law of Moses" – for instance when he causes her to transgress the dietary laws knowing that she observes them, or if he has intercourse with her against her will during her menstrual period (see **Niddah*; *Rema* EH 154:3; PDR 4:342). If the husband is able to persuade the court that his wife has condoned his conduct (PDR 1:139, 142), or of his genuine repentance, the court will not immediately oblige the husband to grant a divorce. The court will direct the parties to attempt living together for an additional period in order to ascertain whether a divorce is the only answer for them, unless it is satisfied that no purpose will be served by such delay (Sh. Ar. and commentators, loc. cit.; PDR 1:87–89; 3:346, 351; 4:257, 259).

RIGHT OF THE HUSBAND TO DEMAND A DIVORCE. The grounds on which the husband may demand a divorce (i.e., since the *Ḥerem de-Rabbenu Gershom*) are mainly similar to those which afford the wife this right against him, and previous awareness or condoning of these defects invalidates his claim (PDR 1:66).

Defects (or Disabilities) of the Wife. In addition, however, defects of the wife which provide the husband with grounds for a divorce are those which are peculiar to a woman as such, and which prevent the husband from cohabiting with her, or which render her unfit for or incapable of such cohabitation (Nid. 12b; Yad, Ishut 25:7–9; Resp.Rosh 33:2; Sh. Ar., EH 39:4 and 117:1, 2, 4; PDR 4:321; 5:131, 193). Included in such defects, according to the majority of the authorities, is epilepsy (Resp. Rosh 42:1; PDR 2:129, 134–6; 5:131, 194). If the husband was aware of such defects prior to the marriage or later became aware – or could have become aware – that they had existed before the marriage but still continued to cohabit with her, he will be considered to have condoned them and they will not avail him as grounds for divorce (Ket. 75 and codes; PDR 1:66; 5:193). Similarly a defect which becomes manifest in the wife only after the marriage does not provide the husband with a ground for divorce, unless she is afflicted with a disease carrying with it mortal danger, such as leprosy, or she has become incapable of cohabiting (Ket. loc. cit. and codes; PDR 2:129, 134–6; 5:131, 194). The husband may demand a divorce if his wife has failed to bear children within a period of ten years of their marriage, and he has no children (even from another woman), provided that he persuades the court of his sincere desire to have children (*Rema* EH 1:3; Sh. Ar., EH 154:1; see also *Oẓar ha-Posekim* EH 1, n. 13–60; PDR 4:353).

Conduct of the Wife. The husband will have ground for demanding a divorce if his wife knowingly misleads him into "transgressing the Law of Moses," as when she has sexual relations with him during her menstrual period and conceals this fact from him, or when she causes him to transgress the dietary laws, etc., knowing that he observes these laws (Ket. 72a and codes), but not if she acted inadvertently, or out of fear, or in ignorance of the law, or if the husband has by his own conduct shown that he is not particular about them (*Rema* EH 154:3; PDR 3:346, 350). Similarly, the husband may claim a divorce if his wife shows habitual immodesty or deliberately slights her husband's honor, as when she curses or assaults him, and generally any conduct on her part tending to disrupt normal family life in such manner as to convince the court that no further condonation and continuation of the matrimonial relationship can be expected of the husband (Ket. 72; Sot. 25a; codes; PDR *ibid.*). Condonation of the above also deprives him of his cause of action for divorce. A similar ground for divorce arises when the husband is able

to prove, on the testimony of two witnesses, conduct on the part of his wife which gives rise to the strong suspicion that she has committed adultery, even if there is no evidence of actual adultery (Yev. 24b, 25a; Yad, Ishut 24:15; Sotah 2:13; Sh. Ar., EH 11:1). Where such proof is forthcoming, the husband is entitled to a judgment compelling his wife to accept a divorce (Sh. Ar. loc. cit. and commentators; *Rema* EH 115:4; PDR 1:51, 54; 2:125–8). If it is proved that the wife has committed adultery, of her own free will, she becomes prohibited to her husband and she will be unable to raise a plea of condonation on her husband's part, since there can be no consent to do what is prohibited by the law (Sot. 18b and 27b; Ket. 9a and codes; PDR 1:13). The wife can be compelled to accept a *get* against her will since she is not protected by the *Ḥerem de-Rabbenu Gershom* in this case. By virtue of the said prohibition, the wife herself may claim a divorce if her husband refrains from instituting action against her since he does not have the right to render her an *agunah*, because on the one hand he is prohibited from living with her and on the other she may not marry another man until divorced from her husband (*Oẓar ha-Posekim* EH 11, n. 1–54; PDR 5:154, 156); however, this is disputed by some authorities (PDR *ibid.*). In this case too the evidence of two witnesses is essential in terms of the rule that "in matters of incest (*ervah*) there cannot be less than two [witnesses]" (Yev. 24b; Kid. 66a; and codes). Thus, generally speaking, her confession alone will not suffice because of the suspicion that she has "set her eyes on another man" (Yev, 24b; Kid. 66a; PDR 3:260), nor will the evidence of one witness only, unless her husband states that he believes her or the single witness as he would two witnesses, and provided the court too is satisfied of the truth of the matter (Kid. 66a and codes). In this event the court will oblige but not compel the parties to divorce each other (Maim. loc. cit.; Sh. Ar. loc. cit.; PDR 4:160). A divorce on the grounds of adultery precludes the wife from remarrying her former husband – to whom she is prohibited by Pentateuchal law – and from marrying the man with whom she committed adultery – to whom she is prohibited by rabbinical law (Sot. 27b and codes). Moreover, she forfeits her *ketubbah* (Ned. 90b; Sh. Ar., EH 115:5). In cases of rape, the wife does not become prohibited to her husband unless he is a kohen (Yev. 56b and codes; see *Priest), nor does she lose her *ketubbah* (Ned. 91a and codes).

Divorce in the Case of a Prohibited Marriage

The court will always compel a divorce at the instance of either party to a prohibited marriage of the sort in which the marriage is valid when performed (see *Marriages, Prohibited), regardless of whether or not they had knowledge of the prohibition, as a matter of law or fact, and regardless of their continued cohabitation after becoming aware of the prohibition (Ket. 77a; Git. 88b; and codes).

The Will of Parties

THE HUSBAND. To be valid, a *get* must be given by the husband of his own free will and is therefore invalid if given while he is of unsound mind, or under duress contrary to law (Yev. 112b; Git. 67b, 88b; and codes). "Contrary to law" in this context means the exercise of compulsion against him when it is not permitted in any way by law, or its exercise in an invalid manner; for instance, if he gives the *get* in order to escape a payment imposed on him contrary to law, even by judgment of the court. Such a case may be when he is ordered to pay maintenance to his wife or children without being at all liable for this, or when he is ordered to pay an excessive amount (PDR 2:9–14). However, if the law specifically authorizes that he be compelled to give a *get* – as in the cases mentioned above – or if he is lawfully obliged to make a payment to his wife – e.g., when ordered to pay interim maintenance in an amount due to his wife pending the grant of a *get* and he has the option of escaping this obligation by granting the *get* – then the *get* will not be considered to have been given by him under unlawful duress, since his own prior refusal to give it was contrary to law (Yad, Gerushin 2:20; BB 48a; Sh. Ar., EH 134:5). In order to obviate any suspicion that the *get* may have been given under duress contrary to law, it is customary, before the *get* is written and before delivery therefore, for the husband to annul all *modaʾot*, i.e., declarations made by him before others in which he purported to have been compelled to give a *get* (*Beit Yosef* EH 134:1; Sh. Ar., EH 134:1–3).

THE WIFE. There must be free will on the part of the wife also to receive the *get* as laid down in the *Ḥerem de-Rabbenu Gershom*, in order to maintain the prohibition against polygamy (see *Bigamy) lest the husband circumvent the prohibition by divorcing his wife against her will and thus become free to take another wife. The wife was therefore given a right similar to that of the husband and cannot be divorced except with her consent (Resp. Rosh 42:1; *Rema* EH 119:2). This applies even in those communities which did not accept the said *ḥerem* against polygamy (cf. *Oẓar ha-Posekim* 1, n. 68, 12). Already according to talmudic law, it was forbidden to divorce a woman who had become of unsound mind, even though it was not prohibited to divorce a wife against her will. If her condition is such that she is "unable to look after her bill of divorcement," the latter will be invalid according to biblical law since it is enjoined that "he shall give it in her hand" (Deut. 24:1) and such a woman has no "hand" in the legal sense (Yev. 113b and codes). Where she "knows how to look after her *get*" even though she "does not know how to look after herself," she still cannot be divorced, but in this case by rabbinical enactment, lest advantage be taken of her and the husband will remain liable for all pecuniary obligations to her even if he should take another wife (*ibid.*). This is all the more so in terms of the aforesaid *ḥerem*, since in both cases the wife is incapable of receiving the *get* of her free will. Whereas talmudic law did not require the husband to obtain permission of the court before taking another wife, the *ḥerem* had the effect of prohibiting the husband from doing so, save with the permission of 100 rabbis. (On the question of the first wife's legal status after the grant of permission as aforesaid, see *Bigamy.)

Execution of the Divorce

Divorce is carried into effect by the bill of divorcement being written, signed, and delivered by the husband to his wife. It is written by a scribe upon the husband's instruction to write "for him, for her, and for the purpose of a divorce." The materials used in the writing must belong to the husband and the scribe formally presents them as an outright gift to the husband before writing the *get.* The strictest care must be taken with the formula of the *get*, most of it in Aramaic, and the text is, with minor differences, according to the wording given in the Talmud. To obviate errors, it is still the practice at the present day to write the bill in Aramaic, although writing in any other language is theoretically permissible (Git. 19b, 87b and codes; on the rules of writing a *get*, its form and language, and the effect of variations therein, see Sh. Ar., EH 120ff.; for the version customary in Ereẓ Israel, see ET, 5 (1953), 656; see also Yad, Gerushin 4:12; Sh. Ar., EH "*Seder ha-Get*" following n. 154). The following is a translation of an Ashkenazi *get*, according to the general usage in the Diaspora:

> On the … day of the week, the … day of the month of …, in the year … from the creation of the world according to the calendar reckoning we are accustomed to count here, in the city … (which is also known as …), which is located on the river … (and on the river …), and situated near wells of water, I, … (also known as …), the son of … (also known as …), who today am present in the city … (which is also known as …), which is located on the river … (and on the river …), and situated near wells of water, do willingly consent, being under no restraint, to release, to set free, and put aside thee, my wife, … (also known as …), daughter of … (also known as …), who art today in the city of … (which is also known as …), which is located on the river … (and on the river …), and situated near wells of water, who has been my wife from before. Thus do I set free, release thee, and put thee aside, in order that thou may have permission and the authority over thyself to go and marry any man thou may desire. No person may hinder thee from this day onward, and thou art permitted to every man. This shall be for thee from me a bill of dismissal, a letter of release, and a document of freedom, in accordance with the laws of Moses and Israel. … the son of …, witness. … the son of …, witness.

The bill of divorcement is composed of the *tofes*, i.e., the formula common to all such bills, and the *toref*, i.e., the specific part containing the details of the particular case, concluding with the declaration that the woman is henceforth permitted to any man. Care must be taken to write the correct date on which the bill is written, signed, and delivered, otherwise it can be invalidated as a bill which is "anticipatory" or "in arrear" of the true date of its writing or signature or delivery (Sh. Ar., EH 127). The husband should also be careful to avoid sexual relations with his wife between the time of writing and delivery of the bill since such a bill, called an "antiquated" one (*get yashan*), although valid in the final instance, may not be used in the first instance (Git. 79b; Sh. Ar., EH 148:1). Once the witnesses sign the *get*, it is delivered by the husband to his wife in the presence of "witnesses to the delivery" (generally the same witnesses as sign; Sh. Ar., EH 133:1). Delivery of the *get* in accordance with the regulations renders the wife divorced from her husband and free to marry any man save those to whom she is prohibited by law, e.g., a kohen or paramour (see *Marriages, Prohibited). It is customary that after the wife has received the *get* she gives it to the court, who presents her with a document stating that she has been divorced according to law. The court then tears the *get* in order to avoid any later suspicion that it was not absolutely legal and files it away in its torn state (*Beit Shemu'el* 135:2; Sh. Ar., EH 154 (*Seder ha-Get*), ch. 6; *Sedei Ḥemed, Asefat Dinim*, *Get* 1:23). The rules pertaining to the writing, signing, and delivery of a *get* are very formal and exact in order to avoid mistakes or a wrongful exploitation of the *get*, and they must therefore be stringently observed. (The exact details are to be found in Sh. Ar., EH 124–39.) As a result it was laid down that "no one who is unfamiliar with the nature of divorce (and marriage) may deal with them" (Kid. 13a). The Mishnah mentions a particular form of *get* which was customary in the case of kohanim, who were regarded as pedantic and hot-tempered and therefore likely to be hasty in divorcing their wives. This form of *get* – called a "folded" or "knotted" one as opposed to a "plain" *get* – consisted of a series of folds, each of which (called a *kesher*) was stitched and required the signature of three witnesses (two in the case of a "plain" *get*) who signed on the reverse side and not on the face, between each fold. All this was done to draw out the writing and signing of the *get* so that the husband might reconsider and become reconciled with his wife (BB 160ff.). The "folded" *get* was customary in ancient times only and the rules pertaining to it are omitted from most of the codes (e.g., Maim., Tur, Sh. Ar.).

Agency in Divorce

Although divorce in Jewish law is the personal act of the husband and wife, their presence in person is not a necessary requirement for its execution. Delivery and receipt of the bill of divorcement, like any regular legal act, may be effected through an agent in terms of the rule that "a man's agent is as himself" (see *Agency; Git. 62b and codes). Appointment of the agent is made before the court by way of a power of attorney (*harsha'ah*), i.e., a written document very carefully and formally prepared to include all the relevant details, in which the agent is empowered to delegate his authority to another, and the latter to another in turn, etc. (Sh. Ar., EH 140:3; 141:29–30). An agent appointed by the husband for the purpose of delivering the *get* to his wife is called "the agent of delivery" and the *get* takes effect only upon delivery thereof by the husband or his agent to the wife or her agent, the latter called "the agent of receipt" (Sh. Ar., *ibid.*). In the latter case the fact that the wife may not know exactly when the *get* takes effect is likely to result in complications and doubts and it has not therefore been customary to resort to agency of this kind (*Rema* EH 141:29). The wife may also appoint a "delivery" agent – i.e., to deliver the *get* to her (and not to receive it on her behalf) after receiving it from the husband or his agent – in such manner that she will become divorced only upon de-

livery thereof to herself. The latter agent is not an "agent of receipt" and is subject to the same rules as is an "agent of delivery" (Sh. Ar., EH 140:5). The rules of agency in divorce are of practical importance in cases where the parties live in different countries and wish to avoid the expense involved in the grant and delivery of a *get* in the presence of each other, or where they do not wish to confront one another. The same applies when one of the parties is an apostate. In these cases the husband is enabled to divorce his wife by way of "conferring" the *get* on her (*get zikkui*), i.e., by delivery thereof to an agent appointed by the court, the divorce taking effect upon the agent's receipt of the *get*. (According to some of the *posekim* the *get* must thereafter be delivered to the wife herself so as to avoid doubt.) This *halakhah*, that the court can appoint an agent for the wife without her explicit consent or knowledge, is based on the rule that "a benefit may be conferred on a person in his absence" (Yev. 118b; see *Agency), on the following reasoning: if the husband becomes an apostate, it is presumed that the Jewish woman will always prefer living as a divorcée to living with an apostate; if the wife becomes an apostate, it can only be to her advantage if she no longer remains tied to her Jewish husband and will thus no longer be liable if she cohabits with another (see *Rema* EH 1:10 and 140:4; *Oẓar ha-Posekim* EH 1, n. 81, 1–9).

Conditional *Get*

A *get* may be written and delivered conditionally, that is so as not to take effect except on fulfillment of a stipulated condition, e.g., if the husband should fail to return to his wife within a specified period or that no word from, or concerning him, shall be forthcoming until then. The condition must not contradict the basic nature of divorce, i.e., the absolute severance of the marriage relationship between the husband and wife. To have validity it is necessary that all the complicated laws pertaining to *conditions be observed at the time of its imposition. Similarly, it must later be carefully investigated whether all the facts required to establish fulfillment of the condition have been adequately proved, since there is at stake the random divorce of a married woman. The doubts and complications attaching to a conditional *get* are likely to be particularly severe in the light of a rabbinical enactment to the effect that a plea of accident (*force majeure*, see **Ones*) does not avail in divorce. Thus, contrary to the general rule that a person is not responsible for his act or omission resulting from accident, the husband cannot plead that the condition to which the validity of the *get* was subject was fulfilled only on account of accident – such as his failure to return in time due to an unforeseeable disruption of the means of transportation (Ket. 2b, 3a; Sh. Ar., EH 144:1; see also **Takkanot*). Hence in general the practice is not to permit a conditional *get* save in exceptional cases, and then the above-mentioned laws may be of great practical importance, e.g., in times of persecution or war when there is separation between husband and wife and the danger of her becoming an *agunah*. In such cases the practice is sometimes adopted of granting a *get* on condition, e.g., if the husband should fail to return from the war by a certain date the *get* shall be deemed to be effective, and the wife divorced and free to remarry without need for a levirate marriage or *ḥaliẓah*. Upon fulfillment of the condition, the *get* will take effect either immediately or retroactively to the time of its imposition, according to the terms thereof, and provided that everything had been done in strict conformity with all the requirements of the law (Sh. Ar., EH 143, 144, 147; see also **Agunah*, *Levirate Marriage). This aim may also be achieved by the conditional appointment of an agent, e.g., the appointment by the husband, before going to war, of an agent given written authority to write a *get* in his (the husband's) name and to deliver such to his wife, on condition that the power of attorney is not acted upon unless the husband should fail to return home within a stated period (Sh. Ar., EH 144:5, 6). The court itself may be thus appointed and may in turn, in terms of authority generally granted in the power of attorney, delegate its authority to a third party. A deathbed divorce (see *Wills) is also a conditional *get*, i.e., one given by a husband on his deathbed so as to free his wife from the requirement of a levirate marriage or *ḥaliẓah*. In practice such a *get* will also have no validity except if the husband dies, whereupon it will take effect retroactively from the date of its delivery (see Sh. Ar., EH 145).

Consequences of Divorce

Upon divorce, the parties are generally free to remarry as they please save as prohibited by law. The wife becomes entitled to the return of her own property from the husband, in accordance with the rules of law pertaining to the husband's liability therefor (see *Dowry). She is similarly entitled to payment of her *ketubbah* and dowry, save where she forfeits her *ketubbah*, e.g., because of her adultery. Divorce terminates the husband's legal obligation to maintain his wife, since this duty is imposed only during the subsistence of the marriage (Sh. Ar., EH 82:6). For charitable reasons, however, it is considered a *mitzvah* to sustain one's divorced wife more extensively than the poor at large (*Rema* EH 119:8). Upon divorce the parties are not permitted to continue their joint occupation of the former common dwelling, lest this lead to promiscuity (Sh. Ar., EH 6:7; 119:7, 11). If the dwelling belonged to one of them, whether owned or hired, it must be vacated by the other party and if it belonged to both it must be vacated by the wife (*ibid.*), as "the husband has greater difficulty in moving about than the wife" (Ket. 28a); although sometimes the courts, in order to settle financial matters between the parties, or in awarding compensation to the wife, will decide that the dwelling remain in her hands (see e.g., OPD, 158, 163 no. 6). If the divorced parties nevertheless continue to jointly occupy the dwelling, or later return thereto – as testified to by witnesses – they will be presumed to have cohabited together as husband and wife for the sake of a marriage constituted by their sexual intercourse (*kiddushei bi'ah:* see *Marriage). This follows from the rule that "a man does not have intercourse for the sake of promiscuity if he is able to do so in fulfillment of a precept," i.e., it will not

be presumed that the parties wished to transgress since they were lawfully in a position to marry each other (Yad, Gerushin 10:17; Sh. Ar., EH 149:1). Hence they will be required to divorce each other once again if they should wish to marry third parties, i.e., a "*get* out of stringency" (*get mi-ḥumra*) at least and possibly even out of an undoubted *kiddushin* between them (Sh. Ar., EH 149:1, 2; PDR 7:35). If the wife marries another man without having first obtained a second *get* as aforesaid, this marriage will accordingly require dissolution, since she is regarded as being the wife of the first husband (Sh. Ar., loc. cit.; *Beit Shemu'el* thereto, n. 4). Since the aforesaid presumption is founded on the premise that the parties were in a position to be lawfully wedded, it will not apply in the reverse situation, e.g., in the case of a kohen who is prohibited from remarrying his divorced wife, or when the wife has meanwhile become the widow of or divorced from another husband, or if the husband has meanwhile taken another wife and hence become prohibited by the *ḥerem* from being married at the same time to another, i.e., his former wife. Consequently, according to some of the codes, no second *get* will be required in all the above cases (*Beit Shemu'el* loc. cit.; PDR loc. cit.).

IN THE STATE OF ISRAEL

In terms of the Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713–1953, matters of marriage and divorce between Jews, citizens or residents of the state, fall within the exclusive jurisdiction of the rabbinical courts, which jurisdiction extends to any matter connected with the suit for divorce, including maintenance for the wife and for the children of the couple (sec. 3(1)). Divorce for Jews is performed in accordance with Jewish law (sec. 2). In applying the *halakhah* the rabbinical courts have introduced an important innovation, namely the award of monetary compensation to a wife who is being divorced; this is done even when the divorce is not specifically attributable to the fault of the husband, but the court, after close scrutiny of all the facts, is persuaded that the situation prevailing between the parties does not, objectively speaking, allow for the continuation of their marriage. In this event, the court, upon the husband's demand that his wife be obliged to accept a *get*, will customarily oblige the former to pay a monetary or equivalent compensation to his wife – in addition to her *ketubbah* – in return for her willingness to accept the *get* (OPD 51–55; PDR 1:137). The extent of the compensation is determined by the court, having regard to all the circumstances, including the financial position of the parties and their respective contributions to the state of their assets.

[Ben-Zion (Benno) Schereschewsky]

ENFORCEMENT. The legal position in Israel regarding the enforcement of divorce may be divided into two periods, the first extending from 1953 to 1995, and the second from 1995 onwards.

The Legal Position from 1953. The Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713 – 1953 established the following procedure for enforcement of a judgment compelling the husband to grant a get to his wife, or compelling the wife to accept a *get* from her husband: "Where a rabbinical court, by final judgment, has ordered that a husband be compelled to grant his wife a *get*, or that a wife be compelled to accept a *get* from her husband, a district court may, upon expiration of six months from the day of the making of the order, on the application of the Attorney General, compel compliance with the order by imprisonment (sec. 6 of the Jurisdiction Law)."

This Law enumerates the following preconditions for imprisonment as a means of compelling the husband to grant a divorce: (a) the rabbinical court judgment ordering a compulsory *get* is a final one; where an appeal against the judgment is pending, it cannot be enforced; (b) the authority is granted exclusively where the judgment *compels* the giving of the *get*, and not where the ruling is that there is an *obligation* to give a *get* (HC 822/88 *Rozensweig Borochov v. Attorney General*, 42 (4) PD 759, 760); (c) six months have passed since the final judgment was given, and the *get* has not been given; (d) after that period, the Attorney General, and not the spouse, is authorized (at his own discretion – see HC 85/54 *Zada v. Attorney General*, 8 PD 738) to apply to the district court, requesting it to enforce compliance with the judgment, by way of imprisonment. The district court, and on appeal the Supreme Court, is the only legal instance empowered to compel the giving or receiving of a *get* by imprisonment of the spouse who refuses to comply with the judgment of the rabbinical court. The Law does not stipulate the length of the period, nor is it of fixed duration. The imprisonment terminates upon the granting of the *get*. In one case, the recalcitrant husband remained in prison for a number of decades until he died (CA 164/67 *Attorney General v. Yichhieh & Ora Avraham*, 22 (1) PD 29).

The power to determine whether there is a need to compel the granting of a *get* in a particular case is vested exclusively in the local rabbinical court, and in the Supreme Rabbinical Court, as an instance of appeal (see entries on **Bet Din* and *Appeal). The Jurisdiction Law of 1953 established a mechanism for dual civil supervision over the compulsion of a *get*: (a) the initiative was neither of the spouse nor of the rabbinical court, but rather of the Attorney General; (b) the judicial instance that actually decided on the imprisonment of the recalcitrant spouse was the civil instance (the district court) and not the rabbinical court. According to the decision of the Supreme Court sitting as the High Court of Justice, the rabbinical court was not permitted to circumvent this supervisory mechanism by way of "intimidatory maintenance" (excessively high maintenance payments as a way of pressuring the husband into granting a *get*). This is because the legislation explicitly provided that the only way of enforcing judgments to compel the granting of a *get* is by way of an application made by the Attorney General, followed by a decision of the civil court. It follows therefore that this power was not conferred on the rabbinical court. An attempt on the part of the rabbinical court to procure the compulsion of a *get* by way

of "maintenance and intimidation" would be overstepping its authority, and its ruling would be annulled by the High Court of Justice (see: HC 54/55 *Rozensweig v. Head of Execution*, 9 PD 1542., per Silberg J.)

The Legal Position since 1995. About 40 years after the enactment of the Jurisdiction Law of 1953 – and in view of the surfeit of unresolved *agunah* cases as a result of the complex mechanism described above – the Knesset pioneered a solution to the problem by the enactment of a special law to deal with enforcement of divorce judgments: The Rabbinical Courts Law (Upholding Divorce Rulings) (Temporary Provision), 5755–1995 (see **Agunah* for a brief description of this Law).

The Law was initially enacted as a temporary provision, but after a few years it became a permanent law. Over the years a number of additions and amendments were introduced in the wake of the lessons derived from its implementation.

The Law introduces the following innovations, in contrast with the situation that had existed since 1953: (1) the rabbinical court judgment need not be final (as in the 1953 law); even if the judgment can be appealed, the provisions of the 1995 Law apply; (2) the power to compel the granting of a *get* under the 1995 Law is not limited specifically to cases in which judgment was given for the compulsion of a *get* (as in the 1953 Law). Hence, section 1 of the 1995 Law provides: "For purposes of this section, it is immaterial if the judgment used the wording of compulsion, obligation, *mitzvah* (positive precept), suggestion or any other wording"; (3) moreover, the 1995 Law can be invoked 30 days after judgment is given for granting the *get*, and there is no need to wait six months, as was the situation under the 1953 Law; (4) the authority to compel the spouse to comply with the divorce judgment no longer rests with the civil authorities (the Attorney General and the district court) as under the 1953 Law; this authority has been conferred on the rabbinical court; (5) the procedure itself is initiated by the spouse, who is no longer dependent on the Attorney General's application to the district court; (6) the rabbinical court is permitted, at its own initiative, to impose or to amend restrictive orders; (7) under the 1995 Law, the period of coercive imprisonment cannot exceed five years, but, if necessary for the purpose of fulfilling the judgment, the rabbinical court is permitted to extend this period from time to time, provided that the total period of imprisonment does not exceed ten years (under the 1953 Law the imprisonment period was unlimited).

Another innovation of the 1995 Law was the establishment of a hierarchy of sanctions, collectively known as "restrictive orders," which the rabbinical court is authorized to impose on the recalcitrant husband (see **Agunah* for a specification of the restrictive orders).

Regarding criminal inmates who refuse to give or accept a *get*, the Law establishes special provisions within the framework of restrictive orders, which include the denial of benefits generally granted to inmates, such as: receiving furloughs, sending letters, receiving visitors, work in prison, and the like. Similarly, the rabbinical court is authorized to issue an order stating that an inmate of this ilk will not be released on parole, or will not be entitled to an administrative release.

The aforementioned restrictive orders of the 1995 Law are a modern application of the *harḥakot* (sanctions) of Rabbenu Tam, which allow the ostracizing of husbands who refuse to grant a *get* by prohibiting all social contact with them (SHEZ 154:211 *Rema,* and see in further detail **Agunah*). Indeed, the rabbinical courts have not regarded themselves as being limited to the specific restrictive orders enumerated in the 1995 Law, and in appropriate cases they added social-religious sanctions, such as not including the recalcitrant husband in a *minyan,* not giving him an *aliyah* to the Torah, prohibiting his burial in a Jewish cemetery, publicizing the entire matter, etc.

However, the most important and primary sanction established by the 1995 Law is the authority of the rabbinical court to imprison a person who refuses to comply with the divorce judgment. This imprisonment has proven to be particularly effective, and there have been quite a few cases in which the recalcitrant husband gave a *get* after just a short period in prison by order of the rabbinical court.

A special problem arises when the reluctant husband is in prison, serving a sentence for a criminal offense. How does one wield the imprisonment sanction against this kind of prisoner in order to compel him to give a *get* to his wife? The Law stipulates that, in such a case, service of the criminal sentence is discontinued, and from the date of the rabbinical court's order, the sentence being served by the inmate is regarded as being for his failure to give a *get*. After having given the *get*, he resumes the service of his criminal sentence (see section 47 of the Penal Law, 5737–1977).

Regarding inmates serving a sentence for a criminal offense, there may be cases in which the rabbinical court deems that imprisonment for compulsion of the *get* is not effective. In such cases, under section 3A of the 1995 Law, it is empowered to order that the inmate be held in solitary confinement for short, 14-day periods, and thereafter for seven-day periods, with intervals of seven days.

The rabbinical court has particularly broad discretionary powers under the 1995 Law. The Supreme Rabbinical Court supervises the rabbinical courts' implementation of the Laws by way of its power to stay execution of a restrictive order and within the framework of an appeal. This supervisory power applies both to restrictive orders and to the imprisonment that can be imposed on the husband refusing to give a *get.*

When recalcitrant husbands refusing to give a *get* petitioned the High Court of Justice, claiming that the imprisonment order issued by the rabbinical court violated their constitutional rights, their petitions were dismissed by dint of this brief and incisive argument: "The petitioner holds the key to his release from prison; when he gives the *get* to his wife, he will go free" (HC 3068/96 *Goldshmidt v. Goldshmidt and the Supreme Rabbinical Court*; HC 631/97 *Even Tzur v. Supreme Rabbinical Court*).

Originally, the 1995 Law regulated the manner of enforcing the *get* in cases where the *husband* is the party obliged to give the *get*. But the Law was amended shortly after its enactment, prescribing slightly different provisions for cases in which the *wife* refuses to accept a *get* from her husband. While the nature of the sanctions against the husband or the wife is essentially the same, with respect to their imposition on women, sections 1(c), (e), and (f) of the Law place the following two limitations: the first is the requirement of the advance approval of the president of the Supreme Rabbinical Court; the second is that, if restrictive orders against the wife have already been issued, the husband's application for permission to marry will not be adjudicated until three years have passed since the restrictive order was given.

It should be mentioned that the provisions of the 1995 Law do not detract from the provisions of the 1953 Law, and it is possible to enforce a divorce under either one of the two laws. However, in view of the effectiveness of the new law, since its enactment in 1995 it has been used exclusively, and the 1953 law is no longer applied.

Great importance is attached to the 1995 Law and the sanctions that have been imposed by rabbinical courts for enforcement of divorce judgments, and they have led to a significant reduction in the number of *agunot* in Israel. The rabbinical courts also relied upon the existence of enforcement measures in Israel as a justification for extending their jurisdiction to include Jewish couples with a limited connection to Israel, especially in cases in which they were civilly divorced abroad, and the woman requires a *get* according to the *halakhah* in order to be able to remarry (see judgments of the Supreme Rabbinical Court, *Appelbaum v. Appelbaum*, File 1239–53–1, and *Anon. v. Anon.*, judgment from 30.6.04). The latter judgment was adjudicated in HC 6751/04 *Sabag v. Supreme Rabbinical Court*. The majority view (Justices Procaccia and Adiel) was that the rabbinical courts in Israel do not have jurisdiction to adjudicate these cases. The minority view (Justice Rubinstein) was that the rabbinical court is competent to adjudicate the maintenance payments for a wife who is prevented from marrying due to the husband, even when the spouses are foreign residents, but Jewish. It should be noted that the Law was amended in 2005, and subject to a number of conditions stipulated in the amended Law, the Israeli Rabbinical Court now has jurisdiction over Jewish couples that were married abroad in accordance with *din torah*, and the 1995 Law applies to those couples as well (see in detail in the entry *Bet Din).

The aforementioned Knesset legislation of 1995 therefore makes an important contribution towards the resolution of the problem of the *agunah*, but the solution it provides is partial only, and the entire subject of the *agunah* still awaits an appropriate and desirable solution. The appropriate path for a comprehensive solution of the *agunah* problem is discussed in detail under **Agunah*.

In other dimensions too, the Israeli legal system operates in order to enforce the divorce and prevent a situation of *agunah*. For example, Elon opined that extradition abroad of a person suspected of murder could be delayed for at least one year in order to enable the rabbinical court to process the divorce of the parties involved, and thus prevent a situation in which the wife of the candidate for extradition would become an *agunah*; see HC 852/86 *Aloni v. Minister of Justice*, 41 (2) PD 1, 70 onwards (see 9 *Teḥumin*, 63 for the judgment of the rabbinical court).

There is now a new method for assisting in the enforcement of divorce judgments of the rabbinical courts if the wife receives a judgment obligating the husband to divorce her, and the husband refuses to comply: in such a case, the wife can sue him for the damage caused to her. In a recent ruling, the Jerusalem Family Court awarded damages in a case of this kind, basing itself on the general rules of negligence. The court ruled that the husband's failure to comply with the rabbinical cCourt's ruling, ordering him to give his wife a *get*, constituted a grave violation of the wife's autonomy and her right to self-realization. It violated her dignity and her freedom, causing her emotional damage by sentencing her to a life of loneliness, lack of partnership, intimacy, and sexual relations with a member of the other sex (FF 19270/03 *Anon. v. Anon.*: given by Judge Menahem Hacohen on 24.12.04).

[Moshe Drori (2nd ed.)]

STATISTICS

Europe

In 1897, the Russian Jews in the Pale of Settlement had a much higher divorce rate than other religious or ethnic groups. Jewish men in the relatively large cities had, on the average, 5.4 divorces per 1,000 males, while the others had only 2.2 per 1,000. In the case of the females the index was 19.1 and 5.4 respectively. Those who lived in smaller communities or rural places had a smaller percentage of divorces. It thus appears that the Jewish population had a much higher divorce rate than non-Jews. In both instances there was a larger percentage of divorces among the women than the men (since women are less likely to remarry) and those who lived in large cities had a higher divorce rate than their coreligionists in towns and rural communities. European Jewish communities witnessed in the years before World War I an upward trend in their divorce rate. One-eighth of those who were divorced or separated in Austria in the years 1882–89 were Jewish, but in the decade 1890–99 they constituted 15.8%, falling to 9.7% in the years 1900–12. Since in Austria the Jews formed only 4.8% of the population in 1890 and 4.6% in 1910, divorce was more prevalent among them than among other religious groups, many of whom were Roman Catholics. However, during this period, relating the number of divorces and separations to the number of marriages, the Jews had a lower rate of increase in divorces than others. The same was true of Prussia where during the same period the Jewish divorce rate continued to rise, but not as fast as the one of non-Jews. This suggests that the attitude of non-Jews to divorce was changing, and once this

had occurred their divorce rate began to increase more rapidly than that of the Jews. The divorce rate of European Jews increased considerably in the years between World War I and World War II. The index of divorces per 1,000 living spouses of Jewish males in Polish cities increased from 2.8 in 1921 to 6.8 in 1931, while that of non-Jews in the same towns was 3.5 and 7.9. In the case of the females, the increases were from 9.6 to 17.3 and from 6.9 to 14.8 respectively. As in the case of Russia, the males had a relatively smaller number of divorces than the females, partly because of the difference in their remarriage rates. Because most of them were Roman Catholics, for whom remarriage was almost impossible, the non-Jewish males had a larger percentage of divorces than the Jewish group. Jewish women had a higher index of divorces because of the anti-divorce attitude of the Catholic Church. The Hungarian Jewish community, which had in 1930 a population of approximately 445,000, had a higher index of divorces than the Polish Jews and a larger increase in the decade 1920 to 1930. Urban Jews had a higher index than those in other localities; the Budapest community, for instance, had the largest percentage of divorces. The Jews in Czechoslovakia had a lower index of divorces than their coreligionists in Hungary. This may have been partly due to the fact that one-twelfth of the Czechoslovakian Jews were engaged in agriculture while only 2.7 were similarly employed in Hungary. German-born Jews in Prussia had in 1925 a larger percentage of divorces than their immigrant brethren. The index of divorces of the former was 14.0 for the males and 29.3 for the females; in the case of the immigrants the indices were 13.5 and 18.8 respectively. The differences were even more pronounced in Berlin, where the German-born males had an index of 24.8 and the females of 47.2 whereas the others had indices of only 18.8 and 23.4 respectively.

British Commonwealth

In Australia, where the number of divorces increased between 1911 and 1954, the male index rising from 7 to 38 and the female from 11.5 to 48.7, the Christians had in 1954 about the same percentage of divorces as the Jews. Canada had in 1931 a very small percentage of divorces, partly because those who had been separated from their spouses were not reported as such. Moreover, adultery was officially the only ground for divorce. The 1941 census report, however, had data on divorce and separation according to ethnic origin in cities with at least 30,000 inhabitants. Taking Montreal, Toronto, and Winnipeg, the three largest Jewish communities, the results were: the index for Jewish males was 14.8 and for Jewish females 24.8, while for the other males and females it was 26.3 and 40.7 respectively. The differences are mainly due to the fact that Jews have a low separation index.

Muslim Lands

Muslims usually have a large percentage of divorces. The Jews in Egypt had a much lower index of divorces than the Muslims. In and around Alexandria and Cairo, the index of divorces of the Muslim males in 1927 was 44.9 and that of the Jews 12.7; the corresponding female indices were 64.1 and 25.6. The Christians had about half as many divorces as the Jews. Twenty years later, the index of the Muslim males had dropped to 26.5 and that of the females to 49.7, while the Jewish indices had increased to 15.1 and 27.0. In 1951 in Morocco Jewish males had a relatively smaller number of divorces than Muslims, the indices being 14.4 and 22.6. However the female index of 57.6 was higher than that of Muslim females.

The U.S.

As far as the United States is concerned, it is difficult to assess the divorce rates of any of its religious or ethnic groups since the agencies which collect data on marriage and divorce do not use such classifications. Nor does the Bureau of the Census report the marital status of the population according to religious or ethnic origin. The only sources of information are surveys of Jewish communities or samples of the population in which Jews are included. As few attempts have been made to survey very large communities and some of the investigators do not use standard definitions or classifications, the results of these surveys and studies are suggestive rather than conclusive. Though the so-called family crisis at the beginning of the period of mass immigration was probably neither very serious nor of long duration, Jewish social agencies became very much interested in the family life of the immigrant. Studies made in the early 20th century showed that desertion was not as prevalent among Jews as among other ethnic and religious groups. An analysis of the Chicago Court of Domestic Relations in 1921 demonstrated that only 10.4% of the deserters whose religion was the same as their wives were Jewish. In 1929–35, when about one-tenth of Chicago's population was Jewish, only 5.5% of the non-support cases were Jewish couples, with those of Jewish origin whose spouses were not Jewish accounting for another 0.7%. In Philadelphia in the years 1937 to 1950, when Jews constituted about 16% of the white population, they accounted for 11.8% of the white couples who were divorced. Baltimore Jews also had low desertion and divorce rates. In 1936 and 1938, when at least one-tenth of the white population was Jewish, they formed only 5.3% of the white deserters. Similarly in the Detroit Jewish community broken homes were less prevalent than in other religious groups there. According to a metropolitan survey in 1958 only 4% of the Jewish respondents who had ever married reported that they had been divorced, as compared with 8% of the Catholics and 16% of the Protestants. However, a study made in 1955 reported that the Jews in several cities had a higher divorce and desertion rate than Protestants. Taken on the whole, these results show that divorce, separation, and desertion were less prevalent among American Jews than others, and surveys of Jewish communities made since 1946 showed that they have a relatively smaller number of broken homes than the rest of the white population. Divorce was more prevalent among those whose spouses are not Jewish than when both of them are of Jewish origin. (The above statistics are quoted by N. Goldberg

in *Jews and Divorce* (see bibl.)). In more recent times Jewish divorce rates have followed the upward trend in the United States as a whole.

DIWAN, JUDAH BEN AMRAM (d. c. 1752), emissary of the communities in Ereẓ Israel to the Diaspora. He resided first in *Jerusalem and later in *Safed. In 1708, he was sent as a representative of Safed to *Iraq and *Persia. Upon his return, he was sent by the community of *Hebron on a mission to the same countries. In the course of this mission he preached in the communities of *Aleppo, *Hamadan, and *Tabriz, and issued responsa in *Baghdad and Hamadan. On his return journey, he learned of the financial pressure Arab creditors were exerting on the Jewish community in Jerusalem. He interrupted his trip and remained in Aleppo for some time where he lost his money in an unsuccessful business enterprise. Having heard that the leaders of the Constantinople community had arranged to settle the debts incurred by the Jerusalem community, Diwan went to Constantinople. There, in 1728, he printed his book *Zivḥei Shelamim* on the laws of *sheḥitah*. He then went on a further mission to several Oriental countries to collect contributions for Jerusalem. On his return, some of the wealthy members of the Constantinople community founded a yeshivah for him in Jerusalem, called Neveh Shalom Berit Avraham. In 1736, he was a signatory to the regulations of the community in Jerusalem. He sent the manuscript of his book *Ḥuṭ ha-Meshullash* to Constantinople where it was published in 1739. The book consists of sermons delivered and responsa issued while on his missions. The introduction includes an autobiography and the description of his three journeys. There are extant a number of *haskamot* ("declarations of approval") to books signed by Diwan.

DIYALA, province of eastern Iraq, 6,154 sq. mi. (15,754 sq. km.). There were formerly Jewish communities in eleven towns and villages of Diyala. According to the 1947 census, the total Jewish population was 2,850. The capital city, *Ba'quba, was inhabited by Jews as early as the 12th century. In *Khanaqin in 1845 there were twenty Jewish families; in 1932 there were 1,110 Jews, most of whom spoke Arabic, while a minority spoke Jebelic Aramaic. Most of the Khanaqin Jews were employed in the textile and iron trades. Some of them were also perfume and spice dealers. In 1911 a coeducational school was founded by the Alliance Israélite Universelle. The majority of the Jewish population of Diyala immigrated to Israel in 1950–51, while some went to America.

[Abraham Ben-Yaacob]

DI-ZAHAV (Goldstein), EPHRAIM (1902–1957), *ḥazzan*. Di-Zahav was born in Jerusalem and after completing his basic education studied in London. When he returned to Palestine he became involved in journalism and literature. He was an official of the mandatory government. He graduated in music from the Jerusalem Conservatory, and participated in oratorios and musical performances in Jerusalem. For six years he held the position of cantor in the Jeshurun synagogue in Jerusalem. When the Palestine Broadcasting Service was established in 1936 he was among its first employees. He was responsible for numerous programs for the radio's Hebrew hour, and participated in broadcasts of cantorial music, regularly reading the cantillation. After the establishment of the State of Israel, he continued to participate in the traditional programs on both Kol Israel and the overseas broadcasts, Kol Zion Lagola. He published articles and stories in the Israeli press. Among his works are *Mi-Sippurei ha-Dod Efraim* (Uncle Ephraim's Tales) and *Ẓeror Aggadot* (An Anthology of Fables).

[Akiva Zimmerman (2nd ed.)]

DIZENGOFF, MEIR (1861–1936), a founder and first mayor of *Tel Aviv. Born in Akimovici, near Orgeyev, Bessarabia, he was active in Russian revolutionary circles in his youth, and was arrested in 1885. Later he became active in the Ḥovevei Zion movement. During the late 1880s he studied chemical engineering in France, specializing in glass production. He was

sent to Erez Israel in 1892 by Baron Edmond de Rothschild to establish a glass factory at Tantura (Dor) which was to supply bottles for the wines produced in the settlements. However, the factory was closed in 1894 when it became clear that the local sand was unsuitable. During his stay in Erez Israel Dizengoff, together with others, tried to form a Jewish workers' organization. Returning to Russia in 1897, he settled in Odessa, went into business, and became active in the Zionist movement. He participated in Zionist Congresses and was among the opponents of the Uganda Scheme. Dizengoff was a founder of the Geulah Company, formed in 1904 to purchase land in Erez Israel. As director of the company he returned to Erez Israel in 1905 and settled in Jaffa. Dizengoff was one of the founders of the Aḥuzat Bayit Company for establishing a modern Jewish quarter near Jaffa. This quarter, later called Tel Aviv, was founded in 1909. In 1911 Dizengoff was elected head of the local council. Later, when Tel Aviv became a city (1921), Dizengoff was elected its first mayor and, except during 1925–28, served in that capacity until the end of his life. At the outbreak of World War I, Dizengoff headed a committee that assisted war sufferers and refugees. However, the Turkish authorities expelled him to Damascus, where he remained until the conquest of northern Palestine by the British at the end of 1918. In 1919 Dizengoff founded *Ha-Ezraḥ* ("The Citizen"), a first attempt at the political organization of the non-labor middle class. He was a member of the Zionist executive during 1927–29 and ran its trade and industry department. He donated his house on Tel Aviv's Rothschild Boulevard for the establishment of the Tel Aviv Museum in his wife Zina's name. Upon the outbreak of the Arab riots in 1936 Dizengoff urged that government offices be opened in Tel Aviv and succeeded in establishing a separate port at Tel Aviv independent of Jaffa and its port. Dizengoff published his memoirs, *Im Tel Aviv ba-Golah* ("With Tel Aviv in Exile"), in 1931.

[Yehuda Slutsky]

DJERASSI, CARL (1923–), U.S. chemist. The son of a Bulgarian father and Austrian mother, both Jewish physicians, Djerassi was born in Vienna but immigrated to the U.S. with his mother in 1938 to escape from the Nazis. He was educated at the American College in Sofia and at Newark Junior College, New Jersey, before graduating with a B.A. from Kenyon College, Ohio (1942), and obtaining his Ph.D. in organic chemistry from the University of Wisconsin (1945). After working with the Ciba pharmaceutical company, he moved to Syntex in Mexico City (1949–52) before becoming a professor first at Wayne State University, Detroit, and subsequently at Stanford University (1959). He continued his association with Syntex as vice president for research. Djerassi made major contributions to organic chemistry, including elucidating the structure of complex natural products with innovative optical and spectrometric techniques, characterizing a vast range of sterols encountered in marine sponges and corals, synthesizing many novel steroids, and advancing alkaloid and terpenoid chemistry. As president of Syntex's offshoot company, Zoecon, he was concerned with new approaches to insect control. His best-known achievement is the first synthesis of a female oral contraceptive, "norethisterone." His prodigious scientific output is reported in over 1,200 original articles and seven scientific monographs. His many honors include election to the U.S. National Academy of Sciences (1961), the National Medal of Science (1973), the first Wolf Prize in Chemistry (1978), the National Medal of Technology (1991), the Priestley Medal (1992), and the Gold Medal of the American Institute of Chemists (2004).

Djerassi was deeply involved in scientific programs relevant to less-developed countries; he participated in Pugwash Conferences on Science and World Affairs and chaired the U.S. National Academy of Sciences Board for International Development. He was also concerned with the social and cultural problems of population control. His many other interests include writing fiction, poetry, and plays with a particular concern for the portrayal of scientists in fiction and drama. His well-known works include the plays *An Immaculate Misconception* (1999), *Calculus* (2003), *Ego* (2004) and five novels, two of which (*Menachem's Seed* and NO) are set in Israel. His interest in the visual arts inspired the foundation of the Resident Artists Program at Woodside, California, and his collection of Paul Klee's works.

[Michael Denman (2nd ed.)]

DJERBA (**Jerba**), island off the coast of Tunisia. In ancient times it was an important Phoenician trading center. According to the local tradition, the Jewish settlement there is very old. It maintains that the Jews came there during the reign of *Solomon and founded the present al-Ḥāra al-Kabīra (the "Big Quarter"). A family of priests fleeing Jerusalem in the year 70 C.E. is said to have transported one of the Temple gates to Djerba. It is believed to be enclosed in the Bezalel synagogue, known as al-Gharība (the "extraordinary") of the Ḥāra al-Ṣaghīra (the "Small Quarter"), which is situated in the center of the island. The Gharība was a much frequented place of pilgrimage. The Jewish population consisted mainly of *kohanim* (priests) with a small sprinkling of others, although there were no levites among the residents. According to tradition, the absence of levites on the island is the result of a curse against them by *Ezra because they refused to answer his request to send levites to Erez Israel (cf. Ezra 8:15), and they all died. The history of the Jews of Djerba includes three serious persecutions: in the 12th century under the *Almohads; in 1519 under the Spanish; and in 1943 under the Nazis. In 1239 a colony of Jews from Djerba settled in *Sicily, where they obtained concessions to cultivate henna, indigo, and the royal palm groves. It was common for the male Jewish population of Djerba to look for livelihood abroad, but they kept returning to the island, where their families had remained. Exchange of goods

with *Malta and *Italy was in the hands of the Jews, who grew the products and processed the commodities for export themselves. *Maimonides, in a letter to his son, expressed a low opinion of their superstitions and spiritual capacity, but praised them for their faith. In the 19th and 20th centuries the yeshivot of Djerba produced many rabbis and writers and they provided rabbis for the communities of North Africa. In 1976, some 300 youngsters received Jewish education. In the early 1990s, the American Jewish Joint Distribution Committee provided funding for Jewish education (including a girls' school) with a combined enrollment of 245. David Idan established a Hebrew printing press in Djerba in 1903, and many books, mainly Passover **Hagaddot* and liturgical items, were printed there. In 1946 there were some 4,900 Jews in Djerba, settled in al-Ḥara al-Ṣaghīra, al-Ḥāra al-Kabīra, and Houmt-Souk, the principal town of the island. Their number dwindled to about 1,500 by the late 1960s, about 1,000 in 1976, 800 in 1984, and 670 in 1993, the majority immigrating to Israel and settling in moshavim (many of them on moshav Eitan) or reaching France. Those remaining dealt in jewelry and commerce, but the Jewish neighborhoods lost their purely Jewish character as Muslims moved in and the community was the victim of several anti-Jewish incidents. In October 1980 a Jewish boy was sentenced to five years in prison (but released two months later) for destroying an Islamic religious manual during a 1978 schoolyard scuffle. Following the Israeli invasion of Lebanon in 1982, Jewish homes and shops in Djerba were ransacked and set on fire on Yom Kippur and several Jews were injured. The Tunisian government encourages the annual Lag ba-Omer pilgrimage to al-Gharība as a tourist attraction, even inviting Tunisian Jews from Israel to participate in May 1993. But al-Gharība suffered several attacks, with the pilgrimage temporarily decreasing. On May 9, 1979, a fire (labeled by the government an "accident") broke out, destroying seven Torah scrolls, the ark, and prayer books. During the Simḥat Torah prayers in October 1985, a Tunisian guard, posted by the government for protection, shot at the congregation, killing five (including a policeman) and wounding eleven. He was convicted and sentenced to a mental institution. On April 11, 2002, a natural gas truck exploded at the outer wall of al-Gharība, killing 21, mostly German tourists, with a group linked to al-Qaeda claiming responsibility.

°DLUGOSZ, JAN (1415–1480), Polish cleric and annalist. He acted as secretary to Cardinal Zbigniew Oleśnicki in Cracow, who was violently anti-Jewish. After Oleśnicki's death in 1455, Dlugosz began a history of Poland, which he concluded in 1479. He was appointed archbishop of Lvov in 1478. A primary source for historical material, his annals include a first-hand account of the massacre of the Jews in Cracow in 1407 and the plunder, forcible conversions, and burnings of Jewish houses which accompanied it. His work set the anti-Jewish tone of medieval Polish historiography.

DLUZHNOWSKY, MOSHE (**Moyshe Dluzhnovski**; 1906–1977), Yiddish novelist. Dluzhnowsky was born in Tomaszow Mazowiecki, Poland. His traditional *ḥeder* education was supplemented by autodidactic study of secular subjects. After his literary debut in 1925, he published short stories, novels, plays, essays, and reportage in the Yiddish press around the world. He immigrated in 1930 to Paris, where he described Jewish life in short stories and sketches. In 1940, he fled to Morocco and discovered in its *mellahs* a still unexplored field for Yiddish literature. His stories, and especially his novel *Vintmiln* ("Windmills," 1963), depicted the impoverished Berber-Arab-Jewish settlements. He went to the U.S. in 1941, where he contributed fiction to the Yiddish and English press. His works include a children's book *Der Raytvogn* ("The Chariot," 1958); a novel *Vi a Boym in Feld* ("As a Tree in the Field," 1958); and short story collections *Dos Rod fun Mazl* ("The Wheel of Fortune," 1949), *A Brunem Baym Veg* ("A Well by the Road," 1953), and *Tirn un Fentster* ("Doors and Windows," 1966). He also wrote several plays, some of them adapted from his novels. Most were produced in New York and South America, the most successful being *Di Eynzame Shif* ("The Lonely Ship," 1956).

[Sol Liptzin / Eliezer Niborski (2nd ed.)]

°DMOWSKI, ROMAN (1864–1939), Polish politician and antisemite. He was leader of the Polish National Democratic party (ND: *Endecja) before 1914 in the Russian part of Poland and its chief representative in two of the *Dumas. Dmowski constantly propounded the view that antisemitism was an expression of the *Kulturkampf* between Jews and Poles; he adopted the anti-Jewish *boycott slogans introduced during the elections to the Duma in 1912. While on the Polish National Council between 1917 and 1918, which he headed as the representative of Poland to the Allied Powers, Dmowski discussed the future relations between Poles and Jews with the American Jewish leader Louis *Marshall in October 1918, particularly in view of the boycott then poisoning the atmosphere. Dmowski contended that Polish-Jewish relations would improve as the result of economic progress in an independent Poland, which would diminish the prevailing tensions. His readiness during

the talks to listen to severe criticism of his antisemitic stand obviously only indicated his wish to alter his unfavorable image among American Jews so as to gain support in his activities as chairman of the Polish council. Dmowski served for a brief period in 1923 as foreign minister of Poland. After Józef *Pilsudski ousted Dmowski's party from all political power in 1926, Dmowski concentrated on writing articles in which he used antisemitism to rally right-wing opposition to Pilsudski's regime. With Hitler's rise to power Dmowski anticipated the collapse of world Jewry which in his view had hitherto depended on Germany. His "Downfall of Jewry" (1934) expresses the opinion that the 20th century will seal the fate of the Jewish people, which he considered to be an historical anachronism.

[Moshe Landau]

DNEPROPETROVSK (**Yekaterinoslav** until 1926), city and industrial center situated on the River Dnieper in Ukraine. Jews first settled there shortly after its foundation in 1778, and in 1804 the town was included in the *Pale of Settlement. The community numbered 376 in 1805 (total population 2,634) and 1,699 in 1847. With the growth of the city in the second half of the 19th century Jews began to move there from other parts of Russia, and played an important role in its commerce and industry. Apart from big flour mills Jews owned sawmills utilizing the timber sent down the Dnieper River. In the mid-19th century the railroad to Odessa was laid and Jews took a large part in the development of the grain trade and exports. Later, when the Donets Basin was linked to the city by railroad, Jews were involved in the metallurgical industry. Several Jewish agricultural colonies (see *Agriculture) were founded in the Yekaterinoslav province and in the neighborhood of the city itself between 1846 and 1855 with about 8,000 persons; some remained in existence until the German occupation in World War II. Apart from *ḥadarim* there was a *talmud torah* for poor children and seven private schools (1887), while 153 Jewish children studied in the local high school in 1882. The writer and lawyer Ilya *Orshanski together with others upgraded the curriculum of the *talmud torah* and the *heders* and organized food and clothing for destitute pupils. Pogroms occurred in Dnepropetrovsk and the vicinity on July 20–21, 1883, in which 350 homes and many Jewish shops were looted and destroyed. The losses were estimated at 600,000 rubles, and 2,870 persons lost their sources of income. By 1897 the Jewish population had increased to 41,240 (36.3% of the total population). It included 15,160 breadwinners (3,046 of them women), including 4,531 in trade, 2,969 in the garment industry, 1,426 artisans, and 1,714 in services and working in shops, with many professionals as well. Most of the shops and houses in the city center were owned by Jews. There were three *talmud torah* schools with 500 pupils, 885 studied in the *ḥadarim*, and a yeshivah and 16 private schools were in operation. In 1860 a hospital was founded with 14 beds, growing to 29 in 1886. In 1880 an old age home was opened for the poor. The community extended help in 1882 to 500 families (2,625 persons). There was also a small Karaite community in Dnepropetrovsk which had its own prayerhouse. They numbered 359 in 1897, dropping to 145 in 1926. Pogroms again broke out on October 21–23, 1905, and 74 Jews were killed, hundreds injured, and much property was looted and destroyed. Local *self-defense was organized in 1904, comprising 600 members, 2% of them Christians. It did much to protect the community. Revolutionary trends among the Jewish youth were strong, alongside Ḥasidism and Orthodoxy among the older generation of the community. Dnepropetrovsk was an important Zionist center where M. *Ussishkin (from 1891 to 1906) and Shemaryahu *Levin were active. The latter served there as a government-appointed rabbi from 1898 to 1904. The well-known lawyer Oscar *Grusenberg was born and raised in the city. He took part in the pogrom trials of Kishinev and Minsk and defended the accused in blood libels in Vilna and Kiev (the *Beilis Affair). Also living in the city was Hillel *Zlatopolsky, a Zionist activist and founder, with his daughter Shoshanah *Persitz, of the Omanut the publishing house (later Massadah). In World War I and the civil war in Russia, thousands of Jews took refuge in Dnepropetrovsk, which numbered 72,928 Jews in 1920. In the Civil War (1917–20) the city changed hands a number of times, suffering from tributes, looting, rape, and murder. In June 1919 the *Denikin army raped about 1,000 women and in May 1919 the Grigoryev band killed 150 Jews. After the establishment of Soviet rule, Jewish community life ceased there as elsewhere in the Soviet Union. Zionist activity was forbidden, and on September 18–22, 1922 about 1,000 were arrested. Only *He-Ḥalutz was allowed to function, until disbanded in summer 1926. The Jewish population numbered 62,073 in 1926 (26.9% of the total), with the following occupational structure: workers in factories and workshops: 6,397; office workers: 8,477; in professions: 425; in agriculture: 887; in trade: 2,194; artisans: 3,469; without professional status: 2,146; unemployed: 4,819. In 1924, 1,187 school-aged Jewish children studied in Yiddish schools and 4,064 in general schools. In the 1930s there were four Yiddish schools, a vocational high school for mechanics, and an industrial school at the Petrovski steel mill, where 500 Jews studied. An illegal Chabad yeshivah operated in the years 1929–35 with a few dozen students. According to the census of 1939 the Jewish population of the city was 89,525 (total population 526,000).

Dnepropetrovsk was occupied by the Germans on August 25, 1941. Thanks to evacuation and flight, only about 17,000 Jews remained. In September, 179 were killed. On October 2 a big tribute of 30 million rubles was imposed on the community and on October 13–14, 13,000–15,000 Jews were assembled and led to the botanical gardens, where they were

murdered. The remaining 2,000 Jews were executed at the end of 1941 and the beginning of 1942. At the end of summer 1943 a unit of Operation Group 1005 opened the mass graves, burned the bodies, and dispersed the ashes. The city was liberated on October 25, 1943, and many Jews returned. According to the 1959 census there were 53,400 Jews living in Dnepropetrovsk. In 1963 antisemitic hooligans broke into a synagogue during the High Holiday services without interference from the police. In 1970 there was one synagogue still functioning in the city. During the High Holidays the synagogue street became filled with Jews and order was maintained by the police. J.L. Levin served as rabbi of Dnepropetrovsk before becoming chief rabbi of Moscow. Subsequent census figures put the Jewish population at 45,622 in 1979 and 17,869 in 1989. Immigration to Israel diminished the number significantly during the 1990s. The community offered wide-ranging communal and educational services. Shmuel Kaminetzky was chief rabbi.

DO'AR HA-YOM (Heb. דֹּאַר הַיּוֹם; "Daily Mail"), Hebrew newspaper established in Jerusalem in 1919, under the editorship of Ithamar *Ben-Avi. The newspaper was designed primarily for those born in Ereẓ Israel and for the older *yishuv* circles (as emphasized by the programmatic leading article in the first issue). The tone of the paper, which was set by Ithamar Ben-Avi, followed that of the sensational French press. *Do'ar ha-Yom* introduced modern reportage in Hebrew. Many of its reporters were native Palestinian Jews, and it became the mouthpiece of the farmers and older settlers. Its editorial policy opposed the official Zionist movement. From December 1928 until the beginning of 1931 it supported the Revisionist movement and was edited by V. *Jabotinsky. Afterward, Ben-Avi returned as editor, but was later replaced. *Do'ar ha-Yom* ceased publication in 1936 and while no other daily newspaper imitated Ben-Avi's emotional and sensationalist style, the innovations he introduced influenced Israel journalism and many of the journalists influenced by Ben-Avi played important roles later on in the Israel press.

DOBIN, SHIMON (**Shimoni**; 1869–1944), writer, educator, and socialist in Russia. Born in Bobr, Belorussia, he joined the *Ḥibat Zion movement in Odessa as a young man. With B. *Borochov he became an early member of the *Po'alei Zion in Yekaterinoslav, and was a delegate to the Minsk convention of Russian Zionists in 1902. He continued to play an active role in Zionist workers' movements for some time, and was a founder of *Vozrozhdeniye and the *Zionist Socialist Workers' Party. In 1906–07 he edited *Folksshtimme*, the organ of the *Jewish Socialist Workers' Party. After imprisonment and exile for his political activities he joined the *Bund in Kiev in 1911. After the October Revolution he became active in "Ozet" and educational institutions, and contributed articles on Yiddish literature and language. He died in Sverdlovsk.

DOBKIN, ELIYAHU (1898–1976), Labor Zionist leader. Dobkin, who was born in Bobruisk, Belorussia, was a founder of the Zionist student organization, He-Ḥaver, in 1914 in Kharkov. He became general secretary of the *He-Ḥalutz movement in Warsaw in 1921. In 1932 he settled in Palestine. He served as a Mapai deputy-member of the Jewish Agency and Zionist Executive from 1937 to 1946, and thereafter as a full member. During World War II Dobkin was head of the Jewish Agency's immigration department, which dealt with rescue activities in Europe and later with "illegal" immigration. From 1951 to 1968 Dobkin served as head of the Agency's Youth and He-Ḥalutz Department, and was also chairman of Keren Hayesod ("United Israel Appeal") from 1951 to 1962. Dobkin was chairman of the Bezalel National Museum, Jerusalem. His writings include the book *Ha-Aliyyah ve-ha-Haẓẓalah bi-Shenot ha-Sho'ah* ("Rescue and Immigration during the Holocaust, 1946").

DOBRATH (**Dovrat**; Heb. דָּבְרַת).

(1) Levitical town of Issachar (Josh. 21:28; I Chron. 6:57). Dobrath/Daberath is located between Chisloth-Tabor and Japhia in the description of the border of Zebulun (Josh. 19:12). Some scholars see a connection between the names Dobrath and Deborah since the battle with the Canaanites took place in its vicinity. A Galilean village called Dabaritta is mentioned several times by Josephus (*Life*, 318); some of its inhabitants attacked and robbed a Herodian official (*Life*, 126; *Wars*, 2:595). In the Mishnaic period it was an administrative center as appears from a circular letter of the patriarch Gamaliel I; a Rabbi Matya of Dobrath is mentioned in the Talmud (TJ, Or. 1:1, 60d). In the fourth century Dabeira/Dabira was a Jewish village (Eusebius, *Onom*. 78:5; Jerome adds that it was small in size) in the territory of Diocaesarea (Sepphoris). Abel suggested identifying Dabbūriyya with Byzantine Helenopolis, but Bagatti believes it was at Kafr Kama instead. The Arab geographer Yakut mentions Dabbūriyya as a town in the province of Urdun. In the Middle Ages the place may have been known by the names Buria/Boria. It is the present-day Arab village of Dabbūriyya on the northern slopes of Mt. Tabor. It has been visited by many travelers and explorers since the 19th

century. Christian tradition places the location of Jesus' cure of the epileptic boy "having a dumb spirit" at Dabbūriyya (Luke 9:37–43; cf. Mark 9:28). The site is still largely unexcavated, although the remains of a ruined medieval chapel have been found – first reported on in the 19th century by Robinson and Guérin and eventually dug by Fathers Corbo and Loffreda in 1978. Others have noted the discovery at the site of a mosaic floor, tombs (including a decorated Roman stone door) and cisterns. Some travelers have associated the name Daburah with ruins situated in the northern part of the village, close to a path ascending to Mt. Tabor.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

(2) Kibbutz in Israel in the N.E. Jezreel Valley, W. of Mt. Tabor, affiliated with Iḥud ha-Kibbutzim. It was founded in 1946 by a group of immigrant youth who had previously settled temporarily near the En-Harod spring. Dovrat's economy is based on intensive farming (field crops, fruit orchards, poultry, and dairy cattle). The kibbutz also operates a small shopping center at the nearby gas station, a plant for organic fertilizers, and a computer laboratory. In 1968 its population was 290, in 2002 it was 278.

DOBROGEANU-GHEREA, CONSTANTIN (originally **Solomon Katz**; 1855–1920), Romanian literary critic and Socialist theoretician. Born in Slavianka, Ukraine, Katz became involved in revolutionary politics as a student at Kharkov University. His subsequent political career was colorful and adventurous. Pursued by the czarist police, he crossed into Romania in 1875, but three years later the Russian authorities found him masquerading as an American citizen, and he was kidnapped and taken back to Russia. After a year's imprisonment, Katz succeeded in making his way back to Romania, where he changed his name to Constantin Dobrogeanu-Gherea. He obtained the restaurant concession at the Ploieşti railway station, and the place became an asylum for writers and Romanian and Russian refugee socialists. As a literary theorist and critic, he succeeded in introducing into Romania a new perception of art as opposed to "art for art's sake." He insisted that art was a product of society and reflected the outlook of different social groups and classes. The articles he began publishing in various periodicals in 1885 were collected in his *Studii critice* (3 vols., 1890–97; 2 vols., 1925–27), to which a fourth volume was subsequently added. The work became the main guide to the materialist viewpoint in Romanian literature. As a political writer, Dobrogeanu-Gherea was the great popularizer of Marxist socialism in Romania. Outstanding among his political works are his *Concepţia materialistă a istoriei* ("The Materialist Concept of History," 1892), *Ce vor socialiştii romni* ("What do the Romanian Socialists Want," 1886; 1946), *Anarhism şi socialism* (1894), and *Socialismul n România*. In his social study *Neoiobăgia* ("The New Serfdom," 1910), he declared that even a bourgeois revolution had still to take place in Romania. In 1941, at the height of Antonescu's dictatorship, the Bucharest authorities exhumed Dobrogeanu-Gherea's remains and induced the Jewish community to rebury them in the Jewish cemetery. After World War II the new communist regime criticized his ideas, seeing in him a typical representative of the social democratic camp, and declared him guilty of "grave ideological errors."

[Dora Litani-Littman]

DOBROVEN, ISSAY ALEXANDROVICH (1894–1953), conductor and composer. Dobroven was born in Nizhni-Novgorod, and was a child prodigy as a pianist. He later studied at the Moscow Conservatoire, and joined *Godowsky's master class in Vienna. Between 1917 and 1921 he was a professor at the Moscow Music Academy; in 1919 he became chief conductor at the Imperial Opera. He staged in Dresden (1923) the first German performance of Mussorgsky's *Boris Godunov*, the first step in a lifetime's pioneering of Russian music all over the world which led to his appointment as conductor at the Grosse Volksoper (1924) and of the Dresden symphony concerts. From then until World War II he was musical director of the Bulgarian State Opera, Sofia (1927–28) and guest conductor in the United States, Palestine, Italy, and of the Budapest Royal Opera. He spent the war years in Sweden, after which he resumed his international career. In operatic engagements Dobroven was his own producer and stage director. Outstanding among his many compositions was a piano concerto, the solo part of which he played all over Europe.

[Max Loppert (2nd ed.)]

DOBRUSCHKA, MOSES (1753–1794), Frankist and French revolutionary. Dobruschka was born in Bruenn into a family that belonged to the small circle of rich tax-farmers who largely controlled the tobacco administration during the regime of Maria Theresa. His mother, Schoendel, was the first cousin of Jacob *Frank, and her house served as a meeting place for the secret adherents of the sect. It was apparently this connection which caused Frank to settle in Bruenn (1773–86)

after his release from prison in Czestochowa. Dobruschka received a talmudic education and was also initiated into the kabbalistic teachings of Shabbateanism. He began to study German literature and foreign languages as an adolescent. In 1773 he married the adopted daughter of Ḥayyim (Joachim) Popper, one of the richest Jews of Prague, and about the same time began writing in Hebrew and German in the spirit of the early *Haskalah, producing, among other books, *Sefer ha-Sha'ashu'a* (1775), a commentary on the *Beḥinat Olam* of Abraham *Bedersi. Dobruschka later engaged in business and amassed a considerable fortune as one of the chief army suppliers in the preparation of the war against the Turks. In 1778 he was ennobled by Emperor Joseph II, with whom he enjoyed some favor and to whom he dedicated enthusiastic poetic eulogies, taking the title of Franz Thomas Edler von Schoenfeld. He became active in the mystic circles of freemasonry, into which he introduced elements of Kabbalah, particularly of a Shabbatean nature, but retired from active participation in 1784. In the late 1780s he lived as a wealthy man with wide connections in the upper circles of Vienna and established contact with the famous writers of Germany, continuing to enjoy the favor of Leopold II, the successor of Joseph II. On the death of Jacob Frank in 1791, Dobruschka's name was mentioned as his possible successor as head of the Frankist sect.

Dobruschka (or Schoenfeld) became an ardent admirer of the ideals of the French Revolution, and his career is henceforth closely connected with it. Arriving in Strasbourg in March 1792, he changed his name to Gottlob Junius Frey, joined the Jacobin club, and immediately involved himself in French politics. He moved to Paris in June, joined the Jacobin club there, took part in the storming of the Tuileries, and wrote a philosophical and constitutional book *Philosophie sociale, dediée au peuple français* (1793), which was a spirited defense of Jacobinism and included a strong attack on Moses and Mosaic legislation. In January 1793 he made the acquaintance of François Chabot, a Jacobin demagogue who married his sister Leopoldine in October of that year. Shortly after he was denounced by Austrian and German émigrés as an Austrian agent and this, combined with a financial fraud in which he was involved, brought about his arrest, together with that of Chabot. He was charged with corruption and espionage, found guilty, and executed on April 5, 1794. A few months after his death some of his Austrian friends spread a rumor that he had been engaged on a secret mission to liberate the former queen, Marie-Antoinette, from prison.

BIBLIOGRAPHY: G. Scholem, in: *Zion,* 35 (1971), v–vii, 127–81.

DOBRUSCHKA-SCHOENFELD, family in Moravia. Its first known member, JACOB MOSES DOBRUSCHKA (Dobruska; d. 1763), bought the concession for the Jewish eatinghouse in Brno in 1734, and by 1750 held the tobacco monopoly in Moravia. His son SOLOMON (c. 1715–1774) in 1759 obtained permission to retain a "small Torah" in his home, and to hold services at the rear of his house. Solomon's wife, Schoendl (1735–1791), obtained the potash monopoly and other concessions, and by skillful management increased the family fortune. Wolf Eybeschuetz stayed in her home in 1761 where he was reputed to have worked miracles. Jacob *Frank used the alias "Dobruska" while staying in Brno (1773–86); Schoendl, his cousin and an admirer, presumably supported him financially. After Solomon's death, eight of their 12 children embraced Christianity. In 1778 six were ennobled receiving the title "Edler von Schoenfeld." Four became Austrian army officers. Other members of the family married into the Polish and Austrian nobility; only two of them remained Jews. Solomon's second son, Moses *Dobruschka MOSES (b. 1753), published in 1774 *Sefer Sha'ashu'a*, a commentary on the *Beḥinat Olam* of Jedaiah *ha-Penini, approved by leading rabbis and dedicated to Joachim *Popper whose niece he had married a year before. He subsequently wrote poems in German, dramas, and reviews, and translations from the Psalms. Moses, who had connections with Jacob Frank, was considered by some as a candidate for his successor. His sister, Franceska, married into the *Hoenigsberg family, notorious for its Frankist connections. In 1782 Moses (now Franz Thomas von Schoenfeld) moved to Vienna. He was one of the founders of the "Asiatische Brueder," a masonic lodge with predominantly Jewish members, and formulated its doctrines. With his brother EMANUEL (formerly David; b. 1765), he went to revolutionary France, where they appeared in Strasbourg in 1792 under a new name, Frey (Moses used the symbolic name, Siegmund Gottlob Junius Brutus Frey). The "Frey" brothers contributed magnanimously to patriotic causes and attracted many to their *salon* in Paris. Junius published two anti-Girondist pamphlets. The influential radical politician François Chabot married their youngest sister, Leopoldine, for the sake of her large dowry. Thereafter all three were caught bribing members of a parliamentary committee deciding the future of the Compagnie des Indes. Chabot lost his influence and the Frey brothers were suspected as Austrian spies. On April 5, 1794, they and their accomplices were guillotined, together with Danton.

DOBRUSHIN, YEKHEZKEL (1883–1953), Yiddish literary critic, poet, and playwright. Born in the Ukraine, he was educated privately and at the Sorbonne, where he was involved in *Territorialist circles. After his literary debut in 1912, he became a central figure among young Kiev-based Yiddish modernist writers, co-edited the Moscow literary journal *Der Shtrom* (1922–24), worked as one of the first university lecturers of Yiddish literature, and was the main literary consultant of the Moscow State Yiddish Theater, adapting works by Sholem Yankev *Abramovitsh, *Sholem Aleichem and A.

*Goldfaden, while various Yiddish theater troupes staged his plays. An enthusiast of Soviet Jewish colonization, he spent much time in villages built by Jewish colonists in the Crimea, one of which still bears his name: Dobrushino. He (co)authored several folklore collections and books of literary criticism, including his study *Dovid Bergelson* (1947). Together with other leading Jewish cultural activists of the Jewish *Anti-Fascist Committee he was arrested in 1949 and sent to a Siberian labor camp, where he died.

DOCTOROW, EDGAR LAWRENCE (1931–), U.S. novelist and editor. Born in the Bronx, New York, Doctorow began his career as a reader of fiction for TV and film studios. This led him into editorial work, first at New American Library (1959–1964) and then as editor-in-chief for Dial Press in the 1960s. His reading of mediocre film scripts for western movies helped inspire his first novel, *Welcome to Hard Times* (1960), a black comedy of the Wild West. His second novel, *Big as Life* (1966), a semi-science-fiction tale, described two huge, naked figures being introduced to New York. Several critics saw these figures as an allegory of the atom bomb.

In 1971, Doctorow published *The Book of Daniel*, a fictionalized account of the celebrated Rosenberg trial and its radical legacy. The novel is a portrait of the defendants' son "Daniel" who was profoundly affected by the death of his parents at the hands of a ruthless and indifferent society. The novel's style anticipates many of the innovative literary techniques employed in his later novels – juxtaposition of historical fact and fantasy and cinematic switches of tense, scene, and voice. The novel was made into a film.

Ragtime (1975) weaves a story around a host of early 20th century figures in the United States, among them Houdini, Freud, Jung, Emma Goldman, Theodore Roosevelt, Henry Ford, Woodrow Wilson, and Albert Einstein, together with ironic comment on their achievements and later effects. *Ragtime* was awarded the National Book Critics Circle Award in 1975. The film version was directed by Milos Forman. His *Loon Lake* (1980) dealt with life during the Depression; *World's Fair* (1985) culminates in a boy's visit to the New York World's Fair in 1939; and *Billy Bathgate* was made into a movie. Doctorow's fiction utilizes the past to explore parallel tendencies in the present and the inability of the present to learn from the past and escape its errors. His *City of God* (2000) is a theological novel. Its characters attempt to find the coherence of life and the significance of its representations through the events that have befallen them. Rich in its allusions and structure, the novel becomes an accounting for the spirit of things unseen within the city of man. *The March* (2005) is about Sherman's march to the sea in the American Civil War.

Doctorow also wrote a play, *Drinks Before Dinner* (1979), which was first produced at the New York Shakespeare Festival's Public Theater. He was a writer-in-residence at the University of California at Irvine and taught at Sarah Lawrence College in Bronxville, New York.

[Susan Strul / Lewis Fried (2nd ed.)]

"DOCTORS' PLOT," the most dramatic anti-Jewish episode in the Soviet Union during *Stalin's regime involving the "unmasking" of a group of prominent Moscow doctors, mostly Jews, as conspiratorial assassins of Soviet leaders. It was a continuation of the "cosmopolitanism" accusations against Jewish scientists in the field of medicine. On January 13, 1953, *Pravda* and Radio Moscow announced that nine eminent doctors were under arrest and had confessed to murdering two Soviet leaders of the past, A.S. Shcherbakov and A.A. Zhdanov (who had died in 1945 and 1948, respectively). They were reported to have also admitted conspiring to murder a number of prominent figures in the Soviet armed forces, including the war minister, Marshal A.M. Vasilevski, the chief of staff, General S.M. Shtemenko, and the popular war hero, Marshal I.S. Konev. Six of the nine doctors were Jews. The number of arrested grew to 37 through 1952, of which 28 were doctors and the others family members. Among them were Professors Pevzner, Vinogradov, Ettinger, Vovsi, and others. "Most of the participants in the terrorist group," read the statement, "were connected with the international Jewish bourgeois nationalist organization, the 'Joint' (*American Jewish Joint Distribution Committee) established by American Intelligence … (in order to) conduct extensive espionage terrorist, and other subversive work in many countries including the Soviet Union."

These accusations unleashed panic among the Jews of the Soviet Union and were met by reactions of disbelief and foreboding in Western Europe, the U.S.A., and Israel. On January 19, the Israeli foreign minister, Moshe Sharett, bitterly condemned the Soviet action. A bomb exploded in the courtyard of the Soviet embassy in Tel Aviv on February 9, wounding four of the staff. Despite prompt apologies from the Israeli government, the U.S.S.R. immediately broke off diplomatic relations. The Soviet press now stepped up its attacks on Israel, the "Joint," Wall Street, Zionism, and imperialism. "The pack of mad dogs from Tel Aviv," wrote Yuri Zhukov in *Pravda*, Feb. 14, 1953, "is loathsome and vile in its thirst for blood." An article published in *Trud* on February 13 noted that the "Joint" had organized major anti-government conspiracies not only in the U.S.S.R. but in Hungary and Czechoslovakia as well – direct reference being made to the *Slansky Trial of November 1952.

Stalin died on March 5, and on April 3 *Pravda* announced that the doctors were not guilty and had been freed, and those responsible for using "impermissible means of inves-

tigation" had been arrested. On July 20 diplomatic relations between Israel and the Soviet Union were restored.

The Plot was apparently part of Stalin's plan for a new purge of the top Soviet leadership. It was probably directed against Lavrentii Beria, the minister of the interior (MVD), who had been responsible for security matters when Shcherbakov and Zhdanov had died. The *Pravda* editorial of January 13 specifically criticized "the agencies of state security" that had failed to "discover the doctors' wrecking, terrorist organization in time." (Moreover, the Plot was clearly modeled on the 1938 case of G.G. Yagoda, an earlier chief of the Secret Police who had been found guilty of recruiting medical specialists to murder such prominent citizens as Maxim Gorki.) Stalin's death enabled Beria to regain control of the Secret Police (MGB) and merge it with his ministry, the MVD. The release of the doctors and the arrest of their interrogators evidently formed part of Beria's desperate, but ultimately futile, effort to consolidate his power. Seen in broader perspective, the Plot proved to be the last of those macabre "conspiracies" that were manufactured during Stalin's reign but did not reappear in such a form in the subsequent Soviet regimes, though many of the anti-Jewish manifestations that had accompanied the Doctor's Plot were to reemerge later (see *Antisemitism in the Soviet Bloc).

In his secret speech at the Twentieth Party Congress (1956) Nikita Khrushchev blamed the Doctors' Plot on Stalin, but carefully ignored its antisemitic aspects and even took the opportunity to exonerate S.D. Ignatev, who had headed the MGB during the Plot, in early 1953. In fact, Ignatev was reelected to the Party's Central Committee in 1956.

[Jonathan Frankel]

DÓCZY, LAJOS (1845–1918), Hungarian author, poet, and playwright, also known as L. Dux. Dóczy, who was born in Sopron, studied law at Vienna, and rose to a high position in the Austro-Hungarian government. He converted to Christianity and was made a baron. A founder of the neo-Romantic school of Hungarian drama, Dóczy became famous mainly as a writer of historical plays. One of these, *Az utolsó próféta* ("The Last Prophet," 1869), deals with the destruction of Jerusalem. Equally at home with German and Hungarian culture, Dóczy wrote in, and translated classical works into, both languages. His translations include a Hungarian version of Goethe's *Faust* and a German version of *Az ember tragédiája* ("The Tragedy of Man") by Imre Madách. Dóczy's most important plays are *Csók* ("Kiss," 1874), *Utolsó szerelem* ("Last Love," 1884), and *Széchy Mária* (1886).

DOEBLIN, ALFRED (1878–1957), German poet, novelist, and physician. Born in Stettin, Doeblin was raised in poverty in Berlin in an assimilated family. After studying medicine in Berlin and Freiburg from 1900 he started working as a physician in 1905; later on he specialized in psychiatry, opening his own neurological practice in 1911. At the same time, Doeblin began publishing in the expressionistic journal *Der Sturm* and wrote his first stories, collected in *Die Ermordung der Butterblume* (1913). He gained fame with *Die drei Spruenge des Wang-lun* (1915; *Three Leaps of Wang-Lun*, 1991), a novel about a Chinese rebel who becomes the apostle of a new religion. With this and the following important novels *Wallenstein* (1920), *Berge, Meere und Giganten* (1924), and *Berlin-Alexanderplatz* (1929), Doeblin essentially initiated the modern novel in German literature, dealing with the central questions of his time such as war, technology, and the metropolis. Even though Doeblin left the Jewish community and converted to Catholicism, though not until living in exile in the U.S. in 1941, he never completely abandoned Judaism; on the contrary, particularly in the 1920s, traveling through Poland, he participated in the discourse on East European Judaism and Zionism. Already in *Zion und Europa* (1921) he opposed Western assimilated Judaism with East European Judaism, and even more so in his account of his travels through Poland, *Reise in Polen* (1926; *Journey to Poland*, 1991). After the attack of the Jews of the Berlin Scheunenviertel in 1923 he wrote even more strongly about Zionism, leaning, however, toward the Jewish Territorial Movement founded by Nathan *Birnbaum, with whom he was in personal contact (cf. *Zionismus und westliche Kultur,* 1924). Fleeing from Germany to Zurich and Paris in 1933 Doeblin again raised the question of the Jewish people in several essays (*Unser Dasein*, 1933; *Juedische Erneuerung*, 1933). Publishing also in Birnbaum's journals, *Der Ruf* and *Der juedische Volksgeist*, at that time, Doeblin still took the territorial position, arguing that the Jews should settle not only in Palestine but throughout the entire world, a position which he changed in favor of Zionism shortly afterwards, as reflected in his essay *Flucht und Sammlung des Judenvolks* (1935). After Birnbaum's death in 1937 and criticism by Ludwig *Marcuse, Doeblin abandoned the territorial position (cf. *Von Fuehrern und Schimmelpilzen*, 1938), though he still emphasized the right to a territorial home for the Jews. In 1940 he barely escaped from Paris to the United States, as he recounts in his autobiographical work *Schicksalsreise* (1949; *Destiny's Journey*, 1992). In exile from 1933, he published several important novels such as *Babylonische Wanderung* (1934) and *Pardon wird nicht gegeben* (1935) and began the trilogy *November 1918* (1938). In 1940, under the guidance of the Jesuits, he converted to Catholicism. He described his conversion in *Der unsterbliche Mensch; Ein religioeses Gespraech* (1946). After World War II, Doeblin returned to Europe, living in Paris and Germany, where he edited a literary periodical in Mainz and completed the trilogy *November 1918* with the novels *Verratenes Volk* (1948), *Heimkehr der Fronttruppen* (1949), and *Karl und Rosa* (1950). His last novel *Hamlet: oder Die lange Nacht*

nimmt ein Ende (1956; *Tales of a Long Night*, 1984) underscores his religious journey.

[Andreas Kilcher (2nd ed.)]

DOEG (Heb. דּוֹאֵג, דּוֵאג, דֹּאֵג), the Edomite, one of Saul's court officials and his trusted adviser (1 Sam. 22:9). The epithet הָאֱדֹמִי (the Edomite; Ps. 52:2) points up Doeg's foreign origin. He was probably responsible for the king's property and his herds, as can be deduced from his title, "Saul's chief herdsman" (1 Sam. 21:8; cf. 1 Chron. 27:28–31). Some read רצים (*raẓim*, "runners, guards") instead of רעים (*roʿim*, "herdsmen"), and believe that he headed a regiment of runners, i.e., the bodyguard of the king, who ran before his carriage and executed his orders (cf. 11 Sam. 15:1). It seems that Doeg attained his important position in the court of Saul after having held a senior appointment in Edom before his arrival in Israel. It could also be that his title *ʾabbir* (Heb. "chief") was the title of his Edomite office. This was in accordance with the policy of Saul and of David, both of whom chose experienced men from neighboring countries to conduct their administrative affairs. He doubtless adopted his master's religion (1 Sam. 21:8).

His being an Edomite and a stranger among the servants of Saul explains his unswerving loyalty to the king. In contrast to the servants of the king who betrayed him and were ready to side with David in exchange for some benefits which they could gain, as Saul himself complained, and who refused to submit information on David's whereabouts, Doeg was the only one to inform the king of the assistance which had been extended by *Ahimelech, one of the priests of Nob, to David when he fled from Saul (1 Sam. 22:7–10). He was also the only one of the royal runners who was ready to kill on the king's orders. He thus put to death 85 of the priests of Nob and destroyed the city to its foundations so that only Abiathar the son of Ahimelech succeeded in escaping the massacre and finding his way to David (1 Sam. 22:17–20).

[Josef Segal]

In the *Aggadah*

Doeg was a man of great learning who, however, perverted his knowledge for base and selfish ends (Sanh. 106b). He was called "Adomi" (Edomite) because he made those who disputed with him blush (*adom*, "red") with shame at their ignorance (Mid. Ps. to 52:4). He suited the law to his own purposes when persuading Saul not to kill Agag (*ibid.*); when maintaining that Ahimelech's consultation of the *Urim and Thummim on David's behalf (1 Sam. 22:11–19) was illegal (*ibid.*, 52:5); by convincing Saul that David's marriage to Michal had lost validity from the day David was declared a rebel (Gen. R. 32:1); and by attempting to refute David's legitimacy because of his descent from Ruth the Moabitess (Yev. 76b–77a). Doeg is rebuked, "Thou lovest evil more than good, and lying rather than to speak right" (Ps. 52:5), and God says to him, "Are you not a mighty man in Torah? Why than boastest thyself in mischief?" (Sanh. 106b). The variant spellings of Doeg's name in 1 Samuel 21:8 and 22:22 are explained: "At first God sits and is anxious (דּוֹאֵג, *doʾeg*) lest one go out on an evil course. But once he does so, He exclaims, 'Woe (דּוֵיג, *doyeg*) that he has entered on an evil path'" (Sanh. 106b). Eventually, Doeg's knowledge was taken from him. When he was 34 years old, he was confronted by three destroying angels, one of whom caused him to forget his learning, one burnt his soul, and the third scattered his ashes in the synagogues and schoolhouses (*ibid.*). According to another tradition, he was slain by his students when they saw that his wisdom had departed from him (Yalk. Sam. 131). His enmity toward David sprang from the fact that David chose a site for the Temple in preference to his own (Zev. 54b). Doeg deliberately praised David lavishly in Saul's presence (1 Sam. 16:18) in order to arouse Saul's wrath against him (Sanh. 93b). As a result of his calumny Ahimelech, Abner, Saul, and Doeg himself lost their lives (TJ, Peʾah 1:1). Doeg is one of the four commoners who have no place in the *olam ha-ba*, world to come (Sanh. 10:2), and one of those who set their eyes upon that which was not proper for them; what they sought was not granted to them, and what they possessed was taken from them (Sot. 9b).

BIBLIOGRAPHY: de Vaux, Anc Isr, 94, 219, 221; Ginzberg, Legends, 4 (1954), 74–76; 6 (1959), 241–2; I. Ḥasida, *Ishei ha-Tanakh* (1964), 100–02.

DOENMEH (**Dönme**), sect of adherents of *Shabbetai Ẓevi who embraced Islam as a consequence of the failure of the Shabbatean messianic upheaval in the *Ottoman Empire. After Shabbetai Ẓevi converted to Islam in September 1666, large numbers of his disciples interpreted his apostasy as a secret mission, deliberately undertaken with a particular mystical purpose in mind. The overwhelming majority of his adherents, who called themselves *maʾaminim* ("believers"), remained within the Jewish fold. However, even while Shabbetai Ẓevi was alive several leaders of the *maʾaminim* thought it essential to follow in the footsteps of their messiah and to become Muslims, without, as they saw it, renouncing their Judaism, which they interpreted according to new principles. Until Shabbetai Ẓevi's death in 1676 the sect, which at first was centered largely in Adrianople (*Edirne), numbered some 200 families. They came mainly from the Balkans, but there were also adherents from *Izmir, Brusa, and other places. There were a few outstanding scholars and kabbalists among them, whose families afterward were accorded a special place among the Doenmeh as descendants of the original community of the sect. Even among the Shabbateans who did not convert to Islam, such as *Nathan of Gaza, this sect enjoyed an honorable reputation and an important mission was ascribed to it. Clear evidence of this is preserved in the commentary on Psalms (written c. 1679) of Israel Ḥazzan of Castoria.

Many of the community became converts as a direct result of Shabbetai Ẓevi's preaching and persuasion. They were outwardly fervent Muslims and privately Shabbatean *ma'aminim* who practiced a type of messianic Judaism, based as early as the 1670s or 1680s on "the 18 precepts" which were attributed to Shabbetai Ẓevi and accepted by the Doenmeh communities. (The full text was published in English by G. Scholem, in: *Essays … Abba Hillel Silver* (1963), 368–86.) These precepts contain a parallel version of the Ten Commandments. However, they are distinguished by an extraordinarily ambiguous formulation of the commandment "Thou shalt not commit adultery," which approximates more to a recommendation to take care rather than a prohibition. The additional commandments determine the relationship of the *ma'aminim* toward the Jews and the Turks. Intermarriage with true Muslims is strictly and emphatically forbidden.

After the death of Shabbetai Ẓevi the community's center of activities moved to *Salonika and remained there until 1924. Shabbetai's last wife, Jochebed (in Islam, ʿĀ'isha), was the daughter of Joseph Philosoph, one of the rabbis of Salonika, and she returned there from Albania after a brief sojourn in Adrianople. Later, she proclaimed her younger brother Jacob Philosoph, known traditionally as Jacob *Querido (i.e., "the beloved"), as the reincarnation of the soul of Shabbetai Ẓevi. So many different and contradictory traditions exist concerning the profound upheaval which affected the *ma'aminim* of Salonika around 1680 and afterward that, for the time being, it is impossible to say which is the most reliable. They all agree that there was considerable tension between the original Doenmeh community and the followers of Jacob Querido, among whom were several of the rabbis of Salonika. As a result of their propaganda, two to three hundred families, under the leadership of two rabbis, Solomon Florentin and Joseph Philosoph, and his son, underwent mass conversion to Islam. There are two contradictory accounts of this conversion. One dates it in the year 1683, and the other at the end of 1686. It is possible that there were two mass conversions, one after the other. Many mystical "revelations" were then experienced in Salonika, and several pamphlets were written reflecting the spiritual tendencies of the various groups. As time went on, most of the apostate families from other cities in Turkey migrated to Salonika and the sect was organized on a more institutional basis. During the 18th century the sect was joined by other Shabbatean groups, particularly from Poland. Jacob Querido demonstrated his outward allegiance to Islam by making the pilgrimage to Mecca with several of his followers – a course of action which the original Doenmeh community opposed. He died on his return from this journey in 1690 or 1695, probably in Alexandria.

Internal conflicts caused a split in the organization and resulted in the formation of two sub-sects: one, according to Doenmeh tradition, was called *Izmirlis* (*Izmirim*) and consisted of members of the original community, and the other was known as the *Ya'akoviyyim*, or in Turkish *Jakoblar.* A few years after Querido's death another split occurred among the *Izmirlis*, when around 1700 a new young leader, Baruchiah Russo, appeared among them and was proclaimed by his disciples to be the reincarnation of Shabbetai Ẓevi. In 1716 his disciples proclaimed him as the Divine Incarnation. Russo was apparently of Jewish birth and the son of one of the early followers of Shabbetai Ẓevi. After his conversion he was called "Osman Baba." A third sub-sect was organized around him. Its members were called *Konyosos* (in Ladino) or *Karakashlar* (in Turkish). This was considered to be the most extreme group of the Doenmeh community. It had the reputation of having founded a new faith with a leaning toward religious nihilism. Its adherents embarked on a new missionary campaign to the chief cities of the Diaspora. Representatives were sent to Poland, Germany, and Austria, where they were a source of considerable excitement between 1720 and 1726. Branches of this sect, from which the Frankists later emerged, were established in several places. Baruchiah Russo died in 1720 while still young and his grave was an object of pilgrimage for members of the sect until recent times. His son, who became the leader of this sect, died in 1781. During the period of the French Revolution a powerful leader of one of the sects (either the *Izmirim* or the Baruchiah sect), known as "Deverish Effendi," became prominent. He is perhaps to be identified with the Doenmeh preacher and poet, Judah Levi Tovah, several of whose poems and homiletical expositions in Ladino were preserved in manuscripts belonging to the Doenmeh and are now in a number of public collections.

It soon became clear to the Turkish authorities that these apostates, who had been expected to encourage the Jews to convert to Islam, had no intention of assimilating, but were determined to continue to lead a closed sectarian existence, although outwardly they strictly observed the practices of Islam, and were politically loyal citizens. From the beginning of the 18th century, they were called Doenmeh, meaning (in Turkish) either "converts" or "apostates." However, it is not clear whether this is a reference to their conversion from Judaism or to the fact of their not being true Muslims. The Jews called them *minim* ("sectarians") and among the writings of the Salonika rabbis there are several responsa dealing with the problems of how they are to be treated and whether they are to be regarded as Jews or not. They settled in specific quarters of Salonika, and their leaders were on friendly terms with Sufic circles, and with the dervish orders among the Turks, particularly the Baktashi. At the same time they maintained secret ties not only with those Shabbateans who had not converted, but also with several rabbis in Salonika, who, when knowledge of the Torah diminished among the Doenmeh, were paid for secretly settling points of law for them. These relationships were severed only in the middle of the 19th century. This double-faced behavior becomes clear only when their ambiguous attitude toward traditional Judaism is taken into account. On one level, they regarded the latter as void, its place being taken by a higher, more spiritual Torah, called *Torah de-Aẓilut* ("Torah of Emanation"). But on another level there remained certain areas in which they sought to conduct

themselves according to the actual Torah of talmudic tradition, called *Torah di-Beri'ah* ("Torah of Creation").

The numerical strength of the Doenmeh is only approximately known. According to the Danish traveler, Karsten *Niebuhr, around 600 families lived in Salonika in 1774, and they married only among themselves. Before World War I their number was estimated to be between 10,000 and 15,000, divided more or less equally among the three sub-sects, with the *Konyosos* having a slight numerical majority. At first, knowledge of Hebrew was common among the Doenmeh and their liturgy was originally standardized in Hebrew. This can be seen in the part of their prayer book which is still extant (Scholem, in: KS, vols. 18 and 19). However, as time went on the use of Ladino increased, and both their homiletic and poetic literature was written in that tongue. They continued to speak Ladino among themselves up to about 1870 and it was only later that Turkish replaced it as the language of everyday speech.

As far as social structure is concerned, there were distinct differences among the three sub-sects which developed apparently between 1750 and 1850. The aristocrats of Doenmeh society were the *Izmirlis*, who were called *Cavalleros* in Ladino or *Kapanjilar* in Turkish. These included the great merchants and the middle classes, as well as most of the Doenmeh intelligentsia. They were also the first to show, from the end of the 19th century, a marked tendency toward assimilation with the Turks. The *Jakoblar* community of *Ya'akoviyyim* included a large number of lower- or middle-class Turkish officials, while the third and most numerous group, the *Konyosos* (according to the few available accounts), consisted as time went on mainly of the proletariat and artisan classes, e.g., porters, shoemakers, barbers, and butchers. Some say that for a long time practically all the barbers of Salonika belonged to this group. Each Doenmeh had a Turkish and a Hebrew name (for use in Turkish and Doenmeh society respectively). Furthermore, they preserved the original Sephardi family names, which are mentioned in poems composed in honor of the dead; many of these poems have survived in manuscript. Doenmeh cemeteries were used in common by all the sub-sects. In contrast, each sect had its particular synagogue (called *Kahal* – "congregation") at the center of its own quarter, concealed from the outsider.

Their liturgies were written in a very small format so that they could easily be hidden. All the sects concealed their internal affairs from Jews and Turks so successfully that for a long time knowledge of them was based only on rumor and upon reports of outsiders. Doenmeh manuscripts revealing details of their Shabbatean ideas were brought to light and examined only after several of the Doenmeh families decided to assimilate completely into Turkish society and transmitted their documents to friends among the Jews of Salonika and Izmir. As long as the Doenmeh were concentrated in Salonika, the sect's institutional framework remained intact, although several Doenmeh members were active in the Young Turks' movement which originated in that city. The first administration that came to power after the Young Turk revolution (1909) included several ministers of Doenmeh origin, including the minister of finance, *Javid Bey, who was a descendant of the Baruchiah Russo family and served as one of the leaders of his sect. One assertion that was commonly made by many Jews of Salonika (denied, however, by the Turkish government) was that *Kemal Atatürk was of Doenmeh origin. This view was eagerly embraced by many of Atatürk's religious opponents in Anatolia.

With the exchange of population that followed the Greco-Turkish war of 1924, the Doenmeh were compelled to leave Salonika. Most of them settled in Istanbul, and a few in other Turkish cities such as Izmir and Ankara. In the Turkish press at that time there was a lively debate about the Jewish character of the Doenmeh and their assimilation. When they were uprooted from the great Jewish center of Salonika, assimilation began to spread widely. Nevertheless, there is reliable evidence that the organizational framework of the *Konyosos* sect survived, and as late as 1960 many families still belonged to this organization. Among the Turkish intelligentsia, one of the professors at the University of Istanbul was widely regarded as the leader of the Doenmeh. Attempts to persuade them to return to Judaism and to immigrate to Israel have borne little fruit. Only a few isolated Doenmeh families were among the Turkish immigrants to Israel.

There is hardly any basic difference in religious opinions between the Doenmeh and the other sects who believed in Shabbetai Ẓevi. In their literature, as far as it is known, there is hardly a mention of their belonging to the Islamic fold. Their claim of being the true Jewish community is not unlike the claims of the early Christians and the Christian church. They preserved their faith in Shabbetai Ẓevi, who had abrogated the practical commandments of the material Torah and had opened up "the spiritual Torah" of the upper world as a substitute. The principle of the divinity of Shabbetai Ẓevi was firmly developed and accepted by the sect, as was the threefold nature of the upper forces of emanation, called *telat kishrei demeheimanuta* ("the three bonds of faith"). In addition to their abrogation of the practical commandments and their mystical trinitarian belief, one factor in particular aroused great opposition among their contemporaries. This was their obvious inclination to permit marriages which were halakhically forbidden, and to conduct religious ceremonies which involved the exchange of wives and which, therefore, bastardized their issue according to Jewish law. Accusations of sexual licentiousness were made from the beginning of the 18th century, and although many have tried to belittle their importance there is no doubt that sexual promiscuity existed for many generations. The long sermon of Judah Levi Tovah (published by I.R. Molcho and R. Shatz, in: *Sefunot*, 3–4 (1960), 395–521) contains a spirited defense of the abrogation of the sexual prohibitions contained in the material "Torah of Creation." Orgiastic ceremonies in fact took place in the main on the Doenmeh *Ḥag ha-Keves* ("Festival of the Lamb") which fell on the 22nd of Adar and was recognized as a celebration of the beginning of

spring. In addition, they celebrated other festivals, connected with the life of Shabbetai Ẓevi and particular events associated with their apostasy. They did not abstain from work on their festivals in order not to arouse outside curiosity. They contented themselves with rituals on the eve of their festivals. The Doenmeh liturgy for Tishah be-Av, the birthday of Shabbetai Ẓevi, called *Ḥag ha-Semaḥot* ("Festival of Rejoicing"), is extant in Hebrew and contains a Shabbatean adaptation of some of the High Holy Day prayers, with the addition of a solemn declaration of their Shabbatean creed, consisting of eight paragraphs (KS, vol. 18, 309–10).

[Gershom Scholem]

DOG. In the Bible the dog is usually spoken of disparagingly, the references being however to ownerless dogs which prowl in inhabited areas (Ps. 59:7, 15), feed off animal carcasses and human corpses (I Kings 23:38), and attack passersby (Ps. 22:17). "Dog" was a derogatory term (II Kings 8:13) and apparently was applied to a male temple-prostitute (cf. Deut. 23:19). However, shepherd dogs were bred (Isa. 56:11; Job 30:1). Divergent views were expressed by the sages on the rearing of dogs. The Mishnah says: "One should not rear a dog unless it is kept on a chain" (BK 7:7). There was also opposition to rearing dogs in Ereẓ Israel, R. Eleazar declaring that "he who rears dogs is like one who rears swine" (*ibid.* TB 83a). It was however permitted in a frontier town where "one keeps it chained during the daytime and looses it at night" (*ibid.*) and one *amora* even stated that a man should not live in a town "in which no dogs bark" (Pes. 113a). There is no explicit information extant on the breeds of dogs reared in biblical times. Pedigree dogs were probably raised alongside the local dog, *Canis familiaris putiatini*, of which there were different types. Various breeds of dogs appear in Assyrian and Egyptian monuments. The use of hunting dogs is attested by an ivory comb from Megiddo showing a dog hunting a mountain goat. Mosaics dating from mishnaic and talmudic times also depict dogs. The Mishnah distinguishes between a common dog, which resembles a wolf, and a village or wild dog, which resembles a jackal (Kil. 1:6; cf. Ber. 9b). Attacks by mad dogs were a common occurrence; the rabbis refer frequently to rabies and give the symptoms by which to recognize a mad dog (Yoma 83b, 84a).

DOHANJ, JULIJE (1884–1972), Yugoslav lawyer. Dohanj was born and studied in Budapest. He lived first in Karlovo Selo in the Banat region, moving later to Novi Sad, the capital of the Vojvodina province, where he had a successful career as an advocate. He was a Zionist and for a while even vice president of the Yugoslav Zionist Federation, but in the early 1930s he broke away and joined the Revisionist faction of Jabotinsky, which until then had had no adherents there. Under his influence the local Zionist group also broke away and became a center of Revisionism in Yugoslavia. Jabotinsky spoke at meetings in Zagreb, Belgrade, and Novi Sad, and the new movement, with its Betar youth sections, spread throughout the country. In 1935, after Jabotinsky left the Zionist organization, forming the New Zionist Organization, Dohanj presided over its Yugoslav branch. In that capacity, he helped organize "illegal" Jewish *immigration via the Danube River and, in cooperation with the British Embassy in Belgrade, attempted to warn the Yugoslav public of the Nazi danger.

Dohanj was married to a German woman. Despite this fact, or possibly because of it, he was arrested and interrogated, and was ultimately sent to the Gestapo headquarters in Berlin, where he was kept imprisoned throughout the war. Returning home after the liberation he reopened his office, but experiencing problems with the new Communist judiciary system he soon immigrated to the United States. He worked as a government employee and remarried, this time to an American. On his retirement in 1967 he moved to Israel, settling in Haifa.

[Zvi Loker (2nd ed.)]

°**DOHM, CHRISTIAN WILHELM VON** (1751–1820), German historian, economist, and diplomat. He was among the first to advocate "reformation" of the Jews and their customs, as well as improvement of their civil status. Dohm studied theology and law, and in 1779 entered the Prussian state service as royal archivist in Berlin where he met Moses *Mendelssohn. In 1786 and in 1797 he represented Prussia at the Congress of Rastatt, and in 1807 entered the service of the Kingdom of *Westphalia established by Napoleon. Dohm pursued the study of history and political science and wrote a number of books on these subjects.

His well-known work on the Jewish question, *Ueber die buergerliche Verbesserung der Juden* ("On the Improvement of the Jews as Citizens"; 1781, 1783[2]), was undertaken at the instance of Mendelssohn who had asked him to draw up a memorandum in favor of the Jews of *Alsace. In this work Dohm reviews the history of the Jewish people in exile in order to point out the constant deterioration of their situation as a consequence of oppression and attacks. He argues that repression inevitably corrupts the character of the victim peoples as evidenced by the history of the Irish and the Gypsies. These examples are adduced to confirm his description of the Jewish character in his own time: "The Jews have wisdom, a sharp intellect, they are assiduous, persevering, and are able to find their way in every situation"; their ritual precepts, even though they encourage pettiness, educate them to fulfill their duty rigorously. On the other hand this nation has "an exaggerated tendency.… to look out for gain in every

way, a love of usury … defects which are further aggravated in many of them by their self-imposed segregation owing to their religious precepts as well as rabbinical sophistry.… The breaking of the laws of the state restricting trade, the import and export of prohibited wares, the forgery of money and precious metals are the natural result" of these flaws of character. However, "if our reasoning is correct, we shall find that the oppression from which they still suffer and the restrictions imposed on the trades open to Jews are the true reasons for their shortcomings. Concomitantly we have also discovered the means by which they can be cured of this corruption so as to become better people and more useful citizens." Dohm finds no intrinsic evil in the Jewish religion and literature, and argues on this point against the anti-Jewish agitator Johann *Eisenmenger. He appreciates the enlightened Jewish intellectuals of his time, "these admirable men who attained eminence in the sciences and the arts." To eradicate the evil and abolish its consequences, Dohm suggests a series of measures for improving the situation of the Jews and hence their character. His proposals reproduce some of the ideas held by proponents of Enlightened Absolutism and in some points resemble the *Toleranzpatent* issued at that time by Emperor *Joseph II. Joseph Dohm plans to educate the Jews to identify themselves more closely to the state, and to serve it, by putting an end to oppression and by abolishing the economic restrictions imposed on them, as well as by encouraging them to participate in the culture of the environment. The educational effort and the grant of equal economic and civil opportunities to the Jews would be worthwhile to enlightened governments aiming at justice and the increase of their population. The Jews are preferable to new settlers since "they are more deeply rooted in the countries they inhabit than a foreigner can be, even after a considerable time; they know no other homeland besides the one which they already have and do not long for a home in a distant land."

Dohm thus voiced the climate of opinion prevailing in enlightened Christian and Jewish circles of Berlin. He aroused German public opinion to consider the Jewish problem as of political and social significance. His opinions had wide reverberations and provoked numerous and stormy debates. The antisemites accused him of being bought by the Jews. The Jewish *maskilim* were grateful to him for the way in which he described the situation of the Jews, and for his aims, with which they were basically in agreement.

[Haim Hillel Ben-Sasson]

DOK, a fortress 3 mi. (5 km.) N. of Jericho where Simeon, the last of the Maccabean brothers, together with his wife and two sons, was murdered in 135 b.c.e. by his son-in-law, Ptolemy son of Habubu, governor (*stratêgos*) of Jericho (I Macc. 16:15). Josephus calls it Dagon (Ant., 13:230) and the place is also mentioned in the *Copper Scroll (265:19) found at one of the Qumran caves. A Byzantine monastery called Douka/Duca was founded in the vicinity of the site by St. Chariton. Dok is identified with Jebel Qarantal (Mons Quarantena); the Arabic names for the site are Duk and Dyuk, the first resembles the original name, but the second version stems from popular etymology (Dyuk = chickens). The name of the site is also preserved in the nearby village of ʿAyn al-Dūk (ancient *Naarah). The mountain of Qarantal commands a strategic situation overlooking Jericho to the east and has the remains of a small medieval chapel which was recorded by members of the Survey of Western Palestine in 1873. The site has not been thoroughly excavated, except for a few pits made by E. Netzer that revealed an ionic capital. Scattered architectural remains at the site, however, do attest to palatial buildings having existed at the site at the time of *Herod the Great and his successors, as well as during the Byzantine period (notably a Corinthian capital decorated with a cross). Roman siege works with towers have also been identified around the site by Z. Meshel, and a water system that was fed by an aqueduct was studied by D. Amit.

DOKSHITSY (Pol. **Dokszyce**), town in Molodechno district, Belarus. It passed from Poland to Russia in 1793; was within Poland from 1921 to 1939; and afterwards was in the Belorussian SSR. The Jewish community probably started at the beginning of the 18th century and increased from 210 Jews in 1766 to 2,775 (49.1% of the total population) in 1878. It numbered 2,762 in 1897 (75.8%). The Jews traded in lumber and agricultural products, exporting to central Poland, Russia, and even Leipzig. They were also occupied in crafts and farming. In 1925 they numbered approximately 3,000. Between the two world wars, the Jews lost their markets and were required to pay heavy taxes, leading to economic decline. The loan fund sponsored by the *American Jewish Joint Distribution Committee had 250 members in 1925. There was a Hebrew Tarbut school which was the center of Zionist activities. The Germans occupied the town on June 22, 1941, creating a ghetto on Sep-

tember 30. During Passover 1942, 65 and later 350 Jews were executed. The liquidation of the ghetto commenced on May 29, 1942. It lasted 17 days and about 3,000 Jews were murdered. The community was not reestablished after World War II.

DOLGIN, SIMON ARTHUR (1915–2004), U.S. Orthodox rabbi and Mizrachi leader. Dolgin was born in Chicago and studied at the Hebrew Theological College there, where he was ordained in 1939, and received his doctorate in 1959. He also received a doctorate in theology from the University of Southern California in 1954. From 1939 until 1971, he served as rabbi of Beth Jacob Congregation, Beverly Hills, California; he was vice president of the Rabbinical Council of America from 1966 to 1968.

A prominent member of the Mizrachi, he was a member of the National Council of the Ha-Po'el ha-Mizrachi, 1943–55, and vice chairman of the National Council of Religious Zionists of America.

On immigrating to Israel in 1971 he was appointed director-general of the Ministry of Religious Affairs, holding the office until 1977, when he became head of the Midrashah Gevohah le-Torah in Jerusalem, serving simultaneously as rabbi of Ramat Eshkol in Jerusalem. In 1978 he was appointed chairman of the World Organization of Mizrachi-Ha-Po'el ha-Mizrachi.

DOLGINOVO (Pol. **Dołhinów**), town in Molodechno district, Belarus. It passed from Poland to Russia in 1793; was within Poland from 1921 to 1939; and was then in the Belorussian SSR. Jews settled there at the beginning of the 16th century but only formed a community in the 17th, numbering 485 in 1667. Apart from petty trade and crafts, the Jews also exported agricultural products through Danzig. A pogrom in 1881 resulted in the looting and destruction of shops and homes. The community numbered 1,194 in 1847; 2,559 in 1897 (out of a total population of 3,551); and 1,747 in 1921 (out of 2,671). During the interwar years, the loss of the agricultural hinterland (Russia) resulted in the decline of the economy. Some Jews earned a living by smuggling goods across the border with the Soviet Union. Most Jewish children studied in a Hebrew Tarbut school. In September 1939 the Soviets abolished all Jewish organizations and parties and nationalized the economy.

[Shmuel Spector (2nd ed.)]

Holocaust Period

The Jewish population of the city had increased to nearly 5,000 in 1941. From the outbreak of World War II in 1939 until the German-Soviet war the town was under Soviet occupation. On June 28, 1941, the German army captured it. In August 1941, 22 men, including the rabbi of the community, were murdered by the Germans. On March 3, 1942, in the first mass *Aktion* 1,500 Jews were shot to death and cremated on the outskirts of the town. On May 1, 1942, a ghetto was set up. During the *Shavuot* festival that year, the entire community was wiped out, except for 500 craftsmen who were spared from immediate death. In this period groups of Jews fled to the forests and joined the partisans operating in Nalibocka Puszcza. The few remaining members of the community were murdered in September 1942. Only about 200 persons survived the war as soldiers of the Soviet army drafted in the spring of 1941, others as members of partisan units, and a number who had gone into hiding. The community was not refounded after World War II.

DOLINA, town in Stanislavov district, Ukraine, in Poland between 1917 and 1939. Although Jews are mentioned in 1472, a community was only established in 1638, when they received a permit from the king to build a synagogue and cemetery and to trade, on condition that they pay taxes like the other burgers. After the Austrian annexation they suffered in the years 1772–1868 from severe restrictions and heavy and humiliating taxes. At the end of the 19th century many of the local Jews emigrated. The Jewish population was 2,654 in 1900 (29% of the total), 2,014 in 1921, and 2,488 in 1931. In the 1920s the economic conditions deteriorated. With the help of the Joint an orphanage, soup kitchen, and interest-free loan association were established. In the 1930s the economy improved after several factories reopened. Between September 1939 and June 1941 Dolina was under Soviet rule, with all public life terminated and industry and trade nationalized. Dolina was occupied by the Germans on July 2, 1941. In the beginning of August a group of Hungarian and local Jews was executed in a forest near the town. In July 1942 all the Jews from the environs were concentrated in Dolina and 3,000 people were murdered in ditches in the local cemetery. About 50 Jews joined the Babi partisan unit, but only five survived along with a few who hid in the forests.

[Shmuel Spector (2nd ed.)]

DOLITZKI, MENAḤEM MENDEL (1856–1931), Hebrew and Yiddish poet and novelist. Born in Bialystok, he received a traditional Orthodox education and, as a teenager, became interested in the ideas of the *Haskalah. At the age of 19 he wrote a long satiric poem, *Likkui Shenei ha-Me'orot, o Shenei Ẓaddikim she-Ḥibbelu Zeh ba-Zeh* ("The Eclipse of Both Luminaries, or Two Ẓaddikim Who Harmed One Another," published in *Ha-Shaḥar,* 1879, then in book form). In this poem he mockingly describes the way of life of the ḥasidic groups. He served as a Hebrew teacher in various towns and in 1881 was an eyewitness to pogroms in southern Russia, which had a profound effect on him. In his poem *Ha-Ikkar ve-ha-Noẓah* ("The Farmer and the Feather," 1884) and his stories *Be-Tokh*

Leva'im ("Among Lions," *Ha-Meliẓ*, 1884, also in book form) and *Mi-Bayit u-mi-Ḥuẓ* ("From Inside and Outside," *Ha-Meliẓ*, 1890–91, also in book form), he described the sufferings of the Jews in Russia. After the pogroms he joined the Ḥibbat Zion movement and wrote poems of yearning for Zion in the spirit of this movement. The poems are colorless and full of clichés but nevertheless exude warmth and innocent romanticism. From 1882 to 1892 he lived in Moscow where he worked as Hebrew secretary to the philanthropist K.Z. Wissotzky. He wrote a biography of Wissotzky called *Mofet le-Rabbim* ("An Example to Many," 1894). At the same time he published various collections of letters: *Shevet Sofer* ("Writer's Pen," 1883); *Niv Sefatayim* ("Fruit of the Lips," 1892); and later *Ha-Et* ("The Pen," 1906), which include some interesting letters of A. *Mapu and P. Smolenskin. In 1892, when the Jews were expelled from Moscow, Dolitzki emigrated to New York and was warmly received by the small band of Hebrew *maskilim* in the U.S. He began publishing descriptions of the persecution of Jews in Russia in the journal *Ha-Ivri*, mainly in poetic form. His epic poem dealing with the forced conscription of Jewish children *Ha-Ḥalom ve-Shivro* ("The Dream and its Meaning"), which he had started in Russia but could not publish there because of censorship, appeared in 1904. Despite the efforts of the Hebraists in the U.S. to assist him, he found no way of making a living from Hebrew writing. After working at various jobs he finally took up writing for the daily Yiddish press, turning out serialized novels which catered to the popular reader. He died in Los Angeles. In his youth he was highly regarded as a Hebrew writer and poet, and his poems and stories were very popular with the Hebrew reading public of his day. J.L. Gordon, in a poem dedicated to Dolitzki on his departure for America, views him as his heir in Hebrew poetry ("Here, take my pen, rise and inherit my place"). However, after his arrival in America a period of decline set in, from which he never recovered. His last years were spent in poverty, and he was quite forgotten. A list of his Hebrew works in translation appears in Goell, Bibliography, 20–21.

[Gedalyah Elkoshi]

°**DOLLFUSS, ENGELBERT** (1892–1934), chancellor of Austria and leader of the *Christian Social party there. He served as chancellor from 1932 until his murder in an attempted Nazi putsch. An antisemite, Dollfuss had been instrumental in excluding from membership all students "tainted with Jewish blood" at a Catholic students' congress in 1920. During his chancellorship a number of covert anti-Jewish measures were introduced, and after the crushing defeat of the Social Democrats in February 1934 he refused to see a Jewish delegation, remarking that the Jews should be pleased that he was too busy to deal with Jewish affairs. However, Austrian Jewry regarded him as a "bulwark against persecution and the horrors of a Nazi regime" (JC, July 27, 1934) because of his energetic stand against Nazism. Dollfuss issued several statements against racial antisemitism and was not connected with any official action against Jews. His opponents considered the Jews one of the pillars of his regime. His murder made him the symbol of the fight against Nazism. After his murder the Zionist leadership of the Jewish community and Chief Rabbi David Feuchtwang praised Dollfuss as the renewer of the Austrian state and organized mourning services in the synagogues.

BIBLIOGRAPHY: Karbach, in: JSOS, 2 (1940), 255–9; G. Shepherd, *Dollfuss* (Eng., 1961); H. Greive, *Theologie und Ideologie, Katholizismus und Judentum in Deutschland und Oesterreich 1918–1935* (1969), index. **ADD. BIBLIOGRAPHY:** C.A. Gulick, *Austria from Habsburg to Hitler* (1948).

DOLMATOVSKI, YEVGENI ARONOVICH (1915–1994), Soviet poet and songwriter. Dolmatovski became known during World War II for his collections of patriotic verse, such as *Pesnya o Dnepre* ("Song of the Dnieper," 1942), and later wrote successful songs for postwar patriotic motion pictures. His other works include *Sozvezdiye* ("Constellation," 1947), praising the 16 republics of the U.S.S.R.; the anti-Western *Slovo o zavtrashnem dne* ("A Word about Tomorrow," 1949), which won the 1950 Stalin Prize; and *Iz zhizni poezii* ("From the Life of Poetry," 1965). Dolmatovski signed the 1970 manifesto opposing Jewish emigration from the Soviet Union.

DOLMENS ("stone table" in Breton, from *dol*, "table," and *men*, "stone"), ancient chambers built of a number of undressed vertical stone slabs (orthostats), usually weighing several tons, supporting a single flat capstone. In its original state the dolmen was covered over with a heaped-up mound of earth or small stones retained by an external ring of stones (tumulus). The disappearance of the encompassing mound since antiquity has given dolmens their typical table-like appearance. The stone chambers were intended to contain human remains and as such dolmens are regarded as places of burial. The dolmen is the most common of a series of monuments of proto-historic date called megaliths (structures built of massive undressed stone blocks), notably stone circles, standing stones (menhirs), and cists in cairns. Dolmens have been found across the world (see Joussaume) indicating that this form of burial was reinvented in different cultural centers. The idea that dolmens reflect patterns of diffusion (e.g., G. Elliot-Smith, who believed that the megaliths of Europe were built by wandering Egyptians) is no longer held by scholars. Burial in dolmens, or within stone cairns or tumuli, is characteristic of the southern Levant during much of the late fourth and third millennia B.C.E.

They are characteristic of regions where the geology does not provide natural caves or where the rock is difficult to quarry. Dolmens usually appear in groups ("fields") and they number in the hundreds. Some of the best examples are known from the Golan Heights and Transjordan (where there are fields of between 300 and 1000 each). In Palestine most

of the dolmens have been found in the north, with isolated examples known further south (e.g., at Yiftahel). However, cairn and tumuli burials are known in southern Palestine as well, but their stone-built burial cists lack the monumental orthostats and massive capstones of the dolmens. An interesting field of tumuli with cist burials of this sort was investigated at Ramat ha-Nadiv in the Carmel Hill range. The oldest dolmens in the Near East are said to come from el-Adeimeh, 9 miles (15 kms.) southeast of Jericho, which was believed by Stekelis to be the cemetery of the Chalcolithic site of Tuleilat Ghassul, but there is uncertainty about this dating and they are more likely to be from the Early Bronze I. A series of extraordinary dolmens was investigated at Ala Safat in Transjordan, some of which had chambers that were accessed through stone slabs hewn with portholes. These too are dated to the Early Bronze Age. A correlation between the distribution of dolmen fields and Early Bronze Age settlements was pointed out by Vinitsky for the Golan. In the Golan a major study of dolmen fields was undertaken by Epstein, who noticed five types based on methods of construction and on the state of their preservation. Previous studies on dolmens have concentrated on typology, function, and date, but in-depth studies of dolmen landscapes have yet to be undertaken and may very well reveal evidence for various forms of social stratification. At er-Ramthaniyyeh in the Golan, for example, one "free-standing" type of dolmen existed within a field which otherwise only had *tumuli*-dolmens. Variation in monument type has also been noted by Greenberg within the dolmen fields of the Transjordan, as well as within the tumuli field at Ramat ha-Nadiv, suggesting the existence of a hierarchy within the populations they served. The general consensus of opinion is that dolmens served populations from a non-sedentary pastoralist background. Dolmens are notoriously difficult to date. The earliest artifacts found in them are dated to the Intermediate Bronze Age (EB IV; circa 2000 B.C.E.), but it seems likely that they were periodically reused or rebuilt for burial purposes throughout the protohistoric period, beginning with the Early Bronze I (late fourth millennium B.C.E.) and culminating with the Intermediate Bronze Age which was probably the last period in which the practice of dolmen construction persisted; this would account for the fact that most of the artifacts (mainly weapons, pottery, and some jewelry) found in dolmens date from this period.

[Shimon Gibson (2nd ed.)]

DOLNI KOUNICE (Ger. **Kanitz**; Heb. קוניץ), small town in Moravia, Czech Republic. Jews were living there from the end of the 14th century. A "Jewish judge" is mentioned in 1581. The synagogue was destroyed by the Swedes in 1643; rebuilt immediately, it existed until the Holocaust. About the end of the 17th century several conventions of the Moravian communities were held in Dolni Kounice. Jews there were able to acquire real estate until the regulations imposing the *Familiants system were introduced in 1727; these also limited the number of families permitted to reside in the locality to 111. There were 16 "Jewish houses" registered in 1674 and 35 in 1823. Dolni Kounice was one of the political communities (**politische gemeinde*). The community numbered 595 in 1848; 206 in 1900; 71 in 1921; and 53 in 1930 (1.6% of the total population), of whom 41 declared their nationality as Jewish. The Jewish quarter was destroyed by fire in 1823, and in 1862 by flood. Dolni Kounice was the birthplace of the historian Gotthard *Deutsch. The historian Heinrich *Flesch was appointed rabbi there in 1894. The Jews in Dolni Kounice were deported to the Nazi death camps in 1942 and perished there. The synagogue equipment and *pinkas* (minute-book) of the *ḥevra kaddisha* were deposited in the central Jewish Museum in Prague. No community was reestablished after World War II. The synagogue building was restored by the authorities in 1969. Ancestors of Austrian chancellor Bruno *Kreisky were from Dolni Kounice.

[Meir Lamed]

DOLNI KUBIN (Slovak **Dolný Kubin**; Hung. **Alsókubin**), town in N. Slovakia, now Slovak Republic. According to existing documentation, Jews arrived in the city of Dolni Kubin, and in the Orava region, by the beginning of the 18th century, though it can be assumed that they were in the area earlier.

Moravian Jews were the pioneers of Jewish settlement in the entire region of northern upper Hungary, from Čadca to Bardejov. *Holešov Jewry, in northern Moravia, settled in many Jewish cities of this region, including Dolni Kubin in 1710. During their initial years in the city, the Jews rented houses from local inhabitants and were quick to exploit the city's strategic location between Cracow and Vienna for business purposes. In 1775 the Jews built their first synagogue. They also acquired land for a cemetery.

In 1780 there were 112 Jews in the Orava region; in 1801, 668; in 1840, 2,333; and in 1900, 3,197 (probably the peak). In

the town of Dolni Kubin the Jewish population rose from 124 in 1835 to 680 in 1921 but then dropped to 248 in 1940 (of a total 2,005).

In 1870 the community split into an Orthodox and a *Neolog congregation. It was reunited as a *status quo community in 1886. The Zionist movement in Dolni Kubin was one of the first in Hungary. Moric Greunwald was among the founders of the World Mizrachi movement and was a personal friend of Theodor *Herzl. He participated in the second and third World Zionist Congresses. At the end of World War I a wave of pogroms shook the region. Jewish war veterans fought off threatening mobs.

In September 1938 Slovak autonomy was proclaimed, and on March 14, 1939, the independent Slovak state came under German protection. From the outset Jews were persecuted. On June 5, 1942, the Jews of Dolni Kubin and the vicinity were dispatched to the Zilina transit camp, and from there to extermination camps in Poland. In 1947, 27 Jews lived in Dolni Kubin, most of them leaving in 1948–49. The synagogue became a movie house. In 1991, a memorial to the victims of the Holocaust was erected in the presence of President Vaclav Havel. It was the first such ceremony since the fall of Communism in Slovakia.

[Yeshayahu Jelinek (2nd ed.)]

DOMALSKY, I. (**Mikhail Davidovich Baytalsky**; 1903–1978), Russian poet and publicist. Domalsky was born in the village of Chernovo in Odessa province. He participated in the Civil War and was a Komsomol (Communist Youth League) activist in the Ukraine. Together with M. Elko, he wrote the popular song "Po moryam – po volnam" ("Over the Seas – Over the Waves"). In the 1920s he worked as a journalist for newspapers in Kharkov and the Donbass. In 1930 he moved from the Donbass to Moscow where he worked on the staff of the newspapers *Vechernyaya Moskva* and *Izvestia.* Accused of Trotskyism, he was arrested and served two terms in forced labor camps in Vorkuta (1936–41 and 1950–56). He was a soldier in World War II and after his demobilization he worked as a metalworker in Eysk. While imprisoned Domalsky began to write poetry (c. from 1951) in which he expressed his passionate longing for Israel. The poems were smuggled out of the U.S.S.R. and published in Israel under the pseudonym D. Seter (Hebrew for "hidden") with parallel Hebrew translation. The book of poems was edited by Avraham Shlonsky and Moshe Sharett under the title *Pridet vesna moya* ("My Spring Will Come," 1962, 1975).

In 1956 Domalsky was rehabilitated. He then moved to Nal'chik where he began to write his memoirs, chapters of which appeared in Moscow in the *samizdat* (self-publishing) journal *Evrei v SSSR* ("Jews in the Soviet Union," 17, 1979) and in Israel in the journals *Vremya i my* ("Time and We," 11, 1978) and *22* (5, 1979).

In 1970 Domalsky moved to Moscow where, under various pseudonyms, he was actively involved both in the general democratic and Jewish *samizdats*. In 1975 his book *Russkie yevrei vchera i segodnya* ("Russian Jews Yesterday and Today") was published in Tel Aviv. In 1977 he wrote a sociological essay "Novoye v antisemitizme" ("What is New in Antisemitism?") which appeared in the collection *Antisemitizm v Sovetskom Soyuze. Yego korni i posledstviya* ("Antisemitism in the Soviet Union, its Roots and Consequences," Tel Aviv, 1979). In these publications Domalsky explained the mechanism of official Soviet antisemitism.

Domalsky died in Moscow. According to his wishes his remains were brought to Israel in 1979 and buried in kibbutz Gelil Yam near Herzliyyah.

[*The Shorter Jewish Encylopaedia* in Russian]

DOMBROVENI, Jewish agricultural colony in Bessarabia, founded in 1836 on 1,287 hectares (approx. 3,217 acres) of land bought by settlers from Podolia. It developed the most advanced level of farm economy in the Jewish colonies in the region. Of the 371 families (1,874 persons) living there in 1899, 139 owned land with an average holding of 9.2 hectares (approx. 32½ acres) per family; an additional 2,325 hectares (approx. 5,812 acres) were held on lease. The colony owned then 31 plows and 3,517 sheep and goats. A school was opened in 1900, to which the writer K.R. Abramowich-Ginzburg was appointed principal. Under the Romanian agrarian reform of 1922, 182 Jews in Dombroveni received 413 hectares (approx. 1,032 acres). The 303 members registered in the loan fund operating locally in 1925 included 225 farmers, 21 artisans, and 24 merchants. In 1930 there were in the colony 1,198 Jews (87.3% of the total population).

[Eliyahu Feldman]

Holocaust Period

After occupation by the Soviet army in June 1940, the rabbi and community leaders of Dombroveni were exiled to Siberia; Jewish property was confiscated in stages and all Zionist activity outlawed. In 1941, in the interval between the withdrawal of the Soviet forces and the entry of German-Romanian troops, Dombroveni was plundered by the inhabitants of the nearby villages, and the Jews fled to the outlying fields. When they were caught by the Romanian troops they were all concentrated in the school courtyard, robbed of their money and jewelry, and ordered to leave the place. Those who turned west were murdered by the Germans they met en route; others turned east and reached the Dniester, where some succeeded in crossing the river with the help of the remaining Soviet authorities and took refuge in the Soviet Union. Still others were caught by Romanians and dispatched to *Transnistria, where they were either killed or died of starvation and disease. The settlement itself was leased out and all the property seized and distributed among local peasants.

[Jean Ancel]

DOMENICO GEROSOLIMITANO (c. 1552–1621 or later), apostate and censor of Hebrew books. Born in Jerusalem, Domenico, whose Jewish name is unknown, received a talmudic and kabbalistic education at Safed and also studied mathematics and medicine. At first he was active as a rabbi, then practiced medicine in Cairo, and later became physician to the sultan in Constantinople. In 1593 he converted to Christianity and served the Inquisition as censor of Hebrew books first at Mantua and nearby towns, then at Monferrato, Milan, and Rome. In Rome Domenico became a member of the Collegio dei Neofiti, where he taught Hebrew in addition to his work as a censor. Parts of his Hebrew autobiography were published by Guidi (*Festschrift… A. Berliner,* 176ff.) and by G. Sacerdote. Domenico's writings, mostly in manuscript form, include an "Index Expurgatorius," the *Sefer ha-Zikkuk*, which lists all passages in Hebrew literature to which the Inquisition objected; a translation into Hebrew of the New Testament and the Apocrypha; and anti-Jewish, pro-Christian sermons in Italian.

[Alfredo Mordechai Rabello]

DOMESTIC PEACE (Heb. שְׁלוֹם בַּיִת, *shelom bayit*). The Jewish tradition visualizes God as seeking peace: in the heavenly spheres, between the nations on earth, and especially between *husband and wife. Since every man is considered a king in his own household, Scripture regards a man who establishes peace in his house as a sovereign who establishes peace in his dominion (ARN[1] 28:3). The rabbis sensed that the ultimate achievement of peace on earth depends upon its achievement in the smallest social unit – the *family. They also said that God's presence leads to peace in the home. However, the view that "Great is peace that reigns between husband and wife" had legal and moral consequences as well. It was permitted to tell a lie for the sake of domestic tranquility. God Himself had done this when He reported to Abraham on Sarah's soliloquy (Gen. 18:12–13 and BM 87a). Moreover, the practice of Jewish women to light candles every Sabbath eve, established by the rabbis as one of the principle commandments to be performed by females, is expressly for the purpose of promoting an atmosphere of warmth and peace on the holy day. The rabbis queried which of two commandments is to enjoy preference when there are insufficient funds for both, Sabbath or Ḥanukkah candles, and ruled that Sabbath candles were more important because they contributed to *shelom bayit* (Shab. 23b).

That God strongly desired *shelom bayit* was derived especially from the fact that according to the **sotah* ritual (Num. 5:11–31), He had permitted His holy name to be inscribed on parchment which was placed in water, though He knew that His name would thus be erased by the liquid. Yet He lent His name to this abuse that He might be a party to the restoration of marital tranquility. However, the rabbis in many places cautioned husbands not to make it necessary to resort to the ritual altogether. They should behave properly and not be tyrannical or jealous (Sot. 2b). Because of the principle that one cannot be expected to live with a snake under one roof, the rabbis ruled that the husband would not have the right to exact from his wife an accounting under oath with regard to her management of household goods (Ket. 86b). Either the relationship was one of trust, they stated, or it was better for it to be terminated. It is apparent from the Bible that the institution of polygamy was frowned upon because of *shelom bayit* long before it was abolished by the ban of R. *Gershom, in about the year 1000. The patriarchs Abraham and Jacob, who had more than one wife, had domestic strife; the prophet Samuel was born in such a home; and the kings suffered harmful intrigues because of their harems. There could hardly be *shelom bayit* when there was more than one mistress of the household, and the Bible proves this by its description of the relationship between the two wives of the same man by the word *ẓarah*, which also means misfortune and suggests that two wives of one husband can only bring grief to each other and to the home. Because of *shelom bayit*, husbands were urged to heed their wives' counsel (see the commentary of Me'iri on BM 59a) with regard to all household affairs, and especially the feeding and clothing of the sons and daughters. This, however, is only one of numerous rules involving the love and honor due to a wife from her husband and the husband's legal obligations because of the marital relationship. Moreover, for the sake of *shelom bayit*, a husband whose parents unjustly find fault with his wife is not required to please his parents by showing his agreement with them thereby angering his wife (*Sefer Ḥasidim*, 564). Thus even the fifth commandment of the Decalogue, to honor one's parents, is superseded by *shelom bayit*.

[Emanuel Rackman]

DOMESTIC VIOLENCE, behavior used by one partner to control the other; it can include verbal, emotional, sexual, and physical abuse and cuts across social strata. Although men can be abused, most victims are women. Children in abusive households are likely to have been abused or to have witnessed abuse. In recent decades, the term "domestic violence" has replaced "wife beating" or "wife battering"; such behavior is also referred to as "relationship violence," "domestic abuse," and "violence against a spouse."

Domestic violence is not a new issue among Jews. Although the word מכה (strike, blow, hit, beat) appears in the Bible, it is not associated with wife beating until talmudic times and even then it is not overtly discussed. The most useful source in the study of wife beating is responsa literature (ranging from geonic times to the present). There are a variety of attitudes towards domestic violence found in these texts, with some decisors who declare it unlawful while others justify it under certain circumstances. Gratuitous abuse, striking a wife without a reason, is unlawful and forbidden by all. However,

the attitude of rabbinic sources toward perceived "bad wives" is ambivalent, and wife beating is occasionally sanctioned if it is for the purpose of chastisement or education.

Medieval Attitudes in the Muslim World

*Ẓemaḥ ben Paltoi, *gaon* of Pumbedita (872–90), allowed a man to flog his wife if she was guilty of assault. Rabbi *Yehudai b. Naḥman (Yehudai Gaon, 757–61) wrote that: "…when her husband enters the house, she must rise and cannot sit down until he sits, and she should never raise her voice against her husband. Even if he hits her she has to remain silent, because that is how chaste women behave" (*Oẓar ha-Ge'onim*, Ket. 169–70). The ninth-century *gaon* of Sura, *Sar Shalom b. Boaz (d. c. 859 or 864), distinguished between an assault on a woman by her husband and an assault on her by a stranger. The *gaon* of Sura's opinion was that the husband's assault on his wife should be judged less severely, since the husband had authority over his wife (*Oẓar ha-Ge'onim*, BK 62:198).

In his *Mishneh Torah*, Moses *Maimonides (1135–1204) recommended beating a bad wife as an acceptable form of discipline: "A wife who refuses to perform any kind of work that she is obligated to do, may be compelled to perform it, even by scourging her with a rod" (Ishut 21:10). The responsa of R. Solomon b. Abraham *Adret (Rashba, 1235–1310) include examples of husbands who occasionally or habitually use force; few of these men are brought to court for beating a wife in a moment of anger. However, there are instances in Rashba's responsa of wives who considered the rabbis as allies against violent husbands (Adret, vol. 5, no. 264; vol. 7, no. 477; vol. 8, no. 102; vol. 4, no. 113).

Medieval Attitudes in Ashkenaz

Responsa from 12th- and 13th-century France and Germany express a rejection of wife beating without any qualifications in a Jewish society in which women held high social and economic status. This attitude is reflected in a proposed *takkanah* (regulation supplementing the talmudic *halakhah*) of R. Perez b. Elijah, who believed that "one who beats his wife is in the same category as one who beats a stranger"; he decreed that "any Jew may be compelled on application of his wife or one of her near relatives to undertake by a *ḥerem* not to beat his wife in anger or cruelty so as to disgrace her, for that is against Jewish practice." If the husband refused to obey, the court could assign her maintenance according to her station and according to the custom of the place where she dwelled. It is not clear whether this *takkanah* ever received serious consideration.

Some Ashkenazi rabbis considered battering as grounds for forcing a man to give a *get*. Rabbi *Meir b. Baruch of Rothenburg (Maharam, c. 1215–1293) and R. *Simḥah b. Samuel of Speyer (d. 1225–1230) wrote that a man has to honor his wife *more* than himself and that is why his wife and not his fellow man should be his greater concern. R. Simḥah argued that like Eve, "the mother of all living" (Gen. 3:20), a wife is given to a man for living, not for suffering. She trusts him and thus it is worse if he hits her than if he hits a stranger. R. Simḥah lists all the possible sanctions. If these are of no avail, he not only recommends a compelled divorce, but allows one that is forced on the husband by gentile authorities. This is highly unusual since rabbis rarely endorse forcing a man to divorce his wife and it is even rarer to suggest that the non-Jewish community adjudicate internal Jewish affairs. Although many Ashkenazi rabbis quoted his opinions with approval, they were overturned by most authorities in later generations, starting with R. Israel b. Pethaḥiah *Isserlein (1390–1460) and R. *David b. Solomon Ibn Abi Zimra (Radbaz, 1479–1573). In his responsum, Radbaz wrote that R. Simḥah "exaggerated on the measures to be taken when writing that [the wifebeater] should be forced by non-Jews (*akum*) to divorce his wife … because [if she remarries] this could result in the offspring [of the illegal marriage, according to Radbaz] being declared illegitimate (*mamzer*)" (part 4, 157). Sixteenth-century responsa seem to acknowledge that wife beating is wrong, yet they avoid releasing the woman from the bad marriage. These evasive positions vis-à-vis relief for a beaten wife are part of *halakhah* and rest on the husband's dominant position in marriage.

Contemporary Perspectives

For many years there was a myth that domestic violence among Jewish families was infrequent. However, there is much data demonstrating that domestic abuse is a significant and under-recognized behavior in Jewish communities in Israel and the Diaspora. Jewish women typically take twice as long to leave battering relationships than other women for fear that they will lose their children and because they are aware of the difficulties in obtaining a *get*, the Jewish divorce decree which is dependent on the abusive husband's consent. The major halakhic stance in the early 21st century continues to support the central role and authority of the husband and domestic abuse is not automatic grounds for Jewish divorce. Rabbinic courts tend to favor men who promise to reform their behavior (*shelom bayit*) and often force women to return to their vicious husbands or lose their rights to maintenance and property and custody of children. An abused woman whose husband refuses to give her a divorce is considered an **agunah*, a chained or anchored woman.

The problem of domestic violence in Israel surfaced in the media during the first Gulf War in 1991 when soldiers were not mobilized and husbands and wives (and their children) were forced to be together in sealed rooms. Beginning in the 1990s the rate of husbands murdering wives spiralled upwards in Israel and this trend has continued, with over 200 spousal murders reported by 2002.

Jewish Women International (JWI) is among contemporary organizations addressing the plight of victims of domestic abuse. It has developed resources for Jewish women and an information guide for rabbis. JWI coordinated international conferences on Jewish domestic violence (2003 and 2005) addressing this behavior in the U.S., Israel, South America, and the FSU. An inter-denominational group, the Jewish Institute Supporting an Abuse-Free Environment (J-SAFE), promotes a Jewish community in which all institutions and organizations

conduct themselves responsibly and effectively in addressing the wrongs of domestic violence. Its goal is to promote universal standards for training and policies that prevent abuse, that ensure that victims are treated supportively and appropriately, and that perpetrators are held accountable, thereby promoting a safer environment for all children and adults. In recent years, some rabbinic authorities, shocked by the growing murder rate, have made initial efforts to address the situation of women in abusive marriages.

[Naomi Graetz (2nd ed.)]

DOMICILE.

Definitions

In contrast to "residence," which is the place of physical abode, domicile is that place where a man has his true, fixed, and permanent home and principal establishment and to which whenever he is absent he has the intention of returning. For example, in matters governed by local custom, a man is bound to follow the practices of his place of domicile (*lex loci domicilii*) if they conflict with those of the locality in which he happens to be residing (Pes. 51a; Maim. Yad, Yom Tov, 8:20; see also **minhag*). There is also a distinction between "resident" and "inhabitant," the latter term implying a more fixed and permanent abode than the former and imposing privileges and duties to which a mere resident would not be subject. Thus, one who uttered a vow not to derive any benefit from the "inhabitants" of a certain city (*anshei ha-ir, benei ha-ir*) is forbidden to do so from those who have resided there more than 12 months, but is permitted to derive benefit from anyone residing there less than that. If, however, his vow was not to derive any benefit from the "residents" of the city (*yoshevei ha-ir*), he is forbidden to do so from anyone who has lived there for more than 30 days (BB 8a; Maim. Yad, Nedarim, 9:17).

Intention to Establish Domicile

Intention in the matter of establishing domicile may be avowed, implied, or construed. Occasionally, these types are in conflict with one another, and authorities have disagreed as to the relative strength of each type. A famous case is that of the observance of the second day of a festival. Inhabitants of the Land of Israel keep one day; those of the Diaspora keep two (see *Festivals). The settled law is that people traveling between the Land of Israel and the Diaspora follow the practice of the place to which they have arrived if their avowed intention is to establish domicile there (Sh. Ar., OḤ 496:3, and commentaries). But the following geonic responsum illustrates how implied intention or circumstantial factors can modify the settled law:

African Jews who have married in the Land of Israel and reside there: If 12 months have as yet not elapsed since they took up residence, they are obligated to keep two days following their place of origin; for this have the rabbis (BB 7b) taught, "How long must one reside in a city in order to be considered as one of its inhabitants? – 12 months." If, however, 12 months have elapsed, then thereafter – even if their avowed intention is to return – they follow the practice of the inhabitants of Jerusalem until they actually return to their homes.

The foregoing refers to people going to the Land of Israel from Africa. As for people, however, who go to the Land of Israel from Babylonia which has two talmudic academies:

If their avowed intention is to return – even though many years have elapsed – they keep the more stringent practices of both localities. If, however, they do not have the avowed intention of returning, they follow the practices of the Land of Israel whether this will make for more stringent or for more lenient observance (*Oẓar ha-Ge'onim*, ed. by B.M. Lewin, 3, pt. 2 (1930), 72, Pes. 51, no. 175).

Domicile as a Source of Obligations

The Talmud has a series of rules according to which the length of residence in a place determines the extent to which one becomes obligated to participate in local activities and to perform communal duties. Thirty days' residence carries with it the obligation to contribute to the communal soup kitchen maintained for the poor (*tamḥui*). It also renders one subject to the rules of the apostate city (*Ir ha-niddaḥat; Sanh. 112a). Three months' residence carries with it the additional obligation to contribute to the general charity fund of the community; six months' to the fund which provided clothing for the poor; nine months' to the fund which covered the funeral expenses of the poor. Twelve months' residence changes one's status to that of inhabitant and subjects one to all communal expenses, taxes, and imposts; in this respect, the purchase of a home has the equivalent effect of 12 months' residence (BB 7b–8a; Maim. Yad, Mattenot Aniyyim, 9:12, Shekhenim, 6:5).

Domicile of a Married Woman

According to the tannaitic sources, the domicile of a married woman is established by her husband. She could, with a few specified exceptions calculated to avoid undue hardship for her, be compelled to follow him on pain of divorce and loss of alimony rights (*ketubbah*). Thus, if they have been living in the country he may not compel her to move to the city, and if they have been living in the city he may not compel her to move to the country, "for in certain respects living in the country is preferable and in other respects living in the city is preferable." Another one of the exceptions to the general rule is taking up residence in the Holy Land. If a woman insists upon emigrating to the Land of Israel or, in Israel, to

Jerusalem, and her husband is adamant in his refusal, a divorce must be granted, and she retains her rights to alimony (Ket. 110b; Maim. Yad, Ishut, 13:17–20).

Concerning the domicile established by a rabbinic legal fiction, for the purpose of doubling the distance one might be permitted to walk outside the city limits on the Sabbath, see **eruv* (*eruv teḥumin*).

With regard to restrictions on the freedom to establish domicile in the medieval communities of Europe, see **ḥerem ha-yishuv.*

[Aaron Kirschenbaum]

The Establishment of Domicile as a Factor in the Determination of Subordination to Communal Enactments in Matters of Civil Law

This issue arose in a question put to R. Isaac B. Sheshet (Spain-Algiers fourteenth century) in the context of an enactment passed in a particular town requiring that marriage ceremony be conducted exclusively in the presence of communal trustees and in the presence of ten of them; otherwise the money transacted for *kiddushin* would be expropriated and the marriage annulled. This enactment was intended to prevent clandestine/secret marriages (see *Marriage, **Hefker*, **Takkanot ha-Kahal*, **Aguna*). Ribash was asked whether the enactment could also apply to those who had taken up residence in the city after its enactment. Ribash responded that "even those who came from outside the town to reside there are subject to the same law as the people of the city and must abide by their enactments, and it is if they explicitly agreed to accept all of the communal enactments upon their arrival in the town, provided that they have no intention to leave. And they are even permitted with respect to matters that were forbidden in their own town because of the local custom, for as long as they do not intend to return, and if not forbidden in the town in which they came to live…" (see *Conflict of Laws).

On the other hand, in matters relating to the collection of taxes, a number of rulings in the responsa literature indicate that the community has no authority to subject a member of the community to a tax that was first levied prior to his becoming a member of the community. For example, if the community borrowed a certain sum of money, or if a tax was imposed by the ruler of the town, even if not by way of an enactment (Resp. Rashba, 111, no.412) According to Ribash, a new resident can only be required to pay previous debts of the town when the enactment had already been made prior to his arrival in the town and the new resident already had notice of the enactment.

The State of Israel

ESTABLISHMENT OF DOMICILE FOR DETERMINATION OF RABBINICAL COURT'S JURISDICTION. The question of establishing a person's permanent place of residence is of crucial importance in the State of Israel, with respect to the jurisdiction of the rabbinical court in matters of personal status. The Rabbinical Courts Jurisdiction (Marriage and Divorce) Law 5713 – 1953 provides that "matters of marriage and divorce of Jews in Israel, being citizens or residents of the State, shall be under the exclusive jurisdiction of the rabbinical courts" (sec. 1). On a number of occasions, the Israeli Supreme Court was required to determine whether a Jewish couple was domiciled in Israel, this being the precondition for the jurisdiction of the rabbinical court. The general criterion adopted in Israeli common law is the criterion of "the center of a person's life." Where a Jewish couple was married in Israel and their life centered in Israel, the Israeli rabbinical court has jurisdiction over them, even if the couple went to live abroad (see in detail in entry **Bet Din*).

The Place of Residence for Determining a Minor's Domicile for Purposes of the Hague Convention

The determination of domicile is also of decisive importance in cases of child abduction (see entry: *Abduction). The Hague Convention, which regulates matters of jurisdiction in cases of child abduction (for the contracting states), was enacted as binding legislation in the State of Israel (The Hague Convention Law Return of Abducted Children, 1991). The Hague Convention compels the Court in whose jurisdiction the abducted child was found to order the return of the child to the state from which he was removed, so that the case can be adjudicated by the court of that State. Under section 3 (a) of the Convention, a condition for the Convention's applicability is that the child was habitually resident in the State (from which he was removed) immediately before the removal or the retention of the child. The Israeli Supreme Court determined that as a rule the habitual residence of the child is the place in which he lives his daily life. However, the view was also expressed that, when the parents have traveled abroad for a temporary period, the duration of which having been determined in advance, their temporary place of residence abroad will not be regarded as their domicile, and by extension, will not be regarded as the child's domicile.

In FA 575/04 (Jerusalem District Court) the Court was required to determine a child's habitual place of residence in order to determine whether the case was one of abduction, and as such was governed by the provisions of the Hague Convention. The Court addressed a number of parameters indicating that the parents' permanent place of residence was Israel. Their stay abroad was temporary, its duration having been determined in advance, and the return to Israel was one of the preconditions for the trip abroad. The couple had not purchased an apartment abroad, and on the other hand, they owned an apartment in Israel. They visited Israel on a regular basis, and the husband was attempting to find work in anticipation of their return. However, in the Court's view (Judge M. Drori), the central and clinching argument for viewing *Israel* as the parent's permanent place of residence was the fact that the husband, who was religiously observant, did not observe the Second Day of Festivals ordinarily observed by Jews living outside Israel.

The Court adduced extensive halakhic material from the *posekim* who dealt with the prohibition on residents of the

Land of Israel who traveled abroad from performing work on the second day of the Festival, as distinct from actions performed in private, which are permitted to them (Maim., Yad, Hilkhot Yom Tov, 8.2; Sh. Ar. OH, 496.3, Magen Avraham, ad loc. 4). The Court also cited at length a responsum of R. David b. Zimra (*Resp Ridbaz*, 4: 73), who distinguishes between three categories of people traveling from the Land of Israel abroad: One who goes abroad exclusively for business purposes belongs to the category of "intending to return immediately" and is therefore required to conduct himself in accordance with the strict law of the place to which he came, but only in public; one who travels for business purposes in order to make a profit, or to engage in his livelihood or to learn Torah, belongs to the category of "intending to return at a later stage" and therefore is required to behave in accordance with the strict law of his place of origin and the strict law of his current location, so as not to trigger dispute; and one who changed his place of residence together with his wife and children, even though he intends (in the future) to return to settle in Israel, and who is not referred to as one who "intends to return," and is therefore required to conduct himself in all matters as one of the local residents. With respect to the final category, R. Yisrael Meir Radin (*Mishna Berura*, 496.13) explains that "one who leaves his place of residence with his wife and children for the purpose of trading and profiting, even though at the time of his departure he intended to return, is considered as one who does not have the intention of returning, for presumably, having moved his entire family to a new residence, he will not move again for as long as he is engaged in a profitable livelihood in his new place of residence."

Based on these comments and the fact that the husband concerned was both observant and knowledgeable, the Court presumed that in these kinds of matters he had conducted himself in accordance with, and in awareness of, the *halakhah*. When abroad, the husband had treated the Second Day of the Festival for exiles as though it was a regular weekday. The Court ruled that this indicated that he did not intend to settle in England, and had every intention of returning to Israel. In the Court's view this was conclusive evidence that the habitual residence of the husband – the appellant – was in Israel, and it was as though on each festival the husband had made a public declaration that his habitual residence was in Israel.

DOMIN, HILDE (**Hilde Loewenstein**; 1909–), German poet and writer. Domin was born in Cologne, Germany. She studied law and economics, sociology, and philosophy in Heidelberg, Cologne, and Berlin. Among her teachers were Karl Jaspers and Karl Mannheim. In October 1932 she immigrated to Rome together with her future husband, the art historian Erwin Walter Palm. In 1935 she received her doctoral degree in the field of political science in Florence and taught languages in Rome. After the pact between Hitler and Mussolini she escaped with her husband in 1939 to England. In 1940 she settled in the Dominican Republic, where she worked as a translator and architectural photographer. From 1947 to 1952 she taught German at the University of Santo Domingo. After her mother's death, in 1951, she adopted the pseudonym Domin, as a reminder of the Dominican Republic.

In 1954 she moved back to West Germany, and three years later her first poems appeared. From 1961 she worked as a writer. Along with poems, stories, and one novel she wrote literary-scientific essays and worked as a translator and editor.

Her works reflect the emotional worlds of an individual caught between escape, exile, and return, with all the doubts and complexities involved.

Among her works are the poetry collections *Nur eine Rose als Stuetze* (1959), *Rueckkehr der Schiffe* (1962), *Der Baum blueht trotzdem* (1999), the novel *Das Zweite Paradies* (1968), and the autobiographical *Von der Natur nicht vorgesehen: Autobiographie* (1974) and *Aber die Hoffnung: Autobiographisches aus und ueber Deutschland* (1982).

Domin won numerous prizes, including the Droste-Preis der Stadt Meersburg (1971), Rainer-Maria-Rilke-Preis fuer Lyrik (1976), Nelly-Sachs-Preis der Stadt Dortmund (1983), Literaturpreis der Konard-Adenauer-Stiftung (1995), and received the Grosses Bundesverdienstkreuz (1994).

[Noam Zadoff (2nd ed.)]

DOMINIC, ALEXANDRU (**Avram Adolf Reichman**; 1889–1942), Romanian poet and playwright. Born in Bucharest to a middle-class family, Dominic completed the local German-Evangelical secondary school and doctoral studies in law (Brussels) and in literature (Paris). While a student in France he had ties to an anarchist group and published articles in French periodicals, one of them *La société nouvelle,* under pen names. In 1912 he returned to Bucharest, where his poems appeared in Romanian periodicals. In 1920 he published his first volumes of expressionist and social poems, *Revolte si crucificari* ("Revolts and Crucifixions"). Well received by critics, Dominic was nominated for a Nobel Prize by the French review *Esope, journal d'action intellectuelle* in the same year. In 1921 he published the expressionist play *Sonata umbrelor* ("Sonata of the Shadows"), dealing with the problem of the intellectual. This play was staged at the National Theater in Bucharest (1920) and in German translation at Neues Theater am Zoo, Berlin (1922). In 1927, Dominic published a new volume of poems, *Clopote peste adancuri* ("Bells above Depths"). In 1924–25, together with the Romanian writer Liviu Rebreanu, Dominic edited the review *Miscarea literara*. His poem *Israel* (1920) deals with the theme of Jewish suffering. Dominic also

published verses in the Zionist review *Puntea de fildes* (1925). In 1938 he visited Palestine, where he decided to send his son. Dominic died in Bucharest. His widow, Bertha, immigrated to Israel, where she established a prize in his memory. Some of his poems were translated into Hebrew.

[Lucian-Zeev Herscovici (2nd ed.)]

Major centers of Jewish settlement in the Dominican Republic.

DOMINICAN REPUBLIC, republic in the Caribbean islands comprising two-thirds of the island of Hispaniola. This region (Santo Domingo) has quite a convoluted history. By the treaty of Ryswich (1607) it was given to Spain, but the treaty of Basel (1793) gave it to France, and in 1814 it reverted to Spain. Haiti occupied it from 1822 to 1844 when it became independent; it was then occupied by Spain until 1865, when it became independent once and for all.

In the first part of the sixteenth century those in charge of colonization of the Spanish colonies, the Converso Bishop Juan Rodriguez de Fonseca and the secretaries of King Ferdinand, Lope de Conchilles and Miguel Perez de Almazan, applied a policy of sending *Converso colonists to Santo Domingo. Historians deduce that in that period Santo Domingo was practically in Converso hands.

From 1781 to 1785 Jews arrived from the destroyed Jewish community on the Dutch island of St. Eustatius. During the French occupation (1795) Jews from Curaçao, occupied by England, began to settle there and were joined by Jews from St. Thomas and Jamaica, all holding foreign citizenship. Jews also arrived from Haiti after the slave rebellion there.

Under the Haitian occupation a cemetery for foreigners was established and the first Jewish grave is located in it – that of Jacob Pardo, dated December 6, 1826. The Jews dispersed in various areas, including the capital Santo Domingo and Puerto Plata, Monte Christi, La Vega, and S. Pedro de Macoris. They dealt mainly with the export of tobacco, timber, and jewelry and the importation of general merchandise from Curaçao, St. Thomas, and Europe through the Sephardi community of Hamburg.

The local population saw the Jews as a progressive, positive, and patriotic element. This is best demonstrated by the famous response by the first Dominican president, Santana (Sept. 16, 1846), to an anti-Jewish petition instigated by the Spaniards in the city of La Vega.

Jews actively helped in the revolution against Spain in 1865, and the new independent government immediately thanked Rafael de Mordecai de Marchena and other Dutch subjects for their active support in the War of Independence.

The number of Jews living there in that period cannot be effectively evaluated, since most of them lived as Dutch, Danish, or British citizens. No organized community existed, and one of them – Rafael Namias Curiel – acted as cantor and performed marriages until 1900. The second-generation Sephardi Jews assimilated almost completely into the local population in a phenomenon that was called by the historian Ucko "the fusion between the Sephardics and the Dominicans."

President Gregorio La Peron made an official proposal in 1882 for the settling in the Dominican Republic of Jews suffering from pogroms in Russia. After limited public debate, however, the proposal was abandoned without further investigation.

At the *Evian Conference on refugees, convened by President Franklin Roosevelt in 1938, the Dominican Republic offered to accept for settlement up to 100,000 refugees. The Dominican Republic Settlement Association Inc. (DORSA) – sponsored by the *American Jewish Joint Distribution Committee (JDC) – acquired from President Trujillo 22,230 acres of land in Sosúa on the northern coast, and the American Jewish Joint Agricultural Corp. (Agro-Joint) – a subsidiary of JDC – contributed a large sum in subsidies for the project. The agreement, signed by DORSA and the Dominican Republic and unanimously approved by parliament, assured the immigrants freedom of religion and facilitated immigration by offering tax and customs exemptions. DORSA, in turn, promised a policy of selective immigration and financial support for the settlers.

Despite the optimism of the government and the Agro-Joint, basic difficulties precluded the ultimate success of the project. Wartime conditions made travel, especially from occupied countries, extremely difficult. The first immigrants did not arrive until mid-1940; by 1942 there were only 472 settlers; and by 1947, 705 persons had passed through the settlement. Although the original objective of the project had been agricultural development, few of the settlers were agriculturists or even inclined toward it. Of the 373 people left in Sosúa in July 1947, only 166 were engaged in agriculture. The rest worked as businessmen and artisans. It is estimated that under the colonization scheme some 5,000 visas were actually issued, thus helping many of the beneficiaries to escape the Holocaust; but most of them never reached the Dominican Republic. The census taken in 1950 indicated the presence of 463 Jews in the Dominican Republic. Today most of the inhabitants of Sosúa have assimilated into the local population.

Descendants of Jews reached the highest strata of Dominican society. Francisco Henriquez y Carvajal, son of a

Jewish father and Converso mother, took office as president of the republic in 1916. His brother, the famous writer Federico Henriquez y Carvajal, wrote *La Hija del Hebreo* ("The Daughter of the Hebrew") on the problematics of mixed marriages. The president's son, Pedro Henriquez Urena, became one of the major linguists of the Spanish language. His other son, Max Henriquez Urena, as Dominican ambassador to the UN, made the welcoming speech when Israel was admitted to the *United Nations in 1949. The well-known writer Haim Horacio Lopez-Penha wrote the anti-Nazi book *Los Paisanos de Jesus* ("Jesus' Fellow Countrymen"). The composer Enrique de Marchena culminated his career with the concerto suite "Hebraicum," inspired by his visit to Israel.

In 2004 some 250 Jews lived in the Dominican Republic, which had two synagogues – one in Santo Domingo, the other in Sosúa; an active community, Centro Israelita de la Republica Dominicana; a bimonthly magazine, *Shalom;* and a Sunday school.

[Benjamin (Benno) Varon (Weiser) / Mordechai Arbell (2nd ed.)]

DOMINICANS, Roman Catholic religious order, whose official name is *Ordo Fratrum Praedicatorum*, the Order of Friar Preachers. Often referred to as "Jacobins," after their Saint-Jacques Monastery in Paris, they were also popularly known as *domini canes*, "the [watch-] dogs of the Lord" because of their leading role in the *Inquisition. Founded by Saint Dominic and sanctioned by Pope Honorius III in 1216, the order's first mission was preaching against Christian heresies in the south of France. From 1232, the Dominicans (along with the *Franciscans) were also in charge of the Inquisition, which was initially an institution directed only against the Christian heresies of the *Albigenses and the Waldenses. Because of their duties in these and other spheres, the activity of the Dominicans soon became largely directed against the Jews.

When Popes Gregory X in 1274 and Nicholas IV in 1288 and 1290 reissued the *Turbato corde* bull of Clement IV (1267), which had likened to heretics those converted Jews who had later returned to Judaism together with those who had assisted them in the process (see Papal *bulls), they entrusted the Dominican and Franciscan inquisitors with the prosecution of such persons. The Dominicans proceeded with these prosecutions in southern France from the close of the 13th century. In his *Practica inquisitionis*, an Inquisition textbook written in about 1323, the Dominican Bernard Guy, inquisitor in Toulouse, inserted lengthy passages dealing with the Jews. The interrogatory model which he proposes was above all intended to uncover the accomplices of the converted Jews who had reverted to Judaism. Without any doubt, the cruelest role in the imposition of Inquisition policies against converted Jews was played by the Dominican Tomás de *Torquemada, inquisitor-general in Spain until his death in 1498.

The Dominicans also played a predominant role in the proceedings against the Talmud (see Burning of *Talmud) and the *censorship of other Jewish books following the denunciation by Nicholas *Donin in 1239; after the confiscation of March 3, 1240, these books were collected by the Dominicans (as well as by the Franciscans). When at this point one bishop came to the defense of the Jews, the Dominican Thomas de Cantimpré accused him of having been corrupted by the Jews. Both in order to be able to understand such books themselves, and also to be the better prepared for their spoken and written missionary activities among the Jews, the Dominicans introduced the study of Hebrew from the middle of the 13th century, a development in which the Spanish Dominican *Raymond de Peñaforte played an important part. Raymond *Martini, another Spanish Dominican, held a chair in Hebrew until his death (shortly after 1284), but at first it was mainly converted Jews who directed these studies. At the Council of Vienna in 1312, the Spanish Dominican Raymond Lully elicited a general decision calling for the teaching of languages (Hebrew and Arabic) for missionary activities. However, after the meeting of their general chapter in Rome in 1571, the Dominican attitude toward the teaching of Hebrew grew more reserved. On the insistence of the apostate Pablo *Christiani and Raymond de Peñaforte, the compulsory attendance of the Jews at Dominican missionary sermons was decreed in 1263 (see also *Sermons to Jews). In 1278, Pope Nicholas III ordered the grand master of the Dominicans to make such sermons and their compulsory attendance general practice. The Dominicans obtained the consent of Edward I of England for the introduction of such sermons in 1279; and subsequently many Dominicans, especially Vicente *Ferrer, and Peter *Schwarz, made widespread use of forced sermons to the Jews. The Dominicans were also in the forefront in organizing public *disputations, beginning with the one in *Paris in 1240, to which the Jews were compelled to send delegates. The disputation of *Barcelona in 1263 was convened on the initiative of Raymond de Peñaforte and Pablo Christiani.

Anti-Jewish polemics occupy an important place in Dominican writings. Raymond Martini drew up the *Capistrum Judaeorum* and the *Pugio fidei christianae* (Paris 1621, 1651; Leipzig, 1687), written in both Hebrew and Latin. Pierre de Janua, Martini's assistant, who was also well versed in Hebrew, wrote an *Opus adversus Judaeorum errores accuratum*. Alfonsus *Bonihominis, a Spaniard who lived for many years in Paris (d. 1353), claimed to have translated the *Epistola Rabbi Samuelis* (printed 1480?) from Arabic; however, it is probable that he composed the work himself. Other Dominican anti-Jewish works were *In sectam hebraicam* by the Italian Gratiadei Aesculanus (d. 1341); *Liber contra Judaeos nomine Thalamoth*

(mid-14th century) attributed to Pierre de Pennis; and *Capistrum Judaeorum* (before 1418) by the Italian Lauterius de Batineis (or Laurentius de Valdinis, or de Ubaldinis). Theobaldius of Saxony (first half of the 15th century), one of the participants at the Council of Constance, wrote a *Refutatio errorum Thalmud*. The Spaniard Joannes Lopez (or Lupus, d. 1464) collected several anti-Jewish sermons and arguments under the title *Opus eruditum contra superstitiones Judaeorum*. The German Peter Schwarz, who appears to have learned Hebrew in a Jewish school in Spain and had attacked the Jews during a public disputation in Ratisbon, was the author of *Tractatus contra perfidos Judaeos de conditionibus veri Messiae… ex textibus hebraicis* which includes various appendices in Hebrew and a "reply to several Jewish arguments." Later authors were the Catalonian Gaspar Fayol, who wrote *Tractatus contra Judaeos* (end of the 15th century); John Baptist Theatinus, who knew some Hebrew, author of *De Trinitate et cognitione Dei contra philosophos et Judaeos* (early 16th century); and the Spaniard Cyprianus Benetus (d. 1522), to whom is attributed *Aculeus contra Judaeos*. Augustus Justiniani, who lived in northern Italy during the first half of the 16th century, translated several biblical texts from Hebrew, as well as Maimonides' *Guide of the Perplexed*, and translated the New Testament into Hebrew; he also published Victor Porcheti's pamphlet *Adversus impios Hebraeos*. On a more everyday plane, Sixtus Medices, who was in Venice during the second half of the 16th century, attacked the activity of Jewish moneylenders in *De foenore Judaeorum*. Antoninus Stabili (d. 1583) published in Italy *Fascicolo delle vanità Judaiche diviso in giornate sedeci*. In the older tradition of Dominican Hebrew scholars was Franciscus Donatus of Rome (d. c. 1653), who demonstrated his sound knowledge of the language in several works on Hebrew accents and abbreviations and made various translations from Hebrew.

Anti-Jewish polemics continued in the 17th century; especially prolific was the Italian Petrus Pichius, author of: *De partu virginis Deiparae adversus Judaeos; Epistola a gli Hebrei d'Italia nella quale si dimostra la vanità della loro penitenza ed aspetatione del Messia; Trattato della passione del Messia contra gli Ebrei; Stolte dottrine degli Ebrei con la loro confutazione*. The Italian Tommaso Campanella (d. 1639), author of about 80 works of all kinds, compiled *Adversus astrologos Judaeos*; and the Frenchman Johannes of Sancta Maria (1604–1660), in addition to a Hebrew grammar and commentaries on some of the prophets in which he made wide use of Hebrew sources, published the polemic, *De futura legalium apud Judaeos observatia post eorum ad Christi fidem conversionem*. Josephus Maria Ciantes of Rome (d. 1670), who had studied Hebrew and rabbinic literature and in 1625 had been appointed by Pope Urban VIII to "instruct" the Jews, was the author of *De sanctissima Trinitate contra Judaeos* and *De Sanctissima Christi incarnatione contra Judaeos*; the Hebrew translation of Thomas Aquinas' *Summa* is also his work. The Dominicans in Cologne, under their prior Jacob van Hoogstraaten, played a prominent and hostile role in the *Reuchlin-*Pfefferkorn controversy (1509–20) over the destruction of Hebrew books. In 1664, the general of the Dominicans, Giovanni Battista de' Manni, ordered members of the order in Poland to preach from the pulpit against the *blood libel. Although the Dominican Order continues to include in its ranks a considerable number of converted Jews, it has nevertheless given up all organized missionary activities among the Jews. Of late, the Dominicans have made important contributions to biblical studies and on the Dead Sea Scrolls at the Ecole Biblique et Archéologique Francaise de Jérusalem. They have adopted a positive attitude toward the State of Israel, where they have several monasteries and churches in Jerusalem.

[Bernhard Blumenkranz]

°DOMITIAN (**Titus Flavius Domitianus**), Roman emperor, 81–96 C.E. Son of *Vespasian and brother of *Titus, Domitian attempted to establish an absolute monarchy against the senate, and resumed an expansionist policy. A rabid opponent of Oriental cults, he combated Judaism and Christianity, the latter then being considered a Jewish sect by the Romans. The triumphal arch dedicated to Titus for his victory in Palestine was erected in his reign. In the year 85, coins were issued with the inscription *Iudea Capta* or *Iudea Devicta*. In 95 he had his cousin *Flavius Clemens sentenced to death and the latter's wife, Flavia Domitilla, exiled, after having ensured their conviction for atheism on account of their adherence to Judaism (or Christianity). He stringently enforced the prohibition against conversion to Judaism and is said to have ordered the execution of all persons claiming to be descendants of the House of David (Euseb., Hist. Eccl. 3:19; Dio Cass., Hist. 69:23, 2), but it seems that he prevented the execution of a number of descendants of David who had been brought to him (Euseb., *ibid.* 3:20; Tertullianus Apol. 5:5). Under Domitian the *Fiscus Judaicus* was very strictly collected (*acerbissime actus est*) by means of informers (Suetonius, Domit. 12). The fiscal tribunal considered the cases not only of those who lived in accordance with Jewish custom, but also those who tried to hide their origin. Suetonius (*ibid.*) himself relates that he was present when a 90-year-old man was subjected to an examination in public, in order to see if he was circumcised (cf. Martial 7:55; 7:82). It was perhaps at that time that R. *Gamaliel went to Rome, together with three other rabbis, in the hope of being able to avert further persecutions.

[Alfredo Mordechai Rabello]

DOMNINUS OF LARISSA (Laodicea in Syria; c. 415–485), philosopher and mathematician. He was a pupil of Syrian and a contemporary of Proclus Diadochus whose pupil Marinus mentions him frequently in his biography of Proclus. A neoplatonist of the Athenian school, he turned at times to the teachings of the Alexandrian school. Thus he criticized the metaphysical speculations of Syrian and Proclus, for which Damascius accused him of superficiality and of corrupting Platonic philosophy. Proclus is said to have directed against Domninus a work entitled "Restitution of Plato's Teaching." Damascius takes Domninus to task for having transgressed the prohibition against eating the meat of pigs when he visited the temple of Asclepius in order to effect the cure of a malady. On the other hand, Damascius praises Domninus as a mathematician. Domninus was also interested in problems of physical astronomy, such as the nature of comets, which he attempted to explain. Two of Domninus' mathematical works have been preserved: a mathematical handbook entitled ἐνχειρίδιον ἀριθμητικῆς εἰσαγωγῆς (in J. Boissonade (ed.), *Anecdota Graeca*, 4 (Paris, c. 1832), 413–29), and a treatise (ed. by C.E. Ruelle in *Revue de Philologie* (1883), 82 ff., with French translation and a short commentary). In the *Encheiridion* Domninus mentions his intention to write a *Principle of Arithmetic*, but nothing further is known about this work. Domninus had a pupil Gesius, identical with Jasius, often cited by Arabic writers.

DOMUS CONVERSORUM, home for converted Jews in London, established in 1232 by Henry III in New Street (now Chancery Lane). It could accommodate about 40 persons and paid pensions to others who lived outside. The home was governed by a warden and later a subwarden or presbyter, assisted by a chaplain. In 1280 Edward I devoted to its upkeep half of the property of converts, which legally escheated to the Crown, and for a period of seven years also the proceeds of the Jewish poll tax. From its foundation up to 1290 the total number of inmates and dependents was approximately 100. On the expulsion of the Jews from England in that year, there were as many as 80 at one time. Thereafter, its importance declined. However, it was hardly ever empty. It was continually resorted to by converts from France, Germany, Flanders, Italy, Spain, Portugal, or the Barbary States. From 1390 to the beginning of the 17th century, 38 men and ten women figure in its records. The last reference to an inmate appears in 1609, though for another 150 years converts from Judaism sometimes received crown pensions. The office of keeper was ultimately combined with the judicial office of Master of the Rolls. The last legal relic of the institution was abolished in 1891.

[Cecil Roth]

DONALDA, PAULINE (1882–1970), Canadian soprano, teacher, administrator. Donalda was born Pauline Lightstone in Montreal into a Jewishly active East European immigrant home. As a child she attracted attention for the quality of her voice and studied music on scholarship at the Royal Victoria College. In 1902 she went to Paris on a grant from Donald Smith (Lord Strathcona), after whom she adopted the professional surname of Donalda. She made her London debut at Covent Garden in 1905 singing *Micaela* under the direction of Andre Messager, her Canadian debut in 1906 singing with her husband (Paul Seveilhac) in the Montreal Arena, and her New York debut later that same year in *Faust*. In the spring of 1910 Donalda opened the Covent Garden season and returned in 1912 singing in both *Les Huguenots* and *I Pagliacci*, again with her husband. She was about to leave Canada for a European tour when World War I broke out. She remained in Canada, often giving benefit concerts in support of the war effort. In 1917 she returned to Paris, where she sang in Balfe's *Le Talisman*, sharing the stage with her new husband, Mischa Leon (b. Haurowitz).

In 1922 Donalda left the stage to devote her life to teaching, opening a studio in Paris. She returned to Montreal in 1937, where she opened a studio, and in 1942 founded the Opera Guild, the company she directed until 1969. During her relatively short performing career, Donalda was recognized for the purity of her voice and for her musicality, fine diction, and powerful stage presence. She is remembered for the unfailing energy with which she promoted opera in Montreal and encouraged talented young Canadian singers. Donalda also was very active in support of Jewish music in Montreal and the study of music at the Hebrew University of Jerusalem.

[Joel Greenberg (2nd ed.)]

DONATH, ADOLPH (1876–1937), Austrian poet and art historian. Donath was born in Kremsier (Moravia) and, after studying law and philosophy at Vienna, began composing poetry on Jewish themes. The poems were published in the following year under the title *Tage und Naechte*, with a laudatory introduction by Georg *Brandes. Donath's early *Judenlieder* (1895) were set to music by Béla Nemes (1899, reprinted 1920). The poems in *Mensch und Liebe* (1901) bewailed the fate of the Jewish people without a homeland. From 1900 to 1904, Donath contributed regularly to the Viennese *Neue Freie Presse* and in 1904 he edited a *Festschrift* of Austrian poetry dedicated to poet Detlev von Liliencrons. In 1903, some of his poetry was included alongside those of Richard *Beer-Hofmann, Martin *Buber, and Stefan *Zweig in an anthology of Jewish poetry, entitled *Junge Harfen. Eine Sammlung jungjüdischer Gedichte*. In 1905 he moved to Berlin, where he devoted his writings mainly to art criticism, as well as the technique and psychol-

ogy of art collecting. In 1910 he founded a bi-weekly art journal, *Der Kunstwanderer*, and from 1921 to 1925 edited the *Jahrbuch fuer Kunstsammler*; his book *Judenlieder* was published in 1920 in Vienna. After the advent of Nazism Donath moved to Prague, where he continued to write on art; his last book, *Wie die Kunstfaelscher arbeiten*, was published in 1937.

[Sol Liptzin / Lisa Silverman (2nd ed.)]

DONATH, EDUARD (1848–1932), Austrian chemist. Donath was born in Wsetin, Moravia, and studied in Vienna. In 1876 he became a Christian. From 1888 he was professor of chemical technology and analysis at the Deutsche Technische Hochschule in Bruenn. Donath was a technologist, analyst, organic and inorganic chemist, geologist, and botanist. In particular, he worked on coal, metals, building materials, glass, water, rubber, dyestuffs, and the chemistry of food. His books include *Monographie der Alkohol-Gaehrung als Einleitung in das Stadium der Gaerungstechnik* (1874), *Die Pruefung der Schmiermaterialen* with K. Pollak (1879), *Neuerungen in der Chemie des Kohlenstoffes und seiner anorganischen Verbindungen* (1899), and *Das Wollfett…* with B.M. Margosches (1901). Donath was active in the development of technical universities at Brunswick, Vienna, Prague, and in the foundation of the Verein der Oesterreichischen Chemiker.

[Samuel Aaron Miller]

DONATH, LUDWIG (1900–1967), U.S. stage and screen actor. Born in Vienna, Donath became well known in pre-Hitler Germany and Austria in supporting roles. Later he was active in the anti-Nazi underground. He fled to the U.S. in 1940. In Hollywood, his mid-European accent typed him for Nazi roles, notably as the Fuehrer in *The Strange Death of Adolf Hitler* (1943). His talent soon brought him other parts: as Al Jolson's father in *The Jolson Story* (1947) and the psychiatrist in the Broadway success, *A Far Country* (1961).

DONATI, ANGELO (1885–1960), Resistance activist of the Holocaust period. Donati was born into a well-known Jewish family in Modena, Italy. After World War I he settled in Paris, where he created the Banco Italo-Francese di Credito while remaining an Italian citizen. In 1931 he brought *Jabotinsky together with the Italian government to open a naval school for *Betar in Civitavecchia. After the Germans occupied northern France in 1940, he found refuge in Nice, which was occupied by the Italians in November 1942. In Nice, he volunteered to help local Jewish organizations and eventually, in cooperation with the Roman Catholic priest Padre Maria Benedetto (Father *Marie Benoît), became active in rescuing Jews. Italian Police Inspector Guido Lo Spinoso, Italian commissioner for Jewish affairs, appointed Donati as his councilor. In turn, Donati introduced Padre Benedetto to Lo Spinoso in 1943 to persuade him to endorse a plan to rescue 30,000 Jews in Nice and the region in the event of a German occupation of the Italian-occupied zone. Padre Benedetto obtained an audience in Rome with Pope *Pius XII on July 16, 1943, in which he explained the plan to bring those Jews to northern Italy. After the fall of Mussolini on July 25, 1943, Donati negotiated with senior officials of the Italian Foreign Ministry and with the representatives of Great Britain and the United States at the Vatican in an attempt to transfer 30,000 Jews from France and another 20,000 from Italy to North Africa. The Italian government was ready to allocate four passenger ships, but the approval of Great Britain and the United States did not come. Though Italy's surrender in September 1943 frustrated these efforts, thousands of Jews managed to cross into Italy with the help of Italian authorities, and many were thus saved. Donati himself escaped in 1943 to Switzerland, where he continued rescue and assistance operations for Jews. He returned to Paris after the liberation in 1945, and was appointed as representative of the Italian Red Cross as well as ambassador of the small state of San Marino. He died in Paris. On April 25, 2004, Carlo Azeglio Ciampi, president of the Italian Republic, awarded Donati a posthumous Gold Medal of Civic Merit, referring to his "noble and enlightening example of eminent civic qualities."

[Daniel Carpi / Sergio Itzhak Minerbi (2nd ed.)]

DONATI, ENRICO (1909–), Italian surrealist and abstract painter. He was born in Milan, and studied piano and composition before becoming a commercial artist and later a painter. In 1934 he moved to Paris, and subsequently to New York. Donati's art is largely inspired by geological phenomena. A collector of strange gems and ores, his paintings reflect their shifting, transparent colors. In 1949 he found a smooth, small stone on the beach at Dover in England. On breaking it open, he saw it contained a perfect fossil. From that time he became preoccupied with the theme of fossilization. At first he painted "moonscapes," depicting imaginary views down the center of a fossil, and then made a series of paintings depicting the surface of a fossilized plant or rock. Later he painted new themes, suggestive of immemorial antiquity: human imprints in sand and ancient inscriptions on cylinder seals and tablets.

BIBLIOGRAPHY: P. Selz, *Enrico Donati* (1965).

DONATI, LAZZARO (1926–1977), Italian painter, nephew of Angelo *Donati. He was born and lived in Florence. His painting is representational, but not literal. He painted on wood in thin, wet glazes and his favorite subjects were portraits of women, still lifes, city scenes, and landscapes. Dona-

ti's work is imbued with a purity of color and an atmosphere of poetic sensuality.

DONEN, STANLEY (1924–), U.S. film director. Born in Columbia, South Carolina, Donen trained as a dancer and while still in his teens began working with Gene Kelly on Broadway. He went with Kelly to Hollywood and joined MGM, where he worked closely with producer Arthur Freed. Donen's inventive choreography and directorial skills helped revitalize the musical during the 1940s and 1950s. For example, his filming of Fred Astaire dancing on the walls and ceiling of his London hotel room in *Royal Wedding* (1951) has become legendary. Donen directed some of the most successful and best-regarded musicals of the time, including *On the Town* (1949), *Singin' in the Rain* (1952), *Seven Brides for Seven Brothers* (1954), *It's Always Fair Weather* (1955), *Love Is Better than Ever* (1956), *Funny Face* (1957), *The Pajama Game* (1957), *Damn Yankees!* (1958), *The Little Prince* (1974), and *Movie Movie* (1978).

Donen also directed sophisticated comedies and thrillers, such as *Kiss Them for Me* (1957), *Indiscreet* (1958), *Once More, with Feeling* (1960), *Surprise Package* (1960), *The Grass Is Greener* (1960), *Charade* (1963), *Arabesque* (1966), *Two for the Road* (1967), *Bedazzled* (1967), *Staircase* (1969), *Lucky Lady* (1975), *Saturn 3* (1980), and *Blame It on Rio* (1984). In 1985 Donen directed the TV series *Moonlighting*, and in 1999 he directed the TV drama *Love Letters*, based on the play by A.R. Gurney.

Among his many honors, Donen has received the Career Achievement Award from the Los Angeles Film Critics Association (1989); a Lifetime Achievement Award from the Academy Awards "in appreciation of a body of work marked by grace, elegance, wit, and visual innovation" (1998); the Akira Kurasawa Award at the San Francisco International Film Festival (1995); the Opus Award from the ASCAP Film and TV Awards (2000); and the Career Golden Lion at the Venice Film Festival (2004).

[Ruth Beloff (2nd ed.)]

DONETSK (until 1924 **Yuzovka**, and until 1961 **Stalino**), industrial city in the Eastern Ukraine, established in 1869–70 when an iron mill and coal mines were opened. The Jewish population numbered 3,168 in 1897 (11.5% of the total). They were occupied as petty traders and artisans. In 1887 a magnificent synagogue was built, a *talmud torah* opened, and charity organizations were established. In 1887 the authorities prevented a pogrom against Jews and Englishmen, but during a pogrom which lasted for three days from October 20, 1905, many Jews were killed and wounded and synagogues and Jewish houses were destroyed. In 1910 there were three synagogues and five Jewish private schools. Zionism was active and a delegate was sent to the Sixth Zionist Congress. During World War I many refugees arrived and were helped by a local Jewish committee. Between the wars the general population grew by 400% and the Jewish population doubled. There were 11,300 Jews living in the town in 1926 (10.6% of the total population). In 1922 most of the Jews were artisans and were dominant in tailoring and hide production. In the second half of the 1920s there were 300 Jewish workers (among 12,000) in the big steel mill, 30 of them professionals. There were several hundred young Jews among the 4,000 workers employed in the construction of new steel mills. There was one Yiddish school with 320 pupils in Donetsk, and in 1935 it had six Yiddish and five Russian classes. In 1939 the Jews numbered 24,991 (total population 466,268). At the beginning of the German-Soviet war thousands of Jews were evacuated with their families by their factories or organizations, such as about 1,500 Jews employed at the Stalino Works who left with their families for the Urals. The town was occupied by the Germans from October 20, 1941, to September 8, 1943. A large ghetto was set up and its inhabitants were kept without food or medical aid, with hundreds dying every day. In December *Einzatzcommando* 6 murdered several hundred Jews. In April 1942 the liquidation of the ghetto commenced. The Germans took the Jews to the abandoned Maria mine and threw most of them down the shafts alive. They also used gas vans, throwing the bodies into the mine. Some 15,000 Jews were murdered there. According to the 1959 census, the Jewish population numbered 21,000 (3% of the total). There was a synagogue, a rabbi, and poultry slaughtering until 1959, when the synagogue was closed down during High Holiday services. In 1963 the militia clamped down on *minyanim* and confiscated religious articles, returning only prayer shawls. In 1970 the estimated Jewish population was 40,000. Many immigrated to Israel and the West in the 1990s but Jewish life was revived, with Pinchas Vyshedsky as chief rabbi from 1995 and a full range of religious, educational, and cultural services offered to the community.

DONIGER (O'FLAHERTY), WENDY (1940–), U.S. scholar of the history of religion. Born in New York City, educated at Radcliffe College (B.A., 1962), Harvard (M.A., 1963; Ph.D., 1968) and Oxford (D.Phil., 1973), Doniger taught at Harvard, the School of Oriental and African Studies of the University of London (1968–75), the University of California, Berkeley (1975–77), and the University of Chicago (from 1978), where from 1986 she was Mircea Eliade Distinguished Service Professor of the History of Religions at the Divinity School. She also held an appointment in the Department of South Asian Languages and Civilizations and was a member of the university's Committees on Social Thought and the Ancient Mediterranean World. In addition she was the director of the university's Martin Marty Center.

Doniger's work focuses primarily on the comparative historical study of religious mythology and its social and cultural meanings, with particular reference to gender relations, and on the history and culture of Hinduism, on which she is ac-

knowledged to be among the greatest contemporary authorities. Her most important works include *Women, Androgynes, and Other Mythical Beasts* (1980), *Dreams, Illusions, and Other Realities* (1984), *Tales of Sex and Violence: Folklore, Sacrifice and Danger in the Jaimaniya Brahmana* (1985), *Other People's Myths: The Cave of Echoes* (1988), *The Implied Spider: Politics and Theology in Myth* (1998), *Splitting the Difference: Gender and Myth in Ancient Greece and India* (1999), and *The Bedtrick: Tales of Sex and Masquerade* (2000). She edited a number of important collections, including *Purana Perennis: Reciprocity and Transformation in Hindu and Jaina Texts* (1993), *Off With Her Head! The Denial of Woment's Identity in Myth, Religion, and Culture* (1995, with Howard Eilberg-Schwartz), and *Myth and Method* (1996, with Laurie L. Patton), and also published translations of culturally significant texts, including *The Rig Veda: An Anthology* (1981), the *Oresteia* (1989), and the *Kamasutra* (2002, with Sudhir Kakar), as well as *Mythologies* (1991), a translation of Yves Bonnefoy's landmark *Dictionnaire des Mythologies*.

[Drew Silver (2nd ed.)]

DONIN, HAYIM HALEVY (1928–1983), U.S. Orthodox rabbi and author. Donin was born Herman Dolnansky in New York City, legally changing his name in 1955. He earned his B.A. from Yeshiva University in 1948; his ordination from Yeshiva University in 1951; his M.A. from Columbia University in 1952; and his Ph.D. from Wayne State University in 1966. He served as rabbi of Congregation Kesher Israel in West Chester, Pennsylvania (1951–53), where he was also counselor of the B'nai B'rith Hillel Foundation at West Chester State Teachers College. In 1953, he became rabbi of Congregation B'nai David in Southfield, Michigan, where he remained until he immigrated to Israel in 1973.

Donin was Adjunct Professor of Judaic Studies at the University of Detroit (1969–73) and co-founder (with James Gordon) and first president of Akiva Hebrew Day School (1964), the first modern Orthodox day school in metropolitan Detroit. (Donin had previously started the Hebrew Academy of Oak Park, the forerunner of Yeshivat Akiva.) Donin also served as vice president of the Jewish Community Council of Detroit and chairman of the Board of License for Hebrew teachers in the Detroit area, and was a member of the Michigan Governor's Ethical and Moral Panel (1966–68). In 1961, he participated in the White House Conference on Aging, as Chairman of the Social Actions Commission of the Rabbinical Council of America, on whose National Executive Board he subsequently served (1967–8).

After publishing *Beyond Thyself* (1965), Donin wrote a highly acclaimed series of books on practicing Judaism from the Orthodox perspective: *To Be A Jew*: *A Guide to Jewish Observance in Contemporary Life* (1972); *To Raise a Jewish Child: A Guide for Parents* (1977); and *To Pray as a Jew*: *A Guide to the Prayer Book and Synagogue Service* (1980). Following the success of *To Be a Jew*, which was translated into seven languages, Donin moved to Jerusalem to write full-time, along with lecturing at Bar-Ilan University in Ramat Gan (1974–76). He was also one of the most popular teachers of conversion classes for non-Israelis sponsored jointly by the Rabbinical Council of America and the Chief Rabbinate of Israel. In 1999, Donin, who had already received Yeshiva University's Torah U'Mada Award, was honored posthumously by Yeshiva University with the Dr. Samuel Belkin Award for Excellence in Religion and Religious Education.

[Bezalel Gordon (2nd ed.)]

DONIN, NICHOLAS (13th century), apostate to Christianity; of La Rochelle. A pupil of R. *Jehiel b. Joseph of Paris, whose yeshivah he attended, he was excommunicated by his teacher for his heretical (Karaite?) ideas and repudiation of the Oral Law. Turning apostate and informer, he joined the *Franciscan Order, seeking revenge on his former coreligionists. Along with other converts, Donin compiled a list of 35 accusations against the Talmud – an indictment based on charges that the Talmud teaches that the Oral Law is superior to the Written Law, and that it is full of gross anthropomorphisms, obscenities, and blasphemies against Jesus, Mary, and Christianity. Donin was the main instigator of the famous disputation of Paris (1240), which in reality was a trial of the Talmud, himself appearing as the accuser with four rabbis called to be the defendants. Only two of them were given the opportunity to defend the Talmud: R. Jehiel and R. Judah b. David of Melun. As a result of the disputation the Talmud was condemned to be burned; 24 cart loads of talmudic works were burned in Paris in 1242. Donin was also said to be responsible for the spread of the *blood libel, although this accusation was not raised during the disputation. He is, however, not identical with the convert who instigated massacres of the Jews of *Anjou, *Poitou, and *Brittany in the year 1236. Although Donin continued his anti-Jewish activities for a long period, he was basically a rationalist who never became a good Christian. His name was mentioned in 1287 when he was condemned by the general of the Franciscans for a pamphlet attacking the order, which he wrote in 1279.

[Judah M. Rosenthal]

DONNOLO, SHABBETAI (913–c. 982), Italian physician and writer on medicine. He was born in Oria, Italy. The name Donnolo is Greek in origin but is common among Jews in its Arabic form "Dunash." Such details of his life as are known have come from an autobiographical sketch in the preface to his book *Sefer Ḥakhmoni*, a commentary on the Sefer *Yeẓirah. At the age of 12 he was captured by Saracen raiders, but was ransomed by relatives in Taranto and remained in southern Italy. Donnolo studied medicine under teachers who were acquainted with pharmacy, medicine, astronomy, and astrology.

He was well versed in the Talmud, and some geonic literature, knew Hebrew, Greek, Latin, and colloquial Italian, and acquired, copied and studied Greek and Latin medical manuscripts. He traveled a great deal, presumably visiting Salerno, but it appears that he never left Italy, for no mention of other countries is made in his autobiographical writings. There are erroneous references to Donnolo's having visited Modena in Lombardy, as he practiced as a physician and teacher of medicine in southern Italy only. *Rashi's reference to Donnolo residing in Lombardy is due to the fact that southern Italy was at that time also called Lombardy. In *Sefer ha-Mirkaḥot* ("Book of Remedies") Donnolo mentions the village of Martis near Russano, in Calabria.

In keeping with the practice of medieval Europe, Donnolo was both a pharmacist and a physician. He appears to have been an independent thinker and his works are neither translations nor copies, but the collected experience of 40 years of medical practice. Throughout his commentaries he stressed the importance of Hebrew writings and spread the knowledge of them. Donnolo was acquainted with the writings of *Asaph ha-Rofe. Many common features and identical Hebrew expressions are to be found in the works of the latter and Donnolo's "Book of Remedies." It is uncertain if Donnolo knew Arabic, even though the Saracens were then in Sicily. What is evident is that he was not acquainted with Arab medicine, as there is no reference to it in any of his writings. Donnolo's Hebrew is difficult. His terminology is Greek, Latin, and colloquial Italian. His use of Hebrew terms from the Bible and Talmud is rare and of Arabic rarer still, except when these terms already appear in the Talmud, the geonic writings, or the books of Asaph or else designate commodities imported from Arabia. Donnolo's statement in his commentary on the *Sefer Yeẓirah* that "you can foretell the future of the person from the lines and appearance of his face" indicates that he drew material from the same sources as *Hai Gaon. The parallelism of physiognomies and astrology is based on Donnolo's idea that the human body is an image of the macrocosm. As far as is known, Donnolo was the first person in Christian Europe to write on medicine in Hebrew. Apart from Asaph's book on medicine – which was not written in Europe – the "Book of Remedies" is probably the first Hebrew medical work. It has added importance in that it was probably the first serious medical book written in Italy after the fall of Rome. Donnolo wrote at the crossroads of the Greco-Latin and Arab cultures, and his works show that the Greek medicine of his time had not yet been affected by its Arab counterpart, despite the fact that the Salerno School (founded probably in Donnolo's time) is said to have taught in Hebrew, Latin, and Arabic. Donnolo was not a prolific writer, but the works he left helped to spread the Hebrew language and promote science. His works include the following: *Sefer ha-Mirkaḥot* ("Book of Remedies") – published by Steinschneider in Virchow's Archive in 1867 and republished in a more complete edition by Muntner in Jerusalem in 1950; *Sefer Ḥakhmoni* (1880); *Pizmon* – a ritual poem in primitive verse; *Sefer ha-Mazzalot* ("Book of Constellations") of which only a few sentences have survived; *Antidotarium* (in Ms.). Although his name does not appear on this work, Donnolo himself refers to it in the "Book of Remedies." In his commentary on the *Sefer Yeẓirah* he mentions another book on anatomy and physiology. Although the inscription *Sefer ha-Yakar* ("The Precious Book") appears on the title page of the "Book of Remedies" it would appear that this name was generic and included both the *Antidotarium* and a work on fevers. In any case it is followed by another more practical inscription: "The Book of Drugs, Liquids, Powders, Bandages, Applications and Ointments to rub on the Skin." It includes more than 100 simple remedies and the method of compounding them. The book deals with medical preparations, pharmacy, scents, and the use of honey and wax as auxiliaries and of balsams (resins) as preservative substances. All Donnolo's remedies derive from the vegetable world. The "Book of Remedies" is not, as Steinschneider believed, a fragment, but is both an independent book and at the same time an integral part of his work. The Donnolo Hospital in Jaffa bears his name.

[Suessmann Muntner]

Donnolo's Theology

Though there is no direct evidence that Donnolo knew *Saadiah Gaon's works, there are some close parallels between the theology of Donnolo and that of Saadiah who was his contemporary. Donnolo's theology is expressed in two of the three parts of his *Sefer Ḥakhmoni*, in his treatise on the verse "God created man in His image," and in his interpretation of the *Sefer Yeẓirah*. Donnolo's aim was to remove anthropomorphic elements in the concept of God by reinterpretation of the biblical verses which may give rise to such concepts; the same aim guided Saadiah in his *Emunot ve-De'ot*, though Donnolo's treatment of the subject is less systematic and conclusive. Donnolo, however, made use of his scientific knowledge while interpreting the anthropomorphic elements in the Bible and offering his own conclusions. Donnolo's thesis was that a verse which stresses, or appears to stress, the similarity between God Himself and man in fact refers to the relationship between man and the created world. Thus he introduced into Jewish thought the idea of man's being the microcosm in contrast to the created world, which is the macrocosm. Using all his scientific knowledge, Donnolo tried to prove that everything in man corresponds to some phenomenon in the world. Man's two eyes, for instance, correspond to the sun and the moon, and man's hair to the grass and forests which cover the earth. He gives a detailed study of the functions of the various parts of man's body, and then equates them with the function of the various powers and elements in the world. Man, therefore, was not created in the image of God, but in the image of God's creation.

God, according to Donnolo, cannot be seen, because He has no form. Therefore, some explanation has to be given to the phenomenon of prophecy and the various biblical passages describing the appearance of God to man. Though probably unaware of Saadiah's theology, Donnolo offered the same an-

swer to this question as Saadiah had: God did not appear to the prophets, but His glory (*kavod*) did. Moreover, the *kavod*, according to Donnolo, appeared in various forms to various people, so as to prevent them from believing that God Himself has a human form. Donnolo attempted to give a scientific explanation of the creation of the world in the course of his interpretation of *Sefer Yeẓirah*, one of the earliest interpretations of this work. Subsequent interpreters, mainly the *Ḥasidei Ashkenaz, but to some extent the kabbalists as well, used Donnolo's views while constructing their own concept of the process of creation.

DONSKOY, MARK SEMENOVICH (1901–1981), Soviet film director. Born in Odessa, he began working in films in 1926. Most of his films were made from his own scenarios. He became famous with *Pesnya o schast'e* ("Song of Happiness," 1934). His trilogy based on Maxim Gorky's autobiographical accounts: *Detstvo Gor'kogo* ("Gorky's Childhood," 1938), *Vlyudjakh* ("Among People," 1939), and *Moi universitety* ("My Universities," 1940) are distinguished by the vividness and precision of the depiction of Russian provincial life at the end of the 19th century and by the psychological acuteness of his presentation of character. The direct and candid depiction of suffering in the partisan movement in the Ukraine as seen in *Raduga* ("Rainbow," 1944) and *Nepokorennye* ("The Undefeated," 1945; according to B. Gorbatov's novella) made a strong impression and influenced the masters of the Italian neo-realistic cinema. In the second of these two films there is a particularly striking episode depicting the mass execution of Jews in a Nazi-occupied city. *Sel'skaya uchitel'nitsa* ("The Village School Mistress," 1947) enjoyed considerable popularity. Later films included one about Lenin's mother and screen versions of Gorky's novels *Mat'* ("The Mother," 1956) and *Foma Gordeev* ("Foma Gordeev," 1959).

Donskoy was awarded three Stalin Prizes and one State Prize, and the honorary titles of Peoples' Artist of the U.S.S.R. (1956) and Hero of Socialist Labor (1971).

[*The Shorter Jewish Encylopaedia* in Russian]

DON-YAḤIA (Donchin), YEHUDAH LEIB (1869–1941), rabbi, one of the earliest religious Zionists, a founder of the *Mizrachi movement. Don-Yaḥia was born in Drissa, Belorussia, and from 1902 was rabbi to various Russian communities. He began his Zionist activity while still a yeshivah student and in 1902 was one of the four rabbis who founded the Mizrachi movement. In 1901 he published *Ha-Ẓiyyonut mi-Nekuddat Hashkafat ha-Dat* ("Zionism from the Religious Point of View"), which ran into several editions. In it Don-Yaḥia attempted to prove to Orthodox circles that political Zionism and settlement in Ereẓ Israel were religious duties. He remained a Zionist even under the Soviet regime and settled in Tel Aviv in 1936. His responsa on matters of *halakhah*, sermons, and articles on topical subjects are collected in *Bikkurei Yehudah*, 2 vols. (1930–39).

His cousin SHABBETAI DON-YAḤIA (1909–1981) settled in Palestine in 1931 and became active in Ha-Po'el ha-Mizrachi. When the daily *Ha-Ẓofeh* was founded, he joined the staff as a columnist, becoming its editor in 1948.

DOOR AND DOORPOST. The Bible distinguishes between the term *petaḥ*, which is the entrance to a house (Gen. 43:19), and *delet*, which is a device for closing and opening the entrance. Thus, while *petaḥ* applies to both the entrance to a tent (Gen. 18:1) and a house, the term *delet* is used only in connection with a built house. The door has two main components: a fixed frame and a moving board or slab. The frame has two doorposts (Heb. *mezuzot*), which are its vertical sides; a lintel (Heb. *mashqof*), its upper horizontal side; and a sill or threshold (Heb. *saf*), its lower horizontal side. Wider doorways occasionally had a third vertical beam on which two doorleaves, as implied by the dual form of the word *delata'im* ("paired doors"; Isa. 45:1), one attached to each of the doorposts, converged when shut. The doorway was constructed as part of the wall in question, but the doorposts, lintel, and threshold were built in after the construction of the building was completed. Finally, the door itself was set into this framework. At the top and bottom of each doorleaf was added a projecting hinge of wood, metal, or other material, to be received within depressions in the lintel and threshold respectively (cf. I Kings 7:50). Doors generally opened inward; they were prevented from swinging outward by ledges, stops at the outer edges of the lintel, and the threshold. Other methods of placing hinges were to suspend the door on some pliable material, such as leather or rope – these were fixed between the door and the doorpost at two points and served as hinges to enable the movement of the doors back and forth – or sometimes to put up special metal hinges that joined the door to the doorpost. A number of excavations have revealed the remains of metal coverings on hinges and sockets that served to protect them from wear. Excavations in Palestine have frequently uncovered sockets carved into the lintel and the threshold.

The threshold was of stone, either cut to size and laid slightly higher than the floor or built up from smaller stones. It was built slightly higher than the level of the floor and the

street in order to keep out water and dirt. Doorposts were made either of wood or stone. The term *'ammot* in Isaiah 6:4 probably refers to stone doorposts standing at both ends of the threshold. Doorposts made of wood are implied by the law about the Hebrew slave (Ex. 21:6; Deut. 15:17), according to which a Hebrew slave who, when the time of his release arrived, preferred slavery to freedom was to be placed against a doorpost and have his earlobe and the doorpost pierced with an awl as a symbol of his enslavement for life. Similarly, the lintel might be made either of stone or wood and was placed horizontally across the doorposts. The size of a doorway was related to the size of the building. Doorways to private dwellings from the Israelite period preserved in the Negev were lower than man's height, while the entrances to large buildings, such as palaces and temples, were proportionately higher and wider. Very large doors were erected at the gates of fortified cities (Judg. 16:3). The doors of luxurious buildings were made of special, expensive wood (I Kings 6:31, 34) or were overlaid with metal, usually copper, or even gold, like the doors of the Temple. Descriptions from various places on cylinder seals or monuments show single or double doors set within a decorative framework (Frankfurt, *The Art and Architecture…* (1954), Fig. 83). An integral part of the door was its bar or bolt, a device used to lock the door from the inside or the outside. The bar consisted of a movable horizontal beam which, when slid into a slot in the doorpost, prevented the door from opening. The lock was somewhat more complex and could be operated for locking or unlocking from the outside (II Sam. 13:17, 18). Another way to lock the door from inside was to put an iron bar on the inner side in a fitting depression. It seems that the Hebrew term for it is *bari'aḥ* (cf. I Sam. 23:7). In the ancient world doorposts were marked in order to protect the people within the house from evil spirits and devils. That practice is reflected in Exodus 12:7, 22–23.

[Zeʾev Yeivin]

DOR (**Dora**; Heb. דּאֹר, דּוֹר, דֹּר), ancient harbor town on the coast of Carmel, 18 miles (29 km.) south of Haifa. The earliest known appearance of the name of Dor is from an Egyptian inscription from Nubia, dated to the time of Rameses II (13th century B.C.E.). According to Egyptian documents Dor fell into the hands of the Sikila/Tjekker, one of the Sea Peoples (Philistines), in the 12th/11th centuries B.C.E. Dor was one of the important Canaanite city-states in the league of Jabin, King of *Hazor (Josh. 11:2). It was among the cities of Manasseh in the territory of Asher, but according to Judges (1:27) it was not conquered by them. Solomon appointed the son of Abinadab as overseer of the region of Dor – the fourth district of his kingdom (I Kgs. 4:11). Under the name of Du'ru it belonged to the Assyrian province of the same name following the conquest of the region by Tiglath Pileser III in 732 B.C.E. In the Persian period (6th–4th centuries B.C.E.), when the cities on the coast were granted autonomy, Dor became a Sidonian colony. In the early Hellenistic period it was a Ptolemaic royal fortress. At the end of the second century B.C.E., Dora was in the hands of the tyrant Zoilus, who also ruled Strato's Tower (*Caesarea). Alexander Jannaeus acquired both cities by negotiation in the late second century B.C.E. After conquering the country (63 B.C.E.), Pompey restored Dora to its former owners, as was his policy with all cities that had formerly been autonomous. The city retained its freedom during the reign of Herod and his successors. According to Josephus (Ant. 19:300) a synagogue existed there before the destruction of the Second Temple. A change in status came about early in the second century C.E., when it was annexed to the province of *Phoenicia. In the late Roman period it became part of Palaestina Prima. Eusebius (*Onom*. 78:9; 136:16) states that the site is located 9 Roman miles from Caesarea. A fortified tower (*Merle*) was built on the southwestern edge of the mound in the Crusader period.

The site consists of a mound and a lower area used for occupation to the east, i.e. the upper and lower cities. Excavations were first undertaken in the mound in 1923 and 1924 by John Garstang on behalf of the British School of Archaeology in Jerusalem. Two test trenches were sunk on the northern and southern slopes, and a substantial area along the western slope in the area of the monumental temples with their impressive *podia* was cleared. Recent work has shown that these temples are undeniably Roman and apparently do not date back to the Hellenistic period as was once believed. Excavations on the tell were conducted by Ephraim Stern between 1980 and 2000 (current directors are Ilan Sharon and Ayelet Gilboa) and substantial structural remains from the Iron Age, Hellenistic, and Roman periods have been found. Excavations were first conducted in the lower city by J. Leibovitch in 1950–52, uncovering parts of a Roman theater and a Byzantine church, at the northern and southern ends of the city. The excavation of the Byzantine Church was resumed by Claudine Dauphin in 1979 and completed in 1994. A general survey of harbor installations along the edges of the tell and along the bays to the north and south has been undertaken by Avner Raban and others since the 1980s. Shipwrecks and other underwater features have been investigated by Raban, S. Wachsman, K. Raveh, and S. Kingsley. A survey of the aqueducts leading water to the site was made by Yuval Peleg. Regional surveys were conducted by Y. Olami, A. Siegelmann, A. Ovadiah, and others. A project of landscape archaeology was undertaken by Shimon Gibson and Sean Kingsley in 1994 with the investigation of settlements and fields, dating from the Chalcolithic, Early Bronze I, Middle Bronze Age IIA, Iron Age, Hellenistic, Roman, Byzantine, and medieval to Ottoman periods.

Several areas of the large 30-acre mound were examined during the excavations by Stern, and more recently by Sharon and Gilboa. In the upper level are remains of the Roman period. Below these lie the remains of a city wall of the Hellenistic period, which was apparently built in the latter part

of the reign of Ptolemy II Philadelphus, and was still in use in the early Roman period. The wall, built of large ashlars, is still standing to a height of 7 feet, and it has a tower with a projection of 45 feet. It is built over the remains of a city wall of the Persian period, which is composed of large uncut stones and encloses a somewhat larger city. Beneath the Persian wall were sections of a brick Israelite city wall, at least 8 feet wide. Buildings remains were found within the wall. Whereas the buildings of the Persian and early Hellenistic period followed the Phoenician method of ashlar pillars alternating with a fill of undressed stones, the later Hellenistic walls were built of headers only. A dyeing installation of the Hellenistic period yielded large quantities of *murex* shells. Another monumental building of the Hellenistic period contained several plastered pools. The sections of the Hellenistic city examined revealed that it had been laid out according to the Hippodamian principles of town-planning, consisting of parallel intersecting streets, which formed a checkerboard pattern. Surprisingly, however, at Dor this method of town planning is dated to the Persian period. In the interior, adjacent to the wall, were shops opening onto a street. Little has remained of the underlying Persian level, except for pottery found in pits sunk into late Israelite levels. Inside the city were uncovered channels of an elaborate sewage system and of an aqueduct. From the city gate, a 30-foot-wide street led into the city, into an area which contained workshops of the Byzantine period. The gate of the Roman period has not been preserved. In deeper levels the gates of the Hellenistic and Persian periods were found, and beneath them an Israelite city gate, made of cyclopean boulders brought from Mt. *Carmel. In plan this gate resembles the gate of *Meggido IV-A. It consists of two guardrooms with paved squares at the front and back of the gate. Beneath this gate was a very solid gate of the four-chamber type, which is a unique example of Phoenician-Iron Age construction methods. One pilaster of the gate, facing the town, was made of polished orthostats. This gate is dated to the 9th–8th centuries B.C.E. and its destruction is ascribed to the Assyrians in 734 B.C.E. A massive fortification wall built of mud-brick along the eastern edge of the mound dates to the Early Iron Age (1150–1050 B.C.E.). These are associated with the Sikila/Tjekker settlement at the site. Only pottery and small finds are known from the Late Bronze Age. Several walls were dated to the 11th century B.C.E. The earliest remains of occupation at the site are buildings along the western edge of the site dating from the Middle Bronze IIA period.

The Byzantine-period town was apparently situated almost entirely in the area of the lower city immediately to the east of the mound that was no longer used for habitation purposes. The outline of the city is clearly visible in aerial photographs. Textual sources indicate that Dora was the seat of a bishop. The excavations by Dauphin have brought to light an episcopal basilica that was a center of pilgrimage and healing at the tomb of two saints and was erected in the fourth century over the ruins of a Graeco-Roman sanctuary.

[Shimon Gibson (2nd ed.)]

Modern Period

Modern Dor is a moshav, affiliated with Tenu'at ha-Moshavim, founded in 1949 by immigrants from Greece, some of whom had been stevedores in Salonika. These were joined by settlers from Iraq, Morocco, and other countries. Fishing, initially envisaged as a mainstay of the moshav's economy, was replaced by intensive farming and livestock as principal farm branches. A large plot of land was acquired at the site of the nearby Arab village Ṭanṭura (abandoned since 1948) by Baron Edmond de *Rothschild, who erected a glass factory in 1891 intended to exploit the fine shore sand for the production of bottles for the wine of Rishon le-Zion and Zikhron Ya'akov. The enterprise was unsuccessful. Dor was a partner with neighboring Kibbutz Naḥsholim in the Ḥof Dor recreation home. In 2002 its population was 321.

DOR, MOSHE (1932–), Hebrew poet, essayist, and translator. Dor was born in Tel Aviv, served in the Haganah, and was a correspondent for the army weekly *Bamaḥaneh*. He later studied political science and history at Tel Aviv University and served many years as literary editor of *Maariv*. Dor was also cultural attaché at the Embassy of Israel in London and Distinguished Writer in Residence at the American University in Washington, D.C. A seminal figure in the "*Likrat*" literary circle in the 1950s, which strove to renew Hebrew poetry and free it from poetic verbosity and pathos, Dor published *Bisheloshah* in 1952 and the collection *Beroshim Levanim* ("White Cypresses") in 1954. This was followed by over a dozen other collections (including *Zahav va-Efer* ("Gold and Ashes," 1963), *Mivḥar Shirim* ("Selected Poems," 1970), *Ovrim et ha-Nahar* ("Crossing the River," 1989), and *Shetikat ha-Banai* ("Silence of the Builder," 1996)). In 2004 a volume of selected poems written over a period of 50 years appeared as *Shetaḥ Hefker*. Foregrounding the landscape, whether in Israel, London, or the United States, Dor coalesces feelings and sights, human experience and impressions. Dor has also published collec-

tions of essays and six books for children. Since the 1990s he has been living in Tel Aviv and in the U.S. Dor edited a number of collections in English, including: *The Burning Bush: Poems from Modern Israel* (with Nathan Zach; 1977), *The Stones Remember: Native Israeli Poetry* (with Barbara Goldberg and Giora Leshem; 1991), and *After the First Rain: Israeli Poems on War and Peace* (with Barbara Goldberg; 1998). A number of collections including Dor's own poetry have been published in English: *Maps of Time* (1978), *Crossing the River* (edited by Seymour Mayne; 1989), *Khamsin: Memoirs and Poetry by a Native Israeli* (1994).

[Anat Feinberg (2nd ed.)]

DORATI, ANTAL (1906–1988), conductor and composer. Dorati was born in Budapest and entered the Budapest Royal Academy of Music at the age of 14, studying piano, conducting, and composition, and graduating at the age of 18. From 1924 to 1928 he was conductor at the Budapest Royal Opera House, subsequently becoming assistant to Fritz Busch at the Dresden State Opera, and at the same time conducting opera and concerts in other cities. In 1932 he became musical director of the Ballet Russe de Monte Carlo, with whom he toured widely and remained until 1940. Dorati's subsequent career focused principally on the United States: he was conductor of the Dallas Symphony Orchestra (1945–49) and of the Minneapolis Symphony Orchestra (1949–60), with whom he made many records. He was chief conductor of the BBC Symphony Orchestra from 1962 to 1966; and thereafter became musical director of the Stockholm Philharmonic Orchestra (from 1966) and later, concurrently, of the National Symphony Orchestra, Washington, D.C. (from 1969), with whom he had made his American debut, in 1937. Dorati's fine international reputation was based on his prowess as an orchestra builder; as a devoted advocate of contemporary music, with particular understanding of Bartok and Stravinsky; and as a conductor of many fine recordings. In 1973 he completed the formidable task of recording all the 107 Haydn symphonies, most of them for the first time. His many compositions include symphonies, a cello concerto, and choral and chamber music; he also made many ballet arrangements.

[Max Loppert (2nd ed.)]

DORFF, ELLIOT N. (1943–), U.S. rabbinical scholar. Born in Milwaukee, Wisc., Dorff was ordained by the Jewish Theological Seminary in 1970 and awarded a Ph.D. in philosophy by Columbia University in 1971. He then joined the faculty of the University of Judaism in Los Angeles. He later served as rector and distinguished professor of philosophy at the University and as a visiting professor at the UCLA School of Law.

The author of 10 books and over 150 articles on Jewish thought, law and ethics, Dorff assumed a leadership role in the community as well, serving as vice chair of the Conservative Movement's Committee on Jewish Law and Standards, co-editor of the halakhic commentary in *Etz Hayim*, the movement's edition of the Pentateuch, and president of the Society of Jewish Ethics and chair of the Academy of Jewish Philosophy and of the Jewish Law Association.

He was also deeply involved in public service. In the spring of 1993, he served on the Ethics Committee of then First Lady Hillary Rodham Clinton's Health Care Task Force. In 1999 and 2000 he was part of the U.S. Surgeon General's Commission to draft a Call to Action for Responsible Sexual Behavior; and from 2000 to 2002 he served on the National Human Resources Protections Advisory Commission, charged with reviewing and revising the federal guidelines for protecting human subjects in research projects.

In *Jewish Law and Modern Ideology* (1970), Dorff delineates the different approaches of the various Jewish religious movements to Jewish law and argues for the authenticity of the one adopted by the Conservative Movement. While he affirms his commitment to uphold the traditional *halakhah,* he also supports the right to adjust it to meet radically altered conditions of living and even to change it in keeping with new moral sensibilities.

Dorff's most extensive work on Jewish law is *A Living Tree* (1988), co-written with Arthur Rosett, which traces the development of Jewish law through the past three thousand years, paying special attention to the rabbinic and medieval periods. It explains the relationship between religion and law and the interaction of the latter with morality.

Dorff's stress on the importance of law is also evident in his most speculative work, *Knowing God* (1994). Acknowledging that, as a pluralist, he accepts the relativity of all truth claims, he nonetheless believes that there is an "objective reality" that serves as the ultimate criterion for the truth of any system of ideas. However, this reality can only be known by us through "the perspective of a perceiving community," which depends for its existence on a system of law to define its principles and concretize them. Since "it is the Jewish community of the past and the present that decides (for Jews) which events are revelatory and what … the implications of that revelation are," the most direct way to experience revelation is through the study of the classic Jewish religious texts.

Dorff has written three popular works *Matters of Life and Death* (1998), which deals with medical ethics; *To Do the Right and the Good* (2002) on Jewish social ethics; and *Love Your Neighbor and Yourself* (2003), devoted to personal ethics. His knowledge of the moral issues faced by current medical practitioners is impressive, as is his willingness to address controversial questions raised by infertility and death and dying.

While being quite traditional in his personal practice, giving the longstanding *halakhah* "the benefit of the doubt," he tends to be more liberal in his rulings on issues of gender equality and homosexuality, for example. His general view

is that the *halakhah* embodies the highest moral standards. When he feels that it does not, he is prepared to modify it, though he exercises great care to maintain the integrity of the structure of Jewish law. In this, as in all his teaching, he demonstrates the Conservative Jewish regard for the law and the role it must play in keeping the Jewish community loyal to the covenant of Israel.

[David L. Lieber (2nd ed.)]

DORFMAN, JOSEPH (1904–1991), U.S. economist. Born in Russia and educated in the United States, Dorfman worked with the National Industrial Conference Board and joined the faculty at Columbia University in 1931. Economic methodology and history of economic thought were his main fields of study. His major publications included a five-volume work, *The Economic Mind in American Civilization* (1946–59); other studies deal with the economics of the Jacksonian era and the thought of Thorstein Veblen, the American social scientist. He also wrote *Thorstein Veblen and His America* (1934); *Early American Policy: Six Columbia Contributors* (1960); and *Institutional Economics: Veblen, Commons, and Mitchell Reconsidered* (1963). Dorfman was a distinguished fellow of the History of Economics Society. In 1990 the HES established an annual prize for the best dissertation in the history of economic thought. In 1992 the Dorfman family endowed a permanent fund for the award, which is now called the Joseph Dorfman Best Dissertation Award.

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

DORFMAN, JOSEPH (1940–), Israeli composer. Born in Odessa, Ukraine, Dorfman studied at the Stolyarsky School of Music (Odessa) and later at the Odessa Conservatory (1958–65) with Starkowa (piano) and Kogan (composition). In 1971 he received his Ph.D. in musicology at the Gnessin Musical Institute in Moscow. Already as a student he was engaged in a wide range of musical activities as a composer, lecturer, theoretician, coach, and conductor. During the 1960s, Dorfman was among the pioneers in performing and lecturing on contemporary Western music in the Soviet Union. A consistent field of interest was also Jewish music in all its aspects (art, liturgical, and folk). In 1973 he immigrated to Israel, where he was appointed professor of composition and theory at the Rubin Academy of Music (Tel Aviv University). There he also served as head of the Composition and Theory Department and head of the Academy. While continuing to promote both Jewish and contemporary Western music, he was artistic director of the International Festivals of Jewish Art Music and music director of the concert series "20th Century Music." Dorfman was also visiting professor at Columbia University, at the Hochschule fuer Musik und Darstellende Kunst in Frankfurt am Main, and at Johannes Gutenberg University, Mainz (Germany), as well as at Bar-Ilan University.

His early compositions of the Soviet period were influenced by early 20th century Russian music and by Hindemith. Later he moved in many directions, including recorded and live electro-acoustic improvisation, graphic notation, and various combinations of graphic and traditional forms of notation. His works include music for solo instruments, chamber ensembles and symphony orchestra, opera, ballet and oratorios, multimedia staging, and educational works. Dorfman was a prolific musician, performing as a solo pianist, a participant in various chamber groups, and conductor of concerts in several European festivals and radio programs.

DORFMAN, RALPH ISADORE (1911–1985), U.S. biochemist. Dorfman was born in Chicago. He joined the Worcester Foundation for Experimental Biology and became research professor of biochemistry, Boston University, in 1951. He was professor of chemistry at Clark University (1956), and later director of the Institute of Hormone Biology of Syntex Research Center in Palo Alto, California (1964). His books include *Metabolism of Steroid Hormones* (with F. Ungar, 1953) and *Androgens* (1956); he edited *Methods in Hormone Research* (5 vols., 1962–66).

[Bracha Rager (2nd ed.)]

DORI (**Dostrovsky**), **YA'AKOV** (1899–1973), military leader; first Israeli chief of staff. Dori, born in Odessa, Russia, was taken to Erez̲ Israel in 1906. After graduating from the Reali High School in Haifa, he served as a sergeant in the Palestinian Battalion of the Jewish Legion in World War I. When the Legion was disbanded, Dori joined the group of sergeants and soldiers who intended to form the nucleus for a Jewish unit within the Palestine Defense Force. The plan was canceled by the British authorities when this group of soldiers went to the defense of Tel Aviv in May 1921 during an attack by Arab rioters. Dori studied engineering in Belgium, and upon his return to Palestine joined the Haganah. From 1931 to 1939 he was Haganah commander of the Haifa district. Enhancing his military knowledge through self-education, Dori introduced systematic exercises and training in the Haifa branch of the Haganah, and formulated a plan for the defense of the town. He also participated in the training of commanders in nationwide courses. He was named head of the national command training bureau (Lishkat ha-Hadrakhah) upon its establishment. In September 1939 he became the first chief of staff of the Haganah, a post he held until the establishment of the State of Israel in 1948 (with an interval during 1945–47 to raise funds in the U.S. for the purchase of arms for the Haganah). With the establishment of Israel, Dori became the chief of staff of the Israel Defense Forces with the rank of *rav-alluf* (major general), a post he held until the end of the War of Independence. He served as president of the Haifa Technion from 1951 to 1965, contributing to its expansion and development as a center for technological and scientific training in Israel.

[Yehuda Slutsky]

DORIAN, DOREL (**Iancovici**; 1930–), Romanian writer. Dorian was born in Piatra-Neamt. Upon completion of secondary school he studied building engineering at the Politechnical Institute, Kiev, 1948–53. As a student he had begun to make literary contributions to *Revista elevilor* (1946) and to Communist youth journals, among them *Tanarul Muncitor* and *Scanteia Tineretului.* Upon his return to Romania he worked as a building engineer for several years until he became the editor of popular science publications, among them *Stiinta si tehnica*. In 1955 he published a volume of stories, *Nau inflorit inca merii* ("The Apple Trees Haven't Blossomed Yet"). In 1959, his first play, *Daca vei fi intrebat* ("If You Are Asked") was performed at the Bucharest Municipal Theater and his play *Secunda 58* ("The 58th Second") earned him a state prize. By 1985, ten of his plays had been performed in Romanian theaters and on TV, among them: *De n-ar fi iubirile* ("If There Was No Love," 1961); *Oricat ar parea de ciudat* ("As Strange as It Seems," 1965), judged the best of the year; *Teatru cu bile* ("Theater with Balls," 1970); and *Confesiune tarzie* ("Late Confession," 1985). His plays deal with problems of conscience under the Communist regime. Dorian also published science fiction and ecological and parapsychological essays, such as *Paranormal 2000* (1998). In the 1980s he became active in Jewish communal life. In 1996 he became the main editor of the bimonthly *Realitatea Evreiasca* and in 1997 editor of the series of cultural pamphlets published by the same review. He also published a play on a Jewish subject, *Foc in Calea Vacaresti* ("Fire on Vacareshty Street," 1999). From 1996 to 2004 he was a member of the Romanian Parliament as the representative of the Jewish minority.

[Lucian-Zeev Herscovici (2nd ed.)]

DORIAN, EMIL (1892–1956), Romanian poet and novelist. Born in Bucharest, Dorian practiced medicine there but devoted much of his time to writing. His works, published under such satirical pseudonyms as Michail Prunk and Dr. Knock, appeared in several important literary journals. Dorian's verse was later collected in *Cîntece pentru Lelioara* ("Songs for Lelioara," 1923), *In preajma serii* ("In the Twilight," 1924), and *De vorbă cu bălanul meu* ("A Talk with My White Horse," 1925). These poems, praised by the critics, display a serenity and love for mankind that later found expression in the novel *Vagabonzii* ("The Vagabonds," 1934). The leftist pacifism of this work provoked some hostile comment: the Romanian literary historian George Călinescu pointedly observed that only a Jew devoid of national feelings could so ruthlessly condemn a people's struggle. Other novels by Dorian were *Profeți și paiațe* ("Prophets and Clowns," 1933[2]) and *Otrava* ("Poison," 1946), the latter dealing with the anti-Jewish persecution under Antonescu's pro-Nazi regime. *Otrava* stressed the permanence of antisemitism and its persistence in all strata of society – including the proletariat. For this deviation Dorian's works were banned by the Communists and the writer was thereafter only allowed to publish poems and stories for children. He also translated Heine's *Buch der Lieder* and Eliezer Steinbarg's Yiddish fables.

[Abraham Feller]

DORIS (first century B.C.E.), first wife of *Herod the Great, whom he married (c. 47 B.C.E.) before he became king and while he was *strategos* of Galilee (Jos., Wars, 1:241, 432f., 448, 562, 590; Jos., Ant., 14:300; 17:68). The name Doris is Greek but was similar to Dorothea. Josephus refers to her as a Jerusalemite: "her family (γένος) being from Jerusalem" (War 1:432). Her precise background is unknown, but it is assumed she was Idumaean in origin and of Hellenized stock. On ascending the throne in 37 B.C.E. Herod dismissed her in order to marry the Hasmonean princess *Mariamne. Doris was now banished from the city together with her son Antipater II. Later Antipater was allowed back (c. 14 B.C.E.). Doris too was recalled and honored at the court, only to be dismissed again (c. 7/6 B.C.E.) with the discovery of her son's disloyalty and plotting against the king: "… he [Herod] stripped her of all the finery which he had bestowed upon her and for the second time dismissed her from court" (Wars 1: 590). She seems to have been as unscrupulous as her son, with whom she cooperated in all his crimes against the sons of Mariamne and against Herod himself.

[Isaiah Gafni / Shimon Gibson (2nd ed.)]

DORMIDO, DAVID ABRABANEL (d. 1667), a founder of the modern English-Jewish community. Born in Spain of a Marrano family, as Manuel Martinez Dormido, he collected taxes in Andalusia and was a city councilor until arrested by the Inquisition in 1627. After appearing as a penitent in an auto-da-fé in 1632, he escaped to Bordeaux and in 1640 reached Amsterdam where he joined the Jewish community. Financially ruined by the Portuguese reconquest of Brazil he later accompanied Samuel Soeiro, son of *Manasseh Ben Israel, in 1654 to London where he petitioned Oliver Cromwell to assist him in recuperating his fortune and to readmit the Jews into England. Cromwell complied with the first request and apparently expressed sympathy with the second. Under the name David Abrabanel, Dormido signed the petition of the London Marranos for freedom of worship in 1656. When the Jewish community was formally organized in 1663 he was presiding warden. His son SOLOMON (ANTONIO) DORMIDO (1622–1700) was the first Jew to be admitted formally to the Royal Exchange in London. The statement that Dormido was Manasseh Ben Israel's brother-in-law has no authority.

[Cecil Roth]

DOROHOI, town in N.E. Romania, located on important trade routes between Poland, Bukovina, and Moldavia. Jews began to settle there in the 17th century. They were granted charters of privilege in 1799, 1808, and 1823. The Dorohoi community was organized, like other communities in Moldavia, as a *Breasla Jidovilor* ("Jewish guild"), first mentioned there in 1799 and existing until 1834. There were 600 Jewish families in Dorohoi in 1803, 3,031 persons in 1859 (50.1% of the total population), 6,804 in 1899 (53.6%), and 5,820 (36.6%) in 1930. The town was also a ḥasidic center, where *admorim* sometimes lived, among them Jehiel Michael Tierer and Hanoch Frenkel who died in Haifa. Among the town's rabbis were Mattitiyahu Kalman (d. 1824); Ḥayyim *Taubes (1847–1909) after serving in Sassov, Galicia, author of Torah commentaries and responsa; Dov Beer Drimer; and Pinhas Eliyahu Wasserman (1917–1996), who died in Jerusalem. Before the Holocaust 25 synagogues functioned in Dorohoi. A regular modern communal organization was set up in 1896. The community had a *talmud torah* and a secular Jewish school by 1895. A large number of refugees from persecutions in the vicinity arrived in Dorohoi in 1881–4. The community also suffered severely during the peasant revolt in 1907. The Jews were persecuted by the military authorities during World War I and suffered from economic restrictions between the two world wars. The Jews in Dorohoi were mainly occupied as artisans, manual workers, and petty shopkeepers. In 1920 the community established a hospital. Ḥovevei Zion groups became active in the last decades of the 19th century. Later various Zionist and other Jewish organizations also became active. Among the intellectuals born in Dorohoi were Romanian-language writers on general and Jewish themes, such as Ion Călugăru (1902–1956), Saşa Pană (1902–1979), and Ştefan Antim (1879–1944). Jewish periodicals in Yiddish and Romanian were also published there.

[Yehouda Marton / Lucian-Zeev Herscovici (2nd ed.)]

Holocaust Period

In 1941 there were 5,384 Jews living in Dorohoi, comprising about one third of the population. Antisemitic outbursts began in June 1940, when nearby Bessarabia and northern Bukovina were occupied by the Soviet Union. Romanian soldiers attacked the Jewish quarter, murdered about 200 Jewish inhabitants, and looted houses. The following day local peasants stripped the Jewish corpses that were still lying in the streets. The victims' families were forced to sign statements to the effect that their relatives had been murdered by "unknown wayfarers"; the public prosecutor, however, came to the conclusion that the soldiers had acted on instructions. The terror was renewed when Ion *Antonescu rose to power (September 1940), and many Jews were barred from commerce and the trades.

After the war with the Soviet Union broke out, 2,000 Jewish men from the towns and villages in the district were brought to the city and deported to *Transnistria on Nov. 7, 1941. Dorohoi's Jews were deported on November 12, and by November 14 two transports totaling 3,000 persons were dispatched. Many died in the sealed railroad cars before they reached their destination, *Ataki on the Dniester. Deportations were resumed on June 14, 1942, when 450 men were sent to Transnistria. They were later joined by their families in Mogilev and were sent from there to German camps on the banks of the Bug, where most of them met their deaths. In Dorohoi itself, only 2,000 Jews were left and they were forbidden to engage in any economic activity. In January 1943 the Antonescu government acceded to the request of the Dorohoi community and the leaders of the Association of Romanian Jewish Communities in *Bucharest to permit the return of the deportees; but it took until December 20 for this decision to go into effect. Of the 3,074 who had been deported, 2,000 came back to Dorohoi. In addition, 4,000 Jews from Transnistria who were not permitted to return to their original homes in the district also stayed in Dorohoi. In April 1944, the Soviet army occupied the city.

[Theodor Lavi]

Contemporary Period

After World War II the Jewish population of Dorohoi increased because of the refugees who settled there. In 1947, 7,600 Jews lived there. Community life was rebuilt. Jewish schools (including a secondary school) functioned until 1948. Later, Yiddish was taught in some public schools. In 1967 a kosher restaurant was opened and functioned until 1990. Dorohoi was presented as a model of the Jewish *shtetl* in Romania, with delegations of foreign Jewish organizations brought there to visit. In order to maintain this illusion Rabbi Pinhas Eliyahu Wasserman, the last rabbi of the community, was forced to remain in Dorohoi for some 20 years, even though the Jewish population had diminished through emigration, mainly to Israel. In 1956 there were 2,753 Jews in Dorohoi; in 1966, 1,013. In 2000, only 49 Jews remained in Dorohoi, with a functioning synagogue. An organization of Israeli Jews originating in Dorohoi is based in Kiryat Bialik, Israel. A forest dedicated to the memory of the Jews of the town and former county of Dorohoi is located at Shoresh, near Jerusalem, where annual memorial ceremonies are held.

DORON, ABRAHAM (1929–), Israeli social worker specializing in the welfare state and social security system and considered the leading Israeli scholar in these fields. Doron was born in Radom, Poland, and immigrated to Israel in 1946. In 1951 he received his B.A. degree in social work and in 1954 completed his B.A. studies in history and sociology at the Hebrew University of Jerusalem. In 1961 he received his M.A. from the University of Chicago and in 1967 he received his Ph.D. at the London School of Economics and Political Science. From 1963 he taught at the Paul Baerwald School of Social Work of the Hebrew University. In 1979–81 he was head of the school. Doron served on various government planning committees and wrote numerous articles and books, including *The Welfare State in an Age of Change* (1985), *The Welfare State in Israel* (with Kremer, 1992), *For Universality – The Challenges of the Social Policy in Israel* (1992), and *The Work and Welfare Ministry – The Reunion which Never Existed* (1995). In 2004 he was awarded Israel Prize in social work.

[Shaked Gilboa (2nd ed.)]

DORON, HAIM (1928–), Israeli physician. Born in Buenos Aires, Argentina, he immigrated to Israel in 1953. He received his M.D. from the School of Medicine of the Buenos Aires University (1952) and M.P.H. from Public Health School, London School of Tropical Medicine and Hygiene, University of London, in 1961. From 1953 to 1960, he was a family physician in Beersheba and Negev settlement clinics, and from 1961 to 1968, medical director of the Sick Fund (Kuppat Ḥolim Kelalit), Negev District, and the Negev Central Hospital, Beer-Sheba. During those years of mass immigration he organized community health services in the Negev region and promoted the *aliyah* of physicians from Latin American and other countries. He was co-founder of the Ben-Gurion University of the Negev and, in partnership with Moshe *Prywes, of its medical school. From 1968 to 1976 he was head of the Medical Division, Kuppat Ḥolim Kelalit, and deputy chairman. During these years he initiated the reorganization of Kuppat Ḥolim Kelalit health services, developed regionalization and integration of hospital and community services, developed the physician/nurse team in primary care, and introduced social work service within the framework of the health community structure. He was appointed professor of Community Medicine at Tel Aviv University and Ben-Gurion University of the Negev. From 1989 to 1996 he headed the School of Health Professions, Sackler Faculty of Medicine, Tel Aviv University. Doron contributed to the social and cultural process in Beer-Sheba and the Negev during the years of mass immigration and the renaissance of family medicine in Israel.

[Bracha Rager (2nd ed.)]

DOROT (Heb. דּוֹרוֹת), kibbutz in southern Israel, 10½ mi. (17 km.) E. of Gaza, affiliated with Iḥud ha-Kibbutzim, founded in 1941 by immigrants from Germany in a move to spread Jewish settlement southward toward the Negev at a time when the Nazi armies were advancing on Egypt. In 1946 the kibbutz was severely damaged during a search for illicit arms by the British. Thorough soil reclamation work was necessary before farming became possible. Dorot engaged in farming (field crops and dairy cattle in partnership with nearby kibbutz *Ruḥamah), produced herbs, and operated a guest house. In 2002 its population was 500. Its name is composed of the initials of the labor leader Dov *Hos, his wife Rivkah, and his daughter Tirzah, who all died in a road accident.

[Isaiah Gafni / Shimon Gibson (2nd ed.)]

DORPH, SHELDON (**Shelly**; 1941–), U.S. Jewish educator. Dorph was born in Philadelphia and completed undergraduate degrees from Temple University and Graetz College. After receiving rabbinical ordination from the Jewish Theological Seminary of America (JTS) in 1969, he was named director of Camp Ramah in the Berkshires, where he served for four years. He also served as principal of the Los Angeles Hebrew High School (1971–81) and as founding headmaster of the Golda Meir Day High School (1977–85). He published texts on biblical studies for high school students and edited the influential Shalav Hebrew textbook series for Behrman House Books. He earned a doctorate in religion and education from Teachers College, Columbia University, in 1976. He married Gail Zaiman Dorph, an important Jewish educator in her own right.

Dorph served as director of the Pacific Southwest Region of United Synagogue (1987–89) and helped guide the development of some 59 synagogues. But he was best known for his years as national director of the Ramah Camps, a position he held from 1989 to 2003. During that time Dorph oversaw a period of exceptional growth in the Ramah camping system, expanding to eight overnight camps and seven day camps in Canada, the U.S., and Israel and accommodating over 6,000 campers and 1,500 staff members each summer. While serving in the Ramah position he also taught in the education department at JTS.

In 1996 Dorph received the Shazar Prize from the Joint Authority for Jewish Education in the Diaspora for his work

in Jewish education and Hebrew language. In 2004, Dorph received the Janice Coulter award for excellence in informal education from the North American Alliance for Jewish Youth and the Jewish Educators Assembly–Behrman House Books Award for Lifetime Achievement in Jewish Education.

[Barry W. Holtz (2nd ed.)]

DORTMUND (Heb. תירמוניא), city in Germany. A privilege issued by Emperor Henry IV to the city of *Worms in 1074 granted the Jews there trading rights in Dortmund market. In 1096 Mar Shemaryah, fleeing from the crusading mob, killed himself and his whole family in Dortmund. Records pointing to the existence of an organized Jewish settlement there date from the 13th century. The Jews paid a contribution of 15 marks to the imperial treasury from 1241 to 1250. They had their own quarter or street. While in 1250 it was the archbishop of Cologne who granted a privilege to the Jews of Dortmund and was responsible for their protection, these rights and duties had passed to the emperor by 1257, and from 1300 devolved on Count Eberhard of the Mark. By 1257 the community had a *Magistratus Judaeorum*, a rabbi (*clericus* or *papen*), a cantor, *shoḥet*, and a *Schulklopfer,* and possessed a synagogue, a communal center, a cemetery, and a *mikveh*, for which ground rent had to be paid. Jews participated in the guarding of the city walls.

In the *Black Death period the Jews were expelled from Dortmund (1350); the *Judenturm* ("Jews' Tower") was built with the spoils seized from them. They were readmitted in 1372 (for six- to ten-year periods) after making a payment to the count. Subsequently taxes were levied from individuals and not from the community; moneylenders were allowed to charge an interest rate of 36.1% on loans made within the city but twice as much outside. Jews could acquire property only with the permission of the municipality. There were no more than ten Jewish families living in Dortmund in 1380. Another expulsion seems to have taken place around the end of the 15th century as in 1543 the Jews were readmitted for an initial period of ten years, only to be expelled once more in 1596. A privilege granted in 1750 indicates the existence of a new community in Dortmund with elders elected every three years. Under French rule (1806–15) the Jews in Dortmund as elsewhere gained equal rights.

After its incorporation into Prussia in 1815, Dortmund expanded considerably as the result of the industrial revolution. The Jewish population also increased, from 120 in 1840 to 1,000 (1.5% of the total) in 1880, and 4,108 in 1933 (0.8%). The community built a modest synagogue around 1850 and a magnificent building in 1900. Benno *Jacob, the Bible scholar, became rabbi in Dortmund (1906–29); K. *Wilhelm served as rabbi from 1929 to 1933. The community had its own elementary school, apart from a religious school, and a variety of political, charitable, and social institutions, including a communal magazine. As the main congregation was *Reform, a small Orthodox congregation (*Adass Jisroel) was established, supported also by immigrants from Eastern Europe who arrived after World War I. The pattern of persecution in Dortmund followed the evolution of German policy. The Jewish population was 4,108 (out of 540,000) in 1933. The boycott was strictly enforced and sustained beyond April 1, 1933. More than 250 Jews were arrested in the initial year of the Nazi regime. The community tried to sustain its members, offering assistance to needy members, who grew in number. The Jewish school expanded to meet growing needs and then declined as Jews left. Unlike other cities, the community was forced to close its synagogue before *Kristallnacht*. By August 1938 the Jewish population was reduced to 2,600 through emigration. In October 600 Jews of Polish citizenship were expelled; Jewish businesses were Aryanized at a growing pace. On *Kristallnacht* 600 Jewish men were arrested and sent to Sachsenhausen; 500 more fled the city. On the outbreak of war the Jewish population was 1,222; the Jews soon became confined to "Jewish houses." Dortmund became an assembly point for deportations to the East, with about 40,000 deported in eight transports between 1942 and 1945. On April 27, 1942, between 700 and 800 Dortmund Jews were deported to Zamosc and then on to Belzec. On July 29, 1942, 331 elderly Jews were deported. By July 1944 only 334 were left, mainly partners of mixed marriages, but of those too the majority eventually suffered the same fate.

The post-war community, formed in 1945, numbered 351 in 1970, with a synagogue, communal center, and old-age home (opened in 1956). The Jewish community numbered 337 in 1989 and 3,800 in 2005 owing to immigration from the former Soviet Union. In 1998 the community center and synagogue were rebuilt. In 2003 a Jewish kindergarten was opened. From 2005 the community employed a rabbi. Dortmund is the seat of the Association of Jewish Communities in Westphalia.

[Alexander Carlebach / Michael Berenbaum (2nd ed.)]

DOSA BEN HARKINAS (first–second centuries C.E.), Palestinian *tanna*. He is often referred to without patronymic, parallel passages showing that the Dosa referred to is Dosa b. Harkinas (cf., e.g., Eduy. 3:3 and Ḥul. 11:2 et al.). Dosa saw the Second Temple and survived its destruction, living until the time of *Gamaliel and *Akiva, i.e., the second decade of the second century. In Temple times, he engaged in halakhic dispute with *Akaviah b. Mahalalel and *Ḥanina Segan ha-Kohanim (Neg. 1:4). In a dispute concerning matrimonial law between Hanan, one of the judges of civil law, and the "sons of the high priests" he decided according to the latter, in opposition to Johanan b. Zakkai, who agreed with Hanan. He is mentioned 11 times in the Mishnah but more frequently in the *beraitot*. In the Mishnah (RH 2:8) it is related that Rab-

ban Gamaliel accepted the testimony of two witnesses that they had seen the New Moon, despite the fact that Dosa was of the opinion that they were false witnesses, a view in which Joshua b. Hananiah concurred. Gamaliel did not take any steps against Dosa b. Harkinas, perhaps because of his age and honored status, but he ordered Joshua "to appear before me with your staff and your money on the day which according to your reckoning should be the Day of Atonement." Dosa advised Joshua to obey the *nasi*, since "If we call in question the decisions of the *bet din* of Rabban Gamaliel, we must call in question the decisions of every *bet din* which has existed since the days of Moses up to the present time" (RH 2:8–9). During the days of Akiva and Eleazar b. Azariah, the sages heard that Dosa had permitted the levirate marriage of a woman whose co-wife was the daughter of the levir. This was in conformity with the opinion of Bet Shammai against that of Bet Hillel, who forbade levirate marriage in such a case. When the sages heard of this ruling, "they were very disturbed, because he was a great scholar and his eyes were dim so that he was unable to come to the *bet midrash*." It was decided that Joshua b. Hananiah, Eleazar b. Azariah, and Akiva should call upon him to discuss the matter. Dosa explained that he too was of the opinion that the *halakhah* was in accordance with Bet Hillel, and the "son of Harkinas" who had permitted it was not he but his brother Jonathan, who was a disciple of Shammai (Yev. 16a; TJ, Yev. 1:6, 3a).

From a number of passages it appears that he was active in Jerusalem, but it is mentioned in the Tosefta (Mik. 6:2) that he appointed two scholars to investigate the ritual fitness of a **mikveh* between Usha and Shefaram. Dosa's maxim in *Avot* (3:10) is "Morning sleep, midday wine, children's talk, and sitting in the assemblies of the ignorant, put a man out of the world" (Avot 3:10).

[Shmuel Safrai]

DOSA BEN SAADIAH (930–1017), head of the academy of Sura, and son of *Saadiah b. Joseph Gaon. It was not until 1013, 71 years after his father's death, that, at the age of 83, he became *gaon* of Sura. Though only a few of the responsa of Dosa have survived, the new spirit of *halakhah* introduced into the academy by his father, and by his predecessor R. *Samuel b. Ḥophni, is readily recognizable in them. During Dosa's lifetime Babylonia went into decline and Spanish scholars not only began to emancipate themselves from the authority of the *geonim* but even to compete with them. When R. *Samuel ha-Nagid wrote his commentary on complex talmudic subjects, in which he strongly criticized the explanations of Hai Gaon, Dosa hastened to Hai's support and vigorously defended him. At the request of Ḥasdai ibn Shaprut, Dosa wrote a monograph on his father's life, of which only fragments have survived. In addition to his responsa, Dosa wrote commentaries on the Talmud and philosophical works, none of which has been preserved. He studied the sciences and religious philosophy. One of his works was devoted to the problem of *creatio ex nihilo*.

[Mordecai Margaliot]

DOSTAI BEN JUDAH (second century C.E.), *tanna* of the fifth generation. He is not mentioned in the Mishnah, but is quoted a number of times in the Tosefta and the tannaitic midrashim. In Tosef. Ḥul. 8:19 he transmits a *halakhah* in the name of R. Simeon. The tradition found in the printed editions of Bavli Mak. 7a, according to which a *tanna* by the name of Judah b. Dostai transmitted in the name of Simeon b. Shetaḥ.

A legal rule stating that a sentence passed by a Palestinian court over a person who later escaped abroad is not set aside for a new hearing, but in the case of a person who escaped to Palestine the sentence is set aside, is almost certainly a corruption of the reading found in the manuscripts "Dostai b. Judah said in the name of R. Simeon" (cf. Tosef. Ḥullin), as is confirmed by Tosef. Sanh 3:11, where the reading is "Dostai b. Judah said." Other occurrences of the name "Judah b. Dostai," as in BK 83b Vatican 116 and in Pesaḥim 70b Vatican 134 (both versus the readings of the majority of manuscripts) are also certainly scribal errors, e.g. in Pesaḥim 70b where the correct reading "Judah b. Dortai" was corrupted in various ways in several manuscripts (Friedman, Baraitot, 235 note 135). Therefore the "first century *tanna*" by the name of "Judah b. Dostai" should be removed from the lists of talmudic sages.

[Stephen G. Wald (2nd ed.)]

DOSTAI BEN YANNAI (fl. second half of second century), Palestinian *tanna*. The name Dostai is a form of the Greek Δοσίθεος corresponding to the Hebrew "Mattaniah." Only one brief *halakhah* is ascribed to Dostai himself (Tosef. Git. 7:11 = BB 11:10). In addition he reported a number of traditions in the name of the later *tannaim*, R. *Meir (Eruv. 5:4, Avot 3:8, Tos. Ber. 6:8), and R. *Yose b. Ḥalafta (Tos. Ṭoh. 5:8), as well as in the name of earlier figures like R. Eliezer (Tos, Shab. 14:16) and Bet Hillel and Bet Shammai (Tos. Ṭoh. 8:11). Like many relatively obscure tannaitic figures, the later talmudic tradition relates many colorful details concerning his adventures. Together with R. Yose b. Kippar he once went on a mission to Babylonia where they were ill-treated by the authorities. After their return to Palestine he defended himself before R. Aḥai b. Josiah for not having been able to protect his friend against the indignities they had suffered. This he did by giving a satirical description of the manners and vices of the Babylonian authorities (Git. 14a–b; TJ, Git. 1:6, 43d; TJ, Kid. 3:4, 64a). Some of the sayings ascribed to Dostai in the Talmud

reflect a kind of humor, e.g., his answers to his pupils' questions on the differences between men and women (Nid. 31b). On the question "Why are the thermal springs of Tiberias not found in Jerusalem?" he replied that if Jerusalem had thermal springs the pilgrims would have come there for the pleasure of the baths and not for the sake of the pilgrimage (Pes. 8b). In another place, basing himself upon Psalms 17:15, he stated: "If a man gives but a penny to a beggar, he is deemed worthy of receiving the Divine Presence" (BB 10a).

DOSTÁL, ZENO (1934–1996), Czech writer and director. Dostál was born in Konice at Prostějov (Moravia). From 1944 he was hidden from Nazis by his relatives. In the 1950s his studies at the Faculty of Pedagogy were interrupted because of his father's imprisonment. In the 1960s, after working at manual labor, he was employed in a film studio in Prague, where he became an assistant director. He started publishing his "zodiac" stories in the 1980s: *Býk, Beran a Váhy* (1981; "A Taurus, an Aries and a Libra"), describing life in the author's native part of Moravia in the 1930s and during the Nazi occupation, followed by *Lev a Štír* (1983; "A Leo and a Scorpio"), *Vodnář* (1987; "An Aquarius"), *Vrata* (1987; "The Gate"), *Rekrut* (1989; "The Recruit"), *Labuť* (1991; "The Swan"), *Blíženci* (1993; "A Gemini"), and *Ryby* (1994; "A Pisces"), reflecting postwar Czech society and the situation of the Jews.

He directed the movies *Král Kolonád* (1990; "The King of Collonade"), after his story *Leo*; *Golet v údolí* (1995; "Galut in the Valley") based on the work of Ivan *Olbracht; and *Váhy* (1992; "A Libra") for Czech TV (based on his own screenplay).

From 1992 to his death in 1996, he was the chairman of the Prague Jewish community.

[Milos Pojar (2nd ed.)]

DOSTROVSKY, ARYEH (1887–1975), Israel dermatologist. Born in Caro, Russia, Dostrovsky studied medicine at several European universities before settling in Palestine in 1919. From 1920 to 1956 he was head of the Department of Skin and General Diseases at Hadassah Hospital, Jerusalem. He was the first dean of the Hebrew University-Hadassah Medical School (1948–53). Dostrovsky laid the foundation for the development of dermatology in Israel, and was a specialist in the problem of leprosy in Erez Israel. He was a member of the expert advisory panel of the World Health Organization on venereal diseases and treponematosis and was coeditor of *International Dermatologica*.

DOSTROVSKY, ISRAEL (1918–), Israeli physicist. Dostrovsky was born in Odessa, Russia, and a year later immigrated with his parents to Erez Israel. He studied in London, receiving his doctorate in physical chemistry in 1943, and from that year until 1948 was lecturer in chemistry at the University of North Wales. In 1948 he returned to Israel to join the staff of the Weizmann Institute, where he was head of the Isotope Research Department until 1965 and designed and constructed the isotope separation plant. From 1961 to 1964 he served as senior scientist at the Brookhaven National Laboratory in the United States. From 1965 to 1971 he was director general of the Israel Atomic Energy Commission. In 1971 Dostrovsky was appointed vice president of the Weizmann Institute and in 1972 acting president and chief executive officer. In November 1973 he was elected president. Dostrovsky made studies of the mechanism of chemical reactions and isotope effects in them and in the mechanisms of high-energy nuclear reactions: high-energy fission, spallation reactions and nuclear evaporation, fragmentation reactions, and nuclear transfer reactions. Later studies focused on solar energy. He founded the Weizmann Institute's solar energy research center, which utilizes unique equipment. He represented Israel in international organizations, such as the International Atomic Energy Agency, the International Energy Agency, and GALLEX, a program of the Neutrino Astrophysics Group for solar energy. Dostrovsky was a member of the Israeli Academy of Sciences and the New York Academy of Sciences. In 1995 he was awarded the Israel Prize for exact sciences.

[Shaked Gilboa (2nd ed.)]

DOTAN (Deutscher), ARON (1928–), Israeli scholar of the Hebrew language, the Masorah, biblical accentuation, and the history of Hebrew grammar. Born in Stuttgart, Germany, Dotan came to Palestine with his parents in 1934, and was raised and educated in Haifa. His academic studies at the Hebrew University of Jerusalem, begun in 1947, were interrupted by the War of Independence, during which Dotan served in the army and took part in battles in and around Jerusalem. He continued at the university after the war and was awarded a Ph.D. degree in 1963 for his study of *Dikdukei ha-Te'amim le-Rabbi Aharon ben Moshe ben Asher* (1963; see below). In 1961 he was appointed lecturer at Tel Aviv University (professor from 1969), where he continued to teach until his retirement in 1996. He also taught at Bar-Ilan University in Ramat Gan for most of this period, in addition to serving as a guest lecturer at the Sorbonne, at Yale University, and elsewhere. He was a member of the Academy of the Hebrew Language from 1966.

Dotan's research, as presented in several books and scores of articles, focuses mainly on the fields of the Masorah, biblical vocalization and accentuation, biblical manuscripts, and early Hebrew grammar. His *Sefer Dikdukei ha-Te'amim le-Rabbi Aharon ben Moshe ben Asher* ("The Dikdukei ha-Te'amim of Aaron ben Moses Ben-Asher") is a new critical edition of an early work by the outstanding tenth-century masorete Aaron ben Asher, with an introduction and extensive annotation. In another book, which inquires into Ben-Asher's religious affiliation, Dotan discredits the view that Ben-Asher was a Karaite (*Ben Asher's Creed: A Study of the History of the Controversy*, 1977). Dotan's intensive study of biblical manuscripts, of MS Leningrad (B19a) in particular, led to his publication in 1973 of a new edition of the Bible based entirely on this manuscript,

which now serves as the Bible distributed to Israeli soldiers upon their conscription. A new edition of this Bible with a comprehensive introduction in English appeared under the title *Biblia Hebraica Leningradensia* (2001). Dotan's *Encyclopaedia Judaica* entry "Masorah" (1971; q.v.) provides a sweeping, detailed overview of the history of the Masorah and of the different systems of biblical accentuation.

Dotan's most important book in the field of early Hebrew grammar is *Or Rishon be-Ḥokhmat ha-Lashon* ("The Dawn of Hebrew Linguistics," 1997), a critical edition of *Saadiah Gaon's *Sefer Zahut Leshon ha-Ivrim* (in Arabic*: Kitāb Fasīh Lughat al-'Ibraniyyīn*), for which he was awarded the Bialik Prize for Jewish Thought in 1998. Alongside the Arabic original of this work, which is the first Hebrew grammar, this edition provides both an annotated Hebrew translation and a comprehensive introduction elucidating Saadiah's linguistic method.

In his *Min ha-Masorah el Reshit ha-Milona'ut ha-Ivrit* ("The Awakening of Word Lore: From the Masorah to the Beginnings of Hebrew Lexicography," 2004) Dotan shows that the Masorah comprised the basis of Hebrew lexicography. This approach is consistent with his thesis, demonstrated in a number of articles, that grammar was preceded by the Masorah.

[Chaim E. Cohen (2nd ed.)]

DOTHAN (Heb. דֹּתָן, דֹּתַיִן), city in the northern part of the territory of Manasseh near one of the north-south passes through the Carmel range. The author of Genesis locates the story of Joseph's sale to the *Ishmaelites-Midianites in this region (Gen. 37:17ff.). According to II Kings 6:13ff., Dothan was a walled city and the residence of the prophet Elisha. It is mentioned again in the apocryphal book of Judith (4:6; 7:3) among the cities in the Jezreel Valley near Holofernes' camp. Eusebius places it 12 mi. (20 km.) north of Samaria-Sebaste (Onom. 76:13). It is generally identified with Tell Dothan, 3 mi. (5 km.) south of Jenin and 13 mi. (22 km.) northwest of Shechem at the head of the valley of the same name. Excavations conducted there by J.P. Free, a professor at Wheaton College, between 1953 and 1960 uncovered remains from the Bronze and Iron Ages (Canaanite and Israelite periods) – walls, administrative buildings, private houses as well as tombs, rich in finds.

In 2005 an archaeological team from Wheaton College published the first volume of a series of final reports on the excavations. Their analysis revealed occupation from the Neolithic-Mameluke periods. Among the highlights, the Free excavations uncovered several sections of a large city wall dating to the EBII and EBIII, attended by several phases of walls and platforms, including a straddling tower, as well as monumental stairway and ramp, which probably led to a gate. The excavators found additional fortifications and a patrician house from the MBIIb-LBI periods. Dating from the LBII period, when the site was virtually uninhabited, some of the richest LB tombs in the region were excavated by Free's team. These family tombs lasted from LBIIA-Iron I and are an important example of continuity between the Bronze and Iron Ages in the highlands. The excavators uncovered a four-room Iron I period house surrounded by a large private precinct. Dating from the Iron II period, a massive exposure was excavated, which included seven buildings that were all variations on the four-room house. West of them a complex of buildings indicated an industrial area, showing evidence of smelting, weaving, and the production of oil and wine. In the southwest corner of the same area, the excavators uncovered a large administrative building, characterized by ashlar masonry, regular rooms grouped around a courtyard, pavements, drains, and dozens of identically sized small storage containers. These jars may have reflected the dry measure of a *seah*, for the purpose of redistribution. Along the western border of this area there was evidence of a typical Iron Age casemate wall. The Iron Age city underwent violent destruction, dated by radiocarbon analysis to the end of the ninth century. Some time later the tell was again used as a cemetery, after the region had been conquered by Assyria. From the Hellenistic period the fragmentary outline of a city *insula* was discovered, as well as a sizable collection of typical second century Rhodian stamped amphora handles. The Roman and Byzantine periods, confined to the top of the tell, contained massive architecture but few datable living surfaces. Finally, in the Mamluke period the top of the tell was reoccupied by a small farming village with typical Islamic courtyard houses.

[Egon H.E. Lass and Daniel M. Master (2nd ed.)]

DOTHAN, MOSHE (1919–1999), Israeli archaeologist. After graduating from high school in his native Cracow, Dothan received an entry permit to study in Palestine at the Hebrew University of Jerusalem. He arrived in 1938 but his studies were soon interrupted by the outbreak of World War II. He spent two years in kibbutz Naḥshonim (today kibbutz Ma'apil) and then joined the British army in 1942. His service took him to Malta, North Africa, and Italy. When in Italy, he first felt an interest in archaeology.

In 1946 he returned to Palestine and completed a master's degree in archaeology and Jewish history and while working from 1950 in the Department of Antiquities in Jerusalem was able to conclude his doctorate. His thesis (1959) was on the Late Chalcolithic period (4000–3000 B.C.E.) and much of his research was based on his findings at Tel Asor (near Naḥal Iron), a site where a mass grave from that period was discovered.

He headed numerous excavations including Tel Afula (1951); Mezer in Naḥal Iron; the 1956 survey of Kadesh Barnea in northern Sinai of the Israelite town of the tenth century B.C.E.; Tel Mor, the ancient port dating from 1600 B.C.E. where Ashdod port stands today; the excavations of the important Philistine town of Ashdod (1960–77); Ḥammath Tibe-

rias (1962) where the excavations revealed an early synagogue dated approximately 250 C.E. under other synagogues which had been constructed on top of it; and Tel Acre (1972–89) where he headed excavations whose finds went back to the tenth century B.C.E.

From 1972 to 1988 Dothan was a professor at Haifa University where he founded the department of maritime civilization and in 1976 the department of archaeology. He was the *Encyclopaedia Judaica* departmental editor for Bible realia.

He published over 150 articles, primarily in English. He was married to Trude *Dothan.

[Elaine Hoter]

DOTHAN, TRUDE (1922–), archaeologist, expert on the Philistines and Sea Peoples. Born in Vienna, Dothan moved to Jerusalem in 1925 with her parents, Grete Wolf Krakauer, a well-known painter, and Leopold Krakauer, one of the pioneers of modern Israeli architecture and a graphic artist. Dothan studied archaeology and biblical studies at the Hebrew University, eventually earning her M.A. in 1950 with a thesis on the Khirbet Kerak pottery of the EB III period, written under the guidance of Professor E.L. Sukenik. Following her post-graduate studies at the Oriental Institute, University of Chicago, in 1951–52, and at the Institute of Archaeology, University of London, in 1953, Dothan completed her Ph.D. in archaeology at the Hebrew University in Jerusalem in 1961. Having already excavated between 1945 and 1952 at Khirbet Kerak, Ein Gedi and Tel Qasile, Dothan became a field supervisor at the Hazor excavations in 1955–60, under Yigael Yadin, and later a co-director of excavations at Ein Gedi in 1961–62. In 1971–72, Dothan co-directed (with A. Ben-Tor) excavations at Athienou in Cyprus, as well as directing excavations at Deir el-Balah, near Gaza, at intervals between 1971 and 1982. From 1981 to 1996, Dothan co-directed a major archaeological project at Tel Miqne-*Ekron. Having taught archaeology at the Institute of Archaeology, Hebrew University, since 1962, earning her full professorship in 1974, Dothan gained an enormous amount of respect from her students and colleagues, for her enthusiasm and learning. Dothan is the author of numerous articles and books, notably *The Philistines and Their Material Culture* (1981), and *People of the Sea: In Search of the Philistines* (1992, with M. Dothan). A recipient of many fellowships and grants, Dothan was awarded the P. Schimmel Award in 1991 and the prestigious Israel Prize in 1998. A volume of essays, *Mediterranean Peoples in Transition* (eds. S. Gitin, A. Mazar and E. Stern), was presented in honor of Dothan in 1998. Trude Dothan was married to a distinguished archaeologist, the late Moshe *Dothan.

[Shimon Gibson (2nd ed.)]

DOUDTCHITZKY, DINORA (c. 1915–2004), Chilean engraver. Born in the Ukraine, Doudtchitzky's family emigrated to Argentina when she was 10 years old. In Buenos Aires she studied art and in 1939 she moved to Chile where she continued her studies in painting, murals, and engraving. In 1959 she became professor of engraving at the Catholic University.

DOUGLAS, KIRK (originally **Issur Danielovich Demsky**; 1916–), U.S. actor. Douglas was born in Amsterdam, N.Y. A good student and a keen athlete, he wrestled competitively during his time at St. Lawrence University. In 1939 he enrolled at the American Academy of Dramatic Arts in New York City. A small part in Broadway's *Wind Is Ninety* in 1945, as well as the help of former classmate Lauren *Bacall, brought him to the attention of Hollywood producer Hal B. Wallis, who chose him to play opposite Barbara Stanwyck in *The Strange Love of Martha Ivers* (1946). His performance received rave reviews, and more work quickly followed, including a role in the dramatic film *I Walk Alone* (1948). In it, he worked alongside Burt Lancaster. The chemistry between the two future screen legends was so strong that they ultimately appeared in seven films together, including *Gunfight at the O.K. Corral* (1957), *Seven Days in May* (1964), and *Tough Guys* (1986).

Douglas' portrayal in 1949 of a prizefighter in the film *Champion* confirmed his reputation as a leading dramatic artist. He had memorable roles in *Young Man with a Horn* (1950), *The Bad and the Beautiful* (1953), *Lust for Life* (1956), and *Lonely are the Brave* (1962).

Turning to production, he formed a film company that made the anti-war *Paths of Glory* (1957) and *Spartacus* (1960), in both of which Douglas starred. He identified himself with Israeli causes in the U.S. He starred in *The Juggler* (1953), which was filmed in Israel, and in 1966 played the lead in *Cast a Giant Shadow*, a film about Col. David (Mickey) *Marcus. Douglas celebrated his bar mitzvah twice: once when he was 13 years old, and the second time when he was 83.

Other films in the prolific actor's filmography include *My Dear Secretary* (1949), *A Letter to Three Wives* (1949), *The Glass Menagerie* (1950), *20,000 Leagues under the Sea* (1954), *Ulysses* (1955), *Man without a Star* (1955), *The Vikings* (1958), *Strangers When We Meet* (1960), *Town without Pity* (1961), *Two Weeks in Another Town* (1962), *The List of Adrian Messenger* (1963), *Is Paris Burning?* (1966), *The Arrangement* (1969), *There Was a Crooked Man* (1970), *The Fury* (1978), *The Man from Snowy River* (1982), *Greedy* (1994), *Diamonds* (1999), *It Runs in the Family* (2003), and *Illusions* (2004).

Douglas became a goodwill ambassador of the United Nations in 1983, and he also held the position of director of the Los Angeles chapter of the United Nations Association. He was a goodwill ambassador for the U.S. State Department from 1963. His efforts were rewarded in 1981 with the Presidential Medal of Freedom, and in 1983 with the Jefferson Award. France honored him by making him a Chevalier of the Legion of Honor. In 2002 he was awarded the UCLA Medal of Honor.

Douglas was inducted into the Hall of Great Western Performers of the National Cowboy and Western Heritage Museum in 1984. For his film work, he received the American Cinema Award (1987), the German Golden Kamera Award

(1987), the National Board of Review's Career Achievement Award (1989), a Life Achievement Award from the American Film Institute (1991), a Lifetime Achievement Award from the Academy of Motion Picture Arts and Sciences "for 50 years as a creative and moral force in the motion picture community" (1995), and a Lifetime Achievement Award from the American Film Institute (1999).

Kirk Douglas was voted the 36th Greatest Movie Star of all time by *Entertainment Weekly*.

He published his autobiography, *The Ragman's Son*, in 1988. He also wrote the novel *Dance with the Devil* (1990), the novel *The Gift* (1992), *Kirk Douglas Writes to Gary Cooper* (1992), the novel *Last Tango in Brooklyn* (1994), the novel *The Broken Mirror* (1997), *Climbing the Mountain: My Search for Meaning* (1997),*Young Heroes of the Bible: A Book for Family Sharing* (1999), and *My Stroke of Luck* (2002).

The actor Michael *Douglas is one of his four sons.

DOUGLAS, MELVYN (1901–1981), U.S. actor. Son of Edouard Hesselberg, a musician, Douglas first appeared on the New York stage in 1928 in *A Free Soul*. He went to Hollywood in 1931 to act in a screen version of *Tonight or Never*. After his army service in World War II, Douglas' Broadway appearances included *Two Blind Mice* (1949), *Inherit the Wind* (1955), *Waltz of the Toreadors* (1956), *The Best Man* (1960), and *Spofford* (1967). His films include *Counselor-at-Law* (1933), *The Shining Hour* (1938), *Ninotchka* (1939), *Billy Budd* (1962), *Hud* (1963), for which he received an Oscar for Best Supporting Actor, *The Americanization of Emily* (1964), *Hotel* (1967), *I Never Sang For My Father* (1970), *The Candidate* (1972), *The Tenant* (1976), and *Being There* (1979).

[Jonathan Licht (2nd ed.)]

DOUGLAS, MICHAEL (1944–), film actor and producer. Born in New Brunswick, New Jersey, Michael is the son of actor Kirk *Douglas. He received a B.A. from the University of California at Santa Barbara in 1968. Although his father tried to discourage him from entering show business, Michael would not be deterred. After graduating from university, he moved to New York City to continue his drama studies at the Neighborhood Playhouse and at the American Place Theatre.

Michael Douglas first made his mark in the television series *The Streets of San Francisco* (1972). He was the founder of Big Stick Productions and Stonebridge Entertainment. His first major success came as co-producer of the multi-Academy Award winning film *One Flew over the Cuckoo's Nest* (1975). His career as a movie star began with *Coma* (1978) and *Romancing the Stone* (1984). He won an Academy Award for best actor for his portrayal of a power-hungry New York stockbroker in the 1987 film *Wall Street*. Other leading roles were in *The China Syndrome* (1979), *Running* (1979), *Jewel of the Nile* (1985), A *Chorus Line* (1985), *Fatal Attraction* (1987), *Black Rain* (1989), *The War of the Roses* (1989), *Basic Instinct* (1992), *Shining Through* (1992), *Falling Down* (1993), *Disclosure* (1994), *The American President* (1995), *A Perfect Murder* (1998), *Wonder Boys* (2000), *Traffic* (2000), *One Night at McCool's* (2001), *The In-Laws* (2003), and *The Ride to Mt. Morgan* (2005).

The Michael Douglas Foundation, a non-profit organization, was established in 1991. Among its goals, the foundation seeks to better the living conditions of those in need of assistance, promote peace within and among nations, and protect the global ecosystem. Over the years, the foundation has contributed to more than 90 charities worldwide. In 1998 Douglas was named a United Nations Messenger of Peace because of his efforts to focus world attention on nuclear disarmament and human rights.

In 2000 he married actress Catherine Zeta-Jones.

°**DOUWES, ARNOLD** (1906–1999), Righteous Among the Nations. The son of a Dutch pastor, Douwes was recruited for the underground by Johannes Post, a farmer and town councilor in the village of Nieuwlande (Drente), and immediately dedicated himself to saving Jews. Assisted by Max ("Nico") Leons, a Jew posing as a Protestant, Douwes systematically traversed great stretches of the Nieuwlande countryside on his bicycle, stopping at every house and farm to ask whether the inhabitants would be willing to lodge a Jewish child. When convincing failed, Douwes was not beyond, in some instances, forcing people to admit Jews for shelter, on the pretext that it was by order of the Resistance. His sometimes tactless methods produced good results – hundreds of Jews found shelter in the sprawling farms of the Nieuwlande region. Lou Gans, one of the many Jews assisted by Douwes, relates that when he arrived from Amsterdam, Douwes took him for a temporary stay with Jan Dekker, Nieuwlande's postman. He was then moved to the home of Hendrik Kikkert, a local farmer; then to Seine and Jans Otten, both of whom were teachers; and on to Simon Dijk, a housepainter (where counterfeit identity cards were printed), and Engel Bolwijn, a baker. "Our task was not easy," Douwes recalled. "The victims themselves were the main problem. It was very difficult to convince them. Many did not wish to acknowledge the dangers facing them.… We had to resort to lies in order to get the parents to give us their children!… When we told people 'one week,' it really meant until the liberation. When we said 'two days' we meant two years.… We used to contact people in Amsterdam and beg them to let their children go, assuring them that there were safe places waiting for them. There were really no such places. Our thinking was that we would somehow find suitable places

the moment the children arrived. They had to be found and were indeed found: in homes, cellars, attics, or elsewhere." Douwes personally met the children in Amsterdam or at the train station when they arrived in the Nieuwlande region. Sixteen-year-old Haim Roet, one of those saved by Douwes, was brought by him by train from Amsterdam to Zwolle in eastern Holland and then by bicycle to Dedenswaart. There Haim was reunited with his brother, but when he fell ill, after about a month in hiding, and the local doctor refused to treat him, Douwes came to the rescue, taking him to a different doctor; then after Haim's recovery, bringing him back to Dedenswaart. When the German police staged raids in the area, Douwes spent the night on his bicycle, transferring children from one location to another right under their noses. "I well remember sitting on the back of Arnold's bike, riding the narrow lanes beside the canals that crisscrossed the area," Miriam Whartman relates. When she told Douwes that her host family in the village of Hollandse Veld was subtly trying to convert her, he immediately moved her to another household. Douwes kept a secret coded diary of the people rescued, their sheltering places and other vital information. An operation of such magnitude could not go long unnoticed, and the Gestapo was soon on the lookout for him. To avoid arrest he changed his appearance, sporting a mustache and wearing a hat and eyeglasses to hide his face as much as possible. Despite all his precautions, Douwes was arrested in December 1944. While awaiting execution, in an Assen prison, on December 11, 1944, the underground rescued him in a daring operation. He then went into hiding until the country's liberation. After the war he married Jet Reichenberger, one of the women saved by him, and the couple eventually settled in Israel with their three daughters, with Arnold resuming his previous profession as a landscape architect. Toward the end of his life, he returned to the Netherlands. It is estimated that Douwes was responsible for saving at least 500 Jews, including around 100 children. In 1965, Yad Vashem awarded him the title of Righteous Among the Nations.

[Mordecai Paldiel (2nd ed.)]

DOV BAER (the Maggid) OF MEZHIRECH (d. 1772), one of the earliest and most important leaders of *Ḥasidism. As a youth, Dov Baer received a traditional religious education in the yeshivah of R. Jacob Joshua *Falk, author of *Penei Yehoshu'a*. He taught in Torchin and later became preacher in Korets and Rovno. Subsequently he moved to Mezhirech (Mezhirichi) in Volhynia, which became the center of the ḥasidic movement, and toward the end of his life he moved to Annopol (Hanipol). An erudite talmudic scholar, Dov Baer also made a profound study of Kabbalah, adopting the system of Lurianic Kabbalah (originated by Isaac *Luria) and an ascetic way of life. The mortifications to which he subjected himself eventually made him ill; he contracted a disease which affected his legs and he became bedridden. Tradition relates that he sought a cure from *Israel b. Eliezer (the Ba'al Shem Tov), the originator of modern Ḥasidism, whose reputation as a healer was widespread, and Dov Baer became one of his foremost disciples.

After the death of the Ba'al Shem Tov in 1760, Dov Baer was recognized as his successor to leadership of the movement although opposed by *Jacob Joseph of Polonnoye, the more senior disciple. The authority of Dov Baer as the main proponent of Ḥasidism was apparently only recognized in 1766, and even then there were a few notable exceptions such as Phinehas of Korets. Unlike his predecessor, Dov Baer was not a man of the people, and his illness made it difficult for him to associate with his disciples. He possessed charismatic qualities, however, and was an eloquent preacher and teacher. Solomon *Maimon, who visited Dov Baer during his youth, expressed great admiration for his spiritual endowments. Dov Baer was highly esteemed by his disciples, who not only derived spiritual sustenance from his teachings and utterances but also divined an inner significance in his daily life and actions. Thus, *Aryeh Leib Sarahs is said to have visited Dov Baer in order "to see how he put on his shoes and tied his shoelaces."

Dov Baer formulated a doctrine that provided Ḥasidism with a speculative-mystical system, introducing into it the concepts of Kabbalah and a specific pattern of organization. Dov Baer transferred the center of Ḥasidism from Podolia in the southeast to Volhynia in central Poland, and this facilitated its spread throughout the country. He endeavored to popularize Ḥasidism among new classes and in new areas, and sent emissaries to spread the new teaching in many places throughout Poland. His activity may be considered the beginning of Ḥasidism as a movement, while his personal conduct set the precedent in Ḥasidism, for the institution of the *Ẓaddik*, or saintly leader. Under his leadership, Ḥasidism spread in the Ukraine, Lithuania, and Poznania, and began to take root in central Poland. He also won respect and authority outside his own community, and his reputation as a talmudist led numerous people to appeal to him on legal matters, such as ownership and trespass. Dov Baer also took part in communal affairs and his emissary Aaron of Karlin succeeded in obtaining an amendment of the communal tax regulations. In Dov Baer's later years, his views on the Divinity, as well as his methods of leadership, aroused fierce opposition from many rabbis and those who did not accept Ḥasidism. Especial targets for their hostility were the ecstatic modes of religious worship, accompanied by violent bodily movement, adopted by the Ḥasidim of "Talk," the changes he introduced in the prayer ritual in adopting the Lurianic liturgy, the innovations in ritual slaughter, and the neglect of Torah study by the youth who abandoned the yeshivot and flocked to Mezhirech. The main problem confronting the rabbinical opposition was the authority assumed by the Ḥasidim to decide matters of belief and religious conduct. Eventually the ban of excommunication was pronounced on Ḥasidism in Vilna, the orthodox stronghold. According to tradition, the excommunication af-

fected the health of Dov Baer and he died shortly afterward. After his death Ḥasidism remained without a single leader commanding the same authority and general support from all Ḥasidim, and the leadership was assumed by a number of his disciples. The doctrine of Dov Baer may only be ascertained from collections made of his interpretation of biblical passages and rabbinical literature which appear in several versions: *Maggid Devarav le-Ya'akov*, and *Likkutei Amarim* ("Collected Sayings," Lvov, 1697, falsified date), written down by Isaiah of Donovich; *Or ha-Emet* (Husiatyn, 1889), copied from the manuscript written by *Levi Isaac of Berdichev, and in Ms. 8°3282 in the Israel National Library, written by Levi Isaac of Berdichev. Additional sayings have been collected in *Likkutei Amarim* (Lvov, 1792).

Many of Dov Baer's homiletical observations are included in works written by his disciples, among whom were Samuel and Phineas *Horowitz, *Shneur Zalman of Lyady, Israel of *Kozienice, *Jacob Isaac of Lublin, Menahem Mendel of Vitebsk, Nahum of Chernobyl, *Elimelech of Lyzhansk, *Zusya of Annopol (Hanipol), Levi Isaac of Berdichev, Aaron of Karlin, and Aryeh Leib Sarahs.

His Doctrine

Dov Baer develops the doctrine of *devekut* ("devotion") out of a pantheistic and acosmic perception which describes the essence of God as penetrating all existence and embodying everything: "the whole earth is the Holy One, and it is the world which stands within the Creator." From this doctrine he formulated an approach to mankind which had as its basis an elevated appreciation of the metaphysical status of man. The divine emanation through all things renders possible, by means of inner reflection and contemplation, a close and direct relationship with the root of being, and the *ẓaddik* or the devoted man is thus a medium who enjoys direct contact with God. Since, in Dov Baer's theory, every man can achieve this direct contact with the Divine, the charismatic figure of the *ẓaddik* loses his function as the intermediary between the Ḥasid and God. From his acosmic and spiritualist outlook, Dov Baer speaks of *devekut* through the turning aside from conscious will and the negation of existence. The purpose of man is to abolish concrete cosmic reality and to return to the mystical *Ayin* ("Nothingness") which preceded creation ("God created existence out of nothing and He makes nothingness out of existence"). Thus the existence of man in this world is seen as a decline which must precede a rise, an existence which must precede nothingness. The soul descends from the heights in order to raise up the material existence through its spiritual exaltation and thus restore the unity which was disturbed by the work of creation. The *Sefirah* of *Ḥokhmah* ("Wisdom") or *Ayin* is the state which precedes creation as the object of the meditations of those in a state of *devekut*. In the words of the Maggid: "it is impossible for anything to pass from one existence to another, without it becoming nothing (*Ayin*) at the point of transition." (This is the Aristotelian theory of the "absence" in the transfer from potential to actual existence, which was transmuted from the physical realm to the metaphysical.) In all his extant writings there is a definitely acknowledged mingling between the sphere of the first *Sefirah* (*Keter*, *Ayin*) and the second (*Ḥokhmah*). Generally, Dov Baer does not distinguish between the two *Sefirot* – in various places they are treated as identical – and he transposes them in order to elucidate the true structure of the soul. He uses theosophic language and kabbalistic terminology when dealing with matters pertaining to the theory of the soul, from the principles of the doctrine of the *Sefirot*.

In his words on the essence of prayer, Dov Baer rejects the emphasis on the personal nature of supplication and advocates an attitude of indifference toward the results of the act, with no anticipation of an answer. Prayer is a psychological exercise in maximal concentration, a technique or ladder toward denial of the self. In the transfer from vocal prayer (speech) to prayer by thought, the human act is converted into divine speech (automatic speech).

The logical conclusion to be drawn from Dov Baer's monist approach, which lays down that God is to be found everywhere ("there is no place which is not occupied by Him") is that it is possible to worship Him with every act: "know Him in all thy ways" (he does not accept the Lurianic dualism which accentuates the extremes of evil and good; for him there is no absolute evil but only degrees of good). The idea of divine immanence and the Lurianic concept of the uplifting of the *niẓoẓot* ("sparks") are the theoretical basis for the principle of "worship through corporeality" (*avodah be-gashmiyyut*), i.e., the worship of God through *devekut* even during the performance of physical acts. Dov Baer was aware that such an emphasis on the value of the *devekut*, with its concomitant disregard of the precepts and halakhic principles, was likely to lead to anarchy and antinomianism; he therefore limited his approach to the spiritual sphere and emphasized the importance of the necessity for meticulous observance of the normative framework of the *mitzvot*. Because of his tendency toward spirituality, Dov Baer was a conservative in the field of *halakhah* and inclined toward conformity in practical areas. Worship through corporeality is difficult and only "outstanding men" can abide by it.

The concept of *ẓimẓum* ("contraction") in his doctrine contradicts in principle the Lurianic concept and returns to the ideological system of Moses *Cordovero. *Ẓimẓum* is not interpreted as a regression but as an abundance of emanation. The process of *ẓimẓum* is conceived as an act which differs in meaning with respect to the bestower and the recipients. From the aspect of the Divine Essence, *ẓimẓum* is an oblivion and a concealment, while from the aspect of the living creatures it is a manifestation and a revelation. *Ẓimẓum* is a form of cognition which compels God to appear according to the laws of the intellect. Dov Baer interprets the verse: "the king is held captive in the tresses" (Song 7:6), as "tresses of the mind" (*Maggid Devarav le-Ya'akov*). (The contraction of light and its embodiment in objects is conditional to perception, just as thought is revealed by its materialization – its *ẓimẓum* – in sound and

speech.) By rejecting the Lurianic mythical personification, he blurs the origin of the fall of the *niẓoẓot* and dissociates himself from the notion of a crisis in the relationship of God with Himself and His relationship with the world. He does not interpret the *shevirah* ("breaking of the vessels") as a catastrophe within the divine world; its purpose is to illuminate, just as the tailor cuts in order to sew. The *shevirah* is expressed in allegoric fashion ("a broken heart") and is described as an internal event in the life of man.

Dov Baer's eschatological conception is not bound to any historical period. In it the emphasis is not on matters concerning messianism, as in Shabbateanism; rather the pre-redemption tension is slackened and the emphasis is placed on the road which leads to redemption instead of its consequences. Redemption has ceased to be a single national historical event and has become a continuous spiritual experience for the individual.

The main authority of the ḥasidic leader derived essentially from his direct connection with the heavenly powers, allied to his concern for the individual and the community. The *ẓaddik* is a man who struggles to attain a life of complete holiness, devoid of any personal benefit and untainted by any evil inclination. He supervises the scales of the world, watching over its moral equilibrium, and the social sphere is the lowest plane of his mystical activity. By the strength of his religious elevation, he is an intercessor for the bestowal of plenty and it is his task to put right the status of the worlds and redeem existence according to the Lurianic system of the uplifting of the "sparks" and the special *ḥasidic* method of the sublimation of evil thoughts, which transferred the scene of the struggle to the personal sphere and determined a process of internal individual restitution of the soul (*tikkun* of *Adam Kadmon* by means of *tikkun* of *Adam Taḥton*). Dov Baer differentiates between *ẓaddikim* who succeed in maintaining the dialectic tension between social life and the mystic life (and thus maintain a social and metaphysical link between themselves and the individual) and "*ẓaddikim* who are compelled to withdraw from the people" because their contact with society is liable to result in their downfall. His theory does not emphasize the doctrine of the *ẓaddik* and recognizes the possibility of ecstatic experiences without intermediaries. The doctrine of the *ẓaddik* was mainly developed by the disciples of Elimelech of Lyshansk (*ẓaddikut ma'asit*, the practical role of the *ẓaddik*) and was stressed in the Ḥasidism of Bratslav.

[Esther (Zweig) Liebes]

DOVE (Heb. יוֹנָה, *yonah*), the domesticated (*Columba domestica*) as well as the wild pigeon, of which several species are found in Erez Israel, in whose caves and rock clefts brood large flocks of rock pigeons (*Columba livia*), considered to be the original species of the domesticated variety. It builds its nest in the clefts of precipitous rocks inaccessible to birds and animals of prey (Jer. 48:28). Sepulchral chambers, hewn in caves in several places in Israel, are used by doves for brooding, and in the Bet Guvrin region there are columbaria consisting of tens of thousands of such chambers. Among the varieties of the rock pigeon is a wild variety found in Jerusalem which broods under the caves of houses and is known as the "loft-dove" in contradistinction to the "cote dove" which is bred (Tosef., Beẓah 1:10). The Mishnah refers to the catching of wild doves in nets (BK 7:7). The dove, which is permitted as food, was brought as an offering by the poor (Lev. 5:7) and by the Nazirite (Num. 6:10). Because of their importance as a sacrifice, the state of the young doves' development was taken into account when intercalating the year (Sanh. 11a). The sages held that the dove was eligible for sacrifices because "there is none among the birds more persecuted than doves" (BK 93a). It is monogamous, the female following the male (cf. Hos. 7:11). At nesting time the males coo (Isa. 59:11). The dove symbolizes beauty, innocence, and purity (Song 1:15; 5:2). The "*benei yonah*" which were used as sacrifices are defined in the Talmud as tender young doves until "their feathers begin to glisten"; they are identical with the *gozal* (Gen. 15:9; cf. Kin. 2:1; Ḥul. 22b). Of a superior domestic stock were the "*hardesiot*" doves, a name derived, some contend, from that of King Herod who, according to Josephus, bred doves (Jos., Wars, 5:181; cf. Ḥul. 139b). Among those ineligible to act as witnesses is one who decoys doves from his neighbor's dovecote or who engages in pigeon races (Sanh. 25a). The first dove mentioned in the Bible is the one sent by *Noah which brought back an olive leaf (Gen. 8:8–11) – according to rabbinic tradition from the Mount of Olives.

[Jehuda Feliks]

DOWRY (Heb. נְדֻנְיָה), the property a wife brings to her husband at marriage; the Yiddish equivalent, *nadn*, is from the same root. The custom of *nedunyah* became clearly defined and institutionalized only in the talmudic period. In biblical times, *mohar* (מֹהַר), whereby the groom bought his wife from her father (Gen. 24:53; Ex. 22:15–16; Hos. 3:2), was the accepted practice. It was then customary that the groom give the bride gifts, and that she bring certain property to her husband's home upon marriage: slaves, cattle, real estate, etc. (cf. Gen. 24:59–61; 29; Judg. 1:14ff.; I Kings 9:16). Evidence of the custom of *nedunyah* is to be found in Tobit (7:14; 8:21) and in the Assuan papyri (Cowley, Aramaic, nos. 15, 18). Gradually, *mohar* was superseded by the *ketubbah* custom according to which the husband merely assumed the responsibility of compensation to his wife in case he divorced her: he had to pay her 200

zuzim if she had been a virgin at the time of marriage, and 100 *zuzim* if a widow or divorcée (see **Ketubbah*).

By talmudic times, the institution of *nedunyah* was prevalent; the father gave a dowry to the bride since the daughter was excluded from paternal inheritance. Fifty *zuzim* (equivalent to the worth of 180 grams of silver) was the minimum amount a father was obliged to give to his daughter (Ket. 6:5). Parents usually gave much more, according to their social standing. Community funds provided the dowry for an orphan or a very poor girl (*ibid.*; cf. Sh. Ar., YD 251:8). In case of her father's death, the brothers of a minor girl were obliged to give her the minimum dowry, and the court estimated how much her father would have given her above the minimum dowry. The sum was then taken out of the father's estate and given to the daughter upon majority (Ket. 6:6; 68a–69b). In the absence of such an estimate, each daughter was entitled to receive one-tenth of the value of her father's estate in money, or in valuables (Yad, Ishut, 20:4–7; Sh. Ar., EH 113:4). If the father was unable or unwilling to pay the promised dowry at the betrothal ceremony, the groom could refuse to marry his bride (Ket. 13:5; Ket. 108b–109a). Insistence on exact payment of the promised dowry, however, was frowned upon by later rabbinic authorities (Rema to Sh. Ar., EH 2:1). In certain communities it was customary for the groom's father to make a dowry contribution equal to that of the bride's father (Ket. 102b). The dowry, whether given in real estate, slaves, money, or chattel was recorded in the marriage contract (the *ketubbah*) and in some instances one-third or one-fifth of the actual value of the dowry was added to the sum mentioned in the *ketubbah*. Based upon a decree enacted by *Simeon b. Shetaḥ (first century C.E.), the Talmud ruled that the husband and his entire property were liable for compensation as stipulated in the *ketubbah*, either in case he died (when she collected the sum specified in the *ketubbah* from the heirs) or in case he divorced his wife (Ket. 82b). For the status of the dowry and the husband's rights and obligations, see below. The rabbinic enactments (*Takkanot Shum*) by R. Jacob *Tam and by the rabbinic synod of the communities of Speyer, Worms, and Mainz (Germany) stipulated that if a woman died without children within the first year of her marriage, the whole dowry should be returned to her father or to his heirs, and if she died without children within two years of her marriage, one-half of her dowry should be returned to her father or his heirs. These stipulations were accepted by Jews all over Europe, as well as by some Oriental communities. A rabbinic conference at Slutsk (1761) modified these rules by decreeing that only after five years of marriage would the husband of a childless wife become the sole heir to his deceased wife's property.

The custom of dowry in its original sense prevailed until modern times, especially among Jews of Eastern Europe. In these communities, the dowry often consisted of full board granted to the groom for several years so that he might continue his talmudic studies free from financial care. The custom was called in Yiddish *kest* and the financial arrangements of the dowry were detailed in a document called *tena'im* ("stipulations"; "conditions") signed at the betrothal ceremony; *tenoim shraybn* is derived from the term *tena'im* (see Ket. 102a–b). Jews in Muslim countries never accepted the custom of *nedunyah*, but continued the practice of *mohar*. The money which the groom gave to the bride's father, however, was used to buy furniture and household goods for the newly married couple. In modern Israel, the Oriental practices of *mohar*, as well as the custom of *nedunyah*, tend to disappear gradually. On the other hand, in cases of divorce, when couples settle the material aspects before a rabbinic court, the court's judgment, which is guided by the principles of *halakhah*, is legally binding. Societies for providing dowries for poor or orphaned girls were prevalent (see **Hakhnasat Kallah*).

In Jewish Law

Dowry or *nedunyah*, apparently from the word *neden*, nedeh (i.e., gift – Ezek. 16:33 and commentaries), means all property of whatever kind brought by the wife to the husband upon their marriage (Yad, Ishut, 16:1 and *Maggid Mishneh* thereto). In its restricted and common meaning, the term is intended to refer to those assets of the wife which she of her own free will entrusts to her husband's responsibility, the equivalent whereof the husband of his own free will undertakes in the **ketubbah*, and in a sum of money specified therein as the *nedunyah*, to restore to his wife upon dissolution of their marriage (*Maggid Mishneh*, Ishut 16:1; Tur, EH 85; Sh. Ar., EH 66: 11a and 85:2, Isserles' gloss; 88:2). Such property is also called *nikhsei ẓon barzel*, to be distinguished from another category of the wife's property, called *nikhsei melog* (see below). It is the practice for the husband to undertake in the *ketubbah* to restore to his wife the dowry with an increment (the *tosefet nedunyah*) of one third or one half of the amount specified, subject to local custom. Both parts of the total amount may be stipulated together in an inclusive sum and this is the customary practice; to this inclusive sum is added the sum of the *ketubbah*, as fixed by the *halakhah*, and its increments (see **Ketubbah*), so that an overall sum is mentioned, but it is stressed that this sum is the aggregate of all the above-mentioned components (Sh. Ar., EH 66:11, and *Rema* thereto). The said obligation of the husband is treated in the same manner as any other pecuniary obligation (*Maggid Mishneh*, Ishut 16:1).

NIKHSEI ZON BARZEL. (lit. "the property of iron sheep") is a term derived from the name of a transaction in which one party entrusts property on certain terms to another, the latter undertaking responsibility therefor as he would for iron, i.e., for return of the capital value of the property as at the time of his receipt thereof, even if it should suffer loss or depreciation; since, generally, small cattle was the subject matter of such transactions, they came to be described by the above term (BM 69b and Rashi thereto). Hence the use of the term *ẓon barzel* for the property of the wife, to denote that part of her property given over to her husband's ownership but under his responsibility, i.e., subject to his undertaking to restore to her the value thereof as fixed in the *ketubbah* upon dissolution of the marriage. This obligation of the husband is governed

by the rule that any appreciation or depreciation in the property is his, regardless of any change it may undergo, or even its loss (Tur and Sh. Ar., EH 85:2); on the other hand, this obligation remains constant despite any fluctuations in currency values (as distinguished from the fluctuations in the value of the property) and the husband remains liable for the sum specified in the *ketubbah* as the dowry equivalent at its value on the date of the marriage, but subject to calculation thereof in accordance with the local law prevailing at the time of its recovery (*Taz* EH 66, n. 6; *Rema* ḤM 74:7; Resp. *Ḥatam Sofer* EH 1:126). However, if at the time of its recovery, i.e., upon divorce or the husband's death (Sh. Ar., EH 66:11 and *Rema* EH 93:1), the actual property is still in existence and fit for the purpose assigned to it at the time of the marriage – generally the case in respect of real property – the wife is entitled to demand the return thereof in specie, as being "the luster of her father's home" (*shevaḥ beit aviha*), and neither the husband nor his heirs can compel her to accept money instead (Sh. Ar., EH 88:3; *Beit Shemu'el* 88: n. 4; *Taz* 88, n. 3).

NIKHSEI MELOG. (lit. "plucked property," i.e., usufruct) is a term derived from the word *meligah*, e.g., *meligat ha-rosh*, i.e., plucking of hair from the head which remains intact. Similarly, *melog* property is property of which the principal remains in the wife's ownership but the fruits thereof are taken by the husband so that he has no responsibility or rights in respect of the principal, both its loss and gain being only hers (*Rashbam* BB 149b; *Haggahot Maimoniyyot* Ishut 16:1), and upon dissolution of the marriage such property returns to the wife as it stands, in specie. This category embraces all the property of the wife falling outside the category of *nikhsei ẓon barzel* – save for property of the kind described in the next section – whether brought by her at the time of entering the marriage, or acquired thereafter, e.g., by way of inheritance or gift (Yad, Ishut 16:2; Tur and Sh. Ar., EH 85:7).

PROPERTY WHICH IS NEITHER ZON BARZEL NOR MELOG. A third category is property of the wife concerning which the husband has no rights at all, neither as to the principal nor the fruits thereof. This includes property acquired by her after the marriage by way of gift, the donor having expressly stipulated that it be used for a specific purpose (such as for her recuperation), or that it be used for any purpose of her choice without her husband having any authority thereover (Yad, Zekhi'ah 3:13, 14; Sh. Ar., EH 85:11), or property given to her as a gift by her husband, he being considered here to have waived his rights to the fruits thereof, in terms of the rule "whoever gives, gives with a generous mind" (BB 52b and *Rashbam* thereto; Sh. Ar., EH 85; 7; see also *Gifts).

THE HUSBAND'S RIGHTS TO THE PRINCIPAL. Since the wife is entitled to the ownership of her property – *melog*, because it has never ceased to be in her ownership, and *ẓon barzel*, in terms of the halakhic rule concerning "the luster of her father's home" (see above) – the husband is not entitled to deal therewith in any manner prejudicial to her right, e.g., sale, etc., and any such act is invalid with reference to both movable and immovable property (Sh. Ar., EH 90:13, 14; *Rema* to 14; *Beit Shemu'el* 90, n. 48; Resp. *Ribash* no. 150). In the case of money the position is different: if it falls within the category of *ẓon barzel* and therefore passes fully into the husband's ownership, he being responsible for returning the equivalent thereof as determined in the *ketubbah*, he is free to trade or otherwise deal therewith, as with his own money (*Ḥelkat Meḥokek* 85, n. 4; Resp. *Ribash* no. 150); if, however, the money is part of the *melog* property and therefore not in the husband's ownership, he is not entitled to trade therewith save with his wife's consent but may only – and even will be obliged to do so if so requested by his wife – invest the money in such manner that the principal is preserved for her, while the fruits will be his (Resp. *Ribash* no. 150; *Ḥelkat Meḥokek* 85 n. 42).

INCOME FROM THE WIFE'S PROPERTY. All the fruits of the wife's property, i.e., all benefits derived from her property in a manner leaving intact the principal and its continued capacity to provide benefits – such as natural or legal fruits, e.g., rental or the right of occupation or stock dividends – belong to the husband (Sh. Ar., EH 69:3, 85:1, 2, 13). In accordance with the regulations of the sages he is entitled to these in return for his obligation to ransom her should she be taken captive, in order to avoid the ill-feeling that would arise between them if he received no help from her (Ket. 47a–b and Codes). The wife cannot forego her right to be ransomed at her husband's expense with the object of depriving him of his right to the fruits of her property, lest she remain unransomed and become absorbed among the Gentiles (Sh. Ar., EH 85:1); for the same reason, the husband does not escape the obligation to ransom his wife by renouncing the fruits from her property (*ibid.*).

By virtue of this right, the husband is entitled to receive the fruits and to take all steps necessary for the realization thereof – such as collecting rent or demanding the ejection of a tenant – in his own name and without being specifically authorized thereto by his wife (Sh. Ar., ḤM 122:8; EH 85:4 and commentaries; PDRE 4:107); nor does he require any specific authority from his wife in order to recover and receive any money to which she is entitled, including the principal, in order that it may be available to him for its investment and his enjoyment of its fruits (Sh. Ar., ḤM 122:8; *Siftei Kohen*, ḤM 122, n. 33; *Rema ibid.*). On the other hand, the husband, being entitled to the fruits, has the corresponding obligation to defray thereof the expenses of the property (Sh. Ar., EH 88:7), and if the fruits do not suffice for the purpose and he has to invest of his own money and labor on the property, he generally will not be entitled to compensation, not even upon divorce, since he is considered to have waived any claim therefor, having invested them with a view to enjoying the fruits ("what he has expended, he has expended and what he has consumed, he has consumed" – Ket. 79b; Sh. Ar., EH 88:7).

The husband's ownership of the fruits is not absolute, since the object of the halakhic rule whence his right to the fruits of the wife's property is derived is "for the comfort of the

home" Ket. 80b), i.e., for their mutual comfort in their home and so as to ease the burden of maintaining the household (see Yad, Ishut 22:20 and *Maggid Mishneh* thereto). Consequently he is not entitled to use the fruits for his personal advantage, and if he should invest them in a way showing that he is not using them for the comfort of the home, the investment will be considered the wife's property as capital forming part of her *nikhsei melog*, of which the fruits only may be taken by him, to be used for the comfort of the home (Tur, EH 85, *Perishah* n. 51; *Derishah* n. 2). For the same reason the husband's creditors, i.e., in respect of debts unconnected with the upkeep of the household, may not seize the fruits and recover their debt from the proceeds thereof since this would preclude them from being used for their assigned purpose (Sh. Ar., ḤM 97:26; commentaries to EH 85:17). On the other hand, since the fruits belong to the husband, the wife must not do anything which may deprive him of his right of usufruct. Hence her sale of the principal without her husband's consent will be invalid with regard to the fruits, as a sale of something not belonging to her and therefore the husband's right of usufruct is unimpaired thereby and he continues to enjoy the benefits thereof even if the principal is in the hands of the purchaser: "the husband may seize the fruits from the purchasers" (Sh. Ar., EH 90:9, 13). This does not mean, however, that Jewish law denies a married woman legal capacity, like an idiot or a minor, for the sale, as mentioned above, is invalid only in respect of the fruits, as being a sale of something that is not hers (*Rema* EH 90:9, 13; and *Ḥelkat Meḥokek* 90, n. 29); with reference to the principal, therefore, her ownership is not affected by the husband's usufruct and her sale is valid, to the extent that upon her divorce or the death of her husband, the purchaser will acquire, in addition to the principal, the fruits also of the property purchased by him without any need for novation or ratification of the sale. Upon the death of his wife the husband, indeed, is entitled to seize also the principal from the purchasers, but not because the sale is regarded as invalid for reasons of legal incapacity of the wife, but because the sages regulated that when a wife predeceases her husband, he is considered – *mi-ta'am eivah*, i.e., in order to avoid ill feeling between them – upon entering the marriage as the earliest purchaser of her property and therefore takes preference over any other purchaser ("*Takkanat Usha*" – see Ket. 50a, Rashi and Codes). The rule that "whatever the wife acquires, she acquires for her husband," therefore means no more than that he acquires the fruits but the principal is and remains her own (Git. 77a and *Rashi*; Sh. Ar., ḤM 249:3; on the question of the husband's right to the fruits when he is a *mored* ("rebellious spouse") see *Husband and Wife).

DOWRY AND THE MARRIAGE DEED. The wife may only recover her dowry at the same time as she does the *ketubbah*, i.e., upon divorce or the death of her husband (Sh. Ar., EH 66:11; *Rema* EH 93:1, Isserles). The two are distinct, however, since the amount of the *ketubbah* is payable from the husband's own pocket whereas the dowry is her own property. Hence, even in the case where the wife forfeits her *ketubbah* according to law (see *Divorce), she does not lose her dowry, save in case of any express halakhic rule to the contrary (Yad, Ishut 16:1; *Maggid Mishneh*, ibid.; PD 12: 1121, 1197–1201).

THE DAUGHTER'S RIGHT TO A DOWRY. See *Parent and Child.

IN THE STATE OF ISRAEL. The Supreme Court has interpreted section 2 of the Women's Equal Rights Law, 5711/1951, as directing that Jewish law is not to be followed in matters concerning the husband's rights to the fruits of his wife's property (PD 12:1528 ff.). According to this interpretation there is complete separation between the property of the respective spouses with reference to both the principal and the fruits, and the fact of their marriage in no way affects the rights of either party with regard to his or her own property or the fruits thereof.

[Ben-Zion (Benno) Schereschewsky]

The Women's Equal Rights Law, 5711 – 1951, as interpreted by the Supreme Court (see HC 202/57 *Sidis v.Rabbinical Court of Appeals*, 12 PD 1528) had far reaching implications for those cases in which a woman sued her husband for support, while simultaneously earning income from her own property. Under Jewish Law, the husband was entitled in such a case to argue that the wife receive her support from the income from her property which, according to *halakhah*, belonged to the husband (File 5712/2921,4457, 1 PDR 239; File 5716/153, 2 PDR, 97). However, in its aforementioned ruling, the Supreme Court partially abrogated the network of reciprocal obligations, so that the husband's obligation to support his wife remained intact, whereas his right to the income from her property was annulled. This meant that the income from the wife's property could not be deducted from her maintenance. This result was harshly criticized, conflicting as it did with the trend towards equalization of reciprocal duties and rights between spouses under which, in cases where the woman had income from property, she was required to assist in the household expenses. The Supreme Court noted that "this situation is unsatisfactory" and recommended that the Legislature rectify the situation by way of appropriate legislation (CA 313/59 *Balban v.* Balban, 14 (1) PD 285, per Justice Yitzchak Olshan; CA *Rinat v.* Rinat, 20 (2) PD 21 per Justice Zvi Berenson). In another case (FH 23/69 *Yosef v.* Yosef, 24 (1) PD 792), the Supreme Court ruled that, when the wife worked and earned a living, her salary was to be deducted against the sum he owed her as support, because her income constituted "the wife's handiwork" (*ma'aseh yadeha*), which belongs to the husband (see entry: *HUSBAND AND WIFE). In wake of that decision, the Court again called upon the Legislator to amend the existing legal position and to equate the law applying to income from the wife's real assets with the law applying to her income, so that both might be reckoned against the sum owed for her

support (CA 61/71 *Cohen v. Cohen*, 25 (2) PD 327, per Justice Etzioni):

> The existing legal situation gives rise to blatant inequality between maintenance awarded to women who have income-producing property, and those whose income is derived from her wages. In the former case the Court does not consider her income in calculating the support her husband is required to provide, whereas in the case of the working woman, the Court does take her wages into account (her salary being considered "her handiwork"). This is an unacceptable state of affairs. The way to eliminate the inequality inherent in this state of affairs is […] to apply to a women who owns *melog* (i.e., real property on which the husband enjoys usufruct) the same rule that applies to working woman when determining the amount of support (p. 332 of decision).

In response to the Supreme Court's recommendation to the legislature that the statute be amended, in 1976 a new clause, section 2a, was added to the Family Law Amendment (Maintenance) Law, providing that "Notwithstanding the provisions of the Women's Equal Rights Law, 5712 – 1951, in fixing the amount of support required to be paid to a spouse, the Court is entitled to take into account the income of the spouse from employment and from property, and if deemed appropriate – from any other source."

The Supreme Court (CA 596/89 *Hakak v.* Hakak, 45 (4) PD 749) ruled (per Justice M. Elon) that the amendment of the law restored the balance in Israeli law between the woman's right to support and the husband's halakhic right to his wife's handiwork:

> Had it been possible to rely exclusively on the personal law [based on *halakhah*], then with respect to Jewish spouses there would have been no need to amend the Maintenance Law, because according to Jewish Law, when fixing the amount of the support the wife's *melog* property is not taken into account – meaning that she does not have to sell her property in order to support herself. On the other hand, account *is* taken of her income from that property. However, as a result of the enactment of the Women's Equal Rights Law and its interpretation by the Supreme Court, this consideration for the wife's income from her property was abolished when fixing the amount of her support. This "incidental oversight" has now been rectified by the amendment in section 2a. Accordingly, section 2a begins with the provision: "Notwithstanding the provisions of the Women's Equal Rights Law" – the intention being to specify the name of the law requiring amendment, and to underscore that it was an amendment of that law. As a result of this amendment to the Women's Equal Rights Law, Jewish Law was "released" from the yoke of that "oversight" with respect to the fixing of the amount of support for the wife on the basis of the Women's Equal Rights Law as interpreted by the Supreme Court, and the crown of the original Jewish Law was restored (p. 778 of the decision) (see *Matrimonial Property).

°**DOZY, REINHART PIETER ANNE** (1820–1883), Dutch Arabist-Islamist. Having studied Semitics at Leiden, Dozy was appointed professor of medieval and modern history at the university. His scholarly activities concentrated on Arabic lexicography (cf. his *Supplément aux dictionnaires Arabes*, 2 vols. (1881)) and the history of Muslim Spain. His *Histoire des Musulmans d'Espagne, jusqu'a la conquête de l'Andalousie par les Almoravides 711–1110* (4 vols., 1861) was re-issued at least 20 times and became fundamental to the modern study of medieval Andalusia. In 1864 he published a Dutch volume on the Jews in Mecca, *De Israëliten te Mekka van Davids tijd tot in de vijfde eeuw onzer tijdrekening*. There he suggested that migrants from the tribe of Simeon had started the Meccan sanctuary in the days of David, and that a new wave of Hebrews during the Babylonian period had strengthened the Hebraic impact on Muslim ritual. This controversial theory was both applauded and criticized, the latter especially in German Jewish circles. (Dozy's Leiden colleague H. Oort continued the discussion in *The Worship of Baalim in Israel* (1865).) Contemporary Dutch Jewish scholars, too, followed Dozy's work with a keen interest.

In 2005, the worldwide Jewish population was estimated to be close to 14 million persons, with its largest numbers in North America and Israel. Despite the large concentrations in these two geographical areas, there are Jews all over the world who come from a variety of racial and ethnic backgrounds. Here are a few faces that illustrate the diversity and vibrancy of Jewish life in its many world-scattered communities.
