on I wattook one

dound religion match

HE Arcanums of Paracelsus being applauded by many men with fo many and fuch ample Encomiums, yet not enough, incited me Ten Years fince, first to undertake the confulting of Paracelfus himfelf about his Medicines. Two Years thereof had elapsed, in which I turned over his Books day and night, with an indefatigable and invincible Mind, yet with unequal Success,and fcarce any Benefit at all: For in the Books of Paracelfus, befides the usual way of concealing Secrets, common

to

to the Adepts, I found another much greater difficulty withal, yet less frequented by the Adepts; Paracelfus, as Corrector of the Adepts, having propos'd to himself therein, the instructing of not only raw initiated Scholars, but even expert Masters of the more fecret Chymy, and for this reason he abbreviates his Receipts with wonderful Accurtations, Learned indeed to the Learned, but to us seem as lame and imperfect; and befides, they are fo difguised with most intricate Terms of the true Philosophical Chymy, as to illude not only shallow, but profound Capacities: Which Impoffibility (I had almost faid) of understanding, Paracelsus aggravates, by intermixing Common with Secret Receipts; which is not for a Scholar, but a most experienced Master to distinguish.

But of these Difficulties, the first and greatest Obstacle withal, was my own unhappy Preconception of some Univ Calif - Dignized by Microsoft Certain

Alkabest: For being now out of the hope of attaining to the preparation of this Liquor by other mens Books, as well as Paracelfus his own De Viribus Membrorum, I betook my felf to other places, treating of the Circulatum minus, and Specificum corrosivum (as synonimous Terms of the Alkahest with some men) to which I added the Aqua or Oleum Salis, Aqua Comedens, Aqua Regis, Circulatum majus, and one after another, being perfwaded that fome one only universal Menstruum was intended by all, that I might find the Method of preparing this Liquor in all places compared together, which I could not in each feverally; but at length despairing, and being overcome by the manifold and almost incredible, yet unsuccessful pains I took, I refolved to decline Chymy and Medicine, as Arts too deep for my understanding: When behold! on a fudden the Eyes of my Mind were opened, and I faw all these things differ, not in name only, but also in matter, preparation 3015 2

and

and use; fo instead of one Liquor Alkabeft, which I fought for, I found in Paracelsus many Menstruums, with the feveral Uses of them all in Medicine; now knew I how to prepare, and according to Paracelsus, distinguish things into Esfences, Magisteries, Astrums, Arcanums, and those which he calls the less Medicines; so that which was in Paracelsus most difficult to be underftood by others, became more clear to me than any thing else; and so I obtained the End sooner than the Beginning : Yet the Joy from thence accrewing, fell fhorter than expectation; for having tried feveral Experiments in vain, I came to understand that these Menstruums of Paracelsus contained fomething abstrufe and unknown, to be understood, not in the least according to the Letter: whereupon, examining them more exactly, and comparing their Qualities with the Nature of the Liquor Alkahest, I found a vast difference between it and them; for it is faid, There is one Li quor

quor Alkabest, and that universal; but many are the Menstruums of Paracelsus, that indestructible, that destructible; that not mixing with Bodies, thefe abiding with them; that preferves the Virtues of things, these alter them; that ascends after the Effences of things in destillation, these before their diffolutions, &c. I was at a stand fometime which part to take; one while I wish'd for one indestructible Liquor, rather than many destructible Menstruums, supposing that one better than many; another while changing my Mind, I defired the Menstruums, as sufficient for many Uses I knew before.

and a

Truth overcame at length, enabling me now to demonstrate the most, if not all the Medicines of Paracelsus in Guido and Basilius: On the contrary, I perceived the Arcanums of Paracelsus, (commonly so called) as prepared by that Liquor Alkabest, or the like, to be more and more different, yea contrary to the Authentick: wherefore

as to the Preparation of Medicines, I began to abstain, yea defisted from further enquiring into the obscure Matter, Preparation and Use of that Liquor Alkabest, namely, that which I find described in one place of Paracelsus as a Medicine, but not in the least as a Menstruum: Which Obstacle being removed, I found an eafie way from Paracelfus to Lully, Basilius, and other Philosophers of the same Faculty, who I faw agreed all unani. moully in confirmation of the Paracelsian Menstruums; yea Light adding Light to Light, appeared to clear, that their preparation, variety, fimple and literal fense shewed themselves all at once, one only Word remaining unknown, yet expressing the universal Basis of all the Adepts, and that is Spirit of Wine, not Common, but Philofopbical; which being known and obtained, the greatest Philosophical, Medicinal, Alchymical, and Magical Mysteries of the more secret Chymy, will be in the power of the Possesson. In

110

no Books of the Adepts, hitherto known of me, have I found any thing rare, that owes not its original Being to this Spirit; fo that I dare affirm, that what loever Chymical Spirits lower and higher, fixed and volatile, are able to do, the very fame, and more will this our Spirit perform: This it was that moved me to employ all my Study and Endeavours, turning over every Stone in quest of the Spirit of this Wine, and continually ruminating upon those abstruse, and variously difguis'd Terms whereby they clouded it, as the Key of all Philosophy, behold the Fame of your great Name welcom'd me to Wilde, the Metropolis of Lithuania; and observing that You in expounding Natural Philosophy, ab-stained from all manner of Intricacy, and as the first and only Person indeed using a plain and candid Series of Words in applying common Ex-amples of Vulgar Chymistry, I rejoyced with my felf, thinking, What could not this great man do, if Master of the

the more fecret Chymy? I refolved with my felf therefore to take a Jour-ney into England, for your fake alone, that I might confer with you about the Menstruums as well as Medicines, and other Secrets of Paracelfus; from whom alfo I promifed to my felf very great Affistance in some other things not yet known: Nor indeed has my hope deceived me; for befides the ealie admission, common to all Strangers and Foreigners, you have been pleas'd to vouchsafe me a more free Acces, received me courteously, and commended my Studies, and thereby rais'd my Mind to greater Things: Which Favours do oblige me to Dedicate this part of my Studies to you your felf; Earnestly and Humbly befeeching you kindly to accept it, and continue your Love and Friendly Countenance to him that is and ever will be

Your Honour's

Univ Calif - Digitized by Microsoft J. S. W.

Most Obedient Servant,

TO THE STUDENTS OF THE MORE

Secret Chymy.

And The Acres

Nder Heaven is not fuch an Art, more Nder Heaven is not ruch promoting the honour of God, more con-ducing to Mankind, and more narrowly fearching into the most profound Secrets of Nature, than is our true and more than laudable Chymy. This is it which shews the Clemency, Wisdom, and Omnipotence of the Creator in the Creatures; which teacheth not only Speculation, but alfo Practice and Demonstration, the Beginning, Progress, and end of things ; which restoreth our Bodies from infinite Difeases, as by common means. intolerable to pristine health, and diverts our Minds . from the Cares and Anxieties of the World (the Thorns and Bryars of our Souls) to Tranquility of Life, from Pride to Humility, from the Love and Defire of worldly Wealth to the Contempt thereof: And in a word, which raifeth us from earth to heaven; Yet for all that may we fay of it.

with the fame truth, that amongst all the Arts, which have yielded any benefit or profit to the World, there is none, by which lefs honour has hitherto accrued to God Almighty, and lefs utility to mankind; for left a Science of fo great dignity and utility should be too common, or ill managed by the ignorant and impious, the prudent Possessor of the fame made it their business fo to describe it, as to make it known to their Disciples only, but exclude unworthy altogether from it : But in process of time, the Adepts arriving to a greater perfection of Knowledge and Experience, invented fometimes one, fometimes another shorter Method in their Work, altering Fornaces, Fires, Veffels, Weights, yea, and the Matter it felf; who being thereby alfo conftrain'd to make new Theories and Terms of Art, according to the new invented Practice, it happened, that the Scholar of one Adept understood not the new Theory, much lefs the practice of another; which also fometimes happened to the Adepts themfelves, those especially, which were under the document of fome certain Patron in fome particular Method and Process: for they had not the power of difcerning further than they had learnt; whereupon they commonly fuspected all the Notions of other men, especially those that differed from theirs, though in themfelves good and right, as fallacious and contrary to Nature, or applied other mens Theories, Sentences, and Terms of Art unknown to themfelves, to their own private Process, with which they were

3

ac-

acquainted, as I shall by many Examples elfewhere declare; by which very thing they involved this Art in fuch a Chaos of obfcurity, that hitherto neither Masters nor Scholars have fcarce had the power of communicating any benefit to the learned World.

It is to be wondred at, but rather lamented, to fee fuch imperfect Philosophical Systems, as have been hitherto bequeathed to us by the Masters of this Art, not feldom contradicting both Nature and themselves, whereas the Miracles of Nature might by virtue of this Art have been truly and plainly without any convulsion or contraction of words expressed; in which respect I dare, with Philosophical Licence here affirm, that most of the Adepts have by their Writings declared themfelves to the World better Chymists than Philosophers.

For what I pray could they have better done in Medicine, than to have applied themfelves to this Subject, imitating the diligence and industry of *Paracelfus*? But alas ! amongst all, I find perhaps three or four, who have been careful and cordial herein; and therefore the lefs to be admired, that this noble and neceffary Art, has made no greater progress, witness Common Chymistry, where the names of famous Medicines are noifed about, themfelves being unknown, and Shells given for Kernels.

Lately indeed we had not only hope, but promifes also from the Rosy-Crucian Fraternity, as if they had a mind to make this our Age more happy by their Studies; but no effect being hitherto heard of, we cannot but fear, their fair promifes will never be performed.

On the contrary, Experience teacheth, that instead of an universal good derived from the Fountain of this Art, the World hath rather been involved by it in great and many Miferies : for the Adepts affirming, yea more than often with oaths confirming, that they in their Writings treated more clearly and truly of the Art, than any other Philosophers, have thereby inftigated many young Novices of all Degrees and Faculties, to begin their Chymical Labours according to the Method of their Prefcriptions, exposing themselves not only to intolerable Expences, but also being as it were obstinate in a certain confidence of their understanding the Authors genuine meaning, do rather die amongst the Coals and Fornaces, than recede from their Imaginations, once imprinted in them for true: Whereupon some of the more Learned Inquirers ruminating with themfelves, how rarely, and with what great difficulty fome of the Adepts attained to the Art, by the reading of Books only, thought it a point of Prudence to defert the Authors, together with their Books, perfwading themfelves to be able to find out a nearer and easier way by virtue of their own Genius and Reafon, trying, repeating, altering, Gc. Experiments and Conclusions; but herein were they difappointed of their defired fucces, no less than as a Mariner fayling S. Bar

fayling without a Compass, and fo fuch Inquirers would have acted more advifedly, if they had inquired in themfelves, whether they had overcome all the Difficulties obvious to them, before they applied themfelves to this more fecret Art, and doubtlefs many of them would have hearkned to the Counfel of Theobald of Hohenland (who copioufly defcribed the Difficulties of this Art collected out of Philosophers Books) and avoided it, as worfe than the Plague, or a Serpent : For who of you (faith our Saviour) intending to build a Tower, will not first sit down, and compute the Charge, whether he has wherewith to finish it, left having laid the Foundation, and not being able to perfect it, all that beheld it, should begin to deride him, saying, That man began to build, and could not finish the Building, Luke 14. 38.

But I am fenfible that thefe Admonitions will rather be flighted than accepted, efpecially by thofe who are loath to have the magnificent Towers built by themfelves in the Air, demolifhed : For notwithftanding the impoffibility of removing the aforefaid difficulties by fome men, they endeavour to perfwade others, that they can teach them, what as yet they know not themfelves, and fo will rather perfift in deceiving, than defift from that which they know to be Weaknefs and Error : Others think themfelves very able to overcome all manner of difficulties, and therefore it is in vain to diffwade them from this Art : Others indeed perceiving all the difficulties, and an undoubted

b 2

117-

incapacity in themfelves of facilitating them, are, though free from all fraud and arrogance, yet by fome natural or fecret impulse so incited to this Art, as not to be driven from it by any Argument.

Wherefore having a fense of the frailty which mankind is afflicted with, to them will I dedicate my Studies relating to Medicine. Deceivers I will restrain, shame those that ascribe more to themfelves than due; but the true Disciples of this Art, I will lead by the hand, that they may not for the future be subject to the derision, reproaches and fcoffs of Satyrs, together with the lofs of health, as well of Mind as Body, and at length verifie in themselves the lamentable Prediction of Geber, faying, Most miserable and unhappy is he, whom, after the end of his work, God denies to see the Truth, for he ends his Life in Error; who being constituted in perpetual labour, and furrounded with all manner of Misfortune and Infelicity, loseth all the Comfort and Joy of this World, and Spends his Life in Sorrow, without any benefit or reward, Lib. 2. Inveft. cap. 38. So with the fame Argument will I vindicate this the best of Arts from the Injuries of Defamers, who being deceived, by not knowing the Principles, accufe it as fraudulent, impossible, and fo ridiculous, as that they deter the Lovers of it, and incite them to vilifie all the demonstrations and famous Testimonics of the same; and lastly, That the Honour and Glory of God hitherto buried in the Ashes of it, may from thence rise again, as a Phœnix.

Phœnix, I will set before your eyes, that which you have not been hitherto able to find in fo many Volumes of this Art, namely, Diana naked, or without Cloaths; that is, I will take from her Face and Body, the Vizards of Tropes, Figures, Parables, barbarous Names, Gc. by which the hath been hitherto difguifed, left she should be obvious to the knowledge of wicked men. I will expose Diana to you, namely, the very Truth of our Art (with fo much fludy and labour fought in vain) not covered indeed fo much as with the Veyl of neceffary expression, but her most secret parts shall be expofed to your view, concerning which the Adepts gave exceeding caution to their Disciples, adding a Curfe withal, not to divulge them to the unworthy Rabble. Wherefore if you defire to know the Menstruums of Diana, wherewith the Adepts prepared their Philters, the Liquors of Life and Death, if you would know the way how they prepared their Tinctures, either universal or particular for Metals; if lastly, you covet to know how they made pretious Stones, Pearls, perpetual Lights, together with other Secrets of the Art, read the Receipts of the four Books following; Receipts I fay, which were either not understood, or altogether flighted by almost all of you, because of the ruggedness of their Style, which sometimes also you efteemed vain, false, and impossible, compiled in a manner meerly to deceive you; yet most "true, collected not out of trivial vulgar Chymistry, but out of the best Books of the best Adepts, the Trea-

.

Treasury of Diana; Receipts, I fay, fo concatenated and elaborated by as well the congruity, as wonderful dexterity of the Masters, that where you take away or deny one of them, you cannot but reject all the reft as false: on the contrary, he that owns one amongst all to be true, must repute all the reft true; and confequently vindicate the Authors of them, our most venerable Masters from all the Infamy of Lying and Scurrility. Variety fpringing out of Unity, the Fountain of Truth, and returning into it, as into its Ocean, illustrates the excellency of those Receipts : I could never yet fatisfie my felf, whether there be infinite, or only one Receipt in our Chymy, divided into divers parts, and defigned for feveral Ufes : Variety I observe in the various and distinct parts of these four Treatifes, but Unity in every part, yea in the Individual of every Part, you will always find three confirming one Treatife: In the the First Book of Menstruums, you will find alfo the Medicines of the Second, and Alchymical Tinctures of the Third, and Secrets of the Fourth Book; which very thing is also to be understood of the Second, Third and Fourth Books. Laftly, These Receipts are not only true, but also clear, defcribed by plain and common Words, to be underftood not only according to the Letter, but alfo by their clearnefs, illustrating and explaining Places more obscure otherwise not intelligible, so that by one only Process you will fometimes explain more than ten Theoretical Books, never explicable but by this Light. Now

ALC: NO

Now these Receipts I was willing to communicate to you, ye indefatigable Students of this Art, for the Reafons already given, as alfo that you may throughly apprehend the abfolute neceffity of Lully's Spirit of Wine in our Chymy, before I treat with you concerning the Matter and Preparation of it. No man defires that which is unknown to him, or purfues that which he knows not the benefit of: Wherefore I was defirous first to demonstrate the feveral Uses of this Spirit by the Experiments of the Adepts, which if you find true, they will be of fuch fervice to you hereafter, as to be much to your detriment to be without them; but if false, flight and give no credit to them, but. accuse the Masters, the Authors of them, of Lying, Deceit and Villany; but fuch wickedness I never expect from you, whatloever Adverfaries; the blind and ignorant of this Art, will do, we little regard, and if a Zoilus or Momus appear according to his Cuftom, let him chaw the Shell, that is, the homely Style, the flender and flight: Observations and Conclusions given upon the Receipts, all which we give him freely; but touch: the Kernel he cannot.

But if either now or hereafter you reap any joy or benefit by the fight of Diana, attribute it not to Diana, though of Ephefus, nor to me, but to God Almighty, who hath by his Light brought us out of this Cimmerian Darknefs: The time perhaps will come, wherein I may be further uleful and affiftant, in procuring liberty for you to embrace brace Diana in your Arms, as alfo difcourfe familiarly with her concerning her Doves, Forest, Fountain, Milk, Aqua vitæ, &cc. for at prefent you read the Infeription upon her Forchead, Touch me not. Wherefore I advise you, not to touch the Secrets of Diana, unlefs you have to try the Fate and Fortune of Acteon.

[]

Infcius Actxon vidit fine veste Dianam, Præda suis canibus non minus ille suit.
Actæon, hunting in the Woods alone, When he the naked Goddels faw unknown, He (for who could her Fury stay?)
Was to her Fury and his Dogs a Prey.

We may indeed behold her, but not embrace her yet a while; for this is permitted to none but *A*depts, and fuch as are Masters of the *Philosophical Wine*; but if you object with the Poct,

Quid juvat Aspectus, si non conceditur Usus? Tis not the Sight, but Use that gives Delight.

To these Things I answer you, That by viewing Diana naked,

1. You will find, that all the Secrets of Chymy depend upon one only Center of the Art. namely, the Spirit of Philosophical Wine.

2. You will understand, that all the Preparations of all the Secrets are done according to the fignification of the Words.

3. You will perceive, that all Proceffes of what Method and Matter foever, if not without the Spirit of Philosophical Wine, are true, and will nerer be false. 4. What 4. Whatfoever is rare or felect, difperfed here and there by the beft of the *Adepts*, you will have here pick'd and digefted into order, fo, as that there will be nothing wanting, but the enjoyment of them

5. You will moreover have the convenience of chufing the best and shortest out of all the Processes.

6. Or you will be enabled to find out also more of your selves, if these please you not.

7. You will fee that he who hath performed even the leaft thing in this Art, may confequently alfo perform the greateft.

8. One only clear Process will open the underftanding of more, otherwise most obscure.

9. You may know alfo, that the *Adepts* themfelves have been fometimes in the dark, and oftentimes underftood not the ftyle of anothers Writing: That fome have corrected others, and fo made the Art more perfect.

10. And to fay all at once; No man, though never fo Learned, though never fo Eloquent, though never fo fubtil an Impostor, will be able for the future, either by his Authority, Perfwasion, or fubtilty, to deceive any man, and drive him out of our common Road into an untrodden Path, except he be willing himfelf.

Nor will you alone be free from the Deceipts of other men, but your own Mistakes also; by which you have hitherto most miserably lost all, Time, Pains, Money, Health, and what not? You have

made

made your very Life it self vain, unprofitable, and offensive to your selves as well as others.

Yea and fuch are the glittering Rays of our Diana, that I fear they will dazzle your eyes, like as the Ifraelites were at the fight of Moses descending from the Mountain.

You will fcarce believe me, should I affirm, that the Secrets of the Adepts are to be understood and prepared according to the Letter; if you argue it to be improbable that the Adepts should have exposed their Mysteries to the view of all men, they themselves having advertised you of the contrary. What then?

Is not this our Art, faith Artefius, cabalistical, and full of Mysteries? And you Fool believe we teach the Secrets of Secrets openly, and understand our Words according to the Letter; be alfured (I am not envious as others) he that takes the Philosophers Sayings according to the common sence and signification, has already lost the Clew of Ariadnes, and wanders up and down the Labyrinth, and it would be of the fame benefit to him, as if he had thrown his Money into the Sea. The fame thing adviseth Sendivogius in the Preface of the twelve Treatifes : I would, faith he, have the candid Reader know, that my Writings admit not fo much a verbal construction, but such rather as Nature requireth, left afterwards he should have Caufe to bewail the expence of time, pains and cost in vain, &c. Becaufe, as Arnold faith in his Speculum, An intention according to the Letter nothing avails, and to operate according to the intention of the Let-

ters, is the diffipation of Riches. For, faith Geber, Where we (poke most openly we conceal'd the Art, speaking to an Artist not Anigmatically, but in a plain series of Discourse. Yea Roger Bacon proceeds further, faying, When I fwear I fay true, believe it a lie, that is, as to the Letter, and therefore when I tell you of Stalks, understand Lead, &c. lib de Arte Chymica, pag. 56. All that I fay is falle, therefore nothing I fay is true; wherefore I pray, believe me not; but when I fay true, take it to be falle; and if this, the contrary : So that which is falle will be turned into true, and that which is true, into falle : I tell you these things, that you may beware of things that are to be avoided, and believe things credible, in writing properly, I write not, &cc. p. 301. And though I lay, Take this and this, believe me not, operate according to the Blood, that is, the Understanding, and so of all; leave off Experiments; apprehend my meaning, and you will find, believe me being already a lighted Candle, pag. 345.

2400

Thefe and the like may you alleadge to confirm your Opinion; but give me leave to fuggeft to you the diffinction that is to be made between the Theoretical and Practical Books of the Adepts: In the Theoretical Books there is fearce any thing to be underftood literally, all things being parabolical, ænigmatical, \mathfrak{Ge} . But in the Practical Books all things are clear and intelligible, according to the Letter: *Philosophical Wine* alone excepted, the foundation and beginning of all Secrets: For example, Take the magnum Teftamentum of Lully, in $\mathfrak{C} \simeq \mathfrak{O}$ the Theoretical part of which, is Philosophically, that is, by various Sophifms, defcribed the Nature, Matter, and Preparation of Lully's Wine; but in the Practical part of this Testamentum, the Use of this Wine is declared according to the Letter: From hence will you also easily observe, That those Adepts which reject the Literal Sense are rather Theoretical than Practical: We treating at prefent of the practice of the Adepts, or the Use of Philosophical Wine, will prove that most of the Secrets delivered to us by them, are according to the Letter.

But fome of you will urge, that the Adepts themfelves have even more than often declamed against the Literal Sence of Practice, against the very Defcriptions (commonly called Receipts) of Experiments; but let these our Companions know, the Adepts wrote against two forts of Receipts.

The first comprehends the Receipts of Smoakfellers, Deceivers, wicked men, who pretend they either had them from the Disciple of some Adept, or found them in the Walls of some old Cloister or Sepulcher; against whom hear Dionysius Zacharias, Pag. 781. Vol. 1. Th. Chym. saying, Before I left the Colledge of Arts, I entred into familiarity and friend/hip with many other Scholars; they had divers Books of Chymical Receipts, which being lent me, I transcribed with very great diligence, my private Master, who had also a long time before began to labour in this Art, consenting; so that before I went

away,

away, I had gathered a very large Book of fuch Receipts, I went prefently with my Master to the Place where I was to fludy Law, began to turn over my Writings; whereof some contained Projections of One upon Ten, others upon Twenty, Thirty; a Third, a half. part; for the Red of eighteen Carrachs, twenty, &c. into Gold of Crowns, Ducats, and of the highest colour that could be; One was to endure Melting, another the Touch-stone, another all Tryals: Of the. White likewife, one was to be of Ten penny, another of Eleven, another Sterling Silver, coming white out of the Fire, another white from the Touch : In Short, I. thought if I were able to perform the least of those things greater felicity could not happen to me in this. world. TOTAL ATTACK LATINET A TOTAL STREETS

Especially when I read the Inscriptions of great Persons before such Receipts; one of the Queen of Navarr, another of the Cardinal of Lorain, Turine, and infinite others, that by such Disguises and Titles, Credit might be given by unwary men.

Bernhard alfo complains of the fame Receipts, pag. 771. ejufd. Vol. If I had had, faith he, at first, all the Books, which I afterwards procured, doubtles I. Should have fooner attained to the Art, but I read nothing but false Receipts, and erroneous Books; besides I happened to confer with none but the most perverse Thieves, wicked Men, and Impostors.

The other fort contains Receipts of Adepts themfelves, against whom some other Adepts have also sometimes written: As for example, the same Bernhard, Pag. 748. Vol. Theat. Chym. saying,

To withdraw the true Speculators of this Art from common Errors into the right Way, that they may not waste their Wealth, and lose their Labours, Name and Reputation, infifting upon the falle Receipts of Books, as those of Geber, Rasis, Albertus magnus, Trames, Lumen, Canonis pandectarum, Demophon, Summa, and other Seducers, I will first declare my own Errors, &c. And in pag. 750. goes on, Infinite is the number of them, whom to write is needlefs; and there is great plenty of Books written upon this Subjest under Metaphorical Words and Figures, fo as not to be eafily understood by any but the Sons of Art; the reading of which, leads men out of the right way, rather than directs to the Work ; in the number of which, are Scotus, Arnold, Raymund, Johannes Mehung, Hortulanus Veridicus, &c.

[.]

My Business therefore is to fatisfie you, and fay, That the Authors of the first fort of Receipts deceive actively, wittingly, and willingly: But the Receipts of the later fort, written by Adepts themfelves, feduce only passively: And this for two Reafons; either in respect of the Adept being less experienced in the Art, and unacquainted with the Practice of his more Learned Confort; for it is impossible for one Adept, though never so expert in his Method, to know the various Experiments of all the other, much less the peculiar Theorems, private Meditations, different Denominations of things, Ge. formed or derived from the fame: Or in respect of your felves, who extort from those Receipts, as to the Literal Sound, more, than

the

the Adepts themfelves allow, not at all observing that the Spirit of Wine being once and always understood, the rest you will easily understand. For knowing this, faith Flammel, in his Hieroglyphicks, pag. 28. I perfected the Magistery easily; for having learnt the Preparation of the first Agent, I following my Book according to the Letter, could not err if I would. And a little after; Then following my Book from word to word, I made Projection. But why these? Plenty enough of Examples in this Treatife will instruct you in all these things that are to be understood according to the Letter, except Wine, Lunary, Vegetable Mercury, and other things fynonymous to the Matter of the Spirit of Philosophical Wine, or things prepared by the fame Spirit, Vegetable Sal Harmoniack, Philosophical Vinegar, &c.

For this Spirit of Wine being prevaricated, the Adepts knew, that all the reft, though never fo plainly discovered to the Sons of Art, could not contribute the least benefit to the Reader : Wherefore I fear not the indignation of the Adepts, nor the Anathema's which they thundred out against the Betrayers of their Secrets, having herein done nothing more, but (to fpeak ingenuoufly) lefs, than they themfelves. I have according to my capacity, methodically digefted those things which were here and there confusedly disperfed, but added nothing of my own, and fo expect neither Honour nor Thanks from you; but this only, that I may know, if our Studies please; and I shall supply those things. that are here wanting and defired, fomewhat more, largely ; largely; for I will not refufe to affift you yet further by the industry of my Studies: So that nothing remains, but upon our bended Knees to return most humble Thanks to the *Father* of *Lights*, in vouchfafing us this Art by the Writings of his Servants, and the High Priests of Nature, without which it would be beyond the power of man to arrive to so great a degree of Knowledge.

Now celebrate with me the Urns of our pious Masters, who have for the Welfare of Mankind, rather dispersed, than buried their Talents; and may you oblige your selves to the same good Office, if you have any of their Writings not yet published.

Finally, It is my earneft Suit to the Adepts now living, that they would pleafe to employ themfelves freely in expounding Nature, correcting Philofophy and Medicine; And laftly, refuting all the deceitful Sects of Philofophers, as well in the Academies, as private Schools, for the advancement of the Glory of God, being fingularly eminent in this Art. So be it.

more, big (to fpeck ingenuous) ich etan nur elemicives (have according to ray espacht, the thoreally derefted (how this gs) which is zere here and the second of the this gs) which is zere here of new way and for expect restor House in Thanks from yous but this only, thus I may have for Saide y leafes and I fall fup; by thefe shires

The Translator to the Reader.

VOur Business it is, not mine, otherwise than as a Reader, to judge of this Work, but the ample and publick Encomiums of Learned Societies beyond the Seas, already declaring their Sentiments of its Rarity and Excellency, are convictive Authorities far beyond my Opinion; and therefore I shall be filent: only this I think necessary to let you know, that our Author, having little spare time himself, left his Latine Impression to be by others corrected, which has been the cause of many Errors, and indeed in some Places fo gross, that the Author himself could scarce retrieve his own Meaning: This to prevent in the English Translation, he has been pleased to use all Care to have it exactly import his own Mind. I must alfo tell you, that though I have taken no fmall pains in endeavouring to make this weighty Work Speak true and perfect English, yet my Copy not being punctually observed, you will find many small Mistakes, besides the Errata's inserted at the latter end of the Book, which you may please, as you read, to correct.

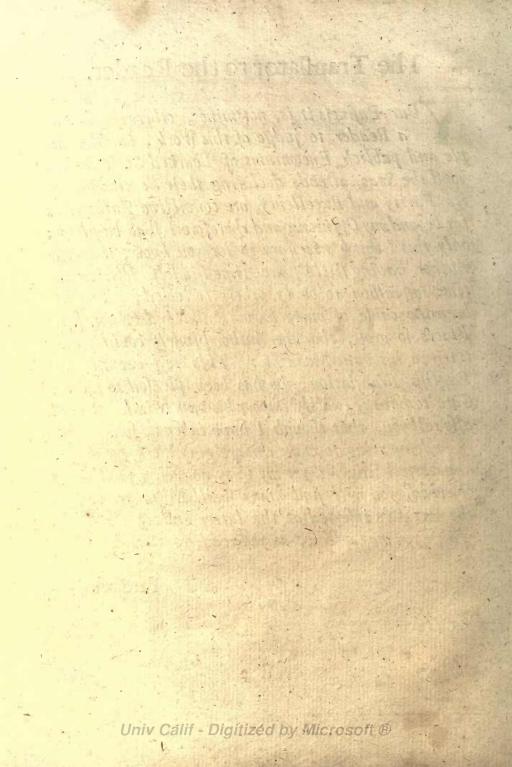

Farewel.

THE DOL NAME OF

THE

PREFACE.

O exempt Diana from being exposed Naked to the Petulant Lust of Unsatiable Men, as also to the Scorns and Contempt of the Ignorant, as a Common Prostitute; the Adepts have taken care not only to cloath, but cover her almost with several sorts of

. i. S. Mala

Garments: To this kind of Apparel, Antiquity has been pleafed, yet not properly enough, to refer an Allegory of the Procreation of Man, deduced from the Analogy of Seed anciently received, however ill applied to the Mineral Kingdom.

First, They reckon Coition; Secondly, Conception; Thirdly, Impregnation; Fourthly, Birth; Fifthly, Nutriment: If therefore no Coition, no Conception; without Conception, no Impregnation; without which no Birth can be premised.

Which Disposition the Ancient Morienus himself confessets to have been derived to him from Antiquity. Hermes, whom they call Father of the Adepts, in his Tabula Smaragdina, hath defcribed to us the Father, Mother, and Nurse of the Chymical Infant. No wonder therefore, that such an Ancient and Easte Do-Etrine as this, should have found so easie an access to Posterity : it would be befides the Intention and Scope to offer those things, which might be inferred by us against this Analogy of Seed : Here let it suffice to remember only, that the greater part, as also the more ancient Adepts, comparing the Chymical Magistery to the Generation of Man, did under the Notion of this Allegory, call their Diffolvents Mentiruums, or Feminine Seed, but the Things which were to be Diffolved, Masculine Seed. My Son, faith Lully, The Vegetable Menstruum is of the Nature of a Womans Menstruum, because a Mineral Menstruum proceeds from it by Difloz Univ Calif. - DigitiBed by Microsoft @ lution,

lution, (of Minerals and Metals) and is made artificially as Nature requireth; for it hath the property of an incorruptible Spirit, which is as a Soul, and hath the Conditions of a Body, becaufe it generates and produceth Seed as a Woman ; therefore we call our D. (Diffolvent) Menstrual Blood, or Menstruum, becaufe it is Generative and Nutritive, and makes the faid C, and (C) (Metals) grow and increase, till they be con-verted into M (Sulphur of Nature, or Philosophers Mercury) or into Q, (Tincture, or Philosophers Stone) for as Menstrual Blood perfects the Embryo by nourifhing, and altering one Principle into another, and one Quantity into another, and one Form into another, yet the Principles and Quantities appearing in every Alteration, under divers Forms, differing from the first Forms themselves, till a certain Substance appears in one entire Quantity, dependent upon feveral Matters, which is a Body, with Spirit and Soul, reduced into Action : And thus it is with our Infant (*Philosophers Stone*) Lully, *Distinct*, 3. Can. 4. Lib. de Essentia, When K. (Colour) appears yellow, then let the Artist know, that the Body of our Infant is formed, made, and compleatly organized, and begins to be prepared for the reception of the vegetable Spirit into it, and Nature continues in that preparation till the yellow K. vanisheth away, and a red K. (Colour) appeareth; and then may the Artift be affured that the faid Infant is perfect both in Body and Soul: fo that he may let the Fire alone till it grows cold ; which being cold, the Artift will find our Infant round as an Egg; which he must take out and purifie (for it is a hard Stone in the middle of many Superfluities, as the Infant of a Woman appears after Birth : Can. II. Diflinct. 3. Lib. Effent.) and let him take and put it into some clean Glass Vessel, Gc. 3 Distinct. 3 Part Lib. de Essent.

Parifinus, Ripley, Espanietus, and other later Adepts, the Disciples of Lully, had this Analogy of Seed from him, being doubtless the most Learned of the Chymical Philosophers. Of this living Heaven, saith Parifinus, Raymund speaks in his Third Book de Quintessentia, in the Chapter beginning, Calum & Mercurius noster; Our Heaven hath the property of an incorruptible Spirit, which is as the Soul of it, and hath the Conditions of a Body in it, generating and producing Seed, as a Wo-

Univ Calif - Digitized by Microsoft @

man,

man, and herein it differs from the other Principles (of the Art) It is also fenfual, because it is apprehended by sense, namely, by fight, tafte and fmell, as is declared in the first Distinction in the Chapter, which beginneth, Præterea est principium movendi, scilicet, corpus sive forma : And a little after, speak-idg of the aforesaid living Heaven, he saith, And in this point our Understanding knows that D. (his living Heaven, or Disfolvent) hath a Vegetable property, the fimilitude of which, R and S (Gold and Silver) do transmit into the Sulphur of Nature, which is the Spirit of Metals, or Stone, or transforming Poylon, according to the fignification of Raymund, which fignification he useth in his Alphabetum figuræ arboris Philosophicæ, and therein produceth this following Sentence in Capite de figura Quintæ Esfentiæ: As the Vegetative part of the Mother or Nurfe, transmits her Likeness into the Son, which the generates, which property the Son retains, fo our Mercury. The Intention of the Philosopher (Lully) is to demonstrate, that the Philosophers Sulphur, or Stone, or transforming Poyson receives all its benefit by the excitation of the vegetative Virtue, which is in this Divine Vegetative Heaven.

The Same Author in the Continuation of his Doctrine, Saith, And alfo the Understanding knows, that the faid Metals R, and S, (Gold and Silver) retain the property of Menstruum, with which they extend their fimilitudes into exotick fubstances, transmuting the faid substances into their own kind, which is. the reason why we call it Vegetable Mercury; as also because it is extracted out of Vegetables. The fame thing at the end of the faid Chapter he speaks afresh : And our Understanding also knows, that principle is as a Woman conceiving the Mans Seed, and bringing forth in the fame form and virtue, as it was in the beginning. From whence we neceffarily conclude, that the Elements of this Stone, namely, Gold, ought to be moved by vertue of a living Quinteffence, and the aforefaid Vegetable Heaven, which way I have fufficiently proved and demonstrated. Parisinus in Lib. I. Elucidarii, pag. 221. Vol. 6. Th. Chym.

Ripley, having the fame Master as Parisinus, expounds this Doctrine more briefly, thus; As an Infant in the Womb of the Mother, does by the concoction of temperate heat, convert Univ Calif - Digitized Biz Microsoft @, the

the Menstruums into its own Nature and Kind, that is, into Flesh, Blood, Bones, yea, Life, with all other Properties of a living Body; fo if you have the Water of Sol and Luna, it will attract other Bodies to its kind, and make their Humors perfect by its intrinsick Virtue and Heat; Ripl. Lib. de Merc. Phil.

We, Saith Espanietus, to deal plainly and truly; affirm, that the whole work may be perfected by two Bodies only, that is, Sol and Luna, rightly prepared : For this is that Generation which is performed by Nature with the help of Art, in which the coition of Male or Female is requir'd, and from whence the Off-fpring more noble thanits Parents, is expected; Seft. 20. Arcan. Herm. Sol is the Male, for he yields the active and informing feed : Luna is the Female ; which is called the Matrix and Veffel of Nature, becaufe she receives the feed of the Male into her womb, and nourisheth it with her Menstruum, Sect. 22. Arcan. Herm. Phil. But the Philosophers do not by the name of Luna, mean common Luna, which also acts the parts of a Male in their (white) work; let no man therefore attempt to joyn two males together, it being wicked and contrary to Nature, nor can he hope for any Offspring from such a copulation, but put Gobritius to Beja, Brother to Sifter. Gell

Conjugio junget Stabili, propriamq; dicabit.

HILL F STILLING

That he may have from thence the noble Son of Sol, Sect. 23. Arcan. Herm. Phil. I would have the Reader know, faith Sendivogius, that Solution is twofold, though there be many other folutions, but of no effect : the first is only true and natural; the fecond violent, under which are all the other comprehended; the Natural is that, by which the pores of the Boby are opened in our VVater, that the digested seed may be injected into its Matrix : But our VVater is Celeftial, not wetting your hands; not common, but almost like Rain: The Body is Gold, which yieldeth feed : our Luna is not common Silver, which receives the feed of Gold. Traft. 10. Novi Lumin. Saturn taking the Veffel, drew up ten parts of the VVater, and prefently took fome of the Fruit of the folar Tree, and put it in, and I faw the fruit of the Tree confumed and refolved as

Univ Calif - Digitized by Microsoft @

Ice

Ice in warm water. This water is to this fruit, as a VVoman. The fruit of this Tree can be putrified in nothing, but in this water only; for no other water can penetrate the pores of this Apple, but this: and you must know that the folar Tree fprang alfo out of this VVater, which is extracted from a magnetical virtue out of the Rays of Sol and Luna, and therefore they have great affinity one with the other : In the Dialogue of Mercury.

Now here we in this Book intend to treat of this Feminine Seed, or diffolving Waters of the Adepts. Great indeed, yea waft is the Ireasure of our Chymy; but altogether inaccessible by those that have not the Keys thereof; without which the Adepts themselves could neither diffolve nor coagulate Bodies. If you know not the way of diffolving our Body, it is in vain to operate, is the Advice of Dionyfus Zacharias, pag. 798. Vol. 1. The Chym. But he that knows the Art and Secret of Diffolution, has attained to the Secret of the Art, faith Bernhard, pag. 40. fue Epistole. For this cause it is, faith Parifinus, that the wife men fay, To know the Celestial Water, which reduceth our Body into a Spirit, is the chief Mystery of this Art, in Eluc pag. 212. Vol. 1. Th. Chym. For without these Menstruums things heterogeneous can never be perfectly mixed. Coral, though never So finely pulverized, cannot be mixed with the purest Powder of Rearls : | Tea Gold mixeth not with Silver (much less with Bodies less perfect) though both be melted together; the Particles of each do indeed touch one another in their extream parts, being in a majs or heap confisting of things heterogeneous, yet they are and do remain all distinct, unblemished and unaltered in their Figures and Properties, no otherwife than as a heap composed of Barley and Oats : But in the more secret Chymy there is no Body, no heterogeneity, but what hath its own peculiar Menstruum, and with which as being homogeneousto it, it runs into one Concrete, rejoycing in the infeparable Properties of either. So long therefore as you intend to joyn Metals with Metals, dry things with dry without the Menstruums of Diana, so long (to use the Phrase of Espanietus) do you presume to joyn males together, which is a thing wicked and contrary to Nature. Hearken therefore to Bernhard, Pag. 757. 1. Th. Chym. Perswading you to leave Stones and all forts of Mnerals, likewife alfo Metals alone, though they are the beginning and our matter. Metals are not only the mat-Univ Calif - Digitized by Microsoft ®

ter,

ter, but are also call'd by Lully, the form of the Stone; yet without these Menstruums they signifie nothing. The Form, faith he, which is the Efficient Principle, Former and Transformer of all other Forms of lefs virtue and power, is defcribed by C, or (C) (Metals) cannot of it felf only be the Magistery of the grea. ter work, &c. Very commodious it is for that Principle to be known, because hereby the Understanding knows it to be one of the two Substances, from which our Infant is produced, having in it the condition of a male, from which proceeds a fperm in the belly of our D. (Menstruum or Dissolvent,) Lul. Dist. 3. Lib. Eff. Heaven or Mercury (Menstruum) is the fourth Principle fignified by D. It is the Caufe and Principle moving C. and (C) from Power to Action, ruling and governing them in its belly, as the VVoman the Infant which the procreates in her Matrix. And in this point knows the understanding of an Artift, that D (Menstruum) hath action upon C, and (C) ruling, governing and reducing them into Action, even as the Heavens above do by their motion, bring things Elementary, into action, And an Artift is to understand that of the two fubftances, of which our Stone is compounded, and by which it is generated, this, namely, D, (Diffolvent) is the more principal. Ibid. In the Book de Medicinis secretis, pag. 336. he goes on; You must know, faith he, that hitherto I have not told you the most fecret thing and matter of the whole Magistery, which is our incorruptible Quintessence, extracted out of white or red VVine, which we call Celeftial Crown, and Menftruum, after the fublimations, putrefactions, and final depuration of it; which Quinteffence is indeed the foundation, principal matter, and Magistery of all medicinal things: My Son, if you have it, you will have the Magiftery of the whole thing, without which nothing can be done and wind a wild water burg awall

But you, My companions, know, what mean the Menstruums of Diana; you know, I fay, they are the highest fecrets of the more fecret Chymy, much more fecret than the Menstruums of Women; that the fame also were never acquired but by the extream Pains and ingenuity of an Adept, most cautiously described, and remended to us principally as the Keys of the Art: Iou easily belie ing, Without these Menstruums nothing can be don the Magistery of the Art. Mag. Nat. pag. 329. Or Christop Parisnus, That

That the great fecret lies in these Menstruums, infomuch if they be not known, nothing can be done as to the transmuting of Metals. Elucid. pag. 222. Vol. 6. Th. Chym. Wherefore I think it enough to declare to you in short, that these Menstruums, which hitherto you have with so much study, to little purpose sought in the Theoretical Books of Adepts, are now offered to you, being found by me, in Practical Books, no longer shrowded with Obscurity, but difrobed, and exposed naked to the fight and understanding of all men: But you have no cause to fear the Spirit of Philosophical Wine which you perceive in any Menstruum, it being familiar and most gentle, because Philosophical. Nor have you need of many Conjurations, to make it appear to you; for in all Pages of the Theoretical Books of Adepts, it offers it felf willingly and expects you, provided you pray to God, that he would graciously vouchsafe to open your Eyes; for without his permission or Special appointment, it dares not manifest it self to you. By the Menstruums of the Adepts, understand not therefore yours, though they be most fecret to you, because I fear. they are yet but vulgar, which diffolving a dry Body, are transmuted with it into a Salt or Vitriol, not with a true, but seeming coalition and mixture, which a fearching Fire cafily discovereth, presently separating these same beterogeneous substances again: On the contrary, the unctious Spirit of Philosophical Wine does by its Uncluosity mollifie a dry Body, and transmute it not into a Salt or Vitriol, but into an Oyl: It easily joyns things heterogeneous by its own equal temperament, and is by its homogeneity easily joyned with things homogeneous to it, by which also it is augmented, according to. that of Bernhard : No Water diffolveth bodies, but that which is of their species. and which can be inspissated in bodies; for a Diffolvent ought not to differ from that which is diffolved, in matter, but proportion and digestion ; Pag. 43. of his Epistles. For Nature is not meliorated, but by its own nature; our mat-ter therefore can be no otherwife meliorated than by its own matter. Parmenides faith the fame, L. de Alchym. pag. 768. Vol. 1. Th. Chym. This Spirit of Phylosophical Wine may be united to all things, and is able to unite all things inseparably. But they that suppose another water, are ignorant and unwise, and will never come to the effect, faith Parifinus in Eluc.p. 222. Vol. 6. Th. Chym. Of which Morienus, pag. 52. thus; As to this Magistery, let Fools seek other things, and seeking err; for they will never attain

Univ Calif - Digitized by Microsoft ®

to

to the effect of it, till Sol and Luna be reduced into one body, which cannot come to pass before the Will of God. Which Arnold, if I mistake not, thus expressed in the Sun and Moon in the Heavens, than Gold and Silver in the Earth without our Menstruums.

But you that have hitherto defired one only universal, immortal, indestructible Menstruum, I mean, the Liquor Alkahest. or Ignisaqua, that undeclinable word, instead of one, whereof you never yet knew the Name, Matter, Preparation and Use, behold! I offer a great many kinds of universal Menstruums, in their Descriptions more clear, in Virtues equivalent, if not better than this your Alkaheft. What others have either obscurely, or impertinently said and written of this Liquor Alkahest, we little regard, as Opinions and Conjectures. By the Menstruums of the Adepts, we intend not all manner of Diffolvents, prepared without the Spirit of Philosophical Wine, and only corroding, but not in the least altering the more minute Particles of Bodies: Nor do we understand an immortal Liquor, not permanent with things diffolved in it : But by Menstruum. we mean a volatile Liquor made several ways of the Spirit of Philo-Sophical Wine and divers things, not only Jeparating Bodies, but also continuing with them, and altering them with the addition of it felf, fo as to be no more two, nor again, what they were before. For out of this Diffolution (the folemn Wedlock, inseparable Union and Combination of Body and Menstruum) emergeth a new Being, containing the unblemished Properties of the thing disolved, and the thing diffolving, not at all separable by Art or Nature.

These Menstruums I have distinguished into Vegetable and Minerals, not as if the Vegetables were made of Vegetables only, and the Mineral of Minerals, but every Menstruum, that hath not manifest acidity, acting without ebullition and motion, is called Vegetable, though it be made of meer Animals or Minerals by the Spirit of Philosophical Wine. On the contrary, a Menstruum becomes Mineral, so soon as manifest acidity is mixed either with the Spirit of Philosophical Wine, or a Vegetable Menstruum; for by adding the acidity, it now dissources Bodies with violence and effervescence. I have subdivided both kinds into Simple and Compound, but not as if the Simple confisted of fewer Ingredients, but because they are of more simple or less virtue. Simple Menstruums tinge Bodies dissourced in them less, but the Compounded more.

Vegetable MENSTRUUMS.

The First Kind.

Simple Vegetable Menstruums made of Philofophical Wine only.

I. The Heaven, Effence, or Spirit of Wine of Lully, Described, Can. 1. Dist. 1. Lib. De Quinta Essentia.

> Ake Wine Red or White, the best that may be had, or at least take Wine that is not any way eager, neither too little nor too much thereof, and diftil an Aqua ardens, as the cuftom is, through Brass Pipes, and then rectifie it four times for better

purification. But I tell you it is enough to rectifie it three times, and stop it close, that the burning Spirit may not exhale, because herein have many men erred, thinking it ought to be seven times rectified, But my Son, it is an infallible fign to you when you shall have seen that Sugar steeped in it, and being put to the flame burneth awey as Aqua ardens. Now having the water thus prepared, you have the matter out of which the Quinteffence is to be made, which is one principal thing we intend to treat of in this Book. Take therefore that, and put it in a circulating Veffel, or in a Pelican, which is called the Veffel of Hermes, and stop the hole very close with Olibanum or Mastick being foft, or quick Lime mixed with the White of Univ Calif - Digitiz G' by Microsoft @

Eggs.

Eggs, and put it in Dung, which is naturally most hot, or the remainings of a Wine-Prefs, in which no heat must be by accident diminished, which you may do, my Son, if you put a great quantity of which you pleafe of those things at a corner of the House, which quantity must be about thirty Load : This ought to be, that the Veffel may not want heat, because should heat be wanting, the circulation of the water would be impaired, and that which we feek for uneffected; but if a continual heat be administred to it by continual circulations, our Quintessence will be separated in the colour of Heaven, which may be feen by a diametrical Line, which divides the upper part, that is the Quinteffence, from the lower, namely, from the Fæces, which are of a muddy colour. Circulation being continued many days together in a circulating Veffel, or in the Veffel of Hermes, the Hole, which you stopp'd with the faid Matter, must be opened, and if a wonderful Scent go out, fo as that no fragrancy of the world can be compared to it; infomuch as putting the Veffel to a corner of the Houfe, it can by an invisible Miracle draw all that pais in, to it; or the Veffel being put upon a Tower, draws all Birds within the reach of its Scent, fo as to cause them to ftand about it. Then will you have, my Son, our Quinteffence which is otherwife call'd Vegetable Mercury at your will, to apply in the Magistery of the transmutation of Metals : But if you find not the influx of Attraction, flop the Veffel again, as before; and put it in the place before appointed, and there let it stand till you attain to the aforefaid Sign. But this Quintessence thus glorified, will not have that Scent, except a Body be diffolved in it, nor have that heat in your mouth as Aqua ardens : This is indeed by the Philosophers call'd the Key of the whole Art of Philosophy, and as well Heaven, as our Quintessence, which arrives to fo great a fublimity, that either with it by it felf alone, or with the earthly Stars (Metals) the Operator of this work may do miraclesupon the Earth.

aner of balliger res

HE twenty four following Kinds of Menstruums will prove, that amongst the Dissolvents of the Adepts, no one is made without the Vegetable Mercury, or Spirit of Philosophical Wine; for it is the foundation, beginning and end of them all: Tea it is according to the various and distinct degrees of its strength, sometimes the least, sometimes the greatest of all the Menstruums. It is the least and weakest, when it doth by its simple Unctuosity dissolve only the uncluous or oyly parts of Vegetables, but either reject or leave untouched the Remainder being less oyly and heterogeneous to it felf: it becomes the strongest when we temper its Unctuosity with Arids, -(that is, dry things, not Oyly) for fo it is made homogeneous to things dry-oyly, and to things meerly dry. In respect of which Homogeneity, the Menstruums of the Adepts differ from the common, because they do by reason of the said Homogeneity, remain with the things diffolved inseparably; yea, are augmented by them, but not with the least saturation, transmuted and melted into a third substance, and so cannot part without the diminution or destruction of their former Virtues. The permanent Homogeneity of Menstruums with things to be diffolved, is the reason why Effences are made with simple Vegetable Menstruums, but Magisteries with the same compounded, and so these operate more strongly, those more weakly. This is it, to comprehend all in a word, which shews us the various kinds of Menstruums distinct one from another in so many several degrees, now to be described and illustrated by our Annotations.

But that you may more eafily understand the following Receipts and me also, I thought it neceffary to preadmonish some certain things concerning the Nature and Property of this Spirit of Wine, lest you should judge amiss of a thing not sufficiently understood.

First, Tou are not to take the Spirit of common Wine, though never so much restified, for the Philosophical Spirit of Wine; for so the following Receipts of all Menstruums would be erroneous and seducing.

Having occasion (faith Zacharias) for a most excellent Aqua-Vitæ for the diffolving of a mark or half a pound of Gold, we bought a large Vessel of the best Wine, out of which we did by a Pellican obtain great plenty of Aqua vitæ, which was of-

ten

ten rectified in many Glass-Vessels bought for that end : then we put one Mark of our Gold, being before calcin'd a whole month, and four Marks of Aqua vitæ into two Glass-Vessels, one Retort entring into the other, being fealed, and both placed in two great round Furnaces: we bought also Coals to the value of thirty Crowns at one time, to continue Fire under it for the space indeed of a whole Year. We might have kept Fire for ever before any congelation would have been made in the bottom of the Veffels, as the Receipt promifed, no folution preceding; for we did not operate upon a due matter, nor was that the true water of Solution, which ought to diffolve our Gold, as appeared by experience, pag. 783. Vol. 1. Th. Chym. Ripley admonisheth us of the Same thing, who Saith, Somethink that this Fire (this Fiery Spirit of Philosophical Wine) is drawn from Wine according to the common way, and that it is rectified by diftillations often repeated, till its watry Phlegm, which impedes the power of its Igneity, be wholly taken from it. But when fuch a fort of Water (which Fools call Pure Spirit)though a hundred times rectified, be cast upon the Calxes of any Body, be it never fo well prepared, we do neverthelefs fee, that it is found weak and infufficient as to the act of diffolving a Body, with the prefervation of its Form and Species, Cap. 2. Jua Medul. Phil. Common Wine (faith he a little lower) is hor, but there is another fort much hotter, whose whole substance is by reafon of its aerity most easily kindled by Fire, and the Tartar of this unctuous Humor is thick; for fo faith Raymund: That Tartar is blacker than the Tartar from the black Grapes of Catalonia; whereupon it is called Nigrum nigrius Nigro; that is, Black blacker than Black: and this humidity being unctuous, doth therefore better agree with the Unctuofity of Metals, than the Spirit extracted from common Wine, because by its liquefactive virtue Metals are diffolved into Water; which operation the Spirit of (Common) Wine cannot perform; which, how ftrong foever, is nothing elfe but clear water mix'd with a kind of Phlegmatick Water, where on the contrary, in this our Unctuous Spirit diftilled, there is no Phlegmatick aquofity found at all. But this thing being rare in our Parts, as well as other Countries, Guido Montanor therefore the Grecian Philofopher found out another unctuous humidity, which fwimsupon other

Univ Calif - Digitized by Microsoft @

other Liquors, which humidity proceeds from Wine; to the kuowledge hereof attain'd Raymund, Arnold, and fome other Philosophers, but how it might be obtained, faid not.

O tortas adeo mentes ! affuetaque falli Artificum vario rerum per inania ductu Pectora ! cum duris quid mollia vina metallis ? Apta epulis, atque apta bibi fuaviffima vina? Hic tamen expression prœlis torquentibns uvam Accipit, & phialæ postrema in parte reponit, Cujus in extremo rostrum connectitur ore, &c.

Thus facetiously sings the Poet and Adept Augurellus, Lib. 2. Chryf. pag. 206. Vol. 3. Th. Chym.

2. That you take not any Oyl, though an hundred times restified, inflead of the Spirit of Philosophical Wine; for all oyly matters, whether distilled or expressed, natural or artificial, alone, but much more mixt with other things, as Alkalies, Acids, Sc. do by distilling, digessing, &c. in Bath, Dung, Vapor, &c. become thick, pitchy, yea, at length dry, instipid, black as a Coal, and sometimes like a Tyle, capable of being made red hot; which is a manifest sign, that they want rather a Dissolvent, than are themselves Dissolvents.

3. It is neceffary to observe that the Spirit of Philosophical Wine appears in two forms, either like an Oyl swimming upon all Liquors, or like the Spirit of Common Wine (to the Nature of which it comes sometimes nearer, and therefore doth from the Analogy borrow its Name) not swimming upon watry Liquors, but mixible with them and its own Phlegm; yet separable by simple Distillation, it easily by this means leaving its Phlegms behind it; but if being rectified, and kindled, it burns wholly away, it affords us the common sign of perfect rectification of the common Spirit, but however, they are not two, but one only Spirit, differing in degree of purity and subtility. Which to prove, is not necessary, examples being obvious to us in almost every Description of the Vegetable Menstruums.

4. Lastly, Distinction must be made between the first and second Spirit of Philosophical Wine, Father and Son. The first doth in

Unit/ Calis - Digitized by Microsoft ®

Its

its preparation require Laborem Sophiæ, the most fecret, difficult and dangerons work of all true Chymistry. The fecond is easily made with the former Spirit according to the Rule of perfect Chymistry: An Elsence makes an Essence, a Magistery a Magistery. Differ they do in Order, not in Nature; they are both of one Virtue, though of different preparation: for this, as hath been lately said, is of a more easie, that of a mor difficult preparation. Essences they are both, the former artificial, the other natural, in Medecines therefore unequal, though alike in Chymistry, as Menstruums, but they are easily distinguished one from the other by their Epithets. The first hath these more general Names in the Latine Tongue, Essentia Vini, Al-

thefe more general Names in the Latine Longue, Ellentia Vini, Alcool Vini, Mercurius Vini, Vinum Vitæ, Vinum Salutis, Aqua Vitæ, Aqua ardens, Vinum adustum, Vinum fublimatum, Ec. Examples of which you will have in these and the like Receipts: Take beaten Gold, and let it be relolved into Liquor by the Effence of Wine; Paracels. in Descript. Auri Diaphoret. Lib. 3. de male curatis. Take Flints, and dissolve them in the Esfence of Wine, as Salt in Water, Ec. Paracels. in Descript. Essentiæ filicum, cap. 18. de Morbis Tartar. pag. 327. Take the Crocus of Sol, and the Alcool of Wine, corrected, Sc. Paracels. in Tinct, Croci Solis, lib.de præparat. pag, 81. The Alcool of Wine exiccated or corrected, is, faith Paracelfus, when the superfluity of the Wine is taken away, and the Vinum ardens remains dry and dephlegmed, without fatness, leaving no Fæces in the Vessel, pag. 507. But as to this, you will have many more Examples, especially. in the following Book of Medecines,

The Second Spirit of Philosophical Wine hath its Sirnames annexed to these more general Names, indicating the radix of its Original, of which the following Receipts may be for Examples. Take the Leaves of Sol tour teruples, of the Alcool of Wine drawn from a Pine, from Balm, ana. Ec. Paracelf. in descript. Balsami Solis, pag. 90. Chyr. major. The Extraction of Mummy is made by mixing it with the Effence of Wine drawn from Celandine, Ec. Parac. in descript. Tincturæ Mumiæ, cap. 10. Lib. 3. de Vitalong. pag. 65. Take the Effence of Wine drawn from Celandine, Mercury of Saturn, &c. Paracelf. Lib. 8. cap. 10. de Tumoribus, Pustulis, &c. pag. 138. Chyr. major. In these and the like Receipts he does by the Alcool of Wine, drawn from the Pine, Balm, Celandine, Ec. mean the second Spirit of Philosophical Wine, or the Effence of those things made with the former Spirit, which also

proved out of the fifth Chapter of the third Book of long Life, pag. 63. Where Paracellus calls the Effences of Herbs the Elixir of Life, or the Wine of Health, made from this or that Herb : which (he faith) will be manifested in the example of Balm. Digest Balm (with the first Spirit of Philosophical Wine) a Philosophical Month in an Athanar, then feparate fo, as that the duplicated Elements may appear apart, and the Quintessence; which is the Elixir of Life, will prefently thew it telf, in Nepitha tharp, in Lolium yellow, in Tincium blackish, in Lupulus thin and white, in Cufcuta harsh, in others likewise to be judg'd according to the Prefcript of Experience. Moreover that Spirit being extracted, and separated from the other, behold the Wine of Health, (Effence of Balm) in which the Pfeudo-Philosophers have earneftly laboured fome Ages, yet never acquired any thing. And a good part of them that followed Raymund (intending to follow him according to the Letter, understanding Wine red or white) emptied fome Butts of Wine in extracting the Quinteffence of Wine, but found nothing at all but burnt Wine, which they unhappily used for the Spirit of Wine : fufficient it is to have thus admonifhed the Spagyrist, which way the Quintessence may be ca (i white) had in Herbs. 2 + Q C 2 2 1 2 0 1 0

This twofold, the first as well as second Spirit of Wine may be made not only out of the Vegetable, but the Animal Kingdom alfo : So is it read of the Aqua Vitx and Phlegm of the Wine of Urine, in the 16th. Experiment of Lully,, and in Paramiro Paracelli, pag. 57. Many have diligently laboured to find in man his own Health, Aqua vita, Lapis Philosophorum, Arcanum, Balfamum, Aurum potabile, and the like. Which they did rightly; for all those things are in him, as also in the external world. So also hath he a description of the Liquor of Flesh, pag. 505. Take of the Liquor of Flesh fix ounces, of Mummy, Sc. Here by Liquor, be means the Wine of Flesh, which is proved by Paracellus himself; faying, Where and according to this it is to be noted, that the Wine of Balm is a Secret in an Afthma : Here also it is to be observed, that by Pulmonaria, not the Herb, but the Liquor, that is, the Wine of it hath place in this Cure : In which words, the Liquor and Wine of Pulmonaria, are Synonimous. So in Lib. 8. de Tumoribus, cap. 3. By the Liquor of Hermodactils. And cap.! 9. By the Liquor of Balm; and lib. 9. cap. 4. By the Liquor Par-Univ Calif - Digitized by Microsoft ®

Parthenion, And cap. 5. By the Liqnor of Bdellium, &c. The Wines or Effences of them all ought to be underflood. Though neither the first nor second Spirit can be produced out of the dry Kingdom of Minerals (there are indeed some purely Oyly, as Oleum Petræ, Naphthæ, Carbonum fossilium, Succini, Agathis, &c. which are reputed Members of this Kingdom, the Oleosity of which notwithstanding differs so little from the Unctuosity of Vegetables and Animals, that scarce deserve to be called Subjects thereof) yet for the same reason that the Fisences and Liquors of Vegetables are called Wines, is an Effence of the Mineral Kingdom, sometimes also called the Liquor and Wine of Minerals; so the Liquor or Effence of Vitriol or Copper is called Wine of the first Metal, Cap. 12. Lib. 3. de Vita longa, pag. 65.

Being now instructed by the light of these Premises, let us come nearer to the Spirit of Wine of Lully, which we shall find like an Oyl fwimming upon its Phlegms, deduced not from the Common, but Philosophical Aqua vita by Circulation: But all other Esfences being made by the belp of some certain Essence, this first Essence of Wine alone must by its own virtues emerge its self out of its own foculencies and impurities : In this respect the making of Philosophical Wine (red or white) renders the work of all the most secret Chymistrymost difficult and abstruse; of which we shall by the Blesfing of God) clearly and truly treat in a particular Book; namely, our Fifth. Our purpose at present is to prosecute the Use of this Wine in the making of Menstruums, where we find Aqua vitæ the first and weakest of all Menstruums, which, being by circulation alone reduced into an Oyl, is made much more excellent than before. Lully's Receipt is clear enough; yet however we thought it advisable to confirm at least, if not illustrate it with the Receipts of other Adepts. Johannes de Rupescissa, a Scholar of Lully, had so great an esteem for the first Distinction of his Master's Book of Effence, that he made it his own with a little alteration : He hath defcribed the Spirit of Philosophical Wine after this manner :

Univ Calif - Digitized by Microsoft ®

II. The

the Barrier Level There and Part

2. The Effence, Soul or Spirit of Wine of Johannes de Rupescissa, described Chap 5. of his Book de Quintessentia.

R Epute me not a Liar, in calling Aqua ardens a Quintef-fence, and faying that none of the modern Philosophers and Phyficians have attained to it, Aqua ardens being commonly found every where ; for I fpoke true of a certain : for the Magistery of a Quintessence is a thing occult, and I have not feen above one, and him a most approved Divine, that underflood any thing of the Secret and Magistery of it: And I affirm for a truth, that the Quintessence is Aqua ardens, and is Aqua ardens. And may the God of Heaven put prudence in the heart of Evangelical Men, for whom I compose this Book, not to communicate this Venerable Secret of God to the Reprobates : Behold now I open the Truth to you. Take not Wine too watry, nor Wine that is black, earthy, infipid, but noble, pleafant, favoury, and odoriferous Wine, the best that can be found, and diffill it through cooling pipes fo oft, till you have made the best Aqua ardens you can; that is, you diftill it from three to feven times; and this is the Aqua ardens which the modern Physicians have not acquired. This water is the Matter out of which the Quintessence which we intend principally in this Book, is extracted : becaufe when you have your noble water, you must cause such a Destillatory to be made in a Glafs-makers Furnace, all entire of one piece, with one only hole above, by which the water must be put in and drawn out; for then you shall fee the Instrument fo compleatly formed, that, that which by the virtue of Fire afcends, and is diffilled into the Veffel through the Pipes, may be again carried back, in order to afcend again, and again defcend continually day and night, till the Aqua ardens be by the will of God above, converted into a Quintessence; and the understanding of the Operation is in this; becanfe the best Aqua ardens that can be made, hath yet a material mixture of the four Elements; therefore it is by God ordained, that the Quinteffence which we feek for, should be by continual Ascensions and De-Univ Calif - DiDtized by Microsoft Genhons

fcenfions feparated from the corruptible composition of the four Elements; and this is done, because that which is a fecond time or oftner fublimed, is more pure and glorified, and separated from the corruption of the four Elements, than when it ascends only one time, and so to a thousand times, and that which is by continual ascent and descent fublimed, comes at length to so great an altitude of Glorification, as to be almost an incorruptible Compound, as Heaven it felf, and of the Nature of Heaven; it is therefore called Quintessence, because it is in reference to our Body as the Heavens in respect to the whole World; almost after the same manner, fo far as Art can imitate Nature, in a near and connatural similitude.

Circular Distillation' therefore being for many days made in a Veffel of Circulation, you must open the hole which is in the head of the Veffel, which is indeed supposed to have been feal'd with a Seal made of Lutum Sapientie, compounded of the fi-neft Flower and the White of an Egg, and of wet Paper most carefully pick'd and mix'd, to prevent the least exhaling. And having opened the Hole, if the Odour (which ought to be fuper-admirable, above all the Fragrancies of the world) which shall feem to have defcended as it were from the fublime Throne of the most glorious God, be to great, that fetting the Veffel in a corner of a houfe, it shall by an invisible force with the fragrancy of the Quintesfence (which is wonderful and highly miraculous attract to it felf all people that enter in; then have you the Quinteffence which you heard of; to which none of the modern Philosophers and Physicians (except him that I excepted before) have fo far as I have been able to understand, attained. But if you find not the Odour and Influence of attracting men, as I faid, feal the Vessel as before, and bring it to the heat above defcribed, in order to compass your defire by Sublimations and Circulations; namely, in finding out this Quinteffence fo glorified, into an Odour of ineftimable fragrancy and favour glorified to a wonder, and the influx of attraction before expressed; and not only to as to yield a wonderful Scent, but alfo to raife it felf more fully to a kind of incorruptibility : it hath not that heat in your mouth which Aqua ardens hath, nor that moiftness, that is, such an Aqueity flowing, because the acute heat of the Aqua ardens; and its watery moistness is by Univ Calif - Digitized by Microsoft D Sub-

(10).

Sublimations and Circulations wholly confumed, and the Terreity will remain apart in the bottom : And the Heaven as well as Stars, of which this our Quinteffence is compounded both as to Matter and Form, are not as that which is compounded of the four Elements; but there is but little of it glorified fo much even to the higheft, fill'd with fo noble a form, that the power of Matter cannot aspire to any other Form, and fo remains uncorrupted, till the Composition be destroyed by command of the Creator ; Nor is the Quinteffence which we feek, altogether reduced to the incorruption of Heaven ; as neither is Art equal to Nature : yet notwithstanding it is incorruptible in respect of the Composition made of the four Elements, becaufe should it be altogether incorruptible, as Heaven, it would abfolutely perpetuate our Body; which the Author of Nature, the Lord Jesus Christ forbids. Now have I opened to you much of the Secret, to the Glory of the immortal God. that is ablease

Paracelfus extracts his Effence of Philosophical Wine not out of Aqua ardens, but out of Philosophical Wine it felf: Thus;

there is and the

and of Philolophi

3. The Spirit of Wine of Paracelsus : Described, 10-5101-Chap. 9. of the Third Book of Long Life, pag.64.

YOur Wine being powred into a Pelican, digeft in Horfe-dung, and that the space of two Months continually, you will fee it fo thin and pure, that a Fatnefs, which is the Spirit of Wine, will of it felf appear in the fuperficies. Whatfoever is under this is Phlegm, without any nature of Wine; but the Fatness alone being put into a Phial, and digested by it felf, is of most excellent energy for long Life.

Guido used the following Method, little differing from the Paracelfian.

5. It was in the I'm but also have calour Sec.

Univ Calif - Digitized by Microsoft @ 1. Child

4. The Effence of Wine according to Guido, Described, Pag. 1. Thesaur. Chym.

Ake White or Red Wine, which is better, diftil by Balneo till the Matter remain in the confiftence of Honey, which being divided into two parts in a duplicated Cucurbit, mixt with the diftilled Liquor, and joyn together again, and after the digeftion of fix weeks, a green Oyl will fwim upon the Matter; which feparate through a Funnel.

From the Receipts, we think these Things following worthy of Observation.

1. That the Wine, Red or White, is not Common, but Philosophical, and that is the only thing that is obscure in these four Books; to be understood not according to the Letter, but by Analogy: but Aqua ardens, Aqua vitæ, Spirit or Essence of a Philosophical Wine are the proper Names of it.

2. That the Aqua ardens of Philosophical Wine doth in some things agree with the Properties of Common Spirit of Wine; namely, it goes before its Phlegm in distillation: it is restified as the Common, from its Phlegm. Lastly, being restified, it is known by burning Linnen, Sugar, &c.

3. That this Aqua ardens doth by Circulation dayly lofe its moiflure and fharpnefs; and is at length converted into a fwimming Oyl, the Effence and Spirit of Philosophical Wine. But who ever reduced Common Spirit of Wine, or Aqua Vitis, by bare Circulation into an Oyl? Who, I fay, hath by continual Circulation brought that Oyl to Drinefs; fo as to be fublimeable as a volatile Salt, and that not but by a ftrong Fire, as Haacus affirms himfelf to have experienced, in the Defcription of his Vegetable Stone? Of which lower in the Third Book.

4. That the Oyl, or Essence of Wine may be divers ways made out of Philosophical Wine.

5. That not only the Time, but alfo the Scent, Colour, &c. of the Effence are varied according to the variety of Method: The Effence of Lully is like Heaven, that is, of a Sky-colour; the Oyl of Guido is green. Call - Digitized by Microsoft 6. That

Sand son born borningte

6. That it hath not a Scent so fragrant, unless it hath a Body (especially a Metallick or Mineral) diffolved in it.

7. That this Heaven, the first of all Menstruums, is also a Medecine; and is called the Essence or Specifick to a long Life.

8. That it is called Heaven for Several Reasons by Lully.

First, Because it works Contraries, like Heaven. Our Vegetable Menstruum, faith Lully, the Celestial Animal, which is call'd Quintessence, preserves Flesh from corruption, comforts things elemented, restores former Youth, vivisies the Spirit, digests the crude, hardeneth the soft, rarifies the hard, fattens the lean, wasteth the fat, cools the hot, heats the cold, dries the moist, moistens also the dry: One and the same thing can do contrary operations. The Act of one thing is diversified according to the nature of the Receiver; as the heat of the Sun, which hath contrary operations; as in drying Clay, and melting Wax: yet the Act of the Sun is one in it felf, and not contrary to it felf.

Secondly, Because like Heaven it receives the Forms of all Things. As the universal Form (the Macrocosmical Heaven) hath an appetite to every Form, so the Quintessence (of Philosophical Wine) to every Complexion; whereby it is evidently manifess, that the Quintessence of things is faid to be of that complexion to which it is adjoyned; if joyned to hot, hot; if to cold, cold, &c. This therefore the Philosophers called Heaven; because as Heaven affords us sometimes heat, sometimes moissure, &c. so the Quintessence in mens Bodies at the Artist's pleasure, &c. Dissence I. Lib. Essence. To this Heaven we apply its Stars; which are Plants, Stones and Metals, to communicate to us Life and Health, Ibid.

Thirdly, Because like Heaven it moveth all things from power to all. Therefore Heaven or our Mercury is the Cause and Principle moving C· (C) (Metals) from power to all: And in this point knows the understanding of an Artist, that D (our Heaven) hath action upon C, and (C) ruling and governing, and reducing it into action; as Heaven brings that which is in Elemental things, by its own motion into action, Cc. For we call it Heaven, by reason of its motion; because as the upper-Heaven moves the universal Form, and first Matter, and Elements, and Senses, to compound Elemented Individuals; for

Univ Calif - Digitized by Microsoft ®

D

D moves C, and (C) and the four Elements to M, (the Sulphur of Nature, or Philosophers Mercury) or to Q (the Tincture) Distinct. 3. de quarto principio Libri Essentia.

(14)

4. Becaufe like Heaven, it is incorruptible. Aqua vitæ is the Soul and Life of Bodies, by which our Stone is vivified; therefore we call it Heaven, and Quinteflence, and incombuftible Oyl, and by its infinite other Names, becaufe it is incorruptible almost, as Heaven, in the continual circulation of its motion, pag. 145. Elucid. Testam.

5. Because it is of the colour and clarity of Heaven. Heaven or our Mercury is the fourth Principle in this Art, and is fignified by D, of an azure colour and line, and is fignified by that colour, because it is celestial, and of a celestial Nature, as we faid before in the description of it, Dist. 3. Lib. Essentia,

This Essence Johannes de Rupescissa calls Humane Heaven, for the following Reasons :

We ought to feek that thing which is to the four Qualities of which our Body is compounded, as is Heaven in respect of the four Elements: Now the Philosophers called Heaven Quintesfence in respect of the four Elements, because Heaven is in it felf incorruptible and immutable, and not receiving strange impreffions, but by the command of God; fo alfo, the thing which we feek, is in respect of the four Qualities of our Body, a Quintessence, in it self incorruptible fo made, not hot dry with Fire, nor moift cold with Water, nor hot moift with Ayr, nor cold dry with Earth; but is it a Quinteffence able to work Contraries, as the incorruptible Heaven; which, when it is neceffary, infufeth a moist Quality, fometimes a hot, fometimes a cold, sometimes a dry: Such a Radix of Life is the Quinteffence, which the most High created in Nature, with power to supply the necessity of the Body to the utmost term which God hath appointed to our Life : And I faid that the most High created the Quinteffence, which is by the Art of man extracted from the Body of Nature, created by God: And I will name it by its three Names attributed to it by the Philofophers : It is called Aqua ardens, Anima, or Spiritus Vini, and Aqua Vite. And when you have a mind to conceal it, call

Univ Calif - Digitized by Microsoft ®

it

it Quintessence; because this is its Nature, and this is its Name, the greatest Philosophers have been willing to disclose to no man, but caufed the Truth to be buried with them : And that it is not moift as the Element of Water, is demonstrated, becaufe it burns; which is a thing repugnant to Elementary Water. That it is not hot and moift as Ayr, is declared, because dry Ayr may be corrupted with every thing, as appears in the generation of Spiders; but that remains always uncorrupt if it be kept from expiring. That it is not dry and cold as Earth, is exprelly manifest, because it is exceeding sharp, and heats extreamly : And that it is not hot and dry as Fire, is apparent to the Eye, because it infrigidates hot things, and wastes and eradicates hot Difeafes. That it conduceth to incorruptibility, and preferves from corruptibility, I will demonstrate by an Experiment; for if any Bird whatfoever, or piece of Flesh, or Fifh be put into it, it will not be corrupted to long as it shall continue therein; how much more will it therefore keep the animated and living Flesh of our Body from all corruption? This Quinteffence is the humane Heaven, which the most High. created for the prefervation of the four Qualities of mans Body as Heaven, for the prefervation of the whole Universe. And know of a certain, that the modern Philosophers and Phy-ficians are altogether ignorant of this Quinteffence, and of the truth and virtue thereof: But by the help of God I will here-after declare to you the Magistery of it. And hitherto I have taught you a Secret, the Quintessence, that is, the humane Heaven, Cap. 2. Lib. Effentia,

(15)-

interest and the second

MULTIOUS WINCLE

Annotations. sit o sit to not .

THE Unctuous Spirit of Philosophical Wine attracts none but the Unstious natural Essences of Vegetables, as we shall observe below in the Book of Medecines. Essences being thus extracted, as alfo all other Oyly things, crude or expressed, and all distilled of both Kingdoms, Animal and Vegetable, this Spirit of Wine doth by fimple digestion divide into two distinct parts, two Oyls or Fats, whereof one is the Effence of the thing, the other the Body : The Effence fo made we named the Second Spirit of Wine .- Both Estences, this by Division, and that by Extraction prepared, are by longer digestion made one with the aforefaid Spirit of Wine. For those things which are of one and the same purity, and of a symbolical Nature, are eafily mix'd together, and that inseparably, and so an Essence made by an Essence, is joyned to that Essence. And if we protract Digestion further, one of the Fats, namely, the Body less Oyly, and therefore left hitherto, is at length received also into a symbolical Nature, by reason of which mixtion, not only is the Spirit multiplied, but also made fitter for the Diffolutions of dry things, because the Particles of this Body less Oyly incline to drynes; concerning which way we treat in this Receipt, in the Prescription of which, the Oyl drawn out of Oyly Vegetables, is by distillation together with the Spirit of Philosophical VVine, circulated into a Magistery (or double Essence, Natural and Artificial; of which, lower in its place) by which the Spirit of Wine is multiplied, and made more homogeneous to dry Bodies. There is the fame Menstruum, but a little otherwise described in his Natural Magick. pag. 358. thus; Take Nigrum nigrius Nigro, and distil ten or eight parts of the fame in a Glafs-Veffel, and in the first distillation you must receive only one half; this again distil, and hereof take a fourth part; and the third distillation you must take in a manner all, and fo diffil that part eight or nine times, and it will be perfect, but not rectified under one and twenty Diftillations. Take of this VVater a quarter of a pound, and acuate the fame by diftilling it with the Vegetables, which are Apium Sylvestre; and fo of the reft, of which was spoken above in Anima Transmutationis, in the Chapter which begins, First you must know, &c. And then put it into a Veffel of Circulation, in hot

Univ Calif - Digitized by Microsoft ®

hot dung, or in the remains of a Wine-prefs with the prefervation of the Species. Which water is also one of the things without which nothing can be effected in the Magistery of this Art.

That Menstruum which ought to be drawn from the Death of Wine by the Office of an Alembick, acuated with the faid Vegetables, and at length circulated, is the Spirit of Philosophical Wine, which is by these degrees so exalted, as to be by Lully descruedly called the Matter of all the Stones of the Philosophers, and vertuous Stones (that is, Precious Stones) Anima Metallica, and Lunaria Coelica, which also is called Vegetable Mercury, deduced from Wine red or white.

The Matter of which this Menstruum is made, is called Wine in the former Receipt : the Menstruum must be extracted from the Death of Wine : But in the latter it is called Nigrum nigrius Nigro. To these two Lully adds a third fynonimous, pag. 1. Test. novistimi. Take red Wine, which we call the Liquor of Lunaria and Nigrum nigrius Nigro. By which fynonimous Terms none but a Fool can understand Common Wine; for the common Spirit berefrom distilled, is altogether insufficient to perform such and so great things; yea, all the Arcanums of the more secret Chymy, which we are folicitous to describe, would be prostituted to all men, were this one only Word literally understood : by Wine therefore is meant a Philosophical Secret hidden from all the unexpert.

It is expedient to draw from the Death of Wine, by the Office of an Alembick, that is, we must rectifie so often till it become most pure, without the Faces and Phlegm of Wine, which is by Lully called the Death of the Spirit. It is (faith he) purged from all its Superfluity, and Phlegmatick corruptible matter, which is its Death, and which mortifies its Spirit, which hath the power of vivifying its Earth; let therefore the corruptible Phlegm be purged and separated from it by a subtil method, which I will tell you: For what reason a because if it be not well purged, its Earth will never become white, nor will Matrimony be made between the Body and Spirit; and so that Spirit is call'd the Spirit of the Stone in Apertorio.

The Method of Rectification omitted in the former Receipt, is described in the latter, as also in Epistola accurtatoria: This Rectification of Philosophical Wine Sendivogius understood not, as appears

Univ Calif - Digitized by Microsoft ®,

appears by the Sixth of his Epifiles, Brux. 25. Martin 1646. Where thus: The fecond Article (my Companion) of the Page-fian work, endeavours to repeat the mysterious way of extracting and preparing Mercury, more than needed, the Authority of Lully being mifunderstood, and the Precepts of other Philosophers ill applied, he commanding the tenth part of his Magnefia first ascending by distillation to be faved, as the only useful, and truly Mercurial fubstance; but the other nine parts proceeding by continuance of distillation, to be cast away as of no use, to this end, that the faid tenth part referved, might at length be reftored to the Earth remaining after compleat diffillation, (which Earth is foolifhly fuppofed to be the Salt and Sulphur of Mercury) and by repeated cohobations, inhumations, digefti-ons and fublimations defcribed by him, united; but it is a grievous Error, for that which Authors declare concerning the tenth part containing the Spirit, and of inhumations in its own Earth, is otherwife referred than to the extraction and preparation of Mercury, as shall be elsewhere in time demonstrated ; nor for the faid extraction and preparation of Mercury is there any Rule to be used besides the bare distilling of Magnefia, whereby the Spirit and Oyl are together elevated to a Siccity even of the Faces, and feparation of the Spirit from the Oyl, and rectification of the fame Spirit oftentimes repeated : But these things we will in their proper place more amply treat of in the Method of operating. south an our one tol : mout

Parifinus, a Disciple of Lully, will correct Sendivogius, who learnt of Lully to rettifie his Spirit of Philosophical Wine after this manner.

Take A (Chaos, our Vegetable Mercury, in which the four Elements are found confused, pag. 271. Vol. fext. Theat. Chym.) and put it in a Vessel to be distilled through Y (Balmeo, pag. 276.) and in this temperate distillation gather its B. (Celessial ardent Spirit, pag. 269.) continue that distillation this way and method till you attain to the Signs declared in our Apertorial, and till you know that the said B. is dissolved and separated from its Elemental Nature, continuing this Magistery even to the fourth Revolution: Then put this Celessial fiery Matter into a pure Vessel, and distil flowly with ordinary fire, and take only a tenth part; in the second distillation take half, and in the unit Calif DigE 20 by Microsoft ® third, third, two parts of three; and in the fourth, take four parts of five, and more: Then take that laft Celeftial Water, and diffil it three or four times by the Rule abovefaid, taking the whole without any feparation appointed. This obferve, and admire the neceffity of this Myftery and Foundation, and you will underftand the reafon why dull and ignorant men make the worft Bread with the fineft and pureft Flower, becaufe they mix the courfe part with the fine. The fame thing happens to prefumptuous Artifts, who perfwade themfelves that they are able to find out the beauty of our Quinteffence with the exuberated Spirit negligently purified, without an exact feparation of the pure from the impure. in Elucid. pag. 230. Vol. 6. Theatri Chym.

Which way notwithstanding of rectification so exactly to observe, there seems to me to be no necessity; rectification of the Spirit being good enough, which way foever done, either with fewer or more cohobations, provided it be separated from the impurities of the Wine, which you will know (faith Lully) when it burns a piece of Linnen by reason of its vehement heat, that is, as elsewhere more clearly, till a Linnen Cloth moistned with this Spirit, and kindled, be wholly confumed. This rectified Spirit is in distilling. (barpned with the only Vegetables nominated in the Receipt, the Oyls of which, being nearest to it, it easily carrieth with it, and is impregnated with the same, and acuated by the aridity contained in them : Tet are we not obliged to use these Vegetables only, and no. other, or is it necessary to mix all of them together, as if one or two would not suffice. The Oyl of any Vegetable, or drawn out of a Vegetable with the help of the Spirit of Philosophical Wine, or already made, and added to the Spirit of Philosophical Wine, will here fatisfie us. I will give one form or other in confirmation of this kind of Menstruums; of which fort is,

6. The Aqua Vitæ of Paracelfus, Pag. 508. Tom. 1.

Ake of the Alcool of Wine exficcated three pounds, of the Flowers of Rofemary, Macis, Lavender, of each half an ounce; of Cubebs, Cloves, Cinamon, of each two ounces; of Mastick, half an ounce; of both forts of Storax, half a dram of each; of Doronicum, three ounces; and cohobate feven times.

The following Use besides the Alcool of Wine exsiccated, testifies, that this Water is made with the Spirit of Philosophical Wine. Take of the Leaves of Gold, Num. 20. of Pearls not perforated, Granats, Rubies, of each half a drachm; digest for a Month: Then take of this Oyl three or four grains with Malago wine, or the water of Majoram or Sage. This Menstruum is Vinum Essatum or Essentificatum, or Spirit of Philosophical Wine impregnated with the Essences of the Oyly Ingredients, with which Paracelfus dissources Gold and Precious Stones into a most noble Oyl or Elixir, which he says is a Secret against the superfluity of Women's Menstruums. The Description of this Water being clear, requires no other Light: I will therefore propose another Receipt more obscure.

7. Another Aqua Vitæ .of Paracelfus, Pag. 115. Chyr. Min.

TAke of the waters of Meliffa, Rofes, Cheirus, Sage, Balfamus, of each one pound: of all the Peppers, Cubebs, Ginger, Cinamon, Maftick, red Myrrh, Mace, Cloves, of each two ounces; of the Juyce of Honey, half a pound; of rectifi'd Aqua Vitæ, five pound: Let them be all digefted together for the fpace of nine days, and after that feparated, and diftilled in a Pelican into a Spirit. Then to this Liquor add an Apple roafted and broken, and let them be digefted together with the following Spices upon Afhes for three days; of which take five grains every day. The Spices are thefe; Take Take of Cinamon, Cloves, Mace, of each two ounces; of Cheirus, Anthos, of each half an ounce; of Amber, two drachms; of Musk, five grains; of Zibeth, half a drachm; of Ginger, Cubebs, Nutmegs, of each one ounce and half; of Amomus, two drachms; of Zedoary, two ounces and half; of Grains of Paradife, one ounce and half. After Digeftion of them all, feparate, and keep the Matter in Glafs Veffels very clofe ftopp'd.

From the Dose it felf of this Prescription, it is manifest that the operation is meerly Philosophical; for if by Aqua vitæ he would have understood the Common Spirit of Wine, it would be altogether ridiculous to give only five grains for a Dose. We meet with many more Menstruums of this kind, which little differing from the pristine Nature of the Spirit of Philosophical Wine, were less observed by some Adepts; wherefore Christophorus Parisinus, a Noble Sicilian, doth not very much commend this acuation of the Spirit of Philosophical Wine. Some (faith he) have made (the aforefaid Spirit) acute with Vitriol, which way is very good ; fome with Nitre; fome with Cinnabar; fome with these two, fome with all three; fome with their Earth, which way difpleafeth me, becaufe a thick Unctuofity and ponderofity was hereby introduced; some use Vegetables, as Herbs, Roots, Flowers, and Seeds known to you, which have ftrong (Vege-table) Mercuries in them; wherefore they that handled it after this manner, augmented rather its Vegetable Form (Unctuofity) than that they made it more foluble. Parifinus in Elucidario, pag. 231. Vol. 6. Theat: Chym. For this reason, Ripley following the same Master as Parisinus, believed these things to be covered with a Mantle of Philosophy; for So he writes in his Medulla Philosophiæ. Raymund faith, it ought to be drawn out from the Death and Fæces of Wine for the space of one hundred and twenty days, by continual rotation, in a Balneo of of the hotteft Dung, and that it must be acuated with hot Ver getable things, as Piper nigrum, Euphorbium, Pyrethrum, Anacardus, Squilla, Solatrum, Apium Sylvestre, and fuch like; for without the virtue of these things, as he faith, it is not fufficient to diffolve Metals, except in a long time; but that nothing of doubt or ambiguity may appear, I fay, that all these things are covered and shrowded with a Philosophical Mantle: For Univ Calif - Digitized by Microsoft ® his

(22)

his meaning is, that in this Spirit may be had another refoluble Menstruum, because without such a resolutive Menstruum Solution can never be made: And that resolutive Menstruum is generated only from the Metallick kind, and is by our resolutive Menstruum produced into act, Ripley, pag. 168. Medul. Philos. Ripley did by the resolutive Menstruum produced into act by the Menstruum resolutive (that is, the Spirit of Philosophical Wine) mean a certain Mercurial Water; of the Preparation of which lower: where likewise it will appear that by the aforesaid Vegetables Ripley thought Lully intended running Mercury; yet nevertheless his following Menstruum proves, that these Vegetables have beensometimes also taken by him literally.

8. The Aqua Vitæ of Ripley. Pag. 338. Viatici.

THE Menstruum being distilled from the first Faces, circulate it with the hottest Species, such as are, Black Pepper, Euphorbium, Pyrethrum, Anacardus, Grains of Paradise, and the like, for the space of 100 days in Balneo; and after that, distil only half of it, and make your putrefaction with it, &c.

It is here manifest that Ripley took these Vegetables, Not Argent vive, because, Circulation being finished, he distilled only one half of the Spirit, as the most subtil part of the Vegetables; in which case that Metal (Mercury) though dissolved, would remain in the bottom. But whereas Lully acuates the Spirit by distilling, and then circulates; Ripley does this by circulating, and after that distils. To this Aqua Vitæ he sometimes adds Oyls, or. Effences either of Metals or Vegetables, as followeth;

9. The Compounded Aqua Vitæ of Ripley, Pag. 343. Viatici.

Cliculate the ftrongest red Wine with known Vegetables, for the space of 120 days, with continual Rotation in Balneo, and then draw only the purest Spirit by distillation; to which put the Oyl of the purest Luna, made without a

Univ Calif - Digitized by Microsoft ®

Cor-

Corrofive; and let them be circulated together 100 days more, and then is the Water of the nature of the Bafilisk, because as a Bahlisk kills a man at an inftant by the Afpect alone, fo this Water being put upon Argent vive does without any other Fire," fuddenly in a manner congeal it into the purest Silver: And note, if the Fire (Oyl or Effence) of Celandine be put in, or the Fire of the Flowers of Thyme, after the first Circulation, and they circulated together without the Oyl of Luna, the Argent vive will be much better congealed, Sc. But that which begets the greater scruple, is the Paraphrase of Lully himself upon this place. We, saith he, would not have you ignorant of that you may extract our Argent vive (Veget.) from its Myne another way: The way (my Son) is to take the Herb which is called Portulaca marina, Apium, Squilla, &c. distil the Fæces which remain calcine, draw off the Salt with the diftilled water, and abstract the water from it, purifie the Salt by often diffolving and coagulating, and you will have the Salt of the acuating Vegetable Herbs: These (faith he) I meant, when I faid, acuate with acuating Vegetables, that is, the Salts, not the fimple Herbs : Wherefore you might fay, it follows, that this Receipt of the Metallick Soul hath not at all been described, so as to be understood according to the Literal Sense; but I have my Answer ready, namely, that Lully acuated the Spirit of Wine with crude Vegetables also, it is eafily proved by the third Distinction of his Book of Essence, in Figura individuorum, alledged by him, where he rehearseth the nearest Individuals, acuating the Spirit of Philosophical Wine, as are red Wine, new Honey, Celandine, Flowers of Rofemary, Herb Mercury, red Lilly, Tartar, Mans Blood, and white Wine. Why he chofe these, not others, and these only, it is not my business to answer : that which we learn from thence, is, that he sommended two of those Individuals to us before the rest, Tartar and Honey, of which thus. There are fome Individuals, in which Mercury (Vegetable) hath a free Act in some respect, in Tartar it hath one free operation only, and in Honey two, and this an Artifl ought to know, that he may be certified in this Art, and the first Truth thereof. He prefers Tartar, not for the Sake of the Tartar, but the Alkali made from thence, and that he refolves as the best of Alkalies per deliquium, and circulates it being purified with

Univ Calif - Digitized by Microsoft ®

with the Spirit of Philosophical Wine, according to the Doctrine prescribed in prima Tabula individuorum, in the second Expe-riment, and in other places. The Alkali of Tartar may be supplied with the Alkalies of Honey, Celandine, and the rest of the Individuals named by Lully, with which the Adepts did alfo fometimes acuate their Spirit of Wine, as shall be declared below in tht Fifth Kind of Menstruums : But these things make also against the Literal Sense of our Receipt, and do prove that the Salts of the Vegetables, not the crude Vegetables themselves were taken in the Receipt. But though he made choice of Tartar, because of the strongest Alkali to be from thence prepared, yet did he not for the Same reason intimate, that Celandine, the Flowers of Rosemary, Herb Mercury, red Lilly, and mans Blood were better than the reft, because with these he proceeds another way; for he separates the Elements from them with the Spirit of Philosophical Wine, from which he takes only the Fire or Oyl, which he circulates with the Spirit, and so acustes it, as is clearly enough evident in fecunda

(25)

But because Honey surpasseth not only its own collateral Individuals, but also the Tartar it self (for he saith that the Spirit of Wine in Tartar hath one, but in Honey two free Operations) and therefore attributes his peculiar process to Honey, namely, by dis stilling the whole Comb, the Honey together with the Wax, with the Spirit of Philosophical Wine through an Alembick. Now betweenboth proceffes of Honey, and the rest of the Individuals our Receipt keeps a middle station. If Honey be volatilized as to the whole substance, it becomes thereby a Magistery, which being joyn'd to the Spirit of Philosophical Wine, yields us a Menstruum of the Third kind. But the Fires or Oyls of Celandine, of the Flowers of Rosemary, common white and red Wine, &c. are by separation of the Elements made with the Spirit of Philosophical Wine, Estences, which being added to the faid Spirit of Wine; do not alter, but multiply it rather, because an Essence is added to an Es-Sence, that is, the second to the first Spirit of Philosophical Wine. But if Celandine, the Flowers of Rofemary, as also the Vegetables of our Receipt be distilled with the Spirit of Philosophical Wine, it does extract and elevate all their Unclusity with it felf, rejecting the aridity of them, being more fimple, subtit, volatile, and less loaded with dry Particles, than the Unstachty of crude Honey; Univ Calif - Digitized by Microsoft ® and

and fo by being circulated with the Spirit of Philosophical Wine; it is made indeed a Magistery, yet more inclining to the nature of an Effence, and therefore lefs dry, and lefs altering the Spirit of Wine, than that of Honey, and so being now defervedly united with the aforesaid Spirit, its makes a Menstruum different from the Menftruums of the Third Kind. So the Literal Senje of our Receipt does hitherto stand unmoved. But not to derogate from the Authority of the Author, and his own Commentator Lully, it is neceffary to suppose, that, the Spirit of Philosophical Wine being distilled upon the aforefaid Vegetables, he did sometimes out of the remainder prepare an Alkali by calcination, and acuate his Spirit with it, and so make a Menstruum of the Fifth Kind.

From these and the like Receipts, we observe,

I. That Wine, Lunaria, Nigrum nigrius Nigro, the Matter of the Menstruum of Vegetable Mercury or Soul of Metals, is not Common, but. Philosophical Wine; nor that the Spirit of this Wine is the Common, but Philosophical Aqua ardens.

2. That a Menslruum of this kind is the unctuous Spirit of Philosophical Wine acuated, that is, tempered with the common Uncluosity of Vegetable Oyls, Mix, digest, and distil any common distilled Oyl with the Spirit of Philosophical Wine, and you will obtain a Menstruum of the Second Kind much sooner; yea, you will make the fame in a moment, if you mix the Essence (Spirit) of Philosophical VVine with the Magistery of an oyly Vegetable.

3. That one oyly Vegetable (Saffron or Macis) of (o many, is fufficient for the acuation of the Spirit of Philosophical VVine; nor yet will youerr, if you take Triacle; which Spirit of Triacle, made with this Spirit of Wine, will be a Menstruum of this kind.

4. That these Menstruums are Medecines.

5. That these Menstruums made out of meer Vegetables, are properly called Vegetable Menstruums, the fome which we call Vegetable Menstruums compounded, are by reason of the addition of Me. tals or Minerals, Sometimes by the Adepts called Mineral Menftruums : so Lully in the 34th. Experiment, calls his Circulatum majus made of Gold and Silver, the true Mineral Menstruum. But we distinguish them from the Mineral Menstruums, because they

Univ Calif - Digitized by Microsoft @

shey are corrofive, being prepared with the acidity of Mineral Salts. But these are most fiweet, without any Corrofive, and do kindly difsolve things that are to be dissolved.

6. That a Menstruum is call d the Soul of Metals. Soul is diversity taken among the Adepts.

First, For perfect Metal, Gold or Silver. So Arnold in Flore Florum: Philosophers call the Soul a Ferment, because as the Body of man can do nothing without its Ferment or Soul, so is it in the thing propounded; for Ferment is a Subflance which converts other things into its own Nature. And you must know, there is no Ferment, except Sol and Luna, that is, Gold and Silver appropriated to those Planets, Sc. Ferment therefore must be introduced into the Body, because it is the Soul thereof. This is that which Morienus faid, except you cleanse the unclean Body, and make it white, and infuse a Soul into it, you conduce nothing to this Magistery.

Secondly, For Metals, and other things, volatilized with a Philofophical Menstruum. So Lully calls Gold and Silver volatilized in the preparation of his Circulatum majus, Menstruum, or animated Spirit. Take, faith he, the animated Spirit of Sol, and the animated Spirit of Luna, joyn them together, &c. So the Tinstures of Gold and Silver volatilized by a Menstruum, as also of imperfect Metals, are by him called Souls. So in the 20th. Experiment he hath the Animal Water of Saturn; in the 21th. Experiment, the Soul of Mars. Tea separating the Elements from all things, he calls the tinged distilled Liquors Souls or animated Spirits, because by them is the dead, dry and fixed Earth again revivisited, volatilized, and reduced into a Sal harmoniack. See the Revivisication of the Salt of Tartar by its own Water, in the Volatization of it given in the Second Experiment.

Thirdly, For Menstruums themselves. For Menstruums are the Souls of Metals, by which the Metals, otherwise dead, are animated and revivisited: so Lully of this our Menstruum, the Soul of Metals, pag. 195. Comp. Anim. Transm. Otherwise, saith he, Metals cannot be diffolved, unless they be animated with a Vegetable Menstruum, by the power of which, Resolution is made in things resoluble. And in Elucid. Testam. pag. 145. Aqua vitæ is the Soul and Life of Bodies, by which our Stone is vivisied. So also Ripley in Libro Mercurii, pag. 108. saith, The Sperm of H 2 Metals is also called Metallick Aqua Vite, because it administreth life and health to Metals, being sick, dead, Sc.

Fourthly, For the Uncluosity as well of the Metal as Menstruum. Of both faith Ripley, pag. 150. Medullæ Phil. There is fome certain Similitude of the Trinity to be perceived in the Body, Soul and Spirit (of our Work.) The Body is the subflance of the Stone; the Spirit is the Virtue (that is, the Quintessence, which excites Natures from Death) and the Soul is to be taken for the Ferment, which cannot be had but out of the most persect Body (Gold) in Sulphur (of Gold;) there is a Terrestreity for the Body, and in Mercury (Menstruum) an aereal screenity for the Spirit; and in both a natural Uncluosity for the Soul: For they are all fermentable in the Uncluosity of the Body, being mix'd and infeparably united with it throughout its most minute parts, by which Soul is the Stone formed, because nothing can be any way formed without it.

from red or white Wine. The Adepts have many Mercuries.

The First is, Common Argent vive, running or sublimed.

The Second is, The running Mercury of Bodies, extracted out of Metals by the Spirit of Philosophical Wine.

A Third is, Any Salt Alkali, especially fixed with the Spirit of Philosophical Wine.

Lully calcines Celandine, and from thence extracts a Salt; of which thus; Repeat this Magiflery fo often, till you have extracted all the Salt, which is the Mercurial Part of that Individual (Celandine.) Thefe things therefore being done, take all thefe Diffolutions (Lixivia's) and transmit them through a Filter, or Linnen-Cloth, that they may be purged from Terreflreity; then diffilled by Balneo congeal, and the moifture being gone over, in the bottom of the Vessel will remain a Mercury or Salt, of a white colour; and by this means you will have extracted out of this Matter a Mercary, which hath almost innumerable Virtues of acuating the Vegetable Spirit, drawn from (Philosophical) Wine, fo as to have the power of diffolving all Metals with the confervation of the Vegetative and Germinative Form.

In Magia Naturali, He calls Tartar calcined, and impregnated with the Vegetable Menstruum, by being four times distilled, then resolved resolved per Deliquium, and coagulated by the Name of Mercury. And faith ke, pag. 379, you wil have the Salt of Art, or Teftamentary Mercury, without which is nothing done. Sometimes the Salt, or Caput Mortuum, in the Separation of the Elements, called exanimated Earth, he calls Mercury. So in Exp. 6. The inanimated Earth of Urine, diffolved in Water, filtred and coagulated, he calls Mercury : Then, faith he, Keep our fixed Sal armoniack, our animal Sulphur, our fixed animal Mercury. Lay a little of which, upon a Fire-hot-plate, and if it melt as Wax without fume, it is a fign you have Argent vive fixed and perfectly depurated, wherewith you will be able to produce many Experiments. This is that Mercury, which hath afforded us most convenient relief.

The Fourth Mercury, is either Vegetable or Animal; of which Saith Ripley in Pupilla, pag. 300. There are more Mercuries than the two above-faid (Mineral the red and green Lyon) namely, the Vegetable and Animal Mercury, because both may be extracted out of fome Liquors, as out of Blood and Eggs. Lully Distinct. 3. Libri Essentia in Figuris & Tabulis Individuorum, de-Scribes the Vegetables and Animals, in which are found these Mercuries most readily. There is, faith he, lastly this other Secret of Nature, for the Artist of this Art to know, and really have the knowledge of the Individuals, in which our Mercury is found most easily. Wherefore let the Artists of this Art know, that our Mercury is found in every Elemented Body, yet in fome fo remote, as to anticipate the Life of Man, before the Artift of this Art can posses it, being extracted, as is expedient : Wherefore we do in that place reveal those things which contain it most nearly. Of this Mercury, faith Lully, Libro Mercuriorum, pag. 8. VVhen we fay common Mercury, we fpeak of that which the Philosophers understand; and when we fay vulgar, we fpeak of that which the Ruflick understands, and which is fold in Shops : Which Ripley in the 326th pag. of his Concordance, thus expressed by Vhen I speak of Mercury, understand Mercury more common than common.

The Fifth is, The Spirit of Philosophical VVine, which Lully in Exp. 3. calls Vegetable Mercury. So, faith he, will you have a Vegetable Salt extracted from this Individual (Honey) which Salt is most precious, and hath the power of acuating the Vege-

Univ Calif - Digitized by Microsoft ®

Vegetable Mercury, and dissolving the two Luminaries, Sc. in Exp. 5. Salts he prepares out of Portulaca, Apium, Squilla, Sc. with all which, faith he, you may acuate the Vegetable Mercury extracted out of VVine, either joyntly or feverally; of which lower in the fifth kind of Menstruums.

The Sixth is, The Philosophical Menstruum it felf; for our prefent Menstruum is called Vegetable Mercury, produced from white or red Wine.

The Seventh is, The animated Spirit or Air of every Body, in the separation of the Elements, which Mercury being a Fire or Oyl, is called Sulphur in almost all Receipts.

The Eighth is, Sal armoniack Vegetable, Animal or Mineral, the Sulphur of Nature, which is also called our Mercury, Mercury Sublimate, and Philosophers Mercury. Necessary it is we should observe these things in the following Descriptions of Menstruums, except we would some times confound the things themselves with the Names.

The

The Third KIND.

(31)

Simple Vegetable Menstruums made of the Spirit of Philosophical Wine, and Oyly, Salts, or (fuch as can neither be called fixed. nor volatile) hitherto called Effential Salts, such as are Sugar, Honey, Tartar of Common Wine, and other Vegetables.

10. The Mellifluous Heaven of Parifinus. In practica Elucid. p. 231. V. 6. Theat. Chym.

He way of acuating this Celeftial and Burning B (Spirit of Philosophical Wine) is to take of the Substances declared to you what quantity you will : But we take the Substances of Flowers United (that is, the Substance of New Honey, pag. 269.) which we put in a Vessel to diftill all the Aquofity through Y (Balneo Maria. pag. 270.) Then we pour in three parts and more of B upon that Substance prepared after this manner ; thutting the Veffel with its Cover, called Antenotorium, and put it in Putrefaction for the space of one Natural Day; then with three Distillations by Z. (Fire of Ashes, pag. 270.) we diftill till we obtain all the Mercurial Part with the whole Juice of the Bleffed Substance by that Method, then re-peat the aforefaid Magistery with New Substance of Flowers, and making this Regiment four times, at the end of which, you have reduced B folutive from Power into Act by Virtue of . the Manna of the Flowers United.

Now take a ftrong Glass Veffel, able to hold, as much Water, Univ Calif -- Digitized by Microsoft @

35:

as a common Pitcher, with a Neckone fpan and a half long, to which another Glass Vessel, containing a fourth part only of the Pitcher, must be joyned, and well luted : Into this Veffet put four Pounds of C (the faid Menstruum made of Honey) to Circulate in Balnee, or Horle Dung, the space of thirty or forty Days, at the expiration of which time, you will have C converted into D (into the Quintessence in its Perfection, drawn from excellent Wine, which is the Form of the Universal Body reduced into B, and B into C, and then Circulation to be made. This Quintessence is Vegetable, because, all the rest of the sharp Waters destroying Metals, this alone doth by its Virtue vegetate, augment and multiply them. Wherefore this Water is the Mystery of Art, because it is Burning, Calcines, and diffolves Bodies, if it be perfectly rectified, pag. 269.) But the Sign of knowing, whether this Conversion be made, will be a fediment in the bottom of the Veffel, like that, which appears in the Urine of a found Man. When the Glorious Body draws nigh, after thirty Days in the end of Perfection, then will you fee D, or the Quintessence in greater clarity and fplendor than any Diamond. The clarity whereof furpasses all Precious Things, to as that it is difficult to judge, whether that Divine Liquor be in or out of the Veffel: Then you must separate our Heaven from its Sediment or Hypoltalis with Industry, keeping it in a Veffel well luted in a cold place, that nothing may from thence expire. This Quinteffence is by the Philosophers called Spiritus Vivus, because it gives Life to humane Bodies, and Metalls, as alfo Aqua Argenti vivi, Aqua Vita, Aqua Cælestis, Aqua Divina, Stella Diana, Anima, Spiritus Mercurii nostri Vegetabilis, Fumus, Ventus, Calum Nostrum. To conclude, infinite Names have been given it, which notwithftanding fignifies one and the fame thing.

TELLING IN LIGHT OF STREETS

Annotations.

He antecedent acuition of the Spirit of Philosophical Wine with Oyly Vegetables, did not so well please Christopher Parifinus, and therefore instead thereof he substituted this, which he found better than the other. Thegreat Mystery and Treasure (faith he) which we teach you in this Chapter, is, how you ought to make B (the Cælestial and Ardent Spirit) acute, which we fignifie by C, wherefore give Ear, for I know not how I ought to propound this Doctrine, left this Secret should be profituted to all Men: For all the Philosophers that ever have been, have abfconded this Secret under divers Figures, becaufe without all doubt this is the thing, which is the Principal, or one of the Principal Keys of this admirable Science. This I would have you certainly believe, that B hath no folutive Nature actually; but only potentially; for if B were not acuated by the way and means manifested to you, it would have no power of Dissolving : Some made it acute with Vitriol, which way is good enough : Some with Niter: Some with Cinnabar: Some with these two. and fome with all three : Some with their Earth, which way difpleafeth me, becaufe this way thick Unctuofity and Ponderofity was introduced: Some have used Vegetables, as Herbs, Roots, Flowers, and Seeds known to you, which have powerful Mercuries in them; for this Reason it is, That they which handled it this way, augmented rather its Vegetable Form, than made it folutive : Some used Flowers United for acuition, which is the Principal Way, and of our Intention, which is found in the Alphabetum apertoriale : Some not knowing the true way of acuating this B, fpent much time in preparing divers Waters, before they could put any Body into B, as happened to us in the beginning, feeking that Practice, which is now manifested to you by the Practice of our Summetta, which though it hath fucceeded well, yet with very great Labour. The Mystery of this diffolutive part is difficult, and tedious, and therefore I will undertake the Repetition of it; for having made B acute by this Method, which we now manifest concerning the folution of Bodies, to be perfected without trouble in a little time, you will be certain. But I confes, when I was with you at that time,

61047 fil9151177

wherein we made the first beginning of discovery did not understand Raymund Lully in this discovery part; but having read him over again returning to our Studies, Practifing, Praying, and Fasting, a perfect Illumination of Mind came to us: this way therefore will I manifest under the Seal of Silence, pag. 231. Vol. 6. Theat. Chym.

Parifinus doth by thefe Words make us more affured, that the Spirit of Philosophical Wine hath no power of diffolving any but Oyly things, becaufe it is Oyl it felf; but in order to diffolve dry things also, it is neceffary for it to be acuated, that is, so tempered, as to be made homogeneous also to dry things, and so diffolve them, which to be a Work difficult and tedious, his own Experience proveth : out of many acuators therefore of the Adepts, he chooseth Hony before the rest, whose principal acuating faculty, he calls the great Mystery and Ireasure of the Art. For according to Lully, the Spirit of Philosophical Wine in Honey hath two free Operations, that is, this Unstious Spirit is easily United to the Unstudy of Honey, and by the same means also easily tempered with the aridity of Honey. In a Word, there are other indeed, yea all the following Menstruums stronger than this, but none more easile to be prepared, and better for a young Beginner. Lully made the same Menstruum after this manner.

11. The Spirit of Honey of Lully. Cap.19. Lib. Mercur.

Ake of Aqua Vita, and put into this Vegetable Humidity a third part of a Honey-Comb, with all its Subflance, Wax, and Honey together, ferment, or digeft it in a gentle heat for three Hours, and the longer it flands, the better it is : then let it be Diftilled in Balneo, and repeat the Diftillation and Fermentation nine times, renewing the Comb every fecond Diftillation.

Parifinus it feems to me learnt not only the Spirit of Philosophical Wine, but also the preparation it felf of this Menstruum, from his Master Lully, though the preparation he corrected a little : Parifinus digests one Pound of Honey inspissated with three or four Pounds of the Spirit of Philosophical Wine, for a Day in Balneo, then Distilling stilling three times mixeth them together. The Work he repeats three times, so as at these four times to have joyned four Pounds of Honey together with so many Pounds of Spirit, and Circulates both each time. Lully digests the Hony-Comb three Hours with three parts of Spirit, and in two Distillations joyns both together : He repeats the Work four times, so as in eight Distillations to have United four parts of Honey with three of Spirit ; the Menstruum now joyned together, he Distills once more, that in nine times or cohobations, he makes his Spirit of Honey. Parifinus made choice of three Ingredients for his Medicine : The most High Creator created three Mines; among Minerals, one, and that is of Sol and Luna: among Vegetables, the Wine; among Animals, the Bee, pag. 222. Elucid. Lully of these three thus, cap. 46. lib. Mercurior. Amongst all Minerals, Vegetables, and Animals, fixed Gold is chofen for the making of Medicines; and above all the Virtues among Vegetables and Animals, are the Virtues of the Juice, or Broth of Lunaria, and the Fly of Befena, which makes Honey.

Parifinus in his Alphabetum apertoriale bath indeed the fame way of acuating the Spirit of Wine; but he in the fame place superadding the Salt of Honey, extracted out of the Caput mortuum calcined to the Menstruum, this acuition is referred not to this, but to another Kind.

But the Honey feems to have this special Priviledge, as if Menftruums of this third Kind, could be made of it alone; yet you must know that all Oyly Salts, (as areSugar Cristallized, Manna Cristallized, crude Tartar of common Wine, &c.) do on one fide prove their affinity with Oyly things, but on the other fide with dry, and so do by that their Oleosity, introduce their own aridity into the Oyly Spirit of Philosophical Wine, but by their aridity temper the Oleosity of that Spirit. Wherefore the same things are to be understood of Sugar and Manna, as have been spoken of Honey; one Example or two we will add of crude Tartar, being dryer then the things aforesaid.

G 2

12. The

Univ Calif - Digitized by Microsoft ®

12. The Spirit of Crude Tartar of Guido. Pag. 51. Thefaur.

at it. The Wirk he repears

(36)

11:13 1

Ake of crude Tartar two Pounds, of Spirit of Wine three Pounds, Diftill and Cohobate ten times upon its own Capit Mortuum.

Paracellus prepared this Spirit of Tartar after this manner :

Denormal The Spirit of Crude Tartar of Paracelfus. Denormal Lib. 8. Paragraph, pag. 505.

Ake crude Tartar, beat and digest it seven or eight times in the Alcool of Wine, and Distill it into a Liquor, in which is no Alkali.

Out of the Receipts we observe the things following:

1. That the Spirit of Philosophical Wine hath in dry things no diffolving faculty without acuition.

That this acuition is the Mystery of the Art, being difficult and tedious.

3. That it is best made with crude Honey, white Sugar-candy, and Manna purified.

4. That fuch Menstruums as these are somewhat hard to be made with crude Tartar.

5. That Lully by Aqua Vitæ, Parifinus by the Celeftial and Ardent Spirit, Guido by Spirit of Wine, and Paracelfus by the Alcool of Wine, meant not common Aqua ardens, which if a Man try an experiment with the Spirit of common Wine, he will by his own Experience find the Truth of the Matter confirmed.

6. That Menstruums of this Kind are the Magistery of Honey, Manna, Sugar, crude Tartar, mix'd with Spirit of Philosophical Wine, they are made extempore, thus: Take of the Essence of Philosophical Wine, and the Magistery of Hony or Sugar, equal parts of each, mix.

Univ Calif - Digitized by Microsoft ®

7. That these Menstruums are Medicaments.

8. That

8. That not only the Spirit of Philosophical Wine, but also the Menstruums themselves have been Circulated, by reason of which Circulation the Menstruums are called Circulatums; and though it be not always expressly declared in Receipts, that they should be Circulated, yet it ought to be understood in all : for this Circulation is the Purification and Melioration of the Menstruum. By F, faith Parisinus, in Alphabeto Summetta, pag. 9. mei M. Ss. We mean Aqua Vitæ Circulated thirty Days at least, in which Operation it is Purified from its Terrestreity, fo as to raise it felf to the Celeftial Virtue of a Quintessence, which is called our Heaven, Influencing upon the Elements fuch effects, as you may defervedly call miraculous: We therefore Name it Quinteffence and Aqua Vite, because it vivifies Bodies. Without this F, no alteration can be made in Bodies, which caution may ferve you for a general Rule. It is otherwife called Vegetable Water, whereof we have more than often made mention in feveral places of our Summetta, which we fent you, affirming the difference between F and D to be greater, than between a clear Day and a dark Night, as will appear in the Operation of it in particulars as well as generals, which Virtue proceeds notwithstanding from our Circulation.

The fourth KIND.

(38)

Simple Vegetable Menstruums made of Spirit of Philosophical Wine, and Volatile Salts, such as common Sal Armoniack, Salt of Blood, Urine, Soot, &c.

14. The Spirit of Sal Armoniack of Trismosinus. In Trast. Aquil. nig. pag. 13. Aur. Veller. Germ.

Ake of Sal Armoniack one Pound, of common Salt melted one Pound and a half, being very well pulverized and mix'd, fublime them; the Matter fublimed fublime again with new Salt, and that to be repeated fo oft, till the Sal Armoniack be made like an impalpable Spirit, (Powder) then imbibe with the Spirit of (Philosophical) Wine, and the Veffel being very close, fet it in Balneo to be diffolved; being diffolved decant, and putrify with new Spirit of Wine added the fpace of eight Days in Balneo, then Diftillgently one half in Balneo, and being Diftilled pour it again to the remainder, and Diftill again, but witha ftronger Fire, that all may afcend through the Alembick: Being Diftilled, rectifie it fo often, till it be without Faces.

Annotations.

HItherto of things Oyly acuating the Spirit of Philosophical Wine: now follow those things which are less Oyly, Volatile Salts, which though they seem not to be Oyly, yet that they are so is easily demonstrated by the following preparations of Salts Harmoniack, whose Earths, otherwise most fixed and flowing like Wax, are by Univ Calif Digitized by Microsofte the

(39)

the Unctuolity alone of the Menstruum made Volatile, but this will not now be our inquiry: It sufficeth us to use crude and common Sal Armoniack, Salt of Urine, Blood, &c. for the acuition of the Spi-rit of Philotophical Wine, which Salts do by their aridity alter their Unctuolity of this Spirit, more than the aforefaid Oyly Matters, and confequently make the Vegetable Menstruum stronger. The Jame Receipt hath Trismosinus Libro novem Tincturarum in Tinctura Quarta, pag. 59. as also in Tinctura Pitrumonsonis Philosophi Angli, pag. 90. of the aforefaid Book. Trismosinus fublimes crude Sal Armoniack several times upon Salt fused, to be acuated by the acidity of this Salt, and then the better dissolved by the Spirit of Philosophical Wine. Geber de investigat. Magift, pag. 284. Sublimes Sal Armoniack with an equal proportion of Salt. Aristotle the Chymist perfected this sublimation after this manner, pag. 74. Volum. 3. Theat. Chym. Take of Sal Armoniack one Pound, of Spuma Maris fix Ounces, of Sal Gemme, of common Salt and Alum, of each two Ounces, grind them all together, and Sift through a thick Hair Sieve, then put the Matter into an Aludel, and fublime, and the Sublimation repeat.

The Sal Armoniack being thus sublimed, is impregnated with the Spirit of Wine, (not common, for then would the process not succeed, but Philosophical Wine) and then diffolved per deliquium : For the Unctuofity of this Spirit cannot diffolve the substance of Sal Armoniack, being heterogeneous to it, but successively, and by slow degrees. Wherefore this dissolution will better succeed according to the Method of Lully. Diffolve, faith he, Sal Armoniack in the Phlegme of Vinum of Lotium, (Philofophical Wine made of Urine) pals it through a Filter, and remove the Water by Balneo, and the Salt will remain coagulated and white; diffolve again with the Phlegm, and Distil it away by Balneo. Then take fuch a quantity of Aqua Vitæ (Spirit of Philosophical Wine) as you have of Phlegm, and pour them together upon the fame Salt, and the Veffel being covered with its Antenotorium (Blind Alembick) fet it in Balneo twenty four Hours ; the Antenotorium being taken away, and an Alembick put on, Diftill by Balneo with a most gentle Fire, when the Salt is coagulated, congeal it again, repeat the fame Magistery, diffolving by turns after this manner, and congealing three times ; and to have you reduced the faid Salt into a Vegetable Virtue, - Univ Calif - Digitized by Microsoft @

by.

by the help of the Vegetative Spirit, by which you diffolved and congealed it. Lully in Exp. 16. Sal Almoniack is eafily diffolved in the Phlegm of Philosophical Wine, and so is by this means sooner joyned with the Unituous Spirit of Philosophical Wine, than if it were immediately cast into this Spirit. That Trismosinus knew allo this Method, and sometimes made use of it, appears by the following Menstruum.

15. Another Water of Sal Armoniack of Trismosinus. In Tinctura Gereton, pag. 98. Aur. Vel. German.

Ake of Sal Armoniack Crude two Pounds, let it be diffolved in Wine (Philosophical) Criftallize it, let the Criftals be diffolved per deliquium; the folution divide into two parts, one of which diftil into the other with a Fire fufficiently ftrong, rectify the parts being joyn'd together into a ftrong Water of Sal Armoniack. The Sal Armoniack therefore being diffolved either in the Phlegm of Philosophical Wine, (that is, Aqua ardens not recti-fy'd) or Philosophical Wine it felf, Cristallized, and refolved per deliquium, is either by it felf, or with the addition of new Spirit of Wine, Distilled into a Water of Sal Armoniack.

This Kind of Menstruums is made not of Sal Armoniack only, but alfo of the rest of the Volatile Salts, thus:

16. The Gelative Sulphur of Lully. In Exp. 8.

Ake of the aforefaid animated Spirit (of Vrine) one part, and of Aqua Vitæ perfectly rectify'd four parts, which pour upon the animated Spirit, and forthwith ftop the Veslel, that it may not respire, which Vessel must be a large Bottle, which shake and move with your Hands, so in the twinkling of an Eye or Moment, you will fee all the Water converted into Salt ; but if any part of Phlegm be in the (Philosophical) Aqua Vita, it will be immediately separated from the Salt in the Form of Water; the Aqua Vitæ therefore ought to be very well purged Calif - Digitized by Microsoft ®

from

from all Phlegm, that, when the work is done, no Matter may remain with the Salt, but be wholly converted, which will be better and more ufeful, and by this means you will have the Animal and Vegetable Salt, which we will call Coagulative and Gelative Sulphur, becaufe it hath the property and virtue of diffolving the two Luminaries, and reducing them from power to act, their Vegetative and Germinative Form being preferved. Lully sometimes sublimed this Offa or Pap of Urine, in the Ninth Experiment following, thus:

There is, faith he, befides, another way of Copulating the aforefaid Animal Spirit with the Vegetable Spirit, namely, thus: Take of the Animated Spirit, rectifi'd as above, what quantity you will, and pour it upon three parts of our (Philosophical). Aqua Vitæ perfectly rectifi'd, which Copulation ought to be made in a Body large and high, to which an Alembick may be fuddenly fitted : the faid Copulation therefore being made, you must have prefently ready fome Cotton-Wooll dipped in Oyl, and very well fqueezed, wherewith the Mouth of the Diffilling Vessel must be forthwith stopped, and it must be let in within the Neck downward, a hands breath, fastened with a strong Flanel thread, that upon occasion you may draw out the faid Cotton-Wooll, then put to it an Alembick with a Receiver, very close stopped, and set it in a Furnace of Ashes, giving it at first a gentle heat; but then by degrees increasing the Fire, till it be fublimed : which fublimation you must keep in a Vessel firmly stopped, because with this Salt and other Means you will be able to do Wonders. fomstines de land round

Parisinus in his Apertorium, pag. 15. M. S. S. mei, doth by this Salt of Urine acuate his C. or Spirit of Philosophical Wine, which being acuated, be then Circulates by the way used, and before described in the Circulation of his Coelum melleum. Lully hath alfo fometimes used the Volatile Salt of Blood, for the making of these Menstruums, as in his twelfth experiment. Take Blood ground (Blood drawn from found and cholerick Men, dryed on a clean Table, that the Phlegm may be feparated from it, and then pulverized, Exp. 11.) put it in a Glass Body with a long Neck, and having fitted an Alembick to it with a Receiver, Diftil first with a gentle Fire, till the moisture exhale, then encrease the Fire till the Salt be fublimed, which will be very white, gather it warily, Univ Calif - DHitized by Microsoft ®

and

and keep it; for it is of very great Virtue and Efficacy. You have, my deareft Son, all the Medicines (Salts) which have properties with the two Luminaries, as also with the other imperfect Metals, without which this Art of Transmutation cannot obtain its defined end.

The Things which I observe from the Receipts are :

NOT MOTE

1. That by Wine, Spirit of Wine, and Aqua Vitæ common, is not meant Aqua Ardens, with which it is impossible to reduce or distil common Sal Arm oniack into a liquid substance, and though it might, yet that Menstruum would be Common, not Philosophical, being made without the Spirit of Philosophical Wine.

2. That these Menstruums are made of all Volatile Salts.

3. That the Menstruums of this Kind are the Magisteries of Volatile Salts. Mix the Essence of Philosophical Wine with the Magistery of any Volatile Salt, and you will in a moment make a Menstruum of this fourth Kind.

4. That these Menstruums may be also made by Parisinus his way of Cœlum melleum, namely by Circulation, and therefore called Circulatums, common Sal Armoniack Circulated, Salt of Urine, Blood, Harts-horn, &c. Circulated, or the Water of Sal Armoniack Circulated, the Water of the Salt of Blood Circulated, &c.

5. That it is very uncertain what Philosophical Menstruum Trifmolinus meant by Spirit of Wine: For divers Menstruums have been by the Adepts signified by the same Name of Spirit of Wine; for the most part they meant the simple Spirit of Philosophical Wine, Jometimes the same acuated after a different manner, that is, the simple Vegetable Menstruum. So Basil in his Book of Conclusions, prepares the Oyls of Metals with Spirit of Wine; by which he declares himself to have meant not the simple Spirit, but a simple Vegetable Menstruum, in the preparation of the Oyl of Mercury, he commanding this open Metal to be by the Spirit of Wine, restify d first with Salt of Tartar, (which Menstruum we shall have in the following Kinds) reduced into an Oyl; with the rest of the Metals being more compact, do more require : Sometimes also they did by the Spirit of Wine intend Vegetable Menstruums compounded; so Lully, among the other Names of Circulatum majus, reckons up alfo Aqua Vita. This Menstruum, faith he, the Wife Men called by almost innumerable Names, the Acetum acerrimum, which converts Gold into a Spi-

rit ;

rit; this is Aqua Sicca, Aqua Solis, Aqua Vitæ, in Exp. 25. Tea, Mineral Menstruums also the Adepts more than often call by the Name of Aqua Vitæ. So Albertus in fuo Composito de Compofitis, pag. 939. Volum 4. Theat. Chym. Distills a Mercurial Mineral Water ; of which thus : Behold, this is the Aqua Vita, the Acetum Philosophorum, and Lac Virginis, by which Bodies are refolved into the first Matter.

Though therefore it be uncertain to Divine what Spirit of Wine, out of Juch a vast number of Menstruums Trismosinus intended ; yet shall we not much err from the Truth, if we take any Menstruum what soever, either Simple or Compounded, Vegetable or Mineral, in-stead of this Spirit; for we may with all promiscuously perfect the same Philosophical Work, differing only in degrees, as being stronger or weaker, which common Spirit of Wine makes altogether impossible, and fallacious : Tet notwithstanding Directions there are, which may in this ambiguity make us more certain; as, and the states avers

1: Any ambiguous, or unknown Name of any Menstrumm, is eafly known by its Synonima's, if there be any in the fame Book, or other Writings of the Same Adept, as for Example: If in the Description of the Ballamum Samech of Paracelfus, you know not what the Circulatum minus is, the Synonima's (produced by Paracelfus himsfelf, Lib. 10. Arch. in the Description of the Circulatum majus, (where it is called Primum Ens Salis, and Arcanum Salis) denoting moreover the Nature, yea, and preparation of the Menstruum, delivered here perhaps less clearly (quatenus Menstruum) but elfewhere more plainly under the Title of Estence or Primum Ens) do put it out of all doubt, that it is the Arcanum of common Salt. But I faid, Synonima's in the Writings of the same, not of another Adept, because oftentimes others intended another thing by these Names, yea that Name which hath in one Book the Same fignification with the reft, hath commonly in another, though of the fame Author, a fignification different from them; and therefore that Synonymum mult, if poffible, be had out of the same Book, which must then be compared both with other Writings of the Same Author, and also with the Writings of other Adepts, to confirm the meaning of the Author about the identity of the Synonimum, which was doubted of.

2. But if there be no Synonima's in Books of the fame Author, it is not convenient for this unknown Name to be explicated by the Writings of other Adepts, because the Adepts themselves have share share simetimes aljo

Univ Calif - Digitized by Microsoft ®

alfo erred, in giving an explication either better than was fitting, or altogether contrary, to an obscure Name and Place; yet is it not onby lawful, but neceffary also, to observe what they say, especially the Scholars or Followers of the same Author; for though they shew not the Authors Meaning, yet do they their own as to that Matter.

-37 Bat if Synonima's cannot discover the Name, some expression used in the Receipt will perhaps explain it more easily, provided it be rightly examined by an industrious Observer of those Receipts; as, some of the second se

or Kegetable Menstruum, it must be enquired by the Particulars following:

following: First, Whether that Menstruum diffolves Bodies with force or heat, for then it must be Mineral, this Sign betraying the acidity of Minerals Salts : because Vegetable Menstruums diffolve Bodies always sweetly, and slowly. Secondly, Whether the diffolution digested for a time be convert-

Secondly, Whether the diffolution digested for a time be converted into a Black Colour, or Black Powder swimming upon the Menstruum, for that signifies a Vegetable Menstruum, because the dissolutions of Mineral Menstruums do contain Bodies twice dissolved, once with the Spirit of Philosophical Wine, wherewith they become Black, then with the corrosive or acid Spirit of Salts: Therefore the Black, then with the corrosive or acid Spirit of Salts: Therefore the Black Powder and Colour are Signs of a Vegetable dissolution, whereto is added a Milky Opacity, common indeed to both Menstruums, for all weak or weakened Menstruums, containing as it were their aridity less dissolved and precipitated, as also Vegetable dissolutions longer digested after blackness; do become Opacous and Milky, and so continue, till they are made diaphanous and most clear, by drawing of the Phlegm, the acid part, or the Spirit of Philosophical Wine being better concentrated: yet these three Signs we newer observe in the use of the Mineral Menstruums.

Thirdly, Whether the Adepts admonish the Operator to beware of air or fume in Operation, or Poyson in the use of the thing already prepared; for that is a Sign that his Menstruum is, or was Mineral, because Poysons derive themselves Originally from acidity, for Pearls and Corals, yea Gold and all other Arids, though otherwise most Innocent, do, by being prepared with a Mineral Menstruum, become the worst of Poysons.

Laftly, If you fee Mineral Bodies diftinguifled into two Oyls, fivimming Univ Calif - Digitized by Microsoft ® ming distinctly and severally upon the Menstruum, Say, that also was a Mineral Menstruum, because this cannot be done by any Vegetable Menstruum, though never so strong.

2. If it be not known, whether either the fimple or compounded Vegetable Menstruum is to be taken, we observe the things following as to the use of them :

First, If in the diffolution of a Metallick or Mineral Body, a White Body or some refidue be left, then may ye know it to be a simple Vegetable Menstruum, because it extracts only the Tinctures or Essences of things, diffolving the Oleosity, but not the Aridity of things, on the contrary Vegetable Menstruums compounded, as also Mineral Men-Aruums, which are stronger than the Simple, do disolve the whole Body, not leaving any Faces.

Secondly, If the whole Body of a thing diffolved be turned into Oyl, swimming upon the Menstruum, that was a Vegetable Menstruum compounded, for that only are they able to do : The fimple Vegetable Menstruums are not strong enough, but Mineral Menstruums are too strong; those therefore diffolve not the whole Body, but these diffolve not only the whole Body, but reduce it, being diffolved into Oyl, not one only, but twofold : So the Temperatum of Paracelfus, (a Menstruum otherwise sufficiently unknown) is by use known, to be the Circulatum majus, or a Vegetable Menstruum compounded, becanfe he reduceth Metals by it into a swimming Oyl, or Magistery.

Thirdly, If in the diffolution or digestion of the thing diffolved. you see it made Black, or cast forth a Black Powder, say it was a simple Vegetable Menstruum, because Vegetable Menstruums compounded, and Mineral, as being stronger, do better retain their Body diffolved in them.

3. But the doubt, whether the simple Vegetable Menstruum, or Spirit of Philosophical Wine is to be taken, length of time alone refolveth; for the sooner Essences are made in the Mineral Kingdom, the stronger are the Menstruums; and on the contrary : But in the Animal and Vegetable Kingdoms it is difficult, if not altogether impossible, to discern by the length of time alone the disolutions of the Bodies as being more opened; of which fort are Oyls, Salts, as also the open Metal Mercury, especially Jublimed, being more amply opened by the acidity of Salts. time your d d'ation with a flow

it to be a functio

(46)

Simple Vegetable Menstruums made of the Spirit of Philosophical Wine, and the fixed Salts of Vegetables and Minerals not tinging.

17. The Cœlum Vegetabile of Lully, made of the Salt of Tartar.

In the 34th. Experiment.

I Feet as Mental F

Ake the best Aqua Vita, rectified fo, as to burna Linnen Cloth, as you have feen, operating with me, and therefore no need of amplifying to you the Magistery of this Water : Take therefore of Aqua Vitæ four Pounds, and put it in a Glass Urinal (Cucurbit) which is very found ; then take of the Vegetable Salt fublimed of the fecond Experiment (Volatile Salt of Tartar) one Pound, grind very well, and put it in the Aqua Vite, lute the Vessel with its Antenotorium (Blind Alembick) firmly, with Wax Gummed, that nothing may respire, then putrifie two Natural Days; after that take away the Antenotorium, and put on an Alembick with its Receiver, the Joynts being very close, and distill upon hot Ashes. Take notice, that the Receiver must be very large and found, that it may not be broken by the force of the Aqua Vita, and thus continue your distillation with a flow Fire, till all be distilled through the Alembick : But if any part of the Salt remain in the bottom of the Veffel, pour it again upon the Water now Univ Calif. - Digitized by Microsoft ® lately

lately diftilled, and diftill as before, making the Joynts as clofe as may be; the diffillation repeat in this order, till all the Salt be passed through the Alembick in the Form of clear Water. Then put of the aforefaid Salt one other Pound into an Urinal, and pour the fame diffilled Water to it ; cover the Veffel with its Antenotorium, as before, putrifie as before, then diftill as before; and when all the Salt is passed over with the Water, take again as before of new Vegetable Salt one Pound, and pass it all through the Alembick again, as before, with the diftilled Water; and by this means you will have those four Pounds of Aqua Vitæ united with three Pounds of the Vegetable Salt, which hath the power of diffolving the two Luminaries (Gold and Silver) and all the other Metals, with prefervation of the Vegetable Form. But now we intend to reduce this fimple Menftraum into a Celestial Form : Take therefore this simple Menstraum, and put it in a found Glafs Veffel (a Circulatory) four parts of which must beempty, but the fifth full : Stop the Veffel fo as not to evaporate, and Circulate in Dung or Balneo fixty Natural Days; and by this Method will you have a clarify'd Menstruam, in which you will fee a Sediment, wherefore empty the Celeftial Water into another Veffel, and have a care that no Sediment pass over with the Water, which you must keep very close in a Balneo.

Annotations.

A S to the facility of preparation, the Cœlum melleum of Parifinus is better than the rest of the Menstruums, but this of Lully hath preference among simple Vegetable Menstruums, for it is the Sapo Sapientium, compounded of fix'd Alcalies, and the Unctuous Spirit of Philosophical Wine. Fix'd Alcalies are not easily joyned with the Spirit of Philosophical Wine, but when they are throughly mix'd together, they are easily sublimed into Sal Armoniack, Sulphurs of Nature, or Philosophers Mercuries, the chief Instruments of the more secret Chymy.

Lully having prefcribed several Acuators of the Spirit of Philofophical Wine, speaks at length of acuating this Spirit with these Salts Philosophically Volatilized : Let, saith he, our Menstruum, which is the Quintessence of Wine, be depurated from all Univ Calif-Digitized by Microsoft Philognt, Philegm, and acuated with the Philosophers Armoniack, because it cannot otherwife diffolve Gold, nor Precious Stones : But let the Philosophers Sal Armoniack be well purified, that is, fublimed, aud cleanfed from all terrestreity and uncleanness, according to the manner of the Philosophers; of which Philosophical Sal Armoniack we have indeed treated largely in our Book, De intentione Alchimistarum, Dedicated to the most Illustrious King Robert, in the Chapter De Salibus Armoniac, &c. and in Clau-Sura Testamenti, otherwise called Vade mesum, in the Chapter which begins, Partus Veræ Terræ. There you may read from first to last the Magistery of making and purifying, together with the Virtues and Energies of this Salt : And know, my Son, that whatfoever we Write in that Chapter, we mean that Salt and nothing elfe: Read and Peruse that Chapter, because nothing can be done in the Magistery without that Salt, for that is the thing with which we acuate our Menstruum, to diffolve as Gold, and Precious Stones, and Pearls, as well for humane Medecines, as for a Metallick and Lapidifick Magistery, and to make Pearls and Precious Stones.

In which Receipt of Lully, we have the Volatile Salt of Tartar given us freely, hitherto fought in vain, with very great pains and cost, of which the Theoretical Philosophers have in their Theories exhibited nothing but what is most obscure. Ispeak, faith Sendivogius, all things openly; the Extraction only of our Sal Armoniack, or Philosophical Mercury, I have not so openly revealed: Send. in Epilogo 12. Tract. pag. 337. Now, out of his second Experiment alledged, we have the following Description of Sal Armoniack, or Volatile Salt of Tartar, thus:

The Volatile Salt of Tartar of Lully. Out of the Second Experiment.

Ake the best Tartar, pulverize, and put it in an Earthen Vessel not glazed, to calcine the space of three Days, or till it be White: Which being done, dissolve it in the Aqua Vitæ, first distill'd (in the Spirit of Philosophical Wine, not yet restify'd) thus; namely, Put this individual, being calcined and Univ Calif - Digitized by Microsoft ®

White, into an Urinal, and pour in the Aqua Vitæ fo, as to be feven Fingers above it, and cover the Veffel with its Antenotorium (Blind Alembick) and fet it on a Furnace of Ashes to simper two Hours, then pour that which is diffolved into another Veffel carefully, but that which remains undiffolved dry : then again pour in new Aqua Vita, and again boyl it upon Afhes : empty the diffolution again, as before, and keep it with the other former diffolution : the matter remaining in the Veffel, dry again, and take it out of the Veffel, because it must be again calcin'd, to be the more eafily diffolved ; which being calcin'd, diffolve again with new Aqua Vitæ, and boyl it upon Afhes : this diffolution keep with the other, as above, and repeat this Magistery fo oft, till all this individual be calcined, and diffolved : then put all the diffulutions in an Urinal, fitting an Alembick with a Receiver to it, and closing the Joynts very fast, diftil by Balneo, till the matter be congealed, or till no more will diffil by that degree of heat, then remove the Receiver, and ftop it to prevent respiring, and then set the Urinal upon Ashes; and if any corruptible part (Phlegm and unprofitable Earth) remain with the matter, let it be burnt, and the Veffel having remained two or three Hours, in a Fire fomewhat remifs, and not any, thing more diffilling through the beak of the Alembick, let the Veffel cool, and then pour the same Water (Aqua Vitæ, or Spirit of Philosophical Wine) which you kept before stopt in the Re-ceiver, upon the matter again : This matter therefore being diffolved, diftil the Water again in Balneo, as before, which having taken away, the Receiver you must keep well flopt from respiring: then set the Urinal in Ashes, and dry the matter; being dryed, diffolve it in again with the Water which you kept in, the Receiver ; and if you fee the diffolution is not clear and diaphanous, you must transmit it so often through a Filter or Linnen Cloth, and fo oft diffolve and congeal it by turns, as before, till it be free from all Terrestreity, and appear clear and fplendid : then may you be affured, that the impure and corruptible part is feparated, and you will fee the whole matter transmuted into an Oyl. But now, most dear Son, you must proceed to the composition of our Mercury, and Sal Armoniack, the Powers and Virtues whereof are fo many and fo great, as fcarce to be comprehended within the expression of Man. The Univ Calif Digitized by Microsoft ®

way

way of which operation is thus : You must know the weight of the Salt or Oyl, which you beheld in the bottom of the Veffel depurated, and pour to it fo much of our Spirit (that is Aqua Vitæ rectify'd fo, as to burn a Cloth fleeped in it) as will be four Fingers above it, or let there be fix parts more of the weight of the Aqua Vita, than is the Salt or Oyl: the whole being mix'd together, put into an Urinal with a Cover or Antenotorium well luted, that it respire not : putrifie in Balneo the space of two Natural Days, then take off the Antenotorium, and put on an Alembick, with a Receiver, close the Joynts well, and diffil in a Furnace of Ashes with a flow Fire: which diffillation must be continued till the Beak or Head discover no Veins. but fuddenly after the Veins difappear, lay afide the Receiver with the diffilled Water (Spirit of Philosophical Wine) and stop it close, for now comes the animated Spirit (Spirit of Wine impregnated with the Essence of Tartar) which hath the power of vivifying its Body (or Caput Mortuum) then continue the fame diftillation, in the end augmenting the Fire, that if any part of Phlegm remain, it may exhale and be removed by that degree of heat : Laftly, the Veffel being cold, take out the matter and grind it : know the weight of the matter, and pour to it four parts of Aqua Vitæ more than is the Earth (Caput mortuum) and covering the Vessel close with its Antenotorium, putrifie as before, then putting an Alembick to it with a Receiver, well luted, diftill as before, in a Furnace of Ashes: the Soul being with its Spirit gone over, with the fame Signs of Veins, as before, appearing, repeat the fame Magistery three times : For then will you have the Spirit perfectly animated, and the Body exanimated and calcined : This Spirit with the Soul (of Tartar) is indeed capable of disposing every Physical operation, but in this place we will use it for the vivifying of the calcined Earth : Take therefore the aforefaid Earth out of its Veffel, and grind it, then put a little of it upon a red hot plate, which if it melt like Wax without fume, is a fign of perfect examination ; if this fign appear not, this Magistery must be reiterated, till you have obtained that fign. Then know the weight of the Earth, upon which pour a fourth part of the animated Spirit, and the Veffel being covered close with its Antenotorium, fet it in Balneo two or three days to be congealed, or till it be congealed; which done, re-Univ Calif - Digitized by Microsoft @ move

move the Antenotorium, putting on a Head, and distill in a Furnace of Ashes without a Receiver, that if there be any part of Phlegm, it may be from thence removed, for that which comes out from this distillation will be insipid, of no favour or esteem in the Form of Rain Water : Then again pour on a fourth part of the animated Spirit, as before, and congeal in Balneo, as before, then diftil the Phlegmatick moisture by Ashes, as before, and thus repeat the aforefaid Magistery, till the Earth hath drunk up and attracted to it all its animated Spirit, and attain'd to fuch a fign, that if you put a small quantity of it upon a Firehot Plate, the major part fume away, which will be a fign that the matter is disposed for the subliming of our most precious Mercury, which hath the power of diffolving any Metal whatfoever with the prefervation of its Vegetive and Germinative form. Take therefore the aforefaid pregnant Earth, and put it into a Bolt-head (Sublimatory) with a long Neck, which you must lute very well with Lutum Sapientiæ, and the luting being dryed, fet it with the matter into a distilling Furnace, adminiftring in the beginning a gentle Fire, till the Bolt-head grow hot, whole Mouth must be stopped with Cotton-wooll, and continue that gentle heat the space of fix Hours, then augment the Fire fomewhat fix Hours more; but if it begins not by that de-gree of Fire to fublime, increase the Fire gradually to a more violent degree, till it begin to fublime, which Fire continue the space of twenty four Hours, at the expiration of which time. the Vessel being cold, take from thence our Sulphur sublimed (the Vegetable Sulphur of Nature) our Mercury (Vegetable) our Heaven (dry) our Sal Armoniack (Vegetable) our Stone not yet fermented, and call'd by many more other Names, whole faculty is to acuate its Spirit (of Philosophical Wine) as shall be made appear by the Experiments hereafter following :

This Volatilization of the Salt of Tartar is sufficiently tedious, yet easie and clear, according to the tenour of the Receipt. In the following kind of Menitruums, we shall have divers examples of making fuch Sal Harmoniacks, wherefore we will thither referve those things which are to be admonished about this way of making the Volatile Salt of Tartar. Lully mixeth three pounds of this Volatile Salt with four of the Spirit of Philosophical Wine face fively by various distillations, and reduceth the mixture by circulating fixty Days

Days into the Vegetable Heaven. But here we are to be advised, that the Sal Armoniack of Tartar in its own dry Form is a Vegetable Menstruum; and so according to the prescribed method of the Receipt, it is not always necessary to reduce that into a liquid substance; for that and the Menstruum made from thence are therein different; because in the making of Heaven, the Unituality of the Spirit of Philosophical Wine Leing Superadded, and now prevalent, hath abforbed and differved the aridity of the Sal Armoniack; but this being this way too much diluted in a greater quantity of that Oleosum, loseth much of it strength, and becomes less fit for the disolutions of dry Bodies : But now if the volatile Salt of Tartar be a Menstruum in a dry form, some have unadvisedly faid it serves instead of a Philosophical Menstruum, which notwithstanding is rightly and very well said, if a corrolive Menstruum, which we call Mineral, be understood, whose place the volatile Salt of Tartar, or Vegetable Menstruum, may upon several occasions Supply.

Now as this Sal Armoniack reduced into a liquid substance by the Spirit of Philosophical Wine, makes our Vegetable Heaven; so being disolved with the Spirit of common Wine it makes the Spirit of Wine of Basilius disolved with Vinegar, our Vinegar disolved with Aquafortis, the Philosophers Aqua Regis; and so of many others. At present the aforesaid Spirit of Basilius hath its place.

18. The Spirit of Wine of Basilius. In Fine Libri Revelat.

Ake generous white-Wine (common) and diftil after the ufual manner, to make a firong Aqua Vitæ thereof in a Copper, which rectifie in a Phial, and ieparate the Phlegm: this Aqua Vitæ is thus proved: If it burn all away, and leave no Aquofity behind it, being kindled in a Glazed Veffel; but if any remain, diftil yet once or twice, the Joynts being very clofe, that the Volatile Spirit of the Wine may not exhale: The Aqua Vitæ being thus diftilled, and exactly rectifi'd (but have a care that in the time of diftilling you put not a Candle to it, left it hurt you) joyn three Ounces of Tartar perfectly fublimed with a quantity of this Aqua Vitæ in another Phial, fo as that the Phi-

Univ Calif - Digitized by Microsoft ®

al

al be half full, put an Alembick to it with a Receiver large enough, and distil in Balneo Maria most gently, because of the Volatile Spirits, a little of the Aqua Vite being left in the bottom, and as you diftil, cool the Alembick with wet Cloaths: thus is the Spirit fooner refolved, and passeth into the Receiver. This is that Spirit of Wine which Bafilius used in several places, especially in his Conclusions, where by the Spirit of Wine he reduceth as well Metallick as Mineral Bodies into Oyl : Whofoever hath imagined to himself another Spirit instead thereof, must have a care left be prove the truth of this faying to his own detriment : There is yet indeed another description of that Spirit of Wine in Appendice Elucidationis, which norwithstanding differs not from the former, except that in the former description it was read the Volatile Salt of Tartar; but here it is read Sal Armoniack, perfectly fublimed; but that they are Synonyma's, is even now manifest by the Receipt of Lully : For whatfoever Salt, either fix d, or volatile, is joyned with the Spirit of Philosophical VVine and Sublimed, is called our Velatile Salt, our Sulphur of Nature, and our Sublimed Mercury, which may be used promiscuously as Salt Philosophically fublimed; for both those Salts (of Tartar and Sal Armoniack) were by Balilius made perhaps out of one and the fame matter : But this his Menstruum is not fo strong as the Colum Vegetabile of Lully; though prepared out of the fame Salt of Tartar just as that: For Basilius diminischeth the virtue of this Salt, by adding the Spirit of common Wine : Lully accomplisheth the Same work, but with the Spirit of Philosophical VIVine : yet Balilius Sometimes allo made his Menstruum fironger than the Coclum Vegetabile of Lully, by separating the Spirit of common Wine from the Philofophical Sal Armoniack, which indeed he performed two ways : First, by kindling the Menstruum in a Copper Vessel design d for this use, to burn away the Spirit of common Wine, but leave the Vegetable Sal Armoniack by it self, reduced into a liquid substance. The way is this. not lop unit need Spirit of Wree (material Sel Ar a

an Alemaick to it with a Receiver large 19. The Fiery Spirit of Wine of Basilius. all i di all In the Place as above. : tostas:

(54)

Ake the antecedent Spirit of Wine, being fit for this preparation of the Fiery Spirit, make an Instrument of Copper, which may be taken up in the middle, below and above the Holes, as also above the middle of the Vessel, put on an Alembick with a Pipe, let them be all of Copper, except the Receiver, which must be of Glass, which put in a wooden Vessel into Water, and cover it above with wet Cloaths, in the wooden Veffel let there be a passage, by which the Water, when hot, may fly out, and cold be poured on : all things being thus prepared, the Spirit of Wine prepared is put in through the lower Holes, fo as to touch the Holes, then is it kindled, and the Mercury is driven upwards through the middle Holes, and refolved by the coldness of the Water, and passeth out of the Alembick into the Receiver : Thus is the true Spirit of Wine prepared, but in the work never ceafe from refrigerating, and pour on new Aqua Vite, left it burn too low. In the Addition or Appendix of manual operations, Basilius described this Spirit thus: Take Wine burned (rather Wine to be burned, made of the Sal Armoniack of Tartar, and Spirit of Common Wine) which put in a ftrong Veffel that can endure the flame of Fire, and kindle it with a Match of Sulphur, and forthwith apply an Alembick of Iron or Copper, with a large Receiver, and the true fiery Spirit of Wine is refolved and diffilled into a Liquor: this is the true airy and fiery Spirit of Wine.

Secondly, He impregnates Calx Vive, or Quick Lime, with the Menstruum described in Numb. 18. from which he distills a Men- . ftruum yet stronger, called Spirit of Calx Vive. Calx Vive, faith he, is strengthened and made more fiery by the pure and not fophifticated Spirit of Wine (made of Sal Armoniack and Spirit of Common Wine very often cohobated, to which Calx add the Sal alkali of Tartar, the dryed Fæces of the fame Salt being also added, from which, being thoroughly mix'd, diftil the true Spiritus Gehenneus, or Spirit of Hell, in which are great Mysteries hidden : the method of acquiring this Spirit I have told . Univ Calif - Digitized by Microsoft ®

you, which observe, keep, and accept for a farewel-Gift. Bah-lius in Repet. Lapidis, in Cap. de Calce viva. Mark, faith he, in the End of this Book, De Medicinis supernaturalibus. I told you of the Virtues and Qualities of Precious Stones, but there are alfo found many Stones despicable and ignoble, yet of great Virtue, as Experience testifies; though the ignorant and unskilful will scarce give Credit to these fayings, and cannot conceive those things with their dull Brains, yet will I demonstrate it by an Example of Calx vive, which Calx is according to the judgment of the Vulgar, of little value, and contemptible in obscurity; yet nevertheless there is powerful Virtue in it, which appears in the application of it against most grievous Difeases : but its triumphant and transcendent efficacy being in a manner unknown to most Men, for the fake therefore of those that inquire into Natural and Supernatural Mysteries, do I discover the fecrets of this Book : as a farewel alfo will I reveal the Mystery: of Calx vive, and declare first the way of distilling the Spirit of it, which work does indeed require an expert Artift, well informed before, in this preparation.

20. The Spirit of Calx vive of Basilius. In Fine Lib. de Med. Supernatur.

Ake of Calx vive what quantity you will, grind and prepare it on a Marble into an impalpable Powder, whereto pour of the Spirit of Wine (Menstruum in Numb. 18.) fo much as the pulverized Calx is able to imbibe, no Spirit fwimming upon the Calx. Then apply an Alembick, lute well, and put a Receiver to it, abstract the Spirit from it in a most gentle Balneo; this abstraction must be repeated eight or ten times : this Spirit strengthens much the Spirit of the Calx, which is thereby made more fiery. Take the remaining Calx out of the Cucurbit, grind it very well, and add to it oi the Salt of Tartar (Alkali) a tenth part, and as much as all of the Earth of the Salt of Tartar, or matter left in extracting the Salt of Tartar, and well dryed, distil them all being well mix'd out of a Retort well Integration three parts of which must be empty, in a Receiver large an firm : Take notice, that the Receiver, into which the Beak we

Univ Calif - Digitized by Microsoft ®

_ tha

the Retort is put, must have a Pipe one Fingers breadth, to which another Receiver is to be applyed, in which must be a little quantity of Spirit of Wine (Menftruum in Numb. 18:) then diftil with a foft Fire, and the Phlegm will alcend into the first Receiver ; the Phlegm being distilled, increase the Fire, and then will come a white Spirit, in the Form of the white Spirit diffilled from Vitriob (Philofophical) which will not defcend into the Phlegm. but through the aforefaid Pipe into the other Receiver, there joyning it felf with the Spirit of Wine, even as Fire is eafily joyned with Fire. Take notice, if this Spirit of Calx be not rightly prepared or impregnated with the like Spirit of Wine, by the aforefaid cohobations, it is in distilling mixed with its Phlegm, extinguished, and lofeth its Virtue; fo difficult a thing it is to drive deeply into Nature, the referving many things to her. felf : This Spirit being now mix'd with the Spirit of Wine take away the Receiver, pour out the Phlegm, and keep the Spirits of the Calx and Wine wearily : Observe, both these Spirits are feparated not without difficulty, for they embrace one another, and in distillation afcend together : Wherefore, if you kindle the Spirits being mix'd and united in a Glass Vessel, the Spirit of Wine is burned, but the Spirit of the Calx remains in the Glass, which keep diligently. This is a great Arcanum, few Spirits do exceed its efficacy, if you knew the use of it, its qualities can fcarce be defcribed by way of Compendium. This Spirit diffolves Crabs Eyes, and the hardeft Criftals : thefethree diffilled together through an Alembick, and many times coholated, make a Liquor, three drops of which taken in warm Wine, do break and diffolve the Gravel and Stone in Mans Body, this Liquor expells the very root or caule of that Difease without any pain to the Patient: This Spirit of Calx at the beginning is of a Sky-Colour, but being gently rectified appears white, tranfparent and clear, leaving tome tew Fæces behind it : This Spirit diffolves the most fixed Jewels, and Precious Stones, and on the contrary fixeth all Volatile Spirits by its transcendent heat : This Spirit overcomes all Symptoms what foever of the Pedagra, though never fo knotty and tartarous, all which it diffolves and radically expells.

If Spirit of Wine, acuated with Vegetable Sal Harmoniack be kindled, the Spirit of common Wine is burned, but the Sal Harmoni-Univ Calif - Digitized by Microsoft ack ack being incombustible, ascends in the Form of a Liquor, and is called the Fiery Spirit of Wine of Basilius, but the same Spirit of Wine joyned with the Sal Harmoniack being absorbed by the Calx vive, and then distilled into it self, and then kindled, the Spirit of common Wine is indeed confumed by the Flame as before, but the Spirit of the Calx, or rather the Vegetable Sal Harmoniack ascends not as before, but remains in the bottom of the Glass because more digested, and made more fixed : But for the greater elucidation of thefe Spirits, we thought good to add another Description of the Spirit of Calx.

21. The Simple Spirit of Calx vive of Bafilius, In manualibus Operationibus.

Ake pure Calx vive, burn it in a Potter's Furnace with a most strong Fire, to reduce it to an exact maturity, grind it very fine upon a Marble, and put it in a Cucurbit, pour to it Spirit of Wine made of *Philosophical Tartar* (as I shall teach in my method of making *Aurum potabile*) that the *Calx* may be made like thin Pap; this being done, diftil from thence the Phlegm, till the Calx be dry, pour on new Spirit of Wine, and draw of : repeat it fix times, then grind the matter very curioufly, and put it in a Cellar to be diffolved per delignium, and within a few days a Liquor will run fromit, which being gather'd and diffilled by a Retort in Sand, first fends forth a Philegmi to be kept by it felf, after that a Spiriruous Liquor, which also keep apart : Now take Criftals pulverized, mix them with the fame weight of Vive or Mineral Sulphur, burn this matter, continual. ly flirring it, till all the Sulphur be burned away, then reverberate in an open Fire the fpace of three Hours; this done, pour the aforefaid Liquor to this matter. Take alfo Crabs Eyes, to which also pour the fame Liquor of quick Lime in another Glass, let them be digested fourteen Days in a heat strong enough, and from both will afcend an humidity upon the fuperficies, which decant finely into a little Glafs, and rectifie in Balneo, and a Liquor will remain in the bottom; three grains of which adminiftred in Wine have produced ver y great and admirable effects,

This

This Medicine cures also radically the Stone of the Bladder and Kidneys, as well in Men as Women.

The Spirit of Wine made of Philosophical Tartar, which Basilius promifed to give in his method of making Aurum potabile, will confirm all the aforefaid Mcnstruums of Basilius; for those are made of Sal Harmoniack, or the Volatile Salt of Tartar being divers ways prepared; but this Spirit of Philosophical Wine is acuated with the Salt of Tartar, not indeed the common Alcali; but that being reduced together with the Spirit of Philosophical Wine into a liquid Jubstance: for we are to be admonished that it is not always necessary to make the Cœlum or Heaven of Lully, and the rest of the Menstruums of this kind, with the Salt of Tartar, as being Philosophically Volatilized, but that fometimes also the fame Menstruum may be made of the Salt of Tartar without the fublimation or reduction of it into the Vegetable Sulphur of Nature, by cohobating only the Spirit of Philosophical Wine upon Salt of Tartar, till it ascend by distillation in the Form of a Milky Liquor. It is thus done,

22. The Tartarifed Spirit of Wine of Basilius. In manal. Operation.

PERMIT THE PART

ALC: N

He first thing to be known is that the Philosophers Tartar, wherewith the Lock is opened, is not like common Tartar, as most Men imagine, but is another Salt, though springing from the fame Fountain : This Salt is the only Key to open, and diffolve Metals, if prepared as followeth. Take the Afhes of a fruitful Wine, and draw a Lee or Lixivium as ftrong as may be out of them with hot Water, which evaporate by boyling it to a drinefs, that the matter may remain reddifh, which reverberate in a reverberating Furnace three days, or thereabouts, with an open Fire, till it become white : then diffolve it in Spring-Water, fuffer it to fettle, decant the clear, filter to feparate the Fæces, being filtred, coagulate, and you will have the white Salt of Tartar, from which the true Spirit is diffilled after this manner : Take Spirit of Wine rectifi'd to the highest degree, and altogether void of Phlegm, (described in Numb. 19.) and pour it to the Salt of Tartar in a Phial with a long Neck, fo as to be three Fingers above it, lute an Alembick to the Phial, fit

Univ Calif - Digitized by Microsoft ®.

a Receiver to it, and digest with a gentle heat, then draw off the Phlegm most fostly, and the Spirit of Tartar is opened by Virtue of the Spirit of Wine, and by reafon of reciprocal and admirable love they both afcend together ; the Faces remaining, if any be, as also the Phlegm must be cast away; thus will you have the true Spirit of Wine, wherewith Aurum potabile is made, and a fishing and a the data attribute johannes de E

This truly is a most Noble Menstruum, fo as for its excellency to deferve a higher Place than this among the Simple Vegetable Menftruums ; whereas it ought to have been more rightly transferred to the Seventh Kind of Menitruums; but it very much at present Illustrating the Menstruums of Basilius, and so of greater utility here than there, we will not remove it from hence, yet will we add some examples more clear of such sort of Menstuums. Thus it is done,

The Vegetable Acetum acerrimum, or Ignis 23. Adepti of Ripley, made of Tartar calcined. Pag. 331. Concord. Raym. & Guid.

(an. 43.

Ake the Tartar of Wine, and calcine it to whitenefs. Take of this calcined Tartar one Pound, and being pulverized, put it in a great Glass Cucurbit, and pour to it half a Cup, or a little more of the strongest Spirit of (Philosophical) Wine, ftop the Mouth very close, and let them stand in cold Water twenty four Hours, then put a Receiver to it, and distil in Balneo with an easie Fire, yet so as to be distilled ; which easie diffillation must be continued, till the Phlegm ascend, which must be known by the taste, then let it cool, and again put new Spirit of Wine to the aforefaid Tartar, the fame quantity as before, doing all things as before : which work you must repeat fifteen times, but when the Veffel is opened in every Imbibition, above all things have a care of the fuddain fume of this Ignis Adepti : This work being in fifteen times compleat, lay alide three ounces of this fiered Tartar for a part, to multiply the Mercurial Oyl, as lower will appear. Take the other part of this fiered Tartar, and diftil it in Sand with a most strong Fire, which Fire being fo diffilled hath a white Colour, and is our Univ Calif - DigitiK & by Microsoft ® Natura 10:00

Natura ignita, our Mercury, our Aqua Vitæ, lastly the Key of our Science.

This Menstruum is the fame, as to the Ingredients and Virtue, mith the Vegetable Heaven of Lully, but it must be Circulated like that Heaven, in order to lose its milky and duskish Colour, and acquire the diaphaneity and clearness of this. This Receipt hath also Johannes de Rupescissa, which it is convenient to compare with this, especially he varying somewhat in Circumstances, by dissolving per deliquium Tartar impregnated with the Spirit of Philosophical Winc before the distillatian of it.

24. The Aqua Fortissima and Vertuosa of Johannes de Rupescissa. Cap. 43. Lib. Essentiæ.

25. Vegetable Mercury acuated with the Salt of Tartar of Lully. In Prima Camera Individuorum, dist. 3. Lib. Esfen.

IN the first Chamber is fignified, that our Mercury is in the power of H(crude Tartar) and in order to draw it out, the Artist must put the faid H into E (that is, in a Glafs-Makers Furnace) three Natural Days, and there must be a great quantity of it, because but little will be made from thence, which H (Tartar now calcined) you must grind subtilly, and put it into H of Arboris Philosophical (into dissolution per deliquium) upon a Marble, in a very cold place, and covered because of dust; and H will be converted into T, (oleum per deliquium) which T must the Artist distil through a Filtre in a Glais Vessel, and the Artist having separated T from H, will be able to extract our Mercury out of the faid T two ways. First, by the Magistery of the Chapter beginning, Non reputes me, &c. (by Circulation like the Effence or Spirit of Wine of Lully.) Secondly, by the Magistery of the Chapter ter, Non prætermittam (by the separation of the Elements, of which not in this place.)

Lully fometimes used the Salt of Tartar depurated instead of the Oyl of Tartar per deliquium, as in the First Experiment. You have, faith he, another fign more certain of the purification of this Individual (the Salt of Tartar) namely, when this most precious Salt will remain in the Vessel upon Fire in the Form of an Oyl, but being removed from the Fire, will fuddenly be congealed. But dearest Son ! Let not the Prolixity of time be inklome to you, in dissolving and congealing this Matter to often, to take away Corruption, which remaining, it can never be joyned with its Spirit extracted from the most precious, and its nearest Individual, which is the best Wine, freed from all manner of Humidity and Corruption : Then Circulate it in a Circulating Vessel, and so reduce it into a Quintessence, and it will forthwith embrace its Spirit : this Circulation we performed at first

Univ Calif - Digitized by Microsoft ®

10:

in thirty days, but afterwards compleated the fame in forty days, which Circulation was much better than the the first, because the longer it is circulated, the more is it purify'd, and adepted for any of our Physical Operations, which order when need requires, you also must observe.

Menstruums of this kind may be divers ways made not only out of the Alcali of Tartar, but other fix'd Alcalies may be also taken in-flead of that, as proves the following Menstruum.

26. The Simple Vegetable Menstruum producedf rom the three Individuals of Lully. it becaufe but livle w.22 c .mirsex In nce, which H (Tartar

W the first Chamber is fignified, that our Mercury's in the

Ake Aqua Vite fo acute, as to burn a Linnen Cloth, which od w transmit again through an Alembick, that it may be perfectly rectify d: Then take the Salt of Celandine, Salt of Mans Blood, Salt extracted from Honey, as you have them above in their Experiments, all which Salts put together in an Urinal (Cucurbit) and upon every Ounce of those Salts pour four Ounces of the alorefaid Aqua Vitæ, cover it with its Antenotorium, (blind Head) then having a little time digested put on an Alembick, with a Receiver annexed, lute the joynts well, and diftil in Ashes, fuffering the Salts to go over together with the Water : If any thing remain, pour to it again its diffilled Water, and when all is come over, pour in new Salt again, to wit, one Ounce, and pass it through the Alembick as before. Thirdly, add again another Ounce of Salt, as above, and diffil, repeating this Magistery three times, every time adding new Salt: These things being done, Circulate this Water in a Vessel deep and narrow the space of fifty Natural Days, But observe that the Veffel refpire not." Circulation being finished, you will in the bottom of the Veffel fee a Sediment like the Urine of a found Man, which will be white; empty the Water warily into another clean Veffel, and be careful that the Sediment pafs not over with the Water, but remain in the bottom of the Veffel: stop the Vellal of the Circulated Water to as not to refpire, and keep it in Balfieb. Luni) and : drug an as not to re-Univ Calif - Digitized by Microsoft @

The

The preparation of the Salt of Celandine is in the Fourth Experiment. Then take the Afhes of Celandine, gathered in the Month of May at full Moon, with its Roots and Flowers, and put them in a Glass Vessel, and thereto pour the water of Celandine distill'd in Balneo, that you may from thence extract a Salt; and let the matter boyl two hours in a most foft Fire of Afhes; empty the diffolution into another Veffel, but dry the undiffolved Earth ; and when the Veffel is cold grind it, pouring again new water upon the Afhes as before; make it boyl, and decant the diffolution, as before. This Magiftery repeat, till you have extracted all the Salt, which is the Mercurial part of that Individual : then take all those diffolutions and filtre them, that they may be purged from Terrestreity; then distilling by Balneo, congeal; for the Liquor being gone over, in the bottom of the Veffel will remain a Mercury or Salt of a white colour ; which Salt you must diffolve and by turns congeal three times; and by this means you will have extracted the Mercury out of this matter, which hath virtues almost innumerable in acuating the Vegetable Spirit drawn from Wine, and hath the power of diffolving all Metals with the prefervation of their Vegetative and Germenative Form.

(63)

The fixed Salt of Man's Blood is thus prepared in the Eleventh Experiment. Take Blood drawn from found and cholerick men, and put it on a clean Table, and fo let it dry that the Phlegm may be feparated from it ; then take the Blood, grind it very well, and put it into a Glass Body, and with a flow Fire diftil the water, which being diftilled keep apart; and having augmented the Fire a little but not too intenfely, left the Salt perhaps fhould fublime ; let only the moifture and fuperfluous Oyl exhale till it will distil no more; then the Veffel being cold, take the burned Earth, put it into a Veffel stopp'd close to keep it from respiring; for in respiring it would vanish away into Smoak : fet the Veffel in a reverberating Furnace, but the heat must be exceeding temperate, that the Salt of the Matter which is volatile, and not fix'd, may not exhale ; and that the Veffel may not by the violence of the Fire be broken, as hath hapned to us; and let the matter fland in that degree of heat the fpace of two days, and it will be calcin'd; which done, let the Veffel cool, and being cold, open it; and upon the calcined matter pour its OWII

- Univ Calif - Digitized by Microsoft D

own Phlegm, that is the water, which you diftill'd at first; fet it boyl upon ashes two hours, that some part may be diffolved, and that which is diffolved decant into another Vessel, and again with new water do as before; and thus repeat till you have extracted all the Salt; then draw off the water by distillation in *Balneo*; and in the Vessel will remain the Salt as white as Snow, of a great many virtues; and if you acuate the Vegetable Fire with it, it will without doubt dissolve the two Luminaries with the confervation of their Vegetative Form: And with it may be made a most excellent *Aurum potabile*, to preferve the radical moisture in men, and expel many diseases.

The Third Experiment teacheth the preparation of the Salt of Honey, after this manner : Take new white Honey together with the Comb, put it in a Glafs Veffel to putrifie the space of fixty days; then diftil, &c. Then take the Earth (Caput mortuum) which remained in the Urinal, and being perfectly ground, put it in an Earthen Veffel, made of Valentinian Chalk, or of that which Crucibles are made of; or if you cannot have this Veffel, put the fame Earth between two Crucibles, one joyned to the other, and very well luted; then fet them in a reverberating or Glafs-makers Furnace, and there let them flay four or five days, fo will the Earth be white ; but if you do this work in a reverberating Furnace, have a care that the Fire be not too violent, for fo would the Earth evaporate; and if the Fire be too weak, it will never be calcined, a moderate heat therefore is requifite; thus, no fuch error can happen as we have met with; for when we began this work, we loft all the Earth by the violence of Fire; but to the purpole; this Earth being calcined, as aforefaid, and the Veffel cold, take it out and grind it; then pour the water which you diffilled by Balneo to it, and let the matter boyl two hours upon afhes, and empty the water into another Vessel from the Earth, which Earth you must dry with a gentle Fire. Upon the fame afhes pour new Phlegm, and let it boyl, as before, decant by emptying and keeping, as before, the diffolution of the Body; and thus repeat the Magiftery, till you have evacuated all the most precious Salt out of it, and converted it into water : Then take all those diffolutions, and filtre them through a clean Linnen-Cloth, which water you must distil by Balneo; at length in the bottom of the Vef-

Univ Calif - Digitized by Microsoft @-

fel will you have a most Precious Salt, or Vegetable Mercury : Which done, know the weight of the faid Congelation or Salt, and pour to it a third part of the Water, which you kept before, and which you rectify'd feven times in Afhes, (the acid Water of Honey) and ftop the Veffel with its Antenotorium, and fet it in Balneo five Days, then having taken away the Antenotorium, and put on an Alembick, you must with a temperate Fire by diffillation exhale all the moifture that will diffil, and that will be infipid, for the Earth hath received, and in it felf retained the Virtue and Acetofity of the Water: Then again imbibe the Earth with new Water as before, and repeat the Magistery by imbibing, digefting, and diffilling fo oft as before, till the Earth hath attracted and imbibed allits Water: And fo by the help of the living God will you truly have the Vegetable Salt drawn from this individual, which Salt is most precious, and hath the power of acuating the Vegetable Mercury, and diffolving the two Luminaries, and all the other imperfect Metals : And with this may Metalsbe reduced into their first Matter.

To thefe Salts requisite for this Menstruum of Lully, I will add the fifth Experiment, which teacheth to prepare Alkalies from Portulaca Marina, Apium Sylvestre, Squilla, Euphorbium, Pyrethrum, Rosmarinus, Herb Mercury, Solatrum, Oliandrum, &c. with all which you may acuate the Vegetable Mercury drawn from Wine, either joyntly or severally.

This fort of Menstruums is made not only out of the Alkalies of Vegetables, but also out of Mineral Salts, such as common Salt, Sal Gemma, Alum, &c. Thus it is made.

27. The Circulatum Minus, or Water of Salt Circulated of Paracelfus Lib. 10. Archidox.

TAKE the true Element of Water, or inftead thereof another Salt which hath not been as yet boyl'd to plain Drinefs, or also Sal Gemmæ putrified; pour two parts of the water mix'd with a little Juice of Raphanus to it, putrefie in acurate digeftion, the longer the better; let it afterward congeal.

234

and putrefie again for a Month; then diffil in a Retort, the remainder urge with a firong Fire, that it may melt; reverberate in a Retort, with a continual Fire, diffolve upon a Martle, the water flowing from hence pour to it, and putrefie again; diffil again even to an Oleofity; joyn it with the Spirit of (*Philofophical*) Wine and that which is impure will fall down, which feparate; but let the pure be criftalized in a cold place; pour on again that which is diffilled, and cohobate fo off' till a fixed Oyl remains in the bottom, and nothing fweet goes over; Digeft moreover for a Month, then diffil, till the Arcanum of Salt pafsover through the Alembeck: Nor let long labour grieve you, for this is the third part of all the Arcanums, which are hidden in Metals and Minerals; and without which nothing can be made ufeful or perfect.

(66)

The fame Circulatum bath Paracelfus described in his Treatife of reducing Metals into their first matter or running Mercury : (which is the fourth Treatife in Rofario novo Olimpico Benedicti Figuli(which Description we thought good to compare with this. that they may illustrate one another. Take, faith he, Sal Gemme most finely pulverized; put it in a strong Crucible, and increasing the Fire by degrees, melt the Salt, being melted, keep it fo for the fpace of three Hours; the Salt being cold, pulverize it again, and melt it in a new Crucible, according to the aforefaid method, and fo proceed five or fix times; then to the pulverized Salt, pour fo much of the hot Juice of Raphanus that it may be diffolved (mix the Salt, and squeeze it with a little of the Juice, with a wooden spoon, in a wooden Vessel; being dissolved. strain it through a sleeve, and set it apart; add again a little of the Juice, and repeat till all the Salt be diffolved) coagulate or draw off the water by an Alembick; reduce the Salt into Powder: putrefie in Balneo fix days; then diftil with an open Fire, like Aqua Regis, observing the degrees of Fire, still nothing more afcends; force it with a most flrong Fire for an hour that it may be throughly calcined ; pulverize the Salt, being yet hot, very fmall on a Marble, and let it be diffolved by it felf in a moift place; putrefie all that is diffolved in Bakneo three days ; then diffil gradually, by the Rule of Art, all the Liquor. through an Alembick in Sand; the remaining Body being well pulverized diffolve on a Marble, putrefie, and diftil as before ; ·repeat

repeat this three times; the remainder reduce into Powder and put in a Cucurbit; to which pour these three distilled waters, putrefie five days, and again diftil in Sand; thus putrefying and diftilling, all the Salt will at length afcend through the Alembick, except a little Caput mortuum to be caft away:" but the water difilled from the fubftance of the Salt, putrefie for a Day and a Night, and rectifie twice or thrice, and you will have the water of Salt.

(67)

This Menstruum made of Sea-falt, or Sal Gemmæ, Paracelfus made choice of before the rest of the simple Vegetable Menstruums, as the best, because according to his Doctrine, it is the Matrix or Center of Metals and Minerals. Because, faith he, being instructed by Experiments, and having in other Books alfo made mention, that the primum Ens, or fifth Effence of the Element of Water, is the Center of Metals and Minerals, and having elfewhere alfo added, that every product ought to dye in that in which it received life, In a German Manufcript thefe Words are thus read, Das ein iegelich frucht in feiner Mutter, darinnen es das leben uberkommen, sterben muss, That is, every Fruit ought to dye in the same Matrix in which it obtains its Life, that afterwards it may receive a new Life better, and fo by the deposition of the old Body be reduced into the primum Ens, or first Being : The way therefore of extracting the Center of Water, in which Metals ought to depose their Body, will I here add.

This Menstruum we will explain by its Branches; whereof the First is, Oyl of Salt diffolved per deliquium. In the first process he diffolves Sea falt, or Sal Gemma, in water mix'd with the Juice of Raphanus, putrefies, and with a stronger Fire distils; but the Caput mortuum (the remaining Salt rather) he diffelves an a Marble per deliquium. In the Jecond Receipt he disolves Sal Gemme, being first five or fix times melted in an equal quantity of the Juice of Raphanus made bot, then congulates, putrefies, and distils like common Aqua fortis; the remaining Salt reduced into Powder, being as yet hot, he diffolves per deliquium in a moistplace. Sometimes he does without this Rinking Juice of Raphanus more compendiously prepare that Oyl. of Salt per deliquium, and that is, from Salt calcined with Nitre: The Receipt is to take of common Salt, and the Salt of Urine equal parts, to be by the Rule

Rule of Alchymy calcined two hours, then refolved in a Cellar after the usual manner, Sc. From this calcined Salt is distilled a Spirit, which refolveth Gold into Oyl; but if it be again extracted, and to the highest degree prepared, a most excellent Aurum potabile will be had, but without that extraction (Distillation) the Gold is only refolved; then is it a most pure Art for Goldsmiths in guilding, and for Iron-smiths a constant and precious Treasure to guild with ; yet they that prepare it ought to be skilful Alchymists. Libro de rebus Nat. Cap. 4. de Sale. pag. 190. That Paracellus, by the Salt of Urine intended Nitre is eafly proved by what follows. In what place foever (faith he) the Urine of Man or Beaft is poured forth, at the fame fucceeding time is Sal Nitre produced; for Urine gathered and prepared into another Salt, is called Sal Niter. ibidem. But the fame Receipt, Tract. de Sale, pag. 171. Puts it out of all doubt, being thus described. Take Salt and Sal Nitre in equal proportion; let them be calcined by themfelves till they melt, then refolve them into a Liquor.

ghis

War

The Second is, The Oyl or Effence of Salt. In the first process he takes the Oyl of Salt per deliquium, and cohobates it fooft with the Spirit of Philosophical Wine, till the Salt remains. at the bottom in a form of an Oyl, and no Phlegm ascends; but if instead of the Spirit of Philosophical Wine any Vegetable Menftruum be taken, as for example ; the Menstruum which we treat now of, being already prepared, or Salt circulated, there is no necessity for the Salt to be diffolved per deliquium, but is with lefs pains reduced into an Oyl or natural Effence. Though, faith he, there are more ways to extract the Ens primum of Salt, yet this is. most commodious and most expeditious; and after this, there is. that other way which we mention'd, speaking of the Elixir of Salt, namely, that new Salt mix'd well with the diffolving water, which is the diffill'd Spirit of Salt, the Circulatum minus made of Salt, the water of Salt circulated, (the Arcanum of Salt, the Menstruum which is now in hand) must be putrify'd, and diftill'd fo long, till the substance of the Salt be diffolved, and reduced into a perpetual Oleofity, the Body in the Form of Phlegm being abstracted from it. The place alleadged is in Lib. 8. Archid.de Elixeriis pag. 31. Take Salt well prepared, most white, and pure, put it into a Pellican, with fix times the weight of the diffolving. Univ Calif - Digitized by Microsoft ®

folving water (by the diffolving water is our water of Salt (circulated) to be understood. Lib. 10. Archid. pag. 38.) Digest them a month together in Horfe-dung; then feparate the diffolving water by Distillation, and pour it on again; and feparate, as before, and that fo oft, till the Salt be converted into Oyl. This way of making the Effence of Salt with the Circulatum minus, is much better, and more exquifite than that formerpreparation performed by the Spirit of Philosophical Wine, though Paracellus affirms the former method to be more uleful, and more exteditious than the latter; which is to be understood of the use of both, not the preparation : For the Escence of Salt is both sooner and better prepared with Some Circulatum minus, than with the simple Spirit of Philosophical Wine ; from which Effence of Salt which way soever made, is prepared the Arcanum of Salt; which reason will have more commodious, and more expeditious, in extracting the Effences of things, than the Oyl of Salt, not yet fo graduated. In, the second Proces, Paracelfus commands, indeed, the Oyl of Salt; made per deliquium to be putrefy'd ; but as to the means of putrefaction, whether with the Spirit of Philosophical Wine, or some fimple Vegetable Menstruum makes no mention, without which not -withstanding the Salt would not ascend in the Alembick, and if it were distilled, yet would it be of no use in extracting Estences : He putrify'd therefore the Oyl of Salt per deliquium, for Some time with the Spirit of Philosophical Wine, then being putrifyed, distil it with a stronger Fire, the refidue of the Salt he again diffold d on a Marble. and being diffolved, putrify'd and distill'd it with new Spirit of+ Philosophical Wine, or Some Simple Vegetable Menstruum, 10, often, till he had distill d the whole into Spiritual Water of Salt.

The third Branch confilts in the Reduction of the Effence of Salt into the Arcanum of the fame; for the Natural (that is, Saline,) Effence of Salt, doth by being cohobated fometimes with the Spirit of Philosophical Wine, afcend together with it, becomes fweet, and is transmuted into the Arcanum of Salt, or Artificial Effence, of which Arcanums more in the fecond Book of Medecines. Common Salt therefore distilled with the Spirit of Philosophical Wine through and Alembick, is the Circulatum minus of Paracelfus, the Aqua falis, circulati, the Primum enstalis, the Arcanum falis, the Aqua folvens, the Spiritus falis distillatus, the Matrix and Center of Metals and Minerals, Sc. It is called Circulatum, by reafon of the Circulation.

From

culation or Digestion of the Essence of Salt for a Month with the Spirit of Philosophical Wine, or which is more probable, because of the common Circulation of all the Vegetable Mentruums for the space of 30, 40, or 60 Days, after the Menstruum was already made, 10 that this Circulation, though omitted in our Receipt, must be underfood in these Circulatums of Paracellus : It is not therefore called Circulatum minus, as if common Salt had lefs Virtues in diffoluting. than the other Salts, but because it hath those only, and not the quality of tinging superadded, as the greater Circulatums: after the same manner as Salt is made a Circulatum, may also Vitriol be made a Circulatum, Alum a Circulatum, Tartar a Circulatum, Gc. This way alfo, faith Paracelfus, is the Arcanum or Magistery to be made of Vitriol, as allo of all other Salts, Lib.

From

9. That the e Saits are called Harmoniack, by reafor of the Harmony on 1, swindto sw erginson out mortave you, faith Lally, the formal Harmonick mixtion of all the Elements

1. That by Aqua Vitx, or Spirit of Wine, the Adepts did not in the least intend Common, but Philosophical Aqua ardens; for Common Aqua ardens will never perform that which is defined in these Receipts; and it being granted, that it seems to perform, yet Menstruums so made, cannot be Menstruums of the Adepts, but Common, of no efficacy or esteem in the more secret Chymy.

2. That Balilius has indeed fometimes used tommon Aqua ardens for his Menstruums, but never by it. Jelf, but mixed with Vegetable Sal Armoniack, or Philosophical Salt of Fartar (that is, with the Spirit of Philosophical Wine) volatilized; which Salt, being brought into a liquid substance by virtue of this Spirit, is his Menstruum; for he separates again from thence the Spirit of Common Wine, either by Flame, or by quick Lime.

3. That the greater quantity of Sal Armoniack is joyned with the Spirit of Philosophical Wine, the stronger are these Menstruums made; wherefore Basilius his Menstruums of this Kind, from which all the common Aqua ardens is separated, are to be reputed among the best.

4. That these Mensiruums are the Magistery of fixed Salts, by Paracelfus call d the less Circulatums, or Arcanum of the Alkali of Tartar, Beans, Wormwood, as also common Salt, Alom, Nitre, &c.

5. And therefore that these Menstruums are Medecines.

6. That these Menstruums may be made several ways; as these out of the Sal Armoniack of Lully, by the method of Paracellus his Circulatums, and so on the contrary, provided the Alkalies or fixed falts be volatilized, and distilled together with the Spirit of Philosophical Wine through an Alembick.

7. That the Spirit of Philosophical Wine is not easily mixed with these Salts, but by certain degrees: First, He extracts the Tincture or Soul from them, that is, the more unctuous parts; which being more volatile than the rest, are then easily distilled into a volatile Tincture, or (to use Luly's phrase) into the animated. Spirit; then the remaining Earth, being now fixed by the same means, is again volatilized by absorbing the said animated Spirit by degrees, and sublimed into Sal Armoniack.

8. That thefe Sal Armoniacks are fublimed with a very firong fire. 9. That:

9. That these Salts are called Harmoniack, by reason of the Harmony ar Perfection of their mixtion. So have you, faith Lully, the formal Harmoniack mixtion of all the Elements; wherefore wonder not, if we call it Sal Armoniack; for so it is called, because of its exalted and sublimed property the pure and first Matter of Nature, Lib. Mercur. pag. 155.

10. That the volatile Salt of Tartar, the volatile Salt of Wormwood, Carduus Benedictus, Gc. common volatile Salt (by Paracelfus call'd Sal enixum) are rightly term'd Sal Harmoniacks, Philofophical Vegetable Mercuries, and Sulphurs of Nature, Gc.

11. That the Spirit of Salt, Nitre, Vitriol, Aqua fortis, &c. are by being cohobated with the Spirit of Philosophical Wine made sweet.

29. The Calum Vinofum of Parifinus made of the Salt of Philosophical Wine. In Appendice Eluc. Pag. 271. Vol. 6. Theat. Chym.

Ake the Philosophers first Matter, called Chaos (Vegetable Mercury, the Philosophers Wine) distil its Spirit (ardent) and Watery Element (Phlegm) in its convenient Veflel, as we shall teach in its proper place, till its Body remain in the bottom like melted Pitch, which by two diftillations wash with its Watery Element, then pour its Spirit to it, four Fingers above it, mixing the Matter well, till it be well united, and fet the Vessel to distil in Balneo with an easie heat : then put it into Putrefaction fix Days in a convenient Veffel, and diftil in Afhes, (the animated Spirit) then take other Spirit, (ardens) and that being poured to it, put it again into Putrefaction fix Days, and fo repeat this Magistery, till you fee that the Spirit has imbibed and extracted the Soul out of the Body, an infallible fign of which will be, when you fee its Earth hard and dry : for then may you be affured, that the Body is for its health-fake dead, which you may vivify and make incorruptible, and it will no more fear Death, nor Corruption in this World. Now take the aforefaid Body, first weigh it, then put it in a convenient Vessel, and pour to it an eighth part of its Spirit (animated Spirit) Univ Calif - Engilized by Microsoft ® which

which extracted its Soul, then put your Vessel in a Fire of dige-ftion, (which we shall speak of atterwards) and continue the Fire till you fee that the Earth hath imbibed its Liquor : then open your Vessel, put on an Alembick, and gather that little fweat, which will have the tafte of hot Water : Imbibe now your Matter for a fecond time with a feventh part of the aforefaid Spirit, which contains the Soul, and proceed in the methodizing of the aforefaid Magiftery : Now for a third time imbibe with a fixt part, for a fourth time imbibe with a fifth part, for a fifth time imbibe with a fourth part, and do not multiply the weight of the aforefaid Spirit, but continue it fo, observing the aforefaid Method, till the Matter, which hath drunk up its Spirit, and is again united with its Soul, be white. Take now the aforefaid Earth, and put it in convenient sublimation, the lower part of the Veffel being luted below the Matter, and make the pure part fublime from the impure, and fo will you have our Mercury, which is clear and fhining as a Diamond. This is that which the Philosophers do by divers Metaphors, call the first Vegetable Matter, Sal Armoniack, our Mercury, our Sulphur of Nature, whereas notwithstanding 'tis one and the fame thing. Take the other Simple Spirit; which you first extracted out of your Chaos, that which hath not extracted its Soul, and make it more pure and fubtil by the way following: Take of the Vegetable first Matter (Sal Armoniack) which you made before, one Pound, and put it in a convenient Veffel in Balneo, till the Matter diffolve it felf (per deliquium) then putting to an Alembick, diftil the fuperfluous Water, then pour on three Pounds of the aforefaid Simple Spirit (ardens) and the Veffel being conveniently ftop'd, as will be manifested below, put it into Putrelaction for one Natural Day, after the manner following: Get you a Brass Vessel, about one span and a half broad, and three spans and a half long, which towards the Orifice must have a Copper Bottom pierced with many Holes, the Cover whereof, which is to go into the Veflel, and ftop it well, must have one or two Holes : but the Glass Vessels, which you would put to that Copper Veffel, ought to be conveniently covered : in the lower part of those Copper Vessels of Putrefaction must be common Water, those Copper Veslels put upon a Furnace, making a moderate Fire under, by the ftrength of which Univ Calif - Digitized by Microsoft ® the

(74)

the fume or vapour of the Water will afcend, and heat the Veffels, in which your Matter is; the whole work of our Supream, Magistery will be matured and prepared by this Method, then diful conveniently in Afhes with a heat, fcarce unlike to the heat of the Sun, till you have drawn all the Juice from it, then diffolve the Matter by pouring to it of the aforefaid Simple Spirit three parts, in respect of the Matter, which remained in the Veffel, after the aforefaid Juice wasabstracted from it ; Repeat the Magistery a fourth time, proceeding and observing all things exactly as above : So will you have the Spirit of your Chaos. which is by the Philosophers called Fire depurated, reduced from power into act with the Virtue of the Vegetable Matter. Take therefore a Glass Veflel, strong, able to contain the meafure of a common Urne, pure and long, whole Neck must be ftrong, and two spans and a halflong, whole Cover mult be another Glass, called Antenotorium, with a Neck turned downward, containing the fourth part of a common Urne, to be put into the aforefaid Veffel: Into this Circulating Veffel put four Pounds, and no more, of the depurated Spirit, which you brought from power to action, by Virtue of the Vegetable Matter, as I taught you before, Circulate in Balneo, or Dung the space of fixty Days, and when Conversion is made of the Spirit deduced from power to action by the first Vegetable Matter, then this you will thereby know, that in the bottom of the Veffel will be a Sediment, like the Urine of a found Man: Then will you fee a Quinteffence brighter and clearer then a Diamond, which exceeds the Stars in fplendour, fo as to be doubted, whether it be contain'd in the Glafs or not: which you must dexterously feparate from its Sediment, and keep in a Veffel close stopped in a cold place : This is that Virtue which the envious have hidden, and obscured by innumerable Metaphors, calling it Spiritus Vivus, Aqua Argenti vivi, Aqua Vitæ, Aqua Celestis, Aqua Dianæ, Anima Menstrui Vegetabilis, Fumus, Ventus, our Heaven, Menstrual Blood, Urine fublimed, Menstruum, our Water of Sulphur, our Bleffed Stone, giving it infinite other Names, which we mention not here, but have by Experience feen and known them to be one and the fame thing. (76)

Most of the Adepts knew no other but this way of acuating the Spirit of Philosophical Wine, for they believed there was one only thing, and one only Method : but this is not the last among st the difficult Methods, nor much different from the Cœlum Vegetable of Lully made of the Alkali of Tartar. The Tartar of this Wine is less Oyly than common Tartar, and therefore adjoyned to this, as a higher Kind; but that we may the better understand the Receipt, 'tis convenient to compare it with its Original, taken out of the last Testament of Lully.

30. The Calum Vinofum of Lully. In Testam. Novisf.

the aloretaid Veffelt Into this Circulating Vefel put four

common Etme sine and lo a model lock must be

Ake Red Wine, which we call the Liquor of Lunaria, and Nigrum nigrius nigro, and distil an Aqua ardens in Balneo, and rectify it, till it be without Phlegm, which you will know, when it burns a piece of Linnen Cloth, by reason of its heat, which you will make it do in five times, fometimes in three, and having fuch a fign, divide it into two parts, and keep one part for the making of the Menstruum, and with the other part abstract the Soul from the Earth (a pitchy mais) by the way which I shall tell you. The way, my Son, is, to distil the Phlegm, till it remain in the form of liquid Pitch, then put to it of the Water (ardens) which you rectify'd, fo much, as to fwim three Fingers above the Matter, 1 and the Veffel being very close, fet it in Dung or Balneo fix Days to digeft, after that diftil all the Water, in which is the Soul, upon hot Ashes, then increase the Fire a little, and take out the Oyl, which keep: then pour in of the other Water (ardens, or Spirit of Philosophical Wine) as before, and put it in Putrefaction fix Days, as before, and then distil in Ashes, first the Water, then the Oyl, and thus continue the Magiftery the fame way, till you have extracted all the Soul from the Earth, keep it, because it is the animated Water, and keep the Oyl for the Tincture : Then take the Earth being dry and hardned, Univ Calif - Digitized by Microsoft @

hardened, and calcine till it grows white, being white, give the Soul in the Water referved to it. My Son ! the way is this, Take the Earth being white and depurated (Salt) and know the weight, put it in a Vessel of Glass, and pour upon it an eighth part of the animated Water, the Veffel being very clofe, and place it in Balneo three days, till you fee the ardent Spirit condenfed in the Balneo, and rectify it, till it be without Phlegm, then having put on an Alembick, draw off the Liquor without tafte, becaufe the Soul hath embraced the Spirit, which is in that part; and imbibe a fecond time with a feventh part of the animated Water, and digeft as before, and diftil away the moifture : A third time imbibe with a fixth part, digest and distil away the VVater : A fourth time pour on a fifth part of the animated VVater, as before : The fifth time give a fourth part, and digeft as you know; and continue with the fourth part always digefting and drawing of the Liquor, till our Earth be pregnant and white: Then take the Earth being pregnant, and put it in a fubliming Veffel luted and very close in a Fire of the third degree, the fpace of twenty four Hours, and fublime the pure from the impure : And thus my Son will you have the Vegetable Mercury fublimed, clear, refplendent in the Form of a wonderful Salt. Know you must my Son, that the Philosophers and we do call it properly Vegetable Sulphur, Sal Armoniack, our Sulphur, the Sulphur of Nature, and many other Names we also give it. Take, my Son, of this Vegetable Sulphur, which you made, one Ounce, put it in a Glass Vessel, and pour upon it three Ounces of the VVater, (Aqua ardens rectifyed to the highest) revealed to you before, and the Veffel being covered close, put it in Balneo for one Natural Day, then Diftil in Afhes, till all afcend that can, then know the weight of the Salt remaining at the bottom of the Vessel, and pour to it three times its weight of the aforefaid Aqua ardens, and put it in our Balneo the space of one natural Day, then Distil in Ashes, and thus do three times : Then is all the Vegetable Salt come over the Helm with its own VVater, and mixture is made, and the Water clear, which we call Simple Menstruum. My Son! Take a Glass Vessel, which must be white Glass and found, and it must be a large Vessel, and put into it four Pounds, or fix (at most) of this Menstruum thus simply diffolved, and the Vessel being well shut and fealed,

Univ Calif - Digitized by Microsoft ®

(77)

put

put it in Balneo or Dung, the space of fixty Days, and it will in that time be converted into a Quintessence exceeding Glorious and Odoriferous, which you will know, when you fee in the bottom of the Veffel a Sediment, like that in the Urine of a well Complexioned Youth, and it will be clear and resplendent, as a Star of Heaven : Keep it in a hot and moist place, as is a Balneo, feparating it first from its Sediment, and sealing the Vessel well as may be.

Both Receipts agree in all things, except that Lully calcines the dead Earth, and by diffolving in common Waterand calcining, purifies it; Parifinus not fo: this Earth notwithstanding seeming by this way of putrifying to be made fitter for the Reception of its Spirit; The Receipts confift of these two parts, the preparation of the Vegetable Sal Armoniack, and the Reduction of the same Salt into a liquid Substance or Menstruum: The preparation of the Sal Armoniack is effected by two Operations: In the first, the Soul is extracted out of the Body by Virtue of the Spirit, to exanimate and fix the Earth, and make it melt like Wax on a red het Plate : In the fecond, the Soul is stored to this fixed Earth by times, and this varioufly, to make it Volatile : In both Receipts as well of Lully, as Parifinus, the animated Spirit is restored to the Earth so examinated, in an eighth, seventh, sixth, fifth, and fourth part of its weight, till it wholly evaporates upon a fiery hot Plate ; this method of im-pregnating, or revivilying the Dead Body will be confirmed and illustrated by the

Vegetable Sal Armoniack of Parifinus. In Apertorio Cap. F. and L. and parte secunda Cithara vel Violetta, and Cap.5. Elucid. pag. 235. Vol. 6. Theat. Chym.

Ur Vegetable Mercury is that Principle to be admired J above all other things of this Art, which confifts in the preparation and ablution of its most precious Earth, which is of fo great Virtue, as not to be comprehended by the wit of any Men, those only excepted, who have attained to the miraculous effects of it. Our purpole is to take the matter remaining (in Univ Calif - Digitized by Microsoft ®

the

the distillation of Philosophical Wine) like melted pitch, to which pour of its Death (Phlegm) the height of four fingers above it, agitate; that the tincture, or unctuous superfluous part of it. may be diffolved, let the matter fettle, decant the tincture, to the remaining matter pour new Phlegm, agitating and decanting fo oft, till no more tincture afcends, and the Earth remains, white, fparkling like a Diamond, which dry in the Sun or fome fuch heat ; being dryed and pulverized, pour to it of C, that is, its (ardent) Spirit, fo much as will fwim upon it the space of four Fingers, digeft in a blind Head three natural Days, then diftil with a stender heat of Ashes, till the Veins disappear, take away the Receiver, stop it well, put another to, diftil away all the Phlegm with a Fire fomewhat ftronger, cool the Vefiel, take out the Matter being hardened, pulverize, and putting it in the fame Veffel, pour to it of C the breadth of three Fingers, lute, and putrefic three days, take away the blind Head, diftil through an Alembick, till the Veins afcend, then change the Receiver, as before, repeat these Operations; till the Earth remain white, and fume not upon a hot Plate : Now take a Phial, put the aforefaid Earth into it, lute well the Neck of the Phial, and fet it to digeft, or calcine rather in Afhes, and you will have your most. precious Earth now fit to receive its Spirit (animated) or Soul, with the confervation of its radical moisture. Take this Earth. put it in a round Veffel, a hands breadth deep, broad about the. Orifice, and imbibe it with its Soul, or animated Spirit, as we fhall declare, cap. L. thus have you fo full an Inftruction of this. Matter, that 'tis impossible for you to err, if you be a faithful. Christian. I promised (he goes on cap. L.) to give you full direction for the making of all forts of Sulphurs for our Magiftery, that is, Mineral, Vegetable, and Animal Sulphur. Wonder not, that I did first fublime, and vivify the Mineral Sulphur of Nature, I doing this, to give them in order, and that you might the better attend your Practice and Theory: though I know, you are not ignorant, that no diffolution can be made without either Vegetable or Animal Sulphur, Now to our purpose; Take the Vegetable Earth prepared, as I taught you cap. F. imbibe it with its animated Spirit, giving an eighth part of it, (in respect of the Earth) cover the Vessel with a Blind Head, digest eight days in Balneo, then lay afide this Head, and draw of all

(79)

Univ Calif - Digitized by Microsoft ®

the

the infipid moifture in a gentle heat of Afhes, or of the Sun : then imbibe with a feventh part, digefting in Balneo, and diftilling in Afhes, asbefore ; then imbibe with a fixth, then a fifth ; laftly a fourth part, and with this quantity repeat the reft of the imbibitions, till the Earth hath drank up two parts and more of its weight : Then take the Earth out of the Veffel, pulverize, and put a little of it upon a red hot Plate, if the greateft part of it fume away, put the powder into a Sublimatory, and fublime the Philofophers Sal Armoniack, giving the beginning of Vegetation to both the terreftrial Luminaries (Gold and Silver) without which, neither the Vegetable nor Animal Work, yea nothing at all can be done in this Magiftery.

This Volatilization of the fixed Earth the Adepts performed other ways alfo, not always observing the order of the aforesaid weights of the animated Spirit, in the resuscitation or impregnation of the dead Body: For sometimes they imbibed this exanimated Earth with an eighth part of its animated Spirit so oft, till it became animated again, and was made Volatile. Thus Lully made his.

The Vegetable Sal Armoniack of Lully. Libro de materia Vegetabili in practica quarta.

Ake excellent Wine either red or white, diftil by the Rule of Art an ardent Spirit, burning Cotton, evaporate the Phlegm till the Matter remain thick, as melted pitch, to which pour of the ardent Spirit fo much, as to fwim four Fingers above it: digeft for a week in Balneo, then diftil the animated Spirit by Ashes, to the Earth pour new ardent Spirit, repeating so oft, till the Earth remain dry, and in the Form of powder : Moreover, you must from the Earth distil an Oyl in Ashes with a Fire fufficiently ftrong, fo as that the Earth being laid on a red hot Plate, cafts forth no fume. That Oyl, as also the Phlegm are of no value in the present Work. Calcine or Reverberate the faid Earth in a close Vessel, to which pour of the animated ardent Spirit an eigh part in an Alembick, digest in Balneo three days, then gently draw off the fuperfluous moifture, being infipid as common Water, imbibe as before, and continue fo oft, till the Earth

Univ Calif - Digitized by Microsoft @

Earth in a close Vessel, to which pour of the animated ardent Spirit an eighth part in an Alembick, digeft in Balneo three days, then gently draw off the fuperfluous moisture, being infipid as common Water, imbibe as before, and continue fo oft, till the Earth be made Volatile, which you will know, if a little of it put on a red hot. Plate be almost wholly evaporated : This impregnated Earth sublime with a subliming Fire the space of twenty four Hours: The Volatile and fublimed Salt fublime by it felf yet twice, which is to be with the ardent Spirit diffolved, diffilled, and forty or fifty days Circulated into an Odoriferous Liquor.

Sometimes they impregnated the Earth from the beginning to the compleat faturity of it, with a fourth part of the animated Spirit, thus :

The Vegetable Sal Armoniack of Lully. In Apertorio suo.

Ake of the best Juice of Lunaria, that you can find, one Pound or two, and put it into a Veffel with an Alembick, the feams being well joynted and luted, fet it in a little Furnace, and underneath make a Fire of one wiek, and with fuch a gentle heat let the aforefaid Spirits be distilled, and so long, till it begins to make Veins : When therefore the Phlegm begins to shew Veins, then is it a fign, that the Spirit is diffilled, which contains in it all the perfection of Life, and then take that diffilled Spirit, and keep it very choicely in a Glass well ftopt with white Wax. then put another Receiver under the Alembick, and receive the fecond Water, because it retains yet something of the aforefaid Spirit, though not fo ftrong as the first : distil from that second Water fo long, till nothing elfe comes but Phlegm, which is no otherwise then as common Water, tafting a little, if it has yet any Virtue, than may you distil yet more, but if it be as the other Water pure in tafte, then lay afide the Receiver with that fecond Water, and put another Glass to receive all the Phlegm, diffilling fo long, till nothing more diffils, and then let all the Phlegm be poured away, because it is that, which brings Death to our Univ Calif - DiNtized by Microsoft @ Precious

Precious Stone, and this the vulgar knows not, but we know. Now have you the Earth, which remained in the bottom of the Veffel black, like melted Pitch : For that calcination of the Earth cannot be done with a ftrong Fire, as Sophiflers believe. but it is doneby its own Spirit, which keeps it from burning becaufe its Spirit draws the Soul from its Body, and repels its fuperfluous Phlegm, and mortifies the Earth, and then vivifies it : Now therefore calcine the aforefaid Farth in this manner; Take the fecond diffilled Water (Aqua ardens mix'd with Phlegm) and pour it upon the black Earth (Pitch) in its Veffel, and mix well. till it be diffolved, becaufe the Earth is prefently diffolved. Then put on an Alembick, and lute well, and diftil the Spirit with one wiek, as I told you before, till you fee Veins, then again feparate the Receiver of the Alembick with the Spirits, and fet it apart. and put another Receiver to, and diffil on, looking if there be yet any Spirits there, if not, then the Water which is distill'd. hath a tafte like hot common Spring Water, which put away again, becaufe fuch Water is Phlegmatick, which caufeth Death to our Stone: And after the whole diffillation take the Veffel with all the Matter, which you will then find more hard than before, and this is the reason, because that Spirit hath attracted the Aereral Soul to it from its Body, it being the place in which the Soulis contained : that Operation repeat fo oft. till you fee your Matter calcined in the bottom in the Form of a black Powder, or even fo long, till you fee no more Phlegm arife. fo asthe last Water to be of as great virtue, strength, smell and tafte, as the first : And you must not be ignorant, that in the third distillation those two Spirits (ill and well restify'd), are to be mixed together upon their Earth, folong, till the Earth and Spirits have those figns aforefaid, namely, the Earth be calcined. and the Spirits yield no Phlegm. Then take the Earth, and with it a fourth part of its weight of the Spirit, and put the Matter into your Vessel, which we call Retentorium, and place it in a Furnace, continuing an eafie heat fo long, till the Spirit be altogether coagulated in the Earth. Know Son! that the Body, which was Dead, puts on white Garments, as, if God pleafe, you fhall fee, when you try the things aforefaid. Son ! this muft yourepeat with new Spirit fo long, till you fee the Earth altogether white as Snow : and then is the Earth big and impregna-Univ Calif . Digitized, by Microsoft ted:

(82)

ted with Eternal clarity, which will bring forth an Infant, according to this way : When the Earth is very white, then Son? take it out of its Vessel, and grind it into a most fine powder. and this do upon a Glass Plate, then again put it into a Veffel, luting the Joynts of it well, and fet it on a little Furnace, and kindle a Fire, continuing it for thirty Hours, and in the corners and fides of the Veffel you will find our Infant, born and refufcitated in the likeness of a powder, most white, most fair, and in fuch clearness, as the Body of Silver: Keep it therefore in high esteem, because it is your Terra foliata, and it is called the Spirit of fublimed Bodies, converted into Terra foliata; fo winto the fame the Soul, Gc.

Sometimes they impregnated this Earth without observing any weight, as thus:

Another Vegetable Sal Armoniack of Lully. In Luce Mercuriorum.

Ake Wine red or white, putrify it in Balneo twenty days at least, that the parts of it may be difunited, and the better feparated, then by distillation of Balneo, with a most gentle Fire draw off the Aqua ardens, which put in rectification fo oft, till nothing of the Phlegm remains : then draw off the Phlegm by diffillation with a Fire of Afhes, till a certain matter remains in the bottom of the Veffel like liquid Pitch, and the faid Phlegm³ put apart: then take the faid matter, and pour to it of the Phlegm fo much, as to fwim four Fingers' above it, and put it for two days in Balneo, then one day in a Fire of Ashes, that it may boyl leifurely, and you will find the Phlegm much coloured. which empty into another Veffel : fet it in Balneo again for two days with new Phlegm, and for one day in Ashes, then empty it into another Veffel, and thus proceed till the Phlegm will be no more coloured, and if Phlegm be wanting, then take the coloured Phlegm, and by distillation draw off one half, or a third part of it by Balneo, and operate with it as before; but when that Phlegmis no more coloured, then will there remain in the bottom of the Veffel an Earth almost white, the Phlegm having at-Univ Calif - Dig N 22d by Microsoft @ tracted

tracted all the Oyl out of it: if you would separate them asunder, put them in distillation of Balneo, then the Phlegm only rifeth, and the Oyl will remain in the bottom of the Veffel most red. Take this Earth, and pour to the fame of Mercury, (Vegetable, or Aqua ardens) fo as to fwim two Fingers above it, and put it in a Fire of Ashes for one natural Day, fo as to boyl gently, then draw off (diftil) the Earth by a Fire of Afhesas before, and put it apart : And of new Aqua ardens pour to the faid Earth fo much, as to fwim two Fingers above it, and fet it in Ashesfor a Natural Day, then draw it off by distilling in Ashes as before : and thus proceed till there be no more Spirit (elfewhere called Soul) remaining in the Earth, but all pass'd over with the Aqua ardens, which you may know by the Earth remaining in a most impalpable powder, and putting it on a Firehot Plate it will yield no fmoak, which will be a fign, that it is without Spirit (Soul): which Earth put then into digeftion in an Athanor, and there let it stand ten days in a continued Fire. Then take of the Aqua ardens, in which the Spirit (Soul) is, and pour it upon the faid Earth, fwimming one Finger above it, and put it in an Athanor for one Natural Day: then fet it in Balneo, and by distillation draw off the Aqua ardens without the Spirit (Soul) the Spirit remaining in the Earth, then pour on other Aqua ardens; and thus reiterate, till the Earth hath drank up all its Spirit, which you will know by putting the Earth upon a red hot Plate, because the greatest part of it will turn into Smoak ; which Earth digeft for fix Natural Days in an Athanor, then put it in Ashes, increasing the Fire, till by the fublimation the Vegetable Mercury rifeth at the fides of the Veffel, and in the bottom remains the Terra damnata, which is not an ingredient to our Work : Which Mercury gather speedily, and whilst it is new; after its rifing, mix it with its Water for two days, and it becomes a Water which hath wherewithal to diffolve all Metals with the prefervation of their Form, and this Water wecall Vegetable Menstruum.

(84.)

Animal Sal Armoniacks may also be made the same way as Vegetable Sal Armoniacks thus is made.

The.

The animal Sal Armoniack of Lully. In Testam. Novissimo.

On ! there is another way of this animal Sulphur of Nature.) in which there is most accurate knowledge, as in Vegetables, which you must perform by the method which we shall teach you ; and Son! the way is to take the Urine of Young Men of good Complexion, and put it in a Glass Vessel forty days, till it be putrified : then take a Cucurbit, and putting on an Alembick in Balneo for the space of forty hours, distil a clear Water, and the Spirit will remain in the Earth (the Soul as Pitch) dry it being well luted, and rectify the Water feven times, and the white Salt (Volatile) which it made in every diffillation gather warily, that it may not feel the Air, and put it in its Water (Spirit.) Then put the Earth and Water (Pitch and Spirit) together in Balneo or Dung for four days, then diftil in the fame Balneo, and put it again upon the Earth, digeft and diffil again as before four days; then take the Water by it felf, and put it in Dung the space of two Natural Days, and distil in Balneo, and again putrify in Dung, and continue this order five times: Then is the Water (Spirit) perfectly rectify'd and clear. This work being ended, reftore the Water to the Earth (Pitch) and fet it in Dung, then diftil in Balneo, and dry up the Earth and the Alembick being taken off, and another Cover put on, fublime for the fpace of twenty four hours the animal Sulphur of Nature :: Then gather it together, and upon the Earth, which remained, pour its (animated) Water, and put it in Dung, and diffil in Bal+. neo, dry and fublime as before, repeating, till all the Sulphur Lefublimed. Son ! We have revealed to you every way of knowing our Vegetable Sulphurs, and also the animal Sulphur, with a Declaration of the whole Magistery. Now, with the help of God, we fhew you, that there is one way and means in the animal and in the Vegetable, without any variation.

Ibis Receipt being lefs clear; in making no mention of the Spirit of Philosophical Wine, and yet of no worth without it; I. will therefore add his: fixth Experiment: of the rational Animal; where thus : Very. Very great, certainly, and incomprehensible Gifts hath the most high God vouchfafed to us; in the acknowledgment of which, our Duty is both Day and Night to love, worthip, and revere him with our whole heart, and everywhere extol his Name with all our might : for befides his creating us out of nothing, and redeeming us with his most precious Blood, he hath also made Man partaker of all the Bleffings contained in the greater World, and for this reason is called Microcolm; for it has by divine infpiration been revealed to us, that all Virtues as well Animal and Vegetable, as Mineral are in Man himfelf, and this very thing I will prove to be true by this wonderful Experiment : Take the Urine of Boys, which must be from the eighth to the twelfth Year, and no more; which Urine gather from those Boys in the Morning, rifing out of Bed, a great quantity of which 'tis convenient for you to have, which must be very well putrified in a Glass Vessel, the Vessel being stop'd, not to respire, two parts of which Veffel must be full, the other empty, and thus ought it to be placed in Horfe Dung to putrify, till the Urine grows black, which commonly happens within forty or fifty days: but that the Urine may putrify and grow black in a shorter space of time, this we have had for a secret, and proved it by true Experiment, that mixing and joyning a Cup of Aqua Vitæ, (Philosophical) but first highly rectified with the aforefaid Urine, will accelerate Putrefaction : Putrefaction being done, put the Urine in an Urinal, (Cucurbit) with an Alembick and Receiver carefully ftop'd, two parts of which Veffel must be full, but the third empty, and diffil in Balneo with a gentle Fire one part of three, or till it produceth Veins in the Head, which Veins being vanished and gone, remove the Receiver, and being very close ftop'd keep it with the diftilled Water, which is the Mercury (Spirit) of it, in a place as cold as you can : then continue the diffillation, increasing the Fire, and its Phlegm will be distilled, which requires a stronger Fire to go over the Helm: and thus continue diffilling, till the Body appears in the likenefs of Honey, or melted Pitch, then let the Veffel cool, and keep the Phlegm, which shall diftil : Thentake the first Mercury, or first Spirit, which you distill'd in the beginning, and rectify it thus: Put it into a large Cucurbit an Arm and a half high, then

put into the Mouth of the faid Veffel Cotton enough to ftop Univ Calif - Digitized by Microsoft ®

the

(86)

the Mouth of it; which Cotton must be first moistened with Oyl, and preffed out, and tyed to a Hempen Thred, that when you have a mind, you may draw it out of the Neck of the Vefiel, and that the Cotton may not fall into the Cucurbit; then put an Alembick to the Cucurbit with a Receiver, the Joynts being very close, befineared with Wheat-Hower and Linnen Swaths, that is, impasted with the Pap of Hower bound fall to the Neck of the Cucurbit, to keep the Veffels from refpiring, which past (Chymical Lute) being dryed, put the Cucurbit to a Fire of Balneo, boyling gently, and the matter will be fublimed into a most precious Salt : Yet Son! take notice of this, that: the Beak of the Alembick must be large and wide, left the Salt rifing and fubliming out of the Cucurbit fhould ftop the Mouth. of the Beak of the Alembick, when it flows over into the Receiver; for if fo, the Veffels would be broken, as it hath alfo happened to us, when we brought this Experiment to practice : when you feeall the Salt gone over by diffillation, there will remain in the Cucurbit a certain Phlegmatick Water, which throw away, as nothing worth ; but the Salt empty with care, and keep it in a Glass Vessel very close stop'd, which Salt will be Volatile, and we will use it either for the diffolving of Bodies, or for the making of Medecines. There is also another way of rectifying or purging the aforefaid animal Spirit or Mercury : Take therefore that animal Spirit, and diffil by Balneo, and half the Liquor being gone over, remove the Receiver, and throw away that which remains in the Veffel : that which is diffilled, diffil again, taking two parts of it, what remains in the Veffel throw away again as before, and what is gone over, diftil again a third time, and take little less than all of it, and thus will you have the animal Spirit or Mercury perfectly rectify'd, wherewith you may exanimate your Earth, which you had before remaining in the likeness of liquid Pitch : Take therefore that liquid Pitch, or rather Earth diffolved, and pour upon it fo much of the aforefaid animal Spirit, as to rife four Fingers above it, the Veffel. with its Antenotorium lute, with Wax gummed, that it exhale not, then shake the Vessel or Urinal very well, that the Spirit may be incorporated, and the Earth being well joyned with the Spirit diffolved, put it in putrefaction for two Natural Days, then take away the Antenotorium, and immediately put on an Univ Calif - Digitized by Microsoft @ Alembick.

(87)

Alembick with a Receiver, lute well to prevent respiring, and diftil by Afhes : Have a care of the fumes when you open the Veffel, for they are exceeding ftrong. All the Spirit therefore being by distillation gone over, increase the Fire, that the Soul may be imprinted into the diffilled Water, and laftly again increafe the Fire thus gradually, till fome other Salt or Sulphur be fublimed : When no more will fublime, cool the Veffel, and gather the fublimation, and lay it with the animated Spirit lately distilled; then take out the hard and burned matter remaining in the Veflel, and grind it, and pour again to it of new Spirit as above, cover the Veffel with its Antenotorium again as above, and putrify, then take away the Antenotorium, and putting on an Alembick with a Receiver well stop'd, distil the animated Spirit by Ashes; which being distill'd again as before, increase the Fire at last, that fome part of the Oyl may be forc'd over, and the other part of the Sulphur fublimed ; but when you fee nothing more will diftil, nor any thing fublime, fuffer the Veffel to cool. and keep the animated Spirit last distilled with the other distilled before : So alfo, if any part of the Salt afcends by fublimation, mixit together with the aforefaid Spirit as before, and keep them all in a Vessel close stop'd: then again pour new Spirit upon the Earth, fo as to rife three Fingers above it, and joyning an Antenotorium to it, putrify as before, and then distil in Ashes as before : but when nothing more will diftil, increase the Fire as much as poffible by adding fuel, that the Earth may be calcined, and in this third Operation converted into a Beretine or ash Colour, then the Veffel being cold, and the Receiver with the animated Spirit taken away, keep it with the rest of the animated Spirit, but put the Earth into a Veffel of Earth or Chalk, which must be found, and able to endure Fire, covered with the like Veffel, giving it as ftrong a heat as can be made with wood, and fo continue two days, then by that time you will have calcined the Earth; the Veffel being cold, draw out the faid Earth, which will be almost white, or of an ash Colour clear and bright, pour fo much of its Phlegm upon it, as will fwim four Fingers above it, and let it boyl in Ashes four Hours, and then decant the Liquor warily into another Veffel, and keepit ; dry the remaining Earth, and pour to it again of new Phlegm as before, then make it boyl as before, then decant as before, and dry the Earth; thus re-

Univ Calif - Digitized by Microsoft ®

peat

peat the Magistery till all the Earth is disfolved, or the most part of it imprinted into that Phlegm, which probably will happen in the third or fourth diffolution : if any thing remains undiffolved, throw it away, for it is an empty Earth of no Virtue, but the Earth which was diffolved in the Phlegm, pass through a Filtre, and then again through a most fine Linnen Cloth, which done, congeal the diffolution in a most gentle Fire of Ashes, in a Glass Urinal, to which must be put an Alembick with its Receiver : which being congealed, diffolve again in the fame Water lately filtred, then pass it through a Cloth again, and lastly congeal it as before: But this Magistery you must reiterate, till it yields no more Terrestreity in the Filtre : Then keep our Physical Sal Armoniack, our Animal Sulphur, our fixed Animal Mercury, whereof lay a little upon a hot Plate, and if it melt as Wax without fmoak, it is a fign you have the Argent vive fixed, and perfectly depurated, wherewith you will be able to accomplifh many Experiments : This is that Mercury, which hath afforded us most seafonable succour, as shall be manifested in the following Experiments.

To this exanimated Earth restore the animated Spirit by various imbibitions, according to the ways described in the preparations of Vegetable Sal Armoniacks, becaufe, faith Lully, there is but one way and method in the animal, as in the Vegetable, nothing varying.

But the ways of making these Salts being very tedious, we will for a conclusion add Lully's way of abbreviation.

The Vegetable Sal Armoniack made by the accurtation of Lully. In Testam. Novis. high do menta

THis Sulphur (of Nature) may, my Son! with the help of God be wonderfully abbreviated, and the way is this : To take our liquid Pitch (after the Phlegm is drawn off) and put it into a Cucurbit, in a Fire of the third degree, and extract the Oyl, till the Earth remains dry and burned. My Son ! calcine as I have taught you, and purify the Earth, and to feparate the Salt

Univ Calif - Quitized by Microsoft ®

Salt from it, and upon it pour a forth part of the Spirit, which is in the fecond Water, (*diffilled out of the Pitch*) and digeft as above; then drawing off the Liquor (*fuperfluous*, *infipid*, and to be caft away) pour again a fourth part, digeft and dry as before, till the Earth be pregnant, the fign will be, that nothing more (of the aforefaid Phlegm or Liquor) will diftil, fublime, and you will have the Vegetable Sulphur clean and pure, and of the fame Virtue with the first. I charge you,my Son ! with the fear of God, not to reveal this most excellent way of abbreviation to any Man.

Parifinus in bis way of making Vegetable Sal Armoniack, declares the Oyl extracted out of the Pitch of Philosophical Wine, to be superfluous and inconsonant : Separate, saith he, all the superfluous unctuofities, which do burn the perfect and precious Elements mix'd and latent in that Vegetable Matter, and are repugnant to that composition : and a little after; After the separation of the fuperfluous unctuofity, and aereal fubftance, which blacks and burns the other precious Elements of this composition, pour to it its ardent and celeftial Spirit. Tea, Lully himself has in some Experiments before declared, that Oyl, as also the Phlegm of this Wine to be of no Virtue in the present Work : nevertheless in this accurtation of Sal Armoniack, he not only uleth the laid Oyl, and indeed (which you may wonder at) for the abbreviation, of a most tedious labour, but alfo affirms that Sal Armoniack thus prepared, is of the fame Virtue with the reft. Sometimes he used also the Water or animated Spirit, together with the Oyl, for present abbreviation, thus :

Another Vegetable Sal Armoniack by the Accurtation of Lully. Lib. de materia Vegetabili in practica septima.

TAke the best red Wine, distil the ardent Spirit, according to Art, so as to burn Cotton, after that the Phlegm, upon the matter remaining in the bottom of the Alembick, being thick as liquid Pitch, pour the Phlegm half a foot above it, let it hoyl three Hours, decant the tinged Phlegm, pour on other, re-Univ Calif-Digitized by Microsoft Pearing

Smelining of 11

peating fo oft, till no more will be tinged, if you have not Phlegm enough, you must draw off the tinged Phlegms in Balneo, which being evaporated, a Vegetable Oyl will remain in the bottom of the Glass, the tincture being drawn out of the Phlegm, the matter will remain like a dry Earth, upon this dry Earth pour of the ardent Spirit the height of four Fingers, let it boyl two Hours, that which is in the mean time distill'd pour again to the Earth, let it fettle two Hours, then decant the animated Spirit from the Spirit or Soul of the Earth, pour new Spirit upon the Earth, doing as before, three times : The Earth being black and calcined, put into a Glais with a long Neck, and pour the Vegetable Oyl (aforefaid) to it, digest in Ashes ten days, then decant, and put it into an Alembick, to which add a fourth part of the ardent Spirit animated, digest in a vaporous Balneo for twenty four Hours, then continue the fuperaddition of the other three parts of the animated Spirit every twenty four Hours, then diftil away the fuperfluous, infipid, and ufcless Liquor gently by Ashes, and augmenting the Fire by degrees, sublime the Volatile Salt, Gc.

(91)

Hitherto of the various preparations of Vegetable Sal Armoniacks. We will now proceed to the other part of the Cœlum Vinofum, namely, the feveral ways of reducing these Salts into a liquid fub-Stance. The Adepts did for the most part distil through an Alembick one part of Vegetable Sal Armoniack with three parts of the Aqua ardens, to which Liquor they added again one part of the aforefaid Salt, and distilled, and that they repeated three, and sometimes four times, to make the weight of the Salt and Water equal; for the greater the quantity of the same Salt, the stronger is the quality of the Menstruum, then lastly they circulated the Menstruum, thereby to make it more pure and excellent : But though this Method was more in use among the Adepts, yet either their curiosity or sedulity found out also other ways; so instead of the Aqua ardens, where with they prepared the Vegetable Sal Armoniack, as well as the Menstruum, they sometimes took Aqua ardens circulated, or the Heaven, or Effence of Philosophical Wine, described in Numb. I. It is thus done, up a children. Q press no. 15 to warred in a new new lower a line

- and a second s

5: 10

31. Calum Vegetabile of Lully Circulated. Lib. de materia Vegetabili in practica quinta.

(92)

Ake the best white Wine, distil the ardent Spirit till it burns Cotton; put this Spirit into a Circulatory two thirds empty, strengthen the Mouth with Wax, and Bury it in hot Dung, with its Mouth downward, for the Spirit to be circulated and digested the space of forty five Days, or till it swims above more pure and clear, (in the Form of an Oyl, se the Heaven, or Effence of Philosophical Wine, in Numb. 1.) having seen this fign, take out the Glass warily, and with a Needle perforate the Wax, that the impure may flow out, then fuddenly turn up the Circulatory, that the pure or more fine may remain, which we call the ardent Spirit circulated, which is of a most delicious Sent : now take the relidue, from which the Spirit of Wine was drawn, and distil the Phlegm; and upon the matter remaining like melted Pitch, pour the faid Phlegm, fo as to fwim four Fingers above it, digeft two days in Balneo, decant the tinged Phlegm, and pour on other, and that repeat fo often, till the Phlegm will be no more tinged, which is a thing useles in this operation: Now the Earth calcine in a Reverberatory, pulverize, put it in an Alembick, and imbibe with an eighth part of the ardent Spirit circulated, digeft in Balneo, and diffil fome certain fuperfluous moisture by Ashes: continue this imbibition, digestion, and distillation, till the Earth be impregnated with. the dry Spirit, which was in the ardent Spirit circulated, of which the fign will be, if it doth almost all evaporate, being a little of it caft upon a red hot Plate: This impregnated Earth. being put into a Sublimatory, fublime according to Art into a Volatile Salt, which digeft in Balneo two days and more, with fix parts of the ardent Spirit circulated, decant the diffolution gently, and if any thing remain undiffolved, proceed with it asbefore, this diffolution circulate thirty days, and it will be a Quintessence to be compared in Virtue with the Aurum potabile of the Ancients.

As these Menstruums are made either weaker or stronger accord-

Univ Calif - Digitized by Microsoft ®

ing.

ing to the variety of weight, so also are they more or less pure, by longer, or shorter, or altogether neglected circulation, for some Menstruums there are of this kind, which the Adepts circulated not : For an Example take the following.

32. The lefs Vegetable Menstruum of Lully. Lib. de materia Vegetabili in practica prima.

Ake the best Wine (red is the best) two pounds of it, put into a Cucurbit with a blind Head, and luting the joynts well, put it in Balneo, to putrify kindly the space of forty five. days, then fit an Alembick to it, and augment the heat, that the ardent Spirit may be diftill'd, which rectify thrice by it felf, or till it is free from all Phlegm, and burns Cotton; keep this ardent Spirit well ftop'd in a cold place: take the matter remaining in the first distillation, and draw off the Phlegm, till it remain thick like liquid Pitch, upon which pour of the Spiritus ardens. fo much, as to be the space of four Fingers above it, digest three days in Balneo, then diftil gently by Ashes three days, and by Virtue of a ftronger Fire, the ardent Spirit will carry over the Soul with it, which it could not do in Balneo ; keep the diffil-. lation : To the remaining Matter pour new Spirit, doing for often, till all the Soul be come over, and that you will know, if by being projected in a small quantity upon a red hot Plate, it yields no fmoak, becaufe the matter is now deprived of its Soul, which we call dry Earth, which imbibe with an eighth part of the animated ardent Spirit, digeft for three days in Balneo, then diftil gently in Ashes the superfluous Liquor, being infipid as common Water : make the fecond imbibition with a feventh part, and fo continue doing as before, till the Earth bemade heavier by a fourth part of its weight, and it will be difpoled to a reduction into a Volatile Salt by the way of fublimation : This Earth therefore being well pulverized, put into a Sublimatory, administring Fire according to Art, and that which you find fublimed white as Snow, is the Volatile Salt, which keep in a Vessel well ftop'd: Take of this Volatile Salt one part, of the ardent Spirit fix parts, digeft in Ashes, and the-Univ Calif - Digitized by Microsoft diffolution,

diffolution is the Vegetable Quintessence apt to diffolve the perfect Bodies of Sol and Luna, to make an Elixir, and other Medicines precious and grateful. doid or built side to sup and sort of

33. The Vegetable Menstruum per delian rolant cause bas quium of Lully. ov Lib. de materia Vegetabili in Practica secunda. at the heer siter

as ma sia l'egetabili in prastica prima.

Ake the best white-Wine, putrify it in Balneo twenty days, or longer, then distil the Spiritus ardens according to Art, till it burns Cotton ; then draw off the Phlegm, till the matter remains in the bottom of the Veffel thick as liquid Pitch, to which matter pour fo much of the Phlegm, as will fwim four Fingers above it, digeft in Balneo two days, and in Alhes one day, decant the tinged Phlegm ; pour new Phlegm to the matter, doing as before, till no more will be tinged, and the matter remains at the bottom of the Vessellike a white Earth, upon this Earth pour the height of two Fingers of the ardent Spirit, digeft for a day in Afhes, and the Soul which is in the Earth, will enter into the ardent Spirit, decant the ardent Spirit being animated, pour off the ardent Spirit again upon the Earth; doing it fo oft as before, till the Spirit draws out no more Soul, and the Earth remains in the Form of a moft fine powder, being defpoiled of all its Soul, which you will know, if it fmoaks not upon a fiery Plate; this Earth digest ten days in Ashes, then put it in Balneo, and pour of the tinged Phlegm fo much, as will fwim two Fingers over it, diftil in Balneo, caft away the diftillation as a thing of no Virtue, then again pour the tinged Phlegm upon the Earth, repeating as before, till no Phlegm remains, and the Earth is impregnated with all the tincture that was in the Phlegm: This done, imbibe the Earth with the animated ardent Spirit, digeft with an eafy heat in Balneo, till the Earth is well dryed, then again inhibe, and fo oft as before, till the animated ardent

sound Univ Calif - Digitized by Microsoft @

ardent Spirit is abforbed by the Earth, and is made Volatile, which you will know, if a little of it caft upon a burning Plate fumes away for the most part ; then put this matter into a fublimatory, and fublime with a fubliming Fire, and that which is fublimed, is the Volatile Salt of the Vegetable matter : put that Volatile Salt into a Phial, digest in Balneo for a day, and it will be reduced into a Water, which we call Vegetable *Menstruum*, which is a wonderful disfolvent for the radical disfolving of the two Luminaries.

These Menstruums the Adepts made sometimes not of Vegetables Sal Armoniack, but by the way following.

34. The Vegetable Mercury of Lully. Lib. de Mat. Vegetabili in practica sexta.

Ake the best odoriferous Wine, put it in a Circulatory large enough, ftop the faid Veffel very well with Sulphur melted, and putrify in Balneo twelve or fifteen Days, then diftil the Spirit and Phlegm according to Art, till the Spirit burns Cotton ; upon the matter remaining like liquid Pitch pour fix parts of the Phlegm, digeft two Days in Afhes, fhaking the Veffel now and then, decant the Phlegm being tinged, pour on other, and doing as before, till it hath extracted all the tincture, and a black Earth remains at the bottom of the Alembick : put the tinged Phlegm in an Alembick, and diftil in Balneo, and that which remains at the bottom of the Veffel will be the Vegetable Oyl, pour the ardent Spirit to the height of four Fingers upon the black Earth, diftil by Afhes, and that which is diftilled will be the ardent Spirit impregnated, to the matter pour new ardent Spirit, repeating as before three times, and in the laft increating the Fire about the end 1 Calcine the Earth with a Fire of Reverberation into whitenefs, out of which extract the fixed Salt with a little of the Philegin, the fixed Salt being pulverized, put in an Alembick, pour to it the animated ardent Spirie about: two Fingers, diffil gently in Balneo the infipid and ufelefs moisture, repeat as before, hill the animated Spirit afcends without diminution of its Virtue, and then will you have the fixed Salt acuated, which put in an Alembick, and pour to it the Univ Calif - Digitized by Microsoft Vegetable: Vegetable Oyl three Fingers high, digeft in Afhes for a day, increafe the Fire, and difful whatloever can afcend; the diffulation keep warily, becaufe it is the Vegetable Mercury : But if any of the Salt remains in the Alembick, you muft repeat the fame operations, till at length all the Vegetable Mercury paffeth through the Alembick, which will extract the Tincture of Gold, being calcined with common Mercury and Salt, and laftly with Sulphur, which is an excellent *Aurum potabile*.

Sometimes they prepared these Mensfruums by cohobation alone, without any imbibition: For Example.

35. The rectified Aqua Vitæ of Lully. In potestate Divitiarum.

Ake Wine, feparate the Spirit warily, as foon and as Beleverely as you can, becaufe you will never feparate it fo warily, but that it will contain in it fome of the pureft part of this Phlegmatick Substance, or Water : this Spirit being once feparated, is called Mercury, that is, Aqua ardens, the fign of which is, that if you dip a Linnen Cloth in it, it will turn into a flame. (if first kindled.) and not be burned, but if you separate often times, (rectify) it is called Lunaria rectify'd, that is, Aqua ardens rectify'd, whereof the fign is, that a Linnen Cloth dipp'din it, burns all away : Separate now all the fuperfluous Phlegm, till none at all remains, and at the bottom will refide a Pitch; then mix the Lumaria, that is, the Aqua ardens rectify'd, with that fubstance made like foft Pitch, shaking it well, till it be incorporated, and fet it to diftil, and that which goes over, is called Man's Blood rectify'd, which Alchymists feek for. That Blood is alfo called Air or Wind, and of this thing fpake the Philosopher, when he faid Wind carryed him in its Belly : from the remainder separate the superfluous Oyl (called above Vegetable) by diftilling it through a Glafs Alembick, till nothing remains, which Oyl keepapart, till I shall tell you; but the refidue will be a fubstance black and dry, which reduce to a fine powder, and mix by little and little with the rectify'd Man's Blood, and let them stand together for the space of three Hours, and then diftil

Univ Calif - Digitized by Microsoft @

ftil, and then this Water is called Aqua ignea rectificata, or Fiery Water rectify'd : then calcine the Caput mortuum in a Furnace of Reverberation, till it be made like Lime, and this Calx or Lime mix with the Fiery Water rectify'd, and diftil feven times, and then is it called Aqua Vitæ rectify'd.

The fame Menstruum hath Paracelfus in his Book, de Elixire Vitx, and the Author of the Appendix of the third Volume of Theatrum Chymicum. These Menstruums differ not from the afore-Said made of Sal Armoniack, but only in preparation ; in those the whole Earth of the Philosophical Wine is by its own Spirit reduced into a liquid substance, with which is performed the fame Work, but after another manner : Hitherto ought to be referred the Menstruum of Guido, made thus :

36. The Circulatum minus of Guido. In Thesauro Chymiatrico.

Ake of the Spirit of (Philosophical) Wine one pound, of the Salt of (the fame) Wine four ounces, mix, the Joynts being well luted, diftil through an Alembick in Balneo, pour back the distillation, and collobate four times, and it will be prepared. Lully reduceth his Sal Armoniacks with some difficulty into a liquid substance : but Guido distils the Salt of Philosophical Wine by four cohobations into the same Menstruum : the cause of abbreviation is to be fought in the preparation of that Salt, which is two-fold, common or fecret; of the common, faith Guido thus : The ardent Spirit of Wine being distill'd, draw off the Phlegm, till the matter remains in the substance of the thinner fort of Honey, which will in a cold Cellar yield Criftals like Nitre, which are called the Salt of Wine, which take out and keep ; the remainder evaporate a little while, and take more, &c. Of the secret way of making this Salt, Saith Guido also, pag. 8. Thef. Take of the Salt of Wine, and Spirit of Wine, of each four ounces, digest the space of eight or ten days, draw off gently in Balneo, and the Phlegm only will afcend, and you will have fix ounces of the Salt of Wine, to which Salt add again an equal quantity of its Spirit, and digest again ten days, and draw off the Phlegm, pour new Spirit to the re-maining Salt, and proceed as above, and thus may you increase the

the Salt of Wine as you pleafe i This latter way of making the Salt of Wine, is not only the multiplication, and addition as well of the quantity, as quality of it, but moreover is also the volatilization of it: It is no wonder therefore, that the Salt, whose half part was Spirit of Philosophical Wine, should so easily ascend with the same Spirit; yet is it to be well observ'd, lest we temper the aridity of the Salt of Wine too much, with too great an addition of Unctuosity, and instead of a Menstruum of this Kind, make a weaker of the second Kind. What has been declared of Vegetable Menstruums is also to be understood of animal Menstruums; for an Example we will instance.

37. The animal Heaven of Parifinus. In Apertorio.

Hickory's and to be set side the Men.

Ake the Urine of Children, between eight and twelve Years of Age, of good difpolition and health, get that which is good, and a good quantity, and put it in many Glafs Veffels, which you must not fill above two thirds, that it may the better circulate: To every ten measures of Urine mix of our C. (Philosophical Aqua ardens) half a measure, which must be without any Phlegm, the Veffels being very well fealed with Wax, let them putrefy fifteen days, and then you will find the matter black; and feparated from its Terrestreity : And you must know, the longer it remains in putrefaction, the more perfect will be the work, every five days the Dung must be changed : then pour it out into the Veffel, which we defcribed in the Vegetable Work, and the Joynts being well luted, diftil till you fee the fign, which we spoke of in Chap. B. but for a more certain fign, diftil only two parts, then take away the Receiver, and put another to, continuing the diftillation, till it remains like Syrup or melted Pitch, then take these two parts referved, and distil by the fame Balneo, receiving three parts of four, the remaining fourth caft away, but diftil half of these three, and again diftil three parts of four parts of this half, which diftil twice by themfelves, and thus will you have your Flower rectify'd, with which weextract Acetum acerrimum out of its own Earth : Take therefore this Earth, being in the form of Syrup, to which pour the Univ Calif - Digitized by Microsoft @ Flower

Flower (Spirit) the height of three Fingers, cover the Veffel with a blind Head, and lute the Joynts with gumm'd Wax, put it in putrefaction three natural Days, and flake the matter in the luted Vellel now and then, as is convenient, that the faline parts may the better be diffolv'd; then take away the blind Head; and put on a common Alembick, but have a care in this changing, left the fharpne's of the Salts offend your Eyes : then diftil gently in Ashes, and when you have by fuch a heat extracted all the Water, increase the Fire, that the Oyl or Soul of it may afcend alfo together with the diftill'd Water, whereof one part will be fublimed, the other part will flick to the fuperficies of the Earth in the form of a white powder, let the Veffel cool, gather the fublimation; being gather'd, put it in its Water, make the Veffel very close, because it contains the animated Flower, (Spirit) then take out the dry Earth remaining, reduce it into powder upon a Porphyry Stone, pour to it the Flower (or Spirit) the breadth of three Fingers, putrefy three days, diftibin Afhes, increasing the Fire with Wood as above, repeat the Magiftery, till the Earth remains of an Afh Colour, then calcine its in a Reverberatory, as we taught you in the Mineral Work, in Chap. 2. And fo you will have the animal Earth oprepared, abounding with fo great Virtue, as not to be expressed. WO abo folute power! upon which all other powersidepend; into what thing haft thou infused fuch Virtue? No Man will comprehend fo great a fecret, none will believe, unless he himself hath feen by Experience, as we have feen. Take the animated Flower, rectify it three times in Alhes, always calting away the Earths, (Terrestial Faces) then distil in Balneo three parts from four, the remainder throw away, this repeat yet once, then diffil the whole, fo will you have the animated Flower rectifyed. Take now a large Vefiel (a Cucurbit) and put in the rectifyed Flower, ftop the Mourth of the Veffel with Cotton, put on an Alembick with a Receiver, and with a gentle hear of Afhes allon the great ? eft part will be fublimed in the Form of a most precious Sale, with which (if you will) you may acuate our C, which then you must circulate according to the Chap. D. D. Wherewith you may perfect all your operations (which we taught in the precedent Chapters) which you will fooner compleat by this Menstruum. But if you defire the animal Sulphur of Nature, vir is necessary Univ Calif - Digit Ped by Microsoft ®

(99)

for

for you to fublime prefently after you have rectify'd the defired Flower, namely, by imbibing the Earth according to the method and order which we declared in the Vegetable Work, that is, with an eighth, feventh, fixth, fifth, and fourth part, fublime and use to do as in the Vegetable Work, to wit, by acuating the animated Flower with its animal Sulphur fublimed, circulating, and doing all things as in the Vegetable Work. Now Son ! you fee how I love you, having repeated fuch things over and over, and with fuch pains, left you fhould have occasion to complain of me, and that you should be expert in every thing, in which I perswaded my felf you might err ; therefore have we in this Chapter repeated and described that, which no Philosopher ever did in his great Volume, and I may eafily believe, that no Philofopher has prefumed to defcribe fo long and ample a practice, as this of ours; all which proceeds from my paternal affection towards you, by which I would oblige you under the pain of God's wrath, not to reveal it to any one, but rather burn it, as foon as you have reduc'd it into use, as you have more than often promised us : My farther advice is, That you would strenuoufly endeavour to live according to the triumphant Gofpel of Grace and Peace : reject and avoid Evil Societies and Actions, as we have often admonished you ; but if you do otherwise, you will not please him, who is the Donor of this Famous Knowledge, of every good Thing, and Grace it felf.

From the Receipts we Note.

cen) thea diffii in Bainco three parts from row, the

P11376. 903

1. That those things which were noted in the fifth precedent Kind, may hitherto also be referred, the Menstruums of this Kind differing only in matter from the antecedent, these were made of Philosophical Wine only, those of the fixed Salts of divers things, but as to the way of fubliming, or the way of making Vegetable Sal Armoniacks, they both agree in all things.

2. That these Sal Armoniacks are called Sulphurs of Nature. In the preparation of Philosophical Wine there is an Earth found, which is called Sulphur, existent in the Vegetable Mercury, coagulating its own Mercury; for the sake of which Earth, they called every other examinated and fixed Earth, Sulphur; but the animated Spirit Spirit (Effence, Tinsture, Sc.) they termed Mercury, to be coagulated by this Sulphur, but both of them being reduced into one Body, and fublimed, they call d Sulphur of Nature, (not more fixed, but) fublimed.

3. These Salts are call'd Sulphurs of Nature, to distinguish them from Sulphur against Nature, that is, of every Acid. Fire, faith Ripley, differs many ways; for one is a natural Fire, another unnatural, another elemental, and another contra naturam : Natural Fire is that which proceeds from the Influence of the Sun, Moon, and Stars, from which are produced the Spirits of burning Waters, the effential vapours of Minerals, as also the Natu. ral Virtues of living things; the unnatural is an occafional Fire. which is called a moift Fire, made artificially by Philosophers : it is also called a Fire of the first degree, which is for the meer temperance of heat called Balneo, Stove or Dunghill; in this Fire is made the Putrefaction of our Stone: elemental Fire is that which fixeth calcines, and burneth, and is nourifhed by things combustible ; Fireagainst (or contrary to) Nature, diffolves violently, breaks, kills, and deftroys the governing power of the Form of the Stone : for it diffolves the Stone into the Water of a Cloud with the destruction of the specifick Form : but it is termed Fire contrary to Nature, because the operation of it is contrary to all natural operations, as Raymond afferts : for all things that Nature hath made, this Fire deftroys, and brings to Corruption, unless the Fire of Nature be added to it, Gc. Med. Phil. pag. 135. Wherefore also there are four Fires in our art, namely, the Natural, which is the Menstruum Sericonis ; the unnatural, that is, Horfe Dung, or Vindemia, and the like : the elemental, viz. maintained by Wood and other combuftible things; and the Fire contrary to Nature, that is, all corrofive Waters, made of Vitriol, Salt, and fuch like things. Viatic. pag. 342. but of these in another place, namely, the fifth Book.

4. That these Salts are to be used presently after the sublimations of them.

5. That Philosophical Aqua Vitx, though never better restify'd, yet contains in it some certain superfluous moisture, which it expells, either by being circulated by it self, as in the preparation of Lully's Heaven, or imbibed in things fixed, as in the ways of making the said Salts.

Univ Calif. - Digitized by Microsoft @ 6. That

or Oyl of Philosophical Wine, is no stronger than the rest, as to the preparation of the Sal Armoniack, though it may be sooner made with this Oyl, than simple Aqua ardens, but as the Sal Armoniack already made is mixed, and again circulated not with the thin Philosophical Water, but with the Oyl or Aqua Vitx circulated.

17. That the divers ways of fubliming these Salts do most clearly discover to us as well the Nature of that Spirit of Wine, as of these Menstruums, and moreover commends the incomparable Experience of Lully in these things.

8. Animal Menstruums, the extracted out of the Vrine, and other parts of Man, are nevertheless not properly so called, so long as the matter of that Spirit of Philosophical Wine was Vegetable, and only acuated with an animal thing : yea the very Spirit of Philosophical Wine made also out of the animal Kingdom, as also acuated, would notwithsstanding differ not from the simple Vegetable Menstruums in the properties of dissolving, because it would together with the said simple Vegetable. Menstruums, very much vary from the tinging faculty of the compounded Vegetable Menstruums, from which it ought to be distinguished; whereas otherwise it might be ranked among the Vegetable Menstruums.

contrary to all natural of dations, as *Remould* afters : for all things in the value faith and the defease, and trings to Correction, and the set of the defease, and trings to all things to not the test of test of

The Seventh KIND.

Vegetable Menstruums compounded of the aforesaid Simple Menstruums.

38. The Circulatum majus of Guido. Pag. 4. Thefauri Chym.

Ake of the Spirit of (Philosophical) Wine fix Ounces, of the Salt of (the fame) Wine four Ounces, the Veffel being well ftopp'd, diffil the Spirit in Balneo, which pour back upon the Salt of Wine, and again diftil, and this ought to be done twelve times : then diftilfor a Month in Balnep rorido : Putrefaction being done, take out the matter and distil in a Cucurbit, with an Alembick of two Heads or Beaks, in Balneo, and the Spirit of Wine will afcend through the upper Beak into its, Receiver, but the Phlegm through the lower into its Veffel: Take out the Salt of Wine, pour one half of the Spirit of Wine to it, and diffil with a Retort into the other part of the Wine, diftil yet once upon the remainder, and all the Salt will afcend into a ftrong Menstruum : But if you defire a weaker, add fix (other) Ounces of the Spirit of Wine, and if you would have it very weak, pour to it a greater quantity of Spirit, but according to the aforefaid weight, it is made our great Vegetable Menftruum, or Circulatum majus.

Annotations.

H Itherto of Simple Vegetable Menstruums; now follow those which are faid to be compounded, not as if they are compounded of more Ingredients, but because they are stronger than the Simple, as well in their qualities of discours, as tinging: The Menstruums;

(104)

ums of this Kind differ not from the former in matter, nor in the method of preparing, but in weight 'only ; for the more aridity you add to the ancluous Spirit of Philosophical Wine, the stronger are the Menstruums made. Guido made his less Circulatum of one part of the Salt of Wine, and four parts of the Spirit of Wine; but the greater Circulatum he makes of two parts of the Salt of Wine, and three parts of the Spirit of Wine. The greater quantity of the Salt, the stronger is the Circulatum. The less Circulatums do extract the Estences, or Tinctures of things, but the greater Circulatums do difforve the whole Body into a Magistery, as will appear in the second Book.

Vegetable Menstruums compounded are made also, if the simple Vegetable Menstruums be taken instead of the Spirit of Philosophical Wine, in the Descriptions of them all; as thus :

39. The Menstruum acutum of Guido. Pag. 8. Thesauri Chym.

Ake of the Vegetable Menstruum (Circulatum minus, described in Numb. 36.) one Pound, of Sal Armoniack (common) twelve Ounces, distil by a Retort first with a weak Fire, then a stronger, and the Sal Armoniack will in part ascend, pour it back, and distil yet once: then again add twelve Ounces of new Sal Armoniack, distil strongly in Ashes, pour back, and cohobate yet twice, and you will have our acute Menstruum.

Sal Armoniack reduced into a liquid substance by the Spirit of Philosophical Wine, is a Menstruum of the fourth Kind, but the same Salt distill d with the Circulatum minus of Guido, is made not a simple, but compound Menstruum, and the better for adding so great a quantity of new Sal Armoniack. Parisinus in the third Kind of Menstruums acuates the Spirit of Philosophical Wine with crude Honey, by which way it is made a simple Menstruum of that Kind, but if mixed with its fixed Salt, and distilled through an Alembick, 'tis made a compound Menstruum.

40. The

40. The Calum majus of Parifinus. In Apertorio.

Ake B, that is, red Wine putrify'd, as you know how, put it in a Glass Cucurbit, with its Alembick, and Receiver well luted, and fet it in Balneo, wherein must be fo much Water, as to fwim two Fingers above the faid Lunaria, and diffil gently, and forthwith you will fee Veins appear in the Alembick ; continue the diffillation fo long as they appear, and thefe Veins will be like Tears clear as Criftal, and when Death (Phlegm) comes, which kills the Spirit, the faid Veins or Tears. will ceafe, and appear round as Pearls: then take away the Receiver, ftop it, that the Spirit may not evaporate, and let it in a cold place, and fo have you separated the Soul (Spirit) of it, tho' it contains a little of its Death yet in it, and thus continue the distillation (the Receiver being now changed) till all the odoriferous Phlegm is afcended, and the matter remains like melted pitch, black and thick, which observe not to dry overmuch, but according to the faid Signs only : And thus will you have two ferments from our B. beware of revealing to any one this Practice, which we communicate to you under the peril of your Soul, for you would be the caufe of much Evil in this World, to be committed by the Sons of Iniquity : put it therefore into the hands of Almighty God, who knows the Will of those that live according to his Will, and the triumphant Gofpel, for the Glory of which you have extracted the Form out of B, and the fame way you may extract from all Individuals Animal and Vegetable. Cap. secundum significatum, per C.

Take the Soul (Spirit) of it referved in the cold place, and distil half of it in Balneo, or till the precious Veins cease from afcending, rectify yet twice, observing the same Rules, but the third and fourth time, fo foon as the Veins appear, leave off diftilling, and try whether it will burn a linnen Cloth, if not, repeat the distillation till it doth : then cohobate by it felf four or fix times in Balneo: And thus have you acquired a way fit for the rectifying of the faid Matter or Soul, (Spirit) which is of fo great Virtue, as not to be expressed by any Tongue, or the Se-

(105)

crets, which the Eternal God hath vouchfafed to it, recited; as when we were at Venice, that Famous City, we both faw fome Experiments of it; and fo keep it well in a cold place. Cap. tertium fignificatum per D. D. Having declared the method of rectifying and separating our ardent Spirit from its Death, depraving its Virtue and Power: you must now know, that it is not able to diffolve the two Luminaries, and reduce them into action. except it be first acuated, as I shall tell you : Though this preparation is to be taught in general, in Cap. F. yet to prevent the loss of time, fo foon as you have rectify'd your ardent Spirit, otherwife called the first Flower, I had rather have you forthwith put it into Practice, which we have in this Chapter fignified by these two Letters, D. D. whereof one denotes the acuition of it, the other its Royal Acuator, that is, Salt extracted out of Honey, by the way which we have oftentimes shewed you, that is. with its most precious Water (of Honey, or the Menstruum de-(cribed in the third Kind, Numb. 10.) and though this Water be good enough, yet this Water, being acuated with its most precious Salt, of which you will be more certain, will recompence your Labour, and abundantly fuftain you, till you attain to the end of your Labour, the great Medicine. Now to the purpofe, Take white Honey of young Bees, put it in Putrefaction in large Cucurbits, with their Alembicks in Balneo, and make it boyl continually for an Hour, the reft of the time let it remain in a temperate heat, and this do for the space of fifteen Natural Days, then pour to the matter fo much of C, as to fwim the breadth of four Fingers above it, covering the Veffels with the blind Heads, and putting them in Putrefaction three Natural Days; then put on the Alembicks with their Receivers, and the Joynts being well luted, diftil in Balneo, and when feven parts of eight are diffilled, or (which is a more certain fign) when you fee round tears or drops afcend, lay afide the Receivers close stopp'd, that nothing may evaporate, keep them in a cool place, for the acuition of the matter ; then continue the diffillations in the fame degree of heat, till nothing more alcends; but if neceffity requires a greater Fire, have a care of making it too ftrong, and when nothing will alcend by the faid Rule, take away also these Receivers, and keep them, becaufe they contain the fecond Water or Phlegm for the extraction of the most precious Salt : Now

Univ Calif - Digitized by Microsoft ®

22.073

Now put your matter in Ashes, and distil with a heat of the third degree, the Oyl being diffilled, fuffer the matter to cool, which being pulverized, reverberate in an Earthen Difh in a Reverberatory for eight Days, or till it be calcin'd enough; the fign will be when you find it of an Ash Colour : then pour of the referved Phlegm to it fo much as to cover it the breadth of two Fingers; the Veffel being covered with a blind Head, keep it in Balneo two or three Days, decant the Liquor, and pouring on new Phlegm, repeat fo oft, till you have extracted all the Salt, which will exceed Snow in whitenefs : And this is that Salt, wherewith we acuate our fimple C, (the ardent Spirit for a Menstruum of the Fifth Kind) this is that which gives the beginning of Vegetation to both the Luminaries, reducing them into the Nature of a Quinteffence : And with the fame may you alfo acuate, and augment its own VVater (of Honey, or Menstruum of the Third Kind) which hath the power of Vegetating all Minerals. With this alone will you support your felf in your neceffity, fo as to be in duty bound, my Son ! to give thanks to the abfolute power : Be careful not to disclose fo great a fecret toany Man; for we have now declared it fo plainly, that 'tis impoffible to add any thing more. Now take your decantations, which you drew off in Balneo, that the Salt may remain moff white, which you must diffolve, filtre, and congeal three times," and it will be fit for all your operations. Now let us defcend to the practice of acuition. Take of the Salt aforefaid one ounce, to which being well pulverized, pour four parts of C, that is, the first Spirit (ardent, but because a Menstruum of the fifth, and not of this Kind, would be made by this Spirit, therefore is C, being acuated with Honey, or the mellifluous Heaven of Parifinus, a Men-Aruum of the third Kind to be taken) in a blind Head, and the Joynts well luted, putrify the space of two Natural Days, then put on an Alembick with a Receiver, and diffil in Afhes : diffillation being ended, take a pound of the Salt remaining in the Retert, and add to it four times the quantity of C, putrifying, and diffilling in Ashes as before, and the Magistery so often repeat, till all the Salt ascends together with its Celestial Spirit, or C, and by this way may you acuate and multiply as you please : but remember that one part of Salt requires four parts of C, (in this place, the Cælum mellifluum of Parifinus.) And you Univ Calif - DigiQ ed by Microsoft ® muft

(107)

must know, I tell you no fabulous Stories, but very distinctly declare to you the order of true Practice, yet with this Provifo, That when first you have brought it into action, you would altogether conceal it, confidering with how great obscurity the ancient Philosophers delivered theirs, which notwithstanding they had not done, but to reftrain the ignorant from being too arrogant, for the fame reason also do we defire, that, as we have more than often admonished you, you would keep fecret, and in convenient time and place work for your felf, and the poor of Jesus Christ. Cap. quartum significatum per E. VVe ought to return infinite thanks to the goodness of the Eternal God, in teaching us to bountifully the way of preparing our Heaven, and making us partakers of fo admirable and ineftimable a favour. Certain it is, when I had compleated this most fecret Science, and feen real transmutation the first time, I was in a manner astonished, and often lifting up my Eyes to Heaven, fell proftrate upon the Earth, giving thanks to Almighty God. Now to the purpose : Takea large Glass of such a size, as I shewed you one at Murarium, into which put two or three pounds of that Menstruum, ftop it well, and circulate in Balneo or Horfe-Dung, but have a care left in changing the Dung you impede the circulation, and fo let it circulate the space of forty Natural Days, and then you will find your matter clear as Criftal, with a Sediment in the bottom like Silk, which decant warily into another Glafs, keep it very close in Balneo, and you will have a Simple Vegetable Menstruum, (if made of the ardent Spirit, and Salt of Honey, but a compound, if prepared with the Colum mellifluum of Parifinus and Salt of Honey) our Heaven is in Virtue beyond expression, herewith do we truly calcine and diffolve the Luminaries, with the prefervation of their radical moisture. This is that which will reduce imperfect as well as perfect Metals from power into action. And though I may feem not to have delineated to you, the Form of the Glass, yet I know, and do remember, that I left fome of them at your Houfe, and many other of our Cucurbits, which are every one good. Govern your felf ac-... cording to your difcretion, we having fufficiently manifested to , you the way of Truth in this Chapter.

From the Receipts we observe.

1. That the Menstruums of this seventh Kind differ from the former simple Menstruums, not in matters, nor in ways of making, but in the weights and use of the Ingredients.

2. That these Menstruums tingenot their dissolution, which is the property of compound Menstruums. Every Vegetable Mercury contains indeed its own tinging Sulphur in its Bowels, sufficient both for it felf and others, as will be demonstrated in the third Book, but especially in the fifth, nevertheles we affirm, that every Spirit of Philosophical Wine wants Tincture, as being not acuated with things more tinging.

From the fire ints me obli

Vegetable Menstruums compounded of Simple Vegetable Menstruums, and common Argent Vive, or other Metals.

41. The Ignis Gehennæ of Trismosinus made of the Spirit of Philosophical Wine, and Mercury Sublimed.

Pag. 7. Aurei Velleris Germ.

Ake of Alum calcined, Nitre, of each two parts, of Salt decrepitated, one part, mix, take of this mixture and Mercury fublimed, of eachone pound, fublime by the Law of Art, mix the fublimation with new mixture of Salts, and fublime, and that repeat three times : To this Mercury thus fublimed and pulverized pour the Spirit of (*Philosophical*) Wine, and draw it off in Balneo to an oleity, cohobate fometimes, and the fourth time will afcend the Mercury together with the Spirit of VVine, rectify the diftillation till it leaves no Faces, and it will be a VVater burning like Hell-Fire : This VVater rectify again in Afhes, till it afcends without leaving any Sediment ; laftly, diftil through a Paper feven times double in Balneo, and you will have a VVater truly Spiritual, which keep in a Veffel close ftoped, by reafon it is very Volatile.

Annotations.

The Kind immediately antecedent is indeed computed in the number of the greater Circulatums, or Vegetable Menstruums compounded, because the Menstruums of that Kind do in the power of discovery excell the other Simple Menstruums, but not in Tincture, Tincture, which that as well as those do want ; but we will now offer those which shall be better; they will not only diffolve, but in diffolving moreover tinge the things diffolved in them, and so make them better: they will not only extract the Effences of things, but transmute whole Bodies into Magisteries : Amongst these, the Vegetable Mercurial Waters, made of common Argent vive, and fimple Vegetable Menstruums have priority; for many of the Adepts being fo taught by Experience, have called common Argent vive the open Metal, for it is sooner dissolved than the other Metals, and does by its aridity more temper the unctuolity of the Spirit of Philosophical Wine, than the individuals hitherto used in the antecedent Kinds of Menstruums : As concerning this matter, hear the Philosophers, and above the rest the great Paracelfus, Prince, without question, of all the Adepts, who faith, If you intend to convert Metals into a Magiftery, and tinge the whole Body altogether into an Effence, you must take the chief and open Metal, to which all the rest have affinity in Nature, and putrify it in its own Matrix, which is fituated in VVater, and is call'd the Mother of all Metals, (Paracelfus his Circulatum minus made of common Salt) purge it from fuperfluities, and reduce it into its liquid first being, that is, the Metallick Acetum acerrimum, the primum Ensof Mercury. Lib. 10. Arch. Cap. 3. pag. 37. As a temperate Effence (he goes on) is drawn out of Herbs (as out of a Vine, for example) by which very Effence, the like Effence may be extracted out of all forts. of Herbs and Roots, fo, as that the Mercury of VVine fhews not its own Nature, but the Nature of that with which it is effentiated; for the like reason out of Metals and Minerals, the like Mercury or Spirit is extracted out of the open and middle Metal Mercury. Lib. 10. Arch. pag. 39. Mercury vive is the Mother of all the feven Metals, and ought defervedly to be called the Mother of Metals, for it is an open Metal. Libro de rebus naturalibus, pag. 87. VV herefore call to mind those things which have been faid before of half perfect Natural Things, among which Mercury vive is one, which is not brought into compaction, but left in liquidity : Besides you must know, that every generated thing which is open, as Argent vive, is like an open Houfe, into which every Man that will may enter, for lo lies Mercury open, that every Phyfitian may take what he will from it, but it is not fo with Gold, Silver, Tin, Ec. for that Gate is shut by coagu-Univ Calif - Digitized by Microsoft 3

lation.

(112)

lation, till opened, diffolved, and reduced into the first matter by Art, which Metals have indeed many impediments, fuch as are not in Mercury, for it is open, and wants nothing but the direction of preparation. Tract.2. lib. 2. de morbis metallicis. 722.

Basilius agrees with Paracellus, Saying : In the beginning of Generation the first of all is Argent vive, being open, and loofely coagulated, because it hath little Salt communicated to it, and therefore is more Spiritual than Corporeal: the reft of the Metals being derived from its Effence, have more Salt, and therefore are made more Corporeal. Lib. de rebus natural. & supernat. Cap. 2.

Chortalassaus affirms the fame faying : Argent vive is of divers Colours, white, skyish, ash, blackish, one flow, another swift, yet in it felf an open Metal, and hath a Body eafily transmutable. Cap. pag. 359. Volum. Sexti Theat. Chym.

In fearching for Sulphur, despair not, Saith Sendivogius, I tell you by all that's facred, it is in Gold and Silver molt perfect, but in Argent vive most easy. Pag. 213. lib. de Sulphure. Of the antient Philosophers I will add Arnold, who in Lib. 1. Cap. 7. Rofarii, faith : The Medicine is as well in Metallick Bodies, as alfo in Argent vive, as to Nature, because they are found to be of one Nature, but indeed in these Bodies harder, in the Argent vive nearer, but not more perfectly. In Argent vive alone it is found more eafily and more nearly, not more perfectly, it being the Father of both those Luminaries, and all things fusible, for they are all derived from it, and therefore are they all refolv'd into it, becaufe Nature embraceth its own Nature more amicably, and rejoyceth with it more, than with that which is Heterogeneous. For in it is the facility of extracting that fubtil fubstance.

Among the Metals there is none that fooner mixeth with the Spirit of Philosophical Wine, and is more easily altered, than Argent vive, wherefore the Adepts effeemed it as an open Metal; all other Metals and Mineral Bodies are with very great difficulty diffolved by the Spirit of Philosophical Wine, but being once counited with this Spirit, they are as well as Mercury, converted into a third fubstance, never to be divided into their constitutives, that is, Metal and Spirit; This open Metal they made more open sometimes by the acidity of Salts; fo Trifmofinus did fometimes Jublime common Mercury for Univ Calif - Digitized by Microsoft ®

his Hell Fire: yet principal care must be taken, that such Menstruums as these made of Mercury sublimate, be by being dulcify'd with longer wan ordinary circulation, or repeated cohobations, freed from all the acidity of the Salts; but this operation being full of danger, yea contrary to the Rule of Kegetable Menstruums, which excludes every Acid whatsoever, we have therefore thought good to advise young Beginners to use crude Mercury, as safer than sublimate. Instead of these we will therefore commend the Menstruums made of crude Argent vive.

42. The Alchymical Mercury of Ripley. In Concord. Raym. & Guidon.

Ake of crude Mercury well purged one Ounce, of our Fiery Tartar, or former Vegetable Salt referved (in the Fifth Kind in Numb. 23.) three Ounces, grind both together very fine upon a Marble, till they be incorporated, then put the matter in a warm Balneo, and let it be all diffolv'd into a kind of white Milk, put it all upon a Pound of crude Mercury, and let it be all diffolved into the like Milk, and thus do in infinitum. This Mercury being diffolved putrify in Balneo, then diftil in Afhes first with a gentle Fire, and an insipid Water will ascend, which must be thrown away : then the Fire being more increafed, another Water will afcend more thick, which Water indeed diffolves all Bodies, putrifies, cleanfeth and fixeth them, at the end with a more vehement Fire will an Oyl afcend of a Golden Colour, which must be preferved for the diffolving of the red Ferment, and for the multiplying of the red Elixir, for it is our peculiar Gold, not yet fixed by Nature.

Elsewhere instead of Iartar fired (that is, the Spirit of Philosophical Wine dryed in the Salt of Tartar, or Vegetable Sal Armoniack made of the Salt of Tartar, but not yet sublimed) Ripley sometimes as a forme simple Vegetable Menstruum, with which he made the exalted Water of Mercury, as followeth.

Univ Calif - DigRized by Microsoft @ 43. The

43. The exalted Water of Mercury of Ripley. Cap. 12. Philorcii.

Ake Nigrum nigrius nigro, and distil an Aqua ardens, and fortify it with Penner Serie D fortify it with Pepper, Squilla, Pyrethrum, Euphorbium, So-latrum, Anacardus, grains of Paradife, Staphis-agria, and the like in acuity : but this is a great fecret. Take the Water of the fifth fortification, and diftil, pour it upon Mercury fo, as to fwim two or three Fingers above it, ftop the Veffel to prevent exhaling, put the Mercury in Balneo to diffolve for a Month, that which is diffolved of it empty into another Veffel, and keep : pour new Water upon the Mercury not diffolved, and proceed as before, thus continuing, till you have one Pound of Mercury diffolved : Then put the diffolution together in Balneo the frace of fifteen Days, and after that distil, and that which ascends keep apart in a Veffel, not to refpire, and upon the remaining Fæces pour new Water, and proceed by Balneo as above, and this Work continue, till all the Mercury is exalted : But this is not the Work of idle and floathful Men. Now this Water thus exalted is by the Philosophers call'd by many Names, for it is Lac Virginis, Aqua roris Maii, and Aqua Mercurii.

Nigrum nigrius nigro, and Philosophical Wine, we have proved before by Lully to be Synonimous: the fortification or acuition of that Water or Spirit, with Pepper, Squilla, &c. we taught in the second Kind. Mercury, though an open Metal, is yet hard enough to be diffolv'd in the aforesaid Menstruum of the second Kind, but the stronger the simple Vegetable Menstruums are, the sooner also is it diffolved; an Example you will have in the following Glorious Water of Lully, where Mercury is in the space of six days diffolved in the Ccelum Vinosum of Lully, by a Menstruum of the fixth Kind.

Univ Calif - Digitized by Microsoft @

44. The

(115)

44. The Glorious Water of Argent vive of Lully. In Testamento Novissino.

Ake of common Argent vive one Pound, put it in a Glafs Veffel, and pour upon it of the Vegetable Menstruum (above described in the Sixth Kind in Numb. 30.) fo much, as to swim four Fingers above it, set it in Balneo or Dung fix Days, and it will be all diffolved into a Glorious Water, elevate the Menstruum gently by Balneo, and at the bottom of the Vessel will remain the Light of Pearls, and Soul of Metals: This we meant in the Chapter which begins: Oportet nos cum eo incipere, S cum eo finire. Then take of this Glorious Water of Argent vive one Pound, and mix it with two Pounds of the Vegetable Menstruum, cœlificated (of Cælum Vinosum, in Numb. 30.) and it will all become one Water, with which you will diffolve all Bodies, as well perfect as imperfect, for the Production of our Sulphur.

The fame way almost he prepares that which he calls the incalcinated *Menstruum*.

45. The incalcinated Menstruum of Lully. In Experim. 34.

Ake common Mercury, brought out of Spain in Skinsfeal'd with a Spanish Seal, to prevent Sophistication, force it through a fine Skin, then take the Mercurial Water, extracted from Mercury by the Magistery, as we taught you in the Experiment of three Vessels, as you know, and so dissolve the Mercury; being all dissolved, draw the Water from it by Balneo, and in the bottom of the Vessel will the Mercury remain in the Form of an Oyl: This therefore we will use to be incerated (circulated rather) into our Heaven or our coelificated Menstruam: Take therefore four Pounds of the coelificated Menstruam (the Vegetable Heaven described in the Fifth Kind in Numb. 17.) and R 2 one one Pound of the aforefaid Mercury reduced into Oyl, and joyn them together, then will you have at length the incalcinated *Menstruum*, with which you will diffolve the two Luminaries, preferving their Form, and not only preferving it, but also propagating it in *infinitum*.

The Receipt of this Menstruum is plain, yet must we declare what he means by the Mercurial Water extracted by the Magistery of three Vessels, the Description of which Menstruum we read thus;

46. The Mercurial Water by three Veffels of Lully. . In Experim. 13.

Ake Spanish Mercury, which is brought in Bladders with the Seal of Spain, that it may not be adulterated; fub-lime it thus: Take Vitriol dryed from all Phlegm, and common Salt prepared, and decrepitated, or first burn'd in Fire; joyn the Mercury with these two, grinding very well, then fublime in a Vessel, at first with a gentle Fire, then increase the Fire, till it be perfectly fublimed : the Veffel being cold, gather the fublimation carefully, and beware of the fumes, being Venomous; imbibe the fublimation very well with the Oyl of Tartar (per deliquium) and quick Lime, then put the matter into a Retort, and administer Fire, till Mercury vive is gone over into the Receiver: fublime again as before, with the fame new Matters, then as before vivily by a Retort, thus repeat the Magistery four times : Then take this Mercury thus prepared, and make it boyl with (Philosophical) Aqua Vitæ, being dryed, preisit through a Goats Skin : Then take this Mercury, and put it in Veffels , three Aludells) which must be firmly and strongly joyned together, and covered on all fides with ftrong lutum [apientia, then prepare a Furnace, in which these Veffels may be fitly placed, fo as that they may all have equal heat; but the Receiver must by no means feel the Fire, fo also the Beak of the first Vessel, through which the Mercury is to pass, must be out of the Furnace : Then give Fire to the faid Veffels, fo as to be red hot, both within and without, then put in the Mercury through the Pipe on the outfide of the Furnace, and prefently ftop the Mouth of the Univ Calif - Digitized by Microsoft ® Pipe:

Pipe with Cotton; and by the tharpness of the Fire, part of the Mercury will in a thort time diftil into the Receiver ; but one part in the likenels of Water ; feparate the Water from the Mercury, and keep it, but that which remains quick, caft again into the faid Veffel as before, fo oft, till it be through the tharpnefs of the Fire all converted into Water, empty the Receiver every time into another Veffel, and keep it well ftopp'd : Then take of this Water four Ounces, and of the Oyl or Salt of the first Experiment (Salt of Tartar impregnated with the Spirit of Philosophical Wine) one Ounce, make it go over together with the faid Salt, distilling that Water in Ashes with a most gentle heat at first, then in the end increasing the Fire, till more will not diftil: Then take new Salt, or Oyl of the fame first Experiment, and joyn it with that Water a little before diffilled, and make it go over again, distilling by Ashes as before; but this Magistery you must repeat five times, mixing one Ounce of the faid Salt or Oyl of the first Experiment every time with three Ounces of the faid Water, distilling as before in Ashes, with the same degree of Fire, and the fame weight as before, as well of the Water, as of the Salt or Oyl: And by this means will you by the help of God, have a Mineral and Vegetable Water united together, which hath the power of diffolving Mercury, and all Metals, especially the two Luminaries : For the multiplication of this Water you must proceed thus; Take one Ounce of Mercury purged, and five Ounces of the faid tharp Water (now prepared) joyn these two together in a small Cucurbit, lute it well, then will the Mercury be forthwith diffolved, which diffolution put in a little Urinal, with an Alembick and Receiver, the Joynts well luted diftilling in Afhes, and it will all come over into a Water, fome Terrefireity of no moment being left in the bottom of the Vessel: Then may you this way multiply the faid Water as much as you will, viz. by taking five parts of it, and one of Mercury purged, dissolving first, and distilling through an Alembick as before.

He revivifies Mercury fullimate, to be purged ofter the common way, by the Oyl of Tartar, and quick Lime; being now purged, he digests it in Aqua Vitæ, that is, Philosophical ; for common Spirit of Wine would be here of no effect, wherein this digestion with I hilosophical Aqua Vitx, much of the permanent uncluolity flicks to the Ar-Univ Calif - Digitized by Wiccosoft @ gent

gent

(118)

gent vive, altering it exceedingly; then he puts it into divers Aludels, joyned together, and to the Receiver, and made red hot, in order to be converted into a Mercurial Water : The way of distilling by Vessels red hot, I find in many places to have been much in use among the Adepts, but whether they contrived this way for the abbreviating, or more exquisite way of operating, or for what other cause, I know not. Bafilius, Lib. particularium, in particul. Solis, diftils not Mercury, but Gold often extinguished in the Philosophical Aqua Vitæ through a hot Veffel into a red Liquor. Take of Aurum fulminans, faith he. one part, of the Flowers of Sulphur three parts, calcine with a gentle Fire till the Sulphur be confumed, the red hot matter extinguish in the Spirit of Wine, acuated with some drops of the Spirit of Tartar (the Vegetable Menstruum made of the Salt of Tartar) decant the Spirit, and the powder dry at the Fire, to which being dryed, add again three parts of the Flowers of Sulphur, calcine and quench as before : This Work repeat fix times, that the powder of the Gold may be made like Butter, foft and fat, which must be carefully dryed, because it melts with a little Fire, this powder being a little heated put into a Retort with a Pipe, and made red hot, and the Pipe being prefently stopp'd, distil the red dropsfalling into good Spirit of Wine put before into the Receiver.

If the Gold being divers times extinguished in the Spirit of Philofophical Wine is made foft and fat, why might not this be alfo done in common Mercury, digested according to the Receipt, in the same Spirit of Wine ? But Suppose Lully propos'd it only to himself, to reduce Argent vive into a common acid Liquor, yet does he out of this, with the addition of the Salt of Tartar of the first Experiment, make a Vegetable Menstruum of the Fifth Kind, with which he disolves common Argent vive, and reduceth it into a Mercurial Water : then he diffolves common Mercury by this Mercurial Water, and draws it off fo, as to remain in the Form of an Oyl; which Oyl of Mercury being diffolved in the Vegetable Heaven, he circulates, and being circulated, calls it the incalcinated Menstruum. If instead of the Oyl of Mercury you take crude Mercury reduced into the true first matter of Mercury, and acuate the Vegetable Heaven with this Mercurial Sal Armoniack, you will make the same, yea a much better incalcinated Menstruum. The way of making the Sulphur of Nature of common Argent vive is this following. Univ Calif - Digitized by Microsoft ®

The

The Mercurial Sal Armoniack, or Mercury of the Mercury of Lully. In Experim. 18.

Ake Mercury being twice fublimed with Vitriol and Salt, put the fublimate upon an Iron Plate, being first very well pulverized, add to it two Ounces of Tin calcined, then fet it in a moist place, and it will be diffolved : fublime again, and lay it upon an Iron Plate as before, and it will be all diffolved, and thus may you diffolve as much Mercury as you pleafe: then take this Water, and rectify it feven times in Affies, or till it will yield no more Terrestreity, then distil it in Balneo with an easie heat, and distil one part of ten, which is of no use, being Phlegm, which it contracted in the moift place, then know the weight of the Water remaining in the bottom, and to every four Ounces put one Ounce of the Vegetable Salt of the first or fecond Experiment, being both of the fame ftrength, then diftil in hot Afhes with an Alembick and Receiver well luted, which being all diftill'd, add new Salt to it again, observing the fame weight as before, of the Salt as well as Water, then diftil again as before, and this fame way diftil four times, to every distillation adding new Salt as before, and distilling in Ashes, and fo will you have a Mercurial Water fit for all Phyfical Operations: Then take common Mercury, washed with Vinegar and Salt, and strained through a Goats Skin, put it in a Vessel, and if there be one Ounce of Mercury, add four Ounces of the aforefaid Mineral Water, and having put on a blind Head in Ashes, let it boyl gently, and it will in a short time be all disfolved, empty the diffolution into another Vessel warily, that if any Terrestreity be left in the bottom, it may be separated from the faid diffolution, as a thing of no effect : you may this way diffolve as much Mercury as you will. Then take the aforefaid Mercury diffolved, and putrify thirty Days in Balneo or hot Dung, which must be changed every ten Days, that the heat may endure, and not be extinguished : having putrify'd, remove the Veffel, and putting on an Alembick to, with an Urinal

nal and Receiver well luted, diftil all the Water in Balneo, and the Mercury will remain in the Vessel white as Snow, then pour to it fo much of this Water, which you now diffilled, as to be four Fingers above it; the reft of the Water keep in its Veffel well stopp'd in a cold place, then putting a blind Head upon its Vessel, and sealing the Joynts, putrify a Natural Day, then taking away the blind Head, and putting on an Alembick with a Receiver close luted, diftil in Ashes, and increase the Fire, that the Soul may pass over intoits distilled Water; lastly, distillation ceafing, let the Veflel cool, takeaway the Receiver, and keep it well ftopp'd, for that which is diffill'd therein is the animated Spirit; but to the matter remaining in the Veffel, that is, the Urinal, pour again of the distilled Water fo much as will swim four Fingers above it, and having put on a blind Head, putrify as before, and taking away the blind Head by turns, and put-fing on an Alembick with its Receiver, wherein you kept the other part of the animated Spirit, the Joynts being well luted, diftil again by Afhes, and laftly increase the Fire, for the Soul togo over into the diffilled Water as before, then the Veffel being cold, keep the animated Spirit in the Receiver as before, well ftopp'd, and to the matter remaining in the bottom pour again new Water as before, and putrify as before, 'distilling in Ashes, pour the Spirit into the same Receiver, where you kept the other : thus repeat the Magistery, till the Body remains dead, black, and void of all moisture, which you will prove by this fign; take a little of this black Body or Earth, and lay it upon a hot Plate, and if it fumes not, nor flyes away from Fire, then take that Earth, and put into a little Glass-Globe wel luted, and the Mouth well stopp'd; fet in a reverberating Fire the space of twenty four hours; then remove that calcined Earth, and put it in hot ashes very well stopp'd to prevent the attracting of any moisture : Then take the animated Water, and rectify it feven times in Ashes, which animated and vivifyed Water divide into two parts, whereof one we will use for the vivifying of the Earth, the other for the diffolving of Sol and Luna: Then take one part of the faid Water, and know the weight of the Earth referved before, grind first, put it in an Urinal, then pour upon it of the aforelaid Water a fourth part of its weight, and joyning a blind Head to it well luted, set the Vessel in Bal-

neo.

neo, not to touch the Water of the Balneo, but for the matter to be heated by the vapour only, and fo let it remain four days; then having taken away the blind Head, and put on an Alembick, diftil in Ashes with a gentle heat like that of the Sun, and an infipid Liquor will flow over, which caft away, as nothing worth; then again imbibe with a fourth part of the animated Spirit as above, digefting as above, and diffilling the Liquor by Afhes as above : This Magistery thus repeat, till the whole Body hath re-affumed its Liquor or Soul, and remains white as Snow, which Body take out, dry, and grind; being ground, put it into a fmall Cucurbit, ftrongly luted with lutum fapientia, and the Mouth of the Cucurbit stopp'd with Cotton, and fet the Veffel in a Furnace of Ashes; but take notice, if the Fire be too violent, the matter will turn into Oyl, and cannot be fublimed, befides there will be danger of breaking the Veffel, as has happened to us, and therefore we are willing to advife you to continue an easy heat, till the matter be sublimed : This also obferve, that this way of fubliming may also be done in the Fire of an Athanor, but then the matter will not be fublimed in lefs than the space of three or four days; which sublimation will indeed be most white, as the Scales of Fish, or as Talk : Then warily take out the Magneha, the first matter of our common Mercury, our Sal Armoniack, our Sulphur, which keep in a fmall Cucurbit, well flopp'd in Afhes, warm as the Sun, but that which remains in the bottom, and cannot be fublimed, caft away, becaufe of no efficacy, its precious Seed being vacuated.

(121)

Here he diffolves Mercury with calcined Jupiter upon an Iron Plate per deliquium, with which he cohobates the Vegetable Salt of the first or second Experiment (Salt of Tartar impregnated with the Spirit of Philosophical Wine, or sublimed into a Vegetable Sal Armoniack) in equal weight (yet by degrees) through an Alembick; (instead of this Menstruum may be taken the Vegetable Heaven of Lully) with this Menstruum he diffolves common Argent vive, and reduceth it into a white Oyl, out of which Oyl he draws the animated Spirit, repeating the Work, till the Earth of the Mercury remains black, fixed, and without fume on a hot Plate: This exanimated and reverberated Earth herevivisies, by imbibling it with a fourth part of the animated Spirit feven times restify'd, till it becomes white and volatile, which then he fublimes into a Mercurial Univ Call - DigiSzed by Microsoft® Sal Sal Armoniack, the making of which differs not from the antecedent Defcriptions of the Sal Armoniacks; but if it be mixed with four parts of Lully's Vegetable Heaven, that which is call'd the incalcinated Menstruum is made from thence, and so much the stronger, as that Sal Armoniack is stronger than the Oyl of Mercury, but if this first matter of Mercury be circulated according to its times you will make a Menstruum deferving the Name of Mercurial Heaven. Guido prepares the incalcinated Menstruum not from common Mercury, but the Mercury of Metals, Sol or Luna.

47. The Menstruum of Guido for Precious Stones. Pag. 92. Thesauri. Chym.

+C|C!P 2.0

Ake of the Vegetable Menstruum acuated (described in the Seventh Kind in Numb. 38. or Numb. 39.) four parts of the Oyl of the Mercury of Sol or Luna one part, mix. Heelfewhere pag. 84. describes the Oyl of the Mercury of Metals thus : Take of the Mercury of Sol (a Description of which we shall have lower in the third Book) three Pounds, of the red Lyon (Gold fublimed, of the preparation of which in its place in the second Book) twelve Ounces, or equal weight, mix very well, put it in a Cucurbit with its Alembick, lute well, and increasing the Fire by degrees, fublime, and the Mercury will afcend partly quick, partly in the form of a white or Ash-Colour'd Sublimate, and about the lower part of the Glass, of a citrine Colour, mix the quick Mercury again with the Sublimate, and again fublime, and that fo oft, till all the Mercury is fublimed, which being fo fublimed, put into Phials of a large bottom, and in every one eight Ounces, to putrify in Balneo fix weeks, and then fix weeks in Balneo. rorido, and the fublimed Mercury of Sol will be refolved into a black Oyl, which rectify through an Alembick, first with a weak Fire, then a ftronger, laftly most ftrong, fo will you have the Oyl of the Mercury of Sol.

- But befides Mercury, that open Metal, Menstruums of this Kind may be also made of the other Metals, though more compact, an Example of which we have in the Lunar Menstruum of Lully.

Univ Calif - Digitized by Microsoft ® 4

48. The

48. The Lunar Menstruum of Lully. In Experimento 24.

Ake common Mercury, and wash it with Vinegar; when the terrestreity of it is taken away, let it run through a Goats Skin, then put it into those your Vessels, of which you had a Form before, (in Numb. 46.) put the Mercury in those Veffels, and diftil with repetition, till it turns all into Water, as I taught you above; then take four Ounces of this Mercurial Water, and therein diffolve one Ounce of the Vegetable Mercury of the second Experiment (Salt of Tartar fublimed, or Vegetable Sal Armoniack made of the Salt of Tartar) pass it through an Alembick together with the aforefaid Mercurial Water, then in every four Ounces of the Water, diffolve one Ounce of Mercury as before prepared, (that is Vegetable) putrify eight days, then distil by Ashes, increase the Fire at last, that so it may pass into that which was diffilled, in which diffolve half an Ounce of Silver cupellated, then putrify three Days, then diftif in Afhes, and lastly increase the Fire a little, that all the clearness, or whiteness of the Luna may go over by an airy resolution in this diffillation.

He extracts not the whole Silver, but the more Volatile part of it, (called in the ways of making Sal Armoniack, animated Spirit) by the Menstruum of three Veffels already described in Numb. 26. with the Description of it there declared, you may explain those things which are more obscure in the present Receipt. He sometimes joyns the animated Spirit of Luna, and the animated Spirit of Sol together, and by circulation reduceth them into an admirable Menstruum, after this manner; unon Dio CEB 10 on the Wind 10-1 . 10-1 . 10-1

49. The Circulatum majus or Acetum acerrimum of Lully. In Experimento 25.

Ake the fimple Vegetable Menstruum of three individuals, described before in Numb. 26.) then take Luna, calcine it with Mercury, then take principal care to remove all the Mercury from the calcined Luna, and the fame way calcine Sol with Mercury, then let all the Mercury be taken wholly from it : these two Bodies put into Glass Dishes each by it felf apart, and to them each by it felf apart pour clarifyed Honey, mixing the Calxes of the two Bodies very well with the Honey upon Afhes to as to boyl, then take the Honey from the Calxes, by walhing them in hot diftilled Water, and the Calxes will remain in the bottom of the Veffel, then mix the Calxes with the Honey again. boyling as before, and mixing with a Spoon as before, and thus repeat your Work three times as well in the Calx of Luna, as Sol : Then take these two Bodies being calcined and washed, and put them into a Vessel of folution feverally, and pour upon them of the former coelificated Menstruum (of the three individuals) fo much as will fwim three Fingers above it, cover the Veffel with a blind Head, - luting the Joynts well with wax gummed, that it may no way refpire, fet it in Balneo for a Natural Day, fo as to boyl gently, then for two other Daysput it upon Afhes, and let it boyl gently as before, then empty that part of Sol, which was diffolved into another Veffel by it felf, which folution will be of a yellow, Colour: So also take out the dissolution of Luna by it felf apart, and pour it into another Vessel, each of which diffolutions keep in each Veffel as before in Balneo, but the diffolution of Luna will be of a Sea or Green Colour; the undiffolved Earth as well of Sol as Luna dry upon Afhes :. Which done, pour again to each, of the new circulated Menstruums, and the Veffel being covered with a blind Head as before, fet it in Balneo, and make it boyl gently as before, and continue the fame boyling upon Afhes, laftly decant the diffolution of each Body as before into its Vessel, wherein the other diffolutions above were kept by themfelves apart : But this Magistery you must repeat,

repeat, till all the Sol, and all the Luna are diffolved; thefe diffolutions putrify by themselves apart the space of forty Days, after putrefaction put the diffolutions feverally into two Urinals. with Alembicks and Receivers ftopp'd, and the Joynts being well luted, diftil first the whole Menstruum in Balneo, but the Bodies will remain in the form of an Oyl, then again pour upon them fo much of their Water lately diftill'd, as to fwim three Fingers above the Matter, cover the Veffel with a blind Head, and putrify twenty four Hours, then take away the blind Head, and put on an Alembick with a Receiver, and luting the Joynts, diftil with a gentle Fire in Afhes; laftly increase the Fire some-what, that the air (the animated Spirit) may pass over into the Water, last of all likewife force it with a stronger degree of heat, till the Fire (the Soul being more viscous) ascends over into the air; the Vessels being cold, pour again the new referved Water. to the remaining Matter, the animated Spirit of each Body being first luted in its Receiver, to prevent respiring, cover the Urinal again with a blind Head, putrifying as before, and laftly diftil in Afhes as before, laft of all as before, increase the Fire; thus repeat the Magistery, till both the Bodies of Sol and Luna are by an airy revolution transmitted feverally through the Alembick : But if these Bodies will not entirely come over by distillation (a little indeed will remain, which keep for the reft of the Experiments) then take the animated Spirit of Sal, rectify it oftentimes by it felf in Ashes, but be fure not to take away any of the Terrestreities, which will every rectification remain in the bottom of the Veffel, but rather pour back the diffilled Water always to the fame Fæces, till you have performed the Work feven times compleat : And observe the same order in rectifying the Water of animated Luna referved before. This done, joyn these two Waters together, which Conjunction is called the Conjunction of Father and Mother, Male and Female, Man and Woman: And thus will you have the Menstruum majus, the Ania mal, Vegetable, and Mineral, being joyned together, and thefe three reduced into one fubftance you must circulate fixty Days in a Veffel fo luted, as not to refpire; Circulation being compleated, you will have the Menstruum majus brought to action, the power of which is fo great, as not to be related : This therefore is that admirable Menstruum which diffolves all Bodies, with the

Univ Calif - Digitized by Microsoft ®

(125)

the prefervation of their vegetative and transmutative Form: This, I fay, is that Menstruum containing in it fuch odour and fragrancy, that nothing can be compared to it : This lastly is the resoluble Menstruum, which is by the Wise call'd by almost innumerable Names, the Acetum acerrimum, which converts Gold into a Spirit : This is the Aqua Sicca, Aqua Solis, and Aqua Vitæ; Parisinus made this Menstruum, (which he otherwise calls the greater Mercury, or compounded Menstruum) by this method.

50. The Circulatum majus of Parifinus. In Apertorio. Cap. G.

Ake of the best calcined Luna three Ounces, of Sol also cal-cined according to Chapter H, (in which the Calcinations of Metals are after the common way described) two Ounces to each, being put by its felf in its Glass, pour of Circulated, or the fimple Quinteffence (acnated with Honey, or the Coclum mellifluum described in Numb. 10.) the height of four Fingers, the Vessels with their blind Heads put in Balneo two Days, and in Ashes two more : when you fee the Waters in fome measure tinged, decant them, and the diffolutions keep by themselves in Balneo well ftopp'd, to the undiffolved Calxes pour again of E, digefting, decanting, and repeating to often, till the Bodies of Sol and Luna be reduced into a liquid fubstance, then diftil the Composition (Diffolution) of Sol, and the Composition of Luna in Balneo, and the Bodies will remain in the bottom of the Glass like an Oyl; but to the Waters drawn from the faid Luminaries in Balneo. put Vegetable Sulphur, according to the weights of the Sol and Luna, and it will in the space of two Days be diffolved in Balneo; fo foon as the faid Sulphur is diffolved in every of its Vessels, pour every one to its Metallick Oyl, but to avoid Error, you must know that your disfolved Sulphur is that which we taught the preparation of in Chapter L, namely, that which is extracted out of (Philosophical) Wine, otherwise called, Sal Armoniack, put the Vessels in Putrefaction eight Days, then draw off the Waters in Balneo every one by it felf, then pour of new Water the height of two Fingers, cover the Veffels with blind Heads, and digest for a Day in Balneo, then put on common

common-Alembicks, and diftil the Waters gently in Afhes, then increase the Fire, that the air may also ascend into the Waters ; the Veffels being cold, pour new Water to each remainder, cover them with blind Heads, digeft in Balneo for a Night, then distil in Ashes, and this repeat as before, till you have extracted all the Liquor of the two Luminaries; keep the Earths, and if a little of it be castrupon a red hot Plate, and burns not, it isan infallible fign, because the faid Earth is deprived of its Soul; keep these two Earths mix'd together in digeftion of Ashes, for the receiving of their Mercuries, (the distilled Airs or Effences) as we shall teach in Chapter L. (in the way of making the mineral Sal Armoniacks, or Metallick of Gold and Silver). Now take the Liquors of both the faid Luminaries, that is, their Souls or Mercuries, already pais'd through an Alembick, and joyn them together, diftilling through an Alembick in-Ashes; if any flimy Earth remains, add it to the former Earths. referved, and this do fix times, always removing the flimy Earth : Take a large Veffel or Cucurbit, with an Alembick made all of a piece, in which pour your compounded Menstruum, Ropping the Mouth with a Glass Stopple, luted with the white of an Egg, quick Lime, and course Paper, which being dryed, lutethen with our Bitumen, made of an equal quantity of Pitch, Wax, and Mastick, and Circulate in a Sophical Balneo, as we shewed you at Mr. Angelo's House in the Famous City of Venice, when we made the fimple Circulated Menstruum, and let it be Circulating forty Natural Days, which being expired, you will fee our Menstruum or Mercury clearer than Cristal, and more odoriferous than any Perfume: This Menstruum, my Son! hath the power of diffolving the two Luminaries, and reducing them from power to action; and you must know that by this alone, yet with the addition of its red or white ferment, you will by Circulation make particulars of great projection : This is that which our Captain Raymund Lully, in his Epistola Accurtatoria, spoke of, faying, Having diffolved Sol, and drawn the Water from it in-Balneo, then know the Gold is made Spiritual, and irreducible into its former Body, to which if you add a hundred parts of common Mercury, it will congeal it into true Gold : Moreover, my Son ! if the faid Gold congealed into a Gum be diffolved in fome Water, and given to a Patient of what infirmity foever, he

(127)

Univ Calif - Digitized by Microsoft ®

he will in a very few Days return to his good temperament; it removes whitenefs of hair, and all other figns of Old Age, reftores former Youth, and preferves health even to the time prefixed by the Eternal God: Know alfo, that fhould I defcribe all the Miracles (and indeed they may well be called Miracles) and all the effects performed by this Mercury, which, as I remember, I fufficiently declared to you by Word of Mouth, and explained the various Sayings of our Captain in the *Book of Quinteffence* then, &c.

From the Receipts we observe.

1. That these Menstruums are stronger than all the antecedent, as being acuated with better arids, or dry things, and therefore do not extract the Essences, but dissolve the whole Body into a Magistery.

2. That these Menstruums are the Magisteries of Metals and Minerals, and therefore Medecines.

3. That they are made many feveral ways now known to us.

4. That the Sal Armoniacks of Metals are made the fame ways as Vegetable Sal Armoniacks.

5. That every one of them is properly called Philosophers Mercury, or Mercury of the Mercury of Gold, Silver, Iron, &c. Jublimed; the Mercury of Antimony, common Sulphur, &c. Sublimed, because like common Mercury Sublimed, it is most cassly resuscitated by hot Water or Vinegar, into the running Mercury of Gold, Silver, Iron, Antimony, &c. as we Shall be better assured by Examples of the following Books.

6. That fimple Vegetable Menstrums, do as being permanent Waters, continue alfo with things Metallick, and flick most perfectly to them, not for Medicines only, but alfo for the making of precious Stones, yea Tinctures, as well particular as universal : As to the simple Vegetable Menstruums, extract the Essences of Vegetables, and the same compounded, that they do make Magisteries for a Medicinal use, we shall easily agree; but for the uncluous, and most inflamable Spirit of Philosophical Wine, made of combustible Vegetables and Animals, to be a constitutive to any Chymical Tincture, seems to be an affertion altogether Paradoxical; for which cause are we to be admonished, that the Adepts rejected every Combustible Vegetable and Animal, as a thing as a for Univ. Calif. Digitized by Microsoft ® for their Tinctures, but never despised the purify'd Elements of Vegetables and Animals, made incombustible, or acquiring incombustibility in the process it self, though they have declared them to be (without the ferment of the Stone) infufficient, as also Metals alone without these Menstruums, being therefore mix'd with Metals, they make Tinctures as well particular as universal for Metals, Witness Ripley, faying : If you have a mind to make Gold and Silver by the Philosophical Art, you must for that purpose take neither Eggs nor Blood, but Gold and Silver, which are Naturally and Prudently, and not Manually calcined, for they produce a new Generation increasing their Kind, as all other Natural Things : But suppose a Man might with benefit effect it in things not Metallick, in which are Colours found in Aspect pleasant, as in Blood, Urine, Eggs, and Wine, or in half Minerals taken out of Mines, yet would it be neceflary for the Elements of them to be first putrifyed, and joyn'd in Matrimony with the Elements of perfect Bodies. Libro. 12. portar. portu. 1. The Elixir, he proceeds, is not to be made of Wine, as Wine, nor of Eggs, Hair, or Blood, as meerly Eggs, Hair, or Blood, but of the Elements only, and therefore we are to feek, in order to obtain the Elements in the excellency of their fimplicity and rectification; for the Elements, faies the Philosopher Bacon in his Speculum, are the Roots and Mothers of all things living : But the Elements of the things aforefaid are not Ingredients to the making of Elixirs, but by the Virtue and Commixtion with the Elements of Spirits (whereof he recites four, Argent vive, Sulphur, Arfenick, and common Sal Armoniack,) and Metallick Bodies, and fo, as Roger Bacon faies, they are Ingredients, and do make the great Elixir. Mid. Phil. Chym. Cap. 3. We, Saith he further, take neither of the first Principles, they being too fimple, nor of the last, they being too grofs and fecualent, but only the middle, in which is the tineture and true Oyl, separated from any unclean Terrestreity, and Phlegmatick Water ; therefore faith Raymund thus : The unctious Liquoris the near Matter of our Physical Argent vive : And though those Bodies, in which those Mercuries are hidden, be fold openly by Apothecaries at a low Price, according to the faying of the Philosopher in this manner: Our Sulphurs we have. from the Apothecaries at a mean Price, yet if you understand not the Art of separating the Elements, according to the Do-UniveCalit - DigiTzed by Microsoft ® Grine

Etrine of Aristotle, in is Epistle to Alexander, in the Book of the Secrets of Secrets, where he faith, Separate the subtil from the großs, the thin from the thick, and when you have drawn Water out of Air, Air out of Fire, and Fire out of Earth, then have you the full Art: except, I fay, you understand this, you will do little or nothing in my Work. Pupilla Alchym. Pag. 298. It appertains not to this place to prove these things by more Examples, it is enough to have instanced these few by way of anticipation, the following Books treating more copiously of this Iruth.

7. That the Name (Hell Fire) the Menstruum of Trismosinus, is the proper and common Name of Mercurial Menstruums : for most of the Adepts do affirm Mercury to be of a most hot, yea Fiery Nature : Jome few dany, accounting it the coldest Metal.

Among It the Affirmers was the great Paracellus, Jaying : We find Mercury to be inwardly of the greatest heat, and no way to be coagulated, but by the greatest cold. Libro. 6. Archid. magic. Whoever think Mercury to be of a moift and cold Nature, are convinced of an open Error, it being of its Nature most hot and moift, by reason of which it always and perpetually floweth; for if it was of a moift and cold Nature, it would be like frozen Water, and be alwaies hard and folid, and it would be necessary to melt it by the heat of Fire, as other Metals, which indeed it requires not, having a Natural Liquation and Flux through its own heat, which keeps it in a perpetual Fluxion, and makes it quick, that it can neither dye, nor be congealed. Cælum Phil. Sect. de calore merc. pag. 124. No Name can be found for this Liquefaction (Fluxion of Argent vive) much lefs the Original of it, by which it may be called, and no heat being fo vehement, as to be equivalent to it, Hell Fire ought to be compared to it. Cælum Phil. can. 1.121. Basilius taught the fame, faying : The Fiery Spirit of Sulphur being invisibly incorporated in Mercury, therefore it prefers it felf in Fluxion, not to be coagulated, Sc. For Mercury is a meer Fire, and therefore cannot be burned by any Fire; no Fire toucheth it fo, as to deftroy it, for either, Gc. Currus triumph. Antimonii, Pag. 40.

And Sendivogius : I Mercury am Fire, &c. My Spirit and the Spirit of Fire love one another, and so far as able, one accompanies the other, &c. If any Man knows the Fire of my Heart, he sees Fire is my Food, and the longer the Spirit of my Heart eats

Fire,

Fire, the fatter it will be, the Death of which is afterward the Life of all things, Gc. I am Fire within, Fire is my Food. Dialog. Mercurii Pag. 515. Volum. 4. Theat. Chym.

(131)

Ripley did by the most hot things of Lully (acuating the Vegeta-ble Menstruum, without the Virtue of which things, it would not be able to disolve Metals, but in a long time) understand Mercury : I am, faith he, forc'd to fay, that all these things which Raymond speaks (of things most hot) are covered with a Philosophical Veil, for his Saying is, That diffolution must be made with Spirit of Wine, but his intention also is, that in this Spirit (of Philfophical Wine) may be had another refoluble Menstruum, which is only of the Metallick Kind. Medul. Phil, Pag. 168. For that is Raymund's Water, which Mary the Propheteis fpeaks of, faying, Make your Water as a running Water, by Divine Infpiration extracted out of the two Mineral and Vegetable Zaiboth (Mercuries) that is, circulated together into a Criftalline Water, &c. because, as faith Raymund, there being in Mercury a Point of Igneity, by the power of which is diffolution made, it is requifite to animate it with the Water of Vegetable Mercury, other. wife it can diffolve nothing : And this is the Water containing all those things which you want, and by Virtue thereof are Pearls made. And this Vegetable Water being compounded, doth by Virtue of the Mercury (*Mineral*) prefently diffolve all Bo-dies, and by reafon of its Vegetability (*Vegetable* Menstruum) revivify every Body, and by its attractive Virtue, (*Symbolical Nature*) produce an Oyl from every Body, and Mercury draws to it felf its like, that is, the Mercury of a Body. Of this Water, faith Raymund, in Compendio Art. Transm. ad Regem Rober-tum : You know, most Serene Prince, that our Stone is made of nothing but Argent vive alone, that is, compounded of Vegetable and Mineral: And therefore faid the ancient Philosophers, the Stone is made of one thing only, that is, Argent vive, Viatic. p.12. 345.

Mercurial Waters are called Ignes Gehennx, by reason of this Fiery Nature of Argent vive, the corrofive Specifick was becaufe of the Mercurial Water call d by Paracellus Ignis Genenna. Libro. de Specif. Pag. 29. The Circulatum majus, prepared from Mercury, he calls a living Fire, most extream Fire, and calestial Fire. Univ Calif - Digitimed, by Microsoft ®

If

If you would bring into action, faith he, (the Life of Antimony hidden in its Regulus) you must refuscitate that Life with its like living Fire, of Metallick Vinegar, with which Fire many of the Philosophers proceeded feveral ways, but agreeing in the Foundation, they all hit the intended Mark, Sc. Yet that Fire, or Corporal Life in common Mercury is found much more perfect and fublime, which manifestly proves by its flowing, that there is a most absolute Fire, and cœlestial Life hidden in it; wherefore whoever defires to graduate his Metallick Heaven (the Arcanum Lapidis, or Antimonii) to the highest, and reduce it to action, he must first extract the first liquid Being, as the cœlestial Fire, Quintessen, and Metallick Acetum acerrimum out of the Corporal Life, (common Mercury) &c. Libro. 10. Archid. Cap. 6. Pag. 39.

Among ft the Deniers, who judge Mercury to be of a cold Nature, is first Bernhard, illustrious for Learning as well as Linage, faying : Whereas Mercury is compounded of the four Elements, they therefore being heated by the common and general Caufes, the Natural heat is excited by its own motion, by fuch motion as this are the Fire and Air in Mercury moved likewife, and by little and little elevated, these Elements being more worthy than the Water and Earth of Mercury, nevertheless moiftness and coldnefs are predominant, Ec. Lib. Alchym. Pag. 766. Volum. I. Theat. Chym. Argent vive being most cold, may in a short time be made most hot, and may the same way be made temperate with things temperate by the Ingenuity of an Artift. Epist. ad Thomam, Pag. 57. Art. Aurif. Arnoldus de Villa Nova in the Book, call'd Rofarium, is observed to have declared, that crude Mercury, that is, Argent vive, which is by its Nature cold and moift, may by fublimation be made hot and dry, then by revivification made hot and moift like the Complexion of Men, &c. The faid Arnold, though a Reverend Doctor, and Ingenious in other Sciences, yet perhaps handled Experiments in this Art. without the Doctrine of Caufes; but he faith, that in the first Purgation, the crude Spirit (Argent vive) is fublimed with the lefs Minerals and Salts, and that Mercury it felf, which is in its Nature cold and moift, may be made a Powder by Nature hot and dry, as he faith, this is indeed of no benefit to our Philofophical Work : but fuppofe a Man may make fuch a Powder, as

Univ Calif - Digitized by Microsoft ®

he

he speaks of, out of Mercury, namely, dry and hot by fublimation with faline Things, yet these Purgations are vain and impertinent, yea hurtful as to the perfecting of our Work, Sc.And if it be faid by way of instance, that as by Purging the impurities of Mercury, the faid Arnold dryed it by fublimation, foalfo, as you fay Thomas, moiftened it by revivification, and made the Mercury hot and moift, fuitable to his own (bumane) Body in Nature, this indeed impedes not my Reverend Doctor, nor impugnes the Truth of the Philosophical Art; yea rather the Error appears in this Natural Art : For, as it is clear; Arnold teacheth, (if you regard the found of Words) that Mercury being thus. dryed, by hot Water, into which it is caft, is revivifyed, and he faith, made hot and moift, whereas when first sublimed, it was hot and dry : But what Philosopher can truly fay, that Mercury, or any other Metal, is by fimple Water, though never fo hot and boyling, changed as to its internal quality in Nature. acquires moistness Natural to it felf, and so is revivifyed? In this revivification therefore Mercury requires nothing, forafmuch as common Water decocts not, nor alters it, because it enters it not, and that which enters not, alters not, because every thing to be alter'd must first be mixed: Some superficial impurities of Mercury, fuch Water may indeed wash away from it, but cannot infuse a new quality into it : For such a Nature as Mercury had when reduced into Powder, and mortified by fublimations, fuch a Nature exactly will it keep being revivifyed by Water ; This I am willing to fay with Reverence and Honour to the faid Arnold, but I confider and defend the Truth of Nature and Experiment. About the end of his Epifle to Thomas.

But be it what it will, it confifts not with our Prudence to adhere to any Opinions, of what Authority foever, but to Truth alone; in which refpect we fay Argent vive is neither cold, nor hot, yet that being of easier diffolution than the rest of the Metals, it is most fit for this kind of Menstruums; and that the Mercurial Waters prepared from it, may by Chymical Liberty be called Hell-Fires, though besides these Waters the Adepts call also other Menstruums Infernal Fire; of which fort is the acctum accrimum of Ripley in the Fifth Kind: But the following Arguments taken out of the Text it felf do prove, that Arnold, Lully's Master, was as to his reducing of Argent vive into the first Matter or Effence, not sufficiently understood, and misel(erved).

observed by Bernhard, taking Aqua fervens for common boyling Water : Arnold divided the Second Book of his Rolary into four Principal Works ; which are, Solution, Ablution, Reduction, and Fixion, as appears by the first Chapter of the aforefaid Book : Of the first Work, namely, the Diffolution of the Stone, in the second Chapter, thus : You must diffolve the Stone (Gold or Silver) being dry and thick, into Argent vive, that it may be reduced into its first Matter; and all this is done by Argent vive only, it alone having the Power of converting Sol and Luna into their first Matter; but Argent vive having a terrestrial and adustible feculency in it without inflammation, and fubstance of aqueiry, you must of necessity take away that which is superfluous, and fupply what is wanting, if you defire a compleat Medicine; but the Earthly feculency is to be wholly taken away by fublimation, Sc. This sublimation or depuration of Mercury he describes in the third Chapter following : The Craft (Way) therefore of removing the Earthy fuperfluous fubstance from it, is to fublime it once or twice with Vitrum (Vitriol formerly so called) and Salt, till the fubstance of it becomes most white, having ascended most white, cast it into Aqua fervens, till it returns into Argent vive; then take the Water from it, and Work with it, because it is not good to operate with it, except it be first purifyed this way : and therefore faith Avicen, The first things to begin with. is the fublimation of Mercury, after that, the folution of it, that it may return into its first Matter, and fublime it wholly: Then put clean Bodies in the fame, weighed into this clean Mercury, Sc.

If we respect the sound of the Words, Bernard in his long Argumentation corrected Arnold deservedly, but if the Sense of the Words, here is nothing deserving Correction : Aqua fervens, the Name of Arnolds Menstruum, is the chief and almost only thing concealed by Arnold in the whole Practice of his Book, which had he manifested, he would have prostituted all the more secret Chymy; but that he meant not common boyling Water, is proved by the following considerations.

1. Gold or Silver must be dissolved into Argent vive, or the first matter, first Being, Essence, &c. by Argent vive, not common, but Philosophically prepared : Nothing reduceth Gold into a first Matter, but a first Matter; as here the first Matter of common Mercury, clean Mercury, (135)

Mercury, or the Mercury of Mercury. The Adepts have a Rule, That a first Matter prepares a first Matter; Therefore as Mercury prepares Mercury; an Essence an Essence; a Magistery a Magistery; so the Philosophers Mercury, or the primum Ens, Essence, &cc. of Sol or Luna, cannot be prepared but by the Philosophers Mercury, primum Ens, or some Essence; wherefore by Aqua tervens in this Receipt, we understand the Essence of Mercury, but not in the least common boyling Water.

2. Clean Argent vive, or the first Matter of Mercury, made of Argent vive sublimed by Aqua fervens, cannot be running Mercury, because it is in the Form of a Liquor : For,

First, The diffolution of Gold made with this clean Mercury is to be filtred. Grind time after time, and imbibe, and boyl in Balneo, then distil through a Filter, till it (meaning the Metal diffolved in the Menstruum, Chap. 3.) goes through.

Secondly, In the Diffolution of Gold, the Tinclure only is extracted, the Body being left. Be patient, faith he, and extract not the Tincture hastily, nor seek to have things perfect hastily or swiftly, for the first Error in this Art is haste, C_c . Bodies dissolved are reduced to the Nature of a Spirit, and are never separated, as neither Water mixed with Water, and that because Nature rejoyceth in Nature, as the Spouse is joyned with the Bridegroom; but those things which are not dissolved, have not pure parts, except they be mollified. Therefore, my dearest, you want where with to operate in the dissolution of the Stone, that is, you must separate their purer parts from them, that the Work may be effected with lighter, the heavier parts being cast away. Cap. 3.

Thirdly, Mercury, or the first Matter of Gold prepared with clean Mercury, is also liquid. Chap. 3. The beginning of our Work is to diffolve our Stone (Gold or Silver) into Mercury, or into a Mercurial Water, Chap. 4. No wonder therefore if Mercury prepared by Aqua fervens be called Water : It is faith he, expedient to diffolve Bodies by Water, that is, by Argent vive. Cap. 3.

Fourthly, Becaufe it extracts an Oyl from every thing. Put, faith he, of the pureft Mercury fo much as to fwim four Fingers, or more, which is better upon the fubflance of the Body, from which you would extract an Oyl, then kindle a gentle Fire under it till you fee the Oyl, that is, the Air of it, by little and litthe-

Univ Calif - Digitized by Microsoft.®

tle ascend, or be elevated upon the Mercury; gather it warily, and keep it apart, Sc. Cap. 10.

3. This Process of Arnold is ordinary, and call d by the Adepts, The way of separating the Elements, which cannot be done without either a Vegetable or Mineral Menstruum.

4. Aqua fervens among the Adepts is the ufual Name of Menftruum. Diffolve, faith Lully, the pureft Sol in its own Aqua fervens, then feparate the Phlegm, and the Sol will remain below, &c. Codicil. cap. 43. Pag. 203. That Fire burns Gold more than Elemental Fire, becaufe it contains heat of a terreftrial Nature, and refolves without any fortitude (force, efferve/cence, or corrofion) which common Fire cannot do; we therefore enjoyn you to make the Magistery of the hottest things you can get, and you will have an Aqua calida, which refolves every strong thing. Vade mecum. Pag. 272.

Which Form of Speech Bernhard himself knew, out of Morienus: Saying, Know that our Laton is red, but of no benefit to us, till it be made white: Know also, that Aqua tepida: calida, and fervens, Synonima's of one Menstruum) penetrates and whitens, even as it felf is (white,) and a moist vaporous Fire effects all things: Again Bendegid, Johannes Mehangus, and Haly: You that seeking Day and Night spend your Mony, waste your Wealth, and Time, tormenting your Wits in vain about the subtilities of Books, I admonish you out of Charity, through Compassion, as a Father moved toward his Son, that you would, I fay, whiten the red Laton by a white odoriferous Aqua tepida, but tear fo many Sophistical Books, so many Methods, and leave such great subtilities; believe me, that it may be well with you. Lib. Alchym. 770. Vol. Theat. 11. Chym.

5. It is by the blacknefs of the diffolution proved, that Arnold's Aqua fervens was a fimple Vegetable Menstruum; the black appearing above, faith he, gather apart, because that is the Oyl, and the true fign of diffolution, because this which is diffolved, attains to the end of sublimity, and is therefore separated from the lower parts, ascending upwards, and aspiring to higher places. Cap. 3. Rofarii.

These things we are willing to say, not impeaching the Reverence and Honour of Bernhard, but we contemplate and defend the Truth and Experiment of Arnold.

The

(137)

The Ninth KIND.

Vegetable Compounded Menstruums made of Simple Vegetable Menstruums, and Things tinging, being first fixed.

51. The Circulatum majus, or Metallick Acetum acerrimum of Paracelfus. Lib. 10. Arch. pag. 38.

F common Mercury ought to be reduced into the first liquid Being, then is it first to be mortify'd, and deprived of its Form, and that is done by feveral fublimations with Vitriol and common Salt, that at last it may be made like fixed Criftal: Then diffolve it in its Matrix, namely, in the primum Ens of Salt, (the Circulatum minus made of Salt, or the Water of Salt circulated described above in Numb. 27.) putrify a Month; add to it new Arcanum of Salt (Circulatum minus) that the impure may be precipitated to the bottom, but the pure turn'd into Criftals : fublime the fame in a clofe Reverberatory, being fublimed, turn it up continually, till it comes to a rednefs; this fublimation extract with the Spirit of Wine rectifyed to the higheft (Phillophical Wine) seperate the Spirit of Wine (by distillation) the remainder (the dry Tincture or Crocus of Mercury) diffolve upon a Marble, (per deliquium) and digest for a Month, pour new Spirit of Wine to it, digest for a time, and distil; Then will the Arcanum of the primum Ens, or first being of Mercury rife over in a liquid substance, which is by the Philosophers called Metallick Acetum acerrimum, and in our Archidoxyes Circulatum majus : And the fame is to be understood of Antimony, Gemms, and all other Metals.

Univ Calif - Dig Vized by Microsoft & Annota-

Annotations.

Here is agreat difference between this and the precedent Kind, though they both treat of Mercurial Waters: The antecedent were made of crude Mercury : This Circulatum of Paracelfus, is indeed made of Mercury, but first fixed : The precedent were most clear; these greater Circulatums are indeed most clear, but also most red, and so much better in their Tinctures than the precedent. The Receipt we will confider as divided into its parts, in the first of which Paracelfus fublimes Argent vive fo often, till it be made like fixed Cristal, that is, like mineral or common Cristal, clear and transparent : As this part is common, so it less needs explaining. In his-Book, De Renovat & Reflaur. he takes only Mineral Gold or Antimony for the fame Work, which Bodies notwithstanding are more bound up than the open Metal, Mercury; and for this reason it may feem to be fit enough for diffolution in Circulated Salt without fublimation : For the illustration of the Receipt, we will add the Description of the faid Book.

Take of mineral Gold or Antimony most finely ground one Pound, of Salt Circulated four Pounds, being mixed, digest them together in Horfe-Dung for a Month; from thence will fpring a Water, wherefore the pure must be separated from the impure, coagulate it into a Stone, which calcine with Wine cenificated (lenificated) and separate again, and dissolve upon a Marble : Let this Water be putrified for a Month, from it will be produced a Liquor, wherein are all fuch Signs, as in the primum Ens of Gold or Antimony, wherefore we delervedly call it the primum Ens of those things: It is no otherwise to be understood of Mercury, and other things alfo.

In the fecond part, he diffolves Mercury being fo fublimed, in Salt Circulated, the primum Ens of Salt, the Arcanum of Salt, the Water of Salt Circulated, (Synonima's of Paracelfus his Circulatum minus) putrifies or digests, precipitates with new Circulated Salt, filters, and lastly reduceth it into Cristals, or Philosophical Vitriol. In the Receipt of Lib. de Renov. he adds the weights of things : Take, faith he, of mineral Gold or Antimony one Pound, of Salt Circulated four Pounds, and then digefts, and feparates Univ Calif - Digitized by Microsoft ®

the

the impure from the pure, and coagulates into Cristals. Sometimes he diffolves Bodies by some mineral Menstruum, which he draws off two or three times from them, and sweetens them again by taking away all the acidity fo far as he is able with common Water : Thus he diffolves common Sulphur in the strongest Aqua fortis (Paracelfus his Aqua regis, to be defcribed in the eighteenth Kind) cohobates three times into a black Matter, which he sweetens with distilled Water, Libro de morte rerum.

For it is much at one, whether Gold or Antimony be diffolved by the Circulatum minus only, and reduced into a Philosophical Vitriol; or whether Argent vive, for the abbreviation of time, be in the sublimation of it first impregnated with the acidity of Salts, and So made more open for the Work, and then mixed with the Circulatum minus, purified by digestion and precipitation, and lastly reduced into a Philosophical Vitriol; or whether to make the time yet shorter, Sulphur be mixed with a mineral Menstruum, that is, an acid, and the Circulatum minus mixed together, and then freed from the acid, jo as with the Circulatum minus to be made the fame Philo-Sophical Vitriol; for which way Soever Philosophical Vitriol is made, it comes to one and the same effect : but of these Vitriols hereafter in the Receipts of mineral Menstruums.

In the third part, he fublimes the Stones or Cristals of the Mercury in a close Reverberatory (that is, a Philosophical Egg) always turning it up, till the Vitriol of the Mercury is at length fixed into a most red Precipitate. This part the Sublimations of Sulphur and Antimony in a close Reverberatory will illustrate. The strongest Aqua fortisbeing often drawn off from the Sulphur, the remaining matter being made thereby black, and then sweetned, he reverberates, that is, Sublimes in a close Reverberatory, and being sublimed, turns up the close Reverberatory, or Philosophical Egg so oft, and continually till it comes to a redness, as Antimony, saith he, which will become first white (Jublimate) then yellow, thirdly red, (precipitate) as Cinnabar; which being obtained, you ought to rejoyce, for it is the beginning of your Riches : This reverberated Sulphur gives a most deep tincture to any Luna, reducing it into most excellent Gold, and preferves a Man's Body in most perfect Health : This reverberated fixed Sulphur (observe) is of fo great Virtue, as is not fitting to declare. Libro. de morte rerum. pag. 95.

The Reverberation of Antimony is in pag. 67. Chyr. majoris. Univ Calif - Dignized by Microsoft ®

thus :

bus: Take of Antimony reduced into a most fine Alcool, (into Philosophical Vitriol with the Circulatum minus, by the way of Mercury in the Circulatum majus; or again into a black and sweetned matter by the way of Sulphur,) what quantity you will, let it be reverberated in a close Reverberatory for the space of one Month (continually turning up the Reverberatory, till the matter will be no more sublimed) and it will be Volatile and Light, first White, then Yellow, then Red, lastly of a Purple or Violet Colour: The Antimony being thus fixed by sublimation, he extracts the tincture, by the Spirit of Philosophical Wine, which tincture he calls the most Noble, most Precious, and only not Divine Essence of Lily.

In the fourth part he diffolves Mercury being precipitated, and extracted by the Spirit of Philosophical Wine, per deliquium, and digests with new Spirit of Philosophical Wine, and cohobates, till it ascends through the Alembick into the primum Ens or Essence of Mercury, Mercury Circulated, the Circulatum majus prepared from Mercury, &c.

In the Receipt we observe,

1. That Argent vive, Antimony, Sulphur, yea Gold, Silver, and all the other Metals, being diffolved in fome fimple Vegetable Menstruum, then reverberated, or by fublimation fixed, diffolved per deliquium, and distill'd into a liquid fubstance, are Argent vive, Antimony, Sulphur, Gold, Silver, &c. Circulated, or the Circulatum majus made of Mercury, Antimony, Sulphur, &c.

2. That these Menstruums are called Circulatums, because they were by the ancient Philosophers Circulated for the space of thirty or forty, sometimes fixty Days.

3. That these are called the greater Circulatums, to be distinguished from the less Circulatums, being less excellent, the greater having greater strength, and communicating tinsture to things that are dissolved in them.

4. That these Circulatums are the first Beings, or graduated Essences of Metals and Minerals, and amongst things Volatile nothing can be more excellent than they, they being exalted from a fixed Essence or Astrum, into a much more Noble Essence, called an Arcanum.

Univ Calif - Digitized by Microsoft ®

5. That

5. That these Circulatums are Medicines, or Medicinal Arcanums.

6. That these Circulatums ore most red. Sublime the Stones, faith Paracelfus, till they come to rednefs. He extracts the tin-Eture of Lily out of Antimony reverberated to a Purple or Violet Colour ; but makes the Soul of Metals out of Sulphur reverberated, of which thus : What Hermes faid, that the Soul alone is the means of joyning the Spiritto the Body, was not impertinently fpoken: For Sulphur being that Soul, and maturing and excocting all things, as Fire, it will be also able to bind the Spirit with the Body, and incorporate and unite them together, fo as from thence to produce a very Noble Body : The vulgar combustible Sulphur is not to be reputed the Soul of Metals, but the Soul is fomething more than a combustible and corruptible Body, and therefore cannot be burned by any Fire, being all Fire it felf, and indeed it is nothing elfe but the Quinteffence of Sulphur, which is extracted out of Sulphur reverberated by the Spirit of (Philosophical) Wine, and is of a red Colour, and clear as a Ruby : Which is indeed a great and notable Arcanum to transmute white Bodies, and to coagulate running Mercury into fixed and tefted Gold : Accept this as commended to you to make you Rich, and you have reason to be content with this only Secret for the transmutation of Metals. Lib. 1. de gener. rerum, Nat. pag. 87. If Mercury, Antimony, and Sulphur fixed by reverberation, and the Spirit of Philosophical Wine drawn off, be red, and diaphanous as a Ruby, it follows that the fame Bodies, volatilized with the Spirit of Philosophical Wine, do become more red. From hence we observe, that the Menstruums of Diana are of divers Colours, sometimes white, milky and opake; sometimes most clear, sometimes again most red and most transparent; so that the Arguments of Bernhard, denying the diaphaneity of Menstruums, may be eafily refolved : Where Fools, faith he, do out of the lefs Minerals extract corrofive Waters, into which they put any fort of Metals, and corrode them: for they think that therefore they are diffolved by a Natural folution, which folution indeed requires permanence together, that is, of the diffolvent, and the diffolved, that from both, as from the Masculine and Feminine Seed a new Species may refult: I tell you truly, no Water diffolves a Metallick Species by Natural Reduction, but that which

Univ Calif - Digitized by Microsoft @ remains

remains with it in matter and form, and which the diffolved Metals are able to recongeal; which happens not in any fort of Aqua fortis, but is rather a defiling of the Composition, that is, the Body that is to be diffolved : Nor is that Water pertinent to Bodies in folution, which remains not with them in congelations; Mercury is of this fort, and not Aqua fortis, or that which Fools efteem Mercurial Water, clear and diaphanous : For if they divide and obstruct the Homogeneity of Mercury, how will the first proportion of the Feminine Seed stand and be preferved ? Pag. 60. Epist. ad Thomam. The Elixir and Azoth (he goes on) that is, the Vital Spirit (Spirit of Life, Philosophical Aqua vitæ) and fugitive Soul (animated Spirit) are not diaphanous nor transparent, nor clear as the Tear of ones Eye, nor any diffolving Spirit. Pag. 94. Ejufd. Epist. Which cannot be done in a diaphanous, clear and transparent Liquor : because, if the aforefaid Elixir and Azoth, that is, Spirit and Soul had or could fhew any diaphaneity, the Farth would now in proportion have difmissed the Water, and separated it felf from it, whereas otherwife it would have infpissated and coagulated the parts of it. caufed an opacity in the Elixir and Azoth, and made the Metallick Form to fland congelable : For in reftringing fixed Metallick Species, the reftringer must of necessity act upon the reftringible, and the congealer upon the congelable, which cannot be done in the aforefaid diaphanous and clear Water : otherwife it is in Vegetables, in which a fimple and diaphanous Water is by decoction infpisfated in those Vegetables, which notwithftanding vanisheth and evaporates at length by the Tryal of Fire, because it is not permanent and fixed in the Composition, not having an Earth Naturally Homogeneous to it in Composition withit, as Argent vive has; which Earth is indeed the caufe of permanent fixion in things Homogeneous; wherefore fimple Water cannot by congelation be fixed with Vegetables, as-Mercury with Metals: If therefore Mercury hath received diaphaneity in the Philosophers Work, it will remain in the quality of an irreftringible fubftance, and will not be congealed upon Laton as to a Metallick Form, Species, and Proportion, which carries the congelation of it felf neither with it, nor in it, as Water does Earth, which Earth, as aforefaid, is indeed Mercurial, and the first cause of inspissation, coagulation, and fixation: If there-Univ Calif - Digitized by Microsoft @ fore

(142)

(143)

fore that Water remains not in Metallick Proportion, how can the like Species be produced from this Composition ? They therefore, that think fo to extract a clear transparent Water out of Mercury, and work many wonders by it, are in an Error : for fuppofe they can make fuch a Water, yet would it be of no advantage to the Work, nor to the Nature and Proportion of it. nor could it reitore or erect a perfect Metallick Species ; for fo foon as Mercury is altered from its first Nature, fo foon is it excluded from being an ingredient to our Philosophical Work, becaufe it hath loft its Spermatick and Metallick Nature : By thefe things therefore it is known, what Truth your Opinion contains, and wherein it is contrary and abfurd, you afferting it to be necessary, in order to perfect the great Elixir, to have a Gum, in which are all things necessary to it, containing the four Elements, and is a most clear Water as the Tear of an Eye, made Spiritual, which caufeth Gold to be a meer Spirit: For one Body penetrates not another, but a pure Spiritual fubftance congealed, is that which penetrates and tingeth a Body. Be it, as you fay, my Honoured Doctor! that Natures are not joyn'd without a Gum, or Oyly Matter, &c.

Had Bernhard disputed only against every Mercurial Water not permanent, made diaphanous with Aqua fortis, or any other vulgar Menstruum, and not also against the most clear Mercurial Water of Thomas de Bononia, then the Arguments afore faid had been of great strength; but now the objections against the limpidity of Menstruums as well of this as other Adepts, are of no validity. The fame Earth, which being lefs than well diffolved, is the caufe of opacity in Bernhard's permanent Menstruum, the very fame exactly diffolved is the cause of limpidity with Thomas, inspissating and coagulating the Water, as well, if not better, than if it had been lefs diffolved. The diaplianeity of Menstruums is defended by Lully, Parifinus, and most of the Adepts: Lully proclaims his Calum Vinosum to be clear, bright, and resplendent as the Stars of Heaven. In Test. novif. pag. 8. Of which very Menstruum Parilinus thus, in Appendice Elucidarii, pag. 273. Vol. 6. Theat. Chym. Then will you fee a Quinteffence brighter and clearer than a Diamond, which a exceeds the splendor of the Stars, foas to be doubted, whicher it be contained in the Glass, or no: indeed tots the

The Tenth KIND.

Vegetable Menstruums compounded made of Vegetable Menstruums compounded, and Metallick Bodies.

52. The Neapolitan Menstruum of Lully. In Exper. 13.

Ake Luna, and calcine with common Argent vive, that is, by amalgaming, and then grinding the Amalgame with common Salt prepared, then evaporate the Mercury with a most gentle Fire, then take away the Salt with hot Water distilled, and fo you will have Luna calcined. Take the. calcined Luna, and pour to it four parts of the Mercurial Water (described by the three hot Vessels before in Numb. 46.) and the Veffel being covered with its Antenotorium fet upon Afhes, fo as to boyl gently, and you will perceive a Green or Sea Colour, which Liquor pour warily into another Veffel, fo that the Fæces be not diffurb'd, the Matter remaining at the bottom dry with an easie Fire, like the heat of the Sun: Then know the weight of the faid Calx, and pour again four parts of the faid Mercurial Water upon one part of the faid Calx, and the Veffel being covered with its Antenotorium, as above, let it boyl again gently, the diffolution pour into another Veffel as before, and joyn it with the first diffolution ; but remember to keep the faid diffolved Matter continually in Balneo, till the whole Work of diffolution is compleated; repeating the Magistery fo oft, till the whole Body of Luna be fully dillolved and decanted over, which has indeed hapned to us at the second time, and set it in putrefaction fourteen ort

fourteen Days: Then put it in an Urinal, with its Receiver and Alembick, very well luted, and diftil in a Furnace of Afhes, then increase the Fire, that the Soul of the Body may ascend into its Water: The Vessel being cold, examine the weight of the Earth of Luna remaining in the bottom, for I believe of one whole Ounce there will not remain above two Eights (Drachms) of the Body not diffolved, the reft will be perfectly diffolved, (that is, diffilled;) But if more of the undiffolved Earth remains, then pour to it fo much of its Water lately distilled, as to be three Fingers above it, and the Vessel being covered with an Antenotorium, put it in Balneo for a Natural Day, then taking away the Antenotorium, and putting on an Alembick with a Receiver very close, diftil by Ashes ; at the end of the distillation increase the Fire as before : This repeat, till the whole Body of Luna be pass'd through the Alembick by an airy revolution; and thus will you by the Help of God have a Menstruum, with which you may dissolve Sol.

Annotations.

H Itherto we have by Argent vive acuated either the Spirit of Philosophical Wine, or Menstruums made with this Spirit, which had so good a faculty of dissolving, that most of the Adepts being content with these Mercurial Waters, desisted from inquiring after stronger Menstruums. The Mercurial Water, which Lully terms Glorious, he faith, is sufficient, yea, a proper Menstruum to make the Philosophers Mercury, or Metallick Sal Armoniack, out of all Metals and Minerals. You must know, saith he, my Son! that in the Truth and Faith of God, no Sulphur of Nature of any Metal can be sublimed without this Water of common Argent vive. Test. Novis. Pag. 12.

But in this Tenth Kind of Menstruums, the Adepts made yet other Menstruums, adding moreover divers Bodies, according to the intended several uses to the asoresaid Mercurial Waters: Lully, to make a more Noble Menstruum for the dissolution of Gold, added Silver to the Mercurial Menstruum: If perbaps he wanted a Menstruum for Pearls, he joyned Pearls with the Mercurial Menstruum: If he had a mind tomake Aurum potabile, he prepared a Menstruum

Univ Calif - Dig zed by Microsoft ®

out

(146))

out of Gold and Silver, as more fuitable to this purpose, yet with some Mercurial Menstruum, and so of others, as you will observe in the following Examples.

53. The precious Menstruum for Pearls of Lully. In Comp. Animæ transmut. Pag. Vol. 3. Theat. Chym.

Ake the Liquor of Lunaria of the third or fccond rectifica-tion (Philosophical Anna and a first or fccond rectification (Philosophical Aqua ardens rectifyed) pour it upon Argent vive, so as to swim three Fingers above it, and putresie three Natural Days, and a great part of it will be diffolved with the Water of Lunaria, which decant, and pour fresh Liquor upon the Fxces, putrefie in Dung or Balneo, and repeat till all the Mercury is reduced into Water, then joyn all the diffillations together, and draw off in Balneo, and when you feeit in a manner thick, fo as to be half a Pound of the Water of Mercury and Argent vive, (Vegetable and Mineral) putrifie fix Natural Days, then put in Pearls, and they will within ten Hours be diffolved, then exuberate them by the way, which I taught in the exuberation of Metals, till they be converted into a (Sal Armoniack, or Sulphur Naturæ of Pearls) whereof diffolve one Ounce in a Pound of its Menstruum aforesaid, and distil four times, then put in Pearls, and they will in half a quarter of an Hour be diffolved, by reason of the greater fubtility of the Menstruum. As Silver is joyned to the Mercurial Menstruum made by the three Firehot Veffels, for the Neopolitan Menstruum, (which may be fo call d, because it was reveal'd to Lully at Neapolis by Arnold de villa nova) so this Menstruum for Pearls is made of the Sal Armoniack of Pearls, and the Mercurial Menstruum, or Glorious Water of Mercury, which if they be Circulated together a convenient time, you will make thereof a Cœlum perlatum.

Univ Calif - Digitized by Microsoft @

54. The

(147)

54. The Mercurial compounded Menftruum of Lully. In Experim. 34.

Ake three Ounces of Luna, and three Ounces of Sol, calcine them feverally with Mercury, as in the former Experiments, (in the Neopolitan Menstruum) then evaporate it from the faid Metals, being calcined, put them feverally in diftinct folutory Veffels, and put upon them fo much of the incalcinated Menstruum (described before in Numb. 45.) as will swim four Fingers above it: cover the Veffel with an Antenotorium, putrifie in Balneo two Days, and two Days more in Ashes with a heat like that of the Sun, decant the diffolution, and dry the remainder : being dryed, pour upon them of the incalcinated Menstruum again as before, putrifying in a close Vessel in Balneo, then upon Afhes, and emptying the feveral diffolutions (of Gold and Silver) into their feveral Veflels as before : If any thing remains undiffolved, dry and diffolve as before, till all the remainder be fully dissolved, then putrifie both dissolutions twenty Natural Days, being putrifyed, take the diffolutions, and put them feverally into their Urinals with their Receivers, and having luted the Joynts well, diftil the Waters of both (Metals) in Balneo; in the bottom of the Veffels will remain the Bodies like melted Honey or Oyl, pour upon those (Oyls) again of their own Waters (The Menstruum now drawn from the Oyls) distilled only by Balneo, fo as to fwim three Fingers above the Matter, cover both Vessels with their Antenotoriums, and putrifie for a Natural Day : then take away the Antenotoriums, and put on Alembicks, lute well, and diftil upon Afhes, laftly increase the Fire, that the Soul or Element of Air may pass over into both their diftilled Waters, and laft of all increase the Fire to the highest degree, that the Element of Fire may pais into the Air: But to the Composition of Luna this Redness or Fire is not neceffary : Distillation being compleated, let the Vessels cool, take the Receivers from them, and keep them very well ftopp'd, that they may not respire, and put distinct Schedules or Inscriptions upon them, that when you have occasion, you may not take

Univ Calif - DigitXed by Microsoft ®

one

(148)

one for the other : Then again to the Earths (of Gold and Silver, left in distillation) pour their Waters distilled by Balneo as before, and having put an Antenotorium to it, putrific as before, then diftil by Athes, each Veffel having its own Receiver, wherein you kept the Souls of those Bodies, and thus repeat the Magistery till the Earths are exanimated and destitute of radical moifture: Then take those Earths, grind well, and joyn them together, then put them in a Glass Egg, and keep them in hot Ashes, till I tell you what to do with them : Then take the animated Spirit of Luna, and rectifie it feven times in Ashes, then take the animated Spirit of Sol, and after the fame manner rectifie it feven times in Ashes; the limosities (remaining Earth) which the Spirit of Sol will in every rectification eject, keep very clofe, being the Element of Fire (in the form of an Earth.) Having rectifyed, take the animated Spirit of Sol, and the animated Spirit of Luna, and joyn them together, then Circulate in a large Vessel, as that wherein we Circulated the simple Menftruum : continue this Circulation fixty Days, in which time you will have a true Mineral Menstruum (not acid, but made of Minerals, as Mercury, Gold, and Silver,) by which you may operate innumerable Experiments.

Hereto ought to be referred the Menstruum which is called by Basilius.

55. The fweet Spirit of Mercury of Basilius. Cap. 3. Libri de rebus nat. & supernat.

Take of Natural Cinabar, or Oar of Mercury, and of the beft Oar of Gold equal parts, to which being pulverized and mixed, pour the Oyl of Mercury made of Mercury fublimed, and putrifyed (that is, Oyl of Mercury fublimed alone, no other Ingredients being added, except the Spirit of Philosophical Wine, or fome Vegetable Menstruum, without which it cannot be made) digest them for a Month, and you will have a Celestial rather than Terrestrial extraction, draw off the extraction in Balneo, and the Phlegm being taken away, in the bottom will remain a ponderous Oyl, diffolving all Metals in a moment; to which add of the Spirit of Wine (Philosophical, or Fiery Spirit

Univ Calif - Digitized by Microsoft 3

of Wine of Bafilius) three parts, Circulate in a Pellican to a Blood rednefs, and incomparable fweetnefs; being Circulated, pour it upon Tartar calcined to whitenefs, and diffil the Spirit of Mercury with a ftrong Fire, the Spirit of Wine remaining with the Tartar.

We must distinguish between this Spirit, and another of the same Name, left one be taken for the other: For Basilius prepared also a Spirit of Mercury from the white Spirit of Vitriol, of which you may read in several places, in the Book de particularibus, especially in the particular of Luna; a Description of which Spirit is lower among the Mineral Menstruums, because it is acid: But the other, namely, this our Spirit of Mercury, is most sweet and fragrant, which you have also in the particular of Luna, as also in the seventh Chapter of the Book de rebus nat. & supernat. where he dissolves the Crocus of Luna in the white Spirit of Vitriol, as also in the most fragrant Spirit of Mercury.

Parifinus for Alchymical Tinctures made a Mercurial compounded Menstruum, of his Circulatum majus, and the first or middle substance of common Argent vive, thus:

56. The incalcinated Menstruum of Parisinus. Cap. G. Apertoris.

Ake of the Circulatum majus (defcribed before in Numb. 50.) one Pound, of Mercury prepared, as we shall teach in the tenth Chapter, two Ounces, mix, and observe that true putrefaction be made with this *Mensftruum*: But when first it is incalcinated, that is, mix'd with such Mercury, it is no more used for Men's Bodies, but only as Medicines for Metals, now the faid tenth Chapter is this, as followeth:

Of reducing common Mercury into the first Matter or Middle Substance.

Now my Son! we will give you full inftruction and demonftration of decocting and reducing common Argent vive into its first Matter, or middle substance, and as in the foregoing Chapters we declared the way of reincrudating the two Lumi-

Univ Calif - Digitized by Microsoft @ naries,

naries, fo now we will demonstrate the ways and means of decocting the faid Mercury. First, we will teach the way of di-stringuishing good Mercury from bad, sophisticated and corrupted, which way is, to take common Mercury, brought out of Spain in Skins fealed, or if you cannot have this, take any other, and put a little of it in a Silver Spoon heated fo, as to make the Mercury evaporate, and if the remainder of it be of a white or citrine Colour, 'tis good; but if of another Colour, bad, and not at all fit for our Work, because sophisticated : Then take of Roman Vitriol two Pounds, melt it in a glazed Vessel, being melted, add one pound of Mercury, and as much of common Salt prepared, ftir and shake till they be all mix'd, evaporating the moisture with such a heat as that of the Sun ; then take out the Matter, grind, and put it in a Sublimatory, and fublime the Mercury by the usual degrees of Fire : The Veslels being cold, take out the fublimation, to which being put into a Retort, pour of the Vegetable Water without Phlegm (Philosophical Aqua Vitæ rectify d) about three or four Fingers, let it boyl in Balnco two Hours, then distil in Ashes, that the Vegetable Water may afcend; then cover the Retort with Afhes, and increasing the Fire, the Mercury vive will afcend into the Aqua ardens, decant the Water from the Mercury, which again fublime with new Matters, and that fix times, always caffing away the Fæces: But take notice that these seven sublimations must always be transacted in Aludels, because you will no other way separate the aduftible powder afcending in the Aludels : And to inftruct you, that you may not err, I will more diffinctly repeat the method of the faid feven Sublimations : The way is this, to take a Glafs Veffel like one of the narrower fort of Cucurbits, with its blind Head, perforated in the upper part of it, into this put two parts of Vitriol very well pulverized, of Mercury one part, and of Salt prepared one part, mixing all well, the Matter being now gently dryed, put on a blind Head, or rather an Aludel, yet observing not to cover the Cucurbit with Ashes above one third, the moifture being evaporated by an eafie heat, ftop the Hole of the Aludel with a little Cotton, and increasing, fublime, all being cold, take out that which is fublimed, as well out of the Aludel, as the Cucurbit, in which (if not yet cold) diffolve the Faces with hot Water, and fo you will eafily cleanfe

the

(150)

the faid Veffel for its ule. Now mix new Matters with your fublimation, and fublime as before, and this repeat feven times; then grind the fublimation into a most fine Powder, put it in the aforelaid Cucurbit with its blind Head, or Aludel, and also with its common Alembick, because of the operation differing from the former; the fublimation being put into a Cucurbit, pour to it of the fimple Animal or Vegetable Menstruum (the Animal Menstruum described in Numb. 37. or Vegetable in Numb. 29.) but here above he order'd him to take Vegetable Water reftify'd, that is, Aqua ardens) fo much, as to be three Fingers above it, cover it with a blind Head, and digest in Ashestwelve Hours, then taking off the blind Head, put on a common Alembick, and draw off the Menstruum in Balneo, lay aside the Alembick again, and put on an Aludel, fet the Veffel in Afhes fo deep, as to cover the Matter in the Glafs, give Fire by degrees, till all the moifture is exhaled, the Hole in the upper part of the Aludel ftop with Cotton, increase the Fire, that the Mercury may be fublimed : Sublimation being ended, and the Veffels cold, take away the Aludel, and what you find fublimed in it, is not for our purpose; for it is that adust part, which is no Ingredient to our Magistery : Then gather the sublimation from the sides of the Cucurbit, which will be clear as Cristal, and have a care that it be not mix'd with its Fæces, grind, fift, and put it into the fame Vessel, being cleansed from the Faces, and pour the Menstruum drawn off in Balneo to it, cover the Veffel with an Aludel, digest twelve Hours as before, lay afide the Aludel, put on a common Alembick, diftil in Balneo, lay afide this Alembick, put on an Aludel, and fublime in Afhes, the Faces, as alfothe adultive part being cast out of the Aludel, gather the middle substance out of the Cucurbit dexterously; with this method. you must fublime feven times, or till it leaves no Faces in the Cucurbit : Having obtained this fign, take the faid substance, grind, and put it in a Glass Vessel, pour to it the simple either Animal or Vegetable Menstruum, the height of three Fingers, cover the Veffel with a blind Head, digeft gently two Days in Ashes, then decant the diffolution into another Vessel, and that which remains in the Veffel, dry with a temperate heat, like that of the Sun, to which pour new Menstruum, covering the Veffel with a blind Head as before, and repeat the fame method, Univ. Calif - Digitized by Microsoft ® till

(151)

till all the diffolvible part is diffolved, and in the bottom of the Glass will remain an indiffolvible Earth, to be cast away, as nothing worth : Now take away diffolution, that is, your decantations, and diffil in Balneo, and the Menstruum being diffilled. put on an Aludel, and in Ashes sublime the Cristalline substance. which may truly be called the first Matter of Mercury ; this is that middle substance, with which we incalcinate our Menstruum, (Circulatum majus, described in Numb. 50.) and make infinite particulars, as we have taught you before : This also is called the Mineral Stone. Now, my Son! will you be able to proceed by infinite ways, yet following these which I have shewed you; and remember, that Mercury thus reduced, is that, which our Captain Raymond speaks of, making mention of the Mineral Stone, as also in the last Chapter of his Book, nam'd Vade mecum, and in many other places of his Volumes. This is that Mercury which Arnold de Villa nova; treats of in his Rolarium. and we declare to you, except Mercury be reduced into the first Matter with the faid Vegetable or Animal Water, it is altogether impossible to do any good with it, by reason of its great Corruption, occafioned by the crudity of it.

From the Receipts of this Kind we observe:

1. That Menstruums may and ought to be made according to the defigned uses, for they are defired not only to diffolve Bodies promiscuously, but rightly also, that the tinctures of things diffolved may not by any Heterogeneous tinctures of the Menstruums be inquinated, but rather illustrated.

2. That these Menstruums being once compounded, the oftner the Composition is repeated by adding new Matter, are endowed with so much a greater Virtue; whereas on the contrary it is manifest, that common Menstruums are this way debilitated.

3. That these Menstruums are most fragrant, and of exceeding sweetness and redness, yet nevertheless called Acetum acerrimum, which dissolves Gold into a Spirit.

4. That these Menstruums are the Essences or Magisteries of Metals made by Magisteries or Essences, and mix'd together into compounded Circulatums.

Univ Calif - Digitized by Microsoft . 5. That

5. That these compounded Circulatums may be made not only of Gold and Silver, but also of imperfect Metals and Minerals.

(153)

6. That Sal Armoniack may be made of Corals, and other arids, as well as Pearls.

7. That Parisinus his first Matter of Mercury is an Essence rather than a Magistery, it is indeed sooner prepared than the Mercurial Sal Armoniack of Lully, but is not of the same, but less Virtue.

8. That Parifinus defends Arnold de villa nova in his way of fubliming Mercury, (described in the Rosarium) against his Confort Bernhard.

9. That this first Matter of Mercury is a Poyson; wherefore Parifinus the Author gives caution that it is not to be used for humane Medicines, but Metals only, yet if this incalcinated Menstruum be Circulated as the rest, it becomes harmless, and an excellent Medicine.

The Eleventh KIND.

Vegetable compounded Menstruums graduated, made of the compounded Vegetable Menstruums, impregnated with the influences of Heaven and Earth.

57. The Etherial and Terrestrial Waters of Metals of Lully for the making of Pretious Stones.
Canon. 43. distinct. 1. Lib. Quint. Esten.

Take the Water of Mercury, made by the way, which we declared in our (Noviffimum) Testamentum, and in Libro Mercuriorum (the Mercurial Menstruum, or Glorious Water of common Argent vive, described before in Numb. 44.) and in that Water, Son! you must dissolve one half Ounce of the purest Luna, after the filtred dissolve one half Ounce of the purest Luna, after the filtred dissolver one the Water from the Faces (distil the Menstruum from the Silver through an Alembick) in which the limosity of the Silver will ascend: This Water, Son! resolves all other Bodies, and Argent vive it felf, by Virtue of which, Son ! Pearls are reformed by the way which Itold you in our Testamentum, and in the Compendium super Testamentum & Codicillum mission Regi Roberto.

The fecond Water is thus made : Take half an Ounce of Lead, and of the aforefaid Water as much as fufficeth, when you feethe Lead diffolved, feparate the Water by filtred diffillation (filtre the diffolution of the Lead) and throw out the Fæces, as nothing nothing worth, then diftil the Water by Balneo (draw off the Menstruum in Balneo) and keep the Faces (the diffolved Lead) for occasion. "

The third Water is thus made : Take of Copper one Ounce, and diffolve it in as much of the first Water as you please, and let it rest in its Vessel, in a cold place, for a Natural Day, then feparate the Green Water through a Filtre, and pour out the first Fxces, (that which remains in the Filtre must be cast away) then diftil the Water through an Alembick, and keep the fecond Fxces.

The fourth Water is thus made : Take one Ounce of the pureft Tin of Cormwall, which is purer than any other, and diffolve it in a quantity of the first Water, and diftil (through a Filtre) that Water (diffolution) with its limofity, and the Fæces which remain caft away, then diftil the Water through an Alembick, and keep (the refidue, or Tin diffolved) the fecond Faces.

The fifth Water is thus made: Take of the pureft Iron one Ounce, and diffolve it in a sufficient quantity of the first Water. then diftil through a Filtre, and caft away the Fæces, diftil the Water through an Alembick, and keep the fecond Fæces.

The fixth Water is thus made: Take of the pureft Gold one Ounce, and diffolve it as I told you in my Testamentum, that is, with pure Lunaria (the simple Vegetable Menstruum without Argent vive and Silver) mix'd with fuch a weight of the fifth Water (now prepared from Iron) and do, as you did with the other.

You may also, Son ! diffolve all those Metals in this order : Having made the first Water, in it diffolve the Metal, which we commanded you to diffolve after the fecond way (to wit Lead) then do with it as we told you before. In this fecond Water diffolve the third Metal, (Copper) and in the Water of the third Metal diffolve the fourth Metal, (Tin) and in the Water of the fourth Metal diffolve the fifth Metal (Iron) and inthe Water of the fifth Metal diffolve the fixth Metal (Gold.)

Take which of those Waters you like best to diffolve a Metal. Son ! these limolities of Metals are called Quintessences, or Mineral Mercury, which the Philosophers effected in the Alchymical work (in Alchymical Tinctures) and the lapidifick, (in the making of Pretious Stones) and in the Medicinal Work (in the Univ Calif - Digit Vez by Microsoft ®

prepa-

preparing of Medicines.) But Son ! in the Alchymical Work those Quinteffences ought to be more fubtil, and to be done by dividing the Elements as we (in the third Book of this Volume) shall declare, but in (making Pretious) Stones, the Quinteffence (aforefaid) are not fo, in fuch a fubtil Matter, but in Medicine either of them (this two-fold way of preparing) may be used.

Having spoken of the Quintessences of Minerals (of Metallick Waters) how we are to make them, it is now convenient to fpeak of the division of them in general. And my Son ! do thus : When your Metals are diffolved, you must divide every Water (being first filtred, and distilled from its remainder) and every divided Water (now distilled) into two parts, and one part of every part you must put withits own Fxces (the remaining Metal, which the Water had left in distillation) into a Glass Alembick, and distila Limus deserti, which is Air made out of two Bodies, (or Metals) in the Furnace, which we defign'd you first with a gentle Fire, fhining with great Mineral Luftre, and with great limofity appropriated to receive Celeftial Virtues : And put every one of those Watersinto a Glass Vessel, with a long Neck and round. and then ftop the Mouth of it with common Wax, and after that with Mastick, and every of those Vessels put in the open Air fo. as that neither Stone, nor any other hurtful thing may touch the Glass. Son ! Take the material Faces, from which you refolved the Limus, which are the fecond Faces left in the diftillation of the Waters which you put in the Air. (Take the Caput mortuum from the distillation of every Limus defertus, or the third Faces, for the first remaining in the Filtre were cast away, from the Second the Limus defertus was distilled; now the Faces of the Limus defertus, are those which be here calls the second) and put them in a Glass Vessel with a long Neck, which may contain two hands breadth, and put in part of its own Water, which was referved from that aforefaid limous fubftance, and ftor the Veffels with a Stopple of Wax, and with Leather and Mastick, as you did to the other, and Bury them (Waters of Metals) in a Garden, in an Earth half a Yard deep, and put also fomething about the Neck of the Veffels, which may appear above ground, for the prefervation of them, and let them be there for one whole Year : Son! the Waters which are put into the Earth are of one Nature, and those which are put in the Air of ano-Univ Calif - Digitized by Microsoft

ther,

(157)

ther; for Son! those which are put into the Earth have a hardning, coagulating, and fixing Virtue and Quality; and those which are in the Air, have the Virtue and Property of Leing hardened, coagulated and fixed: The Year being ended, you: will have all that is defired in the World for this Work, &c.

Annotations.

7 Ou will perhaps wonder, that we have assigned this so high a I place to these Menstruums, they being inferior to many Menstruums of the antecedent Kinds, as to Ingredients, as well as to the method of preparation ; but though it be so, nevertheless these Menstruums are by being exposed to the Air for a Tear, or for for long a time committed to the Earth, made better and more excellent than the aforefaid Menstruums, as will appear bereafter by the use. of them : We will at present explain the methods of making these Waters : The Waters of the first method he makes thus : He diffolves Lead, Copper, Tin, Ircn, and Gold in the Glorious Water of Argentvive, acuated moreover with Luna, filtres every diffolution, cafting away the Fæces, draws off the filtred diffolutions in Balneo to dryness, divides the distilled Waters into two parts, in one of which he diffolves its own Metal left in the drawing off of the diffolution, which he then distills into a Liquor, which be calls Limus defertus, Quintessence, or Mineral Mercury, and hangs it in the air for a Tear, to be his Etherial Water: The Caput mortuum of the Limus defertus he diffolves in the other part of the Water referved, and Buries it in the Earth for his Terrestrial Water. In Compendio Animæ transm. pag. 208. Volum. 4. Theat. Chym. He adds alfo the Waters of common Mercury and Silver to the reft; the Mercury Water is thus made; Take of common Mercury one: Ounce, and diffolve it in the diffolving Water (afore faid) in the digeftion of I. (Afhes) diftil through a Filtre, regard not the Fæces, but keep the second (left in the bottom) alter distilling through an Alembick.

The Water of Luna is thus made : Take one Ounce of the purest Silver, diffolve it in what quantity of the diffolving Water you pleafe, distil through a Filtre, and cast away the first: Faces, then diffil through an Alembick in the digettion of H. (Balneo) and keep the fecond Faces, you must keep the fecond Univ Calif - Digitized by Microsoft (B) Faces,

Fæces of all the Waters in their own Veffels, every one by it felf. Moreover (in Compendio Animæ) he divides not the diftilled Waters into equal parts, as in Libro Effentiæ, but draws off the diffolutions of Metals by diftilling one half for the Terrestrial Water, and diftils the other half for the Etherial Water. You must indeed; faith he, be cautious in resolving the Limus, because you are to make two Waters or parts of every Limus, distilling one half of the Limus, which you must keep apart, beeaufe the Terrestrial Water is made of that first part, and you must likewise distil the other (half) part, which the Aerial Water is made of, which is hung in the Air as aforefaid, for a Year, Pag. 209. Volum. 4. Theat. Chym.

The Waters made by the latter method are more compounded than those of the first, the first were prepared promiscuously with the Lunar Menstruum, the second not so; for the Water of Lead is made by the Lunar Menstruum, of which Water of Lead is made the Water of Copper; of this Water of Copper is made the Water of Tin; from the Water of Tin he prepares the Water of Iron, but the Water of Gold is made with the Lunar Menstruum, to which is added half of the Water of Iron. O wonderfulmixture ! I will not fay, confusion of Metals ! yet doubtless the most acute Philosopher had reasons for it. This method is also in Lapidario, Cap. 9. & fequentibus.

From the Receipts we observe :

1. That the Etherial Waters are the Effences of Metals, exposed to the influences of the Heavens for a Tear.

2. That the Terrestrial Waters are the Bodies of Essences, disolved in their own Menstruums, and Buried for a Tear.

2. That the Effences of not only Metals, but the whole Mineral Kingdoms do by Juch a method yield Etherial and Terrestrial Waters.

4. That these Waters acquire their principal Virtues by being impregnated with the Stars of Heaven.

The Adepts held divers Opinions concerning the Influences of the Heavens. Some would have the Situations, Aspects, and determinate Times of the Planets to be highly necessary to this Work, but others thought the contrary : Among st the Affirmers let us hear Thomas Norton, an English Adept, who thus in the Sixth Chapter of his Ordinal. Pag. 29. of Theat. Chym. Britannicum.

The

He Fifth Concord is known well of Clerks, Between the Sphere of Heaven, and our fubtil Nothing in Earth hath more fimplicity, (Werks; Than th' Elements of our Stone will be : Wherefore they being in Work of Generation, Have most Obedience to Constellation. Whereof Concord most kindly and convenient, Is a direct and fiery. Ascendent ; Being Sign common for this Operation, For multitude of their Iteration : Fortune your Ascendent with his Lord alfo. Keeping th' Afpect of Shrews them fro; And if they must let, or needly infect, Caufe them to look with a Trine Afpect. For the white Work may Fortunate the Moon, For the Lord of the fourth Houfe likewife be it done ; For that is Thefaurum absconditum of Old Clerks, So of the Sixth House for Servants of the Werks : Save all them well from great Impediments, Asit is in Picture, or like the fame Intents. Unlefs then your Nativity pretend Infection, In contrariety to this Election, The Virtue of the mover of the Orb is formal, The Virtue of the Eighth Sphere is here Instrumental: With her Signs and Figures, and parts aspectual, The Planets Virtue is proper and fpecial. The Virtue of the Elements is here material, The Virtue infused resulteth of themall: The first is like to a Work-man's Mind, The fecond like his Hand ye shall find ; The third is like a good Instrument, The remnant like a thing wrought to your Intent :: Make all the Premifes with other well accord, Then shall your Merits make you a great Lord.

Among ft the Denyers is Lully himfelf: Who thus; we fay not, that it is the bulinels of an Artift to operate with the Figures and Images of Heaven, by the knowledge of their motions, as many Univ Calif Digitized by Microsoft Philosophers, Philofophers affirm : But it is enough for you to know the influence of the Celestial heat, informed by the Figure of the Heaven and Stars, by reafon of which, Virtues are infufed into Matter being aptly appropriated, which receives them by the Natural Industry of an Artist with resolution, which is done by Art imitating Nature, Sc. And in this Point the Philosophers have been mistaken, in reprehending those Men that knew, that the Celestial Virtue is too common to every elemented Nature ; for by its great Noblenessit takes determination at any time, because in things mixed it is influenced as well by Art as by Nature, and this is done by reafon of the Natural Virtues, which are the fubject and proper detainer of it in fuch a manner, as that it receives fuch a Virtue, according to the properties of the Matter, and its Kind, which afterwards effects fuch things by Nature, as are reputed for a Miracle. In like manner let every Artift take Notice, that Nature cannot operate but by the fuccession of the least particles, nor also can it receive any Virtues but by the fuccession of its operation, nor can they also doallat once, nor can the Constellations suffer the Station of any time punctually in a certain Virtue, which may not be immediately varied: And it being also granted, that it might, the time of Constellation is fo small by reason of the Circles of revolution, as that it may fooner pais from one Virtue to another, Sc. Lib. Effen. dift. 1. Pag. 18.

An ingenious Artift, *faith Paracelfus*, will by diligent animadverfion be able to prepare Metals, fo that being guided by true reafon, he may promote the perfection of transmuting Metals, by his own work or conduct better, than by Courses of the twelve Celestial Signs, and seven Planets, which therefore to obferve, will be fuperthuous, as also the Aspects, the ill or good times, day or hour, the prosperous or unhappy State of this or another Planet, which cannot help, much less hurt in the Art of Natural Alchymy; if otherwise, you have a true possible process, operate when you please; but if there be any defect in you, or your Operations, and Understanding, the Planets and Celestial Constellations will fail you. *Cælum. Phil. Pag.* 125.

If they alledge. *faith Geber*, that the perfecting of Metals is from a certain fituation of one or more Starrs which we know not, we answer, that we regard not this fituation and motion, nor-

Univ Calif - Digifized by Microsoft ®

alfo

allo is it necessarily requisite for us to know it : because there is not any species of things generable and corruptible, but Generation and Corruption may be dayly and in every inflant made from the individuals of it : And it is therefore manifest, that fuch a position of the Stars is every Day good, and able to perfect, and fimply to corrupt all the species whatsoever of Individuals. It is not therefore necessarily expedient for an Artist to expect the place of the Stars, though it might be useful; because it is fufficient for him only to dispose and administer the way of Nature, that She, who is wife, may dispose the situations of those able Bodies agreeing: For Nature can perfect nothing without the motion and polition of the Planets. Wherefore if you difpole, and duly confider the Artifice of Nature, whatfoever may be the contingents of this Magistery, it will be perfected under a due position by Nature agreeable to it, without the confideration of it : For when we fee a Worm produced from a putrified Dog or other Animal, we do not prefently confider the pofition of the Stars, but the disposition of the ambient Air, and other causes conducing to putrefaction, belides that polition: And from fuch a confideration we know fufficiently, that Worms are produced according to Nature : For Nature finds convenient places for it felf, though we may be ignorant of them. Summa perfect. Lib. 1. parte. 2. Cap. 11.

Petrus Bonus of Ferraria bath the Same Opinion of Influences. Asto the ninth reason, faith he, we fay it is true, that Forms are introduced into things below, by the motion and light of Celestial Bodies, and by their particular Positions and Aspects; but it is not neceffary for us to know, nor can we know them, but. in a confused manner, as in some things by the Sun, who is the caufe of the four Seafons of the Year ; Sowing, Reaping, and Planting, being done at certain Seafons; and in fome Animals, as Hories, Affes, and Hawks, Conjunctions are made in order to Coition and Generation at fome certain Periods of the Sun; but in fome these things are done at any time indifferently, as in Man, Pigeons, Hens, Sc. Wherefore if we would generate a Worm out of putrifying Flesh, we do not confider any position of the Stars, but only the disposition of the ambient Air, and other causes of putrefaction : Likewise, if we put Eggs in Dung, or fuch a like place for the production of Chickens, the Form will be

be given at any time in the place and time predefinated by the Celeftial Powers, without our confideration herein : After the fame manner in the Generation of Lime and Vitriol, and Gold. and Silver, or Sulphur, and Cerufe, and Minium, and Cinabar. likewife in the Composition of Theriacle, and other Confections, because these things may be done at any time, and any hour ; for the Celeftial Virtue Isvery common to all things, and is circumscribed by the Virtues and Dispositions of those things, which are the fubject of it in things Elemented and the Elements themselves, because, as aforefaid, the Celestial Vertues do. operate in the whole Nature of things capable of Generation: and Corruption continually according to the disposition of the Matter, either properly or commonly : Wherefore faid Lilium. The Work is not caufed by the motion of the Powersabove, becaufe it may be done at any time. And Rafis in 70. in Libro Reprebenfionis : Time operates not any thing in this ; and adds becaute flould time operate in it, it would be of no effective amongst the People. If therefore all contingents in this Magiftery concur rightly in their time, their Form will be introduced. under a due Polition and Aspect of the Stars, at the time prefixed in the Matter, without any confideration herein : And thereas fore faid Plato, According to the merit of the Matter, are the Celeftial Virtues infused, &c. But as to those things, in which an accidental, new, and hidden Form is infused by the Celestial Powers, as is manifest in Arte Imaginum Cælestium, it is necessary for us to know and observe the determined Politions and Aspects of the Celeftial Bodies, according to the time proposed: Becaufe fuch a Form is imprinted by fuchalone, and at fuch a time and no other, as appears in the Books of Afrology concerning the Election of Hours, Images, and Wars, Buildings, Journey, &c. Wherefore Alchymy being no fuch Art, therefore is it not expedient for a Man to know these things. Margar. pretiofa, Paga 731: Vol. 5. Th. Chym.

Compounded Vegetable Menstruums most bigbly exalted, made of compounded Vegetable Menstruums graduated.

58. The Etherial and Celestial Limes of Lully, for the making of Alchymical Tinctures. In Testam. Novissimo.

Ake the Sulphur of Gold, (the Philosophers Mercury made of Gold, or Sal Armoniack of Sol) put itin a Glass Veffel, and pour to it as much as it weighs of the Celeftial Vegetable Menstruum the Calum Vinosum of Lully described in Num. 30.) which you know already ; put it in digestion of Balneo fix Days, then diftil by Balneo; then pour on new Menstruum according to the weight of it, and digeft in Balneo fix Days, then fet it in Ashes one Day, distilling all that can be distilled, and put it with the other diffilled before : And again pour on new Menstruum, and digest and distil as before ; and continue the repetition of this Royal Magistery, till all the faid Earth or Sulphur is emptied of its Air, which is done in two and twenty times, if you know how to operate : Then take all the diftillations and put them in Balneo, and diftil the whole Menstruum, and fee if all the Air remains in the Form of a Liquor, then will you know that the Earth is emptied of its Air, but if not, repeat with new Menstruum in Balneo, digesting and distilling in Ashes as before three times, and then will all our Sulphur be freed from its Air: Then take the Air which you kept, and upon it put its whole Menfruum, which is that with which you emptied Univ Calif - DigZizzd by Microsoft ® the

the Air, and pour it upon the Earth of the Sulphur of Gold, and put it in digeftion in Balneo eight Days, then diffil all the Menstruum in the faid Balneo for one Day, and another in Ashes. draw off all the Air and Fire, as much as you can, namely, in another Receiver, which you will know, when the Air begins to change the reddifh Colour. Keep that Fire apart, and again put the Air with the Menstruum drawn from it, or with other, and put it to the Earth in Balneo, and digeft fix Days, and in the faid Balneo diftil all the Menstruam for one Day, and the Fire in Alhes, feparating then every one by it felf as you did before. and keep the Fire in Balneo: And again put the Air with the Menstruum upon the Earth, in which is the Fire, and digest asbefore, and this Magistery repeat, till the Earth is well emptied cf its Fire, which is done in forty times or repetitions. Then must you fublime the Earth after this manner; Take that Earth which remained after the feparation of the Air and Fire, and put it in a Glafs Veffel, and pour upon it of the Vegetable Menstruum, according to the quantity of the Earth, and let it in Balneo for a Natural Day, then another Day diffil in Afhes; and again put of the faid Menstruum according to the weight of the Earth. and digeft in Balneo the space of one Day, and diftil in Ashes another Day, and again repeat, digefting in Balneo, and diffilling in Ashes, till all the Earth is converted into an impalpable Powder: Then take that, and put of the Menstruum upon it according to its weight, and digeft in Balneo two Days, then diful in Ashesone Day, and put the distillation in Balneo : Then take the Earth, and put again of other Menstruum equal to its weight, digest two Days, and distil as before; proceed in repeating the inhumations and distillations till the Earth has passed through the Alembick together with the Menstruum : That Earth being thus mixed with the Menstruum, is called Argent vive exubera. ted according to the intention of the Alcyhmifts: put therefore those distillations wherein is that Earth, to be distilled by Balneo. and draw off the Menstruum, and the Earth will remain dry and prepared in the bottom of the Veffel, which keep : Thus Son ! have you the Elements of the Sulphur of Gold divided with the help of God. Then must you have the Sulphur of Silver, (the Philosophers Mercury prepared from Silver, or the Sal Armoniack of Luna) and separate the Elements from it, separating the Air Univ Calif - Digitizet by Microsoft E

(164)

with

ter, and the Earth fubliming with the Menstrumm, and caule it to pais through the Alembick with the fame Menstruum. Thus have you, my Son! the Elements of the white Sulphur, and the Elements of the red Sulphur separated and divided : Now take the Menstraum or Water with which you separated the Elements of the Sulphurs of Gold and Silver, and for every Pound of the Menstruum in which you diffolved the Gold, diffolve one Ounce of Gold; and in the Menstruum wherein you diffolv'd the Silver, an Ounce of Silver; and put either of them by it felf in a Veffel of Circulation in Balneo or Dung, the fpace of fifteen Days, and there it will be firengthened into its Menftrual Nature : This Water, Son ! we call Elemented Menstruum, or Water washed and drawn from the Faces of the Earth. Now take the two Elements, namely, the Air and Fire of the Sulphur of Gold, put them together into a Glass distilling Vessel, and distil in Ashes. with a most temperate heat, till you have three parts of five. diffilled in the Receiver, then let it cool, and that which is diftilled receive by it felf, and diftil it feven times, and keep it apart, then diffil that which you left; when you have diffilled three parts of five, continue distilling the two which remained, till you fee the Fire congealed at the fides of the Veffel, let it cool till the Fire be congealed : And that Fire which you drew off till the Fire was congealed, (he means that which ascends as yet moist before the sublimation of the Matter from these two parts left) is called the fecond Air and Tincture, and we call it our Secret, and our Treasure, and the Vapour of the Elements : This, my Son! you must rectify by feven distillations or rectifications, and the Earth, which after the diftillation of the first and fecond Air you drew out of the Vellels, in which you diffilled the first and fecond Air, put in the Fire to be congealed, and that Earth is called Fire : Now Son ! prepare this Fire after this manner. Put it in a distilling Vessel, and upon it pour its own Water, which is that wherewith you feparated the Elements of the Sulphur of Gold, when we commanded to reduce it to a fifth Spirit in the Vessel of Hermes, and faid, Take the Water wash'd from the Fæces of the Earth (otherwife the Elemented Menstruum of Sol) five parts of its weight, that is, five Ounces of the faid Water (Elemented Menstruum of Gold) to one Ounce of the faid

Univ Calif - Digitized by Microsoft ®

Fire,

Fire, and digest in Balneo eight Days, then distil in Ashes most gently, and again put new Water, namely, five parts, digest and distil as before, repeating this method seven times, and fo you have the Fire and Earth (of the Sulphur of Gold) calcined by Philosophical calcination; and they are the two Elements of the red Sulphur prepared for the defert Limes. And take notice, that you must put the Earth of the white Sulphur, which you calcined and prepared after the feparation of the Elements of the red Sulphur with the Earth, which you drew from the Air mix'd with the Fire, and put both with the Fire congealed. Now Son! take the Earth of the Sulphur of Silver, which remained after the feparation of the Elements, and prepare it, as you did in calcining and preparing the Earth of Gold, after the feparation of the Elements fublimed together with the Menstruum, and reduced into an impalpable Powder, and carryed through the Alembick with the fame Menstruum. You may also prepare the Earth of the Sulphur of Silver with the Menstruum, that you used in separating the Elements of the Sulphur of Silver : Then have you the Earths of the Sulphur of Gold and Silver prepared by themfelves, which. you will know by the fign given you, that is, putting a little of it upon a red hot Plate of Luna, the greater part will tume away : Then take those Earths in equal weight and ounces, and put them in a preparing Vessel, then take the Menstruum, with which you prepared the Elements of Luna, and in one Pound of it, put one Ounce of the Vegetable Sulphur, which we shewed you how to make from the Earth of Wine (Vegetable Sal Armoniack made of the Earth of Philosophical Wine) and diftilling, make the whole pass through the Alembick, and then will you have the Menstruum, with which you extracted the Elements of the Sulphur of Luna, animated and acuated: Then Son! you must mix and prepare the Earths of the aforefaid Sulphurs (that is of Gold and Silver) together, allowing of the faid Menstruum, now animated and acuated, a fourth part of their weight, digesting and drying, as is done in the making of the Sulphur (of Nature, or Sal Armoniack) till they have drank up four parts . of the faid Menstruum, and are disposed to sublimation, which you must fublime with a Fire of the fourth degree: And obferve that all those preparations and distillations of the Earths. Univ Calif - Digitized by Microsoft @

1.6 -

are

are to be done in Balneo: And thus, Son! have you our Sulphur or Matter, or Vegetable and Metallick Earth in one Kind united, for the making of the Glorious, High, and Virtuous Stone, which will transform common Argent vive into perfect Sol or Luna, without the help of Fire, but as the Eye of a Bafilisk, which kills Animals by fight alone: But it is your interest Son! to use great diligence, and exquisite Ingenuity in making the Roots of this high and lofty Tree, which Roots we call defert Limes, in which the whole Virtue of Heaven and Earth relating to this Magistery will be infused: And the way is this,

(167)

Take of the Vegetable (and Mineral) Earth or Sulphur, which you united in one Kind, by fullimation, which is that which you call'd the Earth of Sulphur in one Kind united, put it in a Glafs Veffel, and pour fo much as it weighs of the Menstruum, with which you separated the Elements of the Sulphur of Luna, and prepared the faid kind of Earth, and put it in a Philosophical Balneo three Natural Days, and in that time it will be all diffolved, which being thus diffolved, put in a common Balneo, and diffil the Menstruum, and the Earth united to its kind will by sublimation remain as an Oyl, which we call the Philosophers Oyntment; and it is one of the Secrets, which we take care to have concealed : Then,

Take of that Oyl or Oyntment aforefaid ten Drachms, and of the rectify'd Air of the Sulphur of Luna one Drachm (not one Ounce: And of the Air of the Sulphur of Sol one Drachm) and difill in a Fire of Afhes, and that which is diffilled, which is almost all, is called the Terreftrial defert Limes, keep it. Take of the Element of the (Fire) Sulphur of Gold already prepared and congealed ten Drachms (not twenty) and of the Element of the Air (Sulphur) of Luna one Drachm, and of the Element of the Air of the Sulphur of Gold another Drachm, and put all in Afhes, and diftil; that which is diftilled from it, which is almost all, is called the Etherial defert Limes; keep it for occafion.

Take of the Element of the Fire of the Sulphur of Gold one Drachm or two, and rectifie it again thus, pouring upon it five parts of its own *Menstruum*, which is that, with which you feparated the Elements of the fame Sulphur of Gold, and put it to digest in Balneo for one Natural Day, then distil in Athes what you can : And again pour the faid *Menstruum* upon it, digest and disti distil by Ashes, and repeat, till it be all pass'd over by a Fire of Ashes. Then take its weight of the said Vegetable Earth, united and sublimed together (prepared above) and you must unite them together (with the distilled Element of Fire) and not distil, but so lay it aside, and it is called the Terrestrial desert Limes, (of Gold) not vaporized.

Take of the faid Earth (in one kind united) one Drachm, and of the Oyl of the Air (of the Sulphur) of Luna one Drachm, mix them together, and you will make the fame Magistery, as you did with the precedent Gold, and it is called the Terrestrial defert Limes lunificated (not) vaporized.

We do now think good to shew the way of celificating and preparing those (*Limes*) in order to receive the Virtues of Heaven and Earth, and the way is this: Take Brass or Iron Cages, and let them be like those wherein Parrots whiss but the twiggs must be closer, so that no Earth, neither Celessial nor Terrestrial can enter, but only the vapour of Heaven and Earth, which you will have by Influence.

Take the Limes (above mentioned, Terrestrial desert) made of ten Drachms of the Earth or Sulphur united, which is that which you united with the Earth of the Sulphur of Silver, and reduced into an Oyl or Oyntment; and of one Drachm of the Air (of the Sulphur) of Luna, and one Drachm of the Air (of Sol)mix'd, and that Limes put in a Glass Vessel with a long Neck exactly Sealed with the Seal of Hermes, and put it in the Cage, and set it one Arm or two deep, and let it stand a Year and half, or at least a Year, covering it well with Earth, and keeping it from all dangers, and in that time will it be made a powerful Water, with wonderful fixative Virtues of the Stone, and it hath admirable Virtues acquired from Heaven, which it attracted from the Vapours of the Earth. Son! depend upon this.

Take the Limes (above declared, Etherial defert,) which you made of ten Drachms of the Fire of the Sulphur of Gold, and of one Drachm of the Air of the Sulphur of Luna (and one Drachm of the Air of the Sulphur of Sol) and put it in another Glafs Veffel with a long Neck Hermetically Sealed, and put it in another Cage, and hang it in the Air on a Tree, or any private place, free from all Wind, Duft, and Danger; leave it a Year and half, or a whole Year at least, as we faid of the other, and

6

(169) Water endou

fo will be made a clear Water endowed with the Virtue of hardning, fixing, congealing, penetrating, and making the Stone Volatile, and is called the Mercury of Air of most acute penetration.

Take the (Terrestrial desert) Limes of Gold not vaporized, nor celificated (neither distilled through an Alembick, nor circulated) which is that, that you made (by meerly mixing) of one Drachm of the Element of the Fire of the Sulphur of Sol, and of one Drachm of the Earth (united in its Kind) and that (take also the Terrestrial desert Limes lumificated, not vaporized) which you made out of one Drachm of the Earth of Sulphur united, and one Drachm of the Air (of the Sulphur) of Luna, and put those Limes every one by it felf in a Glass Vessel Sealed, as was faid of the other, and put it in the Earth the depth of one Arm for a whole Year in a Cage, and in that time will be made a Water of wonderful Virtue in joyning Bodies, and content your felf with this.

Take the Limes which you made out of ten Drachms of the Fire or Air, and one of the Earth; and take that which remains of the Air (of the Sulpbur) of Luna, because you took but three Drachms of it, when you made the Limes, and let it hang in the Air in a Glass Vessel Sealed, and in a Cage, as you did with the other, and there will it receive the Celessial Virtues, which are the means of Conjunction between the Limes of the Earth, and the Limes of the Fire, and other Limes also.

Take the fecond Air (the Menstruum Elemented, in which were diffolved the Air and Fire of the Sulphur of Gold, and gently drawn off, that is, three parts only from five of it) which is that, which you drew from the Fire congeled, which we call'd Philosophical Oyl, and Philosophical Treasure (not that, which is also called the Philosophers Oyntment, made of the Earth united in one Kind, but that which was call'd the Vapour of the Elements) and put it by it felf in another Glass Vessel well Sealed, and put it in the Air near the other, which you put for a whole Year.

Take the Menstruum with which you separated the Elements of the Sulphur of Luna (and that Menstruum, wherewith you separated the Elements of the Sulphur of Sol) and put in every Vessel, wherein is Menstruum of Luna (and the Menstruum of Sol) one Drachm of Sulphur (or Vegetable Sal Harmoniack) and set

11

it in Balneo, then in Ashes, till you have made it all go over with every *Menstruum* by it self: Then each *Menstruum* being thus rectify'd or animated, put in a Glass Vessel Sealed by themselves in their Cages, and hang them in the Air near the other, for a Year.

Take the Oleagineity of Luna (the first, or first Air) which is that, which you drew from the Earth of Luna, when you prepared it for the making of the Sulphur of Luna, which we commanded you to keep, and faid it should be for the making (of the Sulphur of Nature) put it in a Glass Vessel Sealed in the Air, and there it will be made a Fluxible and Virtuous Water of wonderful penetration: And what we faid of the white Oyl, we fay also of the red incerative Oyl (of Sol.) And now Son ! you have the Stone (Menstruum) divided into eight parts, three in the Earth, and five in the Air.

Annotations.

The Ten foregoing Kinds of Vegetable as well Simple as com-pounded Menstruums, the Adepts made by tempering the unctuous Spirit of Philosophical Wine, with many forts of dry Bodies, and by such means produced Menstruums adapted equally for every use, and permanent and inseparable, they being of the same Nature with the things that were diffolved. In the Kind immediately antecedent we shew'd you, that all the aforesaid Menstruums, whether fimple or compound, exalted with so great Labour to the highest degree by tempering them with dry things, may be raised yet higher, and augmented in their Virtues : For what Art cannot do, Nature can; what the Earth cannot do, Heaven can : For Menstruums perfected by Art, do, by being exposed to the Influences of the Heavens, attain to very great and incredible Virtues by Nature : In the eleventh precedent Kind, we had Menstruums for Pretious Stones, made of the simple Elements of Metals : In this twelfth, he takes the Sulphur of Nature, Sal Harmoniack, or Mercury of the perfect Metals Sol and Luna, instead of crude Gold and Silver, and by expofing the Elements of them to the Heaven and Earth, Separates them much more Nobly for the best of all Alchymical Tinctures.

From the Receipts we observe :

1. That Limes in their Compositions are indeed clear, but Clouded with a wearifome multilocution, and difguised by so great a variety riety of operations, besides also in respect of time made most tedions on purpose to deter young, and unadvised Practitioners.

2. That these Limes differ from the former Etherial and Terrestrial Waters in fineness of preparation; these Elements are of the Sal Harmoniack or Philosophical Mercury of Sol and Luna; but those Elements of a crude Metal. For, said Luliy, Limes for Alchymical Tinctures ought to be of a purer Nature, than those which are for Pretious Stones.

That these Limes are Essences graduated, exposed to the Influences of the Heaven and Earth, and consequently are Medicines.
 That the Sulphurs Naturx of imperfect Metals do also by the fame method yield Limes, as strong in their kind, as the Sulphurs

Naturæ of Gold and Silver in their kind.

Hitherto have we treated of Vegetable Menstruums, now follow those which are called Mineral : But before we proceed further, we are to take notice that by Vegetable Menstruums are meant also Animal Menstruums : For all the Vegetable Menstruums already alleadged, are not called Vegetable in respect of Ingredients; for be-fides Vegetables, Animals also, and Minerals were made use of in their preparations; but by reason of the Spirit of Philosophical Wine produced chiefly from a Vegetable uncluosity ; which Spirit, if you knew how to extract out of some Oyly Matter of the animal Kingdom, as the Adepts have more than often done : Tou might with this Animal Spirit transmute the aforefaid Vegetable Menstruums, into Animal Menstruums, which nevertheless you cannot apply to Mineral Menstruums; for though there are also in this Kingdom thin Oyls, swimming upon watrish Liquors, as Oyl of Petre, Pit-Coals, Sc. Tet these are extraordinary Oyls of this Kingdom, produced either by exorbitancy, or defect of Nature. And therefore such Oyls as these the Adepts referred to both the Vegetable and Animal Kingdoms, for they are of one and the fame Nature; whereas the Oyls of Minerals and Metals are more dry and masculine, then to produce our feminine Seed or Menstruum : Now to recite the parts of Animals, and the way of extracting this Spirit of Philosophical Wine from them, is not proper to this place, but belongs to a peculiar Book, namely, our fifth (treating more copiously of these things) to be published in due time, when God permits ; wherefore not mentioning Animal Menstruums, we proceed to the Mineral or Acid Menftruums Iniv Calif - DigitizecAba Izicrosoft ® Of

OF

Mineral MENSTRUUMS.

The Thirteenth KIND.

Simple Mineral Menstruums made of the Matter of Philosophical Wine only.

59. The Green Lyon of Ripley. Libro Accurt. Pag. 383.

Ake the Green Lyon without diffolution in Vinegar (as fometime the Custom is) put it in a large Earthen Retort, which can endure the Fire, and diffil it the fame .way as you distil Aqua fortis, putting a Receiver under it, and luting the Joynts well, that it may not respire ; then distil first with a gentle Fire, till you fee white fumes appear, then change the Receiver, flopping it well, and diftil with a great Fire fo, as Aqua fortis is distilled, thus continuing twenty four Hours, and if . you continue the Fire the space of eight Days, you will see the Receiver always full of white fumes, and fo you will have the Blocd of the Green Lyon, which we call Secret Water, and Acetum acerrimum, by which all Bodies are reduced to their first Matter, and the Body of Man preferved from all infirmities. This is our Fire, burning continually in one Form within the Glass Vessel, and not without : Our Dunghill, our Aqua Vita, our Balneo, our Vindemia, our Horfe-Belly, which effects wonderful things in the Works of Nature, and is the Examen of all Bodies diffolved, and not diffolved; and is a fharp Water, carrying Fire in its Belly, as a Fiery Water, for otherwife it would not have

have the power of diffolving Bodies into their first Matter. Behold ! this is our *Mercury*, our *Sol* and *Luna*, which we use in our Work. Then will you find in the bottom of the Vessel Fæces black as Coals, which you must for the space of eight Days calcine with a gentle Fire, Ec.

Annotations.

HItherto we have mix'd or tempered the uncluous Spirit of Philosophical Wine with things Oyly, Dry-oyly, Oylydry, and purely Dry, and reduced them to divers Kinds of Vegetable Menstruums; in which we have exhibited Menstruums every way absolute and perfect, in Smell, Taste, and Colour incomparable, diffolving without hifing or effervescence, and permanent with things diffolved : Now follow in order, those which are called Mineral Menfiruums, which though they be of a stinking Smell, of an acid or corrolive Taste, and for the most part of a milky and opake Colour, and diffolve Bodies with very great violence and corrohon, yet nevertheless having the same Spirit of Philosophical Wine, as the Vegetable Menstruums for their Foundation, are therefore as permanent as they, yea better than they as to the abbreviation of time; for the acidity of Mineral Salts (for which corrolive or acid Menstruums are called Minera) lcannot destroy the Nature of the Spirit of Wine, ner the Nature of the Vegetable Menstruum, but by corroding makes the particles of dry Bodies more apt to unite themselves with the Oyly Spirit of Philosophical Wine; but if that acidity be taken away, it becomes that which it was before, namely, either the Spirit of Philofophical Wine, or a Vegetable Menstruum.

The method which we used in the Vegetable Menstruums, we will as near as we can observe also in these Mineral Menstruums: In the Vegetable we extracted from the Philosophical Wine an Aqua andens, from which we did by Circulation separate an Oyl or Essence of Wine, which is our Spirit of Wine, which then by acuating divers ways we reduced into the precedent Kinds of Vegetable Menstruums; but in the Mineral we will begin with Philosophical Grapes, the Matter it felf of Philosophical Wine, which is elsewhere called Green Lyon, Adrop, &c. Though the Discourse of this Matter appertains not to this place, yet if any thing presents it felf to us either in the Receipts Receipts themselves, or elsewhere, which may tend to a more clear manifestation of it, we will not conceal it; but on the contrary have determined to illustrate and explain things so, as not only to make you more assured of the use and necessity of this Spirit promised to you, but moreover also, that you may have some certain notions beforehand of its Conception, Substance, Nativity, &c.

For the elucidation of this Receipt, we will propound some other Receipts of the same Matter, that being compared together, they may be made the plainer : In the first place we will propose a Menstruum made indeed not of the Green Lyon it self, but of the Green Lyon dissolved with an acid, and reduced into a certain Gum.

60. A Menstruum made of the Gum Adrop of Ripley. Libro accurtationum, Pag. 381.

Ake Adrop, that is, the Green Lyon, which we fpoke of before, and diffolve it in diffilled Vinegar for the fpace of feven Days, fhaking well the Veffel which the Matter is in, three times dayly, then empty the diffolved Liquor, and diffil through a Filtre three times from its Fæces, till it be clear as Criftal, and evaporate the Vinegar with a gentle Fire, till it be thick as Bird-Lime, which you cannot flir by reafon of its Vifcofity, and being cold, take it out of the Veffel, and keep it ; and again make more of it, and this do, till you have twelve Pounds of this Green Lyon or Adrop reduced to the Form of a Gum, then have you the Earth extracted from the Earth, and the Brother of the Earth. Then take a Pound of that Gum, and put it in a Glafs Veffel of the bignefs of a Bottle, well luting the Joynts of the Alembick with Glew made of the white of Eggs and Filings well mix'd together.

This Receipt in the Treatife of the Philosophical Adrop (which is in the fixth Volume of Theatrum Chymicum, and inscribed to an anonimous Disciple of the great Guido de monte, but differs not from the Books of Ripley, namely, the present de Accurtationibus, and the Clavisaurex portx, the greatest part of which is ascribed to the Famous Dunstan, Archbischop of Canterbury) is altogether the fame as to the Sense, though these Words run better in the Translation Univ Calif-Distized by Microsoft & thus;

(175)

thus: Now take three Pounds of the aforefaid Gum, put it into a Diffillatory able to hold about two Measures, and putting on an Alembick, lute the Joynts with luting made of Ale, the white of an Egg, and Wheat-Flower, Pag. 552. Volum. 6. Theat. Chym. Which is confirmed with the Process or Receipt of the Clavis aurex portx, were thus : Put three Pounds of this Milk (thickned or Gumn'd) into a Glass Pag. 257. Clavis auree portæ: and diftil in a Sand Furnace, and let the Sand be the thickness of two Fingers under the Vessel, and fo round about even to the middle of the Veffel, or till the Matter be covered : put a Receiver to it, making at first a gentle Fire, but not luting the Receiver, till the Phlegm be gone over, and this continue; till you fee fumes appear in the Receiver white as Milk; then increasing the Fire change the Receiver, ftopping it well, that it may not evaporate, and fo continually angment the Fire, and you will have an Oyl most red as Blood, which is airy Gold, the Menstruum fatens, the Philosophers Sol, our Tincture Aqua ardens, the Blood of the Green Lyon, our unctious Humor, which is the last confolation of Man's Body in this Life, the Philosophers Mercury, Aqua solutiva, which diffolves Gold with the prefervation of its Species, and it hath a great many other Names: And when first the white fumes appear, continue your Fire twelve Hours, in which space if the Fire be ftrong, will all the Oyl be diffilled, which keep well ftopp'd to prevent respiring.

This Menstruum differs from the precedent, forasmuch as in this, the Green Lyon is diffolved in Vinegar, but in that, it is all distilled. alive, but they are both clearly enough described in themselves; yet. the Matter of the Menstruum remaining more obscure, and less intelligible to the Reader, we have found out four Reasons in Ripley. why it is called Green Lyon.

First, faith he, by Green Lyon, the Philosophers means the Sun, which by its attractive Virtue makes things Green, and governs the whole World. Tract. de. Adrop. Phil. Pag. 547. Volum. fexti Theat. Chym. and elfe where : The Green Lyon is that, by which all things became Green, and grow out of the Bowels of the Earth by its attractive Virtue, elevated out of the Winter. Caverns, whole Son is most acceptable to us, and fufficient for all the Elixirs, which are to be made of it; for from it may be had the power of the white and red Sulphur not burning, which Univ Calif - Digitized by Microsoft ®

15

is the best thing, faith Avicenne, that Alchymists can take, thereby to make Gold and Silver. But these Words may fuffice a Wife Man to know and obtain the Green Lyon. Medulla Phil. Pag. 139.

Secondly, It is moreover also called Green, because that Matter is as yet fharp and unripe, that is, not yet fixed or perfected by Nature, as common Gold. The Philosophers Green Lyon therefore is green Gold, Gold vive, which is not as yet fixed, but left imperfect by Nature, and for this reason hath it the Virtue of reducing all Bodies into their first Matter, and making those Bodies which are fixed Spiritual and Volatile. Tract. de Adrop. Pag. 547.

Thirdly, It may also be called Lyon, because as all other Animalsgive place to a Lyon, fo all Bodies yield to the power of Gold vive, which is our Mercury. Tratt. Adrop. Pag. 548.

Fourthly, This Noble Infant is called Green Lyon, becaufe when it is diffolved, it is cloathed with a Green Garment. Yet out of the Green Lyon of Fools (Vitriol) is with a violent Fire extracted that which we call Aqua fortis, in which the faid Lyon ought to be elixirated. Medulla Philof. Pag. 139.

These things spoken of the Green Lyon, are also to be understood of Adrop, being a Synonymous term of the lame Matter : Take, faith Ripley, Adrop, that is, the Green Lyon. Now as to Adrop he declared as followeth : Adrop, Saith he, is Gold and Silver in power but not in fight, as Rhafis faith, and our Gold and Silver, according to the Philosophers, is not common Gold and Silver, for our Gold and Silver are airy, which in order to be well fermented, ought to be joyned with the beloved (common Gold,) Forafmuch as the Philosopher faith, That Adrop in its profundity isairy Gold, and Adrop it felf is called Leprous Gold. And to these Sayings feems to affent Guido, the Greek Philosopher, fpeaking of the Mercurial or Menstrual Spirit (the Spirit or Blood of the Green Lyon) which is extracted out of the Natural Adrop by Art, where he writes : And that Spirit is Sol extracted out of the Philosophers Solary Water, Arsenick, and Luna: And in the fame place prefently adds; The Body is the ferment of the Spirit, and the Spirit the ferment of the Body, and the Earth, wherein lies the Fire, dries, imbibes, and fixeth the Water ; and the Air, wherein lies the Water, (the Air which lies in the Water, Univ Calif - Digitized by Microsoft

21

(177)

it ought to be read according to the Doctrine of Separating the Elements) washeth, tingeth, and perfecteth the Earth and Fire; and fo Guido's Saying, that they tinge and perfect, ought to be understood, that the Stone (the Menstruum drawnfrom Adrop, or the Green Lyon) is fufficient for the compleating of it felf into an Elixir, and that no Exotick or Heterogeneous Matter, as he affirms, is or ought to be introduced to it, but all the parts of it are co-effential and concrete, becaufe the Philosophers meaning was to compleat that work in a fhort fpace above the Earth, which Nature scarce perfecteth in a thousand Years under the Earth: Unskilfully therefore according to the Opinion of the Philosophers, as Guido faith, do they proceed, that feek to obtain a ferment from common Silver and Gold for our felect Body : For that Matter, in which is Argent vive clean and pure, not (most, is ill read) throughly brought to perfection by Nature, is, as Guido affirms, after compleat purification, a thousand times better than the Bodies of Sol and Luna vulgarly decocted by the Natural heat of the Sun. Concord. Lully & Guidon. Pag. 323. A certain Philosopher saith, He goes on Discoursing of the Same Adrop; A fume (white) is drawn from its own Mines, which if rightly gathered, and again sprinkled upon its own Mines, will there make a fixation, and to the true Elixir will in a fhort fpace of time be produced from it: And certainly without those Liquors or Spirits, that is, the Water and Oyl of Mercury (Menfruum) this Alchymical Body which is Neutral or Adrop, is not purged : And that is the Alchymical Body, which is called Les prous Body, that is, black (at the beginning of the Work) in which, They as faith Vincentius in his Speculum Naturale, are Gold and Silver in power, and not in afpect; which in the Bowels of it is alfo airy Gold, to which no Man can attain, except the unclean Body be first cleansed, which is without doubt after its compleat, dealbation, and then it is a thousand times better than are the Bodies of common Gold and Silver decocted by Natural heat: The first Matter of this Leprous Body is a viscous Water inspissated in the Bowels of the Earth : Of this Body, according to the Judgment of Vincentius, is made the great Elixir for the red and white, the Name whereof is Adrop, otherwife called the Philosophers black Lead, out which Raymund commands us to extract an Oyl of a Golden Colour, or fuch like: Raymund adds, But

But this Oyl is not neceffary in the Vegetable Work (namely, for the inceration of the Vegetable Stone) because folutions and coagulations are there foon made; and if you can separate it from its Phlegm, and after that ingeniously find out the Secrets of it, you will in thirty Days be able to perfect the Philosophers Stone: For this Oyl makes Medecines (*Tinctures*) penetrable, fociable, and amicable to all Bodies, and in the World there is not a greater Secret. Medul. Phil. Chym. pag. 131.

Ripley hath here recited various Synonima's of this Adrop: We for a time will follow the Green Lyon by the way of Philosophical Lead, as we are directed by Ripley in these very Words : First, understand, when Avecenn faith, that Gold and Silver are in Lead by Power, and not by fight, and they are left by Nature crude and half cocted, and therefore that ought to be perfectly supplyed by Art, which is left imperfect by Nature, and by way of a ferment digesting and cotting that which is left crude : For a ferment therefore take perfect Gold, for a little (paululum, not paulatim) of their fixed substance (those fixed Bodies) will draw and convert much of Bodies not fixed to the perfection of Gold and Silver. And thus will Art help Nature, that in a little space of time that may be done above the Earth, which is not in a thoufand Years done under the Earth : And by this means you will understand, how Lead contains in it the greatest Secrets of this Art : For it hath in it Argent vive, clean, pure, odoriferous, not brought by Nature to perfection: And this Argent vive is the Basis and Ground-Work of our pretious Medicine, as well for Metallick as Humane Bodies, fo as to be the Elixir of Life, curing all infirmities: Which the Philosopher meant, faying, There is in Mercury whatfoever Wife Men feek : From this are the Soul, Body, Spirit, and Tincture drawn: Moreover also in this Mercury is the Philosophers Fire, always burning equally within the Veffel, and not without : It hath also a great attractive Virtue and Power in diffolving Sol and Luna, and reducing the fame into their first Matter : With this Mercury are to be diffolved the Calxes of the perfect Bodies in congealing the aforefaid Mercurial Spirit, Gc. Pupilla, Pag. 295. But have a care that you operate not with (common) Saturn, because commonly it is faid, Eat not of the Son, whose Mother is corrupted, and believe, that many Men err in Saturn. Hear what Avicenn faith,

Certes

Satura

Saturn will be always Saturn; yea operate not with the Earth of (Philosoph.) Saturn, which the Spirit of it has despised, and relinquithed for the worft Sulphur : Operate only with the fume of it to congeal Mercury, yet not as Fools, but as the Philofophers do, and you will have a very good Work. Phil. Cap. 2. Pag. 188. The whole composition we call our Lead ; the quality of the fplendor proceeds from Sol and Luna, and in short, these are our Menstruums wherewith we calcine perfect Bodies naturally, but no unclean Body is an Ingredient, one excepted, which is by the Philosophers commonly called Green Lyon, which is the means of joyning the Tinctures between Sol and Luna with perfection, as Geber himselfattesteth, Libro. 42. portar. Pag. 12. To manifest this thing to you, you must know, that it is one of those, which are of the feven Days (Planets) and the meanest of the fame, out of whose Body is artificially extracted Blood, and a vaporous Humor, which is called the Blood of the Green Lyon, from which is produced a Water, called White of an Egg, and Aqua Vitæ, May-Dew, and by many other Names, which to avoid prolixity, we now omit. Phil. Cap. 3. Pag. 190.

The method of extracting the Blood of the Green Lyon out of calcined Lead, or Philosophical Minium is this that followeth.

61. A Menstruum made of the red Lead of Ripley. In pupilla Alchym. pag. 303.

Take of Lead calcined or rubifyed, or the beft *Minium*, that is, *Mineral Antimony*, prepared, what quantity you pleafe, yet with this confideration, that you muft have fo many quarts of diftill'd Vinegar, as you have pounds of the aforefaid calcined Lead : To this Vinegar pour the aforefaid Lead in a large Earthen Veffel well glazed, then for the fpace of three Days flir the Matter ftrongly with a Wooden *Spatula* fix or feven times a Day, cover it well from Duft, and let it not be put to the Fire by any means during all this time, after which feparate all that is clear and criftalline by a Filtre into another Veffel, then put it into a Brafs Skillet to a gentle Fire, that all the Phlegmatick Water may evaporate, till a very thick Oyl is left in the bottom of the Vessel, which fuffer to cool; which being done, the Matter will become like Gum, fo as to be cut with a Knife, hereof put four Pounds into a Glafs Cucurbit with an Alembick, the Joynt being well luted with a Paste made of the Scales of Iron, Flower, and the whites of Eggs well beaten together : put the Veffel in a Furnace of Sand, and not in Afhes, and let the Veffel be buried in the Sand even to the middle of it, and let the Sand be two Fingers thick under the bottom of the Veffel; then put a Receiver to it, but not luted, till you have drawn out all the Phlegmatick Water with a most gentle Fire, which Water throw away : When you fee a white fume appear, then lute the Receiver, which muft be two foot long ; which being drawn out, ftrengthen the Fire as much as you can, and continue it till you have diffilled all that can be extracted in twelve Hours, and fo will you have the Blood of the Red Lyon, most red as Blood, which is our Mercury, and our Tincture now prepared, to be poured upon its ferment, that is, upon the Calxes of most pure Gold, &c. But if you would use it for the white Work, you must diftil your Mercury three times with a flow Fire, always referving the Fæces apart in every diftillation, and then will you have your Mercury most white as Milk : And this is our Virgins Milk, whitened Menstruum, and our Argent vive Philosophically exuberated; with which by Circulation make an Oylout of the Calxes of Luna, and proceed in all things, as you did with the red Mercury upon the Calxes of Gold, and you will have a white Elixir, which will convert any Metal into perfect Luna: But the Golden Oyl ought to be perfected and tempered, and well united with artifical Balfom, by the way of Circulation, till out of them is made a most clear and refplendent Golden Liquor, which is the true Aurum potabile, and Elixir of Life more pretious for Mens Bodies, then any other Medicine of the the Vinegal pour the dores of Lese in a lars birow-

The like Menstruum Ripley hath in his Medulla Philosophiæ Chymicæ

The main confagall this time, there which there a the is the provide an the is the provide another is $\mathbf{5}$ and $\mathbf{5}$. The purpose is $\mathbf{5}$ and the provide the purpose is the state Skiller to a gentle File, that all the Philematicle Water a state Skiller to a gentle File, that all the Philematicle Water and the Philematicle Water and the Skiller of the state of t

62. The Simple flinking Menstruum of Ripley. Medulla Phil. Chym. pag. 170.

Ake the sharpest Juice of Grapes, and being distilled, diffolve into a clear Griftalline Water, the Body being well Calcined to a Redness, which is by the Philosophers called Sericon; of which make a Gum, which is like Allum in tafte, and is by Raymund called Azoquean Vitriol. Out of this Gum with a flow Fire is drawn first a weak Water, which hath its tafte no sharpnels, no more than Spring-water : And when a white Fume begins to appear, then change the Receiver, and Lute ftrongly, that it may no way expire; and fo you will have your Aqua ardens, Aqua viræ, and a refolvitive Menstruam, which before was refolvible: This is the Potential Vapour, able to diffolve, putrifie, and also purifie Bodies, divide the Elements, and by its attractive Virtue exalt its own Earth into a wonderful Salt: And they that think there is any other Water, befides this which we speak of, are mistaken in this Work : this Water hath a most sharp taste, and partly also a stinking smell, and therefore is called stinking Menstruum; and it being a very Airy Water, it therefore ought to be put upon its Calxes in less then an Hour after it is distilled or rectified; but when it is poured upon the aforefaid Calxes, it begins to boyl up, and then if the Veffel be well ftopp'd it will not leave working, though no Fire be administred to it from without, till it be dryed up in the Calx; wherefore you must apply no greater quantity of it than fcarce to cover the Calxes, then proceed to the full compleating of it, as in the work of the compounded Water. And when the Elixir is reduced to a purple Colour, let it be diffolved in the fame Menstruum, being first rectified into a thin Oyl, upon which fix the Spirit of our Water by Circulation, and then hath it the Power of converting all Bodies into most pure Gold, and to heal all Infirmities of man's Body, more than all the Potions of Happocrates and Galen, for this is. thetrue Aurum Potabile, and no other, which is made of Artificial Gold Elemented, turned about by the Wheel of Philosophy, &c. The fame Menstruum is had in the Vade Mecum of Ripley.

Univ Calif - Digitized by Microsof 63. The.

63. The Menstruum of Sericon of Ripley. In Vade Mecum, commonly called the Bosom-Book.

Ake of Sericon or Antimony thirty Pounds, out of which you will have twenty Pounds or thereabout of Gum, if the Vinegar be good; diffolve each pound of that Sericon in two measures (a Gallon) of Vinegar twice distilled, and having stood a little while in digestion, fur the matter often every day, the oftner the better, with a clean flick, filtre the Liquor three times, throw away the Fæces, to be taken away as superfluous, being no Ingredient to the Magistery, for it is the damned Earth: Then evaporate the filtred Liquors in Balneo Mariæ with a temperate heat; and our Sericon will be coagulated into a Green Gum, call'd our Green Lyon, dry that Gum well, yet with care, left you burn the Flowers, or deftroy the Greens of it : Then take the faid Gum, put it in a ftrong Glass Retort well luted. and with a moderate Fire diffil a weak Water to be caft away: But when first you perceive a white fume ascending, put to it a Glass Receiver large, and of sufficient capacity, whose Mouth is exactly joyned to the Neck of the Retort, which must be very well luted, left any of the fume be loft or evaporate out of the Receiver : Then increase the Fireby degrees, till a red fume afcends, and continue a ftronger Fire, till bloody drops come, or no more fume appears : Then abate the Fire by degrees, and all being cold, take away the Receiver, and forthwith ftop it. that the Spirits may not exhale, because this Liquor is called our bleffed Liquor, to be kept in a Glass Vessel very close stopped : Then examine the Neck of the Retort, where you will find a white and hard Ice, in the form of a congealed Vapour, or Mercury fublimate, which gather carefully, and keep, becaule it contains great Secrets, of which lower : Then take the Fxces out of the Retort, being black as Soot, which are called our Dragon, whereof calcine one Pound, or more, if you pleafe, in a Potters, Glass-makers, or Philosophical Furnace, into a white Snowy Calx, which keep pure by it felf, it being called the Basis and Foundation of the Work, Mars, our white fixed Earth, or Philosophers Iron: Now take the refidue of the Univ Calif - Digitized by Microsoft D

Fxces.

Fæces, or black Dragon, and fift it on a Marble, or any other Stone, and at one of the ends light it with a live Coal, and in the fpace of half an Hour the Fire will run over all the Faces, which it will calcine into a very Glorious citrine Colour; these citrine Fæces diffolve with diftilled Vinegar, after the aforefaid manner, filtre also three times as before, then evaporate the diffolution into a Gum, and distil the Menstruum, which is now cal? led Sanguis Draconis, or Dragons Blood, and repeat this Workin all things as before, till you have reduced all, or the greater part of the Faces into our Natural or Bleffed Liquor, all which Liquors pour to the first Liquor or Menstruum, called the Blood of the Green Lyon ; the Liquor being thus mix'd, putrefie it in a Glass Vessel the space of fourteen Days: Then proceed to the feparation of the Elements, because in this Blessed Liquor you have now all the Fire of the Stone, hidden before in the Fæces; which Secret has been hitherto kept wonderfully close by the Philosophers : Now take all the Menstruum being putrifyed, put it in a Venice Glass of a fit fize, put an Alembick to it, and lute with Linnen Rags dipp'd in the white of Eggs; the Receiver. must be very spacious, to keep in the respiring Spirit, and with a temperate heat separate the Elements one from another, and the Element of Air, which is the Oyl (ardent Spirit, containing a little white Oyl at the top) will first ascend : The first Element being distilled, rectifie it in another Vessel fit for it, that is, distil feven times, till it burns a Linnen Cloath, being dipp'd in it and kiudled; then is it called our rectify'd Aqua ardens, which keep very well ftopp'd, for otherwife the most fubtil Spirit of it will vanish away: In the rectifications of the Aqua ardens the Air will afcend in the form of a white Oyl, fwimming upon the Aqua (ardens) and a citrine Oyl will remain, which is diffilled with a stronger Fire : Mercury being fublimed, and reduced into Powder diffolv'd per deliquium, upon Iron Plates in a cold place pour a little of the Aqua ardens to the Liquor being filtred, and it will extract the Mercury in the form of a Green Oyl fwimminga-top; which separate and diffil by a Retort, and there will afcend first a Water, and then a thick Oyl, which is the Oyl of Mercury: Then diffil the Flood or Water of the Stone into a another Receiver, the Liquor will be whitifh, which draw off in ... Balneo with a moderate heat, till there remains in the bottom of

the

the Cucurbit a thick Oyly fubftance, like melted Pitch, keep this Water by it felf in a Glafs well stopp'd. Take notice, when first the Liquor rifeth white, another Receiver must be put to. because that Element is wholly distilled : Two or three drops of that black liquid Oyl being given in the Spirit of Wine, do Gure any Poylon: Now to this black and liquid Matter pour our Aqua ardens, mix them well together, and let the mixture fettle three Hours, then decant, and filtre the Liquor, pour on new Aqua ardens, and repeat the operation three times, then difil again in Balneo with a gentle heat, and this reiterate thrice, and it will come under the denomination of the rectify'd Blood of Man, which Operators fearch for in the Secrets of Nature : Thus have you exalted the two Elements, Water, and Air, to the Virtue of a Quintessence; keep this Blood for occasion : Now to the black and liquid Matter or Earth, pour the Flood or Water of the Stone, mix them well together, and diftil the whole, till the Earth remains very dry and black, which is the Earth of the Stone; keep the Oyl with the Water for occasion: Reduce the black Earth to a Powder, to which pour the aforefaid Man's Blood, digeft three Hours, then diftil in Afhes with a Fire fufficiently frong, repeat this Work three times, and it will becall'd the rectify'd Water of Fire, and so have you exalted the three Elements, namely, Water, Air, and Fire, into the Virtue of a Quintessence : Then calcine the Earth being black and dry, in the bottom of the Reverberatory, into a most white Calx, with which mix the Fiery Water, and diftil with a firong Fire as before; the remaining Earth calcine again, and diftil, and that feven times, or till the whole substance of the Calx be pass'd through the Alembick, and then have you the rectify'd and truly Spiritual Water of Life, and the four Elements, exalted to the Virtue of a Quintessence; this Water will dissolve all Bodies, putrefie and purge them : This is our Mercury, our Lunary, but whofoever thinks of any other Water belides this, is ignorant and foolish, never attaining to the defired effects.

This Menstruum is made of the fame Matter as the precedent Menstruums. For Green Lyon, Adrop, Philosophical Lead, Mineral Antimony, Airy Gold, Mercury, &c. are Synonima's of one and the same Matter: This Matter being dissolved in distill'd Vinegar, and again inspissated into a Gum, in taste like Alum, is by Ripley

(184)

(185) Ripley in the Description of the antecedent Menstruum in Numb. 62. called Lully's Vitriol of Azoth, or Vitriolum Azoqueum : Lully in practica Testamenti, Cap. 9. Pag. 159. Vol. 4. Th. Chym. makes a Menstruum of B. C. D. By B. he meant the faid Green Lyon, or common Argent vive, which as he fays elsewhere, is more common to Men, than vulgar Argent vive. B. faith he, Pag. 153. of the faid practica, fignifies Argent vive, which is a com-mon substance confisting in every corruptible Body, as appears by the property of it, Gc. By C. be intended common Niter. C. faith be, fignifies Salt Peter, which hath a common (acid) Nature, and like Argent vive by the property of its ftrong (acid) Nature, Pag. 154. 4. Volum. aforefaid. By D. he understood Gum Adrop, made of the Green Lyon. D. faith he, fignifies Azoquean Vitriol, which corrupts and confounds all that is of the Nature and Being of common Argent vive. In the fame place, Both C. and D. he calls the purer mediums. Cap. 58. Theor. Teft. pag. 96. You must know Son ! faith he, our Bath, you may walh the Nature of (Phil) Argent vive fo, as Nature could never do,

that is, to make Argent vive a compleat Elixir. But (Phil.) Argent vive and Metals being both in Nature, and in your Work, extreams, and extreams not being able to joyn themfelves, without the Virtue of a middle difpolition, which is between the foftness of Argent vive, and the hardness of Metal, because there is by reafon of that middle difpolition a Natural complyance, which is the caufe of Conjunction between Body and Spirit, as it is in every thing generated, or in capacity of being generated : In Nature are many mediums, whereof two are more pure, and more viscous, the Green Azoquean Vitriols, with the flony Nature, which is the Salt and Nature of Stones. By the help my Son! of this contemptible Matter is our Stone, which we have to much fought for, procreated, Gc.

With the other of these mediums, C, the stony Nature, Salt Peter, Salt of Peter, or Niter, we have no business at present; but being folicitous of D. Gum Adrop, or the Azoquean Vitriol of Lully, it will be worth while to confult Lully himself : Of which the Philosopher, Cap. 59. Theor. Testamenti, thus : Son! faith he, the Azoquean Lyon, which is called (Azoquean) Vitriol, is by Nature made of the peculiar fubstance of common Argent vive, which is the Natural Root, from whence Metal is procreated in its own Univ Calif - Digitized by Microsoft & Mine. Mine.

Mine. By common Argent vive, he meant not the Vulgar but Philosophical Argent vive, the natural Root as well of Metals as Minerals. When we fay common Mercury, faith he, we speak of that, which the Philosophers understand; and when we name the Vulgar, we speak of that which is known to the Countrymen, and sold in Shops. Cap. I. Lib. Mercuriorum, which the following Synonyma's of this Mercury, namely, Chaos, Nature, Origo, Green Lyon, Argent vive, Unguent, Oyl, Pasture and Liquor of great Value, do also testifie in Cap. 45. Theor. Test. pag. 75. Vol. 4. Th. Chym.

This common Argent vive, or Green Lyon, must be purged from its Superfluities, before the Aroquean Vitriol of Lully. or the Gum Adrop of Ripley can be made of it. You must faith be, my Son! being a Student of this Science, be stedfast, and not fearch after this or that, because this Art is not perfected with many things; and therfore we tell you, there is but one only Stone, that is Sulphur, and one only Medicine, namely, the composition of Sulphur, to which nothing is to be added, only the Terrestrial and Phlegmatick Superfluities taken away, because they are and ought to be separated from our Argent vive, which is more common to men, than Vulgar Argent vive, and is of greater Price, Merit, and stronger Union of Nature, from which and the first forms of it, it is necessary to separate, by the known degrees of feparation, all that belongs not to the Sal Armoniack of Metals, &c. Cap. 18. Theor. Test. pag. 33. Volum 4. Th. Chym. We fay there is but one only Philosophical Stone (volatile not yet fixed, or matter of a Menstruum) extracted from the things aforefaid by our Magiftery. And therefore when it comes newly into the World, you muft not add any other Powder, or any other Water, nor any thing incongruous to it, more than that, which is born in it, being radical to its own Nature, and the Mother of it, which feeds and carryed it, that is Sulphur, which formed the Stone in a Celestial Colour: But before you extract (distil) it (the Stone) throughly, purge, and cleanse it from all its Phlegmamatick, Terrestrial, and corruptible Infirmities, which are contrary to its Nature, because they are the death of it, with which it is furrounded, which do mortifie its vivificative Spirit. Cap. 7. Theor. Test. pag. 20, of the faid Volum. It is to be diligently

5 1 1

ligently noted, that one of the two aforefaid Natural Principles (Sulphur and Argent vive) is more truly Natural in the whole, and through the whole fubflance of it, as well within as without, and that is the pure Sulphur, hot and dry, introducing its form, that is, according to which the form of a Metal purfues a pure effect: But the other (Argent vive) is unnatural, that is inwardly natural, and outwardly againft Nature; but the internal natural part is made proper and alfo con-natural to it felf, becaufe it comes by its own Nature, but the external part is added to it by accident, and is to be naturally feparated from it after the corruption (Putrifaction) of it; wherefore it is manifeft that fuch Argent vive is not in the whole fubflance of it natural, in the first reception of it, nor is depurated to the full, unlefs it be depurated by the Ingenuity of Art.C. 5. p. 10. Codicilli.

As to this Purification of Argent vive, or the Green Lyon, Ripley thus : Wherefore faith he, this Mercury (the corrofive Spirit of common Vitriol) is by Raymond called, Our Fire against Nature: Nevertheless the fame thing happens in some meafure to this Mercury (the acidity of Vitriol) as also to the other (Vegetable Mercury, or Green Lyon) which is our natural Fire: For both of them are hidden in the middle or center of their Bodies, that is, between the Phlegmatick Water on one fide, and Terrestrial Crassitude on the other fide, nor are they obtained without the great Industry of Philosophy, and so those parts can avail us nothing, except only their middle fubstance: For faith Raymond, We take neither of the first Principles, because they are too simple, nor of the last, because they are too gross and feculent, but only of the middle; wherein is the Tincture, and true Oyl, separated from unclean Terreftreity, and Phlegmatick Water : Therefore faith Raymond thus; The unctious Moisture, is the near Matter of our Physical Argent vive, pag. 289. Pupillæ Alchym.

Argent vive, or the Green Lyon, is purified by common Vitriol, as thus: When the Argent vive is put in a dry Vitriolated Vapour (Spirit of Vitriol) which is a sharp Water, it is presently dissolved by the Incision and Penetration, caused by the sharpness, being manifestly strong, and in dissolving, is converted into the Nature of Terrestrial Vitriol, not taking a Metalick, nor a clear Coelestial Form, as appears after the evaporation of

Univ Calif. - Digitizeo by Microsoft ®

. the

the faid Water, and the congelation of it in the form of Yellow Criftals, which Yellowness proceeds from the sharp Sulphurous Terrestreity, which was beyond measure mixed in the faid Water by Atoms, with an Homogeneous Universality and fimplicity, which fimplicity was taken and bound by the faid Terrestreity, with the alteration of the Light, Clarity, and Lucidity into Obscurity, Ge. Cap. 89. Theor. Test. 141. Vol. 4: Th. Chym. Son ! the thick Vitriolated Vapours from which Virriol is produced, is very tharp and pontick, and therefore renetrates the parts of the Sulphur, and Argent vive being depurated, and penetrating, tingeth that purify'd Matter, congealing it into the Form of that Vitriolated and yellow Terreftrial Vapour, which is mixed with them. Wherefore what we have faid is manifest, that is, This is the great Gate, namely, that the Terrestrial Virtues must not excel the Cœlestial. but on the contrary, if you will have the thing defired, Cap. 85. Theor. Teft. pag. 137. of the Same Volume. You may remember that you would put nothing with the Menstrual (the Matter of the Menstrumm) but that which proceeded from it at the beginning of its mixtion; for if you add an incongruous thing, it will prefently be corrupted by the incongruous Nature, nor will you ever have that which you would have. Gold and Silver, and Mercury are diffolved in our Menstrual, becaufe it participates with them in proximity and vicinity of the first Nature, and from hence will you extract a white Fume, which is our Sulphur, and the Green Lyon, which is your Unguent, and the flinking Water, which is our Argent vive: But it is requestite for the Green Lyon to be throughly diffolved in the Aqua Fatens, or flinking VVater, before you can have the faid Fume, which is our Sulphur, which Sulphur is indeed the fame way diffolved from the Body, congealing the Spirit in the form of a dry Water, which we call Stone, and the highest Medium of all our Work, which is the connexion and aggregation of both Natures, that is, of Body and Spirit. Son ! This Water is called Aqua ignis, or if you had rather Ignifaqua, that undeclinable Word, because it burns Gold and Silver better than Elementary Fire can do, and because it contains in it heat of a Terrestrial Nature, which diffolves without Violence, which common Fire cannot do. Wherfore we enjoyn you to make the Magiftery Magistery

Magistery of the hottess things you can get in Nature, and you will have a hot Water, which diffolveth all things, Cap. 59. Theor. Tefl. Pag. 98. Of the fame Volume.

These Sayings Ripley comprehends in short, thus : These Words, faith he, may serve a Wise Man in order to know and acquire the Green Lyon : But this Noble Infant is called Green Lyon, because being diffelved it is Cloathed in a Green Garment. Yet out of the Green Lyon of Fools (Virriol) is extracted by a violent Fire, that Water which we call Aqua fortis (Spirit of Vitriol) in which the faid Lyon ought to be Elixirated. For all Alchymical Gold is made of Corrosives, Sc. Pag. 139. Medulla Phil.

This Argent vive, Green Lyon, Philosophers Lead, Er. being purifyed with Vitriol, must be further matured of calcined into a red Colour, Minium, Lead calcined, Sericon, Ge. E. (that is, Vitriolated Azoth, Pag. 15. Theor. Teft.) the fourth (Medium or Principle) is a substance produced from its Mine, and in it, more near to the Nature of Metals, which is by some called Calcantis, and Azoth Vitreus (Mercury Vitriolated, or Azoquean Vitriol) which is the Earth and Mine of Metals, and is by another Name called Vrifus, of thining white and red within Black and Green openly, having the Colour of a Venomous Lizard, immediately generated out of Argent vive, the Matter aforelaid impregnated with the faid hot and dry fulphurous Vapour (of common Vitriol) in its refolution congealed into a Lizard, in which (Azoth Vitriolated) is the form and species of the flinking Spirit in its mixtion, the Mineral heat of which is multiplyed, which is the Life of Metal, and is fignified by E. Cap. 3. Theor. Teltam. Pag. 12. Volume. 4. Theat. Chym. And a little after e In the Work of Nature is Argent vive, but not fuch as is found upon the Earth, nor will be, till it be first turned into an apostemated and venomous Blood. In the Jame place : You must know Son! that by Art and Nature Argent vive is congealed by an acute Water, uuderstand therefore Philosophically, because if it were not Tharp and acute, it could not penetrate, which is the first action in diffolution, after which diffolution it is returned into an apoftemated Blood, by the mutation of its own Nature into another. Son ! there are two things, which ought to flick together by the agreement of contrariety, one pure, the other impure ;"the impure recedes, Fire being an Enemy, by realon of its Corruption; thethe other remains in Fire, becaufe of its purity, being tranfmuted into Blood, and this is our Argent vive, and our whole Secret, cloathed with a tripartite Garment, that is, black, white, and red, and that alone we want for the purpose of our Magiflery, Argent vive containing all that is neceffary for a Quinteffence. There is in Mercury whatsoever Wife Men seek; for under the shadow of it lies a fifth substance; for the substance of it is pure and incombustible; and all of it is nothing else but Gold and Silver (not common Metals, but airy, being in Mercury, or the Green Lyon) melted and substant without by Virtue of the Fire (against Nature) and asterwards purify'd and separated from all its Original Blemiss fused and liquid, and imparts its Golden Nature in the faid Mercury, Sc. Cap. 62. Theor. Test. Pag. 103. Volume, 4. Th. Chym.

Out of this Philosophical Minium, calcined Lead, or Sericon only, the Adepts sometimes distilled their Menstruums; for Example, the first of this Kind in Numb. 59. Sometimes they discoved this Minium in distilled Vinegar, which being drawn off, they reduced it into Gum Adrop, or Lully's Azoquean Vitriol, out of which they then distilled the stinking Menstruum, or Menstruum foetens, in Numb. 60. Sometimes they diffolved Gum Adrop per deliquium first, and then distilled it. The thirteenth way of practiling, *(aith Ripley, as it here appears, is very curious, and that is in Sa*turn, (Philosophical) rubified in a Glass Vessel stopp'd, to prevent respiration, with a strong and continual Fire, till it becomes red : Take therefore that rubified Saturn, and pour a good quantity of diffilled Vinegar upon it, and fhake it very often every Day for a Month (a Week) then separate the Vinegar by a Filtre, and take only that which is clear without Fæces, and put it in Balneo to diffil, and after the feparation of the Vinegar, you will find at the bottom of the Veffel a white or sky-Coloured Water, which take, and being put in a Bladder five double, to keep out the Water, diffolve it'in Balneo into a criftalline Water; put that Water in a Distillatory, and if you will, separate the Elements from it, or diftil the diffolved Water, which rectifie in a Circulatory, and the Earth which remained in the bottom (in the distillation) calcine, till it grows like a Sponge, and then is it very fit to reassume its Mercury separated from it, that a new Generation.

Generation may be made, and a Son brought forth, which is called King of Fire, and which is fo great in the Love of all the Philosophers, Cap. 17. Philos. Pag. 220. Of this Work Ripley made mention : Cap. 4. of the Same Book, Pag. 194. Saying, There is moreover another Work in Gum produced by Vinegar from red Saturn, out of which is the feparation of the Elements made, after it is diffolved in Bladders : The Menstruums of Gum Adrop, which way foever made, were called finking Menstruums, because of the stinking smell : This Water, Saith Ripley, hath a most sharp taste, and partly also a stinking smell, and therefore. is called flinking Menstruum. Alla fatida also is so called from the fmell, which our Mercury hath when it is newly extracted out of its polluted Body, because that smell is like Alfa fætida, according to the Ph.lofopher, who faith ; That flink is worft before the preparation of this Water, which after the circulating of it into a Quintessence, and good preparation, it is pleafant and very delectable, and becomes a Medicine against the Leprofie. and all other Difeases, without which Gold vive, you can never. make the true potable Gold, which is the Elixir of Life and Metals, Adrop. Phil. Pag. 548. Volum. 6. Theat. Chym.

These Menstruums they called White Fume, because of their white and opake Colour. It is allo called White Fume, faith Ripley, nor without cause, for in distillation a white tume goeth out first, before the red Tincture, which ascending into the Alem-. bick, makes the Glass white as Milk, from whence it is also called Lac Virginis, or Virgins Milk. In the fame place : Out of the red Fume or red Tincture, otherwise call'd the Blood of the Green Lyon, the Adepts did by rectification alone prepare two Mercuries, namely, red and white : Upon this occasion, faith Ripley, I will teach you a general Rule : If you would make the white Elixir, you must of necessity divide your Tincture (the Blood of the Green Lyon) into two parts, whereof one must be kept for the red Work, but the other diffill'd with a gentle Fire; and you will obtain a white Water, which is our white Tincture, our Eagle, our Mercury and Virgins Milk : When you have thefe two Tinctures, or the white and red Mercury, you will be able to practife upon their own Earth, or upon the Calx of Metals; for the Philosophers fay, we need not care what fubfrance the Earth is of, Gc. Adr. Phil. p. 554. Vol.6. Theat. Chy. Roger Bacon made a two-fold Mercury thus Digilized by Microsoft @ 64. The

64. The Green Lyon of Roger Bacon. A Raymundo Ganfrido in verbo abbreviato de Leone Viridi. Pag. 264. Thefauri Chymici Baconis.

He abbreviated most true and approved Word of hidden things being manifested, I have in a short Discourse abreviated to you in the Work of Luna and Sol; in the first place earneftly requiring the Readers not to expose fo Noble a Pearl to be trodden upon by Dogs or Swine; for this is the Secret of all the Philosophers Secrets, the Garden of Delights, Spices, and all Treasures, into which he that hath once entred, will want no more : Now that Word, not without caufe defired by many Men, was first declared by our eminent Doctor Roger Bacon ; afterwards J. Fryer Raymund Jeffery, Minister General of the Order of the Fryers Minors, took care to explain the Word, with as much brevity as I could, to the Sons of Philosophy. In the Name of Chrift then, take a great quantity of the ftrongest Vinegar diligently diftilled through an Alembick, in which diffolve a good quantity of the Green Lyon, being diffolved, diftil through a Filtre, and keep it in Glass Cucurbits well ftopp'd : If any remarkable part of the Lyon remains undiffolved, diffolve it with the aforefaid Vinegar, and distil through a Filtre, and being diffolved, joyn it with the other Waters before referved in the Cucurbits, then take the referved Waters (diffolutions) and diffil them all in Balneo Maria, applying Alembicks to them well luted, that the Cucurbits may not refpire, put Fire under, and receive all the Waters, which will be diffilled, but have a care that the diffolved Lyon be not altogether congealed in the Cucurbits, but that it may remain liquid or foft; then take all the Cu-curbits, and put all that is in them into one Cucurbit, which lute well with its Alembick, and put it in a Furnace of Afhes, as is fitting, and put a gentle Fire under, because of the temper of the Glass, and because of the Heterogeneous moisture, which is in the Lyon to be rooted out: And take notice, that must be always

always done with a gentle Fire, but when the Heterogeneous moisture is gone over, strengthen the Fire by little and little, and have an Eye continually to the Beak of the Alembick, if a red Liquor begins to go over, but if it does not yet go over, continue the aforefaid Fire-till it doth; but when you fee the red Liquor diftil, change the Receiver forthwith, and lute it well to the Beak of the Alembick, and then strengthen the Fire, and you will have the Blood of the Lyon exceeding red, containing the four Elements, very odoriferous and fragrant (after due putrefaction) keep it therefore in a good Phial well ftopp'd: Then take the Blood, and putit in a Phial close ftopp'd to putrefie and digeft, in hot Dung, changing the Dung every five Days, there to be digested for the space of fifteen or fixteen Days, and this is done, that the Elementary parts may be diffolved, and be fitter to be divided into the four Elements, and that by diffillation ; being putrify'd fifteen or fixteen Days, take it out, and put it into a fit Cucurbit, to be diffilled with a gentle Fire in Balneo Mariæ; but it is enough for the Water to boyl with the Fire, take the Water (distilled) and the Faces, which you find at the bottom of the Cucurbit, keep carefully the Water which you distilled, diftil feven times, always referving the Fæces which it makes, with the other Faces referved before ; and fo you will have a fplendid Water, clear and white as Criftal, and very ponderous, which is faid to be the Philosophers Mercury hidden by all the Philosophers, and cleansed and purified from all its superfluities, most choice, and most pretious; keep it therefore warily and wifely in a Phial well stopp'd: Then take all the Faces of the Mercury, as I have faid, before referved, grind them well on a Marble (with the Phlegm of distill'd Vinegar) dry them in the Sun, and grind again, from time to time imbibing them with the Water of diftill'd Vinegar upon the Marble, and drying in the Sun, and repeat the operations of grinding, imbibing, and drying, till all the blackness and superfluity is driven out of the Fæces, which you will know thus : If the Fæces be red, or reddifh, or citrine by the aforefaid imbibitions and ablutions, then it is well done; but if they be yet black, repeat the contritions, imbibitions, and deficcations, till you have the fign aforefaid, and then keep them : Then take a Glass Cucurbit, wherein put the aforefaid Fæces above prepared, with a good quantity of diftill'd Univ Calif - Digi Ded by Microsoft Svinegar,

Vinegar, and fet it in a Furnace, that is, in Balneo Mariæ, put Fire under, and continue it in course, till the Fæces aforesaid be throughly diffolved by Virtue of the Vinegar and Fire, and being well diffolved, take the Cucurbit from the Fire, and diftil them through a Filtre as is fitting, all that Water (diffolution of the Faces) being thus distilled (filtred) put it in a new Cucurbit, well ftopp'd ; but if any confiderable part remains in the Filtre to be diffolved, take that part, and fet it again upon the Fire, as you did the first Fæces, in Balneo Mariæ, till it be diffolved, that you may diffolve those Faces which remained with the Vinegar, as you diffolved the first Faces in Balneo with Vinegar in a Cucurbit, then diftil through a Filtre as before, and put it with the other Water distill'd before, which you referved ; then take that new Cucurbit, in which you put the aforefaid Fæces diffolved and diffilled before, and lute it well with its Alembick, fet it on a Furnace in Balneo, give Fire, and diffil as is fitting ; but have a care that the Fæces be not throughly dryed, but let them be moift or liquid : Then take down the Cucurbit from the Furnace, put it upon Afhes fifted and well press'd, and give it a gentle Fire for the tempering of the Glafs, and extracting the Heterogeneous moisture, which it hath from the Vinegar, and fee often to the Beak of the Alembick, if a Golden or Ruddy Liquor diftills, if not, continue the Fire till it does; being diftilled, prefently change the Glassbeing very clean, and lute it very well to the Beak of the Alembick, then ftrengthen the Fire, receive the Ruddy Oyl, and thus continue the Fire, till all the Liquor be diftill'd, and fave the Fæces because they are the Fire, but the Oyl aforefaid the Philosophers us'd to call their occult Sulphur ; which you must rectifie thus : put it again in a Cucurbit, put on an Alembick well luted, then fet it on a Furnace in Afhes, administer a gentle Fire, till it diffils, receive the Liquor which diftills in a Bottle well ftopp'd with the Beak of the Alembick and the remaining Fæces fave, becaufe they are the Fire : joyn that Fire with the other Fire referv'd, and fo putrefie by diffilling it feven times, and referving the Faces, it makes, as I faid before, and fo you will have your Air or Sulphur well depurated, clear, bright, and perfectly purified, and of a Gold Colour, Ge.

(194)

The Blood of the Green Lyon being Fifteen Days putrify d, Bacon cohobated Seven times by Balneo, into a clear and ponderous Wa-

ter, which he call'd the Philosophers Mercury; out of the Faces left in the rectifications of this Mercury, diffolved in distilled Vinegar, he made a new Gum, out of which he then distilled a Golden Liquor, or ruddy Oyl, which after the Seventh rectification he would have be the Philosophers Air, or Sulphur well depurated, clear and bright : But Ripley used two ways in rectifying the stinking Men-Aruum, or Green Lyon, for either be divided the fresh Blood of the Green Lyon into two parts, distilling only one half; the distilled part he called, white Mercury, white Tincture, Virginsmilk, Gc. The other remaining part he calls the red Mercury, red Tincture, Ec. as it may be feen in his Book called Adrop Phil. in the place before alleadged; or putrify'd the whole Menstruum, the Blood together with the white Fume the Space of Fourteen Days, which after that he divided into three Substances, a burning Water, a Water thick and white, and an Oyl, of which at length be made a Vegetable Menstruum, which is described by Lully in Potestate Divitiarum, and by Ripley (above in Numb. 35.) in his Vade Mecum.

Concerning these three Substances of the Stinking Menstruum, Ripley bath these fillowing Sayings, in his Book named Terra Terræ Philosoph. pag. 319. where thus : When therefore you have extracted all the Mercury out of the Gum, know, that in this Mercury are contained three Liquors, whereof the first is a burning Aqua vita, which is extracted by a most temperate Balneo: This Water being kindled, flames immediatly, as common Aqua vitæ, and is called our attractive Mercury, with which is made a Criftalline Earth, with all Metallick Calxes alfo, of which I will fay no more, becaufe in this Operation we want it not : After that there follows another Water thick and white as Milk, in a small quantity, which is the Sperm of our Stone, fought by many men; for the Sperm is the Original of men and all living Creatures; whereupon we do not undefervedly call it our Mercury, becaufe it is found in all things and all places; for without it no man whatfoever lives: and therefore it is faid to be in every thing. This Liquor, which now you ought to effeem most dear, is that Mercury, which we call Vegetable, Mineral, and Animal, our Argent vive and Virgins-milk, and our permanent Water: VVith this Mercurial Water we wash away the Original Sin, and pollution of our Univ Calif - Dig Dzdozby Microsoft Br Earth

Earth, till it becomes white, as Gum, foon flowing; but after the diffillation of this aforefaid VVarer, will appear an Oyl by a ftrong Fire; with this Oyl we take a red Gum, which is our Tincture, and our Sulphur vive, which is otherwife called the Soul of Saturn, and Living Gold, our pretious Tincture, and our most beloved Gold, of which never man spoke fo plainly; God lorgive me therefore, if I have any way offended him, being conflrained to gratifie your will.

Some great Mystery of Art is here discovered by Ripley, for the revealing of which he fears the displeasure of not only the Adepts, but of God himself: Lully, and others have indeed plainly enough declared to their Disciples, though perhaps it may not appear to us being less instructed in the matter, what our Green Lyon is, what common Mercurymore common to us than common Argent vive, what the Azoquean Vitriol is, and the Menstruum made thereof; but Ripley affirms that no man ever Spoke So plainly of the present Secret. The Adepts have indeed in their Practicks defcribed the use of (Philosophical) Wine without any veyl of Philosophy; and among ft them Raymond and Arnold with fome other's have attained to the knowledge of the same, but (to use Ripley's expression in Medulla) how it might, be obtained they faid not: Wherefore they being filent, Ripley the first, and indeed the only man of all, declares to as, that the Key of all the more fecret Chymy lyes in the Milk and Blood of the Green Lyon, that is, that the flinking Menflruum (or the parts of it, Mercury and Sulphur, Virgins Milk, and the Lyons Blood, white and red Mercury) being fourteen Days digested gently, is the white and red Wine of Lully, and other Adepts: Nor was he fatisfied in declaring this freely to us, but adds Strength and Light to his Words, in making a Vegetable Menstruum the Rectify'd Aqua vitæ (described by Lully in Potestate Divitiarum, and by us in Numb. 31.) of the faid stinking and corrosive Menstruum, by which one only example he was pleafed to teach us, that all Vegetable Menstruums may be made of the faid stinking Menstruum: Lully's rectify'd Aqua vitæ is made by divers Cobobations upon its own Caput Mortuum : We may if we please proceed by another way or method: Diftil the Menstruum Fortens, being fourteen Days digested, and first will ascend the Aqua ardens, then the Phlegm, and in the bottom will remain a Matter thick as melted Pitch, which are the Constitutive Principles of all Vegetable Menstruumsalit - Digitized by Microsoft B. Let.

Let us therefore defift from further purfuit of the faid Green Lyon, which we have purfued through the Meads and Forrest of Diana, through the way of (Philosophical) Saturn, even to the Vineyards of Philosophy: This most pleasant place is allowed the Disciples of this Art, to recreate themselves here, after so much Pains and Sweat, dangers of Fortune and Life, excercising the work of Women, and the sports of Children, being content with the most red Blood of the Lyon, and eating the white or red Grapes of Diana, the VVine of which being purified, is the most seccret, of all the more secret Chymy; as being the white or red Wine of Lully, the Nectar of the Ancients, and their only desire, the peculiar refreshment of the Adopted Sons; but the Heart-breaking, and Stumbling-block of the Scornful and Ignorant.

But before we depart hence, I will prefent you (Paracelfians) with another Dish, and that not unsavory, which is, that the Virgins. milk, or white Mercury (otherwife the white Wine of Lully.) extracted out of the Green Lyon is by Paracelfus that Glue of the Eagle, or Green Lyon, fo carefully fought for: For Eagle and Green Lyon are to the Adepts Synonyma's of the fame thing: For thus Ripley before : You will obtain the white Water, which is our white Tincture, our Eagle, our Mercury and Virginsmilk. Confequently therefore, red Mercury (or the red Wine of Lully) is the Blood of the Red or Green Lyon: For the fame Lyon is called fometimes Green (in his Touthful Estate) fometimes red (in his more grown Estate) and therefore the Blood is sometimes faid to be of the Green Lyon, sometimes of the Red: So Ripley (in the Menstruum described in Numb. 61.) faith; Take the Blood of the Red Lyon being most Red, as Blood, which is our Mercury, and our Tincture now prepared to be poured upon its Ferment, that is upon the Calxes of the pureft Gold : alfo elsewhere; The Blood of the Lyon of a Rosey Colour. But let us hear Paracelfus himself. Is sime states the states

till you have the fuct Oyl by it felt.

(198)

65. The Green Lyon of Paracelfus. Aurei Velleris Germ. p. 41.

TAke diffilled Vinegar, wherein diffolve the Green Lyon, putrefie, filtre the Solution, draw off the Liquor in Balneo to an Oylinefs; this Oyl or Refidue put in a Retort, diffil away the moifture in Sand with a gentle Fire: Then increase the Fire, and the Green Lyon, being compelled by the firength of the Fire will yield his Glue, or Air; To the Caput mortuum, pour its Phlegm (the moifture drawn off) putrefie in Dung (or Balneo) and diffil, as before, and again will ascend the Spirits; force it ftrongly, and there will come a tenacious Oyl of a Citrine Colour: Upon the Caput mortuum pour again the first diftill'd VVater, putrefie, filtre, and diffil, as before: Laftly with a most strong open Fire, and there will come over a Bloody Oyl, which is otherwise called Fire: The remaining Earth reverberate into whitenefs, &c.

Hitherto we have had the slinking Menstruums made of Azoquean Vitriol only, yst sometimes the Adepts have added common Vitriol to it, thus.

NA TATES

66. The ftinking Menstruum made of the Gum Adrop, and Common Vitriol of Ripley. Pag. 357. Viatici.

TAke and Grind the Gum made of Sericon with diftill'd Vinegar, and as much of Vitriol evaporated, and first diftil the VVater with a gentle Fire, then with a strong; receive the Oyl (blood of the Lyon) which separate from the VVater, till you have the pure Oyl by it self.

Sometimes instead of common Vitriol, they added common Nitre to the Azoquean Vitriol; thus Lully in Practica Testamenti made his stinking Menstruum.

Univ Calif - Digitized by Microsoft @

67. The

67. The stinking Menstruum made of Azoquean Vitriol, and Nitre of Lully. Cap. 9. Pract. Testam. p. 159. Vol. 4. The. Chym.

Ake one part of D, (D, signifies Azoquean Vitriol, which destroys and confounds all that is of the Nature and Being of common Argent vive, pag. 154.) and half a part of C, (C, fignifies Salt Peter or Nitre, pag. 154 of the fame Volume) which being very well ground, fiited, and mixed together, put in a Glafs. Cucurbit in a Furnace, and putting on an Alembick, in which. the Spirits are by refolution diffilled and condenfed; lute the: joynts of the Veffels with linnen Cloath, impasted and steeped in luting, made of VVheat-flower, and the whites of Eggs, that the united properties of the three Mercuries, namely, Saltish, Vitriolick, and VVatry, being joyn'd and united together, . may be preferved : And observe, that the faid Powders put in-to the Cucurbit exceed not the weight of eight Ounces; and to abbreviate the time, put of the like Powder into two other Cucurbits, according to the weight of eight Ounces in every Cucurbit, and place them upon little long Furnaces, fo as I fhall declare in the Chapter of Furnaces; put not above three Cucurbits upon one Furnace, for the Fire cannot administer equal heat to more, as the mixtion of Nature requires; and let the faid Cucurbits be placed the diftance of five or fix Fingers one? from another, and let the bottoms of the Cucurbits be luted with Potters Clay mix'd well with hair; put fine Afhes well fifted : and preffed the thickness of five Fingers under them, and to the Beak of every Alembick put a Glass Phial with a long Neck at the end, because the Receiver of those Phials must not feel the heat of the Furnace, nor the Water of the Phialsflow back, nor the Spirits recede or fly away: Then must you provide a good quantity of Saw-duft, whereof take two parts, and half a part of the husks of Grapes, or the powder of dry Fire, and mix it with the faid Saw-duft, and with this Composition fill your Furnace, then light your Fireat both ends, and let it burn ; for Univ Calif - Digitized by Microsoft ®

you .

you must make no other Fire, till you see fix, or ten, or fifteen; or twenty drops of Water diftil, and when twenty have diftill'd, make your Fire with fmall Wood dry, and fo by little and little make the Fire flame directly to the Matter ; and fee when it diftils, that the Water be clear, and when it is at fifteen Points, and the Water clear, and the fumes fubtil, continue that Fire equally : And if you fee it returned from fifteen to twelve Points, or lefs, ftrengthen the Fire, and continue it according to the Point of its diffillation, and then thirdly, ftrengthen your Fire one Point further, and continue it till nothing more diffills, and then let the Fire go out, ftop your Furnace, and let the Matter cool; and if the Water be clear, without any diffurbed Colour, or without muddinefs, take and keep it, and ftop the Phial with warm Wax, that nothing may refpire, nor the Air enter, because the Spirits which are fubtil, would prefently be corrupted by the Air. Remember, when you begin to make the Fire of dry Wood, that your Veffels must be covered with the aforefaid Paste, and wrapped about with Linnen Cloaths, and the Phials well luted to the Beaks of the Alembicks with the fame luting, putting a Quill between the Beak of the Alembick and the Phial; for whilft the Fire operates, the Air will for the most part go out and refpire, when it hath not a Receiver to retain it, for it is hot, and the fubject which retains it, is not able to endure an exceeding heat, and therefore it requires fome place wherein it may refpire ; when therefore you hear it blow, open the Quill-hole for it. O Father! how have you made the practice thus tedious! Son! That you may be acquainted with all things both fmall and great, and that you may have both a general and particular knowledge of Fires, and other operations, as also of all forts of luting; because it is not our intention to speak any more of them, there being nothing difficult to the wife, circumfpect, and intelligent, and that you may hereafter fay, that the ftinking Menftruum is at your command, which is a mean thing, by which all Bodies are in a fhort time converted into their first Nature, and it is the pure and proper Original of a wonderful and most commodious thing, but you must know how to apprehend it with a clear understanding, Gc.

The like Menstruum hath Lully in his Magia Naturalis, which is called

Univ Calif - Digitized by Microsoft @ 68. The

68. The Water calcining all Bodies of Lully. Magiæ Naturalis. Pag. 359.

Ake of the Earth, that is, D. (of Azoquean Vitriol) five Ounces and a half, and of the Water, that is C. (of Salt Peter and Niter) two Ounces and a half, the Sum of which is the weight of eight Ounces, and being all mix'd, grind the Matter fine upon a Marble, then put it in a glafs Veffel with an Alembick upon it, and diftil the whole substance, first making a gentle Fire of Saw-Duft, taking two parts of it, and one part. and a half of Coals small or ground, and a little dry Bran, and light the Fire, and let it kindle of it felf, till it begins to diftil from one Point to twelve (twenty) Points, and then you must begin to ftrengthen the Fire with fmall Wood, making the Fire of the Flame right under the Matter, and fo continue the Fire till it be returned to twelve or fifteen Points, or alfo to fewer, and then continue the whole Fire according to the Points of its distillation, and after that strengthen the Fire one Point further, and continue it till the Alembick loseth its Colour, or no more distils; then cease, and let it cool, gather the Water, keep it in a hot and moift place, and have a care that it refpires not : And remember to have a Quill in the luting of the Beak of the Alembick, and the Neck of the Receiver, that you may fometimes draw it out, that the Receiver may have vent, for the heat is there fo quick, that the Veffel containing the Matter cannot endure it, wherefore it is requifite fometimes to be opened and fometimes shut: Take notice, that this Water, though made of a contemptible thing, hath the power of converting Bodies into their first Matter, which being joyn'd to the Vegetable Virtue is of much perfection, and must be put into practice prefently after it is diffill'd, that the Spirit which is fubtil and of a ftrange Nature, may not be loft by the Air.

The fame Menstruum is described in Lully's Clavicula under this Title,

Univ Calif - Digitized by Microsoft ®

69. The Stinking Menstruum for the diffolution of the Calx of Gold and Silver, in order to the reducing them into Argent vive. Cap. 15. Clav Pag. 299. Vol. 3. Th. Chym.

Ake of Vitriol two Pounds, of Salt Peter one Pound, of Cinabar three Ounces (I do not understand by what Error Cinabar has crept in among the other Ingredients of this Menstrunm, for it is a constitutive not of this, but of the following Menstruum for the diffolving of the Philosophers Stone; especially Lully himself, in Cap. 20. Claviculæ, speaking of the extracting of Mercury from a perfect Body, having made no mention of Cinabar, whereas notwithstanding in the same place he gave a Description of this Menstruum in these few Words, saying : Put of our flinking Menstrual, made of two parts of red Vitriol, and one of Salt Peter, and let the aforesaid Menstruum be first distilled seven times, and well rectify'd) let the Vitriol be rubified and pulverized, then put in the Salt Peter and Cinabar, and grind all together, then put the Matter in fit Veffels well luted to be diftill'd ; let it be diftill'd first with a gentle Fire as the Work requires, and as they know how that have done it : Let this Water be diflill'd very often, cafting away the Fæces which remain at the bottom of the Cucurbit, and so it will be your best distilled Menstruum.

Sometimes they added common Vitriol to the Azoquean Vitriol and Nitre : It is thus done.

70. The Stinking Menstruum made of Azoquean Vitriol, common Vitriol, and Niter of Ripley. Cap. 1. Pag. 143. Medul. Phil. Chym.

Ake Vitriol made of the fowrest Juice of Grapes, with the Fire of Nature and Sericon (Azoquean Vitriol) joyn'd together in one mass with Natural (common) Vitriol a little dryed, together with the Sol Niter, and out of these distil a Water, which will first be weak and phlegmatick, not colouring the Vessel, which throw away: Then will ascend a white Fume, which will first be weak and phlegmatick will a series of the second s

which will make the Veffel look like Milk, which must begathered, till it ceafeth, and the Veffel is returned to its former colour : For that Water is the Stinking Menstruum, wherein is our Quintessence, that is, the white Fume, which is called the Fire against Nature, without which our Natural Fire could not fubfift, whereof we will fay more in its proper place: And thefe, namely, the Mineral and Vegetable Water, being mix'd together, and made one Water, do operate contraries, which is a thing to be admired; for this one diffolves and congeals, moisteneth and dryeth, putrefies and purifies, diffipates and joyns, separates and compounds, mortifies and vivifies, destroyeth and restoreth, attenuates and inspissates, makes black and white. burneth and cooleth, begins and ends. These are the two Dragons fighting in the Gulf of Sathalia, this is the white and red Fume, whereof one will devour the other: And here the diffolving Veffels are not to be luted, but onely flopp'd flightly with a Linnen Cloth and Mastick, or common Wax: For this Water is a Fire and a Bath within the Veffel, and not without, which, if it feels any other ftrong Fire, will be prefently elevated to the top of the Veflel, and if it finds no reft there. the Veffel will be broken, and fo the composition will be left frustrated. So much as this compounded Water diffolves, fo much it congeals and elevates (is congealed and elevated) into a glorious Earth : And fo it is the fecret diffolution of our Stone, which is alwayes done with the congelation of its own Water : And because this Fire of Nature is added to the Water against Nature, fo much therefore as it loft of its Form by the Fire against Nature, fo much it recovers by the Water of Nature, that our work by the Fire against Nature, may not be destroyed or annihilated.

From the Receipts we observe.

1. That the Menstruums of this kind, being made of the very matter of Philosophical Wine, or Philosophical Grapes, are the first of all other Menstruums, either Mineral or Vegetable.

2. That the milky Liquor or Spirit, Virgins Milk, white Mercury, the White Wine of Lully, and the Glew of the Green Lyon, called by Paracelfus the Glew of the Eagle, are terms E e 2

(203)

Synonymous; and that the Red Liquor, Blood of the Green Lyon, Red Mercury, the Philosophers Sulphur, and the Red Wine of Lully, otherwise by Paracelfus, the Blood of the Red Lyon, are likewise Synonyma's.

3. That the acid Mineral Menstruums, are by digestion or further elaboration, transmuted either into a simple Vegetable Menstruum, or into the Heaven or Spirit of Philosophical Wine.

4. That these acid Menstruums are to be distilled with very great caution, by reason of the excessive efferves cence of the Azoquean Vitriol, or rather Spirit of Philosophical Wine, which is in this Vitriol caused by the Acids.

5. That Mineral Menstruums are the Heaven, or Estence of Philosophical Wine diffolved in an Acid, so that having acquired this Spirit, you may make them ex tempore by simple diffolution.

6. That the Menstruums even now prepared, are prefently to be used, left they perist.

7. That Menstruums are by diffolving Bodies coagulated.

8. That Metallick Bodies are by these Menstruums reduced into running Mercury.

9. That these are called Stinking Menstruums, because of their stinking fmell. By the fmell alone we eafly diftinguish these from those fragrant Menstruums called Vegetable. Thus the unfavoury (mell of the Menstruum it self proves that Morienus used the Stinking Menstruum. What is the fmell of it, faith King Calid, by way of Question, before and after the making of it ? Morienus answereth, Before it is made, the fent of it is strong and unfavoury; but after the preparation of it, it has a good fent, according to that which the wife man faith : This Water refembles the unpleafant fmell of a Body dead, and void of life; for the fmell of it is ill, and not unlike to the fmell of Graves : He that can whiten the Soul, and cause it to ascend again, and keep the Body well, and take away all obscurity from it, and extract the ill favour out of it, will be able to infuse it into the Body, and in the hour of conjunction exceeding Miracles will appear, Morien. de Trans. Metal. p. 33. Geber also acknowledgeth himself to have operated with a mineral Menstruum, Cap. 25. Summe perfect. The first natural Principles, faith he, out of which Metals are procreated, are the Stinking Spirit, that is, Sulphur, and Water Vive, which also we allow to be called dry Water. And

(204)

And in another Place at the end of his Book de Inveftigat. he goes. on; We do by plain and open proof conclude our Stone to be nothing elfe but a Stinking Spirit, and living Water, which we also call dry Water, being cleanfed by natural decoction and true proportion with fuch an Union, that nothing can be added or taken from it, to which a third thing ought to be added for the abbreviation of the Work, that is, a perfect Body attenuated.

10. That Adrop, the Name of the Matter of these Menstruums, fignifies the Philosophers Saturn, or Lead. The first Matter of this leprous Body, faith Ripley, is a viscous Water inspissed in the Bowels of the Earth. The great Elixir for the Red and for the White, faith Vincentius, is made of this Body, whose Name is Adrop, otherwise called Philosophical Lead, pag. 132. Medul. Phil.Chym.

Our Stone, *faith* Arnold, *in Speculo Alchym*. is called *Adrop*, which is in Latine Saturnus, in English Lead, and according to the Trojans Dragon or Topum, that is, Poylon, Septima Difpof. Speculi, pag. 596. Vol. 4. Theatr. Chym. I have fhewed that the Philosophers gave it divers Names, because of the diversity of Colours; but as to their Intention, they had one peculiar Name; that is, Roman Gold, or Adrop, or Stone above all the Stones of this world, Quarta dispositio Speculi, pag. 594. of the fame Vo-lume. Laton and Azoth are together, and never asunder, but remain always joyned together, but because of the diversity of Colours, the Philosophers call'd them by many Names; and as the Colours are varied and changed, they imposed fo many Names; because Azoth among the Indians is Gold; among the Hermians Silver; among the Alexandrians and Macedonians Iron ; with the Greeks Mercury ; with the Hebrews Tin ; with the Tartars Brass; with the Arabians Saturn ; and among the Latines, and especially among the Romans Ognividon, (by an Anagram Dono G vini, G fignifying Philosophical Mercury, or Sulphur aqueum;) But that none may err, I fay it hath one proper Name, and is commonly called by men; and every one knows the Stone, Tertia dispos. Specul. p. 593. of the fame Volume.

Some of the Adepts write not Adrop, but Atrop; by which Name they have been pleas'd to fignifie the Matter of these Menftruums to be as it were the Gate of all the most secret Chymy :: for for Atrop, by the inversion of the Letters is read Porta, a Gate : Thus Robertus Valenfis in Gloria Mundi, pag. 305. That you may attain (faith he) to the true foundation, I will once again repeat it to you, and call it the first Hyle, that is, the beginning of all things; it is also called the only Holy; apprehend what Elements are in it by those which are repugnant ; the Stone of the Philosophers, of the Sun, of Metals, the fugitive Servant, the airy Stone, the Thernian Stone, Magnelia, or the corporal Stone, Marcalite, the Stone of Sal Gemma, the Stone of Children, the golden Stone, the Original of worldly things, Xelis, also by inversion Silex, a Flint, Xidar, by the fame inversion Radix, Atrop, by inversion, Porta, a Gate; and it hath alfo as many other Names, yet is but one only thing.

To Robertus Lully seems to incline, who has been pleased to call every alteration of the Azoquean Vitriol, or Matter of the Menftruums of this Kind, the first Porta or Gate of the Work; thus he call'd the diffolution of the Matter the first Gate. In our whole Magistery, faith he, there are three principal Spirits necessary. which cannot without the confummation of their refolution be manifested, and they are otherwise called, three Argent vives. And because Resolution is fo often used for the First Gate of our Magistery which we will declare; the faid Refolution is divided into three principal parts : The first is Corporal, and is called in the Latine Tongue Recfage (that is, Anagrammatically facere G; but by G, he means Sulphur aqueum, Cap. 5. The. Teft. pag. 115. Vol. 4. Theat. Chym. or our Mercury, Cap. 20. Pract. Test. pag. 170. of the fame Volume.) The fecond is spiritual, and called Agazoph. The third is spiritual and corporal, and called Ubridrugat. &c.

When the Matter in the Resolution of it appears black, this Blacknefs (for which fome have call'd it Lead) he would have to be a fign of the first Gate. In the first Resolution, faith he, lies all the danger, and therefore I give you notice, that you must have the Sulphurs of fimple Argent vives destroyed by heat, in fuch manner and form, as that their active property may not be expelled by extraneous heat, and that it may not be feparated from its moift Subject, which appears wholly black, full of a noble Spirit : That Blackness demonstrates the fign of the first Gate leading into our Magistery, and without it can nothing

Univ Calif - Digitized by Microsoft O.

thing be done, because it is the Fire of Nature, which is to create the Stone, and which cannot be manifested without the corruption of its Body, *Cap.* 28. *Theor. Test. pag.* 51. *Vol.* 4. *Th. Chym.*

(207)

Lastly, He calls the Destillation of this Matter the first Gate also. The way of preparing the Stony, and fermentable Spirit is, to take the Juice of Lunary, and extract the sweat of it with a small and gentle fire, and you will have in your power one of our Argent vives in Liquor, in the form of a white water, which is the ablution and purgation of our Stone, and its whole Nature : And that is one of the most principal Secrets, and is the first Gate, as you may understand by the Reasons aforesaid, Sc. Cap. 9. Theor. Test. pag. 21. of the Same Volume,

Being perswaded by these and the like Quotations, I may affirm, that Atrop is to be written rather than Adrop, because besides the Blackness or Philosophical Lead, Atrop signifies the beginning or first Gate of the Work.

11. That in the Adeptical Chymy are many Green Lyons, to be necessarily distinguished one from another.

By the first the Adepts meant the Cælestial Sun, governing the whole World.

The fecond is Argent vive, more common to us than common Argent vive.

The third is called Argent vive diffolved into a Green Colour.

The fourth is Adrop, Azoquean Vitriol, Philosophers Lead, Gc.

A fifth is the Stinking Menstruum, otherwise called the Blood of the Green Lyon.

A fixth is the Green Lyon of Fools, Roman Vitriol, Verdigreece, &c.

The seventh is extraordinary, namely, common Mercury sublimed. 12. That there are also many Saturns. I En

The first is common Lead, the impurest of Metals, and confequently the most remote of all in our Art; which to prove by the Sentiments of the Adepts is a thing superfluous, finding almost every where amongst the Adepts a folemn caution for us to beware of this devourer of Metals and Minerals, Saturn. Have a care, faith Ripley, (to bring one Witness for all) of operating with Saturn, because it is commonly said, Eat not of the Son, whose Mother is defiled, and believe me, many Menerr in Saturn. Hear what Avicence faith,

Univ Calif - Digitized by Microsoft ®

faith, Saturn will be always Saturn, yea operate not with the Earth of (Philosophical) Saturn, which the Spirit of it has despifed, and left for the worft Sulphur, Gc. Cap. 2. Philorcii. pag. 188.

The fecond is Adrop, or Azoquean Vitriol, whereof before. A third is the first Colour or blackness of the first Work; of which lower.

The fourth is Copper, the first of Metals; of which Arnold in Speculo Alchym. difp. 8. Pag. 605. Volum. 4. Theat. Chym. thus : There were, faith he, Philosophers that placed our Science in the feven Planets; and our first Planet is called Venus, the second Saturn, the third Mercury, the fourth Mars, the fifth Jupiter, the fixth Luna, the feventh Sol : The Generation of Copper hath the first place after (the universal) Mercury, saith Basilius, Libro de rebus nat. & Supernat. Cap. 4. Of all those things, Saith Paracelfus, which proceed from Salts, there is none more nearly allyed to the Mineral Virtue, than Vitriol; the reason is, because Salts are Minerals, and all Minerals lie in one Mass and Ares. Now Vitriol in the feparation of Minerals, is the last thing, to which is immediately fubfequent the generation of Metals, whereof Venus is the first, Lib. 4. Philos. de Element Aque, pag. 279. And a little after he faith, The Marcafites and Cachymys being thus separated from the first Matter of Metals, then follows the first Generation, which is of Venus, &c. Besides, by the feparation, whereby the nature of the Marcafites and Cachymys are expelled, the generations of Copperdo immediately concur, imprint themfelves, and are coagulated together, becaufe it is the first Metal after the separation of the Marcafites and Cachymys. in the fame Book, pag. 281.

The Vitriol of Venus being the first of all things added or joyned to the Vegetable Mercury in the making of Adrop, is called by Lully the first Male. This Fire, faith he, is that Property of the Mercury, which you must endeavour to preferve from burning, being the Tincture of Vitriol, with which (the Vegetable) Mercury ought to be fublimed, because it is the first Male of it, and is the augmentation of our Tincture, which is a great addition in virtue and power, when it is joyned with the Tincture of Sol; for if you know how to extract the Property of Mercury from Vitriol and Salt, and make them friendly by conjunction, which is done by gentle fublimations, you will know Univ Calif - Digitized by Microsoft ®

one

one of the greatest Secrets of Nature, and the true principal perfection. Codicil. cap. 92. pag. 202. So in many places of his The-oriz Testamenti majoris, he means Vitriol by his Male; in these especially: The Fire of our Male, pag. 50. The Virtue of the Male, pag. 94. The Virtue of the Sperm of the Male, pag. 108. The Heat of the Male, pag. 72. The Female (Venus) is in this cafe the Male, and is not so hot as the true (second) Male, Gold, Pag. 73. Vol.4. Theat. Chym. This Male also Espanietus mentioneth in the making of his Menstruum. Take, faith he, the winged Virgin compleatly washed and cleansed, impregnated with the spiritual Seed of the first Male, &c. Sect. 58. Arcani Hermet. Phil.

Paracelfus, the better to express the Masculine Nature of Venus, calls it Metallus, a Noun of the Masculine Gender, as Me-, tallus primus. Take, faith he, the Coralline Liquor, I mean that which is very diaphanous, to which add a fifth part of the Vitriol of Venus, digest them in Balneo for a month; for by this means the Wine of the first Metal separates it felf aloft, but the feculent part of (this) Wine, the Vitriol of Venus retains (he means the refidue left in the extraction of Vitriol) and to that first Metal (Metallus primus) is made a perspicuous, di-aphanous, and truly red Wine, &c. Cap. 12. Lib. 3. De Vita longa, Pag. 65. As the Adepts call'd Venus the first Metal (Metallus primus) in the Masculine Gender, so also they changed Saturnus (Saturn) a Noun of the Masculine Gender, into Saturna, a Noun of the Feminine Gender, to signifie not common Lead, but Venus, leing a Feminine Noun, of Copper. I have, faith Ripley, a dear and beloved Daughter, named Saturna, from which Daughter are both the white and red Elixirs affuredly procreated; if therefore you defire this Science, you must extract a clear water from her, Sc.

Sometimes to describe by Saturn, not only Venus, but also the Philosophical preparation of Copper (that is, to be performed by a Vegetable Menstruum) they made it a Vegetable or Herb, that so they might distinguish that which was, from that which was not prepared ; Thus Flamel in his Summary: Some unskilful men, and unlearnest Chymists take common Gold, Silver, and Mercury, and handle them fo ill, till they vanish away by fume, and thereby endeavour to make the Philosophers Mercury; but Univ Calif - Digits fd by Microsoft they they

they do not attain to that, which is the first Matter and true Myne of the Stone: But if they would attain to that, and reap any good, they must betake themselves to the feventh Mountain, where there is no Plain, and from the top dow nward behold the other fix, which they will fee at great diffance. At the top of this Mountain you will find a triumphant Royal Herb, which fome Philosophers call a Mineral, fome a Vegetable, and if pure and clean Broth be made thereof, the better part of the work will be hereby accomplished, and this right and fubtil *Philosophical Mercury* must you take. *This Place is thus read in* Chortalaffæus, pag. 313. Vol. 6. Theat.Chym. Alcend therefore the Mountain, that you may fee the Vegetable, Saturnine, Plumbeous and Royal, likewife also Mineral Root, or Herb, take only the Juice of it, and throw away the Husks.

The Fourteenth KIND.

Simple Mineral Menstruums made of the acid or faline Effences of Salts.

71. The Water or Oyl of Salt of Paracelsus. Cap. 3. Lib. 10. Arch. Pag. 38.

Hough there be many ways of extracting the primum Ens of Salt, yet this (method of making Salt circulated, the Circulatum minus of Salt, the diffolving Water, the Water or Spirit of Salt circulated, defcribed above in Numb. 27.) is most commodious, and expeditious, and after this is that other way, which we mentioned speaking of the Elixir of Salt, namely, that new Salt being mix'd well with the diffolving Water, which is the distilled Spirit of Salt (circulated) must be putrefied, and so long distilled, till the whole substance of the Salt is diffolved, and reduced into a perpetual oleosity, the Body of Phlegun being drawn neatly from it. This way is also taught the preparation of the Arcanum or Magistery of Vitriol and Tartar, as of all other Salts.

Annotations. in he shall a ...

le ribed a lie of e:

WE take notice that the Menstruums of the antecedent Kind are made of the uncluous Matter of Philosophical Wine, parged, disolved, and volatilized with an acid; in the present we shall observe the contrary, namely, that the acid or faline Estences of Salts made with the uncluous Spirit of Philosophical Wine, are Menstruums of this fourteenth Kind. Paracellus in the prescribed Receipt reduced Salts by cohobation alone, with the Water of Salt Ff 2 circulated into a liquid fubstance or Oyl, but the Oyl made of common Salt, by the method aforefaid, he commends before the reft to his Difciples, for the extractions of Metallick Bodies. Certainly, faith he, there cannot be a more Noble and better way, than by the Water or Oyl of Salt, prepared as we have clearly deferibed in Alchymia (and in Libris Chyrurgicis.) For this Water fundamentally and radically extracts out of all Metallick Bodies their Natural Liquor or Sulphur, and a most excellent Crocus as well for Medicinal as Chymical Operations: It refolves and breaks any Metal whatfoever, converting it out of its own Metallick Nature into another, according to the various intention and industry of the Operator. Manuale de Lap. Phil. pag. 139.

It will therefore be worth while to explain the way of making this Oyl of Salt more clearly to you: First for the illustration of the Receipt we will propose the Description of the Oyl of Salt alleadged by the Author himself, in the eighth Book of his Archidoxes, which in the Elixir of Salt, Pag. 31. we read thus: Take Salt accurately prepared most white, and most pure; put it into a Pellican with such a quantity of the dissolving Water, as to exceed the weight of it fix times: Digest them in Horse-Dung together the space of a Month, then separate the dissolving Water by distillation, pour it again to it, and separate as before, and that so oft, till the Salt is converted into Oyl:

By comparing the Receipts it appears, that Sea-Salt newly made is not to be underflood by new Salt, but the fame exquisitely purifyed: Thenit is clear, that the weight of the Water of the circulated Salt omitted in the Receipt of the tenth Book, ought to be so determined, as to be fix times more than the weight of the Salt : Moreover, the time and place of putrefaction omitted in the former process are described in the other, that is, to be digested a Month in Horse-Dung: Besides it is from the Receipts observed, that all the Salt is not converted into Oyl, the Body of the Salt being drawn as a Phlegm from the Essence. Lastly, that the Oyls of Vitriol and Tartar may be also made by the same method.

The Receipts being thus compared, are not only without all obscurity, but do by the exuberance of their Light give Light also to other Proceffes, being otherwise less intelligible. So this Oyl of Salt, as the Effence or primum Ens of Salt explains that more obscure Description of the Effence of Salts, given in Libro 4. Archid. Pag. 14. Take Salts, (213)

Salts, and calcine them throughly; if they be Volatile, burn (*fublime*) them, after that refolve them into a tenuity (*per deliquium*) and diftil them into a Water (*through a Filter*.) This Water putrefy (*not by it felf, but as the Difciples of the Art ought* to underftand and know, with the Water of Salt circulated) for a Month, and diftil by Balneo, and a fweet Water will afcend (*the* Body of the Salt by the way of a Phlegm) which caft away: That which will not afcend, digeft again (*with new diffolving Water*) another Month, and diftil as before, and that fo oft, till no more fweetnefs is perceived. By this way you have now the Quinteffence of Salt in the bottom, (*like an Oyl*) fcarce two Ounces out of a Pound of the burned or calcined Salt. One Ounce of this Salt thus extracted, if common, feafoneth Meat more than halfa Pound of another; for the Quinteflence of it remains only, and the Body is drawn from it by liquid folution. This way is the Quinteflence of all Salts feparated.

This Process being thus enlightned by the rayes of the antecedent, reflects no small Light upon the said Receipts, namely, that scarce two Ounces are acquired from one Pound of the Salts.

In Clavi Archidoxorum, Lib. 10. Pag. 37. Paracelfus has described the Effences of Salts in these Words : The way of extracting the Quinteffence of Salts, as Vitriol, Salt, Nitre, Tartar, Gc. is this : Cohobate with its own Liquor or Water very often, putrify with the Phlegm, and then draw off the Body in the form of Phlegm even to the fixed Spirit : This Spirit diffolve in its. own Water, and by a strong heat separate the pure from the impure with the Spirit of Wine. This Description is most obscure, but made clearer by those aforesaid. The meaning of Paracelfus is this : He putrefies the Salts, and cohobates them so often with theirown Liquors or Waters, that is, with their own Circulatums common Salt with common Salt circulated; Nitre with Nitre circulated; Vitriol with the Water of Vitriol circulated; Alume with the Water of Alume circulated, the diffolving Water of Alume, the: Circulatum minus of Alume, &c. till they remain at the bottom in the form of an Oyl, which Oyl being either acid or faline, eafily makess an effervescence with the uncluous Spirit of Philosophical Wine, or its own Circulatum, and in this heat lets fall some of its impurities, and so becomes purer, which thing is confirmed by the Description it self of the Water of Salt circulated, where he putrefies Salt, being Catif - Digitized by Microsoft @ melied!

melted and refolved per deliquium, with the Spirit of Philosophical Wine, cohobates, and draws it to an Oleity: Joyn it, faith be, with the Spirit of (*Philosophical*) Wine, and the impure will fall to the bottom, which separate, but let the pure be Cristallized in a cold place, pour the distillation to it again, and cohol ate fo oft, till a fixed Oyl remains at the bottom, and nothing sweet will more distill.

Moreover, this Oyl of Salt as a Menstruum, makes his Process in Chyrurgia intelligible, which otherwise could not be understood.

72. The Water of Salt by another Defeription of Paracelfus. Cap. 2. Tract. 3. part. 2. Chyr. major. Pag. 66.

Ake Salt without any addition of Art being most white by Nature it felf(SalGemmæ) which must be diverstimes melted, then being reduced into a most fine Powder mixt with the Juice of Raphanus, sir them together; after refolution diftil, distil the distillation with an equal quantity of the Juice of Sanguinea five times more: In this Water are Plates of Sol, being purged by Antimony, easily refolved into Powder; this Powder being thus prepared must be washed with sweet Water distilled, till it hath no taste of Salt, for the Salt not entring into the subftance of it, is easily washed away.

In this Process Sal Gemma being fused by the method of the Water of Salt circulated, is diffolved in the Juice of Raphanus, evaporated and resolved per deliquium, then hix times distilled with an equal proportion of the Juice of Sanguinea. In the antecedent Description of this Oyl of Salt, this fusion of the Salt, diffolution in the Juice of Raphanus, and resolution per deliquium is not neceffary, because the Water of Salt Circulated is sufficient of it self to separate the Essence of Salt from its Phlegm : But where we use the Spirit of Philolophical Wine in making the Water of Salt circulated, without the faid previous preparation of the Salt, we should have the Work too tedious : In the mean time both Proceffes agree in weight of Menstruum, for it is all one, whether the Salt be cohobated into an Oyl with fix times as much of the diffolving Water, or distilled fix times with the Juice of Sanguinea in equal weight. One thing that Univ Calif - Digitized by Microsoft @ makes

mades the latter Process inexplicable, is the unknown Juice of Sanguinea, but however it is evident by what hath been said, that either the Spirit of Philosophical Wine, or the Water of Salt circulated supplies its place. Basilius indeed resolved common Salt with the Spirit of Philosophical Wine not into an Oyl; but reduced into it a Green Stone thus:

Viride Salis of Basilius. In supplemento Libri de conclusion.

Take common Salt, calcine it well, yet without fufion, reduce it to a Powder, refolve per deliquium in a Cellar, or in Raphanus made hollow, then diftil in Sand with a quick Fire, and a Water will afcend, the refidue in the bottom pulverize, and diffolve it in its diftilled Water, and diftil again ; this repeat till all the Salt has afcended, which will be in the fourth or fifth time : Draw off the Phlegm from the diftilled Water in Balneo, the remainder put into a Cellar in cold Water, and you will have Criftals, which take out, and diffolve in the Phlegm ; then draw off one half, and you will find new Criftals, repeat the Operation four times or more, for the oftner, the more fulfible will be the Criftals, which being dryed and pulverized on a Marble, pour to them the rectify'd Spirit of (*Philofopbical*) Wine, which cohobate from the Salt fo oft, till you perceive the Oyl of Salt coagulated into a Green transparent Stone, which referve.

Paracellus in his Receipts appointed the calcination of Salt to be done by the fusion of it; but in this Process Basilius prohibits this liquefaction of Salt, wherefore we conclude it to be little effential in the faid depuration of Salt, nor do we think it so necessary, for the Salt being resolved per deliquium to be distilled, thereby to be made a suffible Salt; Paracellus having taught how to make the same Oyl out of suffed Salt, which Oyl Paracellus himself, besides Basilius, inmany places affirms to be of a Green Colour. Thus we read of the Green Oyl of Salt: Libro de male curatis, Pag. 170. Chyr. Majoris. Of the Greens of Salt, Libro. 4. de Gradibus, Pag. 154.

Univ Calif - Digitized by Microsoft @

From

From the Receipts we observe,

1. That these Menstruums are the Essences of Salts not tinging. 2. That the Oyls or Essences of tinging Salts, as Vitriol, Gc. may also be made by the same method, and do appertain not to this, but to another Kind.

3. That these Menstruums are by further digestion or cohobation made sweet, and transmuted into volatile Arcanums, less Circulatums, or Simple Vegetable Menstruums of the Fifth Kind.

4. That these Menstruums do dissolve Metals into Powder for the extraction of the Crocus or Sulphur of Metals and Minerals: The way we will borrow from Ripley in the Use of Stinking Menstruums.

Let us, faith he, proceed, Pag. 145. Medul. Phil. Chym. to practife upon the Calx of a (Metallick) Body duly calcined : The Body therefore being prepared, pour upon it fo much of this compounded water (in Numb. 70.) as to cover it half an inch, and it will prefently boil upon the Calxes of the Body without any external heat, diffolving the Body, and elevating it in the form of Ice, together with the exficcation of it felt, which must be taken away by the hand of the Operator : And the remaining Calxes being well dried again by Fire, put fo much water to them as before, and proceed in all things as before, continuing the fame way of operating, till all the Calxes be well diffolved : which fubstance being well diffolved, neatly feparated, and pulverized, must be put into a good quantity of the rectify'd water of the Fire of Nature (Spirit of Philosophical Wine) that in that Vessel well stopp'd it may by the administration of external heat, together with the excitation of internal heat, bediffolved into an Oyl, which will foon be done, &c. When the Menstruum (of Sericon, in Numb. 63.) is poured upon the aforefaid Calxes (of Metals) it begins to boyl up; and if the Veffel be well ftopp'd, it will not leave working, though no external Fire be administred to it, till it be dried into the Calx; wherefore you must not put a greater quantity of it than just to cover the Calxes. In the same place pag. 171. For in this Operation the lefs of the Spirit, and the more

more of the Body is put, the better and fooner will be the diffolution, which is made by the congelation of the Water. You must have a care therefore, as it is faid in the Rofary, that the Belly be not too moift, because then the Matter would not receive driness : And this way must be observed, till all the water he dried up. The same Place, pag. 161.

(217)

5. That all the sharpness of this Metallick Powder may be wash'd away with sweet water. That the Menstruums of the Adepts are permanent, is manifest by the ways of making them; but more clearly by the Use of them in the Receipts of the following Books: However Paracelius feeming to have appointed the contrary by the present ablution of the Menstruum, left therefore you should fall into the greatest and most dangerous. Errour of all the Adeptical Chymy, we thought good to communicate to you an Observation or two about the permanence of Menstruums.

First, That Aqua ardens, the Philosophical that is, is by digestion or circulation divided into Phlegm and Oyl swimming upon it, as you observed in making the Essence or Spirit of Philosophical Wine. Tou have taken also notice that the same Aqua ardens, or Same Oyl made of it, is further concentrated, and rejects the remaining Phlegm, but that it felf as a meer Oleolum, remains with the inanimated Earths so called, in the Preparations as well of Vegetable, as Mineral Sal-Harmoniacks : For it is impossible for the Jaid Phlegm being the vehicle of the unctuous Spirit to abide with things diffolved, much lefs be fixed with them, they being fo contrary to it : wherefore the permanence of Menstruums, but rather of the Spirit of Philosophical Wine is easte to be understood, namely, as these Menstruums are unctuous mixed with dry things, not in the least diluted in their aquosities, which do all separate themselves as useles in fixation. Examples you will have in Lib. 2. De Aftris & Arcanis, and often in Lib. 3. of Philosophical Tinctures.

Secondly, These Menstruums do not presently, or at the first time abide with their diffolutions : For sometimes, nay more than often, we are forced to pour on and cohabate before any part of it will continue with the diffolved Body, whereas in the mean time the rest ascends unaltered.

Thirdly, Nor do the Menstruums perfift with all things promiscuously, but are united only to thing's homogeneous to them, which Gg

in

in reason they should remain with. Thus the Simple Vegetable Menstruums do continue with Essences, but not with their relinquished white Bodies; whereas the Compounded Vegetable Menstruums being sutable to these Bodies, do dissolve them wholly in the making of Magisteries.

Fourthly, Tea though every Menstruum is either an Essence, or a Magistery, and one Essence prepares another, easily entring and mixing themselves radically one with another, yet so long as they are of different kinds or degrees, are they both separable again, nor do they continue; till one being newly extracted, is raised to the same degree as the other, then do they flow together at length into a mixture not to be separated by Art or Nature.

Fifthly, As to thefe Mineral Menstruums, you have observed, that the Acidity of them admits of the Same reason with the Phlegm or Aquosity of the Vegetable Menstruums, so far as it is moilt, and therefore to be separated in the fixations of things: But as it consists of the dry Particles of Mineral Salts, (but Salts they are dry things dissolved in Acids) it will fall under two several Considerations.

In the first, the Acidity of the Menstruum being perhaps in greater plenty than is necessary, or sticking about the superficies of the thing dissolved, is easily wasted away with common Water.

But in the Second, the Same Acidity being more artificially mixt, and absorbed by the Aridity of the thing dissolved, is made the cause of venenolity, and now cannot be altered but by Vegetable Menstruums transmuting it. Paracelfus commands the walking not of the Oyl of Salt, but the sharpness of the Salt, which penetrates not into the Substance of the Metal, and is eafily washed away, but the Unituofity of the Salt being throughly mixed with the uncluous Spirit of Philosophical Wine; and now united to the Uncluosity of the Metal, common Water cannot touch nor Separate. But an Acid received into the bowels of an Arid, he corrects again with the Spirit of Philosophical Wine, that it may not become the cause of venenosity: Tet there is a place in Paracelsus, where he seems to have established a particular Decree against the permanence of Menstruums. Many several ways, faith he, Lib. 4. Archid. de Essentia, pag. 12. are found, whereby the Quintesfence may be extracted, viz. by Sublimation, Calcination, by Aqua fortiffes, by Corrofives, by Sweet, by Sowr, &c. It may

be

be done which way you pleafe: Where this is withal to be observed, that every thing added by way of mixture, to the Quintessence, for the necessity of extraction, must be again taken away, and so the Quintessence remain alone, not mix'd, or polluted with any other Matters : For the Quintessence cannot be extracted from Metals, especially Gold, which cannot be subdued by it self alone; but some fit Corrosive must be made Use of, which may afterwards be separated from it again; fo Salt (diffolved) in water, is drawn again from the water left void of Salt: Whereas notwithstanding it must be confidered, that every Corrofive is not fit for this purpole, becaufe they cannot all be separated: For if Vitriol or Alume be mix'd with water, neither can be feparated from it again without detriment or corruption, but will leave fome sharpness behind them, because they are both watry; and two likes concur together, which ought not to be in this place : Wherefore it is to be advised, not to put watry to watry, or oyley to oyley, nor refiny to refiny, but a thing contrary must separate the Quintessence, and extract it, as waters extract the Quintessences of things oleaginous, and the oleaginous the Quintellences of watry things, as we may learn by the Quinteffences of Herbs: The Corrofives therefore are to be separated again after the feparation and extraction of the Quinteffence, which may eafily be done; for oyl and water are feparated with eafe; but oyl cannot be drawn from oyl, nor water likewife from water without mixing, which being left, would indeed infer very great detriment to the Quinteffence: For a Quinteffence ought to be clear and pure without any mixture, fo as to have an uniform fubflance, by virtue whereof to penetrate the ubela Pade whole Body.

Left the Effence should be defiled by things added for the necessity of extraction, he commands no Watry Matter to be extracted by a watry Menstruum, an oyley by an oyley, a refiny by a refiny, but by some contrary. This Rule, if understood according to the Letter, is erroneous, for it takes away all the permanence of Menstruums established upon the Maxime so often repeated by the Adepts; The Diffolution of the Body, is the Coagulation of the Spirit or Menstruum; and on the contrary: It takes away, I fay, all the natural homogeneity of the diffolvent and the diffolved; yea is is repugnant to the Experience of Paracelfus himself, who had no Menstruum but what remained in a radical mixtion with the things diffolved in it, as by the Use of them we shall prove hereafter. Now an Effence is divers ways coinquinated by things added in the extraction of it.

First, When a Natural or Seminal Effence is extracted by the like Natural Effence of another species; For example, the Effence of Saffron is inquinated and confounded with the virtues of Cinamom, in extracting it with the specifick Effence of Cinamom, and therefore the Effences of Vegetables are not to be extracted with a Natural, or rather Artificial Effence, or with the Spirit of Philofophical Wine, not yet specificated.

Secondly, An Effence is inquinated, when a Menstruum or Effence is in greater than convenient quantity used in the extraction of another Ellence, by which quantity the quality of the said Efience is washed, wasted, and as it were inquinated; wherefore the superfluity of the Menstruum must always be taken away, that the Ellence may remain by it self alone without any mixture.

Thirdly, An Effence is inquinated by extracting it with Air or mineral Menstruums according to some Processes of the Anci-ents. For an Acid, though it cannot be radically mix d with any Effence, being no Effence it felf, yet is eafily abforbed or hidden. by the aridity of mineral Effences, and so joyned with the said Effences by accident, and from a thing otherwise innocent, creates a very strong Poyson: This therefore to remove, the Ancients first washed off that which stuck to the outside of the Body, then transmated that which was more deeply admitted, by the digestion of Vegetable Menstruums : But in the making of Essences with acid or mineral Menstruums according to the reformed Proces, otherwise called by Paracelsus, the Process of two Colours, the said inquination of an Effence bath no place. In the beginning of this Procefs the acid being abforbed by the arid, becomes indeed the cause of venenosity, as in the Process of the Ancients; but when this Process of Paracellus is by industry and ingenuity raised to such perfection, that no more Aridity can remain to hide any Acidity in it, but on the contrary, the whole Body is converted into two Oyls or Fats, from which all Acidity may eafily be washed away with common Water, then is there no inquination to be feared from Acids: The Saying of Paracelfus, we Juppose is to be referred to this Univ Calif - Digitized by Microsoft ® Method.

Method, he having there treated of it on purpose, especially having faid that the oleaginous Essences of Metals are to be extracted by Watry, that is, acid or corrosive Menstruums, but that the watry Essences of Herbs, that is, less oyley in respect of Metals, must be made by Oleaginous, that is Vegetable Menstruums, which things being not in common terms, but obscurely enough delivered, we do therefore leave them to be better explained by his Disciples; but if they were to be understood according to the Letter, it would certainly be an Errour, not indeed to be connived at in the Prince of Adepts: But according to the Proverb, We are Men, Sc. For sometimes good Homer himself has nodded, and the Pen of Paracelfus has wanted mending.

Simple Mineral Menstruums made of the Spirit of Philosophical Wine, and Acid Spirits, as Aqua fortis, Spirit of Nitre, Spirit of Sulphur, Salt, Ec. distilled Vinegar, Ec.

73. Aqua fortis mixt with the Spirit of Wine of Paracelfus. In Tinct. Paracelfica, Pag. 37. AureiVel. Germ.

Ake the beft Wine (the red er white of Lully) rectify till a Linnen Cloath burneth, being dipp'd therein and kindled: This Spirit is called the Essence of Wine. Take of Vitriol two Pounds, of Nitre one Pound, from which diftil Aqua fortis into the aforefaid Essence of Wine, then digest ten Days, that they may be well united.

Annotations.

Hat the Adepts acuated the Spirit of Philosophical Wine divers ways as well with Oyly as Dry things, we have given plenty enough of Examples in the antecedent Kinds of Vegetable Menstruums; it shall now be declared in the following Menstruums, which ways this Spirit is to be acuated by Acids. In this Fifteenth Kind we will joyn the uncluous Spirit of Philosophical Wine with some Acid Spirits, that by the help of their acidity it may difsolve and perfect Arids some and easier than before without. Paracelfus celfus in our Receipt intending to affwage the exceffive effervescence in diffolving the Spirit of Philosophical Wine in Aqua fortis, distill'd the Aqua fortis into the Spirit of Wine, that they might both by degrees be mix'd together, which being thus mix'd one with the other, he digested moreover the space of ten Days. The same Menstruum is described by Trithemius.

74. Aqua fortis mix'd with the Spirit of Wine of Trithemius. Pag. 46. Aurei velleris Germ.

Ake of the Spirit of Wine three Pounds, of Vitriol and Nitre one Pound, diffil the Spirits of the Aqua fortis into the aforefaid Aqua vitæ, digeft eight Days.

This quantity of Aqua fortis is infufficient to diffolve three Pounds of the Spirit of Wine, Ounces perhaps are to be understood for so many Pounds. No Art is here required, provided the Acid and Oyly be mix'd together. In former times the Adepts used distilled Vinegar, instead of Aqua fortis, for this Menstruum, thus:

75. Vinegar mix'd with the Spirit of Wine of Bafilius. Cap. de Wein Effig.in Repet. Lapidis.

DEr Wein Effig. (Vinegarwine, a fingle undeclinable Word) is not the Philofophers Vinegar, which is another Liquor, viz. the Matter it felf of the Stone, becaufe the Philofophers Stone is made of the Philofophers Azot; but Vinegarwine, is made of common Azot diftilled (common Vinegar) and Spirit of Wine (that is, Philofophical.) And elfewhere, Libro de particularibus de particul. Veneris. I fpoke even now, faith he, Parabolically of this preparation, in Libro Clavium (in Repetitione) Capite, de Wein Effig. where I faid that common Azot (Vinegar) is not the Matter of the Stone, but our Azot or firft Matter extracted out of common Azot and Wine, which composition is called the expressed Juice of unripe Grapes, with which the Body of Venus is to be diffolved, and reduced into Vitriol (then into our Azot,

the:

the first Matter of the Stone, Philosophers Mercury, Spirit of Mercury made of Vitriol, &c.) which you must very well observe, that you may be free from many troubles and dangers. The Philo-Tophers Mercury, Saith he, Libro de Conclusionibus, Sect. 2. de Vitriolo Philosephorum, or first Matter of the Stone must be made by Art, for our Azot is not common Vinegar, but extracted by Virtue of common Azot.

Though therefore a Philosophical Menstruum may be made of common Azot or distilled Vinegar, and the Spirit of Philosophical Wine, as also sufficient and qualified for the disolutions of some Bodies, yet being less sharp, especially in the Alchymical use of Metals and Minerals, instead therefore of Vinegar the Adepts took Aqua fortis, the fooner to finish their Operations. You must know, faith Ifaacus Hollandus, that our Anceltors laboured in the Art divers ways, and yet came to one and the fame end, but their Stone made not projection always alike, one making a deep, another a ftrong projection, as the Works (Menstruums) were tharp, or of a deep Colour : fome fweat a long time with pains, before they produced the Stone: others flortned the time by flarpness of Wit, as it is now done every day with fweat and pains. Some of our Ancestors wrought three Years, fome four, before they acquired the Stone, for in those days Aqua fortis was unknown. and they used nothing but distill'd Vinegar; but now their Succesfors have found out Aqua fortis, which hath much abbreviated the Work. Cap. 6. Lib. 2. Oper. min. pag. 423 Volum. 3. Theat. Chym. Even at that time Bodies were to be opened flowly, namely, by calcination, reverberation, folution in our fharp Vinegar (Vinegar mix'd with the Spirit of Philosophical Wine) which their posterity observing and confidering, quickned their Wits, and found out Aqua fortis, which did much abbreviate the way to them. Cap. 77. Lib. 1. Oper. min. pag, 358. of the same Volume.

To make the present Kind of Menstruums, the Adepts diffolved this Spirit of Philosophical Wine, not in Vinegar and Aqua fortis. only, but in any acid Spirit not tinging, as of Salt, Sulphur, &c. It is thus prepared ; And to the and and show and to the boton out of common way and wine, which compilifien is called the

Oraphe with Which the Real of Stand

76. The Spirit of Salt of Basilius. Lib. partic. in particul. Solis.

Ake of the Spirit of Salt accurately dephlegmed one part, of the best Spirit of (Philosophical) Wine without any Phlegm, or of the Sulphur of Wine half a part, the Veffelsbeing luted, distil with a strong Fire, so as that nothing remains.

If you add new Spirit of Wine to the distillation, and digest for Some time, it becomes sweet: It is therefore requisite to diffolve the Spirit of Wine in the Spirit of Salt without digestion, lest the acidity or brackishness of this Spirit be lost. Guido sometimes took his Circulatum either minus or majus, instead of the Spirit of Philosophical Wine, into which he distilled the Spirit of Salt.

.77. The Spirit of Salt of Guido. Pag. 7. Thefauri Chym.

Ake of the less Vegetable Menstruum (in Numb. 36.) or the great (in Numb. 38.) one Pound, put it in a large Receiver. Then take of common Salt, or Sal Gemma, of the Stone of Tripoly, of each four Pounds, distil in an Earthen Retort with an open Fire, first gentle, tillall the Phlegm is drawn off, then put the Receiver with the Circulatum to it, and diffil the Spirits, till not a drop of the Oyl of Salt afcends, and you will have an acuated Menstruum.

To make these Menstruums stronger, they sometimes separated or drew off the Acid from the Oleofum, that the Spirit of Philosophical Wine might remain in the form of Oyl or Ice, thus:

78. Aqua fortis mix'd with the Spirit of Wine of Lully. In Elucidat. Testam. pag. 147. Artis aurifer.

Ake of Vitriol one part, of Nitre one part, of Alume a fourth part, mix them all well together, and distil with a gentle Fire, till the Liquor is gone over, then give a stronger, and lastly most strong, till the Alembick grows white, for then is rhe the Aqua fortis prepared. Then take of the aforefaid Water one pound, put it in a large Cucurbit, and pour it upon four ounces of Aqua Vitæ (Aqua ardens) four times diffilled, and put an Alembick on with its Receiver, then will it make great noifes, boyling exceeding violently without Fire; and therefore the VVaters ought to be mixed by little and little. Then put it into a lefs Cucurbit, and put on an Alembick with its. Receiver, and diffil the Water in Balneo, that a Matter may remain alone at the bottom of the Veffel in the form of Ice; pour back the water, and diffil again, and this repeat nine times, then will an Oyl or Matter like Ice remain in the bottom.

(226)

This Menstruum of Lully is clear, and therefore requires not our Explanation. But it is described by an Anonymous in Rhenanus, thus;

79. Aqua fortis mixed with the Spirit of Wine of an Anonymous Author.

Libro de Principiis Naturæ, & Arte Alchym. pag. 28. Syntagm. Harm. Joh. Rhenani.

TAke an equal Quantity of Niter and Alume, diftil the Phlegm, till the firong and diffolving Spirits afcend, and fet before them new and clean diftilled water, and force the Spirits into it with a most firong Fire. Then take the Spirits of Wine being well purged, and artificially diftilled in Balneo, take four ounces of them to one pound of Aqua fortis, put them into a large Cucurbit, apply an Alembick to it, flop, and put it into cold water, and let them boyl till they will boyl no more: Then put it in Balneo, and diftil the water, fo that the Spirits may remain yet moift, then pour the water first drawn off, to them again, and do as before, and that feven times, continually diftilling with a gentle Fire, till nothing more will diftil, but the Matter remains like an Oyl in the bottom.

From

- Univ Calif - Digitized by Microsoft @

From the Receipts we observe these remarkable Things :

I. That the Spirit of Philosophical Wine diffolved in an acid Spirit, is a mineral Menstruum. Our Aqua fortis, our Vinegar, distilled Vinegar, Vinegar mixed with the Spirit of Wine, our Spirit of Salt, Sulphur, &c.

2. That the Spirit of the fame Wine, is with very great ebullition diffolved in an Acid, and therefore you ought to be exceeding careful left you pour too much of the Spirit of Philosophical Wine upon the Aqua fortis, and vice versa: For it would be more fafe to diftil the Aqua fortis upon the Spirit of Philosophical Wine, as Paracelfus adviseth.

3. That Aqua fortis mix'd with the Spirit of Wine, may be taken instead of Vinegar mix'd with the Spirit of Wine, or Spirit of Salt mix'd with the Spirit of Wine. Ec. in Chymical Works especially.

4. That the more these Menstruums are abstracted from the Acid debilitated in dissolution, the stronger they are made.

5. That the Adepts used also corrosive Menstruums or Aqua fortis. There are some, not only common ignorant Operators, but Adepts also, who not knowing the Preparation and Use of these Menstruums, have written against these corrosive Menstruums. Fools, faith Bernhard, do out of the lefs Minerals make and extract corrolive waters, into which they cast the Species of Metals, and corrode them; for they think them to be diffolved by a natural folution; which folution doth indeed require permanence together, that is, of the diffolvent and the diffolved; that from both, as the Masculine and Feminine Seed a new Species may refult. Verily I tell you no water diffolves a Metallick Species by a natural reduction, but that which continues in matter and form, and which the Metals themfelves, being diffolved, are able to re-congeal. Which Quality is not in Aqua fortifies, but is rather injurious to the Composition, that is, of the Body diffolved, Gc. Yet thus they think they diffolve, mistaking Nature; but they diffolve not, because the Aqua fortiffes being abstracted, the Body melts, as before; nor will that water be permanent to it, nor is it to that Body as radical Moiflure: The Bodies are indeed corroded, but not diffolved, and

Univ Call - Digiti Hhi ? Microsoft @

fo

fo much the more alienated from a Metallick Species. Wherefore fuch folutions as these are not the foundation of the transmutative Art, but rather Impostures of Sophistical Alchymists. who think this facred Art lies in these things, Ec. Epist. ad Thom. de Bononia, pag. 60. Artis Aurifer. So in the Regeneration of Metals, faith Sendivogius, Vulgar Chymifts proceed amifs, they diffolve Metallick Bodies, either Mercury, or Gold, or Saturn, or Luna, and corrode them with Aqua fortiffes, and other heterogeneous things not requisite to true Art, then they joyn and force them together, not knowing that man is not generated from the Body of a man diffected, Gc. Tract. 6. pag. 488. Vol. 4. Th. Chym.

Some do by Art corroding Waters make, In which Metalline Species they calcine ; But then the Liquor doth the Earth forfake, Nor by mans Skill together they will combine : This way to Fools we leave, for nothing fit, But for to wast ones Thrift, beware of it. Page 41. of the fecond Part of the Marrow of Alchymy.

These and the like Expressions they reflect against our Mineral or Acid Menstruums, whereas they were written by the Philosophers against Common not Philosophical Aqua fortifies. In that Point, faith Lully, they ignorantly err, imagining the Bodies of Metals to be diffolved, and as I faid before, reduced to their first Matter or Nature with Common Aqua fortiffes; but if they had read our Books, they would certainly know that these Liquors are repugnant to the intention of the Philosophers, Gc. Comp. Anim. Iransm. pag. 194. Vol. 4. Th. Chym. Parifinus; a faithful Disciple of Lully, explains his Meaning thus : Those things that are objected by us against Aqua fortiffes, namely, that they are of no efficacy in the Art, and neverthelefs are taught by Lully, are to be otherwise understood : For he this way puts a difference between the Vulgar and Philosophical Aqua fortiffes, &c. And therefore Raymund rejecting sharp Waters, means the Aqua fortiffes of separation, but not those of the Philosophers, Cap. 6. Lib. 1. Elucid. pag. 206. Vol. 6. Th. Chym. But it would be meerly Superfluous for us, either by Authorities or Arguments to illustrate that which the Menstruums themselves will demonstrate. Univ Calif - Digitized by Microsoft @

The

(229)

The Sixteenth KIND.

Simple Mineral Menstruums made of Philosophical Vinegar, and Volatile Salts, as Common Sal Armoniack, Urine, &c.

80. The Oyl of Sal Armoniack of Guido. Pag. 11. Thefaur. Chymiatr.

Ake of the Oyl of Salt (the Menstruum described in Numb. 71.) ha'f a pound, of (Common) Sal Armoniack four ounces. Dissolve the Salt in the Oyl, cohobate the Dissolution three times through an Alembick.

Annotations.

N the attecedent Kind, the Spirit of Philosophical Wine was diffolved in Acids: Now to make these Oyley-acid Menstruums stronger, the Adepts added to them Salts, that is, Arids diffolved in Acids, and Cristallized. In this present Kind they took Volatile Salts, as being of easter preparation, in the following: fixed Salts, because of stronger virtue. In the Receipt of Guido, there is nothing either difficult or dark, unless you will object against the Ingredients, which cannot be both common, because Guido sublimes Gold Philosophically with this Menstruum. Whatscever also you read in the Books of Practical Chymy, understand always according to the Letter (we need not admonish you to except the Terms of Art) if so, that which is promised in the Preparation and and use may be performed ; if not, seek an Analogical sense not in the method and use of preparation, but in the ingredients; according to which Rule either the Oyl of Salt, or Sal Armonack, or both ought to be Philosophical, because Gold cannot be Philosophically sublimed with Common Menstruums. The Oyl of Salt of Paracellus, as also the Spirit or Oyl of Salt of Basilius, where with he extracts the Salphur of Sol, do prove the Oyl of Salt to be a Philosophical Menstruum, Cap. 6. de Rebus nat. & supernat.

Probable it is that Guido meant the same Oyl, for otherwise the Name of Oyl had been improperly attributed by a Philosopher to the chin and common Spirit of Salt. But if you think rather that Guido meant the common Spirit of Salt by the Oyl of Salt, you must by Sal Armoniack understand not the common, but Vegetable Sal Harmoniack (the Spirit of Philosophical Wine dryed with fome Salt, and then sublimed) for so you might also make a Menstruum of the Same if not of stronger Virtue, a species of the following Eighteenth Kind : But if both the Oyl of Salt and Sal Armoniack be Philofophical, a Menstruum will be from thence produced yet stronger than both the precedent : Here you may deviate from the true and genuine Sense of the Receipt, but never from Chymical Truth, so long as you are guided by the Spirit of Philosophical Wine, but here yon must have a great care that you do not transmute (as sometimes through inadvertence you may) the false Receipts of deceitful Distillers into true ones; an impossible into a possible; a lye into truth; and a wicked Man into a Philosopher.

Sometimes they impregnated common Sal Armoniack with a Tincture, to make a Menstruum higher, thus :

81. The Water of Sal Armoniack of Isaacus. Cap. 47. 2. Oper min. pag. 460. Vol. 3. Theat. Chym.

TAke Sal Armoniack, fublime it with Roman Vitriol, one Pound of Sal Armoniack, to two Pounds of Vitriol, then grind upon a Stone the Faces, and fublime again, then throw away the Faces, and fublime again with two Pounds of new Vitriol, do as before, repeating nine times: pulverize the Sal Armoniack, and put the Powder into a Glass, pour upon it diffilled Vinegar (Philosophical, or some Menstruum of the Fitteenth Kind)

Univ Calif - Digitized by Microsoft @.

10

(231.)

fo as only to be diffolved, and no more, than that the Sal Aimoniack may be turned only into Water as yellow as Sol, becaufe the Sal Armoniack was fublimed by Vitriol, and that produced the Tincture : And this is that Water of Sal Armoniack, which I promifed before to teach you how to make.

From the Receipts we observe ::

r. That the Oyl or Effence of Salt becomes a stronger Menstruum. by the addition of Volatile Salts.

2. That this ought to be understood also of the Menstruums of the hiteenth precedent Kind.

3. That thefe Menstruums are the fame with the Vegetable Menftruums of the fourth Kind, excepting only that they have an Acid added over and above.

4. That these Menstruums are of most easy preparation, being made by three cohobations only.

5. That it is very difficult for a Man to err, being experienced in the more secret Chymy, for he that understands the practice of this Art, will eafily explain the Receipt of every Adept, be it never foob-Scure, either by the use, or title, or way of preparing; for it is in a manner impossible, not to draw some Light from one or other of the faid three, or direction enough to find the same Receipt more clear in the Writings either of the fame or some other Adept : And indeed. though we sometimes meet with Receipts, which in title, way of preparation, and use, seem to be like the Receipts of vulgar Chymistry, yet a Desciple of our Art will easily determine either for the approbation or reprobation of these Receipts : For there are infallible Signs to distinguish a true from a false Menstruum; this one following shall here Suffice : The quality of a good Menstruum is to diffolve Bodies either gently or violently, and make them not only Volatile, but fat. also, yeareduce them into a true Oyl either swimming upon, or linking under watery Liquors. This Attribute of a Menstruum is inconfistent to any common diffolvent, but proper to the Philosophical, and to them alone, being made of the uncluous Spirit of Philosophical Wine, which Spirit alone doth by its permanence make the dry Sulphur of a Metal both thinner and fatter : That Menstruum therefore in the use of which are promised such things, as cannot be performed by com-

Univ Calif - Digitized by Microsoft ®

mon

(232)

mon Menstruums, may be truly called Philosophical, with a caution or two to be observed.

1. That the Receipt must be of some known and not suspected Author, not of every smoak-seller, promising great and many things without a Foundation, wherefore every Receipt wanting its Authority, though it may seem like a true one, yet we think ought to be rejected as suspicious.

2. That the Receipt must not be alone, described not in one but divers places by the same Author, or at least most clear in its ingredients: For the same Names have one signification with one, but another with another Adept; so long therefore as it is not known by collateral places, what an Author means by his Matters, such a Man's Receipts we declare uncertain.

3. That the Receipt must import a competent Rule in operating, that is, declare whether Matters are to be volatilized in part or in the whole, but what soever are more obscure and concise we lay aside as imperfect.

The

(233)

The Seventeenth KIND.

Simple Mineral Menstruums made of Pbilosophical Vinegar, and fixed Salts not tinging, as well Vegetable as Mineral.

> 82. The Aqua Comedens of Paracelfus. Lib. 10. Arch. pag. 37.

BY Aqua Comedens (Eating or Corroding Water) we mean Vinegar mix'd with the Spirit of (*Philofophical*) Wine, which must be drawn from common Salt so often, till it is diffolved, and comes over by diffillation in the Vinegar.

Annotations.

The Philosophical Vinegar, or Vinegar mix'd with the Spirit of Philosophical Wine, which you acuated with Volatile Salts in the precedent Kind, is made stronger by the mixing of fixed Salts so called. We have described several Vegetable Menitruums made with Alcali Salts in their sifth Kind, which is prepared with Philosophical Vinegar instead of the Spirit of Philosophical Wine, will produce Mineral Menstruums of this Kind, though prepared another way, with this only difference, that they are made more flowly with the Spirit of Philosophical Wine, but with Philosophical Vinegar much soner, yen immediately, if either Common or Philosophical Vinegar be joyned to the Vegetable Menstruums. Aqua comedens, or Eating Water, is the third Menstruum that we have observed to be made of common Salt. The first is in the fifth Kind of Vegetable

Menstruums, where common Salt being fused and resolved per deliquium, is by Virtue of the Spirit of Philosophical Wine reduced into the Oyl or Effence of Salt, which by being fometimes cohobated with the same Spirit, becomes sweet, and is transmuted into the Arcanum of Salt, or Circulatum minus made of common Salt. The fecond is in the fourteenth Kind, where the aforefaid Oyl of Salt is left in its acid (rather faline) Effence. The third, which is taught in the prefent Kind, agrees with the first, except only that it is prepared not with the Spirit of Philosophical Wine, but Philosophical Vinegar, and so, sooner than that, and in use is stronger, as a Mineral Menitruum. Diffolve the Arcanum of Salt, or Salt circulated in any Acid not tinging; for example, common Vinegar distill'd, Spirit of Niter, Sulpkur, Salt, & c. and it will produce the Eating Water by fimple mixtion; on the contrary, if you weaken, or take away the Acid of the Eating Water, either by precipitating it with common Spirit of Wine, common Water, &c. or digesting it by it self, you will have the Arcanum of Salt, or Water of Salt circulated. That which has been faid of common Salt, is also to be understood of Niter, Alume, and all other Salts not tinging. The Receipt of the Eating Water is clear of it felf, except that in the Latin Translation, a Salis Nitri Spiritu is read amiss, the German Authors own Writing baving it a Sale communi, Von gemeinen Saltz: The Error it is requisite you (hould correct.

Menstruums of this Kind are made not only of Mineral Salts not tinging, but also of Vegetable Alcalies, thus :

83. The fixative Water of Trithemius. Pag. 37. Aurei Veller. Germ.

Ake Aqua fortis mix'd with the Spirit of Wine, (defcribed above in Numb. 74.) whereto add of the Oyl of Tartar per deliquium half a Pound, diftil the Spirit, throw away the Phlegm, and diffolve the remaining Earth or Salt in the Spirit. Reep the folution for the fixing of things; but for volatilization the Salt of Tartar must be cohobated fo oft, till it ascends as the common Salt in the Eating Water. Hereto is referred the Menstruum, called

84. The

84. The Aqua Mirabilis of Isaacus. Cap. 29. 2 Oper. Min. & pag.91. Manus Phil.

TAke old Urine, diffil with a weak Fire, then a fironger, that whatfoever can, may afcend; rectifie the deftillation, taking away all the Fatnefs or Oyl, till it leaves no Faces behind it. The *Caput Mortuum* left in the bottom, calcine the fpace of two hours, but without fufion of the *Salt*, draw all the faltnefs from the calcined Matter, with common Water; evaporate the Liquor to a thin skin, that the *Salt* may be Criftalized, repeat fometimes, that the *Salt* may be made moft pure, which diffolve in the diffilled Urine. Then take of this regenerated Urine fix pounds, of diffilled Vinegar, and *Spirit* of (*Philofophical*) Wine, of each three meatures, of *Common Salt* two pounds, of *Sal Armoniack* and *calcined Tartar*, of each half a pound, diffolve them all together into an *Aqua Mirabilis*.

The like Water almost bath Basilius, but that he distils his through an Alembick; the Description of which followeth.

85. The Refuscitative Water of Basilius. Pag. 81. Currus Triumphalis Antim.

TAke of the Salt of Mans Urine clarified and fublimed, of Sal Armoniack, and Salt of Tartar, of each one part, mix the Salts, pour firong (*Philofophical*) Vinegar to them, lute with *lutum fapientiæ*, digeft the Salts for a Month in a continual heat, then diftil the Vinegar by Afhes, till the Salts remain dry, then mix them with three parts of Venetian Earth, force them with a firong Fire through the Retort, and you will have a wonderful Spirit for the making of *Running Mercury* out of Antimony. The fame Water we find alfo, pag. 39. of his Manual Operations.

The Adepts have sometimes used some crude Oyley Matter instead of the Spirit of Philosophical Wine in making these Men-Ii 2 struums; (236)

ftruums; thus Paracelfus volatilized four Salts into a Menstruum of this Kind with Wax diffelved in Aqua fortis.

86. The Water of Sallabrum of Paracelf. Libro de reductione Metallorum in Argentum vivum, sive Tractatu 4. Rosarii novi Olympici Bened. Figuli, pag. 24.

Ake notice there is no fhorter Method of reducing Metals into Mercury, known to us, than that which we used in. our Book de putrefactione quatuor Salium, which we there called Sallabrum, as thus; each of those (Salts, as lower) must be converted into a pure Water or Oyl (per deliquium) which being mixed in equal weight, are called Lac Veterum, or Milk of the Ancients : Which Philosophical Milk put into a ftrong Receiver, and diffil the Spirits of calcined Vitriol, calcined Alume, and the best Niter, ana, five times upon it, and the mixture will be called Flying Eagle, carrying Metals in its Talons aloft; fuch a Metal being inblim'd, grind to powder, from which draw the Spirit of ftrong Wine being poured to it the height of a Finger, three or four times gently in Balneo, and you will have a quick or running Metal as common Mercury., Now the Eagle is made volatile thus: To the Philofephers Milk acuated with the faid Spirits, or Eagle, pour Wax, being very well liquefied and purged, about the thickness of a Finger, diftil the Phlegms together with the Spirits by a Cucurbit in Balneo, which Matter must be cohobated to often, till they are all coagulated or well mixed; and you will have the Philosophers Borax, which we wrote of in our Book de virtute Vitrioli, wherein the Volatile Eagle absconded it self with its Feathers, namely, Spirits. Now take the Calx of what Metal you pleafe, made of Aqua fortis, one part, of the Flying Eagle half a part, m.x, putrefie nine days, the longer the better, then fublime the Matter upon Sand in a Cucurbit well luted, and all the Metal you took will afcend, wherewith proceed as before. Sallabrum described in the Book mentioned, (de putrefactione quatuor Salium) Take Sal Niter, Sal Gemmæ, common,

common Salt, Pot-Afhes, an equal quantity of each, diffolve every one by it felf, and purge it from all Terrestreity; out of all being mixed together, make a clear and transparent Water, which again coagulate in a clean Vessel, and you will find the Salt of another colour, namely, yellow, penetrating, and sweetning, diffolving and fixing: Love and efteem this Salt, because there are many Secrets in it; for it fixeth the Volatile, and vivisiteth the Spirit being dead; and mollisteth the hard and friable, and freeth from any Leprosie and Poyson, fixeth Arsenick, and moreover is the promoter of many famous works to a happy and defined End.

In the first place, let us admonish you to beware of this and such like Menstruums; for a Mystery lies in these Receipts, which to obferve is neceffary, lest you begin to doult the Truth of them after many most dangerous Experiments tried in vain : for you Beginners: let this suffice; that it is impossible for Wax, or any other cyley Matter to Supply the place of the Spirit of Philosophical Wine. There would be no need of this Spirit in the whole Art, if crudeoyley things could perform the fame as this most pure and most un-Etuous Liquor. No man but he that is expert in the Method of preparing the Spirit of Philosophical Wine, can make these Men-ftruums, whereas all the rest may be made by any Ideot, if he hath but the Spirit of this Wine given him. The Adepts do in theje Receipts both prepare and acuate this Spirit of Wine; no wonder therefore that they either wholly omitted the Mystery, or not Jufficiently express d it in their Compositions; for which reason also these Menstruums do appertain to the preparation of the Spirit of Philofophical Wine, rather than as all the rest to the Use of this Spirit, or compositions of these Menstruums; nor should I have remembred them here, had they not been detrimental 'to many men; and that to my own knowledge. The Name Sallabrum is given quali Salis labrum, or Salt Cellar, not that Salt is to be contained in this Veffel, as Candelabrum, or Candleftick is to called, becaufe Candles are fet in it, but rather because the Estence or Fire of Jomes-Metals, or some Chymcial Light is either to be referved, or made ... in this Sallabrum, as Alume is by Itaacus in Man. Philosophor. pag. 28. called Lucerna, fignifying a Lanthorn. - but shart sound

Concerning this Sallabruin, Thomas Aquinas in Lilio Benedicto; pag. 1085. Vol. 4. Th. Chym. Thus;

Univ Calif - Digitized by Microsoft @ Adde:

Adde labrum Salis quanta fit fexta duorum Conjunge poneq; fimul——

In the fame place he calls this Sallabrum the Medium of joyning Tinctures, the middle between two Extreams, between hard and foft, between Luna and the Spirit, between the Body and Spirit: As the Menstrual Blood is the Medium between the Sperm of the Male and Female, fo this our Salt, pag. 1085. Sallabrum he calls thundring Salt, illuminating Stone, and fatness of the Eagle, pag. 1087. Sal Alembrot, the Stone Bore (Borax) and fatness of the Eagle, pag. 1097. Tincar, Borax.

This Sallabrum or Saline Labrum is by Paracelfus made of these Salts, Niter, Sal gemme, common Salt, and Alcali.

Guido used these four following in his reduction of Metals into Mercury: Common Salt, Alcali, Sal armoniac, and Salt of Tartar, pag. 2.3. Thes. Chym.

Thomas Aquinas took the fame Salts as Guido, for his Labrum Salis. The Affinity which I observe between the Salts of Paracelfus, Gemme and Common, I perceive also between the Salt of Tartar, and Alcali of Guido; but the foundation of the Receipt is not grounded upon these four Salts. Paracelfus was sometimes satisfied with Niter and common Salt fused and resolved together per deliquium. Nor does the Mystery of the Receipt lie in the Wax, in the room of which if you chose any oyley thing else, you will not err. Instead of the same, he sometimes used Linseed-Oyl in the Water of the fixth gradation; but of this hereafter.

From the Receipts we observe,

1. That these Menstruums are simple Vegetable Menstruums of the Fifth Kind dissolved in Acids. Dissolve any of them in common Aqua fortis, and you will have a Menstruum of this Kind; but take away the Acid, and it will be a Vegetable Menstruum again, as it was before.

2. That these Menstruums are by reason of the Acidity both sooner made, and do more powerfully operate than the said Menstruums of the Fifth Kind.

Univ Calif - Digitized by Microsoft ®

3. That

3. That they are not always made of the Spirit of Philosophical Wine, but also with any common Oyley Matter, provided it be undertaken by an Artist expert in the Method of making the Spirit of Philosophical Wine.

4. That these Menstruums do by their own strength without any addition of Common Argent vive, reduce Metals and Minerals into running Mercury.

5. That Metals diffolved in these Menstruums, and sublimed, are properly enough called Philosophical Mercuryes, because as Common Mercury sublimate, so these are most easily resuscitated into running Argent vive.

Simple Mineral Menstruums made of Vegetable Sal Harmoniack, and Acids not tinging.

87. The Aqua fortis of Isaacus Hollandus. Cap. 122. Oper. Min. pag. 397. V.ol. 3. Th. Chym.

Make an Aqua fortis with an equal quantity of Sal Harmoniack, and Sal Niter, dry the Sal Niter to a dry Powder, then mix the Sal Harmoniack differently among the Powder of the Sal Niter, fo as to be well mixed together, and incorporated one with the other; then difful; not luting the Receiver clofe to the Beak, before it begins to difful; for if you lute the Receiver at first to the Beak of the Alembick, there are windy wild Spirits in the Matter, which would break the Receiver; but having diffulled a little while, lute the Beak without fear, and difful the Water according to Art.

Annotations

Annotations.

B Efides the Philosophers Vinegar, there is a Sal Harmoniack, under the Name of which is comprehended the Spirit of Phi-losophical Wine, the root of all Menstrums, being concentrated, dried in an Arid, and sublimed into an admirable Salt. This pre-Sent Kind treats of this Salt, not common Sal Armoniack, diffolved in common Acids, not tinging. We have also made indeed Philosophical Menstruums before of common Sal Armoniack, by the help of Philosophical Vinegar, or an Acid mix'd with the Spirit of Philosophical Wine, but the Menstruums of this Kind are stronger than they, the Spirit of Philosophical Wine being subli-med into a Vegetable Sulphur or Mercury, is made better, as being acuated either with an Alcali, or some fixed Arid, and for this reason being dissolved in an Acid, it yields also a more noble Men-ftruum. Isac in our Receipt mixeth Vegetable Sal Harmoniack with so much of Sal Niter, for the Vegetable Salt to be by subsequent distillation disolved in the Mineral Acid of Sal Niter; but because this way of dissolving, is by reason of the sudden ebullition of the oyley and acid, too dangerous, he durst not therefore lute the Receiver close to the Beak, but the like effervescence appearing in the distillation, of common Sal Armoniack, and Sal Niter, we must prove, that by Sal Harmoniack Isaacus meant not the Common, but Philosophical; which we prove first by the Use of the Menstruum : Of which faith Isaack thus ; Diffolve your Sol in the Water made, and put it in Balneo, with a glass Alembick upon it; kindle the Balneo no more than that you may endure your hand in it, and lute the Receiver very firmly to the Beak, and a little hole being made above in the Alembick, put a glass Funnel therein, whereby other Aqua fortis may upon occasion be poured in, and keep the Balneo in that heat aforefaid a day and a night, and when you fee your Aqua fortis brought to a finall quantity (by distilling) as it was when you diffolved the Sol in it, pour to it new Aqua fortis' and let it gradually distil a day and a night in Balneo, and when it is thick again, pour Aqua fortis again to the Matter, doing in all refpects as before ; repeat it three times, always

pouring

pouring to it new Aqua fortis, but the third time diflil it dry (to ficcity) then let the Body cool, and take the Receiver from the Beak, and stop it firmly with wax, remove the Alembick from the Pot, and then take a Drachm or Scruple of the Matter out of the Pot, and put it in a glass Phial, pour common diffilled water to it, and fet it on a Fornace in Afhes, and let the water boyl half an hour : Then let it cool of its own accord, and fiand a day and a night, and a Powder will fettle in the bottom of the Veffel; pour off the top of the water gently, and the reft evaporate with a lukewarm heat, to dry your Powder: Being dry, take it out, "and heating a filver Plate, put a little of your Powder upon it, and look earneftly whether the Powder fumes not; if you perceive it fume, have a care of your felf, for the fume may kill you, Sc. pag. 397. of the fame Volume. Then he goes on, Cap. 24. faying, Then put your Matter or Powder in it (the fubliming Veffel) with a large and clean Alembick upon it very well luted, fo as to be certain that no Spirits can pierce the lating; for they are fubtil beyond defcription, and should they peretrate, and you receive the fume, you would die. Lute also a large Receiver to the Beak of the Alembick, and let the luting be in every place throughly dry : Then put Fire under the Fornace, first a very fmall Fire, and fometimes increase it by degrees, till your Matter begins to fublime, which it will do with a little heat ; and when you fee the Matter afcend, diligently observe to keep the Fire in the fame degree, that it may fublime very gently, which will be eafily done; for the Matter is fublimed, and alcends with a very little Fire, pag! 402. of the Same Volume. 1213 of the order on openal

Gold diffolved in this Aqua fortis of Haack, and once or twice cohobated, then washed with common Water, becomes sovolatile, as to ascend with a very small heat into a most poysonous Sublimate; if any man does the same by as easie a Method with common Aqua Regis made of Sal Armoniack and Niter, we declare be needs not Menstruums of this Kind; but that common Sal Armoniack is insufficient for sach a purpose, even the Novices of vulgar Chymistry have long since experienced.

Besides the Ofe of this Mensitum, the Encomiums of Sal Harmoniack, which agree not in the least with the Common of the the second states the second states of the second states the second states and second state

the same Name, do prove the excellency of this Menstruum. Now, saith he, we have a mind to teach you how and which way to joyn Soul, Body and Spirit together, fo as to enter one into the other; for a Congregation of Contraries cannot be fo. as to remain together without a Medium (which before in cap. 146. he called Sal Harmoniack or dry Water) Take an example from the Dyers that dye Cloaths, Gc. Thus it is with our Stone. Though we have rightly prepared the Body, Soul and Spirit, if they enter not into one another, they will neither now, nor at any time ever remain together without the Medium of our dry Water. Now Beloved, where now shall we find this Water ? For Geber faith, Our water is not Rain-water. Aristotle saith, Our water is a dry water. Hermes saith, Our water is gathered out of a filthy and flinking Menstrual Matter. Danthynus faith, Our water is found in old Stables, Houfes of Office, and flinking Sinks. And Morienus, Our water fprings in Mountains and Valleys, and Fools understand not these words, but think it Mercury; it is not Mercury, it is a dry water, which caufeth all Mineral Spirits, Soul and Body to enter and mixtogether, and when it has joyned them together, it departs from them, and lets them remain fixed. And this water is found in all things of the world. For if this water was not, in vain should we endeavour to make the Stone: For how should we make one of our prepared Matter enter into another ? As the Apothecaries gather their Herbs together, fo ought we to do either in the Vegetable, Animal, or Mineral Kingdom, to make a perfect work or Quintessence, we ought to have a dry water out of every diffinct thing. A dry water therefore is in all things, to make themfelves perfect. Therefore, faith Galen, All things have their own Medicine to make the Stone either in the Mineral, Animal, or Vegetable Kingdom, without the addition of any exotick things. Wherefore when we would make the Stone, or any Fixation, we ought to make that conjunction with our dry water, as was faid of the Dyer and Apothecary. Therefore is it, my Beloved ! that fo many fall into Errors, becaufe they do not underfland nor follow Nature : Therefore did I mention the Dyer and Apothecary, for you to understand Nature, by that rude way, that you may in your own mind perceive that no conjunction Univ Calif - Dicki leckby Microsoft @

(243)

can

(244)

can be made without a Medium.. Wherefore all the works above cited are good, but those two things are not there named, the *Spirit*, that is, and *Dry Water*, weights and way of joyning, wherein confists our whole Art : wherefore I conjure you never to reveal this Secret ; for all the Art that is in the world is comprehended in it, to make the perfect work in a fhort time and little pains, *Cap.* 147, 148,149. 2. Ripley hath described the Same Water thus ;

88. The Aqua Regis of Ripley. Pag. 349. Viatici.

MAke a corrofive Water of Salt Peter and Harmoniack, and put not above four Ounces in the Destillatory, and draw a water with a flow Fire, wherein diffolve and make the Oyl of Sol, Sc.

This Water Bafil Valentine calls the Kings Bath, of which thus, in the elucidation of the fecond Key: Take notice, Friend! and ferioufly confider, becaufe here lies the principal Secret; Make a Bath, have a care that no ftrange thing enter into it, left the Noble Seed of Gold be radically deftroyed after the diffolution of it: Exactly therefore, and with care examine the things which the fecond Key informs you of, that is, what Minerals are to be taken for the Kings Bath, wherein the King ought to be diffolved, and his external form fubverted, that his Soul may appear without blemifh: To this purpofe will the Dragon and Eagle, that is Niter and Sal-Armoniack ferve, out of which being united, is made an Aqua fortis, as you will be informed in my Manuals, where I fhall treat of the Particular of Sol.

89. The

(245)

89. The Kings Bath of Basilius. Lib. Partic. in Particul. Solis.

Ake of Salt Peter one part, of Sal Harmoniack, one part, of Flints pulverized half a part, mix, and diftil. Take notice, that this Water must be carefully and exactly diftilled; for it cannot be diftilled by the common method: He that is expert in the operations of (the more secret) Chymy, will know what is to be done. Obferve, you must have a strong earthen Retort well luted, in the upper part of which must be a Pipe half a span long; and two fingers broad; put a great Receiver to it, lute well, and increafe the Fire by degrees till the Retort grows red hot: Then put in a spoonful of this Matter through the Pipe, and fuddenly ftop the Pipe with a wet Cloath, and the Spirits will pass impetuously into the Receiver; the Spirits being alfwaged, put in another spoonful of the faid Matter, thus proceeding, till no Matter remains, and you will have Aqua Gehennea, or Hell-water, diffolving the Calx of Gold in an inftant into a thick folution, which we mentioned in the third Part, as alfo in the fecond Key, not only diffolving Gold, but reducing the same into volatibility, Gc.

This Kings Bath is described also by Basilius in Revelations Manualium Operationum, thus;

90. A Philosophical Water for the Solution of Gold of Basilius. Labore primo Revelation. Man. Operat.

TAke of Salt Peter, and Sal Armoniack, of each two parts of Stones washed one part, grind them together, and by a Retort (with a Pipe) distil the Water into a large Receiver putting in two or three ounces through the Pipe; the Receiver, must be a big one, and lie in a Vessel full of cold Water, and co-

Univ Calif - Digitized by Microsoft ®

vered

vered with wet Linnen Cloaths, that the Spirits may cool; for it will be very hot, flop the Joynts of the Retort very clofe, kindle a Fire, and the Retort being hot, caft in three ounces of Matter, the Pipe being fuddenly itopp'd, the Spirits will pafs through, and the Receiver will grow white, and drops fall: When the Spirits are fetled, put in three ounces more, flopping the Pipe immediately, proceed as before, changing very often with wet Linnen: Continue this Operation till you have water enough, which flop very well, that it may not evaporate; it is the true Water and Mineral Bath for the King.

(246)

That Basilius as well as Isaacus used the Sal Harmoniac not common Sal Armoniac, for his Bath, the Use of the same doth also prove.

Take of this Water three parts, of the Calx of Gold one part. mix them in a Cucurbit, put it with an Alembick upon hot Afhes to be diffolved; if it be not wholly diffolved, pour out the Water, and pour on new, and that till all the Calx is diffolved in the water, being cold, white Faces fettle in the bottom, which separate; put all the water together, and digest for a day and a night in Balneo, then removing the Fæces, digeft the space of nine Days continually, distil the Water, that the Water may remain in the bottom like Oyl, Gc. distil fo often, till all the Gold has pass'd through the Alembick. In the same place: This unctious Bath reduceth Gold and all other Metals into Oyls, because it is made of the Oyly Spirit of Philosophical Wine, concentrated, and dryed in some Vegetable Alcali; and Spirit of Nitre, whereas on the contrary Sal Armoniack, or common Aqua Regis, cannot transmute Metals beyond its saline Nature, for that Oleity which it bath not, it cannot give. Haacus for want of a Retort with a Pipe, perhaps, not being at that time known, sustained no Small loss of Spirits in distilling this Menstruum, which Basilius did by kelp of the faid Retort endeavour to repair, though that also not without some difficulty.

The later Adepts, Crinot, Trismosinus, and Paracelsus obserwing the difficulty of distilling, and the loss of Spirits made it better, who by a plain but better method diffolved the Vegetable Sal Harmoniack in Spirit of Nitre or Aqua fortis, without any loss, danger, dr delay. We will be the best of the second of the Univ Calif - Digitized by Microsoft @ vol. tall ed Silver, being difforced in 29. Spris, with the afore-

91. The most strong Aqua fortis of Paracelfus. Lib. 3. Arch. de separ. Elem. pag. 7.

Ake Sal Nitre, Vitriol; and Alume, in equal parts, which distil into Aqua fortis, this again pour to its Faces, and repear, distil in a Glass, which Aqua fortis clarify with Silver, and diffolve Sal Armoniack in it. That Paracellus meither by Sal Armoniack meant the common,

is also demonstrated by the use of the Menstrum, which he thus de-Scribes : These things being done, take a Metal reduced into Plates, and there refolve it into Water, in the fame Water, then feparate by Balneo and pour on again, this repeating, till you find an Oyl in the bottom, of Sol or Gold a purple, of Luna a lazurine; of Mars red and very darks of Mercury white; of Saturn livid and lead Coloured; of Venus altogether green; of Jupiter yellow; in the fame place. Whoever diffolved Metals promiscuoully with common Aqua regis, both Sibver and Gold into an Oyl, either purple or lazurine? Not to fay any thing of the reduction of all Metals into two Fats red and white, the Effence thereof, and the Dead Body. It is therefore clear from the effect that Paracelfus. diffolved Sal Harmoniack in Aqua fortis for his most strong Aqua

fortis. In making this Menstruum Guido adds the weight of the Sal Harmoniack which Paracelfus onits under clother agga bial war Water then mis the white well that his mare and put tan a

and a station is

Retort with a long seek to n.a. 92. The Aqua Regis of Guido. Pag. 22 Thefauri Chym: orgeb sens vo

int turn in o Water, and mature tunnin Ake Vitriol, common Salt, and Nitre, distil into Aqua fortis, take one Pound of this, four Ounces of (Philosophical) Sal Harmoniack, and diftil yet once of alt and some solution of solution of the soluti Aqua fortis, and to the folution added Sal Harmoniack. Thus he Univ Can't Juligitizadility Mano agia to polatilivolatalized Silver, being diffolved in Aqua fortis, with the aforefaid Salt. Lib. 8. Tinct. quinta. pag. 81. Aurei velleris German. Take of pure Luna four Ounces, diffolve it in common Aqua fortis, draw off the Phlegin, to the remainder add fix Drachms of Sal Harmoniack, and pour on new Aqua fortis, draw off again in Afhes to an oleity, this repeat four times with new Aqua fortis, then urge it ftrongly, and the Luna will afcend together with the Aqua fortis.

Sometimes he volatilized Gold and Silver together with this Menftruum. In Tinctura Regis Julaton. pag. 16. Aurei veller. Take of the filings of Gold of Sal Harmoniack, each two Ounces, to which put four Ounces of the beft Silver diffolved in eight Ounces of Aqua fortis, draw off to an Oleity, pour on new Aqua fortis, and repeat three times with new Aqua fortis, and the Gold will afcend with the Silver through the Alembick.

Lully made his Aqua Regis by diffolving Vegetable Sal Harmoniack in the acid Water of Mercury sublimate.

93. The Aqua Regis of Lully. In Exp. 17.

8h . 1. 34

eft to I

Ake Mercury being twice fublimed with Vitriol, and common Salt prepared, each time with new materials, grind. and if there be one Pound of fublimate, take the whites of nine new laid Eggs, which whites beat fo long, that it feems to be Water ; then mix the white with that fublimate, and put it in a Retort with a long Neck, joyn a Receiver to it very clofe, giving it a Fire of Ashes at the beginning most gentle, till it distils by that degree : The distillation ceasing, increase the Fire, and at last give a most violent Fire, and by this means part of the Mercury will turn into Water, and part into running Mercury, which running Mercury being gone over fublime again, then grind and joyn it with the diftilled Water, and diftil again asbefore, repeating the Magistery, till all the sublimate is gone over, and converted into Water: Wherefore you may the fame way multiply it as often as you pleafe, always putting new fublimate to the Water, and distilling till it be converted into Water. Now

Now take this Water, put it in a small Urinal (Cucurbit) joyning a Head to it with a Receiver, then diftil by Balneo, till the white feems to be gone over mixt with it, which you will thus know ; take an Iron or Copper Plate, upon which let one drop of the diffillation fall, if it boyls and feems to diffolve, take away the Receiver, joyning another very well luted, and diftil by Ashes, and again by Ashes repeat this Magistery seven times : And thus you will have a Mercurial Water, which will ferve you in many operations: Take now one Ounce of the Salt of the fecond Experiment (Volatile Salt of Tartar, declared in Numb. 17.) and four Ounces of this Water (the acid Water now distilled from Mercury (ublimate) mix them together, and the mixture will prefently be diffolved; being diffolved, diftilby Ashes with a gentle Fire luting the Joynts well, in the last place increase the Fire, that all the Salt may with the Water pass through the Alembick, then again put one other Ounce of the Salt into the fame Water, and by distillation pass it all over as before, and thus repeat this Work of distillation four times, in every distillation adding an Ounce of the faid Salt to that Water : Then will you have at length a Mineral Water vegetated and acuated. with the augmentation of Virtue and Power proceeding from. the faid most precious Vegetable Salt, without which is nothing done.

(249)

Our Annotations upon the Receipts are :

Fhe

1. That the Menstruums of this Kind are simple Vegetable Menftruums of the fixth Kind, diffolved in Acids. Take away the Acidity, and it will be a Menstruum again of the fixth Kind.

2. That these Menstruums are better made of Aqua fortis, it being an Acid stronger than the rest : yet that they may be also made of any other Acid lefs ftrong, as diffill'd Vinegar, Spirit of Salt, Salphur, &c.

3. That these are the best of all the simple Mineral Menstruums, both in the facility of making, and excellency of Virtue.

4. That it is much at one, whether the Metal be first diffolved in common Aqua fortis, and then the Vegetable Sal Harmoniack added. or the Said Salt first, and then the Metal. Salt - Dig Lized by Microsoft @ 5. That

5. That these Aqua registes differ from the common, in that they diffolve all Metals promiscuously, Silver as well as Gold, and reduce the same not into a Calx, but Oyl, which cannot be faid of common Aqua regis.

6. That Metals diffolved in these Menstruums and sublimed, become the greatest Poysons belonging to this Art.

(251)

The Nineteenth KIND.

Mineral Menstruums compounded of the Philosophers Spirit of Wine, and Acid Spirits tinging, Spirit of Vitriol, Butter of Antimony, &c.

94. Spirit of Vitriol mixt with the Spirit of Wine of Lully.

Epist. accurtatoria, pag. 327.

H E Spirit of Vitriol is more dry and thick, than the Spirit of the Quintessence of Aqua ardens, and great affinity there is between the Spirit of Vitriol, and the Nature of Gold, because they are both derived from the fame Principles with Minerals: The Spirit therefore of Vitriol being joyned with the Spirit of Aqua ardens, inspissates it, and makes it fuddenly adhere to Gold, so as to be fixed with it; and believe me, this is a very excellent way of Abbreviation.

Annotations.

This Difference you may observe between the Simple and Compounded Mineral Menstruums; The Simple diffolve only, but the Compounded do both diffolve and tinge things diffolved; for they are in a wonderful mammer exalted by things tinging, and made many degrees better, so as to have enough to serve themselves, and others also, and therefore may deservedly be called graduated, as well as graduatory Waters. Hitherto we have treated of the Simple; In L12

Nineteenth Kind, we are to confider them as Compounded, of two Spirits, Oyley and Acid tinging, as in the prescribed Receipt of the Spirits of Philosophical Wine and Vitriol mix'd together, and intimately joyned by two or three distillations. The Preparation is most easie, in which notwithstanding it will not be impertinent to take notice of this one thing; that both Spirits must be without Phlegm, and exquisitely rectified according to the Advice of the following Anonymus. A burning Oleity is made out of Wine, therefore it participates with Sulphur, and herein is indeed the greatest virtue of the Metallick Nature, which it drew and conceived from the Earth; and as this Oleity, the Spirits that is, are much more agil than the Spirits of other things; therefore their Virtues are much more agil than the Virtues of other things : but yet you must know that those Spirits (as faith the Text of Alchymy, and as indeed the truth is) which come out of Vegetables and Animals, conduce not to Alchymy as they are in a Vegetable Nature, but it is requisite for them to attain to a Metallick Nature by many depurations and diffillations, and then they are ferviceable to it: Therefore is there one only stone, and one foundation necessary to the Art, namely, the Metallick virtue, though fometimes Vegetable and Animal things are taken, yet they do not remain in a Vegetable or Animal Nature, but are transmuted into a Metallick and Sulphureous Nature, which contains a Metallick Virtue. Whereupon, said Ferrariensis, cap. 20. suarum Quastionum : It is impoffible to coagulate Argent vive, without Sulphur, or fomething that hath a fulphureous Nature, because Sulphur is the coagulum of Argent vive, and if there be fulphureities in Wine, having a burning faculty, it argues there is a Metallick Nature in it : wherefore fome do operate in Wine and Gold or Silver, to extract out of the Wine its most subtil Spirit, strengthning the virtue of Gold with it, that fo the Spirits may be fixed with it, by which confequently the Tincture of the Gold is dilated and multiplied, and of a certain there is a very great coherence or participation between the Spirits of Wine and the Spirits of Gold, they being both of a hot Nature, and therefore the Spirits of Wine are infeparably fixed with Gold; yet it is to be noted, that the Spirits of middle Metals, as Vitriol, Ec. are of larger fixation, and more nearly allied to Gold, both fpringing fpringing

fpringing as it were out of one Fountain, namely, out of the Mines of Metals, than the Spirits of Wine, which proceed from a Vegetable Nature; though the Spirits of Wine are more agil and fubtil. Some therefore do compound the Spirits of them, fo as to joyn the Spirits of Vitriol with the Spirits of Wine, to infpiffate one with the other, and to make them more eafily united to Gold: But he that intends to operate with thefe things, must take the ftrongeft Spirits, and the pureft Matters, fo that the Spirits must be exactly purified before they are fixed with Gold or Silver. Anonym. de Principiis Natur. & Arte Alchym. pag. 30. Syntagm. Hermon. Rhenani,

Not only the rectified Spirit of Vitriol, but every Acid Spirit is here effectual, provided it be tinging, and mixed with the Spirit of Philosophical Wine, thereby to be made a Menstruum of the Jame Kind. 'I is thus made:

95. The Butter of Antimony mix'd with the Spirit of Wine of Basilius. Pag. 88. Currus Triumphalis Antim.

TAke of Common Mercury most purely sublimed, of Antimony, equal parts, grind, mix and distil by a Retort, which retains the Spirits, three times; rectifie this Oyl with the Spirit of (Philosophical) Wine, and it is prepared, and of a Blood-colour; in the beginning it was white, and thickens as Ice or melted Butter. This Oyl hath done many wonderful things; yet the Virtue, Faculty, and Operation of it hath always appeared, making an ill thing good.

This Composition, though given by Basilius, as a Medicine, not as a Menstruum, yet is by Paracellus in Libro de Gradationibus, described as such.

Univ Galif - Digitized by Microsoft @

CKIE CORE 37 .

6. The

96. The Water of the fourth Gradation of *Paracelfus*.

Libro de Gradationibus, pag. 131.

Ake of Antimony one pound, of Mercury Sublimate, half pound, diftil both together with a violent Fire through an Alembick, and a rednefs will afcend like Blood, thick, which tingeth and graduates any Luna into Sol, and brings this pale Colour to the higheft degree, of a permanent Colour.

Though Paracellus thought it not always neceffary to admonif his Disciples of the Spirit of Philosophical Wine as an addition in his Compositions, yet nevertheless ought I to declare to you the neceffary addition of this Spirit in this Menstruum, that you may not err; for without it, it would be of no consequence, but rather a dammage to you in the more secret Chymy:

The Adepts made fometimes Menstruums of this Kind, not with the Spirit of Philosophical Wine, but the Matter of it, namely, some Vegetable Oleosum, Thus;

97. The Water of the fixth Gradation of *Paracelfus*.

Libro de Gradationibus, pag. 132.

Ake of Sulphur wive, two pounds, of Linfeed Oyl, four pounds, boyl them to a Composition (commonly called the Liver of Sulphur) which must be distilled into an Oyl (by a peculiar and Philosophical manual Operation, appertaining to the making of the Spirit of Philosophical Wine:) To this must be added again the fame quantity of Sulphur vive, and boyl'd as before to a Composition, and digested in Horse-dung for a Month, or if longer, better: Then must be added of Sal Niter, Vitriol, Alume (Ingredients of Aqua fortis) Flos Æris, Crocus of Mars, Cinabar, (to increase the Tincture of the Sulphur) of each half a Verto (einem halben vierling, that is, a fourth part of half a pound, or two ounces) distil whatsoever will ascend, and take away the Liquors, the Oyls only being kept (not Oyl, Oyl, but Oyls, because they are two, White and Red) which must be put into a glass Cucurbit, the Species being added, as before, and the Caput mortuum pulverized; distil them again together as before; then pour the distillation back to the Faces, and let it be putrified again for a Month, and distilled again: Then the Colours being evacuated or separated (the Red from the White) keep the Red, and rectifie it as is requisite, in which let Plates of Luna be digested a due time, and then reduced by eupellation.

Paracelfus sometimes made this Oyl or Fire of Sulphur by it felf, without other tinging things for the graduating of pretious. Stones as well as Metals. It is come to that, faith he, pag. 200. Lib. de Sulph. that the Spirit of Transmutation hath given his. Receipt of making a Liver or Lung out of Linseed Oyl and Sulphur: The diffillation of this Lung or Liver is done many ways; but it is found by operating, that this Liver yields a Milk nothing differing from common Milk, being thick and fat; it yielded also a red Oyl like Blood : This Milk and that Blood confounded not their Colour and Effence by distillation, but remained diffinct and feparate one from the other, the White fetling to the bottom, and the Red ascending to the top : Now Art has been folicitous in making Silver out of the White or Milk, and out of the Red, Gold; but to me it is plain that never any thing could be either by the Ancient or Modern Philosophers done with the White or Milk (of Sulphur) I do therefore affirm that Milk to be dead, and nothing contained in it : But as to the Red Oyl which yields the Liver, observe, every Criftal or Beril being first well polished or purified, &c. (See the fourth Book concerning the Use of this Oyl in the Grada-tions of Pretious Stones) exalts Gems even to the highest degree, yea higher than they can be exalted by Nature. Here alfo note, that all Silver put into it a due time, at length grows . black, and leaves a golden Calx, yet not fixed before its exacttime, but a volatile and immature thing; but if it hath its time, it performs all things feafible, whereof no more must be here declared. Thus therefore observe of Sulphur, if it be taken into degrees, the more fubtil, clearer, higher, and of quicker operation it is, the higher and better it is: This way areMetals and Stones made. He that is about to attempt it,

mult

must not think, but know himself able; for it is, as to Operation, the most dangerous Labour in all Alchymy, and therefore requires notable Experience, and repeated Practice, nor must he proceed by Hear-fay, but by much Experience, Sc.

Tet not being fatisfyed with the strength of this Oylin this twelfth gradation, he was willing to exalt it yet higher with other tinging things, as Flores Aris, and Crocus of Mars, by which Paracelius meant not Common but Philosophical Medicines. We perceive, faith he, Lib. 4. Archid. de Essentiis, pag. 16. Verdegrease is accounted the Quintessence of Venus, whereas it is not; but the Crocus of Venus is a Quintessence fo to be understood. Flos Æris is a (common) transmutation with a thick and fabtil substance together, extracted out of the whole Complexion of Copper, wherefore it can be no Quintessence; but the Crocus of Venus, as we have taught, is a true Q inteffence, it being a potable thing, without corrolion, and in mixtion divided from the Body, very fubtil, yea more than I am minded here to write, to avoid prolixity. So also the Crocus of Mars and the rust of it has hitherto been effeemed a Quintessence, it not being fo ; but the (true) Crocus of Mars is the Oyl of Mars, (which is sometimes in a dry form under the Name of an Effence, and called the Philosophical Crocus of Mars in the second Book of Medicines.

From the Receipts we observe.

1. That common Spirit of Vitriol, Butter of Antimony, Arfenick, Tin, &c. mix'd with the Spirit of Philosophical Wine, are Philo-Sophical Spirit of Vitriol, Philosophical Butter of Antimony, &c. 2. That the Menstruums of this Kind, are the fame with the Menstruums of the Fifteenth Kind; but with this difference, namely, in that, Philosophical Vinegar not tinging is prepared, but in this, Philosophical Vinegar tinging; because these aremade of the Acid Spirits of things tinging, that is Metals and Minerals; but those of the Acid Spirits of things not tinging, that is Vegetable Salts, and some Minerals, whose dry part was neither Metal, nor any coloured B dy.

3. That these Menstruums are not only diffolving Waters, but al-Jo gradatory, because prepared with things tinging.

4. That these Menstruums are the Essences of things tinging, or Magisteries dissolved in an Acid, and consequently Medicines.

Univ Calif - Digitized by Microsoft ®

5. That

5. That these Menstruums, may be also made of crude Oyls; provided a Man knows the way of preparing the Spirit of Philosophical Wine.

6. That the fame two Oyls of Sulphur (whereof the Red is an Estence, after the way of Paracelfus, that is, the best) which Paracelfus elsewhere prepares with the most strong Aqua fortis, described before in Numb. 91. are here made by the same Author, of a crude oyly matter.

7. That Vegetables and Animals as fuch, and crude, are not. Ingredients in Philosophical Works, but as they are made incombustible, and reduced into a Metallick Nature. The faid separation, saith the Author of Via Veritatis, pag. 253. You must well observe, for from hence the Ancient Sophi took occafion to inquire into the Three Natures (Three Kingdoms) namely, the Vegetable, Animal, and Mineral; and they to much learned from it, that the feparation of Natures is nothing elfe but a defect of coction in Nature : Then they confidered them fomewhat further, how (for inftance) those Effences, which were most weakly cocted by Nature, might be fuccoured in a Natural way, with common Fire, that the Effences which are now combustible, may by their Liquors (which the Ancients through envy called Mercury, and are black, feparated from the Effence) be made perfect by Art, fo as that the Effences may remain with the Liquor fafe and fecure from burning, and the Liquor not be able to feparate it felf from the Effence: This the Ancients called our Sulphur; for according to this preparation, the Effence is no more Vegetable, nor Animal, but now by coction made a Mineral Effence, and therefore called Sulphur. And afterwards, pag. 264. he thus proceeds. One Nature is more cocted by its moisture with its Elementary Fire, than another, whereof the Vegetable Nature is in coction the leaft, becaufe the Effence of it is eafily burned, and the Liquor alfo is most easily separated from the Elementary Fire, by the help of common Fire. The Animal Nature is in coction not much unlike the former (Vegetable Nature) the Effence of it being likewife eafly burned, and there-M in

Univ Calif - Digitized by Microsoft ®

fore

fore the Mineral Nature is in coction the highest, because the Metalick Liquor will be more and better united by coction with the Elementary Fire, than the other two aforefaid Natures: Wherefore alfo, Metals do refift common Fire, better than the other things comprehended under a Vegetable and Animal Nature, as you may fee by Metals put into Fire, which do not Flame as Wood; for the Effence of it is not fo cocled with Liquor, as the Metalick moisture with its Effence; and the conjunction of the Liquor with the Effence is not Metalick, but fimply Vegetable, which is confumed in a black Fume. But when the Effence hath attained to cochon by Nature, then it remains not a Vegetable, but is now made a Metalick, and is now confumed in a white Fume by common Fire, no otherwife than as you fee in perfect Metals, when they are melted in Fire, disperse a white Fume from them. Now confider, faith Chortalasseus, or the Author of Arca arcani Artificiosifimi, in his Cabula Chymica, pag. 369. Vol. 6. Th. Chym. by way of advice; how the aforetaid Speeches of Vegetables and Animals are to be taken, neither of them, must be rejected; for they differ one from the other no otherwife, than that the Vapour is purer, and of greater quantity in one than the other; but you may make the more impure, like to the pure Vapour, for they may by fubtil management be fo reduced, that those two, that is, the Animal and Vegetable, in a Watry Body may be taken together with the Mineral Spirit or Vapour, and then the Mineral Spirit separated from the rest with great discretion. which though it shews it felf in a small quantity, is notwithstanding of the greatest Virtue, and clearer than the Light at Noon: In this state will that Spirit if you please bring the Animal and Vegetable Spirit, fo as to be like it felf. This is the Foundation of the whole Art, that is, for the Vegetable or Animal Spirit to leave its combustibility, and become Incorruptible, and Immortal: This is the Key to open all Gates; here you have the true first matter of Gems, and Merals: Yet if I confider this thing rightly, it is not the first Matter, but a threeold extraction out of the first matter of Gems ; and therefore you ought

Univ Calif' Digitized by Microsoft @ -

to.

to praise God Eternally, and give him thanks in thaking you worthy of this matter, and youch afing you to much understanding, whereby to obtain to your use that which is the deepett in the Earth. I proceed in this first matter; which if you make Liquid, and open by the incombustible Vegetable Spirit (not common) you will be able to diffolve Gold, Silver, all Minerals, and Gems in it, and make it melt like Ice in warm Water, destroy, mortifie, and re-new it again; by this means I fay, visibly obtain, fee, touch, and perceive an Astral Spirit (as a Lanthorn, wherein the Eternal Fire, and Virtue of the highest Star of Eternal Wifdom dwelleth) you will I fay, with your Eyes behold an inconfumptible Fire, fhining Night and Day; Sun, Moon, Stars, Carbuncles, and a Splendor exceeding all manner of Fire; and observe the perfection of the whole Firmament in it. O man, my Creature! how great a Divine Gift, as that which is above all the Heavens, most excellently clear, and is most deep in the Earth, may you in a few Hours time obtain, whereas she hath been a vast time employ-ed in it, and in subtilty is far inferior to you, Sc. The Same Author of this first matter in his Rusticus. pag. 308. of the faid Volume, thus :. This Doctrine certainly is very worthy of Obfervation; for many Notable Men, do herein err, thinking they have the first matter, when they have obtained the Philosophers Mercury, or Salt of Metals: For the first matter is made when the Man and Woman are joyned together, witnels Count Bernhard, faying : Then is the Conjunction called the first Matter, and not Lefore; that is, of the Stone, and all Metals; concerning which fee *Turba*: For before this is done, we do according to the frundation of Nature, and with good reasons delervedly reject *Animals* and *Vegetables*, as things extraneous, and contrary and ineffectual to our Work, and our Stone we place rightly among Minerals.

8. That both Spirits ought to be warily mixed, because of the danger of overmuch effervescence.

M m 2

Univ Calif - Digitized by Microsoft ®

9.

9. That these Menstruums are by digestion made sweet, and cal-led the sweet Spirit of Vitriol, sweet Butter of Antimony.

10. That the Spirit of Philosophical Wine is sometimes not expressed in the Receipts of Menstruums; but it appears by collateral places, and necessity requires it to be understood.

Mineral Menstruums Compounded of the Spirit of Philosophical Wine, and other tinging things; Vitriol, Cinabar, Antimony, Lapis Hæmatites, &c.

> 98. Oyl of Vitriol of Bafilius. Cap. 6. Sect. 2. Libri de Conclusionibus.

Ake Hungarian Vitriol, diffolve it in diftilled Water, coagulate, criftallize, repeat five times, and fo purge it from the Salts, Alume, and Niter: This Vitriol thus purged, diftil with the Spirit of (*Philosophical*) Wine to a red Oyl, which ferment with Spiritual Gold; add to it, its part of the Mercury of Stibium, and you have a Tincture for Man, and reducing *Luma* into Sol. Vifitando Inferiora Terræ, Reclificandoq; Invenies Occultum Lapidem, Veram Medicinam.

Annotations ~

THE Antecedent Hind contained Mineral Menstruums, compounded of Acid Spirits containing a Metalick Tiniture in them; in this present we use the Bodies of these Spirits, to make the Menstruums a degree better. For a Tiniture, for Example

extracted out of the dry part or body of Vitriol distilled, with the Spirit of Philosophical Wine is an Effence, which being in the fame. distillation diffolved in its own Acid Part, preduced a Menstruum of this Kind; whereas in the Precedent Kind, that Small quantity of Copper, diffolved or contained in common Spirit of Vitriol. and elevated with a violent Fire, is by the Spirit of Philosophical Wine reduced not into the Esfence, but Magistery, little effectual as well through the smalness of its quantity as Tincture: This present Oyl of Vitriol is not the least esteemed among the Secrets of . Bafilius, and therefore we will a little more exactly confider his molt clear description, that by his more abundant Light, we may Illustrate darker places. First, Basilius bids us purifie Roman Vitriol by divers folutions, and coagulations; which purification is necessary to separate the Vitriol from strange Dust, Dross, and other impertinent Offals; yet this we think Superfluous, when the Vitriol is purely cristallized, for the Terestreity Setling in the dissolution of Vitriol, is not Faces, but Copper, less diffolved than the rest, and left by the Acid, being too much diluted with common Water : The Vitriol being purified, he enjoyns to be distilled with the Spirit of Wine into a red Oyl.

He reduced not only Natural Vitriol, but also Artificial Vitriols made of Metals into Such Oyls. The Sugar or Vitriol of Saturn he distills together with the Spirit of Wine into a red Oyl, curing Melancholy, the French Dilease, &c. Coagulating and fixing Mercury, but, if fixed with the Mercury of Mars, tinging thirty parts of Mercury into Gold. Libro de Conclu. Tract. 2. Sect. I. Cap. I, de Sulphure Saturni. The fame way, faith he, is a red fweet Oyl tinging Saturn into Gold, to be diftilled out of Sugar or Vitriol of Jupiter, in the following Chapter, which he repeats in Sect. 2. Cap. 2. de Vitriolis Saturni & Jovis. Argent vive he diffolves in Aqua fortis, and being reduced into Cristal or Vitriol, distils with the Spirit of Wine rectify'd before with the Salt of Tartar (the Menftruum described in Numb. 18.) into a fiveet Oyl, curing the French Pox, Old Olcers, Palhe, &c. to be joyned to Martial Tin-Etures in the Transmutation of Metals. Sect. 2. Cap. 5. de Vitriolo Mercurii: The more fixed Metals, Gold and Silver he distills in Balneo Regis (in Numb. 89.) through an Alembick, which, the Men-Aruum being drawn off, he reduceth into Volatile Vitriols, to be di-

distilled with the Spirit of Wine into Oyls. Sect. 2. Cap. 1. De Vitriolo Solis et Luna. The more dry Metals, Iron and Copper, he prescribes to be distilled into the same Oyls, but omits the way of distilling. Sect. I. Cap. 3. De Sulphuribus Martis & Veneris, Sect.2. Cap. 3. De Vitriolo Martis. Cap. 4. De Vitriolo Veneris; but the following Kind of Menstruum will prove that they are to be distilled with Philosophical Vinegar: By these places compared together, we are better affured of divers things : First that the Oyl of Vitriol is not any common Acid of Vitriol, though drawn out of Vitriol most exquisitely purify'd, for the same Oyls may be made with the Vitriols of all Metals by the fame Spirit of Wine. Secondly, that common Spirit of Wine is altogether useles to this Work; but that the Philo'opinical, or Menstruum rather described in Numb. 18. is meant by Basilius by the Spirit of Wine. Moreover, that the Vitriols of Saturn and Jupiter do yield fiveet Oyls, becaufe made of fome weak Acid, namely, common Vinegar, which is eafily altered or transmuted by this Philosophical Menstruum. But that the Oyls of the other Metals, being made with stronger Acids, either Philosophical Vinegar, or Mineral Menstruums do remain Acid, especially the present Oyl of Vitriol, in the distillation of which, the Spirit of Philosophical Wine, or Vegetable Menstruum is diffolved by the Natural Acid. or common Oyl of Vitriol, and with such a prevalent Acidity, ascends in the form of a red Oyl. Lastly, that this Oyl of Vitriol is commended to us by Bafilius as a Menstruum to be fermented with Gold; which we would have you take special notice of; for Basilius hath here and there in his Books discovered many notable things concerning the Meustraum of Vitriol, but most rarely advised the distillation of it with the Spirit of Philosophical Wine; yet without which all Proceffes and Labours, all Endeavours and experiments are vain, and of no importance in the more Secret Chymy.

For the making this Oyl of Vitriol the Adepts fometimes diffolved it in the Spirit of Philosophical Wine; which afterwards being criftallized, they called Vitriol corrected or graduated. Of this correction or graduation of Vitriol Paracelfus, thus: The Detcription of Vitriol, faith he, is to be directed to Medicine and Alchymy: In Medicine at is an excellent Remedy: In Alchymy it is good for many other things; but the Art of Medicine and Alchymy, confifts.

fifts in the preparation of Vitriol: For the Crude is not fuch, but like Wood, out of which any thing may be carved. Lib. de Vitriolo, pag. 200. At first, he proceeds, the Spirit of Vitriol being obtained, the cuftom was to graduate it to the highest, wherewith being exalted, they cured the Epilephie, whether new or old, in Men and Women, of what condition foever, Gc. But let us return to the beginning, how the Spirit of Vitriol was found ; First they distilled the moist Spirit of Vitriol by it felf from the Colcothar, then they extended its degree by diffilling and circulating it alone to the highest, as the process teacheth: Thus the Water began to be used for several Diseases, as well Internal as External, as also for the Falling Sickness; so a wonder. ful Cure was performed: But those that came after were much more diligent in the extraction; for they took the Spirit of Vitriol, corrected as before, and distill'd it with the Colcothar eight or ten times with a most strong Fire; so the dry Spirits were mixed with the moift: They urged the work fo long, continually and without intermission extracting, till the dry Spirits were over, then they graduated both Spirits, the moift as well as the dry, in a Phial together their own time: This Medicine they found to be of much greater operation against Diseases, that they confounded all the Humorifts in general: Yet is there fome correction by Artifts added by Spirit of Wine, for better penetration fake, but of no higher degree: But I will communicate to you my process, which I commend to all Physitians, especially for the Epilepsie, which hath the only cure in Vitriol; wherefore even the Charity of our Neighbour, requires us to appoint the more diligent care in that Difeafe: Now my Process is for the Spirit of (Philosophical) Wine to be imbibed by the Vitriol, and then distilled, as I faid, from the dry and moist Spirits, Gc. But you must further know, that the aforefaid Receipts of making the moift Spirit of Vitriol cannot be more clearly described; for an Artist is required to understand it; those fordid Boylers do not in the least understand a thing of so great moment. You must expect fufficient information of all things, from Artists (of the more secret Chymy) Alchymists and Operators, foalso to be more instructed by the same in the way of correcting the Spirit of Wine.

Balilius in his Elucidat. 12. Clavium. Where he made the following Menstruum spoke of such a graduated Vitricl, not common. 99-

99. A Menstruum of Basilius made of Hungarian Vitriol.

In Elucid. 12. Clavium.

F you have obtained fuch a highly graduated and well prepared Mineral, called Vitriol, most humbly befeech God to give Understanding and Wisdom for the fucces of your Intention, and when you have calcined it, put it into a Retort well luted : Distil it at first with a flow Fire, then increase it, and the White Spirit of Vitriol will appear in the form of a horrid Fume or Wind, and passeth into the Receiver fo long as any of the fame Matter is init : And take Notice, that in this Wind are hidden all the Three Principles, proceeding from one and the fame Habitation; it is not necessary therefore to be always diving in pretious Things, because by this Means a nearer way to the Mysteries of Nature lies open, and is obvious to all Men apt to learn Art and Wifdom. Now if you can well and purely feparate and free this Expelled Spirit by the way of Distillation, from its terrene Moisture, then will you find in the bottom of the Glass Treasure, and the Fundamentals of all the Philosophers, hitherto known to few, which is a Red Oyl ponderous as Lead or any Gold whatfoever, as thick as Blood, of a burning and fiery quality, which is the true Fluid Gold of the Philosophers, which Nature com-pacted of the Three Principles, in which are found Spirit, Soul, and Body, and it is Philosophical Gold, that (Spirit of Philosophical Wine) excepted, with which the Difsolution of it is performed, &c.

Cinabar the Adepts fometimes added to the Vitriol thus.

and rate r the Fifth (was times of a

FRI DELETING

Ake Aqua Vita fo hot as to burn a Linnen Cloth, then take Vitriol free from all Phlegme, fo as to Boyl upon Fire without Liquefaction (Vitriol calcin'd the common way) the beft Sal Niter, Roch Alume dephlegmed and dried, one Pound of all the aforefaid, of white Tartar calcined, and Cinabar of each half a Pound, grind and fift every one feverally through a Sieve ; then mix, and put the Matter into a Retort, pouring the aforefaid Aqua Vite upon it, put a Receiver to it, the Joynts being very close, and the Luting first thoroughly dried: The Receiver must be large, as those, wherein Aqua Fortifes are commonly distilled : Now the Luting being dried, make a gentle Fire at first, till the Retort grows warm, then continue the Distillation in this degree, that you may pronounce ten words between each drop of the Distilling Water, and when it will Distill no more with that Degree of Fire, increase the Fire fo as to return the Distillation again to the same ten Words as at first; and this degree continue, till the Distillation increafeth again, and laftly, increafe the Fire with Wood, covering the Retort round about with Tiles above, that it may have a Fire of Reverberation; but this observe, the Retort must first be strengthened on all fides with strong Luting, before this Distillation is begun, and when the Distillation is begun, and when the Distillation is, it ought to be placed in a convenient Fornace, with an open Neck; but it would be best and most commodious in this Work, if the Receiver of this Diftilling Water could be handfomly fet in a Bason full of cold Water, but if that cannot be, you must at least lay Linnen Cloths dip'd in Water upon the Receiver again and again oftentimes 3 thus the Receiver may not be broken by the violence of the Spirits, all which particulars mark well. The Distillation being ended, let Univ Calif - Digitized by Microsoft ®

the

the Vessels cool, and keep the Receiver with the Water very close stopped. Then take the fame Mineral dried, and prepared as before, in the fame order and measure, which grind together, and put into a Retort, as before, and pour the Water a little before Distilled upon it, fit a Receiver to it, the Joynts being very well Luted, as before, and having dried the Luting, put Fire under, the Distillation being compleated, take again New Materials of the fameWeight, and put them again into a Retort with their own Water, and Distil; as before, with the fame Degrees of Fire; which being done, and the Veffel cold, take away the Receiver, and keep it carefully with its Distilled Water firmly stopped : -For you will have a Phyfical Mineral Water, or Stinking Menstruum with its Form : This Water hath the power of Calcining, and at the fame time diffolving all Metals with the prefervation of their Vegetative Form: Many Experiments we have herewith both feen and done.

(297)

Isaacus Hollandus to augment the strength of these Menstruums, did rather add some tinging Minerals to the Vitriol, than the Acidity of Niter and Alume. Thus he prepared a Menstruum called,

105. The Diffolving Water for the Red, of the first Description of Ifaacus. Cap. 103. Oper. Min.

Ake of Roman Vitriol fix parts, of Lapis Hamatites, Crocus Martis, Cinabar, Æs uftum, Mineral Antimony, of each one part, being well dried, mix, and putting them into a Retort, pour four Pounds of Rectify'd Aqua Vitæ to them, Diftill and Cohobate three times upon the Caput Mortuum pulverized.

The following Menstruum being like this, proves it to be of a fanguine colour.

106. The

no . Marcis presidentes inc. o

V.C. N. 1911 (1) (1) (2) (2)

106. The Diffolving Water for the Red of the fecond Description of Isaacus. Cap. 45. 3. Oper. Miner.

Ake of Mineral Antimony, Hes ustum, Crocus Martis, Cinabar, of each two parts, of Vitriol the weight of all, being all dried and mix'd together, pour to them of Aqua Vita most purely rectified, the height of two hands; the Vessel being close luted, digest in Balneo the space of ten days, stirring the Matter three or four times every day, that it may be the better incorporated with the Aqua Vita; these ten days being ended, and an Alembick put on, Distill with a gentle Fire, but at last with a most strong Fire twelve hours together, that all the tinged Spirits may ascend with the Aqua Vita: This process repeat, always Distilling the Water with new Matters, till it becomes Red as Blood.

To these two we will add also a third Menstruum of this fort.

107. A Diffolving Water for the Red of the third Description of Isaacus. Cap. 61. 3. Oper. Min.

Ake of Roman Vitriol, Cinabar, of each one part, of Crocus Martis, Lapis Hamatites, Æs uftum, Verdegreece, of each half a part; calcine the Vitriol first. If you have a mind, you may extract the Tincture out of Mineral Antimony with (Philosophical Vinegar) and being feparated from the Vinegar, add it to the former Species, as also as much Aqua Vita twelve times rectify'd as fufficeth; the Veffel being well luted, digest in Balneo feven or eight times, then having put on an Alembick, and luted the Joynts well, Distill with a gentle Firetwo days, then a stronger two days more, then the space of three days, that the Glass may be Univ Calif - Digitized by Microsoft (Philosophical Vinegar) hot; hot; the Glaffes being cold, take out the *Caput Mortuum*, which being well pulverized, digeft with the Diffilled Water for the fpace of cight days, then Diffill the first day gently, the fecond more strongly, the third most strongly for the space of twenty four hours, that the Glass may be red hot; then let it cool, the Diffilled Water digest with new Matters, and Diffill, as before, and that to be three times repeated.

And as these Menstruums were for Red Tincfures, so also he made some for White Tincfures, thus,

108. A Diffo'ving Water of Isaacus for the White. Cap. 76. 3. Oper. Min.

Ake of Roch Alume, Lapis Calaminaris, of the Calx of Eggs, an equal quantity, pour to them as much Aqua vitæ rectify'd from all Phlegme as fufficeth, and diftil, as the Diffolving Water for the Red.

109 Another Diffolving Water of Ifaacus for the White. Cap. 48.3. Oper. Min.

Ake of Roach Alume, Lapis Calaminaris, Calx of Eggs, common Arfenick, an equal quantity, being all pulverized, mix, and to the Powder pour as much Aqua Vita well rechfy'd, as to be the fpace of three hands above the Matter, difful with a gentle Fire, then a ftronger, laftly, for twenty four hours foas to be red hot; cohobate the diffillation yet four times upon the Caput Mortuum reduced into Powder.

Many fuch Menstruums as these we meet with in several places of Isaacus, in the Descriptions of which, the the Addition of Philosophical Aqua Vitæ or Spirit of Wine le not always expressed, yet that it is to be understood in all of them, is evident by the former Receipts of Dissolving Waters : The Menstruums following may be Examples, in the first place that which is called University Dissolved by Microsoft 110. A

110. A Red Water Shining Day and Night of the First Description of Isaacus. 2 . W R. 1

Cap. 153. Lib.2. Oper. Min. Pag. 528. Vol. 3. Th. Chym.

and longith relation and that to be three since repeated.

TAke the Crocus of Mars, Antimony as it is dugge out of the Mines, Red Arsenick, of each one Pound, of Anripigment one Pound, of Roman Vitriol three Pounds, of Sal Niter as much as the weight of all the reft : Grind all together into an impalpable Powder; mix one Pound of Sal Armoniack with them, and being well mix'd, put the Matter in an Earthen Veffel, not glazed within, fuch as can well endure the Fire, and having put on an Alembick, with a Receiver strongly luted, distil Aqua Fortis, as it should be, first with a finall Fire, then increasing the Fire by degrees, and a White Water will diftil, which being diffilled, the Akmbick will begin to be Red or Yellow; then prefently take away the Receiver, and add another, foundly luted, and increase your Fire till a White Spirit goes over ; it is the Sal Armoniack which goes over laft of all, and ftrengthen the Fire fo long, till the Alembick be altogether clear: When now the Red Spirit goes over, nothing (of Sal Armoniack) goes with it, and fo foon as it is gone over (the White Water) the Spirit and (dry) Water (or Sal Armoniack) go over together, then the Alembick becomes White within, as if it was full of Snow, and then increase the Fire till the Spirit and Water are driven through the Beak by Exhalation, as a Man cafts forth his Breath by force; fo the Spirit and dry Water do breath through the Pipe of the Alembick into the Receiver, and increase the Fire, and the Spirit and dry Water being gone over, the Alembick becomes clean, clear, white, and transparent; then let it cool, and take it from the Fire, put the Water into a Glafs, and stop it close. Take the Caput Mortuum, grind it to a fine Powder, put it in pure clear Water for two hours, let it fettle, pour off the clear, and pour it upon pure clear Water again, as before, and let it boyl an hour, as before ; then let it fettle again, add it again Univ Calif - Digitized by Microsoft ® _____to

to the former, caft away the Feces, and that which you poured out (the Solution) evaporate, and a yellow Powder will remain, weigh it, add as much Sal Niter, and mix them together, put them into a Glafs, pour your Distilled Water (or-Menstruum) uponit, put on an Alembick strongly luted all over, adding a Receiver, and leave it three days upon thee Fornace (to Digest) before you put Fire under, then kindle your Fire, and Diftill first with a small Fire, then sometimes a greater, till the White Spirit is gone over, then ceafe, and you have a Red Water thining Day and Night, which diffolves fixed Luna, as Luna is commonly diffolved, and it will take a Tindure as the pureft Sol that ever was feen, yea, it tingeth all White Metals of the colour of Sol.

A Red Water shewing Light by Night of the Second Description of Isaacus. III. . Cap. 44. Oper. Min. Pag. 458. Vol. 2. Th. Chym.

TAke of Roman Vitriol three Pounds, of Cinabar, Verde-grefe, Ceruffe, of each half a Pound, of Crocus Martis, Lapis hamatites of each four Ounces, of Sal Niter as much, as the whole Mafs (five Pounds) pulverize and mix them well together; divide the Mass into three parts, and of one part make an Aqua fortis, which pour upon the powder of another part 5 diftill Aqua fortis again, and pour it upon the third powder, and diftill Aqua fortis again; which being done, pulverize all the three Caput Mortuums. Take the Water of Salarmoniack, which I shall teach you below to make (but we have already declar'd it in Numb. 81.) wherewith grind the aforefaid powder fo fine, as that a Painter may paint with it, then dry it in your Dry Stove in glafs Difhes being dried, grind it dry upon a Stone, and put it into an earthen Pot, and pour the Aqua fortis (before distilled) upon it ; distill first with a gentle fire the space of twenty four hours, then increase (the Fire) as yet 24 hours more, then increase till it begins to shine, then keep it in the same Univ Calif - Digite 2 d by Microsoft @ fiery

fiery brightness fix hours more, then let it cool, take it away from the Fire, and ftop the Receiver well : Then grind and pulverize the Caput Mortuum upon a Stone with Vinegar distilled, and extract the Salt or Element of Fais's out of the Feces; put the Salt into a Glafs, pour yout Aana fort is upon it, the Alembick and Receiver being very clofe, put the Glass in Sand in a Kettle with Water (in Balneo) diftill all that will diftill, when no more diftilleth, let the Balneo boil a day and a night whether it drops or no : Then let it cool, remove it from the Fire, put it in Ashes, use first a weak Fire for 12 hours, then increase the Fire yet 12 hours more; then let it be moderately hot, and let it be fo for fix hours; then let it cool, take it from the Fire, and cover it well, and having taken away the Feces or Salt, grind them very fmall with Diftill'd Vinegar, put it into a Stone Jugge, and a good part of the Diftillation being poured to it, put it in Balneo, doing as was taught be-fore; fee if it hath yet any Feces, and make the Salt clear; put it again in a Glass, pour on the Aqua fortis again, do every way as before, three or four times, and all your Matter or Earth will diftill with the Aqua fortis, then take it. from the Fire, ftop close, and keep it well: For you have a pretious Water , above all the Waters that ever I heard of; and believe me in good faith I have feen and done alfo my felf wonderful things with this Water : This Water I have reduced to a Red Christalline Stone, which would give light by night, fo as that my Friends might fee to eat and drink by it. Keep it well for use, and efteem it as the most fecret Water of all you have.

The Method of making such Shining Menstruums is better perceived by the following Water.

COM ON

From the Receipts we observe :

1. That all Tinging Bodies what foever being either naturally or artificially diffolved in an Acid, and reduced into Salt or Vitriol by the help of the Spirit of Philosophical Wine, do yield the prefent Menstruums, by these two Methods; either by repeated Cohobation, or Simple Distillation; but in this latter way it is necessary for the Salts or Vitriols of the faid Bodies to be first graduated, that is, by various Dissolutions and Coagulations joyned with the Spirit of Philosophical Wine, and then distilled, where Caution must be had, lest in this gradation of the Vitriol, the Acid, be by Operations les necessary than convenient debilitated; for fo you will eafily prepare Menstruums unexpectedly of the Eighth instead of this Kind.

2. That these Menstruums differ from Menstruums of the Eighth Kind, these being Acid, but those Sweet. Dissolve a Compounded Vegetable Menstruum of the Eighth Kind in Distilled Vinegar, Spirit of Sulphur, Common, Aqua Fortis, &c. and you will immediately have a Menstruum of this Kind; on the contrary, debilitate the Acidity of these Menstruums. and they will be transmuted into Menstruums of the Eighth Kind.

3. That these Menstruums are the Estences of Things tinging. disolved in an Acid.

4. That Hungarian Vitriol (Copper naturally diffolved in . an Acid) the artificially purged from Heterogeneous Salts and Feces, does nevertheles as well as other things tinging, require the Spirit of Philosophical Wine, in order to be reduced into an Oil fo excellent in Medicine as well as Alchimy.

5. That it is even much at one by what Acid Copper or any other tinging Body is reduced into Vitriol, provided it be afterwards graduated, that is, mixed with the Spirit of Philofophical Wine : Wherefore you must once for always take notice. that not only in the Writings of Bafilius and Paracelfus, but of other Adepts also, as in Via Veritatis, &c. in several places of which you will meet with these Phrases, Things graduated, corrected, exalted, &c. you must understand not Common Univ Calif - Digitized by Microsoft @

Men-

(305)

Menstruums, but prepared with the Spirit of Philosophical Wine, and so made fit for the Works of the more Secret Chymy.

6. That Roman Vitriol is reduced into so Noble an Oil, not by the Spirit of Common but Philosophical Wine.

7. That these Menstruums do by continued Cohobations become most red, shining by Night so, that Men at Supper want no other Light; permanent and multiplying the Philosophers Stone; but of these in their proper places, namely, the Third and Fourth Books.

Compounded Mineral Menstruums of Simple Mineral Menstruums and Mercury, the rest of the Metals, and other Tinging Things.

greece of Basilius.

Libr. Partic. de Particul. Veneris.

Ake of Copper as much as you will, of which make Vitriol the common way, or inftead of it take Common Verdegreece fold in Shops, which will do the fame thing; to which being pulverized, pour (Common) Diftilled Vinegar, put it in a heat, decant the Vinegar, being transparent and green, to the remainder pour new Vinegar, and repeat the Work, till the Vinegar be tinged, and the Matter remain in the bottom of the Vessel black; draw off the Vinegar being tinged and gathered together either to drinefs, or to a thin Skin, that the Vitriol may be Christallized, and you will have the Verdegreece purified (after the common way) to which being pulverized, pour the Juice of Unripe Grapes (Philosophical Vinegar in Numb. 74.) put it in a gentle heat, and digesting you will have a transparent Sma-Univ Calif - Digitized by Microsoft @ gradine

gragdine Tincture, with which is extracted the Red Tincture of Venus, an excellent Colour for Painters. This Tincture being extracted, mix all the Extractions together, and draw off the Phlegme gently, that the Vitriol being very clear (graduated) may be criftallized in a Cold place, whereof if you have a fufficient quantity, you have also enough Matter for the making of the Philosophical Stone; if perhaps you should doubt to perform fuch a Mystery with every (Natural) Vitriol whatfoever : Concerning this Preparation we lately spoke parabolically in Libro Clavium, Capite de Wein Effig. where we faid : That common Azoth is not the Matter of our Stone, but our Azoth or first Matter extracted by common Azoth and Wine, which are the expressed Juice of unripe Grapes, whereby the Body of Venus is to be diffolved and reduced into Vitriol : This is to be well observed, for thus you will free your felves from many Difficulties. Now out of this Vitriol thus prepared, distil a Spirit and Red Oil, &c.

Annotations.

Nthe Eighth Kind common Mercury and Metals were either by the Spirit of Philosophical Wine, or by some fimple Vegetable Menstruums converted into compounded Vegetable Menstruums. In the Twentieth antecedent Kind, tinging Arids disolved in Acids are more eafily distilled together with the Spirit of Philosophical Wine into compounded Mineral Menstruums: But the present Kind volatilizeth the faid Bodies, not by the Spirit of Philosophical Wine; but Mineral Menstruums, that the Menstruums may be thereby made Sooner, easier, and of a higher Kind. In the last Kind we distilled natural Vitriol, being macerated in the Spirit of Philosophical Wine, or, which is much more conducible, diffolved in the fame Spirit, and reduced into graduated Vitriol, into a Mineral Menstruum : For the natural acidity of Roman Vitriol for the corrofion of Copper, was in the composition of it able and strong enough to dissive the Spirit of Philosophical Wine in the making of the Said Univ Calif - Digitized by Microsoft B. Men-

Menstruum; but here in Artificial Vitriols the matter is otherwife ; for the dry Bodies of Metals co-operating in their Diffolutions do debilitate the acid, and therefore Vitriols, containing this debilitated acidity, are scarce fit either for the dissolution of the Spirit of Philosophical Wine, or the constitution of the prefent Menstruum : Wherefore the Vitriols of Saturn and Jupiter being made with a common acid, do by virtue of the Spirit of Philosophical Wine, yield fweet Oils, or Vegetable Menstruums, not at all acid or mineral; for that weak acid re-... maining in the Vitriolification of those foft Metals, is wholly. -transmuted in the dissolution of the Spirit of Philosophical Wine, as alfo in the very Distillation of it felf, fo that Vitriol being artificially made of Copper and Iron by acids, is distilled not by the Spirit of Philosophical Wine, but Mineral Menstruums, into a Menstruum of the present Kind; but Gold and Silver need not only these Mineral or Stronger Menstruums, but to be likewife volatilized by the fame, and reduced into Volatile Vitriols.

Thus Basilius in Conclusionibus fuis. Sect. 2. de Vitriolis. Cap. I. de Vitriolo Solis & Lune: reduced Gold and Silver into Volatile Vitriol. It is requisite, faith be, first to have our Water made of the cold Salt of the Earth (Niter) and the Eagle (Vegetable Salharmoniack) wherewith Goldand Silver are made spiritual, and coagulated into Cristal, or Metallick Vitriol, by which, O.c. In-Labore primo Libri Revelationis, ut & in Elucidatione 12 Clavium, this Vitriol of Sol is more exactly thus described : Take, Saith ke, of this Water (the Kings Bath or Menstruum described above in Numb. 89.) three parts, of the Calx of Gold one part, mixe. put it in a Cucurbit with an Alembick upon hot Afhes, to be diffolved, if it be not all diffolved, pour off the Water and pour on new, and that, till all the Calx is diffolved in the Water ; when it is cold , white Feces fettle in the bottom, which feparate, joyn all the Water together, and digest in Balneo a day and a night; then having taken away the Feces, digeft the space of nine days continually, distill away the Water, that the Matter may remain in the bottom like Oyl, the Water distilled from it pour on again being heated, diftill, as before, pour on again, diftill, and this repeat fome

(309)

certain times, thus will (the Menstruum) be debilitated, then pour new Water to the Matter like Oyl, digest a day and a night, diftill in Sand to an Oyl, pour on Water again being hot; diftill, and that fo oft till all the Gold is come over, but this Distillation ought to be done in a low Cucurbit, with a flat bottom, put the Golden Water which came over in a cold place, to cristallize, separate the Water from them. Guido made the Volatile Vitriol of Gold out of Gold sublimed : The Gold he sublimed thus : Take of Gold calcined twelve times with three parts of Cinabar, or of Leaf Gold four Ounces, of the Oyl of Salt (the Menstruum described in Numb. 76.) twelve Ounces, diffolve in ashes. Draw off the Oyl of Salt from it feveral times, putrifie for a Moneth, then diftill, and all the Gold will be fublimed, of a Red Colour in the tenth or twelfth Sublimation; but if it will not be fublimed, joyn all together, and draw off the Phlegme in Balneo, to the remainder add of the Oyl of Tartar per delignium four Ounces gradually, and force it with a ftronger Fire, and the Gold will afcend Red with the Menstruum, and be precipitated in the bottom of it; decant the Water from the Gold, upon which kindle Rectified Spirit of (Common) Wine eight or nine times, to take away all the Acidity of the Oyl of Salt. Pag. 11. Thefaur. Chym. With Gold thus sublimed he prepared the graduated Vitriol of Sol by the following Method. Take of Gold fublimed four Ounces and a half, pour to it Radical Vinegar (mix'd with the Spirit of Wine) the height of three Fingers, digeft three days in Balneo, decant the Vinegar, and pour on new, till all be diffolved, which draw off in Balneo, but beware of too much ; put it in a cold Cellar, and the Vitriol of Gold will be cristallized of a Ruby or Granat Colour, more or lefs beautiful, according to the Method of Operating; from which decant the Liquor again to be drawn off to a thin Skin, till you have five Ounces of the Vitriol. Pag. 19. The faur: Chym. The fame way alfo he prepared the Graduated Vitriol of Luna, Pag. 31. as also of Mars, Pag. 36. But Jupiter, Pag. 42. Venus, Pag. 45. and Saturn, Pag. 49. be calcin'd onely, and reduc'd them with the aforesaid Vinegar into Graduated Vitriols, out of all which Vitriols may Meniv Calif - Digiti Qtoy Microsoft @ ftruums

9

(310)

struums of this Kind be distilled, as Basilius his Spirit of Venus.

Isaacus diftilled the Spirit of Saturn out of the Graduated Vitriol of Lead, thus,

114. The Water of Paradile of Isaacus. In Opere Saturni.

Ake of Saturn ten or fifteen Pounds, which no other Metal is mix'd with, beat it into thin Plates, and have a Bottle half full of Vinegar, lute, put it in a warm Balneo, and every three or four days fcrape the Saturn that is calcined from the Plates, gather about five or fix Pounds of it, grind this calcined Saturn (Ceruse) with distilled (Philosophical) Vinegar, upon a Marble, fo as with a Pencil to ferve for a Picture, then take a Stone Jugg, and therein pour Distilled Vinegar to the calcined Saturn, leaving a third part of the Jugg empty, mix very well, ftop it with a Glafs or Stone Stopple, fet it in Balneo, ftir it five or fix times a day with a Woodden Slice or Spoon, ftop it again, nor heat the Balneo more than that you may endure your hand in it; let it thus stand 14 days and nights, then pour off the clear, and pour new Vinegar to the Calx not yet diffolved; mix, proceed, as before, repeating, till all the Calx of Saturn is diffolved; put the Saturn being thus diffolved in Balneo, evaporate the Vinegar with a flow Fire, the Saturn' will be reduced into a Mass, which move to and fro till it be dry; it will be of a Honey Colour, rubit on a Marble with Diffilled Vinegar, like Soap, put it again in the Stone Jugge, being very well mixed, in a warm Balneo the space of five or fix days; stir it every day with a Woodden Slice, ftop the Glass, let it cool, pour off what is diffolved into another large Stone Jugge, pour other Vinegar to it, mix very well, put it again in Balneo, pour off, and thus proceed, till nothing more will be diffolved, which you may try by your tongue, for if the Vinegar be fweet, it is not enough diffolved ; or put a little in a Glass Cucurbit and

let

let it evaporate, if any thing remains, all that will be Gold is not diffolved, and that which remains in the Jugge, or Feces, if they be fweet upon the tongue, and you find yet fomething in the Cucurbit that is not enough diffolved, you may diffolve it by pouring new Vinegar to it. Thefe Solutions coagulate, as before, diffolve in Distilled Vinegar, as before; these Coagulations and Solutions continue, till no more Feces remain in the bottom, but are all things diffolved intoa clear and limpid Water; then is Saturn free from all its Leprofie, Melancholy, Feces, Blacknefs, and Superfluitics, and is pure, as (now, being exempted from all filth) fulible as Wax, and fweet as Sugar, O.c. Take half of the Purged Saturn, put it in a Stone Jugge, and pour to it four Pounds of Diftilled Vinegar, put on an Alembick, and diftill the Vinegar in Balneo, but the Alembick must have a hole in the top, through which pour new Vinegar, diftill, as before, pour on new and draw off, and that till the Vinegar be drawn off as ftrong as it is poured on, then is it enough, becaufe the Matter hath imbibed as much of the Spirits of the Vinegar, as it needs, and as much as it can retain : Take the Jugge from the Fire, and the Alembick being taken off, put the Matter into a Glass that can endure the Fire, put an Alembick to it, put it in a Copel with Afhes in a Fornace; make first a gentle Fire, increase it by degrees, till your Matter goes over of the Colour of Blood, and thickness of Oyl, fweetness of Sugar, and of a heavenly finell; if the heat diminisheth, keep it while the Matter distills, increase the Fire, till the Glass begins to be Fire hot, keep it in this heat, till nothing more diftills; let it cool by it felf, take away the Receiver, and ftop it very well with Wax, beat the Matter (Caput mortuum) in an Iron Mortar, with a Steel Peftle, and then grind it upon a Marble with Diftill'd Vinegar (Vinegar mix'd with the Spirit of Philosophical Wine) put it in a Stone Jugge two parts full, diftill by Balneo, pour on new Vinegar, distill as before, repeat, till the Vinegar distills with the fame strength as it was poured on , let them cool, diffill the Matter in a ftrong Glafs upon Afhes as before, fift with a gentle Fire, then a ftronger, as you did before, a Red Oil will go over, as before, &c. beat the Univ Calif - DQitg of by Microsoft @ Matter, - -----

(311)

Matter, and proceed again, till the Matter will retain no more of the Spirit of Vinegar in the Diffillation *in Balneo*, then take the Matter, diftil what will diftil in a glafs Cucurbit upon Afhes, till you have diffilled the Matter into a Red Oil, which is the noble Water of Paradife, by which all Fixed Stones may be refolved, and the Stone made perfect. This Water of Paradife the Ancients call'd their fharp, clear, Vinegar, \mathfrak{Sc} .

Metals fometimes are not reduced into graduated Vitriols but by repeated Cohobation made Menstruums of this Kind Thus

Y Still The Lot of an

115. The Mercurial Vinegar of Trismosinus. Libro Moratosan sive Octo Tincturarum in Secunda Tinctura, Pag. 79. Aur. Vell. Germ.

Ake Argent Vive purged the common way, put it in an Alembick, whereto pour very fharp Vinegar (Vinegar mix'd with the Spirit of Philosophical Wine described before in Numb. 72.) three Ounces of Vinegar to one Ounce of Mercury; draw off fix times in Balneo, then force it to ascend into the Receiver, being distilled, rectifie it, and it will be prepared.

Sometimes instead of Philosophical Vinegar he used the prongest Aqua Fortis described in Numb. 73.

116. The Mercurial Water of Trismosinus. Libr. Octo Tincturar. in Tinct. quarta. Pag. 80. Aurei Vell. Germ.

Ake of Roman Vitriol, Sal Niter, of each one Pound and a half, of (Vegetable) Sal armoniack four Ounces, of Tiles pulverized one Pound, out of which diftil Aqua fortis by the Rule of Art. Take of Venetian MerMercury fublimed (you must have a care of its Venemous Fume) four Ounces, put it in a Cucurbit, pour the faid Aqua fortis to it, draw off strongly, that the Mercury may be well mixed with the Aqua fortis, and it will be prepared.

Albertus Magnus prepared the Same Mercurial Water thus,

117. The Mercurial Water of Albertus Magnus. Libro Compositum de Compositis. Cap. 5. Pag. 937. Vol. 4. Th. Chym.

Ake of Roman Vitriol two Pounds, of Sal Niter two Pounds, of Alume calcined one Pound ; being well ground and mix'd together put the Matter in a fit Glass Phial, and having luted the Joynts very close, that the Spirits may not evaporate, distill Aqua fortis after the common way, first with a weak Fire, secondly a stronger, thirdly with Wood, that all the Spirits may go over, and the Alembick turn white; then put out the Fire, let the Fornace cool, and keep the Water carefully, becaufe it is the Diffolvitive of Luna, keep it therefore for the finishing of the Work, because that Water diffolves Luna, separates Gold from Silver, calcines Mercury and the Crocus of Mars, Ge. This is the first Philosophical Water (Common Aqua fortis) and hath one Degree of Perfection in it. Take of the first Water one pound, dissolve in it two Ounces of (Vegetable) Sal armoniack pure and clear, which being diffolved, the Water is prefently otherwife qualified, and otherwife coloured, becaufe the first was of a Green Colour, and the Diffolvitive of Luna, and not of Sol, and prefently after the putting in of the Sal armoniack the Colour of it is turned to a Citrine, and diffolveth Gold, Mercury, and Sulphur fublimed, and tingeth a Mans Skin of a most Citrine Colour, keep that Water (Philosophical Aqua Regis) apart. Take of the fecond Water one Pound, and of Mercury fublimed with Roman Vitriol, and common Salt five Univ Calif - Digitized by Microsoft & Ounces

(314)

Ounces and a half, put it to the fecond Water by little and little gradually, feal the Mouth of the Glass well, that the Virtue of the Mercury put in may not fuddenly exhale; put the Glass in Ashes temperately hot, and the Water will prefently begin to work upon the Mercury, diffolving it and incorporating; and let the Glass stand thus in hot Ashes, and in the diffolution of the Water, till the Water appears no more, but has wholly diffolved the Sublimed Mercury : Now the Water acts always upon Mercury by the way of imbibition, till it diffolves it totally : But take notice, if the Water cannot wholly diffolve the Mercury put in, then lay afide the Mercury that is diffolved by that Water, and that which is not diffolved at the bottom dry with a gentle Fire, grind, and diffolve it with new Water as before, and thus repeat this Order, till all the Sublimed Mercury is diffolved into Water: And then joyn all the folutions of that third Water, into one, in a clean Glass, and stop the Mouth of it, well with Wax, and keep it carefully : This is the third Philosophical thick qualified Water in the third degree of Perfection, and is the Mother of Aqua Vita, which diffolves all Bodies into their first Matter. Take the third clarifi'd Mercurial Water, qualifi'd in the third Degree of Perfection, putrefieit in the Belly of a Horfe, to be well digested in a clear Glafs with a long Neck, well fealed the fpace of 14 days, make it putrefie, and the Feces fettle at the bottom, then will this Water be transmuted from a Citrine to a Yellow Colour, which done, take out the Glass, put it in Ashes with a most gentle heat, put on an Alembick with its Receiver, and begin to distil by little and little a most clear, clean, ponderous Aqua Vite, Virgins Milk, most sharp Vinegar, drop by drop, continuing constantly a flow Fire, till you have distilled all the Aqua Vita gently, then put out the Fire, let the Fornace cool, and keep it diligently apart. Behold this is Aqua Vita, the Philosophers Vinegar, Virgins Milk, by which Bodies are refolved into their first Matter, which is called by infinite Names. The Signs of this Water are thefe, if a Drop be cast upon a Copper Plate red hot , it will presently penetrate , and leave a White Impression , it finoaks upon Fire, is coagulated in the Univ Calif - Digitized by Microsoft Air

Air after the manner of Ice : and when this Water is difuilled, the Drops of it do not enter continually as other Drops, but one is diftilled one way, another another way; this Water acts not upon Metallick Bodies, as another ftrong Corrofive Water, which diffolves Bodies into Water, but if Bodies be put into this Water, it reduceth and refolves them all into *Mercury*; as you fhall hear hereafter.

Paracelfus made this Water by the following Method.

118. The Mecurial Water of Paracelsus. In Appendice Manualis de Lap. Phil. Pag. 139.

Ake of Mercury feven times fublimed with Vitriol, Sal Niter, and Alume, three pounds of (Vegetable) Sal armoniack fublimed three times with Salt, clear and white, one Pound and a half, being ground together and alcolized, fublime them in a Sublimatory nine hours in Sand: Being cold, draw off the Sublimate with a Feather, and with the reft fublime, as before : This Operation repeat four times, till no more fublimes, and a Black Mass remains in the bottom flowing like Wax ; being cold take it out, and being ground again, imbibe it often in the Water of Sal armoniack prepared according to Art (the Menstruum described in Numb. 91.) in a Glass Dish , and being coagulated of it felf, imbibe it again, and dry nine or ten times over, till it will fcarce any more be coagulated : Being ground finely upon a Marble, diffolve it in a moist place to a clear Oil, which you must rectifie by Distillation in Ashes from all Feces and Sediment. This Water keep diligently as the best of all.

Lully made his Mercurial Water of Mercury and the Stinking Menstruum thus,

119. The

Univ Calif - Digitized by Microsoft @

1 19. The Sinking Mercvrial Menftruum of Lully. Pag. 63: Teftam. Novifimi.

Ake of the Stinking Menstruum four Pounds, and put in one pound of Mercury Vive, put the Matter in Balneo or Horse Dung fix days, and it will be all converted into Water, distil by Balneo, and you will have a Mercurial Water, truly Mineral.

Ripley followed kis Master in the way of making the Mercurial Water, as followeth.

120. The Mercurial Green Lion of Ripley. Pag. 310. Pupillæ Alchymicæ.

Ake Mercury fublimed with Vitriol and common Salt, to the quantity of 20 or 40 Pounds (in my opinion two or four ought to be read) that you may have enough. Grindit well into Powder, and put it in a Glass Vessel very large and ftrong, pour to it fo many Pounds of the most strong Water .(the Stinking Menstruum is the strongest Water in the World, Pag. 138. Medulle) as there are Pounds of Mercury : Shake them foundly together, and the Vefiel will become fo hot, that you can scarce touch it ; stop it well, and let it stand nine days in a cold place, fhaking it ftrongly three or four times each day : Which done, put the Veflel in a Fornace of Ashes, and with a most gentle heat distil away all the Aqua Vita (Menstruum) which keep fafe by it felf, then immediately add another Receiver well luted , kindle a most ftrong Fire, and continue it till all the Golden Liquor is wholly distilled.

The fame ways as the Mercurial Waters are made, may alfo be made Menstruums of this Kind out of the other Metals, thus.

Univ Calif - Digitized by Microsoft @ 121. The

(316)

(317.)

ANSA CLARENOFT BERNIN

121. The Stinking Lunar Menstruum of Lully. In Experimento 29.

T Ake of the aforefaid Mineral Water (described in Numb. 104.) as you have it in the former Experiment (Numb. 26.) fix or eight Ounces, diflolve in it one Ounce of Luna, which diffolution put into a small Retort to be distilled by Ashes; which Distillation ceasing, increase the Fire as much as possible, and when no more moissure will with this degree of Fire distil, cool the Vessel, receive the Distilled Water, wherein is the Soul of Luna, and secure it from respiring.

Thus also Lully prepares the Water of Sol.

With which the thirt i

122. The Stinking Solar Menstruum of Lully. In Experim. 31.

TAke the Aqua Fortis or Mineral Water (described in Numb. 104.) as above, and in every Pound thereof diffolve three Ounces of the Animal Salt prepared and fixed, as you have it in its (Sixth) Experiment: Which being diffolved, diffolve therein two Ounces of Gold cemented, as you know, after that putrefie eight days, then diftill by Balneo: Now that which remains at the bottom, will be likemelted Honey, upon which Matter pour again fome of its own Water diftilled by Balneo, fo as to fwim two fingers above it; putrefie for a natural day, then taking away the Antenotorium, put on an Alembick with a Receiver, fo clofe, as not to refpire: Diftil by Afhes, till no more will diftil, then increase the Fite a little, that part of the Air may pals into the Water; and laftly increase the Fire, that also the Element of Fire may pass through the Alembick ; and when nothing will diffil with this laft degree of Fire, cool the Veffel, take away the Receiver with its Diffilled Water, and keep it well ftopp'd. R r Heacus keep it well ftopp'd.

Ifaacus Hollandus made a Mercurial Water sometimes with the Mercury of Luna, thus.

123. Philosophers Vinegar made of the Mercury of Silver of Isaacus.

Cap. 99. 2. Oper. Min. Pag. 492. Vol. 3. Th. Cym.

Ake of the Calx of Luna one Pound, of Sal armoniack, which must be clear and transparent as Cristal, without moifture, a fourth part, being ground, put them in a Stone Jugge, then take (*Philosophical*) Vinegar diffilled five or fix times from its Phlegme, fo as to leave no Feces; empty the Vinegar into another Stone Jugge, and having. put on an Alembick, place it in Balneo: The Jugge which the ground Calx is in, lute well to the beak of the Alembick. and let the Luting be throughly dried ; Then make Fire un-der the Balneo, and diftil the Vinegar leafurely upon the Calx of Luna; and fo many Pounds as you have of the Calx of Luna; fo many four Pounds of Vinegar diftil upon it, and when all the Vinegar is diffilled, let it cool gently the fpace of three days, before you remove the Jugge, for if you remove it fooner, the Vinegar, Luna, and Sal armoniack will run over, and you will retain nothing, fo vehement is that Matter, for Cold and Hot do come together ; and when you would remove it, have a Glafs Stopple ready fitted to the mouth of the Jugge, or Receiver, which you must prefently lute to it, that the Virtue may not evaporate : Then fet the Jugge in Balneo, let the Fire be no hotter than your hand can well endure in the Water up to the Knuckles, or then may be drunk without burning, and thus keep it the fpace of fix weeks: Then let it be cold, break it, and prefently lute an Alembick to the Jugge very firmly, and put a Receiver to the Beak, distil in a temperate Balneo, whatfoever will distil, and when now no more distils, take it out, and put it in Afhes, lute the Receiver again to the Beak, and first apply a gentle heat, then sometimes a stronger', till your Mercury begins to fublime with the Sal armoniack.

as

as white as Snow, and hanging to the White Matter with clear Fibers, then keep it thus (till you fee it fublimes not) in the fame heat, to extract the Mercury purely out of the Earth : Then let it cool, take away the Alembick, take out the Mercury being fublimed with the Sal armoniack, which are fublimed into a Mass together, which weigh, that you may know how much Mercury you fublimed out of the Calxes of Luna, for you knew how much Sal armoniack you put into the Jugge : Then put the Sublimate again into a Glass, and again fublime, that you may fee whether any Feces remain, for you must repeat the Sublimation till no Feces remain. Keep this Mercury till I teach you what to do with it : You must know that in that Vessel, wherein you fublimed the Mercury with the Sal armoniack, is the Body (commonly called Caput Mortuum) or Element of Earth with its Oyl or Fire, this take out and weigh, that fo you may the better know, how much Mercury you fublimed also out of it, for you knew how much of the Calx of Luna you had in the Jugge, fo you may certainly know how much you have out of it : Then put your Salt or Earth into a Glafs, and pour Distill'd Vinegar upon it, and dissolve it into a pure Water, if it yields any Feces, pour off the top gradually, and congeal again, till it leaves no more Feces, then congeal again : Then have you your Salt prepared with your Earth clear as Criftal. Now take your Sublimed Mercury and Sal armoniack, and your clear Salt, and grind them together upon a Marble dry, being ground, put all the Matter into a Glass Plate, fet it on a Tripos or our Calcining Fornace, and there let it ftand fix Weeks, and apply fuch a heat, as if you would keep Lead melted without congealing : Those fix Weeks being expired, let it cool,then put it in a cold Cellar, and cover it with a Linnen Cloth, that no dust may fall in, and in the space of fix or eight days it will be wholly diffolved into a clear Water. Now you must know, this is the Philosopers clear Vinegar, for when they write our Vinegar, they mean this Water, and when they fay Philosophers Mercury, they mean this Water, and it is their Vinegar which they write or fo wonderfully fpeak of Univ Calif - Digitized By Microsoft @

or vith class

Line goriland

From the Receipts we observe :

1. That Metals and Minerals volatilized with Simple Mi-

2. That these Menstruums are the same with the Menstruums of the Eighth Kind dissolved in Simple Mineral Menstruums, but differ from the antecedent Kind, in being made not with the Spirit of Philosophical Wine, but Philosophical Vinegar.

3. That these Menstruums are the Estences or Magisterics of Things tinging disolved in Simple Mineral Menstruums.

4. That those Menstruums being Mineral or Acid, are in Alchymical Processes better than the Vegetable Menstruums of the Eighth Kind, because stronger.

5. That the diffolutions of Metals performed by thefe Mercurial Menstruums, have been by the Adepts fometimes called Amalgamations. You must know, faith Isacus, That this is the best Solution, that ever was found in the World, for herein is no error of Proportion and Weight. For Nature errs not. For when Mercury is disfolved, it disfolves other Metals also, as is rightly taught in other places. Nor will it disfolve more than it is able, nor will it receive more of a Body into it, than its Nature can bear. For whatfoever has no need of it, it cannot disfolve. And it is the best Amalgamation that can be found. 2. Oper.Min. Cap. 103. Pag, 494. Vol. 3. Th. Chym. That Bernhard in Epittola ad Thomam treated not of a dry but of this moist Amalgamation, I shall prove a elsewhere.

6. That the Menstruum of Venus, Sol, Luna, &c. is of the same Virtue, as to the faculty of Dissolving, with the Menstruum of common Argent Vive; this Mercurial Menstruum has been indeed more in use than the other by some Adepts, because of the more easie way of operating upon the Open Body of Mercury, the it be less powerful than the rest in Point of Tinging.

7. That there are divers Kinds of Stinking Menstruums: The Thirteenth Kind taught us how to distil the most Stinking Menstruum of all, out of Atrop: For there the Oyly Matter of

Univ Calif - Digitized by Microsoft ®

the

the Spirit of (Philosophical) Wine being dissolved in Vitriol, is in its Distillation purged from all its Putrid Feculencies; but the Twentieth Kind treats of Menstruums lefs stinking, being made of the Spirit of Philosophical Wine now purified and fweet : The prefent Kind produceth from the fame Matter Menstruums of the fame Name indeed, but not of the fame Stinking Savour, Colour, &c. For Philosophical Vinegar is, by reafon of the perfect disfolution of the Spirit of Philosophical Wine, Diaphanous, not of a Milky Colour, but in the Distillation of a Menstruum it is made Milky, because the Acidity of the said Vinegar being debilitated by the Aridity of a Body diffolved, cannot retain the Unstious Spirit of Philosophical Wine so well as before, but in the precipitation of which the Distilled Liquor becomes Milky; for this reason the Adepts sometimes added common Vitriol and Niter to the Azoquean Vitriol, that the faid Spirit might the better be diffolved. In a word : The greater quantity of Philosophical Vinegar, or any other Mineral Menstruum stronger than this, is made use of in the making of these Menstruums, the less Milky, and less Stinking will the Menstruums be, because made not of the embrionated Stinking Matter of the Spiritof Philosophical Wine, but of the Same purified by Circulation and Distillation. 8. That these, as all other Menstruums, are by Digestion

8. That there, as all other Menstruums, are by Digestion made sweet and transmuted into Dissolvents of the Eighth. Kind.

Mineral Menstruums compounded of the Philfophers Vinegar, and other Simple Mineral Menstruums and Things tinging being first fixed.

124. The Menstruum of Venus of Isaacus Hollandus. Cap. 82. 3. Oper. Miner.

Will now Son teach you how to make the Stone, which God gives us freely. You muft know it is made divers Ways, but I will teach you the Way which I learnt from my Father. Take of the Stone which God gives us freely (the Vitriol of Venus) as much as fufficeth, which dillolve in (Philofophical) diftill'd Vinegar, let the Feces fettle, decant the Diffolution from the Feces warily, and filter; draw off the Vinegar with a gentle Fire, that the Matter may remain dry; being dried diffolve it again in Diftill'd Vinegar, decant, filter, and draw off, and that to be four times repeated, till no more Feces fettle in the Solution: Then diftil away the Vinegar with a gentle Fire, till the Matter becomes fo dry, as to flie away in the beating of it into Powder, yet retains its Spirits: Now it is prepared for Calcination. You muft know Son, that this Matter is in its Nature Matter Difficultion of the Solution of Stip-

diffolved in Distil'd Vinegar, that it may retain the subtil Spirit of the Vinegar, and be calcined together with the faid Spirit, made more fubtil, be better opened and diffolved, for the Spirit of Vinegar diffolves well before all things. The Vitriol being thus prepared, Put it in a Glass Bottle or Egg, lute hermetically, but the Veffels must be fill'd, that there may be no space for the Spirits to elevate themselves, fet it on a Tripos, and there let it remain in a temperate heat, to fubtiliate it felf: Then take out the Matter, and pulverizeit, put it in a Cucurbit, put on an Alembick with a Receiver to it, and fo diftil in Balneo whatfoever will distil, it will be distilled in about 20 or 25 days: Then lay afide the Distillation, take out the Feces lying at the bottom of the Cucurbit, grind them very fine upon a stone, put them in a Diffolving Veffel, pour all the Distilled Water to them, feal hermetically, and it will be all diffolved in Balneo without Feces ; diffil the Solution in a Cucurbit through an Alembick in Balneo with a moderate heat, that all the Water may feparate it felf. which keep very choicely; continue the Distillation in Ashes, that you may receive the Element of Air in the form of a very noble Citrine Oyl; and this must be done with a strong Fire, lay alide the Air by it felf very well ftopped near the Water : The Feces being as red as Blood, take out of the Cucurbit, grind them to an Impalpable Powder upon a Stone, put them in a Glass Bottle or Egge, feal, and fet it 20 days and nights on a Tripos to be fubtiliated with a temperate heat, then take out the Matter, grind it to Powder, put it in a Diffolving Vessel, pour to it the Element of Wa-ter (above distilled) seal, and put it in Balneo, to be diffolved, as before; diffil the Solution through an Alembick in - Ashes (the Receiver must be put into cold Water) increase the Fire by degrees, till at length it be hot; fo let it continue five or fix days, and in the mean time will afcend the Element of Fire in the form of a Red Oyl, fuffer it to be cooling three or four days, then take away the Receiver, keep it very well ftopp'd' oren it, the novo some a sharing a fit

EV b THIS

TTE have had divers graduated Vitriols in the former Receipts, which have yielded us divers Menstruums. The Vitriol in this Kind is made better than all of them 3 for it is made of Vitriol graduated in a close Veffel, fixed according to Art, and again diffolved in Philosophical Vinegar, that by Distillation it may be made a better Menstruum than those before. In the Ninth Kind of Vegetable Menstruums the graduated Vitriol of Mercury, made of Mercury fublimed and Salt circulated, is in a close Veffel reverberated into a Fixed Powder, which Crocus of Mercury then volatilized with the Spirit of Philosophical Wine, makes a Vegetable Menstruum. If the same graduated Vitriol of Mercury be in a close Veffel reverberated into a Fix'd Precipitate, and then diffolved, not in the Spirit of Philosophical Wine, but Philosophical Vinegar, or fome other Mineral Menstruum, it will be thereby made a Menstruum of this Kind. That which is spoken of the Vitriol of Mercury, must be also understood of the prefent Vitriol of Venus in our Receipt ; where Ifaacus diffolzes the faid Vitriol in Phiofophical Vinegar, depurates and graduates, which then he calcines, that is, fixeth upon a Tripos ; being fixed it must be diffolved in new Philosophical. Vinegar, and volatilized, before the Distillation of it, as appears : by the Description of the same Menthuum elsewhere given.

125. A Menstruum of Vitriol of Ifaacus Hollandus. Cap. 62. 2. Oper. Min.

(provi i population)

Ake a great quantity of Roman Vitriol, 10 or 12 Pounds, 1 ather more than lefs, as much as you will, and diffolve the Vitriol in common Water; let the Feccs fettle, put the clear Diffolution in a Stone Veffel to be congealed, till a thin skin comes over it, then let it cool and fland three daysa, nd you will have notable Stones of a green colour clear

as Criftal; take out those Stones, and put them in finall Glass Vessels in a clean Balneo to dry, the Balneo must have such a heat as is of the Sun in the middle of Summer, and your Stones will be turned into a white Powder, which Powder diffolve in common Diftill'd Water, and let the Feces fettle, decant the clear into a clean Vessel, as before, and let it be congealed, as before; this repeat, till you can fee no Feces left; when you have thus walhed and made your Powder white, you may be affur'd your Vitriol is rightly prepared. Now take the white powder of Vitriol, put it in a Glass Vessel with a Neck pretty long, and feal the Neck with the Seal of Hermes fo, that no Air can either pafs out or in; and then put it in a Plate with fifted Ashes upon a Fornace, put fire under, and put a Burning Lamp under the Fornace, adding fuch a heat as the Sun yields in the middle of March, and thus keep it, till you fee your Matter grow yellow, and continue it in the fame heat, till it be perfectly ruddy, then increase the Fire a little, that is, put under one Lamp more, and thus continue it eight or ten days, and then fee whether your Matter begins not to be red, if it begins to be red, increase your Fire, and so continue it eight or ten days : But if you gain nothing in rednefs, increase your Fire with yet one Lamp, and fo proceed gradually always one Lamp being kindled, till your Matter be as deep a red, as a Rofe or Ruby; it being now fo deeply red, fuffer it even thus the space of eight or ten days in the same heat; when you fee your Matter remains in the fame state, take it out of the Plate with Ashes, and empty it into another strong Glafs, pour a good quantity of (Philosophical) distill'd Vinegar upon it, and put it in Balneo, let it boil, and ftir it with a Woodden Spatula three or four times every day, and thus continue it four days and nights, then let it cool, and pour off the clear ; and again pour on Diftill'd Vinegar, and that repeat three times ; then throw away the Feces, and draw off the Vinegar through an Alembick in Balneo, till your Matter become altogether dry; pour on new Vinegar, and do as before, and that fo long, till no more Feces remain in the Diffolution : Then congeal it into a dry Powder, which put into a good thick Glafs, and putting on an Alem-Univ Calif - Digiti Sed by Microsoft @ bick

bick with a large Head, diftil in order to obtain first Saffron Colour'd Spirits, then a Red Oyl, lastly, white Spirits, then let it cool, take away the Receiver, and keep that truly bleffed Oyl which is in it. Take away the Alembick, and in the Pot you will find a Matter white as Snow, and clear as Cristal, Ge.

(326)

The way of making of this Menstruum, we will consider in its several Branches.

The first is concerning the choice of Vitriol, which Reason requires as well as the antecedent Receipt to be graduated, that is, dissolved either in the Spirit of Philosophical Wine, or Philosophical Vinegar, and Cristallized, for the Calcination of common Vitriol, dissolved in common Water, and purified, in a close Vessel to a most red colour, is altogether Impossible, and of no Efficacy neither; for nothing but the common Acid or common Spirit of Vitriol is extracted out of common Vitriol, be it never so well purified and calcined: Vitriol therefore well Purged in common Water, is to be chosen according to the present Receipt, but after that, according to the antecedent well dissolved in Philosophical Vinegar, that it may be thereby made graduated Vitriol, and the fit Matter of this Menstruum.

The second Branch treats of the calcination or fixation of this graduated Vitriol into redness : Corncerning which, the former process was too obscure, but the present or later clear enough : This Calcination is the true and Philosophical way of fixing this Vitriol, and that chiefly, because citrinity and redness follow. blackness and whiteness; the true signs of volatilization as well as fixation, of which Tho. Isaacus faid nothing in both. the Receipts, yet other Adepts have mentioned these Colours in the fixing of Vitriol. Take that Stone, faith Ripley, Cap. 7. Phil. Cupri Stillicidium (the Green Lyon of Foots, or common. Vitriol graduated) and putit, being ground into a Philosophers Egg, and proceed upon it by the way of Putrefaction, as was declared in the Process of Rebis, and continue the Stone upon the Fire, till after blackness and whiteness, it is. turned into a red Powder, which many call Vitriol Rubificated.

But

Univ Calif - Digitized by Microsoft @

But here rifeth some doubt , in that the Red Colour of this Calcined Vitriol, feems to be by Ifaacus himfelf called Volatile, not in the least fixed. This Matter, faith he, will remain red for ever, and not fixed, for if it fhould be fixed, it would be altogether corrupted, for it must be Dislolved into Water, and diffilled through an Alembick, Cap. 65. To difperfe this Cloud, you must know, the meaning of Ifaacus is, that Vitriol calcined, or by what way soever reduced into redness, remains red, but not also fixed, because it must be dissolved in Philosophical Vinegar, and Distilled through an Alembick. For we find the like, if not the same Phrase, concerning the redness and fixity of the Philosophers Stone, which will eafily remove the aforefaid doubt : When the Stone is perfect, faith he, it ought to remain in that State now and for evermore. After Perfection, it cannot be changed for better nor for worfe, but will remain a King for ever. Wherefore, if any Man has prepared the true Philosophers Stone, no Multiplication follows after; wherefoever Multiplication follows after Perfe-Etion, there is not the Philosopher's Stone, nor is there a true Stone. It may be a Medicine, or other Stone, of which fort are many wherewith Projection is made, but it is not the Philosophers Stone, which we here Discourse of. When the aforefaid Stone is perfect and prepared, it ought to remain in that State for ever, Cap. 127. 1. Oper. Miner. Pag. 407. Vol. 2. Th. Chym.

As to the Permanence of the red colour in the Philosophers Stone, he declares the following Notions: In Multiplication, faith he, no blacknefs intervenes, nor do any Colours of the World fhew themfelves, nor any Whitenefs, nor in Sublimation does any thing fhew it felf befides rednefs, nor in fixation does any Colour fhew its felf except its own, that is, an egregious rednefs: For the Stone hath no other Colour but rednefs, for it is one only fubftance, one fingle matter, and as the Heaven invincible: You must also know, tho it were fublimed, it would not be deprived of all its fixity, for when the Stone is made and prepared in the utmost vertue of it, then can it not be changed out of its own Effence into another, for if the Stone could be changed or drawn out of its own Effence into another Effence or Nature, it would not

Univ Calif - DiStaz2d by Microsoft ®

be

be the Philosophers Stone, nor one single Matter, nor a glorified Body; no, no, understand my Discourse rightly, &c. Cap. 72. 1. Oper. Min. Pag. 355. of the fame Volume.

Ifaacus being perhaps perswaded of an unalterable constancy of redness observed in the Multiplication of the Stone of higher Degree or Kind, concludes the Philosophers Stone to be altogether and abfolutely immutable : which Opinion to defend in every part, be has fooner ventured to deny the volatilization it felf of the Stone, than give way to the altering of fixity in Multiplication : You must know, faith he, if the Stone were fublined, yet would it not be deprived of its fixity. Tea, he has chosen rather to prevert his own Senses (for he himself hath in the same place taught how to volatilize the Philosophers Stone, with some shining Menstruum) and the Sense of the Word Fix (thoupon this Term depends one half of all the Operations in the more fecret Chymy) than relinquiff this fallacy derived from a Paralogism. The Stone, faith he, may be fo often opened as aforefaid, and after that fublimed, and again condenfed to as to unite its parts, which we call. Fixation; we term it indeed Fixation, but it is not Fixation, but only Condenfation, fo, as that all the fubril parts of it are again forced-into anUnion-joyntly together, as they were at first, and the Stone will again expect Fire, and we may again make Projection with it, as we did before. Cap. 76. read 73, 74, 75. Chapters of the Same Book.

What we have against this Opinion, we will referve for the Third Book; in the meantime it will be requisite for you to obferve this one thing: That the Matter of Calcined Vitriol, as also of the Philosophers Stone, multiplied, remains for everred, but not fixed, because either of them may be volatilized with Philosophical Menstruums. But let them be how they will, the Vitriol of Saturn fixed the same way by the same Author, will prove that the graduated Vitriol of Venus, calcined to redness in a close Veffel is fixed. Take, faith he, a Glass Viol, put in it one half of Purged Saturn (Sugar of Saturn made not with common Distilled Vinegar, but Philosophical) referve the other part by it felf-till you have occasion, put a fit Glass to the mouth of the Viol, and put the Glass in fifted Ashes in a Fornace, of Tripos Arcanorum, or on a Fornace wherein

Univ Galit - Digitized by Microsoft ®

you.

vou calcine Spirits; give it a Fire as hot as the Sun is at Midfummer, no more, except by chance a little hotter or colder, provided it be not fo great as to melt the Lead, for fo your Matter would be liquid as Oyl, and should it stand fo the space of 12 days, all the Sulphur would fly away, and the Matter be corrupted, for the Sulphur of it is not yet fixed, and on the outfide only, and therefore the Matter is most eafilv melted, and though it be pure, yet is it not fixed ; wherefore the Fire must be fo gentle as not to melt the Matter; let it stand fo the space of Six Weeks, after which take a little, project it upon a hot Iron, if it prefently melts and fumes, it is not yet fixed, but if it remains, the Sulphur of it is fixed: Then increase the Fire notably, till your Matter becomes citrine, and fo continually till it grows red, fill increasing. the Fire till it attainsto the colour of Rubies; increase till it is red hot, and then is it fixed, and prepared for Infufion, with the Noble Water of Paradife (the Menstruum described in. Numb. 114.)

Befides this, there is indeed another way alfo of calcining Philosophical Vitriol, which is done in an open Vessel; thus graduated Verdigrese is calcined to redness before the Distillation of it, in the preparation of the Spirit of Venus of Basilius, as we have observed in the precedent Kind, but this belongs not to this place, for the Calx remains volatile, not fixed, which way of Calcining was invented meerly for the seperation of the Phlegme.

The third Branch confifts in a new diffolution of this fixed Vitriol in Philosophical Vincgar, for which Reason this Vitriol is volatilized again, and made fit for Distillation, in the former Receipt, this Solution is wholly omitted, but more exatly described in the latter Process.

The fourth Branch is the fingle, and frequent Distillation in the feveral ways of making all these Stinking Menstruums, yet this excepted, that out of this graduated, fixed, and again volatilized Vitriol, the Spirit ascends not White, but of a Saffron Colour (because more Mature) before the Red Oyl; and lastly, the White Spirit appears also, being extracted out of the Salt or White Body.

Univ Calif - Digitized by Microsoft ®

Laftly,

"Laftly, Thefe words following do prove, that the fame Men-Arnums may be also made of any other Metals. But if you would extract an Oyl out of Metals, as has been taught of Vitriol ; you must dissolve your Metal in Aqua fortis, and make it precipitate, and wash away the Saltness of it with common Water, and being dryed, put into a Glass with a long Neck , and congealed , and put upon a Fornace with Sifted Ashes, make a Fire under it as for Vitriol, till the Metal be alogether red, and till the infide of it is turn'd outward : Then diffolve it in Diftil'd Vinegar, as the Vitriol, and Congeal, till no more Feces remain : Then distil, and the Metal will wholly distil into a Red Oyl, and it is the perfect Oyl of the Philosophers, but the Projection of it is not fo high, as of the Oyl which was first Salt : And the Oyl of every Metal you must Multiply with the Oyl of Vitriol, as aforefaid : And the Oyl is very eafily made after the fame manner out of Saturn, and the Projection of it is very high : Give thanks to God, Work, and remember the Poor, difpense the gifts of God to your own Salvation, Cap. 80.2. Oper. Min. Pag. 478. of the fame Volume.

All Metals, Saith he, Cap. 67. of the Same Work even Jupiter and Luna, will become red as blood, for the infide of all Metals is red, one more red than another : When therefore they are brought to rednefs, they must then be diffolved (in *Philosophical Vinegar*) and again congealed, till they be free from any Feces, and yet contain their Elements together perfectly; for when they are brought to that pitch, nothing remains, fave only Feces; for the Earth (the Caput Mortuum) being made fubtil and liquid, is likewife diffolved, when you have made it fubtil by Diffolving and Coagulating fo, as that no more Feces remain. Thus you may Distil it through an Alembick into a Red Oyl. As you was here taught concerning Vitriol, fo must you also do with all Metals, as alfo Mercury, when it is diffolved in Aqua Fortis, and precipitated, the Saltness wash'd away and dried, put it in a Glafs, as was faid of Vitriol, and done moreover fo, as was taught before concerning Vitriol. And that which is here declar'd of Metal, you may alfo do with Antimony (and all other Minerals.) Open your Ears, and hearken, and open your Univ Calif - Digitized by Microsoft @

your Mind, it was never heard that fuch a Work should be done with so little Pains.

Here I would advise you to take Notice of the difference be-tween the Oyls of Vitriol and other bodies ; the like Oyl is produced from all Metals as from Vitriol, yet with this difference, that Vitriol in the Distillation of its Oyl, leaves an Earth or Salt behind it, wherewith the Spirit and Oyl of it are fixed. into the Philosophers Stone; but Metals and the rest of the Minerals not fo, they totally ascending into Spirit and Oyl, no Earth. Salt or Caput mortuum remaining, whereby to be fixed into the Stone : Vitriol therefore is that alone, which hath. all things in it, relating to the Perfection of it felf, whereas the Oyls and Spirits of thereft are forced to borrow fixed bodies elfewhere for their fixations. You must know, faith he, when you would reduce the Salt of Metals to an Oyl, the fame as hath been faid of Vitriol, the Elementary Earth of Metals. will diffil together, with the Oyl red as blood, but that the Earth of Vitriol does not, the Oyl feperates it felf from the Earth: God hath vouchfafed fuch a bleffing, that the Philosophers Stone may be made of it alone without Addition, translating all Metals into true Sol, but the Oyl of it must be. fixed with the Earth (its own Earth or Salt) but that is not. fo with Metals, the Earth diffils together through the Alembick, and the whole Body is converted into Oyl, translating all Métals into true Sol: Herein do all the Philosophers agree. An Oyl, he goes on, is also made of Mercury, and of Antimony, but their Earth goes over together, and their whole Body turnsinto Oyl, and remains an Oyl for ever, and with this Oyl you may do wonderful things, which here to recite . would be too long. You know alfo what is written of Antimony and the Oyl of it. Yet must my Son know, That the Oyl of Mercury is much better in all works, wherein the Oyl of Antimony is used. This is a Secret, Cap. 69. and 70. of the Same Work.

An Example, That Metals wholly ascend into Oyl, he brings in the following Chapter, namely the 70th, which we will name.

126. The

Univ Calif - Digitized by Microsoft®

126. The Circulatum Majus of Isaacus. Cap. 70. 2. Oper. Min. Pag. 474. Vol. 3. Th. Chym.

Ake this Mercury (the Metals fublimed in the Philofophical Menftruums aforegoing) Diffolve it in Aqua Fortis, with an equal quantity of Vitriol and Niter, being Diffolved, put the Solution in a Glafs Veffel, put on an Alembick, fet it in Sifted Afhes, give first a gentle Fire, Diffil the Aqua Fortis from it, then the Mercury will sublime upwards into the Alembick, when it will sublime no more, take it away; take the Mercury out of the Alembick, put it in a Glafs with a long neck, as you did with the Vitriol, put it in a Veffel with Sifted Afhes, light your Lamp under it, so leave it, till it be perfectly red, as hath been taught of Vitriol; Diffolve, Congeal, being clean, Diffil it into a red Oyl, as hath been faid of Vitriol, but all the Mercury diffils into Oyl, fo as to leave no Earth.

. trad

The Menstruum immediately antecedent in Numb. 125, is in all things clear, except the first Branch of it, wherein is omitted the necessary Dissolution of Vitriol in Philosophical Vinegar, before the Calcination of it into redness or fixation. The first Menstruum of this Kind is imperfect, not indeed in this, but in another Branch, infomuch as it is not therein declared, that Vitriol must after the Calcination of it, be again Diffolved in Philosophical Vinegar. In this prefent third , The it be faid, that it ought to be made according to the rule of the precedent Menftruums, there is no mention at all made of Philosophical Vinegar, yet without it, Vitiiol can neither be fixed into redness, nor when fixed, be again Volatalized or Distilled. The Receipts therefore must be compared as often as the Adepts have either through too much fear or envy left us them imperfect: It is enough, if by comparing them together, we can pick out their meaning or intention, being not fully enough expressed in every circumstance, the terms being either too obscure, or altogether omitted. Bodies in this Kind are to be fixed, and then volatilized by Mineral Menstruums, as Mercury and Univ Calif - Digitized by Microsoft @ Antimony,

sub-1 tool an

Antimony, in the Ninth Kind, are first fixed, and then distilled in the greater Circulatums by vegetable Menstruums: This light borrow'd from the faid Ninth Kind, will difpel all the Obscurities and Doubts of this Kind. Vitriol therefore purged with common Water by Solutions and Coagulations, must first be graduated, that is several times disolved in Philotophical Vinegar and coagulated according to the Receipt in Numb. 125, as Mercury is diffolved in the Water of Salt, circulated in the Circulatum majus of Mercury. This Vitriol being graduated in a close Vessel, must be fixed into a most red Powder, and being fixed, then dissolved and coagulated in Philosophical Vinegar, that it may again become volatile, as Mercury being fixed in its own Circulatum, is again made volatile by virtue of the Spirit of Philosophical Wine. At last the Vitriol is to be Distilled into its Spirits. Now by knowing the method, it is manifest that the mystery of the Receipts confifts in the Vinegar, but to remove all for uple from these most excellent Menstruums, we will prove by the very words of Ifaacus himself, that he meant not a common but Philosophical Menstruum. Have not I taught you, faith he, how to draw all Metals through the Alembick, fo as to Diftil wholly into Oyl, leaving nothing; but that alone does the ftrong Spirit of Vinegar, and makes them (Metals) to be perfectly separated and rectified from their Feces, within and without, as I taught you, and that the infide fhould be outward, and the outlide inward, and then they are fo refolved and fubtil, that the Elements cannot be feparated one from another; if you fought all the means in the world, you would not be able to feparate these Elements, by reason of their subtility, cleannefs and refolution; and when they have the fubtil penetrating Vinegar with them, they pass all together through the Alembick with the Vinegar; but if you should put them to fire, and any Spirit of Vinegar (in Sufficient quantity) was prefent, they (the Metal and Vinegar) would be forthwith fixed together; and becaufe the Vinegar is copioully in their clean, open, fubtil Body, they diftil into Oyl, and the Spirits of the Vinegar are fixed with the Body: Now you must know that the Spirit of Vinegar is more Subtil than all things in the World, yea, a thousand times more subtil than Univ Calif - Dilitzed by Microsoft B the

1:070

the Quintessence of Aqua Vita, it cannot be contained in any Veffels, but it is eafily half fixed, and therefore it eafily fixeth the thing to which it is applied, as it is demonstrated in the Vegetable (Work) where the Discourse is of Wine. and the Nature of it, where you will be fufficiently instructed what Vinegar is, and the Spirit of it, how all things are diffolved and afcend. Cap. 77. 78. 2. Oper. Miner. Pag. 477. Vol. 2. Theat. Chym. You must know, faith he elsewhere, this is the greatest Secret in this Art, for the middle parts of Vinegar are of fo great Virtue as to be incredible, by reafon of their great Subtility, for every thing they are mixed with, becomes exceeding fubtil and penetrable, wherefore they make the (Philosophers) Stone a thousand times more fubtil than it was before, and more penetrable, and the fubtil parts mix themselves with the Stone, for they are of one Nature, and are both clean and fubtil, and are mixed together, as Water with Water, and it is a Medicine of that Nature, as to make every thing fixed which it is mixed with, and of its own Nature wherein it is; and thus are the fubtil parts (of Philosophical Vinegar) fixed in the (Philosophical) Stone, and are made of one Nature with the Stone, and they make the Stone as fulible, as an Artift can with , as he oftentimes diffolves the Stone in Vinegar, and congeals it, for as many or few Spirits remain in the Stone. the more fufible is the Medicine: Wherefore I have taught my Son how to make his Stone fo fufible, as thereby to bring Mercury to Sol and Luna; and it is a great Secret, known to few, perusethis Lecture diligently, what vertue there is in Vinegar, and what with the middle matter of Vinegar may be made. Cap. 51. 1. Oper. Min. Pag. 337. Vol. 2. Th. Chym.

That Vinegar, which is a thousand times more subtil than the Quinteffence of Aqua Vitæ, or Spirit of Philosophical Wine: The Spirits of which makes the Philosophers Stone a thou fand times more Subtil : That is of one Nature with it ; and fixeth every thing it is mixed with ; you your felves will fay is no common Menstruum, but another of more excellent quality. Ifaacus moreover diffolves and coagulates the Stone in this Vinegar, fo oft, till it is converted into Oyl, which will be no

more

(334)

more congealed. Cap. 51, 59, 107. of the fame Book. With the same Vinegar also be made Metals fat, and transmuted them into Oyls, thus he diffolved and coagulated Gold fo often continually in New Vinegar, till an Oyl was made thereof as red as blood, as Cap. 54. of the fame Book. Sometimes also he did with the same Vinegar reduce Gold to the consistence of an excellent White Oyl, out of which he then distilled a White Spirit, and a Red Oyl apart, and not immixible together, fo subtil, as that he advised the Artist to have a care, left these Oyls should condense again by too much Restification, for then being forced with too strong a Fire, the greatest part of them would by reason of their great Subtility penetrate the Glass, and so be lost. Cap. 126, 128, 1. Oper. Min. Pag. 406. Vol.2. Th. Chym. Who can expect fuch and fo great things from Common Vinegar? The Same Vinegar, that diffolved the fix'd Metal Gold, and divided it into Spirit and Oyl, the Constitutives of the Stone out of Sol alone; the same also is required to diffolve fixed Vitriol, and distil it into Spirit and Oyl, the constitutives of the Stone out of Vitriol alone, of the making of which in the Third Book of Alchymical Tinctures.

That this Oyl of Vitriol, shews light by night, affirms Trismofinus, who hathdescribed the said Oyl thus.

127. The Oyl of Vitriol shining by Night, of Trismosinus.

Libro Gangeniveron, sive novem TinAurarum in Tin-Aura prima.

Ake of the beft Hungarian Vitriol twelve pounds, grind and diffolve it in pure clean Water, or Rain Water diffilled, let the Feces fettle, decant the Solution into a Glafs Difh, placed in a Brafs Bafon full of Sand, put the faid Bafon in Balneo, and draw off the Water to a thin skin; let it cool, and frand three days in a cold place, and in the mean time you will find green Stones, which take out, the remainder Univ Calif Digit L t 2 Microsoft of draw

draw off again to a thin skin, and let it Cristallize, and this feven times repeat, put the Stones in a Stove of the fame heat as the Sun in Dog-days, and in fuch a heat they will turn into a White Powder. The Vitriol being thus prepared. put it in a Cucurbit, with a long neck, well Sealed, in Afhesunder which put a Lamp, fo as that the heat exceed not the Sun in March, thus leave it, till the Vitriol begins to beyellow, being yellow, the Fire of the Lamp increase one Degree, and thus leave it ten days and nights, or till it begins to be red, then again increase the Fire in the Lamp another Degree; and thus continue, till the Matter be altogether red as a Ruby, then increase the Fire yet ten days, and the hidden part of the Vitriol is now manifest, and prepared in its rednefs, as a volatile Matter : The rednefs thus remaining, take the Glass out of the Ashes, and the Matter out of the Glafs, and put it in a stronger Glafs, to which pour the best Vinegar well rectify'd, stop it well, set it in Balneo, fo let it stand four days, yet stirring the Matter with a Spatula made of Hassenood, three or four times a day, let it cool, decant the Vinegar into another Glass, pour new upon the Matter, digest in Balneo, as before, this repeat with new Vinegar three times, the decanted Vinegar gently draw off, till the Matter remains in the form of a Salt at the bottom, to which, pour new tharp Vinegar, put it four days in Balneo, as before, to diffolve, and let that be repeated, till it be free from any fediment : Then coagulate the Matter into a dry Powder, and put it in a Glass Cucurbit, with a wide mouth, and a large Alembick, lay the Receiver in a Veflel full of Water, lute the Joynts firm, and diftil with an open Fire, but very gently, the space of four hours, after that frongly, and the Spirits will afcend yellow, which are called Air 5 continue the Fire in the fame degree, till the Alembick begins to be red; then flow the Fire, that the Alembick may be of a blood colour, then increase the Fire still, that the Glass may be burning hot as a red hot-Iron, which keep in that heat, till the Alembick be made of a Snow Colour, then strengthen the Fire yet more, thatthe Alembick may again be clear and transparent, then let it. cool, remove the Receiver, and pour the Oyl into a pure. Glafs.

(336)

Glafs, which ftop well, and you will have the true Oyl of Vitriol fining night and day in dark places, which keep well for your occasion. But you must know there is a White and Beautiful Oyl found in the bottom, which to its red Oyl, $\mathcal{O}_{\mathcal{C}}$.

This Receipt of Trifinofinus agrees almost in all things with Isacus his Description of the Menstruum made of Vitriol, so that it seems to me to be borrowed of Isacus, especially because the same phrase of Isacus of the volatile redness of Calcined Vitriol is retained: Those things therefore, which were observed before upon the Menstruum of Isacus, do also hereto relate; but we added this, because Trifinosinus does more assure us, that this Oyl spines in darkness, concerning which quality of bis Menstruum, Isacus was selent.

Ripley made Menstruums of this Kind this way.

128. The Circulatum Majus of Ripley. Pag. 395. Accurtationum.

He time of true Putrefaction and Alteration is compleated in the fpace of Six Weeks, but it may be done in a fhorter time by half, and that by the acuition of our Mercurial Waters, that is, the white and red Water (the milk and blood of the Green-Lyon in Numb. 59.) with common Mercury fublimate, which thus do: Fix and Calcine the Mercury fublimate, and diffolve it in our white, or red Mercury (of the faid Menstruum) fo as to be all one true Water, which Water, being thus acuated, hath the Power of putrifying and altering any Calx of Metals, in the space of three Weeks, and that because the two Fires, namely, of Nature and against Nature', are then joyn'd together a in that Water.

Common Mercury being diffolved in Philosophical Vinegar, 3 or any Mineral Menstruum, and fixed either by Sublimation as the Circulatum majus of Paracels, or Calcination as the Vitriol of Isaacus calcined to redness, is then diffolved in a stinking Menstruum, and distilled through an Alembick. He

reduced all other Metals and Minerals, the fame way as he did Mercury, into the greater Circulatums, thus.

129. The Metallick Acetum acerrimum of Ripley. Pag. 266. Clavis aureæ Portæ.

Aving therefore thefe two Mercuries, the white and red (of the Stinking Menstruum) practice with them cither upon their own Earth (or Caput Mortuum of the faid Menstruum) or upon the Calx of Metals prepared, for you need not trouble your felf about the Earth, provided the substance of it be fixed : Take therefore any of them, being white, and ferment it thus: For the White Work, take the Calx of Luna, and the altered Earth (a Philosophical Calx, made of the Mineral Menstruum of Luna) in equal quantity, grind them together, and temper them with the White Mercury, which we call Lac Virginis (in the Description of the Green Lyon.) and fublime them very well, keep and gather that which is not fixed, that is, fo much as afcends white, and flicking to the parts of the Glafs as Mercury fublimate, for this is that our Mercury made by fublimation out of the white altered Earth; then grind it upon its own Calxes, tempering, distilling, and fublinning it with Lac Virginis, till it be wholly fixed, fo as to be immovable by Fire: This is the fublimed and fixed Mercury, for which fools take that common Mercury fublimed with common Vitriol and Salt, wherein they very much err : put it into a-Circulatory, and pour Lac Virginis upon it, till it be covered, then let it be circulated and diffilled through an Alembick.

An Example of making the altered Earth of Metals, and the way of fixing the faid Earth he hath given in Vitriol. Take Vitriol calcined to Afhes (common Colcothar) gind it to a most fine Powder, put it in an Urinal, pour Lac Virginis (the White fume of the Stinking Menstruum) to it, till it be covered with it, stop the Urinal with a Linnen Cloth, and let it stand eight days, then add the same quantity of the former Milk, repeating it from eight days to eight, but when

(338)

when it will drink up no more, let it ftand in the cold well ftopp'd, till a Criftalline Earth appears in the fuperficies of it, like Eyes of Fifh. Seperate this Earth from the thicker parts refided in the bottom, and put it (*this graduated* Vitriol *made not indeed of the Spirit of* Philosophical Wine, *nor* Philosophical Vinegar, *but the* Stinking Menftruum) in a *Philosophical Egg*, to digeft (*calcine*) differently, till it be perfectly fixed, then increase the Fire, till it be perfectly citrinated, and ftill increase it, that it may be Rubified in the form and colour of *Sanguis Draconis*.

Lastly, For a conclusion, we will add the Circulatum Majus of ifaacus, made of Sulphurs, which being most clear in the graduation, fixation, and volatilization of it, will help to illustrate those things which have perhaps remained more obscure in the antecedent, and make the Receipts in this Kind more clear.

being purities differential, perentisenal fine in

130. The Circulatum majus of *Ifaacus*, made of *Sulphur*. Cap. 88. 3. Oper. Min.

Ake Hungarian or Spanish Sulphur ten or twelve pounds, prepare it upon a Stone, with (Philosophi-cal) Vinegar distilled, as Painters do their Colours, pour a good quantity of the (aforefaid) Vinegar upon ir, put it in Balneo, fir it well with a Woodden Spatula, decoct it in a close Vessel in Balneo the space of fix or eight days, ftirring it three or four times a day, then let it cool and fettle, filter the tinged Vinegar, pour on new, repeat this Work, till no more Vinegar will be tinged : Draw off all the tinged Vinegar in Balneo, that a Powder of a golden Colour may remain at the bottom. This Powder prepare and extract with Vinegar, as before; filter the folution, and draw it off, till at length it leaves no Feces behind it, then draw off the Vinegar, that the reft of the Matter may remain in the form of a Powder. Take of this Powder one port, of Salt prepared one part, of Roman Vitriol dried, fix

fix parts, mix them all well, and fublime by degrees, first. with a weak Fire, fecondly, ftronger, laftly, most ftrong for the space of two days; sublime the sublimation mix'd with its Feccs three times, then cafting away the Feces, fublime with new Species, and repeat the Work three times, then diffolve the Sublimation in the Diffolving Water for the red (of what Description Soever in the Twentieth Kind) the Water being drawn off, fublime, pour on New Water and fublime, and that do three times: Then take feven parts of this Sublimation, one part of the Calx of Sol, and fublime : This Sublimation being put into a Philosophical Egg, made of Gold (for one of glasswould be of little use for this purpose, because it would become foft as wax) ftop it well, and fet it upon a Tripos the space of eighteen Weeks to be fixed, but the first fix Weeks with a gentle Fire, the next fix a stronger, the last most strong: These Eighteen Weeks being ended, take out the Matter (being fixed) reduce it to Powder, to which being put in a diffolving Veffel, pour an equal quantity of our red burning Water (of the aforefaid Diffolving Water for the red) feal or stop the Vessel very well, let it diffolve and fettle, then take it out, and distil it through an Alembick in Balneo with a very small Fire: It is necessary for the Receiver, to be well luted, and the Alembick must have a pipe in the upper part, for it must be fix times distilled, always with new Red Water, and your Matter will at length become thick as Honey, which diftil in Sifted Afhes by degrees, and an Air will afcend like Water, then changing the Reciver, an Oyl of a Golden Colour will distil gilding the Alembick, as also the Receiver ; let it continue in the fame heat till the Alembick be of a Blood Colour, then take away the Receiver; ftop it fuddenly, put another to, and increase the Fire for the space of twenty four hours, till the Vessel grows red hot, in which heat., let it continue twelve hours, and the Matter will afcend red as blood, and at laft alfo a red fume : Thefe Spirits no more appearing, let the Veffels cool, keep the Distillation, but the Feces reverberate, drc.

.....

(340)

Out of the Receipts these things we observe.

1. Hat these Menstruums, made of the graduated Vitriols of Metals, fixed in a close Vessel, have the like place amongst Mineral Menstruums, as the greater Circulatums of Paracelfus, have amongst the vegetable Menstruums. Dissolve the aforesaid Circulatums in any Acid Spirit, and you will presently make Menstruums of this Kind.

2. That these Menstruums are Medicines, call'd Volatile Arcanums, dissolved in an Acid.

3. That the graduated Vitriol of Venus, has some certain peculiar Priviledges above the rest.

1. Becaufe in the Diftillations of thefe Menstruums, it hath a Fixed Body, besides a Soul and Spirit, whereby the two aforefaid must be fixed into the Stone; but all the other Metals and Minerals being reduced into graduated Vitriols, have no Fixed Bodies, and are divided into two parts only, Spirit and Soul; but becaufe the Adepts found it necessary to borrow fome Fixed Body elsewhere for the fixing of these, they therefore more than often affirmed the possibility of making the Stone out of Vitriol alone, without any Addition, thus have we heard Isacus in the antecedent Receipts saying: God hath vouchsfed fuch a blessing to Vitriol, that the Philosophers Stone may be made of it alone, without Addition, it translating all Metals into true Sol, but the Oyl of it must be fixed with (its)Earth (or Body) but that is not fo with Metals, for their Earth diftils together through the Alembick.

But who observes not here these Words, Without any Addition, to be meant of any Foreign Matter, and are so to be understood with some certain restriction? For this most red Oyl of Vitriol', shining by night, and which must be fixed with its Salt into the Philosophers Stone, cannot in the least be produced from Vitriol alone, and that crude, being not graduated with Philosophical Menstruums.

Morcover as the like Oyl being distilled from Gold, and fixin the purified, but not volatalized part of it, is called by Ifaacus the

S . 10 10 10

the Stone of Sol alone; whereas notwithstanding, he used his Philosophical Vinegar to the making of it; so the Stone may be said to be made out of Vitriol alone, without Addition, though the same Vinegar was used in the preparation of it.

Lastly, It is manifest by the Kinds of almost all Menstruums, that no Acid (that is, dry and incombussible Matter) can be reduced into Oyl, without an Oyly Menstruum, because it must receive this unctionity from the Unctions Spirit of Philosophical Wine.

2. Because it is of mean value, and so by the Adepts call'd. the Stone, which God hath given us freely. This Work, faith Isaacus, you cannot enter upon with a little Matter, you must have at least four or five Pounds of Matter (Gold or Silver) if otherwife, the Work will be infufficient. For it is not the Work of poor men, except the Stone given us by God freely, might happily be obtained ; then other Charge is not neceflary, more than Veflels, Coals, and Food, till we have prepared the Stone. And the two Stones, which God hath given us freely, for the White and Red Work, require but half the time, as the Matter which is to be taken for preparation fake, for before we come to Sublimation, the Stone given us freely, is already almost brought to fixation. Gap. 17. 1. Oper. Mineral. Pag. 313. Vol. 3. Th. Chym. The fame thing is affirmed by Bafilius: faying, There is no moisture in Gold, unless it be reduced into (graduated) Vitriol, which would be a Work indeed of no Profit, but much Charge, because of the great quantity of Vitriol required to the making of the Philosophers Stone; and though there is in Vitriol the defired Spirit of Gold, of a white quality, and a Soul and Salt of a glorious Effence, but how many Countreys, Estates and Riches, have been thus confumed, I will not reckon; but this Admonition I give my Disciples, to follow the shorter way of Nature, that they may not also fall into extream and inextricable Poverty. If you intend therefore, he goes on, to make the Philosophers Stone out of the Vitriol of Sol, as many men indeed endeavour, confult with your Purfes, and prepare Ten or Twelve pounds of this Vitriol, and then you will finish your Work, whereas Hungarian or other Vitriol would fuffice. 3. Becanle

343)

3. Because it is our Gold full of the Tincture of common Gold. Green Vitriol, faith Ripley, being Stillicidium Veneris (or common Vitriol) is by many Philosophers called Roman Gold, because of the abundance of its Noble Tincture, which ought to be fermented with common Gold, Pag. 140. Medulla Philos. For Vitriol, he goes on, is nothing else but Stillicidium Cupri (or droppings of Copper) in the Mynes, wherein Copper is generated, as Bartholomaus (an English Monk and Philosopher) faith; and though it hath an admirable Tincture of redness, yet is that Tincture polluted with an unclean terreftreity, which is called its original blemith, which hinders Gold and Silver from being made of it. Therefore faith Raymund, let not the Terrestrial Virtues over power the Coeleftial Virtues (of the Sun and the rest of the Stars) and you will have a good thing in Vitriol. Pag. 303. Pupilla.

Arnold to few the Golden Nature in common Vitriol to his Disciple, resolved to prove it by an Experiment, in Speculo Alchymia, Pag. 605. Vol. 4. Theat. Chym. where thus by the way of Dialogue. Disciple, I wonder, good Master, that you commended Brafs fo much, I know not whether there be fo great a fecret in it, I thought it to be a leprous Body, becaufe of that greennefs which it hath in it : Wherefore I still admire what you faid, that we ought to extract Argent vive (Menstruum) out of this Body. Master, Son ! You must know, that the Philosophers Brass is their Gold, and therefore faith Aristotle in his Book, Our Gold is not common Gold, because that greenness which is in that Body, is the whole Perfection of it, because that greenness is by our Magistry fuddenly turned into most true Gold, as we know by experience; and if you have a mind to try, we will give you a Rule. Take Hs uftum well and perfectly rubified (common to be Sold in Skops) and let it drink feven times of the Oyl Duenech (Spirit of Philosophical Wine) as much as it can drink, always allating and reducing (cohobating and calcining) then caufe it to defcend (melting this Vitio Leing impregnated with the aforefaid Oylinto a Regulus) for pure Gold fettles as grains (of Kermes) red and pure; and you must know that fo great a redness defeends with it, as to tinge fome quantity of Silver of a most true Colour, & c.

Univ Calif - Divitive2 by Microsoft ®

To

To alledge all, that the Philosophers have faid of the Golden Nature of Vitriol, would be too much, peruse Basilius alone, especially the fourth and sifth Chapter, De Rebus Naturalibus & Supernaturalibus, as also in the Elucidation of the 12. Keyes, and you will find Vitriol more esteemed by him than any Gold, for his Doctrine is that the Tincture of the Vitriol of Venus and Mars, is far better than the Sulphur of Gold, not indeed in its Kind, for it is one and the fame in all, but that this Tincture is in the Natural as well as Artificial Vitriol of Venus and Mars higher, and more noble in Colour, more abundant in Quantity, of easier Separation from its Body, in Preparation, and of less Charge in the use, than the Tincture that is in Gold.

4. Becaufe it is Gold opened, not yet fused, and so of easier preparation. You have laboured, faith Ifaacus, a long time, before this Matter is made fubtil and fpiritual enough to be fublimed : But if you could procure the Stone, which Cod hath given us freely, there would be no need to prepare it fo: But you might prefently take it, reduce it to an impalpable Powder, and wash away the uncleanness of it with a comnton Water, till the Matter came clear from it, then dry it again, and it would be ready for Sublimation, in which refeelt the Work of it is thorter. Cap. 22. Pag. 317. Vol. 3. Theat. Chym. To freak more plainly, Saith Ripley, I affirm, that the more fubril a Body is, of the eafier Diffolution it is. And moreover you must know, that Diffolution ought to be performed by our Vegetable Menstruum, or some other Vegetable. And this Vegetable Mercury (Vegetable Menstruum) cannot renetrate a Eody, fo as to complete the diffolution of it, except the Body be first made spongy; but no Lead is fo frongy, nor fo fubtil, as Red Lead or Minium (Vitriol calcined) and therefore if we would not be frustrated of our expectation, it is necessary for us to take Red Lead, that is, Antimony prepared, which is more fpongy and fubtil, than any other Lead. For the (Vegetable) Water will fuddenly penetrate into it, and diffolve the most subtil parts of it. But now to declare further concerning the fecond Body, which is Roman Vitrial, you must know, that it is an easier thing to make the feparation of the Elements in a thing com-Univ Calif Digitized by Microsoft © plexioned

plexioned, which was never before forced into a hard and compact Subfrance by the violence of Fire, than to perform the fame in a Subfrance forced into a hard Mafs, or in a Metallick and Stony Subfrance, wherein the Congalative Virtue is extinguished, and therefore in respect to the other is made Intractable, not being fost nor unctious, and confequently lefs obedient to Solution and Separation; for Vitriol. is nothing elfe but, & c. Pag. 301. Pupilla.

4. That the Adepts in the more fecret Chymy meant four things chiefly by the Stone.

1. The Matter of the Menstruum or Spirit of Philosophical Wine, of which God willing, in the Fifth Book.

2. All Menstruums what seever, made with the Spirit of Philosophical Wine. Examples enough you will find in the Receipts of Menstruums produced to you.

3. Every Matter of the Philosophers Stone; so Gold and Silver are in many places called Stones, but by the Stones which God hath given us freely Ifaacus meant Vitriol for the Red, and Alume for the White. Cap, 39. 3. Oper. Miner. Pag. 67. He kath befides these two other Stones also made of Atteniek and Auripigment both graduated, of which see the Six former Chapters, 1. Oper. and Cap. 112. and 113. 2. Oper.-Miner. But of these in their proper places.

4. Every Alchymical Tincture, the not in the form of a Stone; but Oyl.

5. That Menstruums made of Vitriol or Venus are indeed better than the rest in point of Tinging but not Disolving.

The Three and Twentieth KIN D.

Mineral Menstruums made of Mineral Menstruums compounded, and Metallick Bodies and other Tinging Things.

131. The Oyl of Mars and Venus of Bafilius. Libro de Conclusion. Sect. 1. Cap. 3.

Ake of Verdegrese fome Pounds, and with (Philosophical) Vinegar diffilled make an Extraction, which is cristallized into a Noble Vitriol; out of which by a Retort is diffilled a Red Oyl, which diffolves Mars into Vitriol, out of which is the Red Oyl extracted again in a long time, and with a strong Fire ; and thus have you the Sulphur of Mars and Venus together : with this Oyl is Luna graduated, and a good part of the Kings Crown obtained, a part diffolved with a part of Sol and Luna together, and putrified in this Oyl eight days and nights, is changed into good Gold. Praised be God.

Annotations.

THo every Mineral Menstruum is able enough to diffolve any Body what soever, yet the Adepts thought good to achate them yet more, by the addition of Metallick Bodies, that they might the better diffolve and tinge their Diffolutions. In the prefent Receipt Bafilius diffolves Mars in the Spirit of Venus, described before in Numb. 113. reduceth it into Vituol, and at last distils it into a Compounded Oyl. Sect. 2. Cop. 4. This Menfru-Univ Calif - Digitized by Microsoft ®

un

um he calls Oyl of the Salt of Mars: Now, faith he, I have taught you how to extract a clear Vitriol out of Venus, and to diffil its Red Oyl; this Oyl diffolves Mars into Vitriol, and being yet once diffilled ftrongly by a Retort, you will have a Noble Tinging Oyl, or Salt of Mars, which is a Subject that pays Tribute to the King, and enricheth him. This Oyl diffolves the Purple Spiritual Gold, and brings it over the Helm, &c. The Procefs of this Oyl of the Salt of Mars, &c. being by its brevity too obfcure, will be not a little illustrated by the following Spirit of Mercury.

132. The Spirit of Universal Mercury made of Vitriol of Basilius. Labore 2. Libri Revelat.

Ake Common Copper, make Verdegrese of it after the common way, grind it, pour to it a good quantity of Distilled Vinegar (Philosophical, or Vinegar mix'd with the Spirit of Philosophical Wine) ftir it well , and the Verdegreafe will be diffolved, let the Feces fettle, and the Solution will be very pure, clear and green : Draw off the Vinegar in a Cucurbit to thicknefs, and in a cold place a weighty Vitriol graduated to the highest degree will be cristallized, which again diffolve in hot Water, evaporate the Water till it be thick; put it again in a cold place, and the Vitriol will be again coagulated : which folution and coagulation must be three times repeated, and the purification of the Vitriol will be perfect : Let the Phlegm evaporate from this Vitriol in a Calcining Pot, and calcine it till it begins to be red, that is enough. Then take pure Flints, calcine, and being red hot, quench them in Distilled Vinegar, repeat fome certain times, till they be well calcined : Then again calcine, and when they are a little cool, pour to them (Philosophical) Vinegar made hot, and let them be gradually dried. Of these little Stones thus prepared, take one part, of the Vitriol now calcined two parts, grind and mix, put the Matter in an Earthen Retort, that will not fuck up the Spirits, or in a Glafs Retort

Univ-Calif - Digitized by Microsoft @

well

well-luted, put a large Receiver to it, and the Veffel being well luted, kindle a Fire by degrees the fpace of 24 hours, then give a stronger Fire 24 hours more, and the Green Spirits will come over White, and the Fire being thus continued Red Dropsat laft : Keep this violent Fire, till all the Spirits and Drops are gone over, then put the Distillation in a Cucurbit, and the Veffel being very close, rectifie it in Balneo with a most gentle Fire, and the Phlegme will afcend, but in the bottom of the Cucurlit will remain the Oyl of Vitriol red and ronderous. This Work being finished, Take pure Filings of Iron, put them in a Cucurbit, pour to them the faid Ovi of Vitriol, fo as to fwim above them, add fo much diffilled Rain Water, till you fee that the Oyl diffolves the Iron; then draw of the Phlegme by Diffillation, and let the remainder criftallize in a cold place into pure Vitriol, and thus are Mars and Venus joyned together : This Vitriol calcine it under a Tyle, and ftir it with an Iron Hook into a fine reddifh Powder : This Powder put into a Glass Retort well luted, and the Veffels being very close, diftil by degrees of Fire, as you distilled the Oyl aforefaid, and first you will have a White Spirit, which is the Philosophers Mercury, then a Red Spirit, which is the Philosophers Sulphur, an incombustible Oyl compounded of both the Tinstures of Venus and Mars never to be feparated, and this is the Blood of the Green and Red Lyon , with which the King their Father ought to be nourished, draw of the Plegms from this Oyl in Balneo, and it is prepared for Gold to be tinged with it. Take the Caput Mortuum, which is of a Beautiful Crimfon Colour, grind it to a most fine Powder, put it in a Glass, pour (Phi-Holophical) Vinegar diffilled to it, digest three days in a gentle heat, to extract the Salt, wherein lye the Treasures of the whole World, without which Salt, all labour would be in vain; draw off the Vinegar in Afhes, and the Salt will remain in the Glafs, to which, pour the aforefaid Oyl (of Venus and Mars) in a Glass Retort, and the Salt will be prefently diffolved, and then diffil with the fame violence, as before, and the Oyl will carry its own Spirit of Salt over with it, which rectify once in Balneo, and it will be ten times ftronger than before and you have the incombustible Oyl of Mercuny, Sulphur_

(349)

Sulphur and Salt, iffuing out of one root prepared; this Oyl is the true first Matter of Metals, and the true root from which Gold is generated.

This Spirit of Mercury, ye fearchers of Nature! has been to my knowledge, detrimental to many unwary men, seeking after it either too inconfiderately; or arrogantly, which to prevent for the future, I will somewhat more clearly manifest the Nature, Qualities, and Original of it. Common Verdegrese reduced into Vitriol by Vinegar, then three times diffolved in common Water, and coagulated, must be calcined to redness in an open Veffel, that the superfluous Phlegm may be drawn. away, and made fitter for the ensuing Distillation. But whoever calcined Verdegrese purified, in Apothecaries Shops, call'd the flowers of Verdegrese, to redness, without the diminution of its Virtues ? Who I say has distil'd a most Red Oyl out of this calcined Powder? Verdegrese therefore must be diffolved not in common, but Philosophical Vinegar, in order to be not only purified, - but reduced also into Vitriol, graduated to the highest. In the 20th Kind, Basilius distils the Same Red Oyl of Venus, ponderous as Lead or Gold, thick as Blood, and of a fiery quality; that is, of extream acidity, out of Roman Vitriol being highly graduated, that is, either macerated, or throughly diffolved in the Spirit of Philosophical Wine. In the 21th Kind, We took Notice, that the fame Vitriol of Copper or Verdegrefe being purified with common Vinegar, was reduced into a graduated Vitriol, not indeed by the Spirit of Philosophical Wine alone, but with the juice of Sowre Grapes, that is, mix'd with common Vinegar, or some other stronger Acid, and then distilled into the Oyl of Venus. If Metals, Minerals, and all other Acids diffolved in acids, and reduced into Vitriols, be fo graduated with the Spirit of Philosophical Wine or Philosophical Vinegar, that the defired Oyls may be drawn from them, the reason why Vitriols alone made of Copper, should be deprived of the faid Priviledge, cannot eafily be apprehended : It matters not whether Vitriol be graduated according to the method given in Numb. 112. or according to the prescription of the present Receipt, for the same Spirit and Oyl is produced either way.

Univ Calif. - DigXixed by Microsoft ®

Non

Now this Oyl of Venus being made, and diluted in common Water, Iron is reduced into graduated Vitriol, which must like the Vitriol of Venus be also calcined into a Red Colour, and then distilled tnto aWhite Spirit and Red Oyl. The Method of this Process is, in Libro particul. in particulari Martis, thus : Take off the Red Oyl of Vitriol one part, of Spring-water two parts, mix, wherein diffolve the Filings of Steel, filter the Solution warm, then evaporate it gently to the comfumption of a third part, and in a cold place you shall find Cri-Itals fweet as Sugar, the true (that is graduated) Vitriol of Mars, from which decant the Solution, then draw it off a little, and in a cold place you will have New Criftals, which gently calcine under a Tyle, ftirring them continually with an Iron Spatula, into a Powder of a Purple Colour, to which pour (Philosophical) distil'd Vinegar; extract the Soul (Tineture or Effence) of Mars, draw off the Vinegar, and edulcorate the Soul: This is that Soul of Mars, which being diffolved in the Spirit of Mercury, and united with the Soul of Sol, tingeth Luna into Sol.

But of these below, The Vitriol of Mars being graduated and calcined into a Purple Powder in our Receipt, is without the extraction of its Soul distilled into the Philosophers Mercury, and Philosophical Sulphur, the true Oyl of Mars and Venus, the Menstruum next fore-going in Numb.131. Out of which, to make the present Spirit of Mercury, the Salt must be extracted out of the Caput mortuum, with Philosophical Vinegar, which Salt being mix'd with the Oyl of Mars and Venus, and distil'd together through an Alembick, is call'd the first Matter of Metals.

Basilius sometimes used the Salt and Sulphur of Sol, instead of the faid Salt extracted out of the Caput mortuum. Thus,

133. The

Univ Calif - Digitized by Microsoft @

133. The Oyl of Mars and Venus, acuated with the Sulphur and Salt of Sol of Basilius. In Supplemento.

Ake of the Purple Coloured Gold (the Crocus of Sol, des Konings Purpur Mantel) half an ounce, of the Philosophers Oyl of Mercury (the Oyl of Mars and Venus) one ounce and half, diffolve, to which add of the Salt of Sol two drachms; all being refolved into an Oyl, rectifie it by a Retort, that it may be clear and pellucid.

For the Spirit of Universal Mercury, Basilius took Copper diffolved in Philosophical Vinegar, and cristallized into graduated Vitriol, and with gentle calcination, reduced it into the true Crocus, or Red Powder of Venus: But the Iron he diffolved in the Oyl of Venus (distilled out of the faid Crocus of Venus) cristallized and calcined into the Crocus of Mars. For the present Menstruum he requireth Gold diffolved in Balneo Regis (described in Numb. 89:) and reduced into a volatile graduated Vitriol, which then being diffolved in Distil'd Water, he precipitates with three times as much of Argent Vive, out of the Menstruum but the amalgame from thence produced, ke gently calcines under a Tyle, into a Purple Powder or Crocus; as to the making of which here only by the by, but in the fol-lowing fecond and third Books, we shall treat more fully of it. The way of making the Salt of Sol, be has thus in Libro particul. in particulari Solis, described: Take the White Body of Sol left in the extracting of its Soul, (the Estence extracted out of the Crocus of Sol, with the freet Spirit of Salt described in Numb. 28.) reverberate it gently for half an hour, that it may be made corporal, then pour to it the Corfolive Water of Honey well rectified, which in a gentle heat will extract the Salt in the space of ten days : All the Salt being extracted, draw off the Menstruum from it in Balneo, edulcorate the Salt, by repeating Cohobations in common Diffilled Water ; and laffly, Clarity it with the Spirit of (Philosophical) Wine; and you will have the Salt of Gold, Microsoft @ X x 2

Concerning

Concerning this Water of Honey, Bafilius in Curra triumphali Antimonii, Pag. 77. thus: Out of fweet Honey may be made the ftrongeft Corrofive and Poyfon, which is to moft men a thing incredible. The fame affirms Paracelfus, faying: The like is to be underftood in Honey, which by its elevations is made much fharper than any Aqua Fortis and Corrofive, and more penetrative than any Sublimate; fuch a property of fharpnefs it hath not Naturally, but by elevation, which changeth this Honey into a Corrofive. Libro 5. Archid. Pag. 18. and elfewhere, Cap. 14. de Morbis Tartar. Pag. 319. Honey of it felf is innocent, but in the third elevation becomes mortal.

The way of making this Water, is not indeed in the Writings, which we have either of Bafilius or Paracelfus; yet eafily will a diligent Disciple learn the same, by the Principles of his Art, for either the Cælum Mellifluum of Parifinus must be dissolved in distilled Vinegar, or some stronger acid, or crude Honey cohobated in Philosophical Vinegar, that is, common, mix'd with the Spirit of Philosophical Wine, and the Process will be . Shorter and better. But this Salt of Gold may be also made without the faid Water of Honey, provided the Menstruum be so correspondents to dissolve the remaining Body of the Gold, thus in Labore tertio Revelat. he reverber ates the Caput mortuum of Gold, the space of three days, then calcines it with an equal weight of the Salt of Tartar, which he washeth off with Distilled Water, and extracts the Salt out of the dried Powder with Vinegar, which drawing off the Vinegar, he clarifies with the Spirit of Wine, that is, he diffolves, filters, draws off, and cristallizeth it into the true Salt of Sol. In another place, he extracts the Salt of Gold by the Spirit of Universal Mercury, as in Elucidatione 12. Clavium, where he affirms, that the Philosophers Stone cannot be coagulated or fixed without this Salt; and that he hath taught the way of making it in the fourth Key. By the Philosophers Oyl of Mercury, he means the Oyl of Mars and Venus, not yet reduced into the Spirit of Univerfal Mercury, or acuated with its own Salt, and the more fixed part indeed of this Menstruum, which he calls the Philofophers Sulphur, not the more volatile part, which is call d the Philosophers Mercury : With this Sulphur he diffolves the Soul

Soul or Crocus of Sol, and converts it into potable Gold. Libro de fupernaturali Medicina. Yet fometimes he would have us take the fame Oyl of Mercury for the Oyl of Roman Vitriol, the Menstruum described in Numb. 98. So in Libro de particular. in particulari Solis, he reduceth the white Body of the King (Gold, left in the extraction of the Soul or Crocus of Sol) with Philosophical Sulphur, which is the fecond Principle in order, and the Spirit of Mercury (a little before call'd the White Spirit of Vitriol) into pure and malleable Gold, as it was before, not in the least defective in colour and virtue.

Sometimes he acuates the Spirit of Universal Mercury, with the Sulphur and Salt of other Metals: Thus,

134. The Spirit of Universal Mercury acuated with the Sulphur and Salt of Luna of Bafilius.

Libr. partic. in particul. Lunæ.

He Sulphur of Luna being extracted and edulcorated, dry the remainder of the Calx of Luna, to which pour the fame Corrofive Water of Honey, that you used for the Salt of Sol, digest gently the space of four or five days, that the Salt of the Luna may be extracted, which you will know by the Whiteness of the Menstruum. All the Salt being extracted, draw off the Water of Honey, edulcorate the Salt; diftilling and clarifying it with the Spirit of (Philosophical) Wine. The remainder left in extracting the Salt of the Luna edulcorate, and dry, then pour the Spirit of Tartar to it, digest fifteen days, and proceed as with the Gold, and you will have the Mercury of Luna (of which in the Second Book, for here we use it not.) The faid Salt of Luna hath excellent Virtues for the Body of Man, of which I shall treat, in a place more convenient. In the mean time the efficacy of the Salt and Sulphur of Luna you will learn by the Process following. Take the Lazurine Sulphur of Luna, diffolved in the Spirit of (Philosophical) Wine (netified) and coagulated; put it in a Cucurbit, pour to it Univ Calif - Digitized by Microsoft @ double

double the quantity of the Spirit of Mercury made of the White Spirit of Vitriol: In like manner take the Salt of L_{n-na} extracted and clarified, which mix with three times the quantity of the Spirit of Mercury, lute both the Glasses, and digeft gently in Balneo the space of eight days and nights; have a care that none of the Sulphur and Salt be lost, but let them be in the same quantity as they were sparated from the Silver. Putrifaction being ended, mix both Dissolutions and distil, \mathcal{G}_{c} .

He fometimes acuated this Spirit without Metallick Salt, and Sulphurs only thus :

135. The Spirit of Universal Mercury acuated with the Sulphur of Sol and Luna of Basilius. Libro particul. in particul. Lunæ.

TAke of the Sulphur of Luna one part, of the Sulphur of Sol half a part, of the Spirit of Mercury fix parts, joyn them together, lute well, digeft in a gentle heat, and a Liquor will come over of a Red Colour, diffil through an Alembick, fo as nothing to remain.

This Spirit of Mercury he fermented not onely with the Sulphurs of the perfect Bodies, but sometimes added to them withal the Sulphur of some imperfect Metal, as Mars, thus:

136. The Spirit of Universal Mercury acuated with the Sulphur of Sol and Mars of Basilius.

Libro partic. in partic. Solis.

Ake of the Sulphur of Sol and of the Sulphur of Mars, equal parts of each, of the Spirit of Mercury the heighth of two Fingers above them, that the Matter may be well diffolved into a Golden Water of a Ruby Colour, being mix'd, diffil through an Alembick, that they may become one, as they were at first from one Stem, keep it well, that nothing may evaporate.

. Befides

Besides the Sulphur of Mars he sometimes added also the Sulphur of Antimony, thus:

137. The Spirit of Universal Mercury acuated with the Sulphurs of Sol, Mars, and Antimony of Basilius.

Libro partic. in particul. Antimonii.

Ake of the Sulphur of Antimony two parts, of the Sulphur of Sol one part, mix. Take of the Sulphur of Mars three parts, of the Spirit of Mercury fix parts, being well luted digeft, that the Sulphur of Mars may be wholly diffolved; then caft in a fourth part of the Sulphur of Antimony and Sol, lute again, and digeft till they be all diffolved, then add another fourth part of Antimony and Sol, repeating the Work, as before, till all be perfectly mix'd, and the Matter made like a thick Red Oyl, diftil the whole through an Alembick.

Sometimes he fermented this Spirit after an unufual way, namely, without the Sulphur of any perfect Metal, but meer imperfect onely, thus:

138. The Spirit of Universal Mercury acuated with the Sulphur of Mars, Jupiter, and Saturn of Basilius.

Libro partic. in partic. MercuriiVivi.

T Ake of the Soul of Mars two Ounces, of the Soul of Saturn one Ounce, of the Soul of Jupiter one Ounce, diffolve them in fix Ounces of the Spirit of Mercury, being well diffolved, diftil them through an Alembick without any Sediment into a Golden Water like to the tranfparent Diffolution of Gold.

The

The thefe Menstruums of Basilius may well deferve the first place among the Dissolvents of the Adepts, yet some of the Adepts made Menstruums not much inferiour to them. Isacus Hollandus not onely the better to dissolve Bodies, but tinge them also deeper, made his Menstruums of Tinging Menstruums, and common Mercury, but being satiated with the Tin-Eures (Souls, Sulphurs, &c.) of Tinging Things. Thus made he the Menstruum call d,

139. A Compounded Mercurial Water for the Red Work of Isaacus. Cap. 43. 3. Oper. Miner.

Ake Argent Vive purged with Salt and Vinegar, which fublime with an equal quantity of Hs ultum, Crocus of Mars, Crocus of Venus, and Lapis Hamatites; of Roman Vitriol the weight of all, and a little Salt, and repeat the Sublimation feven times, every time with new Species, and the Mercury will be fublimed for the Red. Take of His uftum, Cinabar, Crocus of Mars, Venus, Lapis Hamatites, Antimony, equal parts of each ; of Roman Vitriol the weight of all, mix, and reduce to a fine Powder, to which pour of Aqua Vite compleatly rectifi'd (Spirit of Philosophical Wine) the height of two hands breadth, digeft in -Balneo three days, ftirring the Matter daily, then draw off the Aqua Vita with a gentle Fire, then increase the Fire gradually; laftly, force with a most strong Fire for the space of Twelve hours, that all the Spirits may afcend : This Work must be three times repeated with new Matters continually. Take of this Water one Pound, of Argent Vive fublimed for the red as much as fufficeth, or you can diffolve. distil, and referve.

Besides Mercury he sometimes added also Sulphur and Sal Armomack sublimed for the red, thus:

.blod to nonno 140. The

ommo lo schuol their to rei (bataukara 140. The Bhilolophers Water made of Three Spirits 2010 anildul of i Haacus? Cap 10. 3. Oper. Min Cap 10. 3. Oper. Min Ake of Roman Kitniol fix: parts of Lapis Hematites.

Ake of Roman Kitnial fix: parts, of Lapis Hematites, Crocus of Marshof Venus, Cinabar, His ultum, Mineral Antimony, of each one part, dry well and mix, put the Matter in a Retort, and pour to it of AquaVite rectified (Spirit of Philoscplical Wine) four Pounds, diffil, and cohobate three times, with the Caput Mortuum pulverized, Divide the Water into two parts, whereof fave one, in the other diffolve one Ounce of Salanmoniack, fublimed to rednefs, in Balnen, which being diffolved, diffolve one Ounce of Sulphur prepared & laftly, alfo put in an Ounce of Mercury fublimed for the Red Work : Thefe three being diffolved in the Diffolving Water made of AquaVita, you have a Water, which is defervedly called the Philosophers Water, by reafon of its admirable and fecret Virtues, the Miracles of which mult not be deferibed, because not convenient for certain Reafons', &c.

The Preparation of Sulphur, Take of Sulphur Vioum 12 Pounds, to which being pulverized, pour diffilled (Philofophical) Vinegar, let them boyl gently in Balneo, the Veffel being very clofe the fpace of three days; decant the Vinegar being now tinged warily; to the refidue, pour New Vinegar, digeft, and decant, and fo often repeat, till no more Vinegar will be tinged: The tinged Matter diffil gently in Balneo, to the remainder of a fourth part; from the refidue, you will in the fpace of three or four days in a cold Celler receive Crittals. (the graduated Vitriol of Sulphur) like Niter, clear as Amber, and of the colour of Gold: The remaining Vinegar evaporate into a Golden Powder, then diffolve the Criftals and Powder in the aforefield Vinegar, and Criftallize, and that fooft, till the Sulphur kaves no Feces behind it. This is a great Alchymical Screet for the Purging of Sulphur. The Preparation of Meretry, Tike of New Y Roman Vitriol (by which the Adepts do more than often mean that which is graduated) fix or eight Pounds, of common Salt two Pounds, mix them together with three Pounds of Mercury, purged with Salt and Vinegar, fublime the Mercury, and that repeat three times always with new Species, keep the Mercury.

The Preparation of Salarmoniack, Take of Salarmoniack three Pounds, fubliment thrice with Roman Vitriol, and Lapis hamatites, with New Matters every time.

The thefe Menstruums of Haacus are not fo much esteemed, is those before of Basilius, as to the Excellency of Preparation, yet are they of no less but the same Virtue with those, as to the quality of tinging, for they are made of the same Sulphurs, Crocufies, and Elences of Mars, Venus, Sulphur, & c. as the compounded Mineral Menstruums of Basilius were made of. Lully acuates the same Menstruums with Metallick Elences, not indeed already made, but to be made in the preparation of the Menstruum, thus with the Stinking Menstruum, acuated with Vegetable Salharmoniack, he makes the Essence of Luna, which being mix'd with the faid Menstruum, becomes a Menstruum of this Kind, and is called.

141. The Compounded Water of Silver of Lully. Cap. 10. Practicæ Testamenti majoris. Pag. 161. Vol. 4. Th. Chym.

N the Power of A (God,) take one Ounce of F (clear Luna, Pag. 171.) well purged and refined: And that Silver being well beaten (extended with a Hammer) into Leaves, cut them into finall pieces, fhort and flender, then divide them into two equal parts, and take two diffolving Glaffes, the Form and Meature of which, you will fee in the Chapter of Veffels; and in one of these two, put one Ounce and a half of E. (Menstrual Pag. 171, alleadged by us before, in Numb. 67.) I mean the eighth part of the whole Menstrual, then put in prefently one part of F, and be careful immediately to ftop the Mouth of, the Veffel with its Cover, and lute

lute the joynt well, with the luting aforefaid (in the Preparation of the faid Menstrual) or with clear and pure Wax; which done, put it in Balneo Maria hot for three days, that God may give you a happy day. Then take F (the Diffolution of the Silver) and Itiain (decant) the Water into another clean Glafs Vetiel, and incline the Vefiel well and warily, that the Earth of F may not be ftrained with the Water, nor the Water troubled, and ftop the faid Phial wherein you put the Water of F, and keep it apart. Then upon the Diffolving Veffel of that F, which ought to be diffolved (the other part of Silver to be distilled into a Men-(trunm) put its Alembick, which must be close and differently joyned with the luting aforefaid ; then place it upon Sifted Afhes, and fetting it on a Fornace, kindle your Fire and distil, put the Liquor in a Glass Phial, and make a Fire of Saw-duft, and when the Liquoris in a manner all diffilled. ftrengthen the Fire a little with Coals, according to that which is used for the exact calcining of an Earth, but keep it from too much heat, for we have feen it done by the heat of the Sun; understand this well, unless you would be made a fool, give this heat continually for eleven hours, then ftop the Fornace, and go to fleep, and in the Morning take your Calcinatory (which is fo called because of the property of its operation) and put in the Menstrual often mentioned. wherein G (our Mercurial Pag. 171. or Vegetable Sal armoniack) was dillolved (fee the Menstruum below in Numb. 147.) and you will fee it operate, and the fume afcend, and the Metal calcined with Liquefaction, but ftop it better than before with its own stopple, which goes in (to the faid Calcinatory) and have a care of puting it into any other heat, till it hath operated by its own Virtue, and when it hath wrought and is quiet, lute the joynt well with common Wax, and being fo luted, put it in a hot Balneo Maria three Natural days, as you did clfewhere, becaufe it is fo expedient. Then distil the Water, and calcine the Earth (remaining in 'the bottom) as aforefaid, and repeat fo oft till all the Earth is diffolved by this Method in the Form of a Liquor, and the Diffolved Limus, or Oyl by Art diffolved, which is the Subflance of a Body depurated by Water, and carried by the

Bion the Receipts we obferve:

I. Hat the Menstruums of this Kind are more noble than those of the 20th and 21th Kinds; there the Effences or Magisteries of Metals were dissolved in Simple Mineral Menstruums, but here in the fame compounded.

2. That these Menstruums differ not from the Menstruums of the Tenth Kind, but in the addition of Acidity; diffelve a Menstruum of the said Kind in what Acid you will, and it will be forthwith transformed into a Menstruum of this. Kind.

3. That these Mentruums are by Digestion made sweet again, and Vegetable as before.

4. That these Menstruums are not satiated, but by their Disolutions augmented, as well in quantity as quality in infinitum.

5. That the Spirit of Universal Mercury, or first Matter of Metals of Basilius, is by him also called Mercury duplicated, wherein the Kings Mantle is to be disolved. Sect. 1. Cap.de Sulphure Mercurii, Sect. 2. de Vitriolo Phil. and Sect. 2. Cap. 4. de Vitriolo Veneris. In another place, the Sulphur of Mars and Venus duplicated. Sect. 1. Cap. 3. de dulph. Martis & Veneris. In another place the Soul of Mars and Venus, as in Particul. Veneris.

6. That this duplicated Mercury is made much better by adding the Kings Mantle, the Crocus of Sol, Luna, and other Metals. That the Menstruums of almost all Kinds are promiscuously called Philosophers Mercuries, but of these more copionsfly and more exactly in the Third Book.

7. That the Spirit of Universal Mercury of Easilius, is the same with the Magisteries of Mars and Venus, made after the Mineral way; diffolve the Magisteries of Mars and Venus in the common Spirit of Vitriol, and by this simple Diffolution, you will make the same Spirit of Universal Mercury.

Univ Calif - Digitized by Microsoft @ 8. That ...

8. That as Mars and Venus, so also Jupiter and Saturn, and the rest of the Metals, may be made into the said first Matters, that is, of the same Virtues with the first Matter of Mars and Venus, as to the faculty of disolving: But Mars and Venus are preferred for the excellency and exuberance of their Tinctures.

WHY THE REAL

and such and and and a such as

EPILOGUE.

Hefe are the things, My Iriends! which I promifed you; the Menstruums of Diana, hitherto by none but the Adepts described, declared, and rightly applied to Use, and are now by me so manifestly explained, and distributed into their Kinds, that they may be distinctly apprehended even by the meanest Chymifts. There are indeed many more Menstruums remaining (for Diana has superfluity of Menstruums) which I have not shewed. you; but I thought these sufficient, as Examples to you: You, if you please, may collect more, and appropriate them to their Kinds : But if it be our duty to respect the common Good, I could wish you would communicate to me fome of the more rare Manuscripts or Impressions of the Adepts, if you have any in your Studies or Libraries. that they may be of service not only to you, but to all Mankind, or at least fignifie their Names to me, that I may either buy, or by entreaty borrow them of you or others; especially you being already well affured, that in Practical Books all Secrets depend upon the Spirit of Philosophical Wine, but that in the Theoretick, they are all most obscure, being figurative, and not in the least to be under-Rood according to the Letter; which, if you keep longer in your. Libraries, will be dayly exposed to a thousand dangers, and at length, as nothing worth, being mouldy and rotten, become the Aliment of Time, the Consumer of all things.

In the mean time, defpife not these Receipts of Menstruums offered to you, but rather read and peruse them, and every where endeavour to find out the Chymical Iruth, but those which you do not either understand, or not essen, cast away as trivial; for if one only Kind, or any one Receipt-of a Kind out of four and twenty, please you, it is sufficient; for we will easily prove that by that one, all the Secrets of the more Secret Chymy may le prepared.

If also you are pleased to object against the Authority, yea Honesty and Sincerity of this or that Adept, as, Paracellus, Lully, Ec. you may leave him, and reject his Receipts, making choice of

any

any other, in whom you may have greater confidence, and we will prove all the reft by his Receipt: Learn therefore the ways of making these Mensurums, observe their Orders, Degrees, Matters, Methods of Making, the Virtues of Dissolving, Tinging, Multiplying themselves, &c. and you will acknowledge them to be the best Instruments of all the more Secret Chymy, as Keys, without which nothing, and with which all the Secrets of this Art are opened and unlocked.

To make these Things, which we have declared in the former Discourse, of the Excellencies of the Menstruums, more easie to you, I will here contract into a Breviary, and reduce them into twelve subsequent and infallible Conclusions.

I.

That the Descriptions of these Menstruums are understood according to the Sound of the Letter.

Hat the Receipts of this Book contain nothing occult, but the Spirit of Philosophical Wine (the Use only of which we promised to define) you will easily vouchsafe us your Assent. Nor yet is it too obscure, but that it may be properly called an unctuous Spirit, proceeding from the White and Red Wine of Lully, the Constitutives of the Menstruum sectors: The rest, which seem more obscure, are Terms of Art, for the most part explained in the very Descriptions of the Receipts of things made and produced from this Spirit: But the obscurity, which a shorter or longer description of a Receipt causeth, is by accident, to be easily overcome and removed by any diligent Disciple of this Art.

II.

That no one of the aforefaid Menstruums is prepared without the Spirit of Philosophical Wine.

A Mong all these Menstruums of the Adepts imparted to you, there is not one, which has not the Spirit of Philosophical Wine for its Basis. There are indeed Menstruums, in the Receipts of which, we meet not with the Name of this Spirit, yet there it is lurking

(271)

lurking under the name of this or that Mentruum. Other Receipts of Menstruums there are, which do not take the Spirit of Philosophical Wine free, but as it were fettered, that is, any Common Oyl; but when in the making of these Menstruums the Spirit is unfettered, as also acuated, such Menstruums cannot in the least be said to be made without it. There are lastly also Menstruums, in the Receipts of which, neither the Spirit of Philosophical Wine, nor any Oyley Matter is expressly mentioned (but these are more rare, on purpose alledg'd to shew us either the Envy or Morosity of the Adepts) whereas notwithstanding it is by the Use of the Menstruum, manifest that this Spirit is added through necessity; for that which is promised, could not otherwise be effected.

Finally, There are some, which you will affirm may be made with Common Spirit, Common Vinegar, and Aqua fortis, or Common Sal Armoniack without the Spirit of Philosophical Wine : Suppose it so; but when you proceed to Practice, and try an Experiment with such a Menstruum, you will soon find it not only too weak, but also altogether ineffectual, and destructive in the more Secret Chymy: For it is impossible to do that with a common Menstruum, which the Adepts have prescribed by a Philosophical Menstruum. The Secrets of the more Secret Chymy have this Priviledge, that they cannot be made by any man but him that is possible of Philosophical Wine.

III.

That these Menstruums are prepared from any fort. of Matter.

We have demonstrated that the Menstruums aforefaid are made of divers Oleosities, Aridities and Acidities of the three Kingdoms. Tou have observed the simple Vegetable Menstruums to be made of things neither Tinging nor Acid; Compounded Vegetable Menstruums of things Tinging, not Acid. Simple Mineral Menstruums made of things Acid, and not tinging; the Compounded, of things hoth Acid and Tinging. Wherefore being now better affured of your Menstrual Matter hitberto so anxiously sought for, you may take crude Mercury, or Vitriol, Niter, common Salt, Salt of Tartar.

Tartar, or Urine, Rain-Water, May-Dew, the Spirit of the World alfo, by what foever Art obtained, or any other Matter alfo which you have made choyce of before the rest, for the true and universal Matter of a Menstruum, in which choyce you will not err ; for it is much at one, whether you make it of Gold or Mercury; whether of Pearls or Arsenick; Vegetable or Mineral Salt, provided you proceed according to this or that Kind of Menstruums, with confideration also of what Use you would have the Menstruum, lest you prepare an Essence instead of a Magistery, or a Poyson for an Antidote: On the contrary, take pure Honey So applauded by Parisinus, or the Salt of Tartar, commended by Ripley; or common Salt, esteemed by Paracelfus, as the Matrix of Metals; or Vitriol abounding with the Tincture of Gold, extolled by Bafilius, or Argent vive magnify'd by most of the Adepts, as the open Metal : Take, I (ay, which of them you please, but you must know it cannot in the least answer your expectation, except it be joyned, that is, corrected, exalted and graduated with the Spirit of Philosophical Wine.

IV.

That these Menstruums are also prepared by any Method.

YOU have here had several Methods of Preparation, which if not satisfactory, you may please to invent new ones. Herein is contained nothing secret, if your Matter, and the Spirit of Philosophical Wine be, without any possibility of being separated, mixed together, and distilled either in part or whole, through an Alembick: For every Matter, by what method sever volatilized and distilled with the Spirit of Philosophical Wine, is a Menstruum.

(373)

s and the fame reality of forer

S. Stabut in

That these Menstruums are sufficient also for every Use.

TOU have now in this Book observed the Use of the Spirit of Philosophical Wine, as also of most Menstruums in these ways of making Menstruums: hereafter, in the following Books you will perceive them to be sufficient for every purpose. By these means you will make all the Medicines of the Adepts, reduce all Metals into running Mercury, or if you had rather, into the Philo-Sophers Mercury, or first Matter of Metals. By these will you make as well universal as particular Transmutatives of Metals, the best of all in respect of deeper Tincture, shortness of Time, and conciseness of Work. Hereby lastly, will you prepare what sever curiosity has been left us by the Adepts, and prescribed in their Books, so that if they have any Preparations without the Spirit of Philosophical Wine, you may decline them without any dammage : For these Menstruums do volatilize all fixed Bodies, and fix the volatile and volatilized, diffolve the coagulated, and coagulate the diffolved: Under which few Notions are comprehended all the Operations of the more Secret Chymy.

to the Otenting And

That these Menstruums are many.

1000 - 20G

Y 0 V have observed divers Kinds of Menstruums, defigned for several distinct Vses. Simple Vegetable Menstruums do extract, rather than dissolve Bodies; the Compounded dissolve only, but not extract: That which Vegetable Menstruums do, the Mineral cannot; and so on the contrary: Of Vegetable Menstruums are made Medicines only, not Poysons; but of Mineral Menstruums, Poysons only, and not Antidotes withut the fingular dexterity of an Artisst. An Vse different and contrary to its felf admits no universal Menstruum: The Spirit of Philosophical Wine is indeed the universal Matter of them all, but there is not one of all the Menstruums sufficient for every Vse; wherefore, un-

less

(374)

less you will for the fame reason call every one universal, because they all proceed from the Spirit of Light, the universal Bass of all things, we cannot but deny an universal Menstruum.

VII. Sta

That some Menstruums are corrosive.

Hat Mineral Menstruums are corrosive, and therefore diffolve Bodies with ebullition, is clearly manifest by the Receipts aforefaid. I would not have you, being perhaps not sufficiently instructed in the Sayings of the Adepts, every where declaring against Aqua fortifies, and all Corrosives, either despise, or think ill of them : These are those Menstruums by which the ancient Adepts abbreviated their Time and Labour in preparing their Tinctures: And Paracelfus justly entituled himself to the Monarchy of Arcanums, he having been the principal Instrument in compleating not only the Abbreviations of Alchymy, but moreover introducing these Mineral Menstruums to Medicinal Use, and that with lo much dexterity, that there seems to be now no hope left to his Disciples of mending any imperfection of this Art, as will be demonstrated in the following Books: Befides, these Menstruums differ from the Vegetable Menstruums no otherwise, than that an Acidum is superadded to them, or to the Spirit of Philosophical Wine, corroding the Aridum, and dividing it into Atoms, making way for the Oleofum, to be Sooner and better incorporated and mixed together, which notwithstanding do by taking away the Acidum, return into the fame Vegetable Menstruums they were before. mannin

nosticaldanage i Sam VIII.

That these Menstruums are permanent, yea fixed with Things diffolved in them.

It is by the former descriptions of Menstruums, manifest, that as well the Spirit of Philosophical Wine, as Menstruums made of it, do slick to the things dissolved in them. There is indeed no better Argument to confirm the excellency of Menstruums, than that they are homogeneous and permanent with things dissolved, and consequently sequently Dissolvents transmutable with the dissolved into a third Substance different from both: These Menstruums therefore are so far from being immutable, that, according to the Edict of the whole Crowd of Philosophers, to wit, The diffolution of the Body is the coagulation of the Spirit, and fo on the contrary, nothing in the more Secret Chymy, can be more infallible. Now this permanence of Menstruums you have observed not only in the volatilizations of Menstruums, but also in the fixations of some, thus you had the fixation of the Spirit of Philosophical Wine in the greater Circulatums of the Ninth, and Two and Twentieth Kinds; but you will find more in the Preparations of Medicines, as well as Tinctures. They were by an Analogy of the Ancients ill called Menstruums, unless also they could be transformed into the substance of an Embryo, and yield proper Nutriment and augmentation to the Infant : The Spirit of our Wine is indeed an absolute Oleosum, that is, combustible, but here being throughly mixed with Aridums, it becomes incombuftible, and despiseth the violence of Fire : It is also moist, and so ancapable of fixation; but the moister and thinner parts, which it contains, are separated in the work of fixation from the more Oyley Particles being now concentrated. So you observed, that, in the Preparations of the Sal Harmoniacks, or Sulphurs of Nature, the Spirit of Philosophical Wine, as also the Vegetable, as well as Mineral Menstruums are partly reduced into insipid Water, and partly sticking to the Matters left in the bottom, and fixed : But better Examples you will have both in the Second and Third Books.

.XIn Icd Veren

That *Menstruums* are not fatiated with diffolving, but become rather more avidous, and fo are by Diffolutions augmented as well in quantity as quality.

Hough the Spirit of our Wine is the Basis, Root, and Center of all Menstruums, Medicines, Alchymical Tinctures, and Pretious Stones, yet nevertheless doth it dissolve flowly, yea only such Bodies as are homogeneous to it, that is, purely Oyley, as it felf is a pure Oleosum, and affociate the same to it, transmuting Univ Cast - Diost A 2 a 2 Microsoft & into

(2376)

into its own Nature, and so multiplies its self by this means. Now fo foon as this Spirit is transmuted into an Arido-Oleosium, it does under the name of a Simple Vegetable Menstruum, diffolve Arido-Oleofums, that is, the Sulphurs or Tinctures of the Mineral Kingdom, the pure Aridum being untouch'd, and left in the form of a white Powder, with which Effences the faid Menstruums or Effences may indeed melt together, but not in the least be satiated. because there is an Addition and Multiplication of like Parts: But the same Vegetable Menstruums being now compounded of the Simple, do no more extract the Tinctures and Effences of Minerals. but diffolve and transmute the whole Mass or Substance of these Bodies into an Oyl (wimming above, which is called a Magistery : Now this being digested together with its Menstruum, at length falls in, is united, and so multiplies the Compounded Vegetable Menstruum. For an Example to young Beginners; The Spirit of Philosophical Wine being a Menstruum of the first Kind, and acuated with the Oyl of Nutmegs, is hereby made a Menstruum of the second Kind; or acuated with Honey, if you would have a Menstruum of the third Kind: distil either of those Menstruums with Common Sal Harmoniack, and you will have a Menstruum of the fourth; but if you defire one of the fifth Kind, cehobate either of them with the Salt of Tartar, and you will have the Acetum acerrimum of Ripley; or with common Salt, and you will make the Sal circulatum of Paracelfus; Cohobate Mercury, or any other Mercury, or any other Metal through an Alembick with this Vinegar or Salt, and you will transmute the Simple Vegetable. Menstruums into the Compounded Vegetable Menstruums of the eighth Kind; from which you will further prepare Menstruums of the tenth Kind, by diffolving and volatilizing any other Metal in them. The Same Rule you have as to our Mineral Menftruums : But the Common Menstruums cannot receive beyond their Capacity. HS QUARE

(377)

That these Menstruums are also Secrets of the Second Book.

YOu have in this Book observed that among the Vegetable Menstruums there is none but what is either an Essence, or a Magistery, and it will be more copiously demonstrated in the Book of the Preparations of Medicines: Iou have also taken notice by the aforefaid Receipts of them, especially being compared with the following Descriptions of Medicines, that Mineral Menstruums are the same Medicines, but mixed and dissolved with Acids.

XI.

That these Menstruums are likewise Secrets of the Third Book.

It is now partly clear by the Receipts of them, but will be more clear by the Secrets of the Third Book, that the Simple Menftruums are the Philosophers Stones not yet fermented; but the Compounded are Menitruums mixed with the Masculine Seed, and therefore Volatile and Fermented Stones.

XII.

That these Menstruums are in like manner Secrets. of the Fourth Book.

That these Menstruums do give Light by Night, and consequently, are perpetual Lights, yield also Matters for Pearl^s, Pretious Stones, &c. the Receipts themselves do shew; which will be confirmed by the Fourth Book.
