*damot u-She'arim* (Piotrkow, 1908); *Sefer ha-De'ah* (an abbreviation for *Derushei Olam ha-Tohu*) in two volumes (Piotrkow, 1911); *Sefer ha-Kelalim*, on the principles of *egressus* and *digressus* in the process of emanation, two volumes (Jerusalem, 1924–26, but actually completed only in 1930); *Sefer Helkei ha-Be'urim*, a commentary on Ḥayyim \*Vital's *Ez Ḥayyim* in two volumes (Jerusalem, 1935–49). His glosses and additions to *Ez Ḥayyim* were also published in the Warsaw 1890 edition of that work. The works of Eliashov contain a highly detailed systematic description of the Lurianic Kabbalah concerning the doctrine of *azilut* (“emanation”). It was said that Eliashov accomplished for the works of Isaac \*Luria what Moses \*Cordovero had done for the \*Zohar.

**ELIAS LE EVESKE (Elijah ben Berechiah ha-Kohen;** before 1200–after 1259), archpresbyter of English Jewry (1243–57). Born in London before 1200, Elias Le Eveske (or l'Eveske, as he was often known) was a prominent figure in the London Jewish community by 1230. His period of office coincided with the most outrageous of the royal exactions by Henry III. In 1253 he appeared before Earl Richard of Cornwall and the Royal Council and made a pathetic appeal for permission for the Jews to leave the country. He was deposed from office in 1257 and two years later became converted to Christianity, together with his two sons. His subsequent life is unknown.

**ELIASSOF, HERMAN** (1849–1918), U.S. Reform rabbi. Eliassof was born in Russia, ordained in Germany, and immigrated to the United States in 1871. After serving for a year as rabbi of Congregation Rodef Shalom in Ogdensburg, N.Y., he became the first rabbi of Temple Beth-El in Chicago, where he was also editor of *The Occident*, a local religious weekly, as well as the regional correspondent for the \**American Israelite*, the Anglo-Jewish weekly newspaper published in Cincinnati. For many years he served as principal of the Sabbath school of Kehillath Anshe Maarab and was a teacher in the Zion Congregation religious school. In the early 1890s, Eliassof was head of the Society in Aid of Russian Refugees, which assisted the many Jews who came to Chicago in the wake of the enforcement of the Russian \*May Laws. Eliassof was the first scholar to write a history of the Jews of Illinois, which was published in a special issue of *The Reform Advocate*. He also wrote Hebrew poetry and was a frequent contributor on Jewish subjects to English, German, and Hebrew periodicals.

**ELIAV, ARIE LOVA** (1921– ), Israeli planner, educator, sociologist, politician, and peace activist, member of the Sixth to Ninth and Twelfth Knessets. Eliav was born in Moscow and was brought by his parents to Palestine in 1924. He studied at the Herzlia Gymnasium in Tel Aviv and general history and sociology at the Hebrew University in Jerusalem. He joined the Haganah in 1936 and in the years 1941–45 fought in the British army in the Middle East and Europe. In 1946–48 he was active in the organization of “illegal” immigration to Palestine. After the establishment of the state he joined the IDF and participated in the War of Independence, reaching the rank of lieutenant colonel. In 1949–53 he served as assistant to the director of the Jewish Agency Settlement Department, and studied agricultural economics in London in 1953. In 1955–57 Eliav directed the project for the development of the Lachish region in southern Israel, where many new immigrants were settled; he participated in the planning and establishment of the town of Arad. During the Sinai Campaign in 1956 he was in charge of the project for saving the Jews of Port Said.

In 1958–60, Eliav served as first secretary in the Israeli Embassy in Moscow. In 1960–64 he headed the aid and rehabilitation mission that Israel sent to Qazvin in northwestern Iran after it had been severely hit by an earthquake. Eliav was first elected to the Sixth Knesset in 1965 on the Alignment list. In 1966–67 he served as deputy minister of industry and trade in charge of industrialization in development areas, and the following two years as deputy minister of immigration absorption under Yigal \*Allon. In 1969–71 Eliav served as secretary general of the \*Israel Labor Party. In this period he started to adopt dovish positions regarding the concessions that Israel might make in return for peace with its neighbors. After resigning the secretary generalship of the Labor Party, he spent the next year writing an ideological work entitled *Erez ha-Zevi* (one of the biblical names for the Land of Israel) in which an entire chapter was devoted to a discussion of Israel's relations with the Arabs and Palestinians. It appeared in English in 1974 as *Land of the Hart*.

Following the earthquake that occurred in Managua in Nicaragua just before Christmas of 1972 Eliav headed an Israeli aid mission to help construct temporary housing there. In December 1973 he ran in the elections to the Eighth Knesset on the Alignment list, but in April 1975 left the Alignment and joined the Civil Rights Movement, forming a parliamentary group by the name of Ya'ad. In 1975 he was also one of the founders of the Israeli Council for Israeli-Palestinian Peace. In January 1976 he and MK Marsha Freedman left Ya'ad, due to a dispute about policy toward the PLO and formed the Social Democratic parliamentary faction. In 1976–77 Eliav participated in talks with representatives of the PLO.

Eliav was one of the founders of the radical party Maḥaneh Sheli, and in 1977 was elected to the Ninth Knesset on its list. In 1979 he handed his seat over to Uri \*Avneri and engaged in teaching new immigrants and prisoners. In 1982–85 he participated, on behalf of Prime Minister Menahem \*Begin, in contacts with the PLO and other Palestinian organizations in

an attempt to bring about the release of four Israeli prisoners held by them in return for over 1,000 Palestinian prisoners.

In 1982 Eliav joined the International Center for Peace in the Middle East. In the elections to the Twelfth Knesset in 1988 he returned to the Knesset on the Alignment list. In 1993 he unsuccessfully ran against Ezer \*Weizman for the Labor Party nomination for the presidency of Israel.

[Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**ELIAV (Lubotzky), BINYAMIN** (1909–1974), Israeli public figure and editor. Born in Riga, Latvia, he finished his secondary education in Haifa. Returning to Europe for his higher studies, he soon became one of the outstanding figures in the Betar movement, led by Vladimir Jabotinsky, whose personality profoundly influenced him. From 1932 to 1935, he lived in Paris where he served as general secretary of Betar. In 1935 he returned to Palestine, where his political activities against the policies of the British Mandatory government earned him repeated terms of imprisonment, principally in the Acre Prison. In between, he edited the movement's newspapers *Hamashkif* and *Hayarden*.

In 1938 he was released from Acre due to ill health, on condition that he leave the country until the termination of martial law, and was in Riga until 1940. After his return he championed the cause of conciliation between the Revisionist movement and the Zionist Organization. A tentative agreement that was to be the basis of the reconciliation was vetoed by Ben-Gurion.

Eliav left Betar and formed his own political party, Tenuat Ha'am, and edited its daily newspaper, *Mivrak*. This small party attracted a wide variety of supporters. In June 1947 Eliav was again arrested, and placed in a detention camp in Latrun together with other leading figures of the *yishuv*.

After the establishment of the State of Israel he underwent a certain metamorphosis. He disbanded his party and never again played an active political role. He worked as a journalist, editor, and translator (editing the Labor Party's afternoon daily *Ha-Dor*, and translating Isaac Deutscher's biography of Stalin). From 1953 he was in the Israel Foreign Ministry, serving in South America and later as consul-general in New York.

Gradually he devoted himself exclusively to the cause of Soviet Jewry, which in the mid- to late-1950s, was a *tabula rasa*. To Eliav the fate of this last great Jewish community to survive in Europe was crucial to the future of the Jewish people. At the same time, he saw it as a universal human problem of minority rights.

For the next 12 years he traveled all over the world and established a veritable network of influential connections. He won the support of outstanding personalities such as Bertrand Russell, Jean-Paul Sartre, Aya de la Torre of Peru, and Senator Terracini of Italy.

After retiring from the Foreign Ministry, he served for a while as Prime Minister Eshkol's adviser on information and as acting chairman of the Broadcasting Corporation. From

1969 Eliav worked on the *Encyclopaedia Judaica*, of which he was associate editor with particular responsibility for the section dealing with Israel, Zionism, and contemporary Jewish history. *Sifriat Keter*, a series of original monographs in Hebrew on various aspects of Jewish culture and history, was launched by him, and he edited its first volumes.

[Aryeh Eliav (2<sup>nd</sup> ed.)]

**ELIEL, ERNEST LUDWIG** (1921– ), U.S. organic chemist. Eliel was born in Germany and received his Ph.D. from the University of Illinois in 1948. He was at the University of Notre Dame in 1948–72 (professor from 1960) and W.R. Kenan, Jr. Professor at the University of North Carolina at Chapel Hill in 1972–93. He was a member of the National Academy of Sciences, U.S., and the American Academy of Arts and Sciences. He wrote *Stereochemistry of Carbon Compounds* (1962) and was co-author of *Conformational Analysis* (1965), *Elements of Stereochemistry* (1969), *Stereochemistry of Organic Compounds* (1994), and *Basic Organic Stereochemistry* (2001). He published over 300 original publications and reviews in stereochemistry, conformational analysis, synthetic methodology, physical organic chemistry, and NMR. He received the Priestley Medal (Am. Chem. Soc.) in 1996 and many other awards and was president of the American Chemical Society, 1992.

[Bracha Rager (2<sup>nd</sup> ed.)]

**ELIEZER** (Heb. אֱלִיעֶזֶר; “God is help”), the steward of \*Abraham’s household (Gen. 15:2).

#### In the Bible

Eliezer’s name appears in the text immediately following the word “Dammeseq.” While English “Tokyo Rose” is syntactically unobjectionable, “Damascus Eliezer” is foreign to Hebrew. Ginsberg (in bibliography) suggests accordingly that *dammeseq eliezer* is a phantom resulting from scribal corruption. Alternatively, “Dammeseq Eliezer” is simply the name of the steward, composed of two words. According to the story, Abraham complained to God that material reward would be of little use to him since, because he had no offspring, his servant Eliezer was to be his heir. God replied with the promise of a natural heir (Gen. 15:4ff.). This episode is made clear in light of the Nuzi archives, which frequently mention the filial adoption of a stranger, sometimes a slave, by a childless couple to tend them in old age and perform their funeral rites in return for being their heir. Sometimes, complications might arise where a natural son would be born after the adoption, as in the case of Eliezer. The Nuzi contracts, however, carefully set out the rights and obligations of both parties in such eventualities.

#### In the Aggadah

Although nowhere so mentioned specifically in the narrative, Eliezer is identified by the rabbis with the anonymous servant sent by Abraham to find a wife for Isaac (Gen. 24). He is thus made the prototype of the loyal and selfless servant, fulfill-

ing his master’s wish even to his own disadvantage. He had a daughter whom he hoped Isaac would marry, and the failure of his mission would have made this possible (Gen. R. 59:9). He is credited with having acquired all the virtues and learning of his master. His name, “Eliezer of Damascus” is interpreted as meaning that he drew from and provided others with his master’s teachings (*Dammeseq = doleh u-mashkeh*; Yoma 28b). He even resembled Abraham in his physical appearance, and Laban mistook him for his master (Gen. R. 60:7). Raised in Nimrod’s court, Eliezer was presented to Abraham after his miraculous deliverance from the fiery furnace (*Sefer ha-Yashar*, Noah 42). Eliezer alone went with Abraham to rescue Lot, the *gematria* of his name being 318, the number of Abraham’s servants given in the Bible as constituting his army (Gen. 14:14; Tanh. B., Gen. 73). Later, Eliezer visited Sodom where he was victim of the injustices practiced in that city (Sanh. 109b; see also \*Sodom in the *Aggadah*). Despite his admirable qualities, Eliezer still remained a member of the cursed Canaanite nation. He is identified as one of the two lads who accompanied Abraham and Isaac to the \**akedah* (Lev. R. 26:7), and who remained at the foot of Mount Moriah because they could not see the vision which was vouchsafed to Abraham and Isaac (Gen. R. 56:2). Eliezer was wrongly suspected of having defiled Rebekah during their journey from Haran (PDR 16).

As a reward for successfully discharging his mission, he was emancipated by Abraham and given the kingdom of Bashan, over which he reigned under the name of Og (PDR 16). The curse resting upon Eliezer, as upon all descendants of Canaan, was transformed into a blessing because of his loyal service to Abraham (Gen. R. 60:7). His greatest recompense was that God found him worthy of entering Paradise alive, a distinction accorded to very few (DEZ 1).

There are nine other biblical personages of the same name: (1) Moses’ younger son (Ex. 18:4; I Chron. 23:15, 17; 26:25); (2)–(9) see I Chron. 7:8; 15:24; 27:16; II Chron. 20; 37; Ezra 8:16; 10:18, 23, 31.

Ginsberg, in: BASOR, 200 (Albright Anniversary; 1970), 31–2.

**ELIEZER BEN HYRCANUS** (end of the first and beginning of the second century C.E.), *tanna*. He is sometimes called Eliezer the Great (Sot. 9:15; Tosef., Or., end) and is the Eliezer mentioned without patronymic. R. Eliezer was one of the pillars of the early talmudic tradition, and through his student R. Akiva (and Akiva’s circle of disciples) he had a decisive influence on the evolution of *halakhah* during the tannaitic period and beyond. In the eyes of later talmudic tradition, the period

of the *tannaim* was a heroic age, and even the slightest scrap of information about the least of the *tannaim* can develop in the later *aggadah* into a tale of epic proportions. In the case of truly heroic and significant personalities, like R. Eliezer – who was already the subject of many colorful stories in the tannaitic literature itself – this process of literary expansion and elaboration is inevitable. R. Eliezer even became the subject of an early medieval midrashic romance (*\*Pirkei de-Rabbi Eliezer*), while the talmudic story of his death was retold in the *Zohar* (1:98a), providing the literary prototype for the Zoharic masterpiece, the *Idra Zuta*. R. Eliezer remained the object of admiration and the subject of an ongoing and developing narrative tradition for over 1,000 years. As a result it is not always easy to distinguish between the earlier and more fundamental forms of the traditions relating to this historical figure, and those which reflect a later more romanticized and “fictionalized” form of these traditions. In fact it would be fair to say that up to and through the 1970s scholars rarely even made any attempt to distinguish between these different literary and historical levels. Only after Jacob Neusner’s revolutionary studies of the life and legend of Rabban Johanan ben Zakkai did scholars begin to pay serious attention, not only to the legend, but also to the history of the legend. Below, we will first bring in outline the “legend” of R. Eliezer, as summarized by one of the finest scholars of the last generation, and then make a few brief comments about the “history of the legend.”

### Education

Eliezer’s youth is enveloped in legend. It is said that until the age of 22 (or 28) he worked the estates of his wealthy father, but on deciding to study he left home, making his way to the school of \*Johanan b. Zakkai in Jerusalem. There he studied diligently in poverty and want until he became one of the outstanding students of the academy. Some time later his father came to Jerusalem to take a vow to deprive him of his inheritance. When he entered the *bet midrash*, however, and found his son sitting at the head, with all the great scholars of Jerusalem facing him, expounding the Torah and “transcending what was said to Moses at Sinai, his countenance as luminous as the light of the sun, and beams emanating from him as the rays from Moses,” Hyrcanus changed his mind and instead wished to bequeath the whole of his fortune to Eliezer, who, however, refused to accept more than his brothers (ARN<sup>1</sup> 6, 31; ARN<sup>2</sup> 13, 32; PDRE 1; 2, and parallels). According to another tradition, he was outstanding already in his youth. It was realized that he was destined to achieve great things, and the verse (Prov. 20:11), “Even a child is known by his doings,” was applied to him (Gen. R. 1:11, and parallels). Johanan b. Zakkai had a very high opinion of his pupil and said of him, “If all the sages of Israel were in one scale of the balance and Eliezer b. Hyrcanus in the other, he would outweigh them all” (Avot 2:8). He also praised his phenomenal memory, calling him “a cemented cistern that does not lose a drop” and “a pitched vessel that preserves its wine” (ARN<sup>1</sup> 14, 58), a reference also to his intense conservatism. Eliezer followed the example of

his teacher both in his method of study and his behavior. He never walked four cubits without studying and without *tefillin*; no one ever found him sitting in silence, but only sitting and learning; he never said anything that he had not heard from his teacher (Suk. 28a). During the Roman War Eliezer was closely attached to his teacher. He and his colleague, \*Joshua b. Hananiah, bore Johanan in a coffin outside the walls of Jerusalem during the siege for his meeting with Vespasian (Git. 56a).

After the destruction of the Temple he was numbered among the important scholars of the great *bet din* of \*Jabneh (Sanh. 17b). He also played an important part in national affairs. He was a member of a delegation to Rome headed by the *nasi* to obtain concessions for the Jews (TJ, Sanh. 7:16, 25d, et al.); and traveled to Antioch on behalf of the scholars (*ibid.*, Hor. 3:7, 48a). He married into the family of the *nasi*; his wife, \*Imma Shalom, was the sister of Rabban \*Gamaliel. His permanent home was in Lydda, where he established an academy. Among his outstanding pupils were \*Akiva, \*Ilai, \*Yose b. Dorsmaskos, Abba Hanan, and \*Aquila the proselyte. His *bet midrash* was well-known, and the verse “Justice, justice shalt thou follow” (Deut. 16:20) was applied to it: “Follow an eminent *bet din*, follow the *bet din* of Johanan b. Zakkai and the *bet din* of Eliezer [in Lydda]” (Sif. Deut. 144; cf. Sanh. 32b).

### Halakhic Method and Relation to his Colleagues

In his halakhic method Eliezer is distinguished by his great attachment to early traditions and ancient *halakhot*. This tie with early *halakhah* brought him into conflict with the trends operating in the council of Jabneh to adjust the *halakhah* in the light of the changes that took place with the destruction of the Temple, and to crystallize the religious tradition into a fixed and uniform system. In his disputes with \*Joshua and his associates, different attitudes to the *halakhah* found expression. Thus Eliezer endeavored to limit the use of hermeneutical rules as a basis for deriving new *halakhot*, regarding the tradition and doctrine which had been handed down as the foundation and essence of the *halakhah* (Neg. 9:3; Tosef., TY 1:8 and 10; et al.). He regarded the act as the determinant of a person’s obligations and punishments, in contrast to his associates who regarded intent and purpose as the deciding factor (Ker. 4:3; Tosef., TY 2:13f.; et al.). Even the tendency to stringency which he reveals in a considerable number of his *halakhot* was grounded in the early *halakhah*, which was based on the doctrine of \*Bet Shammai, as a result of which he was called “*Shammuti*” (“follower of Shammai”; Shab. 130b; TJ, Bezah 1:4, 60c; et al.). He was very determined and unyielding (Ta’an. 25b). The drawn-out struggle between him and the *nasi* and scholars of the Sanhedrin ended tragically. The Talmud relates that during a discussion on the ritual purity of the “oven of Akhnai” (an oven made by Akhnai) in the college, Eliezer brought every conceivable argument in favor of his view but they were rejected by his colleagues. “He said to them: ‘If the *halakhah* agrees with me, let this carob tree prove it,’ whereupon the carob tree was torn a hundred cubits out of its place... He then said to them: ‘If the *halakhah* agrees with

me, let it be proved from heaven,' whereupon a *\*bat kol* cried out: 'Why do you dispute with Eliezer, seeing that in all matters the *halakhah* agrees with him?' R. Joshua arose and said, 'It [i.e., halakhic decision] is not in heaven' [Deut. 30:12], we pay no attention to a *bat kol*, for it is written in the Torah at Mount Sinai: 'One must follow the majority' [Ex. 23:2]" (BM 59b). The *aggadah* continues that on that day all objects which Eliezer had declared ritually pure were brought and burned. A vote was then taken and they excommunicated him.

This severe step affected Eliezer's status and undermined his influence in *halakhah*. He was removed from the council, his associates and pupils held aloof from him, and even refrained from quoting his *halakhot* in the assembly of the scholars (Nid. 7b; Sif. Deut. 188). Of his violent reaction it is reported: "Great was the anger on that day, for everything at which he cast his eyes was burned. Rabban Gamaliel, too, was traveling in a ship when a huge wave arose to drown him. 'It appears to me,' he reflected, 'that this is on account of none other than Eliezer b. Hyrcanus.' He arose and said: 'Lord of the Universe! Thou knowest full well that I have acted neither for my honor nor for the honor of my father's house, but for Thine, so that strife may not multiply in Israel'" (BM 59b). Rabban Gamaliel excused his action on the grounds that excommunication was designed to establish unity in the sphere of *halakhah* and to establish the authority of the council as a determining and decisive institution in a fateful period in the life of the nation.

#### Attitudes toward the Jewish and Pagan Worlds

Eliezer's love for Israel and his country and his hatred of pagans knew no bounds. During the Roman War he was near in spirit to the *\*Zealots*. He considered weapons to be an adornment, permitting them to be worn on the Sabbath in public (Shab. 6:4). He forbade chapter 16 of Ezekiel to be read as *haftarah*, and sharply censured anyone who transgressed this, because it included matters that offend the honor and ancestry of the Jews (Meg. 4:10, 25b). His adverse opinion of heathens is expressed in his saying: "All the charity and kindness done by the heathen is counted to them as sin, because they only do it to magnify themselves" (BB 10b). This adverse attitude served as the basis for several of his *halakhot*, such as his disqualification of sacrifice from heathens (Par. 2:1; Av. Zar. 23a), and he endeavored as far as possible to lessen social contact between them and Jews (Hul. 2:7; Git. 45b). This, too, is the cause of his reservations about accepting proselytes (Yev. 48b; BM 59b).

The Tosefta relates that Eliezer was once arrested by the government for uttering heretical opinions. Though he was liberated and exempted from punishment, he was greatly distressed that he had been wrongly suspected. Akiva, in an attempt to comfort him, said to him: "Perhaps you heard a heretical opinion and it appealed to you." Eliezer remembered that in Sephoris he had heard a *halakhah* from Jacob of Kefar Sekhania in the name of Jesus b. Pandira, which had appealed to him, thus transgressing (Prov. 5:8), "Remove thy way from

her," i.e., from heresy. This may be reflected in his statement: "Keep away not only from ugly deeds but from what appear such" (Tosef., Hul. 2:24; Av. Zar. 16b). His bitter experience is reflected in his saying: "Let the honor of thy friend be as dear to thee as thine own; and be not easily provoked to anger; and repent one day before thy death; and warm thyself before the fire of the wise, but beware of their glowing coals that thou be not singed, for their bite is the bite of a fox, and their sting is the sting of a scorpion, and their hiss is the hiss of a serpent, and all their words are like coals of fire" (Avot 2:10).

#### Attitude toward his Colleagues in his Last Days

When Joshua, Eleazar b. Azariah, and Akiva came to visit him in his last illness, he expressed his severe indictment of the scholars for their withdrawal from him: "I shall be surprised if these [the scholars of the generation] die a natural death," he exclaimed bitterly; and in explanation he said, "Because they did not come to study under me." Eliezer then lifted both arms, placed them upon his breast, and said: "Woe for my two arms, that are like two scrolls of the Law and that are about to depart from the world. For were all the seas ink, and all the reeds quills, and all the people scribes they would not suffice to write all the Scripture and Mishnah I learned, and all the practice I was taught at the yeshivah ... and my pupils have taken no more than the paint brush takes from the palette" (ARN<sup>1</sup> 25, 80f.; Sanh. 68a).

#### Attitude toward Eliezer after his Death

The attitude of the scholars to Eliezer changed only after his death. "When his soul departed in purity, Joshua arose and said: 'The vow is annulled! The vow is annulled!' and he clung to him and kissed him and wept, saying, 'Rabbi! Rabbi!'" (*ibid.*; TJ, Shab. 2:6, 5b). "Akiva rent his clothes and tore his hair until blood flowed and he fell to the ground and cried out: 'Woe is me for thee, Rabbi! Woe is me for thee, Rabbi! For thou hast left the whole generation orphaned. My father! My father! the chariots of Israel and the horsemen thereof [II Kings 2:12]. I have many coins to change, but no one to accept them'" (*ibid.*). Everyone realized: "With the death of Eliezer, the scroll of the Law was hidden away" (Sot. 49b). His *halakhot* were restored to the *bet midrash*, many being cited in his name in the Mishnah and *beraitot*. When scholars wished to refute his words, Joshua said "You should not seek to refute the lion after he is dead" (Git. 83a). The *halakhah* was also decided in accordance with his views in a number of instances (e.g., Nid. 7b). Eliezer left a son Hyrcanus who, according to tradition, did not wish to occupy himself with study, whereupon Eliezer consecrated his property to heaven in order to compel him to occupy himself with Torah. The scholars later absolved him from his vow (She'iltot, Ex. 40; cf. Shab. 127b). The *Pirkei de-Rabbi Eliezer*, as well as several other minor *Midrashim*, are ascribed to his authorship.

[Yitzhak Dov Gilat]

#### Toward a History of the Legend

When approaching the history of the legends surrounding a figure like R. Eliezer, it is virtually impossible to provide a

simple, synthetic overview of his life, like that presented above. Each tradition has a history of its own, often beginning with some early traditional element related in tannaitic sources, and sometimes lacking any early literary foundation whatsoever. For example, in describing R. Eliezer's early life, it is natural to begin with the most detailed and colorful versions of the story – ARN<sup>1</sup> 6, 31; ARN<sup>2</sup> 13, 32; PDRE 1; 2. But all these sources are post-talmudic, and reflect a highly romanticized version of events. Similarly in the case of the story of the “oven of Akhnai,” it is tempting to begin with the “complete” version of events – including a full description of R. Eliezer's excommunication – as laid out in Babylonian Talmud BM 59b, and to set aside the fragments of information found in tannaitic sources, or the merely “partial” description found in the earlier Jerusalem Talmud. Yet what do the early sources have to tell us? Mishnah *Kelim* 5:10 reports a simple and unexceptional dispute between R. Eliezer and the Sages, over a certain kind of oven, called the “oven of Akhnai,” which R. Eliezer considered pure (i.e., not susceptible to ritual impurity), while the Sages held that it was impure (i.e., susceptible to ritual impurity). In Mishnah *Eduyyot* 7:7, however, this tradition is transmitted in a somewhat different form: “They testified that an oven [of this sort] was impure, since R. Eliezer held that it was pure.” From this source it sounds as if R. Eliezer's opinion about this oven had been the subject of a special debate, in which his view was dismissed as invalid. The Tosefta of *Eduyyot* (2:1) restates the more neutral formulation of Mishnah *Kelim*, but adds at the end: “and it was called the oven of Akhnai, about which there were many disputes in Israel.” From this it might seem that the dispute over the oven of Akhnai did not end with the attempt of the Sages to suppress R. Eliezer's position, but rather resulted in further and more serious disputes and confrontations. The next stage in the development of this tradition is found in the Jerusalem Talmud (MK 3:1, 81d). After quoting Mishnah *Kelim*, it transmits the following description in the name of R. Jeremiah – a fourth generation Palestinian amora: “A great tribulation occurred on that day. Wherever R. Eliezer looked was stricken. Not only that, but even a single stalk of wheat was half stricken and remained half healthy, and the walls of the meeting hall began to weaken. R. Joshua said to them: ‘If friends are having an altercation what concern is it of yours?’ Then a heavenly voice declared: ‘The *halakhah* is according to R. Eliezer, my son.’ R. Joshua replied: ‘It is not in heaven.’” R. Jeremiah's description contains nothing about any excommunication, and in fact this Palestinian tradition contains little more than a colorful elaboration of what could be gleaned from the tannaitic sources themselves. On the other hand, immediately prior to this discussion of Mishnah *Kelim*, the Jerusalem Talmud (MK 81c) brings two anonymous traditions beginning with the words “They attempted to excommunicate R. Meir,” and “They attempted to excommunicate R. Eliezer.” In the first case R. Meir objected, and it would seem that the excommunication was not put into effect. In the second case also, after R. Akiva went to inform R. Eliezer that his “friends” had excommunicated him, R. Eliezer objected, as

the Jerusalem Talmud relates: “He took him and went outside, and said ‘Carob, Carob! If the *halakhah* is as they say, uproot yourself!’ But it did not uproot itself. ‘If the *halakhah* is as I say, uproot yourself!’ and it did uproot itself. ‘If the *halakhah* is as they say, return!’ But it did not return. ‘If the *halakhah* is as I say, return!’ and it did return.” Here also there is no sign that the proposed excommunication was put into effect. But when all of these anonymous and attributed Palestinian amoraic traditions are brought in Babylonian Talmud BM 59b they are presented woven together into a single coherent and continuous narrative, appearing as a single tannaitic *baraita* (whose content was summarized in outline above). Does the Babylonian Talmud preserve here an early tannaitic tradition, which contains the full and authentic version of historical events as they occurred, or does the Babylonian Talmud's version represent, rather, the final stage – to use Neusner's phrase – in the “development of a legend”? Each individual case obviously needed to be analyzed and evaluated in its own right. Similar questions need to be raised and similar analyses provided with respect to the halakhic positions ascribed to R. Eliezer both in tannaitic and amoraic sources. Because of the highly technical nature of these discussions, however, we will pass over them here.

Hyrcanos: The Traditions and the Man* (1973).

**ELIEZER BEN ISAAC (Ashkenazi; 16<sup>th</sup> century)**, Czech Hebrew printer. Eliezer was born in Prague. In partnership with others he printed Hebrew books in Lublin from 1557 to 1573. For a short while an epidemic forced him to move to Konska Wola, near Lublin, and some of the products of his press bear the name of that small town. Among the works printed by him in Lublin are some tractates of the Talmud, published with the approval and recommendation of the \*Councils of the Lands. In 1574 he set out for Constantinople, taking his typographic equipment, and set up press in partnership with David b. Elijah Kashti. They printed a volume of geonic responsa (1575) and began a *Mahzor Romania* (festival prayer book according to the Romaniot rite), in which Kashti, as a member of the old-established pre-Turkish community, was particularly interested. The partnership broke up before the *mahzor* was finished. Then Eliezer alone issued Baruch ibn Ya'ish's commentary on the Song of Songs under the title *Mekor Barukh* (1576). The same year Eliezer went to Safed, where he entered into partnership with Abraham b. Isaac (Ashkenazi), who

financed the press. Thus they established the first press in Erez Israel. They produced three works in the years 1577–79. Later Eliezer returned to Constantinople, where he printed, once more in partnership with Kashti, Samuel Aripol's *Lev Hakham* (1586). In 1587, in Safed again, Eliezer printed three more books. Eliezer apparently died soon after.

**ELIEZER BEN ISAAC OF WORMS** (also called “**Eliezer ha-Gadol**”; 11<sup>th</sup> century), German talmudic scholar. Eliezer was a pupil of his relative Simeon ha-Gadol, in \*Mainz, and later of \*Gershom Me'or ha-Golah, and \*Judah ha-Kohen, author of *Sefer ha-Dinim*. He was a friend of \*Jacob b. Jakar (Rokeah, *Ha-Tefillah* 21; Joseph Solomon Delmedigo, *Mazref le-Hokhmah* 14:2). After the death of R. Gershom, he and Jacob b. Yakar headed the yeshivah of Mainz, which numbered among its pupils Isaac ha-Levi and \*Isaac b. Judah, the teacher of Rashi, who mentions Eliezer several times in his commentaries to the Bible (e.g., Ps. 76:11) and the Talmud (Pes. 76b) calling him “*ha-Gadol*” or “*ha-Ga'on*.” A number of Eliezer's decisions and instructions have been preserved in works issuing from Rashi's school, including the *Sefer ha-Pardes*. Menahem b. Judah di Lonzano attributes to Eliezer the well-known work, *Orhot Hayyim* or *Zavva'at R. Eli'ezer ha-Gadol*, which had previously been attributed to \*Eliezer b. Hyrcanus. The suggestion that Eliezer was the father of Tobiah b. Eliezer, author of the *Lekah Tov*, is without firm foundation. The *selihah* “*Elohah Bassar*” recited in the *Yom Kippur Katan* service, which bears Eliezer's name in acrostic form, has been attributed to him.

**ELIEZER BEN JACOB**, name of two *tannaim*.

(1) *Tanna* who lived during the period of the destruction of the Second Temple. He was intimately acquainted with the Temple and describes its structure, arrangements, and customs (Mid. 1:9; 2:6; Ar. 2:6; etc.). A tradition states that he was the author of the Mishnah \**Middot* on the structure and dimensions of the Temple (Yoma 16a; TJ, Yoma, 2:3, 39d). It is reported that \*Ben Azzai found in Jerusalem a genealogical scroll in which it was written that the opinions quoted in Eliezer's name are few “but well-sifted” (i.e., irrefutable) and that his statements everywhere represent the accepted *halakhah* (Yev. 49b). Since there was another *tanna* of the same name (see below), it is sometimes difficult to distinguish which of the two was the author of certain *halakhot*. It is, however, undoubtedly this Eliezer who is quoted in connection with laws dealing with the Temple and in discussions with R. \*Eliezer b. Hyrcanus, R. \*Ishmael b. Elisha, and R. \*Ilai (Kil. 6:2; Kelim 7:3; Pes. 39a). One of his aggadic

contributions is his interpretation of the phrase: “serve Him with all your heart and with all your soul” (Deut. 10:10), which he interpreted as an admonition to priests officiating in the Temple not to allow extraneous thoughts to enter their minds (Sif. Deut., Ekev. 41).

(2) *Tanna* of the second century. A pupil of R. \*Akiva (Gen. R. 61:3; TJ, Hag. 3:1, 78d), he was among the sages who participated in the synod at Usha after the Hadrianic persecutions (Song Rabbah 2:5). Talmudic sources quote *halakhot* on which he differed from his colleagues R. \*Meir, R. \*Judah, R. \*Yose, R. \*Simeon b. Yoḥai, and R. \*Eleazar b. Shammu'a (Neg. 10:4; Tosef., Yev. 10:5; Tosef., BK 5:7). He is reported as saying: “Whoever provides lodging in his home for a scholar and shares with him his wealth has the merit of one who offers up a daily sacrifice” (Ber. 10b). His kindness is illustrated in a story which tells that once, when a blind man came to his town, Eliezer gave him a seat of honor above his own. When the people saw this, they maintained the blind man in honor. The latter, on learning the reason for his good fortune, offered a prayer on Eliezer's behalf saying: “You have dealt kindly with one who is seen but sees not. May He who sees but is unseen accept your prayers and deal graciously with you” (TJ, Pe'ah 8:9, 21b).

[Yitzhak Dov Gilat]

**ELIEZER BEN JACOB HA-LEVI (Horovitz) OF TARNOGROD** (d. 1806), rabbi and ḥasidic author. A descendant of a famous rabbinic family, he was a disciple of Elimelech of Lyzhansk, Jacob Isaac of Lublin, and Israel of Kozenice. He wrote *No'am Megadim* (Lemberg, 1807) and *Amarot Tehorot* (Warsaw, 1838). According to one of his sayings, even the greatest saint has to hide his own light to avoid the sin of pride.

[Adin Steinsaltz]

**ELIEZER BEN JOEL HA-LEVI OF BONN** (Heb. acronym **ה"ר אב"י**, *Ravyah*; 1140–1225), rabbinic scholar in Germany. His maternal grandfather was Eliezer b. Nathan. Eliezer studied under his father \*Joel ha-Levi of Bonn, as well as under Judah he-Ḥasid, and Judah b. Kalonymus of Mainz. His brother Uri died a martyr's death in 1216; Eliezer's mourning for him was so great that his vision was impaired and he was compelled to dictate his novellae to his students, among them \*Isaac b. Moses Or Zaru'a. In the course of his long life, Eliezer wandered from place to place: Bonn, Worms, Wuerzburg, Mainz, Metz, Cologne, Regensburg, and, apparently, through France and Lombardy. He refused to accept rabbinical office so as “neither to be glorified by, nor benefit from, the Torah” (*Ravyah*, no. 396) until he was robbed of his fortune. At his father's request, he accepted the rabbinate of Cologne in 1200. The status he then attained as spiritual leader and halakhic expert bore out the prophecy of Eliezer of Metz, “Honor will pursue

you, and you will merit a lofty seat on high” (*ibid.*). In 1220 he participated in the communal synod at Mainz and was among the signatories of the enactments passed there. Nothing further is known of him after this date.

His major work, *Ravyah*, also called *Avi ha-Ezri* (“My Father is my Help”), is a compendium of articles that developed into a book. It contains *halakhot* and legal decisions according to the order of the tractates in the Talmud as well as research on halakhic subjects which he calls “*responsa*.” Among these “*responsa*” are some genuine *responsa* written by him and his father to contemporary scholars. They are written in simple, lucid language, and are generally prefaced by rhymed introductions. In 1885 H.N. Dembitzer published tractate *Berakhot* with the relevant *responsa* from a manuscript of *Ravyah* to which he added his own notes, *Livyat Hen*. V. Aptowitz continued the task in a two-volume critical edition (published by Mekize Nirdamim, Berlin, 1913; Jerusalem, 1935) up to section 893. He later published addenda and corrigenda (1936) and an introduction (1938). She’ar Yashuv Cohen and E. Prisman revised Aptowitz’s editions in three volumes (Jerusalem, 1965) and added a fourth volume covering sections 894–919. Eliezer also wrote *Mishpetei Ketubbah*, to which *Seder Binyan Bayit Sheni* (“The Order of the Construction of the Second Temple”) is an appendix. Yom Tov Lipmann Heller quotes it 15 times in his commentary on tractate *Middot*. Early authorities mention his *Avi’asaf*, a commentary on the orders *Nashim* and *Nezikin*, in addition to other material not included in *Ravyah*, which was seen by H.J.D. Azulai. He apparently also composed *tosafot* on various tractates; *likkutim*, consisting of explanations of passages of the Pentateuch; and six *piyyutim*. Although his chief purpose was the determination of the *halakhah*, Eliezer’s approach to textual clarification and to the basic sources (Babylonian and Jerusalem Talmuds; *rishonim*) is reminiscent of the approach of the *tosafists*. His works were considered basic in halakhic literature until the publication of the Shulḥan Arukh. The great codifiers relied heavily upon him and R. Eliezer of Metz called him “the pillar of decision and the foundation of *halakhah*.” He was also famous for his piety and for his ethical teaching, his contemporaries referring to him as “one who by his exhortations brought about repentance” (*Ravyah*, no. 922 in Ms.).

[Yehoshua Horowitz]

**ELIEZER BEN MANASSEH BEN BARUCH** (mid-18<sup>th</sup> century), preacher in western Russia and author of an ethical work. In his youth, Eliezer spent some time studying in Berlin. It is not known who his teachers were or what he studied there. After some years of traveling, he was appointed *av*

*bet din* in Rozwadow, where he probably spent most of his life. Later, at the time of the printing of his book, he was a preacher in the town of Tarnigrad. His *Ir Dammesek Eliezer* (Zolkiew, 1764) is, for the most part, a detailed homiletic and halakhic analysis of the weekly Torah portions. Each homily is divided into two parts: “*Huzot Dammesek*” and “*Penei Dammesek*.” Very often Eliezer brings lengthy sayings and rules by contemporary East European rabbis; his work is thus an important source for their teachings. The second part of this book, a short ethical work entitled “*Sha’arei Dammesek*,” contains four sections called *she’arim* (“gates”). The first deals with the Torah, the second with prayer, and the third, with repentance; the fourth, “the gate of Jerusalem,” deals mainly with reverence toward and fear of God. To this last section the author added, at the conclusion of the work, a collection of homilies on various ethical themes, called “*Pirkei de-Rabbi Eliezer*.” Well versed in Kabbalah, Eliezer often quotes both the Zohar and ethical kabbalistic literature, in addition to the usual rabbinic sources.

**BIBLIOGRAPHY:** Benjacob, *Ozar*, 440.

[Joseph Dan]

**ELIEZER BEN MEIR HA-LEVI OF PINSK** (second half 18<sup>th</sup> century), rabbi and *darshan*. A descendant of Samuel \*Edels (Maharsha), Eliezer was *rosh yeshivah* in Pinsk in the 1760s and 1770s, and, in the early 1780s, rabbi and *av bet din* in Chomsk (Khomsk). Returning to Pinsk in the late 1780s, he served as the rabbi of that city and of its *kloyz* (a type of *bet ha-midrash*). In this latter period, he became involved in a dispute in connection with a ḥasidic leader, Aaron ha-Gadol. The *Maggid* \*Dov Ber of \*Mezhirech sent a letter to Eliezer in which he requested that they unite in one group together with Aaron. The exact nature of this dispute is not known; some think that Eliezer was sympathetic to the Ḥasidim.

Eliezer wrote two homiletic works, *Si’ah ha-Sadeh* (Shklov, 1787) and *Re’ah ha-Sadeh* (*ibid.*, 1795), the first containing one sermon for each weekly Torah portion, and the second, two for each weekly Torah portion. The sermons, primarily ethical and moralistic in tone, are concerned with repentance in the realm of the *mitzvot* between man and God. Eliezer often uses kabbalistic symbols.

**BIBLIOGRAPHY:** Nadav, in: *Zion*, 34 (1969), 101–4; W.Z. Rabinowitsch, *Lithuanian Ḥasidism* (1970), index.

**ELIEZER BEN NATHAN OF MAINZ** (known as **RaBaN** = Rabbi Eliezer Ben Nathan; c. 1090–c. 1170), one of “the elders of Mainz” and a leading rabbinic authority in Germany in the 12<sup>th</sup> century. Eliezer was apparently born in Germany and in his youth seems to have studied with rabbis of Mainz. Later he lived for a time in the Slavic countries, and possibly in Russia. He then returned to Mainz, where he married the daughter of Eliakim b. Joseph, of whose rabbinical court he was a member. Among his four sons-in-law were \*Samuel b. Natronai and \*Joel b. Isaac ha-Levi. He was also related to \*Ephraim b. Jacob of Bonn and Jacob b. Isaac ha-Levi. It is

doubtful whether \*Asher b. Jehiel was a descendant of his. When the latter refers to *zekeni ha-Rabban*, the quotations are mainly from the *Ravyah* of \*Eliezer b. Joel ha-Levi. Raban's contemporaries in France and Germany recognized his authority, and they addressed him in terms of great respect. Indeed Raban was in contact with all the major Jewish communities of his time. In 1150, together with Jacob b. Meir \*Tam and \*Samuel b. Meir, he drew up the famous *Takkanot Troyes* (the Troyes Ordinances).

His great work (*Sefer ha-Raban*) which he called *Even ha-Ezer* ("Stone of Help") is the first complete book that has survived emanating from German Jewry. It contains responsa and various extracts and halakhic rulings following the order of the talmudic tractates. The book appears to have come down exactly as Eliezer wrote it (but cf. *Sefer ha-Raban*, p. 106a), although there is no logical continuity from one section to the next and there are a number of omissions. The section numbers are by Eliezer himself, who used them for internal reference purposes, but in the printed editions they are deleted from §385 onward. The book contains expositions of talmudic topics and commentaries on customs, liturgical passages, including the *Kaddish*, as well as interpretations of various Midrashim and of chapter 31 of Proverbs, together with correspondence with over 20 rabbinical authorities of the day.

The book contributes much to knowledge of the way of life of the Jews of France and Germany in the 12<sup>th</sup> century and is a mine of information on the state of scholarship and religious practice in France, Germany, and Babylonia. The book functioned as a bridge between the world of the Talmud and the daily life of the Jew. *Even ha-Ezer* was a conduit for the Western dissemination of geonic literature and ideas. It is also a major source of early German customs. Special mention should be made of Eliezer's considerable use of the talmudic commentary of \*Hananel b. Hushi'el ("Rabbenu Hananel"; often without mention of the source) only about 50 years after it appeared. Most likely Hananel's commentaries came to him from the *Arukh* of \*Nathan b. Jehiel of Rome whom he also quotes. The citations from Hananel are rendered more accurately by Eliezer than by other early authorities. Eliezer is also the first to cite the anonymous *Sefer ha-Mikvo'ot*. The Wolfenbuttel manuscript of *Even ha-Ezer* contains a sharply worded anti-Christian polemic that is based on chapter 30 of Proverbs. This is the first known polemic to emerge from medieval Germany.

There is some confusion with regard to the book *Zafnat Pa'ne'ah* ("Revealer of Secrets"), which the early authorities cite frequently, and which they attribute to Eliezer. The fact that many of the quotations appear in the *Even ha-Ezer* indicates that it may have been known by two names. Another opinion is that the reference is to a shorter edition of the book, while still another view is that there was an entirely different book, from which the copyists added to the *Sefer ha-Raban* that has been preserved. Another book ascribed to Eliezer, *Even ha-Roshah*, which is in manuscript, is merely a

compilation from "*Hilkhot Dinin*" in the *Sefer ha-Raban* (pp. 92ff.), corresponding in all respects with a similar compilation printed in the *\*Kol Bo. Sefer ha-Raban* was first published in Prague (1610) and subsequently (only as far as tractate *Niddah*) by S. Albeck, who added a long introduction in Warsaw (1905). Part of it was published in Jerusalem (1915) by Leib Raskes, and the entire work was published by Solomon S. Ehrenreich (Simleul-Silvaniei, 1927), who wrote an extensive commentary to it.

Eliezer was the first commentator on *piyyut* in Germany. Part of his commentaries are preserved in manuscript, of which only fragments have been printed, often interspersed with selections from the commentaries of other early authorities in *maḥzorim* published in Ostrog (1810, 1817 et al.) and Slawita (*Maḥzor Korban Aharon*, 1826, et al.). An old manuscript, given to the editors by Ephraim Zalman Margalio, served as the basis for this printing. Another incomplete manuscript was in the possession of Solomon Zalman \*Halberstam (*Kehillat Shelomo*, Vienna, 1890). Eliezer's commentary encompassed the entire *maḥzor*, the complete *siddur* for Sabbaths and weekdays, the *Haggadah*, and *Pirkei Avot* ("Ethics of the Fathers"). He has mistakenly been credited with the authorship of the anonymous *Ma'amar Haskel* (Cremona, 1557), a commentary on his own *piyyut El Elohim ha-Shem Dibber*. The commentary was actually written more than 100 years after his time. It is also doubtful whether he is the author of the commentary on the *kinah* of Kallir, *Eikhah Yashevah Ḥavazzelet ha-Sharon*, published by J.H. Schorr (see bibl.). Of Eliezer's *piyyutim*, some have been printed and others are extant only in manuscript. The horrors of the First Crusade form the theme of some of his *piyyutim*. He also devoted a special booklet to this subject, *Kuntres Gezerot "Tatnu"* ("Booklet on the Massacres of 1096," publ. Leipzig, 1854; publ. in English translation by Eidelberg, 1986). His commentary on *Avot* (also included in the above-mentioned manuscript owned by Margalio), was in the possession of Jehiel Michael Moravchik, who made use of it "from the manuscript of the RaBaN written in 1145" in his own commentary on *Avot (Minḥah Ḥadashah*, Cracow, 1576). A didactic poem by Eliezer on the laws of *sheḥitah* was published in *Sefer ha-Yovel le-Rav Shimon Skop* (Vilna, 1936). In *Sefer ha-Roke'ah* (§319) he is credited with having written a book on customs.

Eidelberg, *The Jews and the Crusaders* (1996).

[Israel Moses Ta-Shma]

**ELIEZER BEN SAMSON** (fl. 12<sup>th</sup> century), *paytan* and rabbi in Cologne; a pupil of R. Isaac b. Asher ha-Levi in Speyer. He exchanged responsa with R. \*Abraham b. Nathan, who referred to him with admiration. Many of his decisions were used as precedents by early authorities (Mordecai Ket. 219, Kid. 515, Shev. 761; and R. Isaac b. Moses Or Zaru'a). He composed a number of liturgical poems including a *reshut* in Aramaic to the Sukkot *haftarah*, which described the era between the creation of the world and the revelation at Mount Sinai.

**BIBLIOGRAPHY:** Landshuth, *Ammudei*, 23ff.; Fuenn, *Keneset*, 133; Germ Jud, 74; Kohn, in: MGWJ, 27 (1878), 44ff.; Zunz, *Lit Poesie*, 176; Davidson, *Ozar*, 4 (1933), 365.

**ELIEZER BEN SAMUEL HA-LEVI** (d. 1357), German Jew, son of Samuel b. Yakar, the *hazzan* of Mayence (also known as Tov Elem). Eliezer, who was not a rabbi, but was titled *\*haver*, is known from his ethical will, which is preserved in several manuscripts and first published in 1870 in a German translation (ed. by A. Berliner in *Juedische Presse*, 1 (1870), 90f., 99). The Hebrew original was afterward published by M. Guedemann (Guedemann, *Quellenschr*, 295–8) and again, along with an English translation by I. Abrahams (*Hebrew Ethical Wills*, 2 (1926), 1207–18). In this touching document Eliezer requests that his children walk in God's ways, that they fulfill strictly all the *mitzvot*, that they be not mercenary, and if possible, live among Jews.

**ELIEZER BEN SAMUEL OF METZ** (c. 1115–c. 1198), tosafist and halakhic authority. Eliezer was a pupil of Jacob \*Tam (see *Sefer ha-Yashar*, ed. by F. Rosenthal (1898), 128 n. 57), as well as of \*Samuel b. Meir, and Hayyim Cohen of Paris. Among his disciples were some of the greatest German rabbis, such as \*Eliezer b. Joel \*ha-Levi and \*Eleazar b. Judah of Worms, author of the *Roke'ah*. He thus served as an intermediary between the centers of study in France and those in Germany. Eliezer obtained his livelihood by moneylending, and was in charge of the distribution of charity. His daughters died during his lifetime. Little else is known of him. Eliezer's most important work is his *Sefer Yere'im*, written between 1171 and 1179, a work on the 613 precepts according to the enumeration of the *\*Halakhot Gedolot*. It was abridged by Benjamin b. Abraham \*Anav, who divided it into 12 "Pillars," in which form it was published in Venice in 1566, and in many later editions. The complete book (464 paragraphs) was published from a Paris manuscript in Vilna (1892–1902) by Abraham Abba Schiff who added a commentary entitled *To'afot Re'em*. Other commentaries have also been written. Although essentially a halakhic work, *Sefer Yere'im* includes ethical maxims and homilies on the true service of God. Halakhic discussions are sometimes preceded by rhymed introductions. The rulings of *Sefer Yere'im* as well as those in Eliezer's commentaries on the Talmud were accepted as authoritative by the *rishonim*. Eliezer is also an author of *tosafot* and novellae. Mention is made of his commentary to *Berakhot*, *Shabbat*, *Zevahim*, and *Nedarim*. Hayyim Joseph David \*Azulai was in possession of

a manuscript by him on *Hullin*. Very few of his responsa have been preserved.

[Israel Moses Ta-Shma]

**ELIEZER BEN SAMUEL OF VERONA** (early 13<sup>th</sup> century), Italian tosafist. Eliezer was a pupil of Isaac b. Samuel of Dampierre (*Roke'ah* 377) and the teacher of \*Avigdor b. Elijah Kohen Zedek of Vienna. He was a colleague of \*Eleazar b. Judah of Worms and of Abraham b. Moses of Regensburg. He wrote *tosafot* to the Talmud, and those to *Bava Batra* (from 144b ff.) in particular are attributed to him. One of his rulings gave rise to considerable controversy. He permitted the widow of a certain Solomon b. Jacob to remarry, seven years after he had disappeared when the ship in which he was sailing sank near Pesaro in 1214. He sent his ruling to "the communities of the Rhine and of Cologne," but Baruch b. Samuel of Mainz forbade the *agunah* to remarry. After Baruch's death, Abraham b. Moses of Mainz sent Eliezer's ruling to Eliezer b. Joel ha-Levi, but he confirmed the prohibition (*Sefer Ravyah*, 4 (1965), 133–43). Eliezer's responsa to \*Isaac b. Moses of Vienna (Or Zaru'a) are quoted in Zedekiah b. Abraham's *Shibbolei ha-Leket* (ed. by S. Buber (1886), nos. 13, 237, and 247) and in *Sefer Issur ve-Hetter* (no. 9) by the same author (published in *Ha-Segullah*, 1, 1934). There is also mention of his biblical exegesis (Zunz, in *HB*, 7 (1864), 20ff.). Isaac Or Zaru'a calls Eliezer and \*Isaiah di Trani the Elder "the two kings of Israel." \*Hillel of Verona was his grandson.

[Yehoshua Horowitz]

**ELIEZER (Eleazar) BEN YOSE HA-GELILI** ("of Galilee"; fl. second century C.E.), *tanna*. Eliezer is mentioned only once in the Mishnah, but more than ten times in the Tosefta, and even more frequently in the tannaitic Midrashim. Almost all of his dicta in both Talmuds, in *beraitot*, and in Midrashim are aggadic. According to the Talmud, R. Eleazar b. Simeon said of him: "Whenever you find the words of Eliezer b. Yose in the *aggadah*, bend your ear attentively" (*Hul.* 89a). The *Baraita of the Thirty-Two Rules*, which defines the hermeneutical rules for the aggadic exposition of scripture, is ascribed to him, though in its present form this is highly unlikely (see: *\*Baraita of the Thirty-Two Rules*). Among his statements are: "A person in distress is forbidden to pray" (*TJ*, *Ber.* 5:1, 8d); "Even if nine hundred and ninety-nine argue against a man [in the Heavenly Cause], while one argues in his favor, he is acquitted" (*Shab.* 32a). He applied the well-known saying of R. Eleazar b. Azariah, to the effect that the full praise of a person should not be uttered in his presence, to teach that "one

utters only a portion of the praise of Him at whose word the world came into being" (Gen. R. 32:3).

[Alter Hilewitz]

**ELIEZER FISCHEL BEN ISAAC OF STRYZOW** (end of 18<sup>th</sup> century), Galician kabbalist. Eliezer, who was born and lived in Strzyzow near Tarnopol, was close to the circle of the kabbalists of the *Klaus* of Brody, and devoted four books to the exposition of kabbalistic teaching in which the principles of Lurianic doctrine were presented in a more lucid way than in earlier works. His works include:

(1) *Sefer Olam ha-Gadol*, also called *Midrash la-Perushim* (Zolkiew, 1800); (2) *Sefer Olam Ehad*, on the unity of God according to kabbalistic teaching (*ibid.*, 1802); (3) *Sefer Olam Barur*, on the doctrine of the elevation of sparks (*nizozot*) and purification of souls (*ibid.*, 1800?); and (4) *Sefer Olam Hafukh*, homilies on morality in Kabbalah (*ibid.*, 1800?).

In addition to his works on Kabbalah, he also published *Olam Va'ed* (1849), on the calculation of the seasons and new moons (first days of months). Eliezer was nevertheless considered one of the leading opponents of Ḥasidism and several of his books contain both explicit and implicit criticism of the practices of the Ḥasidim.

[Gershom Scholem]

**ELIEZER OF BEAUGENCY** (fl. 12<sup>th</sup> century), biblical commentator from N. France. Nutt was of the opinion that Eliezer was a student of \*Samuel b. Meir but there is no clear-cut evidence in support of this view. Few biographical details are known of him. He had a knowledge of Latin and often cited the Vulgate in his commentaries. Three of his commentaries have been preserved: on Isaiah (publ. by Nutt, 1879), on Ezekiel, and on the minor prophets (both publ. by S. Poznański, 1907–13). From references in these works and in those of other exegetes, however, it appears that Eliezer also wrote commentaries on the Pentateuch, Jeremiah, Psalms, Ecclesiastes, and Daniel. It is possible that he covered all the books of the Bible. Generally speaking Eliezer followed the literal method of interpretation of the Bible adopted by his French predecessors Rashi, Samuel b. Meir, and Joseph Kara. Although he did not cite these commentators frequently, it is quite clear that he relied upon them. Eliezer held Rashi in great esteem and called him simply "our teacher" or "our illustrious teacher."

In his attempts to give a literal exegesis of the Bible Eliezer ignored rabbinic exegesis to an even greater degree than his French colleagues. He occasionally referred to the Midrashim but adds that he would not utilize them since they were not in accordance with the plain sense of the verse (cf. his comments on Zech. 7:3; Ezek. 43:17). His comments on certain verses conflicted with the *halakhah* (e.g., Isa. 9:6). Nevertheless, he did concur at times with the homiletical interpretation. Eliezer attempted to identify the historical events

alluded to by the prophets and their significance, sometimes interpreting the events to apply to the prophets' own times; on other occasions he applied them to the future. In his identifications he was greatly influenced by the *Sefer \*Josippon*. He also placed greater emphasis than did his French predecessors on the problems of dating the prophecies and the editing of the books (cf. his introduction to Isaiah). Like his contemporary, Joseph \*Bekhor Shor, Eliezer attempted to give a rational explanation of the supernatural miracles (e.g., Isa. 30:26; Zech. 4:3). On the other hand he believed that the constellations influenced man's fate. Orion and the Pleiades controlled the movements of the planets and at their command the world was destined for good or evil, war or peace, famine or plenty, everything in its season (Amos 5:8 and in greater detail in Isa. 38:1). His comments were usually brief and to the point, but his comments on the building of the Temple in Ezekiel constitute an exception which he justified because of the farfetched interpretations given by other exegetes.

In its simplicity and clarity Eliezer's style was similar to that of his French colleagues. His language was studded with biblical and talmudic phrases and expressions, but he also coined new terms and expressions. Eliezer paid little attention to questions of grammar. Like Rashi, he followed the system of \*Menahem b. Saruq and \*Dunash ibn Labrat. In his exegesis he was usually guided by the cantillation signs (e.g., Isa. 6:3), though occasionally he disregarded them. On occasion he drew upon the Targum, but here also he did not hesitate to disagree when he felt that its interpretation was contrary to the literal meaning. In order to determine the exact biblical text Eliezer examined various manuscripts which were available to him in France. There were instances when the spelling in his text differed from the present masoretic text (e.g., Ezek. 8:16; Micah 6:7). Many of the French words (*\*la'azim*) of which he makes use are derived from Rashi's commentary. Eliezer resorted to the Vulgate, which he attacked together with Christological interpretations of the Bible (cf. Isa. 7:14; 9:5). At times his remarks reflect the conditions of his own times. For instance, in his commentary on Ezekiel 37:12, "I shall bring you to the land of Israel," he stated: "This verse is a great comfort to all those who die a martyr's death and even to those who do not make the supreme sacrifice since they constantly suffer shame, disgrace, and physical abuse when they refuse to acknowledge false gods."

[Avraham Grossman]

**ELIEZER OF TOUL** (d. before 1234), French tosafist. Eliezer came from Toul, near the German border. He studied under \*Isaac b. Samuel the Elder of Dampierre. For some time he lived in Boppard, Germany, where he served as a tutor in the household of one of the local leaders of the community. When the latter withheld his remuneration, the case was referred to the rabbis. Eliezer's talmudic discussions appear in the works of later *\*posekim*, the disciples of \*Meir b. Baruch

of Rothenburg. Zedekiah b. Abraham \*Anav of Rome mentions that he consulted his *tosafot* to tractate *Bezah*, but these have not survived.

**BIBLIOGRAPHY:** Urbach, *Tosafot*, 277f., 285.

[Israel Moses Ta-Shma]

**ELIEZER OF TOUQUES** (d. before 1291), one of the last tosafists and editors of tosafist literature. Only a few details of his biography are known. He was a nephew of \*Hezekiah of Magdeburg and appears to be identical with the Eliezer b. Solomon who signed a well-known responsum on the question of whether the \**Herem ha-Yishuv* applied to the community of \*Goslar. He studied under \*Isaac b. Moses (Or Zaru'a) and was the teacher of Ḥayyim \*Paltiel. Eliezer's contemporaries had the highest regard for him, considering him an equal of \*Meir b. Baruch of Rothenburg. Isaac Joshua b. Immanuel de \*Lattes looked upon him as "head of the yeshivah of France," a post later attributed to \*Perez b. Elijah of Corbeil. The \**tosafot* of Eliezer of Touques are primarily an adaptation of those of \*Samson b. Abraham of Sens, with the addition of later novellae. He sometimes adapted the *tosafot* of other scholars, among them \*Judah b. Isaac Sir Leon. The disciples of Meir b. Baruch of Rothenburg used Eliezer's *tosafot* extensively, and it was through them that they became the accepted *tosafot* of France and Germany. Consequently the publishers of the Talmud also made an effort to include them, in order to enhance the value of their publication. The *tosafot* to the tractates *Shabbat*, *Pesaḥim*, *Ketubbot*, *Gittin*, *Bava Kamma*, *Bava Mezia*, *Bava Batra*, *Shevu'ot*, and *Hullin* in the printed editions of the Talmud, and possibly also of some other tractates, were edited by Eliezer.

**BIBLIOGRAPHY:** Urbach, *Tosafot*, index.

[Israel Moses Ta-Shma]

**ELIHU** (Heb. אֱלִיהוּ, once אֱלִיהוּ; "God is the one [who is to be thanked, or worshipped]"), son of Barachel the Buzite, of the family of Ram, a character – first introduced, and quite unexpectedly, at Job 32:2 – who addresses Job and his three friends from 32:6 through chapter 37. (For the literary problem this creates and an analysis of Elihu's contribution to the discussion, see \*Job, Book of.) The names assigned to Elihu and to his father (Barachel, "God has [or "is"] blessed") may hint that the author of these chapters approves of the point of view that Elihu represents. The tribe and family assigned to him, however ("the Buzite, of the family of Ram"), are obviously chosen, like for example, the name and tribe of \*Eliphaz the Temanite, in order to conform to the setting of the oldest stratum of the Book of Job ("the land of \*Uz," Job 1:1; "the \*Kedemites," 1:3b); for according to Genesis 22:21, Buz was a younger brother of Uz and an uncle of Aram, with whom the Septuagint and Symmachus, probably rightly, identify this Ram. A less likely possibility is the connection of Elihu's ancestry to Ram, grandson of Judah in the late sources (Ruth 4:19; 1 Chr. 2:9) that are followed by the New Testament (Matt. 1:2).

[Harold Louis Ginsberg]

### In the Aggadah

The *aggadah* praises both the wisdom and modesty of Elihu. He was called "*buzi*" (lit. "lowly"; Job 32:2), only because he considered himself of low account in the presence of those greater than himself (Zohar, 2:166a), and showed his wisdom in never speaking until he had listened to what Job had to say (ARN<sup>1</sup> 37, 111–112). His wisdom is reflected in his statement: "Touching the Almighty, we can never find Him out" (Job 37:23). He would have merited to be mentioned in Scriptures had he done no more than describe the action of the rain-fall (cf. Job 36:27 and 37:3; Gen. R. 36:7). Elihu was a prophet (Sot. 15b) and descended from Nahor, the brother of Abraham (SER 28, 141–2).

**BIBLIOGRAPHY:** Ginzberg, *Legends*, index; Y. Ḥasida, *Ishei ha-Tanakh* (1964), 65–66.

**ELIJAH** (Heb. אֵלִיָּהוּ, also אֱלִיָּהוּ), Israelite prophet active in Israel in the reigns of \*Ahab and Ahaziah (ninth century B.C.E.). In the opinion of some scholars, the designation "the Tishbite of the inhabitants of Gilead" (1 Kings 17:1) supports the hypothesis that Elijah did not live in one specific place in Gilead but was a member of either the \*Kenites or the \*Rechabites, sects which led a nomadic existence. These scholars detect even in his resolute war against \*Baal and in his zeal for Yahweh a line of conduct which they believe was characteristic of the Kenites and Rechabites but not of the nation at large. (For the role of Jehonadab son of Rechab in Jehu's purge of Baal, see 1 Kings 10:15–17.) But the accounts of Elijah's wanderings (1 Kings 17) describe his withdrawal from society as a matter not of principle but of necessity (persecution, famine). In addition, the reading "of the inhabitants of Gilead" is suspect. It is impossible to decide whether "Elijah" was a cognomen symbolizing the prophet's mission: Eli-Jahu ("YHWH is God"), or whether he had been given that name by parents zealous for Yahweh. Elijah brought matters to a head by stressing the idea of zeal for YHWH, which unconditionally opposed the toleration of any cult (especially any official cult) other than that of YHWH in Israel. This extremist position, summed up in the sentence "I have been moved by zeal for the Lord, the God of Hosts" (1 Kings 19:10, 14), was a minority opinion among Israelites, who evidently could comfortably serve Yahweh and Baal (1 Kings 18:21), let alone intrinsically different from the polytheistic outlook, which never opposed in principle the blending of different religious cults, or their separate existence side by side. Even \*Jezebel, who fought against zealots like Elijah and is accused of killing the Yahweh prophets (1 Kings 18:13), was probably not opposed to the worship of Yahweh per se, but to the demand that he be worshipped exclusively at the expense of Baal. Ahab, in fact, gave his sons the names Ahaz-iah and Jeho-ram, which are compounded with the name of the national god YHWH. For the "Yahweh-alone" zealots, it was insufficient to worship Yahweh as the national god while tolerating others. The attitude of Elijah and those of like mind was liable to impair relations between Israel and her neighbors. Because of this, Elijah's

activity encountered opposition from the royal court whose policy was to cultivate economic ties with Israel's neighbors and specifically with Tyre. Ahab saw no more harm in showing tolerance toward the religion of the people of Tyre and establishing a place of worship in Samaria than did Solomon who had acted similarly in behalf of his foreign wives (1 Kings 11:7–8). But Elijah, whose attitude to the Sidonians themselves was not hostile (cf. the incident at Zarephath, which belonged to Sidon, 1 Kings 17:8–16), believed that it was his people's obligation to preserve within its own borders a "pure" religious cult that did not recognize any other gods but Yahweh. Hence, his vehement opposition to the cults of Baal and \*Asherah of Sidon, supported by the royal court.

The most dramatic point of Elijah's activity was the confrontation on Mount Carmel. In response to Elijah's demands, Ahab assembled "all Israel unto Mount Carmel" together with 850 prophets of Baal and Asherah (1 Kings 18:19). In their presence and that of the king, Elijah turned to the people: "How long will you keep limping between the two boughs? [Thus Joseph Caspi] If Yahweh is God, follow Him; and if Baal, follow him" (18:21). While the priests of Baal were offering up their sacrifices and calling "O Baal hear us," cutting themselves with knives and lances until the blood gushed out, Elijah mockingly suggested that they cry more loudly, since their god might be asleep or his attention otherwise engaged. Only after their prolonged pleas and cries proved of no avail did Elijah step forward to repair the demolished altar of Yahweh, make all the necessary preparations for the sacrifice, and offer up a short prayer. According to the biblical narrative, fire immediately descended from heaven, consuming the burnt sacrifice, and all the people of Israel present fell on their faces chanting, "Yahweh, He is the God; Yahweh, He is the God." At Elijah's command those present attacked and killed the prophets of Baal. The king showed no sign of opposition to Elijah's actions. This story is interwoven with another occurrence, which has a historical foundation, connected with the drought, the beginning and end of which were prophesied by Elijah. A short while after the events on Mount Carmel, the sky became black with clouds and heavy rain began to fall (1 Kings 18:45). This was seen by Elijah and his followers as a sign that God had forgiven the repentant people their sin of Baal-worship which had been the cause of the drought (cf. 1 Kings 17:1). The Tyrian chronicle of Menander, which is generally reliable (Ant., 8:323–4), confirms that a drought occurred at that time, though it ascribes the rains to the prayers of Ethbaal (Ithobal) of Tyre, Ahab's father-in-law.

Elijah triumphed over the adversaries of Yahweh on the border of Tyre and Israel, and the altar on Mount Carmel remained in existence for some time (11 Kings 2:25; 4:25). However, Jezebel was furious over the massacre of the prophets of Baal and launched a bloody war against Elijah and his followers. According to 1 Kings 19, Elijah was forced to flee to the desert south of Beersheba, where, tired and disheartened, he longed to die. However, while he was lying in a mood of despair under a broom bush, an angel appeared, strengthened

Elijah with food and drink, and urged him to continue his journey. Elijah traveled 40 days until he reached Mount Horeb. There, in the place where the Lord had revealed Himself to Moses, He appeared to Elijah. The description of the revelation to Elijah differs from similar revelations which the Bible recounts as taking place on Mount Sinai. Fearful phenomena such as tempests, fire, and a general cacophony accompanied the revelation there also, but the Bible stresses specifically that these mighty forces appeared before the revelation of the Lord; that the Lord did not reveal Himself within them but rather in a still, small voice.

It is the task of the prophet to listen to the voice of God and pass on its message to the people. Since Elijah had fulfilled his prophetic task and the people had failed to stand by him in his war against Jezebel, retribution was merely a matter of time. The instruments of God's retribution were to be \*Hazeal, who was to assume power in Syria; \*Jehu, the future king of Israel; and \*Elisha, Elijah's successor. Elijah was commanded to anoint all three (1 Kings 19:15–16), but the narrative makes it clear that he only appointed Elisha as a prophet and passed on to him the task of anointing Hazeal and Jehu. Elisha, in turn, anointed only Hazeal, and Jehu was anointed by one of the "sons of the prophets" at the behest of Elisha. All these actions, however, were carried out in the spirit of Elijah's ideals, with the aim of uprooting the worship of Baal in Israel. Despite the sharp conflict between Elijah and the royal palace over Baal-worship, there is no conclusive evidence that because of this Elijah prophesied the destruction of Ahab's house; in fact, the accusation of Baal-worship was leveled equally against the masses and the royal household. What finally caused Elijah to prophesy the complete destruction of the House of Ahab was the crime committed against \*Naboth.

Elijah's last deed in the days of Ahaziah son of Ahab also reflects his zeal for the Lord. When Ahaziah fell ill and sent to inquire of Baal-zebub, the god of Ekron, whether or not he would recover, his messengers were intercepted by Elijah who asked, "Is it because there is no God in Israel that you are going to inquire of Baal-zebub the god of Ekron? Now therefore, thus says the Lord, you shall not come down from the bed which you have mounted, but shall surely die" (11 Kings 1:3–4). In contrast to his relations with Ahab, on this occasion Elijah had no dealings with the king; he passed his judgment on to the king and after a short while his words were fulfilled. It seems that the difference lay in the nature of the king's fault – open consultation of a foreign god, a sin which Ahab never committed. The account in 11 Kings 1–2 makes it difficult to establish whether Elijah's activity ceased during the reign of Ahaziah or in that of his brother and successor Jehoram. According to 11 Chronicles 21:12, Elijah sent a letter to Jehoram son of \*Jehoshaphat, the king of Judah. It is likely however that the letter was sent while Jehoram was acting as regent for Jehoshaphat (according to Thiele, 853–848 B.C.E.), and it is therefore possible that the event occurred in the lifetime of Ahab. By the time Jehoram of Judah was king in his own right, Elisha had succeeded Elijah. Elijah's standing was

bolstered by wonder-tales. He was fed bread and meat by ravens (1 Kings 17:6) at the divine command. As an *ish-elohim* (“Man of God,” i.e. divine messenger, he miraculously caused a jar of flour and a jug of oil to keep on producing for the benefit of a poor woman whose son he subsequently raised from the dead (1 Kings 17:7–24). It was believed that a divine wind could take him from one place to another (1 Kings 18:11). He could bring rain and then, seized by the hand of YHWH, outrun the royal chariot from Mount Carmel to Jezreel (1 Kings 18:46). That being the case, we should not be surprised that Elijah did not die but was carried to heaven in a chariot and horses of fire (11 Kings 2:1–11). Elijah was well-known by his gait and manner of dress. Ahaziah’s envoys described him as wearing “a garment of haircloth, with a girdle of leather about his loins” (1 Kings 1:8). Miraculous powers were attributed to Elijah’s cloak. As Elijah ascended to heaven, his cloak dropped to the ground and with its help Elisha too performed miracles (*ibid.* 2:8, 13). 11 Chr. 21:12–15 expands on Elijah’s activity by attributing to the prophet a letter to King Jehoram of Judah prophesying dire punishment for worshipping foreign gods and for fratricide. The prophecy at the end of Malachi (3:23) that the prophet Elijah would be sent to the people before the coming of “the great and fearful day of YHWH” came within Judaism to mean that Elijah would herald the coming of the \*Messiah. Some early Christians, accordingly, identified \*John the Baptist with Elijah (Matt. 11:14; 17:10–13).

[Joshua Gutmann / S. David Sperling (2<sup>nd</sup> ed.)]

### In the Aggadah

The deep impression left by Elijah’s revolutionary ministry and his miraculous translation to heaven in a “chariot of fire” drawn by “horses of fire” (11 Kings 2:11) had already made Elijah a legendary figure in biblical times. Malachi’s final prophecy that Elijah would be sent by God “before the coming of the great and terrible day of the Lord,” so that he may “turn the hearts of the fathers to the children, and the hearts of the children to their fathers” (Mal. 3:23ff.), became the point of departure for the subsequent association of Elijah with the Messianic age.

Ben Sira (c. 200 B.C.E.), in his eulogy of Elijah, attributed the future restoration of “the tribes of Jacob” to him (Ecclus. 48:10). By the first century C.E., it was taken for granted that Elijah was to be the precursor and herald of the Messiah. Jesus himself was at first believed to be Elijah, but when he revealed his own messianic claim, he proclaimed John the Baptist as having been the reincarnated Elijah (Matt. 11:10ff.; 17:10ff.; Mark 9:11ff.).

It was perhaps against this Christian and sectarian tendency to associate Elijah with religiously dubious and politically dangerous movements that attempts were made to counter the excessive veneration accorded to Elijah among apocalyptic-sectarian and Christian circles. It was, accordingly, denied that Elijah had ever gone up to heaven (Suk. 5a), biblical evidence to the contrary notwithstanding. Elijah’s habit of revealing divine secrets to pious mortals (cf. BM 59b)

once earned him a severe punishment of 60 lashes of fire (BM 85b). Elijah’s denunciation of Israel for having forsaken the divine covenant (cf. 1 Kings 19:10, 14) had so angered God that He dismissed Elijah from His service and appointed Elisha in his place (Song R. 1:6, no. 1; cf. 1 Kings 19:16). Above all, the scope of Elijah’s future tasks was limited to the solution of certain halakhic problems (Eduy. 8:7; Tosef., Eduy. 3:4). Subsequently, too, it was believed that “when Elijah comes, he will tell us” (Ber. 35b; cf. Men. 45a; Bek. 24a). He was indeed supposed to have his own court (Av. Zar. 36a), and legal problems which defied solution were to be referred to him (Shek. 2:5; BM 1:8; 2:8; 3:4–5; Men. 63a). Nevertheless, the predominant tannaitic view was that Elijah was not only to solve halakhic disputes, but also to be the great peacemaker in the world (Eduy. 8:7).

Rabbis and pious men endowed with a mystical frame of mind established a spiritual communion with Elijah and were reputed to have been guided by him in their studies (cf. *Tanna de-Vei Eliyahu*, ed. M. Friedmann, 27ff.; Ginzberg, *Legends*, 4 (1913), 217–23). Nine aggadic *beraitot* in the Talmud are introduced by the words “It was taught at Elijah’s school” (cf. Friedmann *op. cit.* 44ff. for a complete list). Although these *beraitot* may have originated from a compilation by a *tanna* called Elijah (Ginzberg, *Legends*, 6 (1928), 330, n. 70) or from a school called after Elijah (Friedmann, *op. cit.*, 60–61), they were soon attributed to the prophet. In post-talmudic times, the Midrash *Tanna de-Vei Eliyahu* (“It was taught at Elijah’s school”) was likewise believed to have emanated from the prophet’s own “school.”

Despite such relatively restricted rules assigned to Elijah by the rabbis, his primary task of heralding the redemption of Israel was never forgotten (cf. also the third benediction after the reading of the *haftarah*), and in the post-talmudic era it assumed primary importance in Jewish eschatology (cf. PR 35:161). Even earlier, Elijah appears almost invariably in the role of one who is deeply concerned about Israel’s suffering and exile, and who does what he can to speed the day of deliverance. In a beautiful tannaitic *aggadah*, R. Yose relates how Elijah once told him that “whenever Israelites enter synagogues and houses of study... the Holy One, Blessed be He, as it were shakes His head and says: Happy is the king who is thus praised in his house! Woe to the father who exiled his children, and woe to the children who are banished from their father’s table” (Ber. 3a).

R. Simeon b. Yoḥai, a relentless opponent of Roman rule who had to flee from Roman persecution, was freed from his hiding place in a cave by Elijah’s announcement that the emperor had died (Shab. 33b). As the carrier of good tidings for Israel (cf. the Grace after Meals, in which Elijah is assigned the function of bringing good news to the Jewish people), Elijah inevitably became the antithesis of Rome and all it stood for. Thus, he sharply rebuked R. Ishmael b. Yose who had undertaken police work on behalf of the Romans: “How long will you deliver the people of our God for execution?” (BM 83b–84a). Similarly, when the pious R. Joshua b. Levi, who was

said to have been in constant communication with Elijah (cf. Sanh. 98a; Mak. 11a; Gen. R. 35:2), persuaded a Jew sought by the Roman authorities to give himself up, thereby saving the entire Jewish community of Lydda from destruction, Elijah shunned R. Joshua for about 30 days. Later he explained that he could not be “a companion to informers”: and although R. Joshua had acted according to mishnaic law, Elijah maintained that “this should have been done by others, not by you” (TJ, Ter. 8:10, 46b; Gen. R. 94:9, end).

On another occasion, Elijah told R. Joshua b. Levi that the Messiah was to be found among the beggars of Rome ready and willing to redeem Israel, although, as he subsequently explained, only if they repented and obeyed God (Sanh. 98a). A late Midrash, however, maintained that Israel would repent only when Elijah made his public appearance (PdRE 43, end).

Elijah's association with the Messiah became more pronounced in the late talmudic and post-talmudic ages. Increasingly, Elijah becomes not only a precursor, but an active partner of the Messiah. Both Elijah and the Messiah are busy recording the good deeds of the righteous, no doubt with a view to hastening the day of Israel's redemption (Lev. R. 34:8; Ruth R. 5:6). Ultimately, Elijah and the Messiah are to be among four world conquerors (Song R. 2:13, no. 4); though, according to one Midrash, Elijah himself is destined to overthrow the foundations of the heathen (Gen. R. 71:9). Elijah is, indeed, accorded the exclusive privilege of bringing about the resurrection of the dead (Sot. 9:15 end; cf. Song R. 1:1, no. 9) – no doubt because of his achievement in reviving the son of the widow of Zarephath (1 Kings 17:17ff.).

Elijah's solicitude for Israel's safety was also demonstrated in the past. Thus, when Haman was threatening to exterminate the Jews, Elijah was said to have intervened with the Patriarchs and with Moses to secure their intercession with the Almighty. At the decisive moment he appeared in the guise of Harbonah to denounce Haman (Esth. R. 7:13; 10:9). Likewise, at the time of the siege of Jerusalem by the Babylonians, Elijah was searching among those who were languishing with hunger in the hope of saving those who might renounce idolatry (Sanh. 63b).

Of equal concern to Elijah were individual pious Jews who happened to be in trouble. Among those whose lives were saved or whose health was restored by Elijah's timely appearance in various guises were Nahum of Gimzo (Ta'an. 21a; Sanh. 109a), R. Meir (Av. Zar. 18b), R. Eleazar b. Perata (Av. Zar. 17b), Judah ha-Nasi (TJ, Kil. 9:4, 32b; Gen. R. 33:3; 96:5), R. Shila (Ber. 58a), R. Kahana (Kid. 40a), and many others (cf. also Matt. 27:47ff., and see Mark 15:35–36 for similar expectations in connection with Jesus' crucifixion). Innumerable legends and stories are still told of the poor and hopeless being aided by Elijah.

It was because of Elijah's great love for Israel that he had boldly assumed an attitude of insolence toward God, Whom he blamed for turning their hearts away from Him (cf. 1 Kings 18:37). God, however, eventually agreed with him

(Ber. 31b–32a). The furious zeal displayed by Elijah on that occasion (cf. 1 Kings 18:40; 19:10, 14) was so similar to that shown by Aaron's grandson Phinehas (cf. Num. 25:7ff.; Ps. 106:30) that in rabbinic literature the two are often identified, either expressly or by implication (PdRE 47; cf. BM 114a–b; Kid. 70a; Num. R. 21:3; Targ. Yer., Num. 25:12), and both are, accordingly, regarded as immortal (BB 121b; Gen. R. 21:5; 25:1; Num. R. 21:3).

Elijah is often associated with Moses in both rabbinic and Christian literature – first because Elijah was to inaugurate Israel's future redemption just as Moses had liberated the Israelites from Egyptian bondage; second, because his career resembled that of Moses' inasmuch as both were granted revelations at Mount Sinai in somewhat similar circumstances (Ex. 3:2; 19:16ff.; 20:18; Deut. 4:11ff., 33ff.; 1 Kings 19:11–12); and since, moreover, Malachi's admonition to “remember the law of Moses” and his prediction of the future mission of Elijah are in close juxtaposition (Mal. 3:22–24). Elijah appears as a disciple and follower of Moses and also as a fellow prophet active in the same cause of delivering Israel, in which both are to participate on the advent of the messianic age (Tosef., Sot. 4:7; Tosef., Eduy. 3:4; Sot. 13a; TJ, Sanh. 10:1, 28a; Ex. R. 44:1; Num. R. 18:12; Lam. R. 1:2, no. 23; Matt. 17:3ff.; Mark 9:4ff.; Luke 9:30ff. et al. For a detailed comparison of the careers of Moses and Elijah, see PR 4:13).

[Moses Aberbach]

### In Mysticism

According to \*Moses b. Shem Tov de Leon, Elijah belongs to the angels who advocated the creation of man (Cordovero, *Pardes Rimmonim*, 24:14); accordingly, Elijah is an angel who dwelt only temporarily on earth as a human being, before again ascending to heaven. Moses \*Cordovero compares Elijah's life with the fate of Enoch (*ibid.*, 24:13), as the two are the only biblical personages who were carried off from earthly life in an extraordinary manner. The further fate of Elijah and Enoch in heaven is imaginatively described by Jewish mystics. While Enoch's body is consumed by fire and he himself is changed into \*Metatron, the highest angel, Elijah remains after his ascension in possession of his earthly shape, which is why he can maintain his association with the human world and, when necessary, reappear on earth. Though his body is not made from dust like that of human beings but came from the tree of life, it enables him to carry out God's commands and miracles (*ibid.*; Zohar, 1:29a; 2:197a; Yalk. R. 27). Therefore, unlike Enoch who is known only as the archangel Metatron, Elijah keeps his name under which he intervenes in the fate of the Jewish people. The \*Zohar, like the Talmud, tells of devout men to whom Elijah is supposed to have revealed himself. In the later mystic literature, Elijah's comments on the secrets of the Torah are extremely frequent. Elijah prophesied the births of Isaac \*Luria and \*Israel b. Eliezer Baal Shem Tov to their parents. He appeared frequently to Israel Baal Shem Tov, and also played an important part in the legends of the *Zaddikim*.

[Samuel Abba Horodezky]

### In Jewish Folklore

Many of the legends and stories in written and oral Jewish folk literature are spun around biblical and post-biblical (historical) figures and legendary characters. Among these Elijah is a favorite hero and overshadows other popular folklore protagonists: e.g., Moses, King David, King Solomon, Maimonides, and such local sages as R. Shalom \*Shabbazi of Yemen, R. Ḥayyim b. Moses \*Attar of Morocco, R. Israel b. Eliezer Baal Shem Tov of the ḥasidic legend, and others. The redemptive motif associated with Elijah in rabbinic literature as the herald of the future redemption of Israel and of the messianic era is not stressed in folklore; he is rather portrayed as the heavenly emissary sent on earth to combat social injustice. He rewards the poor who are hospitable and punishes the greedy rich. In his attempts to right wrongs, he seeks to bridge the gap of social inequality and does not hesitate to punish the unjust, regardless of their status even if they be rabbis or respected communal leaders. In Joseph Shabbethai Farḥi's collection of folktales, *Oseh Pele* (vol. 2 (1954), 114), Elijah strangles the local rabbi while the latter rests after the \**seder*. The prophet admonishes the rabbi: "You collected all the money as charity, but you distributed it according to your own will. The cries [of the needy] reached heaven and came before God, the Almighty..." Many of the stories about Elijah are outcries of the wretched and unfortunate against the proud and oppressive elements in the Jewish community and were used by the authors as a vehicle for social protest. At the same time, these legends are a type of comfort and solace to the poor. Elijah appears especially on the eve of \*Passover when he punishes the misers and provides the despairing poor with the necessities to prepare the *seder*. His activities continue late into the *seder* night; the Cup of Elijah is placed in the center of the festive table and the prophet is expected to announce the redeemer. Elijah also alleviates the burdens of Jewish communities suffering from religious and national persecution, and exposes \*blood libels – mainly occurring on Passover – as absurd and perfidious calumnies.

Elijah's benign acts and the miracles he performs extend beyond the specifically Jewish sphere and have their parallel in other folklore. A recurrent theme in the Elijah legends is the prophet's ability to ward off the \*Angel of Death from the young fated to die (a motif rooted in the biblical revival story); this he usually does by advising them to study the Torah. A healing agent, he also blesses the barren with fertility and is able to interpret occult events and visions described in cryptic passages in the Torah and in the Talmud. Another prevalent Elijah motif is the prophet's task to act as provider, based on his biblical endowment to make rain. He confers an inexhaustible barrel of oil on Mayer Amschel Rothschild, distributes magic money-making boxes to the poor but deprives them of this heavenly gift when they become uncharitable and stop giving alms. In the Yiddish song "God of Abraham," chanted by East European Jewish women at the termination of the Sabbath, Elijah is heralded as Israel's redeemer, but since the song is chanted at the beginning of the new week, it also

stresses his role as provider. Since Elijah did not die, and is thought to wander the earth, usually disguised as a poor man, a beggar, or a gentile peasant, there are those who are eager to meet him, or at least to see him in a dream (*Gillui Eliyahu*, "Elijah's revelation"). The practical Kabbalah and Jewish folk beliefs describe ways to bring this about. His name is, therefore, also inscribed on many amulets, especially in the areas influenced by Islamic culture.

The stories and beliefs revolving around Elijah were the subject of many \*chapbooks composed in Yiddish, Ladino, and Judeo-Arabic dialects. All these legends testify not only to the popularity of the prophet among all Jewish communities, but also reveal the close affinity in Jewish folklore between written and oral literature and customs (see \*Elijah, Chair of; \*Elijah, Cup of). Many of the customs associated with Elijah can be explained by etiological tales. Their setting is usually an Elijah cave or shrine found on Mount Sinai, at Haifa, Alexandria, Cairo, Damascus, Aleppo, etc. The miracles in these tales, which are mainly of a healing nature, often give the name and describe the origin of the cave. Elijah's role in the circumcision ceremony is not only associated with the "Chair of Elijah," but he heals and is the guardian angel of the newborn Jewish child during the "critical birth" period (lasting at least 30 days from the date of birth). Numerous religious and secular folk songs and dances testify to this fact. Many proverbial sayings and aphorisms grew around Elijah's name. The most popular among them "until Elijah arrives," used when referring to a doubtful and unsolved matter, is similar to the folk explanation of the word תִּיקוּ (*teiku*), which is actually a form of תִּיקוּם "let it stand," "stalemate," as a \**notarikon* consisting of the initial letters of *Tishbi yetarez kushyot u-ve'ayot* "the Tishbite (Elijah) will resolve difficulties and problems." Though the main stream of the Elijah folklore is associated with his socio-national and religious roles, the prophet – as is usual with popular folk heroes – is also a protagonist in witty tales, folk jokes, and humorous stories. In these Elijah is identified with, or is the guardian angel of, the simpleminded Jew who at the end of the story is victorious; a factor which testifies to a type of wishful thinking at the root of Jewish folklore.

[Dov Noy]

### In Islam

According to the Koran (Sura 37:123–130), Ilyās (Elijah) was one of the apostles sent to his people to admonish them to fear God and not worship Baal. They, however, regarded him as a liar. In Sura 6:85 he is mentioned among the righteous ones, together with figures from the New Testament who included ʿĪsā (Jesus). The commentators of the Koran and the authors of Muslim legend enlarge upon this limited information and explain that Ilyās lived during the days of Ahab and Jezebel. They also add that he was the fourth generation (!) after Aaron the Priest. In light of the Bible and the Midrashim they shaped the figure of the prophet who wages war against the worshippers of Baal and its priests, even though they occasionally change the names of the characters: Ahab becomes

Lājab, Jezebel becomes Arbil (this difference is due to omission of the diacritical mark on the letter R).

[Haïm Zew Hirschberg]

### In the Arts

Elijah has inspired a wealth of literary material, mainly in the form of drama and verse. However, apart from an early appearance in the 17<sup>th</sup>-century medieval English *Stonyhurst Pageants*, he only began to receive serious attention in the late 18<sup>th</sup> century, when the Countess de Genlis included *La Veuve de Sarepta* in her sacred plays and T.S. Dupuis wrote his English dramatic poem *Elijah* (1789). These were followed in the 19<sup>th</sup> century by the U.S. writer R. Davidson's *Elijah, a sacred drama...* (1860), and by two Hebrew poems: *Tiferet ha-Tishbi* (1839) by Max E. Stern (1811–1873) and *Ru'ah Eliyahu ha-Tishbi* (1879) by Samuel Loeb Silbermann. The subject acquired greater popularity in the 20<sup>th</sup> century, when writers invested Elijah with fresh social or political significance. The pioneer Yiddish dramatist Peretz \*Hirschbein contributed *Eliyohu der Novi* (1916), a comedy portraying the sudden arrival of Elijah at the home of a poor Jew; and Ben Jair (Moritz Golde) wrote a three-part dramatic poem entitled *Elijahu* (1914). Between the world wars the English author Clemence Dane wrote her play *Naboth's Vineyard* (1925) and John Kinmont Hart a poem entitled *Prophet of a Nameless God* (1927). During the period of World War II and immediately following it, there were further works, such as *The Vineyard* (1943), a drama about Elijah, Ahab, and Jezebel by the Earl of Longford; Norman Nicholson's verse play *The Old Man of the Mountains* (1946); and Helmut Huber's German drama *Elias* (1947). Nicholson's play set the Elijah-Ahab conflict in the North of England, the prophet here appearing as the champion of the working classes. Mid-20<sup>th</sup> century treatments of the subject include Jean Bothwell's *Flame in the Sky...* (1954); Heinrich Bela Zador's *Die Erfuellung* (1958; *Hear the Word!*, 1962), a novel about Elijah and Elisha; and a late work by Martin \*Buber, *Elija; ein Mysterienspiel* (1963).

The prophet Elijah is also a prominent figure in Christian art of both East and West. From Greece, where the name was assimilated to Helios (god of the sun), his cult spread to Byzantium and Russia. In the West, the cult was propagated to some extent by the foundation of the Carmelite Order, so named because Elijah, its patron and "founder," is associated with Mount Carmel. Through this patronage Elijah acquired the attribute of a white mantle, the dress of the Order. In Christian typology, Elijah figures as the precursor of John the Baptist; like him he is an ascetic, living in the desert, and like him he is shown as emaciated and wearing a hair-tunic. Elijah, however, also prefigures Jesus: his despair in the desert parallels the Agony in the Garden; the resurrection of the son of the widow of Zarephath (1 Kings 17:8–24) is seen as a prefiguration of the resuscitation of Lazarus; and his ascension in a chariot of fire is equated with the Ascension of Jesus. Even the fire of heaven which ignites his sacrificial offering is likened to the descent of the Holy Spirit at Pentecost. Elijah cycles exist in several Carmelite environments. Examples include a 12<sup>th</sup>-

century storiated capital from the Carmelite cloister of Trie (now in Tarbes); paintings of the school of Jörg Ratgeb in the refectory of the Carmelite convent at Hirschhorn am Neckar (1507); 17<sup>th</sup>-century windows in the Carmelite church of Antwerp; and 18<sup>th</sup>-century paintings by Jean-Baptiste Despax in the chapel of the Carmelites in Toulouse. The beautiful Russian church dedicated to Elijah at Yaroslavl on the Volga (17<sup>th</sup> century) is painted with scenes from his life.

The important scenes in Elijah's life are Elijah fed by ravens, Elijah fed by the widow of Zarephath (Sarepta), the resurrection of the widow's son, Elijah comforted by an angel in the wilderness, the sacrifices on Mount Carmel, the massacre of the prophets of Baal, Naboth's vineyard, the smiting of the Jordan, and the ascension in a chariot of fire. These have received varying emphasis in iconographic treatment, those most favored being the ravens, the widow, the angel, and the ascension. The feeding of the ravens appears in a 14<sup>th</sup>-century fresco in a monastery on Mount Athos; in a 15<sup>th</sup>-century fresco in a church at Lublin, Poland; in a privately owned painting by Guercino (1620); and in a work by Washington Allston (1779–1843). The widow of Zarephath and her sticks and the resurrection of her son appear in the synagogue of \*Dura-Europos; the widow is also depicted in a window at Chartres (12<sup>th</sup> century) and another at Bourges (13<sup>th</sup> century); in the 16<sup>th</sup>-century tapestry of La Chaise-Dieu; and in a painting by Jean Massys (1565). The resurrection of the widow's son also occurs at Bourges; in an icon of Pskov (Tretiakovskaya Gallery, Moscow; 16<sup>th</sup> century); and in a curious late 19<sup>th</sup>-century watercolor by Ford Madox Brown (Tate Gallery, London). The angel in the desert appears in a fresco in Orvieto Cathedral (14<sup>th</sup> century); in 16<sup>th</sup>-century paintings by Luini (Brera, Milan) and Tintoretto (Scuola di San Rocco, Venice); and in a Tiepolo ceiling in the archbishop's palace at Udine and a Rubens tapestry cartoon (17<sup>th</sup> century). The holocaust on Mount Carmel is represented at Athos and in a 16<sup>th</sup>-century fresco in Siena Cathedral by Beccafumi. The ascension of Elijah is, iconographically, in the strong classical tradition including Helios, Apollo, and Pluto. Some early examples are third- and fourth-century catacomb paintings and Christian sarcophagi. The Chapel of Golgotha in the Church of the Holy Sepulcher, Jerusalem, had an early mosaic representation of the scene and the subject also appears on the sixth-century wooden doors of Santa Sabina, Rome; in a ninth-century miniature of the Kosmas Indikopleustes manuscript (St. Catherine, Sinai); on the bronze door of Saint Sophia, Novgorod (1155); in Athos and Prague (14<sup>th</sup> century); in the 14<sup>th</sup>-century *Weltchronik* manuscript of Rudolf von Ems; and in paintings by Tintoretto (Scuola di San Rocco), Rubens, and Simon Vouet.

A rich and variegated selection of Elijah songs forms part of the folk and paraliturgical repertory of almost every Jewish community. In Christian music, the "History of Elijah and Ahab" occurs among Hungarian Protestant Bible songs of the 16<sup>th</sup> century (Hofgreff manuscript). Oratorio composers, from the 17<sup>th</sup> century onward, made use of the subject when the political climate was favorable, although no oratorios or cantatas

about Elijah were composed for the French court. Some early examples are M. Cazzati's *Il Zelante Difeso* (Bologna, 1665), on Elijah and the priests of Baal; and the oratorios written for the Viennese court by composers such as Georg Reutter (1728) and Antonio Caldara (1729; libretto by Zeno). A comic opera after Kotzebue by Conradin Kreutzer, *Die Schlafmuetze des Propheten Elias* (1814), was by the whim of the censor retitled *Die Nachtmuetze*..., varying the term for nightcap. Felix Mendelssohn's oratorio *Elijah*, first performed at the Birmingham Festival in 1846, has remained the outstanding musical interpretation of the prophet's character and deeds; it is also practically the only 19<sup>th</sup>-century oratorio that survives in the repertory and is most often performed in England, Germany (except during the Nazi era), and Israel. Abraham Zvi Idelson's opera *Elijah* has yet to be published.

**ELIJAH, APOCALYPSE OF**, apocryphal work. In the *Stichometry of Nicephorus*, a Christian list of biblical books and Apocrypha generally dated to the middle of the sixth century, there is the item, “Of the Prophet Elias, 316 *stichoi*.” Similar references are found in other early Christian lists and the *List of 60 Books* gives the title as *The Apocalypse of Elias*. The exist-

tence of such a work is confirmed by Origen's comment that the verse in 1 Corinthians 2:9 (Commentary to Matthew 27:9) is from the *Apocalypse of Elias the Prophet*. A similar claim is made by other Church Fathers, but Jerome, a great opponent of all apocryphal books, denies it vigorously (*Epistula LVII [ad Pammachium]*, 9). This same verse is quoted in the Ascension of Isaiah 11:34, definitely from 1 Corinthians and perhaps independently in Pseudo-Philo (*Antiquitatum biblicarum liber* 26:13), Clement of Alexandria (*Protrepticus* 10:94), and elsewhere. Likewise, some ancient sources attribute a quotation in Ephesians 5:14 to the same source (cf. Schuerer, *Gesch.*, vol. 3, 361ff.).

Two Latin documents containing quotations from the *Apocalypse of Elijah* have been discovered, one of particular interest (de Bruyne, in *Revue Benedictine* (1908), 146ff.), presenting a description of the torments in Hell. A similar revelation is shown by Elijah to R. Joshua b. Levi in the *Chronicles of Jerahmeel* (ed. by M. Gaster (1899), 34ff.). De Bruyne published additional Latin materials relevant to the *Apocalypse of Elijah* in *Revue Benedictine* in 1925. There are also two later *Apocalypse of Elijah*. One, in Coptic, first published by G. Steindorff in 1899 (there is a 1981 edition: *The Apocalypse of Elijah, based on Pap. Chester Beatty 2018: Coptic text*, ed. and transl. by A. Pietersma and S. Turner Comstock, with H.W. Attridge), probably preserves a considerable body of older Jewish apocalyptic material, including descriptions of the Antichrist. Similar descriptions are also to be found in the Hebrew *Sefer Elyahu*, a work edited with an explanation in German by M. Buttenwieser (1897), who discerned in it an apocalypse written about 260 C.E. with later, supplementary materials. A description of the Antichrist is also found in quotations attributed to the *Apocalypse of Elijah* in the fragments published by F. Nau in *Journal Asiatique* in 1917 (Ilesérie, tome 9, p. 453ff.).

**BIBLIOGRAPHY:** In addition to that cited above see M.R. James, *Lost Apocrypha of the Old Testament* (1920), 53–61; and DBI, Supplement 1 (1928), 456–8, both with bibliographies.

[Michael E. Stone]

**ELIJAH, CHAIR OF** (Heb. כִּסֵּא שֶׁל אֱלִיָּהוּ, *kisse shel Eliyyahu*), a special chair placed at the right of the *sandak* (godfather) at the circumcision ceremony and left unoccupied. The chair is symbolically meant for Elijah the prophet, called “The Angel of Covenant” (Mal. 3:1; covenant = *berit* = circumcision). It is usually richly carved and ornamented with embroideries. The Shulḥan Arukh (YD 265:11) prescribes the reservation of a special chair or seat for Elijah, and the *mohel* (circumciser) refers to it in the opening prayer preceding the circumcision: “This is the chair of Elijah, blessed be his memory.” The chair is also mentioned in the special *piyyut* for circumcision when the rite is performed on a Sabbath. Midrashic literature links the custom to Elijah's plaint to God that “the children of Israel have forsaken Thy covenant” (1 Kings 19:10, 14). According to the homiletic interpretations of this verse, Elijah had complained that the Jewish people had disregarded the commandment of circumcision and God is said to have replied: “Because of ex-

cessive zeal for Me you have brought charges against Israel that they have forsaken My covenant; therefore you shall have to be present at every circumcision ceremony” (PDR 29; Zohar, Gen. 93a). Since “the messenger [angel] of the Covenant,” spoken of in Malachi 3:1, was identified with the prophet Elijah, it was only proper that the Angel of the Covenant should be present whenever a Jewish child entered the Covenant of Abraham (i.e., circumcision). Scholars have suggested that the custom is rooted in the belief in guardian angels for the newborn; Elijah is identified as the guardian angel of the Jewish child. Most probably, the biblical story (1 Kings 17:17–24) in which Elijah revived the child of the widow was instrumental in creating this concept. Elijah is also the child protector in the inscription on \*amulets against \*Lilith. These were placed above the bed of the mother and the newborn child.

**BIBLIOGRAPHY:** H. Schauss, *The Lifetime of a Jew* (1950), 34–37; Eisenstein, *Dinim*, 182.

**ELIJAH, CUP OF** (Heb. כוסו של אליהו, *koso shel Eliyyahu*), term designating the cup of wine which is placed on the table of the \*Passover eve ceremonial (*seder*), but which is not drunk. There was controversy among the rabbis whether the *seder* ritual required four or five cups. Since, according to traditional belief, all doubtful cases of tradition will be resolved “when Elijah comes,” custom decreed that the fifth cup should be filled but not partaken of (cf. Pes. 118a; Maim., *Yad*, *Hameẓ u-Mazẓah* 8:10). Later this custom became associated with the belief that Elijah had not died but had ascended to heaven in a fiery chariot (11 Kings 2:11), and that he would return as the forerunner of the Messiah (Mal. 3:23). The festival of redemption from Egyptian bondage was naturally associated with the forerunner of the Messiah, who was expected in this “season of redemption” to herald the coming deliverance (cf. RH 11b). Hence the popular notion arose that the “cup of Elijah” was prepared to welcome the prophet who visited every Jewish home on the Passover night.

**ELIJAH BEN AARON BEN MOSES** (also referred to as **Ibn-'Abd-al-Wālī** or *ha-dayyan*, “the judge”), Karaite author in Jerusalem; according to A. \*Firkovich, he lived in the 15<sup>th</sup> century, and according to P.F. Fraenkel (see bibliography) in the 16<sup>th</sup>. He wrote the following works in Arabic: *Shurūt al-Dhabāḥāt*, on the laws of ritual slaughter; a key (*fihrisṭ*) to Judah \*Hadassi's *Eshkol ha-Kofer*; collectanea (manuscript in Jewish Theological Seminary, N.Y., presumably the same as *Sefer le-Eliyahu ha-Dayyan*, referred to in S. Pinsker, *Likkutei Kadmoniyot* (1860), 192 no. 14); and a commentary on the weekly portion *Ha'azinu*. He also composed *Shevah fi al-Torah*, a prayer on opening the Ark.

**BIBLIOGRAPHY:** Fraenkel, in: *MGWJ*, 32 (1883), 400–15; Mann, *Texts*, index, s.v. *Elijah Haddayan*.

[Jakob Naphtali Hertz Simchoni]

**ELIJAH BEN ABRAHAM** (first half of 12<sup>th</sup> century), Karaite scholar who may have lived in Erez Israel. He wrote a polemical tract *Ḥilluk ha-Kara'im ve-ha-Rabbanim* (“The Controversy between the Karaites and the Rabbanites”). In this Elijah lists 14 Jewish sects of which there remained in his time only four: the \*Rabbanites, the \*Karaites, the Tiflisites, and the followers of the faith (i.e., sect) of \*Meshwi al-Ukbari. Following \*Kirkisānī and other Karaite writers, Elijah considers that the breach between Karaism and Rabbanite Judaism is traceable as early as the time of \*Jeroboam I. Elijah was the first Karaite author to relate the questionable Karaite tradition according to which \*Anan b. David and other Karaites were the first Avelei Zion (“Mourners of Zion”) in Jerusalem. The list of Karaite sages in Elijah's work includes authors not known from other sources and also Rabbanite scholars such as \*Judah b. Eli of Tiberias and Judah ibn Quraysh. The author states in conclusion that “although the *Rabbanim* go astray in most of the *mitzvot*, they are our brothers and our coreligionists. And our soul grieves for their errors.”

**BIBLIOGRAPHY:** S. Pinsker, *Likkutei Kadmoniyot* (1860), 19, 225 (first pagination); S. Poznański, *Karaite Literary Opponents of Saadiah Gaon* (1908), 72–74; Mann, *Texts*, 2 (1935), index; L. Nemoj, *Karaite Anthology* (1952), 4–8; Z. Ankori, *Karaites in Byzantium* (1959), index.

[Simha Katz]

**ELIJAH BEN BARUCH (ben Solomon ben Abraham) THE ELDER** (d. before 1712), Karaite author. Elijah lived at first in Constantinople but is included by Simḥah Isaac \*Luzki among the Karaite writers of the Crimea. Elijah subsequently visited Erez Israel, and is therefore referred to as “Yerushalmi.” While in Jerusalem he copied the polemic by Salmon b. Jeroham against \*Saadiah Gaon, as well as the polemical tract of Sahl b. Mazliah. Elijah inserted his own comments, strongly critical of the \*Rabbanites in general and Saadiah Gaon in particular. Elijah's writings, mainly polemical, include (1) *Asarah Ma'amarot*, his major work, on the differences between the Rabbanites and the Karaites; (2) *Iggeret ha-Vikku'ah*, in four parts, not extant (mentioned in Luzki's *Orah Zaddikim*); (3) *Yalkut*, a collection of 61 essays by Karaite and Rabbanite scholars, with commentary; (4) *Sippurei Massa'ot*, a description of his journey from the Crimea to Erez Israel; (5) *Zeror ha-Mor*, a commentary on Judah Gibbor's *Minḥat Yehudah*. None of his works was published.

**BIBLIOGRAPHY:** A. Geiger, in: *Ozar Nehmad*, 4 (1863), 18; A.B. Gottlober, *Bikkoret le-Toledot ha-Kara'im* (1865), 159; S. Pinsker, in: *Likkutei Kadmoniyot* (1860), 25, 27, 43; S. Poznański, *Karaite Literary Opponents of Saadiah Gaon* (1908), 86, no. 45; Mann, *Texts*, 2 (1935), 1426–27.

**ELIJAH BEN BENJAMIN HA-LEVI** (d. after 1540), rabbi and *paytan* of Constantinople. He belonged to an indigenous Turkish Jewish family. He studied under Moses \*Capsali, to whose aid he came in his dispute with Joseph \*Colon, and afterward under Elijah \*Mizrahi, whom he succeeded as chief rabbi of Constantinople in 1525. Elijah wrote a book of re-

sponsa called *Tanna de-Vei Eliyahu*, comprising 451 responsa (in manuscript), 221 of which were edited by Benjamin b. Abraham \*Motal and published by Aaron Galimidi, one of his descendants, under the title *Zekan Aharon* (Constantinople, 1734). Some of his responsa were published in the works of his contemporaries, in the responsa *Oholei Tam* (in *Tummat Yesharim*) of \*Tam ibn Yaḥya, and in the *Avkat Rokhel* of Joseph \*Caro. Benjamin Motal published Elijah's article "Kol De'i," on the laws of \*asmakhta, in his collection *Tummat Yesharim*. Elijah edited and published the *Maḥzor Romania*, the liturgy in use in Greece and the neighboring countries, adding to it *bakkashot*, *teḥinot*, and other *piyyutim*. Benjamin Motal states that Elijah wrote thousands of poems, and the following books of poetry are known to be by him: *Beit ha-Levi*, *Tokheḥah Megullah*, *Shevet ha-Musar*, and *Mei Zahav*. The book *Zekan Aharon* mentions his *Livyat Hen*, which deals with ethical conduct. It is divided into three parts: *Maḥaneh Leviyyah* (of which one chapter was published as no. 148 of *Zekan Aharon*), *Maḥaneh Yisrael*, and *Maḥaneh Shekhinah*. He also prepared for publication Jacob b. Asher's *Arba'ah Turim* (Constantinople, 1494 or 1504) and Alfasi's code (Constantinople, 1509).

**BIBLIOGRAPHY:** Motal, in: Elijah b. Binyamin ha-Levi, *Zekan Aharon* (Constantinople, 1734), introduction; Zunz, *Poesie*, 388–90; A. Berliner, *Aus meiner Bibliothek* (1898), 3–5; S. Wiener, *Kohelet Moshe*, 4 (1902), 441, no. 3665; Rosanes, *Togarmah*, 1 (1930<sup>2</sup>), 206–9; 2 (1938<sup>2</sup>), 8f.; Davidson, *Ozar*, 4 (1933), 363, s.v. *Eliyahu ha-Levi*; Goldschmidt, in: *Sefunot*, 8 (1964), 205–36.

[Abraham David]

**ELIJAH BEN ELIEZER PHILOSOPH HA-YERUSHALMI** (fl. 15<sup>th</sup> century), scholar and Hebrew poet who lived in Crete. Elijah wrote a book on logic, *Sefer Higgayon al Derekh She'elot u-Teshuvot* (manuscripts in Leiden, Paris, and Parma), which is based entirely on Aristotelian logic, omitting the categories. He also wrote *Perush Pirkei ha-Merkavah*, a commentary on Maimonides' interpretation of Ezekiel's vision in his *Guide* (manuscript in Paris). In this work Elijah cites his commentary on the book of \*Bahir. He is also the author of a number of poems written in Hebrew and Aramaic and of prayers in prose (Mss. Parma 997; Paris 707).

[Jefim (Hayyim) Schirmann]

**ELIJAH BEN ḤAYYIM** (1530?–1610?), rabbi and halakhist, known as *Maharanah* or Morenu *ha-Rav* ibn Ḥayyim. Elijah was born in Adrianople and in about 1575 was appointed chief rabbi of Constantinople. His writings – including no-

vellae, discussions on most of the tractates of the Talmud, and responsa – were stolen, but some were recovered and published. They comprise *Teshuvot ha-Ranaḥ* (Constantinople, 1810<sup>2</sup>), responsa, with an appendix consisting of novellae on tractate *Ketubbot* published by his disciple, Isaac di Leon; *Mayim Amukim* (Venice, 1647), responsa, together with others by Elijah \*Mizraḥi; *Ha-Noten Imrei Shefer* (Venice, 1630), homilies on the Pentateuch (the first edition entitled *Mikhtav me-Eliyahu* (Constantinople, 1624) was probably incomplete). He was highly regarded by later rabbis, among them Akiva \*Eger, who praised his *Teshuvot ha-Ranaḥ*, which he used as a source for his decisions.

[Jacob Haberman]

**ELIJAH BEN JUDAH OF PARIS** (first half of the 12<sup>th</sup> century), French talmudist, commentator, and halakhist. Elijah is quoted in the *tosafot* and in the works of \*Eliezer b. Nathan of Mainz, \*Eliezer b. Joel ha-Levi of Bonn, \*Moses of Coucy, \*Mordecai b. Hillel, \*Meir b. Baruch of Rothenburg, and others. He was considered one of the leading scholars of his time, together with R. \*Tam and \*Meshullam b. Nathan of Melun, who held him in great esteem. Eliezer b. Nathan of Mainz directed his question on *Hezekat ha-Hallonot* to these three scholars (Raban, 153:3); and questions were also addressed to Elijah by Isaac b. Samuel ha-Zaken (Tos. to Ket. 54b). \*Moses b. Abraham of Pontoise, in a responsum to R. Tam (*Sefer ha-Yashar*, Resp. 51), refers to Elijah as "our teacher and our light." The Jews of Paris followed his customs, even in opposition to the views of R. Tam. His ruling (Tos. to Eruv. 97a) that the *tefillin* knot must be tied every day is well-known. Zunz attributes to Elijah a number of liturgical poems.

**BIBLIOGRAPHY:** Zunz, *Gesch.*, 458; Gross, *Gal Jud.*, 515f., no. 9; Michael, *Or*, no. 381; V. Aptowitz, *Mavo le-Sefer Ravyah* (1938), 310–1; Urbach, *Tosafot*, index.

**ELIJAH BEN KALONYMUS OF LUBLIN** (second half of 17<sup>th</sup> century), preacher and rabbi. Little is known about Elijah, whose only extant work, *Adderet Eliyahu* (Frankfurt on the Oder, 1696), contains sermons commenting on each weekly Torah portion. They resemble short fables, each of which can stand independently, while together they form an intricate whole. In these *derashot*, written in a pleasant style, Elijah employs much kabbalistic terminology, quoting from such works as the *Zohar*, *Zohar Ḥadash*, and *Sefer ha-Peli'ah*, and makes use of talmudic-midrashic literature as well as Rashi. At the end of the book is appended a prayer from Erez Israel, the recitation of which could ensure forgiveness for sins connected with the destruction of the Temple and the resultant Diaspora.

**ELIJAH BEN LOEB OF FULDA** (c. 1650/60–c. 1720), rabbi and halakhic author. Elijah was born in Wiznica (Poland),

where he spent most of his life, and where he died. Toward the end of his life he moved to Fulda (southwest Germany), although there is no evidence that he became rabbi there as has been stated by some. Elijah made a special study of the Jerusalem Talmud, his fame resting principally on his commentaries to *Shekalim* (Frankfurt, 1689), the order of *Zera'im* (Amsterdam, 1710), *Bava Kamma* and *Bava Mezia* (Offenbach, 1725), and *Bava Batra* (Frankfurt, 1742). Using manuscripts upon which he also relied for his corrections to the *editio princeps* of the Jerusalem Talmud, Elijah's commentaries deal with each topic in *halakhah* and *aggadah*. His style is generally succinct; lengthier discussions are inserted in a separate rubric. Elijah's commentary was published approximately 50 years after that of Joshua \*Benveniste, the existence of which was unknown to him, and his commentary, published together with the text, exercised great influence on his contemporaries and initiated the systematic study of the Jerusalem Talmud in 18<sup>th</sup>-century Poland.

**BIBLIOGRAPHY:** L. Ginzberg, *Perushim ve-Hiddushin ba-Yerushalmi*, 1 (1941).

[Jacob Haberman]

**ELIJAH BEN RAPHAEL SOLOMON HA-LEVI** (end of 18<sup>th</sup> and beginning of 19<sup>th</sup> century), Italian rabbi, author, kabbalist, and liturgical poet. Elijah was both a pupil and a colleague of Isaac \*Lampronti together with whom he studied under Judah \*Briel in Mantua. He was at first rabbi of Finale and later worked in Alessandria. He composed a number of marriage poems and other occasional poems as well as a large work, *Seder de-Eliyahu* (Mantua, 1786). The names of all his books are connected with the name Elijah, such as *Sava Eliyahu* and *Eliyahu be-Arba*. His responsa are to be found in the *Shemesh Zedakah* of Samson Morpurgo, in the *Pahad Yizhak* of Isaac Lampronti, and in the *Givat Pinhas* (unpublished) of Phinehas Anau. A number of talmudic and kabbalistic works, responsa, and homilies by Elijah remained unpublished. Isaac Raphael Finzi composed an elegy on his death.

[Samuel Abba Horodezky]

**ELIJAH BEN SHABBETAI BE'ER** (14<sup>th</sup>–15<sup>th</sup> centuries; also known as **Elia di Sabato of Fermo** and in England as **Elias Sabot**), papal physician. He attended Popes Innocent VII (1404–06), Martin V (1417–31), and Eugene IV (1431–47), as well as the duke of Milan and the marquess of Ferrara. In 1410 he was summoned to England to treat King Henry IV and was empowered to bring with him a retinue of ten persons. A teacher of medicine at the University of Pavia, he was the first Jew recorded on the faculty of a European university. In recognition of his services, he was accorded the dignity of knight, and in 1405 was awarded Roman citizenship. An enigmatic medal was struck in 1497 (or 1503) in honor of his son Benjamin.

[Ariel Toaff]

**ELIJAH BEN SHEMAIAH** (fl. 11<sup>th</sup> century), liturgical poet in Bari, southern Italy. He was one of the most prolific poets of the Italian school. He composed about 40 *seliḥot*, most of them strophic, which have remained in manuscripts and old editions; some were included in the German-Polish ritual. Y. David, who prepared a critical edition of Elijah's *piyyutim* (1977), commented also on their sources, meaning, and characteristics. The subject matter is mostly a variation of the same theme: grief over present misery of Israel in exile and trust in God's help. Some of his poems allude to cruel persecutions in his time, and he refers to the enemies of Israel with many allegorical names. Stylistically, the poems resemble the *seliḥot* of his contemporary \*Solomon ha-Bavli, who was probably his master, but the language is more stereotyped. Zunz made a special study of his language and style. Elijah's signature is, among others, preserved in a responsum of Samuel b. Natronai. In the past scholars underlined the lack of depth and originality of this kind of *piyyutim* and the obscurity of the language. More recently, scholars have come to have a much higher opinion of the quality of Ben Shemaiah's *seliḥot*, considering him an excellent spokesperson of the Jewish community of Bari in its historical situation and a good representative of the literary tendencies of the epoch with his own individuality.

Bar-Tikva, in: *Sinai*, 83, 1–2 (1978), 92–94.

[Jefim (Hayyim) Schirmann / Angel Sáenz-Badillos (2<sup>nd</sup> ed.)]

**ELIJAH BEN SOLOMON ABRAHAM HA-KOHEN OF SMYRNA** (d. 1729), one of the outstanding preachers of his time. Born in Smyrna, Elijah spent most of his life there as a preacher, *dayyan*, and rabbi. Elijah came from a family of rabbis and writers; his grandfather, R. Michael ha-Kohen, wrote exegetical works on the Torah, and his uncle, R. Isaac ha-Kohen, was also a writer. His father, Abraham Solomon ha-Kohen, one of the rabbis of Smyrna, is known for his involvement in the rescue of Jews who had been taken captive. It would seem that he was also a scholar, as Elijah often quotes him.

Elijah was a prolific writer; about 30 of his works are extant, some in print, others in manuscript; his lost works are known only from references to them in his own writings. The following are among his extant works:

(1) *Shevet Musar* (Constantinople, 1712, and many subsequent editions), one of the most popular Hebrew works in the fields of ethics and homiletics, also translated into Yiddish. This work consists of 52 sermons, corresponding to the

weekly Torah portions and to the numerical value of his Hebrew name, “Eliyahu.”

(2) *Me'il Zedakah* (Smyrna, 1731), an ethical work dealing with the question of charity.

(3) *Midrash ha-Ittamari* (Constantinople, 1695; Salonica, 1725), a homiletical work consisting of sermons on various subjects, many of them ethical (e.g., charity and repentance). Because of this work, Elijah became known in Hebrew literature as Elijah ha-Kohen ha-Ittamari.

(4) *Midrash Talpiyyot*, novellae on various subjects, collected, according to the author, from the 300 books listed in the preface. Only the first half of this work, arranged in alphabetical order, was printed (Smyrna, 1736).

(5) *Minhat Eliyahu* (Salonika, 1824), 33 sermons, or chapters on ethical subjects.

The rest of his works includes several other ethical-homiletical collections, commentaries on Psalms, on other parts of the Bible, on *Pirkei Avot*, the 613 commandments, prayers, rabbinical sayings related to the various Torah portions, and on the *aggadot* of the Jerusalem Talmud. In addition, Elijah wrote several responsa, some to questions sent from far away. It is possible that he also dabbled in magic; many legends, which can be found in Ladino folktales, were related about him.

The teaching of ethical behavior, however, was Elijah's main purpose. He made extensive use of the vast ethical literature of the Middle Ages, both early and late – from *Sefer Hasidim* to the *Shenei Luhot ha-Berit*, by Isaiah ha-Levi Horowitz. In the sermons, ethical writings, and exegetical works, he also used kabbalistic literature, in which he was well versed. Later writers of homiletics and ethics, the author of the famous *Hemdat Yamim*, for example, made use of his works.

Social problems are a basic concern in his thought. The social and economic gap between rich and poor disturbed him, and some of his sermons are devoted to the question of theodicy: Elijah dwells at length upon the heavenly rewards of the poor and the just after death while vividly describing the horrible punishment awaiting the wicked. His preaching displays a strongly negative attitude toward the benefits derived from this world, and his listeners are asked to renounce all its joys, even purposely to take suffering and hardship upon themselves.

A considerable portion of Elijah's sermons deals with messianic subjects. G. Scholem – through the aid of historical documents and theological analysis of some of Elijah's works – proved that in fact he was a Shabbatean, although not one of the extremists. He probably adhered to its theology as expounded by Abraham \*Cardoso. It is possible that late in his life Elijah became detached from this movement, but he did not delete the Shabbatean portions from his earlier works.

**BIBLIOGRAPHY:** Steinschneider, *Cat Bod*, 932; Michael, *Or*, 188–90; M. Wunderbar, in: *Literaturblatt des Orients*, 37 (1847), 579; A. Jellinek (ed.), *Beit ha-Midrash*, 1 (1938<sup>2</sup>), 16; Rosanes, *Togarmah*, 6 (1945), 291; Zinberg, *Sifrut*, 5 (1960), 196–200; S. Werses, in: *Yavneh*, 2 (1940), 156–73; G. Scholem, in: *Sefer ha-Yovel Alexander Marx* (1950), 451–70.

**ELIJAH BEN SOLOMON HA-KOHEN**, Palestinian *gaon* from 1062 to 1083. His father Solomon was *gaon* from about 1020 to 1025 and was succeeded by \*Solomon b. Judah, who held that office until 1051. Elijah and his elder brother Joseph, who were very young when their father died, occupied important positions during Solomon b. Judah's incumbency, Elijah being the “*shelishi*” (“third”) and his brother the “*av bet din*”. According to the prevailing custom Joseph should have been appointed as *gaon*, and Elijah as *av bet din* after the death of Solomon b. Judah, but they were forcibly prevented by \*Daniel b. Azariah who belonged to the family of the Babylonian *geonim*. Daniel assumed the gaonate, holding the office from 1051 to 1062, and the two brothers were obliged to accept his authority. Only after the death of Daniel was Elijah appointed *gaon*. After the conquest of Jerusalem by the Seljuks in 1071, Elijah moved to Tyre together with his yeshivah. About two years before his death he designated his son \*Abiathar to succeed him after his death, and his second son, Solomon, as *av bet din*. A few of his responsa have survived, in which he and Abiathar reply to questions from \*Meshullam b. Moses of Mainz.

[Simha Assaf]

**ELIJAH BEN SOLOMON ZALMAN** (the “*Vilna Gaon*” or “*Elijah Gaon*”; acronym **Ha-GRA** = **Ha-Gaon Rabbi Eliyahu**; 1720–1797), one of the greatest spiritual and intellectual leaders of Jewry in modern times. A man of iron will, Elijah combined the personal life of an intellectual hermit with active and polemical leadership in Jewish society through his overwhelming influence on a chosen circle of disciples. Born in Selets, Grodno province, he came from a well-known rabbinical and scholarly family, whose members included Moses Rivkes. From his childhood, Elijah showed unusual gifts. At the age of six and a half, he gave a homily in the synagogue of Vilna and answered with great perception the rabbi's questions on it. When he was seven, Abraham Katzenellenbogen, rabbi of Brest-Litovsk, took him to Moses Margalioth of Keidany (Kedainiai), with whom Elijah studied for a time. However he mainly studied on his own, and thus remained untrammelled by the conventional methods of talmudic education of his day. Besides the Torah and the Oral Law, Elijah also studied Kabbalah, and before the age of 13 attempted to cultivate “practical” Kabbalah and to create a *golem*. Elijah stated, however, that “while I was making it, an image appeared above me, and I ceased from making it, for I said, doubtless God is preventing me” (Hayyim of Volozhin, in *Sifra de Zeni'uta* (with a commentary by the Vilna Gaon), introd.). Elijah also acquainted himself with astronomy, geometry, algebra, and geography in order to understand certain talmudic laws and discussions. Thus his main concern with astronomy was to

understand the rules of the Jewish calendar. For similar reasons he paid great attention to Hebrew grammar (see below). After his marriage around the age of 18 he would seclude himself in a small house outside the city and concentrate on learning day and night.

After staying briefly with his father-in-law in Keidany, Elijah traveled throughout Poland and Germany and visited important communities, including those of Zolkiew (Zholkva), Lissa (Leszano), and Berlin. Subsequently he settled in Vilna, where he remained until his death. He received financial support from the bequest of Moses Rivkes (who left a foundation for scholars in his family) and was additionally assisted by a sum allocated him by the community board, which also provided him with a rented apartment. In about 1785 his weekly allowance was raised by the community to 28 zlotys, which was higher than the stipend of the *av bet din*, the rabbi, or the *shadlan*. Since there were many outstanding scholars in Vilna at the time, the financial assistance given to Elijah, although he did not hold communal office, testifies to the high esteem in which he was held, despite his extreme personal modesty.

In Vilna his exceptional diligence in study became even more pronounced. To shut out distraction, Elijah would close the windows of his room by day and study by candlelight. In winter he studied in an unheated room placing his feet in cold water to prevent himself from falling asleep (Israel of Shklov, *Sefer Pe'at ha-Shulḥan* (Safed, 1836), introd.). According to Elijah's sons he did not sleep more than two hours a day, and never for more than half an hour at a time. He noted his comments and remarks in the margin of the page he was studying. Elijah made a special study of the Jerusalem Talmud, "opening up new horizons and clarifying incomprehensible passages" (his son Abraham in his eulogy *S'arat Eliyahu*). When he was 40 Elijah evinced a revolutionary change in his life. According to his students, he gave up studying exclusively by himself and began to teach, giving lectures to a group of outstanding scholars. In 1768, a wealthy relative, Elijah Peseles, bought a plot near Elijah's home where the edifice he built was dedicated to prayer and study. The master's "prayer room" was later enlarged and became the *bet ha-midrash* (*Klaus*) of the Gaon. Several of Elijah's disciples, including Ḥayyim of Volozhin and the brothers Menahem Mendel and Simḥah Bunem of Shklov, recorded his observations and explanations, and hence through them and Elijah's sons his teachings were disseminated. Elijah at this time generally refrained from contact with people who were not close to him. An exception was the "Maggid of Dubno," Jacob b. Ze'ev \*Krantz, whose friendship he sought, and to whom he once wrote: "Come, my friend, to my house and do not delay to revive and entertain me." Though his views had been sought earlier, only at this time did the Gaon also begin to express opinions on public issues. When in 1756 he was requested by Jonathan \*Eybeschutz's party to express his opinion on the controversy with Jacob \*Emden, Elijah modestly refused to arbitrate, saying: "Who am I, a man from a distant land, a man young in years, of re-

tiring disposition, that they should listen to me." However his intellectual and spiritual influence continued to grow, and according to the testimony of his contemporaries, "without his knowledge no important activity can be carried out" (I. Klausner, *Vilna bi-Tekufat ha-Ga'on* (1942), 237).

Elijah encouraged the translation of works on the natural sciences into Hebrew but opposed philosophy and *Haskalah*, seeing them as a threat to faith and tradition. He violently opposed the ḥasidic movement. Although he devoted considerable attention to Kabbalah he looked with concern on any suggestion of giving Kabbalah precedence over halakhic studies, and he also objected to changes in prayer rites and new customs that were being introduced by Ḥasidim. He was apprehensive over the possibility of the creation of a new group which would lead to a split in the community. When the first groups of Ḥasidim were organized in Belorussia and Lithuania the leaders of the Shklov community asked Elijah what policy they should adopt toward the new sect; Elijah replied that it should be fought. Etkes demonstrates that Elijah was the one who initiated the rejection of the Ḥasidim. The Vilna community decided to close the prayer rooms of the Ḥasidim, burn their works, and excommunicate them. In 1772 its leaders dispatched letters to a number of other communities urging them to combat the new movement.

Thus, under the leadership of Elijah, Vilna became the center of opposition to Ḥasidism. In 1772 and 1777 Menahem Mendel of Vitebsk and Shneur Zalman of Lyady, the heads of the ḥasidic movement in Belorussia, attempted to meet Elijah to demonstrate that the new movement did not conflict with traditional Judaism, but the Gaon refused to see them. After publication of Jacob Joseph of Polonnoye's *Toledot Ya'akov-Yosef* (1781), Elijah's fight against Ḥasidism intensified. Through his influence, the ban was again pronounced on the Ḥasidim, and emissaries were sent to rouse the communities against the movement. Around 1794 the Gaon gave instructions that the *Zavva'at ha-Ribash* ("Testament of R. Israel Ba'al Shem Tov") should be publicly burned in Vilna. In 1796, the Ḥasidim having spread a rumor that Elijah regretted his stand against the movement, the Gaon replied in a letter sent by special emissaries to the communities of Lithuania and Belorussia: "I will continue to stand on guard, and it is the duty of every believing Jew to repudiate and pursue them [the Ḥasidim] with all manner of afflictions and subdue them, because they have sin in their hearts and are like a sore on the body of Israel." When several Ḥasidim in Minsk cast doubts on the authenticity of Elijah's signature on the letter the community leaders sent two emissaries to Vilna to clarify the matter and Elijah responded with an even sharper condemnation of Ḥasidism. Because of the denigration of the Gaon in ḥasidic circles, the leaders of the Minsk community threatened excommunication to anyone impugning Elijah's honor. In the dispute which broke out in Vilna between the heads of the community and Samuel, the *av bet din*, Elijah opposed Samuel, although they were related. Elijah's intervention resulted in a judgment by the rabbis ruling that Samuel had broken an

oath and was guilty of other instances of bad conduct. Samuel's supporters thereupon tried to persuade the state court to prevent payment of the community's weekly allowance to Elijah, since he did not hold a formal position in the communal institutions. The community leaders, however, vigorously condemned this action and imprisoned the preceptor Joel for defaming Elijah. At that time a son of one of the community leaders ran away to a monastery and became converted to Christianity. When the youth was kidnapped from the monastery to induce him to return to Judaism, the ecclesiastical and state authorities arrested several suspects and charged them with the kidnapping. Elijah was also interrogated and imprisoned for a month in February 1788; in September 1789 he was again imprisoned for 12 weeks but the term was commuted. After his death, the opposition to the ḥasidic movement abated somewhat but did not die out completely.

Elijah had decided, before 1783, to immigrate to Erez Israel. He set out alone with the intention of sending for his family later, and on his way sent them a letter – a kind of spiritual testament. The missive reflects his delicate feelings toward his children, his wife, and his mother. He requested his wife not to economize on the tuition of his sons and to care for their health and diet. He also gave instructions for the education of his daughters and admonished them to refrain from taking oaths, cursing, deceit, or quarreling. He considered that vain talk was one of the greatest sins and therefore advised making few visits, even to synagogue, and praying at home, alone, in order to avoid idle talk and jealousy as much as possible. He warned them not to covet wealth and honor, because “it is known that all This World is vanity” (in his *Alim li-Terufah*, 1836). For unknown reasons Elijah did not reach Erez Israel and returned to Vilna.

Over time, Elijah became known as the Gaon and Ḥasid. The first appellation is based on his enormous scholarship that spanned the entirety of rabbinic literature, including the vast world of Midrash and kabbalistic literature. In addition, the depth of his knowledge and understanding is evident in his writings. The combination of Elijah's asceticism and almost obsessive devotion to Torah study and religious observance earned him the title of Ḥasid. Through his teachings and actions Elijah did much to form the characteristics of the “Litvak” *Mitnagedim* peculiar to Lithuanian Jewish culture whose achievements attained their pinnacle of expression in the 19<sup>th</sup> century in the many celebrated yeshivot of Lithuania, such as those of Volozhin and Mir. The semi-legendary figure of saint and intellectual giant towered over Lithuanian Jewry and influenced its cultural life in the 19<sup>th</sup> and into the 20<sup>th</sup> centuries.

[Israel Klausner]

### Teachings

The importance of the spiritual activity of the Vilna Gaon stemmed primarily from the vast range of subjects with which he dealt. There is no subject relevant to Judaism on which he did not write a book or notes and glosses that at times amount to a complete book. The Bible, the Talmud, including the

minor tractates, the tannaitic Midrashim, the Zohar and the *Tikkunei ha-Zohar*, the Shulḥan Arukh, Hebrew grammar, and a long list of general sciences such as geometry, measurements, astronomy, and medicine – all these occupied the Gaon of Vilna, to such an extent that it may be said of him that no Jewish or general topic which had a bearing on Judaism was alien to him. Even in the order of the prayers and in the *piyyutim* he formulated new readings that have been accepted (e.g., in the hymn for the termination of the Sabbath, instead of “our seed and wealth he shall multiply as the sand,” he read, “our seed and peace”).

The fundamental base of his outlook was the concept of the eternity of the Torah, with all its details and minutiae, in actual practice. He regarded the slightest attack on any single detail of the *halakhah*, or the undermining of a single precept of the Torah, as a blow at the foundations of the Torah as a whole. His outlook on the absolute eternity of the Torah he expressed strikingly in his commentary to the Sifra *de-Zeni'uta* (Ch. 5): “Everything that was, is, and will be, is included in the Torah. And not only principles, but even the details of each species, the minutest details of every human being, as well as of every creature, plant, and mineral – all are included in the Pentateuch.” This belief also encompassed the Oral Law, whence his punctiliousness about every smallest detail of the *halakhah* which established the content and the mode of observance of the precepts of the Torah. In consequence of this outlook the Vilna Gaon came to revive many customs and early prohibitions no longer mentioned even in the Shulḥan Arukh but mentioned in the talmudic sources, or for which he found support in these sources.

The Vilna Gaon interested himself in secular sciences to the extent that he saw in them an aid to the understanding of the Torah. It was his opinion that “all knowledge is necessary for our holy Torah and is included in it.” “To the degree that a man is lacking in knowledge and secular sciences he will lack one hundred fold in the wisdom of the Torah” (introduction to Baruch of Shklov's *Euclid*, The Hague, 1780). For this reason he influenced the physician Baruch of Shklov to translate into Hebrew works in such secular sciences as he found necessary for this purpose. He also desired to see the works of Josephus translated into Hebrew, “since they are in aid to the understanding of many passages in the Talmud and Midrash which deal with topics connected with the Holy Land in ancient times.” According to a statement dated 1778, he regarded the lack of interest in secular sciences that was widespread in the circles of talmudic scholars as a profanation of Israel's name among the nations, “who like the roaring of many waters will raise their voice against us, saying, where is your wisdom? And the name of Heaven will be profaned” (*ibid.*).

After deeply studying many branches of science, he tried his hand at writing works on mathematics (*Ayil Meshullash*, 1833), on geography (*Zurat ha-Arez*, Shklov, 1822), on astronomy, and on the calculation of the seasons and planetary motions (in Mss.). He also greatly valued music and said that “most of the cantillation of the Torah, the secrets of the le-

vitical songs, and the secrets of the *Tikkunei ha-Zohar*, cannot be understood without it” (Israel of Shklov, introduction to Elijah’s *Pe’at ha-Shulhan*, 1836). Similarly he greatly interested himself in medicine. However he had no knowledge of foreign languages and derived all his secular knowledge from Hebrew sources, most of which had been compiled during the Middle Ages. As a result he had no idea of Newton’s theory or the theory of Lavoisier and his entire scientific thinking was bound up with the theory of the four elements. Despite this Elijah was far removed from the \*Haskalah, which spread in his time in the circles of German Jewry. He imposed a severe punishment upon the preacher Abba of Glusk who identified himself with the *maskilim* when in Berlin, and in a conversation with Elijah expressed himself to the effect that “Rashi did not succeed in interpreting the Torah according to the plain meaning of the Scripture, and the authors of the Midrash as is well known are not masters of the correct literal meaning” (J.H. Lewin, *Aliyyot Eliyahu* (1856), n. 34). He did not join battle with the Haskalah movement because at that time the *maskilim* still stood within the bounds of traditional Judaism. They saw no contradiction between Elijah’s attitude to secular sciences and the activities of Moses Mendelssohn and some of them had connections with both of these simultaneously.

Elijah’s chief strength lay in *halakhah*. The fact that many *halakhot* and dicta in the Talmud are quoted in a fragmentary or defective form in one place, but in full or in a more correct version elsewhere, roused in him the determination to establish the correct reading of many *halakhot* by comparing the different sources. Emendations of the text not based upon investigation of the sources but the result of mere conjecture he regarded as “an absolute crime... for which excommunication is merited” (*Be’ur ha-Gra* to Sh. Ar., YD 279:2). Frequently he succeeded in explaining difficult problems in the Talmud by establishing the correct readings. His eschewal of casuistic hair-splitting, of which he said that “through it transgression increases, iniquity grows, pleasant speech is lost, and truth driven from the congregation of the Lord” (introd. by his sons Judah Leib and Abraham to *Be’ur ha-Gra* to Sh. Ar., OH), was also connected with this desire to clarify the readings of the *halakhot*. Hence he also demanded of the student “that he should delve into the subject with integrity, detest piling up difficulties, admit to the truth even if uttered by school children, and all his intellectual desires be nullified as against the truth” (*ibid.*). He regarded the commentary of Rashi as ideal for the study of the Talmud, since his comments “are very straightforward to the discerning” (*ibid.*). In the same spirit of this approach to the study of the Talmud he also established rules for the study of the Mishnah. The rabbis of the Talmud were accustomed in his opinion to explain the words of Mishnah as they explained the words of the Torah, i.e., both according to the plain meaning and exegetically. Expositions of the Mishnah on the basis of the assumption “there is a lacuna and this is what was taught” are exegetical. According to the Gaon, in actual fact the Mishnah lacks nothing, but Judah I occasionally cites a Mishnah which expressed

the view of one of the halakhic scholars, and as the *amoraim* inclined to a different view, they understood the Mishnah as if it were defective through omissions, in order that it should conform with their view. This view of the relationship between the Mishnah and the *Gemara* is expressed with complete consistency in his commentary on the Mishnah. At times he deviates from the conclusions of the *Gemara* in connection with certain *mishnayot* and explains them in accordance with the literal meaning of the passage (see, e.g., his commentary to Ber. 4:1 and 7:2).

The Vilna Gaon included within the Torah the Zohar, the *Tikkunei ha-Zohar*, and other early kabbalistic books like the *Sefer ha-Bahir*, of which he had a profound and extensive knowledge. Here, too, he paid special attention to establishing the correct readings. His chief aim, however, was to explain the Kabbalah sources in such a way as to abolish any contradictions between them and the talmudic sources. Wherever he found such contradictions he ascribed them to error in the understanding of the Kabbalah sources or of the words of the Talmud. He applied the same thoroughness to the kabbalistic works of Isaac \*Luria, in which he delved deeply, and “he brought them out of the darkness caused by copyists’ errors” (Ḥayyim of Volozhin in the introduction to the commentary to the *Sifra de-Zeni’uta*). His method of exposition in Kabbalah literature was also directed to understanding the words in their plain sense, although pupils said that in every literal interpretation he gave there was latent the esoteric meaning of the passage. Because of his attachment to Kabbalah he took a negative attitude to philosophy, which he designated “the accursed.” In particular his criticism was directed against Maimonides who rejected the efficacy of the use of Divine Names, charms, and amulets, thus denying the possibility of practical Kabbalah, which Elijah had followed from his early youth (*Be’ur ha-Gra* to Sh. Ar., YD 179:6). In his critical observations against philosophy he did not refrain from sharply attacking even Moses \*Isserles. When the Gaon gives the view of Isserles who, following Maimonides, interprets *pardes* as wisdom, he comments, “Neither he nor Maimonides saw the *pardes*” (*ibid.* to YD 246:4). Despite all his vast knowledge and understanding of Kabbalah, Elijah opposed preference being given to its study over that of the *halakhah*, as he opposed changes in the text of the liturgy and new customs, in which he saw echoes of Shabbateanism. In Ḥasidism’s stress on the fundamental of the love of God and the service of God in joy which it regarded as being on a higher level than Torah study, he saw contempt for the importance of Torah. Elijah’s spiritual path starts with ritual observance and Torah study. Only after one has perfected these two aspects of religious life can one enter the realm of mystic experience. Mysticism is attained through perfection of the self, not by enthusiasm.

The curriculum he laid down conforms to the demands of the Mishnah (Avot 5:21). He demanded that girls should also have a certain knowledge of the Bible and laid particular importance on their acquiring a knowledge of the Book of Proverbs and conducting themselves according to its principles.

## Writings

Over 70 works and commentaries are attributed to Elijah. More than 50 have appeared in print while several of his manuscripts have been completely lost. Up to the age of 40 he wrote only for his own use. Subsequently he would teach his novellae to his pupils who could take down only part of his teachings as he did not pause to allow time for this. None of his works was published during his lifetime. His commentary to the *Shulḥan Arukh* (OH, Shklov, 1803; YD, Grodno, 1806; EH, Vilna and Grodno, 1819; HM, Koenigsberg, 1855), *Ayil Meshul-lash*, fragments of a commentary on Scripture, and parts of a commentary on several *aggadot* which are extant were written by his own hand. Of his other teachings there remained notes written in haste on the margins of books and later copied – at times with errors that distort the meaning – by his sons or pupils. Of these notes, Hayyim \*Volozhiner said (introduction to *Be'ur ha-Gra* to Sh. Ar., OH) that they are “like the stars which appear small but beneath which the whole world stands.” In the scholarly circles of Vilna and beyond, several Torah novellae were also known that were transmitted in his name, and in order to make sure that everything attributed to him actually emanated from him, a proclamation was issued by the Vilna *bet din* on Kislev 19, 1798 forbidding anything to be published in the name of Elijah until it had been made absolutely certain that it was in his actual handwriting (*Shenot Eliyahu to mishnayot of Seder Zera'im*, Lemberg, 1799). The unsatisfactory external form of the Gaon's spiritual testament resulted in the fact that his great work in establishing the correct readings was not fully exploited.

The Gaon wrote commentaries to practically all the books of Scripture and to several of the books of the Mishnah. Among his expositions of the Mishnah, his commentary on that of *Arugah* (Kil. 3:1) became especially well-known in scholarly circles (*Be'ur al ha-Arugah*, in: Zerachiah Gerondi, *Sefer ha-Zara* (Shklov, 1803). Knowledge of geometry is necessary for its understanding, for which reason previous commentators of the Mishnah had experienced difficulty in explaining it. Israel b. Samuel of Shklov, the pupil of the Gaon, who, during the years he dwelt in Erez Israel interested himself especially in the Gaon's novellae to *Zera'im* (from the standpoint of their value for agricultural work in Israel), testifies: “He toiled on the theme of *Arugah* for as long a time as it would have taken him to complete half the Babylonian Talmud, rejecting all the explanations of the early commentators and expounding it by a new and true system” (introduction to *Pe'at ha-Shulḥan*, 1836). He also wrote commentaries and glosses on the tannaitic Midrashim – *Mekhilta* (1844), *Sifra* (1911), *Sifrei* (1866) – on various parts of the Tosefta, on the Jerusalem Talmud, on the whole of the Babylonian Talmud, and on the *aggadot* of the Talmud. Among his commentaries on the sources of the Kabbalah are a commentary to the *Sefer Yezirah* (Grodno, 1806), the *Sifra de-Zeni'uta* (Vilna and Grodno, 1820), the *Zohar* (Vilna, 1810), the *Tikkunei ha-Zohar* (1867), the *Ra'aya Meheimna* (1858), and the *Sefer ha-Bahir* (1883). Many attempts have been made to collate his

teachings and sayings. The most reliable such collection is *Ma'aseh Rav* (Zolkiew, 1808, and many more editions) by Issachar Ber of Vilna.

A singular aspect of the Gaon's writings was his constant emendation of the text. Elijah made textual emendations throughout all of rabbinic and kabbalistic literature. He combined two methods of emendation: (a) assuming that all rabbinic literature is a seamless whole, Elijah harmonized parallel sources, and (b) he corrected texts even when he had no textual sources. Rather, his amazing command of the entire literature allowed him to speculate as to the correct reading of the text. He even based some of his legal decisions on such emendations. Later historians claim that in emending the text, Elijah was a forerunner of modern scientific philological scholarship. However, what the Gaon did and how he did it is vastly different from modern scholarship. Nevertheless, he was a pioneer in thinking that many if not all of the available printed editions were filled with errors.

The Gaon's kabbalistic writing had great influence on the religious thinkers of the 19<sup>th</sup> and 20<sup>th</sup> centuries, starting with his student Hayyim Volozhiner, continuing through such ḥasidic giants as Abraham of \*Sochaczew and \*Zadok ha-Kohen of Lublin, to Abraham Isaac ha-Kohen \*Kook. His kabbalistic ideas were explicated and expanded upon by Isaac Ḥaver and Solomon Eliashiv, author of the *Leshem Shevo ve-Aḥlamah*.

[Samuel Kalman Mirsky / David Derovan (2<sup>nd</sup> ed.)]

## As Grammarian

Elijah's study of Hebrew, *Dikduk Eliyahu* (“Elijah's Grammar”), was first published by Zevi the grammarian (1833), and later in an edition by A.L. Gordon (*Mishnat ha-Gra*, 1874). Employing the methodology of the medieval grammarians, the study concerns itself with details from the field of phonology. It includes chapters on consonants, vowels, the *sheva*, the *dagesh*, and rules of accentuation in the Bible. In an additional list, Elijah summarizes the general principles of vocalization by means of mnemotechnical symbols and numbers. In the second part of the work, apparently authentic, are summaries of the categories of words in Hebrew (noun, verb, particle), and a short description of their morphological structure (conjugations and declensions). Here also the description is concise; at times it is summarized by numerical symbols.

Many grammatical observations are also found in Elijah's commentary on the Pentateuch (e.g., Gen. 1:1–7) and on the Prophets and Hagiographa. His entire exegesis on the first verses of the Torah is a morphological analysis, a summary of the rules of vocalization. His purism in defining the meanings of words, especially in distinguishing between synonyms, is apparent throughout his commentaries. At times he distinguishes between synonyms by using the etymology of the words (e.g., *dal*, “poor,” is from *dal minneh* – “it became less for him,” i.e., “his wealth was taken from him”). Similarly, linguistic and literary observations, accompanied by examples,

are to be found in his commentary on the “thirty-two principles of exegesis of Rabbi Yose ha-Galili.”

**ELIJAH CHELEBI HA-KOHEN OF ANATOLIA** (probably 15<sup>th</sup> century), liturgical poet. Five religious poems by him are printed in the *Mahzor Romania* and in the collection of devotional poems *Shirim u-Zemiroth ve-Tishbahot* (Constantinople, 1545). Menahem Tamar in the introduction to his own *Azharot* (Ms. Leyden 34) claims to have seen a collection of poems by Elijah. He is also mentioned in the collection of poems by Joshua Benveniste (written in 1635).

[Jefim (Hayyim) Schirmann]

**ELIJAH MENAHEM BEN MOSES** (c. 1220–1284), English rabbi, physician, and financier. Elijah Menahem was the son of R. \*Moses of London. From 1253, when he is first mentioned in the records, he was one of the most active English financiers. Many nobles, and even members of the royal family, were among his clients. Recent research has disclosed that he was one of the greatest and most prominent of the pre-exilic rabbis of England. Apart from various responsa, he wrote a commentary on the Mishnah (at least on the order *Zera'im*) which was frequently utilized by Yom Tov Lipmann \*Heller (in his *Tosafot Yom Tov*) and also a commentary on the Passover

*Haggadah*. Elijah also achieved some reputation as a physician, on one occasion being called upon to attend the count of Flanders. One of his brothers was Hagin (Hayyim) of Lincoln, archpresbyter of the Jews of England from 1257 to 1280; another was the scholar Berechiah of Lincoln.

[Cecil Roth]

**ELIJAH OF LA MASSA** (15<sup>th</sup> century), Italian rabbi and author. Elijah was head of the Padua yeshivah in the 1520s. He made a pilgrimage to Palestine via Egypt after 1433. A short while after his arrival in Jerusalem in 1437 he was appointed *dayyan*; halakhic questions were also addressed to him from neighboring countries, such as Syria and Egypt. He wrote several letters from Jerusalem to his sons via his brother in Ferrara. One of these, written after he had lived in Jerusalem for over a year, is the only known document about the Palestinian Jewish community of the first half of the 15<sup>th</sup> century. In this letter he describes his adventures and misfortunes on the way to Palestine; relates the details of the plague that struck Palestine and Syria, which was responsible for the death of 90 persons in Jerusalem; tells of his appointment as *dayyan*

in Jerusalem; and mentions the occupations of the local Jews. In the last part of his letter he speaks of the rumors current in Jerusalem about the wars of Beta Israel in Ethiopia, and also of what he heard about the Ten Tribes in India from a Jew who emigrated from Iraq. These rumors were already current in Italy, and Elijah was asked to get more details about them. It is not known whether he stayed in Jerusalem or returned to Italy. An English translation was published by E.N. Adler in his *Jewish Travellers* (1966<sup>2</sup>), 151–55.

[Avraham Yaari / Moti Benmelech (2<sup>nd</sup> ed.)]

**ELIJAH OF PESARO** (16<sup>th</sup> century), Italian scholar and traveler. After living for some time in Venice, Elijah set out for the Holy Land in 1563 but was obliged to stop his journey in Cyprus as there was an outbreak of cholera in Erez Israel. From Famagusta he wrote a letter to his relatives in Italy describing the journey, giving advice to travelers, and including an account of Cyprus which remains a primary source for the social and economic history of the island. Elijah also wrote philosophical homilies and commentaries on the Song of Songs, Jonah, and Job (Paris, Bibliothèque Nationale Ms. Heb. 276).

[Ariel Toaff]

**ELIJAH OF PRAGUE**, rabbi and head of the yeshivah in Prague in the 15<sup>th</sup> century. Elijah was strict in applying his rabbinical authority, frequently placing his opponents under the *herem* (ban), and even invoking the assistance of the secular authorities, an act for which he was censured by Israel \*Isserlein. His ruling that in a case of \*blood libel all the communities of the realm should be considered “one city,” and obliged to share the expenses for defense was accepted under protest because he had not consulted the communities concerned. He became involved in financial affairs “not in accordance with his honor” and was summoned before a *bet din* by Isserlein. Toward the end of Elijah's life Eliezer of Passau settled in Prague and encroached upon Elijah's sphere of competence, opening a rival yeshivah, among other activities. Israel \*Bruna and Perez succeeded in stopping the conflict between them which affected the whole Prague community.

**BIBLIOGRAPHY:** Horowitz, in: *Zeitschrift fuer die Geschichte der Juden in der Tschechoslowakei*, 1 (1930/31), 231–4; Suler, in: JGGJČ, 9 (1938), 109–11, 135–44, 167; Michael, *Or*, 159–60; M. Frank, *Kehillot Ashkenaz u-Vattei Dineihem* (1937), 24.

**ELIJAH PHINEHAS BEN MEIR** (c. 1742–1821), scholar, kabbalist, and *maskil*. Elijah was born in Vilna, but in his youth, after his father's death, he traveled extensively among the Jewish communities of Europe. In each city that he vis-

ited he furthered his Jewish learning, in particular his knowledge of Kabbalah, as well as his secular studies. Elijah became known through his work *Sefer ha-Berit*, the first edition of which appeared anonymously in Brno in 1797. This work enjoyed a relatively wide circulation and was particularly well received in Haskalah circles in Galicia and in Berlin, where, according to Elijah's own testimony, it was regarded as a kind of encyclopedia of the natural sciences, astronomy, and theology. When the work was attributed to \*Elijah ben Solomon Zalman, the Gaon of Vilna, and to Moses \*Mendelssohn, Elijah had the second edition published under his own name (Zolkiew, 1807, with additions and emendations; third edition, Vilna, 1818). The work is divided into two parts. The first, composed of 21 treatises, deals with science and philosophy; the second, comprising 14 treatises, deals with ethics and Kabbalah. The section on science was already outdated at the time of its composition, for, while it contains new empirical data, it embodies a conception of the universe that is based on medieval Aristotelian philosophy and on the Kabbalah of Isaac \*Luria. Elijah ignores the principles of Galileo and Newton in physics, and of Lavoisier in chemistry, maintaining, for instance, that the earth is stationary. The section on ethics and Kabbalah, which Elijah intended to be the main part of the work, is modeled after Ḥayyim \*Vital's *Sha'arei Kedushah*. In this section Elijah accepts \*Judah Halevi's view that the Jewish people is on the fifth level in the ascending scale of creation – mineral, vegetable, animal, rational, and Israel, and he makes use of the kabbalistic concept of the five souls inherent in rational beings – *nefesh*, *ru'ah*, *neshamah*, *hayyah*, *yehidah*, and of the doctrine of the *Sefirot*. Turning to more practical matters Elijah discusses the means by which one can prepare oneself for communion with the holy spirit (*ru'ah ha-kodesh*). Since the principal requisite is “the fulfillment of the commandments for their own sake,” he provides guidance for the observance of the commandments, according to the teachings of Isaac Luria. The love of one's neighbor, Elijah maintains, is one of the foundations of the service of God. However, higher than the love of human beings is the love of God, which he discusses in the final section of the work, entitled “Love and Joy,” and which he defines as the soul's cleaving to God. In addition to *Sefer ha-Berit*, Elijah wrote a commentary on Immanuel Ḥai \*Ricchi's *Mishnat Ḥasidim* (published in 1889); *Mitzvot Tovim*, dealing with the reasons for the commandments (*Taamei ha-Mitzvot*); *Matmonei Mistarim*, on the combinations of letters; and *Beit Yozer*, a commentary on *Sefer Yezirah*. These last three works are extant only in manuscript.

[Meir Hillel Ben-Shammai]

**ELIMELECH** (Heb. אֱלִימֶלֶךְ; “God [or my God] is king”), the husband of \*Naomi and father of Mahlon and \*Chilion, from Beth-Lehem in Judah. Due to the famine in Israel during the

time of the Judges, Elimelech crossed over to Moab, where he and his two sons died. Following their deaths, his wife Naomi returned to Beth-Lehem together with her daughter-in-law \*Ruth (Ruth 1:1–3; 2:1, 3; 4:3, 9). There Ruth married \*Boaz, one of Elimelech's relatives. The name itself is attested in the \*El-Amarna letters of the 14<sup>th</sup> century B.C.E. as Ili-Milku, a variant of the name Milk-ilu, ruler of Gezer. In Ugaritic documents of the 13<sup>th</sup> century the name is written \*Imlk and pronounced either Ili-Milku or Ili-Malku.

**ADD. BIBLIOGRAPHY:** W. Moran, *The Amarna Letters* (1992), 326; W. Watson and N. Wyatt (eds.), *Handbook of Ugaritic Studies* (1999), index, 841.

**ELIMELECH OF LYZHANSK** (1717–1787), popular *zaddik* of the third generation of Ḥasidim and one of the founders of \*Ḥasidism in Galicia. Elimelech was a disciple of \*Dov Baer the *Maggid* of Mezhirech and is considered the theoretician and creator of “practical *zaddikism*.” Elimelech and his brother Zusya of Hanipol traveled from village to village, according to the principle of *nedudei galut* (“wanderings of exile”), i.e., their travels, symbolically expressing their identification with the wanderings of the *shekhinah* (Divine Presence). According to a later interpretation, the purpose of their wanderings was the promotion of repentance. After the death of Dov Baer (1772), Elimelech settled in Lyzhansk, Galicia, which as a result became an important ḥasidic center. He headed a court financed by *pidyonot* (lit. ransoms), i.e., a system of internal taxes paid to the *zaddik* usually accompanied by *kvitlakh* (lit. “receipt”), slips on which the Ḥasidim wrote their spiritual and material problems for the *zaddik* to solve. Letters published under his name show his attitude toward the quarrels between the Ḥasidim and the *Mitnaggedim*. Elimelech is also mentioned in the indictments against the Ḥasidim in *Sefer ha-Vikku'ah* and in *Zemir Arizim*. In his letters, he defends himself against the objections of the *Mitnaggedim* to Ḥasidim praying according to the Sephardi ritual (following the rite of Isaac \*Luria). Elimelech cited as proof Joseph \*Caro and even Moses \*Isserles, who according to him established the Ashkenazi ritual for the general community, but not for the pious who had attained a higher plane of faith. Elimelech was ascetic, but he did not regard asceticism as the way of life for all. According to him, asceticism corresponds to the “breaking of the vessels” in Lurianic Kabbalah, whose purpose is *tikkun* (“restitution of the world”). However, it is not the only path to *tikkun*; for “one *zaddik* reaches *tikkun* through eating and another, through asceticism” (*No'am Elimelekh*, “*Va-Yikra*”).

### The Doctrine of the *Zaddik*

Elimelech formulated the mores of ḥasidic society in the doctrine of the *zaddik*. In contrast with the view that the *zaddik* was solely a spiritual leader, Elimelech maintained that the *zaddik* possessed the task of leadership in all spheres of life. The *zaddik* had to live in the dialectical tension between the spiritual life of *devekut* (devotion) and the pragmatic, materialistic requirements of society. Apparently, Elimelech himself

could not withstand the pressure of the life of a *zaddik*, and toward the end of his life concentrated on self-fulfillment. He withdrew from his disciples and even neglected the spiritual leadership of his community. According to Elimelech, the *zaddik* possesses a higher spiritual status than the *seraphim* and is the foundation of the world. He has power to influence the higher spheres, i.e., “the *zaddik* decrees and God fulfills” (Shab. 59b, cf. *No'am Elimelekh*, “*Shelah*”). The authority of a ḥasidic leader comes from his direct connections with higher powers whose assistance he receives for his concerns for the individual and the community. “Every utterance of the *zaddik* creates an angel, and influences higher spheres” (*ibid.*). By means of reflection and contemplation, the *zaddik* wages a war whose ultimate purpose is *devekut* and the ascent to the absolute. He “lives below” (i.e., on earth) “but in reality he dwells in higher worlds” (*ibid.*, “*Va-Yera*”). The *zaddik* faces the danger of death from an excess of enthusiasm. Therefore, God calms him in the height of his *devekut* in order that he not die from the ecstasy of the mystical experience. The condition of *devekut* is not static, but varies in its intensity, having ascents and descents.

### *Nefillat ha-Zaddik* (“The Fall of the *Zaddik*”)

Elimelech recognizes two types of falls (Heb., *nefillot*) in the status of the *zaddik*: descent for the purposes of *tikkun* and descent because of Satan. Descent for the purpose of *tikkun* is conceived of as a voluntary process. The *zaddik* knows that he is obligated to improve his community and, therefore, descends to its level in order to uplift it. Elimelech regarded the sublimation in this doctrine of descent as the inner identification and conscious comparison of the *zaddik* with the ordinary individual. As a result there takes place the process of the elevation or sublimation of evil thoughts (*ha'ala'at ma'hashavot zarot*), the abolition of sin, and the transformation of the profane into the holy. *Tikkun* by the elevation of *nizozot* (“sparks”) in the Lurianic Kabbalah is transferred to the sphere of the soul in Elimelech's teachings and is interpreted as the elevation of evil thoughts, leading to personal redemption. The “fall” of the *zaddik* is essential, and his capacity to sin is a condition of his charismatic mission. Practical application of this doctrine, which apparently stemmed from the Shabbatean idea of sin as a source for performance of a *mitzvah*, contains a serious religious danger. Inability of the *zaddik* to “fall,” however, interferes with the spiritual elevation of the community. The ascent of the *zaddik* which follows the “fall” is higher than the level he attained in his previous ascents. From this point of view, evil strengthens holiness. Elimelech's solution to the problem of evil is the sanctification of material things and the overcoming of temptation. The *zaddik* must abolish the dualism of coexistent good and evil by transforming evil into good, a process which will bring the advent of the messiah when all will return to their original unity. The innovations of this doctrine are the spiritual renewal of man and the revelation of the inner aspects of the Torah not revealed on Mount Sinai. These ideas appear in *No'am Elimelekh* (Lvov, 1787) arranged

in the form of sermons on the weekly readings of the Torah, mostly describing how the *zaddik* worships God. It includes his letters, his religious testament on matters of leadership, and a treatise, *Likkutei Shoshanim*. Elimelech's disciples were Abraham Joshua Heshel of \*Apta, Jacob Isaac \*Horowitz, the Seer ("Ha-*Hozeh*") of Lublin, Kalonymus Kalman \*Epstein of Cracow (author of *Ma'or va-Shemesh*), Menaḥem Mendel of \*Rymanow, and \*Moses Leib of Sasov.

**ELION, GERTRUDE BELL** (1918–1999), U.S. pharmacologist and Nobel Prize laureate. Elion was born in New York City. She studied chemistry at Hunter College and NYU, where she obtained her master of science degree in 1941. After a series of intellectually less challenging appointments, she joined Burroughs Wellcome in North Carolina as a biochemist in 1944, becoming head of the Department of Experimental Therapy in 1967 and scientist emeritus after her retirement in 1983. Her collaboration with George Hitchings led to her lifelong interest in DNA and RNA synthesis from purine and pyrimidine precursors and the design of drugs which selectively inhibit these pathways. This led to the development of 6-mercaptopurine, a landmark drug which inhibits cell proliferation and thus has anti-cancer properties, and its derivative, the anti-leukemic drug 6-thioguanine. Later came the immunosuppressive drug Imuran (Azathioprine), used to combat graft rejection and to treat immunological diseases; acyclovir, which inhibits herpes viruses and was the first anti-viral drug; and allopurinol, which inhibits uric acid synthesis and is a mainstay of gout treatment.

In 1988 she received the Nobel Prize in medicine (jointly with George Hitchings and James Black). Other honors include the Garvan Medal (1968), the American Cancer Society's Medal of Honor (1990), election to the National Academy of Sciences (1990) with subsequent Council membership, and the National Medal for Science (1991).

[Michael Denman (2<sup>nd</sup> ed.)]

**ELIONAEUS, SON OF CANTHERAS** (or **Cithaerus**), high priest 43–44 C.E. Elionaeus was appointed by \*Agrippa I. It is not clear whether he is to be identified with the "Cantheras" who was deposed by Herod of Chalcis and was succeeded by Joseph, the son of Camei (Kimḥit; Jos., Ant., 20:16). The Mishnah refers to him as Elioneiai b. ha-Kof (Par. 3:5), one of the few high priests who prepared the ashes of the \*red heifer.

[Edna Elazary]

**ELIOT, GEORGE**, pseudonym of **Mary Ann Evans** (1819–1880), English novelist. A Christian, George Eliot was a friend of the talmudic scholar Emanuel \*Deutsch, and began to study Hebrew and to show an interest in Jewish matters at an early age. *Daniel Deronda* (1874–76), her celebrated "Zionist" novel, was, however, her last great work of fiction. Possibly suggested by the career of Colonel A.E.W. \*Goldsmid, the hero of this novel, after discovering his Jewish identity only in his 20s, eventually leaves for Palestine to help "revive the organic center" of his people's existence. *Daniel Deronda* influenced the early Zionist thinker Eliezer \*Ben-Yehuda, and such Hebrew writers as I.L. \*Peretz and P. \*Smolenskin. Literary critics have severely criticized this novel complaining that the Zionist part is inflated, rhetorical, and not based on genuine observation. But it has been claimed that the author was writing a special kind of novel, dealing with the destinies of nations rather than individuals. George Eliot discussed the Jewish question again in "The Modern Hep-Hep," a strong attack on anti-Jewish prejudice published in a collection of essays entitled *Theophrastus Such* (1878).

[Harold Harel Fisch]

**ELIPHAZ** (Heb. אֱלִיפַז אֶדְוָי; perhaps: "God is victorious"; Ar. *fwz*), the name of two biblical characters. The first is the oldest son of \*Esau and his wife Adah, and the ancestor of several Edomite clans, the most important of which is Teman, since its name is employed in poetry as a synonym for "Edom" (Jer. 49:7; Obad. 9) and "Amalek" (Gen 36:2, 10–12, 15–16). The second, Eliphaz the Temanite, is the oldest of the three friends with whom the later stratum in the book of "Job the Patient" (see \*Job) furnishes its hero. In his choice of a name and nationality for this friend, the author of the later stratum may have been guided by the following considerations: the older stratum locates Job himself in the land of \*Uz and in the general ambience of the \*Kedemites (Job 1:1, 3b). The land of Uz is identified in Lamentations 4:21 with Edom, which, in any case, included a group known by the name of Uz (Gen. 36:28), and was certainly an important Kedemite nation (Isa. 11:14). From the above data on the first Eliphaz, it is not difficult to see why within Edom the author was attracted to the tribal name of Teman and within Teman to the personal name of Eliphaz.

[Harold Louis Ginsberg]

### In the *Aggadah*

Eliphaz, the comforter of Job, is identified with Eliphaz, the son of Esau (Gen. 36:4; Targ. Yer., Gen. 36:12). He had, however, few dealings with Esau (Yal. 897), and became a righteous man by virtue of the fact that he grew up under Isaac's care (Tanḥ. Va-Yera, 38). When his father sent him to kill Jacob, after the latter's flight from Haran, and Jacob beseeched him to spare his life, he agreed to do so, but, in order technically not to disobey his father completely, took all Jacob's worldly goods, since "one who has lost his possessions is regarded as dead" (Mid. Ag., Gen. 28:20). Eliphaz even attempted to avert a later tragedy by advising Amalek his son (Ten 36.12) to help Israel, because they were to inherit both this world and the world to come. In the time to come, Eliphaz will testify that Israel has observed all the Torah (Av. Zar. 3a).

**BIBLIOGRAPHY:** Ginzberg, *Legends*, 1 (1961), 421–3, 345–7; 5 (1955), 322; I. Ḥasida, *Išei ha-Tanakh* (1964), 68–69.

**ELISHA** (Heb. אֵלִישָׁא; "God is salvation"), Israelite prophetic wonder-worker of the ninth century B.C.E. in the days of \*Jehoram son of \*Ahab, \*Jehu, \*Jehoahaz, and \*Joash. According to 1 Kings 19:16, God commanded \*Elijah on Mount Horeb to anoint Elisha as prophet in his place. (11 Kings 19:15 is the sole biblical reference to anointing as an element of prophetic investiture.) When Elijah passed by the fields of Elisha's father and found Elisha busy plowing, "he cast his mantle upon him." The mere touch of Elijah's cloak transformed Elisha. The fact that he was plowing with 12 yoke of oxen that he slaughtered as a farewell feast before leaving his family for Elijah's service shows that he was wealthy. He became Elijah's devoted servant and outstanding disciple. Elisha came from \*Abel-Meholah (19:16). On the basis of the opinion that Abel-Meholah was in Gilead (see Glueck in bibl.), certain scholars postulated that geographical proximity was one of the causes of the personal affinity between Elijah and Elisha. Elisha was given the task of continuing Elijah's general prophetic mission. He also performed certain acts which had been imposed on Elijah but which the latter did not carry out in his lifetime, e.g., the anointing of \*Hazeal as king of Aram and Jehu as king of Israel. The transfer of Elijah's prophetic mission to Elisha is also described in the story of Elijah's ascension. Elisha, who saw Elijah ascending and "took the mantle of Elijah that had fallen upon him," was vouchsafed two-thirds of Elijah's prophetic spirit, and the sons of the prophets said: "The spirit of Elijah rests on Elisha" (11 Kings 2:1–18). In contrast to Elijah, who appears as a hermit-like prophet performing his deeds alone, Elisha in the performance of his acts avails himself of the sons of the prophets (9:1–12). He is also in need of a musician, so that the hand of God may rest upon him (3:15). Elisha's first appearance as a prophet in his own right took place during the expedition against Moab undertaken by \*Jehoram king of Israel and \*Jehoshaphat king of Judah (about 850 B.C.E.). Jehoram asked Elisha to reveal to him the "word of the Lord" about the outcome of the battle. Elisha did not hesitate to speak to Jehoram in the sharpest terms, and at first even re-

fused to prophesy. Only when the king pressed him, hinting that not only was he in danger but also his allies – the kings of Judah and Edom – did Elisha agree to prophesy because of the virtues of Jehoshaphat (11 Kings 3:11–19). The relations between Elisha and the kings of Israel were generally, but not always, harmonious (11 Kings 6:31–3). Jehoram is described as an improvement over his parents Ahab and Jezebel because "he put away the pillar of Baal which his father had made" (3:2). The Bible has preserved an account of how the king asks \*Gehazi, Elisha's young servant, to describe some of his master's deeds (8:4–6). The king listened with interest to Gehazi's narration, evidence not only of admiration for the prophet but also of complete belief in him and his prophetic powers. Nevertheless, this did not prevent Elisha from apprehending the failures of Jehoram's regime: the Moabite rebellion against Israel, defeats in the wars against the Arameans, the Aramean invasion and siege of Samaria, and the many years of famine, which Elisha saw as an indication that the sins of Ahab's house demanded atonement. In Jehu and Hazeal, he saw the rod of God's wrath in the awful and terrifying events that befell Israel as a punishment for the sins of Ahab's house.

Especially noteworthy is Elisha's prophecy to the Aramean Hazeal (11 Kings 8:7–15) in which the prophet told Hazeal that he would succeed to the throne of his ailing master \*Ben-Hadad. Elisha instructed Ben-Hadad to tell Hazeal that he would recover, despite Elisha's prophetic knowledge that Ben-Hadad would die. Encouraged by Elisha's prophecy Hazeal hastened Ben-Hadad's death. Noteworthy as well in the same story is how Elisha wept when he told Hazeal that his greatness would come at the expense of the Israelite people. Elisha is likewise depicted as playing a role in Jehu's revolution in the kingdom of Israel. It was Elisha who sent one of the disciples of the prophets (Heb.: *benei ha-nevi'im*) to anoint the army commander Jehu and instruct him: "You shall strike down the house of Ahab your master, that I may avenge on Jezebel the blood of my servants the prophets, and the blood of all the servants of the Lord" (9:1–7). Interestingly, the biblical writers do not mention any direct involvement of Elisha with Jehu in the destruction of the house of Ahab, or in Jehu's bloody purge of the worshippers of Baal. Nor do we have an account of Elisha's intervention in subsequent events of Jehu's reign. Only in the days of Jehu's grandson, Joash, more than 40 years after the bloodshed, does Elisha once again appear to prophesy future victories for the kingdom of Israel over the Arameans (11 Kings 13:14–19). He died during the reign of Joash son of Jehoahaz.

Elisha was remembered as a powerful wonder-worker for both good and ill. One of his miracles rescues the son of the widow of one of the disciples of the prophets from slavery (11 Kings 4). In another tale he brings fertility to a barren woman and later brings the boy back to life (*ibid.*) In another tale he heals the Aramean general Naaman of a dread skin disease (11 Kings 5). In yet another case he responds to youngsters who had teased him about his baldness by cursing them in Yahweh's name with the result that 42 of them are mangled

by bears. Elisha was a prophet by profession and sometimes received payments or gifts for services rendered, but refused to take them from the grateful Naaman (11 Kings 5:16). In fact, when his servant Gehazi cunningly received the gift from Naaman, Elisha cursed him vehemently (11 Kings 5:20–27). It appears that the stories of the wonders performed by Elisha and his master Elijah influenced the New Testament writers in their portrayals of Jesus as wonder-worker.

[Yehoshua M. Grintz / S. David Sperling (2<sup>nd</sup> ed.)]

### In the Aggadah

Elisha was the only one of Elijah's disciples whose prophetic powers were not only not diminished after his master's ascension but were increased, as a reward for his undeviating loyalty to his master. When the angel descended to take Elijah to heaven, he found the two so immersed in a learned discussion that he had to return without accomplishing his mission (SER 5:90–91; cf. Ta'an. 10b). Elijah's promise to bestow a double portion on his disciple was realized in that Elisha performed 16 miracles compared to the eight performed by his master (David Kimḥi to 11 Kings 2:14). While Elijah restored one person to life, Elisha revived two – the son of the Shunammite woman and Naaman, since a leper was considered as dead (Hul. 7b). His washing of Elijah's hands is extolled since serving a teacher is more meritorious than being his disciple (Ber. 7b).

The Shunammite built a private chamber for him to minimize his contact with other people since any woman gazing directly at Elisha would die (PdRE 33). She discerned the holiness of the prophet since she never saw a fly on his table and because a pleasant fragrance surrounded him (Ber. 10b; Zohar, 2:44a). Elisha did not refuse her hospitality because a sage may benefit from the generosity of his followers, though Samuel refused to do so (Ber. 10b). Elisha sanctified God's name when he refused to accept any recompense from Naaman (Num. R. 7:5). The children devoured by the bears on Elisha's command were in reality disgruntled water carriers whose livelihood was affected by the miraculous healing of the waters of Jericho. They, their ancestors, and their posterity were completely devoid of virtue. Nevertheless, Elisha was punished and afflicted with severe illness because he yielded to anger and cursed his antagonists. He was also visited with illness for completely thrusting Gehazi away instead of maintaining some relationship with him (Sot. 46b–47a). When Elisha rebuked King Jehoram in anger, the spirit of prophecy departed from him and he had to resort to artificial means to arouse it again (Pes. 66b). Elisha recovered from his two illnesses and was the first person in history to survive serious illness. Before him, every illness had resulted in death (BM 87a). Even after his death a great miracle occurred when a dead man was revived by touching his bier (PdRE 33; Sanh. 47a).

### In Islam

Al-Yasa' or Alyasa' is to be identified with Elisha, the disciple of Elijah. He is mentioned in the Koran twice (Sura 6:86;

38:48), once together with Ishmael, Jonah, and Lot (Sura 6:86) and the second time with Ishmael and Dhū al-Kifl, a figure who is not easy to identify (see \*Ezekiel). It is, however, evident that Muhammad did not know where to place him. According to the commentators of the Koran, he lived before King Saul.

**ELISHA BA'AL KENAFAYIM** (Heb. אֱלִישָׁע בְּעַל כַּנְפַיִם; “Elisha the man-of-the-wings”; c. second century C.E.), pious man of the tannaitic period whose name is said to reflect his miraculous escape from death during the Roman persecutions. The talmudic story reads as follows: “... the wicked state (i.e., Rome) once proclaimed a decree against Israel that whoever put on phylacteries should have his brains pierced; yet Elisha put them on and went out into the streets. A quaestor saw him; and when Elisha fled from him, the latter gave pursuit. As he overtook him, Elisha removed the phylacteries from his head and held them in his hand. ‘What is that in your hand?’ he asked, to which Elisha replied ‘The wings of a dove.’ He opened out his hand and the wings of a dove were found therein. Hence he is called ‘Elisha the man-of-the-wings’” (Shab. 49a, 130a). The Jerusalem Talmud states “Whoever is not like Elisha the man-of-the-wings should not put on phylacteries” (Ber. 2:3, 4c; see *Penei Moshe*, *ibid.*). It seems however, that the epithet “man of the wings” is in fact a *euphemism* for “one with clean hands,” i.e., that he was scrupulous with regard to the ritual washing of hands (see *Arukh ha-Shalem*, ed. by A. Kohut, 4 (1926), s.v. *Kanaf*, and S. Lieberman, *Tosefta ki-Fes-hutah*, 1 (1955), 215).

[Jacques K. Mikliszanski]

**ELISHA BEN ABRAHAM** (d. 1749), rabbi and author. Elisha was born in Leczyca, Poland. He also lived in Frankfurt and Altona in Germany and in Grodno in Lithuania. In his youth he was a pupil of Joseph Samuel of Cracow, the rabbi of Frankfurt, in whose home he was brought up. In 1697 he published in Amsterdam *Kav ve-Naki*, a short commentary to the Mishnah, which was brought out together with the text in one compact volume and has been frequently republished. He was appointed head of the *bet din* of Grodno, but in his old age returned to Germany, staying for some time in the home of Joseph Oppenheimer (son of David \*Oppenheim). Oppenheimer placed at Elisha's disposal a manuscript of \*Asher b. Je-

hiel's commentary to the Mishnah on the order *Zera'im*, which he published together with his own notes and glosses under the title *Pi Shenayim* (Altona, 1735). The work received several approbations, including that of Moses Hagiz and his opponent Jacob \*Emden, who rarely gave approbations. The manuscript of Asher b. Jehiel's commentary is now in the Bodleian Library, Oxford, and an edition of *Pi Shenayim* (1966) collated anew with the manuscript was published in 1966.

[Shlomoh Zalman Havlin]

**ELISHA BEN AVUYAH**, *tanna*, quoted once in the Mishnah as saying: “Learning in youth is like writing with ink on clean paper, but learning in old age is like writing with ink on blotted paper” (*Avot* 4:20). From the position of this saying toward the end of the fourth chapter (see: \**Avot*, Structure) – after R. Jacob and R. Shimon ben Eleazar and before R. Eleazar Hakapar – it would seem likely that he was one of the very last of the *tannaim*. In the talmudic tradition (TJ, Ḥag. 2:1, 77b) he was identified with “Aḥer” (“the Other”), the third of the four companions who “entered the *pardes*.” In the earliest form of this *baraita* (Tosef., Ḥag. 2:3, cod. Vienna), this third companion was named explicitly as “Elisha.” Elisha is a relatively rare name among the *tannaim*, and this probably contributed to the identification of these two figures. From the story in Tosefta *Ḥagigah*, it seems clear that the Elisha mentioned there was a contemporary of R. Akiva. Beyond what is told in *Avot* and in Tosefta *Ḥagigah*, tannaitic sources provide no additional information on either of these two figures. Chapter 24 in *Avot de-Rabbi Natan* version A ascribes various statements to Elisha ben Avuyah. However, *Avot de-Rabbi Natan* in the forms in which we possess it is a post-talmudic work, and these specific traditions are variously ascribed to other Sages in other sources. They cannot, therefore, be viewed as reliable evidence for early traditions concerning Elisha.

Tosefta *Ḥagigah* tells us that Elisha “looked and destroyed the plants.” “Destruction of plants” is a standard phrase in tannaitic sources for wanton destruction. It can refer either to damage caused to oneself or to damage caused to another (BK 8:6). In later sources it is used by extension to refer to the destructive consequences of sin (Gen. R. 19), and specifically to one who learns Torah but does not fulfill its precepts (Deut. R., ed. Lieberman, 109). In the Palestinian tradition two related interpretations of Elisha's “destruction of the plants” are suggested. According to one interpretation (TJ, Ḥag. 2:1, 77b–c; Ruth R. 6; Eccles. R. 7), Elisha himself stopped learning Torah and gave up observing the Sabbath. In this tradition Elisha is viewed as a tragic figure, who has strayed from the ways of the Torah and is convinced that there is no way back. In response to R. Meir's repeated attempts to convince him to repent, Elisha states: “Once I was passing by the Holy of Holies riding on my horse on the Day of Atonement which

fell on the Sabbath, and I heard a heavenly voice coming from the Holy of Holies, which said: ‘Return, O children’ – except for Elisha ben Avuyah.” This interchange, which provides the thematic framework for this entire narrative tradition, reflects a literary reversal of R. Meir's own position in Tosefta *Demai* 2:9, where R. Meir states that a sage who has abandoned the ways of the *havurah* “can never be accepted back” into the fold, while R. Shimon and R. Joshua ben Korhah state that he can always be accepted back, as it is written (Jer. 3:14): “Return, O repentant children.” This theme of the “sinful sage” (Rubenstein, 64–104; Goshen-Gottstein, 21–229), as developed in the Jerusalem Talmud and the parallel *Midreshei aggadah*, has no obvious connection to the story of the “four who entered the *pardes*.” In response to the question of what led to Elisha's apostasy, this tradition provides a number of answers. Two of them relate to the impure nature of Elisha's conception and birth, and two to Elisha's crisis of faith concerning the suffering of the righteous (e.g., seeing the tongue of R. Judah ha-Naḥtom in a dog's mouth, regarding which he commented: “Is this the Torah and this its reward?” (TJ, Ḥag. *ibid.*), cf. the parallel description of the tongue of Ḥuzpit the Meturgeman being dragged along by a pig in the Babylonian Talmud (Kid. 39c), concerning which Elisha exclaimed: “The mouth that uttered pearls licks the dust,” and see below). Since none of these reasons seem to have any connection to what Elisha may have “seen” when he entered the *pardes* (however this is understood), the later Palestinian tradition (Song R. 1) omitted the word “looked” from the original text of the *baraita*, reading instead: “Elisha destroyed the plants.” According to this tradition his experience in the *pardes* was not the cause of his apostasy. Rather the underlying causes of both his apostasy and of his negative experience in the *pardes* were the flaws in his character and the weakness of his faith.

Another early Palestinian interpretation of Elisha's “destruction of the plants” is also found in the Jerusalem Talmud (TJ, Ḥag. 2:1, 77b) and echoed in Song R. 1. According to this understanding, Elisha did not merely bring damage upon himself by ceasing to learn Torah and to observe the Sabbath. He also inflicted damage upon others, by forcing them to desecrate the Sabbath, or by preventing children from learning Torah, or even – according to an extreme version of this tradition – killing children who learned Torah. Clearly this tradition does not portray Elisha as a tragic figure, but rather as an arch-villain, deserving no sympathy, but rather only contempt and hatred. It is therefore significant to note that only in this tradition does the Jerusalem Talmud use the term “Aḥer” to refer to Elisha, thus avoiding referring to him by name. R. Meir also does not appear in this tradition, nor is there any discussion of his repentance or his return to the fold (cf. Tosef., Yoma 4:11).

In the Babylonian Talmud (Ḥag. 15a–b) these two very different early aggadic traditions were combined into a single composite, but fairly continuous narrative. Elisha both sins against himself and commits crimes against others. He is simultaneously a sympathetic and tragic figure, accompanied

by his still devoted disciple R. Meir, and given consideration by sages like R. Johanan, yet at the same time an arch-villain, never referred to by his own name, but rather only as “Aḥer” – “the Other” – and clearly despised by R. Judah ha-Nasi. As such, his complex and contradictory (or if you will: paradoxical) figure provides a profound challenge for literary critics. But the most important change in the Babylonian tradition is in fact a return, in part, to the earliest forms of the Elisha tradition, namely the connection between his apostasy and the experience of the *pardes*. No doubt basing itself on the original tradition of Tosefta *Ḥagigah*, the Babylonian Talmud assumes that Elisha’s “destruction of the plants” was a direct result of what he saw when he entered the *pardes* (“Elisha looked and destroyed the plants”). Moreover, the Babylonian Talmud assumes (probably correctly) that the original story of the entry into the *pardes* as described in the Tosefta reflects a mystical journey, involving an ascension (physical or spiritual) into the heavens, and a vision of some aspect of divinity. The clarification of the precise nature of the tannaitic understanding of the mystical ascent to the divine, and of the dangers inherent in this ascent, are therefore crucial to any appreciation of the roots and development of the Elisha traditions. In their present form, the Babylonian Talmud’s version of these traditions reflects a relatively late stage in the evolution of the Metatron traditions, and shows some degree of interdependence with the later strata of the *heikhalot* literature. For a powerful and profound study of these aspects of the Elisha traditions, see Liebes, *The Sin of Elisha*.

Given the composite character of the Elisha traditions, it is quite clear that any attempt to write a single consistent and coherent “biography” of this character will ultimately break down in contradiction. One extreme example of this phenomenon is reflected in the willingness of earlier scholars to accept on face value the identification of the tanna R. Jacob b. Korshai as Elisha’s grandson. The textual basis of this pseudo-identification provides a good text-case both of the talmudic method of “creative historiography,” and of the uncritical use of talmudic sources by some scholars. As mentioned above, one of the reasons given for Elisha’s apostasy was his loss of faith in divine reward and punishment. The Jerusalem Talmud (*Ḥag.* 2:1, 77b) tells that Elisha once saw a man ascend to the top of a date palm, take the young birds without sending off the mother, and came down safely, despite the fact that he had transgressed the law of the Torah (cf. Deut. 22:7). The next day, Elisha saw another man ascend to the top of a date palm, send off the mother and then take the young birds, thus fulfilling the law of the Torah. When he came down, he was bitten by a poisonous snake and died. Elisha was distressed because the Torah explicitly promises that one who fulfills this commandment will be given “goodness and length of days,” and so he lost his faith. To this the Jerusalem Talmud adds that Elisha lost his faith only because he was unaware of R. Jacob’s interpretation of the verse: “‘you shall receive goodness’ – in the world to come, which is all good; ‘you shall receive length of days’ – in the future world, which is ‘long’ [i.e., unending].”

This dictum is brought in the name of R. Jacob (b. Korshai) in Tosefta *Ḥullin* 10:16, a text which also includes a story about a man who ascended a tree, etc. Given the similarity between the story told by R. Jacob in the Tosefta and the story told by the Jerusalem Talmud in the name of Elisha, there can hardly be any doubt the entire passage in the Jerusalem Talmud is a free reworking and elaboration of R. Jacob’s original story in the Tosefta in order to suggest an additional reason for Elisha’s apostasy. In the context of the Babylonian Talmud’s discussion of R. Jacob’s position (*Kid.* 39b; *Ḥul.* 142a), it brings a dictum of Rav Joseph, which states: “If Aḥer had only interpreted this verse like R. Jacob the son of his daughter, he would not have sinned.” This is the only evidence for any family connection between Elisha and R. Jacob. Attempts like this to provide detailed family connections between characters in aggadic narratives are very common in the Babylonian Talmud. For example, both Abba Hilkiyah and Ḥanan ha-Neḥba are described in *Taan.* 23a–b as grandsons of Ḥoni Hameagel – the former as the “son of his son” and the latter as the “son of his daughter.” In fact, the only substantial connection between them is that they were all miraculous rainmakers. Even the precise phrase “Jacob the son of his daughter” occurs elsewhere in the Babylonian Talmud (*Sot.* 49a) with regard to Rav Aha bar Jacob. “Evidence” like this is inherently weak. However in our case, the very notion that Elisha was R. Jacob’s grandfather is totally implausible. R. Jacob b. Korshai’s was one of R. Judah ha-Nasi’s teachers. In *ṬB Ḥag.* 15b when Elisha’s daughter appeared before R. Judah ha-Nasi to ask for charity, he asked her: “Whose daughter are you.” She replied: “I am the daughter of Aḥer.” To this he exclaimed: “Does he have any offspring still remaining in the world?” If his own teacher was the son of Aḥer’s daughter, how could he be unaware that Aḥer had offspring? Moreover, how could R. Jacob b. Korshai be Aḥer’s daughter’s son, and still be old enough to have been R. Judah ha-Nasi’s teacher? These are the sort of problems one is bound to encounter when one takes what is in effect a minor literary embellishment (“the son of his daughter”) as an assertion of historical “fact.”

The various legends of Elisha, who forsook Judaism to seek new paths, influenced the Jewish writers of the Haskalah period, many of whom had passed through a similar crisis. He is the central character of several historical novels and poems of that period, and is the subject of various studies, including those of M.J. Berdyczewski, Y. Liebes, J. Rubenstein, and A. Goshen-Gottstein. M. \*Letteris’ Hebrew adaptation of the first part of Goethe’s *Faust* is called *Ben Avuyah*. Elisha b. Avuyah is also the subject of Milton \*Steinberg’s novel *As a Driven Leaf* (1940).

[Stephen G. Wald (2<sup>nd</sup> ed.)]

**ELISHAH** (Heb. **אֵלִישָׁה**), one of the sons of Javan, a grandson of Japheth (Gen. 10:4; 1 Chron. 1:7), and also the name of the island from which the Tyrians obtained blue and purple dyes (Ezek. 27:7). Elishah is usually identified with the name *Alašiya* (= \*Cyprus, or a part of the island) which occurs in document form in Alalakh, Tell el-Amarna, Ugarit, and in Hittite sources. The copper of Alašiya was already well-known in \*Mari in the Old Babylonian period. Other forms of Elishah are Ugaritic, *Alty* ("from *Alt*"), and Egyptian *ʿa-la-sá*.

**BIBLIOGRAPHY:** G.F. Hill, *A History of Cyprus*, 1 (1940), 42–50; C.F. Schaeffer, *Enkomi-Alasia* (1952); EM, 1 (1955), 52–3 (incl. bibl.); J. Simons, *The Geographical and Topographical Texts of the Old Testament* (1959), 28–29; H.W. Catling, in: CAH2, vol. 1, ch. 9 (1966), 58–62; *Ugaritica*, 5 (1968), index.

**ELISHA ḤAYYIM BEN JACOB ASHKENAZI** (d. 1673), father of \*Nathan of Gaza and emissary of the Ashkenazi community of Jerusalem. In 1650 Ashkenazi and the kabbalist Solomon Navarro were sent as emissaries to North Africa by their community. On their return, they stayed for a time in Venice where Isaac \*Bing of Jerusalem published Joseph \*Caro's *Maggid Meisharim* (1654), from a manuscript which Ashkenazi had brought from Jerusalem. Bing had published the first part of the work in Lublin in 1646. Ashkenazi also brought to Italy for publication Abraham \*Galante's *Zoherei Hammah*, a commentary on the \*Zohar (Venice, 1655). During his stay in Italy, Solomon Navarro converted to Christianity. The money they had collected on their mission was therefore lost, and Ashkenazi was compelled to begin anew, leaving for Germany and Poland. He returned to Italy in 1665, and in Leghorn heard of his son's prophecies in Gaza. Ashkenazi proceeded to Erez Israel via Egypt, where he was received by the wealthy Raphael Joseph with honor and gifts, on account of his son, the prophet. In 1666 he again departed for Germany and Poland on a mission for the Ashkenazi community of Jerusalem, passing through Constantinople, the Balkans, Budapest, and Vienna. Toward the end of his life, Ashkenazi went to Morocco on a mission, and he died there in the city of Meknès. It is possible that he brought his son's kabbalistic writings with him on this mission, for they were circulated widely throughout Morocco at that time. Certainly the fact that Nathan's father was well known and respected in the North African communities facilitated the spread of Sabbateanism there. There is no doubt that Ashkenazi believed in the prophecies of his son, who corresponded with him notifying him of his activities, and in the messianism of \*Shabbetai Zevi, even after the latter's conversion to Islam. Ashkenazi's other son, AZARIAH ḤAYYIM ASHKENAZI, was also sent to Morocco as an emissary of the Jerusalem Ashkenazi community. His novellae of the Torah appeared in *Mareh Einayim* (in Ms.) written by Eliezer Bahalul in 1710.

[Avraham Yaari]

**ELISHEBA** (Heb. **אֵלִישֶׁבַע**; "[my] God is fullness"), wife of \*Aaron, the daughter of Amminadab, and the sister of \*Nahshon. She bore Aaron four sons, \*Nadab, \*Abihu, \*Eleazar, and \*Ithamar (Ex. 6:23).

**BIBLIOGRAPHY:** Noth, Personennamen, 146; Rowley, in: JNES, 3 (1944), 75–76; Koehler, in: ZAW, 55 (1937), 165–6.

**\*ELISHEVA** (pen name of **Elisheva Bikhowsky née Elizaveta Zhirkova**; 1888–1949), non-Jewish Hebrew poet. Born in Russia, she began writing poetry in Russian in 1907, came into contact with Jewish circles, and was deeply attracted by the movement for Jewish national renaissance. Her admiration for the Jewish people and their hopes for redemption found expression in poems full of yearning for the beautiful and noble qualities of Judaism. Her Russian poems were published in two volumes in 1919: *Minuty* ("Minutes") and *Tainye Pesni* ("Hidden Songs"). She studied Hebrew, which she regarded as the "language of the heart of lights and shadow," and translated into Russian works by Judah Steinberg, J.Ḥ. Brenner, J.D. Berkowitz, G. Schoffmann, and U.N. Gnessin. Her first Hebrew poems were published in *Ha-Tekufah* (1921) no. 13. In addition to stories and poems, her Hebrew writings include articles of literary criticism on Hebrew and general European literature, particularly Russian. In 1925 she settled in Palestine with her husband Simeon Bikhowsky, whom she had married in 1920. Referred to as "Ruth from the banks of the Volga," her stories and her poems are pervaded by a deep love of everything Jewish. Her poems often have the innocence of a folk song, while her stories reflect a desire to stress the noble elements in life and to describe all that is good and exalted in man. Her Hebrew books are *Kos Ketannah* ("A Small Cup," poems, 1926); *Sippurim* ("Stories," 1928); *Mikreh Tafel* ("Unimportant Incident," a story, 1929); *Simtaot* ("Alleys," a novel, 1929; 1977); *Meshorer ve-Adam* ("Poet and Man," about the poetry of Aleksandr Blok, 1929); *Shirim* ("Poems," 1946). A collection of poems, *Yalkut Shirim*, appeared in 1970.

**BIBLIOGRAPHY:** V. Weiner, *Pirkei Ḥayyim ve-Sifrut* (1960), 74–96; *Genazim*, 1 (1961), 151–67. **ADD. BIBLIOGRAPHY:** *Kovez Ma'amarim odot ha-Meshoreret Elisheva* (1927); H. [Gedalyah Elkoshi]

**ELISOFON, ELIOT** (1911–1973), U.S. photographer. Born in New York, the first generation of his Latvian Jewish family in America, Elisofon grew up in poverty and he later developed an immense sympathy for the victims of the cataclysms he

witnessed and photographed in traveling two million miles across six continents. He became a professional photographer in 1935 after graduating from Fordham University. He depended on commercial work until 1939 when the Museum of Modern Art hired him as its first staff photographer. By the following year he had transformed himself into an energetic and committed photojournalist, artist, activist, teacher, lecturer, and writer. His still work ranged from war reportage and social photojournalism to food and glamour photography. He focused often on art and architecture of ancient cultures, and he loved Africa as a subject. He covered the London blitz, and as a staff photographer for *Life* magazine, he accompanied United States troops to North Africa. As a Hollywood color consultant, he created the mood-inducing hues of the film *Moulin Rouge*. Exhibitions of his paintings, often with his photographs, were held in leading museums and galleries throughout the world. He contributed to many books, including *The Art of Indian Asia: Its Mythologies and Transformations* (1955), *The Sculpture of Africa* (1958), and *The Nile* (1964), a work involving years of research.

[[Stewart Kampel (2<sup>nd</sup> ed.)]]

**ELITZUR**, sports organization of the religious workers movement, \*Ha-Po'el ha-Mizrachi. It was founded in 1938 at the initiative of R. Meir \*Bar-Ilan. Its early years in Erez Israel were devoted to mixed military and sports activities in the framework of the Haganah and Palmah and also in helping “illegal” immigrants come safely ashore. Intensive sports activities only developed after World War II. Its object was to encourage sport among religious youth in a framework which would not interfere with observance, with all activities taking place on weekdays. Elitzur’s membership reached 25,000 in 130 branches throughout Israel by the 1990s. Its teams played in the national leagues for basketball, volleyball, table tennis, tennis, judo, swimming, chess, athletics, badminton, squash, and handball but not for soccer where games are played on Saturdays. Outstanding has been the encouragement of sport among Ethiopian immigrant children and youth, producing several Israel champions in light athletics and winners of the Israel marathon.

Starting in 1983, the Elitzuria games were held every 4–5 years with the participation of religious Jewish youth from the Diaspora and Israel, attracting as many as 2,000 athletes from 20 countries, including Eastern Europe and the former U.S.S.R. World Elitzur has branches in North and South America, Europe, South Africa, and Australia.

[Zeev Braverman]

**ELIYAHU, MORDECHAI** (1929– ), Israeli religious leader, kabbalist, and former Sephardi chief rabbi of Israel. Born into a Jerusalem family of little means, Eliyahu was 11 years old when his father and teacher, Ḥakham Salman Eliyahu, passed away. Eliyahu then continued his studies at Yeshivat Porat Yosef with the Rabbi Ezra Attiah. For a number of years

he studied with Rabbi Abraham Yeshaya \*Karelitz, the Ḥazon Ish. He graduated from the Institute of Rabbis and Religious Judges headed by Rabbi Isaac \*Nissim, the former chief rabbi of Israel. Upon graduation he became the youngest *dayyan* (religious court judge) appointed to a religious court in Israel. He served on the rabbinic court in Beersheba for four years and then transferred to the court in Jerusalem. Eventually, he was elected to the High Rabbinic Court, where he continued to serve. In 1983 he was elected Sephardi chief rabbi of Israel and served one term until 1993. During his term as chief rabbi and afterwards, as well, Eliyahu, together with his colleague, Chief Rabbi Abraham \*Shapira, became one of the spiritual leaders of the religious Zionist camp in Israel. For over 20 years, he spoke out on political and social issues of concern to religious Zionism. During the events leading up to the Israeli government’s disengagement from Gaza in 2005, he was a vocal opponent of the removal of the Jews from their homes and the uprooting of Jewish communities in Gaza.

Eliyahu is the author of several popular works on *halakhah*, including *Darkhei Taharah*, about the laws of family purity (published in five languages); an annotated and updated edition of the *Kizzur Shulḥan Arukh*; a Sephardi rite *siddur*; and various pamphlets regarding Jewish law. Every Monday Rav Eliyahu taught a *shi’ur* (lesson) that could be heard on the radio over the Internet and by satellite in 250 localities throughout Israel. He also had his own website: <http://www.harav.org>. Eliyahu’s second son, SAMUEL, was chief rabbi of Safed. Eliyahu was recognized as a *posek* (halakhic decisor) and kabbalist, with many coming to him with their halakhic questions and for personal advice.

[David Derovan (2<sup>nd</sup> ed.)]

**ELIYIA, JOSEPH** (1901–1931), Greek poet, scholar, Hebraicist, and translator. Eliyia was born in Janina (Ioannina), was an ardent Zionist in 1917–18, and taught French at the Alliance Israélite Universelle school in Janina. He was a radical in defense of workers. His poem “Militarism” (1920) criticizing the role of Greece in the Asia Minor War angered the Greek authorities. He published demotic verse in various Athenian periodicals (*Noumas*, *Vigla*, and *Nea Estia*) and in the *Epiritikon Aghon* of Janina. His outstanding poems were love songs dedicated to Rebekah, his ideal of womanhood. Eliyia’s major translations include Greek versions of Isaiah and Job, the Song of Songs, Ruth, and Jonah, the poems of Judah Halevi and Ibn Gabirol, and the works of such modern Hebrew writers as Bialik, Frishman, Shneur, Peretz, and Tchernichovsky. He also wrote articles on Kabbalah and eschatology. He was one of the first Jews to advocate liberal ideas in Ioannina. In 1924, as an anti-militarist and leftist, he was arrested. He also developed a socialist ideology. To avoid problems with the authorities, he settled in Athens in 1925, writing in *Filiki Etairia* and the *Great Greek Encyclopaedia*. In Athens he graduated from the Ecole Française d’Athènes in 1930. A teaching appointment necessitated Eliyia’s move in 1930 to Kilkis, a remote town in northern Greece, where he was the only Jew in a hostile en-

vironment. By the time of his premature death from typhoid at age 29, Eliyia had written 257 poems and had contributed over 200 articles on Jewish themes to the *Great Greek Encyclopedia*. A biographical study of Eliyia (together with 90 of his poems in English translation) and a Greek edition of his poetry (sponsored by the B'nai B'rith) appeared as posthumous tributes to the writer.

Hassiotis (ed.), *The Jewish Communities of Southeastern Europe, from the Fifteenth Century to the End of World War II*, Thessaloniki: Institute for Balkan Studies (1997), 263–80.

[Rachel Dalven / Yitzchak Kerem (2<sup>nd</sup> ed.)]

**ELI ZIYYON VE-AREHA** (Heb. אֵלִי צִיּוֹן וְעָרֶיהָ; “Wail, Zion and its cities”), the initial words of an acrostic elegy for the fast day of the Ninth of \*Av. This dirge, written in the Middle Ages but of anonymous authorship, consists of 12 stanzas, each closing with the refrain: “Wail, Zion and its cities,/ as a woman in labor pains,/ and like a maiden that dons sackcloth to mourn for the husband of her youth.” The dirge enumerates, in detail, the cruelties suffered by Judea and its inhabitants during the destruction of the Second Temple. *Eli Ziyyon* is sung by the congregation standing. The refrain is sung slowly (and in some traditions twice) at the beginning, and then repeated faster after each stanza. The melody is of an elegiac character, and has become, for all Ashkenazi communities, a symbol of the yearly commemoration of the Destruction. It therefore came to be used also for some other *kinot*, such as the last stanza of *Az be-hata'einu* (“Then, for our sins”), and for *Terahem Ziyyon ka-asher amarta* (“Have mercy upon Zion as Thou didst promise”); and also for *\*Lekhah Dodi* during the “Three Weeks” (17<sup>th</sup> of Tammuz to 9<sup>th</sup> of Av). It is sometimes considered one of the *\*Mi-Sinai Niggunim*. The origin of the melody has been discussed by Emmanuel Kirschner and Abraham Zvi Idelsohn. Kirschner related it to a 15<sup>th</sup>-century German court ballad *Die Frau zur Weissen Burg*, and to 14<sup>th</sup>- and 17<sup>th</sup>-century Catholic songs. Idelsohn related it to a 17<sup>th</sup>-century Spanish folksong, and a Czech song of the same period, both of which belong to a melodic type which he also found among the Balkan Sephardim. Since all these comparisons are based upon resemblances of isolated motives or melodic phrases, and a direct prototype has not been identified as yet, it seems more probable that it represents a particular instance of a widespread European “migrant” tune or melodic pattern. The earliest notated evidence of the melody found so far is in the manuscript manual of Judah Elias of Hanover (1743), for *Lekhah Dodi* (in a slightly varied form), and in several of the manuals of 18<sup>th</sup>-century *hazzanim* published in Idelsohn, *Melodien*, vol. 6 (1932) (Isaac Glogau, Moshe Pan, I.L. Wolf). Its earliest appearance in print is

in Isaac Nathan’s very free paraphrase of the melody, for his setting of “O weep for those that wept by Babel’s stream” in Byron’s *Hebrew Melodies* (1815). An interesting version is given by Moses Margoliouth who states that he heard it sung by Polish immigrants at the Western Wall on the Ninth of Av, 1848 (*A Pilgrimage to the Land of my Fathers*, 2 (1850), 356–9).

The melody can be found in the following publications: S. Sulzer, *Schir Zion* (1838), 188, no. 148; M. Kohn, *Vollstaendiger Jahrgang von Terzett- und Chorgesängen*, 3 (1839), 130, no. 89; S. Naumbourg, *Zemiroth Yisrael*, 3 (1864), 23, no. 25; A. Baer, *Baal T’fillah* (1883<sup>3</sup>), 90; A.S. Ersler, *T’fillah w’Zimrah*, 1 (1907), 48, no. 49; L. Kornitzer, in: *Israelitisches Familienblatt* (July 28, 1927), supplement; Idelsohn, *Melodien*, 6 (1932), 213, no. 35; 7 (1933), 105, no. 302 a and b; 148, no. 101. It was published in Israel in Y. Sharett (ed.), *Anot*, 5 (1938), in M. Ayali, *Haggim u-Zemannim*, 1 (1953), 527, and in *Sefer ha-Moadim*, 7 (1957), 16–18 (music section).

In the 20<sup>th</sup> century, several composers made arrangements of the melody, including L. Zeitlin and Joseph \*Achron. Its poetical and melodic structure was the inspiration for A. Luboshitzky’s elegy on the death of Theodor Herzl *Eli Ziyyon ve-Nodedeha* (“Wail, Zion, and her dispersed ones”; *Mivhar Shirei Amenu* (1921), 59–60). A modern *kinah*, J.L. Bialer’s *Eli, Eli Nafshi, Bekhi* (Wail, wail my soul, cry”), in commemoration of the Holocaust, was approved by the Union of Synagogues in Israel for use on the Ninth of Av, and is sung to the *Eli Ziyyon* melody.

[Haim Bar-Dayan]

**ELKABBACH, JEAN-PIERRE** (1937– ), French broadcast journalist. Elkabbach was born in Oran, Algeria. He was a leading figure of radio and television journalism in France. From 1970 to 1972 he was a newscaster on the first channel. In 1975 he was chief editor on the state radio network, France Inter, and he became director of the news division in 1976. During the years 1977 to 1981 he was head of the news department of the second channel of French television. Since the position at that time was based on a political appointment, he was replaced when the Socialist government came to power in 1981. He became an editor and newscaster on the main daily news report on Europe No. 1 radio station. In 1993 he reached the peak of his career when he was appointed chairman of France Television, the French public broadcasting company. His methods of dealing with the strong competition from private networks were somewhat controversial, and he was forced to resign in 1996. He wrote about his experiences and the role of public broadcasting in France in *29 mois et quelques jours* (1997).

From December 1999, Elkabbach, a dynamic reporter noted for his aggressive broadcasting style, was chairman

of Public Senat, the parliamentary channel of the French Senate.

[Gideon Kouts / Dror Franck Sullaper (2<sup>nd</sup> ed.)]

**ELKAN, BENNO** (1877–1960), sculptor and graphic artist. Elkan was born in Dortmund, and studied art in Munich and Karlsruhe. He became a very versatile artist and could not decide whether to work as painter or sculptor. But after he had finished *The Walking* (1904, Ostfriedhof Dortmund) he decided to specialize in sculpture. In 1905 he went to Paris where he taught himself sculpture. There he became acquainted with Paul Albert Bartholomé, whose monumental sepulcher in the Père-Lachaise cemetery greatly influenced Elkan. A year after his marriage to Hedwig Einstein in 1907, the couple went to Rome for three years, where he immersed himself in the art of the Renaissance. In 1911 he returned to Germany where he executed a large number of stone tombstones decorated with bronze statues, and several large sculptures in colored stone. Among the busts he carved is a bronze mask of Jules Pascin (1906, Hamburger Kunsthalle), and busts of Truebner (1911, Ursula Hammil, Beverly Hills, U.S.), Alfred Flechtheim (1912, Stadtmuseum Düsseldorf), and Rathenau (1925, Museum am Ostwall Dortmund). Elkan's bas-relief portrait medals capture elements of chiaroscuro. In World War I, Elkan enlisted but was released after a bout of cholera. Elkan settled in Frankfurt for 15 years and had a profound impact on local cultural life. He published his war experiences (*Polnische Nachtstuecke*) as lithographs in 1918. The medals and busts created by Elkan are to be found in all the important museums of Europe. His most outstanding works in Germany were the freedom monument in Mainz (*Erwachende*, 1930, granite, about 17 ft., 4.5 meters, high) which was destroyed during World War II, and the memorial to the victims of war, erected in Frankfurt, which the Nazis removed in 1933, but which was restored in 1946.

In 1933 Elkan settled in London, spending the war years in Oxford. He modelled portraits of Lord Keynes, Winston Churchill, Lord Samuel, James de Rothschild, Claude Monet, Chaim Weizmann (on his 75<sup>th</sup> birthday), and Chief Rabbi J.H. Hertz. He created large bronze candelabra engraved with biblical figures for King's College (1934), Cambridge, New College, Oxford (*Verkündigung*, 1938), and several churches. His twin candelabra (*Old Testament*, 1931; *New Testament*, 1942, 2 × 2 meters) in Westminster Abbey depict 24 groups of figures from the Bible. Elkan's monumental bronze seven-branched candelabra (1956) decorated with biblical scenes was presented by members of the British Parliament to the Israel Knesset.

Menzel-Severing, *Benno Elkan* (1980); idem, "Benno Elkan – ein künstlerischer Kosmopolit aus dem Ruhrgebiet," in: J.-P. Barbian, M. Brocke, L. Heid (eds.), *Juden im Ruhrgebiet. Vom Zeitalter der Aufklärung bis in die Gegenwart*. (1999), 133–53.

[Sonja Beyer (2<sup>nd</sup> ed.)]

**ELKAN, SOPHIE** (1853–1921), Swedish novelist. She published some early works under the pseudonym Rust Roest, but her best-known novels, based mainly on historical themes, appeared under her own name. These include *John Hall* (1899) and two novels dealing with the Swedish king, Gustavus Adolphus IV – *Konungen* ("The King," 1904) and *Konungen i landsflykt* ("The King in Exile," 1906). Her central characters are perverted personalities, whom she analyzes with psychological subtlety. Following a voyage to Egypt and Palestine which she undertook with Selma Lagerlöf (1858–1940), she wrote an interesting book entitled *Drömmen om Österlandet* ("The Dream of the Eastern Land," 1904).

[Hugo Mauritz Valentin]

**ELKANAH** (Heb. אֵלְקָנָה; "God has created"), father of \*Samuel. 1 Samuel 1:1 names four generations of Elkanah's ancestors, thereby suggesting his important lineage. He lived in Ramathaim-Zophim (*ibid.*), which was apparently Ramah in the land of Zuph, at the southern end of Mount Ephraim. The genealogical lists in 1 Chronicles 6:7–12, 17–23, trace Elkanah's line to \*Kohath, the son of Levi, i.e., the levites who dwelt in Mount Ephraim. But the text in 1 Samuel 1:1 calls him an Ephraimite, and there are some who believe that this suggests that he was a descendant of Ephrath, Caleb's concubine, whose line is associated with Beth-Lehem in Judah. Possibly the claim to his descent from Kohath was added by later sources, which concluded from Samuel's priestly service that he was a levite. Elkanah has often been praised for nobility of character attempting to comfort his barren wife Hannah (1 Sam. 1:8), but in fact he negates the legitimacy of her feelings, and she is not comforted as the ensuing verses make clear. In the genealogical lists in 1 Chronicles several ancestors of Samuel are mentioned by the name of Elkanah.

[Samuel Ephraim Loewenstamm]

### In the Aggadah

The good deeds of Elkanah are compared with those of Abraham (Agg. Ber. 50). He was the only pious man of his generation, and was able to overcome the problem of having two wives who hated each other (*ibid.*). He did not marry Peninah until he had been married to Hannah for ten years without offspring (PR 43, 181a). He used to encourage his fellow men to accompany him on pilgrimages to Shiloh, and himself always made four annual pilgrimages instead of the obligatory three. Because he always traveled with his kinsmen and household, his caravan invariably roused the interest of the inhabitants of the towns through which he passed. Elkanah informed them of the purpose of his journey and encouraged them to join him. By taking a different route to Shiloh every year, he was eventually responsible for all Israel going on pilgrimage (SER 8).

**ELKANN, JEAN-PAUL** (1921– ), French engineer, businessman, and Jewish community leader. Elkann was born in Paris; he received his engineering degree from Columbia University. In addition to his engineering endeavors, he was appointed director of important French fashion houses and director of government companies. He was the director of Christian Dior from 1983 and prior to that of Parfums Givenchy (1980–83). Elkann was the owner and director of Vanadium Steel Italiana from 1948 and of Vanadium Alloys Steel Company Canada from 1950, and vice chairman of Vanadium Alloys Steel (U.S.A.) from 1953. Among his activities in the Jewish community, he was president of the Association de la coopération économique France-Israel and vice president of the France-Israel Chamber of Commerce. In 1982 he became president of the \*Consistoire Centrale Israélite de France, holding this position for a decade. In addition, Elkann was a member of the Alliance Israélite Universelle Central Committee and the Technion's Board of Governors.

He was awarded France's highest honors: Commander of the Legion of Honor and Grand Officer of the National Order of Merit.

[Gideon Kouts / Dror Franck Sullaper (2<sup>nd</sup> ed.)]

**ELKERBOUT, BEN** (1940–1987), Dutch-Jewish documentary film producer. Elkerbout joined the Dutch Labor Broadcasting Company VARA as a young man, first in an administrative position but later working as a producer of television documentaries. In this capacity he made many reports from abroad – from Vietnam, Biafra, and particularly Israel, where he felt closest to the Israel Labor party. His interview with Golda Meir in 1976 won a special prize from the international press jury at the First Jewish Film and Television Festival in Jerusalem.

In 1979, together with his younger colleague Ludi Boeken, he founded the independent Belbo Film Productions Company, which specialized in documentaries on unusual subjects. The topics included the uncovering of the financial resources of the neo-Nazis throughout the world, the dumping of unlicensed medicines in the Third World, prisons in Argentina, and a reconstruction of the students' revolts in Europe in the late 1960s.

In 1986 he went over to producing full-length feature films, the first of which was *Dreamers*, on pioneers of the Third Aliyah in Palestine.

[Henriette Boas]

**ELKES, ELHANAN** (1879–1944), chairman of Kovno (Kaunas) *Aeltestenrat* (Council of Elders under the Nazis). Elkes was born in Kalvarija (Lithuania). He received both a traditional Jewish and a private secular education. Elkes studied medicine in Koenigsberg, Germany, was a village doctor in Belorussia, and then served as a physician in the Russian army during World War I before coming to Kovno, where he was director of internal medicine at Bikkur Holim. A respected physician, he treated prominent non-Jews as well as

Jews and thus had excellent contacts, which he used when the Soviet Union occupied Kovno to assist in the emigration of Polish Jews stranded in Lithuania. Although an ardent Zionist from youth, he was not active in Jewish public life until the German occupation (June 1941), when he was unanimously elected chairman of the Kaunas *Aeltestenrat*, a position he accepted with great reluctance. Thus, he derived the legitimacy of his administration from the Jewish community and not from the Germans, who routinely appointed the Jewish leadership. Despite his failing health, Elkes guided the council for more than three years, during which time he took upon himself fateful decisions involving the future of the community while actively furthering the local resistance movement. He was a man of unquestioned integrity, who conducted the affairs of the Judenrat with equity and fairness, in marked contrast to other ghettos where corruption and the enticements of power – however limited and derivative from the German master – were rampant. Also in contrast with other Judenrat chairs, Elkes cooperated with the resistance. In Kovno the Jewish police directly assisted the partisans. In 1942, word of the fate of Polish Jews reached Kovno through Irena Adamowicz, a non-Jewish courier for the underground. From then on the members of the Jewish Council understood they would lead the battle for survival even without knowing if their efforts could postpone or prevent the day of destruction. Despite the Judenrat's best efforts, only 2,000 Jews – 8 percent of the ghetto's original population – survived, a rate little different from that of other ghettos whose internal governance was more corrupt and less benignly guided.

By his personality and dignity of bearing Elkes represents an outstanding example in the history of imposed Jewish "self-government." He wrote of his fate in a letter to his children, who were safe in England (written on October 19, 1943).

I am writing these lines, my dear children, in the vale of tears of Viliampole, Kovno Ghetto, where we have been for over two years. We have now heard that in a few days our fate is to be sealed. The Ghetto is to be crushed and torn asunder. Whether we are all to perish, or whether a few of us are to survive, is in God's hands. We fear that only those capable of slave labor will live; the rest, probably, are sentenced to death.

We are left, a few out of many. Out of 35,000 Jews of Kovno, approximately 17,000 remain; out of a quarter of a million Jews in Lithuania ... only 25,000 live ... The rest were put to death in terrible ways by the followers of the greatest Haman of all times and generations ...

We are trying to steer our battered ship in furious seas, when waves of decrees and decisions threaten to drown it every day. Through my influence I succeeded, at times, in easing the verdict and scattering some of the dark clouds that hung over our heads. I bore my duties with head high and an upright countenance. Never did I ask for pity; never did I doubt our rights. I argued our case with total confidence in the justice of our demands.

The Germans killed, slaughtered and murdered us in complete equanimity. I was there with them. I saw them when they sent thousands of people – men, women, children, infants – to their death, while enjoying their breakfast, and while mocking

our martyrs. I saw them coming back from their murderous missions – dirty, stained from head to foot with the blood of our dear ones. There they sat at their table – eating and drinking, listening to light music. They are professional executioners.

I am writing this in an hour when many desperate souls – widows and orphans, threadbare and hungry – are camping on my doorstep, imploring us for help. There is a desert inside me. My soul is scorched. I am naked and empty. There are no words in my mouth.

Following the liquidation of the ghetto, he was deported to Lansberg, where he served as a physician before succumbing to illness on October 17, 1944.

**ELKIN, ADOLPHUS PETER** (1891–1979), Australian anthropologist. Born in Maitland, New South Wales, Elkin began his fieldwork in the mid-1920s among the Australian aborigines and was one of the founders of anthropology in Australia. In 1934 he joined the faculty of the University of Sydney and became the chairman of its department of anthropology, remaining until 1956. During this time he did fieldwork in all parts of Australia, as well as in New Guinea and other areas of Oceania, and wrote on the rapidly disappearing aborigines of these areas. His books include *The Australian Aborigines* (1954<sup>3</sup>) and *Marriage and the Family in Australia* (1957). He became editor of the anthropology journal *Oceania* in 1933.

Elkin made great efforts to better the condition of the aboriginal peoples of Australia and New Guinea, and to improve relations between them and the white populations of these areas. From 1933 to 1962 he was president of the Association for the Protection of Native Races. Although Elkin's father, Reuben Israel Elkin, was Jewish, his mother was a Christian and, it should be noted, Elkin apparently regarded himself as an Anglican. He was married as an Anglican and for some years after 1919 was vice warden of St. Johns Theological College, Armadale, New South Wales, an Anglican institution.

**BIBLIOGRAPHY:** R.M. Berndt and C.H. Berndt (eds.), *Aboriginal Man in Australia* (1965), 453–70 (incl. bibl.). **ADD. BIBLIOGRAPHY:** *Australian Dictionary of Biography*.

[Ephraim Fischhoff / William D. Rubinstein (2<sup>nd</sup> ed.)]

**ELKIN, STANLEY** (1930–1995), U.S. novelist and short story writer. From 1955 to 1957, he served in the U.S. Army. From 1960, he taught and wrote at Washington University in St. Louis, Missouri, where he was appointed professor of English in 1968.

Elkin has been described as a black humorist. His fiction, which dramatizes the conflicts and vulgarity of contemporary

popular culture in the U.S.A., has become increasingly popular since the 1960s. His first novel *Boswell: a Modern Comedy* (1964) chronicles the post-World War II era as seen through the eyes of a cynical outside observer. His 1976 novel *The Franchiser* describes the life of Ben Flesh, who collects franchises, lives out of his Cadillac, eats fast food, and sleeps in motels. Only serious illness forces Ben to confront the sterility of his life.

Elkin's fiction is peopled by fantastically comic characters. In his third novel, *The Dick Gibson Show* (1971), Elkin utilizes a radio talk show format to recreate a set of eccentric comic personalities. His novella *The Living End* (1979) traces the lives of hold-up victims in Minneapolis-St. Paul, the cast of characters including Jesus, Mary, and Joseph and others both living and dead.

Elkin often uses the Jew and his exile as analogy for man's striving for freedom. In his first collection of short stories, *Criers and Kibitzers, Kibitzers and Criers* (1966), Elkin evokes the atmosphere of growing up Jewish in the late 1930s.

Elkin's other works have included the novel *A Bad Man* (1967) and the volume of short stories *Searches and Seizure* (1973), *George Mills* (1982), for which he won the 1983 National Book Critics Circle Award, and *Magic Kingdom* (1985).

**BIBLIOGRAPHY:** D. Dougherty, *Stanley Elkin* (1990); T. Pughe, *Comic Sense* (1994).

[Susan Strul]

**ELKIND, ARKADI DANILOVICH** (1869–?), Russian physician and anthropometrist. Elkind was born in Mogilev. After graduating in medicine, he became increasingly involved in the scientific study of anthropometry and craniology. As a result, he was entrusted by the Imperial Society of the Friends of Natural Science, Anthropology, and Ethnography with the study of the physical anthropology of Russian Poland. His extended investigations resulted in two important monographs for the society's journal, one an anthropological and cranial sketch of the Vistula Poles, the other *Yevrei*, a study based mainly on his observations of Polish Jews. The latter, which appeared in 1903, was described by M. \*Fishberg as the most comprehensive work ever published on the anthropology of a particular Jewish community. Elkind later pursued his demographic and anthropometric research in Germany and Italy. He came to the conclusion that there was a distinctive Jewish type, especially among the Jews of Russian Poland, which had been crystallized for the most part in the pre-Christian period. He published his findings in *Zeitschrift fuer Demographie und Statistik der Juden* (nos. 4–5, 1906; no. 12, 1908).

[Ellen Friedman]

**ELKUS, ABRAM ISAAC** (1867–1947), U.S. lawyer and public official. Elkus, who was born in New York City, practiced law there. He was appointed special United States attorney to prosecute bankruptcy in 1908, and in 1911 counsel for the New York State Factory Investigating Commission. Under the administration of President Woodrow Wilson, he was ambassa-

dor to Turkey (1916–19). Upon his return to the United States, he served briefly on the New York State Court of Appeals and as a League of Nations commissioner before resuming his private law practice. He was active in a number of Jewish organizations, especially the New York Free Synagogue, whose president he was from 1919 to 1927, and the Jewish Publication Society of America, of which he was honorary vice president until his death.

[Hillel Halkin]

**ELLENBOGEN, WILHELM** (1863–1951), Austrian politician. Born in Breclav (Lundenburg, Moravia), he was taken to Vienna by his family in 1870 and qualified as a physician in 1886. He was one of the first members of the newly constituted Social Democratic party, and served on its Executive Board from 1891. He was elected to the Reichsrat in 1901 and remained in the Austrian parliament also after 1918, until its dissolution in 1934. In 1907, Ellenbogen played an important part in securing the passage of the Universal Franchise Bill. At the end of World War I, he negotiated with the Hungarian government for food shipments to save Vienna from famine. In 1919 he became undersecretary for commerce, and in 1921 he succeeded Otto \*Bauer as secretary for socialization, with the rank of a cabinet member. Later he headed the office for electrification of the state railroads (until 1929). After the *Anschluss* in 1938, Ellenbogen fled to France and in 1940 to New York. His publications include *Was will die Sozialdemokratie?* (1910), *Sozialisierung in Oesterreich* (1922), and *Anschluss und Energiewirtschaft* (1928).

**ADD. BIBLIOGRAPHY:** A. Barkai, “The Austrian Social Democrats and the Jews,” in: *Wiener Library Bulletin*, 24 (1970); A. Rabinbach, *The Crisis of Austrian Socialism: from Red Vienna to Civil War, 1927–1934* (1983); R.S. Wistrich, *Socialism and the Jews: The Dilemmas of Assimilation in Germany and Austria-Hungary* (1982).

[Josef J. Lador-Lederer]

**ELLENSON, DAVID HARRY** (1947– ), U.S. Reform rabbi and scholar of modern Jewish thought; president of Hebrew Union College. Born in Brookline, Mass., Ellenson was raised in an observant home in Newport News, Virginia. He received his undergraduate degree from the College of William and Mary in 1969, a master’s degree from the University of Virginia in 1971, and his Ph.D. from Columbia in 1981. He was ordained at the Hebrew Union College-Jewish Institute of Religion (HUC) in 1977, and from 1979 to 2001 was a professor at the HUC campus in Los Angeles. In 2001, Ellenson was appointed as the president of the Hebrew Union College.

Over the course of his life, Ellenson has belonged to Orthodox, Conservative, and Reform communities. Consequently, some observers greeted his appointment as HUC president as reflective of a new post-denominational trend in American Jewish life. Ellenson’s wide-ranging life experiences, broad scholarly interests, and well-known affability have enabled him to forge connections with scholars and religious leaders of differing outlooks in the United States and Israel.

At the same time, his vision of a liberal Judaism balanced by ethical obligation and personal autonomy, as well as a strong commitment to Zionism and the State of Israel, have infused considerable new energy into Hebrew Union College and the American Reform movement. Since becoming president of HUC, Ellenson has been a vocal spokesperson on contemporary Jewish issues in North America and the State of Israel.

Ellenson’s research has been devoted to the manifold efforts of Jews to mediate between tradition and modernity in a post-Enlightenment age, as indicated by the titles of three volumes of his collected papers: *Tradition in Transition* (1989), *Tradition and Culture* (1994), and *After Emancipation* (2004). Throughout these books, Ellenson extensively analyzes two types of Jewish sources: liturgy and halakhic responsa. In the first case, Ellenson has followed his fellow Reform scholars Jakob J. \*Petuchowski and Lawrence \*Hoffman in utilizing liturgical innovation and translation as a prism through which to understand the ways in which modern Jews adapt age-old ritual formulae to contemporary realities. Typical of his intellectual reach, Ellenson’s study of liturgy has spanned the denominational spectrum and engaged German, American, and Israeli milieux.

The other major genre of literature that has occupied Ellenson’s scholarly attention is the halakhic responsum. In a long series of studies of articles, he has sought not only to understand halakhic decision-making from within the Jewish legal tradition, but also to examine the shifting function of the responsum in modern contexts that are quite distinct from the well-guarded bounds of the pre-modern *kehillah*. His approach owes much to the historical sociological method of Jacob \*Katz, with whom Ellenson studied. For Ellenson, responsa are important barometers of the struggle of observant Jews to remain true to traditional legal norms while confronting the challenges of modernity.

David Ellenson has devoted the majority of his research to Orthodox Judaism. His main monographic study, based on his Columbia doctoral dissertation, is *Rabbi Esriel Hildesheimer and the Creation of a Modern Jewish Orthodoxy* (1990) that traces the intellectual path of the founder in 1873 of the new-style Berlin Orthodox rabbinical seminar. Ellenson brings his historical sociological method to bear on a subject who, to him, personifies the central question of modern Jewish existence: “how to live in two different cultural worlds.” Although their paths differ, Ellenson avers, “I have come to see much of his problem as my own.”

[David N. Myers (2<sup>nd</sup> ed.)]

**ELLENSTEIN, MEYER C.** (1886–1967), U.S. politician. Ellenstein was born in New York City and raised in Patterson, New Jersey. He graduated from Columbia University’s dental school (1912) and opened a practice in Newark, meanwhile studying law at the New Jersey Law School. Receiving a law degree in 1925, Ellenstein gave up dentistry and entered politics. In 1933 he was elected on the Democratic ticket to the five-member Newark City Commission, which chose him

mayor and returned him once more to the office in 1937. During his administration Ellenstein developed Newark's airport and harbor, but his second term was marred by charges of conspiracy to defraud the city in a real estate swindle. After a three-year investigation, Ellenstein was finally acquitted in 1940, but failed in his bid for reelection in 1941. In 1945 he was voted onto the City Commission again, where he served for eight more years. After another unsuccessful mayoral candidacy in 1958, he retired permanently from politics.

**ELLINGER, MORITZ** (1830–1907), U.S. public official, communal leader, and journalist. Ellinger was born in Fuerth, Bavaria, and arrived in New York in 1854. He advocated Reform Judaism. Active in the affairs of B'nai B'rith, he was a member of its National Executive Committee and served as corresponding secretary between 1895 and 1905, besides being instrumental in helping to establish lodges in several European countries. Ellinger toured Europe in 1882 on behalf of American Jewish leaders in an attempt to organize the migration of Russian refugees. In addition, he edited the *Menorah Monthly*, the official organ of B'nai B'rith, from 1860 to 1901, and as founder and editor of the *Jewish Times* (1869–78) he expressed the views of David \*Einhorn. In civic life, Ellinger was coroner of New York City (1876–81) and an official of the Surrogate's Court (1888–1907). He also served as secretary of the New York Medico-Legal Society.

[Robert Shosteck]

**ELLIOT, "MAMA" CASS (Ellen Naomi Cohen; 1941–1974)**, U.S. folk singer, member of the rock group The Mamas and the Papas. Born in Baltimore, Maryland, to a middle-class Jewish family, Elliot was given the nickname Cass by her father. She changed her last name from Cohen to Elliot when she went to New York to try to make it as a Broadway actress in the early 1960s. Elliot joined a rock group, The Big Three, a short-lived band called the Mugwumps, and then the folk-rock band, the New Journeymen, which became The Mamas and the Papas in 1965. In December of that year the group's first album, *If You Can Believe Your Eyes and Ears*, was issued, containing the single, "California Dreamin'" which reached No. 4 on the music charts in March 1966, followed by "Monday, Monday," which in May reached No. 1 and later won a Grammy Award. Other hits included "Words of Love," "Dedicated To the One I Love," "Go Where You Wanna Go," "I Saw Her Again," and "Dream a Little Dream of Me," which became her theme song.

The Mamas and the Papas were arguably the first music act to combine both hippie and pop sensibilities, enabling Middle America to see the "safe" side of the Haight-Ashbury counterculture of the 1960s. Elliot, who had the most outgoing and appealing personality in the group, and who wore big yellow and orange flower and sun images in appliqué on a long white dress, became the poster girl for the "Age of Aquarius."

In June 1967, the group played at the prominent Monterey Pop Festival, but tensions within the band led to a break-up a year later. Elliot went solo, and had some hits with songs such as "It's Getting Better," "Make Your Own Kind of Music," and "New World Coming." In 1969 Elliot began appearing on TV variety shows doing comedy sketches and performing songs, with much success.

Elliot had health problems brought on by her obesity – she stood 5'5" and weighed 238 lbs. – and on July 28, 1974, she died in London of a heart attack. It was initially misreported that her death was caused by choking on a ham sandwich, but despite the autopsy report by a pathologist and a London coroner a week later, the "ham sandwich" story became an urban legend.

Elliot and her fellow band mates from The Mamas and the Papas were inducted into the Rock and Roll Hall of Fame in 1998.

[Elli Wohlgeleitner (2<sup>nd</sup> ed.)]

**ELLIS, VIVIAN** (1904–1996), British theatrical composer. Born in London, the son of a tailor, Ellis started as a concert pianist and began composing for musical shows before he was 20. He subsequently contributed music and lyrics to many revues, wrote popular songs, and was the composer for A.P. Herbert's musical plays *Big Ben* (1946), *Bless the Bride* (1947), *Tough at the Top* (1949), and *The Water Gypsies* (1955). He also wrote humorous books and two volumes of autobiography, *Ellis in Wonderland* (1939) and *I'm on a See-Saw* (1953). Ellis wrote many pieces of "light classical" music which have become well-known, such as "Coronation Scot," as well as popular songs like "Spread a Little Happiness."

**BIBLIOGRAPHY:** ODNB.

**ELLISON, LAWRENCE J.** (1944– ), U.S. computer entrepreneur. Born out of wedlock in New York to a Jewish teenager and an Italian-American Air Force pilot, Ellison was raised by an aunt in a lower middle-class Jewish community in Chicago. At the University of Illinois, he was named science student of the year but dropped out of school after his aunt died. He enrolled at the University of Chicago, but also left before graduation. Ellison went to California, where, after a few jobs, he became a computer programmer. He was inspired by a paper on relational database theory, which held that if data could be stored in computers in a less "hierarchical" way, it would be easier to find and use. With two other programmers, Ellison began in 1977 what became the Oracle Corporation, now the foremost producer of computer software for corporate databases. At the time, IBM was doing pioneering research on the subject, but doubted that relational databases were commercially viable. Ellison put together a prototype and made his first sale to the CIA. Over the next few years, Oracle found itself on the cutting edge of data storage technology. IBM was wrong and Ellison was right. Relational databases were the future, and Oracle, under strong pressure from Ellison, won marquee-name clients like the National Security Agency and

Navy Intelligence before going public in 1986. Ellison turned Oracle into a world leader in producing software that runs large organizations. The initial release of Oracle was Oracle 2, even though there was no Oracle 1. The release number was intended to imply that all of the bugs had been worked out of an earlier version. Ellison was chief executive officer and a director from the time he cofounded the company. He was believed to be one of the richest people in America, with a net worth estimated at \$18.7 billion.

Ellison and Oracle developed a reputation for dealing on the edge. It sold software not yet ready for use and blamed customers when things went wrong. In the early 1990s the mistakes caught up with the company and it suffered significant losses. But in 1992 Ellison brought in new leadership and Oracle regained its place in the market. At that time Ellison began focusing on the big picture. In the mid-1990s, when Microsoft was still not appreciating the importance of the Internet, Ellison pushed Oracle to switch over to web-based data storage software. It was a brilliant move, and Oracle rode the Internet to new heights.

Ellison was also the leader and principal financier of Oracle-BMW Racing, which competed for the America's Cup in 1999 and 2003 on behalf of the Golden Gate Yacht Club of San Francisco. Ellison was the winner of the disastrous 1998 Sydney to Hobart Yacht Race in his boat *Sayonara*. The storm that hit the race cost six other sailors their lives, an experience that caused Ellison to swear off ocean racing. Ellison was believed to have the biggest yacht (as of 2004) in the world, named *Rising Sun*. It was 452.75 feet long and reportedly cost more than \$200 million to build.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**ELLMANN, RICHARD** (1918–1987), U.S./British literary biographer and critic. One of the most eminent of recent literary biographers, Richard Ellmann was born in suburban Detroit, the son of a lawyer, and was educated at Yale University. When stationed in Britain during World War II he became interested in studying the lives of the leading modern Irish writers, and produced a long list of path-breaking and highly regarded studies and biographies, beginning with his life of William Butler Yeats, *Yeats: The Man and the Masks* (1948). Much of Ellmann's professional career was spent at Northwestern University in Illinois (from 1951 to 1968). From 1970 to 1982 he lived in England, where he was Goldsmiths' Professor of English Literature at Oxford University, the first American to hold this position. Ellmann returned to the United States in 1982, although he died in Oxford in 1987. Ellmann's long and distinguished list of works include his much-lauded biography *James Joyce* (1959), based on ten years of research, and *Oscar Wilde* (1987), completed immediately before his death, which received the Pulitzer Prize, as well as many other biographical works and essays. Ellmann was notable for the respect in which he held his subjects, declining, in contrast to many biographers, to concentrate on their pathologies. Ellmann was also the co-editor (with Robert O'Clair) of *The*

*Norton Anthology of Modern Poetry* (1973), a standard collection. A posthumous *Festschrift* in his honor, edited by Susan Dick et al., *Essays for Richard Ellmann: Omnium Gatherum*, appeared in 1989.

**BIBLIOGRAPHY:** R.E. Johnsen, "Richard David Ellmann," in: John A. Garraty and Mark C. Carnes (eds.), *American National Biography*, vol. 7 (1999), 453–54.

[William D. Rubinstein (2<sup>nd</sup> ed.)]

**ELLSBERG, DANIEL** (1931– ), U.S. government adviser responsible for leaking the Pentagon Papers. Born in Chicago, Ellsberg was a graduate of Columbia University, receiving both his B.S. (1952) and his Ph.D. (1959) there. A Vietnam veteran, he was a first lieutenant in the Marine Corps. He then went to work for the Rand Corporation on defense issues, ultimately becoming an important adviser to Secretary of Defense Robert McNamara. His views then were decidedly hawkish. He was assigned to study American policy toward Vietnam and in the course of that study became a fierce opponent of the war. He then took the major step of leaking a study of the history of American involvement in Vietnam to the *New York Times*. The study, commonly known as the Pentagon Papers, documented the way in which the Johnson administration had misled the American people during the Vietnam War. Although the Papers did not directly attack Richard Nixon's actions, his administration reacted with fury. Ellsberg was charged with leaking the document; a petition was filed against the *New York Times*, enjoining them from publishing the papers; and then the White House had some secret operatives, later known as the "plumbers unit" of Watergate fame, break into Ellsberg's psychiatrist's office in search of potentially incriminating information that could be used to destroy his reputation. When the *Washington Post*, which had not been enjoined from publication, printed the Pentagon Papers, the case became moot and the information became public. The break-in at the office of Ellsberg's psychiatrist became public during the Watergate hearings that led to the downfall of Richard Nixon, who resigned as president of the United States in August 1974. Having achieved his "five minutes of fame" Ellsberg remained politically active, most especially fighting against nuclear arms proliferation and becoming a prominent figure at public protests.

**BIBLIOGRAPHY:** D. Ellsberg, *Secrets: A Memoir of Vietnam and the Pentagon Papers* (2002).

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**ELLSBERG, EDWARD** (1891–1983), U.S. naval officer. Born in New Haven, Conn., Ellsberg was the son of Jewish refugees from czarist Russia. The family moved to Colorado when Ellsberg was a boy. He trained as an engineer. One of very few Jews to be accepted into the U.S. Naval Academy in 1910, he ranked first in his class. After varied service on the *USS Texas*, he was ordered to the Massachusetts Institute of Technology for postgraduate work in naval architecture, receiving a master of science degree. Although he was encouraged to remain an

executive officer, he transferred into naval construction. During World War I he worked in refitting confiscated German liners in the New York Navy Yard and subsequently became an authority on raising sunken vessels. In 1925 he became the first person to be awarded the Distinguished Service Medal in peacetime when he raised the submarine USS S-51, which had sunk after a collision off Block Island, Rhode Island. During the ten-month salvage operation, Ellsberg became the first naval officer to qualify as a deep-sea diver, understanding the importance of going down to the ocean floor with his men. He earned a reputation as an expert in submarine salvage.

In industry, Ellsberg worked as chief engineer of the Tidewater Oil Company until 1935. He patented several inventions, including a method for increasing the yield of high-octane gasoline and a process for removing water from lubricating oil.

Ellsberg organized the rehabilitation of the U.S. naval base in Eritrea (then Massawa, Ethiopia) following the entry of the United States into World War II. There, with a makeshift workforce, he restored the demolished Italian naval base and cleared the harbor of scuttled ships. At the end of 1942 he was made principal salvage officer for the Mediterranean. On the North African coast, he cleared the ports of Oran and Algiers for Operation Torch. He also took part in the Artificial Harbors project connected with the Allied invasion of France in 1944. He was released from active duty shortly before the end of World War II. Ellsberg was the recipient of many awards from the United States and British governments, such as the Legion of Merit and the Order of the British Empire. He retired in 1951 with the rank of rear admiral. He consulted for shipbuilding companies and remained on the sea, traveling and sailing on his boat.

Ellsberg was the author of books on naval topics, including *On the Bottom* (1928), *Thirty Fathoms Deep* (1930), *Pigboats* (1931), *S-54* (1932), *Hell on Ice* (1938), *Men under the Sea* (1940), *Under the Red Sea Sun* (1946), *No Banners, No Bugles* (1949), *Passport for Jennifer* (1952), *Midwatch* (1954), and *The Far Shore* (1960).

[Ruth Beloff (2<sup>nd</sup> ed.)]

**ELLSTAETTER, MORITZ** (1827–1905), German politician, the first Jew to become a minister in a German state. Born in Karlsruhe, Ellstaetter studied law and worked in a banking house in Berlin, where he met Karl Mathy (1807–1868), the future Baden minister of finance. When Mathy assumed office in 1866, he appointed Ellstaetter department head of his ministry. In 1868, on Mathy's death, Ellstaetter was given responsibility for the ministry. He reformed the Baden finances and introduced a new taxation policy which was followed by other German states. Ellstaetter advised the German government on fiscal and coinage legislation for 25 years. In 1881 he became director of railways. Although he took no part in Jew-

ish affairs, Ellstaetter was, because of racial prejudice, only officially confirmed as minister of finance in 1888. He retired due to ill health in 1893.

**BIBLIOGRAPHY:** NDB, 4 (1959), 460.

[B. Mordechai Ansbacher]

**ELLSTEIN, ABRAHAM (Abe; 1907–1963)**, composer, conductor, and pianist. Born in New York, Ellstein studied with Frederick \*Jacobi, Rubin \*Goldmark, and Albert Stoessel, and became the accompanist for Mischa Mischakoff, Michel Píastro, Isa Kramer, and Jossele \*Rosenblatt. At the age of 19 he wrote the first of his 33 scores for the Yiddish musical theater. He also wrote the scores for several Yiddish films produced in Warsaw before World War II and composed over 500 Yiddish songs. In 1957 he turned to composing works for concert, stage, and the synagogue. Among his compositions are *Ode to the King of Kings*, a cantata in celebration of the tenth anniversary of the State of Israel; *The Thief and the Hangman*, a one-act opera; *Hora Fantasy*, for piano; *Haftorah*, for violin and string orchestra; *Negev Concerto*, for piano and orchestra; two *Sabbath Eve Services*; *Passover Service*; *The Redemption*, a Hanukkah oratorio for chorus, organ, and percussion; and an opera, *The Golem* (1962).

**ELMALEH**, family of rabbis and communal leaders in Turkey, Morocco, and Italy. The family originated in Spain. (1) **ABRAHAM BEN JUDAH ELMALIK**, kabbalist, settled in Pesaro in 1551. He was the author of *Likkutei Shikhḥah u-Fe'ah* (Ferrara, 1556), kabbalistic expositions of talmudic *aggadot*. In the introduction he relates his adventures on leaving his home, possibly Salonika, though some scholars took it to refer to the expulsion from Spain. (2) **AARON BEN GERSHON ELMALI** was an important member of the Salonika community in the first half of the 17<sup>th</sup> century. His signature occurs on a document of 1647, and members of his family were represented in the Évora congregation of Salonika (whose members originally came from \*Évora). The first known member of the Turkish branch of the family is (3) **MOSES BEN DON DAVID ELMALEH** of Adrianople. He apparently served as *dayyan* and there is a reference to him dating from 1510. After this date the name is hardly found in Turkey, the family reappearing in Salé and Rabat in North Africa at the beginning of the 18<sup>th</sup> century. (4) **JOSEPH BEN AYYUSH ELMALEH** (1750–1823), kabbalist and halakhist, was considered one of the outstanding Moroccan scholars of his time. He served as rabbi of Salé and of Rabat in 1780. There he maintained a large yeshivah, which continued to function after his death. In 1809 he was in Gibraltar with the intention, according to one source, of journeying on to Erez Israel, and was invited to serve as rabbi there. In the same year, however, he returned to Rabat. He introduced a special tax (*imposta*) on behalf of the poor, which is still levied. His responsa (Leghorn, 1823–55), chiefly on *Hoshen Mishpat* and in part on *Even Ha-Ezer*, are a valuable source for the history of the Jews of Morocco. His son (5) **AMRAM** (d. before 1855), a wealthy merchant, dwelt in Mogador and in Lisbon. Ac-

ording to one source he was once imprisoned in Lisbon, but was freed on the intervention of the British authorities. During the last years of his life, he was appointed Sicilian consul in Mogador. His protection of the Jews aroused the anger of the Muslims.

(6) AARON BEN REUBEN ELMALEH of Demnat in south Morocco settled in Rabat and studied in the *bet ha-midrash* of Joseph ben Ayyush Elmaleh, whose daughter he married. When his father-in-law went to Gibraltar, he acted in his stead. His halakhic rulings were extant in manuscript. (7) JACOB BEN JOSEPH, rabbi and poet, lived in Rabat. He was the author of poems and dirges, among them a *kinah* on the persecutions in Morocco in 1790. (8) JOSEPH ELMALEH (1788–1866), son of (7), rabbi, writer of books on Kabbalah, and merchant, was born in Rabat and married into the wealthy Gedaliah family, which had many business connections in Morocco and London. Joseph served as rabbi in Mogador for over 50 years and built a large synagogue there. His great influence with Abdul Rahman, sultan of Morocco, enabled him to be of great assistance to the Jews. When the city was attacked by the Kabyles in 1844, hundreds of Jews gathered in his house and defended themselves against their attackers. Later he lost his wealth and immigrated to Jerusalem shortly before his death. (9) JOSEPH BEN AARON ELMALEH (1809–1886) was born in Rabat, where he later served as *dayyan*. In 1826 he went to Mogador and about 1840 was appointed rabbi there. He became Austrian consul and was decorated both by the emperor Franz Joseph and by the bey of Tunis. Joseph was active on behalf of the persecuted Jews of Morocco, opposing missionary activities, and bringing many apostates back to the fold. In 1879 on one of his numerous business visits to Europe, he was offered the position of rabbi to the Spanish and Portuguese community in London, but declined. He died in London. His son REUBEN became head of the community of Mogador as well as Austrian consul.

(10) ABRAHAM BEN JOSEPH ELMALEH, rabbi of Mogador, played an important role in the spiritual and communal life of the Jews of Morocco, and was considered one of its important contemporary poets. In 1855 he was in Leghorn as an emissary. While there he published *Sova Semahot*, a book of poems, a shortened version of which was published in Algiers in 1890. The poems are full of religious yearning and of longing for Zion and redemption. He also published *Tokpo shel Yosef*, responsa. (11) JUDAH BEN MORDECAI ELMALEH, rabbi of Sefrou, was also in Fez, Meknès, and Rabat. In 1833 he endorsed a responsum of the sages of Fez and in the following year, himself wrote a responsum in Tetuán. He appears to have been a bookseller, and correspondence on books and halakhic topics between him and Amir Abutbol of Sefrou are extant. (12) ELIJAH BEN ABRAHAM ELMALEH, lawyer and jurist, was the author of *Nahalat Avot* (Leghorn, 1874) on the will of the caid, Nissim \*Samama of Tunis, *Mishpat ha-Yerushah* (Leghorn, 1878), and other works. (13) ELIJAH BEN JACOB ELMALEH (1837–1908) was born in Mogador, settled in Tangiers in his early youth, and was appointed rabbi there. He was the author

of *Beka la-Gulgolet* (Jerusalem, 1911) on the Bible, as well as novellae on the Talmud and the Codes.

**BIBLIOGRAPHY:** *The Voice of Jacob*, 4 (1844), 33–34, 50–51; JC (Jan. 5, 1886); J. Nehama, *Mikhtevei Dodim mi-Yayin* (1893), 100; Kaufmann, in: ZDMG, 50 (1896), 238–40, 335–6; idem, in: REJ, 37 (1898), 120–6; J.M. Toledano, *Ner ha-Ma'arav* (1910/11), 168–91; N. Leven, *Cinquante ans d'histoire*, 2 (1920), 81, 89; J. Benaim, *Malkhei Rabbanan* (1931), 19b, 52b, 102a; M.D. Gaon, *Yehudei ha-Mizrah be-Erez Yisrael*, 2 (1937), 73–78; A.M. Hyamson, *The Sefardim of England* (1951), 363; Toledano, in: *Minhah le-Avraham Elmaleh* (1959), 22–26; Benayahu, *ibid.*, 27–39.

**ELMALEH, ABRAHAM** (1885–1967), Hebrew author and a leader of the Sephardi community in Erez Israel. Born in Jerusalem, Elmaleh fostered Hebrew education among the Sephardi Jewish communities in Palestine, Istanbul, and Damascus before World War I. He was a member of the Asefat ha-Nivharim and of its executive, the Va'ad Le'ummi. Elected to the Jerusalem Municipal Council, Elmaleh served as deputy mayor for some time. In 1949 he was elected to the first Knesset on the Sephardi list. A journalist and writer, he was founder and editor in chief of the daily *Ha-Herut* (1909–10), served on the editorial boards of the daily *Do'ar ha-Yom*, and edited the monthly magazine *Mizrah u-Ma'arav* (1912–32). In addition to publishing popular works on the history of Palestine and Syria during World War I and on the Jews in Oriental countries, Elmaleh compiled the following dictionaries: Hebrew–French (1923, 1925, 1947), French–Hebrew (1935, and eight other editions), Hebrew–Arabic (1929), Arabic–Hebrew (1930), and a Hebrew–French dictionary in five volumes (1950–57). A list of his Hebrew writings is found in *Minhah le-Avraham* (1959), 11–43 (Hebrew numerals). Elmaleh also wrote *Rishonim le-Ziyyon Toledoteihem u-Fe'ulatatam* (1970), containing biographies of the Sephardi rabbis of Erez Israel.

**BIBLIOGRAPHY:** Tidhar, 1 (1947), 512–4.

**EL MALE RAHAMIM** (Heb. אֱלֹהֵי מְלֵא רַחֲמִים; “God full of compassion”), a prayer for the departed recited at the funeral service, on the anniversary of the death (\**Yahrzeit*), on visiting the graves of relatives (especially on the Ninth of \*Av and during the month of Elul), or after having been called up to the reading of the Law (see \**Ashkavah*). In some Ashkenazi rites it is also part of the memorial service (\**Hazkarat Neshamot*) on the festivals and on the Day of Atonement. *El Male Rahamim* originated in the Jewish communities of Western and Eastern Europe where it was recited for the martyrs of the \*Crusades and of the \*Chmielnicki massacres. This explains the many different versions of this prayer in various European communities (e.g., Nemirov, Lublin, Prague, etc.). At a funeral service which takes place on those days when \**Tahanun* is not said, *El Male Rahamim* is also omitted and other appropriate prayers are substituted. In the Conservative version of *El Male Rahamim*, the words “and in whose memory charity is offered by... so and so...” are omitted (see *Likkutei Tefillah, A Rabbi's Manual* [RAA] (1965), 120ff.). The Reform ritual has

a shorter version of the traditional Hebrew and English text (*Rabbis' Manual* [CCAR] (1961<sup>2</sup>), 99).

### Musical Rendition

The elaborate musical form of the prayer, and its – often virtuoso – rendition by a cantor, are customary only among the Ashkenazi communities. There it has become the symbolic center of the burial and commemoration ceremonies, next to the \**Kaddish*. The melody is almost never featured in the standard collections of synagogal song. The version attributed originally to Joshua (Osia) \*Abrass became famous when Solomon \*Razumni recited it after the Kishinev pogrom.

**BIBLIOGRAPHY:** Davidson, *Ozar*, 1 (1924), 176, no. 3808, and 3800, 3801, 3804, 3805, 3806, 3807; Elbogen, *Gottesdienst*, 203; *Siddur Ozar ha-Tefillot* (Sefardi, 1916), 723ff. **MUSICAL RENDITION:** A. Baer, *Ba'al Tefillah* (1883<sup>2</sup>), no. 829; M. Wodak, *Ha-Menazze'ah* (1898), no. 442; J.J. Sebba, *Shirei Yosef* (1914), no. 102.

[Bathja Bayer]

**ELMAN, MISCHA** (1891–1967), violinist. Born at Talnoye, near Kiev, Elman received his first violin lessons from his father Saul, who later wrote a book entitled *Memoirs of Mischa Elman's Father* (1933). At the age of six he was taken to the Odessa Music Academy. In 1902 he was accepted in Leopold \*Auer's class at the St. Petersburg Conservatory, having received a permit of residence by Imperial assent, since Jews were not allowed to live in that city. As a youth he made sensational debuts in St. Petersburg and Berlin (1904), in London (1905), and in New York (1908). Thereafter he made the United States his home, but traveled widely. His playing, remarkable for its sweet intonation as well as technical perfection, gave rise to the phrase “the Elman tone.” Besides many transcriptions for violin, he composed several works, including a light opera.

**BIBLIOGRAPHY:** M. Carpenter, *Mischa Elman and Joseph Szigeti* (1955); *Grove's Dict.*

[Dora Leah Sowden]

**ELMAN, ZIGGY** (**Harry Finkelman**; 1914–1968), U.S. trumpeter and band leader. Elman is one of those handful of jazz musicians who has the misfortune of being known for a single recording, “And the Angels Sing,” which was a huge hit for the Benny Goodman band in 1938. The song was a reworking of an Elman tune, “Frailach in Swing,” that bespoke both musicians' all-but-forgotten roots in Jewish music. Elman was born in Philadelphia but raised in Atlantic City, where he flourished as a startlingly natural musician, first playing trombone with the Alex Bartha band on the Steel Pier, then joining Goodman in 1936. Elman could play any instrument he picked up, once teaching himself clarinet in a single day for a performance with the Goodman band. After leaving Goodman in 1940, he played with several other important bands, including Tommy Dorsey's and his own, basing himself in Los Angeles. Ironically, when Hollywood came calling for *The Benny Goodman Story* Elman, who played himself, was too ill

to recreate his famous solo on “Angels”; his trumpet part was dubbed by Mannie Klein.

[George Robinson (2<sup>nd</sup> ed.)]

**EL MELEKH NE'EMAN** (Heb. אֱלֹהֵי מֶלֶךְ נְאֻמָּן; “God, faithful King”), an affirmation of faith pronounced before the recital of the \**Shema*. The rabbis interpreted the word \*Amen as being composed of the initial letters of *El Melekh Ne'eman* (Shab. 119b). The phrase, however, is pronounced only in private prayer and not at public services where an interposition (even Amen) between *Shema* and the preceding benediction is omitted (according to some opinions) as an unlawful “interruption.” A midrashic interpretation (Tanḥ, B., Lev. 74ff.) derives the custom of reciting *El Melekh Ne'eman* from the fact that the *Shema* consists of 245 words, and the phrase *El Melekh Ne'eman* brings the number up to 248, corresponding to that of the human limbs (cf. Ps. 35:10 “All my bones shall say: Lord, who is like unto Thee”). At public synagogue services where the *hazzan* repeats the last three words of the *Shema* aloud, the number of the words comes to 248 and the recital of *El Melekh Ne'eman* is therefore omitted (see Sh. Ar., OH 61:3).

**BIBLIOGRAPHY:** Elbogen, *Gottesdienst*, 21ff.; Eisenstein, *Dinim*, 16.

**EL MELEKH YOSHEV** (Heb. אֱלֹהֵי מֶלֶךְ יוֹשֵׁב; “God, King enthroned”), first words and name of a petitionary prayer for the forgiving of sins, with reference to \*God's Thirteen Attributes (Ex. 34:6–7). It is the main theme and refrain of the \**Seliḥot* services in all rites and is thought to have originated in the sixth century C.E.

**BIBLIOGRAPHY:** Elbogen, *Gottesdienst*, 222; Davidson, *Ozar*, 1 (1929), 177, no. 3822.

**ELNATHAN BEN ACHBOR** (Heb. אֶלְנָתָן; “God has given”; Septuagint reads here the semantically equivalent Yehonatan), a minister of King \*Jehoiakim (Jer. 36:12). Yeivin identifies him with Elnathan, the father-in-law of King Jehoiakim (11 Kings 24:8). At the king's command Elnathan brought the prophet \*Uriah from asylum in Egypt to be executed (Jer. 26:20–23). In another episode he begged the king not to burn Jeremiah's scroll of denunciation (Jer. 36:25). Certain scholars feel that these two acts are incompatible. However, human behavior is not always consistent. Indeed, Elnathan's reverence for Jeremiah's scroll may very well have resulted from a guilty conscience because of his role in Uriah's murder.

The \*Lachish ostraca mention a prophet of Zedekiah's reign whose words are “not good, making hands weak” (6:2–8), as well as an army officer named C[on]iah b. Elnathan, who went to Egypt (3:13–21). Torczyner (Tur-Sinai) attempted to relate the two references and explained that the ostraca refer to the prophet Uriah's being brought back from Egypt by

Elnathan. The fact remains, however, that Jeremiah speaks of a prophet who fled to Egypt during Jehoiakim's reign, while the ostraca refer to a prophet of Zedekiah's time. In addition, according to the biblical text, the minister who goes to Egypt is Elnathan b. Achbor, while in the Lachish ostraca it is C[on]jiah b. Elnathan. Therefore it seems that two similar but not identical events took place, the first during Jehoiakim's and the second during Zedekiah's reign. The "true" prophets opposed an Egyptian orientation and preached capitulation to Babylonia ("to weaken our hands"). During the reigns of both kings they were persecuted and forced to flee. Political fugitives had traditionally sought asylum in Egypt. It is almost certain that C[on]jiah mentioned in the ostraca was the son of the Elnathan in the biblical text, and that he performed a mission in the time of Zedekiah similar to his father's during Jehoiakim's reign.

**BIBLIOGRAPHY:** H. Torczyner (Tur-Sinai) et al., *The Lachish Letters* (1938), 63–67; idem, *Te'udot Lakhish* (1940), 93–103; Yeivin, in: *Tarbiz*, 12 (1940/41), 255–9; Malamat, in: *BJPES*, 14 (1948), 871. **ADD. BIBLIOGRAPHY:** W. Holladay, *Jeremiah 2* (1989), 252.

[Jacob Elbaum]

**ELNECAVÉ, DAVID** (1882–1963), journalist and writer. Born in Istanbul, Turkey, he studied at the Rabbinical Seminar of Istanbul and in 1909 founded the Sephardi Zionist daily *El Djudio*. Political persecution in Turkey for his Zionist activities motivated his immigration to Sofia, Bulgaria, where he continued to publish *El Djudio* between 1925 and 1930. In 1930 he immigrated to Argentina and was the correspondent of the JTA. In 1931 he founded the Spanish bi-weekly *La Luz*, which fulfilled a central role in spreading the Zionist ideology among the Sephardim in Argentina during the 1930s and 1940s. After his death *La Luz* was directed by his son Nissim and subsequently by his grandson David. Elnecavé was the author of a number of books on biblical and Jewish topics, including *El buen pastor* and *Introducción a la Biblia*.

[Efraim Zadoff (2<sup>nd</sup> ed.)]

**EL NORA ALILAH** (Heb. אֵל נֹרָא עֵלִילָה; "God that doest wondrously"), name of a solemn hymn for the \**Ne'ilah* service of the Day of Atonement. The initial letters of the stanzas (מִשֵּׁה חֹזֵק) form the name of its author, Moses b. Jacob \*Ibn Ezra of Spain. The motive of this hymn is expressed in the refrain of each of its eight stanzas: "Pardon at Thy people's cry,/ As the closing hour draws nigh," referring to the last hours of the Day of Atonement. The hymn (which is to be found in the prayer books of Aragon, Barcelona, Algiers, Tunisia, Leghorn, Constantine, and Tlemcen) originally formed part only of the Sephardi and Yemenite (*Tiklal*) *Ne'ilah* liturgy, but because of its moving text and solemn melody some Ashkenazi congregations also included it in their liturgy (cf. *High Holiday Prayerbook*, ed. M. Silverman (1954<sup>2</sup>), 458).

[Meir Ydit]

**ELOESSER, ARTHUR (Marius Daalman; 1870–1938)**, German literary historian and dramatic critic. Born and educated in Berlin, Eloesser was denied an academic career at the university because of his refusal to convert and thus became a drama critic for the *Vossische Zeitung* and a producer at the Lessing Theatre in Berlin. He published essays and criticism in the *Neue Rundschau* and edited the works of Otto Ludwig, Heinrich von Kleist, Shakespeare, and Frank Wedekind. In 1925 Eloesser wrote the first biography of Thomas Mann. His main achievement was *Die Deutsche Literatur vom Barock bis zur Gegenwart* (2 vols., 1930–31). Its second volume was published in English as *Modern German Literature* (1933) and contained a preface by Eloesser's cousin, Ludwig Lewisohn. He published monographs on French and German literary figures and an autobiographical work, *Die Strasse meiner Jugend* (1919). Eloesser was long indifferent to his Jewishness, but he adopted a positive Jewish attitude after Hitler came to power and was impressed by two visits to Palestine. He became an occasional contributor to the *Juedische Rundschau* and in 1933 published *Judentum und deutsches Geistesleben*. In 1936 Eloesser published *Vom Ghetto nach Europa* on the role of the Jews in 19<sup>th</sup>-century culture from material he had prepared for *Juden im deutschen Kulturbereich* and whose publication was prohibited by the Nazis. It concentrated on German-Jewish authors such as Moses \*Mendelssohn, Berthold \*Auerbach, and Heinrich \*Heine. Eloesser promoted the return to Erez Israel; however, on his return from his second journey to Palestine he became severely ill and died in the Jewish hospital in Berlin in 1938.

**BIBLIOGRAPHY:** A. Terwey, "Arthur Eloesser: der Philologe als Kritiker," in: G. Bey (ed.), *Berliner Universität und deutsche Literaturgeschichte* (1998), 201–14; D. Schaaf, *Der Theaterkritiker Arthur Eloesser* (1962).

[Ann-Kristin Koch (2<sup>nd</sup> ed.)]

**ELON, AMOS** (1926– ), Israeli journalist and author. Born in Vienna, Elon came to Israel as a young child. He began his career as a journalist for *Ba-Maḥaneh* and in 1948 published his first book, *Yerushalayim Lo Naflah* ("Jerusalem Did Not Fall"). From 1954 he was associated with *Ha'aretz* and from 1961 was a member of the editorial board. He served as foreign correspondent in New York, Washington, Paris, Bonn, and Eastern Europe. His book *A Journey through a Haunted Land* (1967), a reportage on the new Germany, was highly praised. His best-selling *The Israelis: Founders and Sons* (1971) was heralded by *Newsweek* magazine as "the most illuminating, even-handed, candid appraisal of the Jewish condition yet to appear," and his biography *Herzl* (1975) was also widely acclaimed. *Herzl* was later made into a Broadway play by Dore \*Scharly in collaboration with Elon.

His other books include *Between Enemies* (1974), a dialogue with Egyptian Sana Hassan; the novel *Timetable* (1980); *Flight into Egypt* (1981); *Founder: Meyer Amschel Rothschild and His Time* (1996); and *The Pity of It All: A Portrait of the*

*German-Jewish Epoch, 1743–1933* (2002). His works have appeared in English, Hebrew, French, German, Italian, Spanish, Portuguese, and Japanese.

**ELON, BINYAMIN (Benny; 1954– )**, Israeli rabbi and politician, member of Knesset since the Fourteenth Knesset. Born in Jerusalem, the son of former Supreme Court justice Menachem \*Elon, he studied at Yeshivat Merkaz ha-Rav in Jerusalem and the Idra Kolel in the Golan Heights. He served in the IDF in the artillery corps. He was ordained as a rabbi in 1978. In 1979–82 Elon served as rabbi in Kibbutz Sheluhot in the Beit She'an Valley. In 1983–85 he was an emissary of the Jewish Agency to the Jewish students organizations in the United States, and after his return taught at the Makhon Meir and Atteret Kohanim yeshivot in Jerusalem. He settled with his family in Bet-El near Ramallah in 1982 and in 1987 founded there, together with his wife, Emuna, the Sifriyat Bet-El publishing house, and the Tov Ro'i Institute, where he published Abraham Isaac \*Kook's talmudic commentaries. In 1990 he established the Bet Orot Yeshivah, heading it until 1996, when he was elected to the Knesset.

Elon was an active opponent of the Oslo Accords and consequently founded the Emunim Movement, which fought against the establishment of a Palestinian authority, which he viewed from the start as a terrorist entity. He maintained that it was legitimate to discuss a transfer of the Palestinian population to a Jordanian-Palestinian state in Transjordan, and argued that the refugee camps should be dismantled, and the refugees resettled.

Elon entered the Fourteenth Knesset on the list of Rehavam \*Ze'evi's Moledet party, and despite the extreme views that he represented soon came to be known for his mild manner. He promoted the unification of the various right-wing parties in the Knesset and ran in the elections to the Fifteenth and Sixteenth Knessets on the National Union list. Following the assassination of Ze'evi in October 2001, Elon was appointed minister of tourism, but resigned from Ariel \*Sharon's government in March 2002 because of Sharon's agreement that the assassins of Ze'evi be held in prison in Jericho instead of being turned over to Israel. He was again appointed minister of tourism in the government formed by Sharon after the elections to the Sixteenth Knesset. During both his terms in the Ministry of Tourism he contended with the drop in tourism to Israel due to the second *Intifada*, by encouraging Christian tourism to the Holy Land and the development of tourist sites in Judea and Samaria. The National Union objected fundamentally to Sharon's disengagement plan, and the removal of Jewish settlements from parts of Erez Israel, and as a result its ministers were dismissed by Ariel Sharon from the government in June 2004, before the government voted on the issue.

Since his dismissal from the government Elon has been an active member in the Finance Committee.

From 1990 Elon was active in establishing various associations engaged in the purchase of property and buildings in

East Jerusalem and the renewal of Jewish settlement in them. He was also active in renewing Jewish settlement in Bethlehem, in the vicinity of Rachel's tomb. He maintained close ties with Jewish communities abroad and communities of Christians who support Israel throughout the world.

His wife, EMUNA, an educator and writer, served as the prime minister's adviser on women in 1996–97, and in this capacity led the establishment of the National Authority for the Advancement of Women. She has written numerous children's books.

[Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**ELON (Fetter), MENACHEM (1922– )**, Israeli jurist and Supreme Court justice. Born in Dueseldorf, Germany, Elon immigrated to Palestine in 1935. After eight years of study at the Hebron Yeshivah in Jerusalem, where he was ordained as a rabbi, Elon was awarded an M.A. degree in humanities (*cum laude*), and a doctor of laws degree (*cum laude*) from the Hebrew University of Jerusalem, where he subsequently taught for over 40 years. From 1959 to 1966 Elon was adviser on Jewish Law to the Israel Ministry of Justice. From 1966 he taught Jewish Law at the Hebrew University, where he founded and directed the Institute for Research in Jewish Law.

Elon was appointed to the Supreme Court of Israel in 1977 and was named deputy president of the Court in 1988. He was awarded the Israel Prize in 1979 for his classic work, the authoritative four-volume *Ha-Mishpat ha-Ivri* (Eng. version: *Jewish Law: History, Sources, Principles*, 1994). It compares Jewish legal traditions and modern legal systems, emphasizing both the differences between them and their common denominators. The work became the classic textbook in universities and law schools in Israel and abroad in Jewish Law.

The first part of the work deals with the history and elements of Jewish Law, its scientific study and its impact – as a living legal system – on Jewish history and society. The second section deals systematically with the various legal sources of Jewish Law such as exegesis (*midrash*) and interpretation, legislation, custom (*minhag*), precedent, and legal reasoning. The third section is devoted to a broad description of the literary sources of Jewish Law, from biblical times until the modern era, including the basic sources (Bible, Mishnah, and Talmud) and their interpretation, the commentaries and novellae literature, the codificatory literature, and the vast responsa literature. The fourth part deals extensively with the implementation of Jewish Law in the modern legal system, particularly in Israeli legislation and case law. Elon, together with his predecessors (such as Judges S. \*Assaf, M. Zilberg, and H. \*Cohen), made a remarkable and most important contribution to the implementation of Jewish Law in hundreds of judgments he wrote while serving as a Supreme Court judge. Amongst his most important and renowned judgments are the decision enabling women to serve as active local religious council members, a decision forbidding active euthanasia, and a decision forbidding imprisonment for civil debt.

Elon's attitude in the study of Jewish Law can be characterized by three main qualities: (1) research into all periods of Jewish Law (unlike his predecessors, who focused on the biblical and talmudic periods) and the intensive use of post-talmudic legal sources, in particular the vast responsa literature; (2) historical-analytical methodology, analytically examining each legal institution while examining at the same time how its development was affected both by time and place; (3) emphasis on the potential of Jewish Law to contribute to the modern legal system and indication of how its principals should be implemented in modern law, legislation, and judgments alike.

Elon published many works on the history and nature of Jewish Law and the relationship between it and the modern State of Israel, including *The Freedom of the Person of the Debtor in Jewish Law* (1964, 2000<sup>2</sup>), *Religious Legislation in the Laws of the State of Israel and within the Jurisdiction of the Civil and Rabbinical Courts* (1968), *Jewish Law (Mishpat Ivri): Cases and Materials* (1999), and *The Status of Women: Tradition and Transition* (2004). From 1968 to 1971 he was editor of the Jewish Law section of the *Encyclopaedia Judaica*, whose entries were subsequently collected in his *Principles of Jewish Law*. By 1984 he had edited ten volumes of the *Annual of the Institute for Research in Jewish Law* of the Hebrew University of Jerusalem and also edited *Indices to the Responsa of Jewish Law* (5 vols.).

Elon established Chairs of Jewish Law at the Harvard School of Law, New York University, and McGill University, Montreal, and was the founder of the Institute for Research in Jewish Law of the Hebrew University of Jerusalem (1963) and the Center for the Study and Research of Jewish Law at Sha'arei Mishpat College (1997), where he served as dean until 2003. From 1995 Elon also served as the president of the World Union of Jewish Studies and continued to serve as editor of the Jewish Law section of the second edition of the *Encyclopaedia Judaica*.

[Aviad Hacoen (2<sup>nd</sup> ed.)]

**EL PASO**, west Texas city bordering New Mexico and situated on the Rio Grande River across from Juarez, Chihuahua, Mexico; Jewish population (1969) was approximately 4,500 out of a total population of 400,000. Its general population increased significantly with the expansion of the Southwest and numbered 750,000 in the early 2000s but the increase of the Jewish population did not keep pace proportionately. There were approximately 5,000 Jews in El Paso in 2005. The Jewish population was unusual in its low median age range, its large proportion of American-born newcomer families, and its large proportion of third-, fourth- and fifth-generation American Jews. Despite its geographic isolation from important Jewish population centers, the El Paso community maintained organizational counterparts of several Jewish institutions and philanthropic agencies. El Paso was a major crossroad for the east-west and north-south trails of the 1800s. There were Jews in El Paso as early as 1850 and major influxes of Jews occurred

after each of the world wars. Many Jewish pioneers were involved in business transactions with Mexican government and anti-government forces, with the U.S. Indian Bureau, and with the U.S. Quartermaster Corps. Many Jewish soldiers were stationed at Fort Bliss and other military installations in the area and a sizable number of these stayed on after discharge. Mount Sinai Temple, the oldest Jewish institution in El Paso, is located in the Mission Hills district of the west side of the Franklin Mountains where most Jews reside. In 2005 this Reform congregation consisted of approximately 480 members. Congregation B'nai Zion (Conservative) is located further west and has a comparable membership. Although there was an Orthodox congregation in El Paso between the world wars, none existed by the 1960s until Chabad came to town.

The El Paso Jewish Federation coordinates Jewish organizational activities and the annual Jewish fundraising appeal which originated in 1935. El Paso also boasts a Jewish Family and Children's Service, housing for the elderly, and a Jewish day school, El Paso Hebrew Academy, with grades 1–8. Each of the congregations has a religious school for children and there is a great deal of informal Jewish learning sponsored by many of the local institutions. El Paso is home to a Holocaust Museum and Study Center that serves the Jewish as well as the non-Jewish community. A sizable collection of Judaica was established in the library of the University of Texas at El Paso by the family of the late Dr. Vincent Ravel.

By the 1960s, El Paso Jews were primarily merchants. As in much of the United States, by the new millennium, El Paso's Jews were increasingly professionalized, including lawyers and doctors, accountants, academics, businesspeople, and others.

[Ralph Segalman / Anne Schwartz Schaechner (2<sup>nd</sup> ed.)]

**EL SALVADOR**, republic of Central America; population, 6,704,932 (2005); Jewish population, 120.

El Salvador is one of the smallest communities in Latin America. A few Crypto-Jews from Portugal passed through El Salvador in colonial times. The recorded existence of Jews in El Salvador dates back to the first half of the 19<sup>th</sup> century, when some French-Sephardi Jews settled in the small town of Chalchuapa. More French and German Jews, most of them Alsations, settled in the capital, San Salvador, during the second half of the 19<sup>th</sup> century. Alfredo Widawer, arriving in 1909, was the first to organize the services of the High Holidays. East European and some Oriental Jews came during the 1920s and a few German Jews arrived as a consequence of World

War II. During that period, El Salvador granted Salvadoran documents of citizenship to 10,000 Jews, most of them from Hungary, thus rescuing them from deportation to Auschwitz. This operation was carried out by George Mandel-Mantello, a Romanian Jew, who was appointed as first secretary in the Salvadoran Consulate in Geneva, Switzerland. Mandel-Mantello was supported by José Castellanos, consul general of El Salvador in Switzerland, by José Gustavo Guerrero, former president of El Salvador, and by the foreign minister of El Salvador, Julio Enrique.

The communal organization La Comunidad Israelita de El Salvador was founded in 1944, as the representative organ of the Jewish community and the provider of its social and religious needs. A year later it inaugurated its cemetery and in 1950 it opened a synagogue that conducts services on Sabbaths and holidays. The Zionist Organization was established in 1945 and an affiliate of \*WIZO somewhat later. There is no regular Jewish school, but some classes in Hebrew and religion are conducted by the rabbi. The Jewish community of El Salvador is affiliated to FEDECO – Federación de Comunidades Judías de Centro América that was founded in 1956. The Liebes and De Sola families were the most prominent in philanthropic, cultural, and business activities of the community. Alexander Freund was for many years the spiritual leader of the community.

Prior to the civil war of 1979–91 there were around 300 Jews in El Salvador, most of them in the capital. A census of the community carried out in 1971 recorded 268 affiliated Jews and 43 non-affiliated; 277 were Ashkenazim and 34 Sephardim; 53 couples were Jewish and 60 were of mixed marriages, with most of the children considered as non-Jews.

The signing of peace treaties in 1991 led to the return of several Jewish couples with children who had moved elsewhere during the civil war, and, as of 2000, the Jewish population in El Salvador was approximately 120. A new community center and synagogue were inaugurated in the 1990s. There are two synagogues, and the community is divided between adherents to Conservative and Reform Judaism. At the Conservative synagogue, Sabbath services are held on Friday evenings only; however, the Comunidad Israelita de El Salvador holds services on Friday, Shabbat morning, and on holidays. University students have a Jewish students association, *ejes* (Estudiantes Judíos de El Salvador), and a Zionist group, *fusla* (Federación de Universitarios Sionistas de Latinoamérica), both of which are active throughout the year. For adults, the community offers different educational classes in Hebrew and other topics of interest. The “Chevra of Women” offers a course in Jewish cooking, and there is a monthly Jewish bulletin called *El Kehilatón*, which advertises synagogue events. The Noar Shelanu youth movement, with about 30 children age 8–18 and a kindergarten for young children, meets weekly.

#### Relations with Israel

El Salvador abstained in the debate about the Partition of Palestine in the UN General Assembly session of November 29,

1947, but was one of the first countries which recognized the State of Israel (on Sept. 11, 1948). The Instituto Cultural El Salvador-Israel was founded in 1956. El Salvador is one of only two countries (Costa Rica is the other) to maintain its embassy in Jerusalem. One of the only times of tension between the two countries was during the civil war, when the Israeli Honorary Consul was kidnapped and murdered by guerillas.

[Alfred Joseph / Margalit Bejarano (2<sup>nd</sup> ed.)]

**ELTE, HARRY** (1880–1944), Dutch architect of buildings with a Jewish (ritual) function in the interwar years; also active as a restorer and project developer. He came to prominence when he won a design competition for a stadium that opened in Amsterdam in 1914. His work was influenced by three architectural styles. His early work, including villas and residential complexes in Amsterdam, reflects the influence of the Berlage School (1900–25). Examples of his Amsterdam School style (1910–30) include the Second Synagogue in The Hague, demolished in 1981, and the Amsterdam nursing home De Joodsche Invalide (Jewish Invalid), both dating from 1924–25. International Expressionism (1920–30) influenced his design for the monumental synagogue on Amsterdam’s Jacob Obrechtplein (1927–28), considered Elte’s finest achievement. Its Cubist architecture, featuring characteristic colors and use of daylight, reflects the influence of American architect Frank Lloyd Wright. The interior decoration is Art Deco, with beautiful materials and warm colors. While most of the 12 synagogues Elte completed between 1904 and 1932 have since been demolished or converted for some other purpose, the Obrecht Shul continues to serve as a synagogue. It was granted historical monument status and completely restored in 1997. Elte was deported to Theresienstadt in February 1944, where he died on April 1, 1944.

[Julie-Marthe Cohen (2<sup>nd</sup> ed.)]

**ELTEKEH** (Heb. אֶלְתֵּקֶה, אֶלְתֵּקָה), leitical city in the territory of Dan (Josh. 19:44; 21:23; but according to T<sup>J</sup>, Sanh. 1:2, 18c “of Judah”). It was in the “plain of Eltekeh (written: Altaqû)” that \*Sennacherib in 701 B.C.E. defeated the Egyptians who had come to the aid of the rebelling king of Judah Hezekiah and his allies. The battle is described in Sennacherib’s annals (1:76–79). \*Albright proposed identifying Eltekeh with Khirbet al-Muqanna’, 6 mi. (10 km.) S.E. of ‘Aqir, but recent surveys have shown that this was the largest fortified city in the area and probably the site of \*Ekron. Mazar has consequently suggested Tell al Shalláf, about 2½ mi. (4 km.) N.E. of Jabneh, where potsherds from the Early and Late Iron Age have been found.

**BIBLIOGRAPHY:** Albright, in: *BASOR*, 15 (1924), 8; 17 (1925), 5f.; Mazar, in: *IEJ*, 10 (1960), 73–77; Pritchard, *Texts*, 287f.; *EM*, 1 (1950), 419f.; Press, *Erez*, 1 (1951<sup>2</sup>), 23. **ADD. BIBLIOGRAPHY:** S. Ahituv, *Joshua* (1995), 322.

**ELTON, SIR GEOFFREY RUDOLPH** (1921–1994), British historian. Elton, a son of Victor \*Ehrenberg, was born in Tuebingen, Germany, and went to England in 1939. He began teaching at Cambridge University in 1949, and in 1967 was appointed professor of constitutional history. From 1983 to 1988 Elton was Regius Professor of Modern History at Cambridge.

Elton's interpretation of the political and constitutional history of 16<sup>th</sup>-century England has brought about a major reassessment of the Tudor period. His most important work, *The Tudor Revolution in Government* (1953), portrays the 1530s as a revolutionary decade, when Henry VIII's minister, Thomas Cromwell, reshaped England's government. Elton later extended and consolidated his insights in *England under the Tudors* (1955), and in a collection of documents, *The Tudor Constitution* (1960). His other books include *Reformation Europe* (1963), which is a basic introduction to the subject, and *The Practice of History* (1967). He edited a number of volumes of the *New Cambridge Modern History*.

Elton was one of the most distinguished historians of early modern Britain, although many of his theories about Tudor government were widely disputed. He received innumerable honors, including honorary degrees from six universities, while no fewer than five *Festschriften* were published in his honor. He was knighted in 1986.

[Theodore K. Rabb / William D. Rubinstein (2<sup>nd</sup> ed.)]

**ELUL**, the post-Exilic name of the sixth month in the Jewish year. The name is Babylonian and was subsequently adopted in Hebrew, Aramaic, and Arabic. Its first occurrence in a Hebrew text is in Nehemiah 6:15. The zodiacal sign of this month is *Virgo*. In the present fixed calendar, it invariably consists of 29 days, and the first of Elul never falls on a Tuesday, a Thursday, or a Sabbath. In the 20<sup>th</sup> century, Elul in its earliest occurrence extended from Aug. 8 to Sept. 5 and in its latest from Sept. 6 to Oct. 4. The talmudic rule that Elul invariably consists of 29 days reflects the early endeavor to facilitate the prior calculation of the date of Rosh Ha-Shanah, i.e., the \*New Moon of Tishri (the seventh month, which followed Elul, and was therefore directly determined by the length of Elul), and consequently also the dates of the other festivals occurring in that month. For the same reason, the New Moon of Elul was announced to Jewish communities by the messengers of the Sanhedrin (*RH* 1:3). Witnesses to the sighting of the New Moon of Elul were not permitted to travel on the Sabbath to report their sighting to the court in Jerusalem; the witnesses to the new crescent of Nisan and Tishri were so permitted (*RH* 1:4; cf. *EJ*). In Temple times traveling on Sabbath was permit-

ted to report the new crescent of all the months because of the Temple sacrifices (*ibid.*). According to some *tannaim* the first of Elul was to be considered a Rosh Ha-Shanah (beginning of a new year) in respect of the tithing of animals (*RH* 1:1; *Bek.* 9:5–6). There is a tradition that the seventh or 17<sup>th</sup> of Elul had once been observed as a fast, commemorating the death of those spies whom Moses had sent to Canaan and who brought back an evil report of the land (*Num.* 14:37; *Tar. Jon.*, *ibid.*; *Meg. Ta'an.* 13, ed. Neubauer; *Sh. Ar.*, *OH* 580:2, et al.).

As it precedes the \*Ten Days of Penitence, Elul became a month of repentance and of special ascetic and devotional practices. A rabbinic homily derives an allusion to the name of the month from the initial letters of *Ani le-Dodi ve-Dodi Li* (Heb. אָנִי לְדוּדִי וְדוּדִי לִי; "I am my beloved's, and my beloved is mine," *Song* 6:3), as describing the relationship between God and His people. The \**shofar* is sounded daily at the morning service (except on the Sabbath), and Psalm 27 is recited. In the Sephardi rituals \**Selihot* are also recited daily throughout Elul, whereas in the Ashkenazi ritual, they are recited only during the last four to nine days of Elul (*Sh. Ar.*, *OH* 581). A similar liturgical divergence existed already in the geonic age (*Tur.*, *ibid.*, citing R. Hai Gaon). Rabbinic *aggadah* connects the special significance of Elul with the 40 days of Moses' stay on Mount Sinai (*Ex.* 34:28) which was calculated to have commenced on the first of Elul and ended on the tenth of Tishri (the Day of \*Atonement, *PdRE* 46).

[Ephraim Jehudah Wiesenberg]

**ELUSA** (Gr. Ελουσα), Nabatean city in the Negev, now the ruins of Ḥaluza (Ar. al-Khalaṣa), 12 mi. (20 km.) S.W. of Beer-sheba. Elusa was the starting point of the roads leading from Palestine to Egypt and Sinai in the Roman and Byzantine periods (Ptolemy, *Geography*, 5:15, 7; cf. *Peutinger Map*, where it is located 71 Roman miles from Jerusalem, 24 from Eboda, and 53 from Thamara) and especially of the pilgrim road to Sinai (Theodore, *Itinera Hierosolymitana*, 78). Elusa was colonized by the Nabateans in the last decades of the first century C.E. In the fourth century C.E. Elusa was the seat of a school of rhetoric and had its own police chief; the city's area extended as far as Nessana (Nessana Papyri). In Targum Jonathan (*Gen.* 16:14) Elusa is identified with Bered. The monk Hilarion visited Elusa and was served wine from the local plantations; the inhabitants of the city apparently spoke Aramaic (Jerome, *Vita Hilarionis*, 25). Its bishops participated in the church councils from 431 onward. In Arab times Elusa was the seat of a district governor who was under the jurisdiction of the governor of Gaza. The site was surveyed by E. Robinson (1838), E.H. Palmer (1869/1870), A. Musil (1897), A. Jaussen, R. Savignac and H. Vincent (1905), and C.L. Woolley and T.E. Lawrence (1914). Although the ruins of the city are extensive, they were greatly damaged by the builders of Gaza during Turkish and British Mandate times. Some of the city's dumps were excavated in 1936 by the archaeologist H. Dunscombe Colt. Excavations were conducted at Elusa by A. Negev in 1973, 1979, and 1980,

revealing fortifications (represented by a tower), an area of dwellings, a theater that had been repaired in the fifth century C.E. (based on the evidence of an inscription which speaks of a new floor made for the “old theater”), and a Byzantine period church, one of the largest known in the Negev Desert. Additional, smaller, churches are known at Elusa. A Nabatean cemetery was also discerned near the settlement. New excavations were conducted at the site in 1997 by H. Goldfuss and P. Fabian in the area of the Roman theater, the construction of which can now be shown to date from the late second or early third century C.E., with its abandonment taking place in the sixth century C.E. Additional work was done in an area of pottery workshops on the edge of the settlement.

[Michael Avi-Yonah / Shimon Gibson (2<sup>nd</sup> ed.)]

**ELVIRA (Eliberis, Illiberis)**, town in Andalusia, Spain, near Granada. The church council convened in Elvira in 300–303 (or 309) issued canons forbidding marriage between Christian women and Jews unless the Jew first adopted Christianity (§16); prohibiting Jews from keeping Christian concubines (§78); from entertaining at their tables Christian clergy or laymen (§50); and from blessing fields belonging to Christians (§49): Christians who turned to Jews for such blessings were to be excommunicated. These were the earliest canons of any church council directed against the Jews. A Jewish community still existed in Elvira at the time of the Muslim conquest. Its scholars corresponded with Saadia Gaon in the tenth century, as attested by Abraham \*Ibn Daud in *Sefer ha-Kabbalah* (ed., G.D. Cohen (1967), 79). In the course of time the Elvira community became merged in that of Granada.

[Haim Beinart]

**EL-YAM**, Israeli merchant shipping company. Cargo Ships El-Yam Ltd. was founded in 1949 by a subsidiary of the Israel Discount Bank and started operations in 1953 with three 10,800-ton vessels. It developed rapidly and in 1977 its fleet (owned through affiliated and subsidiary companies), consisting of bulk carriers and refrigerated vessels for the transport of fruit, meat, and dairy products, exceeded 1.75 million tons dead-weight, representing an investment of \$200,000,000.

**ELYAN, SIR ISADORE VICTOR** (1909– ), chief justice of Swaziland. Born in Dublin, Ireland, Elyan qualified as a lawyer and from 1946 was a magistrate in the British Colony of Gold Coast (Ghana) until his appointment as judge of the Basuto-land Court of Appeal in 1955. From 1965 to 1970 he was chief justice of Swaziland and from 1966 also served as judge of the Court of Appeal for newly independent Botswana.

**ELYASHAR, JACOB BEN HAYYIM JOSEPH** (after 1720–1788), rabbi and communal leader in Erez Israel. Elyashar was born in Hebron. He was a grandson, through his mother, of Jacob Vilna, a member of the group of \*Judah he-Ḥasid. He acted as an emissary of the Hebron community to various countries, visiting Italy, Germany, and Poland after 1751, Baghdad in 1763, and Sofia and other Turkish towns in 1768, returning in about 1770 to Hebron, where he became one of its notables. He was included there among the pupils of Ḥ.J.D. \*Azulai and the two became very close friends. He helped Azulai in his literary activities, copying on his behalf various manuscripts. In 1773 Elyashar again visited Baghdad as an emissary of the Hebron community, and in 1774 went to Basra where he stayed until 1781. During that time the Persian army in 1775 captured the town, ruling over it until 1779.

Elyashar, who was a composer of *piyyutim* and poems, commemorated the day the Persians left Basra by composing a poem, “*Megillat Paras*,” in which he described events in Basra during the siege and its capture by the Persians. It was first published by his grandson, Jacob Saul \*Elyashar, at the beginning of the latter’s *Ish Emunim* (1888). A critical version with a commentary was published by M. \*Benayahu in his book *Rabbi Yaakov Elyashar* (1960). Jacob also composed poems in honor of that day, which the Jews of Basra continued to recite annually amid great celebrations for about 100 years after the event. In 1781, through the influence of the well-known Farḥi family, he reached Safed. There he served as *av bet din* and one of the leaders of the community. He devoted himself to the rebuilding of \*Safed, whose Jewish settlement began to develop anew in the years 1778–79. He wrote several books which were lost as a result of his wanderings and the persecutions he suffered.

**BIBLIOGRAPHY:** M. Benayahu, *Rabbi Yaakov Elyashar* (Heb. 1960); idem, *Rabbi Ḥayyim Yosef David Azulai* (Heb. 1959), index, s.v.; Yaari, Sheluḥei, 591 f. and index, s.v.; A. Ben-Jacob, *Yehudei Bavel* (1965), 123, 139, 282, 335 f.

[A’hron Oppenheimer]

**ELYASHAR, JACOB SAUL BEN ELIEZER JEROHAM** (1817–1906), Sephardi chief rabbi of Erez Israel (*rishon le-Zion*). A grandson of Jacob ben Ḥayyim \*Elyashar, he was born in Safed. His father, a *daiyyan*, *shoḥet*, and cantor there, was arrested by the Turkish authorities, but succeeded in escaping and settled with his family in Jerusalem. When Jacob Saul was seven, he lost his father, and his mother remarried in 1828. His stepfather, Benjamin Mordecai \*Navon, became his teacher and supported him for many years. Elyashar mar-

ried the daughter of \**hakham* bashi, Raphael Meir \*Panigel. He was appointed a *dayyan* in Jerusalem in 1853, and in 1869 head of the *bet din*. He succeeded his father-in-law as *hakham bashi* and *rishon le-Zion* in 1893.

A cultured scholar and a fluent linguist, Elyashar wrote thousands of responsa in answer to questions from both Ashkenazim and Sephardim all over the world. He was respected by the authorities and the heads of other religious communities, and received orders of merit from the Turkish sultan, Abdul Hamid, in 1893, and the German kaiser, William II, in 1898. He was accepted by both the Sephardi and Ashkenazi communities and worked hard to put religious institutions in Jerusalem on a solid foundation. The affection in which he was held is reflected in the fact that he was referred to as “*Yissa Berakhah*” (“conferring a blessing”), the word *Yissa* (יִסָּא) being derived from the Hebrew initials of his name. He enjoyed marked success as an emissary to Smyrna (1845), Damascus (1854), Alexandria (1856), and Leghorn (1873).

In 1888 when a controversy arose as to the permissibility of working on the land during the following year, a sabbatical year, Elyashar decided that such work could be permitted by selling the land formally to a non-Jew, but suggested that each Jewish agricultural settlement leave a small portion of land uncultivated as a symbol and reminder of the commandment. Elyashar died in Jerusalem, where the Givat Sha’ul district is named after him.

He was the author of the following works, all published in Jerusalem (some by his son, Ḥayyim Moshe) and all bearing the word “Ish,” the initials of his name, in their title: (1) *Yikrav Ish* (1876–81), 2 parts, novellae and responsa, which were included in the *Benei Binyamin* of his stepfather; (2) *Ish Emunim* (1888), homilies for festivals and various special occasions; (3) *Ma’aseh Ish* (1892), responsa; (4) *Derekh Ish*, homilies; (5) *Divrei Ish*, 2 parts (1892–96), homilies; (6) *Simḥah le-Ish* (1888), novellae, responsa, and *piyyutim*; (7) *Yissa Ish* (1896), responsa; (8) *Olat Ish*, responsa, as well as a number of sermons entitled *Penei Ish* (1899); (9) *Sha’al ha-Ish* (1909), responsa and rulings, together with responsa by his son, Ḥayyim Moshe, entitled *Penei HaMA*; (10) *Kavod le-Ish* (1910), responsa, including the eulogies in his honor. Elyashar possessed a large collection of manuscripts, some of which are in the Jerusalem National Library.

His eldest son, Rabbi ḤAYYIM MOSHE ELYASHAR (1845–1924), a merchant and businessman, represented the Jewish community on the council of heads of religious communities established by the Turkish authorities, and, in the early days of the Mandate, served as *rishon le-Zion*. He was one of the initiators of the combined rabbinical committee which was the forerunner of the chief rabbinate of Erez Israel. His son ISAAC ELIACHAR (1873–1933), the first chairman of the United (Sephardi and Ashkenazi) Jewish Community Council of Jerusalem, was appointed to the Jerusalem municipality in 1917. His grandson ELIYAHU ELIACHAR (1898–1981) was chairman of the United Community Council of Jerusalem

from 1938 until 1949. He headed for many years the Committee of the Sephardi Community of Jerusalem and served during the mandatory period as a member of the Asefat ha-Nivḥarim and the Va’ad Le’ummi. He was a member of the First and Second Knesset.

**ELYASHIV** (Heb. אֵלִישִׁיב), moshav in central Israel, in the Ḥefer Plain, affiliated to Tenu’at ha-Moshavim. One of the first Yemenite agricultural settlements in Israel, it was founded in 1933. Its economy was based on intensive farming including citrus orchards as well as outside employment. In 2002 the population of Elyashiv was 436.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**ELZAS, BARNETT ABRAHAM** (1867–1939), U.S. Reform rabbi and historian. Elzas was born in Germany, the son of a Hebrew teacher, and moved with his parents to Holland and then to London where he was educated at Jews’ College and the University of London. In 1890 he went to America and served congregations in Toronto, Canada and Sacramento, California, being eventually appointed to the pulpit of Congregation Beth Elohim in Charleston, South Carolina (1894). Elzas became keenly interested in local Jewish history and made an exhaustive study of records of Charleston Jewry and of the older smaller communities of the state. After writing a number of studies on the subject, he produced the comprehensive *Jews of South Carolina: From Earliest Times to the Present Day* (1905), which still ranks as one of the best historical studies of an American Jewish community. While in Charleston, Elzas also qualified at the Medical College of South Carolina (1900), although he never practiced. In 1910 he moved to New York City where he ministered to the Hebrew Congregation of the Deaf and served as Jewish chaplain to the City Department of Correction and the State Mental Hygiene Department. He also served as president of the New York Board of Rabbis. In 1912 Elzas became rabbi of Beth Miriam Congregation, Long Branch, N.J.

[Thomas J. Tobias]

**EMANATION**, a theory describing the origin of the material universe from a transcendent first principle. According to this theory, the universe, which is multiple, is generated from the One, which is unitary, through the medium of a hierarchy of immaterial substances. The ultimate source is undiminished, while the beings which are emanated are progressively less perfect as they are further removed from the first principle. The process is conceived as being atemporal. In neoplatonic

emanationism the ultimate product, the material universe, is not regarded as evil, as in gnostic systems of emanation. A variety of models are used to describe emanation. For example, it is compared to the efflux of light from a luminous body, or to water flowing from a spring. The emanationist theory was given its classical formulation by Plotinus in the *Enneads*, in which the typical fourfold scheme of the One, Intellect, Soul, and Nature is found. Emanationism tends to be combined with an eschatology (or soteriology) that envisions the soul's return to its ultimate source of being by *epostrophē* or "reversion" (see A. Altmann, *Studies in Religious Philosophy and Mysticism* (1969), 41ff.). The theory of emanation was developed further by Plotinus' successors, particularly Proclus, who systematized the scheme of *monēproodos-epistrophē* (immanence, procession, reversion) to account for the process of emanation.

### In Jewish Philosophy

The Hebrew terms used for emanation are *azilut* or *azilah* (cf. Num. 11:17), *hishtalshelut*, *meshekh*, *shefa*; the verbs *shalah* and *sadar* (in the pu'al) are also used (see J. Klatzkin, *Thesaurus Philosophicus* (1930), 96; 4 (1933), 112). The theory of emanation was known to medieval Arabic and Jewish philosophers from several sources. Plotinus was known from the *Theology of Aristotle* (in both a vulgate and long recension), a paraphrase of texts from the *Enneads*, as well as from Plotinian material ascribed to "al-Sheikh al-Yūnānī" ("The Greek Sage," probably Porphyry, editor of the *Enneads*), and a work titled *al-ʿIlm al-Ilāhī* ("The Divine Science"), falsely ascribed to al-ʿFārābī (translations of this material are in Plotinus, *Opera*, ed. by H. Schwyzer (1959), vol. 2). Proclus was known from the *Liber de causis* (*Kitāb al-Idāh fī al-Khayr al-Mahd*) ascribed to Aristotle but actually based on Proclus' *Elements of Theology* (ed. and tr. by E.R. Dodds, 1963). One must also take into account neoplatonic texts such as the pseudo-Aristotelian source utilized by Isaac ʿIsraeli and Abraham ʿIbn Ḥasdai (see S.M. Stern, in *Oriens*, 13–14 (1960–61), 58ff.) and the pseudo-Empedoclean *Book of Five Substances* (ed. by D. Kaufmann, *Studien ueber Salomo Ibn Gabirol* (1899), 17ff.). Jewish philosophers also relied on the appropriation and development of emanationism by Arabic philosophers such as al-ʿKindī, al-ʿFārābī, ʿAvicenna, and the Sincere ʿBrethren (Ikhwān al-Ṣafāʿ). In medieval Arabic and Jewish neo-Aristotelianism, the neoplatonic theory of emanation was applied to the Aristotelian-Ptolemaic cosmology which posited a series of nine concentric spheres encompassing the earth, each endowed with an intelligence. Thus, Aristotle's active intellect (*De Anima*, 3) was identified either with Plotinus' universal intellect in the neoplatonic hierarchy, or with the intelligence of the lowest sphere (of the moon) in the Aristotelian-Ptolemaic cosmology. Emanation is a necessary (natural) and eternal process, and is thus thought to imply the absence of will and design on the part of the ultimate source. Thus, the theory of emanation is in conflict with the biblical concept of temporal creation by divine volition. Also, emanationism sees the divine source as somehow omnipres-

ently immanent in the world, and it therefore tends toward pantheistic expressions.

In their discussions of cosmology, Jewish philosophers sometimes tried to harmonize emanation with biblical concepts of \*creation and \*providence. Isaac Israeli, for example, postulates an initial act of creation by "the will and power" of God which results in the first two substances, which are in his system prime matter and form (or wisdom), while the subsequent entities are generated by a process of emanation. These are the typical hierarchy of intellect, soul, and nature of Plotinus, but the universal soul, like the individual soul, is tripartite (rational, animal, vegetable; as in Ibn ʿGabirol), and nature is identified with the first or outer sphere. Each emanated being is derived from "the shadow" of its anterior cause. Ibn Gabirol injected an element of voluntarism into an emanationist system with his notion of "will," which mediates between the first essence and primary matter and form, which together constitute the hypostasis of intellect. Will thus appears not as a function of the creator (cf. Israeli), but as a distinct hypostasis. Gabirol often appeals to the metaphors of a spring of water, light from the sun, the reflection in a mirror, and human speech to explain emanation. There is a pronounced tendency toward pantheism (see *Mekor Ḥayyim* 5:39, 3:16).

Pseudo-ʿBaḥya's *Kitāb Maʿanī al-Nafs* ("On the Essence of the Soul") combines creation and emanation. The entire chain of being hinges on God's will and wisdom. Intellect is called *Shekhinah* and soul is called *Kevod Elohei Yisrael* (see Guttman, *Philosophies*, 110). ʿAbraham bar Ḥiyya posits five worlds above the celestial spheres, which he correlates with the five days of creation, giving each a theological interpretation. The lower three (the worlds of knowledge, soul, and creation) seem to correspond to the neoplatonic hypostases. Above them are the world of light (*ha-olam ha-nurani*) and the world of dominion (*olam ha-ravrevanut*), probably derived from an Arabic neoplatonic work (*Megillat ha-Megalleh*, ed. by A. Posnanski (1924), 21ff.; see also, G. Scholem, in *MGWJ*, 75 (1931), 172ff.; and Guttman, *Philosophies*, 112ff.). Like Ibn Gabirol, Abraham bar Ḥiyya uses expressions which are tantamount to pantheism. God is essentially identical with the universe insofar as He gives it the power of being.

The emanation theory of Arabic and Jewish Aristotelians, an intricate system explaining the derivation of the spheres and their intelligences, was rejected by ʿJudah Halevi as an unproven claim (*Kuzari*, 4:25). Abraham ʿIbn Daud also rejected the emanationist explanation of the derivation of the spheres and their intelligences, but without denying the order itself (*Emunah Ramah*, ed. by S. Weil (1852), 67). The position of ʿMaimonides is complex. He was keenly aware of the opposition between eternal necessary emanation of the world from God and the free act of creation. Nevertheless he wrote: "It has been said that the world derives from the overflow (*fayd*) of God and that He has caused to overflow to it everything in it that is produced in time." In the same context he compares the derivation of the world from God to a

spring of water which, he says, is “the most fitting simile for the action of one who is separate from matter” (*Guide of the Perplexed*, 2:12). Divine emanation also accounts for cognition and prophecy (*ibid.*, 2:37). The governance of the lower world is perfected by means of forces emanating from the spheres (*ibid.*, 2:5). Still, this emanation is said to be unlike that of heat from fire and light from the sun in that it constantly assures duration and order for the existents that emanate from God by “wisely contrived governance” (*ibid.*, 1:59). Maimonides’ insistence on creation in time and insertion of intention and wisdom into a scheme of emanation appear to contradict the presuppositions of the latter. \*Levi b. Gershom found several difficulties with the theory of emanation which postulates an eternal procession from God (*Milhamot Adonai*, 6:1, 7; see also Guttman, *Philosophies*, 211ff.). He maintained, for example, that it was impossible for existence to flow constantly from God to the heavenly bodies (as opposed to their being brought into being at once), for the heavens would thus exist only potentially.

[Joel Kraemer]

### In Kabbalah

Though the term *azilut* has many meanings in Hebrew, the Jewish philosophers and kabbalists used it to describe different forms of emanation. The Hebrew term is understood as pointing to both the process of emanation and to the realm that is emanated. The major concept that is conveyed by this term is the prolongation of a spiritual entity into a hypostasis that does not separate itself essentially from its source. According to such a view, the Infinity, *Ein-Sof*, underwent a process of autogenesis that produced a realm of ten divine powers which, different as they are from each other, nevertheless constitute together the divine zone. In this mode of understanding the process of emanation is conceived of as remaining within God, offering a pseudo-etymology of *azilut* as if related to the Hebrew word *eẓlo*, “with him,” namely with God. Though articulated since the 13<sup>th</sup> century, this view has much earlier Jewish sources, as early as second century, according to which some angels are extensions of the divine glory and return to it after completing their mission. This view is known in Kabbalah as the doctrine of essence, which means that the divine emanated powers are identical with the divine essence. According to another view, the emanation is constituted as the shadow of the higher plane of being. This view understands *azilut* as if derived from the Hebrew *ẓel*, “shadow,” and points to a concept of efflux that somehow leaves its source. This view is more consonant with the kabbalistic theory according to which the first emanated powers are the instruments used by the Infinite to create the world and to interact with it, or the vessels which contain the divine energy, which pour themselves out. The instrumental view of emanation is closer to, and derived and adapted by, the kabbalists from Neoplatonic sources which reached them via Arabic and Latin translations. In some few cases, the astrological theory of emanations descending from stars and other celestial bodies was represented by the term *azilut*.

Though emanation explains the gradual descent from the Infinity to the lower world as part of a great chain of being, in two important cases there is a direct emanation from the divinity: both the Torah and the soul are described as circumventing the great chain of being, and having a special relationship with the divine. In these cases, evident in Naḥmanides and Cordovero, the special emanation is described as a cord that allows the kabbalist to have a theurgical impact on the divine sphere.

In many forms of theosophies, the first world is described as the world of emanation, *olam ha-azilut*, as part of the four-fold distinction *ABYA* (*Azilut, Beri'ah, Yeẓirah, Asiyyah*). During the Renaissance period, kabbalists in Italy like Johanan \*Alemanno or David Messer \*Leon paid special attention to the processes of the emanation of the *Sefirot*, and this development influenced the Safedian kabbalists.

## EMANCIPATION.

### Definitions and Dialectics

Emancipation of the Jews in modern times stands alongside such other emancipatory movements as those of the serfs, women, slaves in the United States, and Catholics in England. The term “emancipation” is derived from Latin (*emancipatio*), and originally meant in ancient Rome the liberation of a son from the authority of his father and his attainment of independent legal status. It has come to mean the liberation of individuals or groups from servitude, legal restrictions, and political and social disabilities. Jewish emancipation denotes the abolition of disabilities and inequities applied specially to Jews, the recognition of Jews as equal to other citizens, and the formal granting of the rights and duties of citizenship. Essentially the legal act of emancipation should have been simply the expression of the diminution of social hostility and psychological aversion toward Jews in the host nation. Indeed, Jewish emancipation was related to the weakening of the general social antipathy toward Jews; but the antipathy was not obliterated, and constantly hampered the realization of equality even after it had been proclaimed by the state and included in the law. Emancipation was achieved by ideological and social change and political and psychological strife. Before achieving full emancipation the Jews in many countries passed through several transitional stages. They had to overcome the barriers of vested interests and such ancient prejudices as the hateful image of the Jew as alien, his religion odious, and his economics unscrupulous. Ideologically, emancipation

stemmed from the utopian political and social thought since the 18<sup>th</sup> century. Emancipation was, however, dependent on actual political and social conditions in each country and on the residential, cultural, and social characteristics of the Jewish population. Stages in the history of emancipation have been marked by the strength or weakness of egalitarian ideology and the corresponding interaction with existing laws, institutions, and relationships.

### The Three Periods in the History of Jewish Emancipation

The first period, “heralding emancipation,” covered the 50 years preceding the \*French Revolution (1740–89). The second period, the 90 years from the French Revolution until the Congress of \*Berlin (1789–1878), comprised emancipation in Western and Central Europe. Finally, the third period extended from the Congress of Berlin to the Nazis’ rise to power (1878–1933) and saw in an atmosphere charged with newly inflamed hatred and racial animosity the achievement of Jewish emancipation in Eastern Europe, and the struggle in many countries to maintain civic equality and the right to national definition.

During the first period, demands for alleviating the lot of the Jews, with a view to their ultimate emancipation, were based on a theory of the “civic improvement of the Jews.” The proponents of this idea, men like John \*Toland, Christian Wilhelm von \*Dohm, Comte de \*Mirabeau, and their supporters, argued that existing legislation disabling the Jews was motivated primarily by religious intolerance, hence contrary to the enlightened “spirit of the times.” They pointed out, moreover, the economic advantages which would accrue to the state as a result of permitting Jews to function in society with the same rights and obligations as other groups. Admitting the faults of the Jews pointed out by opponents, enlightened thinkers showed the defects to be the natural result of the degrading status in which Jews were compelled to live when all decent ways of life were closed to them. Such considerations were expressed in the deliberations on the Jewish question in pre-revolutionary \*France. Their influence is reflected in the announcement of an essay competition set by the Société Royale des Arts et Sciences in 1785 on the question: “Are there any ways of making the Jews of France happier and more useful?” and the entry of Abbé Henri \*Grégoire which gained the prize. New legislation ameliorating the status of Jews was inspired by this idea. Notable examples were the 1740 law enabling the Jews to become naturalized in the British colonies if they had lived there for at least seven years, and the law passed by the British Parliament in May 1753, according the Jews of \*England the right of naturalization. The British government, however, was compelled to revoke the latter law on Dec. 20, 1753, because of vigorous public opposition. For the first time Jews were also given the right, in several places (Leghorn [Italy] and Belorussia), to elect representatives to municipalities and other institutions, like merchant and burgher organizations, although with some educational limitations. The *Toleranz-Patent* (1781–82) of \*Joseph II of Austria aimed

at encouraging the integration of the Jews into Christian society, and is thereby a law “heralding emancipation,” as were the laws abolishing the “body tax” (see \*taxation) in Austria in 1781 and in the France of Louis XVI in 1784. The declarations and laws issued on freedom of conscience and religion at the time of the American Revolution were radical in their egalitarianism (see below).

Among the Jewish initiatives toward obtaining civic liberation, the literary activity of Moses \*Mendelssohn is of historic importance, and the demands of Zalkind \*Hourwitz are worth noting. The petitions for equal rights and “equality in religious rights,” presented by U.S. Jews in 1784 and 1787, set an example which was later widely followed.

The second period opens with the principles and wars of the French Revolution and ends with the resolutions and tactics of the Congress of Berlin. In the intervening 90 years, Jewish emancipation became a political and legal fact in all European countries where revolution and liberalism were in the ascendancy: France, \*Belgium, the \*Netherlands, \*Italy, \*Germany, and \*Austria-Hungary. The revolutionary peaks of 1789–91, 1830–31, 1848–49, and times of fundamental change in the structure of European states (e.g., unification of Germany and of Italy, and national independence in Hungary) were periods of progress in Jewish emancipation. Even where the emancipation evolved from legislation created within the permanent framework of the existing order (England and Scandinavia), or as the result of international circumstances (\*Switzerland), or international pressure (\*Serbia; \*Bulgaria), the relation between the new liberal political climate and the emancipation of the Jews was decisive. The ideals of the Enlightenment were also evident in the numerous arguments and lengthy literary and political deliberations on Jewish emancipation which took place during this period. It was stressed that keeping the Jews in a politically limited and socially inferior status was incompatible with the principle of civic equality. Such deprivation would be a contradiction of the principle of “natural rights” of man, and, therefore, would undermine the civic equality of all who had attained it by revolution and the application of this principle. Emphasis was placed on the belief that “it is the objective of every political organization to protect the natural rights of man,” hence “all citizens have the right to all the liberties and advantages of citizens, without exception.”

As men, Jews should be guaranteed political rights in the countries in which they reside. Their ethnic origin and messianic hopes notwithstanding, the Jews had adopted the language and the culture of their environment; they were loyal to the state and identified themselves with the national feelings of their fellow countrymen. The activity of Jews in the struggle for their rights was bound up with their energetic participation in the general striving toward political liberty and egalitarianism as exemplified by Heinrich \*Heine, Ludwig \*Boerne, Johann \*Jacoby, Ignaz \*Kuranda; by the journalists and parliamentarians Gabriel \*Riesser, Berr Isaac \*Berr, Moritz \*Veit, Sir David \*Salomons, and Lionel Nathan

\*Rothschild; and by the statesman Adolphe \*Crémieux, who in 1870 issued in the name of the French government the law which conferred French citizenship on the Jews of \*Algeria. Jewish society fought for its emancipation not only through general institutions (the \*Board of Deputies of British Jews, the Central \*Consistory of Paris, individual communities), but also through organizations specifically devoted to this aim. The \*Alliance Israélite Universelle worked energetically for its declared goal “of striving universally for the freedom of the Jews.”

The third period (1878–1933) witnessed a reaction to Jewish emancipation, and in Europe was marked with the prevalence of rabid \*antisemitism. Intense opposition brought many Jews to realize that the state’s legal recognition of Jewish civic and political equality does not automatically bring social recognition of this equality. The controversy over Jewish emancipation intensified and became embittered in almost every European country. Racism and nationalism were the bases for anti-emancipation agitation. Opponents claimed that emancipation was granted under the false pretenses that Judaism is only a religion, and that emancipated Jews would give up all Jewish national identity and assimilate into the host nations. The “price of admittance” had not been paid by most Jews, who continued to form a separate national group. Even in the view of many liberals, the claim of Jews for participation in the government of the nation in which they were not an organic part was unjustified. Racists added that Jews should not be granted civil rights or become assimilated because their racial inferiority could only harm the “superior race.” Throughout its difficult and complex history, Jewish emancipation was a touchstone of freedom and social openness in European culture. Support came from those who cherished liberalism in life, thought, and politics, while bitter opposition came mostly from the reactionary camp. In Jewish life the fight for emancipation at first went hand in hand with a readiness to assimilate, and then, in the late 19<sup>th</sup> century, became associated with national Jewish loyalty and \*autonomy.

### Emancipation in Various Countries

UNITED STATES. The first country to emancipate the Jews was the United States. Jewish political inferiority during the colonial period before 1776, however, was not the result of a peculiar legal status. It derived rather from the Jews’ belonging to the non-Protestant portion of the population, or in some colonies their nonmembership in one privileged Protestant denomination. Before the period of the American Revolution, Jews living in the colonies were generally ineligible for public office, owing to a Protestant form of oath which operated to exclude Catholics as well. There are instances where Jews entered public life nevertheless, perhaps by disregarding such forms. Jews were not limited in the rights of domicile, economic activity, or the practice of Judaism. Their full enjoyment of civil rights, together with the newness, foreignness, and minuscule numbers of colonial Jews, probably did not encourage them to seek the full political rights which they lacked.

The American Revolution and the Federal Constitution brought emancipation in the political realm to Jews and other disadvantaged white minorities. Most of the newly enacted state constitutions abolished Christian oath formularies and separated church and state. The Virginia Statute of Religious Liberty, long promoted by Thomas Jefferson and enacted in 1786, not only guaranteed freedom of worship and prohibited public support of religious institutions, but provided that “religious opinions and beliefs shall in no wise diminish, enlarge, or affect civil capacities.” This law influenced the Federal Constitution of 1787. The latter’s clause that “no religious test shall ever be required as a qualification for any office or public trust under the United States” is the closest the United States ever came to a definitive act of religious emancipation, including Jews. The First Amendment, enacted in 1791 within the Bill of Rights, completed the process by disestablishing all religions. Such Federal constitutional law did not, however, supersede the rights of individual states, although virtually all of them emulated the Federal model. The right of Jews to hold public office was actually sharply debated in Maryland between 1816 and the abolition of the Christian oath requirement in 1824. Vestigial oath clauses remained on the statute books of North Carolina until 1868 and New Hampshire until 1877, but they were generally disregarded. Both states had only a handful of Jews.

For emancipation in Latin America see \*Latin America.

ENGLAND. Jewish emancipation in England came through the gradual change in the climate of social opinion rather than through revolution, although the ideas of the American and French revolutions, and the emancipation of English Catholics in 1829, were influential in changing English attitudes. Jews had participated with Catholic leaders in planning the strategy for achieving Catholic emancipation. Jewish emancipation in England was accomplished by laws specifically relating to the Jews. These laws were passed only after some social equality had become an accomplished fact and the state was required to give it legal expression. Literature, as well as law, did much to shape and reflect public opinion. Byron, for example, expressed sympathy for the suffering Jew; Richard \*Cumberland in *The Jew* (1794) created a complimentary portrait of the Jew as a man. In addition, there were English translations of the literature written in defense of the Jews by such men as \*Lessing, Mendelssohn, and Grégoire; publication of books and essays by various English authors calling for emancipation of Jews; and the defense of the rights of Jews in other countries by English diplomacy (e.g., at the Congresses of Vienna and Aix-la-Chapelle; support of Moses \*Montefiore’s interventions in the \*Damascus Affair; Morocco; Russia). The change in public attitude toward Jews was largely due to their civic and economic progress. In practice, neither the right of the Jews to reside in England, nor their choice of profession or commercial opportunity were restricted after their return in the 17<sup>th</sup> century, the Jews being gradually allowed to improve

their economic and social status to a great extent. Jewish civic and political inequality was bound up with the formula of the oath of loyalty, "according to the usages of the Anglican Church," to be taken in order to hold any office. In the deliberations on the emancipation of the Catholics (1828), one of the bishops proposed the new formula, "on the true faith of a Christian," which would then only discriminate against Jews. Thereafter, Jews and their public sympathizers and parliamentary supporters demanded the abolition of this formula for Jews. An attempt in 1830 by a Liberal member, Sir Robert Grant, to change the oath, was carried at first by a majority of 18, but was defeated in second reading. In 1833 after the reform of the British Parliament, Grant proposed "that it is expedient to remove all civil disabilities at present affecting His Majesty's subjects of the Jewish religion, with the like exceptions as are provided with reference to His Majesty's subjects professing the Roman Catholic religion." During the discussion following this motion, speeches were made which have become classics in the polemics of Jewish emancipation, including one by the English historian Macaulay (see \*Apologetics). The motion was finally carried by a great majority in all three readings. The House of Lords, however, rejected it, as it was to do again in 1834. During this time, nevertheless, Jews were being elected to various honorary positions. After David Salomons, a banker and communal worker, was elected sheriff in 1835, the government passed a law in Parliament which enabled Jews to hold this position. Similarly, after Salomons was elected to the court of aldermen in 1841 and again in 1844, a law was passed in 1845 enabling a Jew elected to municipal office to substitute an oath which was acceptable to his conscience for the prejudicial declaration ordinarily demanded. In 1835 a law was enacted which exempted voters from taking any oath. The Jews were enabled in 1837 to receive degrees from the University of London (a secular university), and in 1841, the Jew Isaac Lyon \*Goldsmid was knighted. Admission of Jews to Parliament and university was gradual, changes coming through compromises occasioned by the election of two Jews, Lionel Nathan Rothschild and David Salomons, to Parliament and their struggle to take their seats from 1841 to 1858; a compromise law of 1858; the deletion by law in 1866 of the Christological portion of the oath; and a further abolition of limitations for Jews in 1871.

BRITISH COMMONWEALTH. The later development of the major countries of the British Commonwealth and their colonization by the English (and to a far lesser extent by Europeans) created a situation in which the problems of political emancipation did not present themselves either at all or to any great degree. This development became effective only toward the middle of the 19<sup>th</sup> century or later, and by this time the climate of opinion and political thinking was characterized by liberal concepts averse to legal discrimination for reasons of religion. Originally administered as colonies direct from London through a local representative of the central government, they achieved or were granted self-government when these

liberal concepts were dominant. The social stratification of the settlers also had an influence in the same direction. These were frontier societies engaged in promoting and establishing themselves, in which there was no room for religious discrimination. And in that frontier society, Jews themselves occupied a prominent position and played an important role as entrepreneurs of various kinds. The generally superior educational attainment of Jews also helped. A further element was the very small percentage of the total European population that Jews constituted, in New Zealand never more than about a quarter percent and in Australia one-half percent. The problem confronting the Jews in these Commonwealth countries was not "legalized" religious discrimination and restrictions but the absence thereof and the prevalence of measures of social freedom which brought quite different problems manifested in a trend to intermarriage and complete assimilation.

SCANDINAVIAN COUNTRIES. Emancipation was not an acute problem in the Scandinavian countries in which Jewish settlements were comparatively recent (17<sup>th</sup> and 18<sup>th</sup> centuries) and few in number. There Jewish emancipation came as the legal expression of the quiet victory of a sociopolitical principle natural to civilized states, developing in a conservative mode. On March 29, 1814, the king of Denmark authorized all "the believers in the Mosaic faith" born in Denmark, or living there legally, to engage in all professions, obliged them to keep their books in Danish or in German, and narrowed community autonomy. In 1837 Jews became eligible for municipal election, and in 1843, the special Jewish \*oath was abrogated. In the constitution of June 5, 1849, article 84 was tantamount to a grant of emancipation in refusing to recognize the inequality of "any person on the basis of religious grounds." In Sweden the government abolished discrimination against Jews by an administrative decree on June 30, 1838, but was compelled to rescind it under pressure of public opinion. Some disabilities were abolished by general laws on freedom in the choice of profession. In 1860 Jews were permitted to acquire real estate. Marriage between Jews and Christians was legalized in 1863, and in 1873 it was also permitted to give a Jewish education to children born of such marriages. In 1865 Jews were granted the active right to vote and in 1870, the passive right. In Norway, the 1814 prohibition against the entrance of Jews was abrogated in 1851, after several unsuccessful previous attempts in 1842, 1845, and 1848. It was only in 1891 that the Jews were authorized to enter government service.

FRANCE. The emancipation of the Jews of France was linked to the French Revolution and its principles. Jewish equality was implied in the Declaration of the Rights of Man (Aug. 27, 1789), where it states that no man ought to be molested because of his opinions, including his religious opinions. Equality was gradually implemented through various national laws amid a continual, and sometimes fierce, discussion of the applicability of full equality to Jews, but full emancipation was granted on Sept. 27, 1791. Various features in the composition

and distribution of the Jewish population, and in the traditional French attitude toward Jews, caused this acrimonious two-year struggle (see also \*France, \*French Revolution, \*Alsace). During the debate in the National Assembly Comte de \*Clermont-Tonnerre, an advocate of emancipation, explicitly formulated the assimilationist assumptions of the emancipation when he declared on Dec. 23, 1789: "The Jews should be denied everything as a nation, but granted everything as individuals..." and that "it should not be tolerated that the Jews become a separate political formation or class in the country. Every one of them must individually become a citizen; if they do not want this, they must inform us and we shall then be compelled to expel them. The existence of a nation within a nation is unacceptable to our country." Indeed, Jews striving for emancipation abandoned all demands for autonomy, especially those of the Portuguese communities in the south of France (see \*Avignon; \*Bordeaux; \*Berr Isaac Berr), who were emancipated somewhat earlier than the Ashkenazi Jews of Alsace. The law of September 1791 (ratified by the king on November 13) emancipating all Jews as a matter of principle was considered by Jews as an historic turn in their fate, "a tremendous revolution which heralded happiness," and a victory of revolutionary principles, while the clergy and the royalists considered it a "further insult" to the Church and French historic tradition.

Every territory conquered by the French revolutionary armies, or placed under their rule, and where the laws of France were introduced, saw the proclamation of Jewish equality (e.g., Belgium, the Netherlands, Italy, southern Germany). Jews in these countries considered the French "friends of the Jews," and \*Napoleon Bonaparte was admired by most, even though he later (from 1806 publicly) restricted full emancipation (see France, \*Assembly of Jewish Notables, French \*Sanhedrin). Napoleon's restrictions lapsed in 1818, and ironically were not renewed by the reinstated reactionary Bourbon regime; civic equality of the Jews in France became an established fact. Jewish legal equality was renewed by the law of Feb. 8, 1831 (passed in the French Parliament after numerous discussions), which recognized the Jewish religion as equal in rights to the Christian churches, and provided for the salaries of its religious officials to be paid by the state. In 1846 the \*oath *more Judaico* was abolished by a decision of the court of appeal.

**THE NETHERLANDS.** The French revolutionary conquest of the Netherlands precipitated Jewish emancipation. It was declared legally on Sept. 2, 1796, by the Batavian National Assembly, which stated that "it is impossible to deprive any Jew of the rights and privileges which are attached to Batavian citizenship, if he wishes to employ them, on condition that the Jew answers to all the requirements and fulfills all the obligations to which every citizen is bound." Both the basis of this law and the discussion about it centered on the definition of Jews and their aims. Neither party to the discussion was inimical to Jews. The opponents of emancipation emphasized the

political nature of the Jewish people, who, although deprived of a state, considered Erez Israel to be its country and the Torah its law. One of the debaters, Van Hamelsveld, claimed that since the Jews anticipate a messiah, bringing political revival, to grant them political rights in Batavia would cause the Jews to deviate from their correct historic path, which was similar to that of the Greeks, who stood on the verge of a political revival. All Jews, the argument continued, should have civic rights, which are encompassed by human rights, while political rights should only be given to those who explicitly declare their wish to become Batavian citizens. This conception was supported by the majority of Dutch Jews and their communal leaders, both noted for loyalty to the monarchy (the princes of Orange) and the desire not to cooperate with the revolutionaries who relied on the French conquest.

The opponents of equality claimed that by their religion the Jews were monarchists and thus opposed to any republican regime. They argued, in addition, that Jews are opposed to the abolition of their autonomy and feared that active participation of the Jewish masses in the affairs of state would finally bring misfortune to the Jewish population. In practice, emancipation in the Netherlands did not encounter much difficulty (see the \*Netherlands), and the change of regime in the Netherlands did not change the law of equality. In the constitution, redrafted in 1848, the article on equality was even more clearly formulated: "The members of the various religions are to benefit from the same rights as the citizens of the state and the citizens of the communities, and they have an equal right to hold honorary, clerical, and public service positions."

With the conquest of Belgium by the French armies, the laws of France were applied. Emancipation continued through the time of union with the Netherlands (1815–30), and was incorporated into the Belgian constitution of 1831, which proclaimed the equality of all citizens.

**ITALY.** The beginnings of emancipation in \*Italy were also connected with the victories of the French revolutionary armies. Opening the gates of the ghetto and the destruction of their walls symbolized the new regime. The government of the Cisalpine Republic invited the Jews to send their delegates to its founding assembly, and declared in its first proclamation that "the Jews are citizens and society must recognize them as citizens." One of the first steps of the government of the Republic in Rome was to publish in February 1798 the following decree: "The Jews answering to all the conditions required for the obtention of the rights of Roman citizens shall become subject to the laws which have been decreed for all the citizens of the Republic. Therefore, from this day, all the special laws and decrees concerning the Jews are declared to be null and void." The grounds for this decree were the "sanctified principles of the Constitution of the Roman Republic," according to which "the laws must equally apply to every Roman citizen." Support of Italian patriotism, unification, and revolutionary aims became characteristic of traditional Jewish

community leaders (rabbis, *parnasim*, etc.), as well as Italian Jewry in general during the 19<sup>th</sup> century.

The first emancipation in Italy was of short duration, being repealed with the return of the “ancient order.” The rhythm of repeal varied in the different Italian states. The renewed animation of the Italian liberation movement in the 1840s helped to bring about a considerable shift in public opinion in favor of the Jews. During the Revolution of 1848, the equality of the Jews was proclaimed in almost all the states of Italy: the duchy of Tuscany in its founding constitution of Feb. 17, 1848; Sardinia (which granted Jews civic rights on Mar. 29, 1848) on July 8, 1848; and Rome at the beginning of 1849. The general reaction which followed the year of the Revolution especially affected the Jews of the Papal States, where the period of reaction was also of longer duration. Only with the unification of Italy in 1870 did emancipation also come to the Jews of Rome when all restrictions connected with religion were abolished by the decree of Oct. 13, 1870, and by the parliamentary decision of Dec. 15, 1870. Liberation of parts of Italy during the process of unification also accomplished Jewish emancipation: in Modena, June 14, 1859; Lombardy, July 4, 1859; Romagna, Aug. 10, 1859; Umbria, Feb. 27, 1860; Sicily, Feb. 12, 1861; Naples, Feb. 16, 1861; and Venice, Aug. 4, 1866. Jewish emancipation in Italy was an expression of both social reality and public opinion, until the conclusion of the alliance between Benito \*Mussolini and Adolf \*Hitler.

GERMANY. Jewish emancipation in Germany prior to unification was related, as in Italy, to aspirations for the reform of the state along liberal and democratic lines, and to the desire for unifying the nation, as well as to the revolutionary movement. But after 1848 Germany was controlled by conservative, “historic,” elements, which shaped the form of German unity and the nature of its political life. The process of emancipation in Germany was, therefore, a prolonged and bitter struggle, complicated by \*assimilation on the one hand, and the power of the German “tradition of hatred” of Jews on the other (see G.E. Lessing; Ch. W. von Dohm). The struggle was to last from the 1780s until the passing of the law on Jewish equality in the North German Confederation on July 3, 1869, and its extension, with the ratification of the Constitution, to the whole of the German Empire on April 14, 1871. Emancipation in Germany also came first to those regions conquered by the French (see \*Westphalia; \*Frankfurt on the Main; \*Hamburg). In the German states which retained their independence, “improvements and concessions” in the situation of the Jews were introduced (e.g., the abolition of the body tax, etc.).

The most important initial law in the emancipation of German Jews during the French revolutionary period was the edict issued in \*Prussia on March 11, 1812, with its various modifications and limitations. It recognized all Jews already resident in Prussia by virtue of privileges and “special concessions” as citizens of Prussia, and abrogated all limitations on their rights of residence and commerce, all special taxes, and in general, all special laws relating to the Jews. It imposed

on Jews all civic duties, including army service, and entitled them to serve in municipal and academic offices. However it did not give them the right of appointment in the civil service and army, and did not regulate communal affairs and Jewish religious education. After liberation of the “free cities” in Germany from French domination, stringent measures were taken to return the “ancient order,” i.e., they endeavored to deprive the Jews of their civic rights (Frankfurt; Hamburg) and even of their right of residence (\*Bremen; \*Luebeck). The Jews appealed to the Congress of Vienna for assistance, thus making Jewish emancipation in Germany an international question. A result of the German-Jewish conflict was the wording of article 16 of the credentials of the German Confederation (June 10, 1815), which stated that only rights granted Jews “by the states” will be continued and not rights granted “in the states,” thus eviscerating, through the change of one word, the rights granted under French dominion. The states did indeed use this opportunity to restrict the freedom of the Jews (see Bremen, Luebeck, Hamburg, Frankfurt, \*Mecklenburg). Only during the 1830s was the movement for Jewish emancipation revived, a movement in which the literary and political activities of Gabriel Riesser played a central role. He succeeded in founding societies for the obtention of equality which influenced the governments and public opinion. Riesser considered himself a German nationalist, but he gave a distinctly Jewish communal character to the Jewish fight for their rights in Germany. The most prominent and talented members of the Jewish community aided Riesser in the battle, as did all of the Jewish communities in the German states. By the 1840s the results of this campaign were evident in public opinion in Prussia, expressed by the demands of the provincial assemblies (*Landtage*), and in the “law on the reform of the Jews” (July 23, 1847). The law resulted in a certain improvement in the organization of the Jewish communities, especially in southern Germany.

The Revolution of 1848 caused all the German states to proclaim emancipation. “The fundamental rights of the German people” (published on Dec. 27, 1848), which were to serve as the norm for every constitution of the German states, declared that “civil and political rights are not conditioned by religion or restricted as a result of it” and that “religion must not diminish civic obligations.” This article was included, in one form or another, in the basic constitutions of most German states (Prussia, April 6, 1848, Dec. 5, 1848; Wuerttemberg, Dec. 21, 1848, Jan. 14, 1849; \*Baden, Nov. 17, 1849) and was even preserved in the “constitutions” of the early reactionary period. Article 12 of the Prussian Constitution (Jan. 31, 1850) declared “freedom of religion and the freedom of organization of religious societies,” and, further, that “the use of civic and political rights is not dependent on religion,” nor does the “use of religious freedom impair civic and political obligations.” This article appeared to be a firm guarantee for the emancipation of Jews.

Serious attempts were made during the 1850s to challenge the emancipation as a matter of principle and to abolish it in fact. Friedrich Julius \*Stahl stressed the Christian char-

acter of the state and the resultant impossibility of granting equality to the Jews. In 1856 a motion was even introduced for the abolition of article 12 of the constitution. But the Jewish communities, led by Ludwig Philippson, raised a storm of protest and the motion was dismissed. However, through its interpretation of the “amended” constitution’s article 14, an article which dealt with the Christian religion, a means was found to bar Jews from government service. In other states, too (e.g., Bavaria) many discriminatory laws were revived or remained in force.

On Nov. 1, 1867, all restrictions on the Jews’ right of residence, acquisition of real estate, and choice of profession were abolished in the states of the North German Confederation. These restrictions were similarly abolished in the states of southern Germany (Bavaria in 1861; Wuerttemberg in 1862; Baden in 1864). The law of equality was passed by the Parliament of the North German Confederation on July 3, 1869. With the extension of this law to the states united within the German Empire (Bavaria, April 22, 1871), the struggle of Germany’s Jews for emancipation achieved success.

**AUSTRIA AND HUNGARY.** The first period of emancipation in Austria made no change in the status of the Jews. But on the basis of the general constitution of the empire (March 4, 1849), which contained an article on “civic and political rights” being “not dependent on religion,” all restrictions on Jews were abolished. With the abrogation of this constitution on Dec. 31, 1851, however, the ancient disabilities were renewed in aspects of life ranging from the acquisition of real estate (Oct. 20, 1853) to the employment of male and female Christian domestics. It was only during the 1860s that emancipatory laws were re-instituted. On Dec. 21, 1867, emancipation was achieved in Austria with the promulgation of the new fundamental laws in which article 14 assured “complete freedom of religion and conscience for all” and that “the benefits derived from civic and political rights were not dependent on faith and religion.” “In any event,” the article continued, “religious faith should not collide with the fulfillment of civic obligations.”

In Hungary the townspeople tended to oppose granting rights to the Jews, whose numbers were constantly increasing. However, the lower aristocracy, whose economic progress was connected with the commercial activity of the Jews, and who were generally the standard-bearers of national liberalism, actively supported the Jews. As a result of their influence the demand “to give to the Jews all those rights from which the non-aristocratic population benefits” was included in the instructions of the provincial assemblies to their delegates in parliament. These instructions resulted in the law making the Jewish religion a “government-recognized religion,” abolishing the “tolerance-tax,” and declaring “the Jews equal in their civic rights to the other citizens who were not of the nobility.” Therefore, public and government offices, including positions in the war ministry, which were not reserved for the nobility, could be occupied by Jews (1840). The Upper House however did not ratify the law, and the king would not even agree to

the abolition of the “tolerance-tax.” The Austrian government consented only to the extension of the right of residence to the Jews. Magyarization was made a prerequisite for Hungarian Jewry before it could achieve emancipation. The Jews have “to speak the language of Hungary and to sing its songs” so as “to cleave to the fatherland, which we have acquired for ourselves.” But Orthodoxy, in the words of Moses Sofer, claimed that emancipation – i.e., “having all the same rights as the other inhabitants of our country” – proves that it is the Will of God to maintain His people in the Exile for a prolonged period, therefore the Jews should be roused to ask for mercy and pray for Redemption. The assimilationists and reformers claimed that declarations of the Orthodox had “strengthened the opponents of equality” and had caused the Upper House in 1844 to deny even the abolition of the “tolerance-tax” (abolished two years later by the Austrian government, after exacting “compensation” from the Jews for losses anticipated as a result of the abolition). Direct negotiations conducted by the Jews with the Austrian government, without taking into consideration the national rule in Hungary, angered the Hungarian nationalists and brought about a deterioration in their relations with the Jews. During the first days of the Revolution in 1848, the Hungarian Parliament deliberated on the issue of equality for the Jews. Even the Liberals, who in principle demanded it, were mostly of the opinion that such equality must be gradual and conditional to preliminary “reform” of the Jews. The Parliamentary Assembly, on March 14, 1848, decided to grant to the Jews the right to vote, but had to rescind this decision because of demonstrations and riots against Jews in several Hungarian towns (in most cases in connection with the admission of the Jews into the National Guard). The riots were not suppressed by the government, which even exerted pressure on the Jews to relinquish their rights “of their own free will.” The patriotic activity, however, of many Jews during Hungary’s war of independence created a bond between the Hungarian national cause and the Jews, strengthened by severe fines imposed on the Jewish communities by the victorious Austrians. On July 28, 1849, the government presented a motion to the Founding Assembly in Szegedin (Szeged) stating that “every believer in the Mosaic faith born on the soil of Hungary, or who has settled on it legally, shall benefit from all those civic and political rights which the believers of other religions enjoy.” This emancipation turned out to be only a gesture, because the rule of the Hungarian government was rapidly disintegrating. Jewish emancipation was to become legal only with the establishment of Austria-Hungary as a dual monarchy. The two Hungarian houses of parliament, on Dec. 20/27, 1867, declared one of the fundamental laws of Hungary to be that “the Israelite inhabitants are equal to the Christian inhabitants in their civic and political rights” (art. 1) and that “all the laws, usages, and decrees which are in contradiction with these are hereby abrogated” (art. 2).

**SWITZERLAND.** The struggle for emancipation in Switzerland was drawn out over more than 75 years. It developed from nine

French demands imposed upon Switzerland (1797) to exempt French Jews visiting the country from special customs duties and taxes. The Helvetic Republic, established in 1798, passed general resolutions on emancipation. Special taxes on Jews were abrogated on July 1, 1798, as “a disgrace to the honor of mankind.” This problem only concerned \*Aargau, the one canton in which Jews were living legally. Full emancipation was rejected in 1799. The constitution of 1848 declared the theoretical equality of all Swiss citizens (art. 4), but, in effect, reserved full rights of citizenship only for members of one of the recognized Christian churches (art. 41). In 1856 the National Council decided that Jews living in the cantons permanently were to benefit from civic and political rights in their places of residence, and guaranteed their right to move freely within Switzerland. These resolutions, however, met with strong opposition from both the public and the authorities of Aargau. Only on Aug. 27, 1863, was the vote granted to the Jews of Canton Aargau. The emancipation of Switzerland’s Jews concluded as it had begun by pressure from the outside. Many countries (France, the Netherlands, the U.S.A.) requested that Switzerland not discriminate against their Jewish citizens visiting there. Threats to cancel commercial treaties were made by France in 1835 and 1864, and the Netherlands in 1863, if the rights of their Jewish citizens were not guaranteed. Switzerland’s consent to such demands created the anomaly of giving preference to Jews of other countries over Jews of Swiss nationality, which strengthened the case of those who demanded full emancipation. On Jan. 14, 1866, all restrictions concerning the right of Jews to establish residence were abolished, and on April 19, 1874, article 49 of the new constitution declared full emancipation in Switzerland.

**THE BALKANS.** In the Balkan countries (\*Greece, \*Bulgaria, \*Serbia, and \*Romania), which gained their independence from the \*Ottoman Empire with the support of Russia, the question of the status of Jews was raised as soon as each country became independent. The Jews were generally loyal to \*Turkey. The Christian insurgents were imbued with religious fanaticism, and Russia’s hostility toward the Jews was notorious.

The question of Jewish emancipation became connected with the fate of Muslim minorities. From the time of establishment of the Balkan countries, these factors brought about the intervention of the great powers to help determine the status of minorities. In the protocol of the Conference of London (Nov. 30, 1830), which recognized the independence of Greece, the powers agreed that “all the subjects of the new state, without distinction of religion, shall be eligible for appointment in public service, government, and honorary positions, and their treatment should be based on complete equality in all religious, civic and political matters.”

In the *irade* (a decree on governmental organization), which the sultan gave to Serbia on Dec. 24, 1838, the obligation of the government to “protect the property, the freedom, and the honor” of all the inhabitants was emphasized. After the

Crimean War, the protocol of the Council of Constantinople (Feb. 11, 1856) declared that in the principalities of the Danube (Moldavia and Wallachia, which by their union formed the Kingdom of Romania) “freedom would be given to all the members of the various religions, and all of them, without distinction of religion, would be accorded the protection of the law, would be eligible for employment in the service of the public and society, and would be authorized to acquire lands and real estate.” The Treaty of Paris (Aug. 19, 1858), however, stated in article 46 that “those belonging to the Christian Churches would benefit from political equality, while the extension of political rights to other elements of the population was the concern of the legislature.” Agreeing in principle with the non-equality practiced in Serbia and Romania, the article continued to be the source of discrimination and expulsions (in Serbia, 1856 and 1869; in Romania, 1867–70, etc.), and even riots (in Romania, 1866–68).

It was only in Greece that emancipation gradually materialized (1870–72) without any additional outside pressure. In the other Balkan countries, emancipation was guaranteed by the Congress of Berlin, where, as a result of the numerous intercessions of the Alliance Israélite Universelle, it was decided that special articles on equality in Bulgaria, Serbia, and Romania would be a condition for international recognition of their independence. The article on Bulgaria declared that “no person should be deprived of his civic or political rights because of his religious beliefs,” and that “all the inhabitants of the Bulgarian Principality, without distinction of religion or race, may be accepted into every public office, government service, and honorary position.” With respect to Serbia, the Congress decided to consent to Serbian independence on the condition that religious freedom be recognized. The kingdoms of Bulgaria and Serbia included the articles on emancipation in their constitutions.

**ROMANIA.** The situation developed differently in Romania. Article 44, ratified at the Congress of Berlin, dealt with emancipation in Romania, and although not explicitly mentioning the Jews, reflected an understanding of their oppressed position in that country and was directed toward ameliorating it. The article declared “the differences between the religious faiths, or the credo of any person, cannot serve as a pretext for exclusion from the society which enjoys civic and political rights, or from certain professions, categories of crafts or industry, in any place.” “Freedom of worship,” the article continued, “shall be guaranteed to members of all religions in Romania, as well as to all foreigners, and no obstacles shall be laid in the way of the hierarchic organization of the various communities or their relations with their spiritual leaders. The treatment of the subjects of all the powers, businessmen, or others, when in Romania, shall be on the basis of complete equality.” In actual practice, the Romanian government found a way to nullify this article. Although formally drafting the seventh article of its constitution according to the demands of the Congress of Berlin (the difference in religions and faiths in

Romania shall not entail any limitations in the acquisition of civic and political rights), the Romanian authorities included articles on “aliens” which permitted civic rights to be given to only 885 Jews while enabling the government to withhold these rights from more than 250,000 Jews (1885) who were declared aliens and required to undergo naturalization.

The peace treaty concluded with Romania after World War I (Dec. 9, 1919) included an article stating that “all those born in Romania, who are not subjects of another country by birth, shall become Romanian citizens on the strength of their birth in the country.” In addition, a special article (7) was drafted into the treaty according to which Romania “commits herself to recognize as Romanian citizens the Jews living on Romanian territory who do not have any other nationality, by the actual fact of their living in the country, without requiring any formal demands of them.” Another article (8) declared that “all Romanian subjects shall be equal before the law and shall benefit from the same civic rights without any distinction based on race, religion, or language.” However, the motion to include article 7 in the constitution of 1923 was rejected, and the Jews were again required to provide documents attesting their right of citizenship causing about 10% of the Jewish population to remain without rights.

**POLAND.** Demands for Jewish emancipation in \*Poland were presented at the end of the 18<sup>th</sup> century, amid the social and spiritual agitation resulting from the collapse of the regime and the state. During the interim period between its second and third partition, Poland’s struggle for existence compelled it to seek ways of exploiting all available resources, including the increased economic resources which would accrue from “reform of the Jews.” Thus “reform” was proposed by Mateusz \*Butrymowicz, Tadeusz \*Czacki, Kołłątaj, and others, mainly in the spirit of mercantilist exploitation of Jewish economic activity and their “improvement” through assimilation into Polish culture rather than as the natural result of a liberal regime in which Jews would be permitted civic equality and access to Polish cultural life. The Jewish population in Poland, which was the largest and most specifically Jewish in the Diaspora, could not be considered a mere collectivity of individuals. Influenced by Western political liberalism, Polish theorists formulating the methods for Jewish “reform” believed that the state should be based on the principles of civic equality legislated systematically and implemented with persistence by the state. It was the conflict between the theoretical liberal and the practical mercantilist orientations which caused the complete failure of the projects to “reform the Jews.” The constitution of May 3, 1791, did not mention the Jews, and the law on the municipalities was based on the principle that municipal citizenship could be granted only to Christians. After the dismemberment of Poland, Polish legislation concerning Jews was applied only within those territories which enjoyed intermittent independence: the Grand Duchy of Warsaw, 1807–13; Kingdom of Poland, 1815–30; and Republic of \*Cracow, 1815–46. Polish attitudes continued to influence the sta-

tus of the Jews under alien rule, especially during the Polish uprisings, and in autonomous Galicia from 1848 to 1918.

The Grand Duchy of Warsaw tortuously followed Napoleon Bonaparte’s policy toward the Jews. On Oct. 17, 1808, the duke decreed that “the inhabitants of the Grand Duchy of Warsaw of the Mosaic faith” could not make use of their political rights for a period of ten years, though “this law will not prevent us from authorizing individual members of this religion to benefit from political rights even before the lapse of the said period, should they be found meritorious and suitable.” However, all petitions presented by a group of individuals, who considered themselves deserving of full equality, were dismissed by the government which emphasized that “equality before the law does not transform the inhabitants of the country into citizens.” The government also took pains to issue special laws against the Jews, such as prohibiting the acquisition of estates, and restricting residence in Warsaw.

The Kingdom of Poland followed a similar but simpler course: it promised and did even less to emancipate Jews. In its draft constitution presented at the Congress of Vienna, an article promised that “all the civic rights, which are guaranteed in the present laws and regulations, shall also be reserved for Jewish people; special reforms should also be introduced in order to facilitate a larger Jewish participation in the rights of citizens.” During the same year (1815), however, the Jewish question was studied by a reforms commission, headed by Prince Adam \*Czartoryski, which endorsed the principle of emancipation only in theory, withholding it in practice until the Jews took up agriculture, abolished their community organization, acquired modern Polish education, and refrained from trading in and sale of alcoholic beverage (see \*Wine and Liquor Trade). The decree which abrogated the equality of the Jews was prolonged by the Sejm (parliament). All suggestions advanced by “progressive,” wealthy, or enlightened Jews (*maskilim*) to be considered “reformed” and separate from Jewish society as a whole and, therefore, worthy of civic rights brought no legal change in the condition of the Jews. An extensive polemical literature emerged, which was overwhelmingly and violently opposed to the Jews.

During the Polish uprising of 1830, there were those who favored the equality of the Jews, and there were some Jews, especially among the youth and the masses, who openly manifested their sympathy for the uprising and wished to participate in it. The leaders of the uprising and the Sejm generally adopted a negative attitude toward the desires of the Jews. A step toward Jewish emancipation was made later by Marquis Wielopolski who obtained from Czar \*Alexander II permission to grant the Jews “partial civic equality.” As a result, Jews were allowed to acquire land, and residence restrictions in several towns and regions were abolished, as were the Jewish oath and other limitations. But the use of Hebrew or Yiddish in bookkeeping or documents was forbidden on May 24, 1862. The national revolutionary government of 1863 addressed itself to “the Polish brothers of the Mosaic faith” in a special manifesto in which it promised that “the people’s government

would not ask about religion and race, only the place of birth,” and that the Jews would be granted “all civic rights without restrictions” (see Dov Berush \*Meisels).

The Sejm in Galicia ratified on Dec. 21, 1867, the abolition of restrictions on Jews’ participation in municipal elections. The recognition of Jewish emancipation in principle was widespread among Polish progressives in the 1860s and 1870s. The belief was based on the assumption that after emancipation the Jews were bound to identify themselves nationally and politically with Poland and assimilate its culture. However, the increase in Jewish population and its social and cultural cohesiveness convinced the Poles that this assumption was illusory. The Poles argued that although the Jews fulfilled their civic obligations and were loyal to the state, they did not accept assimilation. Opposition to the Jews grew continually in intensity. It was encouraged by the Russian government’s policy of “divide and rule,” and by the Christian urban classes’ enmity toward the Jews as rivals in commerce and in the liberal professions.

At the beginning of the 20<sup>th</sup> century Jewish participation in revolutionary activity (1905), the development of their own press, public schools, and economic institutions, the rise of modern Jewish nationalism (\*Zionism, the \*Bund, etc.), and the weight of their increasing numbers in municipal and \*Duma elections sharpened Polish opposition to emancipation for the Jews. Only the Polish socialist movements demanded Jewish civic and political equality. During the German conquest of Poland in World War I, many laws and regulations directed against the Jews were actually abolished, and the organization of the communities received a more democratic character. Between the two World Wars the Jewish fight for equality in independent Poland was influenced by these developments. Emancipation of the Jews in Poland had been guaranteed by the Treaty of Versailles (arts. 86 and 93), and, in particular, by the “additional Treaty of Versailles” (June 28, 1919) signed by Poland, which provided for \*minority rights in Poland. After numerous delays, the Polish government was compelled to sign the treaty. Although the Polish constitution of March 17, 1921, included the “additional Treaty of Versailles” and promised “complete equality in civic rights” (art. 9), there was also included an article stating that “in order to execute the constitution, the preparation of suitable legislation would be required.” In other words, until the publication of new laws, it was possible – perhaps even necessary – to apply the ancient laws and restrictions. It was only in 1931 that several of these laws and restrictions were abrogated. In the new Polish constitution of April 23, 1935, the principle of equality was outlined in article 7 according to which “the rights of a citizen would not be restricted because of his origin, religion, sex, or nationality,” and that “the right of the citizen to determine the course of public affairs would be considered in respect to the value of his efforts in the service of public welfare.” Yet the violent opposition of Polish authorities and society to Jewish emancipation did not cease. The law of equality and the law concerning the rights of minorities were

successfully emptied of their contents, remaining merely a political and judicial framework for Jewish complaints against the oppressive injustice and perverted laws under which they were compelled to live.

RUSSIA. The beginnings of the struggle for emancipation in Russia took place after the first partition of Poland (1772), when Russia annexed Polish provinces which contained large Jewish populations (Belorussia). On May 7, 1780, Catherine II accepted the “requests of the Jews living in the districts of \*Mogilev and \*Polotsk to register among the merchants.” She ratified the rights of the Jews who had registered with the merchant class and who had been elected to public positions in the self-governing institutions of the burghers, ordering officials not to prevent the Jews from exercising this right (May 13, 1733). This episode is the beginning of the difficult fight for Jewish emancipation in Russia. Emancipation conflicted with the ideology of the czarist regime, which was built on a system of special privileges in all areas of life, and on rigid social classes legally separated. Under such a regime, every attempt to attain Jewish civic equality was doomed to failure from the start. The promptings of theory and pretensions toward principle often resulted in decrees which were supposedly intended to “reform” the Jews in order to render them suitable “for admission into civil society.” On Dec. 23, 1791, the \*Pale of Settlement was set up for the Jews, with further discriminations and impositions following suit. The Commission for the Reform of the Jews, at first inclined toward the liberal opinion that “prohibitions should be reduced and liberties increased” (Sept. 20, 1803), in the end issued the “Jewish Statute” of 1804 which determined the limits of the Pale of Settlement and imposed further domiciliary and economic disabilities. The commission, however, encouraged Jews to enter agriculture by recommending that the government allocate land and subsidies for their agricultural settlements. Also, Jews were to be permitted to attend general schools of all standards. In 1847 Czar Nicholas I replied to Moses Montefiore’s plea for Jewish emancipation by saying that “such a thing is inconceivable, and as long as I live, such a thing shall not take place.” Yet Nicholas supposedly believed in the principle of “betterment of the Jews,” which meant that “if the experiment to direct the Jews toward useful work should succeed, time will gradually bring about automatically the abolition of those restrictions, which in the meantime are still indispensable.” The czar’s \*Cantonist decree was occasionally “explained” by reasons of “reform in order to achieve citizenship.”

During the reign of Alexander II, the situation remained basically unchanged. He ordered the appointment of a special commission to “examine all the existing regulations concerning the Jews in order to adapt them toward the general objective of the integration of this nation within the country, as far as the moral condition of the Jews renders them suitable for this” (March 31, 1856). The czar, however, shared with some members of the commission their opposition to Minister of the Interior Lansky’s belief that the civic equality of

the Jews was a preliminary condition for their assimilation. Alexander II held the view that “the emancipation of the Jews of Russia must be graduated in accordance with their intellectual progress and their adaptation to useful occupations.” He only consented to the extension of the rights to certain classes in the Jewish population who had proven their usefulness to the state (see \*Russia). He rejected any “far-reaching” suggestions, such as the abolition of the Pale of Settlement, or even less dramatic but immediate alleviation of the Jewish plight. During the reign of \*Alexander III the Supreme Commission for the Study of the Current Laws Concerning the Jews was set up on Feb. 4, 1883, under the presidency of Count K. von Pahlen. On May 24, 1888, a report was presented whose majority opinion suggested “changing the system of laws and restrictions for a system of graduated laws of freedom and equality,” because “from the governmental point of view, the Jew should benefit from all the rights available.” Alexander III, however, rejected the opinion of the majority, accepting the minority viewpoint which accentuated the policy of discrimination. Convinced that there was no hope for an improvement in their conditions within the framework of the existing political regime, many Jews became active participants in the revolutionary movement.

While previous generations of Jews had presented their demands for reform to the authorities through the intermediary of *shtadlanim* (Nathan Note \*Notkin, Lippman Selzer), \*deputies of the Jewish people, or delegations of the wealthy and intellectual (Baron Horace \*Guenzburg, Samuel \*Poliakoff, Alexander \*Passover, and others), the generation prior to the Russian Revolution expressed their demands for civic equality through increased numbers of Jewish political parties and movements (see \*Bund; \*Jewish Socialist Workers’ Party (“Sejmists”); \*Po’alei Zion). All of these parties approved of the “political struggle” within Russia in general and the struggle for the rights of the Jews in particular. At the beginning of 1906, political activism within Russia was included in the program of the Zionist Organization, largely for the purpose of obtaining civic, political, and national rights for the Jews. With the rise of the revolutionary movement (1904–05), and the appointment of Prince Svatopolk-Mirski as minister of the interior (succeeding V.K. \*Plehve who was assassinated by a revolutionary) to “appease” the public, many groups of Russian Jews presented demands for civic equality to the government. In April 1905 the \*Society for the Attainment of Equal Rights for the Jewish People in Russia was established. As a protest against the 1892 law which deprived Jews of the right to vote in local elections, the league encouraged Jewish members of the municipalities appointed by the government to resign. It also organized a protest movement against the intention of the government to deprive Jews of the right to vote for members of the Duma.

Jewish revolutionary activities, especially participation in revolutionary parties and in the Bund, led the government to intensify its persecutions (see \*Pogroms; \*Minsk; \*Kishinev; \*Gomel; \*Zhitomir) and actually to declare “war on the Jews”

to “protect the Russian state and people.” The czar’s decree issued on the eve of the first revolution, Dec. 12, 1904, which was intended to appease the public, promised an “investigation into the laws which restrict the rights of aliens,” and that “the restrictions which are necessary for the welfare of the state and the Russian people are not to be abolished.” To the government manifesto of Oct. 17, 1905, Count \*Witte appended a declaration which discriminated against Jews in the application of “civic freedom.” Dealing with the “civic equality of all citizens without distinction of religion and nationality,” the declaration stated “this would be executed through the channels of ordinary legislation,” while the application of the other articles (freedom of the press and assembly) would be carried out immediately. And to article 76 in the basic laws issued on May 6, 1906, guaranteeing “to every Russian citizen the right to freely choose his place of residence,” the Russian government added that “the restrictions to these laws are to be defined in special laws.”

The first Duma did not deal specifically with the “Jewish question”; yet in answer to the opening speech of the czar it undertook to prepare “a law on the complete equality of rights of all citizens and to abolish all the restrictions and privileges which are conditioned on class, nationality, religion, or sex.” A motion to this effect was introduced and supported by 151 delegates. A special commission was appointed to draft the bill, but the first Duma was dissolved before the work was completed. The government introduced a motion in the second Duma for the abolition of all restrictions based on faith or religion, “with the exception of the restrictions concerning the Jews.” The Duma commission decided to delete this limitation, but it did not succeed in bringing the revised law to the plenum before the second Duma was also dissolved. In the third Duma, which was not a liberal one, the Jewish deputy L.N. \*Nisselovich introduced (May 31, 1910) a bill, supported by 166 deputies, for the abolition of the Pale of Settlement. The bill was transferred (Feb. 9, 1911) to the commission on “personal liberties,” but it, too, failed to reach the plenum. The government removed the issue of Jewish equality from the agenda as a matter of principle. During World War I the partial abolition of the Pale of Settlement by a circular of the minister of the interior (August 1915) was actually forced by the pressure of Jewish refugees expelled by the Russian authorities from the front area.

After the overthrow of the czarist regime the decree of the Russian Provisional Government (March–October, 1917), although not formulated only for Jews, was the most complete of all the laws of civic equality enacted with respect to the status of the Jews. In its preamble the decree stated that “according to our firm inner consciousness, in a free country, all citizens must be equal before the law, and the conscience of the nation cannot consent to the restriction of the rights of individual citizens because of their religion or race.” On the basis of this ideology the Provisional Government decreed that “all the restrictions in the rights of Russian citizens because of their attachment to any faith, religion, or nation – such

restrictions as are in force according to existing laws – shall be abolished.” The first article of the decree enumerated in nine subsections the categories of restrictions to be abolished – both those in force throughout Russia and those limited to localities or regions. In six articles (2–7), the decree specified in great detail, giving dates of publication and numbers in the legal codes, all the numerous laws discriminating against Jews and members of other religions and nations. Article 8 declared invalid all prior administrative orders issued by civil or military authorities “which contained restrictions in rights because of affiliation with any faith, religion, or nation.” Inclusion of an itemization of anti-Jewish legislation in the equality decree, reflecting the extent of Russian discrimination and the struggle for emancipation, resulted from the initiative and counsel of the Jewish Political Committee (delegates of the Jewish parties and Jewish representatives in the Duma), which provided this material for the government. The policy of the antisemitic czarist Russian government had compelled the Jews to act for themselves in every sphere of life: legal defense, self-defense against pogroms, founding schools and educating the masses, mutual credit, professional training, emigration arrangements, and political organization. The resulting “strengthening” of the Jews’ ability to solve the problems of everyday life, together with the widespread appeal of the Zionist movement, increased Jewish cohesion to the point where it became a powerful instrument in the fight for survival. A basic political demand of Jewish political parties was “national \*autonomy,” expressing the collective character of Russian Jewry’s struggle for emancipation.

**THE BALTIC STATES.** \*Finland, \*Estonia, \*Latvia, and \*Lithuania, which all became independent after World War I, included Jewish civic equality in their constitutions, because the \*League of Nations accepted them as members only after committing themselves to providing for minority rights.

On Jan. 12, 1918, by granting emancipation in its constitution, Finland abolished the prohibition against Jewish settlement in force from 1806. This prohibition had been relaxed only for a few Jewish soldiers, whose other rights were nevertheless restricted, after their demobilization in 1865. The constitution permitted all Jews living in the country for at least five years prior to 1918 to become naturalized citizens.

Estonia’s constitution of 1919 promised the Jews full equality. The law concerning cultural autonomy (Feb. 5, 1925) granted the Jews the right to elect a national council to administer their own schools, provide for their cultural needs, and supervise the communal organizations.

In Latvia civic equality was promised in its constitution. A special law on minorities (Oct. 8, 1919) granted the Jews, among other minorities, extensive cultural autonomy. An official appointed by the minority group was placed at the head of its school network. With the abrogation of the constitution in May 1934, the autonomous institutions of minorities were also dissolved.

The leader of the Lithuanian Paris peace delegation, Prof. Voldemaras, informed the \*Comité des Délégations, in a letter of Aug. 5, 1919, that Lithuania would now promise the Jews representation in the country’s legislative institutions, complete autonomy in their internal affairs, legal status for their autonomous institutions, recognition of the right to use their mother tongue, and the appointment of a special minister for Jewish affairs. The promises were ratified in the constitution of 1922 and, to a large extent, in the constitution of 1928, even though autonomous Jewish institutions in the meantime were dissolved. With the dissolution of the Jewish National Council and the Jewish Ministry in 1924, the Jewish community again became merely a religious community.

**MUSLIM STATES.** In the Islamic world there was no emancipation in the Western sense, neither as a public movement to which was linked the Jewish desire for civic equality and participation in the life of the state, nor as a reform movement holding civic equality to be a sign of a new order. To a certain extent, however, the civic equality granted to the Jews in the Ottoman Empire may be considered “emancipation.” During the 19<sup>th</sup> century the sultan twice, in 1839 and 1856, proclaimed the civic equality of Jews and Christians, which represented a great change in the attitude of the Islamic countries toward “infidels.” The revolution incited by the Young Turks in 1908 resulted in the ratification of this equality. The number of Jews who participated in the organizations of the Young Turks, and in the political life of Turkey, was not inconsiderable. After World I, Turkey signed a minorities treaty (1923), but, in the letter of the Jewish notables to \*Kemal Pasha of Feb. 6, 1926, the Jews officially waived these rights for fear that they be accused of separatism. \*Yemen, which won its independence between the two World Wars, never granted legal emancipation to Jews. Other Arab states (\*Egypt, \*Iraq, \*Syria, \*Libya, \*Morocco, \*Algeria, \*Tunisia) granted Jewish emancipation officially, but took it away in reality after the Israel War of Independence through restrictions, persecutions, and humiliations as Jew-hatred became part of the fight against Zionism and Israel.

[Benzion Dinur (Dinaburg)]

**EMANUEL**, a man of Jewish origin mentioned in a letter of the Austrian envoy in Istanbul in 1591 as the Turkish sultan's nominee for the *gospodar* of the principality of Moldavia. According to the envoy the man came from Poland and owed his appointment to the efforts of the physician Solomon \*Ashkenazi, and even more to the large sums (half a million ducats) which he had paid to the sultan and his courtiers. The envoy states that Emanuel had many enemies and that his appointment might be nullified even before he left Turkey. Some identify Emanuel with Prince Aron Vodă, ruler of Moldavia from 1591 to 1595, who rebelled in 1594 against the Turks; 19 Jews from Turkey who were in Jassy at that time were then killed along with the Turks. This identification has no grounds; according to some Romanian historians, Aron belonged to a princely Moldavian family. Emanuel could have been one of those who tried to buy the Moldavian throne but did not succeed, as the Austrian envoy indeed says.

**BIBLIOGRAPHY:** E. Schwarzfeld, in: *Anuar pentru Israeliți*, 7 (1885), 113–6; JC (Jan. 2, 1885), 5.

[Eliyahu Feldman]

**EMANUEL, WALTER LEWIS** (1869–1915), humorist. A London lawyer, Emanuel contributed to *Punch* and wrote amusing books such as *A Dog Day* (1902), *The Snob* (1904), *The Dog World and Anti-Cat Review* (1909), and *One Hundred Years Hence* (1911). His father and brother both served as secretary to the Board of Deputies of British Jews and Emanuel himself was active in communal affairs.

**EMAR**, ancient city in the Near East. The cuneiform finds from Emar, at modern Meskeneh, must be understood in relation to those from \*Ugarit. They are contemporary, spanning the 13th and early 12th centuries B.C.E.. Emar is directly inland from Ugarit, on the great bend of the Euphrates River. Both populations were dominated by Semitic speakers, whose dialects appear to have been distinct, though both western. Both towns were ruled in this period by their own local kings, with a circle of dependent towns and villages. For our understanding of the indigenous culture, it is unfortunate that Emar did not share Ugarit's alphabetic cuneiform alternative. Like much of Ugarit's cuneiform, the texts from Emar are mostly written in Akkadian, the language of the eastern Mesopotamians who were the system's first users. Emar's most striking textual discovery is the archive of a scribal school that was run by the man who oversaw the main body of public religious life in the town. As a whole, the cuneiform finds from Emar offer a counterpoint to Ugarit, that adds variety and nuance to our picture of Syria at the time of Israel's emergence. Politically and socially, Emar was in some ways more like Israel than was Ugarit (see below).

Excavations at Emar have taken place in two phases, the second of which is still in progress as of 2006. When Lake el-Assad was created by a new dam in the 1970s, a French team led by Jean-Claude Margueron explored much of the Late Bronze II town. All of the cuneiform finds came from this phase of work and belong to this period, including the tablets from the illicit antiquities market. Tablets were uncovered in a pair of temples, a public building of modest size, and several houses. The major discovery, however, was the building M, both the residence and shrine of an official who called himself "the diviner of the gods of Emar." Roughly a thousand tablets and fragments were found here, mostly written in Akkadian, but also including two Hittite letters, scribal lore in Sumerian, and divination manuals in Sumerian and in Hurrian. The diviner was a well-educated man.

Margueron did not uncover any strata from earlier periods, even though texts from other sites make clear that Emar already existed in the third millennium, at the time of the \*Ebla archives. He concluded that the town was completely rebuilt under Hittite sponsorship at the end of the 14<sup>th</sup> century. New excavations by a joint German-Syrian team led by Uwe Finkbeiner, Shawki Sha'ath, and Farouk Ismail, beginning in 1996, have now demonstrated that the older town occupied the same site, suggesting greater cultural continuity in the society depicted in the texts. Perhaps the most fascinating feature of the Emar excavations, in vivid contrast to Ugarit, is the lack of

a proper palace. The texts prove that the town had a king and palace, but no royal archives were unearthed, and the small public building that Margueron identified as the palace is far from convincing. It appears that the palace did not occupy either of the two main high points of the tell, both of which have been explored. Without palace finds, other buildings and their contents take center stage. Beyond the building M<sub>1</sub>, three temples were found, one pair at the western summit of the town and another just above the diviner's residence, near the middle of the site. Several houses were excavated, proving that unlike some administrative and religious enclosures, these city walls protected a substantial population. The texts from the temple include only lists, and those from the houses are private legal documents.

The real novelty at Emar is the diviner's building, which has a temple-shaped hall and entrance, modified by rooms along one side. Cuneiform tablets were found jumbled across its main level, badly broken and suggesting collapse from a second story. The archive is diverse, with various threads indicating the diviner's personal interest. A large collection of lexical tablets includes colophon signatures for this diviner and his associates or students. Some of the divination lists include similar signatures, and the nature of the texts by itself suits the "diviner" title. The Hittite letters involve the financial interests of the first in the family of diviners, a man named Zu-Ba'la. Many of the tablets reflect everyday affairs at Emar rather than standard professional texts. These are divided into two main groups, both of which carry Emar's main interest for the Bible because they reflect the particular life of this Syrian site. There are many private legal documents of the same type as those from Emar's houses. One part of these record the affairs of Zu-Ba'la's family through four generations. A larger number of tablets and fragments pertains to the administration of Emar's religious institutions, apparently including the activity of the building M<sub>1</sub> itself. To our benefit, some of this administration was tied to prominent rites and festivals that are described in considerable detail. A few of the ritual texts were even copied as exercises. Throughout the rituals, "the diviner" receives various portions and payments, evidently for his services, and he surfaces occasionally with other roles.

The longer ritual texts form two natural groups. One set is defined by the calendar, for rites defined by the sacred year, generally celebrated once a year. Most prominent is the *zukru* for the turn of the year every fall, which survives in two versions. The simpler rite was understood to be annual. One tablet presents a special event focused on a certain seventh year, first anticipated by ritual preparations a year in advance. Nothing defines the *zukru* itself, a local Semitic word that makes best sense as something spoken. The central event of the *zukru* in both annual and seventh-year forms is a procession outside the town walls that has the god Dagan (see \*Dagon) pass between upright stones. Dagan is the most important god of this part of the Euphrates valley. At Emar, he is invoked by far most often in personal names, and the *zukru* festival presents him as the explicit head of the pantheon. This is a major event

for a preeminent god, gathering all the people and including offerings for all the town's gods. Removed from Dagan's temple in favor of the external site and simple stones, the whole thing has an old-fashioned feel to it. Neither the king nor any temple servant has any active role. Somehow, the rite is central to Emar's identity as a single community.

Another small set of festivals is defined by special events not tied to the calendar. The two most impressive are rites to install in office two leading priestesses, one for the storm god, and the other for the goddess Ashtartu. In the first rite, the priestess of the storm god is prepared in stages to move from her father's house to the house of the god. She takes up residence in the temple, a privilege that may be shared only by the priestess of Ashtartu. These installations take place only upon the death of a sitting priestess.

As a whole, the collection of ritual administration is dominated by local concerns, and this allows us a view of long-standing religious practices at Emar in western Syria. With cuneiform archives, local origin cannot be taken for granted, because the scribal lore is often learned from distant sources, ultimately founded in eastern Mesopotamia. For those interested in the Bible, the distinction is crucial. Western Syrian culture shared much more with ancient Israel than did eastern Mesopotamia, and this explains the many continuities in religious practice.

By any measure but the most traditional, however, the Bible is a product of the first millennium, the periods of the kingdoms, the ends of Israel and Judah, and the early survival of Judah's people. Many would challenge the very relevance of a Late Bronze site to the Bible, and the application merits conscious explanation. First of all, Emar must be considered in combination with Ugarit, the more famous city on the Mediterranean coast. The archives of Ugarit date to the same period and are also cuneiform based. Because a subset of the Ugarit tablets is written in an alphabetic cuneiform with the local West Semitic dialect, this site has attracted special interest, and it presents unique comparative possibilities. In a larger sense, however, Ugarit and Emar should be treated in combination, with the same argument for their relevance to the Bible. This is especially true for questions about religion.

Together, Ugarit and Emar provide a baseline from written evidence for understanding what is ancient and indigenous in the Bible, as opposed to late borrowings from outside contacts with distant empires. Both sites are far north of Israel and Judah, and they represent distinct expressions of Syrian culture. Both reflect many contrasts with the peoples of the Bible. Where we find points of continuity, these probably reflect deep lines of cultural likeness between these northern and southern societies. Little if anything can be treated as borrowed, because there is no reason to imagine any contact between these populations, either directly or through intermediaries. The comparisons are then all the more valuable for the independence of the writings on both sides. By the nature of this comparison across cultures, in no case does it date any biblical text or tradition. Common ground between early Syrian writ-

ing and the Bible may undermine certain arguments for late foreign influence or uniquely late and Judahite developments. Where similar features appear, the biblical expression appears then to be in long continuity with regional patterns.

Before addressing the specific possibilities of how Emar texts may illuminate the Bible, it is worth distinguishing the applications from Emar and Ugarit. Ugarit is essential for good reason. The West Semitic dialect of Ugarit by itself offers the primary point of reference for the earliest development of Hebrew. Emar's tablets are entirely cuneiform, and the local West Semitic language is only visible in personal names, terms that pass into the texts without translation, occasional glosses for Emar vocabulary, and grammar that does not fit proper Akkadian. In spite of these limitations, it still seems that the dialect of coastal Ugarit had more in common with ancient Hebrew than did that of Emar. More precisely, an adequate grammatical comparison is impossible for Emar Semitic, but the vocabulary of Ugarit overlaps substantially with Biblical Hebrew, much more than that of Emar.

In a way, religion presents a similar situation. With El (Ilu), Baal (Ba'lu), and Asherah (Athiratu) among the leading deities, even the vocabulary of Ugarit's pantheon coincides more with the Bible's divine names than does the pantheon of Emar. Of course, the name of Israel's particular god YHWH appears in neither, a detail not to be missed. Like the vocabulary of the languages as a whole, the religious vocabulary of Ugarit matches that of the Bible in significant ways, including sacred personnel (e.g. the *khn* "priest"). Ugarit's religious poetry displays themes and language that have echoes in the Bible, especially in the poetry of Jerusalem. Emar's ritual texts offer comparisons based less on vocabulary than on procedure, but the degree of ritual similarity is striking.

As we consider various individual comparisons between Emar documents and the Bible, we must keep in mind at least two dimensions of the Emar component: its inland geography, and its political heritage. Like Ugarit's, Emar's archives are earlier than biblical writing, from what would be the first stages of Israel's existence in the land and before. Both are far north of Israel, though closer than the origins of cuneiform in eastern Mesopotamia. Cultural proximity must be distinguished from physical distance and decided by the actual characteristics of the peoples involved. Egypt is physically closer to Israel and Judah than either of these two northern sites, but its language and religion are much more sharply separated. It appears that the peoples of the Bible shared much with those of the lands directly to the north, to an extent measured by the specific continuities found between their writings, even across centuries of chronological distance. Especially in the case of Emar, we must remember that this evidence precedes the spread of the \*Arameans across Syria at the beginning of the Iron Age.

In spite of the fact that both Emar and Ugarit are roughly the same distance north of Israel, their geographical relationship both to each other and to Israel requires precision. According to various biblical lore, confirmed by the 9<sup>th</sup>-century

Mesha Inscription from Moab, Israel straddled the Jordan River valley, with a sizable population on the east side. In Genesis 31, the tradition of Jacob's return from Syria has Laban chase him south along an inland route, from the vicinity of the Euphrates into this territory east of the Jordan River. On the southwestern elbow of the Euphrates, Emar participated in currents of exchange that moved north and south without ever entering the coastal regions or the land more properly called Canaan.

The other large factor to keep in mind as context for any Emar comparisons is political tradition. During the 13<sup>th</sup> century, Emar did have a king whose power is visible even though no royal archive was discovered. Because most of the Emar texts were not composed in the palace, however, including the whole output of the building M<sub>1</sub>'s diviner, we have an unusually good view of life outside royal circles. At Emar, kings struggled to establish true dominance in a town that for centuries had maintained a stubborn tradition of collective decision-making, defined by "elders" or a governing council. The public ritual life of Emar, as depicted in the diviner's archive, gives the king no active role, in radical contrast to the ritual found at Ugarit. In this respect, the Emar evidence stands in closer continuity to the world of the Bible than does that of Ugarit. The Bible also leaves much of the world of kings opaque. We learn almost nothing about royal and palace ritual and religion. In the Torah, Israel is presented as celebrating its festivals as a gathered people, without kings.

The tablets from the authorized excavations at Emar were only published in the mid-1980s, and their study has barely passed its first phase. Because the author both took part in this early research and maintained a continuing interest in the Bible, he has pursued several separate applications, and this article follows his personal work. There remains much to be done, however, especially to take advantage of the social context offered by Emar. Very soon after the publication of the main Emar volumes, Ben-Barak incorporated Emar into her discussions of women's inheritance, as with Zelophehad's daughters. Hundreds of legal documents from private households can be identified with Emar, whether or not from the authorized excavations. These offer a rich and varied portrait of family affairs in Late Bronze Syria, as a backdrop to the portrayal of family life and law in the Bible.

A second category of broad comparison that has not yet attracted attention is political. In broad terms, the Bible presents Israel as a people that maintained a political identity for some long period without having a king. Emar represents a very different setting in that its political identity is defined by the town and whatever surrounding population depends on it. Nevertheless, the combination of evidence from Late Bronze Emar itself and about Emar (written Imar) in the Middle Bronze archives of \*Mari suggests that a strong monarchy only emerged in the 13<sup>th</sup> century. Kings may have existed during earlier periods, but their leadership was always balanced by a vigorous collective alternative. During the Middle Bronze Age, this took the form of a council called the *tahtamum*, known

only at Emar and Tuttul. Even at the time of the Late Bronze archives, elders retained important legal and ritual responsibilities. Israel's monarchy also had to build its power in a political environment with long-established traditions for collective governance, in this case rooted in populations spread across a much larger region. Aside from any direct political comparison, the strength of collective political life at Emar gives its public religious celebrations a flavor more like what the Bible portrays for Israel than much Near Eastern public ritual, which tends to revolve around the king.

The most striking specific comparisons between Emar texts and the Bible have to do with religion, and public ritual life in particular. One preoccupation of the biblical Torah is the definition of a collective Jewish religious practice by reference to Israel in its life before kings, before Jerusalem and its temple, even before settlement in the land. This religious practice includes a major public component, with the ark and its tent shrine, priests for all Israel, and festivals to be celebrated in the name of Israel.

Although Emar religion belongs to a Late Bronze Age town, far to Israel's north, the cultural framework has points in common with Israel, beyond the collective political traditions. Most telling is the foundation of a shared temple architecture. In broad Near Eastern terms, the temples of Syria-Palestine, drawn north-south to include what become the lands of Israel and Judah, stand out from many other types. Even in the central cities of significant states, Syrian temples are most often constructed along one axis, with a doorway that opens directly onto the main sanctuary room. Four Emar temples, including the sacred room of the diviner's building M<sub>1</sub>, share this form. The only descriptions of temple form in the Bible apply to Solomon's structure at Jerusalem and the mobile tent of \*Exodus. Both of these share the simple axial layout of the regional type. Together with these simple sanctuary forms we find a lack of large temple-based communities, in contrast to the major sacred centers of the southern Mesopotamian cities, for one. Only a small number of priests enter the temple, and it is rare that the temple serves as the home for sacred personnel. At Emar, it is possible that only the storm god's (NIN.DINGIR) priestess and perhaps the neighboring *mashartu* priestess of Ashtartu lived in the temples they served.

The most provocative comparisons between Emar and biblical religion relate to ritual procedure. Two clusters merit special attention, one related to the calendrical structure of festivals and the other to the technique of anointing. Both clusters are embedded in the public ritual life of the people on both sides of the comparison. On the biblical side, the closest comparisons appear in the priestly lore of the Torah. Although the finished versions of this lore may date to the exile of Judah or later, the similarities to Emar practice suggest that these traits do not derive from external contacts unique to such late times. They appear to be deeply indigenous, never borrowed, arising and developing in the local setting.

Three of Emar's all-town festivals are constructed around seven-day blocks, like the Bible's seven-day festivals of Pesah/

Massot (Passover/Unleavened Bread) and Sukkot (Booths). Two of the Emar events are the installation rites for the priestesses of the storm god and Ashtartu, which were evidently performed after the death of the previous officeholder. Only one was celebrated according to the annual calendar, and the similarities are striking. Emar's *zukru* festival was focused on the full moon of the first month, with a seven-day period of feasting to follow. Emar counted the new year from the fall. At least once, a special version took place in the seventh year, and this event was by far the most expensive rite recorded in the archive. The *zukru* was an all-town festival during which the whole population brought all the gods outside the walls to pay special honor to Dagan as head of Emar's pantheon. The word *zukru* is West Semitic, not Akkadian, and probably represents an act defined by speech, a prayer or oath that renewed devotion to Dagan in this leading role.

Emar's *zukru* has more in common with the major calendar festivals than does any one rite found at Ugarit. Pesah/Massot and Sukkot are celebrated at the two axes of the ancient year, in spring and fall, and in the Holiness Code and Priestly versions of Leviticus 23 and Numbers 28–29, both incorporate a seven-day block and are focused on the full moon. The autumn new year at Emar matches the timing of Sukkot, in particular. Although this feast came to give pride of place to the spring event in later tradition, the importance of the autumn equinox is visible in several aspects of the biblical calendar. In spite of the count of numbered months from the spring in priestly writing and the eventual borrowing of the Babylonian calendar with its spring new year, Exodus 23:16 and 34:22 indicate a turn of the year in the fall. This tradition is preserved in Rosh Hashanah, celebrated at the new moon of the first autumn month. A late note at the end of Deuteronomy preserves the most striking comparison with Emar's *zukru* (31:10–11). Every seventh year, at the feast of Sukkot, the written instruction of Moses was to be read aloud to the assembled population. The calendar is exactly like that of Emar's special event, and the centrality of speech also offers an impressive continuity. How can we explain these similarities? The contents of each religious tradition are surely distinct. Deuteronomy's choice of this timing for such a major rite must, however, reflect ancient practices in Israel or Judah, even if they are transformed here to fit the notion of a Mosaic text. Somehow, the *zukru* at Emar belongs to a stream of ritual custom in which the biblical festivals participate at a later date. Where the calendar of biblical ritual corresponds with that of Emar's *zukru*, it is unlikely that the biblical timing was first created or borrowed at the date of textual composition, even if that may finally be exilic or later. The priestly calendar for the spring and fall festivals, along with the fall rite of Deuteronomy 31, appear to be much older than the texts in which they are embedded.

Aside from the calendar, Emar's festival accounts resemble the Torah instructions for Israel in at least one more important respect. They share an emphasis on the assembly of the people, without differentiation, and without leadership

by any special individual, whether priest or king. In the Bible, Moses and Aaron have leading ritual roles, depending on the context, but the spring and fall festivals never specify the role of a priest, even in the Holiness and Priestly versions of Leviticus 23 and Numbers 28–29. All the accounts of Israel's primary festivals emphasize the gathering of the populace. At Emar, the most striking comparison again is found in the *zuku*, "given" by "the sons of the land of Emar" together and with feasting by "the people" as a whole. The feasting takes place outside the city walls, where all the gods of the town have gathered to witness Dagan's procession between sacred stones. Although the king's financial commitment to the festival is impressive, no ritual role is attributed to him. Likewise, the diviner is absent. Only the gods have individual roles, and we are never told who moves them or manipulates their statues. What is important is the participation of all the people and all their gods, the human and divine population of Emar. The same full participation characterizes the ideal of the Torah festivals.

The continuities between the worlds of Emar and of the Bible have more to do with the structures of their societies. At the same time, the ritual calendar and emphasis on the collective at the ritual expense of the king, for example, are not universal Near Eastern traits. Somehow, both Ugarit and Emar show different expressions of a cultural kinship that reached north and south along the Mediterranean and inland. The overlapping preoccupations of Torah instruction and the Emar ritual texts allow glimpses of this common cultural foundation beneath the superstructures of their separate developments. These glimpses warn us neither to treat the Bible and its religion as a world unto itself nor to explain points of similarity by the notion of borrowing, especially by contacts with conquering Mesopotamian powers. Rather, these similarities are hints of a massive commonality, from which the distinct features of particular peoples developed. The commonality itself is not uniform across the ancient world, and the north-south axis is striking, even as lines of distinction will not often be sharp. Emar, like Ugarit and other Syrian sites with cuneiform archives from the Bronze Age, suggests a depth to the cultural traditions embedded in the Bible that is too easily neglected. Evaluation of the stories and the events they describe is a problem that requires other comparative evidence.

[Daniel Fleming (2<sup>nd</sup> ed.)]

**EMBALMING.** The natural drying out of the body by solar heat (mummification) is the oldest method of preserving a corpse. The ancient Egyptians may have simply tried to dry corpses in the hot desert sands, or as in one of the chambers found at Thebes, in rooms which were artificially heated. Embalming is the artificial treatment of a corpse to prevent or delay its putrefaction. In ancient Egypt the technique consisted, according to Herodotus, of using an iron hook to draw out the brain through the nostrils, and then making a cut along the flank to remove the abdominal contents, which were washed and soaked in palm wine and infusions of spices, and then stored in "canopic" jars. The heart, as seat of intelligence, was removed, wrapped in linen, and replaced into the chest cavity. The cavity was filled with myrrh, cassia, and other spices before being sewn up; the body was then washed and wrapped from head to foot in fine linen. The Bible describes embalmers as "physicians" (Gen. 50:2), and mentions it (perhaps to provide local color) only with reference to Jacob and Joseph (Gen. 50:2–3, 26), who both died in Egypt. The statement that the process required 40 days (Gen. 50:3) is at variance with Herodotus' statement that it required 70, the period which the Bible assigns to the Egyptians' mourning for Jacob. In actuality, the mummification process might range between 30 and 200 days. The strong belief in an afterlife was what made preservation of the body so important in Egypt, in marked contrast to the situation in ancient Israel.

Today embalming before burial is widely practiced in the United States by undertakers, who inject a formalin solution into the blood vessels; but in Israel it is rare, being confined entirely to bodies being sent abroad for burial (in conformity with international regulations).

**EMBDEN, GUSTAV** (1874–1933), German biochemist. Born in Hamburg, Embden was appointed professor of physiology at Frankfurt University in 1914, where he carried on his productive investigations into the chemistry of muscular contraction. Recognizing that muscle glycogen is not directly oxidized for energy, he helped to elaborate the metabolic pathways by which carbohydrate is degraded within the cell. This biochemical pattern, which bears his name, is characteristic of most living cells. Embden also stressed the significance of phosphoric acid in the intracellular metabolism of sugars. Other research contributions were in the area of fat

metabolism. He contributed, with G. Schmidt, to *Handbuch der biologischen Arbeitsmethoden* (1921–39) and edited, with others, *Handbuch der normalen und pathologischen Physiologie* (6 vols., 1925–29).

[George H. Fried]

**EMBER, AARON** (1878–1926), U.S. Orientalist and Egyptologist. Born in Kovno, Lithuania, Ember migrated to the U.S. in 1891. From 1904 to 1910 he worked as a fellow of Semitics at Johns Hopkins University and from 1911 was assistant professor (professor 1924) in its Semitics department. His studies in Ancient Egyptian, Assyrian, Arabic, and Ethiopic led him to seek an earlier form of proto-Semitic in Egyptian, which he came to regard as the oldest Semitic language. He died as a result of a fire in his house in which his wife and child also perished. His papers, which were partially destroyed, were partly published by Cyrus Adler in the *Paul Haupt Anniversary Volume* (1926), in a chapter entitled “Partial Assimilation in Old Egyptian” (pp. 300–12), where Ember discussed the phonological relationship of Egyptian to Semitic languages and his theory that abstract terms developed from a concrete basis. The book also includes a biographical sketch of Ember. In 1930 a manuscript that survived the fire was published as A. Ember, *Egypto-Semitic Studies*. Its publication was due in large part to the efforts of Ember’s former teacher, the great Egyptologist Kurt Sethe of Berlin. Ember took an active part in the Jewish community of Baltimore. For many years he was a director of the Baltimore Talmud Torah and of the Isaac Davidson School and helped to found the Jewish Public Library there. He was also an ardent Zionist and assisted the Hebrew University Library, Jerusalem.

**BIBLIOGRAPHY:** H. Loewe, *Aaron Ember* (Ger., 1926); K. Sethe, in: *Zeitschrift fuer aegyptische Sprache und Altertumskunde*, 4 (1926), 130–1. **ADD. BIBLIOGRAPHY:** O. Sellers, in: *AJSL*, 50 (1934), 109–10.

**EMBRYO** (Heb. עֵבֶר, *ubbar*), a child in the womb of its mother before its head emerges (Sanh. 72b; Sh. Ar., *ḤM* 425:2), the Hebrew *ubbar* meaning the unborn child in both the embryonic and fetal stages. Generally speaking, an embryo is incapable of having legal rights or duties, although there are various rules intended to protect its rights when born, and to prevent uncertainty with regard to its status.

#### Determining the Identity of the Embryo

A widow or divorced woman must not remarry until 90 days after the death of her husband or after her divorce (Sh. Ar., *EH* 13:1; see \*Marriages, Prohibited). The reason for this prohibition is to remove any doubt should she immediately become pregnant from her second husband, as to whether the child she bears is a nine-month child of the first, or a seven-month child of the second, a doubt which might seriously affect its personal status (*Yev.* 41a–42a; and Codes).

#### Mother or Embryo

Who Takes Precedence? On the question of whether an em-

bryo may be killed in order to save its mother in the case of a difficult confinement, see \*Abortion.

#### Parentage

Generally, the same laws that apply in determining the parentage of a born child and the capacity of the mother or her husband to deprive it of its status apply to the embryo; see \**Mamzer*; Parent and \*Child.

#### Levirate Marriage or *Ḥlizah* of a Pregnant Woman

If a woman was pregnant when her husband died and the child is subsequently born alive, she is exempt from levirate marriage or *ḥalizah* (Sh. Ar., *EH* 156:4; see \*Levirate Marriage and *Ḥalizah*).

#### Proselytization

For the status of a child born after its mother became a proselyte while pregnant with it see \*Proselyte.

#### Succession

An embryo is incapable of acquiring rights, for only a person born can possess rights. Accordingly, if an embryo dies in its mother’s womb, it does not leave the right of succession, to which it would have been entitled had it been alive when the deceased died, to those who would have been its heirs had it been born alive when the deceased died. Instead, such right of succession passes to the heirs of the deceased as if the embryo had never existed (*BB* 142a; *Nid.* 44a; and Codes, *Rif* to *Yev.* 67a). There is a contrary opinion, however, to the effect that intestate succession being automatic, the embryo does acquire it (*Piskei ha-Rosh* to *Yev.* 67a; see *Tur*, *ḤM* 210). All agree, however, that a child born alive after the death of its father inherits its father as though it had been alive when he died (*Rif*, *Ritba*, to *Yev.* 67a, *Beit Yosef* and *Bah* to *Tur* and *Sh. Ar.* loc. cit.; see *Hiddushei Ḥayyim ha-Levi* to *Yad*, *Terumot* 8:4). Hence, an embryo that is born after the death of the deceased, even if it dies the day it is born, leaves the right of succession (after its mother) to its heirs on its father’s side, but not to those on its mother’s side – who would have inherited had the embryo died in her womb (*Tur* and *Sh. Ar.*, *ḤM* 276:5). Only in respect of the special rights due to a firstborn son is a child born after the death of his father not of equal status with one already born when the father dies. Thus, if twins are born, the first one will not be entitled to the additional share in the father’s estate due to the firstborn (see \*Firstborn), since the Torah states of the primogenitary right, “If they have borne him children . . .” (*Deut.* 21:15), i.e., only a firstborn alive when the father dies, but not an embryo, is entitled to the (additional) primogenitary share (*BB* 142b, and Codes).

A will in favor of the embryo of another has no validity, even if the embryo is born alive, since no rights can be conferred upon one not yet born (*BB* 141b–142; *Piskei ha-Rosh* to *Yev.* 67a; *Sh. Ar.*, *ḤM* 210:1). However, when a man whose wife is pregnant makes a will in favor of his own embryo whether it be a will of a person being on his deathbed (*shekhiv me-ra*) or of a person regarded as being in health (*bari*) (see \*Wills) –

it is valid, because a person is favorably disposed toward his own child and wholeheartedly wishes to transfer ownership to him (Sh. Ar., חַמ 253:26–27). Some are of the opinion that this law applies only to a will made by a person on his deathbed and not to one made by a healthy person (*Beit Yosef* to Tur, חַמ 210:3; Sh. Ar., חַמ 210:1).

### Contractual Obligations to an Embryo

According to some authorities although transfer of rights cannot be made to an embryo, a contractual obligation can be undertaken in his favor (see \*Contract). A guardian can be appointed to protect the rights of an embryo (Sh. Ar., חַמ 290:1).

### The State of Israel

In general, Jewish law is followed. With regard to succession, however, section 3 of the law of succession (1965) provides that a person born within 300 days after the death of the deceased is deemed to have been living when the deceased died, unless it is proved that he was conceived thereafter. In terms of section 33 (b) of the Capacity and Guardianship Law, 5722–1962, the court may appoint a guardian for a child *en ventre de sa mère*.

[Ben-Zion (Benno) Schereschewsky]

**EMDEN**, city in Germany. The first authentic reference to Jews in Emden dates from the first half of the 16<sup>th</sup> century. David \*Gans mentions Jews of Emden in his *Zemah David*. A Jewish cemetery is mentioned in 1586. In 1590 the citizens of Emden complained to the representative of the emperor that the Jews were permitted to follow their religious precepts openly and were exempted from wearing the Jewish \*badge. Marranos from Portugal passed through Emden on their way to Amsterdam, and a few settled in Emden and returned to Judaism. Moses Uri ha-Levy (1594–1620), a former rabbi of Emden who settled in Amsterdam, officiated there as the first *hakham* of the Portuguese community. The city council of Emden discriminated between the local Jews and the Portuguese, encouraging the latter to settle in the city, while attempting to expel the former. Their attempts, however, were unsuccessful, since the duke intervened in their favor. The judicial rights of the Portuguese Jews were defined in a grant of privilege issued by the city council in 1649, and renewed in 1703. In 1744, when Emden was annexed to \*Prussia, the Jews there came under Prussian law. In 1762 there was an outbreak of anti-Jewish riots in Emden. In 1808, during the rule of Louis Bonaparte, the Jews in Emden were granted equal civic rights. There were then 500 Jews living in Emden. The rights of the Emden Jews were abolished under Hanoverian rule in 1815, and they did not obtain emancipation until 1842. Noted rabbis of Emden were Jacob \*Emden (1728–33), and Samson Raphael \*Hirsch (1841–47).

The community numbered 900 in 1905, and 1,000 in 1930. Nearly half left with the advent of Nazi rule and another quarter through 1938. The synagogue was burned down on *Kristallnacht* and most of those remaining were later deported and perished, including at least 150 on October 23, 1941. Community life was not resumed after the Holocaust.

[Zvi Avneri]

**EMDEN, JACOB** (pen name **Yavez**; derived from Ya'akov Ben Zevi; 1697–1776), rabbi, halakhic authority, kabbalist, and anti-Shabbatean polemicist. Emden was regarded as one of the outstanding scholars of his generation. Emden's teacher was his father Zevi Hirsch \*Ashkenazi (Hakham Zevi). He inherited his father's interest in secular studies, his dissociation from the Ashkenazi method of study (*pilpul*) and customs, his stormy, independent, and uncompromising character, and his devotion to the campaign against the Shabbateans and their sympathizers. In addition, he possessed a fine literary talent, a critical tendency, and a knowledge unusual for his age of general non-halakhic Jewish literature. He was also familiar with sciences and languages (German, Dutch, Latin). Despite his distinguished descent and his remarkable talmudic attainments, Emden occupied no official position, with the exception of a few years as rabbi of Emden (1728–33). This made it possible for him to be exceptionally critical toward the society and the tradition of his time. He was more on guard about anything that he considered *hillul ha-Shem* (bringing the name of the Jew into disrepute) than for the good name of the rabbinic and of the community. He made extensive use of the private printing press he founded in \*Altona to disseminate his views. As a result, because of his views on a number of issues, both personal and communal, he became a figure of contention. His important halakhic works are *Lehem Shamayim*, on the Mishnah (pt. 1, 1728; pt. 2, 1768); a letter of criticism against R. Ezekiel Katzenellenbogen, rabbi of Altona (1736); responsa, *She'elat Yavez* (2 pts., 1738–59); *Mor u-Kezi'ah*, on the Shulhan Arukh, OḤ (2 pts., 1761–68). In addition, he published an important edition of the prayer book (whose parts had different names) with a valuable commentary (1745–48). This prayer book was reprinted several times. His main historical importance lies in his campaigns against the Shabbateans to which he dedicated many years. He relentlessly examined and investigated every suspicious phenomenon pertaining to the sect. He called upon the contemporary rabbis to publish excommunications and mercilessly attacked anyone suspected of supporting or showing sympathy to the Shabbateans. The Shabbateans were accustomed to introduce hints of their secret doctrine into their literary works, particularly in

the field of Kabbalah. Consequently, Emden became an expert in uncovering such allusions and hidden meanings, and developed an extraordinarily sharp critical faculty by which he could recognize any suggestion of the Shabbatean heresy. Many books in which no one saw anything to which objection could be taken, were condemned by him as heretical. Though at times he was at fault and suspected the innocent without cause, his judgment in general was sound (F. Lachover and I. Tishby (eds.) *Mishnat ha-Zohar*, 1 (1957<sup>2</sup>), 52–56).

His most famous controversy was with Jonathan \*Eybeschuetz, rabbi of the “Three Communities” (Altona, Hamburg, Wandsbek) from 1750 until he died in 1764. It commenced in 1751 soon after Eybeschuetz came to Altona and did not cease even with the latter’s death. It divided German Jewry, particularly rabbinic circles, into two camps, and undermined the prestige of rabbinical institutions.

The conflict at first centered around several amulets which Eybeschuetz circulated in Metz and Hamburg. Emden published their content in his work *Sefat Emet u-Leshon Zehorit* (1751) and interpreted them rather convincingly as Shabbatean amulets. As a result of this publication, Emden was compelled to escape to Amsterdam for some time and there he published in *Torat ha-Kena’ot* (1752) an anthology of documents on Shabbateanism. Eybeschuetz too was a great scholar; he had devoted disciples but also many enemies. He was suspected of adhering secretly to the Shabbatean groups or at least of affinity to them. His son was a declared Shabbatean. Eybeschuetz denied the accusation, which in any case could not be proved with certainty. The majority of the greatest rabbis in Poland, Moravia, and Bohemia, as well as the leaders of the Three Communities supported him, either because the accusation was utterly incredible, or because condemnation of a rabbi who enjoyed such an enormous prestige as Eybeschuetz would cause inestimable damage to the communal organizations as a whole. Emden disregarded these considerations vehemently. He fought his opponent and his numerous supporters by means of books and pamphlets which came out in unabated succession.

Emden’s major works in this dispute, apart from several small pamphlets and leaflets, are *Edut be-Yaakov* (1756); *Shevirat Luhot ha-Even* (1756–59), a detailed critique of the defense of Eybeschuetz; *Luhot Edut, Sefer Hitabbekut* (1762–67), which also includes important protocols on the Shabbatean propaganda activities in the yeshivah of Eybeschuetz in Hamburg and in the great yeshivah in Pressburg. In addition, Emden dedicated his *Sefer Shimmush* as “a special weapon for every Jew to use in order to know what to answer to the Shabbatean groups” (1758–62) and to fight Frankism, which arose in his time. The two opposing camps in Altona requested the intervention of the authorities and it was only through this intervention that the conflict subsided.

From this campaign, Emden went on to criticize the Zohar, the bastion of the Shabbateans (see \*Kabbalah). The Zohar was regarded by many as second only to the Bible in sanctity. Emden had questioned its antiquity, and consequently its sanctity in *Mitpaḥat Sefarim* (1768), which pro-

voled opposition. His piety and profound attachment to tradition would not permit him to condemn the work as a whole. Nevertheless, he did not hesitate to state his conclusion that later and forged additions had been interpolated into an ancient and sacred book. His critical attitude toward accepted ideas and beliefs is revealed also in his criticism of the *Guide of the Perplexed*, the major work of Jewish philosophy, which he found to contain heretical tendencies; he did not believe that \*Maimonides was its author. His activity in many directions as well as his general approach which he based on the use of grammar, philology, and history and the like, his brilliant and scholarly style, his tolerant attitude to Christians and his deprecation of Polish Jews, created a certain affinity between him and the first proponents of Haskalah, who had already emerged in his day, and most of whom were opposed to the Kabbalah and its influence. Although in fact Emden rejected philosophy and scientific criticism in the sphere of Judaism, permitting only the study of the natural sciences, he was friendly with Israel of Zamosc and his disciple, Moses \*Mendelssohn. He held discussions with them on halakhic topics, customs, and principles of religion. From the correspondence between Emden and Mendelssohn, the difference between the *maskil* of the old school such as Emden and the new type such as Mendelssohn emerges clearly.

The independence, originality, and stormy temperament of Emden are noticeable in his halakhic works. In certain subjects he takes up an extreme view against the majority opinion, and in others he is outstandingly lenient (e.g., with regard to concubinage and eating legumes during Passover). In a dispute with Israel of Zamosc on the authority of the Shulḥan Arukh, it was precisely Emden who upheld the principle of the freedom of the *posek* (halakhic authority), from dependence on this code. Emden’s autobiography, *Megillat Sefer* (first published from an Oxford Ms. in 1896), is unique in the rabbinic world. In addition to its historical importance it is of no small belletristic value.

Emden’s ability as a grammarian is evident in his commentary on the prayers (*Siddur Beit Yaakov*), where he combines grammatical comments and kabbalistic commentary. He explains, for example, that *barukh* is not a passive past participle but a noun like *raḥum*, the *kamaz* compensating for the lack of a *dagesh* in the letter *resh*. In consequence he arrives at the explanation that God is the source of blessings. He also discusses mishnaic Hebrew (e.g., the word “*Nishtannah*” as a conflation of *nifal* and *hitpa’el*). In his commentary on the Mishnah *Leḥem Shamayim*, he discusses variant readings, determining the correct one by linguistic considerations. *Em la-Binah*, his commentary on Scripture, abounds in inferences drawn from differences between synonyms, and *Gal Ed* contains discussions on correct vocalization.

[Moshe Shraga Samet]

**EMERY, RICHARD WILDER** (1912–1989), U.S. historian. Emery was professor of history at Queens College, New York. A non-Jew interested in medieval French history, Emery began detailed research on the rich notarial records of Perpignan in southern France. The amount of material of Jewish interest was so great that he devoted a separate volume to this subject, *The Jews of Perpignan in the Thirteenth Century: An Economic Study Based on Notarial Records* (1959), which was followed by other monographs. This is the most detailed study of certain aspects of the history of a medieval Jewish community that has ever appeared, and it reveals the existence of vast untapped sources of information. In addition, his studies have thrown much light on the real extent and consequences of the forced conversions that began in 1391 and on eminent personalities, such as Menahem \*Meiri and Profiat \*Duran. He also wrote *The Friars in Medieval France: A Catalogue of French Mendicant Convents 1200–1550* (1962) and *Heresy and Inquisition in Narbonne* (1967).

[Cecil Roth]

**EMESA** (now **Homs**), city in Syria. It was ruled by a dynasty which enjoyed friendly political relations in the first century C.E. with Agrippa I (Jos., Ant., 18:135; 19:338) and with Agrippa II (*ibid.*, 20:139). The marriages contracted between members of the two royal families were apparently dictated by political expedience. It is likely, although evidence is lacking, that at this period Jews were living in Emesa. Azizus king of Emesa consented to be circumcised in order to marry Drusilla the sister of Agrippa II, and it may be that he was not the only proselyte in his kingdom at this time. There is reference to other proselytes in Emesa at a later period, in about the third century (TJ, Yev. 11:2, 11d, et. al.). Several Palestinian *amoraim* visited Emesa: Hiyya b. Abba received money for orphans and widows from the local Jews (TJ, Meg. 3:1, 74a). R. Yose was asked there about the laws concerning a levirate marriage and proselytes (TJ, Yev. 11:2, 11d), and R. Haggai about those concerning the tithe from fields rented to non-Jews (TJ, Dem. 6:1, 25b; TJ, Av. Zar. 1:9, 40b). Still in existence at the time of the Arab conquest (635–40), members of the community assisted the conquerors. With the fall of the \*Umayyad caliphate and the Byzantine invasions of the region, the town was impoverished and the Jews abandoned it. \*Benjamin of Tudela, the 12<sup>th</sup> century traveler, found about 20 families there. After a short period of prosperity during the 13<sup>th</sup> century, there is no further information on Jews in the town.

[Lea Roth / Aryeh Shmuelevitz]

**EMIN PASHA (Eduard Schnitzer; 1840–1892)**, Austrian traveler and explorer. Born of Jewish parents in Silesia, he was baptized as a child. He served as a quarantine doctor in Albania, and from 1870–74 as private physician to the governor of Albania. He adopted a Turkish name, Emin Effendi, and entered the services of General Gordon, who was then governor of the Equatorial Province of Egypt. When Gordon was made governor general of the Sudan in 1878, he appointed Emin to succeed him. They were both determined to stamp out the slave trade, and Emin traveled the length and breadth of his province continuously on the watch. When the Mahdi revolution broke out in 1881, Emin Pasha (as he now called himself) held his province although he was completely surrounded and isolated. The Germans and the British made various plans to relieve him but the British explorer H.M. Stanley was the first to reach him and with great difficulty persuaded him to leave the province. In 1880 Emin entered the service of the Germans and led an expedition along the coast of Lake Victoria to Lake Albert. The aim was to acquire certain lands for the German government but while he was traveling, the Anglo-German agreement was signed excluding these territories. He was ordered to return but quarreled with the Germans and refused. Disease now broke out among the men of his expedition and Emin went into the Congo, sending the able members to the coast while he stayed inland with the stricken. In 1892 Emin was murdered by slave traders against whom he had never stopped fighting. Emin was a good governor, a great linguist, and his contributions to the ornithology, ethnography, and meteorology of Central Africa were important. He published a number of treatises and diaries. Emin Pasha Gulf, the Southern Bay of Lake Victoria, was named after him.

**BIBLIOGRAPHY:** F. Stuhlmann, *Mit Emin Pascha ins Herz von Afrika* (1894), contains bibliography p. 59–60; G. Schweinfurt et al. (eds.), *Emin Pasha in Central Africa* (1888); B. Schweitzer, *Emin Pasha, his Life and Work* (1898); A.F.A. Symons, *Emin, Governor of Equatoria* (1950). **ADD. BIBLIOGRAPHY:** C. Edet and J.P. Sicre, *Vers les montagnes de la lune – Sur les traces d'Emin Pasha* (1993); I.R. Smith, *The Emin Pasha Relief Expedition 1886–1890* (1972); S. White, *The Lost Empire on the Nile – H.M. Stanley, Emin Pasha and the Imperialists* (1969).

**EMIOT, ISRAEL** (pseudonym of **I. Goldwasser; 1909–1978**), Yiddish poet. Influenced by the Warsaw Jewish Writers' Club, Emiot moved in the years 1932–36 from ḥasidic to worldly themes and published several collections containing ballads on Jewish history, pastoral lyrics, and innovative triolets that reflect the somber interwar mood (*Mit Zikh Aleyh*, "Alone with Self"; *Tropen in Yam*, "Drops in the Ocean"; *Bay Zayt*, "Beside Me"; *Iber Makhitses*, "Over Partitions"). In 1939 he fled to Russia, where *Lider* ("Songs," 1940) contained lamentations about family, homeland, and war. While he was a correspondent in Birobidzhan (1944–8), he published *Oyfgang* ("Rising," 1947), with Sovietized content. When the Jewish \*Anti-Fascist Committee was liquidated (1948), he was arrested and imprisoned for seven years in Siberia. Repatriated to Poland, he published *Benkshaft* ("Yearning," 1957), before immigrating to the

U.S. (1958), where he republished and augmented his previous work during the years 1960–69: *In Nign Ayngheert* (“In Melody Absorbed”), *Fardekte Spiglen* (“Covered Mirrors”), *In Mitele Yorn* (“In Middle Years”), *Eyder Du Leshst Mikh Oys* (“Before You Extinguish Me”), and *Tsulib Di Tsen Umshuldike* (“For the Sake of Ten Innocents”). His prose memoir *Der Birobidzhaner Inyen* (“The Birobidzhan Affair,” 1960) provides a dispassionate account of his Siberian experience, retained in the author’s 1981 translation, while his verse translation, *Siberia* (1991), reveals a more anguished personal account. Emiot edited the trilingual journal *Roots*. His work after 1958 includes sonnets, addresses to God, free verse, lyrics of alienation and love, and reflections on the U.S. in prose and poetry. He expanded his interest in musical themes and modernist poetry, but maintained his use of traditional Jewish imagery.

[Leah Zazulyer (2<sup>nd</sup> ed.)]

**EMMA LAZARUS FEDERATION OF JEWISH WOMEN’S CLUBS**, U.S. progressive women’s group, founded in 1944 by the Women’s Division of the Jewish People’s Fraternal Order (JPFO) of the International Workers Order (IWO). Formed to combat antisemitism and racism and to nurture positive Jewish identification through a broad program of Jewish education, the Emma Lazarus Division attracted a membership of left-wing, largely Yiddish-speaking women of the immigrant generation. One founder was labor leader, Clara Lemlich \*Shavelson.

In 1951, when New York State’s attorney general initiated proceedings against the IWO as a subversive institution, the Women’s Division reorganized as the Emma Lazarus Federation of Jewish Women’s Clubs. Despite revelations about Stalinist terrors and antisemitism, ELF Executive Director June Croll Gordon and her successor, Rose Reynes, called for coexistence with the U.S.S.R. ELF’s public disregard of Soviet antisemitism remained a conspicuous blind spot.

At home, the ELF commissioned writer Eve Merriam to write a biography of poet and essayist Emma \*Lazarus, and in 1954 published Yuri Suhl’s biography of Ernestine \*Rose, who was seen to combine Jewish patriotism with broad humanism. The Federation wrote study outlines of other Jewish women, including Rebecca \*Gratz, Lillian \*Wald, Sophie Loeb, and Penina \*Moise. The ELF also developed curricula on working women, dissident women (from Anne Hutchinson to Ethel Rosenberg), and black women, and joined in a statement of principle with the Sojourners for Truth and Justice, an African-American women’s group. In the 1950s and 1960s, it sent food and clothing to the South and joined boycotts and sit-ins. In 1963, the ELF initiated a petition campaign for the U.S. to ratify the Genocide Convention, adopted by the UN General Assembly in 1948; it considered this campaign its most important political project.

With chapters in Brooklyn, the Bronx, Boston, Los Angeles, San Francisco, Chicago, Philadelphia, Detroit, Miami,

Rochester, Newark, Jersey City, Lakewood, and Toms River, New Jersey, the ELF maintained its educational and political activism for almost 40 years, attracting approximately 4,000–5,000 members in 100 clubs at its peak. Affected by the aging of the membership, the transformation of women’s work, and the women’s movement, ELF disbanded in 1989, though some individual clubs remained.

**BIBLIOGRAPHY:** J. Antler, “Between Culture and Politics: The Emma Lazarus Federation of Jewish Women’s Clubs and the Promulgation of Women’s History, 1944–1989,” in: A. Kessler-Harris and K.K. Sklar (eds.), *U.S. History as Women’s History* (1995); idem, “Emma Lazarus Federation,” in: P.E. Hyman and D.D. Moore (eds.), *Jewish Women in America*, vol. 1 (1997), 375–77.

[Joyce Antler (2<sup>nd</sup> ed.)]

**EMMANUEL, ISAAC SAMUEL** (1899–1972), Greek-born rabbi and historian. Emmanuel was born in Salonika, the son of Samuel Emmanuel, a rabbi. He studied at the rabbinical seminary there and was ordained at the Jewish Theological Seminary of Breslau. Thereafter he held pulpits in Curaçao, Panama, Rio de Janeiro, and Cincinnati. His works include *Histoire de l’industrie des israelites de Salonique* (1935); *Gedolei Saloniki le-Dorotam* (1936), 500 epitaphs of the Jewish cemetery of Salonika with biographical notes; *Precious Stones of the Jews of Curaçao* (1957); *Mazzevot Saloniki* (2 vols., 1963–68); and with his wife Suzanne A. Emmanuel (1912–1969), *History of the Jews of The Netherlands Antilles* (2 vols., 1970).

**EMMAUS**, ancient town in the Judean Shephelah, 20 mi. (33 km.) N.W. of Jerusalem. It is first mentioned as the site of the camp of the Seleucid army under Georgias, which Judah Maccabee routed in 166 B.C.E. (1 Macc. 3:40). Six years later it was fortified by Bacchides (Jos., Ant., 13:15; 1 Macc. 9:50). In 43 B.C.E. the Roman general Cassius sold its inhabitants into slavery for failure to pay taxes (Jos., Ant., 14:275; Wars, 1:222).

When Zealot activity was intensified in the area immediately after the death of Herod in 4 B.C.E., Varus burnt down the city in reprisal (Jos., Wars, 17:29). During the Jewish War, Vespasian established a fortified camp at Emmaus (in 68 C.E.) and stationed the Fifth Macedonian Legion there (*ibid.*, 4:444–5); during the Bar Kokhba War (132–135 C.E.), Roman detachments were posted there to encircle the rebels (Lam. R. 1:16, no. 45). In talmudic sources the city was considered the boundary between the Central Mountain Range and the Shephelah (TJ, Shev. 9:2, 38d). Described as a place of “fair waters and healthy climate” (ARN<sup>1</sup> 14, 59), it apparently possessed hot springs and public baths, which is possibly the reason for its Hebrew name Hammat (*ham*, “hot”; Song Zuta, 6:9). Eleazar b. Arak settled in Emmaus after the death of his teacher Johanan b. Zakkai, and there, far removed from his colleagues, he is said to have forgotten his learning (Eccl. R. 7:7, no. 2; Shab. 147b). The city was also the home of \*Nehunya b. ha-Kanah (Mid. Tan. to 26:13). Archaeological remains indicate that a Samaritan community had lived there. According to

Christian tradition, Jesus appeared before his disciples at Emmaus after his crucifixion and resurrection (Luke 24:13–16). In the third century, the Christian writer Julius Africanus lived there. In 221 he headed a deputation that induced the emperor Elagabalus to confer on Emmaus the status of a city enjoying Roman rights, and it was henceforth called Nicopolis. There was a Christian community there from very early times and Jews continued to live in the city until the Arab conquest in 639 (J. Moschos, in: *Patrologia graeca*, ed. by Migne, vol. 87, pt. 3 (1863), 3032). A plague broke out in the city after the Arabs took it (the “Plague of Emmaus”) and it decimated the conquerors. After the founding of Ramleh, the town (see \*Latrun) declined in importance. It became the Arab village ‘Imwās on the Jerusalem–Tel Aviv highway which before 1948 had a population of 1,420 Muslims and was destroyed during the Six-Day War (1967). Excavations conducted there in 1924–25 by the Ecole biblique et archéologique française uncovered remains of a Roman villa and a Christian basilica that was destroyed during the Samaritan revolt in the sixth century and later rebuilt. The Crusaders also erected a small church there. Today the excavations are part of Ayalon-Canada park.

**EMÓD, TAMAS (Ernő Fleischer; 1888–1938)**, Hungarian poet. Emőd was born at Berekböszörmény and graduated in law at Oradea (then Nagyvárad) Law Faculty. He worked as a journalist but mainly devoted himself to literature. Emőd’s first poems, influenced by the great Hungarian poet E. Ady, appeared in the avant-garde anthology *Holnap* (“Tomorrow”). The poems he wrote during World War I were particularly well-known. Emőd chose Jewish subjects for a number of his works, including *Temetés* (“Funeral”), *Falusi zsidó* (“The Village Jew”), and *Vox Humana*. Of his plays, the most important are *A vándor katona* (“The Wandering Soldier”), written in collaboration with F. Karinthy, and *Ferenc Jóska ládájából* (“From Ferenc Jóska’s Box”). Emőd was one of the originators of the *chanson*, which was at one time a feature of Hungarian literary cabarets.

**EMOTIONS.** Jewish tradition has shown a positive interest in human emotions, and they are portrayed and discussed in the Bible, Talmud, Jewish philosophy, and mysticism.

#### Bible

Biblical figures are frequently emotional, and in this lies much of their human appeal and credibility. Genesis introduces feelings of \*Love, \*Joy, Fear, and their opposites (in, e.g., 3:6; 4:5; 29:18; and 37:3) that are later found in such figures as Saul and David, the psalmist, and the lovers of the Song of Songs. Similarly, in His initial appearances God is portrayed as a deity who acts out of deep feelings of compassion and anger (Gen.

4:10; 15; 6:5; 8:21; 18:17; 29:31), emotions which are revealed at Sinai as essential to His nature (Ex. 20:5, 6; 34:6). The Israelites encountered God’s fearsome, possessive love, frequently expressed in jealous wrath and moral indignation, in their desert wanderings, and the prophets tended to identify with these same emotions (see Ex. 19:3; 32:9; Num. 14:11; 17:8; Isa. 65:3; Jer. 7:19; Ezek. 16:36). However, the Torah advocates a different set of relationships and emotions as an ideal, one in which God loves His people and wishes them to respond in love as well as fear (Deut. 6:5; 10:12, 15), and in which man is exhorted to rid himself of hatred and lust, relate to his fellow man in love and kindness, and joyfully observe God’s commandments (Ex. 20:14; Lev. 14:17, 18; Deut. 16:11). Then God will bless men both materially and spiritually, meaning with emotional peace and happiness (Num. 6:24–26; Isa., 65:17ff.).

#### Talmud

Prophetic and rabbinic Judaism also appeal, in particular, to such emotions, as in Micah’s terse summary of the religious ethic (6:8: “to do justice, to love kindness (*hesed*), and to walk humbly with your God”; and in Hillel’s paraphrase of Lev. 19:18: “what is hateful to you, do not do to your fellow man” (Shab. 31a)). Anger, jealousy, lust, and pride are all condemned by the rabbis (see, e.g., Avot 2:11; 4:21); the Talmud even blames the destruction of the Second Temple on the Jews for the sin of unjustified hatred, *Sinat hinnam* (Yoma 9b). The ideal emotional type, according to the rabbis, is one who controls his passions and is good-hearted, humble, and peace loving (Avot 1:12; 2:9; 4:1; 5:11). Such a man finds emotional gratification in the study and observance of the law, enjoying a happiness (*simḥah shel mitzvah*) that, while itself a reward, is an intimation of future bliss as well. Prayer (as well as devotional, i.e., *musar*, literature, and most poetry), study, and ritual increasingly became outlets for the Jewish psyche in exile, and deeply felt personal and national emotions were formalized in such holidays as Simḥat Torah and such commemorations as the Ninth of Av.

#### Medieval Jewish Philosophy

Medieval Jewish philosophy resumed the attempt of Hellenistic Jewish thought to subjugate the emotions to the intellect, and attempted, even more than rabbinic exegesis did, to rationalize away the biblical depiction of God’s emotions (see \*Allegorical Interpretation and \*God, Attributes of). Using Arabic mediated Greek models, Jewish philosophers analyzed emotions in terms of both the humors and organs of the body and the faculties, or parts, of the soul. Whatever the variation in details (for which see \*Soul), however, the philosophers generally agreed with Aristotle that moderation should be observed in expressing emotion (see, e.g., Solomon ibn Gabirol, *The Improvement of the Moral Qualities* (1901), pt. 4, 84–86; and *The Eight Chapters of Maimonides on Ethics* (1966), 54ff.). Yet for all its rational emphasis, like that of its Arabic and late Greek predecessors, Jewish philosophy views the dispassionate, analytical search for Truth as a religious quest, beginning in anxious doubt and culminating in feelings of certitude and

the bliss of divine love (Saadiah Gaon, *The Book of Beliefs and Opinions*, trans. by S. Rosenblatt (1948), introduction, 6ff.; Maimonides, *The Guide of the Perplexed*, trans. by S. Pines (1963), introduction, 5ff., 51, 618ff.).

### Mysticism and Hasidism

Jewish mysticism seeks to lead man from a state of psychic alienation to one of ecstatic intimacy with God. Mostly, however, it attempts to reach this emotional goal through an intellectual process and a discipline parallel to that of philosophy. It is mainly \*Hasidism, with its suggestion of antinomianism and its anti-intellectual direction, that emphasizes the emotions – particularly joy, trust, and gratitude – as a primary means to the religious life.

[Alfred L. Ivry]

°**EMPEDOCLES** (fifth century B.C.E.), Greek poet, prophet, and natural philosopher who set forth the doctrine of the four elements, which dominated Arabic, Hebrew, and Latin thought in the Middle Ages. Empedocles is known in medieval Jewish circles through stray references to him and his work, mainly found in the works of Aristotle, which were translated into Arabic and then into Hebrew. The form of his name in the Hebrew translations from the Arabic follows the Arabic form, that is, Abduqlis, Abiduqlis, and others. In translations from the Latin, the Latin form is found. Empedocles' name was taken over by late Greek neoplatonic circles and affixed to treatises later translated into Arabic, which became known to medieval Jewish thinkers. The main representative of this literature is the *Book of the Five Substances*. The Arabic version is lost but it is partially preserved in a Hebrew translation, published by D. Kaufmann as an appendix to his *Studien ueber Salomon ibn Gabirol* (1899).

Among medieval Jewish philosophers, Shem Tov ibn Falaquera mentions that Solomon ibn Gabirol's *Source of Life* was influenced by the *Book of the Five Substances* (S. Munk, *Mélanges*, 1). Joseph ibn Zaddik refers to the true conception of the will as a secret whose true meaning may be derived from the *Book of Empedocles* or works by other philosophers written on these subjects. Judah Halevi twice refers to Empedocles as the head of a philosophic school, in his *Kuzari* (4:25 and 5:14). Maimonides, in his famous letter to Samuel ibn Tibbon, states that one should not waste one's time studying the works of Empedocles, which form a part of ancient (pre-Aristotelian) philosophy (A. Marx, in: *JQR*, 25 (1935), 380).

[Lawrence V. Berman]

°**EMPEREUR, CONSTANTIJN I'** (1591–1648), Dutch Calvinist theologian and Christian Hebraist. L'Empereur pursued an academic career as a theologian. Only following his

appointment to the professorship of Hebrew at the University of Leiden (1627) did he start to study rabbinical literature seriously. Within six years he published several (fairly competent) editions of rabbinical works, most of them with a parallel Latin translation and annotations, meant to facilitate the study and use of Jewish literature. He paid \*Menasseh ben Israel and Isaac \*Aboab da Fonseca to assist him in his studies. His books did not sell well. His emphasis on rabbinical literature in his lectures was not well received by the students and professors of the theological faculty, and he was ordered to focus on biblical Hebrew. In 1633 he was passed over in a fiercely contested appointment to a professorship in the faculty of theology. To compensate him, the board of the university raised his salary, and justified this unusual generosity by appointing him to a spurious professorship of Jewish controversies, which did not entail any duties. In 1637 he published an edition, translation, and commentary on the tractate *Bava Kamma*, a highly original (although implicitly antisemitic) work in which he compared its rulings with the corresponding legislations of Roman Law. In 1647 he was, finally, appointed to a professorship in the faculty of theology.

[Peter van Rooden (2<sup>nd</sup> ed.)]

**EMPEROR WORSHIP**, the Roman cult established during the reign of Augustus, first in the provinces but not in Italy, and practiced throughout the Roman Empire. It is the direct continuation of the Hellenistic worship of the ruler. Emperor worship first appeared in Palestine during the reign of \*Herod the Great. Although it was completely unacceptable to the Jewish population, Herod could nevertheless not afford to lag behind other vassal princes in establishing the cult. Thus although a temple was not erected in Jerusalem to honor the emperor, these rites were adopted in the cities of Sebaste and Caesarea, both predominantly non-Jewish. The Jewish population, though not the Christian, was everywhere exempted from the loyal duty of emperor worship and only one attempt was made to compel the Jewish nation to accept emperor worship, when \*Caligula issued a decree to erect a statue of himself in the sanctuary at Jerusalem (Jos., *Ant.*, 18:262; Jos., *Wars*, 2:184; Philo, *De Legatione ad Gaium*, 188, 207–8; Tacitus, *Historiae*, 5:9). The decree was never carried out, however, due to the death of Caligula in January 41 C.E.

Following the destruction of the Second Temple there was a tendency among the rabbis to mitigate various laws concerning idolatry, which was no longer considered a threat to the Jewish community. Nevertheless these same rabbis continued to reject any compliance with the imperial cult.

[Isaiah Gafni]

**EMRĀNI (Imrāni;** probably a pen name; 1454–after 1536), Judeo-Persian poet. Emrāni was born in Isfahan and died in Kashan. He is considered the second greatest Judeo-Persian poet after \*Shāhin. Emrāni produced the following Judeo-Persian works, the majority of which were discovered after 1960.

1. *Fath-Nāmeḥ* (“Book of Victory”) is an epic poetic paraphrase of the biblical books of Joshua, I and II Samuel, part of I Kings, and the Book of Ruth. This is Emrāni’s longest composition. It was composed in 1474 and consists of about 10,000 couplets. In some *Fath-Nāmeḥ* mss. one may find other poetic compositions such as *Shofetim-Nāmeḥ* and *Pilegesh al ha-Giva* with interpolations which do not belong to Emrāni.

2. *Ganj-Nāmeḥ* (“Book of Treasure”) is a poetic paraphrase of *Pirkei Avot*. Composed in 1536, this is apparently Emrāni’s last important work and consists of about 5,000 couplets.

3. The following are relatively short poems by Emrāni found in collections of mss: (a) *Vājebāt-e Sizdahgāneh*... a poetic paraphrase of Maimonides’ Thirteen Principles; (b) *Hanukkah-Nāmeḥ* (“Book of Hanukkah”) narrates the historical events of Hanukkah; (c) *Entekhāb-e Nakhlestān* (“Choice of the Palm Grove”) is a didactic poetic work; (d) *Sāqi-Nāmeḥ* (“Book of the Cupbearer”) is a mystical-lyrical poem; (e) *Qesse-ye Haft Barādarān* (“Story of the Seven Brothers”), written in prose and verse, narrates the story of Hannah and her seven sons who were murdered because they refused to worship the Greek idols; (f) *Asarah harugei ha-malkhut* (“The Ten Martyrs of the Kingdom”), in prose and verse, relates the torture and death suffered by ten Jewish sages of Mishnaic times; (g) a few other short poems mostly of didactic nature; (h) a few short prose works such as the story of the *\*Akedah* (Binding of Isaac) and *tafsir of Pirkei Avot*.

Some selections of Emrāni’s works have been published in Persian transliteration (Netzer, 1973). The manuscripts of Emrāni’s works are kept in the libraries of the Hebrew University of Jerusalem, the Ben-Zvi Institute, JTS in New York, HUC in Cincinnati, and the British Library in London.

[Amnon Netzer (2<sup>nd</sup> ed.)]

**EMSHEIMER, ERNST** (1904–1989), Swedish musicologist of German birth. Born in Frankfurt on the Main, Germany, Emsheimer studied piano and music theory, and thereafter musicology, at the universities of Vienna and Freiburg, where he received his doctorate in 1927. After concluding his studies he went to Soviet Russia, where he began his research on folk and non-European musical traditions. He was research assistant at the Russian Academy of Sciences in Leningrad from 1932 until 1937, and accompanied a music research expedition in north-

ern Caucasia in 1936. In 1937 he joined a scientific expedition to the northwestern provinces of China. In 1937 Emsheimer immigrated to Sweden, where he intensified the ethnomusicological tradition. From 1949 until his retirement in 1973 he was the curator of the music history museum in Stockholm. After War World II he investigated Georgian folk polyphony. In 1962, he created jointly with Erik Stockmann the first study group on European instruments under the auspices of the International Folk Music Council and founded the famous series of studies dedicated to popular European and non-European instruments under the title *Studia Instrumentorum Musicae Popularis*, of which the first volume appeared in 1969. His writings include *Musikethnographische Bibliographie der nichtslavischen Voelker in Russland* (1943); *Preliminary Remarks on Mongolian Music and Instruments* (1943); *Music of Eastern Mongolia* (1943); and *Lappischer Kultgesang* (1950).

[Amnon Shiloah (2<sup>nd</sup> ed.)]

**EMUNAH**, World Religious Zionist Women’s Organization, the third largest women’s movement in Israel. Founded in Jerusalem in 1925, Emunah was incorporated as a worldwide movement in 1977. World Emunah combines the Israel National Religious Women’s Movement and its sister organizations in 28 countries with a membership of over 150,000. This voluntary organization is devoted to educational and social service programs. Emunah is unique in that it is rooted in Jewish tradition and emphasizes the spiritual and moral heritage of the Jewish people within a Zionist framework. In Israel, Emunah has around 100,000 members.

The Israeli programs include a network of 120 day care centers, six residential homes for deprived children, six high schools, an arts and technology college for girls, and Emunah’s teachers college. Its social-welfare projects in Israel range from literacy programs to group dynamics and family counseling. The organization runs an emergency center for abused children. In Israel, Emunah volunteers’ activities in the absorption of new immigrants have been noted with distinction by the awarding to them of municipal and national awards. In the field of women’s rights, Emunah is active in promoting legislation and representing women in such bodies as the rabbinical courts. The organization also runs a club for business and career women.

In addition to supporting the Israeli projects, the member organizations worldwide conduct adult education outreach programs within their own countries to strengthen their commitment to Jewish values and Jewish living. Emunah worldwide is actively involved in community programs relating to religious education, support for Israel, and pressing contemporary issues affecting world Jewry. Emunah is represented on major Zionist and Jewish bodies in its member countries as well as in international forums.

## ENCYCLOPEDIAS.

### Encyclopedias of General Content in Hebrew and Yiddish Outside of Israel

The first Hebrew encyclopedias were translations or adaptations of Arabic works, which were intended as systematic presentations of the sciences in the medieval Aristotelian scheme, not usually arranged in alphabetical order. The first of these was *Yesodei ha-Tevunah u-Migdal ha-Emunah* by Abraham b. Hiyya ha-Nasi of Barcelona (in the early 12<sup>th</sup> century), which included sections on mathematics, geometry, astronomy, optics, and music. Only the preface and the beginning of this work have been preserved in manuscript. In 1247 Judah b. Solomon ibn Matka, a native of Toledo, Spain, wrote an Arabic work that he later translated into Hebrew as *Midrash ha-Hokhmah*. The first part deals with logic, physics, and metaphysics, in addition to commentaries on passages in Genesis, Psalms, and Proverbs; the second, with mathematics, in addition to a kabbalistic study of the letters of the Hebrew alphabet; there is also an enumeration of Bible passages that are to be interpreted philosophically. Again, only fragments of this encyclopedia have been preserved.

Shem Tov b. Joseph \*Falaquera, another Spanish scholar of the 13<sup>th</sup> century, wrote *De'ot ha-Filosofim*, dealing with physics and metaphysics, based mainly on Averroes. Although the two extant manuscripts of this work ascribe its authorship to Samuel ibn \*Tibbon, Zunz and Steinschneider identify Falaquera as its author. \*Gershon b. Solomon of Arles presents a vivid picture of the scientific works available in Hebrew in the late 13<sup>th</sup> century in his *Sha'ar ha-Shamayim*. In the introduction he states that he used only Hebrew sources or works in Hebrew translation; thus, it is known that at this time some of the works of the major writers of classic antiquity had become part of the Jewish cultural background. His book is divided into three parts: physics, subdivided into a discussion of the four elements, minerals, plants, and animals; astronomy, according to Almagest (see \*Ptolemy), \*Avicenna, \*Averroes, \*Aristotle, and others; and theology or metaphysics, according to Averroes and Maimonides. This work is the oldest medieval encyclopedia to be printed, although in abridged form, first in Venice in 1547 and several times in the 19<sup>th</sup> century, as a part of the program of the East European Haskalah to broaden the horizon of the masses. Based in part on *Sha'ar ha-Shamayim* is the *Shevilei Emunah* by the 14<sup>th</sup>-century Spanish scholar Meir ben Isaac \*Aldabi, whose intent was to combine natural sciences and Jewish religious tradition (Riva di Trento, 1518). Between the 15<sup>th</sup> and 18<sup>th</sup> centuries no major encyclopedia was written by Jews, as their interest in the general sciences declined. In 1530–32 the Sephardi physician Solomon b. Jacob \*Almoli published a plan for such a work, *Me'assef le-Khol ha-Mahanot*, in Constantinople. Another small work was *Kelaz Kazer mi-Kol ha-Rashum bi-Khetav* by Judah ibn Bulat, another exile from Spain in Constantinople, who attempted to organize the sciences systematically (Constantinople, 1531–32; reprint Jerusalem, 1936).

Jacob b. Isaac \*Zahalon, a physician in Ferrara, Italy, had prepared a large work to be called "*Ozar ha-Hokhmot*," but only the third part, devoted to medicine, appeared, *Ozar ha-Hayyim* (Venice, 1683). In the 17<sup>th</sup> century physicians were the only Jews in Central and Eastern Europe who had an opportunity for secular education. Thus, another representative of that profession, Tobias \*Cohn (Tobias b. Moses Narel of Metz), compiled an encyclopedic work, *Ma'ase Toviyyah* (Venice, 1707), covering metaphysics, physics, astronomy, geography, medicine, and pharmacology.

With the rise of the Haskalah, an interest in publishing a general encyclopedia in Hebrew developed. In particular David \*Franco-Mendes, a Jewish community leader and Hebrew poet in Holland, formulated such a suggestion in *Ha-Me'assef* (1785), but except for a prospectus, *Ahavat David*, nothing came of it. A pupil of the Gaon of Vilna, Phinehas Elijah b. Meir Horowitz, tried to present the general sciences from the point of view of Jewish tradition in his *Sefer ha-Berit* (Bruenn, 1797). This work became quite popular, as is evidenced by the publication of several editions in the 19<sup>th</sup> century. In 1856 Julius \*Barasch, a Romanian physician, published the philosophical part of a general encyclopedia under the title *Ozar ha-Hokhmah*. The first alphabetically arranged general encyclopedia in Hebrew was attempted by Isaac Goldmann in Warsaw in 1888; it was called *Ha-Eshkol*, but only six parts came out, and even the first letter of the Hebrew alphabet was not completed.

Joseph \*Lurie and Hayyim Dov \*Horowitz began the first general encyclopedia in Yiddish, *Di Algemeyne Yidishe Entsiklopedye*, in St. Petersburg, Russia, in 1904, but only three parts were published before the venture failed. In 1917 the well-known Yiddish writer and journalist Hillel \*Zeitlin began *Di Ershite Algemeyne un Yudishe Hand-Entsiklopedye* with similar abortive results. David Goldblatt's *Algemeyne Ilustrirte Entsiklopedye* (2 vols., New York, 1920–23) was more successful, but it did not get beyond *alef* either (it should be remembered that an initial *alef* for transliterated words is equivalent in the Latin alphabet to *a, e, i, o, and u*).

The most ambitious attempt in Yiddish encyclopedias was *Algemeyne Entsiklopedye*, published by the Dubnow Fund from 1931, first in Paris and then in New York. After the first five volumes, devoted to general subjects, seven more on Jews and Judaism, arranged according to topic, were published by 1966.

### Encyclopedias of Jewish Content Only

The first large Jewish encyclopedia in alphabetical arrangement was *Pahad Yizhak* (13 vols., 1750–1888) by Isaac ben Samuel \*Lampronti, a physician in Ferrara, who worked on this reference book covering Talmud, rabbinics, and responsa throughout his life, part of it being published posthumously. It was the first such enterprise to be completed to the last letter of the alphabet. In each entry the history of the topic is traced through Mishnah, Talmud, and the responsa up to Lampronti's day.

With the development of the study of Judaism and Jewish history on a scientific basis in the 19<sup>th</sup> century, the Jews sought to emulate others in promoting encyclopedias devoted to their interests alone. The Jewish historian Isaac Marcus \*Jost suggested such a project in his journal *Israelitische Annalen* in 1840. In 1844 the prestigious scholars Moritz Steinschneider and David Cassel published *Plan der Real-Enzyklopaedie des Judenthums, zunaechst fuer die Mitarbeiter*. Some of the articles intended for this work found their way into the general encyclopedia edited by Ersch and Gruber, *Allgemeine Enzyklopaedie der Wissenschaften und Kuenste*, into other journals, or into separate monographs. Another talmudic dictionary was begun by the Prague chief rabbi, Solomon Judah Leib \*Rapoport, under the title *Erekh Millin* (Prague, 1852), but it did not go beyond the letter *alef*.

The first Jewish encyclopedia in German was the *Real-Encyclopaedie fuer Bibel und Talmud* by Jacob \*Hamburger, chief rabbi of the German principality of Mecklenburg-Strelitz. It treated biblical and talmudic subjects in two separate volumes with a six-part supplement and appeared in three editions, the latest between 1896 and 1901. In spite of many defects, it was considered an achievement for its time, since it was helpful in tracing Jewish religious ideas in the Bible and Talmud.

Aḥad Ha-Am's suggestion to publish a Jewish encyclopedia in Hebrew did not gain much support. He had wanted to present the salient areas of Judaism and Jewish history and literature in a systematic, rather than an alphabetical scheme. There were objections that Hebrew literature was in its beginnings and could not sustain such an ambitious venture. Others believed that a general encyclopedia in Hebrew was needed more urgently than one devoted to Jewish subjects only. On Aḥad Ha-Am's suggestion, a sample of the *Ozar ha-Yahadut* was published in Warsaw in 1906, containing four articles by four young scholars who later made their mark in Jewish learning, David \*Neumark, Hirsch (Zevi) Perez \*Chajes, Ismar \*Elbogen, and Joseph \*Klausner.

Despite the great accomplishments in Jewish studies in Europe during the 19<sup>th</sup> century, it was not granted to European Jewry to publish the first synthesis of its rich harvest. Instead, it was the American Jewish community, which at the turn of the century consisted of a population less than half its present size, a large proportion of whom were new immigrants, that published this basic work, *The Jewish Encyclopedia* (12 vols., 1901–06). Under the editorship of Isidore \*Singer and with the participation of hundreds of scholars in the United States and abroad, the attempt was made to bring all Jewish knowledge within the scope of this work. Naturally it, too, had weaknesses, as in its treatment of modern Hebrew literature and the history of East European Jewry, but many of its entries (e.g., those by Louis Ginzberg) have remained unsurpassed statements. Shortly thereafter, Judah David \*Eisenstein prepared a ten-volume encyclopedia in Hebrew, *Ozar Yisrael* (New York, 1906–13). Unlike the *Jewish Encyclopedia*, which took account both of the traditional and the modernist view-

points, its approach was more traditional, but it was considered inadequate in many respects.

Also influenced by the *Jewish Encyclopedia* was the Russian *Yevreyskaya Entsiklopediya* (16 vols., St. Petersburg, 1906–13) under the editorship of such outstanding scholars as Judah Leib \*Katzenelson (Buki ben Yogli), Simon \*Dubnow, David \*Guenzburg, and Albert (Abraham) \*Harkavy. Yet, while omitting some of the material about Jewish life in America that figured so prominently in the *Jewish Encyclopedia*, it concentrated on Eastern Europe and gave full scope to modern Hebrew literature. Its ideology was that of the *Gallut* ("Diaspora") nationalism advocated by Dubnow, but the Zionist point of view was also presented. Thus, it was in a way a complement to the *Jewish Encyclopedia*.

Under the leadership of George \*Herlitz and Bruno Kirschner, the *Juedisches Lexikon* (Berlin, 1927–30), a five-volume work in German, was published. Because of its size it had to be more limited in scope than the *Jewish Encyclopedia* and concentrated more on contemporary Jewish life than had the other major Jewish encyclopedias published earlier in the century. A more ambitious project was the *Encyclopaedia Judaica* (10 vols., Berlin, 1928–34) in German under the editorship of Jacob \*Klatzkin, Nahum \*Goldmann, and Ismar Elbogen. It was intended to present a new synthesis of Jewish knowledge some 20 years after the appearance of the *Jewish Encyclopedia* and to include all those areas neglected in the earlier pioneering work. However, because of the establishment of the Hitler regime in Germany, the plan could not be completed; only ten volumes appeared, through the article "Lyra." Of its Hebrew companion, *Eshkol, Enziklopedyah Yisre'elit* (Berlin, 1929–32), only two volumes were printed, not completing even the first letter. An oddity among encyclopedias with Jewish content published in Germany was the *Sigilla Veri* (4 vols., Erfurt, 1929–31), a work with antisemitic sponsorship in four volumes through the article "Polak."

The need for a more up-to-date and popular encyclopedia in English in the mid-20<sup>th</sup> century was met by a number of one-volume works, which are noted below in the bibliography, and by the *Universal Jewish Encyclopedia* in ten volumes (New York, 1939–43). Similar in purpose to the *Juedisches Lexikon* (whose English translation rights the editors Isaac \*Landman and others had secured at the time of its publication), it concentrated on the more recent past and on the history of American Jewry.

The growth of the Latin American Jewish community is reflected in the *Enciclopedia Judaica Castellana* (10 vols., Mexico, 1948–51), based largely on the *Universal Jewish Encyclopedia* but containing original material for Latin America.

### Encyclopedias in Israel

The first general encyclopedia in Palestine on a large scale was the *Enziklopedyah Kelalit* (6 vols., 1935–37). It was conceived and planned by Joseph Klausner. A work on a larger scale is the *Enziklopedyah Kelalit Yizre'el* (16 vols., 1950–61). Another popular work is the *Enziklopedyah Kelalit Massadah*

(6 vols., 1960–61) with a supplementary volume (1966). The most ambitious Jewish encyclopedia ever attempted is *Ha-Enziklopedyah ha-Ivrit (Encyclopaedia Hebraica; (1949–1981);* first supplementary volume, covering volumes 1–16, 1967; second supplementary volume, 1983), a general, Jewish, and Israel reference work.

The special needs of Israel require, in addition to general and Jewish encyclopedias, specialized ones devoted to such fields as the social sciences, agriculture, and education, as well as Bible and Talmud. The young State of Israel has already met the need to a considerable extent.

### Jews and Judaism in General Encyclopedias

Until the 19<sup>th</sup> century the treatment of Jews and Judaism in encyclopedias as well as in all other reference works was determined by the Christian point of view. Primary attention was paid to the biblical period as a background to Christianity, but very little interest was shown in the period that followed.

Among the first general encyclopedias to depart from this pattern was the Ersch-Gruber *Allgemeine Enzyklopaedie der Wissenschaften und Kuenste* (1818–89), when it included Moritz \*Steinschneider among its contributors. His article on Jewish literature in its volume in 1850 and published separately in English translation in 1857 is considered a classic.

Since that time post-biblical Jewish history and Judaism have generally received more comprehensive and fairer treatment. It is now customary to assign such topics to recognized Jewish scholars. Notable among such encyclopedias are Hastings' *Encyclopedia of Religion and Ethics* (1908–26), *Religion in Geschichte und Gegenwart* (1927–31<sup>2</sup>, 1957–65<sup>3</sup>), *Encyclopedia of the Social Sciences* (1930–35; repr. 1948–49), and *New Catholic Encyclopedia* (1967).

Quite striking is the difference between the earlier and more recent editions of the *Encyclopaedia Britannica*. In its third edition of 1797 the detailed history of the Jews ended with the destruction of the Second Temple in the year 70. The laws of rabbinic Judaism that followed are dismissed as mere "absurdities" deserving no consideration. In a concluding paragraph the history of the following 16 centuries is summarized with persecutions and massacres duly noted, the more tolerant attitude of the present day emphasized, and mentioning the recent emancipation of the Jews in France in 1791.

In the ninth edition of 1881 the history is divided into two articles, "Israel," dealing with antiquity and the medieval period, until the emancipation, written by the German Protestant Bible scholar Julius \*Wellhausen, who gave a fair presentation, also referring to Jewish scholars, such as Jost, Graetz, and Herzfeld, in his bibliography, and "Jews," the period beginning with Mendelssohn, written by Israel Davis, a Jewish lay leader in England. More recent editions have had contributions by Isidore \*Epstein, Norman \*Bentwich, Jacob R. \*Marcus, and other well known Jewish scholars.

### Jewish Encyclopedias

ENGLISH. Major works: *Jewish Encyclopedia*, 12 vols. (1901–

06; 1925<sup>2</sup>; repr., 1963); *Universal Jewish Encyclopedia*, 10 vols. (1939–43); *Encyclopaedia Judaica* (1971, 2006<sup>2</sup>).

Other works: J. De Haas (ed.), *Encyclopedia of Jewish Knowledge* (1934); A.M. Hyamson and A.M. Silbermann (eds.), *Vallentine's Jewish Encyclopedia* (1938); *American Jewish Cyclopaedia* (1943); D.D. Runes, *Concise Dictionary of Judaism* (1959); P. Birnbaum, *A Book of Jewish Concepts* (1964); S. Glustrom, *Language of Judaism* (1966); Z. Werblowsky and G. Wigoder, *Encyclopedia of the Jewish Religion* (1990<sup>2</sup>); J. Neusner, *Encyclopedia of Judaism*, 3 vols. with supplements (1999, 2003); G. Wigoder et al., *New Encyclopedia of Judaism* (2002<sup>2</sup>).

Special encyclopedias: *Interpreter's Dictionary of the Bible*, 4 vols. (1962); G. Wigoder, S. Paul, et al., *Illustrated Dictionary and Concordance of the Bible* (2005<sup>2</sup>); A. Negev and S. Gibson, *Archeological Encyclopedia of the Holy Land* (2001); S. Spector and G. Wigoder, *Encyclopedia of Jewish Life Before and During the Holocaust*, 3 vols. (2001); R. Rozett and S. Spector, *Encyclopedia of the Holocaust* (2000); *Yad Vashem Encyclopedia of the Righteous Among the Nations* (vols. 1–6, 2003–5), in progress; P. Hyman and D.D. Moore, *Jewish Women in America: An Historical Encyclopedia*, 2 vols. (1997); M.D. Sherman, *Orthodox Judaism in America: A Bibliographical Dictionary and Sourcebook* (1996); P.S. Nadell, *Conservative Judaism in America: A Biographical Dictionary and Sourcebook* (1988); K.M. Olitzky, L.J. Sussman, and M.H. Stern, *Reform Judaism in America: A Biographical Dictionary and Sourcebook* (1993); A. Steinberg, *Encyclopedia of Jewish Medical Ethics*, tr. F. Rosner (2003); R. Slater, *Great Jews in Sports* (2000<sup>2</sup>); R. Posner, *Junior Judaica* (1994<sup>2</sup>); G. Wigoder et al., *Student's Encyclopedia of Judaism* (2004).

DUTCH. J. Meijer, *Encyclopaedia Sefardica Neerlandica* (deals with the Sephardi community in Holland).

GERMAN. Major works: *Juedisches Lexikon*, 5 vols. (1927–30), *Encyclopaedia Judaica*, 10 vols. (1928–34), incomplete (*Aachen to Lyra* only).

Other works: E.B. Cohn, *Das juedische ABC* (1935); E. Bin Gorion, et al. (eds.), *Philo-Lexikon; Handbuch des juedischen Wissens* (1937<sup>4</sup>); *Philo-Atlas; Handbuch fuer die juedische Auswanderung* (1938); J.F. Oppenheimer (ed.), *Lexikon des Judentums* (1967; a revision and up-dating of the *Philo-Lexikon*).

Special encyclopedias: J.L. Hamburger, *Real-Encyclopaediefuer Bibel und Talmud*, 2 vols. (1896–1901<sup>3</sup>), Supplement 6 vols.

HEBREW. J.D. Eisenstein (ed.), *Ozar Yisrael*, 10 vols. (1907–13); *Eshkol, Enziklopedyah Yisre'elit*, 2 vols. (1929–32), incomplete – A-Antipas only (Hebrew edition of *Encyclopaedia Judaica*); I. Press, *Erez Yisrael, Enziklopedyah Topografit Historit*, 4 vols. (1951–55<sup>2</sup>); S.Z. Ariel, *Enziklopedyah Me'ir Nativ le-Halakhot, Minhagim, Darkhei Musar u-Ma'asim Tovim* (1960); J. Pevsner, *Enziklopedyah Yehudit* (1966); idem, *Enziklopedyah Yuda'ikah* (1961); C. Roth and G. Wigoder (eds.), *Enziklopedyah shelha-Yahadut*, 2 vols. (1969; revised Hebrew edition of *Standard*

*Jewish Encyclopedia*); Y.T. Lewinsky, *Enziklopedyah shel Havai u-Masoret ba-Yahadut*, 2 vols. (1970).

Bible: B. Natanson, *Ma'arekhet Sifrei Kodesh* (1870); A.H. Rosenberg, *Ozar ha-Shemot Asher be-Khitvei ha-Kodesh*, 10 vols. (1898–1922); *Enziklopedyah Mikra'it*, 8 vols. (1950–82); P. Ne'eman, *Enziklopedyah le-Geografyah Mikra'it*, 4 vols. (1962–65); D. Kimḥi, *Enziklopedyah le-Ishim ba-Tanakh*, 2 vols. (1964?); M. Solieli and M. Berkooz (eds.), *Leksikon Mikra'i*, 2 vols. (1964/65); G. Cornfeld and B. Lurie (eds.), *Enziklopedyah shel ha-Mikra vi-yemei Bayit Sheni* (1967); Talmud and Rabbinics: I. Lampronti, *Pahad Yizhak*, 13 vols. (1750–1888; repr. 1998); M. Guttman, *Maft'e'ah ha-Talmud*, 4 vols. (1906–30), incomplete; H.Z. Medini, *Sedei Hemed*, 16 vols. (1896–1911); *Enziklopedyah Talmudit*, 28 vols. (1947–2005); M. Wulliger, *Kovez ha-Tosafot, Ozar Nehmad*, 3 vols. (1952); I.M. Fishleder, *Mivzar Yisrael* (1958); A.N. Orenstein, *Enziklopedyah le-To'rei-Kavod be-Yisrael*, 4 vols. (1958–63) (encyclopedia on honorific titles in the Bible and Rabbinic literature); A. Maged, *Beit Aharon* (encyclopedia of talmudic principles and personalities), 11 vols. (1962–78).

HUNGARIAN. *Magyar Zsidó Lexikon* (1930), 1929 edition published as *Zsidó Lexikon*.

PORTUGUESE. F. Levisky, *Enciclopédia Judaica Resumida* (1961); C. Roth, *Enciclopédia Judaica*, 3 vols. (1967).

RUSSIAN. *Yevreyskaya entsiklopediya*, 16 vols. (1906–13); "Shorter Jewish Encyclopedia," 11 vols. (1976–2005).

SPANISH. P. Link, *Manual Enciclopédico Judío* (1950); *Enciclopedia Judaica Castellana*, 10 vols. (1948–51); E. Weinfeld, *Judaismo Contemporáneo* (1961).

YIDDISH. *Algemyne Entsiklopedye: Yidn*, 7 vols. (1939–66); H.B. Bass (ed.), *Dertsigungs-Entsiklopedye*, 3 vols. (1957–59), in progress; S. Petrushka, *Yidishe Folks-Entsiklopedye*, 2 vols. (1943, 1949<sup>2</sup>).

SERBO-CROATIAN. O. Mandić, *Leksikon judaizma i krsanstva* (1969).

Abiram, *Enziklopedyah li-Sport u-le-Tarbut ha-Guf*, 2 vols. (1966<sup>2</sup>).

[Theodore Wiener]

**ENDECJA** (so called after the pronunciation of N.D., abbr. of Polish "Narodowa Demokracja," National Democracy; also Endeks), right-wing political party which became a focus for Polish antisemitism in the first half of the 20<sup>th</sup> century. The party was active in all parts of partitioned Poland. It originated from the "National League," established at the end of the 19<sup>th</sup> century, to unite Poles of various political allegiance to work for the resurrection of Poland. At first the liberal and right-wing tendencies in the party were balanced, but from 1903 the chauvinist tendency gained in strength, finding expression in struggle against the Jews and a stand against liberalism, among other objectives. It also adopted a pro-Russian and anti-German policy. In Galicia, Endecja was set up in 1905, where it was anti-Ukrainian, and in 1907 won a victory in the elections to the Austrian parliament in which its representative was elected president of the "Polish club" of all Polish deputies in the parliament. Between 1907 and 1911 Endecja was split and weakened by an internal crisis over its pro-Russian policy. During the elections to the fourth Duma in 1912 in Warsaw, when the Jewish vote tipped the balance in favor of a Socialist candidate against the Polish majority, the occasion was used by Endecja as a springboard to strengthen the party. Under the leadership of Roman \*Dmowski, Endecja proclaimed an anti-Jewish economic boycott, which was carried out by the mass of Poles. During World War I, the party supported Russia and the Allies and achieved its maximum influence on the future of Poland through the establishment of the National Polish Committee, in which Dmowski played a decisive role as chairman. This committee was recognized as the official representative of the Polish nation at the Versailles Peace Conference. The Endecja-led delegation took part in the coalition government of 1919 headed by I. Paderewski. Endecja became the dominant party in the first elected Polish parliament (Sejm), and took a share in several governments until Pilsudski's coup in 1926. Active mainly on behalf of the interests of the petty bourgeois urban classes, the party was adept in making political capital out of emotionally charged issues, such as a chauvinistic attitude toward the national minorities. Endecja continued its extreme antisemitic stand in its struggle to preserve the Polish character of the towns in Poland against Jewish influence and economic competition. Its connections with capitalist circles and the clergy determined its objectives in domestic policy. Endecja was instrumental in

the passing of various laws intended to curtail Jewish influence on the Polish economy and culture. It was active in the numerus clausus case of 1923, and later influenced the youth in the universities to demonstrate against the Jewish students, leading to bloody incidents. Concerning discrimination in commercial taxation Endecja found it difficult to remain consistent, since the party largely represented the urban element in Poland. However it acted energetically regarding the extension of the government monopoly, and in support of Polish cooperatives – all in an anti-Jewish direction – and in the economic restriction of Jews, even if the aims did not correspond with the party's basic principles concerning the sanctity of private property and free enterprise. Through the economic boycott Endecja inspired the \*Rozwoj organization. The party's antisemitic influence was strong in military circles, particularly among the Polish volunteers who returned after the war from France and the United States, led by General \*Haller. With Hitler's rise to power and the spread of Nazism in Europe, Endecja changed its traditional attitude toward Germany, which it had always considered Poland's principal enemy. The party's youth faction, influenced by Fascist ideas, founded a new body, \*NARA, that saw in the Nazi regime a desirable example for Poland. After the outbreak of World War II and the collapse of the Pilsudski regime, which had been Endecja's political opponent, the party's influence increased among Polish émigré circles, both among the army reorganizing abroad and the government-in-exile, established first in France and later in England. During the Nazi occupation Endecja was also active in the nationalist underground movement "Armja Krajowa," which in many cases acted against Jews. In 1970 it still had adherents among Poles outside the country.

**ENDELMAN, TODD M.** (1946– ), scholar of Jewish history. Born in Fresno, Calif., he was educated at the University of California at Berkeley, and at Warwick University, Coventry, England, and the Hebrew Union College-Jewish Institute of Religion. He received his doctorate from Harvard University in 1976. He was an assistant professor of Jewish history at the Bernard Revel Graduate School of Yeshiva University in New York from 1976 to 1979 and a lecturer in history at Hebrew Union College-Jewish Institute of Religion in 1979. From 1979 to 1985 Endelman was an associate professor of modern Jewish and European history at Indiana University, Bloomington. He became the William Haber Professor of Modern Jewish History at the University of Michigan, Ann Arbor, in 1985, and the director of the university's Jean and Samuel Frankel Center

for Judaic Studies. In 1982 and 1999 he was a visiting scholar at the Oxford Centre for Postgraduate Hebrew Studies.

Endelman is known as a specialist in the social history of the Jews of Western Europe, particularly Anglo-Jewish history, and his work examines conversion and other forms of radical assimilation. His 1979 work, *The Jews of Georgian England, 1714–1830: Tradition and Change in a Liberal Society*, received the National Jewish Book Award for History and the A.S. Diamond Memorial Prize of the Jewish Historical Society of England. His other works include *Radical Assimilation in English Jewish History, 1656–1945* (1990) and *The Jews of Britain, 1656–2000* (2002). He served as editor of (and contributor to) *Jewish Apostasy in the Modern World* (1987) and *Comparing Jewish Societies* (1997). He was coeditor, with Tony Kushner, of *Disraeli's Jewishness* (2002). He has written extensively for academic journals and has contributed to many works, including *The Legacy of Jewish Migration: 1881 and Its Impact* (1983), *History and Hate: The Dimensions of Anti-Semitism* (1986), *Living with Anti-Semitism: Modern Jewish Responses* (1987), and *The Self-Fashioning of Disraeli, 1818–1851* (2000).

A fellow of the American Academy for Jewish Research, he is also a member of the American Historical Association, the Association for Jewish Studies, and the Jewish Historical Society of England. He has received fellowships from the National Endowment for the Humanities, the Memorial Foundation for Jewish Culture, the Lucius N. Littauer Foundation, and the Lilly Endowment. Endelman's later research involves the study of Jewish apostasy in Europe and America from the Enlightenment to the present.

[Dorothy Bauhoff (2<sup>nd</sup> ed.)]

**ENDINGEN**, town in Baden, Germany, site of a notorious \*blood libel. Jews are first mentioned there in 1331; in 1349 they were affected by the \*Black Death persecutions. When the headless corpses of two adults and two children were found in the grounds of the cemetery in March 1470, Rabbi Elias and his two brothers (granduncles of \*Joseph b. Gershon of Rosheim) were accused of ritual murder, tortured, put on trial, and burned at the stake on April 8, 1470. On May 5, Emperor Frederick III condemned the executions on the grounds that the Jews were under imperial protection and ordered the release of other imprisoned Jews, repeating this demand on June 22 and stressing papal prohibitions of the blood libel. In consequence of the libel, the Jews were expelled from Endingen. Despite imperial and papal disapproval, the blood libel story was kept alive; the remains of the supposed victims were enshrined in the altar of the Church of St. Peter. The story was reenacted in the *Endinger Judenspiel*, first performed before huge crowds in 1616. A church bell cast in 1714 bears reliefs of the headless children. Carrying the children's relics in church processions was prohibited under Emperor \*Joseph II (1765–90). By 1871 some Jews were living in the town once more. Their number reached 43 in 1888, but declined to ten in 1925, and five in 1933. The remaining couple was deported

in 1940. In 1967 the remains of the “martyred” children were removed from the church.

**ENDINGEN AND LENGNAU**, villages in the Swiss canton of \*Aargau, in the Surbtal near the German border. A few Jewish families are known to have lived there during the Middle Ages, when the villages were in the county of Baden, but organized communities were not formed until early in the 17<sup>th</sup> century. Around 1650 Marharam (Meir) Guggenheim was their leader. The legal status of the Jews was based on letters of protection, which had to be renewed (and paid for) periodically. From 1696 these letters were renewed every 16 years, the last dating from 1792. The letters authorized them to trade in the whole Baden region, though not in real estate, but for the most part they engaged in the sale of livestock. They were authorized to grant loans against movable property only. The number of Jewish houses was limited and a Jew and non-Jew were forbidden to live under the same roof. The Jews were subject to the bailiff, but they had recourse to their rabbis in civil and religious affairs. The 1776 letter of protection limited Jewish residence in the county of Baden to Endingen and Lengnau only. From 20 households in the entire county in 1634, the number grew to 35 in 1702, 94 in 1761, 108 in 1774, and 240 in 1890.

A cemetery was leased to the Jews in 1603 on a small island in the Rhine, called the *Judenaule* or *Judeninsel*. In 1750 they were allowed to acquire another cemetery (*Waldfriedhof*), halfway between the two villages. In the same year a permanent synagogue was dedicated in Lengnau (which had no church!), and in Endingen in 1764; both communities shared the services of a rabbi from around the same date. The synagogues were rebuilt in 1848 and 1852 respectively.

The French Revolution and the formation of the Helvetic Republic brought the Jews of Endingen and Lengnau no nearer to civic and political emancipation. By a law of 1798 they at least achieved the status of other aliens in the republic. When the French left in 1803, the Christian population of the district rioted, plundering Jewish homes, as had already happened in 1729 and recurred in 1861. The Jews' Law of 1809 was a retrograde move, and like the laws of 1824 (*Organisationsgesetz*) and 1835 (*Schulgesetz*) led to increased interference in the autonomy of the communities, which by then had achieved the legal status of public corporations. The struggle for full equality continued and was successful only in 1878. The Reform movement led to sharp controversies within the communities, but the majority remained loyal to tradition. The Jewish scholars J. \*Fuerst and M. \*Kaysersling served as rabbis of the communities from 1854 to 1858 and 1861 to 1870

respectively. The Jewish population of Endingen and Lengnau, around 1,500 in 1850, had decreased to less than 100 by 1950, and in 1962 the combined community had only 17 members. The Swiss-Jewish Home for the Aged was established in Lengnau in 1903.

Guggenheim-Gruenberg, *Die Sprache der Schweizer Juden von Endingen und Lengnau* (1950); idem, *Aus einem alten Endingen Gemeindebuch* (1952); idem, *Die aeltesten juedischen Familien in Lengnau und Endingen* (1954); idem, *Der Friedhof auf der Judeninsel im Rhein ...* (1956).

**ENDLICH, QUIRIN** (d. 1888), antisemitic journalist in Vienna called the “Judenfresser” (“Jew-eater”), particularly prominent during the revolution of 1848. Endlich first contributed to S. \*Ebersberg's *Zuschauer*, later founding *Schild und Schwert* (“Shield and Sword”), with a column entitled “Judenkontrolle” which heaped denunciations and obscenities upon the Jews. Taking advantage of the newly proclaimed freedom of the press, Endlich called the Jews “Austria's greatest disaster” and asserted that all their activities were destructive. His book, *Der Einfluss der Juden auf unsere Civilisation*, was published in 1848. According to Endlich, the Jews had instigated all the unrest of March 1848 in order to achieve their emancipation. To divert public resentment, they stimulated hatred against the real benefactors of the people, i.e., the aristocracy and the army. By building railways the Jews ruined the innkeepers and carters, and their factories ruined the artisans. His style and methods were later adopted by the Austrian \*Christian Social Party.

[Israel Smotricz]

**EN-DOR** (Heb. עֵין דֹּרַר, עֵין דָּאָר).

(1) A city in the territory of Issachar that was occupied by the strong Manasseh tribe (Josh. 17:11). The biblical statement that Gideon's triumph over the Midianites took place at En-Dor (Ps. 83:11) corresponds well with its location north of the hill of Moreh (Gibeath-Moreh, Judg. 7:1). The city's notoriety is mainly due to Saul's visit to “the woman that divineth by a ghost” – the famous witch of En-Dor (1 Sam. 28:7). Saul disguised himself because he and his army were then at Gilboa and the Philistines at Shunem and he had to pass near the enemy camp to reach En-Dor. Eusebius describes it as a very large village 4 m. (6½ km.) south of Mount Tabor and north of the Little Hermon (al-Nabi Dahī), and also mentions its proximity to Na'im, near Scythopolis (Onom. 34:8; 94:20). En-Dor seems to have been originally part of the district of Sepphoris and was detached from it with Na'im to form a separate district. The name is preserved in 'Indūr, east of Na'im and north of the hill of Moreh. Tell al-ʿAjjūl or Khirbat al-Şafşāfa, two tells in the vicinity of Na'im containing Iron Age remains, have been suggested as possible sites of the ancient city.

[Michael Avi-Yonah]

(2) The modern kibbutz of En Dor, S.E. of Mt. Tabor, was founded on June 16, 1948, a few days after the region was secured by Israel forces in the War of Independence. It is affiliated to Kibbutz Arzi ha-Shomer ha-Za'ir. Its settlers include Israel-born pioneers and immigrants from the United States, Bulgaria, Turkey, Germany, and South America. Its economy was based on field crops, poultry, dairy cattle, and a factory for modern electronic equipment. The kibbutz also operated a station for seed development. In the mid-1990s the population was approximately 635, rising to 783 in 2002.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**BIBLIOGRAPHY:** Zafir, in: *BJPES*, 14 (1948/49), 93; Abel, *Geog.* 2 (1938), 316; Zori, in: *PEQ*, 84 (1952), 114ff.; Aharoni, in: *JNES*, 26 (1967), 213., n. 9.

**EN-DOR, WITCH OF**, the popular designation of a medium from the town of En-Dor in Manasseh, who was consulted by King \*Saul (1 Sam. 28:7–25). (The woman is not designated “witch,” Heb. *mekašepah*.) The narrative begins with a report of the Philistine advance; their superiority is so great that Saul, seized with terror, vainly seeks ways of discovering the will of God. In desperation, he resorts to necromancy, which he himself has outlawed (*ibid.* 28:3; cf. Deut. 18:11). Saul finds the necromancer of En-Dor, who is persuaded to accede to his request to conjure up \*Samuel. The prophet rebukes Saul and predicts his defeat at the hands of the Philistines. The woman, who had recognized Saul, solicitously provides him with a meal before he departs.

[Shlomo Balter]

### In the *Aggadah*

According to the *aggadah*, the witch of En-Dor was the mother of \*Abner and was called Zephaniah (the hidden one; *PDRE* 33), while Pseudo-Philo calls her Sedecla (unrighteous) and tells that she deceived Israel with her sorcery for 40 years (Pseudo-Philo 64:3–5). The rabbis state that the evocation of Samuel took place within 12 months of his death when the body has not yet decomposed and the soul still hovers near it (Shab. 152b). The witch knew it was Saul who called upon her because the ghost appeared face upward, while for an ordinary person it comes face downward (Lev. R. 26:7). From the details given in this story, the rabbis concluded that the necromancer sees the spirit but does not hear it, while the person that evokes the spirit hears its voice but does not see it. Others present neither see nor hear it (Lev. R. 26:7).

Two interpretations are given of the words “*Elohim Olim*” (1 Sam. 28:13). One is that Samuel was evoked like a god and thus told Saul, “Do you not know that just as punishment is inflicted upon the worshiper so it is inflicted upon the worshipped?” The other is that the word “*elohim*” refers to Moses (Ex. 7:1). Samuel, fearing that the Day of Judgment had come, brought Moses up with him to act as his advocate.

**BIBLIOGRAPHY:** Ginzberg, *Legends*, 4 (1913), 70, 73; 6 (1928), 235–8.

**°ENDRE, LÁSZLÓ** (1895–1946), Hungarian antisemite. After World War I Endre joined various antisemitic organizations and published anti-Jewish pamphlets, including a booklet in 1936 on the *Protocols of the \*Elders of Zion*. In 1937 he organized the “Socialist Party for the Defense of the Race,” which merged with Szalasi’s party in August of that year. His administrative career started in the White Terror period; he served as county sheriff in various places and from 1923 on in Gödöllő. In 1937, as deputy prefect of the Pest district, he became known for his brutal orders against the Jews. In 1940, in a memorandum to Prime Minister Teleky, he proposed the sterilization of the Jews serving in forced labor units. He maintained close ties with the German Nazi party and attended several of its conventions.

Shortly after the formation of the puppet government under Sztójay (March 1944), he became director-general of the Ministry of Interior, with the special assignment of dealing with the “Jewish problem.” He then issued various orders for the concentration of the Jews in ghettos, including the secret order of April 14, 1944, providing for the establishment of ghettos in Hungary. In his statement to the Israeli Police, Adolf \*Eichmann described Endre as a very clever man who needed no urging to act against the Jews; on the contrary, he was sometimes forced to restrain Endre. In his negotiations with (Israel) Rezső \*Kasztner, Eichmann on one occasion hesitated to agree to one of Kasztner’s requests, wondering “What will Endre say?” During the Soviet advance into Hungary in 1945, Endre fled to Austria, where he was caught by an American unit, turned over to Hungary, sentenced to death, and executed in Budapest.

[Yehouda Marton]

**ENELOW, HYMAN (Hillel Gershon)** (1877–1934), U.S. Reform rabbi, scholar, and writer. Enelow, who was born in Kovno, Lithuania, went to the U.S. as a young man, age 16, and was ordained by Hebrew Union College in 1898. Enelow served as rabbi of Temple Israel, Paducah, Kentucky (1898–1901), Temple Adath Israel, Louisville, Kentucky (1901–12), and Temple Emanu-El, New York (1912–34). During World War I, Enelow served in France with the Jewish Welfare Board. He was vice president of the Central Conference of American Rabbis (1925–27), its president (1927–29), and a member of both the American Historical Association and the American Jewish Historical Society. Enelow was instrumental in having chairs for Jewish studies established at Harvard (with the aid of his friend Lucius \*Littauer) and Columbia (aided by Mrs. Nathan Miller). His numerous books on Jewish religion include the following: *The Synagogue in Modern Life* (1916); *The Faith of Israel* (1917); and *A Jewish View of Jesus* (1920). His *Selected Works* were published in four volumes by F. Levy in 1935.

Enelow's four-volume edition of Israel \*Al-Nakawa's *Menorat ha-Ma'or* (1929–32) was an important contribution to Jewish scholarship. His thesis that this work served as the model for Isaac \*Aboab's work of the same name was widely discussed though not universally accepted. Of equal importance is Enelow's edition of *Mishnat Eliezer* (or *Midrash of 32 Hermeneutic Rules*, with an English introduction and full apparatus, 1933). A collection of manuscripts was presented in his memory to the Jewish Theological Seminary, New York, by his friend Mrs. Nathan Miller. His private library of over 20,000 volumes was also willed to the Seminary.

#### EN-GANNIM (Heb. עֵיִן גַּנִּים).

(1) A locality in the territory of Judah, about 2 mi. (3 km.) south of Beth-Shemesh, that is mentioned in the Bible together with Zanoah (Josh. 15:34). Its identification with 'Ayn Faṭīr near Beit Jimal has been proposed.

(2) A levitical city in the territory of Issachar (Josh. 19:21; 21:29). This has been identified by various scholars with the modern Jenin on the southern extremity of the Jezreel Valley, which Josephus mentions (*Wars*, 3:48) as Ginaea, on the northern border of Samaria. Jenin, however, is probably the biblical Beth-ha-Gan ("gardenhouse," 11 Kings 9:27), and a more plausible identification is Khirbat Beit (Bayt) Jann near Jabneel on the northern border of Issachar.

[Michael Avi-Yonah]

#### EN-GEDI (Heb. עֵיִן גֵּדִי).

(1) An oasis on the western shore of the Dead Sea and one of the most important archaeological sites in the Judean Desert. En-Gedi (En-Gaddi in Greek and Latin; 'Ayn Jiddi in Arabic) is actually the name of the perennial spring which flows from a height of 656 ft. (200 m.) above the Dead Sea. In the Bible, the wasteland near the spring where David sought refuge from Saul is called "the wilderness of En-Gedi" and the enclosed camps at the top of the mountains, the "strongholds of En-Gedi" (1 Sam. 24:1–2). En-Gedi is also mentioned among the cities of the tribe of Judah in the Judean Desert (Josh. 15:62). A later biblical source (11 Chron. 20:2) identifies En-Gedi with Hazazon-Tamar but this is rejected by most scholars. In the Song of Songs 1:14 the beloved is compared to "a cluster of henna in the vineyards of En-Gedi"; the "fishers" of En-Gedi are mentioned in Ezekiel 47:10.

In later literary sources, Josephus speaks of En-Gedi as the capital of a Judean toparchy and tells of its destruction during the Jewish War (*Wars*, 3:55; 4:402). From documents found in the "Cave of the Letters" in Naḥal Ḥever, it appears that in the period before the Bar Kokhba War (132–135), the Jewish village of En-Gedi was imperial property and Roman

garrison troops were stationed there. But in the time of Bar Kokhba, it was under his control, and was one of his military and administrative centers (see \*Judean Desert Caves). In the Roman-Byzantine period, the settlement of En-Gedi is mentioned by the Church Fathers; Eusebius describes it as a very large Jewish village (*Onom.* 86:18). En-Gedi was then famous for its fine dates and rare spices, and for its balsam.

After surveys of the area, five seasons of excavations were conducted at En-Gedi by B. Mazar, T. Dothan, and I. Dunayevsky between the years 1961–62 and 1964–65. The settlement of En-Gedi was found to have been established only in the seventh century B.C.E. with no evidence of occupation in the time of David (tenth century B.C.E.). Excavations showed that Tell Goren (Tell el-Jurn), a small hill above the southwestern part of the plain near Naḥal Arugot, was one of the main centers in the oasis beginning with the Israelite and especially in the Iron II, Hellenistic, and Roman-Byzantine periods. Surveys of the area revealed that the inhabitants of En-Gedi had developed an efficient irrigation system and engaged in intensive agriculture. The combination of abundant water and warm climate made it possible for them to cultivate the palm trees and balsam plants for which En-Gedi was renowned. The settlement was apparently administered by a central authority which was responsible for building terraces, aqueducts, and reservoirs, as well as a network of strongholds and watchtowers along the road linking En-Gedi with Teqoa.

Five periods of occupation were uncovered on Tell Goren. The earliest settlement, Stratum v, was a flourishing town which had spread down the slopes of the tell dating from the Judean kingdom (c. 630–582 B.C.E.). Various installations, especially a series of large clay "barrels" fixed in the ground, together with pottery, metal tools, and ovens indicated that workshops had been set up for some special industry. This discovery conforms with various literary sources (Josephus and others) which mention En-Gedi as a center for the production of opobalsamon ("balsam"). It can thus be assumed that En-Gedi was a royal estate which ran this costly industry in the service of the king. This first settlement was apparently destroyed and burned by Nebuchadnezzar in 582/1 B.C.E.

The next town on the tell (Stratum IV) belongs to the Persian period (fifth–fourth centuries B.C.E.). Its area was more extensive than the Israelite one and its buildings were larger and well-built. A very large house, part of it two-storied, which contained 23 rooms, was found on the northern slope of the tell. En-Gedi at this time was part of the province of Judah as attested by the many sherds inscribed "Yehud," the official name of the province.

Stratum III belongs to the Hasmonean period. Its famous dates are mentioned in this period by Ben Sira (*Ecclus.* 24:14). En-Gedi flourished, especially at the time of Alexander \*Yannai and his successors (103–37 B.C.E.). A large fortress on the tell was probably destroyed in the period of the Parthian invasion and the last war of the Hasmoneans against Herod.

The next occupation (Stratum II) contains a strong fortress on the top of the tell surrounded by a thick stone wall

with a rectangular tower. This settlement is attributed to the time of Herod's successors (4–68 C.E.); it was destroyed and burned apparently during the Jewish War in 68 C.E. Coins from the “Year Two” of the war were found in the area of the conflagration.

During the Roman-Byzantine period (Stratum I) the inhabitants of the tell lived in temporary structures and cultivated the slopes of the hill (third–fifth centuries C.E.). It appears that at least from the time of the Herodian period the main settlement at En-Gedi moved down to the plain, east and northeast of Tell Goren between Nahal David and Nahal Arugot.

A Roman bath was found in the center of this plain about 660 ft. (200 m.) west of the shore of the Dead Sea. It is dated by finds, especially six bronze coins, to the period between the fall of the Second Temple and the Bar Kokhba War.

A sacred enclosure from the Chalcolithic period was found on a terrace above the spring. It consists of a group of stone structures of a very high architectural standard. The main building was apparently a temple which served as the central sanctuary for the inhabitants of the region.

Excavations (1970) brought to light the remains of a Jewish settlement dating from the Byzantine period. The synagogue had a beautiful mosaic floor depicting peacocks eating grapes, and the words “Peace on Israel,” as well as a unique inscription consisting of 18 lines which, inter alia, calls down a curse on “anyone causing a controversy between a man and his fellows or who (says) slanders his friends before the gentiles or steals the property of his friends, or anyone revealing the secret of the town to the gentiles. ...” (According to Lieberman, it was designed against those revealing the secrets of the balsam industry.) A seven branched menorah of bronze and more than 5,000 coins (found in the synagogue's cash box by the ark) were also uncovered.

[Benjamin Mazar]

Since the writing of the entry above by Benjamin Mazar, new archaeological work and historical studies concerning En-Gedi have been made. En-Gedi is an oasis on the fringe of the Judean Desert, situated in the middle of the western shore of the Dead Sea, in the rift valley, the lowest place on earth. The climate of the rift valley is arid and climatic changes have in the past influenced the flow of the springs as well as the levels of the Dead Sea. The source of the springs is in the aquifer of the Judean Group of the Cenoman-Touron Formation. In the past, there were ten springs, but only four are active today: Arugot, David, En-Gedi, and Shulamit.

En-Gedi is mentioned for the first time in the Bible as Hazazon Tamar (Gen. 14:7), which was identified as En-Gedi (II Chron. 20: 2). In I Samuel 23:29; 24:2–3, David took refuge in the wilderness of En-Gedi. En-Gedi is mentioned once in each of the Talmudic writings (TJ, Shevi'it 9:2, 38d; TB, Shabbat 26a). The inhabitants of En-Gedi made their living from agriculture. They cultivated a very poor marl and stony soil with irrigation channels from the waters of the springs. They

also collected salt and asphalt (bitumen) from the shores of the Dead Sea, as well as chunks of sulfur from the marl plains for the production of medicines. The main cultivations in this oasis were palm trees and barley; balsam, a cash crop, was also grown in the region. Writers from the Roman period praised the excellent dates that grew in En-Gedi and Judaea (Pliny, *Hist. Nat.* 13:6, 26; Josephus, *Ant.*, 9: 7). The palm tree, a symbol of Judaea, was used as a motif on Jewish coins and Flavian victory coins. Transportation between En-Gedi and other parts of the country was dictated by geographical and political conditions. During ancient times En-Gedi had a strong connection with Jerusalem. During the First Temple period, En-Gedi was first established as a military outpost on the western shores of the Dead Sea over against Moab and Edom. Later maritime transportation was undertaken on the Dead Sea, as has been proven by the discovery of wooden and stone anchors, as well as of anchorages near En-Gedi and at other locations around the Dead Sea. Although sailing vessels have not yet been found underwater, drawings and graffiti of sailing ships are known from Masada and on the mosaic map of Madaba. The connection between En-Gedi and Nabataea, and later with Arabia, is attested by ancient historians, on the one hand, as well as in the Judean Desert Documents, on the other. Nabatean coins have also been found in archaeological excavations.

During the 1980s–90s a systematic archaeological survey was conducted in the area, and a number of intact burials of the Second Temple period were revealed and excavated. These were family tombs and the bodies were wrapped with linen shrouds and interred in wooden coffins, usually without funerary objects (Hadas, 1994). In the late 1990s a large area of the Byzantine village adjacent to the synagogue was excavated and many dwellings were revealed, all of which supports Eusebius' description of En-Gedi as “a large village of Jews” (Hirschfeld, in press). During this project the irrigated agricultural systems were also investigated and excavated (Hadas, 2002). In recent years (2003–5), a new suburb of En-Gedi dating from the Second Temple period has been revealed to the northwest of the synagogue (Hadas, forthcoming). Caves in the cliffs behind En-Gedi have also been surveyed, revealing Bar-Kochba coins and papyri in some of them, and much earlier Persian period ornaments in another. Additional excavations conducted in the area of the synagogue area (Hadas, in press) have shown that the Byzantine village was destroyed and burnt in the sixth century C.E. This was the end of the Jewish settlement, which had existed here almost continuously for about one thousand years. A gap in the occupation of En-Gedi existed until the 13<sup>th</sup>–14<sup>th</sup> centuries C.E., when a Mamluke village was founded at the spot and existed there for about a century. Remains of this period were found above the synagogue site and in the general vicinity. A water mill was also built at this time (Hadas, 2001–2) and it still exists near the En-Gedi spring. En-Gedi remained in ruins until the establishment of the State of Israel in 1948.

[Gideon Hadas (2<sup>nd</sup> ed.)]

(2) Settlement in the Judean Desert on the west bank of the Dead Sea, founded by Israeli-born youth first as a \*Naḥal military outpost in 1953 and later in 1956 as a civilian kibbutz affiliated to the Iḥud ha-Kevuẓot ve-ha-Kibbutzim. Its primary functions were, initially, those of defense; but it also successfully developed farming methods adapted to the local conditions of a hot desert climate and an abundance of fresh water from the En-Gedi Springs. These are fed by an underground flow (from the rain-rich intake area on the western slopes of the Hebron Hills), which emerges on a fault line. An area surrounding the Springs has been declared a nature reserve because of the small enclave of Sudano-Deccanian flora existing there. A field school of the Society for the Preservation of Nature, a youth hostel (Bet Sara), and a recreation home are all situated there. Until 1967 the means of transportation to En-Gedi were by land or sea from Sodom, on the south side of the Dead Sea. In 1962 a narrow asphalt road was built and it replaced the 50 km. dirt road that was frequently destroyed by flash floods in the winter months. At that time there was a motorboat that sailed from Sodom to En-Gedi, and a medical doctor used to arrive once a week by light plane (Piper) from Beer Sheva. In 1971 an asphalt road was built northwards and connected En-Gedi to Jerusalem, shortening the travel time from En-Gedi to Tel Aviv, from 5 to 2 hours. The kibbutz economy was based mainly on tourism, including a guest house and medicinal waters. Farming was based on mango plantations, date palms, and herbs. The kibbutz had a 25-acre botanical garden with 900 plant species from all over the world. In 2002 the population of En-Gedi was 603.

**ENGEL, ELIOT L.** (1947– ), U.S. congressman. Engel was born and raised in New York. His family lived in a third floor Bronx tenement and around the time of his bar mitzvah moved to middle-class public housing. During the summers of his teenage years, he worked as an actor. In 1969, he graduated from Hunter-Lehman College with a B.A. in history and received a master's degree in guidance and counseling in 1973 from Herbert H. Lehman College of the City University of New York. In 1987, he received a law degree from New York

Law School. After graduation from college he was a teacher and guidance counselor in the New York school system before entering politics.

He began his political career as a member of the New York Assembly (1977–88) where he chaired the Committee on Alcoholism and Substance Abuse as well as the Subcommittee on Mitchell-Lama Housing. After six terms in the Assembly, he challenged ten-term incumbent Mario Biaggi, who had been convicted of bribery and extortion. He beat him in a Democratic primary, which was paramount to election in the district. He served in Congress from 1989. In Congress he was a member of the Energy Committee and a member of the International Relations Committee. In typical New York fashion he pursued the three I's strategy: Israel, Ireland, and Italy. He was outspoken in his defense of Israel, and a prime mover of the bill to move the American Embassy from Tel Aviv to Jerusalem. He also pressed the issue of American participation in Bosnia during the crisis of the mid-1990s. Engel was a member of the Congressional Human Rights Caucus, the Democratic Study Group on Health, and the Long Island Sound Caucus. He co-chaired the Albanian Issues Caucus and was an Executive Board Member of the Congressional Ad Hoc Committee on Irish Affairs.

**BIBLIOGRAPHY:** L.S. Maisel and I. Forman, *Jews in American Politics* (2001); K.F. Stone, *The Congressional Mynan: The Jews of Capitol Hill* (2002).

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**ENGEL, JOEL (Yuli Dimitriyevich; 1868–1927)**, composer and music editor, a pioneer of music in Erez Israel. Born in Berdyansk, Russia, he studied at Kharkov and the Moscow Conservatory. He was music critic of the journal *Russkiye Vedomosti* for 20 years and in 1911 he published a collection of criticism, *At the Opera*. The turning point in Engel's work came in 1900, when he began to adapt Jewish folk songs and to organize concerts for their performance. His activity attracted young Jewish musicians and the Society for Jewish Folk Music was founded in 1908. In 1912 Engel took part with S. \*An-Ski in an ethnographical expedition to South Russia, and collected many folk songs among the Jewish population. Engel found in the Ḥasidic wordless *niggunim* manifestations of an original Hebrew melos. He believed that folk songs sung for years by the Jewish people, even though containing alien elements, reflected the Jewish spirit. He applied this idea in his most important composition, the music to An-Ski's play *The Dybbuk* (published as a suite for orchestra, 1926). He also set Hebrew poems of \*Bialik and \*Tchernichowsky to music. In 1924 he settled in Tel Aviv and devoted himself to the creation of original Hebrew-Palestinian songs. His music for Peretz's works was performed at the Peretz Festival in the Ohel Theater in 1926. He also wrote children's songs. In 1916 in Moscow he published *Fifty Children's Songs* (in Yiddish). More songs appeared in the booklets *Yaldei Sadeh* (1923) and *Shirei Yeladim*, and in a posthumous collection *Be-Keren Za-*

vit (1927). The Tel Aviv municipality named a prize for Israel composers after Engel.

**BIBLIOGRAPHY:** Sendrey, Music, index; A. Weisser, *Modern Renaissance of Jewish Music* (1954), 71–80; M. Ravina, *Yo'el Engel, Ḥayyav vi-Yzirato* (1937), includes bibliography; idem, *Yo'el Engel ve-ha-Musikah ha-Yehudit* (1947), includes list of compositions and books written by J. Engel.

[Simha Katz]

**ENGEL, JOSEPH BEN JUDAH** (1859–1920), Polish rabbi and halakhist. Born in Tarnow, after his marriage he settled in Bendin, where his father-in-law lived, and there became famous as one of the greatest of Polish rabbis. In 1906 he was elected *av bet din* of Cracow and was the virtual chief rabbi of the city, no one being appointed to the position during his tenure of office. At the outbreak of World War I he moved to Vienna where he died.

Engel wrote more than 100 works on *halakhah*, *aggadah*, and Kabbalah. His works comprise a sort of (mostly alphabetic) encyclopedia and include 30 volumes on Talmud; more than 20 volumes on Kabbalah; and five of responsa, novellae on talmudic themes and on the Shulḥan Arukh, and sermons. During his lifetime about 20 of his works were published, but the rest have remained in manuscript. After his death a committee of the friends of Engel was formed in Vienna, with the name “Ohavei Torah,” for the purpose of collecting and publishing all his manuscripts. Some of them are in the process of publication, but many others were lost as a consequence of the Holocaust.

The following of his published works are noteworthy: *Atvan de-Oraita* (1891), giving 27 fundamental principles on talmudic methodology; *Beit ha-Ozar* (Pt. 1, 1903; Pt. 2, 1907), on biblical themes, arranged in alphabetical order; *Bet Porat*, responsa (Pt. 1, 1907; Pt. 2, 1912); *Ozerot Yosef* (1921), comprising eight sermons; halakhic novellae on the laws of the sabbatical year as they apply at the present time (1928); and novellae to Shulḥan Arukh *Yoreh De'ah* (1929). His revolutionary interpretation concerning the sabbatical year is noteworthy: even if the sabbatical year applies to modern times, it has only the force of a rabbinical enactment, whereas the *mitzvah* of settling in Erez Israel is a commandment ordained by the Torah and hence completely abrogates the laws of the sabbatical year, thus making it unnecessary, in order to permit cultivation of the land, to have recourse to the expedient of selling it temporarily to a non-Jew. Other published works of his are *Gilyonei ha-Shas*, marginal notes on the Babylonian and Jerusalem Talmuds in three volumes (1924–37), containing source references, novellae, and comparisons. They testify to Engel's great erudition. He reveals points of similarity with the subject under discussion in apparently unconnected passages. Additional works are *Hoshen Yosef* (1945), novellae on the Maharit, and on the *Avnei Millu'im* of Aryeh Leib ha-Kohen; *Gevurot Shemonim* (1903), containing 80 solutions to a single problem; and *Ziyyunim la-Torah* (1904), consisting

of 40 pilpulistic discourses. These last works in particular reflect Engel's keen and penetrating intellect. His approach to the Kabbalah is interesting in that he finds a parallel in the Talmud for every kabbalistic idea, and endeavors to demonstrate the close connection between Jewish mysticism and the rational part of the talmudic *halakhah* and *aggadah*. Recognized as an outstanding halakhist, he was consulted on halakhic problems by hundreds of rabbis.

[Itzhak Alfassi]

**ENGEL, JÓZSEF** (1815–1901), Hungarian sculptor, born at Sátoraljauhely, Hungary. Intended for the rabbinate, he was sent to study at the yeshivah of Moses \*Sofer at Pressburg. While still studying, Engel began to practice sculpture, and his father asked the rabbi whether this was permissible according to rabbinic law. On his receiving a negative reply, Engel was forced to stop. When his father died, however, Engel left for Vienna and became apprentice to a wood-carver. In 1840 he moved to England, where he made his name and executed busts of Queen Victoria and of Prince Albert, who commissioned several works from him. He also executed a bust of Sir David \*Salomons, the first Jewish lord mayor of London. In 1847 he went to Rome, remaining there for nearly 20 years before returning to Hungary.

**BIBLIOGRAPHY:** Roth, Art, 868.

**ENGELBERG, ḤAYYIM OF (Ferdinand Franz Engelberger;** d. 1642), apostate who converted to Christianity in 1636 to evade the penalty for stealing. After publishing a missionary pamphlet, he went to Vienna where he won the favor of \*Ferdinand III. When he and two Jewish accomplices were caught pilfering gems from the treasury and sentenced to death, he assumed that the emperor would pardon him and accepted the last sacraments peacefully. Becoming aware that the sentence was to be carried out, he smashed a crucifix, rejected Christianity, and asked to die a Jew, also announcing that he had desecrated the \*Host. This admission spurred the mob to kill a number of Jews and plunder their homes. After being tortured and maimed, Ḥayyim was burned at the stake on the Sabbath, Aug. 26, 1642, and was heard mumbling: “May my death be my atonement.” The incident was commemorated on two marble tablets in Vienna. His wife and children, whom he had persuaded to accept baptism, escaped to Poland and reverted to Judaism.

**ENGELMANN, GABRIEL** (d. 1850), Hungarian talmudist and *rosh yeshivah*. Engelmann was born in Vaguihely. For 15

years he served as *dayyan* in his native town and later was appointed rabbi and *av bet din* of Rohonc, Hungary, where he remained until his death. He devoted most of his life to his yeshivah and in the introduction to his *Einei Yisrael* (pt. 1) relates that he chose for himself the way trodden by most Jewish scholars to devote himself to study and teaching. His contemporaries esteemed him highly and those who gave their approbations to his books included Moses \*Sofer. Engelmann's *Einei Yisrael* is in two parts, the first (Vienna, 1822) on tractates *Shevu'ot* and *Bava Batra*, the second (*ibid.*, 1824) on *Hullin*. Some erroneously attributed to him the *Gevurat ha-Shem* (1838), a commentary on the Passover *Haggadah*, but its author is Gabriel b. Jacob Katz of Szamotuly.

[Naphtali Ben-Menaheem]

**ENGELMANN, SUSANNE CHARLOTTE** (1886–?), educator. Born in Germany, she was recognized during the Weimar period as an influential educator of girls, as well as the author of significant works on education, including *Die Krise der heutigen Maedchenerziehung* (1929) and *Methodik des deutschen Unterrichts* (1929). From 1933 on, she was deprived of the right to pursue her professional work, but she did not leave Berlin until 1940, when she migrated to the U.S. She was a guest scholar at Wilson College, Chambersburg, Pa., and lectured at other institutions. Her writings after 1940 stressed the educational changes in Germany of the 1930s and the war period. As author of *German Education and Reeducation* (1945), she was characterized as one of the most competent writers to assess the effectiveness of Nazi methods of indoctrination and the necessity of reeducating the German mind.

[William W. Brickman]

**ENGELSBURG, LEON** (1919–1998), Israel painter. Born in E. Europe, Engelsburg studied at the Warsaw Academy of Art. He settled in Israel after World War II in Jerusalem, in 1955. He painted expressionist landscapes of the Jerusalem countryside, but did not exhibit. His landscapes describe the hills and valleys of the Jerusalem area, so that landmarks like the Temple Mount and other religious sites are absent from his paintings. He won the Yad Vashem and Sussman prizes.

**ENGLAND.** The British Isles were unknown to the Jews until a late date, and the settlement of the Jews in medieval England was among the latest in Europe. It is possible that a small nucleus was to be found there under the Romans and that in the Saxon period, isolated Jews extended their commercial activities as far as the British Isles. But the slender evidence formerly adduced in support of this (e.g., the references in the *Liber Poenitentialis* ascribed to Archbishop Theodore of Canterbury, 669) has no validity.

### The Medieval Period

Jews were settled in some numbers in the continental possessions of William the Conqueror. With the Norman Conquest in 1066, it was inevitable that some should follow him to England, even if (as sometimes reported) he did not specifically invite them. The new community thus had a comparatively artificial origin, and possessed a remarkable homogeneity, being composed almost entirely of financiers and their dependents. It may thus be regarded as a type of late medieval Jewry in composition and in occupation as well as in its close subjection to royal control.

The community originated in the main in northern France, of which it was to some extent a cultural, linguistic, and economic offshoot. A minority came from Germany, Italy, and Spain, while one or two came even from Russia and the Muslim countries. By the mid-12<sup>th</sup> century, communities were to be found in most of the greater cities of the country, in \*Lincoln, \*Winchester, \*York, \*Oxford, \*Norwich, and \*Bristol. However, the \*London community was always the most important. Until 1177 the only cemetery allowed was in London. No communities were found west of \*Exeter or north of York. The Jews were treated tolerantly by the Norman monarchs. William Rufus (1087–1100) is even said to have encouraged them to enter into disputations with Christian clerics. Under Henry I (1100–35), an exemplary charter of liberties, the text of which is no longer preserved, was probably granted to the Jews.

In the course of the 12<sup>th</sup> century, anti-Jewish feeling began to manifest itself. In 1130 the Jews of London were fined the then enormous sum of £2,000 on the charge that one of their number had killed a sick man. The first recorded \*blood libel took place at Norwich in 1144 and was imitated at \*Gloucester in 1168, before the precedent came to be followed outside England. Similar accusations were made before the end of the century at \*Bury St. Edmunds (1181), Bristol (before 1183), and Winchester (1192). Nevertheless, the community grew in wealth and numbers, and its financial importance became increasingly recognized and exploited by the Crown. In 1168 a tallage (an arbitrary tax, theoretically levied only in emergency) of 5,000 marks (a mark was two-thirds of a £) was imposed by Henry II. In 1188 a tax of one-fourth of the value of their movable property was levied upon London Jewry. The amount raised, according to the rough contemporary estimate, was £60,000, as against only £70,000 raised from the general population. The annual revenue obtained by the state from the Jews is conjectured to have averaged at this time £3,000. \*Aaron of Lincoln (c. 1125–1186) was the greatest English capitalist of his day. His financial aid made possible the completion of several English monasteries and abbeys, besides secular buildings. On his death, his property and credits were claimed by the Exchequer, where a special department was set up to deal with them.

The period of relative tranquility ended with the spread of crusading enthusiasm under Richard I. At his coronation, a riot began at the doors of Westminster Hall, which ended

in the sack of London's Jewry and the murder of many of its inhabitants (September 1189). The example spread throughout the country in the following spring. The leaders were in many cases members of the lesser baronage whose religious ardor was heightened by their financial indebtedness to the Jews. At Dunstable, the handful of Jews saved themselves by accepting Christianity. At Lynn (later \*King's Lynn), foreign sailors exterminated the entire little community. At \*Stamford and Norwich, all who did not take refuge in the royal castle perished. The most tragic episode occurred in York. There, the community, headed by R. \*Yom-Tov b. Isaac of Joigny, escaped massacre by voluntary death (March 16–17, 1190).

These outrages had been accompanied everywhere by the burning of the deeds of debts due to the Jews. The Crown, which derived much revenue from the profits of the moneylenders, thus suffered considerable loss. Accordingly, after his return from captivity (to supply ransom the Jews of the country had been made to contribute three times as much as the citizens of London) Richard, by his "Ordinance of the Jewry" (1194), ordered the establishment of an *\*archa* or chirograph chest in principal cities, under the charge of Jewish and Christian "chirographers," in which duplicate records of all debts contracted with the Jews were to be deposited. Thus, whatever disorders might occur, the Crown's dues were henceforth secure. As coordinating authority over these provincial centers, ultimately some 26 in number, there came into being the *Scaccarium Judaeorum* or "Exchequer of the Jews" – an institution with both judicial and financial functions. Closely connected with it was the office of *Presbyter Judaeorum* or *\*archpresbyter* – not a chief rabbi, as once believed, but official representative and expert on Jewish matters appointed by the Crown. Of the occupants of this post, the names of Jacob of London (appointed 1199), Josce (1207), *\*Aaron* (fil' (i.e., son of) Josce) of York (1236), *\*Elias le Eveske* (1243), Hagin (Ḥayyim) fil' Moses of Lincoln (1258), and Cok Hagin fil' Deulecresse (1281) are known. In the Exchequer, the Jews of England had an organization acting in the royal interest equaled in no other European country. Its records, preserved in unparalleled completeness, yield minute information as to their condition.

The English communities never fully recovered from the blow they received at the time of the accession of Richard I. John indeed favored them at first and in 1201 confirmed their charter of liberties. However, later in his reign he began to squeeze money out of them by a succession of desperate expedients culminating in 1210 in the harshly-exacted Bristol Tallage of 60,000 or 66,000 marks (though this figure may have been used merely to describe a vast sum) which reduced them to the verge of ruin. Nevertheless, the barons viewed the Jews with aversion, as instruments of royal oppression; in the course of armed baronial resistance to the Crown, the Jewry of London was sacked. A clause in the Magna Carta (omitted in subsequent reconfirmations) restricted the claims of Jewish creditors against the estates of landowners who had died in their debt.

During the minority of Henry III, the Jews recovered some degree of prosperity. This was, however, counterbalanced by the introduction at the Council of Oxford (1222) of the discriminatory legislation of the Fourth \*Lateran Council of 1215, which was enforced in England earlier and more consistently than in any other part of Europe. The most important of these provisions was the wearing of the Jewish \*Badge which here took the form of the two tablets of stone.

From the beginning of the personal rule of Henry III in 1232, the condition of the Jews rapidly deteriorated. Tallage succeeded tallage with disastrous regularity. A "Parliament of Jews," consisting of six representatives from each of the major communities and two from the smaller centers, was held at \*Worcester in 1241 in order to apportion one such levy. When nothing further could be extorted from the Jews directly, Henry exercised his rights as suzerain by mortgaging them to his brother, Richard of Cornwall. They were subsequently made over to Edward, the heir to the throne, who in turn consigned them to their competitors, the Cahorsins. The Crown, however, resumed its rights before the expiration of the period.

Meanwhile, ecclesiastical enactments against the Jews were enforced with unprecedented severity. A new synagogue built at London was confiscated on a frivolous pretext (1232). There was a whole series of ritual murder accusations, culminating in the classical case of Hugh of \*Lincoln in 1255. In 1253 a decree was issued forbidding the Jews to live henceforward except in towns with established communities. With the outbreak of the Barons' Wars in 1263, the Jews found themselves exposed to the animosity of the insurgents who regarded them as the instruments of royal oppression. From 1263 to 1266, one Jewish community after another was sacked, with considerable loss of life, including those of London (which suffered twice, in 1263 and 1264), \*Cambridge, \*Canterbury, Worcester, and Lincoln.

### The Expulsion

On his accession in 1272, Edward I found the Jews so impoverished that their importance to the treasury had become negligible. Moreover, foreign bankers who enjoyed a higher patronage had begun to render the services for which the Jews had formerly been indispensable. By the *Statutum de Judaismo* of 1275, the king endeavored to effect a radical change in the occupations and mode of life of his Jewish subjects. The practice of usury was forbidden. On the other hand, they were empowered to engage in commerce and (for an experimental period) to rent farms on short leases. They were not, however, permitted to enter the Gild Merchant, without which the privilege to engage in trade was virtually useless; nor were they given the security of tenure necessary for agricultural pursuits. The *Statutum* failed in its purpose. A few of the wealthier began to trade in wool and corn (though this was in many cases a mask for moneylending) but others continued to carry on clandestinely the petty usury now prohibited by law; while some eked out a living from their capital by clipping the coinage. This led

*Jewish settlement in Britain before the expulsion of 1290, and communities existing in the late 20<sup>th</sup> century.*

in 1278 to widespread arrests and hangings, in many cases on the flimsiest pretexts.

Edward may have contemplated a relaxation of the situation by permitting a resumption of usury but for a variety of economic and political reasons, and from sheer rapacity, he finally decided to resolve the problem drastically. On July 18,

1290, he issued an edict for the banishment of the Jews from England – the first of the great general expulsions of the Middle Ages – by All Saints’ Day (November 1). Most of the refugees made their way to France, Flanders, and Germany.

The English Jews of the Middle Ages perhaps numbered fewer than 4,000, though contemporary chroniclers put the

figure far higher. They formed, intellectually as well as politically, an offshoot of the neighboring Franco-German center, even speaking French among themselves. Their interests were accordingly halakhic rather than literary, though no name of the first importance figures among them. Outstanding scholars included \*Jacob b. Judah of London, author of the ritual compendium *Ez Hayyim*; the grammarian Benjamin of \*Cambridge; Isaac b. Perez of Northampton; \*Moses b. Ha-Nesi'ah of London who wrote the grammatical work *Sefer ha-Shoham*; \*Meir of Norwich, a liturgical poet; \*Moses b. Yom-Tov of London, halakhist and grammarian; and his sons \*Benedict of Lincoln (Berechiah of Nicole) and \*Elijah Menahem of London, physician, scholar, and financier, the greatest luminary of medieval English Jewry.

Their expulsion in 1290 cleared England of the Jews more completely than was the case in any other European country. The *\*Domus Conversorum* founded by Henry III in London in 1232 continued indeed to function until the beginning of the 17<sup>th</sup> century, but ultimately its few inmates were in every case foreigners. The only professing Jews known to have come to the country were half a dozen individuals in 1310 (perhaps to negotiate conditions for readmission), one or two physicians who were invited professionally, and occasional wandering adventurers.

### The Resettlement Period

This almost absolute isolation was broken by the repercussions of the expulsions from Spain and Portugal and of the activities of the Inquisition in the Iberian Peninsula, which drove refugees throughout Western Europe. A small \*Marrano settlement was established in London in the reigns of Henry VIII and Edward VI but broke up on the accession of Mary in 1553 and the Catholic reaction which ensued. In the reign of Elizabeth, a semi-overt congregation existed for some years in London and Bristol, comprising among others Dr. Hector \*Nunez whose commercial connections were found useful by the government in Spanish affairs, and Roderigo \*Lopez, the queen's physician, who was executed in 1594 on a charge of having plotted against her life. The latter was connected by marriage with Alvaro Mendes (Solomon \*Abenaes), duke of Mytilene, who sent diplomatic missions to the English court on more than one occasion. Although this Marrano community at one time numbered approximately 100 persons, it had no legal guarantee of existence. With a change in political and economic conditions in 1609, it disappeared.

Toward the middle of the 17<sup>th</sup> century, a new Marrano colony grew up in London, partly of refugees who had been settled for a time at Rouen and the Canary Islands. The revolution and the spread of extreme Puritan doctrine among the English people led to the development of a spirit more favorable to the Jews, which increased proportionately with the importance attached to the Old Testament. Sir Henry \*Finch, Roger Williams, Edward \*Nicholas, and John Sadler were among the notables who joined in the agitation for the formal readmission of the Jews into England, whether as a

measure of humanity or in the hopes of securing their conversion. The economic revival under \*Cromwell, coupled with his anti-Spanish policy, combined to create an atmosphere more and more favorable to the Marrano merchants, some of whom, such as Antonio Fernandez \*Carvajal, rendered the government valuable service in obtaining intelligence from the continent.

Meanwhile, the reported discovery of Jews in America by Antonio (Aaron) de \*Montezinos had led \*Manasseh Ben Israel, the Amsterdam rabbi and mystic, to look forward to the millennium which would be ushered in by the completion of the dispersion through the official introduction of the Jews to the "end of the earth" (*Kezeh ha-Arez* = Angle-Terre). Negotiations with him, which had been going on fitfully since 1650, came to a head with his arrival in England in the autumn of 1655. A petition presented on behalf of the Jews was backed up by his eloquent plea in the "Humble Addresses" (Amsterdam, 1655), presented to the Lord Protector. On December 4, 1655, a conference of notables met at Whitehall to consider the whole question. The judges present decided that there was no statute which excluded the Jews from the country. On the other hand, a large body of theological and mercantile opinion manifested itself, which would consent to readmission only on the severest terms. After four sessions, Cromwell dissolved the conference before it arrived at a positive conclusion. In the following March, the London Marranos presented a fresh petition, merely asking for permission to have their own burial ground and to be protected from disturbance in the performance of their religious ceremonies. Their position was meanwhile strengthened by a judicial ruling which restored the property of Antonio \*Robles (seized on the outbreak of war with Spain because of his Spanish nationality), mainly on the grounds that he was a Jew. In July, as it seems, the petition of the previous March was at last taken into consideration and assented to by the Council of State. Although the relevant pages were subsequently torn out of the minute book, the settlement of the Jews in England was never thereafter seriously questioned. This was far from the formal recall for which Manasseh Ben Israel had hoped, but its very informality secured its continuance even after the restoration of the monarchy in 1660 and saved English Jewry from that special and inferior status which was the rule elsewhere in Europe.

The easygoing King Charles II was indeed little disposed, on his return to England, to reverse the arrangement which had become established under the Protectorate, in spite of anti-Jewish agitation fostered by Thomas Violet and embodied in a petition by the City of London. In 1664, in consequence of an attempt at blackmail made by the Earl of Berkshire and Paul Ricaut, the community received from the Crown a formal promise of protection, and in 1673, after another petty persecution, a guarantee of freedom of worship, which was confirmed in similar circumstances in 1685. This pragmatic policy of protection for the Jews was continued throughout the reigns of the later Stuarts. Suggestions for special taxation (which must inevitably have led to special status) were not im-

plemented. The legality of the practice of Judaism in England at last received indirect parliamentary recognition in the Act for Suppressing Blasphemy of 1698.

The community henceforth grew in wealth and in importance. Its numbers were increased by immigrants, principally from Amsterdam, or else directly from Spain and Portugal. Its position was consistently favorable, despite certain vexatious restrictions – e.g., the obligation to support their children even after conversion to Christianity and the limitation of the number of “Jew Brokers” in the City of London to 12. The only other community in the British Isles was a small Sephardi group in \*Dublin. Nevertheless Jews figured in an increasing proportion in the growing colonial empire – at \*Tangier, \*New York, \*Bombay, and in the West Indies – especially \*Jamaica and \*Barbados. Numbers rapidly grew in the final years of the 17<sup>th</sup> century, particularly during the period of the close connection with Holland under William of Orange, when several families came over from Amsterdam. A new synagogue, now classified as an historic monument, was erected in Bevis Marks in London in 1701. The upper class of the community was composed of brokers and foreign traders; the lucrative coral trade, for example, was almost entirely in their hands. Jews entered gradually into various aspects of the country’s life. Mention may be made of city magnates, such as Samson \*Gideon and Joseph \*Salvador, whose financial advice was sought by successive ministries, and of Jacob de \*Castro Sarmiento, a notable physician and scientist, of Moses \*Mendes, the poet, and of Emanuel \*Mendes da Costa, clerk and librarian of the Royal Society and a prolific writer.

Meanwhile, an influx of Ashkenazim had followed upon the Sephardi pioneers. The forerunners came principally from Amsterdam and Hamburg, but they were followed by others from other parts of Germany and elsewhere, and later in increasing numbers from Eastern Europe. About 1690, a small Ashkenazi community was formed in London. In 1706, as the result of a communal dispute, a second was formed, and in 1761, a third. The newcomers were, for the most part, distinctly lower in social and commercial status than their Sephardi precursors. A large number of them were occupied in itinerant trading in country areas where the Jewish peddler became a familiar figure. They generally returned to pass the Sabbath in some provincial center. Thus congregations, several of which have since disappeared, grew up in the course of the second half of the 18<sup>th</sup> century in many country towns – Canterbury, Norwich, Exeter, and others, as well as ports such as \*Portsmouth, \*Liverpool, Bristol, \*Plymouth, King’s Lynn, \*Penzance, and Falmouth, and manufacturing centers such as \*Birmingham and \*Manchester. London remained, however, the only considerable center.

The external history of the Jews in England was meanwhile tranquil. In 1753 the introduction to Parliament of the Jewish Naturalization Bill (“The Jew Bill”), giving foreign-born Jews facilities for acquiring the privileges enjoyed by their native-born children, resulted in an anti-Jewish agitation so virulent that the government withdrew the measure; but it was

not accompanied by physical violence. Political opposition, on the other hand, led to greater solidarity among the various sections of the community. From 1760 representatives of the Ashkenazi congregations began to act intermittently with the *deputados* of the Sephardim as a watch-committee in matters of common interest. This gradually developed into the London Committee of Deputies of British Jews (usually known as the \*Board of Deputies), ultimately comprising representatives also of provincial and (in a minor degree) “colonial” congregations, which assumed its present form in the middle of the 19<sup>th</sup> century.

### The 19<sup>th</sup> Century

The Napoleonic Wars marked an epoch in the history of the Jews in England. Ashkenazi families, notably the \*Goldsmids and \*Rothschilds, began to occupy an increasingly important place in English finance and society. A generation of native-born Jews had meanwhile grown up, who were stimulated by the example of Jewish emancipation in France and elsewhere to desire similar rights for themselves. The civic and political disabilities from which they suffered did not in fact amount to very much, for they had enjoyed a great measure of social emancipation almost from the beginning, and commercial restrictions were confined to a few galling limitations in the city of London. In 1829, on the triumph of the movement for Catholic emancipation, agitation began for similar legislation on behalf of the Jews. It was championed in the Commons by Robert Grant and Thomas Babington \*Macaulay, the great Whig historian, and in the Lords by the Duke of Sussex, son of George III, a keen Hebraist. On its second introduction in 1833, the Jewish Emancipation Bill was passed by the recently reformed House of Commons, but it was consistently rejected by the Lords in one session after the other. Meanwhile, the Jews were admitted to the office of sheriff (1835) and other municipal offices (1845). Minor disabilities were removed by the Religious Opinions Relief Bill (1846), which left their exclusion from Parliament the only serious grievance of which the English Jews could complain. Lionel de \*Rothschild was elected by the city of London as its parliamentary representative time after time from 1847, but the continued opposition of the Lords blocked the legislation which could have enabled him to take the required oaths. In 1858, however, a compromise was reached, and each house of Parliament was allowed to settle its own form of oath. In 1885 Nathaniel de \*Rothschild (Lionel’s son) was raised to the peerage – the first professing Jew to receive that honor. The example of Benjamin \*Disraeli, one of the most brilliant of modern English statesmen, who made no effort to disguise his Jewish origin and sympathies, did much to improve the general social and political position of the Jews. Sir George \*Jessel was made solicitor general in 1871, and several Jews subsequently received government appointments. Herbert (later Viscount) \*Samuel became a cabinet minister in 1909. Sir David \*Salomons, who had been the first Jewish sheriff in 1835 and the first Jewish alderman in 1847, became lord mayor of London in 1855 – a position in which

several Jews have since followed him. In 1890 religious restrictions on virtually every political position and dignity were removed and Jewish emancipation became complete.

Considerable changes had meanwhile been taking place within the community. There was a gradual movement toward greater cohesion. The Sephardi community had to yield pride of place to the Ashkenazim before the end of the 18<sup>th</sup> century. Solomon \*Hirschel, son of R. Hirschel \*Levin (Hart Lyon), was appointed rabbi of the Great Synagogue in London in 1802, in succession to David Tevele \*Schiff of Frankfurt. His authority was recognized by the other Ashkenazi congregations in London, who were induced by him to enter into a closer union. His successor, Nathan Marcus \*Adler, who was elected to office by the delegates of the London congregations in association with those of the major provincial communities, may be considered the first chief rabbi. The extension of his authority is indicated in the *Laws and Regulations for all the Synagogues in the British Empire* which he issued in 1847. He was followed as chief rabbi in 1891 by his son, Hermann \*Adler, who had been acting as his father's delegate for some years. He was succeeded by Joseph Herman \*Hertz.

**COMMUNAL EXPANSION.** During the 19<sup>th</sup> century Anglo-Jewry took the lead in measures for the protection of the Jews and the amelioration of their position in every part of the world. In this they were assured of the assistance of the British government, which was now identified with a strikingly protective policy toward the Jews, especially of Palestine and the Muslim countries of the Middle East – partly because of the absence of closely allied Christian bodies on whose behalf the exertion of political influence could ostensibly be based, as was the case with the rival Russian and French governments. The Board of Deputies increased in scope of activity and in importance. Sir Moses \*Montefiore, backed up by the British government, acted as the ambassador for the whole of Jewry, in the event of persecution, from the \*Damascus Affair of 1840 onward. In 1871 the \*Anglo-Jewish Association was founded to collaborate in the work of the \*Alliance Israélite Universelle, prejudiced by the enmities aroused through the Franco-Prussian War; and in 1878 the Joint (Conjoint) Foreign Committee, which it formed in conjunction with the Board of Deputies, came into being as an agency for safeguarding Jewish interests abroad. The \**Jewish Chronicle*, the first permanent Anglo-Jewish periodical (now the oldest continuing Jewish publication in the world), was established in 1841. In 1855 \*Jews' College was founded in London – the first theological seminary for the training of Anglo-Jewish ministers of religion. It was followed four years later by the Jewish Board of Guardians (since 1964 known as the Jewish Welfare Board), a model London organization for the relief of the poor, which was widely imitated in provincial centers. The loose union for certain charitable and other purposes of the Ashkenazi synagogues in London, which had been in existence since the beginning of the century, became consolidated in 1870 by the establishment, under authority of an act of Parliament, of the United Synagogue

which is today one of the most powerful Jewish religious organizations of its sort in the world.

The basis of the community had meanwhile been broadening, though it remained overwhelmingly centered in London. The industrial developments of the 19<sup>th</sup> century led to a widening of the area of Jewish settlement, important communities based largely on German immigration being formed or expanded in provincial centers such as Manchester, \*Bradford, etc. All were Ashkenazi, except at Manchester, where a Sephardi community was also organized in the second half of the century, mostly composed of newcomers from the Levant. With the recrudescence of persecution in Russia in 1881, immigration increased immensely. A majority of the refugees settled in London; the communities of Manchester, Birmingham, and other places were similarly reinforced while that of \*Leeds, wholly based on the tailoring industry, proportionately attracted the greatest number of all. The congregations in all the more important industrial towns and seaports throughout the country – including \*Scotland, \*Wales, and \*Ireland – now grew to important dimensions. However, at the same time, some of the older country centers, such as Canterbury or Penzance, were decaying. The newcomers largely settled in urban districts and entered one or two specific trades; the ready-made clothing industry was virtually created as a result of their efforts. The characteristically English Trade Union and Friendly Society movements rapidly acquired a stronghold. The tide of immigration was, however, checked by the Aliens Immigration Act of 1905, passed after a long agitation which at one time assumed something of an antisemitic complexion.

The Federation of Synagogues was established in London by the first Lord \*Swaythling in 1887 to coordinate the many small congregations set up by the Russian-Polish immigrant elements – partly in rivalry with the "aristocratic" United Synagogue. The Reform movement had been introduced into England, in spite of strenuous opposition, in 1840, when the West London Synagogue of British Jews was founded. It was long confined almost entirely to the capital. Branch congregations were set up before the end of the 19<sup>th</sup> century only in Manchester and in Bradford. A more radical movement was begun by the foundation at the beginning of the 20<sup>th</sup> century, under the auspices of C.G. \*Montefiore, of the Jewish Religious Union, which in 1910 established the Liberal Jewish Synagogue. This also showed in the mid-century a considerable measure of expansion. The vast mass of English Jewry, however, remained attached to the compromising Orthodoxy represented by the United Synagogue.

**SCHOLARSHIP AND CULTURE.** The most eminent Jewish scholars associated with England have been immigrants from abroad, such as David \*Nieto, Ephraim \*Luzzatto, Michael \*Friedlaender, Solomon \*Schechter, and Adolf \*Buechler. The most eminent native-born scholars have been humanists rather than talmudists, such as David \*Levi, an able polemicist and translator of the liturgy, and (in more recent years)

Israel \*Abrahams, H.M.J. \*Loewe, and C.G. Montefiore. On the other hand, through the building up of the superb collections of Hebrew printed books and manuscripts at the British Museum, the \*Bodleian Library at Oxford, and the Library of the University of Cambridge (the last predominating in the \**Genizah* Mss.), England has become in many ways the Mecca of the Jewish student throughout the world.

The \*Disraelis, father and son, are noteworthy figures in the English literature of the 19<sup>th</sup> century. Grace \*Aguilar and Amy \*Levy are among the earliest names in a series of Anglo-Jewish novelists which culminated with Israel \*Zangwill, Louis \*Golding, etc. Joseph \*Jacobs was an eminent figure in English as well as in Jewish letters. Sir Sidney \*Lee, editor of the *Dictionary of National Biography* and the foremost Shakespearean scholar of his day, and Sir Israel \*Gollancz, secretary of the British Academy, illustrated the Jewish contribution to English literary studies. In art, Simeon \*Solomon, Solomon J. \*Solomon, Sir Jacob \*Epstein, and Sir William \*Rothenstein were notable figures. Sir Landon Ronald occupied an important position in the world of music. Alfred \*Sutro was among the most popular English dramatists of the Edwardian era, while in the middle of the 20<sup>th</sup> century Arnold \*Wesker, Harold \*Pinter, Wolf \*Mankowitz, Peter \*Shaffer and others have attracted considerable attention. In politics, the Jewish representation in Parliament is considerable. Jews have been identified with all parties (since World War II, especially the Labour Party), and individuals have risen to high rank under governments of every complexion.

[Cecil Roth]

### Modern Period

MASS IMMIGRATION. The mass immigration from Eastern Europe that began in 1881 opened a new epoch in Anglo-Jewish history. The Anglo-Jewish community was affected not only by the sheer size of the migration, which increased the population of the community from 65,000 in 1880 to 300,000 in 1914, but also by the differences it imposed on the character of the community. The immigration injected into what was by then an increasingly middle-class, anglicized, mainly latitudinarian body, a mass of proletarian, Yiddish-speaking, predominantly Orthodox immigrants. Whereas the existing community had begun to disperse from the old Jewish quarters into the suburbs, the immigrants formed compact, overcrowded ghettos in East London, Manchester, Leeds, Liverpool, and Glasgow. Furthermore, while the earlier English Jews had tended to seek an increasing diversity of occupations in the 19<sup>th</sup> century, the immigrants were concentrated in a limited number of trades: in 1901, about 40% of the gainfully employed Russo-Polish immigrant males were tailors, about 12–13% were in the boot and shoe trade, and about 10% were in the furniture trade, mainly as cabinetmakers. The immigrants created a network of institutions such as Yiddish and a few Hebrew newspapers and fraternal societies and trade unions, although the Jewish trade-union movement had no lasting history in Britain. They also created many small syna-

gogues (*hevrot*) and joined in the London Federation of Synagogues – albeit under the leadership of English Jews – headed by Sir Samuel Montagu, later Lord Swaythling.

The communal leadership sought to “anglicize” the immigrants by encouraging their participation in classes in English, the state-aided Jewish schools, such as the Jews’ Free School, and clubs and youth movements, like the \*Jewish Lads Brigade. The London \*United Synagogue tried to found a large synagogue in the Jewish quarter with associated community services (the “East End Scheme”), but this plan was frustrated largely by opposition from the *hevrot* it was intended to replace. The immigrants themselves generally sought anglicization, as British prestige was high in the world and the British libertarian tradition was appreciated among Jews. While some stalwarts, such as the Machzike Hadath community, remained aloof, many immigrants joined the United Synagogue, since its rite was broadly traditional. The instance of social mobility was high among the immigrants: they sought economic independence, moved to the suburbs, and joined the Anglo-Jewish middle class. Leaving aside minorities of Orthodox, secularists, Yiddishists, socialists, and anarchists, the Anglo-Jewish community that evolved was probably more integrated than any other in the western lands of immigration.

The influx of so many aliens, at a time when there was no effective control over immigration, produced considerable reaction among the native population. Charges were made that aliens working for low wages on piecework in small workshops would depress wages generally and cause unemployment; pressure on housing accommodation would cause overcrowding, raise rents, and introduce “key money” (premiums for grant of tenancies); the English or “Christian” character of whole neighborhoods would be altered, and immigrants would bring disease and crime. Strong sections of the trade unions were hostile to immigration. Organizations such as the British Brothers’ League were formed to combat it, and, unfortunately, the peak years of immigration occurred during a period of economic depression.

The charges against the aliens were investigated by several official inquiries, culminating in the Royal Commission on Aliens in 1903, which declared all the charges unfounded, except, in part, that relating to overcrowded housing conditions. A majority of the commission recommended measures to prevent the concentration of immigrants in particular areas. This move proved impracticable, but the government reacted by introducing the 1905 Aliens Act to restrict immigration. The act had some effect at first, but, since it contained appeal provisions for genuine refugees from racial or religious persecution, the number of immigrants increased again to the former annual average. Many opponents of immigration sought to distinguish between the immigrant population and the established Jewish community. The latter had at first displayed an ambivalent attitude toward the immigrants. Although they recognized the humanitarian problem, some leaders feared that the communal institutions would be swamped by the helpless, and at first it was not generally appreciated that

Russian persecution was more than a temporary check on the progress of liberalization. In the earlier years, therefore, attempts were made to dissuade immigrants from coming to England and even to “repatriate” them to Eastern Europe. After the 1903–04 pogroms, however, there was no longer any doubt about the nature of the situation in Eastern Europe and the support of the Jewish communal leadership for immigration was unquestioned.

**PARTICIPATION IN PUBLIC LIFE.** Meanwhile, political emancipation for British Jews reached its climax when the first peerage was conferred upon a Jew, Lord \*Rothschild (1885). The attainment of social acceptance was expressed by the presence of a number of Jews in the “Marlborough House set” centered around the Prince of Wales (later Edward VII); Lord Rothschild and his brothers, Alfred and Leopold, the Reuben brothers, Arthur and Albert \*Sassoon, Sir Ernest \*Cassel, Baron de \*Hirsch, and others, were members of this group. Jews had also become prominent in politics as Conservative members of Parliament (such as the communal leaders Lionel Louis and Benjamin \*Cohen), although as a group they still belonged primarily to the Liberal Party which had fostered Jewish emancipation. Notable in the Asquith administration, which began in 1906, were Sir Rufus Isaacs (who became lord chief justice as Lord \*Reading in 1913) and the young Herbert Samuel. The prominence of Jews in Liberal politics, the Marconi case (in which both Isaacs and Samuel were, however unfairly, involved), the wealth of Jewish financiers, and even the friendship of Jews with royalty were all ingredients in the literary antisemitism of the Edwardian period, in which Hilaire Belloc, G.K. Chesterton, and Rudyard Kipling all attacked the allegedly alien influences in high places.

**WORLD WAR I.** The outbreak of World War I (1914) ended the great immigration, although the refugees from Belgium included a considerable number of Jews of East European origin. The high-strung xenophobia of the early war years, in which everything related to Germany was attacked, created some antisemitism and some curious anti-German reactions in the Anglo-Jewish community. The demand for uniform clothing produced an economic boom which benefited small Jewish entrepreneurs. On the other hand, because their civilian occupations were generally not essential enough to defer them from military service in the national interest, the proportion of Jews in the armed forces was higher than in the general population. Genuine loyalty, however, was also responsible for this factor: there were 10,000 casualties among the 50,000 Jews serving, and 1,596 were decorated (including six recipients of the highest award, the Victoria Cross), which was also probably above the general average. Of special significance was the raising of Jewish battalions of the Royal Fusiliers to serve in the campaign to liberate Palestine from the Turks.

The outstanding event of the war, however, was the attainment of the \*Balfour Declaration in 1917. Zionism in England originated with the \*Hovevei Zion in 1887, led by Elim d'Avigdor and Colonel Albert \*Goldsmid. Although some of

the older members of Anglo-Jewry were interested in the Jewish national movement, the recent immigrants provided the mass of support, particularly after the development of political Zionism in 1897. \*Herzl visited England on a number of occasions and the offer of \*Uganda was made to him by Joseph \*Chamberlain, then colonial secretary. Although Sir Francis Montefiore became president of the English Zionist Federation, formed in 1899, many leading figures of the established community, notably the first Lord Rothschild, Sir Samuel \*Montagu (Lord Swaythling), and Hermann \*Adler, the chief rabbi, opposed it. The turmoil World War I brought to the Middle East and the desire to influence American Jewry on behalf of the Western allies provided Chaim \*Weizmann with the opportunity to persuade the British government to issue the Balfour Declaration. To some extent, Weizmann had been anticipated by Herbert Samuel, a member of the government until 1916, in a pro-Zionist memorandum to the prime minister. The official leadership of the community was now much more disposed to Zionism: the new chief rabbi, Joseph Hertz, the Haham of the Sephardim, Moses \*Gaster, and the second Lord Rothschild (who succeeded his father in 1915) were all actively associated with Zionism. The issue of the declaration had been preceded by a letter to the *Times* from the presidents of the Board of Deputies (D.L. Alexander) and the Anglo-Jewish Association (Claude Montefiore) dissociating themselves from Jewish nationalism. The declaration precipitated the resignation of Alexander and the victory of the pro-Zionists, whose views were henceforth the official policy of the Anglo-Jewish establishment. The events of 1917 thus served as a catalyst within the Anglo-Jewish community and promoted it into a new role in world Jewry, since Britain was to become the administering power for the Jewish National Home.

**RELIGIOUS AND SOCIAL TRENDS.** Although Russo-Jewish immigrants had exercised a decisive influence in the religious and intellectual spheres, they were not alone. A group of British- or Empire-born scholars and writers grew up in the 1880s with the Romanian-born Solomon \*Schechter as their mentor. The Anglo-Jewish Historical Exhibition of 1887 (with whose organization the art connoisseur Sir Isidore Spielmann was associated) was visited by Heinrich \*Graetz, who urged the formation of a body to study Anglo-Jewish history. This suggestion was implemented in 1893 by the foundation of the \*Jewish Historical Society of England, with whose work Lucien \*Wolf, equally celebrated as an expert on international affairs, was associated for over 35 years. Apart from the continuation of historical studies, the specifically Anglo-Jewish renaissance was short; Schechter and Jacobs moved to America, as did the \*Jewish Quarterly Review (begun by Claude Montefiore and Israel Abrahams in 1888).

The main body of religious Anglo-Jewry continued its latitudinarian way. While small congregations of German or East European origin maintained a separate existence on the extreme right of the religious spectrum, the immigrants increasingly joined the United Synagogue in London and its

provincial counterparts. Some changes in liturgical usage had been sanctioned by the aged chief rabbi, Nathan Marcus Adler, in 1880 and may have led to his retirement from active office. His son, Hermann, who succeeded him sanctioned further changes in 1892. But these changes were in detail rather than substance and followed what the United Synagogue then described as its principle of progressive Conservatism, an attitude confirmed by the next chief rabbi, Hertz.

In contrast to this trend was a movement in the 1890s for more radical change that soon broke from the Orthodox ranks, although several of those originally concerned, such as Simeon \*Singer, the translator of the prayer book, remained in the Orthodox community. As a result, in 1902, Claude Montefiore formed the Jewish Religious Union, which soon developed into the Liberal Jewish Synagogue.

The 1920s was a period of deceptive political calm and relative intellectual stagnation for Anglo-Jewry. Socially, the decade saw the progressive anglicization of the community and its increasing upward mobility from the working to the middle class. Small businesses prospered; the new generation turned to professional callings as lawyers, doctors, dentists, and accountants; and university education, even in the established institutions, began to be the practice for the middle class, instead of the prerogative of virtually the upper class alone. Social change was reflected in the steady exodus from the crowded Jewish quarters in London and the main provincial centers as middle-class families acquired a house and garden in the expanding residential suburbs. A distinctively Anglo-Jewish, middle-class way of life began to develop there, and Golders Green became as characteristic a milieu of interwar Anglo-Jewry as Maida Vale had been in the 1880s.

An attempt to finance a massive education renaissance as the Jewish memorial to World War I fell far short of achievement, but the United Synagogue, under the effective paternalism of the industrialist Sir Robert Waley-\*Cohen, continued to expand as an efficiently run religious organization and founded new synagogues in the developing districts of London. During this period, the Board of Deputies was led by Sir Osmond d'Avigdor-Goldsmid, a founder of the "mixed" \*Jewish Agency, on which both Zionists and non-Zionists served. Although the Zionist victory of 1917 had changed the community's political trend, it had not yet effected a social revolution and removed control from members of the older establishment.

**THE SHADOW OF NAZISM.** The 1930s were overshadowed by the rise of fascism, which produced an immigration of 90,000 refugees (73,000 from Germany and Austria, 10,000 from Czechoslovakia, 4,000–5,000 from Poland, and 2,000 from Italy and elsewhere). Of this number, 10,000–12,000 left Britain in 1940, 2,000–2,500 were transferred as internees to Australia and Canada and did not return, and 15,000–20,000 left after 1945 or died during the period, so that some 40,000–55,000 prewar refugees, mostly but not exclusively Jewish, were counted in Britain by 1950. Quantitatively, this was a sub-

stantial intake for a community of between 300,000 and 400,000, though a much smaller one than the Russo-Jewish immigration of 1881–1914. Qualitatively, its impact was almost as great. The Central European immigrants were essentially from the middle class, unlike the originally proletarian Russo-Jewish ones. Before drastic restrictions were imposed on the export of property from Germany, the refugees of the 1930s brought considerable capital: it is estimated that up to mid-1938, £12,000,000 were transferred from Germany to Britain. The immigrants created or transplanted many businesses, particularly in the fashion trades, pharmaceutical production, and light engineering, and made London the European center of the fur trade in place of Leipzig. Equally important was the influence of the many professionals, intellectuals, and artists upon British scientific, literary, and cultural life.

The effect of this immigration upon Anglo-Jewry was even more dramatic. Both branches of religious life were strengthened. Ministers and scholars trained in the German Reform movement revitalized progressive Judaism; the Frankfurt-inspired Orthodox expanded the separatist Orthodox movement in England and also produced a shift to the right in the United Synagogue. The Jewish day-school movement, the \*Gateshead yeshivah (founded in 1927) and associated institutions and, after 1945, a number of other educational institutions (especially in North and North-West London) were strengthened by German and Hungarian Jews. The Central European immigrants virtually created a cultural revival in the academic sphere. They took part in every aspect of activity from rabbinic studies to Anglo-Jewish historiography, and postwar institutions like the Department of Hebrew and Jewish Studies at University College, London, would have been unthinkable without them.

Continental fascism was imitated in England on a smaller scale and fostered by the economic depression of the early 1930s. Attacks on Jews and Jewish property by the "black-shirts" led by the English fascist leader Sir Oswald Mosley, provocative processions through the Jewish areas, and street clashes with left-wing elements followed, but were checked by the 1936 Public Order Act, which, inter alia, banned the wearing of political uniforms. The need to defend the community against these attacks induced a feeling of solidarity that was intensified by the need to raise funds for the relief of refugees and the work of settlement in Palestine. Fund raising again became a primary communal commitment that served as a unifying force as well as an engrossing organizational and social activity.

**WORLD WAR II.** The outbreak of war in 1939 had a centrifugal effect on Anglo-Jewry. At first schoolchildren and some mothers were evacuated from London and other large centers of population; the heavy bombing which began in the autumn of 1940 brought about a more general dispersal. Service in the armed forces took away women as well as men, and in 1940 refugees were subjected to large-scale, though temporary, internment. Religious and communal life in London continued

on a smaller scale, and the dispersal of the population was followed by a regrouping in new communities in the evacuation areas. The countryside and small towns, which had hardly known a Jew, became the homes of thriving communities for the duration of the war, and some of these new communities maintained their existence even after the war. The main effect of the war on the distribution of the Jewish population, however, is seen in the East End of London and in some of the other Jewish quarters in the main provincial cities, where the bombing destroyed the physical environment. The Ashkenazi Great Synagogue in Duke's Place, London, was only one of the Jewish monuments and institutions that was lost. In the East End of London, the old Jewish residential area was never rebuilt though some of the older people remained or returned and many others continued to come in daily to work.

ENGLAND AND PALESTINE. The relations of the developing Jewish community in Palestine with the British government as a mandatory power increasingly concerned the Anglo-Jewish community, which expressed opposition to the policy set down in the White Paper of 1939, limiting Jewish immigration to Palestine. Support for a Jewish state was the policy of the Zionist bodies and the \*World Jewish Congress, but not of the \*Anglo-Jewish Association nor of its splinter group, the anti-Zionist Jewish Fellowship, headed by Sir Basil \*Henriques (which dissolved in 1948). The Anglo-Jewish Association enjoyed great prestige for its distinguished membership and 70 years of concern with foreign affairs. The wish to mobilize the support in the representative body of Anglo-Jewry for Zionist policies was combined with a desire to make its leadership reflect the changing character of the community as a whole. These aspirations were symbolized by the 1939 election of Selig \*Brodetsky, a first generation Russo-Jewish immigrant, educated in Britain, as president of the Board of Deputies. They were realized in 1943 by a carefully planned campaign to secure the election to the board of a majority committed to the creation of a Jewish state in Palestine. The newly elected board dissolved its joint Foreign Committee with the Anglo-Jewish Association. As in World War I, the problems of Palestine effected a polarization in the Anglo-Jewish community between those who put primary emphasis on Jewish national ideals and those who stressed the overriding claims of British citizenship.

Although this dichotomy was unrealistic in many respects, it sharpened communal tensions. After the creation of the State of Israel, the Anglo-Jewish Association adopted a policy of goodwill toward the new state, but stressed the responsibilities of Anglo-Jews as citizens of Britain who were identified with its national life. Communal tensions were also heightened by some antisemitism, which resulted from the conflict between the mandatory administration and the *yishuv*, beginning with the assassination of Lord Moyne in 1944 and culminating in the hanging of two British army sergeants in August 1947. The latter was followed by minor disorders in some provincial cities and some attacks on Jewish property.

Normalcy was restored after the establishment of diplomatic relations between the British government and the new state.

EDUCATION. The need to provide for the education of children dispersed in the 1939–45 evacuation led to the formation of a joint emergency organization. In 1945 Jewish education was substantially reorganized on this basis with a central council for the whole country and an executive board for London, representing the United Synagogue and other Orthodox institutions. Jewish education during the evacuation had been limited to an average of one hour a week, and improvement of standards after the war was slow. The new organization was responsible for the reconstitution of the Jews' Free School and two other of the prewar private schools that were closed during the war, one of which was a secondary comprehensive school in a central location with a planned complement of 1,500 pupils. As Jewish education regained importance, the schools took various forms: the Jewish secondary schools movement, begun in 1929 by Victor Schonfeld; the day schools begun in the 1950s under Zionist auspices; independent Orthodox day schools with Yiddish as a language of instruction; the long-standing provincial day schools; and Carmel College, a private school in the country, founded by Kopul Rosen.

#### Early Postwar Period

Chief Rabbi Hertz died in January 1946 and Israel \*Brodie succeeded him in May 1948. The first chief rabbi to be both born and educated in Britain, Brodie found the religious spectrum of Anglo-Jewry not only growing stronger at either end but also tending to disintegrate in the middle. Orthodoxy, combining strict observance and exact learning with secular culture, had been strengthened by the Central European refugees of the Frankfurt school and, particularly after 1945, was also increased by refugees from Poland and Hungary, many of whom were Hasidim. The Reform and Liberal congregations, while still a minority, probably increased their membership at a greater rate than the United Synagogue, opening numerous new congregations and founding the Leo Baeck College to train their own ministers. Although their leadership was clearly strengthened by the Central European immigration of 1933–39, much of their postwar membership could only have come from the ranks of the nominally Orthodox. The Spanish and Portuguese Congregation also increased with the immigration of Jews from Egypt, Iraq, and Aden.

In 1956, Anglo-Jewry celebrated the tercentenary of the resettlement, with a more or less united service at the historic Bevis Marks Synagogue and a dinner at London's Guildhall, in the presence of the Duke of Edinburgh. But the sentiments of communal solidarity – and of self-congratulation on communal self-discipline – engendered by these celebrations were short-lived. There had already been considerable changes within the main synagogal bodies. The character of the Federation of Synagogues changed as its membership, while hardly increasing, moved from the small *hevrot* of the

East End to live in the suburbs. There they often attended local synagogues but retained membership in the federation for sentiment and burial rights. The old-fashioned minister (and even his clerical collar) had disappeared in the United Synagogue in favor of younger rabbis, often pupils of Jews' College under the direction of Isidore \*Epstein, who strove to remodel it as a rabbinical seminary. The *bet din*, under the influence above all of the great scholar Yehezkel \*Abramsky, steadily kept the religious orientation of the United Synagogue to the right; at the same time, however, the old lay leadership, under the presidency of Frank Samuel and Ewen Montagu, tended toward religious flexibility. The influence of members of the older families must not be exaggerated, however. As early as the 1950s, a new generation of laymen – second-generation citizens, Zionist, and traditionally Orthodox – was maturing in the United Synagogue.

In all these changes lay the seeds of conflict, which crystallized around Louis \*Jacobs, a rabbi of Orthodox practice who held certain modernist views. Minister of the fashionable New West End Synagogue (London), Jacobs was appointed tutor of Jews' College in 1959 with the consent of the chief rabbi. The latter, however, vetoed Jacobs' appointment as college principal and then in 1964 his reappointment to his former synagogue, because he held that Jacobs maintained parts of the Torah were not of divine origin and human reason should select which parts were divine. The local management of the synagogue persisted in their desire to have Jacobs as minister and permitted him to preach, although the requisite certificate or special sanction had not been issued by the chief rabbi. The central body of the United Synagogue then constitutionally deposed Jacobs' supporters, who founded a new congregation in another area with Jacobs as minister. The "Jacobs Affair" received wide publicity in the non-Jewish press, but its significance may have been exaggerated. Since the formation of the Reform Synagogue in 1840, Anglo-Jewry has not been very interested in theology or biblical criticism, as distinct from ritual or liturgy. There were personal and social factors underlying the controversy, and a shift took place in the leadership of the United Synagogue in 1962, when the presidency was first filled from outside the circle of older families by the financier and industrialist Sir Isaac \*Wolfson. The incident that led to the formation of a new synagogue was over a disciplinary issue, not a theological one (preaching without the chief rabbi's certificate), and the new congregation has not yet inspired a wider movement. The issues involved in the "Jacobs Affair" and its consequences could, however, be regarded as marginal to the much more important problem of Jewish religious life, i.e., the progressive alienation of growing sections of the Anglo-Jewish community from Jewish religious affiliation of any kind.

The main countervailing factor to the trend away from Jewish identification was the influence of the State of Israel. Mobilizing support for Israel was a major communal and social activity and, to some extent, a substitute for the organized religious life of earlier times. But it actively affected only a mi-

nority of the community until the \*Six-Day War (1967), when the danger to and triumph of Israel produced an emotional reaction unprecedented in intensity and affecting even many who were previously estranged from Jewish life. It was not clear, however, how lasting the effect would be or whether it might weaken Anglo-Jewry still further by adding to those numbers, previously inconsiderable, who have gone to settle in Israel. Anglo-Jewry made little impact on world scholarship in the second third of the 20<sup>th</sup> century.

[Vivian David Lipman]

**DEMOGRAPHY.** The number of Jews in Britain, which was estimated to be 410,000 in 1967, is declining in absolute terms. World Jewish population figures show that during the 1960s Britain's Jewish community has slipped numerically from fourth to sixth place. This decline is being felt acutely in the provinces, in both very small communities and larger centers. Greater London, on the other hand, has maintained its level of 280,000 Jewish inhabitants (61% of the total Jewish population of the country). Close to 75% of the Jewish population of Britain is concentrated in the country's five largest cities. The most significant trend in the last two decades has been the migration of the Jewish population from the urban central areas – the old ghetto quarters – to the new suburban districts surrounding big conurbations. The exodus from the older districts has not, however, been characterized as a transplantation of old communities in new areas. A concomitant phenomenon has been the wider distribution of the Jewish population in places more distant from urban centers and settlement in a more scattered fashion among a predominantly non-Jewish population. In these areas Jews lack effective community organization and are isolated from the more developed forms of Jewish life found nearer the cities, exposing them to the potent forces of assimilation. The influence of assimilation must be regarded as one of the factors contributing to the numerical decline of the community. In purely demographic terms, the most visible symptom of this decline, and one reflecting the speed with which it is taking place, is the drop in Jewish marriages, and the intermarriage rate has been estimated to be between 12% and 25%. The drastic change can be seen when the synagogue marriage rate of 4.0 per thousand in the period 1961–65 is compared with the marriage rate in the general population, which was 7.5 in the same period. This very substantial difference may be attributed to two main causes:

(a) the rise in the number of Jews who marry by civil ceremony only, a phenomenon which might also signify a rise in the rate of intermarriage;

(b) the decline in the Jewish birthrate over the last few decades. In the second half of the 20<sup>th</sup> century a strong tendency had set in among Jews in Britain not to go through a religious ceremony in the synagogue, the causal factor for which might be the increase in the intermarriage rate.

**OCCUPATIONS.** The occupational trends in the second quarter of the 20<sup>th</sup> century (up to the 1960s) have been as follows:

large numbers have abandoned the semi-skilled and manual occupations; increasing proportions have entered occupations with opportunities for self-employment, such as shopkeeping, hairdressing, and taxi driving; and there has been a continuous rise in the number of Jews entering the professions. The number of economically active persons in the community has declined, but one explanation for this turn is the greater number of Jewish students who remain in school after age 15 and proceed into the professions. The disproportionate Jewish interest in finance has drastically decreased and preoccupation with manufacturing has increased substantially. Since the beginning of the 20<sup>th</sup> century, the predominance of Jewish-owned merchant banks has declined, while Jews have become more prominent in enterprises of large-scale production, particularly of consumer goods. On the whole, information concerning industrial distribution shows that remarkable similarities exist between Jews in Britain, the United States, Canada, and continental Europe. In all cases large concentrations of Jews are found in the clothing and textile trades, distributive trades, and light industries, and to an increasing degree in professional and administrative services. There is an underrepresentation of Jews, however, in agriculture and heavy industries. The fact that the younger generation has largely avoided the traditional Jewish industrial setting of tailoring and furniture making in the last three decades has resulted in a decline of the Jewish labor and trade-union movements that flourished at the turn of the century. The Jewish worker in the 1950s exhibited a strong tendency to leave the ranks of the working class and become self-employed. It has been estimated that Jewish students compose 3% of the total student population of Britain, whereas Jews account for less than 1% of the population of the country. In addition, only 11.4% of the Jewish women were economically active, compared to 33.9% in the general population.

**COMMUNITY LIFE.** Organization life in Britain boasts a wide array of charitable, religious, educational, recreational, and political groups. These often overlap both in function and membership, which makes it difficult to estimate the proportions of Jews associated with particular types of organizations. Some figures are available, however; in London 61% of the Jews are members of synagogues, as are 75% in Liverpool; in Leeds more than 43% contribute to charitable organizations, and over 63% contribute to the \*Jewish National Fund; in the Willesden district of London, 72% of the boys and 53% of the girls are members of Jewish youth groups. Youth organizations are divided into the following categories: various clubs offering social and sports activities, the best example of which is \*Maccabi; Zionist organizations offering educational and recreational programs and strengthening cultural and personal ties with Israel, such as \*Habonim and \*Bnei Akiva; organizations providing study courses and the Jewish Youth Study Group movement; and societies for Jewish students at universities and colleges. The larger representative youth organizations are the Jewish Youth Council, on which nearly 40

organizations are represented; the Association of Jewish Youth, with some 15,000 members; and the Inter-University Jewish Federation, with some 30 affiliated societies in most universities and in many other higher educational establishments.

Some of the basic constituents of religious identification seem to have remained stable since the 1930s. Thus, in 1934 there were 310 registered synagogues in England and Wales and 400 in 1962; however, considering that there were fewer than 300,000 Jews in the country in 1934, the number of synagogues per thousand Jews had not changed. In London more than a third of the Jewish population is not affiliated with any synagogue, while in Leeds and Liverpool less than a quarter of the Jews were found to be similarly unaffiliated. All the surveys taken in this area point to the fact that the vast majority of Jews still ascribe to religious burial. Synagogue attendance compared with prewar years has been low, except for the High Holidays; however, fragmentary statistics on this point suggest that attendance runs parallel to church attendance among the general population, i.e., between 13–15% of the population attend services weekly. Some religious practices, such as bar-mitzvahs, are observed by a substantial majority, and other practices, such as circumcision, are almost universally maintained. There can be no doubt, however, that on the whole the influence of religion on Anglo-Jewry has declined. Immanuel \*Jakobovits, who was elected chief rabbi in 1966, declared after taking office in 1967 that the survival of Judaism was the primary challenge, in view of “staggering losses by defections, assimilation and intermarriage.” He drew particular attention to the estimate that 85% of the students and 90% of the 2,000 academics were outside organized Jewish religious life.

**EDUCATION AND CULTURE.** The leadership of the community agrees that the key to the preservation of Jewish identification in general, and religious practice in particular, is education, although Jewish education in and of itself will not insure identification without the maintenance of a Jewish atmosphere in the home. Statistics also reveal a continuing desire on the part of Jews to associate mainly with fellow-Jews. Education has been constantly highlighted, therefore, and in the past 15 years much effort has gone into the establishment of Jewish day schools, especially after it became evident that Jewish education imparted through *talmud torah* classes after school hours was becoming less and less satisfactory. In 1962 it was estimated that in London and the provinces, at any one time, only about 57% of Jewish children of school age were receiving Jewish instruction. Despite the efforts to extend day-school programs to larger numbers, the achievement is less impressive than it might at first appear. In the whole of Britain in 1963 there were some 8,800 children in the 48 Jewish day schools (of which only 12 were secondary schools), a figure that represented a doubling of students compared with the situation ten years before. Progress since 1963 has been rather slow, although a certain amount of consolidation in

the day-school movement has taken place. (See also \*Education, Great Britain.)

Higher Jewish and Hebrew \*education can be obtained in yeshivot and colleges with specialized departments in these fields. A survey published in 1962 showed that in the eight yeshivot in Britain, there were 392 full-time students (many of whom were from overseas). Jews' College had 31 students in its combined degree and minister's-diploma course during the 1959–60 session. Similarly, the numbers associated with cultural bodies such as the Jewish Historical Society or the Friends of Yiddish are relatively small. The larger Jewish public is reached, however, by the Jewish press, which has a strong influence on the measure of individual identification. The leading position is taken by the *Jewish Chronicle*, which has the widest circulation in the community. A number of smaller newspapers also cater to some of the provincial towns and to some sections of the community more actively connected with Israel and its specific political parties. Two leading academic journals, *The Jewish Journal of Sociology* (1959– ) and *The Journal of Jewish Studies* (1949– ), are published, and two social science units, one at the Board of Deputies and the other at the Institute of Jewish Affairs, are specifically engaged in research on Jews. There is no regular Hebrew publication in the form of a journal or a newspaper, and the almost total decline of Yiddish is reflected in the closing of the last weekly Yiddish newspaper in 1967. The trend in Britain toward an open society and the existence of equal citizenship rights has closed the social distance between the Jewish minority and British society, and in turn has been eroding Jewish identification. There can be no doubt that progressive emancipation has been leading to a greater degree of assimilation. The persistence of prejudice and some degree of discrimination against Jews has worked, however, in the opposite direction. During the 1950s and 1960s Britain was not free of such anti-Jewish prejudices. They have been promoted by tiny antisemitic groups, who in 1959 and again in 1965 engaged in desecration and arson against synagogues and have spasmodically disseminated virulent antisemitic literature. Less extreme or overt prejudice has also been evident in the business world; for example, in some insurance firms and other commercial enterprises. Quotas exist for Jewish pupils in some elite schools, and Jews have been excluded from the membership of some recreational clubs. At the same time forces more favorable to gentile-Jewish relations have been growing in the postwar period. Special efforts made by the Council of Christians and Jews, established in 1942 and functioning through its 20 branches, have succeeded in fostering better Jewish-gentile relations in the 1960s.

[Ernest Krausz]

### Later Developments

**DEMOGRAPHY.** A conference in March 1977, organized by the Board of Deputies of British Jews and the Institute of Jewish Affairs, surveyed Jewish life in modern Britain and reviewed trends since a previous conference in 1962, basing itself on the social and demographic data produced by the Board's

Research Unit, established in 1965. Generally, the conference found a trend towards polarization in Anglo-Jewry: a growing minority were intensifying their commitment to Jewish religion and education, but there was also an increasing general drift towards intermarriage and assimilation. No official estimates of the Jewish population had been published since the estimate of the Research Unit in 1965 of 410,000, but informed observers now put the number of those identified with the Anglo-Jewish community at considerably below 400,000. While between 1960 and 1979 the annual number of burials (and cremations) under Jewish auspices remained in the range between 4,600 and 4,900, the number of persons married under Jewish religious auspices fell from an annual average of 3,664 for 1960–65 to 2,782 for 1975–79 and 2,606 in 1979. Local community surveys carried out indicated households of sizes varying from 2.4 to 2.98 according to the age structure and character of the local Jewish community, and data on children per marriage in the 1970s reinforced the conclusion that Anglo-Jewry was not replacing itself by natural increase: nor was this deficiency being made up by net immigration.

The surveys confirmed the picture of organized Anglo-Jewry as consisting of increasingly middle class, and increasingly aging, communities; with a high proportion of home- and car-ownership, and a wide range of occupations; and with a tendency well above the national average towards self-employment. Geographically, there remained pockets of elderly and often poorer residents in the inner cities but the trends were towards dispersal from the larger conurbations into the suburbs and countryside, combined with the decline or extinction of established smaller provincial communities.

Synagogue affiliation showed 110,000 members of synagogues in 1977, a decline of 6% since 1970; the Central Orthodox (e.g., United Synagogue and Federation of Synagogues) appeared to be losing ground to the Progressives (Reform and Liberal) with over 20% of the membership and to the small but growing right-wing Orthodox (3.5%). This apparent trend towards religious polarization was also found in the marriage figures for 1979, with the Progressives responsible for 22.5% (compared with 18.6% in 1960–65) and the right-wing Orthodox for 8.4% of the total number of synagogue marriages. The overall decline in synagogue affiliation continued into the 21st century, dropping to a membership of 88,000 in 362 congregations in 2001. The United Synagogue and Federation of Synagogues accounted for half the congregations, with the United Synagogue accounting for 57 percent of overall membership, the Progressives next with 25,000 members (28 percent), and the Haredim with 7,500 (8.5 percent).

The Jewish population continued to decline in the 1980s, from 336,000 (plus or minus 10%) in 1983 to around 300,000 in 1990, a level which it maintained into the 21st century, making it the fifth largest Jewish community in the world. The percentage of Jews who were members of synagogues in the central Orthodox stream fell from 70.5% in 1983 to 64% in 1990. The percentage of those affiliated to the right-wing Orthodox community increased from 4.4% in 1983 to 10% in 1984, fall-

ing to 6.9% in 1990. Only the Progressive movements showed signs of consistent growth. In 1983, 22.4% of Jews affiliated to synagogues belonged to Reform and Liberal congregations. According to 1990 figures, the Reform Synagogues of Great Britain accounted for 17%, the Union of Liberal and Progressive Synagogues claimed 7%, with the Masorti movement taking a small, but growing share. The Sephardi community held steady at just under 3% of the total.

The geographical and social distribution of British Jews barely altered. Two-thirds continued to inhabit the capital. The only growth areas were the "sun-belt" towns on the South Coast such as Brighton, the largest with 10,000. Manchester Jewry maintained its numbers at around 30,000, but Leeds had seen a fall from around 14,000 to about 11,000. A similar drop was estimated for Glasgow. Within each metropolitan center, Jews remain concentrated in a small number of prosperous, suburban, middle-class districts: Bury in Manchester, Moor-town in Leeds, northwest London and Redbridge, an eastern suburb of the capital. The first centers of settlement are now almost bereft of Jewish residents or institutions.

In the mid-1990s the Board of Deputies Community Research Unit estimated the total number of Israelis in the UK to be at least 27,000. Their distribution reflected that of the Jewish population. Over two-thirds live in Greater London, with the majority concentrated in the northwestern boroughs. The highest concentration of Israelis outside London, 7% of the total, is in the northwest of England. The Israelis had a different age profile than British Jews. Over 25% were aged under 16 and only 2% were over 65 years, as compared to 17% and 25% respectively for British Jews. There have been no significant changes in the geographical or occupational distribution of British Jews.

**POLITICAL DEVELOPMENTS.** The General Election of 1979 returned to the new House of Commons 21 Labour and 11 Conservative Jewish members. The new Conservative Government included one Jewish cabinet minister, Sir Keith Joseph, responsible for industry and regarded as a strong influence on the economic thinking of Prime Minister Thatcher, and senior ministers outside the cabinet including Nigel Lawson (Financial Secretary, Treasury), Leon Brittan (Home Office), Mrs. Sally Oppenheim (Consumer Affairs), as well as junior ministers such as Malcolm Rifkind (Scotland) and Geoffrey Finsberg and Lord Bellwin (Environment). In spite of the prime minister's personal commitment to Israel and the strong Jewish vote in her constituency (Finchley), concern was expressed at the pro-Arab record of influential Foreign Office ministers and some evidence of Britain modifying her attitude towards Israel in line with developing EEC policies on the Middle East.

In 1980, earlier discussion of the question whether there was a specifically Jewish pattern of voting crystallized in a debate between the political scientist, Dr. Geoffrey Alderman, who maintained that Jews voted according to their communal interests and could exercise a key influence in important

marginal constituencies, and Dr. Barry Kosmin, director of the Board of Deputies' Research Unit, who showed that the trend of Jewish voters to support the Conservative Party merely reflected their increasingly middle class status; and even if Jews did vote to support a particular policy, they could not affect the outcome in more than a very few constituencies.

A disturbing change during the later 1970s was that of the extreme right-wing National Front from latent to overt antisemitism; and their obtaining 75,000 votes, with some high percentages locally, in the 1976 district council elections. In the 1979 general election, however, when the turnout was much higher, their 301 candidates polled a total of only 191,000 votes with the highest vote for any of their candidates just over 2000; nor did any National Front candidate win even one local council seat. However, in late 1980 Anglo-Jewry shared the unease caused in European Jewry generally by the violence of right-wing movements, notably the Paris synagogue bombing; and the recurrence of anti-Jewish incidents, albeit scattered and unpublicized, combined with deepening economic recession, gave cause for concern.

The principal manifestation of anti-Jewish activity was however associated with the Arab and overwhelmingly left-wing propaganda against Israel, particularly on university campuses. With some 12,000 Arab students in British universities and higher technical institutions, outnumbering Jewish students, especially in engineering and other vocational faculties, anti-Israel propaganda in student organizations had been rife for some years, and it developed into overt anti-Jewish discrimination in 1977. The (British) National Union of Students had voted in 1974 to "refuse any assistance (financial or otherwise) to openly racist and fascist organizations ... and to prevent, by whatever means are necessary," any members of these organizations from speaking in colleges. The resolution of the UN Assembly in November 1975, equating Zionism with racism, thus gave a welcome opportunity to the Socialist Workers Party and the General Union of Palestinian Students. Student unions at some eight universities and five polytechnics voted to withdraw recognition from local university Jewish societies. Decisions at such meetings are usually taken by a small minority of the total number of students in the institution, and several were subsequently reversed. In 1980, however, the exclusion of Israeli scholars from an Arab-sponsored colloquium at Exeter University was widely criticized as an infringement of academic (and tax-payer supported) freedom of discussion.

Support for Israel continued to be possibly the most socially unifying factor in Anglo-Jewry with the organizational framework complementing, even to some extent replacing, more traditional patterns of organization. The advent of the Begin Likud government in 1977 evoked at first a detached, even critical, attitude, from personalities accustomed to dealing with the previous governments in Israel. The peace initiative of Prime Minister Begin and the Camp David agreement which followed, however, produced a much more sympathetic attitude within Anglo-Jewry. The Likud government's settle-

ment policy in the administered territories, however, evoked controversy within Anglo-Jewry, in which Chief Rabbi Jakobovits became involved, when he argued that the retention of occupied territory in the Holy Land had to be considered in the light of the possibility of advancing the cause of peace and the saving of life. While there was not unqualified support for his views within Anglo-Jewry, there was condemnation of attempts to impugn the integrity of his commitment to the cause of Israel. Organizationally, the union of the Zionist Federation of Great Britain with the Mizrahi as the United Zionists was announced but not consummated as of 1981.

The 1980s saw a shift of political allegiances among British Jews from the left to the right. Affluence and self-interest have underpinned the trend, but it was abetted by the perceived anti-Zionism of the Labour Party and the appeal of Mrs. Thatcher, prime minister for most of the period, who was seen as “strong” on Jewish issues. Yet the same period saw manifestations of a stubborn prejudice against Jews within Conservative political circles.

In the June 1983 General Election, 28 Jewish MPs were elected of whom 17 were Conservative and 11 Labour. Three Jews were appointed to serve in the new cabinet, rising to four in 1984 and briefly five in 1986. The General Election of June 1987 saw 63 Jewish candidates. Of these, 16 Conservative and 7 Labour candidates were elected. This marked the second highest ever number of Jewish Tory MPs and a big fall in the number of Jewish Labourites. In the June 1992 General Election out of 43 Jewish Parliamentary candidates, 11 Tory, 8 Labour, and 1 Liberal Democrat were successful. The unsuccessful candidates included 4 Jewish Greens, a new phenomenon. Three Jewish Conservative MPs retired and two others were defeated. Among the appointments to the new cabinet made by the prime minister, John Major, were two Jews: Michael Howard, secretary of state for the environment (home secretary in 1993) and Malcolm Rifkind, secretary of state for defense.

Unlike the rest of Europe, the far-right has been conspicuously unsuccessful in British electoral politics at either a local or national level. In April 1992, the British National Party obtained a mere 7,000 votes for the 13 candidates it fielded. The National Front did even worse, winning under 5,000 votes in 13 constituencies. A visit to Britain by M. Le Pen in December 1991 was met by Jewish protests and anti-fascist demonstrations.

The government’s stand on immigration and asylum issues throughout the decade has aroused disquiet among sections of the Jewish population. In February 1992, a delegation from the Jewish Council for Community Relations saw the then home secretary, Kenneth Baker, to protest against the Asylum Bill. The Board of Deputies also expressed its concern. The Jewish historical experience was alluded to several times by Jewish speakers in the debates accompanying the Asylum Bill’s passage through Parliament during 1991–93.

Another long-running Parliamentary issue of Jewish concern was the punishment of alleged Nazi war criminals

and collaborators domiciled in the United Kingdom. An All Party Parliamentary War Crimes Group was formed in November 1986 to press first for a government investigation and, subsequently, for action against suspected war criminals. Intense lobbying and media revelations caused the government to announce an inquiry in February 1988. Its report in July 1989 called for legislation to enable the trial in Britain of men suspected of committing war crimes in Nazi-occupied Europe at a time when they were not of British nationality. Legislation was introduced into Parliament in November 1989, but opposition by a minority of MPs and a majority of Peers delayed its passage into law until May 1991. The debates about the bill exposed the persistence of many negative stereotypes about the Jews. By April 1992, around £10 million had been spent on the investigations being conducted by the Metropolitan War Crimes Unit and its Scottish counterpart. Over 90 cases were being looked into, but there was still no indication of any case coming to trial.

In July 1992, Antony Gecas, a former member of the 11<sup>th</sup> Lithuanian Police Battalion who had lived in Scotland since 1946, lost his libel case against Scottish TV for a program which had accused him of being a war criminal. The hearing lasted four months and cost £650,000. In his ruling, the presiding judge, Lord Milligan, concluded that Gecas had “participated in many operations involving the killing of innocent Soviet citizens including Jews in particular.” Despite this, Gecas has not been charged with war crimes under the 1991 Act.

Anti-Jewish prejudice surfaced in politics and society. Leon Brittan, the trade and industry secretary who resigned from the cabinet over the “Westland Affair” in 1986, Lord Young, secretary of state for trade and industry who Mrs. Thatcher wanted to take over the chairmanship of the Conservative Party, and Edwina Currie (née Cohen), a junior health minister who resigned in December 1988 over her pronouncements on salmonella in eggs, were all thought to have been victims of a “whispering campaign” among Tory backbenchers.

A series of criminal cases involving Jews attracted much attention and discussion during the late 1980s. The Jewishness of those involved was mentioned sometimes directly, sometimes obliquely, and efforts were made to find a link between this and the malfeasance in question. Such commentary could be open and well-intentioned, but at other times it was insidious and malevolent.

In August 1990, the first trial in the Guinness fraud case, which had lasted 113 days, resulted in the conviction of Gerald Ronson, Sir Jack Lyons, Anthony Parnes, and Ernest Saunders. Parnes, Ronson, and Lyons were Jews, the last two being notable donors to Jewish causes. Saunders was Viennese-born of Jewish parents, but raised as a Christian. In the two subsequent trials connected with the Guinness affair, none of the defendants was Jewish and none was convicted. This fostered the sense that the defendants in the first case had been at best “fall-guys” or, at worst, victimized.

The sensational death of Robert Maxwell in November 1991 was followed rapidly by the collapse of his business empire and the revelation that he had stolen hundreds of millions of pounds from his employees' pension fund in order to prop up the share value of his companies. His sons were subsequently arrested for abetting this fraud and await trial. Although Maxwell's ostentatious burial on the Mount of Olives could not help but draw attention to his Jewish roots, media commentary was relatively restrained. However, it was widely considered that Maxwell and the Jewish entrepreneurs in the Guinness case were outsiders in the City. This denied them protection by the "old boys" network when their schemes, in no way unique, ran foul of the law.

British Jews were, on the whole, spared violent forms of antisemitism. The exception was 1990 when, over a 12-month period there were 29 cases of vandalism against Jewish cemeteries, synagogues, and Holocaust memorials in the London area alone and seven reported cases of physical assault on Jewish persons. This violence is miniscule compared to the assault on non-white minorities, but the attacks provoked media comment and provoked reassuring statements from the prime minister in May 1990.

The most prevalent form of anti-Jewish action in Britain has been the distribution of antisemitic literature. In November 1990, Greville Janner, MP, sponsored an early day motion in the House of Commons which attracted the names of 100 MPs in support of suppressing the circulation of Holocaust Denial material. In March 1991, Dowager Lady Birdwood was charged under the Public Order Act (1986) for distributing the ritual murder accusation against the Jews. She was subsequently found guilty and given a two-year unconditional discharge. In December 1992, glossily produced pseudo-Hanukkah cards containing doggerel that embraced antisemitic libels were sent to hundreds of Jewish organizations and prominent individuals. Police investigations failed to identify the source of this "hate mail" and the Government has consistently rebuffed pleas by the Board of Deputies, most recently in October 1992, for a community libel law.

The announcement that a gathering of Holocaust Denial practitioners would be held in London in November 1991 led to demands that the home secretary ban the entry of Robert Faurrison and Fred Leuchter. Leuchter actually entered the country illegally and was deported after showing up at a "conference" that was heavily-picketed by anti-fascist groups. David Irving, sometime British historian and now a propagandist well known for addressing neo-Nazi rallies in Germany, had become a linchpin in this shadowy global network.

Jews and the Holocaust figured in several historical controversies. In 1987 Jim Allen's anti-Zionist play *Perdition* deployed the canard that Zionists collaborated with the Nazis. Production was canceled after expressions of outrage from the Jewish community and intense media scrutiny, but this only inflamed the debate. The War Crimes Bill occasioned many reflections on the Holocaust, often yoked disturbingly

to Jewish terrorism in Palestine in 1946–47. In January 1992, when Irving claimed to have discovered new Eichmann papers the press treated him as a right-wing historian whose views merited serious reportage. In July 1992, the *Sunday Times* caused a storm of controversy by employing him to transcribe and comment on newly revealed portions of Goebbels' diary.

Alan Clark, junior defense minister, was widely condemned in December 1991 for attending a party to launch the revised version of Irving's book *Hitler's War* in which Irving states that Hitler was innocent of the Final Solution and denies the existence of gas chambers for killing Jews. Clark later endorsed a political biography of Churchill by John Charmley, which appeared in January 1993, that suggested Britain should have made peace with Hitler in 1940 or 1941. Clark and Charmley agreed that there was little to choose between Stalinism and Nazism, and that the plight of the Jews under Nazism was a marginal issue. The exposure in the *Guardian* newspaper in May and December 1992 of war crimes in the Nazi-occupied Channel Islands, and the concurrence of the local authorities in the deportation of Jews, shed a different light on the matter. The Irving affair reached a head when Irving filed a libel suit in 1996 against Deborah Lipstadt and her British publisher, Penguin Books, claiming that Lipstadt's *Denying the Holocaust* had accused him of being a Nazi apologist, Holocaust denier, racist, and antisemite. Lipstadt contended that this was precisely what he was, and the Court agreed in its 2001 verdict denying his suit.

Controversy also surrounded efforts to set up an *eruv* in the London borough of Barnet. The project was launched by the United Synagogue "Eruv Committee" in 1987. In June 1992 it was passed by the Public Works Committee of Barnet Council. It was then considered by the Hampstead Garden Suburb Trust, which manages this architecturally unique suburban area. At a stormy meeting in September 1992, the Trust's chairman, Lord MacGregor, was censured for approving a letter to Barnet Council advising it to reject the plan and calling the *eruv* "a very unpleasant exhibition of fundamentalism." He subsequently resigned. This fracas made the *eruv* into a heated issue locally and in the national newspapers. On February 24, 1993, the council's planning committee defeated the *eruv* proposal by 11 to 7 votes. Jewish councilors were split and it generated fierce opposition from both Orthodox and "assimilationist" Jews. It was also attacked by non-Jews unable to accept the public expression of Jewish difference.

In June 1992 the prime minister, John Major, appointed two Jews to his new government: Michael Howard became secretary of state for the environment and Malcolm Rifkind was appointed secretary of state for defense. After a cabinet reshuffle in March 1993, Howard was made home secretary. In November 2003, however, Howard was elected leader of the British Conservative Party, the first Jewish leader of a government or opposition party in Britain in the 20<sup>th</sup> century. Howard stepped down after the 2005 elections. Another reshuffle in September 1995 led to Rifkind's appointment as foreign sec-

retary. He was the first Jew to hold this office since the brief tenure of Rufus Isaacs, the Marquess of Reading, in 1931.

After the death of John Smith MP, in April 1994 the Labour Party chose Tony Blair MP, as its new leader. He actively sought to heal the breach between British Jews and the Labour Party so marked in the 1980s. Blair promoted a number of Jewish MPs and political activists. Blair's closest advisers include Peter Mandelson MP, and David Miliband. In October 1995, Barbara Roche MP, a former headgirl of the Jews' Free School, was elevated to the ranks of the Labour shadow government. The veteran Jewish Labour MP, Greville Janner, former president of the Board of Deputies and chairman of the House of Commons Employment Select Committee, announced that he would not stand again for Parliament at the next general election.

The far-Right enjoyed a modest revival in September 1993, when Derek Beackon, an unemployed 47-year-old former steward for the neo-Nazi British National Party (BNP), won a local council by-election in the Milwall ward of the Isle of Dogs in London's docklands. However, the election of the first BNP councilor proved to be a local quirk. Beackon took 34% of the vote, winning by seven votes, in a contest with a disorganized Labour Party opposition. The vote was more of a protest gesture than an endorsement of neo-Nazi ideology. The BNP "triumph" was universally deplored by mainstream politicians and triggered the revival of a national anti-racism campaign. In the May 1994 local council elections, Beackon increased his vote by 500. But he polled only 30% of the total vote on a much higher turnout that resulted in a Labour victory. The BNP won over 25% in two other east London constituencies, but failed to elect a single councilor.

The Board of Deputies reported that antisemitic incidents numbered 346 in 1993 (as against 292 in 1992) and 327 in 1994. In 2000 the number was 405 and in 2002, 350. Jewish cemeteries were desecrated in Newport in May 1993; Southampton in August 1993; East Ham, London, in December 1993, January 1994 and June 1995; Bournemouth in July 1995. A Manchester synagogue was daubed with swastikas in August 1993 and the following month a Jewish nursery school in Stamford Hill, London, was destroyed in an arson attack. There were mailings of antisemitic literature in September and December 1993. In April 1994, 80-year-old Lady Birdwood was found guilty of distributing material liable to incite racial hatred. Upsurges in antisemitic incidents were generally related to events reflecting the conflict in the Middle East, like 9/11 or the 2002 Israeli military action against Jenin. In this context, in a particularly outrageous act, Britain's 48,000-member Association of University Teachers decided in April 2005 to boycott Israel's Bar-Ilan and Haifa universities. In the face of international pressure it rescinded its decision a month later.

Jewish leaders made numerous representations to the government for stronger legislation against racism. In December 1993, the Board of Deputies gave evidence of escalating anti-Jewish activity to the House of Commons Home Affairs Select Committee. The Board assisted the drafting of a private

members bill, introduced into the House of Commons by the Conservative MP Hartley Booth, to impose tougher penalties on criminals convicted of racial crimes and outlaw group defamation. In January 1994 the Runnymede Trust published a report, "A Very Light Sleeper: The Persistence and Dangers of Anti-Semitism," charting the increase of anti-Jewish attacks and urging that religious discrimination be outlawed. The Home Affairs Select Committee report in April 1994 recommended making "racial harassment" an offense and tightening the penalties for racial crimes.

Michael Howard promised to clamp down on racial violence, but rebuffed calls for tougher legislative action made by a Board delegation in February 1994. The government refused to support Booth's widely backed bill, and in June 1994 rejected the recommendations of the Home Affairs Select Committee. However, in October 1995, the minister of state at the Home Office gave instructions to the police and the courts to be as harsh as possible within the existing legal framework when dealing with racial crimes. Meanwhile, Howard flagged new measures to reduce illegal immigration and curb the number of "bogus" asylum seekers. His proposals were regretted by Jewish representatives.

Following the Washington Peace Accords in September 1993, anxiety about communal security focused on militant Islamic groups allowed to operate in the UK. In February 1994 the Board complained to the Home Office about Hizb ut-Tahrir, an association of mainly overseas Muslim students attending British universities. After the March 1994 Hebron massacre, which was condemned by the chief rabbi and president of the Board of Deputies, there were attacks on Jewish targets in London, Birmingham, and Oxford. After the bombing of the Israeli Embassy and JIA offices, in London on July 26–27, 1994 (see below), Jewish organizations reiterated their concern about radical Islamic groups. The Board unsuccessfully called on the Home Office to ban a rally organized by Hizb ut-Tahrir at Wembley Conference Centre in August 1994. After much prevarication, in November 1994, the governing body of the London School of Oriental and Asian Studies (SOAS) banned Hizb ut-Tahrir from holding meetings on SOAS premises. Hizb ut-Tahrir held a mass meeting in Trafalgar Square in August 1995 at which speakers called for the destruction of Israel and denied that the Holocaust had taken place. British Jews have also been concerned by the growing influence of the Chicago-based Nation of Islam among British blacks. In 2002 Sheik Abdullah al-Faisal was arrested for incitement to murder Jews.

War crimes cases continued to cause controversy. In February 1994 the Scottish police war crimes unit was wound up and the Crown Office later announced that there was insufficient evidence to charge Antony Gecas, the sole subject of investigations, under the 1991 War Crimes Act. In December 1994, Lord Campbell of Alloway introduced into the House of Lords a bill to stop war crimes trials in England, basing his case on the need to harmonize English with Scottish practice. It was opposed by the government. In July 1995, Simeon Se-

rafimovicz, an 84-year-old former carpenter, was charged with the murder of four Jews in Belorussia in 1941–42. He is the first person in England ever to be charged with war crimes under the Act. However, British efforts to prosecute war criminals, from the passage of the Act through the early years of the 21<sup>st</sup> century, have been, on the whole, tepid.

The bid by the United Synagogue Eruv Committee, launched in 1987, to establish an *eruv* with a circumference of 6.5 miles in Golders Green, Hendon, and Hempstead Garden Suburb finally met with success. In February 1992, Barnet Council planning committee had rejected the proposal. An appeal was lodged with the Department of the Environment and a revised plan was put to the planning committee in October 1993. It was again rejected, but the Department of the Environment ordered a public inquiry which took evidence in December 1993. Much of the rhetoric at the inquiry by opponents of the *eruv* was lurid and inflammatory. In September 1994 the government inspector conducting the inquiry issued his report. It refuted the arguments of *eruv* protesters and the following month, during Sukkot, John Gummer, Secretary of State for the Environment, gave his sanction for its erection.

**THE ANGLO-JEWISH HERITAGE.** The introduction of government aid for historic places of worship in use assisted the restoration of the third oldest surviving synagogue, Exeter, established in 1763/4 and re-opened in October 1980, its use as a synagogue being combined with the provision of a center for Jewish students at Exeter University. This highlighted the problem of architecturally and historically important Jewish buildings no longer viable because of the movement of Jewish population from provincial towns or city centers, which was exemplified by the appeal to convert the former Sephardi synagogue in Manchester established in 1874 to a Jewish museum.

A unique commemoration took place on October 31, 1978 when on the initiative of the Jewish Historical Society of England, and in the presence of the chief rabbi and the archbishop of York, the massacre of the Jews of \*York in 1190 was commemorated by the unveiling of a plaque at Clifford's Tower, the site of the massacre. The inscription in English reads: "On the night of Friday, 16 March 1190, some 150 Jews and Jewesses of York, having sought protection in the royal castle on this site from a mob incited by Richard Malebisse and others, chose to die at each other's hands rather than renounce their faith," and concludes with the verses in Hebrew: "They ascribe glory to the Lord and his praise in the isles" (Isaiah 42:12); the word *ha-iy*, "the island," being the name used for England in medieval Hebrew.

**COMMUNITY LIFE.** In mid-1979, Lord Fisher of Camden retired as president of the Board of Deputies. His six years of office saw the affiliation of the Board to the World Jewish Congress, changes in the organization and representational basis of the board, and the growth of a sense of communal purpose in support for Israel and Soviet Jewry, and in opposition to threats against civil liberties from extremes of the

left and right. He was succeeded by Greville Janner, QC, MP, son of a former president (Lord Janner) and, at 50, the Board's youngest president. On taking office, he declared that his policy would be to emphasize working with youth and with provincial communities.

The 1980s also saw the first visit of a prime minister, Mr. James Callaghan, to the Board as well as that of the foreign secretary, Lord Carrington, at his own request, to explain British policy in relation to Israel.

The community was increasingly concerned with the problems of meeting the welfare needs of its increasingly aging membership. The London Jewish Welfare Board devoted the greater proportion of its expenditure to homes and flats, day centers and home visits to the aged. Coordination of social work was advanced by cooperation between organizations and professional workers, and shared use of accommodation in buildings like the Golders Green Sobell House or the Redbridge Jewish Centre.

The Board of Deputies acquired a new chief executive in February 1991 when Neville Nagler, a senior civil servant, succeeded Hayyim Pinner, holder of the position for 14 years. In June 1991, Judge Israel Finestein, QC, won the election for the presidency of the Board of Deputies and succeeded the outgoing Dr. Lionel Kopelowitz who had held office since 1985. Rosalind Preston was elected the first woman vice president of the Board. Finestein announced that he intended to increase democracy in Anglo-Jewry and secure greater participation in communal governance by the young, women, regional communities, and academics.

Chief Rabbi Dr. Immanuel Jakobovits was elevated to the House of Lords in January 1988 and in March 1991 was awarded the prestigious Templeton Prize for progress in religion. In May 1991 he was criticized by figures in the Joint Israel Appeal because of an interview in the *Evening Standard* newspaper in which he expressed reservations concerning Israeli conduct in the Administered Territories. He was succeeded in September 1991 by Rabbi Dr. Jonathan Sacks. As principal of Jews' College, in 1989 Sacks organized two important conferences on "traditional alternatives" in Judaism, one on general and another on specifically women's issues.

In February 1992, the new chief rabbi unveiled his review of women's role in Jewish life and named Rosalind Preston as its head. This followed a bitter struggle over women's services in Stanmore Synagogue. Although in April 1991 he resigned from a Jewish education "think tank" because it included a Reform rabbi, in April 1992 Chief Rabbi Dr. Sacks led a delegation that embraced Reform and Liberal rabbis (including a woman) to a major interfaith conference.

In September 1992 a report on the United Synagogue, conducted under the guidance of Stanley Kalms, found "mistakes, miscalculations, poor management, and financial errors" and revealed a debt of £9 million. The report also noted that a majority of members felt alienated by the rightward trend of the rabbinate and recommended an "inclusivist" position. It precipitated the resignation of Sidney Frosh, the pres-

ident. In December 1992, the United Synagogue announced £0.8 million of cuts and a freeze on rabbis' salaries. It wound up its three-year old *shehitah* operation, established as a result of the bitter "*shehitah* wars" in the 1980s, with a loss of £0.7 million.

The search for economies underlay the amalgamation of the Jewish Blind Society and the Jewish Welfare Board to form Jewish Care in December 1988. In the recession of the early 1980s and again in the slump of 1990–92, Jewish welfare organizations had to cater for Jewish unemployed persons, too, despite a shrinking income base. The second recession saw many of the fortunes built up by Jewish entrepreneurs in the 1980s crumble. Grodzinski, the *kasher* baker, went into receivership in February 1991 after trading for 102 years. The famous *kasher* caterer Schaverin suffered a similar fate in November 1991. In June 1992, the Glasgow *Jewish Echo* closed down after 64 years of publication.

Nor was Anglo-Jewry immune to the social problems afflicting the rest of society. In July 1991 David Rubin, son of an eminent rabbi, absconded after allegedly defrauding fellow-Jews of millions of pounds. A few weeks later, a child-abuse case in the Orthodox community of Stamford Hill led to violent demonstrations by members of the community against the family that had taken the matter to the police.

Jewish communal institutions have been dogged by poor finances, while attempts at reorganization have had uneven success. In March 1993 the highly effective and inexpensive Association of Jewish 6<sup>th</sup> Formers (AJ6), which prepares Jewish teenagers for university, faced closure due to lack of funds. AJ6 received a last-minute reprieve, but the affair showed the need for a strategic funding policy. In April 1993, Lord Young, former Tory cabinet minister and businessman, initiated the Central Council of Jewish Social Services (CCJSS) which he envisaged as a directorate for British Jewry. In July 1993 he was elected chairman of the CCJSS, now embracing over 40 Jewish organizations.

Lord Young dismissed the Board of Deputies as inefficient and incapable of providing either policies or leadership. His view appeared to be confirmed when plans for its reform were stymied. In December 1993, the Board failed to give a two-thirds majority to measures to decrease the size of the executive, the number of Deputies, and the frequency of plenary meetings. The election of Eldred Tabachnik, QC, as president in June 1994 revived hopes of reform.

The United Synagogue (US), which announced that it had lost £1 million on a disastrous *shehitah* operation in June 1993, pulled itself back into the black by means of draconian economies. A series of institutional reforms failed to placate women who demanded a greater say in its affairs (see below). The Rix Report on Jewish youth in September 1994 called for greater investment in youth work which was met with alacrity by the CJC's and other funding bodies. After a series of poor appeal results, the JIA was relaunched in October 1995.

The most important communal initiative was the inauguration of Jewish Continuity in April 1993. Jewish Conti-

nuity was intended to raise money to fund new and existing educational projects, invest in people to "champion" Judaism, and provide advice and guidance across the whole Jewish community. However, Continuity immediately aroused the suspicions of Progressive Jews because of the absence of any but Orthodox Jews from its directorate and staff. In May 1994 an allocations board was set up that included members of the Reform and Liberal movements. Continuity hoped to avoid Orthodox criticism of this move by making the allocations board semi-detached, dispensing moneys given it for the purpose by Continuity. In July 1994, Continuity reached an agreement with the JIA that £12 million of the money raised by the JIA in Britain would go to educational projects identified by Continuity. In September 1994 it announced its first grants, totaling £435,000. The largest number and amount of grants went to Orthodox causes.

During 1995, critics continued to charge Jewish Continuity with bias and a lack of strategy. In October 1995 it announced a major review of its operations, to determine what its role should be and end the confusion between its functions as grant giver and service provider. The review would also deal with the antagonism which had built up between it and the JIA and Progressive Jews in Britain.

The fortunes of Jewish Continuity were inextricably linked with those of its progenitor, Rabbi Dr. Sacks. He appeared increasingly beleaguered by an intractable rabbinate, an assertive Jewish women's movement and confident Masorti, Reform, and Progressive movements. In February 1993 a Jewish women's prayer group held the first women's Sabbath service in a manner authorized by Rabbi Dr. Sacks: in a private house and without use of a *Sefer Torah* or prayers requiring a male quorum. But there was pressure for more radical, and according to many authorities permissible, steps such as use of a *Sefer Torah* and praying in a synagogue. In March 1994, a women's prayer group defied Rabbi Dr. Sacks and held a service using a *Sefer Torah* on a Sunday at Yakar, an independent Orthodox study center in London.

In July 1993, Rabbi Dr. Sacks issued guidelines to the US on how to accommodate women's demands for greater involvement. He ruled that women could become members of the US council and sit on synagogue boards of management, but only by co-option not election. This did not satisfy the women of the US. In October 1993, Rabbi Dr. Sacks announced his solution to the problem of *agunot*. He recommended mandatory prenuptial contracts entitling the wife to support from her husband until divorced by a *get*, and mutual cooperation to achieve that end. Enforcement of this recommendation was stymied by members of his Beth Din.

The inquiry into women in the community, initiated by Rabbi Dr. Sacks and headed by Rosalind Preston, announced its findings in June 1994. It revealed that women wanted more spiritual involvement, more rituals in recognition of female life-cycle events, the right to say *kaddish*, greater recognition of the needs of single women and single mothers, urgent reform of the *get* system, and greater sensitivity by *Batei Din* to

women's issues including domestic violence. Yet Sacks found it difficult to deliver anything meaningful and his hands were still tied even on prenuptial agreements. Acting out of frustration, on October 28, 1995, "chained" Jewish women demonstrated outside the office of the United Synagogue Chief Rabbinate. The debate about Jewish women's rights under *halakhah* has consistently attracted national press and television coverage.

In January 1995 Sacks launched an attack on the Masorti movement in England. The pretext was an article in the Masorti magazine insinuating that he had recognized marriages conducted by Masorti rabbis. He responded with an article in the ultra-Orthodox *Jewish Tribune* in which he declared that the Masorti were guilty of "intellectual dishonesty"; using the term "*ganavim*" (thieves) to describe them. He stated that a follower of Masorti had "severed his links with the faith of his ancestors." Masorti, Reform, and Liberal rabbis, as well as lay leaders upbraided Sacks for the violence of his outburst. It put the future of Jewish Continuity into doubt since non-Orthodox Jews could not see how a body under Sacks' influence could fund their work or merit their support and Rabbi Dr. Sacks struggled to contain the damage.

The cultural agenda has been dominated by the anniversaries connected with World War II and the Holocaust. The 50<sup>th</sup> anniversary of the Warsaw Ghetto Uprising, the liberation of Auschwitz, the liberation of Belsen, and the end of the war were all marked by commemorative events, academic conferences, and a spate of publications. Media coverage of these events was intense and raised public awareness of the Holocaust. In November 1994, the Imperial War Museum announced that it was considering the construction of a permanent exhibit on genocide in the 20<sup>th</sup> century, focused on the Holocaust. Plans for a Holocaust Museum were unveiled in Manchester, too. Beit Shalom, the first Holocaust Museum in Britain, a private initiative originated, funded, and developed by a non-Jewish family in rural Nottinghamshire, opened in September 1995.

The Board of Deputies considered legal action against the Jewish authors, producers, and director of a TV fictional film, "Wall of Silence," about murders in the *hasidic* community of North London. First screened at the 9<sup>th</sup> Jewish Film Festival and then transmitted on BBC on October 17, 1993, the film was widely criticized for presenting negative stereotypes of Orthodox Judaism.

A Center for Jewish Studies was inaugurated at SOAs in December 1993, for German-Jewish Studies at Sussex University, and Sephardi Studies in London, under the auspices of the Sephardi community, in 1994. In November 1994, Dr. Dovid Katz started the Oxford Institute for Yiddish Studies, incurring the wrath of the Oxford Center for Hebrew and Jewish Studies, from which he subsequently resigned. New positions in Jewish studies were created at professorial level at Manchester University and at lecturer level at Bristol University. The Institute for Jewish Affairs transferred to a new home in April 1993 and broke away from the World Jewish Congress, form-

ing instead close ties with the American Jewish Committee. Jewish Book Week moved to a new venue and attracted bigger literary figures and audiences than ever before. A specially designed building to house the London Jewish Museum was opened in Camden in 1995. In 1994 the *Jewish Quarterly* was invigorated by a new editor, Elena Lappin.

**EDUCATION AND CULTURE.** While estimates of the Jewish child population (and of those receiving part-time Jewish education) fell with the decline of the general child population in Britain, the number enrolled in Jewish day schools reached some 13,000 at the end of the 1970s, representing over 20% of the estimated Jewish child population. New Jewish day schools continued to be founded and there were positive developments in Jewish adult education in various aspects involving synagogues of different religious affiliation, the Lubavitch movement, and courses for younger Jewish leaders. Enrollment continued to rise through the 1980s and 1990s reaching 30% in 1992 and 51% in 1999. The United Synagogue Agency for Jewish Education operated 14 primary and nursery schools and five secondary schools in the early 2000s and had trained over 150 teachers since 1997. The Leo Baeck College Center for Jewish Education offered an M.A. program in Jewish education from 2002.

In 1984, Jews' College moved to new accommodations and the Manor House Sternberg Center for Reform Judaism was set up. Jewish museums were founded in London and Manchester. In 1990–92 there were several conferences and publications on the preservation of the documents, artifacts, and buildings that constitute the Jewish heritage in Britain. Sadly, Bevis Marks synagogue suffered collateral damage from an IRA bomb attack in London in August 1992. In 1991, Immanuel College was opened and the Jewish Chronicle Chair in Modern Jewish History was established at University College London to mark the paper's 150<sup>th</sup> anniversary and a chair in Modern Jewish Studies was dedicated at the University of Manchester. During 1992–93, lectureships in Modern Jewish History were established at Warwick and Leicester universities. In 1992, Dr. David Paterson was succeeded by Professor Phillip Alexander as head of the Oxford Center for Postgraduate Hebrew Studies, having secured its future. Jewish schools topped the national league for the award of "A" Levels in August 1992. Less happy publicity was created by the decision of state-aided Jewish schools in Liverpool and Manchester in September 1991 not to admit Jewish children from a Reform Jewish background.

Jewish culture found diverse expression in the courses of the Spiro Institute throughout the decade. There were festivals of Yiddish culture on the South Bank, an annual Jewish Film Festival, and Jewish music festival. In December 1991, *Leon the Pig Farmer*, an independent film funded largely by Jews and on a Jewish subject, won awards at the Edinburgh and Venice Film Festivals. In 1988, the conference "Remembering for the Future" inquired into the Holocaust. The anniversary of the massacre at Clifford's Tower in York in 1090 occasioned sev-

eral solemn events. The 50<sup>th</sup> anniversary of the 1942 Wannsee Conference was the subject of an international conference in London organized principally by the Wiener Library. During 1992 there were many celebrations of the Sephardi experience to mark the anniversary of the expulsion from Spain.

### Relations with Israel

Britain's relations with Israel should be viewed in the perspective of half a century, beginning with the closing phases of World War I. In November 1917, with the war against Germany and her allies still at its height, the British government issued a statement of policy, the \*Balfour Declaration, favoring the establishment of a Jewish national home in Palestine. The near euphoria and sense of gratitude to Britain that this announcement aroused among Jews everywhere was to give way a generation later to an atmosphere of bitterness and mutual recrimination, in which the British Mandate over Palestine finally came to an end (1948). But in the intervening years, despite all the frictions and difficulties, the foundations of Jewish statehood had in fact been laid. The period immediately following Israel's Declaration of Independence in May 1948 was a somber one in the relations between the new state and the former mandatory power. Unlike the United States and the Soviet Union, Britain refused to recognize the newly established state for many months. At the United Nations General Assembly in Paris in the latter part of 1948, the British delegation was the principal, though ultimately unsuccessful, protagonist of the so-called \*Bernadotte Plan, a central feature of which was the proposal to transfer the Negev from Israel to the Arabs. Relations between Britain and what it termed "the Jewish authorities in Tel Aviv" reached an acute point when, on Jan. 7, 1949, in the course of renewed fighting between Israel and Egypt, the Israelis shot down five British planes that had been sent on a reconnaissance mission from the Suez Canal Zone. At this time, however, a strong reaction against the policy of Foreign Secretary Ernest \*Bevin began to assert itself in Britain. The debate in the House of Commons on January 28 was a damaging one to the government. Three days later Bevin announced the *de facto* recognition of Israel and, shortly thereafter, the appointment of Britain's first diplomatic representative to Israel, Sir Knox Helm.

Gradually a new pattern of relations evolved between the two countries. The period of Bevin's influence had not been forgotten by the people of Israel, but Britain's initial role in having made the development of Jewish nationhood in Palestine politically and physically possible was increasingly recalled and recognized. Steady progress was made in day-to-day contacts through trade, tourism, and cultural relations. But despite these positive developments, British policy toward Israel continued to be markedly reserved, for reasons connected with Britain's interests and commitments in the Arab world. As late as 1955, the British government still harbored ideas about the transfer of at least a part of the Negev to Egypt. This attitude was reflected in Prime Minister Anthony Eden's

speech at the Guildhall on Nov. 9, 1955, in which he suggested a compromise on the frontiers set by the Partition Resolution of 1947 and those established under the Armistice Agreements as a way out of the Arab-Israel impasse. This proposal was unequivocally rejected by Israel and eventually abandoned. Less than a year later, Britain and Israel found themselves in unlikely association in military action against Egypt-Israel in Sinai, Britain in Suez. The events leading to this development were President Nasser's nationalization of the Suez Canal on the one hand, and his active sponsorship of the *fedayeen* terror gangs, organized on Arab territory for acts of murder and sabotage within Israel, on the other.

For more than a century, the preservation of Britain's communications with India, the keystone of her empire, had been a dominant factor in Britain's interest in the Middle East. In 1947, India achieved independence almost contemporaneously with Israel. The strategic and political implications of this event for Britain's status in the world were not immediately obvious. Britain remained the paramount power in the Middle East with military bases in Iraq, Egypt, and Jordan, and with a vital financial stake in the ever-increasing oil wealth that was being uncovered not only in Iran but in the Arab lands bordering on the Gulf, including Iraq, Kuwait, Bahrain, and the sheikhdoms. In the mid-1950s a revolutionary change occurred: the collapse of British power and prestige that accompanied the Suez debacle of 1956 was followed two years later by the murder of the king of Iraq and the lynching of his premier, Nuri Said, Britain's faithful friend and ally. The last British base in the Arab Middle East other than one in Aden was now relinquished. By 1968, as Britain's policy of withdrawal from direct military commitment to areas east of Suez began to be extended even to the Persian Gulf; Aden too was abandoned. Middle East oil, so vital to the European economy, continued to flow more or less uninterruptedly because of the mutual interests of the Arab governments on the one hand and of Western purchasers on the other. But the old power relationship, including its implications for Israel, had dissolved.

Nevertheless, Britain's role in the area in the 1960s must not be underestimated. As a great world financial and trading community, with the support of experienced and effective diplomats, Britain continued to exert extensive influence. The decline of Britain's authority in the Arab world significantly affected British-Israel relations. Although the traditional sensitivity of the Foreign Office to possible Arab reactions persisted, a more relaxed, less inhibited attitude toward Israel began to assert itself. This was manifested not only in official contacts and public statements, but also in willingness to sell Israel such major items of military equipment as Centurion tanks, naval vessels, and submarines. Within the aggregate of Britain's overseas trade, Israel occupied a modest but increasingly significant place in 1968. The total bilateral trade between the two countries in 1967 amounted to about \$215,000,000, an increase of nearly 75% compared with 1957. In fact, the value of Britain's exports to Israel exceeded that to any of the Arab

countries. Britain constituted Israel's most important overseas market, with agricultural products (notably citrus) and polished diamonds predominating. Israel–British economic relations have long been a target of the Arab boycott offices, but, as trade figures reveal, their success has been marginal. The Suez Canal – blocked as a result of the \*Six-Day War – remained closed. The resultant loss to British trade and shipping, although eventually much reduced, undoubtedly contributed to Britain's active interest in seeking a solution to the Middle East crisis. British diplomats at the United Nations thus took a leading part in sponsoring and securing the passage of the Security Council resolution of Nov. 22, 1967. The war brought about a rupture in relations between Britain and a number of Arab countries, but these were reestablished, and Britain's policy ostensibly aimed at seeking to maintain a balance of friendship with both the Arab states and Israel.

Although there is not always an identity of views between Israel and Britain on the problems of the Middle East, there was a broad base of common understanding in the late 1960s. The interest of the British people in Israel is not a passing phenomenon but rests on deep religious and spiritual foundations and was impressively demonstrated at the time of the Six-Day War. Attitudes and suspicions on the part of both countries survive from a more troubled period in their relationship. But the dominant motive was one of mutual regard that found its expression not only in political and economic spheres, but also in cultural relations and public opinion.

[Arthur Lourie]

For most of the 1980s British foreign policy was conducted by Sir Geoffrey Howe. Britain urged the PLO to recognize Israel and renounce terrorism, while calling on Israel to halt settlements in the occupied territories as a *quid pro quo*. Between 1984 and 1987 there were several friendly high-level exchange visits, but British unease about conditions in the Gaza Strip were forcefully expressed by junior Foreign Office Minister David Mellor during a visit in January 1988. After Yasser Arafat announced acceptance of UN resolutions 242 and 338 and renounced the armed struggle, William Waldegrave, Mellor's successor, met with Abu Bassam Sharrif of the PLO.

The outbreak of the *intifada* in 1989 led to the revival of the propaganda war in the media and in student politics. British Government officials repeatedly expressed concern at Israeli handling of the disturbances. In March 1990, the new foreign secretary, Douglas Hurd, met with Abu Bassam Sharif, although the Palestinian terrorist attack on Israel in May 1990 led to demands to sever links with the PLO. Hurd issued a call to the Palestinians to curb terrorism, but contacts with the PLO continued. The situation was transformed by Iraq's invasion of Kuwait in August 1990. The British Government deplored PLO support for Saddam Hussein and rejected any "linkage" between Iraq's invasion and the Palestinian problem, although in October 1990 it said that Israeli policy towards the Palestinians could not go unchanged. In November

1991, Britain resumed diplomatic ties with Syria, severed after the 1988 Lockerbie disaster, which was now a member of the anti-Iraq coalition.

When the war started, hundreds of British Jews, including the chief rabbi, went to Israel on solidarity missions. Prime Minister John Major congratulated Israel on its "admirable restraint" following Iraqi missile attacks. Popular attitudes towards Israel and the Palestinians changed radically, although British official policy soon reverted to type. In January 1992 Mr. Major addressed a letter to the Zionist Federation of Great Britain calling on Anglo-Jewish leaders to intervene with the Israel Government against the deportation of 12 Palestinian activists. On July 30, 1992, Mr. Major addressed the annual dinner of the Conservative Friends of Israel. He called the settlements "a major impediment to the peace process," denounced the Arab boycott as "iniquitous" and said it should be ended in return for freezing the settlements.

In March 1993, Douglas Hogg, the minister of state at the Foreign Office, met with Faisal Husseini and PLO officials, thus ending the ban on official ministerial contacts with the PLO. On July 2, 1993, the Foreign Secretary met Husseini along with Nabil Shaath and Afif Safieh, the PLO's London representative. Following the White House Accords, which were welcomed by the government and opposition parties, Douglas Hogg visited Yasser Arafat in Tunisia and the status of the PLO office in London was upgraded to a "delegation." The Foreign Secretary, Douglas Hurd, visited Israel during a Middle East tour in December 1994. A visit to London by Israeli prime minister Yizhak Rabin was curtailed by a terrorist bombing in Israel.

On October 30, 1994, Prince Philip made the first royal visit to Israel. During his 25-hour stay he attended a ceremony at Yad Vashem to honor his mother for rescuing Jews in Greece during the war, and dined with President Ezer Weizman. In March 1995, Prime Minister John Major became the second serving British premier to go to Israel. The accent of his visit was firmly on strengthening trade links between the two countries. However, British diplomats avoided the Jerusalem 3000 celebrations.

The peace accords divided British Jews. While welcomed by Israel Finestein, president of the Board of Deputies, and Chief Rabbi Dr. Jonathan Sacks, they were anathematized by British Mizrahi and Herut, including many rabbis. On December 15, 1993, during an official visit to London, Yasser Arafat met British Jewish leaders including Israel Finestein, Lord Rothschild, Greville Janner MP, and Sir Sigmund Sternberg. But 60 rabbis and prominent *dayyanim* issued a statement condemning the meeting. On August 6, 1995, businessman and JIA leader Cyril Stein and Rabbi Alan Kimche, the outreach director of Jewish Continuity (see below), joined a demonstration outside the Israeli Embassy in London against the peace negotiations. It was organized by the New York Rabbi Avi Weiss. In October 1995, Rabbi Dr. Sacks was again attacked by his own rabbinate for endorsing the peace process and the principle of withdrawal from the West Bank.

The peace process had a more dangerous and tragic impact. On July 26–27, 1994 bombs exploded outside the Israeli Embassy at Palace Green, Kensington, and Balfour House in North Finchley, which houses the offices of the Joint Israel Appeal (JIA) and the Zionist Federation. Nineteen people were injured in the first attack, none seriously, but the embassy was badly damaged. The Jewish community was aggrieved that its warnings to the authorities had been ignored. Armed police guards were subsequently posted at potential Jewish targets and communal security stepped up, but the government refused to help fund the installation of surveillance systems. In December 1994, Israeli police minister Moshe Shaḥal held talks with Scotland Yard in London to discuss measures to counter the threat posed by radical Islamic groups operating in London. On September 5, 1995, Danny Frei, a former pupil of Hasmonian school in London, was murdered in Israel on the West Bank where he lived.

During the Blair years, Israel's relations with England were fairly smooth. Blair himself exhibited warmth and support while maintaining what England considers an even-handed approach to the Middle East conflict. In a meeting with Shimon Peres in October 2005 he called Israel's disengagement from Gaza a "crucial and courageous act," reaffirming his commitment to a secure Israel as well as a viable Palestinian state. The British media, on the other hand, and particularly the BBC, is perceived as hostile in Israel and in effect as encouraging terrorism through its biased reporting.

**ENGLARD, YITZHAK** (1933– ), Israeli jurist. Englard was born in Frankfurt, Germany. He received his Magister Juris (cum laude) at the Hebrew University of Jerusalem in 1956 and his Diploma d'Etudes Superieures at the Faculte de Droit, Paris. Admitted to the Israeli Bar in 1960, he served in the Israel Defense Forces (as judge advocate) in 1962–63. Subsequently he became professor and later dean of the Hebrew University Law Faculty and director of the university's Institute for Research in Jewish Law. He was also a visiting professor at the University of Zurich, Switzerland; the University of Grenoble, France; and the University of Toronto, Canada. He was also an honorary member of the World Jewish Academy of Sciences.

In 1997 Englard was awarded the Israel Prize for law and in 1997–2003 he served as a justice of the Israel Supreme Court, occupying the "Orthodox seat." He wrote numerous books and articles on torts and Jewish law, state and religion, legal capacity and comparative law. Englard has been a critic of Menachem \*Elon's dogmatic-historic approach to \*Mishpat Ivri, preferring to place the emphasis on spiritual input rather than legal doctrine in assessing the desired relationship between *halakhah* and Israeli law.

## ENGLISH LITERATURE.

### Biblical and Hebraic Influences

The Bible has generally been found to be congenial to the English spirit. Indeed, the earliest English poetry consists of the seventh-century metrical paraphrases of Genesis and Exodus attributed to Caedmon (died c. 680). Here the emphasis is on the military prowess of the ancient Hebrew warriors. Abraham in his fight against the five kings (Gen. 14) takes on the character of an Anglo-Saxon tribal chief leading his thanes into battle. One early biblical work was *Jacob and Joseph*, an any-

mous early 13<sup>th</sup>-century poem written in the Midlands dialect. As in France, biblical figures also appear in the medieval miracle or mystery plays staged in York and other towns. A more religious understanding of the Old Testament was achieved later, in the period of the Reformation, with works such as the Greek academic drama about Jephthah written in 1544 by the Catholic Christopherson. This Hebrew judge inspired several dramatic works, notably the ballad "Jephthah Judge of Israel," quoted by William \*Shakespeare (*Hamlet*, Act 2, Scene 2) and included in Bishop Thomas Percy's *Reliques of Ancient English Poetry* (1765); and *Jephthah's Sive Votum* (1554), by the Scottish poet George Buchanan, who also wrote a Latin paraphrase of the Psalms (1566). Other biblical works of the 16<sup>th</sup> century were *God's Promises* (1547–48) by John Bale; *The Historie of Jacob and Esau* (1557), a comedy by Nicholas Udall in which Esau represents the Catholics and Jacob the faithful Protestants; the anonymous *New Enterlude of Godly Queene Hester* (1560), which had strong political undertones; Thomas Garber's *The Commodity of the most vertuous and Godlye Susanna* (1578); and *The Love of King David and Fair Bethsabe* (1599) by George Peele mainly about Absalom. From the Middle Ages, biblical and Hebraic influences had a profound impact on English culture. Works inspired by the Bible were especially prominent in the 17<sup>th</sup> century, first during the era of Puritanism, and later when the undogmatic, practical temper of Anglican piety led to a new evaluation both of the Jews and of the Hebrew scriptures. The Puritans were particularly drawn to the Psalms and to the records of the Judges of Israel, with whom they were apt to identify themselves. John \*Milton, their greatest representative, knew Hebrew, and his epic *Paradise Lost* (1667) and *Samson Agonistes* (1671) are steeped in biblical and Judaic lore. The Puritans' doctrine of election and covenant also derived to a great extent from Hebrew sources. They made the "Covenant" a central feature of their theological system and also of their social life, often undertaking their religious and political obligations to one another on the basis of a formal covenant, as recorded in Genesis. There are interesting developments of the covenant idea in the philosophies of Thomas Hobbes (1588–1679) and John Locke (1632–1704), and also in Milton and the 17<sup>th</sup>-century religious radicals known as the Levellers. The same period saw the publication of other works based on the Bible or Jewish history, such as the *Davideis* (1656), an anti-royalist epic poem by Abraham Cowley, and *Titus and Berenice* (1677), a play by Thomas Otway based on the tragedy *Bérénice* by Jean \*Racine. John Dryden dramatized Milton's *Paradise Lost* unconvincingly as *The State of Innocence and Fall of Man* (1677). His famous satire *Absalom and Achitophel* (1681), in which David represents Charles II, reflects the contemporary political scene. In the 18<sup>th</sup> century, various minor writers provided the librettos for Handel's oratorios, over a dozen of which deal with Old Testament themes ranging from *Israel in Egypt* (1738) to *Judas Maccabaeus* (1747). Hannah More, who wrote *Belshazzar* (one of her *Sacred Dramas*, 1782), was one of several English writers who paid attention to this figure. Others were

Henry Hart Milman (*Belshazzar*, 1822); Robert Eyres Landor, who wrote *The Impious Feast* (1828); and Lord \*Byron, whose *Hebrew Melodies* (1815) contains a poem on this subject. William Wordsworth revealed an imagination shaped by biblical forms and patterns, and in "Michael" the dramatic focus of the whole poem is the picture of an old man setting up a heap of stones as a covenant between himself and his son at their parting. In a more scholarly field, the Christian Hebraist Robert \*Lowth devoted much time to the study of Hebrew poetry in the Bible. One novelist in whom a fairly strong Hebraic background can be discerned is Henry Fielding, whose *Joseph Andrews* (1742) was intended to recall the lives of Joseph and Abraham.

**BIBLICAL MOTIFS IN LATER WRITERS.** During the third decade of the 19<sup>th</sup> century, the biblical figure of Cain was the center of some literary controversy and interest. The publication of an English translation of Salomon Gessner's German prose epic *Der Tod Abels* (1758) in 1761 set a fashion, and Coleridge's "Gothic" work on this theme was one of many. Byron's attempt to transform the first murderer into a hero in his *Cain* (1821) roused a storm of protest, provoking *The Ghost of Abel* (1822), a riposte by William \*Blake. A less revolutionary side of Byron is seen in his *Hebrew Melodies*, which includes poems on Jephthah's daughter, Sennacherib, and the Babylonian Exile. The 19<sup>th</sup> century produced many other works of biblical inspiration by English writers. One which had a great vogue in its day was *Joseph and His Brethren* (1824), a grandiose epic poem written under a pen name by Charles Jeremiah Wells. In his *Poems* (1870), Dante Gabriel Rossetti used Midrashic and legendary material for his treatment of the conflict between Satan and Lilith and Adam and Eve in "Eden Bower." Alfred Austin wrote *The Tower of Babel* (1874); and in defiance of the censors Oscar Wilde first published his daring comedy *Salomé* in French (1893), the English version only being allowed on to the British stage in 1931. A number of leading 20<sup>th</sup>-century writers maintained this interest in the personalities and themes of the Old Testament. They include C.M. Doughty, with the dramatic poem *Adam Cast Forth* (1908); George Bernard Shaw, in his play *Back to Methuselah* (1921); Thomas Sturge Moore, author of the plays *Absalom* (1903), *Mariamne* (1911), and *Judith* (1911); the poet John Masefield who wrote *A King's Daughter* (1923) on Jezebel; D.H. Lawrence, with his play *David* (1926); Arnold Bennett, whose *Judith* had a brief, sensational run in 1919; and Sir James Barrie, who wrote the imaginative but unsuccessful play *The Boy David* (1936). The works of the Scots playwright James Bridie include *Tobias and the Angel* (1930), *Jonah and the Whale* (1932), and *Susannah and the Elders* (1937). A number of anti-biblical *Old Testament Plays* were published in 1950 by Laurence Housman. Figures from the Bible are also introduced in *A Sleep of Prisoners* (1951), a symbolic play written by Christopher Fry, whose *The Firstborn* (1946) transformed Moses into a superman. Curiously enough, most of the Jewish writers who emerged in Britain during the 19<sup>th</sup> and 20<sup>th</sup> centuries avoided biblical subjects and devoted their attention

to social and historical themes. However, Isaac \*Rosenberg wrote a Nietzschean drama, *Moses* (1916).

**IMPACT OF JEWISH PHILOSOPHY AND MYSTICISM.** In the general abandonment of medieval Christian authorities during the Reformation, there was a certain tendency to look to the medieval Jewish philosophers and exegetes for guidance. The thinking of writers like John, Jeremy Taylor (1613–1667), and the “Cambridge Platonists” was in part shaped by the Bible and by Maimonides. The Platonist poet Henry More (1614–1687) drew heavily on both Philo and Maimonides, and made frequent reference to the Kabbalah. Like many other English writers of his time, More had, however, only a very imperfect idea of what the Kabbalah contained. Two earlier writers whose works contain kabbalistic allusions are the Rabelaisian satirist Thomas Nash and Francis Bacon. Nash’s *Pierce Penniless His Supplication to the Divell* (1592), a humorous discourse on the vices and customs of the day, draws from the Christian Kabbalah; while Bacon’s *The New Atlantis* (1627) describes the utopian Pacific island of Bensalem, where the Jewish colonists have a college of natural philosophy called “Solomon’s House” and are governed by rules of kabbalistic antiquity. Genuine kabbalistic motifs, admittedly obtained at second hand, are to be found in the late 18<sup>th</sup> century in the works of William Blake. His notion of the sexual inner life of his divine “Emanations” and “Specters” is at least partially kabbalistic, while his portrait of the “Giant Albion” is explicitly derived from the kabbalistic notion of the *Adam Kadmon* (“Primal Man”). Kabbalistic notions and images later played a part in the occult system employed by W.B. Yeats (1865–1939) in his poetry; and in the mid-20<sup>th</sup> century the Kabbalah acquired a considerable vogue, exemplified by the poetry of Nathaniel \*Tarn and by *Riders in the Chariot* (1961), a novel by the Australian writer Patrick White.

### The Figure of the Jew

Jews were expelled from England in 1290, and the great medieval English works in which Jews were portrayed, notably John Gower’s *Confessio Amantis* (c. 1390), William Langland’s *The Vision of Piers Plowman* (three versions c. 1360–1400), and Geoffrey \*Chaucer’s *Prioress’s Tale* (one of the *Canterbury Tales*, c. 1390) were all composed about a century later. The figure of the Jew was therefore almost certainly not drawn from life, but rather from imagination and popular tradition, the latter a mixture of prejudice and idealization. This approach is not untypical of medieval writing generally, which often used stereotypes and symbols and gave them concrete shape. The evil stereotype of the Jew is clearly based on the Christian account of the crucifixion of Jesus, including his betrayal by Judas (identified with the Jew in general) and his often-stated enmity toward the Jewish scribes and Pharisees. This provided the basis for the image of the Jew in the early mystery or “miracle” plays, current from the 13<sup>th</sup> century, which presented the Bible records in dramatic form. A contemporary touch was sometimes added by representing Judas as a Jewish usurer. There is an historical link between the dramatizing of

the Crucifixion and the rise of the \*blood libel, which reached its culmination in the notorious case of \*Hugh of Lincoln (1255). This accusation became the subject of several horrific early poems, including the old Scottish ballad of “The Jew’s Daughter,” reproduced in Percy’s *Reliques*. In this ballad the story is slightly varied, the ritual murder being committed by a young Jewess. Chaucer’s *Prioress’s Tale*, a story of child murder committed by Jews, explicitly refers the reader to the case of Hugh of Lincoln a hundred years earlier, the suggestion being that the killing of Christian children by Jews was habitual. Echoes of these medieval fantasies continue to be heard down the centuries, and they provide the starting point for Christopher \*Marlowe’s *The Jew of Malta* (c. 1589) and for Shakespeare’s *The Merchant of Venice* (c. 1596). Both Marlowe’s Barabas and Shakespeare’s Shylock obviously delight in the murder of Christians either by knife or by poison, a partial reflection of the charges leveled at the trial of the unfortunate Marrano physician Roderigo \*Lopez. The stage Jew down to the Elizabethan period looked rather like the Devil in the old mystery plays, and was very often dressed in a similar costume: this explains why, in Shakespeare’s play, Launcelot Gobbo describes Shylock as “the very devil incarnation,” while Solanio sees him as the devil come “in the likeness of a Jew.”

**THE DUAL IMAGE.** The Jew, however, aroused not only fear and hatred but also awe, and even admiration. Thus the medieval imagination had room not only for Judas, but also for heroic Old Testament figures such as Isaac and Moses. There is no doubt that the Israelites at the Red Sea in the old mysteries were also clearly identified as Jews. \*Judah Maccabee (another Judas) was one of the famous Nine Worthies of early legend, along with David and Joshua. Shakespeare, who refers to the Jews in seven of his plays, draws on this tradition in the closing scene of his comedy, *Love’s Labour’s Lost*. Another early Christian tradition which carries undertones of admiration and awe is that of the \*Wandering Jew. Ahasuerus, as he is sometimes called, in the early ballads was a “cursed shoemaker” who churlishly refused to allow Jesus to rest on a stone when he was on his way to Golgotha, and for this was made to wander the world forever. As the Jew who lives on eternally to testify to the salvation offered to the world, he is by no means an unsympathetic figure. In later romantic literature, particularly in poems by Percy Bysshe Shelley (*Queen Mab*, 1813) and Wordsworth (“Song for the Wandering Jew,” 1800), he finally symbolizes universal wisdom and experience. The anonymous interlude *Jacob and Esau* (first published in 1568) includes acting directions which state that the players “are to be considered to be Hebrews, and so should be appalled with attire.” Thus, both Jacob the saint and his brother Esau, the lewd ruffian, are clearly Jews. The portrait of the Jew therefore becomes ambiguous: he is both hero and villain, angel and devil. There is more of the devil than the angel in the early portraits, but the balance varies. What is lacking is the middle, neutral ground of everyday reality, for little attempt is made to visualize the Jew in his ordinary environment. It

is, however, worth noting certain speeches in *The Merchant of Venice*, especially Shylock's famous lines beginning, "I am a Jew. Hath not a Jew eyes? hath not a Jew hands, organs, dimensions, senses, affections, passions?" Here, there is at least a glimmer of realism. Jews are usually referred to by writers of the Elizabethan and succeeding periods in derogatory terms, the very word Jew invariably suggesting extortioner, beggar, thief, or devil's accomplice. But the resettlement of the Jews in England after 1656 and the new undogmatic character of 17<sup>th</sup>-century Anglicanism led to some change. George Herbert's poem "The Jews" (in *The Temple*, 1633) breathes a strain of devout love for Israel as the exiled people of God. Herbert was imitated a few years later by Henry Vaughan who, in an equally passionate poem of the same title, prays that he "might live to see the Olive bear her proper branches." The reference is to the metaphor of the olive used by the apostle Paul (N.T. Rom., 11), when he speaks of Israel as destined one day to be restored to flourishing growth. William Hemings based his drama, *The Jewes Tragedy* (1662), on the Jewish revolt against Rome, as described by \*Josephus and \*Josippon. Milton's *Samson Agonistes* presents a picture which is in part that of the heroic Jew of the Bible, in part a self-portrait of the poet himself. This marks a new phenomenon: the subjective projection of the author into the portrait of the Jew, and it was not to be repeated until much later, by such 19<sup>th</sup>-century poets as Byron and Coleridge, and by James Joyce in the figure of Leopold Bloom in *Ulysses* (1922).

LATER DRAMA AND FICTION. In 18<sup>th</sup>-century drama the Jew continued to be portrayed as either utterly evil and depraved or else completely virtuous. One dramatist might often produce both types, as did Charles Dibdin in *The Jew and the Doctor* (1788) and *The School for Prejudice* (1801). Richard Brinsley Sheridan introduces an unpleasant Jew, Isaac, in his comic opera, *The Duenna* (1775), balanced by a virtuous Jew, Moses, in *The School for Scandal* (1777). The hero of an anonymous play, *The Israelites* (1785), is a Mr. Israel, who practices all the virtues that the Christians only profess. The most sympathetic portrayal of all is that of the Jew Sheva in Richard \*Cumberland's play, *The Jew* (1794). A kind of Shylock in reverse, Sheva is the English counterpart of the hero of the German dramatist \*Lessing's *Nathan der Weise* (1779). In fiction there was a similar tendency to extremes. The vicious and criminal Jew painted by Daniel Defoe in *Roxana* (1724) is balanced in Tobias Smollett's novel *The Adventures of Ferdinand Count Fathom* (1753), where the benevolent Joshua Manasseh insists on lending the hero money without interest. Yet Smollett himself had a few years earlier (in *The Adventures of Roderick Random*, 1748) drawn a no less exaggerated portrait of the Jewish usurer in Isaac Rapine, whose name suggests his character. The same duality in the portrait of the Jew is noticeable in the 19<sup>th</sup> century. Maria Edgeworth, having produced a gallery of rascally Jews in her early *Moral Tales* (1801), compensated for those in *Harrington* (1816), a novel largely devoted to the rehabilitation of the Jews, whom

she represents as noble, generous, and worthy of respect and affection. All this was part of the new liberal attitude generated by the French Revolution and the spread of the belief in human equality and perfectibility. To entertain anti-Jewish prejudices was to subscribe to outmoded social and ethical forms. Thus, "Imperfect Sympathies," one of the *Essays of Elia* (1823–33) by Charles Lamb, expresses mild reservations about "Jews Christianizing, Christians Judaizing," Lamb having little time for Jewish conversion or assimilation. The novel *Ivanhoe* (1819) by Sir Walter Scott introduces Isaac of York, the medieval usurer who, though described as "mean and unamiable," is in fact radically humanized in line with the new conceptions. He has become grey rather than black, and his daughter Rebecca is entirely white, good, and beautiful. Scott has come a long way from the earlier stereotypes, and the Jews, far from being murderers, preach peace and respect for human life to the murderous Christian knights. In later 19<sup>th</sup>-century English novels there are many Jewish portraits. William Makepeace Thackeray always pictures his Jews as given to deceit and as suitable objects for social satire. In his *Notes of a Journey from Cornhill to Grand Cairo ...* (1846), which includes the record of a visit to the Holy Land, Thackeray indulges in a rather more emphatic strain of antisemitism. Charles Kingsley and Charles \*Dickens, on the other hand, both have sympathetic as well as unfavorable portraits. Kingsley's bad Jews are to be found in *Alton Locke* (1850), and his good Jew in *Hypatia* (1853), while Dickens introduces Fagin, the corrupter of youth and receiver of stolen goods, in *Oliver Twist* (1837–38), and Mr. Riah, the benefactor of society and ally of the innocent, in *Our Mutual Friend* (1864–65). Charles Reade has as the central character of his novel *It is Never too Late to Mend* (1856) a Jew, Isaac Levi, who initially more sinned against than sinning, ends by taking a terrible revenge on his rascally foe. George Henry Borrow, an agent of the British and Foreign Bible Society, was obsessed with Jewish exoticism, but disliked Jews as people. He used a Hebrew title for *Targum* (1835), a collection of translations, and in his most famous work, *The Bible in Spain* (1843), recorded his encounter with the alleged leader of Spain's surviving Marranos and included his own verse translation of *Adon Olam*. In his novel *The Way We Live Now* (1875), Anthony Trollope drew the fantastically wicked Jew Augustus Melmotte on a melodramatic scale and with no real attempt at verisimilitude. But in the following year, the ultimately noble Jew makes his appearance in George \*Eliot's Zionist novel, *Daniel Deronda* (1876). This shows the Jews not merely as worthy of sympathy, but as having within them a spiritual energy through which mankind may one day be saved and made whole. The 19<sup>th</sup>-century belief in race and nationality as a source of vital inspiration has here combined with a certain moral idealism to produce a remarkable vision of the Jewish renaissance, in some measure prophetic of what was to come after the rise of Herzlian Zionism. Something similar is to be found in the novelist and statesman \*Disraeli, who never tired of vaunting the superiority of the Jewish race as a storehouse of energy and vision. In *Tancred* (1847) and his biography of

*Lord George Bentinck* (1852) he maintained his belief that the Jews were “the aristocrats of mankind.” George du Maurier propagated a Jewish caricature nourished by the new Nietzschean philosophy of race. Svengali, the evil Jew in his novel *Trilby* (1894), is the eternal alien, mysterious and sinister, a sorcerer whose occult powers give the novel the character of a Gothic thriller. Svengali belongs, of course, to an “inferior race,” and his exploits are ultimately designed to corrupt the “pure white race” personified in the novel’s heroine, Trilby. On the other hand, George Meredith, in *The Tragic Comedians* (1880), presents a romantically attractive Jew, Alvan, who is actually a portrait of the German-Jewish socialist Ferdinand Lassalle. Sir Thomas Henry Hall Caine also showed unstinted sympathy and admiration for the Jew in his novel of Jewish life in Morocco, *The Scapegoat* (1891), although his account is not without some inner contradictions. The non-Jewish Anglo-American Henry Harland, using the pen name Sidney Luska, published three novels – *As It Was Written* (1885), *Mrs. Peixada* (1886), and *The Yoke of Thorah* (1887) – in the guise of an immigrant of Jewish background describing the life of the German Jews of New York. The poets Wordsworth and Byron were drawn to the romantic glamour of the Jewish past, the former in a touching descriptive lyric, “A Jewish Family” (1828), the latter in the more famous *Hebrew Melodies*. Like Blake, Shelley was repelled by the Old Testament’s stress on the Law and the Commandments – his instinct being toward free love and anarchism – but was drawn to the figure of the Wandering Jew. Samuel Taylor Coleridge, too, in his “Rime of the Ancient Mariner” (in *Lyrical Ballads*, 1798) shows an interest in the same theme evidently derived from his reading of M.G. Lewis’ gruesome novel *The Monk* (1796). Coleridge translated *Kinat Jeshurun*, a Hebrew dirge on the death of Queen Charlotte by his friend Hyman Hurwitz, calling it *Israel’s Lament* (1817). The warmest and most detailed accounts of Jews are to be found in the poetry of Robert Browning, who seemed determined to show that even post-biblical Jews, such as the medieval Rabbi Ben Ezra and the Jews of the Roman ghetto, could be given sympathetic, even noble, treatment. Browning tried to do in poetry what Rembrandt had done in paint – suggest the mixture of everyday realism and sublimity in the lives of Jews. Matthew Arnold, the most “Hebraic” of 19<sup>th</sup>-century English writers, paid tribute to Hebrew culture in his elegy “On Heine’s Grave” (*New Poems*, 1867), while Algernon Charles Swinburne gave expression to great indignation in his poem “On the Russian Persecution of the Jews” (1882).

THE 20<sup>TH</sup> CENTURY. English poets of the 20<sup>th</sup> century have shown less interest in Jews. T.S. Eliot makes a return to the medieval stereotype of avaricious extortioner in his phrase: “My house is a decayed house,/and the jew squats on the window sill, the owner/spawned in some estaminet of Antwerp/...” (*Gerontion* and other references), although elsewhere he speaks with veneration of Nehemiah, the prophet who “grieved for the broken city Jerusalem.” In Catholic writers such as Hilaire Belloc, G.K. Chesterton, and Graham

Greene, there is a similar rendering of the dark image of the Jew. Belloc, an anti-capitalist, held that the Jews and Protestants were the arch-enemies of civilization and evolved a belief in a “Jewish conspiracy” (*The Jews*, 1922). Greene revived the medieval connection between Judas and the Devil in *A Gun for Sale* (1936) and *Orient Express* (1933), and in *Brighton Rock* (1938), where the Jewish gang-leader Colleoni – one of the most sinister villains in English literature – leads the hero, Pinkie, to damnation. Frankly antisemitic portraits can also be found in the writings of D.H. Lawrence and Wyndham Lewis. A more mild and benevolent portraiture emerges from the biblical dramas of James Bridie, Laurence Housman, and Christopher Fry. George Bernard Shaw brought back the Jew-Devil stage tradition in burlesque form in *Man and Superman* (1903); and various characters in *Major Barbara* (1905), *Saint Joan* (1923), and *The Doctor’s Dilemma* (1906) express Shaw’s not unkindly view of the Jew in modern society. An important development in the 20<sup>th</sup> century was the attempt to abandon the old stereotype and depict Jews in natural, human terms. John Galsworthy took the lead in his novels and more particularly in his play *Loyalties* (1922). Here the Jew, Ferdinand de Levis, is the victim of a robbery at a country-house party. The other guests band together to defend the thief because he is one of them, whereas the Jew is an alien. Galsworthy has carefully purged his imagination of the kind of emotional attitudes that determined the reaction of Shakespeare and his audience to the basically similar situation in *The Merchant of Venice*, and the result is an objective study in social psychology. A similarly unemotional approach is to be found in James Joyce’s *Ulysses*, where the central character, Leopold Bloom, is neither exactly hero nor anti-hero but something in between. Less flamboyant Jewish characters appear in novels by E.M. Forster, *The Longest Journey* (1907); and C.P. Snow. The latter’s *The Conscience of the Rich* (1958) is devoted to the affairs of a Jewish family who differ from the English upper class around them only in an extra touch of gregariousness and more tenacious adherence to tradition.

### **Palestine and Israel in English Literature**

Ever since medieval times English writers have recorded impressions of their visits to the Holy Land or written imaginative works based on Jewish historical themes. One of the earliest books of this kind was the *Voyage* (1357–71) of the 14<sup>th</sup>-century Anglo-French traveler Sir John Mandeville. Outstanding works over the centuries were Henry Maundrell’s *A Journey from Aleppo to Jerusalem at Easter 1697* (1703); *The Fall of Jerusalem* (1820), a play by Henry Hart Milman, dean of St. Paul’s, who also wrote a *History of the Jews* (1829); *Eothen* (1844), travel impressions by Alexander William Kinglake; *The Brook Kerith* (1916), a novel by the Irish writer George Moore; and *Oriental Encounters. Palestine and Syria 1894–1896* (1918) by Marmaduke William Pickthall. Britain’s Mandate in Palestine, which led to a political confrontation with the *yishuv*, and the State of Israel found wide reflection in English fiction, generally of inferior merit. G.K. Chesterton, an antisemite

who condoned massacres of Jews during the First Crusade as “a form of democratic violence,” was nevertheless attracted to the Zionist ideal of emancipation through physical toil, recording his impressions of a visit to the Holy Land in *The New Jerusalem* (1920). A thinly disguised account of Jewish-British relations in Erez Israel is combined with an accurate description of Palestine under the Romans in W.P. Crozier’s *The Letters of Pontius Pilate* (1928). Some writers were intensely pro-Zionist, others violently hostile and pro-Arab. Muriel Spark’s *The Mandelbaum Gate* (1965) was a tale of divided Jerusalem with an anti-Israel bias, but another non-Jewish novelist, Lynne Reid Banks, who wrote *An End to Running* (1962; U.S. ed., *House of Hope*) and *Children at the Gate* (1968), settled at kibbutz Yasur. Of the many books about Palestine and Israel written by English Jews outstanding was Arthur \*Koestler’s dramatic *Thieves in the Night* (1946).

### The Jewish Contribution

Before the Expulsion of 1290, the Jews of England were culturally an integral part of medieval French Jewry, speaking Norman French, and conducting their business affairs in Hebrew or Latin and their literary activities almost exclusively in Hebrew. \*Berechiah ben Natronai ha-Nakdan, the 12<sup>th</sup>–13<sup>th</sup>-century author of *Mishlei Shu’alim* (“Fox Fables”), is probably identical with Benedict le Poinctur (i.e., punctuator, Hebrew *Nakdan*), who is known to have been living in Oxford in 1194. Berechiah’s “Fox Fables” compiled from a variety of Jewish, Oriental, and other medieval sources, were both popular and influential, partly determining the shape of later medieval bestiaries. Their influence may also be seen in the Latin *Gesta Romanorum*, first compiled in England (c. 1330; first printed c. 1472). An important literary figure of the Elizabethan period, John Florio (1553?–1625), was descended from converted Italian Jews. A friend of Ben Jonson and Sir Philip Sidney, he influenced Shakespeare, whose *Hamlet* and *The Tempest* echo Florio’s pioneering translation of the *Essays* of Montaigne (1603). It was not until nearly a hundred years after the readmission of the Jews in 1665 that they began to play any significant part in English literary affairs. Moses \*Mendes, the grandson of a Marrano physician, was a well-known poetaster and minor playwright. His ballad-opera, *The Double Disappointment* (1746), was the first work written for the theater by an English Jew. He also wrote *The Battiad* (1751), a satire, in collaboration with Dr. Isaac \*Schomberg. Jael (Mendes) Pye (d. 1782), a convert like Mendes, made a brief but significant entry into English literature with poems and a novel; while another early poet, Emma (Lyon) Henry (1788–1870), a staunch Jewess, received the patronage of the Prince Regent in the early 19<sup>th</sup> century. Many of the Anglo-Jewish writers of the 18<sup>th</sup> and 19<sup>th</sup> centuries were either remote from Jewish life or actually abandoned Judaism. They include Isaac \*D’Israeli, father of Benjamin Disraeli, Earl of Beaconsfield; the half-Jew John Leycester \*Adolphus, the first person to deduce Sir Walter Scott’s authorship of the *Waverley Novels*; members of the \*Palgrave dynasty, notably Sir Francis (Cohen) Palgrave and

his son, Francis Turner Palgrave, editor of the famous *Golden Treasury* of English Verse (1861); and Sir Arthur Wing Pinero (1855–1934), the most successful dramatist of his time, who was also of Jewish origin. Late writers included Stephen Hudson (Sydney Schiff); Naomi Jacob; Ada \*Leverson; Benn Levy; Lewis Melville; Leonard \*Merrick; E.H.W. \*Meyerstein; Siegfried \*Sassoon; Humbert \*Wolfe; and Leonard \*Woolf.

JEWISH THEMES. From the early 19<sup>th</sup> century onward, many Anglo-Jewish writers devoted a large part of their talent to Jewish themes. Several of these committed authors were women. The sisters Celia (Moss) Levetus (1819–1873) and Marion (Moss) Hartog (1821–1907), who ran a private school for 40 years, together published a collection of poems, *Early Efforts* (1838<sup>1</sup>, 1839<sup>2</sup>); a three-volume *Romance of Jewish History* (1840); *Tales of Jewish History* (1843); and a short-lived *Jewish Sabbath Journal* (1855). Better known was Grace \*Aguilar, a vigorous champion of Judaism, who wrote the first significant Anglo-Jewish novel, *The Vale of Cedars* (1850). Two other women writers were Alice Lucas (1851–1935) and Nina (Davis) Salaman (1877–1925), both of whom wrote poetry; Nina Salaman also translated medieval Hebrew verse. Novels on Jewish themes proliferated from the latter half of the 19<sup>th</sup> century. Benjamin \*Farjeon, a writer of North African Sephardi origin, really created this new genre with works such as *Solomon Isaacs* (1877), *Aaron the Jew* (1894), and *Pride of Race* (1900), which described the London-Jewish scene and especially the growing populace of the East End. This was the main location for the more famous novels of Israel \*Zangwill, who remains the greatest single figure in England’s Jewish literary history. Although Zangwill wrote many books on non-Jewish themes, he is best remembered for his “ghetto” stories – *Children of the Ghetto* (1892), *Ghetto Tragedies* (1893), *The King of Schnorrers* (1894), and *Dreamers of the Ghetto* (1899). At about the same time, Jewish middle-class life was being faithfully described by three women novelists, Amy \*Levy; Julia (Davis) \*Frankau (“Frank Danby”); and Mrs. Alfred Sidgwick (Cecily Ullman, 1855–1934), whose works include *Scenes of Jewish Life* (1904), *In Other Days* (1915), and *Refugee* (1934). Their books had little impact outside the Jewish community, but their common central theme – mixed marriage – became increasingly popular. This was the case with the novelist G.B. \*Stern, but the most sentimental, and obsessive, use of the motif occurs in the works of Louis \*Golding, whose *Magnolia Street* (1932) and “Doomington” novels enshrine this aspect of Jewish assimilation with an archetypal repetitiveness that suggests a permanent solution of the “Jewish problem” through wholesale extra-marriage. The outstanding Jewish poet of the 20<sup>th</sup> century was Isaac \*Rosenberg, whose feeling for the sufferings of the soldiers in the trenches of World War I was in part nourished by the Bible. Izak \*Goller, originally a preacher, was a more intensely Jewish poet, whose passionate Zionist sympathies and outspoken manner brought him both fame and notoriety during the 1930s. Other Jewish writers included S.L. \*Bensusan; the biographer and historian, Philip \*Guedalla;

and M.J. Landa. A number of Jewish writers also became eminent as literary scholars and critics. They include Sir Sidney \*Lee; F.S. Boas; Sir Israel \*Gollancz; Laurie \*Magnus; V. de Sola Pinto; Jacob Isaacs (d. 1973), first professor of English at the Hebrew University of Jerusalem; David \*Daiches; and George Steiner. The left-wing publisher, author, and pacifist, Victor \*Gollancz, attempted to synthesize his conception of Judaism with a liberalized Christianity. Joseph \*Leftwich, J.M. Cohen (d. 1989), and Jacob Sonntag (d. 1984) were prominent editors, anthologists, and translators.

**NEW IMPULSES.** In the mid-20<sup>th</sup> century a new dimension was given to the problem of Jewish existence both by the European Holocaust and its aftermath and by the birth and consolidation of the State of Israel. These momentous events, shattering old illusions, in time created a new sense of tragedy and peril, in which the Jew became the focus of a universal situation. This feeling can be detected in several Anglo-Jewish writers, although none of them was as significant as such U.S. authors as Saul \*Bellow, Bernard \*Malamud, and Philip \*Roth. In poetry the outstanding names were Dannie \*Abse, Karen Gershon, Michael Hamburger, Emanuel \*Litvinoff, Rudolf Nassauer, Jon \*Silkin, and Nathaniel Tarn. A writer whose novels, essays, and political and philosophical works commanded wide attention from the 1930s onward was the Hungarian-born Arthur Koestler. Like Koestler, Stephen Spender (1909–1995), a leading poet and critic of partly Jewish origin, was a disillusioned leftist. His works include impressions of Israel, *Learning Laughter* (1952). Elias \*Canetti was a refugee playwright who continued to write in German, his works being translated into English. Harold \*Pinter, Peter \*Shaffer, and Arnold \*Wesker were leading playwrights of the post-World War II era. In 2005 Pinter was awarded the Nobel Prize for literature. Janina David (1930– ) described her childhood experiences in pre-war Poland and the Warsaw ghetto in *A Square of Sky* (1964); its sequel, *A Touch of Earth* (1966), tells of her postwar move to Australia. *The Quick and the Dead* (1969), a novel by Thomas Wiseman (1930– ), reflects early memories of Vienna during the 1930s and the *Anschluss* era. A few writers attempted to demythologize the Jewish image by presenting Jews as basically similar to their fellows. The novelist Alexander Baron, the novelist and playwright Wolf \*Mankowitz, and Arnold Wesker all belong to this category, although Mankowitz later reassessed his commitment to Judaism. Popular novelists included the Socialist member of parliament Maurice Edelman, whose book *The Fratricides* (1963) has a Jewish doctor as its hero; and Henry Cecil (Judge Henry Cecil Leon), who specialized in legal themes. From the late 1950s a “new wave” of Anglo-Jewish writers appeared following the publication of *The Bankrupts* (1958), a novel by Brian \*Glanville harshly criticizing Jewish family life and social forms. Works of similar inspiration were written by Dan \*Jacobson, Frederic Raphael, and Bernard \*Kops. Following the general inclination to reject or debunk the inheritance of an older generation – these writers were not, however, entirely

destructive, their aim being to strip Jewish life in England of its complacency and hypocrisy. Other writers were more firmly committed to Jewish values and ideals. They include the humorist Chaim Bermant; the novelists Gerda Charles, Lionel Davidson, William Goldman (1910– ), Chaim Raphael, and Bernice Rubens; and the Welsh-born poet Jeremy Robson (1939– ), who edited *Letters to Israel* (1969) and an *Anthology of Young British Poets* (1968).

Another member of this group was the critic John Jacob Gross (1935– ), assistant editor of *Encounter*. The Six-Day War of June 1967 galvanized many Jewish writers in England into a sudden awareness of a common destiny shared with the Israelis in their hour of peril. This found expression in a forthright letter to the London *Sunday Times* (June 4) signed by more than 30 Anglo-Jewish authors.

[Harold Harel Fisch]

### Later Developments

The trends which had characterized Anglo-Jewish literature during the 1960s continued to manifest themselves in the 1970s. New books were published by virtually all of the better-known writers, including the novelists Gerda \*Charles, Frederic \*Raphael, Chaim \*Raphael, Nadine \*Gordimer, Bernard \*Kops, Barnet \*Litvinoff, Chaim \*Bermant, Bernice \*Rubens, the last of whom was awarded the Booker Prize for Fiction in 1970 for *The Elected Member* (1970), the story of a drug addict and his Jewish family set against the background of London’s East End.

One of the new trends in the years under review was a growing closeness to the Hebrew tradition. Dan \*Jacobson’s *The Rape of Tamar* (1970) brought King David, his family, and court to life in a searching and brilliant retelling of biblical narrative. His drama, *The Caves of Adullam* (1972), treated the David-Saul relationship no less interestingly. Later heroism was described in David \*Kossoff’s *Voices of Masada* (1973), the story of the siege as it might have been told by the two women who, according to Josephus, were the only Jewish survivors. In another historical novel, *Another Time, Another Voice* (1971), Barnet Litvinoff deals with Shabbetai Zevi, while against the background of present-day Israel Lionel \*Davidson’s detective story, *Smith’s Gazelle* (1971), deftly wove together kibbutz and Bedouin and the Israel love for nature.

Davidson, who settled in Israel after the Six-Day War, in 1972 became the first writer in English to win the Shazar Prize of the Israel Government for the encouragement of immigrant authors. Another English writer who settled in Israel was Karen \*Gershon, the German-born poet, whose poems on Jerusalem were the heart of her volume of verse, *Legacies and Encounters, Poems 1966–1971* (1972). A cycle of the Jerusalem poems appeared in Israel with Hebrew translations facing each page.

The new, sometimes even personal, relation of Anglo-Jewish writers to Israel is paralleled by a deeper involvement with the Jewish past in England itself. Thus, Gerda Charles’ novel, *The Destiny Waltz* (1971), grew out of the life of Isaac

\*Rosenberg, the East End poet who died in World War I, while Maurice \*Edelman went further back to write *Disraeli in Love* (1972), a portrait of the statesman in his youth. The largely interrelated aristocratic families that dominated the Anglo-Jewish community in the 19<sup>th</sup> century and even later were vividly described in *The Cousinhood* (1971) by Chaim Bermant.

The nearer past continued to be reflected in literature, Emanuel \*Litvinoff's *Journey through a Small Planet* (1972) depicting an East End childhood in the 1930s and Arnold \*Wesker in his play, *The Old Ones* (1973), evoking ideologies and eccentricities of an older East End generation that is now vanishing. The second part of David \*Daiches' autobiography, *A Third World* (1971), describes the author's years in the United States, while *Mist of Memory* (1973) by the South African writer Bernard Sachs portrayed a Lithuanian childhood and full, contemplative years in South Africa – its politics, racial conflicts, trade unionism, and Jewish attitudes.

Another book on South Africa, Dan Jacobson's novel on interracial marriage, *Evidence of Love* (1960), was translated and published in the Soviet Union. Both Jacobson and Sachs, like other South African Jewish writers, in recent years made their home in England. Similarly, Canadians like Norman Levine and Mordecai \*Richler, though continuing to write about Canada, became resident in England, and Richler's *St. Urbain's Horseman* (1971) sharply described expatriates in the film and television industry.

[Shulamit Nardi]

Starting in the 1980s Anglo-Jewish literature has undergone something of a transformation. Instead of specifically English concerns and forms of expression, many recent Anglo-Jewish novelists are influenced by the American Jewish novel and incorporate European Jewish history and the contemporary State of Israel into their fiction. This marked lack of parochialism is reflected in novels, often first novels, published in the 1980s by Elaine \*Feinstein, Howard \*Jacobson, Emanuel \*Litvinoff, Simon Louvish, Bernice \*Rubens, and Clive \*Sinclair.

In 1985, the London *Times Literary Supplement* indicated a serious general interest in Anglo-Jewish literature by organizing a symposium for English and American Jewish writers on the role of Hebrew and Yiddish culture in the writer's life and work. In general, national British radio, television, and press have devoted a significant amount of time to Anglo-Jewish literature which, in recent years, has included many individual profiles of Jewish novelists in England. Clive Sinclair and Howard Jacobson, in particular, have achieved national prominence with Sinclair, in 1983, designated one of the 20 "Best of Young British Novelists" and Jacobson's *Peeping Tom* (1984), his second novel, winning a special *Guardian* fiction prize. Since 1984, the Institute of Jewish Affairs, the London-based research arm of the World Jewish Congress, has organized a regular Jewish writers' circle which has brought together many Anglo-Jewish writers for the first time. This group has grown out of a colloquium in 1984 on Literature

and the Contemporary Jewish Experience which included the participation of the Israeli writer Aharon \*Appelfeld and the literary critic George \*Steiner.

In contrast to Anglo-Jewish literature which includes explicitly Jewish concerns, many Jewish writers in England continue to abstain from overt expression of their Jewishness in a fictional context. Prominent examples, in these terms, include Anita \*Brookner's *Hotel du Lac* (1984), which won the Booker McConnell Prize for Fiction in 1984, Gabriel \*Josipovici's *Conversations in Another Room* (1984), and Russell Hoban's *Pilgermann* (1983). Against this trend, however, Anita Brookner's *Family and Friends* (1985), for the first time in her fiction, obliquely refers to the author's European Jewish background and her *The Latecomers* (1988) makes explicit her grief for a lost European past as well as her Central European Jewish antecedents. Gabriel Josipovici's literary criticism reveals a profound interest and knowledge of Jewish literature. Two of Josipovici's novels, *The Big Glass* (1991) and *In a Hotel Garden* (1993), are concerned, respectively, with a Hebraic understanding of art and the continued European dialogue with Jewish history. Josipovici has also published his much acclaimed *The Book of God: A Response to the Bible* (1988) which has had a considerable impact on his fiction. Josipovici has also written the introduction to the English translation of Aharon Appelfeld's *The Retreat* (1985).

A young Anglo-Jewish playwright, who has emerged in the last decade, is Stephen Poliakoff, whose plays have been regularly produced in both London and New York. Older playwrights, Bernard \*Kops and Arnold \*Wesker, continue to produce drama of interest, especially Bernard Kops' *Ezra* (1980) and Arnold Wesker's *The Merchant* (1977). Between 1977 and 1981 Harold \*Pinter's collected *Plays* were published to much acclaim and Peter \*Shaffer, the author of *Amadeus* (1980), staged *Yonadab* (1985), a play based on Dan \*Jacobson's *The Rape of Tamar* (1970), which played in a West End London theater. Jacobson, who was born in South Africa and has lived in England for nearly three decades, continues to produce fiction of high quality as demonstrated by his autobiographical set of short stories, *Time and Time Again* (1985) and his novel *The God-Fearer*. The poet Dannie \*Abse has published *A Strong Dose of Myself* (1983), the third volume of his autobiography, and his *Collected Poems: 1945–1976* appeared in 1977.

Much Anglo-Jewish literature continues to situate Jewish characters in a specifically English context. In a comic tour de force, Howard Jacobson contrasts Englishness and Jewishness in his popular campus novel, *Coming From Behind* (1983). Jacobson's *Peeping Tom* (1984) is a brilliant and lasting comic treatment of the same theme. His *The Very Model of a Man* (1992) and *Roots Shmoots: Journeys among Jews* (1993) are explorations of his Jewishness.

Frederic \*Raphael's *Heaven and Earth* (1985) examines Anglo-Jewishness in the political context of an amoral English conservatism. A more conventional account of middle class Jewish life in England – and its relationship to the State of Israel – is provided by Rosemary Friedman's trilogy, *Proofs*

of *Affection* (1982), *Rose of Jericho* (1984), and *To Live in Peace* (1986). Friedman's fiction demonstrates that the family saga continues to be a popular form of Anglo-Jewish self-expression. Chaim \*Bermant's *The Patriarch: A Jewish Family Saga* (1981) is another example of this genre, as is Maisie Mosco's bestselling *Almonds and Raisins* trilogy (1979–81). Judith Summers' first novel, *Dear Sister* (1985), is a woman-centered Jewish family saga.

While much Anglo-Jewish literature continues to be set in an English milieu, many Jewish novelists have begun to reveal a fruitful interest in European Jewish history and the contemporary State of Israel. Emanuel Litvinoff's *Falls The Shadow* (1983), using the form of a detective novel, examines the Jewishness of modern-day Israel and the relationship of the Jewish State to the Holocaust. A more controversial account of these themes is found in George Steiner's *The Portage to San Cristobal of A.H.* (1981). The 1982 West End stage version of this novella excited a prolonged exchange of articles and letters in the London *Times* and the *Jewish Chronicle*. Steiner also published an interesting work of fiction, *Proofs and Three Fables* (1992). Other works of fiction by Jewish critics include Al Alvarez's *Day of Atonement* (1991) and Harold Pinter's autobiographical novel *The Dwarfs* (1990 but mainly written in the 1950s). Pinter, like Steven \*Berkoff in his challenging plays, was deeply influenced by his poor London East End Jewish background. Provocative fictional accounts of contemporary Israel are found in Simon Louvish's novels, *The Therapy of Avram Blok* (1985), *The Death of Moïshe-Ganel* (1986), *City of Blok* (1988), *The Last Trump of Avram Blok* (1990), and *The Silencer* (1991). Louvish, who lives London, was raised in Jerusalem and served in the Six-Day War. His fiction is an iconoclastic, deliberately grotesque, portrait of the State of Israel. Clive Sinclair's *Blood Libels* (1985), his second novel, also utilizes Israeli history, especially the Lebanon War, and combines such history with a haunting imagination. In fact, Sinclair epitomizes the explicitly Jewish self-assertion and maturity of a new generation of Anglo-Jewish writers that has emerged in the 1980s. He describes himself as a Jewish writer "in a national sense" and so situates his fiction in Eastern Europe, America, and Israel. In this way, he eschews the usual self-referring, parochial concerns of the Anglo-Jewish novel. This is especially true in his collection of short stories, *Hearts of Gold* (1979) – which won the Somerset Maugham Award in 1981 – and *Bedbugs* (1982). His later works are *Cosmetic Effects* (1989), *Augustus Rex* (1992), and *Diaspora Blues: A View of Israel* (1987).

Elaine Feinstein is another Anglo-Jewish writer who, over the last decade, has consistently produced fiction of the highest literary excellence and has demonstrated a profound engagement with European history. Her fiction, especially *Children of the Rose* (1975), *The Ecstasy of Dr. Miriam Gardner* (1976), *The Shadow Master* (1978), *The Survivors* (1982), and *The Border* (1984), all demonstrate the persistence of the past in her characters' lives. Apart from *The Survivors*, all of these novels have a continental European setting. That is, Feinstein's

fiction has successfully drawn on European Jewish history in a bid to understand her own sense of Jewishness. In recent years this has been clearly focused in her autobiographical *The Survivors*, set in England, and her less overtly autobiographical *The Border* which is set in Central Europe in 1938. *The Border* received high critical acclaim. The novel, using the form of a collection of letters and diaries, enacts the irrevocable march of history leading up to the outbreak of World War II. In juxtaposition to this historical backdrop, Feinstein's rare lucidity evokes her characters' passionately differing sense of reality. Bernice Rubens' *Brothers* (1983) utilizes modern Jewish history in more expansive terms than Feinstein, but, perhaps because of this, with less success.

The growing strength of British-Jewish writing is further indicated by a younger generation of Jewish novelists which is now emerging. Work by them includes Jenny Diski's *Like Mother* (1988), Will Self's *Cock and Bull* (1992), and Jonathan Wilson's *Schoom* (1993). When this writing is coupled with the plays of a number of young Jewish dramatists such as Diane Samuels, Julia Pascall, and Gavin Kostick, then the future of British-Jewish literature looks particularly healthy.

The last decade has demonstrated that there is a coincidence of interests between English literature in general and the concerns of the Anglo-Jewish novel. In recent years, much of the best English fiction looks to Asia, the Americas, and continental Europe for its subject matter and sense of history. It is not uncommon, therefore, for non-Jewish writers to incorporate Jewish history into their novels. With regard to the Holocaust, two of the most prominent examples of this phenomena are Thomas Keneally's Booker Prize winning *Schindler's Ark* (1982) – based on the life of the righteous gentile Oskar \*Schindler – and D.M. Thomas' controversial *The White Hotel* (1981).

**EN-HAROD** (Heb. עֵין חָרֹד).

#### Ancient

Spring where Gideon and his people camped during his war against the Midianites and the place where he selected the men for his night ambush (Judg. 7:1). It is identified with a spring on a northwestern spur of Mt. Gilboa, and may also be the unnamed fountain where Saul camped against the Philistines (1 Sam. 29:1). From Byzantine times it was believed that the battle between David and Goliath took place at En-Harod. The Arabs thus called it Ain Jalud ("Spring of Goliath"), by which name it became famous as the site of the Mongol defeat by the Mamluk sultan Kotuz in 1260.

En-Harod is also an unidentified locality which was the home of Shammah and Elika, two of David's warriors (11 Sam. 23:25; cf. 1 Chron. 11:27).

[Michael Avi-Yonah]

#### Modern

En-Harod is the name of two kibbutzim in the Harod Valley, one affiliated with Ha-Kibbutz ha-Me'uḥad and the other with Iḥud ha-Kevuṣot ve-ha-Kibbutzim. The original En-Harod was founded in 1921 at the foot of Mt. Gilboa near Harod Spring by a pioneer group of \*Gedud ha-Avodah. They set up two tent camps and started draining the malarial swamps of the "Nuris Bloc" recently acquired by the \*Jewish National Fund. At En-Harod, the principles of the "large and growing kibbutz" were worked out in its first years and laid down by Shelomo \*Lavi. At the same time, fierce discussions were held between members accepting the Gedud ha-Avodah doctrine of a countrywide commune of kibbutzim and others who demanded that every village constitute a separate economic unit. The former concentrated at neighboring \*Tel Yosef, and the latter at En-Harod. When the Gedud declined, most of its groups associated themselves with En-Harod, eventually forming Ha-Kibbutz ha-Me'uḥad. In 1929 the En-Harod settlement was transferred to the northern rim of the valley, on the slope of the Zeva'im (Qūmi) Ridge. In the 1930s, the kibbutz quickly increased in membership, intensified its farming, and opened manufacturing enterprises. Exposed to frequent attacks during the 1936–39 Arab riots, special night squads of the Haganah were set up and trained at En-Harod, under Orde \*Wingate. In the Israeli War of Independence (1948), a Palmah group from En-Harod dislodged the Arab Legion from its positions menacing the Harod Valley at Zir'in (Yizre'el) and al-Mazar on Mt. Gilboa. In the 1951–52 split in the Kibbutz Me'uḥad movement, members of En-Harod were about equally divided between Mapai and the \*Aḥdut-Avodah faction of Mapam, causing the settlement to be split between Iḥud ha-Kevuṣot ve-ha-Kibbutzim and Ha-Kibbutz ha-Me'uḥad, the latter setting up a new kibbutz adjoining the veteran settlement in the northwest. Both kibbutzim developed highly intensive farming (beehives, dairy cattle, poultry, fishery, fields crops, and orchards) and each had a number of industrial enterprises (at En-Harod "Iḥud," stainless steel sanitary equipment, other metal products, a printing press, and a guest house, and at En-Harod "Me'uḥad," steel works,

a furniture factory, medical and industrial recording equipment, and software). Tel Yosef and En-Harod maintained the Bet Sturman Museum and Study Center containing collections and documents on the region's nature, history, and settlement history; nearby, a large open-air stage for art performances was set up. There was also a museum for contemporary art, Mishkan la-Ommanut (see \*Museums, Israel). In 1968 En-Harod "Me'uḥad" had 760 inhabitants, and En-Harod "Iḥud" had 690. In the mid-1990s the population of En-Harod "Me'uḥad" was approximately 875, and the population of En-Harod "Iḥud" was approximately 720. At the end of 2002 the population of En-Harod "Me'uḥad" was 809 and the population of En-Harod "Iḥud" was 559.

**WEBSITE:** www.einharodm.co.il (for Me'uḥad).

[Efraim Orni]

**ENNERY, JONAS D'** (1801–1863), French politician, geographer, and educationalist. Ennery, who was born in Nancy, was principal of the school of the Jewish community in Strasbourg. In 1849, despite the anti-Jewish disorders in Alsace, he was elected to the constituent assembly, where he sat among the members of the "Mountain" (left wing). After Napoleon III's coup d'état in 1852, Ennery was exiled to Belgium. His works include *Dictionnaire général de géographie universelle* (4 vols., 1839–41) and *Prières d'un coeur israélite* (1848).

**ENOCH** (Heb. חֵנוֹךְ). (1) Son of Cain, father of Irad. The world's first city was named after Enoch (Gen. 4:17f.). It has been suggested that the writer is punning on the root *hnk*, "to found," "initiate." (2) Son of Jared, father of Methuselah, seventh generation of the human race (Gen. 5:18–24; 1 Chron. 1:3). Sasson (in Bibliography) has suggested that as seventh in the line of Adam, Enoch's life of piety is in contrast with the seventh in the line of Cain, who is associated with bloodshed. In comparison with the life-span of his ancestors and descendants, his life is short and corresponds in years with the number of days in the solar year. It is further said of him that he "walked with God; then he was no more for God took him" (Gen. 5:23). This cryptic statement implies the existence of some fuller narrative about Enoch, now lost, perhaps connecting him with the sun god (see below). Legend has stepped in to fill the gap. Some scholars have pointed to a similarity with the Mesopotamian story of Enmeduranna, the seventh king before the flood, who was very close to the sun-god to whom his capital city was dedicated. Hess follows Borger (Bibliography) in suggesting that a better Mesopotamian counterpart of Enoch would be Utuabzu, adviser to Enmeduranki. Utuabzu, seventh in a list of sages before the Mesopotamian flood, like Enoch ascended into heaven.

[Nahum M. Sarna / S. David Sperling (2<sup>nd</sup> ed.)]

#### In the Apocrypha

In Jewish apocryphal literature of the Second Temple period similar motifs to those of Enmeduranna are connected with Enoch (seventh in Seth's line); he too learned God's mys-

teries and had access to the heavenly tablets. It is therefore probable that the similarity between the later legends about Enoch and the figure of the Babylonian legendary king can be explained by the fact that Genesis preserves a partly expurgated narrative about Enoch and that some of the original mythological motifs continued to exist in oral tradition until they reached their present form in Jewish pseudepigrapha and medieval legends and mystical literature. Enoch became a hero in Jewish apocalyptic literature and two Jewish apocalyptic books are ascribed to him: the so-called Ethiopic and Slavonic Books of Enoch. The figure of Enoch was especially significant in the spiritual movement from which the \*Dead Sea Sect originated. Thus his story and his writings are treated in the Book of \*Jubilees, his prophecies are hinted at in the Testament of the Twelve Patriarchs, and he plays an active role in the Genesis Apocryphon, one of the \*Dead Sea Scrolls. Cave 4 at Qumran yielded Aramaic fragments many of which correspond to the apocalyptic 1 Enoch. The importance attached to Enoch in some Jewish circles in the Second Temple period aroused the opposition of the more rationalistic Jewish sages. Therefore in rabbinic literature Enoch is sometimes presented as evil and the biblical statement that he was taken by God is simply explained as a reference to his death. The first to claim that Enoch merely died was Ben Sira (Ecclus. 44:16; 49:14–16) – even Joseph, Shem, Seth, Enoch, and Adam had to die. It is interesting to note that all these biblical personages (with the exception of Joseph, but note “The Prayer of Joseph”) became heroes of Jewish, Gnostic, and Christian mystical speculations. It is also important that while the Hebrew text of Ben Sira presents Enoch as a “sign of knowledge to all generations” – a hint at his mystical wisdom – by the time of the Greek translation (135 B.C.E.) Enoch had become “an example of repentance for all generations,” reflecting the legend that there was repentance before the Flood. This legend, in a curious form, occurs even in Mormon holy scriptures (Moses 6:27–7:19).

[David Flusser]

### In the *Aggadah*

Enoch was among the nine righteous men who entered paradise without suffering the pangs of death (DEZ 1, end). “He ascended to heaven on God’s command, and was given the name \*Metatron the Great Scribe” (Targ. Yer. to Gen. 5:4). During his lifetime Enoch was the guardian of the “secret of intercalation” and of the “miraculous rod” with which Moses later performed the miracles in Egypt (PdRE 7:40). He is the central figure in some late Midrashim, such as *Sefer Hanokh* and *Hayyei Hanokh* (which are related to the legends found in the various pseudepigraphic Books of Enoch and other apocryphic works). Enoch lived in a secret place as a hidden righteous man and was called by an angel to leave his retreat to go to teach men to walk in the ways of God. He taught for 243 years, during which peace and prosperity reigned in the world. He made a powerful impression on all he taught, including kings and princes, and they acclaimed him as their king. As a reward for instructing mankind, God resolved to in-

stall him as king over the angels in heaven too. He ascended to heaven in a fiery chariot drawn by fiery chargers. When Enoch arrived in heaven the angels exclaimed: “How comes a man born of a woman amid the fire-consuming angels?” To which God replied: “Be not offended, for all mankind denied Me and My dominion and paid homage to the idols; I therefore transferred the *Shekhinah* [‘Divine Presence’] from earth to heaven, and this man Enoch is the elect of men.” God arrayed him in a magnificent garment and a luminous crown, opened to him all the gates of wisdom, gave him the name “Metatron,” prince and chief of all heavenly hosts, transformed his body into a flame, and engirdled him by storm, whirlwind, and thundering (*Sefer ha-Yashar* to Genesis, p. 11a–13a). Notwithstanding these legends, third-century Palestinian rabbis deny the miraculous translation of Enoch, and state that he vacillated all his life between righteousness and sinfulness, whereupon God removed him from the world before he relapsed again into sin (Gen. R. 25:1). This derogatory evaluation of Enoch was, at least in part, a reaction against the use made by Christians of the legend of Enoch’s ascension to heaven.

### In Islam

A prophet named Idrīs is mentioned in the Koran in Suras 19:57–58 and 21:85. The commentators identify him with Enoch, whom God “took” (Gen. 5:22–25), namely, that he did not die. The Muslims shaped the character of Idrīs, the brother of “Noah,” in keeping with Jewish *aggadah*, as already found in Ben Sira, Josephus, and the books of the Pseudepigrapha, in various languages, which are attributed to Enoch. The brother of “Noah” was well versed in books and was therefore named Idrīs (“the expounder of books”). Like the Jews, the Muslims occasionally identify him with Elijah, as well as with al-Khaḍīr (see \*Mūsā).

**ENOCH, ETHIOPIC BOOK OF** (known as **1 Enoch**; abbr. **1 En.**), one of the most important of the apocalyptic works, dating from the period of the Second Temple. It is named after the biblical Enoch, son of Jared, about whom it is stated in Genesis 5:24 that he “walked with God; then he was no more, for God took him,” which was understood to mean that he ascended to heaven during his lifetime. The work consists of different sections, which are generally clearly indicated.

In its present form it is divided into five parts, consisting of some nine separate sections, as follows:

(1) 1–5: An introduction, in which Enoch relates the good in store for the “elect” after the final “day of judgment”; 6–11 describes Shamḥazai and his cohorts, the chiefs of the watchers (cf. Dan. 4:10–14); they are “sons of God . . . the Nephilim” of Genesis 6:4, who lust after the daughters of men and sire children (cf. the Greek *gigantes*), who consume the labor of others, and teach mankind the arts of magic and the art of fashioning weapons of destruction. Uriel, one of the angels of the “Heavenly Presence,” is sent by God to apprise Noah of the impending flood, destined to come upon the earth because of this wickedness. The angel Gabriel is sent to destroy the children of the “watchers” and the angel Michael to bind the “watchers” in \*Sheol until the day of the last judgment; 12–36 continues the foregoing except for the fact that here the leader of the Nephilim is called Azael, and Enoch the “righteous scribe” acts as the intermediary between them and God. It continues with Enoch’s journey through the universe, during which he is granted a view of all the elements of creation (hills of darkness, rivers of fire, the abode of the spirits, the place of the great future “judgment,” the garden of Eden, Gehenna, the sun, the stars, etc.) and among them also “the seat of glory,” upon which sits “the great glory” (God).

(2) 37–71: This section deals with the “last day.” The Messiah, who is here called the “Elect One,” is envisioned as a pre-existent being who has, from time immemorial, been “under the wings of the Lord of the spirits” and who, on the last day of judgment, is destined to act as the judge of all mortal beings (41). The ministering angels, who lift their voices in song in the morning, first greet the “Lord of spirits” (or the “ancient of days” of Dan. 7:9) and then the “Elect One.”

(3) 72–82: The Book of the Courses of the Heavenly Luminaries. This book is entirely separate and distinct from the preceding one. It gives a detailed description of the course of the sun, of the moon and of the stars, of the falling of dew and of rain, of the recurring seasons of the year, etc. The nature of the “true” calendar of 364 days per year, i.e., 52 weeks, is also explained (by means of a description of the procession of the sun through the “gates” and “windows” of the heavens).

(4) 83–90: This part is similar in content to section (2). In it are related, by means of dream-visions and symbols, the deluge and the history of the children of Israel down to the beginning of the Hasmonean era.

(5) 91–108, which may be subdivided as follows: (a) 91–105: another survey of the history of man and of the children of Israel. History is divided into ten periods, seven of which have already occurred (the creation, the flood, Abraham, the revelation at Sinai, the Temple, the destruction of the Temple, the time of the election of “the righteous shoot”) and three which belong to the future. In them the righteous shall triumph, the Temple will be rebuilt, and the day of the last judgment come; (b) 106–107: The Book of Noah, the story of Noah’s birth, similar in content to the Genesis Apocryphon

and to the Book of Noah found at Qumran; (c) 108: Enoch’s instructions to mankind.

The different parts of the work are not merely a compilation of various heterogeneous elements, but apparently also reflect different periods in the life of the community in which these “books” arose. In its view of the role of Enoch and in its solar calendar it has affinities with the Book of \*Jubilees (which mentions it – 4:17–23 et al. – and is dependent upon it), as well as with other apocalyptic literature (cf. the Testament of Levi, 10:5; 14:1 et al.). These books are also familiar with the Noah story, as apparently with chapters 80–93. On the other hand chapters 37–71 reflect the views of esoteric circles. In the Talmud, R. Akiva, who was among the sages who delved into such lore (*ma’aseh merkavah*; see Tosef., Hag. 2:4), expressed similar ideas concerning a pre-existent Messiah who sits on a seat next to the “Divine Presence” (*Shekhinah*; Sanh. 38b; Hag. 14a), and similar ideas are found in the later “pseudepigraphic” midrashic literature (ed. by A. Jellinek in his *Beit ha-Midrash* and in PR 36–46). One passage in this section (67:6–8), which speaks about mineral waters used medicinally by mighty and wicked monarchs, apparently alludes to Herod (cf. Jos., Ant., 17:171) and hence dates from after his reign (or possibly the days of the early \*procurators). The belief in a Temple which will descend from heaven (91–105) also stems from separatist circles, such as those represented by the authors of the Dead Sea Manual of \*Discipline who did not consider the Second Temple to be sacred and dissociated themselves from it. The final chapter is both ideologically and linguistically close to the \*Dead Sea Scrolls, and the term “righteous shoot” is also common in the writings of this sect.

The Book of Enoch had tremendous influence. From it, or at any rate, through it the Manual of Discipline received the solar calendar and it also served as an exemplar for the composition of the burgeoning apocalyptic literary genre. From it too comes the concept of a pre-existent Messiah, which influenced early Christianity and prepared the way for the belief in the divinity of Jesus (see later). It was this influence which was apparently responsible for the negative attitude of some of the talmudic sages of the third century C.E. who regarded Enoch as a wicked and hypocritical figure (Gen. R. 25:1). Only later, at the beginning of the Middle Ages, did the rabbis deal with the mystical knowledge traditionally vouchsafed Enoch. Some early Church Fathers (like Tertullian) considered the book to be part of the canon. However, from the fourth century on, it gradually lost importance in the Western Church and only in the Ethiopic Church is it still considered canonical. The Book of Enoch became known again in Europe only in the 18<sup>th</sup> century when James Bruce brought parts of it from Ethiopia. In the 19<sup>th</sup> century, Dalman (who is also responsible for the chapter divisions), and later Charles, disseminated it in the world of Western scholarship.

The original language of the Book of Enoch was, according to Joseph Halévy, Hebrew, but the fragments of the book found in Qumran are all in Aramaic. Charles’ hypothesis is that the book consists of Hebrew and Aramaic portions in-

discriminately combined. The book was translated into Greek and from Greek into Ethiopic. Only part of the Greek translation is extant. The Book of Enoch is quoted in the Epistle of Jude (14–15) in the New Testament and its influence has been discovered at many other points in the New Testament and in the Church Fathers (cf. Charles, *Apocrypha*, 2 (1913), 180–5). Of the Greek translation, chapters 1–32 were found in Egypt in 1886–7 and were published by Bouriant in 1892. In 1930 the University of Michigan purchased this manuscript, as well as the manuscript of chapters 97:6–104, 106–107, which were published by Bonner (*The Last Chapters of Enoch in Greek*, 1937). The most complete Ethiopic version was published by R.H. Charles as *The Ethiopic Version of the Book of Enoch edited from 23 Mss.* (1906). There are the following translations of the Ethiopic text into modern languages: English, Charles, *Apocrypha*, 2 (1913), 163–28; German, G. Beer, in: E. Kautsch (ed.), *Apocryphen und Pseudepigraphen*, 2 (1900), 236–310; French, F. Martin, *Le livre d'Hénoch* (1906); Hebrew, A. Kahana, *Ha-Sefarim ha-Ḥizonim*, 1 (1936), 19–101.

[Yehoshua M. Grintz]

**ENOCH, SLAVONIC BOOK OF** (known as **II Enoch**; abbr. **II En.**; also entitled the **Book of the Secrets of Enoch**, or several variations on this), apocryphal work translated in the tenth or 11<sup>th</sup> century from Greek into Slavonic. The dating is deduced from the evidence of certain linguistic peculiarities. The first complete edition of the work was published by A. Popov in 1880. It was edited and studied by M. Sokolov (1899 and 1910) who made a special examination of the quotations from Old Russian literature it contains. An edition and translation of the work into French was made by A. Vaillant (1952). There are considerable differences between the two recensions (one long and one short) found in the manuscripts. Vaillant and other scholars maintain that the short recension is closer to the original text than the long one, which in their view contains many interpolations made by two revisers. Nonetheless the long recension seems to contain some material belonging to the original text omitted from the short recension.

The Slavonic Book of Enoch begins with \*Enoch's account of his journey on the wings of angels through the seven heavens. This account, which contains astronomical information and descriptions of various classes of obedient and rebellious angels, recalls, despite considerable differences in detail, similar passages in the Ethiopic Book of \*Enoch. In the seventh heaven Enoch sees from afar the Lord, who speaks to him and orders the angel Vreveil to describe to him the workings of heaven and earth, as well as disquisitions on various other

topics, and commands Enoch to record these in 360 books. This is followed by an account of the creation given to Enoch which is succeeded in turn by Enoch's exhortations to his sons. These exhortations include moral admonitions, injunctions concerning sacrifices, a description of what Enoch has seen in the heavens, and an eschatology. The tale continues with Enoch being carried away by angels. His son Methuselah is ordained as a priest, offers animal sacrifices, and at the end of his life sees in a vision the Lord, who announces the deluge and commands him to choose Nir, the second son of Lamech (i.e., Noah's brother), as his successor in the priestly office. After the death of Methuselah, Nir offers animal sacrifices. After more than 200 years, when people have changed for the worse, Sophonim, Nir's wife, becomes pregnant in her old age. Rebuked by her husband who believes her unfaithful, she dies. A child comes forth from her corpse. He has the distinctive signs of priesthood and is named Melchizedek. When the time of the deluge approaches, the Lord informs Nir that Melchizedek will be taken to Eden by the archangel Michael and will be forever the priest of priests, or, as Nir puts it, the head of the priests of the "other" people (those who will live after the deluge).

In the long recension the Lord refers to the 13 priests headed by Melchizedek's son Nir who precede the Melchizedek known from the Bible and to 12 priests who follow the second Melchizedek; after them will come the great high priest, the Word of God, who created all things visible and invisible. This allusion to the Christian concept of the Christ has no counterpart in the short recension. The latter, which ends with the removal of the first Melchizedek, is possibly cut short, and in this case the long recension may have preserved some original materials.

Various hypotheses have been put forward on the origin of the Slavonic Book of Enoch and the influences discernible in it. There are unmistakable echoes of Christian doctrine in the long recension, but only doubtful ones, or none at all, in the short. If, as seems probable, the latter text is comparatively free from interpolation, there does not appear to be any firm ground for maintaining, as Vaillant does, that the work originated in a Christian milieu. It is possible that it reflects tendencies of one or even several Jewish groups; there are many quotations from biblical texts and allusions to them and to Ben Sira. It is reasonably likely that the original work, which is more or less represented by the short recension, was an amalgam of two or more texts of differing provenance. A significant clue may be provided by the fact that in two passages – in Enoch's exhortations to his sons (Vaillant, p. 58–59) and in the account of the sacrifice offered by Methuselah (p. 66–67) – the text makes it clear that the four legs of the sacrificial animals should be tied together. A passage in the Babylonian Talmud (Tam. 31b) characterizes this way of tying sacrificial animals as a custom of the sectarians (*minim*). It is therefore a possibility that some portions of the Slavonic Book of Enoch, or the whole of it, reflect the views of a Jewish sect which was heterodox in rabbinic eyes. In this connection, it may be asked if

the story of Melchizedek recounted in this work also belongs to the lore of this sect.

Some portions of the Slavonic Book of Enoch show Iranian influences. A passage in the exhortations of Enoch (Vaillant, p. 56–57) referring to the souls of animals accusing man certainly derives, as W. Otto noted, from the Zoroastrian scriptures; its ultimate source may be found in the Avestic Gathas (Yasna 29). The reference in the same passage to the habitation assigned to the souls of the animals in the Great Aeon may also reflect Zoroastrian views. It may be significant that these passages immediately precede the sectarian passage of sacrificial animals (Vaillant, p. 58–59). A passage in the exhortations of Enoch (p. 60–63) in which he refers to God having established the division of time in the Aeon of Creation and to these divisions (the years, months, days, and hours) disappearing in the eschatological Great Aeon is also reminiscent of Iranian doctrines on the creation of the Time of Long Dominion (which has the ordinary divisions of time) and to its merging at the end with Infinite Time (which has none). It has been claimed, with good reason, that the account of the creation the Lord gives to Enoch (Vaillant, p. 28–31) also contains some Iranian elements. The book also shows an Egyptian influence. The Greek original of the Slavonic text appears to have been full of Hebraisms; it may be supposed that the author was familiar with the language of the Septuagint. However, in at least one case (Vaillant, p. 10) a post-biblical Hebrew expression, *porkei 'ol*, seems to have been translated.

Chronologically the Slavonic Book of Enoch comes after the Ethiopic Book of Enoch. A *terminus a quo* is suggested (though not established) by the hypothesis that the Mishnah may include a reference to the sacrificial usages of a sect within which at least some portions of this text may have originated. There are some not wholly conclusive indications that the Greek original of the work may have still existed in the 13<sup>th</sup> century.

[Shlomo Pines]

**ENOCH BEN ABRAHAM** (d. after 1662), talmudist and preacher. In 1649, after having served as preacher in Cracow, he left for Gnesen where he was appointed rabbi. He afterward became *dayyan* at Posen. As a result of the suffering and poverty caused by the Chmielnicki rebellion (1648–49), Enoch left Poland and settled at Oettingen (Germany) where he was appointed rabbi, remaining there, probably until his death. His works, published posthumously, are *Vikku'ah Yosef ve-ha-Shevatim* (Amsterdam, 1680), an attempt to exonerate Joseph's brothers; *Reshit Bikkurim* (1708), three sermons on God's existence, revelation, and reward and punishment, published as part one of his grandson Enoch b. Judah's book

of the same title. The introduction mentions his commentaries on Psalms, Proverbs, and Esther; *Berit Olam*, homilies on the Bible; and novellae on the *Tur Oraḥ Ḥayyim*. Some of his responsa, together with those of his son Judah and his grandson, appear in *Hinnukh Beit Yehudah* (1708).

**BIBLIOGRAPHY:** J. Perles, *Geschichte der Juden in Posen* (1865), 82, 83; J.E. Sokolow, *Gan Peraḥim* (1890), 120.

[Jacob Hirsch Haberman]

**ENOSH** (Heb. עֲנוֹשׁ; "man, mankind"), eldest son of \*Seth and the father of Kenan (Gen. 4:26; 5:6, 9; 1 Chron. 1:1–2). He lived 905 years (Gen. 5:11). It was in his day that the name יַחַוְחַ was first invoked (*ibid.* 4:26).

#### In the Aggadah

The generation of Enosh is the "counsel of the ungodly" of Ps. 1:1. Enosh and his contemporaries studied and practiced the arts of divination and control of heavenly forces, thereby making way for the generation of the flood (Zohar 1:56a), and were also the first to practice idolatry (Sif. Deut. 43; see also Shab. 118b). Four revolutions in nature occurred during the days of Enosh: the mountains became barren; corpses began to putrefy; the faces of men became apelike (rather than Godlike); and demons lost their fear of men (Gen. R. 23:6).

**BIBLIOGRAPHY:** Cassuto, in: *EM*, 1 (1965), 450; E.A. Speiser, *Genesis* (1964), 37–38. IN THE AGGADAH: I. Ḥasida, *Ishai ha-Tanakh* (1964), 73.

**EN-RIMMON** (Heb. עֵין רִמּוֹן), ancient town in the northern Negev. Originally part of the territory of Simeon (Josh. 19:7), it was absorbed by the tribe of Judah in the time of David (*ibid.* 15:32; 1 Chron. 4:32). It was resettled by Jews in the Persian period (Neh. 11:29). In the masoretic text of the Books of Joshua and Chronicles, En-Rimmon appears as two separate cities (Ain and Rimmon) but as one city in the Book of Nehemiah and the Septuagint. In the fourth century C.E. Eusebius refers to it as a large Jewish village (Onom. 88:17; 146:25). The name may be preserved in the Arabic Khirbat Umm al-Ramāmin, about 8 mi. (13 km.) north of Beersheba.

**BIBLIOGRAPHY:** Abel, *Geog.*, 2 (1938), 318; Avi-Yonah, *Geog.*, 114. **ADD. BIBLIOGRAPHY:** S. Ahituv, *Joshua* (1995), 303.

[Michael Avi-Yonah]

**ENRIQUES, PAOLO** (1878–1932), Italian zoologist. Born at Leghorn, he became director of the Institute of Zoology at Padua in 1921 and remained there until his death. His zoological studies dealt with comparative physiology and protozoology. Among works of wider scope were his *La teoria cellulare* (1911), in which he attempted a synthesis of modern biological problems; *Riproduzione nei protozoi* (1924); and a series of monographs on genetics and evolution in which Enriques attempted to reconcile Mendelian heredity with the Darwinian theory of evolution.

[Mordecai L. Gabriel]

**ENRÍQUEZ (Henríques), ISABEL** (fl. 1660), Spanish poet. According to Miguel de Barrios, she was “famous in the Academies of Madrid for her rare talent.” In 1636 Isaac Cardozo dedicated to her his *Panegýrio... del color verde*. At some date after this she fled to Amsterdam, where she openly professed Judaism. It was here that she was befriended by Barrios, who dedicated two poems to her in his *Aplauso métrico* (1673). In his *Relación de los poetas*, Barrios cites a *décima* of hers and describes her as the author of a volume of verse. Together with Isabel Correa, Isabel Enríquez is reputed to have been a member of Belmonte’s Academia de los Sitibundos in Amsterdam.

**BIBLIOGRAPHY:** M. de Barrios, *Relación de los Poetas y Escritores Españoles de la Nación Judayca* (1683), 56; Kayserling, *Bibl.*, 52; Brugmans-Frank, 455.

[Kenneth R. Scholberg]

**ENRÍQUEZ (Henriquez) BASURTO, DIEGO** (b. 1621), \*Marrano poet, son of Antonio Enríquez \*Gomez. Probably born in Spain, he lived with his father in Rouen, France, and later moved to the Low Countries. Apparently while in Antwerp, Enríquez was the target of a vicious lampoon written in 1664. Enríquez wrote a sonnet in praise of his father’s *Siglo pitagórico*. A longer poem, *El Triunpho de la Virtud y Paciencia de Job*, dedicated to Anne of Austria, employs a variety of verse forms and is divided into six “visions,” with intercalated portions of the Psalms (Rouen, 1649).

**BIBLIOGRAPHY:** Roth, *Marranos*, 246, 333; Kayserling, *Bibl.*, 26; Barrera, *Catálogo del teatro antiguo español* (1860), 136; I.S. Revah, *Spinoza et le Dr. Juan de Prado* (1959), 24, 74–76.

[Kenneth R. Scholberg]

**ENRÍQUEZ (or Henriquez) GÓMEZ, ANTONIO** (pseudonym of **Enrique Enriquez de Paz**; 1601–1663), Spanish playwright and poet. Born in Segovia Cuenca, he was the son of a Portuguese Converso family that had been persecuted by the Inquisition for several generations. From 1577 the family began to practice Judaism in secret. They kept the Sabbath and festivals, observed some of the laws and customs pertaining to *kashrut*, and performed certain acts that were distinctly Jewish. His grandfather Diego de Mora was arrested for judaizing in 1588 and died in an Inquisition prison. Some members of the family escaped to France where they openly practiced Judaism. His father Diego Enríquez de Mora was arrested and tried in 1624 and then left for France. Once his Christian wife died, his father married a second wife, this time from a Converso family. Antonio lived in Cuenca, Seville, and Madrid. Together with other Converso writers and poets, Antonio was at the court of Felipe IV. Antonio, whose mother was an old Christian, also married an old Christian but raised his children as Jews. His literary career was a great success. He wrote about 40 plays and many prose and poetry pieces. For purely racist reasons his literary work was almost totally ignored until recent times. His works bear clear testimony of his “Jewish” identity. Gómez had a distinguished military career, rising to

the rank of captain and receiving the decoration of Knight of the Order of San Miguel. Together with his son, Diego Enríquez Basurto (who also became a well-known author), Enríquez Gómez left Spain in about 1636 and lived for a time in France, in Bordeaux and Rouen, where most of his books were published. He later moved to Holland, where he reverted openly to Judaism; he was symbolically punished in absentia at an auto-da-fé in Seville on April 13, 1660. Enríquez Gómez felt very bitter that he had to live away in a country where his mother tongue, in which he produced masterpieces, was not spoken. For some unknown reason, he returned to Spain in around 1649 and lived in Seville under a false name. He intended to continue to live as a Jew and had plans to move to Naples. He continued to write using a pen name Fernando de Zárato y Castronovo. For more than ten years he was able to remain incognito. His real identity was discovered because of the drama he wrote. The Inquisition examined the background of the playwright whose work aroused its suspicion. In 1660 he was burnt in effigy. He was arrested in 1661 and was thrown into prison where his life ended in 1663.

Enríquez Gómez was a lyric, dramatic, and epic poet, as well as a noted satirist. His major works include the *Academias morales de las musas*, dedicated to Anne of Austria (Bordeaux, 1642), and *El siglo pitagórico y vida de don Gregorio Guadaña* (Rouen, 1644). The latter, a novel in verse and prose, presents a series of 14 transformations of a soul in different bodies, satirizing various classes of society. Enríquez Góez also wrote *Luis dado de Dios a Luis y Ana* (Paris, 1645), dedicated to Louis XIII of France; *Torre de Babilonia* (Rouen, 1649); and a biblical epic about Samson, *El Sansón nazareno* (Rouen, 1656). In the prologue to this last work, Gómez refers to his authorship of 22 plays. These are mainly concerned with themes of honor, love, and friendship and half are based on biblical subjects. In many of his works Enríquez Gómez very strongly criticized the Inquisition. Enríquez Gómez composed a ballad dedicated to the martyr Lope de Vega (Juda el Creyente), who was burned at Valladolid on July 25, 1644.

Revah’s research has clarified many dark points in Gómez’s biography and introduced his literary creation to the wider academic and literary world.

**EN-ROGEL** (Heb. עֵין רֹגֵל), a spring or well southeast of Jerusalem on the border between the tribes of Judah and Benjamin, between En-Shemesh and the \*Hinnom Valley (Josh. 15:7; 18:16). Jonathan and Ahimaaz, who acted as spies and runners for David when he was fleeing from Absalom, waited there for news from Jerusalem (11 Sam. 17:17). Adonijah's aborted attempt to succeed David as king took place at En-Rogel (1 Kings 1:9) and it is probably identical with the "dragon's well" (Ein ha-Tannim) mentioned in Nehemiah 2:13. En-Rogel has been identified with a well, 60 ft. (18 m.) deep, called Bîr (Bî'r) Ayyûb ("Job's Well"; perhaps a corruption of "Joab's well" [Ahituv]), situated at the convergence of the Hinnom and \*Kidron valleys, some 500 meters south of the city of David outside the walls of the Old City of Jerusalem. It sometimes overflows in rainy winters, justifying its definition as a spring. Alternatively, the well was dug on the site of the ancient spring that had been stopped up.

**ENSHEIM, MOSES** (also known as **Brisac** and **Moses Metz**; 1750–1839), mathematician and Hebrew versifier. Ensheim left his native Metz in order to avoid having to become a rabbi, and for many years led a wandering life. From 1782 to 1785 he was employed as a tutor in the home of Moses \*Mendelssohn in Berlin. He then returned to Metz, where he gave private lessons in mathematics since, as a Jew, he was precluded from teaching in the new central school in the city. He also started working with the Hebrew journal *Ha-Me'assef* in which (vol. 6 (1790), 69–72) he published his *Shalosh Hidot*, a satire against billiards and card games, and two hymns: *Al-ha-Va'ad ha-Gadol asher bi-Medinat Zarefat* (6 (1790), 33–37), addressed to the National Assembly in Versailles; and *La-Menazéah Shir*, a hymn on the occasion of the Metz civic fete of 1792. The latter was sung in the Metz synagogue to the tune of the *Marseillaise*. Ensheim was a friend of Abbé \*Grégoire, and helped him with the preparation of his essay on the Jews (1788). He was also acquainted with several French mathematicians of note, and his *Recherches sur les calculs différentiels et intégrals* (1799) was highly regarded by Lagrange and Laplace. En-

sheim spent the last years of his life in Bayonne as a tutor in the home of Abraham \*Furtado. He bequeathed a quarter of his estate, amounting to 12,000 francs, to the Jewish elementary school in Metz.

**ENSISHEIM**, town in Haut-Rhin department, Alsace, E. France, about 19 mi. (30 km.) S. of \*Colmar. R. \*Meir of Rothenburg was held prisoner there from 1286. The first evidence that Jews were living in the town dates from 1291. They were among the victims of the \*Armleder persecutions in 1338. The community had hardly been reconstituted when it suffered from the persecutions accompanying the \*Black Death in 1348–49. A few Jews again settled there from 1371. The small community welcomed the Jews expelled from Kayersberg and \*Mulhouse at the beginning of the 16<sup>th</sup> century. After an ordinance of 1547, only one Jewish family was allowed to reside in Ensisheim and the surrounding localities, and the synagogue was closed for worship. In 1689, some Jews were again admitted for a short while on payment of a high protection fee. It was not until 1824 that some Jews again settled there. Only a few Jews were still living there in 1936. At an unknown date there was a \*blood libel in Ensisheim and the Jews there were put on trial.

[Bernhard Blumenkranz]

**ENTEbbe RAID**. On Sunday, June 27, 1976, an Air France jet plane en route from Tel Aviv to Paris with over 200 passengers on board, including 80 Israelis, was hijacked after it took off from Athens where it had made an interim landing. The hijackers claimed to belong to the Popular Front for the Liberation of Palestine. The plane landed at Benghazi Airport in Libya later the same day, and after refueling there (although Libyan authorities denied this), it took off in the direction of Amman and ultimately landed at Entebbe Airport near Kampala, Uganda, in complete darkness.

On Wednesday, June 30, the terrorists – after releasing 47 of the passengers, including elderly women, children, and the sick – issued their demands for the release of 53 Palestinian terrorists imprisoned in various countries, 40 of them in Israel, setting the following Thursday at noon as the deadline, and threatening to kill all the remaining passengers and blow up the plane if their demands were not met. Later, they extended the deadline for another 24 hours.

Meanwhile, on the previous two days the hijackers released 148 passengers, most of them Jews who were not Israelis, leaving 102 hostages, mostly Israelis, plus the crew of the airline.

On July 1, the Israeli government announced that it would submit to the demands of the hijackers and officially asked France to negotiate on its behalf for the return of the hostages.

It later transpired, however, that from the moment that the hijack took place a rescue plan was drawn up, and on July 4, Israel and the whole world thrilled at the news of an attack by an Israeli commando unit at Entebbe, which effected the release of the hostages. The operation was rightly described as the most daring and incredible rescue mission in military history, taking place as it did, in a hostile country, 2,500 miles distant and with minimal time for planning its complicated details. The operation, which had been kept a guarded secret, was under the command of Brigadier-General Dan Shomron and was carried out with giant American Hercules transport planes.

The rescuers landed at the airport with orders only to return fire directed at them and did so at Ugandan soldiers who fired at them from the control tower. Storming the place where the hostages had been housed, they shouted to them to keep their heads down, with the result that the rescue was thus effected with a minimum of loss of life.

Three of the civilians lost their lives, two in the actual operation and one succumbing to wounds in Nairobi Hospital. There was a single military casualty – Lt.-Col. Jonathan (“Yoni”) Netanyahu, commander of the strike force, the 30-year-old son of Professor Ben-Zion Netanyahu. He was buried with full military honors in the Military Cemetery on Mt. Herzl. Among those present were President Katzir, Prime Minister Rabin, and Chief of Staff Mordecai Gur.

One hostage, Mrs. Dora Bloch, was left behind, since she had earlier been taken to a hospital in Kampala and it transpired that she was later brutally murdered.

Kurt Waldheim, secretary-general of the UN, described the rescue operation as a violation of Ugandan sovereignty and claimed that the situation created by it was likely to have serious international repercussions, especially as far as Africa was concerned. (It was in fact condemned at a summit meeting of the Organization of African Unity.) This, however, was the only discordant note in a flood of congratulations which poured in, including one from President Ford – a message which was declared to be “unprecedented,” since no American president had ever congratulated Israel on a military action.

[Louis Isaac Rabinowitz (2<sup>nd</sup> ed.)]

**ENTIN, JOEL** (1875–1959), Yiddish editor, educator, and translator. Entin was born in Pohost, Russia, where he received a traditional religious and secular education. He became active in *Hibbat Zion* and in 1890 moved to Moscow to work for Bnei Zion. He arrived in New York in 1891 where he audited classes at Columbia University. Although he wrote chiefly in Yiddish, his first publication was an English poem. With Jacob \*Gordin he organized in 1896 the *Fraye Yidishe Folksbine*. Entin was a journalist and commentator on current events and literature for the Yiddish daily *Varhayt* (1905–15). He co-ed-

ited the second volume of the literary almanac *Yugend* (1908) and *Der Yidisher Kemfer*, the Labor Zionist weekly (1916–20). He translated novels, plays, and stories into Yiddish and was a founder of Yiddish secular schools, the Jewish Teachers’ Seminary (1919), and the People’s Relief Committee during World War I. He was active in the American Jewish Congress and the Farband Labor Zionist Order. His *Gezamlte Shriftn* (“Collected Works”), edited by S. Shapiro, appeared posthumously in New York in 1960.

**BIBLIOGRAPHY:** Rejzen, *Leksikon*, 2 (1927), 780–7; Z. Zilbertsvayg, *Leksikon fun Yidishn Teater* (1934), 1577–79; E. Shulman, *Geshikhte fun der Yidisher Literatur in Amerike* (1943), 136f; LNYL, 7 (1968), 3–8. **ADD. BIBLIOGRAPHY:** R.R. Wisse, *A Little Love in Big Manhattan* (1988).

[Elias Schulman / Marc Miller (2<sup>nd</sup> ed.)]

**ENTRE RÍOS**, province in the Argentine Republic and one of the most important centers of Jewish agricultural settlement. In 2005 the Jewish population was estimated at 1,200 families, 550 of them in the capital city of Paraná. Entre Ríos has been the focal point of Jewish settlement in Argentina since the beginning of Jewish immigration to the country. The Jewish Colonization Association (ICA) first purchased land in the province in 1892 and the first settlers came during the same year. Argentina’s national census of 1895 indicated that of the 6,085 people who declared their Jewish affiliation 3,880, or about 64%, lived in Entre Ríos. The amount of land in Entre Ríos owned by the Jewish agricultural settlements continued to increase until 1940, when it reached its peak of 571,988 acres.

On the perimeter of the agricultural settlements, Jewish communities began to develop in the towns and later in distant principal cities. A 1909 survey found Jews in seven cities and towns and their number at that time was estimated at 585 in contrast to 9,948 who lived in the Jewish agricultural settlements. Another poll, conducted in 1943, estimated the number of Jews in Entre Ríos at 20,803, of whom 9,266 were engaged in agriculture in the Jewish settlements, 4,695 lived in 17 adjacent villages, and the remainder – 6,842 persons – were settled in 76 towns, villages, and hamlets in the province. As a result of the Jewish agricultural colonization in the province Entre Ríos has such Hebrew and Jewish place names as Carmel, Baron Ginzburg, and Avigdor. Jews in Entre Ríos have had local political importance, a rare circumstance within Argentinian Jewry as a whole. During the first years of settlement the Jewish colonies established in Colón, Uruguay, and Villaguay increased the population of these regions by about 55%. This relative numerical importance, however, was not maintained. The settlements were arenas for Argentinian political struggles which had tragic consequences in 1916–17 when synagogues were destroyed and Torah scrolls desecrated in the Clara colony. In 1921 the Jews of Entre Ríos suffered violent antisemitism – camouflaged as anti-Communism – a phenomenon which increased particularly during the 1930s and 1940s.

The concentration of Jews in rural areas helped to pre-

serve Jewish life especially where Jews constituted a majority. Jewish economic organizations – such as Sociedad Agrícola Lucienville, which was possibly the first agricultural cooperative in Argentina, and the Fondo Comunal, among the largest in the province – remained of economic importance. Nevertheless, the diminishing number of Jewish agricultural settlements and the general migration to Buenos Aires and its environs have had severe consequences for the Jews of Entre Ríos. The 1947 census recorded 11,876 Jews who declared their Jewish affiliation, i.e., 4.9% of all avowed Jews in Argentina; the 1960 census indicated the number had declined to 9,000. According to data provided in 1968 by the Va'ad ha-Kehillot (Central Committee of Jewish Communities), the number of Jews had decreased to 8,000, of whom about 3,050 lived in Paraná, the capital of the province. The same data refers to some 30 congregations in the province, but only nine of them, with 442 students (141 in Paraná), maintained any kind of Jewish education and there were only five youth centers. Nevertheless, these congregations provide a framework for activities and their membership in the regional branches of the Va'ad ha-Kehillot and of the \*DAIA brings them assistance in providing communal services and constitutes a mutual defense against antisemitism. Other local and regional committees allow the Jews of Entre Ríos to contribute to central welfare projects in Buenos Aires – such as the Jewish hospital, and the national and Israel funds.

**BIBLIOGRAPHY:** H. Avni, “*Mifalo ha-Hityashevuti shel ha-Baron Hirsch be-Argentinah*” (Dissertation, Jerusalem, 1969), includes English summary and bibliography; Jewish Colonization Association, *Rapport ...* (1909).

[Haim Avni]

## ENVIRONMENTAL SCIENCES.

The Holy Blessed One took the first human, and passing before all the trees of the Garden of Eden, said, “See my works, how fine and excellent they are! All that I created, I created for you. Reflect on this, and do not corrupt or desolate my world; for if you do, there will be no one to repair it after you” (Midrash Ecclesiastes Rabbah 7:13).

The philosophy of materialism and humanity's right to dominate its environment has led to man's rapid development. This attitude further developed during the Middle Ages and the Enlightenment in Western Europe on the basis of biblical interpretation. Western society embraced man's dominance of nature, and technological advances through the ages enabled people to overcome the environment and attain a higher standard of living. Technological innovations, such as plowing, harvesting, forest clearing, and animal husbandry, helped overcome natural obstacles and tame nature.

Ecological and environmental concern can be found in Jewish sources from the Bible onward. In Genesis 2:15 man is given stewardship of the earth – *le-ovedah u-le-shomerah*. Man is to preserve the earth, to look after it, and to tend it. He is not the owner, nor the master. The earth was not given to man in absolute ownership to use (or abuse) as he saw fit; but

rather it was given to him to maintain and to preserve for his benefit and for that of future generations. Some of the many topics dealt with in Jewish sources include *shemittah* – the fallow year; *bal tashhit* – the prohibition of purposeless waste; felling of fruit-bearing trees; raising small cattle in Erez Israel; sanitary disposal of human waste; air pollution; water quality; noise; and many more. For a comprehensive discussion of this topic see \*Ecology.

The Mishnah and Talmud elaborate and expound on biblical passages that deal with nature and its preservation in order to curtail environmental damage. The approach taken by the rabbis to limit the harmful effects of different environmental sources was to treat them not as absolutes but according to prevailing conditions, and this is still applicable today. Injury to the environment included not only cases of proximate causation but also those in which conditions were created that might reasonably give rise to nuisance.

The Coalition on the Environment and Jewish Life was founded in 1993 to promote environmental education, scholarship, advocacy, and action in the American Jewish community. COEJL is sponsored by a broad coalition of national Jewish organizations and has organized regional affiliates in communities across North America. COEJL is the Jewish member of the National Religious Partnership for the Environment ([www.coejl.org/about/](http://www.coejl.org/about/)).

Environmental studies (environmental sciences) is a relatively new field that gained recognition after the publication of Rachel Carson's *Silent Spring*. It crosses the boundaries of traditional disciplines, challenging us to look at the relationship between humans and their environment from a variety of perspectives. It is closely related to ecology and draws heavily on the physical sciences (chemistry and physics) as well as on biology and mathematics. Furthermore, due to globalization the careful integration of natural and social science data and information is vital to scientific research and societal decision-making related to a wide range of pressing environmental issues.

Complex interactions in the air, on land, underground, and in rivers, bays, and oceans are intricately linked to one another – and to our well-being. Below we shall briefly review the contributions made to the various disciplines comprising environmental sciences.

### Atmospheric Sciences

Atmospheric sciences deal with environmental issues such as acid deposition, air pollution and quality, and stratospheric ozone. One of its goals is to identify and quantify the natural and anthropogenic processes that regulate the chemical composition of the troposphere and middle atmosphere and to assess future changes brought about by human activities. They deal with topics as varied as the role of the biosphere in producing and consuming trace gases; the importance of the chemical and photochemical processes occurring in different atmospheric environments; and the role of transport processes connecting these environments (e.g., large-scale

advection, convection, stratosphere/troposphere exchanges, and continental export).

By the mid-1980s there was undeniable evidence that our planet was getting hotter, a massive 10% shift in only 30 years, so the idea of reduced solar radiation just did not fit and was not widely accepted in the scientific community. This began to change in 2001, when G. Stanhill and a colleague at the Volcani Center in Bet Dagan, Israel, collected all the available evidence together and proved that, on the average, records showed that the amount of solar radiation reaching the Earth's surface had gone down by between 0.23 and 0.32% each year from 1958 to 1992 (solar dimming).

Theoretical and experimental research in atmospheric radiative transfer and remote sensing of aerosol, their interaction with clouds and radiation, and impact on climate, with emphasis on biomass burning in the tropics was being conducted by Yoram J. Kaufman at the Goddard Space Flight Center. Joseph M. Prospero at the University of Miami was a specialist in the global-scale properties of aerosols focusing on the aerosol chemistry of the marine atmosphere and the biogeochemical effects of the long-range atmospheric transport of materials from the continents to the ocean environment. He pioneered in the study of mineral aerosol (soil dust) transport, showing that huge quantities of dust were carried by winds from arid regions to the oceans.

Richard Siegmund Lindzen at MIT was renowned for his research in dynamic meteorology on topics such as the atmospheric transport of heat and momentum from the tropics to higher latitudes. He developed models for the Earth's climate with specific concern for the stability of the ice caps, the sensitivity to increases in CO<sub>2</sub>, the origin of the 100,000 year cycle in glaciation, and the maintenance of regional variations in climate. Alan Robock, at Rutgers University, was involved in many aspects of climate change. He conducted both observational analyses and climate model simulations and his current research focuses on soil moisture variations, the effects of volcanic eruptions on climate, detection and attribution of human effects on the climate system, and the impacts of climate change on human activities. In the 1980s much of his work addressed the problem of nuclear winter, the climatic effects of nuclear war, demonstrating long-term (several-year) effects with a computer model, disproving the dirty snow effect, and discovering observational evidence of surface cooling due to forest fire smoke plumes in the atmosphere.

Research on cloud physics and dynamics, atmospheric radiative transfer, atmospheric dynamics, and satellite remote sensing of the Earth's climate and other planetary atmospheres was being conducted by Dr. Rossow of NASA. His early work focused on the clouds and dynamics of the atmospheres of Venus and Jupiter and he served on the Science Teams for the Pioneer Venus and Galileo (to Jupiter) space missions. Eli Tziperman of Harvard University worked on climate dynamics, trying to understand physical processes that affect the Earth's climate on time scales of a few years to millions of years.

The first numerical model able to simulate El Niño and the Southern Oscillation (ENSO), a pattern of interannual climate variability centered in the tropical Pacific but with global consequences, was devised by Mark Cane of Columbia University. In 1985 this model was used to make the first physically based forecasts of El Niño. Dr. Cane also worked extensively on the impact of El Niño on human activity, especially agriculture.

### Oceanography

Oceanography is the science that studies the world's oceans, its waters and depths, how they move and how they play a part in the whole of our planet. The sea is not just salty water, but a living system that controls many aspects of this planet. Limnology is the scientific study of the physical, geographical, chemical, and biological aspects of inland freshwater systems. The factors studied in such bodies of water as lakes, rivers, swamps, and reservoirs include productivity, interactions among organisms and between organisms and their environment, characteristics of the water and of the water bottom, and pollution problems. Structure, function, and long-term changes in these water bodies are also of importance.

Global studies of freshwater lakes with emphasis on biological, chemical, and physical interactions between the surrounding watersheds and lakes are the fields of interest of Charles Goldman of UC Davis with particular emphasis on eutrophication of lakes, nutrient limiting factors, the impact of climate and weather, and the use and importance of long-term data sets in environmental research. The core research has been directed towards a better understanding of lake processes and measures to preserve the water quality of lakes.

The research efforts of Paul G. Falkowski of Rutgers University were directed towards understanding the co-evolution of biological physical systems, evolution, paleoecology, photosynthesis, biophysics, biogeochemical cycles, and symbiosis. The cycling of nutrients and energy transfer in the microbial food chain, the dynamics of nutrient uptake by marine phytoplankton, the interaction of chemical-biological processes at the microbial level, and the impact of physical-biological processes on marine primary productivity were the major interests of Joel Goldman, UC SC.

Daniel P. Schrag of Harvard University applied geochemistry to problems in paleoclimatology and oceanography on a variety of timescales. A large portion of his current research effort used corals as recorders of information on past and present climates. Modern corals from the Pacific were being used to reconstruct El Niño variability over the last few centuries, and to assess the reliability of coral records. He also used geochemistry of corals to understand recent patterns of ocean circulation.

Understanding major biogeochemical cycles in the marine environment, as they operate today and in the past, were the main research interests of Mark A. Altabet, University of Massachusetts. He specialized in nitrogen cycling in the ma-

rine environment; nitrogen isotope biogeochemistry; particle fluxes in the open ocean; marine productivity; oceanic paleochemistry and paleoproductivity. Much of this research relates to the Earth's carbon cycle and control of atmospheric CO<sub>2</sub> concentration. Related work involved studies of N<sub>2</sub>O and carbon isotopes.

### Soil Microbiology

Soil microbiology deals with the improvement of knowledge and understanding of the microbial processes involved in geochemical cycles (e.g., carbon and nitrogen cycles) and in the factors contributing to the quality of our environment and our foods, in order to understand them and to eventually control them. These objectives require improved knowledge of microbial populations and their activities. They also require improved knowledge of how terrestrial ecosystems work, using integrated methods for research of the processes.

Over and above improved knowledge of soil micro-flora and their activities, and more generally the biological functioning of soils, soil microbiology is concerned with the identification of the bio-indicators of soil quality, and the management of native micro-flora (sustainable agriculture) and/or introduction of selected strains (microbial inoculation) in order to improve soil quality (bio-remediation) and/or reduce the use of synthetic inputs (pesticides and nitrogen fertilizers) thus contributing to the improvement of food quality (residue reduction).

Selman Abraham \*Waksman was born in the Ukraine in 1888 and immigrated to the United States in 1910. In 1915 he graduated from Rutgers University. His decision to enter agriculture was guided by Jacob G. Lipman, a bacteriologist who was dean of the College of Agriculture and himself an immigrant from Russia.

In 1939 Waksman and his colleagues undertook a systematic effort to identify soil organisms producing soluble substances that might be useful in the control of infectious diseases, what are now known as antibiotics. He developed simple screening techniques and applied these to a variety of samples of soil and other natural materials. Within a decade ten antibiotics were isolated and characterized, three of them with important clinical applications: actinomycin in 1940, streptomycin (with A. Schatz) in 1944, and neomycin in 1949. Eighteen antibiotics were discovered under his general direction. The many awards and honors that were showered on Waksman after 1940 culminated in the Nobel Prize.

M. Alexander, of Cornell University, focused his research in the areas of soil and environmental microbiology, bioavailability and aging of chemical pollutants, and microbial transformations that are of environmental or agricultural importance in natural environments. His research dealt with the bioavailability and biodegradation of a variety of toxic organic chemicals and pesticides in soils, subsoils, groundwaters, and surface waters. A variety of different issues are dealt with, including the biodegradation of sorbed chemicals, interaction between species during transformations of chemicals, find-

ing means to enhance microbial destruction of pollutants, exploring bioremediation methodologies to promote the use of introduced microorganisms to rid natural environments of toxicants, and unique problems arising because of persistence of low concentrations of organic compounds.

### Hydrology

Hydrology is the study of all waters in and upon the Earth. It includes groundwater, surface water, and rainfall. It embraces the concept of hydrological cycle.

The large volume of research in the last several decades has shown an increasing frequency of many chemical and microbial constituents that have not historically been considered as contaminants being present in the environment on a global scale. The sources of these emerging contaminants are from municipal, agricultural, and industrial wastewater sources.

Environmental hydrology aims to provide information on these compounds for evaluation of their potential threat to environmental and human health. To accomplish this goal researchers need to develop analytical methods to measure chemicals and microorganisms in a variety of matrices (e.g., water, sediment, waste); determine the environmental occurrence of these potential contaminants; characterize the myriad of sources and source pathways that determine contaminant release to the environment; define and quantify processes that determine their transport and fate through the environment; and identify potential ecologic effects from exposure to these chemicals or microorganisms. Environmental hydrology seeks to combine models of the atmosphere, land surface, or rivers, for example, into full-fledged simulated ecosystems. These simulations are critical throughout the physical and natural sciences.

Gedeon Dagan, Tel Aviv University, is a hydrologist whose main interests are the theory of flow through porous media; groundwater hydrology and water waves; and naval hydrodynamics. His research has led to the application of effective strategies for protecting and restoring groundwater, which constitutes 97% of the world's useable freshwater.

He contributed greatly in aquifer characterization and monitoring. This research is important because groundwater protection is hindered by difficulties in observing and characterizing the subsurface. Therefore, effective strategies for protecting and restoring groundwater require realistic predictions of the effects of different management options. He was awarded the Stockholm Water Prize for having established the basis of a new field within geohydrology, where contaminant spreading in the subsurface environment is determined in such a way that it accounts for heterogeneity and for biochemical processes.

Jacob Bear is professor emeritus of the Technion-Israel Institute of Technology. His teaching, research, and consulting covered the areas of groundwater hydrology and hydraulics, management of water resources, subsurface contamination and remediation, and the general theory of transport phenomena in porous media.

### Biological Plant Protection

Biological plant protection, or biological control, is concerned with the identification, screening, release, and monitoring of biological agents for long-term, cost-effective control of invading plant pests. Effective biological control is an essential element in the sustainable management of invading alien pests. Main research areas in this field include studies on the role played by insects, spider mites, nematodes, and microorganisms in reduction of plant pests and improvement of their strains and application methods for biological and integrated programs of plant protection. The goal is environmentally safe control of pests of open-field, greenhouse, mushroom house, and orchard cultures, as well as urban forest and park trees.

Ilan \*Chet, president of the Weizmann Institute of Science, Israel, was a member of the UN Panel for Applied Microbiology and Biotechnology. His research dealt with the biological control of plant disease using environment-friendly microorganisms, focusing on the basic, applied, and biotechnological aspects of this field. Prof. Chet was awarded the Israel Prize (1996) and the Wolf Prize (1998).

### Desertification and Afforestation

Desertification is a worldwide phenomenon. Land deterioration into desert-like conditions occurs in the world at the rate of 6 million hectares a year as the result both of climatic conditions and man's destructive use of the soil: failure to arrest this process endangers the vital infrastructure of a country. Combating desertification is essential to ensuring the long-term productivity of inhabited lands in arid and semi-arid regions. Desertification occurs at the transition zones between true deserts and cultivated lands. These transition zones have very fragile, delicately balanced ecosystems. In these marginal areas, human activity may stress the ecosystem beyond its tolerance limit, resulting in degradation of the land.

JNF activities are aimed at arresting the spread of the desert and improving the ecology of the area. One of the central questions troubling people concerned with the quality of life is the maintenance of a reasonable level of environment preservation in these dense urban areas. The JNF deals with this problem through planting forests around urban settlements. Through this afforestation work, Israel will be the only country to have more trees at the conclusion of the century than at the beginning! These forests enable the town dweller to have contact with nature, improve his quality of life, and create green lungs which absorb pollutants and emit carbon dioxide.

Savanization is another strategy for halting the desertification process. In the desertification process, the ecological system is controlled by sparse vegetation of bushes and green growth. In the savanization process the bushes are replaced with trees and the inferior vegetation with herbaceous growth. This involves sophisticated measures for collection of water, preservation of soil, planting of trees, and increasing natural vegetation and animal life in the area. Forests contribute to soil conservation, prevent soil erosion, act as a barrier against dust, noise and air pollution, create shade and comfortable mini-

climates, halt desertification on the border of arid zones, and contribute ecologically and globally to reducing the greenhouse effect by releasing oxygen into the atmosphere and absorbing carbon dioxide.

One of the most important agrotechnological innovations of modern times is probably the Israeli invention of drip irrigation by Simcha Blass and his son (the father conceived the idea, the son developed the dripper). Drip irrigation has many advantages over other irrigation methods and is especially suited for arid and semi-arid regions.

Blass developed a drip irrigation system for greenhouse use and in the 1960s began drip irrigation experiments in the Negev Desert. Development in capillary tubes, self-filtering systems, fertilizer injectors, and improved emitter bodies has increased the usage of these systems at an exponential rate. From 1974 to 1984, the worldwide acreage under these systems quadrupled.

Ecological responses to global climate change; the interactions between biodiversity, desertification, and climate change; and the role of individual species in the provision of ecosystem services are topics studied by Uriel Safriel. He worked on projects carried out jointly by Israel, Jordan, and the Palestine Authority, for example, as regional expert for Israel on the "Initiative for Collaboration to Control Natural Resource Degradation (Desertification) of Arid Lands in the Middle East," a joint project of Israel, the Palestinian Authority, Jordan, Egypt, and Tunisia, facilitated by the World Bank. He was head of the delegation of Israel to the Intergovernmental Negotiating Committee on Desertification.

### Environmental Law

Environmental law uses sustainability as an organizing principle to develop new strategies for the protection of land, water, and biological resources by integrating environmental laws, tax laws, development laws, and other tools. Environmental law aims to solve environmental problems and promote sustainable societies through the use of law, to incorporate fundamental principles of ecology and justice into international law, to strengthen national environmental law systems and support public interest movements around the world, and to educate and train public-interest-minded environmental lawyers.

Topics of concern in environmental law include climate change, biodiversity and wildlife, biotechnology, sustainable development, persistent organic pollutants, and human rights and the environment.

Joel B. Eisen, director of the Robert R. Merhige, Jr., Center of Environmental Law, served as counsel to the U.S. House of Representatives. He taught courses on environmental law, urban environmental law, international environmental law, environmental dispute resolution, property, and energy law and policy.

Robert J. Goldstein was director of environmental programs, Pace Law School. His publications include *Environmental Ethics and Ecology: Green Wood in the Bundle of Sticks*; *Environmental Ethics and Law*; *Environmental Ethics and Posi-*

*tive Law; Only Who Can Prevent Forest Fires?: Considering Environmental Context in Fire Suppression and Land Use; Putting Environmental Law on the Map: A Spatial Approach to Environmental Law Using GIS and Forestry Law.*

Howard Latin, of the Rutgers Law School, was involved in environmental law, international environmental law, tort law, and products liability law. Latin was an advisor to a three-year Congressional Office of Technology assessment study on “Rethinking Environmental Regulation.” He is among the most widely read scholars in the environmental law field and served as a consultant for environmental groups advocating marine conservation and pollution control. He engaged in political lobbying efforts to protect ocean wildlife in the Bahamas, Western Australia, the Galapagos Islands, and the United States.

Dan Mandelker is one of the U.S.’s leading scholars and teachers in land use law. He was also a pioneer in the teaching of environmental law and state and local government law. In environmental law, Mandelker is best known for his widely used treatise, *NEPA Law and Litigation*.

### **Sustainable Development**

From conferences at Stockholm in 1972, to Rio de Janeiro in 1992, and finally to Johannesburg in 2002, the global community has embarked on a three-decade journey aimed at furthering progress towards broad global sustainable development objectives. During the course of this 30-year period, a manifold range of sustainable development issues has been discussed, debated, deliberated, and negotiated, serving as a critical call for action of individuals, voluntary organizations, businesses, institutions, and governments.

Sustainable development is defined as “development that meets the needs of the present without compromising the ability of future generations to meet their own needs” (Brundtland Report, 1987). For development to be sustainable it must integrate environmental stewardship, economic development, and the well-being of all people – not just for today but for generations to come.

The Rio conference was also known as the United Nations Conference on Environment and Development, or more simply the Earth Summit, bringing together nearly 150 representatives of states including Israel who negotiated, signed, and agreed to a global action plan for sustainable development which they called Agenda 21. In addition, four new international treaties – on climate change, biological diversity, desertification, and high-seas fishing – were signed in the official sessions. Further, a United Nations Commission on Sustainable Development was established to monitor the implementation of these agreements and to act as a forum for the ongoing negotiation of international policies on environment and development.

Agenda 21 has been the basis for action by many national and local governments. Many countries have set up national advisory councils to promote dialogue between government, environmentalists, the private sector, and the general commu-

nity and include nearly 2,000 cities worldwide with their own local plans. They have also established programs for monitoring national progress on sustainable development indicators. Within this framework, one of the most successful programs which has been adopted by governments all over the world is the Man and Biosphere program. Biosphere Reserves are areas of terrestrial and coastal ecosystems promoting solutions to reconcile the conservation of biodiversity with its sustainable use. They are internationally recognized, nominated by national governments, and remain under sovereign jurisdiction of the states where they are located. The Israel National Commission for UNESCO has formed a MAB committee, though with just one Biosphere Reserve in Israel so far, Mount Carmel, these issues are receiving broader attention.

**ISRAEL’S COMMITMENT.** Israel established environmental institutions after the Stockholm conference in 1973 with the Environmental Protection Service as part of the Prime Minister’s Office, in 1976 within the Ministry of Interior, and finally in December 1988 a full-fledged Ministry of Environment with district and local offices. The program was initiated by Uri Marinov, while physical planning and development was guided by Valerie Brachya as deputy director-general. In the mid-1990s the Ministry of Environment, aided by the Mediterranean Action Plan of the United Nations Environment Program, initiated a strategy for sustainable development in Israel.

The Israeli government’s decision of August 4, 2002, calls for the minister of environment to report to the government on the Johannesburg Summit and on ways to incorporate the conclusions of the conference in government policy. As Agenda 21 calls for including environmental and development issues in all government decisions that have to do with economy, social policy, energy, agriculture, transportation, and commerce, it was decided that every government office would prepare its own strategy for sustainable development. Integrating environmental issues within policy decision-making calls for the gathering of information and using efficient ways to evaluate dangers and profits for the environment.

In August 2004, the Ministry of Environment presented the government with a report on the implementation of government decisions on sustainable development. The report shows that all government offices began the process of assimilating sustainable development issues, with the Ministries of Finance and Commerce first to present their strategies. Current guidelines and programs were being developed for ecotourism, educational programs for schools, and general strategies for sustainability.

Non-Government Organizations (NGO) concerned with environmental issues have played an important role in contributing to public awareness and pressure on the government to allocate more resources for these issues. Among these are the Society for the Protection of Nature in Israel (SPNI), Friends of the Earth/Middle East, Adam Teva VaDin, the Heschel Center, and local initiatives like Sustainable Jerusalem. There are a number of private foundations supporting issues

related to environment, sustainability, and education. These organizations continue to work together in promoting sustainable development policies in Israel, assisting in professional knowledge and experience. The Knesset established a Commission for Future Generations, whose responsibility is the coordination of programs at the parliamentary level.

University courses and research including sustainability are developing rapidly from the esoteric programs of the 1970s in Environmental Health at the Hebrew University to exclusive degrees in environmental sciences at all the universities attached to a variety of subjects like economics, geography, and earth sciences.

**ENVIRONMENT AND SUSTAINABLE DEVELOPMENT IN JUDAISM.** Essentially an agrarian society, certain concepts in Judaism relate more specifically to sustainability. The commandment to plant fruit-bearing trees on entering the Holy Land relates to the consideration and investment that is made for future generations. This is paralleled with the commandment of *bal tashhit* (“do not destroy”) used in the Bible with reference to the proper behavior with regard to trees during wartime (only non-fruit-bearing trees may be chopped down). The talmudic sages expanded this to forbid the destruction or damaging of anything potentially useful to man.

Another set of laws that apply in the Holy Land are those concerning sabbatical and jubilee years: *shemittah* and *yovel*. *Shemittah* refers to the seventh year, when one must refrain from working the land in order to enrich the soil and prevent exhaustion of the land. Through keeping this commandment the fields rest for one year, and products that might be produced during that time are not used. *Yovel* refers to the fiftieth year, adding the cancellation of debts to the *shemittah* regulations. It also involves the reversion of land to the original tribal structure, thus preventing large-scale concentration of land and looking after local and individual interests and maintaining sustainability.

Finally, urban laws fall under “doing good” and “preventing bad,” i.e., laws that instruct in the right way and those that relate to tort. The city had defined borders and could be extended only through a decision of the Sanhedrin. Perhaps the rebuilding of cities in the layered tel is the epitome of recycling urban land and preventing the deterioration of the immediate agricultural hinterland. The maintenance of public monuments was part of the joint responsibility of the public and private domain.

[Miriam Waldman, Zev Gerstl and Michael Turner (2<sup>nd</sup> ed.)]

**\*EÖTVÖS, BARON JÓZSEF** (1813–1871), Hungarian statesman, author, and jurist; he fought for and brought in the legislation granting \*emancipation to the Jews in Hungary. Eötvös became a member of the Hungarian diet in the Liberal opposition. In 1840 he published his classic work *A zsidók emancipációja* (“Emancipation of the Jews”) where he refuted the arguments of those who rejected emancipation of

the Jews unconditionally, as well as of those who first required the “betterment of the Jews” before they attained emancipation. Only emancipation without any prior conditions, Eötvös claimed, would improve the way of life of the Jews whose defects he did not deny, and whose assimilation he advocated in this as well as in his other writings. Eötvös was a member of the revolutionary government (1848) as minister of public instruction and religious affairs. After the failure of the revolution, he fled to Germany, from where he returned in 1851. He retired from political life and was elected president of the Hungarian Academy. With the formation of the independent Hungarian government in 1867, he once more held the same ministerial position and succeeded in having the bill on the emancipation of the Jews passed during that year. Eötvös also sought to organize the structure of Hungarian Jewry upon the principle of a unified community, without any intervention in its internal affairs. To this end, he convened a national congress of the Jews of Hungary in 1868, but his project did not materialize. Eötvös was a talented writer of fiction and in his fictional works also expressed his ideas concerning the Jews (*A falu jegyzője*, 1845; *The Village Notary*, 1850).

Braham (ed.), *Hungarian Jewish Studies*, 2 (1969), 1–33 (Eng.).

[Baruch Yaron]

**EPERNAY**, town in the Marne department, northern France, approximately 19 mi. (about 30 km.) E. of Châlons-sur-Marne. During the Middle Ages, the Jewish community there was sufficiently large to occupy three streets, the Rue Juiverie, Rue Haute, and Basse Juiverie. On the eve of World War II, a small community, which was to be cruelly tried during the persecutions, existed in Epernay. In 1969, the community numbered fewer than 200.

[Bernhard Blumenkranz]

**EPHESUS**, Greek city on the W. coast of Asia Minor, at the mouth of the River Cayster. Ephesus had an important Jewish community in the first century and its beginning apparently goes back to the early Hellenistic era. Information about it is found chiefly in Josephus, but also in Philo, in inscriptions, and Acts. What is perhaps the earliest information about the Jews of Ephesus appears in Josephus (Apion, 2:39) referring to \*Antiochus II. Josephus also mentions a decree of the consul Lentulus in 49 B.C.E. concerning the Jews. Ephesus played an exceptionally important role in the history of early Christianity, and its main importance in Jewish history is in the opposition of the Jewish community to Paul's missionary activity there. Paul laid the foundation of the first Christian commu-

nity in Ephesus against the vehement opposition of the local Jews and the non-Jews who were worshipers of Artemis (Acts 19, and the Epistle to the Ephesians). Paul disputed his critics in the hall of Tyrannus within the city (Acts 19:9), but the whereabouts of this location have not been discovered during excavations at the site. With the rise of Christianity throughout the Roman Empire, Ephesus became one of the most important centers of the new religion. The third Ecumenical Council was held there in 431 C.E. With the political change during the sixth and seventh centuries in Asia Minor, Ephesus ceased to exist. Close to the ruins of Ephesus is the modern town of Selçuk.

[Abraham Schalit / Shimon Gibson (2<sup>nd</sup> ed.)]

**EPHOD** (Heb. עִפּוֹד). The term ephod occurs several times in the Bible, where it appears to describe different cultic objects. In Exodus 28 the ephod is a garment made of expensive materials. In 1 Samuel 2:18; 22:18; 11 Samuel 6:14 the ephod is made of linen (Heb. *bad*). In Judges 17:5; 18:14–20 the ephod is mentioned along with a sculpted image (Heb *pesel*) of the kind outlawed by the Decalogue. In Judges 8:24–27 Gideon makes an ephod out of captured Midianite metals, which he sets up (*wayaşşeg*) in Ophrah, which Israel “whored after,” i.e., worshipped. Another biblical form of the word ephod is *ʾafuddah* (Heb. אֲפֻדָּה: Ex. 28:8; 39:5; Isa. 30:22), to which the verb *ʾafad* (Ex. 29:5; Lev. 8:7), with the meaning “gird” or “adorn,” is related. In its broader sense in what appear to be early texts, ephod includes the entire mantic instrument (e.g., 1 Sam. 2:28; 23:6, 9; 30:7; cf. 1 Sam. 21:10). It is possible that the robe worn by the priest (see below) from which the golden bells were suspended may also be included in the term ephod. (The bells were necessary to alert Yahweh that the priest, and not some intruder, was entering the sanctuary so that the priest would not be killed for entering the holy place (Ex. 28:31–35).) Biblical religion prohibited many forms of soothsaying and divination by means of auguries, but did permit, side by side with prophecy, the priestly ephod (see \*Divination). Both prophecy and the ephod were seen as a means of seeking the counsel of God and of obtaining a revelation of His will. The technical term for consulting the ephod and the Urim and Thummim is “to come before the Lord” (Ex. 28:30; cf. Num. 27:21), that is, either in the Tabernacle or before the ark (Judg. 20:27; cf. Judg. 20:18, 23, 27; 1 Sam. 14:18, 41 et al.). Some biblical references indicate that in ancient Israel use was made of an ephod, together with \*teraphim (Hos. 3:4) and a graven image, for approaching God (Judg. 17:4–5; 18:14, 17, 20; Isa. 30:22; cf. Judg. 8:27). The Pentateuch contains no clear description of the shape of the ephod, nor does the Hebrew root of the

word furnish any additional clues. The Hebrew word seems related to the Akkadian *epattu*, plural *epadātu*, which signifies a costly garment in the Cappadocian tablets, and to Ugaritic *ʾipd* (KTU 4. 707:13; 4. 780:1, 3, 4, 7); plural *ʾiptt* (KTU 4. 707:11); dual *ʾipdm* (KTU 1. 136:10) with the same meaning. The ephod has an apparent analogue in Greek *ependytēs* (overgarment). A similar word is found in Aquila’s translation of ephod. According to H. Thiersch (see bibliography), the *ependytēs* originated in Syria, spreading from there through Asia Minor and Greece. But while correct about the Oriental origin of the *ependytēs* and its physical resemblance to the ephod, Thiersch seems to have erred about the cultic use of the Greek garment. It seems instead to have served as a luxury item for Orientalizing Greeks. (See Muller in Bibliography.) The pentateuchal ephod was engraved with the names of the Twelve Tribes, apparently to signify the totality of the nation (Ex. 28:9–12). It is not stated how the ephod was made in the days of the Judges (\*Gideon: Judg. 8:27; \*Micah: Judg. 17:5), nor the ephod at Shiloh (e.g., 1 Sam. 2:18; and Nob: *ibid.* 22:18), and that used in connection with Saul’s campaign against the Philistines (*ibid.* 14:3). The Pentateuch contains a description of the ephod of Aaron (Ex. 28). The most common occurrences refer to an upper garment, the ornamented vestment which the high priest wore over the blue robe (“the robe of the ephod”). To this he bound the \*breastplate together with the principal vehicle for enquiring of God, the \*Urim and Thummim. All of these attestations are confined to Exodus 25, 28, 35, 39 and Leviticus 8 in settings that describe Aaron as a priest, with him and his sons wearing breeches (Ex. 28:42), an invention of the Persian period, and must be dated to post-exilic times. According to this description, the ephod was an embroidered work “of gold, of blue, purple, and crimson yarns, and of fine twisted linen, worked into designs.” To its two ends were attached two straps which fastened over the shoulders, and on each of the shoulder straps was set a *shoham* stone (identification uncertain), engraved with the names of the tribes of Israel. The breastpiece (Heb. *hoshen* חֹשֶׁן) was bound to the ephod at the top by rings and chains and at the bottom by a cord of blue, while in the middle it was encircled by “the decorated band” which was also made “in the style of the ephod” and of the same combination of gold thread and four yarns. The ephod seems to have been a square, sleeveless garment, falling from just below the armpits to the heels (“like a sort of horsewoman’s surcoat,” according to Rashi (to Ex. 28:6)). According to this view, it enveloped the entire body. According to the commentary of R. Samuel ben Meir (to Ex. 28:7), however, the ephod enclosed the body from the waist downward, the upper part of the body being covered by the breastpiece. Josephus (*Ant.*, 3:162; *Wars*, 5:231–236) states that the ephod had sleeves and resembled a type of waistcoat (“the *epomis*” of the Greeks – used by the LXX in translating “ephod” of the Pentateuch); it was variegated and had “the middle of the breast uncovered” for the insertion of the breastplate. The high priest used the ephod along with the breastplate and the Urim and Thummim as a means of divination. Lesser priests, as well as

others engaged in sacred ministrations, Samuel (I Sam. 2:18), and once even David (II Sam. 6:14) wore a simple ephod of linen, apparently during sacred service or at special celebrations (I Sam. 22:18).

According to the Talmud, each thread of the ephod consisted of six blue strands, six of purple, six of scarlet, and six of fine twisted linen, with a thread of gold in each twist of six strands, making a total of 28 strands (Yoma 71b, 72a). The names of the tribes were engraved on the onyx stones with the *shamir* (Sot. 48b; Git. 68a). The ephod was one of the eight vestments worn by the high priest (Yoma 7:5; Maim., Yad, Kelei ha-Mikdash, ch. 8–10) and, together with the onyx stones, was used in the Second Temple. The ephod was believed to atone for the sin of idolatry (Zev. 88b). Gideon was said to have made an ephod because the name of his tribe, Manasseh, was not included on the stones of the ephod (Yal., Judg. 64).

[Yehoshua M. Grintz / S. David Sperling (2<sup>nd</sup> ed.)]

**EPHRAIM** (Heb. אֶפְרַיִם), younger son of \*Joseph, born to him in Egypt by his wife \*Asenath daughter of Poti-Phera (Gen. 41:50–52); the eponymous ancestor of one of the two tribes descended from Joseph. Before his death, Jacob adopted both Ephraim and his older brother \*Manasseh as his sons on a par with Reuben and Simeon, thereby ensuring that each would become the ancestor of an entire Israelite tribe, rather than of half a tribe (48:5, 16). He made Ephraim the recipient of a greater blessing than his older brother (48:13–20), thus giving greater prominence and importance to the tribe of Ephraim. The story is an etiological explanation of the prominence of the Ephraimites in historical times. In contrast to the pentateuchal tradition, I Chr. 7:20–29 maintains that Ephraim and his family remained in Canaan and says nothing about Ephraim's birth in Egypt.

### The Name

From about 745 B.C.E. onward, the name Ephraim also served as a popular alternative to Israel to designate the people of

Territory of the tribe of Ephraim.

the shrunken northern kingdom or their descendants (Isa. 7:5, 8; Jer. 31:17, 20; Hos. 5:3, 5, et al.). The origin of the name Ephraim is not clear. According to Genesis 41:52, Joseph, in so naming his son, made a wordplay based on the root פרי ("to be fruitful"). Most scholars consider this to be the correct derivation, and hold that the name means "fertile land," with the addition of an old locative suffix – *aim* (-*ayim*). However, some view the name as a derivative of the post-biblical אֶפְרַיִם ("a place of pasture"). In both theories the name is geographical, the tribe having been called after the region it occupied, "the land of Ephraim," "the country of Ephraim" (Obad. 19), or "the hill country (Heb. *har*) of Ephraim." Least likely is the suggested connection with Akkadian *eperu*, "dust," "region," cognate with Heb. *apar*, that would have resulted in spelling Ephraim with initial *ayin*.

### The Land of Ephraim

This area comprises the hill country of central Palestine. In this region there is no watershed plateau as in Judah, but a complex of ridges, spurs, and valleys surrounding the central valley, el-Makhnah, which is apparently to be identified with Michmethath (Josh. 16:6; 17:7). Shechem stands at the northwest extremity of this valley. On the east, two long spurs descend to the Jordan plain: Qarn as-Sarṭabah (RH 2:4) and Rās al-Kharrubueh. Wādi esh-sha'ir, which falls into the Alexander River, continues northwest from the central plain of Shechem. To the northeast is the plain of Sychar (al-ʿAskar), which is formed by Wādi Beidān falling into Wādi Fāri, which in turn flows into the Jordan. The Shalem Plain, linked to the Jordan Valley by Wādi Ifjīm, extends to the east. The plain of Michmethath stretches southward until it reaches the Lebonah Ridge (Khān Lubbān), which hems it in on the south. The hill country of Ephraim is one of the most fertile areas in Palestine and at present is planted with such fruit trees as vine, olive, pomegranate, carob, etc. Prior to Israelite settlement, it was wooded (Josh. 17:18), and during the monarchy, beasts of prey still roamed there (II Kings 2:24). The coastal strip parallel to the hill country of Ephraim is extremely narrow; it is unsuitable for anchorage and ships found shelter in the river estuaries (Alexander, Haderah; see Sharon in \*Israel, Land

of: Geographical Survey). It is widely accepted that the lists of tribal territories in Joshua 13–19 reflect the situation before the period of the monarchy. It is difficult, however, to determine the exact limits of the territory of Ephraim, since it is only indicated as part of the wider unit, the house of Joseph (which included Manasseh), and the biblical data are variously interpreted by scholars (see Yeivin, bibliography).

### The Tribe

From the genealogical lists of the tribe of Ephraim (Num. 26:35ff.; 1 Chron. 7:20ff.), it is known that its families intermingled with other tribes, especially \*Asher, \*Benjamin, and \*Judah. The central position of the Ephraimites' area of settlement and their militant spirit led them to encroach upon Manasseh, whose power declined with the passage of time. After the migration of the \*Danites (Judg. 18) to the north, and the defeat of the \*Benjaminites (Judg. 19), the Ephraimites spread both south and southwest, coming into conflict and mingling with Judah in areas severed from the Jebusites of \*Jerusalem (see \*Jebus) during the period of the Judges. This explains why, in various biblical lists, certain families, places, and areas are sometimes attributed to Judah, Benjamin, or Dan, and sometimes to Ephraim. According to the Bible, the conquest of Canaan was led by \*Joshua of the tribe of Ephraim. In the ensuing period of the Judges, the accounts of the disputes with \*Gideon (Judg. 8) and \*Jephthah (Judg. 12) illustrate the pride of the Ephraimites, who claimed seniority among the tribes and precedence over the fraternal tribe of Manasseh (cf. Gen. 48:13–20). This was doubtless due not only to the political independence that they achieved in the period of the Judges, but also to the location of the religious center of \*Shiloh in their territory. The military and political importance of the Ephraimites is reflected in some ancient biblical poems, such as the Song of Deborah (Judg. 5:14). Jacob's blessing (Gen. 49) praises Joseph for his prowess and his hegemony over the other tribes, but contains no reference to Joseph's sons Ephraim and Manasseh, perhaps because it dates from a time when Joseph still counted as only one tribe in the league of Israelite tribes. In the blessing of Moses, however, the sons of Joseph are referred to as "the myriads of Ephraim," and "the thousands of Manasseh" (Deut. 33:17), which probably reflects the later date, on the whole, of the pronouncements on the tribes in Deuteronomy 33, as compared with those in Genesis 49. The self-aggrandizement of the Ephraimites over the other tribes and their tendency to isolation, inherent in such self-aggrandizement, ultimately proved fatal to themselves and to the entire nation, since it brought about the end of the united kingdom of David and Solomon and the diminution of the state's prestige. The man held responsible in the Bible for the breakup was an Ephraimite – \*Jeroboam son of Nebat, from Zeredah in the land of Ephraim (1 Kings 11:26).

[*Encyclopaedia Hebraica*]

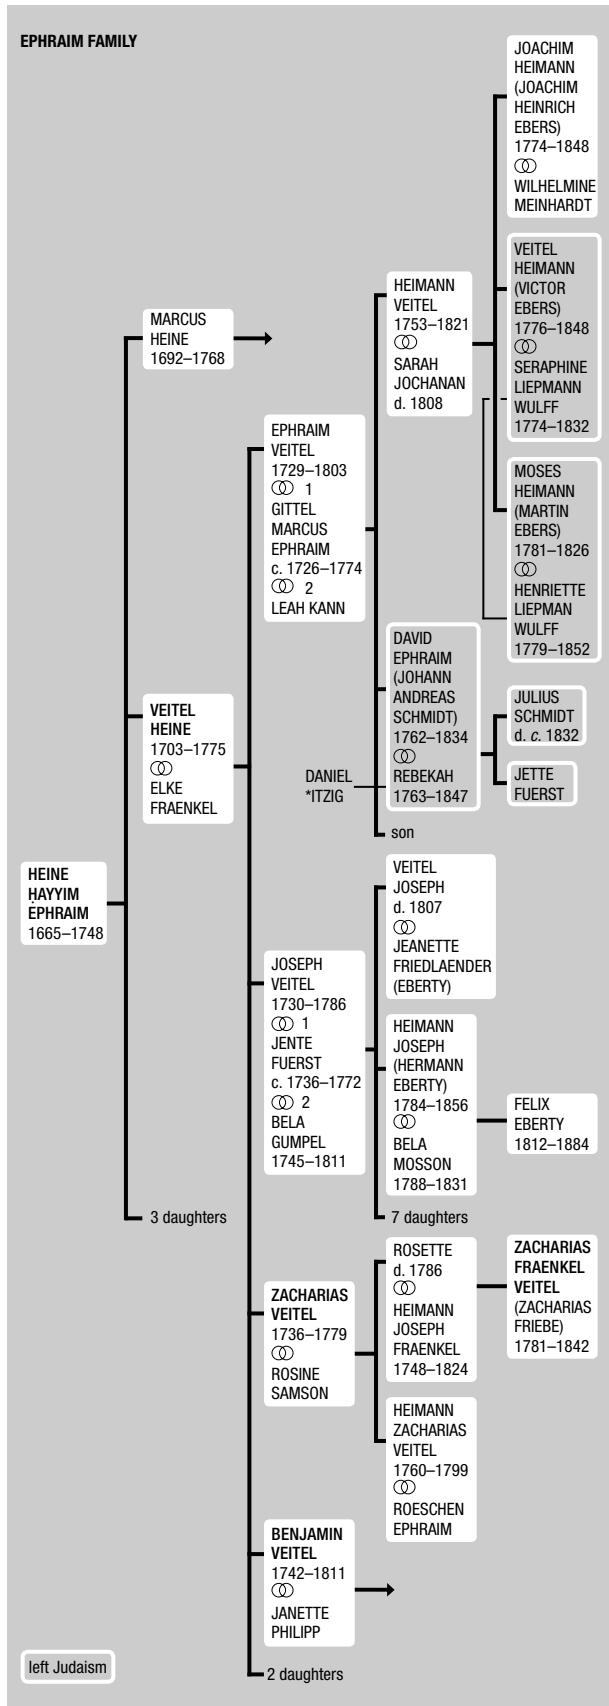

### In the Aggadah

The preference shown by Jacob toward Ephraim, in placing his right hand on his head instead of on Manasseh's and in twice

mentioning Ephraim before Manasseh (Gen. 48:14–20), was interpreted by the rabbis as an all-inclusive nullification of Manasseh's prerogatives as the firstborn. Thus Ephraim was granted precedence to Manasseh in the distribution of the Holy Land (Josh. 16:5); in the order of the banners during the wandering and camping in the desert (Num. 2:18, 20); and in the consecration of the Tabernacle (Num. 7:48, 54). Likewise, the descendants of Ephraim ruled before those of Manasseh, i.e., Joshua before Gideon, Jeroboam before Jehu (Gen. R. 97:5; Num. R. 14:4). Jacob instructed Ephraim for 17 years, yet when he came with Joseph, together with his brother Manasseh, to receive Jacob's blessings, Jacob did not recognize him, for upon seeing Jeroboam and Ahab as issuing from Ephraim, the prophetic spirit left him. Only after Joseph's prayer did it return, whereupon seeing that Joshua too would descend from Ephraim, he blessed him, giving him precedence over Manasseh (Tanḥ., Va-Yehi 6). R. Aḥa in the name of R. Levi explains Jeremiah 31:19 to mean that Jacob blessed Ephraim thus: "You shall be the head of the tribes and the head of the academies; and the best and most prominent of my children shall be called after thy name" (Lev. R. 2:3). Moreover, one of the two future Messiahs will originate from Ephraim; he will prepare the way for the Messiah, son of David, and defeat Gog and Magog and the kingdom of Edom; according to some sources he will be killed in battle (Targ. Yer. Ex. 40:11; Suk. 52a). Ephraim's standard was black and bore the emblem of a bullock in accordance with Deuteronomy 33:17 (Num. R. 2:7). The tribe of Ephraim camped to the west, whence came snow, hail, cold, and heat, since Ephraim had the strength to withstand them, as stated in Psalms 80:3 (Num. R. 2:10). The archangel Raphael was appointed to assist at God's throne to heal the breach wrought by Ephraim's descendant, Jeroboam the idol worshiper (*ibid.*). According to the Midrash, the tribe of Ephraim erred in their calculation of the termination of the Egyptian bondage and left the country 30 years before the date ordained for redemption. On their way to Canaan the Philistines waged war against them, killing 300,000 of their number. Their bones were heaped up along the road. In order that the children of Israel would not see these bleached bones and consequently take fright and return to Egypt, God did not lead them on the straight road from Egypt to the Land of Israel, but led them by a circuitous route. According to the Palestinian Targum (Ezek. 37) and the Talmud (Sanh. 92b) it was these bones which were resuscitated by Ezekiel (in the "Vision of the Dry Bones," cf. Ezek.).

**BIBLIOGRAPHY:** Abel, *Geog.* 1 (1933), 359; 2 (1938), 56, 81; S. Yeivin, in: *EM*, 1 (1950), 505–12 (incl. bibl.); Aharoni, *Land*, 236–37; Ginzberg, *Legends*, index. **ADD. BIBLIOGRAPHY:** S. Japhet, *1 & 11 Chronicles* (1993), 178–87; S. Ahituv, *Joshua* (1995), 275–80.

**EPHRAIM**, family mainly active in Berlin. Its first member to settle there was HEINE (ḤAYYIM) EPHRAIM (1665–1748), born in Altona, who rose to be court jeweler and head of the Berlin Jewish community (1726–32). His son was Veitel Heine \*Ephraim, most of whose great-grandsons embraced

Christianity and changed their names to Ebers; some of their descendants were ennobled. Veitel Heine's grandson, DAVID (1762-1834), married a daughter of Daniel \*Itzig; following a financial scandal he fled to Vienna, embraced Catholicism, and changed his family name to Schmidt. ZACHARIAS (1736-1779), son of Veitel Heine, showed marked business ability. His grandson ZACHARIAS FRAENKEL (1781-1842) was an influential banker. As representative of the Berlin community, he demanded conscription of the Jews in 1812.

Veitel Heine's youngest son BENJAMIN (1742-1811) was a businessman and government confidential agent. After varying success in questionable business transactions, he reorganized the family lace factory in Potsdam, opening a school for his girl workers, which was highly commended. In 1779 he took on in his factory unemployed Jewish girls and women from the recently annexed Polish territory. He successfully averted the expulsion orders of Frederick William II by stressing the usefulness of his 700 to 1,500 workers to the state. In Berlin, Benjamin maintained a leading salon, was the first Jew to own an art collection, and had access to ruling circles, having loaned the king large sums before his accession. In 1787 he was sent on a secret mission to Brussels to assure the anti-Austrian rebels of Prussian support. In 1790 the king entrusted him with the mission of contacting the French government to arrange a treaty, with a government post promised as his reward. His expenditure of large sums of his own fortune in Paris aroused suspicions against him in Berlin; at the same time Prussia changed her diplomatic course. Discredited and impoverished, Benjamin demanded recognition and reimbursement. An advocate of close French-Prussian ties, he was entrusted with minor diplomatic roles in negotiations with France. His pro-French attitude led to his arrest in 1806; he was later released by the victorious French. He died in relative poverty.

[Henry Wasserman]

**EPHRAIM, VEITEL HEINE** (1703-1775), court jeweler and head of the Berlin community. From 1730 he regularly attended the Leipzig fairs, and supplied jewels to the Prussian court and silver to the mint, strengthening his position by furnishing loans to the crown prince. The wedding of two orphans in his home in 1740 was attended by the court. In 1745 Ephraim was officially appointed court jeweler to the king of Prussia. After the death of his father in 1748 Ephraim was elected head of the Berlin Jewish community, continuing in

this office until his death. He proved a benevolent though despotic leader, enjoying the continued support of \*Frederick II. In 1743 Ephraim appointed his brother-in-law, David \*Fraenkel, the teacher of Moses \*Mendelssohn, rabbi of Berlin. He also forced a personal enemy, Abraham Posner, a *maskil*, who wanted to shave off his beard in demonstration of his unorthodox convictions, to retain his beard. Ephraim built a school for the children employed in his factories and an educational foundation bearing his name. During the Seven Years' War (1756–63) Ephraim organized a consortium (including Daniel \*Itzig and other financiers) for the mint farming rights in Prussia and the conquered territories, especially Saxony. The consortium bought up all the precious metals and good coinage and issued a series of debased coins, which became known as "Ephraimiten." Through these government-authorized inflationary measures about one-sixth of Prussia's war expenditures were defrayed, but the general populace became impoverished and Ephraim was attacked from the pulpit and in pamphlets. Frederick II issued a formal discharge to Ephraim although refusing to have it made public. After the war Ephraim was active in measures taken to improve the coinage. Having amassed great wealth during the war, Ephraim invested it in building a castle-type residence and in manufacturing ventures. He leased the Potsdam orphanage factory for fine gold and silver thread, over which he was granted a monopoly, and owned a Brussels lace factory, employing 200 workers. He died one of the richest men in Berlin.

**EPHRAIM BEN ISAAC (of Regensburg; 1110–1175)**, tosafist, member of the *bet din* of Regensburg, and the greatest of the *paytanim* (liturgical poets) of Germany. Among his teachers were \*Isaac b. Asher ha-Levi and \*Isaac b. Mordecai of Regensburg. He was held in great esteem by his contemporaries, being referred to as "the great Rabbi Ephraim" and as "Ben Yakir" (an allusion to Jer. 31:20). His youth was spent in France, where he was among the first pupils of Jacob b. Meir \*Tam (Rabbenu Tam). Ephraim was uncompromising in his pursuit of truth; his intransigence often brought him into conflict with other scholars, even with Jacob Tam himself. Once, after a particularly heated dispute with the rabbis of Speyer, Rabbenu Tam answered him sharply: "From the day I have known you, I have never heard you concede a point" (*Sefer ha-Yashar*, no. 64). Rabbenu Tam, however, appreciating Ephraim's selfless motives, bore him no ill will, even referring to him affectionately as "my brother Rabbi Ephraim" (*ibid.*, n. 80).

When the rabbis of Speyer complained to Rabbenu

Tam that Ephraim was overly lenient, a literary controversy arose, in which Ephraim's letters to Rabbenu Tam evidenced undeviating adherence to Jewish law and custom. Ephraim remained in Speyer for a short while after the dispute, then moved on to Worms, and finally to Regensburg. Ephraim is the author of *Tosafot* (cited in early works); a commentary on *Avot*; and halakhic decisions. He also apparently wrote *Arba Panim* ("Four Aspects"), a commentary to *Seder Nezikin*. Thirty-two of his *piyyutim* are extant. They reflect the severe hardships which the Jews of Germany suffered in the Regensburg massacre of 1137 and the Second Crusade (1146–47). Zunz regarded Ephraim's poems as superior to all other contemporary Hebrew poetry written in Germany. They are distinctive in form and content, and powerful in expression. Ephraim also employed the metric forms of Sephardi poetry and one of his *selihot* is in the Sephardi festival liturgy.

[Abraham Meir Habermann]

**EPHRAIM BEN JACOB HA-KOHEN (1616–1678)**, rabbinic authority. Ephraim served as a judge in Vilna together with \*Shabbetai Kohen and Aaron Samuel \*Koidanover in the *bet din* of his teacher, Moses Ben Isaac Judah \*Lima. During the Swedish War (1655), Ephraim fled from Vilna to Velke Mezerici in Moravia. From there he went to Prague, where he established a yeshivah. He then moved to Vienna, remaining there until 1666, when he was appointed head of the *bet din* in Ofen (Buda). There he established a famous yeshivah and corresponded with some of the most prominent rabbis of his time, including those of Turkey and Erez Israel, among them Moses \*Galante and Moses ibn \*Habib. Toward the end of his life he was invited to the rabbinate of the Ashkenazi congregation of Jerusalem, a position which, 80 years earlier, his grandfather R. Ephraim ha-Kohen had held. He died, however, before he could take up the position. Ephraim was one of the great legal authorities of his generation. His decisions on many questions, civil, domestic, and religious, helped influence Jewish life in several countries for a number of generations. His only published work is his responsa, *Sha'ar Efrayim* on the Shulhan Arukh, published by his son Aryeh Loeb (Sulzbach, 1689). Other works have remained in manuscript. Ephraim was the grandfather of Zevi Hirsch \*Ashkenazi, the "Hakham Zevi."

[Aharon Fuerst]

**EPHRAIM BEN JACOB OF BONN** (b. 1132), liturgical poet and commentator. When his teacher Joel b. Isaac ha-Levi left Bonn, Ephraim succeeded him as *av bet din*. He also taught for some time in Mainz and Speyer. In 1197, he resided in Bonn and Neuss, leaving the latter town only three days before its Jews were massacred. He appears to have died shortly thereafter. Ephraim wrote the *Sefer Zekhirah* ("Book of Remembrance") and dirges on the sufferings of the Jews during the Second Crusade. He also composed *piyyutim* for the festivals, 27 of which (two in Aramaic) have been published. His commentary on *piyyutim* still exists in manuscript; it contains many traditional details concerning the early liturgical poets, poems, and liturgical customs (Hamburg, Ms. no. 152). The well-known legend describing the martyrdom of \*Amnon of Mainz, as well as the legend concerning the early *paytan* R. \*Yannai, who out of jealousy of his pupil R. Eleazar \*Kallir put a scorpion in his shoe, are attributed to him. He also wrote *tosafot* and commentaries to the treatises of *Eruvin*, *Ketubbot*, and *Avot*, besides halakhic responsa and commentaries to benedictions and various customs. R. Ephraim is also referred to in his hymns as "Shalom"; it was possibly an additional name. The meaning of the word *יְלִיבָיָה* added to his name has not yet been clarified. It has been suggested that he had a German name such as *Geliebter* ("beloved") which was commonly pronounced "*yeliba*."

[Abraham Meir Habermann]

**EPHRAIM BEN SHEMARIAH** (c. 980–c. 1060), leader of the Palestinian community in \*Cairo during the first half of the 11<sup>th</sup> century. Ephraim's father, Shemariah, was born in \*Gaza and later moved to \*Egypt with his family. Ephraim himself studied in the Palestinian yeshivah, where he received the title *haver* ("scholar") from the *gaon* Josiah. He was engaged in commerce, but in about 1020 became the rabbi of the Palestinian community. Although he came into conflict with an opposing faction from time to time, he held his position for more than 30 years. Ephraim supported the Jews in Palestine and, especially, the Palestinian yeshivah. He was a close friend of the *gaon* R. \*Solomon b. Judah, with whom he corresponded for many years.

[Eliyahu Ashtor]

**EPHRAIM IBN AVI ALRAGAN** (late 11 and early 12<sup>th</sup> centuries), North African halakhist. He is referred to in halakhic literature as "Rabbenu Ephraim," "Ephraim of Kaleah," "Ephraim the Sephardi," "Ephraim, pupil of the Rif" (i.e., Isaac

\*Alfasi), "Ephraim the Elder," etc. He lived in \*Qal'at Hammād (Algeria). Ephraim was an outstanding disciple of Alfasi, with whom he discussed halakhic problems and Alfasi at times accepted his view. The "*Mahadura Batra*" (second recension of the *halakhot* of Alfasi) contains Ephraim's amendments. He was the first to write a commentary on the *halakhot* of Alfasi, and this is referred to in the works of *rishonim* under various names: *haggahot* ("glosses"), *hassagot* ("critiques"), *teshuvot* ("responsa"), *tosafot* ("addenda"), and *tashlum halakhot* ("complement to the *halakhot*"). The work has not survived, but quotations from it appear in the works of the *rishonim*, and a substantial part of it, on *Bava Kamma*, was published in the *Temim De'im*, no. 68, margin in the Romm Vilna (1882) edition of Alfasi. The quotations indicate that the book covered the whole of the *halakhot* and possibly also the Mishnah of tractates which Alfasi did not include in his work. The book consists of supplements to the *halakhot* ("additional *halakhot* omitted by Alfasi"), explanations of passages from the *Gemara* which Alfasi quoted without comment, explanations of the text itself, and refutations of Alfasi's critics. It also contains criticism of Alfasi, mainly where he disagrees with the decisions of the Babylonian *geonim* and North African scholars, and with their customs. The criticisms are presented vigorously but respectfully. Sometimes, when an opinion attributed to Alfasi is not acceptable to Ephraim, he, like other admirers of Alfasi, questions the attribution. Ephraim's purpose was to secure universal acceptance for the *halakhot*; even his criticisms were directed to this end, for by citing the views of earlier scholars which conflict with those of Alfasi, those who disagreed with him could still use the work as a whole as an authoritative code. Because the *rishonim* quoted mainly the criticisms of Ephraim, it was thought that the whole work was critical. Ephraim exercised an influence particularly on the early scholars of Provence and Catalonia, such as \*Abraham b. David of Posquières, \*Zerahiah ha-Levi, \*Jonathan ha-Kohen of Lunel, \*Isaac b. Abba Mari of Marseilles, and \*Naḥmanides. Much of his teachings are contained in their works, sometimes without attribution. In some cases his glosses in the margins were incorporated in error by copyists into the text of the *halakhot* itself. Solomon b. Parḥon was one of Ephraim's pupils.

**BIBLIOGRAPHY:** Benedikt, in: *KS*, 25 (1948/49), 164–9, 229–30; 26 (1949/50), 216, 322–38; 31 (1955/56), 264; Ta-Shema, *ibid.*, 42 (1966/67), 507–8.

[Binyamin Zeev Benedikt]

**EPHRAIM SOLOMON BEN AARON OF LUNTSHITS** (*Leczyca*; 1550–1619), rabbi and renowned preacher. He was known as "Ephraim of Luntshits," the popular pronunciation of *Leczyca* among Polish Jews. The name "Solomon" was added some time after 1601. In his youth Ephraim was sent to study in the yeshivah of Solomon \*Luria. At an early age he had already gained a reputation as a preacher, in which capacity he traveled to Lublin, Lemberg, Jaroslaw, and other towns. It is not known whether he ever held a regular com-

munal post before he became head of a yeshivah in Lemberg when he was already past fifty. In 1604, he arrived in Prague where he served as president of the rabbinical court and head of the yeshivah, but he relinquished his rabbinical post in the last year of his life. As a preacher he was distinguished for his lucid and fascinating sermons. He addressed the heads of the \*Council of Four Lands when they met in Lublin and was apparently on friendly terms with the leaders of that council on whose recommendation he was appointed *rosh yeshivah* in Lemberg. Ephraim's sermons shed much light on the religious and communal life of the Polish-Jewish community of his time. He railed against the wealthy members of the congregation whose passion for money and luxury caused them to withhold assistance from their needy brethren and he criticized their pretensions to spiritual and religious status on the basis of their commercial success. He said that wealth corrupts and destroys the character of men when they do not appreciate its purpose. At the same time, he complained about the poor who wished to enjoy the charity of the rich without making any effort to provide for their needs. In addition, he attacked certain casuistic methods of talmudic study (*pilpul*) which often neglected the truth, and the desire for personal aggrandizement among communal leaders.

Ephraim's sermons were collected and published in various books: *Ir Gibborim* (Basle, 1580); *Olelot Efrayim* (Lublin, 1590); *Orah le-Ḥayyim* (*ibid.*, 1595); *Keli Yakar* (*ibid.*, 1602), commentary on the Pentateuch in homiletic style that was subsequently included in various editions of the rabbinical Bible (*Mikra'ot Gedolot*); *Siftey Da'at* (Prague, 1610); *Ammudei Shesh* (*ibid.*, 1617); *Petiḥot u-She'arim* (Zolkiew, 1799). He also compiled a book of sermons entitled *Rivevot Efrayim*, which is occasionally mentioned in his other works. He composed three *seliḥot* in connection with the invasion of Prague in 1611 by the army of the bishop of Passau.

[Abraham David]

**EPHRATH** (Heb. אֶפְרַת), an additional name for \*Bethlehem of Judah: “Ephrath – the same is Bethlehem” (Gen. 35:19; 48:7; LXX, Josh. 15:59b; cf. Micah 5:1). In the genealogical tables in the Bible, which provide information on the distribution of the clans and the places occupied by them, Ephrath appears as the wife of Caleb and the mother of “Hur the first-born of Ephrath, the father of Bethlehem” (1 Chron. 2:19, 50; 4:4). The various biblical references apparently indicate that in addition to the Calebite clans, originating from the south, the Ephrathites, who possibly were of a different origin, also penetrated into the Bethlehem district, and their influence there was so great that the chief city of the district was named for them.

Jesse, David's father, was called “Ephrathite” (1 Sam. 17:12) and so were Naomi's sons (Ruth 1:2).

[Moshe Kochavi]

**EPHRATI, DAVID TEVELE BEN ABRAHAM** (1849–1884), talmudic scholar. Born in Merits (near Vilna), he showed exceptional talent as a child and at the age of 14 had already written his *Dalot Zahav* on the Shulḥan Arukh *Orah Ḥayyim* and *Yoreh De'ah*. At 15, his articles and studies began to appear in the periodical *Ha-Levanon*, and he continued to write regularly. At the age of 22 he wrote a halakhic work, *Migdal David*. Ephrati was one of the most active leaders of the Hibbat Zion movement, and was on intimate terms with Elijah \*Guttmacher and Zevi Hirsch \*Kalischer. In 1873 he was sentenced to a year's imprisonment for his Zionist activities. He refused invitations to rabbinic posts and, from 1868 lived alternately in Mogilev and Gorodok, later moving to Vitebsk where he engaged in business. Toward the end of his life he moved to Berlin, where he became friendly with Azriel \*Hildesheimer. He died in Frankfurt on the Main. Ephrati was also the author of *Toledot Anshei Shem* (1875), biographical sketches of great Jewish scholars, with an appendix, *Divrei David*, consisting of homilies and novellae; this work is of considerable historical importance. Other works are *Yad David* (1880), *halakhah* and *aggadah*; *Matta Efrati* (1882), novellae and responsa; *Kohelet David ha-Efrati* (1884), a commentary on Ecclesiastes; *Sha'ar ha-Zekenim* (1884), a collection of manuscripts of early authorities with his own commentary, *Mevo Efrati*. Ephrati was also editor of a monthly periodical called *Ez Ḥayyim*. Many of his works have remained unpublished.

**BIBLIOGRAPHY:** *Ha-Asif*, 2 (1885), 754; *Ozar ha-Sifrut*, 1 (1887), 129–32 (2<sup>nd</sup> pagination), contains an autobiography.

[Itzhak Alfassi]

**EPHRON** (Heb. עֶפְרוֹן).

(1) Mountain on the northern boundary between Judah and Benjamin 8 mi. (13 km.) west of Jerusalem between Nephthoah (Liftā) and \*Balaah-Kiriath-Jearim (Tell Deir al-Azhar; Josh. 15:9). Ephron probably constituted the mountainous area extending from Har ha-Menuḥot to Qaryat al-<sup>5</sup>Inab.

(2) A town in Transjordan captured by \*Judah Maccabee during his retreat from Gilead in the direction of \*Beth-Shean (1 Macc. 5:46–52; II Macc. 12:27–29; Jos., Ant., 12:346). It appears in the account of the conquest of Ptolemaic Palestine by \*Antiochus III in 218 B.C.E. as Gephrous (Polybius, 5:70, 12). It is identified with al-Ṭayyiba, 7½ mi. (12 km.) north-east of Pella.

**BIBLIOGRAPHY:** Aharoni, Land, index; Avi-Yonah, 176; C. Steuernagel, *Der Adschlun* (1927), 447 f.; Abel, in: RB, 32 (1923), 520.

[Michael Avi-Yonah]

**EPHRON** (Heb. עֶפְרוֹן, עֶפְרוֹן), son of Zohar, from whom \*Abraham purchased the cave of \*Machpelah and the field east of Mamre (Gen. 23; 25:9; 49:29–30; 50:13). Abraham sought a

burial site for Sarah, but as he was a “resident alien,” he did not own land. He therefore sought to purchase the cave belonging to Ephron, who, after much bargaining, agreed to accept 400 shekels of silver. Ephron is described as a “Hittite,” though the form of his name and that of his father is West Semitic. While “Hittite” in the Bible may sometimes refer to Canaan’s pre-Israelite inhabitants (cf. Gen. 26:34 with Gen 27:46), and not to the Hittites of Anatolia in the second millennium B.C.E., the first millennium Arameo-Hittites were within the orbit of the biblical writers. Some scholars interpret the name Ephron as being related to *’ofer* (“gazelle”); S. Yeivin’s explanation that Ephron is not a personal name but an indication that the man was an *’Apiru* (see *\*Habiru*) of Hittite origin is ingenious but unlikely.

**BIBLIOGRAPHY:** S. Yeivin, in: *Beth Mikra*, 7 (1963), 44–45 and note 281; E.A. Speiser, *Genesis (The Anchor Bible, 1964)*, 172; N. Sarna, *Understanding Genesis* (1967), 168ff. **ADD. BIBLIOGRAPHY:** J. van Seters, in: *VT*, 22 (1972), 64–81; N. Sarna, *Genesis (JPS; 1989)*, 396.

**EPHRON, NORA** (1941– ), U.S. writer, film director. Ephron was born on Manhattan’s Upper West Side, but her family moved to Beverly Hills by the time she turned three. Her parents, screenwriting duo Phoebe and Henry Ephron, wrote such classics as *Carousel* (1956) and *There’s No Business Like Show Business* (1954). They based their script *Take Her, She’s Mine* on the letters their daughter wrote home while she was attending Wellesley College. In 1962, after finishing school, Ephron moved to New York City, launching a career in journalism. She worked for the *New York Post* and, later, for publications such as *Esquire*, the *New York Times Magazine*, and *New York Magazine*. Her work is collected in such books as *Wallflower at the Orgy* (1970), *Crazy Salad* (1975), and *Scribble, Scribble* (1978). After a brief marriage to writer Dan Greenburg, Ephron married Carl *\*Bernstein*, the journalist who, along with Bob Woodward, first brought the Watergate scandal to the country’s attention in the pages of the *Washington Post*. The marriage broke up while Ephron was pregnant with their second son, Max, and the breakup became the basis for her semiautobiographical novel, *Heartburn*. With two young children to support, Ephron turned to her family trade – screenwriting. Her scripts frequently focus on strong, independent women struggling to achieve their ambitions. Ephron wrote such films as *Silkwood* (1983), *When Harry Met Sally* (1989), and *Sleepless in Seattle* (1993). She made her directorial debut with the comedy *This is My Life* (1992), which she co-wrote with her sister Delia. She continued to write and direct movies, including the box office smash *You’ve Got Mail* (1998) and *Bewitched* (2005).

[Casey Schwartz (2<sup>nd</sup> ed.)]

**EPHROS, GERSHON** (1890–1978), *hazzan*. Born in Poland, he went to Palestine at 20, and studied under the musicologist A.Z. *\*Idelsohn*, for whom he also conducted a choir. Later he immigrated to the U.S. where he received appointments as *hazzan* and taught singing in schools. Ephros composed

liturgical music for soloists, choir, and organ, and arranged *Ḥasidic* dances and Israel songs. His main work is his *Cantorial Anthology* in five volumes (1929–57), a practical collection of older and recent works for all the synagogue services of the year, which also contains some of Ephros’ own compositions.

In 1976 the Gershon Ephros Cantorial Anthology Foundation was established for the purpose of continuing the publication of his Anthology, of which 6 volumes have now been published. In 1979 the American Society for Jewish Music published an index to them. Two records of his liturgical songs and songs for children have appeared.

[Akiva Zimmerman (2<sup>nd</sup> ed.)]

**EPHRUSSI, BORIS** (1901–1977), geneticist. Ephrussi was born in Moscow but moved to Paris after the 1917 Revolution, where he graduated in zoology (1922) and obtained his doctorate in experimental embryology (1932) from the University of Paris. A Rockefeller fellowship with George Beadle at California Institute of Technology (1934) determined Ephrussi’s career as a geneticist. The German occupation of France forced him into exile in the United States, where he worked mainly at Johns Hopkins University, Baltimore. He became professor of genetics at the Sorbonne, Paris (1945), and director of the newly established Laboratory of Physiological Genetics in Gif-sur-Yvette near Paris (1956). After a period of major organizational difficulties, he moved to the U.S. as professor at Western Reserve University, Cleveland (1962), until he returned to direct the same institute near Paris, now renamed the Center of Molecular Genetics, until 1972. Before 1945 Ephrussi was one of the few internationally recognized French geneticists in France and he largely directed the reorganization of the field after World War II. His collaboration with Beadle helped establish the concept that genes control cellular events. Subsequently he pursued the then highly contentious concept that cytoplasmic factors influenced by external factors are genetically transmitted independently of conventional genes. The experimental validity of his work was subsequently vindicated by the discovery of mitochondrial DNA. His many honors included election to the French Academy of Sciences (1978).

[Michael Denman (2<sup>nd</sup> ed.)]

**°EPICTETUS** (c. 100 C.E.), Greek Stoic philosopher, who made several noncommittal observations on the Jews. Epictetus wrote no books; the sole source of his teachings is the *Discourses* of Arrian. Here (1:11, 12–13) it is related that Epictetus indicated the differences between the dietary concepts of the Jews, Syrians, Egyptians, and Romans, noting their incompatibility; and later (1:22, 4) he is reported as classifying these four peoples as in agreement on the substance of the principle of sanctification, though differing on details, such as the eating of pork. A third passage (2:9, 19–22) shows that Epictetus knew of the importance of ritual immersion for proselytism. The Galileans mentioned by him (4:7, 6)

cannot be identified with the Zealots; here, the more usual explanation – that Epictetus was referring to Christians – is preferable.

**BIBLIOGRAPHY:** Reinach, *Textes*, 154–5.

[Menahem Stern]

**EPICUREANISM**, a philosophy of adjustment to the social changes after \*Alexander the Great (336–323), founded by Epicurus, 342/1–270 B.C.E., “the most revered and the most reviled of all founders of thought in the Greco-Roman world” (De Witt). Recent scholarship sees in it a “bridge” to certain rabbinic and Christian moods. Epicurus taught freedom from fear and desire through knowledge as the natural and pleasurable life. He endorsed religious observance but denied earthly involvement of the perfect gods and with it providence, presage, punishment, and penitential prayer. The transformation of Epicureanism into a competitive sect celebrating Epicurus as “savior” increased the already existing opposition to it. Rhetorical literature falsely accused Epicurus of materialistic hedonism. Complaints of Epicurean dogmatism, “beguiling speech” (Col. 2:4), and compelling argumentation (of Avot 2:14 “...[know] what to answer the Epicurean”) are frequently heard. Rabbinic condemnation reflects knowledge of Greco-Roman rhetoric, experiences with individuals and centers (Gadara, Gaza, Caesarea), and, possibly, the favoritism shown to Epicureanism by \*Antiochus Epiphanes and \*Hadrian. “Epicurean” became thus a byword for “deviance” – ranging from disrespect to atheism – in Philo, Josephus, and rabbinism alike (see \**Apikoros*). An early unexpanded version of the “four who entered ‘Paradise’” (Ḥag. 14b) may once have signified Epicurus’ school (“the garden”), since it fits Akiva’s past, Ben Azzai’s celibacy and many Epicurean sayings, Elisha b. Avuyah’s heterodoxy, and Ben Zoma’s gnosticism (Epicureanism and Gnosticism were equated also by the Church Fathers). Akiva’s “mystical” admonition (Ḥag. 14b) could easily have been a parody on the “apocalyptic”-enthusiastic style of the Epicureans (parallel parody H. Usener, *Epicurea*, fragm. 364; Gen. R. 1:5; Theodor-Albeck, p. 2 mentions “nothing from nothing”; Mid. Ps. to 1:22 the “automatic” universe; cf. Jos., Ant., 10:280).

Agreements, however, both in content and literary form, between rabbinism and Epicureanism are striking: study for its own sake (Vatican fragment 45 and Avot 6:1); removal of doubt (*Life* 121b, *Doctr.* 22 and Avot 1:16); mortality and urgency (Vat. fr. 10 and Avot 2:15); acquisition of a companion (*To Menoecus*, end, and Avot 1:6); diet of bread and water (Bailey, fr. 37 and Avot 6:4); satisfaction with one’s lot (Bailey, fr. 69–70 and Avot 4:1); and avoidance of public office (Bailey, fr. 85–87; Vat. fr. 58; *Doctr.* 7 and Avot 1:10–11; 2:3; etc.). Epicurus anticipated Judaism’s denial of astral divinity and rule. With the general rise of the lower classes he accorded human dignity even to the prostitute, an evaluation continued in the Midrash (Sif. Num. 78; Gen. R. 85:8) and the Gospels (Matt. 1:3; 5, etc.). In Hellenism and Christianity, too, denunciation of Epicurus together with partial adoption of his ethics is fre-

quent. The centrality of the sage in post-Socratic ethics and rhetoric facilitated such developments.

Altmann (ed.), *Biblical and Other Studies* (1963), 123–41; *Reallexikon fuer Antike und Christentum*, 5 (1962), 681–819, s.v. *Epikur* (contains bibliography).

[Henry Albert Fischel]

**EPIRUS**, province in N.W. Greece. Epirus was an independent despotate between c. 1214 and 1340. Under the first and strongest of its despots, Theodore Ducas Angelus, the Jews (see \*Durazzo, \*Arta, \*Ioannina) were subjected to a persecution in which Jewish property was confiscated and Judaism probably prohibited. This was subsequently extended to Salonika, captured by Theodore in 1224, and continued even after Salonika was retaken from Epirus in 1246. With the strengthening of the empire under \*Michael VIII Palaeologus, parts of Epirus reverted to the empire and the persecutions came to an end. His son Andronicus II Palaeologus placed the Jews of Ioannina (Janina), the most important of the Epirote communities, under his direct protection and angered the Church by favoring the Jews.

[Andrew Sharf]

**EPISCOPUS JUDAEORUM** (Lat. “bishop of the Jews”), title given by the Christian authorities in the Middle Ages to the head of the Jewish community or its rabbi. The significance of the title, which is much disputed, is sometimes clarified when Hebrew and Latin forms are found side by side. In Germany the title is mentioned in the privilege granted to the Jews of Worms in 1090, addressed to Salman the “Jews’ bishop,” a distinguished scholar. The “bishop” of the Jews in Worms, later called the *hegmon parnas*, was the permanent chairman of the community board; the last man to hold the title, Michael Gernstein, died in 1792. In Cologne the first “bishop” of the Jews is mentioned from 1135 to 1159. His successors were in office for long terms, although elections were held annually; some of them were rabbis. In Silesia, the “Jews’ bishop” held the offices of rabbi, ritual slaughterer, cantor, and religious teacher in 1315. Found in England in the 12<sup>th</sup> century, the term (*Eveske* in Anglo-French) was sometimes equivalent to the Hebrew *kohen*. It is therefore impossible to maintain that in England it denoted an official rabbinical position.

[Isaac Levitats]

**EPITAPHS.** Commemorative inscriptions marking the place of burial were known at the time of the First Temple following the custom of the other Oriental nations, in particular the Phoenicians. The most elaborate as yet discovered is a rock-carved inscription over a burial cave in the Kidron Valley outside Jerusalem apparently referred to explicitly in Isaiah 22:15–16, indicating the grave of the royal steward Shebna: “This is (the sepulcher of) ... yahu who is over the House. There is no silver and no gold here but (his bones) and the bones of his slave-wife with him. Cursed be the man who will open this.” In the Second Temple period, there grew up the practice of burial in sarcophagi or secondary burial in \*ossuaries: these generally bore at the most the names of the persons whose bones had been brought together in them. On the other hand, more elaborate inscriptions were placed over some burial places, such as the tomb of the priestly family of Benei \*Hezir in the Kidron Valley. From the period of Roman-Byzantine domination, after the fall of Jerusalem in 70 C.E., many epitaphs are preserved, brought together by J.B. Frey in the second volume of his *Corpus Inscriptionum Judaicarum*, the largest number being from the \*catacombs of \*Bet She’arim in Galilee. Normally these bear only the name of the deceased, whether in Hebrew or in Greek: in two cases the epitaph is a lengthy poem in Greek verses.

To the same period belong the very large number of epitaphs found in the Roman catacombs, collected with others from Europe in Frey’s first volume. Of these, the great majority (approximately 75 percent) are in Greek: most of the remaining 25 percent are in Latin. Only a small minority include any Hebrew, and these, mainly stereotyped phrases (“Peace” or “Peace upon his resting place”). On the other hand, a very large number are distinguished by Jewish symbols such as the seven-branched candelabrum, or *menorah*. The Roman epitaphs are on the whole brief, giving little more detail than the name of the deceased, sometimes with the addition of the communal position he held (e.g., *grammateus*, “secretary”; *archon*, “warden”); one of them includes a poem in Latin hexameters. Contemporary with and similar to the Roman Jewish catacombs are some of \*Venosa in south Italy. Here, however, there was a tendency for the epitaphs to be longer, more elaborate and more descriptive, as in the case of that of a girl of 14 who, it is related, in a remarkable inscription in curious Late Latin, was the only child of her distinguished parents, was conveyed to her grave amid universal lamentation, and was commemorated by two rabbis and two messengers from the Holy Land (Frey, no. 611).

From Venosa and the neighboring region of south Italy a series of \*tombstones also have been preserved which demonstrate how, from about the year 800, Hebrew displaced Latin and Greek in funerary epitaphs. These are now relatively long, mention Jewish schools and “scholars of the academy” (e.g., Nathan b. Ephraim of Venosa, who died in 846), and in one case incorporate poetical passages from a funerary prayer. In other lands of Europe (Greece, Gaul, Spain, Pannonia) epitaphs of the late classical period in Latin and Greek are simi-

larly preserved: the Mérida (Spain) inscription is trilingual, in Greek, Latin, and Hebrew.

In due course, however, as knowledge of Hebrew spread and Latin came to be considered the language of the Church, the use of Hebrew became universal. From the 11<sup>th</sup> century, tombstones with epitaphs in Hebrew are preserved in Spain, France, Germany, and elsewhere. These are generally at the beginning very brief, containing little more than the name of the deceased. Later they tend to become more elaborate. The Spanish epitaphs of the 13<sup>th</sup>–14<sup>th</sup> century (collected by F. Cantera), written sometimes on all sides of raised horizontal tombstones, are veritable literary documents. The French medieval inscriptions are collected by M. Schwab. Similar collections for some other countries remain a desideratum. In Italy, from the 16<sup>th</sup> century, it became usual to incorporate in the epitaph a short poem in a stereotyped lilting meter: a very large number of those composed by R. Leone \*Modena of Venice have been published by A. Berliner and R. Pacifici. Less literary, but historically of great importance, are the funerary inscriptions from such places as Prague (published by S. Hock), Frankfurt on the Main (published by M. Horovitz), Salonika (published by I.S. Emmanuel). No epitaphs are preserved from the Papal States in Italy or France (Avignon, Carpentras) during the age of the ghetto, when commemorative inscriptions over the dead were sternly forbidden.

In the 17<sup>th</sup> century, the communities established in Western Europe by the ex-Marranos reintroduced the use of vernacular on tombstones, as instanced in the epitaphs from Amsterdam (published by D. Henriques de Castro), Hamburg (collected by M. Gruenwald), Curaçao (published by I.S. Emmanuel), Barbados (published by E.M. Shilstone), Jamaica (included by J.A.P.M. Andrade in his *A record of the Jews in Jamaica*, 1941), New York (published by David de Sola Pool), London, Venice, Leghorn, Bordeaux, Bayonne, etc. Many of the Spanish epitaphs end with the valedictory abbreviation “SBAGDG” (*Sua bendita alma goze de gloria*, “May his blessed soul enjoy glory”), or something similar. Sometimes these inscriptions are bilingual (Spanish/Portuguese, and Hebrew). English (though not Dutch, German, etc., elsewhere) began to appear already in the 17<sup>th</sup> century: in 1684 the epitaph of the English court jeweler, Isaac Alvarez Nunes, in London, incorporates an English poem in Alexandrine couplets. The cemeteries of the Ashkenazi communities on the other hand did not as yet admit the vernacular. The inscriptions were here now longer and more elaborate, sometimes incorporating crude verses giving the name of the deceased in acrostic form. The inscription in the case of a man was generally headed פה נקבר פ” (here lies), for a woman, פ”ט, פה טמונה (here is interred). At the close, the abbreviation תנצב”ה for תנצב”ה (May his soul be bound up in the bond of eternal life”; cf. 1 Sam. 25:29) was usual. This has remained the case down to the present time, and in recent times is sometimes the only Hebrew element that remains.

In the course of the 19<sup>th</sup> century in most of the countries of the Western world the vernacular began to encroach more

and more in epitaphs. At the beginning the secular name of the deceased alone figured together with the Hebrew; later a fairly lengthy vernacular (e.g., English) inscription paralleled and repeated the details of the Hebrew: in due course often the Hebrew name alone figured, or sometimes not even this. In some cemeteries (e.g., in England) the use of some Hebrew has been made obligatory; in others, belonging to strongly Orthodox groups, no English whatsoever is allowed. In Israel, the tendency is now for simple epitaphs in which Hebrew alone figures.

[Cecil Roth]

**EPPENSTEIN, SIMON** (1864–1920), German rabbi and scholar. Eppenstein was born in Krotoszyn, Poland, and served as rabbi at Briesen (West Prussia) 1889–1911, and thereafter was lecturer in Jewish history and Bible exegesis at the Berlin Rabbinical Seminary. As an early supporter of religious Zionism (Mizrachi), he conducted some of his lectures at the Seminary in Hebrew.

Eppenstein's main fields of study were the geonic period, on which he wrote *Beitraege zur Geschichte und Literatur im geonaeischen Zeitalter* (1913), and medieval Bible exegesis, such as publishing \*Astruc's *Midrash ha-Torah* (1899), Joseph \*Kara's commentaries on the Bible, as well as \*Saadiah Gaon's introduction to his commentary on the Psalms (publ. in *Festschrift A. Harkavy*). He also made Hebrew translations of Joseph b. Judah ibn \*Akkin's *Marpeh Nefashot* (in *Festschrift N. Sokolow*) and \*Abraham b. Moses b. Maimon's *Kifayat al-'Abidin* (in *Festschrift J. Lewy*). Eppenstein also wrote a biography of Maimonides (for W. \*Bacher's work on him), as well as one on his son Abraham (in *Jahres-Bericht des Rabbiner-Seminars zu Berlin fuer 1912/13*). He also edited and annotated the fourth edition of the fifth volume of \*Graetz's *Geschichte der Juden* (1909) and the *Festschrift D. Hoffmann* (1914).

[Akiva Posner]

**EPPLER, SANDOR** (1890–1942), Hungarian communal worker. Eppler, the son of an Orthodox rabbi, was born in Budapest and despite his association with the Neolog move-

ment maintained an Orthodox way of life. After completing his studies in a business academy, he entered the service of the Neolog community of Budapest and as a result of his outstanding organizational and administrative ability became its general secretary.

His abilities, however, found full scope following the anti-Jewish discrimination in Hungary, which began in 1938, and the consequent impoverishment of the Jews of the country. He undertook negotiations with the government and participated, initially as an observer, at the Evian Conference in 1938. He established contact with the Jewish welfare organizations of France and England, and in 1939 proceeded for that purpose – with Samuel Stern, chairman of the National Council of Hungarian Communities (Neolog) – to Paris and London, where he pleaded unsuccessfully with Lord Winterton, the chairman of the Inter-Government Commission for Refugees in London, to include Hungarian Jewry in Germany and Austria among those granted priority in emigration.

As a result Eppler devoted himself energetically to the problem of the rehabilitation of the Jews of Hungary, especially after the annexation to Hungary in 1939–40 of territory which had belonged to it before World War I and contained the largest Jewish population, and the arrival of Jewish refugees from Germany, Slovakia, and Poland. He established welfare organizations, educational and trade institutions, reopening schools which had been closed.

His greatest achievement was the Jewish Hospital which gave employment to Jewish doctors whose qualifications, received outside Hungary, were not recognized. In opposition to the leadership of the community he assisted in the *hakhsharah* of *halutzim* who intended on immigrating to Erez Israel.

Eppler published a number of works on social service: *A budapesti zsidóság szociális munkája* ("Social Work of the Jews of Budapest," 1937); *A zsidóság helyzete, kulturális és szociális munkája Europa tizenkét államában* ("The Position of the Jews, Their Cultural and Social Activities in Twelve European Countries," 1938); *A rabbik szerepe a hitközségi ügyintézésben* ("The Function of Rabbis in Communal Activities," 1940); *Zsidó segítőszervezetek* ("Jewish Welfare Organizations," 1942).

Eppler died a natural death in 1942.

**BIBLIOGRAPHY:** P. Ujvari (ed.), *Magyar Zsidó Lexikon* (1929); B. Vihar (ed.), *Sárga könyv* (1946); F. Karsai, in: *Evkönyv* (1971/72), 162–180.

[Baruch Yaron]

**EPPSTEIN, PAUL** (1901–1944), sociologist and German-Jewish community leader, "elder" of \*Theresienstadt. Eppenstein, born in Mannheim, was lecturer in sociology at the university there from 1926 until 1933. After the *Kristallnacht* pogrom of November 1938, he was invited to England as a sociology lecturer but refused to go. As a prominent Jewish youth leader, organizer, and speaker he was one of the founders of the Reichsausschus der juedischen Jugend-Verbaende (National Board of Jewish Youth Organizations) and of the

Reichsvertretung der deutschen Juden; he was the head of its welfare department, retaining the position when it became the Nazi-imposed \*Reichsvereinigung, until his deportation to Theresienstadt in January 1943. Upon his arrival he was, on \*Eichmann's orders, nominated "Judenaeltester" ("Jewish Elder") in place of Jacob \*Edelstein. On September 27, 1944, he was arrested by the \*Gestapo, apparently for having helped to organize clandestinely self-defense among the inmates, and immediately shot.

[Yehuda Reshef / Bjoern Siegel (2<sup>nd</sup> ed.)]

**EPSTEIN, ABRAHAM** (1841–1918), rabbinic scholar and historian. Epstein was born in Staro-Konstantinov, Russia, to a wealthy family. Epstein leased some land near Kozmin in 1865 and worked it himself for many years, trying to persuade some of the local Jewish poor to do the same. During that period he developed an interest in natural sciences and built a laboratory, where he carried out various experiments. After his father's death Epstein left his farm and took over the family business. In 1861 he traveled to Western Europe, where he met some of the leading figures in Jewish scholarship (S.J.L. \*Rapoport, Z. \*Frankel, and M. \*Sachs) who greatly stimulated his interest in Jewish studies. Gradually, he liquidated his shares in the family business and devoted himself to research. In 1876 he settled in Vienna, where he pursued his studies and contributed articles to learned Hebrew periodicals. Among Epstein's Midrash and Targum studies are *Kadmut ha-Tanḥuma* (1886), on the antiquity and origin of *Midrash Tanḥuma*; and a critical edition of *Eldad ha-Dani* (1891) with a comprehensive introduction, notes, and appendices, including a note on \*Beta Israel and their customs. On the Franco-German school he wrote "Der Gerschom Meor-ha-Golah zugeschriebene Talmud-Kommentar" (in *Festschrift ... Steinschneider* (1896), 115–43), an article which aroused much interest and revolutionized the study of pre-Rashi Talmud commentaries; *Schemaja, der Schueler und Sekretaer Raschis* (1897); a critical edition of *Ma'asei ha-Ge'onim* (1901), a collection of responsa of the Franco-German school; and *Das talmudische Lexikon Jechuse Tannaim we-Amoraim und Jehuda b. Kalonimos aus Speier* (1895). Epstein's historical studies on the same period include *Juedische Altertuemer in Worms und Speyer* (1896) and *Mishpahat Lurie* (1901). In the controversy between Rapoport and I. \*Weiss, Epstein defended the former in *Divrei Bikkoret* (1896). Epstein's works manifest his vast knowledge and painstaking research: he combined the best of Eastern scholarship with Western method and is recognized as an outstanding scholar in his fields. A collection of

some of his writings appeared under the title *Mi-Kadmoniyot ha-Yehudim* (1887), of which the second volume of *Kitvei R. Avraham Epstein* (1950–57), edited by A.M. Habermann, is an enlarged version. An autobiographical sketch was published in N. Sokolow, *Sefer Zikkaron le-Sifrei Yisrael* (1889, 162–6), and is reproduced in *Kitvei R. Avraham Epstein* (1, 1950, 14–19). Epstein willed his large and valuable library to the Vienna Jewish Theological Seminary.

[Zvi Avneri]

**EPSTEIN, ABRAHAM** (1880–1952), Hebrew literary critic. Born in Slutsk, Russia, he started his teaching profession on the faculty of the Hebrew Teachers' Seminary in Odessa and taught later at the Herzliah Hebrew Teachers' Institute in New York City, where he settled in 1925.

Epstein's first creative works were published in *Ha-Zofeh*, but he began his career as a literary critic with an essay in *Erez* (1918). Although he was impressionistic rather than analytical in his approach, Epstein was a sensitive and earnest critic. *Soferim* ("Writers," 1934), his first volume of criticism, deals mainly with non-American Hebrew authors but it also discusses four Hebrew writers in America: Yitzhak Dov \*Berkowitz, Benjamin \*Silkner, Shalom Dov Ber \*Maximon, and Israel Zev Frishberg. *Mi-Karov u-me-Rahok* ("From Near and Far," 1943) is devoted mostly to Hebrew literature in America, but included are also critical essays on other leading Hebrew writers. Some of the essays in the book are devoted to Yiddish literature in America and to the biblical books Song of Songs and Ruth. *Soferim Ivrim ba-Amerikah* (2 vols., 1952) is a critical work on the major Hebrew poets and novelists in the United States.

**BIBLIOGRAPHY:** *Hadoar*, 32 (1952), 128; Waxman, *Literature* 4 (1960<sup>2</sup>), 1076.

[Eisig Silberschlag]

**EPSTEIN, ABRAHAM** (1892–1942), U.S. economist and sociologist. Born in Russia, Epstein immigrated to the United States in 1910. He specialized in the problems of the aged and their economic maintenance, and became a leading advocate of publicly financed old age pensions. Through publications, research, legislative drafting, and political activity, Epstein was instrumental in preparing the ground for the 1935 Social Security Act, but remained critical of the principles adopted by the federal legislation and their implementation. In 1939, the federal government incorporated many of Epstein's recommendations through major amendments. In 1927 Epstein organized the American Association for Old Age Security which in 1933 became the American Association for Social Security. From 1934 to 1937 Epstein served as United States representative on the social insurance committee of the League

of Nations' International Labor Office, and as a consultant for the Social Security Board. He also taught at Brooklyn College and New York University. Epstein's major publications include *The Negro Migrant in Pittsburgh* (1918), *The Problem of Old Age Pensions in Industry* (1926), *Facing Old Age* (1922), *The Challenge of the Aged* (1928), and *Insecurity, a Challenge to America* (1938).

[Roy Lubove]

**EPSTEIN, ABRAHAM MEIR BEN ARYEH LEIB**, also called **Meir Harif** ("sharpwitted"; 1726–1772), talmudist. Epstein was born in Grodno. He studied under his father, the kabbalist Aryeh Leib \*Epstein, with whom he later also pursued halakhic studies. The results of their joint work appear in the talmudic glosses *Divrei Hiddud*. In 1750 he was appointed rabbi of Lyskovo, and in 1752 of Nowy-Mysz. In the dispute between \*Eybeschuetz and \*Emden on the use of amulets, Epstein, like his father, supported the former. He leaned toward \*Hasidism and received Israel of Plotsk, a pupil of \*Dov Baer of Mezhibezh, with great respect. The added name Abraham was given to him during a serious illness in 1756. He was held in great esteem by his contemporaries and was frequently consulted on halakhic problems. He was the author of novellae to the Talmud and to Maimonides' *Mishneh Torah* (*Shevil Nahar*, *Divrei Yedidim*, *Mahadura Batra*); a collection of sermons, *Vikku'ah Ger ve-Toshav*; an ethical treatise in the form of a dialogue; responsa; glosses and novellae to the Shulḥan Arukh, *Yoreh De'ah*, together with contributions by his father. Some of his novellae are contained in the works of his contemporaries. His ethical will was published as an appendix to the *Gevurot ha-Ari* of Ephraim Mordecai Epstein (1888<sup>2</sup>).

**BIBLIOGRAPHY:** Ephraim Mordecai Epstein, *Gevurot ha-Ari* (1888<sup>2</sup>), 27–29; *Yahadut Lita*, 3 (1967), 30.

[Samuel Abba Horodezky]

**EPSTEIN, ALVIN** (1925– ), U.S. actor. Born in the Bronx, New York, Epstein acted with a U.S. Army company in Europe after World War II, then joined the French Mime Theater and toured Europe. He joined the Habimah Theater, Israel, in 1953. He spent three years in Israel – the first one devoted to learning Hebrew. During the following two years he played 11 roles, gaining invaluable experience working with many well-trained actors who had come from the Moscow Art Theater School. He subsequently played in New York and on tour, his roles including Lucky in *Waiting for Godot*, Feste in *Twelfth Night*, the title role in Pirandello's *Henry IV*, Shabelsky in *Ivanov*, and Lee Strasberg in *Nobody Dies on Friday*.

Epstein served as artistic director of the Guthrie Theater and, for almost 25 years, he was the associate director of the Yale Repertory Theater. He also taught acting at the ART/MXAT Institute (Institute for Advanced Theater Training).

Epstein performed throughout the United States, staging over 20 productions and performing in over 100. His Broadway and off-Broadway credits include his debut with former fellow student Marcel \*Marceau, as well as roles in Orson Welles' *King*

*Lear*, *The Threepenny Opera* (co-starring with rock star Sting), the world premiere of *When the World Was Green* (*A Chef's Fable*), and *Tuesdays with Morrie*. For 20 years Epstein and Martha Schlamme performed *A Kurt Weill Cabaret* on tour in the U.S. and South America, with a year's run on Broadway.

Epstein reprised the role of Lucky in the 1961 TV movie version of *Waiting for Godot*. He also played in the TV series *The Doctors* (1981) and appeared in the TV movie *Doing Life* (1986). On the big screen, he had a role in *Never Met Picasso* (1996) and *Alma Mater* (2002). Epstein also lent his voice to the films *Everybody Rides the Carousel* (1975) and *Beauty and the Beast* (1991).

In 2004 he became involved with the Colleagues Theater Company in New York. Founded in 1996 by Catherine Wolf, its aim is to "identify and develop performance opportunities for the mature and seasoned actor and to provide training opportunities in theatrical craftsmanship for gifted high school graduates from underserved communities." Epstein appeared in the CTC's productions of *The Mad Woman of Chaillot*; *24 Evenings of Wit and Wisdom*; and *Tasting Memories*.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**EPSTEIN, ARYEH LEIB BEN MORDECAI** (1705–1775), rabbi and kabbalist. Epstein was born in Grodno and was a pupil of Isaac of Grodno, Poland, and Aryeh Leib b. Nathan of Slutsk. After a brief period as a merchant he took up the position of preacher in Grodno and in 1741 became rabbi in Berestovitsa and Golyinka. In 1745 he went to Königsberg, where he developed an extensive educational system. He sided with Jonathan \*Eybeschuetz in the latter's dispute with Jacob \*Emden, sharply criticizing the bickering in rabbinical circles. Two inquiries which he sent to Eybeschuetz in 1758 are extant, the one dealing with a halakhic matter, the other with the liturgy. Epstein was responsible for the introduction of a number of important *takkanot* in the Königsberg community and also for the establishment of the Great Synagogue there.

His works include *Or ha-Shanim*, on the 613 commandments (Frankfurt on the Oder, 1754); *Sefer ha-Pardes*, consisting of novellae to tractate *Shabbat*; sermons; funeral orations; a treatise on positive and negative commandments called *Yalkut Sakhar va-Onesh*, with an appendix entitled *Kunteres ha-Re'ayot* on Shulḥan Arukh, *Orah Hayyim* (Königsberg, 1764); and *Mishnat Gur-Aryeh*, a commentary on Isaac \*Luria's prayer book (published in part only, Königsberg, 1765). He also published his responsa under the title *Teshuvot Maharal* (Morenu ha-Rav R. Aryeh Leib; *ibid.*, 1769); wrote glosses to the Talmud (together with his son Abraham Meir); glosses and novellae to Shulḥan Arukh, *Yoreh De'ah*, to which his son also contributed (Vilna, 1883); and several other works.

**BIBLIOGRAPHY:** J. Emden, *Mitpahat Sefarim* (Lemberg, 1870), 119; D. Kahana, *Toledot ha-Shabbeta'im ve-ha-Hasidim*, 2 (1914), 57; S.A. Friedenstein, *Ir Gibborim* (1880), 41, 44 ff., 47–50; E.M. Epstein, *Gevurot ha-Ari* (1888<sup>2</sup>); H.N. Maggid (Steinschneider), *Ir Vilna* (1900), 44; *Sefer Yahadut Lita*, 3 (1967), 30.

[Samuel Abba Horodezky]

**EPSTEIN, BARUCH HA-LEVI** (1860–1942), Russian talmudic scholar. Born in Bobruisk, Epstein received his early education from his father, R. Jehiel Michal \*Epstein, author of *Arukh ha-Shulhan*. In his youth he distinguished himself by his unusual diligence and his phenomenal memory. He continued his studies under his uncle, Naphtali Zevi Judah \*Berlin, who, recognizing his outstanding abilities, devoted special attention to him. Berlin later married Baruch's sister. Epstein declined offers to occupy rabbinical positions in such great communities as Pinsk, Moscow, and Petrograd, preferring to work in a bank and to devote all his spare time to his studies. His correspondence with many leading scholars brought him wide recognition. Epstein is best known for his *Torah Temimah*, a compilation of quotations from the oral law arranged according to the scriptural verses to which they refer and annotated by a brilliant commentary which attests to his vast and profound knowledge of Talmud.

**BIBLIOGRAPHY:** B. Epstein, *Mekor Barukh* (1928); H. Seidman, *Elleh Ezkerah*, 1 (1956), 142–9; *Sefer Yahadut Lita*, 1 (1959), 293, no. 5; 3 (1967), 31, under his father's name; A.Z. Tarshish, *R. Barukh ha-Levi Epstein* (1967).

[Mordechai Hacohen]

**EPSTEIN, BRIAN SAMUEL (Shmuel; 1934–1967)**, British impresario, one of history's most successful show business entrepreneurs whose success in managing the Beatles changed the world of music. Epstein was born on Yom Kippur to Harry (Tzvi) and Malka ("Queenie") in Liverpool, where the family owned a furniture store and where Epstein became manager of the store's record department. When his father opened an NEMS music store on Whitechapel Street, Brian was put in charge, becoming fully engrossed in the world of music and writing a music column for *Mersey Beat* beginning August 3, 1961. The store was down the street and around the corner from a basement nightclub called The Cavern, and it was there on November 9, 1961, that Epstein first met and saw the Beatles perform. Three weeks later he approached John Lennon and offered to become the Beatles' manager. Paul McCartney's father – who had once bought a piano at the Epstein furniture store – immediately approved, telling Paul that Epstein would make a good manager. "He thought Jewish people were very good with money," McCartney said years later. "That was the common wisdom. He thought Brian would be very good for us... And he was right... If anyone was the fifth Beatle, it was Brian."

Epstein immediately changed the Beatles' appearance from their unpolished, jeans and leather-jacket greaser look to one of neatly tailored matching suits; and he ordered them not to eat, smoke, or swear on stage and to bow to the audience after each number. After getting rejected by all the major British record companies, Epstein landed the Beatles a recording contract in June 1962 with EMI's smallest labels, Parlophone, headed by Sir George Martin. Drummer Pete Best was fired and replaced by Ringo Starr, and the elements for success were now in place. Indeed, in little more than a year under Epstein's

direction, the Beatles began enjoying the greatest success that any popular artists had ever achieved.

Epstein's homosexuality, and his alleged infatuation with Lennon, were the subject of many articles and books. It was extensively rumored that in the Beatles' song "Baby You're A Rich Man," Lennon sang "Baby you're a rich fag Jew" as a slur against Epstein. The audible ambiguity of the recording fueled the rumor into a worldwide urban legend, though it was never authoritatively confirmed.

Epstein died of a drug overdose, likely from some sort of sleeping pills, at age 32. Once he died the Beatles became embroiled in a tangle of conflicts, money squabbles, and personal jealousies, and their business affairs began to unravel. Within three more years the group disbanded.

In addition to managing the Beatles, Epstein also managed Gerry & the Pacemakers, Billy J. Kramer & The Dakotas, The Fourmost, and Cilla Black. He wrote an autobiography, *A Cellarful of Noise* (1964).

[Elli Wohlgelernter (2<sup>nd</sup> ed.)]

**EPSTEIN, CHAIM FISCHEL** (1874–1942), Orthodox rabbi. Born in Taurogen, Lithuania, Epstein was recognized for his brilliance at an early age. After studying Talmud at the famed Telshe Yeshiva, Epstein wrote his first book, *Hinukh le-Na'ar* (a commentary on Aaron Ha-Levi's *Sefer ha-Hinukh*), at age 16. That same year, he entered the Volozhin yeshivah, studying under its famed leaders, Rabbi Naphtali Zevi Judah \*Berlin and Rabbi Hayyim \*Soloveitchik. At only 18 years of age, Epstein was ordained as a rabbi by Rabbi Soloveitchik and Rabbi Shelomo Cohen of Vilna.

Notably, Epstein also studied secular subjects, which many other Orthodox rabbis of his time did not, earning the equivalent of a high school diploma at a gymnasium in Shedlitz. Epstein also displayed an energetic interest in the fledgling Zionist movement. He wrote poetry about the Land of Israel, was affiliated with the \*Hibbat Zion movement, and attended a Zionist conference in Minsk in 1902. Eventually, he became a founder of the Mizrahi movement of religious Zionists, and continued to endorse Zionism after immigrating to the U.S.

At age 24 Epstein began a series of rabbinical positions, including Grosowa (near Minsk) and Sainee, where he remained until the outbreak of World War I. Toward the end of the war, Epstein was named chief rabbi of an Estonian Jewish region. During this time, Epstein completed a Ph.D. degree and taught Jewish philosophy at the local university.

Epstein declined invitations to serve congregations in London and Liverpool, instead immigrating to the U.S. in 1923. He served many communities, including in Bayonne, New Jersey; Cleveland; Cincinnati; and Brooklyn. Like many of his colleagues from Eastern Europe, he faced resistance from more liberal lay leaders and congregants regarding standards of Jewish practice, particularly *kashrut*. Yet Epstein's reputation as a scholar assured that many rabbinical colleagues and lay leaders came to him to adjudicate matters of Jewish law.

In 1923, he served as a rabbinical judge in a *kashrut* dispute between two prominent Canadian rabbis. Epstein wrote several volumes of highly regarded responsa, including *Teshuvah Sheleimah*. A second volume addressing matters of American concern was published in 1940 in the U.S.

Epstein lived his later years in St. Louis, serving as chief rabbi of the United Orthodox community and head of the city's newly established Va'ad ha-Ir. He remained the leading Orthodox rabbi in St. Louis until his death.

**BIBLIOGRAPHY:** M. Sherman, *Orthodox Judaism in America* (1996).

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**EPSTEIN, CHARLOTTE** (1884–1938), U.S. swimmer and champion of U.S. women's participation in the Olympic Games; known as the "Mother of Women's Swimming in America." The daughter of Moritz H. and Sara Epstein, Charlotte was born in New York City and educated at the Ethical Culture School. She became a court stenographer. Epstein, who enjoyed swimming competitively, joined the recently formed National Women's Life-Saving League in 1911; in 1913, she served as chair of the Athletic Branch of the National Women's Life-Saving League in which role she and colleagues campaigned to reform gender constraints in aquatic sports and to convince the Amateur Athletic Union (AAU) to allow women to compete in Olympic aquatic events.

In October 1917 Epstein founded the New York City Women's Swimming Association (WSA), a non-profit club, to advance the sport of women's swimming. "Eppie," as she was known, launched the swimming careers of many American and Olympic swimming champions when she became team manager of WSA, chairman of its Sports Committee and, in 1929, president. She successfully battled the U.S. Olympic Committee to enable American female swimmers and divers to compete in the 1920 Olympics in Antwerp, Belgium, the first time women participated in aquatic Olympic events. As U.S. Olympic Women's Swimming Team Manager in 1920, 1924, and 1932, Epstein's WSA members won Olympic championships and set numerous world records. Epstein served as chair of the national AAU women's swimming committee.

Eppie worked with Jewish organizations with suitable swimming pools. The WSA team of Olympians swam at the Young Women's Hebrew Association of New York for national championship meets in the 1920s. In 1935 Epstein served as chair of the Swimming Committee of the Second Maccabiah Games where WSA swimmer Janice Lifson triumphed. In 1936 Epstein refused to attend the Berlin Olympic Games and withdrew from the American Olympic Committee in protest at U.S. participation in the "Nazi Olympics." Epstein's major influence on swimming continued until her death. She was inducted into the International Swimming Hall of Fame and the International Jewish Sport Hall of Fame.

Women in Aquatic Sports," in: *The International Journal of the History of Sport*, 21 (March 2004), 197–235; idem, "Epstein, Charlotte," in: P.E. Hyman and D. Dash Moore, *Jewish Women in America: An Historical Encyclopedia*, vol. 1 (1997), 380–82.

[Linda J. Borish (2<sup>nd</sup> ed.)]

**EPSTEIN, CLAIRE** (1911–2000), Israeli archaeologist, expert on the Chalcolithic culture of the Golan Heights. Born in London, Epstein was the only daughter and oldest of three children of German immigrants, Olga and Mortimer Epstein. Educated at the University of London in English and Italian literature, Epstein became active in Zionist circles, studying Hebrew and helping to found the local branch of the Habonim youth movement. She also translated material from Hebrew for the Peel Commission. In 1937 Epstein immigrated to British Mandate Palestine, settling in Tel Aviv where she worked as liaison to the Mandate Government until 1942. Answering a call to help with the war effort, she joined the Women's Corps of the British army, serving four and a half years in Egypt. Shortly after returning to Tel Aviv, Epstein became a member of the newly established kibbutz En Gev on the s.e. shore of the Sea of Galilee. In 1955 Epstein joined kibbutz Ginosar and remained one of its members for the rest of her life. Epstein's first digging experience was as a field supervisor on the Tel Hazor under the direction of Yigael Yadin. It was only at the age of 50 that Epstein embarked on her formal studies at the Institute of Archaeology of University College, London, eventually earning her Ph.D. under Kathleen Kenyon in 1962 on the subject of "Palestinian Bichrome" pottery. As a full-time archaeologist, working for the Israel Department of Antiquities (later the Israel Antiquities Authority), Epstein conducted numerous surveys and excavations in Israel, notably the Golan emergency archaeological survey in 1967. Subsequently Epstein excavated numerous Chalcolithic sites on the Golan Heights, and the results of her work were eventually published in a monograph titled *The Chalcolithic Culture of the Golan* (1998). Epstein was the author of numerous articles on the late prehistory of Israel, including excavation reports, and research papers, one of which was on her interpretation of the stratigraphy of the sacred area at Megiddo. Epstein was the recipient of numerous prizes: the Percy Schimmel Award, the prestigious Israel Prize, and the Irene Levy-Sala Award.

**BIBLIOGRAPHY:** "Obituaries: Claire Epstein (1911–2000)," in: *Bulletin of the Anglo-Israel Archaeological Society*, 18 (2000), 111–14.

[Eliot Braun (2<sup>nd</sup> ed.)]

**EPSTEIN, GILBERT** (1927– ), U.S. Conservative rabbi. Epstein was born in New York City, educated at Yeshiva University (1948), and then moved to the Jewish Theological Seminary, where he was ordained in 1952. He then served in congregations in the New York suburbs of Woodmere (1952–55) and Hewlitt (1955–61) before moving to the Conservative synagogue on Fifth Avenue. He was among the first to lead teen tours to Israel and was the first director of Kefar Silver's summer camp in Israel (1962–64).

In 1965 Epstein joined the \*Rabbinical Assembly and headed its Joint Commission on Rabbinic Placement, the very sensitive job and highly political position of matching rabbis with congregations, thus enabling young rabbis to advance, successful rabbis to move to larger and ever larger congregations, and those whose careers have been difficult to find additional employment. It was a position that he handled with grace and tact. His task was to deal with rabbis and congregations in times of crisis and transition. During the years of major growth of the Conservative movement, the job was exceedingly demanding because there were so many positions to fill. As the rate of expansion declined and the need for rabbis settled down, his work became difficult in a different sense as he had to redirect rabbis to positions where they could succeed. He helped Wolfe \*Kelman and represented the Conservative Rabbinate in many national organizations including the National Conference of Soviet Jewry, the New York Board of Rabbis, and the Conference of Presidents of Major American Jewish Organizations.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**EPSTEIN, HARRY H.** (1903–2003), U.S. rabbi. Epstein was born in Plunge, Lithuania, and raised in New York and especially Chicago. He attended the Rabbi Isaac Elchanan Theological Seminary, where Bernard \*Revel became a mentor. Epstein continued his education at the famed Slobodka Yeshivah and its branch in Hebron, Palestine, both of which were headed by his uncle, Moses Mordecai \*Epstein. He obtained traditional *semikhah* (ordination) from three rabbis, including Abraham Isaac \*Kook, later the first Ashkenazi chief rabbi of Israel. He also obtained B.Ph. and M.A. degrees from Emory University, a Ph.D. from the School of Law of the University of Illinois, and a D.D. (honoris causa) from the Jewish Theological Seminary.

Epstein's was a surprisingly eclectic education given the dominant influence of his traditionalist father, Ephraim, an Orthodox rabbi who helped launch what became Chicago's Hebrew Theological College. The Slobodka Yeshivah was noted for the \**Musar* approach, which fostered modern Jewish character through piety and faith alongside talmudic study. RIETS provided American Orthodox training but the remainder of his education, including public school in Chicago, was secular. His background prepared him well for an evolving East European-American Judaism and rabbinical career.

After a year filling a pulpit at Tulsa's B'nai Emunah, Revel's father-in-law's congregation, where Epstein advised oil-rich members on philanthropy, in 1928 he became the rabbi at Ahavath Achim, the more affluent of Atlanta's four Orthodox synagogues. Fluent in Yiddish and English, and mixing learned Talmud classes for the old guard with early Friday night services for their acculturating children, Epstein offered a trans-generational, gradual accommodation to middle-class Jewish life in America by becoming an exemplar of the Modern Orthodoxy championed by Joseph \*Lookstein and Leo \*Jung during the interwar years. Traditional observance was

coupled with modern education in a synagogue-center environment hosting a variety of activities. Epstein, who lost a brother in the 1929 Hebron massacre, also led his congregation as an ardent Zionist. He headed regional Zionist efforts, participated in national conferences during World War II to aid European Jewry, co-chaired Atlanta Jewish Federation campaigns with Reform Rabbi Jacob Rothschild after the war, and served as a model for modern, traditional rabbis throughout the South. Following national trends he drew his congregation into the Conservative fold in 1954, something he later regretted when his successor, Arnold Goodman, allowed women to read from the Torah and he realized that Orthodoxy could have survived.

Epstein wrote *Judaism and Progress: Sermons and Addresses* (1934).

**BIBLIOGRAPHY:** M.K. Bauman, *Harry H. Epstein and the Rabbinate as Conduit for Change* (1994); K.W. Stein, *A History of Ahavath Achim Synagogue, 1887–1987* (1987).

[Mark K. Bauman (2<sup>nd</sup> ed.)]

**EPSTEIN, ISAAC BEN MORDECAI** (c. 1780–1857), talmudist and kabbalist. Epstein, who had already written halakhic works in his youth, attached himself against the will of his grandfather to \*Chabad Ḥasidism, and thenceforth devoted himself to the study of Kabbalah and Chabad teaching, burning his previous halakhic writings. He felt that only \*Shneur Zalman of Lyady, whose favorite pupil he became, was capable of revealing the innermost secrets of the divine Law. Epstein served as rabbi of Gomel. In his old age he himself made his debut as a *zaddik*. In the handling of halakhic problems he took pains to write in an unpretentious and clear style. He left ten studies on Chabad teaching including *Ma'amar ha-Shiflut ve-ha-Simḥah* (1864) and *Ma'amar Yezi'at Mizrayim* (1877); the others are in manuscript. He also wrote homilies for the weekly portions of the Law and the festivals, some of which were published with his *Ma'amar Yezi'at Mizrayim*.

**BIBLIOGRAPHY:** Bermann, in: *Keneset ha-Gedolah*, ed. by S. Suwalski, 1 pt. 3 (1890), 18–22; I. Heilmann, *Beit-Rabbi*, 1 (1965, photogr. reprint of 1902), 136, 165–6, 174–5.

[Samuel Abba Horodezky]

**EPSTEIN, ISIDORE** (1894–1962), English rabbi and scholar. Epstein was born in Kovno, Lithuania, and immigrated with his parents first to France and then in 1911 to England. He later studied in Hungarian yeshivot, particularly at Pressburg, and at London University until 1926. From 1921 to 1928 he served as rabbi in Middlesborough. In 1928 Epstein began teaching Semitics at Jews' College where he was also librarian; in 1945 he became director of studies; and in 1948, principal. Epstein expanded the activities of Jews' College by introducing a *hazzanut* department, a rabbinical diploma class, and an institute for training teachers.

Epstein's first publications were in history as reflected in responsa: *Responsa of Rabbi Solomon b. Adreth of Barcelona (1235–1310) as a Source of the History of Spain* (1925) and *The*

*Responsa of Rabbi Simon b. Zemah Duran as a Source of the History of the Jews in North Africa* (1930); they were published together in their second editions as *Studies in the Communal Life of the Jews of Spain, as Reflected in the Responsa of Rabbi Solomon ben Adreth and Rabbi Simeon ben Zemach Duran* (1968). His *Faith of Judaism* (1954) is an important theological statement of the Orthodox position in the light of modern philosophy and science. While this work addressed itself chiefly to the believing Jew, Epstein's *Judaism* (1954), "a historical presentation," spoke to the non-Jewish world. Epstein contributed the article on Judaism to the *Encyclopaedia Britannica* (from the 1958 edition onward). He was the first Jewish scholar to be given this assignment and the first to present Judaism in its entirety, not merely as a forerunner of Christianity. Articles on Jewish subjects in *Chambers' Encyclopedia*, too, were either written or edited by him (1950 and subsequent editions). Epstein's major achievement in Jewish scholarship was supervising the English translation of the Babylonian Talmud (Soncino, 35 vols., 1935–52; 18 vols., 1961). This monumental work made the Talmud accessible to the English-speaking world. Epstein also edited *Moses Maimonides, 1135–1204; Anglo-Jewish Papers in Connection with the Eighth Century of His Birth* (1935) and coedited *Essays in Honor of the Very Rev. Dr. J.H. Hertz* (1943); he had assisted \*Hertz with many of his publications. Apart from contributions to learned periodicals and Festschriften, Epstein also published a variety of theological and historical studies for educational purposes. As a scholar, writer, and educator, Epstein played a significant role in modern Anglo-Jewish scholarship.

[Hirsch Jacob Zimmels]

**EPSTEIN, IZHAC** (1862–1943), Hebrew writer and linguist, and a pioneer in modern Hebrew education in Erez Israel and in the Diaspora. The brother of the writer Zalman \*Epstein, he was born in Luban, Belorussia. In 1886 he (together with five others) was sent to Palestine for training in agricultural colonies at the expense of Baron Edmond de Rothschild. After working for four years in Zikhron Ya'akov and Rosh Pinnah, he became a teacher. In 1891 he was appointed principal of a public school which had just been opened in Safed and later taught in public schools in Metullah and Rosh Pinnah. He studied at the University of Lausanne from 1902 to 1908 and directed the Alliance school in Salonika from 1908 to 1915. Influenced by the psychophysiological school of T.A. Ribot, Epstein pioneered in the new method (the "natural" method) of teaching Hebrew. According to this system explanations are made only in the language that is being taught. Epstein expounded the new method in "Ivrit be-Ivrit" (*Ha-Shilo'ah*, 4 (1898), 385–96), which was later published as an introduction to his textbook of that name in 1900. The work had a fundamental influence on Hebrew teaching. The subject was also treated by Epstein in his doctoral thesis "La Pensée et la Poly-

glossie" (1915). In "She'elah Ne'lamah" ("The Obscure Question," *Ha-Shilo'ah*, 17 (1907), 193–206), he discussed Jewish-Arab relationships in Erez Israel and urged Zionists to adopt a more compromising attitude.

After World War I, Epstein returned to Erez Israel where he served for a short time as principal of the Lewinsky Teachers' Seminary in Jaffa and then as supervisor of the schools under the auspices of the Zionist movement. Upon resigning from his official duties, he devoted himself to the study of Hebrew linguistics, concentrating especially on problems of phonetics. He coined many new words and phrases, particularly in pedagogy and psychology. Among his other books are *Hegyonei Lashon* (1947) and *Mehkarim ba-Psikhologyah shel ha-Lashon ve-ha-Hinnukh ha-Ivri* (1947).

**BIBLIOGRAPHY:** "Yizhak Epstein," in: *Sifriyyat Rishonim*, 8:1, 1943; *Tidhar*, 2 (1947), 822f.

**EPSTEIN, SIR JACOB** (1880–1959), English sculptor, considered one of the greatest sculptors of the 20<sup>th</sup> century, and probably the most famous Anglo-Jewish artist of his time. He was born on New York's Lower East Side into a family of Polish Jewish immigrants and studied at the Art Students League. His first assignment came from the non-Jewish writer, Hutchins Hapgood, who asked him to illustrate a book about the Jewish quarter of New York, *The Spirit of the Ghetto* (1902, reissued 1967). He used the fee to go to Paris, where he studied at the Ecole des Beaux-Arts. In 1905 he went to London, which became his home for the rest of his life; he was naturalized in 1910. In 1907 he was commissioned to decorate the facade of the British Medical Association in the Strand. His series of 18 figures, *The Birth of Energy*, shocked the British public because he had refused to disguise sexual characteristics, and because one figure was of a woman in advanced pregnancy. The nationwide protest made him famous. Epstein remained the subject of heated moral and aesthetic criticism almost to the end of his career.

Epstein was an admirer of the prehistoric carvers, the archaic Greek sculptors, the African, Polynesian, and pre-Columbian image-makers. In creating his works he drew on his vast knowledge of the sculpture of all places and periods, yet always retained the powerful imprint of his own style. His style passed through several successive phases. *The Birth of Energy* was executed in a naturalistic classical tradition. *The Tomb of Oscar Wilde in Paris* (1912) is in a very different style. It consists of a strange figure with a human face and swept-back wings reminiscent of the hieratic winged bulls of Assyrian sculpture. The face is surmounted by a crown decorated with representations of the Seven Deadly Sins.

Epstein's only abstract sculptures were executed during the years 1913–15. *Rock Drill* (1913) is a sculpture romanticizing the power of the machine; *Venus I* and *Venus II* are also experiments in abstraction. In later years Epstein felt that abstract sculpture was of no value in itself, but that it had helped him to develop his sense of form.

In the monumental works executed after World War I, Epstein aroused hostile criticism by his expressionist distortion of form and by his treatment of sacred themes in a deliberately crude and primitive style. By this means he endeavored to express elemental forces. *Genesis* (1931) is the solid, heavy figure of a pregnant woman with a brooding head like an African mask. The dynamic, advancing figure of *Adam* (1939) is even more "primitive." *Jacob and the Angel* (1941) is more naturalistic. His sculptures on Christian themes also gave rise to controversy owing to his unorthodox treatment of traditional subjects. In his day Epstein was probably the most controversial artist in Britain, arousing fierce hostility, often laced with overt or covert antisemitism, from conservatives, but also great praise from many experts.

Throughout his life Epstein cast portraits in bronze, and many critics believe that as a portraitist he was second only to Rodin. Executed in a naturalistic, renaissance style, these works aimed at expressing the personality rather than the mere physical features of the sitter. Characteristic of these bronzes is the pitting and furrowing of the surface to suggest the clay from which they were cast. Among the many eminent figures Epstein portrayed were Albert Einstein, Chaim Weizmann, and Yehudi Menuhin. He was also an excellent draftsman; his drawings included illustrations of the Old Testament, and a series inspired by Baudelaire's *Les Fleurs du Mal*.

By the end of World War II Epstein had become acceptable to the British art establishment, and in 1954 he was knighted. Although he had no organizational links with Judaism, he always recalled with great warmth his origins in the New York ghetto, and never lost his broad Lower East Side accent. He said in his memoirs (*Let there be Sculpture*, 1942): "I imagine that the feeling I have for expressing a human point of view, giving human rather than abstract implications to my work, comes from these early formative years." In his late period, Epstein executed a number of religious works. These are in a sense more conservative than his earlier works and though elements of abstraction and distortion still exist they are no longer so dominant. They include *Lazarus* in the chapel of New College, Oxford (1947), the *Madonna and Child* in Cavendish Square, London (1953), the *Christ in Majesty* (1957) at Llandaff Cathedral, and the *St. Michael and the Devil* (1959) at Coventry. After his death, 105 of his clay models were donated to the Israel Museum, Jerusalem, by Lady Epstein. He wrote an autobiography, *Let There Be Sculpture* (1940), which he published in revised form in 1955 as *Epstein: An Autobiography*.

[Alfred Werner]

**EPSTEIN, JACOB NAHUM** (1878–1952), Talmud scholar. Born in Brest-Litovsk, Epstein studied at home with his father, at the Mir yeshivah, and at the universities in Vienna

and Berne, receiving his doctorate from the latter. In 1923 he became lecturer at the Hochschule fuer die Wissenschaft des Judentums in Berlin and in 1925 professor of talmudic philology at the newly founded Hebrew University. He formulated the basis for a new approach to talmudic studies in which he trained generations of scholars, and such outstanding individuals as S. Lieberman, G. Alon, S. Abramson, M. Margaliot, and E.Z. Melammed. On the occasion of his 70<sup>th</sup> birthday, pupils and fellow scholars presented him with a jubilee volume. Early in his career Epstein devoted studies to books of the Bible and the Elephantine papyri, but the major portion of his life's work was dedicated to rabbinical literature, particularly to the Mishnah text about which he wrote *Mavo le-Nusah ha-Mishnah* (2 vols., 1948). This work is considered to be the most authoritative study of the original text of the Mishnah. The author displays great erudition and critical acumen in attempting to establish the correct version of the Mishnah and its development. He clarifies many difficult passages in the Mishnah and the Talmudim. Two works were published posthumously, edited by E.Z. Melammed: *Mevo'ot le-Sifrut ha-Tanna'im* (1957, containing an introduction to the Mishnah and Tosefta, introductions to the 18 *masekhtot* of the Mishnah, and an introduction to halakhic Midrashim) and *Mevo'ot le-Sifrut ha-Amora'im* (1962, including introductions to nine tractates of the Babylonian Talmud, an introduction to the Jerusalem Talmud, and alternate versions of the latter, down to the end of tractate *Shabbat*). These works, together with the preliminary studies such as *Dikduk Aramit Bavlit* ("Babylonian Aramaic Grammar," ed. by E.Z. Melammed, 1960), were actually preparatory to a critical edition of the Mishnah text, which unfortunately remained an unfulfilled dream. Epstein was also concerned with establishing a correct version of the Jerusalem Talmud, a problem connected with the relationship between the *editio princeps* and the Leiden manuscript. He also initiated the ambitious plan of translating the Babylonian Talmud into Hebrew, accompanied by variant texts and a short commentary. Three tractates (*Bava Kamma*, *Bava Mezia*, and *Bava Batra*) were published (1952–60).

It was natural that other early rabbinic texts should similarly engage Epstein's attention. He defined the Tosefta to be a supplement to the Mishnah recording older materials, omitting controversies and traditions, and commenting on established (Mishnah) texts. He also wrote studies on the halakhic Midrashim and prepared a new edition of the *Mekhilta de-R. Simeon ben Yoḥai* (ed. by E.Z. Melammed, 1955) which, in addition to being reconstructed from materials embodied in such other works as D. Hoffmann's edition of 1905, used fragments of this lost Midrash found in the Cairo *Genizah*.

In the field of geonic literature, Epstein edited the geonic commentary to the sixth order of the Mishnah (*Tohorot*, 1921–24; supplement, 1945), the introduction to which had studies on the \**She'iltot* of R. Aḥa Gaon. He devoted other studies to such medieval talmudic commentators as Rashi and his son-in-law and pupil, the early tosafist, Judah b. Nathan; Elijah b. Menahem of London; Yom Tov b. Abraham

and others. His contribution to the modern study of rabbinical literature was of far-reaching importance. Epstein's essays and reviews appeared in many learned periodicals, and he was cofounder and coeditor of the quarterly *Devir* (1923–24), and edited the first 23 volumes of the quarterly *Tarbiz* (1930–52). He was an active member of the Vaad ha-Lashon and presided over several of its committees.

**BIBLIOGRAPHY:** *Sefer ha-Yovel... J.N. Epstein* (= *Tarbiz*, 20, 1950); S. Abramson, *J.N. Epstein, Reshimah Bibliografit ... ve-Toledot Hayyav* (1942); M. Schwabe, et al., *Le-Zikhro shel J.N. Epstein* (1952); Loewinger, in: S. Federbush (ed.), *Hokhmat Yisra'el be-Ma'arav Eiropah*, 2 (1963), 49 ff.

**EPSTEIN, JEAN** (1897–1953), French director. Epstein was born in Warsaw but lived and worked in France. As a young man the experimental cinema attracted him, and he directed his first film, *Pasteur*, when he was 25, thereafter working largely in the realistic mode, using outdoor settings and everyday scenes in such films as *La Belle Nivernaise* and *Finis Terrae* (1928), a documentary-style tale of Bannec island fishermen. In *La Chute de la Maison Usher* (1928) he created notable indoor atmospheric effects as well, introducing the use of slow motion. One of his last films was *Les Feux de la Mer* (1948). His sister MARIE EPSTEIN (1899–1995) worked with him and also with Jean Benoît-Lévy, writing the screenplay for and sharing direction of the classic *La Maternelle* (1933) with Benoît-Lévy.

**EPSTEIN, JEHIEL MICHAL BEN AARON ISAAC HALEVI** (1829–1908), rabbi and halakhic authority. Epstein was born in Bobruisk, Belorussia. He studied in Volozhin under R. Isaac of Volozhin from 1842. At first unwilling to enter the rabbinate, he was persuaded to do so by the rabbi of his native town, R. Elijah Goldberg, who formally ordained him, and c. 1862 he was appointed to his first rabbinate in Novosybkov where there were many \*Chabad Ḥasidim. During that period he visited R. Menahem Mendel of Lyubavich, author of *Zemah Zedek*, from whom he also received *semikhah*. In 1874 he was appointed rabbi of Novogradok, Belorussia, where he remained until his death.

Epstein's fame rests upon his *Arukh ha-Shulhan*, consisting of novellae and halakhic rulings on the four parts of the Shulhan Arukh: *Orah Hayyim* (1903–07), *Yoreh De'ah* (1894–98), *Even ha-Ezer* (1905–06), and *Hoshen Mishpat* (1884–93). In the introduction to the volume on *Hoshen Mishpat*, Epstein explains that just as Maimonides saw the need to compose the *Mishneh Torah* and Joseph Caro the Shulhan Arukh, in order to codify the halakhah in their times, there was now a need to bring the Shulhan Arukh up to date by giving the halakhic rulings which had been promulgated by authorities subsequent to Caro, both in works devoted to that purpose and in responsa. He said that "great anxiety and confusion" had resulted from those new rulings and his work was intended to give the final halakhic summation up to his day. Although in its external arrangement the work follows the chapters of the

Shulhan Arukh, in its internal arrangements he conforms to that of the *Mishneh Torah* of Maimonides. According to Epstein the principal aim of the study of Torah is not dialectical and casuistic exercise, the "uprooting of mountains"; but to arrive at a definite knowledge of the *halakhah*. He showed a marked tendency toward leniency in his rulings, and he gave expression to this tendency in a statement to Rabbi J.L. \*Maimon who obtained *semikhah* from him. "When any problem in connection with the prohibitions of the Torah comes before you, you must first presume it is permitted, and only after you have carefully studied the *rishonim* and can find no possibility of leniency are you obliged to rule that it is forbidden" (Maimon, *Sarei ha-Me'ah*, p. 112).

The *Arukh ha-Shulhan* has become an authoritative work. Like the Shulhan Arukh on which it is based, it deals only with the laws which have a practical importance. After Epstein completed it, however, he undertook the writing of additional works dealing with such laws as are not applicable at the present time, to which he gave the suggestive title *Arukh ha-Shulhan le-Atid* ("Arukh ha-Shulhan for the Future"), which were published posthumously. They deal with agricultural laws (*Zera'im*, 3 pts., 1938–46); *Sanhedrin*, *Mamrim*, *Melakhim*, *Shekalim*, and *Kiddush ha-Hodesh* (1962); and *Kodashim* (1969). In them he takes especial care to indicate his sources, tracing the development of each law from its first source to its latest form. His son Baruch \*Epstein gives an attractive picture of the manner in which his father would encourage candidates to the rabbinate. He would exhort them always to consider the pros and cons before giving a halakhic decision, and to show every consideration to the person putting the problem, so as not to confuse him.

Among his other works are *Or la-Yesharim* (1869), a commentary on the *Sefer ha-Yashar* of Jacob \*Tam in which he defends Tam against the criticisms leveled against him by later authorities. Only two of his responsa have been published (in the *Even Me'ir* of M. Gordon, 1909).

**BIBLIOGRAPHY:** B. Epstein, *Mekor Barukh*, 3 (1928), 1163–75; H. Tchernowitz, *Toledot ha-Posekim*, 3 (1947), 299–305; J.L. Maimon (Fishman), *Anashim shel Zurah* (1947), 133–79; S.Y. Zevin, *Soferim u-Sefarim* (1959), 30–35; A.Z. Tarshish, *R. Barukh ha-Levi Epstein* (1967), 41–69.

[Yehoshua Horowitz]

**EPSTEIN, JEHIEL MICHAL BEN ABRAHAM HALEVI** (d. 1706), German rabbi and author. Epstein is principally known for his *Kizzur Shelah* (Fuerth, 1683, 1696) and for a *siddur* which he issued with a translation of the prayers, laws, and customs in Yiddish, entitled *Derekh Yesharah* (Frankfurt, 1697). These he wrote largely for the benefit of Jews living in isolated villages that were without the guidance of rabbis and teachers. *Kizzur Shelah*, mainly an abbreviated version of Isaiah \*Horowitz' *Shenei Luhot ha-Berit (Shelah)*, also contains glosses as well as new laws and customs which Epstein extracted from works appearing after the publication of Horowitz' book. In addition, the author deals with Jewish educa-

tion, its organization and syllabus. Criticizing the prevailing system, he proposed that the pupils be first taught the Bible and the four *sedarim* of the Mishnah relevant to the times (an approach reminiscent of that of \*Judah Loew b. Bezalel of Prague) and only subsequently the Talmud and the codes. He opposed the form of casuistry known as *hillukim* on the basis of its being largely forced. The proposed educational reform could, he maintained, only be achieved through cooperation between the *heder*, the home, and the *bet midrash*. *Kizzur Shelah* was translated into Yiddish by Wolf Gershels of Prague under the title of *Ez Hayyim* (Frankfurt, 1720), 39 editions of which have appeared. It is very doubtful whether he had any associations with the Shabbatean movement, although he was suspected of it because of the wording of a certain passage in his *siddur*. He was also the author of *Derekh ha-Yashar la-Olam ha-Ba* (Frankfurt, 1703), an ethical work written in Yiddish, which language, he contended, had become a religious and cultural necessity in Jewish life; since it had acquired a sacred character, the gulf between it and Hebrew, the holy tongue, was progressively diminishing. His works provide an insight into the contemporary life of the smaller Jewish communities of Germany.

[Yehoshua Horowitz]

**EPSTEIN, JUDITH** (1895–1988), U.S. Hadassah leader. Epstein was born in Worcester, Massachusetts. She became involved in Jewish communal activity while at Hunter College, from which she graduated in 1916. Epstein served Hadassah in many capacities from 1928 when she was national secretary. She was chairman of various national departments, including membership and Zionist public relations, and was editor of *Hadassah Magazine*. Named vice president in 1934, Epstein served as national president of Hadassah during 1937–39 and 1943–47. From 1947 she was an honorary vice president. She traveled to virtually every Jewish community in the country, and for many years she played a prominent role at sessions of the Zionist General Council in the United States and abroad.

Dedicated to the needs and the future of the Jewish state, Epstein was largely responsible for funding the Rothschild-Hadassah-University Hospital in Jerusalem.

During her lifetime, she was an ardent advocate for young women. In her name and to honor her legacy, the Judith Epstein Memorial Award was created in 1991 to recognize the achievements of National Young Leaders Advisory Council (NYLAC) representatives, who are responsible for initiating activities and events that will bring visibility to Hadassah as well as bringing other young women into the organization. Each year the award is presented to a young leader whose community project was the most successful in promoting Hadassah in a meaningful way.

[Gladys Rosen / Ruth Beloff (2<sup>nd</sup> ed.)]

**EPSTEIN, JULIUS J.** (1909–2000), **AND PHILIP G.** (1909–1952), U.S. screenwriters. New York-born identical twins, Julius and Philip Epstein graduated from Pennsylvania State University in 1931. They had their first play, *And Stars Remain*, produced by the Theatre Guild in 1936. After working separately for two years, they joined Warner Brothers and became the best-known screenwriting team of the 1940s. Their films included *Daughters Courageous* (1939), *Four Wives* (1939), *No Time for Comedy* (1940), *Casablanca* (1942), *The Bride Came C.O.D.* (1941), *The Strawberry Blonde* (1941), *The Man Who Came to Dinner* (1941), *Yankee Doodle Dandy* (1942), *The Male Animal* (1942), *The Battle of Britain* (1943), *Arsenic and Old Lace* (1944), *Mr. Skeffington* (1944), *Saturday's Children* (1946), *Romance on the High Seas* (1948), *My Foolish Heart* (1949), *Take Care of My Little Girl* (1951), *Forever Female* (1953), *The Last Time I Saw Paris* (1954), and *The Brothers Karamazov* (1958).

In 1943, the Epstein brothers won a Best Screenplay Academy Award for *Casablanca*, which they had adapted from an unproduced play with the forgettable title “Everybody Comes to Rick’s.”

After Philip’s death, Julius continued to work alone. Among his screenplays were his Oscar-nominated *Four Daughters* (1938), *The Tender Trap* (1955), *The Reluctant Debutante* (1958), *Take a Giant Step* (1959), *Tall Story* (1960), *Light in the Piazza* (1962), *Fanny* (1964), *Send Me No Flowers* (1964), *Any Wednesday* (1966), his Oscar-nominated *Pete ‘n’ Tillie* (1972), *Cross of Iron* (1977), *House Calls* (1978), and his Oscar-nominated *Reuben, Reuben* (1983).

In 1956 Julius won a Laurel Award for Screenwriting Achievement. In 1998, some 15 years after he had retired, Julius received the Los Angeles Film Critics Association Career Achievement Award.

[Jonathan Licht / Ruth Beloff (2<sup>nd</sup> ed.)]

**EPSTEIN, KALONYMUS KALMAN OF CRACOW** (d. 1823), ḥasidic *zaddik*. A disciple of \*Elimelech of Lyzhansk and \*Jacob Isaac ha-Ḥozeh (“the Seer”) of Lublin, he became noted for the ecstatic mode of prayer he adopted. In 1785 he organized groups of Ḥasidim in Cracow, and arranged *minyanim* where they prayed with *devekut* (“devotion”) employing pronounced bodily movements. They were strongly opposed by the Cracow community, this opposition resulting in excommunications issued by Isaac Ha-Levi of Cracow and his *bet din* in 1786 and 1787. Epstein, however, withstood his opponents and actively propagated Ḥasidism throughout western Galicia. His main work, *Ma’or va-Shemesh* (Breslau, 1842), a commentary on the Pentateuch, is one of the fundamental works of Ḥasidism, and includes information on the activities and the personalities of *zaddikim*. It was published in many editions. His son, Aaron (d. 1883), succeeded Epstein as the leading propagator of Ḥasidism in western Galicia and founded the first *kloiz* (ḥasidic synagogue) in Cracow, called after him R. Aaron’s *kloiz*. Another son, Joseph Baruch of Neustadt (d. 1867), became known as a miracle worker. He

was known as “the good Jew” of Neustadt, for the simplicity of his life and conduct.

**BIBLIOGRAPHY:** A. Markus, *Ha-Hasidut* (1954), index; B. Friedberg, *Luhot Zikkaron* (1969), 39–45, 95; A. Bauminger, in: *Sefer Kraka* (1959), 33; M.S. Geshuri, *ibid.*, 167–8; L. Grossman, *Shem u-She'orit* (1943), 65; Dubnow, *Hasidut*, 167–8, 450–2.

**EPSTEIN, LESLIE** (1938– ), U.S. writer. Born in Los Angeles and having a father as well as an uncle who were screenwriters (Julius J. and Philip G. \*Epstein), Leslie Epstein was no outsider to Hollywood life: his *San Remo Drive: A Novel from Memory* (2003) is a recounting of his childhood as well as its repossession by the novel's protagonist. Its writing must have been cathartic yet this act of purgation runs throughout much of Epstein's work, which deals with those who are powerless or deluded or both, and who are presented to us in a tight narrative line that offers dark satire as a way of recounting the horrific. *The King of the Jews* (1986), a meditation upon the uses of power and self-deception, explores the nature of Trumpelman (based on Rumkowski, the ruler of the Lodz ghetto). Though the book is a controversial one, Epstein being charged with trivializing the Holocaust, the novel has also won much praise for its strongly controlled tone that veers between pathos and comedy. His most endearing character is Leib Goldkorn, a former Viennese musician, who undergoes a series of mishaps yet whose reflections are by turns chilling, sweet, and astonished by the chaos and destruction that he sees. He threads his way through *The Steinway Quintet* (1976), *Goldkorn Tales* (1985), and *Ice Fire Water* (1999).

Epstein attended Yale and Oxford and served as the director of the Creative Writing Program at Boston University for over 20 years.

[Lewis Fried (2<sup>nd</sup> ed.)]

**EPSTEIN, LOUIS M.** (1887–1949), U.S. Conservative rabbi and authority on Jewish marriage law. Epstein was born in Anyksciai, Lithuania. When his father, Rabbi Eziel Epstein, went to the United States to accept a pulpit, he left his son behind to study at the yeshiva in Slobodka. He graduated from Columbia University (1911) and was ordained at the Jewish Theological Seminary in New York in 1913. He served in various congregations in Dallas, Texas, and Toledo, Ohio, before assuming the leadership of Beth Hamedrosh Hagdol in Roxbury, Massachusetts, in 1918 and then becoming rabbi of Kehilath Israel in Brookline, Massachusetts, where he served for the remainder of his career. Epstein was president of the Rabbinical Assembly (1922–25) and chairman of its committee on Jewish Law (1936–40). Epstein wrote *The Jewish Marriage Contract* (1927), *Marriage Laws in the Bible and Talmud* (1942), and *Sex Laws and Customs in Judaism* (1948). His scholarly attainments made him a leading figure in the Conservative movement. He was instrumental in framing various proposals in Jewish law, the best known being a method of solving the \**agunah* problem published in his *Li-She'elat ha-Agunah* (1940). Under Epstein's proposal, the husband would autho-

rize the wife to act as his agent for the purpose of a *get*. This innovation was accepted by his colleagues but was abandoned by the Rabbinical Assembly because of the opposition of the Orthodox rabbinate and of some members of the faculty of the Jewish Theological Seminary.

[Benjamin Z. Kreitman]

**EPSTEIN, MELECH** (1889–1979), Yiddish journalist and editor. Born in Ruzhany, Belorussia, Epstein received a traditional Jewish education but left home at the age of 13 and became involved in socialist activities in Russia and Poland. In 1913 he immigrated to the U.S., where he joined the Communist Party in 1921. Epstein was one of the founders of the Yiddish daily *Morgen Frayhayt* and its chief editor from 1925 to 1928. He also served on the editorial board of the Communist monthly *Der Hamer*. He left the Communist Party in 1939 in protest against the Hitler-Stalin pact. Thereafter he contributed to the *Forverts* and *Tsukunft* as well as to the English-language Jewish press. He wrote *Sacco un Vanzetti* (“Sacco and Vanzetti,” 1927), *Sovyetn Farband Boyt Sotsyalizm* (“The Soviet Union Builds Socialism,” 1935), and *The Jew and Communism ... in the Jewish Community, U.S.A., 1919–1941* (1959).

Kohen (ed.), *Leksikon fun Yidish-Shraybers* (1986), 419.

[Israel Ch. Biletzky / Lily O. Kahn (2<sup>nd</sup> ed.)]

**EPSTEIN, MORRIS** (1921–1973), U.S. author and editor. Epstein was born in Newark, N.J., and studied at Yeshiva University and Columbia, receiving his doctorate from New York University in 1957. In his early years he wrote a number of children's books. In 1940 Epstein, together with Sigmund Laufer and Ezekiel Schloss, established the bi-monthly youth magazine *World Over* (1940–83) under the auspices of the Bureau of Jewish Education and published with the support of the New York Jewish Board of Education. The 16-page English-language magazine served as a learning tool to challenge Jewish youth and reinforce the ideas they learned at Hebrew school and in the home, but with a non-academic bent. While the three founders produced most of the text and artwork for the magazine themselves, they also included stories and essays submitted from the U.S. and abroad. Epstein was also the managing editor of the *Jewish Education Magazine*. He edited and translated the tales of \*Sindabar (*Tales of Sendeban*, 1967) and in 1970 published a book on the *Sefer \*Minhagim*, an illustrated collection of Jewish customs (Venice, 1593). In 1955 he joined Stern College for Women of Yeshiva University and was appointed full professor and chairman of the English Department in 1966. He wrote radio plays, drama reviews, and scholarly essays, and broadcasted and lectured extensively.

Books by Epstein include *My Holiday Story Book* (1958), *A Pictorial Treasury of Jewish Holidays and Customs* (1959), *A Picture Parade of Jewish History* (1963), *The New World Over*

*Story Book: An Illustrated Anthology for Jewish Youth* (1968), *More World Over Stories: An Illustrated Anthology for Jewish Youth* (1968), and *All about Jewish Holidays and Customs* (1970).

[Ruth Beloff (2<sup>nd</sup> ed.)]

**EPSTEIN, MOSES MORDECAI** (1866–1933), talmudist and *rosh yeshivah* in Lithuania and Erez Israel. Born in Bakst, Moses studied in his youth at the Volozhin yeshivah where he was known as the “*illui* (“prodigy”) of Bakst.” At Volozhin he supported the Hovevei Zion group, founded by students of the yeshivah and in 1891 was a member of a Hovevei Zion delegation, which bought the land for the settlement of Haderah. In 1893 he was appointed head of the Keneset Israel yeshivah of Slobodka, a position he filled until his death. During World War I he wandered from town to town in Russia at the head of his yeshivah and after the war became one of the leaders of religious Jewry in Lithuania and a cofounder of its rabbinical council. In 1923 at the conference of the Agudat Israel held in Vienna, he was elected a member of the *Kenesiyyah ha-Gedolah*, the supreme body of the organization, and the *Mōezet Gedolei ha-Torah*, its rabbinical council, established on that occasion. In 1924 he transferred most of the Keneset Israel student body to their sister yeshivah in Hebron, which he had established. After the 1929 riots in Hebron in which many of the students were killed, he moved the yeshivah to Jerusalem. His method of studying Jewish law was to seek an understanding of the structure of individual laws as a means of comprehending the system of talmudic law in general. To this end he made a special study of Maimonides, whose method of halakhic commentary he sought to elucidate. In his teaching, likewise, he stressed the understanding of the underlying principles of individual laws more than expertise in wider areas. Epstein’s method was adopted in numerous yeshivot. A collection of his lectures, entitled *Levush Mordekhai*, was published in four volumes: on tractate *Bava Kamma* (1901); on *Bava Mezia* (1929); on the four parts of the Shulḥan Arukh (1946); and on *Yevamot* and *Gittin* (1948).

**BIBLIOGRAPHY:** S.J. Zevin, *Ishim ve-Shitot* (1958<sup>2</sup>), 275–91.

[David Tamar]

**EPSTEIN, PAUL SOPHUS** (1883–1966), theoretical physicist. Epstein was born in Warsaw. After his studies in Russia he went on to take a degree in optics in Germany. He left Russia in 1919 and lectured for two years at the Technische Hochschule in Zurich, Switzerland. In 1921 he went to the U.S. and became a professor at the California Institute of Technology at Pasadena. Epstein’s scientific output was very impressive, and his studies covered wide fields which included applications of the quantum theory (in a series of papers in the Berlin periodical *Zeitschrift fuer Physik*), spectroscopy, radiation pressure, Stark effect, thermodynamics, fluid mechanics, theory of elasticity, and earth magnetism. In 1937 he published a *Textbook of Thermodynamics*.

[Arthur Beer]

**EPSTEIN, SEYMOUR** (1917– ), U.S. author. Epstein’s novels, *Pillar of Salt* (1960), *The Successor* (1961), *Leah* (1964), and *Caught in that Music* (1967), and his collection of short stories, *A Penny for Charity* (1965), are mostly about first-generation immigrants no longer bound by traditional commitments. Perhaps his most powerful novel, *Looking for Fred Schmidt*, was published in 1973.

**EPSTEIN, ZALMAN** (1860–1936), Hebrew essayist and critic. Epstein was born in Luban, Belorussia, and he received his early education at the Volozhin yeshivah. At the age of 16 he moved to Odessa where he lived for 30 years. He served on the central committee of Hovevei Zion from 1890 to 1900 in Odessa. Later Epstein lived in St. Petersburg, Warsaw, and Moscow, and settled in Palestine in 1925. In 1879 he began to publish letters and articles in the Hebrew press, some under the pen-names of “Shelomo ha-Elkoshi” and “Ben Azzai.” His article, “The Spirit of Nationalism and its Results in Modern Times,” which appeared in *Ha-Meliz* in 1882, brought him a measure of recognition. He became a regular contributor to *Ha-Meliz* and later to *Ha-Zefirah*, *Ha-Shiloah*, and other journals, writing primarily about Jewish problems, particularly the settlement of Palestine and Zionism. He contributed a series of articles in Yiddish to the St. Petersburg paper *Der Tog*. Epstein also commented on Hebrew and general literature, and published a number of poetic sketches, the best known of which are the series *Mi-Sefer ha-Zikhronot shel Shelomo ha-Elkoshi* (“From Shelomo ha-Elkoshi’s Book of Reminiscences”). In his article “*Ha-Sefer ve-ha-Hayyim*” (“Books and Life”), in: *Lu’ah Ahi’asaf*, 1 (1894), he called upon Hebrew writers not to concern themselves solely with Jewish problems. Epstein was a romantic who respected and admired Jewish traditions and sought to blend Judaism and humanism. He was the first to publish articles in Hebrew on Dostoyevski, Tolstoy, and Turgenev (in *Ha-Boker Or*, *Ben-Amami*, and *Ha-Zeman*). His style was biblical and ornate. Only a few of his hundreds of articles and sketches were collected in the two volumes of his work, one of which appeared in St. Petersburg in 1905, the other in Tel Aviv in 1938. His monograph *Moshe Leib Lilienblum* was published in 1935.

**BIBLIOGRAPHY:** Autobiographical note in the preface to J. Fichmann (ed.), *Kitvei Zalman Epstein* (1938).

[Gedalyah Elkoshi]

**EPSTEIN HA-LEVI, MOSES JEHIEL** (1890–1971), rabbi and *admor*. Epstein was born in Ozarow, Poland, where he received his rabbinic education. In 1913 he was appointed rabbi there and in 1918 *admor*. Epstein immigrated to the U.S. in 1927 and in 1953 came to Israel and settled in Tel Aviv. He was a leader of Agudat Israel and a member of the *Mōezet Gedolei ha-Torah* and also active in educational and charity affairs. His works are *Esh Dat* (11 vols.) and *Be’er Moshe*. He was awarded the Israel Prize for rabbinical literature in 1968.

**ER** (Heb. עֵר; “watcher, watchful”), the name of two biblical figures. (1) The eldest son of Judah and the daughter of Shua, a Canaanite (Gen. 38:2–3). He married \*Tamar but died childless because of his wickedness (Gen. 38:6–7; 46:12; Num. 26:19; 1 Chron. 2:3). The nature of his offense is not specified. (2) The son of Shelah, the grandson of Judah, and the father of Lecah (1 Chron. 4:21).

**BIBLIOGRAPHY:** W.F. Albright, *Yahweh and the Gods of Canaan* (1968), 69–70, 233p.

°**ERASMUS OF ROTTERDAM (Desiderius Erasmus Roterodamus;** 1469–1536), European humanist, theologian, and writer. Netherlands-born Erasmus lived and worked in all major countries of Europe and wrote only in Latin.

Erasmus’ view of Judaism as a religion was fully determined by traditions of the New Testament (especially by the epistles ascribed to Paul) and of the Early Church (in the first place, Jerome, to a lesser extent, Augustine). An original aspect of this position is that he regularly used the words *Judaismus*, *Judaeus*, etc., to stigmatize bad Christians, “for whom religion consists of rituals and observations of corporeal things” (a letter of December 1504). In another writing, he says, “Judaism I call not Jewish impiety, but prescriptions about external things, such as food, fasting, clothes, which to a certain degree resemble the rituals of the Jews” (*Declarationes ad censuras Lutetiae*, 1532). In fact, the majority of Erasmus’ anti-Mosaic attacks are directed against this “new Judaism.”

As far as the Jewish Bible (the Old Testament) is concerned, it is only natural that a Christian humanist professing “the philosophy of Christ” placed the New Testament higher than the Old. But on many occasions he insisted on the importance for Christians of the Old Testament in its entirety and, even more significantly, on the complete inadmissibility of contrasting the two Testaments.

As a humanist (in the strict and specific sense of the word) Erasmus highly appreciated Hebrew and demanded thorough knowledge of the original language of the Bible. “Who does not master all three holy tongues [i.e., Hebrew, Greek, and Latin], is not a theologian, but a violator of the holy Theology” (*Adagiae*, 1515). But Erasmus’ own knowledge of Hebrew was rudimentary and he was completely dependent on other scholars’ commentaries and upon their direct, personal help (in his New Testament commentaries and paraphrases of Psalms). Hence numerous mistakes, “anti-philological” interpretations (discrediting Erasmus’ general method), and even a kind of irritation against “ambiguities” of Hebrew can be found in his writings.

Erasmus’ attitude toward Jewry of his day should be evaluated against a background of the universal hatred of Jews, intolerance, and missionary zeal in the 15<sup>th</sup> and 16<sup>th</sup> centuries, especially in Germany. This sinister background is often apparent, much more in private correspondence than in writings intended for print. In some of the latter we find remarks that are comparatively moderate and reasonable. Thus, Erasmus thinks that the number of Jews, their force, and influence

are insignificant, and, consequently, they are of no danger to Christianity; that forced conversion of Jews is absolutely inadmissible, and even that Christian missionary activity among Jews is perhaps useless; that the expulsion of Jews from Spain should be condemned, and that the Marranos should be treated mercifully, etc. Such remarks spring organically from the deepest principles of Erasmus’ understanding of the world and must be considered as really “erasmian.” But the “erasmian spirit,” expressing itself in a well-known line from a letter (January 30, 1523 (4)), “I have a temperament such that I could love even a Jew, if only he were well-mannered and friendly, and did not mouth blasphemy on Christ in my presence,” was far from always being uppermost. In fact, he never met a real Jew all his life, never sought out such a meeting, and never wrote anything especially devoted to Jews or Judaism. He was, in fact, indifferent to the living “remnant of Israel”; the flesh-and-blood Jew was simply not within his field of vision. This indifference, in a time of catastrophic sharpening of religious and national fanaticism, could have been an initial step toward true tolerance. Erasmus’ position could be qualified as asematism; suggesting that he was an antisemite seems to be as un-historical as claiming he was sympathetic toward Jews.

**BIBLIOGRAPHY:** G. Kisch, *Erasmus’ Stellung zu Juden and Judentum* (1969) [Kisch considers Erasmus a rabid antisemite, equal to Luther]; S. Markish, *Erasmus and the Jews*, with an Afterword by Arthur A. Cohen (1986); G.B. Winkler, “Erasmus und die Juden,” in: *Festschrift Franz Loidl zum 65. Geburtstag* (1970), 381–392; C. Augustijn, “Erasmus und die Juden,” in: *Nederlands Archief voor Kerkengeschiedenis*, 60:1 (1980), 22–38.

[Shimon Markish]

°**ERATOSTHENES OF CYRENE** (c. 275–194 B.C.E.), polymath, author of *Geographica*, a first-rate geography much used by \*Strabo, who cites his description of Arabia (16:4, 2), commenting upon the occupations of the inhabitants (including the Judeans), soil, flora, water supply, and distances. Strabo elsewhere (16:2, 44) cites Eratosthenes’ theory that the region around Edom was once a lake and that the land came into existence as a result of volcanic eruptions.

**ERECH** (Sum. **Unug**; Akk. **Uruk**; modern **Warka** in Iraq), city mentioned as one of the mainstays of the kingdom of \*Nimrod (Gen. 10:10), and perhaps referred to in Ezra 4:9. In ancient times Uruk lay on the bank of the Euphrates, approximately 40 mi. (65 km.) N.W. of Ur; the river has now shifted far to the west, leaving the city in the desert. The site was occupied in the fifth millennium B.C.E., and experienced its first peak of prosperity in about 3300–3100 B.C.E., when it was probably the largest religious center of Sumer, with large temples and the earliest written documents so far known. The legendary hero Gilgamesh was probably an historical king of Uruk in about 2700 B.C.E. Uruk played a part in the rise of the Neo-Sumerian kings of Ur, and was the seat of a dynasty of West Semitic rulers shortly before the time of Hammurapi. Thereafter, it was politically unimportant, but remained a seat of learning until Seleucid times. It was the cult center of Anu,

the sky god, and of Inanna-Ishtar, the goddess of love and war. In 1912 the German Oriental Society began to excavate the site and allowing for the interruptions caused by wars continued until the end of the 20<sup>th</sup> century.

[Richard S. Ellis]

**EREZ ISRAEL** (Heb. אֶרֶץ יִשְׂרָאֵל), Hebrew name of Land of Israel. The term Erez Israel is biblical, although its meaning varies, designating both the territory actually inhabited by the Israelites (1 Sam. 13:19) and the Northern Kingdom (11 Kings 5:2). It was, however, only from the Second Temple period onward that Erez Israel became the current appellation of the Promised Land. It was the official Hebrew designation of the area governed by British mandate after World War I until 1948. For further details, see \*Canaan, Land of; \*Israel, Land of (Geographical Survey).

**ERFURT**, city in Thuringia, Germany. Jews are first mentioned there in the 12<sup>th</sup> century. At first under the protection of the king, by the second half of the 12<sup>th</sup> century they had passed to the jurisdiction of the archbishop of Mainz, who composed an \*oath formula for them in German. In 1209 the king also relinquished his right to collect taxes from the Jews, which in 1212 was explicitly granted to the archbishop. In 1221 anti-Jewish riots broke out in Erfurt: the synagogue was burned down, and a number of Jews were murdered while some threw themselves into the flames. Among the martyrs was the *paytan* and cantor Samuel b. Kalonymus. Nevertheless, the Jewish community of Erfurt continued to exist and even to expand. After some time a new synagogue was built and well-known rabbis chose Erfurt as their seat. Between 1286 and 1293 Asher b. \*Jehiel probably lived there, and at about the same time Kalonymus b. Eliezer ha-Nakdan composed his *Masorah Ketannah*, still preserved in manuscript in Erfurt. During the Middle Ages the Jews of Erfurt followed the Saxony prayer rite. The community's Book of Ritual is preserved at Jews' College, London (Ms. 104, 4). At the beginning of the 14<sup>th</sup> century protection over the Jews passed to the municipality; this, however, was unable to save them from massacre during the Black \*Death: at the beginning of March 1349 over 100 Jews were murdered by the populace, and many set fire to their homes and perished in the flames. Those who survived were driven from the city. Among the martyrs was Alexander Suslin ha-Kohen, author of *Sefer ha-Aguddah*. Israel b. Joel \*Susslin mentions the Erfurt martyrs in an elegy (*Sefer ha-Dema'ot*, 2, 126–7). The city council again permitted Jews to settle within the city walls and build a new synagogue in 1357. During the following century the Erfurt community became one of the largest and most important in Germany, some of the most celebrated rabbis officiating there. Meir b. Baruch \*ha-Levi served there for some time; a disciple of his was Hillel of \*Erfurt. In the middle of the 15<sup>th</sup> century Jacob b. Judah \*Weil taught there. During this period, Erfurt Jews played an

important role in banking in Thuringia. In 1391 the king canceled all the debts owed by Christians to the Erfurt Jews and handed them over to the municipality for 2,000 gulden; the municipality claimed this sum from the Jews but promised them to return part of the debts. Subsequently the Jews had to pay a special tax to the king's treasury. In 1418 they were compelled to declare the amount of their property on oath, in the synagogue, and the king collected new taxes from them on this basis. In 1451 and 1452 Nicolas of \*Cusa and John of \*Capistrano visited Erfurt. Their anti-Jewish sermons greatly agitated the populace, and in 1453 the city council withdrew protection from the Jews, who subsequently left Erfurt.

Around 1820 the Prussian authorities used the tombstones in the Jewish cemetery for the fortification of the city. At that time Jews again began to settle in Erfurt, numbering some 144 in 1840 when a new synagogue was dedicated. The communal archives from 1855 to 1936 have been transferred to the Central Archives for the History of the Jewish People in Jerusalem. The community numbered 546 in 1880 (1.03% of the total population); 795 in 1910 (0.72%); and 831 in 1933 (0.6%). After the advent of the Nazis the majority left Erfurt, 263 remaining in 1939. The synagogue was burned down on Nov. 9, 1938. The community was compelled to pay for the benzene used for igniting the synagogue and for clearing the ruins. The men were detained in the local school, where they were mistreated, and subsequently deported to \*Buchenwald. Of the 188 Jews remaining in Erfurt in September 1941, 152 were deported to the East in four transports between May 1942 and January 1944.

A few Jews returned to Erfurt after the war, and there were 40 in 1951. A new synagogue was opened in 1952, and the community numbered 120 in 1961. As a result of the immigration of Jews from the former Soviet Union, the number of community members rose to 550 in 2003. One of the famous manuscripts of the Tosefta was found in Erfurt after which it is named (S. Leibman, intr. *Tosefta bi-Feshuto*).

[Zvi Avneri / Stefan Rohrbacher (2<sup>nd</sup> ed.)]

**ERGAS, JOSEPH BEN EMANUEL** (1685–1730), rabbi, kabbalist, and author of books on halakhic and kabbalistic matters. Ergas, who was of Marrano descent, was born in Leghorn. The headdress of a knight engraved on his tomb in Leghorn perhaps indicates descent from a noble Spanish family. Samuel of Fez was his teacher of *halakhah* and \*Benjamin ha-Kohen Vitale of Reggio taught him Kabbalah. As a young man, he traveled throughout Italy and preached public sermons, urging repentance. For a while he stayed in Pisa where he founded

a yeshivah, Neveh Shalom. Later, he was appointed rabbi in Leghorn, and remained there until his death. Ergas became famous for his pamphlet *Tokhaḥat Megullah*, the polemic against the Shabbatean Nehemiah Ḥayon, and an addition to it called *Ha-Zad Nahash* (London, 1715). His kabbalistic works include *Shomer Emunim* (Amsterdam, 1736), in which he explains the principles of the Kabbalah in the form of a dialogue between Shaltiel, who believes only in the revealed Torah, and Jehoiada, the victor in this argument, who believes also in the esoteric aspect of the Torah; *Shomer Emunim* includes *Mevo Petaḥim*, an appendix to the former, a selection from ḤLuria's doctrine, and an introduction to the Kabbalah, and *Minḥat Yosef*, an ethical-religious anthology and the rules for the study of the kabbalistic doctrines. A selection of his responsa was published by his disciple Malachi Ha-Kohen as *Divrei Yosef* (Leghorn, 1742). The publisher's introduction mentions several *piyyutim* written by Ergas. Ergas was an enthusiastic believer in the importance and sanctity of the Kabbalah in general and of the ḤZohar in particular, despite his view that marginal annotations had been introduced into the proper text of the Zohar. He opposed philosophy, which he considered alien to Judaism and an invention of heretics. He opposed ḤMaimonides' explanations of the stories of the Creation and the visions of Ezekiel in the spirit of Aristotle's natural philosophy. Ergas' style is distinguished by its clarity.

Ergas' Kabbalah evinces affinities with that of Moses Ḥayyim ḤLuzzatto, and tension over this issue developed between the two kabbalists.

**BIBLIOGRAPHY:** Joseph ben Emanuel Ergas, *Shomer Emunim*, ed. by S.A. Horodezky (repr. 1927), introd. **ADD. BIBLIOGRAPHY:** R. Goetschel, "La justification de la kabbale dans le 'Shōmer Emūnim' of Joseph Ergas (1685–1730)," in: U. Haxen, H. Trautner-Kromann, and K.L. Goldschmidt Salamon (eds.), *Jewish Studies in a New Europe; Proceedings of the Fifth Congress of Jewish Studies in Copenhagen* (1994), 269–81.

[Azriel Shochat]

**ERIK, MAX** (pseudonym of **Zalmen Merkin**; 1898–1937), Yiddish literary critic and literary historian. Born in Sosnowiec (Poland), Erik was educated privately (among his tutors was Ḥayyim Nahman ḤBialik) and in a traditional *heder*. He later studied at a Russian-language high school and at a Polish officers' training school from which he graduated as a reserve officer. His uncle was Yitzkhak Peysekzon, a founder of the Jewish Labor Bund. In 1922 he settled in Vilna where he taught Yiddish and Polish literature in Yiddish-language high schools. Erik published his first essays in 1920 on neo-Romanism and Hugo Tsukerman in I.M. Weissenberg's *Yudishe Zamelbikher* and then contributed studies, essays, and critical articles to various Yiddish periodicals including *Ringen*, *Lit-erarishe Bleter*, *Bikher Velt*, and the *Vilner Tog*. His first works on Yiddish literature were *Konstruksiye Shtudiyen: tsu der Konstruksiye fun der Goldene Keyt* ("Construction Studies: On the Construction of the Golden Chain," 1924), an analysis of the variants of I.L. ḤPeretz's plays; *Vegn Alt-Yidishn Roman un Novele – 14ter–16ter Yorhundert* ("On the Old Yiddish

Novel – 14<sup>th</sup>–16<sup>th</sup> Centuries," 1926); and *Di Geshikhte fun der Yidisher Literatur fun di Eltste Tsaytn biz der Haskole Tekufe* ("History of Yiddish Literature – from the Beginning to the Haskalah Period," 1928). Erik's work helped found the field of Old Yiddish studies. He also formulated the long-dominant but now disproven theory of Yiddish *shpilmener* ("troubadours") who composed, or adapted from other languages, the extant Old Yiddish epics. In 1929 Erik settled in the Soviet Union. He lived in Minsk and Kiev and taught Yiddish literature at various Jewish institutions of higher learning. Increasingly, his works in this period were written from the official party-line point of view and include a study of Sholem ḤAsch (1931); *Etyudn tsu der Geshikhte fun der Haskole* ("Studies in the History of the Haskalah," 1934); and *Di Yidische Literatur in XIX Yorhundert*, vol. 1, coauthored with A. Rosenzweig ("A History of Yiddish Literature in the 19<sup>th</sup> century," 1935). He also edited *Di Komedies fun der Berliner Ufklerung* ("The Comedies of the Berlin Haskalah," 1933) and a selection of the works of Solomon ḤEttinger (1935). Upon the liquidation of the Institute for Jewish Proletarian Culture of the Ukrainian Academy of Science in May 1936, Erik was arrested and exiled to the Viet-losian prison camp in Siberia, where he died.

[Elias Schulman / Barry Trachtenberg (2<sup>nd</sup> ed.)]

**ERIKSON, ERIK HOMBERGER** (1902–1994), U.S. psychoanalyst. Born in Frankfurt, Germany, Erikson immigrated to the U.S. in 1933. He taught and did research at Harvard, Yale, and the University of California until 1951, when he joined the senior staff of the Austen Riggs Center at Stockbridge, Mass. In 1960 he was appointed professor of human development and psychiatry at Harvard. Erikson's research into the cultures of the Yurok and Sioux Indians resulted in *Childhood and Society* (1950, 1963<sup>2</sup>), in which he discussed childbearing methods and human development. In the same book he dealt with the evolution of identity and character, including the American and German, and with antisemitism and the role of Jews in changing culture. In *Young Man Luther* (1958), Erikson related the reformer's adolescent crisis of identity (identity versus identity diffusion) and the historical crisis of his age. He later clarified his concept of the synthesis of the ego through successive identifications by the child with individuals, group ideals, and goals. His *Insight and Responsibility* (1966) discusses the ethical implications of psychoanalytic insight and the responsibility of each generation to succeeding generations.

Other books by Erikson include *Identity: Youth and Crisis* (1968), *Gandhi's Truth on the Origins of Militant Nonviolence* (1969), *The Twentieth-century Sciences: Studies in the Biography of Ideas* (1972), *Dimensions of a New Identity* (1974), *Life History and the Historical Moment* (1975), *Toys and Reasons:*

*Stages in the Ritualization of Experience* (1977), *Adulthood: Essays* (1978), *Themes of Work and Love in Adulthood* (1980), *St. George and the Dandelion: Forty Years of Practice As a Jungian Analyst* (1982), *Vital Involvement in Old Age: The Experience of Old Age in Our Time* (1986), *Identity and the Life Cycle* (1988), *The Life Cycle Completed* (1995), and *The Erik Erikson Reader* (2000).

For *Gandhi's Truth* (1969), Erikson was awarded the Pulitzer Prize and National Book Award.

Erikson is labeled an ego-psychologist in that he built on Freud's early work on the ego, though with emphasis on social rather than sexual factors. He is best known for his work in expanding Freud's theory of stages. Often referred to as the "father of psychosocial development" and "the architect of identity," and the man who coined the term "identity crisis," Erikson believed that development functions by what he called the "epigenetic principle." According to this principle, we develop through a predetermined unfolding of our personalities in eight stages. Each person's progress through each stage is in part determined by his/her success, or lack of it, in the previous stages. If one interferes with any stage of that natural order of development or does not manage a stage well, one could develop maladaptations and malignancies as well as jeopardize one's future development.

Erikson also theorized about the interaction of generations, which he called "mutuality": not only do parents influence their children's development, as Freud suggested, but children also influence their parents' development, Erikson contended.

[Louis Miller / Ruth Beloff (2<sup>nd</sup> ed.)]

**ERLANGER (D'Erlanger)**, family of German bankers, originating in Frankfurt. RAPHAEL ERLANGER (1806–1878) learned banking with the Rothschilds and eventually established in Frankfurt his own bank, Erlanger and Sons, which was mainly concerned with the formation of German provincial banks and existed until 1904. Raphael received titles from the rulers of Portugal, Saxe-Meiningen, and Austria. Three of his sons expanded the banking operations. VICTOR (1840–1894) managed the Vienna branch which went into liquidation in the 1890s. FREDERIC-EMILE (1832–1911) established the London house. LUDWIG (1836–1898) headed the original bank in Frankfurt, which was absorbed by the Dresdner Bank in 1904. In Paris and London the Erlangers

became part of Europe's banking elite, although their attempt to float a Confederate loan during the American Civil War miscarried.

[Joachim O. Ronall]

**ERLANGER, CAMILLE** (1863–1919), composer. Born in Paris of an Alsatian family, Erlanger studied composition at the Paris Conservatoire with Delibes and Massenet, and received the Rome Prize in 1888 for his cantata *Velléda*. Erlanger wrote nine operas. His first opera, *Kermaria*, produced in 1897 by the Opéra-Comique, made little impression. However, his next attempt – *Le Juif Polonais* (1900), based on the story by Erckman-Chatrion – was very popular and remained in the operatic repertoire until 1933. His most popular opera was an opéra-comique – *Aphrodite* (1906), adapted from Pierre Louÿs' novel and performed over 180 times in 20 years. Erlanger was particularly influenced by Weber, whom he greatly admired, and to a much lesser extent by Wagner. Other operas of his are *Bacchus triomphant* (1909) and *Hannele Mattern* (1911). He also wrote the symphonic poem *Maître et Serviteur*, based on Tolstoy's story, which remained in manuscript; *La Chasse fantastique* (1893); *Le fils de l'étoile* (drame musical, 1904), and many songs.

**ADD. BIBLIOGRAPHY:** Grove online; C. Mendès, "Le Juif polonais," *Le journal* (April 11, 1900); A. Bachelet, "Camille Erlanger," in: *Monde musical*, v (1919).

**ERLANGER, JOSEPH** (1874–1965), U.S. physiologist and Nobel Prize winner. Erlanger, who was born in San Francisco, graduated from Johns Hopkins University in 1899. From 1906 to 1910 he was professor of physiology at Wisconsin Medical School and from 1910 held the chair of physiology at Washington University School of Medicine in St. Louis. He and Herbert Spencer Gasser received the 1944 Nobel Prize for physiology and medicine, for their work on the functional differentiation of nerves and on the influence of pulse pressure on kidney secretion. Erlanger made fundamental contributions to the knowledge of the cardiovascular and nervous system and to methods of physiological investigation. He invented a graphic method for measuring blood pressure and studied the mechanism of production of sounds used in measuring blood pressure by the auscultatory method. He studied nerve action potentials by cathode ray oscillograph; induction shocks as stimuli; traumatic shock and impulse initiation and conduction in the heart.

[Suessmann Muntner]

**ERLANGER, MICHEL** (1828–1892), French communal worker. Son of the rabbi in Wissenbourg, Alsace, he had a traditional Jewish education. Erlanger was among the founders of the \*Alliance Israélite Universelle and a member of its

central committee. He helped Charles \*Netter to establish the \*Mikveh Israel agricultural school, and accompanied Baron Edmond de \*Rothschild's representative, Albert \*Cohn, on his visits to Erez Israel. Erlanger advised Rothschild on his philanthropic activities and acted as his liaison with the \*Hibbat Zion movement and colonists in Erez Israel. He was vice president of the Jewish \*Consistoire in Paris, a member of the board, and treasurer of the Société des Etudes Juives.

[Yehuda Slutsky]

**ERLANGER, PHILIPPE** (1903–1987), French writer and art critic, son of Camille \*Erlanger and related on his mother's side to the Comte de \*Camondo. Born in Paris, Erlanger wished to become a diplomat but worked principally at the Ministry of Education, where for 40 years he headed the cultural-exchange office. In this position he organized hundreds of exhibitions and was one of the founders of the Cannes film festival. Erlanger was also a prolific journalist and art critic (*Les Peintres de la réalité*, 1946; *Les Gisants*, 1947) and wrote more than 30 books. He began as a novelist, but from the 1930s his main work was biographical, falling midway between scientific historical research and literary psychological studies. Among his subjects have been the French kings Charles VII (1945), Henri III (1933), Louis XIII (1946), Louis XIV (1961, 1965), and their entourage: Diane de Poitiers, Henri II's favorite (1955), the two antagonistic advisers of Louis XIII, Cinq-Mars (1962) and Richelieu (3 vols., 1967–1970), Gaston d'Orléans, Louis XIV's brother (1953), and the "Régent" Philippe d'Orléans (1938), as well as Marguerite d'Anjou, queen of England (1932), the Duke of Buckingham (1951), and the Borgia family (1934). The only contemporary subject of his biographies was Georges Clemenceau (1968). Erlanger received many prizes and honors.

**BIBLIOGRAPHY:** *Biblio*, 24 (June/July 1966), 6.

**ERLICH, HENRYK (Wolf Hersh; 1882–1941)**, journalist; leader of the \*Bund in Poland. Erlich was born of a well-to-do family in Lublin; his father was a Ḥasid who became a *maskil* and a Ḥovev Zion. Having joined the Bund in 1903 while a student at the University of Warsaw, Erlich was arrested several times for revolutionary activities and expelled from the university. Later he graduated in law from the University of St. Petersburg and became a member of the central committee of the Bund. After the 1917 revolution he was a leading figure in the Petrograd (Leningrad) Workers' Soviet. In October 1918 he returned to Warsaw, becoming prominent in the Bund, and editor of the party's Yiddish daily *Di Folkstsaytung*. He was a member of the Warsaw city council and the *kehillah* board, and participated in numerous international socialist congresses. On the German invasion of Poland in September 1939 Erlich left Warsaw with his family, and in October was arrested by the Soviet authorities. With Victor \*Alter he was

accused of active subversion and helping Polish intelligence, and was condemned to death; the sentence was later commuted to ten years' hard labor. In September 1941, following the amnesty for all convicted Polish citizens in Soviet Russia, Erlich and Alter were set free. After their release they were approached by Soviet representatives to join a Jewish anti-Fascist committee. However, in the early morning of Dec. 4, 1941, they were again arrested in Kuibyshev. According to a communication of Feb. 23, 1943, from Maxim \*Litvinov, then Soviet ambassador to the United States, addressed to William Green, president of the American Federation of Labor, Erlich and Alter were executed shortly after their arrest "for hostile activities, including appeals to the Soviet troops to stop bloodshed and immediately conclude peace with Germany." The executions aroused worldwide protests by Labor and Liberal organizations. His wife, whom he married in 1911, was SOPHIA \*DUBNOW-ERLICH (1885–1986), the daughter of the historian Simon \*Dubnow.

[Ezekiel Lifschutz]

**ERLICH, VERA STEIN** (1897–1980), Yugoslav social-cultural anthropologist and psychologist. Vera Erlich devoted many years to the study of family relationships in rural areas. She managed to save her material on the eve of World War II, and it eventually formed the basis of her book *Porodica u transformaciji* (1964; *Family in Transition: A study of 300 Yugoslav villages*, 1966). From 1945 to 1950 Vera Erlich was a United Nations Relief and Rehabilitation Administration (UNRRA) psychiatric social worker with displaced persons in Italy. She then went to the United States, and for ten years acted as lecturer in Slavic languages and literature and a research fellow in anthropology at Berkeley University. In 1960 she returned to Yugoslavia and became a professor in anthropology at the University of Zagreb. Her published works include *Savremeno dijete* ("The Contemporary Child," 1936) and *U društvu sa čovekom* ("In the Company of Man," 1968). In her capacity of professional consultant, she was helpful to the operations of UNRRA (the United Nations Relief and Rehabilitation Administration) and the IRO.

She was married to Dr. Benno Stein, a noted psychologist of Zagreb, murdered in the Jasenovac death camp.

[Zdenko Lowenthal]

**ERLIK, DAVID** (1909–1995), Israeli physician, one of the founders of modern surgery in Israel. Erlik was born in Pinsk, Russia, in 1909. His family came to Palestine in 1924 and settled in Haifa. From 1928 to 1935 he studied medicine in Strasbourg, France. In 1936 Erlik was accepted for a residency in

Jerusalem's Hadassah Hospital, where he spent the next dozen years training in general surgical techniques. In 1948 he was asked by Israel's Ministry of Health to put together the surgical department at the abandoned British Mandatory Hospital in Haifa, by then renamed Rambam Hospital. As its chief of surgery for over 30 years, Erlik was instrumental in making Rambam the major medical center in northern Israel, including the successful association between the Haifa Technion and Rambam's medical school, which opened its doors in 1969.

Erlik was a pioneer and innovator of surgical procedures involving the blood vessels in the abdomen and kidneys. In 1966 he carried out the first kidney transplant in Israel, and under his stewardship Rambam became the leading transplant center in the country. Erlik created a surgical standard of excellence with which he imbued the next generations of surgeons in Israel.

Erlik was awarded the Israel Prize in life sciences in 1992.

**ERMAN, JOHANN PETER ADOLF** (1854–1937), German Egyptologist, usually cited as Adolf Erman, or A. Erman. Erman studied at Leipzig and Berlin under Georg \*Ebers, and then became director of the Egyptian Section of the Berlin Museum and professor of Egyptology (1884–1923). Primarily a philologist, his work established a solid foundation for all subsequent philological study in ancient Egyptian. At the turn of the 20<sup>th</sup> century, under the auspices of the Prussian Academy of Science, he began work on the great dictionary of the Egyptian language, the *Woerterbuch der aegyptischen Sprache* (vol. 1, 1926). The second revised edition of his *Neuaegyptische Grammatik* (1933<sup>2</sup>), dictated from memory when he was virtually blind, still remains the standard grammar of Late Egyptian. In addition to numerous philological, technical works, he wrote popular books on Egyptian literature, culture, and art. In an article "Eine aegyptische Quelle der Sprueche Salomos" (in *Sitzungsberichte der Deutschen (Preussischen) Akademie der Wissenschaften*, 15 (1924), 86–93), Erman maintained the direct relationship of Proverbs 22:17–24:22 to the Instruction of Amen-em-opet. This had considerable repercussions in biblical studies, for scholars began to see the close, sometimes direct, relationship of biblical wisdom literature to ancient Near Eastern wisdom literature. Erman, himself a Protestant, was of Jewish descent, and although not actively persecuted, suffered indignity and humiliation under the Nazis until his death in Berlin. His autobiography *Mein Werden und mein Wirken* appeared in 1929.

**ERNAKULAM** (formerly **Angicaymal**), town in Kerala, India, about 5 mi. (8 km.) from \*Cochin. A community of "black Jews" is known to have existed there since the 15<sup>th</sup> century. Moses \*Pereira de Paiva (1687) lists it as the second largest Jewish settlement on the Malabar Coast after Cochin, with 150 families. In 1970 "Jew Street" contained two large synagogues, Theckoobagam (said to have been built in 1625) and Kadvoobhagam (1150), formerly containing valuable liturgical objects; services were held in them alternately on the Sabbath and festivals. Two old cemeteries lie some distance from this street. In 1922, the elders of the synagogues wrote to the British Zionist Federation expressing their desire to settle in Palestine. In recent years the community has declined, mainly because of emigration to Israel. None of the Ernakulam synagogues function any more.

[Walter Joseph Fischel]

**ERPENIUS (van Erpe), THOMAS** (1584–1624), Dutch Orientalist. Erpenius traveled (1608–12) extensively through the libraries of Europe, availing himself while at Venice of Jewish instruction. In Leiden, where in 1613 he was appointed professor of Oriental languages (initially excluding but from 1619 on including Hebrew), he ran an Oriental press. Erpenius' own work covers various Oriental languages, such as his *Orationes tres de Linguarum Ebraeae et Arabicae Dignitate* (Leiden, 1621). His works include grammars of Hebrew (Leiden, 1621; Geneva, 1627; Leiden, 1659); of Aramaic and Syriac (Amsterdam, 1628); the books of Samuel and Kings edited and translated into Hebrew and Latin; the Pentateuch in Arabic (Leiden, 1621); Psalms in Syriac (1628); and a treatise on the punctuation of the divine name (Rostock, 1626). After Erpenius' death his Oriental manuscripts were purchased and donated to Cambridge University (a.o. Hebrew Mss. Ee. 5.8–10, Mm. 6.26.1–2).

[Raphael Loewe]

**ERRERA, CARLO** (1867–1936), Italian geographer and historian of exploration. Errera, who was born in Trieste, and originally trained as a geographer, became interested in the Italian explorers and cartographers of the 15<sup>th</sup> and 16<sup>th</sup> centuries, and produced numerous monographs on their activities. These detailed analyses were synthesized in *L'Epoca delle grandi scoperte geografiche* (1902, 1926<sup>3</sup>). An "Irredentist" with a particular interest in the Adriatic region, Errera wrote a number of books and pamphlets on this subject. He was vice president of the Italian National Research Council.

[Frank D. Grande]

**ERRERA, LÉO** (1858–1905), Belgian botanist and Jewish leader. Errera studied in Brussels, Strasbourg, and at the Botanical Institute of Wuerzburg. In 1884 he was appointed lecturer at the University of Brussels (professor, 1895), where he founded the Botanical Institute in 1891. In 1898 he was elected to the Royal Academy of Belgium. Errera's research included discovery of glycogen as the reserve carbohydrate of fungi, studies on the role of alkaloids in plants, and pioneer studies on the physical laws governing the shape of cells. His collected works were published in five volumes between 1908 and 1922. Errera was prominent in local and international Jewish activities. He was connected with the Alliance Israélite Universelle and he participated in many international conferences on Jewish questions. In 1893 he published a pamphlet protesting the persecution of Russian Jews, *Les Juifs russes: extermination ou émancipation* (English ed. 1894; German ed., together with the author's study on the Kishinev pogrom, 1903). His brother was Paul Joseph \*Errera.

**BIBLIOGRAPHY:** Massart, in: *Annuaire de la Société Royale des Sciences naturelles et médicales de Bruxelles* (1905); Fredericq and Mossart, in: *Annuaire de l'Académie Royale de Belgique* (1908), 131–279; A. Errera, in: *Commemoration Léo Errera*, ed. by Université libre de Bruxelles (1960), 17–37 (includes bibliography); Pelseener, in: *Bulletin de la Société Royale de Botanique de Belgique*, 92 (1960), 269–70.

**ERRERA, PAUL JOSEPH** (1860–1922), Belgian jurist. Born in Brussels, son of the banker Jacques Errera, Paul Errera became professor of constitutional law at Brussels, was rector of the university from 1908 to 1911, and its administrative vice president in 1919. He was a member of the Royal Academy of Belgium. Errera published several works on Belgian law, including *Les Masuirs* (1891), *Les Warechaix* (1894), and *Traité de Droit public belge* (1918<sup>2</sup>). He was active in Jewish affairs and a member of both the Jewish Colonization Association and the central committee of the Alliance Israélite Universelle.

[Rose Bieber]

**ERTER, ISAAC** (1791–1851), Hebrew satirist of the Haskalah. Born in Koniuszek near Przemyśl, Erter, during the earlier part of his life, lived in various places including Lvov, where he, together with a group of young *maskilim*, was excommunicated in 1816 by Rabbi Jacob Ornstein; Budapest, where he studied medicine (1825–29); and Brody, then an important commercial and cultural center for Galician Jewry, where he settled in 1831 and remained for the rest of his life. In addition to his literary work, Erter was also active communally among Haskalah circles, showing special interest in the plans for a reform of contemporary Jewish society. Toward the end of his life, he collaborated with his friend Y.H. \*Schorr in the early stages of the founding of *He-Ḥalutz*, a Hebrew periodical dedicated to the study of Judaica in the spirit of religious reform, and distinguished by a boldly critical treatment of problems relating to Jewish tradition.

Erter's only book, *Ha-Zofeh le-Veit Yisrael* ("The Watchman of the House of Israel," 1858), consists of five satires, all of which had been published separately (between 1823 and 1851) with the addition of some personal correspondence relevant to his literary career. Noteworthy among the satires are the following: *Ḥasidut ve-Ḥokhmah* ("Ḥasidism and Wisdom"), *Tashlikh* (the ceremony of symbolically casting one's sins into the water on Rosh Ha-Shanah), and *Gilgul Nefesh* ("Transmigration of the Soul"). Written in the form of epistles, several of the satires seem to have been modeled on the work of Lucian, the second-century Greek satirist, whose writings were very popular in European Rationalist literature and which Erter came to know in Wieland's German translation. Lucian's satiric and ironic treatment of Greek mythology and of ignorant and boorish antiquity during its decline was adapted by Erter in his fight against the traditionalist Jewish society of his day. The recurring character – a type of "*persona satirae*" – "the watchman of the House of Israel," has its source in the prophet-castigator of Ezekiel 3:17 (whence also the title); by virtue of the authority of the biblical figure, Erter's watchman reviews the reality of Jewish society in Galicia and Poland in the first half of the 19<sup>th</sup> century. In this narrative, written in an autobiographical manner, the "observer" gathers evidence and confronts the reader with confessions of figures belonging to an imaginary, fanciful world, confessions made in a dream state or after death. Having endowed them with a keen rhetoric ability, Erter enables these figures to explain their character and experience by ironic exaggeration, coupled with the idealistic pathos characteristic of the Haskalah movement.

The subjects treated in the satires are the hypocrisy, ignorance, and superstition, which in Erter's view characterize the world of Ḥasidism; the rabbis, who are accused of pedantry, pursuit of personal glory, and literary plagiarism; and the leaders of the Jewish community, condemned for their corruption. The irony is likewise directed, although to a lesser extent, at the *maskilim*, who ignore the plight of their brethren, and at Erter's colleagues, the physicians, who abuse their profession out of either ignorance or the pursuit of gain and glory. These facts are presented in an extremely satiric form with Erter's frequent use of not only conventional personifications of human qualities, in the tradition of satirical allegory, but also demonic figures drawn from the Jewish legends, such as angels, Samael, and reincarnated souls. The satirist pretends to be an objective reporter of empirical facts who, in his experimental approach, employs such satiric devices as scales which expose the true value of human qualities, nets which catch the sins of persons regarded by all as above reproach, and the cynical confessions of deceased sinners. He even has recourse to the pseudo-magical devices of a miraculous shortening of a journey and instantaneous flight to distant places so as to keep track of events in all areas of Jewish sojourn. The number of observations made is basic to his method, for in describing as many facets as possible of Jewish life which to

him seem disgraceful, Erter seeks to stress his accusations by way of irony. Assuming an air of innocence, he is apparently surprised and shocked at the various reports of deceit and ignorance which are conveyed to him by the characters which inhabit the shadow of his sketches. His style is most important in the shaping of his satire. Using biblical phraseology extensively, he highlights the disparity between the sublime and the ideal in the original biblical source from which that phraseology is drawn and the ugly and the ridiculous state of the contemporary world which it describes. He also parodies traditional legal sources and adapts for his purpose some traditional sayings and proverbs. His idiom reflects the elaborate Hebrew style of the period and does not lack a certain rhetorical symmetry. A new edition of *Ha-Zofeh le-Veit Yisrael* was published in 1996.

[Samuel Werses]

**ERUV** (pl. **Eruvin**; Heb. עֲרֻבֵי), term applied to various symbolical acts which facilitate the accomplishment of otherwise forbidden acts on the Sabbath and festivals. The literal meaning of *eruv* is “mixing” and it probably connotes the insertion of the forbidden into the sphere of the permissible (cf. Maim., *Yad*, *Eruvin*, 1:6). Thus, though it is forbidden (biblically, according to some authorities, rabbinically, according to others) to walk further than 2,000 cubits from one’s town on the Sabbath or festivals, one may “mix” the forbidden and permitted areas by establishing an *eruv tehumim* (boundary *eruv*). This is accomplished by placing sufficient food for two meals (also called *eruv tehumim*) less than 2,000 cubits from the town, thus establishing another “residence” from which one can again walk the permissible distance in any direction. This ordinance is evidently ancient since its existence is assumed in tannaitic sources (cf. *Er.* 3–5; *Tosef. Er.* 3–7; et al.). It is discussed extensively in the Talmud (cf. *Er.* 26b–61b; *TJ, Er.* 3–5) and by later authorities (e.g., *Tur, Sh. Ar.*, *OH* 408–16).

A similarly old statute (attributed to Solomon in *Er.* 21b) is that of *eruv hazerot* (domain *eruv*). While carrying between private and public domains is forbidden on the Sabbath, the rabbis also forbade carrying between two private domains. For example, if several houses opened onto one courtyard, an object could not be removed from one house to another, nor

from a house to the courtyard (the latter is considered private property, owned by all the residents, if it is surrounded by a wall at least ten handbreadths high). To facilitate such carrying, a loaf of bread (called *eruv hazerot*) owned by all the residents is placed in one of the houses, thereby symbolically creating mutual ownership of all the dwellings. The houses and courtyard are thereby “mixed” together into one private domain. The sources indicate that *eruv hazerot* was already practiced in the time of the Second Temple; the details are elaborated in rabbinic literature from tannaitic times (*Er.* 1:10; 2:6, et al.; see also *Er.* 17b; 61b–82a, et al.) down to the later codes (cf. *Tur, Sh. Ar.*, *OH* 366–95).

To “mix” private and public domains in order that an individual may carry from one to the other or within the latter, an *eruv* is erected around a given settled district. According to most early authorities, this *eruv* consists of a minimum of four poles at least ten handbreadths high, connected by other poles from top to top, forming the shape of a gate. The accepted practice among Jewish communities for generations has been to erect such an *eruv* by connecting poles (of the required height) with iron wires. A minority opinion among the authorities, based on a disagreement of interpretation of a talmudic section (*Er.* 11a–b; cf. *Tur, Sh. Ar.*, *OH* 362), holds that the poles must also be no more than ten cubits apart.

No *eruv*, however, can permit carrying within what rabbinic law considers as falling under the biblical definition of public domain (cf. *Shab.* 6b; *Er.* 6). According to most authorities, such a domain is defined as an area crossed by at least 600,000 people (the number of Jews who fled Egypt) every day, and this definition is accepted in law. Since such public domains exist only in the largest cities, an *eruv* is effective in most areas. Some consider the minority opinion, which finds a biblically defined public domain in most settlements. While individuals refrain from carrying in such areas, the authorities admit that this practice is not required of everyone by law (cf. *Shab.* 6b; *Tos. to Shab.*, s.v. *Kan*; *Tur, Sh. Ar.*, *OH* 303, 345.)

According to rabbinical decree, in order to cook for the Sabbath during a festival immediately preceding it, one must establish an *eruv tavshilin* (cooking *eruv*). Before the festival, bread and a cooked food (some feel the former is unnecessary) are put aside for the Sabbath. Since the preparation of food for the Sabbath begins before the festival, it may be continued during the holidays. The preparation of food for the festival and that for the Sabbath are thus “mixed.” The food prepared before the holiday is “mixed” with that prepared within the day, and the use of both is permitted. The term *eruv tavshilin* is applied both to the act of setting aside the food and to the food itself. This practice also evidently dates from an early period, since a controversy is recorded between the schools of Shammai and Hillel regarding one detail: Bet Shammai held that not one but two cooked dishes must be set aside. *Eruv tavshilin* is made by every householder, although, in principle, one man’s *eruv* (e.g., that of the rabbi) can dispense the whole congregation or city. The making of the *eruv* is preceded by the standard benediction “Blessed art Thou ... Who hast sanc-

tified us with Thy commandments and hast commanded us concerning the ordinance of the *eruv*” followed by an Aramaic sentence to the effect that “by virtue of this *eruv* it is permitted to bake, to cook, and to kindle light as well as to provide for our necessary wants on this festival day for the succeeding Sabbath; for us and for all the Israelites living in this town.” In some congregations it is customary to announce before the evening service of the festival that those who have forgotten to make *eruv tavshilin* are dispensed by the rabbi’s *eruv*. In the Portuguese rite of Amsterdam the congregation was reminded by the *hazzan* on the day preceding the eve of the festival of the obligation to make *eruv* (*Vosses tens obrigacao de fazer Hirub*). The rules regarding *eruv tavshilin* are discussed in the Talmud (cf. Mishnah Beḥa 2:1; TB, Beḥa 16a–17b; TJ, Beḥa 2:1) and the codes (Sh. Ar., OH 527).

[Zvi Kaplan]

**ERUVIN** (Heb. עֲרוּבֵין), the second tractate of the order *Mo'ed* in the Mishnah, Tosefta, and in both the Babylonian and Jerusalem Talmuds. It deals with all aspects of the Sabbath *eruv*: *eruv* of Sabbath boundaries, the *eruv* of courtyards, and the *eruv* of the partnership of alleys (see \**Eruv*). It is thus a continuation of the tractate *Shabbat*, and in fact, it appears that originally the two tractates were one, but in view of its length (24 and 10 chapters) it was divided into two. This is evidenced by the fact that the last chapter, the Mishnah of *Eruvin*, is a kind of supplement to both *Shabbat* and *Eruvin* and deals with several details of the law of the Sabbath. The Tosefta of *Eruvin* also concludes with a statement which applies to the Sabbath: “The *halakhot* of the Sabbath ... are like mountains hanging by a hair, having few biblical verses and many *halakhot* that have nothing upon which they can be supported” (cf. Hag. 1:8). *Eruvin* contains traditions which relate to the realia of the Second Temple period. Thus chapter 1:10 states that soldiers proceeding to battle are exempted from four things: they are permitted to collect wood for fuel from any place – and it is not regarded as theft; they are exempt from washing hands before touching food; they do not have to tithe \**demai* produce; and they are permitted to carry things from tent to tent and from the tent into the camp without an *eruv*. Chapter 10:11–15 similarly gives a collection of *halakhot* regarding activities generally forbidden because they conflict with the spirit of Sabbath rest but permitted in the Temple. The chief sources of the Mishnah of *Eruvin* in its present form are, as usual, the pupils of Akiva-Meir, Judah, Yose, Simeon, and Eleazar. It is said of Judah that wherever he teaches a Mishnah in *Eruvin*, the *halakhah* goes according to his teaching (Er. 81b).

The first two chapters deal with the alley and with domains of a semi-private nature (*karmelit*), where the sages permitted carrying after minor modifications had been made. Chapters three to five deal with the limits of travel on the Sab-

bath and their extension by *eruv*. The next three chapters deal with the *eruv* of courtyards and of entrances owned jointly, and, as stated, chapter ten discusses various details of the *halakhot* of the Sabbath. According to Mishnah 6:1, if a Jew shares a courtyard with a non-Jew or with one who does not admit the validity of the *eruv* (such as a Samaritan or a Sadducee), he is thereby precluded from carrying articles from his house into the common alley on the Sabbath. The effect of this law was to limit joint residence with a gentile or sectarian in a building served by a common courtyard, or using the courtyard on Sabbaths (cf. Er. 62b: “lest he learn from his actions”). In the Jerusalem Talmud (Er. 7:9, 24c), however, Joshua b. Levi states: Why are *eruvim* made in courtyards? For the sake of peace, i.e., the carrying of the food before the Sabbath into the house of one of the neighbors for the *eruv* of courtyards promotes peace among the neighbors. The Jerusalem Talmud goes on to relate the case of a woman who was hated by her neighbor and sent her *eruv* through her son. When the neighbor saw the son she embraced and kissed him; on his return home he told his mother, who said, “She loves me so much and I did not know it,” and as a result they were reconciled.

The order of the chapters in the manuscripts differs from that in the printed text. In the Munich manuscript chapter five precedes chapter three, and in the Oxford manuscript chapter four follows chapter two and chapter five follows six, but the order of the Tosefta accords more with that of the printed texts even though in many *halakhot* its order is different from that of the Mishnah. The Tosefta in the printed texts and in the Vienna manuscript of *Eruvin* has eight chapters – in the Erfurt manuscript (Zuckerman’s edition) it is divided into 11 chapters – and supplements the topics dealt with in the Mishnah. Worthy of note are the collection of *halakhot* in chapter 4 (3): 5–9 which discuss war on the Sabbath. If gentiles come to attack Jewish cities, it is permitted to go out with arms and desecrate the Sabbath; this applies only if they are bent on hostilities which endanger lives, but if their purpose is only to take spoil, it is forbidden. If, however, they move against towns near the border, even if only to take chaff or stubble, it is permitted to go out against them with arms and desecrate the Sabbath. In the Babylonian Talmud tractate *Eruvin* is considered one of the most difficult tractates, apparently because of the mathematical calculations (see, e.g., 14a–b or 76a–b) as well as because of the difficulty in understanding the various designs of the domains and their mutual relationship, despite the fact that sketches are provided in order to illustrate them (starting with the later printed versions).

Many scholars conclude from the discussion in *Eruvin* 32b, where there occurs the phrase, “Did you embody it in your *Gemara*?” that the *amoraim* already possessed a *Gemara* on the Mishnah which was methodically arranged (see the epistle of Sherira Gaon, ed. by B.M. Levin (1921), 63; Hallevi, *Dorot*, 3 (1923), 117, et al.). It can also be seen from *Eruvin* 72a–b that there was an early editing of various discussions in the Talmud which preceded its final editing (see C. Albeck, *Mavo la-Talmudim* (1969), p. 578). Scattered throughout

*Eruvin* are many *aggadot* and ethical dicta. One tells how “for three years Bet Hillel and Bet Shammai disagreed, one school saying, ‘the *halakhah* follows us,’ and the other, ‘the *halakhah* follows us.’ A heavenly voice [*\*bat kol*] was heard to say, ‘Both are the words of the living God but the *halakhah* follows Bet Hillel.’ Since, however, ‘both are the words of the living God,’ why did Bet Hillel merit to have the *halakhah* established according to them – Because they were genial and modest, and taught their own sayings and those of Bet Shammai. Furthermore, they put Bet Shammai’s words before their own.... This teaches you that whosoever humbles himself the Holy One exalts, and whosoever exalts himself, the Holy One humbles” (Er. 13b). The method of learning and memorizing in the academy of Rabban Gamaliel of Jabneh and of Simeon b. Gamaliel is reflected in an anachronistic aggadic *baraita*, quoted in *Eruvin* 54b, that describes the “order of the Mishnah” which Moses received from the Almighty and its teaching to the elders and the nation (cf. Epstein, *Tanna’im*, 187). Among the many apothegms to be found in *Eruvin* are the following: “The numerical value of the word *yayin* [“wine”] is 70 and that of *sod* [“secret”] also 70, to teach that when wine enters, secrets are divulged” (65a); “A man’s character can be recognized by three things; by his cup [*kos*], by his purse [*kis*], and by his anger [*ka’as*]; some say also by his mirth” (65b). In addition to the many commentaries, editions, and translations available today, Abraham Goldberg has published a critical edition and commentary to Mishnah *Eruvin*, which discusses the historical levels in this tractate of the Mishnah, its relation to the Tosefta, and many of the traditions and interpretations found in the two Talmudim.

[Yitzhak Dov Gilat]

**ERWITT, ELLIOTT** (1928– ), U.S. photographer. Born in Paris to Russian parents, Er Witt immigrated to the United States with them in 1939. The family settled in Los Angeles, where Er Witt studied photography from 1942 to 1944 at Los Angeles City College. He worked as a photographic assistant in the U.S. Army before going to New York to study film. There, his work gained the regard of three influential figures in photography: Edward *\*Steichen* of the Museum of Modern Art; Robert *\*Capa* at Magnum, the photo agency; and Roy Stryker at the Standard Oil Company photo library. Steichen included several of Er Witt’s pictures in the Modern’s monumental 1955 “Family of Man” show, Stryker hired him as a staff photographer, and Capa promised a membership at Magnum after Er Witt’s two-year army hitch. He remained with Magnum for more than 50 years. Er Witt’s photography has often reflected his sense of humor: a quiet sense of the ridiculous, sometimes punctuated with visual puns, sometimes with hilariously candid juxtapositions. Most of his images, in black and white, were candid, taken with a small Leica, which he carried constantly. Some familiar photographs included Richard

M. Nixon and Nikita S. Khrushchev at the famous “kitchen debate” in the Soviet Union; a bored-looking dog lifting his leg during a political speech by Nelson A. Rockefeller; and Jacqueline Kennedy in Arlington National Cemetery, clutching the flag that covered her husband’s coffin. Other memorable pictures are of unknown people at unknown places and times. The cover of one of his books, *Personal Exposures*, for example, shows a photograph, taken at a beach in California in 1955, of a parked car whose side-view mirror reflects a couple kissing.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**ESARHADDON** (Akk. *Aššur-ah(a)-iddina*, “Ashur has given me a brother” (for the other siblings); Heb. אֶסְרָחַדְדִּין, king of Assyria from 680 to 669 B.C.E., third ruler of the Sargonid dynasty. Though a younger son, he was preferred for the succession because of the influence of his mother Naqī’a-Zakutu. His reign is characterized by three main policies. The first was the reconciliation of Babylonia by the rebuilding of Babylon, which his father Sennacherib had destroyed in 689 B.C.E. The second was the maintenance of Assyrian rule and influence in the northern and eastern marches of the empire, especially in the face of the Scythian invasion of 679 B.C.E. and its consequences in the north, and the gradual political and military consolidation of the Medes on the Iranian plateau. With some of the latter he concluded vassal treaties in 672 B.C.E. to ensure the orderly succession of his son Ashurbanipal to the throne. The terminology of these treaties bears comparison in structure and detail with various parts of the contemporary Book of *\*Deuteronomy*, especially the final section of curses in Deuteronomy 28:15ff. The third aspect of Assyrian imperial policy during the reign of Esarhaddon was the response to the danger of increasing Egyptian influence and intrigue among the vassal states of Syria, Phoenicia, and Palestine, involving punitive campaigns against insurgent cities in 677 and 675 B.C.E. and an expedition to the Arabian desert in 676 B.C.E., and culminating in the defeat and conquest of Egypt in 671 B.C.E. Esarhaddon relates that he made 22 western vassals, including *\*Manasseh* of Judah, drag beams and timber for the construction of his palace in Nineveh and stone statues of protective deities (see Pritchard, *Texts*, 291). This may be the historical nucleus of II Chronicles 33:11–12, according to which Manasseh was taken in chains to Babylonia by the army officers of the king of Assyria but was later allowed to return to his kingdom. But the political orientation of Judah in those years is obscure and Manasseh may have steered a national course for a time. Assyrian cultural influence in Judah was strong in the reign of Esarhaddon, and according to Ezra 4:2 he continued the colonization of Samaria with foreign settlers.

[Aaron Shaffer]

**ESAU** (Heb. אֶשָׂו; meaning uncertain; see below), the firstborn son of \*Isaac and \*Rebekah, the twin brother of \*Jacob (Gen. 25:24–26). Esau is also called Edom (25:30) and is the ancestor of the Edomites (Gen. 36; Mal. 1:2–3; see \*Edom). The Bible does not describe Esau at great length; but he is featured as a hairy man, “a skillful hunter, a man of the outdoors,” and the favored son of Isaac, in sharp contrast to Jacob, a mild man, “smooth-skinned,” and the favored son of Rebekah (Gen. 25:25, 27–28; 27:11). According to the biblical narrative, while Rebekah was pregnant with the twins, “the children struggled in her womb” and in her anxiety Rebekah “went to inquire of the Lord.” The oracle she received in reply describes, in fact, not so much the relationship between Jacob and Esau as that between the Israelites and the Edomites: each of the boys would become the progenitor of a nation, and “One people [would] be mightier than the other, and the older would serve the younger.” In a sense, the prophecy began to be fulfilled in the lifetime of the two ancestors, through two episodes in which Jacob gains the upper hand. First a starving Esau took an oath whereby he agreed to relinquish his birthright to his brother in exchange for a meal (25:29–34). The oath, it should be noted, was as binding as a written document. The narrative at this point contrasts with pentateuchal law, which guarantees certain privileges to the firstborn (Deut. 21:15–17), and reflects an earlier state of affairs in which the transfer of the birthright was possible. The socio-legal situation behind this incident is clarified in the finds of \*Nuzi (see \*Patriarchs). The second event which gives the struggle between the two brothers special significance is the loss by Esau of the patriarchal blessing (Gen. 27). Jacob, following the advice of his mother, disguised himself as Esau and received the blessing promised by Isaac to his brother. When Esau discovered the deception and implored his father for a blessing, he was told, “See, your abode shall enjoy the fat of the earth and the dew of heaven above. Yet by your sword you shall live, and you shall serve your brother; but when you grow restive, you shall break his yoke from your neck.” This “blessing” contains echoes of the oracle which Rebekah had received, the supremacy of the younger brother over the firstborn being emphasized in both cases. However, at the end of Isaac’s blessing there is a hint of Edom’s recovery of her independence in the days of Solomon (1 Kings 11:21–22, 25) and Jehoram (11 Kings 8:20–22). Incensed by Jacob’s deception, Esau intended to kill Jacob once Isaac was dead (Gen. 27:41). When Rebekah became aware of this, she advised Jacob to flee to her brother \*Laban in \*Haran, where he stayed for 20 years. Meanwhile Esau, having taken two wives from among the indigenous peoples of Canaan and a third from among the daughters of his uncle, Ishmael (regarding their names, and the parentages of the Canaanite ones, there are two different traditions: Gen. 26:34; 28:9; and

Gen. 36:2), and having begotten children, migrated with all his household and his belongings “to another land because of his brother Jacob. For their possessions were too many and the land where they sojourned could not support them because of their livestock” (Gen. 36:6–7). Esau settled in the land of Seir, alongside the descendants of Seir the Horite, who were already living there (36:20). When Jacob, on his way home from Haran, had advanced into \*Gilead as far south as \*Penuel, he decided to try to appease his brother by sending messengers with greetings. Esau set out to meet him with a band of 400 stalwarts; and when his messengers returned and made this known to Jacob, he was frightened and sent ahead some herds of livestock as gifts (32:4–22; 33:1–2). As it turned out, however, Jacob’s fears proved to be unfounded; for Esau came with 400 of his men to welcome his brother just south of the \*Jabbok, greeted him with every sign of affection, and refused to accept the gifts. He wished to escort Jacob and his company southward through Transjordan to his home in Seir where he would no doubt act the older, if not unkind, brother; but Jacob persuaded him to go ahead, and then proceeded westward to the land of Canaan (33:4–16). In this incident as in the sale of the birthright Esau is a good but simple fellow, easily manipulated by his wily brother.

Three popular etymologies are connected with Esau. In the description given of him at his birth – “red, like a hairy mantle all over” (Gen. 25:25) – at most only the second part can have anything to do with the name Esau (Heb. Esav, ‘Esaw), which may be related to the Arabic root *ġšw*, “to cover.” The redness, in contrast, can only explain his other name, Edom (Heb. ‘Edom), connected with the word *’adom* (“red”). In verse 30, the same name is explained by his impatient plea, when he came home hungry, for some of the “red stuff” (i.e., lentils) that Jacob was cooking. The red down (“hairy mantle,” Heb. *’adderet se’ar*) with which he is said to have been covered at birth may originally have served to explain the name Seir (Heb. *se’ir*).

[Yuval Kamrat]

### In the *Aggadah*

The personality of Esau is discussed in the *aggadah* from three different aspects, the differentiation between which causes difficulties. He is discussed as the brother of Jacob, as identical with \*Edom, and sometimes with \*Rome, with whom Edom was identified.

**JACOB’S BROTHER.** Esau’s relations with \*Jacob were a favored theme for many homilies and *aggadot*. Generally the *aggadah* follows the biblical account, and so do the pseudepigraphic works of the Second Temple period (particularly the Book of \*Jubilees and the \*Testament of the Twelve Patriarchs), but they aim at describing Esau as completely wicked. However, there are also descriptions aimed at finding some redeeming features in him, such as the dictum of Simeon b. Gamaliel: “All my days I attended upon my father but I did not attain to one hundredth of the attention Esau gave his father, for I attended him in soiled garments and when I went out to the market-place I went with clean clothes. When Esau,

however, attended his father, he waited upon him in regal garments, saying, 'Father's honor is to be respected only in regal garments'" (Gen. R. 65:16). So too the homily: "And Esau saw that the daughters of Canaan pleased not Isaac his father; so Esau went unto Ishmael and took Mahalath [Gen. 28:8–9]; Joshua b. Levi said: he intended to mend his ways [*Mahalat*, root: "to forgive"] because the Holy One pardoned his iniquities" (Gen. R. 66:13). The aggadists also find some merit in his relations with Jacob. Thus Simeon b. Yoḥai says: "It is a well-known fact that Esau hated Jacob, yet at that moment his compassion was turned to him and he kissed him wholeheartedly" (Sif. Num. 69, cf. a similar saying of Simeon b. Eleazar in Gen. R. 78:9). Here too, however, the opposite opinion is expressed that he did not kiss him "with his whole heart" or that he even "intended to bite him" (*ibid.*). The homilies which portray the wickedness of Esau are many and very diversified. He is said to have committed the most heinous sins – idolatry, adultery, and bloodshed (Gen. R. 63:12) – and he was hypocritical, asking questions like "how does one tithe salt ... how does one tithe straw?" (Gen. R. 63:10).

**ESAU AS EDOM.** The identification of Esau with Edom (cf. Gen. 36:1, 43) is often referred to in the Bible and is found in all the apocrypha and pseudepigrapha of the Second Temple period and naturally in talmudic and midrashic sources too. \*Amalek, the eternal enemy of Israel, is one of his descendants. Since the end of the Second Temple, the identification of \*Haman the Agagite (Esth. 3:1; 8:3, 5; 9:24) as "a descendant of the seed of Amalek" (an identification first found explicitly in Jos., Ant., 11:20, apparently on the basis of the connection between the name "Agagite" and \*Agag, king of Amalek: 1 Sam. 15:8–9, 20, 32–33, and cf. Num. 24:7) served as a fertile source for many homilies connecting the stories of the Book of Esther with Esau. Most of these homilies are naturally condemnatory, but there occur some with a slightly different tone, such as "R. Ḥanina said, whoever says that the Holy One is indulgent will be punished. The truth is that He is patient but ultimately claims His due; Jacob caused Esau to utter one cry [Gen. 27:34], and where was he requited? In Shushan the capital, as it is stated [Esth. 4:1] 'and he cried with a loud and a bitter cry'" (Gen. R. 67:4).

**ESAU AS ROME.** The identification of Esau with Rome is not found in the literature of the Second Temple period; attempts at detecting it in the Ezra Apocalypse (IV Ezra 6:7–8 and in Jos. Ant.) and in the Targum of \*Onkelos to the Pentateuch have no real basis. The identification appears first, apparently, in an *aggadah* of the period following the \*Bar Kokhba War (132–135 C.E.): "It has been taught: Judah b. Ilai said: My teacher Baruch (or, "blessed be he" – see later) used to say "The voice is the voice of Jacob, but the hands are the hands of Esau [Gen. 27:22]; the voice of Jacob cries out at what the hands of Esau did to him at Bethar'" (TJ, Ta'an. 4:8, 68d; Gen. R. 65:21, et al. – "Baruch my teacher" may be a cryptic reference to \*Akiva). The identification is also found in a conversation between Akiva and \*Tinneius Rufus (Tanḥ. Terumah,

3) and is common in the mouths of the scholars of the age following the Hadrianic persecutions (Gen. R. 67:7 – Yose b. Ḥalafta; Tanḥ. B., Deut. supplement 5 (p.5) – Simeon b. Gamaliel). Thereafter it became very widespread (see the anonymous homily in Sif. Deut. 41, ed. Finkelstein, p. 85). In general Esau is referred to in a derogatory vein but here too there are exceptions such as: "For the three tears that Esau shed [Gen. 27:38], Israel suffered in three wars, as it says [Ps. 80:6]: Thou hast fed them with the bread of tears, and given them tears to drink in large measure" (*shalish*, ARN<sup>2</sup> 47, 130).

**ESCALONA**, town in Castile, central Spain. A Jewish community existed in Escalona during the Muslim period and remained in the town after the Christian conquest in 1083. The rights of the Jews in Escalona were established by the *fuero* ("municipal charter") of 1130. This gave them equal status with Christians and Moors, although a Jew was not permitted to act as judge in Christian lawsuits. Jews in Escalona owned vineyards and real estate throughout the existence of the settlement there. In the 1290 tax distribution among the Jewish communities, the Jews of Escalona were not included specifically, probably due to their small number. The community was destroyed during the persecutions of 1391, but was renewed in the 15<sup>th</sup> century, when it was fairly small. In 1453 real estate in the city was given to R. Salamon, the physician of Countess Juana Pimentel, in appreciation of his services. The list of the taxes levied on the community is an important source of information, showing that it paid 1,000 maravedis in 1474, and 2,000 maravedis in 1482. The levy for the war against Granada amounted to 38 gold castellanos in 1485. The community paid 5,040 maravedis in 1489, 6,570 maravedis in 1490, and 4,000 maravedis in 1491. From a source preserved in the municipal archives we know that a Jewish quarter existed between 1477 and 1489. There is a reference to a Jewish slaughterhouse. Following the segregation of the Jews in 1483 the mosque of the Muslims was included within the Jewish quarter. Thus the community apparently continued to exist until the expulsion of the Jews from Spain in 1492. Don Isaac \*Abrabanel had business interests in the town. There was a group of \*Conversos living in Escalona, and those suspected of secretly practicing Judaism were tried by the Inquisition of Toledo.

[Haim Beinart / Yom Tov Assis (2<sup>nd</sup> ed.)]

**ESCAPA, JOSEPH BEN SAUL** (1570–1662), Turkish rabbi and author. Escapa was the descendant of a family from Castile which settled in \*Salonika. He served there as head of a yeshivah, and was a colleague of Ḥayyim \*Shabbetai. From about 1620 he was rabbi of the Salonikan community in Smyrna, and in 1648 was appointed rabbi of all the congregations of the city. Under his leadership, the united Smyrna community became one of the most important in Turkey. Gifted with administrative ability, he introduced regulations concerning the collection of taxes and the supervision of communal affairs; these practices are followed to the present day by the community of Smyrna and surrounding territory. Escapa's enactments were collected by R. Joshua Judah and published in his *Avodat Massa* (Salonika, 1846). Escapa was one of the most vehement opponents of \*Shabbetai Zevi, who was his disciple and whom he had ordained, and proclaimed it a religious duty to put Shabbetai Zevi to death. Escapa wrote a commentary on the Shulḥan Arukh, called *Rosh Yosef*, of which only sections – on *Oraḥ Hayyim* (Smyrna, 1657), and *Ḥoshen Mishpat* (*ibid.*, 1659) – were published. He also wrote responsa (Frankfurt on the Oder, 1709), and a work on \*Maimonides which has remained in manuscript.

**BIBLIOGRAPHY:** J. Sasportas, *Zīzat Novel Zevi*, ed. by I. Tishbi (1954), 378, index; Conforte, *Kore*, 46a; Rosanes, *Togarmah*, 2 (1938), 208–10; Werses, in: *Yavneh*, 3 (1942), 101 ff.; Scholem, *Shabbetai Zevi*, 89–90, 113, 119–20, 140, 304–5.

**ESCHATOLOGY.** In general, the term “eschatology” designates the doctrine concerning “the last things.” The word “last” can be understood either absolutely as referring to the ultimate destiny of mankind in general or of each individual man, or relatively as referring to the end of a certain period in the history of mankind or of a nation that is followed by another, entirely different, historical period.

#### INTRODUCTION

The Bible has no word for the abstract idea of eschatology. It does, however, have a term – *ʾaḥarit ha-yamim* – that often has eschatological connotations, at least in the broad sense mentioned above. It means literally “the end of the days,” i.e., “the end of time.” Just as the cognate Akkadian term, *ina aḥrāt ūmī* (from the older *ina aḥriāt ūmī*), often shortened to *ina aḥrāti*, means simply “in the future” or “for [all] the future,” so also the Hebrew term *be-ʾaḥarit ha-yamim* can sometimes mean merely “in the future, in time to come,” without necessarily having any eschatological connotation (thus, e.g., Deut. 4:30; 31:29; cf. *ʾaḥarit*, “a future,” in Jer. 29:11; et al.). In the Prophets, however, *be-ʾaḥarit ha-yamim* generally has an eschatological connotation (see below).

In the last few centuries before the destruction of the Second Temple, a new term with a strictly eschatological meaning in the absolute sense appears. This term, *kez* (*qez*) *ha-yamim*, means literally “the term of the days” (Dan. 12:13b; cf. the similar term, *ʿet qez* “the time of the term,” Dan. 8:17; 11:35, 40; 12:4, 9).

Some scholars have sought to derive Israelite eschatological ideas from similar concepts of its ancient neighbors, Egypt and Babylonia. At most, there may have been some borrowings from these sources by the Prophets in the secondary details of their descriptions dealing with the horrendous conditions of the eschatological period. More likely, the features for which there are early extra-Israelite parallels were concepts common to the entire ancient Near East. Essentially, eschatology in Israel is an inner-Israelite development. Only in the very later period, i.e., in Daniel and the so-called intertestamental literature of the Jews, can a certain amount of borrowing from Persian sources be shown as probable.

It is difficult to date several eschatological oracles. In certain cases where, for instance, reference is made in a pre-Exilic prophet to Jerusalem as already destroyed and the people of Judah as already in exile, it is legitimate to suggest that such passages are later insertions into the pre-Exilic Prophets. However, when such criteria are lacking, the supposition should normally be that the eschatological oracles in question belong to the pre-Exilic prophet to whom they are attributed.

#### IN THE BIBLE

For the sake of showing how eschatological ideas evolved in ancient Israel, it is useful to consider the preprophetic period, the early prophetic oracles, the later pre-Exilic Prophets, and the Exilic and post-Exilic Prophets.

#### Pre-Prophetic Period

In the age of the Patriarchs, of Moses and Joshua, and of the Judges, and in the first few centuries of the monarchy there is little evidence of true eschatology. Yet the basis of later Israelite eschatology was really laid down in that early age. From the time of Abraham on, those descendants of his who later called themselves *bene Yisrael*, “the Israelites,” venerated their one and only God as a “living God,” i.e., as one who took an active part in the history of His people. They were conscious of the fact that He had made them His “chosen people.” Since He was not only the special God of Israel but also the sole Lord of the entire world, Israelite religion combined a certain “particularism” as the “chosen people” with a certain universalism, which looked forward to their God's reign over all mankind. They regarded Him as a just God, who would reward or punish all men according to their morally good or evil lives. Because of His \*covenant with His chosen people, He proves Himself to be faithful and loyal to His promises (thus showing His frequently praised *ʾemet* or *ʾemunah*, “faithfulness,” and *ḥesed*, “mercy”); therefore in times of need He sends His people “saviors,” such as Moses and Joshua, the various “Judges,” and especially David, the ideal *mashiʾah*, “anointed” (see \*Messiah) king, who was promised an everlasting dynasty (11 Sam. 7:11–16). The hope and expectation that this relationship between the God of Israel and His people would continue in the future led to the genuine eschatology that is found in the books of the so-called “writing” Prophets (as distinct from such earlier prophets as Elijah and Elisha). The essential ori-

gin of Israel's eschatology lay in Israel's belief in its election by God as the means by which He would establish His universal reign over all mankind, combined with His promise to Israel of its own land, "the Promised Land," "the land of Canaan," as His pledge guaranteeing this promise.

### Early Pre-Exilic Prophets

Among all the prophets of Israel, only the recorded oracles of Amos and Hosea were uttered before the destruction of the Northern kingdom of Israel (722 B.C.E.).

AMOS. The prophetic activity of \*Amos took place in approximately 750 B.C.E., during the brief period of peace and prosperity that both Israel and Judah enjoyed after Jeroboam II, king of Israel (786–746), inflicted a decisive defeat (at an uncertain date) on the Arameans of Damascus (II Kings 14:25–27). This prosperity led to various forms of social injustice, whereby the relatively small class of rich landowners and government officials oppressed the poor, as well as to an indulgence by many of the people of both kingdoms in the degrading practices of their pagan neighbors. With divinely inspired foresight, Amos knew that these evils would bring about a time of crisis when the wrath of God would condemn to inevitable doom (Amos 1:3, 6, 9; et al.) not only the pagan nations (1:3–2:3) but also Judah and especially Israel (2:4–6:14). The prophet based his prediction of Israel's and Judah's punishment on the much older concept of their election by God as His "Chosen People": "You only have I known of all the families of the earth; therefore I will punish you for all your iniquities" (3:2).

In designating the time of God's future punishment, Amos was the first to call it "the \*Day of the Lord" (*yom YHWH*), a term that was taken up, with further developments of the concept, by many of the later prophets (Isa. 13:6, 9; Ezek. 13:5; Joel 1:15; 2:1, 11; 3:4; 4:14; Obad. 15; Zeph. 1:7, 14; Mal. 3:23), with variations such as "the day of the Lord's fury" (Zeph. 1:18), "that Day" (*ha-yom ha-hu'*, Isa. 2:11; Zeph. 1:15), or simply "the Day" (*ha-yom*, Mal. 3:19; cf. Ezek. 7:7). However, Amos did not invent the term; it is clear from his reference to it that it was already in popular use. Its origin is obscure, and at first it may have had a military connotation, "the day of the Lord's victory over the enemies of His people" (cf. the expression "the day of Midian" in Isa. 9:3, where, however, it refers to Israel's victory over the Midianites). In any case, at the time of Amos the common people were using the term to designate the time when their God would bring them complete victory over their enemies and thus lead them into the "light" of lasting peace and prosperity. The prophet turned this expectation of theirs directly against them: "Woe to you that desire the day of the Lord! Wherefore would you have the day of the Lord (YHWH)? It is darkness, not light... No, the day of the Lord shall be darkness, not light, gloomy, devoid of brightness" (5:18, 20). In 8:9–10 Amos enlarges on this theme: "And on that day, says the Lord God, I will make the sun go down at noon, and darken the earth in the clear day. And I will turn your feasts into mourning and all your songs into

lamentation; I will bring sackcloth upon all loins, and baldness on every head; and I will make it like the mourning for an only son, and the end of it like a bitter day." While Amos used the image of a midday eclipse of the sun merely in a figurative sense, the eschatological oracles of later prophets (e.g., Isa. 13:10) developed this image into vast cosmic disturbances, seemingly to be understood literally, that would accompany the Day of the Lord.

Although for Amos the event initiating the new historical era would be primarily one of punishment and destruction, he includes, because he is aware of God's fidelity to His promises, the hope that for those who "seek the Lord" (5:4–6) "it may be that the Lord, the God of hosts, will be gracious to the remnant of Joseph" (5:14–15). Here again there occurs the earliest use of a term, "the remnant" (*she'erit*; see \*Remnant of Israel), that was reused and at times received a different connotation in later eschatological writings (Jer. 6:9; 31:7; Ezek. 9:8; et al.; sometimes also in the form *she'ar*, Isa. 10:20–21; 11:11, 16; et al.). For Amos it designates those who will survive the destruction of the Northern Kingdom.

In order that the Book of Amos might end on a more positive note of hope, the last verses of the book (9:11–15), concerning the restoration of Israel, were apparently added by a post-Exilic editor. The later origin of this passage seems probable because it presupposes that the Davidic dynasty has come to an end and that the walls of Jerusalem have "breaches" and the city is in "ruins" (9:11).

HOSEA. It is generally agreed that \*Hosea, the only "writing" prophet who was a native of the Northern Kingdom, was a contemporary of Amos, although apparently a younger one, for some of his oracles were probably delivered shortly before the fall of Samaria, although none after that date (722 B.C.E.). Like Amos, Hosea inveighed vigorously against the moral evils in Israel. Yet his vehement threats of terrible punishments (Hos. 2:3–7, 16–25; 5:14; 10:14–15; 13:7–8; et al.) are mingled with generous promises of forgiveness and future happiness (2:16–23; 6:1–3; 11:8–9; 12:6; 14:2–9; et al.); this is done with such sudden and confusing transitions that some scholars regard the book as a rather haphazard collection of Hosea's short oracles strung together by some later editor in complete disorder, while others see in this a reflection on the Lord's part of the prophet's own experience with his faithless wife (1:2–9; 3:1–3; cf. McKenzie, in CBQ, 17 (1955), 287–289).

If eschatology is understood in the broad sense of a dramatic change from one historical period to an entirely different one in the future, Hosea no doubt shows genuine eschatological concepts. Some of these, which are original with him, played an important role in later eschatological writings. Such, for instance, is Hosea's concept of renewal of God's love for and covenant with Israel as in the days following the Exodus from Egypt (2:14–15; 11:1). The notable – and seminal – feature of this new covenant is that it has a built-in guarantee against Israel's ever giving cause for its dissolution as it did with the original covenant. With the covenant, Israel will receive a new nature

which will render it incapable of breaking it (Hos. 2:21–22; see Jeremiah below). Another notable eschatological concept is the view of a future in which Israel will never again be attacked by human enemies from without and will live in peaceful harmony with all living creatures within its border.

### Later Pre-Exilic Prophets

In the second half of the eighth century B.C.E. two prophets, Isaiah and Micah, were active in Judah, and some of their oracles are eschatological in the broad sense described above. Similar eschatological oracles are found in Zephaniah, Nahum, and Jeremiah, who lived about a century later.

**ISAIAH.** The authentic prophecies of \*Isaiah, who was active as a prophet from approximately 740 to at least 701 B.C.E., are found in the first 39 chapters (“Proto-Isaiah”) of the long book (66 chapters) that is attributed to him; even in the first 39 chapters there are several sections, some rather long (e.g., the eschatologically important “Apocalypse of Isaiah” in 24:1–27:13), that are later additions to the Book of Isaiah. These, as well as “Deutero-Isaiah” (40:1–55:13) and “Trito-Isaiah” (56:1–66:24) – the question of a Trito-Isaiah is still, however, disputed – will be considered below for their eschatological import. Only those oracles with eschatological bearing that are clearly or at least probably from Isaiah or his disciples are treated here.

Isaiah lived at a time of national crisis for Judah: the Assyrians under Tiglath-Pileser III (745–727) ravaged and annexed Syria and most of the northern kingdom of Israel, and under Shalmaneser V (727–722) and Sargon (722–705) subdued the rest of Israel and most of the Philistine plain; meanwhile the wicked Ahaz (735–715) and even the pious Hezekiah (715–687), kings of Judah, played the game of international politics rather than trust in help from the Lord. Filled with a deep sense of God’s utter holiness by his call to prophesy, Isaiah fulminated against idolatry and general wickedness in Israel and Judah. Many of his vehement threats of the punishment that would come on “the Day of the Lord” have a genuine eschatological ring: they predict universal destruction, not only for Israel and Judah, but also for the pagan nations, especially those who were the “rod of His wrath,” and these oracles often have the overtones of cosmic disturbances that became characteristic of later Jewish eschatology. Thus, for instance: “For the Lord of hosts has a day against all that is proud and lofty... And the haughtiness of man shall be humbled, and the pride of men shall be brought low; and the Lord alone will be exalted on that day” (2:12, 17); “You will be visited by the Lord of hosts with thunder, and with earthquake, and great noise, with whirlwind and tempest, and the flame of a devouring fire. And the multitude of all the nations that fight against Ariel ... shall be like a dream, a vision of the night” (29:6–7).

A recurring theme with eschatological implications in Isaiah is that of the “remnant of Israel” (10:21–22; 11:11, 16; 14:30; 28:5; 37:32). To some extent this term implies a threat, as in Amos 5:15 (cf. “only a remnant” in Isa. 10:22), but usually it includes a consoling promise that at least a remnant of the people will be left with whom the Lord will be pleased (cf.

“to recover the remnant of His people” in 11:11, and similar phrases in 4:3; 11:16; 28:5). There is no good reason for rejecting these passages as not authentic or for placing them in the Exilic or post-Exilic period, since there is mention of a son of the prophet with the symbolic name of Shear-Jashub (7:3), which means “a remnant shall return.” (This, however, occurs in a third person story about the prophet, and its historicity is therefore not technically assured; but see Isa. 6:11–13.)

A new theme in Isaiah is the prospect of a future ideal king of Judah. This occurs in the so-called Immanuel passages, although, apart from its use as an exclamation in 8:8, the name Immanuel, meaning “God is with us,” occurs only in 7:14, and the literary form of third person narrative, among other things, raises doubts as to its historicity (see \*Immanuel). When King Ahaz of Jerusalem is threatened with war by a coalition of the kings of Israel and Damascus if he does not enter into an anti-Assyrian league, Isaiah urges him to trust solely in the Lord and gives him this sign: “Therefore the Lord Himself will give you a sign: behold, a young woman shall conceive, and bear a son, and shall call his name Immanuel... Before the child knows how to refuse the evil, and choose the good, the land before whose two kings you are in dread will be deserted” (7:14, 16). Although the exact meaning of this passage is disputed, it is usually understood as referring directly to Ahaz’ son and successor Hezekiah, who is here given the symbolic name “God is with us.” Probably 9:5–6 is to be connected with this passage. Here, after singing of joyful peace following a great victory that the Lord has wrought for His people, the prophet continues: “For to us a child is born, to us a son is given; and the government will be upon his shoulder; and his name will be called Pele-Joez-El-Gibbor-Abi-Ad-Sar-Shalom [“Wonderful Counselor, Mighty God, Everlasting Father, Prince of Peace”]; of the increase of his government and of peace there be no end, upon the throne of David, and over his kingdom, to establish it, and to uphold it with justice and with righteousness from this time forth and for evermore. The zeal of the Lord of hosts will do this.” Finally, connected with these two prophecies is that of 11:1–5: “There shall come forth a shoot from the stump of Jesse, and a branch shall grow forth out of his roots. And the Spirit of the Lord shall rest upon him, the spirit of wisdom and understanding, the spirit of counsel and might, the spirit of knowledge and the fear of the Lord. And his delight shall be in the fear of the Lord. He shall not judge by what his eyes see, or decide by what his ears hear; but with righteousness he shall judge the poor, and decide with equity for the meek of the earth; and he shall smite the earth with the rod of his mouth, and with the breath of his lips he shall slay the wicked. Righteousness shall be the girdle of his waist and faithfulness the girdle of his loins.” These passages are quoted here at length because in their description of the future ideal king of Judah, they laid the foundation for the so-called Royal Messianism in the post-Exilic period, an important element in late Jewish eschatology. There is no solid reason for denying the Isaian authorship of these prophecies; even though the pre-Exilic prophets may not have held the

kingship of Judah, as they knew it, in high esteem, they must have been aware of the constant tradition based on Nathan's oracle concerning the perpetual endurance of the Davidic dynasty (II Sam. 7:12–16; Ps. 89:20–38; see \*Messiah).

Like Hosea 2:20, 23–25, Isaiah describes the peace of the Messianic age as a return to the happiness of the Garden of Eden, where all creatures, wild beasts as well as men, would live in tranquil harmony; “for the earth shall be full of the knowledge of the Lord, as the waters cover the sea” (11:6–9).

MICAH. Contemporaneous with Isaiah, \*Micah, a native of Moresheth in Judah, apparently had a much shorter prophetic ministry. Like Isaiah, he looked forward, in a broader eschatological sense, to an ideal ruler (the basis of Royal Messianism) who would be of the Davidic dynasty, coming from David's native town of Beth-Lehem (5:1–3).

The theme of Mount Zion's eventually becoming the religious center of all mankind, which is further developed in later Jewish eschatology, is first enunciated in a prophecy that is given, in almost identical words, in both Micah 4:1–4 and Isaiah 2:2–4. Some scholars hold that this prophecy is not original in either Micah or Isaiah, but that it was inserted in both books from some common source by a later editor. Yet there is no solid reason for assigning a post-Exilic date to it. Interestingly enough, in the post-Exilic book of Joel, where there is a description of the eschatological war that will be waged between the Lord and His pagan enemies, the classical words of the earlier oracle describing universal peace are turned into the directly opposite sense: “Beat your plowshares into swords, and your pruning-hooks into spears” (Joel 4:10).

ZEPHANIAH. The prophet \*Zephaniah probably uttered his oracles at about 640–603 B.C.E., in the first decade of the reign of King Josiah of Judah, a turbulent period when the idolatry and general wickedness of the people of Judah, combined with the political folly of Jerusalem's leaders in favoring the declining power of Assyria, led him to believe that “the great day of the Lord is near” (Zeph. 1:14). The bold imagery he used in describing this terrible “day” had much influence on later Jewish eschatological writings. After depicting the destruction of all the wicked on this day of doom (1:2–14), he cries out: “A day of wrath is that day, a day of distress and anguish, a day of ruin and devastation, a day of darkness and gloom, a day of clouds and thick darkness, a day of trumpet blast and battle cry against the fortified cities and against the lofty battlements. I will bring distress on men, so that they shall walk like the blind, because they have sinned against the Lord; their blood shall be poured out like dust, and their flesh like dung. Neither their silver nor their gold shall be able to deliver them on the day of the wrath of the Lord. In the fire of his jealous wrath, all the earth shall be consumed; for a full, yea, sudden end he will make of all the inhabitants of the earth” (1:15–18).

In genuine prophetic tradition, Zephaniah ascribes to the Lord phrases such as “the remnant of My people” and “the survivors of My nation” (2:9), adding “For I will leave in the midst of you a people humble and lowly. They shall take ref-

uge in the name of the Lord, those who are left in Israel; they shall do no wrong and utter no lies, nor shall there be found in their mouth a deceitful tongue. For they shall pasture and lie down, and none shall make them afraid” (3:12–13). However, the final verses of the book (3:14–20) were probably added to it in the Exile or in the post-Exilic period since they speak of the gathering in of the scattered exiles of Zion.

NAHUM. Although the short Book of \*Nahum, as such, consists essentially of a hymn of victory over the fall of Nineveh (612 B.C.E.), this hymn is introduced by an incomplete “alphabetic” psalm (Nah. 1:2–8), in which God's wrath is portrayed in the vivid colors that are later employed in describing the cosmic disturbances accompanying the great and terrible Day of the Lord.

JEREMIAH. In the broad sense of eschatology as the “end” of a given historical period that would be followed by a very different one, the Book of \*Jeremiah, despite its seemingly disturbed sequence of poetic oracles and prose narratives combined with later scribal accretions, can be considered as practically eschatological throughout. Jeremiah clearly foresaw that the kingdom of Judah was doomed, because most of its people refused to give up their evil ways and their political leaders resisted the Babylonians whom God had sent to punish His people. One can almost speak of “realized eschatology” in Jeremiah, since for the prophet the doom was so imminent as to be felt as already present. Sixteen of his oracles begin with the expression *hinneh yamim ba'im* (“Behold, the days are coming when...”; 7:32; 9:24; 16:14; 19:6; et al.), which for Jeremiah is almost the equivalent of the eschatological term “at the end of days,” when the imminent and actual invasion of the Babylonians under Nebuchadnezzar (cf. 15:1–4; 34:8–22; 37:3–10; et al.) will take place.

Yet even when the situation looked utterly hopeless for Judah, the prophet still believed that in God's mercy a remnant would survive the Babylonian destruction of Jerusalem (32:1–15), just as he had expected a reprieve for the remnant left in the Northern Kingdom (3:11–18) and a restoration of Judah's exiles taken to Babylonia in the first deportation of 597 B.C.E. (24:1–10). Like Isaiah and Micah a century before his time, Jeremiah looked forward to the continuity of the Davidic dynasty in an ideal king of the future (23:5–6). (In the symbolic name that the prophet gives to the new, ideal king, *YHWH zidekenu* (*zideqenu*) (Heb. יהוה צדקנו), there is most likely an intentional allusion – with obvious inversion – to the name of the last, wicked king of Judah, Zedekiah (Heb. צדקיהו).) Moreover, Jeremiah, obviously inspired by Hosea 2:21–22, foresaw that Israel's reestablishment would entail a renewal of the ancient Sinaitic covenant in such a way that it would bring about a true change of heart, a new, interior spirituality (31:31–34).

### Exilic and Post-Exilic Prophets

During the Babylonian exile and in the centuries that followed the gradual return of the Jewish exiles to the land of

Israel until the latest writings in the Bible, important developments took place in Jewish eschatological thought. This can be seen especially in the writings of Ezekiel, the so-called Deutero-Isaiah (Isa. 40:1–55:13), the so-called Trito-Isaiah (Isa. 56:1–66:24), Haggai, Zechariah, and Malachi, Joel, the so-called Deutero-Zechariah (Zech. 9:1–14:21), the author of the so-called Apocalypse of Isaiah (Isa. 24:1–27:13), and finally in the Book of Daniel.

**EZEKIEL.** Since it can rightly be said that the Babylonian destruction of Jerusalem in 587 B.C.E. formed the climactic turning point, not only in the political history of ancient Israel but also in its religious orientation, the prophet \*Ezekiel is unique in many ways, particularly as he prophesied before that destruction (although already in Babylonia), as well as during the first few decades of the Jewish exile in Babylonia, where he had been taken in the first deportation of Jews by Nebuchadnezzar in 597 B.C.E. He shows a more intense sense than the older prophets both of the imminence of God's punitive judgment on the pagan nations (Ezek. 25:1–32:32) and of the restoration of God's chosen people to a holier state than before.

For Ezekiel, Judah's restoration would be almost as miraculous as the resurrection of the dead to life, which is illustrated in his well-known vision of the valley filled with dead men's bones that took on flesh and came back to life (37:1–14). Although the new religious life of Judah would be essentially based on a sincere inner conversion to the Lord (11:19–20; 36:26–27), it would be centered on an elaborately described worship in a rebuilt temple in Jerusalem; this holy city, with its new symbolic name of "The-Lord-Is-There," would be in the center of the new land of Israel, with six of the twelve tribes of Israel living in parallel geographic strips to the north of it, and the other six in similar strips to the south (40:1–48:35).

Now that Judah no longer had its own king, Ezekiel kept alive the ancient expectation of a continuance of the Davidic dynasty – the basis of later messianism. However, for this prophet, Judah's future ruler as the Lord's viceroy would have the title of only "prince" (*nasi*, anciently "a tribal chief"), not "king" (44:3; 45:17; et al.). He would be a true shepherd of the Lord's flock (34:11–24). Chastened Israel, though now scattered throughout the world, would be the Lord's means of establishing His reign over all the earth, and would thus fulfill the promise He made to the Patriarchs (36:1–38). A diligent elaborator of Jeremiah motifs, he conceived in his own way the motif of a change in Israel's nature – "a new heart and a new spirit," with variations (11:17–20; 16:60; 36:24–28) – which would guarantee the new covenant against dissolution as in the case of the first. However, he stresses in his inimitable manner (36:20–23, 29–31) the principle first clearly enunciated in I Samuel 12:22, according to which God's motive is not compassion for undeserving Israel, but His own prestige, since His name, because it is associated with Israel, is discredited in the eyes of the nations by Israel's misfortunes. That is why, even after proving that he is able to restore Israel to its land, He will further "prove Himself great and holy" in

the eyes of the nations (38:23) by demonstrating through Gog and Magog that He is able to prevent their being subjugated again (39:22–29).

The fantastic word pictures drawn by Ezekiel, which he used directly only for describing eschatology in the broad sense, e.g., that of \*Gog and Magog who represented for the prophet the hostile pagan nations of his time (38:1–39:20), were destined to find many echoes in later Jewish writers, who reused them in depicting their eschatology in the strict sense – the "end" of the world as men knew it.

**DEUTERO-ISAIAH.** The anonymous writer who composed Isaiah 40:1–55:13 and to whom modern scholars have given the name "Deutero-Isaiah" (the "Second Isaiah") is generally believed to have prophesied in the last years preceding the conquest of Babylon by the Persians under Cyrus the Great in 539 B.C.E. Just as the prophet knew that the Lord had used the pagan kings of Assyria and Babylon to punish His sinful people according to the predictions of the earlier prophets (Isa. 1:21–31; Jer. 7:1–15; Ezek. 22:1–22), so he foresaw that the Lord would use the pagan king of Persia as His "anointed one" (cf. Isa. 44:28; 45:1 with Jer. 25:9; 27:6; 43:10) to liberate repentant Judah from its captivity. The prophet's preaching, therefore, is almost entirely one of consolation for his afflicted fellow exiles. From an eschatological viewpoint, Deutero-Isaiah is important for his clear perception of God's plan in directing man's history on earth; the Lord alone prearranged this history from beginning to end (Isa. 41:22–23; 42:8–9; 46:8–13; et al.). The prophet treats this history of man on a cosmic scale; the restoration of Judah is to be a "new creation" for all mankind as well as for the Jews (41:17–20; 42:5–7; 43:1; 45:8). This plan of God for the world's salvation would be carried out by the \*Servant of the Lord (*ʿeved YHWH*), who both personifies Israel (49:3) and has a mission for Israel (49:5–6); his sufferings atone for man's sins, but his glorious exaltation brings peace and salvation to the world (52:13–53:12). With Deutero-Isaiah there begins a more transcendent concept of eschatology; climactic events in history are viewed not so much as the beginning of a new historical era brought about by human means, but rather as a transformation of the world on a cosmic scale produced by God's extraordinary intervention in man's history.

**HAGGAI, ZECHARIAH, AND MALACHI.** When Zerubbabel, the grandson of King Jehoiachin of Judah, was appointed governor of the small Persian province of Judah, the prophets \*Haggai and \*Zechariah temporarily saw him as the one who could continue the Davidic dynasty (Hag. 2:20–23; Zech. 4:6–7; 6:9–14 (emending "Joshua son of Jehozadak, the high priest," to "Zerubbabel" in v. 11; cf. "the Shoot" in 3:8)); thus they kept alive the messianic expectation in Judah. Moreover, the strange type of symbolism that first appears in Zechariah 1:7–2:13 and 5:1–6:8, connected with the concept of an incredibly enlarged Jerusalem (Zech. 2:5–9), was later re-echoed in the eschatological imagery of Daniel and the later Jewish writers.

The book that bears the title \*Malachi (“my messenger”), apparently borrowed from Malachi 3:1, was probably written about the time of Ezra and Nehemiah (second half of the fifth century B.C.E.). This prophet predicts that the Lord will come to His temple preceded by His messenger, and will hold His Day of Judgment against the wicked (Mal. 3:1–6). In what is generally considered to be a later addition to the book, this messenger is identified with “Elijah the prophet [coming] before the great and terrible day of the Lord” (3:23). Since on the basis of 11 Kings 2:11 it was commonly assumed that Elijah never died, a popular belief, later elaborated on in Jewish writings, held that he would return to earth as the precursor of the \*Messiah (cf. Matt. 11:14; 16:14; Mark 9:11–13; Luke 1:17; John 1:21; et al.).

JOEL. A terrible plague of locusts (Joel 1:2–20) was seen by the prophet \*Joel, who probably prophesied between 400 and 350 B.C.E., to have eschatological significance in that it symbolized the forces hostile to God on “the day of the Lord... a day of darkness and gloom, a day of clouds and thick darkness! Like blackness there is spread upon the mountains ...” (2:1–17). Yet the Lord would be victorious over His enemies (4:1–16) and bring salvation and blessings to His chosen people (2:18–3:5). This is eschatology in the strict sense, involving cosmic disturbances as the initiation of the new, transcendent era (3:1–4).

In the verse in which Joel has God say: “I will gather all the nations, and bring them down to the valley of Jehoshaphat, and I will enter into judgment with them there, on account of My people and My heritage Israel...” (4:2), the term “valley of Jehoshaphat” has no geographic significance; it merely means “the place where the Lord judges.” Later tradition identified it with the Kidron Valley to the east of Jerusalem, and consequently this valley and the Mount of Olives to the east of it became a favorite burial place, where one would be at hand at the resurrection of the dead for general judgment on the Last Day.

DEUTERO-ZECHARIAH. The last six chapters of the Book of Zechariah (9:1–14:21) differ in so many respects from the first eight chapters that many modern scholars attribute them to a later writer (or even to two later writers – one for 9:1–11:17, and another for 12:1–14:21), who apparently lived some time between Joel (c. 400–350 B.C.E.) and Ben Sira (c. 180 B.C.E.). Rejoicing over the fall of Syria and the coastal cities of Palestine (9:1–8), perhaps as the victorious army of Alexander the Great advanced toward Egypt in 332 B.C.E., the prophet saw in their fall a sign of the imminent coming of the Messiah as a prince of peace: “Rejoice greatly, O daughter of Zion, shout aloud, O daughter of Jerusalem; Lo, your king comes to you; triumphant and victorious is he, humble, and riding on an ass ...” (Zech. 9:9). In describing the new, transcendent era, the prophet develops the symbolic language of the older prophets, especially that of Ezekiel, but it already has more of the fantastic imagery that is characteristic of \*apocalyptic literature. A theme that later receives further development is that of the

sufferings that God’s people must still endure (14:1–2, 13–14a) before “the Lord will become King over all the earth” (14:9).

TRITO-ISAIAH. Many scholars hold that the last 11 chapters of the Book of Isaiah (56:1–66:24) form a unit quite distinct from both Proto-Isaiah (1:1–39:8) and Deutero-Isaiah (40:1–55:13). This section probably consists of a collection of writings composed by different men at various times in the post-Exilic period (even though 57:3–13a may possibly be of pre-Exilic origin). From an eschatological viewpoint, the passages in Isaiah 60:1–62:12; 65:17–25; 66:7–17, depicting the glory of the new Jerusalem and the joy of all the earth, and the passage in 66:18–21, describing the gathering of all the nations of the earth for God’s final judgment on mankind, are of particular importance. (On the bearing of the “unquenchable fire” (66:24), together with Jer. 7:30–8:3; 19:6; 31:40, for the later eschatological concept of the eternal fire of Gehenna, see below.)

“APOCALYPSE OF ISAIAH.” Isaiah 24:1–27:13 is so different from the rest of Isaiah that it seems to have been written by some anonymous prophet distinct from all the other prophets whose prophecies have been gathered together in the large compilation now known as the Book of Isaiah. The hymns of praise (24:14–16a), thanksgiving (25:1–12), and supplication (26:1–19) that are interspersed among the various prophecies of doom and blessing suggest that this section once formed a sort of “liturgy.” Nowhere in the section is there any reference or even allusion to an historical event that could be used for dating the composition. Yet in the descriptions of the devastation of the entire world (24:1–13), of the concomitant cosmic disturbances (24:19–23a), and the salvation of the “remnant” (26:20–21), the style and language are so similar to later apocalyptic writings that this section is commonly called “the Apocalypse of Isaiah,” and the date of its composition is generally placed not long before the composition of the genuinely apocalyptic chapters in the Book of Daniel. Concepts that play a large role in the later apocalyptic writings, such as the eschatological banquet (Isa. 25:6) and the resurrection of the dead (26:19, perhaps to be understood here in the literal sense as distinct from the symbolic resurrection of the dead, signifying national resurrection, in Ezek. 37:1–14) appear here for the first time (see the Book of \*Isaiah).

DANIEL. The first section of the Book of \*Daniel is a compilation of six (or five, the first being merely introductory) agadic stories about Daniel and his three companions, who are presented as living in Babylon in the sixth century B.C.E., toward the end of the Neo-Babylonian empire and the beginning of the empire of the Medes and Persians (Dan. 1:1–6:29); the second section contains four visions or revelations (7:1–12:13) that Daniel is said to have received and which foretell the history of the Near East from the time of Nebuchadnezzar, king of Babylon (605–562 B.C.E.), to that of Antiochus IV Epiphanes, king of Syria (175–164 B.C.E.). This compilation was made in its present form shortly before the death of Epiphanes, at a

time when Judaism in Palestine was suffering a severe crisis both from defection toward pagan Hellenism from within, and from violent persecution from without by Epiphanes to make the Jews forsake their ancient religion.

The older aggadic stories were retold in the book for the sake of encouraging faithful Jews to withstand persecution; as the Lord had come to the rescue of Daniel and his companions, so also would He intervene in the present crisis by putting an end to the pagan empires and establishing His reign over all the earth by means of His chosen people, for He is the Lord of history, who “changes times and seasons; he removes kings, and sets up kings” (2:21).

The second half of the book (7:1–12:13) contains the earliest preserved form of apocalyptic literature in the strict sense, a type of writing that was frequently imitated and developed by Jews at least until the destruction of the Second Temple. This type of writing, in brief, purports to be a revelation (Greek *apocalypsis*, literally an “uncovering”) of the future, especially the final destiny of the world, which was given to some ancient worthy centuries or even millennia earlier, but was left “hidden” (Gr. *apocryphon* – hence many of these writings are called “\*apocrypha”) until the present time of crisis.

Persian influence on the apocalyptic writings can be seen, not only, e.g., in their more elaborate \*angelology, but especially in their division of history into various distinct eras or “monarchies.” The Persians divided their history of the world into three “monarchies”: the Assyrian, the Median, and the Persian. In the Hellenistic period a fourth “monarchy” was added – their own Greek “kingdom,” which as far as Palestine was concerned, consisted of the Ptolemaic dynasty in Egypt and the Seleucid dynasty in Syria, with the capital at Antioch. The Jews adapted this four-monarchy theory of history to their own situation by substituting the Babylonian empire (as better known to them) for the Assyrian empire, and by adding a fifth “kingdom” – the universal reign of God on earth, based on His chosen people, Israel. This last kingdom would be “an everlasting kingdom” (3:33) – a concept that is eschatology in the strict sense. In Daniel this view of world history is presented in two places: first, in the aggadic story of Nebuchadnezzar’s dream of the gigantic statue made of four different materials (symbolizing the four successive pagan empires), that was smashed by a rock hewn without hands from a mountain, which itself “became a great mountain and filled the whole earth,” the kingdom of God, “which shall never be destroyed... and it shall stand for ever” (2:31–45); secondly, in the apocalypse of chapter 7, where four beasts (each with a characteristic number to show the number of rulers) representing the four successive pagan empires are destroyed by God, and in their place “one like a son of man” receives from the Lord “dominion, and glory, and kingdom, that all peoples, nations, and languages should serve him; his dominion is an everlasting dominion, which shall not pass away, and his kingdom one that shall not be destroyed” (7:13–14).

In Daniel, the “one like a son of man” (a Semitism meaning simply “one like a human being”) is a symbol, as stated

explicitly, representing “the people of the saints of the Most High” (7:27); that he “came with the clouds of heaven” (7:13), i.e., had his origin from God, is said primarily to contrast him with the four great beasts that “came up from the sea” (7:3), i.e., from the realms of chaos (cf. Gen. 1:2). However, as will be shown below, this purely symbolic figure of “one like a son of man” was soon regarded as a real person, the Messiah.

Daniel contains the first unequivocal affirmation of a belief in the eschatological resurrection of the dead: “There shall be a time of trouble...; and at that time your people shall be delivered, every one whose name shall be found written in the book. And many of those who sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt” (12:1–2). This does not necessarily imply a universal resurrection of all mankind at “the end of the world”; the expression “many of those” hardly means “all men, numerous as they are.” But it does offer a solution to the age-old problem of divine retribution, why the just suffer and the wicked seem to prosper in this life. The Book of Job struggled in vain with this problem; yet even the well-known passage in Job 19:25–27, where the text itself is not clear, seems merely to have the sufferer reassert his firm belief that God would some day vindicate Job’s righteousness. Belief in the resurrection of the dead may have been adumbrated in the “Apocalypse of Isaiah” (Isa. 26:19; see above) and in the pious hope of the Psalmist (Ps. 73:23–26), yet it appears in Daniel 12:1–2 with startling suddenness. Perhaps there is some influence here from the Zoroastrian religion of the Persians, which had such a belief. However, the occasion for the expression of this belief in Israel was apparently due to Israel’s conviction, on the one hand, of God’s justice in rewarding the good, and on the other hand the martyrdom of so many innocent Jews in Antiochus Epiphanes’ persecution.

Another important trait in the eschatology of Daniel is the attempt by the author of the apocalypse contained in chapter 9 to show that “the end” was to come in the near future; he does this by interpreting the 70 years of exile that had been foretold by Jeremiah (Jer. 25:11; 29:10) to mean 70 weeks of years or 490 years, and to argue from this by his own strange chronology that only three and a half years still remained before the end would come. The author may well have been the compiler of the entire book, for the references to the remaining three and a half years before “the end” in the other apocalypses (7:25b; 8:14; 12:7) seem to be insertions made by him. Later on, additions were made to the book in 12:11 and 12:12, in order to lengthen the period of waiting when the earlier predictions failed to be fulfilled.

#### IN THE INTERTESTAMENTAL LITERATURE

##### Apocrypha and Pseudepigrapha

Certain Jewish writings that were composed after the completion of the latest book of the Hebrew Bible (probably Daniel, c. 165 B.C.E.) and before the completion of the books of the New Testament are commonly referred to as the “intertestamental literature.” With the exception of some fragments that

have been found at \*Qumran, these writings have been preserved in Greek (or in secondary translations made from the Greek), although most of them were originally written not in Greek but in Hebrew or Aramaic. None of these books is included in the Jewish or Protestant canon; but seven of them, which are found in the \*Septuagint, are included in the Bible of Roman Catholics and Orthodox Christians. These seven books – Tobit, Judith, Baruch, I and II Maccabees, the Wisdom of Ben Sira, and the Wisdom of Solomon – are called “deuterocanonical” (i.e., belonging to the “second canon”) by the Catholics; Protestants call them “the \*Apocrypha,” and the rest, “the Pseudepigrapha.” Some of these books – the Ethiopic and the Slavonic Books of Enoch, the Apocalypse of Ezra, the Syriac and the Greek Apocalypses of Baruch, the Jewish Sibylline Oracles, etc. – are primarily apocalyptic and of prime importance for the eschatological concepts of the period in question. However, even the pseudohistorical writings (Jubilees, Life of Adam and Eve, Ascension of Isaiah, etc.) and the moral-didactic writings (Wisdom of Solomon, Testaments of the Twelve Patriarchs, Psalms of Solomon, etc.) provide much information concerning eschatological ideas of the Jews in the last two centuries before, and the first century after, the destruction of the Second Temple. Almost all the intertestamental writings have come down in copies or translations made by Christian scribes, who often interpolated new passages containing Christian concepts into the older original Jewish compositions. However, it is generally not difficult to discern which passages are Christian interpolations.

**MESSIANISM.** Although Jewish eschatology, including that of the intertestamental literature, was always theocentric, i.e., concerned basically with the ultimate triumph of God and His justice, it combined this with certain preliminary events that would precede the establishment of God’s universal reign over all mankind on “the Day of the Lord.” Chief among these preliminary events would be the reign of the \*Messiah (1 En. 45:3; 105:2; 28:29; 13:32–35; 14:9). Not only from the intertestamental writings but also from Josephus (Wars, 2:6, 12; Ant., 13:9) and the New Testament (Matt. 23:23–24; etc.), it is clear that in the last two centuries before the destruction of the Second Temple and even in the succeeding generations, e.g., at the time of the revolt of Bar Kokhba (132–135 C.E.), belief in the imminent coming of the Messiah was widespread in Judaism. During that period more than one contender arose to claim the title of Messiah (cf. Acts 5:36; 12:38). The intertestamental literature naturally reflects this belief, but not always in a uniform fashion.

Some of these writings speak of certain personages who would precede the coming of the Messiah. On the basis of Deuteronomy 18:15 (“A prophet will the Lord thy God raise up into thee..., like unto me; unto him ye shall hearken”), some of the apocalyptic writers of this period predicted that a special prophet, or even Moses himself, would come to prepare the way for the Messiah. Jeremiah, “a friend of his brethren, who prays much for his people and for the holy city” (II Macc.

15:14) and highly respected by the Jews of the period, was sometimes identified with this precursor of the Messiah. However, the chief candidate for the office of the precursor of the Messiah was the prophet Elijah, in keeping with the oracle of Malachi 3:23–24; by his miracles and his preaching he would reform the people and make them ready to receive the Messiah (cf. e.g., Ecclus. 48:10–11).

*Reckoning Eschatological Times.* In imitation of the attempts made in Daniel to calculate the time remaining before “the end of time” (cf. Ass. Mos. 1:18; IV Ezra 3:14), the apocalyptic writers of the intertestamental period devised various methods for reckoning “the times of the Messiah,” *Yemot ha-Mashiah*. Jubilees, for instance, divided the history of the world into a great number of “jubilees” (period of 50 years each) in order to establish when “the end” would come. Other writings divided the history of the world into 12 periods of 400 years apiece (IV Ezra 14:11; Test. Patr., Abraham A 19, B 7; Life of Adam and Eve 42). Some reckoned by millennia and maintained that the reign of the Messiah itself would last for a thousand years, referring to “the Messianic millennium,” a period of peace and happiness on earth before the final Day of the Lord.

*Birth Pangs of the Messiah.* In general, the intertestamental literature depicts the period preceding the coming of the Messiah as one of terrible distress: plagues and famine, floods and earthquakes, wars and revolutions, accompanied by such cosmic disturbances as the darkening of the sun and the moon and the falling of the stars from the sky. In part, these ideas were derived from contemporary events, such as the dispersion and persecutions suffered by the people of Israel, and in part from the descriptions of the Day of the Lord found in the writings of the earlier prophets. The purpose of these terrifying pictures was to encourage the faithful in Israel to bear their afflictions patiently as God’s will for them, for only when the cup of evil was filled to the brim would the Messiah come to bring salvation. These sufferings, therefore, are commonly called “the pangs of the Messiah,” *hevlo shel Mashiah*, meaning that Israel, like a mother, was to bring forth the Messiah in the pangs of childbirth.

On the basis of Ezekiel 38:1–39:20, the pre-messianic wars are presented as the Lord’s fight against Gog and Magog, symbols of the powers of evil in the world. The leader of these evil forces bears such names as Satan, Belial (or Beliar), Maste Din (or Mastema), and (in the Greek versions) the Anti-Christ. However, it should be noted that this pre-messianic warfare is to be understood primarily as a spiritual, not a military, one; and the Lord’s use of Israel in establishing His reign over all mankind is not intended to imply an Israelite political empire.

*Son of Man.* Besides such titles as “savior” and “redeemer,” which are given to the expected Messiah in the intertestamental writings, a special title is given to him in the (Ethiopic) Book of Enoch (1 En.; written shortly after Daniel) and in the Apocalypse of \*Ezra (IV Ezra; written c. 30 years after the de-

struction of the Second Temple), that of the “son of man.” This title is clearly borrowed from Daniel 7:13. Although in Daniel the term is purely symbolic (see above), the intertestamental books use it in reference to an actual person, the Messiah. According to these writings, the “son of man,” who stands “at the throne of God” in heaven, existed “before the sun and the stars were created” (1 En. 46:1–3); he will bring salvation at the end of the ages, when he will be enthroned as king of the world (IV Ezra 13:26).

**4TH WORLD TO COME.** The apocalyptic writings after Daniel (though in this book the terms themselves are not used) divide the time after God’s great eschatological interventions as “this (present) time” (*olam ha-zeh*) and “the time to come” (*olam ha-ba*, lit. “the coming time”; cf. I En. 23:1; IV Ezra 7:30, 43; Test. Patr., Abraham 19, B 7). It is only in the latter period – the eschatological period in the strict sense – that full retribution for good and evil is meted out by God to every man.

**Retribution.** Israel always had firm faith in the Lord’s justice, in His rewarding the good and punishing the wicked. However, in Israel there was a definite development of this concept in two important points: (1) from collective responsibility and retribution to individual responsibility and retribution, and (2) from full retribution in man’s mortal life to full retribution only “in the world to come (*\*olam ha-ba*),” i.e., after man’s death.

Although even in the oldest periods of biblical theology Israel often expressed the belief that God rewards and punishes each man according to his own deeds (cf. e.g., I Sam. 26:23), as can be seen in the numerous cases of divine punishment meted out to individual sinners (Cain, Lot’s wife, Miriam, Er and Onan, etc.) and as frequently stressed in the wisdom literature, in pre-Exilic Israel the emphasis was placed primarily on collective retribution; the whole group (family, tribe, nation) was responsible for the deeds of its members. It was Ezekiel in particular who shifted the concept of divine retribution from a collective to an individual one (cf. especially Ezek. 18; Jer. 31:29–30 is probably a later addition, borrowed from Ezek. 18:2–3). However, the principle that every man is rewarded or punished in this life for his good or evil deeds seemed to be contradicted by ordinary experience; and the problem of why the innocent suffer and the wicked prosper in this life, as presented especially in \*Job, appeared to be an insoluble mystery, best left to God’s wisdom.

**Resurrection of the Dead.** A solution to this problem was finally found in the belief of the resurrection of the dead (*tehiyyat ha-metim*), i.e., in the notion that the dead would come back to life, both in body and in soul, on the Day of the Lord. The earliest clear expression of this belief is in Daniel 12:12, and subsequently it was often expressed by many writers of the intertestamental literature (II Macc. 7:9, 11, 14, 23; 12:43; 14:46; Jub. 23:30; Test. Patr., Men. 98:10; IV Ezra 7:29–33; etc.). Some of these writings speak of all men, good and bad alike, rising from the dead for judgment on the Day of the

Lord; others maintain that only the just will rise to life, since the condemnation that the wicked receive at God’s tribunal can scarcely be called “life” (so apparently even in Dan. 12:2). Moreover, some of the apocalyptic writings (e.g., II En. 66:5) speak of two resurrections: the first only of the just, at the beginning of the Messianic millennium; the second of the wicked, at the final Day of the Lord, which is for the wicked a “second death.”

A special concept of a future life immediately after death is seemingly found in the Wisdom of \*Solomon, a Greek composition (c. 75 B.C.E.) by an Alexandrian Jew, who was influenced by the Greek philosophical concept of the immortality of the human soul (cf. Wisd. 3:1–9). Yet the author of this work really follows the common Hebrew concept of life as truly human only when man’s body and soul are united.

In the last two centuries before the destruction of the Second Temple the \*Pharisees believed in the resurrection of the dead, whereas the \*Sadducees did not (Jos., Ant., 18:14; Wars, 2:14; cf. also Mark 12:18; Acts 23:8).

Until the last two centuries before the destruction of the Second Temple the Jews retained the ancient Israelite concept of \*Sheol, the dark abode in the nether world of all the dead, good and bad alike (thus still Ben Sira: e.g., Ecclus. 14:16; 28:21; 51:6, 9). However, when the concept of individual retribution after death developed in Judaism during this period, the concept of Sheol underwent various changes in the different intertestamental writings. According to some of these writings there are various levels in Sheol (e.g., six: IV Ezra 7:36–37), so that even before the resurrection of the dead the wicked are tormented in various degrees in Sheol’s lower levels, whereas the good enjoy bliss in its highest level. According to other writings Sheol is replaced by \**Gehinnom* (Gehenna), the place where the damned are in torment, whereas the just, either immediately after death or only at the resurrection, have the delights of an eschatological \*Garden of Eden or Paradise.

**Gehenna.** The word “Gehenna” is the Greek form of the Aramaic *Gehinnom* for the Hebrew *Ge (Bene) Hinnom* (“the Valley of (the sons of) Hinnom”), the ravine in the south of ancient Jerusalem (Josh. 15:8; 18:16). Since it had been defiled by being the site of the Topheth worship of Molech (II Kings 23:10; Jer. 32:35; etc.), Jeremiah cursed the place and predicted that, at the Babylonian destruction of Jerusalem, this valley would be filled with the corpses of the city’s inhabitants, to be burned there and rot like “dung upon the face of the earth” (Jer. 7:32–8:3; 19:6; 31:40). Trito-Isaiah (Isa. 66:24) clearly alludes to these sayings in Jeremiah, even though he does not use the word “Gehenna,” when he speaks of the eschatological punishments of the wicked: “And they shall go forth, and look upon the carcasses of the men that have rebelled against me; for their worm shall not die, neither shall their fire be quenched; and they shall be an abhorrence unto all flesh.”

The intertestamental writings add further gruesome details to the torments suffered by the wicked in this fiery pit, where their bodies burn eternally, although, incongruously,

they are, at the same time, rotting away with worms and maggots (cf. IV Ezra 7:36; I En. 27:2; 48:9; 54:1; 90:26–27; 103:8; Ass. Mos. 10:19; II Bar. 85:12–13).

*Eschatological Paradise.* The term “paradise” is from the Greek word that the Septuagint uses to translate the Hebrew term, Gan Eden (“the Garden of Eden”). Since the earlier prophets had depicted, in figurative terms, the eschatological bliss of “the new earth” as a return to the original peace and joy of the Garden of Eden before Adam’s sin (cf. Isa. 11:6–9; 51:3; Ezek. 36:35), the intertestamental writers call the place where the righteous are to enjoy endless bliss “the Garden of Eden” (IV Ezra 4:7; 7:36, 123; 8:52; II En. 42:3; 65:10). It is not identical with “heaven” as God’s abode. But just as Gehenna is pictured as having several levels, one lower than the other, so the eschatological paradise has at least three levels (I En. 8), one higher than the other, the uppermost being nearest to God’s abode in heaven. As in the case of Gehenna, so also in regard to the eschatological paradise there is inconsistency in these writings concerning the time when the just enter this place of paradisiacal bliss, whether immediately after death, or only at the resurrection.

One of the features of the eschatological paradise, at least during the “messianic millennium,” is the participation in the messianic banquet (based on Isa. 25:6; cf. the Qumran literature below, and Matt. 8:11). A special privilege at this banquet in the world to come is to be seated at the side of Abraham (Test. Patr., Abraham 20; cf. Luke 16:26; the poor man Lazarus in “Abraham’s bosom”).

### Dead Sea Scrolls

The writings composed by the \*Essene community that lived at Qumran from approximately 150 B.C.E. to 68 or 70 C.E., generally called “the \*Dead Sea Scrolls,” can from a merely chronological viewpoint be classified with the intertestamental literature; yet, because of their unique importance for revealing the specifically Essene concepts of eschatology, they are here given separate treatment.

**IMMINENCE OF THE END OF DAYS.** The presumably Essene community of Jews that had its headquarters at the site now known as Khirbat Qumrān, near the northwestern shore of the Dead Sea, was very concerned with eschatology. Its life was organized by austere rules, especially by an exact observance of the various precepts of the Torah, particularly those concerning ritual purity, so that this would hasten the coming Day of the Lord and, at the same time, make the members of the community ready to stand at God’s awesome tribunal on that day. They lived in the barren Desert of Judah, not merely because they had fled from Jerusalem and its Temple on account of what they considered the illegitimacy of the Hasmonean high priests and their successors who were appointed by the conquering Romans, but more particularly because they thus sought to carry out literally the command (originally intended merely in a metaphorical sense) of Isaiah 40:3: “Clear ye in the wilderness the way of the Lord” (cf. IQS 8:12–14; 9:19).

They were convinced that they were living “at the end of the era of wickedness” (CD 6:10, 14; 12:23; 14:19), which was soon to be followed by “the era of (divine) favor” (IQH 15:5). They believed that they were living in the “last days” foretold long ago by the ancient prophets; and, therefore, they held that their anonymous founder, whom they called the *Moreh Zedek* “Teacher of Righteousness” (probably to be understood as “the right teacher,” i.e., the one who explained the Torah correctly), had been raised up by God “to make known to the later generations what He would do in the last generation” (CD 11:12). Their *peshet* (“commentary”) on Habakkuk 2:1–2 says: “Its interpretation concerns the Teacher of Righteousness, to whom God made known all the secrets of the words of His servants the prophets” (1QP<sup>H</sup> Hab 7:4–5). The Qumran community apparently expected “the end” to come 40 years after the death of their founder (CD 20:14–15), during which period the wicked in Israel would be destroyed by God (CD 20:15–16). However, when the members of the community were disappointed in the nonfulfillment of this expectation, they admitted that only God knows when the end will come. So the writer of the *peshet* on Habakkuk 2:3a says: “Its interpretation is that the final end may be prolonged, indeed longer than anything of which the prophets spoke, for the secrets (or mysteries) of God are for wondrous fulfillment” (1QP<sup>H</sup> Hab 7:7–8). The interpreter, therefore, says on Habakkuk 2:3b: “Its meaning concerns the men of truth, who carry out the Law (Torah) and do not let their hands grow too weak to serve the truth, despite the final end being long drawn out; for all the limits set by God will come in their due time, as He has set for them in His mysterious wisdom” (1QP<sup>H</sup> Hab 7:10–14).

**ESCHATOLOGICAL WAR.** Before “the end” there will be, according to the Qumranites, a great eschatological war, waged not only against the powers of evil but also against all wicked men, not excluding the wicked of Israel. In fact, the Qumranites placed in the latter class all the Jews who did not belong to their community. They alone were “the remnant of Israel” (CD 1:4–5), God’s “chosen ones” (IQM 8:6). They called themselves “the Sons of Light”; all others were “the Sons of Darkness.” This ethical dualism, perhaps influenced by Persian thought (though not foreign to the older Hebrew Scriptures), is typical of Qumran theology: “He [God] created man to rule the world, and He set for him two spirits by which he would walk until the appointed time of His visitation; these are the spirits of truth and perversity” (IQS 3:17–19).

The eschatological war, besides being referred to in other Qumran writings, is described at great length and in great detail in a fairly well-preserved scroll of 19 columns to which the title “The War of the Sons of Light against the Sons of Darkness” has been given. This document is a strange mixture of sound military tactics combined with idealistic warfare, in which God and His angels fight on the side of the Sons of Light against Belial (Satan) and his evil spirits, who come to the aid of the Sons of Darkness. The good fight is waged also against Gog and Magog (cf. Ezek. 38:1–39:20), here merely symbols of

the powers of evil. It seems, therefore, that this eschatological war is to be viewed as waged on a transcendental plane, despite the elaborate rules based on mundane battles; the Essenes of Qumran, like their predecessors the Hassideans of Hasmonean times (cf. I Macc. 7:13–17; and perhaps Dan. 11:34), were not militarists. They trusted more in the power of God than in the force of arms. In the end God would be victorious, and then the messianic age would begin.

**MESSIANISM.** The “Teacher of Righteousness” did not regard himself, nor did his disciples regard him, as a Messiah. In fact, there is little messianism in the earliest Qumran documents. However, when the 40 years had elapsed after the death of their founder and “the end” had not yet come, the Qumran writers speak more often of the ultimate salvation that would come with the appearance of the Messiah: “the coming of the prophet and the Messiahs (*meshiḥe* – note the plural) of Aaron and Israel” (1QS 9:11; cf. 4Q**Testimonia**).

For the Jews of that time the Hebrew term, *ha-Mashi’ah*, “The Messiah” (lit. “the Anointed One”), did not have the same connotations that its Greek translation, *Christos*, had for Christians. From certain other passages, in the Qumran writings it appears quite certain that this community, which was fundamentally a priestly one, expected an especially anointed high priest (“the Messiah of Aaron”) as well as an especially anointed lay ruler (“the Messiah of Israel”). It should be noted that in the Cairo Damascus Document (CD 7:20) the royal Messiah is not called a “king,” but a “prince” (*nasi*, in keeping with Ezek. 34:24; 37:25; etc.). The concept of two Messiahs, one royal and one priestly, probably goes back to Zechariah 4:14: “These are the two anointed ones that stand by the Lord of the whole earth” (said of Zerubbabel of the Davidic line and of the priest Joshua). On the presence and precedence of the royal Messiah and the priestly Messiah at the eschatological “messianic banquet,” see below.

It is not clear what the Qumranites meant by the “prophet” who precedes these two Messiahs. He may be the “prophet like Moses” foretold in Deuteronomy 18:15, 18, since the Qumranites believed they were living or were to live under a “new covenant” (CD 8:35 – the term, no doubt, borrowed from Jer. 31:31); or he may be Elijah (on the basis of Mal. 3:23), in whom the Qumranites were interested.

**FUTURE LIFE.** Although the Qumran community possessed and, therefore, apparently prized several of the books of the so-called intertestamental literature mentioned above – Jubilees, Enoch, Testaments of Levi and Naphtali, etc. – its own compositions, at least as far as now known, betray relatively little concern with the future world after death. They do not use the terms, “this world,” and “the coming world,” to designate the present and the future eras. There is no explicit mention of the resurrection of the bodies of their deceased members, but neither is there any denial of such a belief. Perhaps it was taken for granted, or it was left as one of God’s mysteries about which they should not speculate. However, they do

say the righteous “will share the lot of God’s Holy Ones,” i.e., the angels (1QH 11:11–12), and they are to enjoy “everlasting” bliss (see below).

The Qumran writings often speak of “the end” (*Kez*), i.e., of the present era (1QS 3:23; 4:18, 25; CD 4:9–10; 20:15; 1QP**Hab** 7:2; etc.). The end will be preceded by the “pangs” of the pre-messianic era (1QH *passim*), by cosmic storms (1QH 3:13–16), and by a cosmic conflagration (1QH 3:29–31; cf. 1QM 14:17). At “an appointed time of decisive judgment” (*mo’ed mishpat neherashah*: 1QS 4:20) God will judge both angels and men (1QH 7:28–29), for in the present era there are both good and evil spirits (1QS 3:20–22).

**RETRIBUTION.** Whereas the writings of the Qumran community do not mention either a “Gehenna” for the wicked or a “Garden of Eden” for the just in the afterlife, they do, apparently, speak of the punishment of the wicked as an everlasting death, and reward of the just as an eternity of bliss: “The doors of the Pit will be closed upon those who are pregnant with wickedness, and the bars of eternity upon all the spirits of worthlessness” (1QH 3:18). “But the reward of all those who walk in it [the way of truth] will be a healing remedy and abundant well-being in a long life and a fruitfulness of seed, together with all the blessings of eternity and everlasting bliss in life forever, and a crown of glory with a recompense of majesty in light everlasting” (1QS 4:6–8).

**NEW TEMPLE.** Because of God’s promise of “new heavens and a new earth” (Isa. 65:17), the apocalyptic writings sometimes speak of a new Jerusalem with its new temple as coming down from heaven to the earth. Since the Qumran community was basically a priestly one, it was naturally interested in a new temple for the messianic age of bliss on earth. Even the so-called War Scroll gives instructions on how the priests and levites are to function in the new temple (1QM 2:1–6). But, surprisingly, the new temple of the Qumranites is not thought of as coming down ready-made from heaven, but as built by themselves according to a new plan revealed by God.

The \*Temple Scroll, like the Torah, is written as if dictated by God to Moses. Besides giving various precepts concerning ritual purity, festivals, sacrifices, etc., it presents detailed prescriptions for the construction of the new temple and its surrounding courts. The resulting construction differs from all the previous temples – of Solomon, of Zerubbabel, and of Herod, and even from the idealistic temple of Ezekiel 40:1–42:20.

To understand the relationship between this proposed man-made temple and “the house that He [God] will make for you at the end of days,” as mentioned in certain Qumran *pesharim*, one must remember that the Qumran community lived a quasi-sacramental life: their cultic acts both prepared for, and symbolized, the full reality that would come to pass in the messianic age. This is likewise the case in regard to the so-called messianic banquet at Qumran.

**MESSIANIC BANQUET.** The midday and evening meals at Qumran were cultic acts. Those who were ritually unclean

or who were penalized for various faults could not be present at them. The Davidic Messiah and the Priest (or Aaronic Messiah) are depicted as already present at these repasts, even though this would not be actually true until “the end of days.”

The protocol of these eschatological meals is described in 1QS<sup>a</sup> 2:11–22: “This is the (order of the) seating of ‘the Men of the Name who are invited to the Feast’ (a phrase based on Num. 16:2, but with Qumranite interpretation) for the council of the community, if ... [?] the Messiah with them. The priest shall come in at the head of the whole assembly of Israel, and all the ancestral leaders of the Aaronide priests...; and they shall take their seats, each one according to his rank. After that, the Messiah of Israel shall come in; and the head of the thousands of Israel shall take their seats, each one according to his rank.” The text then continues with instructions on the blessing of the bread and wine by the priest, who is the first to partake of them, followed by the Messiah of Israel, and finally by “all the assembly of the community.” This rite is to be observed when at least ten men are present. One striking element in this ritual is the precedence given to the priestly Messiah over the royal (lay) Messiah – which would be expected in such a sacerdotally oriented community. Another important feature is that this ceremony is to be observed even when only a *minyan* is present. This ritual meal, therefore, is both a foreshadowing and a quasi-sacramental anticipation of the great eschatological messianic banquet that is often referred to in other religious writings of the period (e.g., the New Testament).

From its earliest beginnings in God’s promises to the patriarchs until the dispersion of the Jews after the destruction of the Second Temple, Israel always kept alive its eschatological hopes and expectations, based both on a belief in God’s justice and on an optimism that, with God’s help, good would ultimately triumph over evil in the world.

[Louis F. Hartman]

#### IN THE TALMUDIC PERIOD

The eschatology of the Talmud and the Midrash is based upon that of the Bible and is very similar to that of the Apocrypha. A distinction is generally made between “the days of the Messiah” and “the world to come.” The former is regarded as the transition stage to the world to come, and various periods are mentioned for it: 40, 70 (“those generations”), 365 (“as the days of the solar year”), and 400 years (Sanh. 99a; Sif. Deut. 310) as in Esdras (1v Ezra). A late *baraita* states that this world will exist for “6,000 years, of which the first 2,000 will be a period of desolation, 2,000 of Torah, and the last 2,000 the messianic era” (Sanh. 97a–b; Av. Zar. 9a). There is also a view that “4,291 years after the creation, the world will be orphaned”; when there will break out “the war of the great sea-monsters” (almost certainly referring to the civil wars of the Roman Empire during the period of its decline and fall), “the war of Gog and Magog” etc.; “And the Holy One Blessed Be He will renew his world only after 7,000 years”

(Sanh. 97b). Not only the year of redemption but even the very month and day was fixed by those “who calculated the end” (*ibid.*) – the 14<sup>th</sup> day of Nisan, according to R. Joshua (Mekh., Pisha 14) whose view is accepted in preference to that of R. Eliezer.

Since, however, these calculations did not prove true, the scholars proceeded to enumerate among “the seven things hidden from men” “when the Davidic dynasty will return, and when the guilty kingdom will fall” (Pes. 54b; Mekh., Va-Yassa 5). Moreover the Messiah was included among the “three things that will come unawares” (Sanh. 97a). When Jonathan b. Uzziel wanted to reveal the “messianic end” in his translation of the Hagiographa “a heavenly voice was heard to say ‘enough!’” (Meg. 3a). There is an even more striking saying from a period later than that of the early *tannaim*: “May the bones of those who calculate the end rot. For they say: Since the time has arrived and he has not come, he will never come” (Sanh. 97b). At a still later period it was enunciated that: “All the calculated times have gone and everything depends upon repentance and good deeds” (*ibid.*). Moreover the children of Israel were even placed under an oath “not to make known the end, and not forcibly to hasten the advent of the end” (Ket. 111a).

#### IN KABBALAH

##### Introduction

Apart from basic ideas concerning reward and punishment, life after death, the \*Messiah, redemption, and resurrection, there is hardly a commonly held belief among the Jews regarding eschatological details. This lacuna provided an obvious opportunity for free play for the imaginative, the visionary, and the superstitious, and so became the field in which the kabbalists left their mark: for they dealt extensively with just these concepts. It is understandable that with such scope they could never arrive at a decision which was acceptable to all, and thus various trends developed. From fairly simple beginnings, eschatological teaching developed in the \*Zohar, and in the kabbalistic works which followed it, and it had many ramifications.

##### Life after Death

Of great importance here are the views of \*Naḥmanides in *Shaar ha-Gemul* on the Zohar, and of the Lurianic school as they are crystallized in the great summary of Aaron Berechiah b. Moses of Modena, *Ma'avar Yabbok*. Generally speaking, they stress, after the time of Naḥmanides, the differing fates of the three parts of the soul, which are separated from one another after death. The *nefesh* (the lowest part) remains below by the grave, and suffers punishment for transgressions after the first judgment, which is called *ḥibbut ha-kever* (“punishment of the grave”) or *din ha-kever* (“judgment of the grave”). The *ru'ah* is also punished for its sins, but after 12 months, it enters the earthly Garden of Eden, or “the Garden of Eden below.” The *neshamah* returns to its source in “the Garden of Eden above”; for, according to the Zohar, the *neshamah* is not

liable to sin, and punishment falls only upon the *nefesh* and the *ru'ah* (although other opinions exist in early Kabbalah). In certain cases the *nefashot* ascend to the category of *ruhot*, and *ruhot* to the category of *neshamot*. The *zeror ha-hayyim* (“the bond of life”), in which the *neshamot* are stored, is interpreted in various ways. It is the concealed Eden, prepared for the delight of the *neshamot*; it is the “treasury” beneath the throne of glory in which the *neshamot* are stored until the resurrection; or it is one of the *sefirot*, or even their totality, into which the *neshamah* is gathered when it is in communion and bound up with God. There are a large number of descriptions in kabbalistic literature of the details and the various degrees of punishment in the abodes of *Gehinnom*, and of pleasure in the Garden of Eden and its various standards. They dealt with the problem of how the *ruhot* or the *neshamot* could have any experience without physical faculties; what kind of garment the *ruhot* wore, and the method of their survival. (According to some, the garment of the *ruhot* was woven of the commandments and good deeds, and was called *haluka de-rabbanan* (“the garment of the rabbis”).) Nahmanides called the domain of pleasure after death *olam ha-neshamot* (“the world of souls”), and distinguished it absolutely from the *olam haba* (“the world to come”), which would be after the resurrection. This distinction was generally accepted by the Kabbalah. In the “world of souls,” the *neshamot* are not incorporated into the Divine, but preserve their individual existence. The idea of punishment in *Gehinnom* (which was envisaged as a subtle spiritual fire which burned and purified the souls) conflicted to no uncertain way with the idea of atonement through transmigration (\**Gilgul*). There was no settled opinion on the question of which sin was punished by *Gehinnom*, and which by transmigration. One can only say that with the development of the Kabbalah transmigration took on an ever more important role in this context. Both the Garden of Eden and *Gehinnom* were beyond this world, or on the borders of it, whereas the theory of transmigration ensured reward and punishment in large measure in this world. Kabbalists sought various compromises between these two paths, but they came to no agreed solution. Attempts were also made to remove the whole subject of *Gehinnom* from its literal sense and to interpret it either according to the view of \*Maimonides, or metaphorically as referring to transmigration. The eschatology of the Kabbalah, and particularly that of the Zohar, was greatly influenced by the idea of the preexistence of souls. The existence of the soul in “the world of souls” is nothing more than its return to its original existence before its descent into the body.

### The Messiah and Redemption

The Messiah receives a special emanation from the *sefirah malkhut* (“kingship”), the last of the *sefirot*. However, there is no trace of the concept of the divinity of the Messiah. The picture of the personal Messiah is pale and shadowy and does not add much to the descriptions of him in the Midrashim of redemption which were composed before the growth of the

Kabbalah. In the Zohar, there are a few new elements. According to the Zohar, the Messiah dwells in the Garden of Eden in a special palace, called *kan zippor* (“the bird’s nest”), and he will first be revealed in Upper Galilee. Some believed that the soul of the Messiah had not suffered transmigration, but was “new,” while others contended that it was the soul of Adam (the first man) which had previously transmigrated to King David. The letters of Adam (*alef, dalet, mem*) refer to Adam, David, and the Messiah – a *notarikon* found from the end of the 13<sup>th</sup> century. There is possibly some Christian influence here because, according to Paul, Adam, the first man, corresponds to Jesus, “the last man” (Rom. 5:17). Descriptions of redemption in the Zohar follow in the footsteps of the Midrashim with the addition of some points and certain changes in theme. The redemption will be a miracle, and all that accompanies it miraculous (the stars sparkling and falling, the wars of the end of time, the fall of the Pope, who is called symbolically in the Zohar “the priest of On”). The idea of the pangs of redemption is greatly stressed, and the condition of Israel on the eve of redemption is pictured in terms which reflect the historical conditions of the 13<sup>th</sup> century. Descriptions of the redemption became more numerous at times of crisis, and particularly after the expulsion from Spain. However, in the later Kabbalah (Moses of \*Cordovero and Isaac \*Luria), their importance declined. On the other hand, the mystical basis of redemption was emphasized – the basis that developed from the time of Nahmanides and his school and which centered on the midrashic view that redemption would be a return to that perfection which was sullied by the sin of Adam and Eve. It would not be something entirely new, but a restoration, or a renewal. Creation at the time of redemption would assume the form that was intended from the beginning by the eternal intellect. Only at the redemption would there be a revelation of the original nature of Creation which has become obscured or impaired in this world. Hence, the extreme utopian character of these ideas. In the Divine realm, the state of redemption is expressed as the end of the “exile of the *Shekhinah*,” the restoration of the divine unity throughout all areas of existence. (“In that day the Lord shall be One, and His name One” – hence the view that the true unity of God will be revealed only in the time to come, while during the years of exile it is as if sin had rendered His unity imperfect.) At the time of redemption there will be a continuous union of king and queen, or of the *sefirot Tiferet* and *Shekhinah*; that is to say that there will be an unceasing stream of Divine influence through all worlds, and this will bind them eternally together. The hidden secrets of the Torah will be revealed, and the Kabbalah will be the literal sense of the Torah. The messianic age will last approximately a thousand years, but many believed that these years would not be identical with human years, for the planets and the stars would move more slowly, so that time would be prolonged (this view was particularly current in the circle of the *Sefer ha-‘Temunah* (“Book of the Image”), and it has origins in the Apocryphal books). It is obvious, on the basis of these theories, that the kabbalists be-

lieved that the natural order would change in the messianic era (unlike the view of Maimonides). As to the problem of whether the redemption would be a miracle or the logical result of a process already immanent, kabbalistic opinion was divided. After the expulsion from Spain, the view gradually prevailed that the appearance of the Messiah would be a symbolic event. Redemption depended on the deeds of Israel, and on the fulfillment of its historic destiny. The coming of the redeemer would testify to the completion of the “restoration,” but would not cause it.

### Resurrection at the End of the World

The Kabbalah does not cast any doubt on the physical resurrection of the dead, which will take place at the end of the days of redemption, “on the great day of judgment.” The novel expositions of the kabbalists revolved round the question of the fate of those who were to be resurrected. Nahmanides taught that after a normal physical life the resurrected body would be purified, and be clothed in *malakhut* (“the garments of the angels”), and, thereby, pass into the future spiritual world, which would come into being after the destruction of this world; and this new world would appear after the resurrection. In the world to come the souls and their “spiritualized” bodies would be gathered together in the ranks of the *sefirot*, in the true “bond of life.” According to Nahmanides, the souls, even in this state, would preserve their individual identity. But afterward other views emerged. The author of the Zohar speaks of “holy bodies” after the resurrection, but does not state his specific view of their future except by allusion. One widespread view identified the world to come with the *sefirah Binah* and its manifestations. After the life of pleasure experienced by the resurrected, this world would be destroyed, and some say that it would return to chaos (“waste and void”) in order to be recreated in a new form. Perhaps the world to come would be the creation of another link in the chain of “creations” or *shemitot* (“sabbaticals”; according to the view of the author of *Sefer ha-Temunah*) or even the creation of a spiritual existence through which all existing things ascend to reach the world of the *sefirot*, and return to their primeval being, or their “higher source.” In the “Great Jubilee,” after 50,000 years, everything will return to the bosom of the *sefirah Binah*, which is also called the “mother of the world.” Even the other *sefirot*, through which God guides creation, will be destroyed with the destruction of creation. In contrast to the teaching of the author of *Sefer ha-Temunah* concerning the creation of worlds according to a fixed cycle (\*Bahya ben Asher speaks of 18,000 jubilees), most of the kabbalists maintained that there would be only one creation, and, correspondingly, only one eternal “world to come.” The contradiction of having two judgments on man’s fate, one after death, and the other after resurrection, one of which would appear to be superfluous, caused some kabbalists to restrict the great Day of Judgment to the nations of the world, while the souls of Israel, in their view, would be judged immediately after death.

[Gershom Scholem]

## IN ISLAM

### Introduction

From the beginning of Muhammad’s prophetic career, he was impressed with eschatological ideas about the descriptions of the occurrences which were to take place on the last day. Contending that the “insured children of Abraham [the Jews]” did not feel the crushing terror of God’s last judgment, J. Wellhausen concluded that Muhammad must have been greatly influenced by Christian eschatological ideas, especially the descriptions of the punishment of the sinners as they were spread in Arabia by monks and hermits who lived in the deserts of the Arabian peninsula. However after a thorough examination of Koranic material, T. Andrae concluded that Wellhausen’s assumption has no foundation in the Koran. No decisive judgment can be made as to which religion – Judaism or Christianity – was more influential in Muhammad’s formulation of an eschatology. In any event, it may be added that the same ideas are to be found in the poems of Jews in Arabia, and the works of the \**ḥanīfs* and contemporary pagan poets. The texts found among the Dead Sea Scrolls show that these ideas were familiar to Jewish circles in pre-Christian times. Thus, it is probable that the beliefs about resurrection, the last judgment, paradise, and hell were current in Arabia among Jews, Christians, and Arabs alike. It is therefore not astonishing that Koranic eschatological descriptions and beliefs have parallels in the Apocrypha, the *aggadah*, and the apocalypses.

### The Day of Judgment

On many occasions Muhammad repeats the descriptions of *yawm al-qiyāma* (“the day of resurrection”), an expression which occurs 70 times (e.g., 2:79, 107; 16:125; 58:19; 75:1–35), and *al-sā‘a* (“the hour”), 40 times (e.g., 6:31, 40; 79:42). He also uses many other names for that day, e.g., *yawm al-ḥisāb* (“day of reckoning”; 38:15, 25, 53), and describes it in many different fashions. On that day all men come back to life to be judged (28:85; 77:13–14); it will be a day of great calamity, when everyone will try to flee, so that “the leg shall be bared” (68:42; i.e., the loins will be girded for flight); on that day the trumpets (of resurrection) shall be blown (6:73). According to Sura 69:13, “the trumpet shall be blown with one blast,” but Sura 39:68 states that the trumpet shall be blown twice: at the first sound “those who are in the heavens and in the earth shall swoon, save whom God pleases. Then it shall be blown again and, lo! they shall stand up and look on.” This *āya* (“verse”) was of great importance for later descriptions of the last judgment: the sound of the trumpet will be followed by an earthquake (78:18); all this will occur “as the twinkling of an eye, or nigher still!” (16:79); at the second sound all the dead will return to life and gather at the *al-maḥshar* (“the gathering place”). Later Muslim tradition states that this gathering will take place in Jerusalem (see below): Allah will come to the judgment with a host of angels; the scales will be set up for the exact weighing of the good deeds (7:7–8) and “no soul shall be wronged at all” (21:48); the books of the deeds of every individual will be opened and the reckoning made (10:62; 80:11–15; 89:7–12); Al-

lah himself will judge or every sinner will bear witness against himself (17:14–15; 36:65; 69:19, 25–27; 89:13, 23); the *ṣirāṭ* (37:23), the way to hell, will lead the sinners to their place of punishment. The prevailing opinion in the Koran is that intercession (*shafā'a*) will not avail the sinner (2:45, 255; 74:49; cf. Ps. 49:8) because man must face his Judge alone. Nevertheless, the Judge, Allah, the Merciful, can allow intercession (2:256; 19:90). According to the \**ḥadīth* Muhammad can intercede for the believers and his intercession will be helpful.

### Retribution

Descriptions of the last day are related to those dealing with the lot of the sinners and the righteous: on that “overwhelming day” the sinners shall be “humble, laboring, toiling – shall broil upon a burning fire; shall be given to drink from a boiling spring! no food shall they have save from the foul thorn, which shall not fatten nor avail against hunger! [But the faithful] shall be comfortable ... in a lofty garden wherein they shall hear no foolish word; wherein is a flowing fountain; wherein are couches raised on high, and goblets set down, and cushions arranged, and carpets spread” (88:1–16; cf. also 67:7–8). In some suras the bright and large-eyed virgin maids (the *hourī*) are mentioned. They take part in the banquets arranged in paradise and some are wedded to the pious (e.g., 44:54; 55:70–74; 56:15–22).

Muhammad was greatly concerned with the concept of hell (*jahannam*; Heb. *gei-hinnom*, cf. Josh. 15:8; 18:16), but his descriptions of it are not clearly defined. *Jahannam* is seen as something mobile, possibly a monster which swallows the sinners (cf. 67:8; 89:23–24). Muhammad's conception of paradise (usually called *janna* (“garden”), but twice named *firdaws* or *jannat al-firdaws*, 18:107; 23:11) is much clearer, and is of a very material nature. Later Muslim traditionalists and theologians found in his descriptions many difficulties which had to be elaborated, explained, and adapted to philosophical and ethical trends.

### Resurrection

Among the signs of the resurrection the *ḥadīth* mentions the appearance of the *Dajjāl* – the arch foe of the true Believers – and the descent of 'Īsa (Jesus Christ) at the “hour” (cf. Sura 43:61). Later eschatological descriptions assign a special role to the Temple Mount, the Valley of Hinnom, and the Mount of Olives. According to 'Abdallah ibn Salām, a Jew from Medina who embraced Islam after Muhammad's arrival in that city, the *ṣirāṭ* – the narrow bridge over the Valley of Hinnom which all creatures must cross on judgment day – extends between the Mount of Olives and the Temple area (where the Lord will take His stand on that day); according to the basic writings of Islam it is a real bridge, which a Muslim is required to believe in. A certain area of the Mount of Olives is called *sāhira*, where men will assemble at the hour of resurrection – its soil is white and no blood has ever been shed on it. Obviously, these places are particularly suitable as burial places of prophets, as they relieve them of the necessity of performing the “subterranean journey” to Jerusalem and enable them to

be the first to be resurrected. According to Islamic tradition, many Muslim mystics, saints, and heroes were buried near the Temple Mount or on the Mount of Olives, evidently so that they, too, might be among the first to rise on the day of resurrection. A special place in eschatological descriptions is reserved for the *Dajjāl*, Allah's enemy (the \*Armilus of the Jewish legend and the \*Antichrist of Christianity), and for the War of Yājūj and Mājūj (\*Gog and Magog). These legends embody many reminiscences of Jewish and Christian stories. The *Dajjāl* will wage war and conquer the entire world, except three cities – Mecca, Medina, and Jerusalem; the battles of the *Dajjāl* will be similar to the battles of Yājūj, which will be fought in the neighborhood of Jerusalem. In eschatological descriptions, Muslim writers created many new legends. Though devoting a great deal of space to this subject, the Koran never mentions any definite place. Tradition filled the gap by assigning the locale to Jerusalem and its surroundings. Books are extant – outstanding among them are the *Kitāb al-Zuhd* (“Book of Asceticism”) and the *Kitāb Aḥwāl al-Qiyāma* (“Book of the Phases of Resurrection”) – which mainly consist of descriptions of the resurrection: the angel Isrāfīl will sound three trumpet blasts, whereupon all mankind will assemble at the gathering place on the Mount of Olives. Gabriel will move paradise to the right side of Allah's Throne and hell to the left side. Abraham, Moses, Jesus, and Muhammad will stand to the right of the scales of justice; the angel Raḍwān will open the gates of paradise and the angel Malik will open the gates of hell. The bridge (*ṣirāṭ*) which all men must cross is long and slippery and narrower than a hair, sharper than a sword, and blacker than night; it has seven arches, and on each arch men are questioned about their deeds. Particularly interesting – in view of parallels in later midrashic literature – are the four mountains associated with the day of resurrection: Khalīl (i.e., Hebron), Lebanon, Ṭūr (the Mount of Olives), and Jūdi (Ararat), each of which will shine like a white pearl, with incomparable splendor, between heaven and earth. They will stand at the four corners of the Temple. With the exception of those concerning the *ṣirāṭ*, which seems to be of Persian origin, these legends are based on Jewish or Christian conceptions (e.g., I En. 26–27; Av. Zar. 2b).

**ESCHELBACHER, JOSEPH** (1848–1916), author and rabbi in Bruchsal, Baden (1870–1900), and Berlin. His main work, *Das Judentum und das Wesen des Christentums*, was written in answer to Adolf von Harnack; others include a biography of Jehiel Michael Sachs and a work on the attitude to the Jews revealed by contemporary Protestant theology. His son MAX (1880–1964), rabbi in Bruchsal, Freiburg, and Duesseldorf (1913–39), published comparative studies on Jewish law and a book on the Duesseldorf community. In 1939 he escaped to England, where he remained until his death.

**ESCUADERO, LORENZO** (d. apparently in 1682), convert to Judaism and polemist. He was born in Córdoba (Spain) to Old Christian parents. He left his wife in Seville when he was 40 years old and apparently married an English woman who converted later on to Judaism. Later, he went to Amsterdam, studied Judaism, and in due course was converted, being known henceforth as Abraham Israel Peregrino (i.e., “the convert”) or Abraham Guer (Ger) de Cordova. After the Portuguese community in Amsterdam refused to convert him, he applied to the Ashkenazi community, which agreed to do so. He was circumcised in 1658. Subsequently, the Portuguese community changed its attitude towards the new convert. Although a skilled fencer and able musician, he spent the rest of his life in penury. Perhaps he served as *shamash* in the Portuguese synagogue. After his conversion, he was invited to the wedding of Emperor Leopold and Marguarita Maria in Brussels, despite the prohibition of Philip IV, Margarita’s father, of Jews to dwell in his Flemish territory. It is astonishing that a convert to Judaism was invited to Spanish-ruled Flanders. Attempts in Brussels to bring him back to Christianity failed. He adopted a very daring attitude towards Christian lay and religious leaders and he challenged Alonso de Cepeda to participate in the debate with Isaac Orobio de Castro. He lived in London from 1655 to 1659, when he was denounced to the Lisbon Inquisi-

tion. Abraham Guer was converted out of conviction, but he was not the author of *Fortaleza del Judaismo y confusion del extraño* as suggested by some scholars, including Cecil Roth (prob. Amsterdam, c. 1680), of which manuscript translations exist in Italian and in Hebrew (under the title *Zeri’ah Bet El*). According to his own testimony he was attracted to Judaism under the influence of the Dominican Fray Luis de Granada, whose spiritualism and attack against Christian “physical ritual” attracted both old and new Christians. *Copia da vida do bemaventurado Abraham Pelengrino* (sic; formerly in the D. Henriques de Castro collection, no. 534), contrary to what Roth wrote, was written by another convert, Manuel Cardoso de Macedo, who also took the name Abraham Peregrino, who died in 1652. Daniel Levi (Miguel) de \*Barrios wrote a sonnet in his honor. Escudero was not an isolated case of a Jewish convert in 17<sup>th</sup>-century Amsterdam.

[Cecil Roth / Yom Tov Assis (2<sup>nd</sup> ed.)]

**ESHEL, YITZHAK** (1912– ), *ḥazzan*. Yitzhak Eshel was born in Debrecen, Hungary. He studied in a *heder* and in yeshivot, among them the Ḥatam Sofer Yeshivah in Bratislava (Pressburg). At the age of 19 he was appointed chief cantor in Munich, where he also continued to practice music and studied in the Conservatory. He served as cantor in Manchester and in his birthplace, Debrecen. In 1938 he was appointed cantor in the famous Nozyck Synagogue in Warsaw, but because of the antisemitic atmosphere he decided not to accept the position. In 1949 he immigrated to Israel where he became the cantor in the Great Synagogue in Ramat Gan. He became known throughout the country, officiating at prayer services and appearing in concerts in different parts of the country. He served as chief cantor of the Beth-El Synagogue in Tel Aviv, and in 1956 for a year was chief cantor of the Shomrei Hadass congregation in Antwerp. He moved to the United States and was appointed chief cantor of the Po’ale Zedek Synagogue in Pittsburgh. When he returned to Israel in 1961 he was chief cantor of the central Hekhal Meir Synagogue in Tel Aviv, where he served until 1970. He founded a choir, which was led by the English-born director, Martin White. From 1970 he appeared in various synagogues in Israel and in the Diaspora and trained many young cantors. Yitzhak Eshel has produced records of cantorial music and Yiddish songs. He is considered one of the creative cantors, while his original compositions are written in a traditional spirit. He published articles on cantorial music and other Jewish music in the journal of the Sha’arey Zedek Synagogue in Pittsburgh.

[Akiva Zimmerman]

**ESHET HAYIL** (Heb. אִשֶּׁת הַיָּל; “a woman of valor”), opening words praising the virtuous woman in Proverbs 31:10–31. This poem enumerates the qualities of the ideal wife in a sequential alphabetic acrostic of 22 verses, one for each of the letters of the Hebrew alphabet. She is lauded as provident, economically successful, working hard for husband and household, and charitable to the needy. She possesses optimism, faces life with confidence, and speaks in wisdom and kindness. Her efforts enable her husband to function as a prominent communal leader, “As he sits among the elders of the land.” The conclusion of the passage celebrates a woman’s domestic and spiritual strengths: “Grace is deceitful, and beauty is vain, But a woman that fears the Lord, she shall be praised ... and let her works praise her in the (city) gates.”

In many Jewish families the song is recited or chanted on Friday evenings before the *Kiddush*. This custom originated in kabbalistic circles and initially referred to the *Shekhinah* (“Divine presence”) as the mystical mother and wife. Later this devotion became a domestic ceremony in which the family paid homage to its wife and mother. Other sources maintain that *Eshet Hayil* refers to the Sabbath or the Torah. In some places this song was chanted at Jewish weddings. Its verses have often been used as inscriptions on tombstones of the pious; in Sephardi rituals the first verse is recited before the \**Ashkavah* (“laying to rest”) prayer at women’s funerals.

*Derashot* to some of the singular verses of *Eshet Hayil* appear in tannaitic, talmudic, and midrashic literature. Several smaller Midrashim expound the poem in sequence, a genre which has assumed the rubric *Midreshei Eshet Hayil*. Some of these Midrashim interpret the entire poem as referring to Sarah. One such text appears in *Tanḥuma*, *Ḥayei Sarah* 4. Two additional versions, which interpret the poem until the verse “Her husband is prominent in the gates” (Prov. 31:23), appear in *Tanḥuma*, ed. Buber, *Ḥayei Sarah* 3, pp. 116–18, and in *Aggadot Bereshit*, ed. Buber (Cracow, 1893), ch. 34, pp. 66–69. Several *Midreshei Eshet Hayil* interpret each of the verses of *Eshet Hayil* as referring to a different biblical female personality.

The earliest surviving manuscript of *Midrash Eshet Hayil* was copied in 1270. This text, which was erroneously appended to the end of *Midrash Proverbs*, is actually an independent Midrash. It contains *derashot* to the first 20 verses only. The women in the first eight verses, all mentioned in the Pentateuch, are presented in chronological order: the wife of Noah, Sarah, Rebekah, Leah, Rachel, Bithiah the daughter of Pharaoh, Jocheved, and Miriam. The remaining women appear in non-chronological order. With the exception of Elisheba, the women mentioned in the latter group appear in the Prophets and Hagiographa. A critical edition of this Midrash has been prepared by Y. Levine (*Midreshei Eshet Hayil*, pp. 1–151).

Several *Genizah* fragments of *Midrash Eshet Hayil* survive. One such text was published by L. Ginzberg (*Ginzei Schechter*, 1 (1928), 163–68). Other versions have been annotated by Y. Levine (*Midreshei Eshet Hayil*, pp. 254–83) and M.B. Lerner (*Sefer Zikaron le-Tirzah Lifshitz*). Additionally,

four Yemenite editions of *Midrash Eshet Hayil* containing *derashot* to the entire poem exist in their entirety. The version in *Midrash ha-Gadol*, by R. David ha-Adani, refers to the verse beginning “And the lifespan of Sarah” (Gen. 23:1) (ed. Margulies, pp. 368–74). Another edition, based on *Midrash ha-Gadol*, appears in *Midrash ha-Ḥefez*, by R. Zechariah ha-Rofeh (*Midrash ha-Ḥefez al Ḥamishah Ḥumshei Torah*, Bereishit–Shemot, Jerusalem, 1991, Gen. 23:1–2, pp. 163–64). An additional edition is attributed to R. Moses Albalidah and was published by Z.M. Rabinowitz in *Mi-Zefunot Yehudei Teiman* (1962), pp. 209–22. However, this ascription is questionable (*Midreshei Eshet Hayil*, p. 244).

The *Eshet Hayil* poem also served as the basis for many post-medieval *derashot*, in which traditional sources concerning women, primarily talmudic and midrashic, were expounded. This external form was particularly prevalent and common among Sephardi rabbis as eulogies for women. Contemporary Jewish feminists have sought to reclaim this poem and have offered new insights and interpretations.

[Yael Levine (2<sup>nd</sup> ed.)]

**ESHKOL (Shkolnik), LEVI** (1895–1969), Israeli statesman and third prime minister of Israel, member of the Second to Sixth Knessets. Eshkol was born in Oratova, in the Kiev district in the Ukraine, into a prosperous ḥasidic family. As a child he studied at a *heder* and with private tutors up to the age of 16, when he entered the Hebrew high school in Vilna. Eshkol joined the *Zē'irei Zion* movement in Vilna. He settled in Erez Israel in 1913 and began his career as an agricultural worker and watchman. He was one of the founders of a workers' commune called *Ha-Avodah* in Petaḥ Tikvah, which then moved to a plot of land near Kalandia, north of Jerusalem, and from there to Rishon le-Zion. In 1918–20 he served in the \*Jewish Legion, and after World War 1 was one of the founders of *kevuza* \*Deganyah Bet, soon becoming its treasurer and economic planner, securing funds for its development from central labor and Zionist institutions. In later years he became active in initiating and managing various institutions within the framework of the \*Histadrut. In 1921 he served on the Defense Committee of the Histadrut, and in 1922, while on a mission to Europe to acquire arms, he was arrested and detained for several weeks by the Vienna police for allegedly purchasing arms illegally. Eshkol was one of the first leaders of the *yishuv* to recognize the importance of securing an adequate supply of water for agricultural development, and was one of the founders of the \*Mekorot Water Company, which

he directed in the years 1937–51. In 1934 he was also one of the initiators and implementers of the \*Haavarah project for transferring Jewish capital from Nazi Germany to Palestine in the form of capital goods and was sent to Berlin to oversee the arrangement. In 1940 he became a member of the National Command of the Haganah, where he was in charge of finances and played a major role in organizing illicit arms manufacturing activities. In 1942–45 Eshkol served as secretary of \*Mapai, and in 1944–48 secretary of the Workers' Council of Tel Aviv. In 1947, he was among those in charge of registration in the *yishuv* for national military service in anticipation of the approaching armed struggle. He was simultaneously a member of the Negev Committee, which prepared the defense of the Negev settlements.

Eshkol was a member of the Jewish Agency Executive, its treasurer in the years 1949–51, and head of the Settlement Department in the years 1948–63, simultaneously holding ministerial posts in the governments of David \*Ben-Gurion and Moshe \*Sharett. As head of the Settlement Department he oversaw the establishment of 371 new settlements and the expansion of an additional 60.

In 1948–49 Eshkol served as director general of the Ministry of Defense (he was referred to as deputy minister), helping Ben-Gurion set up and organize the ministry. He was elected to the Second Knesset in 1951, serving as minister of agriculture and development in 1951–52. In 1952 he replaced Eliezer \*Kaplan, who had passed away, as minister of finance, a position he held until replacing Ben-Gurion as prime minister in 1963, overseeing the implementation of the New Economic Plan introduced by Kaplan and reaping the economic benefits of the Restitution Agreement signed with West Germany in September 1952 – three months after he became minister of finance. Under his direction the Israeli economy entered two decades of rapid economic growth, with GDP rising by an average of 10 percent annually. In 1953–55, Eshkol headed Israel's delegation in negotiations with President Eisenhower's special envoy, Eric Johnston, on the allocation of water resources between Israel and its neighbors. After the Arabs rejected the Johnston Plan that emerged from these negotiations, Israel embarked on the construction of the National Water Carrier, involving the channeling of water from the Jordan River to the Negev, which Eshkol strongly supported. In 1954, when Ben-Gurion temporarily retired to Sede Boker, he designated Eshkol as his successor, but the Mapai institutions elected Moshe Sharett, and Eshkol continued to serve as minister of finance.

In 1960 Eshkol was a member of the cabinet committee that exonerated Pinḥas \*Lavon from responsibility in the Lavon Affair, but several months later he supported Lavon's dismissal from his post as secretary-general of the Histadrut. In the following years Eshkol used all his patience, equanimity, and skill to resolve the crisis as amicably as possible. When in 1963 Ben-Gurion was finally obliged to resign as a result of the crisis, it was Eshkol who was chosen to succeed him as prime minister and minister of defense. Despite pres-

sure by Ben-Gurion, after becoming prime minister Eshkol refused to reopen the Lavon Affair. This refusal, plus Eshkol's success in getting Mapai and \*Aḥdut ha-Avodah-Po'alei Zion to form a single list – the Alignment – in the elections to the Sixth Knesset in 1965, finally caused Ben-Gurion and his supporters in Mapai to leave the party and form \*Rafi, which ran independently.

Soon after becoming prime minister Eshkol reversed Ben-Gurion's policy and agreed to bring the remains of Ze'ev \*Jabotinsky for burial in Israel. Eshkol was the first Israeli prime minister to visit the United States, at the invitation of U.S. president Lyndon \*Johnson, and during his premiership the U.S. started selling Israel significant quantities of arms, though until the Six-Day War France remained its main source of arms. It was also Eshkol who decided to establish formal diplomatic relations with West Germany in 1965. His attempts to improve relations with the Soviet Union failed, and these relations were broken by the latter in the aftermath of the Six-Day War.

The National Water Carrier was inaugurated about a year after Eshkol became prime minister. The Arabs responded by initiating a project to divert the headwaters of the Jordan and repeatedly shelling settlements in northern Israel. In November 1964, Eshkol approved air operations (for the first time since the \*Sinai Campaign) against Syrian artillery positions and the Arab diversion works. In the following two and a half years the security situation became increasingly tense, and the IDF undertook numerous operations in reaction to Syrian and Jordanian attacks and to acts of sabotage by infiltrators. A further deterioration took place in May 1967, when President Gamal Abdel \*Nasser closed the Straits of Tiran to shipping bound for Eilat, called for the withdrawal of UN peacekeeping forces from the Gaza Strip, and started to amass troops in the Sinai Peninsula. Eshkol's policy was to try to avert war at any cost, but when all his efforts failed he approved preemptive action by the IDF. On the eve of the outbreak of the war, and due to growing public pressure, he invited Rafi and \*Gaḥal to join a government of national unity, and handed over the defense portfolio to Moshe \*Dayan, even though he had wanted to appoint Yigal \*Allon to the post. After the war Eshkol did not object to Israel's returning most captured territories in return for a comprehensive peace, and in December 1967 accepted Security Council Resolution 242, which spoke of Israeli withdrawal from territories in return for recognition of its right to live in peace within secure and recognized borders. However, the Arab Summit at Khartoum in 1968 rejected any prospect of negotiations with Israel. Eshkol paid a second visit to the United States in January 1968 when President Johnson agreed to upgrade U.S. arms sales to Israel.

In the aftermath of the Six-Day War Eshkol actively supported the establishment of the Israel Labor Party, through the merging of Mapai, Aḥdut ha-Avodah-Po'alei Zion, and Rafi. The Labor Party was established in January 1968, and Levi Eshkol stood at its head until his sudden death in February 1969.

[Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**ESHTAOL** (Heb. אֶשְׁתָּאֹל), biblical town in the Judean Shephelah, in the territory of the tribe of Dan, usually mentioned together with nearby Zorah (Josh. 15:33; 19:41). The Danites set out on their march to Laish from these towns (Judg. 18:2) and somewhere between were the tombs of Samson and his father Manoah (Judg. 13:25; 16:31). The *aggadah* describes the two towns as mountains facing each other (Sot. 9b). In the fourth century C.E. Eusebius mentions a village called Eshtaol in the Eleutheropolis (Bet Guvrin) district, 10 mi. (16 km.) north of the city; its location is not clear (Onom. 88:12–14). Estori ha-Parḥi (14<sup>th</sup> century) was the first to identify Eshtaol with Ishwa', north of Zorah and 16½ mi. (27 km.) west of Jerusalem (*Kaftor va-Ferah*, 302). The ancient city was perhaps located at Tell Abu-al-Qābūs, on the hill above the village of Ishwa', where remains of the Iron Age have been found. In the War of Independence (1948), the village (pop. 600) was taken during the building of the “Burma road” to Jerusalem; it had been abandoned by its inhabitants.

[Michael Avi-Yonah]

The name Eshtaol was renewed when a moshav, affiliated with Tenu'at ha-Moshavim, was founded by newcomers from Yemen, at the site of Ishwa' in the Judean Foothills north of Beth-Shemesh. Initially this was a work village whose settlers were employed at reclaiming the terrain for farming. Gradually, the main branches – deciduous fruit orchards, vineyards, garden crops, etc. – were developed. Near the village a forest tree nursery of the Jewish National Fund offered further employment to the settlers who also worked in nearby forests, e.g. the President's Forest commemorating Chaim \*Weizmann, which served as a recreation ground. The crossroads near Eshtaol bears the name Zomet Shimshon (“Samson Junction”). In 1968, Eshtaol numbered 320 inhabitants, rising to 480 in the mid-1990s and 702 in 2002 as the moshav underwent expansion.

**BIBLIOGRAPHY:** J. Garstang, *Joshua, Judges* (1931), 375; Montgomery, in: *JBL*, 54 (1935), 61; Malky, in: *JPOS*, 20 (1946), 43 ff.; Aharoni, *Land*, index; Avi-Yonah, *Geog*, 111.

**ESHTEMOA** (Heb. אֶשְׁתֵּמוֹעַ, אֶשְׁתֵּמוֹהַ, אֶשְׁתֵּמוֹהַ), levitical city in the territory of Judah, south of Hebron (Josh. 15:50; 21:14; 1 Sam. 30:28; 1 Chron. 6:42) that belonged to the family of Caleb (1 Chron. 4:17, 19). According to Eusebius, in the fourth

century C.E. it was still a large Jewish village in the district of Bet Guvrin (Eleutheropolis; Onom. 26:11; 82:20). The site is occupied by the Arab village of al-Samū' where many fragments of synagogue ornamentation, such as reliefs of candelabra, have been found. Remains of an ancient synagogue were uncovered by excavations conducted by L.A. Mayer and A. Reifenberg in 1935–36.

On November 13, 1966, the Israeli army attacked the Arab village – then in Jordan with a population of about 2,500 Muslims – which was serving as the base of terrorist raiders who had committed a number of outrages in Israeli territory. The village fell into Israeli hands as a result of the \*Six-Day War in 1967. Excavations by Z. Yeivin in 1969–70 led to the discovery of a mosaic pavement with an Aramaic inscription at the synagogue site. The synagogue differs in plan and details from the type common in Galilee in the third and fourth centuries C.E. It measures 40 ft. (12 m.) by 65 ft. (20 m.). Iron Age jewelry and ingots were found beneath the floor.

**ESKELES**, family in Vienna. The name is derived from El-kesh, i.e., Olkusz, town in Krakow province. The first noted member, GABRIEL BEN JUDAH LOEW ESKELES (d. 1718), was born in Cracow. A pupil of Samuel \*Koidanover, he became rabbi of Olkusz in 1684. The rabbinate of Prague was offered to him in 1683 but it is not clear if he accepted it. He became rabbi of Metz in 1695, and in 1708/9 *Landesrabbiner* (“chief rabbi”) of Moravia and head of the yeshivah in Nikolsburg (Mikulov), sharing his office with David \*Oppenheim. In 1712 he banned the kabbalist and Shabbatean Nehemiah \*Ḥayon. Gabriel left unpublished novellae on the Talmud tractates *Shabbat* and *Megillah*, a commentary on *Avot*, and a collection of responsa (now lost), known mainly from quotations in Meir \*Eisenstadt's *Panim Me'ivot*.

His son ISSACHAR BERUSH (Bernard Gabriel, 1692–1753) married a daughter of Samson \*Wertheimer, and, as written on his tombstone, “wrapped in a gold-trimmed cloak” became rabbi of Kremsier (Kromeriz) at the age of 18. As he absented himself frequently on business, he appointed a substitute rabbi. In 1717 he is mentioned as rabbi of Mainz. Around 1719 he settled in Vienna as court purveyor (see \*Court Jews), supplying arms and other commodities. He succeeded his father as chief rabbi of Moravia and in 1725 followed Samson Wertheimer as chief rabbi of Hungary, administering both offices from Vienna. When consulted by the Moravian authorities in 1727, he suggested that they enforce the precept forbidding Jews from shaving with a razor, and advocated distinctive dress for Jews except for traveling. He translated into German the Moravian *takkanot* (published in 1880 by Gerson Wolf) for the Austrian government. His novellae on

tractate *Berakhot* remain unpublished. Using his influence at court, he supported Diego \*d'Aguilar's efforts to prevent the expulsion of the Jews from Moravia in 1742, and from Prague and Bohemia in 1744-45. Four days before his death, he established the Eskeles-Stiftung (see below).

Issachar's son **BERNHARD** (1753-1839), born after his father's death, became one of the outstanding financiers in Austria at the beginning of the 19<sup>th</sup> century. After an unsuccessful start in Amsterdam, where he lost his father's legacy (over 400,000 florins), he returned in 1774 to Vienna, married Cecily Wulff (née \*Itzig), and went into partnership with her brother-in-law Nathan von \*Arnstein. Following the rise of his banking house and his uncovering of a banking forgery (1795), he was entrusted with government financial tasks and his advice was sought by \*Joseph II and \*Francis I. He founded the Austrian National Bank in 1816, and, competing with Salomon Mayer \*Rothschild, promoted railway construction. Ennobled in 1797, he became a baron in 1822. It is assumed that he was the author of an anonymous exposé of the Jewish situation used by Joseph II for his *Toleranzpatent*. In 1815, he was one of the signatories of a petition for Jewish rights (see \*Austria). The only Austrian Jew invited to the Napoleonic \*Sanhedrin in 1806, he informed the police out of loyalty to Austria. In an obituary (*AZJ*, 1839, 518-9) he was attacked for failing to make sufficient use of his influence and wealth for the benefit of the Jews. Bernhard's wife **CECILY** (1759-1818), a daughter of Daniel Itzig, made their house a meeting place for high society (see \*Salons), mainly during the Congress of \*Vienna. Her parties rivaled those of her sister Fanny von \*Arnstein. \*Goethe made her acquaintance at Carlsbad. Bernhard and Cecily's children were baptized in 1824. **DENIS** (Daniel) inherited the firm, which went bankrupt in 1859, as a result of his connection with the French *Crédit Mobilier*. Issachar's elder daughter **LEA** (Eleanore) was involved in a Prussian spy scandal. Because of this Valentin Guenther (with whom she had had two children), who had

played an important part in the formulation of the *Toleranzpatent*, was banished from court. In later years Goethe corresponded with her.

### The Eskeles-Stiftung

Issachar established a foundation for Torah teaching to children and providing dowries for poor brides. Endowed with 50,000 florins, the foundation was one of the largest in the Hapsburg empire. When in 1782 the government ordered that it should be used for the newly founded *Normalschulen* (see \*Austria, education) Bernhard sued the government, and it was agreed that the foundation should be used for its original aims as well as for the new ones. As its income had decreased considerably, Bernhard doubled the capital in 1811. In 1839 he altered the statute, adding a donation for five Moravian university-trained rabbis and ten students. The latter were required to be of Jewish faith when granted the scholarship, but they were not to lose it if they were baptized. Of the two trustees one was to be a member of the Eskeles family of any religion, who was to propose the second, a Moravian resident of Jewish religion, who could be replaced if he were baptized. The foundation's committee still existed in Brno in the 1930s.

[Meir Lamed]

**ESPINOSA, EDOUARD** (1872-1950), British ballet dancer and teacher. Espinosa belonged to a renowned family of dancers and teachers, originally of Sephardi extraction. His father Léon E. (1825-1904) studied at the Paris Opera school, danced at the Théâtre de la Porte-Saint-Martin, and toured the U.S. before joining the Bolshoi Ballet in Moscow as premier danseur de contrast. He settled in London in 1872, where he opened a school. Edouard was born in London and trained by his father. He danced under Henry Irving at Lyceum Theatre, London (1891-96) and for a season (1893) under Charles \*Frohman, New York. From 1896 to 1939 he was ballet master at Covent Garden and other London theaters, producing dances for numerous shows, including *Chu Chin Chow* (1916), *Maid of the Mountains* (1917), and *The Last Waltz* (1922). He was one of the founders of the Royal Academy of Dancing in 1920 and of the British Ballet Company in 1930. After his death the latter was directed by his son Eduard Kelly Espinosa (d. 1991) and daughter Ivette (d. 1992). He also wrote manuals on dance technique.

[Amnon Shiloah (2<sup>nd</sup> ed.)]

**ESPINOZA, ENRIQUE** (pseudonym of **Samuel Glusberg**; 1898–1987), Argentine author, publisher, and, journalist. His pseudonym combines the names of Henrich Heine and Baruch Spinoza. Born in Kishinev, Espinoza arrived in Argentina at the age of seven. He founded and edited the literary reviews *Cuadernos Americanos* (1919) and *Babel* (1921–51), first in Buenos Aires and later in Santiago de Chile, where he settled in 1935 for health and political reasons, and also founded the Babel publishing house, which launched books by new Argentinian writers. In 1945 he conducted a symposium on “the Jewish Question” among prominent Latin American intellectuals, published in *Babel* 26. He was co-founder and first secretary of the Argentine Writers’ Association, and a member of avant-garde movements in literature and the arts. His short stories and articles deal with Jewish identity, immigration, antisemitism, and the Holocaust, as well as ethical and universal social issues. His contemporaries saw him as the perfect intellectual blend of cosmopolitanism and Jewishness. His best-known stories appeared in *La levita gris: cuentos judíos de ambiente porteño* (1924); and *Ruth y Noemí* (1934). His essays were collected in *De un lado y otro* (1956), *Heine, el ángel y el león* (1953), and *Spinoza, ángel y paloma* (1978).

[Florinda Goldberg (2<sup>nd</sup> ed.)]

**ESRA**, organization founded January 26, 1884, with its headquarters in Berlin and its major objective to support Jewish agricultural settlers in Erez Israel and Syria without the traditional \**Halukkah* system. At the end of 1886 a group of young Berlin Jews produced a manifesto prompted by the movement of Russian Jews to Erez Israel to establish agricultural settlements, proclaiming: “These Russian Jews, who have been continually tortured and persecuted, were able to initiate this excellent project out of their intense need. Shall German Jewry, which enjoys the full protection of an impartial government, stand idly by and merely watch their efforts? We, who have had intellectual hegemony since the days of Mendelssohn, stand ashamed before Russian Jewry.” The founding assembly of the Verein zur Unterstuetzung ackerbautreibender Juden in Palaestina und Syrien (“Association for the Support of Jewish Farmers in Palestine and Syria”) took place in Berlin in 1884. Its early leaders were Willy \*Bambus and Hirsch \*Hildesheimer, the son of Rabbi Esriel Hildesheimer, who coopted the Orthodox camp into the organization. At its peak, the leaders of the organization included Otto \*Warburg and Eugen \*Mittwoch. The association, which had branches throughout Germany, published the newspapers *Serubabel* and \**Selbstemanzipation*, pamphlets about agricultural settlement by Bambus, and the periodical, *Zion*. In 1891, the association succeeded in forming an umbrella organization for all European associations supporting settlement in Erez Israel. Esra supported individual settlers in almost all agricul-

tural villages, devoting special attention to the Qastina settlement (later Be’er Toviyah), the Benei Yehudah colony in the Golan, Yemenite immigrants, and educational projects. When political Zionism gained momentum, the association emphasized the value of practical settlement in Palestine, while opposing Zionist political activity. Even at the end of World War I, it stated firmly that despite the “Charter” (i.e. the Balfour Declaration, to which they would not refer by name), supreme value must still be attached to settlement, without which there is no real basis for “national rights.” Since the Zionist organization now began its large-scale settlement projects (inter alia, in the Jezreel Valley), the activities of Esra became superfluous. The association disappeared in the early 1920s.

[Getzel Kressel / Bjoern Siegel (2<sup>nd</sup> ed.)]

**ESSELIN, ALTER** (**Artur Eselin**; pseudonym of **Ore Serebrenik**; 1889–1974), Yiddish poet. Born in Chernigov, Ukraine, Esselin immigrated to the U.S. at the age of 16, worked as a carpenter in various cities, and settled in 1925 in Milwaukee, Wisconsin. His first poems appeared in 1919 in local Yiddish newspapers (*Der Veg*, Detroit; *Kundes*, New York). In a few years, he received significant literary recognition. His poetry volumes, *Knoytn* (“Candlewicks,” 1927), *Unter der Last* (“Under the Yoke,” 1936), and *Lider fun a Midbernik* (“Poems of a Hermit,” 1954), are marked by their sadness. He often laments his lonely vigil far from Yiddish centers and voices his pride that he earns his living with saw and hammer. Death is a frequent theme, and in a poetic epitaph he describes himself as a poet who poisoned himself with songs in which honey and arsenic were mixed. A selection of his poems, translated into English, with an introduction by his son, Joseph Esselin, appeared in 1968.

**BIBLIOGRAPHY:** Y. Bronshteyn, *Fun Eygn Hoyz* (1963), 267–74. **ADD. BIBLIOGRAPHY:** *LNYL*, 7 (1968), 9–10.

[Sol Liptzin / Eliezer Niborski (2<sup>nd</sup> ed.)]

**ESSEN** (in Jewish sources: **נסע**), city in North Rhine-Westphalia, Germany. Jews are first mentioned there in the 13<sup>th</sup> century. During the \*Black Death (1349) they were expelled from the city, but subsequently allowed to return. Jews are mentioned in a list of taxpayers of 1399. Between 1545 and 1578 there were no Jews in Essen. The first municipal law concerning the trades open to Jews was passed in 1598. Jurisdiction over Essen Jewry was disputed between the monastery and the municipality during the period 1662 to 1686. Although there were only seven Jews living in Essen in 1652 and 13 in 1791, a synagogue was built there in 1683 and a cemetery consecrated in 1716. Several Jewish physicians were living in Essen in this period. With the city’s expansion in the mid-19<sup>th</sup> century the number of Jews rose from 19 in 1805 to 750 in 1869.

There were approximately 5,000 Jewish residents in 1930 and 4,500 (0.7% of the total population) in 1933. Jewish businesses were Aryanized and Jewish workers, no matter how prominent, were fired, including Benno Schmidt who invented stainless steel and was dismissed by Krupp and Company. The synagogue built in 1913 was desecrated by the Nazis in 1938. Seven hundred Jewish men aged 16–60 were arrested and deported to Dachau. Among the Jews not arrested were Ingo Freed and his father; Freed went on to serve as the architect of the United States Holocaust Memorial Museum. By May 17, 1939, 1,636 Jews remained in Essen. Those who had not already left were deported between 1941 and 1943. Deportations commenced when 247 Jews were sent to Lodz on October 27, 1941; 121 were sent to Minsk in November; an unknown number were deported to Riga in December; and in April 1942, 355 were sent to Izbica and from there presumably to Belzec. According to ration cards issued in 1942, there were 527 Jews left in May who were confined to the Holbeckshof camp in Essen-Steele and from there were deported to concentration camps. Two hundred ninety-four were sent to Theresienstadt on July 21. In April 1944, 39 Jews still lived in Essen, mostly people in mixed marriages. In the fall the Jewish population grew as an acute labor shortage at Krupp led to the arrival of 520 young Jews. Many later died in Bergen-Belsen. About 100 survivors returned after the war. A community was again established in Essen after the war and a synagogue was opened in 1959. There were 170 Jews living in Essen in 1970 (0.03% of the total population) and 130 in 1989. As a result of the immigration of Jews from the Former Soviet Union, their number rose to 667 in 2003.

[Azriel Shochat]

**ESSENES**, a religious communalistic Jewish sect or association in the latter half of the Second Temple period, from the second century B.C.E. to the end of the first century C.E. Contemporary or near-contemporary descriptions are found in \*Philo (*Every Good Man is Free, Hypothetica*), \*Josephus (*Antiquities* and *War*, including references to individual Essenes), and Pliny the Elder (*Natural History*). Brief references from later authors are in Hegesippus (2<sup>nd</sup> century, who merely lists them, with other Jewish sects), Hippolytus (2<sup>nd</sup>–3<sup>rd</sup> century B.C.E., who seems dependent on neither Josephus nor Philo), and Synesius (4<sup>th</sup>–5<sup>th</sup> century C.E., apparently based on Pliny). Epiphanius (4<sup>th</sup> century C.E.) refers to both *Essenoi* (as a Samaritan sect) and *Ossaioi/Ossenoi*, whom he locates near the Dead Sea. The information in these sources is not always consistent. Josephus, who (improbably) claims to have been a member of the Essenes for a while, is probably less idealistic or fanciful than either Philo or Pliny, though he is relying

on more than one source himself, while the latter preserve some probably reliable information. Josephus names them as one of his three main Jewish parties (*hairesis*), and according to Philo, they numbered about 4,000. According to both authors, their members lived in monastic communities; Josephus states that some married and some did not, while Philo is unclear, stating that they had children but did not “take women.” Pliny says they lived “without women ... or money” but seems to consider them as living in one place only, “above En-Gedi.” The \*Dead Sea Scrolls are widely regarded as belonging to the Essenes and if so they extend our knowledge of them considerably. There is no reference to the Essenes in the rabbinic literature, or in the New Testament, though it has frequently been suggested that \*John the Baptist was influenced by Essenism since he lived, preached, and baptized beside the Jordan River only a few miles from Qumran. Some New Testament scholars also believe that the early Church may have incorporated Essene elements into its structure. The very existence of a pre-Christian Jewish quasi-monastic (and celibate) community is important for the understanding of subsequent Christian ascetic practices. A gateway and nearby district near Mt. Zion in Jerusalem has been excavated and plausibly identified as an Essene quarter (Pixner, following a suggestion from Yadin), but no absolute proof exists. Qumran is widely identified as an Essene settlement (see below); two other possible Essene locations have been proposed near the Dead Sea at Ain al-Ghuweir (by P. Bar-Adon) and above En-Gedi (by Y. Hirschfeld).

Their origins are unclear. They seem to have emerged as a distinct party, along with Sadducees and Pharisees, in the wake of the Hasmonean revolt, though all three probably have earlier roots. Some scholars regard both the Essenes and Pharisees as originating from the *hasidim* mentioned in connection with the Maccabean revolt; but the different *halakhah* and calendar, as well as strong criticism of apparently Pharisaic beliefs and practices, make this unlikely. It has also been suggested (Murphy-O'Connor) that they had immigrated from Babylonia at about this time or, alternatively (García Martínez), that they arose out of the Palestinian Jewish “apocalyptic movement.”

### The Essenes and the Dead Sea Scrolls

The Qumran scrolls have generally been interpreted as belonging to the Essenes, and their descriptions of sectarian communities cohere well with the classical sources, especially once the difference between the descriptions of the Damascus Document and the Community Rule is observed, since these differences can partly explain the discrepancies in the classical sources as well as control our interpretation of them. Thus, for instance, Josephus’ account fits rather well with the many settlements (called “camps” and “cities”) of the “Damascus” community, and with the existence of marrying and non-marrying orders, with the lengthy initiation procedures, attitudes towards women, limited participation in the Temple cult, and strict adherence to Torah and Sabbath; while Pliny seems to al-

lude to the *yahad* described in the Community Rule, which is represented as a single and entirely celibate community – most likely that living at Qumran. Although the interpretation of the Qumran settlement is currently controversial, the site has generally been regarded as according well with the accounts of Essene lifestyle reported in the ancient sources, and this settlement has been understood either as a headquarters or a retreat center for the wider movement (Stegemann), or the home of a group that split off from the main body under the leadership of a figure named in the Qumran scrolls as the “Teacher of Righteousness.” This figure is unnamed in the scrolls, but has been variously identified with known Essene figures mentioned by Josephus, in particular “Judah the Essene.”

### Meaning and Origin of the Name

There is a wide diversity of opinion as to the etymology of the name “Essene.” Greek writers refer to them by names of which the most common are Ἐσσηνοί and Ἐσσηαῖοι. The English “Essene” comes from the first form through the Latin. Philo invariably uses the second, and explains the name with reference to the Greek *hosioi*, while \*Josephus uses both forms. Among the numerous theories that have been proposed are the following: (1) the most popular is a derivation from חַסִּידִים (*hasidim*, “pious”), a name used in I and II Maccabees of those especially loyal to the Torah (there are also references in rabbinic literature). Alternatively, the basis may be the Aramaic form חַסִּיָּא, the plural of חַסִּיָּא (“pious”) (the same derivation, but from Syriac, has also been proposed); (2) from Aramaic אַסַּא, “heal,” based on Josephus’s account of their interest in medicinal herbs and the possible connection between Essenes and Therapeutae made by Philo. (Whether the Therapeutae should be regarded as linked to the Essenes, rather than just compared by Philo, is dubious); (3) from חַשְׂאִים or חַשְׂאִין (“the silent ones”), based on a passage from the Mishnah which mentions two rooms in the Temple of Jerusalem, one called the “chamber of utensils,” and the other, the “chamber of חַשְׂאִים” (chamber of “secrets” in H. Danby’s translation). In the chamber of חַשְׂאִים, the “sin-fearing ones” used to deposit their gifts “in secret” and impoverished gentlefolk could help themselves to these gifts, equally in secret. This is now discarded, though it possibly fits with Josephus’ statement that the Essenes sent offerings to the Temple, but offered sacrifices “by themselves” (ἐφ’ αὐτοῖς). Less probable are (4) from Heb. עֹשִׂים or עֹשִׂין “doers (of Torah)”; (5) from חֶשֶׁן “breastplate”: Josephus uses *essen* to refer to this item, and it also figures in the liturgy of the Qumran “Songs of the Sabbath Sacrifice”; and (6) from the celibate priestly *Essenas* who ministered to Artemis at Ephesus (reported by Pausanias).

### Rites, Practices, and Doctrines

By critically combining the evidence of the Qumran scrolls and the classical sources, the following description can be offered. The Essenes lived frugal, usually celibate, lives, supporting themselves by manual labor, generally agricultural, and practicing common ownership. They were also devoted to study of the Torah in its minutest details and performed

frequent washing to maintain ritual purity (Josephus says they avoided oil, which was often used for cleaning the body). They had a rigorous and lengthy system of initiation. Unlike the Pharisees and Sadducees, they lived a segregated lifestyle with very limited contact with those outside. On the evidence of the Dead Sea Scrolls, they deemed themselves the only true Israel and regarded the religious observances of other Israelites, and especially in the Temple, as corrupt. On these grounds they qualify to be called a “sect.” Like the Pharisees, they stressed the need for personal piety and separation from the impurities of daily life, imposing on themselves levitical rules of purity: but while the Essenes (so Josephus) believed in the immortality of the soul, they rejected the Pharisaic doctrine of bodily resurrection. It has recently been proposed that the *halakhah* of the Scrolls is similar to that ascribed to Sadducees in the rabbinic literature.

The Essenes laid a strong emphasis on scrupulous obedience to the Torah, as they interpreted it. They emphasized observance of the Sabbath and the observance of festivals on the appropriate days, according to their own 364-day calendar, based on the solar year – which may explain Josephus’ statement that they prayed towards the sun every morning. According to Josephus, they then worked through the greater part of the morning, then having gathered they girded themselves in white linen garments, and bathed in cold water (Jos., War, 2:129). They had their midday meal together, with a grace recited by a priest before and after the meal. The meal, eaten in a state of purity, seems to have played a very important role in sustaining the corporate identity of the sect. After working until the evening, they again ate together, in total silence. In all its activities, each Essene community was governed by rank and learning; the leaders directed the procedure, and named the persons to officiate. The Essenes zealously studied the sacred books and had an interest in medicinal herbs. They abstained from oaths, and blasphemy against God was punishable by death.

### Initiation and Organization

New members of the community were recruited by adopting candidates after a probationary period. Those wishing to enter had to wait before being given the emblems – a belt, a white garment, and a hatchet for digging holes in the earth (whenever they wished to relieve themselves; *ibid.*, 2:127; 148). Then they were allowed to follow their routine and receive “more purifying washings for holiness” but were not yet permitted to take part in the common meals. After a probationary period of two more years the new member was admitted to the society, but not until he had taken oaths to observe the rules. Some form of communal ownership of goods was allowed, apparently more complete in the *yahad*, which, as the name (“union”) implies, may have seen itself as a corporate unit, whose holiness depended on the individual holiness of all its members who worked, ate, and studied in communion. The Damascus Document describes a looser social structure, with an “overseer” (*mevakker*) in charge of each “camp” and

ideology: corporate activity is less intense, but also subject to similar disciplinary rules. The settlements of married members were organized on the basis of individual households, with wives and children included in the sect automatically. This community also had dealings with non-Jews and owned slaves, though detailed accounts of such aspects are not provided. While the classical sources say little about priestly leadership, the Scrolls accord a very important role to the priesthood in matters of law and of course liturgy; how far they were responsible for the wider governance of the sect is unclear.

Essene participation in wider Jewish affairs is hard to assess. Apart from the mention of individual Essenes, however, Josephus states that they participated bravely in the war against Rome, and the discovery at Masada of some manuscripts that may have originated at Qumran, together with evidence of the Roman destruction of Qumran in about 68 B.C.E. and the many copies of a "War Rule" in the caves, in which the Romans appear as a thinly disguised enemy, support this claim. After the end of this war, the Essenes seem either to have disappeared or fled or dispersed: but the existence of copies of the Damascus Document in the Cairo *Genizah* may suggest that some of their traditions continued and influenced, among others, the \*Karaites.

[Menahem Mansoor / Philip Davies (2<sup>nd</sup> ed.)]

**ESSEX COUNTY**, county in New Jersey, U.S. Located in northern New Jersey, Essex County has an area of 127 sq. miles (330 sq. km.) and in 2005 was the second largest county in New Jersey by population. Essex County is part of the United Jewish Communities of MetroWest, which encompasses Essex, \*Morris, Sussex, and northern \*Union counties and serves a Jewish population of approximately 120,000.

### Early History

The Jewish history of Essex County is rooted in the city of Newark. Records indicate that a small number of Sephardi Jews were among the earliest Jewish settlers in the Newark area, but, with few records and no synagogues to document

their stay in the area, the growth of Newark's Jewish community is attributed to the arrival of German Jews in the 1840s. Conventional wisdom has it that the first recorded Jewish settler in Newark was Louis Trier in 1844. Trier had six children, among them Abraham, who in 1845 became the first Jewish child to be officially registered as born in Newark.

### Prince Street and the Third Ward

Of the many memories associated with Jewish Newark, none engenders more enthusiasm than stories about life on Prince Street and the six blocks of Yiddish-speaking neighborhoods that bordered and surrounded Prince Street. This was Newark's Third Ward. The boundaries at the eastern end were High Street (now Martin Luther King Boulevard) from Clinton Avenue to Springfield Avenue. The western boundaries were Belmont Avenue (now Irving Turner Boulevard) from Clinton Avenue to South Orange Avenue. This is where Newark's Jews, some 50,000 of them by 1911, lived and worked. First there were peddlers who came to the area, then came the pushcarts, followed by Jewish merchants who opened storefronts on Prince Street. Prince Street was described as "Baghdad on the Passaic" by one of the founders of the Jewish Historical Society of MetroWest, Saul Schwarz. Residents kept to the neighborhood. For entertainment, old and young attended Yiddish plays and operettas at Elving's Metropolitan Theater (1922–44). This first generation of Jewish immigrants also maintained memberships in mutual benefit and burial societies. For German Jews there was the *KUV*, *Kranken Unterstuetzung Verein*, or Chronic Benefits Society, and for East European Jews, these societies, or "landsmanschaften," helped ease their adjustment to life in America. Two of the most popular occupations at this time were that of the saloonkeeper and the pharmacist. For sons of Jewish immigrants, boxing was a way to make a living. The starting place for Newark's Jewish fighters was the High Street *YMHA*. Noted amateurs were Newark's only Jewish mayor, Meyer Ellenstein, and Newark's bagel king Sonny Amster. Professional boxing sites were Laurel Garden or the Newark Veleddrome. Newark's Jewish boxers were also recruited into an organization designed to counter pro-Nazi activities in the Newark area in 1933 and were called "The Minutemen."

### Synagogues

By 1855, the number of Jewish families living in Newark was estimated at 200. The steady increase of Jewish families had already manifested itself when, in 1848, as many as 60 families joined the newly incorporated "Jewish Religious Congregation B'nai Jeshurun." This was Newark's first synagogue and New Jersey's oldest Reform congregation. Isaac Schwarz was its first rabbi. Newark's second oldest congregation, Temple B'nai Abraham, founded in 1855, was followed by Congregation Oheb Shalom in 1860. Oheb Shalom was one of the seven charter members of the \*United Synagogue of America. These synagogues continue to host large congregations but are now located in the Essex County towns of Short Hills, Livingston, and South Orange respectively. In its heyday, however, New-

ark was home to as many as 43 synagogues. After numerous mergers and relocations, Essex County is currently home to 27 synagogues. There is one neighborhood synagogue with member services still located in downtown Newark, Ahavas Shalom, and one continuously operating synagogue, Mount Sinai Congregation, located at the Ivy Hill Apartments in suburban Newark. Of the many distinguished rabbis that served the greater Newark community, one in particular earned national and international recognition. Rabbi Dr. Joachim \*Prinz, who fled Nazi Germany, became chief rabbi of Temple B'nai Abraham in 1939. Prinz used his pulpit to rally support for America's civil rights movement and counted civil rights leader, Dr. Martin Luther King, Jr., as one of his close friends.

### **Business, Industry, and Philanthropy**

Louis \*Bamberger and Felix Fuld established what became, by 1920, the nation's fourth largest department store, L. Bamberger and Company. Bamberger and Fuld were Essex County's, and possibly New Jersey's, greatest philanthropists of all time. The two men were the largest donors for Newark's Beth Israel Hospital, the YM-YWHA building on High Street, the building that houses the world-renowned Newark Museum, and the lasting legacy of an annual cherry blossom festival (more cherry trees than Washington, D.C.) at Branch Brook Park courtesy of Carrie Bamberger Fuld. Bamberger and Fuld donated some \$18 million dollars to found the world famous Institute for Advanced Study located in Princeton, New Jersey, which offered world renowned scientist, Albert \*Einstein, a position as the first head of its mathematics department. Einstein's connection to Newark's Jewish community is well documented.

Newark's Jews owned manufacturing businesses in industries such as leather, trunk, and harness manufacturing as well as jewelry manufacturing. Prominent industries such as Louis Aronson's Ronson Lighter Company and A. Hollander Sons, which grew into the largest fur dressing and dyeing operation in the world, earned Newark the name "workshop of the nation." New Jersey's premier supermarkets, Kings, ShopRite, Pathmark, and Wakefern Food Corporation were founded by members of the MetroWest community following World War II. Jewish businessmen with family roots in Newark continue to play a role in the renaissance of Newark. Jewish landmarks from the past are finding new uses.

### **Charitable Institutions**

The collective accomplishments of Newark's Jewry include the founding and funding of Newark's Jewish hospital, Beth Israel Hospital (1901), which merged into St. Barnabas Healthcare System in 1996, and whose profits from the sale of the hospital are managed by the Jewish community as the Healthcare Foundation of New Jersey, and New Jersey's first Jewish home for the aged, Daughters of Israel Geriatric Center, founded in 1906, and located in West Orange. The first YM-YWHA was located on Newark's High Street in 1924. MetroWest now maintains two "Y" buildings, one in West Orange and the other at its Whippany Campus in Morris County. The community's

social service agencies are distributed around the greater MetroWest area.

### **Educational Institutions**

A congregational Hebrew school was established at B'nai Jeshurun in 1863; the Plaut Free Memorial Hebrew School followed in 1888. A *talmud torah* was established in 1899 in a store on Newark's Broome Street. Michael Stavitsky spearheaded the movement to establish the JEA, or Jewish Education Association, in 1937. Not well known is the Bet Yeled Jewish Folk School organized in 1950. The first major day school, Yeshiva of Newark, merged with the *talmud torah*, and was renamed the Hebrew Academy of Essex County in 1943; it subsequently merged with the Hebrew Youth Institute, and was renamed the Hebrew Youth Academy in 1962. Currently, it is the Joseph Kushner Hebrew Academy located in Livingston. Two individuals, Professor Nathan Winter and Horace Bier, were responsible for most of the Solomon Schechter Day Schools founded in New Jersey.

The newspaper-of-record, the *Jewish News*, began publishing in 1947. This paper is now the *New Jersey Jewish News*, and has the distinction of being the nation's second largest Jewish newspaper.

### **Shift to the Suburbs**

In 1948, Newark was home to as many as 65,000 Jewish residents with an additional 21,000 Jews living in its suburbs. In the decades after World War II, there was a large-scale movement to the suburbs to towns such as South Orange, West Orange, Livingston, and more recently, Millburn-Short Hills. Flight was intensified by the Newark riots of 1967 and paralleled similar movements by Jewish communities elsewhere into the suburbs. In the mid-1990s the Jewish population of Essex County, including Newark, numbered approximately 76,200. The Jewish population of Livingston was approximately 12,600, and the Jewish population of West Orange was approximately 16,900.

### **Mergers of Institutions and Agencies**

In 1923, an agreement to merge 13 Jewish agencies resulted in Essex County's Conference of Jewish Charities. The Essex County Council of Jewish Agencies was formed in 1936. The Jewish Community Council of Essex County, established in 1944, went one step further and incorporated the community's welfare services, fundraising, and community relations programs within one central federation. The 1973 merger of towns in the greater Summit area with the Jewish Community Council of Essex County reflected the movement of Jews west to towns in Morris County. The last significant merger occurred in 1983 between the Jewish Community Federation of Metropolitan New Jersey (Essex County) and the Jewish Federation of Morris and Sussex to create the United Jewish Communities of MetroWest.

### **MetroWest in Footlights**

Essex County's greatest contributions to Jewish life in America are in the broad field of entertainment. Theater owner Mor-

ris Schlesinger is credited with discovering singer/film star Al \*Jolson; Dore \*Scharf, executive producer at MGM studios, produced as many as 350 movies and also wrote the Pulitzer Prize-winning play *Sunrise at Campobello*; Essex County claims world-famous comedian Joseph Levitch, a.k.a. Jerry \*Lewis; composer Jerome \*Kern attended Barringer High School; Broadway producer Burton Shevelove produced *A Funny Thing Happened on the Way to the Forum*; choreographer Dean Collins gave us the steps to the West Coast Swing; there was children's poet Ilo Orleans; Beat Generation poet Allen \*Ginsberg; and Newark's Jewish neighborhoods, mom and pop merchants, synagogues, rabbis, and institutions have been immortalized on the pages of American literature by Pulitzer Prize-winning author and Weequahic High School graduate Philip \*Roth, who depicts Newark time and again in his novels.

[Linda Forgosh (2<sup>nd</sup> ed.)]

**ESSLINGEN**, city in Baden-Wuerttemberg, Germany. The sum levied on Esslingen Jewry in the tax list of 1241 indicates that it was one of the largest communities in Swabia, comprising more than 10% of the town's population. In the 13<sup>th</sup> century the community owned a synagogue, a drinking (or dance) hall, and a cemetery. The "Jews' Street" is first mentioned in 1308, but Jewish residence was not confined to it. Jews were allowed to join the guild on payment; the main Jewish occupation was moneylending. When attacked during the \*Black Death persecutions in 1349, the Jews in Esslingen set fire to their synagogue; some committed suicide and others fled. However, in 1366 Jews are again mentioned in Esslingen. There were 14 in 1387, 21 in 1391. Esslingen Jewry loaned 84 hellers to the city in 1384; a Jew named Saecklin lent money to Duke Leopold III of Austria some time before 1385. By 1439 there were no Jews left in Esslingen. In the 16<sup>th</sup> century several Jews were admitted for short periods at high rents and taxes. However, the city expelled this group in 1543. Later it admitted two Jewish physicians. In 1806 Frederick I of Wuerttemberg allowed five Jewish families to settle in Esslingen, who founded a hardware factory and organized a community. A synagogue was built in 1817–19, a Jewish elementary school opened in 1825, and an orphanage was established in 1842. The Jewish population numbered 88 in 1823; 101 in 1831; 160 in 1860; 145 (1% of the total) in 1892; and 128 in 1930. During the Nazi regime the interior of the synagogue was destroyed (1938) and the building later used as a center for training Hitler youth. The last 34 Jews remaining in Esslingen were deported in 1941–42, including some of the children of the orphanage and the headmaster. There were 12 Jews living in Esslingen in 1965. After 1992 Jews from the Former Soviet Union settled in Esslingen. About 230 Jews who belonged to the Jewish community in Stuttgart were living in and around Esslingen in 2004.

**ESTE, JOÃO BAPTISTA DE** (17<sup>th</sup> century), Italian-Portuguese convert to Catholicism and anti-Jewish polemist. Born in Ferrara, he was baptized in Évora and became a consultant in Jewish matters to the Portuguese Inquisition. His works include a "Dialogue Between a Pupil and his Catechizing Teacher, Resolving All the Doubts that the Obstinate Jews are Wont to Make Against the Catholic Faith, with Cogent Arguments both from the Holy Prophets and from their Own Rabbis" (*Dialogo entre discipulo e Mestre catechizante*, Lisbon, 1621, 1674), and a "Summary of All the Festivals, Holidays, and Ceremonies, both from the Written Law and from their Talmud and Other Rabbis" (unpublished).

[Martin A. Cohen]

**ESTELLA (Stella)**, city in northern Spain. The Jewish community there was one of the most important in the kingdom of Navarre, the third after Tudela and Pamplona. The earliest information concerning the settlement dates from the 11<sup>th</sup> century. The Jews lived in the citadel and in the adjacent unwallled area. Because of the privileges granted to the Jews there, the city attracted other Jews from many parts of Spain during the 12<sup>th</sup> century. The growth of the Jewish community in Estella was also due to the city's location on the route of the pilgrims to Santiago. There were Jews from Andalusia who fled from the Almoravid invaders and Jews from France who were attracted to the city. These included the poet Moses \*Ibn Ezra, who was warned by \*Judah Halevi against residing in so remote a town, which he compared to living among wolves, bears, and lions. In 1144 King García Ramirez transferred the synagogue to the bishop of Pamplona to be converted into a church. A *fuero* ("municipal charter") granted to Estella in 1164 contained a series of articles regulating relations between Jews and Gentiles. A responsum of Solomon b. Abraham \*Adret (4:268) deals with problems of the sewage and the water conduit in the Jewish quarter. In 1265 there were 29 Jewish householders in Estella paying land tax and rent to the king. Following the death of Carlos IV in 1328 the Jews of Estella were particularly hard hit by anti-Jewish rioters. Many were killed. The Jewish quarter in Estella was destroyed and most of its inhabitants perished in 1328 during the French invasion, as recorded by \*Menahem b. Aaron ibn Zerah in his introduction to his code *Zeidah la-Derekh*. The community began to revive in the second half of the 14<sup>th</sup> century. There were 85 Jewish families in Estella in 1366. In 1365 Charles II appointed Judah b. Samuel ha-Levi of Estella to act as high commissioner for the crown for collecting the money in services and taxes owed by Jews and in 1390 sent him on a diplomatic

mission. Jews of Estella engaged in tax farming throughout the 15<sup>th</sup> century. The city opened its doors to the exiles from Aragon and Castile but the Jews in Estella suffered the same fate, with the rest of those of Navarre, in 1498.

[Haim Beinart / Yom Tov Assis (2<sup>nd</sup> ed.)]

**ESTERKE**, Jewish woman from the village of Opoczno, Poland, said to have been a mistress of the Polish King \*Casimir the Great (1310–1370). Reports claim that her outstanding beauty caught the king's eye while he was passing through her town. Her two sons, Pelka and Niemera, were given grants of land from their father and were raised as Christians. The names of her daughter (or daughters) were never recorded, but with the king's approval, they supposedly remained Jewish. Alternate endings to Esterke's story include the king's severing his relationship with her; Esterke's death while they are still together; and Esterke's suicide either immediately after the king's death or several years later. Although a house in Opoczno was designated as her family home, and her grave was believed to be in Lobzow Park, near Cracow, there is no historical basis for any of the Esterke legends, and there is no mention of her either in court documents or in Jewish sources. Written mention of Esterke appears in the late 15<sup>th</sup> century in a history by Polish cleric Jan Dlugosz (1415–1480). The first Jewish source to mention Esterke is *Zemah David* by David Gans, written in 1595. Gans believed in the historicity of the report and gave a Christian source for it. The relationship of Esterke and Casimir, with its obvious parallel to the Book of Esther, was appealing; the theme was used by Jewish writers as late as the 19<sup>th</sup> century. Versions of Esterke's story in Polish antisemitic literature attempted to undermine customary Jewish privileges granted to Jews by King \*Boleslav V (1221–1279) and continued by King Casimir, suggesting that they were promulgated to please a lover rather than for the good of the nation. A 16<sup>th</sup>-century priest alluded to Esterke in his book *Jewish Cruelties*, claiming that her "gentle words induced him [Casimir] to devise by scheme this loathsome law under the name of the Prince Boleslav..." Such negative allusions to Esterke continued in Christian writings until the 19<sup>th</sup> century; the belief that this Jewish woman actively interceded for her people gave Casimir the nickname "the Polish Ahasuerus." Despite confirmations by modern historians that Esterke is best regarded as an example of a literary trope of the seductive Jewish woman, popular from the early Middle Ages, and despite the fact that her name was used to further antisemitic claims, her sentimental appeal persists among Jews.

**ESTERMANN, IMMANUEL** (1900–1973), U.S. physicist. Estermann, born in Berlin, was educated and worked at Hamburg University until 1933 when he immigrated to the U.S.A. For the next 20 years he was professor at the Carnegie Institute of Technology, and a consultant on the Manhattan (atomic bomb) Project. From 1951 he was with the Office of Naval Research, and in 1959 became its scientific director in London. From 1964 onward he had a visiting professorship at the Technion in Haifa. Estermann's main fields of work were on molecular beams, low temperatures, solid state physics, and semiconductors. Among his books was *Recent Research in Molecular Beams* (1959). He edited *Methods of Experimental Physics* (vol. 1, 1959) and coedited *Advances in Atomic and Molecular Physics* (3 vols., 1965–68).

[Samuel Aaron Miller]

**ESTEVENS, DAVID** (born before 1670–died after 1715), Jewish artist of Spanish (Marrano) origin. He lived in Denmark, studying in Copenhagen under the French artist Jacques d'Agar; he also spent some time in England. His best-known work is a portrait executed in London of Rabbi David \*Nieto which was afterward engraved by James McArdell (1727). He may also have been the artist of the well-known portrait of Zevi Hirsch \*Ashkenazi (the Ḥakham Zevi).

[Cecil Roth]

**ESTHER** (Heb. אֶסְתֵּר), daughter of Abihail, an exile at \*Susa, and heroine of the Book of Esther. The name Esther is probably from Old Persian *star* (well attested in the later Persian dialects), with the same meaning as English "star." She is once called Hadassah (Esth. 2:7), a testimony to the practice of Jews having double names, as do the heroes in \*Daniel. She was orphaned as a child, and her cousin \*Mordecai adopted her and brought her up.

When Queen \*Vashti fell into disgrace because of her disobedience to King \*Ahasuerus, Esther was among the beautiful virgins chosen to be presented to the king (1:19–2:8). Ahasuerus was struck by her beauty, and made her queen instead of Vashti (2:17). Esther, however, did not reveal the fact that she was a Jew.

Later, when \*Haman, the prime minister, persuaded the king to issue an edict of extermination of all the Jews of the empire, Esther, on Mordecai's advice, endangered her own life by appearing before the king without being invited, in order to intercede for her people (4:16–17). Seeing that the king was well disposed toward her, she invited him and Haman to a private banquet, during which she did not reveal her desire, however, but invited them to another banquet, thus misleading Haman by making him think that he was in the queen's

good graces. Her real intention, however, was to take revenge on him. During the second banquet, Queen Esther revealed her origin to the king, begged for her life and the life of her people, and named her enemy (7:3–6). Angry with Haman, Ahasuerus went into the palace garden. Haman, in great fear, remained to plead for his life from the queen. While imploring, he fell on Esther's couch and was found in this compromising situation on the king's return. He was immediately condemned to be hanged on the gallows he had prepared for Mordecai. The king complied with Esther's request, and the edict of destruction was changed into permission given to the Jews to avenge themselves on their enemies.

See also \*Scroll of Esther.

### In the *Aggadah*

Esther was a descendant of King Saul. Her father died soon after her conception and her mother when she was born (Meg. 13a), and she was brought up by Mordecai as his daughter. Her real name was Hadassah, but she was called Esther by non-Jews, this being the Persian name for Venus (*ibid.*). Esther was one of the four most beautiful women in the world (*ibid.* 15a), though some say that she was of sallow complexion but endowed with great charm. Like the myrtle (Heb. *hadassah*) she was of ideal height, neither too short nor too tall (*ibid.* 13a). All who beheld her were struck by her beauty: she was more beautiful than either Median or Persian women (Esth. R. 6:9). In addition, everyone took her to be one of his own people (Meg. 13a). Before Esther was made queen, Ahasuerus would compare women who entered with a statue of Vashti that stood near his bed. After his marriage the statue was replaced by one of Esther (*Midrash Abba Guryon*, Parashah 2). When Esther became queen she refused to disclose her lineage to Ahasuerus though she claimed that like him she was of royal descent. She also criticized him for killing Vashti and for following the brutish advice of the Persian and Median nobles, pointing out that the earlier kings (Nebuchadnezzar and Belshazzar) had followed the counsel of prophets (Daniel). At her suggestion he sought out Mordecai whose advice he requested on how to induce Esther to reveal her ancestry, complaining that neither giving banquets and reducing taxation in her honor nor showering gifts upon her had been of any avail. Mordecai suggested that maidens be again assembled as if the king wished to remarry and that Esther, aroused by jealousy, would comply with his wishes. But this too was in vain (Meg. 13a).

Mordecai was appointed to the king's gate, the same appointment that Hananiah and his companions had received from Nebuchadnezzar (Dan. 2:49). His task was to inform Ahasuerus of any conspiracy against him. Bigthan and Teresh, who had previously kept the gate, became incensed, saying: "The king has removed two officials and replaced them by this single barbarian." To prove the superiority of their guardianship over that of the Jew, they decided to kill the king. Not realizing that Mordecai as a member of the Sanhedrin knew 70 languages, they conversed together in their native Tarsean. In Mordecai's name Esther informed the king, who

ordered the two to be hanged. All affairs of state were entered into the king's chronicles and whenever the king wanted to be reminded of past events they would be read out to him. The information given by Mordecai was written in the book, and this was the beginning of Haman's downfall (Esth. 6). This was why the sages said: "whoever repeats something in the name of one who said it brings redemption to the world" (Perek Kinyan Torah = Avot 6:6 in the prayer book version; Esth. R. 6:13; Meg. 15a; PDR 50). The three days appointed by Esther as fast days (Esth. 4:16) were the 13<sup>th</sup>, 14<sup>th</sup>, and 15<sup>th</sup> of Nisan. Mordecai sent back word complaining that these days included the first day of Passover! To which she replied: "Jewish elder! Without an Israel, why should there be Passover?" Mordecai understood and canceled the Passover festivity, replacing it with a fast (Esth. R. 8:6). Esther's motive in inviting Haman to the banquet was that he should not discover that she was Jewish, and that the Jews should not say: "We have a sister in the king's palace," and so neglect to pray for God's mercy. She also thought that by being friendly to Haman she would rouse the king's jealousy to such an extent that he would kill both of them (Meg. 15b). Haman thought that Esther prepared the banquet in his honor, little realizing that she had set a trap for him (Mid. Prov. 9:2). With the revocation of the evil decree, Esther sent to the sages and asked them to perpetuate her name by the reading of the book of Esther and by the institution of a feast. When they answered that this would incite the ill-will of the nations, she replied: "I am already recorded in the chronicles of the kings of Media and Persia (Meg. 7a)."

[Elimelech Epstein Halevy]

### In the Arts

Of all the biblical heroines Esther has enjoyed greatest popularity among writers, artists, and musicians, representing feminine modesty, courage, and self-sacrifice. From the Renaissance era onward she figured in a vast array of dramas, including many Jewish plays intended for presentation on the \*Purim festival. Two early works on this theme were *La Representatione della Reina Hester* (c. 1500), an Italian verse mystery that went through several editions during the 16<sup>th</sup> century, and the last of the 43 plays of the French *Mistère du Viel Testament*, a work of the later Middle Ages. These were followed by the German Meistersinger Hans Sachs' *Esther* (1530) and an English verse play, *A New Enterlude of Godly Queene Hester*, published anonymously in 1561. The latter, which entirely omitted the character of Vashti and muted the role of Mordecai, contained marked political undertones reflecting popular dissatisfaction with King Henry VIII and his ministers of state. A work of the same period was Solomon \*Usque's *Esther*, first staged in Venice in 1558. This Portuguese play, later revised by Leone \*Modena, was remarkably successful and attracted many non-Jews to its performances.

The subject gave rise to a series of dramatic interpretations in France, beginning with the Huguenot playwright Antoine de Montchrétien's three verse tragedies, *Esther* (1585), *Vashti* (1589), and *Aman* (1601). During the 17<sup>th</sup> century a

drama, *Esther* (1644), was written by Pierre Du Ryer and a long epic poem of the same name (1673) by Jean Desmarets de Saint-Sorlin, both in the austere religious manner of the period. The major French literary treatment of the theme was Racine's epic tragedy *Esther* (1689), written for presentation at the Saint-Cyr girls' school supervised by Madame de Maintenon, themorganatic wife of Louis XIV, and first performed with choruses by J.-B. Moreau. Esther herself, a model of Christian womanly virtues, evidently represented the sponsor, while Vashti (Vashti) represented the king's former mistress, Madame de Montespan, heightening the political implications of the play. Other 17<sup>th</sup>-century works on the subject include *Aman y Mardoqueo o la reina Ester*, a play by the Spanish New Christian Felipe Godínez; the refugee Portuguese Marrano João Pinto Delgado's *Poema de la Reyna Ester* (Rouen, 1627), part of a volume dedicated to Cardinal Richelieu; Mardochee Astruc's Judeo-Provençal *Tragediou de la Reine Esther*; and Isaac Cohen de Lara's *Comedia famosa de Aman y Mordochay* (1699).

Interest in the theme was maintained during the 18<sup>th</sup>-20<sup>th</sup> centuries, beginning with Manuel Joseph Martin's *La Soberbia castigada. Historia ... de Esther y Mardocheo* (1781). A Yiddish play, *Esther, oder di belonte Tugend* (1827, 1854<sup>3</sup>), was written by J. Herz, and Hebrew adaptations of Racine's classic drama made by S.J.L. Rapoport (in *She'erit Judah*, 1827) and, in complete form, by Meir Ha-Levi Letteris (*Shelom Esther*, 1843). The virtues of the Jewish heroine were emphasized in the Austrian dramatist Franz Grillparzer's unfinished play *Esther* (1848), and other treatments included J.A. Vaillant's Romanian *Legenda lui Aman și Mardocheu* (1868), Joseph Shabetai Farhi's Italian *Alegria di Purim* (1875), and the U.S. writer Frank C. Bliss' verse drama *Queen Esther* (1881). Almost the only biblical play to escape censorship in 19<sup>th</sup>-century England was *Esther the Royal Jewess: or the Death of Haman*, a lavishly produced melodrama by Elisabeth Polack, which was staged in London in 1835. There have been numerous plays about Esther from the early 20<sup>th</sup> century onward: *Esther, princesse d'Israël* (1912) by André Dumas and S.C. Leconte; H. Pereira Mendes' *Esther and Harbonah* (1917); Max Brod's *Esther* (1918); John Masefield's *Esther* (1922), a pastiche of Racine; and other works of the same name by Felix Braun (1925), Sammy Gronemann (1926), and the U.S. dramatist Sonia V. Daugherty (1929). Three other modern treatments are Izak Goller's fantasy *A Purim-Night's Dream* (1931) and James Bridie's *What Say They?* (1939); and a rare biblical novel on the subject, Maria Poggel-Degenhardt's *Koenigin Vashti; Roman aus der Zeit Esthers* (1928). Most successful were the satiric Megilla-Lieder of the Yiddish poet Itzik Manger adapted for the stage in Israel in 1965.

In art the Book of Esther is represented in the cycle of paintings from the third-century synagogue at Dura-Europos and also in the ninth-century mural in the basilica of San Clemente in Rome. The scenes depicted at Dura-Europos were Esther and Ahasuerus enthroned and Mordecai riding in triumph on a regal white horse. They could be seen clearly from

the women's benches, and it has been suggested that they were placed there because women normally came to synagogue to attend the reading of the Scroll of Esther which, according to Joshua bar Levi (Meg. 4a), they were obliged to hear. In medieval Christian iconography, Esther was associated with the cult of the Virgin Mary. Her intercession with Ahasuerus on behalf of the Jews was interpreted as a prefiguration of the Virgin's mediation on behalf of mankind. After the Middle Ages the story of Esther was treated in a less symbolic manner and was used instead as a storehouse of picturesque episodes. The story was sometimes presented in a narrative cycle of varying length or in individual episodes. Examples of the cycle form may be found on an arch over the north portal of the Chartres Cathedral (13<sup>th</sup> century), a 17<sup>th</sup>-century Belgian tapestry in the cathedral of Saragosa, and an 18<sup>th</sup>-century set of Gobelin tapestries. Popular single subjects were the toilet of Esther, the triumph of Mordecai, and the punishment of Haman. Renaissance artists such as Botticelli, Filippino Lippi, Mantegna, Tintoretto, and Paolo Veronese painted subjects from the Book of Esther. Botticelli (or Filippino Lippi) decorated two marriage-caskets (1428) with scenes from the biblical story, including the long misinterpreted figure *La Derelitta*, now supposed to represent Mordecai lamenting before the palace at Shushan. The Venetian painters Tintoretto and Veronese treated the Esther story as an occasion for pomp and pageantry, Tintoretto painting the *Swooning of Esther* (1545), a subject later treated by Poussin. The Book of Esther was also popular with 17<sup>th</sup>-century artists in the Netherlands. Rubens and Jan Steen painted *Esther Before Ahasuerus*, and Jan Steen also executed a spirited, almost farcical, *Wrath of Ahasuerus* (1660). Rembrandt painted *Mordecai pleading with Esther* (1655), *Ahasuerus and Haman at Esther's Feast* (1660), and *Haman in Disgrace* (1660). A charming *Toilet of Esther* was executed by Théodore Chassériau in 1841.

An early musical treatment of the subject is a 14<sup>th</sup>-century motet for three voices, *Quoniam novi probatur*, in which Haman, or someone whose fate he symbolizes, voices his complaint (see C. Parrish, *The Notation of Mediaeval Music* (1957), 138–40). Palestrina wrote a five-voiced motet, *Quid habes Hester?* (publ. 1575), the text of which is the dialogue between Esther and Ahasuerus in the apocryphal additions to Esther (15:9–14). From the late 17<sup>th</sup> century onward the Esther story attracted the attention of many serious composers. Some 17<sup>th</sup>- and early 18<sup>th</sup>-century works were A. Stradella's oratorio *Esther, liberatrice dell' popolo ebreo* (c. 1670); M.-A. Charpentier's quasi-oratorio *Historia Esther* (date unknown); G. Legrenzi's oratorio *Gli sponsali d'Esther* (1676); J.-B. Moreau's choruses for Racine's *Esther*; A. Lotti's oratorio *L'umilità coronata in Esther* (1712); and A. Caldara's oratorio *Ester* (1723). Handel's masque *Haman and Mordecai*, with a text by John Arbuthnot and (probably) Alexander Pope based on Racine's drama, was first performed at the Duke of Chandos' palace near Edgware in 1720, and was Handel's first English composition in oratorio form. Worked into a full oratorio 12 years later, with additional words by Samuel Humphreys, it had a triumphant recep-

tion at the King's Theater in London in 1732. The libretto was translated into Hebrew by the Venetian rabbi Jacob Raphael Saraval (1707–1782), and two copies of it – with the scenic indications in English and Italian respectively – are in the *Ets Haim* Library, Amsterdam; no evidence of a performance has yet been discovered (see Adler, *Prat Mus*, 1 (1966), 123–4, 212). One of the few works on the subject in the second half of the 18<sup>th</sup> century was K. Ditters von Dittersdorf's oratorio *La liberatrice del popolo giudaico nella Persia o sia l'Esther* (1773).

The 19<sup>th</sup> century saw a few operatic variants of the story, such as Guidi's *Ester d'Engaddi*, set by A. Peri (1843) and G. Pacini (1847), while Eugen d'Albert wrote an overture to Grillparzer's *Esther* (1888). For performances of Racine's play at the Comédie Française during this period the choruses were composed by several undistinguished musicians; later contributions include those by Reynaldo \*Hahn (1905) and Marcel Samuel-Rousseau (1912). The most notable modern work on the subject is Darius \*Milhaud's opera *Esther de Carpentras*, which dramatized the staging of an old Provençal Purim play with the threat posed by a conversionist bishop of Carpentras. *Esther*, an opera by Jan Meyerowitz with text by Langston Hughes, was written in 1956. Meyerowitz also wrote a choral work, *Midrash Esther* (premiere, 1957).

The music of the Jewish Purim plays has not survived in notation, except for a few songs collected by 20<sup>th</sup>-century folklorists from surviving practitioners. Some Yiddish and Hebrew poems of the early 18<sup>th</sup> century were published with the indication "to be sung to the tune of Haman in the Aḥashverosh play" (see Idelsohn, *Music*, 437), but this tune has not yet been recovered. However, the tradition is evident in Isaac Offenbach's play *Koenigin Esther* (manuscript dated 1833, at the Jewish Institute of Religion, New York), which includes some "couplets" and in which the court jester seems a more important figure than the biblical personages. Hermann Cohn's five-act parody *Der Barbier von Schuschan* (1894) was an imitation of P. Cornelius' *Barbier von Bagdad*; Abraham \*Goldfaden's *Kenig Akhashverosh* (c. 1885) produced no memorable tune; and M. Gelbart wrote *Akhashverosh*, a Purim play in New York (1916). For the production of K.J. \*Silman's *Megillat Esther* by the \*Ohel theater, the music was written by Y. \*Admon (Gorochow). The music for the production of Itzik Manger's *Di Megille* was written by Dov Seltzer in a "revival style" reminiscent of the East European Jewish song tradition in general and of the Yiddish theater tradition in particular. Nahum \*Nardi's songs to Levin \*Kipnis' kindergarten Purim play *Mishak Purim*, written in the early 1930s, have become Israel folksongs.

**ESTHER** (pseudonym of **Malkah Lifschitz**, whose names by marriage were **Frumkin** and **Wichmann**; 1880–1943), communist leader, writer, and educator, born in Minsk; one of the most original women in the Jewish labor movement. She acquired a wide Jewish knowledge in childhood, including Hebrew and Bible studies, and studied in St. Petersburg and Berlin. From 1896 Esther was active in Social Democrat circles in Minsk influenced by A. \*Liessin, and from 1901 in the \*Bund. She edited Bundist periodicals after the 1905 revolution. A representative of the extreme Yiddishists at the \*Czernowitz Yiddish Conference, Esther was one of the main promoters in the Bund of Jewish education in Yiddish. She published two books on the subject in Yiddish: "On the Question of the Jewish National School" (1910) and "What Kind of National School Do We Need" (1917). She was imprisoned several times for revolutionary activities and went to Switzerland, where she became a member of the foreign committee of the Bund. After the 1917 February Revolution, she became a member of the central committee of the Bund, and was elected to the Minsk municipal and community councils. She took an active part in founding a network of Yiddish schools, courses for teachers, and other educational institutions. At first violently opposed to the Bolsheviks, she later became a leader of the Kombund, and in May 1921 voted for the self-liquidation of the Bund and joined the Communist Party. From 1921 to 1930 she was a member of the education department of the \*Yevseksiya. With M. \*Litvakov she brought out a Yiddish edition of Lenin's writings in eight volumes, and wrote a biography of Lenin in Yiddish (3 eds., 1925–26). She also edited the Moscow Yiddish daily, *Emes*. She was rector of the Jewish section of the "Communist University of the National Minorities of the West" (KUNMZ) from 1925 to 1936. In January 1938 she was arrested and imprisoned but refused to admit to the false charges proffered against her. In August 1940 she was sentenced to eight years in detention and died in the detention camp in Karaganda.

**ESTHER, ADDITIONS TO THE BOOK OF.** The Book of Esther in the Septuagint, followed by the Old Latin version, contains six passages comprising 107 verses that are not found in the Hebrew text. In the fourth century C.E., \*Jerome, when compiling the Latin Vulgate Bible, removed all these additions and grouped them as an appendix at the end of the Book of Esther. Although Jerome had provided notes to indicate where each addition belonged within the canonical book, subsequent scribes sometimes neglected to copy the explanatory notes, resulting in a meaningless combination of separate portions. The confusion was compounded in the 13<sup>th</sup> century

when Stephen Langton, having divided the text of the Vulgate into chapters, numbered the chapters of the canonical and the apocryphal portions of Esther consecutively. Rearranged in their proper order and with chapter and verse numbering according to Jerome's sequence, the six additions are as follows: A (11:2–12:6), Mordecai saves King Artaxerxes' life; B (13:1–7), the edict of Artaxerxes ordering the massacre of the Jews; C (13:8–14:19), the prayers of Mordecai and Esther; D (15:1–6), Esther risks her life to appeal to the king; E (16:1–24), Artaxerxes' second edict, denouncing Haman and supporting the Jews; F (10:4–11:1), the interpretation of Mordecai's dream. These additions belong within the sequence of the canonical text as follows: A before 1:1; B after 3:13; C and D after 4:17; E after 7:12; F after 10:3.

The author (or authors) of the additions is unknown, but probably at least some of them were composed by Lysimachus, an Alexandrian Jew who lived in Jerusalem and who translated the canonical Hebrew text of Esther into Greek about 114 B.C.E. (11:1). Although the name of God does not appear in the canonical Book of Esther, all but one of the additions contain it. Likewise, although prayer is not mentioned in the canonical text, addition C includes two devout prayers. Thus it appears that one of the purposes of the expansions is to introduce into the book certain religious elements that are conspicuously absent from the Hebrew narrative. Occasionally the additions contradict statements in the canonical text. For example, according to the Hebrew, Mordecai discovered the plot against the king sometime after the seventh year of the reign of Ahasuerus (Esther 2:16–21), whereas addition A suggests that this occurred in the second year of the king's reign; in 16:10 Haman is called a Macedonian, whereas in Esther 3:1 he is called the Agagite (= Amalekite); and in 13:6 the date set for the massacre of the Jews is the fourteenth of Adar, whereas in Esther 3:13 it is the thirteenth of Adar.

[Bruce M. Metzger]

**ESTHER, FAST OF** (Heb. תַּעֲנִית אֶסְתֵּר, *Ta'anit Esther*), the day before \*Purim on which it is customary to fast (unless that day falls on the Sabbath; see below). The *She'iltot* of R. Aḥa of Shabḥa (eighth century; ed. by S.K. Mirsky, 3 (1964), 222, no. 69) has the earliest record of the custom of fasting on the 13<sup>th</sup> of Adar. It quotes the declaration of R. Samuel b. Isaac (Meg. 2a), "The 13<sup>th</sup> day of Adar is the time for public gathering," and refers to the words of Esther (9:18) "The other Jews in the king's provinces gathered together and stood up for themselves on the 13<sup>th</sup> day of the month of Adar"; explaining that the purpose of the gathering was for public prayer and fasting (cf. \*Asher b. Jehiel on Meg. 2a, who quotes R. Tam in a similar vein). Maimonides accepts the custom of public fasting on this day finding his scriptural authority in the words

"Regarding the fasting and the crying" (Esth. 9:31). Comparing it with other public fasts he declares, "Whereas the other fasts are postponed to the following day if they would otherwise fall on the Sabbath the Fast of Esther is anticipated to the Thursday, since fasting here must precede the celebration" (Maim., Yad, Ta'anit 5:5). An earlier tradition of fasting in connection with Purim is preserved in the Talmud (Sof. 14:4), which specifically excludes fasting on the 13<sup>th</sup> of Adar, "because of Nicanor and his men." This is in accordance with the prohibition of *Megillat Ta'anit* against fasting on those days on which the Maccabean victories over \*Nicanor and their other enemies were celebrated. Elsewhere tractate *Soferim* asserts: "Our Rabbis in the West [i.e., Erez Israel] are accustomed to fast at intervals after Purim [i.e., on the three subsequent days: Monday, Thursday, and Monday] in commemoration of the three days fasted by Esther and Mordecai and those who joined them" (Sof. 21:1). Although \*Jacob b. Asher's Tur (OH 686) refers to this ancient custom, there is no historical indication of its preservation. It was probably falling into desuetude at the very time that the tractate *Soferim* was being edited, as the contemporaneous composition of the *She'iltot* indicates. In his gloss on the reference to the fast in the Shulḥan Arukh (OH 686:2), Isserles considers the Fast of Esther as less obligatory than other statutory public fasts. He allows concessions to nursing mothers and pregnant women, and even to those with an eye-ache. He advocates, nevertheless, its continued observance. Special *seliḥot* are recited in addition to those of a regular fast-day, and the fast-day portion of the Torah is read (Ex. 32:11–14; 34:1–10). The day is especially observed by Persian Jews. The afternoon *Taḥanun* is omitted in anticipation of Purim joy.

[Isaac Newman]

**ESTHER RABBAH** (Heb. אֶסְתֵּר רַבָּה), *Midrash Aggadah* on the \*Scroll of Esther. In the *editio princeps* (Constantinople, 1517?) the work is referred to as "*Midrash \*Ahasuerus*" while in the second edition (Pesaro, 1519) it is called "*Midrash Megillat Esther*" and the title "*Ahasueros*." On the origin of the name "*Esther Rabbah*," see \**Ruth Rabbah*.

### The Structure

In the *editio princeps*, *Esther Rabbah* is divided into six sections. However, subsequent editions have ten, the last section being subdivided into five smaller ones. In fact, the work consists of two different Midrashim: *Esther Rabbah* 1 (sections 1–6) and *Esther Rabbah* 2 (sections 7–10).

### *Esther Rabbah* 1

This is an exegetical Midrash which expounds the first two chapters of the Scroll of Esther verse by verse. The sections are introduced by proems of the classical type characteristic of amoraic Midrashim, opening with an extraneous verse which

is interpreted and then connected with that expounded at the beginning of the section. There are 16 proems, the majority in the name of an *amora*, the rest anonymous. Most of them commence with a verse from the Prophets or the Hagiographa, only a small number with one from the Pentateuch. Section 2 concludes with a message of consolation. The language of *Esther Rabbah* 1, like that of the Jerusalem Talmud, is mishnaic Hebrew with an admixture of Galilean \*Aramaic and a liberal sprinkling of Greek words. The work, which contains much original tannaitic and early amoraic material, quotes Aquila's translation, and draws upon tannaitic literature, the Jerusalem Talmud, \**Genesis Rabbah*, and \**Leviticus Rabbah*, but was apparently unaware of the Aramaic translation of the Scroll of Esther, some passages of which are even cited as statements of *amoraim*. The Babylonian \*Talmud is also not utilized. On the other hand, \**Targum Sheni*, \**Ecclesiastes Rabbah*, \**Midrash Tehillim*, *Midrash Abba Guryon*, and *Midrash Panim Aherim* to Esther, Version 2 (see smaller \*Midrashim) all draw upon *Esther Rabbah* 1. It is thus apparently an amoraic Midrash, redacted in Erez Israel not later than the beginning of the sixth century C.E.

#### ***Esther Rabbah* 2**

This, likewise an exegetical Midrash, covers Esther 3:1–8:15, but with many omissions. Its few proems are not of the classical type in that they do not conclude with the verse expounded at the beginning of the section. It quotes the Septuagint Additions to the Scroll of Esther: Mordecai's dream about the two sea monsters (8:5); the prayers of Mordecai and Esther (8:7); and the conversation of Esther and Ahasuerus (9:1). It borrowed these additions as well as other *aggadot* from \*Josippon (chap. 4). Alongside later material, however, it also contains older homilies. Early medieval scholars cite expositions from part of a Midrash on Esther parallel to *Esther Rabbah* 2, which, however, do not occur in the present text. The redactors of *Ecclesiastes Rabbah*, *Midrash Tehillim*, \**Midrash Samuel*, and \**Genesis Rabbati* were unacquainted with *Esther Rabbah* 2. All these Midrashim, as well as *Midrash Abba Guryon*, drew upon an earlier midrashic work on Esther 3ff. which apparently constituted the original second part of *Esther Rabbah* 1. On the other hand, *Midrash Panim Aherim* to Esther, Version 1, \**Yalkut Shimoni*, and perhaps also \**Midrash Lekah Tov*, draw upon *Esther Rabbah* 2. All this would seem to make *Esther Rabbah* 2 a composite work containing remnants of the original second part of *Esther Rabbah* 1 with later additions in the style and language of the later aggadic works (see \*Midrash). *Esther Rabbah* 2, which contains valuable information on anti-Jewish manifestations in the late Roman empire, was redacted about the 11<sup>th</sup> century. After it was attached to *Esther Rabbah* 1 the original second half of the latter was lost.

*Esther Rabbah* is thus composed of two different Midrashim which were apparently combined by a copyist in the 12<sup>th</sup> or 13<sup>th</sup> century C.E. The earliest extant manuscripts date from the beginning of the 15<sup>th</sup> century C.E.

#### **Editions**

*Esther Rabbah* was first published at Pesaro in 1519 together with Midrashim on the other four scrolls, which, however, are completely unrelated to it. This edition has often been reprinted. There is as yet no critical edition of the work based on manuscripts. An English translation by Maurice Simon appeared in the Soncino Midrash (1939).

[Moshe David Herr]

**ESTONIA** (Est. **Esti**), independent state from the 1990s, after the breakup of the Soviet Union, bordering on the gulfs of Finland and Riga. Estonia was an independent republic from 1918 to 1940. From 1940 to the dissolution of the U.S.S.R., with an interval of German occupation (1941–44), Estonia was a Soviet Socialist Republic. Until 1918 part of Russia (Estland and the northern part of Livland), the area of Estonia was not included in the Pale of Settlement. In 1897 some 4,000 Jews lived on this territory, including about 1,200 in \*Tallinn (then Revel). The nucleus of this community was founded by Jewish soldiers after their demobilization from the army of Czar Nicholas I (see \*Cantonists), who established a Jewish cemetery in the town in 1856. There were approximately 1,800 Jews living in the university town of \*Tartu (known among Jews by its German name Dorpat), about 480 in Narva (then belonging to the district of St. Petersburg), and about 400 in Pärnu, on the Gulf of Riga. (See Map: Jews in Estonia.) Jews took part in the struggle for Estonian independence. In independent Estonia, the Jews numbered 4,566 in 1922 and 4,381 in 1934 (about 0.4% of the total population), of whom 2,203 lived in Tallinn, the capital, and 920 in Tartu; 923 (57.4% of those supporting families) were occupied in commerce, 484 (30.1%) in industry and crafts, 159 (9.9%) in the liberal professions, 26 (1.6%) were house owners, and 16 (1.0%) were religious officials. About 642 of the total were employees (officials and laborers) and the remainder were self-employed.

Estonia was the only country in Eastern Europe to fulfill its obligations toward its national minorities according to the concepts of the Minorities Treaties (see \*Minority Rights), even though it had refused to become a signatory. The law on national-cultural autonomy was confirmed by the Estonian parliament on Feb. 5, 1925, and four minorities – Russian, German, Swedish, and Jewish – were accordingly recognized. The Jewish autonomous institutions, headed by a Cultural Council, were established in 1926. However, only 75% of Estonian Jewry (about 3,252 persons in 1939) registered with the Jewish minority list; the remainder ranged themselves with other nationalities, in particular Russian. The first Cultural Council was composed of 12 Zionist representatives, nine Yiddishists,

Major Jewish communities in Estonia, 1918–1940.

and six Independents. Subsequently the Zionists gained in strength, and by 1939 held 20 of the Council's 27 seats. After a severe struggle within the Council on the issue whether the language of instruction in Jewish schools should be Hebrew or Yiddish, the supporters of Hebrew finally prevailed, and most of the Jewish schools were affiliated to the Hebrew Tarbut educational network, including the two secondary schools of Tallinn and Tartu. About 75% of the Jewish children attended Jewish schools. A chair for Hebrew language and literature was established at the University of Tartu. There were three Jewish cooperative banks in Tallinn, Tartu, and Narva, with a total of 625 members in 1935. Estonian Jewry attained important national achievements, but because of its small numbers remained culturally dependent on the neighboring Jewish populations of Latvia and Lithuania. During the 1930s, a Fascist movement was formed in Estonia which launched an antisemitic propaganda campaign. The hardening anti-Jewish attitude was reflected in the decrease of the number of students at the University of Tartu, from 188 in 1926 to 96 in 1934.

After the annexation of Estonia to the Soviet Union in 1940, the Jewish institutions were liquidated and the political and social organizations disbanded. On the eve of the German invasion of the Soviet Union, some 500 communal leaders and affluent members of the congregation were arrested and deported to the Russian interior. Due to the efforts of the Soviet army to halt the German advance on Leningrad, the conquest of Estonia took about two months. Tallinn was not occupied until Sept. 3, 1941, and about 3,000 Estonian Jews succeeded in escaping to the Russian interior. All the Jews remaining in the zone of German occupation were murdered by the end of 1941 by the *Einsatzkommando* 1a with the active help of Estonian nationalist Omakaitse units. On October 12 all men aged 16 and above, about 440, were murdered, and in the last weeks of 1941 the others were liquidated – in all, 936 Jews according to the report of *Einsatzgruppe A*, from January 1942. This left Estonia “*judenfrei*,” a fact which was reported in the Wannsee Conference at the same time. In 1942 and early 1943 about 3,000 Jews, mainly from Germany, were

sent to the extermination camp in Kalevi Liiva. By May 1943 Heinrich \*Himmler had ordered the cessation of mass shooting and the erection of forced labor camps. The main camp in Estonia was Vaivara, commanded by Hans Aumeier (sentenced and executed in 1947). About 20,000 Jewish prisoners, mainly from Vilna and Kaunas (Kovno), passed through its gates to labor camps at Klooga, Lagedi, Ereda, and others. The inmates were employed in mining slate and building fortifications. The successful advance of the Soviet army led to the evacuation of the camps to Tallinn and from there to \*Stutthof from where a “death march” of 10,000 took place along the Baltic coast. Other camps were also liquidated (2,400 killed at Klooga and 426 at Lagedi). On Sept. 22, 1944, Estonia was finally liberated. The Germans attempted to burn the bodies of their victims to conceal their crimes.

After the war, Jews from all parts of Russia gathered in Estonia. The Jewish population numbered 5,436 in 1959 (0.5% of the total) of whom 1,350 (25%) declared Yiddish as their mother tongue, about 400 Estonian, and the remainder Russian; 3,714 Jews (1.3% of the total population) lived in Tallinn. As in the rest of the Soviet Union, there was no organized Jewish life in the Estonian S.S.R.

[Yehuda Slutsky / Shmuel Spector (2<sup>nd</sup> ed.)]

### Revival of Jewish Life

There were an estimated 3,200 Jews in Estonia at the end of 1993 and 1,800 in 2001.

Jewish communal life was renewed in 1988 with the creation of the Jewish Cultural Society in Tallinn, the first of its kind in the Soviet Union. The Society organized concerts and lectures, and a Jewish school going up to the ninth grade was opened in 1990. Jewish culture clubs were also started in Tartu, Narva, and Kohtla-Järve. Other organizations followed, like the Maccabi sports club and the Jewish Veterans Union. Courses in Hebrew were offered. The Jewish Community was established in 1992 as a voluntary umbrella organization; its charter was approved on April 11, 1992. The community published a Jewish newspaper, *Hashakhar* (“Dawn”), and the radio program “Shalom Aleichem” was broadcast monthly. A synagogue was also reopened, attended mostly by the elderly.

In November 1993, an Estonian translation of the *Protocols of the Elders of Zion*, giving no details of the publisher, appeared in Tallinn bookshops. After the protests of the Jewish community and the Estonia-Israel Friendship Society, the book was withdrawn by the bookshop owners. However, in August 1994 the nationalist weekly *Eesti* published an article by Juri Lina, an Estonian émigré in Sweden, claiming that the *Protocols* were authentic and demanding to lift restrictions on their publication.

A more serious danger for the future of the small Jewish community in the country lay in the activities of Russian extremists in Estonia. An antigovernment demonstration, organized by ethnic Russians in Narva (North East) in December 1993, displayed anti-Jewish placards; two parties which are counterparts to Zhirinovskiy's LDPR in Russia – the harshly

antisemitic Ruskii Sobor Estonii [Russian Council of Estonia] and Liberal Demokraatiik Partei, led by Piotr Rozhok – continued to operate.

Another potentially dangerous phenomenon in Estonia was the continuing romanticization of the Estonian military units which, during World War II, fought together with Nazi troops, some of them in the SS; many of them were guilty of murderous acts against Jews.

**ESTORI (Isaac ben Moses) HA-PARḤI** (1280–1355?), first topographer of Erez Israel. The family was originally from Florenza, Andalusia, Spain – hence, the name ha-ParḤi, a Hebrew translation of the Spanish *flor* (“flower”). In the introduction to his main work Estori refers to himself as *Ish Tori* (“Man of Tours”) in Touraine, France. It appears that he was born in Provence. He studied in Montpellier with his relative Jacob b. Makhir \*Ibn Tibbon and with \*Asher b. Jehiel. He obtained a broad general education, including the study of medicine as well. When the Jews were expelled from France in 1306, Estori went to Perpignan and Barcelona and then to Toledo. He stopped in Cairo in 1313 on his way to Erez Israel. He studied with Baruch Ashkenazi in Jerusalem but left because of the negative attitude to Maimonides among the scholars of the city. Estori then settled in Beisan (Beth-Shean), where he was respected as a physician. He continued to earn his livelihood as a physician wherever he went. From Beisan he traveled throughout the land investigating ancient sites. He spent two years studying the Galilee and five years, other parts of the country. In Beisan he wrote *Sefer Kaftor va-Ferah* (Venice, 1549), which was completed in 1322. In this book he delineated the names of the towns and villages in the land. He also presented a complete discussion of the topographic principle that applied to the land. The book, based upon first hand visits to the sites, is rich in information. The book gives the borders of Erez Israel as presented in the Bible and in the *halakhah*. It describes Jerusalem and the various regions of the country and presents a list of the biblical, talmudic, and Arabic names of the sites. Most of the 180 identifications of ancient sites that he made were correct. He was the first person to identify the sites of \*Usha, \*Modi'in, \*Bethar, and others. His ruling that the biblical and talmudic names of villages and rivers are preserved in the Arabic, with only slight changes, is accepted by modern scholarship. Especially important is his study of ancient coins, which he compared with contem-

porary coins. He also compared the weights and measures of the Bible and the Talmud with contemporary weights and measures. He investigated plants, noting their Arabic names and attempting to determine their Hebrew names according to the Mishnah and Talmud. He also described the appearance of Jewish dress in Erez Israel and in those countries of the Diaspora with which he was acquainted. He discovered the ruins of an ancient synagogue in Beisan and also described the remnants of an ancient synagogue in Hukok. He also provides information about the different religions and religious sects: Muslims, Christians, Jews, \*Samaritans (whom he calls Sadducees), and Karaites. He gives valuable information on the Jewish settlements in Israel during his time. He mentions 11 Jewish communities, three of which were in Transjordan. A.M. \*Luncz published a critical edition of *Kaftor va-Ferah* (Jerusalem, 1897), in which he mentions a number of other books that Estori wrote, though most of them are not extant. Estori's books include a translation of the book of medicine *De Remediis* by the physician Armengaud (Eremenganus) of Montpellier; a translation of the book *Hakabusim* containing articles and notes on medical matters, probably collected by the physician Elijah b. Judah; an exposition of some chapters from the Canon of Avicenna; *Battei ha-Nefesh*, words of admonition and moral rebuke; *Shoshannat ha-Melekh*, on the humanities and the sciences in the Talmud; and *Sha'ar ha-Shamayim*, expositions and novellae on the Talmud.

[Jacob Elbaum]

**ESTRAIKH, GENNADY** (1952– ), Yiddish scholar, writer, and journalist. Born in Zaporizhzhia, Ukraine, into a Yiddish-speaking family from a Jewish agricultural colony, he received his first degree in electronics and lived in Moscow (1976–91). In 1979 his family's application for an exit visa to Israel was rejected. In 1981 he joined the Jewish Historical and Ethnographical Commission, an independent scholarly body that sought to revive Jewish scholarship in the Soviet Union. From 1985 he regularly published short stories about contemporary Jewish life and essays on Jewish culture in the Moscow Yiddish monthly *Sovetish Heymland*, which he joined in 1988 as managing editor. His collection of stories *Di Royte Balke* (“The Red Ravine,” 1988) and two editions of *Kratkii Idish-Russian Slovar'* (“Concise Yiddish-Russian Dictionary,” 1989/1990) appeared as supplements to that journal. In 1991 he moved to Oxford to pursue a doctorate, resulting in the book *Soviet Yiddish: Language Planning and Linguistic Development* (1999). In 1994–2002 he edited the Yiddish literary monthly *Di Pen*,

worked at the Oxford Institute for Yiddish Studies, and taught Yiddish language and culture at London University's School of Oriental and African Studies. In 2003 he was appointed visiting professor of Yiddish studies at New York University. He is a regular columnist for the New York weekly *Forverts* (also under the pseudonyms G. Yakobi and Yakov London). He has published numerous scholarly articles on 20<sup>th</sup> century Yiddish culture in English and Yiddish. Other books include *Moskver Purim-Shpiln* ("Moscow Purim Plays," 1993), *Intensive Yiddish* (1996), and *In Harness: Yiddish Writers' Romance With Communism* (2005).

[Mikhail Krutikov (2<sup>nd</sup> ed.)]

**ESTROSA** (or **Istrumsa**), **DANIEL** (1582?–1653), Salonikan rabbi and halakhist. Estrosa was born in Salonika and studied under Isaac Franco and Mordecai \*Kalai. He was apparently appointed as head of the famous yeshivah of the community known as "Portugala Yaḥya" during the latter years of Kalai's life. Among his pupils were David \*Conforte, Gershon b. Abraham Motal, and Gabriel Esperanza. He died in Salonika during a plague. The only one of Estrosa's works published under his own name is *Magen Gibborim* (Salonika, 1754), responsa. It contains valuable glosses on the readings of Maimonides' *Yad* and of Jacob b. Asher's *Tur*. Other known works by him are included in the publications of others: his *Kunteres Shemot ha-Gittin* in the *Yerekh Avraham*, pt. 1 (Salonika, 1815), 1a–4b, of his grandson, Ḥayyim Abraham Estrosa, who also included his grandfather's novellae on chapter three of tractate *Avodah Zarah* in his *Ben Avraham* (Salonika, 1826); glosses on the *Tur*, *Ḥoshen Mishpat*, in the *Doresh Mishpat* (Salonika, 1655) of Solomon b. Samuel Florentin; and his halakhic decisions in the works of his colleagues and disciples.

**ESZTERGOM** (Ger. **Gran**), city in N. Hungary, on the Danube; it had the oldest Jewish community in Hungary. This is mentioned for the first time during the 11<sup>th</sup> century, when Kalonymus b. Shabbetai lived in Esztergom; he is known for the severe legal decision which he pronounced against two merchants of Regensburg who arrived in Esztergom after the beginning of the Sabbath (Zedekiah Anav, *Shibbolei ha-Leket*, *Hilkhot Shabbat*, para. 60; see also Rashi to Bezah 24b). The community lived in a closed Jewish quarter under the protection of the archbishop, granted by him in 1294, and the royal court, and had grown to 1,000 persons before the expulsion of the Jews from Esztergom in 1526. Jews resettled in Esztergom during the 18<sup>th</sup> century, and numbered 870 in 1850, 1,540 in 1910, 1,300 in 1930, and 450 in 1941, attached to a labor camp in 1942 along with thousands of other Jews. On June 13–16, 1944, they were deported to Auschwitz via Farkan. Only 52 survivors returned and there were only ten Jews living in Esztergom in 1970.

[*Encyclopaedia Hebraica*]

**ETAM** (Heb. עֵטָם).

(1) The cleft in the rock where 3,000 men of Judah came to speak with Samson after he had slaughtered the Philistines (Judg. 15:8, 11). Some scholars identify it with 'Irāq Ismā'in, 2½ mi. (4 km.) southeast of Zorah.

(2) A village in the northern Negev, mentioned together with En-Rimmon (1 Chron. 4:32) and identified with the prominent Tell Beit Mirsim, where remains of the Israelite period, including walls, have been found.

(3) A city in the territory of Judah, located in the Bethlehem district according to a Septuagint addition to Joshua 15:59. It was fortified by Rehoboam together with Bethlehem and Tekoa (11 Chron. 11:6). Josephus relates that it was one of Solomon's pleasure resorts and describes it as "delightful for, and abounding in, parks and flowing streams" (Ant., 8:186). It is most likely to be identified with Khirbat al-Ḥūh, a large tell with Iron Age remains, near Ein-Atan in the vicinity of the Pools of Solomon. According to the Talmud, the waters of its spring were brought to the Temple (TJ, Yoma 3:8, 41a), probably a reference to the aqueduct built by Pilate to catch the waters of the spring of Etam (Jos., Wars, 2:175; Ant., 18:60). A Kefar Etam is mentioned in the Mishnah (Yev. 12:6).

[Michael Avi-Yonah]

**ÉTAMPES** (Heb. אֵיטַמְפֵּשׁ), town in the Seine et Oise department, S. of Paris. At the time of the expulsion of 1182, King Philip Augustus gave the synagogue to the canons of Étampes to be converted into the collegiate church of Sainte-Croix (destroyed during the Revolution). There is still a rue de la Juiverie in Étampes, near the Place de l'Hôtel de Ville. One house in this square is still called the "synagogue," a name also given to the vast cellar (since filled in) under 39 and 41, rue Ste-Croix. Local tradition holds that Jews took refuge in the cellars of the quarter to escape persecutions and expulsions and that they buried their treasures there. Until 1182, R. Nathan b. Meshulam, great-grandfather of Joseph b. Nathan \*Official, author of *Yosef ha-Mekanne*, lived in Étampes.

[Bernhard Blumenkranz]

**ETHAN** (Heb. אֵתָן; "permanent, enduring"? or "one consecrated [to a temple]"?). The Bible ostensibly mentions four individuals named Ethan: (1) Ethan the Ezrahite, a sage (along with \*Heman, Calcol, and Darda, "sons of Mahol") whom Solomon surpassed in wisdom (1 Kings 5:11). Psalm 89 is as-

cribed to him. (2) A son of Zerah son of Judah (1 Chron. 2:6, 8). His brothers are Zimri, Heman, Calcol, and “Dara.” (3) A levite Temple musician in the time of David, colleague of the levites Heman and Asaph (1 Chron. 6:29; 15:17, 19; in some lists Ethan’s name is replaced by Jeduthun (*ibid.* 16:41; 25:1–2; 11 Chron. 5:12; 35:15). (4) An ancestor of Asaph (1 Chron. 6:27). In view of their common association with Heman, Calcol, and Dar(da), the first two Ethans are undoubtedly identical. The descent from Judah alleged in 1 Chronicles 2 probably represents a (pre-Chronicles) midrashic attempt to explain the epithet “Ezrahite” on the basis of the name of Zerah, Judah’s son. The epithet is usually understood today to mean a member or descendant of the native pre-Israelite population of Palestine. (‘*Ezrah*’ may be a loan from Akkadian *um/nzarḫu*, “homeborn” (Deller apud Cogan in Bibliography).) Ethan (and Heman, cf. Ps. 88:1) was thus descended from the latter. Since both Ethan and Heman are credited with psalms, it is hard not to identify them with the musicians of the same names in David’s time ((3), above; note, too, that the epithet applied to Heman, Calcol, and Darda in 1 Kings 5:11, “sons of Mahol,” is interpreted by W.F. Albright as “members of an orchestral guild”). As “Ezrahites” they may thus have been among the several non-Israelites holding prominent positions in David’s time. The levite ancestry ascribed to them in Chronicles is typical of that book’s treatment of cultic personnel (cf. the levite lineage it gives the Ephraimite Samuel, 1 Chron. 6:13; contrast 1 Sam. 1:1). Thus the first three Ethans appear to be one: one of the eponymous ancestors (cf. 1 Chron. 6:18ff.) of the guilds of Temple musicians (cf. to Calcol the Temple musician named *Krkr* on one of the 14–12<sup>th</sup> centuries B.C.E. ivories from Megiddo; in Pritchard, Texts, 263), living (according to Chron.) in the time of David, and of pre-Israelite Palestinian ancestry. His wisdom apparently was his psalmodic skill.

**ETHBAAL** (Heb. אֶתְבַּעַל; “Baal is with him” – pronounced *Ittobaal?*), a name borne by several kings of city-states in the area that classical sources call \*Phoenicia, corresponding in the main to present-day Lebanon and Northwest Israel. Akkadian transcriptions indicate that the initial *alef* of Itobaal might be elided in pronunciation. (1) King of Tyre and Sidon, ca. 887–856 B.C.E., father of Jezebel (1 Kings 16:31; Jos., *Ant.*, 8:317). According to Menander of Ephesus, the historian of Phoenicia quoted by Josephus, Ethbaal (Ithobalos) was a priest of Astarte (as is attested of later kings of Sidon), who became king by murdering his predecessor, and ruled for 32 years (Jos., *Apion*, 1:123). A year-long drought in his reign (identified by Josephus as that in Ahab’s reign, cf. 1 Kings 17) ended, according to Menander, when Ethbaal “made supplications to the gods, whereupon a heavy thunderstorm broke out” (Jos., *Ant.*, 8:324). He founded the Phoenician city Botrys and the Libyan

city Auza (*ibid.*). (2) Son of \*Hiram (Ahiram), a tenth-century B.C.E. king of Byblos (Pritchard, Texts, 2, 504; *ibid.*, 3, 661). (3) An eighth-century king of Tyre who paid tribute to Tiglath-Pileser III ca. 740 B.C.E., whose existence was unknown before 1972. (4) A king of Sidon installed by Sennacherib in 701 as a replacement for the rebellious Lulli. (5) A sixth-century B.C.E. king of Tyre (Jos., *Apion*, 1:156).

[Jeffrey Howard Tigay / S. David Sperling (2<sup>nd</sup> ed.)]

**ETHERIDGE, JOHN WESLEY** (1804–1866), English student of Judaica. Etheridge, who was a Methodist minister, held no academic position. His published works deal with both the Syriac Bible and the Targum, of which he did English translations of Onkelos and Pseudo-Jonathan to the Pentateuch, *The Targum of Onkelos and Jonathan ben Uzziel on the Pentateuch* (2 vols., 1862, 1865). He also published *Horae Aramaicae: Outlines of the Semitic Language* (London, 1843) and in 1856 a survey of Jewish learning entitled *Jerusalem and Tiberias: Sora and Cordova*. As a pioneering introduction to the various departments of Jewish learning, the work is not without significance.

**ETHICAL CULTURE**, an American nontheistic movement based on a humanist ideology. From the time of its establishment in 1876, the Ethical Culture movement has appealed to a relatively well-educated, middle- and upper-class, socially idealistic public. Originally and until about 1945, the people attracted to this movement were residents of major urban centers: New York, Chicago, Philadelphia, St. Louis. Felix \*Adler (1851–1933), the leading figure of the first half century of the movement, was deeply influenced in his idealism by both the American transcendentalist Ralph Waldo Emerson and the German transcendentalist Immanuel Kant. Adler’s personal variation of Kant’s ethic was developed into a “religion of duty,” purportedly neutral on theological and metaphysical questions.

Among the comparatively small number of followers of Adler (never more than about 5,000), Jews of German background were prominent in New York City; outside of New York, Germans of Christian background outnumbered the Jews. Again, as the social service activities of the New York group entered the Lower East Side, some of the young Jews of Eastern European backgrounds joined the movement; nothing comparable occurred in other urban centers. Thus it is possible to describe the New York Society for Ethical Culture as

largely an offshoot of German Reform Judaism, while describing the other Ethical Culture societies as largely offshoots of liberal German Protestantism.

The later philosophical orientation of the Ethical Culture movement was influenced by American humanistic and naturalistic ideas, and its audience became increasingly a Jewish and non-Jewish suburban public. The suburban societies have also served as compromise religious “homes” for couples of mixed background.

In keeping with the movement’s mandate to affirm the importance of working to make people’s lives and the world at large more humane, the American Ethical Union takes positions on specific issues at delegated national assemblies and meetings, striving to apply its ideals to current concerns. Local Ethical Societies engage in a wide range of service, humanitarian, and social change projects. An affiliate of the AEU, the National Service Conference, works with other non-governmental organizations at the United Nations and within the AEU on ethical peace-building and other programs. The Washington Ethical Action Office works toward achieving its selected goals by activities such as lobbying and disseminating information through the Washington Ethical Action Report.

Since 1990, some of the resolutions passed by the American Ethical Union include opposing capital punishment, seeking a peaceful solution to the Middle East conflict by ensuring a Palestinian state and a secure Israel, supporting the legalization of gay marriages, and advocating free choice regarding abortion.

On the international front, the International Humanist and Ethical Union has special consultative status with the UN, general consultative status at UNICEF and the Council of Europe, and maintains operational relations with UNESCO.

Succeeding Adler, David Algernon \*Black led the movement into the 1980s.

[Joseph L. Blau / Ruth Beloff (2<sup>nd</sup> ed.)]

**ETHICAL LITERATURE** (Heb. ספרות המוסר, *sifrut ha-musar*). There is no specific ethical literature as such in the biblical and talmudic period insofar as a systematic formulation of Jewish \*ethics is concerned. Even the Wisdom \*literature of the Bible, though entirely ethical in content, does not aim at giving a systematic exposition of this science of morals and human duties, but confines itself to apothegms and unconnected moral sayings. The same is true of the tractate \**Avot*, the only wholly ethical tractate of the Mishnah, which consists largely of the favorite ethical maxims of individual rabbis,

and later works, such as \**Derekh Erez* and \**Kallah*. The ethical principles and concepts of Judaism are scattered throughout the vast area of rabbinic literature and it was only in the Middle Ages that this data was used as the basis of ethical works and from this time ethical literature becomes a specific genre of Jewish literature.

The term “ethical literature,” applied to a type of Hebrew literature, has two different meanings. Both refer to an important part of Hebrew literature in medieval and early modern times, but while one denotes a literary form which encompasses a group of works closely resembling each other structurally, the other denotes a literary purpose expressed in various literary forms. Traditional authors generally use the term in the first sense, while the latter sense is preferred by modern scholars.

### Literary Form

“CLASSICAL” ETHICAL LITERATURE. These writings are in book form and aim at instructing the Jew in religious and moral behavior. Structurally, the books are uniform: each is divided according to the component parts of the ideal righteous way of life; the material is treated methodically – analyzing, explaining, and demonstrating how to achieve each moral virtue (usually treated in a separate chapter or section) in the author’s ethical system.

The first major work in “classical” ethical literature, *Hovot ha-Levavot*, by Bahya b. Joseph ibn \*Paquda (written in the 11<sup>th</sup> century), postulates ten religious and moral virtues, each forming the subject of a separate chapter. In *Ma’alot ha-Middot*, Jehiel b. Jekuthiel \*Anav of Rome expounds 24 ethical principles of perfect moral conduct (positive and negative – the latter to be avoided). Bahya b. Asher, one of the most prominent kabbalists in Spain, lists and analyzes the components of moral perfection in alphabetical order in *Kad ha-Kemah*, while Moses Ḥayyim \*Luzzatto’s major ethical work *Mesillat Yesharim*, constructed in the tradition of the *baraita* of R. \*Phinehas b. Jair, enumerates the main steps to perfection and holiness. Writings falling into this structural category form the main body of the traditional ethical literature.

ETHICAL MONOGRAPHS. Closely following the formalistic pattern of “classical” ethical literature, ethical monographs concentrate on one particular stage in the journey to religious perfection. The first major work of this kind was the *Sha’arei Teshuvah* by \*Jonah b. Abraham Gerondi. In this work the author analyzes every situation and problem that might possibly confront a repentant sinner and advises him how to purge himself completely of the effects of sin. Jonah Gerondi paved the way for what was to become one of the major literary forms in medieval Hebrew literature.

### Literary Purpose

The second meaning of the term ethical literature includes, besides the two categories mentioned (the classical ethical writing and the ethical monograph), nine literary forms, which, though structurally very different, have the same ob-

jective – to posit ethical and religious principles. The search for moral and spiritual perfection is the purpose of ethical literature just as practical observance of *mitzvot* is the purpose of halakhic literature.

**HOMILETIC LITERATURE.** Hebrew medieval \*homiletic literature is didactic and, in this sense, does not differ from “classical” ethical writings. The difference between the two is in their methods. Homiletic literature forms the bulk of ethical literature and for centuries influenced Jewish life more than any of the other ethical literary writings. Except for halakhic literature, no other type of Hebrew literature has achieved such a variety in content and form, has inspired authors over such a long period, and has reached such wide audiences.

**ETHICAL WILLS.** Developed in Germany, France, and Spain from the 11<sup>th</sup> to the 13<sup>th</sup> centuries, writers have used this literary form until modern times. \*Ethical “wills” usually refer to short, concise works in which the main principles of moral behavior are expounded and which are written in the form of a father’s last words to his children. Frequently, the “will” is nothing but a literary cliché, and quite often was applied to short ethical works not really intended as “wills.” Many of the works in this category are pseudepigraphic and are later compilations attributed to early scholars.

**ETHICAL LETTERS.** This form includes actual letters in which the writer instructs either his son or another person, who was far away, to live a moral life; and short ethical treatises, called “a letter” (“*iggeret*”), which is also the conventional name applied to any short work. \*Nahmanides’ letters to his sons belong to the first category, whereas the work “*Iggeret ha-Musar*” by R. Shem Tov \*Falaquera is typical of the second.

**MORALISTIC STORYBOOKS.** One of the earliest literary forms used by writers of ethical literature, the first moralistic storybook, \**Midrash Aseret ha-Dibberot*, a collection of moralistic tales in the form of exempla and short homilies, was probably written in the geonic period. Structurally, the work is a series of stories which exemplify the way to achieve complete devotion to each one of the Ten Commandments. \*Nissim b. Jacob b. Nissim ibn Shahin’s *Sefer ha-Maasiyyot* (“Book of Tales”), better known as *Hibbur Yafeh me-ha-Yeshu’ah*, is also an early work (11<sup>th</sup> century) expressed in this form. Originally written in Arabic, it was translated into Hebrew and as such influenced later Jewish writers. After the 15<sup>th</sup> century, moralistic-storybook writing became more common in Yiddish literature than in Hebrew.

**HANHAGOT LITERATURE.** Unlike the genres described above, which usually strive to teach the most basic and essential principles of ethical behavior, *hanhagot* literature concentrates on small practical details and not on general spiritual fundamentals. The objective – to instruct the individual in the minutest details of daily behavior – makes use both of halakhic laws and of ethical principles. *Hanhagot* literature began to develop in the 13<sup>th</sup>-century *Sefer ha-Yirah* by R. Jonah

Gerondi, and later *Zeidah la-Derekh* by \*Menahem b. Aaron ibn Zerah, but it was still popular, mainly in Eastern Europe, in the 17<sup>th</sup> and 18<sup>th</sup> centuries.

**EULOGIES.** This type of ethical literature belongs to homiletics because eulogies – written obituaries at least – were considered homilies. Eulogies are usually didactic with the virtues of the mourned dead serving as emulative qualities. Hundreds were printed, either as separate booklets or forming parts of a more general homiletic work.

**COLLECTIONS OF ETHICAL FABLES AND EPIGRAMS.** The first collections were influenced by Arabic works; sometimes these compilations were translations from the Arabic (e.g., *Musrei ha-Pilosofim*, attributed to Ishaq ibn Hunayn or \**Mivhar ha-Peninim*, attributed to R. Solomon b. Judah ibn \*Gabirol, or \**Kalila and Dimna*).

**ETHICAL POETRY.** Ethical treatises were sometimes written in verse. Structurally, many of them follow biblical examples, especially the Proverbs, and list the commandments in poetical form. One of the earliest works in this literary form, *Shirei Musar Haskel* (1505), was attributed to \*Hai Gaon. Some of the *maqāma* literature should also be included (*Behinat Olam* by \*Jedaiah ha-Penini, and *Iggeret ha-Musar* and *Sefer Mevakkesh* by Falaquera).

**INTERPRETATIONS OF THE BOOK OF PROVERBS AND OF THE TRACTATE AVOT.** The Book of Proverbs and *Avot*, mainly concerned with ethics, formed the basis of many medieval ethical writings. The interpretation served as a vehicle for the author’s own concepts of Jewish ethics. Popular in medieval literature, these commentaries were usually regarded as independent works of ethics, and not part of the literature of exegesis and interpretation.

The objective of all these literary forms is to give workable and practical answers to the moral problems of the times. Their answers however were derived from theological considerations which lie outside the scope of ethical literature. Conceptually, ethical literature is not original in any of the disciplines it draws upon: theology, anthropology, philosophy, or psychology. The new concepts which originated in theological and theosophical literature were adapted to everyday religious life by ethical literature. It expressed them in different literary forms to make them acceptable to the public at large and it is thus, in form rather than in content, that ethical literature was original. Forms of expression usually do not interest theological innovators who mainly address themselves to the intellectual elite of the community, but a writer of an ethical work cannot disregard them. Since his main objective is to influence the life and religious behavior of the community as a whole, the ethical writer cannot afford to address only a segment of the public; consequently structural considerations play an important role.

Two unrelated processes have thus shaped the history of ethical literature: (a) the development of the literary forms as such; (b) the general development of Jewish religious thought

on which ethical literature drew for its content and which it popularized. The merger of these two processes is the reason why ethical literature tends to be more conservative, less radical and innovative, than the theological movements in which the concepts it used originated. This phenomenon is apparent at every stage of the history of ethical literature, excluding perhaps the first period in Spain (see below). Ethical literature, in adapting new ideas, couched them in traditional literary genres for which it drew on aggadic lore. All the ethical writers used the aggadic form. The fusion of the old and the new, in form and content, made ethical literature the catalytic agent that preserved the new ideas and introduced them into the bloodstream of Judaism. Ethical literature modified the more radical implications of these concepts, and made them acceptable to the traditional community at large.

Since the ideas that ethical literature propounded originated with the ideological and theological movements in medieval Judaism, its history also reflects the development of these movements. Consequently there are four types of Hebrew medieval ethical literature: philosophical, rabbinic, Ashkenazi-ḥasidic (see \*Hasidei Ashkenaz), and kabbalistic; the last greatly influenced modern ḥasidic ethical literature. These testify to four distinct ideological movements. The development of each of these types will be briefly studied.

### Philosophical-Ethical Literature

The beginnings of Jewish ethical literature in the Middle Ages are rooted in the development of Jewish philosophy of that period. The last chapter of *Emunot ve-De'ot* by Saadiah Gaon (ninth century), which is on human behavior, may be regarded as the first Jewish medieval work in ethics. Distinct from the body of the book, both because of its form and because of its contents, it seems to be a separate work on ethics. The philosophical basis of Saadiah's ethical concepts did not develop out of earlier Jewish thought, and this might be the reason why this part of his work did not have a lasting influence on later Jewish ethical writings. *Tikkun Middot ha-Nefesh* (11<sup>th</sup> century) by Solomon ibn Gabirol suffered a similar fate, probably because the ethical system developed in the work was also alien to Jewish thought and did not fit into the accepted morals and ethics of the talmudic *aggadah*. Ibn Gabirol tried to show that the fusion of the four essential elements in medieval thought and the five senses formed the bases of all human characteristics.

Both works are written in Arabic, and both were translated (early 12<sup>th</sup> century) into Hebrew by R. Judah ibn Tibbon. They are an attempt at introducing a "pure ethic" into Jewish philosophy – a direct application of alien philosophical ideas to the field of Jewish ethics, without either blending them with, or using, the wealth of random ethical material already existing in Jewish tradition. In *Sefer ha-Ma'asiyyot*, a book of ethics which appeared at about the same time (11<sup>th</sup> century), also written in Arabic, but which was early translated into Hebrew, the author, R. Nissim b. Jacob b. Nissim ibn Shahin, used the opposite approach to that of Saadiah Gaon's and Ibn Gabirol's.

He collected ethical stories and sayings from the Talmud to which he added medieval tales and concepts scarcely using philosophical ideas and applying no ethical system. It came to be widely used and accepted in its Hebrew version by all later writers of the ethical tale.

These works were precursory to the body of Jewish philosophical writings and it was *Hovot ha-Levavot* of Bahya ibn Paquda, one of the most penetrating works in medieval literature, which gave impetus to this literature. The first medieval Jewish work to evolve an ethical system rooted in Jewish thought, it tried to come to grips with the fundamental spiritual problems that troubled the medieval Jewish mind. While the influence of contemporary medieval philosophy can easily be detected, especially in the first section which is a philosophical treatise on the unity of God, Bahya ibn Paquda also culled from such sources as biblical and rabbinic literatures, and Arabic proverbs, tales, and epigrams to create what is primarily an ethical guide. The most influential single Jewish work in ethics in a period of over 600 years, its impact may be partly attributed to the author's profound and fundamental treatment of what was probably the most challenging question to Judaism at the time – the inner quality of religious life.

All major medieval ethical works came to grapple with this basic and crucial problem which essentially grew out of an age that had adopted the Platonic concept of matter and spirit being antagonistic elements and consequently creating a rift within man. The ethical and spiritual teachings in the Talmud had come to be relegated to a secondary position and Judaism thus came to be seen as a materialistic religion, based on practical deeds and actions, and not on spiritual attitudes which, to the medieval scholars, seemed the essence of religious life. Jewish moralists were therefore confronted with the problem of reconciling the contemporary Jewish concept of religious life which was practically orientated and consequently seen as inferior, with the new ideas which saw religion almost exclusively in a spiritual light. While this question was also considered from a purely philosophical point of view, and thus formed the basis of many medieval philosophical writings, it most needed to be answered in the sphere of morals and ethics to which the community at large turned for guidance.

The conflict was resolved in ethical literature through a reinterpretation of the ancient Jewish heritage in which its spiritual values were stressed in the light of the moral and ethical concepts of the age. Nowhere was the problem more sharply and clearly stated than in the introduction to *Hovot ha-Levavot*. Bahya ibn Paquda's ethical system, except for minor changes and variations, was generally accepted by philosophical-ethical literature. He stressed: (a) the idea of *kavvanah* – any ritual act as such does not represent spiritual fulfillment, unless it is performed with the right *kavvanah* (awareness and intention); the deed becomes a means in the fulfillment of a religious duty. Religious value thus also came to be attached to the spiritual attitude of the doer, and not to the deed alone; (b) a whole system of purely spiritual commandments – the *hovot ha-levavot*, which gave the title

to the work. Spiritual commandments, according to Bahya ibn Paquda, are those that are completely detached from any physical act, and they, therefore, do not include the traditionally "spiritual" religious acts of prayer and study, because the mouth or the eyes (physical organs) are required in their performance. These commandments he set out as: reaffirmation of God's unity, recognition of His workings in the world, divine worship, trust in God, sincerity of purpose, humanity, repentance, self-examination, asceticism, and the love of God.

With variations in emphasis, this double or triple system of commandments (practical commandments, *kavvanah*, and *hovot ha-levavot*) is found in other philosophical-ethical writings: *Hegyon ha-Nefesh* by \*Abraham b. Hiyya ha-Nasi of Barcelona, in which the spiritual meaning of repentance is described; *Yesod Mora* in which Abraham \*Ibn Ezra gave a spiritual foundation to the commandments; and especially in the works of \*Maimonides. The latter, sometimes orientated toward "purely philosophical ethics" as in *Shemonah Perakim*, are also invested with philosophical and spiritual-moral commandments which complement the practical laws, as in *Sefer ha-Madda* of the *Mishneh Torah*. These works ushered in a new period in ethical literature: writings were now in Hebrew and the need to establish a link between the new philosophical-ethical ideas, directed toward the spiritualization and immanence of religious life, and the older more traditional Jewish concepts, became more pronounced. For the Jewish philosophers it had been easier to express "pure philosophy" in Arabic rather than in Hebrew. Henceforth however, even philosophers based their ethical works on biblical passages and talmudic sayings, and thus integrated more closely the ancient Jewish ethical teachings with the new philosophical-ethical ideas.

The relationship between moral perfection and maximum religious fulfillment was one of the main problems that confronted Hebrew philosophers. Maximum fulfillment was usually understood as philosophical contemplation, which had nothing to do with social life and ethical behavior. Was ethics, therefore, to be considered only as a means toward attaining this religious fulfillment, or was ethics an end in itself? Maimonides' writings contain both contradictory concepts; in most places Maimonides subordinates ethics to philosophy but there are places where he sees ethical behavior as the best possible approach to God which man can achieve. Most of the followers of Maimonides tended to see ethics as a means and not as a religious end, e.g., Shem Tov Falaquera's *Sefer ha-Ma'lot*. This approach to ethics possibly contributed to the fact that philosophical-ethical literature after the 13<sup>th</sup> century ceased to be a vehicle of expression of the ethician.

The search for the inner religious quality of life had found expression in ethical literature before Maimonides, but especially after him philosophers tried to give rational and spiritual reasons for the practical commandments. The commandments were thus considered only seemingly materialistic, and their true essence was seen as spiritual. During the 13<sup>th</sup> century Jewish thought used allegorization as a means to reveal the hidden spiritual meaning of the commandments and the Torah,

thus breaking with the Maimonidean rationale. *Malmad ha-Talmidim*, by Jacob b. Abba Mari b. Samson \*Anatoli, and the polemic and exegetic writings of Zerahiah b. Isaac b. Shealtiel \*Gracian (Hen) demonstrate this trend. This development within philosophical-ethical literature was later blamed for the conversion of so many Jews during the Spanish persecutions of the late 14<sup>th</sup> and the 15<sup>th</sup> centuries: the contention of these Jews had been that if the true meaning of the commandments was a hidden spiritual one, why sacrifice one's life in order to preserve the outer meaningless, material shell?

### Rabbinic-Ethical Literature

The rise of rabbinic-ethical literature, especially in 13<sup>th</sup>-century Spain, Provence, and Italy, came as a reaction to such trends and was a revolt against Jewish philosophy influenced by Aristotelian concepts. Rabbinic-ethical literature was receptive to organized ethical thought; its aim, however, was to show that a moral system was already existent in the *aggadah* and in the Talmud. Jonah Gerondi, one of the first Hebrew ethicists, dedicated his major ethical work *Sha'arei Teshuvah* ("The Gates of Repentance") to the problem of repentance, much as Abraham b. Hiyya had done a hundred years earlier. According to him, a systematic arrangement of the old talmudic sayings together with a suitable exegetical commentary would present a complete and satisfactory system. Jonah and the other writers of this literature tried especially to emphasize the spiritual dicta found in older Jewish tradition, thus minimizing and possibly reconciling the antithesis between medieval beliefs and this older tradition.

It is significant that many of the writers of rabbinic-ethical literature were kabbalists, though they did not reveal their mystic ideas in their popular ethical works. Nahmanides' ethical treatise, *Sha'ar ha-Gemul*, discusses the various categories of the just and the wicked and their retribution in the world to come. Bahya b. Asher wrote a very popular rabbinic-ethical work, *Kad ha-Kemah*, in which, following the rabbinic-spiritualistic method, he enumerates alphabetically and studies different ethical problems. These and other ethicists (some modern scholars even maintain that Jonah Gerondi had been a kabbalist) presented the public with a rabbinic-ethical system, while in their closed mystical circles they resolved the antithesis between the spirituality of religion and the material aspect of the Torah through mystic speculation.

There were, however, some rabbinic-ethical writers who merely tried to compile and systematize the different talmudic-ethical writings. Thus, most of *Ma'lot ha-Middot* by Jehiel b. Jekuthiel Anav is a collection of talmudic and midrashic sayings arranged according to theme and content. The objective of later works, e.g., the two versions of *Menorat ha-Ma'or*, one by Israel \*Al-Nakawa b. Joseph of Toledo, the other by Isaac \*Aboab, was similar. Rabbinic-ethical literature, therefore, did not try to innovate, but to apply traditional Jewish ethics to the medieval world. In the process, it even revived some of the old forms of aggadic literature which came to serve as vehicles of expression.

### Ashkenazi-Ḥasidic Literature

The creative verve of the Ḥasidei Ashkenaz movement in Germany expressed itself in a body of ethical writings (see *Sefer Ḥasidim* (first published 1538, Bologna), \*Judah b. Samuel he-Ḥasid of Regensburg, \*Samuel b. Kalonymus he-Ḥasid of Speyer, and \*Eleazar b. Judah b. Kalonymus of Worms) that deviate in character from the philosophical-ethical literature and rabbinic-ethical literature of the time. (The former, however, had already reached its zenith when Ashkenazi ḥasidic literature started to develop, while the latter began at the same time.) While *Sefer Ḥasidim*, a work of major scope, epitomizes Ashkenazi-ḥasidic literature, writings of lesser range and reputation are equally representative, e.g., the introductory chapters to the halakhic work *Sefer ha-Roke'ah* by \*Eleazar of Worms and the ethical works *Sefer ha-Gan* (1899) by Isaac b. Eliezer and *Sefer Ḥasidim Katan* (1866) by Moses b. Eleazar ha-Kohen (14<sup>th</sup> and 15<sup>th</sup> centuries) are almost exclusively based on Ashkenazi-ḥasidic moral teachings. The problems which faced the Ashkenazi ethicist, essentially the same as those that confronted the Hebrew thinkers of Spain, Italy, and Provence, were approached differently and were expressed neither in the variety of forms nor given the systematic treatment of the philosophical-ethical and rabbinic-ethical literatures of the south. The teachings of Greco-Arabic philosophy had not reached and therefore had not influenced the Jewish communities in Germany and in northern France. Thus while medieval European thinkers were essentially confronted by the same challenge, their response grew out of their immediate cultural environment.

Ashkenazi-ḥasidic literature is basically less abstract (less consideration is given to principles and fundamentals and more attention is paid to actual situations and concrete problems) than the literatures of the south. Structurally, the two types of literary writings also differ widely. *Sefer Ḥasidim* is not patterned on the methodical division of *Ḥovot ha-Levavot*. It is comprised of 2,000 short random passages in which every situation and every phase of moral and religious life is discussed. Thus Ashkenazi-ethical thinking was much more concerned with the specific problems to which local historical conditions gave rise than were their southern counterparts.

The approach of the Ḥasidei Ashkenaz to the concept of the spiritual essence of religious and moral behavior and their interpretation of the practical commandments of the old teachings became the classical solution to all such questions in rabbinic literature. They contended that all commandments and ethical demands made upon man by God are a test in order to examine man's devotion to his creator. The religious value of certain deeds therefore does not lie in the actual performance but in the spiritual and religious effort that constitutes the action, e.g., a rich man who paid the ransom for a captured Jew and released him does not attain the spiritual height of the poor man who, with much effort, collected the ransom from many people, but upon paying the money found that the Jew had already been released. It is not the deed alone that counts, but the effort and devotion which God ex-

pects of man in following His will. Thus the reasons for (and even the meaning of) the commandments become negligible and even irrelevant: God in His infinite wisdom chose certain deeds by which to try man; they could be any deeds. What is important is that God's will was revealed through certain commandments and through certain ethical standards; it is not for man to ask why.

Ashkenazi Ḥasidim thus arrived at a certain scale of religious and ethical values and of commandments which ranged from the most difficult and trying precepts to acts which everybody could easily perform; the latter were therefore considered secondary. The religious value in the study of the talmudic tractate *Mo'ed Katan*, which deals with death and mourning, is higher than that of the study of other tractates. The more a commandment contradicts average human desires and instincts, the more religious value is attached to it. Thus, the greatest sacrifice that man can possibly make – to die for \**kiddush ha-Shem* (be martyred in the sanctification of God's name) – is man's supreme religious fulfillment. This view, prevalent during the times of the \*Crusades, was able to take root in an age when thousands of Jews in Germany and northern France died for *kiddush ha-Shem*.

The Ashkenazi-ḥasidic movement thus gave new relevance and new spiritual meaning even to the simplest and most practical of the religious and moral commandments. A more radical principle which also directly affected a whole pattern of behavior was the distinction made between *din Torah* (the "earthly law") and *din shamayim* (the "heavenly law"). Strict observance of the Torah precepts does not necessarily lead to the highest religious fulfillment; for this a higher moral law – *din shamayim*, the law of conscience – is necessary. According to the Torah, a thief is a thief; but according to *din shamayim* a clear distinction must be made between a man who steals bread out of hunger and a rich man who steals in order to further enrich himself. This does not mean that the laws of the Torah should be abandoned; a pious man however should try to transcend them and follow a higher spiritual and moral law.

During the 12<sup>th</sup> and 13<sup>th</sup> centuries, when Ashkenazi-ḥasidic theology and ethics flourished, Jewish life and thought of southern and northern Europe were clearly distinct: they were almost two separate cultures. The 13<sup>th</sup> century saw the slow bridging of the gulf – Ashkenazi ideas spread to southern Europe where they influenced rabbinic-ethical writers, and after the expulsion from Spain in 1492, Ashkenazi-ḥasidic ethics were a bulwark on which Judaism drew, to reorientate itself ideologically after the great tragedy.

Creativity in philosophical-ethical thought came to an end with the expulsion from Spain, mainly because philosophy was seen as a contributory factor to the conversion of hundreds of thousands of Spanish Jews. Writers like Joseph b. Ḥayyim \*Jabez and Isaac Abrabanel clearly denounced current Jewish philosophical thinking. It was a time when Judaism seemed to have fallen into a theological void – the old beliefs were shattered by the tragedy, and for a time nothing,

at least nothing systematic and of embracing scope, seemed to replace philosophical thinking. A new theological outlook, the \*Kabbalah, which came to form the largest body of ethical writings in Jewish literature, finally gave literary expression to Jewish life and its aspirations in the aftermath of the expulsion. Ashkenazi-ḥasidic ethical thought had been only a temporary moral and spiritual support to the Jews of southern Europe and it was integrated into the \*Kabbalah which began to develop during the 16<sup>th</sup> century.

### Kabbalistic-Ethical Literature

The early European kabbalists usually tended to confine themselves to their closed circles and did not want to turn the Kabbalah into a popular literature. The center of kabbalistic learning established in Safed during the 16<sup>th</sup> century, however, created a body of moral writings which were directed toward the Jewish community at large and which started the 300-year period of kabbalistic-ethical literature.

This literature drew on earlier kabbalistic works, especially the \*Zohar, as well as on Ashkenazi-ḥasidic ethics and rabbinic-ethical thought. Using the Kabbalah and its mystical system as a basis, kabbalistic-ethical teachings were formulated along the same strong systematic lines. Central to kabbalistic-ethical literature are two closely related concepts: (1) an ethical dogma in which the commandments are conceived symbolically; (2) the idea that the temporal world reflects the eternal world and vice versa and that there is an interdependence between the performance of deeds on this earth and processes in the divine mystical world. The symbolic approach to the commandments demanded of man to adhere to them with all his might because they reflect divine mystical actions. Through the idea of reflective worlds, man's deeds formed part of the divine drama, and enabled man by means of his action to influence the mystical powers. Moses b. Jacob \*Cordovero's *Tomer Devorah*, one of the first kabbalistic ethical works of this period, is a detailed guide to moral behavior and how such conduct could and should reflect divine essences and satisfy divine requirements. His pupil and follower, \*Elijah b. Moses de Vidas, the author of *Reshit Hokhmah*, developed the idea that man's moral deeds are reflected in the heavenly struggle between good and evil. The \*Kabbalah of Isaac \*Luria, which developed in the last part of the 16<sup>th</sup> century, strengthened this concept by stressing even more man's responsibility in the war raging in the mystical spheres.

The kabbalistic-ethical literature, which, from the 17<sup>th</sup> century onward continued to develop in Eastern Europe, was based almost exclusively on Lurianic teachings. It emphasized more strongly the power of Satan and the consequences that sin has in the divine world. Works like Zevi Hirsch \*Koidonover's *Kav ha-Yashar*, which was very popular, used kabbalistic-Lurianic teachings to warn the reader against the havoc which sin might wreak on the sinner as such, and on the world as a whole.

Kabbalistic theosophy firmly rooted this literature in systematic mystical reasoning and gave it a theological struc-

ture. The actual teachings, the positive and negative precepts, did not, however (with a few exceptions, like the custom of *tikkun*, see \*Kabbalah), originate with the kabbalist but were culled from older ethical literature: rabbinic and Ashkenazi-ḥasidic.

The Shabbatean movement, which deeply influenced all of Judaism in the second half of the 17<sup>th</sup> century, did not use ethical literature as a vehicle of expression (see \*Shabbetai Zevi). Despite the ethical work *Tikkunei Teshuvah* (published by I. Tishby) by \*Nathan of Gaza, most of the Shabbatean literature was theosophical in nature. Some of the Shabbateans who wrote popular ethical works tended to conceal their theological views and only occasional allusions can be found.

During the 18<sup>th</sup> century two converging trends in Jewish thought – kabbalism and messianism – gave rise to the kabbalistic-ethical works of Moses Ḥayyim \*Luzzatto: *Mesillat Yesharim*, *Da'at Tevunot*, and *Derekh ha-Shem*. The controversy that raged around Luzzatto, one of the major ethicists in Jewish literature, forced him to conceal the kabbalistic elements in his works through the use of pseudo-philosophical language and terms. His works, which became popular toward the end of the century, are read to this day.

Ḥasidic literature of the late 18<sup>th</sup> century and throughout the 19<sup>th</sup> century is almost exclusively ethical. Most of it is comprised of homilies in which moral behavior is strongly stressed; some of the writings, however, are purely ethical in nature, e.g., *Sefer ha-Middot* by R. \*Naḥman of Bratslav or *Tanya* by R. \*Shneur Zalman of Lyady. The collections of ḥasidic stories and fables are usually didactic and have an ethical theme. The *Mitnaggedim*, opponents of Ḥasidism, also based their teachings on Lurianic ethical literature. From their ranks sprang the \*Musar movement which tried to introduce the study of major ethical works into the yeshivot and for whom moral behavior became the greatest religious fulfillment man could aspire to. Haskalah literature at the end of the 18<sup>th</sup> and the beginning of the 19<sup>th</sup> centuries also used the traditions of ethical literature in its didactic endeavors.

Hebrew ethical literature, a diversified corpus of writings, is characterized by an underlying unity which cuts across not only the divergent ideological movements out of which the literature grew and which it represents, but also subsumes the various vehicles of expression used by ethicists. Hebrew ethical writers were primarily concerned with a number of elemental universal problems. The solutions they presented, while reflecting the various ideologies, are basically a response to the most crucial point at hand – man and the human condition, his position in the cosmos, and his attitude to the ways of God. They thus transcended the specific dogma to which they adhered and considered the dilemma of man in its universal aspects. Fundamental to this literature are such questions as: the ill fate suffered by the just and the success enjoyed by the wicked in this life; the ways of divine judgment; God's knowledge and active management of the temporal world;

why the wicked were created; freedom of choice in ethical and religious matters and the boundaries of that freedom; the meaning of sin and in what relation does the repentant sinner stand to the just who has never sinned; the relation between fear of God motivated by the thought of retributive justice and fear of God aroused by God's greatness; the relationship between the worship of God through fear and the worship of God through love; the meaning of *devekut* (communion with God) and the ways to achieve it; the essence of *kavvanah* and its place in ethical life; the right attitude to Gentiles; the fate of the just and the wicked after death; the essence of the soul; existence after the resurrection; social behavior in and toward the family; and similar questions which transcend time and space to create one unifying body of literary writings. Some of the answers are dictated by the special character and inclinations of the writer more so than by the movement to which he belonged.

Unlike the philosopher and theologian, the ethicist is faced with concrete situations, actual people; his responses are therefore more pragmatic and less dogmatic – he tackles the questions practically and in human terms. Ethical literature thus, through the uniqueness of this aspect of its character – the specific moral confrontation with man's universal dilemma – has carved out for itself an independent place in Hebrew literature and it is not merely another branch of theological literature.

Form as much as content was a unifying factor in the corpus of ethical writings that classified it into a literature. Ethicists were obliged to use different literary means in order that their works might be accepted by a wide and sometimes uneducated public. This unavoidable emphasis on form, and not only on content, placed ethical literature into a separate category and set it apart from the other branches of religious thinking. The constant use of fables, stories, epigrams, jokes, and hagiography as vehicles of expression created a distinct literature which was read not only for didactic purposes but also to be enjoyed. The literary and didactic role played by literature during the Middle Ages is comparable to that of fiction in modern times.

## ETHICS.

### IN THE BIBLE

There is no abstract, comprehensive concept in the Bible which parallels the modern concept of "ethics." The term *musar* designates "ethics" in later Hebrew, but in the Bible it indicates merely the educational function fulfilled by the father (Prov. 1:8) and is close in meaning to "rebuke." In the Bible ethical demands are considered an essential part of the demands God places upon man. This close connection between the ethical and religious realms (although the two are not completely identified) is one of the principal characteristics of the Bible; hence, the central position of ethics throughout the Bible. Accordingly, the Bible had a decisive influence upon the molding of ethics in European culture in general, both directly and indirectly through the ethical teachings in apocryphal literature (see \*Apocrypha and Pseudepigrapha) and the New Testament which are based on biblical ethics.

### Social Ethics

The command to refrain from harming one's fellow man and to avoid doing evil to the weak is fundamental to biblical ethics. Most of the ethical commands specified in the Bible belong to this category: due justice (Ex. 23:1–2; Deut. 16:18–20); avoidance of bribery (e.g., Ex. 23:8), robbery, and oppression (Ex. 22:20; Deut. 24:14); defense of the \*widow and the \*orphan; compassionate behavior toward the \*slave; and the prohibition of gossip. Added to these were the commands to sustain the poor (Deut. 15:7–11), feed the hungry, and clothe the naked (Isa. 58:7; Ezek. 18:7). The radical but logical conclusion derived from this is that man is obliged to suppress his desires and feed even his enemy (Prov. 25:21), return his enemy's lost property, and help him raise his ass which is prostrate under its burden (Ex. 23:4–5). Biblical ethics, which cautions man to love and respect his fellow man, reaches its highest level in the commandment: "You shall not hate your kinsman in your heart, reprove your neighbor," which concludes with "Love your neighbor as yourself. I am the Lord" (Lev. 19:17–18). The principle aim of this commandment, as of others, is the avoidance of unfounded hatred which destroys the life of the society.

The general trend of social ethics was summed up by the prophets who said: "Hate evil and love good and establish justice in the gate" (Amos 5:15); and similarly: "He has told you, O man, what is good; and what does the Lord require of you but to do justice and love kindness, and to walk humbly with your God" (Micah 6:8). These passages and their like not only summarize the teaching of ethics, but also place it at the center of the Israelite faith. A summation of biblical ethical teachings is contained in the well-known saying of Hillel: "What is hateful to you do not do unto another" (Shab. 31a).

### The Ethical Perfection of the Individual

Unlike the ethical system of Greek philosophy, which seeks to define the various virtues (who is courageous, generous, or just, etc.), the Bible demands of every human being that he perform the good deed, and behave virtuously toward his fel-

low man, and is not concerned with abstract definitions. This attitude is almost explicitly expressed in Jeremiah 9:22–23: “Let not the wise man glory in his wisdom, let not the strong man glory in his strength, let not the rich man glory in his riches. Only in this should one glory: in his earnest devotion to me. For I am the Lord who exercises kindness, justice, and equity in the world; for in these I delight – declares the Lord.” From this it follows that doing what is right and just is the essence of biblical ethics. The personal ethical ideal is the *zaddik* (the good man; see \*Righteousness). Ezekiel defines him in detail for the purpose of explaining the doctrine of reward and \*punishment, and his definition is nothing but an enumeration of the deeds performed by the good man and of those from which he refrains (Ezek. 18:5–9). The essence of all of these acts is the proper relationship between man and man, except for one commandment, to shun idolatry, which is solely a duty of man to God. A similar definition of the good man appears in Isaiah 33:15 and in Psalm 15. Added to the ideal of the righteous man in Psalms is the Godfearing man who finds happiness in the teachings of God and in the worship of Him and who shuns the life devoid of ethical earnestness (e.g., Ps. 1). The personal ethical ideal received further expression in the character of \*Abraham, who was credited with several especially fine and noble qualities. He was complaisant in his relationship with Lot, hospitable, compassionate toward the evil inhabitants of Sodom, humble and generous in his dealings with the people of Heth, and he refused to profit from the booty of the war with Amraphel.

#### **Distinguishing Feature of Social Ethics in the Bible**

The lofty level of biblical ethics which is evident in the command to love one’s neighbor, in the character of Abraham, and in the first Psalm, is peculiar to the Bible, and it is difficult to find its like in any other source; however, the general ethical commandments in the Bible, which are based on the principle of refraining from harming others, are a matter of general human concern and constitute the fundamentals of ethics. Some characteristic features of biblical ethics, such as due justice and the rights of the widow and the orphan, are prevalent in the ancient Near East (see below). Therefore the generalization that the Bible is unique among religious works in the content of its ethical teachings cannot be made. However, the Bible does differ from every other religious or ethical work in the importance which it assigns to the simple and fundamental ethical demand. The other nations of the ancient Near East reveal their ethical sense in compositions that are marginal to their culture: in a few proverbs dispersed throughout the wisdom literature, in prologues to collections of laws, in various specific laws, and in confessions (see below). The connection between ethical teachings and primary cultural creations – the images of the gods, the cult, the major corpus of law – is weak. The ethical aspirations of these cultures are sometimes, but not always, expressed in their religion and social organization, while the Bible places the ethical demand at the focus of the religion and the national culture. The ethical

demand is of primary concern to the prophets, who state explicitly that this is the essence of their religious teaching. Basic sections of biblical law – the Ten Commandments, Leviticus 19, the blessings and curses of Mount Gerizim and Mount Ebal (Deut. 27:15–26) – contain many important ethical commandments. Biblical law itself testifies to its ethical aim: “Or what great nation has laws and norms as just (*zaddikim*) as all this Teaching...” (Deut. 4:8). While the wisdom literature of Israel is similar to that of the neighboring cultures, it is distinctive in the greater stress it places upon ethical education (see below). The assumption that God is – or should be – just, and the question of reward and punishment which follows from that assumption, are the bases of the religious experiences found in Psalms, Job, and some prophetic passages. The opinion of Hillel the Elder that the ethical demand is the essence of the Torah may be questioned, for it can hardly be said to be the only pillar of the biblical faith. However, there is certainly a clear tendency in the Bible to place the ethical demand at the focus of the faith, even if it does share it with other concerns such as monotheism (see biblical view of \*God).

Biblical ethics teachings, though clear and forceful, are not extraordinary in content, for the Bible requires nothing other than the proper behavior which is necessary for the existence of society. Biblical ethics does not demand, as do certain other systems of ethics (Christianity, Buddhism, and even some systems in later Judaism), that man withdraw completely or even partially from everyday life to attain perfection. Asceticism, which views the normal human situation as the root of evil, is foreign to the Bible and to the cultures of the Near East in general. The Bible approves of life as it is, and, accordingly, makes its ethical demand compatible with social reality. However, the degree of justice which it is possible to achieve within the bounds of reality is demanded with a clear forcefulness which allows for no compromise. This makes the Bible more radical than most ethical systems. The ethical teachings of the Bible, like the Bible generally, are addressed first and foremost to Israel. But some biblical passages extend the ethical demand to encompass all mankind, such as the \*Noachide laws (Gen. 9:1–7), the story of Sodom (Gen. 19:20ff.), or the rebuke of Amos against the neighboring kingdoms for their cruelty (Amos 1:3–2:3). The setting of the Book of Job is also outside the Israelite realm.

#### **Sexual Ethics**

What has been said up to here applies only to social ethics, in view of the fact that in the realm of sexual morality the biblical outlook differs from that of neighboring cultures. The Bible abhors any sexual perversion such as \*homosexuality or copulation with animals, prescribing severe punishments for offenders (Lev. 18:22–23; 20:13, 15–16). The adulteress sins not only against her husband, but also against God (e.g., Ex. 20:14; Lev. 20:10; Mal. 3:5). Fornication is generally frowned upon, severely condemned by \*Hosea, and legally punishable by death in some cases (Lev. 21:9; Deut. 22:21). The other peoples of the ancient Near East did not treat these offenses

with such severity. They regarded \*adultery as essentially an infringement upon the rights of the husband – damage done to his property, like robbery or theft – and not as an abominable act sinful to God. Society was reconciled to prostitution, although a certain stigma was attached to it. Therefore Babylonian law, for example, defines the legal status of the various types of prostitution and treats it as it treats other phenomena in society (e.g., Code of Hammurapi, 145, 181, in: Pritchard, *Texts*, 172, 174; Middle Assyrian Laws, 40, in: *ibid.*, 183). There is little opposition to sexual perversions: homosexuality is numbered among the sins in the Egyptian “Book of the Dead” (see below); Hittite law punishes copulation only with certain animals, and even these not very severely (see below). This opposition, which is occasionally expressed, does not declare these acts to be an outright abomination. Fornication and more serious sexual offenses are ascribed to the gods in \*mythology, and possibly played a role in the cult (see *Kedeshah*). Therefore, it is clear that the biblical stand on these matters is unique. The biblical sexual ethic was imposed by Christianity on most of the civilized world in theory if not in practice but in the ancient world it was unique to Israel.

### Ethical Teaching in the Bible

MEANS OF INSTRUCTION. The orientation of biblical ethics is uniform in content, but is expressed in different ways, according to the viewpoint of the particular book of the Bible. The strongest and most radical expression of the goal of biblical ethics is found in the rebukes of the prophets, who chastise the people relentlessly for ethical transgressions and demand ethical perfection (especially in the realm of social ethics) without compromise. But their rebukes do not really constitute instruction, for they do not always teach one how to behave in particular situations.

Biblical law is concerned with providing ethical instruction in particular acts. The legal sections of the Torah explicitly and in detail forbid various offenses such as murder, robbery, and bribery, and explicitly demand support of the poor, love of one’s neighbor, and the like (see below).

Both prophecy and law demand of man in the name of God that he behave properly. Their ethical outlook is a fundamental element in their demand that man do God’s will, and therefore is not practical utilitarianism, even though they teach the doctrine of reward and punishment. This ethical attitude is given added depth in the Psalms, where it becomes a matter of religious feeling that throbs in the heart of the righteous man who seeks closeness with his God (see Ps. 1; 15, especially verses 2, 4, 24:4; 34:13–15). The Book of Job also stresses the commandment of righteousness to which the individual is subject, but from another aspect. Job is not content to protest that he did not commit transgressions of robbery, oppression, or bribery, but asserts that he actually observed positive ethical commandments and was strict with himself beyond the requirements of the law. For example, he claims he did much to support those in need of his help: “Because I delivered the poor who cried, and the fatherless who had none

to help him. The blessing of the destitutes came upon me, and I gladdened the heart of the widow” (Job 29:12–13). Job 31 contains a series of oaths concerning his righteousness, all beginning with *’im*, “if,” which is often equivalent to “I swear”: “(I swear) I have not rejected the cause of my man servant ...” (verse 13); “(I swear) I have not made gold my trust ...” (verse 24). Job is careful to be above suspicion not only in social ethics, but also in sexual ethics, for he claims: “If I have been enticed by a woman, and have lain in wait at the door of another man, may my wife be used by another ...” (31:9–10).

The ethical teachings in all the biblical books so far surveyed are considered an essential element of God’s demands of man. In this respect, the attitude of \*Proverbs is different. Most of the proverbs aim at proving to man that it is worthwhile for him to follow the good path from the consideration of simple worldly wisdom. For example, Proverbs does not declare that adultery is prohibited but points out the dangers in it (6:24–35). In a similar vein are the following verses: “Do not slander a servant to his master, lest he curse you, and you be made to feel your guilt” (Prov. 30:10), and “If your enemy is hungry, give him bread to eat ... for you will heap coals of fire on his head, and the Lord will reward you” (25:21–22). Although there is also a reference to God here, man is placed at the center of ethical instruction. This approach is more practical and utilitarian than the approach of the Bible in general, due to the practical educational orientation of the Book of Proverbs. While Proverbs belongs to the category of general wisdom literature which was prevalent in the ancient Near East, it nevertheless differs from other works of this type in the prominence it gives to ethical instruction; in Proverbs it is of prime importance, while in the wisdom literature of the peoples of the ancient Near East, it is of secondary importance. There are two reasons for this: first, Proverbs aims at the education of the young citizen while the works of Ahikar and Egyptian didactic literature place more emphasis on the training of the official; second, Israelite wisdom literature identified the righteous man with the sage on the one hand, and the evil man with the fool on the other (e.g., Prov. 10:21, 23).

\*Ecclesiastes, in those sections that deviate from stereotyped wisdom literature, casts doubt on the benefit of wisdom in general, and on the simple utilitarian ethical instruction contained in Proverbs. He knows that “there is not one good man on earth who does what is best (i.e., leads to the most desirable results, 6:12) and does not err” (7:20). In his despair he says: “don’t overdo goodness ...” (7:16–18).

ETHICAL INSTRUCTION IN THE BIBLICAL NARRATIVE. Narrative is the one literary form in the Bible which is not entirely infused with an ethical orientation. In biblical narratives ethical instruction is presented indirectly in the form of words of praise for noble deeds, and even this praise is, for the most part, not explicit. Deeds which are represented as noble include Joseph’s fleeing from adultery (Gen. 39:7–18), the mercy shown by David in not killing Saul (1 Sam. 24; 26:3–25), and the story of Rizpah, daughter of Aiah (11 Sam. 21:10). Abraham

is the only biblical character who can truly be described as an ethical model. The other heroes in biblical narrative (Judah, Joseph, Moses, Caleb, Joshua), although blessed with fine qualities, are not described as models of ethical perfection. The Bible portrays their shortcomings clearly (though implicitly; Isaac's weakness of character, Jacob's cunning, the sins of Saul and David) and does not make the slightest attempt to whitewash the ethical defects of its heroes. However, it is the rule in biblical narrative that appropriate punishment follows specific transgressions: Jacob, who bought the birthright by deception, is himself deceived by Laban; David is punished for his sin with Bath-Sheba, and so on. Yet these features are not especially emphasized and thus do not give biblical narrative a prominent ethical orientation. It has been said that biblical narrative takes no clear moral stance, but rather rejoices in the success of its heroes even when they act immorally (Jacob, when he bought the birthright; Rachel, when she stole the household idols; Jael, when she killed Sisera). It is true that the main intent of biblical narrative is to make known the greatness of God, whose acts are the only ones that are perfect. Thus the narrator can afford to see human beings as they are. He does not force himself to moralize overmuch, or to make his heroes model men, but introduces the ethical aspect only where it suits the story. Thus in the narrator's attitude to his heroes one observes a kind of tolerant, knowledgeable understanding of human nature: it is this which makes most biblical stories great, both as literature and as ethics.

**LAW AND ETHICS.** The Bible does not make a formal distinction between those commandments which could be classified as ethical, those which are concerned with ritual (circumcision, sacrifices, the prohibition against eating blood), and those which deal with common legal matters. Scholarship is obligated to differentiate between these categories and to see where the ethical aim appears. The ethical aim can be distinguished by recognizing the difference between the basic, general commandment "Thou shalt not murder" and the laws concerning the punishment of the murderer (e.g., Num. 35). Thus ethical commandments, in the strict sense, are laws without sanctions, to be obeyed but not enforced, e.g., the commandments of gleanings, the forgotten sheaf, and the corner of the field (Lev. 19:9–10, see *\*Leket, Shikhḥah, and Pe'ah*); the prohibition against harming the orphan and the widow (e.g., Ex. 22:21–23); the prohibition against delaying payment of wages (Lev. 19:13). Aside from the clearly ethical commandments, there is a general tendency in biblical law to emphasize the aspiration for justice which is the basis for every law. To be sure, every law is based upon the ethical viewpoint of the legislator and attempts, through the power of practical regulations, to enforce the ethics accepted by the existing society; however, biblical law aspires to this end clearly and consistently, as for example, "Justice, justice shall you pursue" (as the summary of practical regulations concerning the establishment of courts, Deut. 16:18–20), the laws of the Bible are defined explicitly as "just laws and statutes" (Deut.

4:8). Accordingly ethical and social reasons were attached to several laws, such as the commandment for the Sabbath: "So that your male and female slave may rest as you do. Remember that you were a slave ..." (Deut. 5:14–15). This tendency is revealed in laws whose purpose was to defend the weak and to limit the power of the oppressor, such as the laws governing the Hebrew slave (Ex. 21:2; Deut. 15:12) or the relatively lenient punishment of the thief. Yet it must be remembered that law is based not only on the abstract viewpoint of the legislator, but also on the needs of the society according to its particular structure and customs. Therefore an evaluation of biblical law is incomplete if only the ethical aspect is considered; however, the discussion of the aim of law is not essential to the definition of biblical ethics.

#### ETHICAL INSTRUCTION AMONG THE PEOPLES OF THE ANCIENT NEAR EAST

##### Egypt

The Egyptian attitude toward ethics is expressed in literary works of different types. Among these works it is worth noting the books of proverbs (wisdom literature) which teach practical wisdom and proper behavior and include basic ethical principles such as not to covet, rob, or trespass, to be diligent in the performance of justice, and the like. Along with these principles, the books of proverbs include advice on practical knowledge which goes beyond the foundations of pure ethics; there is even the impression that the Egyptian sages advised their students to act justly because in this way they would succeed and achieve their goals, and not because justice is an ethical principle in its own right. According to Frankfort, however, this impression is the product of insufficient understanding of the Egyptian world view.

Another type of literature similar to wisdom literature in its ethical orientation and termed "ideal biography" by scholars is seen in the compositions which were engraved on the walls of tombstones and monuments to the dead. In them, the deceased tells what he did and how he conducted himself throughout his life, as for example: "I spoke the truth, I acted honestly ... I judged both sides to the satisfaction of both. I rescued, with all my power, the weak from the strong. I gave bread to the hungry, and clothing to the poor, etc."

Another aspect of Egyptian ethics is revealed in the collection of writings called the "Book of the Dead." This is a collection of documents from various ancient sources, whose purpose is to assure the passage of the dead into eternal life. It contains statements which the deceased must make when he stands in judgment upon entering the world of the dead, such as: "I did not do evil to any man ... I did not revile the name of the god, I did not slander the servant in front of his master ... I did not murder, I did not cause a death ... I did not sin by homosexuality, etc." (ch. 125). The deceased announces that he did not commit ethical offenses or transgressions of the cult, without distinguishing between the two. The list is arranged in a stereotyped manner, but it does contain certain

ethical principles. On the other hand, the negative confession is close in purpose to a magical incantation, a kind of amulet which is helpful to every man after death even if he was not righteous during his life.

There is yet another basic concept in Egyptian culture which has, without doubt, ethical significance, namely, the concept of *ma'at* which means truth, justice, honesty, or proper order. It is said that the gods live in *ma'at*; the king who sets aright the order of the country and establishes just rules is setting *ma'at* upon its foundation; the way of an honest man – and especially the way of an official who must judge a just case – is *ma'at*; and also the order according to which nature behaves is *ma'at*.

It is difficult to discuss the meaning of the Egyptian doctrine of ethics, because the Egyptian world view in general is beyond reach; the reason being, in Bonnet's opinion, that the Egyptian ethics was not specifically related to the teachings and practices of the religion. Ethical qualities are not characteristic of the gods, and there are cases where Egyptian religion expresses a viewpoint which is not ethical. In Frankfort's opinion, one should not claim that the Egyptians did not have a highly developed ethical doctrine, but one should deal with what is particular to their outlook. The Egyptian saw his world as secure and orderly and nature as behaving always according to *ma'at*. The duty of man is to act according to the same secure and eternal law, to be congenial, not to be ambitious and bad-tempered, and to enjoy the good things in life without anxiety. The Egyptian does not know the fear of sin because his god does not demand that he observe positive and negative precepts. Instead, he helps those who generally behave according to *ma'at*, and corrects the sinner by means of punishment. According to Frankfort, the confession of the dead is not characteristic of the Egyptian ethical outlook; it originates in fear in the face of death, but does not directly affect the way of life.

### Mesopotamia

The Sumerian legislator king Lipit-Ishtar announces in the prologue and epilogue of his law code that he acted lawfully and justly during his kingship and diligently guarded the freedom of the people of Sumer and Akkad, and insured that the father helped his sons and the sons their father. Hammurapi too, in the prologue to his law code, states that he ruled justly in his land, suppressed wickedness and evil, and prevented the strong from oppressing the weak; in his epilogue he commands that justice be done to the orphan and the widow so that the oppressed will find salvation in his just laws and will bless him before the gods. Thus, there was an ethical basis to law in Sumer and Akkad. Babylonian wisdom literature is not as abundant as that of Egypt, but the extant literature contains ethical instructions such as not to requite evil to one's enemy, not to gossip, and the like; there is also a warning not to marry a prostitute because she will not be faithful to her husband. In atonement rites, which were intended to save the sick and atone for injuries likely to be done to one's fellow man, the

magico-cultic aspect is more important than the ethical aspect (see \*Atonement). A type of ethical instruction is also included in the plentiful "omen" literature. Among the collections of omens of all types, which usually have no ethical content, are also omens which contain ethical teachings such as: "if one renders good, good will be rendered to him." The gods are, to a certain extent, considered to be the guardians of ethics and the dispensers of retribution to the evil. However, there is also a Babylonian document which expresses man's despair over the lack of justice in the rule of the gods. The author of this document clearly sees how society oppresses the just, the honest, and the poor and praises the wicked man who succeeds. Mesopotamian myth shows that the gods of Sumer and Akkad were not ethical. The religious Babylonian believed that man was created so that the gods could benefit from his labor, and was not certain that the rule of the gods was just and beneficent. The fear of sin was well-known to him, but the sin itself – if he sinned, how he sinned, when he sinned – was hidden from him.

Documents devoted to ethical instruction have not been preserved from the remaining civilizations of the ancient Near East, but there is some indirect information on this subject. For example, in \*Ugarit it was the king's duty to pursue justice for the widow and to protect the weak (II Keret, 46:50; cf. also II Aqhat, v. 7–8). In Hittite law (188), punishment was decreed for copulation with some animals (Pritchard, Texts, 196), and in this legal collection, as well as several other Mesopotamian ones, there were laws concerning incest.

[Jacob Licht]

### IN LATER JEWISH THOUGHT

The Jewish religion has essentially an ethical character. From its biblical origins to its present stage of development, the ethical element has always been central to the Jewish religion, both as a principle and as a goal. However the intimate connection between religion and ethics was differently interpreted in different periods of Jewish thought. At least two principal trends can be distinguished, the first identifying Jewish ethics with moderation (the middle way), the second insisting on the extreme demands of an absolute ethic. Many thinkers emphasize that Judaism transcends the ethical framework of religion, thereby assuming a metaethical character. Examples of this trend are divine demands, made in prophetic revelations, which seem to conflict with moral norms, and the existence of human suffering.

In talmudic literature, legislative concerns are never the last word. Not only does the *aggadah*, by means of moral lessons, complete and temper the autonomy of the *halakhah*, and not only is the tractate *Avot* an anthology of moral thought; but, more obviously, in every conflict between the legal rigidity of the law and the criteria of ethics, the latter hold sway. Fear of God is superior to wisdom; actions surpass ideas; man is called upon to take a stand in favor not of reason but of the good. Ethics appear not as speculative principles but in

terms of human experience; the talmudic sages are presented as moral exemplars and the ideal of holiness is identified with a scrupulously honest and pure life.

Medieval and modern literature testify to the dual tendency to formulate an ethic which is both theoretical and practical. Some medieval Jewish philosophers developed systematic formulations of Jewish ethical ideas, as for example \*Saadia Gaon and Solomon ibn \*Gabirol, whose *Tikkun Middot ha-Nefesh* is unusual in that it expounds an autonomous ethic which has no connection with religious doctrine. \*Maimonides' *Shemonah Perakim* is a classical work of Jewish ethics which shows similarities to the *Ethics* of Aristotle. There is scarcely a Jewish philosopher or exegete of the Middle Ages who does not devote at least some portion of his work to showing that the body of Jewish thought and its biblical or talmudic sources revolved around ethics. This trend continues to modern times when Jewish philosophers, since Moses \*Mendelssohn, place ethics at the center of their description of the universe. For example, Moritz \*Lazarus and Elijah \*Benamozegh, in the 19<sup>th</sup> century, give this tendency a classical expression, one composing a standard work entitled *Die Ethik des Judentums* ("Ethics of Judaism"), the other by comparing Jewish and Christian ethics (*Morale juive et morale chrétienne*). It would be out of place to mention \*Spinoza in this connection, for while his *Tractatus Theologico-Politicus* shows Jewish influences, the same is not true of his *Ethics*.

In addition to the literature mentioned there are a number of works which are important for the development of medieval and modern Jewish ethics because they reflect an individual or collective experience. The Kabbalah and other mystical currents contributed greatly to the emergence of these works. Examples of this type of literature are \*Baḥya ibn Paquda's *Ḥovot ha-Levavot*, the *Sefer Ḥasidim* (see \*Ethical Literature), and M.H. \*Luzzatto's *Mesillat Yesharim*. These works have become very popular and have been adopted by such opposing Jewish circles as the \*Ḥasidim and \*Mitnaggedim. In the 19<sup>th</sup> century, under the influence of R. Israel \*Lipkin (Salanter), the \*Musar movement reintroduced the primacy of ethics into the highly intellectual talmudic academies.

### The Middle Way and the Absolute

The intimate connection between religion and ethics was interpreted differently in different periods of Jewish life and thought. At least two principal tendencies can be distinguished. In line with the ideal set down in Proverbs and various Psalms, and also in the Jewish Hellenistic writings and Palestinian teachings in the rabbinic period, Jewish ethics strives for moderation. It condemns excess, obviously in the sense of evil but also in the sense of good, and condemns equally greed and waste, debauchery and abstinence, pleasure and asceticism, impiety and bigotry. Maimonides developed this identification of Jewish ethics with the middle way (*Shemonah Perakim*; *Yad, De'ot*) though, at times, he tends toward a more ascetic position. The majority of medieval and modern Jewish philosophers follow Maimonides' general view and the theme

of moderation in Jewish ethics. Consequently, they were opposed to ethical extremism such as that of Christianity, and this view became a commonplace in Jewish apologetics.

Nevertheless, the notion of moderation is not the only facet of Jewish ethics. The biblical books of Job and Ecclesiastes strongly criticize the middle way. In the Book of Job especially, where the middle way is recommended by the friends of Job, this approach is ultimately rejected by God. The Talmud goes further in its declaration that the attitude of moderation is the attitude of Sodom: "He that says, 'What is mine is mine and what is thine is thine' – this is the middle way, and some say that this is the way of Sodom" (*Avot* 5:13). It is not surprising, therefore, that the Talmud praises well-known sages who, going beyond the strict letter of the law (*li-fenim mi-shurat ha-din*), gave their entire fortune to the poor (R. Yeshevav), practiced celibacy (Ben Azzai), spent many hours of the day and night in prayer (R. Ḥanina b. Dosa), and, altogether, seemed generally to conform to the monastic ideals of the \*Essenes. Asceticism is central to the works of Baḥya and Luzzatto, the *Sefer ha-Hasidism*, and, in a way even to 18<sup>th</sup> century Ḥasidism. It is true that in this mystical movement, whose influence is still being felt today, asceticism was transformed into joy, but the ethic of this joy was as extreme and absolute as was the ascetic ethic.

It would therefore be incorrect to associate Jewish ethics with a uniform and moderate attitude. This attitude, which is often presented as a contrast to Christian ethics, is actually only one aspect of Jewish ethics. The other aspect, with its extreme and absolute demands, is equally typical of Jewish thought.

### The Ethical and the Metaethical

By the implications of certain of its teachings, Judaism goes beyond the limits of the ethical, and enters the domain of the metaethical, "beyond good and evil." Already in the Bible, the concept of holiness is affirmed much more often as a category which transcends ethical considerations, rather than as an ethical postulate. The transcendence of God elevates holiness above the moral equity guaranteed by the Covenant. The well-known verse of Isaiah, "For My thoughts are not your thoughts, neither are your ways My ways" (55:8), is often employed by medieval and modern Jewish thinkers as a key for interpreting certain problems which escaped all ethical definition, most notably the problems of freedom and suffering.

How should one accept, from the point of view of ethics, the unusual conduct of certain prophets (Hosea's association with a prostitute; the nudity of Isaiah; the celibacy of Jeremiah)? Unless they resorted to allegorical exegesis, the biblical commentators were forced to admit, and they did so willingly, that there operated here a certain arbitrary divine will which transcended ethical categories. Maimonides expounded this theme in stating that God remains the supreme arbiter of the gift of prophecy. Prophecy is not intrinsically bound to ethical qualities. Of course, only an ethical person can become a prophet, but the man of the highest ethical qualities cannot become a prophet without God's charismatic and transcendent will.

Similarly, the midrashic interpretations of the sacrifice of Isaac, of the dramas of Saul or of Job, are much closer to the existentialist point of view of Kierkegaard or of Kafka than to the systems of Maimonides or of Kant. The conflict between Saul and David was not a matter of ethics but of good or bad fortune. Abraham, ultimately, should have disobeyed the divine command to sacrifice his son, which was inspired more by Satan than by God. Job was perfectly innocent, and his inexplicable sufferings could generate nothing but tears. These, and similar themes, which are scattered throughout talmudic and ḥasidic literature, were often taken up by the Jewish existentialists of the 20<sup>th</sup> century such as Martin \*Buber and Franz \*Rosenzweig. They culminate in the doctrine of radical insecurity, whose sources one may find in the Bible, but which finds a more cohesive expression in a talmudic formulation: *Kulei hai ve-ulai* ("All this and perhaps?"). Even while the most apparently perfect conditions can be gathered together to weigh the balance in favor of good or evil, there yet remains a coefficient of uncertainty which is beyond good and evil. It is possible that events will follow the ethical expectations. It is also possible, however, that these expectations will not be fulfilled. It is true that this disorder is interpreted as a voluntary (and temporary) weakness of God which permits man to exercise his will. Thus, this metaethical Jewish view remains ultimately ethical and never leads to a passive pessimism. The divine transcendence does not disturb the ethical equilibrium except in order to call upon man to reestablish, together with God, an equilibrium which has been disrupted. The metaethical is the price for the inalienable moral essence of the Covenant.

**ETHIOPIA (Abyssinia)**, Christian kingdom in N.E. Africa. Under Egyptian rule from 2000 B.C.E. to about 1000 B.C.E., Ethiopia (Heb. *Kush*) appears alongside Egypt in the Bible, sharing its prophesied doom (e.g., Isa. 20:3); Tirhakah, the pharaoh, is mentioned as king of Ethiopia during the Assyrian conquest of the Northern kingdom (II Kings 19:9 and Isa. 37:9). The wealth of Ethiopia and Seba are also cited (Isa. 43:3; 45:14). However, Ethiopia figures most prominently as an example of a remote place, cf. Amos 9:7, where God rebukes Israel saying, "Are you not like the Ethiopians to me, O people of Israel?" Independent of Egypt, Ethiopia was ruled by a dynasty of Arabian origin which invaded the country in the second century B.C.E., ruled from the city of Axum, and determined the Semitic quality of the customs and language of the Hamitic people. The kings at Axum called themselves *negus-nagast* ("king of kings"). They traced their descent to Menelik whom they claimed to have been the son of King Solomon and the queen of Sheba. This legend finds expression in the classic Ethiopian chronicle of the 14<sup>th</sup> century C.E., the *Kebrā Negast* ("Glory of Kings"). Among other stories, the latter describes Solomon's seduction of and contract with the queen of Sheba, whose son brought Judaic customs and civil law to Ethiopia. The Holy Ark was also conveyed to Ethiopia to be returned to Zion only when Christ would reappear in Jerusalem and the Ethiopian Christians would reign triumphant in the Holy City. Indeed, the Coptic Monophysite Christianity accepted by the Ethiopians, probably in the fifth century, retained certain Jewish elements derived from the contact and influence of local Jews or from early Christianity itself. It is also possible that they were influenced by South Arabian Jews in pre-Islamic times. In the eighth century, the capital of the kingdom was moved from Axum as a result of Muslim expansion into Ethiopia. The Christian kings of the Zagwe dynasty who strove to restore their hegemony from the 13<sup>th</sup> century claimed descent from Solomon and maintained that the Ethiopian aristocracy was taken from Jerusalem to Axum. The lion of Judah has remained the symbol of the emperor of Ethiopia. The literary language of Ethiopia is Ge'ez, a Semitic tongue, which was replaced by Amharic. All holy works are written in Ge'ez, including the Bible (probably translated from Greek or Syriac) and the only complete extant versions of the apocryphal books of Enoch and Jubilees, which were translated from the lost Greek and included in the canon. During the Middle Ages, most works were translated from Arabic, including the major Jewish history, *Josippon*, called in Ge'ez, *Zena Ayhud* ("History of the Jews"), and other Jewish chronicles and religious works gleaned from Arabic sources.

**Ethiopian Church in Jerusalem**

The Ethiopian Church is one of the oldest churches in the Holy Land. An Ethiopian convert is mentioned in the Acts of

the Apostles (8:27–28) and Ethiopian monks and pilgrims are referred to in early pilgrim records. In 1172, in the crusader kingdom of Jerusalem, they possessed altars in the holy places, in the vicinity of which they had established monasteries. Under the Muslim rulers, after the downfall of the crusader kingdom, the Ethiopians obtained more extensive rights. They are mentioned in connection with the Church of the Tomb of the Virgin, and the chapel of St. Mary of Egypt (14<sup>th</sup> century), and as having chapels in the Church of the Holy Sepulcher (15<sup>th</sup> century). Toward the end of the 17<sup>th</sup> century, however, unable to meet the exactions of the Turkish pashas, they lost most of their holdings in the Holy Sepulcher. From an early date until the beginning of the 19<sup>th</sup> century, the Ethiopians had important rights in the Deir el-Sultan Monastery near the Holy Sepulcher, which have since been claimed by the Coptic Church. The Ethiopians were left with hovels on the roof of the chapel of St. Helena which is part of the church of the Holy Sepulcher. In the New City of Jerusalem there is an Ethiopian church with an adjoining monastery. There are also two monasteries in the Old City and one on the western bank of the Jordan River.

#### Relations with Israel

Direct contacts between Ethiopia and the *yishuv* started in 1936, when Emperor Haile Selassie, his family, and officers found refuge in Jerusalem after the Italian conquest of Ethiopia. The emperor lived there for about one year, but numerous Ethiopian notables spent the whole period of their exile in Palestine. During World War II, a number of Jewish soldiers from Palestine served with the British forces in the reconquest of Ethiopia, both under the command of Orde \*Wingate, whose personal ADC during the Ethiopian campaign was a Palestinian Jewish officer, and in the regular East-African Command, particularly in the commando units that fought in Eritrea. After his return to Addis Ababa the emperor called a number of Palestinian Jews to serve in various capacities within the Ethiopian government. The first beginnings of economic ties between the two countries also developed at that time. Palestinian-manufactured goods reached Ethiopia, and some Jewish experts worked in Ethiopia.

#### From 1948

Ethiopia abstained in the crucial UN vote on Nov. 29, 1947 on the partition of Palestine, in view of her cautious line of neutrality in most of her dealings with the problems of the Middle East. In 1948 Ethiopia extended only *de facto* recognition to Israel; however, it continued to maintain its consulate general in West Jerusalem, thereby maintaining close contacts with Israel. In 1955, when an Israeli mission took part in Haile Selassie's Silver Jubilee celebrations in Addis Ababa, an agreement was reached to establish an Israeli consulate general in Addis Ababa, which began to function in the summer of 1956. In September 1961 Ethiopia extended *de jure* recognition to Israel and diplomatic relations at ambassadorial level were established.

In international forums, Ethiopia maintained her traditional neutrality in the Arab-Israel conflict; repeatedly refused

to join anti-Israel initiatives; and tried to urge reconciliation, negotiations, and peace, often in the face of an opposite stand adopted by the Afro-Asian and nonaligned groups in which Ethiopia became an ever more active member. The formal relations between the two countries steadily normalized and bilateral relations began to reflect the relatively close geographical proximity of the two countries. Numerous personalities of both countries paid mutual official and semi-official visits. In 1960 the Empress Menem went on a pilgrimage to Jerusalem. In the same year the Israel minister of agriculture, Moshe \*Dayan, paid an official visit to Ethiopia. Israel's foreign minister, Golda Meir, visited Addis Ababa in 1962, and her successor Abba \*Eban visited there. It was particularly in economic and technical cooperation, however, that mutual ties found expression.

With the opening of the Straits of Tiran to unhampered Israel shipping and the recognition of the Gulf of Akaba as an international waterway following the Sinai Campaign of 1956, Eilat and Massawa, and later on also Assab and Djibouti, became major ports of call for the ships of both nations. With the introduction of more modern ships, the time required for the trip from Eilat to Massawa steadily decreased, so that by 1970 this run was made in just over 48 hours. In 1970 a regular air link between Lydda and Addis Ababa was inaugurated by El Al Airlines, cutting flying time between Israel and Ethiopia to just over three hours. Commerce between the two countries developed steadily, with Israel selling mainly manufactured goods and buying primary products from Ethiopia. Economic cooperation between the two countries started early in the 1950s with the establishment of an Israeli meat-packing plant in Asmara, but it received particular impetus in the 1960s. A large Ethiopian-Israeli cotton farm exists in the Awash Valley, an Ethiopian-Israeli pharmaceutical plant in Addis Ababa, and a number of other enterprises. During the 1960s Israeli experts served in various fields in Ethiopia, from public transportation through fishing and agriculture to Ethiopian geological surveys. Numerous Ethiopian students studied in various institutions in Israel in widely diverse fields, e.g., agriculture and communications.

Cultural ties occupy a special place in the relations between the two countries, particularly those between the institutions of higher learning. In 1959 the Haifa Technion entered into close relations with the Engineering College in Addis Ababa, which later became part of the Haile Selassie I University, in which Israeli professors subsequently served. In 1970 an agreement was reached between the Haile Selassie I University and the Hebrew University for the joint development of a microbiology institute in Addis Ababa. Close collaboration existed also in medicine, town planning, water development, and related fields.

[Hanan Bar-On]

Starting in the 1960s Israel was a major supplier of military aid to Ethiopia, which continued even after Ethiopia broke off diplomatic relations with Israel in 1973 in the wake of the

Yom Kippur War and also after the Marxist Mengistu regime replaced Haile Selassie in 1974. From the 1980s such assistance was linked to Ethiopia's agreement to allow Ethiopian Jews, the so-called Falashas (see \*Beta Israel), to immigrate to Israel, a condition that was fulfilled in two dramatic airlifts in 1984 and 1991. Diplomatic relations were renewed in 1989 at embassy level.

Budge (tr.), *Kebra Negast, Queen of Sheba and Her Only Son...* (1932); idem, *A History of Ethiopia, Nubia and Abyssinia* (1938); E. Littmann, *Legend of the Queen of Sheba in the Tradition of Axum* (Bibliotheca Abbisinica no. 1, 1904); R. Pankhurst, *An Introduction to the Ethiopian Economic History* (1961); J. Harden, *An Introduction to Ethiopic Christian Literature* (1926); Colbi, *Christianity in the Holy Land* (1969), 107–108, 139, 156–57.

**ETHNARCH** (Gr. ἔθναρχος), title given to John \*Hyrcanus II and his sons by official decree of Julius Caesar in 47 B.C.E. in addition to the office of high priest (Jos., Ant., 14:192ff.). The meaning of ethnarch – head of the people – excluded the title or the rights of a king, and Josephus comments that whereas “Pompey restored the high priesthood to Hyrcanus and permitted him to have the leadership of the nation,” he nevertheless “forbade him to wear a diadem” (*ibid.*, 20:244). This distinction is apparent again in the description by Josephus of the appointment of Herod's son Archelaus. Augustus “appointed Archelaus not king indeed, but ethnarch of half of the territory that had been subject to Herod, and promised to reward him with the title of king if he really proved able to act in that capacity” (*ibid.*, 17:317).

The title ethnarch was also used to designate the head of the Jewish community at Alexandria. Strabo, quoted by Josephus (*ibid.*, 14:117), describes the Alexandrian ethnarch as one “who governs the people and adjudicates suits and supervises contracts and ordinances, just as if he were the head of a sovereign state.” Philo, however, relates that Augustus replaced that ethnarch with a *gerousia* or Council of Elders (*In Flaccum*, 74ff.). Certain scholars have attempted to identify the term Σαραμέλ in I Maccabees 14:28 with ethnarch (see \*Asaramel). The term ethnarch was not confined to Jewish rulers. Thus there is mention of an ethnarch at Damascus under the king Aretas (II Cor. 11:32).

[Isaiah Gafni]

**ETIQUETTE** (Heb. דְּרֵכֵי עֵרֶץ, *derekh erez*), the proper conduct of man at home and in society. The sages demanded of the Jew, particularly the scholar, good manners in all his activities. The rules of \**derekh erez* are assembled in the tractates *Avot*, *Derekh Erez Rabbah*, and *Derekh Erez Zuta*, and are scattered throughout the Talmud and the Midrashim. A substantial number of them are set forth in Maimonides' *Mishneh Torah*, *Hilkhot De'ot*.

The rules of etiquette covered every aspect of man's conduct, including the most seemingly insignificant. Only a few of the most important rules are given here.

### Speech

A man should speak pleasantly with everyone (Yoma 86a) and, Maimonides adds: “When speaking he should neither shout nor scream nor raise his voice excessively.” When he meets his fellow he should be the first to extend greetings. As an example the Talmud cites the instance of Johanan b. Zakkai, whom no one ever preceded in extending greeting (Ber. 17a). Since, in the heat of argument, a man is liable to interrupt his fellow and stubbornly assert his own opinion, even after being convinced that the other is right, the sages laid down rules for the conduct of an argument: not to speak before one who is greater in wisdom, nor to interrupt the speech of another, not to be hasty in answering, to ask only relevant questions and to answer appropriately, to speak on the first point first and on the last point last, to say “I have not heard” when he has no tradition to that effect, to acknowledge the truth (*Avot* 5:7).

### Walking

A scholar should not carry himself stiffly, with his neck outstretched... nor walk mincingly as do women and haughty people... nor run in a public place like a madman, nor bend his body as if he is a hunchback, but he should look downward, as when standing in prayer, and walk in the street like a man going about his business (*Maim.*, *Yad*, *De'ot* 5:8).

### Clothing

The Talmud regularizes expenditure on food and clothing by the principle: A man should always spend on food less than his means allow, and clothe himself in accordance with his means (*Hul.* 84b). The sages were most particular that their clothing should be becoming and clean, even to the extent of declaring that any scholar upon whose garment a stain is found is worthy of death (*Shab.* 114a). Maimonides applies the doctrine of the Golden Mean to clothing: “He should not wear clothes, of gold and purple, for instance, fit for a king, and at which everyone stares, nor clothes worn by the poor that put to shame those wearing them, but he should wear modest dress” (*De'ot* 5:9).

### Eating and Drinking

In eating and drinking, too, he should not indulge in extremes, but content himself with the minimum necessary for health. He should eat only in his own home, at his table, but not in the market place, for “he who eats in the market place is like a dog” (*Kid.* 40b). A scholar should not eat standing, nor lick his fingers, for this is the way of gluttons (*DEZ* 5). Gulping one's drink in a single draught is a sign of greediness (*Bezah* 25b). One should not drink out of a cup and then give it to his fellow, for not all people are alike, and sensitive people are particular about this (*Tosef.*, *Ber.* 5:9).

### Treatment of Wife and Children

The rabbis were extremely particular about conduct in the family circle. The responsibility for this was placed primarily

on the husband and father, to whom they gave the following directives: "A man should always observe the honor due to his wife, because blessings rest on a man's home only on account of his wife." "A man should always be careful not to wrong his wife (with words), for being given to tears, she is easily hurt." He should consult his wife in all matters affecting the home: If your wife is short, bend down and listen to her words (BM 59a). They enjoined the head of the household to be indulgent, not to take offense, and not to terrorize his household, so as to avoid quarrels (Ta'an. 20b; Git. 6b).

### Personal Relations

Most controversies are due to the tendency to ascribe bad motives to the words and actions of others. As a result the sages urged: "Let the honor of your neighbor be as dear to you as your own" (Avot 2:10), and "Love all men and honor them, and forgo your will for that of your neighbor" (DEZ 1). Good and worthy intentions may fail if they are implemented at the wrong moment. Hence, the rabbis counseled: "Do not pacify your fellow in the hour of his anger; nor comfort him when his dead one lies before him" (Avot 4:18). One should not present oneself to one's friend, or even to the members of his household, at an inconvenient time: "Do not enter your own house suddenly, and all the more, your neighbor's house" (Pes. 112a) counseled Akiva. The concern of the rabbis in this matter is reflected in the statement, "Let all men learn good manners from the Omnipresent, who stood at the entrance to Eden and called out to Adam, as it says, 'The Lord God called to Adam, saying, "Where art thou"'" (DER 5). Many modern and medieval ethical works praise *Derekh Erez*, adherence to its precepts, and, at the same time, stress the duty of other strictures to those mentioned in the Talmud.

[Abraham Arzi]

**ETROG** (Heb. אֶתְרוֹג), citrus fruit among the Four Species used on Sukkot. The Bible describes what is usually rendered as "the fruit of a goodly tree" (*peri ez hadar*; Lev. 23:40), traditionally interpreted as being the *etrog* (*Citrus medica*). The word *etrog*, the name by which this fruit is known in talmudic literature, derives, according to one view, from the Persian *torong*, according to another, from the Sanskrit *suranga*, meaning "beautifully colored." Some maintain that the *etrog* tree, along with its name, reached Erez Israel only during the Second Temple period, even as it was brought to Greece from its native land, India, only after the campaigns of Alexander the Great. Others contend that "the fruit of a goodly tree" is to be identified with the *Pinus* or *Cedrus*, called *dar* in Sanskrit; others say that what is meant is simply any beautiful

(*hadur*) fruit. There is evidence that the *etrog* was known in ancient Egypt; its use as one of the Four Species on Sukkot was probably responsible for its wider cultivation in Erez Israel in olden days, for neighboring countries set no great store upon its fruit, which is not particularly good. Indeed, even during the Hasmonean period, which abounds in evidence of its cultivation in Erez Israel, the *etrog* was not grown in Italy and is not mentioned by Pliny (23–79 C.E.) among the products of that country.

The *etrog* was formerly unique among the fruit trees of Erez Israel in requiring constant irrigation for its growth, whereas the others were only occasionally irrigated, and then only to increase their yield of fruit. This fact is adduced among the various proofs that "the fruit of a goodly tree" (*peri ez hadar*) is to be identified with the *etrog*, *ez hadar* being interpreted as *ez hiddur*, that is, the tree which requires water. Since the *etrog* was the only \*citrus known in Erez Israel in the mishnaic and talmudic period, the question of the permissibility of an *etrog* from a grafted tree for the performance of the religious rite did not arise until comparatively recent times.

The *etrog* was a conspicuous ornamental motif among Jews during the Second Temple period, appearing on coins of Simeon and other Hasmoneans, and it is often depicted on the walls of synagogues and in mosaics. When Alexander Yannai once acted contrary to the *halakhah* in the Temple, "all the people pelted him with their *etrogim*" (Suk. 4:9; Tosef., *ibid.* 3:16; Jos., *Ant.*, 13:372). In the mishnaic and talmudic period, when the *etrog* was widely cultivated in Erez Israel, it was comparatively cheap, a large *etrog* selling for two perutot (Me'il. 6:4). An especially beautiful *etrog*, which was in great demand for the festival, cost very much more, at times as much as the price of three meals (TJ, Suk. 3:12, 54a). There were periods (for example during the Hadrianic persecutions) when *etrogim* had to be brought from far-flung places in Erez Israel (Tosef., *Dem.* 3:14). Various uses were made of the *etrog*; its thick skin was eaten either pickled in vinegar or boiled to a pulp (Suk. 36b; Ma'as. 1:4), and a perfume was extracted from its peel (Suk. 37b), which was also highly valued as an antidote against snake-bite (Shab. 109b).

Today, the *etrog* is not extensively cultivated in the world, and is grown primarily for the citronate that is extracted from its peel. There are many strains of *etrog*. In Israel the small strain is predominant; the large strain was brought to the country by the Yemenites (cf. Suk. 36b, about a large *etrog* which was carried on the shoulder). In addition to the sour *etrog*, there is also the sweet strain (cf. Shab. 109b). With the increase in the species of the genus citrus, the *etrog* was crossed with other citrus plants, which probably accounts for the present difficulty of growing an *etrog* which has not been grafted on a lemon or hushhash stock, the ungrafted variety being vulnerable to pests and diseases, and its *pittam* (the protuberance, the pistil) usually being atrophied. Whereas in ancient times the *pittam* was a conspicuous mark of the *etrog's* excellence, there are those today who are particularly anxious to obtain only an ungrafted *etrog*, which usually has

no *pittam*. There are several distinguishing signs by which the grafted and the ungrafted *etrog* can be distinguished. The skin of the latter is generally rougher than that of the former, and, according to some halakhic authorities, the seed of the latter lies longitudinally within the fruit, and that of the former, latitudinally. Until the end of the 19<sup>th</sup> century the center for the cultivation of *etrogim* was the island of \*Corfu, from where they were exported to Jewish communities in Europe. Later these began to use the *etrogim* of Erez Israel. Today the *etrog* groves in Israel supply local needs and also export many *etrogim* abroad.

**ETROG, SOREL** (1933– ), sculptor, painter, poet, filmmaker. Etrog was born in Jassy, Romania. In 1950, he immigrated with his family to Israel. He studied at the Israel Institute of Painting and Sculpture in Tel Aviv (1953–55). From 1955 to 1958, he was a member of the Ein Hod artists' colony. Etrog held his first solo show in Tel Aviv (1958). Awarded a scholarship to the Brooklyn Museum Art School/Institute, he studied in New York in 1958–59 and established a studio there.

In the summer of 1959, Etrog was invited to work in Canada by prominent art collector Samuel Zacks. That year, he held a solo exhibition at Toronto's Gallery Moos and in 1963 he moved permanently to Toronto. From 1964 to 1984 he worked in his studios in both Toronto and Florence, Italy. Etrog was one of three artists representing Canada at the 1966 Venice Biennale, where his reputation as a leading contemporary sculptor was confirmed.

Etrog is best known for his large public sculptures which range from the biomorphic to monumental bronze and steel structures. Marshall McLuhan described his “hinge” and “link” work as a drama of dialogue and interchange that reflects the “transformation of the old machine and its consumer products into new vital images of primal art and perception.” Etrog also began as a painter in Israel. His “painted constructions” investigate the interdependency of painting and relief. He also realized a significant body of drawings, including studies and large-scale works on paper and canvas. His art is a process of exploration into the nature of human consciousness and the human condition. A poet himself, Etrog worked collaboratively with writers such as McLuhan, Claudio Aveline, Samuel Beckett, and Eugene \*Ionesco.

The subject of numerous exhibitions, Etrog's art is widely represented in major museums and collections around the world, including the Tate Museum, London; the Museum of Modern Art, New York; the Guggenheim Museum, New York; the Hirshhorn Museum, Washington, D.C.; the Israel Museum, Jerusalem; the Kroeller-Mueller Museum, Otterlo; the Musée d'Arte Moderne, Paris; and the National Gallery of Canada, Ottawa. Among his many public and private commissions is *Powersoul*, which he created for the 1988 Olympics

in Seoul, Korea. In 1968, Etrog designed the Canadian film award statuette (called “the Etrog” until 1980, when it was renamed the “Genie”).

In recognition of his contributions to contemporary art, Etrog was named a Member of the Order of Canada in 1995 and a Chevalier dans l'Ordre des Arts et des Lettres by France in 1996.

[Joyce Zemans (2<sup>nd</sup> ed.)]

**ETTELSON, HARRY WILLIAM** (1883–1975), U.S. Reform rabbi. Ettelson was born in Mobile, Alabama, and received his B.A. with Phi Beta Kappa honors from the University of Cincinnati in 1900, at the age of 17. He was ordained at Hebrew Union College, where he was valedictorian of his class, in 1904. Ettelson earned his M.A. from the University of Chicago while serving as rabbi of Temple Achduth Vesholom in Fort Wayne, Indiana (1904–10), and his Ph.D. from Yale University in 1916 while serving as rabbi of Congregation Beth Israel in Hartford, Connecticut (1911–19). He served as a Navy chaplain at Pelham Bay Training Station during World War I, then became rabbi of Temple Rodeph Shalom in Philadelphia (1919–24), where he also served as president of the Philadelphia Board of Jewish Ministers, vice chancellor of the Jewish Chautauqua Society, and a member of the editorial board of the Jewish Publication Society.

In 1925, he moved to Memphis to assume the pulpit of Congregation Children of Israel (later, Temple Israel), where he remained until his death, serving his final 21 years as rabbi emeritus. He was both a religious and civic leader in Memphis, where he was founder and first president of the Cross-Cut Club, an organization of Memphis clergymen of all faiths that formed the nucleus of that city's chapter of the \*National Conference of Christians and Jews (NCCJ). He also instituted several citywide interfaith initiatives, including Peace Heroes Day; Good Will and Brotherhood Day (later expanded by the NCCJ to Brotherhood Week); and non-sectarian Union Civic Thanksgiving Day services.

Ettelson's reputation as both a scholar and an orator reached its zenith in 1932, when he engaged in a public debate on religion with Clarence Darrow, the noted attorney of Scopes trial fame, who traveled around the country debating clergymen. Although there was no official decision as to a winner, according to the *Memphis Press-Scimitar*, “by and large, the majority sided with Dr. Ettelson's masterly approach” to the question, “Is Religion Necessary?” That same year, his congregation awarded him the Joseph Newberger Memorial Cup, in recognition of his service to the Memphis Jewish community. In 1940, Southwestern University awarded him an honorary doctorate.

As chairman of the CCAR-UAHC Joint Commission on Information on Judaism in the 1940s, Ettelson developed the

“Popular Studies in Judaism” program. He also served as president of the Hebrew Union College Alumni Association and was a member of the HUC Board of Governors as well as of the Executive Board of the Central Conference of American Rabbis (1912). A frequent contributor to Jewish literary periodicals and a translator of poetry into Hebrew and Yiddish, he also wrote the book, *The Integrity of 1 Maccabees* (1925), and published a translation of the epigrams of Shem Tov ben Joseph \*Falaquera, a 13<sup>th</sup>-century Jewish scholar and physician from Spain.

**BIBLIOGRAPHY:** *Journal of the 87<sup>th</sup> Annual Convention of the Central Conference of American Rabbis* (1976).

**ETTENBERG, SYLVIA CUTLER** (1917– ), U.S. Jewish educator, particularly within the Conservative movement. Born in Brooklyn, she received a B.A. from Brooklyn College and a Bachelor of Pedagogy from the Jewish Theological Seminary of America (JTS). In 1940 she married Moshe Ettenberg, an engineering professor; the couple had two children.

Although her career was spent almost exclusively at the Jewish Theological Seminary of America, her influence was felt in a wide range of institutions and settings. Ettenberg, the first female senior administrator at JTS, played a leading role in some of the most important and innovative projects of Conservative Jewish education. She was directly involved in the founding of the Seminary’s supplementary high school (the Prozdor) in 1951, the creation of the Melton Research Center in 1959, and the eventual establishment of the William Davidson Graduate School of Jewish Education in 1996. She worked on the creation of a joint undergraduate degree program between JTS and Columbia University and helped supervise the Department of Jewish Education at the Seminary as it developed its M.A. and doctoral programs.

Arguably, her most notable achievement was Camp Ramah, a summer educational camping program that grew into an international network of camps. Ramah was first launched in Wisconsin in 1947 by a group of community leaders from Chicago. But it was Ettenberg and Moshe Davis who brought Ramah inside the world of JTS itself, creating an infrastructure for the camping system that developed over time and nurtured the powerful educational vision embodied in the camps. The Ramah camps had a profound impact on Jewish education and provided a large percentage of the future academic, lay, and professional leadership of Conservative Judaism.

Ettenberg received an honorary doctorate from JTS, the Behrman House Books – Jewish Educators Assembly lifetime achievement award, and the Samuel Rothberg Prize in Jewish education from the Hebrew University of Jerusalem.

[Barry W. Holtz (2<sup>nd</sup> ed.)]

**ETTENDORF**, township in the Bas-Rhin department, France. Two Jewish families were recorded in the town in 1449. In 1784 the Jewish population of Ettendorf reached its peak of 124, but from the Revolution, it steadily declined; there were 37 Jews

there in 1868 and only one family in 1926. The Ettendorf community, though small, possessed two important institutions, which also served about 20 other communities in Lower Alsace: a cemetery opened during the late 15<sup>th</sup> century and a talmudical school established in the middle of the 18<sup>th</sup> century.

[Bernhard Blumenkranz]

**ETTING**, pioneer Jewish family in Baltimore, Maryland.

ELIJAH ETTING (1724–1778), progenitor of the family in the U.S., arrived in the U.S. from Germany in 1758, settling in York, Pennsylvania, where he became an important Indian trader. After his death his widow, SHINAH (née Solomon), moved to Baltimore with five of her seven children. Her two sons Reuben and Solomon also settled there eventually. REUBEN ETTING (1762–1848), Maryland political figure, was born in York, Pa. During a period when Jews still lived in Maryland by license rather than by right, Reuben assumed the duties of a full citizen in 1798 when a war between the United States and France seemed imminent and became captain of a militia company. Reuben was long involved in politics as a Jeffersonian Republican and was appointed U.S. marshal for Maryland in 1801 by President Jefferson. He was thus the first Jew in Maryland to hold public office, a quarter of a century before the Jews gained civic equality in the state. SOLOMON ETTING (1764–1847), businessman, political figure, and Jewish civic rights leader, also born in York, Pa., became a *shoḥet* at the age of 18, the first American Jew to serve in this capacity. At first a hardware storekeeper, Solomon subsequently became a banker, a shipper, a founder of the Baltimore and Ohio Railroad, and an important businessman. He was prominent in the Baltimore Republican Society, a Jeffersonian political club. He was a leader in the defense of Baltimore against the British in the War of 1812, during which his 18-year-old son Samuel was wounded in the battle at nearby Fort McHenry. Etting was a “manager” of the Maryland State Colonization Society, which sought to promote the resettlement of blacks in Africa. Etting was active in the Baltimore German Society and served as its vice president from 1820 to 1840. Although he was not involved in any Jewish organization in Baltimore, he supported the synagogue of his youth, Mikveh Israel, in Philadelphia. In 1801 he purchased land for a Jewish cemetery in Baltimore. He also led in the struggle for Jewish civic rights, opposing the Maryland law requiring of officeholders a Christian oath. As early as 1797 he appealed to the State Legislature on behalf of a “sect of people called Jews, deprived of invaluable rights of citizenship and praying to be placed on the same footing as other good citizens.” This petition initiated a three-decade struggle, which ended successfully in 1826. Soon thereafter, Etting served as a Baltimore councilman. Solomon Etting’s second wife was the daughter of the prominent leader Barnard \*Gratz.

[Isaac M. Fein]

**ETTINGER**, family noted for its scholars and community leaders, originally from \*Oettingen, Bavaria, from which the name derives. It is probably related to families named Oettingen or Ettingen: members of its East European branch were prominent in Jewish life in modern times. First of note was Ḥayyim Judah Leib Ettinger who in 1717 moved from Holesov (Holleschau), Moravia, to head a yeshivah in Lemberg, Poland. His brother, JOSEPH, served as a preacher in Glogau, Silesia, and wrote commentaries on the Torah, *Edut bi-Yehosef* (Sulzbach, 1741). Ḥayyim's son AARON (1720–1769), rabbi in Jaworow and Rzeszow, fought the spread of Ḥasidism in Galicia. Well-known in the 19<sup>th</sup> century were Mordecai Ze'ev \*Ettinger and his brother-in-law, Joseph Saul ha-Levi \*Nathanson. Mordecai's son, Isaac Aaron Ettinger (1827–1891), served as rabbi in Przemysl and Lemberg. With BARUCH MORDECAI, rabbi of \*Bobruisk in \*Belorussia for about 50 years until he settled in Erez Israel in 1851, the family assumed a leading position in \*Chabad ḥasidic circles; Baruch Mordecai was a close disciple of \*Shneur Zalman of Lyady. In the 20<sup>th</sup> century many members of the family, such as Akiva \*Ettinger, took a prominent part in the economic and cultural life of East European Jewry and Erez Israel. SAMUEL ETTINGER (1919–1988), who was born in Kiev, became professor of Jewish history at the Hebrew University, Jerusalem. He wrote *Toledot Yisrael ba-Et ha-Ḥadashah* ("Jewish History in Modern Times," 1970) and edited a volume of essays by H. Graetz in Hebrew (*Darkhei ha-Historiyah ha-Yehudit*, 1969).

**BIBLIOGRAPHY:** S. Buber, *Anshei Shem* (1895), 25, 67–69, 123–4, 151–2; Ch. N. Dembitzer, *Kelilat Yofi*, 1 (1960), 116–27, 146–9; J. Slutzky (ed.), *Sefer Bobruisk* (1967), 269. **ADD. BIBLIOGRAPHY:** "Devarim le-Zikhroh shel Shemuel Ettinger," in: *Zion*, 53:4 (1988), 423–40.

[Yehuda Slutzky]

**ETTINGER, AKIVA JACOB** (1872–1945), agricultural expert; founder and administrator of Jewish settlements in Erez Israel. Ettinger, born in Vitebsk, Belorussia, came from a distinguished family (his mother was descended from R. Akiva \*Eger). He studied agriculture at the University of St. Petersburg and in West European countries. Representing the \*Jewish Colonization Association (ICA), he took part in 1898 in an investigation of the situation of Jewish farmers in southern Russia, and was then asked to establish a Jewish model farm in Bessarabia. In 1911 he served as agricultural adviser to ICA in South America. Ettinger, together with \*Aḥad Ha-Am, was sent to Erez Israel in 1902 by the \*Odessa Committee of Ḥovevei Zion to investigate the state of the Jewish settlements. In 1914 he was asked by the Zionist Organization and the Jewish National Fund to serve as adviser and inspector for Jewish agricultural settlement in Erez Israel, but because

of the outbreak of war he went to The Hague, where the Jewish National Fund had its temporary head office. There he wrote a programmatic booklet, *Jewish Colonization in Palestine: Methods, Plans and Capital* (1916<sup>2</sup>, published in English, German, and Russian).

During the negotiations over the \*Balfour Declaration, Ettinger was invited by Chaim \*Weizmann to London as adviser on settlement matters, and composed a comprehensive memorandum, *Palestine after the War: Proposals for Administration and Development* (1918). Ettinger settled in Palestine in 1918, serving as director of the agricultural settlement department of the Zionist Organization until 1924. In 1919, after the purchase of land for \*Kiryat Anavim on the rocky Judean hills, he founded the village which became a model for hill settlements. His most important achievement involved the vast settlement project of the Jezreel Valley during 1921–24. From 1924 to 1932 Ettinger played a prominent role on behalf of the Jewish National Fund in the purchase of land and the drafting and implementation of settlement (the *kevuḥah*, *kibbutz*, and *moshav*) and aided their development on a mixed farming basis with emphasis on dairy farming and orchards. He also introduced new afforestation methods. From 1932 until his death Ettinger was adviser to the agricultural Yakhin Company of the Histadrut.

Ettinger wrote many articles on agriculture in Erez Israel. His booklets include *Nahalal* (1924), *Emek Yizre'el* (1926), and *Ha-Karmel* (1931). His memoirs are titled *Im Ḥakla'im Yehudim ba-Tefuzot* ("With Jewish Farmers in the Diaspora," 1942), and *Im Ḥakla'im Ivriyyim be-Arḡenu* ("With Hebrew Farmers in our Country," 1945).

[Alexander Bein]

**ETTINGER, MORDECAI ZE'EV BEN ISAAC AARON SEGAL** (1804–1863), Polish rabbinical scholar, and scion of a long line of rabbis (see \*Ettinger family). He studied under Naphtali Hirsch Sohavstov, rabbi of Lemberg, and under his own uncle, Jacob \*Ornstein. Although renowned for his great scholarship, he never occupied a rabbinical position, his considerable personal fortune rendering him independent. In 1857 he was chosen rabbi of Cracow and its environs and indicated his acceptance but changed his mind. He served as "*nasi* of the Holy Land" of the Austrian *kolel*, an honorable position always given to the greatest of the rabbis. In this capacity he did much to help consolidate the position of the Jewish community in Erez Israel. He studied together with his brother-in-law, Joseph Saul ha-Levi \*Nathanson, many joint works resulting from their 25 years of collaboration.

First and foremost of them was *Mefareshei ha-Yam* (Lemberg, 1827), novellae and elucidation appended to the *Yam ha-Talmud* on the tractate *Bava Kamma*, by their uncle, Moses Joshua Heshel Ornstein of Tarnograd; at the end of this work is included their halakhic correspondence with such contemporaries as Moses \*Sofer, Mordecai \*Banet, and Akiva \*Eger. Their remaining joint works to be noted are *Me'irat Einayim*

(Vilna, 1839), a work in seven sections on the inspection of animals' lungs; *Magen Gibborim*, 1 (Lemberg, 1834), 2 (Zolkive, 1839); two commentaries on the first 235 chapters of the Shulḥan Arukh, *Orah Ḥayyim*; glosses to and emendations of the glosses of Mordecai \*Jaffe on the Talmud (published in the Romm Vilna edition of the Talmud); *Ma'aseh Alfasi* (in the Romm Vilna edition of Alfasi), glosses on the *halakhot* of Isaac Alfasi and the Mordecai; *Ner Ma'aravi*, a commentary on the Jerusalem Talmud which includes references under the title *Ein Mishpat* and glosses thereto entitled *Gilyon ha-Shas* (published in the Piotrkow 1859–60 edition of the Jerusalem Talmud).

This fruitful partnership ended in 1859, Ettinger having published in Solomon \*Kluger of Brod's booklet *Moda'ah le-Veit Yisrael* (1859), which contained a ban against machine-baked *mazzot*, whereupon Nathanson published a contrary opinion in a booklet called *Bittul Moda'ah* (1859). After the rift with his brother-in-law, Ettinger devoted himself to study together with his son Isaac Aaron (*Ma'amar Mordekhai*, no. 58), and decided to publish responsa and novellae independently. To this period belong his important responsa *Ma'amar Mordekhai* (1852), which deal to a great extent with the laws of \**agunah*. A collection of his responsa, *Shevet Aḥim*, has remained in manuscript.

His most famous son was ISAAC AARON (1827–1891) who served as rabbi in Przemysl and in 1888 succeeded Zevi Hirsch Ornstein as rabbi of Lemberg, remaining there until his death. Like his father, he at first refused all rabbinical offers, including the rabbinate of Przemysl, and like him also served as "nasi of the Holy Land." His novellae were published together with his father's *Ma'amar Mordekhai*, and his responsa are found in his *Maharya ha-Levi* (2 vols., 1893), as well as in various works of contemporary rabbis.

**BIBLIOGRAPHY:** S. Buber, *Anshei Shem* (1895), 151f.; I.T. Eisenstadt and S. Wiener, *Da'at Kedoshim* (1897–98), 178; H.N. Dembitzer, *Kelilat Yofi*, 1 (1888), 146a–49b, 156a–b; L. Ginzberg, *Perushim ve-Hiddushim ba-Yerushalmi*, 1 (1941), LXI (Eng. introd.); EG.

[Itzhak Alfassi]

**ETTINGER, SHMUEL** (1919–1988), Israeli historian. Born in Kiev, U.S.S.R., Ettinger immigrated to Erez Israel in 1936 and studied at the Hebrew University of Jerusalem, where he received his doctorate in 1956 for his study "The Jewish Colonization of the Ukraine, 1569–1648." In 1952, while still a research student, he joined the teaching staff of the Hebrew University, and in 1965 he became professor of modern Jewish history. He was a visiting professor at Oxford University in 1969–70.

Ettinger's major fields of research include Russian Jewish history (from its beginnings until the Soviet era), the attitude of 17<sup>th</sup>- and 18<sup>th</sup>-century European thought toward Judaism and Jews, modern Jewish historiography, and the roots and development of modern antisemitism.

His research on the Muscovite state and its attitude toward the Jews and on the Jewish settlement in the Ukraine constituted a basic contribution to the critical study of the

history of the Jews in Russia. In his study of the ḥasidic movement and its historical influence he emphasized the role of the ḥasidic leadership as a powerful formative factor in the continued existence of Jewish autonomy under the centralist regimes of Russia and Austria after the partitions of Poland. The importance of his methodical contribution to the study of the origins of modern antisemitism lies in his unmasking the inherent nature of the critical, and even antagonistic attitude toward Judaism in the major trends of modern European social thought: from the English deism and French rationalism of the 17<sup>th</sup> and 18<sup>th</sup> centuries to the romanticism, nationalism, social Darwinism, and even liberalism and socialism of the 19<sup>th</sup> century. As a representative of the Jerusalem school of Jewish studies, Ettinger emphasized a conceptual framework revolving around the unity and continuity of Jewish history. Within this framework he regarded the centrality of the redemptive principle as an historical motive force even in its secular manifestations, especially in the social and national radicalism of modern Jewish history. His research method, in which he regarded himself as continuing along the path of B.Z. Dinur and Y. Baer, was characterized by the tension between a broad teleological view of Jewish history and its central tendencies, and a rare command of critical investigative methods directed toward detailed elements of historical reality in a wide variety of areas.

Ettinger's studies were published mainly in the journals *Zion*, *He-Avar*, *Molad*, *Gesher*, *Scripta Hierosolymitana*, *Cahiers d'Histoire Mondiale*, and the publications of the Israel Historical Society. He published two works of a general nature on modern Jewish history: a volume of his university lectures, *Toledot Am Yisrael mi-Yemei ha-Absolutism ad La-Hakamat Medinat Yisrael* ("History of the Jewish People from the Era of Absolutism until the Establishment of the State of Israel," last edition 1968), and *Toledot Am Yisrael ba-Zeman he-Ḥadash* ("History of the Jewish People in Modern Times," 1969), the latter being the third volume of a series on Jewish history by teachers of the Hebrew University. The latter volume is aimed at a broader reading public and deals in greater detail with the period from the 1880s until after the Six-Day War. During the 1960s, a parallel series in Russian was prepared and published under his editorship (*Ocherki po Istorii Yevreiskogo Naroda*, last edition 1972). He also published a volume of theoretical essays, excerpts from the diary and correspondence of the historian Graetz (*Zvi Graetz, Darkhei ha-Historiah ha-Yehudit*, 1969), and a history textbook for Israeli high schools.

Ettinger served on the editorial board of *Zion*, the journal for Jewish history (editorial secretary 1955–59, and editor from 1960) and on the executive board of the Israeli Historical Society and the Central Archives for the History of the Jewish People. He was among the initiators and directors of many research projects, among them the Center for Eastern European Jewish Studies, which he headed.

Closely related to his scientific work was his intensive public activity, devoted mainly to two areas: the educational system of Israel, at every level, and the national awakening of

the Jews in Soviet Russia and their spiritual and social integration in Israel.

[Otto Dov Kulka]

**ETTINGER, SOLOMON (Shloyme; 1803–1856)**, Yiddish poet and dramatist. Born in Warsaw, orphaned, and then raised in Leczna by his paternal uncle, Ettinger moved to Zamosc after marrying Golda, the daughter of magnate Judah Leib Wolf, where he was influenced by the Haskalah. He studied pharmacy and medicine in Lemberg (Lvov) – where he discovered the writer in himself – and practiced medicine, despite difficulties with certification in Poland. Although he knew both Hebrew and German, he chose to write in Yiddish, attempting to create his own literary style. The influence of Lessing, Buerger, and other German writers can be traced in his works, and he was also influenced by the Yiddish comedies of Isaac \*Euchel and Aaron \*Wolfsohn-Halle. Ettinger wrote satirical and witty ballads, epigrams, poems, and dramas. His fables (*mesholim*) reflect an influence by the Maggid of Dubno (see Jacob ben Wolf \*Kranz), who left his imprint on Zamosc with this genre in the early 19<sup>th</sup> century. Ettinger concentrated on individual problems rather than on the contemporary ones with which Haskalah literature generally concerned itself. He influenced not only Abraham \*Goldfaden but also Sholem Yankev \*Abramovitsh and later writers. In his play, *Serkele*, he portrays an ambitious woman who pursues wealth and power and gives a vivid picture of the local environment and customs. He starkly outlines the foibles and passions of the fledgling urban Jewish bourgeoisie, foreshadowing his great heir in this genre, Isaac Bashevis \*Singer. He also wrote two unfinished plays: *Der Feter fun Amerika* (“The American Uncle”) and *Di Freylekhe Yungelays* (“The Jolly Young People”).

Because of censorship, the only piece to appear in his lifetime was a short Hebrew poem (1837); but some of his fables and poems were posthumously published. His son, W. Ettinger, a well-known Russian publisher, brought out his *Mesholim* in St. Petersburg (1889, 1890<sup>2</sup>). The definitive edition of his works, *Ale Ksovim fun Dr. Shloyme Ettinger* (“Collected Works of Dr. Shloyme Ettinger”), in two volumes, edited by Max Weinreich, was published in Vilna in 1925; and his *Geklibene Verk* (“Selected Works”), edited by Max Erik, appeared in Kiev in 1935. In 1957 another selection, *Oysgeklibene Shriften* edited by S. Rollanski (Rozhansky), was published in Buenos Aires.

**BIBLIOGRAPHY:** J. Leftwich, *The Golden Peacock* (1961), 693f.; Bloch, in: *Journal of Jewish Bibliography*, 1 (1938), 21f.; Rejzen, *Leksikon*, 2 (1927), 725–39; M. Weinreich, *Bilder fun der Yidisher Literatur-Geshikhte* (1928), 280–91; S. Niger, *Yiddish Literature in the Past Two Hundred Years* 3 (1952), 174–6; I. Zinberg, *Geshikhte fun der Literatur bay Yidn*, 8:2 (1937), 233–48.

[Elias Schulman / Jack S. Berger (2<sup>nd</sup> ed.)]

**ETTINGHAUSEN, RICHARD** (1906–1979), historian of Islamic art. Ettinghausen was born in Germany and studied in

Frankfurt, where he received his doctorate in Islamic studies in 1931, from which time he devoted himself to the study of, and research into, Islamic art. In 1934 he immigrated to the United States. His extensive contributions to Islamic art were in academic teaching, museum activities, and scholarly publications. From 1934 to 1937 he was research associate of the American Institute of Persian Art and Archaeology and from 1938 to 1949 he taught Islamic art at the University of Michigan, Ann Arbor. In 1944, he also began to work in the Near Eastern Section of the Freer Gallery of Art at the Smithsonian Institution, where he acted as head curator from 1961 to 1967. Continuing to combine university and museum work, he taught at the Institute of Fine Arts at New York University from 1961, was appointed Hagop Kevorkian Professor of Islamic Art in 1967, and consultative chairman of the Islamic Department of the Metropolitan Museum of Art in New York in 1969, at the same time acting as trustee of various galleries and museums, such as the Phillips Gallery and the Textile Museum, Washington, and was the main promoter of the L.A. Mayer Memorial Institute, dedicated to Islamic art, opened in 1974 in Jerusalem.

He was the author of numerous scholarly publications, covering a very wide range of subjects, but particularly studies dedicated to Islamic painting. These are again extremely varied with much attention paid to Persian, Turkish, Muslim, Indian, and of course Arab, painting. They include studies in Muslim iconography – *The Unicorn* (1950), *Paintings of the Sultans and Emperors of India in American Collections* (1961), *Persian Paintings in the Bernard Berenson Collection* (1961), and *Arab Painting* (1962). He initiated and organized many exhibitions which dealt with problems of Islamic art for which he compiled the catalogs. He was the editor of *Ars Islamica*, the first periodical dedicated to Islamic arts (1938–50); he then became a member of the editorial board of *Ars Orientalis* (1954–67), as well as of *Artibus Asiae*; he was co-editor of *Kunst des Orients*.

[Miriam Rosen-Ayalon]

**ETTLINGEN**, town in Baden, Germany. The Jews living there at the time of the \*Black Death, 1348–49, suffered from persecution. At assemblies of the regional Estates held in 1588, 1589, and 1591, the representatives of Ettligen pressed for the expulsion of the Jews from the city. There were two Jewish families living in Ettligen in 1683. In 1729 a “protected” Jew, Mayer (originally from Malsch), had to leave his home near the castle and was permitted to build a house of medium size near the town square. The Jews of Ettligen paid a protection tax of 16 florins in the 18<sup>th</sup> century, which was reduced to 8 florins in 1812. A prayer hall was opened in 1812 and a synagogue in 1849; it was replaced by a building in Renaissance style in 1889. The community numbered 33 in 1825 and 70 in 1900. In 1933 there were 48 Jews in the city, joined later by 31 from other locales. About two-thirds emigrated or left for other German cities during the Nazi era and the rest were deported. On Nov. 10, 1939, the synagogue was demolished.

R. Jacob \*Ettlinger and other Jews bearing the name probably originated from Ettlingen.

**BIBLIOGRAPHY:** *Fuehrer durch die juedische Wohlfahrtspflege* (1932/33), 348; *Germ Jud*, 2 (1968), 232–3; F.M. Hundsnurscher and G. Taddey, *Die juedischen Gemeinden in Baden* (1967), index.

**ETTLINGER, JACOB** (1798–1871), German rabbi and champion of neo-Orthodoxy. After receiving preliminary instruction from his father, Aaron Ettlinger, *Klausrabbiner*, a local rabbi in Karlsruhe, Jacob continued his studies under three eminent rabbis: Asher Wallerstein, Abraham Bing, and Wolf Hamburger. He was one of the first Jews admitted to the University of Wuerzburg, but was forced to leave because of an antisemitic outbreak. In 1826, he was appointed *Kreisrabbiner* (“district rabbi”) for the districts of Ladenburg and Ingolstadt and settled in Mannheim, where he founded a yeshivah that attracted numerous students including Samson Raphael \*Hirsch. Ten years later, he was appointed chief rabbi of Altona, a post which he retained until his death. The yeshivah which he established in that city was attended by Israel (Azriel) \*Hildesheimer.

An unswerving traditionalist, Ettlinger reacted to the conference of Reform rabbis in Brunswick (1844) by rallying many of his colleagues in protest against what they considered the gravest threat to Judaism’s future. A notable result of this move was Ettlinger’s decision to publish works reflecting the stand of Jewish Orthodoxy, among them his pamphlet, *Shelomei Emunei Yisrael*, and *Der Zionswaechter*, a journal of traditionalist thought, with a Hebrew supplement, *Shomer Ziyyon ha-Ne’eman*, edited by S.J. Enoch (1845). He was the last rabbi to preside over the Altona *bet din* before its jurisdiction in civil matters was revoked by the Danish authorities in 1863. In the following year, Denmark ceded Altona with Schleswig-Holstein to Prussia and Ettlinger made such a favorable impression on the Prussian king, William, during his visit to Altona in 1865, that the rights previously enjoyed by the Jewish community under the Danes were reconfirmed by royal decree. An outstanding halakhist, Ettlinger published the following works (all printed at Altona, unless otherwise indicated): *Bikkurei Yaakov*, on the laws concerning the festival of Tabernacles (1836; 2<sup>nd</sup> ed. with the addition *Tosefot Bikkurim*, 1858); *Arukh la-Ner*, glosses on various talmudic treatises (on *Yeavamot* 1850; 2<sup>nd</sup> ed. Piotrkow 1914; on *Makkot* and *Keritot* 1855; on *Sukkah* 1858; on *Niddah* 1864; on *Rosh ha-Shanah* and *Sanhedrin*, Warsaw, 1873); *Binyan Ziyyon*, responsa (1868), and its sequel, *She’elot u-Teshuvot Binyan Ziyyon ha-Hadashot* (Vilna, 1874); *Minhat Ani*, homilies (1874; 2<sup>nd</sup> ed. Frankfurt, 1924) and a number of sermons in German. A collection of his articles and addresses was published by L.M. Bamberger (Schildberg, 1899). Through Hirsch and Hildesheimer, Ettlinger exerted an incalculable influence on the course of neo-Orthodoxy in Germany. His great modesty is reflected in his will which stipulates that only the barest details be inscribed on his tombstone.

**BIBLIOGRAPHY:** A. Posner and E. Freimann, in: L. Jung (ed.), *Guardians of our Heritage* (1958). [Shlomo Eidelberg]

**ETTLINGER, MARION** (1949– ), U.S. photographer. Ettlinger, the daughter of German Jews who fled the Nazis in December 1938, grew up in Queens, N.Y., and was educated at Cooper Union in Manhattan, where she studied painting. She discovered photography then but it was not until 1983, when she got an assignment from *Esquire* magazine, that she found her calling and her career. *Esquire*, celebrating its 50<sup>th</sup> birthday, asked Ettlinger to photograph authors who had contributed to a special issue of the magazine. Her photograph of the writer Truman Capote, in striking profile, proved memorable, and in more than 20 years Ettlinger photographed more than 600 authors for book jackets. She worked exclusively in black and white, using only natural light. More than 200 of her author photos were collected in *Author Photo: Portraits, 1983–2002*, a coffee-table volume that includes well-known writers as well as her own image. Previously, authors often tended to appear on the covers of their books in relaxed, un-self-conscious moods and settings. But Ettlinger made portraits for the book jackets, the authors posed and orchestrated as objects in their own right, and her name entered the language as a verb. To be “Ettlingered,” according to an article in the *New York Times*, means to have imparted to you an aura of distinction and renown. Publishers considered these photos as assets to help sell their books.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**ETZIONI, AMITAI WERNER** (1929– ), sociologist. Etzioni was born in Cologne, West Germany, but immigrated at an early age to Erez Israel, studying at the Hebrew University and later at the University of California at Berkeley, where he received his doctorate in sociology in 1958. He was on the faculty of Columbia University from 1958, and chairman of the department of sociology from 1969. From 1979 to 1980 he served as senior adviser to the White House and in the latter year was University Professor at George Washington University. In 1987–89, he served as the Thomas Henry Carroll Ford Foundation Professor at the Harvard Business School. In 1989–90 he was the founding president of the International Society for the Advancement of Socio-Economics, and in 1990 he founded the Communitarian Network, a nonprofit, non-partisan organization dedicated to shoring up the moral, social, and political foundations of society. He was the editor of *The Responsive Community: Rights and Responsibilities*, the organization’s quarterly journal, from 1991 to 2004. Etzioni also served as the president of the American Sociological Association in 1994–95. His primary areas of interest are political sociology and organizational analysis. Etzioni is a member of the Science Information Council of the National Science Foundation and a member of the Social Problems Research Committee of the National Institute of Mental Health, as well as a consultant to many organizations, including the President’s Advisory Committee on Campus Unrest and Change.

He contributed over 80 articles to various professional journals and books and wrote numerous books, of which the most important is *The Active Society: A Theory of Societal and*

*Political Processes* (1968). Among the others are *A Diary of a Commando Soldier* (1952), *The Moon-Doogle: Domestic and International Implications of the Space Race* (1964), *Political Unification: A Comparative Study of Leaders and Forces* (1965), *Demonstration Democracy* (1971), *The Moral Dimension: Toward a New Economics* (1988), *The Spirit of Community* (1993), *The New Golden Rule* (1996), *The Limits of Privacy* (1999), *The Monochrome Society* (2001), *My Brother's Keeper: A Memoir and a Message* (2003), and *From Empire to Community: A New Approach to International Relations* (2004).

Etzioni has been the recipient of a Guggenheim Fellowship and the William Mosher Award for the most distinguished academic article in the *Public Administration Review* in 1967. In 2001 he was named one of the top 100 American intellectuals. At the same year he was awarded the John P. McGovern Award in Behavioral Sciences as well as the Officer's Cross of the Order of Merit of the Federal Republic of Germany. He was also the recipient of the Seventh James Wilbur Award for Extraordinary Contributions to the Appreciation and Advancement of Human Values by the Conference on Value Inquiry as well as the Sociological Practice Association's Outstanding Contribution Award.

[Jacob Jay Lindenthal]

**EUCHEL, ISAAC ABRAHAM** (1756–1804), Hebrew author, Bible commentator, and one of the leaders of the \*Haskalah in Germany. Born in Copenhagen, Euchel, having received a traditional education, moved in 1773 to Koenigsberg, where he earned his living as a tutor in the home of the wealthy \*Friedlaender family. In 1781 he attended Kant's lectures at the University of Koenigsberg. He was recommended for a lectureship in Hebrew at the university but was rejected because he was Jewish. In 1787, Euchel moved to Berlin, where he managed the printing press of the Juedische Freischule (Ḥinnukh Ne'arim School). Later he worked as a bookkeeper for a commercial firm.

Euchel's literary and communal activity began in 1782 (in Koenigsberg) with the publication of his pamphlet *Sefat Emet*, in which he called for the establishment of a school in Koenigsberg, based on the principles of the Enlightenment. In 1782 he was one of the founders of *Ḥevrat Doreshei Leshon Ever* (The Society of Advocates of the Hebrew Language), which started to publish *Ha-Me'assef*, and, with Menahem Mendel Breslau, published *Naḥal ha-Besor*, the prospectus of *Ha-Me'assef*. He served as one of the editors of *Ha-Me'assef* as long as he was in Koenigsberg (till 1790), and published several articles in that periodical, including the first monograph on Moses Mendelssohn, entitled *Toledot Rabbenu he-Ḥakham Moshe ben Menaḥem* (published in book form in Berlin, 1789). He also prepared a free translation of the prayer book into German (1786) and wrote a commentary on Proverbs, with a German translation in Hebrew characters (Berlin, 1790). In addition, he is credited with the authorship of *Iggerot Meshulam Ben Uriyyah ha-Eshemo'i* which started to appear in *Ha-Me'assef* in the autumn of 1789, and which seemed in some

respects to imitate Montesquieu's *Persian Letters*. In 1797 he published in Breslau a pamphlet (German in Hebrew characters) entitled *Ist nach dem juedischen Gesetze das Uebernehmen der Todten wirklich verboten?* To combat the influence of the Orthodox, Euchel wrote (about 1792) a satirical comedy in colloquial Yiddish, called *Reb Henekh, Oder Vos Tut Men Damit*. No copies are extant of this edition, which apparently was published after Euchel's death. A new edition in Gothic characters (*Reb Henoch; oder Was thut men damit*) appeared in Berlin in 1846; and in 1933, Z. Rejzen republished it in his *Arkhiiv far der Geshikhte fun Yidishen Teater un Drama*, from the manuscript preserved in the Rosenthaliana library in Amsterdam. The play, sharply satirical, especially in the portrayal of the Orthodox, reflects the relations between Jews and non-Jews in Prussia during the period of the struggle for emancipation.

[Gedalyah Elkoshi]

**°EUGENIUS**, name of four popes. They include the following:

**EUGENIUS III** (1145–53). At the time of Eugenius' solemn entry into Rome in 1145, the Jews of the city formed part of the procession which welcomed him. Probably as a result of the anti-Jewish persecutions following the preaching of the Second Crusade, Eugenius renewed the *Sicut Judaeis*, Pope Calixtus II's bull of protection for the Jews (see papal \*bulls). In doing this, he may have acted on the advice of \*Bernard of Clairvaux, his former teacher, with whom he maintained close relations. In one of a series of letters to Pope Eugenius written between 1149 and 1152, Bernard pointed out that the concern of the pope should also go out to the Jews.

**EUGENIUS IV** (1431–47). The greater part of his reign was especially favorable for the Jews. In 1432, soon after his ascent to the papal throne, Eugenius IV ratified the privileges of the Jewish communities of Lombardy, the Marches, and Sardinia. He retained his predecessor's Jewish personal physician, Elia di Sabato, and in 1433 confirmed his freedom of the city and his salary. On Feb. 6, 1434, he assured the German Jewish communities of his protection, particularly against attempts at forced conversion, any interference with the practice of their religion, and desecration of their cemeteries. Eugenius ordered the lay and ecclesiastical authorities to assist the Jewish communities in the payment of their taxes.

The change in his attitude probably followed on the deliberations of the Council of Basle (1431–37), which also adopted a severe attitude toward Christian heresies. In order not to appear dilatory in his strictness toward the Jews, in 1442 Eugenius forbade Christians in Leon and Castile to have any relationships with them as maids or menservants. The Jews were forbidden to erect any new synagogues, to lend money on interest, and to work on Sundays and Christian holidays;

they were to be excluded from public office and could not testify against Christians. The provisions of this bull were soon extended to Italy, where the Jews were also prohibited from studying any book but the Pentateuch. As a result many Jews left the Papal States, taking refuge especially in Mantua, where the ruler, Giovanni Francesco Gonzaga, offered them fairly liberal conditions. After large sums of money had changed hands, the restrictive measures were rescinded in December 1443. From then on, Eugenius once more extended his protection to the Jews. Only a few days before his death, he issued a bull against forced baptisms in Spain.

Gill, *Eugenius IV* (Eng., 1961); M.A. Dimier, in: *Dictionnaire d'histoire et de géographie ecclésiastiques*, 15 (1963), 1349 ff.; S. Grayzel, *Church and the Jews...* (1966<sup>2</sup>), 76.

[Bernhard Blumenkranz]

°**EUHEMERUS** (fourth century B.C.E.), writer. In his *Hiera Anagraphe* ("Sacred History"), Euhemerus suggested that the gods had originally been benefactors of mankind who were subsequently worshipped because of their great deeds. Josephus cites him as establishing the antiquity of the Jews (Apion, 1:216).

**EULAU, HEINZ** (1915–2004), U.S. political scientist. Born in Offenbach, Germany, Eulau went to the U.S. as a young man in 1935. He earned his bachelor's, master's, and doctoral degrees in political science from the University of California-Berkeley from 1937 to 1941. During 1946–47 he was assistant editor of the *New Republic* and then taught at Antioch College. He worked in the Library of Congress in Washington and later in the Department of Justice, and in 1958 became professor of political science at Stanford University and served as chair from 1969–74 and 1981–84. Eulau was one of the leading exponents of the behaviorist trend in American political science, which attempted to transform the study of political science into a scientifically oriented discipline based on empirical research and a wide interdisciplinary frame of reference. A path-breaking scholar in the field of legislative research, he specialized in the theory and practice of political representation and electoral behavior. The behavioral movement, which he brought to Stanford, introduced psychology and sociology to study the linkages between political institutions and citizens. He was also instrumental in creating a new field of research focusing on the systematic quantitative analysis of citizens' attitudes and choices. His thesis was set out in his work *The Behavioral Persuasion in Politics* (1963), which followed *Political Behavior* (1956) and *Legislative Behavior* (1959), both of which he co-authored with J.C. Wahlke. In 1961 he became general editor of the *International Yearbook of Political Behavior Research* and was also associate editor for political science of the *International Encyclopaedia of the Social Sciences* (1968).

Eulau was president of the American Political Science Association from 1971 to 1972. In 1976, he helped found *Leg-*

*islative Studies Quarterly*, a journal published at the University of Iowa. He retired from Stanford in 1986 but remained active as the William Bennett Munro Professor Emeritus of Political Science. He also wrote *The Legislative System* (1962), *Class and Party in the Eisenhower Years* (1962), *Lawyers in Politics* (1964), *Political Science* (1969), *Labyrinths of Democracy* (with K. Pre-witt, 1973), *Technology and Civility* (1977), *The Politics of Representation* (1978), *Politics, Self and Society* (1986), and *Micro-Macro Dilemmas in Political Science* (1996). In 1998, he took a light-hearted swipe at university life in *The Politics of Academic Culture: Foibles, Fables and Facts*, and in 2001 co-authored a family history, *The Mishpokhe from Eulau-Jilove*.

In 1986, the American Political Science Association established the Heinz Eulau Award to honor his contributions to political science. In 2002, the Heinz Eulau Political Behavior Fellowship was established by the Stanford Institute for the Quantitative Study of Society. In 1999 he was awarded the Warren E. Miller Award for meritorious service to the social sciences, one of the country's highest honors in the social sciences.

His wife, CLEO MISHKIN EULAU (1923–2004), died five days after her husband. She was the Stanford University adjunct clinical professor in the department of psychiatry and behavioral sciences. In 1994, the Cleo Eulau Center was founded as a service and study center dedicated to developing innovative solutions to helping at-risk children and teens. In 2002, she was the first woman and first non-psychiatrist to receive the Lifetime Achievement Award from Stanford's department of psychiatry.

[Edwin Emanuel Gutmann / Ruth Beloff (2<sup>nd</sup> ed.)]

**EULENBURG, ERNST** (1847–1926), music publisher. The Musikverlag Eulenburg, founded by Eulenburg in Leipzig in 1874, at first published mainly educational literature, but was gradually extended to include scores and especially miniature scores of orchestral and chamber music. His son KURT transferred the firm to London in 1939. He enlarged the number of miniature scores and also increased the output of modern music. In 1957 the shares of the Eulenburg Edition were taken over by Schott of London.

**EULENBURG, ISAAC BEN ABRAHAM MOSES ISRAEL** (d. 1657), rabbi and author, also known as Isaac Przybylska. Isaac's father, who died in 1605, was the cantor and scribe of the old synagogue of Cracow. Isaac studied under Joel \*Sirkes and from 1640 to 1647 served as *dayyan* and preacher in Cracow. Moses Jekuthiel Kaufman, in *Lehem ha-Panim*, quotes one of his halakhic decisions given during his stay in Cracow. In 1648 Isaac became rabbi of Lissa and, finally, of Leipnik (Moravia), where he died. He is incorrectly held by some to have occupied a rabbinical position in Brest-Litovsk (Brisk), Lithuania, and in Nikolsburg. Eulenburg's novellae on the Shulhan Arukh, *Even ha-Ezer* and *Hoshen Mishpat*, a work on marriage and divorce, and his responsa, have remained in manuscript. He is sometimes identified with the "Isaac

ha-Darshan” frequently referred to by Michael Jospes in his *Birkat ha-Mayim* (1861), and has also been identified by several scholars (Zunz and Landshut) with Isaac b. Abraham Moses Israel, the author of a *selihah* bewailing the massacre of the Jews of Podolia and Ukraine in 1648–49. Lewin, however, maintains the author to have been a rabbi of Posen who bore the same name.

[Itzhak Alfassi]

**EUNUCH.** The Hebrew word *sārīs* (Heb. סָרִיס), a loanword from Akkadian, has two meanings in the Bible: the first and most common is “eunuch” (e.g. 11 Kings 8:6; 9:32; 20:18 (= Isa. 39:7); Isa. 56:3–5; and Jer. 39:7) (*šārīs* and all the instances in the Book of Esther (2:3 *passim*)); and second, a government official or officer, not necessarily a eunuch (1 Sam. 8:14–15; 1 Kings 22:9). Inasmuch as eunuchs in some cultures were married, it is not impossible that Potiphar (Gen. 37:36; 39:1) was a eunuch, which could account for the notorious actions of his wife (Tadmor, *apud* Zevit in Bibliography). Daniel and his companions, though not specifically called “eunuchs,” are supervised by the chief of the eunuchs (Dan. 1:3, 7, 10, 18), in apparent fulfillment of the prophecy (11 Kgs. 20:18 = Isa. 39:7) that some of Hezekiah’s offspring would be eunuchs in the palace of the king of Babylonia. As was the case in Assyria (see Grayson in Bibliography, 98), eunuchs could rise to high positions, as shown by the place they occupy in the list in Jeremiah 29:2, where the hierarchical order of the captives is given as the king, his mother, the *sarisim*, the *sarim* (“leaders”), and the craftsmen (but cf. 11 Kings 24:12, 15). The Akkadian *ša rēši*, elliptical for *ša rēš šarri izuzzū*, “the one who stands by the head of the king,” was pronounced *sa rēsi* in Middle and Late Assyrian, resulting in the Hebrew and Aramaic forms with *samekh*. There are clear attestations of Akkadian *ša rēši* in the meaning “eunuch.” In court circles the *ša rēši* is sometimes opposed to *ša ziqni*, “the one of the beard.” Middle Assyrian royal ordinances regulating women’s quarters prescribed examination of the *ša rēši* to assure his status of eunuch, and subsequent castration if he failed the examination. Being turned into a *ša rēši* (*ana ša rēšen turrū*) was a punishment for adultery in the Middle Assyrian laws (A15) and for sodomy (A20). There are attestations of *ša rēši* that do not demand the sense “eunuch” (See CAD R, 289–97) and that is true for the Hebrew loan as well. The law excluding eunuchs from the Israelite community (Deut. 23:2) describes the eunuch as the one with crushed testicles (the normal form of childhood castration) rather than by the ambivalent term *sārīs*. 11 Kings 18:17 mentions *Rab-saris* (mistakenly treated by the Hebrew writer as a proper name) together with other high-ranking officials in the Assyrian kingdom. The reference to *Rab-saris* in Jeremiah 39:3, 13 testifies to the existence of this class in

the Neo-Babylonian kingdom as well. The date of a bilingual Akkadian-Aramaic inscription from Nineveh is indicated by the *limmu* (i.e., eponym) of a *rab ša rēši*. Since the office of *limmu* was held only by high officials, it is evident that the office of *Rab-saris* was of high rank. Isaiah 56:3–5, comforts the eunuchs who keep the Sabbath and observe the covenant; they are promised “a *yad*, either a memorial stele (Talmon) or a share (Japhet) in the temple precincts, and a name, better than sons and daughters.”

[S. David Sperling (2<sup>nd</sup> ed.)]

## EUPHEMISM AND DYSPEMISM.

### Euphemism

Euphemism is the substitution of an agreeable or inoffensive word or term for one that is indelicate, blasphemous, or taboo. Various types of euphemisms are found in the Bible, including (1) avoidance of direct implication of the speaker – “Should you gouge out these men’s eyes” rather than “our eyes” (Num. 16:14; similarly, 1 Sam. 29:4); (2) avoidance of direct implication in an oath – “God do so to the enemies of David” rather than “my enemies,” David being the speaker (1 Sam. 25:22; similarly, 1 Sam. 20:16); (3) avoidance of the expression “to die”: several different euphemistic expressions are employed, e.g., (a) “I am about to go the way of all the earth” (1 Kings 2:2); (b) “I shall go the way whence I shall not return” (Job 16:22); (c) “Enoch walked with God; then he was no more, for God took him” (Gen. 5:24; cf. 11 Kings 2:3); and (d) “They shall sleep a perpetual sleep and not wake” (Jer. 51:39, 57); (4) avoidance of “cursing” (or rather, “blaspheming”) God: the Hebrew verb *barakh* בָּרַךְ (“bless” or “praise”) is employed (1 Kings 21:10, 13; Job 1:5, 11; 2:5, 9), or, instead of the verb, the object is changed from “YHWH” to “the enemies of YHWH” (11 Sam. 12:14); and (5) avoidance of indelicate and offensive expressions: (a) the expression “to cover one’s legs” (Heb. *hasekh raglayim*) is substituted for “to defecate” (Judg. 3:24; 1 Sam. 24:3); “the bread he eats” (Gen. 39:6) for “the woman with whom he has sexual relations” (cf. Prov. 30:20); (b) the following are changed by the *keri* (*qeri*) of the masoretic text: the verb *shagal* (“to rape”) to *shakhav* (Deut. 28:30; Isa. 13:16; Jer. 3:2; Zech. 14:2); *ʾafolim* (“hemorrhoids”) to *tehorim* (Deut. 28:27; 1 Sam. 5:6, 9, 12; 6:4, 5); *hare*(*e*)*hem* (“their excrement”) to *zōʾatam* (11 Kings 18:27;

Isa. 36:12; cf. also II Kings 10:27 where *Le-mahara'ot* is read *le-moza'ot*); and *sheineihem* ("their urine") to *memei ragleihem* (II Kings 18:27; Isa. 36:12).

Lists of euphemistic expressions in the Bible are found in early tannaitic collections of halakhic Midrash. Eleven examples are given in the *Mekhilta* (Shirah 6) and seven in the *Sifrei* (Num. 84). The technical term employed is *kinnah hakatuv*, "Scripture used a euphemistic expression." Later collections of Midrash (Tanḥ. Be-Shalah 16; Gen. R. 49:7; Ex. R. 13:1) employed the phrase *\*tikkun soferim* ("emendation of the scribes") and record additional examples of this phenomenon. Though the difference in terminology reflects two different schools of thought, namely those holding that the Bible itself originally employed euphemistic expressions and those holding that the change was first made by the *soferim*, both agree that the changes were made in deference to the honor of the Lord (Lieberman). Examples of one such list follow: (1) "Abraham remained standing before the Lord" for "The Lord remained standing before Abraham" (Gen. 18:22); (2) "For his sons were blaspheming themselves" for "blaspheming God" (I Sam. 3:13); (3) "But my people have changed their glory for that which does not profit" for "My glory" (Jer. 2:11); (4) "Are you not from everlasting, O Lord my God, my Holy One? We shall not die" for "You shall not die" (Hab. 1:12); and (5) "For he who touches you touches the apple of his eye" for "my eye" (Zech. 2:12). Another kind of substitution resulting from religious scruples is found in the change of the vocalization of the verb *ra'ah* (ראה; "to see") from the active to the passive, "to be seen" (Luzzatto). It is used when referring to the three appointed times during the year that the Israelite was obliged to make a pilgrimage to Jerusalem in order "to see," i.e., to be in the presence of God (e.g., Ex. 23:15; 34:20, 23; Deut. 16:16).

### Dysphemism

Dysphemism is the substitution of an offensive or disparaging term for an inoffensive one. The biblical examples pertain to idolatry: (1) *'Elil* ("idol"), whose etymology is uncertain (it may be the diminutive of *'el* ("god") or derived from *'al* ("non-entirety")), means worthlessness, nothingness (e.g., Jer. 14:14; Job 13:4); (2) *shikkuz* ("abomination") is found in the expression, "Chemosh, the abomination of Moab and Molech, the abomination of the Ammonites" (I Kings 11:7; cf. also II Kings 23:13; cf. also the dysphemistic use of *shikkuz meshomem* ("abomination of desolation"; e.g., Dan. 11:31)). The plurals *shikkuzim* (e.g., Deut. 29:16; II Kings 23:24) and *gillulim* (literally, "dung-pellets"; "fetishes"; e.g., Lev. 26:30), and *to'evah* ("abomination"; e.g., II Kings 23:13, "Milcom, the abomination of the Ammonites"), are comparable terms; (3) the word *boshet* ("shame") is substituted for *ba'al* ("lord"; originally a title for the God of Israel, but later interpreted as the name of the Canaanite god, Baal, in several personal names: the names of Saul's son, Eshbaal (I Chron. 8:33; 9:39), and grandson (Jonathan's son), Merib-Baal (I Chron. 8:34; 9:40), are changed to Ish-Bosheth (II Sam. 2:8) and Mephibosheth (II Sam. 4:4);

the name of the "judge" Jerubbaal (Gideon; Judg. 6:32) later appears as Jerubbesheth (II Sam. 11:21); (4) the vocalization of "Ashtoreth, the goddess of the Sidonites" may be a dysphemism alluding to *boshet*, "shame" (e.g., I Kings 11:5, 33), Ash-toreth for Ashtereth (cf. Gr. Astarte).

A. Geiger thought the same was true of the pointing of \*Molech, the god of the Ammonites (e.g., I Kings 11:7), but since O. Eissfeldt's study of this term, the word *molekh*, which may have originally meant "vow" or "sacrifice," and its pointing, which may be original to a West Semitic dialect, have been subject to debate. Some scholars have also assumed a similar pointing for the Hebrew word, *tofet*, *tefet* (cf. Gr. Thappeth, Thapheth, Tapheth). The substitution of the place name Beth-Aven ("house of iniquity") for Beth-El ("house of God"; Hos. 4:15; 5:8) is also a kind of dysphemism which was employed because of the idolatrous worship in that place.

[Shalom M. Paul]

### In the Talmud

Euphemisms are extensively used in the Talmud and Midrash. The recourse to them is based upon various considerations. The first is the insistence on the need for pure and refined speech and the avoidance of all gross and vulgar expressions. This is explicitly stated in the Talmud: "One should not utter a gross expression" and examples are given of the manner in which the Bible itself employs circumlocutions to avoid the use of the word "unclean." Actual examples are given: two disciples of Rav were discussing how the discourse in the academy had exhausted them. One of them said that he was as exhausted as a pig (*davar aher*, see later), while the other said "as a kid." Rav refused to speak to the former. Similarly it is stated that Hillel foretold of Johanan b. Zakkai (or Judah ha-Nasi of R. Johanan) that he would be an outstanding teacher in Israel because, instead of saying, as his colleague did, "we may gather olives in uncleanness," he said "we may not gather olives in cleanness," and the forecast was fulfilled (Pes. 3b). The rabbis even regard the use of the phrase "eating bread" in Genesis 39:6 (Gen. R. 86:6) and in Exodus 2:20 (Tanḥ. 1:11) as a euphemism for sexual intercourse (that they are probably right with regard to the former seems clear from a comparison between Gen. 39:6 and 9).

This delicacy is particularly evident in the euphemisms used for the privy parts of the body and their functions. The male genital organ is referred to as "the organ" (*ever*: BM 84a) and the female as "that place" (Nid. 20a). The toilet is called "the house of water" (Meg. 3:2) or "the house of the chair" (Tam. 1:1; Ber. 25a). Urine is called "the water of the feet" (Ket. 6a) or "the jet" (*silon*: Ber. 25a) and defecation "having need of his apertures" (Git. 70a) or "turning aside" (*ponim*: Toh. 10:2; *nifneh*: Ber. 62a). Sexual intercourse is "the usage of the bed" (*tashmish ha-mittah*: Yoma 8:1) or simply *tashmish* (Ket. 65b) and so on.

A special euphemism is the use of the phrase *davar aher* ("another thing") for anything repulsive. It is generally used for the \*pig, but is variously employed also for leprosy (Pes.

76b, 112b), sexual intercourse (Ber. 8b), immorality (Ket. 7:5), and idolatry (Men. 13:10; Shab. 17b).

The second reason for euphemisms is in order to avoid phrases which would wound susceptibilities. The most common euphemism in this category is the phrase *sagi nahor* (“with excess of light,” cf. T. Gray on Milton’s blindness “but blasted with excess of light”) for a blind man (Ber. 56a; TJ, Pe’ah 8:9, 21b) and in fact it is regarded as so characteristic that a euphemism is called “*sagi nahor* language” (TJ, Pe’ah 5:5, 19a; Lev. R. 34:13). Various euphemisms such as “departed” (*niftar*: BB 16b), “his soul rested” (*nah nafsho*: MK 25a/b; Ket., 104a), and “left life for the living” (*shavak hayyim le-kol hai*) are used for death, and a cemetery is called “the house of life” (cf. Eccles. 12:5).

The third reason is based on the injunction “a man should not open his mouth to Satan” (Ber. 19a), i.e., one should not invite misfortune by ominous statements. The rabbis detect such a euphemism in the use of the third person “and it [the people of Israel] shall go up from the land” (Ex. 1:10). According to the Talmud Pharaoh actually meant to say “and we shall [be forced to] go up from the land,” and they will possess it, “but it is like a man who curses himself and hangs the curse on someone else” (Sot. 11a). To this category belongs the use of the phrase “the enemies of Israel” for Israel when it speaks of calamity overtaking the Jewish people (Suk. 29a; Lev. R. 25:1) or “the enemies of the Sages” (Ta’an. 7a) and the forecast of calamities is couched in the words “and every trouble which shall *not* come on Israel” (Pes. 117a).

Dysphemisms or cacophisms are usually employed with regard to idolatry and idolatrous sites and practices. The Talmud (Av. Zar. 2a) discusses whether the word *ed* used for the heathen festival (Av. Zar. 1:1) should be written correctly with an *ayyin* (“testimony”) or with an *alef* (“calamity”) – a dysphemism. Idolatrous worship is called *tumah* (“uncleanliness”: Tosef. Av. Zar. 7:2), the festive day “a day of repulsion” (*yom nibbul*: Gen. R. 87:7), and the verse “ye shall destroy their name” (Deut. 12:3) is interpreted as meaning that a dysphemistic name is to be given for its correct one: “where its name is Bet Galya [“the house of revelation”] it should be called Bet Karya [“the house of concealment”]; where its name is Ein Kol [“the all-seeing eye”] it should be called Ein Koz [“the eye of a thorn”]” (Av. Zar. 46a). It should, however, be pointed out that the rabbis are not always consistent in their avoidance of unpleasant expressions (cf. Lieberman).

During the Middle Ages and until recent times dysphemisms became common in Yiddish when referring to the non-Jewish equivalents of Jewish ceremonies and institutions. They usually took the form of a disparaging, assonantal word. Thus a non-Jewish wedding (*hatunnah*, Yid. *khase*) was contemptuously referred to as a “*hashlereh*” a word without meaning, and for *bet tefillah* (“a house of prayer”), *bet tiflah* (“a house of abomination”) was used. Those phrases, however, belong to the common and even vulgar vernacular.

For euphemisms to avoid using the Divine Name see \*Names of God. To those given there may be added a peculiar

one which became current in the Middle Ages, the *Kiveyakhol* (“as though to say”).

**BIBLIOGRAPHY:** IN THE BIBLE: A. Geiger, *Ha-Mikra ve-Targumav* (1959), 172 ff., 193 ff., 199 ff.; O. Eissfeldt, *Molk als Opferbegriff* (1935); S. [Louis Isaac Rabinowitz]

**EUPHRATES** (Heb. פְּרַת; Dead Sea Scrolls *Pwrt*; from Akk. *Purattu* and Sumerian *Buranun*), the longest river (c. 1,700 mi., 2,700 km.) in Western Asia. In texts from the third millennium B.C.E. from Mari the river occurs as a deity. From its sources in northeast Turkey the river takes a southerly course into northern Syria, where it turns southeast and flows into the Persian Gulf after joining the \*Tigris. According to Genesis 2:14, the Euphrates was one of the four branches of the river which rises in Eden to water the \*garden of Eden. The Euphrates – also called “The River” or “The Great River” (see below) – forms the northern boundary of the ideal land promised to Israel (Gen. 15:18; Deut. 11:24; Josh. 1:4). The river is also referred to in Jeremiah 51:60–64, when Jeremiah instructed Seraiah upon reaching Babylon to read the prophecies of Jeremiah, bind them with a stone, and cast them into the Euphrates as a sign of the imminent destruction of that city. The Greek name \*Mesopotamia, like the Hebrew Aram-Naharaim (“Aram of the [Two] Rivers”; e.g., Gen. 24:10), originally designated only the northwest corner of Mesopotamia which is bordered by the Euphrates on the north, west, and south. Later, however, the name was interpreted as the land between the Tigris and the Euphrates, i.e., Assyria and Babylonia. Since Mesopotamia is poor in rainfall, its inhabitants have always had to depend on the two rivers for irrigation. Water was brought to the individual fields through an elaborate system of canals. Naturally, a great many cities were built on or near the banks of the Euphrates; among the best known are Carchemish, Mari, Babylon, Erech, and Ur, known from biblical and cuneiform sources, and Pumbedita, Nehardea, Mata Mehasya, and Sura, known from the Babylonian Talmud.

[Raphael Kutscher]

The term “beyond the river” (*ever ha-nahar*) denotes the region along the Euphrates, but the exact region referred to changes according to the geographical viewpoint or to the emerging geopolitical and administrative situation. The term “beyond the river” in Joshua 24:2–3 refers to the region east of the Euphrates, the place of origin of the patriarchs. In contrast, in 1 Kings 5:4 it describes the empire of Solomon from a view-

point east of the Euphrates: from Tiphseh (missing in Septuagint and probably a gloss; Greek Thapsakos; modern Dibseh, on the western bend of the Euphrates) to Gaza. The area thus described is designated in Assyrian royal inscriptions and documents by the term *eber nāri*, i.e., Hebrew *ever ha-nahar*. This term in its wider geographical connotation is identical with the geopolitical Hebrew term. Thus Esarhaddon, king of Assyria, includes in the expression “the kings of northern Syria and *eber nāri*” the kings of Tyre, Judah, Edom, Moab, Gaza, Ashkelon, Ekron, Byblos, Arvad, Samsimuruna, Ammon, and Ashdod, and he sums them up as: “12 kings of the sea coast” (I.J. Gelb et al., *The Assyrian Dictionary*, 4 (1958), 8).

In Sumerian and Old Babylonian documents, the Euphrates River was already a geographical demarcation. In the Old Babylonian \*Mari documents, two West Semitic terms describe the regions on either side of the river: *aḥarātum* (“the far land”) and *aqdamātum* (“the near land”). The first is perhaps “west,” and the second “east.” At the time of the Persian Empire, a later, second official term for the area was *Athurā* (Assyria), but the original official-geographical term prevailed in Neo- and Late Babylonian documents and in contemporary Hebrew and Aramaic sources (Ezra 8:36 (Heb.); Ezra 4:10, 11 (Aram. *‘abar naharah*)). The Perath mentioned in Jeremiah 13:4–7 is not the river Euphrates, but most probably Parah (cf. Josh. 18:23), near Anathoth (today ‘Ain Farah).

**EUPOLEMUS** (Gr. Ἐυπόλεμος), first significant Greco-Jewish historian. His name, the time when he lived, and the content of the remaining fragments of his work combine to make it likely that he is identical with Eupolemus, son of John, son of Hakkoz, who in 161–60 B.C.E. brought back from Rome a promise of assistance for \*Judah Maccabee (1 Macc. 8:17–32). His father John is mentioned as having gained concessions for Jerusalem from Antiochus III after the Seleucid conquest of Coele-Syria (11 Macc. 4:11). Six passages from Eupolemus’ writings survive in the works of Eusebius and Clement of Alexandria, who found them in the monograph *On the Jews* by \*Alexander Polyhistor (85–35 B.C.E.). Because of its Samaritan bias and its incompatibility with other remnants, it is customary to label the fragment dealing with Abraham as *Pseudo-Eupolemus*.

Eupolemus entitled his book *On the Kings of Judah*. Another title, *On the Prophecy of Elijah*, is either a subtitle or a chapter of the former. Eupolemus’ history covered the period from Moses (perhaps from the creation) to his own day. He reckoned 5,149 years from Adam to the fifth year of Demetrius

Soter (158–157 B.C.E.), evidently the year in which he completed his chronicle (Clement, *Stromata* 1. 141, 4).

Fragment 1, though brief, was extensively quoted, because it summed up the Jewish and, later, the Christian response to Greek philosophy and science: “Moses was the first wise man, the first who imparted the alphabet to the Jews; the Phoenicians received it from the Jews, and the Greeks from the Phoenicians; also laws were first written by Moses for the Jews.”

Fragment 2 is the longest single remnant of a Greco-Jewish text prior to \*Philo. The reigns of Joshua, Samuel, and Saul and his son (*sic*) David are all mentioned briefly. The text becomes more detailed in its description of David’s campaign. Eupolemus was a priest himself, and it is natural that he should have chosen as his central theme the Temple of Jerusalem. An angel hovered above to show David the site of the future Temple, which he himself was forbidden to build. When Solomon became king at the age of 12, he ordered the client-kings, Vaphres of Egypt and Suron (Hiram) of Tyre, to supply him with labor, and each sent 80,000 men. The exchange of letters between the kings concocted by Eupolemus is reproduced verbatim. Eupolemus’ account of the dimensions of the Temple and its furnishings is, as a rule, inconsistent with that of the Septuagint and the Hebrew Bible. Also, Eupolemus’ Temple, the gold surplus of which was sent to Suron, is more gilded than the traditional one (see \*Theophilus). Solomon died at the age of 52, after transferring the tabernacle’s furnishings from Shiloh with great pomp (cf. LXX, 1 Kings 2:12; SOR 14). In the last fragment, the authenticity of which is sometimes erroneously questioned, Eupolemus describes the conquest of Jerusalem by Nebuchadnezzar, assisted by the Median king, Astibares, and an allied force of 300,000 men. The invasion followed Jeremiah’s discovery that the king was worshipping the golden Baal. The Temple and its furnishings were shipped to Babylon. However, the prophet salvaged the tablets of the Law (11 Macc. 2:1ff.).

Eupolemus’ history was not a mere restatement of the biblical version. He changed or invented the names of men and locations and dealt freely with other facts. He continued the chronicler’s method of rewriting the past in the light of the contemporary scene. Thus he contributes a scarecrow to Solomon’s Temple and gives the dimensions of that Temple as similar to those of the Second Temple, which was standing in his day. The Mosaic account of the Tabernacle is a significant element in Eupolemus’ description of the Temple. Though his Greek vocabulary is narrow and his syntax atrocious, Eupolemus’ texts are valuable as the only confirmed remnants of the Greek used in Jerusalem.

He was indebted to the Septuagint for the Hexateuch, but there is no evidence (contrary to Freudenthal) that Eupolemus made use of the Greek versions of Kings and Chronicles. Technical terms transliterated in the Septuagint are rendered by Eupolemus into Greek. He is the first Jewish historian who borrowed from nonbiblical sources. He drew upon Herodotus, Ctesias, and Greco-Phoenician and Greco-Egyptian histori-

ans. There is no evidence that Eupolemus directly influenced Josephus or the rabbinic literature, though parallels, such as the age of Solomon and the king's request for Egyptian workers, need an explanation. In contrast to Eupolemus' devotion to Jerusalem and its Temple, Pseudo-Eupolemus follows a syncretistic Samaritan tradition. According to him, the Tower of Babel was built by the giants who had escaped the flood. Abraham was born in the Babylonian city of Camarina, called by some Urie. This patriarch surpassed all men in nobility and wisdom. He taught astronomy and astrology, first to the Phoenicians, and later to the Egyptians, tipping the balance in favor of the Phoenicians, who were later bested by the invading Armenians. He was then entertained by Melchizedek, the king and priest of the Temple of "Argarizin," which may be translated as "Mount of Most High." He mentions the visit Abraham's wife made to the Egyptian king, and mentions the miracle of the king being unable to have intercourse with her (cf. *Genesis Apocryphon* 20:17). After his wife was restored to him, Abraham lived in Heliopolis, where he instructed the Egyptian priests. The discovery of the sciences and astrology is attributed to Enoch, who, according to Pseudo-Eupolemus, was identical with the Greek Atlas. He identifies the Babylonian Belus with Noah, and the father of Ham with Kronos.

A passage dealing with Abraham, attributed by Alexander Polyhistor to an anonymous writer (Eusebius, *Praeparatio Evangelica*, 9:18, 2), is now ascribed by Freudenthal and Jacoby to Pseudo-Eupolemus on the basis of similarity of content. Walter, however, questions the identification. The apparent pro-Seleucid and anti-Egyptian bias of Pseudo-Eupolemus, the link with the Enochite texts, such as the Book of Enoch, Jubilees, and Genesis Apocryphon, and the fact that the passage is evidently criticized in *Sibylline Oracles* (3:218ff.) suggests a pre-Maccabean dating for Pseudo-Eupolemus. If this dating is warranted, Pseudo-Eupolemus would then be the oldest syncretic presentation of a biblical text.

[Ben Zion Wacholder]

**EUROPA PLAN**, code name for a large scale rescue plan to exchange European Jews for money, developed in the autumn of 1942 by the "Working Group" in Slovakia, an unusual alliance between Zionists and ultra-Orthodox Jews headed by a Zionist and a woman, Gisi \*Fleishmann, at the suggestion of Rabbi Michael \*Weissmandel, the ultra-Orthodox leader who was the son-in-law of the spiritual leader of Slovakian Jewry, Rabbi Samuel David Halevi Ungar, the rabbi of Nitra, and a cousin of Fleishmann. Between March 26 and the end of July 1942 some 50,000 Jews had been deported to Poland. Another 7,000–8,000 Jews had escaped to Hungary, which was an in-

dications that the Jews had internalized their peril even before they had become aware of the \*Final Solution. At Weissmandel's initiative but with the group's support an offer was made to Dieter \*Wisliceny, Eichmann's emissary to Slovakia, to ransom Jews for money and an initial bribe, whose sum total is still a matter of historical dispute but was between \$20,000 and \$55,000, was accepted. Soon thereafter the deportation of Slovakian Jews was halted. The Working Group believed that the bribe had brought the deportations to a halt and that larger sums would indeed save a larger number of Jews. They had few options and this desperate action was perceived to be effective. It certainly had the sanction of Jewish tradition with its detailed teachings regarding the redemption of captives. In his posthumous memoirs edited by his brother and disciples Weissmandel bitterly criticizes the Jewish leadership in the West for not being forthcoming with the required sums of money and for their unwillingness to support such unusual, nonlegal actions. It was part of his attack against the Zionists and against assimilated, Westernized, secularized Jews. However, no evidence has been uncovered that link the bribe to the halt in deportations. Contemporary historians agree that internal Slovakian concerns over the impact of the deportation of Jews on the economy was the reason for halting the deportations. Even the Vatican had protested, which had additional impact, since Jozef Tiso, the president of Slovakia, was a priest. Wisliceny was a secondary official and could not have stopped the deportations on his own accord. It is known that Wisliceny, who received an advance payment from the Working Group, forwarded \$20,000 to the WVHA (Main Economy Administration Office of the SS). The negotiations dragged on until August 1943 with Himmler's consent, perhaps as a way of feeling out Jewish power, but then broke off on Himmler's order (according to Wisliceny). Why did Germany consent to the halt in deportations? From the German perspective, Slovakia was an ally of Germany and the Slovakian Jews were comparatively small in number and could be dealt with after the massive deportations from Poland were completed. Indeed, they were deported to Auschwitz in 1944.

The financial means, fixed at \$2–3 million, were to be provided by Jewish organizations in the free world, and mainly by the \*American Jewish Joint Distribution Committee (JDC). Saly Mayer, the JDC representative in Geneva, proposed to deposit the money in blocked accounts in Switzerland until the end of the war, according to the transfer regulations of the Allied countries, because the Joint was unwilling to break the Allied transfer regulations and to send money directly to the enemy, which clearly would have jeopardized its legal standing in the United States. The Germans were well aware of the difficulties that the Jews had in raising the promised sums though the Jews did not know that the Germans were informed about their communications with Switzerland. It is assumed that the main idea behind the apparent German willingness to discuss the plan lay in Nazi counterpropaganda. The Europa Plan served later as a basis for the negotiations between \*Eichmann and the "Relief and Rescue Committee" headed by

Rezső \*Kasztner in Budapest in the summer of 1944 and the so-called offer of one million Jews for 10,000 trucks.

## EUROPE.

### Antiquity

The earliest contacts of the ancient Hebrews with Europe and Europeans were probably through the Greek traders who were familiar figures all over the eastern Mediterranean littoral as early as the eighth century B.C.E. It must however be borne in mind that the Hebrews were settled mainly in the uplands of Erez Israel away from the coastal area, while the Greeks were at this time almost as much Asiatics as Europeans geographically. It was probably at the time of the First Exile after the fall of Jerusalem in 586 B.C.E. that Jews first penetrated into Europe. The Hebrew prophets, for instance Isaiah, speak more than once of the future redemption of the Jewish exiles from the “isles of the sea,” by which presumably the Greek coastlands were implied, and it is likely enough that at this period Greek slave dealers purchased Jewish captives for sale on their domestic markets. Although their absorption in the Persian Empire confirmed the Asiatic nature of the Jewish people for a long period, that empire’s expansionist ambitions westward to some extent opened it and its Jewish population to Western and European ideas and influences. After the return from Exile, Greek influences on the trading cities of the Palestinian littoral were becoming strong, and some later books of the Bible (e.g., Ecclesiastes) seem to show a distinct Hellenic coloring. It was, however, the conquests by \*Alexander the Great in the fourth century B.C.E. that definitely changed the character of this area. Hitherto, Erez Israel had been part of the Near Eastern Afro-Asiatic nexus, looking to, and influenced by, Syria, Assyria, and Babylonia to the north, the Arabian tribes to the east, and Egypt to the south. Alexander the Great broke down as it were the barrier that had hitherto divided this region from Europe. Henceforth, Erez Israel looked west, not east, and, with the surrounding area, was part of the European nexus and sphere of influence, more or less sharply divided from Asia and the Asiatic powers. Insofar as it continued to be affected by the neighboring land areas, it was by those (Syria, Egypt) that had largely succumbed to Greek influences and could now be regarded almost as extensions of Europe. Although great masses of Jews remained under Partho-Persian rule in \*Mesopotamia, the most important settlement outside Erez Israel was in Greek-speaking \*Alexandria, which had constant and intimate contacts with the centers of European life. It was here in fact in the ensuing period that the Jews produced their great Hellenistic literature, reaching

its climax in \*Philo and constituting their first literary expression in the language of European culture. From certain points of view, the \*Hasmonean revolt in the second century B.C.E. could be considered a reaction against the tendency that has been described – an attempt to stem the inroads of European culture and to reassert Asiatic values. However, its success was only temporary. The Hasmonean monarchs, while asserting political independence, ultimately succumbed to some extent to European cultural influences. The Roman conquest of 63 B.C.E. brought Erez Israel and its population – still the largest and most creative part of the Jewish people – under European rule and within the European cultural orbit. It is hardly an exaggeration to say that from now on, down to the Arab conquest in 640, Erez Israel and its population constituted in effect part of Europe; and the European influences on the Jewish population there – and hence on Judaism itself – became increasingly strong.

Meanwhile the actual Jewish settlement in Europe was growing. From the third century B.C.E. Jews are mentioned in inscriptions, etc., on the mainland of \*Greece. The early Hasmonean rulers had entered into diplomatic relations with \*Rome, necessitating the dispatch of envoys thither, and there is a somewhat obscure reference to the expulsion of Jewish religious propagandists thence in 139 B.C.E. Thereafter, the wars of the Romans in Asia Minor and their conquest of Erez Israel inevitably resulted in the arrival on the Roman slave market of Jewish captives (many of whom would win their freedom or else be ransomed by their coreligionists), while the capital of the empire inevitably attracted visitors, emissaries, and merchants. Rabbinic sources, the New Testament, and \*Josephus all confirm the impression of a solid Jewish community there in the first century C.E., the subsequent importance of which is attested by several series of \*catacombs and hundreds of inscriptions. As early as 59 B.C.E. \*Cicero, in his oration in defense of Flaccus who had raided the Jewish temple offerings in the Greek islands, could assert that the Jews were present at the trial in Rome in such numbers as to overawe the court. Jews were also present at this period in many other places throughout \*Italy, especially along the trade routes leading to the ports commanding trade with the East. The existence of Jewish settlements all over the Roman Empire in its heyday is recorded in Gaul (see \*France), \*Spain, Pannonia, even in the Rhineland (see \*Germany), and it is probable that there was no Roman province without a Jewish settlement, even if no definite evidence is preserved. The total number involved was far from insignificant. The Jewish population of Rome has been estimated (with some exaggeration) at as many as 50,000, and it has been asserted that they constituted something like one-tenth of the population of the empire as a whole. The Jews of Europe, by the time of the breakup of the Roman Empire, were probably to be reckoned at some hundreds of thousands. On the other hand, their cultural significance was slight. They made barely the slightest contribution to rabbinic or Hebrew culture in the talmudic age, nor is any work of this period extant in Latin which is certainly of Jewish authorship.

### Rise of Christianity and Islam

Under the Roman Empire, to the fourth century, the position of the Jews was on the whole good. Although looked down upon, both because of the “superstitions” to which they adhered and their lowly economic status, their religion was tolerated, and from 212 they enjoyed Roman citizenship with all its advantages and responsibilities along with the other free inhabitants of the empire. With the Christianization of the empire, however, their position deteriorated, though at first socially more than juridically, the ground being prepared for their systematic degradation which was to become the rule in Christian Europe in the Middle Ages. The Barbarian invasions probably affected the Jews, as a mainly urban element, more than the rest of the population, so that it seems their numbers were drastically reduced in this period. Moreover, the new rulers, once they adopted Christianity – especially in its Catholic form – were unable to preserve the delicate balance between sufferance and intolerance that had been achieved under the earlier Christian emperors – all the more so since this period witnessed the periodical triumph of religious fanaticism in the \*Byzantine Empire, setting a baneful example to the rest of the Western world. Restrictions were imposed by the Church at an early date; from 305 successive \*Church Councils repeatedly reissued discriminatory legislation. Hence the period between the fifth and eighth centuries was punctuated all over Europe by religious riots, coercion, compulsory baptisms, and widespread expulsions, culminating in the great disaster to the Jewish community of Spain under the Visigoths, about which we are particularly well informed. The Jewish population of Western Europe was now, it seems, reduced to relative unimportance, except perhaps in some parts of Italy.

Conditions changed for the better in the eighth century. The Arab conquests opened up Spain to new colonization which seems to have attained significant proportions – at first, it is true, in a quasi-Asiatic cultural setting – but this was destined to be temporary, waning with the Reconquest and the expansion of the Christian kingdoms. Simultaneously, and apparently with the sedulous encouragement of the Carolingian rulers in France, Italy, and Germany, Jewish merchants and traders (typified in the \*Radanites who had their base in the Rhone delta) became active in Western, then in Central Europe, establishing a fresh nexus of Jewish communities or reinforcing the old. In Eastern Europe – an outlet for their exports of the manufactured products of the West, a source of their purchases of raw materials and slaves – they presumably joined up with older Jewish settlements that had spread northward from the Black Sea and Crimea or along the Danube valley. This period moreover coincided with that of the near-extinction of the old settlement in Erez Israel and the drastic dwindling of that of Mesopotamia and the neighboring lands, due in part to political and in part to economic causes. The result was that in this period, approximately between 800 and 1050, there took place either a mass transference of the Jewish population from East to West, or else a phenomenal expansion of the one and dwindling of the other which had

much the same effect. From the 11<sup>th</sup> century, in any case, the center of Jewry and of Jewish intellectual life was transferred to Europe, where it was to remain for nearly 1,000 years. The new settlers were moreover of a different type in many respects from the old. They (especially those of Northern Europe) might be termed “Talmud Jews” who guided their lives in every respect according to the detailed prescriptions that had become evolved recently in Erez Israel and especially Mesopotamia, and considered that the study of the Talmud was the greatest of religious duties and of personal pleasures. Hence, when the great talmudic academies of Mesopotamia decayed in the 11<sup>th</sup> century, those of Northern Europe – especially France and the Rhineland – were ready to take their place; and the former rabbinic traditions were perpetuated there for centuries. In the south of Europe, particularly in Spain, a somewhat different intellectual tradition prevailed, literature, belles lettres, philosophy, and poetry attaining new heights. At the same time, the position of the Jews, straddling the Latin-Christian and the Arab-Islamic cultures, qualified them in a unique degree to perform the function of middlemen in intellectual as well as economic activities; and while on the one hand they participated in the scientific and philosophical activities of the Islamic world, on the other they were to a great extent responsible for the transference of the superb fruits of these activities to the 12<sup>th</sup>-century Christian world, and so helped to bring about the Latin renaissance and the revival of learning in Europe.

### Medieval Position

It is possible to exaggerate the well-being of the Jews in Europe in the Dark Ages, but there can be no question as to the great and tragic difference that resulted from the \*Crusades. Hitherto, attacks on the Jews had been sporadic and occasional, but from the onslaught on the Jewish communities in France and the Rhineland in 1096 they became commonplace during any period of religious excitement or incitement; not only when the Christian forces marched against the infidels or heretics, but when such preposterous charges as that of the \*blood libel (from 1141) or of the desecration of the \*Host (after 1215) were brought up against the Jews. The stimulus given to European trade by the Crusades and the expansion of the Italian trading republics undermined the position of the Jewish international merchants. As a result of this, combined with the fact that at this period the Church's attack on the practice of usury reached its climax, the Jews of Northern Europe especially were now driven into the profession of \*moneylending – encouraged and protected by their rulers, whose systematic and rapacious system of taxation converted this into a primary source of revenue for themselves. On the other hand, the profession of moneylending, besides affording ample leisure for the talmudic study that had become the all-pervading passion of Northern European Jewry, endowed them temporarily, in the intervals of spoliation, with a remarkable degree of economic well-being, so that the Jews of France, Germany, and \*England in the Middle Ages constituted one of

the most affluent nonnobiary societies of the contemporary world. Thus, economic resentment was now added to the ever-increasing religious hatred. It was under the influence of this atmosphere that the fourth \*Lateran Council of 1215 codified and reenacted the former anti-Jewish discriminatory legislation with innovations such as the enforcement of the wearing by the Jews of a distinctive humiliating \*badge to distinguish them from other men. This henceforth remained a standard of conduct, to be enforced whenever the spirit of reaction triumphed. Such an attitude was increasingly intensified by the constant activity of the Christian mendicant orders, especially the \*Dominicans, founded at this period precisely to combat heresy and unbelief. It was partly due to their influence that the Jews were expelled from England in 1290 and from France in 1306, their now diminished utility to the royal treasury being outweighed by the immediate profit of a single confiscatory measure. The Jews were absent from England henceforth until well after the end of the Middle Ages, and feeble attempts at reestablishment in France were unsuccessful.

Most of the refugees from these countries probably found their way ultimately to Germany, where political fragmentation prevented any similar wholesale measure, although the outbreaks of massacre, particularly at the time of the \*Black Death of 1348–49, far outdid in scale and horror anything else of the sort known in medieval Jewish history. Hence it was only a feeble remnant that maintained the Jewish connection here unbroken. On the other hand, the greater security, and opportunities for profitable activity in an economically undeveloped area, drew Jews (as well as non-Jews) at this time to \*Poland, now struggling for revival after the devastation wrought by Tatar invasions of the 13<sup>th</sup> century. With the close of the Middle Ages this country became the essential bulwark of Jewish life in Europe, perpetuating the intellectual traditions of France and the Rhineland, still maintaining the colloquial German of their ancestors as their \*Yiddish vernacular, and developing in the \*Council of the [Four] Lands and the sister-bodies autonomous institutions hardly paralleled elsewhere in Diaspora history. Poland therefore became the center of “\*Ashkenazi” Jewry, i.e., those of (Franco-) German origin.

Meanwhile, the condition of the Jews of Spain too, after reaching unprecedented heights of culture as well as of political influence even under the Christian kings, began to deteriorate owing to the constant propaganda of the friars. A wave of massacres in 1391 initiated the problem of the \*Conversos or \*Marranos or \*New Christians, which inexorably led in due course to the establishment of the \*Inquisition in 1484, and the Expulsion from Spain in 1492 and from \*Portugal (leaving behind however a compact body of Marranos) in 1497. The refugees made their way in great numbers eastward, where they revived the flagging communities that had survived from Byzantine times. Turkey-in-Europe (see \*Ottoman Empire; apart from Turkey-in-Asia, where the same occurred) thus became the great center of \*Sephardi (or Spanish and Portuguese) Jewry, as Poland was of Ashkenazi Jewry, and the

communities in \*Constantinople, \*Salonika, and other places preserved the ancient traditions of Spanish-speaking Jewry in islands of western Mediterranean culture transplanted to Eastern Europe.

### Renaissance and Counter-Reformation

In the first half of the 16<sup>th</sup> century, the Italian mainland (the Jews had been expelled from \*Sicily and \*Sardinia, with the rest of the Aragonese dominions, in 1492) had witnessed a remarkable development in Jewish cultural life and activity, in the spirit of the Renaissance. But this was changed by the Counter-Reformation. The Jews were expelled from the Kingdom of \*Naples by its Spanish rulers in 1542; the old anti-Jewish code with new extensions was rigidly enforced in northern Italy (especially the papal dominions) from 1555 onward, accompanied by the institution of the \*ghetto and heartless enforcement of the ghetto system henceforth invariable in Catholic Europe. Although Jewish communities continued to exist in the famous ghettos of \*Rome, \*Venice, \*Mantua, etc., which, though not numerically large, played a great part in Jewish cultural life, a considerable proportion of Italian Jewry (especially from the center and south of the peninsula) was now absorbed in the Sephardi communities of the Near East. It is important, however, to note that these newly reestablished centers, under Muslim rule, whether or not in the geographical bounds of Europe, were henceforth basically European in culture, outlook, and language: segments as it were of medieval Europe embedded fossilwise in Asiatic or African soil.

The Renaissance and the accompanying movements established for centuries the predominance of Europe in the world politically, culturally, and scientifically. It hence confirmed the predominance of European Jewry over its coreligionists in other continents, most paradoxically, precisely at the time when most of Europe rejected, ejected, and excluded the Jews. Though European Jewry had led in every aspect of Jewish creativity since the beginning of the millennium, there had been solid collaboration hitherto from elements in other continents; from now on, the lead of Europe was overwhelmingly great, and so far as Jewish life in the other continents was concerned it was on the whole as protraction of European Jewish life. The development of \*printing confirmed and accentuated this cultural hegemony. For four and a half centuries at least, almost all Hebrew printing was done in Europe – with the inevitable result that the European Hebrew texts in particular were accepted as classical, and new works by European Jewish scholars became universally accepted while others of perhaps equal merit might remain in manuscript and almost unknown in wider circles.

The culmination of the age of degradation was accompanied, however, by the glimmer of a new dawn. Marranos mainly from Portugal rather than Spain, settling at this period in Northern Europe for the sake of business more than freedom of conscience, ventured little by little to throw off the disguise of Christianity. By the end of the 16<sup>th</sup> century, a number of new Jewish communities, hovering as yet on the borders of

clandestinity, began to establish themselves in this area, where for generations no Jews had been known; and by the middle of the 17<sup>th</sup> century there were at \*Amsterdam, \*Hamburg, and other cities (a little later in \*London also) open Jewish communities of a new “modern” type, socially assimilated to the world around them.

In Eastern Europe, by this time, the Jews had become involved in the hatreds that had been engendered between the Roman Catholic Poles and their persecuted Greek Catholic subjects in the \*Ukraine. In consequence, when the latter rose in revolt under the Cossack hetman \*Chmielnicki in 1648–49, Jews as well as Poles suffered, the Jews even more than the Poles, the ensuing wave of massacres ending the days of tranquility that had hitherto been the rule there. Henceforth, the tide of emigration set in the reverse direction, from east to west, the communities of Germany, and thereafter of Western Europe, being considerably reinforced. This was intensified as generations passed and the condition of Polish Jewry constantly deteriorated. Conversely, at this period the emergence in Germany after the Peace of Westphalia (1648) of competing states and would-be resplendent courts gave opportunities such as had never existed before for lucra-

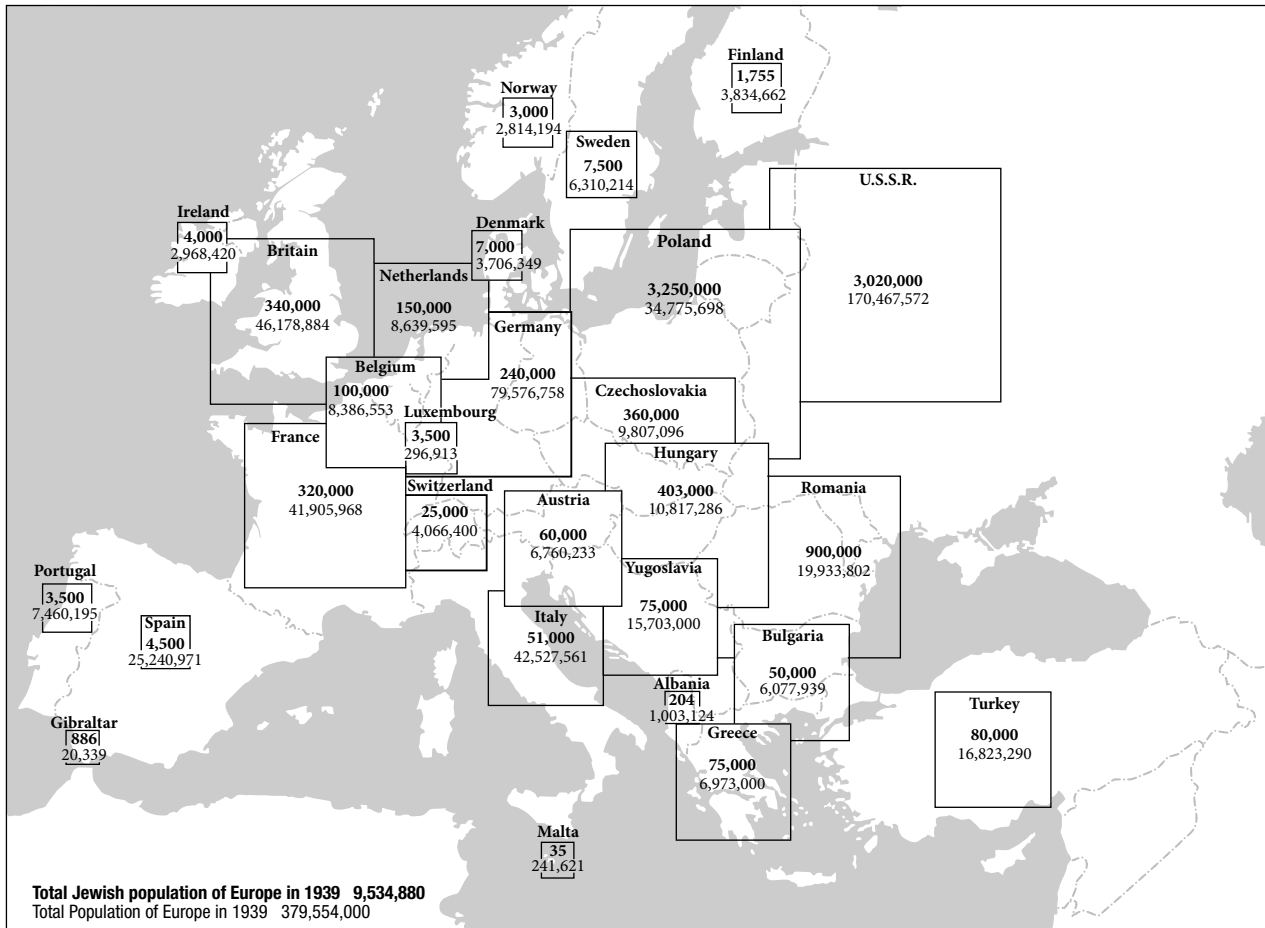

tive activities for Jewish factors and \*Court Jews, new Jewish communities often developing around them. Thus here too a new type of socially assimilated Jew began to emerge in the 17<sup>th</sup> century, culminating in the 18<sup>th</sup> in the remarkable figure of Moses \*Mendelssohn, almost the first Jew to play a role of real importance in European cultural life.

### Emancipation

Thus by the end of the 18<sup>th</sup> century a new type of Jew had emerged in Western Europe. After the outbreak of the French Revolution it was hence inevitable that the new doctrine of Liberty, Equality, and Fraternity should be applied, at first reluctantly, to the Jews as well – that is, that they should be given the same rights, receive the same treatment, and have the same duties as other men. Or, to put it another way, they were now formally recognized as Europeans, differentiated from other Europeans by adherence to another faith. These new doctrines were moreover imposed by or imitated from the French almost all over the continent of Europe where Jews were to be found. A reaction followed the fall of Napoleon in 1815; but henceforth Jewish political equality was part of the liberal creed, and it was accepted almost everywhere by the

*Jewish population of Europe, 1880. Jewish figures based on American Jewish Yearbook.*

Population in 1939, before the outbreak of World War II. Jewish figures based on American Jewish Yearbook.

third quarter of the 19<sup>th</sup> century (the crucial year may be fixed at 1870), Jewish \*emancipation being henceforth the rule. Jews now began to play a role of increasing importance in European cultural, literary, scientific, social, and even political activity. At the same time, Jewish \*assimilation became accelerated, both in the extreme form of conversion to the dominant faith, and in the more loyal form of the representation of Judaism simply as a divergent European religion – that is, \*Reform Judaism, in all its branches and aspects (including \*neo-Orthodoxy). The development of a Hebrew secular literature along European models (\*Haskalah) and of vernacular literature on Hebrew scholarly themes (Wissenschaft des Judentums) were other aspects of this same tendency.

There was however one area where this new attitude did not apply, and the exception was numerically more important, and in its way more significant, than the rule. In \*Russia (where there was no important Jewish settlement until the annexation of those areas of the old Polish kingdom which had the largest Jewish population) these were years not of progress but (with rare intervals) of reaction, and in 1881 a wave of massacres (\*pogroms) began on a scale and of a type which recalled the Middle Ages, to be followed by economic

and social restrictions of unprecedented scope (the \*‘‘May Laws’’). A wave of emigration (see \*migration) followed on a vast scale. This entirely changed the face of European Jewry within very few years. It greatly reinforced the Jewish communities of Western Europe, in particular that of England, and even changed their character. But far more important than this was the transatlantic migration. Emigration largely from Germany in the first three-quarters of the 19<sup>th</sup> century had relieved the pressure of population in that country and at the same time greatly developed the Jewish community in the \*United States of America. Now, within a few years, as a result of immigration from Eastern Europe, it was to be reinforced in fantastic proportions. The results were all-important. For eight centuries after approximately the year 1000, the essential center of Jewish life and creativity had been in Europe. Outside the European area there had been only relatively unimportant offshoots, and this applied in particular to Ashkenazi Jewry. After the 1880s the United States was to be the second, and in due course the first, center of Jewish life in the world, from the point of view of population, and the relative role of European Jewry correspondingly diminished. From the early Victorian era the Western European Jewish communi-

ties had taken the lead in political and charitable activities on behalf of their depressed coreligionists elsewhere. From now on, their preponderance waned, passing in an increasing degree to America. The process of emigration was paralleled in \*Romania and \*Galicia (then under Austrian rule). Between 1880 and 1914, about two million Jews from Eastern Europe transferred themselves to the New World. It is true that natural increase kept the total population level actually unchanged, but had it not been for the emigration it would have continued to rise enormously.

During this period, the ancient Sephardi communities of the Mediterranean area had been affected by quasi-lethargy. Although under the rule of Turkey and the Balkan successor states their material and political condition was on the whole not adverse, the spirit of creativity that had been so marked in Spain had now passed from them almost entirely.

### World War I

World War I marked the beginning of a cataclysm in European Jewish life. The revolutions of 1917 brought the Russian Jews emancipation, but at the same time ushered in the Bolshevik regime which in the long run severed the mass of Russian Jews from their coreligionists abroad, and indeed from

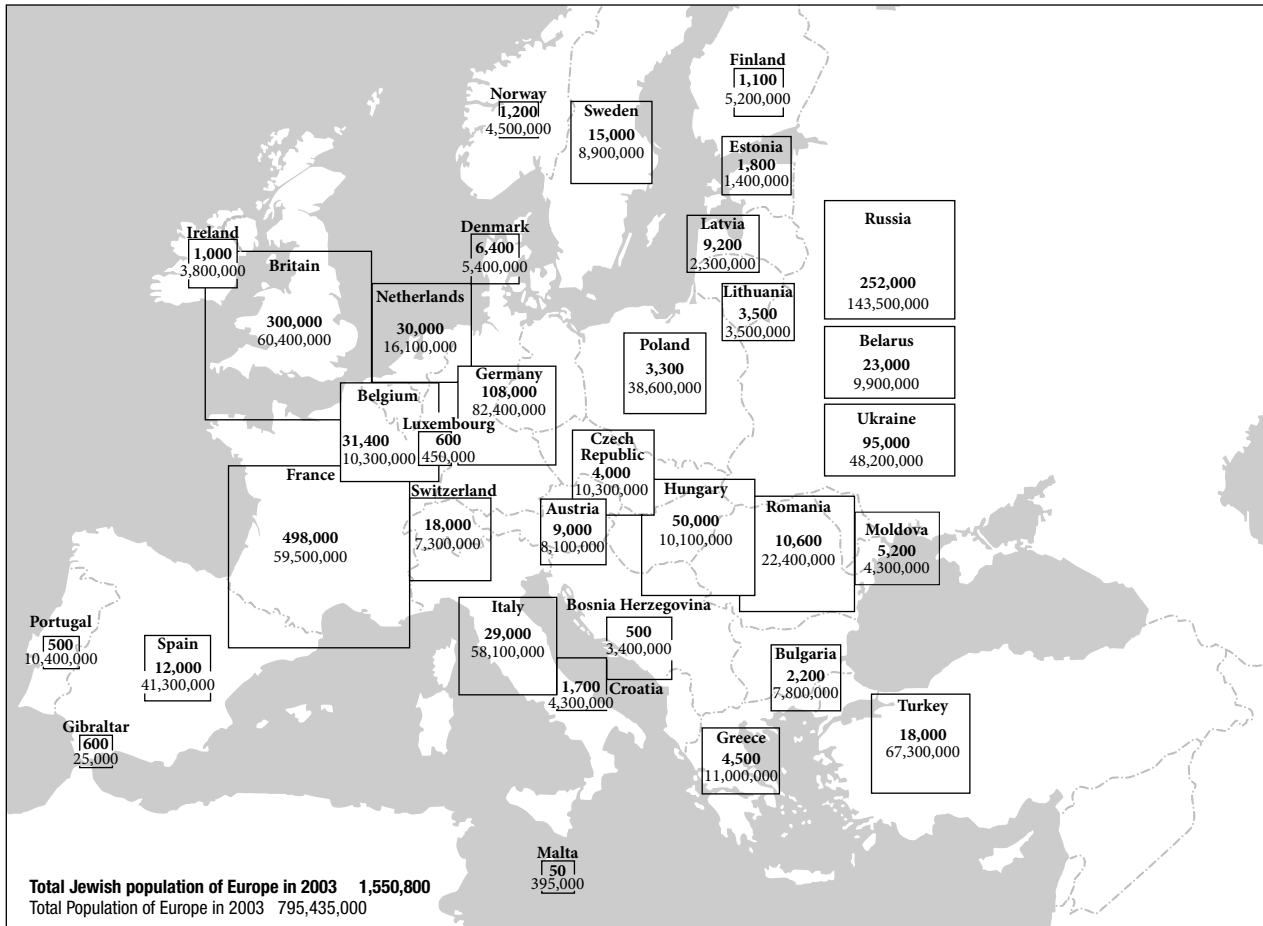

Judaism. On the other hand, the removal of the traditional residence restrictions, which had hitherto confined the Jews to the \*Pale of Settlement, implied that henceforth they were spread more evenly throughout the vast Russian territories, in Asia as well as Europe. Although the rights of the Jews in the Succession States, which were severed mainly from Russia (especially Poland with a very large Jewish population), were nominally guaranteed by the Versailles treaties, the actuality fell short of this. The ensuing period was hence one of strain and perplexity, and emigration continued – though on a smaller scale than hitherto. Owing to restrictions in North America it was now largely directed to South America, and in part to Erez Israel, as a result of the \*Balfour Declaration which was specifically intended to help solve the problems of European Jewry.

### Rise of Antisemitism and Nazism

In Germany, the dazzling progress of persons of Jewish extraction after Emancipation had given rise at the close of the 19<sup>th</sup> century to the new racial \*antisemitism. For a long while this had remained an annoyance rather than a menace, although in France the \*Dreyfus case from 1894 to 1896 had caused a major political convulsion and convinced Theodor \*Herzl that

the solution to the Jewish problem must be sought outside the setting of European life. The German defeat in World War I and the physical as well as moral distress that ensued gave the antisemitic movement in that country an enormous impetus, and it became a cardinal principle of the Nazi Party (see \*National Socialism) which attained power in 1933. The persecution that ensued drove very large numbers of Jews from Germany and \*Austria into exile, to other parts of Europe, to Erez Israel, and to other continents. This, however, proved to be only a beginning. During World War II, in the course of which the German armies overran almost all those parts of continental Europe in which Jewish communities existed, a systematic campaign of extermination was carried out. By the conclusion of hostilities in 1945, some 6,000,000 had perished in the \*Holocaust out of the 9,000,000 who had lived in Europe in 1933, apart from the hundreds of thousands who had gone into exile; most of the greatest Jewish communities of the Continent – \*Vienna, \*Berlin, \*Warsaw, \*Lodz – had been annihilated. Many lands – including \*Poland, \*Yugoslavia, \*Czechoslovakia, and even \*Holland, as well as Germany and Austria – had become almost empty of Jews, most of the handful of survivors preferring to leave the blood-soaked soil.

The great talmudic academies of Eastern Europe had been destroyed, as well as the center of Sephardi culture in the Balkans. Moreover, the Russian Jewish remnant seemed to be cut off from Jewish life even more completely than before, henceforth having no creative role to play.

The proportion of European Jewry in the world Jewish population declined in the course of half a century from 87.2% in 1880 to 58.05% in 1939, and then to 30% in 1968 and 12% in 2003. After approximately a thousand years, the European dominance in Jewish life has ended. It has on the one hand reverted to the ancestral soil in Asia; on the other, been transferred to the New World beyond the Atlantic Ocean.

**EUROPEAN COMMUNITY, THE.**

**The Beginning of the European Economic Community**

After World War II, Europe was suffering from the wide destruction caused by the war and the deep separation between two different camps: one which had struggled for freedom and the other which had tried to subdue Europe under Nazi

dictatorship and coldly organized the massacre of six million Jews.

Winston Churchill, who had been British prime minister during the war, launched an appeal for European unity on September 19, 1946, in Zurich. The first concrete example of European economic integration was the customs union among Belgium, the Netherlands, and Luxembourg, called "Benelux" which started on January 1, 1948.

U.S. Secretary of State George Marshall was ready to promise American aid for the reconstruction of Europe, on condition that European countries would pool their efforts and would agree among themselves on the distribution of American aid. Thus in 1948 was established the first post-war European organization, the OEEC (Organization for European Economic Cooperation). Many other organizations were created, and like NATO, the Atlantic Alliance, in 1949, the Council of Europe in 1949, an instrument of inter-governmental cooperation with no transfer of national sovereignty.

Robert Schuman, the French minister for foreign affairs, declared on May 9, 1950:

The contribution which an organized and active Europe can make to civilization is indispensable for the maintenance of peaceful relations. Because Europe was not united, we have had war. The uniting of the European nations requires that the age-old opposition between France and Germany be eliminated. The action to be taken must first of all concern France and Germany.

On April 19, 1951, six countries (Belgium, the Federal Republic of Germany, France, Italy, Luxembourg, and the Netherlands) signed the Treaty establishing the European Coal and Steel Community (ECSC). It was thought that by pooling coal and steel, two of the most important raw materials for heavy industry, new military conflicts could be avoided and industrialization could be promoted. This sectorial approach very soon proved itself too narrow, and it was decided to make a bold step forward to full economic integration; on March 25, 1957, the six countries signed the Rome Treaty establishing the European Economic Community (EEC), which entered into force on January 1, 1958.

The creation of a vast common market was the first objective with the aim of reaching higher living standards, full employment, and economic expansion. After some years of a transitional period goods were to flow freely among the six member states thanks to the gradual disappearance of tariffs; a common agricultural policy was established as well. The Commission in Brussels was to coordinate the work and prepare specific proposals to be submitted to the Council of Ministers which alone had the power of decision, thus keeping it in the hands of the member countries; the Commission would then have to implement the decisions taken by the Council.

#### **Israel and the EEC**

The French scholar Dominique Moisy divides the relations between Israel and Western Europe into three periods: the first 20 years, in the 1950s and 1960s when "Israel was perceived

by Europeans as a courageous and small pioneer state symbolized by the kibbutz"; "the virtual ostracism of the 1970s and the turn of the decade, when Israel was seen mainly as an ambitious imperialist power bent on expansion"; and the new third phase "characterized by a more neutral and less emotional approach to Israel."

The ink of the signatures on the Treaty of Rome was not yet dry when the Israeli government tried to establish contacts with the Community. It submitted a memorandum to the Commission of the EEC in Brussels on October 30, 1958, and a year later Israel was the third country to seek the accreditation of an ambassador as Chief of the Israeli Mission to the EEC, the ECSC, and Euratom. On June 20, 1960, David Ben-Gurion, the Israeli prime minister, met at Val Duchesse in Brussels with Prof. Hallstein, president of the Commission, and with Mr. Rey, member of the Commission in charge of external relations. Ben-Gurion expressed the wish of the Israeli government to sign an association agreement with the EEC.

The Commission submitted a detailed questionnaire to Israel and the Israeli Ministry of Foreign Affairs answered in a memorandum of September 27, 1960, explaining that it was seeking an Association Agreement with the EEC according to Article 238 of the Treaty of Rome; this would entail the creation of a customs union and would lead to the establishment of the clauses for Israeli participation in the framework of the Common Agricultural Policy envisaged by the EEC, as well as the harmonization of the economic and social policies.

During the following years the Israeli Ministry of Foreign Affairs developed extensive diplomatic activity at the Commission in Brussels and in each of the six capitals of the member states as well as in the European Parliament in Strasbourg.

On July 7, 1961, the diplomatic representatives of Israel brought to the attention of the governments in each of the six member countries an identical Note Verbale in which it asked for the opening of negotiations with the EEC on all the outstanding problems without defining beforehand their possible solution.

The Council of Ministers of the EEC decided on July 28, 1961, to invite the Commission to start a study of the relations between Israel and the EEC. Again the Israeli government, in a memorandum of November 24, 1961 to the Commission, expressed its wish to reach a global and preferential agreement, reiterating the same point of view in a note of February 1962 to the six governments. The first parliamentary delegation of the political groups of the European Parliament, headed by Alain Poher, arrived in Israel in February 1962.

In April 1962 the Council of Ministers of the EEC decided to open exploratory talks with Israel, which started in Brussels in May 1962; following these talks the Council of Ministers decided on September 24, 1962, to open negotiations between the EEC and Israel "in order to seek solutions to problems of commercial relations between Israel and the Community." These negotiations started in Brussels on September 26, 1962; the head of the Israel delegation was Mr. Levi Eshkol, then

minister of finance, while M. Jean Rey, member of the Commission, headed the delegation of the EEC.

Israeli representatives explained the repercussions of the Common Agricultural Policy on third-party countries and put forward some original proposals like the idea of “*trafic de perfectionnement passif*” according to which European raw material included in an Israeli industrial product and re-exported to the EEC should not be subject to the payment of custom duties.

The negotiations were held in three subsequent meetings in Brussels, on November 1962, June 1963, and March–April 1964; they reached a first non-preferential commercial agreement.

The Israeli government had to decide whether to accept this first agreement, limited as it was in its scope, or reject it in order to obtain a larger agreement more suitable to the solution of Israeli foreign trade problems. It was decided to sign the first agreement while at the same time endeavoring to enlarge it. Ambassador Amiel Najar said during the last phase of the negotiations:

Even if all the considerations which I have expressed bring us necessarily and logically to the need for a global agreement between the European Community and Israel, my Government responding to the friendly advice and suggestions made to it in various capitals, has accepted the request of the EEC to follow what is called a pragmatic way.

Thus the commercial agreement was signed in Brussels by Golda Meir, minister of foreign affairs, on June 4, 1964; it allowed a temporary and partial suspension of the Common External Tariff (CET) on about 20 products of interest to Israel and the removal of quantitative restrictions. Since it was not a preferential agreement, the reduction had to be “*erga omnes*,” i.e., for all members of GATT (the General Agreement on Tariffs and Trade); since Israel was not a major supplier to the EEC for any item, it was very difficult to find products which could benefit Israel without causing an excessive loss to the EEC. Generally it was granted a 20% reduction, reaching 40% for grapefruits, 35% for avocados, and 10% only for grapefruit juice; moreover an acceleration of national tariffs to the CET was decided for some other products, providing a concession of temporary and decreasing value since CET had to be progressively implemented anyway.

The economic value of this commercial agreement was very limited, yet it was the first institutional link with the EEC, establishing a joint committee, and had attached to it an important protocol according to which if the EEC were to give any new concession on oranges to any third country in the future, a review of the commercial agreement with Israel would become possible.

This was a very important principle since it was understood that even without naming the North African countries, they were the first ones to be considered. The North African countries enjoyed a privileged status in the Rome Treaty as previous French colonies, and it was of great importance to

avoid the discrimination of Israel vis-à-vis these countries, especially Morocco, in the trade of oranges, a major Israeli export at that time to Europe.

The European Parliament was of great help in that period because even if it had no competence, it gave moral support to the Israeli demands; before the Parliament M. Rey said on January 24, 1964 that the commercial agreement would permit the various problems not yet settled in its framework to be reexamined periodically with the Israeli friends; “we will strive thus progressively to strengthen it and enlarge it.”

A report was submitted by M. Blaisse in the name of the Commission for the external trade of the EP in 1964, in favor of “a first agreement giving satisfaction to both parties.” An official delegation of the European Parliament came to Israel in November 1964 headed by President Duvieusart. The following year, 1965, Mr. G.L. Moro presented a provisional report proposing a resolution, later approved by the EP, in which Article 1 read:

Reaffirms that only the association of Israel to the European Community, according to Article 238 of the Treaty establishing the EEC, will allow the complete satisfactions of the reciprocal interest.

Thus the principle of an association was reaffirmed by the EP, while Israeli representatives stressed in the meetings of the Mixed Commission in April 1965 and in June 1966 that a global agreement remained the aim of the Israeli government. This goal was stressed in a formal diplomatic note and a memorandum on October 4, 1966, to the Commission and the Governments of the Six in which a demand was put forward to substitute the commercial agreement expiring on July 1, 1967, by an association agreement. In this memorandum it was said *inter alia*:

Be it in the domain of commercial exchanges and industrial organization, in that of international cooperation or in that of science and technology, if Europe of the Six would conclude a large association agreement with Israel, it would find in it a loyal and efficient partner.

The Council of Ministers invited the Commission in December 1966 to start exploratory talks with Israel on the problems raised in this note; thus for the first time the Council was authorizing the Commission to discuss a new agreement with Israel.

In June 1967 the Six-Day War started and on June 7, while the Israeli people were engaged in a struggle for their security, the Commission decided to recommend to the Council of Ministers the conclusion of an Association Agreement with Israel, taking into account the special links existing between Europe and Israel. Undoubtedly this was a decision of great political importance even if it could not be implemented without the consent of the Six at the Council.

A special Committee of the Permanent Representatives of the Six in Brussels envisaged in January 1968 either a pref-

erential agreement with Israel for all industrial products at zero custom duty, or a more limited preferential agreement including most industrial products and a reduction of custom duties of 25% to 60% or only an acceleration of the custom reductions due in the framework of the "Kennedy Round," the GATT multilateral negotiation. It seems that at the time only the Federal Republic of Germany and the Netherlands supported the first solution, while Italy, Belgium, and Luxembourg preferred the second and France was against any kind of preferential agreement. In October 1968 the Commission stated again that a preferential agreement was the most suitable means to solve the problem of Israel in its relations with the EEC.

The stand of the member states was divided; in March 1968 the government of the Netherlands declared that the Community should treat in a uniform way all the states of the Mediterranean and therefore they could not accept a preferential agreement with Spain and the North African countries while refusing Israel the same chance. On December 10, 1968, Mr. Luns, then Netherlands minister of foreign affairs, declared:

The Netherlands can not accept the fact that no progress was accomplished with Israel while important decisions were taken for other Mediterranean countries such as Morocco, Tunisia, Spain.

At the Council meeting of January 27, 1969, Mr. Lahr said that it was necessary to establish a double link in the concessions to be made to the Mediterranean countries: a link in timing concerning the simultaneous conclusion of the agreements and a link concerning the content of these agreements. The idea of parallelism between Israel and the North African countries was raised again in February 1969 at the European Parliament in a resolution in which the Commission was asked to prepare at the same time the association agreements with Tunisia and Morocco and the agreement with Israel.

France, according to the press, in May 1969 still refused to consider a preferential agreement with Israel because of the political situation prevailing in the Middle East. This meant simply that the protests of the Arab states against any further preference to Israel were carefully heard in Paris.

Israel on its side was interested in stronger ties with the EEC both for political and economic reasons; Western Europe was an important market for its exports since its agricultural products were suited to the countries of a continental temperate climate, while its industrial products were most suited for sophisticated countries with a high standard of living. An association would entail a structural change in Israeli industry, probably imposing the closure of the least efficient factories, but the process would enhance productivity and would therefore be a healthy one. One could also hope that the association would encourage European investments in the Israeli economy, which had a level of import of goods similar to that of other Mediterranean countries with a population ten times bigger.

On September 1, 1969, the Commission applied a reduction of 40% on the custom duty on oranges; however, the system of reference prices remained unchanged.

France, probably anxious to make progress with the North African countries, changed its stand and at the meeting of the Council of Ministers of July 22, 1969, Foreign Minister Schuman stated that whoever was in favor of a preferential agreement with Israel must at the same time accept the same principle for any Arab country asking for it as well. This idea was accepted by the other members of the Community and the way was open for a decision. On October 17, 1969, the Council issued the mandate for the negotiations "within the general framework of its Mediterranean policy and in expectation of a balanced development in its relations with the countries of the region."

Finally a preferential agreement with Israel was signed on June 29, 1970, in Luxembourg; on the same day a similar treaty was signed with Spain: the Netherlands would have opposed the signature of an agreement with Spain, because of the Franco regime, and made it conditional on a simultaneous signature with Israel.

An association under Article 238 was refused to Israel mainly on political grounds, but a new interpretation was given to Article 113, on which also this agreement was based, in order to give it a preferential nature. Under the clause of the agreement, which entered into force on October 1, 1970, with a duration of five years, more than 850 Israeli industrial products exported to the EEC benefited from a reduction in custom duties which progressively reached 50%. Some sensitive products were put on a special list and given a smaller reduction or a quota ceiling (cotton fabrics); other Israeli products were totally excluded. It was then that the important principle of some reciprocal treatment was established by Israel for goods originating in the EEC; these goods were divided in four categories and a reduction of between 30% and 10% was granted by Israel. The value of custom reduction given by Israel was equal to 40% of that granted by the EEC to Israel.

Israeli agricultural products were granted a 40% reduction in customs duties for citrus, bananas, and avocados; a 30% reduction for fresh vegetables and 40% on fruit preserves. No modification was introduced in the system of reference price.

Some Arab states opposed the conclusion of the new agreement with Israel fearing that it would weaken the Arab boycott; the secretariat of the Arab League sent a memorandum to the Commission threatening to impose a boycott on the EEC members. There was also a hint that Arab oil producers would reconsider their policy if Israel were to be linked to the Community.

### **The Enlargement of the Community**

The accession of Great Britain, Denmark, and Ireland to the Community on January 1, 1973, created a completely new situation that could deeply affect the Israeli economy. Israel

was worried mainly by the changes that would occur in Great Britain because of the great weight of this country in Israeli exports (especially of agricultural products) as well as the fact that the British would raise their custom duties up to the level of CET. The British market had been for years traditionally the most important outlet for Israeli fresh oranges and citrus juices; the British government had a very liberal policy on food imports since its agriculture could not supply more than a small part of local consumption. Entering the Community meant a major change for Great Britain since the Community had a huge surplus of food and the EC would impose the Common Agricultural Policy. Custom duties on fresh oranges and orange juice, for example, would rise steeply; Morocco and Tunisia would enjoy a 4% reduction and therefore there was a danger of diversion of trade in favor of the oranges of these countries against Israeli fruit. Plywood and bromine were among the Israeli industrial products that would have to pay higher custom duties because of the British accession to the EEC.

### The Mediterranean Policy

On February 9, 1971, the European Parliament adopted a resolution inviting the member states to draw up a common policy towards the Mediterranean countries. At the meeting of the EEC Council of Ministers on June 26–27, 1972, Maurice Schuman, French foreign minister, presented a completely new idea: that a “global solution for manufactured products” be found to solve most of the problems of Spain, Israel, and other Mediterranean countries.

The official Israeli reaction to the French proposal was stated by Foreign Minister Abba Eban in a press conference given on August 7, 1972:

I was asked about an idea, proposed by M. Schuman, of a Mediterranean free-trade area including Israel. I think it is a positive idea. It responds to Israel's desire to be associated with a large market and a large community into which its exports would have free entry. We must understand, and our industrialists too, that reciprocity is involved. We would have to open our market, which is a large one for Europe, much more widely...

On November 6 and 7, 1972, the Community Council of Ministers set out the guidelines of the global approach which was to include all the countries of the Mediterranean plus Jordan, with the aim of creating free-trade areas progressively covering also the main agricultural products, as well as organizing financial cooperation for some countries.

On January 30, 1973, a protocol was signed by the Community with Israel and a formal promise was given that a new agreement should be negotiated and would enter into force before January 1974, when the first adjustment to CET was due to take place in Great Britain.

The Council gave a first mandate to the Commission on June 25/26, 1973, but it was not possible to respect the timetable and to complete the package deal with Israel, Spain, Morocco, Tunisia, Algeria, and Malta before the end of the year. At the very last moment the British government decided uni-

laterally to apply a “standstill,” not raising duties on imports from the six Mediterranean countries. The danger of a negative repercussion on the Israeli economy deriving from the British accession was thus temporarily avoided.

A wide range of opinions appeared once more among the member states of the Community. France gave all its support to Spain and the North African countries and stressed its friendship for the Arab countries. Italy was torn between the necessity of paying for most of the concessions to be made on agricultural products of other Mediterranean countries, often in competition with its own, and the desire to play fully its role of a Mediterranean power. Germany, the main commercial partner of the Mediterranean countries, had a moral obligation to Israel and the will to reach an understanding with the Arab states, while generally helping in removing obstacles in the way of the Israeli agreement. In the Benelux countries the business community was eager for closer links with Spain, while public opinion and Parliaments were against Spain for political reasons and in favor of closer links with Israel. A compromise was found enabling each member state to foster its political and economic goals in accordance with its sympathies and interests. In order to avoid United States' opposition to the Mediterranean policy, Great Britain asked and obtained the assurance that no reverse preferences should be given by the southern Mediterranean countries, with the exception of Israel, to the EEC.

After a first round of negotiations, the Commission sent back its proposals to the Council, accepting most of the Israeli requests, in order to obtain a “supplementary mandate.” The Council met again and in its session of July 22/23, 1974, gave the general guidelines for a new mandate.

In December 1974 a new round of negotiations led, after a non-stop meeting from 3 P.M. till 7:25 A.M. next morning, to an agreed text of the new treaty establishing a free trade area for industrial products. The new agreement was signed in Brussels on May 11, 1975, by Foreign Minister Yigal Allon for Israel and by the Irish foreign minister, Garrett Fitzgerald, for the EEC. The agreement, which came into force on July 1, 1975, has no time limit and is therefore still in force; it is of a much wider scope than the two previous ones as it establishes a free trade area although limited to industrial products; Israel gave full reciprocity but with a delay of some years. Thus, while the EEC completed tariff dismantling on Israeli goods already on July 1, 1977, the gradual implementation of the same dismantling by Israel on EEC goods was completed on January 1, 1989, simultaneously to goods originating in the United States thanks to the Free Trade Agreement between Israel and that country.

The Israeli industrialist could now look at the whole Community as its potential market and should be able to produce on a much bigger scale well above the needs of the Israeli domestic market. On the other hand the competition with European goods was now felt inside Israel itself and this implied the need to reach higher productivity, better quality, and in general a more competitive product.

### Political Cooperation

The first aim of the EEC was political although at first it was easier to build the economic side; in November 1970 the foreign ministers of the Six discussed for the first time in Munich a common stand on Middle Eastern problems. Immediately after the Yom Kippur War of October 1973, an oil boycott was declared by OAPEC, the Arab Oil Producers Organization, against the Netherlands and Denmark. This provoked the Declaration of the Nine of November 6, 1973, a kind of total surrender to the Arabs in which four principles were established as the basis for the common European policy: the inadmissibility of acquisition of territories by force; the necessity for Israel to end the territorial occupation in place since 1967; the respect for suzerainty, territorial integrity, and independence of every state of the region and their rights to live in peace within secure and recognized borders; the recognition that due account should be taken of the legitimate rights of the Palestinians.

The beginning of the Euro-Arab dialogue at the end of December 1973 in Copenhagen and its subsequent evolution was a factor for a change to a growingly pro-Arab stand. The Declaration of the Nine in Venice was given on June 13, 1980, after the historic meeting of President Anwar Sadat with Prime Minister Menachem Begin in Jerusalem and the subsequent signature of the Peace Treaty between Israel and Egypt in 1979. In December 1979 the Soviet Union invaded Afghanistan. Some believe that the strategic aim of Europe was to use the outraged feelings of Third World countries regarding the invasion in order to reinforce the European presence in the Islamic world. To this purpose the price of supporting the Arab thesis, the PLO, and the right to self-determination of the Palestinians did not seem too high. According to the Venice declaration of June 13, 1980, the countries of the European Community would be ready to participate in "a system of concrete and obligatory guaranties including in the field" (Art. 5), the Palestinian people should be able "to exercise fully its right to self-determination" (Art. 6), the PLO "must be associated with the negotiations" (Art. 7), the Jewish settlements in the administered territories are considered to be illegal and "a grave obstacle to the peace process" (Art. 9), Israel should put an end to its territorial occupation (Art. 9). Israel did not agree to the text and the spirit of the Venice declaration which ignored the Camp David peace treaty between Israel and Egypt and was considered to be unbalanced and pro-Arab.

The Israeli invasion of Lebanon in 1982 brought the relations with the states of the EEC to their lowest ebb; the Ten at Luxembourg in their declaration of June 29, 1982, maintained "their vigorous condemnation of the Israeli invasion of Lebanon," demanded "an immediate withdrawal of Israeli forces," and "a simultaneous withdrawal of the Palestinian forces in West Beirut" and admonished that:

Israel will not obtain the security to which it has a right by using force and creating "faits accomplis" but it can find this security by satisfying the legitimate aspirations of the Palestinian people, who should have the opportunity to exercise their right to self-determination with all that this implies.

The Council of Ministers also decided to suspend the signature of the second Financial Protocol already initialed. Israel was even accused by Mr. Pisani, member of the EC Commission, to have blocked European humanitarian aid to Lebanon – which had never been sent in the first place.

At the beginning of September 1982 the massacre at Sabra and Shatila provoked the "profound shock and revulsion" of the Ten; they also welcomed the American initiative contained in President Reagan's speech of September 1, 1982, and underlined "the importance of the statement adopted by Arab heads of state and governments at Fez on September 9" calling "for a similar expression of a will of peace on the part of Israel" (Declaration of the Ten of September 20, 1982).

At the European Council of Stuttgart (June 17–19, 1983) the Ten, under the presidency of Germany, took a positive view of the Israeli-Lebanese Peace Treaty and decided to resume normal relations with Israel allowing for the signature of the second financial protocol and the meeting of the Council of Cooperation. In the Dublin summit of December 3–4, 1984, the Ten reiterated that the PLO must be associated with negotiations but refrained from any new Middle Eastern initiative. Bettino Craxi was the first European prime minister to go and meet Yasser Arafat, in Tunisia on December 7, 1984. The Ten had mixed feelings about American initiatives; they considered Arafat as a moderate who could be convinced to state publicly the abandonment of terror; they felt that if Arafat disappeared any successor might be much more radical. The huge economic interest of many European companies in the Arab countries seemed best assured by intimate contact with Arafat.

In the year 1985 two events showed how wide the gap between the Europeans and Israel had remained: the Israeli raid on the PLO headquarters near Tunis on October 1, and the hijacking of the Italian boat *Achille Lauro* some days later. The first was compared by an Italian minister to the Nazi killing of innocent hostages, among them Jews, by the Nazis in Fosse Ardeatine near Rome in March 1944; the second gave rise in the Italian media to the idea that Israel could avoid Palestinian terrorism if it only agreed to make concessions to the PLO.

The Israeli prime minister, Shimon Peres, launched a peace plan at the General Assembly of the United Nations in New York in October 1985, with the idea of an international conference that would accompany direct negotiations among the parties. Peres presented an Israeli scheme for peace at the Council of Cooperation in Brussels in January 1987. The declaration of the Twelve of February 23, 1987, reasserted that a negotiated solution in the Middle East should be based on the Venice Declaration; the Twelve were in favor of an international conference under the auspices of the United Nations and they expressed the wish "to see an improvement in the living conditions of the inhabitants of the occupied territories."

The entrance of Spain and Portugal into the European Community on January 1, 1986, worried Israeli farmers because 70% of their total production is exported and about

70% of total agricultural exports go to the EC countries; their exports could be endangered by preferential treatment given to Spain, their main competitor.

At a very early stage, in 1982, the Israeli Mission in Brussels voiced its concerns about the possible negative repercussions of the entry of Spain; the EC decided that traditional currents of trade should be allowed to continue unhampered. In this spirit a protocol was signed on December 8, 1986, that was aimed at solving some of the problems of Israeli agricultural exports during the transitional period of the Spanish accession. At the end of July 1987 the additional protocols of adaptation between Israel, Spain, and Portugal were initiated.

A problem which gave rise to some tension between Israel and the EC Commission was the sudden decision by the Council of Ministers to unilaterally grant the same preferences enjoyed by Israeli products entering the EC to Palestinian products originating in the territories. The decision was published on December 31, 1986; the Israeli authorities felt that the Twelve had more in mind to help the Palestinian entity evolve into a state than merely economic matters.

After months of negotiations Israel accepted the EC decision for the direct export of agricultural products from the West Bank and Gaza Strip to the EC. Subsequently the Council of Ministers approved on December 15, 1987, the signature of three additional protocols, including one on Israeli agricultural exports, which was long overdue, since it had to give Israel some defense against damages caused by the Spanish adhesion of January 1, 1986. The European Parliament, in an unprecedented move, decided on March 9, 1988, not to approve the ratification of the Protocols because of Israeli repression of the Intifada and the obstruction of Palestinian exports, which had been settled by then. This was a *de facto* political sanction using economic means; eventually the European Parliament ratified the three protocols on October 12, 1988.

On December 30, 1989, there was a demonstration in Jerusalem organized by the Peace Now movement. Excessive force was used by the Israeli police and on January 18, 1990, the European Parliament condemned "the brutal intervention of the Israeli police during the demonstration" and recalled a previous resolution concerning the closing down of Palestinian universities. The EP called on the Commission "to freeze immediately budget heading 7394 allocated to scientific cooperation with Israel." The EC Commission on February 7 quickly complied with this resolution and suspended the scientific cooperation; it took more than a year to restore those joint projects unilaterally brought to an end by the Commission.

Financial aid to the Palestinians started in 1982 with a small sum of 3 million ECU yearly; in the year 1991 after the Gulf War, an emergency aid of 60 millions ECU was decided upon but again the Commission made it conditional on the nomination of its representative for the distribution of this aid in the territories: a request considered by the Israelis to be political.

In a meeting which took place in Paris in June 1991 between Foreign Minister David Levy and the European "troika"

a wide agreement was reached: Israel would be admitted to the European Economic Space, the Community would participate in the future Peace Conference on the Middle East, and the Commission would appoint its representative to the territories. No timetable or technical details were given and the entrance of Israel to the European Economic Space was never implemented.

[Sergio I. Minerbi]

### Later Developments

Relations between Israel and the European Union (EU) are now formally governed by the Euro-Mediterranean Partnership, established through the EU-Israel Association Agreement and the regional dimension of the Barcelona Process.

Israel was keen on becoming a part of the Barcelona Process, initiated in 1995, between the EU and 12 Mediterranean partners. This initiative was conceived by the EU mainly with a view to the Maghreb countries. These countries, which had historical ties with France, were sending thousands of emigrants to Europe. The EU felt that raising the standard of life in the Maghreb countries and creating new jobs would bring less pressure to immigrate to the EU. The situation was radically different for Israel.

Ten years later, the achievements of the Barcelona Process are rather modest. Mediterranean countries need to create 5 million jobs a year, a target which seems impossible to attain. The EU also hoped that through the Euro-Mediterranean Partnership it would have a say in the Middle East peace process.

The major development which took place since the early 1990s in the relations between Israel and the EU has been the signature of the Association Agreement, which was signed on November 20, 1995, and replaced the earlier Cooperation Agreement of 1975. The Association Agreement went into force on June 1, 2000, following ratification by the 15 Member State Parliaments, the European Parliament, and the Knesset.

The principles outlined in the treaty were not always fully implemented. According to the treaty, regional cooperation should be encouraged, a regular political dialogue should be established, as well as a dialogue on scientific, technological, and cultural matters. The regular political dialogue has taken place on rare occasions, probably because the EU was constantly taking sides in the ongoing conflict between Israel and the Palestinians, in favor of the latter.

The situation has been rather better in the field of economic cooperation. In trade relations, the EU is Israel's major trading partner, with about 40% of Israeli imports coming from the EU and about 33% of Israeli exports directed to the EU. In the year 2004, total imports from the EU reached \$16,813 million, while total exports reached \$10,721 million. The figures excluding diamonds are respectively \$7,611 million for the imports and \$7,435 million for the exports. One could jump to the conclusion that the huge deficit of about \$4 billion a year is due mainly to the trade in diamonds.

Cooperation has been the best in the field of science and technology. Israel is highly advanced in technological innovation, especially in the electronics industry and biotechnology. Many achievements in the electronics industry are due to fall-out from military research.

On March 8, 1999, the Agreement for Scientific and Technical Cooperation between the European Community and Israel went into force. Thus Israel has been fully associated with the 5<sup>th</sup> Framework Programme (FP<sup>5</sup>) for Community RTD (1999–2002). Later, Israel became fully associated in the 6<sup>th</sup> Framework Programme (2002–06) as of December 16, 2002.

With the access granted to Israel to the Framework Programme for Community RTD, the financial flow was reversed. Instead of the about \$20 million a year received by Israeli bodies from the EU, \$36.6 million were paid by Israel as its participation fee. Israel's share is calculated on the basis of the percentage of its GNP compared to the total GNP of all contributing countries. Israel's status of "Associated Country" requires financial participation in the FP budget, which reached Euro 150 million for FP5 and Euro 192 million for FP6. In return Israeli organizations, which take part in selected joint EU-Israel projects, can receive a financial contribution from the Commission consisting of the reimbursement of some of the costs incurred. The Israeli contributions are very substantial in comparison with the total expenditure of the Israeli government in support of industrial-scientific research.

The main advantage of working with European bodies is to share risks and costs. On the other hand, about 40 percent of the groups working in the framework program do not envisage any product at all. In September 2003, there were 623 joint research projects associating Israeli groups to the FP5; out of them, 143 were under Israeli coordination. Total estimated European funds to Israeli research reached Euro 163 million in FP5.

At the end of September 2000, the Palestinians started a new Intifada. Five years later, in September 2005, the Palestinians counted more than 3,000 victims, while the Israelis lost more than 1,000 people, mainly civilians. The Palestinians perpetrated many terrorist actions, but obtained no political results, notwithstanding the support they received from the EU.

On April 30, 2003, the U.S. State Department released the text of the "roadmap" to a permanent solution to the Israeli-Palestinian conflict. The roadmap specifies the steps for the two parties to take to reach a settlement, and a timeline for doing so, under the auspices of the Quartet – the United States, the European Union, the United Nations, and Russia.

On June 4, 2003, a meeting took place at Aqaba, with President George Bush, King Abdullah of Jordan, Israeli Prime Minister Ariel Sharon, and Palestinian Prime Minister Mahmoud Abbas. In his statement Prime Minister Ariel Sharon referred to the possibility of establishing a Palestinian state within temporary borders, if the conditions for this were met. The Palestinian state will, inter alia, be completely demilitarized.

This state will be the home of the Palestinian diaspora; no Palestinian refugees will be permitted to enter the territory of the State of Israel.

On May 1, 2004, the EU was enlarged to 25 Member States and established a new "European Neighborhood Policy" designed to offer its neighbors greater political, security, economic, and cultural cooperation. Policy negotiations with partner countries are meant to bring upon an agreed Action Plan.

On the political level, the discrepancies between the European stand and Israeli policy were most intense during the year 2004 and, sometimes, Israel felt that the Europeans went further than criticizing a policy, but were casting doubt on the legitimacy of the existence of the State of Israel. The European Council of March 25–6, 2004 declared:

The European Council expressed its deep concern at the situation in the Middle East ... following in particular the extra-judicial killing of Hamas leader Sheikh Ahmed Yassin. While having repeatedly condemned terrorist atrocities against Israelis and recognized Israel's right to protect its citizens against terrorist attacks, the European Union has consistently opposed extra-judicial killings, which are contrary to international law.

In July 2004, Javier Solana, the chief representative for foreign policy and security of EU, met Prime Minister Ariel Sharon, who said: "Israel is interested in integrating the international community, mainly Europe, in the peace process with the Palestinians, but without a radical modification of the European stand, mainly regarding the security of Israel and its need of defending itself, it will be very difficult to do so." Solana said on this occasion: "The EU has a role in Middle East peace talks, like it or not."

The EU asked Israel to dismantle its security fence, to freeze the settlements in the territories, to stop extrajudicial executions ("targeted killings"), to guarantee human rights and better living conditions for the Palestinians.

The EU is one of the main contributors of financial aid to the Palestinian Authority and Israel has expressed doubts that a part of its disbursement is not being used for terrorist activities. The European Anti-Fraud Office, OLAF, made an investigation, but did not find enough proof to substantiate the accusation, while at the same time it did not exclude the possibility altogether.

Among the possible causes of the negative stand taken by the EU the following may be indicated: the success of Palestinian propaganda depicting Israel as a demon comparable to the Nazis; the success of the Intifada in influencing public opinion, especially through television; the enormous economic interests of most of the European countries in the Arab countries and their desire to go on selling them huge quantities of arms.

After the death of Yasser Arafat, chairman of the PLO, in November 2004, a new Palestinian leadership agreed to and implemented a kind of truce. Israel, for its part, decided unilaterally to dismantle all 21 of its settlements in the Gaza Strip (\*Gush Katif) and from four more settlements in northern

Samaria. Disengagement from the Gaza Strip was completed on September 12, 2005.

The Action Plan with Israel was concluded on December 13, 2004. It allows the possibility for Israel to participate progressively in key aspects of EU policies and programs, to upgrade the scope and intensity of political cooperation, to encourage Israeli legislation as a means to open the EU internal market to Israel, and to achieve greater liberalization of trade, services, and agriculture. The Action Plan identifies, inter alia, as priorities cooperation in the Middle East conflict and other areas, counter-terrorism, non-proliferation of weapons of mass destruction, human rights, improved dialogue between cultures and religions, migration issues, the fight against organized crime and human trafficking and police and judicial cooperation, transport, energy, environment, science and technology, and people-to-people contacts.

On September 15, 2005, Israeli Foreign Minister Silvan Shalom met in New York with Benita Ferrero-Waldner, the European Commissioner for External Relations and European Neighborhood Policy. She said:

I have also reiterated to Minister Shalom that disengagement has to bring tangible and immediate improvement to the lives of ordinary Palestinians. It has to offer hope to both sides. We are working closely with James Wolfensohn, the Quartet Special Envoy, on ways to revitalize the Palestinian economy. We have offered our help and support to resolve crucial issues such as border crossing, customs and links between West Bank and Gaza.

The Israeli authorities have been very satisfied with the new Action Plan, which extends cooperation to new fields. But it is doubtful that the Israelis really understand that this increased cooperation has a price: to accept the involvement of the EU in the peace process with the Palestinians. Vice Prime Minister Shimon Peres said that eventually a larger Europe will incorporate the Middle East. Then, Israel will certainly ask to be included in the economic network of Europe.

#### Main Agreements between Israel and the EEC

- 4 June 1964 Commercial Agreement
- 29 June 1970 (Preferential) Agreement
- 11 May 1975 Agreement (Industrial Free Trade Area); *Kitvei Amana*, n. 882.
- 8 February 1977 Additional Protocol to the Agreement (on Scientific Cooperation); *Kitvei Amana*, n. 924.
- 18 March 1981 Second Additional Protocol to the Agreement (relating to Greece); *Kitvei Amana*, n. 965.
- 24 June 1983 Second Financial Protocol, *Kitvei Amana*, n. 966.
- 18 December 1984 Third Additional Protocol to the Agreement, *Kitvei Amana*, n. 986.
- 15 December 1987 Fourth Additional Agreement to the Agreement (relating to Portugal and Spain), *Official Journal of the European Communities*, L 327 of 30.11.1988.
- 15 December 1987 Third Financial Protocol, *Ibidem*.
- 20 November 1995 Signature of the Association Agreement

- 1 June 2000 The Association Agreement entered into force
- 8 March 1999 Agreement for Scientific and Technical Co-operation between the EC and Israel, entered into force
- 16 December 2002 Israel associated to the 6<sup>th</sup> Framework Programme
- 13 December 2004 Action Plan with Israel concluded

[Sergio I. Minerbi (2<sup>nd</sup> ed.)]

°EUSEBIUS PAMPHILI (c. 260–339 C.E.), Church Father and archbishop of Caesarea. Eusebius was born in Caesarea Maritima, where he was a pupil of the priest Pamphilus (c. 240–309), who had studied with Origen. Eusebius was appointed bishop in c. 313. He was associated with imperial court circles and was a devoted admirer of the emperor \*Constantine. A scholar in a wide range of fields, Eusebius was a prolific writer on exegesis, history, apologetics, and dogmatics. Especially important is his *Chronicle*, a summary of world history based partly on the Bible. *Historia Ecclesiastica* is a study of Church history in ten volumes (completed in 324) up to the time of the victory of Christianity under Constantine. Important for Church history is his small work on the Christian martyrs of Palestine. He also wrote a biography of Constantine, a panegyric to the emperor who built the first churches in Palestine (notably those at Bethlehem and at Golgotha in Jerusalem).

Eusebius' theological position is reflected in his two great works:

(1) *Praeparatio Evangelica* ("Preparation for Christianity"), in which he proves the Greek views on religion to be baseless, Judaism alone providing the proper foundation for the establishment of religion;

(2) *Demonstratio Evangelica* ("Proof of the Truth of Christianity"), in which he severely criticizes Judaism for failing to perceive that the revelation of God in the Bible was merely a prelude to "the glad tidings [the gospel] of the kingdom of God" and that only in the New Testament do these "glad tidings" appear.

The *Onomasticon* of Eusebius, written between 313 and early 325, contains more than 1,000 place-names mentioned in the Bible and gospels which he arranged alphabetically by books of the Bible, following the Septuagint spelling of the names. The primary aim was for it to be used as a sourcebook to facilitate the reading of the Old Testament with the topography of the Holy Land as its backdrop. At the time of Eusebius, the proper veneration of the places associated with Jesus had still not been fully established and so he would not have deemed it necessary to list such sites in his *Onomasticon*. One assumes that when Eusebius wrote in Greek "one can see this place to this very day..." it meant that he had actually visited the place himself, or that he acquired some reliable first-hand information about it. He was particularly good when it came to places in the hill country and along the coast, but less reliable about far-flung places. There is also information in his work about provinces and administrative districts, about the ethnic makeup of settlements, topography and holy places,

and references to roads. The distances, taken from Roman road maps (e.g., the Peutinger Map) and stated in Roman miles, help determine urban boundaries and the course of highways, and they also provide information on the physical geography of the country. Eusebius also consulted the writings of Josephus. He reports that in his time Jews, Christians, and pagans coexisted in the country, with a large number of Jewish villages in his day but only four Christian ones. The *Onomasticon* was also a major source of inspiration for the \*Madaba mosaic map of the Holy Land, which is dated to the second half of the sixth century. The mosaicist in some cases even copied Eusebius' mistakes. While this was not in any way a comprehensive listing of all the places in the Bible – a feat Eusebius may very well have intended but never succeeded to do – his work serves as an important source of information on the country in the early fourth century.

In c. 420 the *Onomasticon* was translated into Latin by Jerome who made several additions reflecting the changes that had meanwhile occurred. Extracts from the Syriac version appeared in 1924. Klostermann's edition from 1904 *Das Onomastikon der biblischen Ortsnamen* was until recently the version most frequently referred to by scholars. A translation into Hebrew was made by Ezra Zion Melamed in 1933 and published with a commentary in *Tarbiz* (reprinted as a separate publication in 1966). A translation into English was made by G.S.P. Freeman-Grenville (2003).

[Michael Avi-Yonah / Shimon Gibson (2<sup>nd</sup> ed.)]

**EUTHANASIA**, term denoting "the action of inducing gentle and easy death," first used by the British moral historian W.E.H. Lecky in 1869. Among advocates of this measure to terminate the life of sufferers from incurable or painful disease are many earlier philosophers, Christian as well as pagan, including Plato in his *Republic* (3:405ff.) and Sir Thomas More in his *Utopia* (2:7). The precise Hebrew equivalent for euthanasia, *mitah yafah* ("pleasant death"), occurs several times in the Talmud, though always in connection with the duty to reduce to a minimum the anguish of capital criminals before their execution (e.g., Sanh. 45a), and never in the sense of deliberately hastening the end of persons dying from natural causes. In the Jewish view, life being of infinite worth, any fraction

of it is of equally infinite value, and the relief from suffering cannot be purchased at the cost of life itself, whatever other concessions Jewish law may make or urge for the mitigation of pain. Hence, "a patient on his deathbed is considered as a living person in every respect ... and it is forbidden to cause him to die quickly ... or to move him from his place (lest this hasten his death); ... and whoever closes his eyes with the onset of death is regarded as shedding blood" (Sh. Ar., YD 339:1 and gloss). Indeed, killing any innocent person, "whether he is healthy or about to die from natural causes," is legally codified as murder (Maim. Yad, Roze'ah 2:7). Some recent rabbinical responsa, however, are inclined to sanction the cessation of "heroic" methods to prolong a lingering life without hope of recovery. The withdrawal of treatment under such circumstances might be justified on the basis of the permission to remove from a dying person an extraneous impediment, such as "a clattering noise or salt on his tongue, delaying the departure of his soul" (Sh. Ar., loc. cit., gloss).

The otherwise uncompromising opposition to euthanasia no doubt springs from the life-affirming attitude of Judaism in which, nationally as well as individually, life in misery is to be preferred to death with glory or dignity, a sentiment which stirred the Psalmist to exclaim gratefully: "The Lord hath chastened me sore; but He hath not given me over unto death" (Ps. 118:18). For the same reason, martyrdom is permitted only in the most exceptional circumstances; to lay down one's life, even for the fulfillment of divine laws, when such sacrifice is not required by law, is regarded as a mortal offense (Maim. Yad, Yesodei ha-Torah 5:4).

[Immanuel Jakobovits]

### In Nazi Germany

Euthanasia was also a euphemism used by the Nazi regime for the murder of the disabled, a group of human beings defamed as "life unworthy of life." Although Adolf Hitler and his associates talked about "mercy death" their aim was not to shorten the lives of persons with painful terminal diseases but to kill those they considered inferior, who could otherwise have lived for many years.

The belief that mentally and physically disabled human beings should be excluded from a nation's gene pool was a staple argument of the international eugenic movement, in Germany known as racial hygiene, and had led to widespread sterilization of the disabled in various countries, including the United States. The Nazis incorporated the goals of the eugenicists into their racial world view, and on July 14, 1933, only four and a half months after Hitler became chancellor, the German government enacted the Law for the Prevention of Offspring with Hereditary Diseases, the so-called sterilization law mandating the compulsory sterilization of the disabled. This law led to the sterilization of three to four hundred thousand disabled German nationals, representing about 0.5 percent of the German population.

The attack on patients with disabilities in state hospitals and nursing homes during the 1930s had involved sterilization

and a reduced standard of care. But this was only the beginning. In 1935 Adolf Hitler told Gerhard Wagner, the Reich physicians' leader, that once war began he would implement the killing of the disabled. As Germany unleashed World War II and Nazi policy became more radical, the regime crossed the line separating traditional eugenic policies from killing operations. Although this radical decision had been initiated by the political leadership, the scientific and medical community did not oppose it, because the idea had circulated since at least 1920, the year the jurist Karl Binding and the psychiatrist Alfred Hoche published *The Authorization for the Destruction of Life Unworthy of Life*.

The first Nazi killing operation was directed against institutionalized disabled patients. It started with the killing of infants and young children born with mental or physical disabilities. Hitler appointed Dr. Karl Brandt, his escorting physician, and Philipp Bouhler, who headed the Chancellery of the Fuehrer (*Kanzlei des Fuehrers*, or  $\text{KdF}$ ), to direct the killing operation, and they in turn designated Viktor Brack, chief of Office II in the  $\text{KdF}$ , as the person to implement the Fuehrer's order. The so-called children's euthanasia was top-secret and was carried out in various hospitals. There the children were placed in so-called special children's wards; they were killed with an overdose of common barbiturates, and sometimes also through starvation diets.

In September 1939, the killing operation was expanded to include adults. Hitler first appointed Leonardo Conti, state secretary for health in the Reich Ministry of Interior, to direct adult euthanasia, telling him in the presence of Hans Heinrich Lammers and Martin Bormann "that he considered it appropriate that life unfit for living of severely insane patients should be ended by intervention that would result in death." Conti accepted the assignment, but he did not remain in charge long; within a few weeks, Hitler replaced him, turning once again to Brandt and Bouhler as his plenipotentiaries, so that Brack and the  $\text{KdF}$  could administer adult euthanasia alongside that for children. To avoid implicating the Chancellery, the staff administering the euthanasia killings moved from the  $\text{KdF}$  into a confiscated Jewish villa at Tiergarten Street number 4 and euthanasia was thus soon known as Operation T4, or simply as T4.

The method used to kill the children could not be used to kill the far larger number of adults. To accomplish its task, T4 therefore constructed killing centers, including gas chambers and crematoria, and developed a killing technique to select, transport, and "process" the victims. And always the killers robbed the corpses of their victims, taking gold teeth and bridge work to enrich the state as well as internal organs to enrich "scientific research." For this purpose, T4 established six killing centers – Brandenburg, Grafeneck, Hartheim, Sonnenstein, Bernburg, and Hadamar – but only four were ever operational at the same time. To hide the killings, T4 used subterfuge to fool the relatives; the killing centers camouflaged as hospitals wrote letters of condolence and issued fraudulent death certificates.

In their 1920 book, Binding and Hoche had argued that euthanasia could only function if the act of this kind of mercy death would be decriminalized, so that physicians would not have to fear prosecution under the murder statute, paragraph 212 of the German penal code, which remained in force throughout the Nazi period. Since Hitler absolutely refused to consider promulgating a euthanasia law, the  $\text{KdF}$  decided to ask Hitler for written orders, so that they could convince physicians to collaborate. In October 1939, Hitler finally signed a document, more an authorization than an order, that had been prepared by the  $\text{KdF}$ . But to emphasize that war would not only alter the international status of the Reich but also herald "domestic purification," he predated it to September 1, 1939, the day World War II began. Prepared on Hitler's personal stationery, as if mass murder was his "private affair," but never promulgated or published in any legal gazette, this authorization did not actually have the force of law, but served, nevertheless, as the "legal" basis for the killing operation.

The imposed secrecy did not prevent news of the murder of the disabled to reach the general population. The unrest of victims' relatives posed a danger to the regime, and in August 1941 Hitler therefore ordered a stop to the gassing of the disabled. This order did not, however, end the killing of the disabled; only their gassing in killing centers stopped. Children's euthanasia continued without interruption; adults were murdered in regular hospitals spread throughout the Reich. The T4 killing centers also continued to operate for several years; they were used to kill concentration camp inmates under a killing enterprise known as Operation 14 f13. The Austrian killing center Hartheim near Linz continued in operation until late in 1944 for the killings under 14f13 and later for the murder of prisoners from the nearby Mauthausen concentration camp. Furthermore, a selected number of T4 male staff members were dispatched to Lublin to operate the killing centers of Operation Reinhard: Belzec, Sobibor, and Treblinka. One of those was the Austrian physician Irmfried Eberl, medical director of the T4 killing centers in Brandenburg and Bernburg, who served as the first commandant of Treblinka.

After the war, the perpetrators argued that Jews were never killed in Operation T4, since they did not "deserve" mercy death, and this was believed at the Nuremberg and later trials. But this was not true. Jewish institutionalized disabled patients were included alongside non-Jewish victims from the beginning. In the spring of 1940, however, a decision was made on the highest level to kill Jewish patients as a group. They were concentrated in a number of central institutions, and killed in the closest killing center. But for the Jews there were no letters of condolence; the Jews were supposed to disappear without a trace. In the end, however, T4 did issue fraudulent death certificates long after the victims had been killed; this permitted T4 to extort money for weeks, even months, for upkeep of the already murdered Jewish patients. To accomplish this, T4 claimed the patients

had been deported to a non-existent hospital in Cholm in Poland, and issued fraudulent death certificates with that non-existent address.

[Jacob Petroff]

**EVANS, ELI** (1936– ), U.S. administrator and Jewish historian. Evans was born in Durham, North Carolina, where his father served six terms as mayor from 1950 to 1962. His grandmother founded the first southern chapter of the Hadassah organization in the pre-World War I period.

After graduating from the University of North Carolina in 1958, he took a law degree at Yale University in 1963. He worked in various branches of government, state and national, as a speechwriter for President Lyndon Johnson, and as a White House assistant.

In 1973, he published *The Provincials: A Personal History of Jews in the South*. The book provided an insight into the Jewry of the southern United States, which had never been studied in depth previously. One of Evans’ most revealing statistics was that more than 45 Jews held mayorships and other leading government positions in southern communities. The book generated a new field of study of southern Jewry.

Turning his focus to philanthropy, in 1977 Evans became the first president of the Revson Foundation, the charitable organization started by Charles Revson, the founder of Revlon. He guided the foundation in four specific areas: urban affairs, with special emphasis on New York City; education; bio-medical research policy; and Jewish philanthropy and education.

In the Jewish field, the foundation made a number of significant gifts. The first major grant helped to underwrite the ten-part television series *Civilization and the Jews*, narrated by Abba Eban. A second gift made possible the production of *Sesame Street* in Hebrew by Israel Education Television. A further large gift was allocated to the Jewish Museum, New York, for its remodeling and expansion to provide an electronics education center on all aspects of Judaism.

In 1988 Evans published a biography of the Civil War secretary of state *Judah P. Benjamin: The Jewish Confederate*. Evans mined previously untapped sources and demonstrated aspects of Benjamin’s personality that reflected the continuing strain of his Judaism even though the well-known southerner did not practice his faith. In 1993 he published a collection of essays entitled *The Lonely Days Were Sundays: Reflections of a Jewish Southerner*.

Evans retired from the Revson Foundation in 2003. In 2004 the foundation honored its president emeritus with a substantial financial gift to the Carolina Center for Jewish Studies at the University of North Carolina at Chapel Hill to establish a program in Evans’ name to support outreach activities on campus and in communities across North Carolina. The center, which was established at UNC’s College of Arts and Sciences in 2003, engages in teaching and research to explore Jewish history, culture, and religion in the United States and abroad. Involved with the center for Jewish studies since its inception, Evans serves as chairman of the advisory board.

Often referred to as “the poet laureate of southern Jews,” Evans has served as the voice, as well as the heart and soul, of both his fellow southerners and fellow Americans.

[David Geffen / Ruth Beloff (2<sup>nd</sup> ed.)]

**EVANS, JANE** (1907–2004), U.S. Jewish communal leader. Born in New York City, Evans was raised as a Reform Jew in Brooklyn, beginning her lifelong affiliation with the Reform movement. She received her B.A. from Xavier University in Cincinnati and moved to St. Louis in 1928 where she began to

work as a designer and taught at the local YM/YWHA. She was recruited from there to become the executive director of the National Federation of Temple Sisterhoods for the \*Union of American Hebrew Congregations in 1951. She developed its program on Jewish education and on world peace and through the \*World Union of Progressive Judaism expanded the work of the NFTS overseas. She brought the energy and leadership of the NFTS to the Jewish Braille Institute, whose board she had joined in 1933, only two years after it was founded. Under her leadership the Jewish Braille Institute provided resources to the Jewish blind in 40 countries. She eventually became president of the JBI in 1979, three years after her retirement from the UAHHC, until 1993 when at the spry age of 86 she stepped down.

A woman of great intellect, integrity, and energy, Evans taught at the New School for Social Research in New York and devoted herself to Jewish and philanthropic causes throughout her long and active life. Widely known as a distinguished national leader, a religious pacifist, and an advocate for human rights, she was a founder and former president of the Jewish Peace Fellowship and former president of the National Peace Conference. She was awarded the Abraham Joshua Heschel Award for peace work in the Jewish tradition. She served on the Commission on Displaced Persons of the American Jewish Conference after World War II.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**EVANS, ROBERT** (1930– ), U.S. film producer and actor. Born Robert Shapera in New York, Evans decided to become an actor in elementary school, and at 12 was cast in *Radio Mystery Theater* as a Nazi colonel. At 14 he was a regular talent on the radio program *Let's Pretend*. He changed his name to Evans in middle school, and began to find roles on television. He ventured out to Hollywood, but returned home to work in his brother's women's clothing company, Evan Picone. By 25 he was a millionaire, and at 26 he was rediscovered at a Beverly Hills hotel swimming pool and cast in the Lon Chaney biopic *The Man of a Thousand Faces* (1957) as studio head Irving \*Thalberg opposite James Cagney. When the actors, writer, and director disliked working with him on his next film, the adaptation of Ernest Hemingway's *The Sun Also Rises* (1957), 20<sup>th</sup> Century Fox producer Darryl \*Zanuck paid a visit to the Mexican set and said, "The kid stays in the picture. And anybody who doesn't like it can quit!" Evans was inspired by Zanuck's power and decided he wanted to become a producer. He was hired by 20<sup>th</sup> Century Fox but left Fox before ever making a picture. Tycoon Charles Bludhorn made Evans an offer he couldn't refuse, putting him in charge of Paramount Pictures. Under his leadership, Paramount had a string of hits: *The Odd Couple* (1968), *Rosemary's Baby* (1968), *Goodbye, Columbus* (1969), *Love Story* (1970), and *The Godfather* (1972), which won the Academy Award for best picture. Evans became en-

amored of actress Ali MacGraw; the couple married in 1969, and had a son, Joshua, before divorcing in 1972 (she left him for Steve McQueen whom she had met on the set of the Evans production *The Getaway*). Evans left Paramount to produce his own films, most notably *Chinatown* (1974), *Marathon Man* (1976), *Black Sunday* (1977), and *Urban Cowboy* (1980). Drug abuse, drug charges, and other scandals as well as two box-office bombs, *The Cotton Club* (1984) and *The Two Jakes* (1990), sunk his career. Broke but unbowed, Evans wrote his memoir *The Kid Stays in the Picture* in 1994, which became a bestseller and a cult favorite audio classic, later adopted by the Library of Congress. Evans was rewarded by a renewed deal at Paramount Studios. In 2003, he provided the voice for an animated cartoon, *Kid Notorious*, based on his exploits. Later film projects include producing the film *How to Lose a Guy in 10 Days* (2003).

[Adam Wills (2<sup>nd</sup> ed.)]

**EVE** (Heb. חַוְּוָה, Ḥavvah), the first woman, wife of \*Adam, and mother of the human race. After Adam had reviewed and assigned names to the animals, but had not found a suitable mate among them, God put him to sleep, removed one of his ribs, and formed it into a woman. Adam immediately recognized this being as an integral part of himself, his own bone and flesh, and called her "Woman" (Heb. 'ishah) because she was taken "from Man" (Heb. 'ish). (Unlike the two English words, the Hebrew ones are completely unrelated etymologically, despite their outward resemblance.) For this reason, a man leaves his father and mother and clings to his wife so that two become one (Gen. 2:23–24).

It was the woman whom the serpent induced to eat the forbidden fruit of the tree of knowledge of good and evil, and she in turn gave some to her husband to eat. It brought them intellectual maturity (some say also sexual awareness, but this was more likely born with the first recognition of physical kinship; see above), and earned for the woman the pain of childbirth and subjection to her husband, and for the man drudgery. After this incident, Adam named his wife Eve Ḥavvah because she was "the Mother of all Living" (Gen. 3:20), an epithet with strong mythical overtones suggesting that Eve was originally a goddess who was demythologized by the biblical writer. The Greek translates the name as *Zōē* ("life"), in keeping with the wordplay. Rabbinic exegesis, however, connected the name with Aramaic *ḥewyā* ("serpent"), and observed that the serpent was her undoing and that she was her husband's "serpent." This etymology has been revived in recent times by the connection of the name with *ḥwt*, probably Hawwat, a Phoenician deity attested in a stela from Carthage in North Africa, and on urns from Cagliari in Italy. That she was a serpent-goddess is based only on the Aramaic etymology.

In biblical Hebrew (Job 18:12) *šēlā'* is an epithet meaning "wife." Eve's creation from Adam's rib or side (Heb. *šēlā'*) provides the epithet with an etiology. The Sumerian Paradise Myth of Enki and Ninḥursag provides another possible side-

light on the role of the rib in the biblical story. When Enki had a pain in his rib, Ninḥursag caused the goddess Nin-ti, “Lady of the Rib,” to be born from him. The Sumerian logogram *ti* means both “rib” and “life,” and it may be that the Mesopotamian “Rib Lady” lies behind the rib/life motif in the biblical story.

Eve gave birth to Cain and Abel (Gen. 4:1–2), and after Abel was murdered, she gave birth to Seth as a replacement (Gen. 4:25). The etiology of women’s sexual subjugation to their husbands (Gen 4:16) is extended in the New Testament. According to 1 Tim. 2:14, the story of Eve’s creation after Adam and the fact that she, not he, was deceived justify female subjection to men and their exclusion from speaking roles in the church. Although nothing further is related of Eve in the Bible, her figure continues to generate an enormous amount of feminist and theological literature.

[Marvin H. Pope / S. David Sperling (2<sup>nd</sup> ed.)]

### In the *Aggadah*

Eve was created from the 13<sup>th</sup> rib on Adam’s right side (Targ. Jon., Gen. 2:21) after Adam’s first wife, \*Lilith, left him. God chose not to create her from Adam’s head, lest she be swell-headed; nor from his eye, lest she be a flirt; nor from his ear, lest she be an eavesdropper; nor from his mouth, lest she be a gossip; nor from his heart, lest she be prone to jealousy; nor from his hand, lest she be thievish; nor from his foot, lest she be a gadabout (Gen. R. 18:2). As soon as Adam beheld Eve, who was exceedingly beautiful (BB 58a), he embraced and kissed her. He called her *Ishah* (הִשָּׁה), and himself *Ish* (אִישׁ), the addition of the letter *yod* to his name and the letter *he* to hers indicating that as long as they walked in a godly path, the Divine Name (Yod-He) would protect them against all harm. However, if they went astray, His Name would be withdrawn, and there would remain only *esh* (אֵשׁ, “fire”), which would consume them. Ten resplendent bridal canopies, studded with gems, pearls, and gold, were erected for Eve by God, who Himself gave her away in marriage and pronounced the blessings, while angels danced and beat timbrels and stood guard over the bridal chamber (PdRE 12).

\*Samael (Satan), prompted by jealousy, chose the serpent to mislead Eve (PdRE 13). According to another tradition, the serpent itself wished to lead Eve to sin since it desired her (Sot. 9b; Shab. 196a). The serpent approached Eve rather than Adam since it knew that women are more readily persuaded (ARN<sup>1</sup> 1:4). Initially, Eve hesitated to eat the fruit itself, and only did so after touching the tree and discovering that no harm befell her (Yal., Gen. 26). Immediately she saw the Angel of Death before her. Expecting her end to be imminent, she resolved to make Adam also eat of the forbidden fruit lest he take another wife after her death (PdRE 13). Nine curses and death were pronounced on Eve in consequence of her disobedience (PdRE 1). Eve conceived and bore Cain and Abel, according to one view, on the day of her expulsion from Eden (Gen. R. 22:2). Afterward Adam and Eve lived apart for 130 years (Er. 18b). After they were reunited, she bore Seth (Gen. R. 23:5).

When Eve died, she was interred beside Adam in the cave of Machpelah in Hebron (PdRE 20).

### In Christian Tradition

The New Testament mentions the deception of Eve as a warning to Christians (11 Cor. 11:3), and stresses Adam’s precedence in support of the view that women ought to be submissive and find their fulfillment in childbearing (1 Tim. 2:11–15; cf. 1 Cor. 11:8–12). While Eve does not figure as a type in the New Testament, Paul’s doctrine of the “New Adam” (i.e., Jesus) and his implicit comparison of Eve and the Church (Eph. 5:22–23) anticipate the development of later Christian typology according to which the creation of Eve from Adam’s rib represents the emergence of the Church from the open wound in the side of Jesus upon the cross.

Justin, Irenaeus, and other Church Fathers compared and contrasted Eve, the first woman, and Mary, the mother of Jesus. Mary is seen as “new Eve,” a title which Paul assigned to the Church collectively. The disobedience and the infidelity of the first (who, like Mary, was married and a virgin at the time of sin) is contrasted with and followed by the obedience and faith of the second. Eve is thus restored to wholeness in the Virgin Mary as Adam is in Jesus. Protestants, in their opposition to the Catholic veneration of Mary, did not develop this typology (see \*Adam in Christianity).

### In Islam

Eve (Ar. Ḥawwāʾ), the name of Adam’s wife, is not mentioned expressly in the Koran; she is called the “spouse” in the tale of their sinning against Allah, having been influenced by Iblīs, the Satan (7:18, 20:115). Nevertheless, this name is found in three poems of the old-Arabic poetry, one of \*Umayya ibn Abī-al-Ṣalt and two of ‘Adī ibn Zayd, a Christian living in the times of Muhammad. (The third poem is suspected to be a falsification.)

For Eve in the arts, see \*Adam, In the Arts.

**EVENARI, MICHAEL** (originally **Walter Schwarz**; 1904–1989), Israel botanist. Born in France, Evenari went to Erez Israel in 1933, having carried out plant research in universities in France, Czechoslovakia, and Germany. He joined the Hebrew University in 1934. During World War II he served in

the Jewish Brigade and after returning to civilian life, lectured at several U.S. and South American universities. From 1952 to 1957 Evenari was dean of the faculty of science at the Hebrew University and headed the botany department as professor of plant physiology. He served as vice president of the Hebrew University from 1953 to 1959. Evenari's main fields of research were the study of the influence of red and infra-red light on the germination of seeds, and the determination of the food value of algae for livestock and their large-scale cultivation. With a grant from the Rockefeller Foundation, Evenari carried out research on the methods used by \*Nabateans, Romans, and Byzantines to maintain a thriving agricultural existence in the northern Negev in spite of the low annual rainfall of the area. He set up experimental farms at \*Shivta and \*Avedat based on archaeological findings in the area. Evenari served on several UNESCO bodies, dealing with arid zone development.

**EVEN HA-TO'IM** (Heb. אבן הטוֹיִם or אבן הטֵּעֵן), a stone in Jerusalem, It is mentioned once in the Mishnah (Ta'an. 3:8) in the story of \*Onias (Ḥoni) the circle drawer. When asked to pray that the rains cease, he answered: "Go and see if the *even ha-to'im* has been washed away," indicating that just as it was impossible for it to be washed away so was it impossible to pray for the rain to cease. This picturesque reply is reminiscent of one in the Jerusalem Talmud showing that praying for the cessation of rain is unnecessary (Ta'an. 3:11, 67a). An anonymous Aramaic passage in the Jerusalem Talmud (Ta'anit 3:11, 66d) interprets the *even ha-to'im* as a place where "one who lost an item would receive it from there, and one who found an item would bring it to there." A similar tradition is reflected in a *baraita* found in the Babylonian Talmud (BM 28b) which mentions the *even ha-to'an* in connection with the return of lost property during the Second Temple period. People who had lost or found objects in Jerusalem and on the road to the capital met by the side of this stone: "The one stood and announced his find and the other submitted evidence of ownership and received it." According to these traditions, the name is to be interpreted as "the stone for those wandering," i.e., in search of someone or something. The reading *even ha-to'an* ("the claimant's stone") is faulty (Dik. Sof., *ibid.*), and any conclusions deriving from it are therefore invalid.

[Jacob Eliahu Ephraïm]

**EVEN-OR, MARY** (1939–1989), Israeli composer. Even-Or studied at the Music Teachers' Seminary in Tel Aviv in 1959, the Oranim Seminary in 1960–62, and with Yehezkel \*Braun. She studied law at Tel Aviv University and music in 1976–80 at the Rubin Academy of Music in Tel Aviv and Tel Aviv University. Even-Or was a member of the Israel Composers' League from 1980; from 1981 she was a member of ACUM and of the International Association of Women Composers. Her works include *Dances* for flute, clarinet, violin, bass, and percussion (1961); *Dreams* for flute, clarinet, and guitar (1977); *Music for*

*Strings* (1979); *Espressioni Musicali* for choir a cappella (1981); *Cardioyada* for brass quintet (1981); *Musikinesis* for symphony orchestra (1983).

[Ury Eppstein (2<sup>nd</sup> ed.)]

**EVEN SHEMUEL (Kaufmann), JUDAH** (1886–1976), Israel educator, lexicographer, and writer. Even Shemuel was born in Balta, Ukraine, and received a yeshivah education. He studied in various countries and his thesis at Dropsie College, Philadelphia, "Rabbi Yomtov Lipman Muelhausen..." (1927), contained his edition of \*Muelhausen's *Sefer ha-Eshkol*. From 1913 he was active in the Zionist Labor movement in Montreal, Canada, and became the first principal of its teachers training college. As a contributor to *Ha-Toren* and the *Zukunft* and a lecturer on Jewish philosophy and sociology, he gained a reputation as a spiritual guide of the movement. He also tried to reconcile the Hebraists with the Yiddishists.

Even Shemuel settled in Palestine in 1926 at the invitation of the Devir publishing house to edit, with Ḥ.N. \*Bialik, I. \*Efros, and B. \*Silkner, an English-Hebrew dictionary (1929; 29<sup>th</sup> and revised repr. 1963). He continued his cultural activities in the Histadrut and became the first general secretary of the Friends of the Hebrew University. When the \*Va'ad Le'ummi established a cultural division, Even Shemuel was appointed its head, remaining there until 1947. He received the Israel Prize in Jewish studies in 1973.

His principal scholarly work is a vocalized edition of Maimonides' *Guide of the Perplexed* in Samuel ibn Tibbon's Hebrew translation (3 vols., 1935–60), with introductions, extensive commentary, and notes. A one-volume edition of the whole work with a short introduction appeared in 1946. Even Shemuel also published *Midreshei Ge'ullah* (1943, 1954<sup>2</sup>), an anthology of messianic and apocalyptic literature from the conclusion of the Talmud to the 13<sup>th</sup> century. He edited various volumes in fields of Jewish scholarship.

**BIBLIOGRAPHY:** Kressel, *Leksikon*, 1 (1965), 14–15; P. Birnbaum, in: *Hadoar*, 47 (1968), 587–9.

**EVEN SHETIYYAH** (Heb. אבן שְׁתִּיָּיָה), tannaitic term which was understood in two ways in talmudic times: "the rock from which the world was woven, and "the foundation rock." Both meanings presuppose the belief that the world was created from the rock which, placed at the center of the world in the Holy of Holies (*Devir*) of the Temple in Jerusalem, constitutes the focal point of the world. The Holy Ark was placed upon this rock, and during the Second Temple period the high priest rested the fire-pan on it when he entered the Holy of Holies on the Day of Atonement. The Mishnah (Yoma 5:2) states that the rock had been at the site of the *Devir* since "the time of the early prophets" (i.e., David and Solomon); that it was three finger breadths higher than the ground; and that it was called *shetiyyah*. However, R. \*Yose b. Halafta (Tosef., Yoma 3:6) explains the term as having cosmogonic significance and the subsequent Midrash is based on this view. The Mishnah clearly dates the placing of the stone to the time of the Temple's

construction and ignores the mythological dimension; other tannaitic views similarly deny that the creation was initiated at Zion (Yoma 54b). The mishnaic source may have antedated the cosmogonic belief; it may have postdated it and rejected it; or it may have assumed that it was the cosmogenetic rock that was brought to the Temple site. The later Midrash states that the entire Temple was founded upon the rock, and that the stone was possessed of magical properties.

The relationship of the *even shetiyyah* to the rock presently housed under the Dome of the Rock (the “Mosque of Omar”) built on the Temple Mount is not fully clear. Muslim tradition identifies the two, and this is the view most widely held today. The major difficulty here is the size: the rock housed in the Dome of the Rock measures approximately 58 by 51 feet, an area larger than the entire Holy of Holies in which the *even shetiyyah* was found. The later Midrash does state, though, that the entire Temple was based on this rock, which, it implies, merely broke through in the Holy of Holies. In medieval times it was thought that the ground around the rock had been worn away by violence and the erosion of centuries, revealing it in its present magnitude (cf. Radbaz, Responsa, 2 (1882), nos. 639, 691). A second theory states that the rock under the Dome is not the *even shetiyyah* but the foundation-rock of the great altar of holocausts; the cave under the rock would then have served to collect ashes and other sacrificial refuse. In that case, the Holy of Holies would have stood to the west of the present Dome of the Rock, which presents architectural and topographical difficulties.

[Gerald Y. Blidstein]

**EVEN-SHOSHAN, AVRAHAM** (1906–1984), Hebrew educator, writer, and editor. His father, Chaim David Rosenstein (1871–1934), was an educator and Zionist leader, who was imprisoned by the Soviet government for his activities. Avraham was born in Minsk, and went to Palestine in 1925. He served as teacher and principal in a number of schools, and from 1954 until 1968 was director of the Bet ha-Kerem Teachers Institute in Jerusalem. His first literary efforts appeared in a children’s magazine (*Ittonenu*) which he helped edit (1932–36). Subsequently he published stories, poems, and plays for children, and translated children’s books into Hebrew. He is best known for a monumental Hebrew dictionary which he compiled, *Millon Ḥadash Menukkad u-Mezuyyar* (“New Vocalized and Illustrated Dictionary”), which originally appeared in five volumes and a supplementary volume (1947–58); a seven-volume edition subsequently appeared, which is now also available in other formats. His *Concordance to the Bible* listing and explaining the words and expressions of the Bible appeared between 1977 and 1979. Even-Shoshan was awarded the Israel Prize in 1978 and the Bialik Prize in 1981. His brother

SHELOMO EVEN-SHOSHAN (1910– ) was one of the founders of kibbutz Sedeh Naḥum. He contributed poems, stories, and articles to the labor press and from 1944 was one of the editors at the Kibbutz ha-Me’uḥad publishing house. His books include an appreciation of Yizḥak \*Katzenelson and translations from Soviet Russian literature.

[Getzel Kressel]

**EVENTOV, YAKIR (Drago Steiner; 1901–1984)**, journalist and historian.

Born in Koprivnica, Yugoslavia, he lived and worked in Zagreb until his immigration to Palestine. A Zionist activist from his youth in the Ha-Po’el ha-Za’ir branch in Yugoslavia, he edited the Zionist weekly *Židov* and an “Anthology of Hebrew Literature,” to which he contributed his own translations.

Arriving in Palestine in 1934, he spent a year in kibbutz Merḥavyah; the next year he joined the staff of the Haifa Electric Corporation and worked there until his retirement. He devoted all his spare time to the study of Jewish history, producing with the assistance of C. \*Rotem a volume entitled “History of the Jews in Yugoslavia” (1979), the first work in Hebrew on the subject.

With his wife, Ethel, he initiated in 1955, and directed from his home in Haifa, an archival collection of documents and materials on Jewish life in all parts of Yugoslavia. It was called the Museum and Historical Section of the Association of Immigrants from Yugoslavia. After the Eventovs’ death, the collection was renamed in their honor the Eventov Archives, and in 1986 it was transferred to Jerusalem, where it became part of the Central Archives for the History of the Jewish People.

[Zvi Loker (2<sup>nd</sup> ed.)]

**EVEN YEHUDAH** (Heb. אֶבְרָתָא; אֶבְרָתָא), rural settlement in central Israel, 4½ mi. (7 km.) southeast of Netanyah. The settlement area consists of 3.2 sq. mi. (8.3 sq. km.). It was founded in 1932 by the members of the \*Benei Binyamin movement. Two neighboring villages, Be’er Gannim and Tel Zur, later merged with it. In 1950 it received municipal council status. The youth village Hadassim was also included in its boundaries. Citrus orchards constituted the principal branch of its economy. In the early 1970s the settlement began to decline. However, after the Yom Kippur War there was an influx of new residents, so that the population grew from 4,000 in 1968 to 8,480 in 2002, with income much higher than the national average. It is named after Eliezer \*Ben-Yehuda.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EVEN YIZHAK** (Heb. אֶבְרָתָא; אֶבְרָתָא), kibbutz in Israel, in the Manasseh Hills of Samaria, affiliated with Iḥud ha-Kibbutzim, founded on March 11, 1945, by pioneers from Germany, many of whom had been hiding in Holland under Nazi occupation from 1940. They were joined by Jews from other countries.

Farming was based on field crops, fruit, and livestock. The kibbutz owned two factories: a plastics plant in partnership with Kibbutz Mishmar ha-Emek, and a biochemical plant. In 2002 the population was 393. The settlement, named after the South African Zionist Isaac Ochberg, is generally known as “Gal Ed” (Monument), a memorial to the settlers’ comrades who perished in the Holocaust.

**EVER HADANI** (pseudonym of **Aharon Feldman**; 1899–1972), Hebrew writer. Born near Pinsk, he immigrated to Palestine in 1913, and after serving with the Jewish Legion during World War I, lived in the kibbutzim Maḥanayim and Kefar Giladi. He edited agricultural publications and from 1948 worked in the Israel Ministry of Agriculture. Apart from his publications in many newspapers, he wrote several novels, including *Zerif ha-Ez* (“The Wood Hut,” 1930), an early romantic novel about Israel’s pioneers, and the trilogy *Nahalolim* (“Brambles,” 1935); but the bulk of his writing was devoted to the history of Jewish settlement in Galilee and Samaria. Among his dozen books on this subject are *Ha-Shomer* (1931) and *Ḥakla’ut ve-Hityashevut be-Yisrael* (1958). His collected works appeared in seven volumes (1968).

**EVER MIN HA-HAI** (Heb. אֶבֶר מִן הַחַי; “a limb from a living animal”), designation of the biblical injunction against removal of a limb or of a piece of flesh from a living animal and its consumption. Deuteronomy 12:23 states “and thou shalt not eat the life with the flesh.” The prohibition forms part of the Jewish \*dietary laws and is one of the seven Noachian Laws (derived from Gen. 9:4), which, according to rabbinic view, are incumbent on non-Jews as well (Sanh. 56a–b; see also Hul. 101b–102a; Maim., Yad, Ma’akhalot Asurot 5:1–15; Sh. Ar., YD 62).

**EVIAN CONFERENCE**, conference of 32 nations convened but not attended by President Franklin Delano Roosevelt on July 6–14, 1938, at the Hôtel Royal in Evian on the French side of Lake Geneva to consider the plight of refugees – the euphemistic way of referring to the Jewish question. The conference was convened against the backdrop of the German incorporation of Austria in March 1938, which sparked a massive exodus of Jews to any country willing to receive them. Convening the conference was the first American government initiative regarding refugees.

The Evian Conference was conceived by President Roosevelt as a grand gesture in response to mounting pressure in the United States to do something about the refugee problem. The call for the conference was greeted warmly by the American Jewish community but it also triggered a hostile

reaction from American isolationist and anti-immigration forces. Thomas Jenkins, one of those who wanted to restrict immigration, accused the president of going “on a visionary excursion into the warm fields of altruism. He forgets the cold winds of poverty and penury that are sweeping over the one third of our people who are ill clothed, ill housed, ill fed.” American Jews and their allies were pressing the admission of greater numbers of immigrants. Restrictionist forces kept reminding the president of the Depression, of the domestic agenda, and of the need to put America first. Roosevelt sought to balance both concerns, to assuage but also not to provoke. Walking such a political tightrope hampered any effort to pressure the international community. Internationally, Romania flatly refused to attend; it wanted to get rid of its Jews, not to import new ones, and Switzerland spurned an invitation to host the conference.

The very invitation to the conference gave an indication of its reluctance to act. Attending countries were assured that “no country would be expected to receive more immigrants than were permitted under existing laws.” Nor would any government be expected to subsidize refugees: all new programs would have to be funded by private agencies. American isolationists were assuaged by the understanding that U.S. quota system for immigrants would not be touched. Britain was told that Palestine would not be on the agenda. Two days after Roosevelt’s announcement of the Evian Conference, Hitler issued a characteristic statement:

I can only hope that the other world which has such deep sympathy for these criminals [Jews] will at least be generous enough to convert this sympathy into practical aid. We on our part are ready to put all these criminals at the disposal of these countries, for all I care, even on luxury ships.

The United States delegation was not headed by the president or the vice president, nor by Secretary of State Cordell Hull or Undersecretary Summer Welles. Instead, Roosevelt nominated Myron C. Taylor, a businessman who was one of his close friends. Great Britain also sent a special delegation. The other nations used their diplomats in the region. Foreign leaders got the message. The French premier told his British counterpart that the American president was acting to soothe public opinion. Under these circumstances, little was expected or accomplished.

For nine days the delegates met at the Hôtel Royal, along with representatives of 39 private relief agencies, 21 of them Jewish. The world press gave the event extensive coverage.

Delegates from each country rose in turn to profess their sympathy with the plight of the refugees. They also offered plausible excuses for declining to open their countries’ doors. Britain had no room on its small island and refused to open Palestine to Jewish refugees. The United States spoke abstractly about “political” refugees, using the euphemism to glide over the fact that most of the refugees were Jewish. It would fill its quota, but do no more.

The Australian delegate was more candid. “We don’t have a racial problem and we don’t want to import one,” he said. For Canada, still in the midst of the Depression, “none was too many.” Canada would, however, accept farmers – small comfort for the urbanized Jews seeking to leave Germany. Colombia’s delegate could not resign himself to believe “that two thousand years of Christian civilization must lead to this terrible catastrophe.” In any case, his country could offer nothing. The Venezuelan delegate was reluctant to disturb the “demographic equilibrium” of his country. No Jewish merchants, peddlers, or intellectuals were wanted in Venezuela.

Holland and Denmark were ready to extend temporary asylum to a few refugees. Only the Dominican Republic made a generous offer to receive Jews. In the end, however, few came. Even though an inter-governmental group was established at Evian to coordinate policy, the tidal wave of refugees soon overwhelmed the few offers of assistance. The German Foreign Office viewed the conference with considerable interest and sensed in it a vindication of its own attitudes toward the Jews:

Since in many countries it was recently regarded as wholly incomprehensible why Germany did not wish to preserve in its population an element like the Jews ... it appears astounding that countries seem in no way anxious to make use of these elements themselves now that the opportunity offers.

At that point in time, the announced policy of Nazi Germany was the emigration – forced or otherwise – of the Jews. The Evian Conference demonstrated that forced emigration would not work since no country – or groups of countries – were willing to receive the Jews in numbers adequate to make Germany “*judenrein*.” As events unfolded, the Jewish problem became more acute but four months later when the events of the November pogrom of \**Kristallnacht* triggered a tidal wave of Jewish emigration and over the course of the next two years as Germany invaded country after country, more and more Jews came under its control and the problem of what to do with the Jews became ever more acute, ever less solvable by means of emigration.

## EVIDENCE.

### Non-Evidentiary Proceedings in Biblical Law

The revelation of divine law is found not only in legislation but also in adjudication in particular cases (cf. Lev. 24:12–13; Num. 15:32–34; 27:1–8; Deut. 1:17), whether through Moses or judges or priests (Ex. 28:30; Num. 27:21; Deut. 17:9–12; 21:5; 33:8–10), and God requires no evidence: He is all knowing and His decision is infallible (cf. Gen. 31:50). That adjudications without evidence continued to survive in judicial, nondivine proceed-

ings is demonstrated by the report of the trial held by King Solomon between the two women each claiming the same child (1 Kings 3:24–25) and by contemporaneous trial reports from other civilizations. Judges appear to have devised their own tests of credibility.

### Evidentiary Proceedings in Biblical Law

The existence and availability of human witnesses and other modes of proof seem from earliest times to have been part of judicial proceedings (cf. Ex. 22:9, 12). Witnesses appear to have testified to the facts prior to God being asked to pronounce the law (Num. 15:32–35); and eventually it came about that a person “able to testify, as one who has either seen or known of the matter,” was guilty of an offense if he failed to come forward and testify (Lev. 5:1).

### Evidence in Criminal Cases

**PROOF OF GUILT.** Biblical law had already established that in criminal cases the evidence of at least two witnesses is a *sine qua non* of any conviction and punishment (Deut. 17:6; 19:15). This rule appears to have applied both in judicial and in priestly adjudications (cf. Deut. 19:17), and was interpreted as prescribing a minimum burden of proof, from which no later legal development could in any way derogate.

Post-biblical law thus concentrated on devising measures to assure the greatest possible reliability of witnesses’ testimony: they were cautioned by the court that they would be rigorously cross-examined, that they must not rely on hearsay or on opinions, and that they must be conscious of their grave responsibility – since a human life was at stake (Sanh. 4:5). They were in fact subjected to cross-examination by the court – each witness separately – and their evidence would not be accepted unless their respective testimonies were found to be consistent with each other in all relevant particulars (Sanh. 5:1–4; Maim. Yad, Sanh. 12:1–3; for particulars of the cross-examination of witnesses and their qualifications, see \*Witness).

The further rule was evolved that it was not sufficient for witnesses to testify to the commission of the offense by the accused: they also had to testify that the accused had been warned by them beforehand against committing that particular offense (*hatra’ah*) – that is, that the accused knew that in committing the act he was violating the law (Tosef. Sanh. 11, 1; Sanh. 8b; et al.). Elaborate rules were laid down for the identification of the accused by the witnesses, and where the court was not satisfied beyond any doubt as to such identification, the accused was discharged even before the witnesses were examined on the merits of the case (Maim. *ibid.*). According to some scholars, he was also thus discharged where the victim of the offense had not been identified by the witnesses to the satisfaction of the court (see *Lehem Mishneh, ibid.*).

**EVIDENCE IN DEFENSE.** Whereas a witness testifying in a criminal case was not allowed to raise a point in defense of or against the accused (Maim. Yad, Edut 5:8) – a witness being disqualified from performing the function of a judge – when

the evidence of the prosecuting witnesses had been found admissible and *prima facie* conclusive, public announcements had to be made inviting any person able to raise a point in favor (*zekhut*) of the accused, to come forward and speak (Sanh. 6:1). While the charge against the accused could be proved only by the *viva voce* evidence of witnesses, any shred of evidence from which a defense could be inferred would be used in his favor (Rashi, Sanh. 42b). For this purpose, a favorable point is not necessarily a rebuttal of the testimony of the prosecuting witnesses, but merely any fact or circumstance likely to arouse in the mind of the court a doubt as to the guilt of the accused; hence such points did not automatically result in an acquittal, but they were sufficient justification for the case to be remitted to the court for reconsideration – even four or five times. There is no explicit presumption of innocence in Jewish law; the requirements of proof of guilt are, however, so stringent and rigorous, and the possibilities of establishing a valid defense so wide and flexible, that a conviction is much more difficult and an acquittal much easier to obtain than under a rebuttable presumption of innocence.

**POST-TALMUDIC LAW.** In talmudic law the standards of proof required, even in criminal cases, were largely reduced where the jurisdiction rested on considerations of the “emergency” (*hora'at sha'ah*; see \*Extraordinary Remedies). After the virtual cessation of jurisdiction in capital cases (see \*Capital Punishment), and particularly in post-talmudic law, all criminal jurisdiction rested on considerations of “emergency” to which the provisions relating to the dispensation from the normal rules of evidence and procedure were held to apply. The rules of evidence prevailing in the Sanhedrin were held inapplicable in the courts of the Diaspora, when they were called upon to enforce public order by the imposition of \*fines or \*flogging (Resp. Rashba, vol. 4, no. 311).

#### Evidence in Civil Cases

**BURDEN OF PROOF.** It was in the law of evidence in civil cases in which the genius of the talmudic jurists, unfettered by scriptural restrictions, could develop fully. The obstacle that there was to be “one manner of law” (Lev. 24:22) in criminal and civil cases alike (Sanh. 4:1) was overcome with the assertion that the Torah takes pity on the money (property) of the people of Israel, and if the standards of proof in civil cases were as strict and rigorous as in criminal cases, nobody would lend his neighbor any money anymore, for fear the borrower would deny his debt or the memory of a witness would fail him (TJ, Sanh. 4:1). Accordingly, a balance had to be struck between the exigencies of formal justice which required the burden of proof to be on the initiator of the proceedings (Sif. Deut. 16; BK 46b) and commercial and judicial convenience which required the greatest possible elasticity in handling and discharging that burden.

**PRESUMPTION OF RIGHTFUL POSSESSION.** The fundamental rule that the plaintiff has the burden of proving his claim (*hamozi mi-havero alav ha-re'ayah*) is based on the presumption

(\**hazakah*) of the rightful possession by the defendant of the chose in action – i.e., the thing (or money) claimed (*hezkat mamon*): so long as the defendant's possession was not proved to be unrightful, it will not be disturbed – hence a defendant in possession is always in a better position than the plaintiff (Shevu'ot 46; Maim. Yad, To'en ve-Nitan, 8:1; Sh. Ar., ḤM 133:1). But in order to raise the presumption of title, the possession must be accompanied by a claim of right (BB 3:3 and Codes); where the defendant in possession does not claim a specific right thereto, the burden is shifted to him to prove a right to retain the chose in action. Or where a claim is made according to custom, and the defense (that is, the possession) is contrary to custom, such as in a claim for workmen's wages (TJ, BM 7:1, 11b), the presumption of rightfulness operates in favor of the plaintiff and shifts the burden of proof onto the defendant. In an action between heirs, where the defendant has seized part of the estate, his claim of right is not any better than that of the plaintiff, and he will have to prove that his possession is rightful (Yev. 37b and Tos. *ibid.*). Where a man was seen to take a chattel out of a house, it was held to be on him to prove that he took it rightfully (BB 33b; Hai Gaon, *Sefer ha-Mikkah ve-ha-Mimkar*, ch. 40), presumably because his possession was too recent to give rise to any presumption to that effect. Conversely, past possession which had meanwhile ceased (*hezkat mara kamma*) would give rise to a presumption of title only where the other party was not in possession either (BM 100a). These rules do not apply to possession of land and houses but only of money and chattels – for lands and other immovables there must be an uninterrupted possession of three years (BB 3:1), coupled with a claim of right (BB 3:3), in order to give rise to a presumption of title.

**PRESUMPTIONS AND QUASI-PRESUMPTIONS OF CONDUCT.** In order to mitigate the burden of proof and to simplify the judicial process, the sages have, presumably from their own accumulated judicial experience, established a vast number of quasi-presumptions, rooted in the psychology of human conduct, which apply to every litigant before the court, unless and until the contrary is proved. To give a few examples: a man does not waste his words or his money in vain without good cause (Ket. 58b, 10a); nor will he stand by inactive when his money is taken or his property endangered (Shab. 117b, 120b, 153a; Sanh. 72b) or when a wrong is being done or threatened to him (BB 60a). A man does not pay a debt before it falls due (BB 5a–b); nor does a man tolerate defects in a thing sold to him (Ket. 75b–76a). On the other hand, no man buys a chattel without having first seen and examined it (*ibid.*). A debtor will not easily lie in the face of his creditor (BM 3a), nor a wife in the face of her husband (Ket. 22b), nor anybody in the face of a man who must know the truth (Tos. Ket. 18a; BK 107a). A man is not expected to remember things which do not concern him (Shevu. 34b). A man will not leave his house empty and his household unprovided for (Ket. 107a). However, he is apt to understate his fortune so as not to appear rich (BB 174b–175a), and will rather have one

ounce of his own than nine ounces of his neighbor's (BM 38a); nor will he sell and dispose of any of his goods unless he has to (BB 47b). No man commits a wrong unless for his own benefit (BM 5b) and the purpose of an act is its normal consequence ("everybody knows why the bride gets married"; Shab. 33a). No person is lighthearted in the hour of his death (BB 175a), or defrauds the Temple treasury (*hekdesb*; Shevu. 42b; Ar. 23a). Apart from such general presumptions, there are special ones relating to particular contracts or offices, as for example the presumption that an agent has duly performed the duties of his agency (Git. 64a), or that a priest has duly performed the duties of his office (TJ, Shek. 7:2, 50c).

**PRESUMPTIONS OF CREDIBILITY (*NE'EMANUT*).** Much stronger than these general and special presumptions of conduct are two further categories of presumptions, which are – theoretically at least – irrefutable (comparable to, but not identical with, the Roman *praesumptiones iuris et de iure*). One is the presumption of credibility (*ne'emanut*) and the other is the presumption of common sense (*umdana mukhaḥat*).

The presumption of credibility is primarily based on the notion that the party or witness concerned has an intimate knowledge of the matter in issue and has no reason to distort it. Thus, where a man says he has divorced his wife, his word is taken as conclusive for the court to permit her remarriage – because the matter is within his own knowledge, and he has no reason to distort it, as he could even now divorce her any time (BB 134b–135a, but see Maim. Gerushin 12:5; Sh. Ar., EH 152:1; see also \*Divorce). Or, a woman is believed when she says that her first husband has divorced her – because the matter is within her own knowledge and she need not have disclosed her previous marriage at all (*ha-peh she-asar hu ha-peh she-hittir*; Ket. 2:5). Or, an action will not lie for land which the defendant had told the plaintiff he had bought from the plaintiff's father, although the defendant could not prove the purchase: he will be believed that he bought it, because he need not have disclosed that it had ever belonged to the plaintiff's father in the first place (Ket. 2:2). The law would be different where the ownership of the plaintiff's father could be proved by witnesses (*ibid.*).

Some of these irrefutable presumptions of credibility are based on Scripture, e.g., where a father says he has given his daughter in marriage (Deut. 22:16: "I gave this man my daughter to wife"; Ket. 22a), or a father's nomination of his firstborn son (BB 127b, following Deut. 21:17). There are, however, also presumptions of credibility which rank in weight with the rebuttable presumptions of conduct – that is, they are capable of being displaced by express evidence to the contrary. A man is presumed not to lie about matters which are easily ascertainable (Yev. 115a); and a man is presumed to remember matters which are extraordinary and astonishing (Hul. 75b). Conversely, a man whose words were proved false on one point, will no longer be believed on other points in the same case; notwithstanding any presumption in his favor, he will be required to adduce express proof for the other points (BM 17a;

Maim. Yad, Gerushin 13:1). Credibility is also presumed for statements made for purposes unconnected with the litigation (*mesi'ah lefi tummo*: Git. 28b; cf. BK 114f.). A man is believed where his statement (e.g., that he had become a convert on his own, without a *bet din*) disqualifies him (Yev. 47a), but no such statement is accepted as proof of disqualification of anybody else, even his wife or children (*ibid.*).

**PRESUMPTIONS OF COMMON SENSE (*UMDANA MUKHAḤAT*).** The presumption of common sense applies to bring acts or conduct into conformity with reason or propriety: the presumption is that a person acts reasonably and properly, notwithstanding any outward appearance to the contrary; and his acts will therefore be judged not according to appearances, but according to what, in reason and propriety, they ought to have been. Thus, a man is presumed not to give away the whole of his property during his lifetime; hence where a dying person disposed of all his property and then recovered, his act will not be enforced by the courts, and he is regarded as having acted in the mistaken belief that he was going to die (BB 146b). The same applies to transactions made for an ulterior motive; where a woman had given away her property in order to deprive her future husband of his legal rights thereto, and on divorce reclaimed the property, the court is reported to have torn the deed of gift into pieces (Ket. 78b; Maim. Zekhiyyah u-Mattanah 6:12). A husband giving his property to his wife is irrefutably presumed to have made her only his trustee and not to have deprived himself and his children of all his property (BB 131b; for a list of these presumptions see *Piskei ha-Rosh* Ket. 11:9).

**PRESUMPTIONS OF CONDITIONS (*UMDANA BE-GILLUI DA'AT*).** While these presumptions apply whether or not the mistake or motive was expressed or admitted, there are other cases in which these or similar presumptions apply only where such mistake or motive can be inferred from express statements made at the time of the transaction (*umdannot be-gillui da'at*). Thus, where a man disposed of his property, mentioning that he had decided to emigrate, and then he did not in fact emigrate, he will be presumed to have disposed of his property only conditional on his emigration (Kid. 49b). Or, where a man had made a will bequeathing his property to strangers, because he had heard that his sons had died, and then it appeared that they had not died, his will was set aside as having been made by mistake (BB 132a). Even where a vendor had stated, at the time of the sale, that he sold in order to have the money for a certain purpose, and that purpose could not afterward be effected, he was held entitled to have the sale set aside (Ket. 97a). It has been said that reservations giving rise to such presumptions must, however, always be reasonable: the man desiring to emigrate, for instance, could have the sale or gift of his landed properties set aside if the emigration did not transpire, but not the sale of his personal effects which he would be assumed to take with him on his emigration (Tos., Ket. 97a).

**JUDICIAL NOTICE (ANAN SAHADEI).** All these presumptions and quasi-presumptions are being taken notice of by the court *ex officio* (*anan sahadei*; Resp. Rosh 34:1; 81:1), and in this respect they are similar to matters of custom and usage (cf. TJ, Pe'ah 7:6, 20b). Not unlike the concept of "judicial notice" in modern law, they replace formal evidence which would otherwise have to be adduced by the party on whom the burden of proof lies: in the language of the Mishnah, the disputant of a presumption of credibility in a given case would say, "we do not live from his mouth," but he has to adduce proof to verify his words (cf. Ket. 1:6–9). In some cases, especially those involving marital status, courts will take notice also of common repute or rumor (*kol*; Git. 89a; Ket. 36b; et al.; on presumptions see also \**Hazakah*).

**MODES OF PROOF.** Where neither presumption nor custom avails the party on whom the burden of proof lies, he may discharge it by adducing evidence, either in the form of an \*oath, or in the form of a *shetar*, or in the form of the testimony of \*witnesses.

**EVALUATION OF EVIDENCE.** Notwithstanding the formal and apparent sufficiency of the evidence adduced, however, the court is not bound by it, but has to weigh its reliability and satisfy itself of its truth before deciding the case in accordance therewith: it is a matter for the mind and heart of the individual judge, and no hard-and-fast rules can be laid down (Maim. Yad, Sanh. 24:1–2).

**FRAUD ON THE COURT.** Where the judge has gained the impression that the case before him, though duly proven, is a fraud (*din merummeh*), Maimonides holds that he ought to disqualify himself and leave the case to be decided by some other judge (*ibid.* 3); but the better opinion appears to be that he ought to dismiss the case there and then (Resp. Rosh 68:20; ḤM 15:3). Where it was the defendant who had deceived the court, judgment would be given in favor of the plaintiff, so as not to let "the sinner reap the fruits of his sin" (Resp. Rosh 107:6). The same rule would apply where a party sought to prevent the court from discovering the whole truth, whether by refusing to submit to cross-examination, or by suppressing evidence, or by any other means (*ibid.*).

**ADDITIONAL EVIDENCE.** Even though a case has been duly proved and decided, any party claiming that new evidence has been discovered, which might change the outcome of the proceedings, is entitled to have the case reopened (Sanh. 4:1). The only exceptions to this rule are, first, where the court has fixed a time limit for the adducing of additional evidence and that time has expired; and second, where the party has expressly declared in court that there is no additional evidence available to him (Sanh. 3:8) – in these cases it is apprehended that the additional evidence might have been fabricated (Rashi, Sanh. 31a).

**FORMAL EVIDENCE (GILLUI MILTA BE-ALMA).** It is not only by vesting a wide discretion in the judge but also by legisla-

tively relaxing the rules of evidence in proper cases that the law seeks to avoid any possible hardships which may arise from the objective difficulties of obtaining evidence. Such legislative relaxations are to be found particularly in respect of routine matters. Thus no formal evidence is required for the identification of litigants who identify themselves; even a relative or a minor can identify a brother-in-law for the purpose of *halizah* (Yev. 39b; see \**Levirate Marriage*) or the evidence of one witness (who would nowadays be called a "formal" witness) is sufficient to establish matters of physical examination, such as the appearance of signs of puberty or the symptoms of a disease – matters which have to be proved, not because they can be seriously contested but in order "that judgment may be rendered without a stammer" (Rashi, Ket. 28a).

**LEGISLATIVE RELAXATION OF RULES OF EVIDENCE.** In matters of marital status, there are many situations where the law contents itself with the evidence of a disqualified or a single witness, or hearsay, or other generally inadmissible modes of proof, because, in the language of Maimonides, these are generally matters which can be verified by other means and on which a man will not normally lie, as e.g., the death of another man; "and while the Torah insists on the testimony of two witnesses and all the other rules of evidence in cases which cannot be proved otherwise, as e.g., whether A killed B or A lent money to B, in these matters in which it is unlikely that any witness would lie, have the sages seen fit to relax the rules and to accept the evidence of bondswomen, and in writing, and without cross-examination, so that the daughters of Israel may not lose their remedy" (Gerushin 13, 29).

[Haim Hermann Cohn]

### Circumstantial Evidence

The above discussion concerned various *legal* presumptions – based on conduct, on credibility, on common sense, presumptions of the existence of a given condition, and "judicial notice" – all of which involve interpretation of and legal consequences derived from known facts. There remains, however, a basic question, as to whether facts may be determined in reliance on circumstantial evidence. Circumstantial evidence is evidence that does not directly prove the specific fact for which proof is required, but necessitates a deductive process of drawing conclusions to prove that fact.

In *dinei mamonot* (monetary cases), as stated above, it is undisputed that a presumption may be relied upon for the determination of an actor's intent. However, regarding the commission of an act itself or the actor's identity, the *rishonim* take varying approaches: Maimonides (Yad, Sanhedrin 24:1) adopts the view that in such monetary cases facts can be determined on the basis of circumstantial evidence, provided that the evidence offers good and convincing proof. For example, if a person claims that he left a specific article as a deposit with a decedent and presents signs which prove that the article is his, and a judge is persuaded that the article is not the decedent's property – the article will be taken from the heirs and given to

the claimant, even if there is no will directing that this be done. An opposite view appears in the responsum of R. Yosef Colon (Responsa Maharik, §129; Italy, 15<sup>th</sup> century), which provides that a presumption can only be relied upon to determine the intention of an actor, but cannot be used as proof of the actual commission of the act or the actor's identity, regarding which judges only rely on direct evidence.

Regarding personal status, marriages and divorces, testimony that an act of divorce or marriage actually took place is required to confirm its validity; regarding marriage, all authorities agree that circumstantial evidence is sufficient to prove commission of the act. However, with respect to divorce, there is a need for constitutive evidence – supporting witnesses who witnessed the act of divorce – and the authorities are divided as to whether circumstantial evidence is sufficient for this. Rabbenu Tam (Tosafot at Gittin 4a) takes the view that actual witnesses are necessary and that circumstantial evidence is insufficient, while R. Alfasi (TB Gittin 47b–48a and Rabbenu Nissim, ad loc) reasons that circumstantial evidence can take the place of witnesses who confer validity to the *get*.

In penal law as well there are disputes about the status of circumstantial evidence. The accepted view is that capital cases may not be decided and punishments may not be imposed except on the basis of clear and direct proofs (see Maimonides, Yad, Sanhedrin 20:1), and there is a clear distinction in this context between monetary cases and capital cases (*dinei mamonot* and *dinei nefashot*).

However, the Tosafists (Shevuot 34a) take a different view, postulating that a person may also be convicted of murder in reliance on circumstantial evidence, when such evidence is absolute and incontrovertible – just as the same evidence would have substantiated the defendant's liability for monetary damages had he not actually killed the victim but only injured him.

According to some authorities, even Maimonides would agree that the prohibition against reliance on circumstantial evidence applies exclusively to actual capital cases, but that in other types of penal cases, such as *malkot* (lashes), circumstantial evidence can be relied upon in the same manner as in *dinei mamonot* (monetary cases) (Responsum Maharik, Part 87).

An exception to the rule with regard to capital cases is that of adultery, in which the basic rule is that circumstantial evidence is sufficient. The view of the *amora* Samuel in the Talmud (Makkot 7a) is that to convict a man and a woman of adultery, it is sufficient that the witnesses testify that they appeared to be engaged in an act of adultery, and there is no requirement that witnesses testify to having witnessed the actual sexual act. This opinion was accepted as the binding halakhic rule by most authorities (Yad, Issurei Bi'ah 1:19; Sh. Ar., EH 20:1). The main explanation for this divergence from the strict evidentiary requirements of criminal law, especially in capital matters, is that the sages considered it unreasonable to assume that biblical law required witnesses who witnessed the actual sexual act, both because of the technical difficulty

and the indecency involved, and they therefore assumed that under biblical law it was sufficient that there be testimony that they were seen behaving “like adulterers” (see \*Adultery).

LESSENING THE BURDEN OF PROOF IN CRIMINAL LAW – PUNISHMENT IN DEVIATION FROM THE LAW. Another category of cases which deviates from the rule that capital cases may only be decided in reliance upon direct evidence are those decided in accordance with the doctrine allowing the imposition of punishment in deviation from the strictures of criminal and evidentiary law when the exigencies of the times necessitate such punishment (*le-migdar milta*, i.e., to provide “a fence around the words” of Torah). This category was discussed at length in the Israeli Supreme Court decision in the *Nagar* case (Cr.A. 543/79 *Nagar v. State of Israel*, P D 35(1) 163–170, opinion of Justice Elon). We will review some of this discussion.

Toward the end of the Tanna'itic era, we read of the establishment of a principle – followed for many years beforehand – which constituted a significant change in Jewish criminal law, with respect to both penal law and the rules of procedure and evidence in criminal trials:

R. Eleazar b. Jacob stated, “I heard that even without any Torah [authority for their rulings], *beth din* may administer flogging and [death] penalties; not, however, for the purpose of transgressing the words of the Torah but in order to make a fence around the Torah” (TB Yevamot 90b; Sanhedrin 46a). In TJ Yerushalmi, Hagigah 2.2, the text is “I heard that they administer penalties not in accordance with the *halakhah* and they administer penalties not in accordance with the Torah” (page 165 of the *Nagar* decision).

On the basis of this fundamental provision, which enabled the courts to deviate from the original law of the Torah in criminal and evidentiary law, in accordance with the needs of the time and the place, both the courts and the communal leaders utilized their authority to enact communal regulations (see \**Takkanot*):

Detailed legislation by way of regulations which were enacted during all of the periods against the background of variegated religious, societal, economic and moral circumstances.... This legislation granted broad power to determine criminal penalties and litigation procedures which conformed to the needs of the time and of society, and was accompanied by a serious warning not to infringe a person's stature as a human being, and his dignity more than necessary. After determining the scope of this extended authority given to the halakhic authorities in the area of criminal law Maimonides gives the following summary of the Sages' obligation when exercising these powers: “All these matters are carried out in accordance with what the judge deems necessary under the exigencies of that time, and his acts should always be for the sake of heaven and he should not take a frivolous attitude to human dignity” (Maimonides, Yad., Sanhedrin, ch. 24., 10) (*ibid.*, pp. 165–66).

Formally, such regulations are defined as “temporary provisions,” but they have become part of substantive Jewish law in practice. At various times, Jewish courts throughout the Diaspora have exercised this authority even in imposing death sentences without requiring a court of 23, and without the strin-

gent rules of evidence imposed by the original Jewish Law (see Elon, *Jewish Law*, pp. 515–19, and notes 100, 104–108).

As noted, in its original format, Jewish Law was strict in its requirements for direct evidence. Maimonides makes the following illuminating observations on the strict evidentiary requirements of Jewish Law (*Sefer ha-Mitzvot*, Negative Commandments, §290): “Even if A pursues B with intent to kill, and B takes refuge in a house, and the pursuer follows him, and we enter after them and find B in his last gasp and his enemy, A, standing over him with a knife in his hand, and both of them are covered with blood, the Sanhedrin may not find the pursuer A liable for capital punishment, since there are no direct witnesses who actually saw the murder ...” The reason given by Maimonides is that if the court was permitted to convict a suspect of a criminal offense on the basis of other than the unequivocal testimony of witnesses to the actual act, the court might soon find itself convicting of criminal offences on the basis of a “speculative evaluation of the evidence.” He completes his comments with the observation, that “it is better and more desirable that a thousand guilty persons go free than that a single innocent person be put to death.”

In contrast with the stringency that characterized the original Jewish Law, the authority to impose punishment in a manner that deviated from Torah law enabled the courts in numerous Jewish communities to be content with circumstantial evidence alone, even for purposes of conviction for serious offenses such as murder. R. Isaac b. Sheshet of Perfet (Spain and North Africa; late 14th century) ruled that defendants accused of murder could be convicted relying on circumstantial evidence alone, provided there are convincing proofs and plausible reasons.

In any event, in order to “create a safeguard,” since someone from among you has died, if you decide that the death penalty is called for because a crime has been committed heinously, violently and deliberately (it appears that they lay in wait for him [the victim] at night and during day, and openly brandished weapons against him in the presence of the communal leaders), then you may [impose the death penalty]... even when there are no eyewitnesses, if there are convincing proofs and plausible reasons.

In another responsum, the Ribash ruled that for the same reason it is also possible to rely on the confession of a litigant supplemented by circumstantial evidence (similar to the provision in the law of evidence practiced in the State of Israel, allowing conviction of the accused on the basis of a confession given outside court, with the addition of “something extra”):

Jewish courts [at this time] impose flogging and punishment not prescribed by the law, for capital jurisdiction was abrogated, but in accordance with the needs of the time, and even without unequivocal testimony, so long as there are clear grounds to show that he [the accused] committed the offense. In such a case, it is the practice to accept the defendant's confession even in a capital case, even where there is no clear proof, in order that what he says, together with some measure of corroboration, may shed light on what happened (*ibid.*, 234).

Not every part of the Jewish Diaspora enjoyed such broad autonomous criminal jurisdiction, and the extent of juridical authority differed according to the period and the location. However, jurisdiction similar to that enjoyed by the Spanish center in the Middle Ages also existed at a later period in the Jewish community of Poland. It was during this period that we hear of Polish communities exercising the power of “imposing punishment not prescribed in the Torah,” in order to convict defendants on the basis of circumstantial evidence (*Nagar, ibid.*, pp. 167–169).

It is important to emphasize that, where convictions were based on circumstantial evidence, it was constantly reiterated that such evidence, even if not clear and direct, must be of a kind that the judges “believe to be the truth” (*Resp. Rashba*, attributed to Nahmanides, §279), and that this kind of adjudication is only possible where “the accusation is proven to be well grounded”; and that “the sole intention is to pursue justice and truth and there is no other motive” (*Resp. Zikhron Yehudah* § 79, *Nagar, ibid.* 170).

As noted above, these principles constituted the basis of the ruling of the Israeli Supreme Court in *Nagar*, under which one suspected of murder could be convicted relying on incontrovertible circumstantial evidence, even though the court had no direct evidence of his having committed the offense, and even though the body itself had not been found (see \*Capital Punishment).

**DOCUMENTS AS EVIDENCE.** There is evidence of written documents serving as legally valid proof in the Bible itself: “and written in the books and sealed, and witnesses called” (Jer. 32:44).

The talmudic rule is that deeds constitute valid proof in a court. “Resh Lakish said: If witnesses are signed on a deed it is as if their testimony had been examined in court” (TB Ketubbot 18b). Several reasons are given for this ruling: first, because the deeds are drawn up with the debtor's consent and he has mentally resolved to agree to their contents since he derives some benefit or profit thereby; second, because the texts of the deeds are uniform and everyone understands their import; and third, because people customarily rely on them, since otherwise they would be unable to do business with one another. The *rishonim* therefore ruled that, in order for a deed to be binding, it must be written with the debtor's consent and at his request; a deed which was written by witnesses of their own initiative is not binding (Tosafot, Ketubot 18b; Nahmanides, Bava Bathra 171a; Hame'iri, Ketubot 20a).

Under biblical law, the authenticity of a deed is presumed, “a person does not dare to forge” (Rashi, at Gittin 3a). However, the changing times and different moral and social attitudes precluded continued adjudication of deeds on the basis of simple authentication by way of the witnesses' signature, on the presumption that this excluded the possibility of forgery. The Rabbis henceforth enacted that all deeds would require substantiation. Thus, a person making a claim based on a deed, or relying on it as evidence, bore the burden of proof

of demonstrating that the witnesses' signature was genuine. Substantiating evidence for a deed could consist of additional testimony on the signature, comparison of the signatures to other recognized signatures of the witnesses who signed, or the summoning of the signing witnesses to testify that the signature on the deed was indeed theirs.

Maimonides took a different view regarding the nature of a deed. Maimonides contended (Hilkhhot Edut 3:4) that under Biblical law oral testimony is sufficient in all areas of law, including *dinei mamonot* (monetary civil cases). According to Maimonides, the requirement and acceptance of the signature of witnesses as proof of a deed is rooted in a rabbinic regulation, enacted so as not to "lock the door against borrowers" – i.e., economic life would be impossible if it were necessary to confirm every loan by way of oral testimony in court. In Maimonides' view, the requirement of substantiation of a deed is an offshoot of this rabbinic regulation, intended to prevent forgery of deeds.

In addition to requiring that witnesses' signatures be substantiated in order to prevent forgery of a deed, the Talmud prescribes that deeds are not to be written on paper (on which the original text could be erased) or untanned animal skin, because writing on this kind of paper can be easily forged (TB Gittin 21a–22b). Similarly, deeds cannot be written in a manner that enables the forging of their concluding section, or the addition of words that did not appear in the original text; a deed written in such a manner is inadmissible as evidence (Tb BB 160af.; cf. \**Shetar*).

**OBJECTION TO EVIDENCE BY RIVAL LITIGANT.** The litigants are allowed to make conditions regarding the rules of evidence in a civil case, in which they agree to admit otherwise inadmissible evidence. Nevertheless, so long as a trial has not yet finished, either litigant can object to the hearing of inadmissible evidence (Sh. Ar., *ḤM* 22:1). Moreover, if the agreement between the parties was not made in the court, the litigant can renege on his consent to accept such evidence even after the trial's conclusion (*Siftei Kohen*, ad loc.). In order for a litigant to submit evidence that is otherwise inadmissible and deny the other litigant the right to object to such, he must make an agreement with the other litigant through an act of *kinyan*.

**EVIDENCE THAT INFRINGES PRIVACY AND VIOLATES HUMAN DIGNITY.** \*Human dignity and the right to privacy are extensively protected in Jewish law. Nevertheless, at times the search for the truth necessitates the violation of a suspect's dignity or privacy. The conflict between the value of determining the truth (even by prohibited means) and that of preserving human dignity was discussed in the Israeli Supreme Court's decision in the rehearing of the Vaknin case (*FH 9/83 Military Appeals Court v. Vaknin*, PD 42(3) 837). In that case, the police obtained incriminating evidence against a defendant suspected of possessing dangerous drugs by forcing him to drink salt water, as a result of which he vomited up the drug packages that he had swallowed. The Court was requested to

decide on whether the police action fell within the ambit of section 2 of the Protection of Privacy Law, 5741–1981. An affirmative ruling on this point could disqualify the illegally procured evidence, precluding reliance thereon for a conviction. On the other hand, if the conclusion was that the police action was not proscribed by the Protection of Privacy Law, then, even though the act itself was improper, the evidence obtained thereby would be admissible. (In general, under Israel law only evidence obtained through infringement of privacy as defined by the Protection of Privacy Law is rendered inadmissible.)

The Court ruled that this case did not involve an infringement of privacy, and the evidence was therefore admissible. Justice Elon held that the Protection of Privacy Law should be interpreted in accordance with Jewish law, and therefore adduced sources in Jewish law concerning the prohibition of disclosing secrets, the prohibition on opening another person's letters without permission, and others. Nevertheless, Elon indicated a number of specific cases in which the need to obtain evidence prevails over the need to protect privacy or human dignity – both with regard to penal law and monetary law:

Eavesdropping is an affirmative precept (*mitzvah*) in certain circumstances as for example in order to obtain evidence in a case involving grave criminal activity (such as incitement). In such a case, "they may hide witnesses [against] him behind a fence" (Mishnah Sanhedrin 7.10), and it is permitted to do so in order to obtain evidence regarding any manner of criminal activity. (See R. Joseph Babad's *Minḥat Ḥinukh* – Commandment §462: "This is evidently not the simple meaning of the Mishnah in Sanhedrin ad loc: 'Witnesses are not hidden against any who are subject to the death penalty according to the Torah law, other than these' – and the matter requires clarification.") Similarly, it was permitted to open a letter addressed to another person where there are grounds for suspecting that the letter's author intends to commit a wrongdoing with the addressee's money and the matter can be clarified by opening the letter and reading it (see Responsa Hikekei Lev, Part 1, *Yoreh De'ah*, 49, responsa of R. Hayyim Palache, rabbi of Izmir in the mid-19<sup>th</sup> century and one of the outstanding respondents during the period of the *aḥaronim*. See also *Responsa Maharik*, n. 110, of R. Joseph \*Colon, one of the great halakhic sages in Italy during the 15<sup>th</sup> century, and Sh. Ar. *YD*, 228.33 Rema).

In addition to the principles elucidated in the *Vaknin* decision, there is also the issue of investigating the adulterous wife (*sotah*; see \*Ordeal). Although this is a procedure based upon the occurrence of a miracle, which is not practiced in our time, it is intended to clarify guilt, and involves the humiliation of the woman being investigated.

An additional case raising the question of the clash between the need for evidence and the right to privacy came before the High Rabbinical Court of Appeals (Appeal 5733/216, R.D. 9, 331). The case concerned a husband who claimed that his wife was mentally ill, and therefore requested that the Court order her to undergo psychological treatment in order to restore "domestic peace." In the event of her refusal, he requested that she be declared "a rebellious

wife” (*moredet*). The husband requested to summon her doctor as witness to her mental condition, but the latter conditioned his testimony on the wife’s agreement to waiving medical confidentiality, which the wife refused to do. The president of the Court, Rabbi Shlomo Goren, and Rabbi Mordechai Eliyahu both held that the suspicion regarding a mental impairment was firmly based and that the doctor should therefore be compelled to testify to the court. On the other hand, Rabbi Yosef Kafah ruled that the probative value of the doctor’s testimony was minimal, as he would only testify on her medical condition as it had been many years back. On the other hand, the testimony was liable to cause her serious damage, given that she was engaged in education and would be derided by her students. Rabbi Kafah therefore ruled that the doctor’s testimony should not be required.

ACCEPTING EVIDENCE AFTER THE CONCLUSION OF THE TRIAL. The Mishnah (Sanhedrin 3:8) states that “whenever evidence is brought – it can contradict the ruling.” In other words, after the trial’s conclusion, even if the obligation ruled upon was discharged, the ruling can be annulled if new evidence was brought before the court. In such a case, a new trial must be held. The *tannaim* (*ibid.*) disputed the issue of whether the Court can place a time limitation on the period during which a litigant can proffer new evidence. The law was decided according to R. Simeon b. Gamaliel – namely, that the court cannot impose a time limit on a litigant’s submission of new evidence which, irrespective of when it was submitted, will be accepted. A limitation on the submission of new evidence is only effective if the litigant himself declared that he has no further evidence; in such a case he is prevented from bringing further evidence at a later stage (Maimonides, *Yad*, Sanhedrin 7:6–9; Sh. Ar., *HM* 20).

**EVIL EYE** (Heb. עַיִן הַרָעָה, *ayin ha-ra*; lit., “the eye of the evil”; Aram. אִינָא בִּישָׁא, *eina bisha*), a widespread belief that some persons may produce malevolent effects on others by looking at them, based on the supposed power of some eyes to bewitch or harm by glance. In early Jewish literature the acceptance of the existence of the evil eye as fact precluded any theoretical explanation of this phenomenon and discussion of its origin. In post-talmudic literature, however, one of the following two explanations is generally found: (1) the evil eye contains the element of fire, and so spreads destruction (Judah Loew b. Bezalel (“Maharal”) in *Netivot Olam*, 107d); (2) the angry glance of a man’s eye calls into being an evil angel who takes vengeance on the cause of wrath (Manasseh Ben Israel in *Nishmat Hayyim*, 3:27; cf. *Sefer Hasidim*, ed. by J. Wistinetzki (1924<sup>2</sup>), 242 no. 981).

As both explanations imply magic, folk beliefs governing magic and counter-magic are evidenced in beliefs connected with casting and averting the evil eye.

### Casting the Evil Eye

Whereas a “good-eyed” person is generous and good-hearted, the “evil eye,” in biblical (cf. 1 Sam. 18:9; Prov. 28:22) and tannaitic (cf. Avot 2:9, 11; 5:13, 19) sources, denotes stinginess, selfishness, and jealousy; in the *aggadah* of Palestinian *amoraim* the evil eye is a prevalent motif. Furthermore, jealousy was linked with magic and with fatal consequences. Hence, talmudic and midrashic elaborations of biblical narratives represent Sarah as casting the evil eye on Hagar (Gen. R. 4.45:5), Joseph’s brothers on Joseph (*ibid.* 84:10), Og the giant on Jacob (Ber. 54b). Likewise, the evil eye caused the breaking of the first tablets of the Law (Num. R. 12:4) and the death of Daniel’s three companions (Sanh. 93a).

This magical power of the eye was not confined to biblical evildoers; folk heroes, regarded as sacred wonder-workers, were believed to have exercised it as well, but for benevolent purposes. So R. \*Simeon b. Yoḥai transforms an evil person into “a heap of bones” by means of his magic endowment (Shab. 34a; פֶּדַרְק ed. by S. Buber (1868), 90a–b), and, with a look, R. Johanan, the *amora*, kills a man who calumniated

Jerusalem (BB 75a). The magical aspect of the deed is stressed in killing by transformation (Ber. 58a).

### Averting the Evil Eye

Folk beliefs and folk customs are especially evident in the attitude toward the aversion of the evil eye. All measures taken against it are either (1) preventive or (2) counteractive.

(1) The belief that the evil eye is activated by arousing the jealousy and malice of the “jettatori” (i.e., the endowed people) calls for preventive measures of self-restraint, e.g., the avoidance of any expression of praise, approbation, and of beauty, domestic or socioeconomic success, or happiness. For this reason Abraham sent his son Isaac home at night after the *\*Akedah* (Gen. R. 56:11); Jacob advised his handsome and strong sons not to enter the same gate all together “on account of the eye” (*ibid.* 91:6); similarly, Joshua advised Ephraim and Manasseh to hide in a forest (Josh. 17:15; BB 118a–b). Prominent men, beautiful women, and newborn babies – all of whom are likely to attract special attention – are especially susceptible to the evil eye. If, however, the beauty is veiled, riches not exhibited, and a child covered with a dirty bag or given an ugly name, the happy event may pass unnoticed, and the evil eye thus remains passive. Therefore, a costly garment should not be spread over the bed when guests are visiting the house as “it will be burned by the eye of the guests” (BM 30a), and precious glass should be broken at a wedding. The idea that “blessing comes only upon those things which are hidden from the eye” (Ta’an. 8b) is undoubtedly connected with such preventive measures.

(2) Once the evil eye has been activated, and the threat of danger and harm is close to realization, there is no need for preventive measures: only confrontation and war measures based on countermagic which deceive or defeat the evil eye can then save the endangered person. The use of a mirror (ornament) or a specific color (red, blue) may blight its source by reflecting the glance; an obscene gesture or a holy verse (*\*amulet*) may avert the evil eye by frightening it; and an outstretched hand may stop its rays. According to the Talmud (Ber. 55b), whoever is afraid of the evil eye should stick his right thumb in his left hand and his left thumb in his right hand, proclaiming: “I, so and so, son of so and so, am of the seed of Joseph, whom the evil eye may not affect.” The gesture (a “fig”) – universally used to avert the evil eye by putting it to shame (this original meaning was probably unknown to sages who prescribed it) – took on a Jewish character by the pronouncement of the aggadic sentence that the descendants of Joseph are immune from the evil eye (Ber. 20a).

Other means of fighting and subduing the activated evil eye stem from attempts to absorb the devastating glance, and so to neutralize it. To divert the glance from the intended target, “interesting” objects may be hung between the eyes of the endangered person, e.g., precious stones, or as strange and unexpected an object as a tail of a fox between the eyes of a horse in need of protection (Tosef., Shab. 4:5).

The belief in the evil eye and the various means, both sacred and profane, of averting it, were very prevalent among East European Jews; to this day they exist in many Oriental Jewish communities. In modern times the use of blue paint and a metal amulet in the form of an open palm of the hand are still widespread in Oriental communities, and among Yiddish-speaking Ashkenazi Jews, it is customary to “qualify” any praise with the phrase *keyn ayen hore* (“may there be no evil eye” often shortened to *kaynahora*). The custom of tying a red band around the wrist or neck of a newborn child also derives from a fear of the evil eye. In Yiddish, even the name “evil eye” is euphemistically called *git-oyg* (“good eye”). R. Lilienthal (see bibl.) lists over 80 anti-evil eye practices recorded among East European Jews. The striking resemblance to those listed in monographs on Oriental Jewish communities (cf. H. Mizrahi, *Yehudei Paras* (1959), 115–7) can be explained by the universality of the motif of the evil eye, on the one hand, and its particular Jewish expression, on the other.

[Dov Noy]

**EVIL-MERODACH** (Heb. אֲוִיֵל מְרֹדַךְ), son of *\*Nebuchadnezzar*, king of Babylonia from 562–560 B.C.E. The Babylonian form of the name is Amēl Marduk (“man of Marduk”). During Evil-Merodach’s reign, the stability of the royal court of Babylon was undermined and there appeared the first signs of the decline of the neo-Babylonian Empire. After two years as king, he was assassinated, probably by his brother-in-law Nergal-šar-ušur (Nergal Sarezzer), who succeeded him on the throne (Jer. 39:3, 13). It is related in the Bible (II Kings 25:27–30; Jer. 52:31–34) that Evil-Merodach freed *\*Jehoiachin*, king of Judah, from prison in the 37<sup>th</sup> year of Jehoiachin’s exile in Babylon and that he accorded him a food allotment for life and treated him better than his other vassals. His motives can only be guessed at. He may have contemplated a far-reaching reverse of his father’s policies.

[Bustanay Oded]

**EVOLUTION.** Although evolutionary ideas are very old, being found in the works of Greek philosophers and echoed in the *aggadah* and the Midrash, the main stimulus to evolutionary thought came from the theory developed at the end of the

18<sup>th</sup> century, according to which life on earth has existed for millions of years, and not for less than 6,000, as held by the biblical tradition current in the civilized world. The theory of evolution produced a sharp reaction on the part of those intellectuals and scholars who subscribed to the assumption of the stability of the species from the six days of creation. Besides scientists who cast doubts on the validity of the theory, its chief opponents were (and still are) religious people who accept the creation story in Genesis literally. There are, however, religious thinkers who see in the principle of evolution a concept that accords with the idea of divine providence, some of them not only regarding the account of creation in Genesis as a simple explanation “in ordinary language” of the actual process of creation, but seeing in it a deeper significance. Some point to aggadic and midrashic statements which contain allusions to evolution and to the fact that life existed on earth in epochs preceding the accepted reckoning in Judaism. When discussing the Greek philosophers’ views on “the eternity of the universe,” a similar problem confronted Maimonides, who says (*Guide*, 2:25):

We do not reject the eternity of the universe because certain passages in Scripture confirm the creation; for such passages are not more numerous than those in which God is represented as a corporeal being. Nor is it impossible or difficult to find for them a suitable interpretation. We might have explained them in the same manner as we did in respect to the incorporeality of God and this might have been easier ... However, we have not done so ... for the eternity of the universe has not been proved and there is no need of scriptural passages to reject it ... If we were to accept the eternity of the universe as taught by Plato, we should not be in opposition to the fundamental principles of our religion ... The scriptural text might have been explained accordingly ... But there is no necessity for this expedient, so long as the theory has not been proved. As there is no proof sufficient to convince us ... we take the text of the Bible literally.

Applying this to the subject under discussion and stating it in contemporary terms, it may be said that if proofs were forthcoming for the theory of evolution (on the assumption that there exists One who directs creation), a way would be found of explaining the biblical passages accordingly.

Although Judah Halevi clearly recognized the need to accept the Scriptures literally, he nevertheless stated in his *Kuzari* (1:67): “If, after all, a believer in the Law finds himself compelled to admit an eternal matter and the existence of many worlds prior to this one, this would not impair his belief.” In the latter part of this sentence Judah Halevi alludes to the statement of R. Abbahu (Gen. R. 3:7) that God “created worlds and destroyed them,” while according to R. Judah b. Simon there was “a succession of times (days and nights) before that,” that is, before the first day of creation (*ibid.*). To this province belong also such statements as: “And there was evening and there was morning, the sixth day’ (Gen. 1:31). R. Simon b. Marta said, ‘Up to this point we count according to the reckoning of the world, after it according to another reckoning’” (Gen. R. 9:16), that is, time before the final creation of

the world has a different meaning from that after it, which is the reckoning that we follow. The relativity of time in the term “day” is referred to in the statement (Gen. R. 19:8) which distinguishes between the human and the divine day, the latter being a thousand years in duration, as it is said (Ps. 90:4): “For a thousand years in Thy sight are but as yesterday.” Alongside these notions there are homiletical interpretations of biblical passages according to which all organisms were fully created in the six days of creation, after which no changes have occurred in them (Hul. 60a). In contrast to those who extended the period of creation, a *tanna* curtailed it by stating that “on the first day the entire world was created,” this being the view of R. Nehemiah, who disagreed with R. Judah’s opinion that “the world was created in six days” (Tanḥ. B., Gen. 7). All these sages based their views on biblical verses, which could be interpreted either way. In this connection Rabbi A.I. \*Kook has remarked that “everyone knows that the creation is one of the mysteries of the Torah, and if all the statements are merely to be taken literally, what mystery is there?” (*Iggerot ha-Re’iyyah* (1961<sup>2</sup>), no. 91). The literature of the sages is pluralistic in its world outlook, especially in the spheres of cosmology and biology. The *tannaim* and *amoraim* absorbed legends and “factual” stories, the views of Greco-Roman science, and the folklore of ancient peoples. Among these were ideas which have no basis in fact nor any support in biblical passages and are even in conflict with the creation story. There was, for example, the view about the development of living organisms from nonliving substances which, known as spontaneous generation and accepted until the 19<sup>th</sup> century, penetrated into the *halakhah*. There was also the “assumption that a mouse does not breed” (Sifra, *Shemini*, Parashah 5; Hul. 127a), and hence the halakhic discussion on the question of the uncleanness of “a mouse which is half flesh and half earth” (Hul. 9:6. As late as in 1652 Helmont, a Dutch chemist, still suggested a method of producing mice by putting rags into a heap of grain). There was similarly the prevailing view that vermin originate from perspiration or from dirt. Thus the Talmud (Shab. 107b) declared that “vermin do not breed,” against which an objection was raised from the reference made to “eggs of vermin” (see Hul. 9:6). The salamander, too, was thought to originate from a fire which burnt continuously for several years (see Hag. 27a). In the belief that some organisms develop on food itself, it was permitted to eat certain foods on which maggots develop.

The folklore of various nations tells of organisms, such as \*mandrakes, that are half plant and half human. There was also the belief that some birds grow on trees in the form of fruit, and R. Tam (12<sup>th</sup> century) was asked whether they require *shehitah*, to which he replied that they do (see Loew, *Flora*, 4 (1934), 348). The *halakhah* mentions an organism called אֲבִי הַשָּׂדֶה or אֲבִי הַשָּׂדֶה, whose corpse, like that of a human being, communicates uncleanness (Sifra, *Shemini*, ch. 6; Kil. 8:5). Explained by some as referring to the chimpanzee, it is said in the Jerusalem Talmud (Kil. 8:5, 31c) to be “a man of the mountains who lives from his navel; if the navel is severed, he does not live,” the reference being to a manlike or-

ganism joined by its navel like a plant to the ground. Legends about such an organism were current among various nations (see R. Patai, *Adam ve-Adamah*, 1 (1942), 216ff.). Mermaids, the legendary half-human, half-fish beings, also figure in the *halakhah*, the unclean “living creatures that are in the waters” (Lev. 11:10) being interpreted as “including mermaids,” which however, unlike a human corpse, do not communicate uncleanness when dead (Sifra, *Shemini*, Parashah 3). The sages who quoted these *halakhot* or statements were influenced by the leading scientists of the time, such as Aristotle, Galen, and others, who had confirmed these “facts” and to whom there undoubtedly applied the principle that “if someone tells you that there is wisdom among the non-Jews, believe him” (Lam. R. 2:13). As it deals with all spheres of life and with theoretical subjects, the *halakhah* also on occasion incorporated legendary, fictitious ideas. In the field of “science” the sages were ready to accept various views current among their contemporaries (but proved in our day to be without foundation) and did not hesitate to give expression to them even if they were contrary to their accepted views.

To this province belong *halakhot* relating to \*mixed species (*kilayim*). Despite the assumption inherent in the Bible that in the six days of creation all organisms were fully formed, statements of the sages in the *aggadah* and the *halakhah* refer to the production of new species by hybridization and grafting. The Tosefta and the Jerusalem Talmud of tractate *Kilayim* cite many “facts” about the formation of a third species by grafting two species of flora, some systematically very remote from each other (see \*Biology; it is now evident that no new species can be produced by grafting). Thus, for example, it is asserted that, by sowing together the seeds of an apple and a watermelon a third species, the \*melon (called in Greek *melo-pepon*, the apple-melon), is obtained (TJ, Kil. 1:2, 27a), even as a dangerous creature called *arvad* is produced by mating a snake with a species of \*lizard (Hul. 127a). Another tradition holds that after Anah the son of Zibeon had produced a \*mule, which is a dangerous animal, by crossing a stallion and a she-ass (מִזְרָא, a *hemi-onos*, i.e., a half-ass; cf. Gen. 36:24), “the Holy One blessed be He appointed a *hakhina* [a poisonous snake] which He mated with a *hardon* [a species of lizard] to produce a *havarbar*,” a species of noxious animal whose bite proved fatal to Anah (TJ, Ber. 8:6, 12b). This story is mentioned in a discussion on whether mixed species originated during the six days of creation (*ibid.*; Tosef. Ber. 6:11). On this subject there is the view of the *tanna* R. Yose (Pes. 54a) that “two things God originally planned to create on the eve of the Sabbath [of the creation] but were not created until the termination of the Sabbath, and at the termination of the Sabbath the Holy One blessed be He granted Adam knowledge of a kind like the divine, whereupon he took two stones, rubbed them together, and fire issued from them [cf. the tale of Prometheus]; he also took two [heterogeneous] animals and crossed them, and from them came forth the mule.” Thus R. Yose held that hybridization represents a remarkable wisdom granted to man, who is prone to produce new organisms, “like the divine creator.”

Another *aggadah*, which declares that God Himself “changes His world once every seven years,” mentions various animals, one of which is replaced by the other (TJ, Shab. 1:3, 3b). The reference here may be to seven years of God, one of whose days is a thousand years (see above; although there is a statement (BK 16b) that “the male hyena (צבוע) becomes a bat after seven years,” etc.).

### Proofs of Evolution

The existence in prehistoric times of gigantic animals, then extinct, is alluded to in biblical verses referring to the dragon, the \*leviathan, the Rahab, and others. Having perhaps found traces of the footprints of primeval animals or remains of their skeletons (footprints of prehistoric reptiles have been discovered near Jerusalem in recent times), the ancients had their imaginations stirred to describe these huge animals and explain the reasons for their extinction.

One of the crucial problems confronting the evolutionists was the question of the transition from ape to man. In the literature of the sages there are allusions to a connection between man and ape. Thus the *amoraim* Rav and Samuel held divergent views on the nature of the rib from which woman was created, the one holding that it was a tail (Ber. 61a). In the opinion of R. Judah: “[God] made him [i.e., man] a tail like an animal and then removed it from him for his honor” (Gen. R. 14:12). Even Adam was not the first man, for “974 generations preceded the creation of the world and they were swept away in a trice because they were evil” (Mid. Ps. to 90:13; cf. Shab. 88b). Nor was Adam anatomically perfect, since he was a hermaphrodite (Gen. R. 8:1); the fingers of his hands were joined together, and it was only from Noah onward that people were born with separated fingers (Mid. *Avkir* to Gen. 5:29; and similarly in Tanh. to *ibid.*). In the days of Enosh there took place a moral degeneration; human beings changed, and “their faces became like apes” (Gen. R. 23:6; cf. Sanh. 109b). All these statements are based on a homiletical interpretation of biblical verses, but underlying them was probably the view of the *tanna* or *amora* which he expressed in this manner. Finally there is a statement that attests to an observation and a conclusion drawn from the realm of comparative anatomy: the *amora* R. Samuel of Cappadocia concluded from a common feature in fishes and birds that the latter, too, were created “out of alluvial mud”: this can be proved “from the fact that birds have on their legs scales like those of fishes” (Hul. 27b).

At the beginning of the 20<sup>th</sup> century the naturalist De Vries (1848–1935) drew attention to the fact that in some flora and fauna characteristics suddenly appear which, though not present in their progenitors, are transmitted by heredity to the progeny. These changes, known as mutations, for the most part small and fortuitous, are in the view of scholars the basis of the evolutionary processes. Through the accumulation of these mutations, organisms were separated during millions of years of evolution into strains, species, and higher systematic groups. According to Neo-Darwinism the fortuitous muta-

tions and the operation of natural selection were responsible for evolution, whereas according to Neo-Lamarckism, development cannot be accounted for without assuming that there is something in the living substance which guides it toward development. In this sense there is a statement of the rabbis: "There is no herb which has not a guardian angel in heaven that strikes it and says, Grow!" (Gen. R. 10:6). Other scholars maintain that there are metaphysical factors that guide and direct the existence and development of the organism. This theory, known as teleology, approximates to the religious view of the Creator's providence over His creatures. Some leading evolutionists, although dissociating themselves from the teleological approach, nevertheless agreed that it was impossible to explain evolution on the basis only of known forces. Thus G.L. Stebbins, who made a study of evolution in flora, argued that evolution can be explained by mutations, hybridization, and natural selection directed by a certain force of unknown nature. Certain embryologists, too, assumed that in ontogeny – the development of the individual during the embryonic period – there is an unknown or nonrational force directing it toward its development, and in this there is a parallel between phylogeny, the development of the species, and ontogeny, the development of the individual.

However much these views fall out of fashion as molecular biology progresses and the fossil record is clarified, these assumptions have an indubitable religious significance, and in this connection mention should be made of the words of Rabbi Kook: "The theory of evolution, which is at present increasingly conquering the world, is more in harmony with the mysteries of Kabbalah than all other philosophical theories" (*Orot ha-Kodesh*, ii, 558). On the other hand there are many evolutionists who are not prepared to include in the scheme of creation and evolution a nonrational force and hold that these "unknown" forces, responsible for the evolutionary process, will be revealed and defined as known chemical or physical forces. There are numerous theories to explain the mechanism of evolution, but the doubts exceed the certainties. When Rabbi Kook was asked about the problem of evolution, he summed it up as follows: "Nothing in the Torah is contradicted by any knowledge in the world that emerges from research. But we must not accept hypotheses as certainties, even if there is a wide agreement about them" (*Iggerot ha-Re'iyah*, no. 91).

[Jehuda Feliks]

**ÉVORA**, capital of Alto Alentejo province, S. central Portugal. It had one of the most important Jewish communities in the country. Regulations defining the powers of the \*Arraby Moor issued during the reign of King Alfonso III (1248–79) laid down that the chief rabbi of the Jewish communities in

Alentejo (Alemtejo) should reside in Évora. In 1360, 1388, and 1434, the Évora community was given privileges by the king defining the limits of its autonomy. In 1325 the Jews of Évora were compelled by a special decree to wear a yellow shield of David on their hats (see Jewish \*badge). On several occasions the kings of Portugal intervened in favor of the Jews of Évora who engaged in varied economic activities. In 1392 John I ordered the town authorities to desist from further confiscation of Jewish property in the synagogues of Évora, and in 1408 he granted the Jews a privilege permitting them to enlarge their quarter. The old Jewish quarter can still be visited. On the doorposts of stone-made houses three slots for *mezzuzot* were found. In 1478 the community paid a sum of 264,430 cruzados to the crown. After the decree of expulsion and forced conversions of 1496/7, Évora continued to be an important center of \**anusim*. In April 1505 these were set upon by bands of rioters, who manhandled them and set the synagogue on fire. From 1542, the year in which Luis \*Dias of Setúbal was burned at the stake there, a tribunal of the Inquisition was active in Évora. Numerous *anusim* were condemned to the stake from the 16<sup>th</sup> to 18<sup>th</sup> centuries.

**ÉVREUX**, capital of the Eure department, N.W. France. During the Middle Ages, Évreux was renowned as a center of Jewish scholarship. Most famous of its scholars was the tosafist \*Samuel (b. Sheneor) of Évreux, known as the "Prince of Évreux"; his elder brother, \*Moses of Évreux, was also a tosafist, and his two other brothers, the liturgical poet Judah and the commentator \*Isaac of Évreux, are also well known. The Jewish community lived in the "rue aux Juifs," later known as Rue de la Bove. The synagogue was situated on the eastern side of the street. After the expulsion of 1306, no community existed in Évreux. In the 1950s, a community was established by Jews from North Africa. In 1968 it had about 250 members.

[Bernhard Blumenkranz]

**EVRON** (Heb. עֵבְרוֹן), kibbutz in the Plain of Acre, Israel, near Nahariyyah, affiliated with Kibbutz Arzi ha-Shomer ha-Za'ir. Evron was founded in 1945 by immigrants from Poland and Romania. In addition to intensive farming (cotton and avocado plantations), the kibbutz had a factory for irrigation

equipment and a quarry. In 2002 the population was 686. Ebron (Evron) was a town of the tribe of Asher (Josh. 19:28).

**WEBSITE:** www.matte-asher-region.muni.il

[Efraim Orni]

**EVRON, EPHRAIM** (1920–1995), Israel diplomat. Evron was born in Haifa and was educated at the Reali High School there, continuing his studies at the Hebrew University, and graduating in history in 1940. He served in the British army during World War II from 1941 to 1946 and in the Israel Defense Forces in 1948. In the same year he entered the Foreign Office, and in 1950 was appointed director, but the following year was transferred to the Office of the Prime Minister. He served as personal assistant to Moshe Sharett, David Ben-Gurion, and Pinhas Lavon, and his close involvement with the last in the “Lavon Affair” brought him into conflict with Moshe Dayan, then chief of staff, and nearly wrecked his political career. He left government service and took up a position representing the Histadrut in the U.S.A., rejoining the Foreign Office in 1961 when he was appointed counselor, and subsequently minister, at the Israeli Embassy in London.

In 1965 he was appointed minister to the Israeli Embassy in Washington and served in that capacity until 1968 when he was appointed ambassador to Sweden; in 1969 he became ambassador to Canada where he served until 1971. On his return to Israel he was appointed deputy to the director-general of the Foreign Office and in 1977 director-general.

In October 1978 he was appointed ambassador to the U.S., in succession of Simcha \*Dinitz, taking up his appointment in December of that year and serving until 1982.

**EWALD, HEINRICH GEORG AUGUST** (1803–1875), Protestant theologian; scholar of the Bible, Israelite history, and Semitic languages. Ewald was a pupil of J.G. \*Eichhorn. He served as professor at Goettingen (1827–37, 1848–67) and Tuebingen (1838–48). He was twice dismissed from his post – once in 1837 for protesting against the abolition of the Hanoverian constitution by the king, and again in 1867 for refusing to swear allegiance to the king of Prussia. Ewald viewed historical criticism not as a religious threat but as a means of reconstructing the process by which divine providence had chosen to reveal the true faith to humanity. He believed that the stories of the patriarchs could be used to reconstruct ancient Israelite tribal history, but that the patriarchs themselves were “ideal types.” Ewald was more positive in his historical assessment of Moses. As for the Hebrew prophets, it was through them that God gave the most important truths to humanity. Ewald also did research on Hebrew and Arabic grammar and on the medieval works of Hebrew grammar, which were written in Arabic. He is considered the father of the theory of Hebrew syntax. In his *Kritische Grammatik der hebraeischen Sprache* (1827–80<sup>8</sup>; pt. 3 trans. as *Syntax of the Hebrew of the Old Testament*, 1879), he attempted to discover the principles which determine linguistic forms and explain them. J. \*Wellhausen, T. \*Noeldeke, and \*A.Dillmann, were among his pu-

pils. His books include *Die Komposition der Genesis kritisch untersucht* (1823); *Grammatica critica linguae arabicae...* (2 vols., Leipzig, 1831–33); *Die Dichter des Alten Bundes erklart* (2 vols., 1966–67); *Die Propheten des Alten Bundes erklart* (3 vols., 1867–68<sup>2</sup>); *Geschichte des Volkes Israel bis Christus* (5 vols., 1843–55; 7 vols., 1851–59); *The History of Israel* (8 vols., 1883– ), according to H. Graetz a turning point in the treatment of Jewish history by Christian scholars; *Ausfuhrliches Lehrbuch der hebraeischen Sprache des Alten Bundes* (1870); and *Theologie des Alten und Neuen Bundes* (1871–78).

[Samuel Ephraim Loewenstamm / S. David Sperling (2<sup>nd</sup> ed.)]

**EXCERPTA VALESIANA**, historical work, written c. 550 and treating the reigns of Odoacer and Theodoric (474–526). It notes a conflict between Jews and Christians, probably over baptism, at Ravenna, after which the Christians burned the synagogues. The author, bitterly anti-Arian, is sharply critical of Theodoric, the Arian Ostrogoth ruler of Italy, who imposed the contribution of funds necessary to rebuild the synagogues.

[Jacob Petroff]

**EXCHEQUER OF THE JEWS**, department of medieval English government for Jewish affairs. The squared tablecloth (12<sup>th</sup> century, Fr. *eschequier*) used like an abacus for counting money in settling the sheriffs' accounts gave its name to the Exchequer, a branch of the royal administration in which accounts were rendered and revenue questions decided. A separate Jewish department (subordinate to the main Exchequer) may have originated in the Exchequer of Aaron, established for the affairs of \*Aaron of Lincoln, whose assets passed to the Crown on his death (1186). By 1194 there were already justices or keepers of the Jews. Benedict of Talmont may have served as a Jewish Justice of the Jews in the last years of the 12<sup>th</sup> century. After 1199 only Christians, varying in number from two to five, were appointed. Other Jewish “officials,” the most important being the \*archpresbyter (*Presbyter Judeorum*), were associated with the Exchequer of the Jews in the 13<sup>th</sup> century.

Its functions were both administrative and judicial. It controlled the system of *archae* (or chests), at first six or seven, later over 20, in towns with established Jewish communities: appointing and dismissing their officials, ordering the withdrawal and restoration of chirographs. All moneylending transactions (other than the lending of money against pawned movables) had to be registered in these *archae*. When the debt became due, the Exchequer of the Jews would issue an authorization for the levying of the debt at the request of the creditor; only if the debtor had died would this need to be preceded by legal proceedings. The Exchequer of the Jews also exercised a jurisdiction over cases involving Jewish debts

which had passed into the hands of the Crown or had been transferred to other Christian creditors. At certain periods in the 13<sup>th</sup> century Crown revenue from Jewish sources was handled by the ordinary Exchequer, but in others the Exchequer of the Jews collected such revenue, retained it in a separate treasury, and disbursed it on the king's instructions. The Plea Rolls of the Exchequer of the Jews survive for 1219–20, 1244, 1253, and in a virtually continuous series from 1266 to 1287 (in course of publication).

**EXECUTION (Civil)**, laws concerning methods of recovering a debt.

#### Definition and Substance of the Concept

In Jewish law, a debt or obligation (*ḥiyyuv*) creates in favor of the creditor not only a personal right of action against the debtor, but also a right *in rem* in the form of a lien over the latter's property (termed *aḥarayut nekhasim*; see \*Lien; Law of \*Obligation). Hence, many of the laws concerning the methods of satisfying a debt out of the debtor's property also apply to the recovery of a debt with the consent of the debtor, and not merely to recovery of a debt by court action; e.g., such matters as the distinction between the different categories of assets out of which the debt must be satisfied, the distinction between free and "encumbered and alienated assets" (*nekhasim benei ḥorin* and *meshu'badim*, respectively), or the matter of preferential rights as between several creditors, etc.

Recovery of debt will here be dealt with from two main aspects: (1) methods of recovery involving the exercise of constraint against the person or liberty of the debtor; and (2) methods of recovery from the debtor's assets.

#### Execution in Jewish Law and in Other Legal Systems – Fundamental Principles

There are detailed instructions under biblical law governing the relationship between the lender (creditor) and borrower (debtor; Ex. 22:24–26; Deut. 24:6; 10–13), the essence of which is to enjoin the creditor not to prejudice the debtor's basic necessities of life or his personal honor and freedom. This is in contrast to the right given the creditor in the laws of Hammurapi to enslave the debtor as well as the debtor's wife, children, and slaves (secs. 114–6, 151–2, also 117–9) and in further contrast with similar provisions in the laws of Assyria, Ashnunna, Sumer, etc. (see Elon, *Ḥerut ha-Perat* 3–8). In biblical law the institution of slavery is limited to two cases only: (1) the thief who does not have the means to make restitution and is "sold for his theft" (Ex. 22:2); and (2) the person who voluntarily "sells himself" because of his extreme poverty (Lev. 25:39). Scriptural references indicate, however, that in practice bondage for debt was customary at times (11 Kings 4:1; Isa. 50:1

and see 1 Sam. 22:2) – presumably under the influence of the surrounding legal systems; but the practice was strongly criticized by the prophets (Amos 2:6; 8:4–6; Micah 2:1–2) and after Nehemiah's sharp condemnation of the "nobles and rulers" for indulging in this practice (Neh. 5:1–13) bondage for debt was abolished in practice as well as in theory. The Bible makes no mention of imprisonment for debt and, indeed, Jewish law has given only the most limited recognition to \*imprisonment, even in the field of criminal law.

Accordingly, methods of execution in Jewish law were in direct contradistinction to execution procedures under the Roman Twelve Tables. By the *legis actio per manus iniectioem*, the creditor was entitled – on the expiration of the 30 days' grace given the debtor to repay his debt and a further 60 days within which someone could redeem him from imprisonment and pay the debt on his behalf – to put the debtor to death or to sell him "*trans tiberim*"; if there were several creditors, each was entitled to a share of the debtor's corpse. The underlying motive of execution in Roman law was not only to satisfy the creditor's legitimate and material claim, but also to extract vengeance and to punish the debtor for not fulfilling his obligation (see H.F. Jolowicz, *Historical Introduction to the Study of Roman Law* (1952<sup>2</sup>), 192; Elon, *Ḥerut ha-Perat* 11f.). In the course of time the harshness of these provisions were modified and the creditor's right to sell or to put the debtor to death was abolished by the *Lex Poetelia* in 313 (326?) B.C.E., but it still remained possible to imprison the debtor until he repaid the debt or made adequate compensation for it by his own labor (Elon, *ibid.*). The basic attitude toward the creditor-debtor relationship as laid down in biblical law, with the later further requirement that the debtor make repayment by the due date, has, throughout the ages, remained at the root of the rules of execution in Jewish law (see Yad, Malveh, chs. 1 and 2; Tur and Sh. Ar., ḤM 97–98), although certain changes and modifications were, at various times, introduced in keeping with the social and ethical realities prevailing in the different centers of Jewish life (see below).

#### Distinguishing between a Pauper and a Man of Means

The biblical passages mentioned above already delineated the basic concept of protecting the poor against the obduracy of their creditors. Talmudic scholars emphasized the distinction in unequivocal terms: "To the poor of your people you shall not be as a creditor, but to the rich" (Mekh., ed. Horowitz-Rabin, Mishpatim; 19, p. 316), and "You shall not be as a creditor to him – do not harass and demand from him when you know he has no means" (Mekh. SbY to 22:24; BM 75b and Codes). In post-talmudic times the distinction acquired a particular significance, especially in relation to imprisonment for debt.

#### Entry into the Debtor's Home

Entering the home of the debtor, in order to remove his assets in satisfaction of a debt, was prohibited in the Torah (Deut. 24:10–11). According to one opinion, entry for this purpose was forbidden to both the creditor and the debtor – so that the

former might not remove assets of the best kind and so that the latter might not take out assets of the worst kind – only the officer of the court being permitted to enter in order to remove assets of a median kind (see below TJ, BM 9:14,12b). The majority of the scholars, however, interpreted the prohibition as directed only against the creditor, to prevent him from violating the borrower's private domain and conspiring against his person or property (TJ, BM 9:14,12b; Git. 50a and Codes). To avoid the danger of this happening to even the slightest degree, some of the scholars were of the opinion that it was also forbidden for the creditor forcibly to seize a pledge from the debtor, even if it was found outside his home and even if the court had sanctioned a distraint on him. According to these scholars it was only permissible for the officer of the court forcibly to extract from the debtor security for his debt (Sif. Deut. 276; Tosef., BM 10:8; BM 31b; 113 a–b). Some scholars expressed the opinion that, in principle, the prohibition against entering the debtor's home only applied to the creditor personally and that the officer of the court was even permitted to enter the debtor's home for the purpose of recovering assets in satisfaction of the debt; other scholars also prohibited the officer of the court from entering the debtor's house and the *halakhah* was so decided (BM 113b and Codes). Similarly, a further dispute between the scholars as to whether the prohibition against entry applied in respect of all debts or only to debts arising from loans, was decided in accordance with the latter view (Sif. Deut. 276; BM 115a and Codes).

The prohibition against entering the debtor's home hindered the effective recovery of a debt if the debtor pleaded that he had no assets and if no assets were found outside his home, since it was impossible to search his home so as to ascertain the truth of his plea. The post-talmudic scholars sought to overcome this difficulty in various ways. For example, Alfasi decided that entry is permissible if the debtor is "given to violent and evil ways and is arrogant" (i.e., in refusing to pay – quoted in *Sefer ha-Terumot*, 1:3), but Maimonides did not accept this view and regarded any permission to enter the debtor's home as against biblical law (Yad, Malveh, 2:2), and other scholars also rejected any permit of this nature (*Sefer ha-Terumot*, 1:3; Resp. Rashba, vol. 1, no. 909; vol. 2, no. 225). Some scholars sought to overcome the problem by giving a restricted interpretation to the biblical prohibition. Thus, for example, Meir ha-Levi \*Abulafia argued that the officer of the court is only prohibited from entering the debtor's home when the debt can be recovered from other assets outside his home; if no such other assets are found and the creditor contends – even doubtfully – that the debtor has assets inside his home, the court officer may enter the latter's home and seek assets on which to levy execution (quoted in Tur, ḤM 97:26). Jacob b. Meir Tam and Asher b. Jehiel offered a solution based on the following reasoning: the biblical prohibition refers only to the case of the creditor attempting to take a pledge from the debtor's property as security for repayment of the loan at some time after the debt was created; but not to the case of the creditor seeking entry in order to collect payment of the

debt, after the lapse of the due date (see also \*Pledge). It follows therefore that entry into the debtor's home in the latter circumstances had never in fact been prohibited and was permissible (*Sefer ha-Yashar*, Nov. no. 602); *Piskei ha-Rosh*, BM 9:46–47), and this distinction was accepted by the majority of the *posekim* (Sh. Ar., ḤM 97:6,15 and standard commentaries); but such entry was nevertheless still restricted to the court officer (Tur, ḤM 97:26; Sh. Ar., ḤM 97:6,15; *Keẓot ha-Hoshen*, ḤM 97, n. 2; Elon, *Herut ha-Perat* (60, n. 35)). When it is clear that the debtor is impoverished and has no property, entry into his home is prohibited since "this can only cause him shame and suffering" (Sma, ḤM 99–13).

### Compulsory Labor

The possibility of compelling satisfaction of a debt by means of the debtor's own labor was recognized in various legal systems during the Middle Ages. This form of compulsion represented a temporizing with the institution of enslavement for debt – all the recognized characteristics of this sometimes being manifest, while at other times and places the debtor was merely required to cover the principal and interest of the debt with his own labor (see Elon, *Herut ha-Perat* 68 ff.).

There was in Jewish law no trace of this kind of compulsion until the 11<sup>th</sup> century (except for the contents of one of the *aggadot* concerning the destruction of the Temple: Git. 58a). From this time onward, however, the question was discussed in the light of the surrounding legal realities and the need for more efficient methods of debt collection. On the one hand, the halakhic scholars regarded compulsory labor as prejudicial to the debtor's personal liberty – particularly in view of the general attitude of Jewish law toward any kind of labor – hire as a restraint on personal freedom, for which reason it has afforded the laborer special privileges, such as the right of retracing, etc. (BM 10a, 77a; see also \*Labor Law). On the other hand, compulsory labor involved no actual deprivation of the debtor's liberty – such as resulted from a sale into slavery – if its object was merely to give the creditor due satisfaction for his debt. Alfasi, and other scholars following him, decided that the debtor should labor – hire himself in order to repay his debt (quoted in Resp. Maharam of Rothenburg, ed. Cremona, no. 146). Some scholars distinguished between different kinds of obligations, and thus, for example, it was decided that in the case of a debt arising from the debtor's obligation to maintain his wife, he could be compelled to work in order to maintain her, since he expressly undertook to do so in the *ketubbah* – a factor not present in any other obligation and thus precluding compulsory labor (Elijah of Paris, Tos., Ket. 63a). Other scholars were of the opinion that compulsory labor was precluded in all cases, including even that of a wife's maintenance (Jacob \*Tam quoted in *Haggahot Maimoniyot*; Yad, Ishut, 12: s.s. 8), and this view was accepted by the majority of the *posekim* (Rosh, Resp. no. 78:2; Tur, EH, 70; Tur, ḤM 97:28–30; 99:18–19; Sh. Ar., EH 70:3; 154:3; ḤM 97:15), although some of the latter did recognize the exception in respect of a wife's maintenance (*Rema*, EH 70:3; *Helkat Mehokek*, Beit Shemu'el

and *Yeshu'ot Ya'akov*, *ibid.*). A further opinion that compulsory labor could be imposed in respect of other obligations, if the debtor was accustomed to labor and to hiring himself (the opinion of Radbaz, quoted in *Erekh Lehem*, *HM* 97:15), was later rejected by most of the scholars (*Tal Orot*, Parashat Kedoshim; Mishkenot ha-Ro'im, "Beth," no. 39).

### Imprisonment for Debt

In talmudic times and for a long time afterward, Jewish law completely excluded the possibility of imprisonment for debt. In the course of time, however, and because of the surrounding legal realities as well as internal social and economic changes, the question of imprisonment for debt came to the surface in Jewish law, and a number of basic halakhic rules were laid down on this subject. For greater detail see \*Imprisonment for Debt.

### Execution Procedure

Execution procedure in Jewish law is based upon talmudic and post-talmudic sources and may be briefly summarized as follows: when it is sought to execute a judgment of the court ("if the borrower fails to give of his own accord, payment is levied through the court": *Yad*, *Malveh* 18:1), the court will grant a stay of execution – if so requested by the debtor in order to give him the chance of raising money to repay the debt – for a period of 30 days; during this period the debtor is not obliged to provide any pledge or surety, unless the court sees grounds for suspecting that he will place his assets beyond reach or in some other manner evade payment of the debt (*Sh. Ar.*, *HM* 100:1; *Resp. Maharik*, sec. 14); the period of the stay may be increased or reduced by the court, depending on the circumstances (*Tur HM* 100:1; *Rema HM* 100:1), but no stay will be granted in respect of certain debts arising from tort (*Yad*, *Hovel u-Mazzik*, 2:20; see also *Sh. Ar.*, *HM* 420:27; for further details concerning the stay, see *Arukh ha-Shulhan*, *HM* 100:2). No stay of execution will be granted when an appeal is lodged against the judgment, unless so warranted by special circumstances (*Rema HM* 14:4; *Bah HM* 14:4; see also *Takkanot ha-Diyyun be-Vattei ha-Din ha-Rabbaniyyim be-Yisrael*, 5720 – 1959/60, Rule 132, and \*Taxation). The creditor may also demand that the court impose a general ban on anyone who has money or chattels and refuses, without reasonable cause, to repay a debt (*Yad*, *Malveh*, 22:1; *Sh. Ar.*, *HM* 100:1). Upon the debtor's failure to repay within the period of the stay, the court will issue a writ of *adrakhta* (see below, *Yad*, *ibid.*; *HM* 100:3), which is followed by various other procedural steps until the actual sale of the debtor's property or the creditor's "going down" to the property (*horadat ba'al hov la-nekhasim*), in satisfaction of the debt. If a stay of execution is not sought by the debtor and he declares that he will not pay the debt, the writ of *adrakhta* is issued forthwith (*BK* 112b; *Yad* and *Sh. Ar.*, *ibid.*). If the debtor is found to have no property he is "warned" by the court three times – on a consecutive Monday, Thursday, and Monday – and then the lesser ban (\**niddui*) is pronounced against him until he pays the debt or pleads that he has no means of doing so and delivers a solemn oath accord-

ingly (the oath of *ein li*; see below). If he suffers the ban for 30 days without seeking its retraction, it will be extended for a further 30 days and thereafter the full ban (\**herem*, "excommunication") is pronounced against him (*HM*, *ibid.*).

### Adrakhta and Tirpa

The word *adrakhta* means "to pursue and overtake" (cf. *Judg.* 20:43; *Ket.* 60b), hence it is the term used for a document empowering a creditor to "pursue" his debtor's property and levy payment thereon, wherever found (*Rashi* to *BM* 16b and 35b). Other scholars gave the term the meaning of the word *dorekh* ("treading upon"), i.e., by virtue of the writ of *adrakhta*, the creditor becomes master over and "treads upon" the debtor's property for the purpose of recovering the debt therefrom (*Rashbam* to *BB* 169a and see *Yad Ramah*, *ibid.*). The writ is issued for the recovery payment out of both the free prospect, and the "encumbered and alienated" property (*nekhasim benei horin* and *meshu'badim*; see \**lien*). The *adrakhta* in respect of free property is written as follows: "X was adjudged to be indebted to Y in such and such an amount and, he not having paid voluntarily, we have written out this *adrakhta* on such and such a field of his." Thereupon the bond of indebtedness is torn up, and according to one opinion, this fact must be stated in the writ of *adrakhta* to prevent any possibility of the creditor recovering a second time on the same bond (*Yad*, *Malveh*, 22:13; *Sh. Ar.*, *HM* 98:9–10; *Meiri*, in: *Shitah Mekubbezet BK* 111b).

If the debtor has no free property, the *adrakhta* on the "encumbered and alienated" property is written thus: "X was adjudged to be indebted to Y in such and such an amount by virtue of a bond in the latter's hands; since he has not paid the debt and whereas we have not found any free property of his and have already torn up Y's bond, we therefore give Y the power to investigate and seek out and lay hands on all the property of X that he can find, including all the lands sold by X from such and such a time on, and Y is hereby authorized to recover the debt and levy payment on all such property" (*Yad*, *Malveh*, 22:6; *Sh. Ar.*, *HM* 98:9; for the *adrakhta* version as to orphans' property, see *Yad*, *Malveh*, 12:9; *HM* 109:2). If the creditor finds any encumbered property which he is entitled to seize for the purpose of recovering payment, he will do so and thereupon the *adrakhta* is torn up (for the same reasons as the bond is torn up) and a writ of *tirpa* ("tearing apart," seizure) is issued (in which the tearing up of the *adrakhta* is recited: for the text see *Yad*, *Malveh*, 22:8; *Sh. Ar.*, *HM* 98:9; for a different order of procedure concerning the *adrakhta* and *tirpa*, see commentaries to *BK* and *BB*, *ibid.*). A creditor executing a *tirpa* against encumbered property is required to take a solemn oath that he has not yet recovered payment of the debt, nor granted a release from or sold his claim (*Shevu.* 45a; *Yad*, *Malveh*, 22:10; *HM* 114:4).

### Appraisement and Related Procedures

After the creditor finds free property of the debtor and also in the case of recovering payment from encumbered property, following upon a writ of *tirpa*, an appraisement (*shuma*) of the

property is made (at the instance of the court) by three persons possessing the necessary expertise (Codes, *ibid.*; according to some scholars the appraisal is made before the *adrakhta* or *tirpa* is written, *Yad Ramah*, BB 169a). The appraisal is made according to the value for which the property can be sold at the particular time and place, without any need for the creditor to sell it somewhere else or wait until the price might rise (HM 101:9). If the appraisers disagree, the majority opinion is accepted and if each gives a different estimate, the average of the three estimates is taken (HM 103:1–3). The appraisal document is headed by the words *iggeret shum* (“letter of appraisal”), by which name it is known (MK 3:3, BM 1:8; for other interpretations of the term *iggeret shum* see commentaries on BM 20a and MK 18b).

After the appraisal has been approved by the court, there is a public announcement or advertisement (*hakhrazah*) in which the judges announce: “whoever wishes to buy may come and do so,” in order to find the highest bidder. In origin, the law of *hakhrazah* applied in respect of consecrated property and the property of \*orphans (Ar. 2lb and Codes), but was extended also to property sold in execution (Ket. 100b; Tos. to Ar. 2lb and Codes). The scholars disputed the question whether the sale of orphans’ property should be so advertised for 30 or 60 days and the *halakhah* was decided that the period should be 30 days where the announcement is made daily and 60 days where it is made on Mondays and Thursdays only (Ar. 2lb and Codes.). According to some of the *posekim*, an announcement for 30 days is made even in matters not concerned with orphans’ property (*Rema* HM 103:1), but another opinion is that in the case of recovering payment out of free property, an announcement is made “as may be deemed necessary, until there are no higher bids” (*ibid.*).

The announcement is made in the morning and evening, when the “workmen set out and return home,” and is only made for the sale of land, not for the sale of chattels, nor, if the sale is for urgent purposes, such as maintenance, funeral expenses, or polltax (Ket. 100b and Codes). The property is sold to the person paying the highest price beyond the appraised value or – if there be no one to raise the price – to the person paying the appraised value. The purchaser is given a *shetar hakhrazah* or *iggeret bikkoret* (“letter of examination,” Ket. 99b and see Rashi ad loc.; cf. also *Tosefot Yom Tov*, Ket. 11:5; for the text see *Sefer ha-Terumot*, 3:2; Beit Yosef HM 103:17; cf. also other interpretations in *A rukh ha-Shalem*, s.v. *iggeret bikkoret*). The creditor is given a preferential right of acquiring the property for himself if no one offers more than the appraised value or if he equals any other offers (Sh. Ar., HM 103:1). In this event the creditor is given a *shetar horadah* (i.e., he “goes down” to the property, it is “appraised” to him; for the text see Tur HM 103:17 where it is called a *shetar shuma*; cf. BM 16b, where it is called a *shetar aḥaletata* *Yad*, Malveh, 22:10–11) where it is also called a *shetar horadah* but a different version of the text is given; see also the standard commentaries and Gulak, *ibid.*).

One opinion is that once the *adrakhta* has reached the hands of the creditor, he may also enjoy the fruits of the property, but another opinion is that he may do so only after the appraisal and the announcement (BM 35b) – the *halakhah* was decided in accordance with the latter view (Malveh, 22:12). The execution proceedings are completed when the property is sold and the proceeds paid to the creditor or the property itself transferred to him.

#### Restoration of Property Transferred to the Creditor

In strict law the creditor to whom the debtor’s land is transferred is not thereafter obliged to return the land if the debtor subsequently acquired the means to repay the debt in cash; but the scholars enacted, in a *takkanah* referred to in the Talmud as *shuma hadar* (BM 16b and Codes; cf. Gulak, *Ha-Hiyyuv ve-Shi’budav*, 125, on the use of the term *shuma* in this connection), that this should be done for the sake of “Do what is right and good in the sight of the Lord” (Deut. 6:18 and see \*Takkanot). Chattels recovered by the creditor, however, are not returnable to the debtor (*Rema* HM 103:9). According to one view, land is returnable to the debtor if he repays the debt within 12 months but the *halakhah* was decided according to the view that land is always returnable to the debtor (i.e., upon repayment of the debt, BM 16b. and 35a, Codes). Land recovered by the creditor and then sold by him, or given in gift, or inherited upon his death, is however not returnable to the debtor (*ibid.*). According to some scholars, the land must always be returned to a debtor, even if given by him voluntarily in satisfaction of the debt and not as a result of execution proceedings; but other scholars hold that his voluntary surrender of the land is a bar to its ever being returned to him against payment of the debt (*ibid.*). Similarly, a stipulation between the creditor and debtor and effected by way of a formal *kinyan* (see \*Acquisition, Modes of), to the effect that the former shall not be obliged to return the land to the latter, holds good even when the land is turned over to the creditor as a result of execution proceedings (Sh. Ar., HM 103:9).

#### Categories of Assets for Recovery of Debt

If the debtor owns cash (coins), chattels, and land, he must pay in cash and cannot refer the creditor to other property (Sh. Ar., HM 101:1); if the debtor wishes to pay in cash but the creditor wants land or chattels, some scholars give the creditor the right to choose, but the *halakhah* was decided according to the view that the choice is the debtor’s (Tur and Sh. Ar., HM 101:3). If the debtor owns land only, the creditor may refuse to accept it and choose to wait until the debtor is able to pay him in cash (HM 101:4). If the debtor has chattels and land but no cash, the creditor recovers payment out of the chattels, but the debtor has the right to choose the chattels for this purpose (HM 101:2); the creditor cannot demand land if the debtor offers chattels in payment.

If the debtor has no chattels or such chattels do not satisfy the debt, payment is extracted from his land (Malveh 22:4 and HM 101:10) and – when such land consists of fields of different quality – in this order: a debt arising from tort is satisfied

from the *idit* or best land; a wife's jointure (*Ketubbah*) from the *zibburit* (the poorest or worst land); and all other obligations from the *beinonit* or land of medium quality (Git. 48b; Yad, Malveh 19:1; ḤM 102:1). In strict law, according to some scholars, all obligations except those in tort can be satisfied from the *zibburit*, but the scholars prescribed that all obligations except for the wife's jointure should be satisfied from the *beinonit* so as not to close the door before a borrower; other scholars hold the opinion that in strict law, all obligations except those in tort and the wife's jointure must be satisfied from the *beinonit* (Git. 49b and Codes; T), Git. 5:1,26c; and see above entry into the debtor's home; above, on the question of levying payment on chattels or land sold by the debtor to a third party see \*Lien).

In many places it was customarily stipulated in bond agreements that the debtor had to pay the debt in cash, without putting the creditor to the trouble of execution proceedings and for this purpose the debtor was obliged personally to deal with the sale of his property and to pay the creditor in cash (Resp. Rashba, quoted in *Beit Yosef* ḤM 101:5).

**“Arrangement” for the Benefit of Impoverished Debtors** (*siddur le-ba'al hov*). The Pentateuch lays down various provisions concerning the taking of a pledge from a borrower and the duty to restore it in case the borrower is impoverished and requires the pledge for the elementary necessities of life. The scholars have interpreted these laws as applying to the taking of a pledge other than at the time of the loan and for purposes of securing the loan, but not when it is taken in satisfaction of the loan (see \*Pledge). The scholars laid down that when the creditor seeks to levy on the debtor's property – i.e., after due date of payment and in satisfaction of the debt – certain property serving the debtor's elementary needs is to be entirely beyond the reach of the levy. This exclusion of a part of the debtor's property from the creditor's grasp is termed *mesaredin le-va'al hov*; i.e., an assessment is made of how much to leave the debtor for his vital necessities (Rashi, BM 113b), or an “arrangement” is made for his necessities, as laid down by the scholars (Rashi to Ned. 65b); the version of some scholars is *mesaredin le-va'al hov*, from the word רִמְזָה = a remnant, i.e., leaving the debtor a shred or remnant (Rashi, 113b).

The basic idea of an “arrangement” is found in a *baraita* which lays down that a creditor may demand that an expensive suit of clothing belonging to the debtor be sold in satisfaction of the debt, but the latter must be left with some other ordinary clothing. In the opinion of R. Ishmael and R. Akiva, “all Israelites are entitled to the same robe,” and even an expensive suit must be left to the debtor (BM 113b). However, the detailed laws of “arrangement” laid down by Judah ha-Nasi in the Mishnah (Ar. 6:3), relate only to *\*arakhin* obligations (to the Temple) and not ordinary debts and only in the *baraita* cited is mention made of “arrangement” in relation to all debts (BM 113b). According to some of the *amoraim*, no “arrangement” of this nature is ever made (BM 114a) and this view is followed by some of the *posekim* (*Sefer ha-Yashar*, Nov. no.

602), but the majority of the *posekim* confirm the institution (Yad, Malveh, 1:7; 2:1–2; Sh. Ar., ḤM 97:6ff, 23). There is also an opinion that “arrangement” is only made in the case of a debt originating from loan (and not, for example, from hire; ḤM 97:29; *Arukh ha-Shulhan* 97:35).

Within the framework of the arrangement the debtor is left with the following: food for a period of 30 days – according to the normal requirements of the average townsman, even though the debtor may have lived as a pauper; clothing for a period of 12 months (“he does not require to wear silken apparel or a head-covering of gold – these shall be taken from him and he shall be given what is due to him”; see above); a bed and other requirements for sleeping; essential home furniture, such as a table and chair (*Arukh ha-Shulhan* 97:26); his shoes; an artisan is left with two of each kind of tool used by him (Yad, Malveh 1:7 and ḤM 97:23); according to R. Eliezer a farmer is left with a pair of working animals, and the owner of an ass or a boat is left with the ass or boat respectively, but the majority opinion of the scholars, according to which the *halakhah* was decided, is that these are regular assets and not artisans' utensils (Ar. 23b; and Codes). The debtor retains his *\*tefillin* but not his books (*ibid.*), but some scholars say that if the debtor is a *talmid hakham*, his books are not taken from him (the opinion of Judah Barzillai, quoted in *Sefer ha-Terumat* 1:1,8). An interesting innovation is the decision of Moses \*Sofer (at the beginning of 19<sup>th</sup> century) that a shopkeeper's stock of goods is not to be sold in execution, “since in these times the essence of their livelihood is to buy and sell on credit, it would amount to taking their lives in pledge (Deut. 24:6) if their stock is taken from their shops; therefore the practice is to take payment in installments at fixed times ... so that the shopkeeper shall not fail completely” (Nov. Hatam Sofer ḤM 97).

The laws of the “arrangement” are not concerned with the needs of the debtor's wife and children, even though they are the debtor's responsibility (Ar. 6:3f., and Codes). Hai Gaon held the view, however, that the debtor's needs for his household and children, for whose maintenance he is responsible, come within the arrangement – and this was the practice in Kairouan (see Elon, *Herut ha-Perat* 47, n. 43). The creditor does not, however – but for an entirely different reason – levy payment on the clothing of the debtor's wife and children, even if it was bought by the debtor with his own money. In the opinion of some of the *posekim*, this includes their Sabbath and festival garments, even if they are very expensive. The reason is that it is presumed that such garments are given by the debtor to his wife and children with the intention that the garments become their own property and the law precludes the creditor from levying payment on chattels that have passed out of the debtor's ownership (Yad, Malveh, 1:5; ḤM 97:25,26 and Isserles ad loc; and see \*Lien). Some scholars hold, on the strength of this view, that a wife's jewelry given to her by her husband, the debtor, is also excluded from the creditor's levy (and see Sma, ḤM 97 n. 62). Garments or jewelry owned by the debtor's wife prior to their marriage or acquired thereaf-

ter with her own private funds, as well as garments or jewelry expressly purchased by the husband for his wife, are clearly excluded from the levy (ḤM 97:26 and Sma 63).

### Plurality of Creditors – Preferential Rights

In the case of a written obligation (*shetar* or deed), the creditor in whose favor the obligation was first established takes preference in levying payment on the debtor's land, whether still in the latter's possession (i.e., the free property) or whether already acquired from the debtor by a third party (i.e., "encumbered and alienated" property; Ket. 94a; Yad, Malveh, 20:1; Sh. Ar., ḤM 104:1). This preferential right upon recovery of a debt is the result of an attitude of Jewish law which gives the creditor, upon the creation of the debt and over and above his personal right of recourse against the debtor, a lien on the latter's land. This lien, which is in the nature of a right, takes precedence over any similar right acquired by a subsequent creditor. If a later creditor forestalls an earlier one in levying on the debtor's land, some scholars hold that what he succeeds in recovering cannot be taken from him by an earlier creditor despite the right of a creditor by deed to seize a debtor's "encumbered and alienated" assets – since a later creditor still takes precedence over a regular purchaser, so that "the door shall not be bolted before a borrower" (Ket. 94a and Tos. to *ibid.*). Other scholars (*ibid.*), followed by the majority of the *posekim* (Alfasi and Asheri to Ket. 94a; and Codes), hold that in these circumstances the levy of the later creditor is not valid and the earlier creditor may seize from the later one whatever the later may have recovered. However, if the later creditor forestalls the earlier one and levies on the *beinonit* land, but leaves the debtor with *zibburit*, the levy will be valid since the earlier creditor is still able to recover his debt from the *zibburit* (Sh. Ar., ḤM 104:1).

So far as the debtor's chattels are concerned, the earlier creditor takes no precedence in recovering his debt from such chattels, since there is no lien over movable property. In the case of two creditors simultaneously claiming the debtor's chattels, some scholars hold that the earlier creditor takes precedence but the majority opinion of the *posekim* is that there is no preferential right and the debtor's assets are shared between the two creditors (see below; Ket. 94a; and Codes). Even in respect of land there is no preferential right unless the land was in the debtor's possession prior to establishment of the debt; and if the debtor, at the time the debt was established, charges in favor of two or more creditors any land which he may acquire in the future (see \*Lien), the earlier creditor will have no preferential right in respect of such land, since when the debtor acquires the land it is automatically charged in favor of both creditors (BB 157b; and Codes).

In the case of a mere oral obligation there is no preferential right between creditors, neither over land nor chattels, and two creditors seeking to levy payment at the same time must share the debtor's property (Rif. Resp. no. 197; see also Sma to Sh. Ar., ḤM 104 no. 3 and 31). According to some scholars, however, there is an order of preference in respect

of land in the debtor's possession (ḤM 104:13 and Sma), even in the case of oral debt.

The *posekim* dispute the method of dividing the debtor's property amongst his creditors when there is no preferential right. One opinion is that each creditor takes a share of the property in proportion to the size of his debt, since it would be inequitable to divide the property equally in proportion to the number of creditors (Rabenu Hananel, in Tur ḤM 104:11; Yad, Malveh 20:4 quoting the Geonim); whereas others hold that the debtor's property is shared equally amongst the creditors according to their number, provided that no creditor receives more than the due amount of his debt, since the small creditor is thereby afforded greater protection (Ket. 94a; Alfasi and Rashi ad loc.; and Codes).

### Preferential Rights and Insolvency

A consequence of the law of preference as described above is that Jewish law does not recognize some of the laws of insolvency customary in other legal systems. Thus, it does not recognize a concurrence with regard to division of an insolvent estate, whereby all the debtor's assets – save for those specifically charged in favor of a particular creditor or creditors – are divided among his creditors on a concurrent basis in proportion to the size of each creditor's claim. Because of the lien over the debtor's land afforded in Jewish law to each of the creditors, the order of precedence in recovering a debt follows the order of the establishment of the various liens, in similar manner to the order of preference in other legal systems regarding specifically charged assets. Even in cases where there is no prescribed order of preference, for example, in respect of the debtor's chattels or land acquired by him after the establishment of the debt, the assets are distributed amongst the creditors in proportion to the number of creditors and not to the size of each claim.

In post-talmudic times the law was supplemented, within the above-mentioned framework, by a number of rules very similar to the familiar insolvency laws. Some of these rules were aimed at protecting all the creditors. Thus, for example, it was laid down that in cases where the law afforded no preferential right, a proportional share of the debtor's estate had to be reserved for those creditors who had not yet claimed repayment and even for those creditors holding claims that were not yet due for payment. (*Teshuvot Maimoniyot*, Mishp. no. 41; Rashba, Resp. vol. 1, no. 1111; *Kezot ha-Hoshen* ḤM 104, s.s. 2). It also became customary to announce in public that anyone failing to lodge his claim against a particular insolvent within a specified period would lose his right (Rashba, Resp. vol. 1, no. 893).

In different periods, when economic crises led to an increase in cases of insolvency, various *takkanot* were enacted to deal with the situation (see Elon, *Ḥerut ha-Perat* 172 ff.). These provided for the appointment of a trustee (*ne'eman*) over the property of an insolvent (a *bore'ah* or "fugitive" as he is called in the halakhic literature and *takkanot* of Poland, Germany, and Lithuania in the 17<sup>th</sup> and 18<sup>th</sup> centuries: see Elon, *Ḥerut ha-*

*Perat* 180, no. 265). The trustee's task was to collect and receive all the debtor's property – which thus became vested in him – and to sell the same and distribute the proceeds amongst the creditors; the *takkanot* prescribed a punishment of a year's imprisonment for a debtor who willfully squandered his property, and could not pay his debts (Halpern, Pinkas Takk. 112, 128; Elon, *Ḥerut ha-Perat* 180–3).

### Execution in the Absence of the Debtor

The scholars of the Talmud express conflicting opinions on the question of levying payment on the debtor's property when he is absent and there is no reasonable prospect of reaching him. One opinion is that in these circumstances, payment is not levied, even if the creditor should take an oath that the debt has not yet been paid; another opinion is that a debt is not recovered in the debtor's absence except with regard to a debt on which interest is payable; third opinion is that payment is not levied unless the debtor had faced trial and thereafter taken flight; a further view is that payment is levied in the debtor's absence and the possibility that he may have paid the debt and received a release from his bond is disregarded, in order that “a person shall not take his neighbor's money and then go and sit abroad, which would cause the door to be bolted before borrowers” (Ket. 88a, T<sub>J</sub>, Ket. 9:9,33b, 8). Some of the *posekim* follow the third of these opinions (Hai Gaon, quoted in *Sefer ha-Terumot*, 15:1; Rabbenu Ḥananel, quoted by Alfasi, Asheri, and in Tos. to Ket. 88a); the majority of the *posekim*, however, hold the opinion that payment is levied in the debtor's absence, on both his land and chattels, after the creditor has presented his bond of indebtedness and taken an oath that the debt had not yet been paid (Alfasi and Asheri, Ket. 88a; Yad, Malveh, 13:1; Sh. Ar., ḤM 106:1). In the event that the debtor goes abroad before the debt falls due for payment, some scholars hold that by virtue of the presumption that no person pays a debt before its due date, the creditor may levy payment without taking the oath of non-payment – even though the debt may meanwhile have fallen due – since the fact that the creditor holds the bond of indebtedness obviates the fear that the debtor may meanwhile have paid the debt through an agent. Other scholars hold that in these circumstances the creditor is required to take the prescribed oath just because of the fear that the debtor may have paid the debt through an agent (*Sefer ah-Terumot*, 15:1; Tur, ḤM 106:3).

At no time is payment levied in the debtor's absence, unless the latter cannot be reached by an agent in a return journey lasting not more than 30 days (some scholars fix a longer and others a shorter period); if the debtor is somewhere where he can be reached in less than the stated period, the court will dispatch an agent to notify the debtor of the proposed levy on his assets. The expenses involved are paid by the creditor, but these may be recovered in turn from the debtor (Yad, Malveh, 13:1 and ḤM 106:1); expenses incurred by the creditor for his own benefit, such as those connected with the issue of a writ of *adrakhta*, etc. are not recoverable from the debtor (Sma n. 2 and *Sifte'i Kohen* ḤM 106). Execution in the debtor's absence

is conditional upon the prior fulfillment of three requirements by the creditor: (1) probate of the bond of indebtedness held by him; (2) proof that the debtor is abroad and is not available to face trial; and (3) proof that the assets on which it is sought to levy payment belong to the debtor (Malveh 13:2; ḤM 106:2). In order to obviate the difficulties attending an execution in the debtor's absence, the creditor may request the court to restrain the debtor from leaving the country unless he provides a surety for the payment of the debt (Sh. Ar., ḤM 73:10; see also Elon, *Ḥerut ha-Perat* 218, n. 409; PDR 2:65 ff.).

### Impoverished Debtors and the Plea of Ein li

“It is the law of the Torah that when the lender comes to recover payment of the debt, and it is found that the borrower has property, then an assessment [“arrangement”] for his vital needs is made and the remainder is given to his creditor ...; if it is found that the debtor has no property, or that he only has objects which fall within the assessment – the debtor is allowed to go his way (and he is not imprisoned, neither is he asked to produce evidence that he is a pauper, nor is an oath taken from him in the manner that an idolator is adjudged, as it is written: ‘you shall not be as a creditor unto him.’” (Yad, Malveh, 2:1). This was the law as it prevailed until geonic times. The advent of the geonic period was accompanied by material changes in the economic life of Babylonian Jewry. Commerce, extending to the North African and other countries, came increasingly to replace agriculture and the crafts as the mainstay of Jewish existence. Whereas formerly loans were taken primarily for the borrower's daily needs, they now came to be employed mainly for profit-making purposes, and the growing capital flow and development of external trade made it difficult to keep a check on the assets of a debtor, all of which encouraged the phenomenon of concealing assets. In the course of time this led to the adoption of far-reaching changes in the means of recovering a debt (see above; and also Imprisonment for \*Debt.). These changes only partially asserted themselves in the geonic period, but two developments from this period may be mentioned, both aimed at a more effective process of debt recovery from a debtor pleading a lack of means.

One development was to place the debtor under a strict ban for a predetermined period, as a means of compelling payment. Thus it was decided by Hai Gaon, the first to mention this practice, that because of the adoption of various subterfuges by people of means seeking to evade payment of their debts – including those falsely swearing to their lack of means – any debtor pleading a lack of means to pay a debt shall have the ban imposed on him for a period of 90 days, during which time he is “severed” from Israel – so as to induce the disclosure of his assets and payment of the debt. Upon the expiry of this period he is made to take an oath that he has no means (for the terms of the oath, see below). Only a debtor who is reputed to be a pauper and known as such by the people is exempt from the ban when pleading no means of paying his debt (see A. Harkavy, *Zikkaron la-Rishonim*, no. 182). The ban for 90 days is also mentioned in the Talmud (BK

112b), but there it is imposed on a debtor who has means and pleads in court that the bond of indebtedness is a forgery; if, after being given a respite in order to prove his plea, he fails to appear in court, the ban will be imposed on him for 90 days and thereafter an *adrakhta* issued on his assets. This drastic innovation was not generally accepted as part of Jewish law. It was rejected by Alfasi and Raviah as contrary to the law (their statements quoted by way of the Mordecai in *Bah*  $\text{HM}$  99:5) and it is not mentioned at all by later *posekim*. Only in the 16<sup>th</sup> and 17<sup>th</sup> centuries is it mentioned again – in various communal *takkanot* – as the imposition of a ban for a period of three days, thirty days, etc., with reference to a debtor pleading that he has no means (see Elon, *Herut ha-Perat* 44, n. 25).

A second development in the geonic period toward more efficient debt collection was a *takkanah* providing for the administration of the oath of *ein li* (“I have no means”) or *shevu'at ha-ḥashad* (oath taken when “suspected” of having means) to a debtor pleading a lack of means to repay his debt: “After the redaction of the *Gemara*, when the early geonim saw the swindlers increase in number and the door bolted before a borrower, they regulated that a solemn oath – having the stringency of biblical law – be taken from a borrower to the effect that he has nothing beyond the assessment that is made for him and that he has not concealed anything with others and has given no returnable gifts; the oath shall include that whatever he may earn or that may come into his hand or possession, in any manner whatever, shall not be used at all to feed or clothe either his wife or children or be given to anyone as a gift, save that he shall take from it sustenance for 30 days and raiment for 12 months – such as is due to him; neither the sustenance of gluttons nor of the nobility nor the raiment of high officials, but such as he has accustomed to – and the remainder he shall give to his creditors, in due order of preference, until the whole of his debt is collected” (Yad, Malveh, 2:2). Unlike the case of the ban imposed for 90 days, the pauper was also subjected to this oath, but was later exempted from it by Maimonides, on the grounds that the oath was designed “to deal with swindlers and not with those generally accepted to be paupers” (Yad, Malveh, 2:4). The administration of this oath, as qualified by Maimonides, was accepted by the *posekim* (Tur and Sh. Ar.,  $\text{HM}$  99:4).

A similar oath can be traced in the legal systems of various European countries, commencing from the 12<sup>th</sup> century onward; thus for example, in the *Offenbarungseid* of German and Austrian law, the debtor is also committed to make over all his future earnings to his creditor (see Elon, *Herut ha-Perat* 49, n. 52).

The underlying purport of the Jewish laws of execution is to ensure the existence of an effective debt-collection procedure, so as not to “bolt the door before a borrower,” while maintaining adequate safeguards against the violation of a debtor’s personal freedom and dignity. The pursuit of this twofold objective has ensured that the laws of execution at all times recognize a material distinction between a genuinely impoverished debtor and a debtor of means seeking to evade

fulfillment of his obligations towards the creditor, a distinction lucidly enunciated in the statements of Maimonides already cited.

[Menachem Elon]

### In the State of Israel

The laws and proceedings for the execution of judgments in the State of Israel in general, particularly with respect to the imprisonment of debtors, were significantly changed by the Supreme Court’s decision in the *Perah* case (HCJ 5304/92, *Perah v. Minister of Justice*, 47(4) PD 715). This decision, written by the deputy-president of the Court (Justice Menachem Elon), relied on the position adopted by Jewish law regarding imprisonment for the enforcement of debts. The *Perah* organization had petitioned the court to nullify one of the regulations that allowed for the excessively easy imprisonment of debtors, without the debtor even having to be brought before the head of the Execution of Judgments Office.

The decision begins by noting that “the central issue of this complaint is the fundamental right of a person to freedom and dignity in the context of imprisonment for debt.” In the ruling, Justice Elon presents a detailed description of the position of Jewish law and its development as attested by a broad range of sources dealing with the execution of judgments in general, and imprisonment for debt in particular, from the biblical era through the contemporary period. In focusing on the detailed process that led to the Knesset enacting the Execution of Judgments Law, he noted that support for the proposed bill was based on principles of Jewish law that reject the view that collection measures also serve as a punishment of the debtor. Justice Elon also relied on the fact that the Basic Law: Human Dignity and Liberty establishes the values of the State of Israel as a Jewish and democratic state.

In wake of this decision, a number of amendments were made to the Execution of Judgments Law, allowing imprisonment for debt only in certain particular instances. (See also the detailed discussion of the decision in the entry “Imprisonment for Debt.”)

The *Negola* decision (LCA 7700/95, *Negola v. Hazan*, 50 (1) PD 338) was another Supreme Court decision in which the Court relied upon the “ancient social sources of Jewish law” regarding the rules of execution of judgments. In that case, in the framework of proceedings to enforce collection of a debt, attachment proceedings were instituted for the sale of the petitioner/debtor’s residential apartment, and an alternative arrangement was established in accordance with the provisions of the Execution of Judgments Law. These provisions require that, prior to ordering the sale of a residential apartment, the head of the Execution of Judgments Office must be shown that “the debtor and his family members who live with him will have a reasonable place to live, or that there is an alternative arrangement for them.” Justice Strassbourg-Cohen’s decision discusses the nature of such an “alternative arrangement,” and analyzes in detail the criteria and the considerations for striking a balance between the creditor’s right to collect his debt, on the one hand, and the special personal circumstances of

the creditors, on the other. Justice Tirkel added that the alternative residence must also be appropriate in terms of the time that the debtor is able to stay there. Accordingly, if the debtor had been entitled to live his entire life in the apartment that he owned, he is entitled to an alternative arrangement that assure him a lifelong residence. This determination stems from the interpretation of the law in light of its purpose – namely, that it mandates the protection of the debtor's basic living needs, as expressed in the prohibition against attaching part of a debtor's salary, his clothing, beds, tools, etc. Judge Tirkel pointed out that this arrangement is based on ancient principles of social welfare within Jewish law: "No man shall take the mill or the upper millstone to pledge; for he takes a man's life to pledge," (Deut 24:6); and "And if he be a poor man, thou shall not sleep with his pledge, you shall surely return him the pledge when the sun goes down, that he may sleep in his garment" (Deut 24:12–13), these being concepts that continued to develop over generations. Justice Tal concurred with the opinions of Justices Strassbourg-Cohen and Turkel, but added that in certain cases, where "the debtor ... lives in a house that he had built for himself with the money of others," the verse "he who builds his house with unfairness and his upper chambers with injustice" (Jer 22:13) is applicable and he is not entitled to the same protection.

Extensive use of Jewish law was made in this regard in a decision of the Petah Tikvah Magistrate's Court regarding the imposition of liens on a debtor's assets. The Court relied on the writings of the Rosh (*Piskei Ha-Rosh*, BK 1.5) and of Rabbi Israel Isserlein (*Terumat ha-Deshen*, §305), from which it emerged that, prior to imposing a temporary lien on assets in order to prevent the debtor from hiding them, there must also be proof of the grounds of the action, and it must be shown that there is a likelihood that the defendant will attempt to hide these assets. The reason is that the purpose of imposing a lien on the assets is not to punish the defendant, but to prevent a situation which would encumber enforcement of the judgment (Maharshah, *Yam Shel Shlomo*, BK 1.20; Civil Application 4804/02, *NMC v. Ben Chalouche*, Registrar Zvi Weitzmann). The same Court also discussed the issue of what situation is considered to be one that encumbers the execution of judgment and concluded, on the basis of Jewish legal sources (Sh. Ar., HM, 73.10; *Shakh* on Shulhan Arukh, op.cit.; Maharshah, op. cit.), that, in order to obtain temporary relief, it is necessary to prove an active attempt on the part of the defendant to conceal his assets and to frustrate the execution of a judgment, and it is not sufficient to prove his inability to discharge the debt. (Civil Application 2264/04, *Rosenthal v. Shinterko*).

Another decision handed down by the same court, also dealing with liens, reviewed the developments in Jewish law regarding the ability to enter a debtor's house to collect a debt, in accordance with the *Perah* decision, while taking care to maintain the debtor's dignity and not to harm him. In light of this review, the Court examined the proper balance between the defendant's rights and the plaintiff's

rights, and the degree of harm that can legitimately be caused to the defendant in order to secure the plaintiff's rights (Civil Petition 2621/04, *Shinterko v. Rosenthal*, Judge Zvi Weitzmann).

Regarding this matter, see also FF 24891/03, *A.N. v. A.T.*; Civil Application 743/02 *G.A. v. G.A.*, regarding an injunction against leaving the country; Execution of Judgment File 17-09642-96-8 – re foreclosure on a secured asset.

Concerning the use of Jewish law, see also Civil Petition 18702/02 *Polaski v. Galaxy Electronics* (Haifa District Court, Judge Yakovshvili), regarding an arrangement of the debtor's assets and a lien on sacred objects; and 3403/01 *Ziva v. Yaakov*, 5761(1) PDM, 756 (Jerusalem District Court, Judge Moshe Drori), regarding the execution of an act without a signature of the creditor.)

**EXEMPLA OF THE RABBIS**, a collection of more than 300 Hebrew stories – the largest collection of its kind compiled in the Middle Ages – so entitled by M. Gaster, who discovered them in manuscript and published them (1924). Most of the stories, especially in the beginning of the book, are similar to, or identical with, those in the talmudic-midrashic literature, although in the latter part, there are some longer, more developed, stories, not found in the Talmud or Midrash. While the manuscript is undoubtedly of medieval times, Gaster maintains that the collection itself is a very early one, predating the Talmud. Furthermore, he tries to prove that for their stories the talmudic sages did not use oral sources, but rather a narrative Hebrew literature, of which the only extant specimen is this collection. This he concludes on the basis of the organization of the work in accordance with literary principles. No proof, however, exists for Gaster's conclusions. It is much more logical to suppose that the compiler of the *Exempla* collected stories from the talmudic-midrashic literature, adding to them medieval stories, with which he became acquainted through oral or written sources. All this material he organized together according to strict literary principles. The existence of two other medieval compilations of this sort – \*Mi-

*drash Aseret ha-Dibberot* and Rabbenu \*Nissim of Kairouan's *Sefer ha-Ma'asiyyot* (which was written in Arabic) – seems to corroborate the theory that Gaster's manuscript belongs to a medieval tradition, according to which later authors tried to provide their contemporaries with a selection of narrative material in the talmudic-midrashic literature. Although the exact date of this collection is unknown, it may be assumed that it was not compiled before the 11<sup>th</sup> or the 12<sup>th</sup> century. Literarily the collection presents a unified structure, in that every story opens with either *Ma'aseh* ("A story") or *Tanu rabbanan* ("The sages taught"). More important, however, is the purposeful arrangement of the stories: each is related, in content and ideas, with those preceding and following it, thus forming an interconnected chain of stories. Abraham's search for the true God, for instance, is preceded by the story of his destruction of the idols and subsequent trial by Nimrod and is followed by the account of Hadrian's attempt to present himself as a god. The book, a collection of stories of many types, contains only a few which properly belong to the literary type known as the \*exemplum.

**EXEMPLUM**, legend or anecdote from the lives of the sages to suggest emulation as instruction. In medieval Hebrew literature it is very difficult to distinguish between the legend and \*hagiography, historical fiction, and various kinds of fables. The exemplum is not defined by its own, intrinsic literary character, but rather by the intent of the author which is not always known and not always clearly expressed in the story. An anecdote is an exemplum only if it is known that its purpose was to serve as an ethical model to be followed. To discover this purpose, however, is not always possible.

Talmudic-midrashic literature, for example, preserved hundreds of stories and anecdotes describing the lives of the *tannaim* and the *amoraim*. Many of these were related by pupils in admiration of their teachers after the latter's death; others out of pure historical interest to preserve the fame of the great rabbis for posterity. The rabbis themselves told autobiographical anecdotes and some parables served only to prove a halakhic or midrashic point. The Middle Ages used the corpus of these stories, whatever the original character or intent of the tales, as exempla: that is to say, a pious Jew had to learn how the old sages behaved so that he might emulate them and achieve the same high moral and religious standards. In the late Middle Ages, this process of turning biographies and hagiographies into exempla continued. In the 16<sup>th</sup> century, the pupils of the kabbalist Isaac \*Luria of Safed evolved a cycle of hagiographies about him which became very popular in Eastern Europe in the 17<sup>th</sup> and 18<sup>th</sup> centuries, and were included in many ethical and kabbalistic works. When

the Ḥasidim evolved their own cycle of legends around their leader \*Israel Baal Shem Tov, they used many of the tales woven around Luria, giving them a sometimes factual basis. It is evident, therefore, that both in fact and in popular tradition the Baal Shem Tov used legends about Luria as exempla for emulation, or at least he was described by his pupils as following in the ways of Luria. Medieval literature produced a few works which used talmudic-midrashic narrative material as exempla for their own generations. This was the purpose of collections like *The \*Exempla of the Rabbis*, a large collection of talmudic stories and medieval additions, and *Sefer ha-Ma'asiyyot* of R. \*Nissim of Kairouan. The latter was originally written in Arabic, in order that the general public, not familiar with talmudic literature, could read the stories and benefit from them. Another example is the early *\*Midrash Aseret ha-Dibberot* (see \*Fiction, the Hebrew Story in the Middle Ages). Most of the stories included in these works, especially in the last one, are not exempla in the ordinary sense. Though their intention is to teach ethical and religious behavior to the average Jew, the examples they set forth are often so extreme that no one would be expected to follow their teachings exactly. In *Midrash Aseret ha-Dibberot*, for instance, a story which is intended to demonstrate the importance of observing the Sabbath relates how a cow that had belonged to a Jew refused to work on the Sabbath, and only when the Jew explained to the cow that gentiles may work on the Sabbath did the animal comply. Another story illustrates the commandment not to give a false oath in the name of God. It describes the misfortunes which befell a man who refused to swear under any circumstances, even to the truth. R. Nissim, in his collection, tells the story of a man who, using most of his income to help the poor, was told by Heaven that he still was not perfect. He then sold his wife into slavery and gave the money to the poor. These tales have an extreme, unrealistic standard of moral behavior which is more closely connected with Muslim fanatic sects than with talmudic Jewish ethics. They are exempla in the sense that they demonstrate the extent to which a saintly person has gone in order to fulfill one of the commandments; they are not exempla intended to teach moderate, everyday behavior to the wider public.

A large body of exempla, short anecdotes, and more developed stories was introduced into Hebrew literature in Spain through Arabic sources, and was included in Jewish philosophical and ethical-philosophical works, as well as in more narrative form in the *\*maqamat* and romances of the time. Most of these exempla are of Indian origin, transmitted, by way of Persian and Arabic literature, into Jewish works. They are models of wisdom and not only of ethics. There is also a strong Sufi element in those found in the works of \*Bahya ibn Paquda or Shem Tov ibn \*Falaquera. Some medieval writings served as exempla without having been written for that purpose, specifically the Jewish martyrologies; "The Ten Martyrs" (A. Jellinek, *Beit ha-Midrash*, 2 (1938<sup>2</sup>), 64–72, under the title *Midrash Elleh Ezkerah*), a medieval work describing the death of the \*Ten Martyrs in Roman time, became a model of be-

havior for Jews in the Middle Ages. The corpus of historical chronicles describing the massacres in Germany and northern France during the Crusades, though written primarily as historical works, served for centuries as exempla to any Jewish community under threat of conversion or death. Contemporaries of the expulsion from Spain repeatedly complain of those who did not follow the example set by their Ashkenazi brothers during the Crusades, but preferred conversion to exile. History itself, or historical chronicles, served in this case as exempla in the full sense of the term.

The largest body of exempla in medieval Hebrew literature is to be found in *Sefer Ḥasidim* (see bibliography), the main ethical work of the \*Ḥasidei Ashkenaz in the 12<sup>th</sup> and 13<sup>th</sup> centuries. The book includes hundreds of exempla; however, where generally the exempla tend to specify men whose undoubted virtue should prompt emulation of their deeds, the exempla in *Sefer Ḥasidim* are always anonymous. Where the name is mentioned (e.g., “a certain Joseph or Mordecai”), it has no associative meaning. Most of the exempla start with: “There was a Jew who...” or “It is told about a Ḥasid who...” The tendency toward anonymity was part of the ethical ideology of \*Judah he-Ḥasid, the author of most of the book. The ideology based itself on the concept that if great deeds are told about a person, he, or his family, might take sinful pride in the fact (pride being regarded by the Ḥasidim as one of the cardinal sins). Unlike the exempla influenced by Islam, the exempla of *Sefer Ḥasidim* are concrete, reflecting everyday life and everyday ethical problems. It is possible that many of the episodes actually happened, the author using true anecdotes to illustrate his ethical standards. Many of the exempla describe the behavior of Jews during the persecutions of the Crusades; these served as models of behavior to many communities. Most of the exempla, however, describe the right, ethical way to behave when tempted by pride, by the evil powers lurking in man, how to conduct oneself toward women, gentiles, etc.

In the Ashkenazi ḥasidic exempla there is a class of anecdotes which expound ways of repentance involving the use of extreme self-mortification. Exempla of the same sort are found 300 years later in 16<sup>th</sup>-century Safed when mystic sages (some of them tried to remain anonymous) used the same type of mortification as a means to repent for their own sins and for the sins of the people of Israel.

In a sense, modern ḥasidic narrative literature served also as exempla, but its purpose was different. The wonderful stories told about the *zaddikim* were not models of conduct to be followed implicitly by Ḥasidim. The *zaddikim* had a different code of behavior from their believers, and the stories of their behavior were intended to provoke meditation, to bring the ḥasid into deeper understanding of the ways of the *zaddikim* and the ways of God, and thereby to some extent to influence the ḥasid's own ethical behavior.

**EXETER**, town in S.W. England. Before the expulsion of the Jews in 1290, Exeter was the most westerly Jewish community in England. The first mention of Jews there is in 1181. Only one Exeter Jew, Amiot, is mentioned as contributing to the \*Northampton Donum of 1194, but subsequently Exeter became the seat of one of the \**archae* for the registration of Jewish debts. In 1275 the local chirographers, both Jewish and Christian, were accused of forgery but were acquitted. At an ecclesiastical synod held at Exeter in 1287, the church restrictions regarding the Jews were reenacted. On the eve of the expulsion of 1290, the community numbered nearly 40 householders, who possessed considerable debts and a large quantity of corn. At the beginning of the 18<sup>th</sup> century some Italian Jews were living at Exeter, including Gabriel Treves and Joseph Ottolenghi (later of South Carolina). The conversion of Ottolenghi to Christianity about 1735 caused considerable controversy. Exeter subsequently became a center of peddling activities. The synagogue still standing was built in 1763. In 1968, 20 Jews lived in Exeter, apart from a number of Jewish students at the university. In the mid-1990s and 2000s the Jewish population numbered approximately 150. There is an Orthodox synagogue, which today holds monthly services.

**EXILARCH** (Aram. רִישׁ גָּלוּתָא, *resh galuta*), lay head of the Jewish community in Babylon. (See Chart: Exilarchs of Parthian and Sasanid Periods and Chart: Babylonian Exilarchs.)

#### Until the Arab Conquest

The government of Babylonian Jewry for the first 12 centuries c.E. lay in the hands of the exilarch. Rabbinic traditions incorporated in the \**Seder Olam Zuta*, trace the origin of the institution to the last years of the exile of Jehoiachin, on the basis of 11 Kings 25:27. Further data were derived from 1 Chronicles 3:17ff. Whether such an institution actually existed before Parthian times is not known, and certainty is impossible. Sources on Jewish life in first-century Parthian Babylonia, however, leave little ground to suppose there was an exilarch then. Josephus' account of the Jewish “state” of Anilaeus and Asinaeus suggests, to the contrary, that no state-sanctioned Jewish government functioned at that time. Whatever the earlier situation, Neusner has put forward the conjecture that the Parthian government under Vologases I (d. 79 c.E.) probably established a feudal regime to govern Jewry as part of its

List of exilarchs of the Parthian and Sasanid periods (based on F. Lazarus; see bibl.).

reorganization of the Arsacid administration (see \*Babylonia). Jews played an important part in first-century Middle Eastern politics, not only in Palestine, but also in \*Armenia, \*Adiabene, Charax Spasinu, and Babylonia itself. It was important to organize a loyal administration for Jewry, both for

the stability of the empire, and for the purposes of foreign affairs. The Jews, living on both sides of the contested frontier between Rome and Parthia, could prove useful to either party able to enlist their support. Furthermore, the destruction of Jerusalem and, with it, the Temple administration which had formerly issued religious instruction to the Diaspora, necessitated Parthian consideration. The Romans, supporting the new rabbinical authority in Jabneh (see \*Johanan b. Zakkai), exerted substantially more control than before.

The Parthians, perhaps earlier contented to allow local Jewry to receive instruction from Jerusalem, certainly took advantage of the change in Palestinian politics and the anti-Roman turn in world Jewish opinion, to establish local control of Jewry under close supervision. The result was highly beneficial. In the next century, Jews were the most loyal supporters of the Parthian cause against \*Trajan, Septimius \*Severus, and Alexander \*Severus. In Palestine, circles of Jewish messianists were prepared to cooperate with the Parthians against Rome.

The first clear evidence of the existence of the exilarch comes in the middle of the second century C.E. Some Jewish authority certainly existed about 145 C.E. when \*Hananiah the nephew of Joshua b. Hananiah intercalated the calendar in Babylonia (Eccles. R. 7, 8, no. 4, 7:26, for his exile to Babylonia; Ber. 63a; TJ, Sanh. 1:2, 19a; TJ, Ned. 6:13, 40a, for the intercalation). The accounts of the intercalation contain the name of a local official, given variously as Ahijah and Neḥunyon. At about the same time, moreover, Rabban \*Simeon b. Gamaliel II rebuked R. Nathan, of Babylonia, for his part in a conspiracy against the former's rule, saying "Granted that the sash of office (*kamara*) of your father has indeed helped you to become *av bet din*, shall we therefore make you also *nasi*?" (Hor. 13b). Since the *kamara*, mentioned in various Iranian inscriptions, was one of the significations of office in Iran, it stands to reason that R. Nathan was the son of the Jewish ruler of Babylonia. The first talmudic mention of the title of *resh galuta*, however, occurs with reference to Huna the exilarch (TJ, Ket. 12:3, 35a; TJ, Kil. 9:3, 32b; Gen. R. 33:3). \*Judah ha-Nasi stated that if Huna were to come to Palestine he would give precedence to him, for Huna was descended from the male line of the Davidic household, while the patriarch, from the female line. Ḥiyya and his nephew \*Rav may have been related to the exilarch, for both Babylonians claimed Davidic ancestry. Ḥiyya came from the same town as the exilarch, and called his nephew Rav *bar Paḥti*. The title *paḥat* was used in the Parthian documents from Nisa for satrap, and if Rav was son of a Jewish *paḥat*, then his father must have held high rank within the Parthian feudal structure. Other Jewish authorities, earlier in the same period, were reported by Palestinian rabbinic messengers to have Parthian names, wear Parthian dress, enjoy the perquisites of a retinue, and execute capital punishment, and yet to be knowledgeable in the law (Git. 14a-b; TJ, Kid. 3:4, 64a; TJ, Git. 1:5, 43c-d). So it is reasonable to suppose that a Jewish government did exist through the last century and a half of Parthian rule in Babylonia.

List of Babylonian exilarchs during the Middle Ages.

The advent of the Sassanids, in 226 C.E., necessitated the provision of a new political foundation for Jewish self-government. At first, the Jewish administrators continued as before, hoping to hoodwink the Sassanids and forcibly to keep the Jews in line. R. Shila, for example, administered lashes to a man who had intercourse with a gentile woman; the man informed against him, whereupon a government agent (*parastak*) investigated the case. Shila persuaded the agent that he was loyal, and then murdered the informant (Ber. 58a). But in a similar situation, R. \*Kahana had to flee to Palestine (BK 117a), for, Rav told him, “Until now the Greeks [Parthians] were here, who did not punish bloodshed, but now the Persians are here, and they will certainly cry, ‘Rebellion, rebellion!’” For their part, the Sassanids under Ardashir I (226–42), who were closely associated with the cult of Ormuzd and Ānahīta, thought they could forcibly convert the various peoples of Babylonia and Mesopotamia to their religion. So for the first two decades of Sassanian rule, no *modus vivendi* could be reached. \*Shapur I (242–272) chose a different, more tolerant policy, encouraging Mani to preach a syncretistic religion of Buddha, Zoroaster, and Jesus (but not Moses!) to appeal to the several major groups of the empire, and seeking to conciliate the Jewish community as well. The Jewish government was given a legitimate role in administering Jewish affairs, when it promised to abide by state law in matters of concern to the state, specifically rules of land tenure and payment of taxes. The agreement of \*Samuel and Shapur I, summarized by Samuel’s teaching that “the law of the government is law,” was closely adhered to by the Jewish regime, which enjoyed a secure position, with few, brief interruptions, for the next four centuries. It is not known what role, if any, the exilarch played in the negotiations preceding this agreement. If there was one Jewish government in Babylonia, as seems plausible, then Samuel must have been acting in its behalf. But rabbinic traditions, which are the only ones to survive, do not mention the participation of the contemporary exilarch, Mar \*Ukba I, in the matter.

Rabbinic opinion on the third-century exilarchate was divided. In the early part of the century, it is clear that the leading rabbis were subordinate to the exilarch. Rav was forced by him to administer market prices, which Rav held was not a proper function of the *agoranomos*, or market supervisor. Samuel deferred to the exilarch Mar Ukba. It was, after all, the exilarch who had earlier employed rabbinically trained functionaries in the courts and bureaus of Babylonia in late Arsacid times. He had done so probably to circumvent the local Jewish strongmen, typified by Anilaeus and Asinaeus in the first century, and the Parthianized Jewish nobility referred to above, in the second century. The rabbis appealed to the people on the basis of their knowledge of Mosaic revelation, which, they held, was unique to their schools, and they moreover affirmed the exilarch’s claim to Davidic origin. At the outset, therefore, the rabbinate and the exilarchate were closely allied against the centripetal forces of feudal autonomy represented by local Jewish upper-class landholders. By the last third of the

third century, however, tension developed between the exilarchate and certain rabbinical circles. The exilarch justified his rule over Jewry as an heir of the Davidic household, just as did the Maccabeans, the Herodians, Jesus, and others who claimed the right to govern "Israel." That claim did not depend upon study in the rabbinical academies or conformity to rabbinical rules. Whether or not the exilarch was a "good Jew" by rabbinic standards is ultimately irrelevant to the issue. The rabbis saw themselves as the sole bearers of Mosaic revelation in its complete, dual form. They alone possessed the Oral Law, which completed the written one and determined its interpretation. About 275, Geniva, a disciple of Rav, caused so much trouble for the exilarch that the latter sought the advice of the Palestinian \*Eleazar b. Pedat. He was counseled to forebear. Geniva was shortly thereafter executed by the state. It is not known what Geniva did to irritate the exilarch. The only clue to his doctrine is his teaching that rabbis should be called kings, the proof-text for which was Proverbs 8:15, "By me kings reign." The eighth chapter of Proverbs was consistently interpreted by the rabbis as the message of the Torah personified. If by "me," meaning "Torah," kings rule, then those not qualified by "Torah" should subordinate themselves to those who are, namely the rabbis. If Geniva made such an assertion of rabbinical superiority, the exilarch would wisely have handed him over to the Sassanids, for subversion of the exilarch was subversion, likewise, of the Sassanid system of millet-government. At the end of the century, Judah b. Ezekiel founded the school at Pumbedita and, for the next 50 years, the heads of the school kept a fund for its support, thus attempting to remain independent of the exilarchic treasury. At the same time, leading rabbis asserted that rabbis should not have to pay the *karga*, or head tax, imposed by the Sassanid regime on minority communities. They held that Scriptures, tradition, and even Artaxerxes of Achaemenid times, had all freed them of that obligation. Since taxes were apportioned by communities, the exilarch would have had to collect funds from other Jews in order to exempt the rabbis. This he did not attempt, and a further irritant in the relations of the two groups was the consequence. By the middle of the fourth century, the academy at Pumbedita, now headed by Rava, was subject to close exilarchic supervision, and moved to the exilarchic capital at \*Maḥoza.

When, under Pērōz (459–84), Jews and Christians were persecuted, the exilarch Huna v was executed, according to the letter of R. Sherira, in the year 470. The office of exilarch remained vacant for some time. The virtual chaos of the reigns before Khusro I (531–79) combined with the anti-Jewish activities of the Mazdakites supported by the throne in the time of Kavadh (488–531), and the economic depression of the period, produced a lapse in orderly government for Jewry as well. For a time (c. 510–20) the exilarch Mar \*Zutra II threw off fealty to the throne, probably provoked by Kavadh's support of Mazdak. From Khusro onward, the situation was restored to its former favorable condition.

[Jacob Neusner]

### During the Arab Period

The first exilarch of the Arab period was \*Bustanai, who founded a new dynasty of exilarchs from the descendants of his Jewish wife and his other wife, the daughter of the king of \*Persia who was given to him, according to the sources, by \*Omar ibn al-Khaṭṭāb. Some opinions doubt the authenticity of the latter detail, because Omar did not visit \*Iraq, but the texts possibly refer to one of his generals. This fact expresses the recognition granted by the Arab rule to the scion of the House of David who stood at the head of the Jewish community. The children of his Jewish wife disqualified the children of the Persian wife from acting as exilarchs with the argument that since the mother had not been converted, her children had the status of non-Jews. The polemics and the halakhic discussion have been preserved in a series of sources. The *ḥakhamim* of the academies decided in favor of the Persian branch. In spite of the protests, which were also voiced after this decision, the descendants of the Persian wife were appointed as exilarchs.

### Relations with the *Rashei Yeshivot*

The exilarchs maintained close ties with the heads of the Sura and Pumbedita academies. They also concerned themselves with the incomes of these academies which were raised throughout the Diaspora. One of the exilarchs, \*Solomon b. Ḥisdai, the great-grandson of Bustanai from the Jewish branch (reigned 733–59), was himself a scholar and distinguished himself with his concern for the academy of Sura and its aggrandizement. He took Mar Samuel out of the Pumbedita academy and appointed him head of the Sura academy (*Iggeret R. Sherira Ga'on*, ed. by B.M. Lewin (1921), 106). Twenty-six years later he appointed Rav \*Yehudai, who was also a disciple of the Pumbedita academy, to the same position. Although the position of exilarch was hereditary, it was not always the firstborn who was chosen, but rather the member of the family who was most suitable and accepted by the academy heads and the important merchants who wielded influence in the court of the caliph. The exilarchs and the heads of the Sura and Pumbedita academies were dependent on each other, because the election of each of them required the confirmation of the other party. Against this background, there were examples of self-assertion. \*Anan b. David, the nephew of Solomon b. Ḥisdai, was worthy of being elected as exilarch because of his erudition, but the *ḥakhamim* found a "disqualifying blemish" in him because of his negation of the Oral Law. His younger brother Hananiah was elected in his place. The leaders of the Karaite community, who were known as *nesi'im*, were descended from Anan.

The split between the \*Rabbanites and the \*Karaites appears to have been the cause of the decline in the status of the exilarchs and the limitation of their authority. Caliph al-Ma'mūn (ruled 813–33) granted the request of the Karaites that their leader be recognized as the *nasi* of their community. In 825 he issued an order according to which any ten men – Jews, Christians, or Zoroastrians – were authorized to organize

themselves into an independent community and were at liberty to elect a leader. After the death of the exilarch Iskoï 11, there were two rivals to his position, \*David b. Judah and Daniel. The dispute was brought before the caliph for arbitration by the supporters of both parties. It is possible that the above-mentioned order was also a result of this situation and R. \*Sherira hints that the decline in the status of the exilarchs was due to this contention. From then onward they were compelled to share the spheres of their influence and their incomes with the academy heads. Another change which occurred was that the gatherings of the *hakhamim* which took place on fast days and on the Sabbaths of the weekly portion of *Lekh Lekha*, which were known as *Shabbeta de-Rigla* and which had until then been held in the home of the exilarch, were from then on held in the academies. The penalization powers of the exilarch were also restricted.

A dispute over the incomes of the exilarch and the academy head resulted in a crisis in which the latter gained the upper hand. The exilarch \*Ukba attempted to appropriate the incomes of Khurāsān from which the Pumbedita academy had until then benefited. According to *Seder Olam Zuta* (Neubauer, *Chronicles*, 2 (1895), 78), \*Kohen Zedek, the *gaon* of Pumbedita, was supported by the bankers and merchants \*Joseph b. Phinehas, \*Aaron b. Amram, and \*Netira, and in 913 Ukba was expelled by the caliph al-Muqtadir (908–32), at first to Kermanshah and later to Kairouan, where he was received with much respect and the *Sefer Torah* was lowered before him (see below). The office of exilarch was vacant for three to four years until, under public pressure, \*David b. Zakkai, the nephew of Ukba, was elected. David b. Zakkai (918–40) was a powerful personality and he insisted upon his right of appointing the academy head according to his own discretion. His candidate for the position of *gaon* of Pumbedita was Kohen Zedek, while that of his rivals was \*Kubashshir b. Kimoi. The latter refused to confirm the appointment of David as exilarch and he ostracized him until they reconciled themselves in 922. David endeavored to raise the status of the Sura academy, and in 928 he appointed R. \*Saadia Gaon as its head, having recognized his vast Torah erudition. When he appointed him, he adjured R. Saadia Gaon “not to appoint any other exilarch beside himself, not to associate himself with those who plotted against him, and not to deviate from his words in any direction.” It appears that R. Saadia Gaon desired to be independent of the exilarch and also to intervene in secular affairs. The crisis finally erupted between them when R. Saadia Gaon refused to ratify a legal decision of the exilarch after it had already been ratified by the *gaon* of Pumbedita. David b. Zakkai issued a *herem* (“ban”) against R. Saadia Gaon and appointed \*Joseph b. Jacob ibn Satia in his place. R. Saadia Gaon, in turn, issued a *herem* against David b. Zakkai and appointed Josiah (Hasan), the brother of David b. Zakkai, as exilarch. Mas’ūdi relates that the dispute was brought before the vizier ‘Alī ibn ‘Isā. On Purim of 937, an agreement was concluded between the opponents. David b. Zakkai attained a respected position in the court of the Abbasid caliph al-Muqtadir, who

supported him against those communities which refused to pay their taxes to him; the caliph also assisted him in his feud with R. Saadia Gaon.

In general, the separation between the various functions of the exilarchs and the *geonim* was maintained: \*Hezekiah (11) b. David, a descendant of David b. Zakkai, was an exception; he combined the exilarchate with the position of academy head. He was exilarch for over 40 years, and from 1038 he succeeded \*Hai as head of the Pumbedita academy until his death in 1058. As a result of the conflict between the exilarch \*Daniel b. Ḥasdai (1150–74) and the *gaon* \*Samuel b. Ali, the exilarch opened an academy in Baghdad which was independent of that of the *gaon*. When he died childless, two candidates of the Josiah b. Zakkai branch, David and Samuel, sought his position. The latter, who benefited from the support of the *gaon* Samuel b. Ali, was compelled to yield several of his powers to the *gaon*. From then onward most of the powers of the exilarchs were transferred to the heads of the academies.

### The Induction Ceremony

The appointment of the exilarch was the occasion for a glorious ceremony, the description of which has come down to us from \*Nathan b. Isaac ha-Bavli (Neubauer, *Chronicles*, 2 (1895), 83–85). It was accompanied by a popular festivity, the climax of which was the gathering in the synagogue on the Sabbath, when hymns were recited in honor of the exilarch and he was blessed with special blessings and *piyyutim*. His name was mentioned in the *Kaddish* and he delivered a sermon or authorized the head of the academy to do so. The *hazzan* lowered the *Sefer Torah* before him while the congregation stood on its feet. The people sent him presents. The festivities were extended over seven days, during which he was host to the people in his home. The Arab chroniclers who mention this office point out that descent from the House of David was an indispensable condition to election. The aristocratic origin and the heredity of the exilarchate made a strong impression on the Shi’ites already during the early history of Islam, to the point that they compared it to the imamate and their theory on the subject of the legitimate caliphate. In their writings they describe meetings between exilarchs and caliphs and imams as equals, with the former reproving the Muslims. Bīrūnī (d. 1048) and others in his wake regarded the exilarch as the lord of all the world’s Jews, who were subordinated to him.

### Official Status, Powers, and Functions

The status of the exilarch became one of the subjects in the discussion held between the Muslim researcher of religions Ibn Ḥazm (994–1064) and \*Samuel ibn Nagrela ha-Nagid in Spain. The latter pointed out the honor and the powers of the exilarch of the House of David and considered this to be the fulfillment of the verse: “The scepter shall not depart from Judah, Nor the ruler’s staff from between his feet” (Gen 49:10). Ibn Ḥazm rejected his words and claimed that the exilarch did not wield any influence, neither over the Jews nor over any others, that he lacked authority, and that his title was merely

an honorary one and devoid of any actual meaning. A similar discussion was held in Jerusalem between a Jewish *hakham* and a Christian clergyman named Abraham di Tiberiade. G. \*Vajda, whose writings on this subject are based on a manuscript of 1689, assumes that this event occurred during the tenth century and possibly even later. The Jew points to the existence of the exilarchate as a proof that the sovereignty of the House of David has not been interrupted and that the Messiah has not yet come. He also refers to the above verse of Genesis. The clergyman mocks and denigrates that status of the exilarch who is not endowed with the title of king, lives in an outlying town of Iraq and not in the Promised Land, and lacks any punitive powers.

The Muslim rule granted the exilarch the same recognition as the Katholikos, the head of the Nestorian community. A letter of appointment of the exilarch is not available, but there is reason to assume that his powers and functions were of a similar character. In the letter of appointment which was granted to the Nestorian Katholikos in Baghdad during the 12<sup>th</sup> century it is said that he is authorized to intervene and mediate in the disputes between the various sects of his community and to dispense justice and that he is also responsible for the supervision of their charitable funds. Anyone disobeying him or interfering in his affairs will be liable to punishment. He shall organize the collection of the poll tax and its transfer to the government which, in exchange, will guarantee the lives of the people of his community and protect its property. The receipt of this letter of appointment was accompanied by a ceremony in which a delegate of the government participated. In addition to the duty of the exilarch to transfer the poll tax of his community to the authorities, he was also responsible for the execution of the Covenant of \*Omar, the discriminatory laws which affected protected subjects. The Arab author Ibn al-Jawzī (d. 1200) relates that in 1031 the Katholikos and the Jewish exilarch were requested to assure that the members of their communities wear the special garb of protected subjects.

Benjamin of Tudela, the traveler who visited Baghdad in about 1168, writes of the exilarch Daniel b. Hisdai that his function had the confirmation of the caliph, who had ordered both Jews and Muslims to stand in the exilarch's presence. The caliph received him in his palace every Thursday, and on his way his carriage was preceded by horsemen who called for the clearing of the way before the son of David. "He has been invested with authority over all the congregations of Israel at the hands of the Amīr al-Mu'minīn, the Lord of Islam. For thus Muhammad commanded concerning him and his descendants" (*Masot Binyamin*, ed. by M.N. Adler (1902), 39–40, Eng. part). From the end of the 12<sup>th</sup> century the Baghdad academy heads assumed most of the powers of the exilarchs; from then onward they were the delegates of the community before the government. The letters of appointment which were granted to the academy heads in 1209, 1247, and 1250 by the Abbasid government, and which have been preserved, shed light on the functions of the exilarchs and their

powers during this period when their leadership was a real one. These letters state that the members of their communities were to obey the exilarch's instructions and were to pay him the accepted taxes; the exilarch was to judge them and it was his duty to enforce the protection conditions and heed the orders of the caliph.

There is a divergence of opinions among scholars as to the appointment of judges (*dayyanim*) by the exilarch and its dependence on the academy heads. It appears that this matter varied with the authority exerted by the exilarchs. It can be divided into five periods: (a) until the reign of al-Ma'mūn appointments were made by the exilarch; (b) until after David b. Zakkai, when authority was divided between the exilarchs and the academy heads, the appointment by each party was restricted to its own domain; (c) during the days of Hai Gaon appointments were made by the supreme *bet din* of the academy heads; (d) in the 11<sup>th</sup> and 12<sup>th</sup> centuries appointments were made by the exilarchs; and (e) after 1175 (the year of the death of the exilarch Daniel) it was only the academy heads who appointed the *dayyanim*. Also, when the exilarchs appointed the *dayyanim*, the *pitka de-dinuta* ("judicial authorization") was granted by the academy heads, while the exilarch merely gave formal permission. The exilarch disposed of a tribunal known as *bet dina de-nasi* ("bet din of the nasi") or *bava demaruta* ("gate of the master"). If the exilarch was a *hakham*, he headed the *bet din* himself. On most occasions, however, it was a distinguished *hakham*, the *dayyana de-bava* ("judge of the gate"), who headed the tribunal. R. Zemaḥ b. Solomon is mentioned as head of the tribunal of the exilarch Hisdai b. Natronai during the middle of the ninth century.

The exilarch had the following means of penalization at his disposal: bans, fines, imprisonment, and flogging. During the reign of the caliph al-Ma'mūn his penal authority was restricted so that the only remaining instrument was the ban. During a later period his powers were, however, once more extended and R. \*Pethahiah of Regensburg, who visited Mosul during the 1170s, relates that the exilarch was authorized to sentence offenders, even if the second party was a Muslim, and that he had a prison in which he detained offenders.

The exilarch participated in the institution of halakhic *takkanot*, such as the one in connection with the collection of debts and the *ketubbah* from movable property instead of from real estate, a *takkanah* which was circulated throughout the Diaspora with the signature of the exilarch in collaboration with his *dayyanim*, the academy heads, and their *bettei din*. A letter has been found from the exilarch, dated from 835, concerning the fixation of the intercalation – the exclusive right of the Palestinian academy. His incomes were derived from the taxes which were paid by the communities under his jurisdiction and which received government protection. According to the report of Nathan ha-Bavli (Neubauer, *Chronicles*, 2 (1895), 85) every Jew aged 20 years or older paid an annual tax of two *zuzim*. Butchers paid ¼ dinar as a fixed annual sum. The exilarch also derived incomes from *ketubbot*, *gittin* ("divorce bills"), bills, and gifts. These details are also

confirmed by an Arab source which adds that the Jews paid him one-fifth of their income, as well as redemption fees for male children and animals. At the close of the 12<sup>th</sup> century the exilarch of Mosul owned fields and vineyards, in addition to half of the poll tax which he collected from his community for the authorities. The exilarchs bestowed honorary titles upon personalities who supported them. These included: "Friend of the *Nesi'ut* (Exilarchate)," "Favorable to the *Nesi'ut*," and "Supporter of the *Nesi'ut*."

### The Exilarchate Outside Baghdad

From the 11<sup>th</sup> century, the period of the decline of the Abbasida caliphate when independent governments were formed in Mosul, Damascus, and Aleppo, descendants of the Babylonian exilarch's family also arrived in these places. As a result of their descent from the House of David the communities appointed them as *nesi'im* over themselves, while they also obtained their recognition by the authorities as the delegates of the Jewish community. They appointed officials and *dayyanim*, judged the people, collected the poll tax, and received tithes.

YEMEN. During the 12<sup>th</sup> century the Jews of Yemen were placed under the formal "authority" of the exilarch of Babylonia and the Palestinian *rosh yeshivah* of Egypt. This was expressed by the fact that the above personalities were mentioned by the *hakham* before his sermon, the interpreter before the reading of the Torah, and the person who recited the blessing at meals. In a document of 1134 concerning Maḍmūn b. Japheth Hasan Bendar of Aden (d. 1151) there is the expression: *nagid* of the Jews of Yemen "appointed by the exilarch and the academy heads." It is however, possible that this refers to members of the Babylonian exilarch's household who came to Yemen. During the 1130s the cousin of the Babylonian exilarch, who had come from Persia, was in Yemen. "He promoted himself to [a leading] position and the local people gave him permission to make decisions in religious law in the synagogues of all Israel" (S.D. Goitein, in *Sinai*, 33 (1953), 232). The latter struck the minister who mentioned the "authority" of \*Mazli'ah, the Palestinian *gaon* of Egypt, in his prayer. Benjamin of Tudela relates that in his time the Yemenite community was led by Shalmon ha-Nasi and his brother Hanan, descendants of David, who "divided up" the country between themselves. They corresponded with their relative, the Babylonian exilarch, and addressed their religious questions to him. It should be noted that during subsequent periods the *nesi'im* of Yemen were referred to as *resh galuta*, although they had no connections with the Babylonian exilarch or the House of David.

PALESTINE AND EGYPT. The members of the family of the Babylonian exilarch who came to Palestine and Egypt were received with deference, but their status was merely a formal one without any practical basis in administration. As a result of the abortive rebellion of the exilarch Zutra against the Persian king Kavadh I (488–531) and the hanging of the rebel at the beginning of the sixth century, his wife fled to Palestine.

When his son Zutra II, who was born after the death of his father, reached the age of 18, he was appointed *rosh pirka* or head of the Sanhedrin in Tiberias (520 C.E.). Eight or ten generations of his descendants succeeded him in this position. At the close of the tenth and during the 11<sup>th</sup> centuries members of the Babylonian exilarch's household appeared in Palestine and Egypt. The only one of these who rose to power in Palestine and combined the functions of *nasi* and *gaon* during the years from 1051 to 1062 was \*Daniel b. Azariah of the family of Josiah b. Zakkai. He left Babylonia because his family had been deposed by the exilarch \*Hezekiah II. Daniel succeeded the *gaon* \*Solomon b. Judah and supplanted Joseph b. Solomon ha-Kohen, who was *av bet din* and to whom the position of *gaon* was due. From his seat in Ramleh and Jerusalem he ruled over the whole of Palestine and Syria, where he was the judge; he also appointed *dayyanim*. Even the communities of Egypt were subordinated to him. After his death the position of *gaon* reverted to \*Elijah b. Solomon ha-Kohen.

David, the son of Daniel, would not reconcile himself to the loss of the sovereignty of the House of David over Palestine and Egypt. He attempted to undermine the Palestinian academy which had been exiled to Tyre because of the invasion of the Seljuks in 1071. In 1081 he went to Egypt, where he was received with respect and his needs were provided for. However, when he desired to dominate the Egyptian communities and the coastal towns of Palestine, he clashed with Mevorakh ha-Nagid. He imposed taxes and ruled with tyranny. The Fatimid caliph al-Mustansir bi-Allah (1036–1094), who claimed descent from the "Prophet" and favored the descendants of David, supported him. David was finally deposed in 1094. The Jews of Egypt accepted the formal authority of the Babylonian exilarch. In 1162 Daniel b. Hisdai ordained \*Nethanel b. Moses ha-Levi in Baghdad as *gaon* and appointed him to the "*bet din ha-gadol* in all the provinces of Egypt." Even several years later, the name of the exilarch appeared in legal documents which were traditionally written with the "authorization" of the *nasi*. During Maimonides' time a *nasi* named Judah b. Josiah lived in Egypt; he ratified the legal decisions of Maimonides. There were *nesi'im* who demanded judicial powers for themselves, but the community and its leaders rejected these requests.

During the first half of the 13<sup>th</sup> century the *nasi* Solomon b. Jesse and his brother Hodayah, who had come from Damascus, lived in Egypt. The latter came into conflict with a *dayyan* from France named Joseph b. Gershom, who lived in Alexandria in the days of \*Abraham b. David Maimuni (1205–1237), over a question of authority. The *nasi* issued a ban against the *dayyan* and anyone who would materially assist the Frenchman. In the reply of the *nagid* to the appeal of the *dayyan*, which was also ratified by other *hakhamim*, the tendency to restrict the authority of the *nasi* and to reduce it to a merely formal ratification is evident. Even though the exilarchs considered themselves as the appointees over the Jews of the lands of dispersion and even though they signed themselves "the head of all Israel's exiles," their intervention

was not viewed favorably in all places and practical powers were not entrusted to them. This opposition was particularly outspoken in Palestine, which was not part of the Diaspora, and in those places in the Orient where the Jewish communities were led by *negidim*.

Hulagu, the Mongolian khan who liquidated the Abbasid caliphate with the conquest of Baghdad in 1258, did not harm the Jewish community and its exilarch Samuel b. David. The exilarchs maintained their positions during subsequent years and some opinions assume that their status was improved. There is no information available on their activities and only the names of some of them are known. The exilarchate was brought to an end by Tamerlane in 1401. Until the beginning of the 18<sup>th</sup> century it was the practice of the governors of the important towns of Iraq to appoint a wealthy Jew as *ṣarrāf bāshī* ("chief banker"); he also acted as *nasi* of the local Jews. His powers were almost identical to those of the Babylonian exilarch during the Middle Ages. The *nasi* of Baghdad was the "*nasi* of the state" and his authority also extended to distant communities. This office was the patrimony of the descendants of the House of David and was passed down from father to son. From the 18<sup>th</sup> century until 1849 the *nesi'im* who were appointed were not from the House of David. From then onward the functions of *nesi'im* were transferred to the *\*ḥakhām bāshī*.

**EXILE, ASSYRIAN.** The mass deportation of population groups from conquered nations, as a measure to prevent these nations from rebelling, was introduced as a general policy by Tiglath-Pileser III in the second half of the eighth century B.C.E. Although deportation by Assyrian kings is well attested in the ninth century, it was Tiglath-Pileser's innovation to practice deportation on a vast scale and to accompany it with population exchange; a practice continued by his successors in Assyria. (The Babylonians did not accompany deportation with population exchange.) The first deportation of peoples from the northern Israelite kingdom took place

when Tiglath-Pileser III campaigned against Syria and Palestine (734–732 B.C.E.), at which time \*Pekah son of Remaliah joined the rebellion led by the king of \*Aram-Damascus against Assyria. In the course of this campaign the Assyrians conquered Gilead and deported the heads of the Israelite clans that inhabited Transjordan (1 Chron. 5:6, 26). One of Tiglath-Pileser III's fragmentary inscriptions lists several thousand captives, apparently only males, whom he exiled from eight cities in Galilee (among which were biblical Hannathon, Jotbah, Rumah, and Merom).

When \*Hoshea son of Elah revolted against Assyria, Shalmaneser v besieged and conquered Samaria. His successor, Sargon II, states that 27,290 people (variant 27,280) were exiled from the city of Samaria. In place of the Israelite deportees, Sargon settled residents of other defeated nations in the Assyrian province of Samaria. In this connection the Bible mentions exiles from Babylon, Cuthah, Avva, Hamath, and Sepharvaim (11 Kings 17:24), while an inscription of Sargon II specifies members of four Arab tribes who were settled in "Omri-land" (Bit Humri) in 716/5 B.C.E. Finally, according to Ezra 4:1–2, forbears of the later Samaritans were brought into the province of Samaria by Esarhaddon, and, according to Ezra 4:9–10, "the great glorious Asenappar" – probably to be identified with Ashurbanipal – settled people from \*Erech, \*Babylon, \*Shushan, and other localities in the city of Samaria and elsewhere in Syria-Palestine. However, it cannot be determined whether these seventh-century colonists were brought in to replace Israelites, who may have revolted again and been deported. The foreign elements that were brought to Samaria assimilated into the remaining Israelite population; the outcome of this lengthy process was a distinct cultural-national group which became known as the \*Samaritans, i.e., the population of the province of Samaria. The Assyrians also exiled inhabitants of Judah (see \*Sennacherib, \*Hezekiah).

The Israelite exiles were settled mainly in the Assyrian provinces in Upper Mesopotamia (biblical Aram-Naharaim), along the Habor River in the vicinity of Gozan (Tell-Ḥalāf). After 716 when some "cities of the Medes" came under Assyrian control, some Israelites were resettled in Media (11 Kings 17:6; 18:11; probably in the province of Ḥarḥar (Diakonoff in Bibliography)). In 1 Chronicles 5:26 there is the addition "and Hara" (הָרָא) LXX, Lucian recension *kai harran*, possibly referring to Haran (cf. Isa. 11:11)).

Notwithstanding the manifold legends fabricated about the exile of the so-called "\*Ten Lost Tribes," there is no certain information about the fate of the Israelite exiles in Mesopotamia during the Assyrian empire or at a later period. Only a few extant allusions in the Bible and in epigraphic sources testify to their existence. Of the latter sources, the onomastic evidence from Mesopotamia contained in Assyrian documents dated to the end of the eighth and to the seventh centuries is of particular significance, since it presents names which are known from the Bible to be Israelite. However, with the exception of personal names composed of the Israelite theophoric element *yau* (*YHWH*), it is not always certain that

the reference is to Israelite exiles, since these names are common Northwest Semitic ones and may also designate either Phoenicians or Arameans.

The documents dealing with or discovered at Gozan, which is mentioned in the Bible in relation to the exile of Israel (see above), are particularly instructive in this respect. One letter (ABL 633) actually mentions one Ḥalabišu (or less likely, Haldu) from Samaria living in Gozan, although he may not have been an Israelite. The same document, however, names two officials called Paṭṭiyau and Niriyau (= biblical Pelatiah and Neriah respectively) who almost certainly were. Another Assyrian letter (ABL 1009), dated to the seventh century B.C.E., mentions Samaritans among the troops of the Assyrian king who were serving in Mesopotamia. In a commercial contract from Gozan (JADD 234 = SAA 6:34) dated to the end of the eighth century, the signatory witnesses are two high-ranking officials in the Assyrian administration whose names are Nādbiyau (biblical Nedabiah), who bore the title “chariot driver,” and Paqaha (identical with the Israelite royal name Pekah), whose title was “village manager.” In a document discovered at Gozan (No. 111) two typical Hebrew names are mentioned – Usī’a (\*Hosea) and Dayana (Dinah), as well as Yaseme’il. In B. Mazar’s opinion, this document concerns Hosea’s redemption of an Israelite woman (Dinah) from an Aramean. In a legal document from Nineveh (SAA 14:50) one Il-yau (= אֵלִיָּא) sells a girl.

Traces of Israelite captives (and possibly even Judeans) seem to appear from the end of the eighth century at Calah (present-day Nimrud) on the Tigris, then capital of Assyria. An Aramaic ostrakon discovered there lists Northwest Semitic personal names, some of which are common in Israel, such as Elisha, Haggai, Hananel, and Menahem. This document possibly concerns a group of Israelites who lived in Calah alongside Phoenician and Aramean elements, and who worked as craftsmen in one of the enterprises of the Assyrian kingdom. Among the Nimrud ivories which bear inscriptions in Phoenician-Aramaic script, one is clearly a Hebrew inscription (ND. 10150). Some bronze bowls also found there were engraved with West Semitic names, such as Yibḥar-’el, El-heli, and Aḥiyô (Ahio), the last name being unmistakably Hebrew. It cannot be ascertained how these objects, dating from the second half of the eighth century, reached Calah, but they may have been taken as spoil from Samaria when the city fell.

Various Assyrian documents contain additional names of an ordinary Hebrew type, such as Menahem, Amram, Naboth, and Abram, but it is difficult to determine beyond doubt that they belong to descendants of the Israelite exiles. In an Assyrian administrative document from the second half of the eighth century B.C.E., the name Aḥiyaqāma appears in relation to the Assyrian city of Halah (Ḥalahḥa), which is mentioned in the Bible as one of the places to which the Israelite exiles were deported (II Kings 17:6; 18:11). The text could be interpreted as referring to an Israelite deportee named Ahikam. In the view of Tur-Sinai (Torczyner), the inscription on an amulet discovered at Arslan Tash (ancient Hadatta), east of

the Euphrates, is written in Hebrew (though this is doubtful; see Sperling in Bibliography), and he attributes it to an Israelite deportee from Samaria. The existence of an Israelite exile is also alluded to in legendary tradition, such as that embodied in the book of Tobit. The hero claims descent from the tribe of Naphtali, supposedly deported in the days of Shalmaneser.

From the documents that presumably refer to the Israelites, or for that matter to any other exiles, it is evident that as a rule they did not possess the status of slaves or of an oppressed population. The exiles were first settled in Mesopotamia as land tenants of the king (cf. the words of Rab-Shakeh in II Kings 18:32), while the craftsmen among them were employed in state enterprises. Eventually, some of the exiles achieved economic and social status and even occupied high-ranking positions in the Assyrian administration. They were given the right to agricultural holdings and to observe the customs of their forefathers, and enjoyed a certain measure of internal autonomy. The striking of roots in Mesopotamian society by a large part of the descendants of the Israelite exiles resulted in their eventual absorption into the foreign milieu. Nevertheless, part of the Israelite community undoubtedly preserved its distinct national character and maintained connections with the homeland (cf. II Kings 17:28), later merging with the Judean exile. The return to Zion apparently included remnants of the ten tribes, as alluded to in the Bible (see the prophecies concerning national unification in Ezek. 16:53ff.; 37:16ff.; and cf. Zech. 8:13; 10:6ff.) and as indicated in the genealogical lists of Ezra and Nehemiah (cf., e.g., Ezra 2:2; Neh. 7:7).

**EXILE, BABYLONIAN**, exiles of Judah to Babylonia, sixth–fifth centuries B.C.E. Although Babylonia was not the only destination of former Judahites, it was the Babylonian deportees and their descendants whose perspectives inform the Hebrew Bible. Modern scholarship has adopted their perspective in dividing Israelite/Jewish history into “pre-exilic,” “exilic,” and “post-exilic” periods. The destruction of the Assyrian empire brought only temporary respite to the kingdom of Judah. The newly established Chaldean (Neo-Babylonian) dynasty

(626 B.C.E.), which together with Media and the Umman-manda (Scythians?) destroyed Nineveh (612), quickly established its own rule (604) in “the land of Hatti” (Syro-Palestine). Although the prophet \*Nahum rejoiced over Nineveh’s fall and Habakkuk was stunned by Babylon’s rise (Hab. 1:1ff.), Jeremiah foretold that Babylonian rule would last “70 years” (Jer. 25:12; 29:10) and counseled submission. The setback that Babylon suffered at the hands of Egypt (601), however, encouraged King \*Jehoiakim to rebel (II Kings 24:1). The uprising was crushed by Nebuchadnezzar himself (598–597), but the statement that Jehoiakim was led into exile (Dan. 1:1ff.; I Esd. 1:39ff.; cf. II Chron. 36:5–6) is probably unhistorical. It is likely that he died in Jerusalem, reviled by Jeremiah (cf. II Kings 24:6; Jer. 22:13–19; 36:30–31), and that the city was surrendered by his son Jehoiachin on March 16, 597 B.C.E. (II Kings 24:8ff.; II Chron. 36:9ff.). As punishment for the rebellion, Nebuchadnezzar sent into exile the young king and his family, royal officials, warriors, artisans, and other distinguished people from Jerusalem and Judah, and took much spoil from the Temple and palace (II Kings 24:12ff.; Jer. 13:18–19; II Chron. 36:9–10). The number of exiles is reported in round numbers once as 10,000 exclusive of artisans (II Kings 24:14) and once as 7,000 “mighty men” and 1,000 artisans (II Kings 24:16). Probably because Jehoiachin surrendered in time, Nebuchadnezzar did not destroy Jerusalem. He took the exiled king’s uncle Mattaniah, made him a vassal king, and changed his name to Zedekiah (II Kings 24:17; Ezek. 17:11ff.). Jehoiachin, however, retained his royal status, and a Babylonian tablet of 592 reports that he and his five sons, along with other exiles, were allotted rations by Nebuchadnezzar. The seal impressions “Eliakim steward of Yaukin,” discovered at Tell Beit Mirsim, Beth-Shemesh, and Ramat Raḥel, may indicate that his royal estates were preserved intact.

In the eyes of Jeremiah, the exilic community was, metaphorically, a basket of excellent figs and would ultimately be restored to the land, while the remaining population were bad figs and would experience further destruction (Jer. 24:1–10). Ezekiel, settled among the exiles, provides evidence that events were dated according “to the exile of King Jehoiachin” (Ezek. 1:2). Despite the continuous preaching of Jeremiah and Ezekiel, prophets in Judah such as Hananiah son of Azzur (Jer. 28:1ff.) and in Babylonia such as Ahab son of Koliaah, Zedekiah son of Maaseiah, and Shemaiah the Nehelamite (Jer. 29:21ff.) encouraged the rump state of Judah to believe that deliverance was at hand. Relying upon Egypt (Jer. 37:5; Ezek. 17:15; 29:6–7), Zedekiah rebelled. This time the city was destroyed (586 or 587) and the Temple burned. For breaking his oath of allegiance Zedekiah was blinded, exiled to Babylon, and his sons were executed. Other leading officials were likewise put to death. The Temple vessels were taken as booty, and all but the poorest were sent into exile (II Kings 25:1–21; Jer. 39:1–10; 52:1–27; II Chron. 36:11–21; cf. also Dan. 5). Whereas excavation shows clear evidence of destruction at this time in several Judahite sites, e.g., Tell Beit Mirsim, Lachish, Beth-Shemesh, Beth-Zur, etc., the evidence thus far is that Benjamin

remained untouched. (On the archaeological situation see C. Carter, O. Lipschits, A. Zertal, and J. Zorn, *apud Lipschits and Blenkinsopp in Bibliography*.) Appointed governor by the conquerors, \*Gedaliah son of Ahikam resided in the Benjaminitic town of Mizpah until he was assassinated by \*Ishmael son of Nethaniah of the royal family (II Kings 25:22–25; Jer. 40:7ff.). The people then fled to Egypt, taking Jeremiah with them (Jer. 41–43), and in 582 a third group was carried off into Babylonian exile (Jer. 52:30). The same source which reports this last small exile of 745 Judahites gives figures of 3,023 and 832 for the exiles of Jehoiachin and Zedekiah respectively (Jer. 52:28–30). It is not clear how these figures are to be reconciled with those cited earlier.

The destruction of the state and the Temple and the exile to Babylonia were traumatic experiences that concomitantly brought forth desires for revenge and stirrings of repentance. Feelings ran strong not only against Babylon (Isa. 47; Jer. 51; Ps. 137) but also against neighboring Edom, which rejoiced at, and benefited from, the destruction (Ezek. 25:12–14; 35:1ff.; Obad.; Mal. 1:3–5; Ps. 137:7; Lam. 4:21–22). Although Jeremiah and Ezekiel explained the impending destruction as punishment for moral and cultic sins, the actual destruction was a shock. It aroused strong lament (Book of Lamentations) and regular commemorative fasts (Zech. 7:1ff.; 8:18–19) and a yearning to be reconciled with God and restored to the land of Judah (Ps. 137; Lam. 3:39ff.; 5:19–21). The Sabbath and festivals continued to be observed, and names such as Shabbethai (Ezra 10:15; Neh. 8:7; 11:16; \*Murashu Tablets) and \*Haggai (the prophet; and a personal name in the Murashu Tablets) made their appearance. The contrast between monotheism and polytheism became sharpened (e.g., Isa. 44:6ff.), and gentiles attracted to the God of Israel were promised a share in the restored Temple if they observed the Sabbath and the Covenant, probably of circumcision (Isa. 65:1ff.). Except for the leaders who had contact with Babylonian officials – \*Sheshbazzar/Shenazzar (Ezra 1:8ff.; 5:14; 6:5; I Chron. 3:18), \*Zerubbabel son of Shaltiel (Ezra 3:2), Mordecai (Ezra 2:2), Bilshan (Ezra 2:2) – and were therefore given, or adopted, Babylonian names (cf. Esth. 2:5, 7; Dan. 1:5ff.), the majority of exiles in Babylonia, as in Egypt, preserved the practice of giving Hebrew names.

Economically, the exiles did not fare badly, and socially they succeeded in preserving their clan and family structure intact. A prominent position was held by King Jehoiachin, who in 561 was exalted by King Amel-Marduk (\*Evil-Merodach) over the other exiled kings. The communal leaders, “the elders of Judah/Israel” (Ezek. 8:1; 14:1; 20:1, 3), maintained their traditional authority and were known as “elders of the exile (Jer. 29:1). Craftsmen and builders were engaged in the royal building projects in Babylon, and clay tablets record rations distributed in 592 to such as Semachiah, Gaddiel, and Urimelech. Many were settled on “mounds” (*tel*), i.e., sites that had formerly been destroyed and needed to be rebuilt, such as Tel-Melah and Tel-Harsha (Ezra 2:59; Neh. 7:61). Ezekiel had a house in Tel-Abib (Akkadian for “mound caused by the deluge”), which lay along the Chebar Canal (Ezek. 1:1; 3:15, 23;

8:1) in the vicinity of Nippur. Jeremiah had encouraged the exiles to settle down, build houses and plant gardens, lead a normal life, and preserve public security (Jer. 29:4ff.). One of the Jews receiving royal rations in 592 was “Shelemiah the gardener.” The best evidence of continuity in the cultural sphere is the activity of the prophets Ezekiel, Deutero-Isaiah, Haggai, and \*Zechariah. The first was born in Judah and was exiled with Jehoiachin. He relentlessly prophesied the destruction of Temple and state and with equal certainty delineated its reconstruction. The last two, who were doubtlessly born in exile, returned to Judah to inspire the reconstruction. The great unknown prophet who goes by the name Deutero-Isaiah (Isa. 40–66) probably knew only exile and yet foretold the restoration in the most lyric of biblical poetry.

### Return from Exile

Just as the greatest tragedy of the destruction of Jerusalem by the Babylonians in 586 B.C.E. was the loss of the Temple, so the first task after the return from exile was its reconstruction. As Cyrus embarked upon his conquest of Babylon, Deutero-Isaiah looked upon him as the Lord’s shepherd and anointed, called upon to release the exiled Jews, rebuild the city, and reestablish the Temple (Isa. 44:28; 45:1, 13). A policy of restoration and reconstruction was pursued by Cyrus throughout the conquered territories, and he announced it proudly in his Akkadian-language cylinder inscription (COS 2:314–16). The specific permission granted the Jews was proclaimed orally throughout the Diaspora and put down in writing. As his victories and policy of restoration were attributed to Marduk in the Babylonian inscription, so in the proclamation to the Jews they were attributed to the God of Heaven, the title by which the God of Israel was generally known at that time (cf. Ezra 5:12; 7:12). No decree specifically granting permission to the exiles to return or to rebuild the city of Jerusalem has come down. Permission is granted simply to rebuild the Temple and for the exiles to return to Jerusalem for that purpose. Those not returning are encouraged to assist the repatriates financially (Ezra 1:2–4). An Aramaic memorandum deposited in the treasury archives in Median Ecbatana (Heb. Achmetha; modern Hamadan), Cyrus’ summer residence, gives the dimensions and certain architectural features of the Temple, and states that expenses are to be met by the royal treasury (Ezra 6:1–5). The Temple vessels were released by the treasurer Mithredath, at Cyrus’ order, to Sheshbazzar/Shenazzar, prince of Judah, who restored them to Jerusalem (Ezra 1:7–11; 5:14–15; 6:5). Sheshbazzar was given the title of governor (*peḥah*) and entrusted with the task of rebuilding the Temple (Ezra 16–17). Although the sources are not clear on the subject, he was apparently succeeded in this assignment by his nephew Zerubbabel, who likewise bore the title “governor” (Ezra 3:1–13; 5:1–23; Haggai 1:1; 2:1–2, 21).

Zerubbabel son of Shealtiel and \*Joshua son of Jehozadak, who was descended from a family of high priests, appear at the beginning of a list of 12 leaders, symbolizing the unity of Israel, who headed the groups returning from exile (Neh.

7:7; one name has accidentally been left out from the parallel list in Ezra 2:2). Besides Zerubbabel (“Seed-of-Babylon”) at least three other leaders bear non-Hebrew names – Mordecai (related to a name compounded with Marduk), Bilshan (= Bab. Belšunu, “Their Lord”), and Bigvai. The last name is from Persian *bagāvahyah*, “through God, the better,” and recurs in the first list of 17 or 18 returning families, along with such unusual names as Pahath-Moab (“Governor of Moab”) and Elam (Ezra 2:6–7, 14; Neh. 7:11–12, 19). Perhaps these names refer to Israelites exiled from Transjordan (1 Chron. 5:26) and to those who settled in Media (11 Kings 17:6), hence the Persian name, and in Elam (Isa. 11:11). Since most, if not all, of the place-names in the second list are located in Benjamin (Ezra 2:20 or 21–35; Neh. 7:25–38), it is likely that these 17 (18) families settled in Judah. Interestingly, exactly 17 settlements are cited for Judah in the time of Nehemiah (Neh. 11:25–30). The subsequent lists enumerate families of priests, levites, singers, gatekeepers, temple servants (*Nethinim*), and “sons of Solomon’s servants” (Ezra 2:36–58; Neh. 7:39–60). In addition to these families, whose genealogical records were in order, there were other repatriates whose records were not. The priests among them were disqualified from the priesthood (Ezra 2:59–63; Neh. 7:61–65). At least one of these families, however, that of Hakkoz, was apparently reinstated at a later date (Ezra 8:33; Neh. 3:4). The number of members of each family and town often varies between the two parallel lists, while the total of all the figures falls far below the recorded total sum. While the difference could be made up by adding women and children, it should also be noted that the given totals are schematic numbers, formed of various combinations of seven and three: 42,360 plus 7,337 slaves (Ezra 2:64–65; Neh. 7:66–67). Despite the list’s title indicating that it numbers “the members of the province who returned from exile ... with Zerubbabel” (Ezra 2:1–2; Neh. 7:6–7), the origin, nature, and purpose of the list has been much debated. The first recorded act of the newly established community was the reinstatement of the regular daily ritual on the first of Tishri, and later the celebration of the festival of Tabernacles “as prescribed in the Torah of Moses.” It was at the time of this festival that Solomon’s Temple had been dedicated (1 Kings 8:62ff.). Like that structure, the Second Temple was to be built with cedars from Lebanon, and at the foundation ceremonies, priestly and levitical choirs chanted psalms of praise and thanksgiving, “according to the order of David” and as was prophesied by Jeremiah (Jer. 33:10–11). The link with tradition is evident from the fact that while the young rejoiced, the elders, who remembered the First Temple, wept (Ezra 3:10–12).

The repatriates’ ties with the past took on a strong ethnic coloring. In the neighboring provinces, particularly in Samaria, the Assyrian kings had earlier introduced an alien population which, in the course of time, came to worship the God of Israel (11 Kings 17). They now wanted to participate in the erection of the Jerusalem Temple. The repatriates felt no kinship with these elements and claimed that Cyrus’ de-

cree was for themselves alone. Rebuffed, these “opponents of Judah and Benjamin,” this new “people of the land,” succeeded in thwarting by one means or another the efforts of the Jews to rebuild the Temple during the reign of Cyrus and \*Cambyses (Ezra 4:1–5). Years of famine followed and a certain demoralization set in. The rebellions and wars that took place in the Persian Empire after the death of Cambyses reverberated in Judah, and the prophets Haggai and Zechariah rose in 520 to encourage the Jewish leaders to resume construction of the Temple. They did so with enthusiasm and Haggai prophesied to Zerubbabel in messianic terms. The son of the same Jehoiachin, whom Jeremiah had likened to a signet which the Lord deliberately pulled off his hand and cast away (Jer. 22:24), would become just such a signet on the Lord’s hand (Haggai 2:23), and the righteous Davidic “shoot” foreseen by Jeremiah (Jer. 23:5–6) was to sprout up and rule alongside the high priest (Zech. 6:12–13). The actual building was again called into question, this time by Tattenai, governor of Trans-Euphrates. The Jews could produce no document granting them permission to build the Temple, but they reported that such a document was on file in the royal archives. When the memorandum of Cyrus was located in Ecbatana, Darius reconfirmed the decree with its provision for covering expenses and agreed to pay the expenses of a daily sacrifice on behalf of the royal family. Building subsequently proceeded and the dedication was held on Adar 3, 515, “as prescribed in the Book of Moses”; Passover was then celebrated by all those “who had separated themselves from the impurity of the nations of the land... to seek the Lord God of Israel” (Ezra 5–6). The Temple was rebuilt and the enemies of Judah were foiled, but Zerubbabel did not ascend the throne of David. No more is heard of him, and upon the death of Darius, the opponents of Judah sought to stir up King Xerxes against Judah (Ezra 4:7ff.). The restored community only became firmly established during the 40-year reign of Artaxerxes I, when \*Ezra and \*Nehemiah undertook the twin tasks of the codification of the law and the fortification of Jerusalem.

**EXISTENTIALISM**, a modern philosophical movement, which intends to elucidate concrete human existence. To the movement belong such people as S. Kierkegaard, A. Schopenhauer, M. Heidegger, J.-P. Sartre, G. Marcel, M. Buber, F. Rosenzweig, and J.B. Soloveitchik.

Embracing a number of disparate philosophical positions, existentialism can be described as a reaction to traditional philosophy with its emphasis on the static, the abstract, the objective, and the purely rational. In its reaction, existentialism emphasizes the dynamic, the concrete, the subjective, and the personal. More specifically, existentialism opposes Idealism, which gave priority to the idea over factuality and largely neglected the part of the philosopher himself in the construction of his philosophy. Existentialism stresses personal involvement and “engagement,” action, choice, and commitment, and regards the actual situation of the existential subject as the starting point of thought. Revolting against the Cartesian view of the self as a thinking entity, existentialism is concerned with the existential subject in his wholeness and concreteness – the willing, feeling, thinking person, who decides and acts from the perspective of his particular life situation rather than from some universal vantage point provided by reason or history. One of the important influences on existentialism was phenomenology, which attempts to understand the world and man not through causal formulae and analysis, but through openness to the whole range of phenomena that are manifest, without asking whether they are “real” in some metaphysical sense. Yet, whereas E. Husserl’s phenomenology investigated human consciousness and its intentionality, existentialists themselves were rather interested in existential situations as insecurity, anguish, depression, shame, tragedy, hope, solidarity, and love. Both Husserl’s phenomenology and existentialism did not relate to the Kantian *Ding an sich*, reality in itself, but in the way reality appears to the subject that is open to it: they do not explain phenomena, they rather describe them.

### Existentialism in Jewish Thought

Existentialist motifs are central to the writings of many modern Jewish thinkers. One may for instance find existential motifs in the thinking of Rabbi Nahman of Breslav (Meir, 37–54).

According to F. Rosenzweig, Hermann Cohen’s thought prepared his own existential thinking (F. Rosenzweig and S.H. Bergman highlighted the dichotomy between the neo-Kantian Cohen of Marburg and the neo-Cohen of Berlin, whereas A. Altmann thought that there was one great continuity in Cohen’s neo-Kantian thinking). It was the concern for the individual which led Cohen to accord religion an independent place in his philosophic system. He argued that religion is necessary insofar as it posits the categories of sin, repentance, and salvation to deal with the problems of the individual, which Kantian ethics overlooks in its concern with man in general. Cohen emphasizes the relation between God and man, rather than theoretical speculation concerning God. With his notion of “correlation” Cohen maintains that the relationship between

God and man is characterized by the holy spirit. Through his relation to God and his acknowledging God as the model and source of holiness, man strives to attain holiness for himself. Man and God are partners in bringing the work of creation to completion, i.e., in bringing about the messianic era. Both the deeds of man and the divine grace are necessary for the salvation of mankind.

Jewish existentialism proper begins with Franz Rosenzweig. Following Cohen, Rosenzweig attaches a great importance to the individual. In *Das neue Denken* ("The New Thinking," 1925) he criticizes traditional philosophical categories, instead making the personal experience of the individual the starting point of philosophy. Because God, the world, and man are experienced as three distinct entities, Rosenzweig rejects the approach of philosophy from the pre-Socratics until Hegel which reduced in a monistic manner these three "substances" to one basic essence, to God (in pantheism), to man (in anthropology), or to the world (in materialism). The separation and interrelationship of God, man, and the world is central to his New Thinking. He explains that the relation between God and the world is cognized as creation; between God and man, as revelation; and between man and the world, as redemption. As a result, the I is less a Cartesian *cogito* than a relating being, called upon to respond.

All of Martin Buber's mature thought bears the stamp of a closely similar existentialism of dialogue reflected in his notion of the I-you relationship, and his insistence on the concrete, on the unique, on the everyday, on the situation rather than the "-ism," on response with one's whole being and the personal wholeness that comes into being in that response. At the center of Buber's existentialism stands "holy insecurity" or the "narrow ridge" – the trust that meaning is open and accessible in the lived concrete, that transcendence addresses us in the events of everyday life, that man's true concern is not unraveling the divine mysteries, but the way of man in partnership with God. The partnership with "the eternal You" comes into expression in the meeting and encounter with a you. The living presence of God is felt when one is present to the other and makes the other present.

For Abraham Joshua Heschel religious reality does not begin with the essence of God but with His presence, not with dogma or metaphysics but with that sense of wonder and the ineffable which is experienced by every man. Through this sense of wonder man is led toward that transcendent reality to which each finite thing alludes through its own unique reality. Heschel approaches philosophy of religion as "situational thinking" and "depth theology" which endeavor to "rediscover the questions to which religion is an answer" (A.J. Heschel, *God in Search of Man* [1955], 3).

Basic existentialist themes are also found in the thought of Rabbi Joseph B. Soloveitchik. His thinking is pervaded by such themes as loneliness and alienation, but also heroic readiness of obeying the divine commandments. Soloveitchik's halakhic hero lives through the normative prism of *halakhah*. He is the ideal type who orients his life to halakhic discipline

and develops an indifference toward the chaotic, death, and the absurd.

Although the existential Jewish writer F. Kafka has his own anti-hero, who is the object of circumstances, of misunderstandings, and alienation and who possesses a total lack of communication, one may sense Kafka's longing for a fuller life in his description of alienated modern man (Meir, 129–145). In their various writings, all Jewish existentialists proposed that their readers adopt an "authentic" lifestyle, the content of which differed from author to author.

Friedman, *The Worlds of Existentialism; A Critical Reader* (1964); idem, *To Deny Our Nothingness: Contemporary Images of Man* (1967). **ADD. BIBLIOGRAPHY:** D. Hartman, "The Halakhic Hero: Rabbi Joseph Soloveitchik, Halakhic Man," in: *Judaism*, 9 (1989), 249–73; E. Meir, *Jewish Existential Philosophers in Dialogue* (Hebrew; 2004).

[Maurice Friedman / Ephraim Meir (2<sup>nd</sup> ed.)]

**EXODUS, BOOK OF** (Heb. title שְׁמוֹת [וְאֵלֶּה] "[And these are] the names of" – the first words of the book; Gk. *exodos ton wion Israel ex aigyptou*, "departure [of the children of Israel from Egypt]"; (cf. Sefer *Yezi'at Mizrayim* ("book of the departure from Egypt"), *Dikdukei Te'amim*, 57) the second book of the Pentateuch. The masoretic notice at the end of Exodus (C.D. Ginsburg's edition) gives it 1,209 verses (middle verse: 22:27), 16,713 words, and 33,529 letters; 33 (or 29) triennial sections (*sedarim*), 11 annual ones (*parashiyot*). According to the traditional chronology, the book's narrative embraces 129 years, from the death of Joseph (A.M. 2320) to the erection of the Tabernacle in the second year after the Exodus (A.M. 2449). The book itself is the end-product of centuries of composition. It has 40 chapters (adopted from the Vulgate in the 14<sup>th</sup> century).

#### Book of Exodus – Contents

<b>Chs. 1:1–18:27</b>	<b>The Liberation.</b>
1:1–2:25	The enslavement of Israel and the advent of Moses.
3:1–7:13	The call and commissioning of Moses.
7:14–11:10	The plagues.
12:1–13:16	Firstborn plague and Passover rite.
13:17–15:21	The miracle at the sea.
15:22–17:16	Trouble and deliverance on the way to Sinai.
18:1–27	Jethro's visit and the organization of the people.
<b>Chs. 19:1–24:18</b>	<b>The Covenant.</b>
19:1–20:21	The theophany at Mt. Sinai and the Decalogue.
20:22–23:33	Rules and admonitions.
24:1–18	The Covenant ceremony.
<b>Chs. 25:1–40:38</b>	<b>The Tabernacle and the Golden Calf.</b>
25:1–27:19	Orders to build the Tabernacle.
27:20–31:18	Activities and actors in the Sanctuary.
32:1–34:35	The Golden Calf.
35:1–40:38	Building the Tabernacle.

### Structure and Content

Although it is part of a continuous narrative that runs through the \*Pentateuch, the Book of Exodus shows signs of having been intended as a distinct unit. (See Table: Analysis of the Book of Exodus.) The opening verses of the book do not continue Genesis 50:26, but briefly recapitulate the genealogy of Genesis 46:8–27 as a background for the story of Israel's proliferation, which sets in motion events leading to the departure from Egypt. Similarly the last verses of the book (40:36 ff.) look ahead to (and epitomize) Numbers 9:15–23 to round out the account of the Tabernacle; Exodus 40:35 has its proper sequel only in Leviticus 1:1. Beginning with a backward glance and ending with a forward one, the book gives the appearance of a (to be sure, secondary) literary entity unto itself.

Genesis describes Israel's antecedents and God's promises of progeny and land to the patriarchs. Exodus relates the fulfillment of these promises in three great divisions:

(1) The liberation – God redeems Israel from slavery and demonstrates His faithfulness, His compassion, and His power (Ex. 1–17);

(2) The covenant – God establishes a covenant with Israel and gives them rules to make them His kingdom of priests, a holy nation (Ex. 19–24);

(3) The Tabernacle – God ordains the building of a sanctuary for Himself in the midst of His people, so that He might dwell among them, care for, and guide them (Ex. 25–31, 35–40).

The visit of \*Jethro (Ex. 18) shows signs of being out of chronological order (see below). In the third division, the sequence of command and execution is interrupted by the \*Golden Calf episode (Ex. 32–34), the people's travesty of God's provision for securing His presence among them.

The contents of the book may be divided as follows:

A. THE ENSLAVEMENT OF ISRAEL AND THE ADVENT OF MOSES (1:1–2:25). Israel's proliferation (described in terms employed in the primeval history (Gen. 1:28; 9:7) and the patriarchal promises (Gen. 17:2, 6; 28:14)) provokes the king of Egypt to employ increasingly brutal measures in an effort to reduce it: forced labor proving to be inadequate, he resorts first to a clandestine, and when that fails to a public, order to put to death all male infants of the Hebrews. In this evil time, a boy is born to Levite parents, and to save him, his mother hides him in the Nile's canebrake. Pharaoh's daughter retrieves the infant and connives with his sister (who stands watch closely) to restore it to his family. Later the child is brought back to the princess; she names him \*Moses (probably of Egyptian derivation; cf. the final element of such royal names as Thutmose "born of [the god] Thut") and adopts him as her son.

Three acts of rescue by the young man Moses (adumbrations of his future role) are related: he rescues a Hebrew from an Egyptian taskmaster, one Hebrew from the unjust attack of another, and finally, as a fugitive in Midian, he rescues the daughters of the local priest from bullies (note the rising scale of disinterest). Moses takes up with the priest and marries his

daughter who gives birth to a son. His retreat from the struggle of his people in Egypt is temporary, however, for God has taken note of their misery and resolves to act.

Well-knit as the narrative is, inconsistencies occur, suggesting a separate provenance of its elements; e.g., though prodigiously prolific, the Israelites have only two midwives; and though Moses seems to be the first child of his parents, he turns out to have an older sister (cf. Ex. R. 1:19 according to which the marriage is really a remarriage). The theme of fertility (a veritable refrain in ch. 1) and birth dominates and unites this whole section, giving the impression of a distinct design.

The birth story of Moses has been compared with that of Sargon of Agade (Pritchard, *Texts*, 119; *COS* 1, 461) and Cyrus (Herodotus, 1:107 ff.). However, an Egyptian myth telling how Isis concealed her infant child in a delta papyrus thicket to save him from the predator Seth offers a closer analogue, and points to local Egyptian color in the Moses story (W. Helck).

B. THE CALL AND COMMISSIONING OF MOSES (3:1–7:13). While shepherding his father-in-law's flock deep in the wilderness, Moses comes upon the mountain of God (unknown to him as such). The wonderful apparition of a bush that burns without being burnt draws him into the presence of God, who calls him to lead Israel out of Egypt. Moses' repeated objections of inadequacy finally impel God to appoint his brother \*Aaron as his spokesman (an etiology of how Levite-priests became the spokesmen and mediators of prophecy in Israel (Lev. 10:11; Deut. 24:8; 33:10; 11 Chron. 17:8–9)). The two bring God's message to the grateful people. Speaking to Pharaoh, however, they disguise their demand (upon God's instruction) as a request for leave to worship God in the wilderness at a three-day's march from Egypt. Pharaoh rebuffs them contemptuously: "Who is YHWH that I should heed him and let Israel go – I do not know YHWH, nor will I let Israel go" (Ex. 5:2). He then orders that the Israelites' toil be intensified, which sends Moses back with a bitter complaint to God. God responds with a renewed charge and vow to liberate Israel in fulfillment of His promise to the Patriarchs. However, neither the people nor Pharaoh are moved by Moses' report of this transaction, so God prepares Moses and Aaron to act against the Egyptians.

The \*burning bush story includes the revelation of the proper divine name, YHWH, and its interpretation – the enigmatic "I am/shall be what I am/shall be" (3:13–15). Moses' supposition that the people would ask God's name is itself unclear – all the more so since the contingency fails to materialize in the sequel. The coherence of the fragments in 4:18–26 is problematic (Nahmanides supposes that verses 22–23 belong to the story of the last plague; in the Samaritan Pentateuch they are in fact repeated in 11:4), and the meaning of the night encounter with YHWH in which Zipporah saves the life of one of her family by circumcising her son is wholly obscure (Jacob's nocturnal struggle with a "man" at Jabbok (Gen.

32:25ff.) may be aptly compared to this incident). An adumbration of the plague of the firstborn on the paschal night, from which Israel's firstborn are saved through a blood rite, has been seen here.

The most salient problem of this complex section is the repetition in 6:2–7:13 of the main outline of 3:1–6:1 – the revelation to Moses of God's plan to save Israel; Moses' mission to Pharaoh and Israel; his objection that he is clumsy of speech and the consequent appointment of Aaron as his spokesman; and Pharaoh's rebuff of the brothers. The medieval French exegete Joseph Bekhor Shor suggests that at least part of the second narrative recapitulates the first (at 6:13, 29); in fact, it appears that these are variant narrations of Moses' call and commissioning. The contribution of the second narrative is its stress on God's involvement in Israel's liberation: Pharaoh's rebuff challenges God's reputation, and He must teach the arrogant Egyptian who He is. Thus the major motive of the plague story is introduced (cf. 7:5 with 7:17; 8:6, 18; 9:14, 16, 29).

C. THE PLAGUES (7:14–11:10). After Pharaoh spurns the credentials of Moses and Aaron as God's messengers because his magicians imitated them, the brothers are instructed to bring on \*plagues of blood, frogs, and lice. The first two are again imitated by the magicians, but the third is beyond them, and they confess it to be "the finger of God." Six more plagues follow, with Pharaoh oscillating between obduracy and concession. When, with the eighth plague (locusts) he engages in real negotiation with Moses, it is Moses' turn to be difficult. He so exasperates the king that after the ninth plague (darkness) he is expelled from the palace with a warning never to show his face there again. Moses stalks out in a rage after warning Pharaoh of the final plague of the firstborn.

The plague narrative is constructed on a 3.3.3. (plus 1) pattern – reflected in the tannaitic mnemonic *Dezakh 'Adash Be'ahav* and expressly noted by medieval exegetes (Samuel b. Meir, Levi b. Gershom, Abrabanel). This pattern is imposed on heterogeneous materials whose inconsistencies have troubled readers from earliest times (for details, see \*Plagues of Egypt). Despite this, the effect of the narrative is achieved: human arrogance toward God is not only futile; in the end it overmasters its subject and leads him to his destruction.

D. FIRSTBORN PLAGUE AND PASSOVER RITE (12:1–13:16). A fortnight earlier, on the first of the spring month (later, Nisan), God had prescribed the protective rite and sacrificial meal that Israel was to carry out on the night of the final plague – namely, the slaughter of the Pesah (protective/pass-over (Mekh.)) lamb, the daubing of its blood on doorposts and lintels, strict confinement indoors, and consuming of the roast flesh in haste and readiness to leave (see \*Passover).

The text moves on to link the Pesah with the future week-long festival of *mazzot*, whose onset coincides with the Pesah night (14 Nisan), and whose main feature – unleavened bread – accompanies the Pesah meal as well. The two, evidently distinct, holy days are henceforth to be cel-

ebrated as memorials of the Exodus – their coincidence on the same date being the basis of their combination. (Only in 12:39 is an etiology of the *Mazzot* Festival associating it directly with the events of the Exodus given – the inability of the Israelites to tarry in Egypt long enough for their dough to rise.)

Moses passes on to the people only the injunction concerning the Pesah. However, his message too has a part that looks to the future. This time the link with the future is the Pesah rite itself: in time to come it is to be reenacted (annually) as a memorial to the sparing of Israel's firstborn during the plague that struck Egypt. (The Samaritan mode of celebrating the rite, preserving all its dramatic and apotropaic features, appears closer to the intention of the text than the Jewish mode, deliberately emptied of them (cf. *National Geographic Magazine*, 37:1 [1920], 34–35, 44–45; Pes. 9:5; Abraham Ibn Ezra on 12:24).

On the fateful night, the bereaved Egyptians press the Israelites to leave. The latter had already fulfilled (*asu* (12:35), pluperfect) Moses' order to ask the Egyptians for valuables (and thus get some return for their unrequited labor and suffering (Sanh. 91a; *Hezkuni* on 3:21f.; B. Jacob, in: *MGWJ*, 32 (1924), 285ff.). (The notice (Ex. 3:20) that the valuables are worn by children is probably an etiology of a festive practice of Jews in the Egyptian diaspora of the later first millennium.) Verses 37–42 of chapter 12 are notes on the departure: the first station; the size of the host (conceived as an army: *ragli*, "footmen," *ziv'ot*  $\Upsilon\text{HWH}$ , "the troops of  $\Upsilon\text{HWH}$ "); the large admixture of non-Israelites; the etiology of *mazzot*; "the night of vigil."

Further regulations concerning the Pesah in verses 43–49 continue verses 1–20, and belong (in the light of verse 50) before verse 29. They appear here owing to their assumption of settled conditions and the presence of foreigners among the celebrants. A passage enjoining the commemoration of the Exodus with the *Mazzot* Festival (a variant of verses 15–20) and the dedication of firstlings follows. Notable is the conception of both as pedagogic measures – vehicles for the transmission of God's mighty deeds to future generations. A large agglomeration of ritual materials of quite varied character and provenance has thus been attracted to this point in the narrative. The reason is clearly to link the rites and holy days in question – doubtless pre-Israelite in origin – with their meaning in Israel.

E. THE MIRACLE AT THE SEA (13:17–15:21). A report of God's providential guidance of the departing Israelites is followed by a prose and poetic account of the miracle at the *yam suf*, usually rendered "Sea of Reeds" or "Red Sea." (On the problematic term see Vervenne in Bibliography; location unknown; every body of marsh and water from Lake Sirbonis in the north, across the Isthmus of Suez, to the Gulf of Suez in the south has been proposed.) The theme of teaching Egypt who  $\Upsilon\text{HWH}$  is reaches its culmination in God's assertion of authority against Pharaoh and his whole army (14:4). God's design

having been abetted by Pharaoh's change of heart and pursuit of Israel, Moses bids the frightened people to "stand fast and see the salvation of YHWH... YHWH will fight for you and you be still!" God displays His sovereign control of the sea, which he first blows apart so that Israel can pass through it on dry land and then allows to close on the pursuing Egyptians. The prose of chapter 14 is elevated: refrain-like clauses (cf. 14:6–7, 9, 17, 23, 26, 28) and phrases (cf. 14:16, 22, 29) summed up in 15:19 and climaxed by a strongly cadenced five-clause coda (14:30–31).

The "Song of the \*Sea" – a paean to God the warrior (15:3) – follows. Its junctures are marked by three verses in "staircase parallelism" (a b c d / a b e f) – verses 6, 11, 16b – dividing it into four parts: (a) a declaration of intent to hymn God's victory and a summary of its essence – the drowning of Pharaoh's army; (b) the piling up of waters by God's wind, the greedy pursuit by the enemy, and the drowning of the enemy; (c) God's guidance of the people to His holy abode (the Land of Canaan), inspiring terror in all the neighboring countries; (d) coda: God's implanting His people in His own mountain, His dwelling-place, His sanctuary in the Land of Canaan; acclamation of God as eternal king.

As the celebration of a specific event, the song is comparable only to Deborah's hymn (Judg. 5), although from verse 12 on it moves on to Israel's journey to its land and its settlement therein. A hymn to the victor at the sea has apparently been expanded into a larger celebration of God's deeds for Israel from the Exodus to the settlement, incorporated here because of its first half. The language displays several early features (-emo suffixes; retention of radical *y* in *yekhasyumu*; staircase parallelism; echoes of the primeval battle with Yam (the Canaanite god of the sea), cf. Cassuto in bibl.); the mention of Philistia, the references to cavalry, and the sanctuary on God's mountain, however, indicate a date no earlier than the tenth century for the present form of the song.

F. TROUBLE AND DELIVERANCE ON THE WAY TO SINAI (15:22–17:16). The interval between the crossing of the sea and the arrival at Sinai is filled with four episodes relating trials and tribulations (catchwords: *nissah* "try, test" and the assonant *nes* "(en)sign" (15:25; 16:4; 17:2, 7, 15)). (a) Marah, where a miraculous healing of brackish water is connected with an obscure law giving, a trial, and an admonition evocative of epilogues to law collections. (b) The \*manna story – an only partly fused composite (note the allusion to quail that has no sequel here) – teaching God's capacity to provide food even in the wilderness. It also illustrates the holiness of the Sabbath: just as God ceased providing manna on the Sabbath, so must Israel rest from procuring and preparing food on that day; 16:35 notes that the manna ceased only when Israel arrived in Canaan (cf. Josh. 5:12). (c) Massah and Meribah: the people complain of thirst, Moses strikes "a rock at Horeb" (but the camp is at Rephidim, a station away from the holy mountain; 17:1 and 19:1–2) and water gushes forth. (d) The encounter with \*Amalek: by virtue of Moses' raised hands

and the force mustered by Joshua Amalek is defeated; God's oath to wipe out Amalek is memorialized by an altar named "YHWH is my ensign."

These stories are more or less paralleled by post-Sinai narratives: the third story, by the "Waters of Meribah" episode in Numbers 20:2–13, in which Moses and Aaron are denied entry into Canaan; the second, by the story of Numbers 11 – chiefly about the quail – which ends with the people's being punished for their complaint (Joseph Bekhor Shor identifies the Exodus with the Numbers story in his comment to Ex. 16:13); the fourth, by the encounter with Amalek and others in Numbers 14:45, in which Israel is defeated. Nor are they free of occasional post-Sinai allusions: e.g., "before YHWH" of 16:9, a commonplace reference to the tent-sanctuary; the "rock at Horeb" (17:6); the Negebite nomads of Amalek. Notwithstanding their shaky anchorage in time and place, these episodes are thematically fitting here. They display God's providence and His capacity to deliver Israel from distress, thus paving the way for His claim upon them based on their experience of Him ("You have seen what I did to the Egyptians, how I bore you on eagles' wings and brought you to me"; 19:4). Punishment would be out of place here, but not so in the post-Sinai narrative, where the credit established by God and the covenant obligation of loyal devotion to Him count against the people.

G. JETHRO'S VISIT AND THE ORGANIZATION OF THE PEOPLE (EX. 18). Drawn by the wonders done for Israel, and accompanied by Moses' divorced wife, and children (but cf. 4:20), Jethro comes to the encampment at the mountain of God. He confesses YHWH's superiority to all other gods and offers sacrifice to him. On the morrow, seeing how Moses is overwhelmed by the charge of the people, Jethro proposes a division of labor between Moses – who should retain only the functions of mediating between God and the people – and a hierarchy of officers who would care for all other needs. (The text speaks of judicial functions, but the terminology (cf. e.g., I Sam. 8:12; II Sam. 18:1; II Kings 1:9ff.; 11:10) is military, in line with the conception of the Israelites as an army.) Whether Jethro's visit occurred before or after the Sinai law giving has long divided exegetes (see Mekh., Ibn Ezra, Nahmanides on 18:1). The argument for a later visit is based on (a) the location of the camp at the holy mountain (cf. 19:1–2); (b) the allusion to an already present cult site (18:12); (c) Moses' teaching of God's laws and statutes (18:20); (d) the representation in Deuteronomy 1:9–10 of the administrative organization here ascribed to Jethro as having occurred just before the people left Sinai; and, finally (e) the notice of Numbers 10:29ff. that Moses' father-in-law was in the camp at that time.

Thematically, the episode suits its context: its first half relates a foreigner's appreciation of the great acts of God told in the preceding chapters; its second half foreshadows Moses' mediatory and legislative function – the topic of the rest of the book. Rabbinic exegesis, for its part, found the contrast in attitude to Israel between Amalek and the equally foreign Jethro

to be the point of the juxtaposition of chapter 18 to chapter 17 – a contrast whose historical consequences are depicted in 1 Samuel 15:6 (see at length David Kimḥi on Judg. 1:16).

H. THE THEOPHANY AT MT. SINAI AND THE DECALOGUE (19:1–20:21 (18)). On the first of the third month after the Exodus (i.e., 1 Sivan, in later terms) Israel arrives at Sinai. Moses ascends to the mountaintop where God descends, and messages concerning God's proposal to contract a covenant with Israel are carried by Moses to and from the people. Upon their acceptance in principle of God's proposal, Moses prepares the people for the theophany (divine manifestation). On the third day, amid lightning and thunder, God manifests Himself on the mountain and speaks the \*Decalogue. Terrified, the people fall back and beg Moses to be their intermediary with God. Moses approaches the cloud "where God was" to receive the rest of the commandments.

The details and order of the narrative in chapters 19 and 20 are perplexing. Weighty matters crowd together in a barely intelligible sequence. The number of Moses' ascents and descents is unclear. The stated aim of the theophany in 19:9 (to let the people overhear God's dialogue with Moses so that they might believe him forever) has no sequel – except perhaps in the unspecified dialogue alluded to in verse 19b. The people are strictly barred from approaching the mountain – a wholly unnecessary precaution. The order to return with Aaron (verse 24) has no sequel (unless it be 24:1); and what Moses said to the people (19:25) is left unsaid.

The Decalogue – a self-contained entity – is only loosely related to the context (see \*Decalogue). The terror of the people (19:18–20) seems to follow upon God's speaking the Decalogue (as in Deut. 5:20 ff.), but it has long been felt (especially since no reference to God's speech occurs in the passage) that it belongs properly to the pre-Decalogue situation described in 19:16 ff. (cf. Naḥmanides).

The extraordinary complexity is best explained as the result of the interweaving of parallel narrations; the author appears to have been reluctant to exclude any scrap of data relevant to this momentous occasion.

I. RULES AND ADMONITIONS (20:22 (19)–23:33). The further stipulations of the covenant are told to Moses, to be transmitted by him to Israel. These consist of cultic regulations, civil and criminal laws, and socio-moral exhortations, arranged as follows: (a) rules concerning access to God in worship (20:22 (19)–26 (23)); (b) the emancipation of Hebrew slaves (21:1–11); (c) homicide and assault (21:12–27); (d) the homicidal ox (21:28–32); (e) injury to property, i.e., to animals (including theft; 21:33–22:3) and to crops (22:4–5); the responsibility of bailees and borrowers (22:6–14); seduction (22:15–16 – from the vantage point of the father's interest, i.e., the bride-price); (f) a miscellany of religio-moral admonitions and commandments (22:17–23:13); (g) a cultic calendar (23:14–19). Admonitions to obey the accompanying angel of God and to keep strictly apart from the society and worship of the Canaanites serve as the epilogue to the section (contrast Lev. 26 and

Deut. 28 with their clear-cut blessings and curses, the formally proper epilogue to a law collection; cf. Hammurapi's Laws, Pritchard, Texts, 178 ff; COS II:335–53). These "utterances of YHWH" and "rules" (usually understood as the categorical and casuistic statements, respectively (cf. Ibn Ezra on 21:1)) appear to constitute the "\*Book of the Covenant" that Moses is said (24:7) to have written down and read to the people; hence the section is conventionally named "the (larger) Book of the Covenant" (to distinguish it from the "smaller": 34:11–26, on which see below). It is made up of heterogeneous elements, including prior entities – note the title of 21:1; or the interrupted series of participial clauses concerning capital crimes in 21:12, 15–17. Sets of five clauses are discernible: the slave laws, the homicidal ox, theft. A general design is evident: the section begins and ends with cultic-religious admonitions and commands; in between these the impersonal casuistic laws appear (note the transition in 21:2, "If you buy") – their environment bestowing on them its character of a divine address and commandment. A fairly clear principle of association and gradation is discernible from (c) through (e); the precedence given to (b) is conditioned by the situation – limitation of slavery among Hebrews being the chief boon that their liberator conferred upon them. Indeed the very gradation referred to betrays a clear hierarchy of values (contrast the arrangement of laws in the Babylonian collections of Eshnunna and Hammurapi (Pritchard, Texts, 161–177; COS II (332–53)). Notable is the recognition of the slave as a person in his own right in 21:20, 26–27, unparalleled in ancient law (though still holding him less than a free man; cf. 21:21, 32). Ibn Ezra's summary of the section merits quotation:

The essence [of the laws] is that one should not do violence to or coerce a weaker man. First, subjugation of the person is taken up – namely, enslavement... Assault is dealt with for the sake of the law on injuring slaves... And talion is dealt with in order to distinguish the case of maiming a free man from that of a slave... The goring ox is mentioned to stipulate the rule in the case of the killing of a slave... Violence to property is the next topic. First field and vineyard are taken up, for they constitute the essence of property; next, crops – produced by the earth; and then bailees and the borrower. And next, the seducer who coerces a minor... The resident alien is mentioned because he is helpless, and similarly the widow and orphan and the poor debtor.

Afterward the violence that may be perpetrated covertly is taken up: cursing God, which one would fear to do openly; or delaying payment of the sacred dues of wine and oil... and... purveying false reports... Judges are addressed in the injunction against perverting justice – which is violence that can be done covertly... And the reason for mentioning the fallow year is to declare the yield forfeit to the poor, and the Sabbath, so that servant and alien may rest... The intention of 23:13 is to reinforce the second commandment [against worship of other gods]; and that is the reason for the three pilgrimage festivals, namely, the assemblage of all Israel to worship God...

This ingenious, if somewhat one-sided, view of the continuity of the section has the merit of highlighting the extraor-

dinary preoccupation of the rulings and admonitions with socio-moral values. Especially noteworthy is the fact that although the laws have numerous parallels to other Near Eastern legal collections, the notion of their divine origin appears unique to Israel.

J. THE COVENANT CEREMONY (EX. 24). Moses relates the rules and admonitions to the people, who accept them. He then writes them down, and, after a second reading and acceptance, performs a sacrifice and blood-sprinkling ceremony to conclude the pact. Moses and Israel's notables ascend the mountain for the sacrificial meal, consecrated by a vision of God. Afterward, Moses takes leave of the notables and enters the cloud on the mountaintop to receive the stone tablets and the laws which God is to give him.

The chronology and interrelation of the elements of this chapter have long puzzled exegetes. The first two verses of chapter 24, not picked up until verse 9, are vaguely evocative of 19:24. Some rabbinic opinion places all of the events of 24:1–11 before the pronouncement of the Decalogue (Yoma 4b; Rashi to 24:1) going so far as to identify the people's acceptance reported in 19:8 with that reported in 24:3 (or 7; Saadiah, cited by Ibn Ezra on 20:21). There is discontinuity between 24:11 and 12: in between, Moses and the elders must have descended the mountain. The relation of the six and seven days of 24:16 to prior events is again obscure, rabbinic opinion being divided as to whether they preceded or followed the Decalogue speech (see Rashi). The impression is unavoidable that heterogeneous matter has been combined.

K. ORDERS TO BUILD THE TABERNACLE (TENT OF MEETING, 25:1–27:19). God commands that materials be assembled for making Him a dwelling place amid the people (see \*Tabernacle). A vision of the tent-sanctuary that God intends in all its detail is shown to Moses (25:9, 40; 26:30; 27:8; cf. 1 Chron. 28:12, 19 with reference to Solomon's Temple, and the dream of Gudea, the neo-Sumerian ruler of Lagash, summarized in H. Frankfort, *Kingship and the Gods* (1955<sup>2</sup>), 255–8; COS II, 417–33). First in importance and first described is the ark – the receptacle of the “tablets of the pact” that Moses is to receive – and the cherubim on its cover, where God will “meet with” Moses and give him his orders concerning Israel (25:22). Next, the table and lampstand, the furnishings of the outer room of the sanctuary. All these articles are of gold or wood overlaid with gold, as befits the holiest part of the sanctuary.

The inner tent is to be of richest cloths: linen of several plies, and blue, purple, and crimson wool, on which figures of cherubim are woven; gold clasps connect the cloths. A cover of goatskin, on which yet another of ram and dolphin skins lies, protects the inner cloths of the tent.

Planks of acacia wood, set in silver sockets and secured by horizontal poles, form the walls of the Sanctuary – all the wood overlaid with gold. A curtain of finest cloth separates the ark from the outer sanctuary; in the entrance to the latter, a similar curtain (but with embroidered rather than woven designs) is hung.

A square wooden altar overlaid with copper and having copper service vessels stands in the courtyard. The linen curtains forming the rectangular court are attached to poles set in copper sockets. The materials of the sanctuary are clearly graded in accord with the sanctity of the objects made of them (M. Haran).

L. ACTIVITIES AND ACTORS IN THE SANCTUARY (27:20–31:18). Reference to the light which is to be lit nightly in the Tabernacle and tended by Aaron and his sons leads to a description of their investiture. The gorgeous sacred vestments of Aaron, the high priest, are described, then the simpler attire of his sons. There follows a week-long ritual to be carried out by Moses to consecrate Aaron and his sons as priests. Linked to this account of the consecration ritual, through reference to the altar, is a prescription for the modest daily sacrifices that are to be made in the Sanctuary (one sheep in the morning, one in the afternoon). The peroration of this section (29:42b–46) would be a fitting close to the entire description of the Tabernacle and its personnel.

However, there is more to come: a gold-plated wooden incense altar for the outer sanctuary; an injunction to collect a half-shekel personal ransom from each Israelite to protect him (“make expiation for him”) against the evil effects of a census – the money to be assigned to the sanctuary; a description of the bronze laver and its use by the priests. The references to the incense altar and the laver include descriptions of the priestly use of them, which may be the reason for their location after the section on the priesthood rather than before it, together with the other furniture. (On the problem see Meyers in Bibliography. The Samaritan text indeed transposes the description of the incense altar to follow 26:35.) Recipes for the anointing oil and the incense conclude the uses for which the materials listed at the start of the section have been collected. God then names the craftsmen responsible for executing all these instructions.

Finally, a Sabbath law, prescribing death for its violation, is promulgated. The link with the foregoing is the term “labor” (31:5), the sense of the juxtaposition (as correctly inferred by the rabbinic exegetes (cf. Rashi, Samuel b. Meir, Ibn Ezra)) being to establish the priority of the Sabbath rest even over the building of the Tabernacle.

SECTIONS K. AND L. are not a natural sequel to 24:12–13, and the notice of 31:18 (God gave Moses the stone tablets when He had finished speaking with him on the mountain) only underscores the foreignness of the Tabernacle sections to the narrative framework that surrounds them. To be sure, there is an associative link between the announcement of a delivery of stone tablets to Moses and the order to prepare an ark to receive them (cf. the identical sequence of ideas in Deut. 10:1–3); and since the ark passage was but a part of the detailed description of the desert sanctuary, its inclusion entailed the rest of the passage. Rashi (following Tanhuma Ki Tissa 31 (181), cf. Elijah Mizrahi's comment to Rashi on 31:18) frankly removes all of 25:1–31:17 from the present order of the narra-

tive, and places it after the golden calf episode, i.e., he makes the story of the execution of the orders to build the Tabernacle follow immediately upon the giving of the orders. As we shall see, however, the present order has its logic.

M. THE \*GOLDEN CALF (EX. 32–34). Not knowing how Moses could have survived 40 days on the mountain and fearing the worst, the people implore Aaron to “make them a god” to lead them. Aaron fashions a calf out of their golden earrings, which the people acknowledge as their redeeming god; Aaron then proclaims the morrow a festival for YHWH whom the calf must therefore symbolize; the calf – in essence an unauthorized (indeed a forbidden (20:2ff.) and hence “apostate”) means of securing the divine presence – thus travesties the Tabernacle (cf. Judah Halevi’s trenchant interpretation in Kuzari, 1:97, and David Kimḥi on the related “apostasy” of Jeroboam, at 1 Kings 12:28). Meanwhile, on the mountain, God wrathfully dismisses Moses, threatening to destroy the people. Moses’ plea on their behalf is successful, and he descends, bearing the stone tablets, to the festive throng. At the sight of their revel, Moses breaks the tablets (signifying the rupture of the covenant, in accord with standard ancient custom), and, having ground the calf into powder, makes the people drink its remains (rabbinic exegetes interpret this, in accord with Num. 5:16ff., as an ordeal to discover the guilty; cf. Av. Zar. 44a; Targ. Jon. on 32:20). The Levites rally to Moses and put to death about 3,000 offenders, in return for which they are consecrated to God’s service (an etiology of the tribe’s conversion to clerical status). Moses now undertakes to obtain remission of Israel’s sin and restoration of the covenant. At first he is ordered to lead the people onward under the guidance of an angel; God’s presence amid the stiff-necked people will be too dangerous for them (33:1–5, a reflective gloss on 32:34). There follows a barely integrated passage telling how Moses pitched his tent outside the camp as an oracle site for himself and the people, and how he there held intimate conversations with God; in the present context, this appears as a result of God’s refusal to be amid the people. Moses now strives to move God to rescind His decision (He rescinds in 33:14), and at the same time to secure the people against God’s wrath should they sin in His presence. Banking on his favor with God, Moses extracts from Him a revelation – both visual (“I will make all My goodness pass before you” (33:19)) and conceptual (“and I will proclaim before you the name of YHWH” (*ibid*)) of His compassionate attributes (34:6–7), whereupon Moses entreats God to show this compassion and forgive offenses of the stiff-necked people He made His own. (Moses again successfully implores God by appealing to His compassionate attributes in his intercession on Israel’s behalf after the incident of the spies (Num. 14:18); partial citations of these “thirteen attributes of God,” as they are traditionally styled, occur in Joel 2:13; Jonah 4:2; Nah. 1:3; Ps. 86:15; 103:8; 145:8; Neh. 9:17. For the subsequent use of the passage in public intercessory prayers, see RH 17b.)

God’s abrupt response is to conclude a covenant – in the present context, to renew the broken covenant (though it is not so expressed) – with stipulations that prove to be a variant repetition of 23:12, 14–33, beginning with the topic dealt with last in the earlier passage. The two main concerns of these stipulations are the prohibition of apostasy and the cultic calendar – against both of which Israel offended when they worshipped the golden calf in an invented festival (Joseph Bekhor Shor). Moses is commanded to write down the covenant terms (34:27). The sequel in verse 28 says that he wrote down “the ten words” on stone tablets (and thus renewed the broken relationship with God). However, this contradicts 34:1, in which God Himself undertakes to rewrite on the new set of tablets the same words that had been on the first set, namely, the Decalogue of chapter 20. The understanding of 34:28 has been traditionally governed by verse one (the subject of “he wrote” being taken as God) no doubt correctly (cf. the unequivocal sense of “the ten words” in Deut. 4:13; 10:4); but this means that in 34: (10–) 27 and 28 two different conceptions of the covenant terms have been crudely juxtaposed (see further, \*Decalogue).

A fitting conclusion to this episode in which Moses confronted God resolutely, staking all on the special relationship between them, is the notice (34:29ff.) that Moses’ face had become uncannily radiant through his intimate converse with God. The golden calf narrative rivals that of the Sinai theophany in its complexity, and for the same reason: charged with intense significance, both were subject to reflections and elaborations that tradition carefully gathered and preserved.

N. BUILDING THE TABERNACLE (EX. 35–40). Having reconciled God to Israel, Moses can proceed to build His dwelling place amid the people. Starting with the last, first, Moses admonishes the people concerning the Sabbath rest, then collects the materials and appoints the craftsmen, who set about building. The order of execution differs from the order of the commands: degree of sanctity determined the order of items in chapters 25ff., common practice determined the order of construction (“The rule is that a man builds his house first and only afterward brings furniture into it,” Ber. 55a; cf. Naḥmanides on 25:1). The tent structure is built first, then its contents, finally the accouterments of the court. An itemization of materials used follows. Then the priests’ accouterments are made.

The completed work is presented to Moses, who, at the command of God, sets it up on the first day of the first month of the second year after the Exodus. Immediately the Divine Presence fills it, and its exterior sign, the cloud (fire by night), covers the tent. (Previously, the Presence and the cloud and fire had rested on the top of Mt. Sinai 24:16–17.) Thus, even though Israel should depart from Sinai, the presence of God would accompany them. The book ends with an anticipation of Numbers 9:15–23, relating how the Divine Presence, attached to the Tabernacle, guided Israel throughout its desert sojourn. (See Table: Analysis of the Book of Exodus.)

**Text and Composition**

Like the rest of the Pentateuch, Exodus is textually among the best preserved books of the Bible. Very few passages appear corrupt (e.g., 17:16a), and the versions offer little improvement over the received Hebrew (though there are hundreds of variants (see the apparatus in *Biblia Hebraica Stuttgartensia*) some of which have appeared in Exodus-fragments of the Dead Sea Scrolls; see bibl.). Remarkable for its extensiveness and appeal-

ing in substance is the Samaritan Hebrew and Septuagint insertion in 22:4, indicated by brackets below:

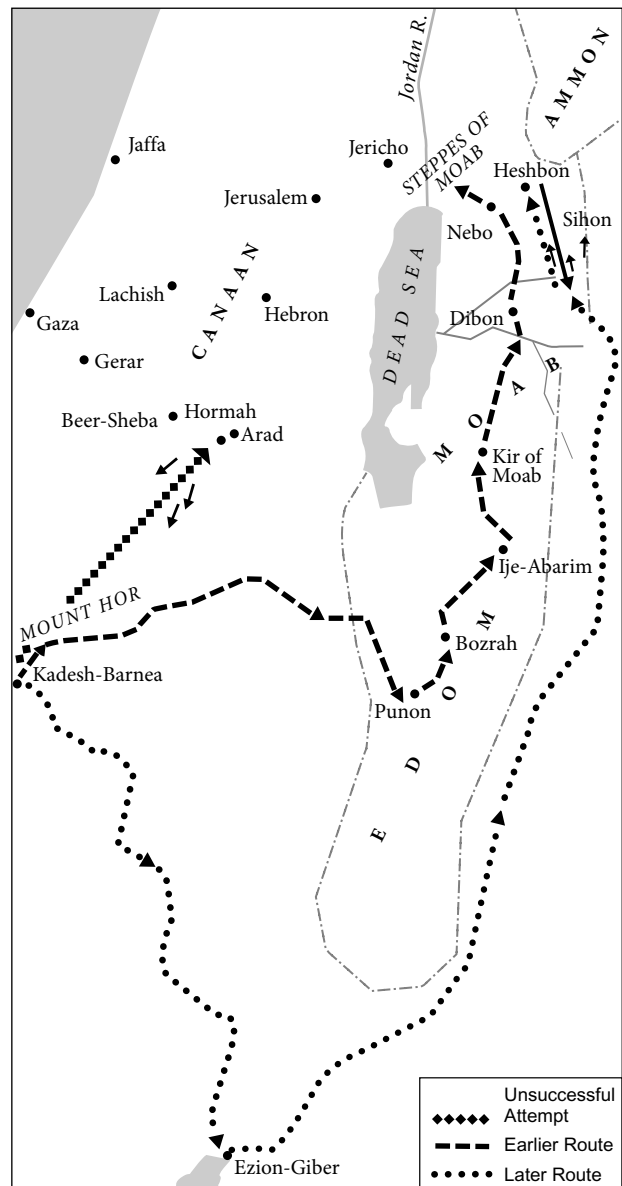

“If a man uses his field or vineyard for grazing, and lets his beast loose so that it grazes in another man’s field [he shall make restitution out of his own field according to the yield expected; but if it consumed the whole field (שלם ישלם משדהו כתבואתה ואם כל) (השדה יבעה)] he shall make restitution from the best part of his own field or vineyard.”

Map 1. Map illustrating major theories on the Israelites' route from Egypt to Kadesh-Barnea; in addition to the routes the major sites are given according to various theories.

This reading obviates the legal difficulty inherent in the plain sense of the received Hebrew that was troublesome to Rava in בַּר 6ב. The Septuagint of the last six chapters (which virtually repeat the orders for building the Tabernacle merely substituting past tenses for future) is abbreviated in places and follows a different order from the received Hebrew. D.W. Gooding has argued, however, that far from throwing a cloud over the antiquity and primacy of the Hebrew, these changes betray the impatience of the translators and the ineptness of later editors. The Greek's incompleteness and absurdity in spots speaks against its priority over the sensible and consistent account of the Hebrew. That the book is composed of heterogeneous materials of varied provenance is a plausible inference from the repetitions, inconsistencies, and incoherence that have been indicated in the survey of its contents given above. The assumption of a few tradition strands that have been woven together or sometimes merely juxtaposed, recognizable by characteristic conceptual and linguistic constants, has proven to give the most satisfactory solution to the question of the book's composition. Conventional criticism reckons with three such strands, styled J, E, and P (Priestly Source), that were combined in stages by editors. There is much controversy over details, some scholars denying the existence of E, others finding it necessary to postulate yet a fourth strand (variously identified and styled J<sup>1</sup>, N, or L). More recently, controversy has broken out over the standing of P as an independent document – for details see \*Pentateuch and Schwartz in Bibliography. The three conventional strands, however, remain the starting point of critical assessment of the book's composition. They are set forth in the accompanying table according to the analysis of S.R. Driver (1913). It must be borne in mind that such schematic representation cannot do justice to the careful, qualified arguments that underlie the analysis, nor can it indicate where preexistent entities and editorial work are postulated.

Subsequent study has focused on the earlier stages of the tradition, recognizing behind the narrative strands individual tales, or themes, or a ground form of the traditional sequence of events; and behind the law collection, smaller series (e.g., decalogues) of admonitions or categorical statements, or casuistically formulated rules. The ultimate provenance of the material and the manner of its transmission can only be speculated upon. It is reasonable to suppose that the narrative of the liberation from Egypt was utilized in the celebration of the Passover, especially in view of the pedagogic purpose of the celebration (13:8); less secure is the assumption of a covenant festival in which the Sinai law giving and covenant-making were celebrated, or rather dramatized in accord with the "libretto" of chapter 19–20: bereft of any plausible liturgical use is the golden calf episode. As a vehicle of transmission the liturgy may thus have played a considerable, but not exclusive role; as the original well-spring of the traditions, it is wholly inadequate. The theory that the present narrative has a poetic substratum is commended by traces of poetic language, and not infrequent patches of elevated style

Map 2. Map illustrating earlier and later traditions regarding the route of the Israelites from Kadesh-Barnea to the Moabite Plateau.

in which parallelism and refrain appear (e.g., 3:15b; 9:23–24; 14 (see above, E); 19:3–6). That the narrative is to be comprehended as saga – the enthusiastic relation of events under the impact of their significance – has been persuasively put forward by M. Buber.

Attention is being focused increasingly upon the editorial contribution to the shaping of the traditions. The disposition of the material must have been dictated in the main by the order of events as related in the individual strands. Indications are that all strands shared a common ground form; the variants that appear are, therefore, to be regarded as maximal. Two forms of the covenant document were preserved – “the smaller Book of the Covenant” (the “cultic Decalogue” in 34:10–26) and the other incorporated now in the “Book of the

Covenant” (23:12, 14–33). Two versions of the “accompanying angel” theme were preserved: one in 23:20ff. – non-pejorative, the other in 33:2ff. – pejorative. Widely diverging blocks of material laid claim to having been delivered to Moses on Sinai during his 40-day stay with God; the result is the obscure chronology that frames the “Book of the Covenant” and the block of the Tabernacle plans – the editor(s) being hard put to find a place for all the legitimate claimants. However, alongside the evidence of embarrassment and perplexity stands the grand design of the material and its generally skillful composition as a testimony to the intelligence and spiritual vitality of the editors. Through their labor, at once conservative and creative, the traditions of ancient Israel have reached us in a form richer, more problematic – and therefore more suggestive – than they had ever been in their primary state.

### Historical Reflexes

Current scholarly consensus based on archaeology holds the enslavement and exodus traditions to be unhistorical. Indeed, the Book of Exodus itself underlines its unhistoricity by its abundance of miracle tales and by not bothering to name either the Pharaoh of the enslavement or of the exodus. (The popular identification of the oppressor as \*Ramses II is based (a) on the mention of the city name \*Ramses (2) (Ex. 1:11; 12:37; Num. 33:3, 5) and the “land of Ramses” (Gen. 47:11), but the royal name Ramses itself was borne by 11 pharaohs of the 19<sup>th</sup> and 20<sup>th</sup> Egyptian dynasties; (b) on the attestation of a people “Israel” in Asia Minor on the stela of \*Merneptah, son of Ramses II.) What may be attempted is the dating of the material of the book, which is bound up with the larger question of the dating of the Pentateuch as a whole. Here, the following indications, taken from the Book of Exodus alone, may be collected:

a) The latter half of the “Song of the Sea,” particularly the mention of Philistia, points to a post-settlement date (see E. above).

b) 16:35 is connected with Joshua 5:12 and, like it, has a post-settlement perspective.

c) The laws reflect a non-monarchic, tribal society of villagers living on the soil. Blood revenge and self-help are recognized. Neither the judicial system of the monarchy nor the new categories of crime that arose under it are visible.

d) It has been proposed to see in the Exodus Tabernacle a reflection of the Davidic tent-shrine (11 Sam. 6:17), in which the gorgeous cloths and lavish gold overlay would be more credible as well (Cross, in *bibl.*). Alternatively, the Shiloh sanctuary has been suggested as the ultimate model of the Tabernacle (1 Sam. 2:22; Ps. 78:60; cf. esp. 11 Sam. 7:6 on the pre-Davidic home of יְהוָה), though the present description shows strong affinities to the plan and furniture of the Solomonite Temple (M. Haran). Most recently, affinities have been sought with the Jewish temple at \*Elephantine in Egypt destroyed in the fifth century (Rosenberg in *Bibliography*).

e) The correspondence between the story of the Golden Calf and that of the two golden calves set up by Jeroboam I

in Bethel and Dan (cf. esp. Ex. 32:4b, 8b; 1 Kings 12:28b) indicates a genetic connection between the two. Since the Jeroboam narrative evidently expresses the view of the Jerusalemite orthodoxy (whose estimate of the calves is not attested in north-Israelite literature before Hosea (8:5f.; 13:2), it may be inferred that the present form of the Golden Calf story reflects their polemic against the calves of the north. It can therefore not be earlier than the division of the monarchy after Solomon’s death.

f) Pithom, “house of (the god) Atum,” named along with Ramses as one of the two “store cities/garrison cities” built by the Israelites (Ex. 1:11), does not appear as a city name before the late sixth century B.C.E. As for Ramses, it is now known that the great monuments from this ancient city (Egyptian Piramesse) built at Qantir by the pharaohs of the 18<sup>th</sup> and 19<sup>th</sup> dynasties were transported to Tanis and Bubastis centuries later. The addition of these two names to Exodus 1:11 is an attempt by Egyptian Jews in the sixth century or later to relate the enslavement traditions to their own environment (Redford, *Wente in Bibliography*).

g) In Exodus 28:42 priests are required to wear breeches in order to protect against inadvertent self-exposure at the altar. Breeches or trousers are a Persian invention. The earlier pre-Exilic law (Ex. 20:23) required the more difficult elimination of stepped altars to achieve the same goal of modesty (Sperling in *Bibliography*).

The lower limits of the historical allusions and the inferable backgrounds of the material in Exodus thus range from post-settlement times to the earlier Persian period (sixth to fifth centuries).

### Main Themes

The Book of Exodus contains the final form of Israelite traditions concerning the birth of the nation and the founding of its main institutions (excepting the monarchy).

a. The birth of the nation was a revelation of God’s trustworthiness, compassion, and power that was to serve for all time as a ground for hope in Him in time of trouble (Isa. 11:15–16; Micah 7:15; Ps. 77:16ff.). In the burning bush narrative, God’s compassion is the sole motive of His rescue of Israel: He heard their cry and took note of their misery. What is peculiar in this instance of rescue is not its motive (cf. the Sodom and Gomorrah story) but its result – the bringing of a people to its promised land. Thus the trustworthiness of God is manifest. In the second commissioning narrative (Ex. 6), God’s mindfulness of His promise to the Patriarchs is on a par with His compassion as a motive of His action. His redemption of Israel from Egypt thus attests to His faithfulness. Again, the circumstances of the redemption – God’s “taking one nation from the midst of another by prodigious acts” (Deut. 4:34) – show the measureless power at His disposal. Egypt’s Pharaoh is the paradigm of heathen might and arrogance. However, the plagues and the drowning of his army in the sea demonstrate the nullity of all earthly power in the face of God (cf. Isa. 31).

The episodes in the wilderness further delineate God's nature: He is revealed as the reliable provider of all His people's vital needs (cf. Deut. 8:3 ff.).

b. These deeds establish God's capacity to be the protector of Israel, His right to possess Israel as His redeemed property, and His claim on their obedience and loyalty (cf. the association of ideas in Deut. 6:20–25, and Ibn Ezra thereon). They are the basis of His proposing His covenant to Israel at Sinai.

The Sinai covenant differs essentially from that made with the Patriarchs. The latter is an unconditional promise, the grant of a sovereign to his loyal servants (M. Weinfeld); the former is a sovereign's rule for his subjects, similar in form and spirit to ancient vassal treaties. At Sinai, obligations were laid upon the people, the express will of their lord, the fulfillment of which was the condition of their happiness.

The terms of the covenant – in every form in which they have been transmitted – are couched as an address by God to the people. Their publicity is essential. Since Israel is to be a holy order (19:6), the entire nation must know its sacred regimen. This distinguishes the covenant rules from the laws of other ancient civilizations; they are not ensurers of domestic tranquillity through justice and defense of the weak (e.g., Hammurapi's laws; Pritchard, *Texts*, 178; COS II, 336) – no system of law so conceived was made the vehicle of public education – but a discipline whereby holiness and righteousness before God are achieved (cf. Ex. 22:30).

c. The people's response to God is a major concern of the book. They have no militant role in their own liberation, but must merely carry out various instructions. At the sea, when they panic, they are commanded to “stand fast and see the salvation of YHWH”; and when it comes “they had faith in YHWH and in Moses His servant” (14:31). This is clearly a spiritual peak.

On the way to Sinai, they repeatedly fall to complaining about their wants, unable to rise above their cares to a quiet trust in God. He supplies their need time and again, giving them every reason to have faith in Him, yet they cannot learn to be trustful. The terror He inspires in them at Sinai is not enough to keep them from recourse to an idol when they despair. Experience of His deliverances fails to instill in them permanently the faith that “nothing is too wonderful for YHWH” (cf. Ps. 78).

d. Exodus depicts the founding of all the main institutions of Israel excepting the monarchy: the human agency through which God acts on and speaks to humanity – the archetype of the prophet; the priest and the consecrated tribe of defenders of the faith, the Levites; the sanctuary – God's dwelling place amid His people, where He is accessible to them for worship and oracle, and by which He guides them along the way; forms of worship – daily sacrifice and annual memorial festivals; and, above all, the covenant, through which God and people are bound to each other: “I will take you to be My people, and I will be your God” – a veritable marriage formula.

These themes remained at the heart of biblical thought. The complex structure of the Book of Exodus, the effect of ages

of reflection and elaboration on each of them, bespeaks their continuous vitality throughout the biblical period.

[Moshe Greenberg / S. David Sperling (2<sup>nd</sup> ed.)]

**EXODUS RABBAH** (Heb. שמות רבבה, *Shemot Rabbah*), aggadic Midrash on the Book of Exodus (for the designation “Rabbah,” see \**Ruth Rabbah*).

### The Structure

*Exodus Rabbah*, which is divided into 52 sections, consists of two different Midrashim (see *Esther Rabbah*; and *Numbers Rabbah*): *Exodus Rabbah I* (sections 1–14) and *Exodus Rabbah II* (sections 15–52).

### *Exodus Rabbah I*

An exegetical Midrash to Exodus 1–10, *Exodus Rabbah I* interprets successively, each chapter, verse, and, at times, each word. The division into sections generally follows the early Erez Israel triennial cycle (see \*Torah, Reading of the). Each section begins with one or more proems (\**Derashah*; \**Midrash*), of which there are more than 20 in *Exodus Rabbah*. Except for one which opens with the name of an *amora* and a verse from Isaiah, all the proems are anonymous and begin with a verse from the Hagiographa (mainly from Psalms, Proverbs, and Job). The structure of some proems is defective, particularly in their ending and in their connection with the beginning of the section. The sections have no epilogues. *Exodus Rabbah I* is written for the most part in Hebrew, in part mishnaic, and in part Hebrew of the early Middle Ages. \*Aramaic (also Babylonian Aramaic) is only sparingly used and there is a sprinkling of Greek and Latin words. In style and content *Exodus Rabbah I* often resembles later medieval Midrashim and *aggadot*, such as *Sefer ha-Yashar*. The redactor of *Exodus Rabbah* drew upon tannaic literature, the Jerusalem Talmud, \**Genesis Rabbah*, \**Leviticus Rabbah*, \**Lamentations Rabbah*, and other early aggadic Midrashim of the amoraic period, and he made extensive use of the Babylonian Talmud and of Midrashim of the \**Yelammedenu-Tanḥuma* type. Such Midrashim were the chief source of the work, and many of its homilies occur in the various editions of the *Tanḥuma*, mostly in the printed one. The redactor of *Exodus Rabbah* broke the lengthy expositions of the *Yelammedenu-Tanḥuma* type, which included halakhic material as well, linking the shorter units to appropriate biblical verses, at the same time incorporating additional material from numerous other sources. In using legends of the Babylonian Talmud, the redactor tried, often not very successfully, to change their language from Babylonian to Galilean Aramaic. His intention apparently was to compile a Midrash, in continuation of *Genesis Rabbah*, on the Book of Exodus up to the point where the \**Mekhilta* begins. The redaction of *Exodus Rabbah I* took place, it seems, not earlier than the tenth century C.E.

### *Exodus Rabbah II*

Exodus 12–40 is a homiletical \*Midrash of the *Yelammedenu-Tanḥuma* type. The division into sections is based on the triennial cycle. Introduced by proems characteristic of the *Yelammedenu-Tanḥuma* Midrashim, some of which are quoted in the name of R. \*Tanḥuma, the sections frequently conclude with epilogues referring to redemption and the promise of a

happier future. *Exodus Rabbah II*, which contains some Greek and Latin words, is mainly in mishnaic Hebrew, with an admixture of Galilean Aramaic – the original language from which some of the *aggadot*, taken from an earlier Midrash, were translated into Hebrew. *Exodus Rabbah II* makes use of tannaic literature, the Jerusalem Talmud, and early amoraic Midrashim, but not entire themes from the Babylonian Talmud. Many of its homilies also occur in the known editions of the *Tanḥuma*. It contains several halakhic expositions, numerous parables, and some *aggadot* of a comparatively late type. For the most part, however, it exhibits features which place it earlier than *Exodus Rabbah I*, and it was apparently compiled in the ninth century C.E. It is probably the second part of a Midrash, the first part of which, no longer extant, served as the main source of *Exodus Rabbah I*. *Exodus Rabbah I* and *II* were apparently combined by a copyist in the 11<sup>th</sup> or 12<sup>th</sup> century C.E. The first scholar known to have been acquainted with the entire work in its present form was \*Nahmanides, who quotes it in his commentary on the Pentateuch.

### Editions

*Exodus Rabbah* was first printed in Constantinople, together with the four other Midrashim on the Pentateuch (see \**Genesis Rabbah*) in 1512. This edition, on which all subsequent ones are based, contains many mistakes and often gives only abbreviated texts of other Midrashim where a parallel homily occurs in full. Several manuscripts of the work are extant but have not yet been fully investigated. Until a scholarly edition is published, no thorough study of *Exodus Rabbah* is possible.

Lieberman, *Midrash Devarim Rabbah* (1964<sup>2</sup>), xxii. **ADD. BIBLIOGRAPHY:** Shinan, *Midrash Shemot Rabbah, Chapters I–XIV* (1984); M. Bregman, *The Tanḥuma-Yelammedenu Literature* (2003).

[Moshe David Herr]

**EXPULSIONS**, The Jews underwent expulsions during the time of the Assyrian and Babylonian kingdoms (see Assyrian \*Exile; Babylonian \*Exile). Pagan \*Rome also adopted on rare occasions a policy of removing the Jews from the capital, considering them an undesirable element: there is some vague information on the expulsion of the Jews from Rome in 139 B.C.E. among the other “Chaldeans.” In 19 C.E. Tiberius ordered the expulsion of all the Jews in Italy if they would not abandon their faith. In 50 C.E. Claudius expelled them from Rome. From the end of the Bar Kokhba Revolt (135 C.E.) until the capture of Jerusalem by the Muslims (638), the Jews were prohibited from entering that city and its boundaries. The policy of expelling Jews was however only adopted by victorious Christianity from the fourth century C.E., in implementation of its objectives to separate the Jews from the rest of society, and degrade and oppress them so that they would convert to Christianity. Individual expulsions from Islamic countries, such as the expulsion from \*Tlemcen (N. Africa), are also recorded during the tenth century (see J. Miller (ed.), *Teshu-*

*vot Ge'onei Mizrahò u-Ma'arav* (1888), 31a, no. 133). The phenomenon of expulsions is, however, overwhelmingly found in Christian lands. Some of these were “general expulsions” which removed the Jews from the territory of a whole country for an extended period. The expulsion from \*England in 1290 (the number of expelled has been estimated at 16,000) removed the Jews from its borders until after 1650. The expulsions from \*France, especially those of 1306 and 1394, evicted the Jews from most of the territory within the borders of France until 1789. The expulsions from \*Spain and \*Portugal, 1492–97 (where the number of victims has been assessed by historians from 100,000 to several hundreds of thousands), removed the Jews from the Iberian peninsula almost until the present day and brought about a series of expulsions of Jews from lands within the sphere of influence of these countries. At the time of the \*Black Death (1348–50), the Jews were expelled from many places in Europe, but in most localities, especially in \*Germany, they were readmitted after a short while. The presence of Jews was rigorously prohibited in \*Russia from the 15<sup>th</sup> century until 1772, when masses of Jews accrued to Russia from the annexed Polish-Lithuanian territories. Even after this date, there was an attempt to maintain this prohibition in the form of the \*Pale of Settlement until 1917. Within the framework of its enforcement numerous expulsions of both groups of Jews and entire communities from towns and villages which were “out of bounds” (such as the expulsion from \*Moscow in 1891) were carried out. There were also expulsions of short duration from the boundaries of entire countries, such as the expulsion from \*Lithuania in 1495. Expulsions from specific regions and towns were frequent and regular occurrences in Germany and northern \*Italy during the 14<sup>th</sup> to 16<sup>th</sup> centuries, but in certain cases they were also ordered down to the 18<sup>th</sup> century (the expulsion from \*Prague, 1744–52). The political fragmentation of these countries during the Middle Ages usually enabled the Jews to settle within the proximity of the baronage or town from which they had been expelled and to return there after a short interval. During World War I, the Russian authorities evacuated about 600,000 Jews from Poland, Lithuania, and the Baltic countries to the interior of Russia, an act regarded as an expulsion.

While the motives for the expulsions fall into differing and variegated categories, the root of them all was hatred of the Jew. This hatred was at times exploited by fiscal considerations of the rulers responsible for the expulsions.

Socio-economic factors contributed to the hostility of the Christian merchants and craftsmen toward their Jewish rivals, the hatred of Christian debtors for the Jewish moneylenders, and, on the other hand, the occasional feeling that there was no need for the Jews as moneylenders for interest and that they did not fulfill any other economic-social function. Tendencies and sentiments of national and political consolidation also played their part. In Spain, the desire to isolate the \*New Christians from Jewish influence was also a factor in the expulsion. In an epoch when the menace of death hovered continually over the Jews, especially in places where they

had grown accustomed to expulsion and rapid readmission, expulsion was considered the lightest of possible evils. \*Judah Loew b. Bezalel (the Maharal of Prague) thought that the era of exile in which he lived was more tolerable because its principal sufferings consisted of expulsions, which he described as the divorce of a woman by her husband. The Jews of \*Frankfurt, when they were actually expelled, also felt that “we went in joy and in sorrow; because of the destruction and the disgrace, we grieved for our community and we rejoiced that we had escaped with so many survivors” (poem by R. Elhanan b. Abraham Helin, at end of pt. 3 of *Zemah David*, 1692). The general expulsions were however considered disasters, and the expulsion from Spain in particular became a fearful memory for the nation. The expulsions always resulted in losses to property and damage to body and spirit. In addition to the losses caused by forced sales – when the buyer realized that the Jew was compelled to abandon all his real property, and at times many of his movable goods – insecurity and vagrancy left their imprint on the social and economic life of the Jews, especially in the German and Italian states. Highway robberies and losses suffered during the enforced travels also increased the damage to property. Much information is available on attacks and murders committed against expelled Jews who left their country and the protection of the authorities. Even in those expulsions where instructions were given to protect the departing Jews, such as the expulsions from England and Spain, there were numerous attacks. The wanderings were the cause of many diseases and also reduced the natural increase. A shocking description of the sufferings of the exiles from Spain and Portugal is given in the writings of the kabbalist Judah b. Jacob \*Hayyat. He relates of himself and his companions after they had reached the safety of Muslim Tunis: “We ate the grass of the fields, and every day I ground with my own hands in the house of the Ishmaelites for the thinnest slice of bread not even fit for a dog. During the nights, my stomach was close to the ground – and my belly my cushion. Because of the great cold of the autumn – we had no garments in the frost and no houses to lodge in – we dug trenches in the refuse heaps of the town and put our bodies therein” (introduction to *Minhat Yehudah* (Mantua, 1558), 3a).

The expulsions left their impress on the entire nation and its history, both materially and spiritually. They maintained and constantly intensified the feeling of foreignness of the Jews in the Diaspora. The consecutive expulsions from England, France, and Spain resulted in a situation where after 1492 there were no Jews living openly on the European coast of the Atlantic Ocean in a period when this had become the center of world traffic. The expulsions of the late 15<sup>th</sup> century resulted in the return of many Jews to the Islamic countries, in particular to the Ottoman Empire. The Jews were also driven into \*Poland-Lithuania. Frequently, the expulsions caused the centers of gravity of Jewish life to be removed from one place to another, the creation of new centers of settlement, messianic movements, and a renewed relationship with Erez Israel; it was no coincidence that the kabbalists of \*Safed were Spanish

exiles. The expulsions also caused the Jews of Spain to come into contact with those of Italy, the Balkans, Asia Minor, North Africa, and many Middle Eastern countries, where they influenced and fashioned the social-spiritual character of many communities in these regions. The expulsions may be considered one of the decisive factors shaping the map of Jewish settlement and one of the forces which molded the thinking of Jews both in relation to themselves and to the world of nations and states which surrounded them.

For expulsion by the Nazis, see \*Holocaust.

## EXTRADITION.

### Biblical Sources

**EXTRADITION OF SLAVES.** The Torah relates directly to the issue of extradition in the context of a slave who flees from his slavery, prohibiting a person from returning to his master an escaped slave who is now in his custody: “Do not deliver to his master a slave who has escaped from his master. He shall dwell in your midst with you, in the place he shall choose in one of your gates, where it is good for him; you shall not oppress him” (Deut 23:16–17). Some Biblical commentators have interpreted this passage on the basis of the context in which it appears, viz. as referring to a slave who during battle escapes from the enemy camp to the Israelite camp, the reason for the prohibition on his extradition being that it is better for the slave to remain in the Israelite camp than to return to worshipping idolatry. An additional reason proposed is a practical one, deriving from the aforesaid battle context – namely, the danger that the slave will “learn the way into the city,” so that to return him to his master would constitute a danger to the security of the city (Nahmanides. *ad loc.*; Ibn Ezra, *ad loc.*). A case in which the question of extraditing a slave at a time of battle arose in 1 Samuel 30:11–16: David and his men, in pursuit of the Amalekites, found an Egyptian slave who had been forsaken by his Amalekite masters. The slave agreed to show David and his men the location of the Amalekite troop, in return for David’s promise that he would not return him to his masters.

According to the Talmud, the prohibition against extradition applies to a Canaanite slave who has fled from Jewish masters outside the Land of Israel into the Land of Israel (Bavli, Gittin 45a; Maim., Yad, Avadim 8.10). Rabbi Judah the Prince is of the opinion that the prohibition applies to a person who purchases a slave on condition that he emancipate him, and later regrets his act and seeks the slave for himself.

**EXTRADITION OF AN ESCAPED CRIMINAL.** The Torah rejects the possibility that an escaped criminal may acquire ref-

uge from punishment by entering sacred grounds: “If a person shall maliciously kill another with guile, he shall be taken to die (even) from my altar” (Exod 21:14). In this manner, the Torah abrogated the rule, widespread at that time and even later (1 Kings 2: 29–32), that entry upon sacred ground can spare a murderer from his just punishment. Biblical commentators emphasized that this law is intended to serve as a contrast to the law of one who committed inadvertent manslaughter, who is given a special place to live and guaranteed protection from persecution by the blood avenger (see \*City of Refuge). A murderer with malice aforethought has nowhere to seek refuge, not even the altar. Maimonides (*Guide* 3.39) emphasizes the difference between the Torah’s command against delivering an escaped slave, regarding whom we are commanded to have mercy and to grant protection and care for all his needs, and a malicious person, whom we are commanded not to pity and not to protect, and who must be turned over to the officer of justice even if he grasps hold of the altar.

**INSTANCES OF EXTRADITION IN THE TORAH.** The Book of Judges (15:9–13) relates that, after Samson smote the Philistines, the Philistines retaliated against Israel, in order to capture Samson and to take revenge for his deeds. The men of Judah went to Samson and told him that they had come to take him so as to extradite him to the Philistines. Samson asked the men of Judah to swear to him that they themselves would not harm him but would only extradite him to the Philistines. They duly did so, binding Samson with ropes; however, as soon as he was delivered to the Philistines he flung off the ropes with which he had been bound and once again struck down a thousand Philistines. Some halakhic authorities classified Samson’s extradition as performed under duress, for had the men of Judah not given Samson to the Philistines, the Philistines would have killed them (*Or Sameah* on Maim., Yad, Yesodei ha-Torah 5.5). From the commentary of Radak (11 Samuel 20:22), it follows that extradition was only possible due to Samson’s consent, but that they would not have been entitled to extradite him against his will.

Following the incident involving the concubine at Gibeah (Judges 19–21), during which people from the town of Gibeah in the territory of Benjamin perpetrated an act of rape and murder, the other tribes of Israel gathered together and demanded that the clans of Benjamin turn over the perpetrators of the atrocity, in order to “eliminate the evil from Israel” (*ibid.* 20:12–14). The Benjaminites refused to extradite the men and went to war against the other tribes of Israel. Nahmanides, in his Torah Commentary (Gen. 19:8) states that the Benjaminites were not obligated to deliver the sinners from Gibeah into the hands of the other tribes of Israel, because the responsibility to take action lay exclusively in the hands of the tribal court of Benjamin, each tribe having jurisdiction over its own members.

Another incident relating to extradition appears in 1 Samuel 23:10–12, when David, fleeing from Saul, together with his

followers, came to the aid of the townsfolk of Keilah, saving them from the Philistines. After David had smitten the Philistines at Keilah, Saul heard that David was situated there, and went with his army in order to capture him. David inquired of God, through the ephod (sacred oracle) held by the Abiathar the priest, as to whether the heads of Keilah would deliver him into the hands of Saul. God responded that they would extradite him, whereupon David left the city. The text implies that, in this case as well, the delivery of David into the hands of Saul by the people of Keilah, had it occurred, would have been one of extradition under duress, as had they not turned David over to Saul, Saul would have destroyed the town.

### Talmudic Period

Following the era of the Talmud and thereafter, in periods during which Jewish communities found themselves under the suzerainty of a heathen ruler, whether in Israel or in the various Diaspora communities, the issue of extradition was considered from various angles: the criminal justice aspect of the offender's acts; the relationship between Israel and the other nations of the world; the relationship between the Jewish legal system and the non-Jewish legal system; and the relationship of the Jewish community towards its own members who had deviated from the right path. Jewish legal autonomy, while containing a not-insignificant measure of juridical competence even in the field of criminal law, was nevertheless restricted with respect to the majority of cases concerning serious offenses and offenses of interest to the authorities, in which areas the authorities retained the right of adjudication and the right to punish. We will now deal with the main problems and questions discussed in the talmudic literature in this regard.

THE SEIZURE AND EXTRADITION OF JEWISH THIEVES AND ROBBERS. During the talmudic period, the Sages encountered cases in which they were requested by the Roman administration to hand over Jewish criminals. We find differing opinions among the Sages regarding the question as to whether such extradition is prohibited or permitted, or possibly even desirable. The Talmud relates how R. Eleazar b. Simeon seized thieves and robbers on behalf of the Roman administration, and the dispute that arose in this regard with R. Joshua b. Korha. R. Joshua b. Korha reacted to R. Eleazar b. Simeon's acts with the words: "Vinegar son of wine: how long will you continue to deliver the people of God to death?" R. Eleazar b. Simeon answered by way of a parable: "I am eliminating thorns from the vineyard" to which R. Joshua b. Korha retorted: "Let the owner of the vineyard [i.e., God] come and eliminate his thorns" (TB, BM 83b). A further discussion of the same issue appears in the sequel to this talmudic passage, which records that R. Ishmael b. Yose would also apprehend offenders at the bidding of the authorities. These controversies reflect the aversion to turning over a Jew to the Roman government, which was suspected of not conducting fair trials, hostility to Jews, and persecution of their persons and property.

SAVING JEWS SUSPECTED OF SERIOUS CRIMES. An additional incident discussed by the Talmud and its commentaries (Bavli, Niddah 61a) reflects the divergent approaches to the issue of granting asylum to a murderer. In this case, certain persons who were suspected of murder approached R. Tarfon with the request that he hide them from the authorities. R. Tarfon's response was that he could not hide them, for the Sages had stated that one should take heed of an evil rumor, viz. that they were in fact murderers. Talmudic commentators are divided as to the reason for R. Tarfon's refusal to hide them. According to Rashi (*ad loc.*), R. Tarfon suspected there might be truth to the rumor that they had murdered, in which case it would be forbidden to save them. According to R. Aḥa Gaon (*She'iltot de-Rav Aḥa* §129; Tosafot, *ad loc.*), R. Tarfon's suspicion did not emanate from the fact that he was forbidden to save them, but rather from the danger to which he would be exposed were he to save them. R. Asher b. Jehiel (Rosh, on *Niddah* 9.5) adopts the *She'iltot's* explanation and rejects that of Rashi, because, according to his view, it cannot be forbidden to save a person's life merely because of a rumor that he has sinned. From Asher's words, it follows that, when it is clear that the person has indeed committed a crime, it would be forbidden to save him even according to Rashi's disputants. R. Solomon Luria (*Yam shel Shelomo* on TB Nid. 61a) states unequivocally that a distinction must be made between the case of one who has *definitely* murdered, whom it is forbidden to save and who must be handed over to the authorities to judge, and the case of a rumor, which gives rise to a mere *suspicion*, in which case the individual, who is presumed innocent until proven guilty, must be saved, provided there is no danger to the savior in doing so.

### Post-Talmudic Period

Over the centuries during which Jews were in various Diasporas and subject to the whims of foreign rulers, many and varied questions arose concerning the interrelationship between the Jewish community and the Jewish legal system and between the authorities and the local legal system. Within this reality, and in view of the need to grapple with the phenomenon of criminality that existed within the Jewish community, the question often arose as to the need to hand over Jewish criminal offenders to the authorities. In post-talmudic and responsa literature, various aspects of this topic are considered.

DELIVERING A CRIMINAL WHO ENDANGERS THE COMMUNITY. When a given individual's criminal conduct constituted a danger to the entire Jewish community, such as when the non-Jewish authorities are liable to harm the entire Jewish community on account of the acts of an individual offender, or when only the non-Jewish authorities have the power to prevent the offender continuing in his socially unacceptable conduct, he may be extradited to the non-Jewish authorities. Thus, already in the 13<sup>th</sup> century it was ruled that the non-Jewish authorities could be informed, and extradition was permissible, in the case of a violent man who regularly assaulted others, or a person whose criminal acts encouraged

gentiles to contrive plots against the Jewish community, in order to remove the danger from the entire Jewish community (*Maharah Or Zarua*, #142). The Shulḥan Arukh rules (ḤM 388) that a Jew who harasses the community, and not merely one individual, could be delivered into the hands of the non-Jews in order “to beat, imprison or fine him.” R. Moshe Isserles adds, in his glosses to the Shulḥan Arukh (*ad loc.*) that even a Jew who is engaged in forgery – if there is a danger that the Jewish community will be harmed by his activities, and he fails to take heed of the warnings made to him – may be delivered to the authorities, in order to demonstrate that only he, the offender, engages in forgery, and no other member of the community does so. Elsewhere, Isserles writes that the permission to deliver such offenders to the non-Jewish authorities is based upon the principle of “*rodef*” – i.e., that any Jew is permitted, if necessary, to kill a person who is pursuing his fellow with the aim of killing him, in order to save the life of the pursued: “One who endangers the community, e.g., if he engages in forgery in a locality where the authorities forbid it, has the status of a *rodef* and it is permitted to deliver him to the authorities” (*Rema*, ḤM 425.1). R. David Halevi, in his commentary *Turei Zahav* on the Shulḥan Arukh (ḤM 157.8) similarly rules that anyone who transgresses and rebels against the local law in a manner that endangers the Jewish community may be turned into the authorities, even if the authorities do not demand that he be handed over.

WHEN THE COMMUNITY IS THREATENED IF THE WANTED PERSON IS NOT DELIVERED. The Tosefta (*Terumot* 7.20) deals with a case in which non-Jews demanded that a group of Jews hand over one of their number to be killed, or else they would all be killed. The Tosefta rules that it is forbidden to deliver a single Jewish soul; rather, they should all be killed. However, if a specific person was designated to be handed over, they should deliver that individual rather than allow all of them to be killed. The Jerusalem Talmud records an amoraic controversy as to whether such a person can only be delivered if he is in fact deserving of death, as was Sheba son of Bichri who rebelled against King David’s rule (2 Samuel 20). In other words the story of Sheba is seen as the source of the ruling by the Tosefta. The alternative view is that he should be handed over request, even if he is not liable to the death penalty. It is noteworthy that the case of the Tosefta does not discuss the issue of extradition – i.e. deliverance of a suspected criminal for the purpose of trying him – but only (translating it into the contemporary context) the case of a terrorist group which threatens to kill many people unless an individual is handed over to them. Nonetheless, the halakhic authorities relied on it in cases where the non-Jewish authorities required the handing over of a specific individual and threatened the lives of other Jews in the event that he was not delivered. Maimonides (*Yad*, *Yesodei ha-Torah* 5.5) ruled that, if the wanted person is deserving of death, he may be handed over in order to prevent the killing of the remainder of the group; however, “we avoid ruling this way where possible.” In a case brought before

R. Joel Sirkis (*Responsa Ba”h ha-Yeshanot* §43), the leaders of the Jewish community were asked to deliver to the Christian authorities for trial a Jew who, according to the authorities, had collaborated in the desecration of Christian religious artifacts. The authorities demanded his extradition, stipulating that, if he was not extradited, the community leaders would have to take his place for any punishment that was decreed. Sirkis ruled that the words of Maimonides – that a person who is liable for the death penalty may be extradited – apply even where the non-Jewish authorities have grounds to kill him under their laws, even if he is not deserving of death according to Jewish law. In such a case, it was not certain that handing over the Jew would result in his death, because the authorities intended to conduct a trial, and the possibility existed that he would be proven innocent. Hence, R. Sirkis ruled that his delivery to the non-Jewish authorities was permitted even *de jure*, in contrast to Maimonides’ ruling that we avoid ruling that way where possible. Furthermore, in this case too permission to deliver the accused was given only because there was *prima facie* evidence of his guilt, and that the grounds for which the non-Jews sought to judge him were thereby substantiated; hence, the accused himself was considered responsible for the allegations made against him.

SAVING JEWS SUSPECTED OF SERIOUS CRIMES FROM THE LAWS OF THE AUTHORITIES. R. Jair Ḥayyim Bacharach (*Resp. Ḥavvot Yair* §146) was asked about a case involving a Jewish youth, a fugitive murderer, who was later caught by the authorities. R. Bacharach rejected the possibility that he could be delivered to the non-Jewish court, even by the relatives of the murder victim (by virtue of the *a fortiori* argument that they could in any event deliver him to the authorities based on the law of the blood avenger; see \*Blood Avenger). At the same time, based on Rashi’s interpretation of the talmudic passage about R. Tarfon, he rules that it is forbidden to save the youth from the authorities, because of the duty to “eradicate all evil from your midst.” He then raises the possibility that, even though it is forbidden to save him, it may be permitted to give him advice on how to escape. In suggesting this possibility, R. Bacharach relies on the words of R. Tarfon in the talmudic story, who told those people who sought refuge with him that they should hide themselves – what may have amounted to advice on the part of R. Tarfon. R. Jacob Emden (*Resp. She’ilat Ya’avetz* II. 9) rejects this possibility out of hand, ruling that it is forbidden to give advice to a murderer on how to evade the judgment against him. In the case brought before him, after one Jew who had murdered another Jew was arrested by the authorities, he was given the possibility of acquitting himself by swearing a solemn oath that another person killed the victim and he was not the murderer. The local rabbi ruled that the murderer should save himself from death by swearing falsely. R. Emden vehemently rejects this advice and states that “it is forbidden to save him from death through any means, even an [otherwise permissible one];” and certainly not through making a false oath.

EXTRADITION BASED ON THE PRINCIPLE THAT “THE LAW OF THE LAND IS LAW”. In the rulings of the great halakhic authorities of Spain from the 13<sup>th</sup> century onward, the authority of the local non-Jewish government is accepted also in matters of penal law, by virtue of the principle that “the law of the land is law” (see *\*dina de-malkhuta dina*), and not only regarding matters of local administration and civil law. The Rashba, in a responsum cited by the *Beit Yosef* on the Tur (הַמ 388), discusses a case in which the Jewish community was asked by the non-Jewish authorities to determine whether a particular Jew had transgressed a criminal offense; if so, he would be punished by the authorities. The Rashba, relying upon the principle of “*dina de-malkhuta dina*,” sets forth the following rule that, when a Jewish court operates under the government’s authority, there is no need to insist on all the normal evidential strictures of the Torah – warning, valid witnesses, etc. – even in capital matters for, were the Jewish court to insist on such requirements, the world would be desolate, as murderers and their companions would multiply. The Rashba proceeds to rule, relying on the above-mentioned talmudic cases involving R. Eleazar Simeon and R. Ishmael b. Yose, that anyone who is appointed by the king is permitted to turn in Jewish criminals to the king. The Ritva, a disciple of the Rashba, also explained the acts of the aforesaid *tannaim* on the basis of the principle of “*dina de-malkhuta dina*,” which applies even in the realm of criminal law (*Hiddushei ha-Ritva ha-Hadashim*, at בַּמ 83b).

R. Samuel de Modena (Salonika, 16<sup>th</sup> century; *Resp. Maharshdam* הַמ 55), relying on a responsum of the Rabad, rules, on the basis of the principle of “*dina de-malkhuta dina*” that acts of the government concerning the punishment of criminals are legally binding just as the government has authority to enact laws in the city.

In the 19<sup>th</sup> century, R. Moses Schick (*Resp. Maharam Schick*, הַמ 50) utilized the above-cited rulings of Rashba and Ritva in relation to a case in which the Jewish community suspected, albeit without any conclusive evidence, that a woman had murdered her husband. The question was asked whether there was any obligation to report the case to the authorities. Maharam Schick determines, in relation to the legitimacy of governmental enactments in punishing criminals, that “...anything they do whose purpose is to benefit society, their law is law,” and that the woman could be reported to the authorities, albeit he concludes that great scholars should not initiate this matter, but rather do nothing – neither save nor extradite the suspect.

### The State of Israel

The Extradition Law, 5714 – 1954, determines the ways and means by which a person can be extradited from the State of Israel to another country that requests his extradition. Amongst the provisions set down in the Law, compliance with which is essential to perform the extradition, are the following: the existence of a reciprocal agreement between Israel and the requesting state; that the offense concerned not be of a po-

litical nature; that the extradition be to a state, the fairness of whose judicial proceedings the State of Israel acknowledges; and, that no person shall be extradited who has already been brought to trial in the State of Israel for the same offense.

In the Aloni affair (HCJ 852/86 Aloni v. Minister of Justice, PD 41(2)1) the issue of extradition was heard by the Supreme Court of the State of Israel, together with an examination of the existing legal framework in Israel in light of the principles of Jewish law. The Court was asked to decide the issue of whether the State should be ordered to extradite to the French authorities a man who was wanted in France for murder. The accused was declared extraditable according to the Israeli Extradition Law, pursuant to a treaty between the two states, but the justice minister decided not to execute the extradition order, due to fear of danger to the life of the defendant by prisoners in the French prison in the event of his extradition. Justice Menachem Elon analyzed the position of Jewish law on the topic of extradition at length and in great detail, based on the above-cited and other sources. His conclusion was that the provisions of the Extradition Law accord, first and foremost, with the categorical stand of Jewish law, which negates the possibility that a suspect in the commission of an offense evade accountability for his acts, particularly if the alleged crime is murder. Justice Elon relies on the justifications in favor of extradition approved by the great halakhic authorities, even where extradition was forced on the Jewish community by the non-Jewish authorities. These justifications were based either on substantive Jewish law itself, or on the principle of “*dina de-malkhuta dina*” – i.e., in order to establish social order and the rule of law. According to Elon, the sources of Jewish law indicate that throughout Jewish history extradition was permitted in specific cases, even when no supervision of the judicial system or the penalty prescribed was performed by the Jewish community. Therefore, it is all the more justified today when it is executed freely by a sovereign Jewish State, with rights equal to those of the state requesting the extradition, and when the Jewish State has the ability to monitor the integrity of the judicial system in the other state and to annul the extradition treaty with it in the event that the said judicial system lacks such integrity. Elon suggests that this view would be concurred with even by the authorities who opposed cooperation with non-Jewish courts unless the crime posed a danger to the Jewish community. This opposition was based on their fear of a miscarriage of justice being caused by the extradition, a fear that was regarded as more significant than the benefit gained in punishing the criminal. These being the reasons for their opposition to extradition based on cooperation with non-Jewish courts, the same authorities would not object to extradition performed by and with the advantages afforded by a sovereign Jewish State.

From the above-cited rulings of *Havvot Yair* and *She’ilat Ya’avetz*, which set forth a prohibition on shielding the criminal in cases of serious crimes, Justice Elon derives that, in a sovereign Jewish state, their rulings should be understood as indicating a duty to extradite. According to Elon, in a small

Jewish community the argument may be made that, while it is forbidden to conceal the offender from the authorities, there is no obligation to hand him over, and if the authorities so desire they can come and search for him. By contrast, in a sovereign state, it is impossible to simply turn a blind eye, because such is not the way of a Jewish state, which has a duty either to try the offender, if this is possible according to its laws, or to extradite him to a state which has the ability to try him, subject to the restrictions stipulated in the law. According to the aforementioned arguments, when it is impossible to try the offender in Israel, the State of Israel must extradite the offender in order to eliminate the evil from its midst.

In the same judgment, Justice Elon ruled that, in the event of a *reasonable probability* of danger to the life of the accused were he to serve his sentence in a foreign country, he should not be extradited. This was in contradistinction to the majority of the Court, who ruled that extradition should only be avoided in the event of a *high probability* of danger to his life. Justice Elon also ruled that the execution of the extradition be delayed until arrangements are put in place to ensure that the accused's wife will not find herself in a state of abandonment (*iggun*). It should also be noted that, in this judgment, Justice Elon recommended that the Extradition Law be amended so as to allow a criminal sentenced by a foreign court to serve his sentence in an Israeli jail; indeed, in 1999 the law was amended in this spirit.

The position adopted by Justice Elon aroused controversy. Amongst his disputants was R. Shaul Yisraeli (see bibliography), who emphasized the prohibition of litigating before non-Jewish courts. According to R. Yisraeli, the possibility of delivering a Jew to the authorities by virtue of the Law of the King and "*dina de-malkhuta dina*" only exists where there is no autonomous government in Israel and no possibility of trying the criminal under Jewish law. In addition, he states that the authority of government law, by virtue of the principle of "*dina de-malkhuta dina*," only applies to those citizens who live within the borders of that state. It does not extend to validate an extradition agreement between states, and it is therefore forbidden for the State to enter into an extradition treaty which, according to R. Yisraeli, has no validity from the halakhic point of view even *post factum*. R. Yisraeli also emphasizes the merits of the Land of Israel, by whose virtue arguments (for his innocence) may be found in his favor (Makkot 7a). The solution suggested by R. Yisraeli to ensure that the State of Israel does not become a "sanctuary for criminals" is for the State to enact a law according extra-territorial status to Israeli criminal law, enabling all Jewish criminals to be tried in Israel.

It should be noted that the Jerusalem Rabbinical Court, in considering the issue dealt with by the aforesaid Supreme Court judgment, determined that an extradition treaty made by the State of Israel with another state has halakhic validity by virtue of the principle of "*dina de-malkhuta dina*" because "it is a matter of good governance that the State of Israel not become a refuge for Israeli criminals and that we should be

able to punish criminals who are located in other countries – in Israel" (File 8384/5747, pp. 27–28, given on 12 Tishrei 5748, 5/10/87).

## EXTRAORDINARY REMEDIES.

### Extrajudicial Remedies

As in other ancient civilizations, the earliest method of vindicating violated rights under biblical law was self-redress. A burglar at night may be killed on the spot (Ex. 22:1), life may be taken for life (see \*Blood-Avenger) and limb for limb (see \*Talion). Even when another man's rights were violated, one was exhorted not to stand idly by, but to interfere actively to vindicate them (Lev. 19:16; and cf. Ex. 23:4–5; Deut. 22:1–4). Again, as in other systems of law, self-redress was largely superseded by judicial redress – firstly because of unavoidable excesses on the part of avengers, secondly because the effectiveness of self-redress always depended upon the injured party being stronger than the wrongdoer and the weak victim was in, the danger of being left without a remedy, and thirdly because an injured party ought not to be the judge in his own cause. The right to self-help survived in the criminal law mainly in the form of self-defense or the defense of others; but in civil law self-redress is in talmudic law much more in evidence than in most other systems, and was a well-established legal remedy.

The biblical license to kill the nocturnal burglar (Ex.) is retained in talmudic law for the reason that such a burglar presumably knows beforehand that, if caught, he might be killed by the irate landlord and is therefore presumed to come with the intention to kill the landlord first, and: "whoever comes to kill you, better forestall him and kill him first" (Yoma 85b; Maim. Yad, Genevah, 9:7–9). There is no restriction in law as to the mode of killing such a burglar: "you may kill him in whatever way you can" (Sanh. 72b). But if the thief is caught alive, no harm may be done to him; nor may the landlord lay hands on him if he knows that the thief comes for money only and has no murderous designs, or where there are people around who would hinder him (*ibid.*; Maim. *ibid.*, 10–12). Similarly, the biblical allusion to the duty of saving the girl in danger (Deut. 22:27) led to the rule that a man was allowed to kill the persecutor in order to save the persecuted girl from death or rape (Maim. Yad, Roze'ah u-Shemirat Nefesh, 1:10). While efforts must be made to avert the danger by means other

than killing, a man is not to be charged with culpable homicide if he did kill even though the danger could have been averted by other means (*ibid.*, 13). A person is under a duty to save another from death or rape even by killing the offender, and his failure to do so, while not a punishable offense (*ibid.*, 15–16), is considered a grave sin (Lev. 19:16; Deut. 25:12).

The general right of self-redress in civil cases has been stated by Maimonides as follows: “A man may take the law into his own hands, if he had the power to do so, since he acts in conformity with the law and he is not obliged to take the trouble and go to court, even though he would lose nothing by the delay involved in court proceedings; and where his adversary complained and brought him to court, and the court found that he had acted lawfully and had judged for himself truthfully according to law, his act cannot be challenged” (Yad., Sanhedrin, 2:12). This final rule was preceded by a dispute between talmudic jurists, some of whom held that a man may take the law into his own hands only where otherwise, i.e., by going to court, he would suffer monetary damage (BK 27b). This view was rejected because there could be nothing wrong in doing what the law had laid down as right in the first place (*Piskei ha-Rosh* 3:3). The party taking the law into his own hands only took the risk that the court might, on the complaint of the other party, overrule him; so that in cases of any doubt it was always safer to go to court at the outset.

There were, however, cases of doubt as to what the law actually was, and as to where the respective rights of the parties lay – in which instance the court would uphold the title of that party who had already taken the law into his own hands and put the court, so to speak, before a *fait accompli* (*kol de-allim gaver*: BB 34b). The reason for this rule – “a very startling phenomenon indeed” (Herzog) – is stated by Asheri to be that it would be unreasonable to leave the parties quarrelling all the time – one trying to outwit the other – so it was laid down that once one of them had possessed himself of the chose in action, he was to prevail; the presumption being that the better and truer one’s right is, the better and more unrelenting effort one will make to vindicate it, while a man with a doubtful right will not go to the trouble of vindicating it at the risk of being again deprived of it in court (*Piskei ha-Rosh* 3:22). This reasoning appears to be both legally and psychologically unsatisfactory; a better explanation might be that where the other party did not establish any better title to the chose in action, he could not succeed as against the party in possession, such possession being for this purpose recognized as accompanied by a claim of right (see \*Evidence).

The rule applied not only to land but also to movables and money. Although courts are no longer competent to award \*fines, where a person entitled in law to a fine has taken it from the wrongdoer, *tefisah*, he may retain it (BK 15b; Sh. Ar., ḤM 1:5); and where he had taken more than was due to him, the wrongdoer may sue only for the return of the balance (Tur and *Rema*, *ibid.*). A wife who had succeeded in collecting her *ketubbah* from her husband is allowed to retain it notwithstanding the husband’s contention that only half of it is due

to her (Ket. 16b). The holder of a bill which was unenforceable because of formal defects may retain the amount of the bill if he succeeded in collecting it (the numerous and rather complicated rules of *tefisah* were compiled by Jacob Lissa and are appended to ch. 25 of the standard editions of Sh. Ar., ḤM). But there is a notable exception to this rule; namely, no creditor may enter the debtor’s house against his will, for it is written, “Thou shalt stand without” (Deut. 24:11); nor may the debtor’s property be attached or sold in satisfaction of a debt otherwise than by process of the court (BM 9:13). Even where the debtor had agreed, by contract in writing, that the creditor may satisfy himself by seizing the debtor’s property in case of default, the creditor was not allowed to do so except where no court was available to award him a legal judgment (Sh. Ar., ḤM 61,6; see \*Execution; \*Pledge).

Two instances of extrajudicial authority in inflicting punishments for crime may be mentioned. One is the prerogative of the king to kill any person disobeying or slandering him (Maim. Yad., Melakhim, 3:8) – not only is the king not bound by the rules of law and procedure, but he may lawfully execute murderers acquitted for lack of evidence or other formal grounds if he considers it necessary for the public good (*ibid.*, 10). The other is the right of zealots (*kanna'im*) to kill thieves of Temple utensils, idolatrous blasphemers, and men cohabiting with idolatresses, without legal process, if they are caught *in flagrante delicto* (Sanh. 9:6): this rule derives its justification from the praise God heaped on Phinehas for his impassioned act in stabbing the man whom he found cohabiting with the Midianite woman (Num. 25:6–13).

### Extralegal Remedies

Instances are already reported in the Bible of punishments being inflicted, mostly drastic and wholesale, and sometimes at the express command of God, but outside the framework of the law and without legal process (e.g., Gen. 34:25–29; Ex. 32:27–28; Judg. 20:13). With the elaboration of talmudic criminal law and procedure and rules of evidence, and the consequential complication of the criminal process, the necessity soon arose for extraordinary procedures in cases of emergency (*Horaat Shaah*): it was in such an emergency that Simeon b. Shetaḥ is reported to have sentenced and executed 80 witches in Ashkelon on one day (Sanh. 6:4). Extralegal punishments such as these were stated to be justified or even mandatory whenever the court considered their infliction necessary for upholding the authority and enforcing the observance of the law (Yev. 90b; TJ, Hag. 2:2,78a). With the lapse of capital jurisdiction (see \**bet din*) – but not previously, as some scholars wrongly hold – this emergency power was called in aid to enable courts to administer the criminal law and uphold law and order generally, the very lapsing of the jurisdiction creating the “emergency” which necessitated the recourse to such emergency powers. Thus, courts were empowered to inflict corporal and even capital punishment on offenders who were not, under the law, liable to be so punished (Maim. Yad, Sanhedrin, 24:4); and there are instances already in talmu-

dic times of illegal punishments being administered – such as cutting off the hand of a recidivist offender (Sanh. 58b), or burning an adulteress alive (Sanh. 52b; the Talmud (*ibid.*), however, adds: “That was done because the *bet din* at that time was not learned in the law.”), or piercing the eyes of a murderer (Sanh. 27a). In post-talmudic times, new forms of \*capital punishment were advisedly introduced, not only for penological reasons but also to demonstrate that these courts were not administering the regular law. Justification for such innovations was found in the biblical reference to “the judges that shall be in those days” (Deut. 17:9), the nature and content of the *Hora'at Sha'ah*, as the term indicates, depending on the circumstances and requirements of the time (*Bet ha-Be'irah* Sanh. 52b; Resp. Rashba vol. 5, no. 238). The same considerations led to a general dispensation with formal requirements of the law of evidence and \*procedure (Resp. Rashba vol. 4, no. 311). Conversely, prior deviations from such law, as, e.g., executions on the strength of \*confessions only, were retrospectively explained as exceptional emergencies (Maim., loc. cit. 18:6).

A peculiar instance of an extra-legal remedy is the rule that where a litigant has a dangerously violent man for his adversary, he may be allowed to sue him in non-Jewish courts under non-Jewish law (Maim. *ibid.*, 26:7; Resp. Rosh 6:27; Tur, ַּמ 2; see \*Judicial Autonomy; \**Mishpat Ivri*). In civil cases, courts are vested with proprietary powers so as to be able to do justice and grant remedies even contrary to the letter of the law (Maim. loc. cit., 24:6; and see \*Confiscation and Expropriation; \**Takkanot*).

[Haim Hermann Cohn]

The fundamental provision referred to above allowed the *Bet Din* to deviate from original Biblical and Talmudic law in matters of evidence, procedure and penal policy, guided by the needs of the time and the place. Based on this provision, both the courts and the communal leaders utilized their authority to enact communal regulations (see entry: \**Takkanot ha-Kahal*) with detailed legislation concerning penal policy. Formally, such regulations are defined as “emergency provisions” (*hora'at sha'ah*), but they were in fact incorporated into substantive Jewish law. Indeed, Jewish courts throughout the Jewish Diaspora occasionally exercised their extra-legal punitive powers to adjudicate capital cases, and even to impose death sentences, without requiring a court of 23, and without being bound by the stringent rules of evidence imposed by the original Jewish law.

The Israeli Supreme Court discussed this issue at length in the *Nagar* case (Cr.A 543/79 *Nagar v. State of Israel* 35 (1) PD 113. Based on this principle, Justice Elon ruled that suspects could be convicted for the commission of murder even where the Court had no direct evidence of their commission of the crime, and even where the dead body had not been found.

For a broad discussion of this topic, see entries: \*Capital Punishment; \*Evidence.

EYAL (Heb. עַיָּל; “strength”), kibbutz in central Israel, on the eastern border of the Sharon, northeast of the Arab town Qalqilya, affiliated with Ha-Kibbutz ha-Me'uhad. Eyal was originally founded on July 3, 1947 as a \*Palmaḥ outpost near the Syrian border east of Lake Huleh, where it fulfilled a vital function during the Israel War of Independence (1948). After the war, the settlement was transferred (Nov. 1, 1948) to its present site, which was also vulnerable to attack until the Six-Day War of 1967. Its farming was based on field crops, orchards including organic farming and milch cattle. The kibbutz operates two factories: Eyal Microwave for microwave components and one for optical lenses (in partnership with kibbutz \*Shamir). In 2002 the population was 385.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EYBESCHUETZ, JONATHAN (ben Nathan Nata; 1690/95–1764)**, talmudist and kabbalist. Eybeschuetz, a child prodigy, studied in Poland, Moravia, and Prague. In his youth, after the death of his father, he studied in Prossnitz under Meir Eisenstadt and Eliezer ha-Levi Ettinger, his uncle, and in Vienna under Samson Wertheimer. He married the daughter of Isaac Spira, the *av bet din* of Bunzlau. After traveling for some time he settled in Prague in 1715, and in time became head of the yeshivah and a famous preacher. When he was in Prague he had many contacts with priests and the intelligentsia, debating religious topics and matters of faith with them. He became friendly with Cardinal Hassebauer and also discussed religious questions with him. Through the help of the cardinal, Eybeschuetz received permission to print the Talmud with the omission of all passages contradicting the principles of Christianity. Aroused to anger by this, David \*Oppenheim and the rabbis of Frankfurt had the license to print revoked.

The people of Prague held Eybeschuetz in high esteem and he was considered second only to David Oppenheim. In 1725 he was among the Prague rabbis who excommunicated the Shabbatean sect. After the death of David Oppenheim (1736), he was appointed *dayyan* of Prague. Elected rabbi of Metz in 1741, he subsequently became rabbi of the “Three Communities,” Altona, Hamburg, and Wandsbek (1750). Both

in Metz and in Altona he had many disciples and was considered a great preacher.

His position in the Three Communities, however, was undermined when the dispute broke out concerning his suspected leanings toward Shabbateanism. This controversy accompanied Eybeschuetz throughout his life, and the quarrel had repercussions in every community from Holland to Poland. His main opponent was Jacob \*Emden, also a famous talmudist and his rival in the candidature to the rabbinate of the Three Communities. The quarrel developed into a great public dispute which divided the rabbis of the day. While most of the German rabbis opposed Eybeschuetz, his support came from the rabbis of Poland and Moravia. A fruitless attempt at mediation was made by Ezekiel \*Landau, rabbi of Prague. Most of Eybeschuetz' own community was loyal to him and confidently accepted his refutation of the charges made by his opponent, but dissension reached such a pitch that both sides appealed to the authorities in Hamburg and the government of Denmark for a judicial ruling. The king favored Eybeschuetz and ordered new elections, which resulted in his reappointment. Yet the literary polemic continued, even prompting several Christian scholars to participate, some of whom, thinking that Eybeschuetz was a secret Christian, came to his defense. After his reelection as rabbi of the Three Communities, some rabbis of Frankfurt, Amsterdam, and Metz challenged him to appear before them to reply to the suspicions raised against him. Eybeschuetz refused, and when the matter was brought before the Council of the Four Lands in 1753, the council issued a ruling in his favor. In 1760 the quarrel broke out once more when some Shabbatean elements were discovered among the students of Eybeschuetz' yeshivah. At the same time his younger son, Wolf, presented himself as a Shabbatean prophet, with the result that the yeshivah was closed. When Moses Mendelssohn was in Hamburg in 1761, Eybeschuetz treated him with great respect, even publishing a letter on him (*Kerem Hemed*, 3 (1838), 224–5), incontrovertible testimony to Eybeschuetz' awareness of Mendelssohn's ideological approach.

Eybeschuetz was considered not only one of the greatest preachers of his time but also one of the giants of the Talmud, acclaimed for his acumen and particularly incisive intellect. Thirty of his works in the field of *halakhah* have been published. His method of teaching aroused great enthusiasm among the pilpulists, and his works, *Urim ve-Tummim* on *Hoshen Mishpat* (1775–77), *Kereti u-Feleti* on *Yoreh De'ah* (1763), and *Benei Ahuvah* on Maimonides (1819), were considered masterpieces of pilpulistic literature. To the present day they are regarded as classics by students of the Talmud. They are unique in that the many *pilpulim* they include are in most cases based on clear, logical principles that give them their permanent value. His homiletic works, *Ya'arot Devash* (1779–82), *Tiferet Yonatan* (1819), and *Ahavat Yonatan* (1766), also found many admirers. In succeeding generations his reputation was sustained by these works. Since (apart from *Kereti u-Feleti*) his works were not printed in his lifetime, it is clear

that his great influence among his contemporaries must have derived from the power of his oral teaching and from his personality, both of which were highly praised by many writers. Of his books on the Kabbalah, only one was printed, *Shem Olam* (1891), but during his lifetime Eybeschuetz was considered a great kabbalist.

Opinions are still divided on the assessment of this striking personality, his supporters and detractors vying with one another with an extraordinary intensity. The great bitterness surrounding the controversies on the question of his secret relationship with the Shabbateans stems precisely from his being recognized as a true master of the Torah. It was hard to believe that a man who had himself signed a *herem* against the Shabbateans could have secretly held their beliefs. Suspicions were aroused against him on two occasions: in 1724, with the appearance of a manuscript entitled *Va-Avo ha-Yom el ha-Ayin*, which the Shabbateans, and also several of his own students, ascribed to him. This book (preserved in Ms.) is indisputably a Shabbatean work. Even after he had signed the *herem* against the Shabbateans, suspicion was not allayed and it prevented his election to the rabbinate of Prague. In 1751, the dispute grew more virulent when some amulets written by Eybeschuetz in Metz and Altona were opened. Jacob Emden deciphered them and found that they contained unmistakable Shabbatean formulae (*Sefat Emet*, 1752). Eybeschuetz denied that the amulets had any continuous logical meaning, maintaining that they consisted simply of "Holy Names" (*Luhot Edut*, 1755), and he even put forward an interpretation of them based on his system. His opponents retorted that the real interpretation of the amulets could be discovered from the work attributed to him, *Va-Avo ha-Yom el ha-Ayin*, and that they could and should be interpreted as having a meaningful content. Scholarly historical research has advanced three views concerning Eybeschuetz' relationship with Shabbateanism: that he was never a Shabbatean and that suspicions on this score were completely unfounded (Zinz, Mortimer, Cohen, Klemperer); that he was a Shabbatean in his youth but turned his back on the sect around the time of the *herem* of 1725 (Bernhard Baer, Saul Pinhas Rabinowitz); that he was a crypto-Shabbatean from the time he studied in Prossnitz and Prague until the end of his life (Graetz, David Kahana, Scholem, Perlmutter). An interpretation of his kabbalistic beliefs must also depend on his relationship with Shabbateanism. Some believe that the book *Shem Olam*, which deals with the philosophical explanation of the nature of God, is a work whose kabbalistic teaching only confirms generally accepted kabbalistic teaching (Mieses); others consider that the book is undoubtedly Shabbatean in its conception of God (Perlmutter). Still others believe that the work is a forgery or was erroneously attributed to Eybeschuetz (Margulies). Recent research has demonstrated a close relationship between *Shem Olam* and *Va-Avo ha-Yom el ha-Ayin*.

[Gershom Scholem]

**EYDOUX, EMMANUEL**, pen name of **Roger Eisinger** (1913– ), French author. Descended from Alsatian Jews, he was born in Marseilles, where he engaged in business until 1965. He then abandoned commerce and taught Jewish history and thought in an ORT school. He was active in the cultural life of the Marseilles Jewish community. Eydoux began publishing poems in 1945, under the pen name of “Catapulte.” He then wrote plays and books on the history of Judaism. The main poetic works of Eydoux were *Le Chant de l'Exil* (1945–47), *Abraham l'Hébreu et Samuelle Voyant* (1946), *L'Evangile selon les Hébreux* (1954), and *Elégies inachevées* (1959). He wrote a play, *Ghetto à Varsovie* (1960), and a tetralogy including *Pogrom* (1963) and *Eliezer ben Yehouda* (1966). Eydoux was also the author of *Le dernier Pourimspiel des orphelins du docteur Janusz Korczak* (1967), which has its setting in the Warsaw ghetto under the Nazis. His didactic works include *La Science de l'Être* (1949) and *Introduction à l'histoire de la civilisation d'Israël* (1961).

[Moshe Catane]

**EYLENBURG, ISSACHAR BAER BEN ISRAEL LEISER PARNAS** (1550–1623), talmudist. Eylenburg was born in Posen and studied under Mordecai \*Jaffe, \*Judah Loew b. Bezalel (the “Maharal”) of Prague, and Joshua \*Falk. He served as rabbi and *av bet din* of Gorizia, Italy. In his *Be'er Sheva* (Frankfurt, 1709), he attempts to provide *tosafot* for those tractates which do not possess them. His halakhic method is original. Taking the actual talmudic *halakhah* as the basis of his discussion, he adopts a critical attitude to the commentaries of such *rishonim* as Isaac \*Alfasi, \*Rashi, and \*Maimonides, not hesitating to disagree with them or even to reject them. He is opposed to philosophy, condemning Maimonides and others who “arrogated to themselves the right to read the works of sectarians.” The work follows to a considerable extent the method of Judah Loew b. Bezalel in *halakhah*. Eylenburg also wrote *Zeidah la-Derekh* (Prague, 1623), a supercommentary to Rashi's commentary on the Pentateuch, with glosses to other supercommentaries on Rashi, including that of Elijah \*Mizrahi. His halakhic work was highly regarded by the scholars of Safed, who invited him in 1621 to serve as rabbi of the Ashkenazi community of that city, in place of Moses Da \*Castellazzo whom they wished to dismiss. Eylenburg declined the invitation, only to be invited again upon Castellazzo's death, when he accepted. He died in Austerlitz on his way to Safed.

[Isaac Z'ev Kahane]

**EYNIKEYT** (“Unity”), official organ of the Jewish \*Anti-Fascist Committee in the Soviet Union. *Eynikeyt* began to appear in Kuibyshev in June 1942 once every ten days under the editorship of Shakhne Epstein. The editorial board consisted of: D. \*Bergelson, Y. \*Dobrushin, S. \*Halkin, S. \*Mikhoels, L. Strongin, I. \*Fefer, L. \*Kvitko, and A. \*Kushnir. After Epstein died, G. Shitz was named chief editor. In July 1943 *Eynikeyt* moved to Moscow and became a weekly magazine. By February 1945 it began to come out three times a week, but publication was stopped on Nov. 20, 1948, with the liquidation of all Jewish cultural institutions in the U.S.S.R. Altogether, about 700 issues of *Eynikeyt* were published, and its contributors included all the Yiddish writers of the Soviet Union. Some of their contributions were first published there, like Fefer's famous poem “Ich bin a Yid” (“I Am a Jew”). The newspaper was devoted entirely to the war effort, carrying stories on the atrocities perpetrated against Jews in the countries occupied by the Germans and emphasizing the contribution and the bravery of Jews in the war against the Nazis. There was a column called “Jewish Life Abroad,” with reports on Jewish events outside the U.S.S.R., Jews in the anti-Nazi underground, and also events in the *yishuv* of Palestine. The paper reported the visit of Mikhoels and Fefer to the U.S., Canada, Mexico, and Great Britain, and also the visit of the Americans Goldberg and Novik. These visits later served the KGB in drawing up its accusations of espionage for the West in the case of the Jewish Anti-Fascist Committee. After the war *Eynikeyt* continued to appear under the guidance and supervision of the Soviet authorities. This control was especially noticeable in the paper's editorial policy toward the struggle of the *yishuv* in Palestine. In the first half of 1948, in conformity with official Soviet policy, the paper supported Israel's \*War of Independence and the establishment of the State of Israel. But from September 1948 until its dissolution, it published attacks on Zionism. The employees of *Eynikeyt* shared the fate of other Jewish cultural activists.

**EYTAN, RACHEL** (1931–1987), Hebrew author. Eytan spent part of her childhood in children's homes and later lived in a kibbutz. She was trained as a teacher and worked with children of new immigrants. Her first novel, *Ha-Raki'a ha-Hamishi* (1962; *The Fifth Heaven*, 1985) depicts in realistic style the life of abandoned children living in an orphanage in Erez Israel during World War II. The novel, which was awarded the prestigious Brenner Prize, was one of the early attempts of Israeli literature to deal with the underprivileged “inferior” groups of the new Jewish society. In 1967 Eytan moved to New York and was appointed professor of Hebrew and Yiddish at Hofstra

University. Her second novel, *Shidah ve-Shidot* (“Pleasures of Man,” 1974) is the story of a young married woman who has a passionate affair with a member of the Israel Philharmonic Orchestra, told against the background of the urban, hedonistic society of Tel Aviv following the Six-Day War.

**EYTAN (Ettinghausen), WALTER** (1910–2001), Israel diplomat. He was the son of Maurice L. Ettinghausen (1882–1974), bibliophile and antiquarian bookseller. Eytan, born in Munich, was educated in England and taught German language and literature in Oxford from 1934. Eytan served in the British army from 1940 to 1945. Settling in Palestine in 1946, he served as director of the Civil Service and Diplomatic College of the \*Jewish Agency in Jerusalem. In this capacity, and particularly as first general director of the Ministry for Foreign Affairs under Moshe \*Sharett and Golda \*Meir (1948–59), he greatly influenced the structure and character of Israel’s foreign service. In 1949 he headed the Israel delegation both to the Rhodes armistice negotiations and to the Lausanne Conference with the Arab states (see State of \*Israel: Historical Survey). In 1955 Eytan headed the Israel delegation to the Atomic Energy Conference in Geneva. He served as Israel ambassador to France from 1959 until 1970. In March 1972, Eytan was appointed head of the Board of Governors of the Israel Broadcasting Authority, in succession to Chaim \*Yahil, and held the position until his retirement in 1978. He wrote *The First Ten Years: Diplomatic History of Israel* (1958).

[Netanel Lorch]

**EZEKIEL**, a major prophet who is said to have begun prophesying in the fifth year of Jehoiachin’s exile in Babylonia, seven years before the final fall of Jerusalem; his prophecies are recorded in the book that bears his name. The name Ezekiel (Heb. **יְחֶזְקִיֵּאל**; Gk. *Iezkiel*; Vulg. *Ezechiel* [cf., in 1 Chron. 24:16, and for (י)יְחֶזְקִיֵּאל(?)], = **יְחֶזְקִיֵּאל**?) seems to be derived from **יְחֶזְקִיֵּאל** “may God strengthen” (namely, “the child” (so Noth, *Personennamen*, 202; others cf., Ezek. 3:8f., 14)).

#### LOCATION OF THE BOOK IN THE CANON

The talmudic arrangement of the major prophets is Jeremiah, Ezekiel, and Isaiah, the departure from the true historical order being justified thus: “The Book of Kings ends with doom, Jeremiah is all doom, Ezekiel begins with doom but ends with consolation, while Isaiah is all consolation, so we place doom alongside doom and consolation alongside consolation” (BB 14b). This arrangement appears in some early Bible manuscripts (Ginsburg, *Introduction*, 5), but manuscripts of

#### Book of Ezekiel – Contents

<b>Chs. 1:1–3:21</b>	<b>The call of the prophet.</b>
<b>Chs. 3:22–24:27</b>	<b>The doom of Judah and Jerusalem.</b>
3:22–5:17	House arrest and dramatic representation of siege and punishment.
6:1–7:27	Prophecies against the mountains of Israel and the populations of the land.
8:1–11:25	A visionary transportation to Jerusalem.
12:1–20	Dramatic representation of the exile of Judah and its king.
12:21–14:11	On false prophets and the popular attitude towards prophecy.
14:12–23	No salvation through vicarious merit.
15:1–8	Parable of the vine wood.
16:1–63	Parable of the nymphomaniacal adulteress.
17:1–24	Parable of the two eagles.
18:1–32	God’s absolute justice.
19:1–14	A dirge over the monarchy.
20:1–44	The compulsory new exodus.
21:1–37	The punishing sword: three oracles.
22:1–31	Unclean Jerusalem: three oracles.
23:1–49	The dissolute sisters, Oholah and Oholibah.
24:1–14	The filthy pot: a parable of Jerusalem.
24:15–27	Death of the prophet’s wife.
<b>Chs. 25:1–32:32</b>	<b>Dooms against foreign nations.</b>
25:1–17	Brief dooms against Ammon, Moab, Edom, and Philistia.
26:1–28:26	Doom against Phoenicia.
29:1–32:32	Seven oracles against Egypt.
<b>Ch. 33:1–33</b>	<b>A miscellany from the time of the fall.</b>
<b>Chs. 34:1–39:29</b>	<b>Prophecies of Israel’s restoration.</b>
34:1–31	Renovation of the leadership of Israel.
35:1–36:15	Renovation of the mountains of Israel.
36:16–38	A new heart and spirit: the condition of lasting possession of the land.
37:1–28	The revival of the dead bones of Israel and the unification of its two scepters.
38:1–39:29	The invasion of Gog and his fall.
<b>Chs. 40:1–48:35</b>	<b>A messianic priestly code.</b>
40:1–43:12	A visionary transportation to the future temple.
43:13–46:24	Ordinances of the cult and its personnel.
47:1–12	The life-giving stream issuing from the temple.
47:13–48:35	Allocation of the land.

the Ben Asher tradition (e.g., Leningrad, Aleppo) and the early printings follow the proper chronological order (Isaiah, Jeremiah, and Ezekiel) as in present texts (cf. Kimḥi’s introduction to Jeremiah; *Minḥat Shai*’s introduction to Isaiah).

#### STRUCTURE AND CONTENTS

The talmudic bipartition of the book recalls Josephus’ statement that Ezekiel “left behind two books” (Jos., *Ant.*, 10:79) –

## The Dates in the Book of Ezekiel

Text	Year	Month	Day	B.C.E. <sup>1</sup>	Event
1:1	30	4	5	Note <sup>2</sup>	Vision of heavenly beings.
1:2f.	5	–	5	July <sup>2</sup> 593	Vision of God's vehicle and call of the prophet.
3:16	A week later				Appointment as lookout.
8:1	6	6	5	Sept. 592	Vision of temple abominations.
20:1	7	5	10	Aug. 591	Prophecy of compulsory exodus.
24:1	9	10	10 <sup>3</sup>	Jan. 588	Beginning of Jerusalem's siege.
26:1	11	–	1	587–6	Prophecy of Tyre's destruction.
29:1	10	10	12	Jan. 587	Prophecy of Egypt's destruction.
29:17	27	1	1	April 571	Tyre's doom amended, substituting Egypt therefor.
30:20	11	1	7	April 587	Prophecy of Pharaoh's destruction.
31:1	11	3	1	June 587	Parable of Pharaoh as a fallen tree.
32:1	12 <sup>4</sup>	12	1	March 585 <sup>4</sup>	Dirge over Pharaoh.
32:17	12	– <sup>5</sup>	15	March 585 <sup>5</sup>	Lament over Pharaoh in Sheol.
33:21	12	10	5	Jan. 585	Arrival of fugitive with news of Jerusalem's fall <sup>6</sup> .
40:1	25	1/7 <sup>7</sup>	10	April/Oct. 573 <sup>7</sup>	Vision of future temple.

<sup>1</sup> The year-count in the dates starts from the exile of King Jehoiachin (1:2; 33:21; 40:1), datable by a Babylonian chronicle to 2 Adar (mid-March) 597. However, II Chron. 36:10 has the exile beginning at “the turn of the year” – i.e., the next month, Nisan, the start of Nebuchadnezzar's 8th year (II Kings 24:12). The era of the exile thus began in Nisan (April) 597, and its years, like Babylonian regnal years, ran from Nisan to Adar.

<sup>2</sup> The date formula in vs. 2 is manifestly an editorial gloss on that of vs. 1 (hence the third person and the absence of the month); the era of the 30th year is enigmatic (traditionally: from the discovery of the Torah in Josiah's reign [622 B.C.E.], or the jubilee year [see note 7 below]). Some take 30 to be the age of the prophet at his call (cf. Gen. 8:13).

<sup>3</sup> Not the usual data formula: = II Kings 25:1 and perhaps taken from there.

<sup>4</sup> LXX: 11th year, i.e. 586.

<sup>5</sup> Month to be supplied from 32:1; LXX: 1st month (April 586).

<sup>6</sup> About five months after Jerusalem's fall, in the summer of 586 (Tammuz [July]–Ab [August], Jer. 39:2; 52:6f., 12), the 19th (Nisan–Adar) year of Nebuchadnezzar and the 11th (Tishri–Elul) year of Zedekiah.

<sup>7</sup> Heb. Rosh Ha-Shanah; LXX: first month (Nisan [April]); tradition, comparing Lev. 25:9: seventh month (Tishri [Oct.]). Tradition thus makes the 25th year of exile a jubilee year; since 20 years before is called the 30th year (1:1, taking 1:2 as its gloss), tradition interprets it as counting to a jubilee that coincided with the discovery of the Torah in the reign of Zedekiah (see Targum and Kimḥi at 1:1).

possibly (cf. R. Marcus) a reference to the fact that chapters 1–24 are, on the whole, prophecies of Israel's doom, while chapters 25–48 are prophecies of consolation. The contents of the book may be subsumed under these two major rubrics, with further specification by subject and date. (See Table: Book of Ezekiel – Contents and Table: Dates in the Book of Ezekiel.)

The marking of certain prophecies (or events) by dates possibly signifies their evidential value to the prophet (cf. his concern over being vindicated by events: 2:5; 12:26ff.; 29:21; 33:33) and may adumbrate the Second Isaiah's argument from prophecy (Isa. 41:26f.; 42:9; 44:8; 45:21; 46:10f.; 48:3ff.). First practiced by Jeremiah's biographer, the custom of dating is at its height in Ezekiel, and is followed by Haggai (1:1, 15; 2:1; 10; 20) and Zechariah (1:1; 7:1) – though Ezekiel's formula is unique.

From the prophet's call to the start of Jerusalem's siege the dated prophecies are condemnatory, and this is true of the great bulk of chapters 1–24 (cf. the scroll of “laments and moaning and woe” that the prophet eats in 2:10–3:3). During the siege years and briefly thereafter, the dated prophecies condemn Israel's neighbors – the subjects of chapters 25–32 (note the clustering of dates in the Egypt oracles, perhaps signifying an expectation of Egypt's imminent fall). The

news of Jerusalem's fall is embedded in a miscellany of brief oracles related to the first part of the book (ch. 33), and is followed by consolatory prophecies of Israel's restoration (chs. 34–48). The sole dated prophecy among these opens the detailed program of the future theocracy's institutions in chapters 40–48.

The division of the book into pre-fall doom prophecies and post-fall consolations must thus be at once qualified by recognition of the intermediate status of the oracles against foreign nations; both thematically and chronologically they straddle the two major divisions. Moreover, the two divisions are not strictly homogeneous thematically (nor is it likely they ever were). Besides prophecies of doom, the first half of the book contains both calls to repentance (14:6; 18) and a few consolations (e.g., 17:22–24), of which 11:14–21 is palpably pre-fall (though intruded into its present context by association with what precedes it). Similarly, condemnation appears in the post-fall prophecies (e.g., 34:1–10; 36:3ff.) – entirely appropriate to its context. Nor is the block of foreign-nation oracles exhaustive: a veiled anti-Babylonian oracle comes earlier (21:33–37) and an explicit anti-Edomite oracle comes later (ch. 35), both integrated into their contexts. Nor is the dating strictly followed in the face of a good countervailing reason.

Grouping the Egyptian oracles entailed an overlap between the last-dated of them and the arrival of the fugitive from Jerusalem. And the eventual substitution of Egypt for Tyre as Nebuchadnezzar's prey (in the dated appendix to ch. 29) advised setting the Tyrian prophecies ahead of the Egyptian, though the latter set in first.

The book thus shows signs of a deliberate editing and arrangement along thematic-chronological lines. Occasional erratic entities are not enough to destroy this overall impression.

The stylistic consistency of the book is striking. Excepting 1:2ff. (an editorial gloss to 1:1), it is couched in the form of a first-person report by the prophet of God's communications to him or the visions he was shown. Only five statements in the book are his own (4:14; 9:8; 11:13; 21:5). His reactions to popular sayings, even his complaints, are clothed as oracles of encouragement or exhortation (contrast, e.g., 33:30–33 with Jer. 15:10ff.). Oracle-reports begin with: וַיְהִי (הָיָה) דְבַר ה' אֵלַי ("This word of the Lord came to me"). The prophet is addressed בְּן אָדָם ("O man!" or "mortal!") often followed by an imperative to say or do something (the prophet rarely reports that he executed the order). The message proper is introduced by כֹּה אָמַר ה' ("Thus said the Lord"), whose frequency is explained by 2:4; 10:11; 3:27. Doom-prophecies regularly state the ground of the punishment, introducing it with יַעַן ("inasmuch as"), followed by the sentence of punishment, introduced by לִכֵּן ("so then" or "assuredly"). The characteristically Ezekielian concluding phrase is וַיֵּדְעוּ (וַיִּדְעוּתֶם) כִּי אֲנִי ה' ("then they [you] shall know that I am the Lord") – with minor variations. A penchant for formulas is one of several affinities of Ezekiel to the priestly writings of the Pentateuch (see \*Holiness Code).

#### ANALYSIS OF THE CONTENTS

##### The Call of the Prophet

(1:1–3:21). By the Chebar River (Akk. *nār Kabari*, a large canal that left the Euphrates near Babylon and passed through Nippur), the prophet is accosted and overwhelmed by a cloud-and-fire apparition of the divine vehicle – a wheeled platform, borne by four hybrid creatures – on which was enthroned the fiery Majesty (*kavod*) of the Lord. Fortified to face his defiant audience, the prophet is sent to announce to them God's coming punishment (cf. Jer. 1:7ff.; 18f.). He is fed a scroll on which the doom is inscribed (cf. Jer. 15:16). Afterward a wind bears him to the exile community of Tel Abib (Akk. *til abūbi*, "mound [abandoned since the time] of the Flood"), where he recovers from shock. Again he is addressed and appointed to be a lookout to warn Israel of the catastrophic consequences of their wickedness. This role delimits his responsibility: as a lookout, he is not accountable for the reaction of his audience – an important release for a prophet anticipating an indifferent or hostile reception.

The appearance of the fiery presence of God to stand by his devotees (Ex. 16:10; Num. 14:10; 16:19), and His coming on a cherub to their aid (Ps. 18:8ff.) were elements of tradition. The Chebar River – like the Ulai and the Tigris of Daniel 8:2;

10:4 – may, as a "clean place" of running water (Lev. 14:5), have served as a revelation site (cf. Mekhilta, *Petiḥta*), in which case the theophany was not wholly unexpected. (The presence of prophets among the exiles seems not to have been unusual; cf. Jer. 29:15; Ezek. 13:9.)

Appointment as a lookout recurs in 33:1–21 in association with its natural concomitant, a call to repentance. Such calls are found otherwise only in 14:6 and chapter 18. Hence the common assumption that the role of a lookout calling for repentance belongs to the latter part of the prophet's career is to be rejected as baselessly shifting a theme attested only before the fall to the post-fall prophecy. (Equally baseless is the notion that as a lookout the prophet addressed the individual rather than the nation; cf. the explicit addresses in 18:31; 33:11.) To be sure, the prophet did not have in mind any but the exilic remnant of the "house of Israel" when he called for repentance – the Jerusalemites were inexorably doomed – but he regarded them as a nucleus of a new Israel, not as discrete individuals. Nonetheless, 3:16b–21 is intrusive in its context; it may well have sprung from the prophet's later reflection upon his role and responsibility toward his audience during the first part of his career, which was dominated by a "negative" message. Its incorporation into the account of the call bespeaks a desire to collect here all the components of the prophet's first (and principal) role.

##### The Doom of Judah and Jerusalem (3:22–24:27)

HOUSE ARREST AND DRAMATIC REPRESENTATION OF SIEGE AND PUNISHMENT (3:22–5:17). The prophet is ordered to shut himself up, "bound," in his house, and to refrain from speaking and publicly censuring the people (cf. Amos 5:10; Isa. 29:21); he can speak only to deliver God's messages. The prophet's withdrawal is borne out by every notice of his contact with others (8:1; 14:1; 20:1; 33:30ff.). He is visited at home; he is never on the street or in the market, no reflex of daily life outside makes its way into his utterances. "For the most part Ezekiel lives in a separate world. Other people drift in and out of the book, but there is little direct contact" (Freedman). The only conversation recorded with other human beings is by the command of God (24:18ff.). Except for dramatic representations, the prophet does nothing. "Though told in story form, Ezekiel's account is more a spiritual diary of personal experience of God and his inner reaction to it than a record of objective occurrences" (*ibid.*). In accordance with his tendency to extremes, he carries Jeremiah's gloomy unso-ciability (Jer. 15:17; 16:2, 5, 8) to its last degree (an analogy from Second Temple times occurs in Jos., Wars, 6:300ff.). Release from his "dumbness" came only with the arrival of the fugitive bearing news of Jerusalem's fall (24:26f.; 33:2ff.).

Orders for a complex series of acts representing the coming doom follow: (a) a model of the siege of Jerusalem is to be built and prophesied against; (b) through lying motionless on his sides, the prophet is to "bear the punishment" (cf. Num. 14:34; this is the usual meaning of the phrase, see especially Ezek. 14:6–10) of Judah and Israel for a number

of days equivalent to the years of their punishment; (c) he is to consume scant rations of a loaf of mixed grains and water to show the siege-famine; (d) he is to bake a cake (*'ugah*, in direct contact with fuel or ashes, see \*Bread) on human excrement (later exchanged for cattle dung) to symbolize the “unclean” food of exiles (cf. Hos. 9:3f.); (e) he is, finally, to shave his head and dispose of the hair in thirds to symbolize the annihilation of the population (cf. Isa. 7:20; Zech 13:8f.). Act (d) is intrusive and belongs thematically with the acts of chapter 12; it was attracted to this section by the food prescription of 4:10ff.

PROPHECIES DIRECTED AGAINST THE MOUNTAINS (= the land; vs. 1) OF ISRAEL AND THEIR HEATHEN CULT INSTALLATIONS (chs. 6 and 7; cf. Lev. 6:30) AND AGAINST THE POPULATION. Chapter seven proclaims that “the end has come” (Amos 8:2; Gen. 6:13) for all classes of the populace.

A VISIONARY TRANSPORTATION TO JERUSALEM (chs. 8–11). In a trance-vision, the prophet is taken to see the abominations in the Temple (ch. 8) and the destruction of Jerusalem by heavenly executioners (9:1–10:7). While he prophesies against a cabal of 25 leading men, one Pelatiah drops dead. A thematically associated denunciation of the Jerusalemites’ design to supplant the exiles and a promise of the latter’s restoration follows. In the course of the vision, the stages of the departure of God’s Majesty from the Temple and the city are recounted (10:18f. (referring to vs. 4?); 11:22f.). The historical implications of this vision are discussed below.

DRAMATIC REPRESENTATION OF THE EXILE OF JUDAH AND ITS KING (12:1–16). After the event, the original references to the king’s disguise in verses 6 and 12 were interpretatively adjusted to conform with the blinding of King Zedekiah (II Kings 25:7). Verses 17–20 order the prophet to represent, as he eats, the fright of the Jerusalemites.

ON PROPHECY (12:21–14:11). Two denunciations of the popular dismissal of doom prophecies precede a long diatribe against false prophets of weal (= Jer. 23:25ff.), and sorceresses. Another oracle declares God inaccessible to the heathenish Israelites for normal oracular consultation (under the dispensation of wrath, only one-way communications from God to man obtained).

NO SALVATION THROUGH VICARIOUS MERIT (14:12–23; against Gen. 18:24, etc.). The legendary worthies Noah, Daniel (apparently akin to the Ugaritic righteous ruler Dnil; Pritchard, *Texts*, 149ff.; *COS I*, 343–56), and Job could save themselves alone – not even their own children – from God’s judgment. (This theme is related to the intercessory function of prophecy (cf. 13:5 with 22:30) and is thus linked to the preceding oracles.) Yet with Jerusalem, an exception will be made: some unworthies will escape with their children to Babylonia to justify God’s dooming the city to Ezekiel’s hearers who will thus be able to see for themselves what a depraved lot the Jerusalemites are.

THREE PARABLES (chs. 15–17). Chapter 15 contains the parable of the vine wood. Not the useful vine (Hos. 10:1; Jer. 2:21; Ps. 80:9, 15) but the useless vine wood is the fit image of Israel – good only for fuel, and hence consigned to destruction.

Chapter 16 contains the parable of the nymphomaniacal adulteress. This lurid, even pornographic, parable, immoderate in its language and its historical judgments, combines these elements: the image of marriage for the covenant relation of God and Israel (Hos. 1–3; Jer. 2:2; 3:1); Jerusalem’s Jebusite origin – used to argue the genetic depravity of Israel; the view that political alliances (whether voluntary or coerced) are equivalent to apostasy – both expressing reliance on powers other than God. At verse 44, the figure is skewed and loses its form. Jerusalem is unfavorably compared to her “sisters” Samaria and Sodom. Undeserving as she is, God will, out of faithfulness to His ancient covenant, yet redeem her and let her rule her sisters. Then she will be ashamed of her past.

It is likely that verses 44ff. are secondary; but to consider them post-fall because of the concluding promise of restoration is to miss the prevailingly condemnatory context of the promise. Contrast the reversed proportions of the same elements in the restoration prophecy of 36:16–7.

Chapter 17 concerns the parable of the two eagles (Nebuchadnezzar and Psammetichus II, see below), a cedar (Jehoiachin), and a vine (Zedekiah): a denunciation of Zedekiah for seeking Egyptian aid to rebel against, and thus break his vassal oath to, Nebuchadnezzar. An oath by YHWH is inviolable even if coerced (II Chron. 36:13). A consolatory appendix (vss. 22ff.) predicting the replanting of a sprig of the cedar, and in no way part of the denunciation, evidently stems from the last period of the prophet.

GOD’S ABSOLUTE JUSTICE (ch. 18). In this chapter Ezekiel maintains that there will be no vicarious suffering of one generation for another’s sins (vss. 1–20), or condemnation of a presently good man for his wicked past (21–28); hence to repent is to live in God’s grace. The argument was provoked by the current epigram (Jer. 31:28): “Fathers have eaten unripe grapes and the children’s teeth are set on edge?,” charging God with punishing the innocent descendants of wicked forefathers (cf. indeed II Kings 23:26; 24:3f.; Jer. 15:4; Lam. 5:7), an “inequitable” procedure (vss. 25, 29). The prophet is at pains to deny any “vertical” bequeathal of guilt, either between generations (as in Ex. 20:5), or within a single generation. Thus only the guilty are punished, and even they may be reconciled with God by repentance.

The presentation is systematic and couched in casuistic-legal terms – the idiom of abstract expression familiar to the priest-prophet (cf. 14; 33:1–20). For the sake of symmetry, the argument is carried beyond the immediate issue to its obverse – the denial too of “vertical” bequeathal of merit. The form shows theology comprehended as law – specifically, God’s rule of justice brought into line with Deuteronomy

24:16's directive to earthly judges. Notable too is Ezekiel's catalogue of righteous traits; its linguistic and substantive affinity with pentateuchal law is highlighted by contrast with other such catalogues in Isaiah 33:15ff. and Psalms 15.

**A DIRGE OVER THE MONARCHY** (ch. 19). In this dirge Ezekiel employs two images: that of a lioness and her cubs, and that of a vine and its branches.

**THE COMPULSORY NEW EXODUS** (ch. 20). This is a review of Israel's past as a series of refusals to accept God's laws and concludes with an affirmation by God to balk its present intention of assimilation to the pagans. God will force His kingship upon them, restore them by force to their land, and there receive their worship.

A plan to normalize the religious life of the exiles by renewing the sacrificial cult in Babylonia has been hypothesized as the provocation of this message. This chapter reveals important aspects of the prophet's theology of history: the pre-determination of the exile (cf. Ps. 106:26); Israel's child-sacrifice as a punitive divine ordinance; concern for His reputation among humankind as the primary motive of God's dealings with Israel. The idea that Israel's restoration is a divine necessity which, if need be, will be forced upon Israel is developed less vehemently later in chapter 36.

**THE PUNISHING SWORD: THREE ORACLES** (ch. 21). The first of these announces the indiscriminate work of God's sword "from the south northward" (such "horizontal" involvement of innocent with guilty contemporaries is not covered in ch. 18; contrast 9:4); the second is a song to a sharpened sword; the third, a dramatic picture of Nebuchadnezzar taking omens at the crossroad to determine whether his sword should strike Rabbath Ammon or Jerusalem. Verses 33ff., misleadingly addressed to Ammon, warn that ultimately the instrument of God's punishment (Babylonia) would itself be struck down by barbarians (cf. Isa. 10:12ff.). This is the only anti-Babylonian oracle in the book.

**UNCLEAN JERUSALEM: THREE ORACLES** (ch. 22). The first is an arraignment of the "bloody city" (Nah. 3:1) – of Nineveh, whose terms recall Leviticus 18–20; the second, a reminiscence of Isaiah 1:20 – once silver, the city is now all dross; the third oracle, a variation of Zephaniah 3:1–8 – all the classes of the city are corrupt. The prophet's avowal that not a soul could be found to redeem the city in God's sight is a hyperbole similar to 1 Kings 19:14, Jeremiah 5:1ff., and Lamentations 2:14. It does not mean that Ezekiel and Jeremiah could not have been contemporaries (as Torrey argued).

**THE DISSOLUTE SISTERS, OHOLAH** (Samaria, i.e., "her own tent") **AND OHOLIBAH** (Jerusalem, i.e., "my tent is in her") (ch. 23). The relations of the two Israelite kingdoms with Egypt, Assyria, and Babylonia are represented – in the extravagant manner of chapter 16 – as the shameless sexual frenzies of two harlot sisters. From verse 36 on, the apostasy motif of chapter 16 appears in a disordered epilogue.

**THE FILTHY POT: A PARABLE OF JERUSALEM** (24:1–14; cf. 11:3ff.), dating to the start of the siege, anticipating its purification through fire.

**THE DEATH OF THE PROPHET'S WIFE** (24:15–27). The prophet must dramatically represent, by his abstention from mourning, the paralyzing shock that will engulf the exiles at hearing of the city's fall (cf. Jer. 16:5–7). However, for the prophet, the arrival of that news will end his dumbness (i.e., release him from obsession with Jerusalem's fall).

### **Doom Pronounced Against Foreign Nations (chs. 25–32)**

These chapters consist of prophecies of doom pronounced against seven foreign nations involved in Judah's revolt (Jer. 27:3). Excepting Egypt, they failed to support Judah; they all survived her. The dating of these prophecies shows that their location is approximately chronological. Condemnatory of Israel's enemies, they are a preliminary to prophecies of Israel's restoration.

**BRIEF PROPHECIES OF DOOM AGAINST AMMON, MOAB, EDOM, AND PHILISTIA** (ch. 25; cf. Jer. 47–49). **PROPHECY OF DOOM AGAINST PHOENICIA** (chs. 26–28). Four prophecies are directed against Tyre and one last against Sidon. Noteworthy is the representation of the island city as a ship loaded with merchandise (the amazing itemization of which is a prime source of information on east Mediterranean commerce of the time (see Bondi, Bartoloni in Bibliography); Ezekiel might have come by this from Phoenician traders and artisans known to have been pensioners of the Babylonian king; Pritchard, Texts, 308). Also remarkable is the image of the king of Tyre as an expelled denizen of God's garden (28:12–19) – a tantalizingly obscure variant of the Eden myth.

**EPILOGUE TO CHAPTERS 25–28** (28:24–26). The epilogue contains the promise that after its restoration, Israel will never again suffer the contempt of these neighbors, since they will all have been destroyed. Excepting Edom and Philistia who are vaguely charged with "taking revenge," the charges against these nations are their hubris and their contempt of Israel (both offensive to God). Why Tyre receives such a measure of wrath is unclear.

**SEVEN ORACLES AGAINST EGYPT** (chs. 29–32). The unusual clustering of dated prophecies may signify the prophet's expectation of Egypt's imminent fall to Nebuchadnezzar after the defeat of Apries (see below), and his concern for establishing the priority of his prophecies to that event. Egypt's offense is its unreliability as an ally (29:6 = Isa. 36:6), or Pharaoh's hubris. However, because Egypt tried to help Judah, it is promised a restoration (29:13ff.). The latest passage in the book is an appendix to the first Egyptian oracle. Nebuchadnezzar, having failed to reduce Tyre, is promised Egypt as his wages (on the historical background, see below). The presence of this amendment to the Tyre prophecies alongside the untouched – and by then confuted – original prophecies attests to the inviolate status of Ezekiel's oracles in his own (and subsequent

age's) estimation. It is a warning against the easy assumption of later tampering with the prophet's words.

The standpoint of the prophecies against the nations is one of sensitivity to the diminution suffered by God owing to Israel's humiliation. Israel's fall gave occasion to its neighbors to gloat and aggrandize themselves. Heathen arrogance reached its limit; God must now act to assert his authority on earth. This necessarily entails the restoration of Israel, which is indeed anticipated several times in this section (25:14; 28:25; 29:16, 21). The interconnection of the doom of the nations and Israel's restoration is seen also in the sequence of chapters 35–36, on which see below.

### **A Miscellany From the Time of the Fall (ch. 33)**

Verses 1–20: The kernel of this piece is the despairing cry of the people: How can we live, immersed as we are in sin (vs. 10)? It stimulates a clarification of the constructive aspect of the doom prophecy – the prophet's role as a lookout, warning his hearers of the consequence of their sin and urging them to repent and live. Previously isolated elements (3:16b–19; 14:6; 18:21ff.) are woven into a new whole, meeting the need of the hour. As in 18, a legal-casuistic style is the vehicle of doctrinal statement.

Verses 21ff.: The arrival of the fugitive with news of Jerusalem's fall brings an end to the prophet's dumbness – to what effect, remains obscure.

Verses 23–33, in form a single prophecy, comprise two heterogeneous pieces. Verses 23–29 are a scornful rejection of claims on the part of those dwelling in the land of Israel after the fall to retain title to the land despite their fewness (a later, pathetic version of 11:15b). Verses 30–33 promise the prophet that, although he is now no more than an entertainer to the people who flock to hear him, the imminent advent of doom will make them take his words seriously. Why this pre-fall piece is placed here is unclear.

All of chapter 33 belongs to the doom prophecy, but it reflects a situation just before and after the fall – later than that of chapter 24. It is dated later than the first dated foreign-nation prophecies (which themselves straddle the fall). The arrangement of chapter 33 after the block of foreign-nation prophecies is therefore reasonable.

### **Prophecies of Israel's Restoration (chs. 34–39)**

RENOVATION OF THE LEADERSHIP OF ISRAEL (ch. 34). In a new tone of compassion, God inveighs against the bad shepherds who misguided his flock and promises personally to take it in charge (vss. 1–16; cf. Jer. 23:1ff.). The image is then skewed, and bucks and rams within the flock are blamed for having bullied the rest. A new David will be their shepherd, and under him they will enjoy all the covenant blessings of Leviticus 26:4–12.

THE RENOVATION OF THE MOUNTAINS OF ISRAEL (countering ch. 6; 35:1–36:15). For encroaching upon Judah, the hill country of Seir will be desolated (cf. III Ezra 4:50) – along with all others who dared lay hands on God's

land (vs. 5). Then the hill country of Israel will prosper as never before, and reproaches of infertility, famine, and "bereaving its inhabitants" (through conquest by foreigners and deportations) will be removed forever.

A NEW HEART AND SPIRIT: THE CONDITION OF LASTING POSSESSION OF THE LAND (36:16–38). With inexorable logic the theology of Israel's career is expounded: exiled for its sins, Israel brought the Lord into disrepute among the nations. In order to establish His authority on earth, God must restore and glorify Israel. But to prevent a repetition of the disaster, God will alter the moral nature of the people, giving them a new heart and spirit and thus insuring that they will be faithful to him (cf. Jer. 32:39 [Ezek. 11:19]; Jer. 31:32f.). That the benefactions to Israel are merely incidental to God's concern for His reputation is repeatedly insisted upon (vss. 22, 32).

Though the gentle conclusion of the prophecy (vss. 33–38) mitigates it somewhat, it emerges as even more thoroughly theocentric than the related doctrine of the compulsory exodus in chapter 20.

THE REVIVAL OF THE DEAD BONES OF ISRAEL AND THE UNIFICATION OF ITS TWO SCEPTERS (ch. 37). Once again a popular saying ("Our bones are dried up, our hope is lost...") provides the stimulus for a prophecy, this time a prophetic vision. With the prophet's participation (as in the vision of Jerusalem's destruction, 11:4–13) "all the house of Israel," by now reduced to "very many and very dry bones," are miraculously reconstituted.

The imagery of the second oracle is related: Ezekiel is ordered to represent symbolically the reunification of the monarchy by joining two sticks, inscribed, respectively, "Judah's" and "Joseph's." The happiness of the future kingdom under God is summed up in four everlasting boons: possession of the promised land, rule by David, God's covenant of well-being, God's presence in His sanctuary among them.

The conclusion of chapter 37 brings to an end the account of Israel's restoration and renovation, and the last verse adumbrates the theme of the program of chapters 40–48. Between the two, however, appear the prophecies on Gog, presupposing the situation arrived at by the end of chapter 37.

THE INVASION OF GOG AND HIS FALL (chs. 38–39). Lured by the prospect of loot, Gog (whose name is modeled on that of King Gyges of Lydia, but who is not, here, a historical personage) and his barbarian allies will march down from the north against defenseless Israel. God, however, will destroy his great host on the mountains of Israel, thus demonstrating to Israel that He is their God, and to the nations that Israel's former misfortune resulted from God's wrath, not His weakness.

Influence of earlier prophecies on this depiction of Gog's fall is acknowledged in 38:17. The menace of a nameless northern nation occurs in Jeremiah 1:14; 4:6; and other passages; and a concerted assault of pagans, in Isaiah 29:1ff.; Micah 8:11ff.

According to Isaiah, Assyria was to perish on the mountains of Israel, not by the sword of man (14:24 ff.; 31:8). In pre-exilic prophecy, however, the assault of the heathen was punishment for Israel's sins, and their collapse must precede Israel's redemption. Ezekiel adapted these unfulfilled prophecies to the exilic situation. A heathen assault could come now only against a restored Israel, and it could not be punitive. Inspired by the ancient model of Pharaoh's fall at the sea, Ezekiel conceives the motive of the assault to be the prospect of pillaging a defenseless people (Ex. 15:9); the significance of the heathen's fall is derived from the same model: to shed glory on God (Ex. 14:4; cf. Ezek. 39:13).

#### **A Messianic Priestly Code (Kaufmann; chs. 40–48)**

Following the general topical order of the priestly writings in the Pentateuch, a description of the future sanctuary, regulations for the cult and its personnel, and provisions for settlement in the land are set out in detail. Modernization and rectification of past wrongs are pervasive motives.

**A VISIONARY TRANSPORTATION TO THE FUTURE TEMPLE** (40:1–43:12; a counterpart to chs. 8–11). A blueprint of the Temple area is narrated as a tour through its courts, gates, and rooms, the prophet being guided by an angelic “man” with a measuring rod and line. The design appears to follow the latest form of the Solomonic Temple, with some schematization (e.g., the preference for the number 25; cf. the 25<sup>th</sup> year, 40:1). The prophet witnesses the return of the divine Majesty through the east gate, by which it had exited in 11:1, into the inner sanctum. Thence an oracle issues, condemning the past contiguity of the palace and the Temple as a defilement of the latter, and banning it for the future.

**ORDINANCES OF THE CULT AND ITS PERSONNEL** (43:13–46:24). These sections deal with the altar, the reorganization of the clergy (Zadokites alone to remain full priests, the rest to be degraded to menials for having served at the “idolatrous” rural sanctuaries), their regulations and perquisites, the territorial “sacred oblation” which is to be set aside for them and the temple, a brief cultic calendar. Mention of the “oblation” attracts regulations concerning the “chieftain” (king), to whom holdings on each side of the oblation are assigned (in consequence, his ancient right [or abuse] of expropriation (1 Sam. 8:14) is abolished). Besides his role in the cult, his responsibility for maintaining justice is touched upon (45:9 ff.).

The discontinuity and loose order of this section suggest that it is a composite that took shape piecemeal.

**THE LIFE-GIVING STREAM ISSUING FROM THE TEMPLE** (47:1–12). The vision of this marvelous stream, through which the prophet is led by his angelic guide, bridges the topic of the Temple and cult and that of the land, which follows.

**THE ALLOCATION OF THE LAND** (7:13–48:35). The boundaries of the future Land of Israel are essentially those of Numbers 34:1–12, and consequently exclude Transjordan, histori-

cally Israelite. Another rectification is the right extended to permanently resident aliens to share in tribal holdings. Yet another is the equalization of the tribal holdings: all receive equal latitudinal strips of land with some coastal plain, some highlands, and some bit of the Jordan-Dead Sea depression. Jerusalem will bear the new name “YHWH is there” (cf. 37:26–28).

#### **THE TEXT AND ITS INTEGRITY**

According to critical scholars, the text of Ezekiel is among the most corrupt of the Bible. That technical passages (e.g., the account of the divine vehicle, the list of Tyre's merchandise, the Temple blueprint) – at best difficult to understand – should have suffered in transmission is not surprising. However, poetry too has been garbled (cf. chs. 7; 21). The Greek (“Septuagint”) often provides a remedy, but at the same time raises new questions because of its frequently shorter text. In the light of the Greek, the received Hebrew text appears conflate – i.e., it exhibits variants, synonymous readings, and tags that have been collected from several versions of the prophet's words. The texts of Ezekiel and Jeremiah were peculiarly susceptible to expansion and the addition of tags owing to the fact that they are very formulaic, their idiom being modeled upon the two most highly stylized and formulaic works of early Israelite tradition – the pentateuchal priestly writings and Deuteronomy respectively.

On occasion, allusions to events later than the prophecies that contain them indicate post-event touching up (see, e.g., on ch. 12, above). Since none reflects events later than the last-dated item in the book (see below), the assumption that someone other than the prophet is responsible for them is unnecessary.

Recurrently, a piece will show a juncture at which a breakdown in form (20), a skewing of theme (16; 23; 34), or change of mood (17) appears. Repetitions (see on ch. 33), discontinuities, and erratic blocks (38–39; 40–48) argue against the originality and integrity of a piece. But whether such phenomena point to another hand rather than to later reflections or editorial activity of the prophet himself is a matter of dispute among critics. The common assumption that a circle of disciple-transmitters existed who had a large part in the shaping of the present text and its disjunctures lacks any evidential basis.

#### **LOCALE AND HISTORICAL BACKGROUND**

Information supplied by contemporary records suffices to test the claim of the book that its contents fall between July 593 and April 571 B.C.E.

Just before breaking off, the Babylonian Chronicle reports that in December 594 Nebuchadnezzar called out his army against Syria – for the first time since his conquest of Jerusalem in 597. It seems hardly coincidental that (a) just at that time a new king, Psammetichus II, came to the throne of Egypt, who showed a lively interest in Syria, and (b) an anti-Babylonian conspiracy of Phoenicians and Palestinians was formed in Jerusalem in Zedekiah's fourth year – 594/3 (Jer. 27).

In the same year Jeremiah had his altercation with Haniah ben Azzur, who prophesied the imminent fall of Babylon and the return, within two years, of King Jehoiachin and his exiles (Jer. 28).

The situation of the exiles can be gathered from Jeremiah's letter to them, which was sent about this time (Jer. 29). There, too, prophets (whom Jeremiah brands as false) encouraged in the people expectations of a speedy end to their exile – which Jeremiah was at pains to quash. He not only exhorts them to be reconciled to their captivity, he communicates to them an oracle (ch. 24) unconditionally condemning Jerusalem to a horrible end. Hope in the future of Jerusalem is futile and wrong; the future belongs to the exiles from whom the nation will be regenerated (so 24:6f.).

In 591 Psammetichus made a state visit to some shrines on the Syrian coast, probably not without political overtones. About two years later, evidently in collaboration with Egypt and its Palestinian allies, Judah revolted. Nebuchadnezzar called out a powerful army which laid siege to Jerusalem in January 588. Shortly afterward, Psammetichus died, but his successor, Apries, maintained his policy. An Egyptian force marched into Palestine, giving Jerusalem temporary relief (Jer. 37:5; 34:21). But it was soon beaten back, and the siege resumed until famine brought Jerusalem to its knees in the summer of 586.

None of the neighbors of Judah was destroyed in the revolt; Tyre and Egypt are known to have preserved their independence. During or directly after Jerusalem's ordeal, Tyre was besieged by Nebuchadnezzar for 13 years (Jos., Apion, 1.21), the end being reckoned between 575–72. The city came under Babylonian control, but was not sacked. Only in 568/7 did Nebuchadnezzar finally move against Egypt (Pritchard, Texts, 308d); the outcome of that campaign is unknown, but Egypt remained independent until its conquest by Cambyses of Persia in 525.

The whole span of Ezekiel's dates falls within the reign of Nebuchadnezzar (605/4–562). He and he alone appears in the book as the conqueror of Judah and the appointed scourge of God for the nations. Every clear historical allusion in the book is to this, or some preceding, period. Especially significant is the book's ignorance of events later than its last date. Its author lived to see the failure of his Tyre prophecy, and emended it in 571. However he did not know that not Nebuchadnezzar, but Cambyses, would conquer Egypt (525) – which would not then go into a 40-year exile; and that Babylon's end would not be sanguinary and fiery (21:36ff.) but virtually bloodless (539). Persia is mentioned only as an exotic adjunct to the forces of Tyre and Gog – indicating that the author was ignorant of what happened from 550 on, when Cyrus united Media and Persia into the nucleus of the Persian Empire. If the author(s?) of 34–48 lived later than 538, they would have seen the confuting of all their restoration prophecies and programs by events. In sum: no post-571 anachronism has left its mark in the book to necessitate the assumption of another hand than Ezekiel's.

That the locale of the prophecy is Babylonia is said several times (1:1; 3:11; 15; 11:24) and implied by the era of "our exile" (33:21; 40:1). Several prophecies have an explicitly exilic standpoint or audience (11:15ff.; 12:11ff.; 13:9; 14:22; 20:34ff.; 24:21b; note also the peculiarly Ezekielian usage of "on the soil of Israel," unnatural for someone living in the land of Israel, 12:22; 18:2; 21:7; 33:24).

At the same time, the almost exclusive focus on Jerusalem in the doom prophecies and the passionate addresses to her have given rise to the view that at least part of the prophecy originated in Jerusalem – the present exilic cast of the whole being editorial (so Rashi at 1:3, combining statements in the Mekhilta to Ex. 12:1 and 15:9). However, the lack of a convincing explanation for such an alleged editorial transfer of originally Jerusalem prophecies to Babylonia leads one to ask whether the anomaly of Ezekiel's prophecy, given its Babylonian setting, is really so implausible.

Ezekiel fails to discriminate between exiles and homelanders in his diatribes; his audience is an undifferentiated "rebellious house," i.e., they are unconscious of any deep-dyed guilt and expect shortly a turn for the better in their fortunes; and they are encouraged in this by their prophets (ch. 13). The situation corresponds to what is known from Jeremiah to have obtained in Jerusalem the year prior to Ezekiel's call (see above). However, Jeremiah's letter reveals that precisely the same situation obtained among the Babylonian exiles. So much so that Jeremiah's major concern is to create a cleavage between the exiles and the Jerusalemites with regard to their hopes for the immediate future. Both his exhortation to become reconciled to a long captivity and his prediction of an inexorable and total doom for Jerusalem are intended to make the exiles despair of Jerusalem's survival, to tear them from the hopes they attached to the city. Only so could they be brought to repentance and the realization of their destiny as the "good figs" (Jer. 24:7).

The implications of Jerusalem's fate were thus hardly less profound for the exiles than for the Jerusalemites themselves (indeed most of the exiles were from Jerusalem, 11 Kings 24:14ff.). Had Jeremiah been in Tel Abib he would have found no topic of more absorbing concern to his audience than the future of the city; and his letter shows what the tenor of his message to them would have been: "laments, and moaning, and woe."

An exiled Ezekiel's preoccupation with Jerusalem (not quite exclusive; his calls to repentance are directed at the exiles, cf. Jer. 24:7, end) is unexceptionable. Anomalous among prophets is his continuously addressing an audience that is apparently hundreds of miles away. But the appearance is misleading. Prophecies against foreign nations, an established genre, always involve an incongruity between the ostensible audience (the foreign nations) and the real one – the Israelites for whose ears the prophecies are really meant and for whom they bear a vital message. Similarly an exiled prophet's address to Jerusalem would have been meant for the ears of his immediate environment. Since in fact and spirit that en-

vironment was thoroughly Jerusalemite, the prophet would not have sensed any incongruity between his ostensible and his real audience. Whatever anomaly attaches to an exiled Ezekiel's prophecy arises out of the anomalous coexistence of two Jerusalemite communities hundreds of miles apart at this juncture of history.

That Ezekiel was far from Jerusalem during his career as a prophet is the most plausible explanation of his Temple vision in chapters 8–11. This congeries of strange cults and sinister plotting going on all at once at different locations in the temple precinct is evidently a montage whose elements are drawn principally, but not exclusively, from the syncretistic cult fostered by Manasseh and eradicated by Josiah (cf. II Chron. 33:7; II Kings 23:11; we do not know whether Josiah's reforms completely survived his death). As the report of a divine vision, the account had powerful significance even to an audience removed from its scene.

#### INFLUENCES UPON THE PROPHET

Of the man Ezekiel all that is known is that he was a priest (1:3), married to a woman who died during the siege of Jerusalem (24:15ff.). He was, presumably, among the aristocrats who were deported with King Jehoiachin in 597. By then he had acquired the priestly learning and attitudes that characterize his prophecy: knowledge of the layout of the Temple and its regimen; of the historico-religious traditions of Israel, and of the idiom of priestly writing of the Pentateuch that dominates his prose (critics dispute the direction of the influence: some attributing to Ezekiel the invention of certain priestly idioms; most allowing the influence at least of the Holiness Code (Lev. 17–26) upon the prophet – the issue is a pivot of pentateuchal criticism); and sensitivity to the “clean” and the “unclean” (e.g., his frequent allusion to menstrual uncleanness, *niddah*), and, above all, to the awesome holiness of God.

Passion and a fertile imagination, tending to the baroque, shine through his writings. He is the master of the dramatic, representational action (which has a portentous, mysteriously causal character; in 24:24 the prophet is called a prefiguring “sign,” *mofet*). He was famous for his (often lurid) imagery (21:5). His actions and his images are more numerous and more complex than those of any of his predecessors. As a visionary too he has no peer; indeed he innovated a genre: the transportation-and-tour vision, so common in later apocalypse. It is no wonder that people flocked to his “entertainments” (33:32).

Ezekiel was immersed in the whole range of Israel's prophetic tradition. Archaic models inspire him – prophesying under seizure by “the hand of YHWH” (cf. Elijah [I Kings 18:46] and Elisha [II Kings 3:5]), transportation by the “wind of YHWH” (cf. Elijah, I Kings 18:12; II Kings 2:16). He is the only prophet after Moses who not only envisions the future but lays down a blueprint and a law for it. He reflects nothing of the eschatological vision of the unity of humankind under God introduced into Judahite prophecy by Isaiah (2:2ff.; 18:7; 19:24f.; Mic. 4:1ff.; Hab. 2:14; Zeph. 3:9; Jer. 3:17), but holds on

to the earlier view that, while God rules over all, His special grace and holiness are, and will be, confined to Israel.

Yet Ezekiel was deeply indebted to classical, literary prophecy as well. Instances of this have been pointed out in the analysis of the contents of the book. It need be remarked here only that by far the most striking affinities of Ezekiel's prophecy are with Jeremiah. The two have in common a vocabulary and a stock of concepts and figures (eating God's words (Jer. 15:16), the harlot sisters (3:6ff.), the bad shepherds (23:1ff.), the lookout (6:17), and many more) beyond what may be explained by mere contemporaneity. That Ezekiel had heard (of) Jeremiah before 597 is to be assumed (cf. Ezek 9:4); that he continued to receive word of his prophecies afterward is likely, since such word did reach the exiles (Jer. 29:24ff.).

#### EZEKIEL'S MESSAGE AND ITS EFFECTS

For Ezekiel the key to the agony of Judah was to be found in the curses attached to God's covenant (as in Lev. 26; Deut. 28), which, since the age of Manasseh, had cast a pall over Judahite religious thought (cf. II Kings 21:10ff.; 22:19ff.; 24:3). As Ezekiel saw it, the entire history of Israel was one continuous breach of covenant, for which the fall was the just and predicted punishment. In the face of nihilistic cynicism (18:1, 25), he insisted on the justice, the reasonableness, and the regularity of God's dealings with men. That is the ground of his denunciation and of his call to repentance as well.

What was not anticipated in the early curses was the aspersion cast on God's power by their operation. It had been assumed that with punishment would come contrition (Lev. 26:41) and repentance (Deut. 30:1ff.), to be followed by reconciliation and restoration. That seems to be the presupposition of Ezekiel's call (to the exiles) to repent (18:30ff.). But in view of the injury to God's reputation (cf. 36:20, a projection onto others of an inner-Israelite reaction?), the idea took hold of the prophet that Israel's rehabilitation could not depend on the gamble that Israel would indeed repent. Frustrated by the people's obduracy, the prophet announced a compulsory new exodus (20:32ff.), underlying which was the necessity of vindicating God's power. Contrition would come later (20:43; cf. 16:61; 36:31) and was no longer a precondition of redemption. As for repentance, God would see to it that after the people were restored they would remain permanently reconciled with, and obedient to, God; not they, but He would make them a new heart (contrast 36:26 (= 11:19) with 18:31). Then they could enjoy eternal blessedness that would serve as a witness of the power of their God to the world.

The doctrine of God's stake in the preservation and restoration of Israel appears in the Second Isaiah (43:25; 48:9, 11); it must have contributed to the exile's will to resist assimilation to their environment and to their faith in a national future.

The effect of Ezekiel's denunciation may be detected in his audience's acknowledgment of their sin in 33:10 at the time of the fall (contrast 18:1), and even more clearly in the version given by the Chronicler of Zedekiah's reign (II Chron. 36:11ff.). II Kings 24:18ff. knows nothing of the defilement of

the temple, nor does it charge the king with violating his vassal oath (Ezek. 8; 17).

Ezekiel's visions and his angelic actors in them inaugurated a literary category that flourished in post-exilic prophecy and apocalyptic (cf. Zech., Dan.). The visionary transportation-tour became the standard vehicle for apocalyptic revelations of the secrets of the cosmos.

The least influential part of Ezekiel's prophecy was his program for the future (chs. 40–48). Medieval exegetes were painfully aware of the contradictions in detail between what Ezekiel laid down and what the community of the Restoration did; they "saved" Ezekiel by declaring his program to be purely messianic (which indeed it is; see, e.g., the conflicting positions of Rashi and Kimḥi on 43:11; cf. Rashi on vs. 21ff. and Kimḥi on vs. 25 and 45:21ff.). The authorities of Second Temple times may also have thought so; in practice, they made the Torah their rule, and ignored Ezekiel's program entirely.

#### LATER DOUBTS ABOUT THE CIRCULATION OF THE BOOK

The divergence in moral theology between Ezekiel 18:4 and Exodus 20:5b did not embarrass later authorities; it was but one of several matters of doctrine that Moses ordained and a later prophet abrogated (so Mak. 24a). Divergences in law were another matter, and by the first century C.E. the many conflicts between the Torah and laws in Ezekiel's program had become so worrisome that withdrawal of the book from circulation was being considered (*bikkeshu lignoz et Sefer Yehezkel*). Only Ḥananiah ben Hezekiah's demonstration that the conflicts could be reconciled kept the book available (Shab. 13b). The possibility was evidently more important than the specific reconciliations, for barely a trace of Ḥananiah's efforts was transmitted (Sifre to Deut. 25:15; cf. Men. 45a).

Another argument for withdrawing the book was the danger surrounding inquiry into the divine vehicle described in chapters 1 and 10. A ramified theosophical doctrine, taught only to a select few, was anchored in that vision (*Ma'aseh Merkavah*; "account of the chariot"; Ḥag. 2:1). The risk inherent in it of overstepping proper bounds is illustrated by a report of a child who "was looking into *hashmal* (Ḥag. 13a), when fire leaped forth from *hashmal* and consumed him." Once again the book was saved from withdrawal by Ḥananiah who pointed out that such children were very rare (Ḥag. 13a). The first chapter of the book remained problematic, and the anonymous opinion of the Mishnah is that it is not to be recited as a *haftarah* (Meg. 4:10). There is a similar stricture upon Ezekiel 16, because of its insult to Jerusalem. Neither is normative and chapter 1 is customarily the *haftarah* of (the first day of) Shavuot. Ezekiel is not referred to by name in the New Testament but the influence of the book on the book of Revelation is unmistakable.

[Moshe Greenberg]

#### EZEKIEL IN THE AGGADAH

Four aspects of Ezekiel's prophetic career figure most prominently in rabbinic literature:

(1) The divine chariot revelation (chap. 1), which became the basis not only of Jewish mysticism but also of various kinds of esoteric speculations (see \*Merkabah Mysticism), and its study was therefore restricted within the rabbinic school curriculum (Ḥag. 2:1; Tosef., Ḥag. 2:1), and excluded from the synagogue *haftarah* reading (Meg. 4:10); but according to Tosef., Meg. 4:34, it could be recited to the public, though apparently without the Aramaic translation; subsequently it was introduced as the prophetic reading for (the first day of) Shavuot.

(2) The fierce denunciations of Israel which might be exploited by the Church for anti-Jewish polemical purposes and were therefore partly unacceptable to the rabbis.

(3) The resurrection of the dry bones (chap. 37), which was a potentially favorite theme for sectarian speculations and was therefore played down by a number of rabbis.

(4) Ezekiel's vision of the future temple and his priestly laws, which appear to contradict the pentateuchal rules and very nearly led to the exclusion of the Book of Ezekiel from the canon (Shab. 13b, and parallels).

The general popularity of Ezekiel's revelation in non-rabbinic circles was bound to dampen rabbinic enthusiasm. Although many of the leading talmudic scholars, from the first through fourth centuries, continued to study and expound mystical concepts based on Ezekiel's *Ma'aseh Merkavah* (cf. Tosef., Ḥag. 2:1ff.; TJ, Ḥag. 2:1, 77a), there was a sharp reaction in Palestine from the second century onward regarding certain kinds of esoteric speculations of an apocalyptic nature. Of four rabbis who entered the heavenly "garden" only one, R. \*Akiva, "ascended in peace and descended in peace." The other three were spiritually harmed by their spiritual adventures, which were henceforth strongly, though not always successfully, discouraged (Tosef., Ḥag. 2:3ff., and parallels; cf. Hag. 2:1). It is interesting to note that Ezekiel's detailed description of the heavenly chariot was contrasted unfavorably not only with the prophecies of Moses and Samuel – "whatever he saw he related; hence Scripture calls him (disparagingly) 'son of man'" (Tanḥ., Zav 13) – but also with Isaiah's restrained revelation (Isa. 6:1ff.). Ezekiel was therefore likened to "a villager who saw the king," while Isaiah resembled "a townsman who saw the king" (Ḥag. 13b).

Although the Midrash emphasizes that God had commanded the heavens to open before Ezekiel (Gen. R. 5:5) – perhaps as a counterweight to similar claims on behalf of Jesus – according to R. Eliezer, "a maidservant saw at the [Red] Sea what Ezekiel and all the other prophets never saw" (Mekh., *Shirah*, 3; cf. Mekh., *Yitro*, *Ba-hodesh*, 3). R. Eliezer, whose early contacts with Jesus' disciples made him especially wary of sectarian ideas (Av. Zar. 16b–17a; et al.), was anxious to emphasize the immense revelation to all Israel rather than to a select few. In line with his "nationalistic" tendency, he prohibited the *haftarah* reading of chapter 16 (on Jerusalem's "abominations"), sharply rebuking a student who had ignored his interdict (Meg. 4:10; Tosef. Meg. 4:34; et al.).

R. Eliezer somewhat reduced the significance of Ezekiel's resurrection of the dry bones, pointing out that "the dead whom Ezekiel revived stood up, recited a song [i.e., of praise], and [immediately] died" (Sanh. 92b). R. Judah apparently regarded the story as an allegorical vision; but other rabbis fully accepted the resurrection miracle.

In later midrashic literature, Ezekiel is praised for his love of Israel; hence he was deemed worthy to perform the resuscitation miracle (SER 5:23). He was criticized, however, for his initial doubting of the possibility of such a miracle. Because of his lack of faith, he was doomed to die on foreign soil (PdRE 33).

The *halakhah* of the Book of Ezekiel deviates on a number of points from the Torah. Although attempts were made to reconcile the contradictions (most notably by Hananiah b. Hezekiah who saved the canonicity of the book), a number of cases were left to be "interpreted by Elijah in the future" (Men. 45a, and parallels). R. Yose b. Hanina, a third century *amora*, frankly conceded that Ezekiel's doctrine of personal responsibility (Ezek. 18:3–4) was irreconcilable with Moses' teaching concerning "visiting the iniquity of the father upon the children and upon the children's children" (Ex. 34:7, et al.; Mak. 24a).

According to R. \*Simeon b. Yoḥai, Ezekiel was consulted by Hananiah, Mishael, and Azariah whether to bow down to Nebuchadnezzar's idol. He referred them to Isaiah 26:20, in effect advising them to hide and flee. They refused to accept his counsel and prepared to die for the sanctification of God's name. Despite Ezekiel's tearful pleading, God refused to promise His aid, though saving them in the end (Song. R. 7:8). The Midrash reflects the conflicting opinions on the preferable Jewish reaction to the Hadrianic persecution. Ezekiel represents the moderate compromising view such as that of R. Yose b. Kisma (cf. Av. Zar. 18a), while the course of martyrdom followed by R. Akiva and R. Hanina b. Teradyon, among others (Ber. 61b; Av. Zar. 18a), was preferred by R. Simeon (a disciple of R. Akiva), who fearlessly braved death when he demanded to be instructed by his imprisoned master (Pes. 112a), and risked his life again when he openly denounced the Romans (Shab. 33b).

[Moses Aberbach / Stephen G. Wald (2<sup>nd</sup> ed.)]

#### EZEKIEL'S TOMB

According to a tradition this was located at a village 20 miles (32 km.) south of the town of Hilla in central Iraq. The Arabs refer to Ezekiel as to other prophets as "Dhū al-Kifl" (various etymologies have been suggested such as "doubly rewarded"; "guarantor"?) for the responsibility that he bore for the people of Israel. The tomb is mentioned for the first time in the epistle of R. \*Sherira Gaon (c. 986), and a detailed description is given by \*Benjamin of Tudela about 1170, \*Pethahiah of Regensburg (about the same time), and later by other travelers, Jewish and non-Jewish. It is situated in a man-made cave, covered by a cupola. Over the cupola a magnificent outer tomb is built, coinciding in its linear dimensions

with the lower tomb, and it is at this outer tomb that the pilgrims pray. In the room adjoining Ezekiel's tomb there are five tombs purported to contain the remains of five *geonim*. Another room, with a window, is referred to as "Elijah's Cave," and a third room contains the tomb of Menahem Šālīḥ \*Daniel, a well-known philanthropist whose family was entrusted with guarding the tomb. The walls bear various inscriptions, including three poems in the Arab-Spanish meter composed by the Babylonian poet R. Abdallah Khuḍayr and in honor of donors. Pilgrimages to the tomb were usually made in the late spring, especially on Shavuot. A special parchment scroll, "the Scroll of Ezekiel," was read, containing passages from the Book of Ezekiel and written on behalf of the ascent to heaven of the souls of the departed. In 1860 the Muslims made an attempt to wrest ownership of the tomb from the Jews, but a government emissary from Constantinople decided in favor of the Jews.

[Abraham Ben-Yaacob]

#### IN ISLAM

The name of the prophet Ezekiel (Ḥizqīl) is not mentioned in the \*Koran. However Sura 2:244 ("Dost thou not look at those who left their homes by thousands, for fear of death; and God said to them 'Die,' and then He quickened them again ...") alludes to Ezekiel 37:1–10. According to *Qīṣaṣ al-Anbiyā'* (Legends of the Prophets), the mother of Ḥizqīl ibn Būdhi was barren (an allusion to Hannah, the mother of Samuel the prophet), and he is therefore referred to as "the son of the old woman." It was he who resuscitated the dead who were killed by the plague (al-ṭā'ūn).

[Haim Zew Hirschberg]

#### IN THE ARTS

Ezekiel and his prophetic vision have not inspired many works of literary importance. Apart from Barbara Macandrew's *Ezekiel and Other Poems* (1871), a lyric by Emma \*Lazarus, "The New Ezekiel" (in *Songs of a Semite*, 1882), predicting the Jewish people's national revival in Erez Israel, works on the theme include a poem by Franz \*Werfel, *Ezechiel, der Prophet* (1953), a tale of the Babylonian captivity by Lieselotte Hoffmann, and Albert \*Cohen's one-act play *Ezéchiel* (1933), a dialogue representing the struggle between prophetic vision and reality.

In art the important subjects drawn from the Book of Ezekiel are the apocalyptic visions – the Chariot (Merkavah) with fiery wheels, the resurrection of the dry bones, and the locked gate. There are also some scenes showing Ezekiel undergoing various ordeals – eating a scroll, lying prostrate in expiation of the sins of Israel and Judah, and cutting his hair and beard and weighing them in the balance. The prophet is usually shown with the fiery chariot or the double wheel, taken as a symbol of the two Testaments. Sometimes he also holds a scroll reading "Porta clausa est, non aperietur" (44:2). In the third-century frescoes of the synagogue at \*Dura-Europos there is an outstanding cycle of scenes from the Book of Ezekiel. There are representations of the men slaughtering

the people of Jerusalem (9:1–6), the prophet taken up by the hair and transported to the Valley of the Dry Bones, and the winds breathing life into the bones. The sixth-century Rabbula Gospels (Laurentiana, Florence) portray Ezekiel in conjunction with Jesus and David. In Oriental art he appears in frescoes in Greece (Hosios David, Salonika, fifth century), and in the church of Bachkovo, Bulgaria (12<sup>th</sup> century), and frequently in icons in those lands influenced by the Byzantine tradition. In the West, Ezekiel is first encountered in illumination, as in the ninth-century Bible of San Paolo Fuori le Mura. The earliest Western monastic example is the fresco in San Vincenzo de Galliano (c. 1007). There is a 12<sup>th</sup>-century statue by Benedetto Antelami on the facade of Borgo San Donnino, Fidenza, and a cycle in the lower church of Schwarzhendorf, near Bonn, Germany. Thirteenth-century portrayals in French churches are on the portal of Saint-Firmin, Amiens, on a window, at Bourges, and in La Sainte-Chapelle, Paris. The vision of the divine chariot also appears in Lesnovo, Serbia (14<sup>th</sup> century), and in the Pitti Palace, Florence. The Valley of the Dry Bones appears in miniature painting from the ninth to the 14<sup>th</sup> centuries in both East and West; it culminates in the Signorelli fresco in the cathedral of Orvieto and the Tintoretto painting in the Scuola di San Rocco, Venice. Michelangelo's famous representation of Ezekiel among other prophets of Israel appears on the ceiling of the Sistine Chapel (1508–10). In the early 19<sup>th</sup> century the English poet and artist William Blake produced a fine engraving and a painting of the prophet.

Ezekiel's vision, in contrast to that of Isaiah, mentions only "sounds" and "voices," but even this unspecific conception would seem to call for some musical embodiment which, however, must inevitably fall short of the sublime suggestions in the biblical source. This is, for example, true of cantorial interpretations of the *Ve-ha-Ofanim* prayer and of the many *ofan* poems (see *\*Piyyut*). In art music the major composers have generally avoided the subject of Ezekiel's vision, whereas that of Isaiah (with its explicit "tonal" description and established place in Christian liturgy) offers far more promising material to the composer. The two visions, combined in the Prologue to Goethe's *Faust*, have an ambitious setting in the prologue act of Arrigo Boito's *Mefistofele* (1868, 1875<sup>3</sup>). The Valley of the Dry Bones is described by Franz Liszt in his *Ossa arida* for choir and organ (1879) and a symphonic work, *The Valley of Dry Bones*, was composed by A.W. Binder (1935). The biblical text has also been set by several Israel composers, generally for choir. In a very different musical tradition the Afro-American spiritual "Ezekiel Saw the Wheel," with its simple rhythmic tune, is interesting for its text: this swiftly turns from the description of "a wheel in a wheel – way up in the middle of the sky" to criticism of the behavior of certain members of the congregation. Another popular spiritual, "Dry Bones," which has often been effectively arranged for vocal or instrumental ensembles, transforms the terrifying biblical scene into a syncopated, jocular description of the gradual joining together of the bones and of their subsequent separation in reverse order.

**EZEKIEL, ABRAHAM EZEKIEL** (1757–1806), English artist, son of the silversmith Abraham Ezekiel (d. 1799) who helped to build the synagogue in Exeter in 1763 together with his brother Benjamin. The son, practicing as a silversmith, watchmaker, and scientific optician, was a successful miniature and portrait painter enjoying a high reputation locally. He also engraved portraits by Opie (1783), Reynolds (1795), and others and executed several bookplates.

His son, SOLOMON (Isaac) EZEKIEL (1781–1867), a plumber and tinsmith by trade, settled in Penzance in Cornwall. He founded "The Penzance Hebrew Society for Promoting the Diffusion of Religious Knowledge," printed (1844–47) the lectures on Abraham and Isaac which he gave before it, and published an incisive letter (1820) which prevented the establishment of a Conversionist Society in Penzance.

[Cecil Roth]

**EZEKIEL, APOCRYPHAL BOOKS OF.** Josephus (Ant., 10:79) appears to refer to two books of Ezekiel, one of which was presumably an apocryphal work. Reference to such a work is also made in the stichometry of Nicephorus, patriarch of Constantinople (806–15), and the pseudo-Athanasian canon list. Fragments of an Ezekiel book are preserved in various ancient sources. The longest is the story of the blind man and the lame found in Epiphanius (c. 315–402; *Adversus Haereses*, 64:70, 5, ed. Hall). It is a parable designed to prove the resurrection of both body and soul by demonstrating their interdependence. A lame and a blind man conspired together to rob a king's orchard, the blind man using his legs to transport the lame man who guided his steps. An almost identical story serves a similar function in rabbinic sources (Sanh. 91a–b; cf. Mekh. Shirata, 2; Lev. R. 4:5). A second fragment is to be found in Clement of Rome's (Pope Clement I 92?–100) *Epistula ad Corinthios*, 83 (PG, 1 (1886), 226), opening "Repent, House of Israel, of your lawlessnesses." This fragment is of a strongly prophetic character based on the language of biblical prophecy. It is also quoted in part by Church Father Clement of Alexandria (*Paedagogus* 1:91, 2; PG, vol. 7, 357). A third tiny fragment is preserved in Clement of Alexandria's *Quis dives salvetur?* (40:2; PG, 9 (1890), 645) and it may belong to the same "prophetic" Ezekiel apocryphon. It seems to be difficult, however, to conceive of the story of the lame and the blind as belonging to the same work, and either an addition or two Ezekiel apocrypha are involved. Another short sentence attributed to Ezekiel occurs in various forms. In Epiphanius, *Adversus Haereses* (30:30, 1; PG, 41 (1863), 458), the form is found "and the heifer shall bear and they shall say, 'She has not borne.'" This is employed in Christological contexts and it is difficult to discern its original import. Various scholars also assign the above quotation in Clement of Rome *Epistula ad Corinthios* (1:23; PG, vol. 1, p. 260) to an Ezekiel book. Some fragments of a Greek Ezekiel apocryphon were discovered on a papyrus and published by Campbell Bonner in 1940. These fragments include one passage which is quoted by Clement of Alexandria (*Paedagogus*, 1:84, 2–4; PG, 8 (1891), 512) as from Ezekiel, which confirms their identification. This document too bears the prophetic stamp observed in some of the above quotations and it may derive from the same work.

**BIBLIOGRAPHY:** M.R. James, *Lost Apocrypha of the Old Testament* (1920), 64–70; Höll, in: *Aus Schrift und Geschichte, Theologische Abhandlungen Adolf Schlatter* (1922), 85–98; C. Bonner, *Studies and Documents*, 12 (1940), 183 ff.

[Michael E. Stone]

**EZEKIEL, JACOB** (1812–1899), U.S. communal leader. Ezekiel was born in Philadelphia, Pennsylvania, and was apprenticed as a bookbinder. In 1833 he moved to Baltimore, where he helped to establish the Hebrew Benevolent Society. The next year he moved to Richmond, Virginia, where he entered the dry goods business, and became active in Jewish affairs. In 1841 Ezekiel took issue with President Tyler's ref-

erence to Americans as a "Christian" people, and Tyler acknowledged Ezekiel's protest as well founded. In 1845 Ezekiel protested local ordinances that severely punished violators of the Sunday blue laws and brought about their repeal. A revised code adopted in Virginia in 1849, as a result of Ezekiel's campaigning, protected citizens who observed the Jewish Sabbath from incurring penalties for violating Sunday laws. Ezekiel was a leading protester against seeming U.S. acquiescence to Swiss anti-Jewish discrimination which helped to bring about a modification of the U.S.-Swiss treaty in 1857. Moving to Cincinnati in 1869, Ezekiel served as secretary to the board of governors of Hebrew Union College from 1876 to 1896. His son was the sculptor Moses Jacob \*Ezekiel, whose *Ecce Homo*, a bronze sculpture of a suffering Christ, done about 1899, was included in the exhibition "The Hand and the Spirit; Religious Art in America, 1700–1900," which was shown at the University Art Museum, Berkeley, in 1972.

**BIBLIOGRAPHY:** H.T. Ezekiel and G. Lichtenstein, *Jews of Richmond* (1917), 117–8; AJHSB, 9 (1901), 160–3.

**EZEKIEL, MORDECAI JOSEPH BRILL** (1899–1974), U.S. agricultural economist. Ezekiel, who was born in Richmond, Virginia, received a bachelor of science degree in agriculture from Maryland Agricultural College (1918), a master of science degree from the University of Minnesota (1923), and a Ph.D. in economics from the Robert Brookings Graduate School of Economics and Government (1926).

Ezekiel spent his career in federal government and United Nations service. He was statistical assistant in agriculture to the U.S. Census Bureau from 1919 to 1922, when he joined the farm management division of the Department of Agriculture. From 1930 to 1933 he was assistant chief economist of the Federal Farm Board. In 1932 he formulated the details of what was to become the Agriculture Adjustment Administration and helped prepare a draft of the Agricultural Adjustment Act. Ezekiel was also involved with the founding conferences and early activities of what was to become the United Nations Food and Agriculture Organization. From 1933 to 1944 he was economic adviser to the secretary of agriculture. He returned to the Department of Agriculture for two years and then spent 15 years in the economic division of the Food and Agriculture Organization of the UN (1947–62), the final year as assistant director-general. In 1962 he became chief of the UN division of program control staff in the State Department's agency for international development. He retired from the FAO in 1962 to take a position with the United States Agency for International Development. He served as chief of the United Nations Division of this agency until his retirement in 1967. During the last years of his life, Ezekiel took occasional assignments as consultant. In 1969 he worked for several months with the FAO, helping to prepare a report entitled "Indicative Plan for World Agricultural Development."

Ezekiel's major interests besides agricultural economics were economic development and econometrics, subjects on which he contributed many articles to professional peri-

odicals and wrote a number of books. Among his published works are *Methods of Correlation Analysis* (1930, 1941<sup>2</sup>); \$2,500 a Year – from Scarcity to Abundance (1936); *Jobs for All Through Industrial Expansion* (1939); and the F.A.O. publication *Uses of Agricultural Surpluses to Finance Economic Development in Underdeveloped Countries – A Pilot Study in India* (1955). He was also co-author and editor of *Towards World Prosperity* (1947).

[Joachim O. Ronall / Ruth Beloff (2<sup>nd</sup> ed.)]

**EZEKIEL, MOSES** (1891–1969), Indian botanist. Born in Nagpur, Ezekiel was economic botanist to the government of Gwalior (1918–22), professor of botany at Wilson College, Bombay, and later principal of the College of Science at Nadiad, Gujarat (1947–50). From 1952 he headed the biology department at Petlad College. His works include *Animal Histology* (1927), *A Handbook of Plant Sociology* (1947), and *Three Great Evils – Contamination, Adulteration and Poisoning of Foodstuffs* (1947). Ezekiel, who was active in Jewish life, also wrote *The History and Culture of the Bene-Israel in India* (1948).

[Mordecai L. Gabriel]

**EZEKIEL, MOSES JACOB** (1844–1917), U.S. sculptor. Ezekiel was born in Richmond, Virginia, and his sculpture is imbued with elements of his Southern and Jewish roots. As a youth he modeled *Cain Receiving the Curse of the Almighty* and *Moses Receiving the Law on Mount Sinai*, both of which are now lost. He attended the Virginia Military Institute, and served in the Confederate army during the American Civil War. After the war, he studied art in Cincinnati and Berlin in the late 1860s.

His bas-relief *Israel* (1873), in which Israel is represented allegorically, won the Michael Beer Prix de Rome. A 1904 replica of the lost original resides at the Skirball Museum Cincinnati at Hebrew Union College. The first foreigner to receive the prize, Ezekiel embarked on two years of study in Rome beginning in 1874, where he then settled permanently. His studio in the Baths of Diocletian became a fashionable gathering place for artisans of all persuasions as well as royalty and politicians. The B'nai B'rith commissioned his enormous marble group *Religious Liberty* for the Centennial Exposition of 1876 (National Museum of American Jewish History, Philadelphia). This was one of the earliest of several monuments he made for the United States as well as for European countries. In 1888 he designed the seal for the recently established Jewish Publication Society of America. Inscribed in the seal, which shows Jerusalem with a Shield of David, is the motto "Israel's mission is peace." He also executed portrait busts, including bronze heads of Robert E. Lee (c. 1886, Virginia Military Institute Museum, Lexington) and Rabbi Isaac Mayer Wise (1899, Hebrew Union College, Cincinnati). The king of Italy knighted Ezekiel in 1907. Although he lived most of his adult life in Rome, his will specified that his body return to America after his death. He was buried at the foot of a Confederate memorial he designed for Arlington National Cemetery (1914).

His autobiography, *Memoirs from the Baths of Diocletian*, was published posthumously in 1975.

**BIBLIOGRAPHY:** D. Philipson, "Moses Jacob Ezekiel," in: *Publications of the American Jewish Historical Society*, 28 (1922), 1–62.

[Samantha Baskind (2<sup>nd</sup> ed.)]

**EZEKIEL, NISSIM** (1924–2004), Indian poet, critic, social commentator, and editor. Ezekiel was a member of Bombay's \*Bene Israel community. His father was a distinguished editor, professor of botany and zoology at Bombay University, and principal of a number of colleges. Nissim Ezekiel was the father of post-Independence Indian poetry. Born in Bombay (Mumbai) he studied first at Bombay University, taking his M.A. in 1947, and then at Birkbeck College, London. He later worked on *The Illustrated Weekly of India* (1952–54) and later headed the English department of the Bombay College of Arts, where he was professor of English and reader in American literature. Ezekiel published literary reviews and verse collections, including *A Time to Change and Other Poems* (1957), *The Third* (1958), and *The Unfinished Man* (1960). Some of his verse appeared in British poetry journals. He was brought up in a secular milieu and even as a child preferred the poetry of T.S. Eliot, W.B. Yeats, and Ezra Pound to the English poetry being written in India. His poetic engagements paralleled those of Ted Hughes, Philip Larkin, and other postwar British poets but he developed his own voice marked by tenderness and irony. His use of Indian English vernacular after the 1960s gave his poetic language a rich humorous seam to draw on. Ezekiel received the Sahitya Akademi award in 1983 and the Padma-Shri, India's highest civilian honor, in 1988.

[Tudor Parfitt (2<sup>nd</sup> ed.)]

**EZEKIEL BEN REUBEN MANASSEH** (d. 1851), Baghdad philanthropist who distributed large amounts of money for charitable purposes in Iraq and Erez Israel. In 1840 Ezekiel established the Baghdad rabbinical academy, named Bet Zilkha and also Midrash Abi Manshi after its benefactor. The yeshivah was first headed by R. Abdallah \*Somekh and provided the students with all their needs. Ezekiel also built in Baghdad the "new synagogue" in 1847, the "small synagogue" in 1849, and Kneset Yehezkel in Safed, which was named after him (it now bears the name of R. Moses \*Alshekh). He also donated half of the construction costs of the Bet Ya'akov synagogue, better known as Hurbat R. Yehudah he-Hasid, in the Old City of Jerusalem. After his death, his sons Manasseh and Sason continued his philanthropic work.

[Abraham Ben-Yaacob]

**EZEKIEL FEIVEL BEN ZE'EV WOLF** (1755–1833), Lithuanian preacher, known as the "maggid of Deretschin." Ezekiel was born in Planaga, Lithuania. In his youth he was appointed preacher in his native town and, subsequently, in Deretschin. At the age of 19 he was an itinerant preacher in the Jewish

communities of Galicia, Hungary, and Germany (where he remained for some time in Breslau). In Vilna he made the acquaintance of Elijah b. Solomon (the Gaon of Vilna) and through him, of Solomon Zalman of Volozhin, brother of \*Ḥayyim b. Isaac of Volozhin. Solomon made a deep impression upon Ezekiel, who wrote his biography (*Toledot Adam*, in 2 parts (Dyhernfurth, 1801–09); frequently reprinted). This contains details of Solomon's life and his teachings as well as stories current about him, and is a unique work for its period, reflecting the widening of the horizons of Hebrew literature in Lithuania at the end of the 18<sup>th</sup> century. Ezekiel sharply censures those rabbis who neglect study of the Scriptures as a result of their preoccupation with the Talmud and codes. In 1811 Ezekiel accepted an invitation to become the “*maggid*” (official preacher) of Vilna, a post in which he served until his death.

Other works by Ezekiel are *Musar Haskel* (Dyhernfurth, 1790), an exposition of *Hilkhot De'ot* and *Teshuvah* of Maimonides, and a commentary *Be'urei Maharif* (i.e., Morenu ha-Rav Ezekiel Feivel) on the *Midrash Rabbah* to Genesis, Exodus, and Leviticus, which was published in Vilna together with the text in 1878. A third volume of *Toledot Adam* remains unpublished.

**BIBLIOGRAPHY:** H.N. Maggid-Steinschneider, *Ir Vilna*, 1 (1990), 87–90; S.J. Fuenn, *Kiryah Ne'emanah* (1915<sup>2</sup>), 241–4; *Yahadut Lita*, 3 (1967), 54.

[Abraham David]

**EZEKIEL THE POET**, Hellenistic Jewish writer of tragedies. \*Eusebius quotes from a unique Greek tragedy on a biblical theme, entitled *Exagoge* (“The Exodus”), written by Ezekiel “the writer of tragedies” (*Praeparatio Evangelica* 9:28), giving \*Alexander Polyhistor as his source. The fragments are the only surviving example of a Jewish drama in antiquity that is consciously patterned after Greek drama.

The play begins with a long soliloquy by Moses containing an exposition of the events that have led up to the first scene. Moses tells how the Jews came to Egypt, how they were oppressed, and how Moses was cast into the water and saved by Pharaoh's daughter (1–31). He then tells how he learned about his childhood, avenged a kinsman who was being beaten by an Egyptian, and fled from Egypt for fear of Pharaoh's retaliation (32–58). The action of the play apparently begins with Moses watching the seven fair daughters of Raquel (“Reuel” – Jethro, cf. Ex. 2:18, 18:1) and with Zipporah telling him that he is in the land of Libya, which “is held by Ethiopians” but ruled by her father (59–65). Later, in reply to a question of a certain Chum, Zipporah says that she is wedded to the stranger (66ff.). Moses tells of a dream in which he saw a kingly person seated on Mount Sinai. In his dream, the throne was offered to Moses and he accepted it (68–82). Moses' father-in-law interprets this dream to mean that Moses will be a leader and a judge, who will know all things past, present, and future (83–89). Moses then sees the burning bush and inquires about it (90–95). God tells Moses to remove his shoes and have no

fear, for He is God. He then appoints Moses His messenger to Pharaoh to tell him that he will lead the people of Israel out of Egypt (96–112). Moses complains that he lacks the eloquence for the task (113–5), at which God says that Aaron will speak for him (116–9). God then tells Moses to cast down his rod and turns it into a snake. He tells him to put his hand into his bosom and it (his hand) becomes leprous (120–31). There is a description by God of the plagues that He intends to send on the Egyptians and He tells Moses to instruct the Hebrew people about the Passover (132–92). A messenger relates the destruction of the Egyptians and how the Hebrews were saved (193–242). The last two fragments depict the oasis at Elim with its 12 springs of water and its 70 palm trees (243–53) and the wonderful bird that appeared there (254–69). This latter description is probably in the voice of a messenger sent by Moses to find a resting place.

From this summary it can be seen how closely the author follows the biblical account in the Book of Exodus. The vocabulary, too, reflects the Septuagint. Some elements, however, seem to be original to the author, or else derive from aggadic material, as, for example, the character of Chum in line 66ff.; the dream of Moses in line 68–82; the details of the destruction of the Egyptians, line 193–242; and the appearance of the bird (the Phoenix?) in lines 254–69.

The 269 verses of iambic trimeters that have been preserved represent a considerable portion of the play. This indicates that the author, influenced directly or indirectly by Euripides, was fluent in Greek and adept at writing verse. Aside from being a late example of ancient Greek tragedy, the play may be seen as an anticipation of the later medieval passion plays. Like these its primary function was probably to exploit the existing profane form as a vehicle toward familiarizing its audience with sacred history. The dependence of the work on the Septuagint means that it was written not earlier than the beginning of the second century B.C.E., while the latest date is the middle of the first century B.C.E., when it is mentioned by Alexander Polyhistor. Eusebius' reference to Ezekiel “the writer of tragedies” (an epithet also found in Clement of Alexandria) suggests the existence of more examples of this genre by the same author.

[Marshall S. Hurwitz]

**EZ ḤAYYIM**, an Orthodox educational institution in Jerusalem, including a kindergarten, a *talmud torah*, a preparatory yeshivah (“*yeshivah ketanah*”), a yeshivah, and a \**kolel*. During the Turkish period Ez Ḥayyim served as the central Ashkenazi educational institution of the old *yishuv*, particularly for the youth of the Perushim community (the descendants of the disciples of Elijah, Gaon of Vilna), the ḥasidim having established the Ḥayyei Olam Yeshivah.

Ez Ḥayyim was established as a *talmud torah* for orphans in the early 1850s at a meeting held in the women's gallery of the "Menahem Zion" Bet Midrash in the courtyard of the Ḥurvah Synagogue, and reflected the growth of the Ashkenazi community, particularly with regard to children. Its budget was originally entirely dependent upon direct allocations from the Kolel Jerusalem in Vilna and R. Samuel \*Salant was appointed its head. In 1855, a "Ḥevrat Talmud Torah" was founded in Jerusalem which assumed responsibility for the institution under the leadership of R. Salant and R. Isaiah \*Bardaki. The Ḥevrah imposed indirect taxes on the Ashkenazi community, in the form of a fixed percentage from weddings, circumcisions, and synagogue offerings, to augment those funds which were received from abroad.

The regulations provided inter alia that if a pupil showed no learning ability by the time he reached the age of 13 he was to be taught a trade, the leaders of the *yishuv* thus accepting, at least in principle, the idea of occupational training.

In 1858 there arrived in Jerusalem R. Saul Benjamin Ha-Kohen Radzkowitz, a man of considerable organizational ability and imagination, who took upon himself the task of establishing Ez Ḥayyim on a firm footing and extending its activities. His unconventional activities, however, gave rise to fears on the part of the conservative leadership that the institution might collapse and he was dismissed, a step which gave rise to an unusually violent controversy.

At first the curriculum was strictly confined to religious subjects, which led to considerable criticism, as a result of which two hours daily were devoted to writing and arithmetic, in 1867. The critics were still not satisfied. Ez Ḥayyim came to be regarded as the symbol of old-fashioned conservatism and in response to its opposition to changes in the curriculum the first modern schools in Jerusalem were opened (Lemel, the Alliance Israélite, and Evelina de Rothschild, etc.).

World War I cut off the sources of income from abroad and the British occupation in 1917 found the institution in a perilous state. Funds from the United States were in the hands of the Zionists, who opposed its educational approach in principle. The Committee of Delegates, which had control of the distribution of aid to the Jews of Erez Israel, applied great pressure on Ez Ḥayyim to institute comprehensive reforms in methods and curriculum, including Hebrew as the language of instruction. The pressure was resisted, and after much effort Ez Ḥayyim succeeded in establishing anew its connections with the Diaspora, thus ensuring its continuation.

Up to and including the beginning of the Mandatory period Ez Ḥayyim was one of the three institutions which had the deciding voice in the election of the leadership of the old *yishuv*, the other two being the Kolelim Committee and the Bikkur Ḥolim Hospital. In 1919 it was one of the deciding factors in the election of Rabbi A.I. \*Kook as chief rabbi of Jerusalem.

During the Mandatory period the prestige of Ez Ḥayyim diminished even among the old Ashkenazi *yishuv* with the

founding of new schools and yeshivot. Nevertheless the energetic leadership of R. Jehiel Michel \*Tykocinski ensured not only its survival but even its expansion. In 1929 its center moved to a new and spacious building adjacent to the Maḥaneh Yehudah market while branches were established in all the old suburbs of Jerusalem.

Despite its curriculum certain changes have taken place, the most outstanding of which is the use of Hebrew in the branches in non-religious subjects, although in the main building Yiddish is still the language of instruction even in non-religious subjects.

As of June 2005, Ez Ḥayyim had some 1,000 pupils, ages three to seventeen. Located on three campuses around Jerusalem, including the original building near the Maḥaneh Yehudah market, Ez Ḥayyim also had a *kolel* of approximately 150 young married men (*avrekhim*) who received financial support. It had a dining room, an aid fund for the needy, and a library of some 20,000 volumes.

[Menachem Friedman]

**EZINE**, district of Çanakkale, Turkey. Ezine was situated in the vicinity of many important cities like Troy, Neadria, and Alexandria Troas. The Ottoman domination in this region began in the 1350s. Ezine became an important settlement point owing to its fertile land and trade routes. The first Jewish presence in Ezine can be traced back to 1845 when five "alien" (*yabancıyan*) Jews were reported. Overpopulation of the Jews in Çanakkale brought some families to Ezine Centrum as well as to other parts of the district, such as Bayramiç, Kumkale, and Yenişehir in the late 19<sup>th</sup> century. The Jews lived in a small quarter composed of 40 households and today known as *Yahudi Sokağı*. In 1894 there were 130 Jews in Ezine, 60 in Bayramiç, 24 in Kumkale, and 13 in Yenişehir. During the Gallipoli Campaign of World War I, the Jewish population in Ezine temporarily increased due to mass flight from the battlefields. The Jewish community in Ezine was attached to Çanakkale for religious purposes until the Gallipoli Campaign. Thus, it had neither a synagogue nor a private cemetery. Ezine Jews were engaged in peddling, export of grain, bonito, leather, and cotton, butchery, jewelry, green groceries, money-changing, and viniculture. The Hakim, Kohen, Yuday, Ruso, and Elinda families were the best known Jewish families in Ezine. After the establishment of the Turkish Republic, the Jewish population in Ezine began to diminish. Official records show that in 1927 there were only 31 Jews. The small Jewish presence lasted until the 1960s. Among the Jewish cultural heritage are a few Jewish houses and one synagogue whose building later served as a place to remove seeds from cotton and today is abandoned.

[M. Mustafa Kulu (2<sup>nd</sup> ed.)]

**EZION-GEBER** (Heb. עֶזְיוֹן גִּבְרָה (גִּבְרָה)), first mentioned in the Bible as one of the camping sites of the Israelite tribes on their way to Canaan (Num. 33:35–36).

As such, it is mentioned next to Elath in Deuteronomy 2:8. From the biblical narrative of the Exodus (Num. 21:4), it may be deduced that Ezion-Geber was somewhere on the Gulf of Elath. Its location on the Gulf of Elath and function as a port and shipyard during the reign of Solomon is clearly stated in 1 Kings 9:26. 11 Chronicles 8:17 indicates that it was not Solomon who founded Ezion-Geber and Elath. According to archaeological evidence it was most probably the Edomites or Midianites as early as the end of the Late Bronze Age (see \*Timna). The port and shipyard of Ezion-Geber are again mentioned in connection with the unsuccessful attempt by Jehoshaphat in the ninth century B.C.E. to renew the gold route to Ophir (1 Kings 22:49). After this, it disappears from the biblical annals, and in the eighth century B.C.E., there is mention only of the struggle between the kings of Judah and Edom for the possession of the city of Elath.

In 1934 F. Frank discovered Tell al-Khalayfa, a low mound approximately 1/3 mi. (c. 0.6 km.) north of the shores of the Gulf of Elath, between modern Eilat and Akaba, and he identified it with Ezion-Geber. N. Glueck subsequently excavated the site (1938–40) and identified it with Ezion-Geber and Elath, assuming a change of the former name to Elath in the days of the kings of Judah. According to him, the site was not only the Solomonic port, but also an important industrial center for the manufacture of copper and iron tools, which served as export goods for the trading ventures of Solomon. Recent excavations in the Arabah and the discovery of an early Iron Age I port installation in the bay and on the island Jazīrat Far'ūn, 7 1/2 mi. (12 km.) south of modern Eilat, have suggested a reconsideration of the date and character of the ruins of Tell al-Khalayfa, and consequently of the location of Ezion-Geber. It has become clear that the site was fortified, perhaps serving as a caravanserai, and not a copper smelting plant, and an identification with the ancient city of Elath has been suggested. It has been proposed that the port and shipyard of Ezion-Geber should be identified with the island of Jazīrat Far'ūn, the only natural anchorage in the Gulf of Elath. Extensive casemate walls and a well-built port testify to its maritime use in early biblical days. From archaeological discoveries in the southern Arabah (1969), it can be deduced that long before Solomon's ships were assembled at Ezion-Geber–Jazīrat Far'ūn, Egyptian mining expeditions on their way to the Arabah copper mines used Ezion-Geber as their harbor.

[Beno Rothenberg]

**EZOBI, JEHOSEPH BEN HANAN BEN NATHAN** (13<sup>th</sup> century), *paytan*. Ezobi was born and lived in Provence (his name signifies that his family came from the town of Orange, close to Avignon) and probably taught in Perpignan. Abraham \*Bedersi praises him as his master and as a talented poet (*Herev ha-Mithappekhet*, verse 148), and Todros b. Judah Abulafia in a hymn in his honor writes: “He is known as Ezov [hyssop]; how pleasant is the hyssop – even the cedars cannot obscure him” (*Gan ha-Meshalim ve-ha-Hidot*, 2 pt. 1 (1931), 46). “*Kāarat ha-Kesef*” (“The Silver Plate”), an educational, ethical, and religious poem, is Ezobi's best-known hymn (printed by Steinschneider, 1860, and in Joseph Ḥayyim ben Elijah al-Ḥakam, *Nifla'im Ma'asekh... Ma'asiyot*, 1989), dedicated to his son on the day of his wedding. The name derives from its 130 verses – equal in numbers to the 130 \*shekels, the weight of the silver plates offered by the princes of the tribes to the Tabernacle (Num. 7:13ff.). In this poem, Ezobi appeals to his son to follow the ways of the Torah. He warns him not to be misled by Greek philosophy, and encourages him to learn grammar and poetics, to study the Talmud and its commentators, such as Alfasi and Maimonides, and to follow his own example and become a liturgist. He also enjoins his son not to favor the wealthy over the poor. In an appended note, he requests his son to read this poem every week. The poem was translated into Latin by \*Reuchlin (Tuebingen, 1512–14). Another translation was published by Jean Mercier (Paris, 1561). I. Freedman published an English translation (1895/6); M. Forcano translated it into Catalan (1997). Other poems by him include “*Aromem El Ram*,” a strophic hymn (*zulat*) for the seventh day of Passover on the splitting of the Red Sea; “*Aggid Hasdei ha-El*,” a strophic hymn for Shavuot; “*Az me-Rosh Mikdemei Erez*,” another *zulat* on the death of Moses, for Simḥat Torah; “*Ezkor Yamim mi-Kedem*,” in commemoration of the \*Ten Martyrs; a *seliḥah*, “*Ayeh Na Ḥasadekha Adonai?*” (of uncertain authorship), etc. Some of his poems have not been published, for example a *bakkashah* studied by B. Bartikva that includes the letter *mem* in every word. Ezobi plays skillfully with motifs taken from the Midrashim, adding some irony and personal humor. Schirmann compares the qualities of his poems with the best works of the early *paytanim*. *Sefer Millu'im* (“Book of Addenda”), known only from a quotation in the responsa of R. Solomon b. Abraham \*Adret (Constantinople, 1516, no. 25), is a homiletic commentary, in prose, on the 613 commandments.

His brother Eleazar, also a poet, exchanged poems with Abraham Bedersi; he was born in Carpentras and lived in Béziers. Another brother, Meshullam, settled in Segovia, Castile, where he wrote in 1279 a short work on Hebrew grammar, *Aguddat Ezob* (Ms. Hebr. 992 of the Bibl. Nat., Paris, unpublished, see C. del Valle, in: *Helmántica*, 163 (2003), 191–205), based in the grammars of Jonah ibn Janaḥ and David Kimḥi.

It is probable that he also wrote the commentary on the Torah, *Sefer ha-Ezobi*, still in manuscript.

[Angel Sáenz-Badillos (2<sup>nd</sup> ed.)]

**EZRA** (Heb. **עֲזָרָה**; “[YHWH] helps”), priest and scribe who played a major role in the rebuilding of the Temple, after the return from the Babylonian exile.

### The Man and His Mission

Ezra whose name means “help” (possibly a shortened form for **הַיְיָ עֲזָרָה** “The Lord has helped,” the name of two of his ancestors (7:1, 3)) was, along with Nehemiah, one of the two notable figures of the post-exilic community in Judah (sixth–fifth century B.C.E.). His work is known from the last three chapters (7–10) of the book that bears his name, and from chapter 8 of the book of Nehemiah (see \*Ezra and Nehemiah, Book of). Ezra was both a priest, whose ancestry is traced back to Aaron (7:1–5), and a scribe “well versed in the law of Moses” (v. 6, 11). Just as another Persian king, \*Cyrus, had done in his time (538), so also one of his successors, \*Artaxerxes I (465–424), issued a royal edict to Ezra granting permission for Jews to go with him to Jerusalem. Ezra was permitted to bring with him gold and silver donations from other Jews, and regular maintenance expenses of the Temple were to be provided from the royal treasury. Ezra’s mission was “to expound the law of the Lord” and “to teach laws and rules to Israel” (v. 10). For this purpose he was granted not only a royal subsidy, but he was also empowered to appoint judges, enforce religious law, and even to apply the death penalty. In response to critics who argue that such a concern by a Persian king for a foreign cult would be unlikely, the Passover papyrus issued by \*Darius II in 419/18 to the Jews at Elephantine in Egypt regarding the date and method for celebrating the Passover (Porten) has often been cited. Nevertheless, the question of imperial authorization of Jewish law by the Persian Empire continues to be a subject of debate (Watts).

### Date

The date of Ezra is problematic as is his relationship with Nehemiah, because apart from Neh. 8:9, and two other minor references (Neh. 12:26, 36), the two are never mentioned together. According to their respective books, Ezra assumed his mission in the seventh year of Artaxerxes (458) and Nehemiah came in the 20<sup>th</sup> year of the same king (445). This would mean that Ezra, who came at the express command of Artaxerxes to

implement and teach the law, did not conduct his first public reading of the Law until 13 years later. Another problem for the biblical chronology is that Ezra found many people in Jerusalem but, according to Nehemiah, in his time, Jerusalem was unpopulated. For these reasons and others, some scholars believe Ezra came to Jerusalem much later, either in the 37<sup>th</sup> year of Artaxerxes I (428) or in the seventh year of Artaxerxes II (397) (see discussion in Klein).

### His Journey to Jerusalem

Ezra’s four month journey to Jerusalem is described by Ezra in a first-person memoir. After listing the names of the leaders returning with him, Ezra discovers there were no Levites in his party so he had to muster up 38 Levites from some Levitical families. Another problem was security. Because Ezra had originally made a declaration of trust in God before the king, he felt it inappropriate to request from him the customary escort. Thus he accounted the party’s safe arrival in Jerusalem with all its treasure intact as a mark of divine benevolence.

### Ezra’s Reaction to Reports of Intermarriage

When Ezra arrived in Jerusalem he was informed that some people, including members of the clergy and aristocracy, had contracted foreign marriages. Immediately upon hearing this news Ezra engaged in mourning rites, tore his garments, and fasted and, on behalf of the people, confessed their sins and uttered a prayer of contrition. At the initiative of one of the leaders of the community Ezra was urged to take immediate action. An emergency national assembly was convened, and Ezra addressed the crowd in a winter rainstorm calling upon the people to divorce their foreign wives. The assembled crowd agreed to Ezra’s plea, but because of the heavy rains and the complexity of the matter (Ezra’s extension of legal prohibitions of marriages that had previously been permitted), they requested that a commission of investigation be set up. After three months the commission reported back with a list of priests, Levites, and Israelites who had intermarried. It is often thought that Ezra’s action insisting on the divorce of foreign wives and their children, together with Nehemiah’s concern that the children of these foreign women could not speak the language of Judah (Neh. 13:24), represented a shift in Israelite matrimonial law. Previously offspring of intermarriage was judged patrilineally; now it was to be on the matrilineal principle (for a different view, see Cohen).

### The Reading of the Torah

Chapter 8 of the book of Nehemiah records that Ezra publicly read the Torah on the first day of the seventh month (Rosh Ha-Shanah). He stood upon a platform with dignitaries standing on his right and left. The ceremony began with an invocation by Ezra and a response by the people saying “Amen, Amen” (v. 6). During the reading the people stood while the text was made clear to them (or translated for them (into Aramaic)) by the Levites (van der Kooij). The people were emotionally overcome by the occasion and wept. However, they were enjoined not to be sad rather to celebrate the day joyously with eating,

drinking, and gift giving. The day after the public reading, a group of priests and Levites continued to study the Torah with Ezra and came across the regulations for observing the feast of Tabernacles on that very month. A proclamation was issued to celebrate the festival which was done with great joy, and the Torah was again read publicly during the entire eight days of the festival.

### Significance of Ezra's Torah Reading

Ezra's reading of the Torah inaugurated a new element in Jewish life whereby the Torah was read and explicated on regular occasions in public. This public reading also led to the democratization of knowledge of the Torah among Jews, since prior to this event most parts of the Torah were under the exclusive provenance and control of the priests (Knohl).

[David Marcus (2<sup>nd</sup> ed.)]

### In the Aggadah

Ezra was still studying under \*Baruch b. Neriah in Babylonia when Daniel and his companions left for Palestine. He regarded the study of the Torah as of greater importance than the task of reconstructing the Temple. Therefore it was only after his master's death that Ezra decided to gather the exiles who had not gone up earlier with Daniel and who desired to return to the Holy Land and rebuild the Temple in Jerusalem (Song R. 5:5). Ezra had another reason for remaining in Babylon after Daniel's departure: he was considerate of the feelings of Joshua the son of Jehozadak, of the high-priestly family of Zadok. Joshua would have been embarrassed by Ezra's presence in the Land of Israel, in view of the latter's greater qualification for the office of high priest. Ezra, therefore, remained in Babylon until Joshua's death. After Ezra went to the Land of Israel, he was appointed high priest. He had carefully worked out his own pedigree before he left Babylonia (BB 15a) and in order to insure the purity of those remaining there he took with him all those of doubtful or impure descent (Kid. 69b). He was so zealous in spreading the Torah, that rabbis said of him, "If Moses had not anticipated him, Ezra would have received the Torah" (Tosef., Sanh. 4:7). He restored and reestablished the Torah that had been almost completely forgotten (Suk. 20a). He ordained that public readings from the Torah take place not only on Sabbaths, but also on Mondays and Thursdays (Meg. 31b; TJ, Meg. 4:1, 75a). He also had the Bible rewritten in "Assyrian" characters, leaving the old Hebrew characters to the Samaritans (Sanh. 21b). He established schools everywhere to fill the existing needs and in the hope that the rivalry between the institutions would redound to the benefit of the pupils (BB 21b–22a). He also enacted the ordinances known as "the ten regulations of Ezra" (see BK 82a–b; TJ, Meg. loc. cit.) and together with five of his companions, compiled the Mishnah (tractate *Kelim*, in A. Jellinek, *Beit ha-Midrash*, 2 (1853), 88). Aside from the book which bears his name, Ezra wrote the genealogies of the Book of Chronicles up to his own time (BB 15a) and had a hand in writing the Book of Psalms (Song R. 4:19). The rabbis identify him with the prophet Malachi (Meg. 15a). He is one of the five

men whose piety is especially extolled by the rabbis (Mid. Ps. to 105:2).

### In Islam

Muhammad claims (Sura 9:30) that in the opinion of the Jews, 'Uzayr (Ezra) is the son of God. These words are an enigma because no such opinion is to be found among the Jews, even though Ezra was singled out for special appreciation (see Sanh. 21b; Yev. 86b). The Muslim traditionalists attempt to explain the words of Muhammad with a Muslim legend, whose origin appears to stem from IV Ezra 14:18–19. The people of Israel sinned, they were punished by God, the Holy Ark was removed, and the Torah was forgotten. It was due, however, to Ezra's merit that his heart was filled with the Torah of God, which he taught to the people of Israel. When the Holy Ark was returned to them and they compared that which Ezra taught them with the text of the *Sefer Torah* in the Holy Ark, the words they found were identical. They deduced from this that Ezra was the son of Allah. Ṭabarī cites another version of this legend: the Jewish scholars themselves hid the Ark, after they were beaten by the Amalekites. H.Z. Hirschberg proposed another assumption, based on the words of Ibn Ḥazm (I, 99), namely, that the "righteous" who live in Yemen believe that 'Uzayr was indeed the son of Allah. According to other Muslim sources, there were some Yemenite Jews who had converted to Islam who believed that Ezra was the messiah. For Muhammad, Ezra, the apostle (!) of the messiah, can be seen in the same light as the Christians saw Jesus, the messiah, the son of Allah. An allusion to the figure of Ezra as the apostle of the messiah is found in a tale which is widespread among the Jews of Yemen, according to which Ezra requested that they immigrate to Erez Israel, and because they did not, he cursed them. Yemenite Jews have therefore refrained from naming their children Ezra. According to some Muslim commentators, 'Uzayr is the man who passed by the destroyed city (of Jerusalem; Sura 2:261) and did not believe that it could be rebuilt (see \*Jeremiah).

[Haim Zew Hirschberg]

### Tomb of Ezra

There are a number of traditions concerning the site of Ezra's tomb. According to Josephus it is in Jerusalem; others hold that he was buried in Urta or in Zunzumu on the Tigris; but the general accepted version is that his tomb is situated at 'Uzēr, a village near Basra. This tradition is mentioned by \*Benjamin of Tudela, \*Pethahiah of Regensburg, Judah \*Al-Ḥarizi, and other travelers, Jewish and non-Jewish, who visited Babylonia. The tomb is in a building covered by a cupola and on its walls are written a variety of inscriptions. Nearby, there is a *khan* in which the visitors to the tomb gather, and which also contains shops where Arab and Jewish merchants offered their wares in the period between Passover and Shavuot, the time of pilgrimages to the tomb. The visitors lit candles and made solemn vows. Special prayers were said (e.g., one was that composed by R. \*Joseph Ḥayyim Al-Ḥakam, contained in his book *Mamlekheth Kohanim*, Baghdad, 1873). The Mus-

lims fear the tomb and ascribe to it supernatural powers, and many legends are linked to it.

**EZRA**, family prominent in India in the 19<sup>th</sup> and 20<sup>th</sup> centuries. JOSEPH BEN EZRA BEN JOSEPH KHLEF (d. 1855), one of the notables of the Jewish community in Baghdad, traveled to India at the beginning of the 19<sup>th</sup> century. Together with his sons Ezekiel and David, he settled in Calcutta, engaging in commerce and becoming very wealthy. After some time, he returned to Baghdad, where he died. The family was known as Baḥer (Ar. "sea"), possibly because they were among the first to cross the sea to India. The traveler \*Benjamin II first mentioned Joseph as among the most distinguished personalities of Calcutta in 1849. Joseph's son DAVID (1797–1882) was president of the Calcutta Jewish community and one of the outstanding Oriental philanthropists. Contributing generously to charitable institutions in India and Iraq, he assisted the Palestinian *sheluḥim* ("emissaries") who often visited India, and also provided funds for the ransoming of captives. A street was named after him in Calcutta, where he built two magnificent synagogues: Neweh Shalom (1856) and Bet El (1870).

His son ELIAS DAVID (1830–1886) was also a wealthy philanthropist. In 1882 he opened a school for the poor in Calcutta and in 1883/84 built a synagogue named Maghen David after his father. He contributed 12,000 rupees toward the establishment of a zoological garden which became known as "Ezra House." In 1870, he married Mozelle (Mazal-Tov; 1850–1921), the daughter of Sir Albert \*Sassoon. She founded a large hospital for the poor in Calcutta, named Ezra Hospital after her husband, and two yeshivot: Mazal Zome'ah and Knesset Eliahu in Jerusalem. Their son SIR DAVID (1871–1947), president of the Jewish community of Calcutta, was also a noted philanthropist. In 1912 he married Rachel (1877–1952), daughter of Solomon David Sassoon. Both were active in many spheres of public life: David was president of a scientific society for the study of nature in India; Rachel founded the League of Jewish Women in 1913 and administered two hospitals. In recog-

nition of their services to India, David was knighted in 1927. During World War II, they gave generous relief to refugees from Europe.

**EZRA, APOCALYPSE OF** (also known as **Ezra IV**), book of visions ascribed to Ezra the Scribe, written between 95–100 C.E., probably in Erez Israel. It is extant in some Greek fragments, Latin, Syriac, Ethiopic, two separate Arabic versions, Armenian, Georgian, and a Coptic fragment.

The book is composed of seven visions. The first three, in the form of dialogues between Ezra and the angel Uriel, deal primarily with the destruction of the Temple and Jerusalem and with theodicy. Each of these three visions concludes with a brief eschatological revelation. The fourth vision is of a weeping, bereaved woman who is transformed into the heavenly Jerusalem, the promise of redemption for Zion. Next, Ezra sees an eagle with 12 wings, eight "little wings," and three heads. This, he is told, is the fourth beast which appeared to Daniel (Dan. 7), the fourth wicked world empire, its heads and wings representing kings and emperors. Ezra witnesses its judgment and destruction at the hands of a lion, a symbol of the Messiah, after which the righteous rejoice in the messianic kingdom. The sixth vision sees one "as the form of a man," rising from the sea, who is attacked by innumerable hosts, which he destroys to be greeted by a joyous multitude – another vision of the Messiah's victory over the evil nations. In the last vision, Ezra receives the Torah, the 24 books of the Bible, and the 70 books of secret, apocalyptic lore, and then prepares for his assumption to heaven.

IV Ezra is considered one of the high points of Jewish apocalyptic literature, combining sensitive perception with profound and daring analysis. The author is deeply concerned with the theological problems arising from the destruction of Jerusalem: "Is Israel any worse than Babylon, that they rule over us?" he asks (IV Ezra 3:27ff.). This question brings him to grips with some basic problems concerning the nature of man. How could God create man with an "evil heart" and, when giving him the Torah, not remove this evil heart, which causes him to transgress its laws? Further, why is man given understanding, so that sinning, he knows that he sins and is destined for Gehenna? To these and other such questions raised in the first three visions, no real solution is offered. Ultimately, the angel can only say that God's ways are inscrutable, that He rejoices in the righteous few, and that Ezra and those like him are assured of their salvation. But the author's real answer is perhaps to be sought elsewhere, in the eschatological sections which conclude each of these visions, and in the three eschatological visions which follow, the solution to these problems residing in the eschatological occurrences themselves.

The book is preserved in the Latin Church and is included by Protestants in the Apocrypha. It did not survive

in the Eastern Church, however, and except for a few patristic quotations (e.g., Clement of Alexandria, *Stromata*, 3:16, 10) and the reuse of the text in the late “Esdras Apocalypse,” the Greek text is no longer extant. There is much debate as to whether the original was Hebrew or Aramaic, the former seeming the more likely possibility. In the Latin, two additional chapters (sometimes called III Ezra and V Ezra respectively; see Greek Book of \*Ezra) occur at the beginning and at the end of the book. The book is included in many Ethiopic and Armenian biblical manuscripts, but has survived in only one Syriac manuscript (Cod. Ambrosianus) and in two incomplete Georgian copies.

A large portion of ch. 7 does not appear in the Vulgate Latin manuscripts, the publication of which in 1875 from *Codex Ambianensis* by R. Bensly was followed by the discovery of a series of Latin codices containing this section. Kabisch, with the subsequent support of de Faye and Box, maintained the book to be composed of a series of five separate source documents: a Salathiel apocalypse (cf. IV Ezra 3:2) covering substantially the first four visions; the Eagle vision (A); the Son of Man vision (M); the final Ezra vision (E<sup>1</sup>); and a second Ezra source which included the apocalyptic sections of Visions 1–4. This hypothesis was strongly attacked by Clemen and Gunkel, who were followed by Violet and, later, Keulers. These emphasize the basic structural unity of the work, pointing to its division into seven visions separated by prayer and fast, the appearance of the same technical terminology throughout, and the questionable nature of many of the so-called “inconsistencies” or “contradictions” between the sources. They thus accept the basic unity of the work, at the same time not denying the possibility that the author employed existing written or oral sources. The book contains no traces of sectarian or Essene ideas and sometimes follows the line of traditional rabbinic exegesis (cf. IV Ezra 6:7–10 and Gen. R. 63:9, Mid. Hag. to Gen. 25:26 et al.). It also includes a fragment of a Midrash on the 13 Attributes (IV Ezra 123ff.) and similar material. The date is established primarily by the identification of the three heads of the eagle in chapters 11–12 with the Flavian emperors.

**EZRA, DEREK, BARON** (1919– ), British industrial administrator. Ezra was educated at Magdalene College, Cambridge, and served in the British army during World War II, being appointed a member of the Order of the British Empire and awarded the United States Bronze Star. In 1947 he joined the newly nationalized coal industry. After holding posts in sales and marketing on the National Coal Board, he became a

member of the board in 1965 and deputy chairman in 1967, and was chairman, the highest position in the industry, from 1971 to 1982. His period of office included the 1974 miners’ strike, but he was generally characterized by a conciliatory attitude in industrial relations. Ezra was knighted in 1974 and created a life peer in 1983. After retirement from the coal board, he joined the Social Democratic Party in the House of Lords and held numerous British and European directorships and advisory posts in industry and commerce. He was appointed a Grand Officer of the Italian Order of Merit and held French and Luxembourg decorations.

[Vivian David Lipman]

**EZRA, GREEK BOOK OF** (also called the **Apocryphal Ezra**, **First Esdras**, or **Third Esdras**), a Greek translation of the last two chapters of II Chronicles, the entire Book of Ezra (except for 1:6), and Nehemiah 7:73–8:13. It differs from the canonical version in that a section of Ezra is transposed, Nehemiah 1 does not follow Ezra, and a noncanonical story is introduced. The following summary illustrates these changes.

The first chapter corresponds to II Chronicles 35 and 36 (omitting the last two verses since they appear in Ezra 1:1 and 2, which corresponds to Greek Ezra 2:1 and 2); Josiah celebrates Passover, battles with the Egyptians, and dies of his wounds; his successors; the sack of Jerusalem; the destruction of the Temple; the Babylonian exile. Chapter 2 corresponds to Ezra 1; 4:7 to end of 4 (2–4:6 being transposed to chapter 5); Cyrus permits the Jews to return and rebuild the Temple; the Temple vessels are returned; the correspondence between a certain Artaxerxes and the Jews’ antagonists (Jos., Ant., 11:26, changes this to, or understands it as, Cambyses); interruption of the construction of the Temple until the reign of Darius. Chapters 3 and 4: each of three guardsmen of Darius suggests what is most powerful – wine, royal power, or womankind – and the third, Zerubbabel, answers “womankind” but adds “truth,” thereby winning the contest; as a reward he requests permission to rebuild the Temple; Darius complies. Chapters 5:1–6: preparations for Zerubbabel’s expedition. Chapters 5:6–9:36 correspond to Ezra 2:1–4:5 and to Ezra 6 to the end: catalog of those who returned; erection of the Altar; reference to the earlier troubles from Cyrus’ reign to Darius’ second year; the Temple rebuilt; Ezra’s expedition. Chapter 9:37 to end, corresponding to Nehemiah 7:73–8:13; Ezra reads the Torah at a public gathering.

The canonical version tells of Zerubbabel’s return, breaks off the narrative at the halt of the Temple construction, records letters between the Jews’ enemies and the king, and returns to the narrative. By noting that the interruption lasted until the time of Darius before the correspondence (4:5) and at its close, the author indicates that, for him, the documents are earlier than Darius’ reign. The Greek Ezra, placing these documents after Cyrus’ proclamation, before Zerubbabel’s return, conveys this same picture of a poison-pen correspondence prior to Darius (Kaufmann Y., Toledot, 4 (1956), 522–7 upholds this view, as do Josephus and traditional commentators). It differs

from the canonical version in that Zerubbabel's expedition occurs under Darius rather than Cyrus.

Josephus used the work as a source for his discussion of the post-Exilic Return (Ant., 11:1–56); little else can be said about it with assurance. To some the work is complete and the concluding conjunction and verb – “and they were gathered” – are a formal close. If the work is a unit, the Nehemiah passage may have been introduced to underscore Ezra's emphasis on the Law. Others see the conjunction-verb endings as evidence that the work is incomplete; it belongs to the next verse (Neh. 8:14). If the author's starting point and closing are unknown, so is his purpose. The translated material has been seen as a version based on the Septuagint, a revision of a translation older than the Septuagint, or an independent translation from the Hebrew and Aramaic. And the “guardsmen” episode has been variously labeled as a Greek, Oriental, or more specifically, Aramaic or Persian folk-tale. The story may be an originally non-Jewish story that was reworked. Scholars think the answer “Truth” is an addition and the contest was limited to one answer per guardsman. Furthermore, Truth is praised; the force of the other elements is proved by example. However, womankind's power is shown in two ways. Woman is presented as the life-giving mother and clother of man (an important ancillary function of woman in antiquity). Without a mother there can be no king or vine-cultivator to produce wine. This sufficiently proves womankind's superiority over the others. At this point a new motif is introduced – woman as temptress for whose favor man dares all; here biblical sounding phrases appear – “beautiful to look at,” 4:18 (cf. Gen. 29:17); and “leave one's father and cleave to one's wife,” 4:20 (cf. Gen. 2:24) – which may reflect Jewish influence. The guardsman mentions an incident showing Darius' subservience to a concubine. Darius and his nobles exchange glances (shocked at the temerity?); immediately Truth is eulogized. This second motif on woman provides an opening for introducing Truth and placing an *aggadah*-like moral lesson within the framework of the Return.

[Jacob Petroff]

**EZRA AND NEHEMIAH, BOOKS OF**, two books in the Hagiographa (i.e., the Book of Ezra and the Book of Nehemiah), which were originally a single work.

The Masoretic tradition regarded the books of Ezra and Nehemiah as one book and referred to it as the Book of Ezra. This was also the Greek tradition, and the same Greek name, Esdras, was given to both books (see below). The division into separate books does not occur until the time of Origen (fourth century C.E.) and this division was transferred into the Vulgate where the books are called I Esdras (Ezra) and II Esdras (Nehemiah). It was not until the 15<sup>th</sup> century that Hebrew manu-

scripts, and subsequently all modern printed Hebrew editions, followed this practice of dividing the books. However, there are good reasons (linguistic, literary, and thematic) for the argument that the two books were originally separate works (Kraemer), which were brought together by a later compiler, and are now to be read as a single unit (Grabbe).

#### Place in the Canon

There are two traditions regarding the place of Ezra-Nehemiah in the Hebrew Bible. The more dominant Babylonian tradition, which is followed by all modern printed editions, places Ezra-Nehemiah immediately before Chronicles, the last book of the Writings. However, the Palestinian tradition, which is found in major Tiberian manuscripts, such as Aleppo and Leningrad, places Chronicles first in the Writings (before the Psalms), and places Ezra-Nehemiah last. In the Protestant Old Testament (e.g., the NRSV version), Ezra-Nehemiah is placed among the historical books, after Chronicles and before Esther. In the Roman Catholic Old Testament (e.g., the Douay-Rheims version), the books are similarly placed after Chronicles but before Tobit, Judith, and Esther.

#### Text and Versions

Some Hebrew fragments from the Book of Ezra (4QEzra) were found in Cave 4 at Qumran (Ulrich). The fragments contain part of the text of Ezra 4:2–6, 9–11, and 5:17–6:5 and exhibit two orthographic variants (e.g., at Ezra 4:10, 4QEzra reads נְהִיָא for MT's נְהִיָה), and two minor grammatical variants concerning singular and plural forms of verbs (e.g., at Ezra 6:1 where 4QEzra reads the singular וּבְקַר “he searched” for MT's וּבְקִירו “they searched”). The Greek tradition knew of two versions of Ezra-Nehemiah, one of which is known as II Esdras, and is a very literal translation of the Hebrew. This version numbers Ezra-Nehemiah consecutively so that chapters 1–10 of II Esdras represent the Book of Ezra, and chapters 11–23 represent the Book of Nehemiah. However, the other version, known as I Esdras, is wholly concerned with Ezra and not Nehemiah. It offers a rendering of the entire Book of Ezra but translates only that portion of the Book of Nehemiah (7:72–8:13) which deals with Ezra. This additional section is attached directly to what is chapter 10 in the Masoretic version.

#### Languages of the Books

The language of Ezra-Nehemiah is late biblical Hebrew (Polzin) and the text exhibits features which are characteristic of this later language. These include use of the -ו consecutive with the cohortative (וְאֶשְׁלַחְהֶם), increased use of pronominal suffixes to the verb (וַיִּתְּנֵם) and of הֵיךְ with the participle (הֵיךְ אֶתְּרֵם), many Akkadian and Persian loan words (such as אֶתְרֵם “letter” = Akk. *egirtu*; פֶּרְדֵּס “garden” = Pers. *pairidaeza*), and many Aramaisms (Naveh and Greenfield). Parts of Ezra are written in Aramaic (4:8–6:18, 7:11–26), and it has been suggested that originally the entire book of Ezra-Nehemiah was written in Aramaic and was subsequently translated (Marcus). In support of this theory is the fact that there is no extant Targum for Ezra-Nehemiah.

**Book of Ezra: Outline**

<b>(1) Edict of Cyrus and rebuilding of the Temple (chapters 1–6)</b>
Edict of Cyrus (1:1–11) List of those returning with Zerubbabel (2:1–3:1) Restoration of worship and laying foundations of the Temple (3:2–13) Opposition to the Temple building (4:1–24) Appeal to Darius and favorable response (5:1–6:14) Completion of the Temple (6:15–22)
<b>(2) Work of Ezra (chapters 7–10)</b>
Edict of Artaxerxes to Ezra (7:1–28) List of those going back with Ezra (8:1–14) Return to Jerusalem (8:15–36) Ezra reaction to news of intermarriage (9:1–10:14) List of those who had intermarried (10:15–44)

**Book of Nehemiah: Outline**

<b>(1) Nehemiah's mission (chapters 1–7)</b>
Nehemiah's response to news from Jerusalem (1:1–11) Permission to go to Jerusalem granted (2:1–9) Arrival at Jerusalem and secret inspection of walls at night (2:10–20) Reconstruction of the city's wall (3:1–38) Threats against the workers (4:1–17) Economic problems (5:1–13) Nehemiah's administration (5:14–19) Intrigues against Nehemiah (6:1–19) More defensive measures (7:1–4) List of the exiles with Zerubbabel (7:5–8:1a = Ezra 2:1–3:1)
<b>(2) Ezra's reading of the Torah and religious celebrations (chapters 8–9)</b>
The reading of the Torah (8:1b–12) Celebration of the Feast of Tabernacles (8:13–18) Day of penance and prayer of the Levites (9:1–37)
<b>(3) Nehemiah's reforms (chapters 10–13)</b>
Code of Nehemiah (10:1–40) The population of Jerusalem and Judah (11:1–36) Clerical genealogies (12:1–26) Dedication of the wall (12:27–43) Provision made for Temple services (12:44–47) Expulsion of foreigners (13:1–9) Renewal of Levitical support (13:10–14) Enforcing Sabbath regulations (13:15–22) Problem of mixed marriages (13:23–29) Summary of other reforms (13:30–31)

**Authorship and Date**

The question of the authorship of Ezra-Nehemiah is bound up with its relation with the book of Chronicles. Since the time of Zunz (1832), the consensus of modern scholarship has been that the author of Chronicles was also the author of Ezra-Nehemiah, and this view still has its adherents (Blenkinsopp, Clines (1984)). Arguments for joint authorship include common vocabulary, style, uniformity of theological conceptions, similar description of religious ceremonies, penchant

for occupational and genealogical lists, and, most importantly, the fact that the first few verses of Ezra (1:1–3a) are identical to the last two verses of Chronicles (II Chron 36:22–23), thus indicating that Chronicles leads in by means of catchlines to the following Book of Ezra (Haran). The position of Ezra-Nehemiah before Chronicles in the Protestant and Catholic Old Testament canons would seem to lend support for this point of view. In recent times, however, the independent authorship of both works has been argued on the basis of the following perceived contrasts: that Chronicles glorifies David, highly regards prophecy, has a conciliatory view of Northerners, and a miraculous view of history, whereas Ezra-Nehemiah emphasizes Moses and the Exodus, is forceful about its opposition to the Northerners (Samaritans), and has a different view of history. Ezra-Nehemiah ought then to be dated to the end of the fifth century B.C.E. whereas Chronicles is a later book composed at the end of the fourth century B.C.E. (Japhet). The catchlines at the end of Chronicles were borrowed from Ezra to give the book of Chronicles an “upbeat” ending heralding Cyrus’ decree, and so not ending with the exile of the people in Babylon (Williamson).

**Contents of the Books**

Ezra-Nehemiah deals with the period of the restoration of the Jewish community in Judah, then the Persian province of Yehud, in the sixth–fifth centuries B.C.E. during the approximately 100 years between the time of the edict of \*Cyrus (538) permitting the Jews to go back to Jerusalem and the 32<sup>nd</sup> year of the reign of \*Artaxerxes I (433). Three different periods are represented in the books, each with different leaders and different royal missions. The first period (Ezra, chaps. 1–6) goes from the time of the edict of Cyrus (538) until the rebuilding of the temple (516), when the leaders of the Jews were Sheshbazzar and Zerubbabel. The second period (Ezra, chaps. 7–10 and Neh., chap. 8) commences in the seventh year of the reign of Artaxerxes (458), when Ezra is given a royal mandate to lead a group of exiles back to Jerusalem. The third period (Neh., chaps. 1–7 and 9–13) encompasses a 12-year period from the 20<sup>th</sup> year of the reign of Artaxerxes (445) until his 32<sup>nd</sup> year (433), and deals with the work of Nehemiah.

THE FIRST PERIOD (EZRA, CHAPS. 1–6). The first period, embracing 22 years from 538 to 516, includes an account of (1) the edict of Cyrus; (2) a list of the first returnees; (3) restoration of worship and laying foundations of the Temple; (4) opposition to the Temple building; (5) the appeal to \*Darius and his favorable response; and (6) the completion of the Temple. In this period the leaders were \*Sheshbazzar and \*Zerubbabel. Sheshbazzar is thought to be identical with Senanazzar (the fourth son of Jeconiah (Jehoiachin), I Chron. 3:18), and is termed both prince (אֲשִׁיָּא) and governor (פְּתָחָה). Zerubbabel is one of the leaders of the first émigrés (2:2), and probably succeeded Sheshbazzar (4:2), though both are said to have laid foundations of the Temple (Sheshbazzar in Ezra 5:16 and Zerubbabel in Zech. 4:9).

*The Edict of Cyrus (1:1–11).* There are two accounts given in the Book of Ezra of the edict of Cyrus: a Jewish version in Hebrew, and a Persian version in Aramaic. The Jewish/Hebrew version has Cyrus declare that God has given him “all the kingdoms of the earth,” that He has ordered the reconstruction of the Temple, and that any of God’s people who so wish may return to assist in the carrying out of the order (1:1–3). The Persian/Aramaic version gives extra details detailing the specifications of the Temple to be built (e.g., its height and width should be 60 cubits, emulating the Temple destroyed by the Babylonians), that expenses for the Temple will be paid by the state, and that precious utensils captured by \*Nebuchadnezzar and brought to Babylon will be returned (6:3–5). This last fact is actually mentioned in the first chapter of Ezra (v. 7). Cyrus released the cult objects and delivered them to Sheshbazzar, the governor of Judah, via Mithredath, the state treasurer. The Cyrus cylinder records similar acts of amnesty and favor shown to the peoples and deities of other countries following his conquest of Babylon in 539 (Cogan).

*A List of the First Returnees (2:1–3:1).* The list of the returning exiles with Zerubbabel is itemized by family, place of origin, occupation (e.g., priests, Levites, singers, gatekeepers, etc.). Because this list is repeated in its entirety in Nehemiah (Neh. 7:6–8:1a) there has been much discussion of the list’s purpose, and where the list originally belonged. Most likely, the writer in the Book of Ezra was using a later list compiled for other uses, and its purpose at the beginning of Ezra is to magnify the first response of the exiles to Cyrus’ edict. However, in the Book of Nehemiah, the list is used for a different purpose, as a starting point of a campaign to induce those who had settled elsewhere in Judah to move to Jerusalem, which needed repopulation.

*Restoration of Worship and Laying Foundations of the Temple (3:2–13).* Among the first activities of the returning exiles in 538 were to erect an altar on the site of the Temple, renew sacrificial worship, and celebrate the festival of Tabernacles. Preparations were then made for the rebuilding of the Temple, parallel to the preparations made for Solomon’s Temple. The laying of the foundations was performed with a special service: prayer and song. The people’s response was enthusiastic and they wept out of joy. However, there were a number of the returned exiles who had seen the first Temple, and these people wept in memory of this destroyed Temple to such an extent that the weeping for joy could not be distinguished from those weeping in memory of the destroyed Temple.

*Opposition to the Temple Building (4:1–24).* Work on the Temple did not proceed smoothly and, although it was started in the second year after the return (537), work was not continued on it until the second year of Darius I (521). The long delay of some 21 years between the laying of the Temple’s foundations in 537 and its completion in 516 is explained as due to opposition by the local population. The opposition arose primarily as a result of the exclusionary policy of the returnees about permitting the indigenous population to participate in the re-

building effort. The returnees believed that they were the true representatives of the people of God who had gone into exile, and that those who had not gone into exile but remained in the land, or were descendants of displaced peoples who had subsequently adopted Israel’s religion, were not entitled to join in this project. The opponents are called צְרִי יְהוּדָה וּבְנֵימִן “adversaries of Judah and Benjamin” and עַם־הָאָרֶץ “people of the land,” and they attempted to thwart the rebuilding effort by various means including writing accusatory letters to the Persian kings. These accusatory letters contained in 4:6–23 are problematic on two counts: first, because they do not deal with the rebuilding of the Temple but with the rebuilding of the city, and second because these letters are addressed to Persian kings who reigned long after the Temple was actually completed (516). These letters are sent to \*Xerxes I (486–465) and \*Artaxerxes I (465–424). That the section containing these letters is misplaced is clear from the fact that it is put in a different place in 1 Esdras, where these letters occur in chapter 2, and not in chapter 4 as in the Masoretic text.

*Appeal to Darius and Favorable Response (5:1–6:14).* The end of chapter 4 reverts back to the proper chronology, that of the second year of Darius (521), at which time the prophets \*Haggai and \*Zechariah encouraged the Jews to persist in the building of the Temple. The renewed activity led to an investigation by local Persian authorities, and a letter of inquiry (not a complaint like the preceding communications) was sent to Darius. The Persian authorities reported that they had gone to Jerusalem, observed the state of building operations, and had requested information on the authorization of the project. They were informed by the Jewish leaders of the edict of Cyrus granting the Jews permission to rebuild the Temple, and the letter asked the king to verify whether or not Cyrus did issue this edict. Darius then ordered a search in the royal archives, and the edict was found and is reproduced in his reply to the local authorities (see above). Darius issues instruction that the Cyrus decree be honored, and that expenses for the project be defrayed from the tax income accruing to the royal treasury from the province. Moreover, provisions were to be made for daily religious observances so that prayers could be made for the welfare of the king and his family. The aforementioned Cyrus Cylinder is often pointed to as an example of a Persian monarch who requested prayer from other peoples for his own and his son’s welfare.

*Completion of the Temple (6:15–22).* The reconstruction on the Temple was completed in the sixth year of the reign of Darius I (516); the work had taken 21 years since the foundation was laid in the second year of Cyrus (537). A joyful dedication ceremony took place with enormous amounts of sacrifices, “one hundred bulls, two hundred rams, four hundred lambs, and twelve goats.” Shortly afterwards the returned exiles celebrated the Passover, together with those of the indigenous population who had “separated themselves from the uncleanness of the nations of the lands,” a hint that the returnees were open to permitting others into their fold (see also Neh. 10:29).

THE SECOND PERIOD (EZRA, CHAPS. 7–10 AND NEH., CHAPS. 8–9). The second period dated in the seventh year of the reign of Artaxerxes I (458) deals with the work of \*Ezra, after whom the book was named, and includes (1) the edict of Artaxerxes to Ezra; (2) Ezra's return to Jerusalem; (3) his reaction to news of intermarriage; (4) his reading of the Torah; and (5) a day of penance and a prayer of the Levites. In this period, the leader is Ezra, a priest whose ancestry is traced back to Aaron (7:1–5), and a scribe "well versed in the law of Moses" (7:6, 11). The date of Ezra is problematic as is his relationship with \*Nehemiah, because apart from Nehemiah 8:9, and two other minor references (Neh. 12:26, 36), the two are never mentioned together. According to their respective books, Ezra assumed his mission in the seventh year of Artaxerxes (458) and Nehemiah came in the 20<sup>th</sup> year of the same king (445). This would mean that Ezra, who came at the express command of Artaxerxes to implement and teach the law, did not conduct his first public reading of the Law until 13 years later. Another problem for the biblical chronology is that Ezra found many people in Jerusalem but, according to Nehemiah, in his time, Jerusalem was unpopulated. For these reasons and others, some scholars believe Ezra came to Jerusalem much later, either in the 37<sup>th</sup> year of Artaxerxes I (428) or in the seventh year of Artaxerxes II (397) (see discussion in Klein).

*The Edict of Artaxerxes to Ezra (7:1–28)*. In the seventh year of his reign (458), Artaxerxes I (465–424) issued a royal edict granting permission for Jews to go to Jerusalem with Ezra. Ezra was permitted to bring with him gold and silver donations from other Jews. Regular maintenance expenses of the Temple were to be provided from the royal treasury and there was to be release of taxes for Temple personnel. Ezra's mission was "to expound the law of the Lord" and "to teach laws and rules to Israel" (v. 10). For this purpose he was granted, not only a royal subsidy, but he was also empowered to appoint judges, enforce religious law, and even to apply the death penalty. In response to critics who argue that such a concern by a Persian king for a foreign cult would be unlikely, the Passover papyrus issued by Darius II in 419/18 to the Jews at Elephantine in Egypt regarding the date and method for celebrating the Passover (Porten) has often been cited. Nevertheless, the question of imperial authorization of Jewish law by the Persian Empire continues to be a subject of debate (Watts).

*Ezra's Return to Jerusalem (8:1–36)*. Ezra's four-month journey to Jerusalem is described by Ezra in a first-person memoir. After listing the names of the leaders returning with him, Ezra discovers there were no \*Levites in his party so he had to muster up 38 Levites from some Levitical families. Another problem was security. Because Ezra had originally made a declaration of trust in God before the king, he felt it inappropriate to request from him the customary escort. Thus he accounted the party's safe arrival in Jerusalem with all its treasure intact as a mark of divine benevolence.

*Ezra's Reaction to News of Intermarriage (9:1–10:44)*. When Ezra arrived in Jerusalem he was informed that some people, including members of the clergy and aristocracy, had contracted foreign marriages. Immediately upon hearing this news Ezra engaged in mourning rites, tore his garments and fasted, and, on behalf of the people, confessed their sins and uttered a prayer of contrition. He is joined by a group of supporters who are also disturbed by this news. At the initiative of a certain Shecaniah son of Jehiel, Ezra was urged to take immediate action. An emergency national assembly was convened, and Ezra addressed the crowd in a winter rainstorm calling upon the people to divorce their foreign wives. The assembled crowd agreed to Ezra's plea, but because of the heavy rains and the complexity of the matter (Ezra's extension of legal prohibitions of marriages that had previously been permitted), they requested that a commission of investigation be set up. After three months the commission reported back with a list of priests, Levites, and Israelites who had intermarried.

*Ezra's Reading of the Torah (Neh 8:1–12)*. Seemingly out of order, Ezra reappears in chapter 8 of the Book of Nehemiah where it is recounted that he publicly read the Torah on the first day of the seventh month (Rosh Ha-Shanah). He stood upon a platform with dignitaries standing on his right and left. The ceremony began with an invocation by Ezra and a response by the people saying "Amen, Amen." During the reading the people stood while the text was made clear to them (or translated for them (into Aramaic)) by the Levites (van der Kooij). The people were emotionally overcome by the occasion and wept. However, they were enjoined not to be sad, rather to celebrate the day joyously with eating, drinking, and gift giving. The day after the public reading, a group of priests and Levites continued to study the Torah with Ezra and came across the regulations for observing the feast of Tabernacles on that very month. A proclamation was issued to celebrate the festival which was done with great joy, and the Torah was again read publicly during the entire eight days of the festival. It has often been pointed out that the feast of Tabernacles which is described as being discovered anew from the Torah reading and had not been observed since the days of Joshua, had already been observed not too much earlier by the first returnees (Ezra 3:4). Furthermore, the materials said to be collected for the festival (branches of olive, pine, myrtle, palm, and leafy trees) differ from those mandated for the festival in Leviticus 23:40 (where the materials are the fruit of תְּרֵדָה trees (later interpreted as the citron), willows of the brook, palms, and bough of leafy trees (later interpreted as the myrtle)). Most strikingly, these materials are said to be used to construct סֹכֹת "tabernacles," and not to be used for making of the לִילְבָב and אֶתְרוֹג in accordance with the later rabbinic interpretation.

*Day of Penance and Prayer of the Levites (Neh. 9:1–37)*. On the 24<sup>th</sup> day of the month, immediately after the celebration of the feast of Tabernacles, a fast day was announced. The identification and purpose of this fast day is unknown. Most commentators believe that this fast and following prayer of the Levites

should come after the events described in Ezra 10, which was concerned with problems of intermarriage. The long prayer of the Levites (v. 5–37) is akin to one of the historical hymns in the Psalter (cf., Ps. 105, 106, 135, 136) (Fensham). The hymn contains stereotypical Psalm language, and contains references to the creation, the covenant with Abraham, the acts of God in Egypt, the wanderings in the desert, Sinai, the conquest, the Judges, and to later periods. Many of the sections are divided by the independent pronoun *וְאֵתָהּ* (v. 6, 7, 19, 27, 33). The hymn is noteworthy in not mentioning David and Solomon, two of Judah's glorious rulers, nor is there any mention of the exile and the current restoration, events central to Ezra and Nehemiah. Verses 6–11 of this hymn are included in the Jewish morning prayer service (*פְּסוּקֵי דְזוֹמְרָא*).

**THE THIRD PERIOD (NEH., CHAPS. 1–7 AND 9–13).** The third period encompasses 12 years from the 20<sup>th</sup> year of the reign of Artaxerxes I (445) until his 32<sup>nd</sup> year (433), and deals with the work of Nehemiah, who had held an important office (termed a “cupbearer”) in the royal household of the Persian king Artaxerxes I (465–424). The work of Nehemiah described in the form of a first-person memoir includes his rebuilding of the walls of Jerusalem and his economic and religious reforms. One of the characteristics of Nehemiah's memoirs is that he intersperses short direct prayers within his narrative usually starting with *וְזָכְרָה לִי אֱלֹהֵי* or with slight variations (5:19, 6:14, 13:14, 22, 29, 31) but once with *שָׁמַע אֱלֹהֵינוּ* (3:36–37). In particular, this period deals with (1) Nehemiah's response to the news from Jerusalem; (2) Nehemiah's efforts at reconstructing and fortifying Jerusalem; (3) intrigues against Nehemiah; (4) the dedication of the wall; (5) Nehemiah's resolution of economic problems; (6) Nehemiah's religious reforms.

*Nehemiah's Response to News from Jerusalem (1:1–2:9).* In the 20<sup>th</sup> year of the Persian king Artaxerxes I (445), a delegation of Jews arrived from Jerusalem at Susa, the king's winter residence, and informed Nehemiah of the deteriorating conditions back in Judah. The walls of Jerusalem were in a precarious state and repairs could not be undertaken (since they were specifically forbidden by an earlier decree of the same Artaxerxes (Ezra 4:21)). The news about Jerusalem upset Nehemiah, and he sought and was granted permission from the king to go to Jerusalem as governor and rebuild the city. This change in Persian policy is thought to have come after the Egyptian revolt of 448 when it was believed that a relatively strong and friendly Judah could better serve Persia's strategic interests (Myers). Nehemiah was also granted much material assistance including supplies of wood for the rebuilding effort. However, unlike Ezra, Nehemiah requested a military escort for safe conduct throughout the provinces of the western satrapies.

*Nehemiah's Efforts at Reconstructing and Fortifying Jerusalem (2:10–4:17, 7:1–4).* A short time after his arrival in Jerusalem Nehemiah made a nocturnal inspection tour of the city walls riding on a donkey. He relates that he could not continue riding, but had to dismount, because of the massive stones left by

the overthrow of the city by the Babylonians. After his tour of inspection, Nehemiah disclosed to the local Jewish officials his mission to rebuild the walls. Nehemiah set to the task of rebuilding the wall by dividing the work into some 40 sections. Nearly all social classes (priests, Levites, Temple functionaries, and laypeople) participated in the building effort. Throughout the time of the building, Nehemiah encountered opposition and harassment from the leaders of the Persian provinces, who had previously administered the affairs of Judah, especially from one \*Sanballat, a Horonite (from Beth Horon), also termed the Samaritan/Samaritan. Sanballat resorted to mockery and ridicule, stating: “that stone wall they are building – if a fox climbed it he would breach it” (3:33–35). To counter the opposition, Nehemiah provided a guard for the workmen, and the masons and their helpers also carried swords. Because of the magnitude of the project, the workmen were separated from each other by large distances, so a trumpeter was provided ready to sound the alarm, the idea being that should one group be attacked the others would come to their aid. Nehemiah ordered the workers to remain in Jerusalem partly for self-protection and partly to assist in guarding the city. After the wall was rebuilt, Nehemiah appointed Hanani his brother and a similar-named individual, Hananiah, to be in charge of security. He also gave an order that the gates to the city should be closed before the guards went off duty and that they should be opened only when the sun was high (at midmorning). In addition to the security police, there was a citizen patrol whose duty it was to keep watch around their own houses. The central problem was the small population of Jerusalem: the city was extensive and spacious, but the people in it were few, and the houses were not yet built. Nehemiah decided to bring one of ten people from the surrounding population into Jerusalem (11:1–2).

*Intrigues against Nehemiah (6:1–19).* One of Nehemiah's enemies, Tobiah, an Ammonite, had intermarried with a prominent family in Judah. He had tried unsuccessfully to subvert Nehemiah's work by enlisting their aid, but without success. Since Nehemiah's enemies could not prevent the rebuilding and fortification of the city they made desperate attempts to capture him. One plan was to lure him away from Jerusalem to some unspecified place. Four times they attempted to invite him to “meetings,” and each time Nehemiah, knowing their harmful intentions, refused their invitation. When these attempts failed, a fifth attempt was made to hurt Nehemiah by framing him before the Persian authorities with a false report that he planned to have himself proclaimed king in Judah. A sixth attempt to damage Nehemiah was to pay a false prophet, Shemaiah, to lure Nehemiah into the Temple, but Nehemiah, realizing that this was a plot, refused to go. Despite these threats, Nehemiah reports that the wall was completed in just 52 days, which seems to be an incredibly short time for such a monumental task. According to Josephus, the project took two years and four months.

*Dedication of the Wall (12:27–43).* A large gathering of priests, Levites, musicians, and notables assembled from all over Judah

for the dedication of the wall in Jerusalem. Nehemiah divided the participants into two processions each commencing from the same point; one procession marched south towards the Dung Gate and then around the right side of the wall, the other marched north along the top of the left side, and both groups joined up together at the Temple square. Each procession was led by a choir, and musicians with trumpets, cymbals, harps, and lyres brought up the rear. Ezra is said to have marched in one procession (though his presence in the text is probably an editorial addition), and Nehemiah in the other. The two joyful processions met up in the Temple square where the dedication was concluded with many sacrifices.

*Nehemiah's Resolution of Economic Problems (5:1–19).* During the period of the rebuilding, the people complained about the scarcity of food and the burden of high taxes. To meet their basic needs, the poor were required to pledge their possessions, even to sell sons and daughters into slavery. Nehemiah reacted angrily against the creditors accusing them of violating the covenant of brotherhood. When his appeal to the creditors voluntarily to take remedial action failed, Nehemiah forced them to take an oath, reinforced by a symbolic act of shaking out his garment, to restore property taken in pledge, as well as to forgive claims for loans. Nehemiah himself alleviated the people's tax burden by refusing to accept the very liberal household allowance for his official retinue which amounted to some 40 shekels of silver a day.

*Nehemiah's Religious Reforms (10:1–40, 12:44–47, 13:1–29).* Nehemiah's religious reforms are found (a) in the so-called Code of Nehemiah; and (b) in the regulations he enacted upon embarking on his second term as governor in the 32<sup>nd</sup> year of Artaxerxes I (433).

*Code of Nehemiah (10:1–40).* The Code of Nehemiah represents pledges made by the community to observe the Torah, its commandments and regulations. It is preceded by a list of signers including Nehemiah, his officials, the priests, Levites, and prominent family members (1–28). In the Code, the community promised to do seven things: (1) to avoid mixed marriages with the peoples of the land; (2) not to buy from foreigners on Sabbaths and holy days; (3) to observe the sabbatical year; (4) to pay a new annual third shekel temple tax; (5) to supply offerings for the services and wood for the Temple altar; (6) to supply the first fruits, firstlings, tithes, and other contributions to the Temple; (7) to bring the tithes due to the priests and Levites to local storehouses.

*Regulations Enacted by Nehemiah during his Second Term as Governor (13:1–31).* *Expulsion of Foreigners (13:1–9).* In their continued reading of the Torah the community came across a law (possibly referring to Deut 23:4–6) that Ammonites and Moabites were prohibited from becoming Israelites, and so they resolved to separate from foreigners (עַרְבִי). When Nehemiah returned from an official visit to the Persian court in the 32<sup>nd</sup> year of Artaxerxes (433) he discovered that the high priest Eliashib had given living quarters in a former storage room of

the Temple to one of his old enemies Tobiah, the Ammonite (see above). When Nehemiah returned he evicted Tobiah, discarded all his belongings, and had the chambers purified and restored to their original use.

*Renewal of Levitical Support (13:10–14).* Another consequence of Nehemiah's absence at the Persian court was that the people had stopped giving tithes to the Levites forcing them to return to their villages. Nehemiah took steps to bring back the Levites to Jerusalem by ensuring that outstanding payments, which had not been collected during his absence, would be paid and that future tithes would be regularly given.

*Enforcing Sabbath Regulations (13:15–22).* Nehemiah reports that in his day the Sabbath had been utterly commercialized. People were working in vineyards and on the farms, and Phoenician traders set up shops in Jerusalem on the Sabbath. Nehemiah attempted to put a stop to this Sabbath activity by ordering the gates of the city closed during the Sabbath. Despite his orders, the Phoenician traders camped outside the walls hoping to entice customers to come outside.

*Problem of Mixed Marriages (13:23–29).* As in Ezra's day, Nehemiah had to deal with problems arising from marriages with foreign women. A major concern of his was the fact that the children of these marriages could no longer speak the language of Judah. Nehemiah ordered an end to further intermarriage, but he did not go as far as Ezra who demanded divorce from foreign wives.

### Significance of the Books for Later Judaism

Ezra and Nehemiah's actions and decrees may be seen as the beginning of an ongoing reinterpretation of tradition in its application to changing circumstances (Talmon). Ezra's reading of the Torah inaugurated a new element in Jewish life whereby the Torah was read and explicated on regular occasions in public. This public reading also led to the democratization of knowledge of the Torah among Jews, since prior to this event most parts of the Torah were under the exclusive provenance and control of the priests (Knohl). The differences between the formulation of regulations in the Book of Nehemiah and their counterparts in the Torah illustrate the process of legal elaboration necessary to meet contemporary exigencies (Clines, 1981). These differences can be seen in at least three areas: contributions to the Temple, regulations regarding Sabbath observance, and new intermarriage prohibitions.

**TEMPLE CONTRIBUTIONS.** Some examples of modifications to Pentateuchal laws introduced in the Code of Nehemiah involve upkeep of the Temple. In Exodus 30:11–16, mention is made of a one-time half-shekel tax. The Code of Nehemiah, however, establishes an annual Temple tax, that of one-third of a shekel. In Leviticus 6:1–6, it is stated that fire should burn continuously on the altar but it does not prescribe the mechanism by which this ought to be done. The Code of Nehemiah does this by stipulating how the wood for the altar is to be obtained. In Deuteronomy 14:23–26, it is enjoined that tithes

for the Levites are to be brought to the Temple. The Code of Nehemiah modifies this regulation by permitting an alternate collection system in provincial depots. All these stipulations for the Temple maintenance represent an innovation in ancient Israel, since now the upkeep of the Temple is made the responsibility of the entire community, not just of the king or the governor (Eskenazi).

**SABBATH OBSERVANCE.** In the Pentateuch, the Sabbath law enjoins rest from work (e.g., Ex. 20:8–11; 23:12; and *passim*), but nowhere defines buying food as work, yet buying food from foreigners on the Sabbath is prohibited in the Code of Nehemiah. According to Amos 8:5, pre-exilic Israelites did not trade on the Sabbath, but the new conditions in Nehemiah's time of foreign merchants coming into Jerusalem on the Sabbath led to this new interpretation of the law.

**NEW INTERMARRIAGE PROHIBITIONS.** The stipulations against intermarriage in Exodus 34:11–16 and Deuteronomy 7:1–4 prohibit intermarriage with Canaanites (Hittites, Perizzites, Hivites, and Jebusites). Both Ezra and Nehemiah redefine these old Canaanites (who had long disappeared) as the new Canaanites, the current Ashdodites, Ammonites, and Moabites. It is often thought that Ezra's action insisting on the divorce of foreign wives and their children, together with Nehemiah's concern that the children of these foreign women could not speak the language of Judah, represented a shift in Israelite matrimonial law. Previously offspring of intermarriage was judged patrilineally; now it was to be on the matrilineal principle (for a different view, see Cohen).

[David Marcus (2<sup>nd</sup> ed.)]

**EZRA BEN ABRAHAM BEN MAZHIR** (c. 12<sup>th</sup> century), *rosh yeshivah* in \*Damascus. \*Benjamin of Tudela, who met Ezra, lists the officials of the yeshivah, the leader being Ezra's brother Sar Shalom, who bore the title of "father" of the yeshivah. Like his father, who had preceded him, Ezra assumed the title of *gaon* and laid claim to all the privileges which had previously been accorded to the yeshivah in Erez Israel, of which the Damascus yeshivah was regarded as a continuation. These claims were disputed by the heads of the Fostat Yeshivah, and the controversy between the two institutions developed into a rivalry between the strongminded R. \*Samuel b. Ali, head of the Baghdad Yeshivah, who supported Ezra, and \*Daniel b. Hasdai, the Babylonian exilarch, who championed Fostat. The rivalry continued for many years.

[Eliyahu Ashtor]

**EZRA BEN EZEKIEL HA-BAVLI** (1660–after 1742), rabbi and poet in \*Baghdad. Ezra was vehement in his criticism of the Jews of Baghdad. In his *Tokhehot Musar* ("Moral Reproofs," 1735), written in rhymed prose, both in Hebrew and Aramaic, he severely took them to task for their low moral standards. He reproved them for wasting time on drink and frivolity, for their lack of support of the poor, and for their disregard of Torah. The sharpness of his criticism led to his persecution by the community and he was either imprisoned or expelled from the community. Ezra also wrote *Netivot Shalom* (1742), homilies on the Pentateuch.

**BIBLIOGRAPHY:** Benjacob, *Ozar*, 617; A. Ben-Jacob, *Yehudei Bavel* (1965), 97, 309.

**EZRA BEN NISAN** (1595–1666), \*Karaitic scholar and physician, leader of the community of Troki, Lithuania. In 1634 he fulfilled the duties of *dayyan*, and in 1640–43 held the position of *shofet* (judge). Ezra came in contact with the famous Jewish scholar and kabbalist Joseph Solomon \*Delmedigo of Candia, who spent five years in Lithuania as a physician of Prince Krzysztof Radziwiłł. It may be that Delmedigo imparted his knowledge of medicine to him, but he probably taught him Rashi's commentary to the Pentateuch with Elijah \*Mizrahi's and \*Ibn Ezra's commentaries. Ezra had a large library, which supposedly was burnt in the course of the Russian invasion in 1655. According to A. \*Firkovich, Delmedigo taught him med-

icine, introduced him to the prince, and even to King Jan Casimir (1648–68), and Ezra occupied Delmedigo's position after he left. Accordingly, Ezra cured a daughter of the king, who granted him lands in Troki that were seized after his demise by local Dominicans, because Ezra had only two daughters who never married. There is no evidence from other sources confirming this information. Ezra also became a hero of Karaite folklore. Ezra composed some liturgical poems, some of them included in the Karaite *Siddur* (IV, Vilna 1890).

[Golda Akhiezer (2<sup>nd</sup> ed.)]

**EZRA BEN SOLOMON** (d. 1238 or 1245), one of the leading kabbalists of his day in Gerona, Spain. For a long time scholars thought him identical with \*Azriel b. Menahem of Gerona, since various authors attributed to Azriel works written by Ezra and vice versa. However, the poems of Meshullam b. Solomon da \*Piera, a contemporary of the two and also a native of Gerona, make it possible definitely to determine that Ezra and Azriel were two different individuals who lived in Gerona at the same time. This fact is also confirmed by testimonies of kabbalists from the late 13<sup>th</sup> and early 14<sup>th</sup> centuries. G. \*Scholem's discovery of several of their works and I. Tishby's studies have established that the two men represented different kabbalistic trends.

According to Abraham \*Abulafia, Ezra wrote a commentary to the *Sefer \*Yezirah* (see A. \*Jellinek, *Beit ha-Midrash*, 3 (1938), 43) which has not survived. His commentary on the Song of Songs, attributed to \*Naḥmanides, was first published in Altona in 1764, with many errors repeated in all subsequent editions. It was republished by H.D. Chavel in *Kitvei Rabbenu Moshe ben Naḥman* (2, 1964, 474–548), but this edition too contains all the errors of its predecessors. It has been translated into French and commented upon by G. Vajda (see bibl.). Both Ezra and Azriel wrote commentaries on talmudic legends. Several fragments of Ezra's commentary appear in *Likutei Shikhḥah u-Fe'ah* (Ferrara, 1556); however, the publisher, Abraham b. Judah Elmaleh, concealed the author's name. The work exists in several manuscripts, especially Vatican 441. Two of Ezra's letters which have survived were published by G. Scholem (in *Sefer Bialik* (1934), 155–62).

Ezra's works show the influence of his teacher \*Isaac the Blind. In his turn, Ezra greatly influenced his contemporaries and the kabbalists of the 13<sup>th</sup> and 14<sup>th</sup> centuries. His colleague and contemporary Jacob b. Sheshet \*Gerondi, who cites him several times, sometimes in agreement and often in dispute, in *Meshiv Devarim Nekhoḥim* and *Ha-Emunah ve-ha-Bittahon*, calls him "the sage (*ha-ḥakham*) Rabbi Ezra." Azriel follows in Ezra's footsteps in his commentary on talmudic legends, although he changes the meaning and the outlook. The greatest scholar of the period, Naḥmanides, cites Ezra's writings on at least one occasion. As noted by I. Tishby, his influence

can also be discerned in the works of other noteworthy personalities, especially \*Baḥya b. Asher, who mentions him by name only twice but uses his writings many times; Joshua \*Ibn Shu'ayb, who cites Ezra on many occasions in his *Derashot al ha-Torah* (the printed copy often confuses Ezra with Abraham \*Ibn Ezra); and \*Isaac b. Samuel of Acre, who cites Ezra in his book *Me'irat Einayim* (in Ms.). Traces of Ezra's commentary on the Song of Songs appear in the \*Zohar.

[Efraim Gottlieb]

**EZRA OF MONTCONTOUR** (late 12<sup>th</sup> and early 13<sup>th</sup> century), French tosafist. Ezra studied under \*Judah b. Isaac Sir Leon of Paris. \*Meir b. Baruch of Rothenburg studied under Ezra (see his responsum, Cremona, 312). Ezra was head of a yeshivah at Montcontour. He was generally referred to as "the prophet" by the *rishonim* and this is how he is mentioned in the *tosafot* (Git. 88a; Shev. 25a; Tos. R. Perez to BK 23b, etc.). However, mention of "Ezra" without any title might also refer to him. The epithet might stem from his connections with the kabbalists. Traditions handed down by his contemporaries relate that Ezra, like his friend \*Jacob of Marvege, attained an "ascent of the soul." There is no evidence, however, that he himself was a kabbalist. According to these same traditions, Ezra was the grandson of Abraham \*Ibn Ezra.

**EZRIN, HERSHELL** (1947– ), Canadian diplomat, public servant, businessman, Jewish community leader. Ezrin was born in Toronto to Sydney and Marcia Ezrin, both the children of immigrants from Russia and Poland. After graduating from Hebrew day school, he earned his B.A. and M.A. degrees in history from the University of Toronto and Carleton University before joining the Canadian Department of External Affairs in 1969, shortly after Pierre Elliot Trudeau was elected Canada's prime minister. Ezrin's foreign postings included Los Angeles, New York, and New Delhi. During the 1980s he served in high positions in the federal and Ontario governments before entering the private sector in 1988. Subsequently Ezrin held a series of top executive posts, including chairman and CEO of GPC Canada, a public affairs and strategic communications firm. He also served as a senior counselor and political adviser to several government officials.

Ezrin was active on behalf of a number of Toronto Jewish organizations, including the Holy Blossom Temple Foundation, the Baycrest Centre for Geriatric Care, and Mount Sinai Hospital. He also served as an adviser to both the State of Israel Bonds and the Canada-Israel Committee. He also served the broader community in numerous capacities, most notably as chair of the Board of the Toronto Symphony Orchestra, and wrote widely on public affairs.

In 2004 Ezrin became CEO of the Canadian Council for

Israel and Jewish Advocacy (CIJA), an organization established by the Jewish federations in 2004 to lobby on behalf of the organized Jewish community on both domestic and Israel-related matters. As the first CEO of CIJA, which includes oversight of both the Canada-Israel Committee and the Canadian Jewish Congress, Ezrin had the task of giving the Canadian Jewish community effective direction and a strong and effective voice in the larger Canadian community.

FA—FEU

**FABIUS, LAURENT** (1946– ), French politician – the youngest premier in the history of the Republic. Fabius was born in France to a Jewish family which converted to Catholicism during World War II. After completing his studies in political science and humanities, he became active in the Socialist party. In 1978 he was elected député to the French Assembly. When François Mitterrand was elected president of the Republic in 1981, Fabius joined the government, first as minis-

ter in charge of the budget (1981–83) and then as minister for industry and research (1983–84). In 1984, with the collapse of the alliance between the Socialists and the Communists and the generally poor showing of the government in the public opinion polls, Mitterrand called in Fabius, as a representative of the new technocratic trend in the Socialist party, to lead the new government. With the appointment of the young, articulate politician, polls took an upswing. “Modernization and

unity – these will be the priorities of my government,” stated Fabius when taking office.

In 1986 the Socialists were ousted by a right-wing government and Fabius ceased to be prime minister. When the Socialists returned to power in 1988, Fabius was elected president of the National Assembly, a position he held until he became first secretary of the Socialist party in 1992. He had the difficult task of pulling the party out of a slump but support for the Socialists continued to plummet. At the end of 1992, the party agreed to send him and two former health ministers to trial for their ministerial responsibility for a 1985 scandal when HIV-contaminated blood had been knowingly distributed by high officials; over 1,000 people had acquired the HIV virus and 200 died. The National Assembly and the Senate endorsed the decision to send the three to trial. Fabius had asked to be brought to trial, saying to the Senate “Innocent and recognized as such, I come before you to ask you to charge me with errors I did not commit,” and was eventually found not guilty. Reelected a member of the National Assembly in 1993, he became, its president for the second time two years later when the left came back to power. In 2000 he was appointed minister of economy, finances and industry in the government led by Socialist premier Lionel Jospin, but the electoral defeat of the left in the 2002 general elections sent him back to the opposition benches of the National Assembly. In 2004 Fabius took a strong stand against the European constitutional treaty, a rather unexpected move that surprised political commentators, who viewed him as a moderate, center-to-left politician. Defying the leadership of the Socialist Party, which endorsed the constitutional treaty, Fabius followed the mood of the public, which overwhelmingly dismissed the treaty in the referendum of May 2005, thereby conceivably improving his chances in the presidential elections of 2007.

Fabius wrote *La France inégale* (1975), *Le cœur du futur* (1985), *C'est en allant vers la mer* (1990), *Les blessures de la vérité* (1995), *Cela commence par une ballade* (2003), and *Une certaine idée de l'Europe* (2004).

[Gideon Kouts / Dror Franck Sullaper (2<sup>nd</sup> ed.)]

**FABLE**, an animal tale (according to the most general and hence most widely accepted definition), i.e., a tale in which the characters are animals, and which contains a moral lesson. The genre also includes tales in which plants or inanimate objects act and talk.

### Introduction

Definitions vary according to the importance ascribed to the thematic factor (the animal story) or the functional factor (its didactic tendency). As a literary creation, the fable developed out of oral folklore, and it can thus be asserted that the thematic element is closely related to those popular origins, while the didactic quality is the product of a more sophisticated cultural level, usually of an individual whose specific

aim is to educate (e.g., the Greek pedagogues, the rabbis of the Mishnah and the Talmud, the *darshanim*, and the priests of the various churches during the Middle Ages). Because the earliest sources of the European literary fable and the oldest known collection are connected with the name of the Greek Aesop, the animal fable has often been called the Aesopian fable.

While the animal society of the fable operates very similarly to its human analogue, the activity, in general, remains exclusively within the realm of the animal world. Some fables, however, do depict interaction between humans and animals. A similarity between the fable and the fairy tale (*maerchen*, Heb. *ma'siyyah*) is seen in this fanciful conception of animals functioning as human beings. Yet within the fable itself, the plot is usually realistic and seldom contains magical elements, such as metamorphoses, revivals of the dead, and ghosts. The fable further differs from the fairy tale in its being mono-episodic. A series of episodes related or written together have developed into the beast epic, but each of those episodes can be isolated from its wider context. Like the fairy tale, though, the fable too uses universal motifs and stock characters. The latter are either stereotyped or endowed with conventional functions within the animal society.

The source of the fable lies in the observation of animals in their natural setting, and the tale often remains etiological. More sophisticated plots and the didactic application of the concrete story to the realm of ethics result from the tendency to draw obvious parallels and to develop potential analogies. In these cases, the two possible narrative forms are the metaphorical and generalizing fables.

Among various conjectures as to the origin of the fable, the 19<sup>th</sup>-century scholar, Julius Landsberger, maintained that the fable originated with the Jews (*Hebraeer*), pointing out the similarity between the names Aesop and Asaph. While this theory has been contradicted (by Joseph \*Jacobs and others), some of the Hebrew fables are nevertheless among the most ancient that are extant in literary form. These are traced back to the 15<sup>th</sup>–14<sup>th</sup> centuries B.C.E., and a still earlier oral tradition can be assumed.

The Hebrew term for fable, *mashal* (משל), is linked, in popular etymology, to the two homonymic roots *mshl*, meaning respectively “to liken,” and “to rule.” This is explained by the fact that *meshalim* were narrated by rulers or related to future rulers in order to instruct them in just ways.

### In the Bible

The biblical term refers to the proverb, aphorism, and to allegorical prophecy. Later interpretation applied the term to allegory (Ezek. 17:3–12), to the parable (11 Sam. 12:1–4), and to the fable. Of the latter there are two prime examples: Jotham's fable told to the citizens of Shechem on Mount Gerizim (Judg. 9:8–15), in which he likens their king, Abimelech, to the bramble which became the king of the trees; and the fable of the thistle and the cedar of Lebanon in the answer given by Jehoash, the king of Israel, to Amaziah, the king of

Judah (II Kings 14:9; II Chron. 25:18). One interpretation of I Kings 5:13 (where Solomon is said to have spoken of trees and animals) is that it refers to Solomon's writing of fables, a field in which the Semitic wise man (e.g., \*Ahikar) characteristically engaged.

### In the Talmud and Midrash

A much richer source of fables is the talmudic-midrashic literature, which mentions several outstanding fabulists, notably \*Hillel (Sof. 16:7), and his pupil, \*Johanan b. Zakkai (Suk. 28a; BB 134a; Sof. 16:6). Johanan mastered three genres: fox tales, palm tales (lit., "the talk of palm trees"), and washerman tales. (The last, *mishlei kovesim*, has been interpreted by Landsberger (see bibl.) as referring to the first century C.E. Libyan fabulist, Kybisses, a view rejected by D. Noy (see bibl. *Maḥanayim*, 91), and others.) According to the Talmud, the most prolific of the fabulists was R. \*Meir, a *tanna* in the last generation (Sanh. 38b–39b); he was reputed to have known 300 fables, but only three were transmitted to his students. (The numbers are formulaic and perhaps exaggerated.) It is even said that when he died "the composers of fables ceased" (Sot. 49a). J.L. \*Gordon argues that R. Meir's fables were Aesopian and that he had heard them from his teacher, \*Elisha b. Avuyah, who was acquainted with Greek culture. \*Bar Kappara, in the following generation, is said to have known as many fables as R. Meir (Eccles. R. 1:3). It is interesting to note that the fox, the hero of a great number of European fables, is a central figure in the talmudic tradition of animal fables. In the Midrash, the fox himself is depicted as a teller of fables (Gen. R. 78:7).

The same period reflects an increased affinity with the Aesopian tradition and the Indian animal tales (as they are known from the Jatakas and the *Panchatantra*). According to Jacobs, of 30 talmudic fables only six lack Greek or Indian parallels; many show both. I. \*Ziegler maintains that the fables as taught by the rabbis were adapted to their audience more than their Greek counterparts: the insistence on moral and theological teaching is stronger with the rabbis, as seen in the following comparison of *epimythia* (i.e., the proverb-like statements concluding the narrative). In the fable of the fox who ate too many grapes and was required to fast before he was able to leave the vineyard, the Aesopian version concludes that time takes care of everything, whereas *Ecclesiastes Rabbah* brings a moralizing quotation from Ecclesiastes (5:14): "As he came forth of his mother's womb, naked shall he return."

### In the Middle Ages

THE ALPHABET OF \*BEN SIRA. Among the stories in this work are the fable of Leviathan and the fox, an etiological fable about the enmity between cat and mouse; and other stories containing motifs from international folklore and possibly based on folktales. The 1698 Amsterdam edition was printed with "*Musar al-pi ha-Ḥidah*," a fragment of a collection of fables, printed in the early 16th century under the name *Ḥidot Isopeto*. ("The Riddles of Isopet"). The name Isopeto, for Aesop, appears in other Jewish writings, and parallels the name Ysopet in the Romance languages.

ḤIBBUR YAFEH MIN HA-YESHU'AH ("The Book of Redemption"). In the 11th century Rabbenu Nissim, from Kairouan (see \*Nissim b. Jacob b. Nissim ibn Shahin), wrote this book of tales, which also includes two fables. The work, originally written in Arabic, was discovered in 1896; prior to that, only the Hebrew translation (*Ma'asiyyot she-ba-Talmud*, Constantinople, 1519) was known.

KALILA AND DIMNA. Translated into Latin as *Directorium Vitae* by the apostate \*John of Capua, this composition was of great importance to European fable literature; it became the basis of all translations. According to A.S. Rappoport, the Greek translation of *Kalila and Dimna* (ed. by J. Derenbourg, 1881) was also made by a Jew, Simeon, in 1080. The original is to be traced back through the eighth-century Arabic translation to an origin in the Indian *Panchatantra*. This line of influence from India nourished the prose fiction of the Jews of Muslim and later of Christian Spain and of Provence.

SEFER SHA'ASHU'IM ("Book of Delights"). Written at the end of the 12th century by Joseph b. Meir \*Ibn Zabara – whose cultural environment was clearly Muslim – this work bears some relation to the *Tahkemoni* of Judah \*Al-Ḥarizi, and to the *maqamat* of the Arabic poet Al-Ḥariri. It contains a fable which deals with a conflict between the strong leopard and the sly fox and which in turn forms the framework for another fable and for four other stories, describing faithless women (one of them the widow of Ephesus, which also appears in Petronius' *Satyricon*). One of the stories is a version of the fable of the fox in the vineyard, completely devoid, however, of the homiletic bent of the Midrash. The book shows traces of Arabic, Greek, and Indian culture, and has parallels in collections of medieval exempla literature. It was translated into English by M. Hadas as *The Book of Delight* (1960).

BEN HA-MELEKH VE-HA-NAZIR ("The Prince and the Hermit"). Translated into Hebrew by Abraham ibn Ḥisdai in Spain at the end of the 12th or beginning of the 13th century (first printed edition, Constantinople, 1518), this work was discovered by Steinschneider to be a translation and adaptation of the Greek "Barlaam and Joasaph." Indian in origin (c. eighth century), it is a typical example of Indian wisdom literature, in which the stories are told by a wise man as he tutors a young prince.

MISHLEI SHU'ALIM ("Fox Fables"). This work was written by R. \*Berechiah b. Natronai ha-Nakdan who lived during the creative period of Jewish fable literature (end of the 12th and beginning of the 13th century), and was printed in Mantua in 1557. The use of the name *Mishlei Shu'alim*, identical with a genre of fables mentioned in the Talmud (Suk. 28a; Sanh. 38b), is explained on the title page by the statement that the fox is the most cunning of animals, and therefore the cleverest. The number of fables included in this collection varies between 107 and 115 with the different manuscripts. They are written in the form of *maqamat*, in a clear, lively style; structurally each has an *epimythium*, the first two lines of which comprise the *pro-*

*mythium* as well (i.e., a proverb-like statement at the opening of the narrative). The religious tendency of the Midrash, totally absent in *Sefer Sha'ashu'im*, appears vaguely in Berechiah's composition. Its tone is clearly Jewish: biblical references are numerous, other sources are echoed in it, mythological creatures are changed to men. A talmudic reference to R. \*Akiva (Ber. 61) is the source of Berechiah's story of the fox and the fish. On the other hand, the work also displays many parallels to the West-European Aesopian tradition, including the Old-French compilation of Marie de France and the *Directorium Vitae*. Some parallels also appear in the popular late-medieval beast epic *Roman de Renart* (High German, *Reinhart Fuchs*; Low German, *Reynke de Vos*). It is possible that Marie de France and Berechiah had common sources in the West European Isopet traditions, in which case the title and the printer's remark can be explained by the immense popularity of fox fables at that period.

*Mishlei Shu'alim* became part of European Jewish culture: a Yiddish translation by Jacob Koppelman appeared as early as 1588 in Freiburg, and was reprinted several times in Prague, Vilna, and Warsaw. Several reprints in Hebrew were also rendered in different parts of Europe. Popular among non-Jews as well, it appeared in a Latin translation by Melchior Hanel (Prague, 1661), and the German author, G.E. Lessing, translated seven of the fables into German (*Abhandlung ueber die Fabel*, 1759). M. Hadas published an English translation, *Fables of a Jewish Aesop* (1967).

MESHAL HA-KADMONI ("The Fable of the Ancient"). The Spanish Hebrew writer, Isaac ben Solomon ibn \*Sahula, aspired to create a Hebrew fable independent of foreign influences, and titled his book *Meshal ha-Kadmoni*, so as to stress the fact that its sources were in the Talmud and Midrash. In fact, however, he did not succeed in completely eliminating foreign influences. Written in the form of a *maqama*, the fables are cast in dialogue. Their moral lessons are Jewish, and the animals, well versed in Jewish learning: the deer is an expert in Talmud, the rooster, a Bible scholar, and the hare knows the *posekim*. They are also knowledgeable in such fields as logic, grammar, and biology. Neither characterization nor plots are fabular in the popular or traditional sense, which, according to Heller, renders Sahula's fables less important than those of Ibn Zabara or of Berechiah. *Meshal ha-Kadmoni* was first printed in 1480. The Venetian edition of 1546 is amply and imaginatively illustrated with pictures of the disputing animals. The book, which gained popularity, was translated into Yiddish by Gershon Wiener (Frankfurt, 1693).

SEFER HA-MESHALIM ("The Book of Riddles"). The 13<sup>th</sup>-century kabbalist Joseph \*Gikatilla compiled this non-kabbalistic collection of approximately 140 riddles, essentially didactic in nature, and often lacking the ingenuity of a genuine riddle. (Some manuscripts, however, include only about half the number of riddles.) The basis of comparison in these riddles varies among plants, animals, and inanimate objects. It was published by I. Davidson in 1927.

IGGERET BA'ALEI HAYYIM ("The Animals' Collection"). A translation by \*Kalonymus b. Kalonymus (Arles, 1316, in seven days) of the end of the 25<sup>th</sup> book of a Muslim encyclopedia, its first printed edition appeared in Mantua in 1557 (ed. by J. Landsberger, 1882). Its sources include Greek and Arabic but are primarily Indian. Several elements of this work are not characteristic of the fable: the animals, for instance, dispute throughout the book with human beings before the king of ghosts, and the plot is not mono-episodic. On the other hand, the context of law courts and the depiction of animals functioning like human beings do resemble the fable. The Jewish element in the translation is the addition of a Jew to the Muslim who represents men in the trial. There is clearly a relationship between *Iggeret Ba'alei Hayyim* and the Bidpai literature, and parallels to some of its "characters" are found in *Kalila and Dimna*. The popularity of this work is evidenced by the fact that it was printed several times and translated into Yiddish.

MISHLEI SENDABAR ("The Tales of Sendabar," Sindbad). Translated into Hebrew the same year as *Iggeret Ba'alei Hayyim* (1316), these tales exist in eight Oriental versions (Greek, Syriac, Old Spanish, three Persian ones, Arabic, and Hebrew), all under the same name. (In all the major Western languages they appear as *The Seven Sages*.) M. Epstein suggests the possibility of a Hebrew origin on the basis of a similarity to Vashti the Queen in the Book of Esther. The wickedness of women is the central theme of both the frame tale and those told by the sages. One of the sages of the Hebrew version, Lokman, is, according to tradition, the Arabic Aesop. The distinctive feature of the Hebrew *Mishlei Sendabar* is the freeing of the woman at the end; in other versions she is killed or otherwise severely punished. The intermediary between the Indian and the Arabic versions is generally held to be Pahlevi. Epstein points out, however, that the Hebrew alone bears some features which distinguish the Western from the Eastern version. According to others, the bridge is either the Byzantine Empire or the Crusaders. A.M. \*Habermann's view is that the book was translated to Hebrew from Arabic, although this has not been proved to be the only possibility. Modern editions include M. Epstein's (*Tales of Sendabar*, 1967) and A.M. Habermann's (*Mishlei Sindbad*, 1946). (See \*Sindabar.)

MISHLEI IRASTO ("Tales of Irasto"). Translated by the early 16<sup>th</sup> century rabbi of Amsterdam, Isaac \*Uziel, this work is very similar to *Mishlei Sindabar*, but the coarse elements have been excluded. It was translated, according to Habermann, from Italian; according to A. \*Elmaleh (editor of *Mishlei Irasto*, 1945), from Latin.

#### In the Post-Medieval Period

THE KUHBUCH. This most popular collection of Yiddish fables in Europe is known only in Moses Wallich's edition (Frankfurt, 1687). Its name is taken from an earlier compilation of the same name, no longer extant, which was printed in 1555 by Abraham b. Mattathias. While it apparently included parts of *Mishlei Shu'alim* and *Meshal ha-Kadmoni*, its fables are

not direct translations; it also includes stories in the typical Renaissance style of Decameron. A modern German translation by R. Beatus was published by A. Freimann in 1926.

**DARSHANIM.** The various ideological schools of medieval Jewry employed fables as religious exempla. The rationalists, the Hasidei Ashkenaz, and the representatives of the Kabbalah in its various stages all used fables allegorically or metaphorically to support and to exemplify their ideas. It is quite likely that fables were used by *darshanim* after the Middle Ages as well, although few examples are extant. Fables with a clear homiletical tendency appear among the *meshalim* of Jacob of Dubno (Jacob \*Kranz, better known as the Dubno Maggid), one of the outstanding *darshanim* of the Musar Movement. It is somewhat exaggerated, however, to call him “the Jewish Aesop,” as M. \*Mendelssohn did, since he drew the background material for his fables primarily from everyday life; as H. Glatt (*He Spoke in Parables*, 1957) has said, “he was more of a parablist than a fabler.” One of his fables is the Aesopian “One Donkey for Two People.” Other classical fables in his repertoire include “The Crafty Woodcock” (i.e., the Aesopian “The Fox, the Cock, and the Dog”) and “The Utensils that Gave Birth” (cf. *Kalila and Dimna* and *Panchatantra*). The stories in his commentary to *Pirkei Avot* also contain fables.

### In Modern Hebrew Literature

**EARLY PERIOD.** Modern Hebrew literature, highly didactic in its early stages (late 18<sup>th</sup>–early 19<sup>th</sup> centuries), found the fable a useful literary device. Isaac ha-Levi \*Satanow wrote the pseudepigraphic *Mishlei Asaf* (2 vols., Berlin, 1788–91). Imaginatively attributed to Asaph b. Berechiah (1 Chron. 6:24), the work is stylistically imitative of Proverbs and the Wisdom of \*Ben Sira. Its animal fables, which tend to be allegorical, are composed in the talmudic and the Aesopian traditions. In the same period, such writers as Joel \*Loewe and Isaac Euchel dealt with the fable from a theoretical standpoint.

Shalom ben Jacob \*Cohen’s *Mishlei Agur* (Berlin, 1799; 1911) includes verses and verse-dramas, which sometimes have fabular characteristics. The Yiddish satirist Solomon \*Ettinger, who associated with the Zamosc *maskilim*, differed from most of his contemporaries in stressing style more than ideology. Influenced by German drama and fable literature (Lessing, Gellert), Ettinger added Jewish content to the foreign themes. Many of his fables are essentially epigrammatic.

**LATE 19TH CENTURY.** Later in the 19<sup>th</sup> century, the poet J.L. Gordon published *Mishlei Yehudah* (1860), a collection mainly of translations of La Fontaine’s fables. In the preface to this work, he gave a history of the Hebrew fable. *Gam Elleh Mishlei Yehudah*, another collection of fables, appeared in 1871. While Gordon essentially collected and transmitted fables from the European tradition to Hebrew, A. \*Paperna wrote a book of fables *Mishlei ha-Zeman* (1894), essentially a long discourse among various animals on the question of who was the happiest of them all. Irony is the dominating

tone of the work, and amusement apparently its primary purpose, although it may also have some practical implications. In verging on the comic, this work resembles the 18<sup>th</sup>-century German fables. In 1893 Joshua \*Steinberg published his *Mishlei Yehoshu’a* which are mainly epigrams. Collections of East European Jewish fables such as these were published as far east as Baghdad.

**HEBREW TRANSLATIONS OF FABLES.** A number of (Hebrew) translations of fables appeared in the 19<sup>th</sup> century, including: I.L. \*Jeiteles’ translation of Lessing’s fables; Solomon Pundy’s (b. 1812) of the German folklorist Pfeffel’s fables; Benjamin Kewall’s (1806–1880) adaptation of 52 of Aesop’s fables *Pirhei Kedem* (1843). The Italian Jewish writer S.D. \*Luzzatto in *Kinnor Na’im* (Vienna, 1825), translated fables by Aesop and Lessing. Krylov’s fables were translated by Meir Wolf Singer (1885) and by Chayim Susskind (1891). In the beginning of the 20<sup>th</sup> century a new translation of Lessing’s fables was made by Moses \*Reicherson (1902), and a translation of Krylov by S.L. \*Gordon (1907). More than 400 years after its translation into Hebrew, *Kalila and Dimna* was retranslated by Elmaleh (1926).

**THE 20TH CENTURY.** Few literary fables have been written in the 20<sup>th</sup> century. Among Jewish works, the most important is probably that written by Eliezer \*Steinberg and published in Romania (*Shriftn*, 2 vols., 1932–33), shortly after the death of the author. The two volumes, written in rich, rhythmic Yiddish verse, include 150 fables of animals and inanimate objects alike. (His fables were published earlier (1928) with wood-cuts by A. \*Kolnik.) Some of the fables have *epimythia*; others convey the moral lesson through the tale itself.

Hananiah Reichman, who translated the fables of Krylov (1950), includes in his epigrammatic collections much fabular material, adapted to his own concise and ironic verse form. His books include *Mi-Mishlei ha-Ammim u-mi-Pi Hakhamim* (1941), *Pitgamim u-Mikhtamim* (1955), and *Devash va-Okez* (1960). He also translated Steinberg’s fables into Hebrew (1954). An interesting contribution is E. \*Fleischer’s *Meshalim* (1957), a book of fables which was sent to Erez Israel from a prison camp in Eastern Europe. The author used the pseudonym Bar-Abba. Written basically in the classical vein of La Fontaine and Krylov, these fables have new themes and combine humor with bitter social satire.

The religious fables (a minority among parables, as *Yalkut Meshalim* (ed. S. Sheinfeld) generally in the case of exempla) of the Ḥafez Ḥayyim (R. \*Israel Meir ha-Kohen from Radin) were published in Tel Aviv in 1952. From the oral tradition, Naphtali Gross’ *Mayselekh un Mesholim* (1955, 1968<sup>2</sup>) shows a low percentage of fables in the East European Jewish tradition. Less than five percent (27 of the 540 fables) in the collection are fables. H. Schwarzbaum’s commentary shows that these few have a great affinity to both the European Aesopian tradition and to the traditional Jewish sources. The percentage of animal fables is still lower (less than two percent) in the collections of the Israel Folktale Archives.

### Summary

The fable in general, and Jewish fable in particular, has almost disappeared from the oral tradition. The largest number of Jewish fables is found in the talmudic-midrashic literature in the Near East, and in the medieval European Jewish collections. Foreign influences upon these fables are decisive, but it is clear to both reader and scholar that some of the early stages of the history of the fable, as far as it can be reconstructed at the present, point to Erez Israel.

**FABRI, FELIX** (15<sup>th</sup> century), Dominican monk in Ulm (Germany). In 1480 he accompanied the German noble Georg von Stein on a pilgrimage to Palestine. Landing at Jaffa, Fabri proceeded by way of Ramleh to Jerusalem. From there he visited Jericho and Bethlehem, and a longer journey took him through Hebron and Gaza to Mount Sinai. He returned to Ulm in 1483. Fabri noted many remarkable details in the countries he visited and wrote an account of his travels that has been translated in the *Palestine Pilgrims' Texts*.

**FABRICANT, SOLOMON** (1906–1989), U.S. economist. Fabricant, who was born in Brooklyn, New York, received his B.A. from New York University and his M.A. (1930) and Ph.D. in economics from Columbia University (1938). In 1930 he joined the National Bureau of Economic Research as a research assistant. He was connected with the Bureau throughout his career, and from 1953 to 1965 was director of research. In 1947, after World War II service with the War Production Board and the European regional office of the United Nations Relief and Rehabilitation Agency (UNRRA), he became an associate professor of economics at New York University and a year later a full professor. In 1955 he became a member of the NBER board of directors, and a director emeritus in 1981. During his 50 years with the Bureau, he produced research on such topics as manufacturing output and employment, business cycles, government employment, and changes in productivity.

Regarded as the world authority on the characteristics of business cycles and the “father” of current productivity measures, Fabricant devoted himself to research and writing on developmental economics, business fluctuations, and macro-economic theory.

His numerous publications include *Output of Manufacturing Industries, 1899–1937* (1940), *Employment in Manufacturing, 1899–1939* (1942), *The Trend of Government Activity in the United States since 1900* (1952), *Basic Facts on Productivity Change* (1959), *Measurement of Technological Change* (1965), *A Primer on Productivity* (1969), *Five Monographs on Business Income* (with C. Warburton, 1973), and *The Economic Growth of the United States: Perspective and Prospective* (1979).

[Joachim O. Ronall / Ruth Beloff (2<sup>nd</sup> ed.)]

**FACING HISTORY AND OURSELVES**, Holocaust education program begun in 1976 just as consciousness of the Holocaust was moving beyond the survivor community, when two Brookline, Massachusetts, teachers integrated a unit on the Holocaust and Human Behavior into their 8<sup>th</sup> grade social studies course. Throughout the next decade, it expanded its outreach, first in Massachusetts with support from that state's Department of Education, and then across the country as one of the model programs designated by the National Diffusion Network of the Office of Education.

In 1990, Facing History opened its first regional office in Chicago, to be followed by offices in six other regions and one in Europe. The organization has now evolved into a program of teacher training, resource preparation, and ongoing research and development that now reaches more than 21,000 educators and over 1.6 million students in 90 countries around the world.

Faithful to its name, there are two dimensions to Facing History and Ourselves, the historical material and the individual student – the self. Facing History's intellectual and pedagogic framework was built upon a synthesis of history and ethics for effective history education. It included a language and a vocabulary for studying difficult and complicated history. It conveyed an understanding that such history did not have to happen but instead was the culmination of a series of ongoing choices (or lack of choosing) and decisions at every level of society. It further engaged students with a sense of the connection of that history to their present and future worlds. The model was interdisciplinary, and built upon the methods of the humanities – inquiry, analysis, interpretation, and judgment. Facing History engaged students in confronting, as distinct from simply studying, the past. Its pedagogy insisted on going beyond the simple answer and response to grapple with complexity and uncertainty in order to come to informed choice which recognized an ethical imperative while rejecting helpless relativism.

From the beginning the core case study of Facing History and Ourselves has been an in-depth study of the failure of democracy in Germany and the events leading to the Holocaust. Studying the unique and universal lessons of the Holocaust helps students to think morally about their own behavior and to reflect on the moral nature of the decisions they have made. By examining the circumstances of this piece of history, students explore fundamental issues of citizenship, responsibility, and decision-making in a democracy.

In Facing History classrooms, middle and high school students learn to think about individual decision-making and to exercise the faculty of making judgments. By illuminating common themes of justice, law, and morality in the past and present, Facing History offers students a framework and a vocabulary for examining the meaning and responsibility of citizenship and the tools to recognize bigotry and indifference in their own worlds. Through a rigorous examination of the steps and events that led to the Holocaust, along with other case studies of collective violence and genocide, Facing History teaches one of the most significant and necessary lessons for adolescents to understand: prevention of collective violence is possible. The mass violence and genocide in the past were not inevitable but rather were shaped by choices made by individuals and groups – choices that at the time may have seemed ordinary and unimportant, but taken together, led to extraordinary, unimaginable consequences.

Facing History encourages adolescents to draw connections among events in the past, choices in the present, and the possibilities of the future. It began with the study of the Holocaust and the Armenian Genocide but it gradually expanded its concerns. The Facing History program offers teachers and students vocabulary, concepts, and materials to confront the mass violations of human rights and human dignity in recent history, whether they be in the breakdown of democracy in Germany in the 1920s and 1930s, or in South Africa, or the Armenian Genocide, or the more recent genocides in Rwanda, Bosnia, or the Sudan.

Students learn to recognize universal themes of prejudice, discrimination, and de-humanization, as well as courage, caring, responsible participation, and steps that can be taken toward prevention.

The Facing History framework is also built upon the notion that democracies are fragile enterprises and can only remain vital through the active, thoughtful, and responsible participation of its citizens. Education for democratic citizenship means encouraging students to recognize that participation can make a difference and is integral to the ethical choices and decisions that we all face. Very often, those decisions are influenced by labeling and stereotyping, and by how we define group identities and who belongs and who does not. Facing History courses embody a sequence of study which begins with identity – first individual identity and then group identities with their definitions of membership. From there the study examines the failure of democracy and the steps leading to the Holocaust – the most documented case of 20<sup>th</sup> century indifference, de-humanization, hatred, racism, and antisemitism. It goes on to explore difficult questions of judgment, memory, and legacy, and the necessity for responsible participation to prevent injustice. The program ends with a section called “Choosing to Participate” with examples of individuals who have taken small steps to build just and inclusive communities and whose stories illuminate the courage and compassion that is needed to protect democracy today and in generations to come.

Facing History is often described as a journey, back and forth between past, present, and future. Its language and vocabulary are tools for entry into history – terms like perpetrator, victim, defender, bystander, rescuer, collaborator, and opportunist. Students learn that terms like identity, membership, legacy, denial, memory, and judgment can help them understand complicated history, but that an authentic use of that language needs to be rooted in the constellation of individual and group choices, decisions, and behaviors that Facing History has called “Ourselves.”

The Facing History journey further embraces a pedagogy that is rooted in the concerns and issues of adolescence: the overarching interest in individual and group identity; in acceptance or rejection, in conformity or non-conformity, in labeling, ostracism, loyalty, fairness, and peer group pressure. It speaks to the adolescent’s newly discovered ideas of subjectivity, competing truths, and differing perspectives, along with the growing capacity to think hypothetically and the inclination to find personal meaning in newly introduced phenomena.

The elements of Facing History pedagogy have been demonstrated in hundreds of institutes and workshops and have characterized teaching and learning in thousands of classrooms. These institutes are given in both face-to-face and online environments, and include an online campus with modules and lesson plans to extend the program. Since the examination of difficult and complex issues of human behavior in critical moments in past and present requires careful thinking and reflection, Facing History teachers employ effective strategies to encourage students to listen, to take another’s perspective, to understand differing points of view, and to undertake intellectual risks in their analysis and discussion. Meaningful intellectual growth is a process of confronting imbalance and dissonance as students grapple with new ideas and different perspectives that contradict unexamined premises, so these teachers carefully challenge generalizations and push for clear distinctions in language and explication. Building upon the increasing ability to think hypothetically and imagine options, Facing History teachers stretch the historical imagination by urging delineation of what might have been done, choices that could have been made, and alternative scenarios that could have come about.

Equally important, Facing History pedagogy embodies teaching the skills of in-depth historical thinking and understanding. These include knowledge of chronology, causality, and point of view; along with the ability to analyze evidence, take different perspectives, make distinctions and understand relationships. Facing History teachers make these skills explicit and provide opportunities for continual demonstration and practice. They further believe that all students are capable of attaining the high standards necessary to engage deeply in the resource materials of the program. Yet students learn differently, so it is essential to use multiple assessments in their classrooms to honor the complexity of their thinking.

Evaluation of Facing History has been a priority of the program since its inception. Researchers have studied the impact of the program in such areas as adolescent psychosocial and moral development and education, violence and violence prevention, historical understanding, citizenship education, empathy, self-concept and social interest, academic achievement, teacher professional development, and school climate. In a major study funded by the Carnegie Corporation of New York, Facing History classes were shown to be significantly successful in expanding adolescents' capacities for interpersonal understanding, and in enhancing the ability to reflect upon the personal meaning of issues of social justice.

As Facing History completes three decades of teaching about the Holocaust and other examples of collective violence and looks ahead to the 21<sup>st</sup> century, its impetus is to go beyond memory and legacy and ask how those perspectives can lead to prevention. Its content and pedagogy is helping students become more global and giving them tools and concepts to build bridges and relationships for global understanding and participation. Thus, the global outreach to educators has become critical. Through its website ([www.facinghistory.org](http://www.facinghistory.org)) Facing History has facilitated online forums for scholars and educators on such issues as the impact of religion on identity, the nature of transitional justice in societies which have undergone mass violence, and the role of education in creating a civil society. Through its power to engage teachers and students, Facing History can facilitate thoughtful and positive change in a school community and convey that while participation can make a difference in sustaining democracy. Such participation, including judgments of right and wrong, needs to be informed, as opposed to constrained by history.

### Major Facing History Publications

Included are *Facing History and Ourselves: Holocaust and Human Behavior* (primary resource book); *Crime Against Humanity and Civilization: The Genocide of the Armenians; I Promised I Would Tell* (Holocaust Survivor Memoir); *Elements of Time* (companion guide to Facing History's videotape collection of Holocaust survivor testimonies); *Facing History and Ourselves: Jews of Poland; Race and Membership in American History; The Eugenics Movement*.

[Martin Sleeper (2<sup>nd</sup> ed.)]

**FACKENHEIM, EMIL** (1916–2003), philosopher. Fackenheim was born in Halle, Germany. After graduating from the Stadtgymnasium in 1935, and despite the encouragement of his classics teacher, Adolph Loercher, to study classical philology, he chose to move to Berlin and enter the rabbinical program at the Hochschule fuer die Wissenschaft des Judentums. For three years, he studied Midrash, Bible, history, and philosophy; he also began a degree in philosophy at the University of Halle. His academic career in Germany was interrupted by *Kristallnacht* and internment for several months in Sachsenhausen. In the spring of 1940 he fled to Aberdeen, Scotland, and matriculated in a degree program in philosophy at the university. A year later, he and other refugees were gathered in camps and dispersed throughout the British Empire. Fackenheim traveled by ship to Canada, was interned in a camp in Sherbrooke, Ontario, and eventually released. He was accepted into the doctoral program in philosophy at the University of Toronto and received his degree in 1945 with a dissertation on Medieval Arabic philosophy and its classical antecedents. From 1943 to 1948 he served as rabbi for congregation Anshe Shalom in Hamilton, Ontario. Invited to teach philosophy at the University of Toronto in 1948, he remained there until 1983, when he retired as university professor. He and his family immigrated to Israel in 1983. He taught at the Institute for Contemporary Jewry at the Hebrew University for several years. In the 1980s he taught German theological students in Israel and in the 1990s traveled several times to Germany, receiving various degrees and honors.

In the postwar period Fackenheim pursued two intellectual interests. First, he examined the tension between faith and reason from Kant to Kierkegaard, writing important essays on Kant on evil and on history and essays on Schelling. Second, he explored the role of revelation in modern culture, in particular Jewish faith, autonomy, the challenge of naturalism and secularism, and the defense of revelation in the thought of Martin Buber and Franz Rosenzweig. Fackenheim developed an existential account of historically situated agency and self-constitution, which he articulated and defended in his short book, *Metaphysics and Historicity*, based on his Aquinas Lecture at Marquette University. His philosophical project on faith and reason, for which he received a Guggenheim Fellowship in 1956–57, became a book on Hegel, *The Religious Dimension in Hegel's Thought*, published in 1968. In the course of the decade that he worked on Hegel, Fackenheim's existential thinking took the shape of a distinctly dialectical style of argumentation and analysis, indebted to his interpretive work on Hegel and to his understanding of the early works of Kierkegaard.

Until 1966 Fackenheim had largely avoided dealing with the Nazi assault on Jews and Judaism and the atrocities of the death camps. In the summer of 1966 he delivered a paper on the "death of God" movement and the "self-exposure of faith to the modern secular world," in which he ended by acknowledging the centrality of facing the horrors of Auschwitz. At the

end of that paper, he acknowledged the role that Elie Wiesel's autobiographical, fictional reflections might play in showing how Jewish faith could be exposed to those horrors and yet survive. The next spring, on March 24, 1967, at a symposium convened by the American Jewish Committee and organized by the editor of its journal *Judaism*, Steven Schwarzchild, "Jewish Values in a Post-Holocaust Future," Fackenheim first formulated and presented his imperative for authentic Jewish response to the Holocaust, what he called the 614<sup>th</sup> commandment, "Jews are forbidden to give Hitler any posthumous victories." He elaborated the reasoning that led to this imperative and its hermeneutical content in "Jewish Faith and the Holocaust," which appeared in *Commentary* and, in a slightly different form, in the introduction to his book of essays, *Quest for Past and Future*. Its argument received its most developed form in the third chapter of *God's Presence in History*, published in 1970 and based on his 1968 Deems Lectures at New York University.

In these central writings, Fackenheim argued that no intellectual understanding – historical, political, theological, or psychological – of the evil of Auschwitz is possible; the event has no "meaning" or "purpose." Even the most comprehensive philosophical systems, the Hegelian system most of all, founder on the rock of radical evil. But while no such intellectual comprehension is satisfying and hence no intellectual response acceptable, an existential response is necessary. No theoretical, philosophical, or theological source, however, is capable of framing what a genuine response should be. At this point, thought must go to school with life; one can and must turn to actual lived experience, during and after the event, to grasp how Jews have responded and hence how one ought to respond. Ongoing Jewish life, Fackenheim claims, can be interpreted as a response to a sense of obligation or duty, and this duty is a duty to oppose all that Nazism sought to accomplish in its hatred of Jews and Judaism and in its rejection of human dignity and worth. While for secular Jews, such a duty has no ground but is accepted as binding without one, for believing Jews, the only ground that is possible is the Voice of a Commanding God. Hence, for them, it has the status of a divine command, alongside but not superseding the other, traditional 613 Biblical commandments. It is, in his famous formulation, a 614<sup>th</sup> commandment.

Fackenheim had arrived at this imperative of resistance to Nazi purposes, this duty of genuine post-Holocaust Jewish existence, alongside an ongoing reflection on revelation and modernity and as an expression of a newly appreciated necessity of exposing faith and obligation to a post-Holocaust situation. His journey had capitalized on several crucial insights. One was that after Auschwitz, as he put it, even Hegel would not be a Hegelian, i.e., that Auschwitz was a case of evil for evil's sake and was therefore unassimilable to any prior conceptual system. Even the most systematic philosophic thought was historically situated and was ruptured by the horrors of the death camps. Second was the commitment to existential-dialectical thinking about the human condition and to

its hermeneutical character. Third was the recognition that while Auschwitz threatened all prior systems, ways of life, and beliefs, Judaism must and could survive exposure to it. The work of Elie Wiesel and Wiesel's life itself confirmed this hope and this realization.

In the 1970s Fackenheim's thought extended the lines of thinking that we have summarized. First, in his book *Encounters Between Judaism and Modern Philosophy* he explored how modern philosophy had ignored or distorted Judaism and had exposed its own inadequacies in so doing. Second, he applied the framework just described to a variety of themes – most notably to the State of Israel, its reestablishment and defense, but also to the belief in God, the relationship between Jews and Christians, and the necessity of struggling against all attempts to diminish human dignity and the value of human life. These efforts continued throughout his life and in effect amount to a ramification of the interpretation of the 614<sup>th</sup> commandment, for Jews, Christians, philosophers, historians, Germans, and others. Finally, he turned to important philosophical problems with his existential and hermeneutical argument. The crucial problem had to do with the possibility of performing the imperative of resistance or, as one might put it, the possibility of confronting the radical threat of rupture and not giving way to total despair. This was to become the central problem of his magnum opus, *To Mend the World*, published in 1983 (with new introductory material in 1987 and again in 1993).

In the earlier period, culminating in 1970, Fackenheim had argued from the necessity of the commandment or imperative to its possibility, either on Kantian grounds, that duty entails the freedom to perform it, or on Rosenzweigian grounds, that along with the commandments that God grants in an act of grace, He also gives humankind out of the same love the freedom to perform them. By the late 1970s Fackenheim had come to see the extent to which both responses failed to respect the victims of the Nazi horrors. In the crucial chapter of *To Mend the World*, he systematically and dialectically explores the agency of evil and its victims, in order to arrive at a moment when the victim's lucid understanding grasps the whole of horror, and yet reacts to it and in opposition to it with surprise. He confirms this intellectual grasp with an emblematic case of victims of the camps and the atrocities, who both see clearly what they are being subjected to, what the evil is, and sense a duty to oppose it in their life. He then goes on to claim that this episode constitutes an ontological ground of resistance, and that Judaism, through the idea of a cosmic rupture and a human act that respects and yet opposes it, what is called in the Jewish mystical tradition (Kabbalah) *tikkun olam*, provides philosophy with a concept essential to grasp the possibility of genuine post-Holocaust life. *To Mend the World* proceeds to apply these lessons in three domains – philosophy, Christianity, and Jewish existence, in each case locating an emblematic case of *tikkun* (mending or repair) that respects the evil of Auschwitz as a total and unqualified rupture and yet finds a route to hope and recovery. Hegel, he

remarks, had said that the wounds of Spirit heal without leaving scars. Hegel was wrong – while healing is necessary (and hence recovery as a hermeneutical and existential activity), the scars of the Holocaust will and must remain.

This line of argument was not without its difficulties, and challenges have been made to it. Fackenheim, in the last two decades of his life, once more extended its lines – with a book on the Bible and how it ought to be read by Jews and Christians, together, in a post-Holocaust world, with a survey of Jewish belief and practice in the 1980s, and with a number of essays on the State of Israel as a paradigmatically genuine response to the Nazi assault, i.e., as a unique blending of religious purposes and secular self-reliance, combining a commitment to a homeland for Jews against the most extreme assault and to its defense. Philosophically, in his last years, Fackenheim focused on two issues that were connected in his mind, one the radicality of the Nazi evil and the question “why they did it,” and secondly the character of the type of victim called the *Musselmanner*, which Primo Levi famously called the “drowned” and identified as the characteristic product of the death camps. These two issues also continue themes of Fackenheim’s earlier work, the nature of the radical evil that was Auschwitz and the question whether there is not a type of victim of the Nazi horrors that must be respected and not dishonored, and yet that is outside the bounds of the ontological ground of resistance itself.

Fackenheim’s philosophical commitments were deeply immersed in existential and concrete realities, most notably the historicity of philosophical and religious thought, the hermeneutical and situated character of human existence, and the unprecedented evil of Nazis and the death camps. Auschwitz led him to expose philosophy, culture, and religion unconditionally to historical refutation; yet his deepest yearnings were to find continued hope and to avoid despair, to appreciate the necessity of Jewish life and the defense of human value and dignity. These dispositions, however, were what we might call “rationally defended yearnings” and hence necessities (duties and obligations) only in a deeply contextual sense. He wanted them to be objective and absolute duties, but in the context of his developed thinking, after the 1960s, there are no such duties, or, if we think there are, they are ones that carry no global or general authority. What force they bear must be defended one by one and situation by situation, within the larger context of a commitment to face the utter rupture of Auschwitz and still go on with life, to heal and recover while nonetheless not expecting the scars of history to disappear.

**FACTOR, MAX** (1877–1938), U.S. cosmetics manufacturer. Factor was born in Lodz, Poland, where at the age of eight

he served an apprenticeship to a dentist-pharmacist. Years of mixing potions instilled in him a fascination with the human form. Factor opened his own shop in Moscow, where he sold hand-made rouges, creams, fragrances, and wigs. A traveling theatrical troupe wore Factor’s makeup while performing for Russian nobility. Appreciating his handiwork, the Russian aristocrats appointed Factor the official cosmetic expert for the royal family and the Imperial Russian Grand Opera. Factor emigrated to the United States in 1904, and opened a cosmetics booth at the World’s Fair in St. Louis. He moved his family to Los Angeles, where, in 1909, he opened a cosmetics and perfume shop in the center of the city’s theatrical district. The business subsequently developed into Max Factor & Co., the largest cosmetics firm in California for decades.

In 1914, Factor created a makeup specifically for movie actors which, unlike theatrical makeup, would not crack or cake. Film stars rushed to his makeup studio, anxious to try out his “flexible greasepaint,” while producers headed for the wigs that Factor made from human hair. In 1938 he developed pancake makeup, a new type of material to be used by actors in Technicolor films, which soon became the standard makeup for all color motion pictures.

In the 1920s Factor introduced cosmetics to the public, promoting the idea that every girl could look like a movie star by using Max Factor Makeup. When pancake was launched, it became one of the fastest-growing, largest-selling, single makeup items in the history of cosmetics. Factor was responsible for countless other cosmetic innovations, including the word “makeup” itself, which he coined. He and his company created such mainstays as lip gloss, the eyebrow pencil, false eyelashes, waterproof makeup, and the concept of cosmetic “color harmony.” He also developed numerous makeup techniques for movie special effects, as well as personal application.

Much of his work has been preserved at the Hollywood History Museum in Hollywood, California. The exhibits include the lobby and various makeup rooms from his studio, as well as thousands of rare Hollywood costumes, props, sets, and memorabilia.

Factor co-authored the book *The Technique of Stage Make-up: A Practical Manual for the Use of Max Factor’s Theatrical Make-up* (with J. Knapp, 1942).

Each of his four sons joined the business. DAVIS FACTOR (1902–1991), who was born in Russia, became chairman of the board. MAX FACTOR, JR. (1904–1996), born in St. Louis, became vice chairman of the board. A specialist in cosmetic chemistry, he received awards from the motion picture and television industry for designing special makeup to go before the cameras. LOUIS FACTOR (1907–1975), also born in St. Louis, became vice president and assistant secretary of the firm. Los Angeles-born SIDNEY FACTOR (1916– ) was a member of the board. Max Factor’s son-in-law, MAX FIRESTEIN (1894–?) of Denver, became chairman of the board’s executive committee. Active in Jewish organizational life, he was

president of the Los Angeles Jewish Community Council and served on the national campaign cabinet of the United Jewish Appeal. His sons ALFRED FIRESTEIN (1924– ) and CHESTER FIRESTEIN (1930– ) became president and executive vice president, respectively, of Max Factor Co. DAVIS FACTOR (1935– ) of the third generation was director of marketing in the international division. By the end of the 1960s Max Factor had become the third-largest U.S. cosmetics manufacturer, and the largest in the international field.

Max Factor became a division of Procter & Gamble in Hunt Valley, Maryland.

**FADENHECHT, YEHOSHUA** (1846–1910), religious Zionist and a founder of the \*Mizrachi movement in Galicia. Born in Berezhany, Galicia, he moved to Kolomea, where he was registrar of births and deaths for the local Jewish community throughout his life. In the early 1880s, he founded one of the first Zionist associations in Galicia, and struggled against extremely Orthodox anti-Zionist circles. One of Herzl's earliest religious supporters, Fadenhecht published suggestions regarding *aliyah* to Erez Israel in the second issue of the newspaper *Die Welt*. For many years he contributed articles on current affairs to the Hebrew press in Galicia. After the First Zionist Congress at Basle (1897), he published *Yizre'el*, intended to be a Hebrew periodical; its sole issue was entirely filled with his own contributions devoted to explaining political Zionism, Herzl's beliefs, and the value of the Zionist Congress – all in the frame of reference of his controversy with ultra-Orthodox opponents.

[Getzel Kressel]

**FADIMAN, CLIFTON** (1904–1999), U.S. literary critic. Fadiman was born in New York and graduated from Columbia University in 1925. He became editor in chief at Simon & Schuster and then book editor of the *New Yorker* (1933–43) and was widely known for his weekly radio program *Information Please* (1938–48). His collected essays were published in *Party of One: Selected Writings* (1955). He was a familiar figure offering suggestions to readers in the Book-of-the-Month Club and guiding the selections of The Reader's Club. An editor and anthologist, he helped put together the multi-volume *Great Books of the Western World* (1990) and also edited *The Treasury of the Encyclopedia Britannica* (1992). He was awarded, in 1993, the National Book Foundation Medal for Distinguished Contribution to American Letters. He was remembered by Carolyn Heilbrun in *When Men Were the Only Models We Had: My Teachers Barzun, Fadiman, and Trilling* (2002).

**BIBLIOGRAPHY:** R. Severo, "Clifton Fadiman," in: *New York Times* (June 21, 1999).

**\*FADUS, CUSPIUS**, Roman procurator of Judea 44–46 C.E. Fadus was appointed by the emperor Claudius after the short period of Jewish government which ended with the death of \*Agrippa I. He had specific instructions to punish the inhabitants of Caesarea and Sebaste, mostly soldiers, who had shown disrespect to the dead king. Upon arrival he found the Jews in Perea in Transjordan engaged in a border dispute with the inhabitants of Philadelphia (Rabbath Ammon). The Jews asserted themselves and killed many of their opponents, thereby arousing the anger of Fadus, who sentenced one of their leaders to death and banished two others. He also took action against the false prophet \*Theudas (Acts 5:36), whom he killed together with many of his followers. According to Josephus, one of his major concerns was to rid Judea of its many robbers. In matters not involving state security he apparently ruled with moderation and generally did not interfere with Jewish customs. In one instance, however, he demanded that the sacred vestments of the high priest be handed over to the Romans for safekeeping, a practice once before adopted by the Romans but abandoned a few years earlier. The Jews protested and obtained his leave to send an embassy to Rome. Claudius, influenced in part by the intervention of the young Agrippa II, revoked the decision. Fadus was succeeded by \*Tiberius Julius Alexander.

[Lea Roth]

**FAENZA**, city in N. central Italy. In the 14<sup>th</sup> century the Jews of Faenza were moneylenders. As a result of the sermons of \*Bernardino da Feltre, the celebrated physician Lazzaro da Pavia was expelled from the city in c. 1480. The liturgical poet Raphael ben Isaac da Faenza also lived in the city in the mid-15<sup>th</sup> century. There is also documented evidence of the presence of a rabbinate of Faenza in the same years. Isaac \*Azulai, who manufactured majolica *seder* plates, worked here in 1575. From the 16<sup>th</sup> century until the Napoleon era there is no evidence that Jews lived in Faenza.

[Attilio Milano / Federica Francesconi (2<sup>nd</sup> ed.)]

**FAGARAS** (Rom. *Făgăraș*; Hung. *Fogaras*), town in Transylvania, Romania; until 1918 in Hungary. Jews were not permitted to settle there until the beginning of the 19<sup>th</sup> century. In the 17<sup>th</sup> century, however, they occasionally visited the fortress at Fagaras to present petitions to the prince of Transylvania. The settlement of Jews 12 miles (20 km.) from the town in the village of Porumbak, today known by the Romanian name of Porumbacul de Sus, was of special interest. From the judicial aspect, this village belonged to the owners of the town Fagaras. In 1697, two Sephardi Jews, Avigdor b. Abra-

ham and Naphtali b. Abraham, leased a workshop there for the manufacture of glass articles. They signed the contract of tenancy in Hebrew characters; this document is preserved in the community archives in Budapest. They were followed by other lessees as well as by Jews who leased the local tavern. A community was organized and a cemetery acquired in Fagaras in 1827. At the beginning of the community's existence its members used mostly the German language, only later going over to Hungarian. After 1919 many of them started to teach their children the language of the new country – Romanian. The synagogue was erected in 1859. There were 286 Jews living in Fagaras in 1856; 485 in 1891; 514 in 1910; 457 in 1920; 390 in 1930; and 267 in 1941. The Jewish contribution to the economic development of the town and the region was very important during the entire existence of the local community. A Jewish school was founded in 1867; the language of instruction was German until 1903, Hungarian until the end of World War I, and subsequently Romanian. It was closed down in 1938. The community joined the neologist organization (see \*Neology) in 1869 and became Orthodox in 1926. The rabbi of Fagaras, Adolf Keleman (1861–1917), visited Erez Israel in 1905 and subsequently published his impressions of the journey in Hungarian.

For long periods of time the relations between the Jews and the Romanian and Hungarian population of the region was more or less normal, with relatively few antisemitic incidents.

During the Romanian Fascist regime (1940–44), Jewish possessions and communal property were confiscated. Some of the men were conscripted for forced labor and others (mostly those accused for Communist activities) were deported to \*Transnistria. The Jews from the surrounding villages were concentrated in the town. There were 360 Jews living in Fagaras in 1947. Subsequently many left, first for the bigger cities in Romania, and after that abroad (mostly to Israel), and 20 remained by 1970.

[Yehouda Marton / Paul Schweiger (2<sup>nd</sup> ed.)]

°**FAGIUS, PAULUS (Paul Buechelin; 1504–1549)**, Hebraist. Born at Rheinzabern, in the Rhineland-Palatinate, Germany, he was professor of theology at Strasbourg and later of Hebrew at Cambridge. He studied Hebrew with Wolfgang Capito and with Elijah Levita, whom he invited to supervise the Hebrew press he established in Isny (Bavaria). He translated the following Hebrew books into Latin: Elijah Levita's *Tishbi* (Isny, 1541; Basle, 1557) and *Meturgeman* (Isny, 1542); the Talmud tractate *Avot* (Isny, 1541). He edited a Hebrew version of the book of Tobit with a Latin translation (Isny, 1542); the *Alphabet of Ben Sira* (Isny, 1542), and David Kimhi's commentary

to Psalms 1–10 (Constance, 1544). He edited several chapters of Targum Onkelos (Strasbourg, 1546) and wrote an exegetic treatise on the first four chapters of Genesis. (*Exegesis sive expositio dictionum hebraicarum literalis et simplex in quatuor capita Geneseos*; Isny, 1542). He was the author of an elementary Hebrew grammar (Constance, 1543) and translated an anonymous booklet by a converted Jew, who endeavored, with reference to Jewish sources, to prove the truth of Christianity (*Liber Fidei*, Isny, 1542; a short extract, under the title *Parvus Tractatulus*, appeared in the same year in the Hebrew Prayers edited by Fagius). Some parts of the same text had been already published and translated by Sebastian Münster in 1537. He began the republication of a revised edition of the concordance *Me'ir Nativ*. After his migration to England, where he died, this work was completed by Antonius Reuchlin (Basle, 1556).

[Giulio Busi (2<sup>nd</sup> ed.)]

**FAHN, ABRAHAM** (1916– ), botanist. Fahn was born in Vienna but grew up in Halicz and went to school there and in Stanislawow (Poland). He immigrated to Erez Israel in 1935. Fahn studied biology at the Hebrew University, where he obtained his doctorate in 1948. In 1952–53 he did research at the Jodrell Laboratory, Kew, and in the school of Botany at Cambridge, England. In 1956 he was a research fellow at Harvard University and in 1965 he was appointed full professor at the Hebrew University. Fahn published a number of scientific books: *Plant Anatomy* (in Hebrew, 1962; translated into English, Spanish, Indonesian, and Chinese); *Secretary Tissues in Plants* (in English, 1979); and, with coauthors, *Wood Anatomy and the Identification of Trees and Shrubs of Israel and Adjacent Regions* (in English, 1986); *Xerophytes* (in English, 1992); and *The Cultivated Plants of Israel* (in Hebrew, 1998). Fahn was dean of the Faculty of Science in 1963–66. He is an honorary member of leading scientific societies, foreign member of the Linnaean Society of London, and corresponding member of the Botanical Society of America. He was awarded the Israel Prize for science in 1963.

[Bracha Rager (2<sup>nd</sup> ed.)]

**FAHN, REUBEN** (1878–1939?), Hebrew writer and investigator of Karaism. Born in eastern Galicia, he became a prosperous merchant in Halicz and developed an interest in the town's Karaites. He settled in Stanislav in 1918 and became secretary of the National Council of Galician Jewry in the short-lived West Ukrainian Republic (1918–19). On the out-

break of World War II he was put on trial by the Russians for Zionist activities and taken to Russia where he disappeared without trace. A regular contributor to the Hebrew press from his youth, Fain wrote poetry, articles, and stories, particularly on the Karaites, and studies of Haskalah literature. Two volumes of his collected works were published: *Sefer ha-Kara'im* (1929) and *Pirkei Haskalah* (1937). A book of his essays, *Masot*, appeared in Jerusalem in 1943 (preface by Dov Sadan). His *Mivhar Ketavim* (selected works), ed. by N. Govrin, appeared in 1969.

**BIBLIOGRAPHY:** *Genazim*, 1 (1961), 115–8, includes bibliography; Kressel, *Leksikon*, 2 (1967), 571f.; *Arim ve-Immahot be-Yisrael; Stanislav*, 5 (1952), s.v.

[Getzel Kressel]

**FAIN, SAMMY** (1902–1989), U.S. songwriter. Born in New York and named Samuel Feinberg, Fain was a trained pianist who worked in vaudeville and in the music-publishing business before achieving success as a composer in the mid-1920s. In a six-decade career, he wrote the music for such well-loved popular songs as “I’ll Be Seeing You,” “That Old Feeling,” “Secret Love,” and “Love Is a Many-Splendored Thing.” He won Academy Awards for the latter two and his songs received eight other Academy Award nominations. Among his other major songs were “I Can Dream, Can’t I?” with his frequent lyricist-partner, Irving Kahal, “Dear Hearts and Gentle People,” and the title song from the film *April Love*. Earlier, he had hits with “Let a Smile Be Your Umbrella on a Rainy (Rainy) Day,” “Wedding Bells Are Breaking Up That Old Gang of Mine,” and “When I Take My Sugar to Tea.” Called to Hollywood, the team of Fain and Kahal wrote songs for a number of movie musicals. One of their most successful movie songs, “You Brought a New Kind of Love to Me,” was introduced by Maurice Chevalier. “That Old Feeling,” one of the great torch ballads, was introduced in the movie *Vogues of 1938*. Perhaps his most famous song was “I’ll Be Seeing You,” which was popularized in nightclubs in the 1940s and went on to become one of the most romantic signature songs of World War II. During the 1950s, with the lyricist Bob Hilliard, Fain composed the songs for the 1951 Disney film *Alice in Wonderland*, including “I’m Late.” With Paul Francis Webster, he wrote the music for the films *A Certain Smile* (1958) and *Tender Is the Night* (1961). Some of the other movies for which he wrote the music include *Call Me Mister* (1951) and a remake of *The Jazz Singer* (1953).

[Stewart Kampel (2<sup>nd</sup> ed.)]

**FAIRSTEIN, LINDA A.** (1943– ), U.S. prosecutor and author. Fairstein grew up in Mount Vernon, N.Y., a suburb of New York City. She went to Vassar College and the University of Virginia Law School. In 1972 she began working in the office of Frank Hogan, the Manhattan district attorney. At the time, the office had seven women among 170 prosecutors. By 2001, when she left, half of the office’s 600 prosecutors were women. In a 30-year career of major cases, legislative reforms,

and best-selling books that explored the legal and emotional realities of rape, Fairstein became the nation’s best-known prosecutor of sex crimes. She became chief of the sex-crimes unit in 1976, two years after it was created as the first such unit in the country. It had four prosecutors at the time; when she left it had 40. In 1977 Fairstein was a principal advocate of New York’s so-called rape shield law, which prohibited, in most cases, what had long been a common defense practice in rape and sexual assault cases: exploring the sexual history of victims to suggest promiscuity. Later she lobbied successfully for a similar law in rape-homicide prosecutions. Fairstein was also credited with a major role in the passage of a law in 1983 that struck down a requirement that victims of rape and other sex crimes prove that they had offered “earnest resistance.” She also was a principal advocate of the Sexual Assault Reform Act of 2001, which facilitated the prosecution of date rape and of rapes involving the use of drugs.

As chief of the sex-crimes unit in the district attorney’s office, she oversaw the disposition of 500 to 700 cases a year involving rape and other sexual abuses. Between 125 and 175 of those cases were prosecuted as felonies. Fairstein played a key role in a notorious 1986 case involving Robert E. Chambers Jr., who killed Jennifer Levin in Central Park after an evening in a “preppie bar.” Fairstein doggedly prosecuted the case and used the defense’s own witness to demonstrate that Chambers’s choke hold on the victim could have been intentionally lethal.

Fairstein served as the model for several no-nonsense prosecutors in the movies *Farrell for the People* (1982) and *Presumed Innocent* (2001). The author Robert Daley dedicated his 1985 novel, *Hands of a Stranger*, to Fairstein, and fictionalized many of her well-known cases. It was made into a television movie.

In 1996, Fairstein published her first novel, *Final Jeopardy*, which introduced the character Alexandra Cooper, who bore a striking resemblance to the author. The book was a critical and commercial success and was followed the next year by *Likely to Die*, which was an international bestseller. By 2005 she had published six novels. Her nonfiction book, *Sexual Violence: Our War Against Rape*, published in 1994, was a *New York Times* notable book.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**FAÏTLOVITCH, JACQUES** (1881–1955), Orientalist, devoted to \*Beta Israel (Falasha) research and relief work. Faïtlovitch was born in Lodz. He studied Oriental languages at the Ecole des Hautes Etudes in Paris, particularly Ethiopic and Amharic under Joseph \*Halévy, who aroused his interest in the Beta Israel. He made 11 missions to Ethiopia (1904–5, 1908–9, 1913, 1920–21, 1923–24, 1926, 1928–29, 1934, 1942–43, 1943–44, 1946). In 1904 he went to Ethiopia for the first time and spent 18 months among the Beta Israel, studying their beliefs and customs. The results were published in his *Notes d’un voyage chez les Falachas* (1905). In his view the Beta Israel were Jews needing help to resist Christian missionary activity, which

threatened their survival as a Jewish community. He promised them to enlist world Jewry on their behalf and took two young Beta Israel with him to Europe to be educated as future teachers. Having failed to win the support of the Alliance Israélite Universelle, he organized “pro-Falasha” committees in Italy and Germany to raise funds for Jewish education for the Beta Israel in Abyssinia and abroad. In 1908–09 Faitlovitch spent 15 months in Abyssinia; he was received by Emperor Menelik II and pleaded for equitable treatment for the Beta Israel. This voyage is described in his book *Quer durch Abyssinien* (1910; *Massa el ha-Falashim*, 1959). Finally, he established one school in Dembea during his third voyage in 1913. After World War I Faitlovitch, who had lectured at Geneva University (1915–19), transferred the center of pro-Falasha activity to the United States, and with the aid of the New York Committee a boarding school for Beta Israel children was opened in Addis Ababa in May 1923. Starting from 1927 Faitlovitch settled in Tel Aviv but he had a nomadic life and spent many years in the United States. The Italian conquest in 1935–36 hampered the expanding activity and World War II stopped it entirely. After the establishment of the State of Israel he was able to persuade the Jewish Agency to take up educational work among the Beta Israel. Faitlovitch was an indefatigable lecturer, everywhere trying to stir active interest in the “Black Jews of Abyssinia.” He considered the Beta Israel ethnologically the descendants of genuine Jews and an integral part of the Jewish people. An observant Jew himself, he felt that it was not enough to study the Beta Israel, but that it was an obligation to save them from extinction and lead them through education into the fold of traditional Judaism. He took out of Ethiopia to study in Europe, Egypt and Palestine 25 young boys. He was interested in the quest for the *nidḥei Israel* and in \*proselytism; he created committees for the conversion of people from Asia and Africa. In addition to the books mentioned above, he published *Mota Mus* (Heb., Fr., 1906), *Proverbes Abyssins* (1907), “Nouveaux Proverbes Abyssins” (in *Rivista degli Studi Orientali*, 2 (1909), 757–66), *Les Falachas d’après les Explorateurs* (1907), *Versi Abissini* (It., 1910), and *Falasha-Briefe* (1913). He wrote numerous articles and pamphlets and a series of tracts in Amharic intended for distribution among the Beta Israel. The only article that he wrote in English is entitled “Falashas” (in *AJYB*, 22 (1920), 80–100). Faitlovitch bequeathed his valuable library to the Tel Aviv Municipality, with the collection now located in Tel Aviv University.

**FAITUSI, JACOB BEN ABRAHAM** (d. 1812), Jerusalem emissary and talmudist. Faitusi was born in \*Tunis and im-

migrated to \*Jerusalem around 1800. In 1806 he became an emissary of Jerusalem to \*Tripoli, \*Tunisia, and \*Algeria. He published: *Berit Ya’akov* (Leghorn, 1800), including the *Shitah Mekubbezet* of Bezalel \*Ashkenazi to tractate *Sotah*, the *Likkutei Ge’onim* of various authors on tractates *Nedarim* and *Nazir*, and *Likkutim* on tractate *Nazir* by Abraham ibn Musa, to which he appended *Sha’arei Zedek* by \*Levi b. Gershom on the 13 hermeneutical principles and an original work on the subject entitled *Yagel Ya’akov; Mizbah Kapparah* (*ibid.*, 1810), containing the *Shitah Mekubbezet* to *Menaḥot*, *Zevaḥim*, and *Bekhorot*, novellae on *Hullin* attributed to \*Nahmanides and *Ronu le-Ya’akov*, his own commentary on tractates *Hullin* and *Temurah*. Appended to the work are homilies in praise of the Land of Israel; *Mareh ha-Ofanim* (*ibid.*, 1810) including the novellae of \*Asher b. Jehiel on *Sotah* and his own commentary, *Yagel Ya’akov*, on *Pesaḥim*, *Bezah*, *Rosh Ha-Shanah*, *Avodah Zarah*, and *Makkot*. Faitusi died in Algeria, while on a mission there. His son, ḤAYYIM DAVID, published Jacob’s *Yerekh Ya’akov* (*ibid.*, 1842), homilies on the Pentateuch and the Five Scrolls, together with *Kokhav mi-Ya’akov*, novellae on the Talmud and responsa.

**BIBLIOGRAPHY:** Frumkin-Rivlin, 3 (1929), 127–8; Rosanes, *Togarmah*, 5 (1938), 279; Yaari, *Sheluḥei*, 707–8; Hirschberg, *Afrrikah*, 2 (1965), 160, 347 n. 33.

[Simon Marcus]

**FAIVOVICH HITZCOVICH, ANGEL** (1901–1990), Chilean politician. Born in Santiago, he received the title of agronomical engineer in 1922 and was appointed assistant in the zootechnic section of the University of Chile. In 1930 he graduated in law and in 1935 was elected councilor of the Municipality of Santiago. In 1937 he was elected from the Radical Party as a member of Parliament for Santiago and in 1945 as senator. He served several terms. Faivovich was professor of International Law and Juridic and Social Studies at the University of Chile. He was president of the Radical Party between 1946 and 1952, during the administration of Gabriel Gonzalez Videla, exercising considerable political influence in government circles. He opposed the candidacy of Allende, dividing the Radical Party and founding the Party of Radical Democracy. He bequeathed his fortune to beneficial causes in Chile and Israel, particularly to the Weizmann Institute of Science in Rehovot.

[Moshe Nes El (2<sup>nd</sup> ed.)]

**FAIYŪM (Fayyūm)**, district and city in Upper Egypt, southwest of \*Cairo. In the early Middle Ages flourishing Jewish communities seem to have existed there, since \*Saadia Gaon was born there, in approximately 882, received his basic education in the city of Dilas of the Faiyūm district, and wrote his first two books there. Benjamin of Tudela, the 12<sup>th</sup>-century traveler, found 200 Jews there according to one of his manuscripts, and 20 Jews according to another. Since the former number appears in most of his writings, it would be possible to assume that the figure applies to the Jewish population of

the entire district. In any case, the number of the Jews in the Faiyūm district declined in that period as the whole of its population decreased formidably; its depopulation was progressive. Jacob \*Saphir, the 19<sup>th</sup>-century traveler, reported in his book (*Even Sappir* (1866), 259) that only a single Jew lived in Faiyūm, and that he was a newcomer to the town. In 1907 there were 43 Jews in the town and district, but the community later dissolved.

Golb, “The Topography of the Jews in Medieval Egypt,” in: *JNES*, 24 (1965), 125–26, 127–28; E. Ashtor, “The Number of Jews in Medieval Egypt,” in: *JJS*, 18–19 (1967/8), 16–17; J.M. Landau, *Jews in Nineteenth-Century Egypt* (1969), 8, 50, 255.

[Eliyahu Ashtor]

**FAJANS, KASIMIR** (1887–1975), U.S. physical chemist who did pioneering work on radioactivity and isotopes. Fajans was born in Warsaw, and after studying in Leipzig, Heidelberg, and Zurich, worked with Rutherford in Manchester. After a period on the staff of the Technische Hochschule at Karlsruhe, Fajans went to the University of Munich, where in 1923 he became full professor of physical chemistry. In 1932 he secured support from the Rockefeller Foundation for the establishment of an institute of physical chemistry in Munich, of which he became director, but in 1935 he was forced by the Nazis to leave the institute. He emigrated to the U.S. and in 1936 became professor of chemistry at the University of Michigan at Ann Arbor. Fajans, with Goehring, discovered the element 91 (uranium X<sub>2</sub> or brevium), the more stable isotope of which (called protoactinium) was discovered independently a little later by Hahn and Meitner and also by Soddy and Cranston. Of Fajans' contributions to scientific journals, many are concerned with brevium, other work on radioactive transformations, and the chemistry of the radioactive elements. But he was also active in numerous other fields of physical chemistry. For some time he was coeditor of *Zeitschrift für Kristallographie* and associate editor of the *Journal of Physical and Colloid Chemistry*. He wrote *Radioaktivität und die neueste Entwicklung der Lehre von den chemischen Elementen* (1920<sup>2</sup>), *Physikalisch-chemisches Praktikum* (1929, with J. Wuest), *Radioelements and Isotopes; Chemical Forces and Optical Properties of Substances* (1931), and *Quanticule Theory of Chemical Bonding* (1960).

**BIBLIOGRAPHY:** Lange, in: *Zeitschrift fuer Elektrochemie*, 61 (1957), 773–4.

[Samuel Aaron Miller]

**FALAISE**, town in the Calvados department, France. During the 12<sup>th</sup> and 13<sup>th</sup> centuries there was a Jewish community in Falaise, which was still remembered until 1890 in the name “Rue aux Juifs.” Among the scholars there were the tosafists \*Samson b. Joseph of Falaise and \*Samuel b. Solomon of Falaise (also known as Sir Morel), who was one of the leading French tosafists and also a successful financier. He took part

in the \*disputation on the Talmud in 1240, but appears to have died before 1247. His son Jean may have been converted to Christianity.

[Bernhard Blumenkranz]

**FALAQUERA** (also **Falaguera**, **Falaquero**, **Palquera**), family in Spain; one of the most aristocratic and wealthy families of the Jewish community of \*Tudela. The Falaqueras ranked among “the great of the community,” i.e., the eight families in whose hands the administration of the community was concentrated, according to the communal regulations of 1305, and whose consent and signatures were required to authorize every such regulation. A certain R. Joseph b. Shem Tov ibn Falaquera was appointed in 1287 head of the *dayyanim* empowered to try informers. Other members of this family, Joseph b. Judah, Joseph b. Isaac, and Solomon b. Moses, are mentioned as *muqaddimūn* (leaders) of the community of Tudela at the close of the 13<sup>th</sup> and early 14<sup>th</sup> century. Nathan b. Falaquera (also mentioned by the name Naçan del Gabay) held important positions in the financial administration of Navarre at the close of the 14<sup>th</sup> century. The philosopher and poet Shem Tov b. Joseph ibn \*Falaquera was also a member of this family. A branch of the Falaquera family lived in the town of Huesca.

[Joseph Kaplan]

**FALAQUERA, NATHAN BEN JOEL** (late 13<sup>th</sup> century), Spanish physician. He may be identical with Nathan of Montpellier, the teacher of the anonymous author of *Sefer ha-Yashar*. Falaquera is the author of a book on medicine, *Zori ha-Guf* (“Balm for the Body”), written in Hebrew; however, although he uses medical and botanic terms taken from talmudic literature, his sources are mainly Arabic. The opinions of Hippocrates, Galen, Averroes, Avicenna, and Maimonides are given. Three manuscripts of the book are still extant and it was quoted by Joseph b. Eliezer ha-Sephardi, author of *Ohel Yosef* on Abraham ibn Ezra's commentary on the Torah.

**BIBLIOGRAPHY:** H. Friedenwald, *Jews and Medicine* (1944), 661; G. Sarton, *Introduction to the History of Science*, 2 pt. 2 (1931), 1096–97.

[David Margalith]

**FALAQUERA, SHEM TOV BEN JOSEPH IBN** (1223/8–after 1290), philosopher, translator, commentator, poet, and encyclopedist. Falaquera was born in Spain between 1223 and 1228; his last known work refers to events in 1290. Various etymologies have been suggested for his name, which was the name of a prominent Jewish family in Tudela. Hebrew spellings include פלאקירא, פלקירה, פלכרה, פלקירה, בלקירה, פלאקיר, פלקיריי.

European spellings include Falaquera, Palquera, Palaquera, Palquira, Palqira, Palkira, Palkera, Phalkira, Phalchera.

Most of Falaquera's prose works survive, many in multiple editions or manuscripts, but Falaquera testifies that half of his prolific youthful poetry (totaling some 20,000 verses) was lost, and in later life, although he abandoned his poetic career, he continued to intersperse poetry with his prose works. Some of this poetry was humorous. "Time said to the fool: Be a doctor / You can kill people and take their money / You'll have an advantage over the angels of death / For they kill a man, but for free." His prose is also marked by occasional humor. His last known work, in defense of \*Maimonides' *Guide of the Perplexed*, plays on the name of the philosopher's opponent Solomon Petit and calls him *peti* (fool).

We do not know how Falaquera supported himself. Repeated references to poverty in some of his writings may indicate personal indigence. We also have no evidence whether he ever married or had a family. With only a few exceptions, Falaquera's references to women were generally quite negative and even misogynist. In one of his poems he aims his barbs at women: "Let your soul not trust in a woman / A woman is a spread net and pit (Proverbs 1:17, 22:14) / How can we still believe that she is honest [straight] / For woman was taken from a rib?" If the "Seeker" in his *Book of the Seeker* represents Falaquera himself (since the Seeker's curriculum would have made him approximately Falaquera's age at the time he composed the book), and if the "Seeker" is patterned after the character Kalkol in his earlier *Epistle on Ethics*, we may be able to infer from Kalkol's never marrying (because he did not want to waste his time or strength on women, or to become entrapped by them) that Falaquera himself never married for similar reasons.

Modern scholarly interest in Falaquera, going back to the early stages of \**Wissenschaft des Judentums*, began with Leopold \*Zunz's doctoral dissertation, "De Schemtob Palkira" (Halle University, December 21, 1820) on the life, times, and doctrines of Falaquera. In 1857 Solomon \*Munk published Falaquera's Hebrew paraphrase of selections from the lost Arabic original of the *Fons Vitae*, on the basis of which Munk determined that the previously unknown and presumably Arab author was actually the Hebrew poet and philosopher Solomon ibn \*Gabirol. Over the next century most of Falaquera's works were published (some with translations into European languages). The latter decades of the 20<sup>th</sup> century saw a resurgence of interest in Falaquera, with books, major studies, and doctoral dissertations by R.K. Barkan, G. Dahan, S. Harvey, M.H. Levine, A. Melamed, D. Schwartz, Y. Shiffman, L. Stitskin, M. Zonta. R. Jospe's *Torah and Sophia: The Life and Thought of Shem Tov ibn Falaquera* (Cincinnati, 1988) includes a biography, descriptions of Falaquera's works, and systematic survey of his philosophy, with a special study of his psychology.

## Works

We know of eighteen works by Falaquera, all written in Hebrew, in line with Falaquera's aim of spreading philosophy

among the Jewish people. Based on internal evidence, in their probable chronological order they are the following:

1. *Battei Hanhagat ha-Nefesh – Batei Hanhagat Guf ha-Bari* (Verses on the Regimen of the Healthy Body and Soul), a composite of two works on health and ethics, published by S. Munter (Tel Aviv, 1950).

2. *Iggeret ha-Musar* (Epistle on Ethics), a \**maqama* (prose narrative interspersed with verse), replete with Jewish and Arabic ethical maxims, recounting the adventures of a youth, Kalkol, in search of wisdom. Edited by A.M. Haberman (Jerusalem, 1936), this early work forms a model for Falaquera's later and larger *Book of the Seeker*.

3. *Zori ha-Yagon* (The Balm for Sorrow), also a *maqama*, containing rabbinic and philosophic consolations, in several editions; critical edition with annotated English translation and a survey of the consolation genre of literature by R.K. Barkan (Ph.D. dissertation, Columbia University, 1971).

4. *Megillat ha-Zikkaron* (The Scroll of Remembrance). The work, of which Falaquera says elsewhere "in which I discuss times past, for at this time hordes of troubles come upon us daily," probably chronicling Jewish sufferings, is not extant.

5. *Iggeret ha-Vikku'ah* (The Epistle of the Debate). The subtitle of the book is *Be-Ve'ur ha-Haskamah asher bein ha-Torah ve-ha-Hokhmah* (Explaining the Harmony Between the Torah and Philosophy). A popular work, much of it written in rhymed prose, the book describes a debate between a *hasid*, a pious traditionalist Jew and a *hakham*, a philosopher, and is deeply indebted to Ibn Rushd's *Faṣl al-Maqal* (Decisive Treatise). S. Harvey's *Falaquera's Epistle of the Debate: An Introduction to Jewish Philosophy* (Cambridge, MA, 1987; Italian: Genova, 2005) includes a critical edition of the Hebrew text with annotated English translation and valuable appendices. Harvey (1992) has also suggested persuasively that the debate is patterned on the Maimonidean controversy of the 1230s. A Latin translation of the *Epistle* with French notes and introduction was published by G. Dahan (in *Sefarad*, 39 (1979), 1–112).

6. *Reshit Hokhmah* (The Beginning of Wisdom), an encyclopedic introduction to the sciences in three parts: I – On the moral qualities necessary for the study of science; II – The enumeration of the sciences; III – The necessity of philosophy for the attainment of felicity; the philosophy of Plato and the philosophy of Aristotle. Major portions of the book, which was edited by M. David (Berlin, 1902), are paraphrases of Arabic philosophers, especially Al-Farabi.

7. *Sefer ha-Ma'lot* (The Book of Degrees), an ethical work describing the corporeal, spiritual, and divine degrees of human perfection. The term *ma'lot*, degrees, also means virtues. Those of the divine rank are the most perfect people, namely the prophets, who no longer exist. Those of the spiritual rank are the true philosophers. Most people are of the corporeal rank, enslaved to their bodily needs. The book, a sequel to *Reshit Hokhmah*, but unlike the former an original work of Falaquera's own ideas, was one of three Hebrew books in the

library of the 15<sup>th</sup> century Italian Christian philosopher Pico della Mirandola. Leopold \*Zunz first wished to publish this book, but found only one manuscript, and it was eventually published by L. Venetianer (Berlin, 1894).

8. *Sefer ha-Mevakkesh* (The Book of the Seeker). The book was composed in Ḥeshvan, 5024 (= Oct.–Nov. 1263) when Falaquera was past 35 and approaching 40 years of age. A *maqama* expanding on the theme of the youthful seeker of wisdom (like his earlier *Epistle on Ethics*), the book surveys the arts and professions, as well as the sciences (only the sciences had been presented in his *Reshit Ḥokhmah*), culminating in philosophy. Several 19<sup>th</sup>- and early 20<sup>th</sup>-century editions of the book exist. M.H. Levine prepared a critical edition and translation of Part I in his Ph.D. thesis (Columbia University, 1954), and his translation was revised and published separately (New York, 1976).

9. *De'ot ha-Philosofim* (The Opinions of the Philosophers). This voluminous work, only minor sections of which have been published, is a major encyclopedia of the sciences, extending over some 600 pages in ms. Parma – De Rossi 164 (= Jewish National and Hebrew University Library microfilm 13897) and ms. Leyden 20 (= Jewish National and Hebrew University Library microfilm 17368). It was written to propagate philosophy and science among the Jews, and quotes extensively from Arabic sources. R. Jospe (1988) published a table of contents of the work, aspects of which were analyzed by S. Harvey, G. Freudenthal, A. Ivry, and M. Zonta in *The Medieval Hebrew Encyclopedias of Science and Philosophy*, ed. S. Harvey, (Dordrecht, 2000). Falaquera states that his purpose in composing the work was to teach true philosophy to the Jews, distinguishing true opinions from those which have not been demonstrated and are mere conjecture; and to provide a convenient and systematic collection of the opinions of the philosophers in accurate Hebrew translation, which would also serve as “a review book for me in old age.”

10. *Sefer ha-Nefesh* (The Book of the Soul). The first systematic Hebrew work of psychology, the book was published in several 19<sup>th</sup>- and early 20<sup>th</sup>-century editions. A critical edition with annotated English translation and extensive discussion was published by R. Jospe (1988). The book, which frequently reviews material earlier discussed in *De'ot ha-Philosophim*, reflects (and in places paraphrases) classical and Arabic sources, prominent among them Ibn Rushd, Ibn Sina, and Ishaq ibn Ḥunain.

11. *Shelemut ha-Ma'asim* (The Perfection of Actions). An annotated edition of this work on ethics in ten chapters was published by R. Jospe (1988). The first six chapters of the book, as B. Chiesa has shown (in A. Vivian, ed., *Biblische und judaistische Studien, Festschrift fuer Paolo Sacchi* [Frankfurt am Main, 1990], 583–612), are for the most part an abridged translation of the *Summa Alexandrinorum*, an epitome of Aristotle's *Nicomachean Ethics*. The last four chapters reflect Arabic ethical literature, especially Ḥunain ibn Ishaq's *Adab al-Falasifah* (Aphorisms of the Philosophers). Typically, Falaquera translated anew or paraphrased those Arabic passages

he was interested in citing – as he also did in his other works – and did not take advantage of existing Hebrew translations, such as Judah Al-Ḥarizi's translation of the *Adab*, the *Musarei ha-Filosofim*.

12. *Iggeret ha-Ḥalom* (The Treatise of the Dream). Edited by H. Malter (in JQR, n.s. 1, 1910/11, 451–501), this treatise does not deal with dreams (as some scholars thought), but derives its name from a superscription by a copyist about the author: “He said that he saw in a dream that he was composing this treatise, and when he awoke, he engaged in it, and this is its beginning.” The treatise begins: “A treatise [literally: epistle] collecting words of peace and truth.” Maimonides had understood Zechariah 8:19 (“Love truth and peace”) as referring to intellectual and moral perfection, and Falaquera's division of Part I (Peace), dealing with physical and spiritual well-being, and Part II (Truth), dealing with truth in speech and actions, and speculative truth, reflects Maimonides' interpretation.

13. *Sefer ha-Derash* (The Book of Interpretation). The work is not extant. It was probably a rationalistic commentary on aggadic passages in the Talmud or Midrash. Fragmentary citations in later authors (published by R. Jospe and D. Schwartz, 1993) may be taken from this work. (See below, *Perush*).

14. *Perush* (Bible Commentary). Falaquera's Bible Commentary is no longer extant. However, Samuel ibn Seneh Zarza's commentary on the Torah, *Mekor Ḥayyim*, which frequently deals with the commentaries of Abraham Ibn Ezra, also cites Falaquera in twenty-six passages; these citations, presumably taken from Falaquera's Bible commentary, were published with English translation by R. Jospe (1988). Nineteen additional citations to Falaquera are found in Zarza's *Mikhlol Yofi*, a commentary to rabbinic *derashot* (homilies) and *aggadot* (lore). Of these nineteen, seven are identical with passages cited in *Mekor Ḥayyim*. Since the *Mikhlol Yofi* is a commentary on rabbinic texts, and since eight of the remaining twelve citations make no reference to a biblical verse, it may well be that the twelve, or at least these eight, citations are not from Falaquera's Bible Commentary but from his Book of Interpretation. The twelve passages in question were published with English translation and discussion by R. Jospe and D. Schwartz (1993). The surviving fragmentary citations support the view that both commentaries, on the Bible and on rabbinic texts, were frequently philosophical in approach.

15. *Moreh ha-Moreh* (The Guide to the Guide). One of the very first commentaries to Maimonides' *Guide of the Perplexed*, Falaquera's work is unusual in its philosophic precision and breadth; in its extensive citations of Arabic sources and comparisons of Maimonides' opinions with those sources; and in its new and precise translation of those sections of the *Guide* discussed by Falaquera. The title is usually understood as a play on the title of Maimonides' book, but based on Falaquera's own explanation of the name in the Introduction, it could also be called “The Guide of the Rebellious,” namely as correcting the opinions of those who oppose and misinterpret Maimonides' *Guide*. It was first published by M.S. Bis-

liches (Pressburg, 1837); an annotated, critical edition with commentary and extensive research into Falaquera's Arabic sources was published by Y. Shiffman (Jerusalem, 2001). Falaquera cites Ibn Rushd so frequently throughout the book that he does not refer to him by name, but simply refers to him as *ha-hakham ha-nizkar* ("the mentioned philosopher"). The third appendix to the book entails a detailed and careful critique of Samuel ibn Tibbon's Hebrew translation of the *Guide of the Perplexed*.

16. *Likkutim mi-Sefer Mekor Hayyim* (Selections from [Solomon ibn Gabirol's] *Fons Vitae*). This text is extant in two manuscripts. The Paris manuscript was published with an annotated French translation by S. Munk in his *Mélanges de Philosophie Juive et Arabe* (Paris, 1857; reprinted 1927); the Parma manuscript was edited with an annotated Italian translation by R. Gatti (Genova, 2001). The Selections eliminate the dialogical form of Solomon ibn Gabirol's original, and may reflect agreement with Abraham ibn Daud's criticism that Gabirol's "words could be included in less than one tenth of that book," and that he had substituted many untrue arguments for one true demonstration. The Selections also occasionally rearrange the order of the original, perhaps in accordance with what Gabirol himself said (3:1), that he had not followed any specific order and that the student should reorder the arguments as appropriate. Occasionally the Selections are nearly identical with the original, and sometimes even longer, including examples or illustrations not found in Gabirol's work.

17. *Likkutim mi-Sefer ha-Azamim ha-Hamishah* (Selections from the Book of the Five Substances). Also an abridged Hebrew translation or paraphrase of passages from a Neo-Platonic, Pseudo-Empedoclean work, this work was published by David Kaufmann in *Studien ueber Salomon ibn Gabirol* (Budapest, 1899).

18. *Mikhtav al Devar ha-Moreh* (Letter Concerning the *Guide [of the Perplexed]*). Falaquera's last known work, the letter in defense of Maimonides' *Guide of the Perplexed* against opponents of philosophy was written in 5050 (= 1290 C.E.). Falaquera mocks Maimonides' opponents, comparing them to Korah's rebellion against Moses. Part of the problem results from the anti-rationalists' ignorance of philosophy and Arabic, and the inadequacy of the two Hebrew translations of the *Guide*, especially the second translation, by Judah Al-Harizi. The letter is included anonymously at the end of Abba Mari ben Moses Ha-Yarhi's *Minhat Kena'ot*, ed. M.L. Bisliches (Pressburg, 1838), pp. 182–185, and at the end of *Iggerot Kena'ot*, pp. 23–24 (Part 3 of *Kovez Teshuvot ha-Rambam ve-Iggerotav*, 1859).

### Philosophy

Since Falaquera considered philosophy to be necessary for attaining ultimate human felicity, and believed in the harmony of revealed and rational truth, he wrote many of his works with the explicit aim of propagating the study of philosophy among the Jewish people by making it available in Hebrew translation.

These works, which can be characterized as text-books, encyclopedic surveys or introductions to philosophy, were often replete with new Hebrew translations or paraphrases (typically abridged) from Arabic philosophical literature, even in cases like the *Guide of the Perplexed* and the *Aphorisms of the Philosophers* for which Hebrew translations already existed, because of Falaquera's insistence on accuracy, terminological consistency and stylistic clarity.

His competence in philosophy and his critical sense for nuance led him to juxtapose, compare and contrast diverse philosophical opinions. Since true human perfection is intellectual, dissemination of philosophy in Hebrew and rebuttal of its opponents serve a religious as well as a cultural need.

A consistent theme in Falaquera's works is the harmony of faith and reason. The Torah and philosophy, when both are properly understood, are "sisters" and "twins." The rabbinic saying, "Rabbi Meir found a pomegranate; he ate what was within and discarded the peel" (BT Hagigah 15b) means that one should accept in philosophy what is true and in accord with the Torah. Reason can verify religious truth, and faith perfects reason.

To reject philosophy because some philosophers have erred is (in an image borrowed from Ibn Rushd) like denying water to a person dying of thirst, just because some people have drowned. A Jew should learn the truth from any source, as one takes honey from a bee. For "all nations share in the sciences; they are not peculiar to one people;" and "Accept the truth from whoever utters it; look at the content, not at the speaker" (*Sefer ha-Ma'ilot*).

Falaquera's rationalism is manifest throughout his works, including his Bible exegesis and his specific treatises. He equates the Platonic doctrine of creation with that of Genesis, and he reads his intellectualism into Biblical ethics, to derive an extreme asceticism with misogynic overtones. Falaquera's position (*Shelemut ha-Ma'asim*, ch. 6, following the *Summa Alexandrinorum*, an epitome of Aristotle's *Nicomachean Ethics*) emphasizing the priority of contemplation and rejecting ethics as the ultimate human end, is more extreme than that of Aristotle himself, for whom the external causes or goods required for ethics can become an impediment to perfection and contemplation (*theoria*), whereas for Falaquera the ethical involvement and social commitments themselves impede contemplation (Hebrew: *ezah*; Arabic: *ra'y*). Despite Falaquera's clear concern for the philosophic education of his people, he believed that genuine felicity is attained by the "solitary" (*mitboded*) individual, who is isolated not physically but spiritually from the external distractions of society and the internal interference of the appetites.

Knowledge of God begins, for Falaquera, with self-knowledge, i.e., knowledge of one's soul. We find throughout his works statements reflecting the Delphic Maxim, "Know yourself." Thus: "Know your soul, O Man, and you will know your Creator." By the science of psychology, a person "will know his soul and his Creator." Psychology is, therefore, prior

to all the other sciences: "Knowledge of the soul is prior to the knowledge of God, and ... is the most excellent form of knowledge after the knowledge of God" (*Sefer ha-Nefesh*, Introduction; *De'ot ha-Philosofim* VI:A:1).

Falaquera was not an original thinker of the first order, nor did he claim to be original; but the breadth and depth of his knowledge of Judaism, philosophy, and science make him an important figure in the history of Jewish philosophy. The pioneering philosophical efforts of earlier luminaries attained an enduring impact through their consolidation and popularization by philosophers like Falaquera, whose contribution is no less important for the fact that their light was often a reflected one.

[Raphael Jospe (2<sup>nd</sup> ed.)]

**FALCO, MARIO** (1884–1943), Italian jurist. Born in Turin, Falco specialized in canon and ecclesiastical law. He became lecturer in law at the universities of Macerata (1910) and Parma (1912) and was appointed to the chair at the University of Milan on its foundation in 1924. He held this post until the promulgation of the antisemitic laws in 1938. Most of Falco's extensive legal writings are concerned with canon law. They include *Il Concetto Giuridico di Separazione della Chiesa dallo Stato* (1913), *La Codificazione del Diritto Canonico* (1921), and *Corso di Diritto Ecclesiastico* (1938). An active Zionist, he participated in Jewish affairs both locally and nationally and was a member of a government committee which prepared the draft law on the Italian Jewish community in 1930.

[Giorgio Romano]

**FALESHTY** (Rom. *Făleşti*), town in Bessarabia, today Republic of Moldova. In 1817, the community numbered 176 families (out of a total of 364 families) and 4,518 persons (68% of the total population) in 1897. As the czarist legislation restricting Jewish settlement in border areas (see \*Russia) applied to Faleshty, the Jews were frequently expelled from the town on the grounds that they were living there illegally. In 1887 a society for settlement in Erez Israel was established in Faleshty, and with the assistance of funds provided by Baron Edmond de \*Rothschild, 25 families settled in 1887 in Kastina (\*Be'er Toviyyah). In 1925, 106 Jewish families in Faleshty were occupied in agriculture, farming an area of 1,025 hectares. The Jewish population numbered 3,258 in 1930 (51.7% of the total).

### Holocaust Period

The Romanian withdrawal in 1940 took place without incident. The incoming Soviet authorities established a Yiddish-language secondary school, but on June 19, 1941, exiled all Zionists and businessmen to Siberia. Most of the exiles survived the war; some returned and settled in the larger towns or went to Israel, while others remained in Siberia.

An aerial bombardment at the beginning of the war (June 21, 1941) caused the first Jewish casualties. Those who had horses at their disposal quickly fled the town, while others followed on foot. A few succeeded in crossing the Dniester with Russian help and escaped from there into the interior of the U.S.S.R. Most of the fleeing Jews, however, were caught on the way by Romanian-German forces and put to death. On June 27 Faleshty was taken over by German troops, who were also joined by Italian forces. The local population and peasants from the surrounding villages collaborated with the occupying forces in robbing and burning Jewish property and murdering the Jews. Romanian troops arrived at a later date and stepped up the murderous campaign. The Jews were concentrated in a ghetto raised at the town's entrance, to which the Jews of other places in the vicinity were brought. The young people were put on forced labor; at night they were imprisoned in the great synagogue and there German and Romanian troops assaulted the women among them. The others were driven out of the ghetto and forced to walk to a nearby village, Limbenii Noui, where many died of disease and starvation. In September the survivors were again deported, this time to the Mărculești camp. In October those who were still able to walk were expelled to \*Transnistria, where practically all of them either succumbed to the inhuman conditions or were murdered by soldiers. One group of Faleshty Jews, including the town's rabbi, Ihiel Flam, were taken to a river in mid-winter, forced to break the ice, strip, and throw themselves into the freezing waters. Only a very small number of Faleshty's Jews survived the war.

**BIBLIOGRAPHY:** *Eynikeyt* (March 6, 1945).

[Jean Ancel]

**FALK**, family of U.S. industrialists and philanthropists. MAURICE FALK (1866–1946) was born in Pittsburgh, Pennsylvana-

nia, where his father worked as a tailor. At the age of 27 he obtained a controlling interest in a small smelting concern, the Duquesne Reduction Company, which in subsequent years expanded its operations to include many sizeable steel and refining holdings. One of the founders of the Federation of Jewish Philanthropies in Pittsburgh, he and his younger brother Leon gave ten million dollars in 1929 to establish the Maurice and Laura Falk Foundation, whose beneficiaries have included many educational institutions. A branch foundation, the Maurice Falk Institute for Economic Research in Israel, was established at the Hebrew University in Jerusalem. The bulk of his large estate was willed to the Foundation for the purpose of studying social problems “for the benefit of mankind.”

LEON FALK (1870–1928) was associated with his brother in most of his business and charitable undertakings, joining with him in 1928 to establish the Falk Medical Clinic at the University of Pittsburgh. He also served as director of the Pittsburgh Federation of Jewish Philanthropies and donated considerable sums to Pittsburgh’s Montefiore Hospital and YM-YWHA. His son, LEON FALK JR. (1901–1988), served as president of the Federation of Jewish Philanthropies in Pittsburgh and in 1939 as vice chairman of the \*American Jewish Joint Distribution Committee. When Maurice Falk granted money in 1939–40 to study the possibility of resettling Jewish refugees in the Caribbean, Leon Jr. traveled to the Dominican Republic to investigate conditions there and acted as chairman of the Dominican Republic Settlement Association. He became treasurer of Falk and Company in 1928 and was chairman of the board from 1948 to 1952.

The Falk Medical Fund is a grant-making foundation incorporated in 1960 as an outgrowth of the Maurice and Laura Falk Foundation. The fund focuses on social policy related to mental health, community health, and civil rights and minorities issues. Since its inception, the fund has awarded grants targeted to the elimination of racism and the creation of programs that combine research in psychiatry and mental health with issues of racism, prejudice, violence, and bigotry. The Falk Foundation was a major contributor to the Brookings Institution, one of Washington’s oldest think tanks, which named its auditorium after the Falk family.

SIGO FALK served as chairman of the Maurice Falk Fund as well as the Leon Falk Family Trust. He was also a director of Duquesne Light Holdings, Allegheny Land Trust, and the Pittsburgh Symphony. He was a trustee of Chatham College, where he served as board chair from 1995 to 2002, and the Historical Society of Western Pennsylvania. Falk was formerly the associate director of Health Systems Agency of Southwestern Pennsylvania and president of Cranberry Emergency and Diagnostic Center. In 2001, he was honored as the Outstanding Philanthropist by the Association of Fund-raising Professionals.

[Hillel Halkin / Ruth Beloff (2<sup>nd</sup> ed.)]

**FALK, BERNARD** (1882–1960), British author. Falk began his career on the *Daily Dispatch* in his home town, Manches-

ter, and went to London to become news editor of the *Evening News*. He edited the weekly *Reynolds News* and the *Sunday Dispatch* (1919–32). He then retired from newspapers and wrote books on life in Fleet Street. He also wrote *The Naked Lady* (1934), a life of Adah Isaacs \*Menken: *Rachel the Immortal* (1936), the life of the famous French actress \*Rachel; *The Way of the Montagues* (1947); and books on Turner and Rowlandson. Falk published an autobiography, *He Laughed in Fleet Street* (1933).

**FALK, JACOB JOSHUA BEN ZEVI HIRSCH** (1680–1756), rabbi and halakhic authority. Falk was born in Cracow and was a descendant of Joshua Heschel b. Joseph of \*Cracow, the author of *Meginnei Shelomo*. He studied in Polish yeshivot and took up residence in Lemberg after his marriage to the daughter of Solomon Segal Landau, an important member of that community. There he was appointed inspector of the *talmud torah*. He became wealthy and was a leader of the community. In 1702 his wife, daughter, mother-in-law, and her father were killed by the explosion of a gunpowder storehouse, and he himself was miraculously saved. As a result he vowed “to apply himself diligently to the study of the Talmud and the Codes” (Introduction to the *Penei Yehoshu’a*). He left Lemberg and served as rabbi in the communities of Tarlow, Kurov, and Lesko (Lisko) successively. In 1717 he was invited to become rabbi of Lemberg, succeeding Zevi Hirsch Ashkenazi (the Ḥakham Zevi). His yeshivah became the central yeshivah of Poland. Falk was one of the most extreme opponents of the \*Shabbatean movement, then gaining ground in Poland, and he excommunicated the Shabbateans in 1722. In consequence of the opposition he had aroused, he was compelled to leave Lemberg in 1724 and went to Buczacz where he lived for some years. Between 1730 and 1734 he served as rabbi of Berlin. He then accepted an invitation to succeed Jacob \*Reischer as rabbi of Metz and remained there until 1741.

From Metz he went to Frankfurt where he was rabbi until 1751. The hostile attitude of the town authorities and internal communal quarrels following his intervention in the controversy around Jonathan \*Eybeschuetz, in which he sided with Jacob \*Emden, caused his resignation and departure from the city, and he lived for a time in Mannheim and Worms. He continued his campaign against Eybeschuetz, sending him a letter entitled “the final warning” on Sivan 11, 1751 and in 1752 excommunicated him. In response to the demands of the Altona community that he rescind the ban, Falk demanded that Eybeschuetz appear before a *bet din* of three ordained rabbis to answer for his actions. Ḥ.J.D. \*Azulai, who repeatedly praised Falk’s wide knowledge (as well as that of his second wife), visited him in Worms in 1754. Falk told him some “dismaying details” about the affair, and Azulai expressed his shock at the “desecration of the Torah and the defamation of the Divine Name” as a result of the publication of the dispute between the Jewish scholars. From Worms Falk went to Offenbach, where he died. He was buried in Frankfurt and although he requested that no eulogy should be said after his death he was

eulogized by Ezekiel \*Landau (see Frankfurt Memorbuch, National Library, Jerusalem).

Falk became renowned through his *Penei Yehoshu'a*, regarded as one of the outstanding works of novellae on the Talmud. Since Falk's grandfather published responsa under the same title ("The Face of Joshua"), the grandson called his work *Appai Zutrei* ("The Small Face") to distinguish it from *Ravreivi* ("The Large Face") of his grandfather. The work is distinguished by its penetrating explanation of difficult talmudic themes. Originally published in separate parts – *Berakhkot* and the order *Mo'ed* (Frankfurt, 1752); *Ketubbot*, *Gittin*, and *Kiddushin*, with *Kunteres Aḥaron* (Amsterdam, 1739); *Bava Kamma* and *Bava Mez'ia* (Frankfurt, 1756), *Hullin*, *Makkot*, and *Shevu'ot* and a second edition on *Mo'ed* and the Tur, *Hoshen Mishpat* (Fuerth, 1780) – it was published together for the first time in Lemberg in 1809. Among his other works still in manuscript the following may be noted: *Sefer Minḥat Ani*, novellae to *Eruvin*, *Niddah*, and *Yevamot*; *Kelal Gadol*, on the problem of "rov and \**hazakah*" (i.e., where the principle of following the majority, *rov*, conflicts with that of a previous presumption, *hazakah*), and responsa. Only a few of his responsa have been published (in various collections). His purpose was "to explain most of the difficulties raised by the tosafists on Rashi's commentary ... as well as such points as the tosafists leave unsolved, or for which they admit that their solution is unsatisfactory, or where their answer appears forced." In his introduction to the *Penei Yehoshu'a* he asserts that he always took care that his conclusions should be in conformity with the *halakhah* of the Talmud and the Codes and was careful not to commit to writing any novellae which did not conform with the truth, "but whenever something new occurred to me on a talmudic topic or in explanation of Rashi and *tosafot* and it appeared to me to approximate to the truth, according to the method of our predecessors and teachers, I accepted it." He also stresses that his sole purpose was "to stimulate the scholar and to bring about a more profound analysis on the part of those who already know how to arrive at halakhic decisions." These features of the work explain its constant popularity among students, and its frequent reprints. He emphasizes that Kabbalah is sometimes of help in explaining the *aggadot*; but despite his reliance on the Zohar and on the works of kabbalists (*Penei Yehoshu'a* to Ber. 10a) he declares "we have no dealings with esoteric lore."

Falk had three sons, two of whom are mainly of note. ISSACHAR DOV (1712–1744), who was born at Lesko, Galicia, studied under his father and Zevi Hirsch Ashkenazi of Halberstadt. He became the rabbi of Podhajce, Galicia, and in 1744 he was appointed head of the yeshivah at Metz, but died on the way there, in Berlin, before being able to take up the appointment. Four of his responsa were published in *Kiryat Hannah* of R. Gershon b. Isaac Moses Coblenz (Metz, 1785; nos. 41–44). His decision in the case of a *get* (bill of divorce), in which he disagreed with R. Jacob Yokel \*Horowitz, is preserved in *She'elat Hakham*, and was published at the end of the responsa of R. Ḥayyim Kohen Rapoport (1957, pp. 243–4).

Issachar Dov's novellae appear under the title of *Hezkat Avahata* in the book *Tesha Shitot* (1800, pp. 53b–80b) of his son Zevi Hirsch Rosanes.

His brother ARYEH LEIB (1715–1789) accompanied his father to Germany. He was appointed *rosh yeshivah* in Frankfurt during his father's incumbency, and held the position from 1745 to 1750. When his father left Frankfurt, Aryeh Leib was appointed rabbi of Sokal, then in Poland. In 1754 he signed the excommunication against the \*Frankists in Brody. From 1761 to 1789 he was rabbi of Hanover. In the affair of the Cleves \*get he supported Israel \*Lipschuetz. He published the fourth part of his father's *Penei Yehoshu'a*, adding to it his own novellae to *Bava Kamma* under the title *Penei Aryeh* (Fuerth, 1780). He was succeeded as rabbi of Hanover by his son ISSACHAR BERISH (1747–1807). Issachar's son, SAMUEL, was appointed rabbi of Groningen, Holland, in 1802. After about seven years he succeeded his brother-in-law, Jehiel Aryeh Leib \*Loewenstamm, as rabbi of Leeuwarden, Holland. In 1815 he succeeded his father-in-law as rabbi of the Ashkenazi community of Amsterdam, and finally served as rabbi of Amersfoort. He supported the \*Haskalah movement among the Jews of Holland, approved the translation of the Bible into Dutch, and was the first rabbi in Holland to preach in the vernacular. Moses \*Sofer refers to him in respectful terms (*Ḥatam Sofer*, pt. 2, EH, no. 139). He also encouraged the foundation of a general fund known as *Kolel Hod*, i.e., "Holland and (Heb. 1) D-utschland (Germany)," for the support of the poor of the Holy Land. Samuel's son ISSACHAR BAER BERENSTEIN (1808–1893) was born in Leeuwarden and died in The Hague. From the death of his father until 1848 he served in Amsterdam as a *dayyan*. He was then appointed chief rabbi of The Hague, succeeding Joseph Asher Lehmann, and served there 45 years. He was highly esteemed by the Dutch government for his activities in organizing various communal institutions.

[Yehoshua Horowitz]

**FALK, JOSHUA** (1799–1864), U.S. Orthodox rabbi, scholar, and author. Joshua ben Mordechai Hakohen Falk was born in Poland and immigrated to America in 1854. He served as rabbi of two communities in New York, Newburgh and Poughkeepsie, before becoming an itinerant preacher and then retiring from the active rabbinate. Known as "the father of American

Hebrew literature,” Falk wrote the first book in the Hebrew language to be published in America (aside from the Bible and prayer books): *Avnei Yehoshua* (“The Stones of Joshua”), a commentary on the Ethics of the Fathers (1860). The interesting colophon to the book reads: “I give thanks that it was my good fortune to be the typesetter of this scholarly book, the first of its kind in America. Blessed be the God of Israel, who surely will not deny us the Redeemer.” Falk also wrote *Binyan Yehoshua* (“The Edifice of Joshua”), novellæ on the Talmud, and *Homat Yehoshua* (“The Wall of Joshua”), an anthology of sermons.

[Bezalel Gordon (2<sup>nd</sup> ed.)]

**FALK, JOSHUA BEN ALEXANDER HA-KOHEN** (c. 1555–1614), Polish yeshivah head and halakhist commonly referred to as “Sma” from the initials of the title of his major work. Falk was born in Lublin and studied under Moses Isserles and Solomon Luria, but refused to serve as rabbi of the community. He devoted his life to teaching, receiving financial support from his father-in-law, Israel b. Joseph Edels, the communal leader of Lemberg, who also maintained the yeshivah conducted by Falk. The yeshivah attracted many pupils, some of whom later achieved fame as rabbis. Famed as a halakhic authority, Falk took an active part in the Council of the Four Lands and was one of the signatories in 1587 to the decree against purchasing rabbinical positions. In 1607 he presided over a session of the Council which passed a decree on the subject of interest, which the intensified financial activity among East European Jewry had rendered an urgent halakhic problem. Falk’s resolute refusal to change his view on a *get* (“bill of divorce”) which he had issued for a seriously ill man, and which Meir ben Gedaliah \*Lublin and Mordecai \*Jaffe had declared invalid, led to a vehement clash of opinions among contemporary rabbis, Falk being upheld by those assembled at Jaroslaw in 1611.

Falk’s most celebrated work is *Sefer Me’irat Einayim*, a commentary on the Shulḥan Arukh, *Hoshen Mishpat*, published in all editions of the Shulḥan Arukh. He was moved to write the commentary because of the large number of halakhists and exponents of the laws who, in his opinion, “have rent the Torah, which is our garment, into 12 pieces, and because of the many scholars who, content to base their halakhic decisions on the Shulḥan Arukh alone without investigating the sources (especially \*Jacob b. Asher’s Tur together with Joseph \*Caro’s *Beit Yosef* and Moses Isserles’ *Darkhei Moshe*), remained ignorant of the sources and rationale of the law and rendered incorrect halakhic decisions.”

*Sefer Me’irat Einayim* is the fourth part of a more extensive commentary on the Tur and Shulḥan Arukh, the first three parts entitled *Perishah*, *Derishah*, and *Be’urim*. The whole commentary is entitled *Beit Yisrael* (after Falk’s father-in-law). Because *Me’irat Einayim* was based on the first three parts of his commentary, it was essential for the reader first to study

the Tur and the other three parts of his commentary. Though Falk apparently intended to write a work on the whole Shulḥan Arukh, he succeeded in covering only the *Hoshen Mishpat*. The *Me’irat Einayim* is an extensive exposition and elaboration upon that work, especially upon Moses Isserles’ glosses, Falk often acting as the intermediary between Joseph Caro and Isserles where they disagreed. Falk’s work contributed greatly in making the Shulḥan Arukh an authoritative source of codified Jewish law. Falk also wrote *Kunteres al ha-Ribbit* (1692) on the laws of interest promulgated by the Council of the Four Lands in 1607. Several of his numerous responsa have been published in various collections (*Ge’onei Batra’ei*, *Bayit Hadash*, *Masot Binyamin*). He wrote novellæ on 14 tractates of Isaac Alfasi (the Rif) and on the commentary to it by Nissim b. Reuben Gerondi (the Ran), expositions on the Kabbalah and philosophy, and several other works, all of which were destroyed in a fire in Lemberg.

[Shlomo Eidelberg]

His great grandson ḤAYYIM (ABRAHAM) BEN SAMUEL FEIVUSH (PHOEBUS; late 17<sup>th</sup> century), was also a rabbi. After the expulsion of the Jews from Vienna (1670), Ḥayyim went to Jerusalem with his father, author of *Leket Shemu’el* and *Derush Shemu’el*, and in his old age he settled in Hebron, where he died. He wrote a commentary to the Book of Psalms, under the title *Erez ha-Ḥayyim* (Constantinople, 1750?). Ḥ.J.D. Azulai mentions Ḥayyim’s commentary to nearly all of the Bible.

**BIBLIOGRAPHY:** S. Buber, *Anshei Shem* (1895), 80–82 (no. 197), 129, 238; Rav Zair (H. Tchernowitz), in: *Ha-Shilo’ah*, 6 (1899), 233–40; idem, *Toledot ha-Posekim*, 2 (1947), 231ff.; 3 (1947), 112–20; Halpern, Pinkas, index 588, s.v. *Yeshu’a b. Aleksander*; H.H. Ben-Sasson, *Hagut ve-Hanhagah* (1959), index, s.v. *Yehoshu’a Falk*.

**FALK, KAUFMAN GEORGE** (1880–1953), U.S. physical chemist and biochemist. Born in New York, Falk taught physical chemistry at Columbia University. He wrote on ignition temperatures, refractive index, chemical equilibria, the electronic theory of valency, and on biochemical topics. His books were *Chemical Reactions, their Theory and Mechanism* (1920), *Chemistry of Enzyme Action* (1921), and *Catalytic Action* (1922). He was president of the Hebrew Technical Institute in New York from 1924.

**FALK, MARCIA** (1946– ), U.S. poet, translator, and liturgist. Falk was born in New York City and grew up in New Hyde Park, N.Y. During her childhood, she began painting (becoming a life member of the Art Students League in Manhattan), writing poetry, and studying Hebrew. She received her B.A. in philosophy, *magna cum laude*, Phi Beta Kappa, from Brandeis University and both her M.A. in English and her Ph.D. in English and comparative literature from Stanford University. Falk was a Fulbright Scholar and a postdoctoral fellow in Bible and Hebrew literature at the Hebrew University of Jerusalem, and has taught at Stanford, the State University of New York at Binghamton, and the Claremont Colleges. In

2001 she held the Priesand Chair in Jewish Women's Studies at HUC-JIR in Cincinnati.

Falk won international acclaim for her translation of the Song of Songs, originally published in 1977 and subsequently released in several editions, most recently as *The Song of Songs: Love Lyrics from the Bible* (2004). Her translation, which made lavish use of assonance and alliteration and interpreted obscure images for modern readers, represented a radical departure from earlier translations. In 1996 Falk published *The Book of Blessings: New Jewish Prayers for Daily Life, the Sabbath, and the New Moon Festival*, a groundbreaking prayer book. *The Book of Blessings* contains new, egalitarian Hebrew and English blessings, along with poems and meditations, as alternatives to the traditional Jewish liturgy. Falk offers non-gendered non-anthropomorphic epithets of the divine, such as "source of life" and "breath of all living things."

Falk translated the Yiddish poet Malka \*Tussman, *With Teeth in the Earth: Selected Poems of Malka Heifetz Tussman* (1992), and the Israeli mystical poet \*Zelda, *The Spectacular Difference* (2004). Falk's own vision, characterized by clarity and quietude, is evident in her two published poetry collections, *It Is July in Virginia: A Poem Sequence* (1985) and *This Year in Jerusalem* (1986).

Hoffman, "Marcia Falk's *The Book of Blessings*," in: *Prooftexts: A Journal of Jewish Literary History*, 19/1 (1999), 87–93.

[Lucille Lang Day (2<sup>nd</sup> ed.)]

**FALK, MIKSA** (1828–1908), Hungarian journalist and politician. Born in Budapest, Falk contributed early in his life to leading newspapers. From 1858 he was one of Count Széchenyi's close friends – in spite of the fact that this Hungarian statesman was antisemitic – and Falk published Széchenyi's political writings. In 1861 Falk was prosecuted for printing an article demanding the restoration of the Hungarian constitution and was sentenced to six months imprisonment. In the same year Falk was sponsored by the liberal leader Ferenc Deák for membership in the National Academy of Sciences. In 1866 he became a tutor in Magyar of the empress Elizabeth, wife of Francis Joseph. After the "compromise" of 1867 in which he had played a considerable part, and by which Hungary recovered its independence within the Hapsburg monarchy, Falk became chief editor of the government German-language newspaper *Pester Lloyd*. Falk converted to Christianity, sat in parliament for ten years, and wrote on Hungarian history.

**BIBLIOGRAPHY:** *Magyar Irodalmi Lexikon*, 1 (1963), 324.

[Baruch Yaron]

**FALK, PETER** (1927– ), U.S. actor. Born in New York, Falk worked for the Budget Bureau of the state of Connecticut as an efficiency expert after receiving his M.B.A. in public ad-

ministration in 1953. Bored with his job, he turned first to theater and television and then to film, eventually receiving Oscar nominations for his performances in *Murder Inc.* (1960) and *Pocketful of Miracles* (1961). In the 1970s Falk made a convincing impression in the films *Husbands* and *A Woman under the Influence* and starred in his own popular television detective series *Columbo*, new episodes of which were filmed after more than a 20-year break. As perhaps an illustration of the concept that life imitates art, his daughter Catherine Falk became a private detective.

In 1972 he appeared on Broadway in *The Prisoner of Second Avenue*. In 1987, he starred in Wim Wenders' Cannes Award-winning film *Der Himmel ueber Berlin/Wings of Desire*, and Rob Reiner's *The Princess Bride*. Other film roles include *The Balcony* (1963), *Robin and the 7 Hoods* (1964), *The Great Race* (1965), *Luv* (1967), *Mikey and Nicky* (1976), *Murder by Death* (1976), *The Cheap Detective* (1978), *The In-Laws* (1979), *Big Trouble* (1986), *Happy New Year* (1987), *In the Spirit* (1990), *Roommates* (1995), *Lakeboat* (2000), *Enemies of Laughter* (2001), *Corky Romano* (2001), *Three Days of Rain* (2002), *Undisputed* (2002), *The Thing about My Folks* (2004), and *Checking Out* (2004).

In addition to winning five Emmy awards, Falk has been nominated for seven other Emmys for his television performances. His memorable TV portrayals have also earned him a Golden Globe award and eight other GG nominations.

[Jonathan Licht / Ruth Beloff (2<sup>nd</sup> ed.)]

**FALK, SAMUEL JACOB ḤAYYIM** (c. 1710–1782), kabbalist and adventurer, known as the "Ba'al Shem of London." Falk, who was born in Galicia, was intimately connected with leaders of the Shabbatean sectarians for many years, e.g., Moses David of Podhajce. He became known early as a magician, escaped burning as a sorcerer in Westphalia, was banished by the archbishop elector of Cologne, and about 1742 made his way to England. Here he achieved notoriety in both Jewish and non-Jewish circles for his kabbalistic practices based on the use of the mysterious Name of God, hence becoming known as a \*Ba'al Shem ("Master of the [Divine] Name"). He had a private synagogue in his house in Wellclose Square, and also established a kabbalistic laboratory on London Bridge where he carried out alchemical experiments which aroused some notice. Among those who were attracted to him, was the international adventurer Theodore De Stein, who claimed to be king of Corsica and hoped to obtain through Falk's alchemical experiments sufficient gold to enable him to "regain" his throne. He was also in touch with, among others, the Duke of Orleans, the Polish Prince Czartoryski, and the Marquise de la Croix. On one occasion, Falk is said to have saved the Great Synagogue from destruction by fire by means of a magical inscription which he inscribed on the doorposts. On the other hand, he was denounced as a Shabbatean heretic and fraud by his embittered contemporary Jacob \*Emden. He was, at the outset, on the worst possible terms with the official London community. However, in the end he became reconciled with

it and received the support of the Goldsmid family. As a result of this, or possibly of success in a lottery, he died in relatively affluent circumstances, leaving a considerable legacy to Jewish charities and an annual payment for the upkeep of the chief rabbinate in London. Much light is thrown on his personality and activities in the semi-literate diary of his henchman Hirsch Kalish, preserved in manuscript in the Adler Collection in the Jewish Theological Seminary of America, N.Y.; one of his own kabbalistic notebooks is in the library of the *bet ha-midrash* in London. Toward the end of his life, his portrait was painted by the distinguished Anglo-American artist John Copley. This is now frequently reproduced erroneously as the portrait of the famous \*Israel Ba'al Shem Tov, founder of Hasidism.

**BIBLIOGRAPHY:** C. Roth, *Essays and Portraits in Anglo-Jewish History* (1962), 139–64; idem., *Mag Bibl*, 124–5; Wirszubski, in: *Zion*, 7 (1942), 73–93.

[Cecil Roth]

**FALKOWITSCH, JOEL BAERISCH** (19<sup>th</sup> century), Hebrew and Yiddish essayist. Falkowitsch was born in Dubno and lived in Odessa. In addition to a free Hebrew translation of Lessing's *Philotas* under the title *Amminadav* (1868), he published two successfully produced plays in Yiddish: *Reb Khayml der Kotsin* ("Reb Khayml the Judge," 1866) and *Rokhele di Zingerin* ("Rokhele the Singer," 1868). Although baptized a few years before his death, he remained well disposed to Judaism. Falkowitsch appeared at blood-libel trials where he argued against the antisemitic charges. When anti-Jewish attacks appeared in the Warsaw Russian newspaper, *Varshavsky Dnevnik*, he wrote a defense in German, called *Wort zur Zeit* ("A Timely Word," Hebrew transl. "*Davar be-Itto*" in the weekly *Ha-Kol* (1877), 8–21).

**BIBLIOGRAPHY:** *Ha-Boker-Or*, 4 (1879), 844; S. Wiener, *Kohelet Moshe* (1893–1936), 3 no. 25; Zeitlin, *Bibliotheca*, 81, 467; Rejzen, *Leksikon*, 3 (1929), 13–16.

[Jefim (Hayyim) Schirmann / Marc Miller (2<sup>nd</sup> ed.)]

**FALL, LEO** (1873–1925), composer. Born in Olomouc, Moravia, Fall, the son of a military bandmaster, was educated at the Vienna Conservatory and served as a theater conductor. His first three successful operettas, *Der fidele Bauer* (1907), *Die Dollarprinzessin* (1907), and *Die geschiedene Frau* (1908), placed him among the masters of the "second period of the operetta," with Franz Lehár and Oscar Straus. His most popular works were *Die Rose von Stambul* (1916) and *Madame Pompadour* (1922). Fall's music was distinguished for its charm of melody and clever orchestration.

**FALL RIVER**, city in S.E. Massachusetts near Rhode Island border. The Jewish population of Fall River has been declining for the past 35 years and now numbers less than 1,000, a decrease from the 1970 population of 4,000 Jews. Attracted by the early cotton-manufacturing industries, the first Jews settled in Fall River during the 1860s and 1870s. Formal religious

services were first held in 1874. These first settlers were German Jews; the community and its religious, social, and welfare institutions were soon changed considerably by the influx of Russian immigrants in the 1880s and 1890s. Two of the three congregations serving the community in 1970 – American Brothers of Israel and Congregation Adas Israel – were established in this era. Adas Israel, originally the Adas Israel Society, was founded in 1885; dissidents from Adas Israel established the American Brothers of Israel about 1892. At the beginning of the 20<sup>th</sup> century a third synagogue, Aguda B'nai Jacob, was founded. Abraham Lipshitz began ministering to these three congregations, which made up the Orthodox community, about 1910, serving them for over 30 years. In the decade 1910–20 Congregation Beth David was founded, Hebrew schools were established, and in 1924 a Conservative synagogue, Temple Beth El, was founded. Morton Goldberg served the congregation from 1925 to 1937, when Jacob Freedman replaced him as spiritual leader. Rabbi Freedman helped found the Fall River Jewish Community Council (1938), which in 1970 included about 25 societies and organizations. The other major communal institution is the Fall River United Jewish Appeal.

Jews prominent in Fall River life have included David L. Gourse, clothier and commissioner of public welfare; Albert Rubin, a state legislator for many years; H. William Radovsky, finance commissioner; and Rabbi Samuel Ruderman, long considered the spokesman for the Jewish community. David H. Radovsky and Moses Entin both played important roles in fraternal organizations and in the Zionist movement. Two nationally known businessmen and philanthropists, Jacob Ziskind and Albert A. List, were from Fall River. Another resident, Dr. Irving Fradkin, inaugurated Dollars for Scholars, an educational funding program which has been adopted by communities throughout the United States.

From their arrival in Fall River, Jews were involved in peddling and in operating small retail establishments. Many Jewish-owned businesses suffered as a result of the 1904 textile strike. Later, large furniture and retail clothing stores were established, and Jews engaged in finance and in operating textile mills. Although textile production has decreased, many Jews are involved in garment contracting; others are professionals, small retailers, and landlords. The declining Jewish population in Fall River can be attributed to a high rate of intermarriage as well as to increased social and physical mobility; Somerset and Highlands are new areas of Jewish residence.

**FALTICENI** (Rom. **Fălticeni**), town in Moldavia, N.E. Romania. The first Jews settled there between 1772 and 1774, and an organized community existed from 1780, when the town was officially founded under the name of Șoldănești, later changed to Fălticeni, as a commercial center between Austrian Bukovina and Moldavia. In 1781 the landowner permitted the building of a synagogue in the form of a regular house and put a plot for a cemetery at the disposal of the community. Many

of the Jews were Sadgora ḥasidim or belonged to Chabad. Several leaders of the community were killed by Greek revolutionaries in 1821, because the Jews were unable to pay them the money they demanded. The community numbered 1,500 in 1803, 5,767 in 1859 (63.5% of the total), 5,499 in 1899, 4,751 in 1910 and 4,216 in 1930 (36.6%). Up to World War I the majority of the Jews in Falticeni were occupied in crafts, and the rest in commerce. Jewish traders held an annual fair there. The community had a hospital, an old age home, 11 synagogues, a *talmud* torah and two schools (for boys and girls). Among the rabbis were Joshua Falik (1835–1915), author of Torah studies; Aryeh Leib Rosen (d. 1950), author of responsa published in *Eitan Aryeh*; and Alter Dorf. The Jewish scholar Solomon Zalman \*Schechter also lived in Falticeni, where he studied Torah. Other prominent figures were the Hebrew writer Mattitياهو Simḥah Rabener, director of the Israelite-Romanian school (in the 1860s and 1870s); the traveler Israel Joseph Benjamin (\*Benjamin 11); the painter Rubin Zelicovici (Reuven \*Rubin; later emigrated to Israel); the mathematician David Rimer (later emigrated to Israel); and the journalist Ḥayyim Rimer, former director of the Jewish periodical of Romania *Revista Cultului Mozaic* (1980–94). At the end of the 19<sup>th</sup> and beginning of the 20<sup>th</sup> centuries a Zionist organization led by Shulem Mayer was active. After World War I, when Bukovina was incorporated within Romania, Falticeni ceased to be a border town and the economic situation of the Jews deteriorated. In the 1930s members of the antisemitic parties organized the looting of Jewish shops and forcibly prevented Jews from attending the annual fair.

### Holocaust Period

There were 4,020 Jews living in Falticeni in 1941, about one-third of the total population. Under the Fascist regime (September 1940–January 1941) a “Green House” was set up in the center of town, where Jewish merchants were brought and tortured until they agreed to pay for their release. On the eve of war with the Soviet Union (June 1941), a German headquarters was set up in the town and the synagogues were expropriated to be used as military barracks. All male Jews were concentrated in camps, from which 1,000 were sent on to Bessarabia for forced labor; those wealthy enough were able to ransom themselves. More Jews were sent on forced labor far from their homes, where a number perished in the harsh conditions. Falticeni was evacuated in the spring of 1944, at the approach of the Soviet Army. The Jews took refuge in Suceava and Botosani and returned six months later to find their houses stripped of all their possessions. By the time the other inhabitants had returned, the Jews had succeeded in restoring public services both in the town itself and throughout the district.

The Jewish population numbered 4,700 in 1947, but decreased to 3,000 in 1950. In 1944–48 a Jewish secondary school functioned. In 1969 there were about 150 families with one synagogue. In 1994, 51 Jews lived in Falticeni. In Israel there is an organization of Jews from Falticeni.

**FALUDY, GYÖRGY** (1913–2006), Hungarian poet and author; born in Budapest. He translated François Villon’s poetry into Hungarian (*Villon balladái*, 1937). In 1939 Faludy fled to France and eventually settled in the United States, where he volunteered for service in the U.S. Army. He returned to Hungary in 1946 and devoted himself to writing and journalism. Five years later he was arrested on a political charge, and was released from prison in 1953. Faludy then joined the editorial board of the literary journal *Irodalmi Ujság*. It was in this paper that in 1956 he published a poem about his experiences in prison. At the time, the publication of the poem was regarded as an indication of the liberalization of the regime. Almost immediately, however, the failure of the revolution forced him to flee the country once again. This time he went to England, where he resumed publication of *Irodalmi Ujság*. Faludy’s works include *A pompéji strázsán* (“On the Guard at Pompeii,” 1938); *Európai költők antológiája* (“An Anthology of European Poets,” 1938); and the prose works *Tragoedie eines Volkes* (1958) and *Emlékkönyv a rút Bizáncról* (“Memories of Red Byzantium,” 1961). In 1962 he published his autobiography, *My Happy Days in Hell*, in English. Faludy’s works in Hungarian were burned by the Nazis and in later years confiscated by the Communists.

**FAMILIANTS LAWS** (*Familiantengesetze*; Heb. *Gezerat ha-Sheniyyot* in allusion to Yev. 2:4 (20a)), legislation regulating the number of Jews in Bohemia, Moravia, and Silesia entitled to found families. The laws were introduced by \*Charles VI in 1726–27 to curtail the number of the Jewish population. The number of families fixed was 8,451 for Bohemia, 5,106 for Moravia, and 119 for Silesia. The laws were expressly confirmed, with certain modifications (see below), by Joseph II in his Toleranzpatent of 1781. The structure of the Familiants system was basically the same for all three regions. In Bohemia the apportionment of the number of families was allotted to the *Kreis* (district) authorities, while in Moravia the communities themselves, which were more compact and exercised a relatively strong autonomy, had more influence in the apportionment. The regulations remained, with some alleviations, in force until 1848. According to this system no Jew could marry and found a family unless he possessed one of the “family numbers” (*Familiennummern*). This could only be transferred to the eldest son (at the age of 24) after the death of the Familiant. A younger son (but not a daughter) could in-

herit the number only after the death of an older brother. The family numbers were carefully registered by the district authorities in the *Familiantenbuch* (register of Familiants), and candidates for obtaining one in the *Kompetentenbuch*. If a Familiant had daughters only, his Familiant "number" (*Familiantenstelle*) expired. In addition, Jews were permitted to reside only in places to which they had been admitted before 1726, and within these they were limited to special quarters, streets, and even houses (*Judenhaeuser-židovny*). Violations of the regulations could be punished by flogging and expulsion.

The Toleranzpatents and other laws, such as the Systemalpatent (see \*Bohemia) of 1797, introduced various changes in the Familiants system. The numbers were increased to 8,600 for Bohemia and 5,400 for Moravia. Alleviations were introduced which tended to favor the upper or professional strata in Jewish society, marriage permits being granted for second or third sons against high payments. On request for a marriage permit the applicant had to prove that he possessed 300 florins (in Prague 500). From 1786 a certificate to prove that he had attended a German or Jewish-German school was required, and from 1812 he had to take an examination in the catechism *Benei Ziyyon*, drawn up by Naphtali Herz \*Homberg. Marriage permits could also be given to those taking up agriculture or a guild craft, or after military service. Communal employees were generally permitted to marry as "supernumeraries," but they were not allowed to transfer their permits to their eldest sons.

The Familiants system forced many Jews to marry secretly ("Bodenchassines," "attic weddings") or "pod pokličkou" ("under cover"). The children of such couples were considered illegitimate by the authorities and had to bear their mothers' names. It was not until 1847 that the fathers were permitted to acknowledge their fatherhood in the records and thus a quasi-legitimacy was established. In one instance, in Prostejov (Prossnitz) in 1841, some women who had "illegitimate" children were sentenced to forced labor and only released by special favor.

Because of the Familiants system a large number of Jews were not able to settle anywhere permanently; they wandered about the country, and contributed largely to developing a Jewish beggar group (see \*Begging and Beggars). People in this category lived virtually outside the law, deprived of any economic status or regular means of livelihood. The system gave rise to conflicts within the communities, and led to tensions in Jewish society, which had before been relatively homogeneous despite the social differences. Lawsuits before secular authorities, denunciations, bribery, and sale of expired family numbers to higher bidders from outside the community instead of transfer to candidates within it were frequent occurrences. In disrupting Jewish family life the Familiants system became one of the causes of \*assimilation. It also led to large-scale emigration from these areas. Many of the communities in Hungary (Slovakia) were founded by the younger sons of Moravian Jewish families.

It is significant that although in movements of Jewish enlightenment (see \*Haskalah) the Familiants Laws were occasionally referred to as "pharaonic laws," no attempts were made to protest against them, and only in the 1840s, and even then anonymously, were thoughts in that strain raised in journals and poems.

With the March Revolution of 1848 the Familiants system ceased to be effective, although formal abolition was only decreed in 1859. The numerus clausus on marriage and closure of areas to Jews ceased. The corpus of legal enactments on Jews in Bohemia and Moravia is collected in H. Kopetz, *Versuch einer systematischen Darstellung der in Boehmen bezueglich der Juden bestehenden Gesetze und Verordnungen* (1846) and H. Scari, *Systematische Darstellung der in Betreff der Juden in Maehren und im K.K. Antheile Schlesiens erlassenen Gesetze und Verordnungen* (1835), index; see also \*Bavaria and \*Prussia.

Echoes of the Familiants system are found in belletristic writings by Jewish authors, such as Leopold \*Kompert's "Ohne Bewilligung" ("Without Permit") and Vojtěch \*Rakous' *Na rozcesti* ("On the Crossroads").

## FAMILY.

### In the Bible

An accurate sociological description of the family and its legal status in biblical times is virtually impossible because the relevant evidence is not of a strictly socio-descriptive nature.

**SOURCES.** Some of the most often quoted examples of family life and its functions come from literary passages in the epic tradition. Thus, one finds considerable attention given to the interaction of various members in the patriarchal community. The history of the Israelite people is predicated on the Divine promise made to its eponymous ancestor Israel and his progenitors. The different branches of the tribal league are traced back to the sons born to Israel by his four wives, and neighboring peoples are judged according to their ancestral relationship to the Hebrew patriarchs. The framework of these relationships is literary, taking the form of stories about the family life of Abraham and his descendants. Other important figures such as Moses and Aaron are also identified by their family ties with the Levitical tribe. Another focal point for tales of family life is the period of occupation and settle-

ment in the land. Family glimpses are afforded of such heroic figures as Caleb and his daughter, Gideon, and Samson. The prophet Samuel and the first Israelite monarchs are also cast in vivid family portraits.

The lack of suitable documents dealing with everyday life (see below) makes it necessary to utilize these literary allusions to family life in developing a picture of the family in biblical times. It should be noted, however, that there are sometimes discrepancies between the situation reflected in biblical narratives and that reflected in legal texts (e.g., marriage to a half-sister, while forbidden in Lev. 18:9, 20:17, and Deut. 27:22, is recorded in Gen. 20:12, in connection with Abraham and Sarah, and the possibility is indicated in 11 Sam. 13:13, in connection with Amnon and Tamar). A gap between law and practice would not be surprising, and perhaps it is this which is reflected in the divergence between the legal and narrative traditions.

A second source of information is genealogies, found especially in Genesis (pertaining to the patriarchs and other ancient figures) and in 1 Chronicles (giving the family trees of the main tribal leaders and groups), but also scattered throughout the epic passages of the Pentateuch (e.g., the genealogies of Moses and Aaron).

In poetical compositions, too, one sometimes finds allusions to marriage or to marital relationships (e.g., the prophetic allegory of Ezek. 16 and the depiction of the ideal wife in Prov. 31:10–31).

Strictly legislative materials are unfortunately few and of limited scope. Leviticus 18 and 20 gives the “forbidden degrees,” i.e., a list of those relationships which are consanguineous and therefore make marriage forbidden (see below). Numbers 5:11–31 describes the ritual process for testing a woman suspected by her husband of infidelity. A case in the epic tradition is cited as a precedent for the inheritance rights of daughters in the absence of sons (Num. 26:28–34; 27:1–11; 36:10–12; Josh. 17:1–6). Social legislation pertaining specifically to the family is found primarily in Deuteronomy. The legal responsibility of the bride to be a virgin (if advertised as such) when entering into marriage and certain subsidiary matters, such as intercourse with a marriageable girl before marriage, are dealt with in Deuteronomy 22:13–23:1. The process of \*divorce is outlined (in only the briefest form) in Deuteronomy 24:1–4, while military exemption for a new bridegroom is prescribed in verse 5 of the same chapter. The laws relating to \*levirate marriage appear in Deuteronomy 25:5–10. Apart from scattered verses on miscellaneous aspects of family status, these are the main legal passages on the subject of family law. It is obvious from this brief survey that many basic themes are neglected entirely.

Unlike the discoveries from other cultures in the ancient Near East, the discoveries from ancient Israel have yielded no strictly legal documents pertaining to marriage. Mesopotamia has yielded hundreds of contracts and other types of documents, many of which are marriage arrangements. Much has been learned from such documents found at Nuzi, and the

\*Elephantine papyri include a marriage contract. That such documents were used by the Israelites is clear: it is known, for example, that a marriage was dissolved by giving the wife a *sefer keritut* (“writ of separation,” Deut. 24:1, 3; Isa. 50:1; Jer. 3:8). The earliest direct reference to a Jewish marriage contract (apart from the one in the Elephantine papyri) is in the apocryphal Book of Tobit, where it is written that Raguel “... took a scroll and wrote out the contract and they affixed their seals to it” (Tob. 7:14). These scattered allusions seem to confirm that marriage contracts were used in ancient Israel; the lack of direct evidence is apparently accidental.

**THE FAMILY UNIT.** The Israelite family as reflected in all genealogical and narrative sources is patriarchal. Attempts have been made to find traces of matriarchy and fratriarchy in the earliest stages of Israel’s history, but none of the arguments is convincing (see below).

The family was aptly termed *bet av* (“house of a father”; e.g., Gen. 24:38; 46:31). To found a family was “to build a house” (Deut. 25:10). The *bayit* (“house”) was a subdivision of the *mishpahah* (“clan, family [in the larger sense];” Josh. 7:14). The criterion for membership in a family (in the wider sense) was blood relationship, legal ties (e.g., marriage), or geographical proximity. The genealogies of 1 Chronicles sometimes speak of the clan leader as the “father” of a town, or towns, in his district (e.g., 1 Chron. 2:51, 52). A common livelihood or profession was probably a major factor in family and clan solidarity. Besides those families who engaged primarily in agriculture (conducted on their own lands), there were others who practiced some specific trade (e.g., they were linen workers, 1 Chron. 4:21, or potters, 1 Chron. 4:23). The sacerdotal functions of the Levites and the sons of Aaron are the most striking case in point.

Family solidarity is reflected in customs such as blood revenge (Num. 35:9–34; Deut. 19:1–13). Not only was this vengeance exacted upon members of another clan who had killed a kinsman (11 Sam. 3:22–27, 30), but even within the framework of a clan, the members of a particular family were responsible for exacting the death penalty when another member of their family was killed in an intra-family murder (11 Sam. 14:4–11). The avenger (*go’el*) also had other responsibilities. A near kinsman was required to redeem a relative who had been forced by penury to sell himself into slavery (Lev. 25:47–49). The same obligation held true for family property that had been sold because of poverty (Lev. 25:25; cf. Jer. 32:7). The Book of Ruth refers to this custom but is complicated by the requirement that the surviving widow also be taken (more or less in line with the Levirate practice (Deut. 15:5–10)). The family was a religious as well as a social unit (Ex. 12:3; 1 Sam. 20:6, 29; Job. 1:5; see \*Education).

**CONSANGUINITY.** The ties of blood relationship that forbade sexual relations are spelled out in order to prevent ritual violations (Lev. 18:6–18; 20:11–14, 17, 19–21). One’s consanguineous relatives, “near kin” (*she’er besaro*), as thus defined, were the father (*av*), mother (*em*), father’s wife (*eshet av*), sister (*ahot*) –

whether the daughter of the father or the mother, granddaughter – whether the daughter of a son or of a daughter, daughter of the wife of one's father (*bat-eshet av*), the father's sister, the mother's sister, the father's brother and his wife – the aunt (*dodah*), the son's wife (*kallah*) – in biblical terms, the “bride” in relation to the parents of her husband, and the brother's wife (*eshet a*). It was forbidden to take a woman and her daughter (Lev. 18:17; stated conversely, a woman and her mother, Lev. 20:14) or granddaughter; likewise a man was prohibited from taking his wife's sister (called *zarah*, a “rival”) while his wife was still alive (Lev. 18:18; contrast Jacob's marriage to Leah and Rachel).

**FUNCTIONS OF FAMILY MEMBERS.** The respective functions and status of these persons are reflected in scattered passages. The father was the head of the family unit and owner of its property (Num. 26:54–55). He was the chief authority and, as such, is portrayed as commanding (Gen. 50:16; Jer. 35:6–10; Prov. 6:20) and rebuking (Gen. 37:10; Num. 12:14). Ideally he was expected to be benevolent, to show love to his family (Gen. 25:28; 37:4; 44:20) and also pity (Ps. 103:13). The patriarchal blessing (Gen. 27) evidently carried legal force with regard to the distribution of the patrimony and other attendant privileges.

The mother, if she were the senior wife of a harem or the sole wife of a monogamous marriage, occupied a place of honor and authority in spite of her subordination to her husband (see below). At his death she might become the actual, and probably the legal, head of the household (II Kings 8:1–6) if there were no sons of responsible age. As a widow, she was especially vulnerable to oppression; concern for her welfare was deemed a measure of good government and wholesome society (e.g., Deut. 24:17). The influence of famous mothers in epic tradition, e.g., Sarah (Gen. 21:12) and the wife of Manoah (Judg. 13:23), is illustrative of the significance attached to their role. Not all of their power was exercised openly; often the motherly stratagem is deemed worthy of special notice in the epic tradition, e.g., the stratagems of Rebekah (Gen. 27:5–17), Leah (Gen. 30:16), and Rachel (Gen. 31:34). The mother naturally displayed care and love (Gen. 25:28; Isa. 49:15; 66:13; Prov. 4:3).

The role of the queen mother (*gevirah*) stands out in several instances (e.g., I Kings 2:19; 15:13; cf. II Chron. 15:16). The almost uniform practice of naming the mother of the newly crowned Judahite king (e.g., I Kings 14:21) may be a reflection of her special status, but not necessarily. The biblical narrative was evidently concerned with keeping track of the royal heirs by this means, perhaps in order to stress the particular family or region whose daughter had gained the distinction of having her son rise to the throne (cf. II Kings 21:19 and 23:36 where the Galilean origin of the kings' mothers is indicated). It is not certain that in every case the son of the chief wife gained the succession.

The greatest misfortune that could befall a woman was childlessness (Gen. 30:23; I Sam. 1). Children were a blessing

from the Almighty (Ps. 127:3–5); they assured the continuance of the family name (Num. 27:4, 8; 36:8b). The mother was more directly involved in the early training of the children than was the father (Prov. 1:8). When the children grew older, the father assumed responsibility for instructing the son (Gen. 18:19; Ex. 12:26–27; 13:8, 14, 15; Deut. 6:7), while the mother evidently kept charge of the daughter until marriage (Micah 7:6). Children were exhorted to honor both parents (Ex. 20:12; Deut. 5:16), and the inclusion of this command in the Decalogue probably accounts for the threatened death penalty to offenders (Ex. 21:15; Lev. 20:9; Deut. 27:16). The decline in respect for parents was symptomatic of the dissolution of society (Ezek. 22:7; Micah 7:6; Prov. 20:20). The demonstration of this respect was primarily through obedience (Gen. 28:7; Lev. 19:3; Deut. 21:18–21; Prov. 1:8; 30:17). Parental control included the right to sell daughters in marriage, although there were limitations on selling her into slavery (Ex. 21:7–11; cf. 22:15–16; Neh. 5:5), and an absolute ban on selling her for prostitution (Lev. 19:29). The father could annul his daughter's vows (Num. 30:4–6), and damages were paid to him for a wrong done to her (Ex. 22:15–16; Deut. 22:28–29). A daughter who was widowed or divorced might return to her father's household (Gen. 38:11, Lev. 22:13; Ruth 1:15).

The terms “brother” (*ah*) and “sister” (*ahot*) applied both to offspring of the same father and mother (Gen. 4:2) as well as to offspring who had only one common parent, either a father (Gen. 20:12) or mother (Gen. 43:7; Lev. 18:9; 20:17). Attempts have been made to find traces of a fraternal system in the most ancient Israelite traditions; e.g., in Laban's role (Gen. 24) as head of the family when his sister Rebekah was sent to marry Isaac. Laban's role, however, can be explained without recourse to fraternalism; Laban, as the direct descendant of Nahor (Gen. 24:15, 29; 29:5), certainly was slated to become head of the family after his own father's demise. Another biblical incident, the concern of Jacob's sons after the humiliation of their sister, whom they called their “daughter” (Gen. 34:17), can also be understood in this way.

Brotherly solidarity is frequently stressed (e.g., Prov. 17:17), and harmony among brothers was held up as an ideal (Ps. 133:1). Brothers were obligated to avenge each other's murder (II Sam. 3:27) as part of their duty as *go'el* (“defender” or “redeemer”; Num. 35:19–28; Deut. 19:6; Josh. 20:3; II Sam. 14:11). Another aspect of this responsibility was the requirement that one ransom a brother who had been taken captive or had gone into servitude as the result of financial adversity (Lev. 25:48; Ps. 49:8; cf. Neh. 5:8).

The term “brother” is often extended to more distant relatives, e.g., nephews (e.g., Gen. 13:8; 14:14), fellow tribesmen (Lev. 21:10), and others (Deut. 2:4, 8; 23:8).

Other members of the immediate family were the paternal uncle (*dod*; e.g., Lev. 10:4; 20:20) and the paternal aunt (*dodah*; the father's sister, Ex. 6:20; and the wife of the father's brother, Lev. 18:14; 20:20); also cousins (male, *ben-dod*, Lev. 25:49; Num. 36:11; female, *bat-dod*, Esth. 2:7).

**MARRIAGE AND ADOPTION.** Though a man left his parents when he married (Gen. 2:24), he normally remained a member of his father's family. In relation to his wife, he was "master" (*ba'al*; e.g., Gen. 20:3; Ex. 21:3, 22; Lev. 21:4; Deut. 24:4). He "took" her from her parents, or she was "given" to him by her father, or by her master or mistress, if she was a slave (Gen. 2:22; 16:3; 34:9, 21). The marriage agreement, which, judging from neighboring cultures, was probably set down in a written contract, was made between the husband and either the bride's father alone (Gen. 29; 34:16; Ex. 22:16; Deut. 22:29; Ruth 4:10) or both her parents (Gen. 21:21; 24). The marriage negotiations might result from an attraction that had already developed between two young people (e.g., Samson and the Philistine girl, Judg. 14), but generally the father must have taken the initiative since evidently he had the right to determine who would be his daughter's spouse (Caleb, Josh. 15:16; Saul, 1 Sam. 18:17, 19, 21, 27; 25:44). If a man seduced a virgin, he had to pay her bride-price to her father, who could, at his own discretion, give his daughter to this man in marriage or withhold her from him (Ex. 22:15). However, if he forced her, he was obligated to marry her and pay her price, and had no right ever to divorce her (Deut. 22:28–29).

Generally, prior to the consummation of the marriage a \*betrothal was entered into; under this arrangement the bride-price (*mohar*) was established (Gen. 34:12; Ex. 22:16; 1 Sam. 18:25), accompanied by a gift (*mattan*; Gen. 34:12). A time limit was set by which the payments were to be completed and the marriage put into effect (1 Sam. 18:17–19, 26:27). The engagement was a legal transaction in the fullest sense. An engaged man was exempt from military service (Deut. 20:7). The legal status of a betrothed virgin was such that she was prohibited to other men. If someone besides her fiancé had intercourse with her, she was held guilty of adultery. If the act took place in town, where she could have cried for help, the woman was equally guilty; but if it happened in the country she was exonerated by the benefit of the doubt – perhaps she did cry out and was not heard (Deut. 22:23–27).

The essence of the \*marriage ceremony seems to have been the transfer of the bride to the house of the groom. He would don a turban (Isa. 61:10) and proceed with his companions to the house of the bride. There the bride, richly attired (Isa. 61:10; Ps. 45:14–15) and veiled (Song 4:1, 3; 6:7; cf. Gen. 24:65; 29:23–25), awaited him. She was then conducted to the house of the bridegroom (Gen. 24:67; Ps. 45:15–16). The festivities included songs extolling the virtues of the bridal pair (Jer. 16:9) – Psalms 45 and Song of Songs evidently represent such compositions – and a feast of seven days (Gen. 29:22–27; Judg. 14:10–12) or even a fortnight (Tob. 8:20). Unusual circumstances might require that the feast be at the home of the bride's parents, but under normal circumstances it must have taken place at the home of the groom. The marriage was consummated on the first night (Gen. 29:23), and the bride's nuptial attire (*simlah*) was kept afterward as evidence of her virginity (*betulim*; Deut. 22:13–21).

The modern definitions of \*monogamy and polygamy are not strictly applicable to the ancient world. It was normal for the head of a household to have only one legal, full-fledged wife (Heb. *ishshah*; Akk. *aššatu*); if she were barren, the husband had the right to take a concubine who was often the handmaiden of his wife (Gen. 16:1–2; 29:15–30; 30:1ff.). However, a man might take two wives of equal standing (Gen. 26:34; 28:9; 29:15–30; 36:2–5; 1 Sam. 1:2). In that case the law forbade his depriving his firstborn son of his legitimate double portion in the interests of the son of the other wife, should she be the favorite (Deut. 21:15–17). Royal polygamy (Deut. 17:17; 1 Kings 11:1–8) was partly a reflection of foreign policy, each new addition to the harem representing a new or renewed treaty relationship. Heroic leaders would also be expected to have numerous wives and to father many offspring (Judg. 8:30–31; 1 Sam. 25:42–43).

Living with her husband, the wife was normally close to her husband's father (*ham*; 1 Sam. 4:19, 21) and mother (*hamot*; Ruth passim; Micah 7:6). Occasions when the groom stayed with the bride's parents (*hoten*, e.g., Ex. 18:1; *hotenet*, Deut. 27:23) are noted in the Bible precisely because they were not the norm. Heroic figures such as Moses and Jacob (cf. also Sinuhe, the hero of an Egyptian historical novel) were forced because of unusual circumstances to spend long periods with their in-laws.

When her father died, a woman's brother would perform all the duties of the *hoten* (Gen. 24:50, 55). Brothers- and sisters-in-law were considered too closely related to marry (Lev. 18:16, 18; 20:21), except in the case of the husband's brother (*yavam*), who was expected to fulfill the Levirate responsibility.

\*Adoption is clearly demonstrated in the case of Jacob's accepting Manasseh and Ephraim as sons (Gen. 48:5); parallels from other ancient Near Eastern cultures have been noted. The absorption of various clans, e.g., the \*Calebites and Jerahmeelites into the tribe of Judah, suggests that adoption may have been more widespread in Israelite society. Divine adoption of the king seems to be reflected in certain passages (11 Sam. 7:14; Ps. 2:7). It has been suggested, on the basis of parallel customs from Nuzi, that Abraham had adopted Eliezer, his chief servant (Gen. 15:2), and that Laban had also adopted Jacob before sons of his own were born (Gen. 31:1–2). The evidence is too scanty for firm conclusions, but one would be surprised if no adoption whatever was practiced (cf. the metaphorical use of adoption symbolism (Ezek. 16:1–7; Hos. 11:1–4)).

### Post-Biblical

The subject of the family in the post-biblical period is considered here under two aspects:

- (a) family in its wider sense of individuals related by marriage or consanguinity, and
- (b) the smaller unit consisting of parents and children.

**THE LARGER FAMILY UNIT.** There is no doubt that the word "family" was used in this sense, i.e., the descendants of an eponymous ancestor, and various families are referred to in

the Talmud, such as the families of Bet Zerifa (Kid. 71a), Bet Zevaim and Bet Kupai (Yev. 15b), and Bet Dorkati (Ket. 10b). Among the priestly families, a completely pure and unsullied genealogy was rigidly insisted upon. It took the most extreme forms, and it was laid down that “they set a higher standard in matters of priestly descent” (Ket. 13a). Josephus, who prided himself on his priestly descent (Life, 1:1), states that the genealogies of the priests were carefully preserved in the archives of the Temple. The attempt of the Pharisees to remove John Hyrcanus (1) from his office of high priesthood (Kid. 66a; cf. Jos., Ant., 13:10, 288–92) and the pathetic incident of R. Zechariah b. ha-Kazav, a priest, who was forced to divorce his wife, despite his oath that he had not left her for a moment during their capture by enemy soldiery (Ket. 2:9), are both based on the law that a woman who had been taken captive by non-Jewish soldiers was forbidden to marry a *kohen*.

What was obligatory and mandatory for priestly families was regarded as desirable for non-priestly families. Most of the last chapter of the talmudic tractate *Kiddushin* deals with this question, with the aim of ensuring the purity of the family. Both purity of descent and eugenic considerations were regarded as important: “A man should not marry into a family which has a recurrent history of epilepsy or leprosy” (Yev. 64b). The responsibility of the individual member of a family toward the good name of the family as a whole is constantly stressed: “A family is like a heap of stones. Remove one, and the whole structure can collapse” (Gen. R. 100:7). “Woe unto him who sullies his children and his family” (Kid. 70a) and “whosoever brings disrepute upon himself brings disrepute upon his whole family” (Num. R. 21:3). This regard for the good name of the family as a whole gave rise to the impressive ceremony of \**Kezazah* in which “all the members of the family” participated when one of them “married a woman who was not worthy of them” (Ket. 28b).

There were “aristocratic families of Israel” on whom alone “the Holy One, blessed be He, causes his Divine Spirit to rest” (Kid. 70b). They alone were regarded as worthy of marrying into the priestly families. The status of certain families as “pure and impure” and as “sullied and unsullied” was well known (Ket. 28b). It was regarded as a meritorious act to marry the daughter of a scholar (Pes. 49a), and genealogical lists were drawn up, and carefully preserved (Pes. 62b; Yev. 49b). The last *mishnah* of Ta’anit (4:8) records an ancient custom that on the 15<sup>th</sup> of Av and on the Day of Atonement the young men of Jerusalem used to go out in the vineyards to choose their brides, and the maidens adjured them saying: “Young man, lift up thine eyes and see what thou art choosing for thyself. Set not thine eyes on beauty; set thine eyes on family.” On the other hand, a blind eye was turned to a family in which it was known that there had been an undesirable admixture which could not be traced (Kid. 71a). During the talmudic period, the marked tendency of descendants to continue the calling or the profession of their forebears is referred to in a statement justifying the fact that retribution is taken in the case of the worshiper of Moloch “from the man

and his family” (Lev. 20:5). “If he sinned, in what did his family sin? Because there is not a family containing a publican of which all the members are not publicans or containing a thief in which they are not all thieves” (Shev. 39a). Mention is also made of “families of scribes, which produce scribes, of scholars who produce scholars, and of plutocrats who produce plutocrats” (Eccl. R. 4:9). This emphasis on the worthiness of the families as a prime consideration in choosing one’s life partner has persisted throughout the social life of the Jews. It was commonplace among East European Jews for the parents of the potential bride or bridegroom to ensure that the parents should be such as “one could sit down with them at table.” It is an interesting fact that in Hebrew and in Yiddish there is a word (*mechutan*) to designate the relationship established between the parents of the bride and the parents of the bridegroom, or between the respective families.

THE SMALLER FAMILY UNIT. In Jewish social life and tradition the family constitutes perhaps the most closely knit unit in any society. All members of the family, husband and wife, parents and children, are bound by mutual ties of responsibility.

Although in theory polygamy is permitted by both Bible and Talmud, the ideal set forward is always of husband, wife, and children forming one unit. The passage from Psalms, “it shall be well with thee, thy wife shall be a fruitful vine in the innermost part of thy house; thy children like olive plants round about thy table” (Ps. 128:2–3), formed the basis of innumerable homilies on the part of the rabbis extolling the virtue of domestic bliss (cf. Tanh. Va-Yishlah; ser 18, etc.). The family was regarded as the smallest social unit through which the cultural and religious heritage of Judaism can be transmitted.

Where Christianity glorified celibacy and monasticism as the highest ideal and a means of extolling the virtue of chastity, Judaism extolled the institution of marriage and the family. It is significant of the difference in outlook that whereas Paul regarded celibacy as the highest virtue and only reluctantly gave permission to marry, “But if they cannot contain, let them marry; for it is better to marry than burn” (i.e., incur the death penalty of burning for incest and adultery; 1 Cor. 7:9), a Midrash attributes the death of Nadab and Abihu, the two sons of Aaron, “from a fire from the Lord” (Lev. 10:2) to the fact that in their arrogance they refused to marry (Lev. R. 20:10). The rabbis pointed to the verse “He created it [the world] not a waste, he formed it to be inhabited” (Is. 45:18) as a justification for the religious duty not only of marrying but of setting up a family. R. Eliezer went so far as to regard the man who does not marry and shirks the duty of rearing children as equivalent to a murderer (Tosef., Yev. 8:4). The Mishnah (Yev. 6:6) lays it down as a duty to procreate, in accordance with Gen. 1:28 “Be fruitful and multiply,” the minimum number of children for its fulfillment being two (according to Bet Shammai two male children; according to Bet Hillel one male and one female). So essentially was this regarded as the purpose

of marriage that according to the same Mishnah not only was a man permitted, but even enjoined, to divorce his wife after ten years of barrenness.

The discussion in the Babylonian Talmud to this Mishnah (60b–63a) is replete with statements emphasizing the sacred nature of this duty and the joy, beauty, and sanctity of the Jewish home. It includes such statements as “He who has no wife lives without joy, without blessing, and without goodness”; “of that man who loves his wife as himself, honors her more than himself, who guides his sons and daughters in the right way, and arranges for their early marriage, Scripture says ‘and thou shalt know that thy tent is peace’ (Job. 5:24).”

The family unit was regarded as a closed one. The spontaneous blessing of Balaam “How goodly are thy tents, O Jacob” (Num. 24:5) was inspired by the fact that he saw that “the doors [of their houses] were not opened opposite those of their neighbors” (cf. Rashi *ad loc.*). The wife was supposed largely to confine herself to her household duties and strangers were somewhat discouraged, despite the emphasis placed upon the duty of hospitality. The wife and mother was the undisputed mistress of the home.

Children are a divine trust (cf. the story of the death of R. Meir’s two children, Yal. Prov. 964). It was the father’s duty to teach his child religion, to teach him a trade, even to teach him to swim (Kid. 40a), and it was strictly forbidden to a parent to show favoritism to any of his children (Shab. 10b). No duty ranked higher than the fifth commandment, “honor thy father and thy mother” (Ex. 20:12). Domestic harmony was enjoined in the injunction “a man should spend less than his means on food, up to his means on clothes, beyond his means in honoring wife and children, because they are dependent on him” (Hul. 84b).

This constant insistence upon the value of the family as a social unit for the propagation of domestic and religious virtues and the significant fact that the accepted Hebrew word for marriage is *kiddushin*, “sanctification,” had the result of making the Jewish home the most vital factor in the survival of Judaism and the preservation of the Jewish way of life, much more than the synagogue or school. It was also a major factor for moral purity.

The traditional Jewish home exemplified the maxim “where there is peace and harmony between husband and wife the *\*Shekhinah* dwells between them.” A religious spirit of practical observance pervades it, from the *\*mezuzah* on the doorpost to the strict observance of the dietary laws in the kitchen. The home was the center of religious practice and ceremonial. Its outstanding expression was the festive meal on Sabbaths and festivals with the kindled candles on the table, the *\*Kiddush*, *\*Zemirot*, and Grace before and after Meals. The outstanding such occasion is the *seder* on Passover eve. But there was also the *\*Sukkah*, the morning and night prayers, the blessing of the children by their father on the eve of Sabbath and Festivals, and the blessing of the parents (significantly called “my father, my teacher,” and “my mother, my teacher”) in the Grace after Meals.

Nor were the social and humane virtues overlooked. The placing of a coin in the charity box (usually for the poor of the Holy Land, the “Meir Ba’al Ha-Nes Fund”) initiated the duty of charity; Deut. 11:15 was interpreted to mean that one should feed one’s domestic animals before sitting down to one’s meal.

Perhaps in nothing was the strength of the family bond more seen than in the paradox that whereas in theory divorce among Jews is the easiest of all processes, in practice it was, until recent times, a comparative and even absolute rarity. The powerful bond which united parents and children in one bond with mutual responsibilities and mutual consideration made it a bulwark of Judaism able to withstand all stresses from without and from within.

## FAMILY, AMERICAN JEWISH.

### Introduction

Any discussion of American Jewish family life as an institution must view it within the context of contemporary American social, economic, and political life. All contemporary American Jews are “Jews by choice” in that their relationship with the Jewish people, Judaism, and its institutions is voluntary. They have freedom and feel part of mainstream American life.

The experience of the Jewish family in the United States over the past century has been one of acculturation and accommodation to the norms and values of American society. The diversity within Jewish life precludes a description of an archetypal contemporary American Jewish family. In contrast, according to Glatzer the historic Jewish family – at least in theory (1959) – was (1) patriarchal, (2) three generational, (3) home oriented, (4) pious, and (5) devoted to study, particularly the Bible, Talmud and other Jewish texts. As in all other modern Jewish societies, the majority of Jewish families in the United States today, and perhaps the majority of Jewish families in the typology suggested bear scant resemblance to Glatzer’s model of the premodern European Jewish family.

Many Jewish families still share certain distinctive socio-economic characteristics, i.e., they are middle or upper middle class, are politically to the left of center, and socialize often with other Jews. But many, from day to day, are hardly distinguishable from their non-Jewish neighbors. In a profound way, the religion most practiced by American Jewish families has been America itself, its freedoms, democracy, openness, and unprecedented opportunities.

The transition from tradition and self-segregation characterizes the development of the American Jewish family in the United States. These processes affected virtually every aspect of family life, from size and residential patterns to marriage and career choices. There are some who see this process as having weakened the Jewish family, leading it in the direction of ultimate extinction as a distinctive type; others see evidence of surprising strength and the maintenance of tradition in a world of dramatic change. Often citing the same evidence, they perceive the Jewish family as having successfully transformed itself in response to the conditions of its environment, requiring, perhaps, only some redefinition. The process of change which the Jewish family underwent in America may be divided into four eras: (1) the years defined by mass immigration or its consequences, beginning in 1881 and lasting until the late 1920s, (2) the mid-century era, lasting from about 1930 to the mid-1960s, (3) the decades of the 1970s and 1980s, and (4) the end of the 20<sup>th</sup> century and the beginning of the 21<sup>st</sup>.

### Immigration

The majority of Jews living in the United States today are third-, fourth-, and fifth-generation descendants of the families of some 2,650,000 immigrants who arrived in America between the last two decades of the 19<sup>th</sup> century and the first quarter of the 20<sup>th</sup> century as part of the mass transplantation of peoples from Eastern and Southern Europe. Howe (1976) points out that for Jews, more than for any other European group, this historic migration was a movement of families, signified by the great proportion of females and children who took part in it. Mass migration, which is usually set in motion by an economic or political crisis, war, or natural disaster, disrupts the normal development of family life. "Yet, it was the ferocious loyalty of the Jews to the idea of the family as they knew it, the family both as locus of experience and as fulfillment of their obligation to perpetuate their line, that enabled them to survive (the immigration experience)" (p. 20). However, immigration put an enormous strain on the family. The older generation was often left behind, never to be seen again. Husbands came before their wives and children thus beginning the process of Americanization earlier. Family reunions were often joyous but seldom without problems as both husband and wife had changed in the intervening years; the husband had become more American, the wife had become used to handling family matters. There were also problems of abandonment, of husbands who had disappeared into the great abyss of America.

The majority of Eastern European Jewish families who came to the United States were nominally Orthodox; they were not, though, among the most learned or pious of that generation. Those who were well established in Europe stayed in Europe. "There is little recognition [today] of the fact that a significant group of the post-1905 immigrants had [already] moved away from Jewish culture . . ." (Sklare, 1971, p. 17). Nevertheless, they held on to a distinctive Jewish ethos and way of

life brought from their towns and villages. Within their world, molded by centuries of Jewish tradition, arranged marriages were common, and large families were desirable, if not always achievable. With a high infant mortality rate and the death of young children by disease, for some children to survive, many more had to be born. The husband was the dominant spouse, the primary breadwinner, and the master of the house, at least in theory. Yet, quite often, the wife was forced to work or in business both husband and wife often worked together. The needs of the group, especially one's family, generally took precedence over any one of its members. Personal achievement of boys and men was encouraged, knowing that the rewards would benefit the entire family. The boundaries of family loyalty and commitment generally extended beyond the immediate household to include a wider circle of relatives.

During this period, economic survival was the immediate concern of each family. "Between 1900 and 1920, it can be argued, more American Jews were engaged in a really difficult struggle for existence than at any time before or since" (Glazer, 1965, p. 23). Despite this, when family members assisted one another the difficulties of resettlement were eased. Countless veteran families legally undertook responsibility for new immigrant relatives, helping them find housing and employment, and, when necessary, sharing food, shelter, and clothing, until the newest arrivals were securely settled.

The many hardships of starting life in a new society put great pressures on the functioning of the family. For example, in the lore of the old country the Jewish father was the natural and unchallenged head of the household, respected and feared by all family members. The Jewish mother was revered for her dedication to her husband and the responsibility she assumed for her young children. Upon reaching America these relationships often changed. The difficulty of adult immigrants in parting with the ways of the old country, in learning to read English and speak it without an accent, in finding gainful employment, and in general, mastering the new environment, in many cases led to the reversal of roles between parents and children. "'Green' parents turned to their Americanized children for succor. Parents became children, and children were unwillingly pressed into the role of parents" (Feingold, 1992, p. 38). Young children learned English more readily and it was not uncommon for them to serve as family spokesman when dealing with the school teacher, principal, policemen and other non-Jewish authorities. In addition, thousands of children were removed from school to work in sweatshops or to perform other menial labor in order to guarantee their family's subsistence income. Inevitably, many children, feeling more American than their parents, were embarrassed by the latter's foreignness and derided them for being "greenhorns" – and then often felt guilty for it. Many immigrant families, perhaps those who were initially less stable, experienced various levels of dysfunction in response to these pressures.

A primary source that reflects the struggles and vicissitudes of first generation Jewish families in America is the letters to the editor column of the then popular Yiddish daily,

the *Forverts*, a collection known as *A Bintel Brief*. The thousands of letters sent to this column by immigrants, beginning in 1906, bear testimony to the family arguments, difficulties with raising children, infidelity, divorce, and particularly, cases of paternal desertion experienced by many Jewish families. “The number of [Jewish] men who left their families became so great at one time that the *Forverts*, in cooperation with the National Desertion Bureau, established a special column to trace them” (Metzker, 1972, p. 10).

Another source on Jewish family life from this period, *The Jewish Communal Register* (1918), is a compendium of socio-economic and demographic data on approximately a million and a half New York Jews, one-half of all the Jews in the United States at that time. One table, covering the period from 1901 to 1916, compiled by the United Hebrew Charities, indicates a steady decrease, from 11,447 to 6,014, in the number of Jewish families receiving community assistance. As Morris Waldman, at the time the executive director of the Federated Jewish Charities of Boston, pointed out:

[T]he striking thing is, that in spite of the rapid increase of the Jewish population, due to immigration as well as to natural causes, the number of dependent families has steadily diminished year by year, not only proportionately, but actually... This is particularly gratifying in the light of the fact that the number of dependent families among other elements in the city, judging by the experience of other private relief agencies, has increased in proportion to the increase of their population. This proves that the Jews from eastern European countries are not willing dependents. On the contrary, they make every effort to care for themselves and thus remain self-respecting as well as self-supporting (pp. 991–92).

These words portend the successful social and economic integration of the American Jewish family into American society during the coming decades. America was expanding, jobs were available and workers were needed.

### The Mid-Century

Although the challenges of resettlement seemed overwhelming at the time, the Jewish family, in retrospect, stood up to them rather well. The evidence for this is the remarkably rapid social mobility of second-generation American Jews whose parents, in spite of their struggles, saw to their education and general welfare. This second era encompasses approximately 40 years divisible, into two periods. The first began roughly around 1925 and lasted until 1945; the second commenced with the end of World War II and continued until the mid-1960s. During the first 20 years immigrant Jewish families underwent a remarkable social metamorphosis. After World War II they emerged thoroughly Americanized and ready to reap the benefits of the country’s post-war economic upsurge.

Quota legislation adopted by Congress in 1921 and 1924, known as the Johnson Acts, effectively ended 40 years of continuous immigration to the United States. With the abatement of mass immigration, the problems of resettlement faded, and the tenor of Jewish community life changed. Those who came in the 1880s and 1890s had been here for decades; their

children were American born and American educated. After the mid-1920s, integration into the American mainstream became the most important issue on the Jewish community’s agenda.

With impressive speed, masses of Jewish families in cities throughout the United States found the means to relocate from the area of first settlement to a second, more desirable, community. As early as 1925, for example, Brownsville had become the largest center of Jewish population in all of New York City, more populous than the Lower East Side of Manhattan, which many of its inhabitants had left in search of cleaner, healthier, and more spacious living (Landesman, 1969). Geographic mobility, usually the move from a small apartment in an older, run down quarter, to a larger apartment or home in a newer, more prestigious section, was the by-product of social and economic success. The *Menorah Journal* of April 1928 points out:

In the United States the benefits of equality have now been attained for all practical purposes. Every number of every Jewish weekly in the land points with pride to some Jewish judge or governor, to Jewish bankers, real estate operators and merchants, to members of the faith who are actors and authors and editors, or who have been honored for some success dear to the hearts of their fellow Americans (*ibid.*, p. 361).

Ironically, the process of becoming established took place against a backdrop of significant antisemitism and discrimination which only peaked towards the end of the 1930s. During these years, “gangs attacked Jews on the streets of Brooklyn and other eastern cities with little interference from the police, while organizations calling themselves the Christian Front of the Christian Mobilizers conducted ‘Buy Christian’ campaigns, cheered the Fuehrer and denounced prominent American Jews” (O’Brien, 1967, p. 271). If nothing else, the effect of antisemitic street violence was reason enough for Jewish families to leave the working class neighborhoods of the Lower East Side of Manhattan, the Bronx, and Brooklyn where older Jewish enclaves bordered the neighborhoods of other immigrant groups. Both intergroup conflict and increasing prosperity stimulated geographic mobility.

By 1920, first-generation Jewish immigrants were outnumbered by their American-born Jewish children who began “asserting themselves in the Jewish community” (Hutchinson, 1956). “As members of the second generation began to strive for the values of the dominant society, they introduced the seeds of conflict into the ... community” (Kramer and Levantman, 1961). By the beginning of the 1940s, it was clear that younger Jewish families, by then virtually all second generation Americans, bore the values and cultural patterns of their native land. One observer from that era writes: “Today in America, Jewry, like a chameleon, has taken on the color of its new surroundings. Its soul remains divided between the memory of its Eastern heritage – of traditions nursed through centuries of ghetto life – and the interests of the community, which has received it. Its thought has been cast increasingly in the American vernacular ...” (*ibid.*). Typically, second-gen-

eration families attenuated the Orthodox rituals, which were the only form of religious Judaism their parents and grandparents had known in Eastern Europe, even if these had not been consistently observed. Kramer and Leventman note that upon becoming adults, the children of immigrants “acquired a middle-class inclination to make distinctions between the sacred and the secular unknown in the ghetto ... What the second generation required were religious institutions adapted to the norms of its new status” (*ibid.*, p. 11). Sklare (1972) thus attributes the success of Conservative Judaism during the period 1920–1950 to “its appeal to young marrieds who were in the process of establishing independent households and developing a pattern of Jewish living that would be distinctive to their generation... Younger Jews who wished to retain continuity with their past and at the same time integrate into American middle-class culture found Conservative Judaism to be the perfect solution to their dilemma” (Sklare, *ibid.*). Both Conservative and Reform Judaism represented a restructuring of European Orthodox religious patterns that appealed more to American Jewish sensibilities. In particular, they sanctioned shorter, mixed-pew Sabbath worship services with greater decorum. For families of both movements, the weekly synagogue service became the main, and for many the only, even if infrequent, family religious activity, with the exception of the Passover seder, Hanukkah candles, or celebrating a family life cycle event, such as a bar or bat mitzvah. The synagogue was used for life cycle events: birth and bar-mitzvah, marriage and death, times of crisis and illness as well as on the High Holidays. One observer spoke of it as a Judaism of “hatch em, match em, patch em and dispatch em.”

To be sure, many family traditions brought from Europe endured and were passed on to the first American-born generation. “Certain deeply felt attitudes, well adapted to the conditions of the *shtetl*, were brought ... by East European immigrants and transplanted in American soil. If this soil had been completely uncongenial to them, they would be dead and forgotten by now; but the soil was partly congenial, partly inimical” (Yaffe, p. 278). Jewish families saw in the pluralistic nature of American society a tolerance for non-native customs that did not exist in the more highly structured and traditional societies of Europe. This openness helped foster a kind of biculturalism – Jewish and American. Even while seeking to emulate the ways of their new surroundings, most immigrants could not divest themselves of their old country values and norms. As a result, many never felt fully at home in America. By contrast, their children, born in the United States, though only one generation removed from Eastern Europe, saw themselves as American in all respects.

Structural acculturation among second generation Jewish families began as early as the 1920s, says Feingold, and was expressed through:

A loosening of the ties of kinship, and ultimately the large extended family was replaced by a small nuclear one. Family clans that had settled in the same neighborhood dispersed. The nuclear family was compelled to bear alone the stress of rapid

change or decline in fortune. Occasionally families cracked under the strain, but most often the changed Jewish family survived and continued to live as before – or as much as was possible (*ibid.*, p. 37).

The dispersion to which Feingold refers was not universal. Second generation families, in fact, often continued to live in the same community, and sometimes even in the same apartment building or complex. This was also true in certain cities more than others. Pittsburgh for example, has had a stable Jewish upper-middle-class neighborhood since the 1930s and is still using the infrastructure created more than three quarters of a century ago. During this era, three generation households, consisting of grandparents, parents, and children, were not as uncommon as they were to become. Grandparents often maintained an active role in managing the family. No doubt this helped many young couples by reducing their child-rearing responsibilities, affording them additional time for work or schooling. In spite of discrimination, many children of immigrants succeeded in entering American colleges and universities. They trained for the “free” professions of law, medicine, dentistry, pharmacy and accounting (Glazer 1965, p. 33). It was during this period that large numbers of American Jewish families improved their socio-economic status, becoming solidly middle class.

According to Glazer, in the mid-1930s almost one-half of young Jewish adults came from homes where their fathers were blue-collar workers, and about one-third from homes where their fathers owned their own businesses or were managers and officials in other enterprises. In one-tenth of the homes the fathers were clerks, and in fewer than one-twentieth they were professionals. In contrast, some 60 percent of the younger generation was engaged in “clerical and kindred” work, and many headed for an independent business career or profession. In smaller cities during the 1930s, such as Detroit, Buffalo, and San Francisco, an even larger percentage of young Jews, including women, were becoming teachers, white-collar clerks, and salespeople (*ibid.*, pp. 30–32). Their solid penetration of the middle class during this period set the stage for even greater socio-economic advancement during the next two decades.

Even before reaching the middle class economically, American Jewish families displayed many of the social patterns of this group. A prime example of this is the decline in the birth rate. “The process of family limitation among American Jews,” says Sklare, “has its roots in the fertility behavior of the first generation. But it was not until the second generation that newer conceptions of family size made deep inroads” (*ibid.*, 1971, p. 79). In 11 community-wide studies carried out between 1930 and 1940 Seligman (see Glazer, p. 34) reports on Jewish fertility ratios (the proportion of children under 5 per 1,000 persons aged 20–54) ranging from 81 to 122. Among non-Jewish Caucasians in 1940 from across the United States, the ratio is 154. Glazer comments that “in the late ‘Thirties, it seem[s] fair to conclude that a modicum of relative prosperity had been accompanied by a very rapid drop in the size of

the Jewish family" (*ibid.*, p. 35). "By 1938," notes Feingold, "50 percent of Jewish families produced two or fewer children. Jews were on their way to becoming America's most efficient contraceptors" (p. 48). Sociologists and others at that time who were sensitive to these trends predicted a decline in the size of the American Jewish community.

By 1940 American Jews had adopted the model of the middle-class American family more successfully than any other immigrant group. This status is portrayed in a number of popular wartime- and postwar-period novels, including *A Tree Grows in Brooklyn* (Betty Smith, 1943), *A Walker in the City* (Alfred Kazin, 1951), *Marjorie Morningstar* (Herman Wouk, 1955), and *Good-bye Columbus* (Philip Roth, 1959). Jewish families portrayed in earlier works, such as Abraham Cahan's *The Rise of David Levinsky* (1917) and Henry Roth's *Call It Sleep* (1934), are, by comparison, preoccupied with the more fundamental issues of resettlement and becoming "real" Americans. After 1940, these themes are no longer relevant. Fictional Jewish families as portrayed by Jewish authors in the 1940s are unmistakably, middle-class American families who also happen to be Jewish.

Glazer asserts that "the fifteen years of prosperity from the end of the thirties to the mid-fifties ... wrought great changes, and created the Jewish community we know today.... This community of businessmen and professional men is better educated and wealthier than most of the population – probably as well educated and as wealthy as some of the oldest and longest established elements in the United States" (*ibid.*, p. 3). Glazer attributes this success to the fact that Jews, more than other immigrant groups, had for generations engaged in various urban, middle-class occupations, and in spirit had long belonged to the middle class.

Upon its rise to the middle class, the Jewish family began exhibiting additional signs of modernization. Strodbeck (1957) offers evidence which demonstrates that after World War II, Jews, as compared to Italians, place less stress on "familism," i.e., they are more willing to leave home and live independently. This suggests that certain values, which helped American Jews achieve higher social rank, might have had a negative impact on family solidarity. Balswick (1966) concludes on the basis of "writings and research material of the last twenty years," that "the American Jewish family is closely knit. It is more closely knit than non-Jewish families with which it has been compared" (p. 166). However, this conclusion is challenged by Westerman (1967), who cites various methodological problems with Balswick's analysis, particularly a failure to compare contemporary Jewish families with those of previous generations.

America's economic boom following World War II helped to usher in a golden age for the American Jewish family. The G.I. Bill of Rights helped American Jewish veterans get an education and universities expanded to meet growing needs. Veterans' benefits also enabled them to purchase homes. Social integration was advanced by the relocation of second- and third-generation Jewish families from urban areas of second

settlement to the periphery of the city and its suburbs. This migration brought about a paradigm shift in American Jewish life whose effect on the family, in particular, was fundamental and far reaching.

Shapiro (1992) cites the reasons for the unprecedented growth of the suburbs after 1945 as follows, including:

the increased use of automobiles, postwar prosperity, the pent-up demand for housing created by the depression and the war, the desire of veterans to resume a normal family life after the dislocations of wartime, the baby boom of the late 1940s and 1950s, government programs that encouraged the building and purchase of houses by veterans ... (p. 43)

Many Jewish families found the means to abandon the crowded and deteriorating conditions of the city for the newness and openness of the suburbs. Gordon (1959) specifically cites the shortage of urban living space as a key factor in their migration.

The depression years of the 1930s were followed closely by World War II. During that fifteen-year period, few, if any, new homes were built, and even fewer families could afford to purchase them, whatever their cost. Families "doubled up": sons or daughters who were recently married moved in with their parents until conditions improved.... The builders of mass-produced homes, such as those in Levittown, provided "low-cost housing." Prices were reasonable enough to satisfy young people who were determined to establish their own family life, independent of parents and in-laws.

But not all young, upwardly mobile Jewish families in the period were so determined, and pockets of urban Jewish life remained. Dawidowicz describes one postwar group that chose to stay in the city.

After years of housing starvation (during the Depression and the war years), many young families in New York found that the great Queens building boom of 1948–1951 offered them a wide choice of modest apartments at modest monthly rentals from \$75 to \$140. Besides wanting a place to live at rents they could afford, these young people were fleeing from the changes in their old neighborhoods in Manhattan, the Bronx, and Brooklyn. They were looking for an inexpensive facsimile of the suburbs a half hour from Times Square. (p. 68)

The experience of suburban living influenced the dynamics of Jewish family life. The new environment engendered a process of social change reminiscent of the experience of immigrant families two generations earlier. This is described by Mary Antin in her autobiography *The Promised Land* (1912), in which she notes how:

In Polotzk we had been trained and watched, our days had been regulated, our conduct prescribed. In America, suddenly we were let loose on the street. Why? Because my father having renounced his faith, and my mother being uncertain of hers, they had no particular creed to hold us to... My parents knew only that they desired us to be like American children; and seeing how their neighbors gave their children boundless liberty, they turned us also loose, never doubting but that the American way was the best way (pp. 270–1).

Gordon (1959) observes that “the suburb is helping to produce marked changes in the basic structures of the Jewish family and its educational, political, religious, cultural and social life” (p. 19). Life in suburbia was so different from life in the city that changes in family life were inevitable.

One important consequence of these changes was the virtual full acceptance and social integration of the Jewish family into American society. This development was discussed in Will Herberg’s classic book *Protestant, Catholic, Jew: A Study in Religious Sociology* (1955), one of the most influential works in the postwar sociology of American religion. Herberg posits that by the mid-twentieth century, Judaism was no longer considered marginal to American society. Affiliation with a major religious faith was important to Americans, and Judaism, as the seminal creed of America’s Judeo-Christian tradition, duly qualified. Jews, as individuals, might still encounter discrimination, but the Jewish tradition, especially as manifest within the home and family, was seen as consonant with the highest of American values (Herberg, *ibid.*, and Kramer and Levantman, p. 153). In Herberg’s typology Jews, who were three percent of the American population, constituted one third of its religious experience. Of course, the Judaism of the suburbs was not the pseudo-Orthodoxy of the immigrant generation. Reform, Reconstructionist, and Conservative Judaism, at least until the 1970s, were the only streams of Judaism to successfully take root there. The modern and often lavish temples and synagogues erected in the 1950s and 1960s conveyed the message that the Jewish family felt self-assured and at home in America (Sklare and Greenblum, 1967). Some were designed by prominent architects, Jewish and non-Jewish – they manifested the sense that Jews had arrived and were taking root.

Synagogue affiliation was altogether a different experience in the suburbs. The distances characteristic of suburban living made regular synagogue participation, for those so inclined, more difficult. Whereas in the city, the synagogue was classically a neighborhood institution, in the suburbs it served a widely dispersed population often accessible only by car. Thus, synagogue attendance could no longer be an informal and spontaneous affair. The increased distance between home and synagogue was but one of the postwar changes in Jewish family life. The Conservative movement responded by permitting travel to and from synagogue by car on the Sabbath. Orthodoxy, which continued to prohibit travel felt more at home in the city or turned a blind eye to those who traveled to synagogue. Living within walking distance of the synagogue was later to be a boon to the sense of community among Orthodox and traditional Jews.

The transplanting of Jewish community life from the city to the suburbs contributed to (1) the long range decline of the Jewish neighborhood, (2) an increase in formal affiliation as a means of community attachment, (3) the child-centered family, (4) the transformation of gender roles, and (5) increased geographic mobility.

According to Shapiro:

The diffusion of Jewish population into the suburbs and exurbs diluted Jewish identity. In the compacted Jewish neighborhoods of the cities, Jewish identity was absorbed through osmosis. In suburbia, it had to be nurtured. Jewish suburbanites lived [mostly] in localities where, in contrast to the city, most of the people were not Jews, the local store did not sell Jewish [especially Yiddish language] newspapers, there were no kosher butchers, synagogues were not numerous, and corned beef sandwiches were not readily available. (p. 147)

In the old neighborhood, grandchildren often lived within proximity of their grandparents, which naturally facilitated more frequent contact. This intimacy made it more likely that family traditions were passed on. Suburban living distanced these generations. The Yiddish of immigrant grandparents, which was understood and spoken, albeit typically unused, by the second generation, seemed foreign and arcane to their suburban grandchildren. A Sunday visit to *bubbie* and *zaidie* in the city might take in shopping at the Jewish bakery, bookstore, or kosher butcher. Such casual activities were the most intensive Jewish cultural encounters some third- and fourth-generation children would experience.

While this scenario partly reflects an overall distancing from tradition, it also points to the diminution of intense Jewish family activity in the suburbs. Such activity is a source of mimetic norms, i.e., knowledge that is “imbibed from parents and friends, and patterned on conduct regularly observed in home and street, synagogue and school” (Soloveitchik, 1994). This form of learning emerges naturally in the traditional Jewish neighborhood. The Jewish neighborhood, much like the *shtetl* of prewar Europe, is an example of *gemeinschaft*, an informal, corporate form of community life. In contrast, suburban Jewish life is likened to *gesellschaft*, a form of community organization wherein social interaction is more disparate and the transmission of culture more formalized. It has become more common for suburban Jewish families who do not live near one another to meet and interact only within the context of formal activities. These scheduled Jewish experiences, such as attendance at synagogue services, school meetings, youth group programs, adult learning courses, holiday celebrations and cultural events, compete for time with a miscellany of other activities. (See Sklare; Gans; Blau; Gordon; and Kramer and Leventman, *op. cit.*)

The suburban synagogue is the central, even if not the sole, focus of public Jewish life. Synagogue membership entitles a family, or any one of its members: to celebrate the Jewish holidays as part of the congregation; to the services of the rabbi and his assistant; to attend synagogue-run classes and lectures; to receive Jewish news and information through the in-house newsletter, and to use the synagogue’s facilities for the celebration of family life-cycle events. For the newly suburbanized Jews, this reflected the dependency of the family on the Jewish skills and knowledge of community professionals. In many instances for that generation, even such classic family rites as lighting Hanukkah candles or participating in a

Passover *seder* no longer took place at home, but in the synagogue, under the direction of a rabbi, or teacher.

Observers note the extent to which the contemporary American Jewish family, particularly in suburbia, became child centered. While concern for the well-being and education of children is basic to Jewish tradition, the child-oriented behavior of American Jewish families is a more recent phenomenon. This generation of American Jews was often characterized by a Judaism that was for the young – children attending Hebrew school at least until bar and bat mitzvah – and the old – grandparents attending regularly as a routine part of their lives.

Having acquired the economic means to provide more than basic food, clothing and shelter, Jewish parents developed a tendency to indulge their children with a surfeit of material goods. This behavior is reflected, says Sklare (1971, p. 88), in the expression “‘they gave their son everything.’ ‘Everything’ means the best of everything from the necessities to the luxuries: it includes clothing, medical attention, entertainment, vacations, schools and myriad other items.” In this same context, observed Gordon, “The financial burdens that Jewish parents in suburbia gladly bear for what they regard as the best interests of their children is often astonishing [and sometimes disturbing] to persons who are aware of the sacrifices these entail” (Gordon, *ibid.*, p. 65). Many second- and third-generation American Jewish parents acknowledged that the very move to suburbia was “for the sake of the children.”

Another example of child-focused family behavior was reflected in the attitude towards ritual observance and Jewish education. According to Sklare, any ritual that is centered on the child is more likely to be retained by the family (*ibid.*, pp. 115, 116). This means that (1) the ritual activity must provide an opportunity to directly involve the child, and (2) it should convey “optimism, fun, and gratification.” The Passover *seder* and the lighting of candles at Hanukkah are two often-cited examples. Toward the end of the 20<sup>th</sup> century, Sukkot experienced an increase in the percentage of observance as Jews had land and backyards where they could build a *sukkah* and it was a family centered, do-it-yourself activity, a perfect suburban project. This understanding of ritual correlates religious practice with the interests of children. Consequently, within the year of their youngest child’s bar or bat mitzvah, many parents discontinued their child’s formal Jewish education, choosing not to renew their synagogue membership, to curtail their other Jewish communal activities, and sometimes to reduce the family’s observance of home rituals.

In their respective analyses of Jewish suburban life, Gans (*ibid.*, p. 233) and Gordon (*ibid.*, pp. 19, 59–60) discuss changes in the family that developed with respect to both males and females in the mid 20<sup>th</sup> Century. According to Gans:

In the suburb... the men’s daytime absence shifts a much greater role in its affairs to the women, except in functions requiring business skills, and aspirations such as power... [Women’s] concern with Jewish education seems also to be stronger than that of the men... This is a major shift from the traditional Jewish

family organization in which the father, as religious leader of the household, supervised the children’s education for an adult community in which he himself was playing a role.

In response to their husbands’ preoccupation with earning a living, claims Gordon, suburban Jewish women in the post-war era began to take responsibility for matters for which their husbands were once considered the sole authority in theory if not in practice. This mirrored the responsibility that other American women assumed for the transmission of culture.

My observation... and particularly this intensive study of suburban Jewish family life, leads to the conclusion that... “all major decisions are made by the husband while all the minor ones are made by the wife.” The major decisions... deal with such matters as war and peace, sputnik and satellites. The minor issues include rearing the children and choosing their schools, the particular synagogue with which to affiliate, the neighborhood into which to move and the kind of home to buy.

The Jewish woman has acquired her new position of... leadership by default... So completely engrossed in business affairs... [the husband] generally gives little attention to spiritual and cultural matters that involve his home and family. The husband’s failure has led inevitably to the wife’s new status.

The geographic mobility among Jewish families in the post-war era primarily reflects their relocation to the local suburbs, not inter-state or cross country migration. It is true that from the 1950s it became increasingly common for the corporate breadwinner to be transferred great distances. However, since many Jews remained excluded from the corporate sector during these years, the voluntary move to the nearby suburbs was far more common. Jewish families moved not only from the city to the suburbs, but in time they also moved within and between suburbs. As its income rose, it was not uncommon for a family to sell its home in a less expensive section of one suburb and move to a higher status area within the same suburb. Naturally, families also moved from lower to higher status suburbs. Kramer and Levantman note that the “securely American status of the third generation and its increasing mobility have released it from old ties and community sentiments...”

### The Mid-1960s to the 1980s

By the middle of the 1960s Jewish family life in America appeared to have reached the zenith of prosperity and security. From a historical perspective, few, if any other Jewish communities could claim to feel so well integrated into surrounding society. Sklare (1971) contends that this very success resulted in “[a] paucity of substantial research studies on the American-Jewish family... The Jewish family constellation has not created social problems in the general society. In fact it has done just the opposite: the Jewish family seems to have solved problems rather than caused them” (p. 73).

But all was not perfect. Acculturation and integration came with a price. “As upward mobility pushed immigrants’ children to the suburbs, their parents were linked to memories of dark stairways, stale smells, cramped apartments, loud voices, and barbarous accents. In comparison, blending into a bland mainstream was a big step forward. With so much dis-

carded, little remained to give their distinctiveness purpose except sentimental leftovers fed by kitsch, Broadway shows, and self-righteousness... This mix of ethnic remnants and carbon-copy assimilation left such parents little to pass on" (Rubin, 1995, pp. 93–94). The poignancy of this transformation became more evident towards the end of the 1960s when traditional notions about family life were confronted by the popularization of values that were more liberal and individual oriented. Many of the assumptions regarding what constitutes a "sound and healthy" family were challenged. Questions were raised about the structure and purpose of the family, as well as the obligations of family members towards each other. "Since 1970, or thereabouts," says Cohen (1983, pp. 114–15) "the American family has undergone such dramatic changes as to spark a popular and scholarly debate about whether it is in fact disintegrating."

The mythic portrayal of the American family is prevalent in the way Jewish institutions are structured. The family is defined as two parents and children. A fixed division of labor is presumed and children are seen as the focus of the family. Membership costs are often defined by family. Synagogue membership is usually stated in family units. Meetings are scheduled as if the family defined above is the norm; so too, programming and fees. These institutions have been slow to change even as women have become officers, major donors and decision makers. It is as if the sisterhood continued to serve Friday evening tea at the *Oneg Shabbat* even though the rabbi, cantor, president and principal supporters may now be women.

Rela Mintz Geffen reports that according to the 1990 National Jewish Population Survey the most common household in the Jewish community comprises one adult Jew living alone; the next most common is two adults Jews; and only then two adult Jews with at least one child under the age of 18 living at home. Only 14% of Jewish households in the survey were comprised of two Jewish adults and with at least one child under 18 living at home. In contemporary parlance, the "conventional Jewish family" is two Jews, one male, one female – whether born Jewish or not – with one child under the age of 18 living at home.

Contemporary Jews live not only in the traditional family but also as singles of all ages; empty nest couples whose children have left home and will not again return; senior adults living alone or in communities and facilities, widowed or married; dual-career spouses; single parents, whether by death of one's spouse, loss or divorce; and non-traditional couples, gay men and lesbian women. These people, constituting a majority of all Jews, often feel unacknowledged by contemporary American Jewish institutions. Programming and normative language of the community often excludes them and many respond accordingly. There may be an asymmetry between the definition of family embodied in community institutions and the actual configuration of the way Jews in America live.

"For American Jews," says Fishman (1994), "as for other Americans today, there is no one model of 'the family.' Jewish

families reflect, in somewhat less extreme profile, an America in which less than 15 percent of households conform to the model of father, mother-at-home, and children living together... [Thus t]he 'typical' American Jewish household today is more likely than not to be atypical in some way. Proportions of older, single, divorced, remarried, or dual-career households make up more of the Jewish population than intact young families with children" (pp. 5, 33). As a result of these changes, social scientists no longer study American families, per se; instead, surveys are conducted among "households," such as in the Council of Jewish Federations (CJF) 1990 National Jewish Population Survey (p. 33). The term "household" accommodates a more flexible and wider range of domestic living arrangements than those associated with the conventional western family.

Trends which first emerged some 25–30 years ago continue to have an impact upon Jewish family life. These include: a decrease in the rate of marriage; the postponement of first time marriage; an increase in the number of marriages that end in divorce; an increase in the rate of intermarriage, particularly non-conversionary marriages; a decrease in the birth rate to a level lower than replacement; an increase in geographic mobility; an increase in cohabitation, and single motherhood; and an increase in substance abuse. Some have argued that there is an increase in domestic violence and in homosexuality but they may be mistaken. It is certainly the case that there is an increase in *acknowledgement* of domestic violence and or homosexuality. It was commonplace to link these phenomena with a decrease in Jewish education and the practice of Jewish ritual, but the evidence is mixed. The number of children receiving a day school education is at all-time high and the measurement of Jewish ritual observance does not necessarily indicate a decline. There is no doubt that Jewish values must compete in the open marketplace of ideas in a multicultural United States, where exposure to other value systems is commonplace.

Fishman (*ibid.*) examines a number of these trends by comparing data from the 1970 National Jewish Population Study (NJPS) and the CJF 1990 National Jewish Population Study with data drawn throughout the 1980s from some two dozen Jewish communities. Regarding marriage, her analysis indicates that while in 1970 nearly four-fifths of all adult American Jews were married, by 1990 this figure had decreased to about two-thirds. A parallel decrease was recorded for all adults in the United States. Over the last 30 years being single in America has developed into a lifestyle. Whereas in 1970–17 percent of Jewish men were still single at ages 25–34, this figure increased to about 50 percent in 1990. An even greater increase applies to Jewish women ages 25–34; only 10 percent of this group was not married in 1970–1, in comparison to about half in 1990. By age 45, however, over 90 percent of all Jews are reported to have been married at least one time.

"The delay or avoidance of marriage is but one of many factors which may lower Jewish birthrates" (Cohen, 1983, p. 117). Still, another factor is higher education; the more

education a couple has completed, the less likely it is to produce more than one or two children. It is understandable then, that Jewish couples, who in comparison with the rest of the population complete more years of education and also marry late, often raise smaller families. This tendency was observed among Jewish families by Seligman and Antonovsky, even in the midst of America's baby boom. Orthodox Jews are the exception. Seligman and Antonovsky cautioned that "[t]he high proportion of two-person and three-person [Jewish] families may be indicative of a declining reproductive rate..." (in Sklare, 1958, p. 66). The impact of this trend was noted over a decade later. "[I]n the second generation," says Sklare, "the birth rate dropped so precipitously as to have serious implications for Jewish population size as well as for group continuity" (1971, p. 79).

A low birth rate has continued into the third and fourth generations. In 1990, 93 percent of Jewish women ages 18 to 24 and 55 percent of those ages 25 to 34 had not yet had children (Fishman, *ibid.*, p. 31). As a result, with the exception of the Orthodox community, the Jewish birth rate in America presently stands at significant less than replacement level of 2.1. Averting the presumed consequences of what appears to be a looming demographic crisis currently occupies a high position on the organized Jewish community's national agenda. A significantly attenuated Jewish population would weaken the Jewish community's standing at large, including its ability to act on behalf of its own interests. It would jeopardize the existence of a range of local Jewish institutions, from family services to community centers and schools, as well as the Jewish community's fundraising efforts on behalf of Israel and distressed Jews in other countries. Finally, some have presumed that it would sap the vitality of American Jewish culture and creativity. Others who study American Judaism believe that the intensity of Jewish life and the freedom of Jews to create as Jews, to act publicly as Jews and feel free even in their seemingly secular pursuits to act as Jews will offset the loss of numbers. Many who point to the problem of intermarriage are slow to acknowledge the tremendous contribution, energy and vitality brought to all institutions and all denominations of Judaism by Jews by choice, those not born as Jews.

The significance of this low birth rate is compounded by the high outmarriage rate – the rate is subject to dispute ranging between 45–52%. Just as the intermarriage [rate] has increased dramatically among younger American Jews, rates of conversion have fallen, especially after the introduction by Reform Judaism's acceptance of patrilineal descent. Mixed marriage is five times higher among Jews 18 to 34 than it is among those over age 55" (Fishman in Bayme and Rosen, p. 26). Ironically, the rise in intermarriage is not unrelated to a decline in antisemitism. Jews are now regarded as acceptable partners for non-Jews and the opposition from the non-Jewish family has declined markedly. Intermarriage also has less to do with one's Jewish identity and allegiance to the Jewish people than it did a generation or two ago. During the mid-1950s, according to Rosenthal (1963), the overall community intermarriage rate

for the Greater Washington, D.C., area, a mid-sized yet highly cosmopolitan Jewish community, was 13 percent. In larger Jewish communities, the rate was between 6–10 percent. By the 1970s, intermarriage rates in many American communities had risen to approximately 30 percent. Whereas, according to Medding, et al. (1992), Jewish identification tends to be passed on to the next generation in conversionary marriages, especially Orthodox and Conservative conversionary marriages, this is not true of mixed marriages. "Jewish identification in mixed marriages is accompanied by the presence of symbols of Christian identification, resulting in dual-identity households at all levels of Jewish identification" (p. 39). Daniel Elazar called this the permeability of contemporary boundaries. So long as mixed marriages constitute the great majority of outmarriages, intermarriage poses a major challenge to transmission of Judaism through Jewish family life in America.

Divorce, like outmarriage, was once relatively rare among American Jews. This is no longer the case. Divorce, especially that which results in long-term single parent households, has increased over the last three decades. Data from the CJF 1990 NJPS reveals "18 divorces for every 100 ever-married men and 19 for every 100 ever-married women [indicating that] divorce has become relatively common among American Jews." "Rising rates of divorce," says Fishman, "have created a situation in which one-third of Jewish children live in homes which have been touched by divorce: about ten percent of Jewish children live in single parent homes and twenty percent live in households in which at least one spouse has been divorced" (1994, p. 34). Clearly, the traditional notion of a two parent family with mother and father raising their own children together is not the only form that contemporary Jewish family life has taken.

Active extended kin relations continued to characterize American Jewish family life until the 1970s. Yet there too the picture may be a bit overdone. Children left for college and left for jobs; grandparents migrated to the South and also to the West. It was presumed that grandparents would be the major repository of Jewish values and yet in the contemporary family it is often the grandparents who are most removed from Jewish education. And because of immigration, because of the Holocaust, many grandparents grew up without grandparents and do not have an image of what grandparenting involved. And American culture, which does not revere the elderly, certainly offers few models to teach them.

On the other hand, the increase in geographic mobility during the last quarter century has enhanced extended family ties. Greater family resources, the ease of travel, the lowering of long distance phone rates, and ubiquity of the internet have increased the involvement of grandparents with their grandchildren. At the same time divorce and intermarriage pose unique challenges. Especially perplexing is the relationship of grandparents to their grandchildren when the custodial parent is not their child. According to the CJF 1990 NJPS, between the years 1985–1990, 25 percent of adults surveyed changed residence, at least once, between cities within

the same state. Another 24 percent changed residence, at least once, between states. Frequent mobility makes it more difficult to develop long-term social relationships within a community. Three generation relationships, as well as active ties between cousins, have become rarer but also more cherished in recent years. There is a tendency for extended family events to be limited to infrequent holiday gatherings or major life-cycle celebrations.

No doubt an added challenge to Jewish family life has been the development of the dual career family. According to the CJF 1990 NJPS about three-fourths of women aged 25–44 and two-thirds of women aged 45–64 are members of the labor force. “Today the labor force participation of Jewish women departs radically from patterns of the recent past. In most cities the majority of Jewish mothers continue to work even while their children are quite young. In Boston, Baltimore, San Francisco, and Washington, three out of every five Jewish mothers with pre-school children are working” (Fishman, *ibid.*, p. 17). Nearly 40 percent of working Jewish women under the age of 44 in 1990 are reported to work in some professional capacity, as compared to 24 percent in 1970. In 1957, says Goldstein, only about 30 percent of Jewish women aged 25–44 were employed at all (*ibid.*, p. 113). Remaining at home to raise children was a more common practice. The increased availability of professional day care services, many under Jewish auspices, aided the growth of dual career families in recent decades. It also should be noted that contrary to many historical recollections women in the traditional Jewish home often worked outside of the home; their labor was necessary for the survival of the family. When the husband studied the wife was responsible for providing for the family and in the immigrant family, the working mother was also essential for survival. Stay at home mothers may have reflected the mid-century American middle class ideal rather than actual practice. In fact, the wife not having to work was a status symbol in mid-century America. The empowerment of women, the increasing professionalization of and opportunity for women pose challenges to the Jewish family but is not unprecedented in the Jewish experience. Substance abuse, domestic violence and incest, pathologies long considered to exist at strictly marginal levels among Jewish families, began to receive increased attention in the 1970s. It is not clear whether earlier instances of these problems were more common but went largely unreported, or whether more acculturated third- and fourth-generation Jewish families in fact have been more susceptible. The training of *mikveh* ladies to recognize signs of physical abuse by a husband is a clear indication that these problems are not confined to the secular family alone.

As late as the end of the 1960s, alcoholism was not seen as a problem that affected many Jewish families. Franzblau (1967) cited findings by the Yale Center of Alcoholic Studies indicating that first-time admissions to New York State Hospitals are fifty times as numerous among Irish as among Jews, fifteen times as numerous among Scandinavians, ten times as numerous among Italians, nine times as numerous among the

English and eight times as numerous among the Germans. According to Franzblau, Jewish families of the period compared favorably to non-Jewish families “whether the factual material presented be on juvenile delinquency, adult criminality, prison populations, family desertion and non-support, separation and divorce rates, commitments to mental hospitals for the tertiary manifestations of syphilis...” (p. 59). He suggested then that “Jewish home and Jewish family life are...endowed with some mysterious extra safeguards against the disintegrative forces of the environment” (*ibid.*).

More recent estimates of alcoholism among Jewish adults range from five to fifteen percent. Since about 92 percent of all Jews marry by age 45, alcoholism among Jews is both a family and a personal problem. Increased recognition of alcoholism and drug addiction within the Jewish community has led to the establishment of Jewish support groups as alternatives to groups like Alcoholics Anonymous which have a Christian orientation.

Domestic violence, including the sexual abuse of children, was considered, for all intents and purposes, absent from the consciousness among American Jews during the middle part of the century, but certainly not during the immigrant experience. The winter 1991–2 *Journal of Jewish Communal Service*, poignantly entitled “Family Violence IS a Jewish Issue,” offers five articles that examine both spousal and elderly abuse, as well as describe abuse treatment programs operated by various local Jewish communal agencies. The April 1990 issue of *Moment* features an article entitled “Confronting Sexual Abuse in Jewish Families” in which the author describes her own and others’ victimization and offers other victims’ advice. She rejects “[t]he myth that Jewish families and incestuous families are a contradiction in terms...” and confronts an issue formerly never associated with Jews.

Conventional family values have been decidedly challenged by the liberal atmosphere which prevails on most American university campuses. In the 1960s, questions about the typical western family, a topic generally relegated to sociology and anthropology lectures, spilled over from the lecture hall to the streets. The counterculture experience, in which so many young Jews participated, encouraged alternative family forms and lifestyles. This partially explains the disproportionate number of Jews who affiliated with communes and cults. Although the experiment with communal living more or less ended by the mid-1970s, Jewish involvement in cults has continued to this day but is now regarded as a much more marginal phenomenon, except to those whose children are within the cults. The Baal Teshuvah movement, in which children become more observant than their parents – and often unable to eat in their homes or to spend Shabbat and holidays with them – is also a challenge to the family structure. It is also present within Orthodoxy where Modern Orthodox parents have *haredi* children who find their parents’ Orthodoxy not sufficiently devout. The attractiveness of cults to young Jews is explained by some observers as a reaction to low self-esteem among those who cannot meet the high expectations

of their parents or community. Others see it as a response to the spiritual emptiness found in so many contemporary Jewish families and synagogues. The *havurah* and programs that educate the Jewish family, both of which initially gained wider popularity in the early 1970s, reflect the efforts of the Jewish community to combat these problems.

The community *havurah* is modeled after the student organized *Havurah* that “originated in the late 1960s [in New York and Boston] with young Jews who were unhappy with the Conservative and Reform congregations in which they had been raised. Influenced by the counterculture, they were dissatisfied with contemporary Jewish institutions, both religious and communal, which they regarded as “sterile, impersonal, hierarchical, and divorced from Jewish tradition” (Weissler, p. 200). Both the independent *havurah*, which is unaffiliated with any community institution, and the synagogue or community center *havurah*, whose participants are generally affiliated with these institutions, typically consists of a small number (10–20) of singles, couples, or sometimes both. The typical *havurah* holds Sabbath and holiday services, celebrates life-cycle events, organizes study groups, and undertakes one or more social action causes. The particular activities of each *havurah* reflect the interests of its membership. It is an attempt to establish community and to retain a personal dimension to institutional Jewish life.

The small and intimate setting of the *havurah* compares favorably to the vast and formal surroundings of many American synagogues to those seeking fellowship and spirituality in their worship. The *havurah* experience is an “opportunity to have a continuing intimate association – to feel a sense of belonging, to be linked with people they know personally and who care about them, and to have people with whom to share happiness and sorrow – bar mitzvahs, Passover *seders*, sickness, death, etc.” (Reisman, p. 207). The *havurah* experience is used by many singles, couples, and families, as a substitute for the natural family and community network that was once much more prevalent within American Jewish life.

Economic considerations also play a role in Jewish affiliation. The higher one’s economic status, the more likely one is to affiliate with the Jewish community and the less likely one is to intermarry. Rates of intermarriage are consistently higher among those of lesser socioeconomic achievement as measured by education, occupation and income, especially for those under 45. In 1990 one in two of those Jews with an income of more than \$100,000 were Jewishly affiliated; the rate of affiliation was one in three for those earning less than \$60,000. Lower income Jews also feel disaffiliated from Jewish life.

Jewish education programs for families have existed in the United States for decades, but it is only since the 1970s that this approach has been developed as a sub-specialty (Schiff, p. 262). Jewish family education is based on the premise that, although “the attitudes and behavior patterns [of most American Jewish families presently]...resemble those of the non-Jewish, white middle-class (Rosenman, p. 153)” a

percentage of these families are willing, or can be induced, to be tutored in basic Jewish knowledge, skills and values and helped to integrate these into their lives.” Programs in Jewish family education exist at the local level where they are sponsored by community centers, synagogues, day schools, [and] family service agencies. At the national level, the William Petschek National Jewish Family Center established in 1981 by the American Jewish Committee, the Whizin Institute for Jewish Family Life at the University of Judaism in Los Angeles, Brandeis University in Waltham, MA, Yeshiva University in New York, and other universities, are among those institutions that offer research opportunities, professional and lay seminars, personnel training, and produce and disseminate educational materials. Although the proliferation of these institutions reflects the growing importance of this field in the eyes of community educators and leaders, it is also indicative of the sense of urgency which surrounds the present condition of the American Jewish family.

Two important studies in the 1970s (Himmelfarb, 1974 and Bock, 1976) found that the most salient influence on adult Jewish identification was the family. Yet, most synagogues, schools and community centers focused their programming exclusively on children, leaving the family to its own devices. Wolfson (1983) called the family’s reliance on the institution to provide opportunities for Jewish celebration a “dependency cycle.” He called on synagogues and schools to empower families with the skills and resources to create a home filled with Jewish celebration, content and values. In 1989, Wolfson gathered a group of pioneering Jewish family educators to establish the Whizin Institute for Jewish Family Life to further the field of practice in Jewish family education. Hundreds of Jewish professionals and laity attended Whizin seminars to learn the latest strategies for “reaching and teaching” the Jewish family. By the end of the century, virtually every synagogue, school and JCC had a full range of Jewish family education programming (Wolfson and Bank, 1998).

### End of the 20<sup>th</sup> Century

At the end of the 20<sup>th</sup> century, the American Jewish family more strongly resembled its non-Jewish neighbor than its own forebear of a hundred years ago. Goldstein and other “survivalists” insist that Jewish families continue to maintain sufficient distinctive collectivist socio-economic and socio-cultural characteristics to guarantee continuity, at least for the foreseeable future. Cohen (1994) argues that current intermarriage and birth rates will result in a smaller, but qualitatively stronger American Jewish community “[O]n the family level, rather than the group level, for the vast majority of families, intermarriage eventually severs the link of future generations with the Jewish people.” While Cohen remains optimistic about the overall long range survival of the American Jewish community, he foresees the disappearance of many presently existing Jewish family lines.

The only variance to the observations above lies within the Orthodox sector. Orthodox families, who constitute some

ten percent of the American Jewish population, do not reflect the trends of the wider Jewish community. Although domestic problems of all stripes do occur within Orthodox circles, their incidence appears limited because it is less reported and certainly less acknowledged. Characteristically, the more religiously observant the family and the more segregated it is from the general society, the less likely it is to experience intermarriage, a low birth rate, and other elements accompanying assimilation.

Among the main purposes and functions of the family, says Bayme (1989), is the transmission of culture and heritage, the basis of group identity. In the middle decades of the past century, this task, he contends, has been transferred to the Jewish school. "We today ask of Jewish schools not only to transmit knowledge and cultural literacy of Judaism but also to transmit Jewish identity and consciousness. Conversely, research has demonstrated that without the cooperation and involvement of families Jewish schools can achieve very little." Recent trends in education emphasize family participation and recent life cycle and calendar ritual behavior also demonstrate an increase in activities that are family centered, albeit with a broadened definition of family.

Can Jewish families continue to fulfill their historical function? Can the definition of Jewish family accommodate all alternative household forms, including cohabiting couples and groups, singles, lesbians and gays, and still guarantee long range Jewish survival? These serious questions are currently being asked by individuals, such as Bayme, as well as other concerned academicians and social scientists, community lay leaders and professionals. The Jewish family is not about to disappear from the American scene; however, it clearly will have undergone significant transformations.

Social policy planners and senior educators who wish to strengthen the Jewish family are presently busy at both the national and community level. Among their objectives is to guarantee the affordability of quality Jewish family education, for children as well as adults, and affordable rates for community center, synagogue, and summer camp participation. For those who chose maximal Jewish life, day school education, Jewish summer camps and synagogue membership along with their ancillary activities pose a heavy financial burden. (One important commentator has joked that day school tuition is "Jewish birth control.") They stress that programming for the Jewish family should be appealing, of high quality, marketed vigorously, and supported by community funds. Maximum and efficient use of communal resources, they contend, would help provide affordable day care and other vital services to assist dual income and financially distressed families. A cogent community strategy can help minimize the additional costs of Jewish living, making affiliation and participation affordable to many more families.

The family is the nexus between the individual and society. The welfare of both is dependent upon the success of the family as an institution in fulfilling its primary goals of socializing and educating its members. Similarly, individual Jewish

identity and the viability of Jewish communal life in the United States are tied to the cultural integrity of the American Jewish family. The historic Jewish family, in various countries and in various periods, has demonstrated great resilience in the face of physical, spiritual and economic pressures. Ironically, it is the relative absence of these pressures in America, which presents a challenge to Jewish survival. External antisemitism is not forcing Jews to remain together. They are comfortably accepted and acceptable within American culture. A low birth rate, high intermarriage, and the diverse forms of family life present new and different challenges to the American Jewish family. "Given the inexorably integrative forces of American society and the resultant parallel trends among Jews," note Lipset and Rabb (1995) "it is reasonable to predict that the Jewish community as a whole will be severely reduced in numbers by the middle of the next century." In an attempt to forestall this outcome, the organized Jewish community is developing policies and programs aimed at supporting and strengthening the family. The next few decades are sure to reveal the results of these efforts.

**FAMINE AND DROUGHT.** Agriculture in Erez Israel was dependent on irregular rainfall, but drought and consequent famine were of frequent occurrence. The paradoxical appreciation by Deuteronomy 11:10ff. of this disadvantage (as involving God in constant attention to the land) puts a good face upon what Ezekiel 36:30 bluntly calls the land’s “reproach among the nations for its famine.” Kimḥi comments on this as follows: “The land of Israel stands in greater need of rain than other lands [being mountainous in contrast, e.g., to the great river valleys of Mesopotamia and Egypt]; hence famine is more common in it than elsewhere. And when one has to leave his land for another because of famine – as witness Abraham, Isaac, and Elimelech – it is a reproach to it.” Another cause of famine through natural causes was the failure of the crop through pests and disease. In addition to these two “acts of God,” famine was caused by siege in time of war. Of

the famines in Erez Israel mentioned in the Bible (the most famous, the seven years’ famine predicted by Joseph in Egypt, included also the Land of Israel – Gen. 41:54, 43:1) most were due to drought (Gen. 12:10; 26:1; 41:54; Ruth 1:1; II Sam. 21:1; I Kings 18:1–2; II Kings 8:1; and apparently Amos 4:6 (cf. verses 7ff.), two to the result of siege – that of Samaria by Ben-Hadad (II Kings 6:24–29) and of Jerusalem by Nebuchadnezzar (*ibid.* 25:3) – and one the result of a visitation of locusts (Joel 1:4–20). A vivid description of the effects of drought occurs in Jeremiah 14:1–6. The same conditions, both natural and man-made (cf. Jos., Wars, 5:424–35), continued during the period of the Second Temple, but to them were added famine, or at least shortage of food, which resulted from the strict adherence to the law requiring that land should remain untilled during the Sabbatical year, to which there is no historical reference in the Bible. The frequency of famine is reflected in the fact that of the seven calamities said in the Mishnah to afflict the world because of sin, three are famines of various degrees of intensity: the “famine of drought,” which does not affect the whole population, the “famine of panic,” which affects all, and the “famine of utter destruction” (Avot 5:8). The traditional triad of major catastrophes consists of “pestilence, sword, and famine” (cf. Jer. 14:12; 21:7, 9; 24:10; Ezek. 6:11, etc.; compare the *Hashkivenu* and the *Avinu Malkenu* prayers). The fact that, given a choice of one of these three, David chose pestilence suggests that it was the least of them (II Sam. 24:14f.). Lamentations gives a preference in the scale of suffering to famine over the sword (4:9). This would indicate that famine was the greatest evil of all: it is in fact difficult to envisage the terrible suffering endured through famine in ancient times. The grim picture, given by R. Johanan, imaginative though it is, of the consequences of the seven-year famine predicted by \*Elisha (II Kings 8:1) – that in the fourth year people would be reduced to eating unclean animals, in the fifth reptiles and insects, in the sixth their children, and in the seventh their own flesh (Ta’an. 5a) – is probably not so exaggerated as may appear. Both during the famine caused by the siege of Samaria by \*Ben-Hadad and of Jerusalem by Nebuchadnezzar, the eating of human flesh is mentioned (II Kings 6:29; Lam. 2:20–31; 4:10). Ashurbanipal, king of Assyria (669–27) claims that the Babylonians under siege by him ate their children. Similarly, Assyrian treaties threaten potential violators that they will be reduced to eating their children. Josephus mentions the eating of children in Jerusalem during the Roman War (Wars 6:201–13, cf. I Bar. 2:2ff.). A pathetic story is told of one of the wealthiest women of Jerusalem picking out grain from animal dung after the Roman War (Git. 56a). There are at least three historical references to famine caused by the observance of the Sabbatical year, one during the siege of Jerusalem by the forces of Antiochus IV (Ant. 12:378 = I Macc. 6:49–54), one in the war of Herod against Antigonus (*ibid.*, 14:476) and one during Herod’s reign (*ibid.*, 15:7 – see also \*Shemittah). The Midrash (Ruth Rabbah 1:4) enumerates ten famines which visited the world. It includes only seven of those mentioned in the Bible as due to drought, and makes up the complement by one as-

cribed to the time of Adam, one to the time of Lamech and a spiritual famine for lack of God's word (Amos 8:11, usually taken as eschatological). This midrashic passage also differentiates between the famine of Elijah which was a sporadic "famine of drought" and that of Elisha which was one "of [economic] panic." One of the three things "which the Holy One, blessed be He, proclaims in person" (Ber. 55a), famine was regarded as the direct result of transgressions. This is, of course, specifically mentioned in the Bible where the rule is that famine and drought are either threatened (Lev. 26:19f., 26; Deut. 11:17; 28:23; 1 Kings 17:1; Zech. 14:17) or suffered for sins. Amos (4:6ff.) interprets occurrences of these calamities as prods to repentance – warning notices of God's wrath aimed to bring the people to contrition and thus avert final destruction. The tendency of the rabbis was to make famine the punishment for specific transgressions – the failure to give the tithes and other dues from one's produce, as a kind of quid pro quo (Avot 5:8; Shab. 32b; for the contrary promise of abundance as a reward for bringing tithes – cf. Mal. 3:10–11). As a result, fasting and supplicatory prayers and fasts were instituted (see \*Fasting and \*Ta'anit – for biblical examples cf. Jer. 14:12 and Joel 2:14–15 for famine caused through pestilence) and the prayers of both pious individuals and people possessing special virtues were regarded as effective in bringing the drought to an end (BM 85b; T1, Ta'an. 1:2, 65b). The rabbis permitted emigration from Erez Israel in the case of famine, but only when it reached serious proportions (BB 91b; Gen. R. 25 end). Basing themselves on Genesis 41:50 the rabbis (Taan. 11a) forbade procreation during the years of famine.

**FANO**, town on the Adriatic coast of Italy. Jews lived in Fano from the 14<sup>th</sup> century under special protection. In 1332 they were prosperous enough to lend 1,000 ducats to the lord of the city, Galeotto Malatesta. When all heretics were exiled in 1367, the Jewish community was unaffected. Besides moneylenders, it included customs farmers, physicians, and merchants and the Jews are said to have paid half the town taxes. In 1464 the Jewish \*badge was imposed. In 1492 a friar raised a \*blood libel against the Jews but the municipal council protected them. Between 1502 and 1517 Gershom \*Soncino set up his press in Fano, printing books in Hebrew as well as in other languages. Altogether 15 Hebrew books came from his press here, the earliest being the *Me'ah Berakhot* after the Roman rite (1503), and possibly \*Ibn Sahula's *Mashal ha-Kadmoni* (second edition with illustrations) which Soncino may have begun before 1500 while still in Brescia. Later appeared the *Roke'ah*, a *maḥzor* according to the Roman rite, a *siddur* in \*Judeo-Italian, the *Kuzari*, and Albo's *Sefer ha-Ikkarim*. After his return from Pesaro in 1516, he printed during that year and the next the *Arba'ah Turim* of Jacob ben Asher. In 1542 Fano received

many of the Jews who had fled from Sicily. With the expulsion from the Papal States, to which Fano now belonged, the Jews had to leave it; 25 loan bankers returned temporarily in 1587/88 in consequence of the liberal policies of Pope Sixtus V, but with the reaction of 1593 the community ceased to exist. In 1901 only three Jews lived in Fano.

[Attilio Milano]

**FANO**, Italian family name, in use from about 1400. Noted are AVIGDOR FANO (second half of 15<sup>th</sup> century), poet. His short poem *Ozer Nashim* was composed in reply to *Sone ha-Nashim*, an attack on the feminine sex by Abraham of Sarteano; MENAHEM AZARIAH DA \*FANO, rabbi and kabbalist; EZRA BEN ISAAC FANO (16<sup>th</sup>–17<sup>th</sup> centuries), scribe, rabbi, and kabbalist living in Venice and Mantua. The last copied and owned valuable Hebrew manuscripts, some of which he personally annotated and published. He probably visited Safed in the 1580s, and together with his friends and students R. Mordechai Dato and Menahem Azariah da Fano and his Safed teacher R. Israel Saruk helped disseminate the Safed Kabbalah in Italy. He also wrote works on Kabbalah; JACOB BEN JOAB ELIJAH DA FANO (16<sup>th</sup> century), scholar and poet in Cento, Ferrara, and Bologna. He composed an elegy on the Marrano martyrs of Ancona of 1555, which he published somewhat incongruously with a satire against women in his *Shiltei ha-Gibborim* (Ferrara, 1556). On papal instructions, the duke of Ferrara ordered the punishment of the author and burning of the volume, which is now very rare. Fano also wrote *Petaḥ Tikvah* on the Ten Commandments, being the first part of a work *Zokher ha-Berit* (unpublished); JOSEPH (Ippolito) DA FANO (c. 1550–1630), communal leader. A notable figure in the Jewish community, he was on familiar terms with the dukes of Mantua and of Ferrara and was sometimes employed by them as an intermediary. Some time before 1628, he is said to have been raised to the rank of Marquis of Villimpenta, in which case he was the first Jew to be ennobled in Europe. The facts, however, require further elucidation; ISAAC BERECHIAH BEN JUDAH ARYEH FANO (17<sup>th</sup> century), rabbi and kabbalist in Lugo. He composed liturgical poems and homilies.

[Attilio Milano / Moti Benmelech (2<sup>nd</sup> ed.)]

**FANO, GUIDO ALBERTO** (1875–1961), composer, pianist, conductor, teacher, and writer on music. Fano studied in Padua with Vittorio Orefice and Cesare Pollini (piano). He took a composition diploma at the Bologna Liceo Musicale (1897) and a law degree at the university (1901). He taught pi-

ano at the Liceo Musicale in Bologna and became director of the conservatories of Parma (1905–11), Naples (1912–16), and Palermo (1916–22). He ended his career at the Milan Conservatory (1922–38, 1945–47) as a piano teacher. His works include an opera, *Iuturna* (1903), *La tentazione di Gesù* (1909), and *Impressioni sinfoniche da Napoleone* (1949) for orchestra; *Andante appassionato* for violin and piano (1908); piano music: *Sonatina op.5* (1906) and four fantasies, op.6 (1906), *Sonata, E* (1920), *Imago, Solitudo* (1933) and *Rimembranze* (1950); and songs. Among his writings are *Pensieri sulla musica* (Bologna, 1903), *I regi istituti musicali d'Italia e il disegno di ruolo per il Conservatorio di Milano* (Parma, 1908), *Le Studio del Piano-forte* (3 vols., 1923–24), and Introduction to F. Fano: *Giuseppe Martucci: saggio biografico-critico* (Milan, 1950), 7–13.

[Israela Stein (2<sup>nd</sup> ed.)]

**FANO, MENAHEM AZARIAH DA** (1548–1620), Italian rabbi and kabbalist. The scion of a wealthy family and a prolific author, he was a recognized authority on rabbinic law and the foremost exponent in the West of the kabbalistic system of Moses \*Cordovero. Under the influence of Israel \*Sarug, who during his stay in Italy spread the knowledge of the mystical system of Isaac \*Luria, Menahem Azariah became an admirer of the latter, though without departing from the system of Moses Cordovero. A pupil of R. Ishmael Ḥanina of Valmontone in Ferrara, he was active in Ferrara, Venice, Reggio, and Mantua. Together with his brothers he aided the victims of the earthquake of 1570. He was a patron of Jewish learning, contributing funds for the publication of such works as Cordovero's *Pardes Rimmonim* (Salonika, 1584) and Joseph Caro's commentary *Kesef Mishneh* (Venice, 1574–76) on Maimonides' *Code*.

Fano's fame as a talmudist is borne out by the collection of 130 responsa bearing his name which was published in 1600 in Venice and in 1788 in Dyhernfurth. His style of writing was precise and he displayed considerable originality in the views he expressed. He enjoyed great popularity as a teacher, attracting students from far and wide, from Germany as well as Italy. One of his disciples compared him to an angel of God in appearance. His gentleness and humility showed themselves in his refusal to answer adverse criticism leveled against him by a contemporary scholar on account of certain statements he made with regard to the ritual of the *lulav* on the festival of Tabernacles. Amadeo Recanati dedicated to him his Italian translation of Maimonides' *Guide of the Perplexed*; Isaiah \*Horowitz praised his theological treatise *Yonat Elem* (Amsterdam, 1648) saying of it, "the overwhelming majority of his words, and perhaps all of them, are true, and his Torah is true" (introduction to *Novelot Ḥokhmah* (Basle, 1631) by Joseph \*Delmedigo). Seventeen of his works have been published. These include a summary of the legal decisions of Isaac \*Alfasi and his own major work on the Kabbalah, entitled *Asarah*

*Ma'amarot* (only parts have been printed, Venice, 1597); *Kanfei Yonah* (Korzec, 1786), a kabbalistic work on prayer; and *Gilgulei Neshamot* (Prague, 1688) on the transmigration of the soul. Many of his kabbalistic interpretations must have been made for the first time in the course of sermons delivered by him. Extant in manuscript are liturgical poems, elegies, comments on the teachings of Isaac Luria, and a voluminous correspondence. He died in Mantua.

**BIBLIOGRAPHY:** L. Woidislawski, *Toledot Rabbenu Menaḥem Azaryah mi-Fano* (1903); S. Simonsohn, *Toledot ha-Yehudim be-Dukkasut Mantovah* (1964), 665, index, s.v.; M.A. Szulwas, *Ḥayyei ha-Yehudim be-Italyah bi-Tekufat ha-Renaissance* (1955) 196, 220.

[Samuel Rosenblatt]

**°FĀRĀBĪ, ABŪ NAṢR MUḤAMMAD, AL-** (c. 870–c. 950), one of the greatest philosophers of the medieval Islamic world. Al-Fārābī had considerable influence on Jewish philosophers, particularly \*Maimonides. Having spent most of his life in \*Baghdad, he became associated in 942 with the illustrious court of Sayf al-Dawla, the Ḥamdānid ruler of Syria, residing mainly in \*Aleppo.

Al-Fārābī played a major role in the dissemination of ancient philosophy in the Islamic world. His teacher was the Nestorian Yuhannā ibn Ḥaylān (see M. Meyerhof, *Von Alexandria nach Bagdad* (1930), 405, 414, 416 ff.). He was thus familiar with the Christian tradition of Aristotelian studies initially cultivated in \*Alexandria and transmitted by Syriac-speaking Christians to the Islamic world. While in Baghdad, al-Fārābī apparently had contacts with the Christian Baghdad school of Aristotelian studies, the leading member of which was Mattā ibn Yūnus. Aristotle was studied together with his commentators, \*Alexander of Aphrodisias and \*Themistius, as well as with commentators of the neoplatonic school of Alexandria (Ammonius son of Hermias and his pupils). The paramount philosophical task al-Fārābī faced was to naturalize the pagan philosophic tradition of antiquity within the confines of a society structured by a revealed law.

### His Philosophy

The bulk of al-Fārābī's teaching and writing was devoted to interpreting Aristotle, particularly the logical works. He wrote commentaries and paraphrases on the entire *Organon*. In natural philosophy he followed the *Physics* closely. His metaphysics is a blend of the *Metaphysics* and neoplatonism. Creation is viewed by him as an atemporal process of emanation which flows from the unique, unqualified First Being. Al-Fārābī combines the neoplatonic theory of emanation with the Aristotelian-Ptolemaic \*cosmology which posits a system of celestial spheres and their intelligences encompassing the sublunar world. The intelligence of the last sphere (the moon) presides over the sublunar world and is called the active \*intellect. Al-Fārābī thus follows that interpretation of the *nous poietikós* ("active intellect"; *De anima*, 3), which regards it as a cosmic entity. The active intellect is "the Giver of Forms" (*wāhib al-ṣuwar; dator formarum*): it conveys forms to the world, thus

constituting the rational structure of the universe. It also actualizes the potential intellect of the individual. Al-Fārābī's theory of intellection is complicated and his various discussions of the subject, mainly in the treatises "On the Intellect" and *Arā' Ahl al-Madīna al-Fāḍila* ("The Opinion of the Citizens of the Virtuous City," ed. by A. Nader, 1959) are not entirely consistent. The individual potential (or material) intellect, influenced by the active intellect, becomes the intellect in act. When it achieves perfection, it becomes what is termed the acquired intellect, which is said to be close to the active intellect. The one who achieves this perfection thereby becomes intelligizer (*āqil*), intelligized (*ma'qūl*), and intellect (*ʿaql*), free from matter, and "divine" (see *al-Siyāsa al-Madaniyya* ("The Political Regime," ed. by F. Najjar (1964), 36). In "The Virtuous City" (p. 31), this threefold identity is posited of God.

Al-Fārābī equates intellectual perfection with supreme happiness. The individual who achieves this perfection and happiness is considered to be the philosopher or sage. If such a person has the additional quality of a perfect imagination, so that intelligible forms flow from the intellect to the imagination becoming embodied in sensible forms, he is more than a sage: he is a \*prophet. The process by which the forms flow from the First Being through the active intellect to the particular intellect and then the imagination is called "revelation" (*waḥī*). To become a statesman, in addition to being a prophet, he needs also the power of persuasion in order to lead men to the correct actions that bring happiness ("The Virtuous City," 104). The prophet is thus essentially a philosopher, one who is capable of conveying philosophical truth (theoretical and practical) to the unreflective masses on the level of the imagination, in myths and symbols. The philosopher, lawgiver (i.e., prophet), and imām (head of the community) are ideally one and the same person (*Taḥṣīl al-Sāʿada*, "The Attainment of Happiness," tr. by M. Mahdi, in *Alfarabi's Philosophy of Plato and Aristotle* (1962), paras. 57, 58). Religion is thus "an imitation of philosophy" (*ibid.*, para. 55). This concept of prophecy is traced by R. Walzer to certain ideas in middle Platonism (*Greek into Arabic* (1962), 206ff.). The identity of the philosopher and ruler is, of course, rooted ultimately in Plato's concept of the philosopher-king in the *Republic*.

### Political Theory

Al-Fārābī's political theory depends mainly on Plato, principally on the *Republic* and *Laws*. The *Republic* inspired his typology of the corrupt and perfect political regimes in "The Virtuous City" and "The Political Regime." The elaboration of a theory concerning the perfect city, the perfect nation, and the perfect world state in the whole of the inhabited world (*ma'mūra; oikoumene*) is traced by Walzer to middle Platonic developments (see *Oriens*, 16 (1963), 46ff.). Plato's *Laws* was of crucial importance for al-Fārābī (and Islamic philosophy in general), for it envisioned a society based on a single divine law comprehending both religious and civil aspects of life (see L. Strauss, in *REJ*, 100 (1936), 2). Aristotle's dictum, "man is by nature a political animal," played an important role in al-

Fārābī's political theory, but he apparently did not utilize the *Politics* to an appreciable extent. Al-Fārābī's choice of Plato's political philosophy had a determining effect upon the later development of Islamic, as well as Jewish philosophy. In ethical theory Aristotle's *Nicomachean Ethics* was of decisive influence (along with Porphyry's now lost commentary).

Al-Fārābī's political theory thus posits a fundamental distinction in society between the elite (the sages who know by reason) and the masses (the believers who apprehend by imagination). Philosophical truth is universal. It is adapted by the prophets to the requirements of various groups and nations in the guise of religion. There are many religions; each is an approximation (of greater or lesser validity) of the single truth of reason (see, e.g., "The Political Regime," 85ff.). While giving priority to philosophy, al-Fārābī recognized the role of religion in human life as an instrument for the welfare of society and the edification of the unphilosophical masses. He was interested in preserving the masses from the possible pernicious effects of the truths of reason. Consequently, he wrote esoterically so as not to disturb unreflective commitment to religion and morality, as well as to evade persecution by religious and state authorities (L. Strauss, in *Louis Ginzberg Jubilee Volume*, 1 (1945), 357ff.).

### Influence on Jewish Thought

Al-Fārābī's impact on medieval Jewish thought was considerable. In Hebrew texts he is called either by his Arabic name (Abū Naṣr or al-Fārābī) or by the Hebrew equivalent of the former (Abū Yesha'). Abū Bakr is sometimes erroneously substituted for Abū Naṣr.

Strauss (loc. cit.) first demonstrated the dominating influence of al-Fārābī's political philosophy on \*Maimonides. Maimonides' esteem for al-Fārābī, which no doubt encouraged the acceptance of the latter within Jewish philosophical circles, is clear from a letter he wrote to Samuel ibn Tibbon (see *JQR*, 25 (1934/35), 379). Maimonides recommended exclusively al-Fārābī's works on logic and praised all his writings, especially "The Book of Principles" ("The Political Regime"), as impeccably excellent and worthy of study, adding, "for he is a great man." In the introduction to his translation of *The Guide of the Perplexed* (1963), S. Pines states that in theoretical and political science Maimonides followed al-Fārābī on all points (p. lxxviii). The main lines of influence are traced by Pines: Maimonides' esoteric style and the tendency to embed "outrageously unorthodox statements" in a cryptic, veiled context are fashioned according to the model of al-Fārābī (see also Strauss, in *Essays on Maimonides*, ed. by S.W. Baron (1941), 37ff.). Maimonides was also influenced by al-Fārābī's negative assessment of the Kalām, as well as his treatment of such crucial issues as creation, intellection, prophecy, and providence.

Extensive quotations in Maimonides' *Shemonah Perakim* are taken from al-Fārābī's *Fuṣūl al-Madani* (*Aphorisms of the Statesman*, ed. and tr. by D.M. Dunlop, 1961), as was shown by H. Davidson (in *PAAJR*, 31 (1963), 33–50). Al-Fārābī's in-

fluence may also be discerned in Maimonides' code of Jewish law. A passage in *Mishneh Torah* (De'ot, 6:1), to the effect that one who lives in an evil city should immigrate to a place where the people are righteous or, if this is impossible, live in isolation, seems to reflect a similar statement in al-Fārābī's *Aphorisms of the Statesman* (para. 88). The comparison of those who are physically infirm, and whose sense of taste is consequently impaired, with those who are psychologically infirm and morally corrupt (De'ot, 2:1) is virtually a verbatim translation of a similar comparison by al-Fārābī in "The Political Regime" (p. 83). It is possible that al-Fārābī's specification and ordering of the ideas that should be taught in the virtuous religious community (*al-milla al-fāḍila*) influenced the choice of subjects treated and their sequence in *Mishneh Torah* (Yesodei ha-Torah; cf. *Kitāb al-Milla*, "The Book of Religion," ed. by M. Mahdi (1968), 44ff.).

### Hebrew Translations

Many of al-Fārābī's works were translated into Hebrew. M. Steinschneider (Uebersetzungen, para. 158) lists eight. The microfilm collection of the Institute of Hebrew Manuscripts at the Hebrew University in Jerusalem contains about 25 works, including some interesting logical works not mentioned by Steinschneider. A partial translation of the tripartite work that comprises "The Attainment of Happiness," "The Philosophy of Plato," and "The Philosophy of Aristotle," together with the music part of *Iḥṣā' al-'Ulūm* ("The Register of the Sciences"), is contained in Shem Tov ibn \*Falaquera's *Reshit Ḥokhmah* (see M. Steinschneider, *Al-Farabi* (1896), 176 ff., 224 ff.; Strauss, in MGWJ, 80 (1936), 96 ff.). "The Political Regime" was translated in part under the title *Sefer ha-Hathalot* (ed. by Z. Filipowski in *Sefer ha-Asif*, 1849). Falaquera often cites al-Fārābī in his commentary on the *Guide*, *Moreh ha-Moreh*. According to S.O. Heller-Wilensky, Isaac ibn \*Latif quotes two whole chapters of "The Virtuous City" in his *Sha'ar ha-Shamayim* (in *Jewish Medieval and Renaissance Studies*, ed. by A. Altman (1967), 196).

[Joel Kraemer]

### As Musician

Al-Fārābī was one of the outstanding theorists of Arabic music and several Arabic sources extol his musical talent and his excellence as an 'ūd player. He wrote several treatises on music of which the most famous are *Kitāb al-Mūsīqī al-Kabīr* ("The Grand Book of Music") and *Iḥṣā' al-'Ulūm* ("The Classification of the Sciences") in which he enumerates all the known sciences and defines their nature and object; part of the third chapter deals with the science of music. This work became known in Medieval Europe through its several Latin translations (see H.G. Farmer, *Arabic-Latin Writings on Music*, 1934) and was translated into Hebrew by Kalonymus b. Kalonymus of Arles in 1314 under the title: *Ma'amar be-Mispar ha-Ḥokhmot* (see A. Shiloah, *Yuval*, 2 (1971), 115–27). Among Jewish writers who used the section on music in their works are Shem Tov ibn \*Falaquera in his *Reshit Ḥokhma* and Joseph ibn \*Aknin in chapter VII of his *Tibb al-Nufūs*. The section

on music as well as several passages compiled in the "Grand Book of Music" is included in the Hebrew version of Ibn Salt's treatise on music and occurs in a Genizah fragment (British Museum, Ms. Or.5565c).

**BIBLIOGRAPHY:** Brockelmann, *Arab Lit.*, 1 (1943), 232ff.; supplement, 1 (1937), 375ff., 957ff.; N. Rescher, *Al Farabi. An Annotated Bibliography* (1962); R. Walzer, in: EIS<sup>2</sup> s.v. *al-Farabi*; H.G. Farmer, *Al-Fārābī's Arabic Latin Writings on Music* (1960<sup>2</sup>), 3–16; H. Avenary, in *Tatzlil*, 3 (1963), 163.

**FARAJ, MURAD** (1866–1956), Egyptian Karaite author and theologian. Born in \*Cairo and trained as a lawyer, Faraj was a government official during the reign of the khedive 'Abbās Ḥilmī (1892–1914). He took a keen interest in the problems of the Egyptian Jewish community and was particularly active among the \*Karaites, whom he served for a time as *dayyan*. After resigning this post, he practiced law until 1932, when he turned exclusively to literary pursuits.

Faraj, who wrote in Hebrew and Arabic, published some 30 volumes of poetry, religious works, and books on law. Two books of verse, highly praised by the great Egyptian poet Aḥmad Shawqī, were *Dīwān Murād* ("Murad's Poetical Works," 5 vols., 1912–29) and *Al-Shu'arā' al-Yahūd al-'Arab* ("The Jewish Poets in Arabic," 1929; 1939<sup>2</sup>). He also published *Shir 'Ivri mi-Meshorer 'Aravi* ("A Hebrew Song of an Arab Poet," 1945) in both Hebrew and Arabic. In his verse he was a meticulous craftsman with a fondness for difficult and unusual expressions.

All but one of Faraj's theological works were written in Arabic. They include *Al-Qarā'ūn wa-al-Rabbānūn* ("The Karaites and the Rabbanites," 1918); *Al-Yahūdiyya* ("Judaism," 1920); *Tafsīr al-Tawrā* ("Torah Commentary," 1928); *Al-Qudsiyyāt* ("Holy Offerings," translated into Hebrew by the author in 1923); *Amthāl Sulaimān* ("The Proverbs of Solomon," 1938), an Arabic translation of and commentary on the Book of Proverbs; and *Ayyūb* ("Job," 1950), an Arabic translation of several chapters of the Book of Job. Two books on linguistics were *Ustādh al-'Ibriyya* ("The Hebrew Teacher," 1925) and *Multaqā al-Lughatayn al-'Ibriyya wa-al-'Arabiyya* ("The Crossroads of the Hebrew and Arabic Languages," 5 vols., 1930–50). Faraj also wrote *Al-Furūq al-Qānūniyya* ("On Legal Differences," 1917) which, from 1928, became a standard textbook at Cairo University. In addition to all of these works, Faraj published several legal dissertations and many articles and reviews. In 1936 he was elected a member of the Egyptian Academy for the Arabic Language.

**ADD. BIBLIOGRAPHY:** J.M. Landau, *Jews in Nineteenth-Century Egypt* (1969), index.

[Hayyim J. Cohen]

**FARAJ (Moses) BEN SOLOMON DA AGRIGENTO** (Girgenti), also known as **Ferragut** and **Faraj ben Salim** (13<sup>th</sup> century), physician, translator, and author. Faraj was personal physician and official translator to Charles I of An-

jou, king of Sicily, for whom he translated several medical treatises from Arabic into Latin. Among these are *Liber Continens* (Ar. *Al-Hāwī*), a medical encyclopedia in 20 parts by Rhazes (al-Rāzī), which he finished translating in 1279 and which was printed five times between 1486 and 1542; *Tacuini Aegritudinum ac Morborum Corporis...*, a translation made in 1280 of the *Taqwīm al-Abdān* by Abū ‘Alī ibn Jazla; and *De Medicis Expertis* by Pseudo-Galen. Faraj’s authorship of other books cannot definitely be authenticated. However, if, as seems likely, Faraj is the same person as Moses b. Solomon of Salerno, he is also the author of a commentary on the *Guide* by \*Maimonides. A picture of Faraj receiving the *Al-Hāwī* for translation from Charles I appears in a 13<sup>th</sup>-century illuminated manuscript.

**BIBLIOGRAPHY:** Roth, Italy, 93–94.

[Attilio Milano]

**FARBAND**, American Jewish Labor Zionist fraternal order. The establishment of the Farband was first conceived in Philadelphia in 1908 by a small group headed by Meyer L. Brown which sought to build a fraternal order in which Labor Zionists would feel at home – one that would combine fraternal benefits and mutual aid with a Labor Zionist outlook and program. In the succeeding two years groups were formed in several cities, and on June 10–16 a founding conference of the national Farband took place in Rochester, New York. It adopted the name Yiddish Natzionaler Arbeiter Farband (Jewish National Workers Alliance) and formulated the following program:

The JNWA strives to organize all Jewish workers on the following principles:

1. Mutual help in case of need, sickness, and death.
2. Education of Jewish workers to full awareness of their national and social interests.
3. Support of all endeavors which lead to the national liberation and renaissance of the Jewish people... support of all activities which lead to the strengthening and liberation of the working class.

With the then existing Jewish fraternal orders largely devoid of ideological content, and with the only other Jewish workers order – the \*Workmen’s Circle (Arbeiter Ring) – adopting an anti-Zionist position, Farband, with its socialist-Zionist viewpoint and program in Israel and America, grew in number from 1,000 in 1911 to 25,000 in 1946 and 40,000 in 1972.

In 1911 Farband developed the first modern insurance and mutual benefit system for Jewish workers. The organization received its official charter, licensing it to sell various insurance and medical plans, from the State of New York on January 6, 1913, and from Canada in 1921. The main mutual benefits of Farband include: life, accident, health, hospitalization, and juvenile insurance; a major medical plan; and savings and loan groups.

From its inception Farband was involved in Jewish communal affairs at home and abroad. In 1913 it fought against

the “literacy test” given to immigrants and protested against the \*Beilis Trial. During World War I Farband participated in the establishment of the American Jewish Congress and the People’s Relief Committee, and sent many volunteers to fight in the ranks of the Jewish Legion. During World War II Farband campaigned actively to raise funds for the Labor Zionist Committee for Relief and Rehabilitation. It also energetically supported the founding of the American Jewish Conference in 1944. Farband has also been active in the civil rights struggle and has espoused many other liberal causes both in the United States and Canada.

Farband concentrates much of its energies on cultural activities. In addition to maintaining a network of day and evening schools, Farband established “educational bureaus” in the 1920s to encourage Jewish cultural activities by promoting “Onegei Shabbat,” musical and drama presentations, seminars, study groups, and lectures throughout the United States and Canada. Farband encourages its members to use Hebrew and Yiddish and in cooperation with the Hillel Foundation has since 1966 promoted the study of the Yiddish language and literature on many campuses throughout the United States. Farband supports the Jewish Teachers’ Seminary, the People’s University in New York, the Farband Book Publishing Association, and a number of newspapers and periodicals in Yiddish, Hebrew, and English. It provides educational programs during the summer months through its network of summer camps: in 1926 Unser Camp (for adults) and Kinderwelt (for youth) were created in New York. The educational and financial success of these camps stimulated the creation of similar camps throughout the United States and Canada. Habonim is the youth movement of the Farband, as well as of Po’alei Zion and Pioneer Women.

As a Labor Zionist organization Farband has always maintained strong ties with Erez Israel and the State of Israel, especially the workers’ groups there. At its founding conference, it resolved to institute obligatory taxes for the benefit of workers in Erez Israel. Important Israeli leaders, among them David Ben-Gurion, Izhak Ben-Zvi, Golda Meir, and Zalman Shazar, have frequently come to the United States to address its conventions and leaders. In 1919 Farband opened a branch in Erez Israel, and during the Mandatory period and after World War II it campaigned energetically and assisted with funds and manpower in the creation of the Jewish State. After the birth of Israel, Farband continued its work on behalf of the cooperative, pioneering sector through support of the Histadrut. It consistently invested a part of its insurance funds in bodies which promote its ideals and today is the largest investor in Ampal, the American investment arm associated with the Histadrut.

Since the 1930s the possibility of the unification of Po’alei Zion and Farband has been discussed frequently, since both share the same Labor Zionist philosophy, the same goals in America and Israel, and have cooperated on the most important national and international projects. In 1954, during Farband’s Montreal convention, Zalman Shazar, subsequently

president of the State of Israel, personally offered his services in this direction. However, only after the New York convention in 1967 did Farband seriously negotiate the unification of Labor Zionist forces in America. The 22<sup>nd</sup> national convention, held in New York December 23–26, 1971, finally brought this about by bringing into the legal framework of Farband the members and branches of Poalei Zion and the American Habonim Association, the latter comprising the alumni of the Labor Zionist youth movement. The name was changed to Labor Zionist Alliance. The national offices are in Farband House, New York City, and regional offices are maintained in principal cities throughout the United States and Canada.

[Jehuda Reinharz]

The 22<sup>nd</sup> national convention, held in New York December 23–26, 1971, finally brought about the merger of Farband, Poalei Zion, and the American Habonim Association, comprising the alumni of the Labor Zionist youth movement. The name was changed to Labor Zionist Alliance and was changed once again in 2004 to Ameinu.

[Daniel Mann (2<sup>nd</sup> ed.)]

**FARBER, MARVIN** (1901–1980), U.S. philosopher, founder of the International Phenomenological Society in 1939 and editor of the journal *Philosophy and Phenomenological Research* from 1940 and, from 1951, *American Lectures in Philosophy*. Farber was born in Buffalo, New York, and educated at Harvard University and in Germany. He taught at Ohio State University, State University of New York at Buffalo, and at the University of Pennsylvania. Starting as an instructor in philosophy at the University of Buffalo in 1927, he became successively assistant professor, professor, department chairman, acting dean of the graduate school, distinguished professor and, in 1964, distinguished service professor.

Farber was the first to bring Husserl's phenomenology to the attention of American philosophers. In 1928 he published *Phenomenology as a Method and as a Philosophical Discipline*, and in 1943 *The Foundation of Phenomenology*. He edited *Philosophical Essays in Memory of Edmund Husserl* (1940). Though Farber was a follower of Husserl and expositor of contemporary German and French thought, he criticized the anti-scientific attitude of Husserl, Max Scheler, and others, as well as the anti-rationalist tendencies in other contemporary European thinkers such as Heidegger. His views tended toward naturalism and pragmatism, as expressed in his volume *Naturalism and Subjectivism* (1959) and in his many articles.

Other books by Farber include *The Aims of Phenomenology: The Motives, Methods, and Impact of Husserl's Thought* (1966), *Phenomenology and Existence: Toward a Philosophy within Nature* (1967), *Foundation of Phenomenology: Edmund Husserl & the Quest for a Rigorous Science of Philosophy* (1967), *Basic Issues of Philosophy: Experience, Reality, and Human Values* (1968), and *The Search for an Alternative: Philosophical Perspectives of Subjectivism & Marxism* (with R. Chisholm, 1984).

Farber was a member of philosophy societies around the world, such as the Institut Philosophie, Paris; International Phenomenological Society (past president); American Philosophical Association (president of the Eastern Division), C.S. Pierce Society, Symbolic Logic Association (executive committee), and American Association of University Professors, Phi Beta Kappa.

**BIBLIOGRAPHY:** H. Spiegelberg, *The Phenomenological Movement*, 2 (1960), 627–9; **ADD. BIBLIOGRAPHY:** D. Mathur, *Naturalistic Philosophies of Experience: Studies in James, Dewey and Farber against the Background of Husserl's Phenomenology* (1971).

[Richard H. Popkin / Ruth Beloff (2<sup>nd</sup> ed.)]

**FARBER, VIOLA** (1931–1998), U.S. dancer, choreographer, and teacher. Of German birth, Farber arrived in the U.S. at the age of seven and became a citizen in 1944. She studied modern dance with Katherine Litz, and Merce Cunningham and also took ballet classes with Alfredo Corvino. In 1953, she became a founding member of Cunningham's company as a dancer and choreographed some of its works until 1968. Among her works from this period are *Crises*, *Paired*, and *Nocturne*. To the Cunningham technique Farber, as a passionate dancer, added her personal contribution of human warmth. Dense, demanding movement and a humorous, bounding enthusiasm characterized her style. In 1968, she founded her own company and began choreographing her own works. Most of her work has been either set to original music or danced in silence. However, in one case her *Dune and Nightshade* was choreographed to Beethoven's Moonlight Sonata. She also taught in Salt Lake City and Columbus, Ohio, and served on the faculty of the New York School of the Arts. In 1981–82, the French government appointed her director of the Centre National de Danse Contemporaine at Angers, for which she created nine works, including *Nuage* and *Oiseaux-Pierres*, continuing to maintain close ties to France. Her choreographed piece *Ainsi de suite* was performed at the Avignon Festival.

[Amnon Shiloah (2<sup>nd</sup> ed.)]

**FARBSTEIN, DAVID ZEVI** (1868–1953), Zionist Swiss politician. Farbstein was born in Warsaw and grew up in a traditional family. He worked at a bank in Warsaw to finance his studies, distancing himself from his Orthodox upbringing. During his studies in Berlin (1892–94) he joined the Russian Jewish Scientific Association and met with N. \*Syrkin. He continued his studies at the universities of Zurich and Berne (1894–97), graduating with a thesis on "the legal status of the free and unfree worker in talmudic law." In 1897 he received Swiss citizenship, became a member of the Cultusgemeinde and joined the Social Democratic Party. He protested against the expulsion of Russian-Jewish peddlers from Zurich (1905/06) and led the opposition in the Cultusgemeinde against the well-to-do Swiss-Jewish establishment. As a lawyer, he defended women who had had abortions. In 1902 he was elected to the cantonal parliament, after 1904 to the city parliament. Here he fought against the introduction of a 15-

year waiting period for Orthodox East European Jews to apply for Swiss citizenship, but he did not convince the bourgeois majority (1920). He was the first Jewish member of the Swiss parliament (the Nationalrat, 1922–38). As a Zionist, he helped \*Herzl set up the First Zionist Congress in Basle and drafted the statutes of the \*Jewish National Fund (Keren Kayemet le-Israel). Already in 1897 he founded the first Zionist group in Zurich. After 1933 he fought Swiss fascism and opposed the policies of the leaders of the Swiss Federation of Jewish Communities as too compromising. He was instrumental in the resignation of Saly Mayer from the presidency of the federation in 1943. He refuted the anti-Jewish allegations of Zurich pastor Walter Hoch.

**BIBLIOGRAPHY:** H. Strauss-Zweig, *David Farbstein. Juedischer Sozialist – sozialistischer Jude* (2002); *Davar* (June 22, 1953); *Festschrift zum 50-jaehrigen Bestehen des Schweizerischen Israelitischen Gemeindebundes* (1954), 197 ff. (his autobiography).

[Uri Kaufmann (2<sup>nd</sup> ed.)]

**FARBSTEIN, JOSHUA HESCHEL** (1870–1948), leader of the \*Mizrachi movement, head of the Warsaw Jewish community, and of the Jewish Community Council (Va'ad ha-Kehillah) in Jerusalem (see Israel, Communal \*Governance). Born in Warsaw, Farbstein was active in the Hibbat Zion movement, and, with the emergence of Herzl, joined the political Zionist movement. Together with his brother, David Zevi \*Farbstein, he attended the First Zionist Congress and was the first to discuss the religious problems of the Zionist movement in pre-Congress talks with Herzl. Farbstein participated in subsequent Congresses, representing Mizrachi after its formation in 1902. He was president of the Zionist Organization in Poland from 1915 to 1918 and was active during these years in obtaining extensive aid for war victims. A founder of Mizrachi in Poland, he was its president between 1918 and 1931, president of the Keren Hayesod in Poland, a member of the Polish Sejm and of the city council of Warsaw, and, between 1926 and 1931, president of the Warsaw Jewish community. Farbstein settled in Jerusalem in 1931 and was a member of the Zionist Executive between 1931 and 1933. Together with Emanuel \*Neumann, he devised the abortive plan to lease 70,000 dunams in Transjordan for Jewish settlement. In Jerusalem he was active in the Community Council, which he headed between 1938 and 1945 (ultimately, as honorary president). Throughout his life he held leading posts in the world Mizrachi movement.

[Getzel Kressel]

**FARḤI**, family of financiers in \*Damascus of Sephardi origin during the 18<sup>th</sup> and 19<sup>th</sup> centuries. The family arrived at Damascus from \*Aleppo in mid-18<sup>th</sup> century. Members of this family held the position of \**ṣarrāf* ("banker") in the province of Damascus during the 1740s and possibly even earlier. It ap-

pears that members of this family also served as officials in the financial administration of the province and during the 1790s the bookkeeping of the provincial treasury was entrusted to them. The status and power of this family reached its climax during the 19<sup>th</sup> century, when the responsibility for the affairs of the treasury of the provinces of Damascus and Sidon – the center of which was in \*Acre – was handed over to one of its members. The family could then undertake the financing of large-scale projects, including participation in the financing of the *hajj* (pilgrimage to Mecca) expenses, which was within the domain of the governor of the Damascus Province as the organizer of the *hajj* caravan.

The first member of this family to consolidate his position in Damascus was SAUL (Shihada) FARḤI who lived there in the second half of the 18<sup>th</sup> century. His position in the financial administration of the province enabled him to intervene with the governor of Damascus in favor of the Christians. In 1770 he was a very wealthy man and had good connections with prominent people in Istanbul. Solomon Farḥi, probably the father of Saul, died after torture in 1794.

The sons of Saul were RAPHAEL (died in Damascus, 1845), MOSES (died in Damascus, c. 1830), MENAḤEM (died in Damascus, c. 1830), JOSEPH (died in Damascus, c. 1830), and ḤAYYIM (died in Acre, 1820). RAPHAEL and JOSEPH inherited his position in Damascus and their cousin SOLOMON (Salmon) FARḤI also shared their importance. The third son, ḤAYYIM, entered the service of Aḥmad al-Jazzār Pasha, the governor of the province of Sidon who had fixed his residence in Acre in about 1790. He held the position of *ṣarrāf* and was responsible for the treasury affairs during most of al-Jazzār's rule (until 1804). He distinguished himself during the stand of Acre against Napoleon's armies in 1799. His brother MOSES was his assistant. In 1804 Ḥayyim was imprisoned, but on the death of al-Jazzār he was set free. He immediately joined in the struggle for al-Jazzār's succession as a supporter of Suleiman Pasha. Suleiman achieved the position of governor in 1805 due to the assistance of Ḥayyim who intervened in his favor in Constantinople. Suleiman had complete confidence in Ḥayyim, and he gave him a free hand in the administration and its finances. The Suleiman period (until 1818) was one of consolidation for Ḥayyim and the family in general, especially after Suleiman was also appointed governor of Damascus. Ḥayyim Farḥi also chose Suleiman Pasha's successor, 'Abdallah Pasha, whom he had helped rise to the position of *ketkhudā* (or \**kaḥya*; administrative director) under Suleiman from 1814. In practice, Ḥayyim was the governor of the province from 1818. However, the thirst for power of 'Abdallah and the presence of men who slandered Ḥayyim before 'Abdallah brought about his downfall and he was executed (1820) at the height of his glory. This was the first blow to strike the family. Ḥayyim's brothers attempted to avenge him and they participated in the war waged against 'Abdallah by the governor of Damascus. Because of its financial power, the family nevertheless continued to hold on to its firm position in Damascus, and Raphael Farḥi was the chief sheriff in Damascus. Ra-

phael's children were David (died in Damascus, 1907), Aslan (born in 1828), Polica, and Meir. Meir had three sons: Moses, Solomon, and Jacob. The son of Aslan was Joseph Farhi who died in Beirut in 1840. There is a letter from the Farhi family to Moses \*Montefiore from 1849 signed by Menaḥem Farhi; Judah, Meir, and David, the sons of Raphael Farhi; Ezekiel, Nathaniel, and Aaron, the sons of Joseph Farhi; and Solomon, the son of Joseph Farhi. In that year Montefiore lodged in the house of Isaac Ḥayyim Farhi. The Egyptian conquest of Syria at the beginning of the 1830s struck a decisive blow at the family, both in relation to its financial matters and its influence in the town. In 1834 the family lost its positions in the financial administration and that of *ṣarrāf*, and only a few of its members remained on the staff of the treasury and in the leadership of the Jewish millet. However, with the return of Ottoman rule in Syria in 1840, one of the members was again appointed to the direction of the treasury administration, even though the family could not regain its former financial power. During the 18<sup>th</sup> and 19<sup>th</sup> centuries the family members were the rivals and opponents of powerful Christian families and sometimes found themselves in a perilous situation because Muslim governors wanted to dismiss them from their positions. The new rivals of the Farhi family in Damascus were the members of Albaḥri family. At the time of the \*Damascus Affair the family lost its political influence and some of its members were imprisoned. Aslan Farhi confessed because he was afraid of torture.

As was the case with other wealthy Jewish families, the Farhis also played a role in fostering spiritual life and financial support of the needy. Ḥayyim Farhi was a particularly generous donor to synagogues both in Damascus and in Acre. He owned the magnificent *Farhi Bible*, which was named after him. After his execution it came into the possession of the British consul in Damascus, and it was only restored to the family nearly a century later. They established family religious trusts for the benefit of yeshivot and \**kolelim*, supported scholars, assisted the needy, and arranged for employment in their offices. They also initiated relations between the Jews of Damascus and Palestine and those of Constantinople. As for the relations between the Jews and the government, there is no definite evidence of their intervention, except for some vague evidence concerning a tax exemption for the Jews of \*Safed. After the death of Ḥayyim, there was a quarrel over his estate in the Farhi family, which began in 1833 and continued for many years. The struggle was between the sons of Raphael and their cousins Joseph Hai and Nissim Farhi, the sons of Menaḥem. Rabbi Jacob Antebi, the chief rabbi of Damascus, wrote a decision in 1833, but Moses, the brother of Ḥayyim Farhi, and, after the death of Moses, who lived in Acre, his sons Mordecai and Menaḥem rejected the decision. They were supported by Rabbi Ḥayyim Nissim \*Abulafia of Tiberias. Rabbi Abraham Ḥayyim \*Gagin, the chief rabbi of Jerusalem, defended the decision of Rabbi Antebi. Moses Montefiore and Zevi Hirsch Lehren also intervened. In 1847 the rabbis of Damascus wrote about the activity of Judah and

David, the sons of Raphael Farhi, against Isaac Ḥayyim Farhi, the son of Solomon, who was the translator of the French consul in Damascus. His relative David Farhi became the Turkish scribe of the French consul, and Nathaniel Farhi was the treasurer of the consulate. Meir, the brother of Ḥayyim Farhi, was murdered in 1822. He had married his second wife in 1818 and she bore him his only son, Isaac Ḥayyim. The interior of the house of the Farhi family in Damascus was very elegant. In later generations the Farhi family settled in Beirut, Paris, Italy, South America, and Israel. In 1854 Meir Farhi was appointed sherif in Damascus, but was later dismissed. Also in 1854 Nissan Farhi was appointed the representative of the Jews in the Mejlis of Damascus.

[Aryeh Shmuelevitz/ Leah Bornstein-Makovetsky (2<sup>nd</sup> ed.)]

HILLEL BEN JACOB FARHI (1868–1940) poet, translator, and physician, also belonged to this family. Farhi, who was born in Damascus, studied medicine in \*Beirut and London and became a government doctor in \*Cairo. In his spare time, he pursued research into Hebrew and Arabic and translated many Jewish religious works into Arabic. These include his *Siddur Farhi* (1917), which contains an introduction to the history of prayer; *Al-Urjūzah al-Fārḥiyah* ("Farhi's Poem," 1914), comprising the 613 \*Commandments in the form of an Arabic poem; and *Majmū'at Farhi* ("Farhi's Collection," 1922), which contains the Passover \*Haggadah, the *Pirkei \*Avot*, and the *Azharot* of Solomon ibn \*Gabirol. Farhi's verse translations and his own poetry are marked by lucidity and simplicity. He published a Hebrew version of the *Rubāiyāt* of Omar Khayyām (1931) and, with Nissim Mallul, produced an Arabic translation of the *Zikhronot le-Beit David* by A.S. \*Friedberg.

A well-known member of this family was ISAAC B. SOLOMON FARHI, the author of *Tuv Yerushalayim* (Jerusalem, 1842), *Zekhut ha-Rabbim* (Constantinople, 1829), *Imrei Binah* (Belgrade, 1837), *Zekhut u-Mishor* (Smyrna, 1850), *Zuf Devash* (Leghorn, 1849), *Shevet Mishor* (Belgrade, 1837), *Matok la-Nefesh* (Constantinople, 1828), *Marpe la-Ezem* (Constantinople, 1830), *Matok mi-Devash* (Jerusalem, 1842), *Musar Haskel* (Constantinople, 1830), and *Minei Metikah* (Leghorn, 1848), sermons for the Sabbath. NURI FARHI, a native of Damascus, settled in \*Alexandria after having studied in Paris. In Alexandria he engaged in commerce and wrote a history of the Jews in the town from its foundation until his own time, *La Communauté Juive d'Alexandrie de l'Antiquité à nos Jours* (1945). Another member of this family, JOSEPH DAVID FARHI (1878–1945), became the president of the Jewish community of Beirut.

**FARHI, DANIEL** (1941– ), French reform rabbi. Farhi was born in Paris to a Jewish family of Turkish descent. He was hidden and protected by a Protestant family during the war, began rabbinical studies in 1959, and was ordained a rabbi in 1966. He chose to join the reform Union Libérale Israélite de France, France's first liberal Jewish congregation, located in Paris and known as "rue Copernic," the street where its main synagogue is located. In 1970, he became first rabbi at the Copernic synagogue, a position that he left in 1977 to create a new liberal movement, the Mouvement Juif Libéral de France (MJLF), originally comprised of just 50 families and subsequently growing to a few hundred. Dedicated to the promotion of Reform Judaism, Farhi also emphasized in his rabbinical activity the importance of inter-religious dialogue, especially with Islam and Christianity. Another main axis of Farhi's concerns was the memory of the Shoah and its transmission, being himself an "enfant caché" (hidden child). Farhi was the first to introduce in France the celebration of Yom Ha-Shoah in 1990, with a 24-hour-long recitation of the names of French Jewish deportees and Holocaust victims. He worked in close association with Serge and Beate Klarsfeld to foster public awareness of the Shoah. Farhi was imprisoned in Germany for trying to pursue Nazi criminals but managed to organize a number of pilgrimages to Auschwitz. He was eventually able to merge his two main concerns – religious dialogue and transmission of the Shoah – when he joined the inter-religious pilgrimage set up by Emile Shoufani, an Arab-Israeli priest from Nazareth, which brought together at Auschwitz Muslims, Christians, and Jews, Israeli and French. Farhi wrote several books on Israel and the transmission of Judaism (*Parler aux enfants d'Israël*), the problematics of liberal Judaism (*Un judaïsme dans le siècle*), and the Shoah (*Au dernier survivant*), as well as two prayer books for Reform communities, *Siddour Taher Libénou* and *Mahzor Anénou*. Farhi also served on the editorial board of the MJLF review, *Tenou'á-Le Mouvement*. He was awarded several prestigious honors, including *chevalier de l'ordre national du Mérite* and *chevalier de l'ordre national de la Légion d'honneur*, a distinction that he received in 1993 from Simone Veil, state minister and Holocaust survivor.

[Dror Franck Sullaper (2<sup>nd</sup> ed.)]

**FARHI, GABRIEL** (1968– ), French reform rabbi. Son of leading reform rabbi, Daniel Farhi, Gabriel completed liberal rabbinical studies in London (Leo Baeck College), where he was ordained in 1996. Subsequently he was the rabbi of the MJLF-Est synagogue, an offshoot of the movement's main congregation. An advisor to the BBC for Jewish affairs, Farhi also serves as the Israelite chaplain at the Georges Pompidou European hospital and headed there a think tank on medical ethics. He was the first non-Orthodox rabbi to be appointed as a chaplain in a French hospital. His keen interest for bioethics, his intimate knowledge of the medical world, and his proximity to the sick and suffering also led him to promote a liberal Jewish viewpoint on bio-

ethics as a teacher at the Faculties of Medicine in Reims and Paris.

[Dror Franck Sullaper (2<sup>nd</sup> ed.)]

**FARHI, MORIS** (1935– ), writer, poet, and artist. Born in \*Ankara, Farhi graduated from Robert College in \*Istanbul in 1954 and from the Royal Academy of Dramatic Art in London in 1956. A British subject since 1964, he pursued an acting career for several years and began writing in the 1960s. Between 1960 and 1983 he worked primarily in television, writing numerous scripts for both the BBC and ITV. Many of his poems have appeared in various U.S. and international publications. He became a member of English PEN in the mid-1970s and joined its Writers in Prison Committee in 1988. In 2001 he was made a member of the Order of the British Empire in the Queen's Birthday Honours List for "services to literature." In November 2001 he was elected a vice president of International PEN. He is a fellow of both the Royal Society of Literature and the Royal Geographical Society. His published works include *The Pleasure of Your Death* (1972); *The Last of Days* (1983), a thriller played out in the Middle East against the backdrop of Arab terrorism; *Journey Through the Wilderness* (1989), dealing with a Holocaust survivor's search in South America for the Nazi who murdered his father; *Children of the Rainbow* (1999), about a gypsy survivor of Auschwitz; and *Young Turk* (2004), a series of interrelated stories set in \*Turkey.

[Rifat Bali (2<sup>nd</sup> ed.)]

**FARIA, FRANCISCO DE** (b. c. 1650), Marrano adventurer. Faria, who was born in Brazil, lived subsequently in Antwerp as an artist, in Holland as an officer in the army, and in England as an interpreter to the Portuguese embassy. In 1680, at the time of the so-called "Popish Plot," he made some startling but unfounded disclosures accusing the Portuguese ambassador of having attempted to bribe him to murder the Earl of Shaftesbury and others. He was rewarded for his revelations, but subsequently disappeared from view.

**BIBLIOGRAPHY:** Friedman, in: *AJHSP*, 20 (1911), 115–32 (= his *Early American Jews* (1934), 127–45, 205–9); Roth, *Mag Bibl*, 125, 248.

[Cecil Roth]

**FARINACCI, ROBERTO** (1892–1945), leading antisemite in the Italian Fascist regime. A socialist until 1914, Farinacci became one of the founders of the Fascist movement in March 1919. He served as a member of the Gran Consiglio del Fascismo, as a member of parliament, and, between 1925 and 1926, as Fascist Party secretary. Farinacci represented the fanatic and extremist element in the Fascist leadership. In 1921 he founded a daily newspaper, *Cremona Nuova*, later renamed *Il Regime Fascista*, which he edited until 1945. In this newspaper he advocated a strong line against the opponents of the regime, closer relations with Nazi Germany, and the adoption of a racist, antisemitic policy. From 1938 he was one of those who directed the Fascist government's racist policy. His anti-

semitic book, *La Chiesa e gli Ebrei*, was published in 1938. He also wrote *Storia della rivoluzione fascista* (3 vols., 1940). In July 1943 he fled to Germany, but later returned to Italy, where he was executed by Italian partisans in April 1945.

**BIBLIOGRAPHY:** R. de Felice, *Storia degli ebrei italiani sotto il fascismo* (1961); Roth, Italy, 522, 525; Milano, Italia, 691; P. Pellicano, *Ecco il diavolo, Israele!* (1938); Starr, in: JSOS, 1 (1939), 105–24. **ADD. BIBLIOGRAPHY:** H. Fornari, *Mussolini's Gadfly: Roberto Farinacci* (1971); U.A. Grimaldi, *Farinacci, il piu fascista* (1972); R.A. Rozzi, *I cremonesi e Farinacci* (1991).

[Daniel Carpi]

**FARISSOL, ABRAHAM BEN MORDECAI** (c. 1451–c. 1525), Bible commentator, geographer, and polemicist. Born in Avignon, Abraham spent most of his life in Ferrara, Italy, where he did most of his work, and in Mantua. He served as a cantor, and for many years as a copyist, a task he performed with great devotion and care. It seems that he was highly regarded by the Jews of Ferrara, for they chose him to represent Judaism before the duke of Ferrara in a religious dispute with two Dominican monks. Farissol's main works are (1) *Pirhei Shoshannim*, a short commentary on the Torah, which was never printed but is extant in manuscript; a commentary on Ecclesiastes, also in manuscript; and a commentary on the Book of Job, printed in the Bomberg Bible (Venice 1516–17). (2) *Magen Avraham*, a work dedicated to the defense of Judaism in religious disputes, and containing in two separate chapters, polemical attacks against Christianity and Islam. Most of the work is based upon the writings of earlier medieval Hebrew polemicists, but parts were influenced by the author's own experience in the dispute in Ferrara. The work is still extant in manuscript. (3) *Iggeret Orhot Olam*, his most famous and most important work, is the first modern Hebrew work on geography (Ferrara 1524; Venice 1586; and many subsequent printings). Each of its 30 chapters deals with a certain geographical area or subject. In addition, many cosmological and historical matters are also treated. The author collected all the evidence he could regarding Jewish settlements in each country. The inclusion of a description of the New World makes Farissol the first Hebrew writer to deal in detail with the newly-discovered America. The 14<sup>th</sup> chapter of *Iggeret Orhot Olam*, which deals mainly with the settlements of the \*Ten Lost Tribes, is of special interest. According to Farissol's introduction to this chapter, it is clear that what moved him to undertake this investigation was the appearance in Italy in 1523 of David \*Reuveni, many of whose descriptions are included in this work.

**BIBLIOGRAPHY:** Steinschneider, Cat Bod, 689–90; Benjacob, Oẓar, 9 no. 189, 296 no. 490; Graetz, Hist, 4 (1894), 411–3; Waxman, Literature, 2 (1960<sup>2</sup>), 485–7, 556.

**FARISSOL, JACOB BEN HAYYIM (Comprat [Comprado], Vidal Farissol;** b. 1405?), Provençal Hebrew poet and philosophical commentator. At the age of 17 Farissol wrote *Beit Yaakov* (Ms.), a commentary to Judah Halevi's *Kuzari*, based on the lectures of his teacher Solomon b. Menahem Frat Maimon; this commentary is in many ways similar to those

of his fellow students, Solomon b. Judah (Solomon Vivas) and Nethanel Caspi. His commentary, like those of his fellow students, is important for the understanding and establishing of the Hebrew text of the *Kuzari*. In the summer of 1453 Farissol was in Avignon and is apparently identical with the poet Jacob who, in a *piyyut* (*Mi Kamokha*) for *Hoshana Rabba*, tells of a thwarted Jewish persecution on Sept. 15, 1443. He also is the author of a liturgical poem (*Tamid*) for the eve of the Day of Atonement.

[Jefim (Hayyim) Schirmann]

**FARJEON, BENJAMIN LEOPOLD** (1838–1903), English novelist. Farjeon, who was born in London into an Orthodox family of North African origin, went to Australia at the age of 17. He eventually became editor and part owner of the first daily newspaper in New Zealand, the *Otago Daily Times*. Returning to England in 1868, he published his first novel, *Grif* (1870), a story of Australian life, which became his best-known work. Farjeon modeled his work on Dickens and later on Wilkie Collins, first writing Christmas pieces and then mystery stories. His 40 novels included several with Jewish subjects, among them *Solomon Isaacs* (1877), *Fair Jewess* and *Aaron the Jew* (1894), *Miriam Rozella* (1897), and *Pride of Race* (1900). He portrayed Jews sympathetically, but was inclined to sentimentality. Farjeon married Margaret Jefferson, daughter of a famous American actor, and three of their children – who had no connection with the Jewish community – were well-known writers. JOSEPH JEFFERSON FARJEON (1883–1955) wrote novels, plays, and *The Compleat Smuggler* (1938). HERBERT FARJEON (1887–1945) was drama critic for several London papers and wrote light verse and revues. ELEANOR FARJEON (1881–1965) wrote fiction, verse for children and, with her brother Herbert, a comedy, *The Two Bouquets* (1936). She was the author of the famous hymn, “Morning Has Broken,” which has in recent years become a popular hit song. Her depiction of her early life, *A Nursery in the Nineties*, gives a warm portrayal of her father. On her death, the Children's Book Circle of England established an annual award in her honor. Her brother, HARRY FARJEON (1878–1948), was a well-known composer of light classical music.

**FARKAS, LADISLAUS** (Wilhelm; 1904–1948), Israel physical chemist. Farkas was born in Dunaszerdahely, Slovakia, the son of a pharmacist. From 1928 he worked at the Kaiser

Wilhelm Institute for Physical Chemistry in Berlin-Dahlem as assistant to Fritz Haber. On the advent of Nazism in 1933, Farkas moved to Cambridge and in 1934 joined the staff of the Sieff Institute in Rehovot and of the Hebrew University of Jerusalem, where he was subsequently appointed professor of physical chemistry. He was killed in an air crash while on his way to the U.S. to buy scientific equipment. He left his mark on a generation of students who were later among Israel's outstanding chemists. Farkas' research covered photochemistry, gas reactions, combustion, the chemistry of parahydrogen and heavy hydrogen, and the recovery of bromine and the reactions of its compounds. During World War II, he acted as secretary of the Scientific Advisory Committee of the Palestine War Supply Board and was instrumental in developing local production methods for essential chemicals from the resources of the Dead Sea. He laid the foundations for the establishment of the Research Council of Israel.

**BIBLIOGRAPHY:** I. Farkas and E.P. Wigner, *L. Farkas Memorial Volume* (1952).

[Samuel Aaron Miller]

**FARKAS, RUTH** (née Lewis; 1906–1996), U.S. sociologist and diplomat. Farkas was born in New York and gained degrees in education from New York University (B.A. and Ed.D.) and Columbia (M.A. in sociology, 1932). She was a sociology instructor at the New York University School of Education from 1945 to 1955, and in 1962, she was appointed director of the William Allison White Psychoanalytical Institute, and became chairman of President's Advisory Council of the New York University Graduate School of Social Work.

As a sociologist and educator she came to the attention of Secretary of State Dean Rusk and was appointed a member of the Executive Committee of the U.S. National Commission for UNESCO and of the Department of State Foreign Service Selection Board. She was also consultant sociologist to the U.S. delegations to the International Conference on Eradication of Illiteracy in Iran (1965) and the International Conference of the Status and Rights of Women in Helsinki (1967). She served as chief delegate to the Conference of the Pan-Pacific Southeast Asia Women's Association in Australia in 1961 and in New Zealand in 1972. Farkas was a member of the President's Special Education committee for Dissemination of Human Rights and of the President's Committee for the Handicapped. She served on Governor Rockefeller's New York State Women's Advisory Council and on the Council of the Child Study Association of America, and was the recipient of a number of awards for work with the handicapped and the aged. From 1965 she served as Consultant for Personnel and Public Relations of Alexander's Incorporated, founded by her husband, George Farkas.

She was involved in many philanthropic activities through the Role Foundation, which she established in 1967. Farkas served as United States ambassador to Luxembourg from 1973 to 1976. In 1982 she was honored by Columbia

University's Teachers College with a Distinguished Alumni Award.

**FARMERS' FEDERATION OF ISRAEL** (Hitahadut ha-Ik-karim be-Yisrael), an association of private farmers in Israel. It grew out of the Union of Moshavot in Judea and Samaria, which was founded in 1920 with a membership of seven villages. The Federation is concerned with the professional, economic, cultural and social problems of its members and represents them vis-à-vis government agencies on marketing, taxation, transportation, and similar questions. By 1970 it had local branches in the form of agricultural committees or cooperatives in 42 villages, and members in some 60 other villages were assisted through its institutions; its total membership was over 8,000 families. The Federation worked through 14 associations for specific branches of agriculture and a number of affiliated companies, including mortgage and benefit funds, and companies for supply, marketing, and transportation. Also affiliated were 80 agricultural, 10 citrus-growing, and 11 transportation cooperatives, the Pardess citrus-growers' syndicate and the wine-growers' association of Rishon le-Zion and Zikhron Ya'akov. The Federation maintained an agricultural secondary school at Pardes Hannah and supported youth and sports clubs. It was among the founders of Kuppas Holim Ammamit (People's Sick Fund; now Kuppas Holim Me'uhedet) which provides medical care for its members. It took the initiative in expanding a number of older moshavot through the absorption of new settlers and assisted in founding several new moshavim.

**FARO**, city in S. Portugal, Algrave province. Jews were organized there as a community in the 15<sup>th</sup> century. The first book to be printed in Portugal, the Hebrew Pentateuch, in square type and vocalized, was published in Faro in 1487 by Don Samuel Porteira (see \*Incunabula). By 1494 (or 1496?) the Porteiros had printed at least 14 Talmud tractates, of which fragments only have survived. At the expulsion from Portugal in 1497 David Porteira went to Pesaro (Italy) where he continued printing Talmud tractates. Traces of the Farense type can also be found in Fez. Members of a Faro family (Marranos?) lived in Bayonne, London, Dublin, and Jamaica in the 17<sup>th</sup> and 18<sup>th</sup> centuries. At the beginning of the 19<sup>th</sup> century Jews again settled in Faro; a cemetery was opened in 1820, and a synagogue in 1850. Early in the 20<sup>th</sup> century the community comprised about 50 families. In 1970 there were no more than five Jews living in the whole province, and the two synagogues were in disuse.

**FASSŪTA**, Christian-Arab village in western Upper Galilee, Israel, 3 mi. (5 km.) northeast of Ma'alot, identified with Mifshata where the priestly family of Harim settled after the destruction of the Second Temple. In the Middle Ages, the village is mentioned by the poet Eliezer ha-Kallir. Cave tombs, parts of ancient buildings, and cisterns have been found at the site. Its inhabitants, most of whom belong to the Greek-Catholic (Uniate) faith, are engaged principally in growing olives, deciduous fruit, and tobacco. The village's jurisdiction extends over 0.3 sq. mi. (0.785 sq. km.). In 2002 its population was 2,860.

**FAST, HOWARD MELVIN** (1914–2003), U.S. author, best known for his imaginative historical novels as well as detective fiction published under the name E.V. Cunningham. *Fallen Angel* (1951) was published under the name of Walter Ericson. Born and educated in New York City, Fast spent the Depression years of the 1930s working in many parts of the U.S. at various jobs. Some early novels had no success, but in 1937 his story *The Children* attracted favorable notice when it appeared in *Story* magazine. When his *Place in the City* was published in the same year, Fast quickly gained recognition. A number of his works deal with American history, notably *Conceived in Liberty* (1939), *The Unvanquished* (1942), *Citizen Tom Paine* (1943), *Freedom Road* (1944), and *April Morning* (1961). Fast also wrote on themes involving injustice, as in *The Passion of Sacco and Vanzetti* (1953), and on oppression as in *The Last Frontier* (1942), an epic account of an American Indian tribe's attempted flight to Canada and in *Spartacus* (1952). During the years 1943–56 Fast was an active member of the American Communist Party, and in 1950 he was jailed for contempt of Congress. One of the leading American leftist writers of the 1950s, he was awarded the Stalin Peace Prize in 1953. The later excesses of the Stalin regime disillusioned him, however, and he explained his break with Communism in *The Naked God* (1957). Despite his political activities, Fast wrote a number of books on Jewish themes, including *Haym Salomon: Son of Liberty* (1941), a young people's biography of the American Revolution's financier. Two other historical works were *Romance of a People* (1941) and a *Picture-Book History of the Jews* (1942), written in collaboration with his wife. *My Glorious Brothers* (1949), generally considered one of Fast's outstanding novels, retells the story of the Maccabean revolt, while *Moses, Prince of Egypt* (1958) was planned as the first of a series of works on the life of the great lawgiver. In his "Immigrants" novels, Fast

studies, against a vast sweep of modern American history, beginning with the last part of the 19<sup>th</sup> century, the interweaving destinies and social mobility of immigrant families, one of them being the Levy progeny. Fast's television scriptwriting resulted in his receiving an Emmy award from the U.S. National Academy of Television Arts and Sciences in 1977. His autobiography, *Being Red*, appeared in 1990. His novel *The Bridge Builder's Story* (1995) traces a young gentile man's acceptance of his own life as he finds understanding through identification with both the suffering and survival of Jews in the Holocaust. Scott Waring's maturation, achieved through analysis, is a liberation from the past and an ability to create a life that comports with this new-found freedom.

**FASTING AND FAST DAYS**, the precept (or custom) of refraining from eating and drinking.

#### In the Bible

Although the origins of the ritual of fasting are obscure, several current theories claim that it originated as (1) a spiritual preparation for partaking of a sacred meal (W.R. Smith); (2) a method for inducing a state of susceptibility to visions (E.B. Tylor); and (3) a means of providing new vitality during periods of human or natural infertility (T.H. Gaster). Scriptural citations have been adduced to support all these theories, but fasting in the Bible clearly emerged in response to more spiritual needs. The Hebrew root for fasting, *zwm* (צום), can be used both as a verb and a noun, e.g., "David fasted a fast" (11 Sam. 12:16), a meaning verified in the next verse: "he ate no food." A synonymous idiom *'innah nefesh* (lit. "afflict the body") includes fasting as part of a general regimen of abstinence, a broader meaning confirmed by the following:

(a) laws annulling women's vows and oaths that contain the phrase "all self-denying oaths to afflict her body" (Num. 30:14, cf. verses 3, 7, 10–13), referring to all forms of abstinence, not just fasting; (b) Daniel, who expressly "afflicts himself" (Dan. 10:12) not only by abstaining from choice food, meat, and wine (in biblical terminology, he is not actually fasting) but also from anointing himself (10:3); and (c) the example of King David, who, in addition to fasting, sleeps on the ground, does not change his clothes, and refrains from anointing and washing (11 Sam. 12:16–20, though the term *'innah nefesh* is absent). In biblical poetry *zwm* and *'innah nefesh* are parallel but not synonymous. Indeed, one verse (Isa. 58:5) indicates that it is rather the root *zwm* which has taken on the broader sense of *'innah nefesh*: "...that a man should bow his head like a bulrush and make his bed on sackcloth and ashes, is this what you call a fast...?" Thus, the rabbis declare that *'innah nefesh*, enjoined for the \*Day of Atonement (Lev. 16:29, 31; 23:27–32), consists not only of fasting but of other forms of self-denial

such as abstention from “washing, anointing, wearing shoes, and cohabitation” (Yoma 8:1; cf. Targ. Jon., Lev. 16:29).

Fasting is attested in the oldest strata of biblical literature and there can be no doubt that spontaneous fasting was widespread from earliest times both among individuals and groups. In the ritual practiced in the First Temple, fasting was clearly a permanent feature (Isa. 1:13, lxx; Jer. 36:9, “before the Lord”; cf. Joel 1:14; 2:15–17). The death of a national leader (e.g., King Saul) could initiate a day-long fast (11 Sam. 1:12), or, alternatively, the fast might be observed for seven days (1 Sam. 31:13). The authority to proclaim a public fast was vested in the elders of the local community, who, however, could be pressured by the royal palace to proclaim a fast (e.g., for Naboth’s undoing, 1 Kings 21:8–12).

The purposes of fasting are various. Its most widely attested function, for the community as well as the individual, is to avert or terminate a calamity by eliciting God’s compassion. For example, God mitigates Ahab’s punishment because he fasted and humbled himself (1 Kings 21:27–29). King David fasted in the hope that “the Lord will be gracious to me and the boy will live. But now that he is dead why should I fast?” (11 Sam. 12:22–23). Many other passages also indicate the use of fasting as a means of winning divine forgiveness (e.g., Ps. 35:13; 69:11; Ezra 10:6), implying that fasting is basically an act of penance, a ritual expression of remorse, submission, and supplication.

Fasting was practiced as a preparation for communing with the spirits of the dead or with the Deity, as when Saul fasted the day before the appearance of Samuel’s apparition (1 Sam. 28:20). To be vouchsafed a theophany, Moses fasted for as long as 40 days (Ex. 34:28 [twice, according to Deut. 9:9, 18]; Elijah, 1 Kings 19:8). On the two occasions when Daniel’s prayers were answered by means of a vision (Dan. 9:20ff.; 10:7ff.), his preparatory rituals included fasting (Dan. 9:3; 10:3). That death occasioned a fast is implied by the couriers’ surprise when King David refused to fast after the death of the infant son born to him by Bath-Sheba (11 Sam. 12:21).

When a calamity, human or natural, threatened or struck a whole community, a public fast was proclaimed. Thus, Israel observed fasts in its wars against Benjamin (Judg. 20:26), the Philistines (1 Sam. 7:6; 14:24), and its Transjordanian enemies (11 Chron. 20:3); similarly fasts were observed in the hope of averting annihilation by the Babylonians (Jer. 36:3, 9; see below) and by the Persians (Esth. 4:3, 16). The purpose of fasts during wartime was to seek God’s direct intervention (e.g., 1 Sam. 7:9ff.) or advice as transmitted through an oracle (e.g., Judg. 20:26–28). Fasting served as a means of supplicating God to end a famine caused by a plague of locusts (Joel 1:14; 2:12, 15), and to alleviate the oppression of foreign rule (Neh. 9:1). As a preventive or intercessory measure, fasting was used to avert the threat of divine punishment, exemplified by the fast declared for Naboth’s alleged cursing of God (1 Kings 21:9) and after Jonah’s prophecy of Nineveh’s doom (3:5).

The biblical evidence thus far cited indicates that fasting, both individual and collective, was a spontaneous reac-

tion to exigencies. In the pre-exilic period there is no record of specific fast days in the annual calendar (except the Day of Atonement), although some Bible critics even conjecture that this, too, was originally an emergency rite and was fixed on the tenth of Tishri only at the end of the First Temple. There is a record of a fast day in Jeremiah’s time (Jer. 36:3ff.), but this too originated as an emergency rite (“a fast day was proclaimed,” verse 9) and was not repeated. That portion of Deutero-Isaiah which describes a fast (Isa. 58:3ff.) became the *haftarah* reading for the Day of Atonement morning service, but the text can hardly be speaking of an observance of the Day of Atonement (cf. v. 4).

Fixed fast days are first mentioned by the post-Exilic prophet Zechariah who proclaims the word of the Lord thus: “The fast of the fourth month, the fast of the fifth, the fast of the seventh and the fast of the tenth...” (Zech. 8:19; cf. 7:3, 5). Jewish tradition has it that these fasts commemorate the critical events which culminated in the destruction of the Temple: the tenth of Tevet (the tenth month), the beginning of the siege of Jerusalem; the 17<sup>th</sup> of Tammuz (the fourth month), the breaching of the walls; the ninth of Av (the fifth month), when the Temple was destroyed; and the third of Tishri (the seventh month), when Gedaliah, the Babylonian-appointed governor of Judah, was assassinated. Some scholars maintain that these fast days are much older, marking the beginning of a Lenten period which preceded the seasonal festivals, and to which only later tradition affixed the events of the national catastrophe. It is argued that the historical basis for the four fast days coinciding with the events ascribed to them is weak in the light of present knowledge. Jeremiah dates the destruction of the First Temple to the tenth of Av (52:12ff.), whereas 11 Kings claims the seventh (25:8ff.); there is, however, no biblical witness for the ninth. It is surprising that a permanent fast day was proclaimed for the murder of Gedaliah, who was a Babylonian puppet and not a member of the House of David. Lastly, there is no scriptural authority for the 17<sup>th</sup> of Tammuz as the date for the breaching of the walls of Jerusalem.

Nevertheless, the claim of the Book of Zechariah (e.g., 7:5) that the four fasts were instituted upon the destruction of the state cannot be discounted. If, as it is now suggested, the fast recorded in Jeremiah was prompted by the sacking of Ashkelon (November/December 604 B.C.E.) and by the similar fate which threatened Jerusalem, it is then conceivable that four different fast days sprang up simultaneously as a reaction to the trauma of destruction and exile. Moreover, would Zechariah have been asked whether the fasts should be abolished if the historical reality of the Second Temple had not rendered them meaningless? Indeed, the people consulted the prophet Zechariah about abolishing the fasts only when the Second Temple was approaching completion (Zech. 7:1; cf. Ezra 6:15), a time which coincided with the end of the 70 years of exile predicted by Jeremiah (Zech. 7:5; cf. Jer. 25:12). There is no need to look for other reasons to account for the proclamation of the fasts than the destruction of Jerusalem and the Temple.

Thus, fasting, a spontaneous phenomenon in the days of the First Temple, may have entered the calendar as a regular and recurring event only after the exile. Finally, fasting as a discipline, a routine for the pious, is attested only in post-biblical times in the Apocrypha, Pseudepigrapha, and Qumran literature.

[Jacob Milgrom]

### Second Temple Period

During the Second Temple period, daily or biweekly fastings were practiced for reasons of \*asceticism, especially among women (Judith 8:6; Luke 2:37; TJ, Hag 2:2, 77d), but also among men (Luke 18:12; Mark 2:18), or in preparation for an apocalyptic revelation (Dan. 10:3, 12; ii Bar. 12:5; 20:5–21:1; 43:3; iv Ezra 5:13–20; 6:35; Sanh. 65b; TJ, Kil. 9:4, 32b). The Jewish literature of the Second Temple period also advocates fasting as a way of atonement for sins committed either unintentionally (Ps. of Sol. 3:9) or even deliberately (Test. Patr., Sim. 3:4), or to prevent them (*ibid.*, Joseph 3:4; 4:8; 10:1–2). These reasons for fasting were strengthened by the destruction of the Second Temple and even more by the repression of the \*Bar Kokhba revolt and the subsequent religious persecutions.

### Fasting Laws and Customs

The laws of fasting detailed in talmudic literature and by halakhic authorities (Maim. Yad, Ta'aniyyot, 4; Tur and Sh. Ar., OH, 579) have basically not changed from the biblical period. Founded on very ancient popular and spontaneous customs, they were, in the main, like the reasons for fasting, not peculiar to the Jewish people, but current in the whole of the ancient Near East. The description of a public fast held by the Phoenicians of Carthage, at the end of the second century b.c.e. (Tertullian, *De jejuniis* 16), is almost identical to descriptions of fasts in the Bible, in Second Temple literature, and in rabbinic sources.

The fast was accompanied by prayer (during the First Temple period sacrifices were offered) and confession of sins (Judg. 20:26; 1 Sam. 7:6; Ezra 10:1). From the Second Temple period onward, the public fast was also accompanied by the reading of the Torah (Neh. 9:3). On solemn fasts (Ta'an. 4:1; Tosef. Ta'an. 4:1), four prayers – *Shaharit*, *Hazot* (“noon”), *Minhah*, and *Ne'ilat She'arim* – were recited as well as *Ma'ariv*. The \*Amidah of the fast day consisted of 24 benedictions – “the eighteen of every day, to which another six were added” (Ta'an. 2:2–4; *Hemdah Genuzah* (1863), nos. 160–1; Tur, OH, 579) – and the liturgy was elaborated with special passages of supplication (*Anenu* – “Answer us!” Ta'an. 14a), *selihot*, and prayers for mercy. The central part of the service was the sounding of the *shofar* (Joel 2:1) or the *hazozerot* (“trumpets”; i Macc. 3:54), trumpets (as main instruments) accompanied by horns (RH 3:4; Tosef. to RH 3:3). The blowing of *shofarot* and trumpets was performed in a different manner in the Temple and on the Temple Mount from the other localities (RH 27a; Ta'an. 16b); the exact procedure, however, is not known. (According to one opinion, there was no blowing outside the Temple area at all; see Ta'an. 2:4–5.) During the Middle Ages, in some Jew-

ish communities, *shofarot* were sounded, in others, trumpets (see Beit Yosef to Tur, OH, 579).

Prayers were generally held in the open (ii Chron. 20:5; Judith 4:11) and all the people humiliated themselves publicly by tearing their clothes, wearing sackcloth (i Kings 21:27; Joel 2:13; Ps. 35:13; Judith 4:10, 8:5), and putting ashes or earth on their heads (Isa. 58:5; Neh. 9:1; *Joseph and Asenath*, 10). The cemetery was also visited. (For the various ways in which these customs were understood see TJ, Ta'an. 2:1, 65a; Ta'an. 16a.) The humiliation was applied even to the most holy objects; at times also the priests (Joel 1:13; Judith 4:14–15), the king (Jonah 3:6), or the *nasi* (Ta'an. 2:1) wore sackcloth and ashes. There were those who covered even the altar with sackcloth (Judith 4:12), and the ark, containing the Torah scrolls, was taken into the street and covered with ashes (Ta'an. 2:1). During the mass assembly (Joel 2:16; Judith 4:11), one of the elders would rebuke the people and the affairs of the community were investigated in order to determine who was the cause of the evil (i Kings 21:9–13; Ta'an. 2:1; Ta'an. 12b).

In many places young children and animals were obliged to fast – a practice which prevailed not only among other nations (Jonah 3:5, 7; TJ, Ta'an. 2:1, 65b) but even in Israel (Judith 4:9–11; Pseudo-Philo's *Liber Antiquitatum Biblicarum* 30:4–5; concerning the participation of the young children cf. ii Chron. 20:13; Joel 2:16). The sages, however, exempted young children (and animals), the sick, those obliged to preserve their strength, and, in most cases, pregnant and nursing women (Tosef. to Ta'an. 2:12; 3:2).

There is some similarity, especially in the case of the solemn fasts, between the customs of fasting and those of \*mourning. On ordinary fast days only food and drink were prohibited, while on the important ones washing (for pleasure), anointing, the wearing of shoes (for pleasure), and cohabitation were also forbidden. People also refrained from work on these days (some, who were stricter, considered work to be absolutely prohibited (TJ, Ta'an. 1:6, 64c)) and shops were closed (Ta'an. 1:5–6). It was also customary for some to sleep on the ground (ii Sam. 12:16).

Ordinary fast days lasted for the duration of the daylight hours; the important fasts were a full 24 hours. Fasts were held either for one day or sometimes for a series of three or seven days; occasionally even daily for a continued period. (Ta'an. 1:5–6; cf. also e.g., Judith 4:13). In exceptional cases, fasts were also held on the Sabbath and the festivals, but it was usually forbidden to fast on those days; some authorities also forbade fasting on the eve of the Sabbath, of festivals, and of the New Moon. In order not to mar the celebration of joyful events in Jewish history, Hananiah b. Hezekiah b. Garon (first century c.e.) compiled the \**Megillat Ta'anit* (“Scroll of Fasting”) which lists 35 commemorative dates on which a public fast could not be proclaimed. In time, however, the *Megillat Ta'anit* was abrogated. It was customary to hold public fast days on Mondays and Thursdays (Tosef. to Ta'an. 2:4); individuals, however, especially after the destruction of the Temple, took upon themselves to fast every Monday and Thursday (Ta'an. 12a).

The *halakhah* is that in such cases the individual, in contrast to the community, has to commit himself to fast during the afternoon of the preceding day (*ibid.*). It was also possible to fast for a specific number of hours (Ta'an. 11b–12a). On some occasions, the fast was not a total one, but people refrained only from meat, wine, anointment with oil, and other pleasures (Cowley, Aramaic, no. 30; Dan. 10:3; Test. Patr., Reu. 1:10; Judah 15:4; iv Ezra 9:24; as well as generally in talmudic literature and in that of the Middle Ages).

### The Purpose and Conception of Fasting

In the ancient Near East, prayer and fasting were advocated as a means to have one's requests fulfilled by the gods (Ahikar, Armenian version, 2:49, from where, it appears, the idea was derived in Tobit, short version, 2:8; cf. also Test. Patr., Ben. 1:4). The Bible emphasizes that the fast is not an end in itself but only a means through which man can humble his heart and repent for his sins; his repentance must manifest itself in his deeds (Joel 2:13; Jonah 3:8). The idea is especially stressed in Isaiah (58:3ff.) where the contrast is made between a fast which is not accompanied by any real repentance, and which is therefore unacceptable to God, and the true fast which leads to God's merciful forgiveness: "Is not this the fast that I have chosen? To loose the fetters of wickedness, To undo the bands of the yoke, and to let the oppressed go free... Is it not to deal thy bread to the hungry, and that thou bring the poor that are cast out to thy house? When thou seest the naked, that thou cover him... Then shalt thou call, and the Lord will answer."

The Second Temple period literature also stressed that a fast without sincere repentance is valueless and senseless (Test. Patr., Ash. 2:8; 4:3; cf. *ibid.*, Joseph 3:5 – in addition to the fast, Joseph gave his food to the poor and the sick). In the Second Temple period fasting was also seen as an "ascetic exercise" which serves to purify man and bring him closer to God. This appears to have been the original significance of the fasts of the members of the *\*ma'amadot* (Ta'an. 4:2–3 (supplement); cf. *\*Theophrastus* on the Jews who fasted during the offering of the sacrifices, and Philo on the Day of Atonement). This conception of fasting closely resembles the concept of complete abstinence and asceticism whose purpose is to induce ecstasy and apocalyptic visions and is found not only in the apocalyptic literature of the Second Temple period (the *\*Qumran* sect seems to have held a "fast" day of which little is known), but also among certain circles of talmudic rabbis, especially after the destruction of the Temple. This "philosophy" led to an exaggerated propagation of fasting which, in turn, aroused a sharp counteraction in general rabbinic literature; the rabbis condemned ascetic women, especially widows and "fasting maids" (TJ, Sot. 3:4, 19a). R. *\*Yose* even went further and declared: "The individual has no right to afflict himself by fasting, lest he become a burden on the community which will then have to provide for him" (Tosef. Ta'an. 2:12); as did *\*Samuel*, according to whose opinion "Whoever fasts is called a sinner" (Ta'an. 11a).

The study of the Torah is of greater importance than fasting and therefore "a scholar has no right to fast because, in doing so, he decreases the work of heaven" (Ta'an. 11a–b). This led to a trend in the *halakhah* which sought to limit even public fasts and their severity, emphasizing however at the same time the original significance of fasting – good deeds and repentance. It found expression in *\*Saadia Gaon's* opinion (*Ketav ha-Tokhehah ve-ha-Hazharah* – "Letter of Reproach and Warning") that rather than keep a voluntary (or vowed) fast, it is preferable for a person to desist from committing a sin. Fasting was widely practiced by the mystics and the kabbalists, especially by *\*Hasidei Ashkenaz*, but the latter-day *Hasidim* were opposed to the idea.

In modern times, except for the Day of Atonement and the Ninth of *\*Av*, which are the two major fast days, other statutory fasts seem to lack general appeal. Orthodox authorities have, therefore, tried to reinvest some fast days with more relevant meaning (e.g., declaring the Tenth of *\*Tevet* as a fast day to commemorate those who perished during the Nazi persecutions and whose *\*yahrzeit* is unknown) but to no great avail. The extension of Jewish sovereignty over the entire city of Jerusalem (1967) has increased the tendency to abolish the fast days of the Third of Tishri (Fast of Gedaliah), the Tenth of Tevet, and the 17<sup>th</sup> of *\*Tammuz* (but not the Ninth of *\*Av*). Reform Judaism recognizes only one mandatory fast – the Day of Atonement. Its general attitude toward other fast days (public or private) is negative, based upon Isaiah 58:3–8.

[Moshe David Herr]

### Classification of Fasts

Fast days fall into three main categories: (1) fasts decreed in the Bible or instituted to commemorate biblical events; (2) fasts decreed by the rabbis; (3) private fasts.

(1) FASTS DECREED OR MENTIONED IN THE BIBLE. The Day of Atonement (Yom Kippur) on which it is commanded "Ye shall afflict your souls" so that the individual may be cleansed from sins (Lev. 16:29–31; 23:27–32; Num. 29:7ff.); this is the only fast ordained in the Pentateuch.

The Ninth of Av (*Tishah be-Av*), a day of mourning for the destruction of the First and Second Temples (see Jer. 52:12–13 where, however, the date is given as the Tenth), and other calamitous occasions.

The 17<sup>th</sup> of Tammuz, in commemoration of the breaching of the walls of Jerusalem in the First Temple period (Jer. 39:2 where the date is the 9<sup>th</sup>) and *\*Titus* breaching the walls of Jerusalem, and of other calamities which befell the Jewish people (Ta'an. 4:6, Ta'an. 28b, also Sh. Ar., OH, 549:2).

The Tenth of Tevet, in memory of the siege of Jerusalem by *\*Nebuchadnezzar*, king of Babylon (II Kings 25:1–2, Jer. 52:4ff.; Ezek. 24:1–2).

The Third of Tishri, called *Zom Gedalyah* (the Fast of Gedaliah), in memory of the slaying of Gedaliah and his associates (Jer. 41:1–2; II Kings 25:25).

The Fast of \*Esther (*Ta'anit Ester*) on the 13<sup>th</sup> of Adar, the day before \*Purim (Esth. 4:16).

Besides the Day of Atonement, which is a pentateuchal fast, the other four fast days were also already observed in the period of the Second Temple. \*Zechariah prophesied that they would be transformed into days of joy and gladness (Zech. 8:19).

On the Day of Atonement and on the Ninth of Av, fasting is observed by total abstention from food and drink from sunset until nightfall of the following day; on the other fast days, the fast lasts only from before dawn until nightfall of the same day. All fasts may be broken if danger to health is involved. Pregnant and nursing women are, under certain circumstances, exempt from observance (Sh. Ar., OH, 50:1 (Isserles) and 55:5).

If one of the above occurs on a Sabbath, the fasting is delayed until Sunday (Meg. 1:3 and Meg. 5a); only in the case of the Day of Atonement is the fast observed even on Sabbath. In the case of the Fast of Esther, observance is on the preceding Thursday (Sh. Ar., OH, 686:2).

(2) FASTS DECREED BY THE RABBIS. It has become customary for the especially pious to fast from morning until evening on the following days:

During the Ten Days of \*Penitence (i.e., between Rosh Ha-Shanah and the Day of Atonement) and as many days as possible during the month of Elul (Sh. Ar., OH, 581:2).

The first Monday and Thursday, and the following Monday after \*Passover and \*Sukkot (Tur and Sh. Ar., OH, 492). This fast was interpreted as an atonement for possible sins committed while in a state of drunkenness and gluttony during the holidays (see Tos. to Kid. 81a s.v. *Sekava*).

\*ShOVaVIM TaT (initial letters of eight consecutive weekly Pentateuch portions starting with *Shemot* which are eight Thursdays of the winter months of an intercalated year).

During the \*Three Weeks of Mourning between the 17<sup>th</sup> of Tammuz and the Ninth of Av (Tur. and Sh. Ar., OH, 551:16). This fast was motivated by a profound grief for the destruction of Jerusalem.

The Seventh of \*Adar, traditional date of the death of Moses observed in many communities by the members of the \**hevra kaddisha* ("burial society") who fasted prior to their annual banquet held on the evening of that same day.

Yom Kippur Katan ("Minor Yom Kippur"), the last day of each month, on which many communities fasted and recited a special liturgy.

The eve of Passover, firstborn males' fast. This fast is a symbol of the sanctification of the Jewish firstborn who were saved during the tenth plague in Egypt (Ex. 13:1ff.). It is also kept in order to stimulate the appetite for the \**mazzah* ("unleavened bread") at the festive meal (Sof. 21:3).

Days commemorating disastrous events in Jewish history (full list in Tur and Sh. Ar., OH, 580:2).

PRIVATE FASTS. In addition to the fixed days listed above, fasts are held on the following private occasions:

The anniversary (\**yahrzeit*) of a parent's death or of that of a teacher (Ned. 12a).

The groom and the bride fast on their wedding day until the ceremony (Isserles to Sh. Ar., EH, 61:1), unless it is Rosh Hodesh (Isserles to Sh. Ar., OH, 573:1).

To avert the evil consequences of nightmares (*Ta'anit Halom*). In talmudic times, it was believed that bad dreams could have pernicious effects (Shab. 11a). This fast was regarded as of such urgency that the rabbis permitted it even on the Sabbath, but advocated fasting on a weekday as well as a repentance for having dishonored the Sabbath joy through fasting (Ta'an. 12b; Ber. 31b). In later centuries, however, the obligatory nature of this fast was mitigated by halakhic authorities (see Sh. Ar., OH, 288, 5).

If a Torah scroll is dropped, it is customary for those present to fast a day.

In the mishnaic period, the members of the \*Sanhedrin fasted on the day on which they sentenced a person to death (Sanh. 63a).

**FASTLICHT, ADOLFO** (1905–1964), Mexican Zionist leader. Born in Galicia, then part of Austria, he studied in traditional and public schools there. He was also active in the Zionist youth organizations. In 1925 he emigrated to Mexico, where he opened a dental workshop together with his brother. He continued his studies and graduated as a dentist. Fastlicht was involved in the establishment of the Organización Sionista Unida "Kadima" (the Zionist Federation) in 1925 and acted as its vice president in 1929. In 1933 he traveled to Erez Israel, where he stayed a year. After his return he served as president of B'nai B'rith, Maccabi, the Zionist Federation, the Anti Defamation League, and the Comité Central – the umbrella organization of the Jewish community that acted as its political representative. Fastlicht was the first honorary consul of the State of Israel in Mexico, promoted the organization of the Instituto de Intercambio Cultural México-Israel, and was the honorary president of the Israeli-Mexican Commerce Chamber.

[Efraim Zadoff (2<sup>nd</sup> ed.)]

**FATIMIDS**, Shi'ite Muslim dynasty which ruled in \*Egypt (969–1171), and in other parts of North Africa (\*Tunisia, 909–

1051), and the Near East (\*Syria, 969–1076 and \*Palestine, 969–1099). The Fatimids traced their ancestry to Fāṭima, the daughter of Muhammad, and ʿAlī, her husband, who, in their opinion, was his only rightful successor. The Jews enjoyed a reasonable degree of tolerance, security, and prosperity during their reign.

The establishment of the Fatimid dynasty resulted from the efforts of the Ismāʿīli branch of the Shiʿa, which sought to restore the caliphate to the direct descendants of the Prophet and to reconcile Islamic religion, based on divine revelation, with Greek philosophy, in order that the ideas of other religions could merge with their own. Hence, the members of this Islamic sect were inclined to be tolerant. Their liberal attitude toward non-Muslim subjects also stemmed from the fact that the great majority of their Muslim subjects remained faithful to orthodox Sunni Islam and hostile to the Shiʿite caliphs who therefore were forced to appoint Christian and Jewish intellectuals as officials and ministers. Christians could build new churches without difficulty and celebrate their holidays with solemn processions, sometimes attended by the caliphs themselves. The second Fatimid caliph of Egypt, al-ʿAzīz (975–996), appointed two brothers of his Christian wife to the posts of patriarch of \*Jerusalem and \*Alexandria respectively. While Jews did not attain such exalted positions, they mostly enjoyed religious freedom and their civil rights were not curtailed. Usually the authorities did not enforce the repressive laws of the Covenant of \*Omar, which demanded that distinctive signs be worn by non-Muslims, and the duties of Jewish merchants were less than those required by Islamic law. Recent research on \**genizah* documents has revealed considerable data on non-Jews, some from Christian countries, who went to Egypt in the 11<sup>th</sup> century in order to convert to Judaism (see N. Golb, in *Sefunot*, 8 (1964), 85ff.; E. Ashtor, in *Zion*, 30 (1965), 69ff.)

The third caliph, al-Ḥākim (996–1020), however, persecuted non-Muslims during the latter part of his reign. In 1012, he took decisive action to humiliate non-Muslims and segregate them from the “true believers” – the two aims of the Covenant of Omar. Jews and Christians were forbidden to ride horses and to keep Muslim servants. Christian sources indicate that many churches were destroyed, including the Church of the Holy Sepulcher in Jerusalem. Many Christians and some Jews embraced Islam or left the country to escape the persecutions. Al-Ḥākim’s measures served as the model for Muslim zealots in the future. His successor al-Zāhir (1020–34) and the later Fatimids returned to the traditional policy of tolerance. But *genizah* documents show that on occasion Jews were victims of the hatred of viziers and other dignitaries. Some were Christians who attempted to harass the Jews and bring about their dismissal from government posts. The Jewish officials, called *sar* (“commander”) in Hebrew documents, protected their coreligionists, appointed them to various posts, and gave them government commissariat orders. They never rose to the position of vizier, as some Christians did, but some held important posts at court, thus enhancing the social standing of

the community. The first of these dignitaries was the Jewish court physician of Caliph al-Muʿizz, the first Fatimid of Egypt. Some scholars have identified him with the general Jawhar or with Yaʿqūb \*Ibn Killis, a Jewish convert to Islam, who became vizier in Cairo. However, B. \*Lewis has proved that the Italian Jew Paltiel of Oria who appears in *Megillat Aḥimāʾaz* was Mūsā b. Eleazar, the court physician of al-Muʿizz. In about 994, Manasseh b. Ibrāhīm al-Qazzāz, praised as a benefactor of Syrian Jewry in Hebrew poems found in the *genizah*, became head of the administration in Syria when the Christian ʿĪsā b. Nestorius was appointed vizier of the caliph al-ʿAzīz. The brothers Abū Saʿd and Abū Naṣr (Hebr. Abraham and Ḥesed) b. Sahl (Yashar; possibly Karaites) who were merchants from \*Tustar, southwestern Persia, and influential at the court in \*Cairo in the second quarter of the 11<sup>th</sup> century, were murdered in 1047. In the early 12<sup>th</sup> century, the Jew Abu al-Munajjā Shaʿyā, chief minister of agriculture, ordered the digging of a canal which still bears his name.

For various reasons, the economic policy of the Fatimids was very advantageous for the Jews. The caliphs’ interest in increasing trade between Egypt and other countries stemmed partly from a belief that they could thus win converts to their religious persuasion. They succeeded in diverting the trade between India and the Near East from the Persian Gulf to the Red Sea which became the main artery of a great international trade. Many Jewish merchants, of varying degrees of wealth, participated in the India trade, as the Fatimids neither created monopolies nor harassed small merchants and industrialists in other ways in the manner of other Muslim rulers.

The Jewish communities of Egypt and Syria were headed by a *nagid*, who was appointed by the Fatimid caliph (see \*Nagid).

Medieval Jewish tradition ascribes the creation of this position to the Fatimids’ desire to remove the influence of the \*exilarch on Egyptian Jewry. This view has been accepted by modern scholars. S.D. \*Goitein, however, holds that the office of the *nagid* developed independent of the aspirations and the policies of the Fatimids. Apparently the first of the *negidim* was Paltiel of Oria. Later on other court physicians held this post, including Judah b. Saadiah (1065–79), his brother Mevorakh (1079–1110), and \*Samuel b. Hananiah (c. 1140–59).

**FEARING, KENNETH** (1902–1961), U.S. poet and novelist. Fearing was born in Chicago and graduated from the University of Wisconsin and later settled in New York. He is regarded as a significant voice in 20<sup>th</sup>-century American poetry. His verse, mainly satirical, was written in the vernacular and gave expression to the nightmarish quality of urban life dur-

ing the late 1930s and 1940s. His first volume of poetry, *Angel Arms*, was published in 1929. This was followed by *Poems* (1935), *Dead Reckoning* (1938), *Collected Poems* (1940), *Afternoon of a Pawnbroker* (1943), *Stranger at Coney Island* (1948), and *New and Selected Poems* (1956). The movies, newspapers, comic strips, radio, and advertising were all targets for his mordant attacks, as was the American faith in success and wealth. Fearing's effects are achieved by a mastery of objective presentation, which anticipated the surrealist manner, pop poetry, and concrete trends of a later generation of American poets. Fearing's first novel, *The Hospital* (1939) was followed by *The Dagger in the Mind* (1941); *Clark Gifford's Body* (1942); *The Big Clock* (1946), the story of a manhunt; *The Loneliest Girl in the World* (1951); *The Generous Heart* (1954); and *The Crozart Story* (1960).

**BIBLIOGRAPHY:** S.J. Kunitz (ed.), *Twentieth Century Authors (First Supplement)* (1955), 319. **ADD. BIBLIOGRAPHY:** R. Barnard, *The Great Depression and the Culture of Abundance: Kenneth Fearing, Nathanael West and Mass Culture in the 1930s* (1995); A. Anderson, *Fear Ruled Them All: Kenneth Fearing's Literature of Corporate Conspiracy* (2003).

[David Ignatow]

**FEAR OF GOD** (Heb. *yirat elohim*, but in the Talmud *yirat shamayim*, lit. "fear of Heaven"), ethical religious concept, sometimes confused with *yirat het*, "the fear of sin," but in fact quite distinct from it. The daily private prayer of Rav (Ber. 16a), which has been incorporated in the Ashkenazi liturgy in the Blessing for the New Moon, speaks of "a life of fear of Heaven and of fear of sin." In the latter, "fear" is to be understood in the sense of apprehension of the consequences of sin but in the former in the sense of "reverence"; as such it refers to an ethical outlook and a religious attitude, which is distinct from the actual performance of the commandments. "Fear of God" frequently occurs in the Bible, particularly with regard to Abraham's willingness to sacrifice Isaac (Gen. 22:12), and it is mentioned as that which God primarily desires of man (Deut. 10:12). Nevertheless it does not seem to have an exact connotation in the Bible (see \*Love and Fear of God), and it was the rabbis who formulated the doctrine of Fear of God with some precision. Basing itself on Leviticus 19:14 (and similar verses, e.g., 19:32, 25:17, 36:43), the *Sifra* (in loc. cf. Kid. 32b) maintains that the phrase "thou shalt fear thy God" is used only for those commandments which "are known to the heart" ("the sin is known to the heart of the person who commits it, but other men cannot detect it" – Rashi in loc.) i.e., there are no social sanctions attached to it, and the impulse behind its performance is reverence for God. This is, in fact, reflected in Exodus 1:17 and it is emphasized, from a slightly different aspect, in the famous maxim of Antigonus of \*Sokho, "Be as servants who serve their master without thought of reward, but let the fear of heaven be upon thee" (Avot 1:3). It was spelled out by Johanan b. Zakkai, when on his deathbed he enjoined his disciples: "Let the fear of Heaven be upon you as the fear of flesh and blood." In answer to their surprised query "and not more?" he answered, "If only it were as much!

When a person wishes to commit a transgression he says, 'I hope no man will see me'" (Ber. 28b). The characteristic of the God-fearing man is that he "speaketh truth in his heart" (Ps. 15:2; BB 88a).

The fear of God complements knowledge of the Torah. According to one opinion it is only through fear of heaven that one can arrive at true knowledge of the Torah: "He who possesses learning without the fear of heaven is like a treasurer who is entrusted with the inner keys but not with the outer. How is he to enter?" Another opinion is: "Woe to him who has no courtyard yet makes a gate for it," since it is through knowledge that one attains fear of God (Shab. 31a–b). Since fear of God is a state of mind and an ethical attitude, it can best be acquired by considering and following the example of one's teacher by waiting on him, with the result that one of the consequences of depriving a disciple of the privilege of waiting upon his master is that he deprives him of the fear of God (Ket. 96a). The quality and practice of fear of God depend upon man alone. The statement upon which is based the fundamental Jewish doctrine of the absolute free \*will of man is couched in the words "Everything is in the hands of heaven except the fear of heaven." The proof verse for this statement is "what doth the Lord thy God require of thee, but to fear the Lord" (Deut. 10:12), and, countering this, the Talmud asks, "Is then fear of heaven such a small thing?" answering that it was only Moses who so regarded it (Ber. 33b).

For the relationship between fear of God and love of God see \*Love and Fear of God.

[Louis Isaac Rabinowitz]

The traditional attitude toward the fear (*yir'ah*) of God was thus ambivalent: it was highly valued, but at the same time was regarded as inferior to the love of God. (Cf. "Love and Fear of God; see TB Sota 31a). Later Jewish thought attempted to resolve this ambivalence by positing the fear of God as an equivocal term. \*Bahya ibn Paquda (11<sup>th</sup> century), in his *Duties of the Heart* 10:6, characterized two different types of fear as a lower "fear of punishment" and a higher "fear of [divine] glory." Abraham \*Ibn Daud (early 12<sup>th</sup> century) differentiated between "fear of harm" (analogous to the fear of a snake bite or of a king's punishment) and "fear of greatness," analogous to respect for an exalted person, such as a prophet, who would not harm a person (*The Exalted Faith* VI). Maimonides (late 12<sup>th</sup> century) categorized the fear of God as a positive commandment. Nevertheless, the halakic status he accorded to the fear of God did not prevent it from being presented in diverse ways. In his *Book of the Commandments* (commandment #4), Maimonides characterized it as "the fear of punishment," whereas in his *Code* he characterized it as the feeling of human insignificance deriving from contemplation of God's "great and wonderful actions and creations" (Foundations of the Torah 2:1). Nevertheless, later in the *Code* Maimonides presents "service based on fear" as a religiously inferior type of behavior of "the ignorant (*'amei ha-arez*), women and children," deriving from their hope for reward and fear of punishment (Laws of Repentance 10:1). At the end of his *Guide of the*

*Perplexed* (3:52), Maimonides characterizes fear as resulting from the entire system of commandments, and as expressing a sense of shame in the presence of God. Isaac Arama (15<sup>th</sup> century) differentiates among three types of fear in his *Binding of Isaac* (ch. 92): in addition to the sublime fear of greatness and inferior “fear not for its own sake” he posits a fear which is the fruit of belief in the divine will, which makes possible undetermined events. In another work (*Hazut Kashah*, ch. 3) Arama characterizes this third type of fear as a supra-philosophical rank, because, in his view, although the philosophers recognized God’s supreme greatness, they did not fear God, since in their view God could not harm people.

The fear of God was also characterized in diverse ways in the Kabbalah by means of the different \*sefirot: fear was symbolized by the *sefirot* “wisdom” (*hokhmah*) (based on Job 28:28), “understanding” (*binah*) (based on Proverbs 1:7), “power” (*gevurah*), which has the same *gematria* (numerical value) as *yir’ah* (fear), or “kingdom” (*malkhut*) (based on Mishnah Sanhedrin 2:5).

**FEATHER, LEONARD** (1914–1994), jazz critic, producer, composer, lyricist, and instrumentalist. Feather was born into an upper-middle-class Jewish family in the London suburbs and was supposed to follow his father into the family garment business, but after a friend played Louis Armstrong’s “West Side Blues” for him in a local record store, young Leonard decided on another career path. He had already been studying piano and clarinet, so his musical knowledge was greater than many of his early competitors. At the urging of the American record producer and critic John Hammond, Feather made his way to the United States in 1935 and never looked back. He quickly became an influential critic at *Esquire* and *Metro-nome*, eventually landing the job of jazz critic at the *Los Angeles Times*. More important, Feather was a prolific author, responsible for several key texts including *The Encyclopedia of Jazz* (co-edited with Ira Gitler) and the pioneering volume *Inside Bebop* (1949), his first book, and countless liner notes. From his pulpit at the *LA Times*, Feather was also a tireless opponent of segregation and racism in jazz at a time when few regular jobs were open to African-American musicians.

[George Robinson (2<sup>nd</sup> ed.)]

**FEDER, ERNST** (**Ernesto A.**, pseudonym: **Spectator**; 1881–1964), German lawyer and journalist. Born into a liberal German-Jewish family in Berlin, Feder studied law, economics, and history, completing his Ph.D. with a prize-winning thesis (*Verantwortlichkeit fuer fremdes Verschulden nach dem*

*Buergerlichen Gesetzbuche*) at Berlin University in 1902. From 1907, he worked as an independent lawyer in Berlin, joined by Arthur Loewe in 1911. He also contributed to several legal and economic journals. In 1918, together with Theodor \*Wolff and others, he founded the German Democratic Party (DDP) and was elected its chairman. From 1919 to 1931, he was domestic politics editor of the *Berliner Tageblatt*, the leading democratic-liberal paper of the Weimar Republic (edited by Wolff from 1907 to 1933). Owing to a dispute with the publisher, Feder resigned in 1931 and resumed private law practice besides working as a freelance writer and journalist. He was elected a member of several press associations and judicial bodies, including the Tribunal d’Honneur International des Journalists in The Hague (1931–33). An ardent supporter of post-imperial democratic Germany, Feder rejected Zionism and was active in Jewish communal organizations like the \*Central-Verein. He was a close friend of leading German-Jewish figures like Paul \*Nathan and James \*Simon (cf. LBI YB, 10 (1965), 3–23).

In 1933, Feder managed to flee via Switzerland to Paris where he gave lectures at the Collège libre des Sciences Sociales and the Institut de Droit International, contributed to various papers like *Mass und Wert* (est. by Thomas \*Mann) and *Aufbau*, and frequently traveled to Denmark, Finland, and Tunisia. After being interned at the Camp de la Braconne, he fled to Brazil in July 1941. In Rio de Janeiro, he continued lecturing and writing well over 40 papers in Brazil and abroad. After he was awarded the *Bundesverdienstkreuz* in 1952, he was personally invited by Theodor Heuss and others to return to West Berlin, where he lived from 1957 until his death in 1964. His literary papers were donated to the Leo Baeck Institute New York. Among his published works are numerous legal and economic studies (cf. ABJ, 6 (1998), 509–513), several biographies, and historical studies: *Theodor Barth und der demokratische Gedanke* (1919); *Hugo Preuss. Ein Lebensbild* (1926); *Politik und Humanitaet. Paul Nathan. Ein Lebensbild* (1929; cf. LBI YB, 3 (1958), 60–80); *Bismarcks grosses Spiel. Die geheimen Tagebuecher Ludwig Bambergers* (1932); and *Les Huguenots en Allemagne* (1935). Feder’s memoirs, *Encontros / Encuentros* (1944/45), originally appeared in Portuguese and Spanish (German edition: *Begegnungen. Die Groessen der Welt im Zwiegespräch*, 1950). His diaries were first published by A. Paucker, “Searchlight on the Decline of the Weimar Republic – The Diaries of Ernst Feder,” in: LBI YB, 13 (1968), 161–234; *Heute sprach ich mit ... Tagebuecher eines Berliner Publizisten 1926–1932*, ed. C. Lowenthal-Hensel / A. Paucker (1971).

**BIBLIOGRAPHY:** *Aufbau*, no. 12 (1956); *MB* (April 17, 1964 and 1965); W. Roeder (ed.), *International Biographical Dictionary of Central European Emigrés 1933–1945*, vol. I (1980), 168; H. Schmuck (ed.), *Jewish Biographical Archive*, F. 237 (1995), 140–45; Series II, F. II/145 (2003), 197–204; R. Heuer (ed.), *Archiv Bibliographia Judaica*, vol. VI (1998), 505–13 (incl. bibl.).

[Johannes Valentin Schwarz (2<sup>nd</sup> ed.)]

**FEDER, RICHARD** (1875–1970), Czech rabbi; from 1953 chief rabbi of Moravia residing in Brno, and from 1961 also

chief rabbi of Bohemia. After graduating at the Vienna rabbinical seminary, he officiated in Kojetin and other communities, where the preaching was conducted in Czech (Louny, Roudnice nad Labem, and Kolin). During the war he was sent to the concentration camp of Theresienstadt where he was active as a rabbi. A prolific writer, Feder wrote popular works on Jewish lore and conducted research on the history of the communities of Roudnice nad Labem and Kolin. His main works are *Židovská tragedie* ("Jewish Tragedy," 1947), one of the first books published on the Holocaust; *Židovské besídky* ("Jewish Tales"; several volumes) for children; *Hebrejská učebnice* (1923), a textbook of Hebrew, also in German; *Židé a křesťané* ("Jews and Christians," 1919); *Židovství a židé* ("Jews and Judaism," 1955); and *Sinai* (1955), a textbook of Jewish religious instruction. In 1965 the state conferred on Feder a medal in recognition of his part in reconstruction and his "uncompromising stand in the fight against fascism and for peace."

**BIBLIOGRAPHY:** *Věstník židovských náboženských obcí v československu*, 27, no. 8 (1965), 1–2; 27, no. 11 (1965), 2–3; A. Charim, *Die toten Gemeinden* (1966), 29–36; R. Iltis, in: *Židovská ročenka* (1965/66), 78; R. Feder, *ibid.*, 31–38; (1960/61), 28–37.

**FEDER, TOBIAS** (pseudonym of **Tobias Gutman**; c. 1760–1817), Haskalah writer, poet, and grammarian, born in Przedborz, near Cracow. Supporting himself by teaching, proofreading, and commerce, he wandered through Galicia, Poland, and Russia. In Galicia he associated himself with the leading Haskalah writers, differing from them in his sharp polemic style directed against all those whose views on science and literature differed from his own. He was a versatile writer and wrote plays, satires, and studies in linguistics and grammar, seeking to synthesize Haskalah and tradition. However, the major part of his work was apparently lost and only a small fraction ever published, most of it posthumously. His works include: *Kol Nehi* (Warsaw, 1798), an elegy on \*Elijah b. Solomon, the Vilna Gaon – and *Shem u-She'orit* (first published in Lemberg, 1877), a collection of poems. He also wrote poems in honor of Czar Alexander I's victory over Napoleon, *Shir Hazlahat Aleksander be-Ḥazoto et Mitkomemav* (1814) and *Simḥah ve-Sason la-Yehudim* (Berdichev, 1814). Several of his smaller works were published in the Hebrew newspaper *Havazzelet*. His early grammatical work *Beit Toviyyah* (no longer extant) formed the basis for the introduction to Hebrew grammar in his *Mevasser Tov* (Mohilev, 1820?), which included a work on the Masorah, *Menorat Shelomo* of R. Phoebus of Dubrovno, as well as poems and novellae. Feder was also the author of the first anti-Yiddish polemic work in Hebrew *Kol Mehazezim* (Berdichev, 1816; Lemberg, 1853) which was directed against Mendel \*Levin's Yiddish translation of the biblical book of Proverbs. Publication of this polemic was, however, withheld, at the request of Levin's friends, until after the death of both men.

#### FEDERATIONS OF COMMUNITIES, TERRITORIAL.

Throughout the Middle Ages and early modern times individual Jewish communities, though jealous of their independence, formed on occasion federations on a district, regional, or countrywide basis. These were prompted in the Middle Ages in many instances by external needs, principally the obligation imposed by the government to collect state and other taxes on a corporate basis, and in others by internal need and trends. Such consolidations were largely sporadic and came into being for a specific purpose. In some countries, however, they were of long duration. \*Synods in France and other countries brought communities together to consult on matters of mutual interest and to adopt regulations, mainly on the internal social, moral, judicial, and political affairs of the communities. Frequently conferences were convened for such purposes.

In Aragon communities of entire districts formed into *collecta* for tax collection. In other countries also the insistence of the state authorities to bargain on taxes with the communities of the entire domain, or at least of a wide region, resulted in the formation of federations, some ephemeral, and some more lasting; some were formed on Jewish initiative and others ordered by the state. Many of these federations of communities, once engaged in a common enterprise, utilized their mutual contacts to further their internal needs. Such were the \*Councils of the Lands of Poland-Lithuania, and Bohemia and Moravia in the late Middle Ages as well as the \*Landjudenschaft of German principalities up to the 18<sup>th</sup> century.

In modern times much of the organization of the new-type Orthodox, Conservative, and Reform congregations has been based on territorial federation. Freed from the task of tax collection they serve on a voluntary basis the religious requirements, social needs, and aims of the trend to which they adhere within the boundaries of the state. The formation of such federations received considerable stimulus through the growing sense of patriotism to the state, the break-up of the old local community, the wish of opponent religious camps to secure a countrywide framework to strengthen their positions, and the rapid development of modern communications systems. The movements to \*autonomism and the implementation of \*minority rights also considerably influenced the formation of federations between the two world wars.

**FEDERBUSCH, SIMON** (1892–1969), rabbi, author, and Zionist leader. Federbusch was born in Narol, Galicia. He was ordained by prominent rabbis in Poland before World War I and also received a rabbinical degree from the Vienna \*Israelitisch-Theologische Lehranstalt in 1923. He settled in Lvov (Lemberg) and was a member of the Polish Sejm (parlia-

ment) from 1922 to 1928, and vigorously supported legislation for Jewish education and for the rehabilitation of Jewish war victims. Active in the Mizrahi movement from his student days, Federbusch helped found Ha-Po'el ha-Mizrachi and was president of the Mizrahi Organization of Galicia from 1924 to 1930. During those years he edited *Gilyonot*, a Hebrew weekly, and *Mizrahah*, a Hebrew monthly. In 1930 he became rabbi of the United Hebrew Congregation of Helsinki, Finland, and the following year was elected chief rabbi of Finland. In this position he promoted interfaith understanding, helped defeat a bill banning *shehitah*, and helped secure Finnish entry visas for many Jewish refugees from Nazi Germany.

In 1940 he moved to New York City, where he was rabbi and principal of the Yeshiva Rabbi Israel Salanter (Bronx), a position he held until his death. He was president of Ha-Po'el Ha-Mizrachi of America from 1942 to 1948. From 1944 he was chairman of the \*Histadrut Ivrit. He was a member of the executive of \*Brit Ivrit Olamit ("The World Hebrew Union"), the executive of the World Jewish Congress, the World Zionist Actions Committee, the World Mizrahi Council, and the presidium of the World Federation of Polish Jews.

Federbusch was the author of many articles and scholarly works in Hebrew, German, Yiddish, English, Polish, and Swedish on rabbinical literature, Jewish philosophy and ethics, and religious Zionist thought. He tried to clarify contemporary problems in the light of classical Jewish sources. Among his works are *Shelemut ha-Yahadut* (1929), *Iyyunim* (1929), *Ha-Musar ve-ha-Mishpat be-Yisrael* (1943, 1947<sup>2</sup>), *Mishpat ha-Melukhah be-Yisrael* (1952), *Ha-Lashon ha-Ivrit be-Yisrael u-ve-Ammim* (1967), *World Jewry Today* (1959), and *Hikrei Yahadut* (1965). He also edited a number of books, such as *Maimonides, His Teachings and Personality* (1956), *Rashi, His Teachings and Personality* (1958), and *Hokhmat Yisrael be-Ma'arav Eirovah* (3 vols., 1958–1965; vol. 3 entitled *Hokhmat Yisrael be-Eirovah*) on modern European Jewish scholars.

**FEDERMAN, MAX** (1902–1991), Canadian labor leader and Zionist. Federman was born in Dzialoszyce, Poland, and in 1920 joined his father, who had previously immigrated to Toronto. Federman found work in the fur industry and became active in the International Union of Fur and Leather Workers. A committed Socialist and strident anti-Communist, he spent 20 years battling Communist infiltration of his union and was regularly denounced as a class renegade in the *Vochenblatt*, the Yiddish Communist weekly in Toronto. In 1935, his union split along ideological lines and finally dissolved in 1955. The union's members joined the Amalgamated Meat Cutters of the AFL/CIO. Federman eventually became manager of the union's Fur and Leather Department in Toronto.

Federman was also active on behalf of the Toronto Jewish community. In the aftermath of World War II he helped

win labor support for the reopening of Canadian immigration and, especially, the removal of barriers to Jewish immigration. He represented labor in fur industry negotiations with the Canadian government regarding the postwar admission of Jewish furriers to Canada from Europe. When the government agreed to the admission of 500 fur workers and their families, Federman was part of the Canadian team that visited Displaced Persons camps in Germany, Austria, and Italy to select the workers.

An ardent Zionist, Federman was chairman of \*Ahdut ha-Avodah-Poalei Zion and instrumental in establishing a vocational training school in Upper Galilee in 1961. In addition, he was active in numerous labor and communal organizations in Toronto, including the Trades and Labour Council, the Executive Trade Union Committee, the Histadrut, the Jewish Labour Committee, the Borochov School, the Co-Operative Commonwealth Federation (CCF) and its successor, the New Democratic Party. Following an upsurge in antisemitic hate activity in Toronto in the early 1960s, Federman joined the Community Anti-Nazi Committee of the Canadian Jewish Congress.

**FEDERN, PAUL** (1871–1950), Austrian psychoanalyst. Federn, the son of a distinguished Viennese physician, graduated from the medical school in Vienna. In 1904 he joined Freud's inner circle, being preceded only by three physicians: Adler, Stekel, and Reitler. His initial studies and publications combined the viewpoints of biology and psychology. In 1912 he contributed papers on sexual subjects and night fears and in 1913–14 papers on sadism, masochism, and dream interpretation, stressing the ego psychological point of view. He also wrote on telepathy and extrasensory perception. During World War I he was a doctor in the Austrian army. Federn devoted himself to the training of analysts and was the chairman of the education committee of the Vienna Society. His interest in social psychology led to a major work, a study of the psychology of revolution, *Zur Psychologie der Revolution: Die vaterlose Gesellschaft* (1919). In the 1920s he wrote papers on many psychoanalytic issues. After Freud's illness in 1924 Federn became his deputy, and continued that function until 1938, when he immigrated to the United States. Federn's most original findings were in the field of ego psychology and the psychoses. He contributed greatly to the understanding of the manifestations of the ego, the sources of its feeling, and the nature of its attachments to objects. His study of the ego, especially in dreams, neuroses, and schizophrenia, permitted him to develop important concepts – at times at variance with those of Freud – which came to be applied in new methods to the therapy of the psychoses. From 1940 the dynamics of the psychosis became clearer to him, and he published papers on the analysis of psychosis (1943) and on the psychotherapy of latent schizophrenia (1949). In his will, Federn entrusted Eduardo Weiss with editing his works on ego psychology, which appeared as *Ego Psychology and the Psychoses* (1953).

[Louis Miller]

**FEFER, ITZIK** (1900–1952), Soviet Yiddish poet. Fefer was born in the Ukrainian *shtetl* of Shpola. He first joined the Jewish Labor Bund but, in 1919, became a member of the Communist Party. Soon after his debut as a Yiddish poet (1920), he became prominent in Soviet-Yiddish literature. In 1922 he formulated his literary credo of *proste reyde* (“simple speech”). By nature lyrical and even sentimental, his Yiddish was rich and idiomatic and his verses rhythmic and musical. He harnessed himself to the party line, and played a central role in the Soviet-Yiddish literary hierarchy. His works, which appeared in Soviet-Yiddish magazines, were often collected and published. Though he wrote the well-known poem “Stalin,” he also wrote “*Ikh bin a Yid*” (“I Am a Jew”) during World War II when the party permitted such poems. His poems *Shotens fun Varshaver Geto* (“Shadows of the Warsaw Ghetto”) are a valuable contribution to the literature of the Holocaust. He also wrote poems about Birobidzhan, the Jewish autonomous region in the Russian Far East, as well as nature poetry and poems for children.

In 1943 Fefer visited the U.S., Canada, Mexico, and the U.K. with Shloyme \*Mikhoels, as a representative of the Jewish \*Anti-Fascist Committee. Arrested in the Stalinist anti-Jewish purges in 1948, he was killed on August 12, 1952. In the 1990s, the publication of archival materials revealed his role as an informer for the Soviet secret police.

**FEIBELMAN, JULIAN BECK** (1897–1980), U.S. Reform rabbi. Feibelman was born in Jackson, Mississippi. After serving in the army during World War I, he was ordained at Hebrew Union College (1926). Feibelman served as assistant rabbi of Reform Congregation Keneseth Israel in Philadelphia, and from 1936 he was rabbi of Temple Sinai in New Orleans, Louisiana. Active in New Orleans community life, he was the spokesman for the Jewish community and a central figure in ecumenism in the area. Feibelman was a lecturer at Tulane University. He served as president of the Louisiana Society for Social Hygiene and the New Orleans Family Ser-

vice Society. His book *The Making of a Rabbi* appeared in 1980.

**FEIBUSCH, HANS** (1898–1998), English painter, sculptor, and lithographer. Born in Frankfurt, Germany, the son of a dentist, he served in World War I and in 1930 was awarded the German state prize for painters. His early work was destroyed by the Nazis. Feibusch came to England in 1933 and was naturalized in 1940. He is especially well known for his murals in churches – including Chichester Cathedral – public buildings, and private houses. These depict classical mythology as well as religious subjects. Emphasizing the human figure, they are elegant and decorative, with a feeling for gesture and rhythm. He also executed colored lithographs and wrote *Mural Painting and The Revelation of St. John* (both 1946), and produced Old Testament figures as well for Stern Hall, London. For much of his life in Britain Feibusch was closely associated with Anglicanism; at the end of his long life he returned to Judaism, and died three weeks short of his hundredth birthday.

**FEIDMAN, GIORA** (1936– ) clarinetist, fourth generation of a klezmer dynasty. Born in Argentina, he studied clarinet with his father, a well-known Klezmer, and from age 14 played with his father at Jewish weddings. He studied at the Buenos Aires conservatory and at 18 was leading clarinetist of the Colon theater orchestra. On the recommendation of Paul \*Kletzki, Feidman joined the Israel Philharmonic Orchestra in 1957, playing with it until 1974. During this period he taught at the Tel Aviv Academy of Music and participated in radio recordings of Israeli folk music. Feidman turned to Klezmer music only in the mid-1960s. When recording for Kol Israel, he decided spontaneously to record the popular tune “Silk Pyjamas” in Klezmer style; it was received so well that Feidman repeated his initiative several times. Feidman concluded that “this is what the Israeli public yearns for.”

In 1969 Feidman was a soloist at the first ḥasidic music festival. There he met the well-known, self-taught Klezmer Moshe (Musa) Berlin, who invited him to play at Meron, where Giora was introduced to Israeli Klezmers and encountered a repertoire influenced by Greek, Turkish and Arab music, new to him. From the outset his playing was distinguished by two styles of performance: one, the familiar eastern European enriched by Feidman's restrained, gentle style with which he performed Ḥasidic tunes, and improvisatory pieces which he termed “*tefillah*” (prayer); the other, his innovative use of a bass-clarinet in addition to clarinet, in the course of a single tune. He toured abroad popularizing Klezmer music among Jewish and non-Jewish audiences, bringing it to concert halls and even to churches and monasteries. His Master classes in Israel and abroad helped entice young musicians, Jewish and

gentile, to this type of music and Klezmer bands began to sprout in Israel and Europe. Feidman did not hesitate to infuse his “Klezmer music” (which included traditional Ḥasidic *niggunim*, Yiddish songs and a few select Israeli tunes) with artistic music, both classical and modern, fitting Klezmer’s openness. Feidman’s publications include dozens of recorded albums and about fifteen anthologies from his repertoire. His music was featured in many films, among them *Schindler’s List* and *Love Story*.

His father LEVI FEIDMAN (1903–1980) was born in Kishinev, to a Klezmer family. His father Gedaliah and his grandfather both played the trombone. Gedaliah’s band, which included Gypsy musicians, played at both Jewish and non-Jewish events, with a repertoire based mainly on Jewish material and its style Jewish-Bessarabian, with Gypsy influences. After World War I, Levi moved to Argentina. In Buenos Aires he supported himself playing the saxophone but also learned the clarinet and bass-clarinet. By 21 he had already mastered the clarinets, all the saxophones, flute and piccolo and played with different bands. After immigrating to Israel in 1965, he quickly integrated into the Israeli music scene, playing in the opera orchestra and at weddings with various Klezmerim. The Klezmer convention in his memory led to the annual convention at Elkana led by the Klezmer Musa Berlin.

[Y. Mazor]

**FEIERBERG, MORDECAI ZE'EV** (1874–1899), Hebrew writer. Born in Novograd-Volynsk (Volhynia, Russia) into a family of devout Ḥasidim, Feierberg spent his childhood in a village, where he was tutored by his father, a *shoḥet*. The family returned to the city when Feierberg was about ten. His studies, while concentrating mainly on *Gemara* and *posekim*, since he was expected to become a *shoḥet*, also included medieval religious philosophy (\*Maimonides, \*Judah Halevi), Kabbalah, and ḥasidic works. Subsequently, he came under the influence of the Haskalah and began reading the Bible and modern Hebrew literature. His secular studies led to a serious conflict between him and his strict father who beat him mercilessly and repeatedly drove him out of the house. Feierberg, however, was not deterred. In a final attempt to bring him back to the traditional fold, his father betrothed him to the daughter of the *shoḥet* of an adjoining town and set him up as a grocer. The store however, became a center for the *maskilim* and Ḥovevei Zion of Novograd-Volynsk and the engagement was broken because Feierberg, always sickly, contracted tuberculosis. Feierberg’s literary career began in 1896 when he went to Warsaw, then a center of the Hebrew press and modern Hebrew literature, and submitted a collection of poems and stories to Nahum \*Sokolow, the editor of \*Ha-Zefirah. Sokolow advised the novice writer to give up poetry and concentrate on fiction. His first story, “*Ya’akov ha-Shomer*” (“Jacob the Watchman,” in: *Ha-Zefirah*, 1897), appeared a year later. His other five short stories were published in 1897 and 1898; three of them – “*Ha-Egel*” (“The Calf,” 1899), “*Ha-Kame’a*” (“The Amulet,” 1897), and “*Ba-Erev*” (“In the Evening,” 1898) – in the

prestigious monthly *Ha-Shilo’ah*, founded by \*Aḥad Ha-Am; and the other two – “*Ha-Zelalim*” (“The Shadows”) and “*Leil Aviv*” (“A Spring Night”) – in *Lu’ah Aḥi’asaf* (1898). Turning to journalism for a short period, Feierberg also wrote feature articles on Jewish life in Novograd-Volynsk for the daily *Ha-Meliz*. Aḥad Ha-Am, who had befriended and thought highly of him, obtained a stipend for him from the well-known tea merchant K. \*Wissotzky. Free from economic dependence on his hostile father, Feierberg, at long last, could give vent to his creative powers. They found expression in his major work “*Le’an?*” (“Whither?”). While it was being prepared for press in *Ha-Shilo’ah* (Aḥad Ha-Am made substantial alterations with the author’s assent), Feierberg was planning to compose an extensive historical narrative on Israel Ba’al Shem Tov, the founder of Ḥasidism. The work, as well as other of his literary projects, was never written. He died of tuberculosis in the spring of 1899, before “*Le’an?*” appeared in print. Two polemical articles on Hebrew literature and on the contemporaneous Jewish intelligentsia were printed posthumously. The first edition of his collected works appeared in 1904. Further editions have appeared since; the most extensive one was edited by E. Steinman (Tel Aviv, 1941).

Feierberg’s stories, articles, journalistic reports, and letters barely comprise a single thin volume and while most of his works lack artistic maturity, his contemporaries and modern critics have recognized in him an original literary mind. His stories, among the most important landmarks in modern Hebrew fiction, express the spiritual-cultural conflict between adherence to traditional Jewish life and the aspiration toward a secular, modern, “European” cultural existence. The theme, expressed earlier by Haskalah authors who considered it their duty to inculcate secular-humanistic values into Jewish life in the 1890s, with such writers as Feierberg, Ḥ.N. \*Bialik, and M.J. \*Berdyczewski, was exposed in all its tragic depth.

Feierberg’s greatness as a writer can be attributed not only to his sensitive aesthetic intuitiveness but, in spite of his youth and inexperience, to an original literary ideology whose basic principles he crystallized. Feierberg thought that the function of Hebrew literature was to describe authentically “the image of our (Jewish) innermost world”; that is, to express the particular outlook of the contemporary East European Jew as conditioned by his education, traditions, and environment. He also believed in a particular Jewish “view of the world,” stating that “The air a Jew breathes, the sky he sees, the earth he treads, and all the external sights revealed to him acquire a different form and shape in his soul from what they really are or how they are perceived by other people.” Though he conceded that this special “form and shape” stemmed from a distortion of the national Jewish life by the “poison” that had tainted the national existence of the Jewish people for generations, he demanded that the Hebrew author (and he for one fulfilled this demand) express it. Only in this way could Hebrew literature make a valuable contribution to world literature. “Indeed the Hebrew tragedy can drown out the tumult of Rome.” Feierberg felt that Hebrew literature

should have remained rooted within the East European Jewish ghetto; it should not have tried to detach its themes and physical, as well as mental landscapes, from their environment; and should not have turned toward the "wide world" of Europe, as was the cry of many contemporaneous influential Hebrew authors. It should not depict the Jewish world from the outside, nor criticize its defects in the light of foreign values, nor emphasize the physical-external aspects of Jewish life specifying its economic and cultural structure; but through the artistic and aesthetic power of the narrative as such, Hebrew literature should directly express the "Jewish situation" from within. To develop this literary art, the young Feierberg had to break with the tradition of the Hebrew fiction, especially the literature of the Haskalah and the trend followed by most of the contemporaneous Hebrew writers of his day. He had to evolve the genre of the lyrical story which focuses on personal situations, usually of a distressing nature, that are symbolic of the "Jewish condition" as a whole. Feierberg thus introduced into Hebrew fiction the genre of the confessional lyrical short story in which the deep personal distress of an individual becomes a symbol. The genre also greatly influenced Berdyczewski, Brenner, and Gnessin and became a basic literary form of 20<sup>th</sup>-century Hebrew fiction.

Feierberg was but a trailblazer in a genre whose development demanded rigid literary and mental discipline. His tendency toward the use of affected language, hyperboles, and sentimental clichés was one of a number of his shortcomings. Another was his failure at times to achieve a viable synthesis between form and content and the idea to be expressed, i.e., direct lyrical expression of his turbulent world and the literary-descriptive frameworks in which he wanted to cast it. The artistic quality of his works is in direct relation to the success with which he achieved this synthesis.

"*Ya'akov ha-Shomer*," a weak groping toward this aesthetic synthesis, has for protagonist a Jewish soldier of the days of Czar Nicholas II who had been impressed into the Russian Army. Taken from his parents' home at a tender age he returns to the margins of Jewish society after years in a distant gentile environment. The life of such a Jew (then extensively described in Hebrew and Yiddish literature) symbolized for Feierberg the theme that was to form the core of all his works: the relationship ("the border-state") between life in the traditional Jewish community and life outside of it, between loyalty to the spiritual ascetic tradition and the yearning for nature and the life of the senses. He saw himself and his generation torn between these opposing polarities. In "*Ya'akov ha-Shomer*" the tension in Feierberg the man in giving personal expression to his innermost belief prevented the writer from portraying the protagonist convincingly. A certain discrepancy also exists between the significance with which Feierberg invested the hero's experience and the experience as such. Estrangement from Judaism was forced on Ya'akov the watchman externally and his experience is therefore not a valid representation of the spiritual state of the Jew wavering between two worlds. The Jewish czarist soldier, too weak a vehicle to carry the symbol,

only partly answers the author's needs of emotional and mental expression and the synthesis between content and self-expression is therefore not realized.

In two of his later stories, "*Ha-Zelalim*" and "*Leil Aviv*," Feierberg broke almost completely with the traditional concepts of plot and character and composed poetic-prose fragments through which he gave direct, bare, and discursive-lyrical expression to the "border-state." Despite the literary sincerity and passages of great beauty and power (especially in "*Leil Aviv*"), the desired synthesis is only partially achieved. In the absence of the rigors of a narrative framework, the stories became infused with sentimentalism expressed in undisciplined language.

The three short stories, "*Ba-Erev*," "*Ha-Kame'a*," and "*Ha-Egel*," were written as childhood reminiscences of Hofni Ba'al-Dimyon ("Hophni the Imaginative"), the hero-narrator. As Feierberg had written to Aḥad Ha-Am, in the Hofni stories he intended to create a "complete world of the Jew" who would be a kind of "hero of the times." He wanted to develop the idea and proceed from Hofni's childhood to later periods in his life. He died, however, before he had time to complete the project. In the tales of Hofni's childhood, Feierberg used a narrative-reminiscing expository style which, while restraining his language and his sentimental temperament, fully expressed his personality. Artistically, "*Ba-Erev*" is considered his best work. The story is divided into two parts: in the first, Hofni reminisces about his *heder* studies during the long winter nights; in the second, he reconstructs a legend told by his mother on coming home from the *heder*. A seemingly popular ḥasidic tale, the legend serves Feierberg as a symbol through which he could clearly and most effectively express the spiritual "border state" in which Hofni would have found himself as a young man. Both parts form a single "world" of oppression and gloom conveying a struggle between loyalty to an ancient and ascetic culture, absolute in its demands of adherence, and a powerful yearning toward a different world. Life in this world of great tension is an endless "trial"; failure lurks everywhere and the burden of responsibility oppresses to the breaking point.

In "*Ha-Kame'a*," in which Hofni recalls his childhood nightmares, this view is sharply expressed, though in a more discursive and less narrative symbolic manner. During these nights of terror he senses the distress and tension that lay in store for him. The talisman, a "weapon" with which Hofni's father and the old kabbalist from the *Klaus* equipped him, is from the start seen as insufficient protection and too light an arm for the fierce battle ahead of him. In "*Ha-Egel*" Feierberg deviates from his regular themes. Hofni reminisces on his love for a calf. The description of the child's terrible shock at his parents' indifference toward the young calf they intended for slaughter portends the depression and isolation of a man whose moral sensitivity would make him lose his sense of identity with his environment. It presages the "border state" of suspension between being within and without, belonging and revolt.

In *Le'an?* Feierberg dwells in minute detail on the sensitive, thinking individual who detaches himself and is cut off from the historical Jewish community. The hero, Naḥman, is the leader prototype, but he has lost contact with his community. His character and education makes him an "aristocrat", an "elected" Jew. The scion of a rabbinical dynasty, his father educates him to be a "soldier" (the same idea also appears in *Ha-Kame'a*) and to assume a life of responsibility in the unceasing battle to protect Judaism from secular inroads. His detachment from the community begins at a very early age when he was taught to regard the "normal" Jewish existence around him as a frivolity which he himself morally could not afford to lead. At this stage one type of alienation is apparent – a detachment between the community and its representative, between the public and the individual who is able to personify ideally the values in which all believe. Naḥman, the ideal, wants to perform great deeds: he wants to heal the historical schism in the fate of the Jewish people by hastening the coming of the Messiah. In his search for a way, he steep himself in the holy books; years pass and he despairs of messianic redemption. He then becomes interested in the Haskalah, thus alienating himself completely. Naḥman's loss of faith in Divine Providence is sudden and swift and his position in the Jewish community becomes a "border state" of unbearable tension which finds concrete expression in the synagogue on the Ninth of \*Av: "The whole congregation is praying, it has one heart now, and he – the other heart – is lonely and separated from the community, cut off from his people ... And how he would have liked to rejoin his people! He would have given his life for the bond. But how could he? No, he had undone the knot of his own free will and could not tie it again ..." This sense of separation is like a hidden disease within Naḥman, but at last the rift between him and his father and the community breaks out in the open with his symbolic act of extinguishing the candle in the synagogue on the Day of Atonement. Naḥman now lapses into a mental state which the community interprets as madness. Toward the end of the story he makes a final attempt at rejoining his people. In a speech at a Hibbat Zion gathering, he propounds the idea of national renaissance and a return to the East. This speech is Naḥman's last call and outcry, he then fades away and dies.

Structurally weak, because Feierberg tried to incorporate the Naḥman story into a narrative of reminiscences (as a continuation of the Hofni stories), *Le'an?* is nevertheless one of the great literary achievements in Hebrew fiction. The tragic proportions of its hero have been attained by few figures in Hebrew literature. The story gives full expression to the torment of the Jew who is torn between the temporal historical moment and his sense of responsibility toward the Jewish heritage of the ages and toward Jewish history. By grappling sincerely and honestly with the tragic problem of the Diaspora Jew in a modern world, Feierberg left an indelible imprint on modern Hebrew literature.

An English translation of *Whither and Other Stories* appeared in 1973 and *The Calf* was included in G. Abramson

(ed.), *The Oxford Book of Hebrew Short Stories* (1996). For other works which have been translated into English see Goell, Bibliography.

[Dan Miron]

**FEIERSTEIN, RICARDO** (1942– ), Argentinian writer. Feierstein was born in Buenos Aires. In his youth he joined Zionist and socialist movements; later he lived for some years on a kibbutz. His literary writings, his achievements as editor of the journal *Raíces* and director of the Milá and Acervo Cultural publishing houses, and his contributions to periodicals reflect his continuous involvement with Jewish cultural life in Argentina. In his writing, Feierstein seeks to close the gap between ideologically oriented and aesthetic literature. His poetry, narratives, and essays seek to build a harmonious individual identity as an Argentinian, a Jew, and a socialist, and the successes and failures of such attempts lie at the core of his writing. His poem "Nosotros, la generación del desierto" ("We, the Generation of the Wilderness," 1984, tr. 1989) speaks for a whole generation that lives between historical events and conflicting trends, unable to establish its own ground. The trilogy of novels *Sinfonía inocente* exposes the unrealized coming-of-age of an Argentinian Jew from adolescence (*Entre la izquierda y la pared*, 1983), to his kibbutz experience (*El caramelo descompuesto*, 1979), to his search for reintegration in a politically shattered Argentina (*Escala uno en cincuenta*, 1984). In *Mestizo* (1988; tr. 2000), a murder mystery frames the search for a fully realized Argentinian-Jewish identity, while his later novel, *La logia del umbral* (2002), exposes the painful collective failure of such a project (especially in the shadow of the AMIA terrorist bombing in 1994). His views of Argentinian Jewry and their existential experience as a dynamic cultural *mestizaje* (a term meaning racial but also cultural mix in Latin America) are discussed in his books *Judaísmo 2000* (1988) and *Contraexilio y mestizaje: Ser judío en la Argentina* (1990). He also edited *Historia de los judíos argentinos* (1993); *Cuentos judíos latinoamericanos* (1989); *Cien años de narrativa judeo-argentina 1889–1989* (1990). His poems and stories have

been translated into English, French, German, and Hebrew. Feierstein was visiting lecturer at American and German universities, and received awards in Argentina and Mexico.

Lockhart, *Jewish Writers of Latin America. A Dictionary* (1997); L. Senkman, *La identidad judía en la literatura argentina* (1983); S.A. Sadow and J. Kates, *We, the Generation in the Wilderness* (1989).

[Florinda Goldberg (2<sup>nd</sup> ed.)]

**FEIFFER, JULES** (1929– ), U.S. cartoonist and writer. Born in the Bronx, New York, Feiffer studied at James Monroe High School and entered the Art Students' League. From 1947 to 1951 he studied at the Pratt Institute while working as an assistant on the comic *The Spirit*. Growing up, he had always assumed that *The Spirit* was Jewish. In 1949 he created his first Sunday cartoon page feature, *Clifford*. He served in the U.S. Army from 1951 to 1953, working with a cartoon animation unit. Upon leaving the army, Feiffer worked in a number of jobs until in 1956, the New York weekly magazine *The Village Voice* began to publish his cartoons. His comic strip, which was simply called *Feiffer*, was an immediate success and appeared regularly in *The Village Voice* and was also internationally syndicated. His satirical cartoons made moral and political statements on a wide range of contemporary issues, both political and personal – from nuclear holocaust, the arms race, and presidential politics to male-female relationships and human fears, and neuroses – and were characterized by the revelation of the private thoughts of his characters. After appearing weekly for 43 years, Feiffer's last syndicated cartoon strip was published on June 18, 2000.

Although known primarily for his cartoons, Feiffer has also achieved success as a playwright, screenwriter, and novelist. His plays of the late 1960s, *Little Murders* (1967), *God Bless* (1968), and *The White House Murder Case* (1969), were all highly political. *Little Murders*, which depicted the horrors of urban life, was later made into a film. In 1963, he came out against the Vietnam War, subsequently speaking at peace demonstrations in Washington.

His screenplay for the 1971 movie *Carnal Knowledge* and his play *Knock Knock* (1976) dealt with more personal issues, the former with middle-age crisis and the latter with social values. His play *Grownups* (1981) focused on interfamily relationships and conflicts. He also wrote the screenplay for the film comedy *I Want to Go Home* (1989), directed by Alan Resnais and starring Adolph Green, as well as the script for the 1991 TV series *The Nudnik Show*.

In 1986 Feiffer received the Pulitzer Prize in editorial cartooning, and in 2004 was honored with the Ian McLellan Hunter Award by the Writers Guild of America.

Among Feiffer's many published works are *Sick Sick Sick: A Guide to Non-Confident Living* (1958); *Great Comic Book Heroes* (1965), a critical history of the comic book super-he-

roes of the late 1930s and early 1940s; *Jules Feiffer's America, from Eisenhower to Reagan* (1982); *Marriage Is an Invasion of Privacy, and Other Dangerous Views* (1984); *Ronald Reagan in Movie America: A Jules Feiffer Production* (1988); and *President Bill: A Graphic Epic* (with W. Brown, 1990). Some of his many books for children include *The Man in the Ceiling* (1993); *A Barrel of Laughs, a Vale of Tears* (1995); *Tantrum* (1997); *Meanwhile* (1997); *I Lost My Bear* (1998); and *Bark, George* (1999).

[Susan Strul / Ruth Beloff (2<sup>nd</sup> ed.)]

**FEIGEL, SIGI** (1921–2004), Swiss Jewish community leader. Born into a Russian-Jewish family, Feigel grew up in the central Swiss Catholic village of Hergiswil (Nidwalden), isolated from any organized Jewish community. In his youth, he experienced much Catholic anti-Judaism. After serving in the Swiss army (1939–45), he studied law at Zurich University and graduated with a doctoral degree in law. He entered the textile firm of his father-in-law, serving as its director until 1977. He was president of the Jewish community of Zurich in 1972–86, initiating a program of lectures by prominent figures and thus getting the Jewish community much publicity. Among the lecturers were Bruno \*Kreisky, Axel Springer, and Willy \*Brandt. He fought for the enlargement of the Jewish Oberer Friesenberg cemetery in Zurich, meeting opposition in right-wing circles. As a prominent media figure, he helped win popular support for the Anti-Racism Law (1993). With his colleague Rolf \*Bloch, he tried to mediate between American-Jewish demands and Swiss politicians and bankers in the 1995–96 Swiss bank account affair. He seems to have coined the phrase, "Justice for the victims, fairness for Switzerland." He founded several foundations to fight racism, xenophobia, and antisemitism, and for the housing of homeless young people. He also initiated the re-writing of textbooks on Jewish history and religion in Switzerland. After selling the textile firm (1977), he returned to law studies and received the Zurich lawyer's diploma at the age of 62. He wrote the standard commentary on the Swiss Anti-Racism Law. The Jewish community chose him as its honorary president.

[Uri Kaufmann (2<sup>nd</sup> ed.)]

**FEIGENBAUM, ARYEH** (1885–1981), Israel ophthalmologist. Born in Lemberg, Feigenbaum trained in Vienna and emigrated to Erez Israel in 1913. He became head of the eye department of the Straus Health Center, Jerusalem, and conducted a vigorous campaign against trachoma, serving hundreds of Arabs and Jews a day in his clinics. In 1914 he organized a trachoma conference, the first of its kind, in Pal-

estine and wrote and published the report and recommendations.

From 1922 to 1954 Feigenbaum was head of the ophthalmological department of the Hadassah Hospital and in 1938 first chairman of the pre-faculty of medicine. He was a founder and editor of the first Hebrew medical journal *Harefuah* (1920) and of *Acta Medica Orientalia* (1942). In 1927 he wrote the first Hebrew textbook on ophthalmology, *Ha-Ayin*.

**BIBLIOGRAPHY:** *Harefuah*, 70 (1966), 473–7.

[Lucien Harris]

**FEIGENBAUM, BENJAMIN** (1860–1932), Yiddish journalist, essayist, editor, and pamphleteer. Born in Warsaw, the son of ḥasidic parents, he rejected the religious traditions in which he had been brought up and developed into a militant atheist and agitator for socialism. Leaving home, he proceeded in 1884 to Antwerp, in 1887 to London, where he wrote for Yiddish and Hebrew periodicals and published pamphlets on socialism, reaching the United States in 1891. In America, he joined the United Hebrew Trades, writing tracts to win the support of Jewish laborers for socialism and atheism. He also wrote for the *Forverts* and *Arbeter-Tsaytung*, and for the literary monthly *Tsukunft*, of which he was editor for a time. He wrote his essays under several pseudonyms including Shabbes, Shabsovitch, and Sh. Peshes. In 1900 he became general secretary of the newly formed Arbeter Ring (\*Workmen's Circle), which he established firmly before resigning in 1903. In 1909 he served as chairman of the mass meeting which sanctioned the general strike of the waist and dress trade, the so-called "uprising of 20,000." His publications include *Vi Kumt a Yid tsu Sotsyalizmus* (1889); *Kosher un Treyfe un Andere Mitsves* (1909); *Yidishkayt un Sotsyalizm* (1942).

**BIBLIOGRAPHY:** Rejzen, *Leksikon*, 3 (1929), 44–49; L. Kobrin, *Mayne Fuftsik Yor in Amerike* (1966), 64–75. **ADD. [Melvyn Dubofsky / Marc Miller (2<sup>nd</sup> ed.)]

**FEIGENBAUM, ISAAC HA-KOHEN** (1826–1911), Polish rabbi and *posek*. Feigenbaum studied under R. Isaac Meir Alter of Gur (\*Gora Kalwaria). In 1893 he founded the first periodical devoted to rabbinic studies, the monthly *Sha'arei Torah*, to which leading contemporary rabbis contributed, and in which he himself wrote the leading article. The journal was continued after his death by his son, Israel Isser Feigenbaum, and ceased publication only at the outbreak of World War II. Among Feigenbaum's works are a critical edition of the *Urim ve-Tummim* of Jonathan \*Eybeschuetz with his own commentary (Warsaw, 1881). Feigenbaum was one of the few Polish rabbis, particularly among the Ḥasidim (he was an adherent of the \*Kotsk dynasty), who was an ardent supporter of the Ḥibbat Zion movement. He was a member of the Menuḥah ve-Naḥalah Society of Warsaw which founded \*Rehovot, and he himself purchased land under the aegis of the society.

**BIBLIOGRAPHY:** J.J. Feigenbaum, *Or Penei Yizḥak* (1939, reprint 1966).

[Louis Isaac Rabinowitz]

**FEIGENBERG, MEÏR** (1923– ), Danish theater manager. After academic studies in Stockholm and practical theater work in Copenhagen, Feigenberg became director of the Riddersalen Theater from 1947 to 1950 and of the Frederiksberg Theatre (now Dr. Dantes Aveny) in 1950–52 with a repertoire ranging from Ibsen and Chekhov to Kjell Abell and Tennessee Williams. Feigenberg was director of the New Theatre in 1966–69 and the Danish Theater in 1974–91, which he led with a sure sense of balance between the highbrow and the popular, between the classical and the modern, sometimes in collaboration with the Royal Theater.

[Bent Lexner (2<sup>nd</sup> ed.)]

**FEIGIN, DOV** (1907–2000), Israel sculptor. Feigin was born in Lugansk, Russia, and immigrated to Palestine in 1927. He studied in Paris between 1933 and 1937, and in 1947–48 was one of the founders of the New Horizons Group which tried to introduce modernism to Israel art. In 1962, he created a monumental sculpture in stone at Mizpeh Ramon in the Negev. Before 1950, Feigin worked in stone and concrete, and produced massive human forms, in post-cubist style. An example is the monument at Rehovot *In Memory of Our Warriors*, a relief characterized by its sharply defined contours. His later work became abstract and he composed linear forms in bronze, copper, and iron. Feigin won several prizes: in 1945–46 the Dizengoff prize, in 1953 the Haifa Municipality prize, and in 1985 the Sandberg prize from the Israel Museum.

**BIBLIOGRAPHY:** B. Tammuz and M. Wykes-Joyce, *Art in Israel* (1966), 152–3; H. Gamzu, *Painting and Sculpture in Israel* (1951), 113–5.

[Yona Fischer]

**FEIGIN, SAMUEL ISAAC** (1893–1950), Orientalist and biblical scholar. Feigin was born in Krichev. As a youth he went to Palestine; he completed his studies at the Hebrew Teachers' College in Jerusalem and fought in the Ottoman Army during World War I. Feigin emigrated to the United States in 1920 and studied at Yale University until 1923. He held several teaching posts and then in 1932 joined the staff of the Oriental Institute of the University of Chicago. He also taught at the College of Jewish Studies and the Hebrew Theological College (both in Chicago). Feigin's main interest was ancient Babylonian civilization and its relation to biblical life and literature. He wrote *Mi-Sitrei he-'Avar* ("From the Secrets of the Past," 1943), a collection of scholarly studies on biblical themes, and *Anshei Sefer* (1950), a collection of biographical essays. He also contributed important articles to scholarly journals.

**BIBLIOGRAPHY:** Irwin, in: *JNES*, 9 (1950), 121–3.

[Samuel Sandmel]

**FEIGL, BEDRICH (Friedrich)** (1884–1966), Czech painter and graphic artist. In 1907, he was a founder of the Osma group

(“The Eight”) which, with Emil Filla as its leading personality, marked the break of Czech art with traditional classicism. This break profoundly influenced modern Czech painting. Feigl created the best work of his expressionistic period with his landscapes of Copenhagen, Berlin, and the fishing villages on the French Riviera. He is, however, best known for his sketches of Prague ghetto life. Feigl also did book illustrations (H. Politzer, ed., *Sippurim*, 1937). After escaping from Nazi-occupied Prague, Feigl spent World War II in London. Here, he prepared the plates for the first Czechoslovak post-war banknotes.

**BIBLIOGRAPHY:** G. Marzynski, *Friedrich Feigl* (Ger., 1921); *Příruční slovník naučný*, 1 (1962), 711.

[Avigdor Dagan]

**FEIGL, FRITZ** (1891–1971), analytical chemist and a leader of the Brazilian Jewish community. Feigl was born in Vienna and served as an officer in the Austrian Army in World War I. He joined the staff of the Technische Hochschule in Vienna in the early 1920s and became professor of chemistry there in 1935. The *Anschluss* of 1938 forced him out of his position and he emigrated to Brazil, where in 1941 he became head of the Ministry of Agriculture’s mineral production laboratory. In 1953 he was appointed professor of chemistry at the University of Brazil. In his work on chemical analysis and microanalysis Feigl specialized mainly in spot tests, on which he became a world authority. He was the main pioneer of new procedures in this field. His books include *Spot Test Analysis* (2 vols., 1934), *Theory, Practice, and Uses of Spot Tests in Qualitative Analysis* (1938), *Laboratory Manual of Spot Tests* (1944), and *Chemistry of Specific Selective and Sensitive Reactions* (1949). Feigl was active in communal and Zionist activities in Brazil, where he served as president of the Confederation of Jewish Federations. In 1951 he became a member of the world executive of the World Jewish Congress. He was a member of the board of governors of the Hebrew University of Jerusalem and of the Weizmann Institute of Science in Rehovot.

[Samuel Aaron Miller]

**FEIGL, HERBERT** (1902–1988), U.S. philosopher and one of the founders of the Vienna Circle discussion group, which espoused the doctrine of logical positivism. He was born in Reichenberg, Bohemia. In 1922, antisemitism in German universities led Feigl to the University of Vienna, where he received his Ph.D. in philosophy in 1927. At the university Feigl, influenced by Moritz Schlick, became interested in philosophical problems in the foundations of physics. In 1924, with Schlick and Friedrich Waissman, he assembled a discussion group that was later called the “Vienna Circle.”

Feigl emigrated to the United States late in 1930 on an International Rockefeller Fellowship and spent nine months at Harvard University, whose faculty he regarded as the American equivalent of the Vienna Circle. He taught at the University of Iowa (1931–40), and in 1940 became professor of philosophy at the University of Minnesota, where he remained

until he retired in 1971. He was appointed regents professor of the University of Minnesota in 1967.

In 1949 he and his colleague Wilfrid Sellars edited *Readings in Philosophical Analysis*, which became a standard text of analytic philosophy and logical empiricism. That year they and several other colleagues founded the *Philosophical Studies* journal. In 1953 he and May Brodbeck edited *Readings in the Philosophy of Science*, which became the standard anthology in the field.

In 1953 Feigl obtained a grant to establish the Minnesota Center for Philosophy of Science. The first such institution of its kind in the country, if not the world, it drew philosophers of science from around the globe to participate in workshops and collaborative research.

Feigl served on the governing board of the Philosophy of Science Association and was a founding member (1934) of the editorial board of *Philosophy of Science*, which later became the official journal of the Association. He was president of the Western Division of the American Philosophical Association (1961–62). His first book, *Theorie und Erfahrung in der Physik* (“Theory and Experience in Physics”), was published in 1929. In his writings, Feigl attempted to formulate and defend the principles of the doctrine of logical positivism (also called “consistent empiricism” and “logical empiricism” – the latter name by Feigl). The main tenet of this theory is that meaningful statements must be empirically verified. Feigl gradually moved away from a strict interpretation of this principle to a position that allows for different categories of meaningfulness.

Other books by Feigl include *The “Mental” and the “Physical”*: *The Essay and a Postscript* (1967) and *The Foundations of Science and the Concepts of Psychology and Psychoanalysis* (with M. Scriven, 1976). He also edited *Concepts, Theories & the Mind-Body Problem* (1972).

**BIBLIOGRAPHY:** H. Feigl and W. Sellars (eds.), *Readings in Philosophical Analysis* (1949); P. Feyerabend and G. Maxwell (eds.), *Mind, Matter, and Method; Essays in Philosophy and Science in Honor of Herbert Feigl* (1966), contains a bibliography of his work. **ADD. BIBLIOGRAPHY:** R. Cohen (ed.), *Herbert Feigl: Inquiries & Provocations, Selected Writings 1929 to 1974* (2001).

[Avrum Stroll / Ruth Beloff (2<sup>nd</sup> ed.)]

**FEILER, ARTHUR** (1879–1942), economist. Born in Breslau, he was a contributor to the financial section of the *Frankfurter Zeitung*, from 1903 to 1910, and from 1910 to 1930 was a senior editor of the paper. He taught at the University of Frankfurt for some time during the late 1920s, and at the Graduate Business School in Koenigsberg from 1932 to 1933. In 1933 he emigrated to the United States where he worked at the graduate faculty of the New School for Social Research in New York. His numerous publications include *Die Konjunkturperiode 1907–13 in Deutschland* (1914); *Amerika-Europa: Erfahrungen einer Reise* (1926); *America Seen Through German Eyes* (1928); *Das Experiment des Bolschewismus* (1930<sup>3</sup>); and (with M. Ascoli) *Fascism for Whom?* (1938).

[Edith Hirsch]

**FEINBERG**, family of pioneer settlers in Erez Israel.

**YOSEF FEINBERG** (1855–1902) was born in Simferopol in the Crimea, the son of wealthy parents, and studied chemistry at Swiss and German universities. Aroused by the 1881 pogroms, he went to Erez Israel in the spring of 1882, taking a large sum of money. He joined Zalman \*Levontin in founding \*Rishon le-Zion on land which he helped to buy. Feinberg went to Western Europe and succeeded in gaining Baron Edmond de \*Rothschild's support for the idea of Jewish settlement in Erez Israel. However, Feinberg opposed the Baron's paternalistic system of management, and after a dispute in 1887 with the Baron's representative, Yehoshua \*Ossowetzky, he was forced to sell his property and leave the settlement, together with other founding members. He bought an oil press in Lydda, but was forced to sell it because of financial straits. He then opened a pharmacy in Jaffa. He was among those who received Theodor \*Herzl in Erez Israel in 1898.

**ISRAEL** ("Lotik"; 1865–1911) younger brother of Yosef, was born in Sebastopol, Crimea. In the early 1880s Israel settled in Rishon le-Zion, where he married Fania Belkind, a member of \*Bilu. Leaving Rishon le-Zion with his brother, Feinberg settled in Gederah, where he was one of the settlement's first watchmen (1891) and organized the planting of eucalyptus groves to drain the swamps. In 1898 he moved with his family to \*Haderah, but, contracting malaria, was forced to move to Jerusalem. The family returned to Haderah a few years later, and Feinberg tried to reestablish his farm there but died as a result of the debilitating effects of malaria and hard labor.

**AVSHALOM** (1889–1917) cofounder of \*Nili, son of Israel. He was born in Gederah and as a young man he studied in France. Upon his return he worked at the agricultural station set up by Aharon \*Aaronsohn at Athlit. A few months after the outbreak of World War I, he and Aaronsohn founded the anti-Turkish intelligence network, Nili. In 1915 Feinberg reached Egypt on an American ship, establishing contact with British naval intelligence, who returned him to Athlit. When Aaronsohn went to England to negotiate with the government, Feinberg, Sarah \*Aaronsohn, and Joseph \*Lishansky continued to develop the intelligence ring, impatiently awaiting the results of Aaronsohn's mission. In 1917 Feinberg again set out for Egypt, this time on foot, along with Lishansky, but was shot and killed by Bedouin near the British front in Sinai. In 1967, after the Six-Day War, Feinberg's remains were discovered near Rafa under a palm tree which had sprung from date seeds he carried with him on his journey. He was reburied on Mount Herzl in Jerusalem and given a state funeral. Feinberg was one of the romantic figures of his time. His letters and memoirs, preserved in the Nili archives at \*Zikhron Ya'akov, offer an insight into the world of the first generation born in the new Jewish settlements. His letters and memoirs were published under the title *Avshalom* (1971) by A. Amir.

**BIBLIOGRAPHY:** A. Yaari, *Goodly Heritage* (1958), index; A. Engle, *Nili Spies* (1959), index; D. Idelevitch (ed.), *Rishon le-Ziyyon* (1941), 41–47,507; M. Smilansky, *Mishpaḥat ha-Adamah*, 1 (1954<sup>2</sup>),

159–62; 2 (1954), 72–77; Dinur, Haganah, 1 pt. 1 (1954), 80f., 279, 354–62; 1, pt. 2 (1956), 730–3; J. Yaari-Poleskin, *Ḥolemim ve-Lohamim* (1964<sup>3</sup>), 103–9; E. Livneh (ed.), *Nili: Toledoteha shel He'azah Medinit* (1961).

[Yehuda Slutsky]

**FEINBERG, ABRAHAM** (1908–1998), U.S. businessman and organization leader. Feinberg, who was born in New York City, received his law degrees from Fordham and New York University. He occupied a number of prominent executive positions, among them chairmanship of the board of the Kayser-Roth Corporation until 1964 and chairmanship of the executive committee of the American Bank and Trust Company. He served for several years on the New York City Board of Education. Feinberg was highly active in American Jewish life and on behalf of the State of Israel. He helped to organize Jewish support for Democratic presidential candidates (e.g., John F. Kennedy). He had a long relationship with Brandeis University, serving as a trustee in 1953; chairman of the board of trustees from 1954 to 1961; a Brandeis Fellow in 1953; and was awarded an honorary doctorate in 1961. And through his generous donation, the International Center for Ethics, Justice and Public Life was established at Brandeis University. Feinberg and his family also endowed the Feinberg Graduate School at the Weizmann Institute in Israel.

Feinberg was the founder and first president of Americans for Haganah, a group formed in the early 1940s to help provide arms and other critical materials to the *yishuv* in Palestine. He offered his home to Zionist leaders who were trying to gain support of the U.S. government, and he aided European Jews seeking refuge. He accompanied Chaim \*Weizmann, Israel's first president, to his first meeting with President Harry Truman. Active in American politics, Feinberg worked informally with the United States and Israeli governments during Middle East crises, led many Democratic fundraisers, and served as a confidant to U.S. presidents Harry Truman, John Kennedy, and Lyndon Johnson.

In 1960 Feinberg was named B'nai B'rith's Man of the Year, an event that was attended by Harry Truman.

Feinberg served as president of the Development Corporation for Israel, which conducts the worldwide sale of Israel Bonds, and as president of the American Committee for the Weizmann Institute of Science. In 1966 he led a syndicate of American Jewish businessmen that successfully bid for a franchise to produce and sell Coca-Cola in Israel, thus breaking the company's long-standing acquiescence to the Arab boycott.

In 1983 Feinberg established three scholarships at the Weizmann Institute (The Belle and Philip Feinberg Scholarship; The Lillian Feinberg Scholarship; and The Shirley and Judge Wilfred Feinberg Scholarship). Feinberg also supported numerous medical causes, including schizophrenia research in both New York and Israel. He endowed the psychiatric wing at Schneider Children's Medical Center for Israel.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**FEINBERG, ABRAHAM L.** (1899–1986), Reform rabbi and activist. Feinberg was born in Bellaire, Ohio, to immigrant parents from Grinkishok (Grinkiskis), Lithuania, which Feinberg referred to as “the birthplace of my spirit.” He earned a B.A. from the University of Cincinnati and was ordained at Hebrew Union College in 1924. After ordination he served in a number of American pulpits but left the rabbinate in 1929 to embark on a singing career as Arthur Frome. He returned to the pulpit in 1935 in response to Hitler’s growing strength and attacks on the Jews. In 1943 he accepted a position at Toronto’s Holy Blossom Temple, the premier Reform congregation in Canada. During his tenure, the Holy Blossom grew rapidly, a testimony to Feinberg’s skills as religious leader, and especially as a preacher. He extended his influence by being a highly successful radio orator.

A firm believer in the prophetic ethic as emphasized in Reform Judaism, Feinberg had supported various left-wing causes while in the United States, and threw himself into the Canadian scene with energy. Holding that Canada should be free of all forms of prejudice, he spoke out against antisemitism and racism including Canada’s wartime treatment of the Japanese and discrimination against blacks in Canada. He was a crucial presence on the Joint Public Relations Committee of the Canadian Jewish Congress and B’nai B’rith, pressing the committee to protest mandatory prayers and Christmas carols in Ontario public schools and to lobby for fair employment and housing practices in Ontario. Feinberg became an outspoken advocate of nuclear disarmament and chaired the Toronto Committee for Disarmament while he continued his advocacy of civil rights as the vice president of the Toronto Association for Civil Rights. Feinberg’s political activism led to surveillance by Royal Canadian Mounted Police intelligence officers. An RCMP file eventually released to his daughter contained 1,100 pages, with even more devoured by the RCMP’s shredder.

Feinberg retired from Holy Blossom in 1961 and was named rabbi emeritus. He continued his activism, protesting the war in Vietnam, and in late 1966 and early 1967 led a delegation to meet with Ho Chi Minh. In 1972 he moved to Berkeley, California, to be near his son Jonathan but relocated across the Bay to be the rabbi for Glide Memorial Church, which catered to “the outcasts of our social system.” He also became a spokesman for “gray lib,” fighting oppression of the elderly. He subsequently moved to Reno, Nevada, where he continued his advocacy for the elderly. At age 70 Feinberg resumed his singing career and released 10 songs, but his most famous performance was singing “Give Peace a Chance,” with John Lennon and Yoko Ono in their Montreal hotel room in 1969.

Feinberg was the author of three books, *Storm the Gates of Jericho* (1964); *Rabbi Feinberg’s Hanoi Diary* (1968); *Sex and the Pulpit* (1981). He also wrote numerous magazine and newspaper articles.

[Richard Menkis (2<sup>nd</sup> ed.)]

**FEINBERG, DAVID** (1840–1916), Russian communal leader. Born in Kovno (Kaunas), Lithuania, Feinberg studied law at St. Petersburg University. While in his twenties he attained a responsible position in the St. Petersburg-Warsaw railroad company and was active in promoting the organization of a community in St. Petersburg. Feinberg was instrumental in obtaining, with the support of Baron Horace Guenzburg, Samuel \*Poliakoff, and others, authorization for building the first synagogue as well as for the establishment of a Jewish cemetery there. He enlisted the support of Adolphe Crémieux, Baron Maurice de Hirsch, and Sir Moses Montefiore in the struggle of Russian Jewry for rights. When the \*Jewish Colonization Association (ICA) was founded in 1891 Feinberg became its secretary-general and was active in promoting Jewish agricultural settlement in \*Argentina, where one of the settlements was named after him. During World War I he did much to relieve the sufferings of refugees.

**BIBLIOGRAPHY:** S. Ginsburg, *Amolike Peterburg* (1944), 111–24; Feinberg, in: *He-Avar*, 4 (1956), 20–36; I. Halpern, *Yehudim ve-Yahadut be-Mizrah Eiropah* (1969), 372–3.

**FEINBERG, KENNETH** (1945– ), U.S. attorney, expert in mediation and alternative dispute resolution. Born and raised in Brockton, Mass., Feinberg graduated cum laude from the University of Massachusetts in 1967 and from New York University School of Law, where he was articles editor of the *Law Review*, in 1970. He served as law clerk to Chief Judge Stanley H. Fuld, New York State Court of Appeals, from 1970 to 1972. He was assistant U.S. attorney, Southern District of New York, from 1972 to 1975 and special counsel, U.S. Senate Committee on the Judiciary, from 1975 to 1980. Feinberg served as administrative assistant to Senator Edward M. Kennedy from 1977 to 1979. He was a partner in the firm of Kaye, Scholer, Fierman, Hays & Handler from 1980 to 1992, then founded The Feinberg Group in Washington, D.C., in 1993. He was also a lecturer at the University of Pennsylvania Law School, New York University School of Law, University of Virginia Law School, and Columbia Law School.

Feinberg served as mediator and arbiter in thousands of disputes, involving such issues as breach of contract, product liability, civil fraud, and various environmental matters. He served as court-appointed special settlement master in several high-profile cases, including the Agent Orange product liability litigation, the RICO class action concerning the Shoreham Nuclear Facility, and many asbestos personal injury litigations. He was the first trustee of the Dalkon Shield Claimants’ Trust. Feinberg was one of three arbitrators chosen to determine the fair market value of the Zapruder film of the John F. Kennedy assassination, and he was one of two arbitrators selected to determine the allocation of legal fees in the Holocaust slave labor litigation.

In 2001 Feinberg was appointed Special Master of the Federal September 11<sup>th</sup> Victim Compensation Fund by Attorney General John Ashcroft. The Fund was created by federal legislation to compensate victims and families of victims in-

jured or killed in the terrorist attacks of September 11, 2001, provided they relinquished their right to sue. Working for 33 months entirely pro bono, Feinberg developed the preliminary regulations governing the administration of the fund and solicited comments and criticism, which were often harsh. He held more than two dozen “town hall meetings” with families, in addition to personal meetings. Feinberg administered all aspects of the program, which awarded \$7 billion. Families who were dissatisfied with an award could appeal through an informal hearing; Feinberg personally presided over more than 900 of the 1,600 hearings. At the end of the process, he won the admiration of many of his former critics, who praised his fairness and his willingness to adjust some aspects of both the procedure and the awards.

In 2005 Feinberg published his book *What Is Life Worth? The Unprecedented Effort to Compensate the Victims of 9/11*, in which he details the immense challenges and difficult emotional components of his work with victims’ families. A member of the National Judicial Panel and the recipient of numerous honors, he was named Lawyer of the Year by the *National Law Journal* in 2004.

[Dorothy Bauhoff (2<sup>nd</sup> ed.)]

**FEINBERG, LEON (Yehude-Arye-Leyb / Leonid Grebniov; 1897–1969)**, Yiddish journalist, novelist, and poet. Born in Kodyma (Ukraine), he studied at the University of Moscow, fought as a Red Guard in the Civil War, immigrated to Palestine, and traveled the world as a sailor, before settling in the U.S. His first volume of Russian poetry (1914) was influenced by Symbolism. Although he continued writing in Russian (further volumes 1919, 1923, 1947), he also began writing in Yiddish. He was on the staff of the Yiddish daily *Frayhayt*, and the monthly *Der Hamer*. A feature writer (and later city editor) for *Der Tog*, he served as president of the New York Yiddish PEN Club. His fifteen novels include the verse novels *Der Farmishpeter Dor* (“The Condemned Generation,” 1954) and *Der Gebentshter Dor* (“The Blessed Generation,” 1962) which depict the lives of two generations of Jews who were caught in the net of the Russian Revolution but succeeded in immigrating to America and Palestine. *Der Khorever Dor* (“The Ruined Generation,” 1967) describes the lives of those who remained in Russia and faced the realities of Soviet life. English translations of his work are to be found in J. Leftwich, *The Golden Peacock* (1940), and J.B. Cooperman, *America in Yiddish Poetry* (1967).

**BIBLIOGRAPHY:** Reizen, *Leksikon*, 3 (1929), 57–60. **ADD. BIBLIOGRAPHY:** LNYL 7 (1968), 349–53; G.G. Branover (ed.), *Rossiiskaia evreiskaia entsiklopediia*, 3 (1997), 189–90; G. Estrakh, *In Harness: Yiddish Writers’ Romance with Communism* (2005), 96–8.

[Israel Ch. Biletzky / Jerold C. Frakes (2<sup>nd</sup> ed.)]

**FEINBERG, LOUIS (1887–1949)**, U.S. Conservative rabbi and community leader. Born in Rossieny, Lithuania, Feinberg was brought to the United States in 1903. He was educated in the public schools of Philadelphia and graduated from the University of Pennsylvania with a B.A. His Jewish education

was received at the Talmud Torah, Gratz and Dropsie Colleges, and Yeshivah Mishkan Israel. He entered the Jewish Theological Seminary, was ordained in 1916, graduating with honors and serving as valedictorian of his class. He served two years as rabbi of Congregation Ohel Jacob in Philadelphia. In 1918, he came to Cincinnati as rabbi of Adath Israel (organized in 1847). He was the first of the modern American rabbis to come to Cincinnati. He emphasized the Saturday morning service, introducing weekly sermons in English and congregational singing. He organized the Adathean Society to involve young men and women in congregational activity. He established a congregational school when it became apparent that many members’ children were not attending the local Talmud Torah schools. In 1933, he introduced a combined graduation and confirmation service and thus, for the first time in a traditional synagogue, girls became eligible for confirmation. In 1947, the congregation adopted an amendment to the constitution which provided for representation of women on the Board of Trustees.

As the congregation grew, he advocated for the enlargement of the synagogue, eventually undertaking a significant building fund campaign. In 1927, a magnificent stone building was erected at a cost of \$450,000. Several of its features exhibited Rabbi Feinberg’s influence: the interior decoration developed by Dr. Boris \*Schatz of the \*Bezalel School of Arts and Crafts in Palestine, and the monumental dome comprising the ceiling of the sanctuary, its rim inscribed with Hebrew inscriptions from the Pentateuch, prophets, medieval philosophers, and the modern poet Ḥayyim Nahman \*Bialik, selected and arranged by Rabbi Feinberg.

In addition to his activity within the congregation, Feinberg took a prominent role in the larger community. He served as president of the local Board of Rabbis and on the boards of the Bureau of Jewish Education, United Jewish Social Agencies, and Jewish Community Council. He was active in Mizrahi and in the Zionist Organization of America. A passionate Zionist, he helped establish a Palestine Scholarship Program in the community, which enabled five young members of his congregation to spend an entire year in Israel. He was a founder of the \*Young Judea movement, and an editor of *Our Jewish Youth* which later became *Young Judean*. In 1937, at the age of 50, he visited Palestine himself for the first time. He called Zionism “the newest development of the Messianic idea.”

Feinberg was a member of the Law Committee of the Jewish Theological Seminary and was a founder of the Menorah Society at the University of Pennsylvania. He translated the Laws of Charity from the *Shulhan Arukh* for the New York School of Philanthropy, published articles on Jewish law in Hebrew, Yiddish, and English, and wrote short stories about Jewish life under the pseudonym Yishuvnik. A graduate fellowship at JTS was created in his memory, and the congregation sponsored the publication of a posthumous collection of his essays, *The Spiritual Foundations of Judaism*, edited by Emanuel Gamoran.

[Nancy Klein (2<sup>nd</sup> ed.)]

**FEINBERG, NATHAN** (1895–?), international jurist. Born in Kovno (Kaunas), Lithuania, Feinberg studied international law in Zurich and Geneva. In 1919–21 he was departmental head of the Ministry of Jewish Affairs in Lithuania; 1922–24 secretary of the \*Comité des Délégations Juives at Paris; and he conducted a private law practice in Palestine in 1925–27 and again in 1934–35. From 1931–33 he lectured at Geneva University. In 1945 he was appointed lecturer in international relations at the Hebrew University, in 1947 also in international law, and professor in 1949; he was the first dean of the university's Faculty of Law (1949–51). Feinberg served from 1962 as one of Israel's representatives on the International Court of Arbitration in the Hague. His published work is mainly concerned with Jewish minority status in post-World War I Europe (*La question des minorités à la Conférence de la Paix 1919–20, 1929*); with the Palestine mandate in international law (*Some Problems of the Palestine Mandate, 1936; Erez Yisrael bi-Tekufat ha-Mandat u-Medinat Yisrael, 1963*); with the Jewish defense against Hitler and the Nazis (*Ha-Ma'arakah ha-Yehudit neged Hitler...*, 1957); as well as with the Arab-Jewish conflict (*Arab-Israel Conflict in International Law, 1970*). Feinberg was co-editor of the *Jewish Year Book of International Law* (1949) and edited a volume of studies in public international law in memory of Sir Hersch Lauterpacht (1962).

**FEINBERG, ROBERT** (1912–1975), U.S. labor lawyer and arbitrator. He was labor counsel of the United Jewish Appeal, the Federation of Jewish Philanthropies of New York, the National Jewish Welfare Board, the Development Corporation for Israel, the Jewish Child Care Association of New York, the Jewish Board of Guardians, the National Council of Jewish Women, the Jewish Family Service, the Jewish Association for Service, and other philanthropic agencies and organizations. Feinberg was senior partner in the law firm of Guggenheimer and Untermyer, and held positions with the National War Labor Board and the National Wage Stabilization Board.

[Milton Ridvas Konvitz]

**FEINBERG, SAMUEL YEVGENYEVICH** (1890–1962), pianist and composer. Born in Odessa, Feinberg graduated from the Moscow Conservatory in 1911 (as a pianist, class of Goldeneveizer) and was appointed professor of piano (from 1922) and director of the piano faculty from 1936 until his death. As a composer he studied with Zhilyaev and was a member of the ASM (Association of Contemporary Music). His music was modernist and influenced by Scriabin, although it frequently contained folklore elements. Among his compositions were three piano concertos: 1931, 1944 (awarded the Stalin Prize), and 1947; 12 piano sonatas; and a sonata for violin and piano. He wrote *Sudba muzykalnoy formy* ("The Future Musical Form," 1968) and *Pianizm kak iskusstvo* ("The Art of Piano Playing," 1968).

**ADD. BIBLIOGRAPHY:** NG<sup>2</sup>; V. Belyayev, *Samuil Feinberg* (1927); L. Sabaneyev, *Modern Russian Composers* (1927); I. Likhacheva (ed.), *S. Ye. Feinberg: Pianist, kompozitor, issledovatel'* (1984); C. Siro-

deau, "Sur Samuil Feinberg," in: *Cycle Scalkottas, Paris 1998–1999* (1999), incl. catalogue of works.

[Marina Rizarev (2<sup>nd</sup> ed.)]

**FEINBRUN-DOTHAN, NAOMI** (1900–1995), Israel botanist. Born in Moscow and raised in Kishinev, Feinbrun-Dothan immigrated to Palestine in 1924. Working with Alexander \*Eig, she helped gather the plants which formed the basis for the Hebrew University's herbarium. She was part of the Hebrew University from its establishment, becoming a full professor in botany in 1966. She was instrumental in preparation and publishing of *Flora Palaestina*. In 1991 she was awarded the Israel Prize for knowledge of the Land of Israel.

[Fern Lee Seckbach (2<sup>nd</sup> ed.)]

**FEINGOLD, DAVID SIDNEY** (1922– ), chemist. Feingold was born in the United States and studied at the Massachusetts Institute of Technology and the University of Zurich. He immigrated to Israel in 1949 and obtained his Ph.D. at the Hebrew University of Jerusalem before joining the department of microbiological chemistry at the Hadassah Medical School. He received the Israel Prize for exact sciences (1957) jointly with his colleagues Gad Avigad and Shlomo Hestrin. He returned to the University of California (1956) and was appointed professor of microbiology at the University of Pittsburgh School of Medicine (1966). Feingold's research concerned sugar metabolism in bacteria and the bean sprout *phaseolus aureus* and in particular the synthesis of polysaccharides in bacterial cell walls. He also studied the implications for clinical infections, particularly by pseudomonas, and anti-bacterial chemotherapy.

**FEINGOLD, RUSSELL** (1953– ), U.S. senator. Feingold was born in Janesville, Wisc., which had a small Jewish community and no synagogue, so Feingold and his sister were taken on a 90-mile round trip to attend Hebrew school at a Reform congregation. As a high school student he won the state debating championship and then went on to earn his B.A. with honors from the University of Wisconsin in Madison, where he was elected to Phi Beta Kappa. He then attended Oxford on a Rhodes Scholarship (1976) and then Harvard Law School (LL.B., 1979). His interest in politics was intense and after a few years in private practice, at the age of 29 he was elected to the Wisconsin State Senate, where he served for 10 years, earning his spurs as chair of the Committee on Aging, Banking, and Communication.

He challenged incumbent Senator Robert Kasten (R-WI) who had heavy support from the Jewish community because of his chairmanship of the influential Foreign Operations Subcommittee of the Appropriations Committee, the subcommittee where foreign aid is allocated. Despite Feingold's clear Jewish identity, under the incumbency rule, pro-Israel PACs and politically active Jews supported Kasten. If an incumbent had a strong pro-Israel record, Jewish political activists continued their support regardless of whom the challenger

was. Thus, Feingold was widely outspent. Characteristically, he made light of his lack of Jewish support, expressing shock that his support for Israel and Jewish bona-fides were called into question. "I am the only candidate for the Senate whose sister is a rabbi living in Israel," he would say. Feingold made his modest support a badge of honor. He won a surprising victory.

In the Senate Feingold was a fiscal hawk, attacking unwarranted expenditures in the federal budget. His national prominence came from his co-sponsorship with Senator John McCain of the McCain-Feingold bill that attempted to limit campaign spending and soft-money contributions. They did not succeed in passing their bill during his first term. Feingold placed stringent restrictions on his own fundraising for reelection. Caught in a close race, he refused an offer of \$500,000 from the Democratic National Committee and voters gave him a narrow victory. McCain-Feingold finally became law early in the Bush Administration. And once again in his reelection bid of 2004, Feingold held fast to his own standards despite serious political opposition.

His positions were generally liberal. Feingold voted against an antiterrorism measure because he objected to its provisions regarding inmates on death row. He fought a constitutional amendment to prohibit flag burning in keeping with Wisconsin's progressive tradition. He was an early and consistent opponent of the war in Iraq, believing that it diverted attention from the fight against terrorism. Though Wisconsin had fewer than 30,000 Jews it was represented by a second Jewish senator as well, Herbert \*Kohl.

**BIBLIOGRAPHY:** L.S. Maisel and I. Forman, *Jews in American Politics* (2001); K.F. Stone, *The Congressional Minyan: The Jews of Capitol Hill* (2002).

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**FEINMAN, SIGMUND** (1862–1909), Yiddish actor-manager. Born near Kishinev, Feinman acted in Bessarabia and Romania, went to New York in 1886, and worked with \*Adler, \*Mogulesko, and \*Kessler, doing his best work in Jacob Gordin's plays. Returning to Europe in 1906, he and his wife Dinah (formerly married to Jacob Adler) established a reputation in London and on the Continent. He played Othello in Romania, 1909, and died while rehearsing in Lodz. Manuscripts of Feinman's own plays and translations were acquired by the \*YIVO Institute. His wife DINAH FEINMAN (1862–1946) acted in *A Doll's House*, *Mirele Efros*, and *La Dame aux Camélias*.

**FEINSINGER, JOSHUA (Shaye; 1839–1872)**, Russian *hazzan*. Born in Lithuania, Feinsinger was taught singing by his father, himself a *hazzan*. After completing his musical training, he became chief *hazzan* in the Polish town of Leczyca. In 1868 he was appointed chief *hazzan* in Vilna. Possessing a phenomenal voice and originality of expression, Feinsinger became famous as one of the greatest *hazzanim* of the mid-19<sup>th</sup> century. His most notable compositions were for the \*Yozer prayers for the *Sefirah* Sabbaths.

**FEINSTEIN, ARYEH LOEB** (1821–1903), Lithuanian scholar and writer. Feinstein was born in Damachev near Brest-Litovsk. He was a successful businessman in that city, active in communal affairs, and wrote a history of its Jewish community, *Ir Tehillah* (1886, repr. 1968). He also published a Passover *Haggadah* with commentary, *Talpiyyot* (1870), and a commentary on Psalms under the same title (1896). Among his other works are *Migdal David* (1895), on talmudic discussions of David and his dynasty; *Divrei Hakhamim ve-Hidotam* (1895), on the \*Rabbah b. Bar Hana tales; and *Elef ha-Magen* (1900), linguistic studies.

**BIBLIOGRAPHY:** Kressel, *Leksikon*, 2 (1967), 626–7; EG, 2 (1955), index.

**FEINSTEIN, DIANNE GOLDMAN** (1933– ), U.S. Democratic senator from California. Feinstein was a centrist legislator and a pioneering politician. She was the first woman to be elected president of San Francisco's Board of Supervisors (1969), mayor of San Francisco (1978), nominated by a major party for governor of California (1990), elected U.S. senator from California (1992), and appointed to the Senate Judiciary Committee (1993).

The daughter of Dr. Leon Goldman, a prominent surgeon, and his wife Betty (Rosenburg), Feinstein started a public service career at a young age. Born and raised in San Francisco, she attended Stanford University where she won her first election as vice president of the Student Body. Upon graduation in 1955 she was awarded a Coro Foundation fellowship to study public policy. Five years later the governor appointed her to the California Women's Board of Terms and Parole, where she served until 1966. Elected to the San Francisco Board of Supervisors in 1969, Feinstein served for nine years, five years as Board president. She was serving in this capacity in 1978 when Mayor George Moscone was assassinated in his city hall office. Feinstein became the acting mayor. A year later, she was elected in her own right, serving the city from 1978 to 1988 when term limits forced her from office. In 1990 the Democratic Party nominated Feinstein for governor, she was narrowly defeated. Two years later, California voters sent her to the U.S. Senate to fill two years of a vacated seat; she was subsequently elected to full six-year terms in 1994 and 2000.

For much of her career Feinstein focused on crime prevention. As mayor of San Francisco she cut the crime rate 27 percent. A successful advocate for victims of crime and crime prevention, she was instrumental in passing the Gun-Free Schools Act (1994); the Hate Crimes Sentencing Enforcement Act (1993); the Comprehensive Methamphetamine Control Act (1996); and the Assault Weapons Ban 1994–2004. Supportive of the Jewish community, Feinstein was a member of Congregation Emanu-El in San Francisco, California, where she was confirmed.

[Ava F. Kahn (2<sup>nd</sup> ed.)]

**FEINSTEIN, ELAINE** (1930– ), English novelist, poet, and translator. Born in Bootle, Feinstein was educated at Cambridge University. She has worked as an editor for the Cambridge University Press and lectured in English at Bishop's Stortford Training College and the University of Essex until 1970. She is now a full-time writer. Feinstein published her first novel, *The Circle*, in 1970. She also translated *The Selected Poems of Marina Tsvetayeva* (1971) and *Three Russian Poets: Margarita Aliger, Yunna Moritz, Bella Akhmadulina*, (1978). As an editor she chose the *Selected Poems of John Clare* (1968) and, with Fay Weldon, *New Stories 4* (1979). She has also published volumes of short stories and plays, *Breath* (1975) and *Echoes* (1980). The Holocaust is central to *Children of the Rose* (1975) and *The Border* (1984). She also wrote a book on the blues singer Bessie Smith (1985).

Her prodigious literary output includes volumes of poetry such as *The Magic Apple Tree* (1971), *At The Edge* (1972) and *The Celebrants and Other Poems* (1973). Feinstein is regarded as an important English novelist. She has described her early fiction as an "extension" of her poetry as her novels combine the poetic with a larger historical canvas. Her fiction, therefore, has ranged through European history and, at the same time, has retained a poetic use of language and myth. With remarkable economy, several of Feinstein's novels, *Children of the Rose* (1975), *The Ecstasy of Dr. Miriam Garner* (1976), *The Shadow Master* (1978), and *The Border* (1984), incorporate the violence, fanaticism, and pseudoapocalyptic character of modern history. The ever-present themes of exile and betrayal in Feinstein's novels are given a wider historical dimension which shapes the lives of her cosmopolitan characters. *The Survivors* (1982), an autobiographical novel, has an exclusively English setting and uses the compressed form of a conventional family saga. Feinstein is also a biographer of note, having written lives of Pushkin (1998), Ted Hughes (2001), and *Lawrence's Women* (1993), about the love life of D.H. Lawrence.

Feinstein consciously writes in a Central European literary tradition. She is the first post-war English-Jewish novelist to successfully eschew the parochial concerns and forms of expression of the Anglo-Jewish novel and has located her sense of Jewishness in a wider European context. *The Border* is a representative example of Feinstein's ability to express in an exciting love story a multifarious vision of the world made up of history and autobiography, poetry and myth, literature and science. In this way, Feinstein has managed to broaden the concerns of the Anglo-Jewish novel and develop a lasting poetic voice in a distinct and imaginative manner.

[Bryan Cheyette]

**FEINSTEIN, ḤAYYIM JACOB HA-KOHEN** (second half of the 19<sup>th</sup> century), emissary from Safed who visited the Jewish communities in the Orient, including Aden, Yemen, and India. He was in the last country three times, in 1866, 1873, and 1887. While in Calcutta, he noted disapprovingly the practice

of the Jews of using the trolley on the Sabbath, and wrote a treatise, *Imrei Shabbat* (1874), in which he vehemently opposed this custom. He published *Torat Immekha* (1886), in which he opposed other practices of Baghdadi Jews. In \*Cochin (which he visited twice) he took the side of the "Non-White Jews," as he called the "Black Jews," and fought for their emancipation, maintaining that they were actually the early settlers while the "White Jews" were newcomers. He expressed these views in his *Mashbit Milḥamot* (1889) which he submitted to the Cochin Jews and to the chief rabbi of Jerusalem, Meir Panigel. His report appeared as a supplement to the second edition of his *Imrei Shabbat* (1889).

**BIBLIOGRAPHY:** A. Yaari, *Ha-Defus ha-Ivri be-Arḥot ha-Mizrah*, 2 (1940), 29, 30; idem, in: *Sinai*, 4 (1939), 416–21; 26 (1950), 342–4; D.S. Sassoon, *Ohel Dawid*, 2 (1932), 966–7; Bar-Giora, in: *Se-funot*, 1 (1947), 265–6.

[Walter Joseph Fischel]

**FEINSTEIN, MEIR** (1927–1947), Jew condemned to death by the British in Palestine. Feinstein was born in the Old City of Jerusalem. In his youth he went to work in the kibbutz of Negbah, where he joined the \*Palmah, and at the age of 16 volunteered for service in the British army. In 1946 he joined the I.Z.L. and on Oct. 30 took part in an attack on the railway station of Jerusalem. During his get-away, fire was opened on him from a passing car and he was badly wounded in his left hand. As a result, whereas his companions managed to escape, he took refuge in a house and the bloodstains enabled his pursuers to find him. After his left hand was amputated he was put on trial and sentenced to death on Apr. 3, 1947. He shared the condemned cell with Moshe \*Barazani, and the date of their execution was fixed for the morning of the 21<sup>st</sup>. At 9 P.M. on the previous evening, they placed an explosive charge, which had been smuggled into the cell, between their hearts and set it off, thus cheating the gallows.

**BIBLIOGRAPHY:** Y. Nedava, *Olei-ha-Gardom* (1966); Y. Gurion, *Ha-Nizzahon Olei Gardom* (1971).

**FEINSTEIN, MOSES** (1895–1986), rabbi and leader of American Orthodoxy. Feinstein was born in Uzda, near Minsk, Belorussia, where his father, from whom he received his early education, was rabbi. In 1921 he became rabbi of Luban, near Minsk, where he served until he immigrated to the United States in 1937. There Feinstein was appointed *rosh yeshivah* of New York's Metivta Tiferet Jerusalem. Under his guidance, it became one of the leading American yeshivot. Feinstein arrived in America with three children: Faye Gittel, who married a distinguished rabbi, Moses Shisgal; Shifra, who married Rabbi Dr. Moses Tendler, long-time rabbi in Monsey, New York, as well as teacher of Talmud and professor of biology at Yeshiva University; and David, who succeeded his father as the head of Metivta Tiferet Jerusalem. A son, Reuven, was born in America. He became the head of the Metivta Tiferet Jerusalem branch in Staten Island, New York City.

After World War II, Feinstein became one of the leading figures in Orthodox Jewry in America. After the death of the

*rosh yeshivah* of the Lakewood Yeshiva, Rabbi Aaron \*Kotler, Feinstein became the acknowledged leader of Orthodoxy. While he did address broader, communal issues throughout his lifetime, his major impact was in the realm of Halakhah. His reputation grew rapidly to the point that his rulings were accepted as authoritative by Orthodox Jews throughout the world. Feinstein's responsa are entitled *Iggerot Moshe*, the first four volumes follow the Shulhan Arukh: *Orah Hayyim* (1959), *Yoreh De'ah* (1959), *Even ha-Ezer* (1961), and *Hoshen Mishpat* (1963), while subsequent volumes (1973, 2 vols. in 1981, 1996) contain responsa from different sections of the Shulhan Arukh. A detailed index to *Iggerot Moshe*, entitled *Yad Moshe* was published in 1987. He also published his talmudic novellae entitled *Dibrot Moshe to Bava Kamma* in two volumes (1946, 1953), to *Bava Mezia* (1966), to *Shabbat* in two volumes (1971, 1976), to *Kiddushin* and *Yevamot* (1979), to *Gittin* (1982), to *Hulin* and *Nedarim* (1983), and to *Ketubbot* and *Pesahim* (1984). *Darash Moshe*, his sermons on the weekly Torah reading and the holidays, were published posthumously in 1988.

Feinstein's world view encompassed the world of Torah. "My entire world view," he wrote (*Iggerot Moshe* 2:11), "stems only from knowledge of Torah without any mixture of outside ideas, whose judgment is truth whether it is strict or lenient. Arguments derived from foreign outlooks or false opinions of the heart are nothing." Nevertheless, Feinstein was keenly aware of the world around him, constantly applying the principles of Torah law to new situations and circumstances. Indeed, when he dealt with medical problems, he always consulted with leading physicians, often asking for a second opinion. He demanded to understand the medical issues in depth. Feinstein served as the *posek* (halakhic decisor) for many medical students and doctors as well as for the Association of Orthodox Jewish Scientists.

Feinstein's responsa deal with a very broad range of issues and topics. He devoted a great deal of time to grappling with problems in Jewish education. He had little tolerance for the teaching of secular studies; however, he permitted it because of government regulations (*ibid.* 3:83). He demanded that science textbooks agree with the idea that God created the world (*ibid.* 3:73). He was unyielding in his opposition to coed classes, but he did allow women to teach boys, acknowledging the reality of the educational world in America. He required fathers to pay for the tuition for their daughters' education.

The Modern Orthodox community in America also looked to Rabbi Feinstein for halakhic guidance. At times, his answers to their questions exhibited a flexibility he did not show to the ultra-Orthodox community. For instance, Feinstein permitted fathers to be present at school performances where girls under the age of 11 sang, even though he frowned upon the practice (*ibid.* 1:26).

Other topics that received his attention include the height of the *mehizah* (partition) in the synagogue, the use of glass in constructing a *mehizah*, renting a hotel ballroom for High Holy Day services, allowing an American owner of an Israeli factory to keep his factory open on the second day of Yom

Tov, the status of children conceived through artificial insemination, and allowing *shohatim* (ritual slaughterers) to form their own union.

Feinstein, highly regarded for his dedication and selflessness, was elected to positions of importance in the Orthodox Jewish world. He was president of the \*Union of Orthodox Rabbis and chairman of the American branch of the Moëzet Gedolei ha-Torah of Agudat Israel. He was also active in guiding and obtaining support for Orthodox Israeli educational institutions, particularly the Hinnukh Azma'i school system of Agudat Israel. Despite his public, communal involvement and his role as the leading *posek* of the second half of the 20<sup>th</sup> century, Feinstein was renowned for his simple lifestyle, his piety, and his humility.

Feinstein passed away during the night before the Fast of Esther, March 23, 1986. Over 150,000 people attended the funeral services in New York. Eulogies were given by rabbis from the entire spectrum of Orthodoxy, from a representative of the Satmar hasidic community to two speakers from Yeshiva University. He was buried three days later in Jerusalem. An obituary notice appeared in the "Milestones" section of *Time* magazine (April 7, 1986, p. 42). Perhaps the most telling indication of his impact on Orthodox Jewry in the 20<sup>th</sup> century is the saying that every rabbi receiving Orthodox ordination in America needed two things upon graduation: A *lu'ah*, a calendar that lists all the changes in the prayer services, and Rabbi Moses Feinstein's telephone number.

**FEINSTEIN, MOSES** (1896–1964), Hebrew poet and educator. Born in Russia, Feinstein arrived in the United States in 1912. He devoted his life to Herzliah – the Hebrew Academy and Teachers' Institute which he founded in New York in 1921. His volumes of poetry are the lyrical *Shirim ve-Sonettot* ("Poems and Sonnets," 1935); *Halom ve-Goral* ("Dream and Destiny," 1937), a description of a journey to Palestine; and *Abraham Abulafia* (1957), a philosophical poem about the 13<sup>th</sup>-century mystic. Feinstein's collected poems appeared posthumously in a volume called *Al Saf ha-Sof* ("At the Threshold of the End," 1964).

[Eisig Silberschlag]

**FEINSTONE, MORRIS** (1878–1945), U.S. labor leader. Feinstone, born in Warsaw, was trained as a woodcarver there. After completing school he emigrated to England where he became president of a woodcarvers' union in London (1895). Later in Birmingham he was active in the beginnings of the British Labour Party. In 1910 Feinstone emigrated to the U.S. where he found employment in various skilled trades, securing permanent work in the umbrella industry. He soon became an official of the Umbrella Handle and Stick Makers' Union and an important figure in the United Hebrew Trades, an organization which sheltered the smaller and weaker American Jewish trade unions. Feinstone was a close associate of the organization's outstanding leader, Max Pine, whom he succeeded as United Hebrew Trades' secretary in 1928. Feinstone continued Pine's policy of supporting the socialist labor sector in Jewish Palestine through the Histadrut. He also represented the United Hebrew Trades on the executive board of the Central Trades and Labor Council of Greater New York, wrote articles in the *New York Call* and the *Yiddish Jewish Daily Forward* endorsing socialism and labor Zionism, and worked for the establishment of an independent labor party. With the advent of the New Deal, Feinstone's socialist teachings were incorporated by the American Labor Party, which satisfied his desire for a working class political organization. Thereafter, until his death he concentrated on obtaining support for Jewish labor in Palestine.

[Melvyn Dubofsky]

**FEIS, HERBERT** (1893–1972), U.S. economic historian. Feis, who was born in New York City, was an instructor in economics at Harvard (1920–21), associate professor at the University of Kansas (1922–25), and professor and head of the department of economics at the University of Cincinnati (1926–29). Between 1922 and 1927 he was U.S. adviser to the International Labor Office of the League of Nations. In 1930, he became a member of the staff of the Council on Foreign Relations, in 1931 economic adviser to the U.S. State Department, and from 1937 to 1943 he was adviser on international economics.

Feis was a special adviser to the U.S. secretary of war from 1944 to 1946, and during that period was chief technical adviser to the World Economic and Monetary Conference in London. From 1948 he was a member of the Institute for Advanced Study at Princeton. His many publications include *Europe, The World's Banker 1870–1914* (1930, 1965<sup>3</sup>), *The Spanish Story* (1948, 1966<sup>2</sup>), *The Road to Pearl Harbor* (1950, 1964<sup>2</sup>), *The Diplomacy of the Dollar* (1950, 1965<sup>2</sup>), *The China Tangle* (1953, 1965<sup>3</sup>), *Churchill, Roosevelt, Stalin* (1957, 1966<sup>2</sup>), *Between War and Peace – the Potsdam Conference* (1960, 1967<sup>2</sup>), *Japan Subdued* (1961), *Foreign Aid and Foreign Policy* (1964, 1966<sup>2</sup>), *1933: Characters in Crisis* (1966), *The Atomic Bomb & the End of World War II* (1966), and *The Birth of Israel: The Tossed Diplomatic Bed* (1969). Feis was awarded the Pulitzer Prize in 1961 for *Between War and Peace*, which dealt with the origins of the Cold War.

In 1982 the American Historical Association established the Herbert Feis Award, which is offered annually to recognize the scholarly interests of historians outside academe and the importance of the work of independent scholars in the United States.

Feis' wife, Ruth, was the granddaughter of James Garfield, the 20<sup>th</sup> president of the United States.

**FEITELSON, MENAHEM MENDEL** (1870–1912), Hebrew writer and critic. Feitelson, who was born in Mikhailovka, Crimea, taught in Melitopol, and was active in the Hebrew Language Association in that city. A contributor to the Hebrew press from his youth, he later published articles of topical interest and literary criticism. He wrote for *Ha-Meliz* (a comprehensive study of Mendele Mokher Seforim), *Ha-Zefirah*, and other journals. After publishing *Mehkarim be-Korot Yisrael* (1890), he gave up writing for a time, taught in Sebastopol, and at the turn of the century settled in Yekaterinoslav. There he wrote a series of articles on Hebrew writers for *Ha-Shilo'ah* and also contributed to other periodicals. Unable to find employment in the literary centers of Eastern Europe, he grew increasingly depressed and committed suicide in 1912. The immediate reason for Feitelson's suicide is believed to be Mendele's insulting remarks to him regarding the essay he had written on Mendele. I. Cohen edited a collection of Feitelson's prose, *Behinot ve-Ha'arakhot* (1970), which includes an essay on the writer by A.B. Jaffe.

**BIBLIOGRAPHY:** F. Lachower, in: M.M. Feitelson, *Ketavim* (1914); N. Goren, *Mevakkerim be-Sifrutenu* (1944), 59–68; Waxman, *Literature*, 4 (1960<sup>2</sup>), 412–3; J. Barzilai, *Ha-Shilo'ah* 1896–1927 (1964), [index to *Ha-Shilo'ah*], 41.

[Getzel Kressel]

**FEITH, DOUGLAS J.** (1953– ), U.S. government adviser. Born and reared in Philadelphia, where his father, Dalck Feith, a Holocaust survivor, was a prominent businessman and philanthropist. Feith was educated at Harvard College (*magna cum laude* 1975) and Georgetown University Law Center (*magna cum laude* 1978). He began his public career in 1975, working as an intern on Senator Henry M. ("Scoop") Jackson's Subcommittee on Investigations. Feith then served in the Reagan Administration as a National Security Council Middle East specialist and as Richard Perle's deputy at the Pentagon. Throughout the 1990s, he advised Republican members of Congress on a range of national security matters, including the Gulf War, arms control, and Bosnia. Feith has written numerous newspaper and journal articles on national security issues such as terrorism, missile defenses, chemical weapons, U.S.-Soviet relations, and the Middle East.

In July 2001 Feith was appointed by President George W. Bush as under secretary of defense for policy, effectively the

third-ranking civilian position in the U.S. Department of Defense. Following the September 11, 2001, attack on the World Trade Center and the Pentagon, Feith played an important role in developing U.S. government strategy for the war on terrorism, advising Secretary of Defense Rumsfeld on policy issues relating to Afghanistan, Iraq, and other aspects of the war. Feith was instrumental also in other defense initiatives, including realigning the U.S. global defense posture, adding new members to the North Atlantic Treaty Organization and reforming NATO's military and civilian structures, creating new U.S. defense ties in South Asia, launching of the Global Peace Operations Initiative to increase the capacity of various countries to send forces abroad to keep or enforce the peace and negotiating with Russia the Moscow Treaty on offensive nuclear weapons.

Like a number of Jewish intellectuals who grew up in liberal, pro-Franklin Delano Roosevelt homes, Feith came to identify himself with a group of "neo-conservatives" serving in or supporting the Reagan Administration who viewed the Cold War as a clash of basic philosophical principles, not just a great power contest. Feith also staked out contrarian views on such issues as the "oil weapon" (he thought its power exaggerated and the financial costs would be high for whatever state tried to use it), arms control treaties (he thought their benefits were illusory), and the Oslo peace process (he predicted it would fail as a result of Arafat's deficient statesmanship and lack of commitment to peace). Those views generated controversy and helped make him a lightning rod later for critics of the Iraq War of 2003. While rejecting the label of Wilsonian idealism, Feith, along with Natan Sharansky and Paul Wolfowitz, has helped elaborate the idea, which President George W. Bush has made central to U.S. foreign policy, that democratic institutions are the route to peace and prosperity and that peoples in the Middle East, as elsewhere, will choose freedom and democratic political institutions if given the chance.

Feith's community work included service as president of the Charles E. Smith Jewish Day School.

[Mark Feldman (2<sup>nd</sup> ed.)]

**FEIWEL, BERTHOLD** (1875–1937), Zionist leader and poet. Born in Pohrlitz, Moravia, Feiwel began his higher education in Brno, where he founded the Zionist student organization Veritas. In 1893 he studied law at Vienna University and became Herzl's close associate, helping to organize the First Zionist Congress in 1897. He contributed to the central organ of the Zionist Organization, *Die Welt*, and became its editor-in-chief in 1901. In his articles he emphasized that Zionism cannot content itself with the political and diplomatic activity of its leaders; it must also bring about the renewal of Jewish spiritual and social life in the Diaspora. At the first Conference of Austrian Zionists at Olmuetz (1901), Feiwel introduced a program of Zionist Diaspora activity, arguing that Zionism means not only the Jewish people seeking refuge in Erez Israel, but also preparing itself (in the Diaspora) for its future com-

monwealth. Diaspora work covered the whole range of Jewish life in the countries of dispersion: political, economic, cultural, and sporting activities. When his program was rejected by the Zionist Executive, Feiwel resigned as editor of *Die Welt* and, together with Martin Buber, Chaim Weizmann, and others, created the Democratic Fraction as an opposition group at the Fifth Zionist Congress. Together with Martin Buber, Davis Trietsch, and the painter E.M. Lilien, Feiwel founded the \*Juedischer Verlag, a publishing house that distributed mainly German translations of Hebrew and Yiddish literature.

In 1903, after the \*Kishinev pogrom, Feiwel published *Die Judenmassacres in Kischinew* under the pseudonym Told. Based on an on-the-spot investigation, this book shocked public opinion. Feiwel had close contacts with Jewish authors in Eastern Europe and became a gifted translator of their works. In the book *Junge Harfen* (1914) he presented their modern poetry. The *Juedischer Almanach* (1902), an anthology edited by Feiwel, as well as *Lieder des Ghetto* (1902, 1920), translations of poems of the Yiddish poet Morris Rosenfeld with drawings by E.M. Lilien, also had considerable literary influence. After World War I (1919), Feiwel's friend Weizmann summoned him to London to become his political and economic adviser. When Keren Hayesod was founded (1920), Feiwel became one of its first directors. In 1933 he settled in Jerusalem.

**BIBLIOGRAPHY:** *Berthold Feiwel ha-Ish u-Fo'alo* (1959); Ch. Weizmann, *Trial and Error* (1949), index. **ADD. BIBLIOGRAPHY:** A. Schenker, *Der juedische Verlag 1902–1938 – Zwischen Aufbruch, Blute und Vernichtung* (2003).

[Samuel Hugo Bergman]

**FEJÉR, LEOPOLD** (1880–1959), Hungarian mathematician. Fejér was educated in Budapest and Berlin. He spent a year in Berlin where he met H.A. Schwarz who had a decisive influence on his mathematical career. He was appointed professor at Budapest in 1911 and elected to full membership in the Hungarian Academy of Sciences in 1930. After being dismissed from his chair during World War II he narrowly escaped being killed by the fascist regime. Fejér's Ph.D. thesis contained the classic result now known as Fejér's theorem that "a Fourier series is Cesàro summable (C,1) to the value of the function at each point of continuity." This key result gave great impetus to further developments in Fourier and divergent series. A complete list of his publications is given in *Matematikai Lapok* (vol. 1 (1950), 267–72).

**BIBLIOGRAPHY:** G. Pólya, in: *Journal of the London Mathematical Society*, 36 (1961), 501–6.

[Barry Spain]

**FEJTŐ, FRANÇOIS (Ferenc; 1906– )**, author, critic, and journalist. Fejtő was born in Zagreb. Together with P. Ignotus and A. József, he was a founder of the Hungarian literary journal *Szép Szó* (Budapest, 1935). In 1938 he was accused by the Budapest police of being a Communist and fled from Hun-

gary, settling in Paris. An expert on Eastern European politics, Fejtő was a prominent socialist and an independent thinker. Both in his political writings and in his fiction he was preoccupied with the Jewish question, particularly the relationship of Jews and Communists. His works include *Érzelmes utazás* ("Sentimental Journey," 1937), *Chine-URSS, la fin d'une hégémonie* (1964), *Henri Heine* (1946), and *Le printemps des peuples dans les pays communistes* (1960).

**BIBLIOGRAPHY:** *Magyar Irodalmi Lexikon*, 1 (1963), 341.

[Baruch Yaron]

**FEKETE, MICHAEL** (1886–1957), Israel mathematician. Born at Zenta, Hungary, Fekete was associated with the Hungarian School of Mathematics and was assistant at Budapest University from 1912 to 1919. In 1928 he accepted a position as lecturer at the Institute of Mathematics in the Hebrew University, Jerusalem, becoming professor in the following year. From 1946 to 1948 he was rector of the university. A dedicated teacher, he laid the foundations of mathematical studies and research there, and played an important part in the development of his department.

Fekete's many and varied contributions included the theory of numbers, algebraic equations, and above all the theory of functions. He considered his greatest achievement to have been the discovery of the transfinite diameter, which won him the Israel Prize for the exact sciences in 1955.

[David Maisel]

**FELD, ISAAC** (1862–1922), poet who wrote in German. Born in Lvov, Feld studied and practiced law, in addition to teaching throughout his life. One of the members of Hovevei Zion in Galicia, his *Dort wo die Zeder* was a very popular Zionism song. It first appeared in the journal *Selbstemanzipation* in the early 1880s, and was later included in many German, Yiddish, and Hebrew anthologies of Jewish songs. It was published with music in the *Blauweiss Liederbuch* (1914).

**ADD. BIBLIOGRAPHY:** N.M. Gelber, *Toledot ha-Tenu'ah ha-Ziyyonit be-Galicia*, index.

[Getzel Kressel]

**FELD, JACOB** (1899–1975), U.S. civil engineer. Born in Austria, Feld was taken to the U.S. in 1906. He was a graduate of City College, N.Y., and got his Ph.D. from the University of Cincinnati. His engineering designs and constructions include the New York Coliseum, Guggenheim Museum, Yonkers Raceway, Sixth Avenue Subway of N.Y.C., airfields, and a naval training station. He was a special consultant to the U.S. Air Force and in 1959 became chairman of the engineering division, New York Academy of Science and later became president of the academy and a fellow of the American Society of Civil Engineers (ASCE), which cited him in 1969 as Metropolitan Engineer of the Year. Feld was active in Jewish community affairs.

**FELDBERG, LEON** (1910– ), South African newspaper publisher and editor. Son of the rabbi of Krok, Lithuania, he went to yeshivot in Ponevezh and Slobodka, and received a rabbinical diploma. He started his journalistic career in Riga, working for Yiddish newspapers. In 1929, he emigrated to South Africa and, after serving as a minister and teacher, went into business. In 1936 he established the weekly *South African Jewish Times*, which he edited until 1969. He also set up a printing and publishing plant and issued the *South African Jewish Year Book* (1960, 1961) and *South African Jewry* (1965, 1967).

[Lewis Sowden]

**FELDER, GEDALIA** (1921/2–1991), Canadian rabbi and halakhic authority. Felder was born in Iczuki-dolne in Galicia and studied in the local yeshiva and with other rabbis in Poland, including Yeshivat Keter Torah Radomsk in Cracow. His father, Hersch, immigrated to Canada in 1930, living briefly in Winnipeg and then in Montreal before bringing his family to Canada in 1937. Felder continued his studies in Montreal and then in Toronto under Rabbi Abraham Price at his Yeshivat Torat Chaim. Felder received his ordination from Price in 1940.

Between 1940 and 1949 Felder served as rabbi for several small Jewish communities in southern Ontario: Sarnia (1941–43), Belleville (1943–45), and Brantford (1945–49). One of his students in the last town spoke of the *menschlichkeit* of Felder and the warm reception students received in his household. Between 1943 and 1945 Felder was a part-time chaplain with the Royal Canadian Air Force for Trenton and District. In 1949 Felder moved to Toronto, where he remained for the rest of his life. Upon his arrival, Felder assumed the pulpit of Shomrei Shabbos, a synagogue founded by Galician Jews in the late 19<sup>th</sup> century. He taught at Price's Yeshivat Torat Chaim and was a staunch supporter of the Eitz Chaim Talmud Torah, the school established by Polish Jews several decades earlier. In Toronto, he also served for years as the chairman of the Va'ad ha-Kashrut of the Central Region (i.e., Ontario) of the Canadian Jewish Congress, and was a supporter of the Mizrahi organization. Felder did not cut himself off from non-Orthodox Jews, participating in the Toronto Rabbinical Fellowship, which brought together for discussion rabbis of various denominations, including, among others, Walter Wurzberger (Orthodox), Stuart \*Rosenberg (Conservative), and Gunther \*Plaut (Reform).

Felder achieved an international reputation on the basis of his halakhic works: the *Yesodei Yeshurun* (6 vols., 1954–70), which deals with laws regarding the liturgy, the Sabbath, and Passover; the two-volume *Naḥalat Zevi* (1952–72) in which he grapples with the thorny issues of adoption, proselytes, and divorce; some of his early responsa are collected in *She'elot u-Teshuvot She'elat Yeshurun* (1964); and in 1977 Felder published an edition of *Sefer Tanya Rabbati*, a work attributed to Jehiel ben Jekuthiel ha-Rofe Anav of 13<sup>th</sup> century Italy. Felder also published in a host of journals devoted to halakhic issues. In recognition of Felder's erudition, he was appointed

one of the five members of the Beth Din of the Rabbinical Council of America.

[Richard Menkis (2<sup>nd</sup> ed.)]

**FELDHEIM, PHILIPP** (1901–1990), U.S. publisher of sacred books and translations in English translation. Born in Vienna, Feldheim was sent away to a series of yeshivot in Europe where he studied under the direction of Rabbi Joseph Zevi \*Duschinsky. He returned to Vienna, where he was active in communal affairs, most especially Agudat Israel. Arrested on \**Kristallnacht* Feldheim resolved to leave Austria and immigrated to the United States with thirty dollars in his pocket. He settled in Williamsburg, where he first sold books from his apartment and received shipments of Jewish sacred books from Europe. From his apartment he moved to rented quarters and then decided to publish books instead of only importing them.

He was involved in printing the first Talmud to be printed in the United States. He moved to Washington Heights in 1950, where he came under the influence of Rabbi Joseph \*Breuer, who encouraged him to translate important Jewish books into English, much as the community in Germany had made sacred works available in German. Feldheim undertook the publication of the English translation of the writings of Rabbi Samson Raphael Hirsch and Rabbi Elie Monk, and such works as *The Path of the Just* and the *Gates of Repentance* and Irving Bunim's *Ethics from Sinai*. He was both a distributor and publisher and spearheaded the creation of an English-language ultra-Orthodox corpus of works, essential for reaching a new generation of Jews comfortable in the English language.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**FELDMAN, ABRAHAM JEHIEL** (1893–1977), U.S. Reform rabbi and a Zionist leader. Feldman was born in Kiev, Ukraine, immigrating to New York in 1906 and settling in the lower East Side. He went to college at the University of Cincinnati where he received his B.A. (1917) and he was ordained at Hebrew Union College (1918). He then served in pulpits at the Free Synagogue in Flushing, the Congregation Children of Israel in Athens, Georgia, and Keneseth Israel in Philadelphia, where the illness of the senior rabbi forced him to assume responsibilities ordinarily not given to a younger rabbi. In 1925, he moved to Beth Israel of Hartford, Conn., where he served as rabbi until his retirement in 1968, setting a tradition of longevity that was to mark the religious leadership of Connecticut's capital. In the New Deal, he served as education director for the National Recovery Administration in Connecticut and later was State Chairman of the National Recovery Administration Adjustment Board. He was a founder with Samuel Neusner of the *Connecticut Jewish Ledger* and served as editor until 1977. He was a master orator, who felt that the sermon may not only inform the mind but shape the heart. He perceived himself as the Jewish ambassador to the non-Jewish world and taught a course at the Hartford Theological Seminary. A distinguished leader in state and commu-

nal affairs, he has also been prominent in rabbinical circles and was president of the Central Conference of American Rabbis during 1947–49, President of the interdenominational Synagogue Council of America (1955–57). A prolific author and journalist, activist rabbi and communal Rabbi Feldman wrote 26 books and many scholarly articles as well as literally thousands of journalistic pieces. Among his books are *Why I am a Zionist* (1945) and *American Reform Rabbi* (1965), as well as many articles.

**BIBLIOGRAPHY:** L. Karol, "Rabbinic Leadership in the Reform Movement as Reflected in the Life and Writings of Abraham Jehiel Feldman" (Rabbinic Thesis, Hebrew Union College); A.J. Feldman, *The American Jew* (1964).

[Abram Vossen Goodman]

**FELDMAN, HERMAN** (1889–1969), U.S. army officer. Born in New York, Feldman joined the army as a private in the field artillery. During World War I he was sent to France and was commissioned in the field artillery. During World War II Feldman again served in the quartermaster corps, eventually being promoted to major general. At the end of the war, Feldman was awarded the Legion of Merit for outstanding services in England and North Africa. A second Legion of Merit was awarded by Admiral Nimitz for outstanding service in the Pacific. He also earned the Distinguished Service Medal and Army Commendation Medal for his service in World War II. In 1949 Feldman was nominated by President Truman as quartermaster general. He retired in 1951 after a distinguished 43-year army career.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**FELDMAN, IRVING** (1928– ), U.S. poet. Feldman taught at Kenyon College from 1958 to 1964, and subsequently at the New York State University in Buffalo. His poetry, including *The Pripet Marshes* (1965), is frequently on Jewish themes. In his reading of Feldman's poetry, found in *The Hollins Critic* of February 1997, David Slavitt has called the poem "The Pripet Marches" "one of the dozen or so most interesting and powerful poems of our generation." Feldman's poems are found, as well, in his *Collected Poems, 1954–2004* (2004).

**BIBLIOGRAPHY:** H. Schweizer (ed.), *The Poetry of Irving Feldman* (1992).

[Lewis Fried (2<sup>nd</sup> ed.)]

**FELDMAN, LOUIS H.** (1926– ), U.S. professor of classics and literature. Born in Hartford, Connecticut, Feldman received his undergraduate degree from Trinity College in 1946, and his master's degree in 1947; his doctoral degree in classical philology is from Harvard University (1951). He was a teaching fellow at Trinity in 1951 and 1952, then an instructor in classics in 1952 and 1953. He was an instructor at Hobart and William Smith Colleges from 1953 to 1955, then joined Yeshiva University of New York as an instructor in humanities and history. He was an assistant professor at Yeshiva University from 1956 to 1961, an associate professor from 1961, and he was appointed a professor of classics in 1966. He subsequently became the

Abraham Wouk Family Professor of Classics and Literature. Feldman served as associate editor of *Classical Weekly* from 1955 to 1957 and as managing editor of *Classical World* from 1957 to 1959.

Feldman is renowned as a scholar of Hellenistic civilization, specifically of the works of Josephus. A fellow of the American Academy for Jewish Research, he received numerous fellowships and awards, including a Ford Foundation fellowship (1951–52), a Guggenheim fellowship (1963), a grant from the Memorial Foundation for Jewish Culture (1969), and a grant from the American Philosophical Association (1972). He was named a senior fellow of the American Council of Learned Societies in 1971, a Littauer Foundation fellow in 1973, and a Wurzeiler Foundation fellow in 1974.

Feldman's works include *Scholarship on Philo and Josephus, 1937–1962* (1963), *Josephus and Modern Scholarship, 1937–1980* (1984), *Jew and Gentile in the Ancient World: Attitudes and Interactions from Alexander to Justinian* (1993), *Studies in Hellenistic Judaism* (1998), and *Studies in Josephus' Rewritten Bible* (1998). He was editor and translator of *Jewish Antiquities, Books 18–20* (1965) and editor of *Jewish Life and Thought among Greeks and Romans: Primary Readings* (1996). He coedited, with Gohei Hata, *Josephus, Judaism, and Christianity* (1987) and *Josephus, the Bible, and History* (1989). Feldman contributed extensively to journals in his field, and he was departmental editor of Hellenistic literature for the first edition of the *Encyclopaedia Judaica* and a contributor to the *Encyclopaedia Britannica*.

[Dorothy Bauhoff (2<sup>nd</sup> ed.)]

**FELDMAN, MARTIN** (“Marty”; 1934–1982), British comedian and scriptwriter. Born in London to Orthodox Jewish parents, Marty Feldman left school at 15 and, in 1957, joined the BBC as a staff writer, continuing for ten years as a television and radio comedy scriptwriter for such shows as BBC radio's *Round the Horne*. From 1967 he was chiefly an actor, his trademark bulging eyes and gangling frame being instantly recognizable. He became internationally famous in the five years after he moved to Hollywood in 1974, co-starring with Gene Wilder in such cult comedies as *Young Frankenstein* (1974), in which he played “Igor,” and *Silent Movie* (1976). Like many clowns, in private life Feldman was a sad, unhappy man. His bulging eyes were caused by a chronic thyroid deficiency, and his manic-depressive personality led to dependence on drugs and alcohol. He died of a heart attack at the age of 48.

**FELDMAN, MIROSLAV** (1899–1976), Yugoslav poet and playwright. A practicing physician, Feldman was born in Virovitica. His first poems appeared in 1920. Later collections included *Ratna lirika* (“War Lyrics,” 1947) and *Pitat će kako je bilo* (“They Will Ask How It Was,” 1959). Among his successful dramas were *Zec* (“Rabbit,” 1932), *Profesor Žić* (1934), *U pozadini* (“Behind the Lines,” 1939, 1953<sup>2</sup>), and *Doći će dan*

(“The Day Will Come,” 1951). Feldman, who dealt mainly with war and love themes, was president of the Croatian Writers' Association (1955). He also wrote theatrical pieces and in 1976 was awarded the AVNOJ prize (the highest literary award). At first a Zionist, he later embraced Communism.

**FELDMAN, MORTON** (1926–1987), U.S. composer. Born in New York City, Feldman began studying the piano with Vera Maurina-Press at the age of 12 (the work *Madame Press Died Last Week at Ninety* was written in 1970 in her memory), and later studied composition and counterpoint with Wallingford Riegger and Stefan Wolpe. With composers John Cage, Earle Brown, and Christian Wolff and pianist David Tudor, he became part of an American avant-garde group interested in bringing to music the same aesthetic concepts of art and expression that had marked the abstract expressionist American painters (such as de Kooning and Pollock) of the early 1950s. His earliest works, *Projections* (1950–51), explored the field of indeterminacy in music and the use of graphic notation. Although Feldman later varied and combined his methods of notating works, he was always concerned with examining the extreme limits of slowness (in durations and tempi) and softness (of dynamic range) of which music is capable, and with timbres created by non-traditional methods, e.g., piano sounds produced without traditional forms of attack. His output was large: many piano pieces for soloist and combinations of two and three pianos, notably *Last Pieces*; and orchestral and ensemble works – *Numbers*, for nine instruments; *Atlantis* (1958); *Structures for Orchestra* (1960–62); *Out of Last Pieces*; *For Franz Kline*, for soprano and four other players; *Rabbi Akiba*, for soprano and ten instruments; *On Time and the Instrumental Factor*, for small orchestra (1969); and the series of pieces for solo viola and various groupings of accompanying instruments entitled *The Viola in My Life*. He worked on films, and collaborated on the ballet *Summerspace* (1966) with choreographer Merce Cunningham and painter Robert Rauschenberg. In 1971 Feldman wrote *Rothko Chapel* for soloists, chorus, and instrumental ensemble which was commissioned as a tribute to the painter, who had died a year before. Some of the composer's late works reflected his interest in the woven patterns in Anatolian rugs and in Jasper John's crosshatch paintings (*Why Patterns*, 1978, *Crippled Symmetry*, 1983). *Coptic Light* (1986), Feldman's last orchestral work, was inspired by the early Coptic textiles at the Louvre. Feldman defended his aesthetics in a number of essays (*Essays*, ed. W. Zimmermann, Kerpen, 1985).

[Max Loppert / Yulia Kreinin (2<sup>nd</sup> ed.)]

**FELDMAN, SANDRA** (1939–2005), U.S. teacher, trade union activist, and labor union executive. Born in New York City to Milton and Frances Abramowitz, Feldman earned an M.A. degree in English literature from New York University. Active in the civil rights movement of the 1960s, she also taught

elementary school on the Lower East Side of Manhattan. In 1966 Feldman became a full-time field representative for New York City's United Federation of Teachers. She worked her way through the ranks following in the footsteps of her mentor, Albert \*Shanker. In 1986, she became the first woman president of the largest local union in the United States. She served until 1997, when on May 6, the national American Federation of Teacher's executive council unanimously elected her the 15<sup>th</sup> president of the national organization. In the same month, she was also elected a vice president of the American Federation of Labor-Congress of Industrial Organizations (AFL-CIO).

As a public school educator, Feldman devoted herself to improving the working conditions of teachers, promoting higher educational standards for students, and strengthening curricula in the schools. During her tenure as president of the American Federation of Teachers, the organization experienced record growth, representing more than one million educators, healthcare professionals, public employees, and retirees. Feldman's second husband was Arthur Barnes, former president of the New York Urban Coalition.

Feldman supported the rights and concerns of children, women, and workers on local, national, and global levels through her association with the Council on Competitiveness, the International Rescue Committee, the A. Philip Randolph Institute, the Jewish Labor Committee, the Coalition of Labor Women, the New York Urban League, Women's Forum, Women's Committee on Refugee Children, Child Labor Coalition, the United States Committee for UNICEF, and the National Council of Americans to Prevent Handgun Violence.

[Peggy K. Pearlstein (2<sup>nd</sup> ed.)]

**FELDMAN, SHIMSHON SIMON** (1909–1995), leader of the Jewish Ashkenazi community of Mexico. He was born in Skvira, Ukraine, and studied in a *talmud torah*, and in a Russian public school. His mother died before his 13<sup>th</sup> birthday, and in 1924 he immigrated alone to Mexico. During his first years there he worked as a peddler. In 1928 he opened his first shop and brought his father and brothers to Mexico. In the 1930s he prospered and at the end of World War II owned a number of factories. In 1942 he joined the Board of the Ashkenazi Nidhei Isroel congregation. In 1942 he became its president – a position he held for 50 years. In this role he dedicated himself to the strengthening of Jewish education and to the development of Jewish schools, to religious community life, to supplying Jewish and non-Jewish needs, and to giving moral and material support to the State of Israel.

[Efraim Zadoff (2<sup>nd</sup> ed.)]

**FELDMAN, WILHELM** (1868–1919), Polish author and critic. Born in Zbaraz, Galicia, he was of ḥasidic origin, but advocated assimilation and was in fact converted before his

death. As editor of the Cracow monthly *Krytyka* (1901–14) and as a literary critic, Feldman was prominent in the progressive literary movement, *Młoda Polska* ("Young Poland"). His critical works include *Współczesna literatura polska* ("Contemporary Polish Literature," 1903, 1930<sup>8</sup>), a study which roused considerable controversy owing to his radical opinions; and *Współczesna krytyka literacka w Polsce* ("Contemporary Literary Criticism in Poland," 1905). Among Feldman's political books are *Stronnictwa i programy polityczne w Galicji, 1846–1906* ("Political Parties and Programs in Galicia 1846–1906," 2 vols., 1907); and *Dzieje polskiej myśli politycznej w okresie porozbiorowym* ("History of Polish Political Thought since the Partitions," 3 vols., 1920). Although Feldman wrote novels on Jewish themes, his unsympathetic attitude became increasingly evident. Two works on Jewish problems were *Asymilatorzy syoniści i polacy* ("Assimilationists, Zionists and Poles," 1893); and *Stosunek Adama Mickiewicza do Żydów* ("Mickiewicz's Attitude to the Jews," 1890).

Wilhelm Feldman's son JÓZEF (1899–1946), historian, was professor at the Jagellonian University of Cracow. His books include *Polska i sprawa wschodnia 1709–1714* ("Poland and the Eastern Question 1709–1714," 1926) and *Problem polsko-niemiecki w dziejach* (1946, tr. of previous version *Polish-German Antagonism in History*, 1935).

**FELDSHUH, TOVAH** (1952– ), U.S. actress. Born Terri Sue Feldshuh in New York, she attended Scarsdale High School, Sarah Lawrence College, and the University of Minnesota, studying drama under Uta Hagen. She switched to using her Hebrew name Tovah when a boyfriend in college complained that Terri Sue sounded too Southern, in marked contrast to generations of Jewish actors who changed their names. She made her stage debut in July 1971 playing small parts in *Cyrano de Bergerac* at the Guthrie in Minneapolis. Her Broadway debut followed in 1973, when she played two parts in the musical *Cyrano*. In 1974 Feldshuh appeared as Myriam in the comedy *Dreyfus in Rehearsal* on Broadway, in the title role in *Yentl* at the Brooklyn Academy of Music Playhouse, and in the musical revue *Rodgers & Hart* at the beginning of 1975. In October 1975, she reprised her role in *Yentl* on Broadway at the Eugene O'Neill Theater, which earned her a Tony nomination and a Theater World Award. Feldshuh's extensive and acclaimed film and television career includes appearances on the soap opera *Ryan's Hope* (1975) and in the made-for-TV movie *The Amazing Howard Hughes* (1977) as Katharine Hepburn, followed by her role as Czech freedom fighter Helena Slomova in the 1978 TV mini-series *Holocaust*. Years later, Feldshuh would

also narrate the film testimony at the U.S. Holocaust Museum. From 1991, she had a repeat role as defense attorney Danielle Melnick on the crime drama *Law & Order*. Her feature film roles include *The Idolmaker* (1980), *Daniel* (1983), *Brewster's Millions* (1985), *Saying Kaddish* (1991), *Citizen Cohn* (1992), *A Walk On the Moon* (1999), and *Kissing Jessica Stein* (2001). In 1989, Feldshuh returned to Broadway as Maria in *Lend Me a Tenor* at the Royale Theater, which earned her a third Tony nomination. Her fourth Tony nomination came in 2004 for her one-woman show about the life of Golda Meir, *Golda's Balcony*. Other awards and nominations include four Drama Desk awards, four Outer Critics Circle awards, the Obie, the Emmy, the Eleanor Roosevelt Humanities Award, Hadassah's Myrtle Wreath, and the Israel Peace Medal. Married to attorney Andrew Harris-Levy, Feldshuh has two children. Pulitzer Prize-nominated playwright David Feldshuh is her brother.

[Adam Wills (2<sup>nd</sup> ed.)]

**FELEKY, GÉZA** (1890–1936), Hungarian journalist, author, and art critic. Born in Budapest, he wrote on art for *Nyugat* (“West”) and later joined the liberal newspapers, *Pesti Napló* (“Budapest Daily”) and *Világ* (“World”). He was editor in chief of *Világ* (1920–25), and later became a director of *Magyar Hírlap* (“Hungarian News”). He strove to regain Jewish rights lost under the Horthy regency and was author of historical essays, including *Kaiser und Krieg* (1933).

°**FELIX, ANTONIUS**, procurator of Judea 52–60 C.E. He was a brother of the freedman Pallas, who was influential in Rome. Felix, appointed to the procuratorship by the emperor Claudius, married Drusilla, daughter of Agrippa I (cf. Acts 24:24). Felix's period of office was one of constant unrest. Tacitus (*Historiae* 5:9; *Annales* 12:54) states scathingly that “with all manner of cruelty and lust he exercised royal function in the spirit of a slave.” Immediately on his arrival in Judea he seized Eleazar b. Dinai, the leader of the \*Sicarii, together with a number of his men, and sent them in chains to Rome; he crucified many more. Taking advantage of the hostility of the Sicarii toward certain classes among the Jews, Felix encouraged them to assassinate the high priest Jonathan, who had presumed to advise him on how to conduct affairs in Judea. He ruthlessly crushed any real or imaginary attempt at rebellion. Believing an exhortation by a prophet to go into the wilderness to be an incitement to insurrection, he dispatched a force which killed many who had been persuaded to go there (Jos., *Ant.*, 20:166). An Egyptian prophet promised to demonstrate to the masses his power to make the walls of Jerusalem fall at a simple command. When he arrived at the Mount of Olives with his followers, Felix attacked them and killed many, although the prophet himself escaped (cf. Acts 21:38). In Caesarea, the residence of the procurator, a civic dispute between the Syrians and the Jews erupted into violence. When the Jews refused to desist, Felix sent soldiers against them. During Felix's term of office, the apostle Paul was imprisoned. According to the New Testament, he was kept in custody to please the

Jews (Acts 23:24; 24:27), but this motive is difficult to accept in view of all that transpired during Felix's procuratorship. The more probable explanation is that Paul's being a Roman citizen prevented Felix from treating him as he had others. In 60 C.E. Felix was succeeded by \*Festus Porcius, under whom the conflict in Caesarea continued.

**BIBLIOGRAPHY:** Jos., Loeb (ed.), vol. 9, index; Pauly-Wissowa, 2 (1894), 2616–18, no. 54; Schuerer, *Hist.*, 180, 228–34.

[Lea Roth]

**FELIX LIBERTATE** (Lat. “Happy through Freedom”), name of a society founded in Amsterdam in February 1795 with the object of attaining Jewish emancipation in the Netherlands and spreading enlightened ideas among Amsterdam Jewry. The society was sponsored by a number of prominent – mainly Ashkenazi – Jews, including M.S. \*Asser and Dr. H. de H. Lemon, who wanted to enlist opinion both inside and outside the Jewish community for obtaining full civic rights for the Jews. Leaders of Amsterdam Jewry, who did not allow them to spread their views in the synagogue, opposed their activities. Contrary to the Orangist majority of the Jewish community, the members of Felix Libertate were sympathizers of the party of the Radical Patriots. Attempts by the municipal council to intervene in the dispute were unsuccessful. One of the first acts of Felix Libertate was the translation of the Declaration of the Rights of Man and the Citizen into Yiddish. Felix Libertate failed to win general approval from other revolutionary societies, although one-third of the membership was not Jewish. They therefore conducted an active campaign both verbally and in print to have their resolution for Jewish emancipation accepted. Pamphlets were published by M.S. Asser and David \*Friedrichsfeld, among others, stressing the competence of Jews as active citizens and a republican universalist outlook. On September 2, 1796, the National Assembly declared complete emancipation. Subsequently, Felix Libertate demanded a revision of the statutes of the Amsterdam Ashkenazi community, especially those regulating its governing body and care of the poor. When the *parnasim* rejected these claims, 21 members seceded from the community and founded the Adath Jessurun congregation, whose members were excommunicated by the existing *parnasim*. The two communities engaged in bitter controversy and both published a Yiddish journal entitled “Discourse” (Yid. דיִשְׁקוּוּרֶה), one issued by the older body, the so-called “*Alte Kehile*” and the other by the “*Naye Kehile*” (1797–98). When two members of Felix Libertate, Bromet and Lemon, were elected to the National Assembly, they dismissed the *parnasim* with the help of the government in March 1798. However, the *parnasim* succeeded in having the dismissal annulled when a less extreme group came to power (June 1798). Subsequently, Felix Libertate discontinued its activities. The Adath Jessurun congregation existed until it was reunited with the old *kehillah* by a decree of King Louis Bonaparte in 1808.

[Jozeph Michman (Melmman) / Bart Wallet (2<sup>nd</sup> ed.)]

**FELLER, ABRAHAM HOWARD** (1905–1952), U.S. lawyer and government official. Feller was born in New York City. He taught at Harvard from 1931 to 1934, specializing in international law. Entering government service in Washington, Feller worked in a variety of federal agencies for the next 12 years, as special assistant to the U.S. Attorney General's Office, as legal consultant to the Office of Lend-Lease Administration, and during World War II as general counsel of the Office of War Information and general counsel of the UN Relief and Rehabilitation Administration. In 1946 he was appointed general counsel to the United Nations, a position in which he functioned as chief legal adviser to Secretary-General Trygve Lie. Several days after Lie's resignation in 1952, Feller leaped to his death from his New York apartment. Although he himself had made no such declaration, his suicide was widely interpreted both nationally and internationally as a protest against the Senate Internal Security Committee's investigation of alleged "Communist penetration" of the American delegation to the UN. His book *The United Nations and the World Community* (1952) appeared shortly before his death.

**FELLER, SHNEYUR ZALMAN** (1913– ), lawyer. He was born in Botosani (North Moldavia) and studied law at the University of Jassy. In 1944, as a refugee in the Soviet Union, Feller was appointed public prosecutor in Kishinev. He returned to Romania in 1946 and worked as a lawyer in Botosani where he was also deputy mayor and president of the Jewish community. From 1948 he was successively judge and public prosecutor. He held other high offices in the Ministry of Justice and in 1951 was appointed professor of jurisprudence at the University of Bucharest. Between 1949 and 1961 he published many articles and notes on criminal law and drafted the Romanian penal code. Feller, who emigrated to Israel in 1963, joined the Hebrew University in 1965, and became professor of criminal law in 1968. In 1971 he was named dean of the Law Faculty and in 1972 he became a full professor. In 1981 he retired from the Hebrew University, but continued to teach voluntarily at the Faculty and at the Ramat Gan Law College. In 1994 he was awarded the Israel Prize.

**FELLNER, WILLIAM JOHN** (1905–1983), U.S. economist. Fellner was born in Budapest and studied at the university there. Fellner's main interests lay in economic analysis and monetary policies. He was a partner in an industrial enterprise and lectured in economics in Budapest before going to the U.S. in 1938. He taught economics first at the University of California at Berkeley and, beginning in 1952, at Yale Uni-

versity, where he was appointed professor of economics and subsequently chairman of the department. Regarded as one of America's premier economists, Fellner served the United States government as consulting expert to the U.S. Treasury Department and the National Securities Board. In 1973 he was appointed by President Nixon to the U.S. Council of Economic Advisers. That year he was also appointed one of the first resident scholars of the American Enterprise Institute for Public Policy Research. He also served as a policy adviser to the \*European Community.

His major publications include a treatise on *War Inflation* (1942), *Monetary Policies and Full Employment* (1946), *Competition among the Few* (1949), *Trends and Cycles in Economic Activity* (1956), *Emergence and Content of Modern Economic Analysis* (1960), *Probability and Profit* (1965), *Maintaining and Restoring Balance in International Payments* (1966), *Ten Economic Studies in the Tradition of Irving Fisher* (1967), *Towards a Reconstruction of Macroeconomics* (1976), *Contemporary Economic Problems* (1978–81), and *Economic Theory Amidst Political Currents: The Spreading Interest in Monetarism and in the Theory of Market* (1982).

**BIBLIOGRAPHY:** B. Balassa, *Economic Progress, Private Values, and Public Policy: Essays in Honor of William Fellner* (1972); J. Marshall, *William J. Fellner: A Bio-Bibliography* (1992).

[Joachim O. Ronall / Ruth Beloff (2<sup>nd</sup> ed.)]

**FELMAN, AHARON LEIB** (1867–1893), pioneer in citrus culture in Erez Israel and author of the first Hebrew book on the subject. Felman was born in Mezhirech and in 1884 he settled in Erez Israel with his family. He worked in his father's orchard near Jaffa, learning citrus culture from the Arabs. Felman saw the future of Jewish settlement in Erez Israel in the planting of groves on the Coastal Plain, and to train future settlers he wrote a short book on citrus culture entitled *Ma'yan Gannim* ("Spring of the Gardens"), printed in Jerusalem in 1891. It is written in the language of the Mishnah and deals with many aspects of citrus culture, from the purchase of land to the planting of trees, their care, and the cure for various diseases. He died in Petaḥ Tikvah.

[Avraham Yaari]

**FELS, U.S. family of manufacturers and philanthropists.**

**JOSEPH FELS** (1853–1914) was born in Halifax County, Virginia. After living in North Carolina, the Fels family moved to Baltimore, where Joseph left school at 15 to join his father's soap manufacturing business. In 1875 he went into the soap business on his own in Philadelphia. He began manufacturing soap and washing powders by the naphtha process in 1893, and by 1896 the Fels-Naphtha Company's products were so successful that Fels was able to devote most of his time to philanthropic causes. He came to believe that his fortune had been amassed by robbing society, and sought to spend it on causes that would end the unregulated free enterprise system which

allowed some men to accumulate great wealth at the expense of others. In 1905 he was converted to Henry George's "single tax" philosophy, which Fels preferred to call "Christianity." Fels believed that God had given land to all the people of the earth, and tax on the unearned increments of landowners would enable all society's members to share the land's bounties. Substantial financial contributions by Fels helped the single tax movement throughout the world, especially in England, where he and his wife lived during 1901–11. He proselytized for the single tax wherever he traveled, as well as for various political reform movements. Fels financed colonies in the United States and England that provided work for the unemployed; he supported the women's suffrage movement in the Western world, and helped social welfare agencies in England. Fels organized the first mass deputation of English women to present petitions to Parliament describing the plight of the poor in London's East End. He was one of the first American manufacturers to institute profit sharing for his workers. Fels backed the Zionist movement and was active in the Jewish Territorial Organization.

MARY FELS (1863–1953), a distant cousin of her husband Joseph, was born in Sembach, Bavaria, and was taken to the U.S. in 1869. She helped her husband with his projects until his death, after which she concentrated her efforts on Zionist activities. She organized the Joseph Fels Foundation in 1925 to advance human welfare through education and to promote the exchange of culture and ideas, especially between the United States and Erez Israel. Mary Fels edited the magazine *The Public* (1917–19) and wrote a biography of her husband (1916).

SAMUEL SIMEON FELS (1869–1950), Joseph's younger brother, was born in Yanceyville, N.C. A partner in the Fels-Naphtha Company, he funded the Fels Planetarium in Philadelphia (1934). In 1936 he established the Samuel S. Fels Fund to promote research in the natural and physical sciences. He also created the Fels Institute of Local and State Government at the University of Pennsylvania.

[Robert Asher]

**FELSENTHAL, BERNHARD** (1822–1908), U.S. Reform rabbi. Felsenthal was born in Munchweile, Germany. He intended to enter the Bavarian civil service, but seeing no prospect of being admitted, he attended a teachers' seminary at \*Kaiserslautern and taught in Jewish schools before settling in the U.S. in 1854. There Felsenthal served a congregation in Madison, Indiana, as officiant and teacher; then in 1858 he moved to Chicago as clerk in a banking house, while also devoting himself to rabbinical and theological study. Deeply influenced by David \*Einhorn, Felsenthal became one of the first protagonists of Reform Judaism in the Midwest. He was a strong opponent of slavery and refused to accept a pulpit

in Mobile, Alabama. He was a founder and secretary of the Chicago Juedisches Reformverein. A statement of Reform views which he published in 1859, *Kol Kore ba-Midbar: Ueber Juedische Reform*, attracted some attention, and when the Reformverein developed into the Sinai Congregation, he became its first rabbi (1861). He was ordained by Einhorn and Samuel Adler. In 1864 Felsenthal became rabbi of the newly formed Zion Congregation, which he headed until his retirement in 1887. Felsenthal was a constant student and, though he wrote no books, wielded a ready pen. When questions on ritual came to him, he generally took an advanced Reform view. In several instances he dissented from the proposals of Isaac M. \*Wise. Thus, he strongly opposed the establishment of a rabbinical seminary, believing that conditions in America did not provide a satisfactory foundation. On the other hand, he advocated Jewish day schools. In 1879 he declined a professorship at Hebrew Union College. In later years Felsenthal became concerned with the threat to the Jews in America posed by religious indifference, and feeling that the course taken by Reform was preparing a "beautiful death" for Judaism, became an enthusiastic supporter of the Zionist movement. Felsenthal was a founder of the Jewish Publication Society of America and of the American Jewish Historical Society.

**FELZENBAUM, MICHAEL (Mikhoel;** 1951– ), Yiddish writer. Born in Vassilkoe (Ukraine), Felzenbaum studied drama in Leningrad (1968–74) and then founded the Yiddish Cultural Society in Belz, where he was active in the theater and the Pedagogical Institute (1974–88). In 1991 he immigrated to Israel. As co-founder and later editor of the annual *Naye Vegn* (1992), executive director of the Yiddish Culture Center in Tel Aviv, and head of the H. Leyvik Publishing House, he won the Dovid Hofshteyn Prize (1999) for his multifaceted and socially provocative work. His dramatic and narrative oeuvre, which unites the Jewish, modern Yiddish, and European and American literary traditions, is marked by a postmodern, "post-Yiddish" character. An antithetical process operates in his improvised intertextual world that strives toward primordial chaos, where nothing begins at the beginning, but everything is revealed in its grotesque and absurd dimensions. Traditional myths and fairy tales function as empty, anachronistic vessels without creative-metaphorical significance in the post-Holocaust world. While the prose works display earthy and mordant qualities, his poems exhibit a sensitivity and thoroughly developed spontaneity characteristic of folk songs. His works appeared in the most important Yiddish literary journals; his book publications are *Es Kunt der Tog* ("Day Arrives," 1992), *A Libe Regn* ("Rain of Love," 1994), *Der Nakht-Malekh* ("An-

gel of the Night,” 1997), *Un Itst Ikh Bin Dayn Nign* (“And Now I Am Your Melody,” 1998), and *Shabesdike Shvebelekh* (“Sabbath Matches,” 2003).

Starck, “Interview with Mikhoel Felsenbaum,” in: *The Mendele Review* (Feb. 15, 2004); idem, “A Critical Study of Mikhoel Felsenbaum’s ‘Shabesdike shvebelekh,’” *ibid.* (shakti.trincoll.edu/~mendele/tmrarc.htm); idem, “*Shabesdike Shvebelekh: A Postmodernist Novel by Mikhoel Felsenbaum,*” in: J. Sherman (ed.), *Yiddish after the Holocaust* (2004), 300–18; V. Tchernin, in: *Shabesdike Shvebelekh* (2003), 9–12.

[Astrid Starck (2<sup>nd</sup> ed.)]

**FEMINISM**, both a political movement seeking social equities for women and an ideological movement analyzing a wide range of phenomena in terms of gender politics. Jewish feminism in the modern era has played a significant and transformative role in virtually every area of Jewish religious, social, and intellectual life.

### Jewish Feminism and its Impact Prior to the 1960s

Although modern Jewish feminist movements were inspired in large measure by Enlightenment claims regarding human equality and dignity, proto-feminist efforts to raise women’s social and religious position can be found in many Jewish communities prior to the 19<sup>th</sup> century. Tracing shifts in gender ideology and in women’s actual status is difficult, however, because of the paucity of sources written by women prior to the 17<sup>th</sup>-century memoir by \*Glueckel of Hameln. References to women in male-authored documents, particularly responsa literature and legal documents, give some evidence of sporadic agitations for change in women’s status in Jewish communal life and religious life. For example, numerous sources indicate that in Germany and France between 1000 and 1300, a time of high economic and social status for Jewish women, women demanded increased involvement in religious life, including the voluntary assumption of commandments from which they were exempt in talmudic Judaism (Grossman).

Critical evaluation of the position of women within Judaism also appears as part of Christian traditions of anti-Judaism. In the *Nizzahon Vetus*, an anthology of 12<sup>th</sup>- and 13<sup>th</sup>-century Jewish-Christian polemic in northern France and Germany, Christians criticized Jews for not including women within the covenant: “We baptize both males and females and in that way we accept our faith, but in your case only men and not women can be circumcised.” In the *Juden Buchlein* (1519), Victor von Karben mocks the refusal of Jews to include women in a prayer quorum. This critique continued in the notorious anti-Jewish text, Johann Eisenmenger’s *Entdecktes Judentum* (1700), and women’s inferior status within Judaism became a major theme among German (and some American) Protestant (and some Catholic) theologians in the 19<sup>th</sup> and early 20<sup>th</sup> centuries (J. Plaskow, K. von Kellenbach, S. Heschel). The inferior status of women within Judaism was presented in order to denigrate Judaism as “Oriental” and “primitive” and to challenge whether Jews should be accorded emancipation into European society. Jewish women’s inferiority was

also cited in Christian theological writings to argue that Jesus treated women as equals whereas other rabbis of his day did not, a claim with little historical grounding. Jewish apologetic responses to such charges began in 19<sup>th</sup>-century Germany with arguments that Judaism honors and elevates women’s status in the home and community by exempting them from the religious obligations of study and public prayer incumbent on men. The nature of these charges and counter-charges made it difficult to articulate Jewish feminist criticisms of sexism.

Jewish enlightenment and, later, socialist critics of Jewish communal and religious structures often fought for women’s rights, but feminists did not always ally themselves with secularism and against religion as a means to improve women’s status. With modern pressures to reshape both gender roles and the status of minority groups, Jewish women had to await emancipation as both Jews and as women to enter secular society. While Jews were permitted entry into German universities in the early 19<sup>th</sup> century, women were excluded until the 1890s. At the same time, some European feminist organizations did not admit Jews. Rather, early efforts at redressing gender imbalance attempted to enhance women’s educational opportunities and position within the Jewish community, creating social service and charitable organizations run by women. The \*Juedischer Frauenbund (Jewish Women’s Organization) was founded in Germany in 1904 by Bertha \*Pappenheim and strove to win voting rights for women within Jewish communal affairs. Within the United States, Rebecca \*Gratz founded the 19<sup>th</sup>-century Sunday school movement that created new roles for women in Jewish education. The tradition of Jewish women’s \*salons was significant not only as a new, neutral space for Christians and Jews to meet, but as an emerging culture of conversation and reflection on gender and Jewish identity. Indeed, Jewish women intellectuals, from the 18<sup>th</sup> to the 20<sup>th</sup> centuries, frequently found greater resonance within Christian society, and were sometimes only reluctantly admitted to Jewish intellectual circles; Martin \*Buber, for example, initially did not want to admit women to the Juedisches Lehrhaus, the adult Jewish educational center he founded in Frankfurt am Main in 1920 (Friedman).

Changes in women’s status within the synagogue came slowly. In mid-19<sup>th</sup> century Germany, teenage girls were given ceremonies of \*confirmation along with boys in Reform congregations, similar to ceremonies prevalent in churches, but women still sat separately from men in the synagogue. Mixed seating in the synagogue was first introduced in the United States in 1851 in Albany, New York, and in 1854 at Temple Emanu-El in New York City. It became common in the United States after 1869 when many new post-Civil War synagogues opened but did not spread to European Reform synagogues until much later and then only tentatively (Goldman).

Conversely, modernity also saw the distinct spheres of women’s traditional expressions of Judaism minimized or eliminated by non-Orthodox Jews, such as \*mikveh observance (immersion in the ritual bath following menstruation and childbirth), which declined radically in the modern

era, though revived in the late 20<sup>th</sup> century. Since the *mikveh* served as a gathering place for women to socialize and also to exert authority in the absence of men, its decline undermined women's opportunities to assemble away from male presence. Further, the falloff in adherence to Jewish law weakened women's status as sources of domestic and gendered legal expertise, particularly concerning laws of *kashrut*. Traditionally entrusted with responsibility for the laws of *\*niddah* and *kashrut*, women had been viewed with the moral trust, intellectual ability, and religious commitment necessary for their strict adherence to those often complex laws. Still, male authorities, whether fathers, husbands, or rabbis, always retained ultimate control over adherence to laws within women's domain.

The modern era opened new public and communal religious and educational opportunities for women. Pressure from the changes in secular society that encouraged women and men to take advantage of equalizing educational and vocational opportunities affected the Jewish world, too. Educational reforms in the Orthodox and *hasidic* communities of Eastern Europe in the early 20<sup>th</sup> century, led by Sara *\*Schnirer*, established a network of schools for religious girls, *\*Beth Jacob*, and the liberal rabbinical seminaries established in Europe and the United States in the late 19<sup>th</sup> century permitted some women to attend courses, although not to receive rabbinic ordination.

The United States had a small and relatively uneducated Jewish community prior to the 1880s. Women received only minimal Jewish education and were not voting members of the community. The demography quickly shifted at the turn of the century, as over two million Jews from Eastern Europe arrived as immigrants between 1881 and 1924. They included women who had been exposed to political organizing and analysis, and who soon became major forces in the nascent labor, socialist, anarchist, and communist movements in New York and other cities in the early years of the 20<sup>th</sup> century. Rose *\*Schneiderman*, for example, was a leader of the *\*Women's Trade Union League*, the campaign for women's suffrage, and the *\*International Ladies Garment Workers Union*. However, once those movements were institutionalized – as labor unions and political parties – women were removed from leadership positions. Separate women's organizations also played an important role within Jewish communal life in the United States; the *\*National Council of Jewish Women*, founded by Hannah Greenebaum *\*Solomon* at the 1893 World Parliament of Religions in Chicago, initially provided educational and vocational training for immigrants through a series of *\*"settlement houses"* established in impoverished urban areas.

### The Impact of Feminism Since the 1960s

Jewish women, including Betty *\*Friedan*, Gloria *\*Steinem*, and Letty Cottin *\*Pogrebin*, have been in the forefront of the Second Wave feminist movement in the United States that began in the late 1960s. The re-emergence of a Jewish feminist movement, as part of the Second Feminist wave, led to major

changes in women's status in Judaism and to a flourishing of Jewish feminist scholarship and theology. The most dramatic change in Judaism for many centuries came with the equality of women in synagogue worship, a movement led by American Jewish feminists and which has gradually extended to Jewish communities elsewhere in the world. The public honoring of young women in the synagogue, the Bat Mitzvah, became widespread by the late 1960s, followed by decisions by Reform, Reconstructionist, and Conservative denominations of Judaism to include women in the prayer quorum, call women to the Torah, and allow women to lead synagogue worship services. Perhaps the most striking transformation from previous Jewish practice has been the ordination of women as rabbis (see *\*Semikhah*).

The first ordination of a woman as a Reform rabbi took place in Germany in 1935; she was Regina *\*Jonas*, murdered at Auschwitz in 1944. Ordination of women as rabbis and cantors was initiated in the United States in the 1970s by Reform Judaism (1972) and was subsequently adopted by the Reconstructionist (1974) and Conservative (1984 for rabbis, 1986 for cantors) movements. Several hundred women rabbis and cantors have been ordained thus far in the United States, and in Britain. Commissions within the Reform, Reconstructionist, and Conservative movements have revised the prayer book *\*liturgy* to use inclusive or gender-neutral language and include references to the biblical matriarchs as well as patriarchs. Feminist biblical commentaries, written from a range of religious perspectives, have also been published (Frankel; Goldstein; Kates and Reimer). Numerous collections of feminist rituals and blessings to mark occasions in women's lives have been developed, including feminist Passover liturgies, prayers for the birth and weaning of a baby, and ceremonies for naming baby girls (see *\*Birth*), egalitarian wedding services for heterosexual and homosexual couples (see *\*Marriage*), and celebration of *\*Rosh Hodesh*, the New Moon, as a women's holiday.

Within Orthodoxy at the beginning of the 21<sup>st</sup> century, women now have opportunities for studying rabbinic texts, heretofore limited to men. With training in particular areas of Jewish law, women serve as legal advisors to Orthodox women regarding issues connected with divorce and *niddah* observance. Orthodox women have established women-only prayer groups and institutions for studying rabbinic texts, and a few Orthodox synagogues have started to permit women to read from the Torah under certain circumstances and conditions, deliver a sermon, and even lead the service. Several clauses have been proposed for inclusion in the *\*ketubbah* (religious marriage contract) that would provide recourse for a woman whose husband refuses to grant her a Jewish divorce, though none has yet attained universal approval by Orthodox rabbis. The problem of the *\*agunah* remains a central issue for Orthodox feminists, particularly in Israel, where the Orthodox rabbinate has exclusive control over Jewish marriage and divorce. Organizations of Orthodox women attempting to address the problem of the *agunah* include the Jewish Orthodox Feminist Alliance, and Getting Equitable Treatment.

By contrast, the Reform movement has entirely eliminated the *\*get*, the divorce decree given by a man to his wife, while the Conservative movement has developed a clause that can be inserted into a *ketubbah* that allows a *bet din* (court of Jewish law) to issue a *get* to a woman if her husband refuses to do so. Since 1980, the Reconstructionist movement has used an egalitarian *get* that can be issued by either spouse.

### Feminism, Zionism, and the State of Israel

During its early years, the political Zionist movement, centered in Europe in the late 19<sup>th</sup> and early 20<sup>th</sup> centuries, harbored considerable ambivalence toward women. Although *\*Zionism* presented itself as an emancipatory movement for Jews, positions of political leadership were firmly maintained in men's hands. The Zionist negation of the Diaspora was linked to a negation of piety, and overcoming the Diaspora meant "becoming a man" (*le-hitgaber*). During the early waves of immigration to Palestine prior to statehood, women worked alongside men in the cultivation of farmland; they have also served with men in Jewish self-defense forces prior to and after the foundation of the state. Yet with the establishment of the State of Israel, women were not granted proportional roles of power within the government, even though Israel's Declaration of Independence proclaimed full equality (Herzog; Hazelton). Instead, a myth of gender equality within the State was promoted to disguise the reality of women's subservience. Thus, while women held traditionally male positions within the kibbutz system, few men took on traditionally female positions, such as childcare, and while women are drafted into the Israeli army, they are generally assigned subordinate tasks and are not given combat duty. Most problematic, since the Orthodox rabbinate holds full legal control over marriage and divorce, women's freedom to initiate and control marital relationships is impeded and women rabbis are disempowered. Women are also prohibited from public communal prayer at Jewish holy sites, such as the Western Wall in Jerusalem, despite years of court challenges by feminist groups.

Although a woman, Golda *\*Meir* served as Israel's prime minister from 1969 to 1974; few women have held senior positions within the Israeli cabinet or parliament. Given the central role of army service in establishing careers within the political and financial arenas, the unequal position of women in the Israeli military has had long-term career consequences. Racial discrimination within Israel against Jews from non-European backgrounds and the Israeli emphasis on large families has also affected women's ability to acquire an education, escape poverty, and achieve career success. Nevertheless, women are increasingly educated and constitute a high percentage of the Israeli workforce. The Israel Women's Network, founded by Alice Shalvi in 1984, is an advocacy group for women's rights that concentrates on legislative and political efforts to overcome discrimination against women in the workplace, military, religious courts, and in the healthcare and educational arenas. With particular attention to violence and sexual harassment, the IWN helped secure passage in 1998 of

legislation criminalizing sexual harassment and holding both the harasser and employer responsible for civil damages.

Throughout the modern era women managed to retain some influence in Zionist social service organizations within the Jewish communities of North America and Europe, collecting and distributing funds and goods, and running schools and vocational training programs. Those activities, a central feature of maintaining Jewish communal cohesion, became the basis for modern women's organizations, such as *\*Hadassah*, the National Council of Jewish Women, *\*WIZO*, *\*Na'amat*, and Women's *\*ORT* (Organization for Rehabilitation and Training), which became wealthy and powerful institutions during the course of the 20<sup>th</sup> century.

In the aftermath of the 1967 Arab-Israeli war that left Israel with control of the West Bank and Gaza, several feminist organizations emerged that called for return of the occupied territories to Palestinian control, and condemned the violence and impoverishment in those territories. Women in Black, founded in 1988 to hold weekly silent vigils of Israeli and Palestinian women calling for an end to the occupation, soon became an international peace network and has been nominated for the Nobel Peace Prize. New Profile is a feminist organization that seeks to change Israel from a militarized to a peace-seeking culture, and works especially on educating children for peace (see essays in Fuchs, *Israeli Women's Studies*).

### Feminist Scholarship

Historical study of Jews, which began in the 19<sup>th</sup> century, was initially seen as a manly endeavor and women's lives and contributions were virtually ignored in chronicles of the Jewish experience. The growth of the field of women's studies, particularly in the United States, helped establish a counterpart within Jewish Studies. Feminist analysis has criticized masculinist biases in describing the Jewish past, but has also used historicism to justify feminist innovations (see *\*Historians, Women*). Feminist analyses of rabbinic literature have uncovered legal precedents for changing halakhic prescriptions regarding women (Hauptman) and interpretive patterns of leniency in establishing Jewish law (Biale), as well as patterns of gendered rhetoric in rabbinic literature that create the masculinity of men and of God (Boyarin; Baskin; Eilberg-Schwartz).

Feminist attention to gender has also exposed the male biases in describing Jewish experience (Koltun; Heschel; Rutenberg). Modernity has been elevated as rational, progressive, and male by describing pre-modern Judaism via tropes of nostalgia using female metaphors. Modern Judaism was described as both positively masculine, in seeking political and religious emancipation, and negatively feminine, as in Haskalah literature in which leaving the Jewish fold and associating with Christians was described as a kind of prostitution (Feiner). In early 20<sup>th</sup> century debates over which language was more appropriate for Jews, Yiddish or Hebrew, the former was viewed as an effeminate, women's language, while Hebrew was valorized as male. Few women writing modern Hebrew or Yiddish literature were accorded the same recognition for

their work as their male colleagues by a literary establishment dominated by men, and few writings by women have been included in the “canon” (Seidman; Fuchs).

In the early years of women’s studies, the task seemed to be fairly straightforward. Textual expressions of misogyny and male-centeredness were demonstrated, and even if the thinker had been dead for centuries, his influence was generally said to continue to this day, as part of a long chain of patriarchal tradition. More recently, however, feminist scholars have developed more complex analyses, demonstrating ambivalences toward women within the same thinker and text, and also turning to metaphorical uses of masculine and feminine imagery in matters not explicitly related to men and women. Male privilege is not always a straightforward matter. For instance, classical and modern Jewish texts evoke an identification between men and the male God, yet undermine that identification by depicting all Jews, including men, as female in relationship to God.

Feminists differ in how to interpret women’s experience and power in patriarchal structures. Some find ways in which women turned their exclusion from aspects of Judaism into a positive experience. C. Weissler has discovered numerous prayers traditionally recited by early modern women as they undertook various domestic duties, such as baking *hallah* and kindling Sabbath lights (*Voices of the Matriarchs* (1998); see \**Tkhines*; \*Liturgy). S. Sered has found that women respond to the male-oriented religious system by becoming ritual experts within the female sphere, sacralizing and holding authority over the domestic sphere and the laws of *niddah* and *mikveh*. Excluded from the realm of men, she argues, women redefine their realm as normative and meaningful. J. Bahloul’s study of Algerian Jewish women delineated a strong social network of women. Still other feminists argue that finding women’s empowerment in female spheres mandated by men undermines arguments for gender equality and may romanticize women’s experience unjustifiably.

Perhaps the most controversial field of feminist scholarship is study of gender and the Holocaust (Ofer and Weitzman, eds.). Women were more likely than men to be chosen by the Judenraete for deportation from ghettos to death camps, and women were more likely than men to be selected for immediate gassing upon arrival at the death camps. J. Ringelheim suggests that women and children made up 60 to 70 percent of those gassed in the initial selections. Based on deportation and death figures as well as the numbers of Jews in DP camps at the end of the war, Ringelheim concludes that more Jewish women were deported and killed than Jewish men, a disparity due to Nazi policies of killing pregnant women and those who arrived at camps with children, as well as the far larger percentage of elderly women than men among Jewish deportees.

### Feminist Analyses of Judaism

During the 1970s feminist critics began to expose the absence of women’s voices within the male-dominated structures pro-

moted by Judaism’s exclusively male-authored texts. Feminists also strove to reconstruct the lost voices of women, trying to recover evidence of women’s history and self-understanding that would allow a more diversified picture of the multiple Judaisms that have flourished throughout the Jewish past. While Judaism traditionally defines itself as a divinely revealed religion, its beliefs and practices have been interpreted and regulated almost exclusively by male authorities until the modern period. Feminist analysis has pointed out that men have created the legal systems articulated in the Mishnah, Talmud, and codes of Jewish law, and acted as supreme arbiters of its interpretation by reserving the rabbinate for men. Courts of Jewish law were historically run by male rabbis, and women were excluded as witnesses in most court cases. In rabbinic law, men may contract a marriage or divorce a wife, but women can neither acquire a husband nor divorce him. Women enter into rabbinic discourse as objects of discussion, when their ritual purity, sexual control, or marital status impinges upon men’s lives.

Many Jewish feminists have suggested that the insistence on overwhelmingly male imagery for God was a deliberate effort to strengthen the male-dominated institutional arrangements of Jewish life and undergird male authority over women in the religious and societal realms. As a result, feminist analysis views Jewish texts with suspicion for their collusion with societal patriarchy in silencing women’s voices, or, even worse, as creating patriarchal oppression and endowing it with the aura of divine sanction. At the same time, some feminists have culled biblical and rabbinic texts to find counter-patriarchal traditions that support principles of justice and equality, or voices of trickster women seeking to correct halakhic inequities (Pardes; Adler). Even as D. Setel argued that the prophet Hosea’s metaphor of Israel as God’s adulterous wife was pornographic, R. Adler noted that God’s reunion with the adulterous Israel, which violates Deuteronomic law (20:4) mandating a husband’s divorce of an adulterous wife, might be understood as a “constructive violation” of Jewish law – “the metaphor that preserves the covenant breaks the law” (Adler, 163–64).

By the 1980s, Jewish feminist theology (see \*Theology, Feminist) began redefining classical, male-authored Jewish understandings of God, as well as associated concepts, such as revelation, the problem of evil, and the nature of prayer. Basing their critique of Judaism on the premise that all experience is gender-based, theologians like J. Plaskow and R. Adler demanded a reconsideration of theological and ethical categories assumed to be universal, but which, they argued, reify men’s experience and have little relevance to women. Jewish feminist theology flourished in particular in the United States, supported by the growth of the academic field of women’s studies at American universities and by the theoretical insights of Christian feminist theology.

Under the influence of postmodernism, feminist thought has attempted to denaturalize assumptions regarding women, emphasizing the social rather than biological creation of “woman” and the attendant assumptions regarding hetero-

normativity. An ideology of compulsory heterosexuality, not innate inclination, feminists argue, has pressured women into marriage with men and defined homosexuality as sinful. Feminist analysis has noted that in contrast to male homosexuality, lesbianism was never clearly defined in biblical literature, and never condemned with the severity of male homosexuality in rabbinic literature. Similarly, the condemnation of male masturbation in rabbinic texts finds no female counterpart, and the genital self-examination by women that is mandated in rabbinic laws regulating the laws of *niddah* replicates masturbatory acts. Freedom of sexual expression for women and men is considered central to women's rights but also essential to reclaiming women's control over their bodies after centuries in which fathers, husbands, and male rabbis regulated women's lives (Schneer and Aviv; Magonet).

\*Lesbian Jewish identity as both homosocial and homosexual has been marginalized in the recent efflorescence of queer Jewish studies and its attention to the (male) body as a site of Jewish cultural, sexual, and religious identity. Lesbian thinkers have emphasized the body as a source of the spiritual, celebrating manifestations of women's sexuality and arguing the centrality of eroticism to religiosity (Plaskow, *Standing Again at Sinai*). Although numerous gay and lesbian synagogues, as well as a World Congregation of Gay and Lesbian Jewish Organizations have been founded in recent decades, only the Reform and Reconstructionist rabbinical seminaries ordain openly gay and lesbian rabbis (R. Alpart, S.L. Elwell, and S. Idelson, eds. *Lesbian Rabbis: The First Generation* (2001)).

Adler has argued that the traditional male-only environments of rabbinic study not only fostered homoeroticism, but was dominated by a "methodolatry" that revolved around male concerns, omitting those of women. Responding to a husband's post-World War II query, asking a rabbi if he is halakhically obligated to divorce his wife because her incarceration in a concentration camp may have included forced intercourse, Adler notes that only the man's requirements form the question and not those of his wife. In responding to the absence of women from the formative practices and exegeses of rabbinic Judaism, Plaskow insists that women as well as men stood at Sinai and received God's revelation, and that their experiences and interpretations should be included as equally normative as the rabbinic law developed by men in response to the revelation.

Other feminist analyses of *halakhah* proceed differently. Both R. Biale and Hauptman have pointed to halakhic interpretations that have been favorable to women, and to sociological processes of analyzing *halakhah* that result in lenient conclusions. These scholars explain certain traditional practices, such as excluding women from being called to the Torah for an *aliyah*, as reflections of particular social settings, not as eternal legal dicta.

### Changes in Feminist Theory

Postmodernism, which has had a strong influence on feminist theory, has changed the modes of understanding power and

analyzing language. Instead of viewing power solely as hierarchical domination, feminist theory, influenced by M. Foucault, has come to understand power as capillary, a disciplinary regime maintaining its force not only through conventional sources of domination, but also through the unconventional, including language itself. Complementing Foucault's understanding of the exercise of power are studies by Gramsci and Althusser of the consent of the disempowered to regimens that maintain their subjugation. Changing the understanding of power opens new ways to interpret women's position within Judaism. T. El-Or's study of *haredi* (ultra-Orthodox) women demonstrates that their education is designed to keep them in a state of ignorance and subordination to men. By contrast, Sered's studies argue that women's piety and rituals create a sense of personal self-worth and permit female religious leadership within women-only domains, such as the *mikveh* and *ezrat nashim*. L. Levitt has challenged classical liberalism as a tool of feminist empowerment, and M. Peskowitz has called for greater attention to the ideological function of rabbinic texts in creating power structures and the adherence to them. Surprisingly little attention has been given by Jewish feminism to theorizing race and class, in contrast to other feminisms. E. Shohat has written on Arab-Jewish identity and the biases toward Europe in Jewish self-understanding, and K. Brodtkin has described *How Jews Became White Folks* (1999) in the United States. Feminist efforts to address antisemitism as part of a larger critique of racism are notable within a multicultural atmosphere that has tended to ignore Jewish experience (Biale, Galchinsky, and Heschel, eds.; M. Brettschneider, ed.; Bulkin, Pratt, and Smith, eds.).

Contemporary attention to the ways Jewish women's experiences have differed from those of men has led to both internal and external critiques of Judaism. While countless Jewish theologians in previous generations proclaimed the moral superiority of Jewish law, most disregarded the ethical significance of the inferior status of women in Jewish law. Written in apologetic terms for a wider Christian readership, traditional Jewish theology tended to defend the traditional, subordinate role of women as an expression of respect for a femininity that is considered intrinsic and not culturally produced. Jewish feminism has struggled with the fine line between its critique of Judaism's sexism and antisemitic attacks on Judaism.

[Susannah Heschel (2<sup>nd</sup> ed.)]

**FENICHEL, OTTO** (1897–1946), Austrian psychoanalyst. Born in Vienna, he moved to Berlin in 1922 and studied at the Psycho-Analytic Institute under Max \*Eitingon and in 1926 joined the staff. With the coming of the Nazi regime he left Berlin in 1933 and went to Norway and Prague, where he taught. In 1938 he went to the U.S. and taught in Los Angeles. He wrote two important textbooks on psychoanalysis, *The Outline of Clinical Psychoanalysis* (1934) and *The Psychoanalytic Theory of Neurosis* (1945). Some of these contributions have become classics in their field, for example, “Elements of a psychoanalytic theory of anti-Semitism” in which he tried to trace the sources of anti-Jewish prejudice. *The Psychoanalytic Theory of Neurosis* is a systematic, comprehensive, and detailed study of every major form of neurosis from a psychoanalytic point of view. The theoretical formulations are painstakingly worked out along with old, new, and controversial points of view. Freud's thinking is followed historically on each issue, along with the major contributions of Karl Abraham, Sándor Ferenczi, and Ernest Jones. In addition, there is an encyclopedic bibliography containing more than 1,600 items. Fenichel also wrote a short monograph, *Problems of Psychoanalytic Technique* (1941), which is a classic in its systematic clarity and scientific discipline. His collected papers were published in two series in 1953–54.

[Hilel Klein]

**FENICHEL, SAMUEL** (d. 1893), Hungarian scientific explorer. Fenichel was born in Nagyenyed. Although he was a frail young man, he had by the age of 20 explored the Dobruja swamps of Romania for zoological specimens. Then, in spite of his health, he spent 14 months exploring New Guinea, where he collected hundreds of specimens of birds, many of them unknown species. He also gathered more than 10,000 specimens of butterflies. The variety of his collection and its careful documentation make it of special scientific significance. He died in New Guinea.

**BIBLIOGRAPHY:** Wininger, Biog.

**FENNEL** (Heb. כַּזְזַף, *kezah*), an herb, the sowing and threshing of which are described by Isaiah (28:25, 27). Fennel is the plant *Nigella sativa*, whose black seeds are used as a condiment. It was used as a condiment in talmudic times, being sprinkled on dough before it was baked (Tosef., ט"ז 1:2; Men. 23b). Different views were expressed on its medicinal and nutritional value, one being that it is good for the heart (Ber. 40a), another that too much of it is injurious to the heart (Kal., ch. 1), and yet another that its pungent smell is harmful (Ber., *ibid*). Galen, and following him Asaph ha-Rofe, recommended fennel for nasal inflammation (L. Venetianer, *Asaf Judaeus*, 1 (1915), 172). In Israel three species of fennel grow wild, a cultivated species being raised to a limited extent for use as a condiment.

**BIBLIOGRAPHY:** Loew, *Flora*, 3 (1924), 120–3; J. Feliks, *Olam ha-Zome'ah ha-Mikra'i* (1968<sup>2</sup>), 184. **ADD BIBLIOGRAPHY:** Feliks, *Ha-Zome'ah*, 147.

[Jehuda Feliks]

**FÉNYES, ADOLF** (1867–1945), Hungarian painter. He was born in Budapest, where he studied law and painting. Fényes participated in the establishment of the Hungarian association of painters and sculptors. In his early work there is evidence of the influence of naturalism, but later there is a strong impressionist influence, especially in his somber scenes of poverty. His work reflects his considerable development and includes biblical subjects. Fényes painted monumental scenes from nature. He represented Hungarian painting in many international exhibitions and his name was well known outside Hungary. He died in Budapest of starvation and suffering shortly after the Holocaust.

**BIBLIOGRAPHY:** *Magyar Zsidó Lexikon* (1929), 274–5; uje, 4 (1941), 274.

[Baruch Yaron]

**FENYŐ, LÁSZLÓ** (1902–1945), Hungarian poet. Born into poverty, Fenyő wrote pessimistic verse protesting against the cruelty of the world. His first collection, *Épites orgonája* (“Organ of the Building,” 1922), was banned, and a volume of selected poems, *Elitél* (“The Judged,” 1959), appeared 14 years after his murder by the Nazis.

**FENYŐ** (formerly **Fleischman**), **MIKSA** (1877–1972), Hungarian author and literary critic. Fenyő, who was born in

Mélykút, was secretary of the Union of Industrialists for 40 years until he left Hungary for New York in 1948. Fenyő was a founder and an editor of the periodical *Nyugat*. He sought to raise the standards of Hungarian literature and education to those of Western Europe, and his scholarly researches and essays did much to contribute to such an improvement. Fenyő became a convert to Christianity. However, in his memoirs, he includes an important description of contemporary Jewish society. He did the same in the diary *Az elsodort ország* ("The Destroyed Country," 1964), written secretly during the Holocaust while hiding among "Aryans" in Hungary. His main works are *Casanova* (1912); *Bethlen István* ("Count István Bethlen," 1937); and his recollections of *Nyugat, Följegyzések a "Nyugat" folyóiratról és környékéről* (1960).

[Baruch Yaron]

**FEODOSIYA** (**Theodosia**; Black Sea port in Crimea, Ukraine; one of the most ancient towns). Founded during the Hellenistic period as the Greek colony of Theodosia, it was called Kaffa (Caffa) until the Russian conquest (1783). The Jewish settlement was also one of the oldest on Russian territory, its beginnings dating from the Hellenistic period. The old synagogue of Feodosiya, thought to be the most ancient in Russia, had an inscription which testified to its construction in 909. Under the rule of the Republic of Genoa from 1266, Feodosiya became the center of the Genoese colonies on the Black Sea. In order to attract merchants from all nations there, freedom of religion was granted for all Christian sects, Muslims, and Jews. The traveler Schiltberg, who visited Feodosiya at the beginning of the 15<sup>th</sup> century, relates of the existence of two communities in the town – a \*Rabbanite and a \*Karaitic one. The Jews engaged in commerce and maintained relations with the Near East and Poland. The constitution of the town, proclaimed in Genoa in 1449, called on the consul and city elders to protect the Jews as all members of other religions, "from any robbery, from scheming against their property when one of them died intestate, and from other molestations of the bishop."

The situation of the Jews remained unchanged when the government of the town was transferred to the Bank of San Giorgio, a powerful financial company that administered the eastern colonies of Genoa (1453–75). The community continued to develop under Turkish rule also (1475–1783). At the beginning of the 16<sup>th</sup> century \*Moses b. Jacob of Kiev, of Lithuanian origin, held rabbinical office in Feodosiya. He composed a uniform *siddur* for all the Jews of Crimea (the Kaffa rite) and instituted 18 *takkanot* for the community.

After annexation by Russia, Feodosiya was incorporated in the \*Pale of Settlement. In 1897 there were 3,109 Jews in the town (12.9% of the total population), mainly Ashkenazim who had emigrated from Lithuania and Ukraine. On Oct. 17, 1905, pogroms accompanied by murder and looting broke out. The Jewish population of Feodosiya numbered 3,248 (11.3% of

the total) in 1926 and 2,922 (6.5%) in 1939. After the February Revolution (1917) three Jews (Zionists) served on the local council. Between the wars there was a Yiddish school and a Jewish section in the local Teachers College. Feodosiya was occupied by the Germans on November 2, 1941. A ghetto was organized, and on December 4, 1941 *Einsatzkommando 10b* murdered 1,700 Jews (according to another document, 2,500). In February–May 1942 the last 200 Jews were killed. In 1970 the Jewish population of Feodosiya consisted of Crimean and Russian Jews and Karaites. There was no synagogue. Many left during the mass emigration of the 1990s.

**BIBLIOGRAPHY:** I. Markon, in: *Zikkaron le-Avraham Eliyahu Harkavy* (1908), 449–69; E. Farfel, *Beit Keneset ha-Attik ha-Nimza be-Ir Feodosiya* (1912).

[Yehuda Slutsky / Shmuel Spector (2<sup>nd</sup> ed.)]

**FERARU, LEON** (originally **Otto Enselberg**; 1887–1961), Romanian poet. Born in Braila, Feraru took his penname from his father's occupation as a blacksmith (Rom. *fierar*). As a schoolboy he was a Jewish socialist. Upon completing high school he began to study medicine in Bucharest, but had to leave because of antisemitic persecution. In 1907 he emigrated to France, where he studied literature in Montpellier, receiving a degree in 1913, when he emigrated to the United States. Before emigrating, Feraru published poems on social themes (among them the fate of the working woman) and articles in Romanian literary periodicals, among them *Viata Romaneasca* (Romanian Life) and the Jewish periodicals *Lumea Israelita* and *Egalitatea*. After emigrating to the U.S. he continued to compose Romanian verse on social themes, on the landscape of his native country, and on his Jewish family. He published two volumes of poems in Romanian, both in Bucharest, *Maghernita veche si alte versuri din anii tinerei* ("The Old Hovel and Other Poems of My Youth," 1926) and *Arabescuri* ("Arabesques," 1937), being considered a universalist poet. Feraru taught Romanian language and literature at Canadian and American universities: Toronto; Columbia (1917–26); Long Island (1927–47). He also published scholarly studies in English, among them *The Development of Romanian Poetry* (1929) and edited the periodicals *Romanian Literary News* and *The Romanian Review*.

**BIBLIOGRAPHY:** D. Safran, *Completare la judaismul roman* (1981), 74–9; A.B. Joffe, *Bi-Sedot Zarim* (1996), 160–2, 459; A. Mirodan, *Dictionar neconventional*, 2 (1997), 268–72.

[Lucian-Zeev Herscovici (2<sup>nd</sup> ed.)]

**FERBER, EDNA** (1887–1968), U.S. novelist and playwright. She was born into a middle-class family in Kalamazoo, Michigan, and at the age of 17 became a newspaper reporter in Appleton, Wisconsin. Later she went to the *Milwaukee Journal* and the *Chicago Tribune*. Her first novel, *Dawn O'Hara*, appeared in 1911, but it was a series of short stories collected under the title *Emma Mc-Chesney and Co.* (1915) that established her as a professional writer. Edna Ferber wrote more than a score of novels, some superficial, some serious, but all

smoothly and persuasively written. They deal with the life of ordinary Americans and in many the central character is a woman. *Fanny Herself* (1917) is the story of a small-town Jewish girl; *So Big* (1924), the story of a woman's struggle for independence, won the Pulitzer Prize in 1924. *Show Boat* (1926) became a successful musical; *Cimarron* (1930), *Saratoga Trunk* (1941), and *Giant* (1952) were all best-selling novels which were made into motion pictures. *Dinner at Eight* (1932) and *Stage Door* (1936), both written in collaboration with George S. \*Kaufman, were her best-known plays. Edna Ferber wrote comparatively little about Jews and Judaism, but in her first autobiography, *A Peculiar Treasure* (1939), she depicted with humor and understanding her life in a small Jewish community, and she identified herself closely with the Jewish plight during the Nazi years. Her second autobiography, *A Kind of Magic* (1963), includes her impressions of the State of Israel.

[Harold U. Ribalow]

**FERBER, HERBERT** (Silvers; 1906–1991), U.S. sculptor and painter. A native of New York City, Ferber was born Herbert Ferber Silvers. While studying at the City University of New York and Columbia University, where he received a B.S. (1927) and a D.D.S. (1930), Ferber also took classes at the Beaux Arts Institute of Design (1927–30) and the National Academy of Design (1930).

His early direct carvings in wood from the 1930s employed techniques similar to William \*Zorach's and Jo \*Davidson's. These small figurative sculptures engaged social justice themes, popular with painters such as Raphael \*Soyer and Ben \*Shahn. The Midtown Galleries mounted Ferber's first solo exhibition in December 1937. In the late 1940s, Ferber eschewed figuration and began welding bronze, lead, copper, and brass as he developed his mature open-form abstract style of sculpture. Akin to Abstract Expressionist painters, Ferber derived inspiration from Surrealist imagery and ancient myth.

Ferber's work was commissioned by B'nai Israel Synagogue, Millburn, New Jersey (1951); Temple Anshe Chesed, Cleveland, Ohio (1956); and Temple of Aaron, St. Paul, Minnesota (1956). An eight by twelve foot abstractly rendered burning bush made of jagged lead-coated copper adorns a wedge-shaped panel projecting from the facade of the B'nai Israel congregation. Titled *And the Bush Was Not Consumed*, this symbolic representation evokes the impression of flames through an open biomorphic style that incorporates snaking vertical and spiral forms. Ferber's textured sculpture identifies the building and serves as a metaphor for the Jewish people. Indeed, the rabbi of the congregation felt that like the Jewish people, the bush was burned but not consumed. This commission was the impetus for several other sculptures designed specifically for walls.

During the 1960s Ferber began a series titled *Homage to Piranesi* in which he enclosed rhythmic forms in wire cages.

In March 1961 Ferber's *Sculpture as Environment* was installed in a room at the Whitney Museum of American Art. One of the first sculptures designed to encompass indoor space on a large scale, the work helped to stimulate a larger movement of installation art in the early 1970s. A year later Ferber's first major retrospective was shown at the Walker Art Gallery in Minneapolis. Houston's Museum of Fine Arts held a retrospective in 1981.

Lesser known are Ferber's canvases and works on paper. These abstract images typically show the influence of color field painting, as exemplified by Marc \*Rothko and Barnett \*Newman.

Kampf, *Contemporary Synagogue Art: Developments in the United States, 1945–1965* (1966), 75–79; E.C. Goossen, *Herbert Ferber* (1981); W.C. Agee, *Herbert Ferber: Sculpture, Painting, Drawing: 1945–1980* (1983); L. Verderame, *The Founder of Sculpture as Environment: Herbert Ferber (1906–1991)* (1998).

[Samantha Baskind (2<sup>nd</sup> ed.)]

**FERBER, ZEVI HIRSCH** (1879–1966), English rabbi. Ferber was born in Kovno and studied in Lithuanian yeshivot. In 1911 he settled in England and after teaching Talmud in Manchester was appointed rabbi of the West End Talmud Torah Synagogue in London, where he remained until his retirement in 1954. His congregation had its own cemetery, and a number of other small congregations were associated with his, mainly for the benefits of burial. As a result Ferber was able to be independent of the official religious organizations, a situation of which he took full advantage. He was a witty and eloquent preacher in the style of the old-fashioned Lithuanian *maggidim*. Ferber was a prolific writer, mainly on homiletic but also on halakhic subjects; most of his publications were in the form of pamphlets. His most important work was *Kerem ha-Zevi*, a halakhic and aggadic commentary on the Pentateuch (1920–38). He also wrote a commentary on the Passover *Haggadah* under the same title (1958).

**BIBLIOGRAPHY:** *Yahadut Lita*, 3 (1967), 79.

[Louis Isaac Rabinowitz]

**°FERDINAND**, name of three Holy Roman emperors.

**FERDINAND I** ruler of Austria; emperor, 1556–64. On his accession to the Austrian throne in 1527 Ferdinand I confirmed the customary Jewish privileges. He opposed the expulsion of \*Prague Jewry in 1541, permitting the Jew Hermann to print Hebrew books there and punished the ringleaders of anti-Jewish outbursts in \*Litomerice and \*Zatec. In 1551 he ordered the Jews within his realm to wear a yellow \*badge. Many of his expulsion decrees for Lower Austria, Silesia, Prague, and Vienna, issued in the 1540s and 1550s, were averted or only partially applied after payments by the Jews. In 1557 he canceled the safe conducts granted to Bohemian Jews, granting them later in exceptional cases. He authorized the Jesuits of Prague in 1561 to undertake the

\*censorship of Hebrew books and forced the Jews to attend their sermons. As emperor he confirmed the privileges accorded to the Jews within the empire.

Ferdinand II king of Bohemia from 1617 and of Hungary from 1621; emperor, 1619–37. A fanatic Catholic and protagonist of the Counter-Reformation in his domains, Ferdinand II was preoccupied for most of his reign with combating Protestantism. The first emperor to employ \*court Jews, he was dependent on Jewish financiers, mainly Jacob Bassevi \*Treuenberg. For his protection during the Thirty Years' War, the Jews of Bohemia had to pay onerous taxes. Ferdinand ignored the petitions of the city council of \*Vienna to expel the Jews, instead granting them successively more favorable privileges (that of 1624 was granted "in perpetuity"). He secured the return of the communities expelled from \*Hanau and \*Mantua. He allowed the Vienna community to build a synagogue in 1624 (insisting that they settle in a separate quarter), permitted the enlargement of the \*Prague Jewish quarter in 1627, and commuted the death sentence on Yom Tov Lippmann \*Heller to a heavy fine. For all these benefits, however, the Jews had to pay large emoluments.

Ferdinand III emperor, 1637–57; son of Ferdinand II. Immediately after his accession the Vienna city council urgently petitioned him to expel the Jews; though refusing to do this, Ferdinand III placed them under the jurisdiction of the municipality until 1641, and did not confirm their privileges until Nov. 5, 1638. These were renewed and expanded in 1645 in return for substantial payment. An expulsion order was averted in 1652 on payment of 35,000 florins, and Ferdinand granted the Vienna community broader privileges and internal jurisdiction in return for thrice that sum. In 1650 he ordered that Jews be allowed to remain only in places where they had been in residence in 1618. He gave his court Jew, Hirschel \*Mayer, widespread power over the Vienna community.

[Henry Wasserman]

**FERDINAND, PHILIP** (1556–1599), English Hebraist. Ferdinand, who was born in Poland as a Jew, lived for some time in Constantinople. He became in turn a Roman Catholic and a Protestant, and then went to England, where he taught Hebrew first at Oxford and then at Cambridge. In 1597 he published in Cambridge *Haec sunt verba Dei*, a Latin translation of the 613 Commandments and of other excerpts from rabbinical literature. In 1598 he went to teach Hebrew at Leiden, where the Christian historian and philologist Joseph Scaliger was one of his pupils. He died soon afterwards.

[Cecil Roth]

**°FERDINAND** (1452–1516) and **ISABELLA** (1451–1504), the monarchs whose marriage created the union of Castile and Aragon which formed the Kingdom of \*Spain. Because of their religious zeal, they became known as the "Catholic monarchs." A popular tradition, partly corroborated by documents, credits Jewish and \*Converso courtiers with a primary role in arranging the marriage contract concluded in 1469 between Isabella, heiress to the crown of Castile, and Ferdinand, prince of Aragon. On the death of Henry IV in 1474, Isabella and Ferdinand began to reign in Castile, then with the accession of Ferdinand to the throne of Aragon in 1479, the two realms were united.

In its first phase their policy adhered to the tradition of relative tolerance which characterized the attitude of the kings of Christian Spain. Generally, this was expressed in their willingness to extend their protection to Jewish communities or individuals whenever they were subjected to outbursts of mob hatred and fury instigated by monks. At the same time the Catholic monarchs employed Jews like Abraham \*Seneor, Meir \*Melamed, Isaac and Joseph \*Abrabanel, and Conversos like Alfonso de la \*Cavalleria, Gabriel \*Sánchez, and Luis de \*Santangel in the administration of the state.

The first sign of deterioration in their attitude toward the Jews can be detected when, at a session of the Cortes held in April 1476 at Madrigal, the monarchs promulgated sweeping edicts for judicial and administrative reforms, including revocation of all the rights of the \**aljamas* ("communities") to exercise criminal jurisdiction. Resolving that unified Spain should also be united in faith, they determined to eradicate the sin of heresy which had spread amid the Conversos, namely the tendency to revert to Judaism. In this they were clearly influenced by their desire to win the support of both the clergy and the burghers, who demanded that extreme measures be taken against the Conversos. The outcome of all these pressures was the establishment of the Spanish \*Inquisition in 1480. Traditionally, Isabella has been regarded as the living symbol of the religious awakening in Spain, but an examination of the letters exchanged between the king and the queen shows that they acted in perfect accord, moved by the same fanatical urge.

As the Inquisition's investigations in the 1480s proved that the Conversos did indeed tend to revert to Judaism in large numbers, the monarchs concluded that, owing to the close relations between Jews and Conversos, the latter would persist in their heresy. The decision to expel the Jews may have been foreshadowed by the eviction from Andalusia in 1483, but the general expulsion order was promulgated on March 31, 1492. During the three months given to the Jews of Spain to prepare their departure, the royal couple endeavored to ensure that the expulsion took place in accordance with their

instructions, lest the Jews be robbed of their property; but this was often to no avail. On July 30, 1493, they issued a letter of protection to all Jewish exiles returning to Spain from Portugal to be baptized, pledging that their property would then be restored to them without loss. It seems that in their decision to expel the Jews from Spain, Ferdinand and Isabella were motivated principally by arguments of a political and religious nature, for the sake of which they were willing to sacrifice every other practical consideration.

**BIBLIOGRAPHY:** F. Fernández-Armesto, *Ferdinand and Isabella* (1975). For further bibliography see under \*Spain.

**FERENCZI (Fraenkel), SÁNDOR** (1873–1933), Hungarian psychoanalyst and psychiatrist. Born in Miskolc, Hungary, Ferenczi became interested in hypnosis and in 1900 began the practice of neurology and psychiatry in Budapest. Ferenczi was the closest friend of \*Freud, whom he first met in 1908, and they exchanged more than 1,000 letters. An inspiring lecturer on psychoanalysis and an outstanding therapist, Ferenczi was the senior member of Freud's group. In 1909 he accompanied Freud to the United States and became a central figure in the psychoanalytic movement. Ferenczi's initial papers (1908) were on psychosexual disturbances, and in papers issued in 1911 he set out for the first time the difference between active and passive homosexuality and its relation to paranoia. In 1913 Ferenczi wrote his classic essay, *Entwicklungsstufen des Wirklichkeitssinnes*, in which he described, on the basis of his analytical experience and observation of children, the child's view of his own omnipotence and the development of his sense of reality. In the works written in this period Ferenczi expanded and checked Freud's findings and indicated new applications and approaches. In 1924 he published a creative and theoretical book: *Versuch einer Genitaltheorie (Thalassa: A Theory of Genitality)*, 1938). Here he correlated biology with psychology and invented the method of "bioanalysis," relating sexual drives to the act of returning to the womb. Ferenczi developed a technique of active therapy, requesting the patient to act or behave in a certain way. He discussed this technique in an essay (1921) and reviewed it in 1925 with his *Kontraindikationen der aktiven psychoanalytischen Technik*. In 1926 he published *Further Contributions to the Theory and Technique of Psychoanalysis*, a work which elaborated and systematized his technique and also contained many clinical essays, such as those on hysteria and tics. He was the first to emphasize the great importance of loving bodily contact with the mother for the child's development, as well as the dangers of too intense stimulation of the baby by adults. Freud became highly critical of some of Ferenczi's experiments in technique and by 1931 Ferenczi began to revise some of his methods, as they had not achieved the anticipated results. However, his ideas on the early object relations of the infant and their impact on personality development, and his ideas about the deeper functions of the ego dealt with areas which preoccupy analytical thinking and have produced a number of controversial theories.

[Louis Miller]

**FERKAUF, EUGENE** (1921– ), U.S. businessman and philanthropist. Born in Brooklyn, N.Y., Ferkauf learned the retailing business from his father, who owned two luggage stores in Manhattan. After serving in World War II, he began his own business career in 1948 with a modest retail discount store in New York. This grew into the E.J. Korvette chain of discount stores, which at the height of its success included 45 department stores and 60 supermarkets. At one point in the early 1960s Korvette was opening one big new store every seven weeks. In 1962 Ferkauf appeared on the cover of *Time* magazine with the banner headline "Discounting Gets Respectable" and a feature story entitled "Everybody Loves a Bargain" (July 6). However, Ferkauf and his executives found it difficult to administer the chain as it grew larger. In 1968 Korvette's merged with Spartans Industries, which abandoned the discount model. Ferkauf resigned from the combine shortly afterward. Five years later the firm was sold to Arlen Realty. Arlen later sold it to a French firm. In 1980, Korvette's ceased operations altogether.

Ferkauf was a prominent contributor to Jewish educational funds in the U.S. and Israel, and endowed a graduate school of social services at Yeshiva University, New York, a high school at Or Yehudah, Israel, and four hospitals to serve underprivileged communities in South America. Ferkauf was also a patron of the arts, as shown by his support of New York's Metropolitan Museum of Modern Art and the Lincoln Center of the Performing Arts. In Israel, he and his wife, Estelle, sponsored the Administration Wing of the Bezalel Academy of Art and Design. Ferkauf was also the main promoter of Atid, a commercial organization set up to stimulate Israel exports to the U.S. He was made an honorary life member of the Board of Governors of the Technion in Haifa. Ferkauf wrote the book *Going into Business: How to Do It, by the Man Who Did It* (1977).

[Joachim O. Ronall / Ruth Beloff (2<sup>nd</sup> ed.)]

**FERNANDES VILLAREAL, MANOEL** (1608–1652), Portuguese soldier, diplomat, and author. He was a prominent businessman and writer. Born in Lisbon of \*Marrano de-

scent, Fernandes Villareal became a captain in the Portuguese Army. He eventually went to live in France, settling in Rouen in about 1638. An agent of the House of Braganza, he was for a time Portuguese consul general in Paris, where he entered the circle of Cardinal Richelieu. Under Richelieu, France welcomed Iberian refugees, many of whom were New Christians. He supported Portugal's efforts to achieve independence and in 1642 he became a close advisor of the Portuguese ambassador, Dom Vasco Luis da Gama. He headed two centers which were in charge of Portuguese propaganda in support of Portuguese independence. As a reward for his services he was appointed to the post of regulating trade between Portugal and France. He prepared some economic programs for the welfare of the newly reestablished Portuguese kingdom and hoped to curtail the power of the Inquisition. He planned the return to Portugal of New Christian merchants. Under his influence an attempt was made to abolish any distinction between Old and New Christians and a pardon was granted in February 1649 to all Portuguese who would return from exile. It was then that Fernandes de Villareal decided to return to Portugal for a visit. While visiting Lisbon in 1649–50, Fernandes Villareal was denounced as a Judaizer by a friar who was a literary rival. The Inquisition uncovered his "New Christian" origin and secret adherence to Judaism, and Fernandes Villareal was condemned to death. He was garroted on Dec. 1, 1652. A few years after his death, some of his relatives officially reverted to Judaism in Leghorn. Fernandes Villareal wrote, in Portuguese and Spanish, works on history, politics, and military techniques. These include his *Epítome genealógico del Duque de Richelieu y discursos políticos* (Pamplona, 1641), a panegyric dedicated to Richelieu. The title of the 1642 edition was *El político cristianísimo o discursos políticos sobre algunas acciones de la vida del ... Duque de Richelieu*. He was inspired by Machiavelli's *Discorsi* and *Principe*. He also wrote the poem *El color verde a la divina Celia* (Madrid, 1637) and a play, *El Príncipe Vendido* (Paris, 1643). He was destined, however, to be remembered more as a tragic victim of the Inquisition than as a writer. While his works had no influence in Spain, in Portugal they were received with great interest.

**FERNBERGER, SAMUEL** (1887–1956), U.S. psychologist. Born in Pennsylvania, Fernberger received his Ph.D. in psychology from the University of Pennsylvania in 1912. He served as professor at Clark University for eight years, and then at the University of Pennsylvania from 1920. He is best known for his work in psychophysics, sensation, perception, and the history of psychology.

Fernberger wrote an article detailing the early history of the American Psychological Association (APA), a professional organization for psychologists founded in 1892 and incorporated in 1925. Considered a classic in the history of psychology, the article, entitled "The American Psychological Association: A Historical Summary, 1892–1930," was first published in the *Psychological Bulletin* in 1932. In 1937 Fernberger published *Elementary General Psychology*.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**FERNHOF, ISAAC** (1868–1919), Hebrew author, editor, and poet. Born in Buchach, Galicia, he was a teacher all his life, first in his native town, then in Zlochov, and finally in Stanislav. During World War I he went to Bohemia, where he taught Galician refugee children. In 1918 he returned to Stanislav, then under Ukrainian rule, and suffered dire poverty and famine. He died there soon after. Fernhof began writing poetry and articles in the late 1880s, and later published *Sifrei Sha'ashu'im* (1896–99), a small literary periodical to which leading writers such as Tchernichowsky, Peretz, Brainin, Klausner, and others contributed. Subsequently he tried unsuccessfully to publish literary journals (*Ha-Za'ir*, *Ha-Yarden*). A book of his stories, *Me-Aggadot ha-Hayyim*, appeared in 1908. He left a series of stories depicting *Mitnaggedim* which were published long after his death as *Sefer ha-Mitnaggedim* (ed. Israel Cohen, 1952). This includes an article published after the appearance of Herzl's *Jewish State* in which Fernhof prophetically refers to the utopian state by the name of "Israel."

[Getzel Kressel]

**FERRARA**, city in N. central Italy, with an ancient and renowned Jewish community. An inscription dating from Roman times and a document of 1088 may relate to local Jewish life. Privileges enjoyed by Jews were recorded in 1275. In the same century two tosafists both named R. Moses b. Meir lived in Ferrara, and perhaps also the philosopher \*Hillel b. Samuel of Verona. In the early years of the 14<sup>th</sup> century some Jews were heavily fined by the Inquisition. Two sonnets by Francesco di Vannozzo (1376) reflect the popular resentment against certain Jews. About 1435 \*Elijah of Ferrara settled in Jerusalem. From the middle of the 15<sup>th</sup> century a period of prosperity began for the community, thanks to the protection of the House of Este. In 1448, on Lionello d' Este's request, Pope Nicholas v curbed the anti-Jewish sermons of the friars; in 1451 Duke Borso declared that he would protect the Jews who entered his lands; in 1473 Ercole I, in opposition to papal demands, protected his Jewish subjects, particularly the moneylenders. In 1481 he authorized Samuel Melli of Rome to buy a mansion in Ferrara

and turn it into a synagogue, which is still used. At this time the geographer Abraham Farissol lived in Ferrara, as well as Abraham Sarfati, teacher of Hebrew at the University of Ferrara, and, in 1477, the printer Abraham b. Ḥayyim the Dyer (dei Tintori) of Pesaro (see below).

The policy of giving refuge to persecuted Jews, especially those who could prove useful, was continued by all successive Este dukes. In 1492, when the first refugees from Spain appeared in Italy, Ercole I allowed some of them to settle in Ferrara, promising to let them have their own leaders and judges, permitting them to practice commerce and medicine, and granting them tax reductions. This was the beginning of the Spanish community in Ferrara, which set up its own synagogue and separate administration. In 1532 Ercole II issued another permit allowing Jews from Bohemia and other countries in Central Europe to come and settle in Ferrara. This was the origin of the German group in Ferrara which also established its own synagogue. In 1524 and 1538 the same duke gave encouragement to the Marranos and in 1553 they were specifically allowed to return to the Jewish faith. In 1540 an invitation to settle in Ferrara was extended to the harassed Jews of Milan and one year later to those banished from the kingdom of Naples. In 1569, when the Jews were expelled from the Papal States (except Rome and Ancona), many from Bologna settled in Ferrara. In the middle of the 16<sup>th</sup> century there were ten synagogues in Ferrara. However, although the dukes spared their Jews from Church oppression, they allowed the Talmud to be burned in 1553. In 1554 a congress of delegates from the Italian communities was held in Ferrara to decide on precautionary measures, including the precensorship of Hebrew books.

Among the outstanding personalities in Ferrara at that time were Don Samuel \*Abrabanel, the last leader of Neapolitan Jewry, the Marrano Gracia \*Nasi, \*Amatus Lusitanus, who taught medicine at the University of Ferrara, the \*Usque family, and the engineer Abraham Colorni. In the sphere of Jewish learning there were the poets Jacob \*Fano and Abraham dei Galicchi \*Jagel, the physicians Moses and Azriel \*Alatino, the chronicler Samuel Usque, his kinsman the printer Abraham Usque (see below), and the polymath Azariah dei \*Rossi.

[Alexander Carlebach]

When Ferrara passed under the rule of the Church in 1598, the condition of the Jews grew much worse. In the same year the Jewish \*badge was introduced. In the following year all real estate had to be sold, synagogues were limited to three, one for each rite, and the loan banks were closed; however this last decree was repealed a short time later, the banks being finally closed only in 1683. In 1624 the construction of a ghetto was decreed and two years later the Jews were confined to it. The Jews were forced to be present at conversionist sermons and Jewish physicians were forbidden to attend to Christians. A similar state of affairs persisted throughout the 17<sup>th</sup> and 18<sup>th</sup> centuries; from time to time the situation was exacerbated by mob attacks on the ghetto (1648, 1651, 1705, 1747, 1754) and by

a \*blood libel charge in 1721. In spite of this the life of Jews in Ferrara was far more tolerable than in Rome.

The Jewish population numbered 1,500 persons in 1601, was at much the same level in 1703 (328 families), and rose to 2,000 in the 19<sup>th</sup> century. Outstanding personalities included the rabbi and physician Isaac \*Lampronti, author of the talmudic encyclopedia *Pahad Yizhak*, and the rabbis Jacob Daniel \*Olmo, poet, and Solomon \*Finzi, author of an introduction to the Talmud. In 1796, after the French occupation, Jews were granted equal civil rights and in 1797 the ghetto's gates were removed. The successive alternations in Ferrara of Austrian, French, and finally, in 1814, papal rule were reflected in the vicissitudes of Jewish life. In 1826 the Jews were locked up in the ghetto once more, but in 1859–60 they finally obtained their freedom when Ferrara became part of the Italian kingdom. For the next 80 years there was a new period of prosperity, Jews being appointed to high public offices in the town's administration and taking a prominent part in the affairs of the Italian Jewish community. Renzo Ravenna was *sindaco* ("mayor") before the Fascist crisis, and Felice Ravenna was president of the Union of Jewish Communities from 1933 to 1937. In spite of this the Jewish population dwindled because of steady emigration.

[Attilio Milano]

### The Holocaust Period and After

In 1936 the community of Ferrara had 760 members. On Sept. 24, 1941, the synagogue was devastated by the fascists. During the autumn-winter 1943 about 200 Jews were sent to extermination camps, of whom only five returned. Three more Jews were killed in the streets on Nov. 14–15, 1943. The Jewish population in Ferrara was reduced to 200 at the end of the war. The population further dropped to 150 in 1970 and 100 at the beginning of the 21<sup>st</sup> century.

[Sergio DellaPergola]

### Hebrew Printing in Ferrara

Under the enlightened rule of the House of Este, Hebrew printing flourished twice for short periods in Ferrara in the 15<sup>th</sup> and 16<sup>th</sup> centuries. In 1477 \*Abraham b. Ḥayyim the Dyer (dei Tintori; מִן הַצֹּבְעִים; *min ha-zove'im*), of Pesaro, using Abraham \*Conat's type, printed here Levi b. Gerson's commentary on Job, and finished printing the edition of Tur, *Yoreh De'ah* which Conat had begun in Mantua. The second somewhat longer period extended from 1551 to 1558, when first Samuel ibn Askara Zarefati of Pesaro and then Abraham Usque, partly with the former's assistance, printed well over 30 books in Ferrara. Among the first was Isaac Abrabanel's *Ma'yenei ha-Yeshu'ah* and Jedaiah ha-Penini's *Behinat Olam*. Under Usque, halakhic, theological, and liturgical items were printed, among them the first editions of Menahem ibn Zerah's *Zedah la-Derekh* (1554), Ḥasdai Crescas' *Or Adonai* (1556), Jonah Gerondi's *Issur ve-Hetter*, and Jacob Fano's *Shiltei ha-Gibborim* (including an elegy on the Marrano martyrs of Ancona), 1556. Apparently complaints by the Church about this publication led to the closing of the press. Usque also printed a num-

ber of works mainly, but not exclusively, of Jewish significance in Spanish and Portuguese, including the Ferrara Bible (1553) and the “Consolation for the Tribulations of Israel” by Samuel Usque (1553). Toward the end of the 17<sup>th</sup> century an attempt at reviving Hebrew printing at Ferrara was made by the non-Jewish printer Girolamo Filoni, who printed in 1693 a handsome small prayer book (*Siddur mi-Berakhah*), compiled by J. Nisim and Abraham Ḥayyim da Fano, printers from Mantua. Filoni also issued a broadsheet primer with the Hebrew alphabet and some basic prayers. Shortly after, Filoni melted down his Hebrew type and converted it into a Latin font. The *takkanot* of the Ferrara community of 1767 provided for less gifted pupils of the Jewish school (*Talmud Torah*) to attend the workshop of the printer Salvador Serri to learn the craft of Hebrew printing, both for their own good and for the preservation of this important craft (see Asaf, *Mekorot* 2 (1930), 206–8). No other evidence of Hebrew printing in Ferrara at that period is available.

°**FERRER, VICENTE** (c. 1350–1419), Dominican friar, canonized by the Catholic Church. Some scholars consider that he was directly responsible for the anti-Jewish persecutions in Spain of 1391. However, it seems that he was on his way to Avignon at the time. In a Lenten sermon delivered in Valencia after the disorders, he condemned the behavior of the rioters. Ferrer advocated conversion to Christianity from conviction and emphasized more than once the Jewish origin of Jesus. Nevertheless his appearances provoked mass demonstrations accompanied by anti-Jewish outbursts. These took place in particular in the first and second decades of the 15<sup>th</sup> century. The conversion of \*Solomon ha-Levi, rabbi of Burgos, and possibly that of Don Samuel \*Abrabanel of Seville, are attributable to Ferrer’s direct influence.

After the 1391 persecutions, when the problem of \*Conversos arose, Ferrer initiated the policy toward the Jews adopted by the antipope Benedict XIII, by Ferdinand I of Aragon for whose choice as king in 1409 Ferrer was responsible, and by the queen mother Catalina, regent of Castile. This policy was embodied in social and communal, economic and legal restrictions in Aragon and Castile. In 1412, Ferrer collaborated with Pablo de Santa María in formulating the laws of Valladolid directed against the Jews. He used his influence to implement a program to evict the Jews from their quarters lest they should have a bad influence on the Christians, i.e., the Conversos, who still lived in their former homes.

Throughout this period, Ferrer went from place to place preaching. As a result of his sermons, the populace more than once refused to sell the Jews food supplies and other necessities. The Jews of Tamarite de Litera complained to Ferdinand I that they were afraid that anti-Jewish riots would occur as a result of Ferrer’s sermons, and the king ordered the city officials to protect them (May 25, 1414). The Jews of Aynsa moved out of town when they heard that Ferrer was coming to preach there, and returned only after he had left (1414). Ferdinand compelled the Jews and Moors to listen to Ferrer’s sermons and imposed heavy fines upon those who were absent. At the height of the disputation of \*Tortosa (November 1413) Ferdinand wrote to Ferrer in Majorca, asking him to go to Tortosa in order to bring about the conversion of the Jews assembled there. From there he was to proceed to Saragossa, where the conversion of numerous Jews was also anticipated. A vessel was placed at the friar’s disposal for this purpose. In May 1414 Ferdinand wrote to Ferrer rejoicing over the conversion of 122 Jews in Guadalajara. Ferrer evidently attempted to persuade the Jews to come to the baptismal font by all means except physical force. In 1408 he was in Italy where \*Bernardino da Siena heard him preach in Alessandria and was thereby stimulated to imitate him.

Ferrer wrote several theological tracts but his sermons, numbering over 6,000, form his principal work. These he delivered in Catalan and they were then summarized in Latin.

[Haim Beinart and Zvi Avneri]

**FERRIS, IRIS** (1910–1970), Indian educator and social worker. Iris Ferris, who was born in Calcutta, became headmistress of one of the city’s secondary schools while still in her twenties. She was active in the local Jewish Women’s League. A member of the Girl Guide movement from childhood, she rose to become commissioner for training in West Bengal. In 1953 she settled in London and joined the staff of the world bureau of the Girl Guide movement of which she soon became general secretary.

[Flower Elias]

**FERRIZUEL, JOSEPH HA-NASI** (called *Cidellus*: “Little Cid” or “Chief”; d.c. 1145), physician of Alfonso VI of Castile. He was allotted property in and around Toledo after its capture in 1085 during the Christian reconquest. Ferrizuel was active on behalf of the Jews of Guadalajara when this town was occupied the same year. His position at court is indicated by the part he played in proposing a marriage for the king’s daughter Urraca on behalf of the Castilian nobles. When the proposal was rejected by Alfonso, Ferrizuel lost favor. Ferrizuel gave assistance to the Jews who fled from areas under Muslim rule in Spain to the Christian kingdoms in the north. However, Abraham ibn Daud relates that he treated the Karaites ruthlessly and expelled them from all the citadels in Castile. Judah Halevi

dedicated several poems to him and to his nephew Solomon b. Ferrizuel, who was murdered on his return from a successful political mission abroad, and subsequently mourned by the poet. In 1110, a year after Alfonso's death, Ferrizuel was one of the witnesses and signatories to a charter of immunities granted by Queen Urraca. Nothing about Ferrizuel is known after this date. He had probably died by 1145, when Alfonso VII gave his property to the Cathedral of Toledo.

[Haim Beinart]

**FESELA (Federación Sefaradí Latinoamericana)**, roof organization of the Sephardi communities of Latin America, affiliated to the World Sephardi Federation as well as to the World Zionist Organization. FESELA was founded in 1972 in Lima (Peru) during the Conference of Jewish Communities in Latin America by a group of young Sephardi leaders representing the new leadership of Sephardim born in Latin America. They were seeking representation in the World Zionist Organization not through political parties but on the basis of their ethnic identity – as Sephardim.

The executive of FESELA is rotated: every two years a different president and secretary – from a different country – must be elected, and the seat of FESELA moves to their respective country. Membership in FESELA is institutional and not personal, and each country is entitled to one vote. In addition to Argentina, Brazil, Colombia, Chile, Guatemala, Mexico, Panama, Peru, Uruguay, and Venezuela, the Cuban Sephardi community of Miami is also active on the board.

The main objectives of FESELA are to represent the Sephardi communities of Latin America, to strengthen Sephardi identity, to combat assimilation, to promote the Zionist cause, and to support the State of Israel. FESELA promotes cultural activities of Sephardim in Latin America and supports the publication of *Sefardica*, a journal published by CIDICSEF – Centro de Investigación y Difusión de la Cultura Sefaradí (Center for the Study and Diffusion of Sephardi Culture) in Buenos Aires.

[Margalit Bejarano (2<sup>nd</sup> ed.)]

**FESTIVALS** (Heb. חַג, *ḥag*; מוֹעֵד, *mo'ed*; or יוֹם טוֹב, *yom tov*).

### Introduction

The root of חַג is חָגַג *ḥagag*, to celebrate, or possibly חָוַג *ḥug*, to go round. It is related to the Arabic *hajja* which means to go on a pilgrimage from which comes *hajj*, the pilgrimage to Mecca. The term *mo'ed* means an appointed place, time, or season.

The festivals can be divided into two main categories each of which can be subdivided: (1) those commanded by the Pentateuch, and (2) those added later.

The Pentateuchal festivals are (a) the \*Sabbath (not strictly a festival), (b) the three pilgrim festivals, \*Passover, \*Shavuot, and \*Sukkot, with Shemini Azret which is consid-

ered in some respects a festival in its own right, (c) the New Year (\*Rosh Ha-Shanah) and the Day of \*Atonement, (d) \*Rosh Ḥodesh, the first day of the lunar month. These divisions can however be still further divided. Rosh Ha-Shanah and the Day of Atonement, while obviously belonging to a single pattern, nevertheless differ from each other completely. The three \*pilgrim festivals, too, although similar in many aspects differ in detail. There is, furthermore, a decided difference between the first and last festival days and the middle days termed *ḥol ha-mo'ed* (see below). The second category too can be subdivided: \*Purim and \*Ḥanukkah; the first being biblical (Book of Esther) and the second from the Hasmonean period; memorial days such as \*Lag ba-Omer (medieval) and the 15<sup>th</sup> of \*Av (mishnaic) to which may be added \*Tu bi-Shevat; thirdly, certain festival days added in modern times to mark historic events of Jewish importance. Apart from the above are also festival days of individuals or communities to record salvation or a similar event.

A festival is characterized by three factors: (1) rejoicing, which mostly takes the form of ceremonial meals (with the exception of the Day of Atonement), and, on the more important biblical festivals, the prohibition of work; (2) the liturgy (or in Temple times, the special sacrificial service); and (3) special ceremonials of the festival, such as eating of *mazzot* on Passover (biblical injunction), lighting of the candles of Ḥanukkah (talmudic), and the planting of saplings on Tu bi-Shevat (custom).

The liturgy is in effect dictated by the type of festival. The main changes from everyday prayer are mainly in (a) the \*Amidah, (b) the addition of \*Hallel, (c) the reading of the \*Torah, (d) the \*Musaf service representing the special sacrifices of the day (for details, see below – Liturgy). It can generally be stated that the less important the festival, the less changes are made in the liturgy. On Sabbath, the pilgrim festivals, and the high holidays, it is customary for the woman to light \*candles accompanied by a special benediction, and (except Sabbath) also by the *she-heḥeyanu*, whereas the man makes sanctification (*Kiddush*) over wine (except on the Day of Atonement). It is interesting to note that the national day of mourning, Ninth of \*Av, is also regarded in a sense as a festival, as it is termed "*mo'ed*" in Lamentations (1:15), and, according to tradition, will be the greatest festival in the time to come (with reference to Jer. 31:13).

### In the Bible

The festivals mentioned in the Pentateuch as "feasts" (חַגִּים *ḥaggim*) are Passover (Ex. 12:14), also called "the feast of unleavened bread"; Shavuot, otherwise "the feast of harvest" (Ex. 23:16) or the "day of the first fruits"; and \*Sukkot, also known as "the feast of ingathering" (*ibid.*) and sometimes called simply "feast" (*ḥag*) in the Bible. The sages, too, mostly use the term *ḥag* by itself to refer to Sukkot. Common to all three festivals is the pilgrimage to Jerusalem from which the term (שְׁלֹשׁ רֵגְלִים "the three pilgrim festivals") is derived. The term "appointed seasons" (*mo'adim*) in the Pentateuch, however, in-

cludes also Rosh Ha-Shanah and the Day of Atonement, as in the verse “These are the appointed seasons of the Lord, even holy convocations, which ye shall proclaim in their appointed season” (Lev. 23:4). At times the term “appointed seasons” is used for all the days which are “holy convocations,” including the Sabbath. Rosh Hodesh, on which work is not forbidden by biblical injunction and which is not mentioned at all with the festivals in Leviticus, is nevertheless included among “the appointed seasons” in the section on sacrifices (Num. 28:11). It seems that the prophets, too, sometimes use “appointed seasons” to refer to the Sabbath and Rosh Hodesh though mostly these days are not indicated. In one instance only the three pilgrim festivals are included “on the appointed seasons, three times in the year” (11 Chron. 8:13). Thus the term “season” generally has a wider meaning in the Bible than “feast” because only the three pilgrim festivals are called “feast,” whereas “season” usually comprises also Rosh Ha-Shanah and the Day of Atonement. A day of feasting and joy, whether fixed by individuals or established by the whole people to be observed by succeeding generations, which does not entail special sacrifices, is called *yom tov* (1 Sam. 25:8; Esth. 8:17).

The festivals, like the Sabbath, have their origin in Divine commandments. Leviticus commands not only “it is a Sabbath unto the Lord” (23:3) and “the Sabbaths of the Lord,” but also “the appointed seasons of the Lord” (23:4, 44). In the Bible the common expression “feast of the Lord” (see Hos. 9:5) or “a feast to the Lord” refers to Passover as well as to Shavuot and to Sukkot. Similarly, the festival which the children of Israel were to celebrate with sacrifices to the Lord in the wilderness is termed “feast.” Aaron, too, at the incident of the golden calf, proclaims “Tomorrow shall be a feast to the Lord” (Ex. 32:5).

### The Source of the Festivals

In the pagan religions of the ancient East, the festivals were established by man in order to find favor with the deity and prevent disasters. It was against this concept that the prophets militated (cf. \*Sacrifices). The biblical concept, on the other hand, is the exact antithesis, for not only are the festivals commanded by God but the service on these days as well. The festival sacrifices (*Musaf*) are not offered for any material reward, but in obedience to the Divine command. Among the sins of \*Jeroboam is mentioned his ordainment of a feast “like unto the feast that is in Judah” on the 15<sup>th</sup> of the eighth month “in the month which he had devised of his own heart,” and his bringing sacrifices on it (1 Kings 12:32–33). Apart from this incident, there is no mention in the Bible of alterations to the festivals as stated in the Pentateuch or the creation of new ones; “the feast of the Lord from year to year in Shiloh” (Judg. 21:19) is seemingly one of the festivals mentioned in the Pentateuch. In the Bible various reasons are given for the festivals. Some are specifically connected with the exodus from Egypt. Passover, the feast of unleavened bread, is celebrated on the anniversary of the day that God led the children of Israel out of Egypt. The paschal lamb was commanded for all generations

to commemorate “that He passed over the houses of the children of Israel in Egypt” (Ex. 12:27) and the unleavened bread is in memory of the haste with which the Israelites left Egypt. Similarly, the reason for dwelling in tabernacles on Sukkot is “that your generations may know that I made the children of Israel to dwell in booths when I brought them out of the land of Egypt” (Lev. 23:43); and even for Shavuot it is said, “And thou shalt remember that thou wast a bondman in Egypt; and thou shalt observe and do these statutes” (Deut. 16:12; cf. Nahmanides ad loc.; cf. Deut. 5:15 on Sabbath). The recital on the offering of the first fruits also testifies to the exodus from Egypt (Deut. 26:5–10). Together with their theological-historical sources, the festivals are also connected with the annual agricultural cycle. Shavuot is the festival “of the first fruits of wheat harvest” (Ex. 34:22) on which two loaves made from the new wheat crop were offered; hence its names: “the harvest feast” and “the day of the first fruits.” Sukkot is “the feast of the ingathering” at the end of the agricultural year when the ingathering from the threshing floor and the winepress is completed. Even Passover, in the spring, apart from the commemoration of the exodus, has an agricultural basis. The *Omer* sacrifice of the new barley was offered on the second day of the festival and permitted the partaking of the new grain crop.

The festivals thus seem to be rooted in two distinct sources which, according to some scholars, are independent of each other. They claim that the agricultural festivals antedate their theological-historical source, specifically pointing to the fact that Passover and Sukkot are celebrated in seasons when night and day are roughly of equal length. Their contention, however, is unacceptable since each festival in the Pentateuch is based on two distinct types of reasons stated sometimes even in the same paragraph. In the case of Passover, the agricultural motif is added to the clearly historical aspect of the festival, while with Sukkot, the historical aspect of the festival is added to the agricultural although this historical aspect is not specifically connected with the time of the year of Sukkot. At any rate the distinction between “the ancient folk festivals” and the later “theological festivals” is doubtful. Contrary to the three pilgrim festivals which are mentioned in the Bible together with their double motifs, no reason, save it being a Divine precept, is given for the day of “memorial proclaimed with the blast of horns” (i.e., the later Rosh Ha-Shanah), celebrated on the first day of the seventh month. The Day of Atonement, however, was inaugurated for the atonement of sins.

### Celebration of the Festival

The Pentateuch cites two specific commandments in connection with the “seasons of the Lord, holy convocations”: work is forbidden and, as a remembrance, sacrifices are to be brought to the accompaniment of trumpet blowing before the Lord (Num. 10:10). The Bible also specifically commands rejoicing on Shavuot (Deut. 16:11) and especially on Sukkot (Lev. 23:40; Deut. 16:14–15; cf. Neh. 8:17). Such commandments, however, were common to all the festivals, as is proven for instance by

the great rejoicings on Passover (Ezra 6:22; II Chron. 30:21 ff.) and those “on the first day of the seventh month” (Neh. 8:2, 9 ff.). These celebrations, especially when the people gathered in the Temple, are testified to by Isaiah: “Ye shall have a song as in the night when a feast is hallowed; And gladness of heart, as when one goeth with a pipe to come into the mountain of the Lord to the Rock of Israel” (30:29). The festivals are therefore referred to as days of mirth, gladness, and joy. It seems that the rejoicing of the people at the golden calf – “[they] offered burnt offerings, and brought peace offerings and the people sat down to eat and drink and rose up to make merry” (Ex. 32:6) – was typical of all festive celebrations, in which the huge feast as well as dancing occupied a prominent place. The celebrations were, however, limited by the sanctity of the festival, and there is no hint in the Bible of the orgies, wildness, and promiscuous abandon connected with the pagan festivals in the ancient Near East. The Pentateuch even stresses the fact that the rejoicings are of the whole community, including slaves, and commands not to forget the levite, the proselyte, the orphan, or the widow (Deut. 16:11, 14). During the early Second Temple period it was customary to send presents to the needy on the festivals (Neh. 8:10–12).

#### In the Apocrypha and Hellenistic Jewish Literature

During the early Second Temple period the laws of the Sabbath and festivals came to be very strictly observed. The festivals were celebrated with great rejoicings and it was customary to invite the poor to the feasting (Tob. 2:1–2). Many would go up to Jerusalem on all the festivals. During the persecutions of Antiochus, observance of the Sabbath and festivals was forbidden. \*Demetrius, however, declared the Sabbaths, New Moons, and festivals, including three days before and after, to be holidays for all Jews in the Seleucid kingdom (testified to in his letter to Jonathan the Maccabee; I Macc. 10:34).

In contrast to the Greek and Roman festival celebrations which were accompanied by gluttonous, drunken, and bacchanalian revelries, Hellenistic Jewish writers stressed the uniqueness of the Jewish festivals. \*Philo claims that the cessation of work on the festival was a possible danger since eating and drinking arouse lust and other low instincts. Giving vent to these feelings without restriction could lead to vice and limitless evil since the festival would serve as a protective means against retribution. The lawgiver therefore did not permit his people to celebrate their festivals in the way of other nations but commanded them first to purify themselves through the restriction of their desires for pleasure at the very time of their celebrations. Then they were to gather at the Temple to participate in the hymns, prayers, and sacrifices so that the place, the sight, and the service would influence their finer senses – sight and hearing – with a spirit of piety. Last but not least, by commanding the sacrifice of a sin-offering, he warned the people to stop sinning; for it seems that a person would not transgress at the very time he asks for forgiveness. Those gathered for the festive banquet do not come to stuff themselves with meat and wine like other nations, but

through prayers and psalms follow the tradition of their forefathers. Therefore the Day of Atonement is also a festival though the partaking of food is forbidden and there is no wild rejoicing, merrymaking, and dancing accompanied by song and music which arouse uncontrollable desires. Ignorance of the nature of true happiness leads people to assume that on the festivals joy is to be achieved through physical indulgences (Philo, Spec. 2:193–4). Philo further states that the true significance of the festival is to find pleasure and enjoyment through meditation about the world and the harmony existing in it (*ibid.*, 2:52). Were man's virtue constantly to rule his desires, his whole life, from his birth to the day he dies, would be one long festival (*ibid.*, 2:42).

#### In Talmudic Literature

The term *haggim*, as referring to Jewish festivals, hardly occurs in rabbinical literature (except in prayers which are in an archaic language). Instead, the festivals mentioned in the Bible are called *mo'adot*. *Mo'ed* (though not *ha-mo'ed*) in the singular is mostly applied to the intermediate days, especially to distinguish them from festival days on which no work at all is allowed. These are usually called *yom tov*. As in the Bible, *yom tov* was also applied in rabbinic literature to days of rejoicing (general or private) not mentioned in the Pentateuch, and on which work was allowed. These were either new festivals ordained for all times or days of rejoicing for certain events. It is doubtful whether the Day of Atonement was included in the term *yom tov* (but see Ta'an. 4:8).

The commandment concerning the feast of unleavened bread, that “... no manner of work shall be done in them..., save that which every man must eat, that only may be done by you” (Ex. 12:16), was interpreted by the sages to mean that work, for purposes of eating, is allowed on all those festivals (Sif. Num. 147) on which “servile work” is prohibited by the Pentateuch. (In contrast to the Sabbath and the Day of Atonement where it is ordained “ye shall do no work.”) The types of work forbidden on the Sabbath but allowed on *yom tov* for the purpose of eating (Bezah 5:2) are kneading, baking, slaughtering, skinning, salting, cutting, burning, and carrying (the last two are also permitted for purposes other than eating; Bezah 12a–b). Hunting, reaping, sheaf binding, threshing, winnowing, selecting, and grinding are forbidden (as to sifting, opinion is divided). Types of work for the indirect preparation of food (מכשירי אוכל נפש) are permitted. The differentiation between the types of work allowed and those forbidden is apparently based on customs prevalent at the time. Except for the work permitted for the sake of food and some other minor allowances made (see Bezah 5:1), everything forbidden on the Sabbath is also forbidden on the festivals. Moreover, the prohibition of handling \*mukzeh (non-usable) objects is stricter on the festivals than on the Sabbath so that the festival prohibitions should not be taken lightly (Bezah 2a–b).

The festivals are also similar to the Sabbath in rejoicing and in honoring the day. All halakhic Midrashim interpret the

term “holy convocation” to mean that the festivals are to be sanctified “with food and drink and clean clothes” and “the Day of Atonement, on which there is no food or drink, the Torah states that one must honor it with clean clothes” (Shab. 119a). It was usual to cut one’s hair before the festivals. Similarly, it was the custom, later incorporated in the *halakhah*, not to work or eat in the late afternoon preceding the festival. In the Middle Ages, it became customary to light a candle on the eve of the festival and to recite a blessing, as on the Sabbath. Rejoicing on the festival involved eating and drinking (concerning the prohibition of fasting see Judith 8:6; TJ, Ta’an. 2:12) and giving presents to the women and children. During the tannaitic period the sages disputed the question as to how a person should spend the festival: “R. Eliezer says that a person should either eat and drink or sit and study on the festival; R. Joshua declares that a person’s time should be divided between eating and drinking and the house of learning.” R. Johanan, the *amora*, found support in the Scriptures for both opinions (Pes. 68b; cf. Bezah 15b; Sif. Deut. 135, is similar to R. Joshua’s opinion). The *amoraim* also disagreed on the similar question as to whether the festivals were meant for the study of Torah, or whether eating and drinking was the main reason and permission to study the Torah on them but a secondary consideration (TJ, Shab. 15:3). According to the sources, it seems that it was customary to go to the *bet hamidrash* both on the eve of the festival as well as in the morning. Prayers, however, were shortened because of the festive meal. The sages, while stating that “the festivals were given to Israel only for their own pleasure” (S. Buber (ed.), *Midrash Tanhuma* (1885), Mid. Tanhuma Gen. 4), nevertheless noted the difference between Israel and the nations: “You grant the nations many festivals and they eat, drink, and are wanton, they go to the theater, the circus, and anger You by word and deed; but Israel is not so. You grant them festivals and they eat, drink, and rejoice, and go to the synagogues and *battei midrash* (“houses of learning”) and multiply their prayers, their festival offerings, and their sacrifices” (PDRK 340–1). It seems that R. Joshua’s opinion (“half to the Lord and half for yourselves”) was practiced and became *halakhah*. However, practices of drunkenness and licentiousness are also mentioned (Behaz 4a; Kid. 81a); R. Abba bar Memel, a Palestinian *amora*, states, “Did they not forbid work on the intermediate days only in order that people should eat, drink, and diligently study the Torah? But they eat, drink, and are wanton” (TJ, MK 2:3) – exactly as the Midrash describes the gentile nations.

Paul opposed the observance of the Sabbath and the festivals (Gal. 4:10; Col. 2:16). Traces of the Jewish-Christian dispute concerning the festivals are found in the Midrash (S. Buber (ed.), *Midrash Tanhuma* (1885), *Pinhas*, para. 17). The sharp condemnation by the sages of “he who despises the festivals” (Avot 3:12; Pes. 118a) is probably directed against the Christian heretics, and probably because of them the observance of the Sabbath and the festivals was stressed so strongly in Erez Israel. Later, in the Middle Ages, Judah Halevi states

that the festivals were the main factor which upheld Israel in its exile (*Kuzari* 3:10).

### The Intermediate Days

Apart from the laws governing the *musaf* sacrifices on the festivals, nothing is stated about the festival days following the first day of Passover and Sukkot, respectively, which the sages called *hōlo shel mo’ed* or just *mo’ed*. They taught that these days are also to be considered as days of “holy convocation.” Only partial work is permitted on them for “the Torah gave the sages the power of determining on which day it is forbidden to do work and on which day it is allowed; which work is forbidden and which allowed” (Sif. Deut. 135). Generally, work which prevents deterioration or loss is permitted on the intermediate days; where this is not the case, work is forbidden. It is forbidden to delay work in order to do it on the intermediate days except for public works. In Erez Israel stringent laws were imposed whereby no work at all was done, even if it was required for the festival itself. The *halakhah*, however, conformed to the Babylonian practice which allowed some work (as mentioned above). All must rejoice on the intermediate days; thus marriage is not permitted on these days as rejoicing should not be mixed, *ein me’arevim simḥah be-simḥah* (MK 8b).

[Moshe David Herr]

### Second Days of Festivals

In the Diaspora an extra day (in Heb. *yom tov sheni shel galuyyot*) is added to each of the biblical festival days, except for *hōl ha-mo’ed* and the Day of Atonement. The practice originated because of the uncertainty in the Diaspora of the day on which the Sanhedrin announced the New Moon. Later, when astronomical calculations were relied upon, the sages declared that the custom should nevertheless be accepted as permanent. Although the Day of Atonement was an exception, as a double fast day was considered too difficult, there were individuals who observed two days. Rosh Ha-Shanah, on the other hand, gradually came to be observed as a two-day festival even in Erez Israel; beginnings of the custom here, too, are to be found in the Second Temple period (RH 4:4), although it became universal only in the Middle Ages. With regard to Passover and Sukkot, the first day of *hōl ha-mo’ed* was observed as a full festival day in the Diaspora while an additional day was added at the end. Thus on Passover a second *seder* is held on the second night and an eighth day is added. The day following Shemini Azeret at the completion of Sukkot became known as Simḥat Torah, the “Rejoicing of the Law.” As long as the new moon was determined by visual evidence, there was no fixed date for Shavuot, so that the day of the festival was not in any doubt as it was always on the 50<sup>th</sup> day counting from the second day of Passover, which day would have been ratified in good time by the Sanhedrin messengers. Despite this, a second day was observed in the Diaspora for Shavuot as well. It would appear that certain sources regard the second day as a punishment and that for its observance no reward is to be expected (TJ, Eruv. 3:9). The only difference in observance between the additional days and regular festival days is in the practice con-

cerning burial, the use of medicine (Sh. Ar., OH, 496:2), and laws regarding *nolad* (the appearance or creation of something not previously in existence). An egg, for instance, which was laid on the first day of the festival remains forbidden all that day but may be eaten on the second day (*ibid.* 513:5). On the second day of Rosh Ha-Shanah, however, *nolad* is not permitted to be used because the two days are considered one long day. Certain trends in Conservative Judaism have made the second festival day optional, while the Reform has abolished it altogether, even for Rosh Ha-Shanah.

A person from Erez Israel who temporarily visits the Diaspora has to observe the additional day when in company, so as not to arouse controversy (*ibid.* 496:3, cf. Pes. 4:1; see \*Domicile). A visitor to Erez Israel, however, observes only one day if he has any intention of staying. According to Zevi Hirsch \*Ashkenazi, even without such intention he observes one day only (*Hakham Zevi*, resp. no. 167).

### Liturgy

On the three pilgrim festivals and on the high holidays a special \*Amidah is recited while on Rosh Hodesh and *hol ha-mo'ed* the ordinary weekday *Amidah* is said. In both, the \*ya'aleh ve-yavo prayer is included, as also in the Grace after Meals. On Hanukkah and Purim \*al ha-nissim, recounting the miracles of the particular festival, is said in both *Amidah* and Grace. The *Amidah* is followed by \*Hallel, preceded and completed by a benediction. On Shavuot, Sukkot (including *hol ha-mo'ed*), Shemini Azeret, and Hanukkah, *Hallel* is recited in its complete form. On Passover full *Hallel* is recited on the first day(s) only but not on *hol ha-mo'ed* or on the last festival day(s) when only "half" *Hallel* is recited. Full *Hallel* is also recited during the *seder* and in many congregations also at the conclusion of the evening service on Passover eve. On Rosh Ha-Shanah and the Day of Atonement, *Hallel* is deleted as these are days of judgment. On Purim, too, *Hallel* is not recited. On Rosh Hodesh "half" *Hallel* is recited (a Babylonian custom). The Torah reading on the festivals is from two scrolls: the first portion always contains a reference to the festivals, while the second is from Numbers 28–29 concerning the special sacrifice of the day. On Simhat Torah three scrolls are read: in the first the Pentateuch is concluded; in the second it is begun again; while from the third the reading is of the sacrifices of the day. Unlike on the Sabbath, there is no reading at the afternoon service, except on the Day of Atonement. On the other hand, in many congregations the Torah is read on Simhat Torah eve. It is customary to read the Song of Songs on the Sabbath during Passover and Ecclesiastes on the Sabbath of Sukkot. On Shavuot the Book of Ruth is read and on Purim the Book of Esther. Lamentations is read on the Ninth of Av. On all the Pentateuchal festivals, including *hol ha-mo'ed* and Rosh Hodesh, the \**Musaf Amidah* is recited which corresponds to the special sacrifices of the day. On Rosh Hodesh the \*tefillin are taken off before *Musaf*, while on *hol ha-mo'ed tefillin* are not used except according to Ashkenazi practice in the Diaspora, when they are taken off before *Hal-*

*lel*. In contrast to Erez Israel, the priests recite the \*priestly blessing in the Diaspora only during the *Musaf* service of the festivals (excluding Rosh Hodesh). When one of the festival days is followed by the Sabbath, a procedure known as \**eruv tavshilin* permits the preparation of food on the festival for the Sabbath, which would otherwise be prohibited.

The "good days" mentioned in \**Megillat Ta'anit*, of which some are also mentioned in other sources, were all established in the Second Temple period. Save for Hanukkah and Purim all have long disappeared, the last one being Nicanor's Day (13<sup>th</sup> Adar) which was still observed in Erez Israel in the seventh to ninth centuries. During the Middle Ages and in modern times other days became commonly accepted as "good days," some without any official standing. These are Lag ba-Omer, the 15<sup>th</sup> of Av, and Tu bi-Shevat, and lately Israel \*Independence Day, which is also celebrated as a holiday with special prayers and *Hallel*.

### Women and the Festivals

Women are responsible for obeying all of Judaism's negative commandments and for observing most of the positive commandments. These positive precepts include celebrating the Sabbath and all of the holy days and festivals of the Jewish year (TB Pes. 109a). However, women are exempt from the following positive *mitzvot* linked to festivals and holy days: hearing the *shofar* on Rosh ha-Shanah, dwelling in a *sukkah* during the Sukkot festival, waving the *lulav* on Sukkot, and counting the *omer*. Since these are all commandments that are to be performed at fixed times of the year, they conform to the exemption of women from time-bound *mitzvot* prescribed in Kid. 1:7. Yet, the Talmud specifically obligates women to other time-bound festival observances, generally rituals that take place in the home. These include *kiddush* (sanctification of wine) on the Sabbath (Ber. 20b), and, according to most authorities, on the festivals as well; kindling Sabbath and festival lights and the Hanukkah lamp (Shab. 23a); listening to the reading of the *megillah* (Scroll of Esther) on Purim (Meg. 4a); and eating *mazzah* (Pes. 43b) and drinking four cups of wine at the Passover *seder* (Pes. 108a).

A number of rabbinic authorities have held that a woman's voluntary performance of those festival *mitzvot* from which she is halakhically exempt should be understood as a praiseworthy personal *minhag* (custom) or permitted as a fulfillment of an individual *neder* (vow). Authorities have been divided over whether one who observes an optional *mitzvah* may recite the benediction that usually accompanies the performance of that precept. R. Moses \*Isserles (the Rema, 1525 or 1530–1572) maintained that a woman could recite the blessing in this case (Sh. Ar., *Orah Hayyim* 589:6) and this became the custom among Ashkenazi Jews. Thus, a woman may choose to listen to the *shofar* or may sound it herself, and she may recite the appropriate blessing (OH 589:6). A woman may not sound the *shofar* on behalf of others, according to the principle that only one who is obligated to perform a precept may perform it for others (OH 589:1).

Two of the three commandments specifically associated with women in rabbinic tradition are connected with Sabbath observance (Shab. 2:6). These are the kindling of Sabbath lights before sunset (*hadlakah*) and removing some of the dough from the Sabbath loaf and burning it in the oven in remembrance of Temple sacrifice (*hallah*). These two obligations may also be performed by a man if no woman is present; however, the Shulḥan Arukh rules that a woman takes precedence over a man in kindling the Sabbath lights for her household (OH 263:2, 3).

Women, like men, are required to fast and afflict themselves in various ways on the Day of Atonement and to refrain from doing any work (Suk. 28b); they are also obligated to observe all other mandated fast days. Pregnant women are expected to fast (OH 617:1). If a pregnant woman says she must eat, she may be given incremental amounts of liquid and then food until she is satisfied (OH 617:1). A woman in childbirth, from the onset of labor until three days after the birth of her child, must eat normally (OH 617:4). A nursing mother should fast unless her fasting will jeopardize her child's health.

Men have traditionally observed Simḥat Torah with festive celebration, particularly circular processions (*hakafot*) around the synagogue, and joyous dancing, with the Torah scrolls. In recent years many women have initiated separate women's *hakafot* with the Torah scrolls. There is no halakhic objection to this practice since a woman, like a man, is permitted to touch and hold the Torah scroll at all times (YD 282:9). Some contemporary Orthodox authorities, however, oppose this innovation because they link it with their perceptions of feminism as a threat to traditional Jewish life.

*Rosh Ḥodesh*, the festival marking the New Moon and the start of each month, is strongly associated with women in Jewish tradition. In some eras in the Jewish past, women's abstention from work on *Rosh Ḥodesh* was encouraged; the Shulḥan Arukh says women may work on *Rosh Ḥodesh* but praises Jewish women who refrain from doing so (OH 417:1). Women are forbidden to fast on *Rosh Ḥodesh* (OH 418:1) and it is a *mitzvah* for them to feast (OH 419:1). However, women are exempt from the obligation to bless the New Moon on its appearance, since this is a time-bound positive precept (*Hali-khot Betah* 16:10). In recent decades, many Jewish women have reclaimed their traditional association with this day, forming *Rosh Ḥodesh* groups for study and fellowship.

**FESTSCHRIFTEN** (from German; lit. “festival writings”). A Festschrift is usually a volume of articles by several authors for a celebration, especially a volume of learned essays, by students, colleagues, and admirers to honor a scholar on a special anniversary. The custom of publishing Festschriften became popular in academic circles in Germany in the 19<sup>th</sup> century and was eagerly adopted by the Jewish scholarly community as well, particularly to honor the birthdays or memory of prominent rabbis, teachers at rabbinical seminaries, and private scholars. An institution, such as a rabbinical seminary, a Jewish school, or a society could also be honored. The contents of these books usually consist of a brief dedication or biographical sketch of the person honored, a list of his writings, and a series of scholarly contributions in the field of his interest.

Early examples of this genre were published in Central Europe when modern Jewish scholarship was striving to achieve recognition within the general community of scholars. At that time formal recognition of scholarship in Jewish subjects was generally denied, except for Bible scholarship; even that field, however, was conceived as an exclusively theological discipline reserved for Christian scholars. Thus the Festschriften served the apologetic tendency prevalent in the early period of modern Jewish learning. With the spread of the methods of modern Jewish scholarship from Germany to other countries, Festschriften also became popular, and this type of literature continues to be published in Israel and the Diaspora. Generally, the main subject of a Festschrift is not the honoree, but in some cases memorial volumes may consist primarily of the literary remains of the person. A related development is the publication of hundreds of memorial volumes dedicated to the Jewish communities that were destroyed during the Holocaust; usually they take the form of reminiscences of the survivors.

#### Lists and Indexes

A list of Festschriften, “Jubilee, Memorial, and Tribute Volumes” (in: *Universal Jewish Encyclopedia*, 1941), enumerates over a hundred titles for the period 1864–1941. The bibliographical quarterly *Kirjath Sepher* regularly published a list of works under the heading *Kevazim* (“collections”), from which a fairly complete bibliography of Jewish Festschriften can be derived. Nearly a hundred Festschriften honoring Jewish educational institutions and published from 1834 on are listed by Leah Y. Mishkin (in: *sbb*, 5 (1961), 92–101). Many of these, however, have the institutions as their principal subject.

An analytical Festschrift is *An Index to Jewish Festschriften* (1937) by J.R. Marcus and A. Bilgray, which analyzes

54 works by author, title, and subject. A general index to Festschriften that analyzes a substantial number of works of Jewish interest is *Articles on Antiquity in Festschriften, and Index; the Ancient Near East, the Old Testament, Greece, Rome, Roman Law, Byzantium* (1962) by Dorothy Rounds.

I. Joel's *Reshimat Ma'amarim be-Madda'ei ha-Yahadut* (1969, "List of Articles on Jewish Studies"), the first volume of a projected series, analyzes periodicals and collections, including Festschriften published in 1966.

*Index to Festschriften in Jewish Studies* (1971), compiled and edited by Charles Berlin, gives a comprehensive list of 243 Festschriften with an alphabetical list of authors and articles, and a detailed index. It excludes the Festschriften indexed by Marcus and Bilgray.

[Theodore Wiener]

**\*FESTUS, PORCIUS**, Roman procurator of Judea 60–62 C.E. Under his rule the sect of Jewish patriots known as the \*Sicarii greatly increased in number, although, according to Josephus, the procurator made every effort to curb their activity. Festus sent his troops to suppress a "deceiver" who led the people into the wilderness promising them victory, and many of them were killed (Jos., Ant., 20:188). Soon after his appointment Nero decided the dispute in \*Caesarea between the Syrians and the Jews in such a way as to make the Syrians the masters of the city; this aroused considerable unrest among the Jewish population. Another legacy of the procuratorship of Felix was the trial of the apostle Paul, whom Festus sent to Rome to be tried after a number of hearings. During his procuratorship Agrippa II added an upper story to the former Hasmonean palace in order to be able to overlook the Temple court. The priests countered by erecting a wall screening the Temple from the palace. For military reasons Festus ordered this wall to be demolished but nevertheless permitted the priests to send a delegation to Rome to appeal his decision. Nero was persuaded by his wife, \*Poppaea Sabina, to decide in their favor and the wall was allowed to stand. Festus died suddenly in Erez Israel in 62 C.E. and was later succeeded by \*Albinus.

[Lea Roth]

**\*FETTMILCH, VINCENT** (d. 1616), anti-Jewish guild leader in \*Frankfurt. In 1612 he presented a petition to the emperor accusing the senate of Frankfurt of corruption and favoring Jews. Though the petition was ignored, he exploited the economic crisis and religious strife to agitate against the senate and the Jews. The populace disregarded two imperial warnings and were unappeased by the expulsion of 60 poor Jewish families. On Aug. 5, 1614, they attacked the ghetto gates, which were forced open after five hours. The Jewish defenders rushed to join their women and children, who were hiding in the cemetery. Two Jews and one Gentile lost their lives and the pillage continued until noon. The cemetery was sur-

rounded by Fettmilch, the self-styled "new Haman," and his followers, and the whole community was forced to leave the city. Meanwhile the emperor had issued an order for Fettmilch's arrest. On March 10, 1616, he and six associates were hanged and quartered; after its return the community commemorated the date annually as the "Purim Winz" ("Purim of Vincent") with the reading of the *Megillat Vinz* composed by Elhanan b. Abraham Helin in Hebrew and Yiddish (publ. Frankfurt, 1616).

**BIBLIOGRAPHY:** A. Freimann and I. Kracauer, *Frankfurt* (1929), 73–107 (Eng.); I. Kracauer, *Geschichte der Juden in Frankfurt a.M.*, 1 (1925), 358–410; idem, in: ZGJD, 4 (1890), 127–69, 319–65; 5 (1892), 1–26; D. Gans, *Zemah David ha-Shalem* (1966), 228 (introd. in English); Baron, *Social*<sup>2</sup>, 14 (1969), 190–7.

**FEUCHTWANG, DAVID** (1864–1936), rabbi and scholar. After studying in Vienna and Berlin, Feuchtwang succeeded his father Meir as rabbi in \*Mikulov, Moravia, in 1892. In 1903 he became rabbi in Vienna and succeeded H.P. \*Chajes as chief rabbi (1927). Feuchtwang contributed numerous articles to both Jewish and non-Jewish scholarly journals. Among his published work are *Nachum im Lichte der Assyriologie* (1888), *Das Wasseropfer und die damit verbundenen Zeremonien* (1911), *Der Tierkreis in der Tradition und im synagogalen Ritus* (1913), and *Studien zum Buche Ruth* (1925). He also wrote a study of the Hebrew tombstone inscriptions of Mikulov. Several volumes of his sermons and lectures were published.

**FEUCHTWANGER, LION** (1884–1958), German historical novelist. Feuchtwanger was born into a Bavarian-Jewish family. Coming from the Jewish community of Fuerth the Feuchtwangers settled in Munich in the mid-1840s, established a successful private bank and a factory for margarine, and were very active in the Orthodox *Synagogenverein Ohel Jakob*. Lion Feuchtwanger studied philosophy at Berlin and Munich; in 1907 he received his doctorate from the University of Munich for a thesis on Heine's *Rabbi of Bacherach*. As a young man he was mainly interested in drama. He wrote about a dozen plays, three of them in collaboration with Brecht. It was after World War I that Feuchtwanger's name first became known. His greatest success came with *Jud Suess* (1925; English edition *Jew Suess*, 1926; U.S. edition *Power*, 1927), a novel about Joseph Suess \*Oppenheimer, the 18<sup>th</sup>-century court Jew, which he had originally written as a play. In 1939 this world best seller, which had already been made into a motion picture in Britain, was used by the Nazis as the basis for a viciously antisemitic film. Feuchtwanger's other big success of the 1920s was *Die haessliche Herzogin Margarete Maultasch* (1923; *The Ugly Duchess*, 1927), a psychological study of an Austrian historical figure. *Erfolg* (1930; *Success*, 1930) daringly exposed the moral corruption of postwar Germany. It was during this period that he began writing his \*Josephus trilogy – *Der juedische Krieg* (1932; *Josephus*, 1932), *Die Soehne* (1935; *The Jew of Rome*, 1936), and *Der Tag wird kommen* (1941; *The Day Will Come*, 1942). Lion Feuchtwanger's brother Ludwig was a

well-known figure in the cultural life of the Weimar Republic. Until 1933 he was the editor of the Duncker & Humblot publishing house in Munich.

Feuchtwanger spent the winter of 1932/33 on a lecture tour of the U.S. and was there when Hitler came to power. He never returned to Germany, but settled in the south of France. After the French collapse in June 1940, the Vichy regime put him into a concentration camp. With the help of American friends he managed to escape over the Pyrenees and, as a result of the intervention of President Roosevelt, was able to enter the U.S., where he spent the rest of his life. The novel *Die Geschwister Oppenheim* (1933; *The Oppermanns*, 1934) deals with the fate of a German-Jewish family in the early days of Nazi rule. A trip to the U.S.S.R. produced *Moskau 1937*, which included an historic interview with Stalin. The years of exile in France inspired several novels, including *Simone* (1944; Eng. tr., 1944), *Exil* (1939; *Paris Gazette*, 1940), and *Unholdes Frankreich* (1942; *The Devil in France*, 1941). When he was living in Pacific Palisades, California, Feuchtwanger wrote more best sellers, including *Waffen fuer America* (2 vols, 1947–48; *Proud Destiny*, 1947), the story of Benjamin Franklin's activities in France; *Goya* (1951; *This Is the Hour*, 1952); *Narrenweisheit, oder Tod und Verklarung des Jean-Jacques Rousseau* (1952; *'tis Folly to be Wise...* 1953); *Spanische Ballade* (1955, also published 1955 under the title *Die Juedin von Toledo*; *Raquel the Jewess of Toledo*, 1956), and *Jefta und seine Tochter* (1957; *Jephta and his Daughter*, 1958). Many of these books were translated into more than 30 languages. Feuchtwanger's play *Wahn, oder der Teufel in Boston* (1946) is a penetrating study of Cotton Mather and his times. The 30,000-volume Feuchtwanger Memorial Library, bequeathed to the University of Southern California, was the novelist's third collection; previous libraries were lost in Nazi Germany and occupied France. After World War II, Feuchtwanger received awards and honors from both West and East Germany.

**BIBLIOGRAPHY:** *Lion Feuchtwanger zum 70. Geburtstag* (1954), contains bibliography; NDB, 5 (1957), 109–10; Zohn, in: *Jewish Quarterly* (Winter 1958/59), 3–4; *Lion Feuchtwanger zum Gedenken* (1959); Yuill, in: *German Men of Letters*, 3 (1964), 179–206. **ADD. **FEUER, HENRY** (1912– ), U.S. organic chemist. Born in the Ukraine, Feuer went to U.S. in 1941. He joined Toledo Hospital, Ohio, and subsequently became a faculty member at Purdue University (1946). He was appointed professor of chemistry there in 1961 and professor emeritus in 1979. In 1964–71 he was visiting professor at the Hebrew University of Jerusalem; in 1971 he was visiting professor at the Indian Institute of Technology and in 1979 at the Beijing Institute of Technology. His contributions to scientific journals deal with organic nitrogen compounds, viscosity, absorption of gases, and rocket propellants. From 1962 to 1989 he was president of Organic Electronic Spectral Data, Inc. and managing editor

of the Organic Nitro Chemistry Series, Wiley-VCH. He is also a fellow of the American Association for the Advancement of Science, the American Chemical Society, and the Royal Society of Chemistry.

[Sharon Zrachya (2<sup>nd</sup> ed.)]

**FEUER, LEON ISRAEL** (1903–1984), U.S. Reform rabbi, orator, and Zionist leader. Feuer was born in Hazleton, Pennsylvania, and ordained at Hebrew Union College in 1927. He received his B.A. from the University of Cincinnati in 1925, an honorary D.D. from HUC-JIR in 1955, and an honorary doctorate from Bowling Green University in 1975. He served his entire rabbinic career in Ohio, first at Temple Tifereth Israel in Cleveland (1927–34) and then at the Collingwood Avenue Temple, Congregation Shomer Emunim in Toledo (1934–74), where he also lectured at the University of Toledo. He gained a reputation as an eloquent and outspoken supporter of liberal social legislation to end racial inequality as well as to protect the rights of workers, the unemployed, women, and children. During the 1930s, Feuer joined forces with Unitarian Minister Rev. Walter Cole to combat the antisemitic radio diatribes of Father Charles Coughlin, raising secret financing to purchase airtime and ghostwriting rebuttal speeches for Cole to broadcast.

Feuer rose to his greatest prominence as an early and influential leader of the Zionist movement in the United States. His book *Why a Jewish State?*, published in 1942, was the first in the English language to advocate an independent Jewish commonwealth in Palestine. In 1943, he became director of the Washington bureau of the American Zionist Emergency Council, obtaining a year's leave of absence from his congregation to head the effort to persuade U.S. political leaders to support the idea of a sovereign Jewish nation. A consummate lobbyist, Feuer convinced representatives and senators in Congress not only to oppose Britain's White Paper restricting Jewish immigration to Palestine but also to pass resolutions calling for the creation of a Jewish state in Palestine after World War II. In 1945, Feuer was elected vice president of the Zionist Organization of America and attended the following year's World Zionist Congress in Basel, Switzerland; as the ZOA delegation's floor whip, he was effective at instilling unity of purpose in achieving the goals of this assembly at such a critical juncture in history.

With the establishment of the State of Israel as the Jewish homeland, Feuer returned to active leadership roles in his community and the Reform movement. He was the organizing chairman of the Jewish Welfare Federation of Toledo and served successively as president of the Toledo Zionist District, the Toledo Lodge of B'nai B'rith, the Jewish Community Council, the United Jewish Fund, and the Toledo United Nations Association. After holding several key CCAR positions, including chairman of the Committee on Justice and Peace and the CCAR-UAHC Joint Social Action Commission, and vice president (1961–63), Feuer was elected president of the \*Central Conference of American Rabbis in 1963. He was a

proponent of stronger Jewish education requirements in the Reform movement, particularly with regard to customs, ceremonies, and Hebrew. Following his term of office (1963–65), he was appointed a public member of the executive of the American section of the Jewish Agency, the governing body of the World Zionist Organization (1966–71). He also served on an International Commission to study revising the WZO. Upon his retirement from the pulpit in 1974, Feuer joined the faculty of Emory University as a visiting professor. He also co-authored two scholarly works: *The Jew and His Religion* (1935) and *Jewish Literature since the Bible* (2 vols., 1937, 1941).

**BIBLIOGRAPHY:** K.M. Olitzky, L.J. Sussman, and M.H. Stern, *Reform Judaism in America: A Biographical Dictionary and Sourcebook* (1993).

[Bezalel Gordon (2<sup>nd</sup> ed.)]

**FEUER, LEWIS SAMUEL** (1912–2002), U.S. educator. Feuer was born in New York. He taught philosophy and social sciences at City College of New York, Vassar, the University of Vermont, and the University of California at Berkeley from 1957 to 1966. In 1966 he was appointed professor of sociology at the University of Toronto, where he taught sociological theory until 1976. He is the author of *Psychoanalysis and Ethics* (1955), *Spinoza and the Rise of Liberalism* (1958), *The Scientific Intellectual: The Psychological & Sociological Origins of Modern Science* (1963), *The Conflict of Generations: The Character and Significance of Student Movements* (1968), and *Marx and the Intellectuals* (1969). He edited *Marx and Engels: Basic Writings on Politics and Philosophy* (1959). His special interest was in the sociology of ideas. In his study of Spinoza, he related the philosopher's thought to the political and economic currents of his time. In *The Conflict of Generations* and other works, he studied the psychoanalytical and personal factors in social and political thought. He also criticized the theory that the rise of Protestantism has been mainly responsible for scientific inquiry and development. Later books by Feuer include *Einstein and the Generations of Science* (1974), *Ideology and the Ideologists* (1975), *Philosophy, History, and Social Action: Essays in Honor of Lewis Feuer: With an Autobiographical Essay by Lewis Feuer* (1988), and *Varieties of Scientific Experience: Emotive Aims in Scientific Hypotheses* (1995).

[Ben G. Kayfetz / Ruth Beloff (2<sup>nd</sup> ed.)]

**FEUERLICHT, MORRIS MARCUS** (1879–1959), U.S. Reform rabbi. Feuerlicht was born in Hungary and ordained at \*Hebrew Union College in 1901. He spent his entire rabbinic career in Indiana, first as rabbi of Temple Israel in Lafayette (1901–4) and then of Indianapolis Hebrew Congregation in Indianapolis (1904–51), where he also was a member of the faculty of Butler University. Feuerlicht espoused the philosophy that Judaism's spiritual heritage could contribute much to American life and translated this into respected social activism, to the extent that *The Indianapolis Times* hailed him as "a man in whom the qualities of greatness transcend all the little differences of creed, nationality and sect that divide us."

The paper went on to call Feuerlicht "...one of the true assets of the State of Indiana... [a] violent foe of the Ku Klux Klan... [an] orator who bested the famed attorney Clarence Darrow in a [public] debate... [and an effective mediator] who settled many strikes."

In 1927, Feuerlicht was one of the founders of the National Conference of Christians and Jews (renamed the National Conference for Community and Justice in the 1990s). Locally, he was one of the founders of the Marion County chapter of the American Red Cross, as well as the founder and first director of the Indianapolis Family Welfare Society. He served successive terms as president of a number of civic organizations, including the Indiana Conference of Social Work, the Children's Aid Association of Indianapolis, and the Indiana Library and Historical Board. He also served as a civilian chaplain at Fort Benjamin Harrison.

In the realm of scholarship, Feuerlicht, a member of the American Oriental Society, was a contributor to the *Universal Jewish Encyclopedia* and wrote *Judaism's Contribution to the Founding of the Republic*, published by the Jewish Tract Commission.

**BIBLIOGRAPHY:** K.M. Olitzky, L.J. Sussman, and M.H. Stern, *Reform Judaism in America: A Biographical Dictionary and Sourcebook* (1993).

[Bezalel Gordon (2<sup>nd</sup> ed.)]

**FEUERMANN, EMANUEL** (1902–1942), cellist. Born in Kolomea, Galicia, and taken to Vienna at the age of seven, Feuermann gave his first public recitals in 1913. He was a teacher at Cologne Conservatory from 1918 until 1923 and became well known as a soloist. He was on the staff of the Berlin Hochschule fuer Musik (1929–33), but emigrated to the United States in 1938. There he performed as a soloist and made notable appearances in trios with Jascha Heifetz and Artur Schnabel, and was acclaimed as one of the great cellists of his time.

**FEUERRING, MAXIMILIAN** (1896–1985), painter. Feuerring worked as an art teacher and art critic in various countries. In World War II he served with the Polish Army and was taken prisoner. In 1948, he organized in Munich the Painters in Exile exhibition, in which he participated with fellow Jewish P.O.W.s. A prolific artist, his paintings reflect the continuous search for problems and conflicts of spiritual or emotional origin. He struggled to integrate the known and the unknown, the formed and the unformed into an organic unity. Feuerring, who lived in Sydney from 1950, twice represented Australia at the São Paulo Biennial and was awarded the Albury Art Prize. He is sometimes known by his Polish surname of Feuring-Emefowicza.

**FEUERSTEIN**, family of leaders of U.S. Orthodoxy. The Feuersteins, who made their fortune in textiles in Massachusetts, trace their history in the United States to the 1893 arrival in New York of HENRY (Naftali) from Hungary. Instilled

with the unyielding Orthodoxy that nurtured such rabbis as Moshe \*Teitelbaum, founder of the Satmar ḥasidic dynasty who hailed from the same town, Feuerstein went beyond his modest beginnings as a peddler who plied his wares throughout New York's Hudson Valley to found a sweater mill in Malden, Massachusetts. Soon he became one of a handful of prosperous American businessmen who remained staunchly Orthodox and as such an important supporter of Orthodox institutions. In the 1920s Henry traveled to Palestine, meeting with both Rabbis Abraham I. \*Kook, who backed the religious Zionist idea of the emergent "New Yishuv," and Joseph Ḥayyim \*Sonnenfeld, the staunchly anti-Zionist leader of Orthodoxy in Jerusalem. He helped sustain Jerusalem's Hungarian community, of which his mother became a member.

SAMUEL (1892–1983), eldest of Henry's three children, all of whom were American-born, expanded both the family concern for Orthodox community needs and the family business, which by the end of World War I as Malden Knitting Mills was worth a then extraordinary million dollars. In the late 1930s and even more after the Holocaust as Orthodoxy in America grew exponentially, the Feuersteins became key figures in helping sustain an expanding number of its institutions – locally, nationally, and internationally. As such they were linked with most of the movement's prominent rabbinic leaders in the 20<sup>th</sup> century, who looked to them for counsel and economic aid. Feuerstein was close to such rabbis as Leo \*Jung, supporting the Vaad Hatzalah (Rescue Committee) in its efforts to save refugees from the Nazis, and Joseph B. \*Soloveitchik, helping to found Maimonides, a coeducational Modern Orthodox Jewish day school in Boston (of which he served as board chair). Samuel also helped Shraga Feivel \*Mendelowitz found Torah Umesorah (the National Society for Hebrew Day Schools) and served as its president. In 1953 he founded the Young Israel of Brookline, and was instrumental in hiring as its first permanent rabbi, Irving "Yitz" \*Greenberg.

MOSES (1916– ), eldest of Samuel's five children and educated in Ascher's Institute (Switzerland), Yeshiva College (B.A. 1936), and the Harvard Business School, took on many of the Orthodox communal leadership roles in the next generation. Like his father, he acted as an important link between the traditionalist and modernist wings of Orthodoxy. Most prominently he served as chairman of Torah Umesorah as well as president of the \*Union of Orthodox Jewish Congregations of America. Under his presidency from 1954 to 1966, the Union became the largest Orthodox Jewish umbrella organization in the United States. Its certification of foods as kosher as a not-for-profit public service, totally free of the element of personal gain and private vestment, became decisive in making such guarantees reliable and kosher foods widely available. Once the OU seal became the national standard of *kashrut*, companies of high standing seeking acceptance of their products by Jewish consumers began, spontaneously, to turn to the Orthodox Union for that purpose. Moses also mediated between

native and European-educated elements in American Orthodoxy, easing tensions between immigrants, who were swelling its ranks, and those who had constituted it in the past.

After Moses' mother, Janette (Kaplan), died, his father married Mitzi Landau. The eldest of their three children, AARON (1926– ), educated at Boston Latin School and later Yeshiva College (B.A. 1947), became CEO of the family business. He expanded its products and presided over its growth into a multimillion dollar textile corporation, now called Malden Mills. Famous for the production of the immensely popular and innovative fleece insulation fabrics under the trademark Polartec, Aaron oversaw the opening of new headquarters in Lawrence, Massachusetts. The success of the company helped the family increase its support for countless Jewish institutions. While other textile manufacturers relocated to the Southern United States and later to Latin America or the Far East in search of lower labor costs and higher profits, Malden Mills, under Aaron's leadership, alone remained in the Northeast, loyal to its workers and unwilling to abandon its roots. In December 1995, the Lawrence mill suffered a devastating fire. Confounding expectations that he would relocate where the labor was cheaper, Aaron chose at a cost of \$1.5 million per week to continue to pay his idle workers with full benefits for over three months, while he struggled to rebuild and battled with insurance companies who were slow to cover his losses. Explaining his motivation as coming from his Judaism, which taught him that good ethics was good business, Feuerstein often quoted Jeremiah (9:22): "Let the rich man not glory in his riches," but rather show kindness, justice, and righteousness in his actions. He became a national hero, receiving numerous awards and honors as well as an invitation to a joint session of the U.S. Congress. He succeeded in rebuilding, and in 2004 Congress approved \$21 million for Polartec garments for the U.S. military in the 2005 Defense Spending Bill.

[Samuel C. Heilman (2<sup>nd</sup> ed.)]

FEUERSTEIN, BEDŘICH (1892–1934), Czech architect and stage designer. He was responsible for introducing elements of futurism and cubism in Czechoslovakia after World War I, demonstrated in his design for the Institute of Military Geography in Prague (1924). In 1925–27 he was in Tokyo, studying Japanese architecture. His stage designs for many plays produced in the National Theater in Prague, the satirical theater *Osvobozené Divadlo*, and other leading Czech theaters, showed great originality. Best known were his designs for Čapek's *R.U.R.* (1920).

[Avigdor Dagan]

FEUERSTEIN, REUVEN (1921–2005), Israeli psychologist. Born in Botosani, Romania, Feuerstein studied at the University of Geneva under such mentors as Jean Piaget and received his Ph.D. in developmental psychology at the Sorbonne. After qualifying as a teacher, he helped set up a special school for the children of Jews taken to Nazi labor camps. After

settling in Israel in 1944, he taught child survivors of the Holocaust and directed Youth Aliyah's psychological service. After directing the psychological services of Youth Aliyah in Europe (1951–55), he was appointed director of the Youth Aliyah child guidance clinic and the Canadian Hadassah-wizo Research Institute in Jerusalem. His work is set forth in his book (with M. Richelle and the collaboration of Z. Rey) *Children of the Mellah (Yaldei ha-Melah; Jerusalem, 1963)*.

Feuerstein believes that every human being can be modified to reach a higher level of functioning irrespective of age and regardless of the cause of a problem or the severity of a condition. In 1965 he established his Jerusalem research institute, which has become a mecca for families with problem children. Two of the items he developed are particularly well known: the Learning Potential Assessment Devices, for evaluating learning potential; and the Instrumental Enrichment Program, for improving an individual's way of thinking and functioning. Worldwide, there are more than 1,000 research projects that implement his work, involving all age groups from infants to the elderly, and every ability level from the severely retarded to the highly gifted.

From 1970 Feuerstein served as professor in the School of Education at Bar-Ilan University in Israel. He was director of the Hadassah-wizo-Canada Research Institute in Jerusalem as well as the Center for Development of Human Potential in Jerusalem. In 1990, France's president François Mitterand honored Feuerstein for his work in training French workers, managers, and executives in the skills of intelligence. In 1992 he was awarded the Israel Prize in social sciences.

Books by Feuerstein include *The Dynamic Assessment of Retarded Performers: The Learning Potential Assessment Device, Theory, Instruments, and Techniques* (with Y. Rand and M. Hoffman, 1979), *Instrumental Enrichment: An Intervention Program for Cognitive Modifiability* (1980), and *Don't Accept Me As I Am: Helping "Retarded" People to Excel* (with Y. Rand and J. Rynders, 1988).

**BIBLIOGRAPHY:** S. Howard, *Changing Children's Minds: Feuerstein's Revolution in the Teaching of Intelligence* (1993); N. Blagg, *Can We Teach Intelligence? A Comprehensive Evaluation of Feuerstein's Instrumental Enrichment Programme* (1990); A. Kozulin and Y. Rand (eds.), *Experience of Mediated Learning: An Impact of Feuerstein's Theory in Education and Psychology* (2000).

Shavuot—festival of the first fruits—celebrated in a kibbutz in Israel with the presentation of first fruits. In the Temple period, Shavuot was the time when the individual farmer would set out with his neighbors in joyous procession to Jerusalem, bringing a selection of his ripe first fruits (*bikkurim*) as a thanksgiving offering. *Photo: Z. Radovan, Jerusalem.*

THE JEWISH HOLY DAYS AND FESTIVALS FALL INTO TWO CATEGORIES: THOSE COMMANDED BY THE PENTATEUCH, SUCH AS SABBATH, ROSH HA-SHANAH, DAY OF ATONEMENT (YOM KIPPUR), AND THE PILGRIM FESTIVALS (PASSOVER, SHAVUOT, AND SUKKOT), AND THOSE ADDED LATER, SUCH AS PURIM (1ST–2ND CENTURY C.E.) AND HANUKKAH (2ND CENTURY). ALL THESE ARE OBSERVED IN VARIOUS WAYS BY JEWS AROUND THE WORLD.

## SABBATH AND FESTIVALS
