Initial "A" at the opening of the Book of Judith in a bible from Citeau, Eastern France, 1109, showing Judith decapitating Holofernes. Dijon, Bibliothèque Municipale, Ms. 14, fol. 158.

ALR-AZ

ALROY, DAVID (Menahem; 12th century), leader of a messianic movement in *Kurdistan. Alroy was born in Amadiya, east of Mosul. His personal name was Menahem b. Solomon, but he called himself David as befitted his claim to be king of the Jews. "Alroy" (אלרוי) and "al-Rūhī" (אל-רוחיי) are evidently corruptions of al-Dūjī, his family name in Arabic. The available information about the movement and its initiators is contradictory and tendentious. The movement probably started among the "mountain Jews" of northeast Caucasus before 1121, although some sources and historians place its beginnings in the second half of the century. It gathered momentum from the ferment that accompanied the struggle waged between Christendom and Islam in the wake of the First Crusade, and during the wars preceding the second. The tribulations of the period and massacres in which they were the victims appeared to many Jews as the pangs heralding the advent of the Messiah. The principal leader of the movement was initially Solomon, Alroy's father, who claimed to be the prophet Elijah. An important role was played by one Ephraim b. Azariah, called "the Jerusalemite." The young Menahem was declared the Messiah, a claim assisted by his personal charm. He was of fine appearance, had excelled in his studies in the Baghdad academy, was acquainted with Muslim customs, learned in Jewish mysticism, and skilled in sorcery. To announce their intentions, the lead-

ers of the movement addressed a missive "to all Jews dwelling nearby or far-off and in all the surrounding countries" announcing that "the time has come in which the Almighty will gather together His people Israel from every country to Jerusalem the holy city." They emphasized penitential preparation by fasting and praying. Their opponents viewed such propaganda as dangerous, and shortly afterward the movement was suppressed. Alroy, however, reestablished his center in Amadiya on the route leading then from Khazaria to the Crusader kingdom. Its strategic position as a Muslim base for operating against Edessa (Urfa) had been strengthened by fortifications constructed by Zangī, ruler of Mosul. Alroy now proposed to capture Amadiya. He was encouraged by the contemporary Muslim sectarians (Yezidis) who also sought to gain control of the stronghold and its surroundings, aided by the superstitious awe with which its inhabitants regarded miracle workers and mystics. Rumors were circulated that when imprisoned by the Seljuk sultan, then overlord of the local rulers, Alroy had magically freed himself. Alroy then invited the Jews of the vicinity as well as those living in Azerbaijan, Persia, and the Mosul region, to Amadiya. They were to come with weapons concealed in their garments to witness how he would obtain control of the city. According to an anti-Jewish tradition, rumors of his activities reached Baghdad. Two impostors had

forged a letter from Alroy in which he promised to convey the Jews of Baghdad to Jerusalem by night, on the wings of angels. Alroy, therefore, acquired many adherents in Baghdad, and those who waited up all night for the promise to be fulfilled became a laughingstock. Before Alroy managed to do more, he was murdered – according to one version by order of the authorities – according to another, by his father-in-law, who had been bribed. A number of his followers in Azerbaijan who continued to believe in him after his death became known as Menahemites. Alroy's death probably occurred long before the date recorded by Benjamin of Tudela (c. 1160). The character in Benjamin Disraeli's novel, *Wondrous Tale of Alroy* (1839), is largely fictional as he is depicted there as a conquerer.

[Abraham N. Poliak]

ALSACE, former province of the Germanic (Holy Roman) Empire, and from 1648, of *France, including the present department of Haut-Rhin and Bas-Rhin.

Middle Ages

The first evidence of Jews in Alsace is reported by *Benjamin of Tudela who mentions (c. 1170) Jews in Strasbourg. From the beginning of the 13th century, Jews are also mentioned in Haguenau, Obernai, and Rosheim, and later, during the same century, in Wissembourg, *Guebwiller, Colmar, Marmoutier, *Rouffach, *Ensisheim, Molsheim, Mulhouse, and Thann. Probably many refugees expelled from France in 1306 went to Alsace. Jews are henceforward found residing in some 40 additional localities there, notably, *Ribeauvillé, *Sélestat, Bouxwiller, Kaysersberg, and *Saverne. The Jews of some 20 communities in Alsace were victims of the *Armleder massacres, principally at the beginning of 1338. Further anti-Jewish persecutions affected the communities of Colmar, Sélestat, Obernai, Rosheim, Mulhouse, Kaysersberg, Turckheim, and Munster in 1347. Later, the Jews were accused of spreading the *Black Death, even before the epidemic began to ravage Alsace. A gathering of nobles and representatives of the imperial cities of Alsace discussed the subject in *Benfeld at the beginning of 1349, and the city of Strasbourg alone defended the Jews. Subsequently, the Jews were cruelly put to death in some 30 towns in Alsace. After the artisans gained control of the municipal council of Strasbourg, having eliminated the patricians, the important Jewish community of this city met the same fate. These events left their mark on the folklore and the toponyms of Alsace. The Jews reappeared in several towns of Alsace after a short while, apparently with an improved legal status. They were admitted as citizens in Colmar from 1361, in Sélestat from the end of the 14th century, and in Mulhouse from 1403, with almost the same rights as the Christian citizens.

End of 15th Century to Middle of 17th Century

Jews were able to settle in the villages of Alsace when expelled from its cities. They mainly engaged in moneylending. Jews

were admitted into Strasbourg during the day to carry on trade, but were compelled to leave the city at nightfall. Regular contact and traffic existed between the Jews of Alsace and those in western Germany, Switzerland, Holland, and Lorraine. Alsace Jewry, basically Ashkenazi, developed individual characteristics, in certain ritual matters, for instance, in the choice of *selihot* (“penitential prayers”). The Alsatian rite (*Minhag Elzos*), has been published several times in at least ten editions (for the first time in Frankfurt, 1725). Communal leadership was centralized and authoritarian. The outstanding personality in Alsace Jewry during the Renaissance period was the *shadlan* (“interceder”) *Joseph (Joselmann) of Rosheim. The works of Joselmann's older contemporary, Johanan Luria, show that Alsace Jews at this period were much influenced by Christian society, ideas, and manners; their social and religious life shows on this evidence much variety, and indicates the social tensions and patrician tendencies in certain circles.

The aristocracy and citizenry found the Jews a profitable source of income and oppressed them in every way. In places where Jews were not granted the right of residence, they had to pay exorbitant transit tolls. Whenever Alsace was ravaged by war, the Jews were the first victims of the soldiers. The Jews living in Alsace were subjected to many restrictions. These extended to the wearing of the Jewish *badge, the humiliating form of *oath, and to family life. (Every Jewish marriage was submitted for authorization, and illegitimate children were forcibly baptized.) Jews were not permitted to own land or any building except their place of residence. Newcomers were excluded unless they obtained special authorization.

Under France (the Ancien Regime)

Although a new tax, the *Leibzoll* (“body-tax”) was imposed on Alsace Jewry by the French, Jews continued to enter Alsace, and in certain cities their numbers rapidly increased. There were 522 Jewish families living in Alsace in 1689, 1,269 families in 1716, and 2,125 in 1740. The “General Enumeration of the Jews Tolerated in the Province of Alsace” of 1784, published in Colmar in 1785, shows that Jewish communities were scattered throughout the province, numbering 3,910 families (nearly 20,000 persons). The principal settlements were often near main towns, from which the Jews had been expelled but into which they were temporarily admitted for purposes of trade under differing regulations. Communities existed in *Bischheim, a suburb of Strasbourg (473 persons), Haguenau (325), Marmoutier (299), Westhoffen (282), Mutzig (307), Rosheim (268), Wintzenheim, near Colmar (381), Bergheim (327), Ribeauville (286), Bisheim (256), *Hegenheim, near Basle (409), Niederhagenthal (356), Oberhagenthal (271), Durmenach (340), Zillisheim (332), and Rixheim (243).

Economic conditions for the Jews in Alsace were precarious. Many engaged in moneylending almost always on a small scale, frequently to peasants. A few Jews acquired wealth as army contractors. The majority consisted of hawkers and dealers in livestock, grain, and scrap iron. In most of the vil-

lages where they were living, the Jews kept the butcher shops. The chief communities of Bouxwiller, Haguenau, Mutzig, and Niedernai wielded extensive jurisdiction according to the administrative division of Alsace. The inflexible piety of the Jews and their distinctive Judeo-Asatian language distinguished them clearly from their neighbors, although in many aspects they blended into the Asatian environment.

In 1735 Jews were forbidden to draw up their accounts in Hebrew characters and they were ordered to keep registers of civil status in 1784. Efforts were made to reduce their numbers by preventing Jews from other countries from settling in Al-

sace and severely limiting Jewish marriages. Tensions built up toward the end of the 18th century: in 1777 a band of criminals, egged on by the bailiff François-Joseph of Hell, forged a mass of false receipts which they sold to peasants indebted to Jews, purportedly freeing them from their obligations. Although the culprits were eventually executed, this affair aggravated the economic difficulties of the Jews and inflamed the Christian populace against them. In 1775 Herz Mendelsheim *Cerfberr of Bischheim, a wealthy purveyor to the king, obtained permission to reside in Strasbourg permanently with his family, although this was opposed by the municipality. Cerfberr was

Jewish communities of Alsace, including those of the Middle Ages.

in contact with Christian Dohm who advocated reform of the Jewish status. Cerfberr appealed also to Louis XVI for its amelioration. An edict was issued in 1784 repealing the *Leibzoll*. Subsequent letters patent brought some security to the Jews, although reinforcing other restrictions. A commission presided over by *Malesherbes was considering the position of the Jews in Alsace, when the French Revolution swept away the *Ancien Régime*.

The Emancipation (1789–1844)

Despite the efforts of Jewish notables, such as Cerfberr, Isaiah *Beer-Bing of Metz, and Berr Isaac Berr of Turique, supported by *Mirabeau, Robespierre and, above all, by Abbé Grégoire, a change in the status of the “German” Jews was strenuously and successfully opposed in the first years of the Revolution by the deputies from Alsace and Lorraine. They claimed that such a move would provoke riots and massacres in their districts. Even when the equality of the Jews before the law was proclaimed on Sept. 27, 1791, people in the eastern provinces became used to it only gradually. These districts of France became in practice, and in formulation of anti-Jewish theory, the hotbed of opposition to Jewish emancipation. Many attacks were made on Jews in Alsace-Lorraine. While the Jews themselves were not overly eager to integrate there, they gladly used their newly won rights, especially concerning freedom of settlement. The Jewish population of Strasbourg, for instance, grew in about ten years from less than 100 Jewish inhabitants to over 1,000. *Napoleon I tried to force the Jews of Alsace-Lorraine to integrate, first on the basis of the document formulated by the *Assembly of Jewish Notables and the *Sanhedrin of 1807, and later by the edict of March 17, 1808, called by the Jews the “infamous decree” (*Décret infâme*).

The repayment of debts owed to Jews by Christian peasants was deferred, trading by Jews was subjected to special authorization, and the possibilities of finding replacements for the army draft were restricted. The regulations were theoretically aimed at Jews throughout the country but were implemented only in Alsace and Lorraine. Napoleon’s requirement that Jews should adopt family *names, and the creation of the consistorial organization (see *Consistory), compelled, even the Jews most opposed to reforms, to conform to the general legal and economic structure of the country despite attempts at resistance. The discriminatory regulations were not renewed in 1818, and the Jewish religion was recognized by the July Monarchy in 1831 as one of the three religions supported financially by the state. This more liberal policy finally succeeded in turning the Jews of Alsace, like their French coreligionists, into loyal citizens of the realm. An *Ordonnance*, issued on May 17, 1849, supplied French Jewry with a strong constitution as one of the “spiritual families” of the French nation. In that framework the Jews from Alsace and Lorraine became a significant element in French Jewry because of their number and the tenacity of their Jewish religious identification.

The Expansion (1844–1871)

The Jews rapidly adapted themselves to the modern society. They retained strong roots in the villages. In about 1900 there were still some 30 official rabbinical posts in Alsace, apart from those in Strasbourg and Colmar which with the seats of consistorial chief rabbis. However, the Jewish population increased in the large towns, such as Strasbourg, Metz, Nancy, Mulhouse, Colmar, Belfort, Sélestat, and Saverne. A considerable number moved to Paris, or emigrated mainly to North and South America. Many became wealthy through wholesale trade and industry, and soon large numbers entered the liberal professions. The Jewish communal elementary schools, which after the emancipation increasingly replaced the *heder* system and private teaching, provided a complete education, giving religious and preponderantly secular instruction. Those who could afford it preferred the state secondary schools to the Jewish vocational schools opened in the main towns (Metz, Strasbourg, Mulhouse, and Colmar) so as to direct the young toward handicrafts and agriculture. Jews also distinguished themselves in the universities. Local writers, such as Alexandre *Weill (1811–95) of Schirrhoffen and Lémon Cahun of Haguenau (1841–1900), achieved some literary fame. In the rural areas religious life continued nearly as in the past and Alsatian villages provided rabbis for the whole of France, Algeria, and some other countries. A great part of the urban population, however, tended to seek other more unorthodox means in which to express their Jewish faith or Jewish identification. This took the form of a tendency to mild religious reform (opposed only by the leader of French Orthodoxy, the chief rabbi of Colmar Solomon-Wolf *Klein), and of Jewish social activity outside the scope of religion in the narrower sense of the work, such as the founding of Jewish newspapers and periodicals. There were also cases of discreet withdrawals from Judaism and of some notorious conversions, such as those of the Strasbourg-born rabbi David *Drach (1791–1865), son-in-law of the chief rabbi of France, E. Deutz; and the brothers *Ratisbonne, who were the sons of the first president of the Lower Rhine consistory.

Under Germany (1871–1918)

The annexation to Germany of a part of Lorraine and the whole of Alsace (except Belfort) after the Franco-Prussian War of 1870–71, found the Jews of this region so rooted in French life that many families preferred emigration to accepting German nationality. Thus a number of textile enterprises belonging to Jews were transferred to Normandy (Elbeuf), while the Epinal, *Lyons, Paris, and many others were vastly increased by newcomers from Alsace and Lorraine. In the climate of opinion of the Third Republic, political activity, as well as the sciences and the arts, were open to Jews. The army also, despite the *Dreyfus affair, was an attractive career for many young Jews of Alsatian origin.

A group of the Jews who had remained in Alsace-Lorraine accepted the new situation and were strengthened by a large influx of Jews from the eastern side of the Rhine. The lo-

cal community thus also reflected a German orientation but most of the Jews there maintained a distrustful attitude toward Germany and welcomed the return to France in 1918.

After 1918

Although the Concordat with the papacy had been abolished in France in 1905, it was maintained in the recovered territories in order to conciliate the Catholic Church, which continued to receive financial support from the state. For this reason the Jewish consistories, which were administered under the same system, continued as official institutions, and officiating rabbis and ministers received their salary from the state. This situation remained unchanged after World War II.

The Nazi Period

In June 1940 the Germans again appropriated Alsace and Lorraine and commenced to make them *judenrein*. Jews who had not been previously evacuated to the interior of France were expelled and synagogues and cemeteries were desecrated. New communities grew up in the center and south of France in which those coming from Alsace-Lorraine cooperated with their coreligionists of all origins; like the rest, they were persecuted. A large number of young Alsatian Jews were active in the underground movement, and many were deported and perished, among them the chief rabbi of Strasbourg René *Hirschler, the youth chaplain Samy Klein, and the young mathematician Jacques Feldbau. Soon after the Allied victory, many of the survivors returned to Alsace and Lorraine. Most of the village communities, which had already decayed before the war, were not reinstated, but Jewish life was renewed in the large cities, especially in Strasbourg.

Postwar Conditions

In 1970 the Jewish population of Alsace and Lorraine numbered about 50,000, including newcomers from Algeria who arrived in France in 1962. Still the seat of a consistory, Strasbourg had an Orthodox, an Eastern European, and subsequently an Algerian-Moroccan *kehillah*, several officiating rabbis, and various educational and philanthropic institutions. There were officiating rabbis in the region for Bischheim (a suburb of Strasbourg), Bischwiller, Erstein, and Obernai (all three rabbis resident in Strasbourg); Haguenau, Saverne, and Sélestat for the Lower Rhine; Colmar, Mulhouse, Dornach (a suburb of Mulhouse, with a rabbi resident in Strasbourg), and Saint-Louis (French suburb of Basle) for the Upper Rhine; and Metz and Sarreguemines for the Moselle district. Of the 67 other communities only 41 had officiating ministers (some only for the High Holidays).

By the 1970s local traditions of the Jews of Alsace-Lorraine were dying out, and only a few elderly people still dimly remembered them. Large sections of the Jewish population were becoming indifferent to their Jewish identity and mixed marriages were common. However, the Jewish school in Strasbourg, where over 15,000 Jews lived in the early 21st century, other forms of religious instruction, as well as the influence of the State of Israel helped keep alive some knowledge of Ju-

daism and an interest in Jewish affairs among elements of the Jewish population.

[Bernhard Blumenkranz / Moshe Catane]

ALSCHULER, ALFRED S. (1876–1940), U.S. architect. Alschuler was a native of Chicago and a prolific architect whose commercial, industrial, and synagogue buildings dotted the greater Chicago landscape between 1910 and 1930. He worked his way through the Armour Institute of Technology (now the Illinois Institute of Technology) and the School of the Art Institute of Chicago. His most famous building, the London Guarantee and Accident Company Building, now a designated landmark, stands proudly at the corner of Wacker Drive and North Michigan Avenue and is better known today simply as 360 North Michigan Avenue. Located on the site of Fort Dearborn, a log-built outpost established by Thomas Jefferson in 1803, the property became valuable real estate when the Michigan Avenue Bridge was built. Work began on this remarkable 21-story structure in 1921. The building was viewed at the time as a permanent "civic" contribution to Chicago's cityscape, akin to the monuments of ancient Greece and Rome. Alschuler turned the irregular property line to advantage. The slight curve of the façade softens the rigor of the tall building. The classical Greco-Roman details that accent the arched entrance speak "power" as they did in ancient Rome. Four massive Corinthian columns hold up a pediment that bears the name of the building. Over the three-story arch, two reclining figures, Ceres and Neptune, gracefully make the transition from the arch to the horizontal pediment. Heraldic shields soften the windows on the third story. Centered over the pediment a spread eagle hovers over the entrance adding to the power icons of the entrance. The rhythmic colonnade of Corinthian columns near the top of the building as well as the cupola serve to add to the buildings height and its unity of design. Throughout the building there are also icons of corporate power and history. Alschuler built The Chicago Merchandise Mart ("The Merc") in 1927. It was an impressive limestone structure located at 100 N. Franklin

Street. Alschuler's design was classical, similar to the London Guarantee with arched windows and limestone sculptures depicting farmers' products. When it became known that the building was scheduled to be demolished by the Crown family real estate interests, Preservation Chicago launched a campaign to save it. The campaign failed and the Merc was demolished in 2003.

[Betty R. Rubenstein (2nd ed.)]

ALSCHULER, SAMUEL (1859–1939), lawyer and judge. Alschuler was appointed by President Woodrow Wilson to the U.S. Federal Court of Appeals in 1915 and served until 1936, part of the time as presiding judge. He practiced law in Aurora, Ill. Alschuler was a Democratic candidate for the U.S. Congress in 1892 and for governor of Illinois in 1900. He served in the Illinois House of Representatives from 1896 to 1900. From 1901 to 1915 he practiced law in Chicago. Appointed federal arbitrator in labor disputes between the packers and their employees, he also served on the U.S. Coal Commission under President Harding.

ALSHEIKH, RAPHAEL BEN SHALOM (1881–1957), Yemenite scholar, teacher, and communal worker; the descendant of a family of sages and leaders in San'a. During the great famine in the years 1900–03, Alsheikh fled to Aden and from there migrated to Jerusalem. He studied at the yeshivot and earned his living by working as a scribe. After World War I he was asked to serve as head of the Yemenite community school in Tel Aviv and taught there until his final years. Alsheikh also served as a rabbi and religious instructor. In his later life he was appointed rabbi of Tel Aviv's Yemenite community and represented it in the Asefat ha-Nivḥarim, the *Va'ad ha-Le'ummi, and the local religious council and burial society.

[Yehuda Ratzaby]

ALSHEIKH, SHALOM BEN JOSEPH (1859–1944), rabbi of the Yemenite community of Jerusalem. Alsheikh preached and taught at the Alsheikh Great Synagogue in San'a. He left his hometown in 1888 and in early 1891 reached Jerusalem. There he first devoted himself to studying in various yeshivot. However, he became involved in the leadership of the community of Yemenite immigrants in Jerusalem, founding educational and charitable institutions for them. In 1893 Alsheikh was elected to the administrative committee of the Yemenite community; in 1895 he was one of the founders of the kabbalist yeshiva Reḥovot ha-Nahar; and in 1908 he was chosen chief rabbi of the Yemenite community of Jerusalem. He left several works in manuscript form, including a kabbalistic commentary on the Torah, sermons, commentary on

Yemenite liturgy, and various liturgical poems. In his unfinished *Divrei ha-Yamim le-Adat ha-Teimanim bi-Yrushalayim* ("Chronicles of the Yemenite Community in Jerusalem"), he describes the tremendous awakening of San'a Jewry to the idea of immigration to Erez Israel and the beginning of the actual emigration in 1881–82.

[Avraham Yaari]

ALSHEKH, MOSES (d. after 1593), rabbi and Bible commentator, born in Adrianople. He studied in Salonika under Joseph *Taitazak and Joseph *Caro, and then emigrated to Erez Israel, settling in Safed, where he gained prominence as an halakhic authority, a teacher in two talmudic academies, and a preacher. He was active in communal affairs and was a member of the rabbinical court of Joseph Caro, who conferred upon him the full *ordination which had been reintroduced by R. Jacob *Berab. In turn, in 1590, Alshekh ordained Ḥayyim Vital, who was his disciple in *halakhah*. His major field of interest was *halakhah* but, acceding to requests to preach on Sabbaths, in the course of preparing his sermons he occupied himself also with Bible exegesis. He also engaged in the study of the Kabbalah, from which he derived the fundamentals of his religious philosophy. According to one tradition, Isaac *Luria sought to dissuade him from pursuing kabbalistic studies.

About 1590 Alshekh visited the Jewish communities of Syria and Turkey, and perhaps also of Persia, in the interests of Safed Jewry. He also sent an appeal on behalf of the Safed community to Italy and other countries. The last information about him was from Damascus. He participated there in a rabbinical court session in the spring of 1593. He died soon after at a venerable age.

Alshekh reworked his sermons into commentaries to most of the books of the Bible. Several of these commentaries appeared during his lifetime: *Havazzelet ha-Sharon* (Constantinople, 1563; Venice, 1591) on Daniel; *Shoshannat ha-Amakim* (Venice, 1591) on the Song of Songs; *Rav Peninim* (*ibid.*, 1592) on Proverbs; and *Torat Moshe* (Constantinople, c. 1593) on Genesis. Alshekh's commentary on the Book of Psalms under the title of *Tappuhei Zahav* appeared in Constantinople in 1597–98. This edition was criticized by Alshekh's son Ḥayyim in the introduction to his own edition of his father's commentary on the Psalms. Ḥayyim Alshekh averred that the manuscript of *Tappuhei Zahav* had been stolen from him and represented a first draft only of his father's commentary.

Between 1600 and 1607, Ḥayyim Alshekh reissued in Venice some of the commentaries published by his father and printed those which had remained in manuscript. They were *Torat Moshe* on the whole of the Pentateuch, *Einei Moshe* on Ruth, *Devarim Neḥumim* on Lamentations, *Devarim Tovim* on Ecclesiastes, *Masat Moshe* on Esther (all 1601); *Helkat Mehokkek* on Job (1603) and *Marot ha-Zove'ot* on the early

and Later Prophets, with the exception of Ezekiel (1603–07); and *Romemot El* on the Psalms (1605).

Alshekh's exegetical approach was to present numerous questions that were followed by answers that delved into the syntactic, thematic, and linguistic unity of the biblical text. Alshekh's spiritual world consisted of rabbinic *aggadah* with kabbalistic elaborations. Nevertheless, he was keenly attuned to the stylistic nuances of the biblical text. Alshekh assumed that the biblical characters conducted their affairs using rigorous logic and deliberate thinking. In addition, the Bible had to be viewed as a faithful record of the thoughts, actions, and speeches of the biblical characters.

Alshekh's commentaries, which are permeated with religious, ethical, and philosophical ideas supported by ample quotations from talmudic and midrashic sources, became very popular and have often been reprinted. Some of the commentaries appeared also in abbreviated versions. Ḥayyim Alshekh also published his father's responsa (Venice, 1605). Alshekh was the author of a dirge on the "exile of the *Shekhinah*," which became part of **Tikkun Hazot*. Never published and subsequently lost were *She'arim*, a book of a religious-philosophical nature; a commentary on *Genesis Rabbah*; and a talmudical work. The commentaries on *Avot* and on the Passover *Haggadah* printed under the name of Alshekh are not original works but compilations from his commentaries on the Bible.

ALSHVANG, ARNOLD ALEKSANDROVICH (1898–1960), musicologist and composer. Born in Kiev, Alshvang became involved in political activities and was exiled to northern Russia in 1914. On his return in 1915 he studied composition, theory, and piano at the Kiev Conservatory with Reingold Glier, Boleslav Yavorsky, and Heinrich Neuhaus. Graduating in 1920, he accepted a teaching post there in 1923. In 1930 he was appointed professor at the Moscow Conservatory. Having abandoned teaching after a serious illness, he devoted himself to writing. Among his works are books on Debussy (1935), Musorgsky (1946), Tchaikovsky (1951, 1959²), and Beethoven (1952, 1977²), articles on Scriabin and piano playing, and compositions: *Symphony* (1922), *Symphonic Poem on Ukrainian Folk Themes* (1927), piano pieces, songs, and choral works.

[Marina Rizarev (2nd ed.)]

°**ALT, ALBRECHT** (1883–1956), German Bible scholar. In 1908 he visited Palestine for the first time as a student in the

Palaestina-Institut, directed by G. *Dalman. In 1913 he was appointed as one of the directors of the Deutsches Evangelisches Institut in Jerusalem. In 1921–23 he headed the German Evangelical community in Jerusalem and served as visiting director of the Institut until its activities were ended in 1938. Alt served as professor of Bible at the universities of Greifswald, Basle, Halle, and Leipzig. During World War II he resided in Leipzig and was rector of the university in that city for some time until he retired in 1953.

Alt's first book was *Israel und Aegypten* (1909). Noteworthy among his other publications are: *Die griechischen Inschriften der Palaestina Tertia westlich der Aruba* (1921); *Der Gott der Vaeter* (1929); and *Die Staatenbildung der Israeliten in Palaestina* (1930). He also published many works on the geographical history of Israel during its various periods. Much of his research, published in the form of articles in the *Palaestinajahrbuch* and in the *Zeitschrift des Deutschen Palaestina-Vereins*, was collected in *Kleine Schriften zur Geschichte des Volkes Israel* (3 vols., 1953–59). In Alt's works one can discern a trend toward illuminating the history of the occupation of localities, the political and administrative history of Palestine, and the role of the great powers in the Palestine area. He thereby created a scientific method that is adhered to by some of the most important contemporary researchers on ancient Israel. But the specific name the "Alt School" or the "Alt-Noth trend" generally refers to the scholars, mostly German, who subscribe to Alt's (and M. *Noth's) views on the nature of the traditions in Joshua 2–9, and on the period of the documents in Joshua 15–19. Alt prepared a revised edition of R. *Kittel's *Biblia Hebraica* (1937³), together with O. Eisfeldt. Beside his many articles on the biblical period, he excelled in his knowledge of later periods of the history of Palestine down to and including the Byzantine era, and made important contributions to research on the Negev and Roman times. A number of his books and articles were translated into English by R.A. Wilson in Alt's *Essays on Old Testament History and Religion* (1966), including *Staatenbildung...* and *Der Gott der Vaeter*.

[Michael Avi-Yonah]

ALTAR (Heb. מִזְבֵּחַ, *mizbe'ah*, derived from the root *zbh* (זָבַח), meaning "to slaughter [as a sacrifice]"), originally the place where sacrificial slaughter was performed (e.g., the sacrifice of Isaac in Gen. 22). According to biblical law however, animal slaughter was never upon the altar but nearby. Moreover, the altar was not restricted to animal offerings; it also received grain, wine, and incense offerings. Thus, whatever the original intention of the word altar, it was extended to designate the place for offering all oblations. Finally, this definition does not mention all the uses of the altar, since non-sacrificial functions are also attested: testimony (e.g., Josh. 22:26–29) and asylum (see below).

Typology

Altars are found everywhere in the ancient Near East. They were constructed from three kinds of material: stone, earth, and metal. The choice depended on such factors as permanence, cost, and, in Israel, on whether the altar was alone or attached to a sanctuary. This discussion will naturally be limited to Erez Israel.

Stone altars are not corroded by time and archaeological excavations have unearthed abundant pre-Israelite specimens. Their form ranges from unworked, detached rocks, to slightly hollowed surfaces, to hewn natural stone, and to completely man-made structures. Some undisputed examples are at Gezer, Hazor, Megiddo, Nahariyyah, and Arad. At Arad, the Israelite sanctuary contains an altar three cubits square and five cubits high (the exact dimensions of the Tabernacle altar in Ex. 27:1) and is built of earth and small unworked stones (in accordance with Ex. 20:22; see below). The Bible also speaks of the same types of stone altars, namely, natural rock (Judg. 13:19–20; 1 Sam. 6:14; 14:33–35; 1 Kings 1:9) and artificial heap (Gen. 31:46–54; Josh. 4:2–8, 20 ff.; 1 Kings 18:31–32). All biblical altars, with the exception of those in sanctuaries, seem to have been built of stone.

Altars of earth are explicitly commanded in Exodus 20:24 (cf. 11 Kings 5: 17), but because earthen altars would not survive the ravages of time, none have been found. Nor, for that matter, were any of the altars mentioned in the Bible built of earth. These, the simplest and least pretentious of all altars, were exclusively the creation of the common folk. Brick, technically also earth, so common a material in Mesopotamia, is not evidenced in Israel; a Canaanite brick altar, however, has been found (*Beth-Shean, stratum 1X).

The shape of the Israelite stone and earth altars thus far discussed seems to have been simple, no doubt because of the prohibition against the hewn stone and steps (Ex. 20:22–23). The Arad altar, though in a sanctuary, is indicative of this simplicity. It is a square structure. In contrast to stone and earth altars, metal altars, associated exclusively with the central sanctuary of Israel, differ profoundly in shape and function.

THE TABERNACLE. Israel's desert sanctuary had two altars: the bronze, or burnt-offering, altar standing in the courtyard, and the gold, or incense, altar within the Tent. The courtyard altar was for sacrifices. Its name, *'olah* ("whole-offering"), is taken from its most frequent sacrifice, required twice daily (Ex. 29:38–43) and on every festival (Num. 28–29); it was also the only sacrifice entirely consumed upon the altar (see: *Sacrifice). The name "bronze" stems from its plating. Actually, it was made of acacia wood and its dimensions, in cubits, were $5 \times 5 \times 3$. Its form is minutely described, though the meaning of all the terms used is not certain (Ex. 27:1–8; 38:1–7).

The most important feature of the bronze altar was its *keranot* (*qeranot*) or "horns," seen on small altars found in Israel. Refugees seeking asylum seized the altar horns. The altar was purified by daubing the blood of the *hattat*, or "purification offering," on the altar horns (Ex. 30:12; Lev. 4:25–30).

Horns were an essential element of all the altars in the Jerusalem Temple. The origin of the horns is still unknown.

Beneath the horns was the *karkov* ("rim" or "border") which seems to have been a projecting rim, and is exemplified by many small altars in Erez Israel. The *mikhbar* ("net" or "grating") was a bronze mesh that covered the upper half of the altar beneath the rim but neither its appearance nor its function is understood.

Since the altar was part of a portable sanctuary, it was fitted with four rings and two staves. Moreover, it was hollow and hence not burdensome. The altar was only a portable frame, since, in contradistinction to the incense altar (Ex. 30:3) there is no mention of a roof, and at each encampment it would, therefore, be filled with earth and rocks (in actual conformity with Ex. 20:21 ff.). The same system of hollowed altars is known from some Assyrian samples.

SOLOMON'S TEMPLE. In the account of the building of the First Temple (1 Kings 6–7), there is no mention of the sacrificial altar although the building of an altar, $20 \times 20 \times 10$ cubits in size, is mentioned in 11 Chronicles (4:1). There are also allusions to the sacrificial altar in the construction account (1 Kings 9:25) under the name of "the bronze altar" (1 Kings 8:64; 11 Kings 16:14–15). The silence of 1 Kings 6–7 may be due to textual corruption.

More is known about its replacement, the altar constructed by King Ahaz (11 Kings 16:10–16). It was a copy of the altar in the main temple of Damascus, probably that of Hadad-Rimmon (5:18). It was called the "great altar" (16:15), and was therefore larger than Solomon's altar. It had to be ascended (16:12); it was not made of bronze, since that name was reserved for Solomon's altar. It may have been the model for Ezekiel's altar (below). Ahaz had Solomon's altar moved to the northern part of the courtyard, where it was reserved for his private use (16:14, 15b).

Ezekiel's Altar

Ezekiel's vision of a new Temple (Ezek. 40:48) comprises a minute description of its sacrificial altar (43:13–17). It consists of four tiers, each one cubit less per side than the tier below. Since the uppermost tier had a horizontal 12×12 cubits, the ones underneath were respectively 14×14 , 16×16 , and 18×18 cubits. The height of the respective tiers, from top to bottom, is given as $1 + 2 + 4 + 4$, to which another cubit must be added for the horns (*ibid.* 43:15). Thus, the total height of the altar is 12 cubits. Because the long cubit is used (app. $20\frac{1}{2}$ inches), the altar was about $20\frac{1}{2}$ feet tall, even higher than the altar attributed to Solomon by the Chronicler (11 Chron. 4:1). It was ascended by a flight of stairs on its eastern side. The edges of two of its tiers were apparently shaped into troughs for collecting the sacrificial blood, the one at the base being called "the *heik* [*heiq*; Heb. הֵיק] of the earth" and the other, in the middle, "the *heiq* of the ledge" (Ezek. 43:14, 17). Their purpose was to collect the blood of the *hattat*, which was daubed at these points (43:20; see below). If rabbinic tradition for the Second Temple holds good for Ezekiel, then even the remaining *hattat* blood

was collected into the middle gutter, for it was dashed on the upper part of the altar walls (see Mid. 3:1).

It has been suggested that Ezekiel's altar corresponded to the one he remembered from the First Temple, in which case it would be an exact description of Ahaz' altar. Supporting this view is the Syrian-Mesopotamian influence upon certain of its features. It is known that Ahaz copied a Damascene altar. Its storied structure resembles the ziggurat temple-tower. The uppermost tier is called *'ari'el* or *har'el*; the latter may mean "God's mountain." Perhaps Isaiah's symbolic name for Jerusalem, *Ariel*, has its origin in this altar (Isa. 29:1–2, 7).

Ezekiel also envisions inside the Temple an incense altar, which he calls "the table that is before the Lord" (41:22). That it is of wood may reflect the reality of 597 B.C.E., when Nebuchadnezzar stripped all the Temple cult implements of their gold (II Kings 24:13).

Sanctity and Theology

The altars are legitimate only in the Promised Land. This is not because the power of Israel's God is spatially limited – He controls the destiny of all nations and can be addressed in prayer everywhere (e.g., I Kings 8:33ff.) – but because of the basic concept of the sanctity of Israel's territory: it is the Holy Land. This principle underlies the argument against the erection of a Transjordanian altar (Josh. 22:19), as well as the legal fiction of taking Israelite soil abroad, adopted by the Aramean Naaman (II Kings 5:17) and, perhaps, by his Israelite townsmen (cf. I Kings 20:34). The sanctity of the altar is evidenced by the theophany which concluded the week-long consecration rites for the Tabernacle: "The presence of the Lord appeared to all the people. Fire came forth from before the Lord and consumed the whole offering and the suet pieces on the altar. And all the people saw, and shouted, and fell on their faces" (Lev. 9:23–24). It is an assumption common to biblical tradition that a sanctuary is not fully consecrated – or is not divinely sanctioned – unless it has a tradition of a theophany upon its altar (I Kings 18:38; II Chron. 7:1), or that its altar is built on the site of one. The altar has mediating powers; it may bring God to earth, and it enables humans, through worship, to reach heaven. This is nowhere more evident than in Solomon's dedicatory prayer for the Temple, when he proclaims that even in a foreign land Israel's armies or exiles need but turn to the Temple and their prayer will travel to God along a trajectory that passes through their land, city, Temple, and then, at the altar, turns heavenward (I Kings 8:44, 48; cf. 31, 38). The altar, then, is the earthly terminus of a Divine funnel for man's communion with God. It is significant that later Judaism carried the tradition that the air space above the altar was an extension of its sanctity. The sanctity of the altar is evidenced by the asylum it provided anyone who "seized its horns" (e.g., I Kings 1:50–51). An early law, however, stipulated that this privilege was not to be extended to murderers (Ex. 21:14). On this basis, the altar provided no safety for Joab (I Kings 2:28–34); even then, Solomon tried at first to remove Joab who "seized the altar horns" (verse 34) from the

altar before he had him killed (verse 30). The altar is consecrated with the "oil of anointment" (Ex. 40:10); it is the only object outside the Tent to fall into the category of the "most sacred" (Ex. 29:37), though not to the same degree as the Holy of Holies inside it. For example, the non-priest is prohibited from viewing the inner sancta (Num. 4:20) but is only barred from touching the altar (Ex. 29:37); the disqualified priest is barred from contact with the sanctuary Holy of Holies, but in regard to the altar, as the verb *karav* (*qrv*) or *niggash* ("encroach") shows, he is forbidden only to officiate at it but is free to touch it (Ex. 28:43; 30:20; Lev. 21:23). The composition of the Holy of Holies also bespeaks this sanctity differential: the inner sancta are plated with gold, the altar with bronze; in transit the former are covered with a blue cloth, the latter with a purple cloth (Num. 4:4–14). Laymen were permitted access only to a corridor within the sanctuary enclosure to perform the required preliminary rituals with their animal oblation (the presentation, laying of hands, slaughter, and flaying of the animal; Lev. 1:3–6), and to assemble there as spectators (Lev. 8:3–4; 9:5). Only the high priest may bless the people from the altar (Lev. 9:22, "and he descended"). Solomon, who performed this function, did so in front of the altar (I Kings 8:64–65).

The sacrificial altar must not only be consecrated by an application of the anointing oil but by a week-long ceremonial, during which the altar horns are daubed with the blood of a purification offering (Lev. 8:15) each day of the week (Ex. 29:36–37). The meaning of this consecration can be deduced through a series of analogies with other uses of sacrificial blood, such as the purification rite of a healed leper (Lev. 14:14–17, 25–28); the investiture of new priests (Ex. 29:20; Lev. 8:23–24); the reconsecration rites for defiled altars (Lev. 4:25, 34; 5:9); and the smearing of the lintel and doorposts with blood of the paschal sacrifice (Ex. 12:7, 22). The things which receive the blood are extremities; i.e., the very points of the object which a hostile force would strike first in attacking it. In the ancient Near East, temples were periodically smeared with supposed potent substances at precisely the same vulnerable points, in order to expel the malefic power from the object and to protect it against future incursions. The blood rites therefore had a purgative and an apotropaic function. It is not too difficult to deduce that in Israel these rituals had the same dual purpose; i.e., to purge the altar of any uncleanness and to protect it from future evil influence. The verbs used in regard to purification apply to the altar but never to man. The blood for each stems from a different sacrifice: for the altar the *hattat* is used but not for humans. Indeed in the case of humans the ritual purification has already taken place by previous ablution (for the leper, Lev. 14:2–9; for the priest, Ex. 29:4). The function of the blood rite therefore is to ward off evil; it is an apotropaic act (cf. the paschal sacrifice, Ex. 12:23). The consecration of both priest and altar was performed, however, by the anointing oil (Ex. 29:21; Lev. 8:11).

The blood of sacrifices must terminate on the altar, if not on its horns, then upon its walls and base. This leads to an-

other equally significant function of the altar: the blood prohibition. Israelites and non-Israelites alike are constrained from eating blood, because it is the life of the animal (Gen. 9:4). The blood must be drained and returned to the Creator. There is only one legitimate place where this can be done: at the altar of the central sanctuary. The altar, then, is the instrument by which the animal's life is restored to God. Indeed, in Leviticus occurs the clear, unambiguous statement that whoever slaughters an ox, sheep, or goat elsewhere but at the sanctuary altar is guilty of murder (Lev. 17:3–4). It is permitted to kill animals and eat their flesh but the blood must not be tampered with; it must be returned to God via the altar, if the animal is sacrificeable, and via the earth if brought down in the hunt (Lev. 17:13–14). Thus, the sanctuary altar legitimates animal slaughter; it is the divinely-appointed instrument of effecting expiation for taking animal life (Lev. 17:11).

The prohibition of making steps on the altar “that your nakedness be not exposed upon it” (Ex. 20:23) is another evidence for the sanctity of the altar. The early altar at the sanctuary of Arad, with a step to it, illustrates that the prohibition was practical, not theoretical. For this reason, once Israelites adopted trousers, a Persian invention, the priests were required to wear breeches (Ex. 28:42–43).

Incense Altar

All the biblical accounts of the sanctuary speak not only of the sacrificial altar but also of an incense altar within the sanctuary building. The incense altar of the Tabernacle is described in detail (Ex. 30:1–10; 37:25–28). Its dimensions were $1 \times 1 \times 2$ cubits. Like the sacrificial altar, it contained horns, rings, and staves for carrying, and was made of acacia wood. However, it differed from it in being plated with gold, not with bronze; also, the plating extended over the top for it was solid and had a roof, in contrast to the sacrificial altar. Its place was directly in front of the curtain, flanked by the two other golden objects, the candelabrum (Ex. 25:31ff.) and table (23ff.). Incense was burned upon it twice daily at the time of the *tamid*, or “daily,” offering. No other offering but the prescribed incense was tolerated (9b).

Reference to the incense altar of Solomon's Temple is found in the construction account (1 Kings 6:20–22; 7:48) and in the incense offering ascribed to King Uzziah (11 Chron. 26:16). In his blueprint for the new Temple (Ezek. 41:22), Ezekiel may have been thinking of the incense altar he saw in the Temple (as a priest, he had access to it).

The historicity of these accounts has been called into question since the critical work of J. *Wellhausen in the late 19th–early 20th centuries on the assumption that the burning of incense was not introduced into Israel until the Second Temple (see 1 Macc. 1:54). However, many small altars have been found in Erez Israel dating back to the Bronze Age, too small for animal offerings. Some actually approximate the dimensions of the Tabernacle altar and are even equipped with horns, e.g., at Shechem and Megiddo. An incense altar, identified as such by its inscription, has been recently excavated in

Khirbet Mudayna in Jordan at a site dating to the early eighth century B.C.E. Thus, the incense altar was standard equipment for neighboring temples and cannot be denied to Israel.

Since there is no reason to deny that there was an incense altar in Solomon's Temple, there remains only the question of the incense altar ascribed to the Tabernacle. Scholars have been nearly unanimous in declaring it an anachronistic insertion based upon the Temple. Their suspicion is strengthened by the placement of its description not in the text containing the rest of the inner sancta (Ex. 26), but after the description of the entire Tabernacle and its paraphernalia (Ex. 30:1–10) – an afterthought, as it were. The objection is fallacious. The fact that it is not found in its “logical” place is in itself reason to suspect that another kind of logic obtained there. Functionally, the incense is outside the carefully graded sanctity outside of chapters 28–29; as such its description appropriately follows those chapters.

[Jacob Milgrom]

In *Halakhah*

In talmudic sources the word “altar,” when unqualified, refers to the outer altar (Yoma 5:5), which stood in the Temple Court in the open, a distance of 22 cubits from the corner of the porch (Mid. 5:1). Most of it was in the southern sector (Yoma 16a; but see the opinion of R. Judah, *ibid.*; see also Zev. 58b). For building the altar for the Second Temple prophetic testimony was needed to determine the exact required location (Zev. 62a). This altar is also called “the altar of bronze” because of its bronze cover (Hag. 3:8) and “the altar of the burnt offering,” because daily burnt offerings and other sacrifices were offered upon it (Men. 4:4).

According to talmudic sources the altar was ten cubits high (but Jos., Wars, 5:225 has 15 cubits). It was a structure of stones joined together with earth (Mekh. Sb-Y. Yitro 20; Epstein, ed., 156) and consisted of four square layers formed of stones, plaster, and a filling of mortar (Zev. 54a), the wider stones being placed below and the narrower above, as described later (Suk. 45a; Mid. 3:1; Zev. 54a). These dimensions made the altar four cubits larger on all four sides than the altar of Solomon's Temple (11 Chron. 4:1; Mid. 3:1). The first layer was 32×32 cubits (according to Jos., *ibid.*, 50×50), and one cubit high. The second layer was 30×30 cubits and five cubits high. The lower projection of one cubit each on the north and at the northeast and southwest corners, which were one cubit higher than the ground (Tosef. Zev. 6:2; Mid. 3:1), was called the base. There was no base in the southeast corner (Zev. 54a). In the southwest corner there were several narrow apertures through which the blood flowed down to the water channel, and from there to the brook of Kidron (Mid. 3:2; Yoma 5:6). Five cubits from the ground, i.e., in the middle of the altar, a red line, the “*hut shel sikrah*,” encircled it, indicating the place for the upper and the lower sprinkling of the blood (Mid. 3:1; Tosef. Zev. 6:2). The third layer was 28×28 cubits, and three cubits high. The cubit-wide projection which encircled the middle of the altar was called the *sovev* (“sur-

round”). The priest walked along it, to offer up the burnt offering of a bird (Zev. 6:5), and to sprinkle the blood of the sacrifices upon the altar with his finger (Zev. 5:3). The fourth layer constituted the “horns” of the altar. They were four stones, one cubit by one, placed at the four corners of the altar. After deducting the breadth of the horns (one cubit) and another cubit within, used as a path for the priests (*karkov*, “border”; Tosef. Shek. 3:19; Zev. 62a) when removing the ashes, an area of 24 × 24 cubits remained which was assigned as the place of the fire. The larger fire was in the southeast corner (Tam. 2:4) and the smaller, for incense, opposite it in the southwest corner (Tam. 2:5). Although open to the sky, it is stated that the rain never extinguished the wood fire, nor did the wind disturb the column of smoke (Avot 5:5). In the center of the altar there was an enormous heap of ashes called *tappu'ah* (“apple”), because of its round shape (Tam. 2:2).

According to R. Meir, the dimensions of the projections of the base, of the surround, and of the horns, were measured by the larger cubit, which was six handbreadths (Kelim 17:10; Tosef. Kelim, BM 6:12–13; see Men. 97b). On top of the altar there were two bowls, either of silver or limestone, into which the water and the wine of the water libation were poured during Tabernacles (Suk. 4:9). During the rest of the year the wine libation was poured into the bowl on the east (Tosef. Suk. 3:14; Sif. Num., Shelah 107). From the bowls the wine flowed through a gutter in the floor of the court (Tosef. Suk. 3:14) into the pits (foundations of the altar) in the southwest corner (Mid. 3:3). The wine was absorbed in the pit or congealed inside the pipe between the porch and the altar, and the pipe consequently had to be cleaned. In the opinion of R. Yose, the pit penetrated to the abyss (Tosef. Suk. 3:15; Suk. 49a).

The stones of the altar were smooth (Zev. 54a), taken from the virgin soil of the valley of Beth Cherem (Mid. 3:4). The use of iron was forbidden in its erection. The stones were plastered over twice yearly, at Passover and at Tabernacles, and, according to Judah ha-Nasi it was plastered with a cloth every Sabbath eve (Mid. 3:4; Maim., Yad, Beit ha-Behirah 1:16). In the times of the Hasmoneans the Syrians placed the “Abomination of Desolation” upon the altar (1 Macc. 1:54). When the Temple was subsequently cleansed they were doubtful whether it could be used, and hid the stones (*ibid.* 4:44; Meg. Ta'an. 9; Av. Zar. 52b) in a chamber in the *Bet ha-Moked* (Chamber of the Hearth; Mid. 1:6). The dedication of the altar (1 Macc. 4:53–59) became the central feature of the festival of Hanukkah. One reason given for the Hanukkah celebration lasting eight days is that it took this much time to build the altar and plaster it (Meg. Ta'an. 9, 25th Kislev). At the southern side of the altar there was a stone ramp, 32 cubits long and 16 wide, enabling the priests to reach the top of the altar without transgressing the prohibition contained in Exodus 20:26 (Mekh. Yitro, Ba-Hodesh, 11; see above). There was a space between the end of the ramp and the altar (Zev. 62b).

Altar and ramp together were 62 cubits long (Mid. 5:2), the ramp overhanging the lower part of the altar. From the large ramp two smaller ones branched off, one on the east side

in the direction of the surround, and the other on the west in the direction of the base (Zev. 62b and Rashi *ibid.*). The existence of a ramp to the surround is mentioned explicitly only by the *amora* Judah b. Ezekiel. Usually one ascended the altar from the right-hand side of the ramp and descended from the left one (Zev. 6:3).

Lack of precision in the aforementioned dimensions of the altar and the ramp did not disqualify them from use (Tosef. Men. 6:12), but the absence of the horns, the base, the surround, the ramp, the lack of a square appearance, or the slightest flaw in the altar would disqualify the sacrifice (Tosef. Suk. 3:16; Zev. 62a and 59a).

Only the slaughter of birds took place on the actual altar (Zev. 6:4–5); other sacrifices were slaughtered to the north of it (Zev. 5:1–2; Mid. 3:5). If the slaughtering took place on the altar, however, the sacrifice was acceptable (Zev. 6:1).

During the Second Temple period no fire descended from heaven (Yoma 21b) as it did in the First Temple (Zev. 61b). A tradition was preserved that the fire of the First Temple was concealed in a well and was brought out in the days of Nehemiah (11 Macc. 1:19–24).

Whenever the altar was not in use for regular sacrifices additional burnt-offerings were offered (Tosef. Shek. 2:8). These are referred to as the *keiz ha-mizbe'ah* (“summer fruit” of the altar; Shek. 4:4). A special regulation “for the benefit of the altar” was enacted to ensure continual sacrifice on the altar (Git. 5:5; Git. 55a). The altar fire continued to burn even at night so that the portions of the sacrifice which it had not been possible to burn during the day would be consumed (Ber. 1:1; Tam. 2:1). The priests would rise early in the morning and undergo ablution in order to be privileged to remove the ashes (Tam. 1:2; Yoma 1:8; 2:1). After ascending to the top of the altar they cleared away the ashes (Tam. 1:4) and shoveled them on to the ash heap (*ibid.* 2:2). When the heap was overfull the ashes were removed, but during the three Pilgrim Festivals they remained there as they were considered ornamental (*ibid.*).

Priests alone were permitted to approach the altar and minister (Zev. 116b) and proof that a person had “stood and ministered at the altar” (Yev. 7:6) was accepted as evidence of his priestly lineage (Kid. 4:5; cf. Ter. 8:1; Jos., Ant., 9:160). The altar and ramp made sacred whatever was prescribed for them. Even if disqualified sacrifices were placed upon them, they were not removed (Zev. 9:1–7; Tosef. Mak. 5:4; and Tosef. Tem. 1:14). A vow made “to the altar” was considered as referring to the altar sacrifices (Ned. 1:3; Tosef. Ned. 1:3).

In the talmudic era the principle that the altar because of its sanctity served as a refuge for murderers who seized hold of its horns was restricted (Mak. 12a; Num. R. 23:13; cf. Tj Kid. 4:1, 65c).

The altar played an important role in the festival ceremonies. During Tabernacles a daily circuit with palm branches or willow branches (Suk. 43b) was made of the altar and verses of *Hallel* were recited. On the seventh day the circuit was made seven times (Suk. 4:5), and the people took their leave of the

altar with expressions of laudation, “Beauty is thine, O Altar! Beauty is thine, O Altar!” (*ibid.*).

During Passover, so large was the number of paschal lambs sacrificed in the Temple court, that the sprinkling of the blood against the base of the altar was performed by successive rows of priests (Pes. 5:5). The *omer* was waved on the east side of the altar and offered on the west side (Men. 5:6); so also with the waving of the two loaves on Shavuot (*ibid.*). The baskets of first fruits were placed at the side of the altar (Bik. 3:6; Tosef. Sanh. 3:6).

The golden altar (Yoma 5:5), also called the inner altar (Tam. 3:1), stood in the center of the center of the sanctuary (Yoma 33a–b), opposite the *parokhet* (“curtain”) which separated the sanctuary from the Holy of Holies (Tosef. *ibid.* 2:2). Incense was burnt (Men. 4:4) and the sacrificial blood was sprinkled upon its sides (Men. 3:6; Lev. 5:1–2; Yoma 5:7). The measurements of the golden altar were the same as those used in the Tabernacle of Moses (Ex. 30:1–10) except that the larger cubit of six handbreadths was used (Kelim 17:10).

In the Aggadah

The altar as a symbol of atonement recurs again and again in rabbinic literature (Tosef. BK 7:6). Johanan b. Zakkai explains the prohibition against the use of iron in erecting the altar, because the sword (iron) represents catastrophe, and the altar, atonement (*ibid.*), its whole (*shelemot*) stones “bringing peace (*shalom*) between Israel and their Father in Heaven” (*ibid.* 7; Mekh. end of Yitro). In line with this homily, the Mishnah taught: “It is not right for that which curtails life to be lifted up against that which prolongs it” (Mid. 3:4). The word *mizbe’ah* (“altar”) is interpreted as suggesting, by assonance, the four words *mezi’ah*, *mezin*, *meḥabbev*, *mekhapper* (“removes evil decrees, sustains, endears, atones”; Ket. 10b); or as a **notarikon*, its four letters being the initials of *Meḥilah-Zekhut Zikkaron – Berakhah-Ḥayyim* (“forgiveness-merit (memorial) – blessing-life”; Tanh. Terumah 11). Because of the merit of the altar, blessing accrued to Israel (Tosef. Ma’as. Sh. 5:29), and because of it, the Holy One blessed be He will punish the kingdom of Edom (Tanh. Terumah 11). Its dimensions and its parts are also interpreted symbolically (*ibid.* 10; Mid. Tadshe 11).

According to one aggadic opinion, Adam was formed from earth taken from the site of the altar, in order that the site of his atonement should give him power to endure (Gen. R. 14:8; TJ Naz. 7:2, 56b).

According to a late *aggadah* the altars of the ancients – Adam, Cain, Abel, Noah – were erected on the site of the altar where also Isaac was bound (PdRE 31), and it was from them that Jacob took the stones that he placed at his head at the ford of the Jordan (Gen. 35).

According to R. Isaac Nappaḥa the fact that the Temple was built on the site of the **Akedah* (Zev. 62a) is the basis of the saying that “whoever is buried in the land of Israel is as if he were buried beneath the altar” (Tosef. Av. Zar. 4:3; ARN¹ 26:41; S. Lieberman, *Hellenism in Jewish Palestine* (1950), p. 163).

The idea of the Sanctification of the Divine Name implicit in the binding of Isaac also gave rise to the metaphorical use of “building an altar” as an expression for such an act (Lam. R. 1:16, 50; Git. 57b). The more usual metaphor is “... as if he built an altar,” used with reference to one observing the commandments of Judaism (Ber. 15a; Suk. 45a–b; Men. 110a).

By interpreting scriptural verses the aggadists coined such expressions as, “as if an altar was erected in his heart” (*Otiyyot de-Rabbi Akiva*, 8), and “the altar shed tears” (Sanh. 22a). Plagues afflicting a person are merely “an altar of atonement for all Israel” (Ber. 5b, see Rabinovicz, DIK, 50F, 1, 14).

After the destruction of the Temple, a Jew’s table is regarded as taking the place of the altar (cf. Tosef. Sot. 15:11–13), and it was said that “now that there is no altar, a man’s table atones for him” (Ber. 55a; Men. 97a). The halakhic authorities explain many table customs on this basis (*Shibbolei ha-Leket*, Buber’s ed., 141; *Sefer Ḥasidim*, 102).

ALTARAS, Spanish family which originated in Castile and spread to Italy, Turkey, and Erez Israel. To MOSES (c. 1500) was attributed, probably erroneously, a Ladino translation of the Shulḥan Arukh, printed in Latin characters under the title *Libro de Mantenimiento de la Alma* (Venice, 1609, 1713). Apparently it was written for the Marranos who could not read the work in the original. According to Steinschneider this work was written by a certain Meir, and Altaras was merely its patron. Three generations of this family were printers. SOLOMON ALTARAS THE ELDER supervised the publication of the Sephardi prayer book which appeared in Venice in 1685. His son, DAVID B. SOLOMON, known as *Devash* (“honey”), an acronym of his name, lived in Venice between 1675 and 1714. He wrote *Kelalei ha-Dikduk* (“Principles of Grammar”) which was printed at the beginning of the Venice edition of the *Mikra’ot Gedolot* (1675–78). From 1675 he printed Hebrew books, including a prayer book (1696) and the Mishnah with

annotations (1756–60). His signature appears on a variety of halakhic rulings along with those of other rabbis of Venice, and he gave approbations to various books. His last will and testament and an elegy on his death appear in *Zuf Devash* (Venice, 1714). In an addendum to his testament “*Devash*” he emphasizes “that one must conspire craftily and with cunning in order to fear God and observe his commandments.” David’s son SOLOMON published books in Venice during the 18th century, among them a prayer book containing the *minhag* (“custom”) of Corfu, entitled *Leket ha-Omer* (1718).

[Yehoshua Horowitz]

ALTARAS, JACQUES (Jacob) ISAAC (1786–1873), French merchant, shipbuilder, and philanthropist. Born in Aleppo, Syria, Altaras spent his early years in Jerusalem, where his father was a rabbi. In 1806 Altaras settled in Marseilles, and there prospered in shipbuilding and the Levant trade; he became an influential member of the Marseilles Chamber of Commerce. A member of the French Consistoire and president of the Marseilles Jewish community, he founded a Jewish school in Marseilles and was a member of the Legion of Honor. In 1846 Altaras visited Russia to negotiate the resettlement of Russian Jews in Algeria. The project failed because of the harsh Russian terms – the payment of 60 rubles in taxes and fines for each Jew.

[Joachim O. Ronall]

ALTARAS, JOSEPH (16th century), *ḥazzan* and poet. Born in Damascus, he settled in Aleppo. He was praised by the Hebrew poet Israel *Najara as the “... highest of heavenly heights above all his contemporaries in the sweetness of his voice” (*Zemirot Yisrael*, 142–144, 147). Najara also praised his poetry. Joseph’s son Nissim was also a poet. It may be assumed that the poems attributed to “Joseph” and “Nissim” scattered throughout the *siddur* of Aleppo (Venice, 1520, 1560) were written by these two. These poems are also included in the collection *Shirei Yisrael be-Erez ha-Kedem* (1921).

AL-TARĀS, SĪDĪ IBN (end of 11th century), Karaite scholar in Castile. According to Abraham ibn Daud and Joseph b. Zaddik, Al-Tarās went in his youth from Castile to Erez Israel, where he became a pupil of the Karaite Abu al-Faraj (probably *Jeshua b. Judah). When he returned to Andalusia, he brought back his teacher’s book with him and not only at-

tempted to circulate it among the *Karaites, but also tried to gain adherents for Karaism among the *Rabbanites. After Al-Tarās’ death, his wife, who is referred to by the Karaites as *al-Mu’allima* (“the teacher”) and was considered by them an authority on religious practice, continued to spread the tenets of Karaism. Abraham ibn Daud indicates that their propaganda prompted the leaders of the Rabbanites to vigorous action, and Joseph *Ferrizuel “Cidellus” (Alkabri), a Jewish favorite of Alfonso VI, obtained authority to expel the Karaites from all the Castilian towns except one.

[Moshe Nahum Zobel]

ALTAUZEN, YAKOV (Dzhek) MOYSEYEVICH (1907–1942), Russian poet. The son of a Siberian gold prospector, Altauzen ran away from home at the age of 11 and wandered through China and the Soviet Far East. His works include *Yakutyonok Oleska* (1927), children’s verse; and *Bezusy entuziast* (“A Juvenile Enthusiast,” 1929) and *Pervoye pokoleniye* (“First Generation,” 1933), poems about young Communists in the industrialization drive. He died in action against the Nazis.

ALTENBERG, PETER (pseudonym of **Richard Englaender**; 1859–1919), Austrian author. The son of a merchant, Altenberg studied law and medicine in Vienna and worked briefly in the book trade. Eventually, he chose the life of a bohemian and became a familiar, picturesque figure in Viennese coffee houses and in the turn-of-the-century circles of “Young Vienna.” In 1894, Altenberg published his first sketches. Fourteen volumes of his prose vignettes appeared. His subjects were Viennese characters and scenes and he portrayed them with delicacy, insight, and wit. His attitude towards Judaism was highly ambivalent. Among his major works are *Wie ich es sehe* (1896), *Maerchen des Lebens* (1908), and *Vita ipsa* (1918).

ALTENSTADT (now **Illereichen-Altenstadt**), village in Bavaria, Germany. A few Jewish families lived there from the late 17th century. A community was founded in 1719 when five Jewish families from the neighborhood were granted rights of residence and permission to open a cemetery and build a synagogue. This was erected in the Jews’ street in 1722. In 1834 the 56 Jewish families (403 persons), living in 35 houses, constituted almost the entire village. Subsequently many Jews left for cities in Germany or emigrated to the United States. The

rabbinate of Altenstadt, which served the neighboring Jewish community of Osterberg as well, ceased to exist in 1869. There were 250 Jews living in Altenstadt in 1859 and 28 in 1933. The impressive synagogue built in 1803 was desecrated in 1938. About half the Jews left by 1939 and 13 were deported to Izbica in Poland in April 1942. The synagogue was torn down in 1955.

ALTER, ELEANOR B. (1938–), U.S. divorce lawyer. Born in Slingerlands, N.Y., the daughter of Charles *Breitel, chief judge of New York State's Court of Appeals, Alter graduated from the University of Michigan and earned her law degree from Columbia University. She worked for several law firms in New York City before becoming a specialist in divorce law. Over more than 35 years, she oversaw the termination of more than 2,000 marriages, including two of her own. Her famous clients included Joy Silverman, the ex-inamorata of Sol *Wachtler, New York's former top judge, and Mia Farrow, Woody *Allen's former companion.

When she began matrimonial work in the mid-1960s, divorce law had a tawdry reputation because the only legal cause for divorce in New York then was adultery. But the law changed and Alter's practice prospered and her reputation grew. An early first marriage, which produced two sons, was to William D. Zabel, who would become a dean of the trust and estates bar. In addition to her practice, she taught at several law schools and lectured widely.

[Stewart Kampel (2nd ed.)]

ALTER, ISRAEL (1901–1979), *hazzan* and composer. Born in Lvov, Alter studied music in Vienna. A powerful tenor with a wide range, he began his career as *hazzan* at Vienna's Brigittenauer Tempel-Verein when he was 20. In 1925 he moved to Hanover, where he remained for ten years before becoming chief *hazzan* of the United Hebrew Congregation in Johannesburg, South Africa. He went to the U.S. in 1961, and became a faculty member of the School of Sacred Music of Hebrew Union College. Alter published his cantorial compositions in *Shirei Yisrael* (2 vols., 1952–57; vols. 3 and 4 were subsequently published by the Cantors' Association of Montreal, Canada) and *Cantorial Recitatives for Hallel, Tal, Geshem* (1962), and his musical settings of Yiddish poems in *Mayne Lider* (1957). He also edited some of David Eisenstadt's liturgical works in *Le-David Mizmor* (n.d.). A phonograph record of his compositions was issued in 1973. In 1978 the Cantors' Assembly of New York issued Alter's "*Ribono Shel Olam*" for *Selihot* according to the order of services adopted by the Rabbinic Assembly.

[Akiva Zimmerman (2nd ed.)]

ALTER, ROBERT B. (1936–), U.S. literary critic. Born in the Bronx, New York, Alter taught at Columbia University from 1962 to 1966. In 1967, he joined the faculty of the University of California at Berkeley teaching Hebrew and Comparative Literature.

Alter has published works on English, French, and American literature. A specialist in modern Jewish literature and culture, he has written numerous articles for the *New York Times Book Review*, the *Times Literary Supplement*, and *Commentary*.

In *After the Tradition: Essays on Modern Jewish Writing* (1969), Alter explores the meaning of tradition in post-Holocaust Jewish literature, examining the works of such writers as Elie Wiesel, Saul Bellow, S.Y. Agnon, and Bernard Malamud. In *Defenses of the Imagination: Jewish Writers and Modern Historical Crisis* (1977), he saw Jewish writing as emerging from the problems of the 20th century and concentrated on Jewish writers such as Gershom Scholem and Osip Mandelstam. He has also explored the profound influence of 20th-century wars on such writers as Norman Mailer and Joseph Heller, and the influence of historical forces on such writers as Saul Bellow.

Alter has also been deeply concerned with biblical narrative. *The World of Biblical Literature* (1978), *The Art of Biblical Poetry* (1981), and *The Art of Biblical Narrative* (1985) show how literary scholarship can be utilized in the study of the Bible as both a literary and religious document. His translations include *Genesis* (1996), *The David Story* (2000), and *The Five Books of Moses* (2004), each with an extensive commentary.

[Susan Strul (2nd ed.)]

ALTER, VICTOR (1890–1941), leader of the *Bund in Poland. Alter was born in Mlawa, Poland, into a wealthy *hasidic* family. He graduated as an engineer in 1910, in Liège, Belgium. In 1912 he became active in the Bund in Warsaw. Exiled to Siberia for his political activities, he later escaped. During World War I, Alter found employment in England, as a laborer and then as an engineer. He returned to Poland after the February Revolution in 1917 and became a member of the central committee of the Bund. Between 1919 and 1939 Alter was one of the prominent leaders of the Bund and Jewish trade unions in Poland. He was a Warsaw city councilor for almost 20 years, and after 1936 a member of the board of the Jewish community. After the Germans invaded Poland in September 1939, Alter escaped to the Russian-occupied zone. However, he was soon arrested with his associate, Henryk Erlich. They were both executed on December 4, 1941, in Kuibyshev. Alter wrote *Tsu der Yidnfrage in Poiln* ("The Jewish Problem in Poland," 1927) and *Anti-semitizm w Swietle Cyfr* ("Anti-Semitism in the Light of Statistics," 1937).

[Ezekiel Lifschutz]

ALTERMAN, NATHAN (1910–1970), Israeli poet. Alterman, who was born in Warsaw, settled in Tel Aviv in 1925. He published his first poem in 1931. Alterman achieved distinction as a poet on two levels: as the author of popular satirical verse which reflected the political aspirations of the *yishuv* in its struggle against the policies of the British authorities in the 1940s, and as a sophisticated modern poet who was recognized as one of the leaders of the country's literary avant-garde.

His role as a poetic spokesman for the national struggle began in 1934 when he became a regular contributor of political verse to the daily *Haaretz*. In 1943 he switched to the Labor daily *Davar* where, in his weekly feature *Ha-Tur ha-Shevi'i* ("The Seventh Column"), he attacked the British authorities, and described the struggle of the Haganah and the Palmah to break the embargo on Jewish immigration and gain national independence. Many of these verses became part of Israel's patriotic repertoire; poems banned by the British censors were passed from hand to hand by an eager public. Alterman also wrote lyrics that were set to music and were popular features of the program of Matateh and other satirical theaters.

After 1948 internal social and political themes became the dominant feature in Alterman's public verse. Following the 1967 Six-Day War, he advocated the views of the Movement for an Undivided Erez Israel, expressing them in prose rather than poetry. Alterman's literary reputation rests upon his more aesthetic works. Originally associated with the A. Shlonsky group of modernist poets, and influenced by both French and Russian symbolists, he soon became the leading "imagist" poet of his generation. Characterized by brilliant wit and imagery, his idiom followed the rhythms of spoken Hebrew.

Alterman constructed a mythical world of his own, subject to its own rules, and made up of two components. One is the poet's lost Eden, a primeval land in which wild beasts and primordial forces of nature rage in a violent blaze of color and sound, from which he was expelled for some unknown original sin and into which he is forever striving to regain entry. In contrast to this elemental landscape stands his mythical city, mechanized, hostile, and decadent, and at the same time morbidly alluring with its aura of catastrophe and death. A central motif of Alterman's poetry is the inevitable clash between these two components which can only be resolved in a final moment of awareness at the very brink of death and oblivion.

Alterman's love poetry is also expressed within the context of this romantic agony. The women he depicts are either idealized ethereal products of a primordial Eden, or jaded daughters of the city, or a combination of both. Again, fulfillment or reconciliation can only occur at the brink of death.

Alterman's first poems show signs of a dichotomy in his conception of poetry. On the one hand, there is the realization that poetry is incapable of penetrating the essence of things, often expressed by the declaration that it is perhaps better to cease writing; on the other hand, some of Alterman's verse suggests that poetry is so powerful it can prevail over the paradisaic world's elemental forces and accurately depict them.

Hence poetry must be built upon fixed rules and regulations. Alterman, therefore, considers symmetrical repetition the supreme value of order and beauty. Each of his poems has a fixed number of stanzas and sentences, a rhyme scheme, and a constant number of feet.

Simhat Aniyyim ("Joy of the Poor," 1941) signaled a radical change in Alterman's poetry both in language and conception. The most marked innovations in this collection are the figures of speech, symbols, and allusions taken from traditional Jewish literature, folklore, and liturgy. The primordial forest and the timeless city are now superseded by images drawn from the Jewish folk tradition of Eastern Europe. Alterman makes no attempt to conceal the affinity between his poetry and the collective national experience, with its clear historical indications of impending disaster. The central poetic idea is that the barriers ordinarily separating the living from the dead through love and trust can be broken. These two attributes offer the hope of rebirth out of doom and destruction only if one courageously confronts death.

In the *Shirei Makkot Mizrayim* ("Plagues of Egypt," 1944), Alterman continues to develop his historiosophic views, applying them not only to the Jewish people but also to humanity. The poet intentionally removes the biblical Ten Plagues from their historical and national context, and turns them into a prototype of the eternal and cyclical history of mankind with its wars and renewal. The main innovation in *Ir ha-Yonah* ("Wailing City," 1957) is the application of the abstract concept of history to one particular and fateful chapter in the history of the Jewish people – the years of the Holocaust, illegal immigration to Israel, and the struggle for national independence. Alterman's diction here is often prosaic and even relies on slang. At the same time he also uses the ballad form more typical of his earlier poetry and characterized by dramatic monologues and theatrical flourishes.

Alterman's plays include *Kinneret, Kinneret* (1962); *Pundak ha-Ruhot* ("The Inn of the Ghosts," 1963), a poetic drama concerning the artist between the opposing worlds of life and death, home and inn, and art and life; *Mishpat Pythagoras* ("Pythagoras' Law," 1965), about a computer with human sensibilities; and *Ester ha-Malkah* ("Queen Esther," 1966). Alterman also wrote *Hagigat Kayiz* (1965), a collection of poems, and a book of critical essays entitled *Ha-Massekhah ha-Aharonah* (1968). Alterman's translations of Molière's plays appeared in three volumes in 1967. He also translated some of Shakespeare's plays. His collected works appeared in four volumes called *Kol Shirei Alterman* (1961–62). For English translations of his poems, see B. Hrushovsky, in S. Burnshaw, et al. (eds.), *The Modern Hebrew Poem Itself...* (1966), 109–19; *Ariel*, no. 14 (1966), 43–55; *Poetry*, 92 (1958), 236 ff. A detailed list of translations into English appears in Goell, Bibliography, 2–5.

[Matti Megged]

All 15 published volumes of Alterman's works have now been republished and have achieved great popularity. In the field of literary criticism *Mivhar Ma'amirim shel Yezirato shel*

Alterman (“A Selection of Works by Alterman”) edited by A. Baumgarten (1971) has appeared, as well as *Ha-Hut ha-Meshulash*, a collection of articles edited by M. Dorman (1971, 1975), and *Mahberot Alterman* (1977–81), which includes hitherto unpublished material, a bibliography of his work, and studies on him. Recent years have seen new editions of his poetry, such as the collection *Shirim mi-she-Kevar* (1999), a new edition of four plays (*Mahazot*, 2002), in addition to various reprints of his translations of classical plays. A bilingual Hebrew-English collection, “Selected Poems,” was published in 1978, followed in 1981 by “Little Tel Aviv.” Individual poems have been published in 20 languages.

ALTHEIMER, BENJAMIN (1850–1938), U.S. banker and philanthropist. Altheimer, who was born in Darmstadt, Germany, immigrated to the United States in 1868 and settled in St. Louis, Missouri. He built up a successful banking and investment business, was a founder and trustee of Temple Israel, and became a leading figure in St. Louis philanthropic and cultural organizations. In 1918 he proposed the institution of Flag Day to President Wilson. He served as treasurer of the National Jewish Hospital for Consumptives, Denver, for more than 30 years. Moving to New York in 1916, Altheimer served as president of Temple Beth El and treasurer of the New York executive of the Union of American Hebrew Congregations.

[Sefton D. Temkin]

AL TIKREI (Heb. אַל תִּקְרִי; “Do not read”), term used to denote a change in the masoretic reading of Scripture in order to give a meaning to a phrase, other than the literal one. The object of its application was not to abrogate the accepted reading or deny its literal meaning, since there is a rule that “a

verse never loses its ordinary meaning.” The intention of the scholars was to reveal additional meanings supporting their interpretation of the *halakhah* or the *aggadah*. The sages used various methods in applying the *al tikrei*:

(1) Changes in Punctuation

Biblical text is unvocalized. Hence the traditional reading can be altered by changing the punctuation, and in this way the word is given a new meaning. For example: (a) The reading in Exodus 32:16 of “*harut*” (“graven”) upon the tablets is changed to “*herut*” (“freedom”); this enables the rabbis to derive the ethical lesson that true spiritual freedom can be attained only by fulfilling the commandments, i.e., “freedom is in the tablets.” (b) The moral that “a man does not commit a transgression unless the spirit of folly enters him” is derived from turning the letter *sin* of *tisteh* (“go aside”; Num. 5:12) into a *shin*, making the reading “*tishteh*” (“shall commit folly”; Sot. 3a).

(2) Transposition of Letters

Such transposition is not unknown in the text of the Bible, e.g., *kesev* and *keves* (“sheep”), *simlah* and *salmah* (“garment”). The rabbis however extended this principle to add a new meaning to a verse. For example, by transposing the letters’ of *kirbam* (“their inner thought”) to *kivram* (“their grave”) in Psalms 49:12, they concluded that there is no resurrection for the wicked since “their home is their grave” (MK 9b).

(3) Change of Letters

Some of the *al tikrei* involve change in the letters, particularly homorganic ones such as *alef* and *ayin*, *het* and *he*. Thus, by reading “*al*” for “*el*” in Numbers 11:2, the verse is made to read “and Moses prayed against the Lord” upon which R. Eleazar bases the statement that man spoke presumptuously to God. In this case the transposition is justified in that “in the school of R. Eliezer b. Jacob they read *alef* as *ayin* and *ayin* as *alef*” (Ber. 32a). An example that involves both transposition of letters and change of vowels is the reading of *hadrat* (“majesty”) as *herdat* (“reverence”) in Psalms 29:2. The lesson derived is that one should not stand up to pray except in a reverent frame of mind (cf. Ber. 30b).

[Abraham Arzi]

°ALTING, JACOBUS (1618–1679), Dutch theologian and Hebraist. Born in Heidelberg, Alting studied Oriental languages and theology in Groningen, Utrecht, and Leiden. In Emden (1638–39) he read Jewish literature with a Jewish teacher named Gumprecht b. Abraham. During his journey to England (1641–43) he was ordained priest of the Church of England and studied Arabic at Oxford with *Pococke. In 1643 he succeeded Gomarus as professor of Oriental languages at the University of Groningen, where in 1667 he became profes-

sor of theology. His works (*Opera Omnia*, 5 vols., ed. by his friend and disciple Balthasar Bekker, Amsterdam, 1687) include a manual of Syriac and Aramaic (Groningen, 1676) and a – didactic rather than descriptive – Hebrew grammar (*Fundamenta punctationis linguae sacrae*, 1654; Dutch translation, 1664) dedicated to *Buxtorf II and *Hottinger, with whom he conducted a scholarly correspondence. As a theologian Altman advocated a purely biblical theology based on the interpretation of Hebrew Scripture. This approach brought him into a long-standing conflict with his scholastic-dogmatic colleague Samuel Maresius. For information on Jewish antiquities Altman drew on post-biblical Jewish sources.

[Irene E. Zwiep (2nd ed.)]

ALTMAN, ARYEH (1902–1982), Zionist Revisionist leader. Altman was born in Balta, Russia, where his father, Menasheh, a Hebrew teacher, was head of the local Zionist movement, and after the Revolution of 1917, head of the Jewish community and deputy mayor of the town. In 1919 the family moved to Odessa, where Aryeh Altman was imprisoned on various occasions by the Soviet authorities for Zionist activity. He was one of some 300 leading Zionists belonging to all political parties who were arrested by the Bolshevik authorities in 1924. Altman traveled to Moscow to intercede with the authorities to allow them to immigrate to Israel instead of being exiled to Siberia. After months of negotiation between the Russian and British authorities he finally received the required permission for *aliyah*, with the Zionists and their families finally departing on a special boat.

From 1927 to 1935 Altman resided in the United States, where he received his doctorate, and headed the Zionist Revisionist movement. On his return to Erez Israel he held the same position and was instrumental in the formation of the *Irgun Zeva'i Leummi in 1937 and was appointed by V. *Jabotinsky as chairman of the triumvirate that headed the organization. After the death of Jabotinsky he was appointed head of the New Zionist Organization. From 1948 to 1950 he was a member of the Provisional Government Council. Altman was a member of the Second through the Fifth Knesset. In 1972 the honor of Yakir Yerushalayim was conferred upon him and in 1976 he was appointed vice chairman of the Israeli-American Friendship Society.

ALTMAN, BENJAMIN (1840–1913), U.S. merchant, art collector, and philanthropist. Altman was born on New York's Lower East Side. Altman and his brother Morris opened a store in 1865. After Morris's death in 1876 Altman assumed sole control over the business, which he developed into a large, high-quality department store. When Altman moved the business, known as "B. Altman and Co.," to Fifth Avenue in 1906, it became the first large store in New York to be established in a residential area. At the same time Michael *Friedsam became his partner and contributed considerably to the growth of the establishment. After Benjamin's death and until its closing, the store was run by the Altman Foundation, a philanthropic trust donating funds to many charities, including Jewish organizations. Altman was also a pioneer in the provision of social, medical, and recreational facilities for employees. Altman's art collection, appraised upon his death at 15 million dollars, was bequeathed to the Metropolitan Museum of Art.

BIBLIOGRAPHY: DAB, 1 (1928); New York Metropolitan Museum of Art, *Handbook of The Benjamin Altman Collection* (1915).

[Hanns G. Reissner]

ALTMAN, MOISHE (1890–1981), Yiddish poet and novelist. Altman, who was born in Bessarabia, was partly self-educated. He lived in Romania and the Soviet Union. In 1920 he began writing poems and literary articles for the Czernowitz weeklies *Frayhayt* and *Dos Naye Leben*. In 1930 he immigrated to Argentina but after a year he returned to Romania and settled in Bucharest. During WWII he lived in the U.S.S.R. After World War II Altman was sent, with other Soviet Yiddish writers, to a Siberian forced labor camp (1949–52), but he survived and resumed his literary work. His prose includes two volumes of short stories, *Blendenish* (1926) and *Di Viner Karete* (1935), and the novels *Midrash Pinkhas* (1936) and *Shmeterlingen* (1939). His selected works (*Geklibene Verk*) were published in New York in 1955, with a biographical and critical introduction by S. Bickel, and in Bucharest (*Oysgeveylte shriftn*, 1974). His last books, *Baym fenster* and *Di viner karete un andere dertzeylungen*, were published in Moscow in 1980.

BIBLIOGRAPHY: LNYL, 1 (1956), 92–94.

[Shlomo Bickel]

ALTMAN, NATHAN (1889/90–1970), Russian painter, graphic artist, sculptor, stage designer. Altman was born in Vinnitsa. As a child, he studied in a *heder* and then at a Russian elementary school in Vinnitsa. In 1902–7, he attended classes in painting and sculpture at the Odessa Art School. During these years, he got close to Jewish intellectuals and writers, among them Ḥayyim Nahman *Bialik. He first showed his work at the exhibit of the Association of Southern Russia Artists in Odessa. In 1910–11, Altman lived in Paris, where he attended M. Vasilyeva's art studio at the Russian Academy. During this period, he met many Jewish artists then living in Paris, among them Marc *Chagall and David *Shterenberg. In 1911, Altman exhibited at the Salon des Beaux-Arts in Paris.

Later in 1911, he returned to Vinnitsa, and then moved to Petersburg in 1912 where he became known as a leading Russian artist and bohemian figure. In his works of this period, Altman combined elements of cubism with the decorative features and linearity of modern art (as in the portrait of Anna Akhmatova, 1914; Gosudarstvenny Russki Muzei, St. Petersburg). In 1913–14, Altman participated in exhibits of various art associations in Moscow and Petrograd, ranging from moderately modernist ones (like “World of Art”) to overtly radical ones (like “The Jack of Diamonds”) and avant-garde groups (like “The Youth Union” or “o.10”). Starting from his earliest works and throughout his life, Altman placed great emphasis on Jewish subjects when selecting themes for his works. Prior to World War I, he had become the first among Jewish artists in Russia to pursue a goal of forging a “contemporary Jewish art.” Seeking the foundations of this new art, Altman copied tombstone reliefs at Jewish cemeteries in the Ukraine. In 1914, he executed a graphic series, “The Jewish Graphics,” incorporating the relief motifs, its first printed edition dedicated to Bialik. In his “Jewish works” of this period, Altman strove to combine the archaic plastics of the Ancient Middle East with the latest achievements of European Modernism (as in the sculpture *A Portrait of a Young Jew* (Self-Portrait, 1916, State Russian Museum, St. Petersburg)). Altman was a founder and a member of the executive committee of the Jewish Society for the Encouragement of the Arts, established in 1915 in Petrograd. He was commissioned to design the emblem of the Society and participated in its exhibits (1916, 1917, Petrograd; 1918, Moscow). In 1916, Altman designed a Hebrew-language textbook. After the Bolsheviks came to power, he was appointed both director of the Petrograd Department of Fine Arts at the People’s Commissariat of Education and director of the Museum of Artistic Culture (1918). He was one of leaders of Communist-Futurist (ComFut) Association. In 1919, Altman moved to Moscow and started working for Jewish theaters. In 1920, he executed stage and costume designs for the Habimah Theater production of *The Dibbuk*. At the same time, he became the principal stage designer for the Moscow Jewish Theater (GOSET), where he designed sets for a number of productions. Being active in Kultur-Lige, Altman was its Moscow branch chairman and participated in its exhibit together with Chagall and Shterenberg (1922). At this exhibit, he showed non-figurative futurist works as examples of his new “Jewish art.” In the early 1920s, he collaborated with Jewish publishers and designed books in Yiddish. He participated in all major exhibitions in Moscow and Petrograd as well as in international exhibitions in Berlin (Van Diemen Gallery, 1923), Paris, and Venice. His first one-man show took place in Moscow in 1926. From 1928, Altman lived in Paris. In 1929, he participated in *Ausstellung juedischer Kuenstler* in Zurich. In the early 1930s, he exhibited in Paris and the U.S.S.R. In 1932–33, Altman executed series of graphic works treating biblical themes. His main genres of this period were still lifes and landscapes that established him as a virtuoso master of color and composition. In 1936, Altman returned to Lenin-

grad. In the 1940s, he designed books by *Sholem Aleichem and stage designs for several productions at Jewish theaters in Moscow and Kiev. In the 1940s–1960s, Altman was active mostly in book and stage design while continuing painting and sculpturing. Not long before he died he had a one-man show in Leningrad.

[Hillel Kazovsky (2nd ed.)]

ALTMAN, OSCAR LOUIS (1909–1968), U.S. economist and treasurer of the International Monetary Fund. Altman, who was born in New York, was educated at Cornell University and at the University of Chicago. He began to work as an economist for the Securities and Exchange Commission in 1936 and was its senior economist from 1938 to 1940. During World War II he was the principal economist of the National Resources Planning Board and served as an officer in the United States Air Force. After heading the analysis and planning office of the French Supply Council, he joined the International Monetary Fund, and in 1966 was appointed the Fund’s treasurer. Altman’s main interest was international liquidity problems, and he was one of the first economists to understand the significance of the Eurodollar market. He published numerous papers on both these issues.

[Joachim O. Ronall]

ALTMAN, SIDNEY (1939–), research biologist and educator. Altman, born in Montreal, Canada, received his doctorate in biophysics from the University of Colorado in 1967. He joined the department of biology at Yale University in 1971, becoming a professor in 1980 and serving as chairman of the department 1983–85. He was the dean of Yale College in 1985. In 1989 he shared the Nobel Prize in chemistry with Thomas Cech of the University of Colorado for similar discoveries they made in the 1970s and early 1980s while working independently. They found that in its role as a chemical catalyst, the RNA subunit of RNase P from bacteria can cleave some transcripts of genetic information.

[Bracha Rager (2nd ed.)]

ALTMANN, ADOLF (1879–1944), rabbi, historian, philosopher. Born in Hunsdorf, Hungary, Altmann studied at the yeshivot of Hunsdorf and Pressburg, and graduated as doctor of philosophy from Berne University. An early follower of Herzl, he worked for the acceptance of religious Zionism in the face of hostility on the part of the Hungarian Orthodox rabbinate. He was a delegate to the First Mizrahi Congress in Pressburg, correspondent for *Die Welt* (1905), and editor of the *Ungarische Wochenschrift* (1904).

He served as rabbi in Salzburg (1907–1915) where he wrote the two-volume *Geschichte der Juden in Stadt and Land*

Salzburg (1913, 1930), which is still the authoritative work on the subject, and in Merano. In World War I he served as senior chaplain in the Austro-Hungarian Army, receiving the Golden Cross of Merit; in witness to Jewish service in the war he collected testimonials from military commanders on the conduct of their Jewish soldiers. From 1920 to 1938 he served as chief rabbi – the last one – of Trier, one of the oldest Jewish communities in Germany. The results of his historical research into the community's origins were published in *Das Früheste Vorkommen der Juden in Deutschland; Juden in römischen Trier* (1931), which threw new light on the subject, dating the settlement of Jews in Trier to the end of the 3rd and early 4th century C.E. He contributed the entry on the history of German Jews to the *Jüdisches Lexikon* (1927). He was a leading delegate to the Association of Jewish Communities (Preussischer Landesverband Jued. Gemeinden) and as prolific author and orator participated widely in Jewish cultural life in Germany. In 1938 he immigrated to Holland and met his death in Auschwitz in 1944 with his wife Malwine, née Weisz, their daughter Hilda van Mentz and family, and their son Dr. Wilhelm Altmann. He was survived by three sons: Professor Alexander *Altmann, Dr. Erwin Altmann, and Dr. Manfred Altmann. A street was named after him in Trier in 1956 and in 1979 in commemoration of the centenary of his birth a special ceremony was held in the Town Hall of Trier. An illustrated brochure, *Dr. Adolf Altmann zum Gedenken* was published by the City of Trier on the event.

Istor, in: *Allgemeine Juedische Wochenzeitung* (Aug. 31, 1979).

ALTMANN, ALEXANDER (1906–1987), rabbi, teacher, and scholar. His father was Adolf *Altmann (1879–1944), a Hungarian-born rabbi who officiated in Trier in 1920–38 and wrote a history of the Jews there and in Salzburg. He died in Auschwitz, together with his wife and other members of his family. Alexander commemorated them in “A Filial Memoir,” which appeared in the *Leo Baeck Yearbook*, 26 (1981). In 1931, Altmann received both a doctorate in philosophy from Berlin University and ordination from the Hildesheimer Rabbinical Seminary in Berlin, where he taught from 1932. He served as rabbi in Berlin from 1931 and established there the Rambam Lehrhaus, a public institute for adult education, in 1935. Altmann was obliged to flee Germany in 1938, and was then appointed communal rabbi in Manchester, England, serving in that capacity until 1959. In 1954 he founded the Institute of Jewish Studies in Manchester, serving as its director until his departure from England, when the Institute moved to University College, London, under the watchful eyes of his devoted brother, Manfred. In 1959, Altmann was appointed Lown Pro-

fessor of Jewish Philosophy and History of Ideas at Brandeis University, where he taught until his retirement in 1976. He established the Lown Institute for Advanced Judaic Studies at Brandeis and directed it from 1960 to 1965. Altmann's scholarship was primarily in the fields of medieval Jewish philosophy and mysticism, as well as in the writings of Moses *Mendelssohn. His initial German essays were theological and contemporary in nature and appeared in translation as *The Meaning of Jewish Existence* (1992). Altmann's work includes *Des Rabbi Mosche Ben Maimon More Newuchim* (abridged German translation, 1935); *Saadya Gaon: The Book of Doctrines and Beliefs* (1946, abridged English translation and commentary); *Isaac Israeli* (together with S.M. Stern, 1969); *Moses Mendelssohns Frühschriften Zur Metaphysik* (1969); *Studies in Religious Philosophy and Mysticism* (1969); *Moses Mendelssohn: A Biographical Study* (1973); *Essays in Jewish Intellectual History* (1981); *Moses Mendelssohn, Jerusalem or On Religious Power and Judaism* (introduction and commentary; translation by Allan Arkush, 1983); *Von der Mittelalterlichen zur Modernen Aufklaerung: Studien Zur Juedischen Geistesgeschichte* (1987). Altmann was the editor of *Scripta Judaica* (jointly with J.G. Weiss) and the *Journal of Jewish Studies* (1954–58); of *Studies and Texts* of the Lown Institute (four volumes, 1963–67); and editor in chief of the *Moses Mendelssohn Gesammelte Schriften Jubilaumsausgabe* from 1970 until his death in 1987. In that period, he was sole editor of five volumes in that series and part editor of five more. A complete bibliography of Altmann's work is found in *Perspectives on Jewish Thought and Mysticism*, edited by A.L. Ivry, E.R. Wolfson, and A. Arkush (1998). An appreciation of his manifold contributions to scholarship is given in the *Leo Baeck Yearbook*, 34 (1989) and in the Hebrew publication *In Memory of Alexander Altmann* (1990), published by the Israel Academy of Sciences and the Hebrew University of Jerusalem.

[Alfred L. Ivry (2nd ed.)]

ALTONA, major port, suburb of Hamburg, Germany; until 1864 part of Denmark. The Portuguese Jews living in Hamburg were prohibited from burying their dead there, and acquired land for a cemetery in Altona in 1611. Thirteen Portuguese families from Hamburg settled in Altona in 1703, augmenting the small Portuguese settlement already in existence. They organized a community known as Bet Ya'akov ha-Katan (later Neveh Shalom). A synagogue was built in 1770. The Sephardi community, however, remained a branch of the community in Hamburg. Greater importance was attained by the community established by Ashkenazi Jews, who first arrived in Altona around 1600. In 1641, they received a charter from the king of Denmark to found a community and build a synagogue. After the Russian-Polish War of 1654/55, Jewish refugees from Lithuania expelled from Hamburg settled in Altona. At the same time numerous families, while formally remaining Danish subjects and members of the Altona community, had established themselves in Hamburg, where they formed a semi-independent subcommunity. In 1671 the Altona com-

munity amalgamated with the community of Hamburg, and afterward with that of Wandsbek, to form a single community, known by the initials AHW (א"ה"ו), under Chief Rabbi *Hillel b. Naphtali Zevi. The chief rabbinate, as well as the attached yeshivah and *bet din*, was situated in Altona. It had jurisdiction over the Ashkenazi Jews in all three communities as well as *Schleswig-Holstein. In the 18th century the community in Altona overshadowed that of Hamburg, in both scholarship (having a series of eminent rabbis and scholars) and affluence. It was in Altona that the acrimonious *Emden-*Eybeschuetz amulet controversy took place. Altona was also an important center of Hebrew printing (see below). The Chief Rabbinate existed until 1863, its *bet din* being the last institution of Jewish jurisdiction to function autonomously in Germany.

The three communities remained united until 1811, when Hamburg was occupied by French forces. In 1815 a number of Jews moved from Hamburg to Altona after the emancipation granted by the French was annulled. The Jews in Altona engaged in commerce, some being shareholders of ships employed in the South American trade and, especially in the 18th century, whaling. Special economic privileges were granted to them by the Danish kings. Hamburg Jews frequently helped to finance these activities. After the annexation of the area to Prussia in 1866, the Hamburg community grew rapidly and eclipsed that of Altona. In 1938 Altona was officially incorporated into Hamburg. Rabbis of the independent community of Altona were Akiva Wertheimer (1816–35); the eminent halakhist Jacob *Ettlinger (1835–71); Eliezer Loeb (1873–92); Meyer *Lerner (1894–1926); and Joseph Carlebach (1927–37). The Jewish population of Altona numbered 2,350 in 1867 (out of a total of 50,000), around 2,000 in 1900, and around 5,000 in 1925 (out of 186,000). (See also *Hamburg.)

Hebrew Printing in Altona

In 1727 Samuel S. Popert of Koblenz established a printing press in Altona, having learned the craft in nearby Hamburg where he had published a few books. He did the printing himself, assisted by the wandering typesetter Moses Maarsen of Amsterdam. Until 1739 Popert published various works in Hebrew and Judeo-German. In 1732 the wealthy Ephraim Heckscher set up a printing house which a year later passed into the hands of his assistant Aaron b. Elijah ha-Kohen, who was called Aaron Setzer ("setter"). He continued printing until 1743, when he became the manager of the press set up by Jacob Emden, where later many of Emden's polemical writings against Jonathan Eybeschuetz were printed. In 1752 they separated, as Aaron had sided with Eybeschuetz. Another assistant in Emden's printing works, Moses Bonn, set out on his own in 1765, and this business was operated for many years by his sons and grandsons as Brothers Bonn.

[Akiva Posner]

ALTSCHUL(ER; Perles), family probably originating in Prague. Its descendants were found throughout Central and Eastern Europe. The name Altschul first occurs as the surname of ABRAHAM EBERLE, a lay leader of Prague who died toward the close of the 15th century. His son MOSES (c. 1542) became a *parnas* of the Bohemian community of Cracow after the Jews were driven out of Prague. HANOKH BEN MOSES ALTSCHUL (1564–1633), *shammash* and secretary of the Prague community, was sentenced to be hanged in connection with the theft of a Gobelin tapestry from a palace, but was saved when it was revealed that he was the middleman in a legitimate business transaction. Hanokh described his hardships in *Megillat Purrei ha-Ketayim* and for centuries his family celebrated "Purim Altschul" or "Purim Fuerhang" (see Special *Purims) on the 22nd of Tevet. His son MOSES (d. 1643) succeeded his father and was the author of the unpublished *Zikhron Bayit*. ELEAZAR BEN ABRAHAM HANOKH PERLES (d. c. 1635) wrote a commentary to Elkanah b. Jeroham's *Keneh Hokhmah Keneh Binah* (1610–11) giving the kabbalistic principles to be discerned in the *Shema*, and esoteric explanations of the commandments. This was very popular and was added to many editions of the prayer book. He is thought to have been the author or editor of the unpublished Hebrew grammar, *Dikdukei Yizhak*. ISAAC, the son of Eleazar, included biographical notes on his father in the latter's *Tikkunei Moza'ei Shabbat* (1650). JUDAH AARON MOSES BEN ABRAHAM HANOKH (early 17th century), the brother of Eleazar, was rabbi of Kromau. He wrote *Va-Yehal Moshe* (Prague, 1613), an ethical treatise giving practical advice to repentant sinners. NAPHTALI HIRSCH BEN ASHER (late 16th century) lived in Lublin and Zhitomir and was in Constantinople in 1607. He was the author of *Ayyalah Sheluhah*, a digest of earlier commentaries on the Prophets and Hagiographa (Rabbinical Bible, Cracow 1593, Amsterdam 1740). He also published a biblical concordance *Imrei Shefer* (Lublin, 1602) arranged in 32 sections. ABRAHAM BEN ISAAC PERLES (d. c. 1690) published *Tikkunei Shabbat* (1678), and wrote an unpublished kabbalistic commentary on the Pentateuch. MOSES MEIR BEN ISAAC ELEAZAR PERLES (1666–1739) lived in Prague and was the author of a commentary on the book of Esther, *Megillat Sefer* (Prague, 1710). AARON BEN MOSES MEIR PERLES (d. 1739) wrote an unpublished commentary, *Tohorat Aharon* on the section of Isaac b. Abba Mari's *Ittur* which deals with porging. In 1725 he published a pamphlet in Yiddish on the same subject. ZE'EV WOLF BEN DOV BAER (d. 1806) published *Zeved Tov* (1793), a commentary on the description of the Temple in Ezekiel 40–48, together with an account of the pedestals for the lavers made by Solomon (1 Kings 7:17–35);

and *Ḥamishah Ḥallukei Avanim* (1794), containing commentaries on Ruth and Song of Songs. His son ELIAKIM (GOTT-SCHALK) BEN ZE'EV WOLF (first half of the 19th century) wrote commentaries to the 1814 edition of his father's *Zevud Tov*.

[Yehoshua Horowitz]

ALTSCHUL, AARON MEYER (1914–1994), U.S. nutrition expert. He was born in Chicago, where he obtained his doctorate in 1937. He joined the Southern Regional Research Laboratory of the U.S. Department of Agriculture in 1941, and was named head of its protein and carbohydrate division in 1949 and of its oilseed section in 1952. He became successively chief research chemist of the Seed Protein Pioneering Research Laboratory in 1958, a professor at Tulane University in 1964, lecturer on nutrition at Massachusetts Institute of Technology, and professor emeritus of nutrition at Georgetown University Medical School from 1971 to 1983. His main interest was nutrition improvement, nationally and internationally. Among other appointments, he was a member of the President's Science Advisory Committee and a United Nations consultant. In 1967 he was given special responsibility for improving protein quality and supply in domestic and international programs. He published the authoritative *Proteins, Their Chemistry and Politics* (1965), and his numerous honors included the Charles Spencer Award for achievements in food chemistry (1965). He was active in many Jewish communities, especially in New Orleans.

[Michael Denman (2nd ed.)]

ALTSCHUL, EMIL (Elias, Uri; 1797–1865), physician in Prague; professor of homeopathy at Prague University from 1849, author of medical and pharmaceutical works, and editor of a homeopathic periodical from 1853. Altschul attended the yeshivah of Bezalel Ronsburg and wrote a eulogy on him in Hebrew. In his *Kol Kore, Kritisches Sendschreiben ueber das bisherige Verfahren mit dem Sterbenden bei den Israeliten*, published in 1846, Altschul criticized certain established methods in Jewish practice concerning death and burial, stating that it was his intention to “harmonize modern ideas of medical science with the classic talmudic rulings” (xii). Altschul considered that the customary procedure of the *hevra kaddisha* when establishing death was hurried and inadequate, and that death should be certified only by a properly qualified physician. He also advocated the establishment of mortuary chambers at cemeteries. His suggestions influenced Jewish public opinion and were instantly adopted by the French *consistoire, which

addressed to him a grateful message. His suggestions were also adopted in 1858 by the Prague *hevra kaddisha*.

[Meir Lamed]

ALTSCHUL, FRANK (1887–1981), U.S. banker. Altschul was born in San Francisco and served as captain in the U.S. Army in Europe during World War I. He entered banking in New York, and became director of Lazard Frères Inc. and the General American Investors Corporation as well as of several other investment and insurance companies. He was a member of the executive committee of the American Jewish Committee, director of the Woodrow Wilson Foundation, and vice chairman of the National Planning Association. Altschul wrote *Toward Building a Better America* (1949), in which he proposed a master plan for U.S. economic expansion, and *Let No Wave Engulf Us* (1941).

[Edward L. Greenstein]

ALTSCHUL, JOSEPH (1839–1908), *hazzan* and improviser of synagogue songs. Altschul, who was commonly known as Yosh(k)e Slonimer, was born in Vilna. He went to Courland for talmudic studies, and there became a successful singer (solo soprano) with a local *hazzan*. He was appointed cantor, but preferred to perfect his singing and became apprentice to the famous *hazzan* Yeruham *Blindman at Berdichev. Altschul is said to have copied the latter's style for some years but developed his own when he was town *hazzan* (*hazzan de-mata*) at Slonim (1870–88). Altschul gained wide popularity, attracted pupils from Lithuania and Poland, and was noted for his rabbinic knowledge. From 1888 until his death, Altschul served as a *hazzan* at Grodno.

Only four small works which Altschul noted down for Eduard *Birnbbaum, a small fraction of his numerous compositions and improvisations, have been preserved. Some of these include easily mastered, almost popular tunes in 6/8 time which are inserted into the cantorial recitative, a predominant Lithuanian feature. The popular trend is also evident in his melodies for congregational singing.

[Hanoch Avenary]

ALTSCHUL, LOUIS (1870–1943), U.S. businessman and philanthropist. Altschul, who was born in Poland, immigrated to the U.S. when he was 21, and settled in New York City. He worked for a while in the fur business and then started a highly successful career in real estate in the Bronx and Westchester County. Active in several Jewish organizations, Altschul was a founder of the Bronx division of the New York Federation of Jewish Philanthropies, director and president of the Bronx Hospital, and a prominent figure in the United Palestine Ap-

peal. In 1941 he incorporated the Altschul Foundation, which disburses funds for charitable purposes.

[Edward L. Greenstein]

ALTSCHUL, MOSES BEN ḤANOKH (c. 1546–1633), early Yiddish writer. He was the author of the *Brant Shpigl* (“The Burning Mirror”), the first original comprehensive book of ethics in Yiddish. Printed by Conrad Waldkirch in Basle in 1602, it was based upon Altschul’s earlier Hebrew ethical tract *Mar’ah ha-Sorefet* (1577). *Brant Shpigl* was part of the cycle of Yiddish didactic works appearing in the late 16th and early 17th centuries addressed primarily to women who could not read Hebrew. Altschul’s volume emphasized women’s duties and ideal moral behavior, and included chapters on such subjects as “how a modest woman should behave at home” and “how a woman should treat her domestic help.” Three editions were published during the author’s lifetime; it continued to be reprinted until 1706 and became particularly popular among German Jews. Other books followed in imitation of Altschul; for example, the *Tsukht Shpigl* (“Mirror of Modesty”), a rhymed, versified compendium of proverbs alphabetically arranged, selected by Seligman Ulma from holy texts (1610, and frequently reprinted); and *Kleyn Brant Shpigl* (“The Smaller Burning Mirror”) edited by Judah b. Israel Regensburg. Its original title in 1566 had been *Mishlei Khakhomim*, but it was renamed as a result of the popularity of *Brant Shpigl*.

[Sol Liptzin]

ALTSCHULER, DAVID (18th century), Bible exegete. Altschuler lived in Jaworow, Galicia. In order to promote the study of the Bible, he planned an easy-to-read commentary on the Prophets and Hagiographa, based on earlier commentators. Altschuler’s commentary on Psalms, Proverbs, and Job was published in Zolkiew in 1753–54. JEHIEL HILLEL (18th century), continued his father’s work. He visited Jewish communities in Germany, Holland, and Italy. In 1770 he published in Berlin his father’s commentary on the Latter Prophets, which he had completed (two vols.). Five years later his own work, *Binyan ha-Bayit*, appeared in Zolkiew. It describes Ezekiel’s vision of the future Sanctuary. The treatise contains a poem by Solomon *Dubno and talmudic novellae by the author. In 1780–82 he printed in Leghorn the entire completed commentary on the Prophets and Hagiographa together with a new edition of his own *Binyan ha-Bayit* (five vols.). The commentary consists of two parts, called respectively *Mezudat Ziyyon* (“Fortress of Zion”) and *Mezudat David* (“Fortress of David”). The former explains individual words. The latter elucidates the meaning of the text. The commentary attained great popularity and has been reprinted frequently.

[Tovia Preschel]

ALTSCHULER, MODEST (1873–1963), violoncellist and conductor. Born in Mogilev, Russia, Altschuler studied cello at Warsaw Conservatory with J. Hebelt (1884–86) and at the Moscow Conservatory with W. Fitzenhagen (until 1890) and other disciplines with A. Arensky, V. Safonov, S. Taneyev, and others (graduating in 1894). In 1895 he immigrated to the United States and founded the Russian Symphony Society (with the orchestra, in New York), which he directed and conducted in 1903–18, presenting works by Russian composers. He performed with Rachmaninoff, Prokofiev, Micha *Elman, Joseph Levin, and Scriabin. With the latter he was associated by close friendship and performed all his symphonic works, many of them for the first time in the United States, including the world première of *Poème de l’Extase* (1908). He also wrote recollections on the composer published by L. Stanley. After 1925 he taught in Los Angeles, continued conducting, wrote transcriptions, including an orchestral version of Tchaikovsky’s *Trio*, and published his *Memoirs* (1956).

[Marina Rizarev (2nd ed.)]

ALUMMOT (Heb. אֲלֻמוֹת; “sheaves”), kibbutz in Israel, 1½ mi. (2 km.) W. of the Jordan outlet from Lake Kinneret. Alummot, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim, was originally founded in 1939 by a religious group. In 1947 it was taken over by immigrants from Central and Eastern Europe, who had, three years earlier, set up a village on the nearby Poriyyah Ridge. The site, also called Bitanyah, had served *PICA (Palestine Jewish Colonization Association) as a fruit tree nursery. Alummot’s economy was based on irrigated field and garden crops, bananas and other tropical fruit, carp ponds, and dairy cattle. The kibbutz also rented family vacation apartments. In 2002 its population was 247.

[Efraim Orni]

ALVA (Allweiss), SIEGFRIED (Solomon; 1901–1973), painter. He was born in Berlin, but lived in Galicia until the age of ten, and was given a strict Jewish education. Alva studied music and later drawing and after a period of travel in Europe studied painting in Paris. Shortly before the outbreak of World War II he settled in England. His works include an illustrated and decorated version of the first chapter of Genesis, a series of studies of the Prophets in lithograph, serigraphs, and oil paintings on several subjects from Jewish life in Eastern Europe. Some of his paintings are symbolist and abstract. Characteristic of his style is the use of a distinctive brush stroke and aerial perspective. He wrote an autobiography, *With Pen and Brush: The Autobiography of a Painter* (1973).

BIBLIOGRAPHY: *Alva: Paintings and Drawings* (1942), introduction by M. Collis; R. Gindertael, *Alva* (Fr., 1955); Y. Haezraḥi, *Alva* (Heb., 1954).

ALVAN BEN ABRAHAM (10th–11th century), rhetorician, poet, and *paytan* who lived in Syria. His *piyyutim* and poems were collected in a *divan* of which only a few pages were found in the Cairo *Genizah*. Evidently Alvan was also a *hazzan*: various *piyyutim* from the *Genizah* which bear the signature “Alvan *Hazzan*” may be his. Several of his nonreligious poems are in the form of letters written to patrons in various cities in Syria. These letters express the author’s longing and respect for those to whom they are addressed. The language of the poem is generally marked by simplicity, but occasionally the poet incorporates ancient *paytan* expression, as was customary among the poets of the time. The name Alvan is biblical (Gen. 36:23) and was used exclusively in Syria.

[Abraham Meir Habermann]

ALVARES (Alvarez), Sephardi family of Marrano descent. The first known to bear the name was SAMUEL DIOS-AYUDA (= Joshua?) of Astorga, baptized as Garcia Alvarez Delcón, probably at the time of the persecutions of 1391. He is sneeringly referred to as “the delight and ornament of Jewry” in an anti-**Converso* satire preserved in the *Cancionero de Baena*.

There were many martyrs of the Inquisition of the name both in the New World and the Old. FERNANDO ALVAREZ (c. 1620–1640) of Bordeaux and later Leghorn, who had returned to Judaism under the name of Abraham de Porto, was one of the few Marranos burned by the Roman Inquisition. DUARTE HENRIQUES was treasurer of the customs in the Canary Islands before escaping in 1653 to England, where, as Daniel Cohen Henriques, he became active in the synagogue. His effigy was burned by the Inquisition in 1658, but seven years later he was denounced again by his own son. ISAAC (died 1683) alias Isaac Israel Nuñez, court jeweler, headed the London Sephardi Community immediately after the Plague and Fire of London: his tombstone, still legible, is written in English alexandrine couplets and praises him because “his far-gain’d knowledge in mysterious gems/ sparkled in the European diadems.” Joseph Israel Nunez, alias Antonio Alvarez, a jeweler of French origin, lived in Amsterdam in the second half of the 17th century. Isaque Alvares lived in Bayonne in the 17th century. We find Rodrigo Alvarez in Cologne and Emanuel Alvares in Hamburg in the 16th century. In America, the name figures in the Jewish community from the beginning of the 18th century (SOLOMON, distiller in New York in 1703). The English musician ELI PARISH-ALVARS (1808–1849) presumably belonged to this family. The Alvares Correa family lived in Brazil.

[Cecil Roth]

ALVAREZ, ALFRED (1929–), British poet, critic, and writer. Educated at Oxford University, Alvarez served as an editor on the *Observer* newspaper, and has written many well-regarded works of poetry, among them his collected *Poems* (1978) and *Day of Atonement* (1991), which explore the interaction of public and private forces on individual behavior. Alvarez has also written many works of criticism and non-fiction, as well as an autobiography, *Where Did It All Go Right?* (1999).

[William D. Rubinstein (2nd ed.)]

ÁLVAREZ GATO, JUAN (1445?–1510?), Spanish poet. Álvarez Gato flourished in the reigns of Henry IV and of Ferdinand and Isabella. A member of the *Converso* bourgeoisie of Madrid, he eventually became Isabella’s keeper of the royal household. Álvarez Gato wrote amorous, religious, and satirical verse. His love poetry, the best and most lyrical part of his output, includes many of the gallant trivialities typical of the period, but it also contains some of the subtle irony which gives it his personal stamp. In his religious poetry Álvarez Gato frequently used popular forms and refrains. During the last years of Henry IV’s reign, the tone of his poetry underwent a radical change and through it he bitterly reproached the monarch for the calamities of his rule. Alvarez Gato’s short treatises and letters on moral questions shed light on the attitudes and problems of the Spanish *Conversos* at the end of the 15th century.

[Kenneth R. Scholberg]

ALZEY (Heb. אֶלְזַי, אֶלְזַיִי, אֶלְזַיָּא), town near **Worms*, Germany. Jews living in Alzey are first mentioned in 1260, and again in 1348 during the **Black Death* massacres. They were expelled from the town with the other Jews of the Palatinate in 1391. Although there were Jews living in Alzey in the 16th century, an organized community was not established until about 1700. Notable in Alzey was the Belmont family: Jessel (d. 1738) served as the first *parnas*, and Elijah Simeon built the synagogue in 1791. A new synagogue was consecrated in 1854. There were nine Jewish households in Alzey in 1772 and 30 in 1807. In 1880, 331 Jews were living there (approximately 6% of the total population); in 1926, 240; in 1933, 197; and by **Kristallnacht* (Nov. 1938), when the synagogue was burned down, there were fewer than 100 as a result of emigration. The last 41 were deported to the extermination camps of Eastern Europe in 1942–43.

BIBLIOGRAPHY: L. Loewenstein, *Geschichte der Juden in der Kurpfalz* (1895). **ADD. BIBLIOGRAPHY:** O. Boecher, in: *Alzeyer Geschichtsblätter*, 5 (1968), 131–46; idem, in: *1750 Jahre Alzey* (1973), 196–206; D. Hoffmann, in: *Geschichte in Wissenschaft und Unterricht*, 43 (1992), 79–92.

‘AMADIYA, town in the mountains of Kurdistan, N.E. of Mosul; birthplace of David **Alroy*. **Benjamin* of Tudela in

the 12th century estimated the number of Jews in Amadiya at approximately 2,000 (another manuscript gives the figure as 25,000). He claimed that they were descendants of Israelites from the Assyrian captivity, exiled by Shalmaneser, and that they spoke Aramaic. Other sources mention 1,000 Jewish families there. 'Amadiya maintained its leading position among the Jewish communities in Kurdistan, as attested by letters and documents from the 16th century and later. These show the influence exercised by the rabbis of 'Amadiya throughout Kurdistan and *Azerbaijan. There were two synagogues in 'Amadiya; the inscription on the "upper synagogue," dated about 1250, is still legible. The Jewish traveler David d' Beth Hillel, who visited 'Amadiya around 1828, found wealthy merchants, workmen, and cattle owners among the 200 Jewish families there, who still spoke Aramaic. In 1933, there were some 1,820 Jews in Amadiya; since then all have emigrated.

[Walter Joseph Fischel]

AMADO LÉVY-VALENSI, ELIANE (1919–), French Jewish philosopher. Amado Lévy-Valensi was born in Marseilles, to an old Jewish family of Italian origin. Her studies were interrupted by World War II but were resumed in Paris in 1950. She was appointed to the Centre National de la Recherche Scientifique and later became a lecturer at the Sorbonne. The subject of her doctoral thesis (1963) already indicated the direction of her interest, the Jewish reply to the problems of the West, and she became increasingly a kind of Jewish counterpart to Henri *Bergson, as profoundly Jewish as Bergson was de-Judaized. She evolved a practical and theoretical system wherein the Jewish and the general human points of view were indissolubly linked. A psychoanalyst who opposed the closed nature of psychoanalytical societies, she founded in 1965, together with Dr. Veil and Professor Sivadon, an interdisciplinary center for psychoanalysis. Ever sensitive to the concept of Jewish existence she was, with André *Neher, the moving spirit behind the *Colloque des Intellectuels Juifs de langue française*, whose proceedings, important contributions to French Jewish thought on contemporary problems, she edited, together with Neher and Jean Halpérin (*La conscience Juive*, 5 vols., 1963–1973).

Amado Lévy-Valensi immigrated to Israel in 1968 and was appointed professor of Jewish and universal philosophy at Bar-Ilan University. After settling in Israel she published, in addition to fundamental works, articles on topical problems about which she felt intensely, seeking to reveal the psychoanalytical and Jewish substrata which could help in the search for concrete solutions to the important political problems facing Israel, particularly the Israeli-Arab dialogue.

Among her important works are *Les niveaux de l'Être*,

la connaissance et le mal (1963); *La racine et la source (essais sur le Judaïsme)* (1968); *Isaac gardien de son frere?* (1969); *Les voies et les pièges de la psychanalyse* (1971); *Le grand désarroi* (1973); *La onzième épreuve d'Abraham ou De la Fraternité* (1981); *Le Moïse de Freud ou la Référence occultée* (1984); *A la gauche du Seigneur ou l'illusion idéologique* (1987); *Job, réponse à Jung* (1991); *La poétique du Zohar* (1996); and *Penser ou rêver: mécanismes et objectifs de la pensée en Occident et dans le judaïsme* (1997).

[Andre Neher / Dror Franck Sullaper (2nd ed.)]

°**AMADOR DE LOS RIOS, JOSE** (1818–1878), Spanish literary critic and historian. In addition to works on general Spanish literary history, Amador wrote *Estudios históricos, políticos y literarios sobre los Judíos de España* (1848, repr., 1942), which was one of the first serious studies on Spanish Jews. This work earned him a chair at Madrid University. Included in his book are numerous quotations from works by Sephardi authors, especially poets, thus introducing them to the Spanish public. His *Historia social, política y religiosa de los judíos de España y Portugal* (3 vols., 1875, repr. 1943) is the first comprehensive history of the Jews in Spain based on documentary sources. Though there are errors of fact and tendentious interpretations, his works are of fundamental importance.

[Kenneth R. Scholberg]

AMALEKITES (Heb. עַמְלֵק), people of the Negev and the adjoining desert, a hereditary enemy of Israel from wilderness times to the early monarchy (Exod. 17:8–16; Judg. 3:13; 6:3; 10:12; 1 Sam. 14:48; ch. 15; ch. 30). Amalek, a son of Esau's son Eliphaz (Gen. 36:2), was presumably the eponymous ancestor of the Amalekites.

Amalek and Israel

According to the Bible, Amalek was the first enemy that Israel encountered after the crossing of the Sea of Reeds. Inasmuch as contemporary archaeology has convinced most biblicists that the biblical traditions of enslavement in Egypt, wilderness wandering, and conquest of the land are unhistorical, traditions about Amalek and Israel in the pre-settlement period probably reflect later realities. In effect, by setting encounters with Amalek in the days of Moses and Joshua, the writers of the Bible were saying that hostilities existed from time immemorial. Among these traditions we find that Amalekites attacked the Israelites in a pitched battle at Rephidim, which, to judge by the Bible (Ex. 17:6, 7, 8–16; 18:5), is in the neighborhood of Horeb; if the locality Massah and Meribah (17:7) is to be found in the region of Kadesh-Barnea or is identical with it (Num. 20:1–14, 24; Ezek. 47:19), then this battle was waged in the northern part of the Sinai Peninsula. The Book of Exodus relates that Joshua fought against Amalek under the inspiration of Moses, who was supported by Aaron and Hur, and that he mowed them down with the sword. Amalek was

not destroyed, however, and at the end of this war Moses was ordered to write in a document, as a reminder, that the Lord would one day blot out the memory of Amalek from under the heaven. In commemoration of the victory, Moses built an altar which he called “YHWH-Nissi,” and proclaimed that “The Eternal will be at war against Amalek throughout the ages.” This implies that Israel is commanded to wage a holy war of extermination against Amalek (Deut. 25:12–19), for in the early days “the wars of Israel” and the “wars of the Lord” were synonymous expressions (cf., e.g., Judg. 5:23).

In the biblical traditions, Israel, after sinning through cowardice and lack of faith as a result of the discouraging report of the spies, turned around and “defiantly marched to the crest of the hill country” (Num. 14:44–45) against the divine command and was punished by sustaining a shattering blow at the hands of the Amalekites and Canaanites who inhabited the hill country, the former no doubt being confined to its southernmost end (Num. 14:45). In this particular case, therefore, YHWH, who according to Exodus 17:16 had sworn eternal enmity to Amalek, permitted Amalek to defeat Israel, but, since He had specifically warned Israel against this particular undertaking, there is no real contradiction between Exodus 17:16 and Numbers 14:45. It is possible that this tradition is based on abortive attempts by Israel to expand its holdings in the South during the premonarchic period (see Num. 13:29; 21:1–3, 4–34; Deut 1:44). More closely historical than the Pentateuch’s accounts of Amalek are the traditions set in the period of the Judges and the monarchy. During the period of the Judges, the Amalekites participated with other nations in attacks on the Israelite tribes. Together with the Ammonites, they joined Moab against Israel and were among those who captured “the city of palms” – apparently Jericho or the pasture lands of Jericho (Judg. 3:12–13). It seems probable that the wanderings of the Amalekites, or of a particular part of them, extended as far as Transjordan in the neighborhood of Moab or Ammon. (Some scholars (Edeleman in Bibliography) have argued that there was a northern Amalekite enclave adjoining Ephraimite territory.) The Amalekites and the people of the East joined the Midianite raids on the Israelites in the time of *Gideon, and, like true desert tribes, undoubtedly participated in the destruction of the crops, as related in the Book of Judges (6:1–7). The Amalekites took part in the battles in the valley of Jezreel (6:33; 7:12) and perhaps also in the Jordan Valley, but there is no evidence that Gideon also fought with the Amalekites in his pursuit of the Midianites in Transjordan. In no case did the Amalekites as a whole suffer decisive defeat at this time and their center in the Negev was not harmed.

The decisive clash between Israel and Amalek came only with the advent of the monarchy, in the famous Amalekite war of *Saul. According to the biblical account, the war began as a result of a divine command of the Lord to Saul through Samuel to smite Amalek and destroy it, infant and suckling, ox and sheep, camel and ass” (1 Sam. 15:3). Although Samuel alludes to Amalek’s provocation of Israel, “in opposing them on the way, when they came up out of Egypt” (15:2), there is no mention

of the battle of Rephidim and of the victorious war of Moses and Joshua. Samuel’s words more closely parallel the narrative about the attack of Amalek in the Book of Deuteronomy (25:17–19), which relates that the Amalekites attacked the Israelites on their way out of Egypt, “when you were famished and weary,” and cut down the stragglers in the rear, without mentioning any victorious Israelite counteraction. Deuteronomy explicitly admonishes the Israelites to remember Amalek and blot out its memory from under heaven, whereas in the Exodus version this can only be inferred (see above). The command imposed on Saul to subject the Amalekites to the ban (**herem*), however, conforms to the version in Deuteronomy. The dispute between Samuel and Saul with regard to the *herem* was not over the command itself, but the extent to which it had been put into effect. Saul’s act of extermination was not absolute, for he spared the best of the sheep and cattle – setting aside part for a sacrifice to God – and *Agag, king of Amalek. It should be noted that even the deuteronomic *herem*, though it does not allow for the sparing of persons (such as Agag), except for particular ones (like *Rahab) specified in advance, permits the taking of booty (e.g., Deut. 2:34–5; Josh. 8:26–27) except in special cases (Deut. 13:13 ff.; Josh. 6:17 ff.). Despite the “pre-deuteronomic” literary framework of chapter 15 and its prophetic-ideological aim, embedded in it is an ancient historical tradition about a war of extermination that reflects Saul’s war against Amalek. This may be seen in the record of Saul’s wars in which the war of Amalek receives special mention: “He did valiantly, and smote the Amalekites, and delivered Israel out of the hands of those who plundered them” (1 Sam. 14:48). The matter was, therefore, a war of rescue as were the wars of the Judges, and it seems that because of its difficulty Saul vowed that in the event of success he would devote the spoil to the Lord by *herem*.

From the scanty information in 1 Samuel 15, it may be concluded that Saul achieved victory over the Amalekites and advanced all the way to their headquarters, “the city of Amalek.” The battle (or the main one) was waged in “the wadi,” by which is perhaps meant the Wadi of Egypt (cf. Num. 34:5; Josh. 15:4; Ezek. 47:19). Accordingly, the main Amalekite center was on the Sinai Peninsula in the region of “the waters of Meribath-Kadesh,” which may have been in the vicinity of Kadesh-Barnea, as the Amalekite attack at Rephidim was also in the same area. The term “city of Amalek” is not to be understood literally, and it is possible that it means a fortified camp. Neither does the title “king,” applied to Agag, necessarily imply an organized kingdom as customarily found in settled regions, and it may be presumed that Agag was a type of tribal chief called a king, like the kings of Midian (Num. 31:8; Judg. 8:5, 12; cf. Num. 25:18; Josh. 13:21) and the kings of Hana in *Mari, whose main function may have been a military one.

According to 1 Samuel 15:7, “Saul defeated the Amalekites from Havilah all the way to Shur, which is east of (or close to) Egypt.” However, Saul himself can hardly have advanced as far as the borders of Egypt (and if this Havilah is the same

as that in Gen. 10:7, 29 – Arabia as well). Perhaps the author merely wishes to define the normal range of the nomadic Amalekites in the time of Saul. A similar expression occurs in the description of the much wider range of the Ishmaelites: “From Havilah, by Shur, which is east of (or close to) Egypt, etc.” (Gen. 25:18). The magnitude of the Amalekite defeat in the days of Saul is apparently reflected in the pronouncement of *Balaam: “Their (i.e., Israel’s) king shall rise above Agag, their kingdom shall be exalted” (Num. 24:7). It is related that when Samuel put Agag to death he said “As your sword has bereaved women, so shall your mother be the most bereaved of women” (1 Sam. 15:33). This may indicate that Agag’s military success was proverbial. The Amalekites were not completely destroyed by Saul, since at the end of his reign they were still raiding the Negev of the Cherethites, of Judah, and of Caleb, and the town of Ziklag, that had been assigned by King Achish of Gath to David (1 Sam. 30:14).

Although the story of David’s victory over the Amalekites is intended to add to his glory, it need not be doubted that it reflects an historical truth about David’s wars against the desert tribes in his premonarchical period, being distinguished by exact topographical indications, by correct military-legal conduct, and the division of booty among the cities of Judah and of the Negev (30:9, 21–31). After the victories of Saul and David the Amalekites ceased to be a factor of any influence in the border regions of Judah and the Negev, just as the Midianites had after the war of Gideon. In 1 Chronicles 4:42–43, some obscure information has been preserved about the remnant of Amalek. These verses relate that some of the Simeonites went to Mt. Seir, killed the survivors of Amalek, and settled there. It is difficult to imagine that Mt. Seir means Edom, in light of the fact that the concept “Seir” may be applied to a variety of regions (e.g., Josh. 15:10; and perhaps also Judg. 3:26) and the areas mentioned in the previous verses (1 Chron. 39–42); it seems most likely that the reference is to the western Negev, where the Amalekites roamed from early times. According to the allusion in verse 41, it is possible to say that the destruction of the survivors of Amalek took place during the reign of *Hezekiah.

Land and People

The name Amalek is not mentioned in writings outside the Bible. The proposed identification of the Amalekites with the Amaw or the Shasu of Egyptian sources is untenable. In the biblical genealogical system (see *Genealogy) Amalek is the son of Esau’s son Eliphaz by Eliphaz’s concubine Timna (Gen. 36:12). On the analogy of the genealogies of the sons of Nahor by concubinage (Gen. 22:24) and of Abraham’s sons by Keturah and Hagar it may be surmised that Amalek’s genealogy was intended to imply his special status as a nomad as distinct from the sedentary Edomites, in the same way as the Ishmaelites or the children of Keturah were distinct from the sedentary descendants of Abraham. There may be geographical significance in the listing of Amalek after Edom in the Song of Balaam (Num. 24:18, 20).

The Amalekites and the Kenites

Those among the Amalekites who lived in the border regions maintained a relationship to the Kenites, who certainly lived near the permanent settlements (1 Sam. 15:6). Whereas the Kenites passed into permanent settlement during the First Temple period and were assimilated in Judah (1 Chron. 2:55), the Amalekites did not deviate from their desert nomadic character until they ceased to exist. Some believe that this Amalekite patronage of the Kenites is also mentioned in Judges 1:16, reading (in accordance with a few Septuagint manuscripts and the Latin Vulgate version) “and they settled with the Amalekite” instead of “and they settled with the people.” However, such an interpretation contradicts the meaning of the chapter – whose purpose is to relate how various tribes and families became annexed to Judah, i.e., “the people.” This reading which occurs only in secondary versions of the Septuagint and not in original ones can be explained as an attempt to interpret a difficult passage in the light of 1 Samuel 15:6, i.e., the verse in the Song of *Deborah where it says of Ephraim “they whose root is in Amalek” (Judg. 5:14). Without raising the possibility of textual reconstruction in detail, it may be established, by drawing a parallel with the element “people,” which appears repeatedly in this song, that the name Amalek in the masoretic text is the authentic one. Hence the meaning of the name in this context is not merely geographic (Judg. 12:15), but serves to indicate the warlike nature of Ephraim, beside Benjamin. It is unimaginable that such a juxtaposition would have been possible after the consciousness of the divine war of extermination against Amalek had taken root in Israel.

[Samuel Abramsky / S. David Sperling (2nd ed.)]

In the *Aggadah*

Amalek, “the first of the nations” (Num. 24:20), had no wish to fight alone against Israel but rather, with the help of many nations (Mekhilta, ed. by H.S. Horowitz and I.A. Rabin (1960²), 176; Jos., Ant., 3:40). At first these nations were afraid to join Amalek, but he persuaded them by saying: “Come, and I shall advise you what to do. If they defeat me, you flee, and if not, come and help me against Israel.”

Moses appointed Joshua to lead the Israelite army not because of his own weakness or advanced years but because he wished “to train Joshua in warfare” (Mekhilta, 179; Ex. R. 26:3). After he defeated the Amalekites, Joshua refrained from the common practice of abusing the bodies of the slain and instead “treated them with mercy” (Mekhilta, 181). The war with Amalek did not end with their defeat, and the Israelites were commanded always to remember the deeds of Amalek (Deut. 35:17). In rabbinic literature, the reasons for the unusual eternal remembrance of Amalek are the following: (1) Amalek is the irreconcilable enemy and it is forbidden to show mercy foolishly to one wholly dedicated to the destruction of Israel (PR 12:47). Moreover, the attack of the Amalekites upon the Israelites encouraged others. All the tragedies which Israel suffered are considered the direct outcome of Amalek’s hostile

act (PDRK 27). (2) The injunction “Remember” does not enjoin us to recall the evil actions of others but rather our own. For “the enemy comes only on account of sin and transgression” (*ibid.*). (3) The verse “Remember...” is meant to remind all men of “the rule which holds good for all generations, namely, that the scourge [the staff of God’s indignation] with which Israel is smitten will itself finally be smitten” (Mekhilta, 181). In the course of time this biblical injunction became so deeply rooted in Jewish thought that many important enemies of Israel were identified as direct descendants of Amalek. Thus the tannaitic *aggadah* of the first century B.C.E. identifies Amalek with Rome (Bacher, Tann, 1 (1930²), 146). The most outstanding example is “Haman the Agagite” (Esth. 3:1) who is regarded as a descendant of Agag (1 Sam. 15:8) the Amalekite king (Jos., Ant., 11:209).

AMALFI, Italian port on the Gulf of Salerno, S.E. of Naples. The first information about Jews living in Amalfi dates from the tenth century. According to the Chronicle of *Ahimaaz, two of his great-uncles, Shabbetai and Papaleone, went on a mission some time in the tenth century on behalf of the lord of Amalfi to the emir of Kairouan, bearing gifts to their kinsman Paltiel, who held a high position at the emir’s court. The Jews of Amalfi formed a relatively small community, engaged in trade, silk manufacture, and garment dyeing. Jewish presence in Amalfi is also attested by letters from the Cairo **Genizah*. In a letter from the beginning of the 11th century a young Jewish scholar of Italian origins who passed through Amalfi on his way to Palermo and then to Egypt mentioned meeting two local Jews, Hannanel and Menahem, who helped him deal with the local traders. Other letters of the *Genizah*, from the middle of the 11th century, mention trade in silk, textiles, and honey from Amalfi. The *Genizah* letters indicate that the Jews were involved to some extent in the commerce between Amalfi, Sicily, and Egypt during the 11th century. The medieval Jewish traveler *Benjamin of Tudela found some 20 Jewish families there in about 1159. A Jew is mentioned among ten bankers who loaned money to Charles I of Anjou in 1269. In 1292, after measures were taken to force the Jews to convert to Christianity throughout the kingdom of *Naples, more than 20 families of “neofiti” (converts) remained in Amalfi. The Jewish community, reconstituted in 1306, ceased to exist when the Jews were banished from the kingdom of Naples in 1541.

[Nadia Zeldes (2nd ed.)]

AMANA (Heb. אַמָּנָה), mountain mentioned in Song of Songs 4:8. As it is referred to together with the Senir and Hermon mountains, it was apparently situated in southern Syria and should be distinguished from Mount Amanus farther to the north. Its marble or alabaster was already known at the end of the third millennium B.C.E., being mentioned in the inscriptions of Gudea, the Sumerian ruler of Lagash. The same stone and cedars were later imported to Assyria by Tiglath-Pileser III, Sargon II, and Sennacherib. In Roman times, a road-station called Amana still existed on the Damascus-Palmyra road. Amana is usually identified with Jabal az-Zevedani (5,900 ft. [1,800 m.] high), which forms part of the Anti-Lebanon chain N.W. of Damascus.

Amanah is also the name of a river flowing from the above, and one of the two rivers of Damascus mentioned in 11 Kings 5:12 (written Avana but corrected to Amanah in the *keri*). It was called *Chrysorhoas* in Hellenistic literature and is now named Nahr Barada.

[Michael Avi-Yonah]

AMAR, LICCO (1891–1959), violinist. Born in Budapest, a pupil of Henri Marteau, Amar became second violinist of the Marteau Quartet, and concertmaster of the Berlin Philharmonic Orchestra (1915–20) and of the National Theater at Mannheim (1920–23). In 1922 he organized the Amar Quartet, which included Paul Hindemith, and was active until 1929 in the promotion of contemporary music. In 1935 he became professor of violin at the Conservatory of Ankara, Turkey. After 1957 he taught at the Musikhochschule in Freiburg.

AMARILLO, AARON BEN SOLOMON (1700–1772), halakhic authority and kabbalist. Amarillo was born and spent his whole life in Salonika. He studied under David Serero, one of the great Salonikan halakhic authorities of his day. On the death of Isaac b. Shangi in 1761, he was appointed one of the three chief rabbis of Salonika (as his father had been before him), serving together with R. Benvenisti Gatigno and R. Eliezer Raphael Naḥmias. His responsa *Penei Aharon* (1796) were published by his son Moses. Some of his responsa were published in the *Ashdot ha-Pisgah* of Joseph Naḥmuli (Salonika, 1790). He edited *Kohelet Ben David* (Salonika, 1749) of David Ḥazzan, appending to it a eulogy and elegies on the death of his brother Ḥayyim Moses. During a severe economic crisis in 1756, he proposed a moratorium on all debts. This was

adopted by the community and led to an improvement in the economic situation.

BIBLIOGRAPHY: D.A. Pipano, *Shalsholet Rabbanei Saloniki ve-Rabbanei Sofia* (1925); I.S. Emmanuel, *Mazzevot Saloniki*, 2 (1968), nos. 1603, 1604.

AMARILLO, ḤAYYIM MOSES BEN SOLOMON (1695–1748), halakhic authority and preacher; brother of Aaron *Amarillo. Born in Salonika, Ḥayyim Moses studied under his father Solomon, who before his death appointed him his successor as preacher in the Talmud Torah congregation. The community, however, opposed this appointment and on the death of Solomon they prevailed upon *Joseph David, author of *Beit David*, to accept the position. Ḥayyim Moses filled many posts in Salonika, teaching in his father's yeshivah and enacting local *takkanot*. With the outbreak of plague in 1724 he fled. In 1733 he was in Constantinople. Upon Joseph David's death in 1736, Ḥayyim Moses was appointed one of the three chief rabbis. Amarillo was a prolific writer and the following of his works have been published: 1) *Devar Moshe* in three parts (Salonika, 1742, 1743, 1750), responsa. The laws of divorce, which constituted sections of parts 1 and 3, were published as *Simḥat Moshe* (Leghorn, 1868); (2) *Halakhah le-Moshe* in two parts (Salonika, 1752), on the fourth book of Maimonides' *Yad, Nashim*. At the end of each chapter he gives a précis of the laws with explanations; (3) *Yad Moshe* (*ibid.*, 1751), sermons. He also edited his father's books, *Penei Shelomo* (1717) and *Kerem Shelomo* (1719), and also wrote an introduction to the responsa, *Edut be-Ya'akov* (Salonika, 1720), of Jacob di *Boton.

Benayahu, in: *Aresheth*, 1 (1958), 226; I.S. Emmanuel, *Mazzevot Saloniki*, 2 (1968), nos. 1445, 1517.

AMARILLO, SOLOMON BEN JOSEPH (1645–1721), Salonikan halakhic authority and preacher, father of Aaron and Ḥayyim *Amarillo. While still a youth, he wrote responsa, and in 1666, he began to preach in various Salonikan congregations. On the death of his teacher, Isaac b. Menahem ibn Ḥabib (before 1685), Amarillo was appointed to replace him until Ibn Ḥabib's son became old enough to assume the position. Amarillo was an outstanding halakhist. Communities from all parts of Turkey turned to him with their problems. In 1691, following the death of Aaron ha-Cohen *Perahyah, he was appointed one of the three chief rabbis of Salonika. In 1716 his *bet ha-midrash* was in the old Sicilian synagogue. He was the author of *Penei Shelomo* (Salonika, 1717), sermons, mainly eulogies, to which are appended notes on the Pentateuch, and *Kerem Shelomo* (Salonika, 1719), responsa. Some of his responsa under the title *Olelot ha-Kerem* were published by his son, Ḥayyim Moses, at the end of the *Torat Ḥayyim*, pt. 3 (Salonika, 1722) of Ḥayyim Shabbetai and also at the end of the responsa *Devar Moshe*, pt. 2 (Salonika, 1743)

of his son Ḥayyim Moses. In the introduction to *Kerem Shelomo*, his son Ḥayyim Moses refers to his father's novellae on the *Ḥoshen Mishpat*.

AMARKAL (Heb. אַמְרָקָל), an anonymous halakhic compendium written in the 13th–14th century by a pupil of *Asher b. Jehiel, whose first name seems to have been Baruch. The work embodies valuable halakhic and literary material dating from the previous two centuries, particularly concerning the distinctive ritual of the German and French communities. The author quotes decisions of his father and reports his own observation and experience. Shalom b. Isaac of Vienna (14th century) already quotes the *Amarkal*. About the same time Ḥayyim b. David, the copyist of Isaac b. Meir *Dueren's *Sha'arei Dura*, used the work in his annotations. A manuscript, written before 1440, from which N. Coronel published a selection (*Likkutim me-Hilkhot Mo'adim in Ḥamishah Kunteresim*, 1864) is at Jews' College library (London). J. Freimann published the section *Yein Nesekeh* in *Festschrift... D. Hoffmann* and M. Higger published *Hilkhot Pesah* in *A. Marx Jubilee Volume*.

BIBLIOGRAPHY: J. Freimann, in: *Festschrift... D. Hoffmann* (1914), 421–32 (Ger. section), 12–23 (Heb. section); M. Higger, in: *A. Marx Jubilee Volume* (1950), 143–73; idem, in: *Talpiot*, 6 (1950), 196–200.

AMASA (Heb. אַמָּסָא), military commander of *Absalom's army in his rebellion against his father David (II Sam. 17:25) and of Judah after the rebellion of Absalom (II Sam. 20:5; I Kings 2:32). Amasa was the son of Jether or Ithra the Ishmaelite, and Abigail the sister of David (II Sam. 19:14; I Chron. 2:17). According to II Samuel 17:25, he was the son of Ithra the Jesraelite (LXX–Jezreelite) and Abigail the daughter of Nahash.

Amasa can probably be identified with Amasai (Heb. אַמָּסָא), the leader of the 30 "mighty men" who joined David at Adullam (I Chron. 12:18). This makes it necessary, however, to assume that Jether the Ishmaelite married Abigail the daughter of Jesse long before David came to the court of Saul, and that Amasa was later deposed from his position in the service of David, since in the list of those who arrived with David in Ziklag, it is Ishmaiah the Gibeonite who commands the 30 "mighty men" (I Chron. 12:4); but it has the advantage of offering an explanation for Amasa's siding with Absalom against David – he was embittered over the fact that David had removed him from his duties. Absalom appointed Amasa military commander because he was a relative and a doughty warrior. After defeating Absalom, David tried to reconcile Amasa and any hostile elements in Judah by appointing Amasa as his commander instead of Joab, who had aroused his anger by killing Absalom (II Sam. 19:14). After his appointment, Amasa regained the loyalty of all Judah to David's side (*ibid.* 19:15).

Amasa was then ordered to assemble the men of Judah to subdue the rebellion of *Sheba the son of Bichri (*ibid.* 20:4–5). He did not succeed in this, and David therefore placed *Abishai at the head of his servants to suppress the rebellion. The latter was then joined by Joab and David’s “mighty men” (*ibid.* 20:7). On their way, in Gibeon, Joab encountered Amasa and treacherously slew him (*ibid.* 20:9–10). This murder aroused David’s anger, and in his last days he ordered Solomon to take revenge on Joab for this act (1 Kings 2:5).

[Josef Segal]

In the *Aggadah*

Amasa, together with Abner, refused to be a party to the massacre of the priests of Nob (1 Sam. 22:17); and he said to Saul: “What more do we owe you than our arms and insignia, which you have given us? Here they are at your feet” (TJ Sanh. 10:2, 52b). He did however accompany Saul to the witch of Endor (Lev. R. 26:7). He vigorously defended David’s legitimacy, despite his descent from Ruth the Moabitess, challenging his opponents with the words: “Whoever will not obey the following *halakhah* will be stabbed with the sword; I have this tradition from Samuel the Ramathite: ‘An *Ammonite*, but not an *Ammonitess*, a *Moabite*, but not a *Moabitess*,’ are excluded from the congregation of Israel” (Yev. 76b).

His piety brought about his death. When challenged by Solomon at the heavenly court, Joab pleaded that he murdered Amasa because he had been tardy in obeying David’s order to gather an army (1 Sam. 20:4–5). The real reason for the delay, however, was that Amasa was loath to interrupt the studies of those whom he was to summon, considering that study overrode his duty to obey the royal command (Sanh. 49a).

AMASIYA, chief district town in northern Turkey. The Turks found a small Greek-speaking (*Romaniot) Jewish community in Amasiya. After 1492 exiles from Spain settled there in a separate street, where they were merchants and craftsmen. In their neighborhood lived Greeks, and Armenians, popularly called “Amalekites.” The Jewish community was small but organized, with a recognized leadership, and there is information about the regulations of the community and some disputes among its members. A document from 1683 mentions 73 Jews in the town and another document from 1576 mentions 63 Jews. Amasiya was an important town during the rule of Sultan *Suleiman I the Magnificent (1520–66). His son Mustafa was *sanjakkbey* (“district governor”) and was known for his hatred of the Jews. In 1553 a *blood libel was spread by Christians when an Armenian woman reported seeing the slaughter of a Christian boy by the Jews in order to use his blood at the Passover feast. Several Jews were imprisoned and tortured and some “confessed” to the crime and were hanged. Finally, the Armenian who supposedly was murdered was found and

the government punished the accusers. Moses *Hamon, the sultan’s personal physician, succeeded in then obtaining from him a firman which prohibited governors and judges to judge cases of blood libel, and ordered these to be brought before the sultan himself. Jewish merchants from Amasya traveled to Tokat and Persia in the 16th century. In 1590 the Jews of Amasya suffered from the Cellali gangs of bandits. Many frightened Jews fled from the city and only in 1608 was the community renewed. During the 17th century most of Amasiya’s Jews moved to Tokat and Ankara. In 1672 there existed a Jewish court of law. At the beginning of the 18th century only a few Jewish families remained in Amasiya. There is no longer a Jewish community there.

[Abraham Haim / Leah Bornstein-Makovetsky (2nd ed.)]

AMATEAU, ALBERT JEAN (1889–1996), communal activist, businessman. Amateau was born in Milas, a town in rural Turkey. His family was part of the westernized middle class elite of the Turkish Jewish community. His father, a lawyer, was the son of the French consul in Izmir. His maternal grandfather, Rabbi Moses *Franco, originally from Rhodes, served as chief rabbi of the Sephardi community in Palestine. Amateau received his primary and secondary education from Jewish schools in Milas and Smyrna. In 1908 he graduated from the Presbyterian American International College with a basic teacher’s diploma and, probably more importantly, the means to escape compulsory military service. Following the Young Turks Revolution in 1908, teachers were exempted from conscription. Teaching part-time, Amateau studied law at the University of Istanbul. In 1910, the government altered its conscription policy, prompting Amateau to flee the country. After a brief stint working as a dishwasher in Naples to raise money for his onward journey, Amateau arrived in New York in August 1910. His early employment in New York mirrored his experience in Naples, moving between a string of jobs that included selling lemonade, delivering bread, and giving English lessons to fellow immigrants. Polylingual and literate, Amateau’s language abilities translated into more stable employment, and he got jobs as an interpreter for the Court and on Ellis Island, and later working for the Industrial Removal Office.

Even while struggling to support himself, Amateau became involved in the leadership of the Sephardi community of New York. Together with Joseph Gedalecia, Amateau founded the Federation of Oriental Jews of America in 1912 with the intention of coordinating the activities of the mutual aid so-

cieties within the disparate Sephardi community, an initiative spurred by the mass immigration of Jews from the Balkans and Turkey. Amateau became increasingly involved in Jewish communal life, working for the Society for the Welfare of the Jewish Deaf and, in his spare time, as an activist for the Federation, the Oriental Jewish Community of New York (a looser confederation of Sephardi groups), and the Sephardic Brotherhood of America, a mutual aid society. He also took classes in social work at Columbia University and in rabbinics at the Jewish Theological Seminary, receiving his ordination from the latter in 1920. He served as the rabbi of the first congregation of the deaf, delivering sermons and leading services using sign language. Amateau volunteered for the United States Army during World War I and was wounded while serving in Europe. In the mid-1920s, Amateau went into private business, only to be left unemployed by the Great Depression. He retrained as a lawyer, and worked in the insurance industry. At about the same time, Amateau became disillusioned with the failings of Sephardi communal life and began to devote much of his free time and organizational abilities working on behalf of the Democratic Party. In a further career shift, he left New York for Los Angeles in 1940, trading on his language skills to start a company which provided foreign language dubbing for Hollywood films. Amateau was active in both Sephardi and civic organizations in this new setting. He retained a fierce lifelong attachment to Turkey, publicly defending it against the accusation that it had orchestrated the Armenian genocide.

[Adam Mendelsohn (2nd ed.)]

AMATUS LUSITANUS (João Rodrigues de Castelo Branco; 1511–1568), physician; one of the greatest Jewish figures in medical literature in the first half of the 16th century. Amatus Lusitanus was born to Marrano parents in the town of Castelo Branco, Portugal. His parents were only outwardly Christians and from them Amatus Lusitanus inherited his attachment to Jewish tradition and a knowledge of Hebrew. He studied medicine in Spain at the University of Salamanca, and received his degree in about 1530. He returned to Portugal to pursue his practice, but when the situation of the Marranos worsened, and hostility toward Marrano doctors increased, he moved to Antwerp (1533). Three years later he published his first book on medicinal botany (*materia medica*), the *Index Dioscorides* – the only book he published under his baptismal name, Joannus Rodericus. His other works were written under the name “Amatus Lusitanus.” “Amatus” was probably derived from his family name, which may have been Ḥaviv (“beloved”). It is probable that he established his connections with the *Nasi family during this period and he dedicated one of his *centuriae* to Joseph Nasi.

Because of Amatus Lusitanus’ great fame as a physician and scientist, the duke of Ferrara, Ercole II d’Este, in 1540 ap-

pointed him lecturer in medicine at the University of Ferrara, a city where there existed both religious freedom and freedom for scientific research. Among his friends were the physician Brassavola (who wrote about medicinal plants), the anatomist, Canano, and the botanist, Falconer. Lusitanus worked with Canano on dissecting corpses. In one of the *centuriae*, he wrote that he performed 12 dissections of corpses (*dissecare fecimus*), a large number for this early stage of anatomy, in order to clarify one single detail of the structure of veins. He carried out other experiments on corpses to prove the possibility of performing certain operations (*Centuriae 1, curatio 61*).

While in Ferrara, Amatus declined an offer to become court physician to the king of Poland, Sigismund II. Instead, he accepted the invitation of the free republic of Ragusa (today Dubrovnik), to become the town physician. In 1547 Amatus Lusitanus left Ferrara, and went to Ancona to await his official letter of appointment. Here he was called upon to cure the sister of Pope Julius III, and became permanent physician to several monasteries (in *Centuriae 4* and *5*, he describes the illnesses of the monks). In 1549 he finished his first *centuria*, in which he collected 100 medical case histories and described their treatment and results. Many of the cases (*curationes*) are accompanied by learned explanations, clarifying various opinions on these cases, and dealing with the pathology and the treatment of the subject. Between 1549 and 1561 he wrote seven *centuriae*, which established his reputation as a thorough researcher in various fields, including anatomy, internal medicine, dermatology, and mental illness. The *centuriae* are also a mine of information on 16th century medical history, social life, and individual biography.

Amatus’ fame was such that he was ordered to Rome several times to treat Pope Julius III. A number of cities invited him to treat their sick. In 1551 he was invited to accept the post of court physician to the ruler of Transylvania, but refused. Amatus finished his commentary on Dioscorides’ work on *materia medica* in 1549 and published it in Venice under the title *In Dioscoridis enarrationes* (1553). The book was published six times in this form. In the 1558 edition (Lyons), it covers 800 pages, with 30 excellent illustrations, mainly woodcuts of plants but also of animals and birds. He gives the names of flora and fauna in Greek, Latin, Italian, and Arabic, and sometimes in French and German. This work is among the first ever published on *materia medica*. In it Amatus mentions several mistakes that he found in Matthioli’s commentary on Dioscorides, which had been published in 1544. Matthioli, a famous botanist and court physician in Vienna, would not tolerate any criticism. He attacked Lusitanus in insulting and vulgar terms and accused him of heresy. Nevertheless, Amatus’ works on *materia medica* won international renown. When Pope Paul IV was elected in 1555 and the *Ancona decrees against Marranos were published, Amatus’ home was looted, together with his library and the manuscripts of his works. It was Matthioli’s hatred and baseless charge of heresy which were the main reasons for this persecution. Amatus managed to escape first to Pesaro and then in 1556 to Ragusa, where he

spent two peaceful years. In 1558 he moved to Salonika, which had a large Jewish community. There Amatus openly practiced Judaism, and mainly treated Jewish patients. It was in Salonika that he died of the plague.

In *Centuria* 1, *curatio* 52, Amatus Lusitanus vividly described his important discovery of the valves in the veins, which direct the bloodstream in one direction and prevent it from flowing back the opposite way. Because of a misinterpretation of the Latin text, the discovery was long attributed to Canano. The discovery of the valves has also been wrongly attributed to Fabricius, who described them at a later date. Amatus also demonstrated that the optic nerves are not hollow, and that the cavity of the human womb is not divided. He described the structure of the mammary gland, and a treatment for inflammation of the lactating breast. He used enemas to feed a man suffering from a stricture of the esophagus. He also gave a precise description of the enlargement of the spleen and the changes in its consistency which are characteristic of chronic malaria.

Amatus Lusitanus' lofty medical ethics are demonstrated in the oath printed at the end of his sixth and seventh *centuriae*. The oath, written after his return to Judaism, is one of the most exalted literary documents in medical ethics. He takes the oath in the name of "the Ten Holy Commandments, which were delivered into the hands of Moses on Mount Sinai for the people who were redeemed from bondage in Egypt." This oath emphasizes the philanthropic side of the art of healing and the need to aid the poor and the needy. In this it differs (as do the Christian oaths) from the professional materialism of the Hippocratic oath. His Latin is fluent and graceful and does not contain the barbarities of style and vocabulary common in medieval Latin. All this helped to popularize the *centuriae* with its readers. Twenty-three different editions of Amatus' works are known (together with that on *materia medica*). They have not yet been fully translated into a modern language, although the first three *centuriae* have been translated into Portuguese (1946–). From the point of view of Jewish history, Lusitanus' life exemplifies the internal struggle and emotional burden to which Marranos were subjected. Despite the necessity of concealing his origins, he emphasizes in his books, long before his open return to Judaism, his attachment to Jewish values. In one of his *centuriae*, he quotes the opinions of Maimonides, with no particular relevance to the context. In his description of the treatment of Azariah dei Rossi, who was apparently suffering from a gastric ulcer, Amatus Lusitanus described the customs and eating habits of the Jews. There is a figure of Amatus Lusitanus above the door of the medical faculty of the University of Coimbra and he is also represented in the tableau of "Portuguese Medicine" in the medical faculty of Lisbon University.

[Joshua O. Leibowitz]

AMAZIAH (Heb. אֲמַזְיָהוּ; "YHWH is strong" [or "YHWH adopted"]), the name of two biblical figures.

(1) King of Judah, son of Joash son of Ahaziah. Amaziah reigned for 29 years (II Kings 14:1–20; II Chron. 25) but the synchronism with the reign of Jeroboam II (II Kings 14:23) presents chronological problems. Amaziah's mother was Jehoaddin of Jerusalem (II Kings 14:2; Jehoaddan in II Chronicles 25:1). The period of his ascension to the throne was difficult both for internal and external reasons because of the serious conflicts between King *Joash, his father, and the sons of *Jehoiada the priest, which brought about the murder of Joash (II Chron. 24:20–26). During the first years of his rule he did not have the power to punish his father's murderers. "But when the kingdom was established unto him" he punished the murderers without harming their children or families. II Kings 14:6 and II Chronicles 25:4 stress that Amaziah acted in accordance with "the book of the law of Moses... Parents shall not be put to death for children, nor children be put to death for parents: a person shall be put to death only for his own crime" (cf. Deut. 24:16). This moderation toward his father's murderers, as well as his political acts in which he procured the participation of the family heads in Judah, brought quiet back to Judah. Consequently, aided by the family heads, Amaziah succeeded in raising a powerful force to fight Edom. At first, he wanted the army of Israel to participate in this war, but when he realized the opposition this had aroused among various sectors of the people, he gave up the idea of receiving help from the Israelite army although its mobilization had already cost him dearly; the Israelite regiment returned home embittered (II Chron. 25:6–10).

Amaziah won a great victory in Edom in the Valley of Salt, captured Sela, which he named Joktheel (II Kings 14:7; II Chron. 25:11–13), but did not succeed in conquering all Edom. It is possible that Amaziah, by forgoing the help of the Israelite army in the war against Edom, caused bitter conflicts between Judah and Israel. These were apparently mainly caused by the acts of plunder and murder committed in various settlements in Judah by the Israelite contingent, which was sent back to its own country after its departure from Judah (II Chron. 25:13). It is possible that Amaziah's reaction to these deeds was a result of the influence of public opinion in Judah which displayed excessive sensitivity toward the Israelite actions against Judah in view of the strengthened self-confidence of the Judeans after their victory over Edom. Amaziah proclaimed war against Joash, king of Israel, and though Joash sought to prevent this war, Amaziah went ahead with it. It may

even have been impossible for him to act otherwise since the official reply of Joash included the parable of the thistle and the cedar – a parable with a derisive design and humiliating content that was offensive to both Judah and Amaziah (II Kings 14:8–10; II Chron. 25:17–19). In the war between Amaziah and Joash near Beth-Shemesh, Judah was soundly defeated. Amaziah was taken captive, and Joash ordered that a wide breach be made in the northern part of the wall of Jerusalem to facilitate the conquest of Jerusalem by Israel (II Chron. 25:23). Apart from this, Joash looted much treasure from the Temple and the palace of the king, and, to assure the fulfillment of the peace terms that he imposed upon Judah, took hostages. According to II Chronicles 25:14–16, Amaziah was guilty of worshipping the “gods of the children of Seir”; this sin brought about a conspiracy against him in Jerusalem in his last days. He fled to Lachish and was murdered there; his body was later buried in the tombs of the kings in Jerusalem (*ibid.* 15, 16, 27). It can be assumed that for political reasons Amaziah took several images of Edomite idols and set up their cult in Jerusalem. This, combined with the defeat he sustained in the war against Joash, brought about a cooling of relations between the king’s court and the family heads. According to II Chronicles (25:25), Amaziah was murdered 15 years after the defeat of Judah in the war at Beth-Shemesh, and it is therefore difficult to regard the murder as a consequence of the defeat alone. It is certain that in the course of time political causes were added which brought about a complete rift between him and the nobles.

[Joshua Gutmann]

In the *Aggadah*

The *aggadah* quotes an ancient tradition that Amaziah was a brother of Amoz (the father of Isaiah; Is. 1:1; Meg. 10b). It was on the latter’s advice that the king dismissed the army he had gathered from among the Ephraimites (II Chron. 25:7–10; SOR 20). His method of killing of the 10,000 Edomite captives (II Chron. 25:12) is severely criticized. “Death by the sword was decreed upon the descendants of Noah, but he cast them from a rock.” As a result he was exiled (Lam. R. introd. 14).

The chronological difficulties presented by differing scriptural references to the lives and reigns of various kings are solved by the statement that Amaziah did not rule for the last 15 years of his life, the kingdom being administered by his son, Uzziah, who, in turn, left the administration to his son (Jotham) for 20 years (SOR 19).

(2) A priest of the king’s sanctuary at Beth-El in the time of *Jeroboam II, son of Joash; one of the opponents of the prophet *Amos (Amos 7:10ff.). Amaziah sent Jeroboam the essence of one of the prophecies of Amos: “Jeroboam shall die by the sword and Israel shall surely be led away captive out of his land.” Amaziah accused him of conspiracy and drove Amos away to Judah. Following this decree of expulsion, Amos repeated his prophecy against Israel, and declared the dire fate in store for Amaziah. Apparently the impetus for this conflict between the prophet and the priest came from the prophetic

activity of Amos in the northern kingdom which was directed against the worship in the temples of the state, in general, and against that of the temple of Beth-El, in particular (Amos 3:14; 4:4; 5:5–6; 9:1).

AMAZYAH (Heb. אֲמָזְיָה), moshav shittufi in southern Israel, in the Adoraim Region of the southern Judean foothills, affiliated with the Herut movement. Amazyah was founded in 1955 as a border outpost and settled by Israeli-born, South African, and other settlers. Its economy was based on vineyards, deciduous fruit, grain, beef cattle, and poultry. In 2002 its population was 128. The name refers to Amaziah, king of Judah, who asserted his sovereignty over the area.

[Efraim Orni]

AMBERG, city in Bavaria, Germany. Jews had settled in Amberg before 1294, when mention is made in a municipal document of their privileges. Thirteen members of the community were killed in 1298 in the *Rindfleisch massacres; a few escaped. In 1347 six families received permission to reside in Amberg. Sussman, the *Hochmeister* (rabbi) of Regensburg, was permitted to open a yeshivah in Amberg in 1364. In 1403 the community was expelled, and a church was erected on the site of the synagogue. The community was not reestablished until after 1872. The number of Jews increased from a single Jewish resident in 1810 to 101 (0.5% of the total population) in 1900; 64 remained by 1933, and only 31 by 1939. On November 10, 1938, the furnishings of the synagogue, Jewish shops, and homes were demolished by the Nazis. Twelve Jews remained in 1942, of which ten were deported to Piaski and Theresienstadt. A few Jews returned after the Holocaust. The reorganized Jewish community numbered 67 in 1965. As a result of the immigration of Jews from the Former Soviet Union, the number of community members rose from 74 in 1989 to 275 in 2003.

AMBRON (Heb. עֲמֵרוֹן), **SHABBETAI ISAAC** (17th–18th centuries), Italian scholar who lived in Rome; member of a distinguished Roman family, whose ancestors left Spain after the expulsion of 1492. About 1710 Ambron composed his *Pancosmosophia*, a treatise on the universe, written in Latin. In this, in opposition to the astronomical and cosmological opinions of Ptolemy, Copernicus, and Galileo, but in accordance with

beliefs current among Jewish mystics and kabbalists, Ambron maintained that the earth was semi-elliptical and the firmament solid; the hidden side of the world included paradise with its bliss and hell with its torments. The Inquisition in Rome and Venice opposed the publication of the treatise as harmful to Christian beliefs. The work with many engravings was sent to Leipzig to be published, but was lost. Another work by Ambron, containing corrections to the *Bibliotheca Magna Rabbinica* of Giulio *Bartolucci, also disappeared. Ambron was a member of the council (*congrega*) of the Roman community. EZEKIEL AMBRON, banker and literary patron, was active in Roman Jewish affairs in the middle of the 18th century and friendly with Pope Clement XIV, on whose death in 1775 he hurriedly left Rome for Florence. He was perhaps the father of SABBATO ISAAC AMBRON, who wrote in Italian an interesting account of his pilgrimage to Erez Israel (Montefiore Ms. 520, etc.).

[Attilio Milano]

°**AMBROSE** (339–397), church father, bishop of Milan from 374; canonized by the Catholic Church. Nothing in Ambrose's works points to his having had personal relations with Jews, and he seems to have avoided any such contact. One of the reproaches he directed against the anti-Pope Ursinus was that he had had dealings with Jews (Epist. 11:3). Ambrose took up his most violent anti-Jewish position in connection with an incident in Callinicum (Ar-Rakka) on the Euphrates; on August 1, 388 the Christians of that city, at the instigation of their bishop, had pillaged and burned the synagogue. The emperor *Theodosius I thereupon ordered the perpetrators to be punished, and the stolen objects restored, instructing the bishop to pay for rebuilding the synagogue. Ambrose addressed a long letter (Epist. 40) to the emperor to persuade him to withdraw these instructions, asserting that to have the synagogue rebuilt with public or Christian funds would be tantamount to permitting the enemies of Christ to triumph over Christians. The arguments he mustered are that the destruction of the synagogue was a meager vengeance for the many churches or basilicas destroyed by the Jews in the reign of *Julian the Apostate, when objects had also been stolen and never restored. Moreover, Ambrose asks, what precious things could there have been in the synagogue of a remote garrison city? Ambrose declared that the bishop must not be faced with the painful alternative of disobeying the emperor or Christ. There was no necessity to search so far for the guilty since Ambrose would gladly offer himself as a substitute for the bishop of Callinicum. If it were asked why Ambrose did not then set fire to the synagogue in Milan, the answer was that God had spared him that task, as it had been struck by lightning. Despite these assertions, Ambrose did not question the legal right of synagogues to exist, as months before he had not protested when Emperor *Maximus had ordered the rebuilding of a synagogue destroyed

by the people of Rome. Theodosius later revised his instructions and directed that the Callinicum synagogue was not to be rebuilt at the expense of the bishop but out of the state or municipal funds, although still demanding that the stolen objects were to be returned and the guilty punished. Sometime later, however, when Ambrose celebrated mass in Milan in the presence of Theodosius he extorted a promise from the emperor, under a thinly veiled threat of excommunication, to suspend further prosecutions in the Callinicum affair (Epist. 41). Several of Ambrose's other missives, dated probably 378, contain anti-Jewish polemics. They include an attack on circumcision because the injunction had been abolished by the death of Jesus (Epist. 72); a disquisition on Old Testament law, to be understood not literally but spiritually (Epist. 73 and 74); and juridical argument to refute the claim of the Jews to be the heirs of the Covenant (Epist. 75). The *Apologia David altera*, a polemic directed against paganism and heresy, which has been attributed to Ambrose, also contains an anti-Jewish section (4). Heretics (mainly Arians) are frequently charged by Ambrose with being Jewish in outlook and manners (*De fide*, 2, 15, 130; 5, 9, 116; *De incarn.*, 2, 9). Ambrose cannot be said to have had any real influence on church policy toward the Jews. His intervention in the Callinicum affair exemplifies the fierce hatred felt by the church against the Jews in the fourth century, but it had little effect on imperial policy.

[Bernhard Blumenkranz]

AMEIMAR (c. 400 C.E.), Babylonian *amora*. Although he acted in a judicial capacity, and also gave halakhic decisions at Maḥoza (Shab. 95a; RH 31b), he was a Nehardean and one of that city's leading sages (BB 31b; et al.). He was also the head of the newly reactivated yeshivah in Maḥoza. On the Sabbath preceding a festival, he came to his seat on the shoulders of his students (Bezah 25b). In Nehardea he also served as a *dayyan*, and instituted certain regulations (Suk. 55a; et al.). It is not clear who his teachers were, but he transmitted statements in the name of Rava (Kid. 10a), and quoted the views of R. Zevid and R. Dimi, sages of Nehardea (*ibid.*, 72b; Hul. 51b), and of the elders of Pumbedita (Er. 79b). Among those who attended his yeshivah were Mar Zutra, later head of the yeshivah of Pumbedita, and R. Ashi, the editor of the Babylonian Talmud (Ber. 44b, 50b; Men. 37b; Bezah 22a; et al.) The exilarch, R. Huna b. Nathan, was his close friend and quoted *halakhot* he had heard from Ameimar (Zev. 19a; Kid. 72b; Git. 19b). Most of the statements cited in his name deal with halakhic subjects. Of his aggadic interpretations the following are examples: "A sage is superior to a prophet" (BB 12a), and "As a rule a heathen behaves lawlessly," applying to them the statement in Psalms 144:11, "Whose mouth speaketh falsehood, and

their right hand is a right hand of lying" (BB 45a). Ameimar's son, Mar, was a pupil of R. Ashi (Suk. 32b).

AMELANDER (also **Amlander**), **MENAHEM MANN BEN SOLOMON HA-LEVI** (1698–1767?), Hebrew grammarian, publisher, translator, and historian. He was born in Amsterdam, went to a yeshivah in Prague, and was a student of Moses *Frankfurter, a *dayyan* and publisher in Amsterdam, whose *Mikra'ot Gedolot* edition of the Bible (1724–27) he proofread. In conjunction with his brother-in-law, Eliezer Zussman Rodelsheim, he published a Yiddish translation of the Bible, together with the Hebrew text and a Bible commentary in Yiddish entitled *Maggishei Minḥah* (Amsterdam, 1725–29). He also edited the *Midrash Tanḥuma* (*ibid.*, 1733), together with a commentary consisting mainly of lexicographical glosses, and he published a Bible edition with his own notes, other commentaries, and appended to it *Sefer ha-Ḥinnukh* (*ibid.*, 1767). His commentary *Lada'at Ḥokhmah* was appended to Elijah de Vidas' *Reshit Ḥokhmah* (*ibid.*, 1737). Amelander's most important work, *She'ërit Yisrael*, is an addition to the Yiddish translation of **Josippon*. It is written in Yiddish and continues the historical account of the latter with a short history of the Jews from the destruction of the Second Temple to the year 1743. In its first edition (*ibid.*, 1743) the Yiddish translation of *Josippon* is called *Keter Kehunnah* and *She'ërit Yisrael* is also entitled *Keter Malkhut*. A third volume, a Yiddish edition of *Tam ve-Yasar*, was planned as *Keter Torah*. Amelander used both Jewish and Christian sources to present a world history of Jewry, interwoven with broader political developments. It was meant for the broader Ashkenazi public and therefore written in Yiddish. *She'ërit Yisrael* was very successful and ran into at least 12 editions in Yiddish, 16 in Hebrew (the first in Lemberg, 1804), and one in Dutch (1855). Often the editions were updated to the date of republication. For example, the 1771 Amsterdam edition brings the history up to the year 1770; the publisher Kosman ben Josef Baruch wrote the addition here. Several subsequent chronicles were written to continue Amelander's *magnum opus*. The Amsterdam successors also wrote in Yiddish: Avraham Haim Braatbard on Dutch and Jewish history in the period 1740–52 and Zalman ben Moses Prinz on the impact of the Patriotic coup d'état in the Amsterdam Jewish quarter (1784–88). The Bohemian Abraham Trebitsch from Nikolsburg dealt in his Hebrew *Korot ha-Ittim* with the history of the Habsburg Empire from 1740 until 1801; while a second unpublished volume covered the period until 1833. The chronicle *Lezikorn* (1795–1812) by Bendit ben Ayzek Wing was the last outburst of Yiddish historiography in the Netherlands.

[Ignacy Yizhak Schiper / Bart Wallet (2nd ed.)]

AMEN (Heb. אָמֵן; "it is true," "so be it," "may it become true"), word or formula used as confirmation, endorsement, or expression of hope and wish on hearing a blessing, prayer, curse, or oath. Originally an adjective ("true"; but see Isa. 65:16 for its use as a noun), it became an indeclinable interjection. As such it is found 30 times in the masoretic text of the Bible and an additional three times in the Septuagint (see Tob. 8:8 and 1 QS 1:20, 2:10, 18). It usually stands alone, but is followed by a more explicit prayer formula in 1 Kings 1:36 and Jeremiah 28:6. In the service of the Second Temple, "Amen" was the response to the songs chanted by the levites (Ps. 41:14; 72:19; 89:53; 106:48; Neh. 8:6; 1 Chron. 16:36; cf. however Tosef. Ber. 7:22). In the synagogue liturgy, "Amen" was the response to all prayers and blessings. In the vast synagogue of Alexandria the *hazzan* signaled with a flag from the central reading platform to the congregation when to respond "Amen" after blessings (Suk. 51b). It may be assumed that in Temple and talmudic times responding "Amen" was the main form of participation in the service, not only because congregations were unfamiliar with the prayer texts (cf. RH 34b) but because public worship mainly took the form that one spoke and the rest responded. The saying of "Amen" is equivalent to reciting the blessing itself, and such religious value has been attached to it, that it has been said to be superior to the benediction that occasioned the response (Ber. 53b; Maim., Yad, Berakhot 1:11). A person should not usually respond with "Amen" to a blessing he himself has recited, the only exception now being the third blessing of the Grace after Meals (Ber. 45a and Tos.). This prohibition may be a reaction to the Christian custom to conclude every prayer with "Amen." The early church borrowed the use of "Amen" together with most of the liturgy, and it is found in the New Testament 119 times, of which 52 are uses different from the Hebrew. In Islam, "Amen" is the response after reciting the first *sura* (*Surat al-Fatiḥa*) of the Koran.

"Amen" is used as a response to blessings recited both privately and in the synagogue liturgy. The congregation also responds "Amen" after each of the three verses of the Priestly Blessing (Sot. 7:3, 39b). In some rites the response after each verse is *Ken yehi raẓon* ("Let this be [His] will"; cf. Sh. Ar., oḥ 127:2). After each paragraph of the *Kaddish* and after a number of other prayers, such as the *Mi she-Berakh* formulas in the Sabbath morning service, the reader invites the congregation to respond "Amen" by saying *ve-imru Amen*, or *ve-nomar Amen* ("and say Amen" or "let us say Amen"). Numerous rules are given concerning how "Amen" should be recited, e.g., with a strong, clear voice but not too loud; not too quick and not too slow. It describes various types of "Amen," such as "snatched," "mumbled," and "orphaned" (Ber. 47a). Other problems discussed in the Talmud are whether to respond to the blessing of a Samaritan or of a non-Jew (Ber. 8:7; Ber. 51b; TJ Ber. 8:1, 12d). The *aggadah* stresses the great religious value of responding "Amen": it prolongs life (Ber. 47a); the gates of Paradise will be opened to him who responds with all his might (Shab. 119b); his sins will be forgiven, any evil decree passed on him by God will be canceled (*ibid.*); and he will be spared from

Hell (Pseudo SEZ 20, ed. Friedmann (1904), 33:1; Yal. Isa. 429). The Talmud (Shab. 119b; Sanh. 111a) also offers a homiletical etymology of “Amen” by explaining it as made up of the initial letters of *El Melekh Ne’eman* (“God, faithful King”), a phrase by which the reading of the *Shema* is preceded when recited other than in congregational worship. However, in the older prayer orders (Amram, Saadiah, Vitry) the original “Amen” appears before the *Shema*. Even God Himself “nods” “Amen” to the blessing given to him by mortal man (Ber. 7a and Rashi). According to legend, two angels accompany each Jew on Friday evening to his home, where they either bless him for his receiving the Sabbath properly or curse him for neglecting it, and they confirm their curse or blessing with “Amen” (Shab. 119b). Any good wish offered should be answered by *Amen, ken yehi razon*, as can be inferred from an incident going back to Second Temple times (Ket. 66b).

In Music

According to the Talmud (Ber. 47a; TJ Ber. 8:10), the “Amen” should be drawn out in pronunciation, an act which is said to prolong life (repeated in the Zohar, *Shelah Lekha*, 162a). Since Eastern chant does not use extended single notes, this very old precept furnished a challenge to elaborate the “Amen” response with ornament and coloratura. The free evolution of an “Amen”-melisma is found in Christian chant as early as the Oxyrhynchos hymn (late third century), in some settings of the *Gloria* and the *Credo* in the Roman mass, and later in figural church music. As to Jewish chant, the *Gemara* already limited the length of the “Amen” pronunciation; therefore, prolonged melodies are restricted to the “Amen” after the Blessing of the Priests (Example 1) and to the solo-part of the precentor (Example 2). In 1696, Judah Leib Zelichover (*Shirei*

AMEN

a. Yemen

Ex. 2 Amen – Vocalises of the Precentor

Morocco

Yehudah, fol. 13b) disapproved of the excessive lengthening of “Amen”-melodies by some of his fellow singers. The “Amen” of the congregation in general remains a simple repetition, a conclusion or short continuation of the precentor’s melody. “Amen”-motives characteristic of a certain feast were derived from its specific musical modes and prayer tunes. In the 19th century synagogue, S. *Sulzer, Hirsch Weintraub, and others attempted an imitation of figural “Amen” composition, but without success.

AMENITIES, COMMUNAL. From the beginnings of Jewish communal organization, the Jewish *community “held nothing human to be beyond its ken.” Its corporative character and national and social cohesion led to the inclusion of social services, socio-religious amenities, and even socialite institutions and mores, within the sphere of communal activity. Total care had to be taken of the community, especially of the less fortunate members.

To conform to dietary requirements, the community had to provide a *shohet* to slaughter animals according to halakhic regulations. It also sometimes provided the means for cooking meat, having a cauldron at the disposal of members for wedding celebrations. Many congregations, particularly in Germany, owned a communal bakehouse, or oven, annually used for baking *mazzot* or for keeping the Sabbath meal of *cholent* warm on Fridays. Wealthy members sometimes paid to use the oven, while the poor could do so without charge. Occasionally baking took place in a building, or bakers’ guildhall. Many French and German communities had a large communal hall above the bakehouse or nearby, which probably served both as a hostel and a dancing hall, or **Tanzhaus*. The *Tanzhaus* (as it was known in Germany) was probably identical with the *bet ha-hatunot* or marriage-hall.

Direct assistance to the poor (see *Pletten; *Charity), also a long-established tradition of the Jewish community, gave rise to several institutions which may be classified as amenities. The daily distribution of food, the *tamhui*, soup kitchen, applied not only to contributions of food, such as bread or fruits, but later also to occasional relief, as distinguished from the regular relief afforded by the *kuppah*. The community usually took care of ritual requirements, in particular if these were expensive; it supplied at least one *etrog* (“citron”) for general use during the festival of Tabernacles. Israel *Isserlein relates that three tiny settlements in 15th-century Germany, unable to afford an *etrog* each, shared one for the celebration of the festival. In Spain similarly a communal *seder* for the poor was held in the synagogue on Passover. Among other civic du-

ties, sanitary control sometimes had to be undertaken by the community. The communities of Rome, Frankfurt, Cracow, Posen, and other large centers retained paid or honorary officials (*memunnim*) in charge of public safety and sanitation. The budget for sanitation was generally provided by special dues, such as the garbage tax and chimney tax, levied on every member of the community. The communal minutes often mention the problem of garbage collection, the streets of the more affluent residents usually receiving greater attention. The other main concern of the sanitary officials was to keep the water sources and conduits clean and flowing. The community also made provision for a water supply. When necessary a well was dug within the synagogue enclosure, probably to provide the water for the communal baths. These included the *mikveh* ("ritual bath"), usually part of the regular Jewish bathhouse which many communities also had to provide since Jews were often forbidden to bathe in the waters used by Christians. The inventory of property confiscated from the synagogue of Heidelberg in 1391 mentions a "vaulted chamber" which stood near the synagogue and served as the "Jews' bath" (*balneum judeorum*). The Jews of Augsburg also had a segregated public bath. No congregation was without a *mikveh*.

Besides the *mohel* to perform circumcision, some communities retained physicians, surgeons, and midwives, not only to serve in communal hospitals, where these existed, but also to supervise certain general health services (see *Sick Care). The Spanish congregation in London, for instance, appointed as early as 1665 "a Physician of the Hebra who shall be obliged to attend the sick as soon as he shall have been informed... that visiting him he shall prescribe what is needful." The physician or physicians received an annual salary from the community, supplemented by the fees they were allowed to take (according to their contracts) from wealthier members. The deeds of contract and communal regulations repeatedly stress the physician's duty to visit the needy sick, either in a special "house for the sick" (sometimes called **hekdesch*), or at home. The *hekdesch*, also used as a shelter where poor itinerant Jews could stay for a limited number of days, in modern times developed into a regular Jewish hospital, first in Western and Central Europe, and later in other communities.

Later, the community also undertook new and more specialized duties for the benefit of its members. Some followed the example of the Salonika *talmud torah*, which established a circulating library. After introduction of the postal system, Jewish letter carriers in Frankfurt and Hamburg distributed, for a small fee, the mail handled by the Thurn-Taxis Company. With Jewish integration into the larger society, the tendency to retain the communal amenities conflicted with the inclination to leave such functions to the municipality or specific institutions. The change in the attitude of Jews toward this service is linked with the evolution of Jewish society in modern times.

In Muslim Lands

The amenities provided in Muslim countries in the Near East, and in Spain during Muslim rule there, were determined by

the form in which the society was organized. Social organization was based on family bonds or common origin; a community consisted of several *kehalim* ("congregations") and it was these that provided most of the amenities for their members. Sometimes even communities that were comparatively small consisted of several *kehalim*, each functioning as an enlarged family. The synagogue not only served as a house of prayer but also as the organizational center of the *kahal*. Rabbinical authorities living in Salonika in the 16th century ruled that "a synagogue is an institution which has officers, a burial society, and persons charged with the collection of taxes and charity for the daily needs and for the synagogue itself" (Adarbi, *Divrei Rivot*, para. 59). "Each *kahal* is a city unto itself" (Samuel de Medina, *חַמ*, para. 398). Every *kahal* was responsible for providing all the requirements of its members, schools for the children, a teacher for the adults, a rabbinical judge, aid for the needy and the poor, the ransoming of prisoners, the burial of the dead, etc. Samuel de Medina (*ibid.*) points out that a person who was not a member of a *kahal* was not, in fact, included in the local Jewish community and had no institution to appeal to for his needs. The custom observed in the early period of Muslim Spain, of setting up a single *sukkah* in the synagogue and thereby absolving the individual Jew from building his own *sukkah* in his home, a practice which does not have the sanction of rabbinical authorities (*Sha'arei Simḥah*, 1, 88–89), may have its origin in the feeling of unity prevailing among the members of each congregation.

It should be pointed out, however, that in matters of common concern to the entire local community, it was the most respected rabbi who represented the community as a whole before the authorities; this applied, for example (cf. responsa David b. Zimra, 1, para. 74) to the institution of an *eruv* (to enable Jews to carry objects inside the city on the Sabbath), for which permission of the local authorities had to be sought.

[Emmanuel Beer]

°AMENOPHIS III (Nebmare Amunhotpe; c. 1405–1367 B.C.E.), Egyptian pharaoh. When Amenophis III assumed the throne just after the middle of the 18th dynasty (c. 1575–1308 B.C.E.), the Egyptian Empire was approaching its zenith. The wars of his predecessors had placed Canaan and the Lebanon under nominal Egyptian control and had brought Egypt deep into southern Syria. Wealth and tribute flowed into Thebes, the Egyptian capital, from every quarter of the ancient Near East, as a result of which Egypt enjoyed an almost unparalleled period of opulence and luxury. There are no records of wars waged by Amenophis III, except for occasional border skirmishes in the south (in Nubia) at the outset of his reign. Instead, the Egyptian records concern themselves with his building accomplishments, his achievements as a sportsman and hunter, and his gifts to the temples. For

his political accomplishments outside Egypt one must turn to the information provided in the *El-Amarna letters. These texts, which formed part of the archives of the Egyptian “foreign office,” clearly establish that Egypt had become one of the great powers of the ancient world. They show that Amenophis pursued a dual foreign policy in Asia. He avoided warfare with the major leading powers – Hatti, Babylon, Mitanni, Assyria, and Cyprus – and entered into trade agreements and alliances, which he frequently cemented with diplomatic marriages. His policy toward his vassal-states in Asia was to leave them virtually autonomous, while playing them off against one another. The policy succeeded for Amenophis, but with the dangerous result that Egyptian prestige lessened and the local Asiatic princes began to turn toward the newly resurgent Hittite Empire. In the sphere of religion, Amenophis III continued to honor Amun-Re and the other traditional deities of Egypt but, simultaneously, brought the disk of the sun, the Aton, into prominence as his personal god. The cult of the Aton, which first appeared in the reign of his predecessor, Thutmose IV, was to play a violent and chaotic role in the reign of his son and successor, *Akhenaton.

The theory that there was a co-regency of Amenophis III with his son Akhenaton has been generally abandoned.

[Alan Richard Schulman]

AMERICA. Although recent research has corrected earlier exaggerated statements regarding the number of persons of Jewish birth or ancestry who accompanied Christopher *Columbus on his first voyage of discovery, it is known that the interpreter, Luis de *Torres, the first European to set foot on American soil, was a former Jew who had been baptized the day before the expedition set sail. The *Marranos of Spain and Portugal were quick to realize the potentialities of the new land and to transfer themselves there; some are even known to have accompanied Spanish adventurer Fernando Cortes and his conquistadores in the invasion of *Mexico.

Marranos and the *Inquisition in the New World

Religious intolerance soon manifested itself in the new land. Two Marranos who had served with Cortes were burned as heretics in Mexico as early as 1528. An inquisitional tribunal was set up there in 1571, to be followed before long by others in various provinces of Spanish South America and in the Philippines. In Brazil under Portuguese rule there was no independent tribunal, but the Lisbon Inquisition maintained perpetual vigilance. From the close of the 16th century, Portuguese New Christians of Jewish stock in relatively considerable numbers began to settle throughout Central and South America, attracted not only by the opportunities for economic

advancement, but also by the possibility of escape from suspicion in a land where their antecedents were not generally known. Although voluntary emigration from Portugal was often forbidden, deportation to Brazil was one of the penalties imposed by the Portuguese inquisitional tribunals.

Before long, the Marranos of the New World were in an affluent position, and it was alleged that they controlled the import and export trade with Europe. They maintained a loose secret religious organization among themselves, and were in touch with their coreligionists, both concealed and openly, in Europe. It is noteworthy that their religious observance seems to have been somewhat closer to the norms of traditional Judaism than was the case among the Marranos of the Iberian Peninsula. From time to time, however, the Inquisition was stirred to violent action against them, and *autos-da-fé of an intensity similar to those in Spain and Portugal were carried out. In 1634 there began a series of interconnected inquisitional onslaughts on the Marranos throughout Spanish South America, which continued for some years and from which the crypto-Jewish communities never fully recovered. During the Dutch attempt to conquer *Brazil from the Portuguese in the 17th century, many local Marranos openly declared themselves Jews and, in addition, a considerable number of Jews emigrated there from Amsterdam.

Hence, from 1631 to 1654 there was an open, well-organized Jewish community with its ancillary institutions in the capital of Dutch Brazil, Recife, Pernambuco, as well as in a couple of minor centers elsewhere. With the Portuguese reconquest in 1654 these communities broke up, and the refugees were scattered throughout the New World, forming open communities where it was possible. This was in effect the origin of the Jewish communities in the Caribbean area in *Suriname and Curaçao under Dutch rule, in *Barbados, and a little later in *Jamaica under the English. For the next three centuries this nexus of Sephardi communities, wealthy out of proportion to their numbers, played an important role in the Jewish world.

First Settlements in North America

One small band of refugees from Brazil in 1654 sought a home in New Amsterdam (later *New York), then under Dutch rule; after some difficulty, they were allowed to remain. At about the same time, probably, the first Jewish settlers reached *Newport, Rhode Island, and those years saw also the sporadic appearance of individual Jews in various other places throughout the English settlements in North America. The great majority of the earliest settlers were Sephardim of Marrano stock, but they were before long joined by Ashkenazim, arriving mainly from Amsterdam or London. By the second half of the 18th century there were half a dozen organized Jewish communities following the Sephardi rite in the British possessions on the North American mainland, including one in *Montreal, Canada.

In this new land, where the Old World prejudices had waned, they enjoyed a degree of social freedom and eman-

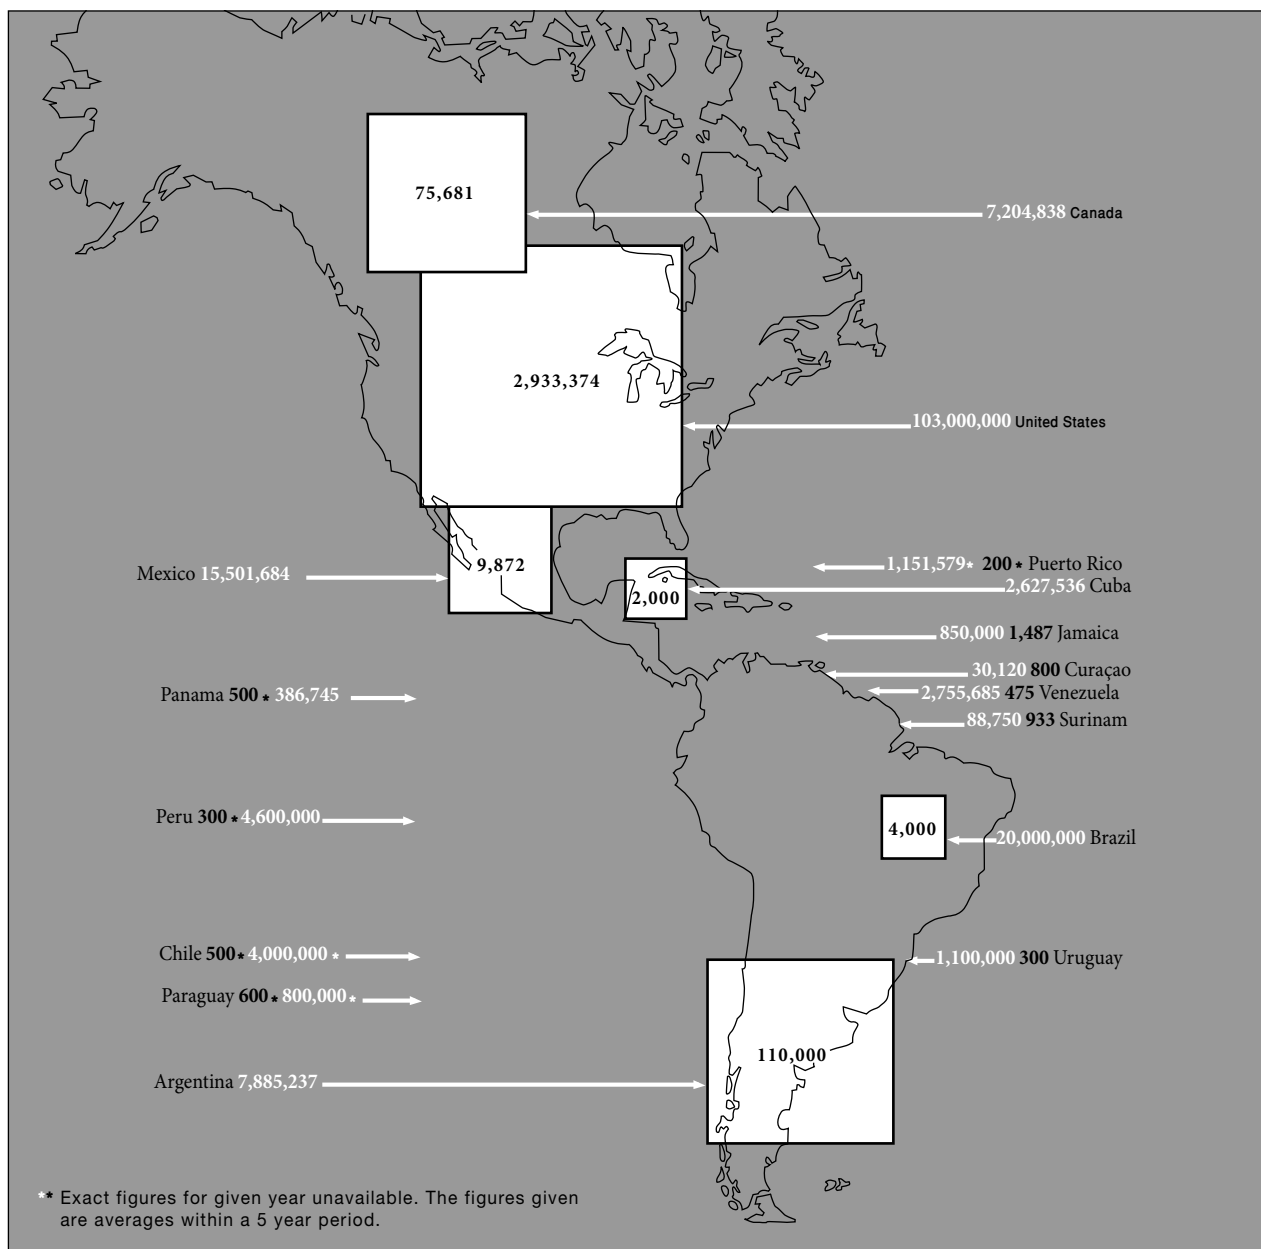

Jewish population of the Americas, 1900. Black numerals: Jewish population. White numerals: Total population.

cipation greater than that in the mother country. America was uniquely tolerant of Jews among western nations in the colonial era and thereafter because the new land needed settlers and, therefore, accepted people of diverse sectarian and regional origins. The need for newcomers created a national impulse toward multi-culturalism.

Another reason for favorable reception of Jews was that America was settled after the passing of the Middle Ages and at the conclusion of the Wars of the Reformation and Counter-Reformation. Hence religious and other conditions which fostered victimization of Jews were absent or much weaker in North America. Consequently, at the time of the American

War of Independence, the 2,000 Jews then resident in the 13 colonies were permitted to collaborate freely with their neighbors both in the civil and the military sphere in an unprecedented manner. The Virginia Bill for Establishing Religious Freedom of 1785 was the earliest law in history to grant full equality to all citizens regardless of religion, the Constitution of the *United States, ratified in 1789, stipulated that no religious test should be required as qualification for any federal office, and the first Amendment to the Bill of Rights, adopted in 1791, prohibited a national religious establishment or any other interference with liberty of conscience. Thus, on American soil, except in certain states, which temporarily

Population figures for 1914. Black numerals: Jewish population. White numerals: Total population.

retained test oaths or funding for Christian denominations, Jewish emancipation was formally established for the first time in history.

In the period after the Revolution Jewish immigration continued on a relatively small scale, and a few more communities were established; the first Ashkenazi congregation was founded in Philadelphia in 1795.

Expansion of United States Jewry in the 19th Century

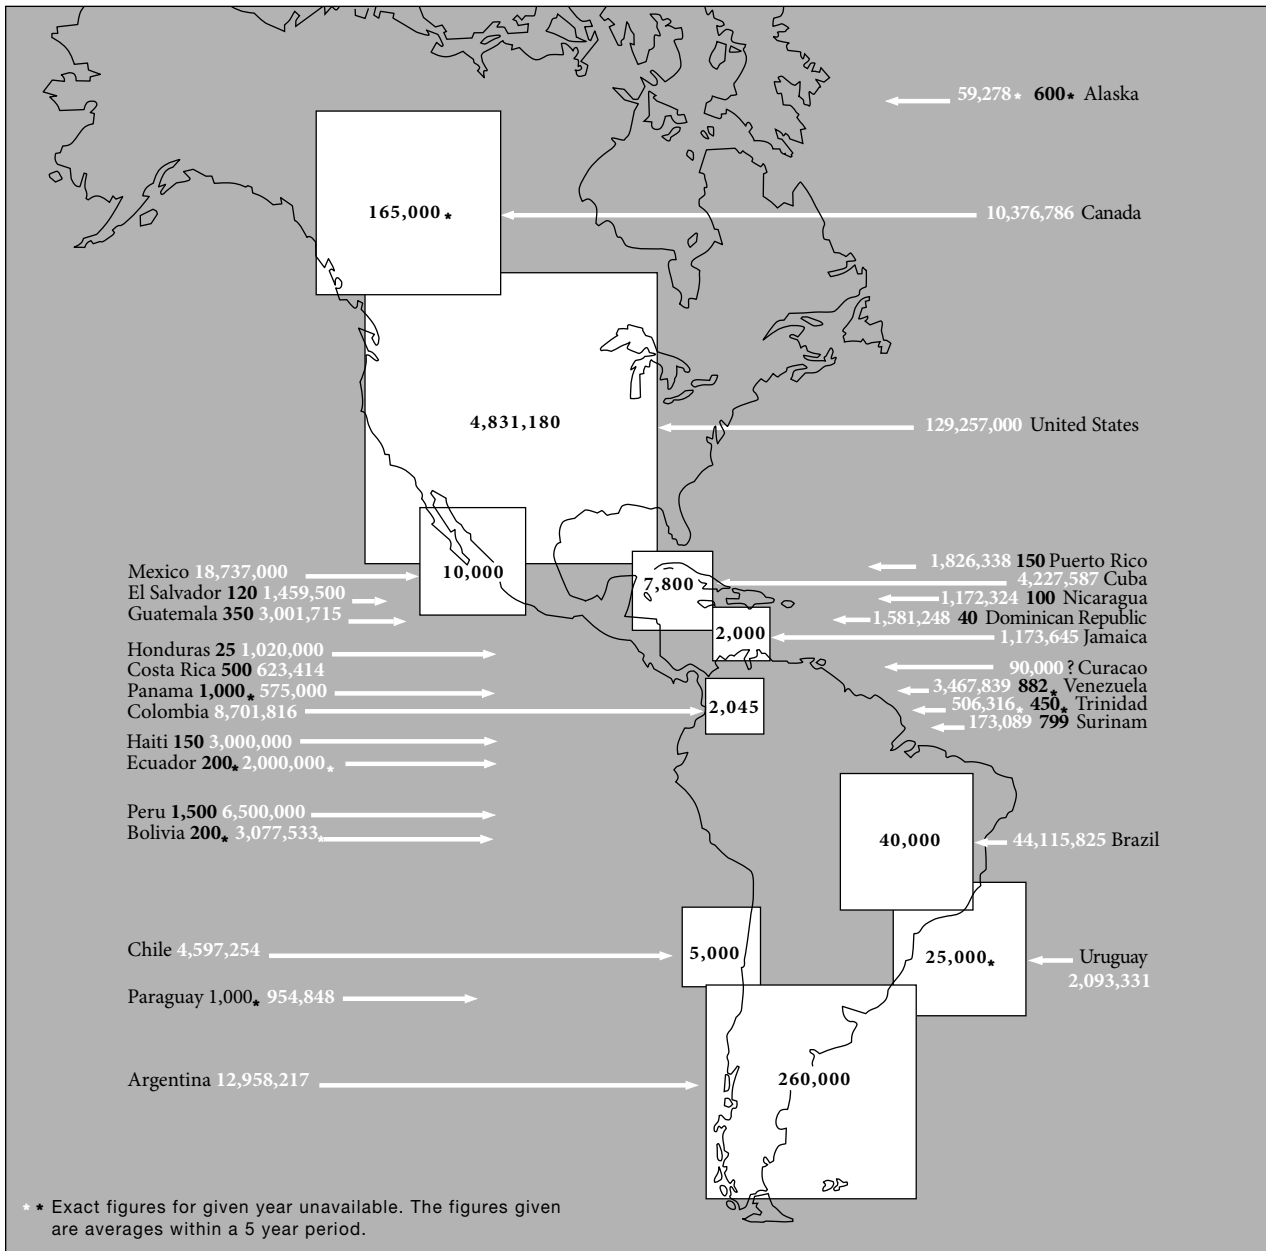

In the second quarter of the 19th century German Jews, escaping discrimination at home and attracted by the economic opportunities that beckoned ahead, began to immigrate. Mainly

merchants and itinerant traders, they spread quickly from the coast inland, founding new communities and synagogues in every new urban center, and playing an important part in opening up the Middle West. The Gold Rush of 1849 brought them to *California and the Pacific. In the new land they felt free from the trammels of tradition, and Reform Judaism became dominant largely through the influence of Isaac Mayer *Wise of Cincinnati, one of the great creative and organizing forces in American Jewish life. In 1843 the Independent Order *B'nai B'rith was founded as a fraternal organization and expanded steadily. By the time of the Civil War there were about 150,000 Jews in the United States and many of these fought

with their fellow citizens in both the Federal and Confederate forces. The economic expansion in the North during the war, which occurred particularly in those branches of trade and manufacture in which Jews were active, brought them increased prosperity. Since colonial times Jews had achieved acceptance in prestigious social and charitable organizations, were active in important businesses and activities, won renown in the legal and medical professions, and held public office. Nevertheless, especially with the coming of the Civil War Jews were subject to discriminatory behavior and other forms of aversion. For more than a century after the late 1850s they were excluded from neighborhoods, hotels,

country and social clubs, and had stringent quotas imposed upon them in schools, business corporations, and the professions.

Eastern European Jewish immigrants also became relatively numerous and set up their own religious and social organizations. But the intensification of persecution in Russia in the 1880s, coupled with the economic opportunities in America, resulted in a migration on an enormous scale, which within a few years completely changed the face of Jewish life in the United States. The rapid expansion of the needle industries, with which the Jews had long been associated, especially contributed to the radical changes. Between 1881 and 1929

Population figures for 1937. Black numerals: Jewish population. White numerals: Total population.

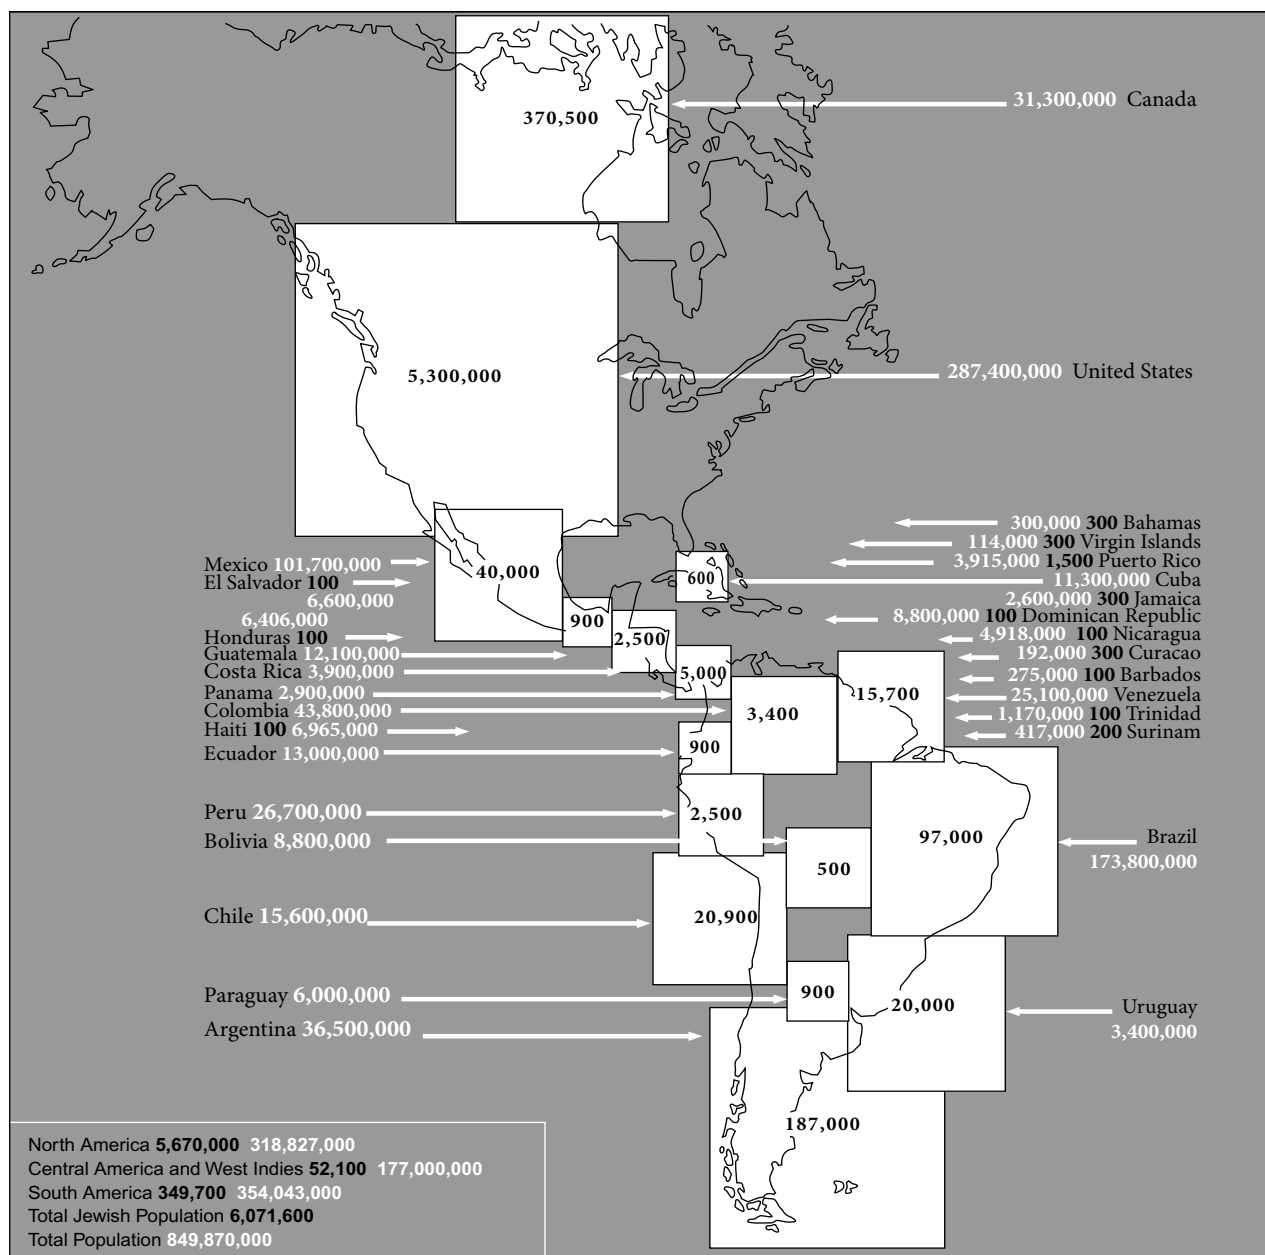

over 2,300,000 Jews from Eastern Europe landed in American ports. At the same time the Sephardim of the Mediterranean area also founded a number of new Sephardi communities throughout the country. By the middle of the 20th century the Jewish population of the United States alone, excluding other American countries, exceeded 5,000,000. Well before, New York, with more than 2,000,000 Jews, had become by far the greatest urban Jewish center that the world had ever known. (See Map: Jewish Population, America).

composition of the United States Jewry: it stemmed the once triumphant advance of Reform Judaism, strengthened Orthodoxy as well as the new *Conservative Judaism, temporarily expanded Yiddish culture and journalism, and provided mass support for the Zionist movement. Also as a result of this mass immigration, the role of United States Jewry in world Jewish affairs became significant.

North and South American Jewry in the 20th Century

This large immigration changed the outlook as well as the

The full strength of American Jewry was manifested for the first time during World War I, when the *American Jewish Joint Distribution Committee took the lead in relief work in Eastern Europe, when American support for Zionism contributed toward securing the *Balfour Declaration, and when

Population figures for 2003. Black numerals: Jewish population. White numerals: Total population.

American Jewish organizations made their voice heard at the Paris Peace Conference.

After World War I Jewish immigration to the United States was stemmed by legislation to some extent, but settlement in other parts of the continent continued by persons seeking new homes. Canada, whose community had developed simultaneously with that in the United States, though on a far smaller scale, found its Jewish population considerably strengthened. Latin America had previously attracted relatively few settlers, despite the fact that religious exclusiveness had ended with the collapse of Spanish rule, and notwithstanding Baron de Hirsch's munificently endowed attempts to establish Jewish agricultural colonies in Argentina. After World War I, however, there was a considerable expansion in that area. The prosperity of its Jewish settlement and the similarity of language proved a powerful attraction, also, to Sephardim from the Mediterranean area who were then being faced with increasing difficulties at home. The Nazi persecution in Germany naturally gave great impetus to immigration to South America, where fewer obstacles were encountered than in almost any other part of the world; this continued during and after the war period. Whereas before 1914 the total number of Jews throughout Latin America did not exceed 50,000, of whom more than one half lived in the Argentine, by 1939 the number exceeded 500,000 and by the second half of the century, 750,000.

World War II made a very considerable difference in the position of American Jewry, due more perhaps to the change in the world's circumstances than to developments within Jewry. By then well-established, the 5,000,000 Jews of the United States played their part on the field of battle and elsewhere to a greater extent than ever before in history. In fact, on a per capita basis, until World War II Jews had served in the armed forces in every war in excess of their percentage of the national population and in 1941-45 served in proportion to their share in the population. Being affluent, they alone were able to shoulder the main burden of relief both during the war and in the years of reconstruction, so that the partial rehabilitation of the Jewish communities in many countries of the Old World would have been impossible without them. Being influential, they were largely responsible for swaying public opinion and the United Nations in favor of the establishment of the State of Israel, which they supported decisively, in the critical period and after. But by this point, the relative position of American Jewry in the Jewish world had changed beyond recognition. With the annihilation of most of Central and a great part of Eastern European Jewry and the enforced isolation of the Jews of Russia, the United States Jewish community was left by far the largest Jewish community of the Diaspora. The change of balance was emphasized even further after the war, when restrictions on immigration were to some extent relaxed. The majority of those refugees from the concentration camps and the hopeless conditions in Europe who did not desire to settle in Israel found their new homes beyond the Atlantic, the Canadian Jewish community in particular receiving

a powerful impetus. The number of newcomers was further swelled after 1948 by new immigrants from Egypt, Iraq, and other Arab states, who provided a fresh element in the kaleidoscope of American Jewry. On the other hand, the escape of many Nazi leaders and propagandists to South America led to a recrudescence there, particularly in Argentina, of antisemitism, which in turn was partly responsible for a migratory movement toward Israel, though on a far smaller scale. The changed circumstances in Cuba in the late 1950s and 1960s similarly led to the partial disintegration of the Jewish community in that country. Before World War II approximately twice as many Jews lived in Europe as in America. After World War II nearly twice as many lived in the United States alone than in all of Europe, ten times more than in any other country of the Diaspora, with the exception only of Russian Jewry. The communities of Canada, Argentina, and to a lesser degree Brazil were among the world's greatest. Antisemitism peaked in the United States from the Great Depression to World War II and then declined to its lowest point, as measured in public opinion polls in 1998. According to an ADL public opinion survey it has increased in this country by about 5 percent, less than it has in Europe and other sectors of the world. Whether that makes the future problematic for Jews here and elsewhere is an open question but has certainly escalated anxiety in the American and other Jewish communities. In the new millennia the increase of antisemitism in Europe and Islamic countries has led to a heated debate among historians and writers, sociologists and Jewish organizational officials regarding the extent and scope of antisemitism in the United States. Furthermore, the dramatic increase of the Jewish population of Israel, which was but 10% of the American Jewish population when it was established in 1948, has now reached parity and should surpass the United States shortly.

AMERICA-ISRAEL CULTURAL FOUNDATION, fundraising agency on behalf of educational and cultural institutions in Israel. In 1939 Edward A. Norman founded the American Palestine Fund, Inc., for the purpose of amalgamating committees that were supporting educational, cultural, and social service institutions in Palestine, which until then were competing with each other in the United States. After changing its name a number of times, in 1957 the organization was renamed the America-Israel Cultural Foundation. However, it was popularly known as the "Norman Fund" for many years. Norman was followed as president of the organization by Frederic R. Mann, Samuel Rubin, the violinist Isaac Stern, and William Mazer. In 2005 Vera Stern was president.

In 1956 the Foundation decided to limit itself to artistic and cultural activities. The America-Israel Culture House in New York, opened in 1966, became the Foundation's headquarters. The house contains an Israel art gallery, an Israeli arts and crafts center, and rooms used for cultural programs. In Israel, the Foundation acts through an advisory board.

In addition to giving financial aid to Israel's cultural institutions, the Foundation provides scholarships to over 900 young Israel artists annually through the Sharett Scholarship Program and helps to take orchestras, theater groups, dance ensembles, and art exhibits to the United States from Israel. It took valuable art collections to Israel from America, including the works for the Billy Rose Sculpture Garden at the Israel Museum in Jerusalem. Building funds support the construction of theaters, music academies, concert halls, and cultural centers in agricultural areas.

AMERICAN, SADIE (1862–1944), U.S. organizational leader. American was born and educated in Chicago. In 1893, in conjunction with the World Parliament of Religions, she was asked to organize the National Council of Jewish Women, an organization she served as executive secretary until 1914. In this capacity, she established the NCJW's Department of Immigrant Aid and Ellis Island programs. She went on to help found Jewish women's organizations in England (1899) and Germany (1904) and was instrumental in forming the International Council of Jewish Women (1923). Sadie American was a leader in the suffragist movement and the fight against white slavery, and a pioneer in establishing vocational schools and public playgrounds. An activist member of many civic and philanthropic organizations, including the General Federation of Women's Clubs and the International Council of Women, she was frequently invited to deliver conference papers and consulted to several governments. American was also involved in the Reform movement, teaching Sunday school at Chicago Sinai Congregation and speaking from the pulpit of other congregations. She supported the Sunday Sabbath and the ordination of women. In speeches on behalf of the NCJW, she called on women to extend their domestic responsibilities outside the home to participate in social reform work for the benefit of society. At the same time, she urged women to carry on Jewish traditions, arguing that their roles as mothers uniquely positioned them to combat assimilation.

AMERICAN ACADEMY FOR JEWISH RESEARCH, organization of scholars, rabbis, and interested laymen; formally established in 1920 and incorporated in 1929 under the laws of the State of Maryland. The original officers were Louis Ginzberg, president; Gotthard Deutsch, vice president; Henry Malter, secretary; and Jacob Z. Lauterbach, treasurer.

The Academy's functions include periodic public meetings at which learned papers are read and discussed, joint scholarly ventures, publication of scholarly works, and the establishment of a working relationship with other groups of similar character and aims. An annual meeting is held at the end of each year, at which members and invited guests are

asked to present the results of their particular investigations; most of these reports are published in the yearly *Proceedings* (1930–present). Monograph series produced by the Academy are *Ya'acov b. Ela'zar Kitab al Kamil* (N. Allony), *Affricated Sade in Semitic Languages* (R. Steiner), and *Economics & Toleration in 17th Century Venice* (B. Ravid). The Academy also financed and endowed publications of several critical editions of classical texts, such as *Midrash Leviticus Rabbah*, the tractate *Ta'anit* of the Babylonian Talmud, *Yerushalmi Neziqin* with introduction and commentary by Professor Saul Lieberman (first printing 1983; second printing 1986). Among other works published by the Academy are the *Union Catalog of Hebrew Manuscripts and Their Location* (1973) by Aron Freimann and *Le-Toledot Nusah ha-She'iltot (Textual History of the She'iltot, 1991)* by R. Brody. It has made numerous grants to promising young scholars. The income of the Academy is derived from membership dues, allocations by welfare boards, special contributions, and bequests. The Academy's membership is composed of fellows, who are nominated and elected by their peers, and associate members who are enrolled upon nomination. Most of its affairs are conducted on a volunteer basis. The Academy's presidents from the late 1960s on have been Salo *Baron (1968–71; 1975–81); Louis Finklestein (1971–75); Harry M. Orlinsky (1981–83); Isaac E. Barzilay (1983–89); David Weiss Halivni (1989–92); Arthur Hyman (1992–96); Robert *Chazan (1996–2000); David *Ruderman (2000–04); and Paula E. *Hyman from 2004.

AMERICAN ASSOCIATION FOR JEWISH EDUCATION, organization founded in 1939 to promote the cause of Jewish education by raising the standards of instruction and professional service, to encourage research and experimentation, and to stimulate communal responsibility for local organizations of Jewish educational endeavor. The American Association for Jewish Education stressed the status of Jewish education as a major concern within the entire Jewish community. It introduced, on a national scale, the scientific study of Jewish education, and was instrumental in founding 32 bureaus of Jewish education to coordinate, supervise, and direct local school systems. It pointed to new approaches in the field of pedagogies, including adult education, provided a variety of community services, and fostered lay participation in the Jewish educational endeavor. The Association published the *Pedagogic Reporter* (bi-monthly); *Jewish Education Newsletter* (from 1940, bi-monthly); *Audio-Visual Review* (biannually); and *Jewish Education Register and Directory* (biannually). Lay leaders (presidents) of the organization included Mark Eisner (1939–47), Philip W. Lown (1955–64), and Isadore Breslau (1964–78). Its professional directors included I.S. Chipkin (1944–49), Judah Pilch (1949–60), and Isaac Toubin (from 1960).

In 1981 the American Association for Jewish Education was succeeded by the *Jewish Education Service of North America.

AMERICAN COUNCIL FOR JUDAISM, the only American Jewish organization ever created to fight Zionism and the establishment of a Jewish state. It was founded in 1942 by a group of Reform rabbis led by Louis Wolsey to protest a resolution of the Central Conference of American Rabbis, which supported the establishing of a Jewish Army in Palestine. At its inception the dissidents consisted of 36 rabbis, some of whom sought to revitalize Reform Judaism and some who sought to oppose Zionism. These rabbis were ideological anti-Zionists, and thus from its inception the Council was the most articulate anti-Zionist spokesman among American Jews. Within a year, the leadership was turned over to laymen and the organization, led by Lessing J. Rosenwald, an heir to the Sears Roebuck fortune, and Rabbi Elmer Berger, became a secular anti-Zionist pressure group. The timing of its founding was inauspicious as Jews throughout Europe were being assaulted because they were a “nation” – a race in Nazi terminology; as American Jews were just learning of the existence of Nazi death camps in what became known as the “Final Solution”; and as Zionism, which had been in decline among American Jews, was taking control of the agenda of American Jewry with the *Biltmore Program. The Council sought without success to establish an alliance with the non-Zionist American Jewish Committee, but non-Zionism was rather different from anti-Zionism.

The Council opposed the establishment of Israel and remained critical of what it calls “the Israel-Zionist domination of American Jewish life.” In the formative pre-State years it did accept the Report of the Anglo-American Committee of Inquiry for the immigration of 100,000 Jews to Palestine, but not a Jewish state. It was allied with the American foreign policy establishment, which also opposed the concept of a Jewish state for other reasons. It primarily used the mass communications media to publicize its program. Its first president was Lessing Rosenwald. The executive vice president and chief spokesman was Rabbi Elmer Berger until his ouster in 1968.

With the birth of the State of Israel, the Council sought to limit Israel’s influence on Diaspora Jewry, to promote integration of Jews, and to establish institutions that were resistant to Zionism. Among its activities are a quarterly journal *Issues*, discontinued from November 1969, a religious education program devoid of “Zionist” influence, and a philanthropic fund separate from the standard Jewish philanthropies, which it feels are under Zionist control. By the end of 1955 the Council had established ten schools for Judaism teaching the positions of classical Reform Judaism.

The Council describes its own ideology as follows: “Judaism is a religion of universal values not a nationality... na-

tionality and religion are separate and distinct... Israel is the homeland of its own citizens only, and not of all Jews.” Zionism was a philosophy of despair, without faith in the Enlightenment; it advocated the self-segregation of Jews just when they should be seeking integration. Those who belong to the Council reflect an ideological stance closely akin to some of Reform Judaism’s 19th-century founders. The Council has occupied an isolated position in Jewish life in America and has often been accused of advocating the Arab anti-Israel viewpoint. It claimed 20,000 members. The Six-Day War of 1967 led several of its most prestigious lay supporters to abandon the Council for a more or less active participation in efforts to aid Israel. It was one thing to oppose Israel; it was quite another to stand aside as Jews were under attack. Most of the Reform congregations organized under its influence have since denied identification with its viewpoint. In the words of Thomas Kolsky: “In the end the Council failed ... the organization became neither a focus for the revival of the classical version of Reform Judaism nor an effective force for fighting Zionism and preventing the establishment of a Jewish state.”

[Frank N. Sundheim / Michael Berenbaum (2nd ed.)]

AMERICAN GATHERING OF JEWISH HOLOCAUST SURVIVORS. Immediately after the World Gathering of Jewish Holocaust Survivors in Israel in June 1981, a new organization was established to prepare for another event, the American Gathering of Jewish Holocaust Survivors in Washington, DC, in April 1983. The officers of this “event-gearred” organization were Benjamin Meed, Sam Bloch, Ernest Michel, Roman Kent, Norbert Wollheim, Hirsch Altusky, Fred Diamant, James Rapp, and Solomon Zynstein.

The event in the American capital attracted 20,000 survivors and their families, where for three days attendees commemorated the Holocaust, attended cultural events, met with politicians, including the president and vice president of the United States, attended seminars, listened to many speeches from survivors and their children, and lobbied for Israel. At the Capital Center, they were addressed by President Ronald Reagan and learned that an umbrella organization for American Jewish Holocaust survivors had been created in the name of the Gathering. The announcement was made by Benjamin Meed, a Warsaw Ghetto survivor, the driving force behind the gatherings, which started as a dream of Ernest Michel, a German survivor, when he was in Auschwitz. The mission of the organization is remembrance, education, and commemoration.

Indeed further gatherings were held in Philadelphia, New York, and Miami and together with the United States Holo-

caust Memorial Museum in Washington to mark the tenth anniversary of the museum's opening.

The New York City-based American Gathering has a number of ongoing projects tied to its mission statement.

The Benjamin and Vladka Meed Registry of Jewish Holocaust Survivors

The Registry was established by the American Gathering in 1981 to document the lives of survivors who came to the United States after World War II. It was originally created to help survivors search for relatives and friends, and now contains the names of survivors and their families from all over the world. In 1993, the Registry was moved to the United States Holocaust Memorial Museum, where user-friendly computers allow visitors to access the database. There is also a page for the Registry on the Museum's website (www.ushmm.org) and the Gathering continues to seek new registrants via its quarterly newspaper, *Together* (circ. 180,000), and its website, www.americangathering.org.

The Registry now includes over 185,000 records related to survivors and their families and seeks to include the names of all Holocaust survivors, facilitate contacts, collect and display basic information about them, and assist survivors seeking lost relatives (registry@ushmm.org or max@americangathering.org or amgathtogether@aol.com).

Summer Seminar Program

Another important program administered jointly by the American Gathering of Jewish Holocaust Survivors, the Jewish Labor Committee, and the U.S. Holocaust Museum is the Summer Seminar Program on Holocaust and Jewish Resistance, initiated in 1984 by Vladka Meed, who purchased arms for the Warsaw Ghetto Uprising while posing as a Christian Pole during the Holocaust. The program brings teachers to Poland, the Czech Republic, and Washington, DC. Participating scholars come from Yad Vashem in Jerusalem, the Study Center at Kibbutz Lohamei ha-Getta'ot, and the United States Holocaust Memorial Museum in Washington, DC.

The Teachers Program goals are to advance education in U.S. secondary schools about the Holocaust and Jewish resistance; to deepen knowledge and ability to implement Holocaust studies in the classroom; to teach each new generation about the Holocaust and Jewish resistance, so that they will know, understand, and never forget; to further educational activities which use the lessons of the past as warnings for the present and the future.

The Holocaust & Jewish Resistance Teachers Program is sponsored by the American Gathering of Jewish Holocaust Survivors; American Federation of Teachers; Educators Chapter, Jewish Labor Committee; the Atran Foundation, Inc.; Conference on Jewish Material Claims Against Germany; Caroline and Joseph S. Gruss Funds, Inc.; and the United States Holocaust Memorial Museum.

In 1988, the American Gathering of Jewish Holocaust Survivors became one of only two Holocaust survivor organizations to join the Conference on Material Claims Against

Germany. The organization is also a member of the World Jewish Congress, the World Jewish Restitution Organization, and the Conference of Presidents of Major American Jewish Organizations. In that capacity, its mission is to lobby for survivors' rights and restitution.

The effect of the American Gathering on the survivors and on America has had a lasting impact. Survivors now contribute actively to educational programs around the country by speaking in classrooms and religious institutions, writing their memoirs, and pressing their case as eyewitnesses before the sands of time run out on them.

Holocaust education is now mandatory in many states of the union because of the need to teach tolerance. Hate Crimes laws have been enacted around the country because survivors pressed for legislation to outlaw racist acts. Holocaust commemoration and remembrance is carried on in almost every state house in the Union. And because of the survivors and the American Gathering, the Holocaust has even had an influence on American domestic policy and even on foreign policy, particularly in Europe and the Middle East.

The American Gathering held its inaugural "organization" meeting in Philadelphia, Penn., in 1985, where its theme was to speak truth to power and to request that the president of the United States, Ronald Reagan, not place a wreath at the *Bitburg Cemetery in Germany, where the Waffen SS were buried.

In February 2005 the officers of the organization were Benjamin Meed, Roman Kent, Sam Bloch, and Max Liebmann.

[Jeanette Friedman (2nd ed.)]

AMERICAN HEBREW, THE, New York Jewish weekly begun in 1879. *The American Hebrew* was published by Philip *Cowen, with editorial responsibility vested in a board of nine members, all of them young. The paper was vigorously written, favoring Orthodoxy over Reform, and concerned with maintaining good literary standards and covering news from all parts of the Jewish world. Though Cowen denied it, the belief persisted that the paper was supported by Jacob Schiff. In 1906 Cowen sold his controlling interest to a group of leading New York Jews that included Isaac *Seligman, Oscar S. *Straus, Cyrus L. *Sulzberger, Nathan *Bijur, and Adolph *Lewisohn. For the next ten years Joseph *Jacobs was editor, succeeded by Herman Bernstein. During the editorship of Rabbi Isaac *Landman (1918–37) *The American Hebrew* often took an anti-Zionist position. It was greatly interested in fostering goodwill between Jews and Christians, and in 1929 instituted an annual award for achievement in this field. Landman was succeeded by Louis H. Biden. In the course of its history *The American Hebrew* absorbed several Jewish weeklies. It ceased to appear as a separate publication in 1956 when it was combined with the *Jewish Examiner* to form the *American Examiner*.

[Sefton D. Temkin]

AMERICAN ISRAELITE, U.S. Anglo-Jewish weekly, founded by Isaac Mayer *Wise in Cincinnati, Ohio, in 1854. *The Israelite* (its name was changed in 1874), edited by Wise until his death, served as a platform for his ideas, and, though run haphazardly, was replete with historical and theological articles as well as news items from all parts of the Jewish world. On Wise's death (1900) his son Leo, business manager from 1875, became editor. In 1928 he was succeeded by Rabbi Jonah *Wise. The family sold the paper in 1930, and its work was then carried on by H.C. Segal (d. 1985). It is the oldest Jewish journal in the U.S., though by the mid-20th century reduced to a local community bulletin. In 1855 Wise had added to *The Israelite* a German supplement, *Die Deborah*. Later published as a separate journal, this paper did not long survive Wise's death.

[Sefton D. Temkin]

AMERICAN ISRAEL PUBLIC AFFAIRS COMMITTEE (AIPAC), U.S. organization often viewed as a synonym for – if not the embodiment of – “the Jewish lobby.” Founded in 1951 to ensure the special relationship between the United States and Israel, AIPAC saw the partnership between the two countries as rooted in an understanding that Israel shares with the United States a deep and abiding commitment to democratic principles and institutions and is a reliable partner in defending shared interests.

On this basis, AIPAC built a formidable record over a period of six decades, reflecting the organizational skill of its leadership in mobilizing American Jewry in support of the Jewish state. In its early years, bringing together a popular constituency in support of a political goal was unique and previously unheard of within the national political process. Yet AIPAC benefited from the post-World War II climate in which many Americans and virtually all Jews, appalled by the horrific calamity that had befallen European Jewry, were active (if not always eager) participants in grappling with the issue of what might be done to assure that the Jews never again be confronted with the imminent threat of extermination.

During World War II, spirited debate swirled through the Jewish community over the timing and even the advisability of advocating the establishment of a Jewish state in Palestine. Pro-Zionists argued that no solution other than immediate statehood would allow Jews to achieve full rights and “normalcy” within the world community. Opponents pointed out that, in the midst of war, agitating for a Jewish homeland might be seen as hurting the effort to defeat Nazism. Other anti-Zionists strenuously opposed the state on the grounds that Jews are a religion, not a nationality.

While certain increasingly marginalized groups continued to maintain an anti-Zionist position, the creation of the State in 1948 abruptly ended the discussion of whether there should be a Jewish state and channeled communal energy and passion into the question of what steps needed to be taken to secure Israel against Arab irredentism and also provide the resources required to successfully integrate the huge num-

bers of refugees from Europe and Arab lands flooding the new Jewish nation.

With Israel's encouragement, the American Zionist Council, which had played a major role in building support for the nascent Jewish state, initiated a project in 1951 to lobby Congress for American aid to resettle Jewish refugees in Israel. It became quickly apparent that the lobbying necessary to win support for Israel could not be sustained by the AZC, constrained by its non-profit status from engaging in substantial lobbying. Thus, in 1954, the American Zionist Committee for Public Affairs was established as a separate lobbying organization. In 1959, recognizing that many non-Zionists supported its work, the organization changed its name to the American Israel Public Affairs Committee and expanded its leadership base to include national and local representatives from other organizations.

Heading the effort from the start was I.L. Kenen, known to everyone as “Si.” A soft-spoken, low-profile individual, Kenen was a fierce advocate, imaginative strategist, and thoughtful analyst. He understood from the start that the United States' foreign policy establishment had as a priority extending American influence in the Arab world to preserve, among other goals, access to Middle East oil. Therefore, Kenen insisted that effective advocacy on Israel's behalf needed to be focused on the Congress (the “people's house”) and must, in all respects, remain bipartisan. Undergirding that strategy, Kenen shaped arguments presenting the case for assistance to Israel as consistent with American national interests, not as a sop to a special interest. It was not surprising, therefore, to find Kenen, in 1951, supporting economic assistance to the Arab states so that they, like Israel, would have resources to resettle the Arab refugees who had been displaced by the fighting that ensued following the establishment of the State of Israel.

Under Kenen's professional leadership, and with the support and cooperation of many of the national membership organizations, AIPAC achieved remarkable success in winning first economic assistance and later military support for Israel. Its authoritative newsletter, the *Near East Report*, became required reading in Congressional offices, and its periodic publication, *Myths and Facts*, provided the interpretive data with which the pro-Israel case might be made.

AIPAC played an immensely important role in strengthening American assistance during the Six-Day War of 1967 and the Yom Kippur War of 1973. In the aftermath of each, the diplomatic relationship of the two countries mitigated much of the disadvantages that Israel experienced in other parts of the globe, including Europe, Africa, and at the United Nations, where sympathy for the Palestinian cause continued to grow, even as revulsion was often expressed at some of the terrorist tactics of its more militant supporters.

Kenen had understood that lobbying was considered a pejorative to most Americans and therefore kept a low profile for AIPAC. He pointedly observed that, while it was free to do so, AIPAC did not endorse political candidates or contribute to electoral campaigns.

Nevertheless, AIPAC's success with the Congress created hostility that was often expressed not in disagreement on issues but by questioning the organization's loyalty. Despite AIPAC's insistence on a fundamental congruence of Israeli and American interests, opponents argued that the Jewish lobby operated at cross-purposes with the U.S. Arkansas Senator William J. Fulbright was a particularly strident critic of Israel's Capitol Hill supporters. During the 1973 Yom Kippur War, Fulbright declared on CBS's *Face the Nation* that "Israelis control the policy in the Congress. The emotional and political ties are too strong. On every test, on everything the Israelis are interested in, in the Senate the Israelis have 75 to 80 votes." Although he drew away from the harsher inferences of this rant, Fulbright's views found resonance in later comments by General George S. Brown, who in 1974 told a Duke University audience that Jews controlled the banks and newspapers and that Americans "may need to get tough-minded enough to set down the Jewish influence in this country and break that lobby." (Brown's comment, which he came to regret, has become a staple on antisemitic websites.) Perhaps the most startling and notorious expression of that "dual loyalty" sensibility came in 1991 when President George H.W. Bush characterized activists gathered in Washington, D.C., to support loan guarantees for Israel as "a thousand lobbyists" opposed to him and, inferentially, U.S. policy. The remark caused an uproar throughout the community and is generally acknowledged to have permanently strained the president's relationship with the Jewish community.

When Kenen retired in 1974, AIPAC underwent a dramatic transformation. First under Morris J. Amitay and then Tom Dine, the organization was revamped and professionalized. The revamping of AIPAC was triggered by two developments: the post-Watergate reforms which decentralized power in Congress and required AIPAC to develop relationships with more than a handful of key legislators such as Senators Henry Jackson, Jacob Javits, and Hubert Humphrey and Representatives Benjamin Rosenthal and Charles Vanik, and the need to fight arms sales to Arab countries hostile to Israel. In response, it expanded its research department, increased the number of lobbyists who worked on the Hill, enhanced its presence on university campuses, and dramatically strengthened its outreach to the community through more vigorous resource development and the establishment of regional offices (there were nine in the early 2000s). AIPAC made a conscious effort to bring legislators as well as senior aides to Israel. It also joined with local Jewish organizations to strengthen pro-Israel support among grassroots and statewide political activists. These efforts accelerated after 1988, when a coalition led by the Reverend Jesse Jackson and a number of Arab groups managed to bring forward a plank to the Democratic Party platform committee that was viewed as hostile by the pro-Israel forces; it was defeated, but only following a roiling debate.

More systematically than had been done heretofore, AIPAC built and utilized its system of "key contacts" to assure ready ac-

cess to members of Congress through local supporters. In 2005, AIPAC boasted a membership of 65,000 people in all 50 states.

Attesting to the ongoing influence of AIPAC is the continuing strong, bipartisan support for Israel on Capitol Hill. There is still a robust commitment to the special relationship between the two countries, and Israel is generally acknowledged as a partner in the struggle against terrorism and Islamic fanaticism – a partnership reflected in a multibillion dollar mostly military assistance package.

Since the 1980s AIPAC has made a conscious effort to work closely with the executive branch. Ironically, though AIPAC often found itself at odds with the Department of State, it came to be seen as an important instrument in winning support for the nation's larger foreign assistance program. With assistance to Israel a dominant part of the foreign aid package, that support is often leveraged by the administration to assure adoption of the entire bill. Since Americans in general oppose foreign aid, the energy of the well-organized pro-Israel constituency became the engine for gaining support for the whole program.

Despite its vaunted effectiveness, AIPAC finds itself operating in a more fractious climate than ever before. Increasingly, a broader range of positions was held – and expressed – on vital issues related to Israel's security and the role of American Jewry in supporting the Jewish state. Not only has the consensus eroded, but organizational discipline has loosened as well. It is no longer rare to find organizations publicly lobbying members of Congress both to AIPAC's political left and right on such issues as Israel's settlement policy, an independent Palestinian state, and many other issues.

The divisions within the Israeli body politic are mirrored within the organized Jewish community. It is noteworthy that the growth of AIPAC's membership and the expansion of its reach into the community occurred during a period when the government of Israel was dominated by the right wing Likud. Thus, activists attracted to join an organization supportive of Israel's government would tend to be right wing themselves. It is therefore not surprising that AIPAC's members who joined after 1977 and staffers who came politically of age at that time appear to be more comfortable with the historic positions of the hard-line Likud of Menahem Begin, Yitzhak Shamir, and Benjamin Netanyahu rather than with the more dovish views of Labor's Yitzhak Rabin, Shimon Peres, and Ehud Barak. Consequently, after the signing of the Oslo Accords in 1993, diplomats of the Rabin government were often critical of the American Jewish lobby for not actively and publicly supporting the peace process. Shortly after becoming prime minister, Rabin let it be known that he did not need American intermediaries – i.e., AIPAC – to speak to the American administration for Israel.

The public tension was eventually resolved, but the private misgivings remained. Former Likud officials who had served in the Israeli embassy and some of their American Jewish supporters used their contacts to lobby against the peace process.

Within the American context, AIPAC activists also appeared to be comfortable with the Middle East policies of President George W. Bush.

Chants of “four more years, four more years” greeted the president at the 2004 AIPAC Policy Conference, creating the semblance of a partisan atmosphere. Some observers felt this was particularly unsettling given the support that all presidents, Democrat as well as Republican, professed for Israel.

An AIPAC past president observed that the immediate past president, Bill Clinton, a Democrat, had been “pluperfect” on the Israel issue.

While the post-Kenen AIPAC publicly followed the organizational commitment to remain above partisan politics, the perception grew that behind the scenes it quietly directed Jewish money to favored candidates. When he left AIPAC Amity doled out large amounts of campaign money as the head of an influential Political Action Committee (PAC), and many other AIPAC leaders took visible roles in campaigns and even administrations. The inference that AIPAC was not a simple bystander to partisan politics was bolstered when, to its embarrassment and regret, a president of the organization was forced to resign after boasting to a potential contributor about the lobby’s ability to elect friends and defeat enemies.

In the late 1980s AIPAC was investigated extensively by the F.E.C. (Federal Elections Commission), accused of directly forwarding the contributions of pro-Israel PACs. AIPAC was exonerated. AIPAC’s leaders do participate vigorously and generously in political campaigns and were credited with the defeat in 1984 of the then-chairman of the Senate Foreign Relations Committee Charles Percy (R-IL) and in 2002 of Cynthia McKinney (D-GA), who ran again and was elected in 2004.

Other missteps, more central to AIPAC’s core mission, have come to light. In 1981, for example, the Jewish community took on the Reagan administration, which sought Congressional approval to sell sophisticated Airborne Warning and Control System (AWACS) aircraft to Saudi Arabia. The increasingly bitter and public battle, pitting the so-called Jewish lobby against the president, became increasingly nasty. When Congress voted to approve the controversial sale, some saw it not simply as a defeat for AIPAC but a sign of its weakness. A more sober analysis, however, suggests that the AWACS campaign revealed AIPAC’s limits in seeking to overturn a presidential initiative in foreign relations, an area where historically the White House has been able to rely on the principle that partisanship ends at the water’s edge.

The episode gave birth to the key contact system and the outreach to every senator and virtually every congressman. In addition AIPAC repositioned and became an advocate for maintaining Israel’s qualitative military edge over its enemies. Future sales to Arab neighbors would be offset with increased military aid to Israel.

More damaging to AIPAC’s reputation was its role during the early 1990s in the effort to secure for Israel \$10 billion in loan guarantees for the resettlement of Soviet Jews immi-

grating to Israel in record numbers. Although the Congress seemed more inclined to support the initiative, the George H.W. Bush administration refused to budge without some assurances from the Israelis about limiting settlement development in the territories. Either hubris or a serious miscalculation of the administration’s resolve caused AIPAC to reassure the Israelis that it could overcome the administration’s reservations and move the loan guarantees forward in the Congress without compromising Israel’s unpopular settlement policy. Others, including the Anti-Defamation League and the Jewish Council for Public Affairs, told the Israelis that they could have loan guarantees or settlements, not both. Again, Israel had been given advice on the American political process that was flawed. Ultimately Israel got the loan guarantee package issued over a five-year period with amounts spent in settlements deducted from that year’s installment. In the end, it also did not use the guarantee.

Following a period of some turbulence and two changes at the professional top of the organization, AIPAC seemed to have righted the ship in the mid-1990s. Howard Kohr, a long-time AIPAC professional who became the director in 1996, had worked for Republicans yet had respect among Democrats. In a sense, his lower profile better served the needs of the organization. Dine had been unceremoniously dumped in 1993 after making remarks that were thought insensitive to Orthodox Jews, and Neal Sher, his successor, had had a rough three-year tenure. It seemed to be a good time to take a deep breath. However, AIPAC found itself thrust on the front pages again in 2003 and 2004 when the FBI launched an investigation following allegations that top AIPAC officials had passed along to Israel classified State Department information about Iran.

Whether ultimately proven or not, the charges are redolent of the old “dual loyalty” canard, an aroma that does not easily disperse in the political atmosphere of the nation’s capital.

In a profound if paradoxical way, the September 11, 2001, attack on America strengthened the relationship between Israel and the United States. With the terrorist attacks in New York and Washington, DC, Americans now experienced directly what the Israelis had themselves been shouldering for decades. Pro-Israel advocacy was energized by mutual anguish and loss. For others, however, the linkage was found not in shared victimization but in joint complicity. In a painful and in some ways puzzling reversal, Israel and the United States were branded by many around the world as co-collaborators in a failed global policy that led to the occupation of Arab and Muslim lands – by the United States in Afghanistan and Iraq, and by Israel in the territories. Thus, in a grim and grotesque way, cataclysmic world events conspired to demonstrate the common interests of the United States and Israel – the very assumption upon which AIPAC has built its program for over more than half a century.

[Lawrence Rubin (2nd ed.)]

AMERICAN JEWESS, monthly magazine published between April 1895 and August 1899. It was the first English-language periodical intended for American Jewish women. Indicative of newly emerging public identities for Jewish women, the *American Jewess* offered health, household, and fashion tips; discussion of women's demands for synagogue membership; early expressions of American Zionism; short fiction; and reflections on the propriety of women riding bicycles. Rosa Sonneschein, the creator and editor of the *American Jewess*, was a Hungarian immigrant who divorced her rabbi husband in St. Louis. Her successful participation in the Press Congress and Jewish Women's Congress that were both part of 1893's World's Columbian Exposition in Chicago inspired her to create the *American Jewess*.

Like the *National Council of Jewish Women, which also emerged from the Jewish Women's Congress, the *American Jewess* was intended to represent the aspirations of America's prosperous and acculturated Jewish women who believed that the national and religious aspects of their identity were not in conflict. Thoroughly American and thoroughly Jewish, the "American Jewess" felt fully at home in her overlapping worlds of American and Jewish culture. Working initially from Chicago and later from New York, Sonneschein echoed NCJW's calls for female synagogue membership and leadership. Through her magazine, she was able to offer the first sustained critique, by a Jewish woman, of gender inequities in Jewish worship and organizational life. In addition, by publishing a veritable portrait gallery of locally prominent Jewish women (often those serving their communities as NCJW officers), Sonneschein altered expectations of what American Jewish leaders should look like. Male and female authors within the magazine offered differing views on Jewish women's public roles within the Jewish and general communities, but all were engaged in making sense of new collective and individual identities for women.

At its height, the magazine claimed a circulation of 31,000. Deflected by both business and health setbacks, however, Sonneschein yielded control to an unidentified group of publishers in the summer of 1898. Despite Sonneschein's continued contributions as a correspondent, the publication suffered from the loss of her editorial vision and energy. When the new publishers were unable to revive the magazine's financial fortunes, the *American Jewess* shifted from a monthly to a quarterly publication in 1899; it concluded its run with a "valedictory" issue in August 1899.

AMERICAN JEWISH ARCHIVES (AJA), archives founded in 1947 by the historian Jacob Rader Marcus (1896–1995) on the Cincinnati campus of the Hebrew Union College-Jewish Institute of Religion. Marcus established the AJA in the

aftermath of the European Holocaust, when American Jews inherited a primary responsibility of preserving the continuity of Jewish life and learning for future generations. The AJA functions as a semi-autonomous organization to collect, preserve, and make available for research materials on the history of Jews and Jewish communities in the Western Hemisphere, primarily in the United States. The term "history" is construed in its broadest aspect to embrace data of a political, economic, social, cultural, and religious nature.

In its collections, the AJA attempts to assemble data describing the American Jew, both as a Jew and as an American. In this sense, the AJA probably possesses the largest collection of source materials found anywhere documenting the history of the Jewish community of a country. Important accessions to the collection are listed annually in the *American Jewish Archives Journal* and in the successive volumes of the *National Union Catalogue of Manuscript Collections*. The AJA began with a small assortment of congregational and societal minute books and a few collections of private papers. By the dawn of the 21st century, it contained more than 12,000 linear feet of manuscripts and archival records.

The collection includes the papers of famous Reform rabbis such as Isaac Mayer *Wise, David *Philipson, and David *Einhorn; scholars Trude *Weiss-Rosmarin, Horace M. *Kallen, and Maurice *Samuel; scientists and physicians Abraham *Flexner and Robert C. Rothenberg; lawyers and politicians Anna M. *Kross, Samuel Dickstein, and Fanny E. Holtzmann; and philanthropists and Jewish leaders Louis *Marshall, Jacob *Schiff, Felix *Warburg, among many others. The holdings also include documents and letters of prominent colonial and Civil War era Jews such as Aaron *Lopez, Raphael J. *Moses, Judah P. *Benjamin, and the *Gratz and *Franks families. In its collections are the records of district and local B'nai B'rith lodges, women's synagogue auxiliaries, and organizations such as the American Jewish Alternatives to Zionism, the Intercollegiate Menorah Association, the World Union for Progressive Judaism, the American Council for Judaism, and the Socialist Labor Party of America. The records of the New York office of the World Jewish Congress (WJC), one of the AJA's largest archival holdings, contain data relating primarily to the WJC's activities during and after World War II.

In 1998, the AJA was designated as the official repository of the historical records of the Union for Reform Judaism (formally the Union of American Hebrew Congregations). These materials compliment the records of the Hebrew Union College, the Jewish Institute of Religion, and the combined Hebrew Union College-Jewish Institute of Religion as well as the records of the Central Conference of American Rabbis.

The AJA is divided into several departments: manuscripts and typescripts, "nearprint," photographs, indices, publications, and programs. The "nearprint" collection subsumes all ephemeral material in the vast zone between letters and books: throwaways, news releases, broadsides, mimeograph announcements and advertisements, newspaper and magazine

clippings, brochures, etc. The collection's broad recorded tape holdings consist of over 6,500 cassettes of oral histories, lectures, religious services, and music. In addition, a photograph collection of well over 15,000 images is used by scholars, publishers, filmmakers, among others, to illustrate books, articles, movies, and television programs. All manuscript collections have been catalogued; indices have been made of important 19th-century magazines like *Sinai*, *Israel's Herold*, *Occident*, *Deborah*, and *Menorah Monthly*. One of the AJA's most important publications is the *American Jewish Archives Journal* (est. 1948), which appears semi-annually. The institution has also published a wide-ranging series of monographs, including Malcolm H. Stern's *Americans of Jewish Descent* (1960), which marked a milestone in the study of American Jewish genealogy. This monumental volume was updated and revised in 1991, appearing under the title *First American Jewish Families: 600 Genealogies, 1654–1988*. An online version of Stern's classic text is available on the institution's website (www.AmericanJewishArchives.org). The AJA also offers a series of enrichment programs for scholars, educators, and the public at large.

Closely associated with the American Jewish Archives is the American Jewish Periodical Center (AJPC), which microfilms all American Jewish serials to 1925 with selected periodicals after that date. AJPC catalogues have been published; microfilm copies of all listed entries are available on interlibrary loan.

Jacob R. Marcus directed the American Jewish Archives from its founding in 1947 until his death in 1995, when the institution was renamed The Jacob Rader Marcus Center of the American Jewish Archives. Gary P. Zola became the second director of the American Jewish Archives in 1998.

[Gary P. Zola (2nd ed.)]

AMERICAN JEWISH COMMITTEE (AJC), oldest Jewish defense organization in the United States, established in 1906 "to prevent the infringement of the civil and religious rights of Jews, in any part of the world." It was formed as one response to the search for a basis upon which a central representative organization of American Jews could be built and as a direct outgrowth of concerns about conditions in Czarist Russia, especially the 1905 Kishinev pogrom. The Committee initially consisted of a small group drawn from the established German-Jewish community, who had migrated in large numbers to the United States beginning in 1820. They were well established and viewed their purpose as being able to mobilize American Jews to respond to matters of concern. Its founders included Jacob *Schiff, Mayer *Sulzberger, Louis *Marshall, Oscar *Straus, and Cyrus *Adler, men who represented the prominent German stratum within the Jewish community, and who, out of a sense of noblesse oblige, combined philanthropic activities and *hofjude* ("court Jew") diplomacy on behalf of their fellow Jews. The Committee was their attempt to guard against the rise of what they considered to be more radical popular agencies based on mass membership and em-

ploying extensive publicity. Oligarchic in design, the Committee – literally a "committee" – limited its membership to 60 American citizens (expanded by 1931 to 350), with offices in New York, and remained a small group for many years. AJC was self-selected, and had a sense of the "elitism" of the German-Jewish community, then the regnant Jewish population in America.

Much enlarged after 1943, the AJC developed into a highly-professional organization in which the leadership have played the critical role in decisionmaking, and the agency has been an effective voice on intergroup and, in recent decades, in public policy issues. The AJC has traditionally had a special interest in ethnicity, pluralism, and Jewish family life, in Israel and the Middle East, and in a broad range of interreligious affairs, and is significantly active in these areas. In recent years with the perception of declining antisemitism and full acceptance of Jews into American society, the AJC's agenda has expanded beyond matters of "defense" to include questions of Jewish "continuity" deemed essential after the 1990 Jewish population survey.

During the 1960s and 1970s, under the stewardship of executive leaders John Slawson and especially Bertram Gold, the AJC resembled not a single agency but a collection of related "fiefdoms," each directed by a leader in his respective field, who collectively contributed to the shaping of the contemporary community relations agenda: Rabbi Marc Tanenbaum in interreligious relationships; Yehuda Rosenman in Jewish communal affairs; Milton Himmelfarb, who shaped AJC's research agenda and who edited the *American Jewish Year Book*; Hyman *Bookbinder, the highly-visible director of AJC's Washington office, who was instrumental in shaping the agency's public affairs agenda.

The AJC has since the early 1980s undergone a necessary process of redefinition of mission and function within the community. This process culminated in 1990, with David Harris as the new executive director – this following a period of institutional and financial instability, in which there were four chief executives within a very few years – with the AJC turning aggressively toward activity in the international arena, positioning itself as an "international diplomatic corps for the Jewish people." The American Jewish Committee's joining the *Conference of Presidents of Major American Jewish Organizations in 1991 signified more than a symbolic affiliation; the AJC, by its membership in the Presidents Conference (the designated spokesman of the American Jewish community to the American administration on Israel and other international issues), asserted that international affairs now had primacy on the AJC's agenda.

The plight of Russian Jewry before World War I prompted the AJC's strong defense of a liberal American immigration policy. The AJC contributed to the defeat of a literacy test requirement for immigrants in 1907 and 1913 by lobbying, propaganda, and publicity. In 1911 the Committee conducted a successful campaign for the abrogation of the Russo-American treaty of 1832. Not only did the AJC object to the Russian dis-

crimination against the entry of American Jews into Russia, which it considered a violation of the treaty, but it hoped that by its abrogation Russia would inevitably be compelled to free her own Jews.

On the outbreak of World War I, the American Jewish Committee sparked the organization of the American Jewish Relief Committee, which set up a central relief fund for Jewish war victims. Opposed to the idea of a democratic and nationalist American Jewish movement presenting the Jewish demands to the Paris Peace Conference in 1919, the Committee joined the first *American Jewish Congress under pressure of public sentiment. However, the minority rights secured for Jewry in the new, succession states of Europe were largely the result of the work of Julian *Mack, Louis Marshall (who served as AJC president from 1906–29), and Cyrus Adler who operated as individual intercessors in Paris. The Committee welcomed the *Balfour Declaration but underscored the provision that it would in no way prejudice the liberties of Jews in other lands. Louis Marshall's post-war correspondence with Chaim Weizmann led in 1929 to an enlarged *Jewish Agency composed of Zionists and non-Zionists. The AJC's stance was a "non-Zionist" one until the creation of the State of Israel in 1948.

During the 1920s the Committee centered its attention on the United States. It fought the popular "Jew-Communist" charge circulated in the infamous "Protocols of the Elders of Zion" and further propagated in Henry Ford's *Dearborn Independent*. Marshall, as president of the Committee, formulated the terms for Ford's retraction in 1927. The approach of the Committee, both strategically and tactically, differed sharply from that of the American Jewish Congress, which was more confrontational and which relied – especially after 1945 – on litigation as a primary vehicle for social action. AJC's approach reflected the Louis Marshall idea that discreet lobbying would best serve the interests of American Jews. This non-confrontational strategy reflected the fear that AJC would be perceived as a "Jewish lobby" with interests at odds with those of other Americans.

The rise of Nazism led to intensified activities on two fronts. In an effort to ameliorate the situation of German Jewry, the American Jewish Committee applied pressure upon the Roosevelt administration, the Vatican, the League of Nations, and even individual German officials. The objective of halting the Nazis by an aroused public opinion failed, and Committee members turned increasingly to plans of rescue and emigration for German Jews. The outbreak of the war halted independent operations, leaving the fate of Jewry contingent upon the Allied war effort. Upon learning of the mass murders, the Committee with other American organizations staged protest meetings and appealed for concrete assistance from the *Bermuda Conference on Refugees (1943). The Committee also cooperated in the efforts of the *War Refugee Board.

Simultaneously, the Committee fought the alarmingly sharp rise in organized antisemitism in America, with an

emphasis on education and "prejudice-reduction" programs. In developing new techniques both to measure and to influence general and Jewish opinion, the Committee discarded the traditionally apologetic Jewish reaction to antisemitism and asserted and demonstrated that antisemitism is a device to undermine the foundations of democratic society. The Committee also investigated the operations of the virulent hate groups and disclosed their connections with the Nazi regime. The AJC pioneered an approach to combating antisemitism in the communities, using as a model the idea that every Jewish community in the U.S.A. needed to have a "volunteer fire brigade" countering antisemitism. In 1941 the AJC and the *Anti-Defamation League joined forces in the Joint Defense Appeal, to raise funds for both agencies' domestic programs.

While the American Jewish Committee joined the Zionists in protesting British curtailment of immigration into Palestine as a result of the British White Paper, it denounced the concept of "Diaspora nationalism" inherent in the programs of the American Jewish Congress and *World Jewish Congress. It opposed the Zionists' Biltmore *Program of 1942 and, in protest against Zionist tactics, left the *American Jewish Conference in 1943. It hoped that the future of Jewry would be secured by universal recognition of human rights to be protected by the United Nations; and it lobbied in 1945 at the San Francisco Conference, at which the charter for the United Nations was prepared, for an international commitment to that principle. By 1946 the Committee realized that the problem of the displaced persons could be solved only by the creation of a Jewish state, and it cooperated with the Zionists in pushing the cause of Palestine partition. After 1948 the Committee filled a dual function with respect to the State of Israel; it worked consistently to insure American sympathy and diplomatic aid, and by agreement with Israeli statesmen, it officially kept Israel's interests distinct from those of Diaspora Jewry. This dynamic was exemplified in the 1950 "entente" between Israeli Prime Minister David Ben-Gurion and AJC President Jacob Blaustein, following reports that Ben-Gurion had called for large-scale immigration to Israel by American Jewish youth; Ben-Gurion acknowledged that American Jews "have only one political attachment, to America," and in effect admitted that the "ingathering of exiles" as a central Zionist principle did not apply to American Jewry.

The American Jewish Committee also assumed a role in several extended projects relating to the Holocaust: prosecution of Nazi war criminals, material restitution by Germany to the Jewish community, and rehabilitation of Jewish cultural life within Europe. The Committee concentrated in the post-war period on combating the persecution of Jews within the Soviet orbit; it was active in disclosing the character of Kremlin-inspired antisemitism in documented form. The eruption of antisemitism in two other areas, the Muslim countries and South America, involved the Committee in tasks of relief and emigration with respect to the former, and self-defense with respect to the latter.

After World War II the Committee expanded markedly in size and function. A chapter plan adopted in 1944 slowly changed the oligarchic cast and elitist control of the organization. The AJC's strategic approaches to participating in litigation as a vehicle for achieving its goals underwent a marked change as well in the post-war years. In its early years the AJC, parting company from the Anti-Defamation League, did promote advocacy against anti-immigration measures. But the Committee had long believed that litigation was confrontational and would damage the constructive relationships that Jews had built up in the interfaith arena. Louis Marshall's view was that individuals, not groups, were constitutionally protected from prejudicial action. (The ADL, conversely, believed that Jews had every right to oppose the insult of group defamation.) Taking upon itself the obligation of strengthening the foundations of a pluralistic democratic society, the Committee took an active interest in the rights and liberties of non-Jews as well as Jews. The AJC's strategy of working with diverse non-Jewish organizations, especially in the Christian religious community, reflected the Committee's concerns both with legal matters (such as the separation of church and state) and social relations. A turning point came in 1943 with the appointment of John Slawson as AJC executive, who believed that, consistent with the AJC tradition of viewing rights for Jews as part of the larger struggle for rights for all minorities, AJC needed to be transformed into a vibrant civil rights agency. From 1947 AJC actively participated, through litigation, educational campaigns, and community projects, in the struggle of the blacks for equal rights. Work to break down the barriers in education, housing, employment, and public accommodations led to pioneer efforts against anti-Jewish discrimination in clubs, fraternities, and the "executive suite." The American Jewish Committee's focus on human relations resulted in new approaches to intergroup cooperation and intercultural education. In that area it labored successfully for the revision of prejudiced teachings about Jews in Christian textbooks and for the historic declaration on the Jews approved by the Vatican Council in 1965. The Committee consistently emphasized the need for research in the behavioral sciences to guide it in plotting its action program. It sponsored the multivolume *Studies in Prejudice and Other Sociological Studies*. The watershed volume *The Authoritarian Personality* (1950) emphasized the psychological, rather than the socio-economic, forces at work in group prejudice.

Through surveys of American Jewish and general communities, and through conferences and other programmatic initiatives, the AJC has also explored new ways to understand intergroup dynamics and to strengthen Jewish identity within the United States. The annual *Survey of American Jewish Public Opinion*, conducted by the Market Facts agency, provides valuable data for social scientists and policymakers. Numerous studies on a range of issues have emerged from the AJC over the past 40 years.

In 2005 the AJC had a membership of approximately 150,000 people organized in 33 chapters around the United

States. Operating in 2005 on a budget of approximately \$37,000,000 – the AJC's budget in 1979 was \$8 million, on par with the Anti-Defamation League – the agency maintains offices in Brussels, Berlin, Geneva, and Jerusalem, and has a presence in Paris, Bombay, and Warsaw, in addition to its New York headquarters.

The Committee's orientation has long been that of a thoughtful and deliberative organization. Indeed, it traditionally viewed itself as being the "think tank" of the Jewish community. In addition to its regular sponsorship of a range of studies and conferences, an influential periodical, *Commentary*, is produced under the AJC's auspices, with a completely independent editorial policy. (*Present Tense*, a bi-monthly, ceased publication in the early 1990s.) Since 1900 the AJC has published the annual *American Jewish Year Book*, which over the years has become the "document of record" for American Jewry.

AMERICAN JEWISH CONFERENCE, representative American organization established in 1943 at the initiative of B'nai B'rith to deal with the problems of Palestine and the European Holocaust. Originally composed of representatives of all major Jewish groups and delegates from local Jewish communities, the Conference was given direction from Zionist bodies which sought a pro-Zionist declaration by a body representing American Jewry as a whole. Such a declaration was overwhelmingly adopted at its New York assembly in August 1943. As a result, the American Jewish Committee seceded from the Conference. Nevertheless, the organization submitted a series of pro-Zionist statements to official national and international bodies and waged a public relations campaign until its dissolution in 1949.

AMERICAN JEWISH CONGRESS (AJCongress), one of the central agencies in American Jewish community relations. The origins of the American Jewish Congress, founded in 1918, provide an important lesson in the dynamics of American Jewry. The AJCongress was established by a group that felt dissatisfaction with the American Jewish Committee. This group, largely of East European origin, felt that the "aristocratic" German-Jewish leadership of the Committee was a self-appointed, self-perpetuating body with no mandate from American Jewry, and that the AJC was paternalistic in its dealings with East Europeans. The debate, largely between East European and German Jews and between Zionists and anti-Zionists, was primarily over the establishment of a congress

that would represent American Jewish interests at the peace conference following World War I. The result was an ad hoc “congress” that would act as an “umbrella” for Jewish groups and represent Jewish interests. Institutionally, the American Jewish Congress was an outgrowth of the first American Jewish Congress, which assembled in Philadelphia in December 1918. A written agreement entered into by a number of organizations stipulated that the Congress was to dissolve as soon as it fulfilled its task of formulating a postwar program of the Jewish people, named a delegation to the Peace Conference in Versailles, and received its report. This agreement was implemented at the second and last session of the Congress in Philadelphia in 1920. However, some delegates from religious, Zionist, and fraternal organizations, and from *Landsmannschaften*, reassembled the next day under the chairmanship of Stephen S. Wise and laid the foundation for the present American Jewish Congress, which was fully organized in 1928. The initial constituency of the American Jewish Congress was mainly Zionist, other voices coming into the body following the 1928 reorganization. In sum, while the American Jewish Committee and other organizations wanted the Congress to go out of business – and indeed it did formally dissolve itself in 1920 – the pressure for a permanent representative organization resulted in the formation of the present Congress, which came into being in 1922, originally as a council of agencies. (The AJCongress evolved into a membership organization in the 1930s.)

The American Jewish Congress began with two goals, which together molded the agency’s subsequent ideology: providing humanitarian relief for European Jews in the aftermath of World War I and restoring a political Jewish presence in Palestine. The American Jewish Congress is the only community-relations agency that has been pro-Zionist throughout its history, and, on a number of issues (for example, a boycott of German goods in the 1930s), was arguably more representative of the views of the grassroots of American Jewry than the other “defense” and community-relations agencies. The early AJCongress leaders, Louis Brandeis and Stephen S. Wise, believed that only a democratic structure would make possible maximum participation in Jewish affairs by Jews, and not just by German Jews. Moreover, they fervently rejected the belief that Jews should not organize along ethnocentric lines, that Jews ought not restrict their lobbying efforts to “behind the scenes,” and that Jews ought not engage in vigorous advocacy. The American Jewish Congress’s view of pluralism was different from that of the American Jewish Committee or the Anti-Defamation League: the AJCongress articulated the view that group and not individual interests needed to be advocated through appropriate organizational channels, and not merely through a few well-connected individuals. Stephen S. Wise especially offered a vision of American Jewry as both religious and ethnic, and, as a people possessing a distinct cultural history, needing openly to advocate its interests.

The AJCongress set goals related to American Jewish affairs, as well as to Palestine and the world Jewish scene. In

the 1930s the AJCongress emerged as a leading force in the anti-Nazi movement and in efforts to aid the victims of Hitlerism. It sought to arouse American public opinion and to combat antisemitic manifestations in America. With the Jewish Labor Committee, the AJCongress organized the Joint Boycott Council directed against German goods and services. The AJCongress was a founder of the short-lived General Jewish Council and of the National Community Relations Advisory Council (NCRAC, later National Jewish Community Relations Advisory Council, NJCRAC; now Jewish Council for Public Affairs, JCPA).

In the mid-1930s the AJCongress led in the formation of the World Jewish Congress, and shortly thereafter changed itself from a body representing organized groups into one based on individual membership. National Jewish organizations found that group affiliation alongside individual membership was untenable, and withdrew in order to form the American Section of the World Jewish Congress, of which the American Jewish Congress is also an affiliate.

The American Jewish Congress pioneered the use of law and social action as tools in combating prejudice and discrimination. This strategy – opposed by other Jewish communal groups, especially the American Jewish Committee and the Anti-Defamation League, which believed in quiet diplomacy and social relations – led to the creation in the 1930s of a number of “commissions” within the agency to examine the utility of litigative action to secure constitutional protection of equal rights. While the image of the AJCongress was one of a creative and aggressive advocate for Jewish interests, there was little substantive difference between the AJCongress and the ADL and AJC until after World War II.

In 1945 the AJCongress embarked on a program based on proposals submitted by Alexander H. Pekelis, in which the character of the agency was matured. Proceeding from the premise that the well-being of Jews depended on a liberal political and social climate, the AJCongress became increasingly involved in the promotion of social legislation and in activities designed to strengthen American democracy, eliminate racial and religious bigotry, and advance civil liberties. The AJCongress created its Commission on Law and Social Action (CLSA, a merger of two commissions, on discrimination and law and legislation) to implement this premise. The CLSA was created for the purpose of engaging the direct-action strategies that would encompass legislative and judicial measures to redress constitutional grievances of American Jews. The CLSA began implementing a vision of advocacy that had been fermenting within the AJCongress for some years. The underpinnings of CLSA advocacy were that the AJCongress ought not limit its work to attacking governmental infringements on the rights of Jews, but should fight discriminatory practices by large, private organizations, such as universities and corporations, and in doing so enter into coalition with like-minded groups such as the NAACP and the ACLU. Moreover, the direct-action method – law and litigation – would concentrate on fighting legal discrimination, and not prejudi-

cial attitudes. This approach was a major departure from the strategic stances of the ADL and the AJC, both of which were committed to education programs and goodwill campaigns to educate Americans about Jewish interests, and to “quiet diplomacy” to redress grievances. Indeed, the creation of the CLSA created shock waves that reverberated throughout these American Jewish organizations. Contributing to the widening gap between the AJCongress’s commitment to legal reform and the ADL’s and AJC’s preference for the “social-relations” model was the towering figure of Leo Pfeffer, for many years the director of CLSA. Pfeffer’s uncontested emergence as the Jewish community’s chief strategist on church-state matters was accompanied by his exercise of almost complete authority over the Jewish community’s litigation agenda.

CLSA activity over the years has led to the AJCongress having viewed itself as being the “lawyer” for the American Jewish community; indeed, it took a pioneering stance and leading role in Jewish community involvement in landmark Supreme Court cases on First Amendment (especially church-state separation) and civil rights issues. Major advocates such as Alexander Pekelis, David Petegorsky, and Will Maslow, and above all Leo Pfeffer, put their stamp on the AJCongress’s agenda, and, beyond the agency, on American Jewish communal activities in the First Amendment and civil rights arenas.

In Zionist affairs the Congress has adopted a pro-Israel position, and indeed is the only American Jewish group (aside from Zionist organizations) to be pro-Zionist from its beginnings. It has organized annual “dialogues” in Israel with the participation of U.S. and Israeli intellectuals and has sponsored regular tours of its members to Israel. Nuanced changes with respect to Israel emerged under the professional leadership of Henry Siegman in the 1980s and 1990s, and the AJCongress veered sharply to the “left” on Israel-related issues, departing in some cases radically with consensus positions of the Jewish community on issues such as settlements and the peace process. Viewed as being relatively “liberal” on most social justice issues and on Israel-Palestinian matters, the AJCongress in the 21st century is re-examining a number of its stances, including its strong “separationist” position in church-state affairs.

The AJCongress is a membership organization with approximately 40,000 members; in 2005 it operated out of 15 chapters, with offices in Jerusalem and Paris, and a presence in Moscow and Brussels. Its 2005 budget was \$6.5 million, raised from membership dues, independent campaigns, allocations from Jewish federations, and other sources. The small budget – relative to its sister defense agencies, the Anti-Defamation League and the American Jewish Committee – is deceptive. While many predicted the demise of the AJCongress during the 1990s – particularly after merger talks with the AJC broke down – and while it is clearly in the “second tier” of defense agencies, the AJCongress in the first decade of the 21st century is hardly moribund. The core of its operation, CLSA, is active, and the AJCongress has added an Office of Jewish

Life. The AJCongress holds national conventions annually, and is administered by a Governing Council. The publications *Congress Monthly* and the scholarly *Judaism*, which for many years was one of the premier intellectual journals in American Jewish life, are produced under American Jewish Congress auspices.

AMERICAN JEWISH HISTORICAL SOCIETY, scholarly organization founded in 1892. An interest in the Jewish experience on the American continent was brought into a formal framework with the founding of the Society on June 7, 1892, in New York City.

The need to collect and preserve the records of the native Jewish population and their forebears, as well as those of subsequent Jewish immigrants, became the serious concern of Abram S. Isaacs, Bernhard Felsenthal, Leo N. Levi, and, especially, Cyrus Adler, then of the United States National Museum. To study American Jewry required research materials and thus it was necessary to begin a serious collection of books, manuscripts, pamphlets, periodicals, newspapers, and historical memorabilia and objects of art. The Society’s first president Oscar S. Straus declared at the initial meeting of the American Jewish Historical Society, “Every nation, race, and creed, which contributed toward the building of this great continent and country, should from motives of patriotism gather up its records and chronicles, so that our historians may be able to examine and describe the forces of our national and political existence.” In 1966 the objectives of the Society were restated as “... the collection, preservation, exhibition, publication, and popularization of material of every kind having reference to the settlement, history, and life of Jews on the American continent, and the promotion and encouragement of research in, and the study of, Jewish history in general, and particularly in its relation to American Jewish history, and in connection with the causes and nature of Jewish emigration from various parts of the world to this continent.”

For over half a century the American Jewish Historical Society was housed in the buildings of the Jewish Theological Seminary of America in New York City. In 1968, after a few years in rented quarters in the same city, it moved to its own building on the campus of Brandeis University in Waltham, Mass.; the new building was financed by the bequest of Lee Max Friedman, the Society’s fourth president. The holdings of the Society consist of the collections and writings of some of the pioneers of Jewish historical research, such as A.S.W.

*Rosenbach, Max J. *Kohler, George Alexander *Kohut, Philip *Cowen, Samuel Oppenheim, Jacques Judah *Lyons, Bernhard Felsenthal, N. Taylor Phillips, and Leon Huehner, as well as the theater and music collection of Abram Kanof.

The Society published 58 volumes of its *Publications*, which became a quarterly with volume 38, and assumed the title *American Jewish Historical Quarterly* with volume 51. Selected studies from these publications were reprinted in *The Jewish Experience in America* (5 vols. (1969), ed. by A.J. Karp). The Society's official publication is now called *American Jewish History*. The contents of this journal for the years 1893–1979 are available on ADAJE, an electronic repository of digitized American Jewish periodicals. The Society's quarterly newsletter is called *Heritage*. The Society also issues a monograph series, *Studies in American Jewish History*, and the *American Jewish Communal Histories* series. Each spring it sponsors American Jewish History Week; it also aids in the arrangement of exhibitions of American Jewish history and the publication of various bibliographies and literature. The Society's presidents have included Oscar S. Straus, Cyrus Adler, A.S.W. Rosenbach, and Lee Max Friedman and, more recently, Salo W. *Baron, Abraham Kanof, Bertram W. *Korn, Jacob R. *Marcus, Leon J. Obermayer, David de Sola *Pool, Abram Vossen Goodman, and Sidney Lapidus.

AMERICAN JEWISH JOINT DISTRIBUTION COMMITTEE (known as JDC or **The Joint**), independent, non-political American Jewish relief and welfare organization dedicated to providing both emergency aid and long-term assistance to individual Jews and Jewish communities throughout the world outside North America. In 2004, after 90 years of service, JDC was operating in over 60 countries, from the former Soviet Union and Eastern Europe to South America, Asia, North Africa, and the Middle East. Nearly one in 10 Jews outside Israel and the United States and one out of four in Israel were benefiting from JDC programs.

In World War I

JDC was founded in 1914 shortly after the outbreak of World War I to send aid to the Jews of Palestine and Eastern Europe who were in danger of starvation. The first call for help came in a telegram sent in August 1914 by United States Ambassador to Turkey Henry *Morgenthau to prominent American Jewish leader Jacob *Schiff, requesting \$50,000 for the Jews of Palestine. Subsequent pleas for help from Jewish communities in Eastern Europe led to the formation of both the Central Relief Committee by American Orthodox Jews and the American Jewish Relief Committee by prominent German-American Jews. On November 27, 1914, the two groups agreed to coordinate the distribution of relief shipments to Jews overseas

within a common framework – the Joint Distribution Committee of American Funds for the Relief of Jewish War Sufferers – under the chairmanship of Felix M. *Warburg. The socialist People's Relief Committee joined them in 1915. The diversity of the three groups comprising the JDC ensured that JDC would assist Jews of every religious and political persuasion. By the end of World War I, JDC's leaders had concluded that rescue and relief to Jews in need would not be sufficient. JDC should also undertake to rebuild Jewish communities in Eastern Europe destroyed by the war. Thus, Rescue, Relief and Reconstruction began to emerge as the threefold mission of JDC.

During the course of World War I, JDC raised more than \$16,000,000 (equivalent to \$236,000,000 in 2005) for relief supplies. These funds were distributed overseas by local committees in Europe and Palestine.

Interwar Period

Immediately following World War I, in coordination with the American Relief Administration, JDC sent convoys of trucks with food, clothing, and medicines to Jewish communities in Eastern Europe which had been devastated by the war and by the subsequent regional conflicts and pogroms. Teams of JDC representatives brought in these supplies and established soup kitchens to ward off starvation. The situation in Poland and Russia at that time was still unstable and private militias roamed the countryside. In 1920 a Red Army militia murdered two JDC workers, Rabbis Israel *Friedlander and Bernard *Cantor.

At the same time that immediate relief needs were being addressed, JDC turned its attention to the rebuilding of Jewish communities in Eastern Europe. In the area of health care, JDC financed the repair of damaged Jewish hospitals, provided medical equipment and supplies, and sent more than 100 doctors, social workers, and public health experts from the United States, under the direction of Dr. Boris Bogen, to institute health programs and train local medical personnel. In 1921, JDC initiated the founding of a local medical society in Poland, *TOZ (Towarzystwo Ochrony Zdrowia Ludnosci Zydowskiej, Society for Safeguarding the Health of the Jewish Population) to supervise these medical activities. JDC also supported *OZE, the Russian Jewish Health Organization.

More than 200,000 Jewish children in Eastern Europe had been orphaned by the war. To care for them and for children whose parents could not support them, JDC established orphanages, kindergartens, and summer camps, and provided food supplements and medical and dental treatment for children in need. In 1923 JDC founded *CENTOS (Federation for the Care of Orphans in Poland), an orphan care group that functioned in Poland until World War II.

One of JDC's priorities was the restoration of Jewish religious and cultural life in Eastern Europe. JDC rebuilt community institutions such as synagogues and ritual baths, which had been destroyed during the war, and provided aid to Jewish schools and yeshivot.

To foster economic recovery in Jewish communities in Eastern Europe, JDC joined together with the Jewish Colonization Association in 1924 to found the American Joint Reconstruction Foundation. The Foundation set up a network of cooperative credit institutions – *loan kassas* – that provided low-interest loans to Jewish craftsmen and small businessmen in towns and villages throughout Eastern Europe. Interest-free loans were granted to the poorer families. In cooperation with *ORT (the Society for Crafts and Agricultural Labor among Jews in Russia, later known as the Organization for Rehabilitation through Training), JDC established vocational training courses for young adults. These measures eased the economic crisis for hundreds of thousands of Jewish families.

In Palestine, once urgent postwar relief needs had been met, JDC began to implement economic, social, and cultural reconstruction programs. In the area of medical care, JDC funded the Malaria Research Unit, which helped combat malaria in Palestine. JDC helped finance the American Zionist Medical Unit sent to Palestine by *Hadassah in 1921, the forerunner of the Hadassah Medical Organization in Palestine.

To care for some 5,000 children orphaned as a result of World War I, JDC established the Palestine Orphan Committee, which supervised these children from 1919 to 1929 until they could become self-supporting. In the area of education, JDC supported schools and yeshivot and provided funds to the newly established Hebrew University of Jerusalem.

In 1922, JDC, in cooperation with the Jewish Colonization Association, established the Central Bank of Cooperative Institutions, which financed agricultural projects in Palestine such as the developing citrus industry. JDC helped establish the Palestine Economic Corporation in 1925 to promote economic development in Palestine, provided subsidies to the Rutenberg Hydroelectric Association, and created a Kuppas Milveh which granted small loans. JDC spent more than \$8 million in Palestine during the years 1914–32.

One of JDC's best-known and most innovative projects, the Agro-Joint, was created by JDC during the 1920s in the newly established communist Soviet Union. In 1924, with the consent of the Soviet government, JDC set up the American Jewish Joint Agricultural Corporation (Agro-Joint) to promote agricultural settlement among Jews. Agro-Joint's purpose was fully supported by the Soviet authorities, who favored redirecting Jewish economic activity from commerce to manual labor. Agro-Joint also sought to solve the problem of Jews who were left without a livelihood when the communists outlawed their professions as tradesmen or religious officials. Between 1924 and 1938, under the direction of Russian-born agronomist Dr. Joseph *Rosen (1877–1949), Agro-Joint helped settle more than 100,000 Jews in agricultural colonies in the Crimea and the Ukraine.

In the late 1930s, however, the Soviet government under Stalin became increasingly suspicious of foreign organizations, and a number of Agro-Joint staff members were arrested and executed. In 1938, faced with growing hostility on the part of the Soviet authorities, Agro-Joint disbanded its operations in

the Soviet Union. During World War II, the colonies established by Agro-Joint were overrun by the German armies and most of the colonists were murdered.

By the mid-1920s, JDC, which had been created as an ad hoc body, had begun to function as a major international Jewish relief organization. Some JDC leaders believed that with the basic relief and reconstruction of Jewish life in Eastern Europe under way, JDC's goals had been achieved and the organization should disband. This opinion was expressed again during the Depression years when JDC's income declined drastically.

However, recurring crises in Eastern and Western Europe and the continuing needs of Jewish communities in Palestine, the Soviet Union, and elsewhere showed the need for a permanent organization. In 1931, JDC was officially incorporated in New York State as the American Jewish Joint Distribution Committee.

The rise of Hitler in 1933 confronted JDC with new challenges. In addition to its reconstruction programs in Eastern Europe, JDC now provided support to the Jewish community of Germany, which became increasingly impoverished under Nazi rule. From 1933 to 1939, JDC spent \$5 million in Germany, subsidizing medical care, Jewish schools, welfare programs, and vocational training. With the German invasion of Austria and its incorporation of Czechoslovakia in 1938 and 1939, JDC extended its support to the Jewish communities in those countries as well. Following the rise of Hitler, JDC transferred its European headquarters from Berlin, where it had been since 1922, to Paris.

JDC's primary efforts from 1933, however, were directed toward assisting the tens of thousands of German, Austrian, and Czech Jews who sought desperately to emigrate from German-occupied countries and to find safe havens abroad. JDC helped the emigrants with travel expenses, provided them with food, shelter, and medical care when they were stranded en route, assisted them in obtaining berths on ships and places on trains, helped them in obtaining visas and paid landing fees so that they could enter countries of refuge. In 1939, when the German ship *St. Louis*, with more than 900 Jewish passengers fleeing from Germany aboard, was denied permission to land in Cuba, JDC arranged for the passengers to be accepted by England, Holland, Belgium, and France, so they would not have to return to Germany. Most passengers, not only those in England, survived.

After the Dominican Republic offered to take in refugees at the *Evian Conference in 1938, JDC founded the Dominican Republic Settlement Association (DORSA), which established an agricultural settlement for refugees in Sosua. In 1941, when 2,000 Polish Jewish refugees in Lithuania received visas to Japan, JDC subsidized their travel expenses. When over 1,000 *"illegal" immigrants bound for Palestine were stranded in Kladovo, Yugoslavia, in 1940, JDC supported them for an entire year while they waited for a ship to take them to safety. The ship did not arrive before the German invasion of Yugoslavia in 1941, and the Germans subsequently murdered most of the refugees.

By 1939, JDC had helped more than 100,000 refugees emigrate from Germany. In 1940, JDC was assisting refugees in transit in more than 40 countries in Eastern and Western Europe, Asia, and Latin America.

In World War II

After the outbreak of World War II, until the United States entered the war, JDC could still function legally in German-occupied countries. In Poland, for example, JDC opened shelters and soup kitchens for the thousands of Jewish refugees who crowded into the cities. In the spring of 1940, JDC shipped tons of foodstuffs to Poland for Passover. JDC continued to support hospitals, child-care centers, and educational and cultural programs in occupied Poland. After the establishment of the Warsaw ghetto in November 1941, JDC-Warsaw supported the soup kitchens, the Jewish hospitals, and the educational and cultural programs in the ghetto. In Cracow, JDC supported the *Jüdische Soziale Selbsthilfe* (JSS), which distributed food, clothing, and medicines to ghettos and labor camps in the area of the *Generalgouvernement* (German designation for occupied Central Poland). Of the three million Jews in Poland in 1941, some 600,000 were receiving assistance from JDC.

With the entry of the United States into the war in December 1941, JDC – an American organization – could no longer operate legally in enemy countries. In countries such as Poland and France, local JDC representatives now had to operate underground. Furthermore, JDC could no longer transfer funds to enemy countries because U.S. State Department regulations prohibited such transfers and stipulated that a U.S. Treasury Department license must be obtained for any transfer of funds overseas, even to neutral countries. In response, JDC authorized local representatives in German-occupied countries to borrow money locally from wealthy Jews on the promise of repayment by JDC after the war (*loans après*).

JDC representatives responded in different ways to the regulations imposed by the American government. The JDC administration in New York, headed by Chairman Edward M.M. Warburg, advocated strict adherence to the State Department guidelines. However, the overseas professional staff, headed by Morris Troper, the director of European Affairs, and his deputy and successor, Dr. Joseph Schwartz, sought greater flexibility. Schwartz, in particular, who headed JDC's European headquarters in Lisbon from 1940 until the end of the war, supported illegal rescue and resistance activities in German-occupied Europe. As a rule, those in the United States were more sensitive to the requirements of American regulations and would not jeopardize the JDC's standing. Those on the ground in Europe were confronted more directly with the desperation of the situation and were more willing to employ extra-legal means.

In June 1940, shortly before the Germans occupied Paris, Troper and Schwartz left Paris and transferred JDC's European headquarters to neutral Lisbon. There, Schwartz leased every available ship to enable the thousands of refugees arriving in Lisbon to proceed to safe havens in North and South America.

Schwartz provided funds to legal and illegal Jewish organizations in France, including the Jewish underground resistance organization *L'Armée Juive*, whose treasurer, Jules Jefroykin, became the JDC representative in France in 1941.

In neutral Switzerland Saly *Mayer, the local JDC representative, channeled JDC funds to Jews throughout Occupied Europe and, on Schwartz's instructions, smuggled funds to France as well. Schwartz authorized the use of funds smuggled into France by couriers, or raised by means of loans, to support 7,000 Jewish children in hiding in France and to smuggle over 1,000 children to Switzerland and Spain. In 1944, JDC spent more than \$1 million on rescue in France alone.

After the United States' entry into the war, the JDC representatives in the Warsaw ghetto – Isaac Giterman, David Guzik, Leib Neustadt, and the historian Emanuel *Ringelblum – continued their activities underground. By means of loans, they secretly supported the soup kitchens, the “house committees” that provided food and educational programs for children, the underground schools and newspapers, and the underground cultural activities. In 1943, Guzik used JDC funds to help finance preparations for the Warsaw ghetto revolt.

In Shanghai, where JDC was providing daily meals to 8,000 impoverished Jewish refugees from Central and Eastern Europe, the United States' entry into the war in December 1941 threatened the continued existence of the soup kitchens. Laura Margolis, the JDC representative in Shanghai, persuaded the Japanese, who had occupied Shanghai, to allow her to continue operating the soup kitchens by means of loans from members of the local Jewish community. Interned as an enemy alien in February 1943, Margolis was later released in a prisoner exchange.

JDC relief and rescue activities continued during 1943–44. JDC sent relief parcels to concentration camps by way of Lisbon, and to Polish Jewish refugees in the Soviet Union via Teheran. JDC helped finance the activities of the War Refugee Board (WRB), established by the United States Government in 1944. Through the WRB, JDC transmitted \$100,000 to Swedish diplomat Raoul *Wallenberg to facilitate the rescue of tens of thousands of Jews in Hungary.

With the limited resources at its disposal, JDC made valiant efforts to provide relief and rescue to the Jews of Europe during the Holocaust period. From a welfare agency engaged in temporary relief and reconstruction primarily in Eastern Europe and Palestine, it emerged as the only Jewish organization involved in immigration, refugee aid, and rescue operations in virtually every part of the globe. JDC was not able to save the overwhelming majority of Europe's Jews, but there is no doubt that hundreds of thousands of Jews who escaped from Nazi Europe, owed their lives to JDC.

Early Postwar Period

During the war, JDC's income was limited. Expenditures fell from \$8.4 million in 1939 to \$5.7 million in 1941, and totaled only \$52 million for the entire war period. Following the war, there was a dramatic increase in JDC income – from \$25 mil-

lion in 1945 to more than \$70 million in 1948. In 1947, more than one half the survivors in Europe – some 700,000 Jews – received help from the JDC.

During the years from 1945 to the early 1950s, JDC cared for over 200,000 Jews in Displaced Persons camps in Europe, providing them with food supplements, medical care, and clothing, and setting up schools and religious and cultural programs. JDC food shipments to Romania and Hungary saved hundreds of thousands of Jews there from starvation. Throughout liberated Europe, JDC aided in the care of child survivors, in the tracing of relatives, in the reestablishment of Jewish religious and cultural life, and in the immigration of survivors to North and South America, Australia, and countries in Western Europe.

Under the influence of Joseph Schwartz, JDC supported the *Berihah, the “illegal” movement of Jews from Eastern to Western Europe, and from there to Palestine. Thousands of Jewish *“illegal” immigrants interned by the British on Cyprus were cared for by JDC, which provided medical, educational, and social services to the Jewish detainees.

During the years following World War II, JDC invested heavily in the reconstruction of Europe’s Jewish communities. With the aid of funds from the *Conference on Material Claims Against Germany, JDC helped rebuild synagogues, hospitals, schools, and community centers in France, Italy, Belgium, Holland, and other countries. In 1949, JDC founded the Paul Baerwald School of Social Work in Paris to help war-torn Europe’s survivors rebuild their lives. In France, JDC helped establish the Fonds Social Juif Unifié (FSJU) the chief fundraising body of the French Jewish community. In the 1950s and 1960s, JDC helped the French Jewish community meet the challenge of absorbing more than 100,000 Jewish immigrants to France from Morocco, Tunisia, and Algeria.

JDC became involved in North Africa itself during World War II, when camps for Jewish refugees were established in Morocco. From the 1950s on, JDC has supported educational, social, medical, and welfare programs for Jews in Morocco, Tunisia, Algeria, Ceuta, and Melilla. JDC supports medical programs conducted by OSE (Oeuvre de Secours aux Enfants) and educational programs conducted by the *Alliance Israélite Universelle, Lubavitch, Ozar Hatorah, and ORT. Beginning in 1949, JDC established similar programs in Iran.

After the establishment of the State of Israel in 1948, JDC subsidized the immigration of hundreds of thousands of Jews to the fledgling state from Europe and from countries in North Africa and the Middle East. In 1949 JDC financed Operation Magic Carpet, the airlift of some 50,000 Yemenite Jews from Aden to Israel, and Operation Ezra and Nehemiah, which brought thousands of Iraqi and Kurdish Jews to the Jewish state.

Many new immigrants to Israel, among them Holocaust survivors, were handicapped or suffering from chronic illnesses. The young state of Israel was not equipped to provide the long-term care they needed. In 1949 therefore, JDC in cooperation with the Jewish Agency and the Israeli govern-

ment, founded *MALBEN to provide institutional care and social services to handicapped and chronically ill immigrants. MALBEN, which from 1951 was financed solely by JDC, established hospitals, clinics, and old-age homes and fostered the development of private and public organizations in Israel for the care of the handicapped. From 1957, MALBEN cared for veteran Israelis as well as new immigrants. In 1958 JDC established the Paul Baerwald School of Social Work at The Hebrew University of Jerusalem to address the social problems of the new Jewish state.

At the end of 1975 JDC transferred its MALBEN institutions to Israeli government authorities. In 1976, JDC established JDC-Israel and moved its Israel headquarters from Tel Aviv to Jerusalem. Henceforth, JDC-Israel would develop social service programs for populations in need in Israel through partnerships with Israeli government and non-profit agencies.

In Eastern Europe

Dramatic changes in JDC activities during the second half of the 20th century occurred in Eastern Europe and the Soviet Union. Immediately following World War II, JDC was active in East European countries, helping survivors and aiding in the reconstruction of Jewish communities. After the Communist takeover in Eastern Europe, JDC was expelled from Poland, Romania, and Bulgaria in 1949, from Czechoslovakia in 1950, and from Hungary in 1953. Only in Yugoslavia was JDC permitted to continue its activities.

In 1957, JDC was readmitted to Poland to care for 19,000 repatriates from the Soviet Union but was expelled again in the wake of the 1967 Six-Day War. That same year, however, JDC was readmitted to Romania, where it supported Jews in need and provided kosher food and religious services through the Federation of Jewish Communities of Romania (FEDROM). In August 1967, Charles *Jordan, JDC’s executive vice chairman, was murdered in Prague under mysterious circumstances.

In 1980, through the efforts of JDC’s Executive Vice President Ralph I. Goldman, JDC resumed direct operations in Hungary, and in 1981, in Czechoslovakia and Poland. JDC concentrated initially on aid to elderly Holocaust survivors in these countries and on the establishment of kosher canteens, support for cultural activities, and the provision of religious books and supplies. JDC subsequently expanded its activities to include educational programs for children and the development of local Jewish community leadership.

With the opening of the gates to Jewish emigration from the Soviet Union in the 1970s and 1980s, JDC set up transit centers for the transmigrants in Vienna, and in Rome, Ostia, and Ladispoli. To help absorb over 840,000 immigrants who arrived in Israel from the Soviet Union during the 1980s and 1990s, JDC established vocational training courses, youth programs, and special projects for the immigrants, particularly those from Bukhara and the Caucasus.

Ethiopian Jewry

With the arrival of Ethiopian Jews in Israel through Operation Moses in 1984–85, JDC established vocational training courses,

health education projects, family counseling, and youth projects to aid in their absorption. In the 1980s JDC initiated medical and agricultural assistance programs in Ethiopia and, in 1990–91, provided food and medical and social services to Ethiopian Jews waiting in Addis Ababa to immigrate to Israel. JDC played a major role in facilitating Operation Solomon, the airlift of some 14,000 of these Ethiopian Jews to Israel in 1991. Among the innovative programs designed by JDC for the Ethiopian immigrants was PACT (Parents and Children Together) – begun in 1998 in partnership with American Jewish Federations and Israeli agencies – which supports early-childhood education for Ethiopian-Israeli preschoolers.

In Israel

During the 1970s, 1980s, 1990s, and 2000s, JDC-Israel continued its assistance to weak and disadvantaged populations in Israel. Programs for the care of the elderly were initiated and developed by ESHEL, the Association for the Planning and Development of Services to the Aged in Israel, founded in 1969 in partnership with the Israeli government. Research in the areas of health, aging, immigration, children and youth, and disabilities was carried out by the Brookdale Institute of Gerontology and Human Development, established in 1974 in partnership with the Israeli government and renamed the Myers-JDC-Brookdale Institute in 2003. During the 1970s, JDC took part in the development of a network of community centers in Israel and, in 1976, initiated the Joseph Schwartz Program to train senior staff for these centers. Through the Center for Social Policy Studies in Israel, established in 1982 and renamed the Taub Center in 2003, JDC provides data on economic and social trends in Israel to national decision makers. ELKA, the Association for the Advancement and Development of Manpower in the Social Services, founded in 1984, conducts training courses for managers in Israel's civil service.

Beginning in the 1950s, JDC placed special emphasis on programs for children in Israel. JDC supported voluntary agencies for handicapped children including AKIM for the mentally retarded, MICHA and SHEMA for the deaf and hearing-impaired, and ILAN for children with neuro-muscular disorders. JDC-Israel's Mifneh program, created in 1987, encouraged potential school dropouts to remain in school, while subsequent programs introduced innovative teaching methods into Israeli schools. During the 1990s, JDC-Israel helped found a network of emergency centers for abused children and, in 1998, together with the government of Israel and the UJA-Federation of New York, JDC established Ashalim to coordinate the development of programs in Israel for children at risk. In 2002, in the wake of the outbreak of terror attacks in Israel, JDC-Israel, with funding from the United Jewish Communities/Federation Israel Emergency Campaign, provided summer camps for 300,000 Israeli children.

Since the 1990s, JDC has placed increasing emphasis on programs to promote employment among Arabs, the ultra-Orthodox, and the handicapped. In 2005 JDC launched a part-

nership with the Israeli government to promote employment among these and other underemployed populations.

Throughout its history, JDC has recognized the importance of Jewish tradition and education. JDC was an important source of support for yeshivot in Europe and Palestine during the 1920s and 1930s. Following World War II, JDC played a major role in rebuilding yeshivot, which had been destroyed during World War II, and in supporting Jewish educational institutions in Jewish communities throughout the world.

In the Former Soviet Union

In 1988, after an absence of 50 years, JDC returned to the Soviet Union. During its official absence, JDC had provided aid to Soviet Jews in need by indirect means. In 1988, however, Ralph Goldman negotiated JDC's resumption of open operations in what was soon to become the Former Soviet Union (FSU).

JDC faced a double challenge in the FSU: how to reawaken Jewish identity in a Jewish population that had been cut off from the religious, cultural, and intellectual sources of Jewish life for 70 years, and how to create a Jewish community infrastructure where none existed. To strengthen Jewish knowledge and identity, JDC sent Judaica libraries (sets of Jewish texts in Russian translation) to Jewish communities in the FSU. By 2005 there were more than 180 libraries in over 100 communities. JDC encouraged the development of university courses on Jewish subjects, subsidized the Moscow Cantorial Academy and the Mekor Chaim Judaic Studies educational center in Moscow, and provided Russian translations for the Jewish prayer book, the Passover *Haggadah*, the Pentateuch, and other Jewish texts. JDC created educational materials for Jewish children, including a Russian-language version of *Sesame Street*, subsidized Jewish schools, and organized summer camps. JDC sent ritual items and kosher food for the holidays, and organized communal *seders* and other religious activities.

To meet the needs of indigent elderly Jews, many of them Holocaust survivors, JDC established community-based welfare centers called Heseds to supply kosher food and medical care. By 2005, there were 174 Hessed centers serving 233,000 elderly Jews across the FSU. In addition to providing food, medical assistance, and home care, these centers distributed fuel for heating and blankets for the cold Russian winters.

To foster community development in the FSU, JDC established a network of 184 Jewish community centers, sent Russian Jewish activists to leadership training courses in Israel, and helped establish 27 Hillel centers for Jewish students and young adults. In late 2002, JDC began creating Jewish family services modeled on those in the United States. By the end of the 1990s, JDC's program in the FSU was the single largest JDC program, with local offices in 15 cities across the FSU.

Additional Activities

JDC's programs since the 1990s address the changing needs of Jewish communities all over the world. In Western Europe, JDC has concentrated on strengthening community development and fostering inter-community cooperation. JDC

supports the European Council of Jewish Communities and the European Union of Jewish Students, and in 1994 established the European Center for Jewish Leadership (LEATID-EUROPE).

In Eastern Europe, JDC has concentrated on strengthening Jewish education and Jewish identity among Jewish youth. In Poland, JDC conducts seminars at the summer camp at Srodoborow and has established a resource center for educational materials in Warsaw. JDC supports the Association of Holocaust Children in Poland, whose 500 members were hidden as children during the Holocaust. In Hungary, JDC subsidizes the Anne Frank High School in Budapest and supports the Ronald S. Lauder Foundation/American Jewish Joint Distribution Committee International Summer Camp at Szarvas. The camp hosts 2,000 youngsters per year from 25 countries in central and Eastern Europe and the Former Soviet Union.

JDC continues to see its role as providing rescue and relief in emergency situations. The outbreak of fighting in Yugoslavia in 1992 led JDC to undertake rescue efforts there. Through its connections with the Yugoslav welfare agency La Benevolencija, and its good relations with all sides in the war, JDC was able to send food and medications for distribution in beleaguered Sarajevo. As fighting intensified, JDC organized an airlift from Sarajevo and then a series of bus convoys from the city, which brought over 2,000 individuals (about half of them non-Jews) to safety. JDC aided in the immigration of the refugees to Israel and elsewhere, and in rebuilding the former Yugoslavia's remaining Jewish communities.

The economic crisis in Argentina in 2000 led to an emergency JDC welfare initiative to assist tens of thousands of Jews who were suddenly impoverished. At its peak in 2003, this initiative provided relief to over 36,000 people. JDC had been active in South America since the 1930s, when JDC sought havens there for Jewish refugees from Europe. JDC has supported Jewish education and community programs in Argentina and in other communities, such as Chile and Uruguay. In 1987 JDC established the Latin America Training and Research Center for the Development of Jewish Communal Leadership (LEATID), and in 1991 renewed its activities in Cuba after an easing of restrictions there.

Changes in the political climate have enabled JDC to resume activities in a number of Arab and Moslem countries. JDC was able to provide direct assistance to Jews in Egypt from 1982, to aid the Jews in Yemen from 1990, and, in the 1990s, played a pivotal role in the departure of most of the remaining 4,000 Jews from Syria. In 1992, JDC resumed activities in Turkey. JDC has developed an extensive program in India and assists the small numbers of Jews in other Asian countries.

JDC receives a major part of its funding for overseas activities from the North American Jewish community.

JDC's global activities include non-Jews as well as Jews. In 1986, JDC established the International Development Program (IDP), to meet the urgent needs of populations around the world following natural or other disasters. JDC-IDP has

provided aid to 50 countries worldwide, including Armenia and Turkey following earthquakes, and Rwanda, Bosnia, and Kosovo following civil war, and has established a Palestinian-Israeli healthcare program in the West Bank and Gaza. It provided relief and reconstruction to South Asian communities devastated by the tsunami in 2004.

In the 21st century, JDC continues to define its mission as Rescue, Relief, and Rehabilitation. In the pursuit of these goals, JDC seeks to strengthen Jewish identity, to build Jewish communities, and to preserve the Jewish cultural heritage.

AMERICAN SEPHARDI FEDERATION (ASF). The American Sephardi Federation was founded in 1973. In 2002 it affiliated with Sephardic House to create one, stronger organization. With its main office in New York City, and regional offices in Miami, Seattle, and Los Angeles, the American Sephardi Federation with Sephardic House is a national Jewish organization dedicated to ensuring that the history, legacies, and traditions of the great Sephardi communities throughout the world be recorded, remembered, and celebrated as an integral part of the Jewish heritage. The Sephardim were the first Jews to settle in the Western Hemisphere, and the ASF/SH seeks to educate the broader American Jewish and non-Jewish communities about the unique history and values it perpetuates, while revitalizing a sense of affiliation and commitment among the younger Sephardi generations. ASF/SH endeavors to foster understanding and cooperation with significant members of the non-Jewish community of the countries where Sephardim lived in peace and harmony for so many generations.

The activities of the American Sephardi Federation with Sephardic House include a Sephardi library, publications, and cultural and educational programming dealing with the Sephardi experience, including the International Sephardi Film Festival, the only permanent Sephardi exhibition gallery, its unique publication, the *Sephardi Report*, and a scholarship program for Sephardi studies. Since its arrival at the Center for Jewish History, New York, which is the joint home of YIVO, The Leo Baeck Institute, Yeshiva University Museum, and the American Jewish Historical Society, the archival holdings and

library of ASF have been enriched with valuable records of personal and community history.

AMERICAN SOCIETY FOR JEWISH MUSIC (ASJM), organization founded in New York in 1974. Its precursors included the *Makhon Eretz Yisraeli le-Mada'ei ha-Musikah* (MAILAMM; 1932–39), established in 1932 by Miriam Zunzer and which, in 1934, became affiliated with the Hebrew University of Jerusalem; and the Jewish Music Forum (1939–63), created by Abraham Wolf Binder and which reemerged as the Jewish Liturgical Music Society of America (1963–74). Evolving from the latter, the ASJM earned increasingly greater international stature under the leadership of Albert *Weisser, its first president, who envisioned much wider goals for the society – expansion into folk, popular, and art music as well as the publication of a scholarly journal, *Musica Judaica* (issued almost annually since 1975), which he and Israel J. *Katz coedited. The ASJM's membership includes cantors, composers, educators, musicologists, performers, and interested laymen. The society presents a variety of annual public programs, sponsors seminars and workshops at which scholars and composers discuss and analyze works in progress, and organizes concerts, recitals, and conferences relating to cantorial issues and other music of Jewish interest. Upon Weisser's untimely death, Paul Kavon succeeded him as president (1982–91), followed by Jack Gottlieb (1991–97), Hadassah Markson (1997–2003), and Michael Leavitt (2003–). Following Katz as editor of the journal were Neil Levin and Alexander V. Knapp (vols. 11–13), Irene *Heskes (vol. 14), and Israel J. Katz and Arbie *Orenstein (vols. 15–).

AMERICAN ZIONIST MOVEMENT (AZM), umbrella organization for American Zionist organizations. AZM is composed of 21 Zionist membership organizations and agencies. It was created to be a programming, educational, and information arm for American Zionism. AZM is the successor organization of the American Zionist Emergency Council (organized in 1939), the *American Zionist Council (1949), and the American Zionist Federation (May 1970). Each successive organization was generated by changing political and social circumstances in the United States and the Middle East.

Established in 1993, AZM set out to heighten the profile and relevancy of organized Zionism in the U.S. through greater activism on a wide range of political and social issues of concern to American Jews. Like all members of the WZO, AZM's unifying principles are those of the Jerusalem Program.

The American Zionist Movement has its own mandate for action in the United States. It has set our own goals and objectives to involve more Jews in Zionism and to take an activist posture on the Jewish scene. AZM defends Israel's cause with vigor and confidence. It offers the next generation of

young Zionists opportunities for leadership and action in the Zionist cause; it attempts to link young Jewish students confronting the problems on American campuses today and to strengthen the links between Jewish faculty and students. It promotes and enhances creative Jewish continuity and aims at forging stronger bonds between American Jews and Israel that result from personal contact with Israel.

AMÉRY, JEAN (Hans (Chaim) Maier); 1912–1978), Austrian writer and essayist. Born in Vienna, Améry started his career as a bookseller and thereafter studied philosophy and literature in Vienna. His first publications appeared under the name Hanns Mayer; together with Ernst Mayer, he published the journal *Die Bruecke* in 1934. In 1935 he wrote *Die Schiffbruechigen*, a novel favorably reviewed by Thomas Mann and Robert Musil. In this work Améry created an alter ego: the novel's protagonist, Eugen Althager, an unemployed Jewish intellectual. In 1939 he fled Austria for Belgium and was detained in South France in 1940. A year later Améry illegally returned to Belgium and became a member of the Communist resistance movement. Améry was captured by the Gestapo in 1943 and sent to Auschwitz, Buchenwald, and later Bergen-Belsen. After being liberated from Bergen-Belsen in 1945 he returned to Brussels. It was in Brussels where his wife died, and where he started writing political and literary essays under his pseudonym Hans Mayer for various Swiss and Dutch journals. After 1955 he published under his anagrammatic nom de plume Jean Améry, a name that symbolized his admiration for the humanitarian French ideals of liberty and equality. Known primarily for his essay writing, Améry was influenced by existentialism. He was particularly fond of the writings of Jean-Paul Sartre, whom he met in 1945. One of Améry's first essays was entitled *Tortur*. It described and analyzed his experiences under Nazi interrogations and in concentration camps. *Jenseits von Schuld und Suehne* was a survivor's testimony against the Nazi regime that railed against oblivion. With the help of Helmut Heissenbuettel, Améry published his most important texts commencing in the mid-1960s: *An den Grenzen des Geistes (At the Mind's Limits)*, 1980), which depicted the limits of the intellectual's mind in the process of losing its basic quality of transcendence; *Ueber das Altern (On Aging)*, 1994), and *Unmeisterliche Wanderjahre*. This trilogy was favorably received by intellectuals like Alfred Andersch and Elias Canetti, who praised it for the intersection of autobiographical and contemporary historical perspectives. Jean Améry's writing career also included works of fiction. His most famous literary work *Lefeu oder der Abbruch*, published in 1974, detailed the life of a Holocaust survivor. His final piece of fiction appeared in 1978 and bore the title, *Charles Bovary, Landarzt*. The subject of suicide appeared in his 1976 publication *Hand an sich legen. Diskurs ueber den Freitod (On Suicide)*, 1999), and in 1978, Améry took his own life in a Salzburg hotel room.

Améry was a member of the *Akademie der Kuenste Berlin*, corresponding member of the *Deutsche Akademie fuer Sprache und Dichtung*, and a member of the German PEN-

Club. The *Jean-Améry-Preis*, an award for essay writing, was awarded for the first time in 1982.

AMERY, LEOPOLD CHARLES MAURICE STENNETT (**Mauritz**; 1873–1955), pro-Zionist British statesman. In 1917 Amery assisted Vladimir *Jabotinsky in obtaining official consent for the formation of the *Jewish Legion and, as assistant secretary to the war cabinet (1917–18), drafted one of the formulas which eventually became the *Balfour Declaration. From 1924 to 1929, when Amery was secretary of state for the colonies, Palestine enjoyed a peaceful period and in his memoirs, *My Political Life*, 3 vols. (1953–55), he takes pride in this achievement. As a member of Parliament, he fought the anti-Zionist policies of the British government and voted against the White Paper of 1939. In 1946 Amery testified in the same spirit before the Anglo-American Committee of Inquiry on Palestine. Amery's famous speech in the House of Commons in May 1940 helped to bring Winston Churchill to power as prime minister. In 1950 Amery was one of the first major British politicians to visit the new state of Israel.

Many years after Amery's death, historical research revealed that Amery's mother, Elisabeth Leitner (*née* Sapher or Sapier), was Jewish, a member of a prominent Budapest family which had converted to Protestantism about 1840 and whose members moved to Britain from about 1850 on. Amery had concealed his Jewish background all his life, while working in an influential way on behalf of Zionist causes. Amery's background made all the more mysterious the actions of his eldest son JOHN (1912–1945), who, during World War II, resided in Germany and tried to recruit British prisoners of war to fight for Germany against the Soviet Union. As a result, John Amery was hanged for treason in 1945. Amery's younger son JULIAN (1919–1996) was a Conservative member of Parliament from 1950 until 1992 and was a prominent minister in the Macmillan and Heath governments. He was given a life peerage in 1992 as Baron Amery of Lustleigh.

AMES (Añes), 16th century *Marrano family living in the British Isles. GEORGE AÑES settled in London in 1521 but later returned to Portugal, where he died. In 1541 his wife and sons, FRANCISCO and GONSALVO, fled to England to escape the Inquisition. Francisco, soldier and administrator in Ire-

land, became mayor of Youghal. Gonsalvo (Dunstan) Añes (d. 1594), a successful merchant and financial agent, was purveyor to Elizabeth I and served as an intelligence agent, conveying secret mail on his ships. His eldest daughter, SARAH, married Roderigo *Lopez. Of his sons, JACOB settled in Constantinople and lived openly as a Jew; another, William, was an English soldier and intelligence agent. The English branch of the family became complete Christians.

AM HA-AREZ (Heb. אֲמֵי הָאָרֶץ; lit., "people of the land").

Bible

In biblical Hebrew, the signification of the term varies in accord with its context. (a) Generally, it denotes "population," whether Israelite (11 Kings 16:15; 25:3; Ezek. 39:13; 45:22) or non-Israelite (Gen. 42:6 – of Egypt; Num. 14:9 – of Canaan; Ezra 4:4 – of the province of Judah). (b) In the plural (Heb. אֲמֵי הָאָרֶץ/הָאֲרָצוֹת) it denotes foreign (= heathen) populations, e.g., of the world at large (Deut. 28:10; 1 Kings 8:43ff.) or of a specific country (Esth. 8:17), but more particularly, in post-Exilic texts, the natives in and about Palestine who threatened and harassed the returning Jewish exiles (Ezra 3:3; 9:11; 10:2; Neh. 10:29, 31–32). (c) Much debated is the meaning of the term in contexts referring to an operative element of the population (e.g., 11 Kings 11:18ff.; 21:24; 23:30; Jer. 34:19). In such contexts the term has been interpreted variously as an ancient Hebrew "parliament"; the landed nobility; the free, male, property-owning citizenry; and the like. Some representative body of the population is evidently intended, though as a general, rather than a specific term (cf. the vague "all the people of Judah" who enthroned King Azariah, 11 Kings 14:21).

[Moshe Greenberg]

Second Temple and Mishnah

Some scholars derive the term *am ha-arez* (in the singular) from the plural form found in Neh. 10:29, where it designates the heathen inhabitants of Palestine (Rabin, 61). The rabbinic use of the term, however, seems to derive from the Torah (Lev. 4:27), where it designates ordinary Israelite citizens. The Midrash (Sifra, ḥovah, parashah 7, 6–7) interprets the words *me-am ha-arez* to exclude the *nasi* (leader) and the *mashi'ah* (priest), on the one hand, and the apostate, on the other. Already here we can see that the term *am ha-arez* does not designate any specific group within the Jewish people. It merely refers to ordinary Jews, who are distinguished neither by any exceptionally positive (*nasi*, *mashi'ah*) nor by any exceptionally negative qualities (apostate). Contrary to the impression made by later rabbinic and post-rabbinic usage, the term, in its tannaitic beginnings, has no clear pejorative connotations. In Tosefta *Avodah Zarah* (3:10) *Simeon ben Nethanel (a disciple of Rabban *Johanan ben Zakkai) is mentioned as an example of an *am ha-arez*. In the (unpublished *genizah*) version of a previous *halakhah* (3:8) a scribe who is described as an *am ha-arez* is opposed to a scribe who is called an ex-

pert (*mumḥeh*). From this it seems that the term *am ha-arez* is semantically analogous to the term *hedioṭ*, also used in tannaitic literature in opposition to the *nasi*, the *mashiàh*, and the *mumḥeh*. Like the term *hedioṭ*, it has no specific content of its own, but rather indicates the absence of some particular quality which is to be found only in some exceptional individual or group of individuals.

In the main stratum of tannaitic literature, the term *am ha-arez* is used regularly to refer to the ordinary Jewish population which did not belong to the religious and intellectual elites of the *ḥaverim* (companions) and *ḥakhamim* (sages). The *ḥaverim* were distinguished as a group by the observance of special restrictions, mostly concerning food. These restrictions fell into two categories: restrictions concerning tithes and restrictions concerning purities. The details of these restrictions, which also govern to a large extent the interaction between the *ḥaver* and the *am ha-arez*, are spelled out in different tractates in the Mishnah, especially *Demai* and *Toharot*. The *ḥakhamim* were an intellectual elite devoted to the study of Torah and committed to the notion that true piety and true godliness could only be achieved through the study of Torah and personal association with the *ḥakhamim*. This conviction is reflected throughout tractate *Avot*, especially in the famous statement (2:5): “The uncultivated man (*bur*) cannot be godfearing, nor can the *am ha-arez* be pious (*ḥasid*).” Here, the term *am ha-arez* primarily indicates the absence of education (parallel to “uncultivated”). The saying as a whole is directed against those who would attempt to achieve spiritual excellence (fear of God, piety), without the guidance of the sages and the discipline of their teachings. Another example of this criticism is found further on in *Avot* (5:10), where the *am ha-arez* is ridiculed for espousing a simplistic communism (“what’s mine is yours and what’s yours is mine”), in opposition to the enlightened communism of the *ḥasid*, who renounces selfish exclusivity over his own property while respecting the rights of the other (“what’s mine is yours and what’s yours is yours”).

Since the term *am ha-arez* is used primarily in opposition to groups like the *ḥaverim* and the *ḥakhamim*, if we wish to define the *am ha-arez* further, we must examine the relationship between the *ḥaverim* and the *ḥakhamim*. On the one hand, they do not seem to be identical. On the other hand, they do not seem to be totally distinct. For example, in Tosefta *Demai* (2:13), we are told that even a disciple of a *ḥakham* needs to be officially admitted into the *ḥavurah*. On the other hand, a *ḥakham* is automatically considered a *ḥaver*. Similarly in Mishnah *Demai* (2:3) Rabbi Judah considers “service in the house of study” as one of the formal conditions for acceptance into the *ḥavurah*. Therefore scholars who have suggested that the *am ha-arez* “with respect to tithes and purities” and the *am ha-arez* “with respect to Torah study” were separate and distinct phenomena have probably introduced an artificial distinction which is not borne out by the sources.

This connection between ritual restrictions and devotion to Torah study in the ideal definition of the rabbinic elite

finds confirmation in an earlier stratum of religious tradition still preserved in tannaitic literature. Tosefta *Demai* 2:11 may be one of those rare cases in which the later tannaitic sources preserve a halakhic tradition from the late Second Temple period relatively intact. There are three considerations which point in this direction. First, this *halakhah* uses terminology otherwise unknown in rabbinic sources: *kenafayim* (wings) as a category designating a group of people. Second, this *halakhah* is the subject of a dispute between the House of *Shammai and the House of *Hillel (2:12), and therefore apparently is older than the earliest literary level of the main stratum of tannaitic literature. Finally, scholars (Lieberman, Rabin) have pointed out similarities between the content of this *halakhah* and certain parallel passages in the Dead Sea Scroll *Manual of Discipline*.

This Tosefta sets down two stages for acceptance to the *ḥavurah* – the first is called “wings” (*kenafayim*) and the second “purities” (*toharot*). In the following *halakhah toharot* seems to be further subdivided into drinks and clothing. As indicated, these phenomena find close but not exact parallels in the *Manual of Discipline*. The term *kenafayim* itself has received special attention (Rabin, 19). Various interpretations have been suggested, almost all based on later rabbinic sources. On the other hand, this very term is found in the *War Scroll*, and Yadin in his edition (p. 176) suggests that it refers to the auxiliary forces which are positioned in the wings, i.e. on the periphery. If this is the meaning here, then this Tosefta represents an early precedent (and an earlier terminology) for the two-tiered structure of the rabbinic elite described in the main stratum of tannaitic literature (Mish. *Demai* 2:2–3). According to the Mishnah, between the *ḥaverim* (defined by *toharot* restrictions) and the *am ha-arez*, there was a third intermediate group – the “trustworthy” (*neʿemanim*) – who observed the restrictions concerning tithes, but not *toharot*.

The community described in the *Manual of Discipline*, while defined formalistically by a rigorous discipline of purity rules and a primitive communism (cf. the *ḥasid* of *Avot* 5:10), was at the same time deeply committed to Torah study and other forms of personal piety. It is clearly impossible to isolate the intellectual and spiritual content of membership from the formalistic ritual and economic conditions of membership. So also the attempt to separate the *ḥaverim* and the *ḥakhamim* into two separate and distinct ideal elites may be an arbitrary abstraction, posited by scholars to deal with apparent contradictions between different rabbinic sources that will be dealt with below.

Developments in Later Talmudic Literature

We possess no sources which can testify directly to the attitudes or practices of the *am ha-arez*. Moreover, the *am ha-arez* in all likelihood did not exist as an organized or even an identifiable group. As a result, the varying rabbinic descriptions and testimonies which either describe or characterize the *am ha-arez* should be understood as reflecting variations in the self-perception and self-definition of the rabbinic elite. These

differences may indeed reflect significant changes in the attitudes or practices of the *am ha-arez* themselves, but we have no way of either confirming or rejecting such an hypothesis.

How then do our rabbinic sources describe the relations between the rabbinic elite (*ḥaverim* and *ḥakhamim*) and the general community (*am ha-arez*)? Different answers emerge from different sources. Even within a given source, radically differing opinions may be expressed. Within tannaitic literature we find a strict approach which tends to exclude the *am ha-arez* almost totally from any significant social contact with the rabbinic elite. We also find within tannaitic literature a much more lenient, inclusive approach. Most early amoraic literature reflects this lenient, conciliatory attitude. In the later literary levels of the Babylonian Talmud, however, we find a new and radically different attitude. This attitude goes far beyond the strict approach found in early tannaitic literature, reflecting a new and virulent contempt and even hatred for the *am ha-arez*, going so far as to describe the *am ha-arez* as subhuman, as an animal – even less than an animal – who may be slaughtered without even the courtesy of a blessing (TB Pes. 49b). In order to define the place of this approach in the history of rabbinic tradition, it is necessary to take into account a methodological principle of talmudic criticism.

By now it is fairly well understood and accepted that the anonymous literary stratum of the Babylonian Talmud – the *stam ha-talmud* – often radically alters the original intent of the amoraic statements which form the foundations of the talmudic *sugya* (discussion). It is therefore crucial for the correct understanding of the development of the talmudic *sugya* to isolate the amoraic literary level and to interpret it in its own right before proceeding to examine the way in which the anonymous editors of the Talmud interpreted it. It is not so well known that the anonymous editors of the Babylonian Talmud often integrated their interpretive comments into the very fabric of the older traditions. In such cases, it is only possible to separate tradition from commentary by comparing the version of a tradition found in the Babylonian Talmud to an earlier or at least an independent version of the same tradition, found, for example, in the Tosefta or the Jerusalem Talmud.

Thus we find that in the Babylonian Talmud statements of *amoraim* who favored the lenient and conciliatory attitude toward the *am ha-arez* are reinterpreted by the *stam ha-talmud*, so that they now seem to reflect the strict and exclusionist approach. Older traditions which are either neutral toward or merely mildly critical of the *am ha-arez* are reformulated by the later editors of the Babylonian Talmud, thereby putting into the mouths of *tannaim* and early *amoraim* positions and attitudes that they never dreamed of, and which sometimes even stand in direct contradiction to their explicit statements as preserved in earlier Palestinian rabbinic traditions (Wald, *Pesahim III*; Wald, *Sin'ah ve-Shalom*).

Most historians who have written on this topic (see bibliography) have taken these traditions at face value, without seriously questioning their historical authenticity. In order to reconcile the blatant contradictions between different families

of sources describing the same historical period (Palestine in the second to third centuries), some have posited a distinction between two different kinds of *am ha-arez* – the *am ha-arez* “with respect to tithes and purities” and the *am ha-arez* “with respect to Torah study.” Others have attempted to assign these different traditions to different geographical locations, positing a special form of “Galilean” *am ha-arez*. Understanding these violently hate-filled traditions to reflect early Palestinian tradition, some have seen in them evidence of late Second Temple period class struggle, and others repercussions of the rise of Christianity. After determining, however, that this unique and particularly virulent strain of anti-*am ha-arez* polemic in all likelihood reflects a much later Babylonian tradition, it is possible to outline the development of the rabbinic traditions concerning the *am ha-arez* in a somewhat more straightforward fashion.

As stated above, within tannaitic sources we can detect two distinct tendencies. One reflects an almost separatist, even a sectarian, ethos. Shared meals are forbidden, not only between the *am ha-arez* and the *ḥaver*, but even between the *am ha-arez* and the *ne'eman* (Mish. Demai 2:2; Tosef. Demai 2:2, Rabbi Meir). One may not say a blessing, nor participate in a *zimun* (cf. Mish. Berakhot 7:1), nor answer amen to an *am ha-arez* who does not observe the rules of purity with regard to food (Tosef. Demai 2:22, 24). Marriage between *ḥaverim* and *amei ha-arez* are virtually banned (Tosef. Avodah Zarah 3:9, Rabbi Meir). A *ḥaver* who leaves the *ḥavurah* is treated as a traitor, and may never be readmitted (Tosef. Demai 2:9, Rabbi Meir), a view reflected also in the *Manual of Discipline* (VII, 22–25).

But there is also a more lenient view in tannaitic literature. For example, Rabbi Judah relates that a *ne'eman* may eat in the house of an *am ha-arez* without compromising his official status (Mish. Demai 2:2; Tosef. Demai 2:2). The Mishnah in *Berakhot* (7:1) states unequivocally that one may perform a *zimun* with one who has eaten *demai*, i.e., an *am ha-arez*. The sages mentioned in Tosefta *Avodah Zarah* 3:9 accept in principle that marriage between *ḥaverim* and *amei ha-arez* may be subject to some restrictions, but these restrictions are minimized as much as possible. Further on in the same source (3:10), another view (also referred to as of “the sages”) totally rejects the assumption that there are any limitations whatsoever on marriage between a *ḥaver* and one who does not observe the rules of purity concerning food. To the extent that they recognize the *halakhah* transmitted above by Rabbi Meir, they interpret it as referring to marriage between members of the community at large and those few who “do not tithe their food” at all. Food which has not been tithed is considered *tevel*, and the punishment for eating it is “death by the hands of heaven.” In the main stratum of tannaitic literature, the *am ha-arez* is only suspected of eating *demai*, not *tevel*. Therefore the position of the sages in Tosefta *Avodah Zarah* 3:10 removes all limitations on marriage between *ḥaverim* and *amei ha-arez* (as the term is ordinarily understood). This lenient view is reflected also in the anonymous position found

in Tosefta *Demai* 2:16–17. Finally, in Tosefta *Demai* 2:9 Rabbi Judah seems to have heard the tradition which forbids readmission of *haverim* who leave the *havurah*, but limits it to those who by their deceitful behavior undermine their credibility. Rabbi Simeon and Rabbi *Joshua ben Korḥa reject this tradition in its entirety. All three of them, as opposed to Rabbi Meir, view the *havurah* as a voluntary organization that one may openly leave if one wishes, without compromising eligibility for readmission in the future.

We find therefore two very different views of the rabbinic religious elite in tannaitic sources. One is separatist, exclusivist, unconditional, allowing for virtually no social interaction between insiders and outsiders. The other assumes a much larger degree of social interaction. According to this latter view, there are no prohibitions on sharing common meals, beyond the technical ones of assuring that the insiders' food has been properly tithed and prepared in accordance with the rules of purity. There are no insurmountable obstacles to marriage between insiders and outsiders, and perhaps no such limitations whatsoever. The elite is structured in a way which permits movement across the boundary lines which separate insiders from outsiders in both directions, without fear of recriminations.

These two views may represent competing tendencies, current during the end of the tannaitic period. On the other hand, the separatist position is found primarily in anonymous *halakhot* and in *halakhot* transmitted in the name of Rabbi Meir, and may reflect an older tradition whose roots lie in the sectarian atmosphere of the late Second Temple period. In any case, the more lenient, socially integrated view predominates in the later strata of tannaitic literature, as well as in the main body of Palestinian amoraic literature and in the early strata of the Babylonian Talmud. The situation begins to change in the fourth generation of Babylonian *amoraim*. Two examples will suffice: TB *Berakhot* 47b quotes a brief and anonymous **baraita*, which states: "One may not participate in a *zimun* with an *am ha-arez*." This *baraita* is probably a paraphrase of the anonymous *halakhah* found in Tosefta *Demai* 2:24, which concerns an *am ha-arez* who does not observe the rules of ritual purity. As stated above, this apparently contradicts the tendency of the *halakhah* in Mishnah *Berakhot* to permit a *zimun* not only with one who has eaten *demai* (= *am ha-arez*), but even with a Samaritan. *Abbaye (fourth generation Babylonian *amora*) accepted the strict opinion of the *baraita*. *Rava affirmed the lenient position of the Mishnah. He reinterpreted the *baraita* in line with the lenient position of the sages in Tosefta *Avodah Zarah* 3:10. By so doing, Rava limited the prohibition in the *baraita* to one who ate *tevel*, not *demai*. In Rava's view it is permitted to participate in a *zimun* with an *am ha-arez*, as that term is ordinarily understood.

Further on in the same passage, Rami bar Ḥama refused to participate in a *zimun* with Menashya bar Taḥlifa, because Menashya bar Taḥlifa did not "serve in the house of study." Mishnah *Demai* (2:3) lists "service in the house of study" as one of the formal conditions for acceptance into the *havurah*,

perhaps the only one still applicable in Babylonia. Rami bar Ḥama's actions therefore should be seen as putting into practice the strict position articulated by Abbaye. Thus it is not surprising that Rava again rejects this position. Rava's strong language is indicative of his vehement disapproval of Rami bar Ḥama's actions: "Rami bar Ḥama died [as a young man] because he refused to participate in a *zimun* with Menashya bar Taḥlifa!" If we relate only to the amoraic component of the passage we must conclude that in the fourth generation of *amoraim* in Babylonia the older tannaitic or pre-tannaitic separatist or sectarian view was revived, first theoretically by Abbaye, then put into practice by Rami bar Ḥama. However, Rava (at least on the amoraic literary level) had the last word, rejecting Abbaye's theoretical position and condemning Rami bar Ḥama's actions.

Some time later, the *stam ha-talmud* added an additional interpretive layer to the end of the *sugya*, turning Rava's words on their head. According to the *stam ha-talmud* even Rava agrees that one may not participate in a *zimun* with one who does not "serve in the house of study," i.e. one who is not a member of the inner circle of the rabbinic elite in Babylonia. We are now to understand that Rami bar Ḥama was criticized for not participating in a *zimun* with Menashya bar Taḥlifa only because Menashya bar Taḥlifa actually did "serve in the house of study," and so was indeed an active adherent of the Babylonian rabbinic elite. Rami bar Ḥama foolishly and wickedly misjudged Menashya bar Taḥlifa, and for this he was punished. This interpretation clearly is not consistent with Rava's own position, and reflects a not uncommon phenomenon in the Babylonian Talmud: a minority view which is raised and rejected by the *amoraim* themselves is then adopted by the *stam ha-talmud*, and used to reinterpret the words of the *amoraim*.

A similar phenomenon occurs in TB *Pesaḥim* 49a. The Talmud relates a lively discussion between *amoraim* concerning the advisability of marriage between the families of *hakhamim* and *kohanim* (priests). Some *amoraim* are in favor, others against. Examples are given in favor and against. None of the *amoraim* and none of the examples even mention the topic of marriage to an *am ha-arez*. Nevertheless, the *stam ha-talmud* manages to reinterpret the entire passage such that all the *amoraim* agree that marriage between families of *hakhamim* and *kohanim* is unquestionably appropriate and advantageous, whereas marriage between families of *hakhamim* and *amei ha-arez* is an abomination. Here again the latest literary level of the Babylonian Talmud has resurrected an ancient tradition, presented in one source (Tosef. *Avodah Zarah* 3:9) as a minority position, explicitly rejected by the other sages there and simply ignored in another source (Tosef. *Demai* 2:16–17). It then reinterprets the words of all the *amoraim* appearing in the *sugya*, as if they all explicitly agreed with the notion that marriage to an *am ha-arez* is an abomination.

The evidence thus points to the latter half of the amoraic period in Babylonia as the time and the place in which ancient separatist traditions began to be revived, when rigid

social boundaries preventing ordinary interaction between members of the rabbinic and social elite and “outsiders” began to form. It points also to the end of this period and the early post-amoraic period as the time in which these tendencies first gained the upper hand, at least in those circles responsible for the redaction of the Babylonian Talmud.

But, as indicated above, this later editorial approach did not limit itself merely to “reviving” authentic ancient positions, nor did it limit itself to augmenting the authentic statements of *amoraim* with editorial comments of its own. Two examples will suffice in order to clarify this point.

Tosefta *Avodah Zarah* 3:9 relates the following simple *halakhah*: “It is forbidden to give them [= *am ha-arez*] daughters [in marriage], irrespective of whether they are grown up, or still children – these are the words of Rabbi Meir.” This *halakhah* probably provided the ideological foundation for the radical reinterpretation of the amoraic statements quoted in TB *Pesahim* 49a. In fact, on the very next page (49b) we find the following *baraita*: “Rabbi Meir used to say: Anyone who marries his daughter to an *am ha-arez* is as if he has bound her in front of a lion – just as a lion attacks and devours without the slightest bit of shame, so also an *am ha-arez* beats [his wife] and has intercourse [against her will] without the slightest bit of shame.” Boiled down to its halakhic “essentials” this *baraita* corresponds exactly to the simple statement of Rabbi Meir found in Tosefta *Avodah Zarah* 3:9. But in its present form it reflects an interpretation which is quite unwarranted in the original context. Indeed most of the many extreme statements concerning the *am ha-arez* found in *Pesahim* 49b can be shown to be late Babylonian interpolations of earlier tannaitic and amoraic material (Wald, *Pesahim III*). Thus we read there: “Rabbi Samuel bar Nahmani said in the name of Rabbi Jonathan: It is permissible to tear an *am ha-arez* open like a fish; Rabbi Samuel bar Yizhak added: And from the back.” When one compares these brutal lines to their original form and context in TB *Hullin* 21a, one can only conclude that these two *amoraim* never dreamed of the use to which some later anonymous editor would eventually put them. A similar process of tendentious reinterpretation and interpolation is evident in another important *sugya* (TB BB 8a), concerning Rabbi Judah ha-Nasi and his refusal to support an *am ha-arez* during a time of famine (Wald, *Sin'ah ve-Shalom*).

The present state of scholarship probably does not permit a convincing explanation for this radical turn of events toward the end of the talmudic period. It is clear that by the geonic period and the early period of the **rishonim*, most of the excesses of this late literary level were largely repudiated, (Alfasi, *Pesahim*, ed. Hyman, pp. 88–93, 327–34). It is possible that it reflects the internal social development of the Babylonian Jewish community, or perhaps the external influence of certain social changes which may have been going on in Sasanian society at the same time (*Cambridge History of Iran*, 3(1), pp. xl–xlii, 3(2), pp. 632–33).

[Stephen Wald (2nd ed.)]

In Later Times

The term came to designate a person without adequate knowledge of the Scriptures and of traditional Jewish literature and consequently one who is ignorant of the rules of Jewish ritual and ceremonial customs, as opposed to the *talmid hakham* (“disciple of the wise”) or *ben Torah*. In common usage, *am ha-arez* is the equivalent of ignoramus or boor (pl.: *amarazim*).

In hasidic folktales the *am ha-arez* tends to mean a naive, but God-loving simpleton. God Himself “wishes his heart” (Sanh. 106b), because it is full of good intentions, and his prayer is more efficacious than that of many a learned scholar.

AMIA (Asociación Mutual Israelita Argentina), organization of the Buenos Aires Ashkenazi community. On Sept. 26, 1893, representatives of the four Jewish organizations in *Buenos Aires, among them the Congregación Israelita de la República Argentina (CIRA), met and decided to form the Sociedad de Entierros (Burial Society). On July 22, 1894, the Chevra Kedescha Ashkenazi (Ashkenazi Burial Society) was formed, headed by Henry *Joseph, rabbi of CIRA. The purpose of the society was to ensure that both members and nonmembers receive a Jewish burial. At first the Burial Society leased graves in the Protestant cemetery, while simultaneously endeavoring to obtain its own burial ground. These efforts encountered many financial and legal difficulties, in addition to hostile public opinion. Only in 1910, due to the efforts of its president, Naum Enkin, was the first burial ground acquired in the suburb of Liniers. The Chevra Kedescha had unwritten agreements with the Sephardic burial societies, allowing each to bury only its own ethnic group. The monopoly on an indispensable religious service made the cemetery a source of community funds for those seeking financial assistance. In the 1920s it partially financed public institutions, increasing these activities in the 1930s. After it had acquired a larger cemetery

site in Tablada in 1934, it helped found in 1935 the Va'ad ha-Hinnukh (Education Committee), which was responsible for organizing Jewish education in Greater Buenos Aires, and founded the Rabbis' Committee. It then became a mutual association called the Asociación Mutual Israelita Argentina (AMIA) on Dec. 17, 1940. During the 1940s, AMIA gradually extended the scope of its community activities and, on March 31, 1949, under the presidency of Moshe Slinin, designated itself the Kehila de Buenos Aires. In September 1952, on the initiative of its president, Moises Goldman, AMIA established the Va'ad ha-Kehillot (Communities' Committee), which united all the communities of Argentina (36 communities in 1952, 130 in 1964). AMIA played a dominant role in this committee and also supplied most of its funds. On April 16, 1956, AMIA changed its statutes. Thenceforth, 90 members were elected to its council, under a system of proportional representation, from a list of eight parties; most of them were from the Zionist parties that generally had their counterparts in the Israeli party system. From among its members, the council chose a president and an executive committee of 24 members.

From 85 members in the year of its foundation, the membership of AMIA gradually rose until in July 1968 it registered 51,798. Since membership is registered by families, this figure represents a much larger number of individuals. The number of associated families is estimated in 2004 as close to 16,000, preserving the traditional position of AMIA as the largest Argentinean Jewish institution, and in latter years there was a membership increase of close to 3,000, probably as a result of its welfare and aid programs. In the 1960s more than 50% of the total budget was spent on the Jewish education system through the Central Education Committee (Vaad ha-Hinnukh ha-Mercazi). It also covered most of the budget of the institutions of higher learning, Ha-Midrashah ha-Ivrit, the rabbinical seminary, and also a secondary day school, Rambam. But this support to Jewish education was reduced drastically in the 1990s and many of these institutions were closed. In recent years, a new coalition was established by AMIA, the Joint Distribution Committee (JDC), and the Jewish Agency for Israel for the economic rationalization and support of the school network. This new organization – Central Agency of Jewish Education – gives financial assistance and provides organizational planning for all the associated schools in the country, embracing nearly 17,000 pupils. In the 1960s and 1970s the Youth Department of AMIA ran a network of youth centers in Buenos Aires and a central course for youth leaders in conjunction with Sociedad Hebraica Argentina and since the 1970s with the World Zionist Organization. Today AMIA supports many youth centers and programs on a basis of partnership. Its Cultural Department organizes weekly lectures, films and theater exhibitions, etc. Until the 1980s it sponsored an annual “Jewish Book Month,” during which thousands of books in Spanish, Yiddish, and Hebrew on Jewish subjects were sold. In 1986 AMIA founded a publishing house – Editorial Mila – which has published hundreds of books in Spanish including literature, essays, testimonies, and research studies.

AMIA has a rabbinical department headed by Chief Rabbi Shlomo Benhamu. Rabbi Benhamu was born in Tetuán (1936) and studied in a yeshivah in Great Britain. After serving as head of a yeshivah in Tetuán, he arrived in 1962 to Argentina as the principal of the schools of Agudat Israel (Hechal Hatorah and Beth Yaakov). In 1965 AMIA sent him to complete his rabbinical studies in Israel, and he entered AMIA's rabbinical department. He was appointed as chief rabbi in 1976.

The social welfare department has many assistance programs in Buenos Aires and in cooperation with Vaad ha-Kehillot also in the provinces, all of them co-sponsored by JDC. In 2004 these programs gave monthly support for the distribution of food, medicines, clothing, and housing to approximately 5,000 people in Buenos Aires and 6,500 in the provinces (Program Mezonot together with the Argentinean welfare association Tzedaka), and subsidized meals for about 2,000 children (Program Meitiv) all over the country. Other functioning programs, with the support of the Inter-American Development Bank, provide employment for Jews and non-Jews. AMIA also established a network of educational and social centers for people with special needs which serves 200 people, and centers for the aged with 2,500 users.

For several years AMIA had an arbitration department that dealt with business and other disputes, which in many cases replaced litigation. AMIA also had (from 1962) a department for social research – CEHIS – engaged mainly in summarizing demographic statistics on Argentinean Jewry, but it was closed in 1995.

The community building of AMIA, built in the mid-1940s and which housed the DAIA, the Va'ad ha-Kehillot, the Va'ad ha-Hinnukh, and the Jewish Scientific Institute (YIVO), with its library and archives, was destroyed in a terrorist bombing on July 14, 1994. In this tragic attack 85 people, Jews and non-Jews, were killed and hundreds wounded. The new AMIA building, dedicated in 1999, houses the above-mentioned institutions and the offices of the Jewish Agency. Since the statutes of AMIA were revised in the 1950s, it has been run by a coalition of most of the Zionist parties. However, there has been a constant decline in the number of voters, a fact that worries the community's leaders.

[Haim Avni / Efraim Zadoff (2nd ed.)]

AMICHAI, YEHUDA (1924–2000), Israeli poet and novelist. Born in Germany, Amichai went to Palestine in 1936, settled in Jerusalem, and served with the Jewish Brigade in World War II. In the latter part of the 1940s he began to publish poetry. The appearance of his first volume *Akhshav u-ve-Yamim Aherim* (1955) marked the emergence of a new school of Hebrew poetry. Amichai's poetry reflected the drastic changes which had taken place in the Hebrew language during World War II and the War of Independence. It had become enriched with new idioms and had adopted syntactical elements derived from the new slang. Amichai's familiarity with the wit

and irony of modern English poetry as well as its use of understatement and prose phrasing aided him in working this new Hebrew vernacular into his verse.

Amichai introduced airplanes, tanks, fuel trucks, and administrative contracts into a Hebrew poetry which had hitherto avoided these modern terms in order not to mar the beauty of its classic texture. The worlds of technology and law, which became the raw materials for his metaphors, replaced the earlier sacral phrasing. The result was either ironic or tragic and represented an eschewal of history – a mawkish, obdurate, and pathetic version of biblical myth. He was awarded the Israel Prize in 1982. His volumes also include *Be-Merhak Shetei Tikvot* (1958); *Ba-Ginnah ha-Zibburit* (1959); and his collected poems, *Shirim... 1948–1962* (1963). Amichai's novel, *Lo me-Akshav, Lo mi-Kan* (1963; *Not of This Time, Not of This Place*, 1968), and his short stories are written in a prose style which tends to be confessional, reflective, and redolent of poetic illumination. The novel focuses upon an Israeli seeking revenge upon the Germans who participated in the extermination of his native town and presents a picture of men in spiritual and physical flight. Amichai also wrote *Massa le-Nineveh* (1962), a retelling of the story of Jonah, staged by Habimah in 1964; a number of radio sketches, including *Pa'amonim ve-Rakkavot* (Eng. "Bells and Trains" in *Midstream*, Oct. 1966, 55–66); and a book for children, "Numa's Fat Tail" (1978). Among his other poetry volumes are *Lo Rak Lizekor* ("Not Only to Remember," 1971), *Zeman* ("Time," 1977), and *Sh'at ha-Hen* ("Hour of Grace," 1982), as well as *Patuah, Sagur, Patuh* ("Open, Closed, Open," 1998). Amichai's poetry has been translated into 33 languages. Available in English translation are, among others, *Achziv, Caesarea and One Love* (1996); *Amen* (1977); *Even a Fist Was Once an Open Palm with Fingers* (1991); *Great Tranquility, Questions and Answers* (1983; 1997); *Poems of Jerusalem and Love Poems* (1992). The *Collected Poems of Amichai* appeared in 2004 in five volumes.

[Dan Tsalka]

AMIDAH (Heb. עֲמִידָה; "standing"), the core and main element of each of the prescribed daily services. In talmudic sources it is known as *Ha-Tefillah* ("The Prayer" *par excellence*). As its name indicates, the *Amidah* must be recited standing. Other names for this prayer include *Shemoneh esreh*, for the number of its benedictions (presently 19), and *Tefillat lahash*, because of the obligation to recite it silently.

Types, Manner, and Nature

The *Amidah* is recited individually during each of the daily services – **Shaharit* (Morning Service), **Minḥah* (Afternoon Service) and **Arvit* (Evening Service); on Sabbaths and the festivals it is recited also for **Musaf* ("Additional Service") and on the Day of Atonement, a fifth time, for *Ne'ilah* ("the Concluding Prayer"). In congregational prayer, i.e., when there is a *minyān* (a quorum of at least ten male adults), the reader repeats the *Amidah* aloud and a number of additions are made (see below). The original purpose of the repetition was to enable uneducated persons, who did not know the prayers, to fulfill their duty by listening to the recital and responding "Amen" after each benediction. There are various forms of *Amidah*. On weekdays, the *Amidah* originally comprised 18 benedictions (later 19); on fast days one more is added in the repetition by the reader, and in ancient times, on some public fasts, six were added to the regular 18 (Ta'an. 2:2–4). On Sabbaths and festivals, there are only seven benedictions, except in the *Musaf* of **Rosh Ha-Shanah*, when there are nine. In cases of emergency or illness, the intermediate blessings of the weekday *Amidah* may also be combined into one (see below *Havinenu*). The various forms have in common the first three and the last three benedictions; the former are devoted to the praise of God, the latter, to closing and leave-taking. On weekdays, the intermediate benedictions are petitions, and the daily *Amidah* is, therefore, predominantly a prayer of supplication. The pronoun "we" is used throughout the *Amidah* (even when it is recited silently by the individual), both in praise and in petition, indicating that it was always conceived as a communal prayer. Even the individual worshiper recites it not on his own behalf but as a member of the congregation.

The *Amidah* was fashioned in the form of an interpersonal dialogic encounter between the worshiper and God. The language of the prayer addresses God in the second person, and the order of the benedictions – praise, petition, closing and leave-taking – is consistent with how a slave approaches his master (Ber. 34a). Consequently, the worshiper stands throughout the recitation of the prayer and bows at its beginning and end (T. Ber. 1:8). At its conclusion, the worshiper bows again and takes leave of the divine presence with backward steps (Yoma 53b). The further obligation to face the locus of the Temple (T. Ber. 3:15) is grounded in the notion that, while praying, the worshiper stands directly in the presence of the *shekhinah*. After the destruction of the Temple, even though some sages opined that the *shekhinah* had left Jerusalem, based on other national-religious considerations, worshipers continued to face the place of the Temple. But they directed their hearts to the *shekhinah*, wherever its locus: "He who prays should regard himself as if the *Shekhinah* were before him" (Sanh. 22a; see also T. Ber. 3:14). To facilitate achieving this elevated spiritual state, the rabbis forbade the worshiper to divert his thoughts from the *tefillah* (M. Ber. 5:1), and some prohibited recitation of the Prayer when of unsettled mind (Erub. 65a).

Evolution and Redaction of the Amidah

Scholarly opinion is divided as to the origins of statutory prayer in general, and of the *Amidah* in particular. Even the talmudic sources reflect such diverse opinions as the one attributing the formulation of the *Amidah* to the Men of the Great Assembly (Meg. 17b), namely to the early Second Temple period, as opposed to one that explicitly ascribes the arrangement of the prayer to the activity of Rabban Gamliel in the post-destruction era at Jabneh (Ber. 28b). Scholarly opinion spans these two poles: some scholars date the origins of the Prayer to the final centuries preceding the destruction of the Temple; others date it as late as the era of Rabban Gamliel at Jabneh. From the welter of sources and opinions, the following likely scenario emerges. As a means of religious expression, prayer gained in importance during the late Second Temple period. Qumran literature provides rich testimony to fixed prayer among circles that opposed the Temple. Rabbinic sources indicate that, at the same time, some Pharasaic circles began to make use of fixed prayer ceremonies and to recite prayers on special occasions. For example, there is attestation to set benedictions recited by the priests in the Temple, of which some partially parallel *Amidah* benedictions (M. Yoma 7:1; M. Tamid 5:1). Explicit testimony from the Tosefta (Rosh Ha-Shanah 2:17) indicates the practice of prayer on Sabbaths and holidays among the sages of Beit Shammai and Beit Hillel. But it is only in the wake of the destruction, from the period of Rabban Gamliel and onward, that we have testimony for the institutionalization of prayer as a mandatory communal, and individual, obligation. The requirement to recite the *Shemoneh Esreh* daily dates only from the time of Rabban Gamliel and his contemporaries.

The exact nature of the fixing of the prayer by Rabban Gamliel at Jabneh also remains a debated point among scholars. Until the late 1980s the prevailing view was that Rabban Gamliel did not mandate the precise wording of the benedictions but rather their number, main motif, and concluding formula, giving worshipers and prayer leaders leeway to formulate the wording of the benediction as they saw fit. Over time, whether by natural processes or rabbinic fiat, certain versions came to predominate. Only in geonic Babylonia did the versions of the prayer achieve greater uniformity, but even then, variants were not entirely eliminated. In the early 1990s a different viewpoint was proposed, according to which Rabban Gamliel not only set the general principles governing the *Amidah* but also its precise wording, which he sought to impart to all Jewish communities. Over time, because of alterations in the worshipers' outlook and esthetic taste, this primary version underwent changes. The scattering of the Jewish people in various diasporas, and the lack of a central leadership, fostered the creation of different branches of the text in the diverse Jewish communities.

For the first centuries of its development, due to the absence of a complete version of the *Amidah* in talmudic literature, we have only vague testimony to its language. The first full witnesses to the wording of the prayer come from *siddurim*

in use in the late first/early second millennium C.E. – the *siddurim* of Rav Amram Gaon and Rav Saadia Gaon as well as thousands of *genizah* fragments – namely, from texts compiled centuries after the fixing of the *Amidah*. Among the *siddurim* preserved in the Cairo *Genizah*, it is possible to distinguish two main branches: a Palestinian and a Babylonian rite. Despite many differences of detail, the *Amidah* as preserved in both rites retains an inherent linguistic kinship. With the thinning out of the Jewish settlement in Palestine in the early second millennium C.E. and the growing influence of the Babylonian yeshivot on most of the Jewish world, the Palestinian rite disappeared and the Babylonian rite became the progenitor of all versions of the *Amidah* to the present.

The Weekday Amidah

The sequence of the benedictions of the weekday *Amidah* is as follows:

(1) Refers to God as the God of the *avot* (“patriarchs”), and extols Him as great, mighty, and awesome (Deut. 10:17); it concludes with *Barukh ... Magen Avraham* (“Blessed ... Shield of Abraham”).

(2) Praises God for His deeds of *gevurot* (“power and might”). Among the manifestations of God’s power are his providing sustenance for all living creatures and His causing the rain to fall in the rainy season. Special stress is laid on the revival of the dead and the benediction which concludes with *Barukh... mehayyeh ha-metim* (“Blessed ... He Who revives the dead”) is therefore also known as *Teḥiyyat ha-Metim* (“Resurrection of the Dead”).

(3) Speaks of God’s holiness, and is, therefore, called *Kedushat ha-Shem*. It concludes with *Barukh ... ha-El ha-Kadosh* (“Blessed ... is the Holy God”).

(4) Petitions God to grant wisdom and understanding. It concludes with *Barukh ... honen ha-da’at* (“Blessed ... gracious giver of knowledge”).

(5) Entreats God to cause a return to His Torah and to His service. It concludes with *Barukh... ha-rozeh bi-teshuvah* (“Blessed... Who delights in repentance”).

(6) Beseeches forgiveness for all sins, concluding with *Barukh ... ḥannun ha-marbeh lislo’ah* (“Blessed ... Who are gracious and abundantly forgiving”).

(7) Implores God to redeem. It concludes with *Barukh ... go’el Yisrael* (“Blessed ... redeemer of Israel”).

(8) Requests God to heal the sick and concludes with *Barukh ... rofe holei ammo Yisrael* (“Blessed ... Who heals the sick of Your people Israel”).

(9) Supplicates God to bless the produce of the earth and grant a good (fertile) year; It is, therefore, called *Birkat ha-Shanim* (“Blessing of the Years”) and concludes with *Barukh ... mevarekh ha-shanim* (“Blessed ... Who blesses the years”).

(10) Is a request for the ingathering of the exiles, concluding with *Barukh ... mekabbez niddeḥei ammo Yisrael* (“Blessed ... Who gathers the banished ones of Your people, Israel”).

(11) Appeals to God to restore righteous judges and reign Himself over Israel. It concludes with *Barukh ... Melekh ohev zedakah u-mishpat* ("Blessed ... King Who loves righteousness and judgment").

(12) Asks God to destroy the *malshinim* ("slanderers" or "informers"), all His enemies, and to shatter the "kingdom of arrogance" (see below). The text of this benediction, called in the Talmud **Birkath ha-Minim* ("Benediction Concerning Heretics"), underwent many changes. It concludes with *Barukh ... shover oyevim u-makhni'a zedim* ("Blessed ... Who breaks the enemies and humbles the arrogant").

(13) Supplicates God to have mercy upon the righteous, the pious, the proselytes, and all those who trust in Him; it concludes with *Barukh ... mishan u-mivtah la-zaddikim* ("Blessed ... the support and trust of the righteous").

(14) Solicits God to rebuild Jerusalem and dwell there. It concludes with *Barukh ... boneh Yerushalayim* ("Blessed ... Who rebuilds Jerusalem").

(15) Seeks the reestablishment of the kingdom of David. It concludes with *Barukh ... mazmi'ah keren yeshu'ah* ("Blessed ... Who causes the horn of salvation to flourish").

(16) Is a general plea to hearken to (i.e., accept) prayers. It concludes with *Barukh ... shome'a tefilah* ("Blessed ... Who hearkens unto prayer").

(17) Begs God to reinstate the *avodah* ("the Temple service"), and to return the Divine Presence to Zion. It concludes with *"Barukh ... ha-mahazir Shekhinato le-Ziyyon* ("Blessed ... Who returns the Divine Presence unto Zion").

(18) Gives thanks to God for all His mercies. The benediction is called *Hodayah* ("Thanksgiving") and concludes with *Barukh ... ha-tov shimkha u-lekha na'eh lehodot* ("Blessed ... whose name is good and to whom it is fitting to give thanks").

(19) Is a petition for peace. It is called *Birkat ha-Shalom* ("Blessing of Peace") and on some occasions is preceded by the Priestly Blessing, recited by the worshipers of priestly descent (see below). The latter concludes with the word *shalom* ("peace") and the benediction is a kind of response to the blessing. It is, therefore, also called *Birkat Kohanim* (Priestly Blessing; RH 4:5) and concludes with *Barukh ... ha-mevarekh et ammo Yisrael ba-shalom* ("Blessed ... Who blesses Your people Israel with peace").

The 13 petitions (4–16) may be subdivided into two distinct groups: Benedictions 4 to 9 are concerned with general human, everyday needs, both spiritual and material; benedictions 10 to 15 give expression to specific Jewish-national aspirations, all concerned with various aspects of messianic redemption.

The above description of the daily *Amidah* essentially portrays most of the details of the accepted prayer rites that are the continuation of the early Babylonian rite. The *Amidah* of the early Palestinian rite differed somewhat in several, some important, details. Of these, the most striking is that in Palestinian *siddurim* the *Amidah* has only eighteen, not nineteen, benedictions. The Palestinian rite has no separate benedic-

tion for the restoration of the kingdom of David (benediction 15 in the Babylonian rite), and this request is incorporated in the benediction regarding Jerusalem (14 in the Babylonian rite). The reason for this distinction between the rites, already found in talmudic times, is not entirely clear. Some link it to the development of *Birkat ha-Minim*, which was added to the *Amidah* at Jabneh after the full redaction of the *Shemoneh Esreh*. In Palestine, seeking to preserve the number eighteen, the benedictions on Jerusalem and the Davidic kingdom were united. Another change in the early language of the *Amidah* came with the deepened awareness of *galut* and the concomitant aspiration for redemption. An outstanding example is the seventeenth benediction, whose closing formula is based on the notion that the *shekhinah* had departed Jerusalem in the wake of the destruction. This conception is missing from the early Palestinian versions of the benediction, which concludes with *she-otekha be-yir'ah na'avod* ("we worship you with awe"). The twelfth benediction as well underwent significant alteration. Its early version did not encompass a request to destroy the *malshinim* (slanderers), but was rather directed at Jewish separatists who endangered internal Jewish unity, explicitly mentioning the early Nazarenes, as well as against the "evil kingdom," namely, Rome. Because of historical circumstances, changed worldviews, and Christian censorship, this benediction underwent manifold changes, the most significant of which was the expunging of the word *nozerim* from the benediction (see **Birkat ha-Minim*). With modernity, in some streams of Judaism wide-ranging changes have been made in the wording of the benedictions, including alterations related to awareness of women's status.

Additions

When the *Amidah* is recited aloud in the congregational service, some additions are made within the above-mentioned framework. Different customs prevail regarding the recitation of the Priestly Blessing which is interpolated before the last benediction. In the Diaspora it is customarily recited in Ashkenazi communities only in the *Musaf* of festivals. In the Eastern communities it is recited in every *Shaharit* service (and at *Minḥah* on fast days). In Erez Israel the Sephardim do the same, and the Ashkenazi communities in most places. While the reader intones *Modim* (the 18th benediction) the congregation recites *Modim de-Rabbanan*, a different prayer of thanksgiving, in an undertone. The most striking addition to the congregational recitation of the *Amidah* is the **Kedushah*. This is an expanded version of the third benediction and comprises the exalted praise of God by the angels (quoted in Isa. 6:3 and Ezek. 3:12). Other additions to the *Amidah* are made on specific occasions, also in the individual recitation. In the rainy season mention is made in the second benediction of God's power which causes the rain to fall; in the ninth, rain is prayed for. On the New Moon and intermediate days of festivals, the significance of the occasion is mentioned in the **Ya'aleh ve-Yavo* prayer, inserted into the 17th benediction. The

miracles performed on Hanukkah and Purim are described in the **Al ha-Nissim* prayer which is added to the 18th benediction. On public fast days, a special supplication, *Anenu*, is inserted into the 16th benediction in the silent recitation; the reader recites this as a separate benediction between the seventh and eighth benedictions. On the Ninth of *Av, the 14th benediction is elaborated with a lamentation on the destruction of the Temple. During the *Ten Days of Penitence, petitions that God may grant life are inserted into the first two and the last two benedictions while the third concludes with *ha-Melekh ha-Kadosh* (“the Holy King”) and the 11th with *ha-Melekh ha-Mishpat* (“the King of Judgment”). These changes are not found in the early Palestinian rite. In the evening service, after the conclusion of the Sabbath, a **Havdalah* is inserted into the fourth benediction. Additions may be made to the standard framework by a worshiper as long as these are appropriate to the general theme of the particular benediction to which they are added (Sh. Ar., Oḥ 119:1–3).

Sabbath and Festivals

In the Sabbath and festival *Amidah*, as well as in the *Musaf* on New Moon, all petitions (4–16) are omitted, and one central benediction, *Kedushat ha-Yom* (“the sanctification of the day”), expressing the special character of the holy day in question, is recited instead. For festivals, the text of this benediction is uniform, only the name of the festival being changed (an exception being at the *Musaf Amidah*; see below). The benediction concludes with *Barukh ... mekaddesh Yisrael ve-ha-Zemanim* (“Blessed ... Who sanctifies Israel and the festive seasons”). On Rosh Ha-Shanah this is expanded to read *Barukh ... Melekh al kol ha-arez mekaddesh Yisrael ve-Yom ha-Zikkaron* (“Blessed ... King over all the earth who sanctifies Israel and the Day of Memorial”); on the Day of Atonement, *Barukh ... Melekh mohel ve-soleh le-avonoteinu... mekaddesh Yisrael ve-Yom ha-Kippurim* (“Blessed ... King Who pardons and forgives our iniquities... who sanctifies Israel and the Day of Atonement”). On all the festivals it begins with thanks to God for choosing Israel from among all the peoples (*Attah Behartanu*) sanctifying them through His Torah and *mitzvoth* and giving them “festivals and seasons of joy” with the mention of the particular festival; *Yaaleh ve-Yavo*, in which the name of the festival recurs, follows and it concludes with a brief petition for the blessing of the festivals. The same version is used for all services, except for *Musaf*, where *Attah Behartanu* is followed by a prayer for the restoration of the Temple (*U-mi-Penei Hata'einu*) and of the pilgrimages and the sacrificial cult; this is followed by the appropriate Bible verses (taken from Num. 28–29) containing the instructions for the sacrifices of the day in question and a more elaborate and solemn petition for speedy redemption and the rebuilding of the Temple. The conclusion is again as above. On New Moons a different text, stressing the character of the day as one of atonement, is used, concluding with *Barukh ... mekaddesh Yisrael ve-Rashei Hodashim* (“Blessed ... Who sanctifies Israel and New Moons”). On festivals and special Sabbaths

poetical prayers are often inserted and said by the congregation during the reader's repetition. These are known as *Kerovot* and are to be found added to the various benedictions. Special poems concerning the 613 commandments and known as **azharot*, are added in the Shavuot prayers, usually in the *Musaf Amidah*.

On the Sabbath, the introduction of the fourth benediction varies in each *Amidah*. In *Arvit* the Sabbath is presented as a “memorial of creation,” followed by the recital of Genesis 2:1–3; in *Shaharit* the Sabbath is associated with the giving of the Torah at Sinai and presented as the symbol of the Covenant between God and Israel; in *Minḥah* the Sabbath is extolled as the day of complete rest, anticipating, as it were, the perfect peace and rest of the messianic age. The above texts seem to have been chosen intentionally to express three different, yet complementary, aspects of the Sabbath: creation – revelation – redemption; a triad of concepts, occurring elsewhere in Jewish thought and liturgy. Other introductions to this benediction are also known and used: for *Musaf*, *Tikkanta Shabbat* (“You did institute the Sabbath”) in the Ashkenazi version and *U-le-Moshe Zivvita* (“You did command Moses”) in the Sephardi, both of which mention the sacrifices; for *Arvit*, *U-me-Ahavatekha* (“Out of Thy Love”; Tosef., Ber. 3:11, used in the Italian rite); for *Minḥah*, *Hannah Lanu* (“Grant us Rest” – see the *siddurim* of Rav Amram Gaon and of Rav Saadia Gaon). The versions of the Sabbath prayers found in the Cairo *Genizah* indicate that this variety is a secondary development and that the benediction for the day was originally uniform as for the festival prayer.

The only festival *Amidah* which diverges from the general pattern of seven benedictions is that of *Musaf* of Rosh Ha-Shanah which has three intermediate benedictions, making a total of nine. This special structure probably came into being in order to provide three separate occasions for sounding the **shofar*, as required by the Mishnah (RH 4:9), at the end of each of the three intermediate benedictions. According to Sephardi custom the *shofar* is blown both in the silent as well as the reader's repetition of the *Amidah*, whereas the Ashkenazim sound it only in the latter. The text of each of them, therefore, relates to one of the special aspects of the day. In addition to the usual “sanctification of the day” (fourth blessing), the fifth benediction was devoted to **Zikhronot* (“Remembrances”) as Rosh Ha-Shanah is the “Day of Remembrance,” and the sixth to *Shofarot* (“the blessing of the *Shofar*”) to express the *shofar* aspect of the festival. A third aspect of the day, “the Kingship of God” was made the subject of *Malkhuyyot*, probably at a later stage. *Malkhuyyot* was not allocated a separate benediction, but was combined with the “sanctification of the day” (RH 4:5). On Rosh Ha-Shanah and the Day of Atonement, the third benediction is recited in a more elaborate version which contains the prayer *u-Vekhen Ten Paḥdekha* (“Now therefore impose Your awe”), an ancient petition for the eschatological Kingdom of God. On the Day of Atonement, the silent recital of the *Amidah* is followed by the *viddui* (“confession of sins”), which is not written as a benediction. In the

repetition by the reader, however, the *viddui* is inserted into the fourth benediction. Two confessions, one short and one long, are recited; both are arranged in alphabetical form. Sins, which might have been committed during the year, are enumerated. In common with other community prayers, they are formulated in the “we”-style: “we have trespassed, etc.” (see *Confession of Sins).

[Uri Ehrlich (2nd ed.)]

Havinenu

Shortened form of the *Amidah*. An abbreviated form of the *Amidah* (known as *Havinenu* (“give us understanding”) from its initial word) may be recited instead of the *Amidah* in cases of emergency, e.g., when a person is hurried or is ill and unable to concentrate for any length of time. The *Havinenu* prayer consists of a shortened version of the 13 intermediary benedictions of the *Amidah* and concludes with the blessing “Blessed are You, O Lord, who hearkens unto prayer.” It is preceded by the three introductory benedictions of the *Amidah* and concludes with the last three blessings of the *Amidah*. There are several versions of the *Havinenu* (Ber. 29a; TJ, Ber. 4:3, 8a, see also B.M. Lewin, *Ozar ha-Ge'onim*, 1 (1928), Teshuvot 72, no. 184 and A.I. Schechter, *Studies in Jewish Liturgy* (1930), 71). The version from the Babylonian Talmud (Ber. 29a), ascribed to Mar *Samuel, is the commonly accepted text in the daily liturgy. *Abbaye scorned those who substituted the shortened *Havinenu* version for the full *Amidah* (Ber. 29a). The law, however, permits such a substitution, except during the evening service at the termination of the Sabbath, when the fourth benediction (*Attah Honen*) is supplemented by a special prayer marking the distinction between Sabbath and the weekdays (*Havdalah*); and during the winter season when the petition for rain (*ve-ten tal u-matar*) must be said in the sixth benediction of the *Amidah* (Ber. 29a; see Sh. Ar., Oḥ 110:1).

Music

In Ashkenazi tradition, the first benediction of the *Amidah* is sometimes distinguished by a particular melody that contrasts with the subsequent cantillation in the *tefillah*-mode. On the occasion of the *Tal*, *Geshem*, and **Ne'ilah* prayers, the special *Avot* tunes employ merely the motive material of the preceding **Kaddish*. A more conspicuous and peculiar melody appears in the morning prayers of the High Holidays. It is considered among the unchangeable **Mi-Sinai* tunes. Like the majority of the latter, the *Avot* melody starts with a theme of its own, while the continuation draws from the thematic stock in use for this kind of synagogue song. The characteristic *Avot* themes show a relatively late European tonality. They develop by means of sequential progression, and are followed by a typical synagogue motive. After repetition of this section the melody uses themes known from **Aleinu le-Shabbē'ah* and **Kol Nidrei*. Like several other tunes from the *Mi-Sinai* cycle, the basic *Avot* melody sometimes underwent elaboration and extension into a “cantorial fantasia.” This was done by Aaron *Beer in 1783, and in the local tradition of Frankfurt and other communities until late in the 19th century. Examples of the ba-

sic melody can be found in: S. Naumbourg, *Zemiroth Yisrael* (1847), no. 54; Idelsohn, *Melodien*, 7 (1932), pt. 1, no. 150a; pt. 3, no. 146; I. Schorr, *Neginot Baruch Schorr* (1928), no. 81; and others. Examples of the cantorial fantasia can be found in: Idelsohn, *Melodien*, 6 (1932), pt. 2, no. 5; 7, pt. 1, nos. 150b–c; F. Ogutsch, *Der Frankfurter Kantor* (1930), no. 177; M. Deutsch, *Vorbeterschule* (1871), no. 269.

AMIDAR, the Israeli national immigrant housing company. It was established in 1949 by the Israeli government, in order to build housing projects for the masses of new immigrants. The government controlled 75% of its shares, and the *Jewish Agency held 25% of its shares. With the steady rise in immigration, however, construction was transferred to the Labor division. Amidar was given the task of proprietor and administrator of public housing: assignment of tenants to the housing projects, maintenance and improvement of the houses, rental and sales of apartments, and organization of community activities. In 20 years Amidar handled approximately 250,000 housing units, placing more than a million people in over 200 housing projects. Amidar's first task was the initial absorption of the immigrants. At first, it even assumed basic municipal functions. It instilled in tenants a sense of initiative in taking care of property and the concept of the citizen's responsibility toward property upkeep. Since housing construction in the early 1950s proceeded according to quantitative rather than qualitative needs, Amidar employed various means to allay premature deterioration and to improve neighborhoods. As a nonprofit institution, Amidar fixed rents according to an immigrant's means at the rate of 7–10% of his average monthly earnings during his first years in Israel. When the immigrant became better established, he was encouraged to buy his apartment with a down payment of 10–20%, and the rest on a mortgage with an interest rate of 3.5–4.5% annually for a period of 25 years. The encouragement of property ownership, initiated

in 1955, led by the late 1960s to the purchase of tens of thousands of housing units by their tenants.

At the beginning of the 21st century the tenants in Amidar's apartments were a mix of old and new immigrants. The company managed 60,000 apartments in 200 settlements, among them 2,200 for the elderly located in 30 sites all over Israel. It continued to be responsible for renting empty apartments, rent collection, maintenance, registration, etc. In this same period there was much public agitation among tenants owing to the high price of apartments, which prevented them from realizing their right to buy them.

[David Tanne / Shaked Gilboa (2nd ed.)]

AMIEL, MOSHE AVIGDOR (1883–1946), rabbi, religious thinker, and author. Amiel studied under his father and at the Telz yeshivah. From there he proceeded to Vilna where he studied under R. Ḥayyim *Soloveichik and R. Ḥayyim Ozzer *Grodzinski. At the age of 22 Amiel became rabbi of Świeciany, and in 1913, rabbi of Grajewo. One of the first rabbis to join the Mizrahi movement, he began publishing articles, noted for their lucid literary style, on communal and national questions and presenting his outlook on Judaism and the ideology of religious Zionism. In 1920 Amiel was elected rabbi of Antwerp, where his initial public appearance at the Mizrahi convention immediately established him as one of the chief ideologists of religious Zionism. In Antwerp Amiel created a wide network of educational and communal institutions from Jewish day schools to a yeshivah, where he lectured. In 1936 Amiel was elected chief rabbi of Tel Aviv where he found further scope for his varied activities. He established the modern high school yeshivah “Ha-Yishuv he-Ḥadash,” now named after him. The school combined talmudic and secular studies and was the first of its kind in Erez Israel. Amiel's first halakhic publication was *Darkhei Moshe* followed by his three-volume *Ha Middot le-Ḥeker ha-Halakhah*. A renowned preacher, he published the homiletical works *Derashot el Ammi* and *Hegyonot el Ammi*. Amiel was a regular contributor to the religious press.

AMIGO, Sephardi family prominent in Temesvár, Hungary (now Timișoara, Romania). Its founder, MEIR AMIGO, who was born in Constantinople, settled there together with four other Sephardi Jews in 1736, by a special authorization obtained for them by Diego D*Aguiar, who held the tobacco monopoly in Austria and appointed Amigo as his agent. Amigo became the organizer and leader of the combined community of Ashkenazi and Sephardi Jews which was subsequently established. He was nicknamed “*rey chico*” (little king) because of his wealth. Amigo maintained contacts between his community and the Sephardi community in Vienna. The

Vienna community also enlisted his help in preventing the impending expulsion of the Jews from *Bohemia in 1745.

Members of the Amigo family continued to play a leading role in Temesvár. ISAAC AMIGO, who headed the community from 1784 to 1788, afforded great assistance to the Jews from *Belgrade who sought refuge in Temesvár in 1791. The last member of the family to serve as head of the community was JOSEPH MEIR AMIGO, who held office from 1808 to 1810.

[Yehouda Marton]

AMIGO, ABRAHAM (c. 1610/15–c. 1683), rabbi and author. Amigo was born in Constantinople, or Adrianople – where he was a pupil of Elijah Obadiah. He immigrated to Erez Israel about 1655, settled in Jerusalem, and was a member of the *bet midrash* of Jacob *Ḥagiz. The rabbis of Egypt and Turkey referred questions to him and his opinion was decisive. He also studied Kabbalah and joined the circle of Jacob b. Ḥayyim Zemaḥ. Among his disciples in Jerusalem were David ha-Kohen Rapaport, author of *Da'at Kedoshim*, and Ḥayyim Abulafia the Younger. Amigo was also a distinguished preacher and moralist and his homilies were transmitted by his pupils even after his death. He opposed Shabbetai Zevi and strove to have him banished. The rabbis of Constantinople wanted to appoint him as one of the “four great men in Israel” who were to go to Gaza to investigate *Nathan of Gaza. His works are *Peri Hadash*, on the Shulḥan Arukh *Oraḥ Ḥayyim*, from the laws of Passover to the end; and responsa, decisions, and novellae on the Talmud, mentioned by Ḥayyim Joseph David *Azulai (part now in the Benayahu Collection). Some of his responsa were printed in the work of his colleague Samuel Garmison, *Mishpetei Zedek* (nos. 78, 99), and in *Naharot Dam-mesek* by Solomon Camondo (ḤM, no. 13).

AMINA (pen name of **Binyamin ben Mishael**; 1672–after 1732/33), prolific Jewish poet of Iran. Our only information about Amina's life is contained in his poetic work entitled *Sar-gozasht-e Aminā bā hamsarash* (Library of the Hebrew University, Jerusalem, microfilm #19874), where he addresses each of his seven children and complains about his wife after 25 years of marriage. A recent study of Judeo-Persian manuscripts in the libraries of the Hebrew University, Ben Zvi Institute in Jerusalem, the Jewish Theological Seminary of New York, the Hebrew Union College in Cincinnati, and the British Museum in London has shown that Amina composed approximately 40 poetic works, most of which are short. His longest works are about Esther and Mordechai (based on the Book of Esther), the sacrifice of Isaac according to the Midrash of Judah b. Samuel b. Abbas (a poet and preacher of 12th-century Tunisia and Syria), and *Tafsir-e azharot* or commentary on the “Commandments and Prohibitions” of Solomon ibn *Gabirol

(the famous poet and philosopher of 11th-century Spain). Each of these works contains 300 to 400 verses. He also composed a 92-verse poem in Hebrew.

AMIR (Heb. עֲמִיר; "ear of corn"), kibbutz in northern Israel, in the Huleh Valley, affiliated with Ha-Kibbutz ha-Arzi. Amir was founded in 1939 by immigrants from Poland, Lithuania, and other countries, near the *Huleh swamps. It was the settlement most prone to the dangers of flooding and of malaria. In 1968 Amir's economy was based on intensive irrigated farming (apples and other deciduous fruit, and field crops in partnership with kibbutz *Sedeh Neḥemyah and kibbutz *Shamir), and dairy cattle. Later on, the kibbutz set up a successful enterprise producing disposable diapers and other sanitary products, but in 2004 it was sold to a private company when the kibbutz ran into economic difficulties. Amir's population was 579 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

AMIR, AHARON (1923–), Israeli writer, translator, and editor. Amir, who was born in Kovno, immigrated to Palestine in 1935. He studied Arabic language and literature at the Hebrew University. A member of the anti-British underground organization Leḥi, he served on the editorial board of its daily, *Mivrak*, and edited its literary supplement (1948). Amir was also a founding member of the Canaanite movement, which saw Hebrew culture as defined by geographical location rather than by religious affiliation. He edited *Alef* (from 1948–50 with Yonathan *Ratosh, and from 1950 on his own), the periodical of the *Canaanites. His publications include *Kaddim* ("Sirocco," poetry, 1949) and *Saraf* ("Fiery Angel," poetry, 1957); *Ahavah* ("Love," stories, 1952); *Ve-lo Tehi la-Mavet Memshalah* ("And Death Shall Not Rule," novel, 1955); the trilogy *Nun* (1969–89); *Matteh Aharon* ("Aaron's Rod," poetry, 1966); and *Ha-Nevalim* ("The Villains," 1998). Amir also edited several books and anthologies. He translated many books into Hebrew, from English, French, and American literature. In 1959 he founded and became editor of *Keshet*, a literary and political quarterly.

[Gitta (Aszkenazy) Avinor]

AMIR (Pinkerfeld), ANDA (1902–1981), Hebrew poet. She was born in Galicia, into an assimilated family. Her father worked as an architect for the Austro-Hungarian government. She completed secondary school in Lvov, and published a book of verse in Polish at the age of 18, her first poem being the prayer of a Polish child for the liberation of his country. After studying at the universities of Leipzig and Lvov, she immigrated to Palestine in 1923. In 1921 she published another volume of verse in Polish, *Piesni życia* ("Songs of Life").

Thereafter, under the influence of Uri Zevi *Greenberg, she began writing in Hebrew. The themes of her verse are love of nature, romantic love, and the joys of motherhood. Her long poem "*Aḥat*" ("One," 1953) describes a young Jewish girl who immigrates to Israel after surviving the Holocaust and dies fighting for Israeli independence. Among her books are *Yamim Dovevim* ("Days Tell," 1929); *Yuval* (1932); *Geisha Lian Tang Sharah* (1935); *Gittit* (1937); *Duda'im* ("Mandrakes," 1943); *Gadish* ("Grain Heap," 1949); *Kokhavim bi-Deli* ("Stars in a Bucket," 1957).

Anda Amir was the first poet to write poetry in Hebrew specifically for children and distinguished herself in this field. Her first collection of such poetry, *Al Anan Kevish* (1933), was edited by H.N. Bialik, while her *Shirei Yeladim* (1934) was awarded the Bialik Prize for poems for children. In 1978 she received the Israel Prize for children's literature.

[Yohanan Twersky]

AMIR, ELI (1937–), Israeli novelist. Amir was born in Baghdad, Iraq, and came to Israel in 1950. He was sent to study at a kibbutz. His career began as a messenger in the Prime Minister's Office, and he worked his way up to Arab affairs advisor to the prime minister. Later he became director of the Youth Immigration Division of the Jewish Agency. He won the Yi-gal Allon prize for outstanding pioneering service to Israeli society. His first novel, *Tarnegol Kaparat* ("Scapegoat," 1987), is a semi-autobiographical novel depicting the integration of an Iraqi Jewish youth in an Israeli transit camp shortly after 1948. This novel is included in Israel's secondary school syllabus. Other novels by Amir are *Mafri'ah ha-Yonim* (1992); "Farewell Baghdad," Ger., 1998), *Ahavat Sha'ul* ("Saul's Love," 1998), and *Yasmin* (2005).

Amir*," in: *Leshonenu la-Am*, 50:2 (1999), 80–92.

[Anat Feinberg (2nd ed.)]

AMIR, MENAHEM (1930–), Israeli criminologist; considered one of the founding fathers of the field of criminology in Israel and specializing in rape, victimology, organized crime, police, and terror. In 1953 he graduated in sociology and education from the Hebrew University of Jerusalem and in 1958 he received his M.A. degree in sociology and psychol-

ogy there. In 1965 he received his Ph.D. in criminology from University of Pennsylvania in Philadelphia. From 1966 until 1969 he served as a lecturer in criminology at the Hebrew University. In 1971–72 he was a senior lecture at Tel Aviv University, returning to the Hebrew University in 1972. From 1977 until 1982 he served as the head of the Center of Criminology at the Hebrew University. He also held this position 1983–84 and 1989–91. In 1989 he became full professor at the Hebrew University and in 1999 professor emeritus. During these years Amir also taught at universities abroad in the U.S., Canada, and Australia, and at the same time he participated in public action, such as the founding of Al-Sam, the anti-drug organization, serving as its chairman in Jerusalem. He was also a member of public committees dealing with prostitution and organized crime and chairman of the prisoner rehabilitation program. He was awarded the Human Rights Association Founders Prize, the Israeli Criminologist Association Prize, and the Ford Fund for Researches Prize. He received the Israel Prize for criminology in 2003 with a citation that pointed to his work as a rare combination of theory, empirical research, and practical application. Amir published more than 90 articles and wrote or edited eight books, including *Patterns in Forcible Rape* (1971); *Organized Crime: Uncertainties and Dilemmas* (1999) with S. Einstein; and *Police Security and Democracy: Theory and Practice*, 2 vols. (2001) with S. Einstein.

[Shaked Gilboa (2nd ed.)]

AMIRA, BINYAMIN (1896–1968), Israeli mathematician. Born in Mogilev-Podolsk, Russia, Amira was taken to Palestine in 1900. He founded the Institute of Mathematics at the Hebrew University, Jerusalem. He also founded the *Journal d'analyse mathématique*, which appeared in 17 volumes from 1955 to 1966.

AMIRAN, DAVID (1910–2003), Israeli geographer. Amiran was born in Berlin, Germany. After studying in Berne, Switzerland, he immigrated to Palestine in 1935 and became librarian of the geological department of the Hebrew University of Jerusalem. During World War II he was an officer in the Royal Engineers, and on his discharge joined the Palestine Meteorological Service. In 1949 he began teaching geography at the Hebrew University and was appointed a full professor in 1963. From 1956 to 1959 Amiran was director of the Research Council of Israel and of the Negev Institute for Arid Zone Research. In 1961 he founded the Israel Geographic Society and served as its president until 1977. From 1962 to 1968 he was acting chairman of the International Geographical Union's Commission on the Arid Zone and in 1968 became a member of the Union's Commission on Man and Environment. From 1965 to 1968 he was vice president of the Hebrew University. In 1978 he established the Jerusalem Institute for Israel Studies and served as its director until 1984. In 1977 he was awarded the Israel Prize in the social sciences.

Amiran directed the compilation of the *Atlas of Israel* (Hebrew edition, 1956–64; English enlarged edition, 1970)

and together with A.P. Schick wrote *Geographical Conversion Tables* (1961). He edited the 1963 edition of R. Roericht's *Bibliotheca Geographica Palestinae* and for UNESCO *Land Use in Semi-arid Mediterranean Climates (Arid Zone Research*, vol. 26, 1964). Amiran published over 120 books and articles in various fields of geography, among them several which summarized the whole field. His work contributed to the discipline in diverse areas, such as physical and human geography. One of his major fields of study was the desert, which he studied in Israel as well as in other places around the world. His specialization in desert studies led the governments of Peru and Brazil to invite him to carry out studies for them. His wife RUTH (1914–), an archaeologist, served as a staff member of the Hazor expedition (1955–58) and also excavated tumuli west of Jerusalem (1953), Tell Nagila (1962–63), Arad (with Y. Aharoni; 1962–66), the Citadel of David in Jerusalem (1968–), etc. She is a coauthor of *Hazor*, 3 vols. (1958–61) and published *Ancient Pottery of the Holy Land* (1970), a comprehensive study of ancient pottery in Erez Israel. She was appointed field archaeologist to the Israel Museum. In 1982 she was awarded the Israel Prize for archaeology.

AMIRAN (formerly **Pougatchov**), **EMANUEL** (1909–1993), composer and teacher. Born in Warsaw, Amiran went to Palestine in 1924, and after study in London, returned to teach music in schools and teachers' seminaries. He was co-founder and director of the Music Teachers Training College in Tel Aviv (1944–55), and in 1955 became supervisor of musical education in the Ministry of Education and Culture. His songs, which are among the most important contributions to the Israeli folk style, include *Emek Emek Avodah*, *El ha-Maayan Ba Gedi Katan*, *Mayim Mayim*, *Ki mi-Ziyyon*, *Uru Aḥim ve-Na'aleh Har Ziyyon*, *Ha-Zore'im be-Dimah*, and *Halleluyah-Kumu ve-Na'aleh*. He also wrote choral, orchestral, and piano music.

AMIRIM (Heb. אֲמִירִים; meaning “summits,” referring to the beautiful local scenery), moshav in northern Israel, near Mt. Meron in Upper Galilee. Amirim was founded in 1950, and taken over in 1956 by a group of vegetarians and naturalists (Israeli-born and others). Amirim had no livestock but grew fruit (apples, apricots, peaches, various kinds of nuts) and vegetables, supplying the settlers' dietary requirements. The moshav offered the public a wide array of alternative health cures, from reflexology to holistic massage as well as restaurant and vacationing facilities. Amirim's population was approximately 380 in the mid-1990s, growing to 458 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

AMISHAI-MAISELS, ZIVA (1939–), art scholar. Amishai-Maisels was born Maxine Maisels in Brooklyn, N.Y., the daughter of Moses Ḥayyim (Misha) *Maisels (M.H. Amishai). Her family moved to Israel in 1959, and in the 1963 academic year, she began teaching at the Hebrew University's Department of Art History. She is known for her work on religious, historical, and personal symbolism in modern art, including

problems of identity and depictions of the other. She concentrated especially on Modern Jewish Art and the work of Chagall, Steinhardt, Lipchitz, and Bezem. Among her most important contributions to the field is her work on the influence of the Holocaust on modern art among both Jews and Christians. She divided their reactions between depictions of the Holocaust's events and the way they have been symbolized in traditional and personal terms, explaining how the resulting images have become archetypes for representations of catastrophe. For this work, she received the Israel Prize in art history in 2004. She wrote many articles, and the books she published include *Chagall at the Knesset* (1973); *Jakob Steinhardt: Etchings and Lithographs* (1981); *Gauguin's Religious Themes* (1985); *Naftali Bezem* (1986); *Depiction and Interpretation: The Influence of the Holocaust on the Visual Arts* (1993); *Jewish Art* (with Gabrielle Sed-Rajna et al., 1995, 1997).

AMIT (Mizrachi Women's Organization of America), U.S. organization founded in 1925 by Bessie Goldstein *Gotsfeld to give religious Zionist women an independent role in the development of Palestine as a Jewish homeland. Prior to the group's formation, women participated in the *Mizrachi movement through auxiliary organizations that raised funds for projects administered by men. When they decided to implement their own programs, the new American Mizrachi women confronted resistance from a male leadership accustomed to controlling movement coffers. In the face of the men's unrelenting claims to their members' resources, the Mizrachi women struggled in their first decade to maintain institutional integrity. In 1934, the group declared its complete autonomy from the men and stands today as the largest religious Zionist organization in the United States.

The Mizrachi Women's Organization has been guided by the principle that the establishment of the land of Israel by the Jewish people should be in the spirit of Israel's Torah. Its initial projects focused on ensuring that young Jewish girls in Palestine would receive training and preparation for productive and spiritual lives. Beit Zeiroth Mizrachi, a technical school and cultural center for adolescent girls in Jerusalem, opened its doors in 1933, welcoming both German refugee and native girls for training in technical, secular, and religious subjects. A second school in Tel Aviv included a Beth Chalutzoth where young working women could reside. The American Junior Mizrachi Women broadened their mother's initial endeavors to take on the creation and support of day nurseries. The religious Zionist women also built an agricultural training school and a teacher's seminary for young women, as well as homes for orphaned and neglected children.

Mizrachi women made a critical contribution to *Youth Aliyah rescue through its establishment of children's residences and youth villages for refugees from traditional backgrounds. These included the Motza Children's Home, where the first of the "Teheran children" were received, the Mosad Aliyah Children's Village in Petaḥ Tikvah, and Kfar Batya in Ra'anana. Throughout the ensuing decades, Mizrachi women

have housed and educated the needy children of each generation of new Israeli immigrants, from countries as diverse as Russia, Iran, Kazakhstan, France, and Ethiopia.

The Mizrachi Women's Organization continues its commitment to vocational education and teacher training. In 1983, the group adopted the name AMIT, and was designated as Israel's official network for religious technological secondary education. Today, AMIT cares for more than 15,000 youngsters in more than 60 schools, youth villages, surrogate homes, and child care facilities throughout Israel. The organization raises funds for all the major Israel campaigns and is a member of both the World Zionist Organization and the Conference of Presidents of Major American Jewish Organizations.

[Tracy Sivitz (2nd ed.)]

AMIT (Slutzky), MEIR (1921–), Israeli military commander and politician. Member of the Ninth Knesset. Amit was born in Tiberias. From 1939 to 1952 he was a member of kibbutz *Alonim. He joined the *Haganah in 1936, and from 1940 to 1945 served in the supernumerary police. In 1947 Amit participated in the battles for *Mishmar ha-Emek and the *Jezreel Valley. In 1948 he joined the IDF and participated in the battle for the liberation of the Lower Galilee and Operation Hiram (see *War of Independence). In 1950 he was appointed commander of the Golani Brigade and in 1951 commander of the Training Command, and chief of operations on the General Staff. After spending a year in an officers' course in England, he was appointed IDF chief of operations in 1954, commander of the Southern Command in 1955, and again chief of operations in 1956, in which capacity he coordinated the planning team for the *Sinai Campaign of 1956. In 1958 he became commander of the Northern Command. In 1959 he took time off to study business administration at Columbia University in New York. In 1961 he was appointed head of the Intelligence Section of the IDF. From 1963 to 1968 he was head of the Mossad (Israel's intelligence services). From 1968 to 1977 Amit was director-general of Koor Industries, the Histadrut's industrial conglomerate. In 1977 he resigned from Koor to join the Democratic Movement for Change and was elected to the Ninth Knesset on its list. In October of that same year he was appointed minister of transportation and communications but resigned in September 1978 after the DMC disintegrated, and joined the Shinui ve-Yozmah parliamentary group. He later left Shinui to join the Israel Labor Party. After 1978 Amit held various senior management positions in various hi-tech companies.

[Susan Hattis Rolef (2nd ed.)]

AMITSUR, SAMSON ABRAHAM (1921–1994), mathematician. Born in Jerusalem, Amitsur studied at the Hebrew University, where he received his doctorate in 1949. From 1951 to

1954 he was a member of the Institute for Advanced Studies at Princeton, U.S.A., and was appointed professor at the Hebrew University in 1960. He was awarded the Israel Prize for exact sciences in 1953.

AMITTAI (c. 800), Hebrew liturgical poet in *Oria, southern Italy; father of the liturgical poet *Shephatiah of Oria. According to tradition, the family was exiled to Italy by *Titus, after the destruction of the Temple. The *Ahimaaz chronicle describes Amittai as “a sage, learned in the Torah, a poet and scholar, strong in faith.” Several *piyyutim* signed simply Amittai may probably be credited to him, including the touching *pizmon Ezkerah Elohim ve-Ehemayah* (“Lord I remember Thee and am sore amazed”) which is included in the Concluding Service for the Day of Atonement according to the Ashkenazi rite, as well as *Eikh Narim Rosh be-Erez Oyevim* (“How shall we raise our heads in a hostile land”). Some authorities however ascribe the former *piyyut* to his grandson *Amittai ben Shephatiah. The compositions breathe the spirit of the ancient Palestinian religious poetry.

[Abraham Meir Habermann]

AMITTAI BEN SHEPHATIAH (late ninth century), liturgical poet in Oria, S. Italy, grandson of *Amittai; he succeeded his father *Shephatiah as leader of the community in Oria, evidently exercising his authority in an arbitrary manner. Over 30 of Amittai's liturgical poems have been published, and several were incorporated into the Italian and Ashkenazi liturgies. Although following the traditions of the Hebrew poetry of the Orient, Amittai often makes use of rare or novel word forms. Amittai's poems contain references to the persecutions to which the Jews of his day were subjected, in particular lamenting the forced conversions imposed by the Byzantine emperor *Basil I (867–86). Allusions to religious *disputations between Jews and Christians also appear in his work. In one poem he employs the dialogue form for a disputation between the Congregation of Israel and its enemies, possibly chanted by two groups of worshipers, or by the precentor and congregation alternately. Another poetical dialogue, also possibly recited in synagogue, is a debate between the vine and other trees discussing the merits of drinking and abstinence. Amittai also composed hymns and poems for special occasions; his epithalamium on the marriage of his sister Cassia to Hasadiah b. Hananeel served as a model for subsequent compositions in France and Germany. He was able to improvise, and recited a lament over the bier of a wayfarer which he saw being conveyed through the streets. The incident was parodied by a teacher named Moses (later of Pavia) who incurred Amittai's resentment, and had to leave Oria. In general his poems consist of equal stanzas each with its own rhyming key, varying from distiches to decastiches, sometimes with a repetend at the end of each strophe. Y. David's critical edi-

tion of Amittai's poems contains 46 poems collected on the basis of 100 manuscripts in addition to the work by B. Klar, *Megillat Ahimaaz*.

[Abraham Meir Habermann]

AMMATHA (Hamta, Ammatu, Ammatu), ancient town located east of the Jordan, 21 Roman mi. south of *Pella. Ammatha was a fortified city in the period of the Second Temple, when it was captured by Alexander Yannai, who seized there the treasures of Theodore, the son of Zeno, ruler of Philadelphia (Jos., *Ant.* 13:356; Wars 1:86–87). When Alexander later resumed his campaign in Transjordan, he found that Theodore had razed the abandoned city to the ground (Jos., *Ant.* 13:356; Wars 1:86–89). A royal palace, nevertheless, still existed there in the time of Herod (Jos., *Ant.*, 17:277).

Ammatha was the capital of one of the five districts, each with its own council (*synhedrion*), into which Gabinius divided Judea (Jos., *Ant.* 14:91; Wars 1:170). In Byzantine times it was still the headquarters of a fiscal district. It is mentioned several times in rabbinic sources as Ammatu, Hamtan, or Hamata, which would indicate a place possessing hot springs (TJ, *Shev.* 6:1, 39d; *Mid. Ps.* to 92:11). In the Arab period, Ammatha continued to be an important center of agriculture (cereals, indigo) and industry (arrowheads). The Arab geographer al-Idrisi (1154) mentions it along with Jericho and Beth-Shean as one of the finest towns of the Jordan Valley. Ammatha is identified with Tell 'Ammatā, northeast of the confluence of the Jabbok and Jordan rivers.

[Michael Avi-Yonah]

AMMERSCHWIHR (Ger. **Ammerschweier**), town in eastern France, 5 mi. N.W. of *Colmar. Jewish residents in Ammerschwihl are mentioned in 1534 when *Joseph (Joselmann) ben Gershom of Rosheim notified them of complaints made by the Colmar magistracy that they were contravening its regulations by introducing foreign currency into the city and selling new clothes there. The municipal regulations of 1561–63, which refer to the text of a former regulation (of 1440), specify the conditions governing Jewish residence in Ammerschwihl. The Jews were required to make an annual payment of 16 florins to the city and city guilds and were prohibited from leaving their homes during the week preceding Easter, and from fetching water from the wells on Sundays and Christian holy days. Outside their homes they were to wear the Jewish *badge. Sale of goods was forbidden to Jews at any place other than in front of the “Stockbrunnen”; they could, however, engage in peddling, and sell their wares at the annual fair; all Jewish visitors to Ammerschwihl had to pay three *deniers* for

each day they spent in the city, and an additional six *deniers* if they remained overnight. Jewish residence ceased from the end of the 16th century; the toll was still imposed between 1625 and 1630 on transients (Archives Municipals. BB 17 fol. 82, 103). The “rue des Juifs” was located between the Colmar gate and the market place.

[Bernhard Blumenkranz]

AMMI'AD (Heb. אַמִּיאָד), kibbutz in northern Israel, on the Tiberias–Rosh Pinnah highway. Ammiad, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim, was founded in 1946 by a group of Israeli-born youth, who were later joined by immigrants. The rocky ground allocated to the settlement had to undergo thorough land reclamation to enable the development of farm branches, which included an avocado plantation, deciduous fruit orchards, intensive field crops, and beef cattle. Its factory produced filtration and fertilization systems. The kibbutz also operated a winery and vacation resort. In 2002 it numbered 429 residents. Remnants of a wayfarers' hostel from the Middle Ages have been unearthed there.

°AMMIANUS MARCELLINUS (c. 330–400), last of the great Latin pagan historians of antiquity. He speaks of Jews in four separate passages of his history. The first refers to Pompey's conquest of Jerusalem (14, 8:11–12); in the second he quotes the disparaging remarks of Marcus Aurelius on the Jews (22, 5:5). Most important is the third passage which contains a description of the attempt of *Julian the Apostate to rebuild the Temple in Jerusalem (23, 1:2–3). He ascribes this not to sympathy with the Jews, but to the emperor's desire to leave a memorial to his reign. According to Marcellinus, the project was entrusted to a certain Alypius of Antioch, but it could not be executed because of an explosion of balls of fire on the Temple Mount. The fourth passage mentions a city on the Euphrates deserted by its Jewish inhabitants during Julian's campaign against the Persians (24, 4:1–2). Marcellinus does not express his personal opinion with regard to the proposed rebuilding of the Temple, but from his quotation from Marcus Aurelius he does not seem to have been well disposed to the Jews.

AMMI BAR NATHAN (end of third century), Palestinian *amora*. Ammi and his colleague, R. Assi, were the most outstanding of the Palestinian *amoraim* of the period. They were referred to as “the renowned Palestinian *kohanim*” (Meg. 22a) and “the Palestinian magistrates” (Sanh. 17b). Apparently, while still in Babylonia, Ammi studied under Rav (Ned. 40b–41a). In Palestine he studied under Oshaya and Ḥanina, and also transmitted statements in the names of R. Yannai, R. Joshua b. Levi, and R. Judah ha-Nasi II. However,

like his colleague R. Assi, his main teacher was R. Johanan. Both Ammi and Assi studied at Johanan's yeshivah in Tiberias (Shab. 119a; Git. 40a). When Johanan died, Ammi observed the mourning customary for a father (MK 25b). He also studied under Resh Lakish who once ransomed him from captivity (TJ, Ter. 8:10, 46b). Ammi seems to have been both a pupil and a colleague of Eleazar and apparently also of R. Isaac Nappaḥa. Ammi and Assi are frequently mentioned in conjunction. They were ordained together, and at their ordination a song was sung in their honor, commencing: “Ordain us men like these!” (Ket. 17a). After the death of R. Johanan and R. Eleazar in the year 279, both headed the yeshivah at Tiberias, but Ammi was the more important (*Iggeret R. Sherira Gaon*). Both were praised for their piety and stories were told of miracles which happened to them (Ber. 62a), of their scrupulousness in honoring the Sabbath, of their preparation of *eruv tavshilin for all the inhabitants of Tiberias (Bezah 16b), and of their good works (TJ, Ḥag. 1:7, 76c), especially the redemption of captives. It is also stated that although there were 13 synagogues in Tiberias, they used to pray “between the pillars” in their place of learning (Ber. 8a, 30b). Ammi and Assi would interrupt their studies and announce “Let anyone who has a lawsuit enter” (that the case could be heard in the presence of both litigants; Shab. 10a). Together with R. Ḥiyya b. Abba, Ammi and Assi were appointed by R. Judah ha-Nasi II as inspectors of education in the towns and villages of Palestine, with authority to introduce necessary reforms (TJ, Ḥag. 1:7, 76c). Ammi accompanied Judah ha-Nasi II to Hammath-Geder (TJ, Av. Zar. 2:2, 40d and 5:15, 45b). There is also a record of his visit to the court of Zenobia, queen of Palmyra, to intercede for the release of a scholar who had been taken prisoner (TJ, Ter. 8:10, 46b). Despite his closeness to the *nasi* and his household, Ammi did not refrain from criticizing their actions when he disapproved of them; as in the case of the appointment of magistrates in consideration of monetary payment (TJ, Bik. 3:3, 65d). As long as R. Huna, head of the yeshivah of Sura, in Babylonia, was still alive, Ammi and Assi continued to be subject to his authority (Meg. 22a). The reference in Bava Batra 11b, “R. Huna asked R. Ammi” is taken by some to allude to another, earlier Ammi, and by others to another, later R. Huna (see Tos. *ibid.*). However, after the death of R. Huna in the late third century, Ammi seems to have been the outstanding authority of his generation. On one occasion the preamble to the publication of a certain practical halakhic decision of his read: “From me, Ammi b. Nathan, the Torah goes forth to all Israel” (Git. 44a). Among those who addressed halakhic inquiries to Ammi were R. Abbahu, head of the yeshivah at Caesarea in Erez Israel (TJ, Yev. 4:11, 6a) and R. Naḥman and Rava, heads of the yeshivah at Maḥoza in Babylonia (Git. 63b). Ammi probably returned to Babylonia for some time, since halakhic discussions are reported between him and R. Naḥman (Ber. 47b) and R. Ḥisda (Yev. 21b).

AMMINADAV (Heb. עֲמִינָדָב), moshav S.W. of Jerusalem. It was founded in 1950 as a work village whose settlers were primarily employed as laborers for *Jewish National Fund land reclamation. The settlers came from Turkey, Morocco, or were Israeli-born. The village economy was based on hillculture (vineyards, deciduous fruit, vegetables) and poultry. In the vicinity the John F. Kennedy Memorial was built and a great deal of afforestation work done. Amminadav's population in the mid-1990s was approximately 400 but due to its location near Jerusalem many new families settled there, bringing the population up to 595 in 2002. The moshav's name derives from a prince of the Judah tribe, the father of Nahshon.

[Efraim Orni]

AMMON, AMMONITES, ancient people. The Ammonites are one of the many tribes that emerged from the Syrio-Arabian desert during the second millennium B.C.E. and eventually established a national kingdom in Transjordan. In the Bible they are usually called "*Benei 'Ammon*" ("Children of Ammon"), while Akkadian inscriptions have them as *Bit Am-ma-na-ai-a* and their land as *māt Ba-an-am-na-aya*. As is now known from Ammonite inscriptions of the seventh century B.C.E. their self-appellation was *bn'mn* written as one word, with no *yod* following the nun. According to Genesis 19:38, the Ammonites are named for their ancestor Ben-Ammi (*ben 'ammi*, "son of my kin"), who was so named by Lot's younger daughter because he was born of her incestuous relations with her father. Since Lot was a nephew of Abraham, the story attests the Israelites' belief that the Ammonites were related to them. However, Deuteronomy 23:4 forbids participation by Ammonite and Moabite aliens in the Israelite cultic community.

The Land

At the end of the 15th century B.C.E., the Ammonites settled along the upper and central Jabbok River and in the area of its tributaries. Their eastern border was the desert, with the central Jabbok constituting their northern boundary (e.g., Deut. 3:16; Josh. 12:2). It was supposed that their western and southern boundaries were marked by the so-called *rujm malfūf* (sing.). These were massive structures built of large, rough stones. Some of the structures are circular and up to 16 meters in diameter, while others are rectangular or square. Their massive construction and strategic location, within sight of one another, indicate that these buildings were used for guarding and defense purposes. But a recent excavation in *rujm malfūf* west of Rabbath-Ammon (Amman) showed it to be from the Roman period, as no earlier remains were found there. It is possible then to reconstruct the Ammonite borders approximately in light of biblical data and topographical conditions. The northern boundary ran from the central part of the Jabbok River (which flows east to west) to the point where Wadi al-Rumaymīn enters the Jabbok. The western border extended from the Jabbok Wadi at Rumaymīn confluence southward along the Wadi Umm al-Danānīr, which originates

Ammonite region and towns.

in the Sahl al-Bugay'a Valley. The ridge of mountains divides the upper Jabbok tributaries from the upper beds of Wadi Shu'ayb, Wadi al-Sir, Wadi Kafrayn, and Wadi Hisbān. Important settlements along the western boundary were at Jogbehah (al-Jubahyat), Jazer, and Nā'ūr. On the south, at Nā'ūr, the border turned eastward, passing north of the Israelite settlements at Elealeh and Mephaath. The most important of the Ammonite settlements was *Rabbath-Ammon, whose location made it ideal as the royal city and the capital of the country. The city is situated alongside the source of the Jabbok (11 Sam. 12:27) and enjoys natural protection. It drew its wealth from the agricultural surroundings and from international trade conducted along the main north-south road of the Transjordanian highlands – the "King's Highway." As a border city, Rabbath-Ammon lay in the path of the caravan trade between Arabia and the major centers of the Fertile Crescent. But the country was equally open to incursions of nomads who lived by raising sheep, goats, and camels, and by raiding the settled population (as well as each other). An exploration headed by N. Glueck discovered a network of fortresses along the eastern border of the Transjordanian states. It has become clear that these communities were destroyed by invasions of desert nomads in the second quarter of the first millennium B.C.E.

Culture

The transition from the nomadic life to permanent settlement in the Jabbok region caused changes in the social order, economy, and government of the Ammonites. They adopted a way of life and form of government which was an amalgam of nomadism, in which they had been rooted for generations, and the customs of the urban and agricultural civilizations.

The Ammonites were organized along the lines of a centralized national monarchy (I Sam. 12:26). It was dynastic (II Sam. 10:1) and based upon a ramified administration (II Sam. 10:3 = I Chron. 19:3; Jer. 49:3; Amos 1:15). Ammonite seals testify to the existence of high officials with the title *'bd* ("servant"), such as *l'Dnnr 'bd 'Mndb* "belonging to Adoni-Nur, servant of Amminadab," and *l'Dnplṭ 'bd 'Mndb* "belonging to Adoni-Phelet, servant of Amminadab." The statuette of an important Ammonite bears the legend *Yrh'zr rb rkshn* "Yarah'azar, Overseer of the Horses." Seals of Ammonite women indicate that they were also appointed to the administrative staff or owned property. It is fairly certain that the higher officialdom was selected from the Ammonite nobility. Luxurious stone-carved burial caves containing tools and expensive jewelry, undoubtedly reserved for noble families, have been found in Rabbath-Ammon and its environs.

Most of the population supported itself by farming (grain crops and orchards) and grazing (Num. 32:1–4; Jer. 48:32; II Chron. 27:5). There were extensive tracts of arable land and settlements were usually situated near wells and streams, which were used to irrigate the fields by means of man-made channels. In areas unsuited for agriculture, mainly in the east, the inhabitants lived as seminomads in temporary quarters, such as tents and huts. In times of danger they could find shelter in the fortresses that dotted the borders. The Ammonite material culture, as far as can be determined from finds (mostly from the eighth and seventh centuries), was influenced by several centers of culture. The local imitations were marked by design and workmanship inferior to those of Ammon's northern and western neighbors. Architectural style was simple and massive, and lacked any decorative elements. Ceramic artifacts, however, indicate that Ammonite potters achieved a high level of technical proficiency and adapted Assyrian, Phoenician, and Israelite styles. Stone sculpture reveals a mixture of Egyptian, Phoenician, Syrian, and Assyrian elements. The two most common forms of seals – the scarab-shaped and the cone-shaped – are represented. The engraving on seals tends to be crude and does not represent the work of consummate artists. The designs engraved on the seals are rich in art motifs taken from Phoenicia, Egypt, Aram, and Assyria. Most of the objets d'art that have been recovered came from well-planned and spacious rock-hewn family burial caves. Some of these caves have ledges upon which the corpses were placed. Many ceramic, metal, and glass objects were found near the bones in these tombs. The discovery of a tenth- or ninth-century cover of an anthropoid coffin from Sahab is worth note, as it appears to have been widespread in Egypt and Philistia; during the eighth and seventh centuries, the Ammonites buried their dead in Assyrian-type coffins (cf. the tomb of Adoni-Nur). (For Ammonite mourning customs, see Jer. 49:3.)

Comparatively little is known of the Ammonite religion. The national god was Milcom (e.g., I Kings 11:5), whose name appears on two seals from the neo-Babylonian and Persian periods. The custom of burning children for *Moloch is

mentioned several times in the Bible, but it is not clear if the references are to the Ammonite cult and its god Milcom, and there is no positive evidence that the sacrifice of human beings to Milcom was practiced in Ammon. It is also unclear if the various theophoric elements appearing in private Ammonite names, such as Yarah'azar, or the motifs engraved on seals, such as the crescent on the seal of Mannu-ki-Inurta, indicate religious syncretism. Like most of the tribes whose descent is traced to *Eber, the Ammonites were circumcised, as is apparent from Jeremiah 9:24–25.

Evidence about the Ammonite script and language is available from many names and a few epigraphic discoveries. The Ammonites used the Canaanite alphabet, which displayed the substantial influence of Aramean lapidary writing. The Ammonite language was no doubt a North-West *Semitic language, as may be seen from personal names (e.g., Nahash, Hanun, Shabel, Amminadab, Hananel, Menahem, Abihaz, Elisha) and words (e.g., *bn*, "son"; *bt*, "daughter"; *'bd*, "servant"; *'mh*, "maidservant"; *na'ar*, "young man"). However, Arabic elements can also be discerned in the Ammonite onomasticon. These South-Semitic elements must have entered the language at a later stage, when the Ammonites entered into trade with Arabia, which received its first impetus beginning in the tenth century and intensified during the Assyrian period.

Ammon and Israel

The Ammonites' finest hour came at the end of the period of the Judges. *Nahash, their king, conquered Israelite territories bordering Ammon and even succeeded in crossing the Jabbok to the north and besieging Jabesh-Gilead (I Sam. 11). His degrading demand upon the inhabitants of Jabesh-Gilead testifies to Ammonite power and self-confidence; it was a challenge to all the tribes of Israel, as was the seven-day period given to the population of the city to find a savior (I Sam. 11:3). The unexpected appearance of *Saul at the head of a unified Israelite army completely altered the balance of power between Ammon and Israel and brought about the Ammonite withdrawal from Israelite territory in Gilead. Saul did not enslave the Ammonites, as he was so occupied with ending internal feuds and wars with Israel's neighbors (I Sam. 14:47–48). Nahash the Ammonite remained on his throne and even passed the kingdom on to his son Hanun (II Sam. 10:1; I Chron. 19:1). Hanun's provocation of King David's goodwill delegation (II Sam. 10), which was probably instigated by the Arameans, led to war between Ammon and David (II Sam. 10–12; I Chron. 19–20). Aramean military aid to Ammon was not sufficient to prevent David's conquest of the entire country. The intent of II Samuel 12:30 (= I Chron. 20:2), regarding the crown that David removed from the head of the Ammonite king, is not clear: it may mean either that David crowned himself king of the Ammonites or that he only took the crown as spoil but left the kingdom in the hands of Shobi, the son of Nahash, who became his vassal (II Sam. 17:27).

Ammon was subjugated to Israel during the reigns of David and Solomon. Although David subjected the Ammonites to a *corvée* (11 Sam. 12:31), he also appointed some of them to important positions in the kingdom (11 Sam. 23:37; = 1 Chron. 11:39). *Solomon had Ammonite wives, some of whom brought the worship of their god, Milcom, to Jerusalem (1 Kings 11:5–8; 11 Kings 23:13). Moreover, Solomon's son *Rehoboam, the heir apparent, was born of an Ammonite mother (1 Kings 14:21). This fact might have been reason for some affinity between Ammon and Jerusalem, but it did not prove sufficient to create a firm alliance with either Judah or Israel after the division of the kingdom. The split in Solomon's kingdom, the wars between Rehoboam and Jeroboam, *Shishak's campaign into Erez Israel, and the rise in strength of *Aram-Damascus all encouraged the Ammonites to cast off the Israelite yoke and become independent. The kings of Aram-Damascus, who sought hegemony over Palestine, encouraged the Transjordanian states to act against the kingdoms of Israel and Judah.

Ammon's fate was largely dependent upon the relative military strengths of Aram, Israel, and Judah and the political ability of its own rulers to exploit developments in Syria and Palestine for their own ends. It seems that the Ammonites did not participate in the 12-party pact of the kings of Syria, Phoenicia, and Palestine against Assyria. It is most probable that Baasha son of Rehoab of Aman who is mentioned among the allies who fought against Shalmaneser III at Karkar in 853 (Pritchard, Texts, 279), was from Mount Aman in Syria, and not from the land of Ammon. 11 Chronicles 20 contains a description of an invasion of Judah by Moab and Ammon during *Jehoshaphat's time, but the geography of the account is difficult. It is almost certain that the Ammonites exploited the strong Aramean pressures on Israel to extend their borders in Gilead at Israel's expense (Amos 1:13). During the reigns of *Jeroboam son of Joash, *Uzziah, and *Jotham, there was a change in the balance of power in Palestine and Syria. Jeroboam is credited with ruling over Damascus and Hamath (11 Kings 14:28), while Uzziah subjugated the Ammonites, who paid a tax and tribute to him and his son Jotham (11 Chron. 26:8; 27:5). Some believe that during the period families moved from Judah to Transjordan and established large estates in Gilead, and that among them was the family of Tabeel (Isa. 7:6), which is later called the family of Tobijah. If 11 Chronicles 27:5 is to be understood literally that the king of the Ammonites paid a tax to Jotham in the second and third years of his reign, it is possible to assume that he rebelled against Jotham and ceased to pay his levy in the fourth year. This cessation of the tax may be explained against the background of 11 Kings 15:37, where the hostile activities of *Rezin and *Pekah against Judah during Jotham's reign are mentioned. Even though Ammon liberated itself from Judah's domination during this period, Tiglath-Pileser III does not list the king of Ammon among Assyria's enemies. As far as can be seen, the Ammonites did not join the anti-Assyrian alliance of Rezin and Pekah.

Under Assyrian and Babylonian Rule and the End of the Kingdom

The campaign of Tiglath-Pileser III into Palestine in 734–732 B.C.E. drew all the states of the area, including Ammon, into the Assyrian orbit. Subjection to Assyria took the form of periodic payment of taxes, occasional tributes, a *corvée*, and military aid to the Assyrian king. The tax records of Tiglath-Pileser III mention Sanipu of Ammon (Pritchard, Texts, 282). An Assyrian letter from the last third of the eighth century discovered at Nimrud (Calah) mentions a delegation from the land of the Ammonites (*māt Ba-an-am-na-aia*) that came to Calah together with delegations from other countries bearing tributes to the Assyrian king. Buduilu (Puduil), king of Ammon, did not join *Hezekiah's rebellion against Assyria in 701, but declared his allegiance to the Assyrian monarch by rendering a tribute to him (Pritchard, Texts, 287). In 676, Buduilu is mentioned along with "the kings of Hatti, the seashore, and the islands," who were obliged to supply cedar and pine beams from the Lebanon and Sirion mountain ranges for the construction of Esarhaddon's palace at Nineveh (Pritchard, Texts, 291). Amminadab (Amminadbi), the Ammonite king who was contemporary with Esarhaddon and Ashurbanipal, is mentioned together with "22 kings of provinces of the shore, the islands, and the mainland" who paid heavy tributes to the two Assyrian kings and sent their armies to the Assyrian war against Egypt in 667 (Pritchard, Texts, 294). Two Assyrian documents that mention a tax paid by the Ammonites and other nations to Assyria probably come from this period.

The Ammonite kings submitted to Assyrian domination because they saw in it a guarantee of their security against desert marauders and a position within the Assyrian imperial framework was beneficial to commercial activities and economic growth (Jer. 49:4). This considerable economic activity is attested to by the large number of seals and other finds from the period of Assyrian rule. Archaeological evidence also testifies to the growth of local Ammonite production, alongside substantial import of jewelry and other luxury items. The war conducted by Kamashaltu, king of Moab, against the king of Kedar (Pritchard, Texts, 298) and Ezekiel's prophecy regarding Ammon (Ezek. 25:4–5) indicate the serious dangers that the wandering bands posed to the peoples of Transjordan. Only with the aid of Assyria, which held substantial interests in international trade and waged numerous wars against the desert tribes, were the Transjordanian states able to fortify their desert borders and repulse the nomadic marauders. The Assyrians for their part had an interest in strengthening the border states and tying them into the empire's defense system. It is even possible that Ammon was able to extend its borders in Gilead under Assyrian auspices (Zeph. 2:8).

There is no evidence that the transition from Assyrian to Babylonian rule at the end of the seventh century brought about any immediate changes in Ammon's political or economic situation. When Nebuchadnezzar fought Ashkelon in 604–603 B.C.E., "all the kings of the land of Heth" paid a tribute to the Babylonian king, and it appears that the king of

Ammon was counted among this group. Ammonite troops served with the Chaldeans in suppressing *Jehoiakim's rebellion (11 Kings 24:1–2), and perhaps in return for this service the Ammonites were given a free hand in Gilead (Jer. 49:1) and their territory was extended westward to the Jordan, as was also the case with the later Babylonian and Persian province of Ammon. A few years later, however, Ammon was disaffected against Babylonia. An Ammonite king is mentioned among the rulers who sent messengers to *Zedekiah in 594–593, in connection with the organization of a general rebellion against Babylonia (Jer. 27:3), but there is no detailed evidence about the fate of the rebellion or about Ammon's participation. There are, however, several suggestions of Ammonite participation in the 589–586 rebellion, namely the representation of Nebuchadnezzar as stopping to decide whether to advance on Rabbath-Ammon or on Jerusalem in Ezekiel 21:23–27, Zedekiah's evident attempt to flee to Transjordan (1 Kings 25:4–5), the refugees from Judah who found asylum in Ammon (Jer. 40:11), and the involvement of Baalis, king of Ammon, perhaps the initiator of the anti-Babylonian policy, in the plot to murder *Gedaliah son of Ahikam, the Babylonian deputy in Judah. A Babylonian punitive expedition against Ammon followed several years later. Josephus (*Ant.*, 10:181–2) relates that five years after the destruction of Jerusalem, during the 23rd year of his reign (in 582 B.C.E.), Nebuchadnezzar conducted a military campaign against Syria and Transjordan. As there is no clear and irrefutable indication about the existence of an independent or semi-independent Ammonite nation after the end of the neo-Babylonian period it may be assumed that it was in the course of Nebuchadnezzar's above-mentioned campaign, or shortly thereafter, that Ammon was reorganized as the province, reaching down to the Jordan, which was known in the Hellenistic times as Ammonitis.

The disintegration of the Assyrian Empire toward the end of the seventh century and the political upheavals in Palestine during the neo-Babylonian period led to the collapse of the defense system along Ammon's desert border. Transjordan was invaded by Arabian tribes which destroyed the community. N. Glueck's archaeological survey of Transjordan reveals that sedentary occupation of Transjordan was terminated in the middle of the sixth century; cultivated lands became the territory of desert nomads (cf. Ezek. 25:4–10). Later mention of Ammon or Ammonites does not refer to the country or people as such, but to the province of Ammon and its population. About "Tobiah the Ammonite servant" (e.g., Neh. 2:10; 3:35) there are divergent opinions. According to one view he was not a true Ammonite but a Jew from the family of Tobijah who served in an important role in the Persian administration. He was called an Ammonite by reason of his residence in that territory. But others maintain that just as Sanballat was a Horonite (of Horonaim in Moab?) but a Samaritan by residence, so Tobijah was an Ammonite by descent but a Samaritan by residence, and like the other Samaritans a Yahwist by religion. During the Hellenistic period, the area of Ammon was reduced to its eastern section and its urban center, Philadelphia

(Rabbath-Ammon). The western part, which had a large Jewish population, was known as Perea (Peraea) and was annexed by the Hasmonean kingdom under Jonathan.

[Bustanay Oded]

In the *Aggadah*

Ammonites are linked with Moabites throughout the *aggadah* and *halakhah*. The *aggadah* explains the especially severe decree against Ammonites and Moabites: "They shall not enter the congregation of the Lord" (Deut. 23:4). It says that these tribes did not show gratitude to the Israelites, whose ancestor, Abraham, had saved Lot, the father of Ammon and Moab. Instead, they committed four hostile acts against Israel. They sought to destroy Israel by hiring Balaam. They waged open war against them at the time of Jephthah and of Jehoshaphat. Finally they gave full rein to their hatred against Israel at the destruction of the First Temple. As a result, God appointed four prophets – Isaiah, Jeremiah, Ezekiel, and Zephaniah – to proclaim their punishment (Lam. R. 1:10, ed. Buber (1899), 74). When they heard Jeremiah foretell the destruction of Jerusalem, the Ammonites and Moabites hastened to report it to Nebuchadnezzar and persuaded him to attack the capital (Sanh. 96b). At the capture of the city, instead of seeking booty, they seized the Scroll of the Law in the Temple in order to erase the decree against them (Lam. R. 1:10; Yev. 16b). According to another view, they seized the two cherubim from above the Ark of the Covenant and displayed them in order to prove that Israel, too, was worshipping idols (Lam. R. Proem 9, ed. Buber (1899), 8). The original attitude toward the Ammonites and Moabites was certainly positive as can be seen from the biblical prohibition against attacking them: "Be not at enmity with Moab, neither contend with them in battle; for I will not give thee of his land for a possession" (Deut. 2:9) and "when thou comest nigh over against the children of Ammon, harass them not, nor contend with them, for I will not give thee of the land of the children of Ammon for a possession; because I have given it unto the children of Lot for a possession" (Deut. 2:19). The latter legends stem from deep disappointment; the Ammonites and Moabites could have been expected to be the natural allies of Israel because of their close relationship through Lot, instead of which they became their enemies.

In the *Halakhah*

The rabbis made two significant and far-reaching reservations to the injunction "an Ammonite and a Moabite shall not enter into the congregation of the Lord forever." The first was the halakhic ruling contained in the Mishnah (Yev. 8:3) restricting the prohibition to males. There was scriptural justification for this since not only did Boaz marry Ruth the Moabitess, but Rehoboam the son of Solomon was the son of an Ammonite woman (1 Kings 14:21, 31). The *aggadah* (Yev. 76b–77a; cf. Ruth R. 4:6) tells in great detail the dramatic story of the dispute concerning David's claim to the throne on account of his descent from Ruth. The dispute was solved by Ithra the Israelite (11 Sam. 17:25) "who girt himself with a sword like an Ishma-

elite” (since he is called Jether the Ishmaelite in 1 Chron. 2:17), and threatened to put to death anyone who disputed the *halakhah* which he had received from the *bet din* of Samuel that the law applied only to males.

Equally dramatic were the circumstances which led to the second ruling, the complete abolition of the restriction. On the day when R. Gamaliel was deposed and R. Eliezer b. Azariah appointed *nasi*, “Judah, an Ammonite proselyte,” came to the *bet midrash* and asked whether the prohibition applied to him. Joshua b. Hananiah declared himself in favor of his being accepted since the inhabitants of these countries at that time were not descended from the Ammonites and Moabites of the Bible, as “Sennacherib had long ago mixed up all nations.” His view was accepted as the *halakhah* (Ber. 28a; cf. Maim., Yad, Issurei Bi’ah 12:25)

AMNON (Heb. אֲמֹנִים, אֲמֹנִים, אֲמֹנִים; from the root אָמַן (*ʾmn*); “to be firm or trustworthy”), eldest son of King David, born in Hebron of Ahinoam the Jezreelitess (11 Sam. 3:2). Becoming infatuated with his beautiful half-sister Tamar, he acted on a ruse devised by his friend Jonadab, “a very clever man,” and son of David’s brother Shimah, lured her to his bedside on the pretext of illness, raped her, and then cast her out. She then took refuge in the home of her full brother *Absalom. The king did not punish Amnon (11 Sam. 13:21). Two years later Absalom invited Amnon to his estate in Baal-Hazor, together with the other royal princes, for a sheep shearing celebration, and ordered his men to kill him while Amnon was merry with wine. (It appears from 11 Sam. 13:32–33 that Jonadab had now cast his lot with Absalom.) Since David’s second son evidently either died young or was incapacitated, Absalom, the third son, now had the strongest claim to the succession on the score of seniority. Recent work from the standpoint of the Bible as literature and feminist criticism has questioned whether Tamar was, in fact, raped. Another trend has been to compare Amnon’s actions toward Tamar with David’s actions toward Bathsheba.

According to rabbinic tradition (Sanh. 21a), Amnon could have married Tamar as she was conceived prior to her mother’s conversion. This tragic incident prompted the rabbis

to forbid an unmarried girl to remain alone with a man in a room (*ibid.* 21a–b). The affair of Amnon and Tamar is stigmatized in *Avot* 5:16 as the prototype of selfish love prompted by lust. For reasons of propriety, the Mishnah excludes the story from public reading in synagogue, whether in the original or in Aramaic translation (Meg. 4:10).

AMNON OF MAINZ (tenth century), martyr and legendary figure. Amnon is known mainly through *Isaac b. Moses of Vienna (12th–13th century) who quotes *Ephraim b. Jacob (12th century) as speaking of Amnon as “a leader of his generation, wealthy, of distinguished ancestry, and pleasing appearance.” The legend is that after Amnon resisted repeated attempts by the bishop of Mainz to persuade him to accept Christianity, he was barbarically mutilated. He was brought back to his home, and on Rosh Ha-Shanah was carried into the synagogue. As the *Kedushah* prayer was about to be recited Amnon asked the *hazzan* to wait while he “sanctified the great name (of God),” and thereupon recited the hymn “*U-Netanneh Tokef Kedushat ha-Yom*” (“Let us tell the mighty holiness of this day”), after which he died. Three days afterward, he appeared in a dream to *Kalonymus b. Meshullam and taught him the entire prayer, asking him to circulate it throughout the Diaspora for recital in synagogues on Rosh Ha-Shanah. This legend, which gained wide credence during the time of the Crusades, inspired many to martyrdom. In Johanan *Treves’ commentary on the Roman *maḥzor* (Bologna, 1540) and in various editions of the Ashkenazi rite, the story is repeated with slight changes. In the Ashkenazi liturgy of Rosh Ha-Shanah (and in its eastern branch, of the Day of Atonement also), the recital of the hymn is invested with great solemnity. It has been adapted by many Sephardi communities of the Mediterranean, in some of which it is recited before *Musaf* in a Ladino translation. *U-Netanneh Tokef* is actually older; for it is found in old liturgical manuscripts and in *genizah* fragments. It apparently derives from a very early Palestinian prayer which was later attributed to Amnon.

AM OLAM, Russian Jewish society formed to establish agricultural colonies in the United States. The organization took its name from Perez *Smolenskin’s famous Hebrew essay “*Am Olam*, (“The Eternal People”), and was founded in Odessa in 1881 by two young utopian idealists, Mania Bakl and Moses Herder, who called for the settling of Jews on the land in America in the form of socialist communes. Coming at a time of rising Jewish emigration and interest in national and social renewal such as motivated the Bilu movement as well, their ap-

peal fell on fertile ground and Am Olam chapters were quickly formed in a number of Russian cities. The first contingent of 70 Jewish craftsmen, artisans, and students left for America from Yelizavetgrad in the spring of 1881 and was followed in 1881–82 by additional groups totaling several hundred people from Kiev, Kremenchug, Vilna, and Odessa. Many of the immigrants never proceeded beyond New York, where they eventually drifted apart, but four colonies were ultimately established. The first of these, consisting of 32 families led by Herman *Rosenthal, settled on over 1,000 acres at Sicily Island, Louisiana, in the spring of 1882 but was soon forced to abandon the site as a result of a disastrous Mississippi River flood. Twelve of these families then went with Rosenthal to South Dakota, where they founded a second colony called “Crimea” in September 1882. Another settlement, “Bethlehem of Judea,” was established the same year a few miles away. Both lasted until 1885, when debt and other difficulties led to their liquidation.

The longest-lived of the Am Olam colonies, as well as the most intensely communistic, “New Odessa,” was established by some 70 persons near Portland, Oregon, in 1882. Led by the socialist Pavel Kaplan and the non-Jewish disciple of Comte’s “religion of humanity,” William Frey, the settlement flourished for a while until internal bickering and demoralization set in, bringing about its demise in 1887. Some of the survivors, led by Kaplan, sought to reorganize as an urban commune, first in San Francisco and then in New York, but by 1890 they too had disbanded and the last vestiges of Am Olam had ceased to exist. Many of its former members, however, continued to play an active role as individuals within New York’s Jewish socialist community.

AMON (Heb. אָמֹן, אֲמֹן), son of *Manasseh; became king of Judah (642–640 B.C.E.) at the age of 22. The author of Chronicles considered the “transgressions” of Amon to have been “more numerous” than those of his father Manasseh (11 Chron. 33:23). The reasons for Amon’s assassination by members of his court are not explained in the Bible, but the conspirators were put to death by the *am ha-arez* (i.e., “the people of the land,” probably the large landowners). They enthroned his young son Josiah. It has been argued that the conspirators were opponents of the pro-Assyrian policies of Manasseh and Amon, while the *am ha-arez* were pro-Assyrian. Support for the hypothesis is based on synchronizing Amon’s reign with the period of a rebellion in Syria against Ashurbanipal, king of Assyria, which is reported in Assyrian sources. On this analysis, Amon, who is said to have followed the ways of his father Manasseh (11 Kings 21:20–21), would have remained loyal to the Assyrian régime and opposed this rebellion, while the intervention of the *am ha-arez* and their crowning of the eight-

year-old Josiah were intended to forestall eventual complications after the suppression of the rebellion by the Assyrians. But a revised chronology of Ashurbanipal’s inscriptions militates against the suggested synchronism.

In the *Aggadah*

Talmudic tradition considers Amon, in the light of what is said in Chronicles, as the worst of Judah’s kings and concludes that his sins surpassed those of Ahaz and Manasseh. Ahaz put his seal on the Torah to prevent the reading of it; Manasseh erased the names of God from the Torah; while Amon ordered all of the Torah scrolls burned. Only one Torah scroll, which was found during the reign of Josiah, managed to escape his decree. The sins of Amon in the interruption of the Temple cult were also extremely severe (Sanh. 103b; SOR 24). Nevertheless, Amon is not enumerated among the kings (Jeroboam, Ahab, and Manasseh) who do not have a portion in the World to Come. This was a consequence of the merit of his son Josiah (Sanh. 104a).

AMORA (Aram. אָמֹרָא; “sayer,” “spokesman”), a term which designates the “interpreter,” who communicated audibly to the assembled pupils the lessons of the rabbinic teacher. It is also used as a generic term for the rabbis of the post-mishnaic period, whose activities were centered on the interpretation of the Mishnah (see **Amoraim*). The *amoraim* as teachers would often employ an *amora* as their spokesman. The *amora* stood by the teacher when he lectured. It was primarily to him that the rabbi spoke and he, in turn, conveyed those words to the audience. The Talmud (Yoma 20b) states that *Rav, who himself had served as an *amora* to R. Shila, appointed an *amora* when he wished to address a large assembly. There are instances both of the scholar communicating his words to the *amora* in Aramaic (Gen. R. 10) and of the *amora* addressing the pupils in Hebrew (Sanh. 7b).

The *Amora* is mentioned during the talmudic period both in Palestine and in Babylonia. Avdan is mentioned as the *amora* of R. Judah ha-Nasi (TJ, Ber. 4:1, 7c), while R. Pedat served as the *amora* of R. Yose (TJ, Meg. 4:10, 75c). Even Mar b. R. Ashi, one of the last of the *amoraim*, used to employ an *amora* at his addresses (Kid. 31b). Sometimes the *amora* was given considerable latitude in his expositions (Sot. 40a). Resh Lakish once told his *amora* Judah ben Nahman, to utter words of comfort on his behalf to mourners whom they both visited (Ket. 8b). On occasion, questions by the students would be addressed to the *amora* who would prepare them for submission to the rabbi. At times he would make the concluding remarks after the delivery of an aggadic discourse or public discussion (TJ, Ber. 4:3, 7c). Sometimes when the assembly was excep-

tionally large, several *amoraim* were employed, Rav Huna on one occasion employing no less than 13 simultaneously (Ket. 106a). On one occasion when the *nasi* appointed a judge, who though wealthy was of doubtful erudition, Judah b. Nahman was appointed as his *amora*. In the course of his discourses, Judah made sarcastic references to his ignorance, and criticized the *nasi* for appointing him (Sanh. 7b). References are found to *amoraim* who delivered the discourse in an unnecessarily loud voice, thus minimizing the effect of the original address, spoken in a soft and gentle tone (Eccl. R. 9:17; Ber. 56a). The institution of the *amora* continued as late as the 12th century, and is mentioned by Pethahiah of Regensburg under the name *meturgeman* (A. Benisch (ed.), *Travels of Rabbi Petachia* (1856), 16–17).

[Shmuel Safrai]

AMORAIM (Aram. אַמּוֹרָיִם), designation of the scholars in the Land of Israel and Babylonia who succeeded the *tannaim* and preceded (in Babylonia) the **savoraim* and *geonim*. (See Table: Heads of Academies.) The composition of the Mishnah by R. Judah ha-Nasi in the beginning of the third century, and its subsequent dissemination and gradual acceptance in the academies of the Land of Israel and Babylonia led to a break between scholarly activity of the earlier period and the halakhic and aggadic activity of later scholars. These scholars are the “*amoraim*,” whose words constitute most of the attributed material in the Talmudim and the amoraic midrash- compilations. The word “*amora*” means “speaker” or “interpreter,” and the application of this term to these scholars likely stems from their work in interpreting and deriving *halakhah* from the Mishnah and contemporaneous *beraitot*. Already in both Talmudim, we find references to the *amoraim* as a group distinct from *tannaim*: R. Levi and R. Simon are described as “two *amorin*” (TJ Berakhot 1:1, 2c), and the Babylonian Talmud (Bavli) explicitly distinguishes *tannaim* from *amoraim* (TB Eruvin 7a; TB Sanhedrin 6a and 33a). At times, the Babylonian Talmud also calls attention to *amoraim* it describes as “*amora'ei be-ma'arava*” (“*amoraim* in the West,” meaning the Land of Israel; e.g., TB Shabbat 21b, 96a; TB Ketubot 80a).

Many Palestinian *amoraim* (and the *tannaim* before them) conventionally bear the title “Rabbi”; the equivalent title of recognition for Babylonian *Amoriam* is “Rav.” A number of *amoraim* in both centers hold neither title. The traditional view is that the title “Rabbi” was only conferred on a scholar after ordination by the patriarch and Sanhedrin in Palestine. Modern scholars have suggested that the difference between these titles is actually a linguistic feature marking separate dialects.

The Generations of the Amoraim

The *amoraim* were active between approximately 220 C.E. (the traditional date of the redaction of the Mishnah) and 360 or 370 in the Land of Israel, and between 220 and approximately

Heads of the Academies of Erez Israel (Palestine) and Babylon.

Erez Israel	Babylon
First Generation 220 C.E.–250 C.E.	
R. Ḥanina b. Ḥama: head of the Council of Sepphoris	Rav (Abba b. Aivu): founder and head of the Academy of Sura
Oshaiah Rabbah: head of the academy at Caesarea	Samuel: head of the Academy of Nehardea
R. Yannai	Karna: “Dayyan of the Golah”
R. Joshua b. Levi: head of the Academy at Lydda	Mar Ukba: the Exilarch
Second Generation 250 C.E.–290 C.E.	
R. Johanan: head of the Academy at Tiberias	R. Huna: head of the Academy of Sura
R. Simeon b. Lakish: (Resh Lakish)	R. Judah b. Ezekiel: head of the Academy of Pumbedita
R. Eleazar b. Pedat: Head of the Academy at Tiberias	R. Hamnuna
Third Generation 290 C.E.–320 C.E.	
R. Ammi b. Nathan: head of the Academy at Tiberias	R. Ḥisda: head of the Academy of Sura
R. Assi: head of the Academy at Tiberias	Rabbah b. Huna: head of the Academy of Sura
R. Abbahu: head of the Academy at Caesarea	Rabba b. Nahmani: head of the Academy of Pumbedita
R. Zeira	R. Joseph B. Ḥiyya: head of the Academy of Pumbedita
Fourth Generation 320 C.E.–350 C.E.	
R. Jonah: head of the Academy at Tiberias	Abbaye: head of the Academy of Pumbedita
R. Yose: head of the Academy at Tiberias	Rava b. Joseph: founder and head of the Academy of Maḥoza
R. Jeremiah	Rami b. Ḥama
R. Haggai	R. Zeira
Fifth Generation 350 C.E.–375 C.E.	
R. Mani: head of the Academy at Tiberias	R. Papa: founder and head of the Academy at Naresh
R. Yose b. Avin	R. Huna b. Joshua
R. Tanḥuma b. Abba	R. Zevid: head of the Academy at Pumbedita
Sixth Generation 375 C.E.–425 C.E.	
	Rav Ashi: head of the Academy of Sura in Matah Mehasya
	Ravina
	Mar Zutra
	Ameimar
Seventh Generation 425 C.E.–460 C.E.	
	Mar b. Rav Ashi (Tabyomi): head of the Academy of Sura
	R. Yeimar: head of the Academy of Sura
	R. Geviha of Bei-Katil: head of the Academy of Pumbedita
Eight Generation 460 C.E.–500 C.E.	
	Ravina ii b. Huna: head of the Academy of Sura
	R. Yose: head of the Academy of Pumbedita Aḥai b. Huna

500 in Babylonia. Rabbinic tradition credits Rav, a student of R. Judah ha-Nasi, with bringing the Mishnah to Babylonia and thus inaugurating the amoraic period in Babylonia. It is customary to divide the amoraic period into generations. In most cases such a division is artificial, since many of the scholars can be assigned to two successive generations. The first five generations consist of both Palestinian and Babylonian *amoraim*. The last two to three generations, however, are limited to Babylonian *amoraim*. It is not easy to identify all the *amoraim* mentioned in the Talmud and Midrash since the same *amora* often appears under different names, whereas two *amoraim* from two different generations can bear the same name. Moreover, many names have been transmitted incorrectly. Over 2,000 *amoraim*, however, can be identified with tolerable certainty. See the table of the more prominent of the *amoraim* of the different generations.

THE PROBLEM OF AMORAIC ATTRIBUTIONS AND BIOGRAPHY. Up to and throughout much of the 20th century, scholars generally assumed that amoraic statements preserved in the Talmudim and midrash-compilations accurately represented the positions held by the sages to whom they were attributed, and that narratives purporting to relate information about the lives of individual *amoraim* reflected reliable biographical traditions about the *amoriam* as real, historical figures. Both of these views have undergone radical revision, and we must attend to these issues before proceeding further with the portrayal of the *amoriam* as set out in rabbinic literature.

Jacob Neusner and his students called the reliability of amoraic attributions into question, partly on the ground that there is no source external to rabbinic literature that can be used to verify them, and partly on the basis of a comparison of parallel traditions which testify to an internal literary development within the rabbinic sources themselves. Skepticism about the reliability of attributions is justified in part by the Babylonian Talmud itself, which sometimes notes that an *amora* did not explicitly state a view attributed to him, but that the attributed view was inferred from the *amora*'s conduct in a particular instance (“*lav be-ferush itamar ela me-kelala itamar*”; e.g., Bava Batra 40b, 126a). In the Jerusalem Talmud as well, Shimon b. Ba was said to have doubted R. Abbahu's attribution of a particular view to R. Yohanan (TJ Shabbat 6:1, 7d), again demonstrating amoraic awareness that not all amoraic attributions may be accurate.

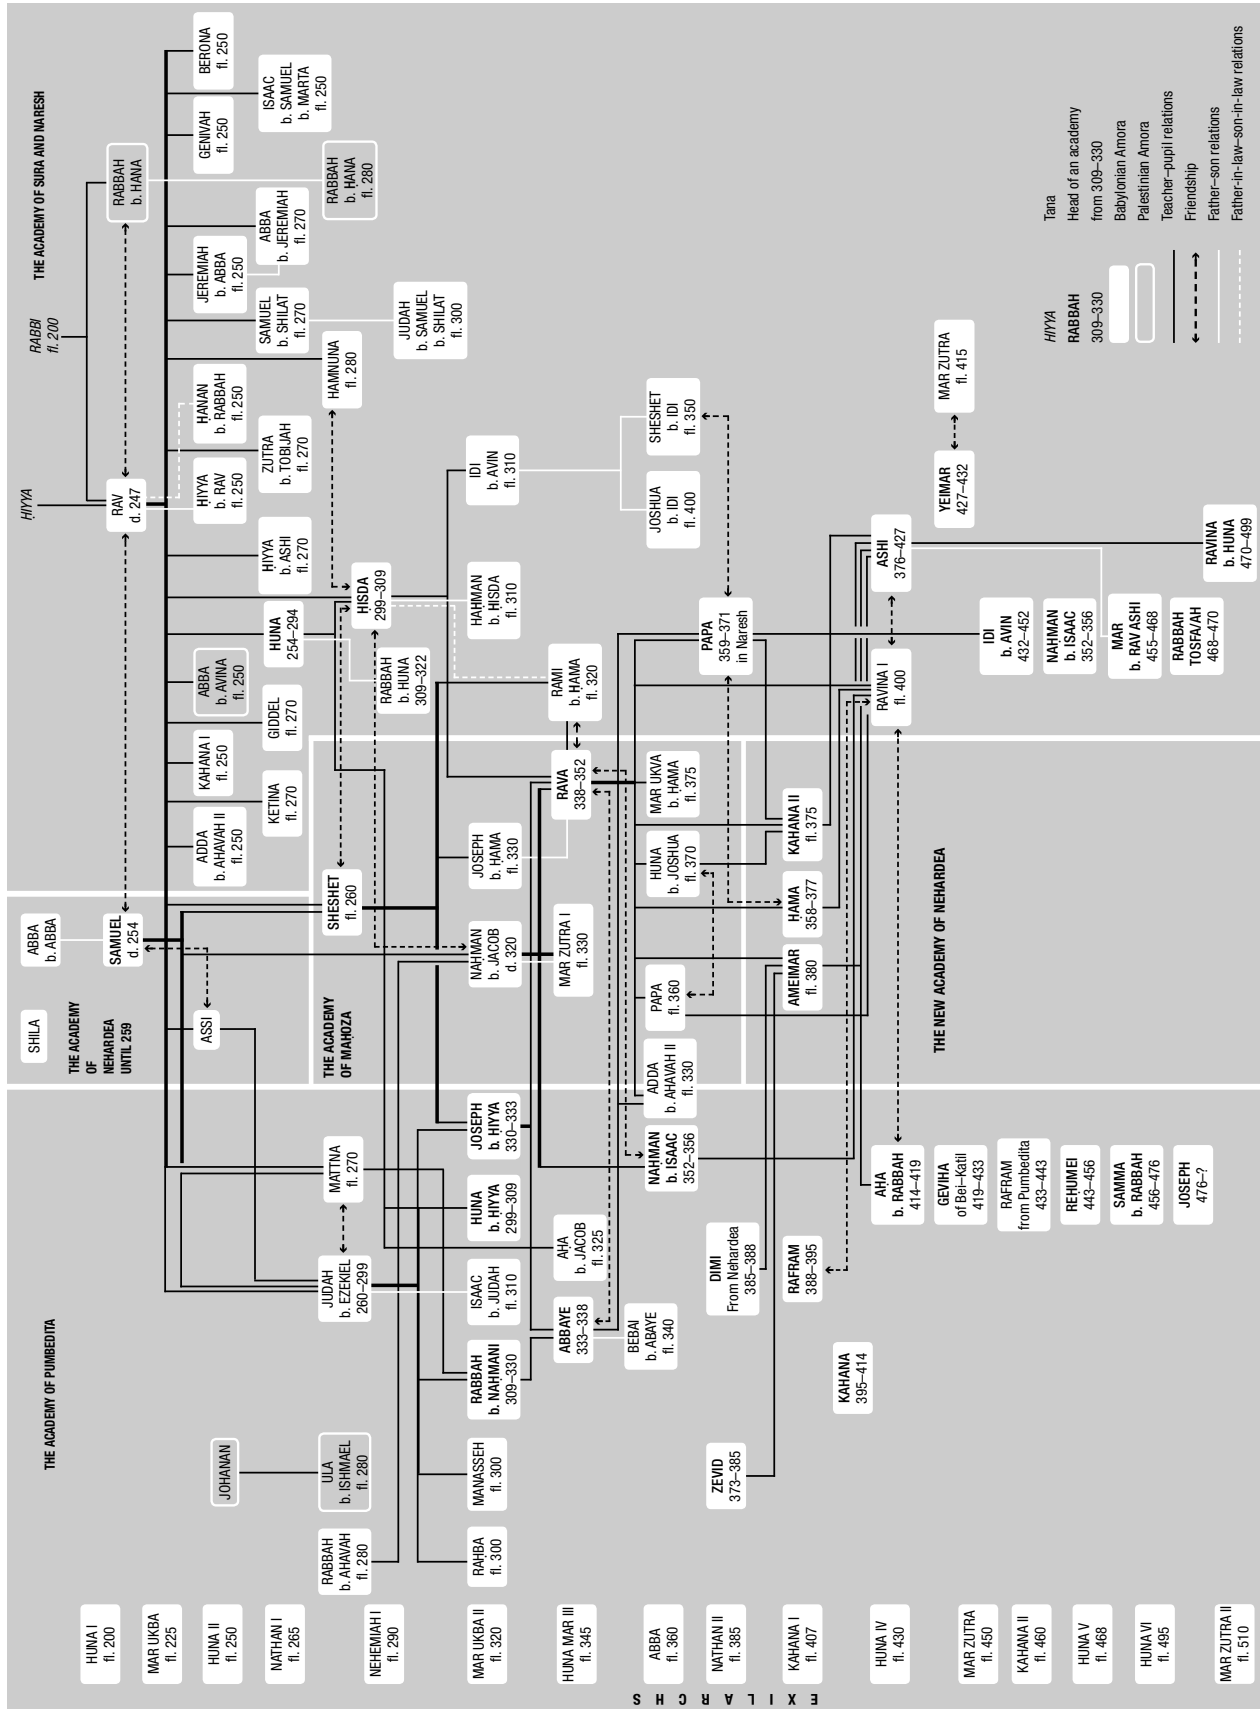

Few, if any, scholars still maintain the view that amoraic attributions are in all circumstances to be presumed reliable. Recent studies by Richard Kalmin have demonstrated that one must also be cautious about leaping to the opposite conclusion: that attributions are in all circumstances to be presumed unreliable. Kalmin demonstrated the existence of patterns in statements attributed to particular *amoriam* or to the *amoriam* of particular generations, and concluded that these patterns are indicative of real historical differences in the amoraic scholarly enterprise. Thus, while the accuracy of a discrete amoraic statement may be impossible to verify, the state-

ments of an *amora* or of a generation, when taken together, may indeed yield information that may be used for historical reconstruction. Other research – such as Z.M. Dor's work on Rava's and Rav Papa's engagement with Palestinian learning, and David Kraemer's finding that the later Babylonian amoraic generations are more likely to preserve argumentation – buttresses that conclusion. But it remains difficult to determine whether or not a given amoraic statement was actually uttered by the sage to whom it is attributed, or whether the statement as transmitted preserves a form of the tradition which remains relatively close to the original, without a detailed examination of all of the parallel versions of the tradition, and all the relevant manuscript material. As a result, references in this article to what a sage said or did should be understood as references to what he *is represented* to have said or done.

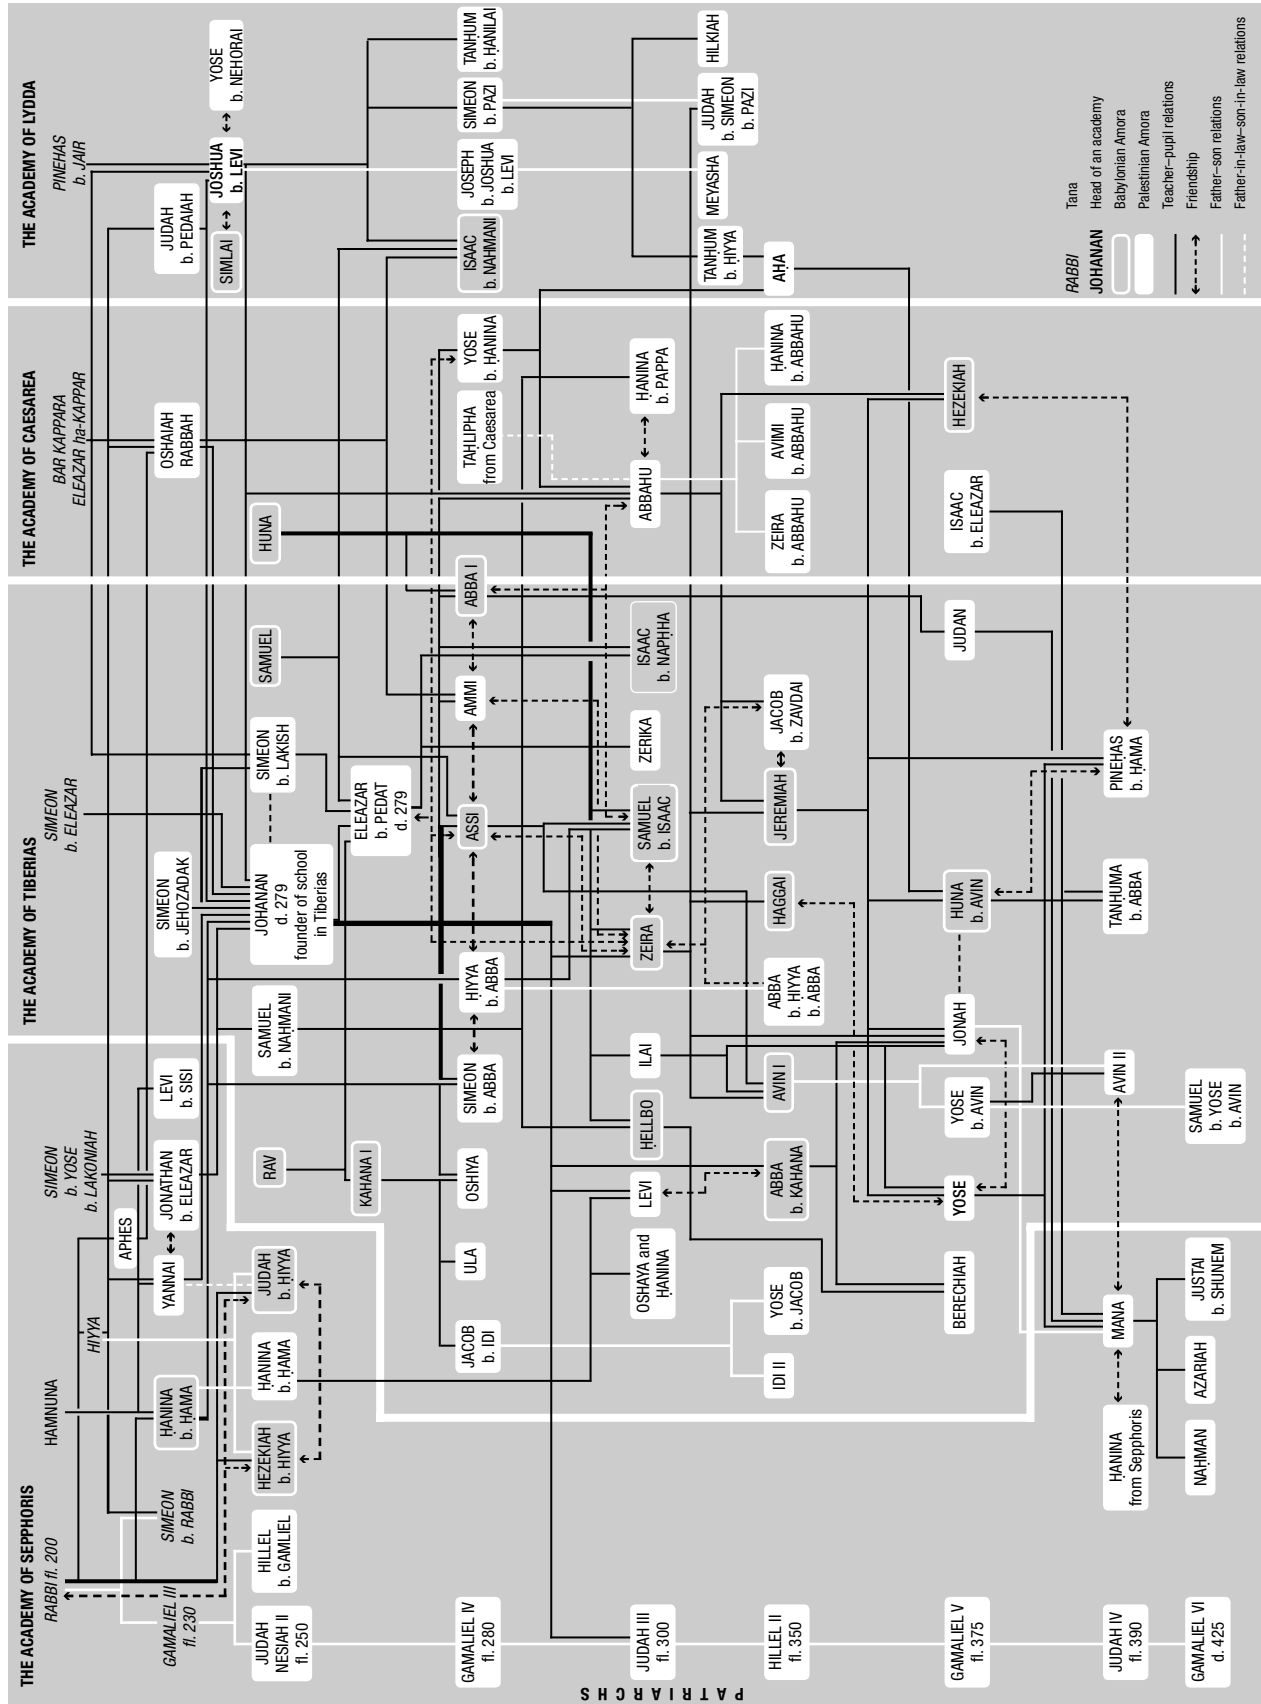

Rabbinic literature also contains narratives, many of which present details about the lives of particular rabbis in the course of telling other stories. Other narratives purport to relate entire episodes from rabbis' lives. Throughout the 19th and most of the 20th centuries, scholars viewed these narratives as sources for rabbinic biography, and some scholarly work was done to draw together the scattered details from disparate rabbinic sources in order to construct rabbinic “biographies.” To the extent that narratives contained accounts of supernatural events, scholars resorted to the technique of the “historical kernel”: ignoring the fantastic elements of narratives in order to recover the kernel of historical information the story was thought to yield about the sage. This project was problematic because for most, if not all *amoraim*, the Talmudim and midrash-compilations leave large gaps in the chronology of their lives, which could only be supplemented by guesswork and creative extrapolation – hardly the stuff of scholarly biography. The seminal work of Jacob Neusner, William Scott Green, Shamma Friedman, Richard Kalmin, Jeffrey L. Rubenstein and other scholars has led to a complete rethinking of the project of “rabbinic biography.” Scholars now recognize that rabbinic narratives are literary creations formulated to serve the purposes of their narrators and/or of the redactors of the compilations in which they are now found; they present edifying moral lessons, or teach about the rabbinic way of life, but are not meant to be straightforward presentations of history or biography and must not be utilized as such. Therefore, alleged discrete biographical details must not be lifted out of rabbinic narratives; the narratives must be carefully studied as whole compositions in order to discern the overall message the storytellers or redactors wished to convey. All of these methodological considerations complicate the project of presenting the lives and activities of the *amoraim*, but the resulting presentation benefits from the rigorous examination of the sources that these methodological considerations require.

Organization of Amoraic Torah Study and Teaching

The major study-centers in amoraic Palestine were Caesarea, “the South” (most likely Lydda), Sepphoris, and Tiberias. In Babylonia, the principal study-centers were Sura, Pumbedita,

The principal Amoraim of the Babylonian academies.

The principal Amora'im of the Palestinian academies.

Nehardea (destroyed and eventually transplanted), Mahoza, and Naresh.

Most likely these cities were not the sites of organized academies. Rather, groups of rabbinic disciples would gather around a teacher, with whom they studied Torah and whom they personally served as part of their initiation into the rabbinic way of life.

Memorization and constant recitation of one's learning were stressed as the cultural ideal in the rabbinic centers of both the Land of Israel and Babylonia. Although some *amoraim* allegedly kept written notes (e.g., TJ Kilayim 1:1, 27a; TJ Ma'aserot 2:4, 49d), and may even have consulted books of *aggadah* (TJ Shabbat 16:1, 15c), orality, rather than writing, was the primary and favored mode of study and teaching. Rav Sheshet was said to have reviewed his learning every 30 days (TB Pesahim 68b). Rava advised that one should always recite one's learning, even if one tended to forget, and even if one did not know the meaning of what was recited (TB Avodah Zarah 19a; see also TB Shabbat 63a). Recitation was to be done in a melodious chant (TB Megillah 32a).

The emphasis on memorization coexists in the Babylonian Talmud in tension with a growing Babylonian amoraic emphasis on dialectic and argumentation. R. Yohanan is represented as claiming that there was a Tannaitic dispute as to whether "Sinai" (the scholar who had memorized much Torah) or the "uprooter of mountains" (a sharp thinker) was preferable. According to the Babylonian Talmud Palestinian scholars resolved this question in favor of "Sinai." Nevertheless, Rav Yosef – described as "Sinai" – was said to have deferred to Rabbah, the "uprooter of mountains," as academy head (TB Horayot 14a). This story illustrates the growing Babylonian preference for skill in argument. Similarly, Rav reported that the people Israel forgot hundreds of *halakhot* after Moses' death, but, according to R. Abbahu, these *halakhot* were restored through the dialectical creativity of Othniel b. Kenaz (TB Temurah 16a). Thus, although the accumulation of knowledge is lauded because "everyone needs the master of wheat" (TB Horayot 14a, referring to one who possesses much memorized knowledge), the Babylonian *amoraim* moved in the direction of ascribing at least equal weight to the achievement of analytic ability and dialectical skill.

Relations Between the Land of Israel and Babylonia During the Amoraic Period

The presence of Palestinian amoraic traditions in the Babylonian Talmud and of Babylonian amoraic traditions in the Jerusalem Talmud testifies to a significant degree of interaction between these two centers of learning during the first four generations of the *amoraim*. While much of this activity involved the transmission of traditions from Palestine to Babylonia, the Jerusalem Talmud does call attention to the halakhic traditions of "the rabbis of there [Babylonia]," who are contrasted with "the rabbis of here [Palestine]" (e.g., TJ Berakhot 1:9, 3d; 9:4, 14a). The Babylonian Talmud also describes the activities of scholars known as the "*nahote*" ("those

who descended"), who carried learning with them from the Land of Israel to Babylonia and back. Two of the best-known *nahote* were R. Dimi (= Avudimi, of the fourth Palestinian amoraic generation) and Rabin (= Avin or Avun, of the third and fourth Babylonian amoraic generations), who eventually moved to the Land of Israel. *Nahote* typically brought discrete halakhic traditions (called "*memrot*"), stories, halakhic *sugyot*, and aggadic traditions to Babylonia; their activity is often introduced by the formulaic "When Rabbi X came [to Babylonia]" (e.g., Ket. 17a, AZ 11b). Rabin is also described as writing letters to Babylonian *amoraim* (TB Ketubot 49b, TB Bava Mezi'a 114a), as are other Palestinian *amoraim* (TB Bava Mezi'a 41b; TB Sanhedrin 29a; TB Hulin 95a).

The Babylonian Talmud also highlights halakhic information brought from Palestine by use of the introductory phrase *shalhu mitam* ("they [= the Palestinian scholars] sent from there [Palestine]"). Among these communications were some that cautioned the Babylonians to be careful to observe the second day of the Festival (TB Beza'ah 4b), to be careful to treat Rav Achai with respect, who is described as "lighting up the eyes of the Exile" (TB Hulin 59b), and some that corrected and expanded their halakhic knowledge in particular areas (e.g., TB Bava Batra 165b, TB Mena'hot 43a).

The two rabbinic centers are not portrayed as being of equal authority or as having equal prestige during the amoraic period. Babylonia and its scholars are portrayed as subordinate to the authority of the Land of Israel. Abbaye claims that since "we are subordinate to them, we do as they do" (TB Pesahim 51a). The Babylonian Talmud also describes Babylonian judges as being the "agents" of the scholars of the Land of Israel who are only empowered to adjudicate certain types of cases that do not require expert, ordained judges only found in the Land (TB Bava Kamma 84b; see also TB Sanhedrin 14a). Abbaye, speaking to Rav Yosef, thus referred to them both as "laypeople" (*hedyotot*), presumably because they had not been ordained in Palestine (TB Gittin 88b).

The Palestinian *amoraim* are also portrayed as ridiculing Babylonian halakhic traditions (TB Pesahim 34b, TB Yoma 57a, TB Zevahim 60b). R. Yohanan explained that Babylonia is called "Bavel" because scripture, mishnah, and talmud are all mixed up ("*balul*") in it (TB Sanhedrin 24a). This ridicule may simply reflect the natural tensions between competing rabbinic centers rather than a real evaluation of Babylonian amoraic capabilities, since we can also observe sharp intra-Palestinian polemics between sages in northern and southern Palestine (TJ Sanhedrin 1:2, 18c; TJ Avodah Zarah 2:9, 41d). There is further support for this conclusion in a tradition about Palestinian appreciation of the scholarly competence of the Babylonian rabbis. Contrary to earlier Palestinian doubts about Babylonian competence with regard to bills of divorce, the "Scholars" (*havrayya*) said in the name of R. Yehoshua b. Levi: "Now that scholars are found outside the Land, they are considered 'experts' [with regard to bills of divorce]" (TJ Git. 1:1, 43b).

The fourth generation Babylonian Amora Rava is the last Babylonian Amora mentioned in the Jerusalem Talmud (TJ Bezaḥ 1:3, 60b). The absence of the rest of the fourth generation (not to mention the fifth–seventh), from the Jerusalem Talmud is evidence that the final redaction of the Jerusalem Talmud was being brought to a close during this time. Some post-Jerusalem Talmud Palestinian scholars do appear in the Babylonian Talmud (e.g., TB Shabbat 107a; TB Ḥullin 59b).

Amoraim as Aggadists

Amoraim in both centers studied both *halakhah* and *aggadah*, although the latter is noticeably less of a Babylonian project. The Jerusalem Talmud itself contains relatively little *aggadah*, but Palestinian *amoraim* are richly represented in the great amoraic midrash-collections: **Bereshit Rabbah*, **Vayikra Rabbah*, and **Pesikta de-Rav Kahana*. The Babylonian Talmud contains much *aggadah* (in keeping with its encyclopedic nature), but most of this material is Palestinian in origin.

The greater Palestinian contribution to *aggadah* is also reflected in the scholarly profiles of some *amoraim*. Among Babylonian *amoraim*, Rav is noteworthy as a scholar of both *halakhah* and *aggadah*, while among Palestinian *amoraim*, there are several scholars renowned for *aggadah* alone – R. Levi, R. Shmuel b. Nahman, R. Tanhuma, and other great aggadists who rarely formulated halakhic statements. No Babylonian Amora is identifiable as an expert on *aggadah* alone. The Palestinian rabbinic compilations alone also refer to certain scholars as *rabanan d'aggadeta* (“the rabbis of *aggadah*”; TJ Yevamot 4:2, 5c; TJ Ma'aserot 1:2, 48d), or as *ba'alei aggadah* (“masters of *aggadah*”; Bereshit Rabbah 94:5; Leviticus Rabbah 31:1). The historical reason for the greater Palestinian engagement with *aggadah* is unclear, but R. Isaac is credited with the notion that a greater emphasis on the study of scripture and *aggadah* is characteristic of periods of economic deprivation and social oppression, such as that imposed by the “wicked kingdom,” Rome (Pesikta de-R. Kahana 12:3).

The Talmudim also indicate that there may have been some tension, or at least competition, between scholars of *halakhah* and *aggadah*. In the Jerusalem Talmud, R. Zeirah is said to have chided R. Abba b. Kahana and R. Levi, claiming that aggadistic works are “books of divination,” presumably because *aggadah* at times interprets scriptural verses in highly creative, counterintuitive ways (TJ Ma'aserot 3:10, 51a). According to the Babylonian Talmud, the public left R. Ḥiyya b. Abba's lecture on *halakhah* in order to attend R. Abbahu's discourse on *aggadah* (TB Sotah 40a).

The Amoraim as Authorities and Sources of Guidance for Non-Rabbis

Palestinian sources describe rabbis as providing guidance on legal and other matters for non-rabbis, including on questions of choosing local religious leadership (TJ Shevi'it 6:1, 36d). But this should not be taken as indicative of non-rabbis' complete, unconditional acceptance of the *amoraim* as

religious leaders, because non-rabbis are also portrayed as ignoring rabbinic directives when these were perceived as too draconian (e.g., TJ Shevi'it 4:3, 35b). Rabbis are also described as modifying the Sabbatical year laws in order to bring them in line with what people were already doing, even if they perhaps might not have considered those behaviors ideal (ibid; TJ Shevi'it 4:2, 35a).

Palestinian sources (and sources about Palestinian *amoraim*) portray rabbis giving public discourses attended by non-rabbis (TJ Horayot 3:7, 48b; TB Sotah 40a). As to Babylonia, Rav Ashi alluded to a twice-yearly gathering of people in Mata Mehasya, presumably for the purpose of hearing discourses about holiday law (TB Berakhot 17b). This may be related to the Babylonian institution of the “*pirka*” (lit. “chapter”), which was a lecture delivered before a large audience containing non-scholars as well as scholars. The institution of the *pirqa* probably stems from the fourth century.

The Amoraim as Holy Men and Medical Experts

Scholars of late antiquity have identified certain kinds of stories and forms of behavior as characteristic of the period's signature “holy man”. Similar stories and forms of behavior are also characteristic of many *amoraim* (Kalmin, *Saints and Sages*). *Amoraim* are represented as being visited by heavenly beings, including the prophet Elijah (e.g., TB Berakhot 29b), angels (TB Nedarim 20a; TB Menaḥot 41a), and spirits (TJ Peah 8:9, 21b). *Amoraim* are portrayed as speaking to the Angel of Death (TB Ḥagigah 4b–5a) and even outmaneuvering him for a time through Torah study (TB Mo'ed Katan 28a). Rav Judah is portrayed as being thanked by a dead man for easing his pain in the hereafter (TB Shabbat 152b). It is said about the rabbis collectively that wherever they cast their eyes, death or poverty results (TB Nedarim 7b). Sages in the Land of Israel were particularly sought out for the all-important activity of rain-making (e.g., TJ Ta'anit 3:4, 66c). In a related vein, *amoraim* are also portrayed as giving advice about health, including remedies for various ailments (e.g., TB Shabbat 81b; TB Avodah Zarah 28a–29a).

Communal Roles of the Amoraim and their Socioeconomic Status

Leading Babylonian *amoraim*, notably Rav, Rav Huna, Rava, and Rav Papa are portrayed as wealthy men. While few Babylonian *amoraim* are explicitly described as poor, the Babylonian Talmud does at times portray Palestinian *amoraim* as such (e.g., R. Johanan at TB Ta'anit 21a). Scholars were not to receive payment for teaching Torah (TB Nedarim 37a), and they are portrayed as engaging in commerce (TB Bava Metsia 83a), trade, agriculture, and other callings. Nevertheless, economic reversals and the demands of study could result in hardship. Some Palestinian sources show the *amoraim* encouraging people to support rabbis by giving the ancient agricultural tithes to scholars rather than to priests (TJ Ma'aser Sheni 5:5, 56b; Pesikta de-R. Kahana 10:10; see also TB Nedarim 62a).

Leading Palestinian and Babylonian *amoraim* are portrayed as playing active roles in communal collection and distribution of *zedakah*, notably R. Jacob b. Idi and R. Isaac b. Nahman (TJ Pe'ah 8:9, 21b), R. Hiyya b. Abba and Resh Lakish (TJ Horayot 3:6, 48a), Rav Huna (TB Megillah 27a–b), Rabbah (Bava Batra 8b), and Rav Ashi (Bava Batra 9a). The Jerusalem Talmud equates *zedakah* and acts of kindness (*gemilut hasadim*) to all the other *mitzvot* of the Torah (TJ Pe'ah 1:1, 15c), while the Babylonian Rav Huna is even represented as claiming that, regarding one who only engages in Torah to the exclusion of acts of kindness, it is as if he has no God (TB Avodah Zarah 17b). In a related vein, both Talmudim represent *amoraim* as judging cases and being sought out to administer justice (e.g., TB Ketubot 49b; TB Sanhedrin 27a–b). But the Babylonian Talmud also indicates that people did not always necessarily receive the justice they sought (TB Shabbat 55a; TB Sukkah 31a).

The Jerusalem Talmud portrays *amoraim* – under the direction of the Patriarch – as being in charge of setting up schools and hiring instructors (TJ Hagigah 1:7, 76c), while the Babylonian Talmud, although not portraying Babylonian *amoraim* in the same way, does show Rava setting down guidelines for the hiring and retention of teachers (TB Bava Batra 21a). Both Talmudim portray Palestinian *amoraim* as traveling around, observing Jewish communities' religious practice, and reporting halakhic violations to more senior rabbis (e.g., TJ Shevi'it 8:11, 38b–c; TB Avodah Zarah 59a), and they are in general described as being more integrated with their communities than their Babylonian counterparts (D. Levine, E. Diamond). Taken all together, these traditions point towards a Palestinian amoraic community that was – or at least portrays itself as – more highly organized and bureaucratic than its Babylonian counterpart.

Although, as noted, scholars were not to receive payment for teaching Torah, Babylonian *amoraim* did see themselves as entitled to certain allowances by virtue of their rabbinic status. Rava rules that when Torah scholars are litigants, their cases should be heard first (TB Nedarim 62a), and that they are entitled to tax exemptions (TB Nedarim 62b). Rava is also portrayed as allowing R. Josiah and R. Obadiah a commercial privilege not provided by law, which the Babylonian Talmud explains as a necessary allowance so that their studies would not be interrupted (TB Bava Batra 22a). A close reading of the sources about amoraic tax exemptions (TB Nedarim 62b; TB Bava Batra 7b–8a) supports the conclusion that the *amoraim* were likely making arguments in favor of their receiving such exemptions in these sources rather than straightforwardly reporting the historical reality of such exemptions.

[Alyssa M. Gray (2nd ed.)]

AMORITES (Heb. אַמֹרִי; Emori), the pre-Israelite inhabitants of the land of Israel. The word appears approximately 85 times in the Hebrew Bible and is used to designate all or part of that population. The Semitic derivation of the word, and possibly also the biblical usage of the term, can be illuminated to some extent from extra-biblical sources.

Extra-biblical Sources

In Sumero-Akkadian and Eblaite texts from the period from 2400 to 1600 B.C.E., Sumerian *MAR.TU*, Eblaite *Martu(m)*, and Akkadian *Amurru* occur as a geographical term meaning literally "the West." The area extended westward from the Euphrates River as far as the Mediterranean Sea. It specifically embraced the great Syrian desert, the Orontes River valley, and the Amanus Mountains. In later Assyrian texts, *Amurru* was an established name for Syria-Palestine.

References to "the people of *Amurru*," in contrast with the more common geographical allusions, are largely from the period prior to 2000 B.C.E. and come from the Akkadian and Ur III periods. A date formula of the Old Akkadian king Sharkisharri (ca. 2200) refers to the defeat of the *MAR.TU* in Basar, identified by scholars with Jebel Bishri, a mountain range in central Syria west of the Euphrates. It seems that the people so named, after having overthrown or weakened Sumero-Akkadian dynasts, and in some cases having founded their own regimes, either quickly amalgamated with the Sumero-Akkadian population or passed on beyond the Tigris River to resume their habitual semi-nomadic type of life. The use of the term in an ethnic sense soon disappeared from the texts.

Strictly speaking, the extra-biblical usage of the name Amorites was applied almost exclusively to people who came from southern Mesopotamian locations prior to 2000 B.C.E. It is clear, however, that people with the same language were present along the mid-Euphrates at *Mari in the 20th century, at Babylon about 1830, and at Asshur on the Tigris River about 1750 B.C.E. That they were even present in Palestine is witnessed by the Egyptian Execration Texts of the 20th and 19th centuries. Their language did not survive in writing, but when they took over Akkadian Old Babylonian, they transliterated their names (which were often theophorous, for example, the elements 'am "people"; 'ab "father"; 'ah "brother," were combined with names of deities such as El and Hadad)

and employed words, forms, and linguistic usages most closely paralleled in later West Semitic languages. These wide-ranging peoples belonging to a common linguistic stock have commonly been called “Amorites,” by extension of the Sumero-Akkadian geographical term, but not exclusively so. T. Bauer proposed “East Canaanites” to stress their affinities with the Syro-Palestinian or West Canaanites. M. Noth for a time preferred “Proto-Arameans” to underscore their connections with later Arameans. A. Caquot opted for “early West Semites” to emphasize their distance from any of the later West-Semitic subdivisions. It is still a matter of considerable scholarly dispute whether the language of this group was the direct predecessor of Canaanite-Hebrew or Aramaic, or whether it was rather an early development without immediate ties to any of the later, better attested West-Semitic tongues. Indeed, the discovery of *Ebla (Tell Mardikh) some 40 miles south of Aleppo, brought to light the Eblaite language, a previously unknown Semitic language of the third millennium and has complicated the entire classification system of ancient Semitic. For further information, see *Alphabet (North-West Semitic); *Aramaic; *Hebrew Language (Pre-Biblical); and *Semitic Languages.

If one draws together all the evidence from the sources which are “Amorite” in the broad sense, the bearers of the name appear originally as ass nomads who came out of the Syrian desert and settled unevenly over parts of Syria-Palestine and Mesopotamia, overthrowing existing political regimes and frequently establishing substitute dynasties. Only at Mari, near their desert home, do they seem to have formed the bulk of the populace. They rapidly adopted Sumero-Akkadian or Syro-Palestinian culture; in Mesopotamia they soon lost their original language, whereas in Palestine they may have retained it while it gradually developed over the centuries into the later Canaanite-Hebrew dialects of West Semitic. There is no evidence that they called themselves “Amorites”; instead, they were known as such only to some Sumero-Akkadians, who viewed them as “Westerners.” In fact, no ethnic term is known which they applied to themselves.

The life style of the Amorite before settling down is attested, perhaps in exaggerated manner, in a Sumerian hymn: “The Weapon (is his) companion... / Who knows no submission, / Who eats uncooked flesh, / Who has no house in his life-time, / Who does not bury his dead companion” (E. Chiera, *Sumerian Religious Texts*, 1 (1924), 24; *Sumerian Epics and Myths* (1934), no. 58, rev. col. 4, lines 26–29). That this semi-nomadic cultural level was abandoned once the newcomers gained a foothold in settled lands is well attested by the hostile policies of Amorite dynasts at Mari toward troublesome nomads in their own kingdom. No inclusive “Amorite” cultural or religious loyalties held the invaders together for long; the newly established Amorite city-states were soon vigorously at war with one another in the familiar Sumero-Akkadian fashion. Similarly, in Canaan the Execration Texts suggest that, within a century of their arrival, the Amorites were split into contending city-states, with single dynasts replacing the initial tribal rule by a cabal of sheikhs or elders.

From an 18th century B.C.E. letter to King Zimri-Lim of Mari comes the earliest testimony to a country in Syria called Amurru. Localized non-biblical usage of *Amurru* appears next in 14th–13th century B.C.E. Syro-Palestinian texts referring to a kingdom located in the mountains and along the coast of northern Lebanon. The relation of the regional political term to earlier usages of *Amurru* is unknown. Conceivably it was merely intended to herald that Syrian kingdom as the most important political entity in “the West.”

Biblical References

The biblical occurrences of Emori are of two types with three sub varieties of one of the types: (1) Amorites are the pre-Israelite inhabitants of the occupied land in general (e.g., Gen. 15:16; Josh. 7:7). This meaning occurs characteristically in the E source of the Pentateuch (in contrast to J’s “Canaanites”), in the conquest narratives, and in the Deuteronomic traditions; and (2) Amorites are a particular subgroup of the pre-Israelite inhabitants of the occupied land: one of several peoples itemized in lists of dispossessed ethnic or political groups (including variously: Canaanites, Hittites, Perizzites, Girgashites, Jebusites, Hivites-Horites, etc.; Gen. 10:16; Ex. 3:8; 1 Chron. 1:14); inhabitants of the Transjordanian kingdoms of Og and *Sihon (e.g., Num. 21:13; Josh. 2:10; 9:10; Judg. 10:8); and inhabitants of the mountainous regions of West Jordan (in contrast to the Canaanites on the coast and in the plains; e.g., Deut. 1:19ff., 27, 44; Josh. 10:5ff.). It is now impossible to draw a direct link between the Sumero-Akkadian term *Amurru* from 2000 B.C.E. and the Israelite term Amorite in use after 1200 B.C.E. Hebrew Amorite is never a geographical term the way *Amurru* largely is (save in Josh. 13:4–5 where the kingdom of *Amurru* in the Lebanon is likely meant). It is impossible to draw a direct link between the Hebrew usage of the name Emori and the Sumero-Akkadian *Amurru*, which died away one thousand years before the Israelites arose in Erez Israel. It is assumed on geographical and chronological grounds, that some of the elements in the local population, perhaps the rulers of the kingdoms of Og and Sihon, were offshoots of the Syrian city-state of *Amurru*. However, there is no positive evidence in favor of the hypothesis and, even if it were granted for want of a better alternative, it does not explain how the localized usage was extended to refer either to all the pre-Israelite populace in the hill country of Cisjordan or to the peoples of Canaan in toto.

A comparison of the biblical and extra-biblical ethnic usages of Amorite and *Amurru* shows that groups of Semites with linguistic affinities were called “Amorites” at opposite ends of the Fertile Crescent at periods almost a millennium apart. Beyond that, the peculiarities and disjunctions in the geographical and ethnic references in the two contexts, the uncertainties of relationship between the early Amorite language and the later Canaanite-Hebrew, as well as the vast time gap between the compared terms, frustrate any attempt to determine the precise meaning or meanings of the biblical term Amorites.

[Norman K. Gottwald]

Talmudic References

The Talmud applies the term *darkhei ha-Emori* (“the ways of the Amorite”) to superstitious heathen practices not covered by specific prohibitions but subsumed under the general prohibition of “neither shall you walk in their statutes” (Lev. 18:3). The verse actually refers generally to the prohibition against “the doings of the land of Canaan” in general. The Mishnah (Ḥul. 4:7) forbids as “Amorite practices” the burial at the crossroads of the afterbirth of the first born of an animal which had been set aside for an offering, or hanging it on a tree, and the wearing of such charms as “a locust’s egg, a fox’s tooth, or a nail from the gallows of an impaled convict” (Shab. 6:10). Chapters 6 and 7 of Tosefta *Shabbat* give a comprehensive list of such prohibitions, and are referred to as “the chapter on Amorite practices” (Shab. 67a where other examples are given). Nevertheless, the rabbis held that whatever is done for medicinal purposes is not prohibited as Amorite practice (*ibid.*).

AMOS (Heb. אָמוֹס; eighth century B.C.E.), prophet in the northern kingdom of Israel. The Book of Amos is the third book of the 12 Minor Prophets according to the Hebrew order (between Joel and Obadiah) and the second according to the Septuagint (between Hosea and Micah). Amos is considered the earliest of the Latter Prophets and by some is considered the first of the writing prophets.

The Prophet, His Place and Time

According to the superscription of the book, Amos was a herdsman (*noqed*) from Tekoa who prophesied concerning Israel in the days of *Uzziah, king of Judah, and *Jeroboam, son of Joash, king of Israel, “two years before the earthquake” (1:1). The title *noqed* is applied again in the Bible to *Meshah, king of Moab, who is said to have been a sheeppaster (11 Kings 3:4). Amos also attributes this employment to himself when he says that he was primarily not a prophet but a *noqed* (in the masoretic text *boker* (*boqer*; “cowherd”), it seems necessary to read the word *noqed*, with the help of the LXX) and a dresser of sycamore trees who was taken from following the flock to prophesy concerning Israel (7:14–15). The term *rb nqdm* is cited in the Ugaritic writings along with the title *rb khnm*, i.e., “chief priest” (C.H. Gordon, *Ugaritic Text-Book*, 62:54–55), where it is explained as one of the temple functionaries who was responsible for the flocks (“chief herdsman”). Some scholars therefore deduce that *noqed*, as connected with Amos, also has a sacral meaning and that even before becoming a prophet, Amos was directly concerned with the service

at the Temple in Jerusalem (Haldar, Kapelrud, et al.). However, this supposition is far from certain.

Amos’ birthplace, *Tekoa, was located to the south of Bethlehem near the Judean Desert, and was known for its wise men (11 Sam. 14:2–21). This has led to the conclusion that Amos’ origin was in Judah. But it is striking that there is no hint of denigration of calf worship in his prophecies, despite the fact that he does not refrain from condemning cultic sins (2:7, 12). In his silence on the matter of the calves, he is similar to the northern prophets *Elijah and *Elisha. Furthermore, Tekoa of Judah is not a sycamore-growing locale; sycamores grew in the Shephelah. Therefore, there may be truth in the explanation first suggested by David Kimḥi and since adopted by several modern scholars, such as Graetz, Oort, and Schmidt, that Amos’ Tekoa was in fact a northern city. A Galilean Tekoa is known from talmudic literature. The verse, “The Lord roars from Zion, and utters his voice from Jerusalem” (1:2), is a formulaic image (cf. Joel 4:16; Jer. 25:30). The mention of Zion in 6:1 is not decisive, since the prophecy is intended for the northern kingdom. The oracle on the restoration of the house of David (9:11 ff.) is doubtful and perhaps not to be attributed to Amos (see below), while the words of *Amaziah to Amos may not testify to the origin of the prophet, for Amaziah does not tell him to return to Judah, but rather: “... go, flee away into the land of Judah, and there eat bread...” A priest of Beth-El could issue such an order even to a northern prophet, particularly during the period of Jeroboam II and Uzziah, when peaceful relations between the two kingdoms flourished. Amos’ prophetic activity took place within the northern kingdom only. There are several allusions in his prophecies to events concerning the northern kingdom and mention is made of Samaria (3:12; 4:1; 6:1; cf. 3:9), and the northern shrine cities, with Beth-El at their head (3:14; 4:4; 5:5–6; 8:14; cf. 9:1). It appears that Samaria, and especially the sanctuary of Beth-El, were actually the scenes of his activity, as is confirmed by the narrative on his encounter with Amaziah (7:10–17).

His prophetic activity began two years before the earthquake (1:1) and continued for some time afterward. This earthquake, which occurred during the reign of Uzziah, is mentioned again in Zechariah 14:5. Impressions of it were recorded by a number of prophets who were active during that period, including Amos himself (see below). Also reflected in Amos are the great political and military changes that took place during the 41-year reign of Jeroboam son of Joash (11 Kings 14:23); they provide the chronological framework of the prophet’s career.

The earliest of Amos’ oracles are the “prophecy against the nations,” at the beginning of the book (1:2–2:6), and the prophecy of visions (7:1–9; 8:1–3). Both precede the earthquake, impressions of which are not yet recognized therein (except for 1:2, where a formulaic usage serves as the superscription for the first prophecy). The situation reflected in the “prophecy against the nations” is that of the early years of Jeroboam’s reign, before Transjordan was returned to Israelite

sway. In this instance the prophet cries out against the injustices of Israel's neighbors, reminding them of their acts of violence and oppression, particularly against Israel. In the prophecy of visions he even refers to Jacob as "so small" (7:2, 5), an attribute that would hardly be appropriate after Jeroboam's extensive gains in Syria. Some claimed that the oracle of visions was Amos' inauguration prophecy (Wellhausen, Budde, et al.). There is nothing in its form or content, however, to justify this claim, though the prophecy does belong to an early stage of Amos' career.

In contrast, the moral reprimands (2:7–6:14; 8:4–14) belong to his later prophecies and reflect the later period of Jeroboam's reign, when *Damascus and *Hamath were already under the hegemony of Israel. The conquest of Transjordan is alluded to in these reprimands (6:13), "the kine of Bashan" who are said to dwell on Mount Samaria (4:1), and Israel's territory is described as stretching from Lebo-Hamath to the Brook of the Arabah (6:14; cf. 3:12). Life in Samaria is characterized by luxury, complacency, and frolic (3:12, 15; 5:23; 6:1, 4–6; 8:10). The inflictions of hunger, locust, and drought are mentioned as part of the past (4:6–9; cf. 8:10). Even the earthquake is recalled in these reprimands as a foregone matter (4:11), while the shocking experiences that came in its wake serve to perceive the impending catastrophe (2:13–15; 3:14–15; 4:3; 6:9 ff.). Still another event alluded to in the moral rebukes, and serving to fix their upper chronological limits, is the solar eclipse, which, according to the Assyrian eponym lists, took place in Sivan 763 B.C.E. This event also serves the prophet as a fitting figure of the punishment to come (8:9).

Thus, although the prophecies of Amos that survived and were collected in the book bearing his name are few, they range over a relatively long period. Variations of character and diction among them lend support to the conclusion that Amos' prophetic output was far greater than what has been preserved in his book.

In the narrative section 7:10–17, a conflict between Amos and Amaziah, the priest, is recorded. Amaziah, who apparently had no authority to punish the prophet, complains about him to Jeroboam, the king: "Amos has conspired against you in the midst of the house of Israel" (7:10). Since there is no royal response the king deemed the matter unimportant. The priest himself tries to drive Amos out of Beth-El by derision (7:12–13), to which Amos responds with emphatic pride about his mission (7:14–15). He ends with a fearful prediction of Amaziah's own future and a renewed pronouncement of Israel's exile (7:16–17). Even in his response Amos says nothing about the king, reinforcing the impression that the quarrel was between him and the priest. Nor are there any further details on the progress or resolution of this clash. This excerpt may pertain only to an extraordinary and provocative event, which did not necessarily occur at the end of Amos' career.

The Structure and Editing of the Book

1. The Book of Amos falls into four divisions, in each of which all or most of the prophecies are of one kind: a prophecy

against the nations (1:2–2:6), prophecies of the punishment of Israel (2:7–6:14), "stories" about the life experiences of the prophet (7:1–9:6), and a prophecy of comfort for Israel (9:7–15). The remaining prophetic books of the Bible are built upon the same four categories, but they are not necessarily arranged in the same order and not every one has left prophecies in all four categories. The editors of the Book of Amos chose the above-mentioned order so that the "prophecy against the nations" opens the book, and the prophecy of consolation brings it to a close. The beginning and end divisions each contain only a single unit, since the editors did not find any more than that, whereas the remaining divisions have clusters of prophecies that could be considered as small scrolls in their own right.

The classification of the prophecies was not a priori but rather as viewed in retrospect by the editors. There are prophecies that could have been classified in a category other than the one into which they are now placed. The editors, however, found a justification for such placement. The first prophecy (1:2–2:6), for instance, is not really an oracle against the nations, since it concludes with Judah and Israel; but since its greater part deals with the neighbors of Israel, the editors could view it as a prophecy against the nations as well. The larger part of the third division does not contain actual stories but visions spoken by the prophet in the first person. From the point of view of their content they could be considered among the judgment prophecies. In the Book of Jeremiah similar visions are in fact included among the judgment prophecies (cf. Jer. 1:11–14; 24:1–3). However, since they are stamped with an autobiographic and narrative form, they could serve in the hands of the editors as a narrative division. One such fragment has already been established among these visions, the incident in the sanctuary of Beth-El (7:10–17), which heightens the narrative character of the entire division through its biographic style. At the same time, a small group of rebukes, similar to those in division two, has been found here (8:4–14). Yet the editors could not allow themselves to transfer it; neither was it significant enough to alter the character of this division as a whole. Similar instances are to be found elsewhere in the Prophets, where the editors did not smooth over inconsistencies for the sake of absolute uniformity.

2. The scope of the isolated prophecies is a subject of disagreement among critics. According to one theory (Koehler, Weiser, Robinson, et al.) the text is divided into the smallest units, each ranging from two to seven verses, with some even limited to a single verse. According to this theory, it was the redactors who combined the original utterances into small collections, thus giving them a more substantial scope. According to another theory (Driver, Sellin, et al.), the prophecies are themselves integral compositions of sizable scope, sometimes being divided into subsections and secondary parts. It can be said that scholars are in agreement on the size and scope of the smallest, indivisible units. The dispute is over whether the smallest units are prophecies in their own right or are links or segments of larger pericopes (and from here on the question

is how the segments join to make up the larger pericopes). The second method seems more likely because many of the tiny segments do not have a unity of thought unless they are attached to the adjacent segments. It appears, then, that the complete prophecies are actually built up by joining the single links together. The single links, which are like strophes of a poem, vary in length, and each one can open with an introductory formula or close with a concluding verse, as if it stood alone. Nonetheless, they are connected to each other by association and continuity of thought. Consequently, the formal structure of the prophecies is rather weak, yet they cannot be understood except as literary wholes. Moreover, within a single prophecy, a prophet sometimes expresses a certain idea in two different ways, without providing real justification for splitting the prophecy in two (for the structure of the single prophecies and the associative connections within their parts, see below).

3. Verses of a unique type are found in the following places in the Book of Amos: 4:13; 5:8–9; 8:8; 9:5–6. Except where the verses interrupt the continuity (5:8–9), they fit fairly well into the context. Yet, they are distinct in content, language, and literary form. Their subject is words of praise to God and the description of his power as revealed in nature. Since scholars apprehended their specific character as cosmic hymns to God, the term “doxologies” has been applied to these verses. The distinctiveness of these verses in the Book of Amos has caused many scholars to claim that these are later additions (Wellhausen, Nowack, Stade, Driver, Sellin, et al.). Various suppositions have been expressed concerning their function; for example, that they served as conclusions to chapters that were read as cultic liturgy (Weiser, et al.), or conclusions to prophetic collections that were absorbed into the Book of Amos (Fohrer, et al.). After the hymnic character of these verses had been noted, the supposition was raised that these are fragments of one hymn that were scattered throughout the Book of Amos, and some attempts have even been made to reconstruct that hymn in its entirety (Budde, Horst, et al.). On the other hand, there were scholars who never denied the authenticity of these verses, and even after their hymnic quality was determined, assumed that the prophet expressed himself here by means of a formulaic style (Robinson, Hammerschaimb, Botterweck, et al.). There were also scholars who attempted to maintain both assumptions at once, i.e., that these verses are both authentic and fragments of a hymn written by Amos (Kaufmann), or of a hymn which Amos interlaced with his own words (Watts, similarly Farr).

Even though these verses are set in a hymnic die, they differ in the Bible, and some of the praises to God contained in them have no example elsewhere in the Bible. Apparently this hymnic style is not that of psalms. In other words, in contradiction to the psalmodic hymns, these did not serve as prayers, but as mere literary clichés. Hymnic passages which do not belong to the psalmodic genre are also found in the Book of Hosea (12:6, and in a slightly different tone 13:4–5 (in lxx there are additional verses nonexistent in the Masoretic

Text)) and intertwined with the speeches of the Book of Job (5:9–16; 9:4–10 (the closest to the hymnic verses of Amos); 12:7–25; 26:6–13), and to a certain degree similar verses are found in the words of Deutero-Isaiah (Isa. 40:22; 42:5; 44:24; 45:18, et al.). But then Amos’ verses probably reflect an early phase of this literary type. The fitting of most of these verses in their context makes it not impossible that they are of the prophet’s pen and that Amos availed himself of them to conclude some of his oracles, with the exception of one instance where the verses were not inserted in their proper place (Amos 5:8–9). Furthermore, in the descriptions of the trembling of the earth, its rising and sinking “as the river of Egypt,” and the pouring out of the sea over the face of the earth (5:8; 8:8; 9:5–6), one may hear an echo of the earthquake, whose impression is recorded in the other prophecies of Amos as well (see above).

4. In the first prophecy of the book (1:2–2:6) various scholars denied the authenticity of the sections concerning the Philistines (1:6–8), Tyre (1:9–10), Edom (1:11–12), and Judah (2:4–5). However, their claims are not decisive, and the opinion of the commentators who consider these sections an integral part of the body of the prophecy should be preferred. Doubts have also been raised concerning Amos 6:2, which mentions the destruction of Calneh, Greater Hamath, and Philistine Gath – cities which were conquered by *Tiglath-Pileser III and *Sargon many years after the reign of Jeroboam. But it is possible that the verse refers to earlier catastrophes that overwhelmed these cities. The statement in 1:5 – “the people of Aram shall go into exile to Kir” – appears to correspond too faithfully to reality according to II Kings 16:9, so that the mentioning of Kir in one of these two passages seemed suspect. In addition, it is not customary for Amos to mention by name the place to which a nation will be exiled. However, the mention of Kir in another passage as the provenance of the Arameans (9:7) is an argument in favor of the authorities in the prophecy of exile, which is comparable to the threat in other books that Israel will return to Egypt (Deut. 28:68; Hos. 8:13).

The prophecy of comfort at the end of the book has also been taken to be late. Indeed, it does contain late expansions (see below). Perhaps in the course of time, some late idioms have found their way into the words of Amos, even in places where there is no reason to deny the authenticity of the passage in general. Of this type seem to be the references to the deities Siccuth, Chiun, and Kokhav (star god) in 5:26, and Ashimah of Samaria in 8:14. Siccuth (Succoth-Benoth) and Ashimah are mentioned in II Kings 17:30 as deities which were worshipped by the men of Babylon and the men of Hamath who were settled in Samaria after the exile of Israel. However, there are some who think that the cult of these deities had gained a foothold in Israel, even prior to the exile of the northern tribes. Possibly, a few Deuteronomistic idioms also became attached to various places in the text of Amos. Such is the idiom “I will set my eyes upon them for evil and not for good” (9:4), to which Jeremiah 21:10; 24:6; 39:16, et al., can be compared. There are those who find Deuteronomistic impres-

sions in the section on Judah (2:4–5) as well. But even if this assumption were certain, it would still not be sufficient to invalidate the reliability of the core of this section.

Content of the Prophecies

THE FIRST DIVISION. The “prophecy against the nations” (Amos 1:2–2:6) begins with a formulaic call (1:2) and contains a series of sections in a stereotyped structure, the subject of which is the neighbors of Israel, concluding with Judah and Israel themselves. To them all, the prophet promises exile and destruction. The utterances to Judah and Israel serve as an apex of this prophecy; hence it appears that this is actually not a prophecy against the nations, though in the main it does speak against Israel’s neighbors. Many scholars believe that its conclusion coincides with the end of chapter two (2:16). However, all that is said after 2:6 is already stamped with the mark of the moral reproofs of the second division, and it is doubtful whether it constitutes a suitable continuation to the first prophecy. Probably the section on Israel (2:6), which lacks the typical conclusion, “So I will send a fire... and it shall devour the strongholds of...” has not been preserved in its entirety, but this prophecy was cut short at the end, and the editors then attached to it the scroll of reproofs to Israel. Thus the section on Israel, and thereby all of the “prophecy against the nations,” was stitched to the moral reproofs of the second division. This is one of Amos’ earliest prophecies; the period of time reflected in it is the beginning of Jeroboam’s reign, before Transjordan was recovered by Israel (see above).

THE SECOND DIVISION. This division is made up exclusively of prophecies of reproof. The first is 2:7–16, the first part of which is probably lost, for it lacks a formal opening (see above). It is divided into three segments: a description of the moral and cultic corruption (7–8), the past grace of God to Israel (9–12), and a description of the impending catastrophe (13–16). 3:1–15 opens with the call “Hear this word.” It is divided as follows: a statement about the relation of the election of Israel and the greater responsibility placed upon it (1–2), a proverb on the connection between cause and effect and on the significance of the prophetic word (3–8), descriptions of catastrophes and reminders of sins (9–12), and a statement on the day of punishment and the destruction of Israel for its transgressions (13–15). The prophecy 4:1–13 again begins with the call “Hear this word.” It is divided into four segments: a description of the corruption and punishment of the “kine of Bashan which are on the mountain of Samaria” (1–3), a denunciation of the worship in the temples (4–5), a series of afflictions that came upon Israel but were not sufficient to return the people to God (6–11), and a call to the people to prepare to meet their God, concluding with hymnic verse (12–13). The prophecy 5:1–17 also opens with “Hear this word” and is divided into the following segments: a lament on the downfall of Israel (1–2) and a description of calamity (3); an accusation against the worship in temples and a warning of exile and destruction (4–6); a description of the moral corruption and its attendant punishment (7, 10–13), in which two hymnic verses

are inserted (8–9); a call to repentance (14–15) and a depiction of mourning as a result of the coming catastrophe (16–17).

The prophecy 5:18–27 opens with the call “Ah!” (Heb. *Hoi*). It is divided into three segments: a description of the terrors of the Day of the Lord (18–20), a denunciation of the worship in the temples and a call to repentance (21–25), and a promise of exile to Israel (26–27). The following prophecy, 6:1–14, also begins with the exclamation “Ah!” and is divided into four segments: a call to Israel not to be tranquil about its future, since it is no better than other kingdoms that were also destroyed (1–2); a description of the serene and luxurious life and a warning of exile (3–7); God’s oath to bring destruction upon Israel and descriptions of calamities (8–11); and a reproof on the moral corruption and a warning of catastrophe (12–14).

THE THIRD DIVISION. The prophecy of visions (7:1–9; 8:1–3) is divided into two pairs of sections, which are of a similar structure. All the sections begin with the words “Thus has the Lord God shown unto me, and behold...,” a specific vision being mentioned in each one. In the first two sections the prophet sees visions of disasters – locusts (7:1–3) and drought (4–6). He begs for mercy until God repents the evil decree and cancels it. In the last two sections the prophet sees symbolic visions: “The Lord stands upon a wall made by a plumbline, with a plumbline in his hand” (7–9) and “a basket of summer fruit,” that is, figs that ripened late (8:1–3). These two visions are explained to him as symbols of the destruction of Israel, and the prophet does not even attempt to void the decision. Both conclude with poetic sentences depicting the destruction. This prophecy belongs to the two years at the beginning of Amos’ activity, before the earthquake (cf. above). The opinion of Sellin, Rost, and others that this prophecy should be fixed at the end of Amos’ work does not stand to reason.

A fragment of a story on an incident that occurred to Amos at the temple of Beth-El (7:10–17) has been inserted into the midst of the prophecy of visions. According to the story, the priest of Beth-El complained to Jeroboam about Amos and even attributed to the prophet intentions of rebellion against the king, quoting from his words: “Jeroboam shall die by the sword, and Israel shall surely be exiled away from his land” (11). Throughout all of Amos’ prophecies Jeroboam is mentioned by name only at the end of the third section of the prophecy of visions (7:9). This was judged a sufficient reason to insert the narrative at this point, thereby separating the two last sections of the prophecy of visions. Also attached to the prophecy of visions is a group of prophetic sayings whose content is close to the prophecies of the second division (8:4–14). It comprises two or three fragments: a prophecy divided into two links, or two pieces that have been joined together – a description of the moral corruption, God’s oath not to forget the deeds of Israel, with a hymnic verse (4–8), and a description of the terrors of the Day of the Lord (9–10); and a piece consisting of sayings concerning the future hunger and thirst for the words of God (11–14).

Chapter 9, verses 1–6 is a vision of the destruction of Israel. Similar to the prophecy of visions, this unit is also related in the first person, which caused many scholars to believe that it is a direct continuation and climax of the preceding visions. However, it is more likely that it is a self-contained literary unit. At the same time it is possible that the editors found this vision in the continuation of the scroll of “stories” that contains the prophecy of visions, with the fragments inserted in, and attached to it. The literary structure of this vision differs from that of the former visionary prophecy. At the beginning of this unit the prophet remarks that he saw the Lord standing beside the altar and ordering the execution of the catastrophe. There is no exchange of words between the prophet and the Lord, and from the opening the vision immediately proceeds to depict the catastrophe. The work of destruction begins with Beth-El, and from there it spreads out enveloping the entire people, without leaving them any place of refuge. The vision is concluded by two hymnic verses.

THE FOURTH DIVISION. This is a single prophecy of comfort to Israel, divided into four segments (9:7–15): in the eyes of God, Israel is not considered to be more important than other nations (9:7); therefore, God is about to destroy the sinning kingdom, but it will not be completely destroyed – He will scatter Israel among all the nations, and the sinners in its midst who were indifferent to the coming calamity will perish (8–10); afterward God will raise up the fallen tabernacle of David, and His people will inherit the remnants of Edom and other nations (11–12); Israel will return to its land and rebuild it, without being exiled from it again (13–15). Thus, the first two segments essentially express a message of calamity, whereas the last two, a message of salvation. Most scholars are of the opinion that the last two segments are not of Amos, whereas a minority views them as authentic. The opinion of the former appears to be the more plausible. However, the editors of the Book of Amos found this prophecy in its expanded form, i.e., when both last segments were already contained in it and attributed to Amos. Consequently, they took it to be a prophecy of comfort and placed it as a division on its own. Even though the last two segments seem to be later expansions of the words of Amos, it does not imply that he was only a prophet of woe and did not compose prophecies of comfort. Among the extant prophecies in the book bearing his name, however, there is no prophecy of comfort except this one.

His Personality and Prophetic Message

Amos testifies that he “was taken from following the flock” to prophesy to Israel (7:15). Nevertheless, one cannot conceive of him as a common person, whose power lies in spiritual inspiration and insight alone. His writings also demonstrate qualities of education and erudition. His polished and highly artistic style could not be attained without literary training, since such a style serves as an obvious indication of the creativity of a man of letters. Amos is well acquainted with the life of the social elite, has a clear perception of all the military and political occurrences on Israel’s perimeter (1:3–2:3; 4:10;

5:27; 6:13–14, et al.), and displays an outlook that encompasses even the fates of nations throughout the Near East (1:3–5; 6:2; 9:7, et al.). Moreover, among his compositions are found a few prophecies explicitly molded in an autobiographic form (see above), as are to be found also in other prophets, and they suffice to verify that Amos, similar to the rest of the Latter Prophets, was also a writer. His other prophecies even though not of an explicit autobiographical mold, are first and foremost literary creations, which he himself, as an artist and poet, shaped. It cannot be told for certain whence this prophet, who was taken from following the flock, received his erudition and literary training. It could have been in his city, Tekoa, which was known for its wise men (cf. above). He could also have attained this stage later on in life.

Amos’ prophetic creation is undoubtedly rooted in literary tradition and his compact and superior style may prove that others preceded him in crystallizing words of prophecy in writing. A few formulaic traits are already discernible in his language. Amos surely did not invent these, but received them ready-made. It is even possible that in some places prophetic words prior to those of Amos have found their way into the books in our possession, but the names of their authors are lost. Amos, however, is the first whose name has been preserved on prophetic writings that were collected in a special book and whose prophetic personality transpires from this book.

The major part of his message is devoted to promises of catastrophe to befall Israel, expressed in several ways. Often the terrors of the earthquake serve him to make the coming catastrophe perceptible (2:13–16; 3:14–15; 4:3; 6:11; 9:1). In other places he depicts scenes of siege, the conquering of a city, and the despoiling of palaces (3:9–11; 4:2–3; 6:8). He also promises Israel the tragedy of exile (5:5, 27; 6:7; 9:9). Amos is the first to express the threat of exile in the Bible, just as he is the first to use explicitly in this connection the Hebrew verb *galah*. Apparently, in this instance his words reflect the Assyrian system, i.e., to uproot and transfer nations from their homelands. In portraying the impending calamity, Amos avails himself of the concept of the *Day of the Lord. This concept primarily denoted a day of salvation for Israel and stringent judgment upon its enemies. This is its significance in the words of several prophets as well as in the passage of consolation appended at the end of the Book of Amos (9:11). Even Amos himself probably fashioned his “prophecy against the nations” after the model of the Day of the Lord oracles (1:3–2:3), though he tacked on to it words of punishment to Judah and Israel. At the same time, Amos reverses the meaning of the Day of the Lord, conceiving it as a day of calamity and judgment upon Israel itself. His usage of this popular concept in reversed fashion is clearly indicated in several verses (see 5:18, 20; also 8:3, 9–10). From the latter passages it can be inferred that in other connections also, when Amos cries out a lamentation and depicts scenes of mourning, a multitude of corpses, and silence everywhere (5:1–2, 15–17; 6:9–10), it is possibly the horrible image of the Day of the Lord that hovers before his eyes.

These various expressions of the message of catastrophe sometimes contradict each other on certain points. Yet, they should not be measured by principles of harsh logic, for the prophet himself undoubtedly did not mean to express his visions in formal, systematic concepts. The poetic images served him only as a means to portray the terror of the impending crisis. Similarly, he often describes the calamity as decided and absolute, allowing no living remnant to survive (see especially 9:2–4). But on the other hand, he speaks of exiling the people from the country, and sometimes assumes that a remnant will be preserved (3:12; 5:3, 15). Furthermore, those who are destined to die are only the sinners who do not believe that evil will befall them (9:10). Contradictions of this nature can be found even within the same prophecy: from Israel will be preserved remnants (5:3), but even so the people are liable to burn in a fire which no one will be able to extinguish (5:6); they will be exiled from their land (6:7), but even so God will raise up against them a nation who will oppress them from Lebo-Hamath to the Brook of the Arabah (6:14). Thus in the first prophecy to all the nations enumerated there the prophet promises burning by fire and destruction, but to a few of those he adds a promise of exile (1:5, 15). Real contradictions exist in these words for those who conceive of them in the framework of contemplative and methodical thought. But in the agitated images of a prophet their purpose is only to complement and strengthen each other. Likewise, the prophet will often describe the catastrophe as inevitable, as a predetermined decree of fate, but he also calls for repentance, thereby pointing the way to life. This occurs even in the midst of the depictions of catastrophe (5:4–6, 14–15). Hence, in the depictions of the decreed catastrophe, he does not exactly “mean” what he says. His words are rooted in a despair of repentance, or their true meaning is that of a threat only.

The promises of doom are explained by Amos, as well as by other prophets, as the result of the people’s social and moral corruption: robbery of the poor, extortion of judgments, cheating in business, acts of plunder and violence by the ruling elite (2:7–8; 3:9–10; 4:1; 5:7, 10–12, 15; 6:4–6). At the same time he denounces the life of luxury and enjoyment (3:12, 15; 4:1; 5:11; 6:4–6; 8:3), and here too he is a partner in the prophetic ideal of simple and innocent life (Isa. 2:12–17; 3:16–23; Hos. 8:14; 13:5–6; Zeph. 3:11–12, et al.). The comforts and great happiness in the lives of the rulers evoke hostility in Amos, for the additional reason that they indicate apparent security and disbelief in the impending calamity (4:1–2; 6:3–7; 9:10). Therefore, he mocks the happiness of the people for their military conquests, which, according to his outlook, will turn to nought (6:13–14). He also defies the worship in the temples, which accompany an abundance of sacrifices, rapturous assemblies, and shouts of joy (4:4–5; 5:5, 21, 23). The people do not sense that all these exhibitions of abundance and pomp will not erase the decree of destruction of the places of worship (5:5; 7:9; 9:1). Rescue will come by seeking the Lord, which is the seeking of the good and is intertwined with a moral and social purification (5:4–6, 14–15, 24). In this connection, the

prophet does not hesitate even to state that the Lord despises the cult practiced in His honor in the temples (5:21–23). Furthermore, he claims that even in the desert, Israel did not worship the Lord with sacrifices and offerings (5:25). This claim reflects the view of the early Pentateuchal sources (JE), according to which Israel made some sacrifices before they left Egypt (Ex. 12:21–27) and when they were encamped by Mount Sinai (Ex. 3:12; 17:15; 18:12; 24:4–8; 32:5–6), but no mention is made of their sacrifices along the journey from Sinai to Canaan. Similarly Jeremiah asserts that when God brought Israel out of Egypt he neither spoke to Israel nor commanded them concerning burnt offerings and sacrifices (Jer. 2:22–23).

Although Amos appears to invalidate the worship in the temples, he does not do it because of the cult as such, but only to accentuate the significance of social ethics. Cultic acts are not important enough to him when they are bound with moral corruption and oppression of the poor (2:7–8). The demand to remove the noise of songs and the melody of harps serves him as an introduction to the positive demand: “and let justice roll down like waters, and righteousness like an everflowing stream” (5:23–24). Similarly, the call to refrain from coming to the temples is related by him to the call to seek the Lord in order to be saved from the catastrophe and to live (5:5–6). Therefore, one should not attribute to Amos a decisive invalidation of the value of the cult (as, e.g., Weiser tended to do), for this invalidation is decreed by him not for its own sake, but rather serves as a kind of rhetorical-polemic means to a greater emphasis on the value of ethics. However, the very perception that the people’s fate is determined solely by its social and moral perfection, found in Amos its first exponent in biblical literature. Afterward, it recurs in various degrees of accentuation in the books of some of the great prophets who succeeded him. But Amos and the other prophets were hardly conscious of the uniqueness of this notion, in which an exceedingly revolutionary idea is hidden. To them it looked like a fundamental principle of the ancient belief in ΥHWH , in whose name they spoke to the people and by whose authority they made ethical demands. Consequently, it also would not be accurate to say (as did, e.g., Cramer), that in fact Amos did not introduce any new religious idea. The unique innovation of Amos (and of the prophets after him) was in a new apprehension of the inner significance of the Yahwistic belief with its ancient tradition. But this innovation was hardly perceptible to its exponents.

Many scholars assert that Amos is also superior to his contemporaries in his perception of God, for he emphasizes the power of ΥHWH over the fates of many nations besides Israel (9:7; cf. 6:1). The people of Israel are no more important to ΥHWH than are the Ethiopians (9:7); their election from among all the families of the earth only burdens them with a greater moral responsibility (3:2). Amos’ prophecies were one of the turning points in moving Yahwistic religion in the direction of monotheism. Although this view was challenged by such outstanding scholars as *Albright and *Kaufmann, our increased knowledge of ancient Israelite religion indicates that

the road to monotheism was a long one, and that Amos was a significant signpost on that road.

[Menahem Haran]

AMRAM (Heb. אֲמֵרָם; “the Divine Kinsman is exalted”), father of Aaron, Moses, and Miriam (Ex. 6:18, 20; Num. 26:58–59). Amram married his aunt Jochebed (Ex. 6:20), which is contrary to biblical law (Lev. 18:12–13; 20:19–20). He was the son of Kohath, the grandson of Levi, and his name frequently appears in genealogical lists of the tribe of Levi (Num. 3:19; 1 Chron. 5:28–29; 6:3; 23:12–13; 24:20). Amram was also the father of the Amramites, a Kohathite branch of the tribe of Levi (Num. 3:27; 1 Chron. 26:23).

In the Aggadah

The *aggadah* relates that Amram was “head of the Sanhedrin” (Ex. R. 1:13), and describes him as “the leader of his generation” (Sot. 12a). When Pharaoh decreed the death of all the male Jewish children, Amram divorced Jochebed, his wife, declaring: “We labor in vain.” His example was followed by all the men in Israel. His daughter, Miriam, however, criticized his action declaring that his example was worse than Pharaoh’s decree. Amram heeded her words, and remarried Jochebed. All the men of Israel, thereupon remarried their wives (Sot. 12a).

Amram’s piety is described as being partly responsible for bringing the divine presence closer to earth (PDRK 1). It is also recorded that he was one of the four personalities (the others were Benjamin, Jesse, and Chileab), who died untainted by sin (Shab. 55b; BB 17a).

[Elimelech Epstein Halevy]

AMRAM, name of two Babylonian *amoraim*. **AMRAM I** (third century). His preceptors were Rav and R. Assi, whom Amram quotes both in *halakhah* and *aggadah* (Pes. 105a; Ned. 28a; et al.). He was once requested by his colleagues to relate “those excellent sayings that you once told us in the name of R. Assi” (Er. 102a). Among his aggadic statements are “[There are] three transgressions which no man escapes for a single day: sinful thought, calculation on [the results of] prayer, and slander” (BB 164b). On Psalms 112:1 (“Happy is the man that feareth the Lord”) he comments, “happy is he who repents while he is still a man,” i.e., while he is still in the prime of life (Av. Zar. 19a). **AMRAM II** (early fourth century) was a pupil of R. Sheshet, whose halakhic rulings he quotes (Yev. 35a, et al.). Sheshet affectionately called him “My son Amram” (Av. Zar. 76a). Once when Amram was guilty of hairsplitting, Sheshet remarked: “Perhaps you are from Pumbedita where they try to make an elephant pass through the eye of a needle?” (BM 38b). Only a few sayings are transmitted in his own name (e.g., Nid. 25b), as he generally quotes *halakhah* in the name of others such as R. Isaac (Zev. 6b); R. Naḥman (Ber. 49b); Ulla (Git. 26b); and Rabbah b. Bar Ḥana (Yoma 78a). He engaged in discussions on *halakhah* with Rabbah and R. Joseph (Sot. 6a). According to the *aggadah*, in one of these, Rabbah expressed himself so sharply when opposing Amram that a pillar in the academy cracked (BM 20b).

AMRAM (late 14th century), **nagid* of the Jewish communities in Egypt. Amram is mentioned as *nagid* in a document of 1377 and in a letter written in 1380, probably by Joseph b. Eliezer Tov Elem of Jerusalem. The name *Amram*, appearing without the epithet *nagid* in a partially preserved document dated 1384, may refer to him. His name also appears in a He-

brew letter which states that rumors of the exodus of the Ten Tribes have spread through Italy, and emissaries have been sent to the East to check their veracity.

[Eliyahu Ashtor]

AMRAM, DAVID (1930–), French horn player, pianist, composer. A man of many parts, the Philadelphia-born Amram has written and performed in almost every conceivable musical context. He studied composition at Oberlin College, then did his U.S. Army service as part of the Seventh Army Symphony, where he played with Sonny Rollins and Charles Mingus. Upon leaving the army he stayed on in Paris briefly, where he led a jazz quintet, which recorded there. The mix of jazz and classical runs through his entire career, as might be expected from a French horn player who jammed with Dizzy Gillespie, among others. He scored and appeared in the famous underground film *Pull My Daisy*, then film director John Frankenheimer brought him to Hollywood to score *All Fall Down* (1961); his stay was relatively brief but did result in the memorable soundtrack to Frankenheimer's *The Manchurian Candidate* (1962), one of the most successful jazz-influenced scores of the period, and two excellent scores for Elia Kazan, *Splendor in the Grass* (1962) and *The Arrangement* (1969). Amram is a prolific composer with over 100 orchestral and chamber works and two operas to his credit, including the Holocaust-themed TV opera *The Final Ingredient* (1965), *Native American Portraits* (1976), and *Symphony: Songs of the Soul* (1986–87). His compositions draw tellingly on Native American, Latin jazz, Middle Eastern, and other folkloric influences. *Vibrations*, an autobiography, was published in 1968.

[George Robinson (2nd ed.)]

AMRAM, DAVID WERNER (1866–1939), U.S. jurist, community leader, scholar; son of Werner David Amram, Philadelphia businessman and owner of the first *mazzah* bakery in Philadelphia. Amram practiced law from 1889 to 1903 when he was appointed a bankruptcy referee to the U.S. District Court. In 1908 he became lecturer in law and from 1912 to 1925 he was professor of jurisprudence at the Law School of the University of Pennsylvania. Active in community affairs, he was on the Board of Governors of *Gratz College and the publication committee of the *Jewish Publication Society. He was chairman of the Philadelphia Zionist Council and editor of its official publication, the *Maccabean*. Amram first began to study Talmud when already an adult, under Marcus *Jastrow, and was deeply influenced by him in his attitude toward Jewish life and thought.

Amram wrote articles on Jewish law in the Bible and Talmud for the Anglo-Jewish press as well as for the *Jewish Encyclopedia*. Among his books on Jewish law are *Jewish*

Law of Divorce According to the Bible and Talmud (1896, repr. 1968) and *Leading Cases in Biblical Law* (1905). Amram also published *genizah* legal documents (in *The Green Bag, an Entertaining Magazine of Law*, vol. 13, 1901), books on law and legal practice in Pennsylvania, and studies in Mexican and Peruvian textile designs and on Aztec pottery. His special interest in Hebrew books and printing led him to write *Makers of Hebrew Books in Italy* (1909, repr. 1963), which contains important descriptions of Hebrew printing in Italy from the 15th–17th centuries and remains the best introduction in the English language to the subject.

[Abraham Meir Habermann]

AMRAM, NATHAN BEN HAYYIM (1805–1870), rabbi and emissary of Erez Israel. Born in Safed, Amram was sent to Egypt in 1825 on behalf of the community of Tiberias. He remained in Alexandria until 1835, when he left for Europe as an emissary of Hebron. Accused of misappropriating funds from a mission, he wrote a pamphlet called *Iggeret ha-Emunah ve-ha-Tiferet* (1843) to justify his accounts. He returned to Alexandria by 1851 and was appointed rabbi there in 1863, serving until his death. Amram was interested in the sciences, medicine, economics, and mysticism and wrote scores of small books on *halakhah*, philosophy, and Kabbalah, some of which were published. In 1853 he began the publication of his major work, *No'am ha-Middot*, concerning philosophical and moral topics, arranged alphabetically (pt. 1, 1855; pt. 2, 1865; pt. 3, 1869). He appended to it *Hitnasse'ut ha-Mishar*, a discussion of the development of the economy of Europe and its ethical and social significance. His novellae on the Scriptures and Talmud, sermons, and letters survive in manuscript form.

AMRAM BEN SHESHNA (**Amram Gaon**; d. c. 875), *gaon* of Sura noted for his responsa and the oldest surviving order of prayer. According to the epistle of *Sherira Gaon, Amram was given the title of **gaon* even during the lifetime of his predecessor Natronai b. Hilai, although the circumstances which led to this are unknown. The precise period during which he served in the gaonate is uncertain; however it is clear from one of his responsa that by 858 he was already acting in that capacity. More than 200 of Amram's responsa are extant, some in collections of geonic responsa such as *Sha'arei Zedek* and *Sha'arei Teshuvah*, others of the earlier rabbinic authorities; still others having been discovered in the Cairo **Genizah*. His responsa include both practical halakhic decisions and comments on the Talmud. In one of them he states that it is prohibited to lend money to a non-Jew on interest, and even though indirect interest (*avak ribbit*) is permitted, scholars should shun it (*Sha'arei Zedek* (Salonika, 1792), 40a). Am-

ram's fame, however, rests primarily on his *Seder* (commonly called his *siddur*), "the order of prayers and blessings for the entire year... according to the tradition which we possess, as laid down by the *tannaim* and *amoraim*." The *Seder*, known also as "Yesod ha-Amrami" and as "Maḥzor de-Rav Amram," originated in a responsum which was seemingly sent to the community of Barcelona. From there it spread throughout Spain and to other countries. The *Seder R. Amram* is the oldest order of Jewish prayers extant. It contains the text of the prayers for the entire year, as well as the laws and customs pertaining to the different prayers. Although Amram's predecessor Natronai had written a responsum (mentioned at the beginning of Amram's *Seder*) to the community of Lucena explaining how the rabbinic injunction to recite 100 blessings daily should be fulfilled and had established the sequence of weekday prayers, Amram was the first to compose a systematic arrangement including prayers for the whole annual cycle as well as the pertinent laws. Amram's sources, in addition to the Talmud, were the works of the *geonim* and the rites of the Babylonian yeshivot. The *Seder* enjoyed a very wide circulation and was extensively quoted by the leading scholars of Spain, Provence, France, and Germany. It served as the basis for later orders of service, such as *Siddur Rashi*, *Maḥzor Vitry*, and especially the liturgy of countries which came under Babylonian influence.

In a responsum to Meshullam b. Nathan of Melun, Jacob b. Meir *Tam (12th century) states: "Whoever is not well-versed in Rav Amram's *Seder* and in *Halakhot Gedolot*... dare not alter the words of the early authorities or their customs, for we must rely upon them wherever they do not contradict our Talmud but [merely] add to it. Many customs we observe originated with them" (*Sefer ha-Yashar*, 619). Three different manuscripts of the *Siddur* are extant, and additional fragments have been discovered in the Cairo *Genizah*. The present work is not that written by Amram and contains later interpolations. Moreover, a thorough study of the *Seder*, as well as a comparison between it and passages cited from it by the earlier rabbinic authorities, show that in the course of time changes were introduced into Amram's original text, both in the sections comprising the prayers and in those dealing with the laws. Some scholars even maintain that Amram sent to Spain only the "order" of the prayers and blessings together with the relevant laws but not the actual text of the prayers and blessings, which were added later. Some contend that the *Seder* was basically composed not by Amram but by Zemaḥ b. Solomon, the *av bet din* at the time.

The *Siddur* has been edited by N. Coronel, *Seder R. Amram Ga'on* (in two parts; 1865); by A.L. Frumkin, *Seder Rav Amram ha-Shalem* (1912); and by D. Hedegard, *Seder R. Amram Ga'on* (only the weekday prayers; 1951). A. Marx published additions and corrections to Coronel's edition under the title of *Untersuchungen zum Siddur des Gaon R. Amram* (1908). A critical edition of the *Seder R. Amram* based on manuscripts and old editions was published by Daniel S. Goldschmidt (Jerusalem, 1971).

[Tovia Preschel]

AMRAM DARAH (fourth century C.E.), Samaritan poet who wrote in Aramaic and whose poems form a central part of the Samaritan basic prayer book, the *Defter*, to this day. He is believed to be the priest (or high priest) Amram b. Sarad mentioned in the Samaritan chronicles of *Abu al-Fat and the *New Chronicle*. According to these sources, Bāba Rabbah appointed him, together with a layman, as head of the fourth district of the reorganized Samaritan province in the fourth century C.E. The *Tolidah* identified him with Tūta, the father of the famous poet Markah, which would make him one of the early revivers of the Samaritan liturgy in an age of political renaissance. His epithet, Darah, meaning the ancient one, differentiates him from later priests called Amram. Amram Darah's style is primitive, and his poems lack a standard number of lines and a fixed line length. Twenty-nine poems in the *Defter* are attributed to him, the greater part under the heading "Verses of Durran," i.e., verses by Darah or in the style of Darah. A smaller section bears the designation "Verses of Markah" because of their stylistic affinity to the poems of his son.

[Ayala Loewenstamm]

AMRAM ḤASIDA (Aram. "the Pious"; c. third century), a prominent member of the Jewish community in Nehardea. It is reported that he applied the punishment of lashes to anyone who followed lenient opinions regarding the sowing of *kilayim* ("mixed seeds") in a vineyard, even outside the Land of Israel (Shab. 130a). He attached *zizit* to a garment worn by his wife (Suk. 11a). He was physically maltreated by the house of the exilarch (because according to Rashi, "he was pious and strict and therefore imposed numerous restrictions upon them") and he became ill. (Git. 67b). The Talmud tells of his struggle against temptation in which he publicly admitted his weakness. When the sages said to him, "You have shamed us," he replied, "It is better that you be ashamed of the house of Amram in this world, than that you be ashamed of it in the world to come" (Kid. 81a). For the phenomenon of talmudic stories concerning saintly figures who live on the periphery of established rabbinic circles, see Kalmin (2004).

[Zvi Kaplan]

AMRAM OF MAINZ, legendary medieval figure. According to the story R. Amram, who was born in Mainz, taught later in Cologne. He requested his pupils to send his body to Mainz for burial after his death. His corpse arrived in an unmanned boat on the Rhine but was seized by Christians who buried him as a Christian saint in a church named after him. A similar legend was current among Christians about the arrival of the corpse of the martyr St. Emmeram at Regensburg. The Jewish legend which originated at the end of the 16th century identifies Emmeram with Amram.

AMRAN, town in Yemen, about ten hours' walk northwest of San'a, with a large Jewish community in a separate walled quarter. Jacob Sappir visited it in 1859 and brought out a first account (*Massa Teiman*, 174–80). There were about 100 Jewish families in Amran at the time, led by the rabbi and president Slayman al-Tanimi, who had reversed the previously gloomy spiritual situation. There were two synagogues and the majority of Jews made good livings as tailors, farmers, blacksmiths, and silversmiths. Many of them had fled from San'a because of its unstable political situation. The Muslims of Amran were considered anti-Jewish. In 1900 most of the houses in the Jewish quarter were very severely damaged in a big flood (*sayl*) and about 40 Jews were killed (Korah, p. 62). Abraham *Arusi wrote a special poem to commemorate this event (Gamlieli, 1978, 435–38). B. Stevenson, who studied Amran in 1978–79, collected important data about the Jews there. According to local tradition the Jews came to Amran about 300 years earlier from nearby villages seeking the protection of the sheikh. They were allowed to settle in Amran in return for scattering the ashes from the public baths on his fields. A few Jews were rich landholders, and many rented stalls or owned shops in the market. As opposed to other places they were not remembered as skilled artisans or craftsmen. When they left for Israel (1948–51) there were 500–600 people living in 121 houses. The houses and the farmland of the Jews (100 acres) and the synagogues were sold for very low prices. Most of these were changed architecturally, so there is very little evidence in the town of Jewish existence there.

[Yosef Tobi (2nd ed.)]

AMRAPHEL (Heb. אֲמֶרְפֶּל), king of Shinar. Amraphel is one of the monarchs who according to Genesis 14:1–9 accompanied King *Chedorlaomer of Elam on his campaign against the rebellious cities of the Sodom region. The identification of Amraphel is uncertain. The old view that Amraphel is the

Hebrew reflex of *Hammurapi king of Babylon is philologically impossible. (A fanciful talmudic derivation of the name as composed of *amar*, “decreed,” and *pol*, “leap,” identified Amraphel with Nimrod, who in Jewish legend ordered Abraham to leap into the fire. See Er. 53a.) At the same time, biblical Shinar designates or includes the country around Babylon in the context of Genesis 11:2 and Zechariah 5:11. The biblical identification of Shinar with Babylon is corroborated by the 15th century B.C.E. cuneiform place name Shanharu, which may itself go back to the name of a Kassite tribe during the period that the Kassites ruled Babylonia. Nothing further is recorded in the Bible about Amraphel, and the invasion of Canaan in which he participated has not so far been attested in extra-biblical sources. Some scholars have, nonetheless, argued that Genesis 14 has the features of a genuine chronological account.

[Nahum M. Sarna]

AMSHWITZ, JOHN HENRY (1882–1942), British artist. He was born in Ramsgate and studied in London. He was best known for his historical murals. He painted four frescoes for the Liverpool town hall and in 1910 was commissioned to paint a historical panel for the Royal Exchange, London. His interest in acting took him to South Africa in 1916, where he remained until 1922 as cartoonist for the *Rand Daily Mail* and *Sunday Times*. He was a vital influence in South African art and his later murals were mainly done as South African commissions (e.g., South Africa House, London, in 1934; Witwatersrand University in 1936; and Pretoria City Hall in 1938). He painted many portraits and illustrated an edition of the *Haggadah* and works by *Zangwill.

AMSTERDAM, constitutional capital of the *Netherlands.

Ashkenazim until 1795

DEMOGRAPHY AND ECONOMY. *The beginning.* The first Ashkenazim arrived in Amsterdam from the end of the 1610s onwards. They left the German countries owing to the Thirty Years War, which devastated the economy and resulted in anti-Jewish measures. At first they depended socially and economically on the Sephardi community, but were in the same position as to legal status.

The first Ashkenazi synagogue services were organized for Rosh Ha-Shana and Yom Kippur 1635. Until then the growing group of Ashkenazim had visited the Sephardi synagogue. From 1636 they hired a room to serve as a synagogue, which resulted in the establishment of an independent Ashkenazi *kehillah* in 1639. Its first rabbi was Moses ben Jacob Weile of

Prague. The community acquired its own cemetery in Muiderberg in 1642.

While the first Ashkenazim were of German descent, a second group of Ashkenazi immigrants settled in Amsterdam in the wake of the *Chmielnicki pogroms of 1648–49 in Poland and the Russian invasion in Lithuania in 1655–56. These Polish Jews brought with them their own *minhagim* and soon established their own *minyán*. Although the existing Ashkenazi community was opposed to it, they formed their own *kehillah* with a rabbi and cemetery in 1660. The Polish community maintained ties with the *Council of the Four Lands. In 1670 the Polish *kehillah* numbered 70 members versus the 238 of the so-called High German *kehillah*. Only by pressure of the local authorities were the two communities unified in 1673. From then on, only the chief rabbi was allowed to have a *minyán*; Chief Rabbi Saul *Loewenstamm followed the Polish rite. After his death in 1790 this Polish *minyán* was allowed to be held in a room under the Uilenburgerstraatshul. From the beginning of the 18th century the Ashkenazi community called itself Talmud Torah.

Demography. The Jewish population clustered in the eastern quarters of the city. While the Ashkenazim kept growing in numbers, the Sephardim had stabilized. The great migration from Eastern Europe started after 1726. In 1674 there were 5,000 Ashkenazim. This number quadrupled in the next century. In 1795 Amsterdam counted 22,000 Ashkenazi inhabitants.

Ashkenazi Jews from Amsterdam, in their turn, founded communities in England and the New World. The communities in Surinam, Curaçao, and London were considered daughters of the Amsterdam one. The London Great Synagogue was therefore called the “Dutch Jews’ Synagogue.”

Economy. Ashkenazi Jews were active in those parts of economic life that were not organized via the guilds. On the whole, the Amsterdam government was not very strict in the enforcement of protective laws, which enabled Jews to work on the edge of privileged jobs. They worked in the markets, were peddlers, opened small shops and were active in the money business, the diamond industry, the silk industry, the tobacco industry and in sugar refining. The majority of the Ashkenazi Jews were very poor. In 1795 87% of them lived on poor relief, while the city average was only 37%. There was a small elite consisting of wealthy businessmen such as Ruben Gompertssohn, Abraham Auerbach, and Benjamin *Cohen. Much of their business was with Germany and Poland, where they could exploit their Ashkenazi network. In London, too, branches of Amsterdam Ashkenazi firms were established by the firms of Cohen, Goldsmid (Goldsmith), Preger (Salomons), Diamantschleifer, and Van Oven. The economic crises of 1763 and 1772–73, which affected Dutch economy as a whole, also damaged the Amsterdam Ashkenazi community.

ORGANIZATION. Parnassim. The economic elite supplied the *kehillah* with community leaders. The most wealthy members

were elected to be *parnassim*. This oligarchy ruled the community with a firm hand. They were in close contact with both the local authorities and the Sephardi *mahamad*. Within the city the Ashkenazim enjoyed the status of a semi-autonomous “High-German Jewish Nation.” This meant that the community could handle all internal affairs, including justice. The *parnassim* took care of relief for the poor, taxed the members and represented the *kehillah* outside the Jewish community. They could even put someone in jail or exile him from Amsterdam, and they were allowed to have a small police force.

Religious establishment. Just as in the Sephardi community (after which the organization was modeled), the rabbis were subordinated to the *parnassim*, which was a source of regular tensions. The religious establishment was headed by the chief rabbi, who presided over the local *bet din*. Until 1749 two *dayyanim* supported him in this task; from that year on, the members of the Beth ha-Midrash Ets Haim (erected 1740) supplied the two other members. The community had two *hazzanim* and two upper-wardens in its service. A whole range of *melammedim*, school teachers, educated the Ashkenazi youth. There were several schools, such as Lomde Torah for boys up to 13, the school of the orphanage Megadle Jethomim (since 1738) and *talmud torah* for the youngest children. Many *hevrot* (membership associations) organized lessons for adults. At least once a week the *hevrah* rabbi gave a lesson.

Synagogues. The Great Synagogue was erected by Elias Bouman in 1671. It had place for 399 men on the ground floor and 368 women on the balconies. In 1730 it was joined by the Neie Shul, which was built next to the Great Synagogue. The latter was replaced by a much larger synagogue in 1750–52, in which 596 men and 376 women could follow the service. The complex of synagogues in the heart of the Jewish quarter was completed by two smaller ones, the Obbene Shul (1685) and the Driit Shul (1700, completely rebuilt 1778). These two synagogues were attended by people from the lower social classes, while the more prominent and wealthy members attended both the Great Synagogue and the Neie Shul. From 1766, the Jewish inhabitants of the Uilenburg-quarter could visit their own synagogue, the so-called Uilenburgerstraatshul.

Rabbis. Most chief rabbis were from Poland. Some of them were important Talmudic scholars and prominent *dayyanim*, such as David ben Aryeh Leib *Lida (1679–1684). The most famous personality, Zevi Hirsch ben Jacob Ashkenazi (who obtained his title *Ḥakham Zevi* in Amsterdam), served the community from 1710 until 1714. He left the *kehillah* after a conflict with the *parnassim*, being succeeded by Abraham Berliner from Halberstadt (1714–1730). After a period in which the community was split into factions over the choice of a new chief rabbi, the local authorities decided that Eleazar ben Samuel of Brody should be entrusted with the task (1735–1740). The son-in-law of the *Ḥakham Zevi*, Aryeh Leib ben Saul *Loewenstamm from Rzeszów, thereupon became Amsterdam’s chief rabbi (until 1755). He became the founder of the Dutch rab-

binical Loewenstamm dynasty: his son Saul ben Aryeh Leib Polonus succeeded him and served until 1793, when his grandson Moses Saul Loewenstamm took over (until 1815).

Politics. The economic position of the Jews in the city was endangered by the 1748 Doelist Revolt. The Doelists advocated the expansion and enforcement of the protective laws and wished to secure the position of the guilds. Had the local government adopted the Doelist position, the Jews would have suffered grave economic losses. Thanks to the stadholder William IV, however, order was restored in the city and the Doelist coup aborted. In the second half of the 18th century the Amsterdam Jews gradually politicized. Although they did not participate in local government, they became more and more involved in the political battle between the enlightened Patriot faction and the Orangist faction. The *parnassim* tried to secure the neutrality of the community, but the great majority of the members supported the Orangists. In the 1787 Patriot Revolution, which also caused regime change in Amsterdam, Ashkenazi Jews battled on the streets with Patriotic mobs. When stadholder William IV was reinstated with the help of his brother-in-law, the king of Prussia, Amsterdam Jewry celebrated this victory extensively.

CULTURE AND INTELLECTUAL LIFE. *Language.* The vernacular of the Amsterdam Ashkenazim was West-Yiddish, which was brought in by the first settlers from Germany. The influx of Polish immigrants did not change the predominance of the West-Yiddish dialect. From the end of the 17th century this language was spiced up with a growing number of hollandisms. Hebrew was taught at the Jewish schools and by private teachers. Only at the end of the 18th century did a small part of the community, its elite, use Dutch as its vernacular. But in the lower social classes too, the language contacts between Dutch and Yiddish were extensive.

Printing. During the 18th century Amsterdam was widely known in the Ashkenazi world as the capital of Hebrew and Yiddish printing. Amsterdam was renowned for its quality of printing and the typesetting of Hebrew letters, known as *otiyot Amsterdam*. Besides Christian and Sephardi printers, some of whom also printed Yiddish books, Ashkenazim too were very active in this field.

*Uri Phoebus started his printing firm in 1658, moving to Zolkiev in 1692. R. Moses ben Simon *Frankfurt (1678–1768), besides a printer also *dayyan*, published many classical Hebrew works and Yiddish translations. He believed the classics of Hebrew literature should also be accessible to the Yiddish reading public. The most prominent Ashkenazi printer was Samuel Proops (1702–1734), who printed many *siddurim*, *maḥzorim*, and halakhic works as well as *musar* literature for the entire Ashkenazi world. In 1730 he published *Appiryon Shlomo*, the first sales catalogue of Hebrew books. The firm was continued by his family until 1849.

Yiddish literature. Of especial importance were the two Yiddish Bible translations. Jekuthiel ben Isaac Blitz's translation

was published in 1676–79, while the rival work by Joseph Witzhausen was printed in 1678. Numerous translations of Hebrew books into Yiddish were printed, including *Sefer *Jossippon*, *Manasseh ben Israel's *Mikveh Israel*, the travelogue of *Benjamin of Tudela and *Menorat ha-Ma'or* of *Aboab. But original works in Yiddish were printed, too. One of the bestsellers became the universal Jewish history book *She'erit Yisroel* by Menahem Mann ben Shlomo *Amelander. Contemporary history was presented in a number of chronicles. In the years 1686–87 (and possibly over a longer period), the Amsterdam Ashkenazim could read the news in the oldest known Yiddish newspaper, the *Dinstagishe un Freitagishe Kurantn*.

Intellectual life. Besides the traditional patterns of religious learning, a number of Amsterdam Jews developed new intellectual activities, often parallel to contemporary Christian developments. In the 18th century some studied at the universities of Leiden and Harderwijk. Hartog Alexander van Embden (Herz Levi Rofe) obtained the rank of doctor in medicine at Harderwijk University in 1716. Active as a physician, Hebrew printer and keeper of a bookshop, he was part of a small group of Jewish intellectuals, interested in science and scholarly debates. In 1775 David ben Phoebus Wagenaar translated *Mendelssohn's *Phaedon* into Hebrew, which remained unpublished. Salomon *Dubno, the grammarian, teacher, and friend of Mendelssohn, spent the last years of his life in Amsterdam and had profound influence on a circle of young Ashkenazim. Eleasar Soesman was active as a publicist for both Jewish and Christian audiences and therefore wrote both in Hebrew and Dutch. He was in contact with various Christian scholars, especially theologians and Hebraists, for whom he wrote his Hebrew grammar *Mohar Yisrael* (1742).

Like the Sephardim, the Amsterdam Ashkenazim were great lovers of the theater. Yiddish theater not only blossomed during Purim, when all kinds of *Purimshpiln* were produced and performed, but also on a more regular basis. From 1784 onwards, Jacob H. Dessauer led a Jewish opera- and theater-group, which also included women. This group was very active and performed many contemporary plays for a Jewish audience.

[Bart Wallet (2nd ed.)]

Sephardim until 1795

After the northern provinces of the Netherlands proclaimed their independence of Catholic Spain (Union of Utrecht, 1571), *Marranos of Spanish and Portuguese origin became attracted to Amsterdam where little inquiry was made as to their religious beliefs. Portuguese Jewish merchants began to settle in Amsterdam, in about 1590, but did not openly reveal themselves as Jews. In 1602 a group of Sephardi Jews arrived with Moses Uri ha-Levi of Emden, and apparently held religious services in a private home. Prominent in the community were Samuel Palache, the ambassador of Morocco to the Netherlands, and his family, who lived in Amsterdam as professing Jews, and did much to assist Jews to settle in the country. Sub-

sequently, increasing numbers of Marranos from Spain and especially Portugal took refuge in Amsterdam, which was now becoming one of the most important international commercial centers. The legal status of these Jews long remained unclarified. While the Reform Church opposed Jewish settlement in Amsterdam, the civic authorities favored it. In consequence, the newcomers, though not formally recognized as citizens, enjoyed religious freedom and protection of life and property, especially in relation to foreign powers. Until the Jews officially attained civic emancipation, they were debarred from practicing all trades organized in guilds, but the municipality rejected any attempt to ban Jews from other professions.

From 1607 religious services had been held at the home of Jacob Tirado, who organized a congregation under the name Beth Jaacob (Casa de Jacob) with 15 fellow-Jews. In 1614 they erected a synagogue with the permission of the authorities. Another congregation, Neveh Shalom, was organized in 1608 by a group of wealthy Marranos with Isaac Uziel (d. 1622) as rabbi. Both congregations cooperated in the establishment of a society for providing dowries to poor brides, in 1615, and a school called Talmud Torah in 1616.

The religious and intellectual life of the community in Amsterdam became marked by tensions between the strict authoritarian orthodoxy of the rabbis and the majority of communal leaders on the one side and the critical libertarian, individualist views of influential intellectuals on the other. This conflict was all the more acute as it was the consequence of the underground existence which the Marranos had formerly led, and their sudden freedom in an open society. A split developed in the Beth Jaacob congregation, apparently because of a bitter religious controversy. The more orthodox wing, under the leadership of the *hakham* Joseph Pardo, seceded in 1619 to found the Beth Jisrael congregation, while a freethinking physician Abraham Farrar, led the Beth Jaacob congregation. The Beth Jaacob synagogue was awarded by the municipality all the property of the congregation and three-fifths of its capital. However, the three congregations continued to cooperate in the central institutions. In 1639 they reunited under the name קק (Kahal Kadosh) Talmud Torah and services were henceforward conducted in one place of worship. The magnificent synagogue dedicated in 1675 became the model for Sephardi synagogues in many other places.

The intellectual life of the community, in both its religious and secular aspects, attained a high level. As a center of Jewish learning throughout the Marrano Diaspora, Amsterdam Jewry wielded a powerful influence and became a focus of intellectual ferment. The Talmud Torah school was celebrated for the breadth of its syllabus and excellence of its teaching, covering not only talmudic subjects, but also Hebrew grammar and poetry, and in the upper classes Hebrew only was spoken. It flourished during the 17th century under the leadership of Saul Levi Morteira, and subsequently under the *hakham* Isaac Aboab de Fonseca. Its pupils officiated as rabbis in numerous Sephardi communities in Western Europe and the Mediterranean countries, and it produced

Hebrew writers and poets. Most of the religious literature in Spanish and Portuguese intended for the guidance of the Sephardi communities was composed and printed in Amsterdam. The first Jewish printer there was Manasseh ben Israel, who began printing in 1627 and produced more than 70 books. Other Sephardi printers included Joseph Athias and David de Castro Tartas. Their publications were sold locally and throughout the Spanish-speaking Jewish Diaspora, and even in Eastern Europe and Asia. The community included such diverse personalities as the rabbi Manasseh ben Israel, Jacob Sasportas, the physicians Abraham Zacutus Lusitanus and Ephraim Bueno, the kabbalist Abraham Cohen Herrera, the playwright Antonio Enriquez Gomez, the physician and thinker Isaac Orobio de Castro, the poet Daniel Levi de Barrios, and the rebel-philosophers Uriel da Costa and Baruch Spinoza, instancing all the manifold trends in the intellectual life of the Amsterdam community. Jewish attachment to messianic hopes and yearning for a change from exile existence were powerfully demonstrated in the ferment aroused by Shabbetai Zevi in the middle of the 17th century. The majority of the community in Amsterdam became ardent followers of the pseudo-messiah and only a minority vigorously opposed him. The leadership of the community remained for a long period in the hands of former Shabbateans, including the rabbis Isaac Aboab de Fonseca, Moses Raphael Aguilar, and Benjamin Mussaphia. Even in the early 18th century when Solomon Ayllon was the Portuguese *hakham* a controversy arose over the Shabbatean work of Nehemiah Hayon. The chief rabbi of the Ashkenazi community, Hakham Zevi Ashkenazi, who joined in the dispute, was excommunicated by the Portuguese congregation in 1713.

The role of the Jewish Portuguese merchants in the economic life of Amsterdam remained modest until the end of the war against Spain in 1648. Subsequently many other ex-Marranos settled in Amsterdam, and became extremely prosperous. Jewish merchants in Amsterdam were one of the first groups to engage in recognizably modern capitalist-type activities. Their foreign interests included trade with the Iberian peninsula, England, Italy, Africa, India, and the East and West Indies. Jews in Amsterdam also engaged in industry, especially in the tobacco, printing, and diamond industries; the last eventually passed almost entirely into Jewish hands. By the end of the 17th century many Portuguese Jews in Amsterdam were active in the stock market, owning a quarter of the shares of the East India Company. They thus became prominent on the stock exchange and helped to organize and develop it. *Confusion de Confusiones* by Joseph Penso de la Vega (Amsterdam, 1688) is the first work written on the subject. The claim of certain writers that the wealth of Amsterdam was mainly due to Jewish economic activity is, however, an exaggeration. The economic position of the Sephardi Jews was jeopardized during economic crises in the republic, especially critical in 1763. The community *parnas*, Isaac Pinto, the banker-philosopher, arranged for tax relief on food and fuel for the poor members of the community and for their emigra-

tion overseas, but it soon became evident that the community could not carry the burden. After the French conquest of the Netherlands in 1794, the Sephardi community became even poorer: two-thirds of the 3,000 members depended on relief. In 1799, 36.7% of the general population in Amsterdam and 54% of the Sephardi community were living on relief. Few of the wealthier families managed to retain their property.

Emancipation, Stabilization and Integration, 1795–1870

EMANCIPATION IN THE BATAVIAN-FRENCH PERIOD.

Politics. In 1795 the Dutch Republic was replaced by the Batavian Republic, a satellite state of the revolutionary French Republic established by joint forces of Dutch Patriots and French invaders. This regime change had massive impact on the country, because the Orangist elite was replaced by new Patriotic authorities and new laws created gradually a different type of state. From a federal republic it became a central state. Also in Amsterdam the local government was reformed, however, initially without a change of attitude towards the Jewish community. The regime change led to fights on the streets between radical Patriots and Jewish Orangists. Continuation of these fights was prevented by the establishment of waiters of the Jewish quarter at the end of August 1795. The local authorities entrusted the *parnassim* the control of the quarter in order to maintain order.

A small group of Jewish intellectuals influenced by the ideas of the Enlightenment and Dutch Patriotism founded a club, *Felix Libertate. Although also open for non-Jews, two-third of its members were Jewish. The club wanted to gain citizenship for Jews in the Batavian Republic and the introduction of democracy within the Jewish community. On September 2, 1796, Felix Liberate was successful in its first task: the national government decreed the emancipation of the Jews. This meant equal rights for Jews in politics and before court. One of the first fruits of the emancipation decree was the right of the Amsterdam Jews to vote. Also Jews were appointed to public offices, such as Moses Salomon Asser who became a member of the judicial committee of the city in 1798.

Split in the community. An internal change within the Ashkenazi *kehillah* appeared to be much more difficult. After the emancipation decree was issued, Felix Libertate asked for new regulations. The members of the club wanted instead of the oligarchic *parnassim* a new, democratic elected board of directors, which could reorganize the *kehillah* and issue social improvements. The *parnassim* rejected their proposals, because it would reduce their power and influence. They were backed by the local authorities, for whom the *parnassim* were one of the pillars to keep order and silence in the city. As a result, the enlightened members decided to secede from the *kehillah*, using the new religious freedom laws to found a new community. On April 8, 1797, the Neie Kille, as the new community was called in Amsterdam Yiddish, had its first synagogue service. Its official name became Adat Jesurun. Appointed as its rabbi

was Isaac Ger Graanboom (1738–1807), one of the *dayyanim* of the *kehillah*. It acquired a cemetery as well, in Overveen. The Neie Kille introduced small changes in liturgy, such as the use of Dutch for making announcements. Only a tiny minority of the Amsterdam Ashkenazim joined the Neie Kille: in 1799 there were 108 paying members and a total of 700 individuals involved in it. From 1799 the Neie Kille had its own synagogue at the Rapenburgerstraat.

Although the vast majority, consisting of circa 20,000 people, remained faithful to the Alte Kille, the *parnassim* considered the new community as a serious threat to their power. Both sides were heavily engaged in a propaganda war, which was fought over in a series of competing pamphlets: the Yiddish *Diskursn* (July 1797–March 1798). Things radically changed when on both the national and local level a coup brought into power a radical enlightened regime. In the few months in 1798 during which the radicals ruled the city, the balance of power within the Ashkenazi community also changed. The *parnassim* were fired and replaced by enlightened “provisional directors.” This new board wanted re-unification with the Neie Kille and an accommodation of the whole community to the innovations of the enlightened group. But after a new coup brought into power a more moderate group, the *parnassim* were re-installed and the troubled relationship between the two Ashkenazi *kehillot* was continued.

Only pressure from King Louis Napoleon, who ruled over the Kingdom of Holland from 1806 until 1810, could bring together both communities in 1808. The terms for the re-unification were the abrogation of all innovations of the Neie Kille, but a relatively large representation of the enlightened faction within the influential strata of the *kehillah*. Thanks to the existence of the Neie Kille for a couple of years, the enlightened Jews could acquire a grip on the policy of the entire *kehillah* following the re-unification.

The Sephardi community. The Sephardi community remained relatively detached from the frictions between conservative and enlightened Jews. Some of the Sephardim were active in Felix Libertate but were already part of the establishment of the Portuguese *kehillah*. They could work from within the community for changes. One of them, Dr. Immanuel Capadoce, served as well as the private doctor of King Louis Napoleon. The *parnassim* of both the Sephardi and Ashkenazi community continued mutual consultations regarding the position of the Jews in the city. In 1810 they agreed on a concordat dealing with mixed marriages and its consequences for membership rules.

New situation. After the annexation of the Kingdom of Holland to the French Empire, the discontent with the political situation grew in Dutch society. Also the vast majority of Amsterdam Jewry, traditionally an Orangist stronghold, opposed the French rulers. This became all the more clear when the compulsory recruiting of Jewish boys into Napoleon’s army resulted in riots in the Jewish quarter. This could not hinder a number of young Amsterdam Jews from serving in the army.

After the defeat of Napoleon the son of the last stadholder returned to Holland, becoming as William I the first king of the Kingdom of the Netherlands. The Amsterdam Jews widely celebrated his return. In the Ashkenazi community a number of French regulations regarding the liturgy were immediately abrogated, resulting in the reintroduction of Yiddish to the synagogue. The new political situation did not, however, result in a return to the pre-Batavian period, which meant that the political emancipation remained in force.

DEMOGRAPHY AND ECONOMY. *Demography.* The period 1795–1800 was both from a demographic and economic point of view a period of stagnation. The migration to Amsterdam from Central and Eastern Europe declined greatly in the 18th century. America was the new favorite migration destination for many Jews. Because of the poverty in Amsterdam Jews even left the city, but many of them stayed within the Netherlands. Because of the emancipation decree they could settle in small provincial towns and villages. In 1795 3,000 Sephardim and 22,000 Ashkenazim lived in the city. This number diminished to 2,534 Sephardim and 18,910 Ashkenazim in 1809. In particular, Sephardi community shrank in this period. The total number of Amsterdam Jews grew from 25,156 in 1849 to 29,952 in 1869. Throughout the period Jews made up 10% of the city's total population.

Economy. Most of the Amsterdam Jews were poor. The economic crises of the late 18th century and the introduction of the Continental System in 1805 by the French, which forbade all economic contacts with England and cut Holland off from its colonies, affected the economy of Amsterdam, and its Jews as well. In 1820 no less than 78% of the city's Ashkenazim depended on welfare for the poor. This percent diminished gradually to 55% in 1849. Also within the Sephardi community poverty rose to high numbers: in 1849 63% received aid to the poor. The number for the total population was much better: less than 20%. Most Jews lived in the Jewish quarters, only 3.5% wealthy Jews lived in other quarters.

A consequence of the abrogation of the guilds in 1809 was that all jobs were open for Jews. But in fact, many Jews stayed within the old patterns and only a small group benefited from the new situation. In the second half of the 19th century the economic situation improved. The Jews profited from the improved education and the economic recovery of the city after 1860. Jewish peddlers and keepers of small shops founded the first warehouses. Also intellectual positions, such as journalist, lawyer, and doctor, together with governmental jobs provided a growing number of Jews their daily bread.

ORGANIZATION. *Sephardi community.* The social infrastructure of the Amsterdam Sephardim remained largely intact in the period 1795–1870. Community life was concentrated around the Esnoga. The economic crises at the end of the 18th century and during the Batavian-French period had seriously affected the Sephardim, resulting in a growing number of poor members. The social differences within the community wid-

ened. Relatively easily the more well-to-do Sephardim integrated into Amsterdam society, using the opportunities created by the emancipation. Within the community Sephardi identity was nourished, especially to stress the difference from the Ashkenazi community, with which they forced into a joint national organization.

Ashkenazi community. The Ashkenazi *kehillah* was led by a small elite, consisting of rich businessmen and the newly emerging intellectual elite. Many of these intellectuals had their roots in the former Neie Kille. The largest part of the community, however, consisted of poor people. They did not have the money to rent a seat in one of the official synagogues. Therefore a number of *chevreshuls* provided in their religious needs. Although from 1827 personal *minyanim* were forbidden, in 1850 no less than seven *chevreshuls* were accepted within the community. The gap between the elite, striving for integration in Dutch society, and the vast majority of the community, attached to the Jewish quarter, grew immensely.

In contrary to many German Jewish communities, Reform did not take hold in Jewish Amsterdam. A small group, united in Shokharee De'a, strove in the 1850s for the introduction of Reform-like changes in synagogue liturgy. When on their invitation a German Reform rabbi, Dr. Isaac Loeb Chronik, came to Amsterdam, riots broke out in the Jewish quarter. Chronik subsequently left for Chicago. Only in 1861 did Shokharee De'a achieve a little success: the introduction of a choir in the Great Synagogue. This inspired two Jewish musicians, Aharon Wolf Berlijn (1817–1870) and Isaac Heymann (called the Gnesener Chazzen, 1827–1906), to compose new melodies for the synagogue liturgy. Also the atmosphere in synagogue changed, with the introduction of measures to encourage decorum. In 1867 an experiment began for having sermons in Dutch in the synagogue once every two weeks, which led to the decision to replace Yiddish completely by Dutch in 1872.

Religious leaders. Rabbis and schoolteachers for the Ashkenazi community were trained at the reorganized Dutch Israelite Seminary (from 1836), while the Portuguese Israelite Seminary Ets Haim continued to deliver well-trained rabbis and teachers for Amsterdam and the Sephardi diaspora. Until 1822 Daniel Cohen d'Azevedo served as the Sephardi chief rabbi, but after his death no successor was appointed until 1900. After the death of Chief Rabbi S.B. Berenstein in 1838, a period without a chief rabbi began for Ashkenazi Amsterdam as well. No suitable candidate was found in the Netherlands, while the leaders were hesitant to have a chief rabbi from the German countries. They did not want to import along with the chief rabbi a division between Reform and Orthodoxy. Finally, Dr. Joseph Hirsch *Duenner (1833–1911) became the new chief rabbi in 1874, besides being rector of the Seminary following his appointment in 1862.

Social Work. Due to the poverty of the majority of Jewish Amsterdam, special importance was given to social work. In

1825 the Dutch Israelite Poor Relief (Nederlandsch Israelitisch Armbestuur) was founded and given the responsibility for the Ashkenazi poor, which had previously been a task of the *parnassim*. The organization was funded both by the government and the Jewish community. In the 1830s half of Amsterdam's Jewry depended on its welfare. It operated a hospital for the poor, which had existed since 1804. In 1845 a separate Doll House was founded. The Sephardim had their own hospital from 1820. There were as well houses for the elderly. The Sephardim had their Old Men's House, Mishenet Zeqenim, from 1750 and an Old Women's House, Mesib Nefes, from 1833 on the Rapenburg. The Ashkenazi Old Women's House, Rechoboth, was located at the Nieuwe Keizersgracht.

Education. The Jewish schools were generally known for their low quality. The schools that were active as early as the 18th century continued their existence in the first half of the 19th century, until the School Law of 1857 turned the Jewish schools into state schools. This was part of a policy of national integration and improvement of education. Religious instruction was since then given after school and on Sundays. Only the Sephardi schools managed to survive a bit longer, until 1870.

But even before the new law, many Jewish children attended private schools or were given education by private teachers; some also attended Christian schools. In 1797 no less than 320 Jewish children were enrolled in church schools. That was nearly one-third of the total of 1,000 Jewish children receiving education. After 1870, many Jewish children did not go to religious schools anymore, because of finances or out of lack of interest. This resulted in loosening ties with Hebrew and the Jewish tradition.

INTEGRATION AND POSITION IN THE CITY. Jewish politicians. After the emancipation decree Jews were able to take part in local politics. Jewish participation in the city council was nearly continuous. Until the constitutional changes of 1848 it was primarily Sephardim who were chosen as representatives of the city's Jewish communities: Abraham Mendes de Leon, Immanuel Capadoce, Jacob Mendes de Leon, and Samuel Teixeira de Mattos. After 1848 Ashkenazim, too, obtained seats, such as Ahasveros S. van *Nierop, who represented the liberal faction.

Jewish philanthropists. Two men acquired a special position within the city. Samuel Sarphati (1813–1866), a Sephardi doctor, initiated and developed many institutions for better education, poor relief and the promotion of labor and industry. He was a thriving force behind the modernization of Amsterdam and built the Amstel Hotel and the Palace for People's Industry. He was faithful to the Jewish tradition and also served the Sephardi community in a number of functions. His idealism inspired others to work for the general good. After his death a park and a street were named after him. His friend and, to some degree, successor was Abraham Carel Wertheim (1832–1897). The Ashkenazi Wertheim, a banker, was a philanthropist and politician as well. He was especially interested

in culture and sponsored the local theater. Although he was a freemason and did not observe Shabbat and *kashrut*, he was a leading figure in Jewish Amsterdam and served as a *parnas* of the Ashkenazi *kehillah* for many years.

Jewish elite. The politicians and philanthropists were part of the elite of Amsterdam's Jewry, which consisted of old business dynasties, such as the De Jongh (Rintel) family. Also bankers were well represented within this circle. The families Bisschofsheim, Koenigswaerter, Raphael, Hollander and Lehren had branches of their firms all over Europe. Some of them left the Netherlands before 1850, but others took their places (Rosenthal, Wertheim, Lippmann). Also lawyers obtained a position within the elite. J.D. *Meyer, the members of the *Asser family, and M.H. *Godefroi all enjoyed prestigious positions within both general society and the Jewish community. A large part of the elite integrated in Dutch society and became detached from the majority of the Jewish community, but they did not completely assimilate because they developed a specific Dutch-Jewish patrician culture. Marriage partners were found among themselves and in Germany. Only a tiny minority converted to Christianity, as did Isaac da *Costa, Abraham Capadoce, and S.Ph. Lipman. Some families remained strictly Orthodox, such as the *Lehren family. The brothers Zevi Hirsch (1784–1853), Meyer (1793–1861), and Akiba (1795–1876) Lehren had an extensive network all over the Jewish world. They led the Pekidim and Amarkalim organization, which helped and controlled the *yishuv*. They also supported the struggle of German Orthodoxy against the Reform movement.

CULTURE AND INTELLECTUAL LIFE. Language. The process of using the vernacular, which started already in the 18th century among the elite, spread in the 19th century over the whole community. The knowledge of the Iberian languages dropped dramatically within the Sephardi community. Although the language was maintained in some parts of the synagogue liturgy, Dutch entered relatively easily in the Sephardi domain. In the early 1850s Dutch replaced Portuguese as the language of the sermon, because most people left the synagogue when a Portuguese sermon was preached. The replacement of Yiddish by Dutch was more difficult. The proletariat, including Sephardim, spoke Amsterdam Yiddish. Gradually this language was replaced through a combined effort of the government and the Jewish elite. The closing of the Jewish schools was a major step, because since then Jewish children were educated only in Dutch.

Intellectual life. In the first half of the 19th century a circle of Jewish intellectuals advocated the Hebrew language. In 1808 the society Chanog lanangar ngal pi darko was founded in order to promote Hebrew. Mozes Lemans, Hirsch Zwi Sommerhausen and Mozes Cohen *Belinfante played an important role in this society. They published several textbooks and prepared a translation of Tenakh into Dutch. A new society was founded with a common objective in 1816, Tongelet. The members devoted themselves to writing poetry in Hebrew.

They published two volumes with their work. Circa 50 members were involved. Samuel Israel *Mulder, Gabriel *Polak and Abraham Delaville (1807–1877) were its most prominent members. Within the Dutch Jewish community they served in several functions; they had as well an extensive network in the European Jewish intellectual world. A third society, Reshit Chochma, was founded in 1813. Within this body traditional Jewish study was the objective, but Mendelssohn's *Be'ur* was included in the curriculum as well. Until the middle of the 19th century the yearly meetings were conducted in Hebrew.

[Bart Wallet (2nd ed.)]

1870–1940: Rapid Growth and the Creation of an Amsterdam Dutch-Jewish Sub-Culture

1870 has been widely accepted in Dutch and Dutch-Jewish historiography as the beginning of a new period (see *Netherlands). The general economic, social and political developments which caused the change, affected Amsterdam, as the capital and as a major harbor, especially, and Jewish society in this city was deeply affected too.

DEMOGRAPHY AND PROFESSIONAL OCCUPATIONS. This period was first of all characterized by rapid demographical growth of the Jewish community in Amsterdam – from 30,039 (almost 11% of a total population of 281,502) in 1869, through 59,117 (11+% out of 531,733) in 1899 and 65,558 (8.5% out of 768,409) in 1930, to 79,497 “full Jews” according to the German racial census, plus almost 7,000 “half-” and “quarter-”-Jews) (about 10% out of 803,073) in 1941. Amsterdam Jewry's importance within Dutch Jewry grew even more: from 44% in 1869, to about 60% in 1920, and almost 57% in 1941. The growth resulted from several sources: high birth rates (between 1869 and 1889; but between 1905 and 1932, a sharp decline occurred, dropping more than 40%, from 164 births per 1,000 to 87.2 births per 1,000) and low mortality rates.

The major reasons for the growth of Amsterdam Jewry were internal migration from the little communities in the countryside to the capital because of economic, cultural, educational and religious motivations; and the immigration from abroad – a limited number of Eastern European Jews at the turn of the 19th to 20th century, a considerable number of Jews from Germany in the 1920s, and many thousands of refugees from Germany after the rise of the Nazi party to power in 1933. Until 1870 most Jews were living in the central and eastern neighborhoods. But when the size of the community grew and an affluent middle class emerged, Jews settled also in Amsterdam-south and later in the neighboring “new-south” neighborhood (in the 1930s many German-Jewish refugees concentrated in this area too). The older neighborhoods remained centers of the Jewish proletariat, which made up for a major part of Amsterdam Jewry. Though during the 1930s less than 10% of the city's Jewish population still lived in the so-called “Jewish quarter,” this area continued to have a dominantly Jewish character.

Jews worked in a variety of professions, but concentrated mainly in a limited number of them (about 75%): diamond cutters (2,095; 5.8%, vs. 2% among the general city population in 1941); textile and cleaning (7,229; 20% vs. 7.8%); commerce (11,668; 32.4% vs. 20.9%); free profession (6,523; 18.1% vs. 8.3). On the other hand, Jews were extremely lowly represented in the construction, food, transportation, banking and house-keeping professions.

The Jewish proletariat. Apart from the small class of wealthy Jews, the majority of the community in Amsterdam in the first half of the 19th century were in serious economic straits and still lived in cramped quarters. Their position improved after 1867 with the development of the diamond industry, which became a “Jewish” profession involving many diamond workers and traders as well (called “The profession” among Amsterdam Jews). When in 1876 the industry underwent a serious crisis, the diamond workers established a strong trade union, under the leadership of Henri *Polak, the first such organization in Holland. Socialism gained ground among the Jewish proletariat, the diamond trade union became the cornerstone of the Social Democratic Workers Party, and Polak one of its leaders.

JEWISH SOCIAL INSTITUTIONS. The size of the Amsterdam community together with the extent of poverty created the necessity for the establishment of a network of Jewish social services, which transformed a strong Jewish tradition of *zedakah* into modern modes. This network included country-wide organizations whose headquarters were in the capital, such as the Dutch-Jewish Organization for the Poor (Nederlandsch-Israëlitisch Armbestuur), and health care institutions such as the Joodsche Invalide and the Nederlandsch Israëlitisch Ziekenhuis (hospital). In the 1920s a (pro-Zionist) Union of Jewish Women was established, which focused on welfare activities. Many organizations dealt especially with youth. Many of those institutions were supported by rich assimilated Jews.

JEWISH POLITICS BETWEEN SOCIALISM AND ZIONISM. As mentioned, as from the 1860s socialism and its varieties found strong inroads in Jewish society, and the Amsterdam socialist organizations were known for their pronounced Jewish color. Through socialism and the Social-Democratic youth movement many lower middle class and lower class Jews became involved in city and countrywide politics. Among the middle class, Jews were already prominent in municipal activities in the beginning of the second half of the 19th century, and contributed to the modernization process of the city; as time proceeded, many became active in the Liberal party and represented it both on the municipal and provincial level. Several Jews in various political parties served for long periods on the municipal council; when in 1933 four of the six city counselors (wethouders) were Jewish, albeit from different parties, served council, antisemitic voices protested “Jewish dominance.”

Political Zionism found support in Amsterdam from its inception. Among those who welcomed the movement was

Chief Rabbi Dr. Joseph Hirsch *Duenner; on the occasion of the first Zionist Congress in 1897 he held a sermon titled with the biblical quotation: "For this child we prayed." In the early 20th century the movement found some adherents among students in Amsterdam, but for a long time Zionist support was confined to intellectual and orthodox circles. After World War I, a strong Zionist youth movement was formed. The number of youths in the Zionist movement grew from 350 in 1929 to 800 in 1939. However, other Jewish political parties, as were active in Eastern Europe, found no ground here.

JEWISH DAILY LIFE AND FOLKLORE. Amsterdam Jewry was the nucleus of Dutch Jewry, and because of its size established a clear sub-culture. As part of the "Hollandization" process, Jews turned to speaking Dutch instead of Yiddish around the beginning of the second half of the 19th century. On the other hand, however, many Yiddish words made their way into local slang (until today). A pronounced expression of the special features of Amsterdam Jewishness was to be found in the Waterlooplein market. The peculiarities of Amsterdam Jewish life at the turn of the 19th century has been depicted in literature, especially by Herman Heijermans in some of his critical stories ("The Diamond City," "The Ghetto").

RELIGIOUS DENOMINATIONS AND SECULARIZATION. The two separate communities of Amsterdam Jewry – the Ashkenazim who were the great majority, and the Sephardim, who were a tiny minority – continued to exist, but cooperation intensified.

The appointment of Dr. Joseph Hirsch *Duenner to the directorship of the rabbinical seminary (Nederlandsch-Israëlitisch Seminarium), and in 1874 as chief rabbi of Amsterdam and the province of North-Holland, inaugurated a marked change. Although strictly preserving the Orthodox character of the community, he raised the academic level of the seminary and educated a group of rabbis who achieved a high standard of scholarship. He also included representatives from all sectors in the leadership of the Ashkenazi community, even the nonobservant such as the banker A.C. *Wertheim. In this way, Duenner prevented religious dissension towards Reform Judaism, which had started some time before his coming. He also built a basis for a nucleus of Modern Orthodoxy (the seminary became its stronghold); however, he could not stop the general process of secularization, caused by the enormous economic and social changes. Consequently, the majority of Amsterdam Jewry became non-observant and hardly visited the synagogues; yet they continued keeping to some basics of Judaism thus creating a clear Jewish sub-group. Mixed marriages between Jews and non-Jews expanded (the number of mixed marriages increased from 6.02% in 1900 to 16.86% in 1930) but still remained quite low until as compared to other western European countries. In the 20th century, with the relocation of affluent Jews to new neighborhoods, some new (Ashkenazi) synagogues were built in them.

Liberal (Reform) Jewry was finally introduced in Amsterdam only in 1932, through an outside initiative by the World

Union for Progressive Judaism. It succeeded in rooting in the city as a result of the influx of German Jewish Refugees as from 1933; it thus became a predominantly "German-Jewish" phenomenon. One of the refugees joining this community was Otto Frank, the father of Anne.

EDUCATION AND CULTURE. The Education Act of 1857, enacted in the spirit of separation of church and state, withheld subsidies for religious schools. This brought in its wake the rapid decline of Jewish schools for the poor, and the transition of Jewish children to the general school system. The law foresaw the closure on Sabbath of schools with more than 50% Jews, and in the 1920s this was the case with 20 schools. Only one Ashkenazi school for the poor, *Talmoad Touro*, could be preserved, as well as a high school. Special Jewish education, especially on Sundays, was unable to cope with the consequent decline in Jewish knowledge. Only at the beginning of the 20th century could a change for the better be made, and an organization for Special Jewish Education (Joodsch Bijzonder Onderwijs) was established. After the enactment of the new constitution in 1917, new efforts were undertaken and several new schools were established in the 1920s. But in 1932 still only about 800 children learned at Jewish day schools.

From the end of the 19th century, Amsterdam became a foremost cultural center of the Netherlands. Jewish writers, painters, theatrical artists, and others took an active part in Dutch cultural life. Writers included the above-mentioned Herman Heijermans (1864–1924); Israel *Querido (1872–1932); Jacob Israel de Haan (1881–1924), who went to Erez Israel, changed sides and joined the anti-Zionist ultra-Orthodox community in Jerusalem, and was murdered against this background; and his sister Carry van Bruggen de *Haan (1881–1932). The jurist, Prof. Tobias M.C. *Asser (1838–1913) won the Nobel Prize.

REFUGEES FROM NAZI GERMANY AND THE THREAT OF THE 1930S. The rise of Nazism to power in Germany made a considerable and immediate impact on the Jewish communities in surrounding countries, including the Netherlands. Amsterdam became a major refuge: thousands of Jews (as well as non-Jewish political refugees) settled in the city for shorter or longer periods between 1933 and the German invasion in May 1940. At the moment of invasion more than 7,000 such refugees were staying in the city. Their presence during the pre-war years caused the establishment of a Committee for Jewish Refugees, headed by Prof. David *Cohen, backed by the Jewish community organizations and prominent Jews. Due to its many activities, its considerable budget, and the contacts it developed with the Dutch authorities and international organizations (Jewish and non-Jewish), this committee became the most important and powerful Jewish organization in the 1930s. The Nazi threat and the refugees also strengthened the Zionist movement and the tiny community of Liberal (Reform) Jews. Two local publishers, Querido and Allert de Lange, published *Exilliteratur*. Two cabaret-groups were established by well-known Jewish refugee cabaretiers from

Germany, and others influenced the still young Dutch film industry. On the other hand, for antisemitic groups the Jewish refugee “invasion” became a major issue through which they strengthened their rows; consequently, many local Jews showed an ambivalent attitude towards those Jews.

1939–1945: The Holocaust

Being the capital and hosting a Jewish community of more than 80,000 souls made Amsterdam the main target for anti-Jewish policies; many of the general measures were tried out and took shape first in Amsterdam, and focal institutions of persecution were established in it. Therefore, the impact of persecutions was intensely felt in this city. Only 25% of Amsterdam Jews survived the Holocaust. (For an account of the general picture of the Holocaust in the Netherlands, see *Netherlands.)

FIRST ANTI-JEWISH MEASURES. Amsterdam was conquered immediately after the German invasion of the Netherlands on May 10, 1940. As Dutch Jews, especially in Amsterdam, had followed the developments in Germany in the 1930s carefully, the awareness of the dangers awaiting ahead were well understood by many (even though the Final Solution, which was not yet decided upon, was not foreseen). Some 128 Amsterdam Jews consequently committed suicide during the first days of German rule, even though persecutions had not yet started. In the fall of 1940 and the beginning of 1941 a series of discriminating decrees were enacted, defining Jews, firing Jews who worked in the bureaucracy (including universities and the legal system), registering Jews and Jewish enterprises. This started a process of legal segregation which immediately affected also the economic situation of many Jews. But the Jewish communities as well as other Jewish organizations resumed their activities, and even books could be published (but Jewish newspapers, except for a minor one, were prohibited in the fall of 1940).

JOODSCHE RAAD VOOR AMSTERDAM (JEWISH COUNCIL). The Nazi governor of the Netherlands, Reichskommissar Arthur Seyss-Inquart, had appointed a special supervisor (*Beaufragte*) for the city of Amsterdam, Senator H. Böhmcker, who was also in charge of anti-Jewish policies. Under his auspices, an idea of establishing a ghetto in Amsterdam was raised in January 1941. However, this idea was never realized, except for the installation – together with the establishment the Jewish Council in February – of sign-posts with the word *Juden-viertel* (Jewish neighborhood) on them around the “Jewish quarter” in the center of the city. This non-ghetto has therefore been nicknamed “the optic ghetto.”

On February 9 clashes between youngsters belonging to the militia (WA) of the Dutch National-Socialist Movement (NSB), who wanted to carry out a pogrom in the Jewish quarter, and some organized Jews, resulted in the death of one Dutch Nazi. German forces reacted by closing that Jewish quarter on February 12 for a short while; Böhmcker ordered on that same day the establishment of a Jewish Council for

Amsterdam, according to the model of the *Judenräte* which had been established in Poland in 1939–1940. In a mode unparalleled in the entire Nazi-occupied Europe and North Africa, two chairpersons were appointed to the Council: the diamond industrial, politician and head of the Amsterdam Ashkenazi community Abraham Asscher; and the Zionist activist, university professor and chairperson of the Jewish Refugee Committee David Cohen. They were officially assisted by a committee of representatives of the Jewish population, but this committee had hardly any influence on the policies. The competences and authority of the *Joodsche Raad* gradually expanded to encompass the entire Jewish population in the country (through a network of representatives). It published a weekly, *Het Joodsche Weekblad*, serving to inform the Jewish population of anti-Jewish measures and of internal issues; and as from the fall of 1941 administered the segregated Jewish education system as well as cultural activities. It was used by the Germans to impose many of the persecutions. As such, the Council employed thousands of employees.

In April 1941, in the wake of the establishment of the *Joodsche Raad*, a branch of Adolf Eichmann’s office (named *Zentralstelle für jüdische Auswanderung*) was established in the city, to supervise the activities of the Council. It later on served as the main authority carrying out the deportations.

“FEBRUARY STRIKE”. On February 22–23, 1941, the Germans for the first time carried out a round-up (“razzia”) in the “Jewish quarter” and arrested 425 men. They were assembled in a square, brutally treated, and later deported to Mauthausen, where they all died. The round-up caused protests by the non-Jewish population, which resulted in a two-day strike in Amsterdam and its surroundings (February 25–26), a unique occasion in Europe (which was never repeated in the Netherlands too, even when systematic deportations to the death camps started). The German authorities suppressed the strike with force; additionally, Seyss-Inquart reacted with a threatening speech on March 12 in the Amsterdam Concertgebouw, stating that the Jews were declared enemies of Germany, and whoever supported them would have to bear the consequences. And indeed, no retreat in anti-Jewish policies was felt; on the contrary: in June 1941, still a year before the beginning of the Final Solution in the Netherlands, another 300 Jews were rounded-up in Amsterdam and once again sent to Mauthausen, where they died.

CONCENTRATION OF JEWS IN AMSTERDAM, DEPORTATIONS AND HIDING. Between January 1942 and April 1943, most parts of the country were declared as forbidden for Jews to live in; their Jewish inhabitants were mostly evacuated to Amsterdam. Additionally, many decrees limited the possibility of Jews to move around (such as the use of public transportation, cars and even bicycles). As from the beginning of May 1942 Jews had to wear a Yellow Star with the word *Jood* on it. Jewish bank accounts and assets were channeled to the Lippmann-Rosenthal bank in the Sarphatistraat, a cover institution created by the German authorities. A first deporta-

Amsterdam's Jewish population.

tion train left the Amsterdam Central Railway Station with 962 persons to the transit camp Westerbork in eastern Holland in the night of 14–15 July. An assembling center for the Amsterdam Jews was created in the Joodsche (formerly: Hollandsche) Schouwburg (i.e. theatre), in the Jewish quarter; this site serves today for the commemoration of the Holocaust of Dutch Jewry. Deportations came to a close on September 29, 1943, on the eve of Rosh Hashana 5704; the last Jews officially living in Amsterdam, including the chairpersons of the *Joodsche Raad*, were arrested and sent away.

RELIGIOUS LIFE. In view of the harsh persecutions and the disastrous number of murdered Jews, it is amazing to note that religious life could go on relatively unhindered during this whole period. True, in the very beginning kosher slaughtering – without prior stunning – was prohibited, but when a solution was found for that by the Amsterdam rabbis, slaughtering continued as long as meat was available. *Mazzot* for Passover were distributed even in 1943. Official prayers went on, and Jews were not arrested in synagogues. Synagogues were partially plundered during the last stage of the war, but never desecrated. Thus, all synagogues, including the impressive Sephardi and Ashkenazi ones in the center of the Jewish quarter, remained in tact, and could be reopened after the war.

REACTIONS OF NON-JEWISH NEIGHBORS. The reactions of the non-Jewish citizens cannot be generalized. On the one

hand, expressions of solidarity were expressed at different stages of the persecutions. The February strike of 1941 was a genuine such expression. When the Yellow Star was imposed, some Amsterdammers wore yellow flowers. Other helped in helping Jews to find shelter or flee. A special such case was the smuggling of hundreds of Jewish children, brought to the Joodsche Schouwburg and smuggled out on the initiative of Jewish employees and the assistance of a German guard, to the neighboring kindergarten (“crèche”), from where the children were directed to hiding addresses throughout the country.

On the other hand, Dutch city officials were instrumental from an early stage in registering Jews, the local police played a major role in arresting and deporting the Jews, streetcar drivers worked additional hours during the round-ups, and others denounced hiding Jews.

Altogether, Amsterdam Jewry was so badly hit in the Holocaust, that the colorful and sparkling Jewish life which had existed in the city for more than three hundred years, was almost entirely disrupted. After the war Amsterdam became once again the major Jewish community in the Netherlands, but never returned to its former importance, both for the Jewish world and for Dutch society.

[Dan Michman (2nd ed.)]

Contemporary Period

Jewish survivors, who returned to Amsterdam after the Holocaust, continued prewar patterns and mostly resettled in its southern neighborhoods. This was even intensified since the postwar Jewish population had a very different socio-economic structure. The proletariat, lacking the social networks and the money one needed to go into hiding, was nearly completely wiped out. Their quarters, known as the original Jewish neighborhoods in the center of Amsterdam, were demolished by the municipality in the interest of renovation and traffic requirements. In time, middle- and upper-middle class Jews spread out into several new suburbs like Amstelveen and Diemen, but the majority still lives in Amsterdam itself, especially in Buitenveldert. This “Greater Amsterdam area” comprised some 20,000 Jews in the year 2000. They represent less than half of the total Jewish population in the Netherlands, estimated at 43,000. Of these only 70% have a Jewish mother and fewer than 25% are connected with the official Jewish community. The “Greater Amsterdam” community is still by far the largest Jewish concentration in the Netherlands and also the most conscious one when it comes to Jewish identity. Most Amsterdam Jews (56%) still have two Jewish parents, while elsewhere the average is much lower (37%). Jews who are in need of community services such as schools, synagogues, kosher food, tend to move to Amsterdam, the only place in the Netherlands offering all those services. Jews, who do not need them, tend to move out of Amsterdam. Over the years, the original Dutch Jewish community in Amsterdam was not able to keep its numbers from deteriorating, but it was resupplied by several thousands of foreign Jews, many of them Israeli and younger than the original community. The prewar Jewish

weekly *Nieuw Israelietisch Weekblad* is the oldest weekly in the Netherlands (since 1862), and it preserved its central place in the organized Jewish community. Immediately after the war, efforts were undertaken to unite the different congregations in Amsterdam into one *Grossgemeinde*. These efforts failed and the different prewar communities all continued their independent existence.

THE ASHKENAZI ORTHODOX COMMUNITY. The four Ashkenazi synagogues in the center of Amsterdam were sold to the Amsterdam municipality in 1955, followed by the ones in Uilenburgerstraat and Rapenburgerstraat. A smaller synagogue replaced the one in Linnaeusstraat, but it was ultimately closed down in the 1990s for lack of worshippers. In Amsterdam South the prewar synagogue in the Lekstraat was found too large. It continued to be in use but part of it was turned into the Resistance Museum. The synagogues on the Jacob Obrechtplein, in Gerard Doustraat and Kerkstraat continued to be in use, as did the one that is part of the Dutch Israelite Seminary in Gerrit van der Veenstraat. There continued to be a synagogue in use in Amsterdam West. However, in 1965 a new synagogue was opened in the new Buitenveldert neighborhood on the southern municipality border. Its establishment was soon followed by a new Orthodox synagogue in nearby Amstelveen. These areas had become the central Jewish area of Amsterdam. In 1970 the Central Dutch Israelite Synagogue (NIHS) bought a complex of buildings in Buitenveldert and transformed it into a Jewish Cultural Center including a synagogue, classrooms, community center and offices. None of the Ashkenazi Rabbis of Amsterdam had survived the Holocaust. Rabbi Justus Tal from Utrecht was nominated chief rabbi of Amsterdam in 1951 and from 1954 Rabbi Aaron *Schuster dominated the scene as chief rabbi and as director of the Rabbinical Seminary. He was educated at the prewar Rabbinical Seminary and preserved the traditions of the prewar community. After he left in 1972, the Ashkenazi community went through a number of changes leaving little of its original character. The Netherlands Israelite Rabbinical and Teachers Seminary in Amsterdam no longer produced rabbis after the war. This made the community dependent on foreign-educated rabbis, who, in general, were much stricter in their interpretation of *halakhah*. Rabbi Meir Just from Switzerland, already in the country from 1962, became more dominant after 1972. Later rabbis were educated in the ultra-orthodox Rabbinical School of Gateshead, such as Rabbi Frank Lewis (1990s). At the same time the Lubavitch movement started to have an impact on the community. As a result halakhic decisions were increasingly taken without reference to Dutch customs. All these different Orthodox streams stayed united in the Nederlands Israelietisch Kerkgenootschap (NIK). The combined membership of the Amsterdam congregations was 5,202 in 1951, but has dwindled over the years. Already in the 1970s it was clear that the real membership was below 4,500 and it further plunged to 2,821 in the year 1998. From 1955 the Ashkenazi Orthodox community of Amsterdam published

its own journal *Hakehillah*, which in the 1990s was renamed *Hakehilloth* and extended to the whole country.

THE PORTUGUESE COMMUNITY. Portuguese Jews still use their 17th century synagogue building in the old Jewish neighborhood in the center of Amsterdam where the traditions of the old community are more or less preserved, but since many of the Portuguese moved to Amstelveen they opened a new congregation there in 1995. Only some 800 Portuguese Jews had survived the Holocaust and the community dwindled down to about 450 in 2000. That number includes new immigrants from Morocco, Iraq, and Israel who have joined the community. The Portuguese Rabbi, S.A. Rodrigues-Pereira, survived the war. In 1968 the community for the first time in its history nominated an Ashkenazi-educated rabbi, Barend Drukarch. Working together with the congregation's president, Dr. Jacques Baruch, Rabbi Drukarch adjusted very well. Both men served the Portuguese community for many decades and preserved its tolerant Orthodox attitude. From 1947 the community published its own journal, *Habinyan*, stressing its independence. It also reopened its famous Ets Haim library as early as 1947 and the part of the library that was sent to Israel as a permanent loan was returned to the Netherlands in recent years and reintegrated in the precious collection. The small community has continuous problems in preserving its prestigious synagogue building and its other historical treasures.

THE LIBERAL CONGREGATION. Liberal Jews in Amsterdam had a very small congregation of about 130 members left in 1946, which consisted mainly of German refugees. They had no synagogue building and efforts to revive the community seemed to bear no fruit. It was on the verge of disappearance when, in 1954, the Union of Liberal Religious Jews in the Netherlands nominated a Dutch Rabbi, Jacob *Soetendorp, who was a former student of the prewar Orthodox Rabbinical Seminary. He had not finished his studies since he had started to have doubts about the kind of Judaism he was learning. In 1955, Dr. Leo Baeck officially ordained him a rabbi and he stayed with the Amsterdam congregation until 1972. Together with its president, Dr. Maurits *Goudekot, Soetendorp succeeded to revive the community and to guide it through a period of explosive growth during the 1960s and early 1970s. From a mainly German community they also succeeded to mold it into a solid Dutch one. The Liberal congregation opened its own synagogue and community center in 1966, in the south of Amsterdam. In 1954 the community established a journal, *Levend Joods Geloof* ("Living Jewish Faith"). After Rabbi Soetendorp, Swedish-born Rabbi David Lilienthal served the congregation for 32 years until the end of 2003. A young rabbi, Menno ten Brink, born and raised in the community itself, took over. The Amsterdam congregation had a membership of 1,700 in 2005.

BETH HACHIDDUSH. This new, *havurah*-like congregation, is not linked up with any of the world's mainstreams of Judaism nor with the official Dutch Jewish community. It grew

out of the gay community in town and started off in 1996 as very progressive when it came to the status of women or homosexuals in Judaism. It attracted many Americans who were used to this type of community in the United States and did not adjust well to the established congregations in the Netherlands. Beth Hachiddush found a permanent home in the renovated synagogue in Uilenburgerstraat, after which it appointed a female Rabbi.

EDUCATION. Amsterdam is the only place in the Netherlands with Jewish day schools. Since the Holocaust, the regular Orthodox schools (Rosh Pina and Maimonides), from nurseries up to high school have been functioning. They are in the hands of a private foundation, Joods Bijzonder Onderwijs (JBO), representing in fact the traditional Ashkenazi community. They attract several hundreds of pupils, many from families who do not have a strictly Orthodox lifestyle. Since 1975 there is a *heder* as well, founded by the Lubavitch community. It grew with the years into a complete educational system. Both school systems attract quite a lot of Israeli children. A *kolel*, a strictly Orthodox center of Talmud study was opened in Amsterdam in 1976. The Netherlands Israelite Rabbinical and Teachers Seminary in Amsterdam, from the 1990s presided over by Rabbi Raphael Evers, trains teachers, Torah-reading, and *shlihei zibbur* and it offers the adult education the community was asking for, but it trains no rabbis. In 2003 the Liberal community set up the Mr. Robert A.*Levisson Institute for the training of its own rabbis, having Rabbi David Lilienthal as its first dean. Along with the program of the Institute itself, the students take required studies at the University of Amsterdam and at Crescas, a countrywide Jewish Institute for adult education since 1999.

WOMEN'S ORGANIZATIONS. During the first decades after the war, women were mostly active in the Dutch branch of the Women International Zionist Organization, but in 1964 women in the Liberal congregation of Amsterdam founded a special group of a more emancipatory brand. Frieda Menco-Brommet was its chairperson for many years and shaped its character. The group was striving for more equality in the administrative structure of the congregation and also in its services. It created international contacts with other women's groups and activities were extended beyond Amsterdam by founding the Federation of Liberal Religious Women. It received support from both the board and the rabbinate. In later years Annie van Dantzig-Hagenaar took over and the group, having largely achieved its goals, became very much involved with social matters and serious Jewish education for women. In the meantime the Orthodox women had founded their own group, "Deborah," in 1978. Deborah was chaired for 15 years by Dr. Blume Evers-Emden. In spite of its activities and its progress, women were still barred from being elected to the board of the Amsterdam congregation, even in the early years of the 21st century. On a national level and in several other congregations in the country, they were fully integrated as board members. The failure to achieve anything in Amsterdam is

quite exemplary for the restrictive influence of both Rabbi Meir Just, Rabbi Frank Lewis, and the Lubavitch movement on the Amsterdam congregation. Deborah found a partner however in the Federation of Liberal Jewish Women, when it discovered that this group already was a member of the International Council of Jewish Women (ICJW). Each country could have only one representative. Together with Annie van Dantzig-Hagenaar, who was eager to cooperate with the Orthodox women, the Dutch National Council of Jewish Women (NCJW) was founded in which the Liberal Women and Deborah are equally represented. This NCJW became the new Dutch member of the ICJW.

SOCIAL WELFARE FOUNDATION. Next to the religious congregations the Jewish Social Welfare Foundation (JMW), founded in 1947, took up a central position in the organized community. Most Jewish organizations including all religious communities are represented in it. JMW over the years developed into a highly professional institution taking care of Holocaust victims, refugees and the old-aged. The last group is disproportionately large. A system of domestic help for the elderly was set up in Amsterdam alone, in addition to the old-age home Beth Shalom, located in Amstelveen. Several previous Jewish old-age homes were concentrated in Beth Shalom as a result of the centralizing policy of the government. JMW also offers community work and alternative frameworks for Jews who are no longer interested in a religious expression of their identity. Among them is a considerable group of Israelis, who are brought together in at least one yearly event. Jewish soccer, also organized by JMW, became very popular during the 1990s and the yearly *Jom Ha-Voetbal* (Jewish Football day) attracts the largest number of spectators to any annual Jewish event.

REMEMBERING THE HOLOCAUST. During the first decades after the war, Jews joined non-Jews in the general Dutch remembering of the victims of the Second World War on May 4. More than half of these victims were Jewish. Jews also attended the remembrance of the February Strike each year together with the population of Amsterdam. Later on, from the 1970s, separate Jewish memorial ceremonies became more accepted, stressing the specific Jewish character of most victims and getting the function of bringing more Jews together on these sensitive occasions. The Hollandse Schouwburg where some 80,000 Amsterdam Jews were concentrated before their deportation to Westerbork, underwent extensive renovation and a permanent exhibition was placed in it. Thus it was transformed into the monument where each year on Yom Hashoah a Jewish ceremony takes place, attended by non-Jews as well. This development from "general Dutch" to "specifically Jewish" also resulted in the new Auschwitz monument which in the beginning of the 1990s was placed in the Wertheim public garden, a few hundred meters from the Hollandse Schouwburg: a large Star of David constructed of glass plates by sculptor Jan Wolkers. A small monument for the Jews in the Resistance was erected in the late 1980s, also stressing their specific

identity while in previous decades this had not been the case. Although the famous Anne Frank house draws some 600,000, mostly foreign, visitors each year, this institution is not in Jewish hands and it plays a minor role in the community.

THE PERIPHERY. Most Jews in Amsterdam are not connected with the community and freely mix with non-Jews including for marriage purposes. Part of them, however, are the founders of many unofficial Jewish or semi-Jewish frameworks that came to life over the years and usually disappeared again after some time. Some took the form of cafés like Gotspe, a café for young Jews in 1973, and Betty's Coffee Shop, Naches and Blanes in the 1980s. In the 1970s Jewish lesbians and homosexuals founded Shalomo, an organization that continued to exist for 30 years. Other young Jews started debating clubs or groups around the conflict in the Middle East, ranging from defenders of Israel to groups that barely identify with the Jewish State and voice criticism. In the 1990s the Jewish "Women in Black," demonstrated against the occupation of the West Bank and Gaza in the center of Amsterdam every second Friday of the month showing that younger generations of Jews had become more critical of Israel. This is especially true about a group called "Another Jewish Voice," active since the end of the 1990s and apparently seeking to become more accepted by their non-Jewish surroundings by criticizing Israel in a rather unbalanced way.

RELATIONS WITH THE SURROUNDINGS. The relation with the authorities was very positive over the years and although Jews have become a very small minority in Amsterdam, the city had no less than four Jewish mayors nominated (Dr. Ivo Samkalden, Wim Polak, Ed van Thijn, Dr. Job Cohen). After a short difficult period immediately after the war, antisemitism barely existed in Amsterdam and was limited to incidents. If they occurred they were usually followed by large anti-racist demonstrations. The Ajax Amsterdam soccer club was identified with Jews and always attracted antisemitic shouts and incidents in the stadium. From 1997 to 2002, the number of antisemitic incidents rose as a result of frictions with the large Muslim community in Amsterdam. In those years the population of immigrants from Third World countries, mainly Muslims, had risen to about 10% of the Dutch population, and they are concentrated in the large cities. They have become the majority of pupils in many Dutch elementary schools in the larger cities. If incidents took place, they were limited to verbal abuse, but some ended with harassment and stone throwing. As a result mayor Job Cohen started a program for improvement of relations between the different communities. In 2003 and 2004 the situation stabilized.

CULTURE. Many Jews in Amsterdam work in the free professions. They are well represented among Amsterdam's journalists, authors and artists and in spite of their small numbers succeeded to continue a Jewish flavor in these fields. Many nostalgic books were published about the prewar Jewish neighborhoods or even certain streets, Jewish life in Amsterdam before

the Holocaust and the like. "Jewish Amsterdam," now greatly reduced to a myth, still plays a role in literature and plays. Authors like Siegfried van Praag and Judith Herzberg, who made themselves felt up to the 1980s and 1990s, are followed by a younger generation still seeking to express itself in a recognizable Jewish way. During the first decades after the war the expressions of Jewish culture were rather modest, but during the 1980s and 1990s interest in Jewish culture only seemed to grow and was not limited to Jews at all. Some of it even has become Jewish culture without Jews, e.g., several *klezmer* groups became popular, most of them, like "Di Gojim," consisting entirely of non-Jewish musicians. At the end of the 1970s a special Commission for Dutch Jewish history was founded within the Royal Academy of Sciences. It organizes international symposia every six years in Amsterdam while symposia of the same kind take place in-between in Jerusalem. The interest in Dutch Jewish history has been growing ever since among Jews and non-Jews alike and the symposia attract hundreds of people. At the University of Amsterdam a special chair for modern Jewish history was created, also by the same Commission in the early 1990s. The first one to occupy it was Prof. Dr. Rena Fuks-Mansfeld. While Yiddish has disappeared from the streets of Amsterdam, there is an amazing revival of interest in Yiddish on a more academic level. The interest in Yiddish is a phenomenon completely unknown to Amsterdam before 1940. In the 1990s two Yiddish festivals were organized in Amsterdam mainly by Mira Rafalowicz, a champion of Yiddish culture in the Netherlands. From the early 1990s students of Semitic languages at the University of Amsterdam were required to attend courses in Yiddish during their second year. The centenary of the Bund, which had no more than a handful of members left in the Netherlands, was celebrated by a new Jiddisjer Krajz group with the participation of an equally new Haimish Zajn choir in 1997. All events are attended by Jews and many non-Jews. Also in 1997 the Menashe ben Israel Institute was established. It coordinates Jewish Studies at the University of Amsterdam and at the Free University (also in Amsterdam) and it organizes well-attended international study days. In the fall of 2000 the first issue of *Di Grine Medine* appeared, published by the recently founded Society for the promotion of Yiddish in the Netherlands. This is the country's first Yiddish periodical in two centuries. Another quite recent phenomenon is the great interest in *hazzanut* and especially the reproduction of prewar *hazzanut*. In 1986 the Amsterdam Synagogue Choir, consisting of male singers only, was reestablished. A Lewandowski Choir, came into being as well. It has some 40 singers both male and female. Greatly adding to all this with publications, catalogues and exhibitions is the Jewish Historical Museum, first reopened on the Nieuwmarkt, but in 1987 it moved to the four great Ashkenazi synagogues in the center of Amsterdam opposite the monumental Portuguese Esnoga. The project of the reestablishment of a much larger and modern museum in those buildings was in the hands of Judith Belinfante, its director for 25 years until 1998, and Ted Musaph-Andriess, chair of the board for an equally long term up to 2000. A special ex-

hibition for children, now known as the Children's Museum, created by Petra Katzenstein, added much to the permanent exhibition. The Jewish Historical Museum of Amsterdam is the one place visited by the largest number of Dutch Jews in the Netherlands and as such it has a positive influence on Jewish identity and identification.

[Wout van Bekkum and Chaya Brasz (2nd ed.)]

Musical Life in the 17th and 18th Centuries

There is much evidence of an intensive musical life during the 17th and 18th centuries, especially within the Sephardi community in Amsterdam. These descendants of the *Marranos who had lived in cultural assimilation in their country of origin for generations, retained the cultural and literary expression of their previous way of life, even after they had returned to a strict observance of Judaism. It is known from contemporary sources that many local rabbis had a good knowledge of music and played musical instruments. From the late 17th and throughout the 18th centuries, there were many musical events in synagogues, within the framework of the "academies" or the various societies, or in celebration of some family occasion. The Sephardi synagogue in Amsterdam was dedicated in 1675 to the music of an orchestra and choir. This event made an impression on the life of the community, and the anniversary became a regular festival, accompanied by musical offerings. The choral rendering of *Heshki Hezki* was one of the most beautiful compositions written for this occasion in the first half of the 18th century by Abraham *Caceres. The festival of *Torah served as another occasion for the poets and composers in the congregation to present their works. The *ḥatan Torah* and *ḥatan Bereshit* were honored in an elaborate ceremony. Among the compositions written for the celebration, particular mention should be made of the cantata *Le-El Elim* (words by Moses Ḥayyim *Luzzatto, music by A. Caceres), first performed in 1738 and often repeated. During the 18th century there flourished in Amsterdam, as in Italy, many societies at whose celebrations musical compositions were heard. Another prominent musical occasion was the contest for the appointment of a new **hazzan* for the synagogue, at which candidates were called upon to prove their musical talents. Family events, and particularly weddings, were often accompanied by musical plays. The Jews of the 18th century made a notable contribution to the development of Dutch musical life in general; their influence was particularly strong in opera. Among the Jewish activities in this field one of the most noteworthy is the attempt by Sephardi Jews in the mid-18th century to establish a theater which would also play French opera. There was also the important enterprise of a member of the Ashkenazi community from Amsterdam, Jacob Dessauer, who in 1784 founded a German theatrical and operatic troupe, the first of its kind in Amsterdam, in which all the members – actors, singers, and the 23 members of the orchestra – were Jews.

AMSTERDAM, BIRDIE (1901–1996), U.S. lawyer and judge. Amsterdam was born on the Lower East Side of Manhattan, New York City into a first generation Jewish American family. She was the second of six children, all of whom pursued professional careers. A graduate of Hunter College High School at age 17, she studied accounting and banking at the City College of New York while waiting to reach the age for admission to law school. Amsterdam worked days and studied in the evening at New York University Law School; she was awarded a LLB in 1922 and admitted to the bar the following year. Amsterdam practiced law independently before forming a partnership with her brother-in-law, Milton Sanders. The firm of Amsterdam and Sanders was dissolved when Amsterdam became a judge. Amsterdam was called the "First Lady of the Judiciary" because of her prominence and her record of "firsts" as a woman in the legal profession. She was the first woman to sit on the Municipal Court in New York County, where she served from 1940 to 1954. She became the first woman judge of the City Court to which she was appointed in 1954. In 1955 she won a full term. In 1958 Amsterdam was elected to the New York State Supreme Court, again a first for a woman. Amsterdam served two terms on the State Supreme Court before retiring in 1975. She was approached in the course of her career to accept an Appellate Court appointment. She declined, preferring to remain a trial judge. Amsterdam received many honors. In 1960 *Who's Who of American Women* named her "Outstanding Woman of the Year in the Legal Field." A leader in the Democratic Party, she was often endorsed in elections by other parties, civic groups, and labor organizations. Active in numerous legal, religious, political, and charitable causes, she also encouraged aspiring women lawyers. She credited her experiences as a lifelong resident on the immigrant and poor Lower East Side with sensitizing her to social needs. Amster-

dam's special concerns included slum clearance, medical care, summer camps for poor children, tuition assistance, and housing for the aged and handicapped.

[Libby White (2nd ed.)]

AMULET. From earliest times, man has tried to protect himself from misfortune by the use of objects which he considered holy or otherwise (e.g., magically) potent. One of the ways of doing this was to keep the object close to his person, frequently wearing it as an article of clothing, or as an ornament. It was felt that the evil spirits which cause misfortune would not dare to attack one so protected. It has been suggested that this desire for protection is the source of man's habit to adorn himself with jewelry and other ornamentation; the female being weaker – and consequently in greater danger – has the greater need for protection. The custom developed for people to have on their persons pieces of paper, parchment, or metal discs inscribed with various formulae which would protect the bearer from sickness, the “evil eye,” and other troubles. The use of inscription as a means to ward off evil spirits stemmed from a belief in early times in the holiness and in the power of words. Such artifacts are known as amulets (for other types of charms and protective items, see *Magic). It is not known whether amulets were used in the biblical period. Presumably they were, but there is no direct evidence to prove it. Traditional Judaism does not consider *tefillin* and *mezuzah* – whatever their original antecedents may have been – to be amulets. The purpose of *tefillin* is stated to be “for a sign upon thy hand” (Deut. 6:8) and from the immediate proximity of the verse regarding *mezuzah* it would seem that its purpose is the same. While one biblical rite involving the doorposts (Ex. 11:7, 13) had an apotropaic function and the current translation for *tefillin* (“phylacteries”) suggests the same purpose, the traditional interpretation of the “sign” was that of a reminder of God's commandments and of the duty of the Jew to bear witness to his God.

Amulets are frequently mentioned in talmudic literature. The term used is *kame'a* or *kami'a* (pl. *kemi'ot* or *kemi'in*), a word whose origin is obscure. It is possible that it derives from a root meaning “to bind” (cf. Rashi to Shab. 61a), but it might come from an Arabic root meaning “to hang.” In either case, the reference is clearly something that is bound or hung on the person (cf. Kohut, *Arukh*, 7 (1926²), 123). The Talmud mentions two sorts of *kemi'ot*: a written one and the *kame'a shel ikrin*, a *kame'a* made from roots of a certain plant. The written *kame'a* was a parchment inscribed with one or more quotations from a variety of sources, including the Scriptures (cf. Shab. 61b). The question arose whether the amulets were invested with the holiness of the scriptural scrolls and whether they should, therefore, be saved from a conflagration occurring on the Sabbath. A *baraita* is quoted which specifically states that they are not holy and that they, together with other texts which contain scrip-

tural quotations (lit. *berakhot*), should be left to burn (*ibid.*). In the original Tosefta text, however, no mention is made of *kemi'ot* (Tosef. Shab. 13:4). Unfortunately, there is no record in the Talmud of the inscriptions in the amulets (but see Yoma 84a). Later amulets were inscribed with quotations relevant to their specific purpose. The text of the *Priestly Blessing (Num. 6:24–26) was considered effective against the “evil eye.” Permutations and combinations of the letters of the different names of God were frequently used; names of angels were also very common. The simplest amulet had an inscription of the name of God on a piece of parchment or metal, usually made of silver; ה (*He*), יה (*YaH*), and יהוה (*Shaddai*, “Almighty”) being very popular. These still feature prominently on pendants worn by Jewish women today. The efficacy of the amulet depended not only on the inscription but also on the person who wrote it; the more pious the author the more effective was the amulet.

The Talmud differentiates between “expert” (or proven, *min ha-mumheh*) amulets and others. The former had proved its effectiveness by curing a sick person on three different occasions or three sick persons, and hence one may wear such an amulet outside the home on the Sabbath (Shab. 6:2).

The Talmud (Shevu. 15b) states that it is forbidden to recite verses of the Torah for the purpose of curing an existing illness but it is permitted “to guard” against possible future sickness (see also Maim, *Yad*, *Avodat Kokhavim* 11:12). This distinction was equally applied to amulets. During the Middle Ages, the rabbinic attitude to amulets varied considerably. *Maimonides, following the precedent of *Sherira Gaon and his son *Hai, opposed the use of amulets and came out very strongly against the “folly of amulet writers” (*Guide*, 1:61; *Yad*, *Tefillin* 5:4). He also opposed the use of religious objects, such as the Torah scroll and *tefillin*, for the curing of sickness (*Yad*, *Avodat Kokhavim* 11:12). On the other hand, both Solomon b. Abraham *Adret and *Nahmanides permitted the use of amulets. Earlier magical traditions, including the use of amulets, magic charms, names of angels, combinations of Hebrew letters, etc. subsequently merged with the *Kabbalah and came to be known as “practical Kabbalah.” Many mystical texts, such as the *Sefer Yezi'rah* and the *Sefer Razi'el*, contain instructions for the preparation of amulets and other charms, for a variety of purposes. After the expulsion of the Jews from Spain, the belief in the efficacy of amulets spread to Eastern Europe. In Erez Israel, it spread from Safed, the center of Kabbalah, to all parts of the country.

One of the most vehement controversies in Jewish history was caused by amulets. Jonathan *Eybeschutz, the rabbi of Hamburg, was accused by Jacob *Emden of having used the name of the false messiah Shabbetai *Zevi in amulets which he had prepared. Eybeschutz vigorously denied the charge. It is interesting that the validity of writing amulets was not questioned in the controversy. The congregational burial society of Hamburg officially endorsed the efficacy of Eybeschutz' amulets. In a particularly sharp attack against Maimonides' rationalism in these matters, *Elijah b. Solomon Zalman, the Gaon of Vilna, a bitter opponent of Hasidism, also endorsed

the use of amulets (to Sh. Ar., YD 179). The belief in amulets gradually diminished with the emancipation of European Jewry, although in Eastern Europe it remained widespread until World War II. *Kemi'ot*, in particular, were worn during pregnancy to prevent miscarriage; amulets called *Kimpet-Tsetl*, *Shir Hamalos-Tsetl*, and *Shmine-Tsetl* were also placed above the head and under the pillow of a woman in labor, to ward off the evil demon *Lilith. Among Oriental communities, amulets are still widely used. Many amulets were inscribed on small discs of silver or other metal and worn as a pendant around the neck. Amulets being small in size, biblical verses and names were indicated by their initial letters, with the result that the inscription is frequently very difficult to decipher. The Samaritan community uses names of angels unknown in Jewish tradition.

For specific laws regarding amulets see Shulhan Arukh (OH 301:24–27; 305:17; 334:14; and YD 179:12).

[Raphael Posner]

Amulets for Safe Childbirth and Protection of Infants

Amulets and talismans intended to protect women in childbirth and their newborns were a significant part of Jewish folk religion in Christian Europe and the Islamic world. The late ninth to early tenth century *Alphabet of Ben Sira* promulgated the legend of *Lilith, the “first Eve,” who claimed that she had been created to harm newborn babies. According to this folk tradition, Lilith was convinced by three angels, Sanoi, Sansanoi, and Semangalof, that she would be unable to enter a house to harm either a baby or its mother wherever she saw their images illustrated or their names written on an amulet. *Sefer Raziel* (first printed Amsterdam, 1701), a compilation of magic, cosmology, and mystical teachings popular among both Ashkenazi and Sephardi communities, contained a recipe for an inscribed amulet to protect a laboring woman as well as for an amulet for a newborn specifically directed against Lilith. Polish and Russian Jews put the book itself under the pillow of women in childbirth; in Iraq it was put on the Chair of Elijah, an object believed to have protective powers which was placed in the center of the birthing room.

In Europe, amulets to protect mothers and infants were generally written or printed on paper, sometimes with illustrations. In the Muslim realm, protective objects made of metal, especially gold and silver, were preferred and also functioned as jewelry for women and for small children. The mystical texts and formulas inscribed on these amulets did not differ significantly in east or west.

[Judith R. Baskin (2nd ed.)]

Childbirth Amulets in Art

While the Hebrew texts inscribed on Jewish amulets in the different countries, East and West, often share similar formulae, names, and selection of biblical verses, the images drawn on those which are ornamented vary greatly, reflecting folk beliefs and traditions, visual ideas and ideals, and the influence of local folk arts. This is best exemplified by childbirth

amulets – the most prevalent category of extant amulets produced in Europe and the lands of Islam from the 17th century on, reflecting the high mortality rate of children before the modern era.

Paper German childbirth amulets are often printed with small, crude figurative woodcuts expressing the ideal roles expected for the newborn when he/she grows up. For example, the amulets for a male newborn depict a boy holding an open book from which he reads, while those for a female show her kindling the typical star-shaped Sabbath lamp used by German Jews. The proselyte *Abraham ben Jacob working for the acculturated Dutch community decorated his popular amulet with a biblical image, which he copied from a Christian Bible, depicting a nude Eve and Adam in Paradise. In Poland handmade colorful papercut amulets were preferred, featuring intricate designs, including a wide selection of animals, such as a pair of rampant lions, which symbolize ideal human qualities (“be strong as the lion ...” Pirkei Avot 5:23). Images of leading rabbinical authorities, known for their righteous conduct, may appear on East European amulets as a sign of blessing and protection. In amulets of the Old Yishuv on the other hand the preferred “protective” images were conventional pictures of the holy sites (Temple Mount, Rachel’s Tomb). Italian Jews created for the amulets of their children attractive silver cases decorated with appliques of the Temple implements. In Islamic lands silver amulets and jewelry were very common, not only for newborn babies but also for children and women, considered weak and susceptible to the evil eye. Prevalent images included the hand (*hamsa*) mentioned above and fish. Both were interpreted by local *hakhamim* (e.g., *Joseph Hayyim of Baghdad) as symbols imbued with deep Jewish meanings. The *hamsa*, as well as the closely related number five, were viewed as bearing potent magical powers based on Jewish textual sources (for example, five is associated with the monogrammaton, *he*, the holy single-letter name of God, which is often inscribed in the center of amulets). Persian Jews also depicted a fantastic image of *Lilith, usually shown “in chains.” In modern Israel some of the designs, the *hamsa* and *hai* [ׁׁ], in particular, have been revived and enjoy widespread popularity. Images of rabbis considered holy, both Sephardi and Ashkenazi, are common in modern Israeli amulets as well.

[Shalom Sabar (2nd ed.)]

“Illuminated Amulets”

Illuminations on amulets are seldom applied for purely decorative purposes. The various designs, symbols, and letters were believed to be efficacious in warding off the evil eye, disasters, or sickness. They consist of magical triangles, squares, rectangles, and other geometrical features, e.g., the Hexagram (“Star of David”) and the Pentacle (“Star of Solomon”). The *menorah* with its seven branches, as well as an outstretched hand, is often used. More rarely, birds, animals, human figures, Satan, and the angel Metatron may appear. Letters which are not as yet completely understood and which are known as “kabbalistic writing” have also figured on amulets.

MAGICAL TRIANGLES. By gradually reducing the size of an inscription, the evil spirit is eased out of its victim and its influence is thus diminished. Magical triangles therefore serve a useful purpose and when used in writing amulets it is with this idea in mind.

SQUARES AND RECTANGLES. These are divided into several boxes each of which contains one or more letters. In this way acrostics may be formed in which powerful inscriptions may be secretly placed in the amulets to exert their beneficent influence without the knowledge of the uninitiated. The squares vary from those of nine boxes to those of 64 or even 100 boxes. The rectangles are usually small and often contain hidden verses from the Bible. Their use and influence naturally depend on the particular biblical verse inscribed.

THE HEXAGRAM. The Star of David as a silver amulet is one usually made by the Jerusalem group of amulet makers. The six points of the hexagram often contain the letters **ירושלים** or **מלך דוד**, the latter obviously alluding to the city of David. Hexagrams may also appear in written amulets.

THE MENORAH. The 7-branched candlestick is often found on the *shivviti* amulets from Persia. In the silver amulets only the initial letters of the words are used but in the parchment ones the verses are written out in full. These are so called because tradition states that King David's shield was shaped like these silver amulets, and headed with the words "I have set (*shivviti*) the Lord always before me" (Ps. 16:8).

THE HAND. A frequent occurrence is a hand inscribed on the paper or parchment amulets. Silver amulets made in the form of hands are common and are usually North African in origin and the hand is supposed to ward off the "evil eye." It is considered by some to be the hand of Fatima, who was Muhammad's daughter, but hands have appeared on North African amulets since the times of the Carthaginians and these people antedate the Muslim tradition by more than a thousand years. The tradition of using hands on amulets still persists strongly in Morocco, Tunis, and Algeria, as well as throughout the Muslim world.

THE DISC, CRESCENT, AND CROSS. The cross and the crescent are rare. The disc and crescent represent Baal and Tanit respectively and may be found as pendants on silver amulets from North Africa. They carry on the traditions of the Semitic colonization of Carthage and its neighboring countries.

THE KABBALISTIC LETTERS. Mysterious and unexplained to this day, the interpretation of these letters has long aroused controversy. Letters of this type are found on ancient amulets before they appeared on Jewish amulets, e.g., on a magic plate discovered in Pergamon from the tannaitic period. There is no proof that they were made in Jewish circles but apparently they were adapted to the needs of Jewish magic. Some scholars derive the origin of these signs from cuneiform writing. Moses *Gaster considered that there were variant forms

of Samaritan (i.e., Old Hebrew) writings and in support of this opinion he cites *Rashi (TB, Sanh. 21b), who called them *Ketav Libbona'ah* and also thought they were of Samaritan origin. However, the Samaritan script bears little resemblance to these curious characters. It may well be that these letters are Hebrew writing in code form. The manuscript "Alphabet of Metatron" in the British Museum is one of the codes that enables the deciphering of some of these letters but much more research is necessary before all the kabbalistic writing can be interpreted. Many manuscripts of practical Kabbalah include alphabets of angels, each alphabet belonging to a different angel, according to the pattern of this writing. It is quite possible that some amulets can be deciphered by the use of such angelic alphabets. Although these characters are often used for ornamental purposes, they should not be dismissed as mere ornamentations. In Hebrew books on magic, many examples and formulas of amulets are published. These sources include *Ta'alamot u-Mekorot ha-Hokhmah* (Venice, 1664); *Derekh Yesarah* (Fuerth, 1697); *Toledot Adam* (Zolkiew, 1720); *Mifalot Elohim* (Zolkiew, 1727; the latter in many editions); *Refuah ve-Hayyim* by Hayyim Palache (Smyrna, 1874).

AMULETS, SAMARITAN. Samaritan amulets are rare because there were no more than 200 members of this sect by the beginning of the 20th century, when (in 1905) M. *Gaster acquired a number of amulets which are now housed in the British Museum. They have been most comprehensively described by Gaster in his *Studies and Texts*. E.A.W. Budge enumerates six forms of these Samaritan amulets: (1) a square sheet of parchment representing practically an entire goat's skin; (2) a scroll varying in length and width; (3) a booklet, probably carried in a case; (4) a scrap of paper; (5) a metal disc like a coin or medal; and (6) inscribed stones.

In other respects, the Samaritan amulets resemble ordinary Hebrew amulets with a few changes made in conformity with the Samaritans' own angelology, esoteric beliefs, and particularly their own text of the Bible.

The construction of Samaritan amulets follows the standard Jewish practice. God is invoked by means of the Tetragrammaton and the 72-letter Name. The name of their archangel, *Penuel*, is often inscribed on them as are the names of specifically Samaritan angels: (1) *Kevala*, derived from Num. 4:20, which they translate as “lest they see *Kevala* alongside the Holy Place and perish”; (2) *Nasi*, derived from Ex. 17:15, read in their own pronunciation as “and Moses built an altar and called the name of it *Jehovah-Nasi*”; (3) *Anusah*, derived from Ex. 14:25; (4) *Yat*, an angel whose name derives from the first word of Ex. 14:21, which verse is itself involved in the formation of the 72-letter Name.

Although demons are known among the Samaritans, none has yet been found depicted on one of these amulets. They are (1) *Zir'ah* (צִרְעָה), deriving from Ex. 23:21 and Deut. 7:20, which is said to be an anagram of *yezer ha-ra* (יֵצֶר הרע); (2) *Belial*; and (3) *Azazel*.

[Theodore Schrire]

AMULO (d. 852), archbishop of Lyons from 841 in succession to **Agobard* whose anti-Jewish prejudices he shared. The Church Council of Meaux and Paris held in 845–46 passed, probably at Amulo's suggestion, a number of regulations excluding Jews from public office, forbidding them to appear in public during Easter, and prohibiting Christians from having contact with them. Amulo subsequently addressed a lengthy epistle (*Liber contra Judaeos*) to Charles the Bald in 846, trying to persuade him that such segregation was justified. This had a wide circulation and asserted that the Jews blasphemed Jesus and the Christians, and by a play on words referred to the apostles as “apostates,” and to the Gospels (*Evangelion*) as *aven gilyon*, i.e., “a sheet of iniquity.” Amulo quotes at length from the Hebrew **Toledot Yeshu* already circulating among the Jews. He also states that the Jews employed Christian servants and forced them to observe the Jewish laws while transgressing Christian precepts. A further charge was that Jewish tax collectors persuaded ignorant Christians to renounce Christianity with promises to reduce their taxes. Amulo's efforts were unsuccessful, however, as Charles refused to ratify the anti-Jewish canons passed by the council.

AMUSIN, JOSEPH (Iosip; 1910–1984), Russian historian, specialist in **Qumran* studies. Amusin was born in Vitebsk and lived in Leningrad from 1924. He was persecuted for Zionist activities, imprisoned, and exiled to Siberia (1926–33). After returning from exile he worked as a bookkeeper. In

1935–38 he studied history at Leningrad University. During the Great Terror of the Stalinist years Amusin was once again arrested (1938) but released the same year and continued his studies. In 1945–50, after serving at the front during the war, he was an instructor at Leningrad University and the Leningrad Pedagogical Institute. When the campaign against the so-called “cosmopolitans” was unleashed, Amusin displayed courage defending his teacher S. **Lurie*. Consequently he had to leave Leningrad, teaching for a while at the pedagogical institutes of Ulyanovsk and Gorky. After the death of Stalin he returned to Leningrad (1954), working from 1960 at the Leningrad department of the Institute of Oriental Studies of the Soviet Academy of Sciences. In 1965 he was awarded a doctor's degree in history.

Most of Amusin's work was devoted to the history of the Jews and biblical studies. He published a translation of Qumran texts into Russian with an extensive preface and historical as well as linguistic commentaries (1971). Other important works of his were *Rukopisi Mertvogo mor'a* (“The Dead Sea Scrolls,” 1960), *Nakhodki u Mertvogo mor'a* (“The Dead Sea Finds,” 1964), the seminal study *Kumranskaya obshchina* (“The Qumran Community,” 1983), and numerous papers on the history and ideas of the Qumran community as well as on various aspects of the history of ancient Greece, ancient Rome, and the Hellenistic world. A collection of his papers under the title *Problemy sotsialnoy struktury obshchestva drevnego Blizhnego Vostoka (1-e tys'acheletie do n.e.)* (“Problems of the Social Structure of the Ancient Near East in the First Millennium B.C. according to Biblical Sources”) was published posthumously in 1993.

AMZALAK, HAYYIM (1824–1916), notable of the Jewish community in Erez Israel. Amzalak, who was born in Gibraltar, went to Jerusalem with his parents in 1830. He became a grain merchant and banker, settled in Jaffa, and was appointed British vice consul for that town. He advised and guided the first emissaries of the *Hovevei Zion* (**Hibbat Zion*) associations who came to Erez Israel in 1882 from Russia, and was elected honorary president of the Committee of the *Yesud ha-Malah* pioneers. This committee had been established in Jaffa by Z.D. **Levontin* to organize the activities of the settlers' associations. In 1882 when Jews of Russian origin were forbidden to purchase land in Erez Israel, the Rishon le-Zion land was registered in Amzalak's name. At the beginning of World War I, Amzalak refused to renounce his British nationality and was exiled to Egypt.

AMZALAK, MOSES BENSABAT (1892–1978), Portuguese scholar and economist. Amzalak was born and educated in

Lisbon, combined a successful business career with encyclopedic academic activity, became professor of philosophy and later dean of the Lisbon School of Economics and Finance, and was president of the Portuguese Academy of Sciences and chancellor of the Lisbon Technical University. His main interests were economic history, history of economic thought, and marketing. A devoted Jew, he headed the Lisbon Jewish community for an entire generation. His publications are extensive, extending beyond economics to Oriental languages, Jewish history, bibliography, and related subjects. He wrote on rare works of Judaica of the 17th and 18th centuries in Spanish and Portuguese, which he reproduced in facsimile from the copies in his own extensive library. He wrote works on several economists of Marrano extraction, such as Joseph *Penso de la Vega, Duarte Gomez Solis, and Isaac de *Pinto. The bibliography of Amzalak's publications exceeds 300 entries including *Do Estudo da Evolução das Doutrinas Económicas em Portugal* (1928), *História das Doutrinas Económicas da Antiga Grécia* (12 vols., 1942–), and *História das Doutrinas Económicas da Antiga Roma* (6 vols., 1953–).

ANAB (Anav; Heb. אנב), city in the southern hill district of Judah that is mentioned in the Bible next to Eshtemoah (Josh. 15:50). In another reference Joshua “cut off the Anakim (‘giants’) from Hebron, Debir, and Anab” (*ibid.* 11:21). Eusebius (Onom. 26:8) places it in the area of Eleutheropolis (Bet-Guvrin). It has been identified with Khirbat ‘Anāb al-Ṣaghīra (Heb. Tel Rekhes) 1 mi. (1.5 km.) west of al-Zāhiriyya on the Hebron–Beersheba road, where Iron Age pottery has been discovered.

[Michael Avi-Yonah]

°**ANACLETUS II, PETER PIERLEONE** (c. 1090–1137), in the official church view an anti-pope, outside the apostolic succession. His great-grandfather Benedict (originally probably Baruch), adopted Christianity and married a Christian noblewoman of Roman lineage. The family eponym, “Pierleone,” combines the names of Benedict’s son Leo and his grandson Peter. Wealth and powerful connections made the Pierleone family highly influential in Rome. In the turbulent politics of the day they sided with the Reform party in the church. The family’s personal ambitions were advanced when Peter (son of Peter) was created a cardinal around 1120. In 1123 he represented Pope Calixtus II as legate to France, where he presided over councils held at Chartres and Beauvais. On the death of Pope Honorius II in 1130 the cardinals, fearing an outbreak of the popular rioting which often accompanied the election

of a new pope, decided to keep the death of the pope and the impending election secret for a few days, presumably until Neapolitan troops could arrive to maintain order. A number of them, however, were hostile to the possible election of Peter Pierleone, broke their promise of delay, and elected one of their own number, who assumed the name Innocent II. The other cardinals, more numerous than their rivals, thereupon elected Pierleone, who took the name Anacletus. The schism shook Christendom. *Bernard of Clairvaux, the most influential churchman of his time, sided with Innocent II. Among his other objections to Anacletus, he expressed horror that a scion of Jews should occupy the Throne of St. Peter. Most of the monarchs and peoples of Europe heeded Bernard. Among the hostile rumors that circulated about Anacletus were charges of incest and of robbing churches with the aid of the Jews. The fickle Roman population eventually also turned against him, and he could maintain himself in Rome only with the help of Roger II, king of Naples. Anacletus remained in control of Rome until his death; only then did Innocent take possession of the city and gain universal recognition. Most church historians continue to write about Peter Pierleone with vehement contempt. In Jewish tradition he gave rise to a number of legends about a Jewish pope.

[Solomon Grayzel]

ANAHARATH (Heb. אַנְחָרַת), Canaanite city in the eastern part of Lower Galilee. It is mentioned in the list of cities conquered by Thutmose III in approximately 1469 B.C.E. (no. 52). It was the most distant place captured in the second campaign of his successor Amenhotep II (c. 1430 B.C.E.), and the booty there included captives, chariots, and cattle. Anaharath later became part of the territory of Issachar (Josh. 19:19). The village of al-Nā‘ūra, north of the Jezreel Valley and east of the Hill of Moreh, may preserve the ancient name and has been suggested for its identification. It lacks, however, suitable archaeological remains, as does the nearby Tell al-‘Ajjūl which has also been proposed. The only other possible site in the vicinity is Tell al-Makharkhas, a prominent tell 5 mi. (8 km.) north of al-Nā‘ūra and 4 mi. (7 km.) east of Mount Tabor, which dominates the upper part of Wadi al-Bīra and contains remains dating from the end of the fourth millennium up to about the tenth century B.C.E.

ANAK, ANAKIM (Heb. אֲנָכִים, אֲנָכִים), son of Arba (Josh. 15:13; 21:11), and a giant people of southern Erez Israel (called *Anakim*, *Benei ‘Anak*, and *Benei ‘Anakim*). According to Joshua 14:15, Arba, to whom the city of *Hebron owed its ancient name of Kiriath-Arba, was the greatest of the Anakim, and according to Joshua 15:13 he was the father of “the Anak.”

From the time when the Israelite spies explored the region of Hebron to the time when it was conquered by Caleb, it was inhabited by *Ahiman, Sheshai, and Talmi, who were “born of the Anak” (*yelidei ha-Anak*, Num. 13:22; or “children of the Anak,” Josh. 15:14). The Anakim are described as *Nephilim (Num. 13:33), a term which is probably used here virtually as a common name for giants (cf. Gen. 6:4), much as titan(s) is used today. In Deuteronomy 2:21 (cf. 1:28) the great stature of Anakim is referred to. Such traditions about an ancient race of giants were apparently current in Israel, Ammon, and Moab (see *Rephaim).

Most biblical references connect the Anakim with Hebron (Num. 13:22; et al.), but Joshua 11:21–22 indicates that they occupied a wider area. It is not known whether the *Iy-ʿnq* of the Egyptian Execration Texts (first half of the second millennium B.C.E.) are connected with the biblical Anakim. The three rulers of the former bear Semitic names (Pritchard, Texts, 328), whereas the names of Ahiman, Sheshai, and Talmi have exact affinities with Hurrian names (cf. de Vaux, in RB, 55 (1948), 326, no. 1). The term *anak* is used in Modern Hebrew for a giant.

ANAMMELECH (Heb. אַנַּמְמֶלֶךְ), deity worshiped by the people of *Sepharvaim (II Kings 17:31), who were settled in Samaria (II Kings 17:24; Isa. 36:19), probably by Shalmaneser V or by *Sargon II. The people of Sepharvaim (possibly Sibraim in Syria [cf. Ezek. 47:16; II Kings 17:24; 18:34], or Sipraʿani, a Chaldean locale) continued to worship their gods, Anammelech and *Adrammelech, and maintain the worship of the God of Israel. According to II Kings 17:31, the cult of Anammelech was accompanied by the sacrifice of children (see *Moloch). The identity of this deity raises some difficulties, as no Assyrian or Babylonian deity bearing this name is known. The “Ana” element in the name has been variously explained as referring to Anu, the sky god, who was the head of the old Babylonian trinity (Anu, Bel, and Ea) and as a male counterpart of the well-known goddess *Anat. The “Melech” element has been explained as meaning “king” or “prince” (*melekh*), or as referring to human sacrifice to Moloch, or to a god bearing that name (cf. de Vaux, *Anc Isr*, 446).

ANAN (mid-third century), Babylonian *amora*. He was also called Anan bar Rav. A pupil of *Samuel, Anan transmitted many statements in his teacher’s name as well as in the name of *Rav. Anan was a judge in Nehardea, and frequented the house of the exilarch Mar Ukva (Ket. 69a, 79a). His colleague was Hanan (Kid. 39a), and R. Naḥman consulted him on halakhic matters (BM 70a). He disputed points of *halakhah* with *Huna (BM 65b); nevertheless, Huna, who regarded himself as Anan’s teacher, was deeply offended when Anan addressed him as “Huna our colleague” (Ket. 69a). References are made to his piety, which expressed itself particularly in the way he honored the Sabbath and in his scrupulous incorruptibility.

According to a talmudic *aggadah*, the prophet Elijah used to visit him and instruct him in the *Seder Eliyahu*, but stopped, because of an incident in which Anan unwittingly caused a miscarriage of justice. After Anan fasted and prayed for mercy, Elijah resumed his visits, but Anan was afraid of him. As a result of this fear, Anan would sit in a box when Elijah was teaching him, until the *Seder Eliyahu* was completed. According to the *aggadah*, this explains why the work is divided into two parts – the *Seder Eliyahu Rabbah* (“major” *Seder Eliyahu*), the part composed before this occurrence, when Anan faced Elijah directly; and the *Seder Eliyahu Zuta* (“minor” *Seder Eliyahu*), composed when Anan was sitting in the box (Ket. 105b–106a; see **Tanna de-Vei Eliyahu*).

[Zvi Kaplan]

ANAN, SON OF ANAN, high priest of the family of *Anan the son of Seth. Appointed to the office by *Agrippa II in 62 C.E., Anan officiated for three months only. He used the interval between the death of the procurator *Festus and the arrival of his successor *Albinus to convene the Sanhedrin and have several persons condemned to death, including James, brother of Jesus. The people resented Anan’s audacity and successfully persuaded Agrippa and Albinus to depose him. Anan was elected to the government constituted after the defeat of Cestius Gallus in the autumn of 66. He played a central role at the beginning of the war against the Romans when he was entrusted with defending the walls of Jerusalem. However, he was not wholeheartedly in favor of the war. Anan tried to hold on to the reigns of government even when his conciliatory policy toward the Romans was no longer popular. When the *Zealots prevailed in Jerusalem, mistreating the pacifists among the local aristocrats and appointing an illegitimate high priest, Anan, with other heads of government, decided to suppress them by force. He convened an assembly of the people and hoped to incite them against the Zealots, whom he condemned for converting the Temple into a fortress and for abusing its ritual purity. Claiming that the Zealots’ deeds were worse than those of the Romans, he blamed the people for allowing them to come to power. Many answered his call. Though Anan hesitated to use the Temple precincts as a battleground, his men captured the Temple courtyard where they

besieged the Zealots. In this struggle *John of Giscala played an important role. At first he belonged to Anan's camp and tried to mediate between both parties. Finally convinced that Anan was collaborating with Romans, John went over to the Zealots. Upon his suggestion, the Zealots solicited the aid of the Idumeans, whose forces decided the conflict. Anan was a victim of the ensuing wholesale massacre in the city. Josephus once criticized Anan as a willful conceited Sadducee, but later eulogized him by saying that, had he lived, the city would have been saved and peace achieved between the Jews and Romans. Anan is identified by some scholars with the "Wicked Priest" of the Dead Sea Scrolls.

[Lea Roth]

ANAN BEN DAVID (eighth century), ascetic sage in Babylonia, founder of the sect of Ananites (Heb. אַנַּנְיִימ, *Ananiyyim*; Ar. *Anāniyya*) and regarded by the *Karaites as their founder. A tenth-century Karaite account, related by al-*Kirkisani, places his appearance between 754 and 775. The report states that Anan was "the first to bring to light a great deal of the truth about the scriptural ordinances. He was learned in the lore of the Rabbanites... The Rabbanites tried their utmost to assassinate him, but the Almighty prevented them from doing so." Kirkisani always refers to him as the Exilarch (*raʿ al-jālūt*). In the second half of the ninth century there were *Rabbanites who saw Anan as a heresiarch "who said to those who strayed... after him, 'Forsake ye the words of the Mishnah and of the Talmud, and I will compose for you a Talmud of my own'" (attributed to *Natronai Gaon). With various permutations, this tradition persists in the *Sefer ha-Kabbalah* of Abraham *Ibn Daud (1161) which adds that Anan was descended from the Davidic line, but as he showed heretical tendencies he was not named *exilarch. A more detailed version of this story is quoted by the 12th-century Karaite *Elijah b. Abraham who ascribes it to 10th century Rabbanites (probably Saadia). In this version the exilarchate was given to Anan's younger brother. Anan thereupon rallied a group of sectarians who set him up as their own exilarch. This led to his arrest. He was sentenced to death for defying the caliph's confirmation of his brother in the office. A fellow prisoner, identified in another Karaite work as the Muslim jurist-theologian Abū Ḥanīfa (d. 767), founder of the Hanafite school of Muslim jurisprudence, advised him to bribe the officials and to obtain a hearing before the caliph in order to claim that he represented a different faith distinct from that of his brother, and therefore was not guilty of the crime ascribed to him. According to this version, Anan stressed before the caliph that in matters pertaining to calculation of the calendar his method was akin to the Muslim system, namely it was based on observation and not on perpetual calculation. He was thus released. The last account may well be mixed of factual and legendary elements.

The only proven historical fact about Anan's life seems to be that he was a learned Rabbanite of aristocratic descent, who for some reason founded a sect of his own. A reliable authority, although of a later period, states that Anan lived in Baghdad. Other facts combine to date the founding of his sect between 762 and 767.

Anan's immediate followers, the Ananites, were never numerous. Not many remained by the mid-tenth century. By the tenth century they had probably developed a modest corpus of legal works written in Judeo-Arabic. Such are quoted by al-Kirkisani. None of them survived. The Ananites steadily decreased in number and were absorbed into the later Karaites. However, Anan's prestige among the Karaites increased until he was acknowledged by them as the founder of the Karaite sect itself. Anan's descendants claimed Davidic lineage. At some time during the tenth century they had been acknowledged by the Karaites as their leaders and accorded the honorific of *nasi* (which in the Middle Ages always indicated Davidic lineage). Individual Karaite scholars often criticized or rejected Anan's views on various matters of law. These somewhat contradictory attitudes arise from the recognition that Anan was the first learned and aristocratic figure to lend his prestige to Jewish groups who had been opposed to the authority of the Babylonian yeshivot. In addition, at some point in late tenth century, his major work, *Sefer ha-Mitzvot* ("Book of Precepts"), came to occupy an important place in Karaite literature. The *Sefer ha-Mitzvot* is a manual of religious law according to Anan's own teaching and his interpretation of the Torah, written in *Aramaic. As such it was a novelty, being an attempt to put to writing a systematic alternative to talmudic law. The portions so far discovered contain concise, if dry, expositions of the law on various subjects, as well as some homiletic sections.

The guiding principles later ascribed to Anan's teaching include rejection of the talmudic tradition, a return to Scripture as the sole source of Divine Law, and repudiation of the authority of the geonic and exilarchic leadership. However, his extant writings demonstrate attempts to adapt the ancient biblical legislation to the changed circumstances of his day. His Rabbanite training ensured that his methods of biblical exegesis, as well as of formulation and interpretation of the law, were much the same as those adopted by the Talmud. But his conclusions were in some cases innovatory, in others he adopted positions ascribed to talmudic sages that had been rejected in the Talmud. His preferred method of deduction was by analogy (Heb. *hekkesh*; Arabic *qiyās*), also frequently applied in Muslim jurisprudence. Anan, however, applied it not only to situations in law, but also to single words or even letters of the biblical text. In line with talmudic exegetical tradition, Anan held that the rules of rhetoric and syntax do not apply to Scripture. If two biblical texts seemingly describe the same situation, but in slightly different words, or employing somewhat varying grammatical constructions, a new and variant rule must be applied to construe the second text.

Anan's procedure often seems to be a deliberate construction of proof, by forced interpretation of Scripture, for an Ananite preformulated rule. His rigorous, ascetic approach moved him to postulate the principle that the strict and prohibitive must always take precedence over the lenient and permissive, wherever both alternatives are equally admissible. Accordingly Anan also championed the *rikkuv* ("restrictive catenary") theory of forbidden marriages (extending the forbidden degrees of marriage), a 70-day fast (from the 13th of Nisan to the 23rd of Sivan evidently involving daytime fasting only, in the manner of the Muslim fast of Ramadan), and prohibition of the practice of medicine as incompatible with faith in the Divine healing power. There is no evidence that Anan insisted on basing the calculation of the calendar on lunar (or other) observation. The reference to such a position in the reports on his secession may be a back-projection of later polemicists, Rabbanites and Karaites. From the surviving sections on liturgy it emerges that Anan saw the synagogue as an imitation of the Temple.

Various earlier and contemporary rigoristic and ascetic trends may have influenced Anan. His teaching indicates the inception of institutions for the separate existence of his sect. Rabbanite writers often accused Anan of leaning toward the doctrines of the *Sadducees, but since the available information is meager and partly contradictory, the extent of Sadducean influence, if any, remains in doubt. The same uncertainty also prevails regarding his probable espousal of religious customs current among certain Jewish groups in the talmudic period. These had been subsequently dropped in favor of those approved by the majority and incorporated in the Talmud. References to some such superseded customs seem to be discernible in the talmudic discussions, and are paralleled in some of Anan's rulings. Certain of Anan's doctrines coincide with those upheld by nearly all other schisms. They presumably represent a long-persisting dissident Jewish tradition, possibly harking back to pre-mishnaic times. An example is the rule that the festival of Shavuot should always fall on a Sunday, and perhaps also the prohibition on having any fire burning on the Sabbath (which had later become a hallmark of Karaites) and the literal interpretation of the *lex talionis* ("an eye for an eye"). It has been suggested that there is some connection between Anan's teaching and that found in the *Dead Sea Scrolls. The picture of Anan as an inflexible ascetic presented by his teaching may be modified to some extent in the light of the maxim ascribed to him, "Search diligently in Scripture, and rely not on my opinion." The earliest attestation of this maxim is found in a commentary by *Japheth ben Eli (late tenth century), where only the first half (in Aramaic) is quoted. It may well be that this half is original, while the second half represents tenth-century Karaite tendencies (notably *Daniel al-Qumisi). While Anan preached engagement in the study of the Torah and its interpretation he considered his interpretation to be definitive. Some modern scholars find parallels between the central position given by Anan to the biblical text, as a source of law and a subject of study, and the

attitudes of some Muslim groups ("scripturalists") towards the Koran. Accordingly it is not a coincidence that Anan emerged at his particular period of time.

Later reports that Anan acknowledged the prophetic mission of Jesus and Muhammad and accepted the doctrine of transmigration of souls seem to lack any factual basis. The text of *Sefer ha-Mitzvot le-Anan* was published by A. Harkavy, in: *Studien und Mitteilungen*, 8 (1903; with Hebrew translation, repr. 1970); S. Schechter, *Sectaries*, 2 (1910); Mann, in: *Journal of Jewish Lore and Philosophy*, 1 (1919), 329–53.

[Leon Nemoj]

ANAN BEN MARINUS HA-KOHEN (first half of 11th century), rabbi and poet. He lived in Siponto in southern Italy. According to Zedekiah b. Abraham *Anav, Anan handed down decisions concerning the order in which people should be called to the reading of the Torah, and ruled that a kohen might be called when there was no Levite, and a Levite when there was no kohen (*Shibbolei ha-Leket ha-Shalem*, ed. S.K. Mirsky (Section 34:233)), and concerning the laws of *shofar (*Shibbolei ha-Leket*, 34:292).

He is known as the composer of a poem to be recited at the termination of the Sabbath. This was a lyrical appeal to Elijah to come without delay, since the appointed time of the coming of the Messiah, 1,000 years after the destruction of the Temple, had already passed, and the enemy was oppressive.

[Yonah David]

ANAN BEN SETH (Σεθί), high priest from 6 to 15 c.E. Anan was appointed by *Quirinius, governor of Syria, to succeed *Joezer b. Boethus but was deposed by *Valerius Gratus, procurator of Judea. During his high priesthood, the Samaritans succeeded in penetrating into the Temple during Passover and desecrated it by scattering bones in the porticoes (Zev. 113a; Tosef. Eduy. 3:3). Entrance to the Temple was thereupon forbidden and a strict watch imposed. Many of Anan's family served as high priests, including his five sons: Eleazar, Jonathan, Theophilus, Matthias, and Anan. Joseph Caiaphas, the high priest in the time of Jesus, was his son-in-law. Evidently Anan was an important figure in Jerusalem even after his de-

position, since Jesus was first sent to him for interrogation after his arrest. The family of Anan (Bet Ḥanin) is one of the high-priestly families censured in the Talmud (Pes. 57a) for extortionate practices.

[Lea Roth]

ANANIAS AND HELKIAS, two brothers, sons of *Onias IV, who were generals in the army of Cleopatra III, queen of Egypt (116–110 B.C.E.). They commanded the Jewish military colony at Heliopolis. Their loyalty to Cleopatra III (Josephus' reference to which is based on the testimony of Strabo) in her wars against her son Ptolemy Lathyrus for the throne of Egypt won for them great influence (Jos., Ant., 13:284–7). In these wars Ananias and Helkias were in command of the Egyptian army that advanced into Erez Israel to drive out Ptolemy Lathyrus who had consolidated his position there after defeating Alexander Yannai, the Hasmonean king (103–102 B.C.E.). The growing strength of Lathyrus in Erez Israel posed a threat not only to Alexander Yannai's position but also to Cleopatra's rule of Egypt. Ptolemy Lathyrus was defeated in battle and forced to withdraw from Erez Israel, and while in pursuit of him, Helkias died (*ibid.*, 13:348–51). After her victory over her son, Cleopatra was advised by some of her counselors to occupy the Hasmonean kingdom but Ananias warned her against this, pointing out its injustice, as well as the enmity that an attack upon Alexander Yannai would arouse among the latter's fellow Jews in Egypt, her subjects. Because of Ananias' warning Cleopatra did not harm Alexander Yannai and even made a pact with him (*ibid.*, 13:352–5). Helkias, or perhaps his son, is probably mentioned in an Egyptian inscription of 102 B.C.E. as the *strategos* (commander) of the *nome* (province) of Heliopolis. It is very doubtful whether the account in Justinus (39:4) of a Ptolemaic general who permitted Lathyrus to escape from Egypt refers to Helkias.

[Uriel Rappaport]

ANANIAS BEN NEDEBEUS (Heb. אֲנָנְיָא בֶּן נְדֵבֵיּוּס), high priest at the end of the Second Temple period. Ananias served as high priest for 12 years (47–59 C.E.), longer than any other high priest after the fall of the Hasmonean dynasty, with the exception of Joseph *Caiaphas. He was the second high priest appointed by Herod of Chalcis, succeeding Joseph b. Kimhit. As a result of the conflict between the Samaritans and the Jews, he was arrested by Quadratus, the procurator of Syria, and sent to Rome to report to Claudius. As the investigation in Rome ended in a victory for the Jews, Ananias probably did not remain long. He rather returned to Judea and to his office at the same time that *Felix was appointed procura-

tor of Judea (52). About 59, Agrippa II appointed *Ishmael b. Phabi II high priest, but Ananias continued to exercise a powerful influence over developments in Judea because of his extraordinary wealth and his firm ties with the Roman administration. He was especially close to the procurator Albinus (62–64), whom he bribed with gifts, as he did the high priest, Joshua b. Damnai. Josephus states that Ananias was highly regarded by the citizens of Jerusalem and was greatly honored by them, a statement consistent with two talmudic passages (Pes. 57a; Ker. 28a). On the other hand, Josephus writes that Ananias set a bad example for other high priests by having his servants take tithes from the granaries by force, thus depriving other priests of their shares. In the period immediately preceding the destruction of the Temple, his great wealth made it possible for him to hire mercenaries who took a leading part in the street battles in Jerusalem. An example of Ananias' influence was the appointment of his son, Eleazar, as captain of the Temple. The *Sicarii considered Ananias one of the major Roman collaborators; they kidnapped Eleazar's secretary, and offered to exchange him for ten Sicarii whom Albinus held imprisoned. Ananias persuaded the procurator to agree. This set a precedent for similar occurrences. At the outset of the revolt, Ananias became a target for the hatred of the extreme elements led by *Menahem b. Judah the Galilean and his home was burnt down together with the palaces of Agrippa II and Berenice. He was subsequently put to death, together with his brother Hezekiah. Ananias was apparently not a member of the oligarchic high-priestly families of the time (Boethus, Ḥanin, Phabi, and Cantheras). He was probably a member of the House of Guryon (or Garon).

[Menahem Stern]

ANANIAS OF ADIABENE (early first century C.E.), Jewish merchant who was instrumental in the conversion of *Izates and the royal family of *Adiabene. Izates, son of King Monabaz and Queen Helena of Adiabene, was sent as a youth to Charax Spasinu, capital of the tiny kingdom of Charakene between the mouths of the Tigris and the Euphrates. Izates was converted to Judaism by Ananias, a Jewish merchant who had previously converted the wives of the local ruler. After he became king of Adiabene, Izates learned that his mother had also converted to Judaism; consequently he wished to complete his own conversion by having himself circumcised. However, both his mother and Ananias rejected this idea, the latter on the grounds that "the king could worship God even without being circumcised if indeed he had fully decided to be a devoted adherent of Judaism, for this counted more than circumcision."

[Isaiah Gafni]

ANANIAS SON OF ZADOK, a prominent Pharisee of the first century. With the outbreak of the Roman war in 66 C.E., the Roman garrison in Jerusalem was forced to retreat to the royal towers of Hippicus, Phasaël, and Mariamne. The force was incapable of prolonged resistance and finally offered to surrender. The besiegers agreed, and sent three envoys, among them Ananias, to take the necessary oaths and guarantee fair treatment. The Roman commander Metilius marched his men out, unarmed, only to have them surrounded and massacred to a man. Metilius himself, however, was spared after promising to convert to Judaism. Ananias was also a member of another delegation. After receiving reports from the supporters of *John of Giscala denouncing *Josephus, the Jewish leaders in Jerusalem decided to relieve the latter of his command in Galilee. For this purpose they dispatched four prominent emissaries, including Ananias, with a force of 2,500 men. Josephus, however, succeeded in capturing the deputies, and they were sent back to Jerusalem under armed escort.

[Isaiah Gafni]

ANANYEV (Ananiev), city in Odessa district, Ukraine. Ananyev was founded in 1753. Jews began to settle there in the beginning of the 19th century. In the 1820s the community owned a synagogue and cemetery; it numbered 532 in 1856 and 992 in 1864. A *talmud torah* operated from 1880. Mob attacks in a pogrom that took place on April 27, 1881, destroyed 175 Jewish homes and 14 shops; the poorer Jewish sector in the outskirts suffered most. A second, less damaging pogrom broke out on Oct. 17, 1905. Another pogrom, carried out by Ukrainian soldiers, occurred in February 1919, with many killed. On May 22, the marauding antisemitic Grigoryev gang killed 44 Jews and pillaged much property. In early 1920, in a battle with the Tutyunyuk gang, the Jewish *self-defense unit lost 220 of its 300 fighters.

The Jewish population numbered 3,527 in 1897 (out of a total population of 16,684), 4,810 in 1910 (out of 22,157), and 3,516 in 1926 (out of 18,230). Between the world wars Jews worked in a textile cooperative and in a Jewish *kolkhoz*. Their number dropped to 1,779 by 1939 (total population 5,918). Ananyev was occupied by the Germans on August 7, 1941. Three hundred Jews were murdered on August 28, and later another 600. On September 1, Ananyev was made part of Transnistria under Romanian rule and a ghetto was established for the remaining 300 Jews. In early October they were ordered to set off for *Dubossary but were murdered on the way near the village of Mostovoye. In 1990 there were 30 Jews in Ananyev.

ANAPA, Black Sea port and resort, Krasnodar territory, Russia. Jews settled there during the rule of King *Mithridates (first century C.E.). It came under the rule of the *Khazar Kingdom, and subsequently under that of the Turks. When the Russians occupied Anapa in 1828 no Jews were living there. The law of Dec. 15, 1846, allowed only Jewish craftsmen to settle, and in 1892 almost all Jews were banned from the Kuban territory, which included Anapa. There were 19 Jews in the town in 1897. During the German occupation (1942–43), Anapa was almost totally destroyed.

ANASCHEHON (Anaschichun), Spanish family which settled in Erez Israel and in Turkey after the expulsion from Spain in 1492. Joseph *Sambari lists Meir Anaschichon among the exiles who settled in Jerusalem and in Safed. He was known to have spent some time in Aleppo in 1525. At the end of the 16th and during the 17th century several scholars of the Anaschichon family lived in Erez Israel. They all wrote books which remained in manuscript and none was ever published. Josiah *Pinto, in his book *Nivhar mi-Kesef* (Par. 74, p. 145b) speaks of “the perfect scholar, the outstanding *dayyan*” JOSEPH ANASCHEHON who died in 1632. There are manuscripts of the correspondence between Anaschichon and Jonathan Galante at the Jewish Theological Seminary of America (Enelow Collection 462–469). A relative, the kabbalist Meir Anaschichon II, lived in Erez Israel and Egypt at the same period. He was a younger contemporary of Ḥayyim *Vital, knew the latter’s students and writings, and apparently moved in the circle of Benjamin ha-Levi and Elisha Vestali. He wrote a copious and important commentary on the *Idra* which Samuel *Vital edited and included in a collection of commentaries by the disciples of his father, Ḥayyim Vital, and of Isaac *Luria. Meir Poppers wrote strictures on that commentary which appear in many manuscripts (e.g., Adler 2254). Meir transcribed a homiletical manuscript on the symbolic *Adam Kadmon* (“Primordial Man,” Ms. Parma 93). Among Meir II’s colleagues in Jerusalem were Jacob *Zemah and Samuel *Garmison. A halakhic responsum addressed to him by the latter is found in *Mishpetei Zedek* (Par. 117). JOSEPH II, grandson of Joseph I, grew up in Safed and was educated by his grandfather. In the manuscript of his works he cites many novellae of “my teacher and mentor, Joseph, my grandfather.” He also studied with his maternal grandfather, Mordecai ha-Kohen Ashkenazi, whose oral teachings he quotes, as he does the many remarks that he recalls from Josiah Pinto of Damascus. He taught at the yeshivah, and Pinto’s son, Daniel, was among his disciples. He lived in Turkey and moved among the greatest rabbis there. In 1675 he served as rabbi in *Tokat, Turkey, where he is also known to have lived in 1684. An extensive work of Joseph is to be found in the library at Columbia University. This is a collection of novellae on the aggadic dicta of the rabbis, on halakhic remarks by the tosafists, and on *Rashi’s commentary to the Pentateuch. This work is evidence that he was also a kabbalist. He makes numerous references in it to his work, *Likutei Shoshannim*. Other manuscripts, not extant but known

to have existed because of reference to them in this book, are *Yad Yosef*, *Pe'er Yosef*, and *Rosh Yosef*. The last was apparently a commentary on the Talmud, for Joseph writes "... in the book of novellae which I wrote and which I entitled *Rosh Yosef* ... on the tractate *Kiddushin*."

ANATH (Heb. אַנַּת), a major goddess of the Western Semites (Amorites-Canaanites, Arameans) worshiped over a wide area of the Near East (in Mesopotamia, Syria-Erez Israel, Anatolia, and Egypt). The earliest evidence of a cult devoted to Anath comes from the literary remains of the Amorites at *Mari on the Euphrates near the beginning of the second millennium B.C.E.

Cult

The cult of Anath had considerable vogue in Egypt, where it was introduced at least as early as the Hyksos period, since *'nt* is attested as the theophorous element in a few Hyksos names. Some rulers of the New Kingdom were apparently devotees of the goddess. An Egyptian magical papyrus relates the sexual assault of Anath by Seth (Baal), who copulated with her in fire and deflowered her with a chisel. Her character is vividly revealed in the mythological texts of *Ugarit from the middle of the second millennium.

Name

Scholarly speculation has been provoked as to whether the goddess' name is a possible clue to her nature. It has been connected with the root *'ny*, from which the meaning "destiny" or "providence" was deduced. The Hebrew *'et* ("time") and Akkadian *ettu* (< *ittu*, "sign," "omen") have also been correlated with the supposed sense of "destiny, purpose, active will." Anath has been presumed to be the personification or hypostatization of the will of Baal, but the Ugaritic texts indicate that she had a strong will of her own. In Arabic the root *'anat* is connected with fornication, coercion, belligerency, obstinacy, stubborn zeal, and the like, qualities and activities that comport with the dominant character of the goddess in the Ugaritic myths. The standard name of the goddess in the Ugaritic myths is "Virgin Anath" (*btlt 'nt*) and she retains this attribute despite copulation with her consort (though the interpretation of Ugaritic texts as describing Anath's sexual activity has been challenged). She is also called "Girl Anath" (*rh'm 'nt*), or simply "Girlish" (*rhmy*). She is once called Anath *ltn* (i.e., Leviathan), presumably by reason of her conquest or collaboration with Baal in the defeat of that monster, and once is also called "Anath Destroyer" (*nthbly*). She is occasionally designated simply "Lady" (*št*).

Mythology

A few highlights of Anath's activities in the myths may be mentioned: she mourns and buries her dead consort, Baal, and avenges his death by pulverizing his slayer Mot ("Death"). She launches a sudden and unexplained assault on humankind, wading hip deep in blood and gore, piling up the heads

and hands of her victims and adorning herself with a necklace of heads and a girdle of hands. She ceases the slaughter as abruptly as she had begun, bathes and performs her toilet, and subsequently receives a message from Baal commending peace and inviting her to hasten to him and hear his secret plans for a splendid shrine on his holy mountain. Anath's warlike character may be reflected in the Hebrew *bn 'nt* arrowheads which indicate the association of the surname *bn 'nt* with military families. For all her violent ways, however, Anath has occasional gentle moments.

Anath and *Ashtoreth are kept apart in the Ugaritic mythological texts, in which Ashtoreth plays a very minor role. In a text that introduces the gods in order of their rank and mentions the abode of each, however, Anath and Ashtoreth are combined (*'nt w'trt*) and their common abode (*'inbb*) is elsewhere attributed to Anath. An Egyptian plaque presents a single nude goddess identified by three names – Qudšu, Ashtoreth, Anath – thus attesting the blending of the three major West Semitic goddesses (*Quadšu*; "Holiness" is a title of *Asherah). Later in Hellenistic-Roman times, Anath and Ashtoreth are probably combined in reverse order in the compound Atargatis. The equation of Anath with Athena is made in a Phoenician-Greek bilingual inscription of the fourth century B.C.E. from Cyprus, in which the Semitic goddess is called "Anath Strength of Life" (*'nt m'z hym*), while the Greek equivalent is *Athena Soteira Nike*. Anath/Ashtoreth/Ishtar is thus the prototype of Athena and the Winged Victory. A number of beautiful and/or armed and/or winged goddesses appear in ancient Oriental iconography, and some of them doubtless represent Anath.

In Israel

Although not explicitly mentioned as a goddess in the Bible, the name Anath is preserved in the place names *Beth-Anath and *Anathoth, and in the personal name *Shamgar the son of Anath. Perhaps due to her martial qualities, the cult of Anath apparently enjoyed a renewed vogue in the fifth century B.C.E. in the Jewish military colony at Elephantine, Egypt, where oaths were sworn on the names *'nt*-Beth-El and *'nt-YHWH*. Some savants sought to eliminate the association of the God of Israel with a goddess – and especially one of such unsavory repute – by construing the element *'nt* as a common noun meaning "providence" or "abode" rather than the name of the goddess, but their efforts have not been wholly convincing.

[Marvin H. Pope]

ANATHOTH (Heb. עֲנַתוֹת, עֲנַתָּת).

1. Levitical city in the territory of *Benjamin (Josh. 21:18; 1 Chron. 6:45; 7:8; Jer. 1:1; Neh. 11:32). It was the birthplace of two of David's "mighty men" (11 Sam. 23:27; 1 Chron. 11:28; 12:3). *Abiathar, one of David's two "priests to the king," owned an estate there, to which he was subsequently banished by Solomon (1 Kings 2:26). *Jeremiah was also "of the priests that were in Anathoth" and probably moved to Jerusalem only when his townsmen became dangerously hostile to him (Jer. 11:21). During the siege of Jerusalem by Nebuchadnezzar in 588–87 B.C.E., he purchased land in Anathoth from his uncle in order to preserve the family patrimony (cf. Lev. 25:25), thus demonstrating his faith in the eventual return of the Judeans to their land (Jer. 32:7ff.). Among the Jews who took advantage of *Cyrus' permission to settle in the province of Judah were 128 "men of Anathoth" (Ezra 2:23; Neh. 7:27). The location of Anathoth is mentioned in Isaiah (10:30) along with Gallim and Laish as being in the vicinity of Jerusalem. Josephus states (Ant. 10:144) that it was 20 *stadia* (2½ mi.) from Jerusalem. According to Eusebius (Onom. 26:27), it was 3 mi. (4.8 km.) north of Jerusalem. The name is preserved in the village of 'Ant, 2½ mi. (4 km.) north of Jerusalem. Ancient remains have been discovered on Ra's al-Harrba, a hill southwest of 'Ant. In 1968 'Ant had 1,260 Arab inhabitants, while in 2003 its population was 9,067. Its economy was based on the cultivation of olives, vineyards, field crops, and sheep breeding.

2. Settlement located in the Judean Hills, east of Mount Scopus. A group of Jews wishing to set up a secular settlement in the desert founded it in 1982. The population included people of various age groups, native Israelis as well as newcomers. Most worked in nearby Jerusalem. In 2004 the population of Anathoth included about 160 families.

[Michael Avi-Yonah / Shaked Gilboa (2nd ed.)]

ANATOLI, JACOB BEN ABBA MARI BEN SAMSON (13th century), physician, homilist, and translator. He married a daughter of Samuel ibn *Tibbon. Samuel taught him mathematics. At the suggestion of friends in Narbonne and Béziers, Anatoli began translating Arabic works on astronomy and logic into Hebrew. However, before completing them, he left France for Naples where he is mentioned in 1231. There Emperor Frederick II employed him as a physician and enabled him to devote himself to scholarly work. In Naples Anatoli became a close associate of another favorite of the emperor, the learned Michael Scot, who had translated works by Aristotle and Averroes from Arabic into Latin. It is doubtful that Anatoli assisted Scot in his translations, as some scholars maintain. Anatoli translated the following works: (1) Averroes' *Intermediate Commentary* on the first five books of Aristotle's *Logic*. The first three books were translated into

Latin by Jacob Mantino from Anatoli's Hebrew translation and printed, together with other works by Averroes, in the editions published between 1550 and 1553; (2) the *Almagest* of Ptolemy; (3) the astronomical work of al-Farghāni, its full title in later manuscripts being *The Elements of Astronomy*. This book was translated by Anatoli from a Latin version but was corrected on the basis of the original Arabic text. Specimens of this translation were published by Campani (RSO, 3 (1910), 205–52); (4) the *Compendium of the Almagest* by Averroes. This translation was begun in Naples in 1231. According to a note in the Vienna manuscript no. 195, 1, the work was completed in Padua, and it is not clear whether this was by Anatoli or by someone else. Other translations have been erroneously ascribed to Anatoli.

Anatoli was also an active preacher. In his discourses, he employed allegorical and philosophical exegesis. Generally, he followed Maimonides, and his sharp public rebuke of the latter's detractors made him many enemies. This was, probably, one of the reasons which caused him to leave France. In Naples he also encountered opposition. Anatoli collected his homilies in a book which he called *Malmad ha-Talmidim* (Lyck, 1866, "A Goad to Scholars"), which follows the order of the weekly scriptural portions. The work argues that observance of the commandments must rest on knowledge of the reasons underlying them and on an adequate understanding of the biblical texts as well as of the prayers. The author sharply castigates the superficial reader of the Bible and endeavors both to demonstrate the ethical value of the biblical stories and to disclose the hidden philosophical truth which, in his opinion, is inherent in the language of Scripture. Yet his sermons also contain practical admonitions. For example, he reproaches those who, like the non-Jews, permit their daughters to sing love songs, and those who indulge in incantations to obtain answers to various questions in dreams. He was an enemy of superstition and of outward piety. He quotes thinkers such as Plato, Aristotle, and Averroes. He also refers to the Vulgate and cites the biblical interpretations of such contemporaries as Michael Scot and Emperor Frederick II.

Anatoli contributed greatly to the dissemination of philosophical knowledge among the Jews of Italy. The *Malmad ha-Talmidim* was widely read in the 13th century; parts of it are quoted almost verbatim in the works of Zerahiah b. Isaac Gracian and *Immanuel of Rome. It was also well-known beyond Italy. When Solomon b. Abraham *Adret issued his famous ban against philosophy and philosophers, he named *Malmad ha-Talmidim* as a dangerous work which should be proscribed. Some scholars also attribute *Ru'ah Hen*, an introduction to Maimonides' *Guide*, to Anatoli. However, according to one manuscript, the author was Anatoli's son, Anatolio, also a philosopher and disciple of Maimonides. Anatolio was the teacher of R. Moses b. Solomon of Salerno, the commentator on the *Guide*. R. Moses often mentions Anatolio in his commentary. One manuscript of *Ru'ah Hen* was transcribed by a grandson of Anatoli, who refers to himself as "Jacob b. Samson b. Anatoli b. Jacob, author of *Malmad ha-Talmidim*."

[Umberto (Moses David) Cassuto]

ANATOLI BEN JOSEPH (late 12th and early 13th century), *dayyan* at Alexandria. Apparently from Lunel in Languedoc, he was one of the European scholars who settled in Alexandria in the days of *Maimonides. Toward the end of his life he lived in Fostat (now Cairo). He was apparently the uncle of *Abraham b. Nathan ha-Yarḥi, author of *Ha-Manhig* (ed. Warsaw, (1885), 90b, no. 156). Anatoli was widely renowned as a halakhist, communities from various countries turning to him with halakhic problems and requesting his assistance in different matters. When, on one occasion, the Jews of Syracuse submitted a problem to him, he was unwilling to answer himself and asked Maimonides to decide the issue. Maimonides' reply shows the high esteem in which he held Anatoli (*Responsa*, ed. by J. Blau, 2 (1960), 620–3). Anatoli's *Iggeret Mehallelim* ("The Epistle of Those who Praise"), addressed to Maimonides, expresses his great desire for knowledge and to be in close contact with him (*Hemdah Genuzah*, ed. Z.H. Edelman, 1856, 1, 23a–24a). He also corresponded on halakhic subjects with Maimonides' son Abraham who addressed him as "the illustrious *dayyan*, our teacher and master, the eminent Anatoli" (*Responsa*, ed. by A. Freimann (1937), 161–72). Several *piyyutim* and *seliḥot* are ascribed to him and he also wrote secular poems, including wine songs (see Anatoli's *Mikhtamim al ha-Yayin*, ed. A.M. Habermann, 1940). His *Diwan* is extant in manuscript in the Firkovitch Collection in Leningrad.

[Yehoshua Horowitz]

ANATOMY. There is no systematic account of the anatomy of the human body in the Bible, although abundant use is made there of anatomical facts, metaphors, and expressions. Biblical anatomy is factual, empirical in the good sense of the word, and based on correct observation. Talmudic anatomy is inestimably richer; it is not free from fanciful distortions, but it reaches further and supplants the Greek theory of the "humors" with a rational explanation of the normal and pathological structure of the body. The details are sometimes astonishing in their accuracy, as in the description of the small cartilage rings in the structure of the trachea, discovered by Western anatomists only in the 18th century. At the same time, talmudic anatomy is deficient by omission, apparently because the subject was not studied systematically but only incidentally as far as it was necessary for the solving of halakhic problems.

Side by side with fanciful notions, there are to be found in the Talmud the beginnings of a scientific method using postmortem examination and dissection of the bodies of animals. Like Greek anatomy, talmudic anatomy shows lack of precision in terminology, which is sometimes expressed through analogy and figures of speech. Graphic illustration is also lacking, since drawing was introduced in the study of anatomy only during the period approaching the Renaissance.

As in all ancient anatomical works, numerous terms are cited in the Bible for the bones: the lower part of the spinal column is called *aẓeh* (Lev. 3:9); the upper part of the pelvis *kesalim*; the loins are given a plural (*ibid.* 3:4), in accordance with their dual structure; the upper (cervical) part of the spinal column is described as *mafretet* (1 Sam. 4:18) with its anatomical location, explaining the sudden death resulting from its fracture. Joints mentioned are the *berekh* ("knee"); *karsol* ("ankle," "malleolus"; Ps. 18:37; 11 Sam. 22:37); the term *kaf ha-yarekh* ("the hollow of the thigh") and its topographical connection with the *gid ha-nasheh* ("sinew of the thigh"; Gen. 32:33) have not been sufficiently defined. The term thigh entered Vesalius' *Tabulae Anatomicae* (Table 5), where it is labeled as the *yarekh*, femur, and also *paḥad ha-yarekh* (Table 6, according to Job 40:17). Even in Vesalius' time it was felt that the biblical word *yarekh* was used in various meanings and was not altogether clear.

The Bible makes frequent mention of internal organs of the body such as the pharynx (*lo'ā*), the gullet (*garon*), the heart (*lev*), the liver (*kaved*) with the gallbladder (*marah*), the womb (*reḥem*), the stomach (*kevah*), the entrails (*me'ayim*), and the kidneys (*kelayot*). The *yoteret ha-kaved* or *ha-yoteret al ha-kaved* (in connection with the liver) is difficult to identify (Lev. 3:4), although the reference is probably to the mesentery, called by Tobias *Cohn the Physician "the covering membrane." The *gidim* ("sinews") in the Bible, as in Greek anatomy, denote both nerves and ligaments and sometimes even vessels. The *gid ha-nasheh* ("nerve of the thigh") is usually identified with the ischiadic nerve. The muscles are recognized as the parts furnishing power and movement: "his strength is in the muscles of his belly" (Job 40:16).

Talmudic scholars were much occupied with the regulations concerning ritually unclean meat, with physical disfigurement that disqualified a man for the priesthood, and with rules concerning the menstruous woman, defilement, and the like. This accounts for the anatomical knowledge so widespread among talmudists. The dissection of animal carcasses to ascertain their ritual fitness revealed important facts and prevented the development of fantastic notions. The Talmud even assumes the possibility of the investigation of the human body for forensic purposes (Ḥul. 11a). In *Bekhorot* 45a, Samuel relates that "the disciples of R. Ishmael boiled the corpse of a prostitute who had been condemned by the king to be burned; upon examination, they found that she had 252 [bones]." This investigation was carried out in order to ascertain the number of bones in the human body, since the remains of corpses defile an abode only if they constitute more than half the skel-

eton, i.e., most of the bones. The sages carried out the examinations themselves or relied on the testimony of a qualified physician (cf. Tosef. Oho. 4:2; Naz. 52a, “Todos the physician entered and all the physicians with him”).

The Skeleton

The enumeration of 248 (רמ"ח) members (bones) in the human body is famous in rabbinic tradition (Oho. 1:8). This number does not correspond to the number of bones in the body of an adult, which amounts only to 200. From the number counted by Ishmael's pupils it may be inferred that the body they examined was that of a girl of 17. Supporting this explanation is the figure “six [members] of the key of the heart,” i.e., the breastbone (sternum), of which there is only a single unit in an adult but which contains six points of ossification. The term “key of the heart” is to be explained by the inclusion of the two superior ribs in the morphological description of the breastbone: these two superior ribs are shorter and rounder, and their junction with the breastbone actually resembles a key. Accordingly, the rabbis of the Mishnah enumerate only 11 ribs instead of 12, the upper being already included in the “key of the heart.” The figure 248 for the number of bones in the body also occurs in the writings of Abu-l-Qasim, the famous surgeon of the tenth century. It would seem that in this detail the Arabs were influenced by the Talmud rather than by the Greeks, since Hippocrates cites figures which are widely inaccurate (101, including the nails), while Galen gives no figure at all. The nomenclature of the bones in the Talmud is precise in its anatomical differentiation. The Mishnah distinguishes between the foot (*pissat ha-regel*), the leg (*shok*), and the thigh or thighbone (*yarekh, kulit*). Corresponding to these are three joints by which the bones are joined to each other: the ankle (*karsol*), the knee joint (*arkuvah*), and the hip joint (*katlit*). Besides these precise anatomical details, mention is also made of the legendary bone known as the *luz* (the medieval *os resurrectionis*) said to be situated at the bottom of the spinal column. According to the legend, it could not be dissolved in water or burned by fire, “and from it man will blossom forth at the resurrection” (Eccles. R. 12:5, no. 1; Gen. R. 28:3).

The Digestive Organs

A remarkable passage is that which compares the salivary glands to springs of water and refers to them as “the conduit (*ammat ha-mayim*) that passes beneath the tongue” (Lev. R. 16:4). This is most interesting in view of the fact that the ducts of the salivary glands were not described with precision in scientific literature until the 16th and 17th centuries. The tongue (*lashon*) is described as enclosed by two walls – the jawbone (*leset*) and the flesh of the cheek (*lehi*; Ar. 15b). The topography of the windpipe (*kaneh*) and the esophagus (*veshet*) is described correctly (“lest the food enter the windpipe before it reaches the esophagus” – Ta’an. 5b; Pes. 108a). In the esophagus two membranes were accurately distinguished: the outer or red muscular membrane, and the inner or white mucous one (Hul. 43a). Many structural details of the maw of the ruminants were also known to talmudists (Hul. 3:1). The digestive

tract of the human being is described in a pseudo-scientific manner: “Ten organs minister to the body in the following phases of food absorption: from the mouth to the esophagus; from there to the first stomach where the food is ground; from there to the lower digestive tract of the maw; from there to the stomach; from there to the small intestine; from there to the *colon ascendens*; from there to the *colon transversum*; from there to the *colon descendens*; from there to the anus, and thence outward.” This defective account, which is to be found in several midrashic versions (Lev R. 3:4; Eccles. R. 7:19, no. 3; et al.), is patently influenced by findings in animals. The liver was regarded as one of the ruling parts of the human body (Zohar, IV, 153a), the other two being the brain and the heart. The *tarpesh* above the liver, according to Maimonides, designates the diaphragm. The *hazzar ha-kaved* (“courtyard of the liver”; Yoma 8:6) according to Preuss, is the part known as the *lobus caudatus* [?]. The *ezba ha-kaved* (“finger of the liver”; Tam. 4:3) is identified by J.L. Katzenelsohn as the pancreas, although that structure was unknown in ancient anatomy as a special organ. The spleen is described in its various parts (Hul. 93a), its convex side being called *dad ha-tehol* (“nipple of the spleen”). The membrane and the blood vessels of the *hilus lienalis* are also mentioned. The removal of the spleen by surgery is referred to in the Talmud (Sanh. 21b).

The Respiratory Organs

The upper part of the windpipe is called the *gargeret* (Hul. 3:1); the windpipe is composed of rings (*hulyot*), and sub-rings are also referred to, i.e., the ligaments joining the cartilage rings. There are descriptions of the ring cartilage called “the large ring,” of the thyroid cartilage, called the *kova* (“helmet”) together with its protruding part, *hud ha-kova* (“the point of the helmet”), and of its lower parts, *shippuei kova* (“the slopes of the helmet”). Identification was also made of the two small cartilages called *hitin* (“protuberances”) at the end of the large ring. (These cartilages were not discovered in the West before Santorini in the 18th century.) The talmudists also correctly recognized the existence of three lobes in the right lung and two in the left. (Hippocrates enumerated three on each side.) They also described the serous membranes of the lung and of the bronchial tubes.

The Heart

The Talmud contains few details on the anatomy of the heart, since a wound in the heart generally caused the death of the animal before slaughtering. The position of the heart is given as on the left side of the body (Men. 36b), in contrast to Galen's statement that it was in the exact center of the chest. The heart is divided into chambers (Hul. 45b), but there is no trace of Aristotle's erroneous view, supported by Avicenna, of the existence of three chambers in the heart. The aorta is mentioned under the name of *keneh ha-lev* (“pipe of the heart”) in *Hullin* 45b, and Maimonides adds *mizrak gadol* (“the aorta is the great fountain”). The two auricles are mentioned in *Tikkunei Zohar* (69): “There are two houses (*battim*) and two ears (*udenin*) in the heart.”

The Genital Organs

IN THE MALE. The special terms for the *membrum virile* are *eiver* (BM 84a), *ezba* (Pes. 112b), *gid*, *ammah* (Shab. 108b), *shammash* (Nid. 60b), etc. The term *atarah* (“crown”) designating the part projecting behind the glans of the penis passed to Western anatomy as *corona glandis*. The (erroneous) view that “there are two ducts in the male, one to emit urine and the other semen, separated by a thin tissue” (Bek. 44b) was widely held in the Middle Ages, also among the Arabs, and was corrected only in the 16th century by Vesalius. The rabbis described the two membranes of the testicles (Hul. 45a) and the *vas deferens* (*hutei beizah*; Yev. 75b) and knew of the connection between erection of the penis (*kishui*) and the spinal cord, where disease prevents cohabitation.

IN THE FEMALE. Because of their attention to regulations concerning the menstruous woman, the talmudic scholars treated the female genitalia much more extensively. The language they used (for reasons of propriety) to designate them frequently causes great difficulty in understanding the anatomical details referred to. The Mishnah (Nid. 2:5) lists the chamber (*heder*), antechamber (*perozedor*), upper chamber (*aliyyah*), and fallopian tube (*adnexa*). “The blood of the chamber defiles (the blood of the upper does not); that found in the antechamber defiles on account of uncertainty, since it is strongly probable that it comes from the source (uterus).” The *Gemara* (Nid. 17b) explains: “The chamber is within and the antechamber without, and the upper chamber is built over both and there is an open passage (*lul*) between the upper chamber and the antechamber; consequently, from the *lul* inward the blood in case of doubt (*sefeko*) is defiling; from the *lul* outward, it is in a state of purity.” Ever since modern medical historiography came into existence, scholars have struggled to explain these *halakhot*. Abraham Hartog Israel identifies the “upper chamber” with the fallopian tube; Rosenbaum (see bibl.) identifies it with the *adnexa uteri* and the broad ligaments. Leibowitz’ identification is that the “chamber” is the womb; the “antechamber” is the part nearest the cervix. But Preuss holds that the “antechamber” is the exterior portion of the female genitalia (*vulva*); the “upper chamber” is the vagina, which in present day Hebrew is called *nartik*. This conjecture is irreconcilable with the talmudic passage as a whole, since the *vulva* everywhere in the Talmud is called *bet ha-toref*, *bet ha-setarim*, *bet ha-hizon* (exterior chamber; hidden chamber; outer chamber), which also includes the *labia*. Katzenelson would identify the parts of the “antechamber” with the *septum vesico-vaginale* and the *septum recto-vaginale*. Nor is it at all clear what is meant by the term *lul*; it is perhaps to be identified with the cavity in the upper vagina: “from the *lul* inward” denotes the upper parts near the cervix; “from the *lul* outward,” the lower parts of the vagina. In the anatomy of the female genitalia there is a place called in the Jerusalem Talmud *bein ha-shinnayim* (“between the teeth”) or *bet ha-shinnayim* (“abode of the teeth”), which Rosenbaum identifies as

the *collum*; Rashi says “within the womb are fleshy protuberances like teeth.”

Other Organs

The Talmud does not deal much with the normal anatomy of the kidneys, but gives numerous accounts of kidney diseases. It contains descriptions of the membranes of the kidney, and refers to *hilus renalis* as *hariz* (Hul. 55b). It describes the outer and inner membranes (meninges) of the brain and recognizes the existence of motor centers in the spinal column. The Talmud records examinations of the spinal cord and of injuries to its membranes and marrow (Hul. 45b); it describes various kinds of morbid changes in the tissue and important details in its pathology such as softening (*ham-rakhah*), dissolution (*hamsasah*), and softening (*hitmazmezut*) of the marrow; and mentions the fontanel: “the place where an infant’s brain is soft” (*rofes*; Men. 37a). It recognized two hemispheres of the cerebellum over the large aperture at the base of the cranium “like two beans (*polim*) lying at the aperture of the cranium” (Hul. 45a–b). These are also described by R. Jeremiah in the case of a fowl: “He examined a fowl and found objects resembling two beans placed at the aperture of the cranium” – a fine example of comparative anatomy.

Middle Ages

In the Middle Ages and the Renaissance period, the Jewish physicians shared the anatomical opinions of their neighbors. Vesalius was, however, assisted in his work of the compilation of his Anatomical Tables in the 16th century by the Jew Lazarus (Lazaro) de *Frigeis. The reluctance of Jews to submit bodies for dissection led to complications and ill-feeling in the universities (e.g., at *Padua in the 17th–18th centuries; Eastern Europe in the 20th). The most outstanding Jewish physician of the Renaissance was *Amatus Lusitanus, who in the 16th century participated in the teaching of anatomy at the university at Ferrara. He first described the valves of the veins, exemplified on the azygos vein. Lusitanus identified these valves through opening 12 bodies, although he did not show their connection with the circulation of the blood.

Modern

Outstanding in the modern study of anatomy was Friedrich Gustav Jacob *Henle (1809–1885) who did important research on the skin, the intestinal tract, and the kidneys. Another important figure was Benedict *Stilling (1810–1879) who did pioneer research on the spinal cord.

[Joshua O. Leibowitz]

ANAU (*Anav*; Heb. מִן הַעֲנַיִים), ancient Italian family. Most of its members lived in Rome, although some moved to other towns in Italy. According to family tradition, the Anaus were descended from one of four aristocratic families of Jerusalem whom Titus brought from Jerusalem to Rome after the destruction of the Temple. It is the first Jewish family living in Rome to be known by a surname, which is found also in the Italian forms Delli Mansi, Delli Piatelli, or Umano. Branches of the Anau family are the ancient Roman Bozecco family, and the Min ha-Keneset (מִן הַכְּנֶסֶת) or Mi-Bet El (מִבֵּית אֵל; De Synagoga) families. The well-known Tuscan families of Da Pisa, Da San Miniato, and Da Tivoli who engaged in loan banking toward the end of the 14th century were also offshoots of the Anau family. The accompanying genealogical chart indicates the main ramifications of the family and its most distinguished members between the 9th and 14th centuries.

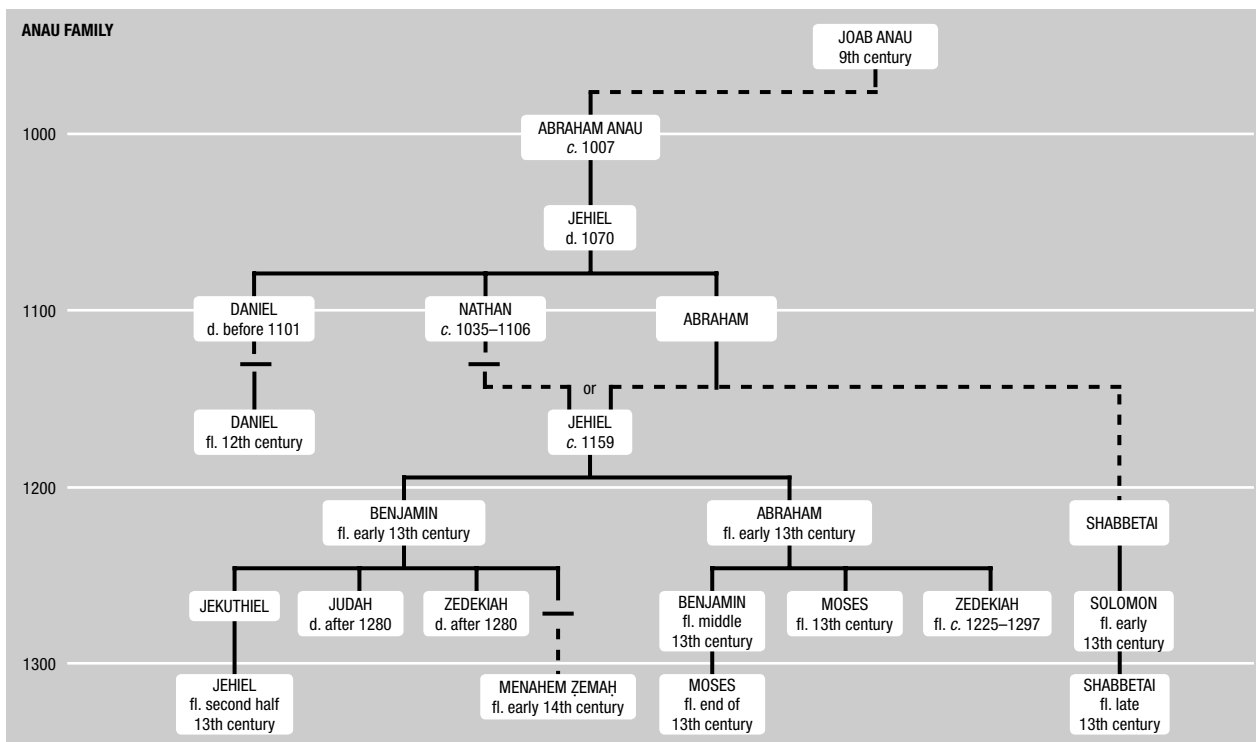

Especially noteworthy was JEHIEL B. ABRAHAM (d. 1070), head of the yeshivah of Rome and liturgical poet. The most important of his sons, *NATHAN B. JEHIEL, was author of the *Arukh*. Jehiel's other two sons were DANIEL BEN JEHIEL (d. before 1101), teacher in the yeshivah of Rome, liturgical poet, and commentator on the Mishnah, and ABRAHAM BEN JEHIEL, teacher in the yeshivah of Rome. He founded a synagogue in Rome in 1101 with his brother Nathan. DANIEL (12th century), rabbi, is mentioned by *Benjamin of Tudela (c. 1159) as a leader of the Jewish community of Rome. JEHIEL, a nephew or grandson of Nathan B. Jehiel, is described by Benjamin of Tudela as a leader of the community and major domo of Pope Alexander III. BENJAMIN and ABRAHAM BEN JEHIEL (beginning of the 13th century) were both physicians

and talmudists. JUDAH B. BENJAMIN *ANAV (d. after 1280) was a talmudist and liturgical poet. One of the most eminent members of the family was BENJAMIN B. ABRAHAM *ANAV (mid-13th century), scholar and poet, one of the most versatile scholars of his day. MOSES BEN ABRAHAM, liturgical poet, wrote two *seliḥot* expressing his consternation at the condemnation of the Talmud (1240). His younger brother ZEDEKIAH B. ABRAHAM *ANAV (1225–1297), a noted talmudist, was author of the halakhic compendium, *Shibbolei ha-Leket*. JEHIEL B. JEKUTHIEL *ANAV (second half of the 13th century), liturgical poet, ethical writer, and copyist, was author of the popular ethical work *Beit Middot* (later published as *Ma'alat ha-Middot*). Significant members of the family in later generations included ABRAHAM BEN JACOB ANAV (18th century), poet and rabbi in Rome, and PHINEHAS HAI *ANAU (known as Felice Umano; 1693–1768), rabbi in Ferrara. SALVATORE was active in the Italian Risorgimento and a member of the provisional government at Ferrara in 1848 and a year later in Rome.

[Attilio Milano]

ANAU (Piattelli), PHINEHAS HAI BEN MENAHEM (1693–1768), rabbi in Ferrara. A member of the *Anau family, he was also known as Felice Umano. He was a pupil at the yeshivah of Isaac *Lampronti, and brother-in-law of Jacob Daniel *Olmo. An extremely fierce dispute among the rabbis in Ferrara was sparked off in 1715 when Isaac Lampronti published in Venice a periodical containing the halakhic rulings of his pupils. The second number, entitled *Tosefet Bik-*

kurei Kazir, included a ruling by Anau deciding in favor of the Ashkenazi custom of stressing the words of the Priestly Blessing on the last syllable and against the view of Nehemiah ha-Kohen and his followers who wished to stress the words on the penultimate syllable. Nehemiah regarded this ruling as a personal insult and complained about Anau to Mordecai Zahalon. The latter, who refused to recognize Isaac Lampronti as chief rabbi of Ferrara, came to the defense of Nehemiah in his work *Meziz u-Meliz* (Venice, 1715) which deploded the insult to Nehemiah and denigrated all those rabbis, including Lampronti, who supported Phinehas Hai Anau's ruling. Anau wrote *Givat Pinhas*, a collection of responsa which has remained in manuscript. Some of his responsa were published in the book *Paḥad Yizhak* of Isaac Lampronti.

[Abraham David]

ANAV, BENJAMIN BEN ABRAHAM (c. 1215–c. 1295), Italian scholar and poet. Anav's teachers included the poet Meir b. Moses of Rome, and Joab, Daniel, and Isaac of Camerino. His main interest was in *halakhah*, but he had a thorough knowledge of mathematics and astronomy, and was among the most esteemed liturgical poets of his age. The bulk of his poetry, which he began writing in 1239, is still in manuscript. The part that has been published reveals him as a poet sensitive to the events of his time and to the suffering of his people, which he mourns in his many *seliḥot*. The themes of his poetry are historical. Thus, he wrote *kinot* when the apostate Nicholas *Donin made his onslaught on the Talmud (1239); when the Talmud was burned in Italy (1244); when the scrolls of the Torah were torn and the Jews compelled to wear the *badge of shame on their clothing (1257); and when the Jewish cemetery in Rome was desecrated (1267). Many of his *kinot* and *seliḥot* were included in the *maḥzor* of the Italian rite.

His works include *Massa Gei Hizzayon* – a satire in sprightly rhymed prose on the arrogance of the wealthy and noble which reflects the life of the affluent Jewish families in his city, Rome (Riva di Trento, 1560; repr. 1860, 1967); *Perush Alfabetin* (“Alphabetical Commentary”), on the Aramaic *piyutim* for the Feast of Weeks (**Akdmut*) – the commentary reveals the poet's knowledge of Italian, Latin, Greek, and Arabic; *Sefer Yedidut* – a book of legal decisions, which has been lost; *Sha'arei Ez Hayyim* – a lyrical composition on morals and good character, in 63 stanzas (Prague, 1598; and in *Kobez al Jad* (1884), 71–74; the poem was also included in Moses b. Jekuthiel de Rossi's *Sefer ha-Tadir*); notes on *Rashi's commentary to the Torah; rules on making a calendar; responsa to R. Avigdor b. Elijah Ha-Kohen: a prayer book, which included laws of ritual slaughter, and which has been lost; *Sod* or *Seder ha-Ibbur* (on intercalation), written between the years 1276 and

1294, found in various manuscripts of the *maḥzor* according to the Roman rite; and glosses on the commentary of Solomon b. Shabbetai Anav and on the *She'iltot* of R. *Aḥa.

[Yonah David]

ANAV, JEHIEL BEN JEKUTHIEL BEN BENJAMIN HA-ROFE (second half of 13th century), author, copyist, and *paytan*; a member of the Anau family of Rome. Little is known of his life. He was the author of a significant work, first published at Constantinople (1512) under the title of *Beit Middot* and later in a different version at Cremona (1556) under the title of *Ma'alot ha-Middot*, on which subsequent editions were based. The book, dealing with 24 “steps” with ethical conduct, is based on talmudic, midrashic, and other sources. It begins and ends with a poem. The work enjoyed great popularity (nearly 40 manuscripts are extant). It was often reissued and was translated into Ladino. Entire chapters of it were included by Jacob *Emden in his *Migdal Oz* (1748). In 1968 the work was republished from a manuscript written in 1287 by the author. Jehiel also wrote *Hilkhot Sheḥitah* on the laws of ritual slaughter (in manuscript).

Some manuscripts which Jehiel copied have been preserved. The number of errors which they contain is not at all surprising in view of the great speed at which he worked. The only complete extant manuscript of the Jerusalem Talmud, now in the Leiden Library, from which the 1523–24 Venice edition was published, was copied by him in 1289. He completed the orders of *Nashim* and *Nezikin* in a month and 12 days. This manuscript has proved of great importance for research into the text of the Jerusalem Talmud. It contains his own notes and emendations, as do other manuscripts which he copied (in some instances he inserted various annotations into the text itself). His share, if any, in *Tanya Rabbati* (Mantua, 1514) has not been convincingly demonstrated, and there are divergent views on this score. There are also differences of opinion concerning the similarity between large sections of this work and the *Shibbolei ha-Leket*, written by his relative Zedekiah b. Abraham *Anav. There are two principal views on this subject. S.H. Kook maintains that *Tanya Rabbati* is the first edition of *Shibbolei ha-Leket*, which Jehiel copied and into which he inserted his own notes and incorporated passages from a later edition of the *Shibbolei ha-Leket* as known today. S.K. Mirsky regards Jehiel as the author of *Tanya Rabbati* and attributes the similarities in the two works to the fact that both Jehiel and Zedekiah received the teachings of Jehiel's uncle, Judah b. Benjamin Anav. In addition to the poems mentioned above, Jehiel wrote another at the end of the Jerusalem Talmud man-

uscript and a *kinah* on the destruction of a synagogue and of 21 Torah scrolls in a fire that broke out in Trastevere, Rome, in 1268 (*Kobez al Jad*, 4 pt. 2 (1888), 26, 29 ff.). Other *piyyutim* are ascribed to him (see Davidson, *Ozar*, 4 (1933), 409).

[Shlomoh Zalman Havlin]

ANAV, JUDAH BEN BENJAMIN HA-ROFE (13th century), author, copyist, and *paytan*; member of the *Anau family of Rome. He was also known as Judah Ya'aleh (initial letters of *Yehudah Anav le-Mishpahat ha-Anavim*, an allusion to Judg. 1:2). Of his personal life, little is known. He studied under Meir b. Moses of Rome and may be approximately dated by means of a Ms. (Paris 312; of the *Hilkhot ha-Rif* on *Seder Moed*), copied by him in 1247, and from a *piyyut*, “*El Mi Anusah le-Ezrah*,” written by his cousin and pupil, Benjamin b. Abraham, in 1239, occasioned by Nicholas *Donin’s denunciation of the Talmud. In 1280 he completed his work on the laws of ritual slaughter with special reference to the customs of Rome and fixed the formula of a *get* (“bill of divorce”) for Rome. He was apparently the initiator of the communal synod in the same year (Ms. Hamburg 193, Ms. Oxford 633).

Among his works are a commentary on the tractate of *Shekalim* (published in the Vilna ed. of the Talmud), and on the *Hilkhot ha-Rif* of Isaac *Alfasi (H.J.D. Azulai saw a manuscript of this latter commentary which covered most of Alfasi’s work). The only extant manuscripts, however, are on *Berakhot*, *Seder Mo'ed*, *Yevamot*, *Hullin*, and on *Hilkhot Tumah*, *Sefer Torah*, *Mezuzah*, *Tefillin*, and *Zizit*. The only ones published are those on *Pesahim* (1955), *Sukkah* (in: M. Herschler (ed.), *Ginzei Rishonim*, 1962), *Rosh Ha-Shanah*, *Yoma*, *Taanit* ((1963); also in *Sefer Yovel I. Elfenbein*, 1963), and *Berakhot* (1967). His work on the laws of ritual slaughter (*Hilkhot Shehitah*) has been published in the introduction to *Shibbolei ha-Leket* (ed. by S.K. Mirsky (1966), 50–74). He also completed Solomon b. Shabbetai Anav’s commentary on Aḥa of Shabḥa’s *She'iltot* (from “*Ki Tavo*” onward; *She'iltot*, ed. S.K. Mirsky, 1 (1960), 38–9). His halakhic questions addressed to Avigdor b. Elijah of Vienna and the latter’s replies are quoted in *Shibbolei ha-Leket*, written by his cousin and most outstanding pupil Zedekiah b. Abraham, and containing much of his teachings. He is not the author of *Tanya Rabbati* as some erroneously contend but the work was influenced by his writings. Of Judah’s *piyyutim*, a *zulat* to *parashat “Shekalim”* is extant.

[Shlomoh Zalman Havlin]

ANAV, ZEDEKIAH BEN ABRAHAM (13th century), Italian talmudist; author of the compendium, *Shibbolei ha-Leket* (“The Gleaned Ears”), which can perhaps be considered the first attempt in Italy at the codification of Jewish law. Although Zedekiah’s exact dates are unknown, he was alive at the time of the burning of the Talmud in Paris, which he describes as having taken place in 1244 (*Shibbolei ha-Leket*, 263), although most historians place the event in 1242. At the time he wrote, Zedekiah lived in Rome, as is obvious from the many references to “the custom here in Rome.” He received some of his education in Germany, where he was a pupil of Jacob of Wurzburg. He also may have studied for a time with *Meir b. Baruch of Rothenburg.

The *Shibbolei ha-Leket* is a major halakhic compendium on the liturgy (with copious explanations of individual prayers, and a complete commentary on the Passover *Haggadah* and the laws regarding the Sabbath, holidays, and fasts). The work is extant in several manuscripts, with only minor variant readings. A comprehensive edition, containing sections on the laws of circumcision, *tefillin*, mourning, and ritually unclean food as found in the various manuscripts (but lacking in source references and notes), was first published by S. Buber in 1886. The first volume of a new critical edition by S. Mirsky, based on a 1260 manuscript in the Sassoon collection, appeared in 1966. A second work by Zedekiah, mistakenly thought by some to be a continuation of the first, is the *Sefer Issur ve-Hetter* (“Book of Prohibitions and Permissions”). Only 136 of its 173 chapters were published in a mimeographed edition from a deficient manuscript (Segullah, Jerusalem). This work deals with the dietary laws and with the laws of oaths, marriage and divorce, menstruating women, judges and witnesses, commerce (including partnership, loans, and usury), and inheritance.

Zedekiah’s method is to state a particular case (or problem) and to cite the authorities, both ancient and contemporary, who have dealt with it. He then proceeds to discuss their points of view and, when required, refers to the talmudic source, often quoting novel interpretations. Only rarely does he give his own explanations and hardly ever does he render a decision. The two works are of great importance both in themselves and as sources of earlier material. Zedekiah quotes with equal facility from both the Occidental and the Oriental schools, citing more than 230 authorities by name in addition to references to the *geonim* and to anonymous sources. He cites in particular the decisions of *Isaiah b. Mali di Trani and the responsa of Avigdor b. Elijah.

The *Shibbolei ha-Leket* is arranged in 13 *arugot* (“rows”), i.e., sections, and 372 *shibbolim* (“ears”), i.e., chapters. *Sefer Issur ve-Hetter* is arranged straightforwardly in 173 chapters divided into several sections, some of which are introduced by poems usually bearing the author’s name in acrostic as does

the whole work. A shortened version of the *Shibbolei ha-Leket* was first printed in Venice in 1546 and achieved great popularity. There were at least two other abbreviated versions of the work, which was also plagiarized under the name of *Tanya Rabbati* (see *Anav, Jehiel b. Jekuthiel).

According to Hayyim Joseph David Azulai, Zedekiah also wrote notes to Isaiah di Trani's commentary to the Pentateuch. *Immanuel of Rome puts Zedekiah and his three sons among the prominent scholars and saints whom he meets in Paradise (canto 28, ed. D. Jarden, 2, 1957) and also addresses a dirge to him (canto 24) mourning the death of two of his sons within a month.

[Raphael Posner]

ANČERL, KAREL (1908–1973), conductor. He studied composition and conducting at the Prague Conservatory with J. Křička and A. Habá, and finally became a pupil of V. Talich and H. Scherchen. He conducted at the theater (1931–33), the Symphony Orchestra of Prague Radio (1933–39), and also performed in festivals abroad. Forbidden to work by the Nazis, Ančerl was sent to Theresienstadt, where he played as a violinist and conducted a camp orchestra. In 1944 he conducted the premiere of Pavel Hass's *Study* for string orchestra. In late 1944 he was transported to Auschwitz. He was the only member of his family to survive the concentration camps. After the war, he dedicated all his efforts to renewing the musical life of Prague. In 1945 he was appointed conductor at the opera, resumed his post at the Prague Radio Symphony Orchestra (1947–50), and held a post as professor at the Prague Academy (1948–51). He took over the directorship of the Czech Philharmonic Orchestra (1950–68) and in spite of the Communist constraints he restored its international fame. Ančerl received the State Prize (1958) and was named National Artist (1966). While he was conducting in Tanglewood, the Russians invaded Prague. Ančerl immigrated to Canada and took over the leadership of the Toronto Symphony Orchestra, a post he retained, despite ill health, until his death. He was held in great esteem for his idiomatic interpretations of music from his homeland and his remarkable insight into masterworks of the 20th century. He made many recordings, which reflect his concentration, reflection, intuition, and musical warmth.

ANCHEL, ROBERT (1880–1951), French historian. An archivist-paleographer, he worked from 1912 until 1940 in the Archives Nationales in his native Paris. His major work was

Crimes et châtements au XVIII^e siècle (1934). Anchel devoted much of his scholarly activity to Jewish history. His principal contributions are *Napoléon et les Juifs* (1928), *Notes sur les frais du culte juif de 1815 à 1831* (1928), and *Les Juifs de France* (1946), a fragmentary but useful work. An objective, scrupulous historian, Anchel's work is characterized by the painstaking precision of an archivist, accompanied by the broad perspective of a historian. His presentation, however, is sometimes influenced by his desire to demonstrate the antiquity of the Jewish settlement in France and its continuity from the Middle Ages until the contemporary period, sometimes on the basis of slender evidence.

[Georges Weill]

ANCIENT OF DAYS. The King James Version of the Bible rendered both *attik yomin* in Daniel 7:9 and *attik yomayya* in verses 13 and 22 by the phrase "the Ancient of days," i.e., with the definite article *the* and with a capital *A*, hence with the clear implication that this was an appellation or epithet of God (like, e.g., "the God of heaven" in Dan. 2:18, 19, etc.); just as it rendered *kevar enash* in Daniel 7:13 by the phrase "one like the *Son of man," likewise with a capital letter preceded by the definite article, with the clear implication that the reference was to "the Son of man" of the Gospels, i.e., Jesus. All revisions of the King James Version, however – the Revised Version, the American Standard Version, and the Revised Standard Version (see *Bible Translations, English) – have recognized that this is precluded not only by the context but also by the very grammar of biblical *Aramaic and have consequently rendered *attiq yomin* in Daniel 7:9 by "one that was ancient of days"; *attiq yomayya* in Daniel 7:13, 22 by "the ancient of days" but without a capital *a* – *the* in this case meaning not "the well-known" but "the aforementioned" – and *kevar enash* in Daniel 7:13 by "one like unto a son of man" (with *a*, not *the*). For, of course, these expressions – exactly like "great beasts" in verse 3, "lion" and "eagle" in verse 4, "bear" in verse 5, etc. – do not purport to be designations of objective realities but only descriptions of figures seen in a dream. To be sure, the figures symbolize objective realities; and that the reality that corresponds to the figure of one of advanced age, with fleece white hair and snow white raiment, who sits on a throne of fire, surrounded by millions of attendants, and determines the fates of kingdoms and nations is God Himself, is so obvious that, unlike other features of the dream, it is not specifically interpreted in the second half of the chapter. One cannot, therefore, ask, "Why is God called the Ancient of Days in Daniel 7?" because He is not, but only, "Why is God represented in the vision of Daniel 7 by the figure of an ancient of days?" As for the explanation, no further one than His role there as the Lord of history is necessary, but an additional factor has been suggested. A vague recollection of a Canaanite tradition

has been surmised on the basis of one of the epithets of El, the head of the Ugaritic pantheon, namely, *mlk ab šnm*, which is commonly interpreted as “the King, Father of Years.” Such a connection would be possible, but not certain, even if the correctness of the rendering “Father of Years” for the Ugaritic *ab šnm* were certain. But in the first place, “years” is elsewhere in Ugaritic (as in Phoenician) not *šnm* but *šnt*; and in the second place, “father of” in the sense of “possessing” or “characterized by” is strictly an Arabic idiom. (That is why H.L. Ginsberg formerly translated “King Father Shunem,” guessing that El was identified with the God Shunem who is known from the Ugaritic ritual texts – which has its difficulties. So has another possible solution: that *šnm* in this title is a doublet of *nšm* “men, people,” so that *ab šnm* would be synonymous with El’s other epithet *ab adm* “Father of Man[kind].”)

That “ancient of days” is not an epithet of God in Daniel 7 does not constitute an objection to the liturgical use of it as such in English (in which it has a solemn and singularly beautiful ring), even if it probably is in large measure a result of the mistranslations of the King James Version cited above (see the Book of *Daniel).

[Harold Louis Ginsberg]

ANCONA (Marche), Adriatic seaport in Italy. According to Early Christian legends, the first bishop of Ancona was no less than the Great Rabbi of Jerusalem, who took the Christian name of Quincus after baptism. Jews were living near Ancona in 967. In that year a document attests that Peter, the archbishop of Ravenna, gave land in perpetual rent to the Jew Elishu, son of Justus. In the Codex De Rossi, dated to the tenth century, there is a reference to Nathan, son of Machir, son of Menahem of Ancona. It seems that there was already a synagogue in Ancona, destroyed in the earthquake of 1279, as the *paytan* Solomon ben Moses ben Yekutiel De Rossi of Rome wrote a *selihah* on the subject.

By about 1300, there was an organized Jewish community in the city on whose behalf the poet *Immanuel of Rome sent a letter to the Rome community intimating that as the Ancona community was in economic straits and suffered from persecution, it should not be subjected to heavy taxation (*Maḥberet* 24). Most of the Jews who settled in Ancona came from the Muslim East. Jews probably engaged in moneylending in Ancona in the first half of the 15th century. There were also many merchants engaged in maritime trade with the Eastern Mediterranean. In 1427 the Franciscan Giacomo della Marca, an enthusiastic disciple of *Bernardino da Siena, tried to force the Jews in Ancona to wear the Jewish *badge and to restrict Jewish residence to a single street. He was in part successful, as the city senate indeed passed restrictive measures. Around 1450 the Jewish population of Ancona numbered 500 persons,

representing 5% of the city’s population. Both in 1456 and 1488 Jews were accused of ritual murder.

The arrival of refugees from the Iberian Peninsula opened a new chapter in the history of the Ancona Jewish community. The first to arrive, in 1492, were refugees from *Sicily. They were joined in 1497 by refugees from Portugal, and after 1510 by others from the Kingdom of *Naples. An order to wear the badge was again issued in 1524, but was revoked four years later. Solomon *Molcho visited the community in 1529 and stimulated messianic enthusiasm there. The assumption by the papal legate of authority in Ancona in 1532 had mixed results for the community. As Ancona was declared a free port, many Jewish merchants took advantage of its excellent harbor facilities to trade with the Levant. At first mercantile interests prevailed in papal policy and Pope Paul III invited merchants from the Levant to settle there regardless of their religion. In 1541 he encouraged the settlement of Jews expelled from Naples and in 1547 extended the invitation to Marranos, whom he promised to protect against the Inquisition. *Julius III renewed these guarantees, and about 100 Portuguese Marrano families apparently settled in Ancona. Jews from Germany also arrived in this period. Thus, around 1550 the Jewish community numbered around 2,700 persons.

In 1555, however, *Paul IV began to institute anti-Jewish measures in the Papal States. The Papal *Bull of July 12, 1555, was implemented in full in Ancona. The Jews were segregated in a ghetto, built the following year, prohibited from owning real property, and restricted to trade in second-hand clothing. Papal opposition to the Marranos proved particularly implacable, and a legate was sent to Ancona to take proceedings against them. Some managed to escape to Pesaro, Ferrara, and other places, but 51 were arrested and tried. Twenty-five were burned at the stake between April and June 1555. The horrors of the tragedy, mourned throughout the Jewish world, inspired touching elegies, still recited locally on the Ninth of Av. The event moved Dona Gracia *Nasi to organize a boycott of Ancona. The boycott, however, caused dissension within Jewry, some rabbis supporting the action while others opposed it, fearing that the pope might retaliate against Jews living under his jurisdiction.

Still, the legal position of Ancona Jewry changed more than once during the second half of the 16th century. It temporarily improved under Pius IV, but again deteriorated under Pius V in 1567. Ancona was one of the cities in the Papal States (together with Rome and Avignon) from which the Jews were not expelled by the Pope in 1569, being tolerated because of their utility in the Levant trade; nevertheless many decided to leave. Some amelioration was afforded by the favorably disposed Sixtus V in 1586 and Ancona was again exempted when *Clement VIII renewed the decree of expulsion in 1593. However by the beginning of the 17th century, the Ancona community was reduced to a state of debility that lasted through two centuries. Any temporary improvement that occurred was prompted by economic considerations. It is interesting that in 1659, when Pope Alexander VII ordered the closing of shops

outside the ghetto, the city senate opposed him on the grounds that this would adversely affect the economic situation of the city. The decree was revoked. A local Purim was observed on Tevet 21 to commemorate the deliverance of the community from an earthquake that occurred on December 29, 1690.

In the 18th century the Ashkenazi community slowly began to emerge. The *Morpurgo family was the most important of the Ashkenazi families. In 1763 there were 1,290 Jews living in Ancona. As late as 1775 Pius VI again enforced all the most extreme anti-Jewish legislation.

During the occupation of Ancona by the army of *Napoleon between 1797 and 1799, the Jews were fully emancipated. The gates of the ghetto were removed, and two Jews, Ezechia and Salvatore Morpurgo, sat on the new municipal council, although the Jews, as well as the local population, were obliged to contribute heavy war levies. In 1814, after Napoleon's downfall, Ancona reverted to the Papal States, and in part the former discriminatory legislation was reimposed by Pope Leo XII. The revolutionary activity of 1831 resulted in the destruction of the gates of the ghetto. However, only in 1848 was obligatory residence in the ghetto abolished. Various Jews contributed to the Italian Risorgimento, such as David Almagià, Giuseppe Coen Cagli, and Pacifico Pacifici. Ancona Jews paid a high price for their participation in the Italian Risorgimento. In 1860 the pontifical general Lamoricière demolished the Levantine synagogue to punish the Jewish community. The Jews obtained complete civic rights in 1861, when Ancona was annexed to the Kingdom of Italy. After the unification the richest elements of the community took part in the municipal life of the city. In 1869 Gioacchino Terni was called upon to direct the Chamber of Commerce, and from 1924 to 1927, Mario Iona. The Jewish population of Ancona numbered approximately 1,600 in the 19th century.

The size of the community and its widespread connections attracted many noted rabbis and scholars throughout the centuries, including the humanist *Judah Messer Leon (15th century), the physician *Amatus Lusitanus, and Moses *Bassola (16th century), Mahalalel Hallelyah of Civitanova, Hezekiah Manoah Provenzal, Joseph Fermi (17th century), Samson *Morpurgo, Joseph Fiammetta (18th century), Jacob Shabbetai *Sinigaglia, Isaiah Raphael Azulai, David Abraham Vivanti, Isaac Raphael Tedeschi (19th century), and H. Rosenberg, who published several monographs on local history.

In 1938 there were 1,177 Jews in Ancona. During World War II, persecution was more individual than collective in character. The Germans, and eventually the Italian Fascists, demanded tributes to allow the Jews to live. In 1944 soldiers of the Jewish Brigade arrived in Ancona, and helped the community get back on its feet. In 1967, there were 400 Jews in Ancona. In 2004 the figure was around 200, with two synagogues in operation, the Levantine and the Italian, in the same building on Via Astagno. The original Levantine synagogue, originally erected in 1549 by Rabbi M. Bassola, was demolished in 1860, rebuilt in 1861 and inaugurated in 1876, utilizing elements of the previous synagogue.

[Attilio Milano / Samuel Rocca (2nd ed.)]

ANCONA (D'Ancona), Italian family whose members were active in the Italian Risorgimento. ALESSANDRO (1835–1914), patriot, philologist, and literary critic. Born into a wealthy Pisa family, Alessandro studied at Pisa University. In these early years he joined the liberal circles in Tuscany seeking the liberation and unification of Italy. In 1854 he wrote his first essay, on the philosophy of the political reformer Tommaso Campanella, which brought him to the attention of the Liberal Party in Tuscany. He joined the staff of two Pro-Risorgimento newspapers in Florence, the *Genio* and the *Spettatore Italiano*. In 1854–59, he went to Turin, ostensibly to study law. In fact he played an important role in the liberal movement, acting as a liaison between Cavour, prime minister of the Kingdom of Sardinia, and the Liberal Party of Tuscany. Ancona became friendly with the Tuscan patriot Farini, and in 1859, when Tuscany was annexed to the Kingdom of Sardinia, he assumed the post of secretary of the Second Army Corps of Central Italy. Between 1859 and 1860, he promoted the cause of the Italian nationalists as editor of the liberal newspaper, *La Nazione*.

In 1860, Ancona gave up politics for literary scholarship; through the efforts of his friend Salvagnuoli, he was appointed deputy-professor of Italian literature at the University of Pisa (1861). The official occupant of the chair was no less than the celebrated critic De Sanctis. Later on he received the Chair of Italian Literature, a post he held until 1900. He was also vice president and director of the Regia Scuola Normale Superiore of Pisa and a member of the Accademia Reale delle Scienze. In 1904 he became a member of the Italian Senate. A typical representative of the positivist trend in the study of Italian literature, Ancona made an important contribution to the study of medieval Italian literature as one of its first philologists. His philological research included the study of folklore material. He unearthed and edited many important documents and encouraged others to publish critical editions of 13th- and 14th-century texts. Ancona himself produced one of the most important anthologies of 13th-century Italian poetry, *Le antiche rime volgari, secondo la lezione del Codice Vaticano 3793* (1875). In *La poesia popolare italiana* (1878), he tried to prove that Italian poetry was developed mainly from popular verse. Other books dedicated to the early development of Italian popular literature were the *Canti del popolo reggino* (1881) and *Poemetti popolari italiani* (1889). In his attempt to trace the origin of medieval Italian prose tales, Ancona engaged in

comparative research that involved the whole of European literature. Examples of this pioneering work are his study of the motif of the *Wandering Jew *La leggenda dell' Ebreo errante* (in *saggi di letteratura popolare*, 1913) and his examination of the development of religious theater in medieval Italy, *Le sacre rappresentazioni dei secoli XIV, XV, e XVI* (1873), a collection of old mystery plays with notes and commentary, on which he based his *Origini del teatro in Italia* (3 vols., 1877, 1891²; 2 vols., 1966). It was in the second edition of the latter that he included a chapter on his important discoveries concerning the Jewish Renaissance Theater at Mantua (vol. 2, pp. 403–22 and 578–84). From his work published in the *Rivista Storica Mantovana* (1, p. 183) he revealed that there was at Mantua a company of Jewish actors who had won considerable fame in the 16th century and were obliged to play before the Dukes of Gonzaga between 1525 and 1597. About the same time, the playwright Leone (Judah) di *Sommo Portaleone was active. Ancona showed that at Venice, too, plays on Jewish themes and even one operetta were presented by Jews at intermittent periods between 1531 and 1607. Ancona surveyed the role and importance of Jews as actors and stage directors in the Italian Renaissance Theater. He also wrote many articles on Jewish literary personalities.

Ancona's contribution to the study of Italian literature includes his critical edition of Dante's *Vita Nuova* (1872) as well as the book *I precursori di Dante* (1874). His most important critical studies dedicated to individual Italian literary figures are those on the *Contrasto di Cielo d'Alcamo* (1884), the *Odi* of Giuseppe Parini (1884), and *Il Tesoro di Brunetto Latini* (1889).

Ancona founded the literary periodical *Rassegna bibliografica della letteratura italiana*, which he edited until 1912; his own articles appeared in leading scholarly journals.

His son PAOLO (1878–1964) was a celebrated art historian and educationalist. He was born in Pisa. In 1909 he was appointed professor of the history of medieval and modern art at the University of Milan. He was also a member of the Fine Arts Council of the Italian Ministry of Education. Among his publications are *Modigliani, Chagall, Soutine, Pascin, aspetti dell' expressionismo* (1952; Eng. translation, 1953); works on Italian miniature painting; and studies on the masters of the Italian Renaissance, including Piero della Francesca (1951) and Paolo Uccello (1959).

Alessandro's brother, SANSONE (1814–1894), born in Pisa, was an important journalist and politician in the Italian Risorgimento. In his youth, like his brother, he wrote for Tuscany's Liberal newspapers, the *Spettatore* and the *Nazione*. In 1859 he was appointed to the financial commission of the provisional government. He was chosen to write a report on the financial situation of the provisional government under the leadership of Ricasoli. Later, after the annexation, he was called upon by Cavour, the prime minister of the United Kingdom of Italy, to direct the "Department of Finances, Commerce, and Public Works" of Tuscany.

With two other Jews he sat in the parliament of united Italy in 1861, where he represented the moderate liberals, and in 1882 he was appointed a life member of the senate, on the floor of which he died in 1894.

His younger brother was the painter Vito d'*Ancona.

[Joseph Baruch Sermoneta / Samuel Rocca (2nd ed.)]

ANCONA, CESARE D' (1832–1901), Italian geologist. D'Ancona was born in Pisa and studied geology under Meneghini. He was appointed professor of paleontology at the University of Florence in 1874. D'Ancona reorganized the section of tertiary malacology of the Central Italian Collection of Paleontology over a period of several years, and as a result, the Italian Geological Committee asked him to prepare a comprehensive, systematic survey of the malacology of the Italian pliocene and early quaternary. This survey, the first since the early study of G.B. Brocchi in 1808, was published in 1871–73 and became the standard work on the subject. In 1894 d'Ancona published a paper on the evolution of the horse, which earned him election to the Italian Royal Geological Association. He was cofounder and secretary of the Italian Botanical Society. His major publications are: *Sulle Neritine fossile dei terreni terziari superiori dell' Italia centrale* (1889); *Malacologia pliocenica italiana* (in *Memorie per servire all' descrizione della carta geologica d'Italia*, 1 (1871), 305–63; 2 (1873), pt. 1, 171–264); *Gli antenati della vigna vinifera* (in *Atti della Accademia dei Georgofili di Firenze*, 13, 1890); *Storia genealogica del cavallo* (*ibid.*, 17, 1894).

[Yakov K. Bentor]

ANCONA, MARIO (1860–1931), Italian baritone singer. Born in Leghorn, Ancona was a lawyer and diplomat before he began to study singing. He made his debut in Trieste in 1890; and in 1892 he was taken to London by Lago for a short season at the Olympic Theatre. Engaged by Covent Garden in 1893, he sang regularly there until 1901, playing Tonio in the first London performances of Leoncavallo's *I Pagliacci* (1893). He sang regularly both in Italy and in New York – at the Metropolitan (1893–97), then with the Manhattan Opera for one season (1906–07). After World War I, he retired to Florence, where he taught singing until his death.

[Max Loppert (2nd ed.)]

ANCONA, VITO D' (1825–1884), Italian painter of the "Macchiaioli" School. He studied engraving with Samuele Jesi and then at the Florence Academy. In 1856 he left Florence for

Venice, where he lived for a long period. Back in Florence, he produced his first well-known painting, *Le Maschere*, clearly inspired by his Venetian stay. His painting *L'abbandonata* is dated to the year 1860 and the *Portico* to 1861. By then D'Ancona had adopted analytic composition. However, contrary to most of the Macchiaioli painters, who depicted contemporary subjects, Ancona favored in this period historical subjects. Thus, his best-known painting is the *Esilio di Giano della Bella* (1864), with a clear historical character. Towards the end of the decade he moved to Paris, where he was at home in the literary and artistic world, which included other Italian painters living there. In this period he painted mainly female nudes and scenes of domestic life. Back in Florence in 1875, he opened a studio at Borgo di Pinti. Already quite ill, he still found the strength to participate in the National Exhibition of painting at Naples in 1877, where he won a gold medal with the painting *A porte chiuse: figura di donna nuda*. In 1879, owing to his sickness, he had to give up painting completely.

[Samuel Rocca (2nd ed.)]

ANDERNACH, city in the Rhineland, district of Coblenz, Germany. A Jewish community lived there toward the end of the 12th century under the protection of the archbishop of Cologne, who acquired Andernach in 1167. The ritual bathhouse, built in the 14th century, still exists. In 1287 the Jews were expelled, and the populace destroyed and pillaged the houses in the *Judengasse*; the archbishop, however, compelled the burghers to restore all property to the Jews and to expel the rioters from the city. The Jews again appear to have been driven out of Andernach in the first half of the 15th century, but evidently remained close to its walls. They were permitted to take refuge inside the city during emergencies, especially during the wars of 1573–1655. The community increased from a single Jewish resident in 1860 to about 140 by 1925. In 1939, only 45 Jews remained in Andernach. At least 11 died in the Holocaust. No Jews have lived there since World War II.

[Zvi Avneri]

ANDERS, GUENTHER (*Stern*; 1902–1992), German philosopher, political writer, and novelist. Born in Breslau as the second child of psychologist William Stern and his wife, Clara, Anders was raised in an assimilatory milieu, or, in his own words, a “tradition of anti-traditionalism.” In 1919, he began to study philosophy in Freiburg with Edmund Husserl, who also supervised his Ph.D. thesis in the field of logic. In 1929 he married Hannah Arendt (they were divorced eight years later). Two months after Hitler’s election, Anders fled the Gestapo to Paris for three years. There he wrote his novel *Die molussische Katakombe*, a fierce examination of the conditions of thinking and story-telling under dictatorship (the manuscript was

reworked several times and finally published after Anders’ death in 1992). In 1936 he was awarded the Amsterdam Prize of Emigration for his novel *Der Hungermarsch*. In the same year he immigrated to the United States, where he developed the focus of his later thought: the status of man in the age of self-iterating technology. Far from being a question of “evolution,” under Anders’ argument the 20th century locates mankind at a crucial point of its development, i.e., within a process of industrial revolutions that sets up structures inevitably leading to the destruction of life and marginalizing man as a willing executor of his own agony. The triumph of technology over life presupposes the transformation of man into raw material. Herein the final significance of Auschwitz can be seen, a thought not least explicitly formulated in Anders’ open letter to the son of Adolf Eichmann (*Wir Eichmannsoehne*, 1964). In his system of negative anthropology, Eichmann represents man under the reign of technical totalitarianism, willingly fulfilling the demands of the killing machinery and unable to recognize the monstrous consequences of his own deeds. (His guilt remains, since despite his blindness, people are always able to defy the progress of monstrosity.)

Thus the rise of technology, its manifestation as historical protagonist, must be viewed from the perspective of catastrophe. The scenery Anders chose for his principal work, *Die Antiquiertheit des Menschen* (Part 1, 1956; Part 2, 1980), is Hiroshima; the invention of the atom bomb – a product not answering any economic need, created to end all needs – becomes an initial proof of his apocalyptic reading of cultural history. After returning to Europe (Vienna) in 1950, Anders dedicated most of his efforts to political realities. While his philosophical approach seemed too unorthodox and isolated to enable an academic career (he was recommended by Ernst Bloch for a professorship at the University of Halle, GDR), Anders was strongly committed to the protest against the Vietnam War (*Visit Beautiful Vietnam*, 1968) and proceeded to become one of the most prominent activists against military and civil uses of nuclear power (*Die atomare Drohung*, 1981; *Hiroshima ist ueberall*, 1982).

Along with several literary awards, Anders received the Deutscher Kritikerpreis (1967), the Österreichischer Staatspreis für Kulturpublizistik (1979), and the Theodor-W.-Adorno-Preis (1983).

[Phillipp Theisohn (2nd ed.)]

ANDRADE, EDWARD NEVILLE DA COSTA (1887–1971), British physicist and author, who established “Andrade’s Laws,” concerning the flow of metals. Andrade was born and educated in London, and graduated from University College. He worked in Manchester with Rutherford, measuring the

wavelength of gamma rays. In 1935 he was elected a Fellow of the Royal Society. He served as an artillery officer in World War I and after the war became professor of physics at the Artillery College, Woolwich, and later head of the physics department of University College, London. In 1950 he was appointed director of the Royal Institution and of its Davy-Faraday Research Laboratory. He resigned in 1952 after basic differences with the governing body. He carried out research at the Imperial College of Science on the electrical properties of flames and on radioactivity, and on the viscosity of liquids (here, too, a law bears his name). He was a noted historian of science, with special interest in Isaac Newton and Robert Hooke. His books, both scientific and popular, include *Structure of the Atom* (1923), *The Mechanism of Nature* (1930), *The Atom and Its Energy* (1947), *Sir Isaac Newton* (1954), *Physics for the Modern World* (1963), *Rutherford and the Nature of the Atom* (1964), and *Poems and Songs* (1949).

[Samuel Aaron Miller]

ANDRADE, VELOSINO JACOB DE (1639–1712), physician and philosophical author. Andrade was born in Pernambuco, Brazil, then under Dutch rule, the son of Portuguese parents who fled there when the Inquisition persecuted *Marranos. After the Portuguese recapture of Pernambuco in 1654, Andrade went to Holland where he first settled in The Hague and subsequently in Antwerp. In both places he devoted himself to the practice of medicine. After the death of *Spinoza in 1677, Andrade wrote a polemical work entitled *Theologo religioso contra o Theologo Politico de Bento de Espinosa que de Judeo sefez Atheista* directed against the latter's *Tractatus Theologico-Politicus*. A manuscript of Andrade's work may still be extant. It may be assumed that he joined the circle of S.L. *Morteira, who had participated in Spinoza's excommunication, and that his work reflects the views of that group.

Andrade also composed a six-volume work entitled *Messias restaurado: contra el libro de M. Jaquelot... intitulado Dissertaciones sobre el Messias*. This presents the Jewish view concerning the Messiah and is directed against a book in which Isaac Jaquelot, a minister of the Dutch Reformed Church, tried to substantiate Jesus' messianic claims from passages in Hebrew Scripture. Andrade translated Morteira's *Torat Moshe* from Hebrew into Portuguese under the title *Epitome de la verdad de la Ley de Moyses*.

[Joseph Elijah Heller]

°**ANDREWES, LANCELOT** (1555–1626), Anglican bishop, one of the principal translators of the King James Version of the Bible (1611). Andrewes studied at Cambridge where he became a fellow in 1576, took his orders in 1580, and became master of Pembroke Hall in 1589. He was bishop of Chichester (1605), of Ely (1609), and of Winchester (1618). Andrewes

knew many languages and it was said of him that he qualified as “interpreter general at Babel.” Andrewes opposed the Puritan tendency to place less emphasis on ritual. He had a working knowledge of biblical Hebrew, but it is difficult to assess the depth of his Hebrew knowledge.

BIBLIOGRAPHY: M.F. Reidy, *Bishop Lancelot Andrewes, Jacobian Court Preacher...* (1955), includes bibliography; H. Hunger, *Die biblischen Gebete des Lancelot Andrewes* (1960); Schmidt, in: *RGG*, 3:1 (1957), 369.

°**ANDREW OF RINN** (Ger. **Anderle von Rinn**), alleged victim of a ritual murder (see *Blood Libel) on July 12, 1462. The murder was reputedly committed on the “Judenstein” in the neighborhood of Rinn near Innsbruck, Austria, in the diocese of Bressanone (Brixen). The perpetrators were said to be four Jewish travelers who had purportedly bought the child from his uncle. The cult of Andrew was introduced in Rinn in 1620, following the cult of Simon of Trent. Pope *Benedict XIV approved his equivalent beatification in 1752 but in 1755 refused to authorize Andrew's canonization and stated that the Roman Church did not formally venerate him. Despite repeated prohibitions by the Catholic Church and the Austrian government, there is an antisemitic cult of Andrew in Rinn up to the present time.

ADD. BIBLIOGRAPHY: W. Kunzenmann (ed.), *Judenstein* (1994); B. Fresacher, *Anderl von Rinn. Ritualmordkult und Neuorientierung in Judenstein 1945–1995* (1998).

[Bernhard Blumenkranz / Marcus Pycka (2nd ed.)]

°**ANDREW** (or **Andreas**) **OF SAINT-VICTOR** (c. 1110–1175), Christian Hebraist, probably English by birth; died as abbot of Wigmore (Herefordshire). Andrew was the pupil, in Paris, of Hugh of Saint-Victor (d. 1141), who was interested in Jewish biblical exegesis. Andrew acquired some proficiency in Hebrew, engaged in prolonged oral discussion with Jews, and was the first exegete after *Jerome to introduce Jewish material into a Christian Bible commentary on a substantial scale. His works cover Genesis through Kings, the Prophets (including Daniel), Proverbs, and Ecclesiastes (the last is the only one available in a printed edition; ed. by G. Calandra, 1948). The Vulgate is collated with the Hebrew text, and an embryonically critical attitude is adopted toward the sources, patristic and Jewish alike. Andrew's lack of concern with Christian theological tradition even allowed him to interpret the “Suffering Servant” of Isaiah 53 not as Jesus, but as Israel, or Isaiah himself. As an innovator, he was at first fascinated by his newfound Jewish sources and recited them indiscriminately. Later he assessed them more critically, though primarily from a rationalist rather than a theological standpoint. He evinced interest in biblical chronology and geography. His work parallels matter found in *Rashi and Joseph *Bekhor Shor. Andrew's work circulated quite widely, and in about 1271–72, Roger *Bacon, while commending his resort to the Hebrew text, deplored the prestige enjoyed by his “literalist” commentaries.

[Raphael Loewe]

ANDROGYNOS (Gr. ἀνδρῶς man, γυνή woman), animal or individual having both male and female characteristics and organs, a hermaphrodite. Both the actual and the legendary androgynos are known in talmudic literature. The legal position and disabilities of the androgynos and a description of his abnormalities are collated in a number of *beraitot* in *Tosefta Bikkurim* 2. In many editions of the Mishnah that chapter is reproduced as chapter 4 of tractate *Bikkurim*, although there are noticeable differences between the two texts. In talmudic literature, the androgynos is nearly always mentioned together with the *tumtum*, a creature whose sex cannot be determined. According to the majority opinion, the laws relating to the androgynos are determined by the fact that it is doubtful whether it is male or female. As a result, in certain matters “it has the status of a male, in others that of a female, or of both, or of neither” (Bik. 4:1). R. Yose, however, is of the opinion that an androgynos is a “creature of its own,” i.e., belonging to a third sex (cf. also Yev. 83a). Most of the laws affecting the androgynos are based upon the oft-repeated comment on the word “*zakhar*” (“male”) occurring in Scripture, which is interpreted “(specifically) as ‘male,’ but not a *tumtum* or an androgynos” (cf. Naz. 2:7). The Midrash (Gen. R. 8:1) takes the verse “male and female” (Gen. 1:27) as referring to the creation of a single individual. Whereas R. Jeremiah b. Eleazar says that it refers to the creation of an androgynos, R. Samuel b. Naḥman says “It means that he created them with a double face (*du-parzufin*) which was then severed in two.” In the Talmud, however, only the latter view is found (Er. 18a, Ber. 61a). This view is similar to that mentioned in Plato’s *Symposium* (190b), with the difference that Plato speaks of three types of “double-faced” creatures, masculine-masculine, feminine-feminine, and masculine-feminine, whereas only the third type is mentioned in rabbinic literature. Nevertheless the view of R. Jeremiah is quoted by the Christian Fathers, who were at pains to refute this “Jewish fable.” Augustine, in his commentary *De Genesi ad Litteram* 3:22, refers to it, and Strabo declared it to be “one of the damnable fables of the Jews.”

[Bialik Myron Lerner / Stephen G. Wald (2nd ed.)]

ANDRONICUS SON OF MESHULLAM (Messalamus), Alexandrian sage. He lived during the reign of Ptolemy VI Philometor (180–145 B.C.E.). Andronicus acted as the spokesman of the Jews in a dispute that arose between the Jews and Samaritans in Alexandria. The Samaritans claimed that the sanctuary on Mt. Gerizim and not that of Jerusalem had been built according to the Law of Moses and demanded a public

disputation between them and the Jews in the presence of Ptolemy Philometor. In the discussion, he demonstrated that the genuine high-priestly succession had been retained by the priests in charge of the Temple in Jerusalem, and that the sanctity of the Temple was unquestionable (since it was famous throughout the world and many kings had offered sacrifices). The king acknowledged the justice of Andronicus’ arguments and sentenced his Samaritan opponents to death. According to Samaritan tradition, however, the Samaritan spokesmen, Sabbaeus and Theodosius, gained the day. They proved that before his death Moses had established Mt. Gerizim as the sole holy place from which the priests could bless the people (Deut. 27), but that this was not recognized by the Jews whose text of the Bible was later. According to the Samaritans, their argument was approved by Ptolemy Philometor, and he prohibited the Jews from going up Mt. Gerizim, on penalty of death.

[Abraham Schalit]

ANER, ESHKOL, AND MAMRE (Heb. אֲנֶר, אֶשְׁכּוֹל, וּמַמְרֵי), three Amorite brothers, allies of Abraham (Gen. 14:13). They participated in Abraham’s campaign against *Chedorlaomer, king of Elam, and his confederates who had waged battle against Sodom and other cities and had captured Lot and his family. After the victory Abraham refused any share in the spoils, but declared that Aner, Eshkol, and Mamre should receive theirs (Gen. 14:24). The *Genesis Apocryphon* (22:6; Aner is called there עֲנִירָ) explicitly accords the three brothers an active role in the battle with these kings.

The names Eshkol and Mamre are associated with Hebron. A wadi in the vicinity of the city is named Eshkol (Num. 13:23–24; 32:9; Deut. 1:24); and the particular spot near Hebron where Abram pitched his tent is called “the terebinths of Mamre” (Gen. 13:18; 14:13; 18:1). In Genesis 23:19 (cf. 35:27) Mamre is spoken of loosely as a former name of Hebron as a whole. According to B. Mazar, the ancient name of Hebron, Kiriath-Arba, implies that the city was a member of four neighboring confederated settlements in which the families of Mamre, Eshkol, and Aner resided, around the citadel of Hebron. However, these locations have not yet been identified archaeologically.

ANFINSSEN, CHRISTIAN BOEHMER (1916–1995), U.S. biochemist and Nobel laureate. Anfinsen was born in Monessen, Pennsylvania, the son of Norwegian immigrants, and converted to Judaism in 1980.

After moving to Philadelphia, he received his B.Sc. in chemistry at Swarthmore College (1937) and his M.Sc. in organic chemistry from the University of Pennsylvania (1939).

A research fellowship in Copenhagen was cut short by the onset of World War II. He received his Ph.D. in biological chemistry from Harvard (1943), where he worked until 1950. He worked at the National Institutes of Health (1950–80) where he became head of the Laboratory of Chemical Biology (1963). Anfinsen's research mainly concerned the relationship between protein structure and function but he had broad scientific interests, notably the molecular basis of evolution and protein purification. He was awarded the Nobel Prize for chemistry in 1972 (jointly with Stanford Moore and William Stein) for proving that the three-dimensional, folded structures of protein chains depend partly on the amino acid sequences which make up protein chains and partly on the physiological milieu (the "thermodynamic hypothesis"). Later he applied the technique of affinity chromatography to protein isolation and purification, which enabled the production of large quantities of interferon and opened the way to advances in anti-viral and anti-cancer therapy. He also worked on the structure of enzymes related to the infectious properties of the bacterium staphylococcus. In 1982 he became professor of biology at Johns Hopkins University, Baltimore, where he worked on extraordinary bacteria that thrive at high temperature on ocean floors, a property which may have practical applications. Anfinsen's many honors included election to the U.S. National Academy of Sciences (1963) and awards from the Hebrew University of Jerusalem (1985) and Bar-Ilan University (1990). He had a long association with the Weizmann Institute, where he was an honorary fellow (1962), a member of the Board of Governors (from 1962), and chairman of the Scientific Advisory Council (1974). Anfinsen's many activities arising from his broad social concerns included his protest with other Nobel laureates against U.S. budget cuts for biomedical research (1976), protests on behalf of political prisoners (in 1981, necessitating travel to Argentina), and criticism of the potential misuses of biotechnology.

[Michael Denman (2nd ed.)]

ANGARIA, transportation corvée. A postal system was introduced under the Achaemenian monarchy (see *Persia) for the transaction of official business between the various states in the Persian Empire and the imperial court. Herodotus (7:98) describes how the Persians divided the principal routes of the empire into stages, none of which exceeded a day's journey.

Although there are no data in the sources, the angaria must have been introduced in Erez Israel by the Persians at the beginning of the Second Temple period, since the main coastal route to Egypt, then ruled by the government of the Persian king Cambyses, passed through it. The first mention of the angaria in Erez Israel, however, dates from the Hasmonean period: release from it being included in the immunities which Demetrius II of Syria offered to the Jews (1 Macc. 10:33). There is no mention of the angaria being imposed under the Hasmoneans. During the Roman period the highway between Sidon and Jerusalem was considered a principal route for the pur-

poses of angaria, while the cities of Acre, Caesarea, Samaria, and Beth-El were important stations along it. The Jerusalem-Antipatris highway was also a principal route, its important stations being Emmaus and Lydda. Although the original institution of the angaria was as a postal service, the term came to mean impressment for nearly any public service. Not only were animals requisitioned, but men were conscripted to perform tasks quite unrelated to the *cursus publicus*. Thus, R. Zeiri (third-fourth centuries) relates that he was forced *be-angaria* to bring myrtles to the palace (TJ, Ber. 1:1, 2d). It is related of Eleazar b. Harsom, a member of a high-priestly family, that his servants failed to recognize him when they encountered him with a sack of flour on his shoulder traveling to study the Torah and seized him for the duty of angaria (Yoma 35b). The third century was a period of economic and administrative breakdown, and the angaria served as a pretext for the imposition of all manner of burdens, levies, and confiscations (e.g., Lev. R. 12:1). In this period animals were requisitioned, but never returned (BM 78a–b); but this may have been a purely Babylonian phenomenon, as it is not mentioned in the parallel Jerusalem Talmud (BM 7:3, 11a; cf. TB, BM 49b). As a result, in rabbinic literature, the term came to mean any act done unwillingly; cf. the statements that Israel accepted the Torah *be-simḥah* ("joyfully") and not *be-angaria* (PR 21:99) and that the sun runs its daily course with delight, and not *be-angaria* (Mid. Ps. to 12:12), though here there is a subtly pointed allusion to the original connotation, the *cursus publicus*.

[Joshua Gutmann and Daniel Sperber]

ANGEL, AARON (1913–1996), Sephardi rabbi in Argentina. Angel was born in Komotina, Greece. He graduated from the Rabbinical Seminary of Rhodes and studied philosophy at the Hebrew University of Jerusalem. In 1940 he was named chief rabbi of Alexandria and a member of the *bet din* (rabbinical court) of Egypt. Following the Sinai War in 1956 the Jews were compelled to emigrate from Egypt. Angel was one of the last to leave. In 1958 he settled in Buenos Aires, Argentina, and from then until his death served as chief rabbi of the Asociación Comunidad Israelita Sefaradí de la Argentina – the Ladino-speaking community. In his 42 years in Buenos Aires he was the spiritual and social leader of the Sephardi community and active in strengthening formal Jewish education. He taught in the Midrasha Haivrit and founded the Maimonides Jewish primary school, serving as its principal until 1989.

In 1988 he received the Jerusalem Award for Jewish education in the Diaspora from the World Zionist Organization and the Jewish Agency for Israel.

[Efraim Zadoff (2nd ed.)]

ANGEL, BARUCH (1595–1670), talmudist, preacher, and kabbalist of Salonika. Angel, head of the Talmud Torah Yeshivah, was one of the outstanding scholars of his age. His disciples included David *Conforte, Solomon b. Samuel Florentin, and Isaac Florentin. In 1651 he was one of the seven foremost scholars of the city. He signed a regulation dealing with a tax on clothing. He was invited to accept the appointment of rabbi of Smyrna but refused, because he was unwilling to encroach upon the domain of the incumbent rabbi. His published works are *Hiddushei ha-Rav Barukh Angel* (Salonika, 1716), on selected chapters of various tractates, and responsa (*ibid.*). His glosses to the Shulḥan Arukh, *Hoshen Mishpat*, are included in the *Doresh Mishpat* (Salonika, 1650) of his disciple, Solomon Florentin. A work on the tractates *Ketubbot* and *Shevu'ot* exists in manuscript form at the Israel National Library.

BIBLIOGRAPHY: I.S. Emmanuel, *Mazzevot Saloniki*, 1 (1963), 371–2, no. 840.

ANGEL, MARC D. (1945–), U.S. Sephardi rabbinical leader and scholar. Angel was born in Seattle, Wash., the son of Sephardi immigrants from Rhodes and Tekirdag, Turkey, and nephew of veteran Sephardi rabbi Solomon Maimon. Angel received his B.A., Ph.D., and rabbinical ordination from Yeshiva University in New York, with an M.A. in English literature from the City College of New York. From 1969 he served as rabbi of the Shearith Israel Spanish and Portuguese Synagogue in New York.

Angel wrote about 20 books on Sephardi history, tradition, and customs; mourning; rabbinic thought; and ethics, and many scholarly and popular articles. He won the 1988 National Jewish Book Award in the category of Jewish thought. His doctorate on the history of the Jews of Rhodes was a pioneering study in the field.

Angel also served as president of the Rabbinical Council of America, was founder, president, and honorary president of Sephardic House, and subsequently became vice president of the American Sephardi Federation and chairman of the Rabbinic Advisory Committee of the Jewish National Fund. He was a board member of the New York Federation of Jewish Philanthropies, the HealthCare Chaplaincy, CancerCare, and many other organizations. He was on the Board of Governors of the Orthodox Union (OU) and a member of the editorial board of *Tradition*.

Angel received the National Rabbinic Leadership Award of the Orthodox Union, the Bernard Revel Award of Yeshiva University for Religion and Religious Education, and the Finkle Prize of the New York Board of Rabbis.

Representing the Spanish and Portuguese Synagogue founded in 1654, Angel developed sympathy for the Ameri-

can Indian and in 1993 delivered a eulogy at Wounded Knee for the Native Americans killed there by soldiers of the United States Army.

[Yitzchak Kerem (2nd ed.)]

ANGEL, MEIR BEN ABRAHAM (c. 1564–c. 1647), rabbi and preacher. Angel was born in Sofia, where his father was a communal leader. His family immigrated to Safed in his youth and there he studied under Samuel *Uceda, Eleazar Ascar, and Ḥayyim *Vital; he also mentions Israel *Saruk as his teacher. Angel returned to his native town where he was appointed rabbi and preacher. He later served in other communities, including Belgrade. He visited Constantinople before 1620. His sermons were unique in form, as they were based on a homiletical explanation of the *Masorah Magna* of the Bible. He followed and developed the homiletic system of Jacob b. Asher and of Moses Alshekh, with his own kabbalistic comments. Angel published *Masoret ha-Berit* (Cracow, 1619), a commentary on more than 600 masoretic readings in alphabetical order, which was immediately in very great demand and was rapidly sold. He thereupon published *Masoret ha-Berit ha-Gadol* (Mantua, 1622) on 1,650 readings. His *Keshet Nehushah*, an ethical work in rhymed prose, was published at Belvedere near Constantinople in 1593 by the press of Donna Reyna, the widow of Don Joseph Nasi. According to Conforte, Angel returned to Safed after 1622 and died there. The high esteem in which Angel was held by his contemporaries can be seen in the eulogy of Solomon Algazi (printed in *Ahavat Olam* (1643), sermon 20).

BIBLIOGRAPHY: Conforte, Kore (1846²), 51b; Ghironi-Neppi, 252–3.

ANGEL, SHEMAYAHU (1810–1874), Turkish banker, merchant, and philanthropist. Angel provided generous support for the Jews of Syria and other Jewish communities throughout the Levant. He was born in Rosetta, Egypt, and settled in Damascus in 1832 after Muhammad ‘Ali’s occupation of Syria. There he used his wealth, reputation, and influence with the Ottoman authorities to help the local Jewish community, which suffered from the 1840 *Damascus Affair and the 1860 Druze revolt. Angel provided material assistance for the Ottoman troops engaged in suppressing the revolt and successfully extricated many Jews from alleged involvement in the uprising. Sultan Abdül Aziz decorated him and a guard of honor was present at his funeral. Angel’s writings include “Les Biens de Mainmorte de la Communauté Israélite,” in: *Hamenorah*, 4, no. 5 (May 1926), 133–44.

[Joachim O. Ronall]

ANGEL OF DEATH (Heb. מַלְאֲכַת הַמָּוֶת, *malakh ha-mavet*). The polytheistic concept of a specific deity of *death who is responsible for the origin and constant occurrence of death

on earth (cf. the Canaanite idea of the god *Moth*) was rejected by Jewish monotheism. According to the Bible, God is the master of death and of life. The origin of death is motivated not by the actions of an anti-human supernatural being, but through man's own sin (cf. the formulation of Adam's punishment in Gen. 3:22–23). Death, however, is often personified in the Bible; the fact that he has emissaries and a host of angels alludes to his independence of God (cf. Prov. 16:14; Hos. 13:14). These allegorical notions, probably survivals of a polytheistic influence on the Bible, are dominated by the more pervasive concept that only God possesses the power to return mortal man to dust (cf. Job 10:9). This power He delegates to a "messenger" (*malakh*), one of His many angel servants. A cruel snatcher of souls, the "Angel of the Lord" who "smites" and "destroys" human beings (cf. II Sam. 24:16; Isa. 37:36) is called the destroyer (Ex. 12:23; II Sam. 24:16) and is described as standing between earth and heaven, with a drawn sword in his hand (I Chron. 21:15–16). The Bible only refers to a temporary messenger and the instances in the Bible in which death is personified (Prov. 16:14; 17:11; 30:12; Ps. 49:15; 91:3; Job. 18:14) do not point to a constant sacred power or to a permanent angel whose function it is to terminate life on earth.

Only in post-biblical times did the concept of an Angel of Death who acted independently emerge. In popular belief, he was conceived as an amalgam of forms and concepts which had their biblical associations with death, cruelty, and wretchedness. The Angel of Death was also identified with the horrifying and dreadful ogres and demons described in the oral tradition, in the literature of the ancient Near East, and in the literatures of medieval Europe ("devil" and "Satan"). An active supernatural being, interested not only in fulfilling God's orders, but also on his own initiative, in fighting, harming, and destroying man, the Angel of Death is identified in the Talmud (BB 16a) with *Satan ("Samael") and with *yezzer hara'* ("evil inclination"). He symbolizes the demoniac forces, which were responsible for Adam's fall and which continue to fight his descendants.

In folklore, the Angel of Death is described allegorically: He is full of eyes (nothing escapes him), a diligent reaper (cf. Jer. 9:20), an old man holding a sword dripping poison into the mouths of mortals, etc. (cf. Av. Zar. 20b; Ar. 7a). But mostly he appears disguised as "a fugitive and wanderer" (cf. Gen. 4:12 on Cain, the first being to take another man's life), a beggar, a peddler, and an Arab nomad. Since the Angel of Death is only a messenger in Jewish tradition, his powers are limited and depend on his master's (God's) decrees and orders. Thus there are remedies to overcome the Angel of Death and weapons against him. In general folk literature, the combatants of death endeavor to find the "herb of life" (cf. the Gilgamesh epics), or go in quest of magic means to attain *immortality. In normative Jewish legends, the study of the Torah, or some exceptional act of piety or benevolence, replaces the magic weapons generally used against death (cf. the folk exegesis on Prov. 10:2; 11:4 – Charity delivers from Death). There are,

therefore, many heroes, most of them biblical, who defeated the Angel of Death with their efficacious prayer, constant study, and outstanding acts of charity for a short or longer period. In the numerous versions of the legend about the death of *Moses (*Midrash Petirat Moshe*), Moses succeeds in chastising Samael who comes to fetch his soul. Only God's promise that He Himself would take the soul induces Moses to lay down his staff with the engraved ineffable Name which had made the Angel of Death flee in terror. One of the post-biblical heroes who defeated the Angel of Death was R. *Joshua b. Levi. He seized the slaughtering knife and even came close to abolishing death forever. Only God's intervention brought about the sage's surrender (Ket. 776).

Several of the animals that achieved immortality, among them the *milhas* or *ziz* birds (aggadic equivalents of the phoenix), as well as many of the persons who entered Paradise alive, "without tasting death" (cf. Ginzberg, *Legends*, 5 (1925), 96), reached their goal after a successful confrontation with the Angel of Death. The confrontation of mortals with the Angel of Death is a theme prevalent in folk literature and in popular traditions. The three main types of narrative in which the motif is found reflect man's ambivalent attitude toward death:

(1) Where the Angel of Death is defeated, mainly by means of deception. Legends of this kind have mostly a humorous tone, as the cheated and fooled Angel of Death is a grotesque and stupid character. Man's victory reflects his wishful thinking and longing to alter his mortal fate, or at least to postpone his time of death. The heavenly decree of death and the determination of each man's span of life are, indeed, irrevocable; since the executor, however, is not God Himself, the possibility exists to escape the messenger and to extend at least the span of life, if immortality in life itself cannot be attained. This narrative is associated with many motifs found in the universal tales of the "stupid ogre" and the "beaten devil." The Angel of Death is tricked into missing the right moment for taking the soul. He is fooled by the change of the doomed mortal's name (a tale still found in current folk literature in all Jewish communities); fails to identify the man whose soul he is supposed to fetch; marries a termagant who torments him and is at a loss to comprehend the queer conduct of Jews, etc. Already at creation the Angel of Death is cheated by the fox and the weasel: he thinks their reflections which he sees in the sea to be them. This fable in the Alphabet of *Ben Sira, which is similar to Far Eastern tales that originated in India, has been the subject of much comparative research and investigation.

(2) The cruel and stubborn Angel of Death as hero of tales of horror and magic. In this narrative, mortals upon meeting the terrible Angel of Death accept his authority submissively with their heart full of fear. In the Talmud, R. Nahman is reported as having said: "Even if the Almighty were to order me back upon earth to live my life all over again, I would refuse because of horror of the Angel of Death" (MK 28a; see Rashi *ibid.*). In this narrative, the Angel of Death cannot be induced to swerve from his course; he is also the source of

magic knowledge, including medicine. In the stories belonging to this type of narrative, the Angel of Death is a physician of excellent repute (or an assistant to a physician). He controls sickness, diseases, and plagues (his messengers). Sly, he takes man's life prematurely, frightens and harms people, and is merciless and brutal. In the Book of Jubilees (10:1–13), Noah prays that the wicked spirits will not destroy him and his sons, and God answers his prayer. However, He allows only one tenth of the “malignant ones” to remain, ruling that Noah be taught all of the medicines for their diseases so that he might cure them with herbs.

(3) The compassionate Angel of Death is the outgrowth of man's optimism and wishful thinking. In this narrative the Angel of Death, though inherently cruel, can be moved to mercy and concession by a mortal's exceptional deed. The narrative includes the numerous Jewish versions of the Greek Alcestis (Indian Savitri) motif (cf. A. Jellinek, *Beit ha-Midrash*, 5 (1938²), 152–4) where the wife offers the Angel of Death her own life as substitute for that of her husband or fiancé. In one of the versions (cf. M. Gaster, *The Exempla of the Rabbis* (1968²), no. 139), the Angel of Death, seeing the devotion and readiness of self-sacrifice of the bride of Reuben the Scribe's son (after his parents had refused to serve as substitute), sheds a “tear of mercy.” The Almighty then grants the couple 70 additional years of life, proclaiming: “If he who cruelly kills souls [i.e., the Angel of Death] has been filled with mercy for them, shall not I who am ‘merciful and gracious’ [Ex. 34:6] show compassion toward them?” To this narrative belong also the stories of the helpful Angel of Death who rewards a benevolent man, consoles people after a disaster, etc.

In most of the legends in the three types of narratives, the encounter between the mortal and the Angel of Death takes place on the mortal's wedding night when either bride or bridegroom is doomed to die and opposes the executor. The evil demon Asmodeus (or Ashmedai) slays the seven husbands of Sarah so that she can become a wife to Tobias, in the apocryphal book of Tobit (3:8, 17). In another post-biblical work, the Testament of Solomon, Asmodeus informs the king that his object is to plot against the newly married and bring calamities upon them. Solomon learns how to subdue him (as in Tobit 8:2) and harnesses him for work in the building of the Temple. Jewish preachers and storytellers associated either the defeat or the concession of the Angel of Death, occurring specifically on that occasion, not only with the “wedding versus death” motif which intensifies the contrast in the narrative but also with the biblical prophecy, “And then shall the virgin rejoice in the dance, and the young men and the old together, for I will turn their mourning into joy” (Jer. 31:12). Homiletic interpretation of this verse could easily associate it with the motifs extant in the “Angel of Death at the wedding” stories. The motif of a young girl unsuccessfully imploring the Angel of Death (an aged, white-haired gentleman) not to take her life is very common in Yiddish folk ballads (cf. N. Priluzki, *Yidische Folkslider*, 2 (1913), 1–42: Songs and Tales of Death). Unlike the folktales, the ballads end tragically.

The Angel of Death played also an important role in the Jewish dance of death, where he capered with sinners (mostly misers) of all classes and professions. His movements, mostly grotesque, as was the whole dance (performed by wandering troupes of paupers), highlighted the feeling of “memento mori” (cf. Ecclus. 7:38). The performances given mostly on festive and gay occasions (weddings, Purim meals, etc.) offset the surrounding glamour, joy, and splendor. The dancing Angel of Death often recited or sang; in his song he stressed the vanity of mortal and perishable values and contrasted them to everlasting and immortal merits and piety.

In many of the Jewish folk customs related to death, *burial, *mourning, and folk medicine, the traditional acts are directed against the unseen source of the disaster, the Angel of Death. Practices which do not seem to bear a direct affinity to the Angel of Death (closing the eyes of the dead, pouring out the water in a house where death had occurred, breaking pots, mourners' meals, narrating *theodicy folktales, etc.) go back to old folk beliefs in which the Angel of Death, or demons affiliated with him, played a dominant role. Most of these beliefs are no longer current. A comparison of past and present mortuary and funeral customs, traditions, and beliefs in Eastern and Western Jewish communities and those in the culture areas of these communities can contribute toward a reconstruction of the original affinities between belief and rites with regard to the Angel of Death.

The impersonation of the Angel of Death led to the extension of his traits and characteristics to the members of his family and servants etc. Indeed, in Jewish-Islamic folk legends, Azrail (the name of the angel who removes the soul from the dying body) is married, has children, sends emissaries (diseases, old age), etc. This also holds true for Samael in East Europe who is often identified with the Angel of Death himself. He is married to *Lilith, who, beside her Satanic functions of luring and seducing men, also performs duties on behalf of her husband, the Angel of Death: she kills babies, harms pregnant women and those giving birth, etc. She fights life and human attempts to continue its successive chain in the same way as the Angel of Death. In many folktales, the Angel of Death is tormented by his wife (cf. Eccles. 7:26; where “death” became personified), his sons often suffer (one of them usually accepts his father's advice and becomes a physician), and all the family members suffer from various disasters and calamities. The motifs in these tales are mainly man's revenge on the Angel of Death and the consolation that man finds in this revenge; the concept being that as long as man has no other means to overcome his eternal and, in the end, always successful adversary, his only way out is through ridicule and irony.

Bible

Many biblical writers assume the existence of beings superior to man in knowledge and power, but subordinate to (and apparently creatures of) the one God. These beings serve as His attendants, like courtiers of an earthly king, and also as His agents to convey His messages to men and to carry out His will.

TERMINOLOGY. These beings are clearly designated by the English word “angel.” The terminology of biblical Hebrew is not so exact. *Mal'akh* (מַלְאָךְ), the word most often used, means “messenger” (cf. Ugaritic *lak* “to send”). It is applied frequently to human agents (e.g., Gen. 32:4) and is sometimes used figuratively (e.g., Ps. 104:4). This term was rendered in the Greek Bible by *angelos* which has the same variety of meanings; only when it was borrowed by the Latin Bible and then passed into other European languages did it acquire the exclusive meaning of “angel.” Post-biblical Hebrew employs *mal'akh* only for superhuman messengers, and uses other words for human

agents. Apparently for greater clarity, the Bible frequently calls the angel the *mal'akh* of God; yet the same title is occasionally applied to human agents of the Deity (Hag. 1:13; Mal. 2:7). Elsewhere angels are called *'elohim* (usually “god” or “gods”; Gen. 6:2; Job 1:6), more often *bene 'elohim* or *bene 'elim* (lit. “sons of gods”) – in the general sense of “divine beings.” They are also known as *kedoshim* (*qedoshim*; “holy beings”; Ps. 89:8; Job 5:1). Often the angel is called simply “man.” The mysterious being who wrestled with Jacob is first called a man, then *'elohim* (Gen. 32:24 (25), 28 (29), 30 (31)), but Hosea refers to him also as a *mal'akh* (Hos. 12:5). As a result of this diversity, there are some passages where it is uncertain whether a human or superhuman messenger is meant. The Bible also speaks of winged creatures of angelic character called *cherubim and seraphim, who serve a variety of functions. A further ambiguity is due to the fact that the Bible does not always distinguish clearly between God and His messenger. Thus, Hagar encounters an angel, but later addresses “the Lord that spoke unto her” (Gen. 16:7, 13; similarly 21:17ff.). It is God who commands the sacrifice of Isaac; later Abraham is addressed by the angel of the Lord from heaven (Gen. 22:1ff., 11–18). The angel of the Lord appears to Moses in the burning bush (Ex. 3:2), but through the rest of the story Moses converses with the Deity. So, too, in the Gideon story, Gideon speaks sometimes with God, sometimes with the angel of God (Judg. 6:11ff.). Some scholars infer from this phenomenon that the angel was not regarded as an independent being, but simply as a manifestation of the Divine power and will. Others suppose that in the earliest version of these stories a human being was confronted directly by God, and that later scribes toned down the boldness of this concept by interposing an angel.

ANGELS AS A GROUP. Micaiah describes a vision in which the Lord is seated on His throne, with the host of heaven standing by on His right and left (1 Kings 22:19; 11 Chron. 18:18). But frequently the phrase “host of heaven” means the heavenly bodies (Deut. 4:19; Jer. 8:2, etc.). Similarly, Isaiah (ch. 6) sees the Deity enthroned while the seraphim proclaim His holiness and majesty. One of the seraphim purifies Isaiah by a symbolic act, so that, unlike Micaiah, he becomes not a witness to but a participant in the ensuing deliberation of the council (cf. Zech. 3:7b), and when the Lord, as in Micaiah’s vision, calls (like El in the council of the gods in the Ugaritic Epic of Keret) for a volunteer, Isaiah responds. In the ancient cosmic hymn Psalms 89:1–3, 6–19, the goodness of God is praised by the assembly of the holy beings because, the psalmist emphasizes, He is incomparably greater than they and they stand in awe of Him (Ps. 89:6–9). This last is similarly stressed in two other early compositions (see Ex. 15:11 and Ps. 29). Not improbably, the motif arose in an age when it was not yet a platitude that “the assembly of the holy beings” or “the company of the divine beings” (Ps. 29:7) is not a pantheon of real gods. So, no doubt, did the practice of representing those beings as standing before God, who alone is seated (1 Kings 22:19; Isa. 6:2; Zech. 3:1–7, especially 3:7 end; Job 1:6; 2:1). The exception, Isa-

iah 14:13, only confirms the rule: the speaker there is a pagan. Despite the masoretic pointing *dina*' ("the Tribunal") in Daniel 7:10, 20, the scruple may have persisted into the second century C.E., since the context favors rather the interpretation of the consonantal graph דִּינָא as *dayyana*' ("the Judge"). Related to the deuteronomic idea that the Lord actually assigned the heavenly bodies and the idols to the Gentiles but chose Israel to worship him (Deut. 4:15–20; 29:25) is the remarkable passage (Deuteronomy 32:8–9): "When the Most High gave nations their homes and set the divisions of men, He fixed the borders of peoples according to the numbers of the divine beings (בְּנֵי אֱלֹהִים); so a Qumran fragment, in agreement with the Septuagint). But the Lord's own portion is His people, Jacob His own allotment." The masoretic reading בְּנֵי יִשְׂרָאֵל "the children of Israel" for the reading of the Qumran fragment and the Septuagint cited above is a conflation of the latter and of a variant אֱלֹהִים , "the ministers of God." This variant is not attested directly, but its existence may be deduced from the fact that it would account both for the masoretic reading in Deuteronomy 32:8 and for the use of שָׂר , "minister" in Daniel 10:20 twice, 21; 12:1. For these passages are obviously nothing but a bold development of Deuteronomy 32:8–9. Their doctrine is that the fates of nations are determined by combats among the celestial "ministers" to whom they have been assigned and that (despite Deut. 32:9) Israel also has a "minister," Michael, who is assisted by another angel, Gabriel. In Job, the divine beings appear before God as a body, perhaps to report on the performance of their tasks and to obtain fresh orders; one of them is the Satan, who carries out his functions under God's directions (Job 1:6ff.; 2:1ff.). The angels seen by Jacob ascending and descending the ladder (Gen. 28:12) seem to be messengers going forth on their several errands and coming back to heaven to report.

THE ANGEL OF THE LORD. The narrative books offer many instances of an angel – rarely, two or more – delivering a message or performing an action, or both. The angel appears in human form, and sometimes is not immediately recognized as an angel. The appearance of an angel to Hagar (Gen. 16:7ff.; 21:17ff.) and to Abraham at Mount *Moriah (Gen. 22:11ff.) was noted above. Further, three "men" visit Abraham to announce the birth of Isaac; two of them go on to Sodom to warn Lot to flee and to destroy the city (Gen. 18:1ff.; 19:1, 13ff.). The angel of God appears to Jacob in a dream, says "I am the God of Beth-El," and bids him return to his home (31:11ff.). The angel of God plays a role, not entirely clear, in the events at the Sea of Reeds (Ex. 14:19ff.). In the *Book of the Covenant, God promises to send His angel to lead the Israelites and to overcome the obstacles to their entrance into the promised land. God's name is in the angel, who must be faithfully obeyed (23:20ff.). When Balaam accedes to Balak's plea for help, the angel of the Lord comes as an adversary to the enchanter. The angel is visible to the she-ass, but Balaam cannot see the angel until the Lord opens his eyes (Num. 22:22ff.). When the "captain of the host of the Lord" appears to Joshua, the latter

does not at first realize that his visitor is an angel (Josh. 5:13). The *mal'akh* of the Lord in Judges 2:1ff., 10 and 5:23 may be a prophet; but the visitor who summons Gideon to leadership and performs wonders is clearly an angel (*ibid.* 6:11ff.). The same is true of the emissary who foretells the birth of Samson, and whose angelic nature is made manifest only when he ascends to heaven in the altar flame (*ibid.* 13:2ff., esp. 16, 20). An angel with a drawn sword is the agent of the pestilence in the days of David (II Sam. 24:16–17; I Chron. 21:15ff.; the drawn sword is mentioned also in the Balaam and Joshua incidents). The old prophet pretends he has received a revelation from an angel (I Kings 13:18). An angel appears once in the Elijah stories (*ibid.* 19:5ff.). The army of Sennacherib is destroyed by the angel of the Lord (II Kings 19:35; Isa. 37:36; II Chron. 32:21). The angel of the Lord appears two times in Psalms: in 34:8, he protects the righteous; and in 35:5–6, he brings doom upon the wicked.

IN THE HAGIOGRAPHA. Other references to angels in the Psalms are scattered throughout the book. In a few places, angels are called on to join with the rest of creation in praising God (Ps. 29:1; 103:20–21; 148:2; cf. 89:6ff.; in 96:7, the phrase "families of the nations" is substituted for the "sons of God" of 29:1; Ps. 78:49 and 104:4, most probably refer to forces of nature that perform God's will). In Psalms 91:11–12, God commands His angels to protect the faithful from harm. The other Hagiographa have little to say about angels. The only possible allusion, in Proverbs 30:3, is doubtful. In Job, aside from the references to the "sons of God," angels are mentioned only by the three friends and Elihu. The friends point out that even the angels, the holy ones, are not flawless, and that man is still further from perfection (Job 4:18; 5:1; 15:15). Elihu speaks of an angelic intercessor for man (*ibid.* 33:23–24), but the passage is obscure. The subject matter of the Five Scrolls is such that no special significance need be attached to their silence on the subject of angels (Eccles. 5:5 is hardly relevant).

SILENCE OF THE PROPHETS. The prophets, except Ezekiel and Zechariah, say almost nothing about angels. In all pre-Exilic prophecy, there are just two passages in which angels are mentioned. One is the rather obscure reference to the Jacob story in Hosea (12:5–6; contrast v. 14). It has been explained as a satirical attack on the cult of the angel (or divinity) Beth-El (see Ginsberg, in: JBL, 80 (1961), 343–7; cf. Gen. 31:11–12). The other is Isaiah's initial vision (6:1ff.), in which the winged seraphim have a prominent part. Thereafter, Isaiah makes no mention of angels (33:7 is obscure and probably not Isaianic). Jeremiah is completely silent on the subject; so is (according to the critical theory) the roughly contemporaneous Book of Deuteronomy. In the Exilic period, Deutero-Isaiah does not mention angels (Isa. 63:9 does mention the "angel of His presence," but the Greek reads – probably correctly: "No messenger or angel; it was His presence that saved them"). Special significance is attached to the fact that Haggai calls himself (1:13) "the messenger of the Lord with the message of the

Lord” (*mal'akh 'Elohim be-mal'akhut 'Elohim*) – apparently to stress the thought that God’s emissary to man is a prophet, not a supernatural being. Malachi’s attitude is not entirely certain. His name (meaning “My messenger”) may be a pseudonym, and he asserts that the priest is the *mal'akh* of the Lord of Hosts (Mal. 2:7). The *mal'akh* of the Covenant (*ibid.* 3:1–2) may, however, be an angel, though the phrase might also refer to the returning Elijah (*ibid.* 3:23–24). Finally, it should be noted that the priestly code (regarded by many scholars as post-Exilic, though others consider it very ancient) does not allude to angels, except for the provision that cherubim are to be depicted on the Ark cover. This array of facts cannot be dismissed as mere accident, especially since angels appear so often in the narrative portions of the Pentateuch, in the historical books, and in the prophetic writings of Ezekiel and Zechariah. Perhaps David Neumark overstressed this disagreement as a major issue of biblical thought (see: e.g., his *Essays in Jewish Philosophy* (1929), 104ff.). But the issue was certainly not unimportant.

EZEKIEL AND ZECHARIAH. In the theophanies described by Ezekiel, the Divine Presence is seated on a throne supported by four fantastic creatures, called in chapter 1 *hayyot* (“living beasts” or “beasts”), but identified in chapters 8–11 as cherubim. In the latter section, moreover, the destruction of Jerusalem is a task assigned to six armed “men,” while a “man clothed in linen with a scribe’s inkhorn on his side” is to mark the foreheads of such righteous individuals as are to be saved (9:1ff.). Later, this same man in linen takes live coals from the fire between the cherubim, to be used in setting the city afire (10:1ff.). Chapters 11–39 of Ezekiel do not mention angels. But in the visions of the rebuilt Temple (ch. 40–48), the prophet is guided by a man “who shone like copper” (40:3) and who goes about measuring the various courts and buildings and explaining their functions. During the vision Ezekiel also receives instruction directly from God; and after chapter 47:12 the “man” is not mentioned again.

In Zechariah, angels are almost constantly present. The book consists largely of symbolic visions, explained to the prophet by “the angel that spoke with me” (1:9, 14; 2:1–7; 4:1–5; 5:5–10; 6:4–5). The “angel of the Lord” appears several times; he intercedes with God on behalf of Israel (1:12–13); he presides over the rehabilitation of Joshua and rebukes the Satan for accusing the latter (3:1ff.). A number of other angels are reported to be standing by. Zechariah also applies the term “man” to angelic beings (1:8ff.; 2:5ff.; the two women with stork-like wings, 5:9, seem to be symbolic figures rather than angels). For the first time in the Bible the angels in Zechariah appear to be acquiring an independent life on their own.

DANIEL. The Book of Daniel repeats much about angels which is found in earlier parts of the Bible. It tells of innumerable attendants around the Divine throne (7:10), and reports that an angel saved the three men in the furnace (3:25, 28) and Daniel from the lions (6:23). It sometimes calls an angel “man”; one angel is described as a man clad in linen

(10:5; 12:7; cf. above on Ezekiel). But Daniel has strong affinities with the extra-biblical apocalypses, and so presents many new features in regard to angels. The revelations received by Daniel are either symbolic visions, which an angel interprets (ch. 7, 8), or they are revealed in their entirety by an angel (ch. 10–12). Zechariah, too, had visions which an angel explained. But he also delivered prophecies received directly from God; such a thing never occurs in Daniel. In the latter book, too, angels do not merely carry out orders, but have some powers of initiative: “The matter has been decreed by the ever-wakeful ones, the sentence is by the word of the holy ones” (4:14). Moreover, the angels now have proper names: *Gabriel (8:16; 9:21) and *Michael (10:13; 12:1). This is the only biblical book in which angels have distinct personalities. Finally, the idea that each nation has an angelic patron, whose actions and destinies are bound up with those of his nation, is encountered for the first time. Mention is made of the patrons of Persia and Greece (10:13, 20); and Michael is the champion of Israel (12:1; on this concept cf. Isa. 24:2).

[Bernard J. Bamberger]

Apocrypha

In post-biblical literature angels frequently manifest themselves as independent beings, distinguishable by their own names and individual traits. Contrary to the general impression gained from the Bible, certain allusions contained in it lead to the assumption that in the earlier periods of Jewish history angels played a more independent role in popular mythology than in the post-biblical period. It was not, however, until the Hellenistic period of Jewish history that the conditions existed for a special doctrine of angels.

During the Second Temple period it was assumed that only the great prophets of earlier times had had the privilege of direct communication with God while in later generations mysteries of the end of days and of man’s future could be discovered only through the intermediary of angels. This led to attempts to explore the nature and individual character of the angels. Furthermore, Jewish literature of this period sought to teach the mysteries of nature, of heaven, of the end of days, etc.; revelation no longer served as the point of departure for the acquisition of knowledge, but as corroboration of the validity of existing doctrines – on medicine (Jub. 10:10ff.), botany (1 En. 3:1), astronomy, cosmology, etc. This type of apocalyptic wisdom literature assumed that the secrets of the universe could be found only beyond the range of earthly surroundings – by means of angels. The development of the concept of angels was also deeply influenced by the syncretism which characterized the Hellenistic Age. By means of the wisdom of the Chaldeans (which enjoyed great prestige among the Diaspora Jewry, see Dan. 1:4), the Jews had become familiar with many of the old Babylonian myths – the creation, the deluge, the early generations of man, etc. – and they sought to harmonize the myths with the biblical reports of these events. Old Babylonian tales of intercourse between gods and legendary heroes, and of books containing heavenly

wisdom, were thus made to concur with Jewish legends; however, in order to avoid contradiction with the monotheistic character of Judaism, they were ascribed to the world of angels. One such example was Enoch, a figure created under the influence of Babylonian concepts, who appears as the bearer and creator of human culture, and as the transmitter of heavenly wisdom to the early generations of man; his authority is derived exclusively from his constant communication with angels. Various sources treat Noah and Abraham in the same manner, ascribing their wisdom to their intimate knowledge of the world of angels. In addition, various religious concepts accepted by the Jewish people under the influence of pagan magic and demonology – insofar as they were not in direct contradiction to monotheism – were eventually incorporated into the doctrine of angels.

AMONG THE JEWISH SECTS. The doctrine of angels was not evenly spread among the various parts of the Jewish people. The apocalyptic wisdom teachers imparted the knowledge that they had secretly acquired through their contact with angels, only to a narrow circle of the specially initiated. Consequently, the doctrine of angels found its widest distribution among the secret societies of the Essenes. The latter (Jos., Wars, 2:142) carefully guarded the secret list of angels' names. The Qumran scrolls testify to an organized system of angelology, in which the "Prince of Light" and other heavenly princes were expected to fight alongside the Sons of Light on the "last day," and they thought them present at meetings of the Qumran sect. A certain dualism is seen in the struggle for power between the forces of evil (Belial) and those of goodness over the sons of man (1QM 13:11). The Pharisees, on the other hand, showed little interest in these problems. The Sadducees, who were opposed to any kind of mysticism, are described by the Acts of the Apostles (23:8) as denying the very existence of angels; this however, was undoubtedly a false assumption, derived from the Sadducees' rejection of apocalyptic teachings. Among Jewish magicians and sorcerers, the concept of angels was particularly confused, influenced as they were by the pagan literature on the subject, where the angels usually appear in the company of pagan gods, to combat disease. In some literary sources biblical figures, such as Solomon, are mentioned as having been in possession of secret formulas or means whereby they were able to induce angels to come to man's aid. The Greek "Testament of *Solomon" cites a number of angels with whose activities Solomon became acquainted only with the help of demons. A similar manipulation of angels through the use of magic is found in the *Sefer ha-Razim*. Angels appearing in post-biblical literature may be divided into several classes. The angel appearing in one of the visions of Zechariah (1:9) is not mentioned by name, but his active advocacy of the cause of Israel indicates that he was not a "messenger" in the strict sense of the term. In the Book of Daniel (8:16; 9:21) the angel Gabriel appears as an interpreter of Daniel's vision. In later apocalyptic writings various angels appear as interpreters of symbolic visions, such as Uriel

(1 En. 19:1; 27:2), Raguel (23:4), Raphael (32:6), and Michael (60:4ff.; *Testament of Abraham*, ed. James, passim). A group of seven angels is frequently described as heading the world of angels; also designated as "archangels," they have "entry to the presence of the glory of the Lord" (Tob. 12:15). They are Uriel, whose function is to lead the angelic host and guard the underworld (Sheol); Raphael, who is in charge of the spirits of humans; Raguel, who takes revenge upon the world of lights; Michael, who watches over Israel; Sariel, whose duties are not defined; Gabriel, who rules Paradise; Jeremiel (1v Ezra 4:38), who according to a later apocalyptic composition (*Apocalypse of *Elijah*; Ger., ed. by Steindorff, p. 10) guards the souls of the underworld (1 En. 20). These seven angels are always in the proximity of God and are the ones that are always called upon to carry out tasks of special significance for world history, such as the punishment of the fallen angels, or of the 70 angels who act as princes of the peoples of the earth (1 En. 90:21ff.), the elevation of Levi to the priesthood (Test. Patr., Levi 8), the transmission of heavenly wisdom to Enoch (1 En. 81:5ff.), etc. A similar list is preserved in the *Serekh Shirot Olot le-Shabbat* (Angelic Liturgy) from Qumran (in VT Suppl. 7, pp. 318–45), in which the heavenly tasks of each of seven angels is recorded. Their names, however, were omitted. The War Scroll describes two angels of prime importance: "The Prince of Light" and "The Angel of Darkness," with whom were associated "the sons of righteousness" and "the sons of darkness" respectively (1QM 13:10–12). These angels were in perpetual conflict and thought to fight on the sides of the two armies at the "last battle," when the Angel of Darkness and his army would be destroyed. This is likewise expressed in the Manual of Discipline (1QS 3:20–22), "In the hand of the Prince of Light is the dominion of all the sons of righteousness... and in the hand of the Angel of Darkness is the dominion of the sons of evil." Some have supposed that the Prince of Light was Uriel but others think he was Michael, for he is described in the War Scroll (1QM 17:6) as being sent by God in "eternal light" (cf. Dan. 10:13, "Behold Michael, one of the leading princes has come"). The Angel of Darkness seems to have been Belial: "But for corruption you have made Belial, an angel of hatred and his dominion is in darkness" (1QM 13:11).

Related to the group of seven is a group of four angels, most of whose names appear also among the seven; designated as "the angels of the Presence" (*Malakhei ha-Panim*) they are in Enoch: Michael, Gabriel, Raphael and Phanuel (sometimes Raphael and Gabriel are interchanged). They have an important role in the punishment of the fallen angels (1 En. 9:1; 10:1ff.; 54:6). Their place is on each of the four sides of God's throne (40:2ff). Contrary to all other angels, they move freely in and out of the Palace of God – the "Heaven of Heavens" – to serve "the *Ancient of Days" (i.e., God; 1 En. 71:5ff.). In the *Book of Adam and Eve*, however, and in rabbinic literature the four are Michael, Gabriel, Uriel, and Raphael. The names of a similar group of angels (Michael, Gabriel, Suriel, and Raphael) were to be inscribed on the battle-towers at the "last battle" (1QM 9:15). Another special group of angels are the 70 "princes

of the peoples,” appointed over each of the 70 peoples of the earth. They are first mentioned in the Septuagint to Deuteronomy 32:8 – without their number being given – from which it may be gathered that at this time the number of all angels was thought not to exceed the number of peoples. Ben Sira (Ecclus. 17:17) quotes the figure 70; the Hebrew Testament of Naphtali (Test. Patr., Naph. 8–9) regards them as the 70 ministering angels (*Malakhei ha-Sharet*). The latter source relates that at the time of Peleg (cf. Gen. 10:25) God descended from Heaven with the 70 angels in order to teach the peoples of the earth their respective languages. Later, Michael, at the behest of God, asked each people to choose its patron angel, and each people chose the angel who had taught it its language, with the exception of Israel, which chose God Himself as its patron. According to a concept found in the Book of I Enoch (89:59ff; 90:22, 25), at the time of the destruction of the First Temple, these 70 angels were appointed to rule over Israel (whom God had rejected) until the Day of Judgment.

Another category of angels are the “guardians.” Like the general concept of angels (cf. the Ba’almalakh in CIS, vol. 1, part 1, no. 182, verse 2; part 2, no. 1373, verse 4), “guardian angels” seems to have been a religious concept common to the entire Semitic world, a fact which supports the identification of guardians with *Ζωφαστημιν* (equivalent to the Hebrew *zofei shamayim*) by Philo Byblos (Eusebius, *Praeparatio Evangelica*, 1:10, 3). At times the title of guardian, similar to the title “he who never sleeps,” is employed to designate all angels (1 En. 61:12; 39:12) for it is their function to be on guard before God at all times; the same was later also said of angels whose function it is to supervise the actions of man (see 1 En. 100:5). The guardians are also regarded as a superior category of angels, although not equal to the “angels of the Countenance.” They are at all times in the proximity of God and must not leave Him by day or by night. Due to their special importance, they are also designated as “the holiest of the holy” (1 En. 14:23). Many scholars see a connection between the guardian angels and the “Irin” (𐤀𐤓𐤓𐤀, Aram. “watchers”) mentioned in the Book of Daniel (4:10, 14, 20). A reference to the “Irin” has been found in the *Genesis Apocryphon* in which Lamech expresses concern over the conception of Noah, who, he fears, was a child “of the watchers (*Irin*), the holy ones, or the fallen angels” (1QA poc. 2:1). In the *Genesis Apocryphon* (1QA poc. 2) the term refers to “the sons of God” in Genesis 6:2ff. (cf. 1 En. 6:8). Perhaps the divine cherubim described by Ezekiel (10:12) are also to be regarded as “guardians” in the sense that the term is used in apocalyptic literature. According to the Book of Jubilees, they descended from Heaven at the time of Jared (cf. Gen. 5:15–20) to teach mankind the practice of law and justice (4:15ff.); they were seduced by the daughters of men and thus the fallen angels came into being. As a result, the guardian angels are sometimes identified with the fallen angels (see 1 En. 10:9; 12:4; 13:10; 14:1ff.; and passim); other sources, however, make a clear distinction between the two (Slavic Book of I Enoch 7:8; 35:2). Apart from these angels, who were thought to resemble man, the stars were also assumed to be living en-

titles and regarded as angels (Isa. 34:4; 40:26; 45:12; Jer. 33:22; Ps. 33:6; 1 En. 18:13ff.; 21:3ff.). However, the more widely accepted version was that certain angels rule the stars (Jub. 19). Connected with this was the concept of the spirits of elements (a concept which came into being under pagan influence), e.g., the angels of the spirit of fire, of the spirit of the wind, the clouds, darkness, snow and hail, thunder, and lightning (Jub. 2:2ff.; 1 En. 60:11ff.; 65:8; Or. Sybill. 7:33ff., etc.). This category also includes the angels of the seasons of the year, all of which – with hardly any exception – bear Semitic names (1 En. 82:10ff.). A foreign influence may also be discerned in the concept of angels functioning as the originators and inventors of human civilization. Thus in “The Life of Adam and Eve,” Michael appears as Triptolemus (in the mythology, the hero who taught man grain cultivation) teaching Adam how to work the soil. In addition to the angelic hosts mentioned in the Bible and Apocrypha under generic names, such as cherubim, seraphim and *ofannim*, there are also angels of power, and angels of dominion; angels who serve as patrons of individual human beings (already alluded to in Ps. 91:11); angels of peace (1 En. 52:5; 53:4; 54:4; 56:2; Test. Patr., Ben. 6), and angels serving as intercessors (*malakh meliz*, Test. Patr., Levi 5). Beside the Angels of Light, Darkness and Destruction (see above) there also occur in the Dead Sea Literature Angels of Holiness (1QM 7:6).

FUNCTIONS OF ANGELS. Offering praise to God is regarded as the major function of angels (1 En. 40; Test. Patr., Levi 4). Their functions as intermediaries between God and man were, however, also of special importance. As early as the Book of Tobit (3:16; 12:12, 15) Raphael is depicted as one of the seven angels charged with bringing the prayers of man before God’s throne (compare Test. Patr., Dan 6). At times, an angel is ordered by God to accompany a man on his travels in order to ward off dangers that may beset him, or, as in the Greek Apocalypse of Baruch, to guide Baruch through the seven heavens and explain the sights. More frequent is the angels’ role as intercessors, pleading for man before God (1 En. 9:4ff.; 15:2; etc.); sometimes man pleads with the angels to transmit his prayers to God (*ibid.* 9:2). Angels also appear in opposition to evil angels who wish to act as prosecutors before the throne of God. It is significant, that in spite of Exodus 33:11 (“God would speak to Moses face to face”), the prevailing opinion of later traditions is that at the giving of the Law the angels acted as intermediaries between God and Moses (Jos., Ant., 15:136; Jub. 1:27ff.; Gal. 3:19; Heb. 2:2). Specific mention of the presence of angels at the right hand of God, during the Revelation on Sinai, is made in the Septuagint, Deuteronomy 33:2.

Although no traces of a cult of angels were retained in normative Judaism, in the *Sefer ha-Razim* angels seem to be used for purposes of magic. Formulas for influencing the angels, stars, and the moon by means of incantations over flasks of wine and blood, by burning incense, sacrifices, and other methods all appear in *Sefer ha-Razim*. Likewise the names of the angels, when coupled with those of Greek gods and magic

phrases, were efficacious for incantations (*Sefer ha-Razim*, ed. Margaliot, 1:123–6; 2:99; introduction, 8–9). Testament of Levi 5 makes mention of an appeal to an angel; the passage, however, does not imply that an angel can be venerated as an independent being, for the context makes it clear that the angel acts only as an intermediary between God and Israel. The imperfect nature of angels is frequently stressed. Although they are regarded as immortal (1 En. 15:6), their existence did not precede the Creation; they were created on the First Day (Jub. 2:1ff.), or, according to another version (Slavic Book of 11 En. 29), on the Second Day. Nor are they omniscient; sometimes they are incapable of answering questions put to them and have to confess their ignorance (1v Ezra 4:51). It follows from this that communication between God and man by means of angels is regarded only as a temporary situation. Before the First Temple was built, communication between God and Israel was by means of an angel, but afterward God and Israel communicated directly, without an intermediary (Job. 1:27ff.). This concept of the nature of angels permitted the view that no unbridgeable gulf existed between the material world and the world of angels, and some righteous men could be transformed into angels (1 En. 51:4). Similarly, in the fragments of the pseudepigraphal “Prayer of Joseph,” Israel, known to mankind as Jacob, declared that in reality he was “the archangel of the power of the Lord” and no mere mortal (Origen, Commentary to John, 11, 84, 15). Even the people of Israel as a whole, by virtue of its covenant with God, was in some ways regarded as being equal to angels; in consequence, while other peoples are in the custody of angels, Israel is under the protection of God Himself and is independent of angels (Jub. 15:27ff.). A further development of this view gives Israel the privilege of participating in the heavenly choir of the angels; at the time that the angels praise the glory of God – as they do at certain hours of the day – the praise by the people of Israel is also heard before the heavenly throne (Ḥul. 91b; *Constitutiones Apostolicae*, 8:35). This idea may be similar to the concept found in Coptic texts and the Prayer of Joseph of an angel “Israel” who serves God in heaven.

[Joshua Gutmann]

FALLEN ANGELS. A special category are the so-called Fallen Angels, frequently mentioned in post-biblical literature. This concept is also common to all Semitic peoples; the idea of vanquished gods or demons, who then appear as accursed and damned, is one that prevailed among all the peoples of antiquity. It is found in a special form in earlier versions of the story of the creation, in which Rahab appears in the role of the vanquished god. Although for a variety of reasons little trace has remained of the ideas upon which the Rahab legends are based, the dualistic concepts of paganism have nevertheless exerted a profound influence upon Judaism, and the concept of the existence of good and evil powers, contradicting as they did the idea of monotheism, found their way into Judaism through the story of the Fallen Angels. It must be pointed out, however, that the passage Genesis 6:1ff., although usually

quoted as the basis of all subsequent legends of Fallen Angels, has in fact little to do with this concept, as it later developed. Not only is the interpretation of “Nephilim” as Fallen Angels of a doubtful nature (see Num. 13:33), but the text contains no denouncement of the “*Benei Elohim*” who had married the daughters of men; on the contrary, it stresses that the children of these connections were “the heroes of days gone by, the famous men.” It was only at a later stage, when the dualistic belief in the existence of evil demons had become a firm component of popular religion, that attempts were made to find biblical authority for this concept, contradictory as it was to monotheism.

The earliest report of Fallen Angels is found in the Book of Enoch (6ff.): The sons of heaven, who belonged to the “guardian” angels, had lusted for the beauty of the daughters of men and in the time of Jared decided to descend upon Mt. Hermon to carry out their plans from there. There were two hundred of them and their leader was Shemhazai; he made them swear an oath (*herem*) to adhere to their purpose and it was this oath that gave the mountain its name – Hermon. They consorted with the daughters of men, who gave birth to a generation of giants who set about mercilessly destroying human beings. The Fallen Angels also taught man the use of weapons and other tools promoting immorality and crime. In this manner a demonic wisdom came into being, in addition to Divine wisdom, and this led to the corruption of mankind. Moved by man’s outcry, the four archangels appealed to God and were given the order to punish the Fallen Angels. Later there is a resumé of this episode in chapter 69, where the Fallen Angel Jeqôn was blamed for the downfall of all the angels. Each of the Fallen Angels taught mankind a particular evil or perversion, thus destroying mankind’s innocence (69:1ff.). The story of Fallen Angels, in the same spirit, appears in the Book of Jubilees (4:15; 5:1ff.), with the difference that here the angels are said to have descended to earth to instruct mankind how to order society, and when they arrived on earth they were seduced by the daughters of men. A hint at this latter idea is preserved in the additional chapter at the end of the Book of Enoch (106), called the Fragment of the Book of Noah. Here the angels are feared for having taken to themselves the daughters of man. In the Qumran *Genesis Apocryphon* (the Birth of Noah), Noah is suspected of being the offspring of an evil angel and a daughter of Man (1QA poc. 2:1–26).

Apart from the punishment meted out to them before the Deluge, final sentence on them would be passed on the day of the Last Judgment (1 En. 16:1ff.; see also *Azazel). Talmudic sources contain a different version of the legend of the Fallen Angels. According to *Midrash Avkir* (see Smaller *Midrashim), the leaders of the Fallen Angels, named Shemhazai and Asael (as in the Book of Enoch), heaped scorn upon the sinfulness of the generation of man after the Deluge. God submitted that if they were on earth, they would also commit sins, and in response to this challenge they offered to descend to earth. They did so and were at once seduced by the beauty of the daughters of men; they revealed the secret Name of God to a

girl named Istehar, who by virtue of this knowledge was able to escape from the hands of Shemhazai and ascend to heaven. This experience did not have any effect upon Shemhazai and his associates. They took wives unto themselves who gave birth to two sons, Hiva and Hiya, whose names (the syllables Hiva and Hi-ya) henceforth became the cries of pain uttered by suffering men. Thus, this version is closer to the story told in the Book of Jubilees, for in it the Fallen Angels commit their sin only after their descent to earth. Other versions in talmudic literature contain even more far-reaching variations from the story as told in the Book of Enoch: in these versions, it was only after the angels had assumed the nature of man that they committed sin (PdRE 22, et al.). Some talmudic circles attacked the interpretation of Genesis 6:1 in the sense that it is found in the Book of Jubilees. On one occasion, R. *Simeon b. Yoḥai interpreted the term “*Benei Elohim*” as “sons of the judges” and condemned those who gave it the meaning of “sons of God” (Gen. R. 26:5). Similarly, *Midrash ha-Ne’lam* (on this passage) interprets the term “Nephilim” as referring, not to the Fallen Angels, but to Adam and Eve who had come into being on earth without having had a father and a mother. Maimonides also states that the term “*Elohim*” as used in this instance should be taken in its profane sense (*hol*), the reference being to “the sons of rulers and judges” (M. Gaster, in: *Devir*, no. 1 (1923), 196). This opinion was also shared by other Jewish scholars in the Middle Ages. Related to the concept of Fallen Angels is another concept found in apocryphal literature, that of the 70 angels whom God had charged with the power over Israel after the destruction of the First Temple and who abused this power by persecuting Israel (1 En. 53:3; 62:11; 63:1; 89:59; 90:22, 25). By these deeds the angels violated God’s will and came to be regarded as rebellious angels to whom punishment would be meted out. It was under the influence of this concept that Satan – who in the Bible appears either as a punishing angel of God or as an angel testing the sincerity of the Righteous – came to be regarded as an independent evil demon. According to an apocryphal source, his fall followed immediately upon the creation of Adam: the angels were ordered to bow before Adam, but Satan refused and was deposed (Adam and Eve, 12 ff.). Other concepts of Satan appear to have come about under the influence of Parsiism (see *Satan). Satan was also known by two other titles, *Belial and *Samael. The former was frequently identified as the spirit of evil, and in the Dead Sea Scrolls he stood at the head of the forces of darkness. The latter appears as a prime foe of Michael.

Angels in the Talmud and Midrash

In the talmudic age, belief in angels was general, among both scholars and laymen. There were, however, differences of opinion among the sages as to the nature of angels. Some maintained that a new group of angels was created every day, who praised God on that day and then sank in the river of fire (*nehar di-nur*). Others accepted this opinion and added that only two angels, Michael and Gabriel, permanently serve God while all other angels sing their hymn of praise on the day of their

creation and then disappear (Ḥag. 14a; Gen. R. 78:1). The distinction between eternal angels and those created for a specific purpose only seems to have been widely accepted among talmudic sages engaged with problems of religious philosophy; Ben Azzai mentions the two categories of angels as though their existence was a generally acknowledged fact (Sifra 1:1). The Mishnah makes no mention at all of angels and this may be due to the tendency to minimize their significance. Other tannaitic sources, while containing references to angels, rarely mention those angels who bear proper names. It is also significant that even eternal angels are said to be incapable of viewing the glory of God.

ORIGIN OF ANGELS. The Talmud and Midrash contain a variety of opinions on the origin and nature of angels. The angels were created on the second or the fifth day of creation (R. Johanan and R. Ḥanina, Gen. R. 1:3 and parall.; S.A. Wertheimer, *Battei Midrashot*, 1 (1950²), 25; cf. also R. Kirchheim in *Ozar Neḥmad*, 3 (1860), 59, ed. J. Blumenfeld). Creation of angels is continuous since every pronouncement by God results in the creation of angels. Angels walk upright, speak Hebrew, and are endowed with understanding; they can fly in the air, move from one end of the world to another, and foretell the future (Ḥag. 16a). Thus angels have something in common with both men and demons. They have the shape of man, but consist half of fire and half of water (TJ, RH 2; PdRK, ed. Mandelbaum, 6; Song R. 3:11, 15). The angels enjoy the splendor of the *Shekhinah* and are free of the *yezer ha-ra* (“evil inclination”; Gen. R. 48:11); they have no needs (Yoma 4b; Mid. Ps. to 78:25; cf. also LXX and Targum, Ps. 78:25; MGWJ, 22 (1873), 113); they are classified according to countries and as a result there are angels who must not leave Erez Israel (Tanḥ. B., Gen. 178); no angel may carry out more than one mission at a time (BM 86b; Gen. R. 50:2; Justin Martyr, *Dialog*, 56c); and they are capable of error (Eccles. R. 6:10, no. 1: cf. Adam and Eve 13–05). According to one concept the size of an angel is equal to a third of the world (R. Berechiah, PR 83:12; Gen. R. 68:12).

CLASSIFICATION OF ANGELS. Angels are divided into angels of peace and evil angels; the former dwell near God, while the latter are remote from Him (R. Johanan, Tanḥ. B., Lev. 39). There are also angels of life and angels of death (R. Samuel b. Isaac, Gen. R. 9:10). The number of angels is countless; they are classified into groups of higher and lower angels. Like apocryphal literature, the *aggadah* regards Gabriel, Michael, Raphael, and Uriel as the archangels and refers to them as the ministering angels (*malakhei ha-sharet*); the angels Sandalfon, Zagzagael, and Suriel appear only rarely. The angel *Metatron assumes great importance in the Midrash. There are angels who control such matters as prayers, hail, rain, anger, Gehinnom, birth and pregnancy, and other matters. The names of angels, according to talmudic sources, became known to Israel only after the return from the Babylonian exile. The *aggadah* elaborates upon the concept already developed in the apocryphal literature of the guardian angels of the nations of the earth and of individual kings. The former are regarded as hostile to Israel

and have to be put in chains to prevent their doing harm to Israel (Ex. R. 42:1; Gen. R. 56:11). When their nations fall, the guardian angels fall with them, and when they are punished the angels also suffer punishment (Mekh. SbY to 15:1; Deut. R. 1:22). A similar concept of guardian angels is, incidentally, also found with Christian Neoplatonists (see A.F. Daehne, *Geschichtliche Darstellung der juedisch-alexandrinischen Religions-Philosophie...* 2 (1834), 62 ff.; C. Bigg, *The Christian Platonists of Alexandria*, 1913²). Dubiel, the guardian angel of the Persians, was known by name to the rabbis (Yoma 77a); the guardian angel of Edom is also mentioned (Mak. 12a; A. Jellinek, *Beit ha-Midrash*, part 3 (1855), 70); in some instances, the guardian angel of a people pleads on its behalf in order to avert Divine punishment. At the time of the Exodus from Egypt, the guardian angels of all the nations were summoned by God to discuss His quarrel with Egypt. During the discussions, the angel Gabriel, acting upon orders from Michael, produced a portion of the wall which the Israelites had been forced to build for the Egyptians. When it was found to contain the body of an Israelite child, punishment was meted out – first to the guardian angel of Egypt and then to the Egyptians themselves (Yal., Ex. 243). Other *aggadot* tell of the guardian angels of all the nations accusing Israel of being no better than all others (PDRK, ed. Mandelbaum, 221). Kings are also said to have guardian angels; Nebuchadnezzar's angel bore the name of Kal (Ex. R. 21:5). The sea has its own guardian angel (BB 74b; Ex. R. 15:22; 24:2). Frequent mention is made of the angel or "Prince" (רַב) of the world (Ex. R. 17:4; Hul. 60a). The angels' relationship to God is described as dependence upon Him. They must take no step without His command (Tanḥ. B., Ex. 115). Their main purpose is to sing hymns in praise of God and to proclaim His sanctity (*ibid.* 120; Sif. Deut. 306). They are incapable of viewing the glory of God and do not know their own dwelling place (Yal., Deut. 825; Mekh. SbY to 15:2). God may forbid them to sing, as He did when the Egyptians were cast into the sea (Meg. 10b; Ex. R. 23:7). God consults the angels on occasion, as He did before the creation of man (Gen. R. 8:5). Angels are quoted as posing questions regarding contradictions found in the Bible. From the third century, the expression of God's "familia" (*Pamalya*) or the heavenly court of justice is found in the sources. God takes no action without prior consultation with the "familia"; such consultation should be assumed in all instances where the expression "and God" appears in the biblical text. The *Angel of Death (*malakh ha-mavet*) plays a special role among the guardian angels and is regarded as the most evil among the wicked angels (*malakhei ḥabbalah*).

The above data leads to the conclusion that angels were generally regarded as being superior to mortal man. On this point, however, the *aggadah* contains divergent views. Thus it is asserted that the righteous are superior to the ministering angels. Other sages, for whom this claim was too excessive, granted the righteous a status equal to that of the ministering angels; every man has the capability of becoming equal to angels and of resembling them. A third version restricts this

capability to Israel as the people of God. Yet another view is that equality to angels can be achieved only after death. There is also the opinion that at the end of days the righteous will rank above the angels and that the angels will learn the mysteries of heaven from the righteous (TJ, Shab. 6:10, 8d). These varied views found in the *aggadah* were apparently influenced by contemporary trends. Heretical influences can also be discerned in the view of the archangels' participation in the creation of man and in the giving of the law; the *aggadah* combats such theories by various means and on all these occasions makes angels appear as opposing the Divine will. Nevertheless, by its extensive use of angelology as a means of interpreting the story of the Bible, the *aggadah* may well have contributed more to the intensification of the belief in angels than all the heretics and angel worshipers combined.

The *aggadah* contains numerous examples of actions carried out by angels in the biblical and post-biblical periods. As mentioned above, God consulted the angels before creating man (Sanh. 38a; Gen. R. 8:5; Justin Martyr, *Dialog.* 62c); at Adam's wedding to Eve, Michael and Gabriel acted as sponsors (*shoshevinin*, R. Abbahu, Gen. R. 8:15; PDR 12, 16). Angels attended Adam in the Garden of Eden (Sanh. 59b; ARN 151), but they later became his accusers (PDR 13). The angel Samael made Eve pregnant (Targ. Jon., Gen. 4:1; PDR 21). Enoch is removed from earth and ascends to heaven, where he is given the name of Metatron (Gen. R. 25:1 and parall. Targ. Jon., Gen. 5:24); an angel leads the animals into Noah's Ark (Zev. 116; Gen. R. 32:8; PDR 23; Targ. Jon., Gen. 6:20). God converses with the ministering 70 angels who correspond to the 70 tongues and 70 nations (see ZDMG, 57 (1903), 474; ZAW, 19 (1899), 1–14; 20 (1900), 38 ff.; 24 (1904), 311; REJ, 54 (1907), 54). Angels are subject to punishment and are expelled from heaven (Gen. R. 50:13; 68:18; 78:3) for betraying its secrets (Targ. Jon., Gen. 28:12). On special occasions, angels assume the shape of men or animals (Targ. Jon., Gen. 32:25; 37:15; see also the miraculous story of R. Ḥanina b. Dosa (Eccles. R. 1:1; Song R. 1:1, 4, et al.) of R. Yose b. Ḥanina and the two brothers of Ashkelon (Song R. 7:3, 8; Deut. R. 2:20; Ex. R. 1:36, et al.)). The angel who wrestled with Jacob seeks to return to heaven in time for the morning hymns of praise (Gen. R. 78:2). God spoke to Sarah through an angel (Gen. R. 53:5); angels argue with God over Isaac's sacrifice (Gen. R. 56:7; Targ. Jon., Gen. 22:10) and rescue Abraham from Nimrod's fiery furnace (Pes. 118a); angels bear Isaac to Shem and Eber's house of learning (Targ. Jon., Gen. 22:19). An angel with a drawn sword appears before Laban in his dream (Targ. Jon., Gen. 31:24). Gabriel approaches Joseph in the shape of a man (Targ. Jon., Gen. 37:15). The angel Zagzagael reveals himself to Moses in the Burning Bush; angels make their appearance at the Sea of Reeds and at the giving of the Law on Mount Sinai. Michael or Metatron call on Moses to ascend to God; in heaven, the angels attempt to take Moses' life. The angels join God in wailing over the death of Moses, and over the destruction of the Temple. Angels try to shut the windows of heaven, to prevent Manasseh's prayer from being heard (TJ, San. 10:2, 28c). Gabriel saves the

three youths in the furnace (PdRE 33). Michael smites Sennacherib's army (Ex. R. 18:5). Ministering angels also gather in the post-biblical period, to listen to the discussions between R. Johanan b. Zakkai and R. Eleazar b. Arakh (TJ, Meg. 2:1, 77a); or to engage scholars in conversation (MK 28a; Men. 41a); they accompany and protect the Righteous (Shab. 119b, et al.; see Reitzenstein, Poimandres 13). God ordains that angels be ready at all times to help man (Gen. R. 65:15).

In the talmudic age, like in earlier periods, no traces of angel worship are to be found, in spite of the Church Fathers' assertion to the contrary. One talmudic passage (Sanh. 38b) may imply that angel worship was practiced by certain sects who were close to Christianity, but the talmudic sages took strong exception to this practice (see TJ, Ber. 9:1, 13a); the claims of Christian writers regarding angel worship among Jews may well refer to these sects.

[Arthur Marmorstein]

In the Liturgy

The concepts concerning angels, as developed in the *aggadah*, have also been incorporated into the liturgy. This is especially true of the idea of angels singing hymns in praise of God; different groups of such angels appear in the *kedushot* hymns of the *tefillah* and the *yozer*, each in a role of its own. Thus, in the *tefillah*, it is the seraphim (*Sarfei Kodesh*) which are given prominence, while in the *yozer* it is the *ofanim*, *Hayyot ha-Kodesh*, and the cherubim (the mention of the latter being based on Isa. 6:3; Ezek. 3:12). It was presumably in the early geonic period that the doctrine of angels was given increasing prominence in the daily prayers, under the influence of mystical movements, especially the "Yoredei Merkavah." Prime examples are the introductory and connecting passages of the *Kedushah* and the hyperbolic descriptions of the *yozer*. Both these portions of the prayers afterward inspired numerous *piyyutim*, which reveal a growing speculation about angels and introduce new designations and functions for them. The very name of the *piyyutim* of the *yozer* – "ofan" – points to their preoccupation with angels; in the course of the centuries the *piyyutim* became more and more extravagant and detailed in their descriptions. The hymns inserted between the various passages of the *Kedushah* describe the adoration of the angels with an infinite variety of images and terms. Of a similar nature are certain portions of the *Siddur* of *Amram b. Sheshna Gaon, in which several angels appear in apocalyptic visions, the prayer *mi-ymini El u-mi-semoli Uzzi'el*, and others (see *Seder R. Amram*, 13b, 54a and passim). In several of the *Selihot* angels appear in yet another role, that of independent beings whose task it is to transport the prayer of man to God, so that He may have mercy upon the petitioner (*malakhei rahamim makhnisei rahamim*). This idea also has its origin in apocryphal literature, the Talmud, and the Midrash. Special concepts of the role of certain angels were held by the group of mystics who lived in Safed in the 16th century and were first led by Isaac *Luria and later by Hayyim *Vital. This group ascribed to the daily prayer a special redemptive significance, for it was

the prayer that achieved the perfection of world order; it regarded the angels as the leaders of the heavenly spheres who would accept only those prayers which are consecrated to a certain name of God, by means of prescribed preparations and concentrations. This implies a special appeal to the angels. According to this concept, the angel Sandalfon weaves a crown for the infinite God out of the prayers that have been accepted, and the angel Metatron rewards the petitioner for his prayer by granting him the heavenly blessing. By virtue of its doctrine and its strict way of life, the Safed group gained great influence among the Jewish people. Its continued efforts to introduce new prayers into the liturgy expressing its doctrine gained wide acceptance.

MOVEMENTS OPPOSING THE VENERATION OF ANGELS. To counteract this movement, an opposing trend developed whose aim it was to entirely exclude angels from the liturgy. One of the most outspoken opponents of appealing to angels was *Maimonides (see his commentary of Sanh. 10). Joseph *Kimḥi (12th cent.) made the following observation on the practice of appealing to angels: "True penitence does not stand in need of intervention by the saints; feigned penitence will not be helped by either the dead or the saints, by man or angel" (*Sefer ha-Berit* in *Millḥemet Ḥovah*, p. 33a). Isaac *Abraham agrees with Maimonides' view decrying appeals to angels (*Rosh Amanah*, ch. 12). Yom Tov Lipmann *Muelhausen (14–15th century) opposed the practice in the following terms: "Our sages rejected any intermediation between man and the Creator; appeals to intermediaries lead to devilry and idolatry" (*Sefer ha-Nizḥaḥon*, no. 132). Among the opponents of appealing to angels there were such who did not reject outright the terms *malakhei rahamim makhnisei rahamim* (angels of mercy, introducers of mercy), but rather made amendments to the text that avoided any implication of pleading with angels for their intervention (see "Netivot Olam," *Netiv ha-Avodah*, ch. 12, by *Judah Loew b. Bezalel of Prague; *Ḥataṃ Sofer*, OF, no. 166). Those authorities who did not introduce any amendments to the text of the prayers, felt themselves obliged to justify why they did not regard these passages as contradicting pure monotheism (*Shibbolei ha-Leket*, no. 282 and others). Yet in spite of the rejection of the practice of appealing to angels, popular belief has clung to this doctrine and the prayer book has retained traces of it. It was only when the *siddur* by Benjamin Ze'ev Wolf *Heidenheim was published (c. 1800) and a new era of prayer book literature was inaugurated, that a regression of the doctrine of angels took place, accompanied by a general rejection of mystical ideas. Although passages of mystical contents may even be found in *siddurim* of the Reform movement, the present tendency calls for a total exclusion of such prayers from the prayer book.

[Dov Shmuel Flattau (Plato)]

Mysticism

Mysticism distinguishes several categories of angels: ministering and corrupting angels, angels of mercy, and angels of

severe judgment. Furthermore, angels with masculine characteristics are distinguished from those with feminine qualities (Zohar 1:119b; 2:4b). The angels stemming from the highest light came into being on the first Day of Creation and enjoy eternal life; the others, having rebelled against God and consequently having been consumed by fire, were formed on the second Day of Creation (*ibid.* 1:17b, 46a). The angels consist of fire and water or, according to another account, of four heavenly elements: mercy, strength, beauty, and dominion, corresponding to the four earthly elements: water, fire, earth, and air (*Sefer Yeẓirah* (“Book of Creation”), ch. 1, 7; *Pardes Rimmonim*, sect. 24, ch. 10f.). The angels represent spiritual powers of the finest, ethereal substance. When fulfilling their functions on earth, they manifest themselves sometimes in human form and sometimes as spirits (Zohar, 1:34a, 81a, 101a; *Pardes Rimmonim*, sect. 24, ch. 11). The strength of the angels lies in the emanation of the Divine light which becomes manifest in them and because of which they are described as elements of the heavenly throne (*Pardes Rimmonim, ibid.*). The notion, already found in apocalyptic literature, that the ministering angels daily sing hymns before God and praise His wisdom, was enlarged upon in later Jewish mysticism. The Zohar (1:11 to 45) says that the angels live in the seven heavenly halls (*heikhalot*). A special hall is set aside for a certain type of angel that mourns the destruction of the Temple (the so-called *Avelei Ziyyon*; “Mourners of Zion”; *ibid.* 2:8b). The ministering angels may only begin to sing in heaven when Israel commences to praise God on earth. The angel Shemiel carries the prayers of the Jews from their synagogues up to the Temple, whereupon the hosts of ministering angels, suffused in streams of light, descend to earth only to return to the Divine throne to intone their hymns to God (*Pirkei Heikhalot*, in Eisenstein’s *Oẓar ha-Midrashim*, 1 (1915), 123). Of the ministering angels, those serving God Himself are called youths (*baḥurim*), and those serving the **Shekhinah* are called virgins (*betulot*; J. Israel, *Yalkut Ḥadash* (1648), nos. 63, 93). The angels led by archangels are arranged in four groups before the throne of God. *Uriel’s group stands in front of the throne, Raphael’s group behind it; Michael’s group is to the right, and to the left is Gabriel’s (*Massekhet Heikhalot*, Eisenstein, op. cit., p. 109). The first encounter between the angels and man is supposed to have taken place when at God’s behest the mysterious Book of the Heaven was handed to Adam through *Raziel, Hadarniel, and Raphael (Zohar 1:55b). The angels know all men’s futures; their fate is made known in heaven by a herald. Every day angels in raiments of light are dispatched to the lower world with special assignments: some serve the human body, others the soul (Zohar 2:10a, 11a, h, 94a, 118b). In each human being there lives a good angel and a wicked one (1:144b); man’s every step is accompanied by good and bad spirits (3:48b). Even in the hereafter the angels accompany man where, depending upon his life on earth, he is received either by the angels of peace or by the angels of destruction (Zohar *Ḥadash* to Ruth (1902), 89a). In the service of the unclean of the *sitra di-semola* (“left side”) stand the angels of destruction (*Malakhei Ḥabbalah*),

corresponding to the ministering angels of the holy *sitra di-ymina* (“right side”). In accordance with God’s command, the latter bring man either good or evil, but with the angels of destruction malice is a natural characteristic. These angels, too, live in seven halls and are subject to certain “superiors.” They swarm through the air, mingle with humans in order to seduce them, and later report their sinful acts to their leaders so that the latter can present the indictments before God (*Pardes Rimmonim*, sect. 26, chs. 1–7). The huge army of the angels of destruction, the counterpart to God’s entourage, constitutes the family of the unclean “other side,” the so-called *kelippah*.

[Samuel Abba Horodezky]

In Jewish Philosophy

PHILO. Philo identified the angels of Scripture with the demons of the Greek philosophers (Gig. 2:6; 1 Sonn. 142). They were, according to him, incorporeal and immortal souls hovering in the air and ascending to heaven, which having “never felt any craving after the things of the earth,” never descended into bodies. They were intermediaries between God and men, hence they are represented as “ascending and descending” in Jacob’s dream. Unlike the Stoic philosopher Posidonius (b. c. 135 B.C.E.), who saw in the demons the necessary link between the upper and lower stages of being, Philo considered the angels merely as instruments of Divine Providence, whose services could on occasion be dispensed with when God chose to address men directly. There were, however, “evil angels” also, who were not messengers of God and hence “unworthy of their title.” Evidently, Philo was thinking of the “fallen angels” of Jewish apocalyptic literature.

MAGHĀRRĪYA AND KARAITES. Philonic and gnostic influences were combined in the angelology of al-Maghārriya, a Jewish sect that flourished in Egypt during the first centuries of the common era. As attested by al-*Kirkisānī, Karaite dogmatist and exegete, and al-Shahrastānī (1076 or 1086–1153), Muslim historian of religion and philosopher, the Maghārriya interpreted all anthropomorphic passages in the Bible as referring to an angel, rather than God Himself, and claimed that it was the angel who created the world and addressed the prophets. According to al-Kirkisānī the writings used by this sect included a work by “the Alexandrian,” a reference, no doubt, to Philo. The angel-demiurge of the Maghārriya, therefore, represents a distorted and gnostically inspired version of Philo’s *logos. This doctrine has no parallels in either the sectarian Qumran writings or in the Greek literature describing the Essenes. It is, however, closely akin to the view held by the Karaite theologian Benjamin *Nahawendi in the first half of the tenth century, as was already noted by al-Kirkisānī. Judah *Hadassi, the 12th-century Karaite teacher, followed Nahawendi in predicating the appearance of angels in all instances of prophecy, including that of Moses, to whom the highest angel is said to have appeared.

SAADIAH GAON. *Saadiah Gaon rejected the Karaite view that the anthropomorphic terms in the Bible refer to angels.

He explained the passages describing Divine revelations to Moses and the other prophets by his theory of the “created glory” (*kavod nivra*) and “created speech” (*dibbur nivra*). The “created glory,” identified by him with the rabbinic concept of *Shekhinah* (“Divine Presence”), is a manifestation of light accompanying the “created speech” and proof that the voice heard is of Divine origin. The angels, too, are created and luminous, but rank below the *kavod*. Nevertheless, Saadiah does admit that prophetic revelation may also take place through the mediacy of angels.

ABRAHAM IBN EZRA. Abraham *Ibn Ezra understood Saadiah’s views as asserting the superiority of men over angels and attacked his notion. Man, according to him, is far below the angels, since all his knowledge is imperfect; only under certain conditions may his soul be admitted to the rank of the angels in the afterlife. This disagreement stemmed from different conceptions of the angelic nature. For Saadiah, the angels, although more refined in substance than man, are still corporeal beings, while in Ibn Ezra’s view, they are identical with the immaterial or simple substances of Neoplatonic ontology. They represent the “supernal world,” which is “all glory” and consists of the “supernal forms” of all things below (cf. Ibn Ezra’s commentary on Genesis 1:1, which is more explicit in the first recension, J. Blumenfeld (ed.), *Ozar Nehmad*, 2 (1857), 210ff.; cf. also M. Friedlaender, *Essays on the Writings of Abraham ibn Ezra* (1877), 115). This Neoplatonic view of the world of angels is poetically described in Ibn Ezra’s Hebrew paraphrase of *Hai ibn Yaqzan* by the Muslim philosopher Avicenna, which he called *Hai ben Mekiz* (in D. Rosin’s *Reime und Gedichte des Abraham ibn Ezra* (1885–94), 196). Avicenna identified the angels of the Koran with the “separate intelligences,” which, following Aristotle, he assumed to be the external movers of the spheres.

MAIMONIDES. The equation of the “separate intelligences” (Ar. *‘uqūl Mufāraka*; Heb. *sekhālim nifradim* or *sekhālim nivdalim*) with angels became the accepted doctrine in Jewish Aristotelianism. Declaring that the angels are incorporeal, *Maimonides writes, “This agrees with the opinion of Aristotle; there is only this difference – he used the term ‘intelligences’ and we say ‘angels’ instead” (Guide, 2:6). This view marks a radical departure from the traditional view of angels as corporeal beings. The assertion of their incorporeality raised the questions of how they could be visibly perceived and what could be meant by the biblical descriptions of them as flying, winged, and so on. Maimonides answered that all such attributes should be understood as figurative expressions (Guide, 1:49). At the same time he considered the word “angel” a homonymous term denoting not only the separate intelligences, but all natural and psychic forces, both generic and individual. Thus, the formative power which produces and shapes the limbs of an embryo may be called an angel; the libidinous disposition aroused by the sight of a beautiful woman may be spoken of as “an angel of lust” (as in Gen. R.

85:8); the spheres and elements, too, may be referred to as “angels” (Guide, 2:6–7). The rabbinic statement “Every day God creates a legion of angels; they sing before Him and disappear” (Gen. R. 78:1) was taken by him to describe the natural and psychic forces in transient individuals.

AVICENNA AND AVERROES. Jewish Aristotelians were greatly influenced by the divergent views of the Muslim philosophers *Avicenna and *Averroes, who identified angels with the moving principles of the celestial spheres. According to Avicenna (c. 980–1037), the motions of the spheres were due to two kinds of movers, the intelligences and the celestial souls. The intelligences moved the souls by virtue of being their objects of contemplation, and the souls, in turn, moved their respective celestial spheres. Avicenna identified the hierarchy of the intelligences with the cherubim and that of the celestial souls with the ministering angels. This doctrine and the complicated theory of emanation supporting it were criticized by Averroes, who eliminated the angelic hierarchy of celestial souls and preserved only the angelic hierarchy of intelligences. He interpreted the “soul of the sphere” in the sense of “nature of the sphere.”

Abraham *Ibn Daud and Maimonides followed Avicenna, while Jewish Averroists like Isaac *Albalag adopted Averroes’ angelology. Ibn Daud (*Emunah Ramah*, ed. by S. Weil (1919), 58–62) demonstrated the existence of angels from the motions of the heavens, which were caused by the celestial souls’ desire to imitate the intelligences. This is a clear restatement of Avicenna’s dual hierarchy with the important difference, however, that the celestial souls are not specifically designated as angels. Maimonides also accepted Avicenna’s dual hierarchy but reserved the term “angel” for the intelligences, the rank of an angelic order being in proportion to its capacity to conceive of God (Yad, Yesodei ha-Torah 2:5–8). Isaac Albalag, on the other hand, followed Averroes in opposing Avicenna’s position and even exceeded Averroes’ critique by denying the need for an internal principle of motion in the spheres. He proposed instead a dual hierarchy of intelligible and natural forces, or angels. Philosophers who rejected the doctrine of separate intelligences in its entirety and the angelology based on it were *Judah ha-Levi (Kuzari, 5:21; cf., however, 4:3, where he refuses to pronounce either for or against this view), Ḥasdai *Crescas (*Or Adonai*, 1:2, 15; 4:3), and Isaac *Arama (*Akedat Yizḥak*, 2). Both Avicennians and Averroists agreed that the separate intelligences (i.e., angels) were simple substances or pure forms without matter. A different view was held by Jewish Neoplatonists, such as Isaac *Israeli who described the hypostasis of intellect as composed of spiritual matter and form, and Solomon ibn *Gabirol, who held that the intelligible substances or angels are composed of matter and form. Abraham Ibn Daud (and Thomas Aquinas in his *De ente et essentia*) attacked Gabirol’s view. Isaac *Abrabanel, in his commentary on the Book of Kings (ch. 3), quotes Gabirol’s doctrine and offers an elaborate survey of the views advanced

on the subject. For the role of angels in prophecy according to the Jewish Aristotelians see *Prophecy.

[Alexander Altmann]

Modern Period

The modern Jewish attitude to angels tends to regard the traditional references and descriptions as symbolic, poetic, or representing an earlier world-concept. Contemporary movements such as Reform Judaism and certain sections of the Conservative Movement have either completely expunged from the liturgy all references to angels or where they remain have understood them in poetic or mythological terms. They feel that a belief in their existence is out of keeping with a modern approach to the world and God and cannot be reconciled with modern rationalism.

The attitude prevailing among many of the Orthodox is ambiguous. They have retained the relevant liturgical passages and accept the appropriate biblical and rabbinic references, but nevertheless modern Orthodoxy tends to demythologize them and reinterpret them without compromising the belief in their ontological status. Angels are interpreted symbolically and belief in their existence is not denied altogether. The degree of literalness of this belief varies from sub-group to sub-group. It is only among the small fundamentalistic sections, such as some of the Hasidim as well as the Oriental Jewish communities, that the literal belief in angels, which for so long characterized Jewish thought, is still upheld.

ANGERS (Heb. אנג'יירש), capital of the Maine-et-Loire department, western France, and of the ancient province of *Anjou. Jews probably resided in Angers from the 12th century. They were expelled by Charles II in 1289. The Jews who evidently resettled in Angers during the 14th century became the victims of bloody persecutions and humiliating restrictions. In 1394, soon after Anjou was reunited with France (1390), the Jews of Angers were again expelled, with the rest of the Jews of the kingdom (see *France). Jews subsequently visited Angers on business, but in 1758 the municipal council prohibited them from entering the market. The present “Rue de la Juiverie,” bordering on the modern part of the city, is not the site of the medieval Jewish quarter. A number of Hebrew inscriptions may be seen on four covings above the portal of the Cathedral of Angers, describing the attributes of the savior, taken mainly from Isaiah 9:5. In 1968 there were 250 Jews in Angers.

BIBLIOGRAPHY: Brunschvicg, in: *REJ*, 29 (1894), 229–41; Joubert and Delacroix, in: *Société d'agriculture, science et arts d'Angers, Memoires* (1854), 129ff.

[Bernhard Blumenkranz]

ANGLO-ISRAEL ARCHAEOLOGICAL SOCIETY, founded in 1961 by Alec Lerner, Leon Shalit (at that time both on the staff of Marks and Spencer), and Richard Barnett, who was Keeper of Western Asiatic Antiquities at the British Museum. It is likely that they were influenced by both positive and negative considerations.

Positively, there was much popular interest at the time in what has often been called “Biblical Archaeology,” and this same group had already been active in seeking to gain material support for excavations in Israel. During 1961–62, Yigal *Yadin was spending a year in London. In preparing for his excavations at *Masada, where the system of using volunteer labor was first introduced, he was in close touch with his three friends about the logistical problems involved. It is thus no surprise that he should have given the Society's inaugural lecture in November 1961 to an audience of some 700.

Negatively, it is likely that Barnett, who was also involved with the much older *Palestine Exploration Fund, was disappointed at the lack of interest being shown in academic circles in the work specifically of Israeli archaeologists and that he was anxious to foster a greater exchange of ideas and the dissemination of the important work that they were doing.

All these concerns led to the formulation of the main aims of the Society, which have continued to the present, namely public lectures (about ten per annum) on the archaeology of Israel and surrounding countries, and the support by grants of students going to join excavations in Israel and similar projects or of Israeli students who need to visit Britain for archaeological research. In recent years, these aims have been further developed by the introduction of museum visits, the provision of lectures in Manchester as well as London, joint lectures with other societies (including the PEF) and in particular by the publication of an annual *Bulletin* which, under

the editorship of Shimon Gibson, has become established as a mainstream academic journal for archaeological and related research as well as continuing to provide summaries of the society's activities and lectures.

The society has had three chairmen in its 25-year history; Barnett himself, who steered it with a very personal touch until 1985, then more briefly J.B. Segal, and since 1991 H.G.M. Williamson, who has sought to develop the role of the executive committee. Honorary presidents have been Lord Segal and currently Viscount Allenby of Megiddo, the great-nephew of the distinguished field marshal.

The charitable society has no religious or political affiliation, and its modest membership is open to all with an interest in the subjects it seeks to promote.

[H.G.M. Williamson (2nd ed.)]

ANGLO-JEWISH ASSOCIATION (AJA), British organization originally founded for the protection of Jewish rights in backward countries by diplomatic means. Its objectives and activities were patterned after those of the *Alliance Israélite Universelle. It was established in 1871 with Jacob Waley as its first president; five Jewish members of Parliament served as vice presidents. By 1900 it had 36 branches, 14 in British colonies. In 1871 it was instrumental in securing the creation of the Romanian Committee and in 1882 collaborated in establishing the Russo-Jewish Committee. From 1878 it cooperated with the *Board of Deputies of British Jews in the Conjoint (Joint) Foreign Committee. The AJA undertook educational work among "underdeveloped" Jewish communities, maintaining schools in Baghdad, Aden, Mogador, Jerusalem (the Evelina de Rothschild School), and other places. In 1893 it became associated with the direction of the *Jewish Colonization Association (ICA). As its president, Claude *Montefiore condemned the *Balfour Declaration. After the Board of Deputies became overwhelmingly Zionist in 1940, the AJA under Leonard J. *Stein became a rallying point of non-Zionist sentiment; as a result, ostensibly because it was not a democratically elected body, its representation on the Joint Foreign Committee was reduced and then abolished. After the establishment of the State of Israel, it modified its attitude toward Zionism. Circumstances have reduced its overseas interests. It published the *Jewish Monthly* (1947–52), and the *AJA Review* (1944–55) which was superseded by the *AJA Quarterly*, and more recently by *AJA Today*. In recent years it has awarded student scholarships and holds cultural events, but it has also continued to represent the Jewish community on government and international bodies.

[Cecil Roth]

ANGOFF, CHARLES (1902–1979), U.S. novelist and editor. Born in Russia, Angoff was taken to the U.S. as a child and began his writing career in the 1920s. He assisted H.L. Mencken, whose attitudes about Jews were variable, in editing the *American Mercury* and in 1934 succeeded him as editor. Angoff's first book, *Literary History of the American People* (2 vols., 1931), surveyed the period from 1607 until 1815, but his qualities were best revealed in his fiction. He first ventured into this field with a series of short stories based on his own experiences: *Adventures in Heaven* (1945), *When I was a Boy in Boston* (1947), and *Something about My Father and Other People* (1956). Only in the 1950s, however, did Angoff emerge as a writer of real significance, recording the saga of East European immigrant Jewry's integration into American society. His most notable achievement was a series of autobiographical novels centering on his alter ego, David Polonsky: *Journey to the Dawn* (1951), *In the Morning Light* (1952), *The Sun at Noon* (1955), *Between Day and Dark* (1959), *The Bitter Spring* (1961), *Summer Storm* (1963), *In Memory of Autumn* (1968), *Winter Twilight* (1970), and *Season of Mists* (1971). With sympathy and fidelity Angoff weaves into the story of his hero a whole gallery of American-Jewish types, ranging from the Yiddish-speaking immigrants at the turn of the century to their Americanized descendants of the post-World War II era, stung to new Jewish awareness by the Holocaust and Israel. He also wrote a book of poems entitled *The Bell of Time* (1967) and a volume of essays, *The Tone of the Twenties* (1966). In 1957 Angoff became an editor of the *Literary Review*. He wrote a frank treatment of a former literary idol and his old associate in *H.L. Mencken: A Portrait from Memory* (1956). He also published *Prayers at Midnight*, consisting of 26 original prayers in the form of "prose poems." In 1969 Angoff was elected president of the Poetry Society of America and subsequently reelected for a second term as president. In 1970, he published, with Meyer Levin, an important anthology of selections from American-Jewish novels, *The Rise of American Jewish Literature*.

[Sholom Jacob Kahn]

ANGOULÊME, capital of the department of Charente, western France. It seems from a missive addressed by Pope Gregory IX in 1236 to the bishop of Angoulême and other prelates that the crusaders had committed excesses against the Jews there. In about 1240 Nathan b. Joseph *Official engaged in a controversy with the bishop of Angoulême. The Jewish cemetery was situated between the city wall and the abbey, and the synagogue near the present Place Marengo. The "Rue des Juifs" (now Rue Raymond-Audour) began at Rue des Trois-Notre-Dame and ended at the Place du Palet. A second "Rue des Juifs" in Faubourg l'Houmeau is mentioned for the first time in 1811. The community seal represents a crescent moon and a six-pointed star with the encircling inscription S[igillum] Iudaeorum.

ANGRIST, ALFRED ALVIN (1902–1984), U.S. pathologist. Angrist, who was born in Brooklyn, held various teaching posts at the New York Medical College from 1929 to 1954, when he became professor of pathology at the Albert Einstein College of Medicine of Yeshiva University, New York, retiring from there in 1969. He was also director of laboratories of the Bronx Municipal Hospital Center and consultant pathologist to many New York City hospitals. Angrist made many important contributions to the knowledge of endocarditis. One of his favorite subjects, however, was the importance of the autopsy, both for the advancement of medical knowledge and for teaching. He campaigned vigorously on the matter, and dealt with it in many of his scientific papers. Angrist was a member of the committee that produced the standard nomenclature of pathology and for over 20 years was on the committee on medical education of the New York Academy of Medicine. He was a strong supporter of “controversial” scientists in the McCarthy era. Among other posts, he served as president of the Queens County Medical Society and New York Pathology Society. Angrist was also a director of the Health Insurance Plan of Greater New York and president of the Queensboro Council for Social Welfare.

[Fred Rosner / Bracha Rager (2nd ed.)]

ANHALT, former German state, now part of the Land of Saxony-Anhalt, Germany; until the 12th century part of the duchy of Saxony, later becoming an independent principality. Jews living in the towns of Bernburg, Aschersleben, Koethen, and Zerbst in Anhalt are mentioned in sources from the 14th century. Communities existed in the first two towns during the 15th century when the rabbi of Aschersleben was Isaac Eilenburg, mentioned in the responsa of Israel Isserlein. No further Jewish settlement in Anhalt is recorded from the end of the 15th century to the beginning of the 17th. Afterward, the mercantilist policies of the absolutist regime encouraged Jewish traders and financiers to settle in the principality. They formed a well-to-do group which soon engaged in cultural activities.

Hebrew printing presses were established in Koethen in 1621. Moses Benjamin Wolff, the court Jew, set up a Hebrew press in 1695 in Dessau (which was active till 1704) as well as in Koethen and Jessnitz where Israel b. Abraham, who was a proselyte, was active for many years. He printed Maimonides' Code with commentaries (1739–42) and his *Guide of the Perplexed* with the standard commentaries in 1742. In 1742 too, Benjamin Moses Wolff's son Elijah restored his father's press for one year, producing the *Sifra* and the Jerusalem Talmud, *Seder Mo'ed*. In the period of Enlightenment Moses *Philippson (1775–1814) established a Hebrew press in Dessau; David (b. Moses) *Fraenkel printed there the first Judeo-German monthly *Sulamith* (1806–33).

A synagogue was built at Dessau in 1687. The characteristic relationship of this period between the German princes and the rich Jews they patronized, a mixture of exploitation, oppression, and socializing, was also found in Anhalt. Thus, permission was given to build a synagogue in the famous gardens of Woerlitz, and a Jewish wedding was held at the palace. Anhalt Jewry played an important role in the Enlightenment (*Haskalah) and acceptance of German culture. Moves toward Jewish emancipation were initiated in the community of Dessau early in the 19th century. In 1804 the “body” tax levied on Jews was abolished in Anhalt, and Jews were required from 1810 to adopt surnames. Full political rights were granted in 1867. In 1831 the civil authorities appointed S. *Herxheimer chief rabbi of Anhalt, contributing half of his salary. Prominent among Anhalt Jews were the philosophers Moses *Mendelssohn, Hermann Heyman *Steinthal, and Hermann *Cohen, the historian Isaac Marcus *Jost, the theologian Ludwig *Philippson, and the mathematician Ephraim Solomon Unger. The Jewish population, numbering 3,000 in 1830, decreased to 1,140 by 1925. The synagogues of Anhalt were burned in November 1938; the 1,000 Jews still living there were murdered during World War II.

[Zvi Avneri]

ANHALT, ISTVÁN (1919–), composer. Anhalt was born in Budapest where he studied with Zoltán Kodály at the Franz Liszt Academy of Music in 1937–41. Conscripted into a forced-labor unit of the Hungarian army in 1942, Anhalt escaped in 1944 and was hidden by Pater Janos Antal and Theresa de Kerpelz, whom he sponsored for recognition by Yad Vashem.

At war's end Anhalt went to Paris where he studied conducting at the Conservatoire with Louis Fourester; piano with Soulima Stravinsky; and composition with Nadia Boulanger. During this time he lived on a stipend from the Union des étudiants juifs de France and led the vocal quartet at a Paris synagogue. He immigrated to Canada as the only musician among 64 displaced intellectuals who were fellows of the Lady Davis Foundation (1949–52). Anhalt spent the rest of his career at McGill University's Faculty of Music (1949–71) and Queen's University's School of Music (1971–84). His students included composers Jack Surinlikoff and William Benjamin.

Among Canadian composers, Anhalt was a leading figure in the postwar avant-garde. Seemingly self-taught in Arnold Schoenberg's 12-tone technique, he employed an idiosyncratic form of serialism that culminated in his *Symphony*. Anhalt conducted the premiere of this, his first large-scale instrumental piece, at a 1959 Montreal concert sponsored by the Canadian Jewish Congress to commemorate the 200th an-

niversary of the first Jewish community in Canada. A turning point in his career, the *Symphony* helped secure Anhalt a tenured position at McGill and resulted in international exposure. Other works of this period are *Seu Sheorim* (1951) for chorus and organ to a traditional text, and Psalm XIX (1951) for baritone and piano, to a text by A.M. Klein, for Otto Steieren, cantor of Montreal's Temple Emanuel.

Also a pioneer in electronic music, Anhalt spent his summers in the late 1950s and early 1960s at Canada's National Research Centre, the Columbia-Princeton Center, and Bell Labs. In 1964 he established Canada's first electronic music studio at McGill. These experiments resulted in *Electronic Compositions 1-4* (1959-61) and such mixed-media works as *Foci* (1969). As in other post-1960 pieces, Anhalt himself wrote *Foci's* text, which contains kabbalistic references and requires extended vocal techniques. In his 1995 opera *Traces (Tikkun)*, a single singer enacts many characters in Anhalt's libretto, which is influenced by the Kabbalah, the Exodus story, and the writings of Martin Buber, Gershom Scholem, and Isaac Luria. *The Tents of Abraham (A Mirage - Midrash)*, which Anhalt has characterized as "a dream of peace between Judaism and Islam," was awarded Canada's Juno Award for best classical composition in 2005. Anhalt was named an Officer of the Order of Canada in 2003.

[Jay Rahn (2nd ed.)]

ANIELEWICZ, MORDECAI (1919-1943), commander of the Warsaw ghetto uprising. Anielewicz, who was born into a Jewish working-class family in Wyszaków, Poland, was for a short time a member of *Betar. He later joined *Ha-Shomer ha-Za'ir and at the outbreak of World War II, was one of the leaders of its Warsaw branch. When the German army approached Warsaw, he fled eastward in an attempt to reach Palestine but was caught at the Romanian border. He went to Vilna, then Soviet-occupied, where many members of the Zionist youth movements found refuge but returned to Warsaw in order to reestablish his movement in German-occupied Poland. He was instrumental in founding an urban kibbutz in a house in the Warsaw ghetto, in organizing educational activities for small groups, and in publishing an underground paper *Neged ha-Zerem* ("Against the Stream"). He was outside the ghetto in Western Poland during the *Aktion* of July-September 1942 (see *Warsaw, Ghetto) in which more than 265,000 Jews were shipped to Treblinka, where they were gassed. Consequently, he was less ridden by guilt and self-loathing for the failure to resist than his comrades who had remained in Warsaw. Anielewicz had long advocated armed resistance against the Germans, and upon the formation of the Żydowska Organizacja Bojowa or Z.O.B. ("Jewish Fighting Organization"), he was named its commander. He was the sole survivor of the Ha-Shomer ha-Za'ir force, which he led at the time of the *Aktion* on January 18, 1943, in which Jews

openly resisted the German deportations, which were halted after four days. The Z.O.B. believed that their resistance had halted the deportations and doubled their efforts. Thereafter Anielewicz prepared both the Z.O.B. and the entire ghetto, now effectively under his control, for the final uprising in April 1943. He deeply sensed the historic importance of his mission. On April 23, he wrote to Yitzhak Zuckerman, a unit commander on the Aryan side:

What we have experienced cannot be described in words. We are aware of one thing only: what has happened has exceeded our dreams. The Germans ran twice from the ghetto...I have the feeling that great things are happening, that what we have dared is of great importance.

Keep well, my dear. Perhaps we shall meet again. But what really matters is that the dream of my life has become true. Jewish self-defense in the Warsaw ghetto has become a fact. Jewish armed resistance and retaliation have become a reality. I have been witness to the magnificent heroic struggle of the Jewish fighters.

On May 8, the Germans sent gas inside the bunkers at Z.O.B. command headquarters at Mila 18. Anielewicz died as he expected, as his wished, fighting the Germans. In the underground Anielewicz used three aliases: "Marian," "Aniol" (Polish for angel), and "Malakhi," all variations of either his first name or family name. Kibbutz Yad Mordekhai is named after him.

[Shaul Esh / Michael Berenbaum (2nd ed.)]

ANILAEUS AND ASINAEUS (first century C.E.), two Babylonian Jewish brothers who founded a robber state in Babylonia and ruled it for 15 years (c. 20-35). Natives of Nehardea, Anilaeus and Asinaeus had been apprenticed by their mother to learn the weaving trade. Punished by their master for laziness, the brothers fled and were joined by other young discontented Jews in the area of the Euphrates. These they armed, and, acting as their leaders, the brothers forced the surrounding herdsmen to pay a tribute from their flocks, and threatened violence to all who refused. Eventually they established a robber state and thus came to the attention of the Parthian satrap of Babylonia. The latter, however, was defeated in battle by the two brothers after miscalculating that the Jews would not defend themselves if attacked on the Sabbath. When news of the battle reached the Parthian king, Artabanus III (c. 12-38 C.E.), he decided "to use the prowess of the Jewish brothers as a curb to ensure the loyalty of his satrapies, for some of them were in rebellion, and some were considering whether to rebel" (Jos., Ant., 18, 9, 330). As a result, they were

formally appointed rulers of those regions of Babylonia which they already controlled. On reaching his own territory, Asinaeus fortified the land and in general “held sway from now on over all Mesopotamia, and for 15 years the brothers’ prosperity kept on increasing.”

Only with the appearance of a certain Parthian general in the area did the situation begin to deteriorate. Anilaeus, having fallen in love with the general’s wife, forced him into battle, secured his death, and married his widow. By tolerating her idolatry Anilaeus aroused great dissension among his Jewish followers. When Asinaeus brought their protests before his brother and urged him to send the woman away, he was poisoned by her. Thus began the downfall of the small Jewish kingdom. Anilaeus assumed control of the army and managed to defeat Mithridates, a Parthian governor and son-in-law of Artabanus. Mithridates, captured and humiliated by Anilaeus, was eventually released. He thereupon gathered a greater force, and “the followers of Anilaeus suffered a disgraceful rout” (Jos., Ant., 18:366). Anilaeus himself managed to escape, and for a while succeeded in plundering villages near Nehardea. He was finally discovered and trapped by the Babylonians, who, after killing him, unleashed a violent wave of terror against the Jews of Babylonia.

[Isaiah Gafni]

ANI MA'AMIN (Heb. אֲנִי מֵאֲמִין; “I believe”), a short creed based, as is the **Yigdal* hymn, on the Thirteen *Articles of Faith formulated by *Maimonides. Each article begins with the words *Ani ma'amin be-emunah shelemah* (“I believe with complete faith”). The author is unknown. The credo character of the formula and the custom of reciting this creed may both be due to Christian influence. The catechistic formula “I believe with perfect faith...” reminiscent of early Christian creeds, has no basis in the Arabic original of Maimonides’ thirteen principles, which are stated apodictically, although the medieval Hebrew translation by Solomon b. Joseph ibn Ya`aqub frequently interpolates “to believe” (*le-ha'amin*) or “that we believe” (*she-na'amin*).

The *Ani Ma'amin* is found, in a somewhat enlarged version, in a 15th-century manuscript (Parma, 1753 (997)) of miscellaneous prayers with the superscription: “These are the 13 principles of religion, faith, and ethics, and denying one of them is equivalent to denying the whole Torah. They should be recited daily after prayer, for whosoever recites them daily, will come to no harm all that day.” The Ashkenazi prayer book, printed in Mantua in 1558, is apparently the first to incorporate the *Ani Ma'amin*. It appears after the *Hallel* prayer and the superscription in High German reads: “Some have the custom to recite this also in the morning.” It can now be found in most Ashkenazi prayer books at the end of the morning service. Unlike the **Yigdal* hymn, however, the more credal

Ani Ma'amin never became part of the liturgy. The recital of the *Ani Ma'amin* is concluded by the three words of Genesis 49:18 repeated three times in different order, in Hebrew and Aramaic, as in the Night Prayer, a custom based on Kabbalah. The 12th article, expressing belief in the coming of the Messiah, became the Martyrs’ Hymn during the Nazi Holocaust, when it was sung to a haunting melody by those taken to their death in the extermination camps and thereafter was frequently sung in their memory. For a *piyyut* based on *Ani Ma'amin*, see Davidson, Ozar, s.v.

[Marc B. Shapiro (2nd ed.)]

ANIMALS, CRUELTY TO (Heb. צַעַר בְּעַלְי חַיִּים, *z'ar ba'alei hayyim*; lit. “pain of living things”). Moral and legal rules concerning the treatment of animals are based on the principle that animals are part of God’s creation toward which man bears responsibility. Laws and other indications in the Pentateuch and the rest of the Bible make it clear not only that cruelty to animals is forbidden but also that compassion and mercy to them are demanded of man by God. According to rabbinic tradition, interpreting the biblical record, mankind was not allowed to eat meat until after the Flood, although the sacrifice of animals to God had been previously allowed (Gen. 1:29; 9:3). Once permitted, the consumption of meat remained surrounded with many restrictions (see *Dietary Laws). According to the rabbis, the Hebrew word for “desireth” in the verse, “When the Lord thy God shall enlarge thy border and thou shalt say: ‘I will eat flesh,’ because thy soul desireth to eat flesh...” (Deut. 12:20), has a negative connotation; hence, although it is permitted to slaughter animals for food, this should be done in moderation. It has been suggested that the Jewish method of slaughter, particularly the laws that the knife be exceedingly sharp and without the slightest notch, were motivated by consideration for the animal because this method is the most painless. The biblical Sabbath laws also suggest consideration for animals (“Thou shalt not do any manner of work... nor thine ox, nor thine ass, nor any of thy cattle” (Ex. 20:10; Deut. 5:14); “but on the seventh day thou shalt rest; that thine ox and thine ass may have rest” (Ex. 23:12)), as do the prohibitions against muzzling an ox as it threshes (Deut. 25:4), and slaughtering an animal and its young on the same day (Lev. 22:28). One reason for the commandment to let the fields lie fallow in the Sabbatical year is that “the poor of thy people... and the beast of the field” may eat from them (Lev. 25:6–7). This same idea is inherent in the commandment “If thou see the ass of him that hateth thee lying under its burden... thou shalt surely release it with him” (Ex. 23:5), and in

the requirement to release the parent bird before taking the young (Deut. 22:6–7). (However, there is a difference of opinion in the Talmud as to the reason for these last *mitzvot* (see below).) Indications of the same consideration appear in the narrative sections of the Bible. The angel rebuked Balaam for smiting his ass (Num. 22:32), and God Himself admonished Jonah “and should not I have pity on Nineveh, that great city, wherein are more than sixscore thousand persons... and also much cattle?” (Jonah 4:11). God is also praised as the One who satisfied all living creatures (Ps. 145:9–16), and for giving the beasts and the birds their food (Ps. 147:9).

In view of all this, the rabbis based a great deal of their legislation and interpretation on the principle of *za'ar ba'alei hayyim*. As one the seven *Noachide Laws, the prohibition to eat the flesh of a living animal, applies also to non-Jews (Sanh. 56a–57a, 59a–b; Tosef. Av. Zar. 8:4–6). The dietary laws limiting the killing of animals are discussed at great length, and the rabbis recommend moderation in eating even permitted meat. The rabbis were not completely opposed to killing animals – giving priority to human needs – but they were entirely against wanton killing as they were against causing pain to animals. It is forbidden to inflict a blemish on an animal (Hul. 7b). Many acts otherwise forbidden on the Sabbath are permitted when their purpose is to relieve animals' pain on the grounds that cruelty to animals is biblically prohibited (Shab. 128b). The accepted (although not unanimous) view is that the commandment to help unload (Ex. 23:5; see above) is motivated by consideration for animals, which is thus regarded as a principle of biblical force (Maim., Yad, Roze'ah u-Shemirat Nefesh 13; Tur, ḤM 272) and thus it is permitted to unload a burden from a laboring animal even on the Sabbath (Maim., Yad, Shabbat 21:9–10). It is permitted to ask a non-Jew to milk cows on the Sabbath – an act that would be otherwise forbidden. The rabbis ordained that one should not recite the festive benediction *She-Heḥeyanu* before the act of ritual slaughter or before putting on new leather shoes because the enjoyment is at the cost of the animal. On the basis of the verse “I will give grass in thy fields for thy cattle, and thou shalt eat and be satisfied” (Deut. 11:15), the rabbis decided that “it is forbidden for a man to eat before he has fed his animal because the animal is mentioned first” (Ber. 40a). This decision accordingly passed into the *halakhah* and was subsequently codified (Maim., Yad, Avadim 9:8). Out of the same consideration they also legislated that “a man is not permitted to buy animals unless he can properly provide for them” (TJ, Yev. 15:3, 14d; TJ, Ket. 4:8, 29a). The principle of kindness to animals played no less a part in the *aggadah* than it did in the *halakhah*. It is as though God's treatment of man will be according to the latter's treatment of animals. This is suggested by the juxtaposition of the promise of long life with the *mitzvah* of sending the parent bird away before taking the young (Deut. 22:6–7). R. Judah ha-Nasi was divinely punished because he did not show mercy to animals, and the punishment was removed only when his attitude improved, and Moses and David were considered fit to be leaders of Israel only after they had been

shepherds (TJ, Kil. 9:3, 32a; BM 85a). In later rabbinic literature, both halakhic and ethical, great prominence is also given to demonstrating God's mercy to animals, and to the importance of not causing them pain (see R. Margalioṭ (ed.), *Sefer Ḥasidim* (1957), 589, 667, 668, 670; M. Cordovero, *Palm Tree of Deborah* (1966), ch. 2–3). Even the necessary inflicting of pain is frowned upon as “cruel.”

The rabbinical attitude toward hunting is entirely negative. Harsh things are said about those who hunt even for a living. R. Ezekiel Landau said that “the only hunters we know of (in the Bible) are Nimrod and Esau; it is not the way of the children of Abraham, Isaac, and Jacob.”

Medieval Jewish philosophers used the principle of *za'ar ba'alei hayyim* to explain various *mitzvot*. It was suggested that the reason for not plowing with an ox and an ass together (Deut. 22:10) is that the ox, being the stronger, would cause pain to the ass (Ibn Ezra, *ibid.*). Philosophers from R. Joseph *Albo to R. Abraham Isaac *Kook discussed the question of why it is permitted to eat meat at all and, indeed, from the talmudic statement that “the *am ha-arez* (i.e., “the boor”) is forbidden to eat meat” (Pes. 49b), it would seem that its authors were also sensitive to the problem (see D. Cohen, in: *La-Ḥai Ro'i* (Memorial A.Y. Raanan Kook; 1961), 201–54).

[Zvi Kaplan]

ANIMALS OF THE BIBLE AND TALMUD. Although no basic changes have occurred in the faunistic composition of Erez Israel since biblical times, an examination of the names of the animals mentioned in the Bible and in talmudic literature reveals that a number of wild animals have disappeared from the country's landscape in fairly recent times. This applies particularly to cloven-hoofed ruminant wild animals. Of the nine such animals referred to in the Bible as permitted for food, namely, the deer, gazelle, and fallow deer, the addax, bison, and oryx, the wild goat, wild ox, and ibex, there survive today in Israel and in the neighboring countries only the gazelle and the ibex. Whereas the wild ox had already disappeared from the confines of the country in early times, the rest of these wild animals were to be found in Erez Israel and neighboring countries until the end of the 19th century. The main reason for the subsequent disappearance of these animals, which were eagerly hunted for their tasty meat, their excellent skins, and their horns, has been the improved means of hunting, particularly the use of the long-range rifle. This has also led to the elimination of the large carnivorous animals – the lion, the bear, the leopard, and the cheetah (though specimens of the last two have survived in the country). The presence of these carnivorous animals in Erez Israel in biblical times has been interpreted as indicating that the country was

then sparsely populated and extensively forested. But these animals were also found in Erez Israel in mishnaic and talmudic times, when the country was densely populated. Their dens were the thickets of the Jordan (Jer. 49:19), the Lebanese mountains (Song 4:8), the Syrian desert and the Negev (Isa. 30:6), from which they descended upon populated places. In Crusader times the lion was still to be found in the Negev. Of the Syrian bear some specimens have survived in Syria and in the Lebanese mountains, from where leopards occasionally make their way into Upper Galilee. Whereas the hippopotamus disappeared from the region in very early days, some *crocodiles survived in the western rivers of Erez Israel up to the beginning of the 20th century. The ostrich became extinct in Erez Israel and in the neighborhood several decades ago, and the last wild asses were exterminated in the Syrian desert at the end of the 19th century.

Most domestic animals were domesticated as early as in the pre-biblical period. Prehistoric engravings of camels and cattle have been found on the rocks of Kilweh in Transjordan, and clay images representing cattle, goats, sheep, and pigs dating from the fifth millennium B.C.E. have been uncovered in Jericho. There were domesticated cats in Egypt in the period of the First Dynasty, and images of cats were discovered in an Egyptian temple at Beth-Shean. The Bible makes no mention of the cat, which was apparently not bred to any great extent in Erez Israel. Even in mishnaic times, when the cat was doubtless known in the country, other animals (the mongoose, etc.) were reared for the purpose of catching mice in the home. Several breeds of dogs appear in ancient drawings uncovered in Erez Israel. It is not clear what strains of cattle were raised in Erez Israel in biblical times, but drawings from the mishnaic period depict long-horned, humped cattle, resembling the present-day Zebu cow. There are pictures dating from the 15th century B.C.E. of the black long-eared goat. The broad-tailed sheep was also to be found in Erez Israel and in the neighboring lands in ancient times. The horse was not much used in the country, the donkey and the mule having been preferred instead. The dove was domesticated in very olden days. The raising of fowl is attested by a seal which dates from the period of the kingdom of Israel and on which a cock is engraved. For royal and princely courts playful and ornamental animals, such as monkeys, elephants, and peacocks, were imported.

There are some 120 names of animals (excluding synonyms) in the Bible, mammals, birds, and reptiles being well represented. (See Table: Animals in the Bible.) Of the 86 mammals, 359 birds, and 76 species of reptiles of Erez Israel about 37, 38, and 12 respectively are specified by name in the Bible. It must be stressed that it is only by chance that animals (and also flora) are described in the Bible. The biblical books were written by men who were close to nature and drew their inspiration from it in the consciousness that all these are the works of the Almighty, the expression of His providence over all creation. The portrayal of nature, although generally poetic and allegoric, is organically associated with the real landscape of Erez Israel. In talmudic literature – the Mishnah, the Tosefta,

the two Talmuds, and the Midrashim – there are scores of additional names of animals, but the numbers are small compared with the hundreds of names of plants. The reason for this paucity in the animals mentioned in talmudic literature is that the *halakhah* mentions them in the main only for the laws of *shehitah* and *terefot*, while the *aggadah* employed similes from the animal world of the Bible.

Classification of the Animals in the Bible and Talmud

MAMMALS. The Bible uses two terms to denote a mammal. The usual one is *בהמה* (*behemah*), which refers to both domestic and wild mammals, seven species of the latter being included among the *behemah* permissible as food (Deut. 14:5). The other is *חיה* (*hayyah*), which is a term sometimes incorporating domestic and wild animals (Lev. 11:2). Another passage however speaks of “hunting any beast (*hayyah*) or fowl” (Lev. 17:13), where the word refers specifically to a wild mammal. In talmudic literature *hayyah*, a wild mammal, and *behemah*, a domestic mammal, are clearly distinguished from each other, with different laws applying to each. Whereas the domestic mammal (if belonging to the category of clean animals) may be offered as a sacrifice, has some prohibited fat (*helev*), and its blood is not required to be covered after slaughter, the wild animal (even though it is permitted for food) is ineligible as a sacrifice, has no prohibited fat, and its blood must be covered after slaughter. The distinction between a *hayyah* and a *behemah* applies to forbidden animals also. Thus the sages held divergent views on whether a dog is a *hayyah* or a *behemah* (Kil. 8:6; Tosef. Kil. 5:7). There was some doubt about which category certain animals belonged to. According to one opinion the *כוי* (*koi*, also pronounced *kavi* or *kevi*), which is “doubtfully a *behemah* or a *hayyah*,” is a hybrid of both (Hul. 80a). Similarly with regard to the *shor ha-bar*, the wild ox, there was uncertainty whether it had always been a wild animal so that the laws of a *hayyah* applied to it or had originally been a domestic animal which had become wild and to which therefore the laws of a *behemah* would refer. In later generations a similar question arose with regard to the water buffalo. Among the wild animals prime importance was attached to the permissible cloven-hoofed ruminants, which were the choicest game. Of these the Pentateuch (Deut. 14:5) enumerates seven: the *deer, *gazelle, fallow deer, wild goat, addax antelope, bison (*buffalo), and *antelope. Two additional permitted wild animals are mentioned in other biblical passages: the wild ox (*cattle) and the *ibex. As permitted domestic animals, the Bible names *sheep, *goats, and cattle; as prohibited ones, the *horse, *ass, *mule, *camel, and *pig. The ass was the most valuable work animal, and the camel of great importance in areas adjoining desert regions. The mule was used for riding and as a beast of burden, and the horse only for limited purposes. The fierce beasts of prey, although they did not usually inhabit Erez Israel, sometimes penetrated its populated areas from neighboring countries. The *lion, *leopard, *bear, and *wolf, frequently mentioned in biblical parables and allegories as symbols of strength, cruelty, and

The Animals Listed in the Bible and in the Talmud (continued)

English Name	Scientific Name	Order or Family	Hebrew Name	Reference
Sheep	<i>Ovis vignei platyura</i>	Artiodactyla Ruminantia	צֹאן אֵיל רִחֵל כֶּבֶשׂ, כֶּבֶשֶׂה כֶּשֶׂב, כֶּשֶׂבָה טֹלָה	Gen. 4:2; I Sam. 25:2; etc. Gen. 22:13; 31:38; etc. Gen. 32:15; Isa. 53:7; etc. Ex. 12:5; Lev. 14:10; etc. Lev. 3:7; 5:6; etc. I Sam. 7:9; Isa. 65:25; etc.
Sheep, Wild	<i>Ovis musimon</i>	Artiodactyla Ruminantia	כוֹי (?)	Bik. 2.8; Bek. 1.5; etc.
Skink	<i>Eumeces</i> sp; <i>Chalcides</i> sp.	Skincidae	חֲמַט	Lev. 11:30
Snake	<i>Ophidia</i>	Serpentes	נָחָשׁ	Gen. 3:1; Amos 5:19; etc.
Sparrow	<i>Passer domesticus biblicus</i>	Ploceidae	צִפּוֹר דְּרוֹר	Lev. 14:4; Ps. 84:4; etc.
Spider	<i>Araneida</i> ; <i>Solifugae</i>	Arachnoidae	עֲכָבִישׁ עֲכָשׂוֹב	Isa. 59:5; Job 8:14 Ps. 140:4
Stork	<i>Ciconia ciconia</i>	Ciconidae	חֲסִידָה	Lev. 11:19; Jer. 8:7; etc.
Swift	<i>Apus</i> sp.	Apodidae	סִיס	Isa. 38:14; Jer. 8:7; etc.
Swine	<i>Sus domestica</i>	Artiodactyla non Ruminantia	חֲזִיר	Lev. 11:7; Prov. 11:22; etc.
Tahash	Dugong; Giraffa?		תַּחַשׁ	Ex. 36:19; Num. 4:6; etc.
Turtle dove	<i>Streptopelia turtur</i>	Columbiformes	תּוֹר	Gen. 15:9; Jer. 8:7; etc.
Viper, Carpet	<i>Echis</i> sp.	Viperidae	אֶפְעָה	Isa. 30:6; Job 20:16; etc.
Viper, Horned	<i>Cerastes</i> sp.	Viperidae	שָׂפִיפּוֹן	Gen. 49:17
Viper, Palestinian	<i>Vipera palaestina</i>	Viperidae	צָפַע צָפַעוֹנִי	Isa. 14:29 Isa. 11:8; Jer. 8:17; etc.
Vulture, Bearded	<i>Gypaetus barbatus</i>	Vultures	פָּרָס	Lev. 11:13; Deut. 14:12
Vulture, Black	<i>Aegyptius monachus</i>	Vultures	עֹזְבִיָּה עוֹז	Lev. 11:13; Deut. 14:12 Kelim 17, 4
Vulture, Egyptian	<i>Neophron percnopterus</i>	Vultures	רְחִמָּה; רְחִמָּה	Lev. 11:18; Deut. 14:17; etc.
Vulture, Griffon	<i>Gyps fulvus</i>	Vultures	נֶשֶׁר	Lev. 11:13; Deut. 32:11; etc.
Wasp	<i>Vespa orientalis</i>	Hymenoptera	צִרְעָה	Ex. 23:28; Deut. 7:20; etc.
Whale	Balenoptera; <i>Physeter</i>	Cetacea	לְוִיָּתָן	Ps. 104:26; Isa. 27:1; etc.
Wolf	<i>Canis lupus</i>	Canidae	זָאֵב	Isa. 11:6; Jer. 5:6; etc.

agility, consort with domestic animals in Isaiah's vision of eternal peace (Isa. 11:6–7). The wild beasts include the *dog. The *fox and *jackal are types of creatures that inhabit ruins and deserted places. Of the small mammals, the hyrax and *hare are mentioned among the animals prohibited as food, the statement that they chew the cud (Lev. 11:5–6) being due to their having characteristics similar to those of ruminants. An animal whose identity is uncertain is the **tahash*. To the mammals belong also animals included in the Bible in other groups. Thus, for example, the Pentateuch mentions, among the unclean birds, the *bat (Lev. 11:19); among the swarming things, the *mouse and the *rat (Lev. 11:29) which by reason of their short legs appear to creep along the ground. The term "leviathan" sometimes refers to an aquatic mammal, while the "great fish" that swallowed Jonah may have been intended by the author of the Book of Jonah to denote a species of whale (see *Leviathan).

BIRDS. Of the birds, which are called by the collective name of צִפּוֹר (*zippor*) or עוֹף (*of*), there are more than 350 species

in Israel, some of them non-migratory, remaining in Israel all year round, others migratory, remaining only in winter or summer, and others transmigratory, staying no more than a short time. The Talmud (Hul. 63b) declares that "there are innumerable species of clean birds," that is, the overwhelming majority of the birds of Erez Israel are permitted, which is the reason given for the fact that whereas the Pentateuch enumerates the clean mammals, of the birds only the unclean ones are listed (20 in Lev. 11; an additional one in Deut. 14). Constituting as they did an important source of food, birds were much hunted, for which purpose various types of hunting equipment were used. The snaring of birds is frequently referred to in the Bible in an allegorical representation of someone who becomes entangled in difficulties. The eggs of wild birds were also collected for food (cf. Deut. 22:6; Isa. 10:14). The Bible makes no mention of the breeding of birds except *doves, which together with *turtledoves and *sparrows were used as sacrifices (the last in the purification rites of the leper (Lev. 14:4)). Descriptions, parables, and allegories taken from bird life occur in the Bible: mention is made of

the exact timing of the migrations of the *stork, turtledove, *swift, and *crane; the beauty and purity of the dove are portrayed, as are the cruelty of the *eagle, and the concern for its young shown by the griffon *vulture; desolation and destruction are symbolized by the *owl, a species designated by many names; the strange habits of the *ostrich receive special attention. To the 37 birds mentioned in the Bible, the Talmud adds many more, in particular in a discussion of the features which determine their ritual fitness as food. The post-biblical period saw the increased breeding in Erez Israel of poultry, fowl, geese, and ducks in addition to several species of doves, while in wealthy homes ornamental birds – *peacocks and *pheasants – were raised.

REPTILES AND “CREEPING THINGS.” The Pentateuch defines reptiles as “every swarming thing that swarmeth upon the earth... whatsoever goeth upon the belly, and whatsoever goeth upon all fours” (Lev. 11:41–42). This embraces all species of reptiles, including *snakes, crocodiles, as well as species of the lizard, gecko, skink, chameleon, and monitor. Of these last five genera, the Pentateuch enumerates six species of swarming things to which particularly severe laws of uncleanness apply (Lev. 11:29–39). Among the reptiles, the crocodile and snakes are extensively described. Although all reptiles are forbidden as food, they are an important source of proteins for the Bedouin who also eat their eggs. The Talmud distinguished between the egg of a reptile and that of a bird, the former being rounded at both ends with the white and the yolk mixed (Hul. 64a). Several times the Bible mentions gigantic legendary animals named *tannin* and *livyatan* that were said to have rebelled against the Creator who was compelled to declare war upon them and kill them (cf. Isa. 51:9; Ps. 74:13–14; Job 7:12; 3:8). The Midrashim preserve such legends which are common to the myths of people of the east and which may have been suggested by the remains of bones belonging to species of prehistoric reptiles that stirred the imagination of the aggadists.

FISH AND AMPHIBIA. Fish are often mentioned in the Bible, where they are referred to by the collective terms of דָּגָהּ (*dagah*) and by its plural דָּגִים without specifying any by name. A distinction is made only between those that have fins and scales and are therefore permitted as food and those without these features (see *Dietary Laws). In Erez Israel, with its seashores, fish constituted an important food, reference being made to their increasing number in the “Great Sea” (Ezek. 47:10). In Jerusalem one of the gates was called the Fish Gate (Zeph. 1:10; Neh. 3:3). Egypt is rich in fish, these being mentioned among the food for which the Israelites longed when wandering in the wilderness (Num. 11:5). The rapid multiplication of fish gave rise to a verb *dagah* (דָּגָהּ; “to teem”; Gen. 48:16). Although it does not mention any fish by name, the Bible has more than a dozen terms for fishing implements. The importance of fish in the economy of Erez Israel is reflected in Ezekiel’s vision of the desalination of the waters of the Dead Sea: “And it shall come to pass, that fishers shall stand by it

from En-Gedi even unto En-Eglaim; there shall be a place for the spreading of the nets” (Ezek. 47:10). In describing the destruction of the earth, prophets spoke of the extinction of fish (Hos. 4:3; Zeph. 1:3). Talmudic literature contains the names of dozens of fish, these being mentioned particularly in the Babylonian Talmud, since fish were plentiful in the Euphrates and Tigris. Seven species of amphibia are found in Israel, of which only the *frog is mentioned in the Bible. The *aggadah* refers to the salamander as a remarkable creature unaffected by fire (Hag. 27a; Sanh. 63b).

INVERTEBRATES. This is the richest group of animals in the number of its species and in the variety of their forms. The vast majority of them are small animals. Although they occupy a comparatively meager place in the ancient literature, except for insects which are frequently mentioned in the Bible and talmudic literature, the insects comprise almost three-quarters of the species in the world. The great majority of them are injurious to vegetation and carriers of diseases. Of the insects, the most important place in the Bible and in talmudic literature is occupied by the *Orthoptera*, to which belong the *grasshopper and the *locust. Notorious for the ravages they cause to agriculture, they were also permitted as food. Among the common agricultural pests are mentioned insects that belong to the species of beetles, fruit flies, and *ants. Species of the *moth are injurious to clothing; troublesome to man are the *fly, *gnat, *louse, and *flea (to which talmudic literature adds the bug and mosquito). The *hornet and the *bee were regarded as dangerous to human beings, who however benefit from the latter’s honey. From the *crimson worm, a prized dye was extracted. Of the other *Arthropoda*, “whatsoever hath many feet” are mentioned: centipedes and millipedes, the *spider, and the *scorpion; of the *Mollusca*, the snail. The gland in the body of purple snails (*murex*), yielded blue and purple dye (see **tekhelet*). Of the *Vermes* group, the *worm is mentioned, the Hebrew for which, תּוֹלָעַת (tolāat), refers to various insects, and also to the earth-worm. The *leech is mentioned only once in the Bible (Prov. 30:15) and several times in the Talmud. Creatures lower than the invertebrates that were known to the ancients were the *corals, which however they thought to be wood.

The identification of the animals in the Bible has given rise to divergent views, some contending that it is possible to identify them in a few cases only. Others, however, hold that this can be done in most instances. While the problem of their identification has been raised in the separate articles on them, the above list gives only the most probable identification of the animals mentioned in the Bible and in the Mishnah.

[Jehuda Feliks]

ANIMAL TALES, stories in which animals are the principal characters, with the plot revolving around them and the setting mainly in the animal world. A man in an “animal tale” is an intruder in a strange world inhabited, ruled, and dominated by animals. One of the oldest forms of the narrative folktale, the animal tale is found at all culture levels in all periods. Very often it was used by later narrators and writers as an exemplum in fable form in which the social background and the animal traits reflect those extant in the human world. Animal tales and animal characters were used as a vehicle to protest against and expose immediate local conditions, ethnic or social conflicts, and human behavior in general, and the narrator remained immune from censorship, while the audience grasped and understood what the tale really intended to convey.

Bible

Many metaphorical and allegorical animal references in different literary forms are to be found in the Bible: Numbers 24:8–9 speaks of “God... is for them like the horns of the wild ox; they shall devour enemy nations, crush their bones... they crouch, they lie down like the lion; like the king of beasts”; Ezekiel 17:3–12 contains the prophetic *parable (*mashal*) and the riddle (*hidah*) about the two great eagles with great wings and long pinions; Ezekiel 19:2–3 is an allegorical lament (*kinah*) about a lioness among lions that reared her whelps: “And she brought up one of her whelps, he became a young lion... and they brought him with hooks unto the land of Egypt.” In Proverbs the animal portraiture serves mostly to teach exemplary behavior: “Go to the ant, thou sluggard; consider her ways, and be wise” (Prov. 6:6–8); ants, rock-badgers, locusts, spiders are seen as small animals which are exceedingly wise (Prov. 30:24–28); the lion, the greyhound, and the he-goat are stately in their march (Prov. 30:29–31). They are also depicted in riddles not necessarily prophetic (the lion in the Samson story, Judg. 14:12ff.). There are also full-length “true” animal tales in the Bible as well, including two plant tales related as fables by Jotham (Judg. 9:8–15) and by King Jehoshaphat (11 Kings 14:9).

Talmud and Midrash

In talmudic and midrashic literature the 36 preserved Hebrew and Aramaic animal tales are designated as “fox fables,” though the fox features in only 11, mostly as a clever and sly trickster. Probably, the fox was the main character in many of the oral animal tales of the tannaitic period which for various reasons were not written down. Rabban Johanan b. Zakkai (Suk. 28a) is said to have included “fox fables” in the realms of his studies, yet none adapted or written by him is known. Similarly, only three of the “300 fox fables” associated with R. Meir (Sanh. 38b) were known three generations after the sage’s death. The name of each (a biblical verse) is recorded in the Talmud, but not the plot or the gist of the tale. They were retold in a different way by later interpreters such as Hai Gaon and Rashi. The fact that the animal tales of R. Meir (see Sot. 9:15, “When R. Meir died there were no more makers of parables”) have not survived is in contrast to the fact that so many

of his other statements have. Even if one regards the number as exaggerated and formalistic (see the numerous references to the number 300 in the *aggadah*, in the index of Ginzberg, Legends, 7 (1938), 474), an explanation is nevertheless needed. The opposition of R. Meir’s contemporaries to the Greek literary heritage, including the rich Aesopian fable tradition, may be one reason.

The obscure phrase *מישלי כ(ו)בטיים*, *mishlei k(o)vesim*, in the panegyric to Johanan b. Zakkai’s extensive knowledge has led to a variety of interpretations centering around the animal tale and its nature. The word *מישלי כ(ו)בטיים*, *k(o)vesim*, has been explained as “washermen” (vulgar stories popular among people dealing with “unclean” matters) and as “Kybises” (referring to the famous first-century Libyan fabulist). The word has also been identified with *כבשיים*, *kevasim* (“sheep”). The latter has its roots in the hypothesis that aggadic animal tales are structurally based mainly on the confrontation between the cunning and unscrupulous clever fox and the naive and gentle (foolish) sheep. The hypothesis is not corroborated by textual evidence of “fox-and-sheep fables,” but might have been among the suppressed and lost material (cf. the Aesopian fables of the wolf and the sheep, ed. Chambry, nos. 217, 218, 220–2, 230–1; ed. Span, indicating Hebrew parallels, nos. 45–46, 52–54, 56–57).

Most of the animal tales found in the *aggadah* are also extant in the fable collections of India (the *Jataka*: the birth stories of the Buddha, and the *Panchatantra*), and in Greek fables (Aesop’s fables as formulated by the later Latin fabulists Phaedrus and Babrius). Where narrative parallels exist between Indian, Greek, and aggadic fables, the Jewish version is closer to the Indian one; e.g., the animal tale used by R. Joshua b. Hananiah (Gen. R. 64:10) as a means to persuade the Jews not to rebel against Rome, has for its hero the lion, like “Javasakuma” in the *Jataka*, whereas the hero in the Aesopian parallel is a wolf (Phaedrus 1:8; ed. Chambry, 224, ed. Span, 41).

Middle Ages

Throughout the Middle Ages, animal tales were current among European Jews. These had reached them in three ways: (1) through the Jewish and local oral tradition; (2) through the traditional aggadic compilations; and (3) through West European “bestiaries” or beast epics (Roman de Renart) and Latin (Avianus, Romulus) or Old French fables (the *Fables of Marie de France*, written around 1170–80), the adaptations of ancient Greek texts, and of European translations of **Kalila and Dimna*. The threefold influence is evident in the 119 *Mishlei Shu’alim* (“Fox Fables”) of *Berechiah ha-Nakdan (12th- or 13th-century fabulist) which is the main source of the later Yiddish animal tale (see Moses b. Eliezer *Wallich). The direct Hebrew rendering of Aesopian fables (*Mishlei Ysopeto*, printed in Constantinople, 1516) had no essential effect on the Jewish animal tales, neither on their literary formulations by Hebrew (see J.L. *Gordon) and by Yiddish (see E. *Steinberg) fabulists, nor on the oral tradition current among Jewish storytellers in the East and in the West.

Modern Period

Among the 8,000 Jewish folktales collected from oral tradition in Israel and preserved in the Israel folktale archives, there are only 140 animal tales, a percentage lower than in any national archive, or in any current non-Jewish folktale collection. Similarly, in the Yiddish collection of 540 East European folktales of Naphtali Gross (New York, 1955), only 24 are animal tales. Of the 300 international animal-tale types only 40 are represented in Jewish oral tradition. Five of the types are Jewish oikotypes (local ethnic narrative type), the most common among them being no. 184 (see bibl., Aarne-Thompson): in it man insults the animal (camel) which later avenges itself (six versions).

Many animal tales still bear their etiological character and have not been transformed into fable. The tale of the camel that asked for horns and lost his ears (Sanh. 106a) is, for example, moralistic and didactic, directed against discontent, haughtiness, overweening ambitions, and immoderate and unreasonable requests; at the same time, however, it explains the origin of the camel's short ears. Most of the animal tales combine the explanatory and didactic motifs.

It is difficult to determine the dividing line between the literary and the oral (folk) animal tale. Literary tales as those of the *aggadah* have been drawn from, and then again become part of, the oral tradition. An analysis of their contents proves that the main line of distinction is functional. The original oral animal tale was meant either to entertain or to satisfy the intellectual curiosity of mankind interested in the animal world. It reflected the fantasy of the masses, but it can also be seen as an early stage of the study of zoology. The literary animal tale tends to be a fable and is essentially didactic and moralizing, reflecting the ideas of the normative leadership and of the ruling elite.

[Dov Noy]

ANIM ZEMIROT (Heb. אָנִים זְמִירוֹת; “Let me chant sweet hymns”), also called *Shir ha-Kavod* (“Song of Glory”); synagogue hymn ascribed to *Judah he-Ḥasid, of Regensburg (d. 1217) and, with less probability, to a number of other medieval authors. The hymn is an alphabetical acrostic of 31 lines, the first and last four being a prologue and epilogue respectively. Each line consists of two half-lines which rhyme. The first three of the last four lines may not be part of the original poem.

The theme is a fervent paean of God's greatness and might, drawing upon Bible and Midrash but also showing

the influence of philosophical ideas. The metaphors used are bold to the point of anthropomorphism. The hymn is recited in Ashkenazi rites at the end of the Sabbath and festival *Musaf* service, though in some synagogues it is said before the Reading of the Law after *Shaharit*. The custom to recite it daily is disappearing, although it has appeared at the end of the daily *Shaharit* in most editions of the prayer book since that of Venice in 1547 (see also Singer, *Prayer* (1962), 81 ff.). *Anim Zemirot* and all the Songs of Unity (*Shir ha-Yihud*) are recited at the conclusion of the **Kol Nidrei* service in some Orthodox synagogues. Objections against the recital of *Anim Zemirot* in general were voiced by Solomon Luria, and against its daily use by Mordecai *Jaffe, *Judah Loew of Prague, Jacob *Emden, and *Elijah b. Solomon of Vilna, because these considered it an extremely holy poem. It is customary to open the Ark for *Anim Zemirot*, and in most synagogues the hymn is sung antiphonally. There are a variety of tunes.

A Purim parody of the hymn was composed by Aryeh Leib Cordovero of Torczyn (d. 1721; Davidson, *Ozar*, 1 (1924), 310, no. 6828). The custom has developed of having *Anim Zemirot* recited by a child at the close of the Saturday morning service.

ANINUT (Heb. word from the root אָנַן, *onen*), status of a bereaved person in the period between the death and the burial of a close relative. The *onen* is exempted from fulfilling certain religious duties such as reciting the *Shema* and the daily prayers, or wearing *tallit* and *tefillin* so as to enable him to make burial arrangements. The *onen* eats in solitude and should abstain from meat and wine (MK 23b; Sh. Ar., YD 341:1). During Sabbaths and festivals, however, the *onen* participates in the customary ceremonials such as *Kiddush*. *Aninut* is terminated with the burial which commences the official mourning period.

ANISFELD, BORIS (Ber; 1878–1973), painter, graphic artist, sculptor, and stage designer. Born in Beltsy, Bessarabia, Anisfeld started his art education at the Odessa Art School (1895–1900). In 1901–9, he studied at the St. Petersburg Academy of Arts, where his tutors were I. Repin and D. Kardovsky. In 1903, he participated in the Summary Exhibition at the Academy of Arts, and in 1906–10 showed his works at exhibitions of the Union of Russian Artists in St. Petersburg and Kiev. In 1905–8, Anisfeld drew political cartoons for satirical magazines. Later he focused mainly on painting and stage design. He exhibited at the Salon in Paris in 1906, at the Vienna Secession in 1908, as well as at international exhibitions in Milan and London. In 1910, he joined “World of Art” and participated in all the exhibitions arranged by this association.

His works of this period feature highly sophisticated painting techniques, subtlety of color, and symbolic content. Anisfeld created several works inspired by biblical themes. From 1907, he was active as a stage designer. In 1912–14, he designed sets for S. Diaghilev's Ballet Troupe productions and for ballets performed on the foreign tours of such leading dancers as A. Pavlova, V. Nijinsky, and V. Fokin. Anisfeld's designs for the sets and costumes of the ballet *Islamey* composed by M. Balakirev (Mariinsky Theater, St. Petersburg, 1912) brought him well-deserved recognition. In 1915, Anisfeld joined the Jewish Society for the Encouragement of the Arts and participated in its exhibits in Petrograd and Moscow (1916, 1917). In 1918, Anisfeld and his family settled in New York. His one-man show at the Brooklyn Museum in the same year brought him fame and success in America. In the 1920s, he continued working as a stage designer and created sets for several productions at the Metropolitan Opera. He collaborated with Jewish cultural organizations and associations, lectured at the Educational Alliance Art School, and published prints of his works in the American Yiddish press. In 1924 and 1926, he had one-man shows in New York. In 1928, Anisfeld moved to Chicago and exhibited his works at another one-man show at the Art Institute. In the early 1930s, Anisfeld all but ceased working for theater and focused mainly on painting. He also taught at the Chicago Art Institute until 1958. His later works feature a wide variety of themes and artistic techniques, from realistic landscapes to symbolic paintings executed in the expressionist manner. Big retrospectives of Anisfeld's works were held in Pittsburgh (1946), New York (1956), Chicago (1958), and Washington (1971).

[Hillel Kazovsky (2nd ed.)]

ANISIMOV (Nissim-Oglu), ILYA SHERBATOVICH (b. 1862), ethnographer of Caucasian Jewry. He was born in Tarka (Dagestan). His father was the first “*mountain Jew” to study at the *Volozhin yeshivah, becoming rabbi of Tarka, and later of Temir Khan Shura, also in Dagestan. Anisimov studied engineering in Moscow and later worked in the Rothschild Naphtha Company in the Caucasus. He drew the attention of Russian philologists to the Tat language spoken by the Caucasian mountain Jews. In 1886 he was sent by the Moscow Archaeological Society to the Caucasus where he visited 88 localities and gathered a vast amount of ethnological and statistical material on the Jews there. His study on the Caucasian Jews, published in 1888, is of great ethnological value.

ANJOU (Heb. אַנְיוּ), ancient province and former duchy in western France. In the Middle Ages the Jews of Anjou lived

mainly in *Angers, the capital, and in Baugé, Saumur, Segré, and perhaps also in the hamlets called Rue-Juif, 3 mi. (5 km.) northeast of Saumur, and La Juiverie, 3 mi. (5 km.) west of Baugé. Near Fontevrault there was a “Jew’s mill.” The principal occupations of the Jews of Anjou, commerce and pawn-broking, are referred to in the customs tariffs of Saumur in 1162 and of Les Ponts-de-Cé near Fontevrault in 1177, and in the 13th-century custumal of Anjou. Records from the middle of the 11th century show that Joseph b. Samuel *Bonfils (Tov Elem) had the title “rabbi of the communities of Limousin and Anjou.” Some rabbis of Anjou took part in a synod convened in the middle of the 12th century by Jacob b. Meir (Rabbenu *Tam) and *Samuel b. Meir. In 1236 many of the Jews of Anjou, *Poitou, and *Brittany were massacred during a wave of persecutions; others consented under threat of violence to convert to Christianity (see *anusim). In 1269 and later, Charles I, count of Anjou, exacted considerable sums of money from the Anjou communities, then numbering less than one thousand persons, represented by Moses, their “syndic and commissioner.” On the whole, however, the position of the Jews in Anjou was favorable. They were exempted from wearing the Jewish *badge, permitted to live in any place with more than 120 households, to engage in commerce, and to give loans on interest, using deeds stamped with the court seal. However on Dec. 8, 1289, shortly after his accession, Charles II ordered the expulsion of the Jews from Anjou and from Maine. It was alleged that they practiced usury in a scandalous manner, had sexual relationships with Christian women, and were turning Christians from their faith. In compensation for the loss of revenues involved, Charles levied an indemnity from the province. The Jews apparently returned to Anjou after 1359 (cf. custumal of 1385), in particular to Angers, staying there until the general expulsion of the Jews from France in 1394.

ANKARA (Turk. **Engürü**, Rom. **Ancyra**, med. **Angora**), capital of the Republic of Turkey since 1923. A trading center on the trade route to Persia and the Far East, it was a way station for Jewish merchants. A few settled there permanently. After the expulsion from Spain and Portugal, the number of Jewish settlers increased. Exiles in large numbers arrived in Ankara, and on their initiative two organized communities (Spanish and Portuguese), which also included the city's previous Jewish inhabitants, were established. The two communities united in the mid-16th century. They numbered 231 Jews in the 1520s and 747 in the 1570s. The Jews of Ankara engaged in the silk trade, ordering wares from Persia and selling them throughout Turkey, and some merchants became wealthy.

The rabbis of Safed decided that the rabbis in Ankara could not be depended on in profound matters of *halakhah* requiring detailed knowledge, but Moses de Boton and David ha-Kohen, who were consulted by several communities in the vicinity, were exceptions. The community dwindled as a result of the plague of 1672. In the 18th century, when prosperity returned, a permanent religious court which also supervised communal arrangements was established; business expanded and commercial ties were formed between Ankara and other commercial towns. In the 19th century there were no decisive changes in the economic situation, but the intellectual level of the community declined, and many Jews left the town. Migration after World War II reduced the Jewish population from 1,500 to 800. There was a certain subsequent increase and in 1968 it numbered 1,000, but in 2005 it was estimated that only 700–800 Jews live there.

ANKAWA, ABRAHAM BEN MORDECAI (b. 1810), rabbi and kabbalist. Ankawa was born in Salé (Morocco). His family, probably of Spanish origin, had settled in Tlemcen (Algeria) and in Salé, where his father, Mordecai, was president of the community for a time. After serving as *dayyan* in his native town, Ankawa traveled to Leghorn about 1838 to arrange the printing of his first works. On his return he journeyed to many towns in Morocco and the Oran district, seeking material for his halakhic works. He was particularly interested in the unpublished research and rulings of old Castilian and North African rabbis, making extensive use of these and the works of authoritative European writers. His visits were usually short, but he stayed three years in Tlemcen and founded a talmudic academy there. He made a second trip to Leghorn in 1858.

The following works by Ankawa have been published: *Zekhor le-Avraham* (Leghorn, 1838), the rules of *terefot* in verse form, with a commentary based mainly on manuscripts by authoritative Fez writers, and an appendix containing four liturgical poems for the New Year by Spanish poets; *Hukkat ha-Pesah* (1843), an Arabic paraphrase of memorial verses for *sefer* nights; *Kol Tehinnah* (1843), prayers for fasts and a few elegies; *Hesed le-Avraham* or *Sha'ar ha-Shamayim* (1845), a prayer book for the whole year arranged in accordance with the teachings of Isaac *Luria, containing the “*Idra Zuta*,” various mystical prayers, formulas, directions, and explanations: this prayer book was later published in several revised editions and under various titles (*Kol Bo*, *Limmudei ha-Shem*, etc.); *Homer ha-Dat he-Attik* (1844), a summary of *Shefa Tal* by Shabbetai Sheftel *Horowitz, printed as an appendix to

Ḥayyim *Vital's *Ozerot Ḥayyim*; *Zevaḥim Shelamim*, a double commentary to Maimonides' rules of ritual slaughter, together with the *Maggid Mishneh*, with source references by Judah Alkalaz: included in this volume were *Get Mekushar* and *Seder Ḥalīzah*, on the arrangements for the bill of divorce and for *halīzah* by Judah ibn *Attar and Jacob *Ibn Zūr; *Yuzza la-Rabbim* (1858) concerning a dispute between Ankawa and some Algiers rabbis; *Kerem Hemed* (1869–71), responsa in two volumes arranged according to the four parts of Shulḥan Arukh: the second volume also contains *Sefer ha-Takkanot*, the statutes of the Castilian communities in Fez (since 1492) and *Et Sofer*, on legal documents. The *Sefer ha-Takkanot* is based on a copy which was completed by Jacob ibn Zūr in 1698, and also contains *Kizzut Takkanot*, after the version of Raphael *Berdugo (no. 196). Unpublished works of Ankawa include: *Ozar Hokhmah*, an abstract of Ḥayyim Vital's *Ozerot Ḥayyim*; *Afra de-Avraham* and *Millel le-Avraham*, homilies; *Seivat Avraham*, novellae to a few talmudic tractates; and a Hebrew translation of the Arabic paraphrase of the Decalogue, formerly ascribed to *Saadia Gaon.

ANKAWA, RAPHAEL BEN MORDECAI (1848–1935), Moroccan rabbi. Ankawa was born in Salé, a descendant of an illustrious Sephardi family. He received an excellent traditional religious education from his father-in-law, Issachar Asseraf, the chief rabbi of Salé. His great authority made him the uncontested leader of Moroccan Jewry. In 1880 Ankawa was appointed *dayyan* in Salé. In 1918 he became president of the Supreme Rabbinical Court in Rabat, the supreme court of Moroccan Jewry, after the reorganization of Moroccan Jewish communities by French Protectorate authorities. Ankawa held this post until his death. In 1929 he was made a Chevalier of the Legion of Honor. His tomb in the Salé cemetery became a shrine for Moroccan Jewish pilgrims. He wrote the following halakhic works: *Karnei Re'em* (1910), *Pa'amonei Zahav* (1912), and *To'afot Re'em* (1930), and a book of talmudic glosses entitled *Ḥadad ve-Teima* (in manuscript form).

ANKORI, ZEVI (1920–), scholar and writer on Karaite history. Born in Tarnow, Poland, Ankori graduated from the Hebrew University, Jerusalem, and Columbia University, New York. He taught at Tel Aviv University, the Hebrew University, Ohio State University, and Columbia University where (in 1970) he became professor of Jewish history. His published work includes *Karaites in Byzantium* (1959), a major contribution to Karaite studies, and articles on Karaism in various

periodicals. He co-edited *Madrikh Bibliografi le-Toledot Am Yisrael* (1961), a bibliographical guide to the history of the Jewish people in the Middle Ages.

ANNA BE-KHO'AH (Heb. אַנָּה בְּכֹהֵן), prayer hymn ascribed to the *tanna* R. Nehunya b. ha-Kanah, but probably composed in the circle of the 13th-century Spanish kabbalists. The hymn, originally part of a group of kabbalistic prayers known under the title *Tefillat ha-Yihud*, gives expression to the longing of Israel for deliverance from the Diaspora and implores God's support and protection. It consists of seven verses of six words each, the initials of which form the 42-lettered Holy Name of God and similar mystical combinations (e.g., the initials of the second verse form the sentence קְרַע שָׂטָן (*Kera Satan*; "Rend Satan"), i.e., silence the adversary of Israel. The prayer is recited, according to some rites, in the order of sacrifices contained in the daily morning prayer and on the Sabbath eve before the hymn *Lekhah Dodi*. Among the rites of Eastern Europe influenced by the Kabbalah it is recited in the counting of the **Omer*.

ANNA BE-KORENU (Heb. אַנָּה בְּקֹרְנָנוּ), a *selihah* in the Sephardi rite, recited on the eve of the *Day of Atonement. It was composed by David b. Eleazar *Ibn Paquda (12th century). The prayer, its eight stanzas spelling the acrostic *David Hazak* ("David, be strong!"), consists of a plaintive theme developed by the cantor and punctuated frequently by the congregation singing either "Hear, O Lord!" or "Pardon, O Lord!" The chorus, from which the name is derived, reads, "To the voice of our supplication when we call Thee, Hear, O Lord! Through Thy mercy, the sins caused by our selfish ambition, Pardon, O Lord!"

ANN ARBOR, city in Michigan, U.S. The present-day Jewish community of Ann Arbor – comprising over 3,000 family units in 2005 – traces its roots to the turn of the century with the arrival of the Lansky family in 1895 and Mr. Osias Zwerdling, furrier, in 1904. Although the Lanskys had heard that Jews had previously lived in the area, there were no signs of the existence of an earlier community. It was not until 1980 – with the serendipitous discovery of a tombstone, beautifully engraved in Hebrew script and dated 1858, and the efforts to determine its original resting place – that the picture of a viable Jewish life in Ann Arbor from the 1840s to the 1880s began to emerge. These first Jews of Ann Arbor, the Weils and their extended family members and friends, arrived from Bohemia and began their lives as farmers and peddlers, then traded furs and skins and finally opened a successful tannery business.

As a result of the information garnered during this discovery process, it was possible to ascertain that the first Jewish cemetery in the state of Michigan existed at the northeast corner of the grounds of what today is the Horace H. Rackham School of Graduate Studies at the University of Michigan. Dedication of a Historical Marker, commemorating the establishment of the first organized Jewish community in

Michigan, took place in 1983. Appropriately, this site also became the location for the Holocaust Memorial sculpture by Leonard Baskin that was dedicated in 1994.

William and Hattie Lansky originally had set up a grocery/general store and, as the Jewish community began to grow, it was this family that undertook a leadership role. The Lanskys were joined in this endeavor by Osias Zwerdling, who served as president of Beth Israel Congregation from 1918 to 1958. By 1902, the landmark Lansky junkyard was established and, as extended family members joined the early pioneers, more Jewish families were attracted to the area: Abraham Levy, shoemaker; Thomas Cook, who made his mark by establishing a foundry business with an African-American partner; Israel Friedman, scrap iron business; Jacob Ingber, auto parts; Mark Ross, furniture store; and Joseph Lampe, retired carpenter, who crafted the *aron kodesh* for Beth Israel Congregation that still exists in its small chapel. His son, Isadore Lampe, was among the first Jewish faculty members at the University of Michigan Medical School. Following his studies, in 1936, Dr. Lampe was named director of the Division of Radiation Therapy, the first full division in the country. His lasting legacy was the training of over 200 radiation oncology physicians, many of whom went on to leadership positions in other universities. Also on the faculty, from 1913 to 1954 in the Department of Economics, was I. Leo Sharfman who became chair in 1928. Prof. Sharfman, uncle of Mike *Wallace, a U-M graduate himself, enlisted William Haber to the department in 1936, and he later became chair and subsequently dean of the College of Literature, Science and Arts. Additional early faculty members of note include Kasimir Fajans, physical chemist, renowned for his pioneering work on radioactive isotopes; Reuben Kahn, originator of the Kahn Test for syphilis; and Jonas *Salk, developer of the polio vaccine. Another famous graduate of the university's College of Architecture and Design was Raoul *Wallenberg, in 1935. In his honor, the College holds an annual Wallenberg Lecture series. Additionally, an endowment was established at the university by members of the Jewish and non-Jewish communities to fund an annual Lecture and Medal series. Invited guests are those who personify the Wallenberg ideals of bravery, stamina and integrity, and who imbue the students the fact that one person can make a difference.

As the University of Michigan grew, so grew the influx of Jewish faculty – in all disciplines. In the 1950s and 1960s, with the population growth, a split developed between town and gown. At that time, Beth Israel was the only formal congregation in the city. A new B'nai Brith Hillel-Beth Israel building was dedicated in 1951 and Beth Israel changed its name to Beth Israel Community Center. In 1964, bursting at the seams, Beth Israel embarked on a fundraising campaign to build its own building. Subsequently, a faction of the membership broke off and began the Reform congregation, Temple Beth Emeth. The Conservative Beth Israel returned to its former name and remained joined in the Hillel Building until its own new facility was built in 1978 under the leadership

of Rabbi Allan D. Kensky, spiritual leader of the congregation from 1971 to 1988. Membership in the two congregations, led by Rabbi Robert Dobrusin at Beth Israel since 1988, and Rabbi Robert Levy at Beth Emeth since 1984, comprised over 1,200 family units. The rift between town and gown was bridged at the outbreak of the Six-Day War, when the community came together in support of Israel, and was cemented at the time of the Yom Kippur War. The thriving Jewish community today, in addition to the aforementioned congregations and Hillel, includes Congregation Chabad, led by Rabbi Aharon and Esther Goldstein since 1975, the Jewish Cultural Society, the Ann Arbor Orthodox Minyan, and the Ann Arbor Reconstructionist Havurah. There is a Jewish Community Center, Jewish Federation, Jewish Family Services organization, Haddassah and Women's American ORT chapters, a Yiddish group and Hebrew Day School.

The most recent wave of major Jewish influx in Ann Arbor began in 1979 with the arrival of the first "New Americans," refugees from the Former Soviet Union. Their population today approximates 200 families, and most of them have become involved in various aspects of the Jewish community.

Enriching the community is the Samuel and Jean Frankel Center for Judaic Studies, established at the University of Michigan in 1988, co-directed by Professors Zvi Gitelman and Todd *Endelman. The Center superseded the University's Program in Judaic Studies, established in 1971 with a grant from the Jewish Welfare Association in Detroit. The Program was co-directed by Professors Zvi Gitelman and Edna Coffin, and it brought Professor Yehuda Reinharz, now president of Brandeis University, to the Ann Arbor campus to teach Jewish history. In 2005, Stanley and Judy Frankel, son and daughter-in-law of Samuel and Jean, donated \$20 million to the University of Michigan to establish the Frankel Institute for Advanced Judaic Studies. The Frankel Center coordinates programs and teaching; the Frankel Institute will have 15 faculty members, 40 courses, and 10–14 visiting scholars, teaching 800–1,200 students per year. The total population at the University numbers 36,000, of which 24,000 are undergraduates; it is estimated that 1/3 of the student body is Jewish. Thus, two percent of all Jewish students in North America study at the University of Michigan and the Jewish community of Ann Arbor swells while the university is in session. The students are served by the B'nai Brith Hillel Foundation, the second largest student organization at the University of Michigan, whose modern, new facility was built in 1989, under the leadership of its long-time and current executive director, Michael Brooks. The University of Michigan is a major feeder school for the Hebrew Union College, Jewish Theological Seminary, and AIPAC's Young Leadership Cabinet.

[Helen Aminoff (2nd ed.)]

ANNENBERG, WALTER H. (1908–2002), editor and diplomat; publisher of the oldest U.S. daily newspaper, the *Phila-*

delphia Inquirer; head of one of America's largest communications chains. Born in Milwaukee, Wisconsin, Walter was the son of Moses L. Annenberg (1878–1942), a newspaper publisher who had added the *Inquirer* to his chain in 1936. Walter became president of Triangle Publications Inc. in 1942. Subsequently he also acquired the holdings of another Philadelphia newspaper, the tabloid *Daily News*, six radio and television stations, and two mass circulation national magazines: *Seventeen* and *TV Guide* – which reached a circulation of 17 million per issue, making it a competitor with *Reader's Digest* as the magazine with the largest circulation. The horse racing daily, the *Daily Racing Form*, also came under his control. In 1969 he sold the *Philadelphia Inquirer* and the *Philadelphia Daily News* to the Knight-Ridder chain, while the Triangle Publications communications empire was sold to Australian media magnate Rupert Murdoch in 1988 for \$3 billion. A public benefactor with a wide range of philanthropic and civic interests, Annenberg founded and became president of the M.L. Annenberg School of Communications at his alma mater, the University of Pennsylvania. He also became president of the M.L. Annenberg Foundation and of the Annenberg Fund, charitable foundations devoted to supporting higher education, medical research, music, and community welfare. In 1969 he was appointed U.S. ambassador to the United Kingdom.

In 1977 Annenberg underwent a hip replacement operation at Philadelphia's Pennsylvania Hospital. He was so pleased with the outcome of the surgery that he gave the institution \$2 million to found a hip replacement institute, named after his physician Dr. Richard Rothman. Generous to many of his friends, Annenberg paid most of the bills to add a bowling lane in the White House during Richard Nixon's years and installed a swimming pool at Chequers, the English country home of the prime minister of Great Britain. Annenberg donated more than \$17,500,000 to refurbish Philadelphia's Academy of Music, and an additional \$10 million to endow the chair of Music Director Wolfgang Sawallisch, conductor of the Philadelphia Orchestra. In 1981 Annenberg was elected trustee emeritus of the board of the Metropolitan Museum of Art in New York, which he had joined in 1974. In 1991 he made the decision to bequeath his collection of French Impressionist and Post-Impressionist art, valued at some \$1 billion, to the Museum; this constituted the largest gift of its kind in some 50 years. His \$50 million contribution to the United Negro College Fund in 1990 represented the largest single donation ever given to African-American higher education in the United States. In 1993 his foundation donated a total of \$365 million – then the largest one-time gift ever given to private education in America – to the universities of Harvard, Southern California, and Pennsylvania, and to his prep school, the Peddie School in New Jersey. He also made a major donation to *Dropsie University (formerly Dropsie College), the center for Jewish learning in Philadelphia, which in 1986 became the Annenberg Research Institute.

In 1986 Annenberg was awarded the nation's highest civilian honor, the Medal of Freedom. He also won the George

Foster Peabody Award in 1987. In 1992 he was inducted into the Broadcast Pioneers Hall of Fame. In 2001 the Annenberg Foundation gave \$100 million each to the communications schools named after him at the University of Pennsylvania and the University of Southern California. At the same time, the Annenberg Foundation gave the Philadelphia Art Museum a cash gift of \$20 million, the largest gift in the institution's 125-year history.

[Irving Rosenthal / Rohan Saxena and Ruth Beloff (2nd ed.)]

ANOINTING. The anointing of persons and objects with oil was widespread in ancient Israel and its environment for both practical and symbolical reasons. Its most practical usage was cosmetic, and for medicinal purposes (see *Cosmetics).

Aside from its cosmetic and therapeutic functions, anointment was an important component of ritual formularies. The anointment of vassals was not a mere ceremonial trapping: "As oil penetrates your flesh, so may they [the gods] make this curse enter into your flesh" (D.J. Wiseman, *The Vassal-Treaties of Esarhaddon* (1958), lines 622–4, p. 78; cf. Ps. 109:18; for the use of oil in the making of a covenant, see Hos. 12:2; see McCarthy in bibl.). The main role of symbolic anointment in the ancient Near East, however, was to solemnize formally an elevation in legal status: the manumission of a slave woman, the transfer of property, the betrothal of a bride, and the deputation of a vassal. Israel continued the Syrian and Anatolian practice of anointing the king (El Amarna Letter 51:4–9, see below). The consecration of a priest involved anointing, a practice attested at Emar in Central Syria in the thirteenth century B.C.E. The Bible also requires anointing for the rehabilitation of persons afflicted with certain skin diseases. The above cases indicate that in Israel symbolic unction took place in the cult but not in legal proceedings. The attribute *mashi'ah* ("anointed") came to designate the king and the high priest and, by extension, other divinely appointed functionaries who were not anointed at all, e.g., the prophets (1 Kings 19:16b, 19b; Isa. 61:1), the patriarchs (Ps. 105:15), and even foreign kings (1 Kings 19:15; Isa. 45:1; cf. 11 Kings 8:7). This figurative use of *mshh* is not a late development since it is already attested in Ugaritic (76:11, 22–23; cf. Ps. 89:21 and 25). Eventually it was applied to the messiah (the very word being taken from the Hebrew "anointed").

In Israel, anointment conferred upon the king the *ru'ah YHWH* ("the spirit of the Lord"), i.e., His support (1 Sam. 16:13–14; 18:12), strength (Ps. 89:21–25), and wisdom (Isaiah 11:1–4; see *Messiah). The king absorbs divine attributes through unction. The anointment of the high priest served an entirely different function. It conferred neither *ru'ah* nor any other divine attribute. Moses, for example, transferred his powers (by hand-laying) upon a *ru'ah*-endowed Joshua (Num. 27:18–20), but when he transfers the high priest's authority from Aaron to his son Eleazar, these spiritual features are con-

spicuously absent (Num. 20:25ff.). The high priest's anointment is otherwise designated by the verb *kadesh* (*qaddesh*; "to sanctify"). Indeed, the anointment "sanctifies" the high priest by removing him from the realm of the profane and empowering him to operate in the realm of the sacred, i.e., to handle the sancta, such as the oracle. The high priest was anointed in conjunction with the cult objects (Ex. 40:9–15), and the latter practice is found in the oldest portions of the Bible (anointment of pillars, Gen. 28:18; 31:13; 35:14). The story of Solomon's anointment by the high priest Zadok (1 Kings 1:39) leads us to the assumption that the royal unction is a derivative of the unction of the high priest. The story could not be an interpolation of the priestly editors, since the latter would by their own laws have condemned Zadok to death (by God) for the crime of anointing a *zar*, a non-priest (Ex. 30:33). On the contrary, this incident complements the image of the king in the historical narratives: since he may officiate at the sacred altar like a priest (e.g., 1 Kings 3:4; 8:63–64), why should he not be similarly anointed with the sacred oil?

According to the priestly source, the sons of Aaron were anointed along with him. Though the word *mashah* is used in Exodus (e.g., 40:15a), it means only that they received the sacred oil and implies nothing about the manner of its application. Indeed, the respective ceremonies differ sharply: the sons were sprinkled (*hzh*) after the sacrificial service (Ex. 29:21), whereas Aaron's head was doused (*yzk*) separately, before the service (v. 7). Furthermore, whereas each succeeding high priest was anointed while his father was still in office (Lev. 6:15), the anointing of the first priests was never repeated; it was to be valid for their posterity (Ex. 40:15b). This concept is proven to be ancient, for it is found in the El-Amarna letters (51:4–9), where a vassal stakes his authority on his grandfather's anointment.

The leper was anointed on the eighth and concluding day of his purification ritual, but the oil was not sacred. The "waving" and the sevenfold sprinkling of the oil "before the Lord" (Lev. 14:12, 16), even before it can be used on the leper, are not rites of consecration but of purification; moreover, the indispensable verb *mshh* is tellingly absent. Perhaps even the "change of status" is operative: the ostracism of the erstwhile leper is ended, and he is free to reenter society. However, an apotropaic function may also be present.

[Jacob Milgrom]

In the Talmud

According to the Talmud the anointing oil was compounded only once in Jewish history, by Moses (Ex. 30:31–33), and the supply made by him sufficed for the whole period from the anointing of Aaron and his sons until the residue was hidden away by Josiah. Anointing oil was therefore not used for the kings and high priests after Josiah, and it was one of the five apurtenances used in the First Temple but not in the Second.

After the anointment of Aaron and his sons only high priests and the priest anointed for war (the appellation of the

Talmud for the priest mentioned in Deut. 20:2ff.; Mishnah Sotah 8:1) were anointed. Every high priest and “priest anointed for war” was anointed, the former even if he succeeded his father as high priest.

On the other hand, from Solomon onward only kings of the Davidic dynasty whose succession was disputed or was in doubt were anointed (as was Jehu, see below). Where the succession was natural and undisputed no anointing took place. Thus Solomon was anointed on account of the rival claims of Adonijah (1 Kings 1:39), Joash because of Athaliah (11 Kings 11:12), and Jehoahaz because Jehoiakim was his senior by two years (11 Kings 23:30).

This anointing of David and his descendants was by oil poured from a horn. For Saul, the only non-Davidic king to be anointed with oil, a cruse was used (1 Sam. 16:13) since “his kingdom was not a lasting one.”

The kings of the northern secessionist kingdom of Israel were not anointed with oil but with balsam, as was Jehoahaz of Judah since Josiah had hidden away the anointing oil. The statement that Jehu was anointed (with balsam) because of his dispute with Joram would appear to suggest that even in the case of the kings of Israel anointing took place only in the case of disputed succession but it would, of course, have applied to each usurping king and founder of a dynasty, though not to his descendants (cf. Ker. 5b with Hor. 11b).

In the anointing of kings the whole head was covered with oil (“in the shape of a wreath”) whereas in the case of priests it was “in the shape of a *chi*.” What is meant by “the shape of a *chi*?... the shape of Greek X” (the printed texts have “a Greek *kaph*,” probably because of the opposition to the sign of the cross).

All the above data except where otherwise stated are to be found in *Horayot* 11b and 12a, and more compactly in the Jerusalem Talmud, *Horayot* 3:4, 47c.

ANOKHI, ZALMAN YIZḤAK (pseudonym of **Z.I. Aronsohn**; 1878–1947), Hebrew writer. Anokhi was born in Lyady, Russia. His first story, “*Ha-Yenukah*,” written in Hebrew, was published in *Ha-Shilo'ah* (12 (1903), 52–64). He soon began to write in Yiddish and published two collections of stories, *Ts-vishen Himel un Erd* (“Between Heaven and Earth,” 1909) and *Reb Elkhonon* (1910). His *Reb Abbe* (1911), the monologue of an aging, naive, and pious Ḥasid, won wide acclaim. In 1911 Anokhi visited Palestine and recorded his impressions in *Unzer Land* (“Our Country,” 1919). After a brief stay in Argentina (1923) he settled in 1924 in Palestine and reverted to writing in Hebrew. He translated *Reb Abbe* into Hebrew (1927) and published two dramas. His collected stories, *Bein Shamayim*

va-Arez (“Between Heaven and Earth,” 1945), appeared shortly before his death in Tel Aviv. Nearly all of his stories are sentimental, romantic vignettes of Jewish life in Eastern Europe.

ANSBACH, city in Middle Franconia, Germany; formerly capital of the Margravate of Ansbach. Its Hebrew designation **אָנשפּאָך, אָנשפּאָך, אָנשפּאָך** retains the older form Onolzbach. Records of a Jewish community in Ansbach date from the beginning of the 14th century and many Jews were massacred during the *Black Death in 1349. A Jews' Street is again mentioned in the second half of the 15th century, but the Jews were expelled from Ansbach in 1561, although readmitted in 1609. The communities in the margravate were organized in a *Landesjudenschaft. During the 17th century members of the Model and Fraenkel families played an important role as *court Jews in the economy and administration as well as leading the Jewish communities of the margravate. Two of these court Jews, however, were dismissed and sentenced to life imprisonment. The synagogue of Ansbach was built by the Italian architect Leopold Retty in 1745–46. In 1836 a conference of rabbis, teachers, and communal leaders was held at Ansbach to oppose liturgical reforms in Bavaria. Rabbis of Ansbach included Abraham Merzbacher and Phinehas (Pinchas) *Kohn, both of *Agudat Israel. The Jewish community declined from 385 persons in 1809 to 220 (1.5% of the total population) in 1880 and 197 (0.9%) in 1933. On Nov. 10, 1938, when the Nazis destroyed many German synagogues, the mayor of Ansbach saved the synagogue there by staging a mock fire. By the outbreak of World War II, after emigration and expulsions, only 10 Jews remained in the city. After the war a displaced persons camp was established at Ansbach. The ancient synagogue was completely restored, but Jewish community life was not reestablished.

[Zvi Avneri]

ANSELL, DAVID ABRAHAM (1834–1914), Canadian businessman, Jewish community leader. Ansell was born in London and arrived in Montreal via Queensland, Australia, in 1866. He went into business as an importer of glassware and representative of a firm headed by his father in Frankfurt, Germany. He also became very involved in the Montreal Jewish community and was soon one of the most prominent Montreal Jews of his era. When he arrived in Montreal he joined the fledgling Young Men's Hebrew Benevolent Association, which

in 1891 was renamed the Baron de Hirsch Society in honor of its most generous benefactor. Ansell served as the society's president for many years. As a member of the *Jewish Colonization Association he became a promoter of Jewish farm settlement in Western Canada. Keenly interested in issues of education, Ansell helped establish a free school for children in the Jewish community and was prominent in pressing provincial authorities for legislation granting equal rights to Jews in the Quebec elementary educational system.

In politics Ansell supported the Conservative Party and maintained an active correspondence with Prime Minister John A. Macdonald and other prominent political figures. In letters to newspapers and speeches Ansell advocated on behalf of British imperial federation and free trade. He also served as consul-general for Mexico in Canada from 1888 to 1913 and worked to increase trade between Canada and Mexico.

ANSELM (Anshel) HA-LEVI (15th century), German rabbi and communal leader; active in Cologne, Andernach, and Worms. Anselm was highly reputed as a scholar among his contemporaries, and even among the secular authorities. Hence in 1435, he was appointed supreme rabbi of the Holy Roman Empire by Conrad von Weinsberg, hereditary chamberlain of Emperor Sigismund and acting on his authority. His seat was in Worms and his nominal jurisdiction extended over a wide area of Germany, France, Switzerland, and the Netherlands. A similar appointment had been made by King Rupert in 1407, when Israel b. Isaac was appointed *Hochmeister* of the Jews of Germany (see *Chief Rabbinate). The creation of this rather high-sounding office was doubtless an act of expediency to facilitate the collection of taxes from the Jewish communities. The appointment of Anselm is not mentioned in Jewish sources, and it can be assumed that it was as unpopular with the Jews as was that of Israel b. Isaac. Such an appointment by an outside authority would have been regarded by the Jews as an unwarranted intervention in their internal affairs. Joseph b. Moses, author of the *Leket Yosher*, was Anselm's pupil.

BIBLIOGRAPHY: A. Kober, *History of Jews in Cologne* (1940), 31, 366; J. Freimann (ed.), *Leket Yosher*, 2 (1904), xxii–xxiii; Guedemann, *Gesch Erz*, 3 (1888), 35 ff.

°**ANSELM OF CANTERBURY** (c. 1033–1109), abbot of Bec (Normandy) from 1078 and archbishop of Canterbury from 1093; theologian and philosopher, perhaps canonized by the Catholic Church though there is some uncertainty about this. The Jew appears as the imaginary adversary in his most important work *Cur Deus Homo*, which is about the theology of atonement. The composition may have been influenced by the Judeo-Christian dialogue which Gilbert *Crispin had dedicated to him. He was among the church reformers whose opposition to William II (Rufus) may have been stimulated by the king's reputed friendliness to the Jews. Anselm favored

Christian missionary activities among the Jews. In a letter he sent to two English clerics Anselm commends to them a certain Robert and his family who had recently been converted, asking them to assist him “so that he should not suffer from want, but should rejoice that he has left perfidy for the true faith.”

[Bernhard Blumenkranz / Shimon Gibson (2nd ed.)]

ANSHEL (Asher) OF CRACOW (first half of 16th century), putative author of *Mirkevet ha-Mishneh*, an alphabetical concordance and glossary of the Bible, with references and Yiddish translations of the words. Two editions were published. The one published in Cracow, 1534, was the first book printed in Yiddish. The title page states that the work “was composed in two languages, the holy language and German, the language prevalent among us.” The second, and better-known, edition was published under the title *Sefer shel R. Anshel* (Cracow, 1584). Some suggest a polemical background to its composition, pointing out that *Luther's German translation of the Bible was also published in 1534 and that the Jews were interested in publishing this concordance to counterbalance Luther's translation. A possible factor was the desire to facilitate the study of the Bible for uneducated Jews, particularly women and children. The identity of Anshel has given rise to many conjectures and theories. He has been erroneously identified with Asher Anshel b. Joseph Mordecai of Posen, who translated the festival prayer book into Yiddish, and with Asher of Cracow, grandfather of Meir b. Gedaliah of Lublin, author of the kabbalistic book *Emek Berakhah*. Steinschneider conjectured that he might possibly be Asher b. Ḥayyim Halicz, one of the brothers who printed the first edition. Some date the work earlier than the 16th century because the German words used by the author belong to an earlier period, some going back as far as the 14th and 15th centuries. The simple title of the second edition, *Sefer shel R. Anshel* (“R. Anshel's Book”), has led many scholars to suggest that the author must have been well known, either as a scholar or as a communal leader.

[Yehoshua Horowitz]

AN-SKI, S. (pseudonym of **Shloyme-Zanvl Rappoport**; 1863–1920), author and folklorist. An-Ski was born in Tshashnik, Belorussia, where his father was a landowner's agent and his mother an innkeeper. An-Ski attended a traditional Jew-

ish *heder*. In 1878, at the age of 16, he became a close friend of Chaim *Zhitlowsky and soon discovered Hebrew and Russian literature. Attracted by the doctrines of the Haskalah, and the Narodniki (a group committed to revolutionizing the Russian peasants), he went to live among Russian peasants and miners, and worked as a blacksmith, bookbinder, factory hand, and teacher. On the advice of the Russian writer Gleb Uspensky, he returned from south Russia to St. Petersburg and wrote for the Narodniki's monthly publication. Compelled to leave Russia in 1892, he stayed briefly in Germany and Switzerland before settling in Paris in 1894. There he worked for six years as secretary of the revolutionary and philosopher Piotr Lavrov, while writing short stories about Jewish radicals. Returning to Russia in 1905, he joined the Social-Revolutionary Party, circulated his 1902 *Bund hymn "Di Shvue" ("The Oath"), and wrote folk legends and stories about Jewish poverty. Until 1908 An-Ski wrote chiefly in Russian, switching to Yiddish after meeting Peretz. An-Ski brought to Yiddish literature a deep appreciation of Jewish folk values. As head of the Jewish ethnographic expedition financed by Baron Gunzberg he traveled through the villages of Volhynia and Podolia from 1912 to 1914, collecting material. His knowledge of folklore inspired his famous play *The Dybbuk* (written and reworked by An-Ski between 1912 and 1917 in both Russian and Yiddish, the latter originally called *Tsvishn Tsvey Veltn*), which was first produced in Yiddish by the Vilna troupe (1920), and then, in the Hebrew translation of Bialik, by the Habimah company in Moscow, Tel Aviv, and New York. Bialik translated *The Dybbuk* into Hebrew in *Ha-Tekufah*, vol. 1 (1918). An-Ski subsequently lost the Yiddish original *en route* from Russia to Vilna and thus revised and retranslated it into Yiddish from Bialik's Hebrew version. This latter version was the one performed by the Vilna Theater group. Productions in numerous languages followed; the Italian composer L. Rocca based an opera on the play; musical versions by Renato Simoni and David Temkin appeared in New York, and movie versions in Poland (1938) and Israel (1968). Pulitzer Prize-winning author Tony *Kushner rewrote *The Dybbuk* in 1998. The play is An-Ski's masterpiece, combining folkloristic aspects with universal themes of love, suffering, and the search for an authentic self. During World War I, An-Ski devoted himself to organizing relief committees for Jewish war victims. He would later recount his experiences during the war in his extraordinary chronicle *Khurbn Galitsye* ("The Destruction of Galicia"). In 1917 he was elected to the All-Russian Constituent Assembly as a Social-Revolutionary deputy and in 1918 he helped to reorganize the Vilna community. In 1920, when the Polish legion took over Vilna and began attacking the Jewish population, An-ski reluctantly moved to Warsaw, where he founded a Jewish ethnographic society. He died soon thereafter and was buried in the Warsaw Jewish cemetery next to Peretz.

AN-SKI COLLECTIONS, Jewish collections of the State Ethnographic Museum in St. Petersburg. For many years the existence of the legendary An-Ski collections was doubted outside the Soviet Union, even maybe outside the walls of the State Ethnographic Museum. All that was known about them was the description of the ethnographical expeditions of 1910–16, headed by the well-known dramatist S.Z. Rapoport (An-Ski), written by one of its members, Abraham Rechtmann. He gave a list of their finds: 700 ceremonial objects, 2,000 photographs, music recorded on 500 wax cylinders, and many folktales, articles of everyday life, and documents. Due to the consequences of the Russian Revolution, two world wars, and official Soviet antisemitism, only a fraction of these items survived in the Russian collection. In 1992, 90% of these remnants, approximately 330 objects, were shown for the first time outside Russia, in Amsterdam, in the Jewish Historical Museum.

The State Ethnographic Museum and the Jewish Historical Museum joined forces to register, describe, photograph, and publish these traces of the once important center of Jewish culture and history: the Pale of Settlement in Czarist Russia.

The history of the Jewish collection in the State Ethnographic Museum in St. Petersburg began early in the century. The scale of collection and completion of material relating to the Jewish culture and way of life has varied greatly at different times – after all, it had to deal with no fewer than six million people who lived within the Pale of Settlement.

The first entries related to the subject date from 1904 to 1912, when the cultural heritage of the peoples inhabiting the vast territories of the Russian Empire attracted special interest. It was a time when there were thorough studies of the way of life among national minorities, when ethnographical expeditions were undertaken, and folklore collected. The enlightened section of the Russian intelligentsia appreciated that rapid urbanization was taking place throughout the country and feared the consequent destruction of traditional forms of folk life, including that of the Russian Jews. Among this group were F.K. Volkov, an expert in Ukrainian ethnography, A.K. Serzhputovsky, a researcher in Byelorussian ethnography, and A.A. Miller, a specialist in the people of the Caucasus, the one who made the first contribution to the Jewish collections.

The second fruitful period for the Jewish collections was during the 1930s when the Jewish section of the St. Petersburg (Leningrad) Museum was headed by I.M. Pulner. His aim was not only to expand the collection but also to form a comprehensive exhibition entitled "The Jews in Czarist Russia and the U.S.S.R." This exhibition opened in 1939 and turned out to have a rather propagandistic character, which only seemed natural in those years.

After World War II the purposeful collection of ethnographical data related to Russian Jews was virtually finished. The Pale of Settlement was now past history, while the years of brutal fascist occupation of the Ukraine, Belorussia, and Lithuania destroyed vast quantities of cultural material.

There was also strongly anti-religious propaganda, which became the policy of the Soviet Union and destroyed the last vestiges of spiritual life – that is, the Jewish religious communities.

During the postwar years the collections were mostly augmented with gifts from other museums as well as rare purchases and private donations. A large collection from the former Moscow Museum of the Peoples of the U.S.S.R., which was passed on to the St. Petersburg Museum in 1948, should be mentioned in this respect.

The S.A. Rappoport (An-Ski) Collection is held to be the heart of the Ashkenazi collection. An-Ski headed a number of ethnographical expeditions during 1911–12, working in the provinces of Podolia, Volhynia, and Kiev. The items collected were intended for exhibition in the Jewish Museum formed as a section of the St. Petersburg Society of History and Ethnography. The *Evreskaya Starina* (“Jewish Antiquity”) magazine, the published organ of the society, printed articles on the collecting activities of the museum. In 1914–16 An-Ski was known to be working in the front lines of Galicia, helping to evacuate historical valuables. This mission was formed by the State Duma (the Russian Parliament), and the data he collected while there were delivered to St. Petersburg. In 1917–18 *Evreskaya Starina* reported that “robbery and pogroms have been taking place since autumn 1917, which force us to close the museum and pack its exhibits into boxes to be kept in a safe place.” From the published An-Ski will it is known that “five boxes and suitcases with exhibits were given to be kept in the Alexander III Museum,” now the State Ethnographic Museum.

As we now have no precise documents or lists it is quite difficult to identify whether certain An-Ski exhibits date back to 1911–12 or to the times of his expeditions of 1914–16. Unfortunately, the documents relating to these expeditions are lost and it proves impossible to identify the geographical source of objects. Indirect indications helping to date the items can be found when deciphering the inscriptions and also in the writings of A. Rechtman. We can, however, only make guesses as to the routes An-Ski followed and the places where he found his exhibits.

The Jewish Ashkenazi collections of the State Ethnographic Museum present a historical and cultural heritage, covering the period from the late 18th to the early 20th century. In terms of geography it embraces most of the area where the Pale of Settlement was introduced after 1795 (the third partition of Poland).

The Judaica occupy a central place in the museum’s collection, together with household objects and personal belongings.

The Czarist policy towards the Jews was ambivalent. It forced the Jews to live in the Pale of Settlement, where they

formed 5% of the population. On the other hand, it tried to assimilate the Jews in their culture. Hundreds of measures were taken to achieve these goals, but without success. The Jews, speaking their own language, keeping their own religion and its traditions, resisted this policy.

But, as in all other communities, their material culture was heavily influenced by the Russian surroundings. The most exciting examples are the so-called Lubok paintings, Russian folk art used for decoration at home, but also as amulets to keep evil out of the house. In Judaica, often made by Jewish craftsmen, Russian folk elements like deer, birds, lions, and flowers decorated the Hanukkah lamps, spice boxes, and *rimmonim*. The Czarist crown can be seen on covers for synagogue arks.

Another important part of the collection is clothing: the specific “*brustichel*” for women, and the headgear for men, both decorated with the so-called “*spanjerwerk*,” gold embroidery. There are also the simple homemade wooden chess set, Hanukkah cards, and the models of cookies, specific for the Jewish kitchen like the bridal cake in a Star of David form.

The remnants of the An-Ski Collection, modest as they are in number, should be treasured for the wealth of background they give of a poor man’s deeply felt Jewish culture of bygone days. And we hope that through the exhibitions and through the publications of the material (see the catalogue *Tracing An-Ski: Jewish Collections from the State Ethnographic Museum in St. Petersburg* with excerpts from A. Rechtman and articles by Igor Krupnik and by Ludmilla Uritskaya, 1992) new generations can benefit from its resurgence.

[Judith Belinfante and Ludmilla Uritskaya]

ANSORGE, MARTIN CHARLES (1882–1967), U.S. congressman, attorney, and corporate director. One of Mark Perry and Jenny (Bach) Anson’s seven children, Martin was born in Corning, New York, where his father was a successful clothing manufacturer. In 1885, the family relocated to New York City, where Martin and his siblings were educated. In their prosperous home, the Anson family’s *lingua franca* was German. The senior Anson eventually became the owner of Anson Brothers and Company in Scranton, Pennsylvania. One of his sons, Herbert, would become president of the Wholesale Clothing Manufacturers Association.

After attending New York public schools, Martin Anson earned both a B.A. and a law degree from Columbia University. Ever resourceful, he earned a handsome living while attending Columbia by selling advertising space in the school paper, the *Columbia Spectator*. After practicing law in New York City for six years, Anson ran as a Republican for the United States Congress in 1912. He came in third in a three-man race. Anson also lost Congressional elections in 1914 and 1916. After serving in the Transportation Corps in World War I, he was finally elected to Congress in 1920. During his one term in the House of Representatives (1921–23), the Republican Anson floor-managed passage of the resolution es-

tablishing the New York Port Authority. He also gave strenuous vocal support to two anti-lynching proposals. Running for reelection in 1922, Ansonge lost by ten votes. Returning to New York City, he resumed to the practice of law.

In 1927, auto magnate Henry Ford retained Ansonge to negotiate out-of-court settlements in the much-publicized Ford-Sapiro libel case. The suit, brought by Sapiro, alleged that Ford had severely libeled him in the pages of the mogul's newspaper, the *Dearborn Independent*. That the antisemitic Ford should hire a Jewish attorney struck many as being incongruous. Following a mistrial, Ford hired Ansonge, who successfully negotiated an out-of-court settlement for an undisclosed amount, plus a public retraction from Ford. In 1934, Ansonge became a director of United Airlines, a position he held until 1961.

[Kurt Stone (2nd ed.)]

ANSPACH, PHILIPPE (1800–1875), French lawyer and politician. Anspach, who was born in Metz, practiced law in Paris. He took an active part in the 1830 revolution and was appointed a deputy procurator in the department of Seine-et-Marne by the government of Louis Philippe. It was the first step in a brilliant career. Anspach successively became judge deputy of the Court of Justice in Paris, section president of the Court of Appeals, and counselor to the Court of Cassation. He was the first Jew in France to attain this position. Anspach combined the qualities of a practical jurist with the erudition of a law theoretician. Active in Jewish life, he served as a member of the Paris Consistory and was selected to the Central Consistory in 1845.

ANT (Heb. נְמָלָה, *nemalah*). The ant most frequent in Israel is the “harvest ant,” the *Messor semirufus*. It is this ant which is described as the symbol of diligence and wisdom, preparing for the future by storing food during the harvest, and having no “guide, overseer, or ruler” (Prov. 6:6–7; 30:24–25). Rabbinic literature contains further details of their habits. They gnaw at the corn to extract the ears (Pe’ah 2:7). They cause extensive damage to harvested grain, and as a result R. Simeon b. Gamaliel permitted the destruction of antheps during the intermediate days of festivals. He put forward an original method for their destruction: “Soil is brought from one heap, placed in the other, and they strangle one another” (MK 6b). This procedure is based on the belief that every anthep has its own peculiar odor which acts as a deterrent to the entry of ants from other heaps. *Simeon b. Halafta also refers to their developed sense of smell. Undertaking experiments to determine their social life, he came to the conclusion that one ant does not take an ear of corn dropped by another since it recognizes its smell (Hul. 57b; Yal., Prov. 938). Large amounts of grain are gathered in their nests; according to one statement “three hundred *kor*”

were once found (*ibid.*). The anthep consists of three chambers; the grain is stored in the upper one and the insects live in the middle, while the lower one is their summer habitat. The same Midrash actually refers to these compartments, but regards the middle one as the storehouse.

[Jehuda Feliks]

ANTEBI, ALBERT (Avraham; 1869–1918), leader of the Jewish community in Erez Israel. Antebi was born into a prosperous rabbinical family in Damascus and was educated at the Alliance Israélite Universelle school there. He was sent by the Alliance to further his education in Paris. In 1896 he was appointed chief assistant to Nissim *Behar, director of Alliance institutions in Erez Israel, and replaced Behar when the latter retired in 1898. Antebi served as director of the Alliance trade school and established a workshop for hand-weaving in Jerusalem. He was also instrumental in the establishment of new quarters in the city and was elected to the Jerusalem District Council. Antebi was later appointed representative of I.C.A. (Jewish Colonization Association) in Erez Israel and represented the Palestine office of the Zionist Organization in its contacts with the Ottoman authorities. Because of his knowledge of the Turkish language and way of life, he was well liked by the Turkish officials, who regarded him as the chief spokesman of the Jewish community. On the outbreak of World War I, Antebi succeeded in persuading the commander in chief in Syria, Jamal Pasha, to commute the sentence of banishment passed against leaders of the Jewish community to 14 days confinement to Tiberias. In 1916 he was exiled to Damascus and two years later he went to Constantinople to plead for the refugees and exiles from Erez Israel. He was unsuccessful in this mission, and was sent as an enlisted soldier to the eastern Anatolia front. There he caught typhoid fever and was transferred to Constantinople, where he died.

[Yehuda Slutsky]

ANTELOPE. In ancient times various species of antelope of the group *Hippotraginae* existed in Erez Israel and surrounding countries. They have completely disappeared from Israel and are found only in the Arabian Peninsula and in Africa. Sundry species of antelope have been identified with some of the seven clean animals, cloven-hooved ruminants, enumerated in Deuteronomy 14:5. Apparently the *dishon* is the antelope, since the Septuagint renders it πύγαργος, i.e., pygargos, which means “having a white rump,” the reference being to the *Addax nasomaculatus* (a large antelope with hollow horns, with black spots on its neck and head, but otherwise white).

Some also identify the *zemer* (AV “chamois”) with a species of antelope, the *Oryx leucoryx*, but others say that it refers to a species of wild sheep. The *re'em* mentioned in Psalms 92:11 as having long horns has also been identified with the *Oryx*. It was this animal, depicted in profile, which gave rise to the legend of the unicorn. In other passages, however, the *re'em* seems to be the wild ox (see *Wild Bull).

[Jehuda Feliks]

ANTHEDON, Hellenistic city in the vicinity of Gaza. Anthedon in Greek means “Flower City.” It is first mentioned as a daughter city of Gaza, captured by Alexander Yannai (Jos., *Ant.*, 8:357). Pompey “freed” it but the actual work of rebuilding was left to his successor Gabinius (*ibid.*, 14:88; Wars, 1:166). Together with the entire coastal area it passed to Cleopatra, and later Augustus presented it to Herod (*Ant.*, 15:217; Wars, 1:396). Herod embellished the town and named it Agrippias in honor of M. Vipsanius Agrippa, Augustus’ general and son-in-law. During the Jewish War (66–70 C.E.) Anthedon was attacked by the Zealots but the attack was repulsed and it remained a hellenized city. Paganism was deeply rooted in Anthedon, flourishing there until the fifth century (Sozomenus, *Ecc. Hist.*, 5:9), when it became a Christian Episcopal see. The site has been identified with Tell Iblakhiye, on the sea shore 1½ mi. (2 km.) north of the port of Gaza; a hill farther north is still called Teda (= Anthedon). The Arab geographer el-Idrisi (12th century) called the harbor of Gaza “Tida.”

[Michael Avi-Yonah]

ANTHONY, JOSEPH (Deuster; 1912–1993), U.S. director and actor. Born in Milwaukee, Anthony appeared in many stage productions including *Peer Gynt*, *Camino Real*, and *Anastasia*, as well as a few motion pictures, such as the 1941 comedy *Shadow of the Thin Man*. He also directed movies. These films include the 1956 classic *The Rainmaker*, starring Burt Lancaster and Katharine Hepburn, as well as *The Matchmaker* (1958), *Career* (1959), *All in a Night's Work* (1961), and *Tomorrow* (1983).

Anthony made his Broadway debut in 1937, and in the years following was the dance partner of dancer and choreographer Agnes de Mille, the niece of director Cecil B. de Mille. Anthony worked as a set designer on films and dabbled as a film actor. His main interest, however, was the stage, and he became one of Broadway’s most accomplished directors. He was nominated six times for a Tony award as best director for his productions of *The Lark* (1956); *A Clearing in the Woods*

(1957); *The Most Happy Fella* (1957); *The Best Man* (1960); *Rhinoceros* (1961); and *110 in the Shade* (1964).

Anthony made numerous television appearances as an actor on such shows as *The Defenders*, *The Untouchables*, *Suspense*, *Kraft Television Theatre*, and *Danger*, and directed for TV as well, becoming the house director of the 1960s crime series *Brenner*.

[Ruth Beloff (2nd ed.)]

ANTHROPOLOGY, literally “an account of man,” is the comparative study of human societies and cultures. Anthropology has four major subfields: *archaeology, the study of past cultures through an examination of material remains; biological (physical) anthropology, the study of humankind from a biological and evolutionary perspective; cultural anthropology, the study of contemporary cultures and societies and the study of human behavior that is learned rather than genetically transmitted; and linguistic anthropology, the study of human languages and the relationship between culture and communication. Due to the diversity of its subfields and the various approaches to its study, anthropology is variously considered a science, a social science, or a part of the humanities. Anthropology as a field of study in universities began in the latter part of the 19th century. Jews played a significant role in the founding and development of cultural anthropology. An early Jewish name in anthropology is that of the Frenchman, Marcel *Mauss (1872–1950), who became the leading figure in French sociology after his uncle, Emile *Durkheim, a sociologist by training who was a powerful influence in anthropology. He helped Durkheim in the establishment of the journal *L'Année Sociologique* and contributed important articles to it. Mauss’ main interest was in comparative religion or the sociology of religion. His most influential work is *The Gift*, written in 1925, which focused on his theory of “gift exchange” and explored the religious, legal, economic, mythological, and other aspects of giving, receiving, and repaying in different cultures. Another French Jew and a colleague of Durkheim’s at the Sorbonne was Lucien *Lévy-Bruhl (1857–1939) who wrote a series of ethnological works on various aspects of preliterate culture, the purpose of which was to demonstrate the nature of “primitive” mentality or “how natives think.” In his posthumously published notebooks, he retracted his evolutionary interpretation of native thought. He came to realize that so-called prelogical thought was not limited to preliterate societies but was rather characteristic of human thought which did not exclude logical thought to meet the practical demands of the natural environment. Lévy-Bruhl’s interpretation of native thought was especially influential in the fields of literary and art criticism.

The most influential Jewish anthropologist was Franz *Boas, who played a key role in the establishment of anthropology as an academic discipline in the United States. Popularly considered to be the “father of American anthropology,” Boas trained most of the first generation of American anthro-

pologists including Ruth Benedict and Margaret Mead. Boas was born in Germany in 1858, moved to the United States in 1886, and became professor of anthropology at Columbia (New York City) in 1899. He did extensive field research in North America rather than “armchair” anthropology and helped to make “fieldwork” a hallmark of anthropology. His theory of Historical Particularism stresses the biological and “psychic unity” of man and explains cultural diversity by appealing to specific culture histories and environments. He rejected the theories of the 19th-century cultural evolutionists and instead introduced the concept of cultural relativism which holds that cultures cannot be evaluated on an evolutionary scale. Cultures are equal and cultural characteristics should be examined in relation to the culture in which they are found. His “Limitations of the Comparative Method of Anthropology” was the first exposition of cultural relativism, a concept that continues to be a powerful concept in anthropology. With the rise of Hitler, Boas spoke out forcefully against racism and intolerance and wrote and lectured widely in opposition to the Nazis. Boas trained many outstanding American teachers and researchers in anthropology. Most of his students specialized in cultural anthropology, though a few became linguists, physical anthropologists, and archaeologists. One of his disciples, Robert H. *Lowie, was one of the best ethnographers and ethnologists of his day and did extensive field work among a great variety of Indian tribes. Another of Boas’ pupils, Alexander A. *Goldenweiser, was not interested in field work and made only one trip to the Northern Iroquois of Canada. His major interest was in social theory and in theoretical aspects of ethnology, such as issues related to totemism, evolution, diffusion, and culture history. He was a significant figure in the development of anthropological thought in America during the first quarter of the 20th century. Leslie *Spier was also deeply influenced by Boas’ canons of scientific method and the conviction that the understanding of culture depended upon an inquiry into historical antecedents. In his extensive writing he manifested his belief in the essential unity of anthropology as a general science of humankind. Edward *Sapir was perhaps the most creative and brilliant of Boas’ students. He did major linguistic and ethnographic work among the Indians of the Canadian Northwest and Vancouver Island. Toward the end of his life he became interested in the ethnological and linguistic study of the Talmud. The research of Paul Radin, who was also a student of Boas, lay predominantly in ethnology, and within this area, in religion and mythology. His principal field work was done among the Winnebago Indians of Wisconsin. Melville J. *Herskovits completed his doctorate under Boas with a dissertation on “The Cattle Complex in East Africa.” He was the recognized dean of African studies in the United States and trained most of the Africanists in that country. He made Northwestern University virtually the center of African studies in the United States and stimulated widespread interest in Africa among American anthropologists. Ruth *Bunzel (1898–1990), among the earliest of American Jewish women to receive a doctorate in anthropology

(1929), worked as a secretary for Boas. With the encouragement of Boas and Ruth Benedict, Bunzel received her Ph.D. from Columbia, where she later taught. Her many books, including *The Pueblo Potter* (1929) and *Zuni* (1935), focused on Zuni ceremonialism. Another student of Boas and Benedict was Ruth *Landes (1903–1991). The daughter of Russian Jewish immigrants, Landes did pioneering work on race and gender, issues that define central current concerns in anthropology. Her field research among the Ojibwa resulted in her masterpiece study, *The Ojibwa Woman* (1938). Her field research in Brazil resulted in her landmark *The City of Women* (1947).

In Britain, Jews have played a role predominately in social/cultural anthropology. Meyer *Fortes (1906–1983), professor of social anthropology at Cambridge University, immigrated to England from South Africa. He worked among the Tallensi and Ashanti in Africa and his major contributions were in lineage theory, studies of religion, and ancestor worship. His 1940 seminal work (with Evans-Pritchard), *African Political Systems*, influenced a generation of anthropologists. Max *Gluckman also went to England from South Africa, where he had done a great deal of field work among the Zulu and Barotse of Africa and shorter surveys of Rhodesian tribes. Gluckman was a political activist. Publicly anti-colonial, he wrote and lectured about the abuses of colonialism and racism. A.L. Epstein did research on problems of urbanization and social change in emerging urban communities in Northern Rhodesia, Central Africa, and Melanesia. Maurice Freedman specialized in the social anthropology of Southeast Asia and China. Hortense *Powdermaker (1896–1970), although born and raised in the U.S., studied anthropology at the London School of Economics with the influential Bronislaw Malinowski, receiving her Ph.D. in 1928. Her books include *Life in Lesu* (1933), *After Freedom* (1939), *Copper Town* (1962), and *Stranger and Friend: The Way of an Anthropologist* (1966).

Claude *Lévi-Strauss, born in 1908 in Brussels, was the most distinguished social anthropologist in 20th-century France. His most original and significant contribution is his theory of structural anthropology which is heavily influenced by linguistics and assumes that the most effective way to understand human societies is to investigate the structures, rather than the content, of its organization. Among his strongest early influences were Sigmund Freud and Karl Marx. His *The Elementary Structures of Kinship*, published in 1949, quickly came to be regarded as one of the most important works on anthropological kinships. Lévi-Strauss was elected to the Académie Française in 1973, France’s highest honor for academics and intellectuals. He was a prolific writer and his works include *Tristes Tropiques* (1955), *The Savage Mind* (1962), *Totemism* (1962), *Structural Anthropology*, (2 vol., 1958–73), *The Raw and the Cooked* (1964), *From Honey to Ashes* (1967), *The Origin of Table Manners* (1968), *The Naked Man* (1971), *The View from Afar* (1983), and *The Jealous Potter* (1985).

Other Jewish anthropologists of France included Paul Levy, who was director of studies at Ecole Pratique des Hautes Etudes (Sorbonne) and specialized in the culture of India and

Southeast Asia. David Cohen was attaché, Centre National de la Recherche Scientifique in Paris. He specialized in the social anthropology of North Africa and the Near East. Marcel *Cohen was honorary professor at the École des Langues Orientales in the Sorbonne and was an authority on Ethiopian and Hamito-Semitic linguistics. Simone Dreyfus was also connected with the Centre National de la Recherche Scientifique in Paris and pursued research in ethnomusicology and among the Indians of Brazil.

In East Germany, Heinz Israel was connected with the Museum fuer Voelkerkunde of Dresden. He was a specialist on the ethnology and archaeology of the circumpolar peoples, especially the Eskimo of Canada, Alaska, and the peoples of North Siberia.

Robert Heine-Geldern taught ethnology, prehistory, and art history of Asia at the University of Vienna. His main publications dealt with ethnology, archaeology, and the art of Southeast Asia and Oceania. He was especially concerned with problems of ancient Asiatic influences on America.

In Soviet Russia, M.G. Levin was deputy director of the Institute of Ethnography of the Academy of Sciences and head of its section for physical anthropology. He co-edited with L.P. Potapov the monumental *Historical and Ethnographic Atlas of Siberia* (Russ., 1961). He authored *Principles of Physical Anthropology* (Russ., 1955) and *Ethnic Origins of the Peoples of Northeastern Asia* (Engl., 1963) and was one of the editors and principal authors of *Peoples of Siberia* (Russ., 1956).

In South Africa, Phillip V. *Tobias specialized in physical anthropology and prehistory and was closely associated with L.S.B. Leakey in connection with the discoveries of fossil man in Tanganyika.

Moshe *Stekelis taught prehistoric archaeology at the Hebrew University of Jerusalem. He carried out extensive and important field research on the prehistoric archaeology of Israel. Henry Rosenfeld, who also taught at the Hebrew University, did research on the Bedouin and on village and urban Arabs.

Among Jewish psychoanalysts in the United States who have taken an active role in promoting the integration of psychology and cultural anthropology, Géza *Róheim, Abram *Kardiner, Theodor *Reik, and Erich *Fromm distinguished themselves. Modern studies of personality and culture owe much to their pioneering research. Róheim's *The Eternal Ones of the Dream* (1945) was a psychoanalytical interpretation of the origin and meaning of Australian myths and rituals. Abram Kardiner's *The Individual and His Society* (1939) was a pioneer theoretical analysis of the relation of the individual to his culture from a psychological point of view. Reik wrote works on the psychoanalytical interpretations of myths and rituals. Erich Fromm discussed the relation of psychology to current problems of religion and ethics. Fromm, in particular, was concerned with the problem of freedom and responsibility and the hard facts of individual alienation in contemporary culture. Marvin K. Opler published *Culture, Psychiatry and Human Values* (1956), which treated personality differ-

ences in various cultures. Iago Galdston edited and participated in a series of symposia on the interrelations of medicine and anthropology.

Among contemporary Jewish cultural anthropologists in America, Sol *Tax was president of the American Anthropological Association. David Bidney of Indiana University published *Theoretical Anthropology* (1953), which was a pioneer work dedicated to basic theory in the history of anthropological thought. Morris Opler of Cornell University was president of the American Anthropological Association and did extensive field work among North American Indians and in rural India.

Harry L. *Shapiro was chairman of the department of anthropology at the American Museum of Natural History and professor of anthropology at Columbia University.

Alexander Spoehr of the University of Pittsburgh was another Jew who served as president of the American Anthropological Association.

Oscar *Lewis published studies of life in a Mexican village, in northern India, and of a family in Puerto Rico and New York. Barbara *Myerhoff (1935–1985) was a renowned scholar, popular professor, prolific writer, and filmmaker, whose influences extended beyond the academy. Her works include *Peyote Hunt* (1974), *Number Our Days* (1978), and the autobiographical film *In Her Own Time* (1985). Sherry Ortner (1941–) of Columbia University has focused her work among the Sherpa people of Nepal and, more recently, in the United States. She helped establish the sub-discipline of feminist anthropology and has made significant contributions to social, cultural, and feminist theory. She is a prolific writer whose works include *Sherpas Through Their Rituals* (1978), *Making Gender: The Politics and Erotics of Culture* (1996), *Life and Death on Mt. Everest: Sherpas and Himalayan Mountaineering* (1999), and *New Jersey Dreaming: Capital, Culture and the Class of '58* (2003).

Jules Henry of Washington University in St. Louis published *Culture Against Man* (1963), a critical analysis of contemporary American culture with special reference to the interconnections among American institutions, values, and personal character among adolescents. Melville Jacobs taught anthropology at the University of Washington in Seattle. He specialized in the folklore of the North American Indians.

In the field of anthropological linguistics there was a distinguished group of Jewish scholars. Joseph Greenberg, of Stanford University, specialized in the linguistics of African peoples and wrote numerous articles on linguistic theory. Zellig S. Harris of the University of Pennsylvania published *Methods in Structural Linguistics* (1951). Stanley Newman of the University of New Mexico specialized in the languages of North American Indians. George L. Trager of the University of Buffalo was a well-known specialist in American Indian languages. Wolf Leslau, professor of Semitic and Ethiopic linguistics at the University of California at Los Angeles, did field research in Ethiopia. Roman Jakobson of Harvard University was the recognized dean of contemporary linguists in

America and was a distinguished authority on Russian language and folk literature.

M.F. Ashley *Montagu was a prolific writer who did much to popularize anthropology in the English-speaking world. While specializing in physical anthropology, he also published a number of popular books on cultural anthropology.

Raphael *Patai published a number of ethnological works on the Near East. James S. Slotkin (d. 1958) was professor of anthropology at the University of Chicago. His study of Peyote religion was the result of active participation in the native Indian church. Rena Lederman of Columbia University does research in the highlands of Papua New Guinea, focusing on the political economy of gift exchange, on inequality and leadership, on gender roles and ideologies. Her books include *What Gifts Engender* (1986). Karin Brodtkin of UCLA explores gender, race, work, kinship, and migration in contemporary North American Jews. Her book, *How Jews Became White Folks and What That Says About Race in America* (1999), examines the relationships among Jewishness, gender, and class in the structuring of social identity. Riv-Elle Prell's research also focuses on Jews in the U.S., with an emphasis on community, gender relations, and religious life. She is the author of *Fighting to Become Americans: Jews, Gender and the Anxiety of Assimilation* (1999) and *Prayer and Community: The Havura in American Judaism* (1989). Ruth Behar of the University of Michigan was born in Havana, Cuba. She has explored her Jewish identity and its relationship with her anthropological research. She is a prolific writer, essayist, poet, and filmmaker. Among her best-known works are *Translated Woman: Crossing the Border with Esperanza's Story* (2003) and *The Vulnerable Observer: Anthropology That Breaks Your Heart* (1997). Sandra Morgen is professor of anthropology at the University of Oregon. Her books include *Into Our Own Hands: The Women's Health Movement in the U.S. 1969–1990* (2002).

[David Bidney / Diane Baxter (2nd ed.)]

ANTHROPOMORPHISM, the attribution to God of human physical form or psychological characteristics. Anthropomorphism is a normal phenomenon in all primitive and ancient polytheistic religions. In Jewish literary sources from the Bible to the *aggadah* and Midrashim, the use of anthropomorphic descriptions and expressions (both physical and psychical) is also widespread. Yet at the same time it is accepted as a major axiom of Judaism, from the biblical period onward, that no material representation of the Deity is possible or permissible. The resolution of this apparent contradiction requires consideration and understanding of virtually every anthropomorphic expression. In every instance it should be asked whether the expression is an actual, naively concrete personification of God, or a fresh and vital form of religious awareness resorting to corporeal imagery, or an allegorical expression, in which the anthropomorphism is not merely an aesthetic means for the shaping of a particular perception or utterance, but is rather

a conscious method of artificially clothing spiritual contents in concrete imagery.

The evolutionary approach to the study of religion, which mainly developed in the 19th century, suggested a line of development beginning with anthropomorphic concepts and leading up to a more purified spiritual faith. It argued, among other things, that corporeal representations of the Deity were more commonly found in the older portions of the Bible than in its later books. This view does not distinguish between the different possible explanations for anthropomorphic terms. It especially fails to account for the phenomenon common in the history of all cultures, that sometimes a later period can be more primitive than an earlier one. In fact, both personifications of the Deity as well as attempts to avoid them are found side by side in all parts of the Bible. The paucity of anthropomorphisms in certain works is not necessarily proof of any development in religion, but may well be due to the literary characteristics and intentions of certain biblical narratives, e.g., the narratives designed to express the growing distance between God and man through describing His relationship to Adam, the patriarchs, and the early and late prophets, etc.

In The Bible

An obviously anthropomorphic expression is found in Genesis: *zelem Elohim* ("the image of God"), and there are references to actually "seeing" God (Ex. 24:10–12; Num. 12:8). The limbs of the human body frequently serve as allegorical descriptions of the acts of God as perceived by man. Thus divine providence is referred to as "the eyes of the Lord" and "the ears of the Lord" (very common in Prophets and Psalms); "the mouth of the Lord" speaks to the prophets (both in Torah and Prophets); the heavens are the work of His fingers (Ps. 8:4), and the tablets of the covenant are written by the finger of God (Ex. 31:18). Striking figurative expressions are *af* ("nose"; i.e., "the wrath of the Lord"), "His countenance" (which He causes to shine or, alternatively, hides), *yad*, ("hand," "His right hand," "His arm," "His sword"). At times the personification is startlingly extreme: God (or His voice) "walks about in the garden" (Gen. 3:8); He "goes down" in order to see what is being done on the earth (Gen. 11:5; 18:21) or in order to reveal Himself there (Ex. 19:18; 34:5), and He "goes up again" (Gen. 17:22; 35:13); He goes through the land of Egypt and passes over the houses of the Israelites (Ex. 12:12–13); He sits on a throne (Isa. 6:1), causes His voice to be heard among the cherubim who are over the ark of the tabernacle (Num. 7:89), dwells in Zion and in Jerusalem (Ps. 132:13; 135:21); the hair of His head is as wool (Dan. 7:9); Moses sees "His back" (Ex. 33:23). Anthropomorphic expressions abound in the song at the Red Sea (Ex. 15) and in the song of David (II Sam. 22; Ps. 18).

More important from a theological perspective are the anthropomorphisms, or psychical personifications of the Deity. Scripture attributes to God love and hate, joy and delight, regret and sadness, pity and compassion, disgust, anger, revenge, and other feelings. Even if one explains these terms as being

nothing but picturesque expressions, intended to awaken within man a sense of the real presence of God and His works, nonetheless they remain personifications. The basis for such terms is the conception of God as a Being who wills in a personal (though not exactly in a human) way. This personalized conception of the Deity, in conjunction with the axiomatic belief in His absolute transcendence, leads to unusual boldness in the use of anthropomorphic imagery.

Ultimately, every religious expression is caught in the dilemma between, on the one hand, the theological desire to emphasize the absolute and transcendental nature of the Divine, thereby relinquishing its vitality and immediate reality and relevance, and on the other hand, the religious need to conceive of the Deity and man's contact with Him in some vital and meaningful way. Jewish tradition has usually shown preference for the second tendency, and there is a marked readiness to speak of God in a very concrete and vital manner and not to recoil from the dangers involved in the use of apparent anthropomorphisms.

However, this anthropomorphic style is frequently accompanied by mitigating expressions indicating reservations. The basic opposition to all such personifications is decisively formulated in the Decalogue. In addition, it finds expression in many verses which maintain that nothing can be compared to God, who has no form or shape, cannot be seen, is eternal and without end (very frequent in the Pentateuch, Former and Latter Prophets, Psalms, Job, and Chronicles). Yet, many of these verses appear to contradict others which describe God in corporeal terms (for example, Ex. 20:4; Deut. 4:15, as against Gen. 1:26; Num. 23:19 and I Sam. 15:29 as against Gen. 6:6; I Kings 8:27 as against Ex. 25:8, and other such examples). These verses emphasize the transcendent nature of the Divine, not in philosophical abstractions but in vivid descriptive expressions. In other places one finds attempts to avoid such personifications and to substitute less daring imagery; if it is said, on the one hand, that the Lord dwells in His sanctuary (Ex. 35:8), and also appears in the cloud over the cover of the ark (Lev. 16:2), on the other hand there are verses which speak instead of God's *kavod* ("glory") or *Shemo* ("His name"; Ex. 24:16–17; Lev. 9:23; Num. 14:10; Deut. 12:5, 11; 16:2, 6; I Kings 8:11). Some scholars (S.D. Luzzatto and Geiger) argued that the present vocalization of Exodus 34:24 "to appear before the Lord" was emended by the masoretes from original לְרֹאֵת־יְיָ (*lirōt*; "to see") to לְרֹאֵת־יְיָ (*lera'ot*; "to be seen"), to avoid an objectionable anthropomorphism.

There is no evidence of any physical representation of God in Jewish history (in contradistinction to the worship of Canaanite and other foreign gods by Israelites). Even the golden calves of Jeroboam represented, according to the view of most scholars, only a footstool for the invisible God. In archaeological excavations no images of the God of Israel have been unearthed. Biblical Hebrew is the only fully developed language which has no specific term for the notion "goddess."

The Targumim

The method of mitigating offensive anthropomorphisms by means of small emendations, described by the *tannaim* as "biblical modifications of expression," is also prevalent in the early translations of Scripture. *Onkelos often renders the name of the Lord in such substitutes as "the glory of the Lord," "the Word of the Lord," and "fear of the Lord." Similarly, he translates "He saw" or "He knew," referring to the Deity as "it was revealed before Him"; "He went down" becomes "He revealed Himself"; "He heard" becomes "it was heard before Him," and other similar examples. If the same verb is used in the Bible to describe an action of God and of man, Onkelos uses two different words in order to distinguish clearly between the Divine and the human (Gen. 32:29; 40:8; Ex. 14:31; and others). He is less hesitant, however, about attributing man's psychical qualities to God, and he translates such expressions as hatred, love, anger, and the like without making any changes except for those words which indicate regret and sadness on the part of God (for example, Gen. 6:6). Yet Onkelos is not consistent in his treatment of anthropomorphism as Maimonides already observed (*Guide of the Perplexed* 2:33), and it has been suggested that he prepared his translation with the simple worshiper in mind: expressions whose metaphorical meaning was obvious, were translated literally; where misunderstanding and error were likely, his translation circumvents the anthropomorphism by a paraphrase. The other Aramaic translators follow a similar course, although the Targum known as "Yerushalmi" goes even further in avoiding anthropomorphisms than do Onkelos and the Targum Jonathan to the Prophets.

The same generally applies to the Greek translations. For instance, *temunah* ("likeness") is always translated in the Septuagint as μορφή ("form") or ὁμοίωμα ("likeness"), and, if it refers to the Deity (Num. 12:8), it is rendered δόξα ("that which appears"). The Septuagint is extremely careful with God's "wrath," "anger," and similar terms, which the Aramaic Targumim never hesitate to translate literally. Yet even within the Septuagint one finds no consistency in handling anthropomorphisms. Among the other Greek translations, of which only fragments are extant, Symmachus is the most consistent in avoiding personifications of the Deity. For example, in Genesis 1:27, he separates the terms "in the image of God," reading instead: "in the image – God created him" (the Targum Yerushalmi attributed to Jonathan treats this verse similarly).

Hellenistic Philosophy

Aristobulus deals in a systematic way with the "true" (that is, the allegorical) interpretation of anthropomorphic verses in Scripture, basing himself on Greek thinkers and poets. The consistent avoidance of any personification of God led Philo of Alexandria to the concept of a Deity who neither acts nor creates, who is without attributes or qualities and hence no kind of positive relationship to this world could be attributed to him. At the same time Philo could not be unaware of the

dynamic vitality and activity of God as portrayed in the Bible. This contradiction caused him to posit an intermediate being between God and the world. His biblical exegesis is an allegorization of Scripture in this direction. Hence the *memra* (“word”) of Onkelos and the *logos* of Philo, despite their terminological similarity cannot be equated.

Aggadic Literature

Rabbinical *aggadah* essentially follows the biblical manner of boldly using anthropomorphic imagery, while at the same time qualifying it. The number of substitute terms for God increases. To the *memra* of the Targum are now added other names and circumlocutions, such as *gevurah* (“strength”), *shamayim* (“heaven”), *makom* (“place”), etc. Sentences in which personifications occur are softened by means of the qualifying term *kivyakhol* (“so to speak,” “as it were”) or by means of sayings such as “if it were not written in Scripture, it would be impossible to utter it.” Occasionally, anthropomorphic personifications of God are justified for didactic reasons and by the need to make divine truth accessible to human understanding: “The Torah speaks in the language of men.” At times the rabbis resort to anthropomorphic language in order to drive home a moral lesson. Thus God’s “descent” on Mount Sinai is used for the following exhortation: “Let a man always learn from his Creator, for here the Holy One blessed be He forsook all of the mountains and high hills and caused His presence to rest on the lowly Mt. Sinai” (Sot. 5a). Similarly, on the third day after the circumcision of Abraham, “the Holy One blessed be He said to the ministering angels: Let us go down and visit the sick man.”

However, definite attempts to qualify anthropomorphic tendencies are evident in other homilies on the revelation at Sinai: “The Divine Presence never descended, nor did Moses and Elijah ever ascend to heaven” (Suk. 5a; Mekh. Ha-Ḥodesh 4). The commandment to cleave to the Lord is explained in the Talmud in this way: “As He is compassionate, so should you be compassionate; as He visits the sick, so should you visit the sick” (Shab. 133b; Sot. 14a). But the original version of the Midrash read: “As He is called compassionate and gracious, so you be compassionate and gracious,” thereby avoiding the potential personification involved (Sif. Deut. 11:22). The rabbis did not recoil from such terms whenever they thought them useful to impress man with an awareness of the existence of God, His love and His fear, and, hence, aggadic literature abounds in statements to the effect that the Holy-One-blessed-be-He studies the law (Ḥag. 15b), puts on *tefillin* (Ber. 6a), weeps over the destruction of the Temple, and the like.

In the Middle Ages

The proper explanation of the anthropomorphic passages in biblical and aggadic texts became a major problem in Jewish theological thought. Generally one may discern three main trends of thought, although there are no clear lines of demarcation, and the number of intermediate positions is considerable: (1) Allegorization: every anthropomorphic description

of the Deity is explained simply as a metaphor. This approach developed chiefly through the influence of Greek and Arabic philosophy. (2) Talmudic orthodoxy: a well-nigh literal understanding of the sayings of the rabbis. Philosophical, i.e., allegorical, exegesis was considered a danger to religion, since the whole biblical, halakhic, and aggadic tradition might easily evaporate into allegorical ideas. (3) The mystical view: there are intermediate beings between God and the world (or stages of God’s self-manifestation), and all anthropomorphic expressions refer to these emanations from the Deity. Further support for this line of thought is found in the Targumim and *aggadah*, which make frequent use of such names as *Shekhinah* (“Divine Presence”).

Philosophy

The medieval Jewish philosophers aimed at purifying the concept of the Deity of any trace of anthropomorphism. *Saadia Gaon held that all corporeal references to God refer to non-corporeal matters, and that strictly speaking only the attribute of existence could be ascribed to God. The forms which the prophets saw in their visions were not actually the Deity but His *Shekhinah* (“Presence”) – viz. the divine light or *kavod* (“glory”) created by Him. Later thinkers developed Saadia’s views, although many of them defended the unlettered, simple believers who were intellectually incapable of properly understanding Scripture and approaching God without material notions (Joseph b. Zaddik, Bahya ibn Paquda; Abraham b. David of Posquière’s gloss to Maimonides’ *Yad*, Teshuvah 3:7). Judah Halevi even saw a logical justification and a didactic value in such anthropomorphisms (compare his comment on the golden calf episode (Kuzari 1:97)). Discussion of the problem reached its zenith in the philosophical work of Maimonides, who insisted upon a nonliteral, allegorical understanding of all anthropomorphic expressions, both physical and psychical, and ruled that every anthropomorphism was outright heresy.

The violence of Maimonides’ polemic against anthropomorphic beliefs and doctrines suggests that these were fairly widespread, and that a great many people were affected by “the *aggadot* (“homilies”) which confuse one’s mind” (so Abraham b. David of Posquière, loc. cit.). The influence of Maimonides, however, was both powerful and lasting. Even against the vehement opposition of more conservative thinkers of his day, his “*Guide*” determined what was to become the Orthodox concept of God within Judaism for a long time. There is evidence (Jedaiah ha-Penini of the 13th century, Moses Alashkar of the 15th) to show that it was the writings of Maimonides which finally did away with all anthropomorphic notions among Jews. Whereas in his lifetime Maimonides’ orthodoxy was suspected because of his opposition to anthropomorphic beliefs, Spinoza was equally strongly denounced in the 17th century for his rejection of Maimonides’ principles of exegesis and for his contention that scriptural anthropomorphisms were originally meant to be taken literally.

[R.J. Zwi Werblowsky]

In the Kabbalah

The talmudic *Merkabah (the heavenly throne-chariot) mysticism taught the ascent of the ecstatic soul into the realm of the divine throne. A description of the revelation of the divine majesty in the form of a human figure (following Ezekiel 1:26) became the focal point of this vision. This description is found in fragments of a tract called *Shi'ur Komah*, literally “the measure of the body,” i.e., the body of God as He appears, revealing Himself in this form. The text, attributed to the two mishnaic rabbis R. *Ishmael and R. *Akiva, gives enormous figures for the measurement of each organ of that divine primordial man on the throne. Such measurements are preserved, for example, of God’s right and left eyes, of His lips, and other parts. The description of God’s organs is designedly linked with the description of the beloved one in the Song of Songs 5:11–15, and it is certainly connected with some esoteric doctrine about the Song of Songs as a mystical text. It constitutes a major piece of theosophy, no longer clear, evolved precisely within the circle of strict rabbinical Orthodoxy. The age of these fragments, which were forcefully attacked by the *Karaites as a profanation and degradation of the religious concepts about God, was long debated. Some philosophic apologists of the Middle Ages, for whom the existence of these doctrines was a source of embarrassment, tried to explain them away as late forgeries. Judah Halevi justified the *Shi'ur Komah* “because it brings the fear of God into the souls of men” (*Kuzari* 4:3). Later Maimonides ruled that it was unquestionably an idolatrous work and should be destroyed (*Teshuvot Rambam*, ed. Freimann, nos. 373, 694). Scholars like *Graetz assumed that they were due to the influence of an anthropomorphic school in early Islam. These opinions are no longer tenable. The term *Shi'ur Komah* appears as the keyword of an esoteric doctrine connected with the Song of Songs in the hymns of Eleazar ha-Kallir, which are pre-Islamic. The existence of an esoteric doctrine about the Song of Songs is attested in the third century by the church father Origen who lived at Caesarea. By this he cannot have meant the openly accepted allegorization of the Song of Songs as the relationship between God and Israel, but rather as a doctrine about the appearance of God in the form of the beloved one, such as is taught by the *Shi'ur Komah*. Saul *Lieberman has shown that in the earlier *aggadah* the revelation of God on His Merkabah at the exodus from Egypt and the revelation on Mount Sinai are in fact attested in a manner which fits into the traditions of the *Shi'ur Komah*. However it is clear from the extant fragments that this extreme form of anthropomorphism was not really meant to describe the Divine Being as corporeal. The description here is of a visionary apparition, however exotic, but not the appearance of God Himself. In kabbalistic literature, *Shi'ur Komah* was interpreted as a symbol for the revelation of the Divinity in the *Sefirot* (Divine Emanations) and therefore it was favorably appraised. Important parts of the *Zohar, in particular the Great and Small *Idras*, represent a kind of kabbalistic adaptation or imitation of the *Shi'ur Komah*. In them, the theosophic beliefs of the kabbalists are quite consciously expostu-

lated in the form of concrete descriptions of the features of the head of the Divinity, in order to doubly stress their symbolic character. Parallels to the *Shi'ur Komah* are also found in the second century in the *gnostic literature of Christian heretics who had a knowledge of Aramaic, such as Marcion. His description of the “Body of Truth” comes particularly close to the traditions of the *Shi'ur Komah*.

[Gershom Scholem]

In Jewish Art

Although Jews have speculated on the anthropomorphic nature of God, visible representation of the Deity was clearly forbidden by the Mosaic law. In spite of this injunction, the Deity has sometimes been represented in Jewish art. In the synagogue frescoes of *Dura Europos (third century C.E.), there are representations of the Hand of God stretching forth from heaven. In certain cases where they depict the visions of Ezekiel the representations might be justified as an illustration of a biblical text (e.g., the prophet said, “the hand of the Lord was upon me”; Ezek. 37:1). No such justification, however, can be used to explain the fact that at Dura Europos and at *Bet Alfa there are representations (as in contemporary Christian art) of the Divine Hand extending from heaven to prevent Abraham from sacrificing his son (it is specifically stated in the Bible that the patriarch was restrained by the voice of an angel). The anthropomorphic tradition was continued in medieval Jewish illuminated manuscripts. In the Sarajevo *Haggadah* there is a figure of a man in repose which according to one opinion illustrates God taking rest after the labor of creation. Later, the theme was taken up in documents and printed books. One of the vignettes to *Jacob b. Asher’s *Arba'ah Turim* published by Hayyim Schwarz (with his son and son-in-law) in Augsburg in 1540 shows the Deity engaged in the work of the sixth day of creation and in the creation of Eve. The Deity was also depicted in small vignettes of scenes from the Vision of Ezekiel on the engraved title page of the *Minḥat Shai* (Mantua, 1742); on the engraved border of an Italian **ketubah* of the 17th century; and in a representation of the Vision of Jacob at Bethel on the title page of the *Ir Binyamin* by Benjamin Zeev Wolf Romaner (Frankfurt on the Oder, 1698). There is a depiction in relief of God appearing to the infant Samuel (1 Sam. 3:10) on the gravestone of Samuel Senior Teixeira in the Oudekerk cemetery of the Sephardi Jewish community in Amsterdam (1717). This is especially remarkable in view of the biblical prohibition of graven images. The accumulated evidence shows that it is even possible that the cast figure of Jupiter Fulgur, incorporated in the perpetual lamp of at least two 18th-century German synagogues, was also intended to represent the Deity. It is clear that the prevalent idea that medieval Jewish art would not brook anthropomorphism is certainly incorrect.

ANTIBI, family of rabbis in Aleppo, Egypt, and Erez Israel. The name is derived from Ain Tab, in southern Turkey. Its members include: ISAAC BEN SHABBETAI (d. 1804), of Aleppo, author of *Ohel Yizhak*, sermons; *Beit Av*, novellae on Maimonides’ *Yad ha-Hazakah* and Joseph Caro’s *Beit Yosef*; and various responsa. These works were published by his son Abraham b. Isaac *Antibi. JACOB (d. 1846), born in Aleppo. He was rabbi of Damascus for 40 years and a halakhic authority. He corresponded with the chief rabbi of Jerusalem, Raphael Joseph Hazzan, who endorsed his decisions. The great publicity given the *Damascus Affair (1840) and the world reaction to it were largely due to him. In February 1840, he was imprisoned and cruelly tortured, but following the intercession of Moses *Montefiore, Adolph *Crémieux, and Solomon *Munk, he was released that September. Upon Montefiore’s request he wrote a detailed account of his imprisonment. After his release he moved to Jerusalem (1841) and was reckoned among that city’s important scholars, residing there until his death. He is the author of *Abbir Yaakov*, novellae, at the end of which is a description of the Damascus blood libel, appended to Hayyim Kafusi’s *Be-Or ha-Hayyim* (1929). Some of his responsa are extant (Ben Zvi Institute, no. 403; Benayahu Collection), and several appear in the works of his contemporaries. He was also a poet. One of his poems, composed on his release from prison, deals with his salvation from the blood libel. Some of his *pizmonim* were recited in the syna-

gogues of Damascus although they were never published. HAYYIM JUDAH SHABBETAI RAPHAEL (1808–1888), son of Jacob, also known as “Mashi’ah,” was a wealthy philanthropist. He aided the rehabilitation of Safed after the 1837 earthquake, and also built a synagogue which bore his name. Later he was appointed rabbi and member of the *bet din* in Cairo. He died there in 1888. His son, ELIJAH RAHAMIM (1852–1920), born in Safed, wrote *Ara de-Rabbanan*, sermons; *Derash Eliyahu*, funeral orations; *Tuv Ta’am*; and *Imrei Shabbat*, all of which are still in manuscript.

ANTIBI, ABRAHAM BEN ISAAC (1765–1858), Syrian talmudist. Antibi, who was born in Aleppo, studied under his father, Isaac Berakhah, and Isaiah Dabah. A scholar of great erudition and acumen, he wrote books on a variety of topics. He ruled his community with a firm hand, making regulations, opposing the inroads of the wealthy, and criticizing the failings of his generation. When his father died he succeeded him, acting as rabbi of Aleppo and head of the *bet din*. He served approximately 40 years. Antibi studied Kabbalah, and speculated on the date of redemption. His ethical publications established his reputation as a moralist. He also wrote poems, most of which expressed the yearning for redemption and for the revelation of the Divine Presence. In Aleppo some of these were sung on Sabbath eves and on festive occasions, being included in the *Bakkashot* books. His learning was acknowledged in Erez Israel, and *Israel b. Samuel of Sklov solicited from him a commendation for his book *Pe’at ha-Shulhan* (1836). Antibi was host to visiting Ashkenazi scholars and emissaries from Erez Israel and his works incorporated his learned discussions with them. His son Isaac was also a distinguished scholar in Aleppo. Antibi is the author of (1) *Yoshev Ohalim* (Leghorn, 1825). This work includes *Ohel Avraham*, sermons on the pentateuchal passages, on the Exodus, and on Passover; *Penei ha-Bayit*, a treatise on the *Torat ha-Bayit* of Solomon b. Abraham *Adret; and *Ohel Yizhak*, some sermons of his father. (2) *Mor ve-Aholot* (Leghorn, 1843), responsa of Antibi and his father. (3) *Ohel Yesharim* (Leghorn, 1843), moral discourses and homilies to which are appended some 50 *piyyutim*. (4) *Penei ha-Bayit* (Leghorn, 1849), on the Shulhan Arukh, חמ, together with *Bet Av* by his father. (5) *Hokhmah u-Musar* (Leghorn, 1850), on ethical conduct, to which is added *Derekh Hukkekha*, laws of the festivals, which also contains *Hukkei Nashim*, matrimonial law based chiefly on the responsa of *David b. Solomon Abi Zimra. (6) *Penei Ohel Mo’ed* (Jerusalem, 1959), homiletical discourses for the special Sabbaths. His works are an important source for the cultural, social, and economic life of the Jews of Syria. To this day legends are current in praise of him and the wonders which he performed.

ANTICHRESIS (ἀντίχρησις) in Greco-Roman law an arrangement whereby a creditor may, under certain conditions, enjoy the use and fruits of property (land or chattels) given to him as security. In talmudic literature, such an arrangement appears under various designations such as *mashkanta di-Sura*, *nakhyata*, *kizuta* (see *Loans, *Pledge, *Property, *Usury), while the word *antichresis* (אֲנִיכְרִיסִיט) itself appears only once in the Talmud (TJ BM 6:7, 11a; another passage in TJ Git. 4:6, 46a has אֲנִיכְרִיסִיט which might be a corruption of *antichresis* (אֲנִיכְרִיסִיט) – see Epstein, in: *Tarbiz*, 8 (1937), 316–8). In Greco-Roman sources too, though antichretic transactions must have been widespread, the word *antichresis* appears only rarely, and it is difficult to ascertain its exact meaning. The glossator Cujacius (Observations 3:35) restricts the term to an arrangement whereby the usufruct is in lieu of interest (*in vicem usurarum*). A. Manigk, rejecting this narrow definition, argues that in Roman, Assyro-Babylonian, Greco-Egyptian, Syrian, and other laws, arrangements whereby usufruct was granted in partial or total amortization of the principal debt were also included in *antichresis*: hence Manigk speaks of “amortization-*antichresis*” as distinct from “interest-*antichresis*” (F. Stier-Somlo and A. Elster (eds.), *Handwoerterbuch der Rechtswissenschaft*, 1 (1926), s.v.). By allowing a token deduction from a principal debt, actual interest-*antichresis* can be made to appear as amortization-*antichresis* (which is what *mashkanta di-Sura* or *nakhyata* really were). This was a means of evading the prohibition of usury. It is thus difficult to say whether the terse statement in the Talmud, which explicitly denounces *antichresis* as usury, refers to pure interest-*antichresis* or also to amortization-*antichresis* of the fictitious kind. The Mishnah discussing it deals with loans on pledge and quotes a saying of Abba Saul allowing amortization-*antichresis* under certain circumstances (“a poor man’s pledge”).

In Christian countries in the Middle Ages, when all interest on loans was forbidden, *antichresis* was linked with the evasion of usury (see C.F. Glueck, *Ausfuerliche Erlaeuterung der Pandecten*, 14 (1813), 47ff.). Economically justified interest rates having become permissible, the significance of *antichresis* faded away and is not found in modern legislation.

[Arnost Zvi Ehrman]

ANTICHRIST, Gr. Ἀντιχριστός, a term first occurring in the Johannine epistles in the New Testament (I John 2:18, 22; 4:3; II John 7). It refers to an eschatological figure, the opponent of God, the pseudo-messiah who will be revealed at the end of days as the great enemy of Jesus. According to II Thes-

salonians 2:2–4 the second coming will be preceded by apostasy, and the “man of lawlessness” will be revealed, the “son of perdition” so evil that “he shall sit in the Temple of God, showing himself to be God.” Perhaps this figure too is to be identified with Antichrist, and he is destroyed by “the breath of the Messiah’s mouth” (cf. Isa. 11:4, Targ. *ibid.*, and many other places in Jewish writings).

The background to this figure lies in Jewish eschatology, where the ideas of the wicked king of the last generation and of the rise of evil to the highest point preceding salvation are found at an early period (cf. Ezek. 28:2; Dan. 7:24–25; 11:36; cf. 9:27). Another form of the same idea can be found in the eschatological battle in which the forces of evil and their leader are finally to be overcome (QM xviii:1; 1QS iv:18–19; Test. Patr., Levi 3:3, et al.). Peculiar to the Christian form of this tradition in which the term Antichrist developed is the anti-messianic aspect of the figure. Thus, in a later Christian apocalypse he is described in the following terms: “His knees are unbending, he is crippled in his eyes, with wide eyebrows, crooked [sickle] fingered, with a pointed head, gracious, boastful, wise, sweet in laughter, visionary, clever, sober, gentle, mild, worker of signs, bringing close to him the souls of the corrupt, bringing forth bread from stones, [making] the blind to see, the lame to walk, he will move mountains from place to place...” (Seventh Vision of Daniel, ed. Z. Kalemkian, 1892, pp. 25ff.). The description of his ugly physical appearance is similar to those found in other Christian apocalypses, such as *Testamentum Domini*, the Greek Esdras Apocalypse and others. But in the Daniel Apocalypse quoted, certain of the characteristics of Antichrist are directly inspired by those of the Christ. Descriptions of the physical form of this figure also occur in later Jewish apocalypses such as *Sefer Zerubbavel* (ed. Ibn Shemu’el, 79ff.), there ascribed to *Armilus.

Another element which entered into this complex of ideas is that of *Nero redivivus*. Here the eschatological wicked ruler took on the characteristics of the Roman emperor who represented the very epitome of all conceivable evil. The idea of *Nero’s eschatological reappearance developed and is to be found in the Sibylline Oracles (e.g., 4:119–39) which constitute the most extensive early source for this idea. In this book the demonization of the Nero figure is complete (5:361–70) and it is very clear further (5:28–34), where of his return it says (33f.): “Then he shall return, making himself equal to God, but [God] shall convince him that he is not.” The same concept is also to be found in Revelation 13:17. There, too, the antidi-vine arises in the form of a dragon, the “primordial serpent called Satan” (12:9), and of two beasts, one of which is generally associated with Nero (13:17–18). The Church Fathers also speculated about Antichrist, but their interest was more in his theological aspects than in the mythical features dear to the apocalyptic writers. So, for example, both Irenaeus in his treatise *Adversus haereses* and Hippolytus in his “On Christ and Antichrist” and his fragmentary commentary on Daniel reflect this interest and for them II Thessalonians 2:2–4 is most important. The later developments of this legend are

complex. One particular form, basing itself on Jewish traditions (see Test. Patr., Dan. 5:6), makes the Antichrist a Jewish pseudo-messiah of the tribe of Dan.

In the Antichrist figure of Christianity, therefore, elements of Jewish thought were given particular formulations as they crystallized. The idea of the rise of evil to its height before the coming of salvation, the embodiment of this evil in the eschatological king (cf. Test. Patr., Dan. 11:36, 37; Ass. Mos. 8), the overweening pride and blasphemy of the figure (Test. Patr., Dan. 7:11, 20; 11 Thess. 2:2-4, etc.), all these are old Jewish motifs. Their combination in the figure of the wonder-working pseudo-messiah or Antichrist is apparently a Christian development, and one which, in turn, may have influenced later Jewish ideas. It is clearly possible that this Christian formulation, which often bears distinct anti-Jewish traits, grew in part from the reaction of Christianity to continuing Jewish messianic hopes. It might be added that Jewish tradition about this eschatological figure may have been more highly developed and earlier than is generally recognized, as the primarily Jewish material in the fragmentary Coptic Elijah apocalypse indicates.

[Michael E. Stone]

ANTI-DEFAMATION LEAGUE (ADL). The Anti-Defamation League (originally "The Anti-Defamation League of B'nai B'rith") was founded in 1913 in reaction to the crude and overt antisemitism of the period, specifically to the Leo *Frank case. The ADL's goal, as stated in the charter that established the League, is "to end the defamation of the Jewish people ... to secure justice and fair treatment for all citizens alike."

Originally headquartered in Chicago, the offices of the League are in New York City. The ADL works out of 31 regional offices located throughout the United States. The ADL has as well a cooperative relationship with the B'nai B'rith Canadian office, an office in Jerusalem, and representation in Rome and Moscow.

The ADL is governed by a National Commission of 700. Unlike the *American Jewish Congress, *American Jewish Committee, and other community relations organizations, the ADL is not a membership organization. It has evolved from being a commission of its parent body to an organization with independent board and fundraising structures, and in reality is fully autonomous. The ADL is staffed by career professionals who are specialists in various disciplines related to community relations: religions, law, communications, promotion, education, labor, foreign affairs (especially Israel and the Middle East), social sciences, politics (national and local), and government.

The ADL recognizes threats to Jewish security coming from an antisemitism that appears in new forms and guises, such as anti-Israel activity and radicalism of the right and left. The League views itself as being an "active" organization, responding in a timely manner to what are perceived to be threats to the rights and security of Jews. It sees itself as taking a pragmatic, rather than an ideological, approach to issues. The ADL, by virtue of its budget and its varied activity, is considered to be a significant voice among the community relations agencies.

The ADL's initial efforts focused on the blatant antisemitism of the pre- and post-World War I period, which included restricted neighborhoods and resorts, jobs, and schools that rejected Jews. (For example, model legislation drafted by the ADL helped unmask the Ku Klux Klan and drastically diminish its power.) The ADL's focus, however, in its early decades was not on legal remedies against discrimination but on countering defamation of Jews. For example, the League exposed the vicious antisemitism of the *Dearborn Independent*, which printed and circularized the infamous *Protocols of Zion*, and extracted an apology and retraction from its publisher, Henry Ford. Throughout the 1930s the League fought and exposed the many hate groups which sprang up during the Depression and the Hitler period, such as the Christian Front, the Silver Shirts, and the German-American Bund.

Particularly in the post-World War II period, the ADL was successful in advocating on behalf of legislation against such discrimination. It also dealt with vulgar stereotypes and caricatures of Jews on the stage and in communication media and with incidents of antisemitic vandalism, and played a role in strengthening interfaith and interracial relationships.

In the 1960s, the ADL played a role in the successful coalitional effort that resulted in the passage of the Civil Rights Act of 1964, and of subsequent fair-housing and voting-rights laws. The ADL's sponsorship of a comprehensive study of the roots of prejudice (the seven-volume University of California Five-Year Study of Antisemitism in the United States – the "Berkeley Studies") helped create a new climate of interreligious understanding and ecumenism, and was a factor in the deliberations of Vatican II that led to the watershed document *Nostra Aetate*, which re-defined the Catholic Church's attitude toward Jews.

On the international scene, advocacy on behalf of the State of Israel and other involvement in Middle East issues became, especially after 1967, an ADL priority. The League carries out an education and action program to help mold public opinion and exposes and counteracts Arab propaganda; ADL led the effort which resulted in the passage of anti-boycott legislation and worked within the European Economic Community to counter the boycott. The League is also active in protecting and securing the rights of Jews wherever they are in danger, and played an important role in the Soviet Jewry movement. Interreligious activities as well have been an important part of the ADL agenda.

During the 1970s, in response to what it then characterized as “the new antisemitism,” which derived less from overt expression and more from apathy and insensitivity to Jews and to Jewish concerns and problems, including Israel, the ADL re-contoured its approaches to antisemitism. A major prejudice-reduction program, “A World of Difference,” has been an ADL centerpiece since the early 1990s, as has been Holocaust education. Convinced that preferential treatment will destroy equality of opportunity and selection based upon merit, the League’s position on affirmative action is nuanced in terms of ADL’s opposition to the re-emergence of quotas.

The ADL’s traditional ideology was that aggressive use of litigation and other legal remedies to counter discrimination and church-state violations was too confrontational and would ultimately damage the constructive relationships that Jews had built up with other faith communities over the years. From its earliest years the ADL, unlike its sister “defense” agencies, rejected advocating on behalf of antidiscrimination legislation, and instead focused on combating prejudice and defamation. The League’s national director until 1947, Richard E. Gustadt, articulated the view that held that intergroup negotiation and education programs emphasizing cultural pluralism offered the best chances to remedy societal abuses. Certain societal evils could not, in the view of the ADL, be eliminated, only tempered. This view (shared in large measure by the American Jewish Committee) marked a fundamental ideological difference with the American Jewish Congress, which believed in direct legal action.

From the late 1940s until the late 1970s the ADL was led by a tandem of Benjamin Epstein and Arnold Forster, who together began aggressively prosecuting a civil rights agenda for the League. Beginning in the early 1980s, however, with a marked shift in the national public policy agenda back to church-state and other First Amendment matters, there was again a shift in the priorities of the ADL. During the tenure of national director Nathan Perlmutter additional legal expertise and resources were added to the agency’s staff (the ADL’s litigation capacity dated back to the late 1940s and was a result of the decision by the American Jewish Congress to organize its Commission on Law and Social Action), and the League became an aggressive “player” in the church-state arena. During this period there was a certain degree of de-emphasis of the traditional civil rights agenda, resulting in large measure from antisemitism within some black civil rights groups.

Even with a new emphasis placed on church-state separation and other legal matters, the ADL always viewed church-state concerns to be but one of several major civil rights and liberties issues on its organizational palette, which includes countering racial supremacist organizations, judicial remedies for “hate crimes,” and discrimination and harassment. Changes within the organization arising out of exogenous factors did not mean that the ADL intended to abandon its charter purpose of public response to anti-Jewish defamation.

From the mid-1980s, under the stewardship of Abraham H. Foxman, the ADL has become one of the most “visible”

national Jewish organizations on the American – and indeed international – scene. Although viewed as increasingly conservative in some areas of activity, the reality is that the ADL has carved a highly nuanced political path, especially on Israel-related issues, threading its way skillfully between agencies such as the rightist Zionist Organization of America and Jewish groups of the left. This “centrist” approach has been evident in a range of domestic public affairs issues as well. Newer areas of activity for the ADL include threats of global antisemitism, “hate” activity on the Internet, working with law-enforcement agencies, a new generation of church-state situations, and balancing traditional civil liberties concerns with those of national and local security. The ADL has commissioned a series of public opinion surveys, both in the United States and in Europe, which have elicited valuable data on antisemitic attitudes and on attitudes toward Israel.

The core mission of the ADL – to combat antisemitism – remains as it has been. The related mission of the League – working for justice for all – has in the view of the ADL not only intrinsic value but instrumental value as well, as it assists in the ADL’s core mission.

In terms of institutional considerations, until the early 1980s the leading “defense” agency, in terms of budget and stature, was the American Jewish Committee; the annual budgets of the two agencies were at approximate parity, at around \$12 million. The ADL budget (\$5.5 million in 1971) began increasing in the 1980s at approximately \$3 million per year in that decade, and soon far outstripped the other “defense” agencies, reaching some \$30 million by the early 1990s and approximately \$60 million by 2005. The League’s staff and programmatic initiatives have increased commensurately.

Also important in terms of institutional dynamics is the ADL’s relationship with B’nai B’rith. The ADL began life as a commission of B’nai B’rith, but tensions developed between the two agencies as B’nai B’rith was reshaping itself from being primarily a fraternal and service organization to one that addresses community relations issues. In the mid-to-late 1990s the issue with B’nai B’rith came to a head, with B’nai B’rith – itself seeking finally to reshape its own identity – asserted that its community relations and “defense” agenda would be pursued aggressively. The ADL, maintaining that it was B’nai B’rith’s “defense” arm, in effect severed its ties with its erstwhile parent. (The ADL does retain a *de jure* legal connection with B’nai B’rith.)

ANTI-FASCIST COMMITTEE, JEWISH, a group of Jewish public figures and intellectuals in the Soviet Union organized during World War II on the initiative of the Soviet government to mobilize world Jewish support for the Soviet war effort against Nazi Germany. When the Germans invaded the Soviet Union, the Soviet government felt the need to organize a Jewish body among the many organizations set up to arouse world opinion to aid embattled Russia. On Aug. 24, 1941, a meeting of “representatives of the Jewish people” was held in Moscow and it was addressed by Solomon *Mikhoels, Ilya *Ehrenburg, David *Bergelson, and others, who called on “our Jewish brethren throughout the world” to come to the aid of the Soviet Union. This appeal made a great impression on Jews in countries free of the Nazi yoke. In the U.S. the Jewish Council for Russian War Relief was established, headed by Albert *Einstein; in Palestine, a reply to the call from Moscow was broadcast in Hebrew on Sept. 28, 1941, on behalf of the *yishuv*. A public committee to aid the Soviet Union’s fight against fascism, which was later known as “League V,” was also established.

At the same time, two representatives of the *Bund in Poland, Henryk *Erich and Victor *Alter, who had been released from Soviet imprisonment in September 1941, suggested to the Soviet government that it establish an anti-fascist committee. When the two were executed in December 1941, it appeared that the proposal had been rejected; however, the serious situation on the war fronts led the Soviet government to recognize the need for propaganda directed toward Jews throughout the world. It was decided to establish a Jewish Anti-Fascist Committee within the *Sovinformbureau*, which served Soviet war propaganda. On April 7, 1942, the Committee published its first appeal to “Jews throughout the world,” signed by 47 people, including writers, poets, actors, doctors, and Jewish soldiers who had distinguished themselves in battle against the Germans (General Jacob *Kreiser, the submarine commander Israel Fisanovich, and others). The Committee was headed by Solomon Mikhoels, and its secretary was the journalist Shakhne Epstein. On May 24, the second meeting of the “representatives of the Jewish people” was held and broadcast an appeal to Jews throughout the world to collect contributions for the acquisition of 1,000 tanks and 500 airplanes for the Red Army. **Eynikeyt*, the Yiddish journal of the Committee, was first published on July 6, 1942, at Kuibyshev and appeared three times a month. The Committee organized radio broadcasts four times a week in Yiddish for the Jews in the U.S. and Great Britain and collected information on Nazi atrocities in Nazi-occupied Soviet areas that was published in *Eynikeyt* and sent outside the Soviet Union for publication in Jewish newspapers. The Committee also collected a total of 3,300,000 rubles in their fundraising campaign among Jews in the Soviet Union for the purpose of setting up a tank unit to be called “Soviet Birobidzhan.” In February 1943, the Committee met in plenary session, at which Mikhoels delivered a shocking report of the fate of Jews in areas liberated by the Red Army. He also gave details on the Jewish role in the

struggle against the Nazis. Ehrenburg denounced the wave of antisemitism then spreading through the country, whose slogan was that “one does not see Jews at the front,” and urged that all circles of the Soviet public be supplied with information on the participation of Jews in the battles against the Germans. In the second half of 1943, Mikhoels and the poet Itzik *Fefer were sent by the Committee on a propaganda tour to the U.S., Canada, Mexico, and Great Britain and were enthusiastically received by almost all sections of the Jewish public. This visit was regarded as the first step in renewing the contact between Soviet Jews and world Jewry that had been severed since October 1917.

The third meeting of “representatives of the Jewish people” in the Soviet Union took place in April 1944, including for the first time a representative of religious Jewry, Rabbi Solomon *Schliefer of Moscow. When Germany was defeated in May 1945, the Anti-Fascist Committee published a declaration emphasizing that during the war “a basis for increasing unity was created” between Jews of various countries and the Jews of the Soviet Union.

When the war ended, the activities of the Anti-Fascist Committee centered mainly around the periodical *Eynikeyt*, which appeared three times a week after February 1945. The Committee planned to publish two books, *The Black Book* on Nazi atrocities in occupied territories and *The Red Book* on Jews as armed fighters against the Nazis; their publication was banned, however. In late 1946, Itzik Fefer declared in *Eynikeyt* that “we have never affirmed all-Jewish (*klal Yisroel*) unity, but only anti-Fascist unity.” Ehrenburg resigned from the Committee in time, while its chairman Mikhoels was murdered by the secret police in January 1948. In late November 1948, the Anti-Fascist Committee was liquidated together with all the remaining Jewish institutions, and most Jewish writers and public figures were arrested.

From the first, the Anti-Fascist Committee had been established as a Soviet propaganda tool operating under the guidance and supervision of the government. But after the war, when Jewish refugees began returning from the eastern regions of the U.S.S.R. to their former residences in the Ukraine and Belorussia and faced difficulties in regaining possession of their homes and getting their jobs back, they turned to the Committee for help. The Committee, and especially Mikhoels, frequently interceded with the authorities on their behalf. It seems that the Committee also sent a memorandum to Stalin demanding that the renewed symptoms of antisemitism be stamped out and that an area be set aside for the settlement of Jewish refugees in the Crimea. These activities, in which the Committee overstepped the limits of its official assignment, were the official cause of its dissolution and the execution of its chairman on January 12, 1948, in a staged car accident in Minsk. The Committee was dissolved on November 20, 1948 and the Jewish publishing house Der Emes was closed. In 1952, at a secret trial, its leading members were accused of being Western (American) spies and, as Jewish nationalists and Zionists, traitors, and of conspiring to sepa-

rate the Crimea from the Soviet Union and to convert it into a Jewish bourgeois republic that would serve as a military base for the enemies of the U.S.S.R. (the "Crimea Affair"). All the accused – S. Lozovskii, J. Juzefovich, Prof. B. Shimeliovich, I. Fefer, L. Kvitko, P. Markish, D. Bergelson, D. Hofstein, B. Zuskin, L. Talmi, I. Vatenberg, E. Teumin, and Ch. Vatenberg-Ostrovskia – were executed on Aug. 12, 1952. Prof. Lina Stern was sentenced to 3½ years of prison and then deportation to Kazakhstan. In related measures, another 110 Jews were tried, 10 were executed, and the others were sentenced to various prison terms.

ANTIGONUS (c. 135–104 B.C.E.), Hasmonean prince; son of John *Hyrcanus and younger brother of Judah *Aristobulus. Antigonus and Aristobulus were put in command of the siege of Samaria by their father. They succeeded in capturing and destroying the city after defeating Antiochus IX Cyzicenus of Syria and the army of Ptolemy Lathyrus of Egypt which had been sent to aid the besieged town. When Judah Aristobulus succeeded to the throne, he imprisoned his mother and his younger brothers, but appointed Antigonus commander of the army and his associate in the administration of the state. During the war, Upper Galilee, southern Lebanon, and part of northern Transjordan were captured, and the Itureans were compelled to adopt Judaism.

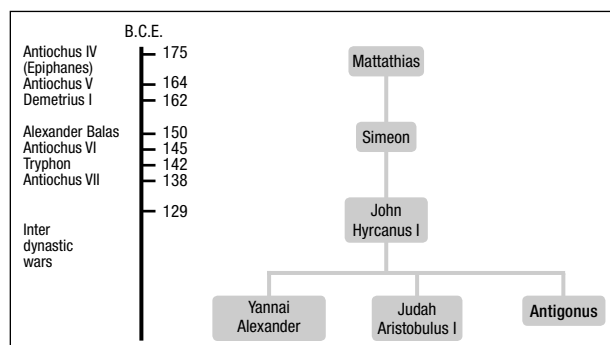

Josephus' account of the death of Antigonus contains several contradictions. He states that Aristobulus, ridden by suspicion and fear of assassination, issued an order forbidding anyone to enter his palace armed. Subsequently, Antigonus returned after the war on the Itureans. On appearing in the Temple during the Feast of Tabernacles dressed in his splendid new armor, he was loudly acclaimed by the people. When the king heard this he sent a messenger to his brother command-

ing him to appear before him unarmed. Antigonus' enemies, however, bribed the messenger to tell Antigonus the opposite and when he reached Strato's Tower on his way to the palace, he was killed by the guards. This tale is linked with another relating the "prophecy" of a certain Essene who foresaw that Antigonus would be slain that day.

[Abraham Schalit]

ANTIGONUS II (Mattathias), last king of the *Hasmonean dynasty, reigned 40–37 B.C.E.; youngest son of Aristobulus *II. After the conquest of Jerusalem by Pompey (63 B.C.E.) Antigonus was taken to Rome with other members of the royal family. In 57 he escaped with his father, but was sent back to Rome by *Gabinus. Eventually Aristobulus' children received permission from the Senate to return to Judea. After the death of his father and his brother Alexander (49), Antigonus and his sisters went to Chalcis to Ptolemy, son of Mennaues (see *Alexandra, daughter of Aristobulus II). In 47 he argued before Julius Caesar the case for his right to rule over Judea, over which *Antipater II, father of Herod, was in control. Caesar, however, preferred Antipater who was more useful to his plans in the East. After the assassination of Caesar (44), Antigonus tried to enter Galilee in an attempt to advance on Jerusalem and seize the throne, but he was repulsed by Herod and returned to Chalcis. After the Parthians conquered Syria (40), Antigonus allied himself with them, and broke through to Jerusalem at the head of an army of Hasmonean supporters. Herod with his men retreated to the royal palace while Antigonus remained on the Temple Mount, awaiting the Parthian troops who were moving on Jerusalem. Against Herod's wishes, his brother *Phasaël and ex-king Hyrcanus II were persuaded to go to the Parthian headquarters in Galilee for a conference and were arrested. Herod thereupon escaped from Jerusalem with Mariamne the Hasmonean and her mother Alexandra. Antigonus' men pursued the fugitives and overtook them south of Jerusalem at the spot where Herod afterward built his fortress palace Herodium. They were repulsed and Herod brought his family and the remnant of his force to Idumea, entrusting them to his brother Joseph, who settled them in *Masada. There are contradictory accounts as to the fate of Phasaël; it is probable that he committed suicide or was killed while attempting to escape. The Parthians cut off Hyrcanus' ears, on the advice of Antigonus, who desired thereby to disqualify him from the high priesthood. Antigonus was now designated king over Judea by the Parthians and also assumed the high priesthood. This appointment bound him to the Parthians and from then on he was regarded by Rome as a declared enemy. Antigonus besieged Masada but failed to conquer it. Herod, who had arrived in Rome, succeeded in being appointed king of Judea, and immediately left for the East. He arrived in Judea at the end of 40 or early in 39, and immediately began hostilities against Antigonus. However, Ventidius,

Antony's legate (later the victor of the Parthian War), gave him no substantial support, and left Judea soon after, probably having been bribed by Antigonus. Herod meanwhile succeeded in liberating Masada, after which he marched on Jerusalem, and attempted to take the city in a surprise attack. The attempt failed, and Herod retreated. The war continued throughout the winter of 39–38 and Herod succeeded in subduing the whole of Galilee, while Antigonus remained in Jerusalem, unable to assist his partisans in the north. Nevertheless Herod would not have got the upper hand if Ventidius had not decisively defeated the Parthians (38). As a result of this victory, Roman forces were freed for action. Even then they did not cooperate with Herod who journeyed to Mark Antony's camp to seek his full support. During Herod's absence from Palestine Antigonus defeated Herod's brother Joseph, who was killed in battle. A general rising followed in Galilee, whose inhabitants seized partisans of Herod and drowned them in the Sea of Galilee; the revolt even spread to Idumea. Herod, returning at the head of a considerable Roman force, crushed the uprising. Antigonus then committed a fatal error: instead of concentrating all his forces against Herod, he dispatched a large part of them against the Roman troops in Samaria, and his army was defeated at Jeshanah. Only the approach of winter prevented Herod from besieging Jerusalem. In 37 Herod was reinforced by a large Roman army, 11 legions (about 50–60,000 men), sent by Mark Antony and commanded by Sosius. The siege lasted five months and the distress in the city was particularly acute, as that year was a sabbatical year and food was in short supply. Two sages in the besieged city, whose names are given by Josephus as Sameas (Shammai or Shemaiah) and Pollion (Hillel or Avtalyon), recommended that the city gates be opened, not out of love for Herod, but in the belief that this was a heaven-sent punishment which must be endured. Josephus' statement that the city fell on a fast day has been wrongly understood to refer to the Day of Atonement; it was probably a communal fast customarily proclaimed in time of danger. Antigonus and his forces fortified themselves on the Temple Mount, and when this was taken by storm by the Romans, Antigonus surrendered to Sosius. He was sent to Antioch to Mark Antony, who ordered him to be beheaded. This was the first time that the Romans executed a legitimate king in such a way, probably to show that they did not recognize him as such.

°**ANTIGONUS OF CARYSTUS** (fl. 240 B.C.E.), an Athenian biographer and bronze-worker who labored under Attalus I at Pergamum. He cites Callimachus, who, in turn, cites Zenophilus (Xenophilus), on the phenomena of the Dead Sea.

[Louis Harry Feldman]

ANTIGONUS OF SOKHO (early second century B.C.E.), sage. Antigonus represents the link in the chain of tradition between *Simeon the Just, his teacher, and the *Zugot ("pairs"). His Greek name indicates the extent of Hellenistic influence in this period. Only one of his statements has been preserved: "Be not like servants who minister to their master in order to receive a reward, but be like servants who minister to their master not in order to receive a reward; and let the fear of Heaven be upon you" (Avot 1:3). It is not clear, whether this saying has any actual background specifically typical of Antigonus' age. Antigonus did not thereby intend to deny the doctrine of future reward, but according to rabbinic tradition, his dictum was misinterpreted by his pupils, Zadok and Boethus, who saw in it a denial of the afterlife. As a result, they founded the sects known as the *Sadducees and *Boethusians who denied the doctrine of the world to come. "They (Zadok and Boethus) taught their disciples who repeated it to their disciples... and said to them, 'what caused our forefathers to say this? Is it possible that a laborer should toil all day and not receive his reward in the evening?' Therefore, had our forefathers known of the existence of the world to come and the resurrection of the dead they would not have said this" (ARN¹ 5, 13; cf. ARN² 10, 13). It is hard to say what historical basis there is to this legend. Some scholars find significance in the fact that the first recorded controversy among the Pharisees themselves (over the issue of *semikhah* "the laying of hands on the head of a sacrificial animal") started in the days of Antigonus' disciples.

ANTIN, MARY (1881–1949), Polish-born U.S. author. Antin immigrated to Boston in 1894, publishing her first poem in the *Boston Herald* while still at elementary school and her first book, *From Plotsk to Boston* (1899), at age 18. An eloquent Progressive whose books also included the classic immigrant autobiography *The Promised Land* (1912) and *They Who Knock at Our Gates* (1914), Antin saw herself as the social representation of those who had likewise fled from persecution to freedom. Her life exemplified the increasing elasticity of Jewish identity in modern American culture. Antin married Amadeus W. Grabau, a German-American Lutheran geologist and paleontologist, in 1901 and the couple had one child. Antin had to relinquish her goal of attending Radcliffe College when her husband assumed a professorship at Columbia University; she studied at Columbia's Teachers College and at Barnard College but did not complete a degree, apparently due to illness and the realities of domestic life that made it difficult for women of her time to combine marriage and motherhood. The marriage later collapsed over Grabau's support for Germany in WWI and conflict generated by Antin's national celebrity and financial success. Antin was an eclectic thinker

who maintained a Jewish identity and some Jewish practices while exploring other forms of spirituality. Initially enthralled by the writings of Thoreau, Emerson, and Darwin, in later life she was attracted to Christian mysticism and spent parts of her final years as a disciple of Meher Baba and Rudolf Steiner. Her popularity as a writer and lecturer waned and her success was followed by writer's block and years of hardship, when she supported herself by doing social work.

[Keren R. McGinity (2nd ed.)]

ANTINOMIANISM (from Greek *anti*, "against," and *nomos*, "law"), opposition to the law and, more especially, a religiously inspired rejection and abolition of moral, ritual, and other traditionally accepted rules and standards. Antinomianism in the narrow sense has usually been applied to one of the main trends in the early church which, in the wake of Paul's disparagement of the Mosaic Law in favor of the law of the "New Covenant," asserted that those who are saved may "do evil that good may come" (Rom. 3:8). Paul himself indignantly repudiated this accusation (*ibid.* 3) though he held that the Mosaic Law was no longer valid after the coming of Christ. In a wider sense the term is used to designate doctrines asserting that at certain times (e.g., in the messianic era when the old things have passed away and a new order is established) or for certain individuals or groups (e.g., those who have attained higher knowledge, salvation, or initiation into certain mysteries) men are no longer bound by constricting rules and norms applicable to less perfect times or individuals. It is not surprising, therefore, that the problem of antinomianism should have posed itself mainly in connection with Gnostic, mystical, or messianic movements. Licentiousness seems to have been characteristic of some Gnostic sects, even as the doctrine of the "freedom of the children of light" or Luther's teachings regarding justification by faith only, without regard to works, contributed to manifestations of antinomianism among the Anabaptists and among some 17th-century English sects. Antinomian tendencies in Judaism often based themselves on arbitrary interpretations of rabbinic statements to the effect that in the "world to come" all ritual prohibitions would be abolished (see also *Gnosticism).

On the other hand, ritual and customs were an integral part of the Torah, the "divine law," and like the Torah itself, were said to possess eternal and absolute validity. Post-Exilic Judaism took great pains to observe every single precept contained in the Torah. Pharisaic Judaism, although it regarded all commandments as equally sacred, did sense a difference between ritual laws and moral laws, as well as between reasonable laws and such that could not be rationally justified. A *baraita* (Yoma 67b) makes a distinction between *mishpatim*, i.e., commandments which "even if they had not been

written down, would have been written down as a matter of course," such as the prohibitions of idolatry, incest, murder, etc., and *hukkot*, i.e., commandments "which the Satan always urges one to transgress," such as the consumption of pork, the use of cloth that is part wool and part linen, levirate marriages, etc. The *baraita* goes on to say: "You might argue that this (i.e., the *hukkot*) is of no account; therefore it is written 'I am God' (Lev. 18:4) – I, God, have fixed the laws and you have no right to question them." This passage in the *baraita* amounts to a clear rejection of antinomian freedom of judgment and clearly expresses the attitude of observant Judaism of all periods to the problem of ritual laws. It was not, however, a solution designed to satisfy the inquisitive mind. The need to find meaning and purpose in the ritual laws seems to have been felt first in the Hellenistic period, when it became indispensable for the propagation of Judaism among the pagans, especially the learned among them. It was necessary to explain to them not only the ancient traditions and legends and adapt them to the Greek way of thinking but above all to justify the law itself. Hellenistic Judaism conceived the Torah as *nomos*, the law being the supreme expression of Jewish religious distinctiveness; it was of the utmost importance to explain to the pagans the inner meaning of Jewish religious laws. Attempts were made to give the laws a symbolic interpretation and thereby to bring out their profound meaning (Aristobulus, the letter of Aristeeas, Philo, Josephus, etc.). At the same time, an antinomian trend also made itself felt; the attempt to explain the law had the natural result of a relaxation in its observance. Philo testifies to this trend when he states: "There are, however, people who regard the written law as images of spiritual concepts, take great pains in exploring the latter, while neglecting the former. These are people that I must censure. For one must be careful to do both: to explore the hidden meaning and to practice the plain meaning. Even though the commandment on Sabbath observance contains the hidden meaning that action is the prerogative of God and His creatures should remain passive, this does not absolve us of the obligation to observe the sanctity of the Sabbath. Similarly, although the holy days and festivals are only images of our spiritual joy and our gratitude to God, we are not permitted to renounce the customary ceremonies and rituals. Circumcision may essentially only mean the removal of all passion, lust, and godless thought, yet we are not permitted to disregard the custom, as it is commanded; for if we were to adhere only to the higher meaning of the law, we would also have to give up sanctification in the Temple and untold other essential ceremonies" (cf. Philo, *Migration*, 89 ff.; Wolfson, *Philo*, 1 (1948), 66–71). A similar danger of the erosion of ritual practice and the observance of the law was felt as a result of the rise and spread of Graeco-Arab philosophy among the Jews after the tenth century.

In medieval Jewish thought, antinomian tendencies appeared in three different manners: (a) in allegorical exegesis of the commandments, which regarded them as symbolic of rational and scientific attainment; (b) in spiritualistic inter-

pretation of worship as the supreme human goal; (c) in astrological antinomianism. Antinomian allusions began to appear regularly in Abraham *Ibn Ezra's Bible commentaries. For instance, Ibn Ezra maintained that worship of images was legitimate outside the Holy Land, but was prohibited within the Land of Israel on account of its special astrological status (viz., Commentary to Deut. 31:16). Maimonides laid the foundations for allegorical interpretation of biblical and talmudic sources, although he generally refrained from applying such allegorical interpretation to the commandments. Nevertheless, he suggested that the Torah teaches an abstract form of worship of God (*Guide for the Perplexed* 3:32). In the controversy over philosophy which erupted in the 13th century, the conservative faction accused the rationalists of antinomian attitudes and behavior, based on their alleged allegorization of the commandments, charges which continued to be leveled despite repeated and strenuous denials by the rationalists, such as *Levi b. Abraham b. Hayyim. Such Jewish attacks on rationalism and accusations of antinomianism parallel and reflect the suppression by the Church of the "heresy" of the rationalist Albigensians (from Albi, in southern France), who had begun in the 11th century to interpret Scripture allegorically, and who denied the literal interpretation of the miraculous events in the life and resurrection of Jesus that are central to Catholic doctrine, allegorization allegedly resulting in laxity in morals. The rationalist threat was met by repeated Church bans (1209, 1210, 1215) on the study of the works of Arabic philosophy and science, and of Aristotle. These bans were renewed in 1231 by Pope Gregory IX, who then established the permanent Inquisition under the Dominicans, with the aim of eradicating the heresy.

In the 14th century, many rationalists did, in fact, display antinomian attitudes, in some cases in their supercommentaries to Ibn Ezra, arguing that "the essence of the worship of God is in the heart" (Samuel ibn Zarza, *Mikhlol Yofi*, Ms. Paris, f. 729–730; Sec. 2, f. 207a). Much additional evidence to antinomian attitudes leading to laxity or abandonment of ritual observance may be found in medieval Jewish sources, although it is not at all clear whether these sources are proof of concrete cases of antinomian behavior, or only of a certain type of homiletical style.

The allegorical interpretations of the philosophical meanings of the laws clearly encouraged laxity among those who thought that the outer observances were merely a means for expressing philosophical truths. Philo's remarks incidentally suggest that the antinomians found no fault with the Temple and the cult of animal sacrifice; in general, however, it was precisely the rejection of the cult of sacrifice which was a cardinal point of many antinomian groups. Epiphanius (*Adversus Haereses* 1:18) mentions a pre-Christian Jewish sect, the Nazarenes, which rejected the Pentateuch, regarding it as a forgery; they observed most Jewish customs but did not accept the cult of animal sacrifice (cf. Meyer, *Urspr*, 2 (1921), 408ff.; Harnack, *The Mission and Expansion of Christianity*, 1 (1961), 402f.). Similar views were also held by many Judeo-Chris-

tian sects. Some scholars claimed to find allusions to antinomianism and Gnosticism in several of the books of the Bible and the Talmud (M. Friedlaender, *Der vorchristliche juedische Gnosticismus* (1898), 71ff.). The rejection of the ceremonial law by the modern *Reform movement can be regarded as a form of antinomianism, but in recent years there can be detected a distinct tendency toward at least a partial return to ceremonial observance.

[Dov Schwartz (2nd ed.)]

In Kabbalah

Since the Kabbalah's basic aim was to strengthen the Jewish religious tradition, it is in general far removed from antinomian tendencies. Its attitude to the *halakhah* is positive but it endeavors to endow the precepts with symbolic value. For this reason we find in the early Kabbalah phenomena which may be regarded only as latent antinomianism. There are three such occurrences: (1) The doctrine of *Sefer ha-ʿTemunah* (first printed in 1784) on the changes of the reading of the Torah due to new combinations of its letters in the various stages of the cosmic cycle. Each such stage is called *shemittah* and what is forbidden in the *shemittah* during which we live may become permitted, and even considered a commandment, during another *shemittah*. Adherents to this doctrine also held that in actual fact the alphabet contained 23 letters, but that one letter became "unseen" in our *shemittah*; its revelation in the next *shemittah* will, of course, deeply change our manner of understanding the Torah. (2) The doctrine of the book *Ra'aya Meheimna* ("The Faithful Shepherd," part of the *Zohar dealing with the interpretation of the commandments): during the period of exile the Torah derives from the *Ez ha-Da'at* ("the Tree of Knowledge") and for this reason it contains purity and defilement, things that are permitted and things that are prohibited, and so on. At the time of *redemption, however, the Torah will be revealed from the *Ez ha-Hayyim* ("the Tree of Life") and with the annihilation of the *yezer ha-ra* ("evil inclination"), prohibitions and limitations will no longer be necessary. Thus, its secret (i.e., mystic) knowledge, the pure spirituality which is its essence, will become manifest and people will act according to it. This spiritual Torah which is concealed in our revealed Torah is called *Torah de-Azilit* ("Torah of the Higher World"). (3) The doctrine of the books *Peli'ah* and **Kanah* (written around 1340–80), according to which there is no literal meaning in the Talmud and in the *halakhah*; the secret (mystic) knowledge itself is the literal meaning. One should observe the halakhic values for this reason only; for, if one should suppose that these values have the literal, customary meaning, then there is no need to keep many of them, since it is possible to prove through inner criticism of the *halakhah* and by the way of talmudic discussion itself that numerous essential halakhic rules do not apply in exile and that most of the ritual precepts are not observed in it at all.

Common to all three doctrines is the fact that in actual reality, in our time, there is no place for antinomianism. But the existence of the halakhic world is always dependent on a

certain esoteric condition, and with the change of this condition the value of the talmudic *halakhah* will also change, although the absolute value of the Torah as a divine revelation will not change at all. Actual antinomianism became manifest only in the radical groups of the Shabbatean movement. However, it was based on the three above-mentioned doctrines. Since they believed that redemption had already come they reached the conclusion that the *Torah de-Beriah* (“the Torah in its present form”), which is the material Torah of traditional Judaism, should be abolished and one should act according to the esoteric Torah, *Torah de-Azilut*. This antinomianism was a revolutionary element in the Shabbatean sect and brought in its wake destructive phenomena in the lives of the radical Shabbateans. Serious sins were considered meritorious, and particularly those sins punishable with *karet* (“divine punishment by premature death”), such as adultery. Antinomian activities were also introduced as a special religious rite (reading the traditional phrase *matir assurim* as “who permits what is forbidden” rather than as “who frees prisoners”). It attained its most extreme form with the Frankists (see Jacob *Frank). This antinomianism of the Shabbateans and the Frankists was connected with their messianic claims and was based on the talmudic statement that in the messianic period all commandments would be abolished, “all sacrifices would disappear, except for the sacrifice of thanksgiving” (Lev. R. 9: 7; 27: 12), and that all fasts would be converted into feasts.

[Gershom Scholem]

One of the main sources of kabbalistic antinomianism is the astrological theory of changes of law which depend on Saturn and Jupiter. The rule of a certain planet over a certain period of time, a cosmic cycle, and the corresponding nature of the law that governs during this cycle, has been transferred by some kabbalists to the rule of a certain *Sefirah*, whose specific nature is reflected in the structure of the Torah.

ANTIOCH (Turk. **Antakya**), city in southern Turkey, on the lower Orontes (Asi) near the Syrian border. Population (2004): 158,400. Part of Syria under the French mandate, it was annexed to Turkey in 1939 along with the district of Alexandretta (*Iskenderun) and made into the capital of the province of Hatay.

Antioch was founded by Seleucus Nicator in 300 B.C.E. and became the capital of the Seleucid Empire. In antiquity Antioch was an important Jewish center, and from its foundation full rights were bestowed upon the Jews. When the inhab-

Plan of ancient Antioch.

itants rebelled against Demetrius II in 142 B.C.E., the soldiers of *Jonathan the Hasmonean were sent to quell the revolt and set the city in flames. There must have been a considerable number of Jews in Antioch by the second century B.C.E. Josephus praises the beauty of its great synagogue, and there were doubtless a number of other places of worship. Antioch had no special Jewish quarter as had *Alexandria, Jews being apparently dispersed throughout the city. *Hannah and her seven sons are said to have been buried in Antioch and it is possible that the martyrdom recounted in the Second and Fourth books of the Maccabees occurred in Antioch; IV *Maccabees could in fact be, in essence, the oration of a Jew of Antioch in memory of these martyrs. The Christians too, later honored the martyrs' grave, which, according to them, was situated in the Kerataion quarter, near the synagogue. The franchise of the Jews in Antioch was engraved on bronze tablets set up in a public place in the city. During the Roman period the Jewish population grew and was augmented by many proselytes. After the Roman war of 66–70 the inhabitants of Antioch asked Titus to expel the Jews from the city, and to destroy the tablets on which the Jewish privileges were inscribed, but he refused. Nevertheless, according to later chroniclers, the Romans erected a splendid memorial to celebrate their victory and set up the *cherubim taken from the Temple in Jerusalem on one of the western gateways of the city, which was conse-

quently called "The Gate of the Cherubim." This, however, appears to be a late legend. The Jewish community of Antioch maintained permanent commercial ties with Palestine and took an interest in the spiritual life of their coreligionists there. In the second century, Abba Judah of Antioch contributed liberally to the maintenance of the Palestinian scholars, many of whom visited Antioch.

Antioch played an important role in the history of Christianity. Here for the first time, in the days of the Apostles, the members of the new faith were called "Christians" (Messianists). The first Christians were, of course, Jews, but already in the days of Paul, pagans also joined their ranks. Barnabas visited Antioch, where he dwelt together with Paul. When the apostle Peter came to Antioch he ate with the pagans, but when messengers arrived from James, the brother of Jesus, who was a Nazarene, Peter felt ashamed and withdrew from the pagan society, Barnabas following suit. According to a tradition of the church fathers, Peter headed the Christian church of Antioch for seven years.

Antioch became a center of Christian learning and the Antiochian school of theology, which flourished in the third and fourth centuries C.E., was particularly renowned. Unlike the school of Caesarea, which interpreted the Bible allegorically and in accordance with speculative philosophy, the Antiochian school expounded the Scriptures in conformity with their historical and literal meaning. The biblical commentaries composed by this school in the fourth and fifth centuries C.E. are of great importance. In Antioch, various means were used to counteract the great influence which the Jews had upon the local Christians. The synod of Antioch (341) forbade the Christians to celebrate Easter when the Jews were observing Passover, and John Chrysostom of Antioch, in his six sermons (c. 366–387), vituperatively denounced those Christians in Antioch who attended synagogues and resorted to the Jewish law courts.

When Christianity became the state religion, the position of the Jews of Antioch deteriorated. The Jews of Imnestar were accused of having crucified a Christian boy on the feast of Purim, and the Antiochian Christians destroyed the synagogue (423 C.E.). When the emperor Theodosius II restored it, he was rebuked by Simon Stylites and refrained from defending the Jews. In the brawls between the sport factions known as the "blues" and the "greens," many Jews were killed.

When the Persians threatened the *Byzantine Empire, Emperor Phocas attempted to force the Jews of Antioch to convert to Christianity. In revenge the Antiochian Jews are alleged to have attacked the Christians (608 C.E.) and killed the patriarch Anastasius. When the rebellion was suppressed, many Jews were slain or exiled. From this date on there is little further information about the Jews of Antioch. *Benjamin of Tudela (c. 1171) found only about ten Jewish families there, most of whom were glass manufacturers.

Under Ottoman rule (1516–1918) there was always a Jewish community in Antioch, and it was reinforced by immigrants from *Corfu and *Aleppo. By the middle of the 18th

century there were 40 Jewish families and several rabbis in residence. The community followed the Sephardi rite. However, when the English traveler A. Buckingham visited Antioch around 1816 he found only 20 Jewish families, who met for prayers in a private house on the Sabbath. The Jewish population seems to have increased later on and by 1894 there were three to four hundred Jews.

Under the Turkish Republic many Jews left and the community dwindled once again. In 1977 there were only 164 Jews living in the city, divided among three large families. Most of them were textile merchants. There was one synagogue in operation, but no rabbi.

[Abraham Haim / David Kushner (2nd ed.)]

°**ANTIOCHUS**, name of 13 Seleucid monarchs who ruled Syria for the greater part of two and a half centuries. They include:

(1) **ANTIOCHUS I SOTER** (b. 324 B.C.E.), son of Seleucus I Nicator, ruled from 281 to 261. Although unsuccessful in his attempt to capture *Coele-Syria (276–72) from *Ptolemy II of Egypt, Antiochus nevertheless pursued his father's policy of founding Greek cities throughout the empire, and was even erroneously credited in late rabbinic and Roman literature with the founding of the capital, Antioch.

(2) **ANTIOCHUS II THEOS**, son of Antiochus I, ruled from 261 to 246 B.C.E. Antiochus recaptured those parts of Syria and Asia Minor lost by his father in the First Syrian War. His confrontations with the Egyptian king, and the intrigues of his wives (which eventually caused his death) are alluded to in the Book of Daniel 11:16ff. Scholars have pointed to a passage in Josephus (*Ant.*, 12:125–7) as proof that Antiochus II granted special rights and even full citizenship to the Jews of certain Greek cities. (For discussion, see Josephus, Loeb edition, vol. 7, 741ff. For selected literature on the early Seleucid rulers and the Jews, see p. 737.)

(3) **ANTIOCHUS III, THE GREAT** (b. c. 242 B.C.E.), son of Seleucus II Callinicus (244–26). Antiochus became king after the murder of his brother Seleucus III Soter (223) and immediately succeeded in stabilizing and strengthening the Seleucid Empire. With his accession, however, the long period of peace in Judea came to an end. For 20 years, until 198, the country constantly changed hands. The young king's second expedition through Coele-Syria was particularly successful. By 217 he reached the southernmost parts of Palestine only to suffer a crushing defeat at the hands of *Ptolemy IV near

Rafi'ah (Rafa; south of Gaza), in one of the fiercest battles of the Hellenistic period. Antiochus was forced to relinquish the conquered areas, and according to Josephus, the Jews "were in no way different from a storm-tossed ship which is beset on either side by heavy seas, finding themselves crushed between the successes of Antiochus and the adverse turn of his fortunes" (Ant., 12:130). By 198 B.C.E. the Jews of Palestine had become disenchanted with Ptolemaic rule, and they opened the gates of Jerusalem to Antiochus, and assisted in the expulsion of its Egyptian garrison. Antiochus rewarded the Jews for their "splendid reception" by restoring those parts of Jerusalem destroyed by the war, freeing its citizens from taxes for three years and supplying funds for the Temple, and in general by permitting "members of the nation to have a form of government in accordance with the laws of their country" (κατὰ τοὺς πατρίους νόμους). It was also forbidden to bring to Jerusalem animals forbidden for consumption by Jews (Jos., Ant., 12:129–53). The victories of Antiochus brought him to the attention of the Romans who were advancing through Greece. In 190 Antiochus suffered his greatest defeat near Magnesia and was forced into a degrading settlement by the victorious Romans. Sensing this, the eastern provinces of the Seleucid Empire revolted and Antiochus, determined to finance his recent setback at their expense, died while trying to sack one of the Temple treasuries of Elymais (187; 1 Macc. 8:6–16; Jos., Loeb edition, vol. 7, p. 743ff., App. D; M. Stern, *Ha-Te'udot le-Mered ha-Hashmona'im* (1965), 28–46; Schalit, in: JQR, 50 (1959/60), 289–318).

(4) ANTIOCHUS IV EPIPHANES, son of Antiochus III, ruled from the death of his brother *Seleucus IV in 175 B.C.E. until his death in 164. His reign marks a turning point in Jewish history. Striving vigorously to restore the strength of the Seleucid Empire, Antiochus founded more new Greek cities than all his predecessors. He became the champion of an intense Hellenization, more as a result of personal tendencies than as a means of reunifying the divided kingdom. To this end Antiochus paid particular attention to the Jews of Palestine. *Onias III, the high priest, was replaced in 173 by *Jason who had strong leanings toward the Hellenistic party in Jerusalem. In time the character of the Jewish capital itself was altered, with Jason undertaking "to register the Jerusalemites as citizens of Antioch" (11 Macc. 4:9; on the legal status of Jerusalem under the government of the Hellenizers see V. Tcherikover, *Hellenistic Civilization and the Jews* (1959), 161ff.). Jason was eventually outbid for the office of high priest by Menelaus, who proved even more servile and prepared to carry out the most extreme Hellenization of Judea. In 168 Antiochus set out on his second expedition to Egypt. Wishful thinking probably promoted the spread of false rumors regarding the king's death, and as a result, Jason, who had fled to Transjordan, returned to Jerusalem and tried to reestablish his rule. On returning from Egypt, Antiochus, convinced that a rebellion had broken out against him, stormed the city, killed thousands of Jews, and sold thousands more into slavery. In their place, and especially in the citadel of Jerusalem (*Acra) which was

erected on the instructions of Antiochus, a Greek community was set up, thus outwardly transforming the city into a foreign polis (city-state). By 167 the enforced Hellenization of the Jews reached its peak; the Jews were compelled, under penalty of death "to depart from the laws of their fathers, and to cease living by the laws of God. Further, the sanctuary in Jerusalem was to be polluted and called after Zeus Olympius" (11 Macc. 6:1, 2). The nature of these decrees has puzzled most scholars and students of the Hellenistic period. Ancient polytheism for the most part was tolerant, and this particular brand of Hellenization was not applied by Antiochus to any segment of the non-Jewish population under his rule. It would seem, therefore, that religious oppression appeared to Antiochus to be the only means of achieving political stability in Palestine, since it was that country's religion, if anything, that was out of place in a predominantly Hellenized empire. It would be wrong, however, completely to disregard the nature of the king himself. His strange behavior, causing contemporaries to refer to him as *Epimanes* ("madman") instead of Epiphanes, obviously played a major part in the formation of such violent policies. In any case, Antiochus did not personally oversee the implementation of these policies. He died in the city of Tabae (Isfahan). He was succeeded by his nine-year-old son Antiochus V Eupator (Polybius 26:10; 31:3–4; Livius 41:19, 20; Diodorus 29:32; 31:16; for a summation of modern literature on Antiochus IV see Tcherikover, op. cit., 175–203).

(5) ANTIOCHUS V EUPATOR reigned only two years before being murdered by his cousin Demetrius, the son of Seleucus IV.

(6) ANTIOCHUS VII SIDETES (b. 164 B.C.E.), the son of *Demetrius I Soter and younger brother of *Demetrius II Nicator. During the early years of his reign (138–129) Antiochus was forced to overcome the usurper Tryphon. His confirmation, therefore, of the privileges granted by his predecessors to the Jews and Jerusalem (1 Macc. 15:1ff.; Jos., Ant., 13:223ff.) was an obvious attempt to solicit the help of *Simeon the Hasmonean, the high priest. When it was clear, however, that he would defeat Tryphon, the king immediately relented and demanded the return of Jaffa, Gezer, and the citadel in Jerusalem to Seleucid rule. To enforce these demands, Antiochus sent the general Cendebaeus to Judea, but the latter was defeated by Judah and John, the sons of Simeon the Hasmonean. Antiochus probably instigated Simeon's murder in 134 by *Ptolemy the son of Abubus, for immediately afterward he laid siege to Jerusalem. The Jews, led by John *Hyrcanus, managed to hold out for two years, but were finally compelled to accept the harsh terms set by Antiochus. The king was thereupon free to turn eastward, and in his expedition against the Parthians, in which soldiers of John Hyrcanus also participated, met his death (129; Tcherikover, op. cit., 240–1, 250–1; Stern, op. cit., 122–4, 139–43).

(7) ANTIOCHUS IX CYZICENUS, son of Antiochus VII and half-brother of Antiochus VIII Grypus, with whom he competed for the Seleucid throne from 113–95 B.C.E. Cyzicenus was unsuccessful in two attempts to rescue the Samari-

tans from John Hyrcanus. In 107 *Samaria fell to the sons of Hyrcanus, *Antigonus and *Aristobulus I, and the two pursued Cyzicenus as far as *Beth-Shean (Scythopolis), where he finally succeeded in eluding them. The second attempt by the Syrian king to subdue the armies of Hyrcanus, this time with the aid of Ptolemy VIII Lathyrus of Egypt, was similarly rebuffed, and Antiochus retreated to Syria. In 95 B.C.E. Cyzicenus was defeated by Seleucus VI, the son of Grypus, and took his own life (Jos., Ant., 13:270 ff.).

[Isaiah Gafni]

ANTIPAS, HEROD (b. 20 B.C.E.), son of Herod by his Samaritan wife Malthace. Antipas was educated in Rome with his older brother *Archelaus. As the age difference between the two was not great, both were sent to Rome together to complete their education. Antipas was designated crown prince in place of Antipater, Herod's eldest son. Herod, however, changed his will shortly before his death and left to Antipas only Galilee and the Jewish portion of Transjordan. According to the final version of the will, Antipas was to have been subject to the authority of Archelaus, who received the kingship and dominion over all parts of the kingdom. After Herod's death, however, Antipas appealed to Augustus against the legality of this will and claimed the throne. Augustus confirmed Antipas as ruler over Galilee and Judean Transjordan and also confirmed the title, "tetrarch," which had been given to him by Herod. Antipas rebuilt and fortified Sepphoris, which had been burnt in the war of Varus in 4 B.C.E., and made it his chief capital. In Transjordan he rebuilt Betharamphtha (biblical Beth-Haram, Bethramtha in the Talmud) which had also suffered seriously in the war, and named it Livias. After Augustus' death in 14 C.E. he renamed it Julias, in honor of the deceased emperor's wife Julia, who took this name as her husband had ordained in his will. He named his new capital, on the western shore of the Sea of Galilee, Tiberias, in honor of the emperor Tiberius. The city was splendidly built and the tetrarch paid no attention to the protests of his Jewish subjects, who regarded it as a place of defilement since it was built on the site of a cemetery. Tiberias was organized as a Hellenistic city with a city council. The exact date of the founding of Tiberias is unknown, although probably it was shortly after Tiberius' appointment as emperor (c. 14 C.E.), with a view to currying favor with him. Josephus states explicitly that there were close relations between Herod

Antipas and Tiberius which were maintained until his death. The forbidden marriage (Lev. 18:16) of Antipas to Herodias, the wife of his brother Herod, the son of Mariamne, the high priest's daughter, stirred the resentment of the people against him. When John the Baptist dared to denounce this marriage publicly, he was executed in Machaerus at the command of Antipas. According to Josephus, however, the principal reason for the execution was Antipas' fear of political disturbances in the wake of John's appearance. His marriage to Herodias also led to war with *Aretas IV, king of the Nabateans, in 36 C.E. Antipas had previously married a daughter of Aretas, who fled to her father when she heard of the impending marriage between her husband and Herodias. In this war Antipas was defeated, and when Tiberius heard the news, he ordered Vitellius, governor of Syria, to go to Antipas' aid. In the spring of 37 C.E. Vitellius set out with his army to fight the Nabateans at Petra; at the request of the Jews he avoided passing through Judea. After the dismissal of the procurator, Pontius Pilate, he and Antipas set out alone for Jerusalem to ascertain the state of events there. Tiberius died four days later, and Vitellius interrupted his preparations for war against the Nabateans. Antipas had been the mediator between Rome and the Parthians. When a peace treaty between Rome and Artaban III, king of Parthia, was signed, Antipas informed Caesar before Vitellius, and thus aroused the wrath of the latter. With the accession of Caligula, the influence of Agrippa, Antipas' enemy, in Rome increased. Agrippa accused Antipas before the emperor of preparing for a war against Rome with Parthian assistance. Antipas came to Rome and tried in vain to prove to Caesar that this information was incorrect. He was exiled to Lugdunum and his property was confiscated. His domain was attached to Agrippa's kingdom.

[Abraham Schalit]

ANTIPATER (first century C.E.), the eldest son of Herod by his first wife Doris. After his marriage to Mariamne the Hasmonean, Herod sent Doris and Antipater away. But when Mariamne had been condemned to death and tension grew between her sons and Herod's other sons, Herod restored Antipater to court. From the moment he returned to his father's house, Antipater sought to annihilate the sons of Mariamne in order to attain the throne. As long as he was in Jerusalem, he informed on them to his father. He continued to inform against his half brothers even when he was sent by his father to Rome already as the designated crown prince (13 B.C.E.). This activity only ceased for a time when Augustus brought about a reconciliation between Herod and his sons, but in the end Antipater and his allies gained their object: Alexander and Aristobulus were executed on Herod's order and Antipater was designated as heir apparent (7 B.C.E.). But just as he had al-

most reached his objective, his plot to murder the aged Herod was discovered. Antipater was condemned to death and the sentence carried out five days before Herod's own death.

[Abraham Schalit]

ANTIPATER II or **ANTIPAS** (d. 43 B.C.E.), governor of Edom in the time of Alexander Yannai and Salome Alexandra, son of Antipater I, and father of *Herod. Josephus states that Antipater I belonged to a distinguished Edomite family, the members of which had embraced Judaism in the days of John Hyrcanus. The statement of the historian, Nicholas of Damascus, that the family was descended from Jews who had returned from the Babylonian Exile is denied by Josephus. The Church Fathers give differing accounts of his origins. Eusebius states that Antipater was the son of a female slave in Ashkelon, that he was kidnapped as a child and carried off to Idumea where he was brought up as a Jew after the forced conversion of the Edomites in the reign of John Hyrcanus. It is probable that Josephus' account is to be preferred. Josephus depicts Antipater II as an ally of *Hyrcanus, son of Alexander Yannai, and as an opponent of the latter's brother *Aristobulus. Aristobulus was dependent on the military aristocracy which was directly opposed to Edomite influence. Even before the death of Salome Alexandra, Aristobulus had attempted to put his supporters in key governmental positions and this certainly aroused opposition. It seems clear, too, that Antipater feared that his position would be endangered in the event of Aristobulus coming to power. When Aristobulus drove Hyrcanus from the throne, Antipater, with Nabatean help, won a victory over Aristobulus who was forced to retreat to the Temple Mount. In return for their assistance Antipater promised to restore to the Nabateans 12 cities conquered by Alexander Yannai. Although Scaurus, one of Pompey's generals, intervened on the side of Aristobulus, Antipater's political position was not substantially changed, for he had previously been the mediator between the Romans and the Nabateans and had negotiated the reparations that the latter were to pay to Rome. During the rebellions of Alexander, the son of Aristobulus, Antipater supported the Roman governor Gabinius

and held the position of "agent" or, according to another version, "overseer" of taxes in Judea. After Julius Caesar's defeat of Pompey, Antipater immediately aligned himself with the victor, and hastened to recruit Jewish and Nabatean soldiers to fight for him. He prevailed upon the Jews of Egypt to support Caesar, thus hastening his triumph over Egypt. When Caesar went to Syria in 47 B.C.E., he appointed Antipater regent of Judea, rejecting Mattathias Antigonus' claims to the throne of his fathers. Antipater thus became, in effect, the ruler of Judea, a position of power which he freely exercised. He gave his sons the most important offices of state: *Phasaël was appointed governor of Jerusalem while Herod was sent to Galilee. With the arrival of Cassius in Syria, to wage war against Caesar's successors, Antipater placed himself at his disposal. He and his sons, Herod in particular, tried to raise the huge sums that Cassius required in the country. In 43 B.C.E. Antipater was poisoned but his policies were continued by his sons. Antipater was a cautious statesman who never presumed to act independently of his master, Hyrcanus, despite the fact that the government of the state was wholly in his hands.

[Abraham Schalit]

ANTIPATRIS (Gr. Αντιπατρις), ancient Palestinian city in the valley of Kefar Sava on the coastal plain, close to the important route *Via Maris*. This was the site of biblical *Aphek, known also as Pegae in Hellenistic times, and perhaps as Arethusa from the time of Pompey. It was eventually rebuilt by Herod the Great in memory of his father Antipater (Jos., Ant., 16:142 ff.). In Roman times Antipatris stood at the junction of important highways leading to Jerusalem, Caesarea, and Jaffa, and is often mentioned as a military campsite or as a stopover for travelers (Acts 23:31). It was the northern boundary of the territory of Judea (Git. 7:7). A vivid picture of Jewish life in Antipatris in the days of R. Johanan b. Zakkai is portrayed in *Derekh Erez Rabbah*, 6. During the war against Rome, the Romans left Antipatris unharmed and Vespasian regulated its affairs much as he had done in Jabneh, Lydda, Timnah, and other places whose inhabitants had remained loyal to Rome. In the fourth century Antipatris declined in importance and is referred to as "a half-ruined townlet." In the Arab period it was known by the name of Abu Fuṭrus and during the period of transition from Umayyad to Abbasid rule, it achieved prominence as one of the towns that remained loyal to the Umayyads in 750.

Antipatris is today situated close to the modern town of *Rosh ha-Ayin (Ras al-ʿAyn), 3½ mi. (5 km.) east of Petaḥ Tikvah. Its many springs serve as sources of the *Yarkon River, for which reason Ras al-ʿAyn is also identified with the Hellenistic customs-post known as Πηγαί ("The Springs"). The castle erected there by the Crusaders was similarly called Le Toron

aux Fontaines Sourdes. The ruins of a Turkish fort erected in the 17th century can still be seen. Earlier excavations at the site in 1961 revealed Roman and Hellenistic remains, and a Roman mausoleum as well. Extensive excavations were conducted at the site by M. Kochavi between 1975 and 1985, revealing part of a defensive system from the Early Bronze Age, a series of palaces from the Middle Bronze Age (IIA), destroyed in a conflagration in the mid-16th century B.C.E., two city walls from the Middle Bronze Age, a palace from the Late Bronze Age, remains of a Philistine settlement from the 12th century B.C.E., and Iron Age dwellings from the 10th and 8th centuries B.C.E. These excavations also brought to light important remains dating from the time of the city of Antipatris, including a street lined with shops that led to the forum, rebuilt at the time of Herod Agrippa I with the establishment of workshops instead. Following the Great Revolt the city fell into decline until the second century C.E.; the latter excavations have revealed segments of the *cardo maximus* street with an odeon situated at its southern end, as well as signs of a marketplace and a residential quarter. The city fell victim to a massive earthquake in the year 363 C.E.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

ANTISEMITISM, a term coined in 1879, from the Greek ἀντί = anti, and Σημί = Semite by the German agitator Wilhelm Marr to designate the then-current anti-Jewish campaigns in Europe. “Antisemitism” soon came into general use as a term denoting all forms of hostility manifested toward the Jews throughout history. It is often qualified by an adjective denoting the specific cause, nature or rationale of a manifestation of anti-Jewish passion or action: e.g., “economic antisemitism,” “social antisemitism,” “racial antisemitism,” etc.

In Antiquity

Prejudice against Jews appeared in antiquity almost exclusively in those countries which later became part of the Roman Empire. Some manifestations were noted in the Parthian Empire, which contained Babylonian Jewry, but such hatred never attained serious proportions. Josephus states it as a well-known fact that in the lands of the Babylonian exile antisemitism did not exist (Apion 1:71). In those countries that afterward formed part of the Roman Empire, a distinction must be drawn between Erez Israel and the Diaspora.

IN EREZ ISRAEL. Even in the days of David and Solomon the land of Israel contained a substantial Gentile population. In Hellenistic times it was primarily concentrated in the coastal towns and in certain districts of Transjordan, but the boundaries between the Jewish and non-Jewish regions were not fixed and the seeds of friction were ever present. Of particular importance, however, was the difference in occupations between

the Jews and Gentiles of those areas. The Jewish population engaged principally in agriculture, particularly in small-scale farming; the non-Jewish population occupied itself primarily with commerce. The transit and sea trade was almost entirely in the hands of the inhabitants of the coastal cities, or of the Transjordanian cities situated along the routes that connected Syria, Asia Minor, and the regions of the Euphrates with the Arabian countries. The inhabitants of Erez Israel who engaged in commerce, with connections abroad, were thus mainly non-Jewish. These Gentiles were therefore in close contact with the foreign powers in the region and were confident of their support; in Erez Israel they were contemptuous of the Jewish population, whom they regarded as an isolated people that eschewed civilization and refrained from all contact with the outside world. Moreover, the non-Jews who dwelt in Erez Israel knew that the Jews looked upon that land as their divine inheritance, and upon themselves as a unique and elevated people. In the eyes of the Jews, as these Gentiles knew, their pagan religions and practices rendered them “unclean”; intermarriage with them was forbidden and, as a consequence of the dietary laws, no real social intercourse was possible.

In normal times these two segments of the population dwelt alongside each other without any undue hostility. In time of crisis, however, relations deteriorated sharply. The first serious manifestation of antisemitism in history was the concentrated attack on the Jewish religion in the days of *Antiochus Epiphanes (175–164 B.C.E.). The immediate cause was anger by the Seleucids at the fact that the vast majority of Jews traditionally sided with the Ptolemies against the Seleucids. Tension was exacerbated still further by the image that Hellenistic rulers such as Antiochus had of themselves. Their role was not only political; they were also to be torchbearers of the ideals of *Hellenism within their dominions. The seeming unfriendliness of the Jews toward all Gentiles, and their refusal to adopt any other religion, was therefore seen as an obstacle to the realization of this cultural mission. An echo of this attitude can be seen in the account of the negotiations that took place outside Jerusalem in 133 B.C.E., when John Hyrcanus was compelled to yield to Antiochus Sidetes after the latter had besieged the capital for a year. Antiochus Sidetes’ officers counseled him to seize the opportunity to conquer the city and completely destroy the Jewish people, since the Jews were the only people in the world that refused to associate with other peoples. Pressing the point, they reminded Antiochus Sidetes of the course taken by Antiochus Epiphanes, who undertook to abrogate those laws of the Torah that he regarded as inimical to humanity. To this end, he had sacrificed a swine on the altar at Jerusalem and ordered that juices from the sacrificial flesh be sprinkled over the books containing the statutes that were directed against the Gentile world (Diodorus, *Bibliotheca* 34:1, 1ff.).

This reiterated insistence on the alleged antipathy of the Jews to other nations is best understood against the background of the peculiar conditions and circumstances obtaining in the Hellenistic period. No other nation at that time de-

nied the gods of its neighbors; on the contrary, it recognized them, identifying them with its own deities. This pan-religiosity was used with considerable success by the Hellenistic ruling authorities to create a social bond between the various peoples in their domains. None of the peoples refrained from dining at one table with their neighbors and from partaking of the sacrifices offered to their gods, except the Jews. None of the peoples refused to send gifts to its neighbors' temples, except the Jews. None of the peoples was unequivocally hostile to intermarriage, except the Jews. They characterized it as a misanthropy in general, and as a flagrant denial of the Hellenic principle of the unity of mankind in particular.

As the Hasmonean kingdom expanded and established its dominion over the whole land, its kings occasionally adopted a policy of political and religious oppression vis à vis the inhabitants of the pagan cities of Palestine, who had sided earlier with Antiochus Epiphanes and had joined the war of Antiochus Sidetes against the Jews. Against this background, libels began to circulate, denying that the Jews had any right to remain in the land. Underlying these libels were Egyptian legends concerning shepherd kings who had once ruled over Egypt and oppressed its people but who had subsequently been expelled. There were also stories about a leprous or unclean people who had been banished from Egypt so that the land and its temples, which they had defiled, might be purified. These legends were now related to the biblical tale of the Exodus; the composite version was that the Jews had been expelled from Egypt because of their uncleanness and had continued to separate themselves from the other nations in Erez Israel. If such was their origin and the reason for their present habits, they had no legitimate claims on this or any other land, or on being unique and elevated.

Descriptions of the Jews as homeless wanderers are found in the allegations of Antiochus Sidetes' officers, who regarded their nomadic status as justification for destroying them. The general motif, however, is undoubtedly much older, having been employed by non-Jews to counter the Jewish claim that Erez Israel was the inheritance of the Lord and that idolaters had no share in it. However, if in the period preceding the Hasmonean conquests this Jewish conception of Erez Israel made little practical difference to its non-Jewish inhabitants, in the Hasmonean epoch it became the justification for eradicating idolatry from the land, and not idolatry alone. The sins of the Canaanites, as they are enumerated in the Wisdom of Solomon (12:3ff.), an apocryphal book composed in this period, were depicted as so offensive to the Holy Land that their perpetrators would have to be cast out if they did not mend their ways and conduct themselves in a manner compatible with the sanctity of Erez Israel. This view, in turn, aroused more animosity against the Jews.

With the consolidation of Roman rule in Palestine there was apparently little reason for the Jews of Palestine to obstruct the policy pursued by Rome on its eastern borders. Even the attempts at such obstruction in the time of *Antiochus II (e.g., his approach to the Parthians), and by the war party dur-

ing the war which led to the destruction of the Second Temple, constituted no great danger to Rome. Any anti-Judaism which then was associated with Roman foreign policy was not caused by militancy or even by revolt on the part of Palestinian Jewry. Even in the relations between the Jewish and non-Jewish settlements in Palestine, or Palestina, as the Romans named the region. Rome created a kind of equilibrium, and clashes on any large scale between the two sides ceased completely. Fresh fuel for antisemitic excesses, however, was provided by emperor-worship, which had begun to assume the form of a permanent political institution in all the countries of the Roman Empire from the time of Augustus onward. From the views of contemporaries to this worship, it appears not to have been regarded as an act of religious homage to the emperor but as an expression of loyalty to the state, which was itself endowed with religious sanctity. The refusal by the Jews to accept the imperial cult in any form was thus equated in the minds of many Romans with a refusal to recognize the authority of the state, and as a result, the belief gradually began to take hold in the pagan world that the Jews had no respect for whatever was held in esteem by the rest of humanity. For example, when the Jews were ordered by Caligula to erect and worship an image of the emperor in Jerusalem, but his assassination spared the Jews of Palestine and other parts of the Roman Empire a bitter conflict with the imperial authorities.

IN THE DIASPORA. The Jews of the Roman Empire (unlike their later-day descendants in the late Middle Ages) were not, as a rule, restricted in regard to place of residence; according to the testimony of reliable sources, there was no part of the empire where Jews were not to be found. The Jews formed up to 10–12 percent, approximately, of the population of the empire, and since an appreciable portion of the Jews in the Diaspora were found in the cities, it follows that they played an important role in the economic life of the countries in which they lived (Jos., Ant. 14:115). It would also seem that the Jews were as unrestricted in their choice of occupation as they were in their choice of residence. In regard to their legal position, no discrimination was made between them and the other citizens of the empire, the extent of their rights being dependent, as a rule, on the class to which they belonged. In some cases Jews even received favored treatment in deference to their religious needs. The observance of Sabbath and the fulfillment of other religious precepts led them to seek exemptions from certain civic obligations which were imposed upon the rest of the populace. According to Josephus (Ant. 14:187, 190ff.), the prerogatives granted the Jews were protected by special decrees of the kings of Persia and Macedonia, and even the Roman rulers honored them, without thereby arousing popular resentment. Still, it should be taken into consideration that Jews maintained the same habits outside Erez Israel as well.

About the first century B.C.E., however, several factors brought about a radical change. In Egypt, particularly in Alexandria, strong opposition to Roman rule became manifest, for many reasons. The upper strata of Alexandrian Egyptians had

particular cause for complaint. They had directed the country's policies during the reign of the Ptolemies but they were now, under Rome, out of power. They were thus reduced to a level no higher than that of the Jews, who were now competing with the former ruling class for Roman favor. Relations inevitably deteriorated.

Illuminating in this respect are the orders issued by the emperor Claudius soon after the restoration of quiet in Alexandria, following the turbulence resulting from the riots organized by the Greeks against the Jewish community there. In his injunction to the citizens of Alexandria and the Syrian cities (Jos., Ant. 19:279 ff.) Claudius fully confirms the original privileges granted to the Jews to allow them to keep the precepts of the Torah without let or hindrance. However, in his edict to all the countries of the empire, in which Claudius addresses himself to the Jews as well, after reaffirming their privileges, he declares: "I enjoin upon them also by these presents to avail themselves of this kindness in a more reasonable spirit, and not to set at nought the beliefs about the gods held by other peoples, but to keep their own laws" (Ant. 19:286 ff., especially 290). Claudius, in an edict to the Alexandrians which has been preserved in a papyrus (published by Idris Bell), is even more explicit. In it, after stating that the Jews are completely at liberty to observe the injunctions of the Torah, Claudius warns that if they will not content themselves with the rights accorded them, he will employ against them all such means as should be used against people who spread "a general plague throughout the world."

Despite the friction between Judaism and the centers of Hellenistic-Roman culture in Egypt, Syria, and cities of the Roman Empire, where intellectual and economic circles were adverse to the Jews, no change was made in the Roman legal code. However, Judaism and the Jews were increasingly described in those circles as flouting not only the law, but all of human society. Though the elements of such characterizations had all already appeared during the struggle between the Hasmonean kings and their adversaries in Palestine, in the first century C.E. they were arranged into a kind of connected rationale of anti-Jewishness.

In common with the courtiers of Antiochus Sidetes two centuries earlier, many Greek authors of the first century C.E. portrayed the Jewish people as the descendants of a mob of lepers, a contaminated rabble, whom the Egyptians had cast out to purge themselves of their defilement and who had continued to pursue in Judea, their adopted home, the pattern that accorded with their degenerate and outcast state. Thus, the portrayal went on, as unclean people who had been afflicted with leprosy they shunned the flesh of swine, this creature being more prone than others to contract this disease. The observance of the Sabbath and the worship of God by the Jews in general were interpreted in a similar vein. No stranger was permitted to approach the Temple in Jerusalem because human beings were sacrificed there. A number of writers of the first century C.E. attempted to portray Jewish life in this man-

ner, the most prominent among them being *Chaeremon, Nero's teacher; *Lysimachus of Alexandria, the head of the library at Alexandria, and *Apion, who surpassed all the others in the crudeness of his fabrications. The destruction of the Second Temple added fuel to the fire. In the period immediately preceding this event, visions of the redemption of the world from the Roman yoke in a form closely corresponding to that of Jewish eschatology began to spread within sections of pagan society. The attraction of the idea of redemption, with its attendant liberation from the ruling power, was a great boon to the propagation of the message of Judaism, the recognition of the unity of God being inextricably interwoven with the redemptive vision. The destruction of the Temple at this juncture produced a sharp counterreaction to this ferment, many of the Jewish adversaries seizing upon it and upon the catastrophe that befell Judea and the Jewish communities in Alexandria, Antioch, and Cyrene as evidence that the Jews were hated by God and had received their due punishment at His hands. According to a story from an antisemitic source (Philostratus, *Vita Apolloni*, 6:29), when representatives of the peoples living in proximity to Judea came and presented to Titus a wreath of victory for his destruction of Jerusalem, he declined to accept it, saying that he had only lent a hand to God, who had revealed his wrath against the Jews. Of what worth was a doctrine of world redemption propagated by a nation forsaken by its god?

The same period saw a deterioration in the attitude of a number of the representatives of the Roman aristocracy toward Jews and Judaism. The factors responsible for this change stemmed, on the one hand, from the conditions prevailing in Rome and among its ruling classes, and, on the other, from the continuing influence, even after the year 70, exerted by Judaism upon some sections of Roman society. Emperors of the type of Nero and Domitian snuffed out the last glimmer of freedom. Sycophancy and subservience dominated the atmosphere. As they dreamt of a purer past which ought to be restored, many Roman intellectuals felt hampered by the multiplicity of foreign cults in imperial Rome and by the powerful influence of Judaism, which appeared to them as subversive of the entire life pattern of Rome. The Jewish community in Rome had already felt the barbs of a number of Roman writers (e.g., *Horace, *Martial), but the first Roman authors to deal with the Jews did not rise to unusual heights of invective. Even *Cicero, the first writer to discuss the Jews seriously (in his speech on behalf of Lucius Valerius Flaccus, the proconsul of Asia Minor, in 62 B.C.E.), he attacked the Jews of Palestine and the Diaspora, and, in particular, those of Rome), did not carry his criticism of the Jews beyond the bounds customary among the pleaders in Rome who tried to discredit a litigant in the interests of their client. It may be well to point out here that Cicero, in attacking the Gauls in defense of one of his clients, leveled such grave charges against them and their religion that, by comparison, the accusations he made against the Jews were not unduly severe (cf. the fragments of Cicero's speech *Pro Pontio*).

The end of the first century C.E. witnessed a radical change. Those who saw Rome's salvation in the resuscitation of civic liberty, in the revival of the Roman attribute of *virtus*, and in the renewal of the ancient Roman ideals of heroism and justice, pointed to the danger inherent in the Jewish attempt to swamp the lower and middle classes with new ideas. They sought to rally the public to their standard by declaring the struggle against the propagators of such ideas a life and death necessity. One of the most capable and outspoken of these agitators was Cornelius *Tacitus. He cited all the libelous fabrications against Jews to be culled from Greek anti-Jewish literature. His presentation of the subject as an inquiry into the various accounts of the Jews and their doctrines to the end of discovering that most consonant with historic reality is but a futile attempt to mask his single, overriding purpose, to prove the Jews a mere rabble, hateful to the gods and men alike, and capable of gaining adherents for their degenerate cause only in a Rome that had become a breeding ground for all that was vile and abhorrent (Tacitus, *Historiae* 5:1–13; cf. also his *Annales* 15:44).

*Juvenal followed closely in the footsteps of Tacitus. In one of his poems he portrayed a convert to Judaism as estranged from Roman society and from the members of his family, as unprepared to guide a person who has lost his way if he is not an observer of the Law of Moses, and as unwilling to give a thirsty man a drink if he is uncircumcised (Juvenal, *Saturae* 14:96 ff.). General Roman policy toward the Jews was not greatly affected by the diatribes of writers such as Tacitus or Juvenal. It is not inconceivable, however, that the emperor Hadrian's anti-Jewish policy, which represented only a brief episode in the history of Roman legislation in regard to the Jews, was influenced to a certain extent by the circles in which Tacitus and his associates moved.

[Joseph Heinemann / Joshua Gutmann]

The Early Christian Period

The anti-Judaism of the pagan world, whether expressed in outbreaks of violence and rioting or in ideological diatribes and libels, did not hold such fateful consequences for Jews as that which later crystallized within Christianity. The crucial factor here was not so much Christianity's refusal to countenance any other faith, as its commitment to an idea of redemption so manifestly in opposition to that of the Jews as to render their mutual coexistence inconceivable. With the political triumph of Christianity, the old pagan image of the Jews as a people hated by God was resuscitated, but the reasons for God's hatred were changed to suit the new circumstances. Under the stigma of this image, the Jews were gradually excluded from every sphere of political influence and their political and civic rights were increasingly denied them, until in the end such rights were almost entirely a thing of the past.

Since Christianity originated as a dissident Jewish sect, certain judgments of Judaism in the New Testament must be examined in this light. Such, for instance, is the case with the writings of Saul (Paul) of Tarsus. In his Epistle to the Ro-

mans he protests against the idea of God's rejection of the Jews: "They are beloved for the sake of their forefathers" (Rom. 11:28): "I myself am an Israelite, a descendant of Abraham, a member of the tribe of Benjamin" (Rom. 11:1). Of the Gospels – easily the most popular writings in the New Testament – the last chronologically, namely Matthew and John, are the most hostile to Judaism, which they criticize from the standpoint of an outsider. In addition, these Gospels already contain the two cardinal themes appearing later in Christian antisemitism: the Jews themselves are made to admit their collective responsibility for the crucifixion of the son of God ("Then answered all the people and said, His blood be on us, and on our children": Matt. 27:25), and are identified with the powers of evil ("Ye are of your father the devil, and your will is to do your father's desires": John 8:44).

Regarded by the Jews as members of a heretical sect, the first Christians stood aloof from the Jewish struggle against Rome. The Gospels' description of the crucifixion, in minimizing the role of Pilate, attests a desire to gain the goodwill of the Roman authorities, while the destruction of Jerusalem in 70 C.E. provided obvious proof of the divine anger and chastisement. In sum, the evolution of Christian anti-Judaism reflects the spread of the new faith among pagan circles and a progressive withdrawal from the ancient faith. The growing hostility was also fed by the rivalry for proselytes. Since traditional Judaism continued to attract pagan elements, the newly Christianized groups were highly susceptible to its influence. The young church, therefore, which declared itself to be the true Israel, or "Israel according to the spirit," heir to the divine promises, found it essential to discredit the "Israel according to the flesh," to prove that God had cast away His people and transferred His love to the Christians. From the outset, therefore, Christian anti-Judaism was an original manifestation: it differed from the traditional tensions between Israel and the nations and did not merely reflect them. Obligated to contest Israel's historic heritage and title, and confronted in addition by a vigorous rabbinical counter-propaganda, the church unremittingly concentrated its attention on the Jews and Judaism. The anti-Jewish theories developed by the *Church Fathers are preeminently variations or extensions of the first accusations leveled in the Gospels. They are developed with particular vehemence by the Greek Fathers who exercised their apostolic authority in regions where the Jewish population was large and influential. Certain polemics already afford an insight into the psychology of the early bishops, whose judeophobia was on the same scale as their religious fervor. To Gregory of Nyssa and John Chrysostom, love of Jesus and hatred for his presumed executioners were indistinguishable. These polemics also testify to the existence of a Jewish population which mixed with its Gentile neighbors on an equal footing. In the fourth century, John Chrysostom characteristically reproached these Jews with extravagance, gluttony, and dissolute living, as well as with deicide.

After Christianity became the official religion of the Roman state (in 321 C.E.) the emperors began to translate the

concepts and claims of the theologians into practice. The ancient privileges granted to the Jews were withdrawn, rabbinical jurisdiction was abolished or severely curtailed, and proselytism was prohibited and made punishable by death, as were relations with Christian women. Finally, Jews were excluded from holding high office or pursuing a military career. The rapid disintegration of the Roman Empire in the fifth century, however, postponed the principal effects of this legal forfeiture of rights. As the model that was to inspire the clerical and lay legislators of the Middle Ages, its repercussions on Judeo-Christian relations only become apparent centuries later. The persistence of Judaism, seemingly a contradiction of the Christian conception of the church as *Verus Israel*, “the true Israel,” led the great theologians, notably Augustine, to elaborate the doctrine that represents the Jews as the nation which was a “witness” to the truth of Christianity. Their existence was further justified by the service they rendered to the Christian truth in attesting through their humiliation the triumph of the church over the synagogue. “Unintelligent, they possess intelligent books”; they are thus condemned to perpetual servitude. A further variation, reversing a biblical image, depicts the Jews as Esau and the Christians as Jacob. They are also Cain, guilty of fratricide, cursed and marked with a sign for eternity. However, the hostility of this allegorization also implies a nascent tendency on the part of the church to protect the Jews, since “if someone killed Cain, Cain would be revenged sevenfold.” Thus the ideological arsenal of Christian antisemitism was completely established in antiquity. However, from the social standpoint the deterioration of the Jewish position was only beginning, and it seems clear that in the early period virulent judeophobia was mainly limited to the clergy.

In Early Islam

From the theological standpoint, the Koran also contained attacks against the Jews, as they refused to recognize Muhammad as the prophet sent by God. In certain respects, Muhammad utilized the Bible in a manner similar to that of the Christian theologians, since he found in it the announcement of his own coming, but at the same time he also used the New Testament in the same way. As a result, Jews and Christians, although “infidels,” are both regarded by the Koran as “Peoples of the Book,” “possessing Scriptures.”

Since Islam spread by force of arms rather than by spiritual propaganda, it did not generally aspire, at least initially, to conquer souls. Therefore, it displayed greater tolerance than Christianity. The religions of the two “Peoples of the Book” were officially recognized, and a special status combining subjection and protection was evolved for them. Apart from the distinguishing colors of their insignia, the *dhimmi* (“protected”) Jews and Christians were subjected to the same measures and were obliged to pay the same tax. On various occasions they were included in the same persecutions. But in the regions where Islam reigned, the forms of anti-Judaism and anti-Christianity each evolved in their own way. When Islam began to spread, the majority of the subjected territories were

Christian, and in them Greek remained the official language for some time. One source of antisemitism in Islam, therefore, may derive from ancient Christian anti-Judaism. The celebrated controversialist Al-Jahiz (mid-ninth century) cites in an anti-Christian polemic four reasons why the faithful held a better opinion of the Christians than of the Jews: the Christians wielded power in Byzantium and elsewhere; unlike the Jews, they engaged in secular sciences; they assimilated more easily and adopted Muslim names, and they engaged in more respectable occupations. In the same period the historian Al-Tabari observed that “the Christians bear witness against the Jews morning and night.” Thus, a number of anti-Jewish traditions and legends from Christian folklore penetrated, with appropriate adaptations, into that of Islam.

However, the concepts relating to ritual purity and dietary laws, of similar inspiration for both Jews and Muslims, as well as the observance of circumcision, drew them together in that they excluded or lessened certain inhibitory phobias such as the fear of pollution. In addition, Muslim revelation was not founded on the biblical canon and could not become a ground of contention, thus excluding one source of polemics and oppression. In sum, the term antisemitism, which becomes a particularly blatant semantic misnomer when used in connection with the Arab world, also regarded as “Semitic” can be employed only with qualifications in reference to Islam.

From the 12th century, the expeditions of the Crusades aggravated the condition of Christians in the Orient. Persecutions were followed by forced mass conversions to Islam. In many regions the Jews remained the only “infidels” with exceptional status, so that their situation became more vulnerable. In North Africa and Muslim Spain they were also fiercely persecuted (period of the Almohads). Yet it is from this period that the position of the Jews in western Christendom progressively deteriorated, and until the modern era, Jewish migration usually proceeded from Christian to Islamic countries. But migratory phenomena, like the frequency or intensity of persecutions, are imperfect indicators of a collective attitude, and literature provides a better conspectus: Although in Islamic literature and folklore the Jew is often depicted in an unfavorable light – frequently accused of malevolence toward non-Jews, or even of plotting their damnation – he is only in exceptional cases invested with the satanic character and attributes frequent in Christian literature. There are Islamic literary sources in the medieval age in which the contemporary Jew is endowed with positive characteristics. In the modern period the position of the Jew in Islamic countries, although varying according to region and historical circumstance, has tended to deteriorate. The most notorious persecutions, in Yemen in 1697, and in Meshed, Iran in 1839, were perpetrated by Shi’ites. The *Yahud* confined to his ghetto – until recently in Yemen and even up to the 1970s in certain *mellahs* in Morocco – appeared to the Muslim an object of contempt rather than of hatred.

The Middle Ages

Jews had appeared in Western Europe from the beginning of the Christian era. At the commencement of the Middle Ages, no sign of particular animosity toward them was discernible. The clerical anti-Jewish polemics of the period deplored the influence the Jews exerted on the simple people and pointed to the existence of cordial, sometimes intimate, Judeo-Christian relations. Characteristic are the epistles of the ninth-century Christian reformer Archbishop Agobard: "Things have reached a stage where ignorant Christians claim that the Jews preach better than our priests... some Christians even celebrate the Sabbath with the Jews and violate the holy repose of Sunday... Men of the people, peasants, allow themselves to be plunged into such a sea of errors that they regard the Jews as the only people of God, and consider that they combine the observance of a pure religion and a truer faith than ours."

The Church Councils continually legislated to prevent these contacts. Ecclesiastical propaganda seems to have produced its first fruits at the beginning of the 11th century, when persecutions and expulsions were recorded in Rouen, Orleans, Limoges, and Mainz. A persecution inflicted at the time on Christians in the Orient was used as a pretext, and, apparently dating from the same period is the fable depicting the Jews as legionaries of the Anti-Christ. However, the crucial event was the First Crusade (1096). Religious excitement commingled with greed for gain. As bands of crusaders set out to recapture the sepulcher of Jesus they were prompted to wreak vengeance on Jesus' legendary enemies and killers and attacked the Jewish quarters of German and French towns along their way. The massacres perpetrated during the summer of 1096 made a lasting impression on both Christians and Jews. The tradition of sacrifice, **Kiddush ha-Shem*, was expressed in collective suicides to avoid forced conversion.

European economic life began to revive in the 12th century. Although the Christian guilds which began to flourish in the cities did not admit Jews, an action which had unfavorable repercussions on their commercial activities, the economic resurgence in Europe considerably increased credit operations, against which the church began to adopt measures. The church regarded the practice of usury as endangering the eternal salvation of its flock, and opposed the overt and authorized practice of usury, i.e., the acceptance of pledges, with particular severity. Being inevitable in contemporary economic conditions, however, the church subsequently endorsed the practice of usury by the Jews, for according to the prevalent opinion their souls were lost in any case. The doctrine and practice which thus spread constituted a major source of antisemitism for, in general, agrarian societies tended to leave the practice of usury to foreigners (those who were not "brothers"). The Jew, already stigmatized as an infidel and deicide, was now regarded by most as the direct antagonist of the Christian, and thus began to symbolize the hostile stranger *par excellence*. The process of differentiation was slow, as shown by the legend of a miraculous conversion around 1220 which places the following question in the mouth of a little girl: "Why is it that

the Jews and the Christians have different names since they speak the same language and wear the same clothes?" Thus the Jew was distinguished primarily by his name, and in contemporary idiom the verb "to judaize" meant both to be a heretic and to lend money on interest.

Secular princes and church prelates were in fact the Jews' silent partners in the practice of usury. Although this partnership multiplied the sources of internal antagonism among Christians, the Jews were assured of an influential protection justified by patristic doctrines: the monarchs of the Holy Roman Empire regarded the Jews as serfs of the chamber (**servi camerae*). Thomas Aquinas considered them condemned to perpetual servitude because of their crime, but they were not to be deprived of the necessities of life. As a later scholastic, Angelo di Chivasso (1411–1495), said: "to be a Jew is a crime, not, however, punishable by a Christian."

Each renewed preaching for the Crusades roused anti-Jewish excesses, despite the protection afforded by the ecclesiastical and lay authorities. Religious consciousness in the masses intensified, and the evolution of theological thinking tended to emphasize and particularize the Jewish role as the scapegoat of Christianity. The 12th and 13th centuries saw the crystallization of the doctrine of transubstantiation, whereby the flesh and blood of Christ become present in the consecrated Host and wine – a doctrine definitively stated at the Fourth Lateran Council (1215). As a result, the eucharistic cult acquired concrete character. Miraculous tales in connection with the Host, proliferated, frequently of Host desecration by the Jews, and the blood libel also began to inflict its ravages. These two closely connected allegations both relate to the delusion that a criminal conspiracy was being fabricated by the Jews against Jesus and the Christians. Psychologists have explained this suspicion as the transference of a guilt complex on the part of Christian communicants who attacked Jews. In partaking of the flesh and blood, they sought to identify themselves with the God-man who had taken upon himself the sins of the world, but they were unable to attain this identification satisfactorily. The resultant feeling of culpability could well be projected onto the "witness" people: the Jews were the people of God, but the only group to remain outside the universal communion of Christians.

The Fourth Lateran Council also promulgated a canon requiring the Jews to wear a distinguishing mark: the decision was intended to make any intimate relations between Jews and Christians impossible. The form of mark was not specified. In practice, the Jews in Latin countries were made to adopt a disk sewn onto their clothing, and in the Germanic countries a distinctive hat. Characteristically, contemporary iconography also depicts the biblical patriarchs, as well as Christian heretics of all kinds, in this dress. The appearance of the Jewish badge also helped to propagate fables that showed the Jews as physically different from other men. The badge, or patch, became popularly known as the yellow badge, yet colors and forms varied in the Christian as well as in the Muslim world, where markings to distinguish the non-Muslim seem to have

been introduced as early as the eighth century. Other features ascribed include a tail and horns – the attributes of the devil – and a distinctive smell (*foetor judaicus*), the converse of “the odor of sanctity.”

During the 13th century the economic position of the Jews, and consequently the protection from which they benefited, was impaired by the development of finance on an international scale in Italy by, e.g., the Florentine and Siennese banks, and by the Lombards in France. The kings of England found that they could now dispense with the services of the Jews, and expelled them in 1290. In 1306 the first general expulsion from France took place. *Expulsions and massacres also followed in the German towns. The mass expulsions helped to perpetuate the image of Jewish homelessness, of the *Wandering Jew condemned to roam from country to country, in the eyes of the masses. At the beginning of the 14th century the specter of conspiracy against Christianity found new expression in the popular belief that the wells were being poisoned by the Jews. It is necessary to draw a distinction between these myths of a popular demonology, which the church itself did not endorse, but on the contrary combated, and the clerical anti-Jewish tradition. Apart from the religious and economic factors referred to above, persistent agencies of religious excitation were the development of a literature written in the vernacular and the growing popularity of the “Passion plays,” which reenacted the crucifixion. Passion plays took place annually, lasted several days, and presented the cruelty and perfidy of the Jewish executioners in a highly realistic fashion.

Very often the established lay and ecclesiastical authorities continued to protect the Jews. The most implacable adversaries of the Jews were now recruited among the rising middle class, and particularly among the mendicant Franciscan and Dominican orders. The Italian anti-Jewish Franciscan preachers John of *Capistrano and *Bernardino da Feltre, at whose instigation the institution of the *Monte di Pietà spread rapidly, and the Dominican Vincente *Ferrer in Spain, were especially vituperative. In Spain, the slow pace of the Christian reconquest – a process lasting from the 11th to the 15th centuries – enabled the Jews to continue to benefit from a privileged situation. Thus the conceptions current in the rest of Europe took time to spread to the Peninsula. It was not until the end of the 14th century that the preaching of Archdeacon Fernando Martinez of Seville set in motion a wave of bloody persecutions. The numerical and social importance of Spanish Jewry resulted in a different evolution, particularly the phenomenon of Crypto-Judaism practiced by the *Conversos. The Castilian *Inquisition was founded in 1478 to eradicate it. In 1492 Jews of the faith were expelled from Spain after a preliminary blood libel trial – the case of Nino de la Guardia – had been staged.

Poland, where a Christian middle class was slow to develop, became the principal country of refuge for European Jewry at the end of the Middle Ages. Russia, however, followed a different course in consequence of a religious schism which

menaced Russian Orthodoxy at the end of the 14th century. This “judaizing heresy” predicated in an extreme form the tendencies of return to the Old Testament present in the Reformation movements of Western Europe. It acquired followers at the court of Moscow but was rapidly stifled. As a result, access to Russia was barred to Jews hereafter. Religious struggle was thus the starting point for the traditional judeophobia of the ruling Russian dynasties.

In general, popular susceptibility to antisemitism developed in the Middle Ages. It was henceforth perpetuated by linguistic usage and religious instruction. In all languages the term “Jew” and its derivatives had assumed a derogatory significance. Religious instruction by the catechism, practically the only form of popular education until a later period, instilled hostility against the “executioners of Christ” into the souls of children. “If it is incumbent upon a good Christian to detest the Jews, then we are all good Christians,” Erasmus stated ironically at the beginning of the 16th century.

The Reformation

The Reformation had important complex and even contradictory repercussions on the evolution of antisemitism. One branch of Protestantism, namely Calvinism and the sects or movements influenced by it, proved less judeophobic than Catholicism until the 20th century. The other branch, Lutheranism, became increasingly antisemitic. How may this divergency be explained? It is as difficult to give a complete answer as it is to establish the exact relationship – a problem posed by Max *Weber and his school – between the “Protestant ethic” and “the capitalist spirit” or modern mentality. From the outset Calvinism and its derivatives emphasized individual responsibility, embracing social values and energetic moral action. To Lutheranism, on the other hand, justification by faith implied a renunciation of civic responsibility, and hostility to active faith (or “salvation through works”), which Luther himself described as *judischer Glaube* (“Jewish faith”). At the end of his life the German reformer vilified the Jews in violent pamphlets which could not fail to exert their influence. Conversely, the role played by the Old Testament in Calvinism led the Puritan sects to identify themselves with the Jews of the Bible and reflected favorably on their attitude toward contemporary Jewry. The French Calvinists were a special case: themselves persecuted until the French Revolution, their sympathies were traditionally pro-Jewish, an outlook retained to a considerable extent to the present day.

An immediate consequence of the Reformation was to aggravate the position of the Jews in regions which remained Catholic. The popes of the Counter-Reformation were determined to restore ecclesiastical usages and the strict application of canon law. One result was that from the second half of the 16th century ghettos were introduced, at first in Italy and afterward in the Austrian Empire. This segregation then served as a convenient additional demonstration of the error of Judaism: “A Jewish ghetto is a better proof of the truth of the religion of Jesus Christ than a whole school of theologians,”

declared the 18th-century Catholic publicist G.B. Roberti. In France, the celebrated Bossuet had expressed analogous views in the 17th century. With the advent of the Counter-Reformation, therefore, the theses of Augustine and Thomas Aquinas regarding the Jews were applied to the letter. However, in the Low Countries, which had been freed of Spanish domination, the Jews could settle freely. They also began to settle in Great Britain and its colonies, and in particular North America, from the time of Cromwell.

Spain after 1492

Traditional Christian conceptions condemned the Jews because their faith was erroneous and strenuous efforts were made to convert them, but the mass conversion in Spain in the 15th century resulted in transference of the customary hostility to the converts and to their real or suspected descendants, the New Christians. In other words, religious antisemitism, far from disarmed by the disappearance of Jews of the faith, transformed itself into racial antisemitism. The Inquisition gradually stamped out Crypto-Judaism. However, statutes promulgated in Spain made “purity of blood” (*limpieza de sangre*) a new criterion to bar entry of the New Christians whose faith was suspect, to certain guilds, and to certain military and religious orders. This discrimination, sanctioned by Emperor Charles V, spread to the military academies and universities and persisted until the Napoleonic Wars. The law involved detailed genealogical research and contributed to the obsession with the code of honor and hidalgism characteristic of old-time Spain. Since New Christians were traditionally concentrated in productive and commercial occupations and in crafts, the contempt with which they were held was connected with these callings. Such an attitude can be considered a major cause of Spanish economic decline in modern times. Vestiges of this attitude toward the New Christians still persist in the Balearic islands, affecting the *Chuetas of Palma de Majorca. Needless to say, the determinant of “purity of blood” was not based on actual religious, cultural, or even biological differences, but on the illusion fostered by the Old Christians that such a difference existed.

[Leon Poliakov]

The Enlightenment

For as long as Christianity held unchallenged sway in Europe, Jews could exist only on the margin of European social life. With the coming of the 18th-century Enlightenment, however, their isolation slowly began to crumble. A new class of bourgeois intellectuals – the *philosophes* – denounced Christianity in the name of Deism, or “natural religion,” and ushered in the secularism of the modern era. As a result of their efforts, for the first time in centuries the status of the Jews became a matter for widespread debate. Many *philosophes* found it only natural to sympathize with the Jews. Not only were Jews the oppressed people *par excellence* in a century which prided itself on its concern for justice, but they were also the most notorious victims of Christian intolerance, which the Enlightenment was sworn to destroy. Accordingly, protests against

the persecution of Jews – and especially against the Inquisition, the Enlightenment’s *bête noire* – became one of the standard set pieces of 18th-century rhetoric. Led by Charles Louis *Montesquieu, Gotthold Ephraim *Lessing, and Jean Jacques *Rousseau, Enlightenment writers everywhere preached that Christian and Jew shared a common humanity and common human rights. Relatively few of these men foresaw the Emancipation, which for most of the 18th century remained a distant prospect. But emancipation was proposed as early as 1714 by the English freethinker John Toland, and it drew increasing support from *philosophes* as the century went on. When, at last, the Jews of France were emancipated in 1791, it was largely the authority of the Enlightenment which overcame the objections of churchmen and gentile economic interests.

Despite its achievements, however, the Enlightenment’s pro-Jewish agitation was not so purely humanitarian as it appeared. Much of the indignation which Jewish suffering aroused was calculated not to comfort the Jews, but to exploit their plight for the purpose of condemning Christianity. Admiring accounts of the Jewish religion, such as those favored by Lessing, were also intended to discredit Christianity – often so blatantly that, like Lessing’s famous *Nathan der Weise*, they expounded Judaism as a religion for *philosophes* to make Christianity seem backward by comparison. In short, when the Enlightenment chose to defend the Jews, it did so largely for reasons of its own; and it dealt with them, in consequence, not as real individuals, but as a useful abstraction. The sole novelty of its approach was that, whereas the Jews had once been a witness to the truth of Christianity, now they were expected to demonstrate its error. The actual Jews, meanwhile, were usually regarded with suspicion and distaste. The Judaism which they practiced, after all, was a religion much like Christianity and hence considered by Enlightenment thinkers as a “superstition” to be eradicated. What was still more serious, Judaism was often considered a particularly anti-social religion, one which nurtured a stubborn sense of particularism, perpetuated ancient, fossilized habits, and created grave divisions within the state. These opinions were so widely held by Enlightenment writers that even friends of the Jews continually urged them to abandon their traditions and observances. Only Montesquieu, of all the 18th century’s great thinkers, showed any willingness to accept the Jews without reforming them into something else. Indeed, the most common argument for emancipation, as conceived by Christian Wielhelm von *Dohm, Honore-Gabriel-Victor Riqueti, Comte de *Mirabeau, and others, was precisely that it would convert the Jews to the majority culture, thus expunging their most obnoxious traits. This view was ultimately upheld by the French revolutionaries, who declared, when they emancipated the Jews in 1791: “To the man, everything; to the Jew, nothing.” Though as a citizen the Jew was to receive full rights, as a Jew he was to count for nothing.

Even so, this program of compulsive emancipation did not fully reflect the intense Jew-hatred of the more extreme *philosophes*. Though it is surprising to recall the fact, among

this group were some of the leading minds of the 18th century, including Denis* Diderot, Baron Paul Heinrich Dietrich d*Holbach, and *Voltaire. Despite their intellectual stature, these men launched scurrilous attacks on the Jews which far surpassed the bounds of reasoned criticism. Many of their polemics were not only intolerant, but so vicious and spiteful as to compare with all but the crudest propaganda of the 1970s or the late 1990s. To some extent, this anti-Jewish fervor can be understood as merely one aspect of the Enlightenment's war on Christianity. Diderot, d'Holbach, Voltaire, and their followers were the most radical anti-Christians of their time, and – in contrast to the more moderate Deists who praised the Jews – they did not hesitate to pour scorn on Christianity by reviling its Jewish origins. This tactic was all the more useful because Judaism, unlike Christianity, could be abused in print without fear of prosecution; but even the fact that the Jews made a convenient whipping-boy cannot explain all the hostility which they excited. Diatribes written against Jews by Enlightenment thinkers were often so bitter, so peculiarly violent, that they can only have stemmed from a profound emotional antagonism – a hatred nourished not only by dislike of Jewish particularism, refurbished from ancient Greco-Roman sources, but also by unconscious Christian prejudice and resentment of Jewish economic success. Voltaire, in particular, detested the Jews with vehement passion. A large part of his whole enormous output was devoted to lurid tales of Jewish credulity and fanaticism, which he viewed as dangerous threats to European culture. At times, Voltaire actually pressed this argument so far as to imply that Jews were ignorant by nature, and could never be integrated into a modern society.

To be sure, prejudices of this kind made little headway against the ingrained egalitarianism of the Enlightenment. Neither Voltaire nor any other pre-Revolutionary thinker seriously denied that Jews could be assimilated, so that in this sense, at least, antisemitism was hardly known. Still less respectable were outright fantasies like the blood libel, which most Enlightenment writers firmly repudiated. Yet the fact remains that, for all their resistance to racism and other delusions, some of the leaders of the Enlightenment played a central role in the development of antisemitic ideology. By declaring the Jew an enemy of the modern secular state, they refurbished the religious anti-Judaism of the Middle Ages and set it on an entirely new political path. In so doing, moreover, they revealed a depth of feeling against Jews which was wholly disproportionate to the Jews' supposed faults, and which would continue to inspire antisemitism even when the Jews' secularism was no longer open to question.

[Paul Weissman]

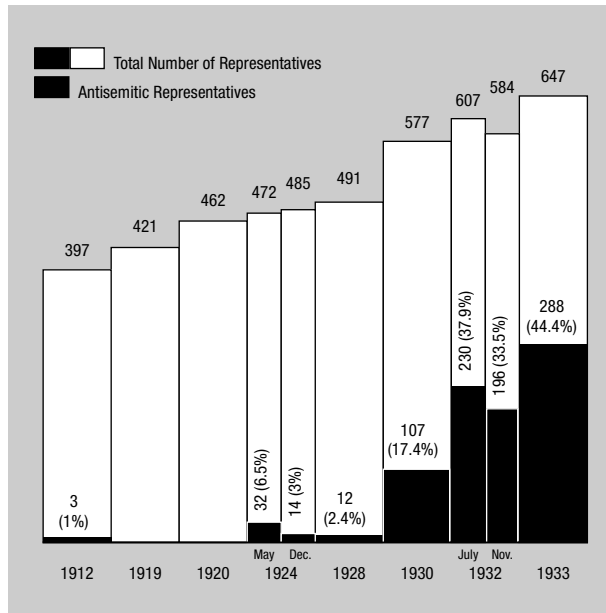

Emancipation and Reaction

ACHIEVING EMANCIPATION. The newer 19th-century version of antisemitism arose on a soil which had been watered for many centuries in Europe by Christian theology and, more important, by popular catechisms. The Christian centuries had persecuted Jews for theological reasons, but this "teach-

ing of contempt" had set the seal on the most ancient of all antisemitic themes: that the Jews were a uniquely alien element within human society. In every permutation of European politics and economics within the course of the century, the question of the alienness of the Jew reappeared as an issue of quite different quality from all of the other conflicts of a stormy age. Jews themselves tended to imagine that their troubles represented the time-lag of older, medieval Christian attitudes, of the anger at "Christ-killers" and "Christ-rejecters," which would eventually disappear. It was not until the works of Leo *Pinsker and Theodor *Herzl, the founders of modern Zionism were published, that the suggestion was made that antisemitism in all of its varieties was, at its very root, a form of xenophobia, the hatred of a stranger – the oldest, most complicated, and most virulent example of such hatred – and that the end of the medieval era of faith and politics did not, therefore, mean the end of antisemitism.

As a result of both the French and the American revolutions there were two states in the world at the beginning of the 19th century in which, in constitutional theory, Jews were now equal citizens before the law. In neither case was their emancipation complete. In the U.S. certain legal disabilities continued to exist in some of the individual states and the effort for their removal encountered some re-echoes of older Christian prejudices. The Jews in America were, however, at the beginning of the 19th century a mere handful, less than 3,000 in a national population approaching 4,000,000, and there was therefore no contemporary social base for the rise of a serious antisemitic reaction. The issues were different in Europe. In France there had been more than a century of economic conflict between Jewish small-scale moneylenders, illegal artisans, and petty credit and their Gentile clients and competitors. The legal emancipation of the Jews did not still these angers but, on the contrary, exacerbated them. The spokesmen of the political left in eastern France during the era of the Revolution and even into the age of *Napoleon argued, without exception that the new legal equality for the Jews would not act to assimilate them as "useful and productive citizens" into the main body of the French people but, rather that it would open new avenues for the rapacity of these aliens. Napoleon's own activities in relation to the Jewish question, including the calling of his famous French *Sanhedrin in 1807, were under the impact of two themes: the desire to make the Jews assimilate more rapidly and the attempt, through a decree that announced a ten-year moratorium on debts owed to Jews in eastern France, to calm the angers of their enemies.

On the other hand, Jews were visibly and notoriously the beneficiaries of the Revolution. It was, indeed, true that a number of distinguished émigrés had been helped to escape by former Jewish associates, and it was even true that the bulk of the Jewish community, at least at the very beginning of the Revolution and a few years later during the Terror, feared rather than favored the new regime. Nonetheless, in the minds of the major losers, the men of the old order and especially of the church, the Jews were the chief, or at the very least the

Antisemitic representatives in the German Reichstag from 1912 to 1933.

most obvious, winners during the era of the Revolution. The association of French antisemitism with counterrevolutionary forces, with royalist-clericalist reaction, throughout the next 150 years was thus begun very early. In the demonology of antisemitism it was not difficult to transform the Sanhedrin in Paris in 1807 into a meeting of a secret society of Jews plotting to take over the world. This connection was made in that year by Abbé *Barruel in his book *Mémoire pour servir à l'histoire du jacobinisme*. This volume is the source of all of the later elaborations of the myth of the Elders of Zion.

In Europe as a whole a new kind of antisemitism was evoked by the new kind of war that the revolutionary armies, and the far more successful armies of Napoleon, were waging against their enemies.

Between 1790 and 1815 the armies of France appeared everywhere not, as they announced, as conquerors holding foreign territory for ransom or for annexation, but as liberators of the peoples from the yoke of their existing governments in order to help them regenerate themselves in a new state of freedom. Wherever the Revolution spread, its legislation included, in places as far-flung as Westphalia, Italy, and even briefly, Erez Israel, equality for Jews. It was entirely reasonable on the part of the Austrian police, and the secret services of some of the other European powers, to suspect that some of the Jews within their borders were really partisans of Napoleon. In the wake of his defeat the emancipation of the Jews remained on the books in France, but it was removed elsewhere, with some modifications in favor of Jews, as an imposition of a foreign power. The battle for Jewish equality had to begin again; it became part of a century-long battle in Europe to achieve the liberal revolution everywhere. This struggle had not yet ended by the time of World War I, for at that moment the largest Jewish community in the world, that

in the Russian Empire, was not yet emancipated and had, indeed, suffered grievously throughout the century.

In the early and middle years of the 19th century the most important battleground between Jews and their enemies was in Germany. Capitalism was rapidly remaking the social structure and Jews were the most easily identifiable element among the “new men.” The victims of the rising capitalist order, especially the lower-middle classes, found their scapegoat in the most vulnerable group among the successful, the Jews. In a different part of society, and from a nationalist perspective, the most distinguished of German historians of the day, Heinrich *Treitschke, was insisting toward the end of the century that the acculturated and legally emancipated Jews, who thought in their own minds that they had become thoroughly German, were really aliens who still had to remake themselves from the ground up and to disappear inconspicuously. Not long after the turn of the century Werner *Sombart (*Die Juden und das Wirtschaftsleben*, 1911) was to express his own ambivalence about capitalism as a whole by insisting, against Max Weber, that it was the Jews, and not the Protestants, who had always been, even in biblical days, the inventors and bearers of the capitalist spirit. Such identification between the Jews and the spirit of capitalism had been made, to their discredit, seven decades earlier, in 1844, by the young Karl *Marx in his essay “On the Jewish Question.” For antisemites of both the political right and the left, who struggled against capitalism for different reasons, such identification was one of the sources and rationales of Jew-hatred throughout the modern era, well into the Nazi period.

On the surface of events modern German antisemitism began with riots by the peasants in 1819, using the rhetoric of older Christian hostility. This attitude toward Jews was soon transformed by the rising romanticism and the nationalist reactions to the Napoleonic wars into an assertion that the true German spirit, which had arisen in the Teutonic forests, was an organic and lasting identity in which the Jew could not, by his very nature, participate. For this purpose the work of Count Joseph-Arthur de *Gobineau on race was pressed into service to make the point that the Jews were a non-Aryan, Oriental element whose very nature was of a different modality. Richard *Wagner insisted on this point not only in his overt antisemitic utterances but also indirectly in his operas, in which he crystallized the Teutonic myths as a quasi-religious expression of the authentic German spirit. In Wagner's footsteps there appeared the work of his son-in-law, Houston Stewart *Chamberlain (*The Foundations of the Nineteenth Century*, 1899), which pronounced the presence of Jews in German society to be radically inimical to its very health. In the popular mind these theorists of national culture were understood within a situation in which the intellectual importance of Germany in Europe was not equaled by its political significance, for the scandalous division of the country lasted until 1870. To be united and German was the dominant ideal.

The very difficulties in realizing the unity of Germany brought the existence of Jews into unfriendly focus. Very few

elements in mid-19th century Germany society, even among their friends, were willing to regard Jews as true Germans. Jews were asking for political equality more in the name of the universal rights of man – that is, as partisans of the cosmopolitan principle – than as sons of the German people. As a result, the ultimate attainment of equality, first in Prussia in 1859 and ultimately in all of Germany in the aftermath of the unification of the country in 1870, had a quite narrow social base. It was identified with the rise of the bourgeois liberalism, but this element never dominated in mid-19th-century Germany as it did in contemporary England. What was worse, from a Jewish perspective, was that as a middle-class element the Jews were themselves in competition with the very class which had facilitated their entry into society. Toward the end of the century the German middle class itself was shifting its political alignment from liberalism to romantic conservatism. To be sure, the main thrust of German liberalism continued to regard antisemitism as reactionary, just as the main body of German Socialism would have no truck with the identification of all Jews with the capitalist oppressors of the working class. Nonetheless, antisemitism was sufficiently potent for all its themes to coalesce into the image of the successful, non-national, unproductive foreigner, whose power resided in money, in his mastery of the legerdemain of modern manipulation, and his cosmopolitan contacts. This “Jew” was a lineal descendant of the Jewish maker of love potions in Greco-Roman demonology and the poisoner of wells of the medieval myths, but the new version was very up to date and answered to contemporary frustrations and angers.

In the last quarter of the 19th century, antisemitism became an acceptable element in German political life to be manipulated at opportune moments by political leaders seeking popular lower-middle-class support. The very term antisemitism had been invented by Wilhelm Marr in 1879 and it was in that year that the court chaplain, Adolph *Stoecker, had made his first public antisemitic speech, “What We Demand of Modern Jewry,” and had then turned his Christian Socialist Party in overtly anti-Jewish directions. With the rise of German imperialism toward the end of the century and the sense of success it gave Germany, political antisemitism waned, but social distance continued unaltered.

In France, Jews had not been an issue of any considerable importance after the restoration of the Bourbons to power in 1815. There alone Jewish political gains had been safeguarded without question, because the fundamental social changes which had been introduced by the Revolution could not be radically altered by the return of the émigrés. Nonetheless, Jews remained one of the most visible symbols of these very changes, and the attacks upon Jews, both from the extreme right and the extreme left, were sufficiently overt to provide the spark for greater difficulties in the second half of the century. Two of the greatest theorists of Socialism in France, Pierre-Joseph *Proudhon and Charles *Fourier, were anti-Jewish on the ground that Jewish capitalist interests stood counter to those of the peasants and the workers, and that the

Jewish spirit as a whole was antithetical to their vision of a reformed humanity living the life of unselfish social justice. In France, too, the changes being brought about by capitalism and the Industrial Revolution made many people feel helpless, as their lives were being remade for the worse. The power of the *Rothschilds was very evident in France, especially in the age of Louis Napoleon, and some of the anger at the new age came to expression in attacks on them by left-wingers such as Alphonse *Toussenel. In the time of conflict which followed the fall of France in 1870 major elements among all forces contending for power after the debacle could blame their troubles on the Jews.

In the renewed political battles of the 1870s and 1880s the overwhelming majority of the Jewish community in France was associated with the liberal republican forces against the conservative Catholics, who were enemies of the Republic. From 1879 to 1884 republican anti-clericals dominated in parliament and succeeded in freeing French education from clerical control. One of the building blocks of the almost successful counterrevolution of 1888, in which General Boulanger very nearly made an end of the Republic, was antisemitism. The myth that the small handful of Jews in France had enormous and highly dangerous economic power had been broadcast two years before in perhaps the single, most successful antisemitic and counterrevolutionary book ever published, Edouard *Drumont's *La France Juive*, which went through innumerable editions. Late in 1894 antisemitism became the central issue of French society and politics for at least a decade and the echoes of the positions taken in those years can still be heard. Captain Alfred *Dreyfus, the first Jew to become a member of the general staff of the French army, was accused of spying for Germany. The outcry against Dreyfus was joined not only by the clerical-royalist right but also by some elements of the French left. His ultimate vindication was the result of the exercise of the moral conscience in the service of truth by a number of individuals more concerned about the preservation of the Republic than about the rights of Jews.

[Arthur Hertzberg]

ANTISEMITIC POLITICAL PARTIES AND ORGANIZATIONS. A distinction must be made between organizations that temporarily adopted antisemitic attitudes and those founded with the express purpose of fighting alleged negative Jewish influences. Into the first category fall some originally liberal groups, especially in Austria and Romania, as well as most of the clerical parties. For example, the German Catholic Center Party blamed Bismarck's *Kulturkampf* on the Jews but later relented and even protected Jewish religious interests. Many conservative groups vacillated in a similar fashion as did certain socialist movements, like the Fourierists in France, some disciples of F. *Lassalle in Germany, and the Narodniki in Russia. Even the Social-Democrat parties later rid themselves, though rather tardily, of antisemitic tendencies. The groups that called themselves Christian-Social were steeped in antisemitism, although for some of them anti-Judaism served

mainly as a means of vote-catching and of competing with all-round antisemitic parties, while for others it constituted an integral part of their program. Since it is difficult to separate them, all parties which displayed anti-Jewish tendencies are included here.

The appearance of anti-Jewish parties and organizations, whether they were based on economic, religious, or *voelkisch* (Aryan nationalist) ideologies or a combination of all three, constitutes the most important distinguishing mark of modern antisemitism, which came to the fore after the political reshuffle of Europe following the wars of 1866 and 1870–71, and particularly after the general economic crisis of 1873. All antisemitic organizations aspired to influence public life by means such as mass movements and parliamentary pressure groups. Although before World War I most of them were short lived and failed to acquire mass support, they registered local victories and accumulated valuable political experience. Moreover, by their incessant propaganda they infected large parts of the population with a latent antisemitism. Germany and Austria were the first countries to experience organized antisemitism, preceding Hungary and Poland. France on the one hand, and Russia and Romania on the other, constitute separate categories.

Germany. In the mid-1870s certain antisemitic social reform groups of artisans, small traders, and clerks began to form local organizations. A prominent instance in Saxony was Ernst Schmeitzner's Society for the Protection of Artisans and Traders. Rural advocates of social reform also gathered in small societies. Groups like the Antisemitic League of Wilhelm Marr (1879) occupied themselves less with economic reform than with *voelkisch* issues. Thus, from the outset of organizational activities, two main trends in political antisemitism asserted themselves: the social and the racist trends. It must be added, however, that both were complex: there was a radical and a conservative trend in the reform associations, as well as rather radical and ultraconservative wings in the racist groups. This divergence, originating in the multifaceted and even contradictory image of the Jew, caused incessant splits and re-formations in political antisemitism, rendering it more or less ineffective until the end of World War I.

The first political organizer to use antisemitism as a lever for a mass movement was the court preacher Adolf Stoecker in Berlin. Stoecker failed to attract followers to his Christian Socialist Workers' Party (1878) on a platform of Christian ethics and reconciliation between state and workers through state intervention in economics. In 1879, however, he hit upon antisemitism as a vote-catcher for artisans and other members of the lower-middle classes in his speech "Our Demands on Modern Judaism." His activities inspired the founding of the antisemitic students' movement, Verein Deutscher Studenten (1881). This was not powerful in itself, but it imbued the old students' organizations – the Corps and the Deutsche Burschenschaft – with the spirit of racial intolerance, so that finally they excluded all Jews from membership. Meanwhile,

Stoecker was elected, with Conservative help, to the Prussian Diet (1879) and to the Reichstag. Stoecker's initial success was paralleled in Saxony, where the First International Anti-Jewish Congress convened in Dresden in 1882, assembling during the blood libel of the Tisza-Eszlar trial, convened delegates from Germany, Austria, and Hungary. A standing committee decided on the founding of an Alliance Anti-Juive Universelle (an allusion to the Alliance Israélite Universelle) and fixed a second congress to be held the following year in Chemnitz. This congress attracted additional delegates from Russia, Romania, Serbia, and France but no lasting unity was established. Later antisemitic congresses (Kassel 1886, Bochum 1889) were strictly German, and they too accomplished close to nothing.

During 1880 and 1881, some of Stoecker's most vociferous racist allies broke away. The first was Ernst Henrici, who headed the radical anti-conservative Soziale Reichspartei for about three years. Next was the ultraconservative Max Liebermann von Sonnenberg, who in conjunction with Friedrich Nietzsche's brother-in-law, Bernhard Foerster, established the Deutscher Volksverein (1881–83). Both parties remained weak, and their endeavors to win general support by presenting to Bismarck their joint antisemitic petition asking for the abolition of Jewish equality gained them only fleeting success. Although they collected 225,000 signatures, they failed at the polls. When in 1883 the Conservative Party severed all connections with them, the center of political antisemitism shifted for a time from Berlin to small towns and rural districts and to other German states. This happened in 1886 when Theodor Fritsch of Leipzig, one of the most rabid racists, joined with the "Hessian King of Peasants," Otto Boeckel, and others in the Deutsche Antisemitische Vereinigung. Boeckel was immediately elected to the Reichstag as the first antisemite per se. Before the elections of 1890 he founded his own Antisemitic People's Party (renamed in 1893 Deutsche Reformpartei), enjoying a certain measure of cooperation with Liebermann von Sonnenberg's reshuffled Deutschsoziale Partei. Thus in 1890 Von Sonnenberg, Boeckel, and three of Boeckel's followers were elected to the Reichstag, the latter forming the first antisemitic parliamentary group. The 1893 elections showed even more striking gains: 16 antisemitic candidates were elected, half of them in Hesse.

This increase was brought about by the public reaction to Jewish emancipation, by a definite antisemitic turn in the Conservative Party, which adopted an openly anti-Jewish paragraph in its so-called Tivoli Program (1892), and by the entrance of the feudal-agrarian Bund der Landwirte ("Agrarian League") into the political arena as an ultraconservative and antisemitic pressure group. Finally, there emerged in Berlin a new rabble-rouser, Hermann Ahlwardt, the "headmaster of all the Germans." Ahlwardt's triumphs were, however, short lived. In 1894 he was received into the parliamentary faction of the later-united wings of Liebermann Von Sonnenberg and Boeckel's Deutschsoziale Reformpartei (DSRP), but was soon excluded again. Boeckel himself lost his seat in 1903 to a can-

didate from a Protestant group. Nevertheless, 11 antisemites were elected in 1903, and three more joined them at by-elections. However, the realignments within their ranks continued. Von Sonnenberg's Deutschsoziale joined forces with the Agrarian League, the Christian-Socialists, and the Bavarian Peasant Party. Thus a parliamentary alignment, Wirtschaftliche Vereinigung, was established. Only the remnants of the DSRP held aloof, commanding six seats in 1907 and three in 1912, while the Wirtschaftliche Vereinigung secured 19 and ten respectively. On the eve of World War I, although again amalgamated into a Deutschvoelkische Partei (1914), party antisemitism seemed to be declining, but other previously non-antisemitic groups had been deeply infected by its vociferous activities. Even the left-wing liberal parties (alternately called Fortschritt, Freisinn, and again Fortschritt), which had staunchly defended Jewish equality, began making election agreements with antisemites or otherwise alienating their Jewish followers. It was therefore not surprising that various club-like right-wing groups openly pursued an anti-Jewish line. Such groups, mostly pan-Germanic and imperialist in outlook, comprised beside the already mentioned Students' and Agrarian Leagues, the Akademischer Turnbund (from 1883), other gymnastic clubs imbued with Friedrich Ludwig Jahn's exclusive nationalism, the Alldeutscher Verband ("Pan-Germanic League"), a small but effective organization of influential right-wing personalities, the somewhat similar Colonial Society, and many others. Of another hue was the Deutschnationaler Handlungsgehilfenverband – DHV (from 1893), which became Germany's largest white-collar union, combining trade-union activities with conservative-nationalist and antisemitic policies. In 1933 the DHV merged with the Nazis in the National Socialist Labor Front. Among the small, lodge-like organizations were the Deutschbund of Friedrich Lange (1894), the Deutsche Volksbund of Boeckel (1907), the Germanen und Waelsingenorden (1912), whose activities were coordinated with Fritsch's Reichs-Hammerbund, and many others.

Austria and the Hapsburg Dominions. Although there are many similarities in the development of the German and Austrian antisemitic organizations, there remain two main differences. Christian-Socialist antisemitism played a leading part in Catholic Austria and even included the conservatives, while in Germany Protestant conservatism never relinquished its predominance over the Christian-Social movement. Secondly, racial antisemitism in Austria partly derived from the liberal camp, because of the essentially German nationalism of Austrian liberalism which denied the various minorities the right of self-determination. Yet the minorities themselves were often antisemitic, regarding Jews as proponents of Hapsburg domination. On the other hand, pan-German racism antagonized the minorities and did not attain the same influence as in Germany. Chronologically, students' unions led the way, excluding Jews as early as 1878. Soon the first Societies for the Protection of the Artisans (from 1880) amalgamated in the

Oesterreichischer Reformverein (1882), which, under the leadership of Franz Holubek, was temporarily the main antisemitic organization. Later also the Deutsche Schulverein, supporting German schools in non-German territories, excluded Jews (1896), as did the nationalist Turnverein, cycling clubs, and the Deutsch-Oesterreichischer Alpenverein, which, however, adopted antisemitism only at the end of World War I.

The way for antisemitism as a force in party politics was paved by Georg Ritter von Schoenerer, who gradually shifted from liberalism to the extreme nationalist pan-Germanic wing, his movement probably influencing the young Adolf Hitler. In 1888, when Von Schoenerer was sentenced to prison for assault, his Deutschnationaler Verein began to dissolve, and the road was clear for the ascendancy of the Christian-Social movement. Karl von Vogelsang was its ideological mainspring and Karl Lueger its leading personality. They first attached themselves to the Christlich-Sozialer Verein (founded in 1887). Lueger, although still associated with a Jew (Julius Mandl), gradually identified himself with a newly formed anti-Jewish and anti-liberal election alignment, the United Christians (from 1887). In Vienna he formed a special antisemitic city branch (Buergerklub), and in the Austrian Reichsrat he led the Free Union for Economic Reform on a Christian Basis. These Christian-Social organizations backed him for the mayoralty of Vienna, although the nationalist elements broke away and formed the short-lived Deutschnationale Vereinigung (1896–1900). He also enlarged the Christian-Social field of action outside the capital by means of Peasant Unions; he was helped by an able organizer, Msgr. Joseph Scheicher. Thus, in the elections of 1902 all 51 antisemitic members of the lower Austrian Diet were Christian-Socialists.

Catholic conservatives (united since 1895 in the Catholic People's Party) also wanted Lueger; when the introduction of a general ballot in 1907 raised the number of Christian-Social members in the Reichsrat to 67, about 29 conservatives joined with them in a parliamentary *Klub*, thus establishing the Christian-Social movement as the protagonist of Austrian conservatism also. Only the radicals, continuing Von Schoenerer's pan-Germanic racism, went their separate way, mainly among the German elements in the Czech Sudetenland. Here the Deutsche Arbeiterpartei (1903, later called Deutsche Nationalsozialistische Arbeiterpartei) and the Deutsche Agrarpartei (1905), with their anticlerical, anti-Jewish, and anti-Czech attitude, registered considerable gains. However, antisemitism in the Hapsburg countries was not a German monopoly. Czech, Polish, and Ruthenian nationalists were sporadically as anti-Jewish as they were anti-German, or anti-Russian and anti-Polish, all regarding the Jews as part of rival nationalism, or decrying them as entirely foreign.

Hungary. Gyózo (Victor) Istóczy, from the liberal benches of the Diet, started local antisemitic cells, similar to Marr's Antisemitic League. He boasted that in 1880 there were already 78 such cells, which he hoped to amalgamate into a Union of Non-Jews. After the riots and pogroms which followed the

Tisza-Eszlar blood libel, Istóczy and Ivan Simonyi, a “national-social” antisemite, founded the Antisemitic Club for the elections of 1884. They gained 17 seats and captured the majority in the Pozsony (Bratislava) municipality but quarreled among themselves and dissolved again. Later, Count Ferdinand Zichy’s Christian-Social movement (Catholic People’s Party, founded in 1895) attracted much antisemitic support, but was not to the taste of radical-nationalists, although it spread vicious anti-Jewish propaganda.

Poland. While antisemitism in Czechoslovakia and Hungary was more or less sporadic, it was endemic in Galicia and Russian Poland. Already in the 1880s it had found a spokesman in Teofil Merunowicz, who advocated anti-Jewish legislation in the Galician Diet. During the 1890s, the Polish Catholic People’s Party, led by Jan Stapiński, which sponsored social measures like rural producers’ and consumers’ cooperatives, also supported anti-Jewish boycott measures. When the Jesuit Father Stojalowski took over the direction of propaganda, this Christian Social movement even initiated a wave of pogroms during the by-elections of 1898, in which Father Stojalowski was returned to the Diet. At the same time, the National Democratic Party (NDK, *Endecja) organized the radical national forces, mainly in Russian Poland. The National Democrats and their propaganda were instrumental in transferring antisemitism into the new Polish state founded after World War I.

France. In the abovementioned countries, with the exception of Russian Poland, political antisemitism emerged as an immediate reaction to the granting of Jewish emancipation. French Jewry had already been emancipated for 80 years when it was hit by the organized forms of Jew-hatred. The chaotic conditions after the French defeat by Germany in 1871, the bloodbath of the Paris Commune, and the birth pangs of the unloved Third Republic formed the background for anti-liberalism, anti-parliamentarism, and antisemitism. Even socialists, influenced by the teachings of Charles *Fourier, Pierre Joseph *Proudhon, and Alphonse *Toussnel, quickly adopted the image of Rothschild as the symbol of financial capitalism. But in the main, French feelings against the Jews, whether of a conservative or of a democratic and social type, were perhaps inspired mostly by Catholicism. In its fight against liberalism and socialism Catholicism was looking for a scapegoat; this it found first in *Freemasonry and finally in a “Jewish plot,” allegedly exploiting the Masonic order to attain “world domination.”

Paralleling Austrian developments, the French-Social-Catholic movement started in the 1870s with rather conservative Catholic Workers’ Clubs; their antisemitism gradually increased, especially after the collapse of the Catholic bank Union Générale in 1882. However no mass organization emerged until about 1890, with the formation of the Christian Democratic movement by forces that took their inspiration from Edouard *Drumont’s book *La France Juive* (1886). Such a movement also served as a refuge for the disillusioned remnants of General Boulanger’s supporters. Certain Boulangists

and Boulangist organizations, like Paul Déroulède’s Patriotic League, had already dabbled in antisemitism, as had Jacques de Biez, one of the first followers of Drumont, who in 1886 attended the founding ceremony of the Alliance Anti-Israélite Universelle in Bucharest. It was only during the course of elections of 1890, however, that the French National Antisemitic League took shape, under the leadership of the Marquis de Morès and Jules Delahaye, as an election alignment for Boulangists and adherents of Drumont. It quickly disintegrated, its candidates being defeated at the polls. An attempt by Morès to organize the Paris street mob into strong-arm brigades did not help, but it invited imitations (see below). The Christian Democrats became more republican and radical, and most violently antisemitic during the *Dreyfus Affair. Typical of this development are the utterances of the anti-monarchist Father Hippolyte Gayraud at the first Christian Democratic Congress in Lyons (1896). Gayraud held that the church had always been antisemitic “on a high moral plane,” and that “all social excrement, especially the Jews” should be expelled from France. The movement quickly disintegrated after the pardon of Dreyfus in 1906. Meanwhile, however, antisemitism prospered, not only in Paris, but also in the provincial towns where antisemitic small businessmen’s and salesmen’s organizations sprang up in Lyons, Poitiers, Dijon, Nancy, and other places, and finally in Algiers, where Max Régis instigated anti-Jewish atrocities, gaining for himself the mayoralty and for Drumont a seat in the Chamber of Deputies. In Paris itself, the most important local group before 1897, when Jules Guerin renewed the Ligue Antisémitique and organized the mob into anti-Dreyfusard and anti-Jewish commandos, was the Students’ Antisemitic League (1894), which remained active in the streets and at the university during the Dreyfus Affair. Several of its founders later formed a National Anti-Jewish Party (1901), but finally joined l’*Action Française. This extreme chauvinist and royalist group (founded in 1899), which sponsored a conservative “landed antisemitism,” remained a political force for more than 40 years, until Hitler’s conquest of France.

Romania. In Romania and czarist Russia, antisemitism was to a large extent government-sponsored. Within the borders of constitutional Romania parliamentary parties flourished and vied among themselves in sponsoring anti-Jewish measures, turning the parliament itself into the main stage for antisemitic propaganda and for discriminative legislation against the “foreigners,” in flagrant violation of international commitment (see Congress of *Berlin). In this, the so-called Liberal Party under John Bratianu surpassed the conservatives, as the land-owning boyars were to a certain extent interested in protecting “their” Jews. In 1886, under the influence of Edouard Drumont, Bucharest served as the center for a new departure in international antisemitism: the Alliance Anti-Israélite Universelle was founded by Romanian, Hungarian, and French intransigents, Drumont being unanimously elected president. But this time, too, the international organization very quickly proved abortive. About ten years later (1895), the Romanians

organized their own Universal Antisemitic League with A.C. *Cuza, the deputy N. Jorga, and other members of parliament and high officials in leading positions. It established branches in many towns, pledging itself "to make life intolerable" for Jews and to force them out of the country. In the following years pogroms in Romania were numerous and vicious, culminating in rural anti-Jewish riots that led to a general peasant uprising, which in 1907 had to be quelled by the army. On the eve of World War I, the so-called "Culture-League" continued the pogrom propaganda in derision of its name, vowing to create a situation in which "Russia with its pogroms and blood libels would seem to be a Promised Land to the Jews."

Russia. Although Russia was the land of the most violent antisemitism, it had perhaps the fewest organizations devoted to it, for Russian autocratic patterns of government did not allow even antisemitic groups. Thus, the first known reactionary antisemitic organization, the Sacred League, which sprang up after the assassination of Czar Alexander II in March 1881, was clandestine, although arch-reactionary high officials and even ministers seem to have furthered it. In their eyes the Jews were the source of all rebellion, and they themselves used terror and violence to destroy the "leaven of revolution." It is generally believed that the Sacred League was instrumental in fomenting the pogroms of 1881 and 1882. It was dissolved at the end of that year. Toward the end of 1904, when the Japanese war was going badly for Russia, and early in 1905, when the revolution broke out, another antisemitic organization was formed, the *Union of the Russian People, rather similar in character and aims to its predecessor. This league was openly recognized, and even furthered by the czar and his government, together with its secret fighting squads, the "Black Hundreds," which were largely responsible for the pogroms of 1905 and for counterrevolutionary political assassinations. The Union of the Russian People, acting in the open, continued in existence until World War I, and inspired the formation of several similar "patriotic" organizations. Perhaps its most reactionary offspring was the United Nobility (1911), one of its leading spirits being N.E. Markov. This party openly advocated the complete expulsion of the Jews from the country, and did much to spread blood libels against the Jews which finally culminated in the *Beilis case. Even during the war, government-sponsored antisemitism scarcely abated and was responsible for the allegation of an act of Jewish high treason against the Russian Army in the village of Kuzhi (1915), which was given wide publicity by every Russian newspaper.

[Jacob Toury]

RUSSIA AND CENTRAL EUROPE. There was a radical difference between the situation in Western Europe in the 19th century and that which prevailed in the Russian Empire. At least in theory the West European states were not anti-Jewish. Despite occasional liberalizations, the czarist regime as a whole regarded it as its duty to protect the bulk of its population against the spread of Jewish economic influence or even of

Jewish population. A few attempts in the course of the century at the assimilation of the Jews did not alter the basic outlook of the state, that Jews were dangerous aliens. The czar continued to derive the validation of his absolutism from theology, from the identification of the Caesar and Jesus by the Orthodox faith; antisemitism based on Christian religious prejudice thus remained alive and virulent. Whatever hopes the Jews had in the course of the 19th century for improvement in their status rested in the hopes for the evolution of czarist absolutism toward parliamentary democracy. Repeated repressions made such hopes clearly illusory, and younger Jews in increasing numbers turned to helping to prepare revolution. This served to enrage the government, and the reactionary circles which supported it, even further. The regime kept imposing more economic disabilities on the Jews, keeping them in the least secure of middlemen occupations such as petty shopkeepers, innkeepers, and managers of estates for absentee landlords; in these capacities Jews were in direct, often unpleasant, contact with the poorest of the peasants. The government made it its business to use these resentments to draw attention away from the seething angers which pervaded the whole of the social system. Antisemitism was thus encouraged and fostered as a tactical tool for preserving czarist absolutism.

The critically important event in the history of Russian antisemitism took place in 1881, when a wave of pogroms occurred involving outbreaks in some 160 cities and villages of Russia. The occasion for these outrages was the assassination of Czar Alexander II by revolutionary terrorists on March 13, 1881. Among the assassins was one Jewish girl who played quite a minor role, but reactionary newspapers almost immediately began to whip up anti-Jewish sentiment. The government probably did not directly organize these riots, but it stood aside as Jews were murdered and pillaged, and the regime used the immediate occasion to enact anti-Jewish economic legislation in 1882 (the *May Laws). The situation continued to deteriorate to such a degree that in the next reign Czar *Nicholas II financially supported the antisemitic organization, the Black Hundreds, and made no secret of his personal membership, and that of the crown prince, in that organization (see *Union of Russian People). This body was associated with the government in directly fomenting pogroms during the revolutionary years of 1903 and 1905; in that latter year the libel known as the Protocols of the *Elders of Zion was first published under the auspices of the secret police by the press of the czar, although he himself believed the work to be a fraud. The ordeal of Mendel *Beilis arose within the hysterical atmosphere of disintegrating czarism. He was accused in 1911 in Kiev of ritual murder, and the full weight of government power was put behind the prosecution. His acquittal at the trial in 1913 was the culmination of two years of battle between the regime and the Jews and their supporters in liberal humanitarian circles in Russia and throughout the world.

It was, indeed, in such circles, which were the Russian parallel to the forces which had created western parliamentary

democracy and social and intellectual liberalism, that the Jews found support during a tragic period. When these elements came briefly to power in the revolution of February 1917 the Jews were immediately given the rights of equal citizens.

Nonetheless, despite this later, brief, and abortive victory of liberalism, after 1882 this current seemed too weak and divided to afford the Jews much hope for the future. Men like Ivan Sergejevitch Turgenev had mixed feelings about Jews and even Lev Nikolajevitch Tolstoy did not always hasten to support them when they were under attack. The political left was even more ambiguous. Even some of the Jews within the general revolutionary movements saw the Jewish petty bourgeoisie not as a victim but as an oppressor. The anger of the peasants and the urban poor was, therefore, regarded as merited, and their pogrom activities were even viewed as positive stirrings toward the ultimate revolution. This was, for example, the stand of the Narodniki, the pro-peasant populist group, with regard to the pogroms of 1881. More fundamentally, the revolutionary groups in Russia had even less patience with specifically Jewish problems, or with any desires on the part of Jews to continue their own communal identity, than was to be found in the European left as a whole. The young Lenin was an opponent of antisemitism, and he held that the problems of the Jews would disappear along with that of all other people in Russia in a new socialist order. On the other hand, Lenin insisted that Jews would have to undergo a more radical and cultural transformation than any other element in Russia and that any Jew who opposed assimilation was "simply a nationalist philistine" ("The Position of the Bund in the Party," in *Iskra*, Oct. 22, 1903). Any form of Jewish national feeling had already been pronounced to be a form of particularly obnoxious reaction. The stage was thus set for the ultimate questioning by Stalin of the loyalty of even Communist Jews.

These difficulties in the Russian Empire in the decades right before and after 1900 had their parallels in the buffer countries between Germany and Russia. In Romania, despite promises that had been made in the Berlin Convention of 1878, Jews were systematically excluded from most walks of life. Even the native-born were declared to be foreigners, so that very few Jews held citizenship. There was little that Jews could do except attempt to flee in large numbers. In the Austro-Hungarian Empire the blood libel was revived in 1899 in Bohemia, but this was only the most sensational case of a series that had begun in *Tisza-Eszlar, a small Hungarian village, in 1882. Much Jewish energy went into the defense against such charges. What was being debated was not so much the blatant lie of the blood accusation but rather the more fundamental issue of the moral integrity of Judaism and the Jew. This was, essentially, still medieval antisemitism, but more contemporary currents were running strong. There were deep national tensions within the multinational Austro-Hungarian Empire, and the Jews were caught in the middle of all of the most embittered of these situations. In Bohemia they identified with the ruling Germans, to the chagrin and anger of Czech nationalists, but the local Germans nevertheless

rejected the Jews as not true members of the *Volk*. In Galicia, the poorest and most medieval of the Austro-Hungarian provinces, the dominant Poles could claim a majority over the Ukrainians only by counting the Jews as Poles, but that did not induce them to accept even those Jews who were Polonizing themselves. The masses of Galician Jewry, almost a million at the turn of the century, were living in poverty that was abject even by Russian and Romanian standards, with no hope of betterment.

BETWEEN EAST AND WEST. Those years, of the last quarter of the 19th century and the beginning of the 20th, were the crucial turning point, the hinge on which modern Jewish history, the era of the emancipation, turned into contemporary Jewish history, the age of unparalleled virulence of antisemitism, the virtual end of European Jewry, and the rise of the American Jewish community and the State of Israel. Between 1880 and 1914 it became clear that the dominant response to the growing difficulties and dangers in Central and Eastern Europe was for Jews to attempt to flee westward; at first westward in Europe itself, to Vienna in the Austro-Hungarian Empire, to Germany, to France, and to England. In all of these countries quite small Jewish populations were, on the average, at least doubled between 1882 and 1914. In the United States, however, during that very same period, the Jewish population increased nearly fifteen fold, from a quarter of a million to three and a half million; Jews were some 8 percent of the total that arrived between 1880 and 1914. In the main, the reasons for this great increase were economic as America was then expanding rapidly in economic dynamism and through the settling of its large territories, and was thus in need of large numbers of new immigrants.

However, a partial reason was the increasing lack of hospitality to Jews in Western Europe. Antisemitism was growing, and so was the increased fear of it on the part of the older Jewish residents in Germany, France, and England. In Vienna the 1890s were marked by the repeated reelection as mayor of the city of Karl *Lueger on an avowedly antisemitic platform. Lueger appealed to the impoverished lower-middle classes, who envied the success of Jews in Vienna's economic and cultural life. The emperor refused to confirm his first four elections, but on the fifth such occasion, in 1897, he finally gave in. It was Lueger to whom the very young Adolf Hitler listened when he came to Vienna to try to become a painter; it was Lueger whom Theodor Herzl had in mind when, watching the degradation of Alfred Dreyfus in Paris, he came to the conclusion that antisemitism which could become a major political issue in the two most enlightened cities in Europe could no longer be regarded as a passing phenomenon. Even in England, the country which had been freest of all forms of antisemitism in the middle third of the 19th century, it reappeared after 1881, as relatively large numbers of Yiddish-speaking new immigrants continued to arrive. The moral qualities and working habits of these Jews were debated and investigated by parliamentary commissions and, after years of ten-

sion, an Aliens Act putting restrictions on further immigration became law in 1906.

In England, and even in France during the Dreyfus affair, anti-Jewish arguments and attitudes rested on a purely national premise, that is, on the supposed need to protect the integrity of national traditions. So, for example, the problem for Charles Maurras, the central figure of French integral nationalism, was whether the Jews would be regarded, along with Bretons, Normans, etc., as one of the valid "families of France." It was, indeed, to the nationalist forms of antisemitism that Pinsker and Herzl were responding by suggesting that the cure for such tensions could come through the establishment of a normalized Jewish national identity parallel to that of all other nations. In those years, however, new forms of antisemitism were arising. These were no longer rooted in real or supposed defense of national integrity. The ideologies of both Pan-Germanism and Pan-Slavism were politically conceived in international terms (both movements were in being in 1890). In the realm of metaphysics their sense of the Teutonic or Slavic traditions as the prime bearers of human culture reflected, and conflicted with, biblical notions about the chosenness of the Jews. The distance from either of these ideologies to racism, to the insistence that the superiority of the Slav or the German inhered not in his history but in his very biological type, was not very large. Gobineau, who had been half forgotten, was again being read in the 1890s, especially in Germany. The first international meeting of all the antisemitic parties of Europe had taken place as early as 1882; by 1900 antisemitism was clearly an international movement in which objection to the Jews had become the unifying premise for groups as disparate and clashing as the anti-Dreyfusards and the nationalists of the very Germany for which Alfred Dreyfus had been accused of spying. This paradox made a certain kind of antisemitic sense. Jews were heavily identified in the major capitals of European culture with the most modern, critical, cosmopolitan supra-national spirit, and thus with the very cultural force which the newest ideologies of the radical right were trying to destroy. The leading figure of the Enlightenment, Voltaire, had not believed that Jews could ever really become *philosophes*, and he had, therefore, been less than a staunch proponent of their equality. Little more than a century later the newest forms of national antisemitism were attacking the Jews as harmful to society precisely because they were regarded, with considerable truth, as the most significant single element among the bearers of the tradition of the European Enlightenment. In this task Jews continued to be important in Europe after 1900, but their position was already clearly embattled. By that year the Jewish masses on the move had already made a crucial decision that the future of most of the migrants was to be found in the United States. The ideologists and earliest pioneers of Zionism had moved eastward, out of the European arena to the creation of a renewed Jewish national identity in Erez Israel.

For the first two centuries of the United States' national history antisemitism as an active force was practically non-

existent. Certain remnants of exclusion on Christian grounds from public office did exist in the early years of the 19th century, but these were all ultimately removed on the grounds of constitutional logic. As a population the Jews were an insignificant handful; the social structure of the country as a whole was largely fluid. The serious conflicts within the United States until after the Civil War had almost nothing to do with Jews, and they played so little role that none of the contenders could use them as scapegoat. A certain amount of endemic social prejudice reappeared in the 1870s, especially in the sight of the rapid economic rise of the first generation of German Jews to affluence. This was one expression of the process by which newly rich gentile elements were asserting their social positions by manufacturing exclusiveness. The serious tensions which did arise were a concomitant of the mass immigration from 1881 to 1914, as gentiles fled from – or battled to retain – neighborhoods becoming filled with masses of very foreign Jews from Eastern Europe. There was substantial discrimination in housing and educational opportunities at the colleges and universities, and especially in jobs in the highly structured bureaucracies of heavy industry, insurance, and banking. This new immigration provided in the first third of the century many of both the leaders and the followers of what little there was of left-wing politics in the big cities, and their role was well remembered in the reaction to the Russian Revolution and later, to the Great Depression of 1929, when there appeared a substantial amount of overt American antisemitism. The memory was carried further in the 1930s under the impetus of Nazism and its American wing, the German-American Bund. Native-born American radicalism, the populist tradition with its suspicions of the big cities, the intellectuals and, above all, of the Wall Street bankers, had its own antisemitic component. It looked for a moment in the 1930s as if antisemitism might become a substantial force in the United States, but that moment was superseded by World War II. As a whole, American antisemitism has been one of the least serious of all its manifestations in the Western world, at least in part because the United States has had, during the last century, phenomenal economic expansion and was absorbing a variety of immigrants and their cultures.

The Inter-War Period

In Europe, however, the 20th century brought with it the most violent forms of antisemitism in all of history, worse even than the outbreaks during the Crusades or in the 17th century. The border wars in Russia and Poland in the days immediately after World War I were attended by pogroms in which many thousands were killed and hundreds of thousands were robbed and rendered homeless. The major force which perpetrated these murders was the army of the Ukrainian Democratic Republic under Simon Petliura, which made blood baths of as many as 500 places. The justification that was advanced, insofar as any rationale was offered at all, was that the Jews were supposedly partisans of the Bolsheviks. Under the impact of these horrors and the pressure mounted by the world Jewish

community on the peacemakers at Versailles, minority rights for Jews, along with those for other national minorities, were written into the treaties which created such newly independent states as Poland, Lithuania, and Czechoslovakia. In the interwar period these arrangements became a source both of some protection for Jews and of considerable friction. Especially in Poland, where Jews were 10% of the population and particularly conspicuous in the cities, the essential trend between 1919 and 1939 was toward driving the Jews out of their economic positions, and toward emigration, in a world in which almost all doors were increasingly closed. The scare of Bolshevism provided the impetus for an American isolationist campaign in 1921 to close the doors of the United States to further unrestricted immigration, especially from Eastern Europe, which ended with the Monroe Law of 1924, that intentionally closed the doors to Jews. Even though some migration from Poland continued in this period and a relatively large number of Central European Jews did escape from Hitler after 1933, the European Jewish community as a whole had to face its destiny in Europe after World War I without the possibility of the kind of migrations which could make a radical difference. The only exception was Erez Israel, where Jewish population grew from relatively negligible numbers to over half a million in this interwar period, and the foundations of the future State of Israel were laid.

The great and virulent outbreak of antisemitism in the Nazi era and its culmination in the Holocaust of most of European Jewry is discussed in detail elsewhere (see *Holocaust). Nazism succeeded in the backwash of German defeat in World War I and the creation of the Weimar Republic and subsequent economic disaster, all of which paved the way for nationalist-racist pan-German ideology and Third Reich hallucinations. Jews were prominent in the very founding of Weimar and in the anti-traditional culture of the Weimar period. They were thus identified with the most "un-German" era of modern German history. This was the situation within which Nazism appealed, especially to the petty bourgeoisie who envied the seemingly ever more successful Jews, but the question of what were the ultimate roots and sources of the Nazi horrors remains a matter of controversy. The most debatable issue is whether it was a demonic aberration in which the underside of human nature broke all the bonds of civilization, or whether Nazism arose from a joining together of all of the forms, of old and modern antisemitism and a need for calculated modernization in an outbreak armed with the most advanced technical tools of mass murder. To survey the whole history of antisemitism suggests that the demonic element in Nazism was not so unprecedented and that its appearance is related to a long past for which Western history cannot disclaim moral responsibility.

The Early Postwar Period

As a result of mass murder in World War II and of the emigration caused by the heightened tensions with the Arab world attending the creation of the State of Israel, Jewish residence in

the classic centers of antisemitism, Christian Europe and the Islamic Middle East, was enormously reduced. The primary centers of Jewish population in the wake of the war were in the United States, the Soviet Union, and Israel.

In the post-World War II era, the Jews of America rose rapidly to very close to the top of American economic, political, and intellectual life. This has been attended by remarkably few conflicts. Some social antisemitism remained, for, as repeated studies have shown, the Jews are the only white group in the United States for whom social rank is consistently lower than economic status. Nonetheless, quotas in the colleges and universities and in certain professions, and exclusion from the highest posts of political life, have well-nigh ended. The visible difficulties that exist are noticeable in the black community. The Jew has generally been the last occupant of the neighborhoods in which blacks now live in the large cities and Jews are therefore still quite visible as landlords and storekeepers in the black neighborhoods. In addition, some Jews have felt that they have been resented for being too prominent in what some blacks would like to regard as their own revolution, which other people are taking away from them in the very act of participating in it. Nevertheless, antisemitism in postwar America was generally regarded as a minor problem.

The mood of Christians in the aftermath of World War II was overwhelmingly that of contrition. World Protestantism in its international meetings immediately after World War II, at Amsterdam and New Delhi (1948, 1961), was at great pains to condemn antisemitism and to express contrition for not having acted more strongly during the Nazi era. It was in this mood, despite ongoing theological problems with the question of whether the church continues to need to convert Jews in order to be true to itself, and the further problems of understanding, from the perspective of Christian theology, the right of the Jews to the Holy Land, that there was substantial Christian support in the late 1940s, especially among Protestants, for Zionist efforts toward the creation of the State of Israel.

In Catholic circles, Pius XII began the process of dissociating himself from Nazism after World War II by maintaining public neutrality during the battle for the creation of the State of Israel and insisting only on the internationalization of Jerusalem. The radical changes in Catholic-Jewish relations took place in the reign of John XXIII, with his excision of certain objectionable anti-Jewish references from the Good Friday liturgy, such as the term perfidy and with his setting into motion the revision of the church's basic attitude on the Jews. This crystallized in the declaration on the subject at the Vatican Council of 1965, that clearly stated: "True, the Jewish authorities and those who followed their lead pressed for the death of Christ; still, what happened in His Passion cannot be charged against all the Jews, without distinction, then alive, nor against the Jews of today." And: "Although the Church is the new people of God, the Jews should not be presented as rejected by God or accursed, as if this followed from the

Holy Scriptures.” This historic theological revolution made necessary further rethinking on the part of Catholics on a whole host of theological doctrines, a process of review that is still going on. A document in which the religious significance of the Holy Land for Judaism, if it be understood in its own terms, is warmly hailed, was discussed within the highest instances of the Catholic Church. There have been since the 1950s cooperative efforts between Jews and Christians of many persuasions toward the removal of antisemitic elements in church textbook material.

Nonetheless, the significance of the “ecumenical age” could be overestimated at the time. Christianity was no longer considered the dominant spiritual force in the West during the 1960s or the 1970s that it was two centuries ago, nor has the antisemitism of the last modern age been primarily Christian. Therefore Christian ecumenism could indeed be considered less than an absolute deathblow to antisemitism. The increased friendship and understanding between Jews and Christians involved the most Western, modern, and intellectual elements: yet large parts of the Christian community remained unaffected. More important, following the Six-Day War of 1967 between Israel and its Arab neighbors, the Christian churches, and most especially the Protestant ones, in many places in the world, evidenced an increasing hospitality to Arab anti-Israel propaganda. Much of this has emanated from the Christian churches of the Arab world. Such material has often been careful to make a distinction between antisemitism, which is ruled out, and anti-Zionism and opposition to Israel, which is affirmed. Nonetheless this distinction was not always maintained. In place of the old stereotype of the Jews as accursed of God for rejecting or killing Jesus, the weak and cringing figure held in contempt, a new stereotype became prevalent in some Christian circles of the Jews as arrogantly victorious and ruthless toward the Arabs.

In the aftermath of June 1967, General de Gaulle, then president of France, angered by the support the Jews of France had given to Israel, which was contrary to his political line and wishes, pronounced the Jews to be an “elitist, self-confident, and domineering people.” Here and there older antisemitic stereotypes were used in reaction to the newest phenomena, the appearance of the Israeli Jew and his effect on the Jewish mentality throughout the Diaspora. In the course of the short period of its existence, Israel has produced for the world the Jew who is unconcerned with what opinions others hold of him and who insists on his personal and national autonomy and sovereignty. This “new Jew” has elicited admiration, but also resentment. The newest forms of antisemitism have responded to the new Jewish stance by attacking what is in their eyes the elements of power. In the late 1960s and 1970s considerable left and radical left-wing opinion in the world was strongly opposed to Israel and to the Jewish involvement in it. There was within this movement the paradox, but not an unprecedented one, of the presence of considerable numbers of leftist Jewish youngsters who were indifferent or even hostile to all forms of contempo-

rary Jewish identity and survival (see “New Left, and “New Antisemitism” below).

The existence of Jews, the Jewish community, Judaism, and Jewish identity – whatever may be their self-definitions – as a people apart inevitably carries with it the prospect of that attack upon them which is termed antisemitism. The hatred of the unlike is an all too human phenomenon. Add to it dimensions of supposedly demonic powers; of many centuries of damnation of Jews by Christianity as the enemies of God; of the need for scapegoats in times of turmoil or defeat – and there then appears antisemitism, the most lasting expression in Western history of the hatred of the man who is regarded as alien, and therefore even possibly inhuman. Have that alien maintain, or have once maintained, or be believed to maintain, his own religious or cultural superiority – and thus appear to be a threat in the midst of elements of the majority – and the “great hatred” has arisen. Antisemitism has been less fashionable after the horror of Hitler, but it was too hopeful to believe in the post-war decades that its day is over.

[Arthur Hertzberg]

In Arab Countries

Postwar Arab antisemitism was influenced by European antisemitic literature (mainly French) published in Arabic in the second half of the 19th century, particularly in connection with the “Damascus Affair. In about 1869, Neophytos’ *Destruction of the Jewish Religion* was published in Arabic in Beirut. In 1890 H. Fāris published in Cairo a book on the blood libel entitled *The Cry of the Innocent in the Horn of Freedom* (reissued in 1962 in the UAR official series of “National Books” under the title *Talmudic Human Sacrifices*). August Rohling’s *The Talmud Jew* was published in Cairo in 1899 and was cited as a source in such publications as the Arab version of the *Protocols of the Elders of Zion* published (c. 1967) by Shawqī ‘Abd al Nāṣir, President Nasser’s brother.

The publication of antisemitic literature became a spate as a result of the Arab-Israel conflict. Antisemitic themes and arguments were developed by Arab propaganda as a weapon against the *yishuv* during the Mandate period (1917–48) and even more so against the State of Israel. The radical objective of liquidating the Jewish state as a political entity induced Arab writers and officials to present the State of Israel as both aggressive and inherently evil, and the need to substantiate the wickedness of Israel led them to trace the sources of its evil to the history, culture, and religion of the Jewish people. Despite attempts to differentiate between Zionism and Judaism, it has been stressed repeatedly that Zionism – which is presented in such writings as a sinister, racist colonialism-originated from, and is a continuation of, Judaism. Zionism is also frequently characterized as “the executive mechanism” of Judaism. For example, H. al-Hindī and M. Ibrahim wrote in their *Isrāil: Fikra, Ḥaraka, Dawla* (“Israel: Thought, Movement, State,” Beirut, 1958, p. 113): “We fight against the imperialist regime and the Jewish people, whose invading vanguard in Palestine, called Israel, is preparing for a further leap.” Though Arab an-

tisemitism did not cause the Arab-Israel conflict, but rather was stimulated by it, it has aggravated Arab hostility.

The amount and vehemence of antisemitic literature in Arabic has no parallel in the post-World War II era. In addition to its quality and tenor, the fact that much of it has emanated from official publishing houses and government agencies makes it all the more significant, as it does not originate on the fringes of Arab society but rather at the center. The *Protocols of the Elders of Zion* has been translated into Arabic several times and been recurrently referred to, summarized, and quoted by various Arab authorities, including Nasser himself (see e.g., the official English volume of his speeches and press interviews, 1958, part 2, p. 30). Antisemitic themes and abstracts from the *Protocols* have been included in Arab secondary school textbooks, as e.g., in Dh. al-Hindāwī's *al-Qaḍīyya al-Falīṣṭīniyya* ("The Palestine Problem"), published in 1964 by the Jordanian Ministry of Education, and in indoctrination material of the armed forces, as in Ḥasan Ṣabrī al-Khūlī's *Qaḍīyyat Filasṭīn* ("The Palestine Problem"), published by the Indoctrination Directorate of the UAR (United Arab Republic) Armed Forces. The concept of a Jewish world conspiracy, as described in the *Protocols*, was the main theme adopted by Arabs from European antisemitism as early as the 1920s. It later may have served the psychological need of alleviating Arab self-reproach for failures and defeats by asserting that the Arabs fought not only against Israel, but against "those who are behind her" – imperialism and world Jewry.

That Arabs have not hesitated to exploit antisemitic themes, despite their witnessing the moral havoc wrought by Nazi antisemitism in Germany, proves the vehemence of Arab hostility. In Arab political literature, the Nazi extermination of the Jews has been justified. It has been suggested that others will follow this example, and Adolf *Eichmann has been hailed as a martyr (see, e.g., Abdallah al-Tal's *Khaṭr al-Yahūdiyya 'Alā al-Islām wa-al-Masīḥiyya* ("The Danger of World Jewry against Islam and Christianity") and M.A. 'Alūba's *Filasṭīn wa-Ḍamīr al-Insāniyya* ("Palestine and Humanity's Conscience"), both published in Cairo in 1964). Thus, antisemitism has served Arab political and intellectual leaders as a psychological tool to prepare their people for the violent liquidation of Israel.

The quibble that the Arab anti-Jewish attitude cannot be defined as antisemitism because "the Arabs themselves are Semites" is sometimes used by Arab spokesmen, particularly in statements addressed to the outside world. Arabs have distributed antisemitic literature in European languages in various countries, and antisemitic groups in Europe and America have collaborated with Arab representatives, as the Arab states can offer them such instrumentalities as support and asylum. The affiliation between Arabs and Western antisemites is manifested by the tendency of post-World War II antisemitism, especially on the left, to support the Arab case against Israel. Arab leaders are aware of the dilemma that by helping to propagate antisemitism they may endanger the position of the Jews in various countries and thereby induce further

Jewish migration to Israel, but their emotions and their belief that the Arab struggle is a global one directed against world Jewry often override other considerations. The very meagerness of the remnants of the Jewish communities in most Arab countries, apart from *Morocco, has been a factor limiting the development of social antisemitism. However, there was clearly an element of antisemitism in the persecution of Jews in *Syria and *Iraq. After the Six-Day War there appeared in the Arab press condemnations of the excessive use by Arabs of antisemitic themes, specifying the damage caused by extremism to the Arab cause. The frequency of antisemitic publications subsequently abated somewhat. A later book is Bint al-Shāṭī' (Dr. 'A'isha 'Abd al-Raḥman), *Ada al-Bashar* declaring the Jews the enemies of humanity), published by no less than the UAR Government – The Higher Council of Islamic Affairs, 1964.

[Yehoshafat Harkabi]

In the Soviet Bloc

THEORY AND PRACTICE. Antisemitism, according to Communist doctrine, is an extremely negative social phenomenon; it could only be part of reactionary, capitalist, and pre-capitalist regimes, in which hatred of the Jews is exploited for the gain of the ruling classes. Lenin, along with the other revolutionaries in czarist Russia, was a sincere and resolute opponent of antisemitism and of any form of oppression, discrimination, and persecution of Russian Jewry. However, after the consolidation of the Soviet regime, principally under *Stalin's one-man rule, a distinctly anti-Jewish policy was sometimes planned and implemented in the Soviet Union. This policy consciously exploited the traditional antisemitism of the people in the Ukraine and in other parts of Russia, who viewed the Jews as a foreign element, "rootless in the homeland," who tended to conspire with the country's enemies, to evade dangerous defense duties in time of war, and who quickly profited by illicit economic manipulations and by exploiting the toiling masses. The word "Jew" itself has been mentioned relatively rarely in Soviet antisemitic propaganda, precisely in order to avoid breaking an ideological taboo; the antisemitic intent, however, was clear to everybody through the use of thinly disguised, conventional terms, such as "*Cosmopolitans," "Zionists," "people without a fatherland," etc. The aim was mostly "a so-called educational" one: to produce tangible evidence that certain popular tendencies which the regime tried to eradicate (such as interest in Western life and culture, or illicit manufacturing and marketing of goods) were initiated and conducted by foreign, traitorous, "rootless" elements, i.e., the Jews. A further stimulus arose during the Cold War years, when the system of suspecting and supervising whole groups of the population by the security organs reached its peak. Every Jew was thus regarded as a real or potential security risk because of his family ties with Jews in the U.S. or other Western countries, and because of his sympathy, open or hidden, for the young State of Israel. This "cosmopolitanism," presumably an inherent characteristic of every Jewish body,

was considered dangerous from the security point of view and warranted the liquidation of all Jewish institutions and organizations, with the exception of only a few synagogues which were placed under constant supervision by the security police. A further stage in Soviet antisemitism was reached in the late 1960s when the Soviet Union adopted an extreme anti-Israel policy, particularly after the Six-Day *War in June 1967. Soviet propaganda started a campaign grotesquely inflating the image of Zionism as a sinister international conspiracy spread over the whole world, very similar to that propounded in the *Protocols of the Elders of Zion*.

AFTER THE OCTOBER REVOLUTION. During and immediately after the October Revolution, antisemitism served as one of the prime weapons of the Russian counterrevolution, when the White forces depicted the Bolshevik regime as executing the enslavement of Mother Russia by the Jews. Lenin saw antisemitism not only as a socio-political evil, in accord with his ideological outlook, but also as a formidable factor which he had to combat in his struggle for saving the revolution. He attacked antisemitism in his statements and speeches, including the well-known resolution of the Soviet government which defined perpetrators and instigators of pogroms as enemies of the revolution who had to be outlawed (*Izvestiya*, July 27, 1918). This atmosphere existed in the Soviet Union for years, at least up to the consolidation of Stalin's dictatorship toward the end of the 1920s. Among the masses antisemitic feelings continued in the 1920s, particularly during the NEP ("New Economic Policy"), sometimes even increasing, as when a large influx of Jews from the townlets came to the industrial and administrative centers, where they competed for the available jobs. Antisemitism also increased among the peasants as Jews received land in southern Russia and Crimea for agricultural settlement. But, despite popular antisemitism and the official persecution of the Jewish religion and the Zionist and Jewish Socialist movement (carried out to a large extent by Jewish Communist party members), vast numbers of Jews in the U.S.S.R. enjoyed (during the 1920s and most of the 1930s) considerable geographic and social mobility, with no obstacles of an antisemitic nature standing in their way.

The turning point began toward the end of the 1930s with the Great Purges, during which the Soviet government discontinued denouncing and punishing expressions and outbursts of popular antisemitism. At this time, the government initiated a systematic liquidation of Jewish institutions and leading figures. Then, however, it was possible to view this as part of the general processes designed to secure Stalin's dictatorship, since there still were significant numbers of Jews holding middle and higher positions of power in the party hierarchy and in vital branches of government, such as the political secret police. From 1939 onward, after the signing of the Nazi-Soviet Pact (Ribbentrop-Molotov Non-Aggression Pact) and the outbreak of World War II in the West, the Soviet press and radio systematically concealed reports about the anti-Jewish character of the Nazi regime and about the oppression and

murder of Jews after the invasion of Poland. In this respect, there was a considerable improvement following the German attack on the U.S.S.R. in June 1941. However, in the many detailed accounts of Nazi atrocities in the Soviet press and radio there was still a discernible tendency to cover up the fact of the genocide of the Jewish people, which was mostly described in vague terms, as the murder of "peaceful, innocent citizens." This systematic concealment continued even more strongly after World War II. Anyone attempting to emphasize the special suffering of the Jewish people under the Nazi occupation of the U.S.S.R. (as, e.g., Yevgeny Yevtushenko) was strongly criticized by official spokesmen.

THE BLACK YEARS 1948–1953. The Black Years began for Russian Jewry when the anti-Jewish line became the active policy of the highest government echelon. These were the last four or five years of Stalin's regime (1948–53). The secret police murdered Solomon *Mikhoels, director of the Jewish State Theater in Moscow and chairman of the Jewish *Anti-Fascist Committee, thus touching off what became the systematic liquidation of all Jewish cultural institutions which were remnants of the 1930s or established during the war. At the end of 1948 and the beginning of 1949 Soviet newspapers and journals opened an anti-Jewish campaign, condemning the alleged cosmopolitan rootless elements in intellectual life. This campaign was the first undisguised expression of the wide exploitation of popular antisemitism for Soviet government aims. The ingrained hatred and suspicion of Jews – as a foreign element liable to treason – served here as a powerful demagogic means of educating the nation against "westernizing" tendencies and for seclusion behind the wall of Russian nationalism. The closing down of the Jewish Anti-Fascist Committee; the arrests and execution of Jewish writers, artists, and public figures; the "Crimea Affair" trial behind closed doors; the Slansky *trial in Prague (initiated and run by emissaries from the Soviet Union); the *Doctors' Plot; the dismissal of many thousands of Jews from their work; and the portrayal of the State of Israel and of the Zionist movement as instruments of an anti-Soviet American spy network, were all part of the anti-Jewish program of the "Black Years." Antisemitism served as one of the principal tools of Stalin's regime and policy during the Cold War years both in the U.S.S.R. and in the satellite countries. According to reliable testimony, Stalin intended, following the Doctors' Plot trial, to initiate a mass deportation of the Jewish population from the principal cities of the U.S.S.R. to Eastern Siberia, but he died in March 1953, before he could carry out his plan.

THE KHRUSHCHEV PERIOD. The period following Stalin's death was inaugurated by an apparent reversal of the anti-Jewish policy through the official retraction of the "Doctors' Plot" accusation, but expectations that the Jewish institutions would be reinstated and that there would be a vigorous campaign against popular antisemitism were frustrated. Nikita Khrushchev, who in a closed session of the 20th Congress of the Soviet Communist Party (February 1956) denounced

Stalin and his methods, completely ignored the anti-Jewish aspect of the defunct dictator's rule, and silence on this subject was regarded as ominous for Soviet Jewry. Khrushchev himself, who was the supreme party and government representative in the Ukraine during and after World War II, was apparently deeply impressed by the immense power of popular antisemitism as a socio-political factor. Upon becoming prime minister and first secretary of the Communist Party of the U.S.S.R., he more than once expressed his own anti-Jewish thoughts and feelings in talks with foreign personalities, delegations, and newsmen and once even spoke out in defense of Stalin's stand in the "Crimea Affair," thus indirectly vindicating the liquidation of the Jewish Anti-Fascist Committee and its members.

Khrushchev's antisemitic policy was moderate in comparison with that practiced in Stalin's last years. It took the form not only of a consistent concealment of the genocide inflicted on the Jews during the Nazi invasion, but also of using Jews for show trials in the campaign against "economic crimes." This campaign was carried out by the security police from May 1961 until Khrushchev was removed from office in 1964. The Jews accused of "economic crimes" were picked out from a large number of people engaged in illicit economic activities and assigned the role of alleged initiators, instigators, and organizers of transgressions and other "crimes" against the Soviet laws in matters of production, marketing, and foreign currency regulations. Jews were the majority of those found guilty. Many of them received the death penalty, and their being Jews was emphasized in various ways in the press. During Khrushchev's office, books and pamphlets appeared which strongly denounced not only Zionism and the State of Israel, but also Judaism as such, as an extremely negative historical, cultural, and religious phenomenon. These publications were sometimes accompanied by crude antisemitic cartoons (as in the book by the Ukrainian antisemite Trofim Kychko, *Judaism without Embellishment*, published by the Academy of Sciences of the Ukrainian Soviet Republic, Ukrainian, 1963). A new effort to eradicate organized Jewish life in the U.S.S.R. was made under Khrushchev through the closing of many synagogues, often following a smear campaign by the local newspapers in which the synagogues were described as hangouts where criminals met for their sinister purposes. Synagogue leaders were arrested; *minyanim* in private homes were brutally dispersed; and the baking of *mazzot* for Passover was gradually abolished. In some places, burial of Jews in separate Jewish cemeteries was discontinued. In these years, popular antisemitism made itself felt in several outbursts, as, e.g., the arson of the synagogue and murder of the Jewish cemetery's *shammash* in the town of Malakhovka near Moscow, accompanied by the posting of antisemitic proclamations in the streets (Rosh Ha-Shanah 1959); the burning of the synagogue in Tskhakaya, Georgia, in 1962; anti-Jewish street riots, at times incited by blood libels (in Tashkent and in Tskhaltubo in 1962); public tension created by a blood-libel story in Vilna in 1963; and in one instance, the publica-

tion of an anti-Jewish blood libel in the official organ of the Communist Party (in the town Buinaksk, Dagestan, in the local newspaper on August 9, 1961, where a few days later an official apology of sorts was printed).

In widespread circles of the Russian intelligentsia opposition to the official and popular antisemitic climate was expressed in several ways, but for the most part by hints and implications rather than by overt criticism. It reached its climax in Yevtushenko's poem "Babi Yar" published in *Literaturnaya Gazeta* in 1961 and in the fact that Dmitri Shostakovich included the poem in one of the movements of his 13th symphony. The poem immediately aroused severe criticism, with antisemitic overtones, on the part of official literary critics and even from Khrushchev himself. A clear hint was given that any public declaration on behalf of the Jews was in contradiction to official policy. At the same time Jews of the U.S.S.R. were affected by systematic discrimination in many spheres. Jews almost completely disappeared from the foreign service, from commanding posts in the army, from positions as representatives of the government, the party hierarchy, the judiciary, etc. The number of Jews in local, republican, or Soviet government bodies fell far below the percentage of Jews, not only in the cities (where about 95% of the Jews reside), but in the population as a whole. Young Jews met with increasing difficulties in getting accepted in higher institutions of learning in the main cities of Russia and the Ukraine, particularly in those fields of study which usually lead to positions of power or to classified fields.

UNDER KOSIGIN-BREZHNEV. When Khrushchev was demoted in October 1964, and the "collective leadership" headed by Alexei Kosigin and Leonid Brezhnev initiated, there were signs of slight improvement in the attitude to Soviet Jewry. The campaign against "economic crimes" and the synagogues ceased; baking of *mazzot* was to a certain extent renewed; Jews were mentioned as victims of the Nazi Holocaust on Soviet soil; and even a public denunciation of antisemitism as one of the evils of society was once made in a speech by Prime Minister Kosigin. Following this, editorials in the same spirit were published in several leading newspapers in 1965. However, after the Six-Day War in June 1967 between Israel and the Arab states, a most severe anti-Jewish campaign in the Soviet press and propaganda media was unleashed again. Its declared aim was to condemn Israel and Zionism, but its general spirit and the caricatures accompanying it were markedly antisemitic. The Ukrainian style of antisemitism, which represents Judaism as a criminal religious tradition from ancient times, educating its followers in racial superiority and hatred of other peoples, began reappearing in widely diffused publications, as well as in tracts written by Trofim Kychko who reappeared on the scene after having had to remain silent for a few years, as his 1963 book had caused a world-wide scandal even in Communist parties in the West. In the new campaign, "Zionism" was assigned a central place: it was depicted as a powerful instrument or a main ally of "imperialism," serving its sinister

global aims, such as enslaving nations and exploiting them, undermining Socialism, and, of course, manipulating Israel for criminal aggression against the progressive Arab states. These descriptions of Zionism closely resembled the description of the world Jewish conspiracy in the *Protocols of the Elders of Zion*. It created an atmosphere of depression and deep apprehension in Soviet Jewry, who again were led to fear for their physical and economic security. However, no persecutions of Jews in the manner of the “Black Years” of Stalin are known to have taken place; it seems that the government took steps to prevent any outbursts of popular antisemitism such as those which occurred in Khrushchev’s time.

POLAND AND CZECHOSLOVAKIA. Popular expression of antisemitism in Poland became overt when Wladislaw Gomulka’s government rose to power in October 1956. One of its sources was hatred of the overthrown Stalinist higher echelon, which in Poland included a number of Jews in key positions (e.g., Jacob *Berman and Hilary *Minc). However, Gomulka’s regime was expressly opposed to antisemitism. In the framework of repatriation of former Polish citizens, it made possible the return of many Jews from the U.S.S.R. and their further migration to Israel. It did not interfere with the exodus of the remnant of Polish Jewry to Israel and other countries. However, its policy underwent a marked change following the Six-Day War in June 1967, becoming extremely anti-Israel, in line with Soviet policy. Gomulka even went a step further, when he publicly warned the Jews in Poland against becoming a “fifth column” by expressions of sympathy for Israel. Following this stand, a number of books and articles appeared that sharply attacked Israel and Zionism, with distinctly antisemitic overtones. This paved the way for wide anti-Jewish purges in the ranks of the government, universities, and other fields in the spring of 1968, when government circles blamed “Zionists” for mass demonstrations held by students and professors in the universities. The anti-Jewish purge and propaganda campaign was directed and exploited by one of the party factions for political ends. This faction, known as the “Partisans,” was headed by the minister of the interior and head of the security police, Mieczyslaw Moczar.

In Czechoslovakia, where traditional antisemitism has no deep roots, as in the Ukraine and in Poland, Antonin Novotny, president of the republic and secretary of the Communist Party, ruled continuously from the period of the (Rudolf) Slansky Trial until early in 1968. When he was ousted by the liberal wing of the Communist Party, there was a general improvement in the atmosphere. Jewish cultural and religious life was favorably affected. But, during the sharp controversy between the Soviet government and the liberal regime in Prague that led to the invasion of Czechoslovakia by the Soviet army in August 1968, Soviet and Polish propaganda used anti-Jewish allusions (e.g., that “Zionists” had pulled the strings of the “counterrevolution” in Czechoslovakia). Following the invasion, Jewish figures in the liberal Czechoslovak regime, such as Eduard *Goldstuecker, Ota Šik, and others, were forced to

disappear or even to leave the country. In the Czechoslovak crisis, as in the anti-Jewish purges in Poland that year, antisemitism, mostly disguised as “anti-Zionism,” was one of the prime elements in the influence exerted by Soviet agencies in Soviet bloc countries; it naturally served even more the needs of the anti-Israel campaign conducted by the Soviet government and propaganda media in Arab countries.

[Binyamin Eliav]

In the United States

IDEALS AND REALITY. In the United States the fate of the Jewish community has been more fortunate than in almost any other country. Jews in general experienced wider tolerance and greater civil and political equality than in the countries they had left, and Judaism was accepted by most Americans as one of the great religions. The U.S. government has exemplified George Washington’s famous words accepting the formula of the Newport Hebrew Congregation to give “to bigotry no sanction, to persecution no assistance.” American Jews, unlike many European compatriots, did not live as an autonomous community, or with a separate legal system for running the affairs of a ghetto.

Jews benefited not only from the absence of official governmental hostility, pogroms, or serious restrictions, and of an established religion that might encourage discrimination against other faiths, but also from the social, economic, and political traits of American life: the pluralistic society with its opportunities for social and geographic mobility, ability to participate in political activity, political parties as broad coalitions in which ethnic groups could compete and also be mutually protected, constitutional protection of civil rights in most cases, the competitive economic system, and the decentralized congregational structure permitting different expressions of the Jewish faith. Some legal restrictions of the civil and political rights of Jews to vote and hold office were almost all eliminated by the early 19th century. No systematic antisemitic ideology has been advocated by any mainstream political leader or group; overt antisemitism has, with rare exceptions, been associated with fringe or non-political elements. Indeed, care must be taken to distinguish the application to Jews of the normal intergroup tensions and conflicts in America from genuine antisemitism.

Nevertheless, anti-Jewish sentiment, social prejudice, and hatred motivated by religious, economic, and racial considerations, has been a constant presence in American life. Sometimes it has taken the form of violence. The Jewish community has suffered from discrimination in many forms: housing, employment, admission to resort hotels, business, college quotas, membership of social clubs. Negative images of Jews in popular literature and culture have persisted. Stereotypes – killers of Christ, criminals, Shylocks, uncouth *nouveaux riches* responsible for social disintegration, ethnic and cultural aliens, clannish conspirators, financial exploiters, revolutionaries or radicals – have been rife. For long periods Jews were rarely portrayed positively or realistically.

Antisemitic rhetoric and behavior have been more pronounced in some periods of American history than in others. During the Civil War the most discriminatory act against Jews was the official order of General Grant in December 1862, expelling them from military territories in the border states for alleged illegal trading; the order was immediately revoked by President Lincoln. In the 1880s and 1890s, the agrarian and Populist movements in the Middle West gave vent to some antisemitic utterances. Anxiety at the influx of East European Jews, and of others held undesirable, led to the imposition of quotas, and the virtual end of Jewish immigration by 1918. Jewish residents also experienced an increase in social antisemitism.

American constitutional ideals, liberal traditions, and pluralistic society and politics, were normally sufficient to prevent extreme antisemitic behavior. Yet ugly incidents did occur, the most dramatic being the unjust conviction in 1913, and the lynching by a mob in 1915, of Leo Frank, a Jewish factory superintendent in Atlanta for the alleged murder of a female employee. In the 1920s, the most influential expressions of antisemitism emanated from publications financed by the industrialist Henry Ford, *The International Jew* and the *Dearborn Independent*, with a circulation of 700,000, and reprinting of the *Protocols of the Elders of Zion*. Before World War II demagogues, such as Senator Theodore Bilbo and Congressman John Rankin, attacked international Jewry in general and New York Jews in particular as aggressive capitalists, communists or radicals, or polluters of American culture. Over a hundred organizations, mostly small and local in character, seeing Jews as mainly or partly responsible for social ills appealed to different social classes and ethnic groups.

Of these organizations, five were particularly active: The German-American Bund, the Silver Shirts, the Christian Front led by Father Coughlin, Gerald L.K. Smith's Committee of One Million, and the Protestant Defenders of the Christian Faith.

Since the end of World War II, polls and surveys, though differing on the exact figures, have suggested a considerable decline in antisemitic attitudes, though about half of American Jews believed that antisemitism is a serious problem and two-thirds feared it could be serious in the future. Moreover, in the U.S., negative attitudes have rarely led to serious manifestations of prejudice. In its 1989 audit of antisemitic incidents in the United States, the Anti-Defamation League of B'nai B'rith reported 845 incidents of vandalism and desecration, ranging from arson to swastika daubings of Jewish institutions and property, and over 580 assaults, threats, and harassments against Jews or Jewish institutions. Over 85 percent of those arrested for the incidents were under 21.

Though it significantly declined from 1944 to the late 1960s, antisemitism persisted during these years notwithstanding the determined efforts of Jewish organizations and political action to counter it, despite elimination of many hostile references to Jews in Christian religious books and

increased interfaith activity and institutes on Judaism, civil rights legislation, federal and state laws, continuing revulsion about Nazi crimes against Jews, the breaking down of social barriers in the post-War era, and in spite of the changed nature of the American Jewish community.

That community is a well-educated, affluent, highly urban, liberal, Democratic, politically active, mobile, adaptable, aging and gradually becoming less religiously observant group. In the late 1970s it amounted to 2.5% of the total population, and still declining, it has achieved an unparalleled social, political, and economic status, occupying prominent positions in education, government, business, the professions, and the cultural world. The very fact that intermarriage of Jews with members of other faiths rose so dramatically – by some calculations to 40% of Jewish males and 10% of females – itself indicated the increased acceptance of Jews. In 1981 only 14% of non-Jews objected strongly, and another 14% somewhat, to a mixed marital relationship.

In post-World War II America, until the 1980s at least, open advocacy, let alone ideological formulation, of antisemitism was not respectable. The symbol of the Holocaust; the moderate political climate; the absence of any mass dissatisfaction with the prevailing socio-economic system; the decline in Christian religious orthodoxy; the modifications of doctrine and attitude by churches, especially by the Catholic Church at Vatican Council II; and the growth of the economy and in the standard of living all helped lessen tension between Jews and non-Jewish whites.

Besides the decline in unofficial anti-Jewish prejudice in areas such as housing and employment, state laws increasingly forbade discrimination, and the courts removed restrictive covenants on housing. In universities, the quota system imposing limitations on Jews was largely ended. Overt discrimination appeared confined to a few exclusive cooperatives, athletic or golf clubs, and law firms.

Public opinion polls tried to measure the attitudes of Americans towards Jews in the postwar years. Survey findings sometimes showed widely differing results and must be treated with care. Yet, they were a valuable way to assess the degree of prejudice since American antisemitism was then largely attitudinal and not usually translated into either ideological coherence or concrete actions.

The index of 11 antisemitic beliefs proposed by Selznick and Steinberg in 1969 has been a useful benchmark for later studies. Between 1964 and 1981, negative beliefs in the index declined by about 14 percentage points. Americans were then less likely to see Jews as dishonest businessmen, clannish, in control of international banking or the media, television, or the movies, as having a lot of irritating faults, or as willing to choose money over people.

Yet, significant numbers of Americans between 1978 and 1985 still accepted negative stereotypes of Jews in general. They saw Jews as pushy, aggressive (25%), clannish (40%), going out of their way to hire only Jews (57%), controllers of movie and television (25%), willing to use shady practices (33%), choos-

ing money over people (34%), and control over international banking (43%).

In 1981, over 80% would vote for a qualified Jew as president. A 1988 Gallup poll shows that only 3% did not want Jews as neighbors; 13% disliked black and 9% disliked Hispanic neighbors. In a 1981 Gallup poll, about 40% had a “highly favorable” opinion of Jews while only 2% were “highly unfavorable.” The highly antisemitic attitudes declined from 37% in 1964 to 23% in 1981. Negative stereotypes existed about Jews but they were held even more strongly against evangelical or fundamentalist Protestants, and against oil companies and big business.

Accompanying the decline in negative images is an increase in positive ones. Jews are seen as hard working, talented, intelligent, warm and friendly, as contributing much to American cultural life, as philanthropic, and as good family members. A 1982 Roper poll found that 59% thought it was “a good thing” that Jews had immigrated to the U.S.

On some issues, negative attitudes increased over the 1960s and 1970s. In 1981, 35% thought Jews had too much power in the business world, 20% that they had too much power in the U.S. (11% in 1964) and more were concerned about the loyalty of Jews to Israel. Polls show that between a quarter and a third of the population believed Jews “are more loyal” to Israel than to America. In a poll in April 1987, 28% thought Jews placed the interests of Israel ahead of the U.S.

ANTISEMITIC GROUPS. Few in post-war America have ventured antisemitic remarks in public. Generalizations, however, can be made on the basis of certain factors: educational level, income, age, race, religion, place of birth, and geographical location. Those holding antisemitic beliefs tended to hold other prejudiced, intolerant, or undemocratic views in general. They were most widespread among the uneducated and poorer members of American society.

Education is a key variable. The least educated scored highest in antisemitic attitudes, except for blacks. Decline in negative images of Jews, as well as in general intolerance, could be correlated during the 1970s and 1980s with the higher level of education of the community. More knowledge of minorities, possession of cognitive skills to think rationally, and understanding of the virtues of tolerance and civil rights have meant less negative images of Jews. Antisemitism was found to be highest in the working class and lowest among professionals and the middle class.

Antisemitism was higher among Protestants than among Catholics. About 80% of Southern Baptists and 70% of Missouri Synod Lutherans agreed that Jews remained unforgiven for the death of Christ. Religion has been a powerful reinforcement of antisemitic views; 45% of all American antisemites get their antisemitic ideas from religious indoctrination or from some religious influence. The number of prejudiced among fundamentalists is some 7% greater than among non-fundamentalists.

Older people tend to be more antisemitic than younger individuals. This might be explained by lower educational level, by the fact that antisemitism was more prevalent when the older people were themselves young, and by the possibility that the aging process might have led to greater feelings of insecurity and intolerance.

Foreign-born Americans in general, partly because they tend to be older and less well educated than the average, hold stronger antisemitic views than the native born. Rural residents, especially in the South and Midwest, tend to be more antisemitic than urban residents. There appears to be little difference in beliefs between the sexes.

The greater degree of antisemitism among blacks than among the white population is disenchanting for those with memories of Jewish sympathy for the plight of blacks, and of actions, even at cost of life, to remedy that plight. Jews have always been more concerned about the state of blacks than have members of other religions, and given disproportionate support and financial aid to civil rights organizations. Black prejudice, often inherited from the Christian fundamentalism imbibed in youth, essentially stemmed from disparaging economic stereotypes of Jews as money grubbers, callous storekeepers and landlords, uncaring employers of black domestics, and as individuals who would use their economic power to degrade blacks.

Moderate black leaders, such as Martin Luther King, Jr., praised “the contribution that Jewish people have made toward the Negro’s struggle for freedom.” They acknowledged the Jewish help and alliance in black organizations and in the campaigns in the South with their freedom riders and voter registration teams.

However, from the 1960s on, the alliance had become strained. The Student Non-Violent Coordinating Committee (SNCC), formed in 1960 with Jewish help, within a decade, under the leadership of Stokely Carmichael, began attacking “the Rothschilds” as well as “Zionist Jewish terrorists.” Malcolm X denounced Jews as part of the white exploitative majority and wrote, “I don’t care what a Jew is professionally, doctor, merchant, housewife, student or whatever – first, he or she thinks Jew,” and talked of “Jews who sapped the very lifeblood of blacks.” The extremist Black Panthers, the Black Muslims, believing in a Jewish conspiracy to control the world, and some black intellectuals were vocal in anti-Jewish sentiment.

All polls and surveys of the time, as well as other empirical evidence, showed that black antisemitism was considerably higher than that of whites at every educational level. Two-fifths of blacks, compared with one out of five whites, could then be characterized as having high or moderate antisemitic beliefs.

Looking at the surveys of black antisemitism, five features seemed significant. The first was that it increased relative to that of whites. Secondly, black antisemitism was higher in the urban North than in the more rural South. Thirdly, it was manifested more on economic than on other issues. Those blacks who had economic dealings with or who perceived

economic mistreatment by Jews recorded a higher level of antisemitism than those who do not. Blacks remained more opposed than did whites to political antisemitism and to social discrimination, but negative beliefs on some noneconomic matters, especially on Israel, also increased. Fourthly, blacks who had personal contact with Jews, mostly in a subordinate role, were likely to be more antisemitic than those who did not, the reverse of the relationship between adult whites and Jews.

Most significant, it was younger blacks and the better educated who exhibited the strongest negative attitudes. This may be the consequence of the competition with or envy of Jews by aspiring black professionals. The antisemitic level of elite black leaders was about double that of blacks as a whole. Assertions of black consciousness and power from the 1960s, greater racial pride and solidarity, meant rejection of white, primarily Jewish, control of black organizations. For many black leaders, the politics of integration changed to the politics of confrontation.

That confrontation took the form of disputes over political goals and the exercise of power. But also the dismissal in 1979 of Andrew Young as American ambassador to the United Nations for meeting with a PLO official, the abusiveness of Nation of Islam leader Louis Farrakhan's remarks about Judaism as a "gutter religion" and his declared admiration for Hitler, the references to New York City as "Hymietown" by presidential candidate Jesse Jackson in 1984, the injection of black-Jewish animosity into the 1988 Democratic party primary in New York, all inflamed passions on both sides. Blacks held about 10% less favorable attitudes to Israel than do whites. Jews and blacks have strongly differed on questions of open enrollment in New York City colleges and, above all, on the issues of quotas for employment. Yet, the old black-Jewish liberal coalition, with its mutual support for electoral office and for policies favoring integrated schools, civil rights, and vitality of urban areas on the one hand, and issues significant to Jews, especially the security of Israel on the other, did not break down.

Besides a few radical left groups, most contemporary vitriolic antisemitism stems from a wide diversity of extremist right-wing hate groups, small in size, essentially anti-democratic and estranged from political and social reality, Identity Church groups and neo-Nazi organizations, living with the memories of Adolf Hitler, and limited to between 400 and 450 members, and the various, small Ku Klux Klan bodies. Some of these groups have engaged not only in hate rhetoric against minorities and racist ideology, but also in crimes, from synagogue bombings to armed robbery and murder, and fanciful conspiracies to overthrow the U.S. government.

These groups, whose members are often disaffected and frustrated, share overlapping beliefs: hostility to government which is seen as illegitimate; enmity toward Jews and non-whites; attacks on Jewish interests supposedly controlling government, finance, and the media; and purported Christian concepts by which white Protestants are seen as the "chosen people."

The better known of the hate groups are the Aryan Nations, the Christian Defense League, the Posse Comitatus, the Covenant, the Sword, and the Arm of the Lord, and the Christian-Patriots Defense League.

Probably the most aggressive of the non-religious hate groups are the "skinheads," gangs of shaven-headed youths who glorify violence, and have been responsible for an increasing number of assaults as well as antisemitic bigotry.

The Liberty Lobby, the most active and the best financed antisemitic organization in the country, describes itself as "a pressure group for patriotism," and maintains close connections with a number of members of Congress. Its weekly newspaper, *The Spotlight*, started in 1975 and now, with a circulation of over a quarter of a million, is the most widely read right-wing extremist paper in the country. Among its favorite targets are Zionism, and people defined euphemistically as "dual loyalists" or "international bankers."

The Institute for Historical Review was created in 1979. Its chief concern has been to deny or minimize the reality of the Holocaust and explore Jewish "atrocious propaganda" through a number of books and materials with antisemitic themes and by annual conventions.

To conclude: Extreme groups in the U.S. remained small and outside the political mainstream, and their membership appeared to have declined even further. American politics embodies and public opinion coheres around a consensus of political moderation in which antisemitic expressions are not respectable.

The country, with certain qualifications, exhibited a lower level of overt prejudice and bigotry than ever before in racial and religious matters. Jews as a group were no longer blamed, except by a fringe element, for the nation's problems or condemned for not being truly American. Indeed, in the working of the American political system today, Jews both as political activists and participants, and as elected and appointed officials have played a prominent role.

Yet, the portrait of antisemitism is a composite of conflicting traits. If most churches no longer insist on Jewish responsibility for the Crucifixion, those of an orthodox or particularist persuasion are inclined to do so. An appreciable minority, between one-fifth and one-quarter, still believed in the 1980s that Jews have too much power. Some remain obsessed by the idea of Jewish domination of the media and banking.

Two other major problems remained. Black antisemitism, stemming from religious teachings and economic stereotypes, exacerbated by the politics of confrontation and, to a lesser degree, a rise in adherence to Islam, was a troubling issue. The issue of Israel, support for its policies, aid for its security, and Jewish relations with the state did not lead to an increase in antisemitism. But about a quarter of non-Jews were highly unfavorable to Israel, and young people are more likely to be so than are older people.

Appropriate anxiety should be shown for the rhetoric and the potential for violence of those extreme groups which have

antisemitism high on their agenda, though their membership is small and declining. But that anxiety should not be excessive. Even admitting a significant minority of the population can be regarded as having antisemitic attitudes, Jews have not been made scapegoats for economic or social problems. What is finally important is that the antisemitic beliefs that existed until the late 1980s did not lead to an organized movement with any serious support for violence against Jews.

[Michael Curtis]

Trends in the 1970s

FROM NAZISM TO NEO-NAZISM. In the post-Holocaust period, there have been attempts in Western countries to revive Nazi organizations with antisemitic ideologies. Still, the “swastika plague,” that swept West Germany and other countries in 1959–60, accompanied by a wave of antisemitic incidents, was found to have been orchestrated by the Soviet Union, in order to embarrass West Germany, and subsided shortly thereafter. Indeed, the efforts to set up an international organization of neo-Nazi groups were centered in Belgium, where a group called *Nation Europa* tried to get a foothold in the 1960s. In the U.S., a small body was set up by Gerhard Lauck in Lincoln, Nebraska, which kept the old label of the NSDAP (National Socialist German Workers’ Party) and still acts as a main supplier of ideological guidance to neo-Nazi groups. Other propaganda centers exist in Switzerland, Denmark, Spain, Britain, Belgium and elsewhere. In Germany, the weekly *Deutsche National-Zeitung* (cir. 100,000 in 1977; 130,000 in 1978) served as a rallying point. After various groups tried to form a neo-Nazi party in the 1950s, the NPD (National-demokratische Partei Deutschlands) emerged; Jewish issues were not on the whole central, but the 1953 Luxembourg agreements on German *restitution were attacked, German war-guilt was rejected, and the Holocaust either minimized or denied. This last tendency became especially marked after the appearance in the U.S. in 1975 (German edition, 1977) of Arthur R. Butz’s *The Hoax of the Twentieth Century*. However, the vote received by the NPD in Federal elections fell from 0.3% in 1976 to 0.2% (68,096 out of 38 million) in 1980. The total average editions of all right-wing periodicals in Germany added up to 324,000 in 1983, of which 17,000 represent neo-Nazi publications (according to the ADL the Anti-Defamation League of B’nai B’rith). The total readership would therefore indicate a slightly higher percentage of sympathizers than actual voters. Membership in the NPD declined from 21,000 in 1970 to 6,500 in 1983, but the *Deutsche Volksunion*, headed by the editor of the *Deutsche National-Zeitung*, claimed 10,000 members. Other German right-wing and neo-Nazi groups rejected the legalistic approach of the NPD and, from about the mid-1970s, increasingly leaned towards extra-legal and terrorist activities. The main targets were the democratic institutions of the German Federal Republic, but antisemitism is part and parcel of the ideological baggage of these groups. They numbered about 70 in 1977, with fewer than 20,000 members. Overall, public opinion polls revealed a marked decline in antisemitic senti-

ments, which are now prevalent mainly among older people, whereas the younger generation appeared to be very much less prone to antisemitism. The decline in antisemitic sentiment was accompanied, paradoxically, by increased violence on the part of the minuscule neo-Nazi movement. Group hatred was directed mainly towards Turkish and other foreign workers (“Gastarbeiter”).

A similar picture emerges in other countries. In Britain, the neo-Nazi National Front was declining steadily after initial successes. In 1977, it polled over 5% (119,000 votes) in the Greater London council elections; by 1978 it had dropped to 34,000 votes, with the downward trend continuing in subsequent years. Its antisemitism, while very marked (“the Jewish question” is “a central issue in the struggle for the salvation of British nationhood,” in *Spearhead*, February 1977), was overshadowed by its opposition to black and Asian immigration to Britain. In the early 1980s, the NF split into four groups. Some of the more extreme splinters (such as the British Movement and Column 88) have evinced an inclination to terrorist action.

In France, a May 1977 enquiry (by the Paris *Le Matin*) showed that about 5% of Frenchmen exhibited clear antipathy to Jews, while 29% were against the idea of a Jew as French president (as opposed to 60% in 1966). French group animosity was directed largely towards foreigners (92% dislike Arab North Africans). Right-wing extremist political groups came and went, but they did not poll, until the late 1970s, more than 1% in national elections. An extreme terrorist group (FANE) was banned in 1980.

The Italian neo-fascist party, MSI (Movimento Sociale Italiano), was a force to be reckoned with, despite a split in December 1976. Openly antisemitic views, however, were expressed only in marginal groups such as Ordine Nuovo or Ordine Nero. The MSI polled 8.6% in 1972 parliamentary elections and 5.3% in 1979. In Belgium, a militant Flemish nationalist group, the VMO (Vlaams Militante Orde), was instrumental in several attempts to coordinate neo-Nazi activities on an international scale. In Spain, a similar group called Fuerza Nueva was accused of being linked to a December 1976 bomb attack on the Madrid synagogue. The European country with the strongest antisemitic popular feelings appears to have been Austria, where 50% of Viennese were found to have negative attitudes to Jews in 1977.

In the U.S., Ku Klux Klan groups reappeared occasionally. Their membership numbered about 10,000 in 1980 (but 50,000 in 1967); however, ADL estimates of Klan sympathizers run to about 100,000. A Nazi party was active, under the leadership of Lincoln Rockwell, but has declined considerably. According to polls conducted in the U.S. and Western Europe, popular antisemitism was generally on the decline. Yet at the same time, the shrinking extreme right-wing and neo-Nazi groups had become more violent and terror-prone. In the U.S. the number of acts of vandalism, mail and phone threats, and harassment of Jews and Jewish institutions increased.

In France and Belgium, terrorist attacks were aimed at Jewish targets, such as the January 1978 attack on Jewish communal buildings in Paris, the October 3, 1980, attack on the rue Copernic synagogue in Paris, the July 1980 murder of Jewish children at Antwerp, the August 1982 attack on the Goldenberg restaurant in Paris, and many more. Similar occurrences took place in Austria and Italy, while less serious incidents were recorded in Britain and other countries. The security organs in all these countries largely failed to uncover the culprits. At least some of these attacks appear to have been perpetrated by Arab terrorists; they were clearly antisemitic, as they were directed against Jews as Jews and not against Israeli targets. Other attacks may have been carried out by right-wing or left-wing extremists, by themselves or in collusion with Arab groups. All this must be seen against the background of the general increase in terrorist activity throughout the Western world, with antisemitic terror playing some, but not a large part. Terror may have the effect of disrupting organized Jewish life, and various Jewish groups have attempted to counteract it by legal action and other means. Laws against racial incitement were legislated in most European countries and in the U.S., sometimes with a salutary effect.

In Germany, the Statute of Limitations on Nazi crimes was abolished in July 1979; however, only 6,342 individuals were sentenced for Nazi crimes in Germany between 1945 and 1978, out of 84,403 indicted by public prosecutors.

THE DENIAL OF THE HOLOCAUST. A new phenomenon in the antisemitic discourse was the denial of the Holocaust. While before World War II extreme antisemites demanded the annihilation of the Jews, increasingly influential groups of pseudo-intellectuals argued in its aftermath that six million Jews were not in fact killed. While immediately after the war it was argued that Jews exaggerated the number of victims, this was done by people on the fringes of society and in the gutter press. The situation changed with the writings of Paul Rassinier (*Le Mensonge d'Ulysse*, 1961; *Le Drame des Juifs Européens*, 1964), a former French socialist and resistance fighter who spent some time in a Nazi concentration camp. Identifying with the SS aggressors, he saw great merit in Nazi Germany, argued that the Nuremberg trials had been a sham, and that "only" a few hundred thousand Jews had been killed. Towards the end of his life, he began to doubt the existence of the gas chambers.

The theme was picked up in the U.S. by students and followers of historian David Hogan, and more so of Harry E. Barnes, an American isolationist historian who opposed America's participation in the European Allies' war against Germany. His anti-Communist leanings led him to take the position that Nazi Germany should have been an ally against the U.S.S.R. Academics, many of them of German ancestry, developed his thinking into an attack on American democracy in general and American participation in the Nuremberg trials, which were seen as kangaroo courts dispensing the victors' justice against tortured Nazis forced to confess to crimes they

never committed. Jews were seen as the conspiratorial element behind this unfortunate American involvement.

A number of influential publications helped spread the idea. Former SS-man Thies Christophersen published "The Auschwitz Lie" in Germany in 1973, a term that became a code name for Holocaust denial. Richard E. Harwood (or Verral), a known member of the British National Front, published in 1974 the brochure "Did Six Million Really Die? The Truth at Last." Arthur Butz's 1975 book *The Hoax of The Twentieth Century* became a focal intellectual event: Butz, a Northwestern professor of electrical engineering, was supported by his colleagues on freedom of speech grounds. In 1978 an Institute of Historical Review was founded at Torrance, California, publishing the *Journal of Historical Review*, which is still largely devoted to the denial of the Holocaust. It was founded by extreme rightist Willis A. Carto, publisher of the antisemitic *Spotlight* and head of the so-called Liberty Lobby. International conferences have brought together the French, American, and other branches of what became an international group of activists, with most of its members holding academic degrees from respectable institutions or being lawyers (such as Nazi veteran Wilhelm Staeglich, author of the 1979 *Der Auschwitz Mythos*, or Robert Faurisson, a Lyon university professor of literature).

The tack was to deny the genuineness of Jewish and Allied documentation, regard all trials of Nazi criminals as based on confessions obtained by torture, deny the existence of gas chambers, brush aside testimonies of survivors as lies (Anne Frank's diary was declared to have been forged, for instance), and see a Jewish-Israeli conspiracy as threatening the West. Some Jews, such as Dr. Alfred Lilienthal, an extreme anti-Zionist, and Dr. Howard Stern, a medical psychiatrist, supported this group of intellectuals. Prof. Noam Chomsky of MIT defended its right to be heard. Other Jews admired by the Institute include Yehudi Menuhin, Rabbi Elmer Berger and the leaders of Neturei Karta.

The purpose, consciously or otherwise perceived, seemed to be an attack on Western institutions and systems of justice, in order to create a moderate picture of Nazi Germany and its crimes, by presenting the west as no less responsible for World War II: the Jews pushed Germany into the war and were the reason for the fight to the bitter end. Discrediting the Jews was a means to achieving this purpose. Some of the propaganda was very cleverly aimed at young intellectuals in the West. At least some of the authors appeared to believe their own lies. Their influence appeared to have increased in the 1970s and 1980s: in high schools and some universities the literature of these so-called "revisionist" historians entered into the curriculum. Activities directed against these groups included law suits (such as the one pursued by Mel Mermelstein in Los Angeles, which resulted in a judicial statement acknowledging as a fact that the Holocaust occurred) and attempts at legal measures (in the German Federal Republic) that would make the denial of the Holocaust a punishable offense. This denial was obviously a new form of antisemitism, because it saw the Jew-

ish mind as capable of fabricating such a horror, and it was attuned to the psychology of Western post-Holocaust society.

In countries such as France, antisemitic sentiment and activity was connected in one way or another with the denial of the Holocaust. While French popular feeling appeared to be veering away from antisemitism, new forms, especially among small groups of the intelligentsia, appeared to be spreading. Groups variously known as the “Nouvelle Droite” or “Nouvelle Ecole” propagated a sophisticated racism directed against non-Europeans such as the North African workers who are the equivalent of the “Gastarbeiter” in Germany. The supposedly destructive influence of these non-French elements was linked to the Jews. The groups mentioned were anti-Christian as well as anti-Jewish, and propounded an integral French nationalism based on “new scientific” insight (“sociobiology”). A group led by the poet Alain de Benoist and associated with the Nouvelle Ecole was prominent in the Sunday *Figaro Magazine*. A group of Rassiner’s followers gathered around *La Vielle taupe*, a leftist source of publications. Their influence on French intellectual life seemed to be greater than its apparently small numbers would warrant. In 1980 the group organized itself as GRECE (Groupement de recherche et d’études pour la civilisation européenne), with about 10,000 adherents.

LATIN AMERICA. It was not easy to clarify the situation in Latin America during the reign of the military juntas. Undoubtedly, the terror initiated by the generals turned with special venom against Jews, and Jewish victims were especially maltreated; the number of Jewish victims (reportedly about 2,500) was out of proportion to the number of Jews involved in political strife in Argentina. Indeed, it is difficult to accept the view of editor Jacobo Timmerman, for instance, that the junta was a Nazi group whose main purpose was to attack and eliminate Jews, because South American antisemitism would rather seem to be a reaction to economic and political crises based on traditional antisemitic prejudices that are revived as the crises get worse. But the impact of the Nazis who reached Argentina after the war, and of Fascist ideologies, on parts of the military and political high echelons of Latin America cannot be ignored. In Argentina, some outrages continued into the post-junta period despite efforts of the new democratic government to stop them. Bombs were thrown at Jewish centers elsewhere as well, for instance, in August–September 1982 alone, there were incidents in Quito (Ecuador), Guatemala City, Guadalajara (Mexico) and Maracaibo (Venezuela). However, violent antisemitic incidents in Latin American countries were few, and the intensity of verbal expressions was far lower than that of European countries.

(For more on Holocaust denial, see below.)

SOVIET ANTISEMITISM. The major antisemitic threat during the 1970s was from the Soviet Union. With the tightening of the Stalinist dictatorship came an increasingly anti-Jewish tendency, reviving pre-Bolshevik anti-Jewish stereotypes as butts of propaganda in a crisis-ridden society. Culminating in the mass murder of the leaders of Jewish culture in the

U.S.S.R. in 1949–50 and the so-called “Doctors’ Plot” of early 1953, this tendency caused Jews as a group to be seen as the protagonists of an imperialist campaign designed to topple the Communist regimes in Eastern Europe. Loyal Communists of Jewish descent were tortured into admitting impossible deeds of treachery as part of the regime’s efforts to strengthen its hold over the satellite nations. Stalin’s death on March 7, 1953, prevented the tragedy of a mass expulsion of Soviet Jews to Siberia. Under Stalin’s immediate successors, the anti-Jewish campaign abated. After the Six-Day War in 1967, and the consequent breaking off of diplomatic relations between Israel and the Soviet bloc, a new campaign started.

In literally hundreds of publications, some with very high circulation (up to quarter of a million copies), and at what must have been a tremendous cost, Soviet writers and journalists, some of whom of Jewish descent, focused on a number of Jewish questions: first, the theme of an inherently evil Jewish culture, whose central text, the Bible, was presented as the source of racism, as the expression of the vilest human qualities, and as endangering the human race through its nefarious cultural influence (V.Y. Begun, *The Creeping Counter-revolution*, Minsk, 1974; T. Solodar, *The Wild Woodworm*, Moscow, 1980, and many others). The second and perhaps major theme was that of a Jewish world conspiracy which managed to gain effective power in the West, where it controls Western imperialism. Writers such as Yuri Ivanov, Lev Kornéev, and others represented the “Zionist clique” dominating the West as equivalent to the traditional concept of the Devil. Continuing a tradition that started in Christian antisemitism long ago and was perpetuated via the Protocols of the Learned Elders of Zion (1903) and on through Nazi writings, contemporary Soviet writers did not actually accuse Soviet Jewry of being part of an international conspiracy. The accusation was directed against a nebulous entity, interchangeably described as Zionist or Jewish, which controlled the levers of economic and political power in the West. By comparison, attacks on Israel’s policies were relatively rational, obviously reflecting Soviet political, strategic and economic interests as perceived by the ruling oligarchy.

In a large number of Soviet publications, then, Jews, Judaism and Zionism (the terms are interchangeable) were seen as the greatest danger to the Communist world. This view was echoed, among East European states, mainly in Czechoslovakia, which excelled in the most violent antisemitic propaganda in its major newspapers. The impact of all this on the general public in the U.S.S.R. and Czechoslovakia was difficult to gauge, but it could be assumed that government-organized antisemitic propaganda could have catastrophic consequences for the remnants of the Jewish populations at some future date; there appeared, however, to be some opposition among Soviet intellectuals, including some close to official circles, to the excesses of Soviet antisemitic propaganda (e.g., G. Martynov).

Antisemitic writings were rife indeed: the bibliography runs into hundreds of items for the years since 1967, including

pseudo-scientific writings in a number of disciplines, fiction (including science fiction), and journalism. Little was done to distribute these publications in other countries. They were mainly intended for home consumption and appeared to answer a deep-seated need for an explanation of the failures of the regime in the economic, social and political spheres.

ANTISEMITISM AND ANTI-ZIONISM. The campaign to identify Zionism with racism, which reached its apogee in 1975 with the resolution at the UN equating the two, was initiated and orchestrated by the U.S.S.R., in cooperation with Arab and Third World countries, as a direct consequence of its antisemitic campaign. The aim seemed to be the delegitimization of the Jewish State, which was increasingly being forced into the position of a pariah within the international community, reminiscent of the situation of the individual Jew in antisemitic societies in pre-modern times.

The 1970s Soviet antisemitic propaganda denied without exception that it was antisemitic. It was everywhere claimed that the attack was against Zionism. Some observers, and especially certain Israeli politicians, have argued that all so-called anti-Zionism is antisemitic, because Israel is representative of Jewish endeavors and therefore every attack on any Israeli interest is anti-Jewish. Others (e.g., Shlomo Avineri) have argued that criticism of Israeli policies is hardly antisemitic, as practically all Israeli citizens have at one time or another been opposed to their government, and if such opposition were anti-Zionist or antisemitic, these terms would lose all meaning. Anti-Zionism should therefore be defined as denying the existence of a Jewish people as such and their right to an independent state, and not as criticism of policies or acts. Such anti-Zionism is then considered to be antisemitic, when antisemitism is equated with anti-Judaism. Jewish anti-Zionists, with some exceptions (such as those who align themselves with the deniers of the Holocaust), are regarded as collective self-haters, though some will admit a category of Jewish antisemites.

The attempt to differentiate between criticism of Israel and anti-Zionism in principle is especially important in the study of Arab and Third World antisemitism, on the other hand, and Western liberal and left-wing antisemitism on the other.

The study of Arab antisemitism – as contrasted with anti-Israeli attitudes, including opposition to Jewish national aspirations – is problematic, as the elements are obviously intertwined. However, a case study of Egypt might well show this differentiation because of the Egyptian-Israeli peace treaty (1978), which was accepted as a fact by some of the more extreme antisemitic writers in the pro-government camp (e.g., Anis Mansur). In mass publications such as *Akhhār al-Yawm* or the government party's ideological periodical, *October*, articles were published lauding Hitler's attitude to the Jews, quoting the Protocols of the Learned Elders of Zion as a basic historical text, and comparing Israeli (interchangeable with Jewish) actions on the West Bank and in the Lebanon

with the Holocaust. Stereotyped descriptions of Jews as controlling the wealth of the world, as exploiters and usurers, as a morally defective community were abundant. Fanatic Sunni writers opposed to the peace treaty repeated these accusations but combine them with the view that the Jews are enemies in principle of Islam from its inception; the idea of independent Jewish political existence is totally unacceptable as it would mean relinquishing territory within *Dār al-Islam*, the area of Islam, to a subject people viewed as the enemy of Islamic traditions. This is the view of the Muslim Brotherhood (e.g., Sayyid Qutb, *Al Yahud, al Yahud*, Riyad, 1970), just as it is of the Khomeinite Shi'a movement, whose anti-Jewish ideology increasingly penetrated into Sunni countries (Syria) and areas with large Shi'ite populations (Iraq, Lebanon).

The Palestine Arab Nationalist organizations fighting Israel with terrorism are an entirely different case. The Palestine National Covenant of 1968 (article 20) states that "Judaism, in its character as a religion of revelation, is not a nationality with an independent existence. Likewise, the Jews are not one people with an independent personality." Article 22 sees Zionism as "aggressive, expansionist and colonialist in its aims; and Fascist and Nazi in its means. Israel is the tool of the Zionist movement and a human and geographical base for world imperialism." These statements are clearly antisemitic, and even genocidal, in two respects: first, because the destruction of Israel clearly implies the destruction of its Jewish population, despite the declaration in article 6 that Jews who were living in Palestine before 1917 could remain (not many of these were still alive in 1968, and even fewer later); second, because the majority of Jews see Israel as an expression of their nationality or ethnicity and not only their religious beliefs. All other national or ethnic groups are likely to have such sentiments recognized by the international community, including, presumably, the Palestine Liberation Organization. The non-recognition, in principle, only of the Jewish case is therefore not merely antisemitic but genocidal by implication. However, from the mid-1970s, the PLO took great care to avoid any antisemitic statements or propaganda, with the important exception of refusing to budge from the original statements included in the 1968 Covenant.

In the West, the apparent ease with which anti-Israeli criticism can turn into clearly antisemitic statements was exemplified in the 1982 media attack on Israel's entry into Lebanon. Beyond political or moral opposition to a military move, which in itself cannot be termed antisemitic, the following was characteristic of media criticism of Israel's action: the Jews (not Israel) are "said to be God's chosen people; at all times and in all countries and with every means they have stolen the property of others" (*Ostersunds-Posten*, Sweden, June 1982); the ritual murder story was revived: "A child disappeared" (in Lebanon) "and was found a few days afterwards in a crevice, shot in his head, ritually executed" (*Aftonbladet*, 25.9.82). Respectable papers compared the attack on Lebanon with the Holocaust and then joined the deniers of the Holocaust: "How ironic it is that the word 'holocaust,' now synonymous with the deaths of sup-

posedly 6 million Jews in Nazi concentration camps, is the only word that can describe what is now going on in Lebanon... there is much controversy going on now about the accuracy of that 6 million figure... perhaps it was a type-setter's error that was repeated" (*The Barrie Examiner*, Canada, 3.7.82). British papers and many Continental journals published similar material. Alongside political or moral criticism of Israel's government, which in itself is certainly not antisemitic, traditional antisemitic themes were introduced – Jewish world conspiracy, ritual murder, flawed Jewish character, including racial superciliousness – all directed against the Jewish people as a whole and not just an Israeli government. It would appear that the Lebanese war only served as a pretext for these outbursts.

Anti-Jewish feelings, often masquerading as opposition to Israeli policy, could be found in liberal circles, among which media was but one example. In another context, the 1983 Assembly of the World Council of Churches – founded by Willem A. Visser t'hooft, who was active in efforts to rescue Jews during World War II – declared its support for PLO participation in Middle East negotiations and lamented the rift in the ranks of the Palestinians and the loss of consensus among Arab nations.

Dangerous tendencies could be discerned in New Left circles. Thus, for instance, the National Union of Students in Britain attempted to ban university and polytechnic Jewish societies on the grounds that as they were pro-Israel and as Zionism was racism they should be denied platforms and union facilities (House of Commons, Hansard, 25.22.1977, cols. 2058–2072).

On the other hand, there is no consensus regarding the many Protestant groups on the American Right, loosely described as Fundamentalist or Evangelical. Many, though by no means all, are ardent supporters of Israel, and many also abjure any kind of anti-Jewish stance. Some may have different views, but no in-depth investigation or self-analysis was attempted during the 1970s.

The increase in antisemitic expressions since the late 1960s justifies calling it a wave. "Classical" antisemitism was gradually declining, but what is more important is that new configurations were cropping up, though here too a clear continuation from previous periods can be shown: the emphasis was on Jewish world conspiracy and rule and the Jewish state as the embodiment of the flawed Jewish character and as the center of the conspiracy.

OPPOSITION TO THE ANTISEMITIC WAVE. During the 1970s and the early 1980s the fight against antisemitism was not carried out by Jews alone, though of course Jewish defense organizations bore the brunt of the struggle. In the U.S., the ADL fought manifestations of the phenomenon not only locally but increasingly in Europe and Latin America as well. The American Jewish Congress concentrated more on attacking the Arab boycott of Israel. The American Jewish Committee emphasized the defense of Jewish communities in the political and cultural spheres.

The World Jewish Congress was active on the international scene fighting antisemitism at the UN and elsewhere. Its research institution, the Institute of Jewish Affairs in London, was a major source of information about contemporary antisemitism. In Berlin, the Center for Research on antisemitism at the Technische Universität, specialized mainly, but not exclusively, in Central and West European antisemitism in the last two centuries. National Jewish bodies such as the Board of Deputies in Britain, and the CRIF (Conseil Représentatif des Institutions Juives de France) in France acted against antisemitism locally; in France, a research group associated with CRIF, CERAC (Centre d'Etudes et de Recherche sur l'antisemitisme Contemporain), was engaged in a study of French antisemitism. In Jerusalem, the Hebrew University's International Center for the Study of Antisemitism is currently engaged in a broad historical and contemporary investigation of antisemitic phenomena.

In the Christian world, there came about an increased awareness of the importance of fighting antisemitism. Following the Vatican's historic decisions in 1965 (see before), the Catholic Church was making efforts to combat antisemitism among its adherents. In 1973, the pastoral Instructions of the French Catholic bishops' Conference called for a repudiation of "pseudo-theological arguments" used to reject Judaism. The Protestant World Council of Churches established a Commission on the Church and the Jewish People, headed by Prof. Krister Steadhal, working for better interfaith understanding. The bond between the Jews and the Land of Israel is recognized in the Guidelines for Christian-Jewish Dialogue of the WCC (1982). In May 1981, the Assembly of the Church of Scotland declared "its belief in the continuing place of God's people of Israel within the divine purpose," and the Lutheran World Federation consultation of August 1982 stated that "we Christians must purge ourselves of any hatred of the Jews and any sort of teaching of contempt for Judaism." The Rhineland-Westphalia Synod of the evangelical church in Germany proclaimed the continued validity of Judaism, and the Catholic Church established an International Liaison Committee for itself and the International Jewish Committee for Interreligious Consultations in 1971. A German bishops' declaration of April 1980 was rather weak and apologetic regarding German Catholic responses to the Holocaust, but it acknowledged the Catholic debt to Judaism and opposed the "deicide" accusation. Apart from these official bodies, important Christian leaders are working to fight antisemitism. Franklin H. Littell (Methodist Church) set up the conferences on the Holocaust and the Church Struggle (Detroit, 1970); Father John Pawlikowski and a number of other Catholic leaders in North America have helped fight antisemitism in their Church; in Rome, August Cardinal Bea (d. 1968) was a major influence in the same cause.

Public figures and leaders in the arts, literature and science and in secular movements in the West were concerned with the phenomenon. From Jean-Paul Sartre to Daniel Patrick Moynihan and from President François Mitterrand to Am-

bassador Jeane Kirkpatrick, strong opposition to antisemitic attitudes and actions was expressed and the danger to Western society from antisemitism was recognized.

The term antisemitism (or rather “anti-Semitism”), as a catch-all phrase denoting anti-Jewish attitudes or acts of all types, is misleading. Casual expressions of dislike as well as murderous hatred are subsumed under one term; but in the absence of a differentiating terminology the term continues to be used. As there is no “Semitism” to which “anti-Semites” object, the term being used to denote haters of Jews as Jews, it should indeed properly be written antisemitism rather than anti-Semitism.

Partly as a reaction to antisemitism, Jewish antagonism to non-Jews, sometimes of a violent and even terrorist nature, has no name, but belongs to the same general category of group hate. Originally a protective psychological defense mechanism, it has burgeoned in the last few decades into a recognizable stance among some radical religious and nationalist Jewish groups in Israel and in the Jewish Diaspora.

[Yehuda Bauer]

In the 1980s

In the Western world, the decade of the 1980s began with a wave of antisemitism sparked off by the Lebanon war. There followed a decline in public expressions of it until the late 1980s when economic recession took hold, far-right parties made significant advances, and newer forms of antisemitic expression gained ground. The resurgence of grassroots antisemitism in Eastern Europe, following the collapse of Communism, gave encouragement to antisemitic groups in the West, and by 1992 it was clear that a wave of resurgent antisemitism was under way.

THE WEST: NEW FORMS OF ANTISEMITIC EXPRESSION. In the United States and Germany, anti-Jewish sentiment, as measured by opinion polls, declined steadily, and in other countries no marked increases in antisemitic sentiment were recorded. However, even in countries where polls indicated decreasing levels of antisemitism, the number of antisemitic incidents appeared to rise steadily and become more violent and abusive. A particularly gruesome example was the desecration in May 1990 of the Jewish cemetery in Carpentras, France, where a corpse was dug up. This shocked many and a huge demonstration led by President Mitterrand, took to the streets of Paris.

In the U.S., skinhead groups were thought to be responsible for the rise in antisemitic incidents in the mid-1980s which continued until 1992, when there was a reported decrease in such incidents for the first time in six years. Skinhead groups were also a source of concern in the United Kingdom, Italy, France, Germany, and Canada, where they were thought to be behind the increase in antisemitic attacks over the decade.

Many neo-Nazi groups were formed during the 1980s. Most remained electorally marginal, although some were thought to be responsible for the more violent attacks. There

was increased international co-operation between extremist groups in terms of the publication and distribution of propaganda and the organization of conferences and speaking tours.

By the mid-1980s, disillusionment with established political parties, rising nationalism, ethnic conflicts, and an influx of immigrants and asylum-seekers from Eastern Europe led to increased electoral gains for far-right parties in Western Europe. These parties were principally anti-immigrant but their leaders used antisemitic innuendo to make it clear to supporters that antisemitism was part of the fundamental ideological outlook. Antisemitism was far more open at local party level. Racial violence was directed mostly at blacks, Asians, Turks – anyone seen as a “foreigner” – and not at Jews. Yet antisemitic slogans and rhetoric often seemed to be employed by those perpetrating such violence.

In France, the Front National consistently achieved between 9 and 15 percent of the vote. By the late 1980s far-right parties such as the German Republikaner Partei, the Belgian Vlaams Blok, and the Austrian Freiheits Partei also won seats at local and national levels. In 1984, for the first time, the far-right parties had sufficient numbers in the European Parliament to form the Group of the European Right, entitling them to EC funding.

In the U.S., David Duke, the former Ku Klux Klan leader, and Pat Buchanan, known for anti-Jewish comments, were candidates for the 1992 Republican Party’s presidential nomination. Although both failed, there was considerable unease at the willingness of the American body politic to embrace these candidates.

Black antisemitism was a serious concern through the 1980s in the U.S. Two of its principal sources were Louis Farrakhan, leader of the Nation of Islam Movement, and the Reverend Jesse Jackson, the black contender for the 1988 Democratic Party presidential nomination. Further tension was caused when, in 1991, a black child was run over by a Hasidic driver in the Crown Heights district of New York and a seminary student was murdered in riots which followed.

The “Pollard affair,” in which Jonathan Pollard, a Jewish U.S. citizen was convicted of spying for Israel, caused anxiety in the Jewish community. However, fears that the affair would result in the traditional antisemitic accusation of dual loyalties were allayed by opinion polls which indicated that it had little negative effect.

Antisemitism in Latin America was marginal during the period, except in the case of Argentina. Under the Argentine military junta, antisemitism had been a factor in the violent campaign waged against perceived political enemies. When democracy was restored after the Falklands/Malvinas war, expressions of antisemitism in publications increased markedly. However, by the end of the decade, even in Argentina, antisemitism appeared to be decreasing in significance.

In South Africa, Australia, New Zealand, and other countries in the Asia-Pacific region, antisemitism remained essen-

tially marginal, although overtly antisemitic groups existed and their activities were occasionally cause for concern.

While significant efforts were made to curb antisemitism throughout the period, the start of the first intifada in December 1987 reignited tensions. Interfaith dialogue played an important role in countering antisemitism in the Christian churches, particularly among the clergy, but did not appear to have sufficient impact on their charges.

POST-COMMUNIST ANTISEMITISM IN EAST-CENTRAL EUROPE. These years could be characterized as a time of transition from institutionalized to grassroots antisemitism. Indeed, the early 1980s were for the Soviet Union a transitional phase between the bureaucratic stagnation of the Brezhnev era and the reformism of the Andropov-Gorbachev regimes. Beginning around the years 1982–83, there was a shift away from the state-sponsored ideological and political media campaign against Zionism and Israel which had begun in the late 1960s in response mainly to the emigration movement of Soviet Jewry. The campaign had been expressed in Marxist-Leninist terms but elements of it had been marked by transparent anti-Jewish imagery, in particular the invocation of an alleged “Zionist”-Masonic world conspiracy against Moscow and the Soviet Bloc.

As the political wind changed, some writers, propagandists and activists who had specialized in this form of propaganda paid lip service to *perestroika*, others joined the burgeoning chauvinistic and antisemitic groups which had sprung up in Russia, yet others disappeared from view.

With the failure of reform, the economic, political, and social fabric of the Soviet Union deteriorated. This was accompanied by ethnic strife in a number of republics. In December 1992 the Soviet Union finally collapsed and was replaced in part by the shaky Commonwealth of Independent States; the three Baltic states had earlier successfully sued for independence from Moscow.

By the beginning of the 1990s, the situation with regard to antisemitic expression in Central and Eastern Europe had changed radically. In not a single country was antisemitism tolerated as a state policy. On the contrary, Jewish culture was undergoing an unimpeded renaissance, emigration was virtually unrestricted, and the leaders of the new states were concerned both with combating xenophobia, racism, and antisemitism by political and legal means and with maintaining good relations with Israel.

At the same time, the collapse of the Communist system was accompanied in several of the countries by the rise of grassroots anti-Jewish movements of varying degrees of importance. One particular source of danger was tactical alliances between “unreconstructed” Communists and extreme nationalists. Another source of concern, in particular in the Baltic countries, was the rehabilitation of accomplices of the Nazis in implementing the “Final Solution.”

At the turn of the decade, the principal danger spots in post-Communist Central and Eastern Europe appeared to

be Russia, where the far right embraced both the would-be respectable National Salvation Front and numerous Pamyat-style neo-Nazi and neo-fascist groups; Hungary, where the far-right parliamentarian and writer Istvan Csurka had been expelled from the governing party and had started up a party of his own; and Romania, where the governing coalition depended on the support of a number of xenophobic parties. While there appeared to be relatively little popular prejudice against Jews in any of the post-Communist countries—there was no shortage of ethnic scapegoats – the economic, political, and social dislocation which followed the collapse of Communism remained serious cause for alarm. The bitter warfare in the former Yugoslavia, with its abhorrent practice of “ethnic cleansing,” served as a solemn reminder of the depths to which ethnic strife could descend.

ANTI-ZIONISM AND ANTISEMITISM. Much expression of antisemitism at the beginning of the 1980s was disguised as anti-Zionism. Although by no means all anti-Zionists were antisemites, many groups across the political spectrum, but particularly on the extreme left, couched their antisemitism in anti-Zionist rhetoric. For some Communist countries too, anti-Zionism was a convenient tool for concealing state-sponsored antisemitism. The 1975 UN General Assembly resolution 3379, which equated Zionism with racism, was a principal tool of the antisemitic anti-Zionist campaign, which reverberated for a number of years, well into the 1980s, with over 200 denunciations of Israel or the Jewish people or both in national and international forums.

The Israeli invasion of Lebanon in 1982 sparked off a wave of antisemitism which was closely related to negative images of Israel. In the following few years, criticism of Israel provided effective cover for expressions of antisemitism, generating considerable debate as to the relationship between anti-Zionism and antisemitism. Some believed that since anti-Zionism denied the rights of Jews on a collective level, it was the equivalent of denying the Jew individual rights – a classic element of antisemitism.

As the 1980s wore on, however, anti-Zionism began to diminish. The Third World forums in which anti-Zionist rhetoric was constantly featured declined in importance as many of the participants saw that it brought them no benefit. The collapse of the Soviet empire led to an end to Communist state-sponsored anti-Zionism. Far-right groups which utilized anti-Zionism continued to do so but, as anti-Zionism became less of an acceptable notion on the international political stage, it became less useful to those seeking a “respectable” front for their antisemitism. In addition, as socialism appeared to be discredited, far-left antisemitic anti-Zionism declined markedly.

In many Arab countries antisemitism was used in the continuous fight against Zionism and the State of Israel. Much of this antisemitism was imposed from above since practically all Arab governments exercised strict control of the media. However, in some countries, Egypt in particular, there

was clear evidence of antisemitism becoming increasingly a grassroots phenomenon, linked to the rise of Islamic fundamentalism.

Antisemitism from Islamic fundamentalist sources became a cause of increasing concern during the period, with extremist groups in certain Western countries propagating violent anti-Jewish rhetoric and using traditional far-right Christian antisemitic themes. Much of this activity was encouraged by Iran and although it resulted in little actual violence against Jews outside of the Middle East, the potential for violence was certainly increasing at the end of the period under review.

THE DENIAL OF THE HOLOCAUST. During the 1980s, Holocaust-deniers sought to depict denial as a scholarly endeavor, issuing “research” purporting to prove that the Holocaust was a hoax. Their main focus was on the gas chambers, particularly at Auschwitz.

Fred Leuchter, who invented the lethal injection system used for executions in some American states, was commissioned to analyze the gas chambers “scientifically.” Leuchter’s work, which claimed to prove the gas chambers a physical impossibility, was disseminated widely by Holocaust-deniers, although it was found to contain fundamental scientific errors and historical inaccuracies. In Britain, the so-called Leuchter Report was published by the far-right historian David Irvin, whose influence in Neo-Nazi circles worldwide increased parallel to the escalation of his tone and arguments, and his moderate portrayal of Hitler.

Other Holocaust-deniers who continued to provide the “conceptual” framework for the deniers’ arguments were Robert Faurisson, in France and Arthur Butz in the U.S. (see above).

Young people were targeted by deniers in an attempt to spread doubt about the Holocaust and the veracity of such works as the *Diary of Anne Frank*. They continually placed advertisements denying the Holocaust in American campus newspapers. A significant number of papers accepted the ads, contending that they represented “ideas” and “points of view” which, however odious, deserved to be heard. In addition, the deniers strengthened their ties with extremist groups worldwide.

Certain countries tried to use the courts as a means of controlling Holocaust-denial activities. However, such legal measures are often difficult to sustain. In 1992, the Canadian Supreme Court overturned the conviction of prominent Holocaust-denier Ernst Zundel, ruling that the prohibition against spreading false news likely to cause injury to a public interest was too vague and possibly restricted legitimate forms of speech

[Hadas Altwarg / Antony Lerman /
Julia Schopflin / Howard Spier]

IN JAPAN. Beginning in late 1986, a marked increase in antisemitic literature surfaced in Japan. Antisemitic literature had been popular in Japan previously, most notably in the 1930s.

In Japan, the image of the Jew that has developed over the past century is a warped and distorted one due to inaccurate sources of information: the anti-Bolshevik White Russian officers of the 1920s, the translation of the *Protocols of the Elders of Zion*, Nazi propaganda in the 1930s and 1940s, and American antisemitic writing in the 1950s and 1960s. But, ironically, although the intention of many of these sources of misinformation is antisemitic it has not led to antisemitic acts by the Japanese. This is because the Japanese have a different value system from that of the West. While they have accepted the image of the Jew as “smart and rich” this has not led to dislike. On the contrary as the Japanese respect “smart and rich” people, they believe that the Jews should be admired and emulated.

However, during the 1980s there were dozens of other works published about Jews and Judaism, including Japanese translations of authors such as David Ben-Gurion and Elie Wiesel. In addition, Japanese scholars have written on Jewish subjects. It is important to emphasize that these, as well as antisemitic books, have also been published in Japan.

The antisemitic literature can be divided into two general categories. The first describes the extraordinary intelligence and financial wizardry of the Jews. These kinds of books are not necessarily intended to slight or insult the Jews. On the contrary they extol the Jews for their great business acumen and, propose that the Japanese should emulate the so-called “Jewish way of business.” These books usually led not to a dislike of Jews but a peculiarly Japanese kind of admiration.

The second category is based on *The Protocols of the Elders of Zion* and uses *The Protocols* to explain the troubled economic situation. They blame the rising value of the Japanese yen on a world-wide Jewish conspiracy to control Japan. One “proof” of this is that multinational companies are a “Jewish invention.” IBM, Exxon, Ford, and Chrysler as well as other leading companies, are Jewish-owned; Rockefeller, George Shultz, and Stalin are Jewish; and Korea’s economy was planned by the Jews to beat Japan. Jews are also held responsible for the Tanaka-Lockheed scandal (charges of corruption involving the Japanese prime minister Nakoi Tanaka and the American aircraft company in 1976), the Chernobyl nuclear accident, and the pillage of the Incas in the 15th century. The most important “fact” in these arguments is that the Jews control the United States and whoever controls the U.S. controls the world.

The “evidence” is as absurd as the allegations. For example, the Lockheed scandal is seen as an act of retaliation by the Jewish world conspiracy. The “Jew” Rockefeller had planned to have the “Jew” Kissinger open China to the U.S. in order to procure off-shore oil rights. Similarly Tanaka had to be eliminated lest the Japanese endanger the “Jewish world conspiracy” to gain off-shore oil rights.

The leading “Jewish conspiracy” theorist is Masami Uno whose four books have sold well over 1,000,000 copies. Uno also lectures extensively on this subject and has written several

articles for various publications. In the April 1987 issue of *Big Man*, a popular monthly, he wrote the following passage:

How does the international Jewish capital, which effectively controls the U.S. assess America? Jews have gradually been taking their money out of the U.S. for the past several years.

The concept of multinational enterprise, which can move like an amoeba all over the world in search of profits, is typically Jewish.

While Japan is struggling with problems arising from loans made to the Third World countries and massive investment in the U.S., these multinational enterprises have removed far more massive assets from the U.S. to elsewhere and are looking for next investment targets. What will be their next investment target? I'm sure that they will invest their money in buying up Japanese enterprises. When will they start their action? It will be when debtors in the Third World declare a moratorium and stocks plummet simultaneously.

The Great Depression calls to mind scenes of people in bread lines, but these pictures only show one side of things. The other side of the Depression was that the Jewish capital groups, such as Rockefeller, Mellon and Morgan in the U.S. and Rothschild in Europe, accumulated massive fortunes during that period. They kept buying massive banks and companies that went bankrupt. There is no guarantee that the same thing will not happen in Japan.

Among other things these books also trivialize the Holocaust. Uno claims that it was physically impossible for 6,000,000 Jews to have been killed and also states that Hitler had no choice but to eliminate the Jews. Another writer, Toru Kawajiri, estimates that only 200,000 Jews died.

During the late 1980s a total of approximately 1,500,000–2,000,000 antisemitic books in both categories were bought in Japan. These books' popularity is an outgrowth of the tremendous concern in Japan about current economic conditions. The recent leap in the value of the yen has hurt Japanese exports. Many Japanese perceive themselves as gravely threatened and are fearful of the future.

Thus, when a book claims it has answers for the economic situation it has great appeal. Many people who bought books with such titles as *If You Understand the Jews, You Understand the World* were primarily interested in what was said about economic matters and had only a vague curiosity about the Jews. Thus the fact that two million copies of the above book were sold should not be regarded as a sign of a rise in antisemitism.

There is another explanation for the recent popularity of antisemitic books. Japan is very concerned with preserving its sense of national identity. Historically, it has always been fearful of foreigners, with large numbers believing that Japan is only for the Japanese. Such a concern can lead to varying degrees of xenophobia and a tendency to blame the outsider in times of trouble. Thus the recent popularity of antisemitic literature can be understood as a reaction against foreigners in general. It has even been suggested that in reality antisemitic books are attacking America, but since America is too important to Japan it is more politic to blame the Jews.

Other groups have also been blamed for Japan's economic problems. This includes the Rockefellers, Illuminati, and Freemasons.

There is, however, a fundamental difference between Western antisemitism and Japanese attitudes to Jews. In the West Jews are blamed as such but in Japan the word "Jew" is often used as a pseudonym for Americans and even possibly for all foreigners. Furthermore, Japanese do not generally distinguish between one white Westerner and another but see all Westerners as a large group with only minor differences between them. These attitudes reflect a sense of xenophobia in general rather than any specific hostility towards the Jews.

These antisemitic books are believable to the Japanese for several reasons. First, the books are popular in form and language. They are aimed at the low- and middle-level white-collar workers. Such people have had little contact with or understanding of the West and have no reason to doubt the "facts" presented to them. Furthermore the Japanese are great respecters of the printed word.

Until March 1987 these antisemitic publications went basically unopposed both in Japan and abroad. The *New York Times* on March 12, 1987, carried an article, "Japanese writers critical of Jews," which detailed the rise in popularity of the Jewish conspiracy books. This article was followed by others in the Western press.

Subsequently, the Japanese press published several essays debunking the Jewish conspiracy theory. The first of these appeared in the April edition of the intellectual monthly *Bungei Shunju*. This article, by Professor Herbert Passin, a leading Japanologist, detailed the inaccuracies of such theories and scoffed at their credibility. Other eminent writers also published articles in this vein included Professor Go Muramatsu, Y. Teshima, and Shuichi Sato. Masahiro Miyazaki, former lecturer at Waseda University and author of several books on economics, published *If You Mind the Jews, You Will Lose Sight of the World* which parodied the three of Uno's books and explained point by point why the claims made against the Jews are baseless.

On a political level, U.S. Senator Arlen Specter and Rep. Charles Schumer called on Prime Minister Yasuhiro Nakasone to take action against the spreading of antisemitic feeling. On March 19, 1987, Mr. I. Umezu, director of the Japan Information Center in New York, wrote a letter to the *New York Times* which contained the following reassurances: "Anti-Semitism has no roots in Japan's cultural history. The Japanese government and people are firmly opposed to any form of discrimination, whether ethnic, religious or other grounds, and we are firm in our determination to uphold that position."

On March 23, 1987, a delegation from the Anti-Defamation League of B'nai B'rith met with the Japanese ambassador to the U.S., H.E. Nobuo Matsunaga, to protest to the Japanese government about the antisemitic literature being published in Japan. Matsunaga responded that while Japan guarantees freedom of speech these publications did not reflect the view of the Japanese government or people.

On September 4, 1987, in response to a question in a session of the Japanese Diet, then Foreign Minister Tadashi Kuranari stated: "I must say that the argument that the problems Japan faces today are due to a global conspiracy of the Jews is totally untrue and irresponsible." While this statement should have helped to delegitimize antisemitic literature, its value and importance were severely limited by the fact that the statement received almost no Japanese press coverage.

On February 3, 1988, the American Jewish Committee held a consultation on Japanese-Jewish relations. It can be said that world Jewish organizations were slowly coming to the realization that Japan as a growing economic and political power could no longer be ignored by world Jewry. While this antisemitic literature has not led to any significant acts of antisemitism, such misinformation left unchecked might ultimately be harmful both to Jews and to the Japanese. In light of this, an effort was made to establish a Yudaya Bunka Center, a Jewish cultural center, to provide accurate and basic information about Jews to the Japanese.

[Michael J. Schudrich]

The 1990s and After

WAVES OF ANTISEMITISM AND THEIR CAUSES. Antisemitic activities and expressions were on the rise from the beginning of the 1990s: during the first Gulf War world Jewry, especially the U.S. communities, were accused of pushing their countries into a war that was in Israel's interests. This accusation served to bolster the "conspiracy theory" that was already in place and according to which the Jewish desire for world domination manipulates global events. Moreover, the waves of immigrants and foreign workers caused by the fall of the Soviet Bloc and the globalization process exacerbated problems of defining and relating to ethnicity, nationality, and the rights of newcomers arriving from the poor Southern Hemisphere to the richer Northern one – all bearing on attitudes to Jews, the symbol of the eternal other. Indeed, the year 1994 was by far the worst of the decade – more than 300 cases of violence against Jews were registered worldwide. Violence doubled in Western Europe, most notably in Germany, and increased in Russia. Great Britain remained the most violent country with respect to racist and antisemitic activities for the third year running.

Additional reasons for these developments were the considerable increase throughout the Western world of the role of extremist Muslim groups and movements affiliated to fundamentalist organizations in North Africa and the Middle East. The extreme right, reacting to the growing presence of immigrant minorities, escalated its response to Jews as well, and even more so, having at their service the skinheads, youth devoid of ideology and of institutionalized frameworks. New and constantly improving techniques, the Internet first and foremost, that facilitated the dissemination of antisemitic propaganda and the cooperation among extremist groups, defied government efforts to impose bans and legal constraints. Worst of all was the impact of public debates on World War II

(see below), the gradual dissolving of former taboos and the filtering of instigation by hard-core extremists down to the general public.

In 1995 these developments prompted government agencies, police and parliaments included, to increase anti-terrorist and anti-racist legislative and enforcement efforts. Their unequivocal response to these few years of rising violence against foreigners and Jews resulted in a sharp decline in such violence for the following two years, until 1998, especially in Western Europe, Canada, and the U.S., but not in Russia. However, use of the Internet by extremists was not hampered and served as a vehicle to disseminate their views, especially the "world Jewish domination" notion that was still prevalent in Japan at the time and was enhanced by additional claims made by U.S. Nation of Islam leader Louis Farrakhan: having been slave traders, the Jews fabricated a Holocaust story to divert public attention from the suffering of the blacks, and distorted their image through Jewish control of Hollywood and the media. The ongoing globalization, resulting in rampant unemployment, cuts in welfare spending, and subsidization of newcomers' needs, caused public dissatisfaction. The extreme right-wing parties were not slow in exploiting the situation, and their leaders – Jorg Haider in Austria, Filip Dewinter in Belgium, and Jean-Marie le Pen in France, made impressive electoral gains in 1995–97. A few years later, Corneliu Vadim Tudor in Romania, Christoph Blocher in Switzerland, and Istvan Churka in Hungary would follow. While such parties became stronger, extra-parliamentary extremist groups weakened.

After three relatively quiet years, 1998 and 1999 were years of great concern and unease as violence became more severe and each attack caused more damage and underscored the enhanced local and international organizational capacities of the perpetrators. The first signs of cooperation between Islamic extremists, active even during the years of the Oslo Accord, and ultra-rightists or -leftists surfaced in a number of countries. They were coupled to attempts by the right-wing organizations to compensate for their weakness through regional or even European reorganization, and to maintain "leaderless cells of resistance" that were harder to identify and monitor. Indeed, the far right orchestrated a violent summer in the U.S. in 1999, and German authorities warned that the number of such groups whose members are prepared to use arms is on the rise, and that some areas in slowly adjusting East Germany were closed off by hooligan youngsters even to the police. Moreover, violence spread to countries hitherto quiet in this respect, not to speak of overt and uncurbed use of antisemitic motifs and an atmosphere of violence in Russia that kept intensifying each year, with the beating of rabbis on the streets of Moscow, Buenos Aires, and London – blatant acts unknown for decades. Violence was accompanied by a no less troubling proliferation of graffiti, slogans, personal insults, threats, and harassment, together with a host of verbal, electronic, and visual anti-Jewish expressions.

Following two difficult years, the year 2000 ushered in a new century with cautious hope. At the Stockholm Conference

some 45 countries declared their commitment to embarking on a less violent century by implementing the lessons of the Holocaust. Pope *John Paul II visited Yad Vashem, and Holocaust denier David *Irving lost his lawsuit against American Jewish historian Deborah Lipstadt with an unequivocal condemnation by a British court that upheld the contention that he had falsified truth and facts – all dealing Holocaust denial a severe blow and creating a new atmosphere. But within a few months, in October 2000, with the outbreak of the second Intifada, an unprecedented wave of violence against Jews swept Western Europe, the U.S., and Canada. Young immigrants from Muslim countries perpetrated most of the 180 or so incidents of violence within a few weeks, during the High Holidays. From then until 2005 a number of waves occurred, each more violent than the previous one, primarily targeting the young and old who looked Jewish on the streets and in educational institutions, but not abandoning the desecration of cemeteries and synagogues. The Durban, South Africa, U.N. World Conference against Racism, held in September 2001, originally assembled to address acute world problems of discrimination, xenophobia, and intolerance originating in the migration process, turned into a wholesale attack that singled out Israel and the Jewish people from among 160 countries and nations. Together with the September 11 events, for which American Jews and Israel were immediately blamed, the conference opened a new wave of virulent antisemitism, later followed by another in 2002, with the opening of Operation Defensive Shield, and another with the invasion of Iraq led by the U.S.

Fueling the fire were the concurrence of interests between radical Islam and the European left; deep-seated anti Americanism and pacifism, combined with anti-globalization movements, associating rich Jews operating in the global economy and the State of Israel with both their bugbears; post-nationalist and post-colonial discourse in a unifying and repentant Europe when the Jewish people exercised a unique kind of nationality; the unspoken wish to shake off the heavy shadow of the Holocaust and the Jewish demand to be compensated for its property looted during the war. Violence against persons has been perpetrated in countries with a large immigrant population, most notably a Muslim one (France, Great Britain, and Canada), while attacks on property and communal sites are more evident in countries where the far right is active (U.S., Russia, and Germany). Thus, the left, gradually realizing that millions of frustrated immigrants have not really been integrated, and are being used in the industries of aging countries, are stricken with guilt feelings toward them, but not toward the Jews. Since the liberal left comprises a considerable part of academia, the media, and government, the scene was set for hostility towards the Jewish communities and the Jewish state.

WORLD WAR II AND HOLOCAUST-RELATED ISSUES. Ceremonies held in 1994–96 all over the world, commemorating the 50th anniversary of events that took place during the final

stages of the Holocaust and World War II, brought relations between Christians and the Jewish people to the fore. The impact of these ceremonies on public debate and extremist activities was especially marked in Eastern Europe and the former Soviet Union, where most of the Holocaust victims had lived and were killed. The central issues were: compensation for Jewish property; rewriting of the dark history of the past in terms more flattering to local collective memory; rehabilitation of war criminals who became anti-Communist national heroes; cooperation of the local population with the Nazis, which is still being equated with Jewish support of Communism. Every commemoration and new monument or financial agreement – themselves Jewish achievements – took their toll in anti-Jewish terms.

Compensation for Jewish property came to the fore when archives were opened in the Western world in accordance with the 50-year archive laws, and in the former Soviet Bloc after its collapse. While governments, mainly in the West, supported the demands of Jewish organizations, bolstered by American pressure, and even hailed the courageous fight for lost rights and property, grassroots attitudes, especially in Eastern Europe, were different: they clung to the notion of Jewish domination of the world and the image of the rich manipulating Jew first found in the *Protocols of the Elders of Zion*, imagining a Jewish grip so strong that the Jews can sell the world any horror story, blackmail it, and get paid for it twice, even 50 years later. Holocaust denial thus became an even more convenient solution, exonerating former generations. The first example was the “Swiss Gold” affair, which pointed to a large number of countries that benefited either from Jewish assets or from transactions with the Nazi regime, in effect collaborating with and supporting, it. Indeed, antisemitism in Switzerland, long dormant, was openly expressed on the individual and even the official level. Another example was Hungary, where a rise in antisemitic violence was registered with the passage of the 1996 law recognizing Jewish rights. Jewish demands generated resentment especially then, when the majority of the Jews were seen as residing in wealthy countries while millions suffered poverty and human rights abuses worldwide.

As the century drew to a close, World War II was increasingly perceived as the major event that shaped it, and other issues accentuated the pivotal role of the Jewish people: the political and economic crisis in Russia highlighted the alleged role of the Jews in the pre- and post-Communist regimes; Pope John Paul II’s epistle to his Catholic flock worldwide, “We Remember: Reflections on the Holocaust,” summarized two millennia of Jewish-Christian relations and admitted that Church antisemitism had paved the way to the Holocaust. Right-wing organizations, especially in Germany and Austria, were cautious in formulating their messages, taking into account the resonance of World War II-related issues in public opinion. Their caution paid off in electoral gains, which encouraged the extra-parliamentary extremists. Germany struggled to find a way to remember its past with a new generation in government office. This was evident in a con-

tinuing controversy over the erection of a central Holocaust memorial in Berlin, and the first voices among intellectuals doubting that the centrality of Auschwitz in public life is still justified.

While the 50th anniversaries and commemorations of World War II brought to the fore the negative image of the Jewish people and resentment of the Jews' role as an eternal reminder of sins that people preferred to forget, the opposite occurred 10 years later, during the 60th anniversary. A special event dedicated to the liberation of Auschwitz at UN headquarters in New York, not to mention a ceremony in the camp itself, with the participation of leading international figures and hosts of declarations and speeches, might be explained either as a form of compensation for the antisemitic violence that had not yet been suppressed by these same leaders; or as the use of Auschwitz as a symbol of human suffering as such, and not only Jewish suffering.

THE NEW ANTISEMITISM AND ANTI-ZIONISM. The new antisemitism is a term that surfaced after the events of October 2000, to distinguish it from late 19th century political antisemitism and post-World War II antisemitism. It is characterized by increasing violence mainly against the person of the Jews, mostly in Western Europe, where France is the biggest trouble spot, and North America and Russia; it is marked by a transfer of initiative from the Christian world to the Muslim one for the first time in the long history of antisemitism. Virulent propaganda keeps spreading from Arab countries, especially those in the Middle East, into the Western world, and Muslim immigrants, numbering about 15 million in 2005 in Europe, have become an electoral and economic asset overshadowing the Jewish communities and Israel. The basic negative characteristics of the collective image of the Jew as they accumulated throughout history have not changed, and traditional and even primitive antisemitism is still put to use. What has changed is the sharpening of the image and the degree of vilification as well as the intensity of the political use that is being made of it. The new antisemitism is political, serving as a tool in the war of the radical Muslim world against the West, and first and foremost against the U.S., a war in which Israel and the Jews represent modernity, a primary enemy in the radical Muslim worldview. And it is political as a convenient fusion of antisemitism and anti-Zionism based on the contention that Israel and the Jewish people are one entity, each responsible for the other and for the whole.

One might say that while part of the antisemitism in Christian countries in recent decades has turned into anti-Zionism, in the Muslim world anti-Zionism appears to be turning into anti-Jewishness, thus broadening a political and territorial conflict into a clash of ideological and religious world views. The use of Christian and secular European antisemitic motifs in Muslim publications has been on the rise, yet at the same time Muslim extremists are turning increasingly to their religious sources, first and foremost the Koran, as a primary anti-Jewish source. Indeed, in the media and in

public meetings in Arab countries antisemitic motifs ranged from absurd accusations that Israel and the Jews engage in the spreading of AIDS and corruption in order to dominate the Middle East, to the extensive use of Nazi motifs, the blood libel and the Protocols of the Elders of Zion, with a hero's welcome to the French Holocaust denier Roger Garaudy.

Two of the most debated issues in this regard are the correlation between antisemitic events and the Middle East conflict and the question of when anti-Zionism becomes, if indeed it does, antisemitism.

While some of the antisemitic waves and incidents were clearly connected to the Middle East, many others were not connected to the outbreak of violence between Israelis and Palestinians, especially those which occurred during the years of the Oslo Accords or following the death of Chairman Yasser Arafat, when a process of rapprochement between the parties seemed to be underway. Also, many of the Muslim immigrants come from countries not necessarily connected to the Middle Eastern conflict, such as those from India and Pakistan in the U.K., from Turkey in Germany, or from central Africa and the Caribbean Islands in France and Canada. Indeed, by 2004 this correlation, previously considered a basic tenet, was being reconsidered because of the growing awareness that the results of immigration are basically a European and global problem, and that the declared correlation with the Middle East is a convenient way to blame the situation on external factors.

While there is general agreement that criticism of Israel's policies is not necessarily antisemitism, there is also agreement, among non-Jews as well, that there are forms of anti-Zionism which are not just criticisms of Israel's policies but an objection to its very existence, thus becoming antisemitism: (a) when the language and images used and the character traits attributed to Israel are imbued with known antisemitic stereotypes, and Israel becomes the collective Jew, or the Jew among the nations; (b) when Israelis and Jews are depicted as a cosmic evil, are blamed for worldwide disasters, and are compared to the Nazis, the ultimate evil; (c) when Israelis and Jews supporting the State of Israel are singled out and attacked, and are treated out of all proportion to the issue at hand and in comparison with the response to the actions of other nations; the often mentioned higher expectations from Israel as a democratic state are at the same time a way to avoid confrontations with despotic regimes, certainly the Muslim ones, spawning such phenomena as a ban only against Israeli universities; (d) when the very existence of a Jewish people, and/or its right to have a national movement and a state are doubted or delegitimized; the Merriam-Webster dictionary stated in 1966 that antisemitism is "opposition to Zionism; sympathy with opponents of the State of Israel"; (e) when the Holocaust is denied, distorted, and made a political weapon, and when the Jews are blamed for allegedly misusing it to extort financial support and to make political capital. While Jewish communities perhaps pay the price for the Middle East conflict, Israel pays for the image of the Jew: "in polite

company,” wrote a London *Sunday Times* observer, “one uses ‘Israel’ when hesitating to use the word ‘Jew.’”

REACTIONS TO THE WAVES OF ANTISEMITISM. “We are back in the 1930s,” was the reaction of most spokespersons of Jewish organizations and many individuals to the waves of antisemitism that started in October 2000. Though originating in calls of “death to the Jews” in the streets and in the numerous cases of arson against synagogues during the High Holidays, which reoccurred in 2001 as well, these developments belonged to an era that cannot be compared with the Nazi period: In the 2000s, the antisemitic waves notwithstanding, Jewish organizations and communities are on the alert, well-organized, pinpointing the recent processes and fighting against them, and applying history’s lessons. The clear stance of the U.S., of the late Pope John Paul II (1978–2005), and of Israel, coupled with the desire of countries to be members of international bodies by demonstrating their commitment to human rights, are all postwar developments. There is today no state-orchestrated antisemitism, and the billion-plus Muslim believers comprise a variety of sects, beliefs, and ways of life. Moreover, European and North American countries admit today that the ideal of a multicultural society advanced from the 1990s, especially by human rights-oriented NGOs which believed in the idea of gradual assimilation, is being replaced by a growing awareness that immediate steps should be taken to calm inter-community tensions, the most prominent form of which is antisemitism. These steps include general education, education for the democratic system, legislation, law enforcement, operative definitions and comprehensive databases and monitoring. A long series of conferences and seminars, accompanied by public opinion polls and reports, initiated by the UN, the OSCE (Organization for Security and Cooperation in Europe), the European Union, and individual countries, was devoted to the struggle against antisemitism, and partly against Islamophobia. Intellectuals, Jews and non-Jews alike, joined the debates and condemned racism of all kinds, first and foremost antisemitism.

Two parallel phenomena thus characterize the antisemitism of the 2000s: violence accompanied by hostile verbal and visual outpourings and growing awareness and the practical response of the national and international communities.

ANTOINE, NICOLAS (1603–1632), French pastor who converted to Judaism. Antoine, who was born into a Catholic family in Briey (Lorraine), became a Protestant c. 1624 and studied theology in Geneva. A few years later, during a stay in Metz, his faith in Christianity was shaken by discussions with Jews of that city. Subsequently he went to Venice where he asked the rabbis of the city to circumcise him, but they were afraid to do so. When he returned to Geneva he assumed various functions, including that of pastor of Divonne, although convinced of the truth of Judaism. He followed Jewish observances, and avoided making reference to the New Testament, or explaining Christian dogmas in his sermons and in the exercise of his other pastoral duties. This might have passed unobserved by the Protestant community of Divonne had he not one Sunday in February 1632, in a sermon on Psalm 2, contradicted the Christian interpretation of the text, openly declaring that it referred not to Jesus, but to David. At first he was declared insane and treated as such, but he was later summoned to court. The trial was conducted summarily. Although several French pastors advocated clemency, he was condemned to death and executed at Place du Plainpalais in Geneva in April 1632.

[Bernhard Blumenkranz]

ANTOKOLSKI, MARK (Mordecai; 1843–1902), Russian sculptor. Antokolski was born in Vilna to poor parents. As a child he studied in a *heder*. He later served as an apprentice to a haberdasher, and then to a wood-carver, and through this medium his artistic talent was discovered. Antokolski was accepted in 1862 at the Academy of Art in St. Petersburg. Two years later, he won the Great Silver Medal for his wood bas-relief, *The Jewish Tailor*. In 1865 he executed the ivory bas-relief *The Miser*, in 1867, *The Kiss of Judas Iscariot*, and in 1869, *The Talmudic Debate*. In 1869 he completed the bas-relief *Inquisition*, on which he worked for six years. When he returned to Russia after a study-trip to Berlin, he ceased treating Jewish subjects and began choosing themes from Russian history. His statue *Ivan the Terrible* (1871) brought him his first great publicity. It was purchased for the Hermitage by Czar Alexander and resulted in Antokolski's election to the council of the Academy. Due to a disease of the lungs he moved to Rome in 1872. Antokolski sculpted *Peter the Great*, a large marble statue, which was placed in Peterhof. He executed three bronze statues, *Jaroslav the Wise*, *Dmitri Donskoi*, and *Ivan the Third*, and in 1874, *Jesus in Chains*. In 1875 Antokolski returned to St. Petersburg and did sculptures of the royal family, L.N. Tolstoi, and I. Turgeniev. Noteworthy among his sculptures in this period are the ivory statue *Mephisto*, the tombstone of Princess Obolenskaya (1875), *The Death of Socrates*, and *Jesus, the Crucified* (1876). International fame came at the Paris World Exhibition in 1878.

Antokolski's noteworthy sculptures between 1881 and 1891 include *Yermak* and *Nestor*. Most of his works were exhibited in the Tretyakow Museum in Moscow and the Russian Museum in Leningrad.

Even in his early works, he departed from the artistic methods of the official academic school generally accepted in the early 19th century. This school viewed classical sculpture and that of the Christian church as a model. Antokolski became associated with the Russian school of artists, the "Peredvizhniki" (the "transmitters"), which saw as its prime object not artistic expression as such, but rather the social ideal, humanity, and an exaggerated realism. Indeed, Antokolski liked to have sculptures embody a social and humane ideal. As long as this school prevailed in Russia (until the 1890s) Antokolski enjoyed much popularity. Later, however, he had many admirers both in Russia and in Western Europe who saw in him a great artist in whose statues the principle was not outward plastics, but rather the lines of the soul which they embodied.

Antokolski became famous during the antisemitic wave in Russia, prior to the pogroms of the 1880s. At that time, the Russian nationalist press opened an attack on him, describing him as a "Jew" who had no right to portray the heroes of Russian history and Jesus and John the Baptist because it was

not possible for him to comprehend them and the spirit of Christianity. His fame was attributed to the influence of influential Jewish bankers (mainly Baron Horace Guenzberg). Turgeniev and the art critic Stasov defended Antokolski; but the artist was severely affected by the antisemitic attacks, and, full of bitterness, he left Russia permanently for Paris. There, in the last years of his life, he lived alone and created almost nothing, with the exception of a large marble statue, *Spinoza*. Antokolski observed Jewish traditions and was interested in spreading art among the Jews. He supported young Jewish artists and envisaged a Jewish artistic school. In *Tehiyat ha-Ruah* ("Renewal of the Spirit"), Aḥad Ha-Am accused Antokolski of choosing to depict the monk Nestor, instead of Elijah, the Gaon of Vilna, as a figure aloof from the world, though the Gaon and the artists were natives of the same town. Despite this, however, Aḥad Ha-Am recognized the particular Jewish character of Antokolski's artistic work, in which the statue is not a body but the dress for the spirit and idea embodied in it.

Antokolski wrote many essays on artistic problems and an autobiography, which was published in the Russian monthly, *Vestnik Yevropy* (1887; full manuscript in the Leningrad Public Library). His correspondence, edited by his colleague Stasov, has been published.

[Karl Schwarz / Abba Ahimeir]

ANTOKOLSKI, PAVEL GRIGOREVICH (1896–), poet. Trained as a lawyer, Antokolski was for a time associated with Vakhtangov's theatrical studio but turned to literature. The settings of Antokolski's poems range from the medieval France of *François Villon* (1934) to the 19th-century Russia of *O Pushkine* (1960). He also published Russian translations of Georgian and Ukrainian verse.

°ANTONESCU, ION (1882–1946), Romanian soldier and politician. Following a dispute with King Carol II in 1934, Antonescu resigned his post as chief of staff. When Goga and *Cuza formed an antisemitic government late in 1937, Antonescu, an antisemite, was appointed minister of defense, and the Germans established contact with him. On September 4, 1940 he became prime minister, with dictatorial powers. Two days later Antonescu forced King Carol II to abdicate, formed a government together with the *Iron Guard, and called himself *conducator* ("leader") of Romania. Antonescu disapproved of the violent methods of the Iron Guard, fearing that they would lead to Romania's economic ruin. On January 21 and 22, 1941, the Iron Guard made its revolt against Antonescu the occasion for a pogrom. Hitler took Antonescu's part, since he needed the Romanian army for his planned invasion of Russia. After Romania entered the war against Russia on June 22, 1941, the Germans and Romanians conquered Bessarabia and Northern Bukovina, and massacred the Jewish population. Antonescu ordered the Odessa massacre (November 23, 1941),

which cost between 25,000 and 30,000 Jewish lives. In the autumn of 1942, the Jewish leadership in Bucharest enlisted the aid of local politicians, neutral diplomats, and the papal nuncio, who applied pressure on Antonescu, and succeeded in preventing the deportation of the entire Jewish population of Romania to concentration camps. After the German defeat at Stalingrad, Antonescu became increasingly lenient toward the Jews. Late in 1943, negotiations began between Jewish leaders and Antonescu's government for the return of those Jews deported to *Transnistria and for their emigration to Palestine. At the same time, Antonescu began negotiating for a separate peace. The Transnistria deportees began to return only in the spring of 1944, when the Russians reconquered the area. Antonescu was sentenced to death by a Bucharest People's Court and executed on June 6, 1946.

°ANTONESCU, MIHAI (1907–1946), Romanian lawyer and politician. In 1940 Antonescu, as minister of justice, formulated several anti-Jewish laws. He was the legal representative of Ion *Antonescu (to whom he was unrelated). Upon the outbreak of war with the Soviet Union in June 1941 Antonescu was appointed deputy prime minister and foreign minister. He ordered the persecution and forcible deportation of the Jewish population of Bessarabia and Bukovina in order to achieve "ethnic purity." In July 1942 Antonescu concluded an agreement with Gustav Richter, Adolf *Eichmann's representative in Romania, to deport all Romanian Jews to Poland, but this plan was frustrated by the intervention of diplomats from neutral countries who acted on the initiative of Romanian Jewish leaders. Early in 1944 Antonescu established contact with the officially non-existent Jewish organizations, and particularly with A.L. Zissu, chairman of the Zionist Executive Committee. In June 1944 he permitted the Palestine Office to operate legally and supply identity cards to refugees bound for Palestine from Hungary, Poland, and Slovakia. After the war he was tried with Ion Antonescu by a Bucharest People's Court. They were sentenced to death and executed.

ANTONIA, fortress situated on a rocky prominence on the north side of the Temple Mount in Jerusalem. It replaced a number of earlier fortresses at this location: (1) the *birah* (the "Citadel") from the time of Nehemiah (Neh. 2:8; 7:2); (2) the Hellenistic *acropolis* or *acra* (2 Macc. 4:12, 27–28; 5:5–6) – not to be confused with the later **acra* of the Seleucids, which was situated to the south of the Temple Mount; and (3) the *baris* of the Hasmonean period (Josephus, *Antiquities* xv, 403; *Wars* I, 75). A rock-cut tunnel leading from the direction of the later Struthion Pool probably fed a number of cisterns belonging to

the Hellenistic/Hasmonean fortress at this location. A rock-cut fosse or ditch originally separated the area of the earlier fortresses from the enclosed temple area itself and was mentioned by Strabo (16, 2:40) and Josephus (*Antiquities*, 14: 61); it was eventually filled in by Pompey in 63 B.C.E. This rock-cut ditch (118 ft. in width and 20 ft. deep) was still visible to 19th-century explorers. As part of the major landscape changes to the area of the Temple esplanade in Jerusalem, Herod the Great decided to refortify the fortress and rename it in honor of Mark Antony. According to Josephus, it was situated at the corner of the northwestern colonnade of the Temple Mount, which meant that Herod was forced to reduce the area of the fortress quite substantially. Josephus relates that it stood on a rock 50 cubits (82 ft.) high, and its walls reached a height of 40 cubits. Inside the fortress were a palace, courtyards, bath houses, and cisterns. From three of its corners rose ornamental towers 50 cubits high, and from the fourth (southeastern) corner, a tower 70 cubits high. The fortress is believed to have stood at the junction of the "second" defensive wall of Jerusalem with the northwest angle of the Temple Mount, but archaeological proof of this has not yet been forthcoming; a deep rock-cut moat apparently protected it from the north, with underground stairs and passages connecting it to the south with the Temple area. This key position was captured by the Zealots on the 15th of Av, 66 C.E. During the siege of Titus the breach through which the Romans penetrated into the Temple area passed through Antonia. Earlier investigators believed that remains of the Antonia fortress could be detected in the grounds of the present convent of Notre Dame de Sion and that combined with the remains seen at the northwest angle of the Temple Mount area, it was deemed possible to reconstruct the plan of the entire fortress. New archaeological studies indicate this is no longer the case and that the area of the Antonia Fortress was restricted almost entirely to the rocky prominence (295 ft. × 131 ft.) at the northwest angle of the Temple Mount, with a flight of steps leading up to it from the south. Several Christian commentators have maintained that Antonia was the site of *gabbatha* (the stone pavement) mentioned in John (19:13) as the place where Pontius Pilate sat when Jesus was brought before him for judgment. However, it is now believed that the trial of Jesus occurred at the Praetorium, which was the same as the Old Palace of Herod the Great situated in the Upper City and to the south of the crucifixion area. The Antonia Fortress was apparently razed following the capture of the city by the Romans in 70 C.E. The Capitoline Temple may have been built at this location at the time of Hadrian, overlooking the northern market of Aelia Capitolina.

°ANTONINUS PIUS, Roman emperor (ruled 138–161); the successor of *Hadrian. Antoninus Pius generally continued the policies of his predecessor. His most notable achievement was in the field of law which he insisted be administered impartially. In regard to the Jews, and particularly in Judea, Hadrian's harsh policies were repealed. Although still not allowed to proselytize, those born as Jews were freely permitted their traditional methods of worship, and the schools and the synagogues were openly reestablished.

[Alan Richard Schulman]

In Talmud and Aggadah

A Roman emperor named Antoninus forms the subject of a number of aggadic statements, dialogues, and stories in the Talmud and the Midrashim, in all of which he is described as in the company of R. *Judah ha-Nasi. The talmudic sources refer to more than one emperor; they distinguish, for instance, between Antoninus senior and Antoninus junior (Eccl. R. 10:5), but the attempts of scholars to fit these accounts into the historic framework of the period of the Antonines have proved unsuccessful. The discussions with Antoninus include dialogues on the relationship between the body and the soul, the power of the evil inclination, and matters of state. They contain no data by which it would be possible to determine with certainty the attitude of the dialogists to the problems that were constantly discussed in the philosophical schools in the period of the Antonines. In the dialogues and stories, the Jewish patriarch excels the Roman emperor in wisdom and in moral stature, but the two are good friends and show complete trust in, and respect for, each other. Antoninus' attitude to Judaism is one of reverence. A rabbinic dictum has also been preserved according to which Antoninus would be the first righteous proselyte to be accepted in the messianic era (TJ, Meg. 3:2, 74a).

Underlying the talmudic and midrashic stories there is undoubtedly an element of historic truth; they testify to the good relations that were established for a time in the period of the Antonines between the Roman authorities in Palestine and the Jewish sages. The form of government in the Roman Empire, which in the second century C.E. was to a certain extent federal, made it possible for the people of the different countries of the Empire to express their views before the emperor not only on the form of government, but also on religious and ethical questions.

The tales about Antoninus and R. Judah ha-Nasi were widely current among the people. A number of them, as, for example, the parable of the lame man and the blind (Sanh. 91a–b) are found in comparatively early works of Jewish literature (see the Ezekiel Apocryphon 1; cf. James, in: JTS, 15

(1914), 236) and are derived from the treasury of folk wisdom. Accounts of disputations and conversations of a similar nature (between other rabbis and Roman dignitaries) have been preserved in talmudic and midrashic literature. There are also extant (non-Jewish) Greco-Roman texts containing disputations and dialogues of this type between various individuals and Roman emperors.

°**ANTONIO**, known as the “Prior of Crato” (1531–1595), claimant to the throne of Portugal which, on the death of childless Henry II in 1580, had been seized by Philip II of Spain. Antonio was the grandson of King Manuel (who had been responsible for the expulsion of the Jews from Portugal in 1496–97) through an illegitimate union between the latter’s son Luis and a beautiful *New Christian woman, Yolante Gomez. It was therefore hoped that if he succeeded to the throne he would curb the activities of the Portuguese Inquisition. Partly for this reason, partly because of their inveterate hatred of Spain, the Portuguese Marrano communities strongly favored his cause. Among his principal supporters was Solomon *Abenaes, who endeavored to secure Anglo-Turkish support for him. In London, the ill-fated Roderigo *Lopes was his personal physician. Dom Antonio proved a weak and unreliable character and the Marrano group later broke with him, while he retaliated by accusing them of treachery. This quarrel ultimately led to the execution of Lopes, who did not turn down a Spanish suggestion that he should poison the pretender and was also suspected of having similar designs on Queen Elizabeth I.

°**ANTONIUS DIOGENES** (c. 100 C.E.), author of a fictional romance on Thule, quoted in Porphyry’s “Life of Pythagoras.” He quotes the tradition to the effect that the philosopher was influenced by the peoples of the East. According to Antonius, Pythagoras visited the Egyptians, Arabs, Chaldeans, and Hebrews, and learned from them the accurate interpretation of dreams.

°**ANTONIUS JULIANUS** (late first century C.E.), author of a book on the Jews mentioned only by the third century Christian Minucius Felix (Octavius, 33:4). Antonius is generally assumed to be identical with the procurator of Judea in 70 C.E. of the same name, who took an active part in the Council of War convened by Titus to debate the fate of the Temple (Jos., War, 6:238).

ANTUÑES, Marrano family. HEITOR (HECTOR) sailed for Brazil from Portugal in 1557; he was tried posthumously by the Lisbon Inquisition. His widow, Ana Rois, died in prison. Several members of the family were tried by the Inquisition in the 17th century and the name figures also in the records of the Mexican Inquisition. In the auto-da-fé at Valladolid in 1725, a family from Portugal comprising two brothers and two sisters named Antuñes were reconciled to the church.

David was among the Amsterdam poets who collaborated in the volume in memory of the inquisitional martyr Abraham Nuñez *Bernal in 1655. AARON, rabbi in Amsterdam and Naarden, was in correspondence with contemporary German talmudic scholars and left some works in manuscript, including a commentary on *Avot*. It is questionable whether he is the same Aaron b. Solomon Antuñes who was active as a printer in Amsterdam 1716–20. GABRIEL, who left Suriname with the British in 1675, settled in Barbados. The family of Antuñes Paredes was numerous in Curaçao.

ANTWERP, Belgian port and commercial center. Although a few Jews are mentioned in Antwerp before the 15th century, the first substantial community was established with the arrival of *Marrano merchants and others from the Iberian peninsula. On March 30, 1526, Emperor *Charles V issued a general safe-conduct to the Portuguese “New Christians” in Antwerp, and numerous Marranos were enabled to settle there, and engage in business. The Marranos in Antwerp, however, were spared from the activities of the Inquisition, which had not been authorized in the southern Low Countries, although under Spanish rule. Nevertheless, the anomaly of Marrano existence under a Catholic prince remained, and they were suspected of aiding the Reformation agitation. Wealthy Marranos, such as the *Mendes family, used the Spanish Netherlands for transit to Muslim countries. These factors, combined with political and economic fluctuations, influenced the sovereigns to revise their attitude to the Marranos in the Spanish Netherlands several times. Toward the mid-16th century it was decided to expel from Antwerp all Marranos who had arrived there before 1543. Attempts by the municipality to avert the expulsion failed. The edict was renewed in 1550 and most of the Marranos were forced to leave, although a group of families continued to reside in Antwerp without rights of domicile. After the Peace of Westphalia (1648), Marranos were able to resettle in Antwerp, and even established a modest place of worship

there. For their religious needs, however, they mainly attached themselves to the community in *Amsterdam. Population figures for the “Portuguese nation” in Antwerp in this period indicate that 85 families and 17 individuals were living there in 1571, and 47 families and 20 widows in 1591; 46 names are mentioned in 1619, and 38 males and 27 females in 1666.

By the Treaty of Utrecht (1713), Antwerp passed under Austrian rule. The Jewish community was able to emerge from hiding, and certain privileged Jews of Ashkenazi origin obtained the right of residence in Antwerp. By the end of the 18th century civic rights had been granted to a number of individual Jews. After the occupation of the Low Countries by the French revolutionary forces in 1794, Jews were able to settle freely in Antwerp, and the Ashkenazi element eventually predominated. Antwerp was again attached to the Netherlands before becoming part of independent *Belgium in 1830. The first synagogue was built in 1808 and a cemetery established in 1828. There were 151 Jews in Antwerp in 1829, and 373 in Antwerp province in 1846.

After the beginning of the 20th century the Antwerp community enjoyed unprecedented prosperity through a combination of two chance circumstances: during the 1880s the port of Antwerp became the major embarkation point for the mass Jewish migration to America from Eastern Europe; at the same time there was a spectacular development in the *diamond industry through the discovery of the South African mines. Many of the intending emigrants decided to settle in Antwerp and take up new skills as diamond cutters and polishers or dealers. The occupation became central to the community, and Jewish enterprise made Antwerp the capital of the industry in Europe. The Jewish population in Antwerp increased from 8,000 in 1900 to 25,000 in 1913, 35,000 in 1927, and 55,000 in 1939 (about 20% of the total population). In 1928 several thousand Jews were employed in the diamond industry, 25% of the total workers and 75% of employees in the industry being Jewish. The number of Jewish emigrants passing through Antwerp and afforded relief by the community was 2,300 in 1897, 7,478 in 1900, 19,448 in 1903, 24,479 in 1905, and 23,656 in 1920–21.

[Simon R. Schwarzfuchs]

The Holocaust Period (1939–1945)

When the Germans invaded Belgium, there were about 50,000 Jews in Antwerp, only 10% of whom were Belgian citizens. Most of the Jews escaped to France at the start of hostilities. However, after the Belgian surrender (May 28, 1940), approximately 30,000 Jews returned to the city.

No special measures were taken against the Jews at the beginning of the occupation. The military authorities were more interested in keeping the country quiet, and in reviving the diamond industry, which had been almost entirely owned by Jews. According to the first anti-Jewish decrees, on Oct. 28, 1940, more than 13,000 Antwerp Jews were registered on the *Judenregister*, and Jewish businesses were marked with trilingual signboards. Further decrees forbade Antwerp Jews

to leave their homes between 7 P.M. and 7 A.M., enter public parks, or dwell in places other than Brussels, Antwerp, Liège, and Charleroi. On April 14, 1941, Jewish shops were destroyed, two main synagogues looted, and Torah scrolls burnt in the streets by pro-German Flemings. The Gestapo carried out the first confiscation in the diamond bourse on August 18, 1941. According to the German census of October 1941, 17,242 Jews now remained in the city.

The final phase of Nazi persecution began with the introduction of the yellow-star *badge on May 27, 1942. On July 22, Jews traveling on trains between Antwerp and Brussels were arrested, sent to the transit camp at Mechelen, and then deported to the death camps. On Friday night, August 28, 1942, most of Antwerp's Jewish families were arrested in a sudden *Aktion*, and sent to the transit camp. Deportations, first to forced labor camps in France (mostly for the Todt organization) and then to Auschwitz, continued until September 4, 1943, when the remaining Jews (Belgian citizens and the protected *Judenrat*) were arrested. However, when the city was liberated a year later, some 800 Antwerp Jews emerged from hiding, where they had been supplied with food and other essentials by the organized Jewish resistance. HISO (Hulp aan Joodse Slachtoffers van de Oorlog – Help for Jewish War Victims) was at once organized to aid returned and displaced persons.

[Ephraïm Schmidt]

Contemporary Period

In 1969, the number of Jews was believed to be 10,500, many of whom were occupied in the diamond industry; almost 80% of the membership of the diamond exchange was Jewish. Several factors contributed to the unity of the Antwerp community. Antwerp Jews were not professionally nor residentially dispersed as were the Jews of Brussels, so that their concentration within certain parts of the city and within a limited number of professions had an impact on the religious and social life of the community. Most of the Jews of Antwerp were of Polish origin, oriented toward either orthodox or ultra-orthodoxy. These orientations were represented by the Shomre Hadass and Machsiké Hadass congregations, respectively. There were six small ḥasidic communities, with a joint membership of 11–12% of the total number of Jewish households. The Sephardi community had dwindled to a few dozen families maintaining their own synagogue. It was estimated that 90% of the children received a Jewish education, this percentage probably being one of the highest in Europe. The congregations controlled four day schools and a yeshivah, which together had 2,200 students. The two largest schools were Tachkemoni of the Shomre Hadass community and the Jesodé Hatora of the Machsiké Hadass community, both recognized and subsidized by the state. Their curricula conformed to official requirements, but they also provided Jewish studies, according to their religious orientation. The ḥasidic congregations also established day schools where a minimum amount of secular subjects were taught. A central fundraising

and welfare organization, Het Central Beheer van Joodse Wel-dadigheid en Maatschappelijk Hulpbetoon, provided medical, youth, social, and financial services for the benefit of the community and transients. In addition, the Forum oder Joodse Organisaties, founded in 1994, represented Flemish-speaking Jews before the authorities, and like the Coordinating Committee of Belgian Jewish Organizations it was represented in the Consistoire Centrale.

In the ensuing decades the Orthodox character of Antwerp's Jews was strengthened, with the city's Jewish population reaching a level of around 15,000 in 2002 while Belgium's Jewish population as a whole dropped to a little over 30,000. The two big Orthodox schools accommodated over 3,000 children and nearly 2,000 others attended Modern Orthodox, ḥasidic, and other schools. Around 30 synagogues were in operation. The majority of the city's Jews remained connected with the diamond industry, where Yiddish was still the dominant language, and the city's weekly *Belgisch Israelitisch Weekblad* was the country's biggest Jewish newspaper.

ANUSIM (Heb. אָנּוּסִים; “forced ones”), persons compelled by overwhelming pressure, whether by physical threats, psychological stress, or economic sanctions, to abjure Judaism and adopt a different faith (in contradistinction to *meshummadim*, or voluntary apostates – see *Apostasy). Here attention will be directed only to instances of group compulsion. An edict or systematic attempt to force Jews to convert to another faith is termed in Hebrew *gezerat shemad* (“edict of apostasy”). In Jewish sources, the term *anusim* is applied not only to the forced converts themselves, but also to their descendants who clandestinely cherished their Jewish faith, attempting to observe at least vestiges of the **halakhah*, and loyalty to their Jewish identity. Both the elements of compulsion and free will enter the psychological motivation of the forced convert. The concept denoted by the term *anusim*, therefore, is fluid, bordering on that applying to apostates and even to *Marranos; it has been the subject of much discussion.

Early Middle Ages

The vituperation heaped on Jews by Christian ecclesiastics, and the violent methods employed by the church in the fourth century (see Jewish *History, Middle Ages), led to many forced conversions. There is clear evidence that *anusim* existed in the Frankish kingdoms of the sixth century, for the typical pattern of mass violence combined with threat of expulsion is already present in the mass conversion of many Jews to Christianity

in *Clermont-Ferrand in 576. The almost inevitable result of the creation of a Jewish “underground” within the Christian society is also clearly visible. The events in Clermont were set in motion after a Jew, who had voluntarily adopted Christianity, was molested by other Jews during a religious procession. The participants in the procession then made an attack “which destroyed [the synagogue] completely, razing it to the grounds.” Subsequently, Bishop *Avitus directed a letter to the Jews in which he disclaimed the use of compulsion to make them adopt Christianity, but announced at the end of the missive: “Therefore if ye be ready to believe as I do, be one flock with us, and I shall be your pastor; but if ye be not ready, depart from this place.” The community hesitated for three days before making a decision. Finally the majority, some 500, accepted Christianity. The Christians in Clermont greeted the event with rejoicing: “Candles were lit, the lamps shone, the whole city radiated with the light of the snow-white flock” (i.e., the forced converts). The Jews who preferred exile left for *Marseilles (Gregory of Tours, *Histories*, 5:11). The poet Venantius Fortunatus composed a poem to commemorate the occasion. In 582 the Frankish king Chilperic compelled numerous Jews to adopt Christianity. Again the *anusim* were not wholehearted in their conversion, for “some of them, cleansed in body but not in heart, denied God, and returned to their ancient perfidy, so that they were seen keeping the Sabbath, as well as Sunday” (*ibid.*, 6:17).

Persistent attempts to enforce conversion were made in the seventh century by the Visigoths in Spain after they had adopted the Roman Catholic faith. Comparatively mild legal measures were followed by the harsh edict issued by King Sisibut in 616, ordering the compulsory baptism of all Jews. After conversion, however, the *anusim* evidently maintained their Jewish cohesion and religious life. It was undoubtedly this problem that continued to occupy Spanish sovereigns at the successive Councils of Toledo representing both the ecclesiastical and secular authorities; it is difficult to conceive that the term *Judaei*, employed in the texts of the canons subsequently promulgated by the councils, actually refers to professing Jews; the restrictive measures adopted against the *Judaei* only make sense if directed at the devoted underground. Thus, steps were taken to secure that the children of converts had a Christian religious education as well as to prevent the older generation from continuing to observe the Jewish rites or from failing to observe the Catholic ones. A system of strict supervision by the clergy over the way of life and movements of the *anusim* was imposed. The attitude of the victims is seen in a letter addressed to the Visigothic king Recceswinth in 654, in which they promised to live as faithful Christians but pleaded not to be compelled to eat pork against which they felt physical revulsion.

Later Middle Ages

Attempts from the beginning of the eighth century to compel Jews in the *Byzantine Empire to accept Christianity similarly resulted in the creation of *anusim* leading a crypto-Jewish ex-

istence. According to the chronicler Theophanes, when in 722 the Emperor *Leo III “compelled the Jews and the Montanists to undergo baptism, the Jews, although unwilling, accepted baptism and then washed it off” (*Chronographia*, ed. by De Boor, 1 (1963), 401). At the end of the ninth century and in the first half of the tenth, attempts were made to convert Jews to Christianity in the Byzantine Empire by physical threats, missionary *disputations, and the offer of rewards to the converts. *Basil I is particularly notorious in Jewish chronicles for these attempts.

Compulsory conversions took place in the Rhineland in the tenth century, and during the Crusades amid the anti-Jewish attacks after 1096 (see also **Kiddush ha-Shem*). The action of Emperor *Henry IV, who later permitted the victims to return to their former faith, was violently resented by the Pope and the Christian populace, hence Henry’s successors did not always follow this policy. In Spain and North Africa in the 12th century, the Muslim *Almohads forced both their Jewish and their Christian subjects to convert to Islam, apparently by terrorization rather than legislative measures. The converts from Judaism and their descendants remained isolated from their environment and humiliated by society. All the evidence points to them having led a crypto-Jewish existence.

At the close of the 13th century the Jews in southern Italy were given the choice of baptism or death, and there followed a wave of forced conversions under which the Jewish population in *Apulia completely disappeared. Many were driven to simulate Christianity to save their lives. The *neofiti* (neophytes), or *mercanti* as they were called because of their commercial activities, remained a recognizable and unpopular group suspected of retaining their fidelity to their ancestral faith for over two centuries. In 1453 Pope *Nicholas V wrote of them: “their forefathers were Jews who adopted Christianity 150 years ago, rather from compulsion than of their own free will.”

[Haim Hillel Ben-Sasson]

THE IBERIAN PENINSULA. Forcible conversion of Jews occurred in many lands throughout the ages, but nowhere was this phenomenon more consequential and widespread than in the Iberian Peninsula, in the Kingdoms of Castile, Aragon, and Portugal. Crypto-Judaism in Sepharad began in 1391 as a result of the massacres that broke out in Seville and spread throughout the peninsula in the summer of that year. The attack against the Jews was perpetrated following a venomous anti-Jewish campaign that was initiated by Ferran Martinez, the archdeacon of Ecija. During the massacres thousands of Jews were killed, thousands fled, and thousands were forcibly converted. Following the massacres, a very strong anti-Jewish campaign was conducted by churchmen. Particularly effective was the campaign led by Vicent Ferrer at the beginning of the 15th century. Many Jews converted to Christianity and joined the ranks of the *New Christians or *conversos*. The Tortosa Disputation in the years 1413–14 initiated by Jerónimo de Santa Fé, Joshua Halorqui before his baptism, proved disastrous to the Jews of the Kingdom of Aragon. Numerous Jews

were baptized following in the footsteps of their leaders who had been held like hostages, away from their communities, during long months of the disputation.

Many *conversos* found their way to the financial and administrative top open. Many occupied important positions in the governments of the Hispanic kingdoms, thus arousing the envy and antagonism of many Christians. In any case, among the Old Christians many doubted the sincerity of the *conversos* and did not accept their conversion under duress as an irrefutable proof of their Christianity. The economic, social and political achievements of some of the New Christians strengthened the already existing opposition to their integration into Christian society. In fact, those who were baptized, whether in 1391 or in later years, did not form a homogeneous group. Some were real *anusim* or Crypto-Jews who continued to identify themselves as Jewish and observed Judaism secretly as much as possible. This group must have been large since it is reasonable that many thousands of Jews who converted forcibly or out of fear did not change their faith and their identity overnight. Others might have accepted their fate, and in their despair decided they would put an end to their tragic existence by facing reality and try to become part of the majority society. A third group consisted of Jews who had been somewhat alienated from Jewish tradition and practice and might have found it easier to turn from being Jews “without a synagogue” into Christians “without a church.” Another group was composed of true Christians whose conversion was an act of faith. Even if their baptism came in times of persecution, it was the result of religious conviction. Such were Pablo de Santa María, formerly Solomon Halevi, or his disciple Joshua Halorqui. Members of the last group proved to be the greatest persecutors of the Jews.

If the boundaries between these groups sometimes disappeared or were blurred, it was primarily due to the Christian refusal to accept the *conversos* as true Christians and to the prevalent Christian notion that all *conversos* maintained their Jewish identity.

Many New Christians left behind them in the Jewish camp spouses, brothers and sisters, sons and daughters or other relatives or friends and did not cut off their relations with them. Under Vicent Ferrer’s influence, Castile decided in 1412 to compel the Jews to live in different quarters and be separated from Old and New Christians. After the Tortosa Disputation various measures were taken to put pressure on the Jewish communities and prevent Jewish influence on the *conversos*. Gradually Christian antagonism towards the *conversos* assumed an ethnic and racial character. The concept of the *limpieza de sangre* (purity of blood) barred the New Christians’ integration within Christian society. More and more violence was perpetrated against the *conversos*. The armed rebellion of the *conversos* in Toledo in 1449 was the result of the Old Christians’ growing pressure and venomous campaign against them. In 1473 widespread violent attacks were perpetrated against the *conversos* throughout Castile. The demand by churchmen that tough measures be taken against insin-

cere converts led to the establishment of the *Inquisition in 1480 in the Kingdoms of Castile and Aragon. The Inquisition was meant to eradicate heresy among the New Christians. From 1481 onwards the Inquisition conducted a systematic war against the *conversos*. The latter were accused of secretly observing Jewish practices while the Jews were blamed for providing them with the information and material that were necessary to maintain their Jewish identity. The official reason for the Expulsion of 1492 was the influence Jews had on the New Christians. In 1492, the *conversos* were joined by a large group of Jews who decided to convert rather than leave the country. Many expellees were destined to return and be baptized after they had found no haven.

The records of the Inquisition show that the Expulsion did not put an end to the *converso* problem and that for generations to come descendants of New Christians would be tried and condemned for Judaizing. The Chuetas from Majorca remained a segregated group and suffered humiliation and persecution beyond the 18th century.

The largest group of Castilian Jews found refuge in Portugal. When the Portuguese king wished to marry the Castilian princess, the Catholic monarchs laid down one condition to their approval: the Expulsion of the Jews from Portugal. Manuel's edict of Expulsion for 1496 remained a dead letter, since Manuel, who did not wish to lose the Jews, decided to convert them all forcibly in 1497. All these converts were forcible converts, many of whom had left Castile to retain their Judaism. Many kept Judaism secretly and were the target of the Inquisition that was created in 1540. The number of converts in Portugal was high compared to the less than one million people who lived in the country around 1500. Only through flight could any of the Portuguese Crypto-Jews leave the Iberian Peninsula and live as Jews or as Christians away from the Inquisition. The result was the Portuguese communities which were established in Western Europe and the New World and those which were founded in the Ottoman Empire.

It is difficult to generalize about all descendants of *conversos*. Naturally, no “*marrano” Judaism existed in the Peninsula. Various customs and different prayers developed among different groups. In certain areas, however, a very strong “Jewish” identity remained until almost modern times. That is why we have recently witnessed the return of many Crypto-Jews in Belmonte, in northern Portugal, to Judaism and why so many descendants of *conversos* left Spain and Portugal and joined existing Jewish communities or formed their own after their return to normative Judaism.

[Yom Tov Assis (2nd ed.)]

Crypto-Jewish Women

Not all *conversas* were Crypto-Jews. Those women who chose to identify with the Jewish people instead of the Catholic Church faced considerable risks. Following the establishment of the Inquisition, Jewish observance by New Christians became dangerous as well as difficult. Even the woman's domain was no longer a safe refuge since every home had servants who

were potential informants. Once the Jewish community had been expelled, however, the home became the only remaining institution where observance was possible. Women's roles were magnified in importance as they became teachers as well as practitioners of Judaism. The Inquisition was aware of the centrality of women in maintaining Crypto-Judaism and arrested and tried numerous *conversas*. The most frequent accusations against women which appear in trial transcripts concern observance of the Sabbath and the dietary laws. These Jewish practices would be easily noticed, especially by anyone working in the household. In addition, many *conversas* observed the fast of Yom Kippur in the hope of attaining salvation. Fasting on Mondays and Thursdays was revived during the messianic fervor between 1497 and 1503 when Inés, a young woman from Herrera, had visions of redemption. She, along with two other *converso* prophets, spread messianic expectation among the *conversos* of Extremadura.

Other holiday observances preserved in secret included Passover, although the traditional *seder* disappeared from most homes in Spain fairly quickly. Prior to 1492, *mazzah* was obtained from Jews; afterwards, numerous Judaizing women baked it. The most outstanding example of women baking *mazzah* can be found in the community of Belmonte in Portugal where the women dressed in white and recited lengthy prayers as they ceremonially prepared the *mazzah* while the men stood guard outside. Birth and purity rituals were also observed in secret. One unique ritual was the *hadas*, a celebration including singing on the eighth night after the birth of a male or female child; the infant was dressed in white and a collation was served. In some homes, the de-baptism ritual was another Crypto-Jewish creative addition. On a more traditional note, many women bathed after childbirth and after menstruation, in place of the required visit to the *mikveh*. Death and burial rituals also played a substantial role in Crypto-Jewish life; while they ranged from the halakhic to the superstitious, all were based on past Jewish practices. These customs reflect some of the Crypto-Jewish women's observances; others may emerge from the tens of thousands of trials, especially in the archives of Portugal, that have not yet been read and analyzed. In addition, there were Judaizing *conversas* in the New World including women from the *Carvajal family in Mexico.

[Renée Levine Melammed (2nd ed.)]

Modern Times

Later instances of forced conversion occurred in *Persia. From 1622 to 1629 the Jews of *Isfahan were compelled to accept Islam, and in 1656 Abbas II issued a decree ordering all Persian Jewry to convert, despite open protest and petitions. The specific ceremonies attending their acceptance into Islam and the name by which they were known, *Jadid al-Islam (New Muslims), show that a typical *anusim* existence and society was created there. In 1839 the entire Jewish community of *Meshed was forced to convert in similar circumstances. Outwardly devout Muslims, they meticulously continued to observe the

Jewish rites in secret, as did their descendants, who were also known as the Jadid al-Islam.

The lot of European Jews, particularly Jewish children, who outwardly embraced Christianity in order to save their lives during the Nazi persecution between 1939 and 1945 was in many ways similar to that of the *anusim* of former ages. It has proved impossible to assess the number of conversions among the Jewish people in this period. Research into this question has been further complicated by emotion and anger on the part of Jews against those who tried “to steal souls” during the *Holocaust on the one hand, and on the other, of gratitude to those who had endangered their lives to save the children.

APAM (Heb. אפאם), initial letters of *Asti, *Fossano, and *Moncalvo, three towns in Italy. The term (more correctly, Afam) denotes the special ritual of prayers that was used by the Jews of these communities who came there originally in the 14th century after the expulsion from France.

APAMEA, city in lower Phrygia, near the sources of the Maeander River (today: the Turkish town of Dineir, on the Smyrna-Egerdir railway). The city was founded by Antiochus I Soter (280–262 B.C.E.) and Jews probably resided there before the early second century B.C.E. when Antiochus III transported 2,000 Jewish families from Babylonia and places in Phrygia (Jos., Ant., 12:147ff.). In 62 B.C.E. the praetor Flaccus confiscated 100 pounds of gold gathered by the Jews of Apamea for the Temple in Jerusalem (Cicero, *Pro Flacco* 28, 68). The biblical stories and local legends of Noah and Enoch were extremely popular in Apamea and coins depicting the Flood and bearing the name of Noah were minted there from the fourth century C.E. One possible reason for this tradition was the additional name given Apamea: ἡ Κιβωτός, “the ark.” There is no evidence, however, that this name (first mentioned by Strabo, about 19 C.E.) was derived from the story of Noah.

[Isaiah Gafni]

APE (Heb. אפֿי), animal enumerated among the precious articles that Solomon imported (1 Kings 10:22, 11 Chron. 9:21). The word *kof* derives from the Sanskrit *kapi*, meaning a tailless ape. In rabbinic literature, however, it refers both to the tailed and the tailless species. Mention is made of the fact that they were employed to keep houses free of creeping things (Tosef., BK 8:17), and they were even trained for domestic uses (Tosef., Er. 3:12). The *Sifra* (51:4), basing itself upon Leviticus 11:27, enumerates it among the animals forbidden to be eaten. In the Mishnah (Kil. 8:5) there is discussion of whether the laws of ritual uncleanness which apply to a human corpse also apply to creatures called *adonei ha-sadeh* (“the lords of the field”) which some scholars have identified with chimpanzees.

APEL, WILLI (1893–1988), musicologist. Born in Konitz, Germany, Apel studied mathematics at the universities of Bonn and Munich (1912–14) and at the University of Berlin (1918–22). From 1925 he devoted himself to musicology and received his doctorate in Berlin in 1936 for a dissertation on 15th- and 16th-century tonality. In that year (1936) he immigrated to the United States. He was a lecturer at Harvard University (1938–42) and professor of musicology at the University of Indiana, Bloomington (1950–70). Apel's main field of research was medieval and Renaissance music. His publications include reference works such as the *Harvard Dictionary of Music* (1944; 1960¹²); *The Notation of Polyphonic Music 900–1600* (1942, 1953⁵), which has served since it was first published as an essential tool for young scholars; and *Historical Anthology of Music*, edited with A.T. Davison, two volumes (1946, 1950⁵). These three contributions were major agents in changing higher music education in the U.S. and abroad. His other works include *French Secular Music of the Late Fourteenth Century* (1950), *Gregorian Chant* (1958), *Geschichte der Orgel- und Klaviermusik* (1967), where Apel reviewed the entire body of keyboard music up to 1700. He was also the general editor of the *Corpus of Early Keyboard Music* and in 1983 published his last major study, a collection of essays on violin music and composers of 17th-century Italy.

APELOIG, YITZHAK (1944–), Israeli chemist and president of the *Technion. Apeloig was born in Russia and immigrated to Israel in 1947. Specializing in quantum chemistry, Apeloig received his Ph.D. from the Hebrew University of Jerusalem in 1974 and then did postdoctoral work at Princeton University in 1974–76. In 1976 he joined the faculty of chemistry at the Technion, becoming a professor in 1988 and

-serving as dean of the faculty of chemistry from 1995 to 1999. In 1996 he established the Lise Meitner Center for Computational Chemistry together with Professor Sason Shaik of the Hebrew University and served as its co-director. In 2001 he was named president of the Technion. He received the Alexander von Humboldt Research Award, the Japan Society for the Promotion of Science Visiting Professor Award, and the Technion Award for Academic Excellence and Excellence in Research. He was a visiting professor in several universities and a member of many scientific advisory committees and the editorial boards of a number of scientific journals. He has over 140 publications to his credit and edited several books.

[Shaked Gilboa (2nd ed.)]

APHEK (Heb. אִפְחֵק), name of three places mentioned in the Bible and named after nearby riverbeds (Heb. *afikim*), in which swiftly flowing streams rise after heavy rainfalls.

(1) A Canaanite royal city (Josh. 12:18) east of Jaffa in the Sharon which is possibly referred to in the Egyptian Execration Texts (early 18th century B.C.E.). It appears in the list of cities conquered by Thutmose III (c. 1469 B.C.E.; No. 66 between Ono and Socoh) and was the first city captured by his successor, Amenhotep II, in his second campaign (c. 1430 B.C.E.). Aphek became a stronghold on the Philistines' northern border, serving them as an important base in their campaigns against the Israelites. They camped there before defeating the Israelites and capturing the ark of the covenant in the days of Samuel (1 Sam. 4:1) and also before the final battle against Saul (1 Sam. 29:1). In 671 B.C.E., King Esarhaddon of Assyria conquered "Aphek in the land of Samaria" on his way to Egypt. The name Aphek was preserved as late as the period of Roman rule in Migdal Aphek (Jos., Wars, 2:1) but from the time of Herod, Aphek itself became known as *Antipatris. It is today Tell Ras el-Ain (Rosh ha-Ayin) at the source of the Yarkon River. Archaeological excavations were conducted at the site between 1975 and 1985 by Tel Aviv University, bringing to light numerous remains from the Early, Middle, and Late Bronze Ages, including fortification walls and palaces, which help support the identification of this site as biblical Aphek. Remnants of a Philistine city were also uncovered, as well as of dwellings from the Iron Age (i.e. from the tenth to eighth centuries B.C.E.).

(2) The place mentioned in 1 Kings 20:26–30 and 11 Kings 13:14–17 where Aram defeated the Israelites in the days of Ahab and again in those of Joash. The name has survived in the name of the village Fiq in the Golan, in the region of Susita (Hippos) near the Damascus-Beth-Shean highway east of the Sea of Galilee. A column incised with a *menorah* and a Jewish-Aramaic inscription were found among the ruins of a settlement there dating from the fourth century; however, so far no older remains have been discovered at the site. At Kibbutz Ein Gev on the shore of the Sea of Galilee, a large fortified city of the tenth to eighth centuries B.C.E. exists (known as Khirbet el-Asheq); its identification with the Aramean

Aphek has been suggested since it is only 3½ mi. (6 km.) from Fiq. Excavations that were conducted at this tell in 1961 and again in the early 1990s brought to light Iron Age strata on the lower tell and Iron Age, Persian, and Hellenistic strata on the acropolis. The Iron Age II strata (tenth–eighth centuries B.C.E.) included the remains of defensive walls, dwellings, public pillared storehouses, and a variety of pottery and small objects, notably a storage jar bearing an inscription *lsqy* (i.e. "cup-bearer"). The town was apparently destroyed by Tiglath Pileser III in 732 C.E.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

(3) A Canaanite city allotted to the tribe of Asher (Josh. 19:30), which did not, however, succeed in driving out its inhabitants (Judg. 1:31). It is evidently one of the major tells in the Plain of Acre and its most acceptable identification is with Tell Kurdana, at the foot of which rises Nahr Namein (Belus). Pottery and weapons dating from the Middle Bronze to Early Iron Ages have been found at the tell. In Crusader times there were water-mills, known as *Recordane*, at Khirbet Kurdana near the tell. In 1939 kibbutz Afek (Aphek), affiliated with Ha-Kibbutz ha-Me'uhad, was founded in the Plain of Acre. It was one of the "tower and stockade" settlements established in 1939 during the Arab riots of 1936–39. When the original plan of developing sea fishing proved impracticable, the kibbutz moved in 1947 to its present site, south of the former site. Afek's settlers came mostly from Eastern and Central Europe. Its economy was based on intensive farming of irrigated field crops, carp ponds, cattle, and a factory for producing pressure meters and other precision instruments. Mego Afek subsequently grew into an international medical and measuring equipment company featuring the Lympha Press for lymphedema treatment. Kibbutz Afek also owned Asiv Textile Industries, supplying garment manufacturers in Israel and abroad, and Hinanit, a sheltered workshop producing soft toys and children's accessories for the local market. In 2002 the population of Afek was 432

APIKOROS, in popular usage, one who negates the rabbinic tradition. The designation *apikoros* first occurs in rabbinic literature in the Mishnah (Sanh. 10:1), enumerated among those

who forfeit their “share in the world to come.” Although there is no doubt that the name is derived from the Greek Ἐπικούροσ (see *Epicureanism), the rabbis seem to have been unaware of, or ignored, the Greek origin of the word and took it to be connected with the Aramaic word *hefker* (“abandoned”; see TJ, Sanh. 10:1, 28b; cf. also Maimonides’ introduction to the above Mishnah, which explicitly states that it is an Aramaic word). They extended its meaning to refer generally to anyone who throws off the yoke of the commandments, or who derides the Torah and its representatives. Thus *Korah, who, according to the rabbis, held up the laws of the Torah to ridicule, is referred to as an *apikoros* (TJ, Sanh. 10:1, 27d). The most extensive discussion is to be found in Sanhedrin 99b–100a where different *amoraim* of the third and fourth centuries apply the term variously to one who insults a scholar, who insults his neighbor in the presence of a scholar, who acts impudently toward the Torah, who gibes and says “what use are the rabbis to us, they study for their own benefit,” or “what use are the rabbis since they never permitted us the raven nor forbade us the dove” (i.e., who cannot go beyond the dictates of the Torah). Maimonides gives a more precise theological definition of the word. Distinguishing the *apikoros* from the sectarian (*min*), the disbeliever, and the apostate, he defines him as one who either denies prophecy, and therefore the possibility of communion between God and man, or denies divine revelation (“who denies the prophecy of Moses”), or who says that God has no knowledge of the deeds of man (Maim., Yad, Teshuvah 3:8). Later authorities extended the meaning even further to include all those who refuse obedience to the rabbis, even “the authority of a religious work, great or small” (Moses Hāgiz, *Leket ha-Kemah* YD 103a). In modern parlance, it is popularly used loosely for anyone who expresses a view which is regarded not only as heretical but even as heterodox.

[Louis Isaac Rabinowitz]

***APION** (first century C.E.), Greek rhetorician; anti-Jewish propagandist in Alexandria, against whom *Josephus wrote his *Contra Apionem*. Evidently of Egyptian origin, Apion was born at the end of the first century B.C.E. or the beginning of the first century C.E. He studied rhetoric and became principal of the Homeric school in Alexandria, lecturing on his interpretation of Homer there and in many places in Greece, which he visited for this purpose. He stayed in Rome during the reign of Tiberius and visited it in the times of Caligula and Claudius.

In scholarly circles Apion was looked upon as a charlatan, spinner of grandiloquent phrases, and gossipmonger. *Pliny the Elder called him *famae propriae tympanum* (“a self-trumpeter”), and Tiberius nicknamed him the “world’s drum.” His vanity and passion for popularity led him to introduce into his commentaries peculiar or bizarre innovations and some quite unfounded theories. His glosses to Homer were in this category, the excesses of imagination they display comparing

unfavorably with the traditional Alexandrian school of criticism. Apion wrote a five-volume *History of Egypt* which was of similar stamp and apparently included a section on the Jews. It is most likely this section that is referred to by Christian writers as his work *Against the Jews*. In it Apion detailed many absurdities about the Jewish people, Judaism, and the Temple in Jerusalem, mainly extracted from the works of earlier anti-semitic authors but with his own additions. Josephus’ *Contra Apionem* shows that Apion took over the idea that the Jews were expelled from Egypt because they were lepers, from the Egyptian historian *Manetho. The tenets of Judaism obliged the Jews, according to Apion, to hate the rest of mankind. Once yearly, he asserts, they seized a non-Jew, murdered him and tasted his entrails, swearing during the meal to hate the nation of which the victim was a member. In the Holy of Holies in the Temple in Jerusalem there was a golden ass’ head which the Jews worshiped – a variation on the fabrication (cf. Mnaseas: see *Greek Literature, Ancient) that the Syrian king *Antiochus Epiphanes had found the statue of a man riding an ass there (see *Ass Worship). In making these statements Apion was not prompted by the type of intellectual curiosity which actuated other Hellenistic ethnographers, such as *Hecataeus of Abdera, who noted down indiscriminately everything he could gather. Apion’s method was to give publicity to any disparaging stories he could find about the Jews and to add some from his own imagination. These he used for conducting anti-Jewish propaganda in Alexandria. During an outbreak of anti-Jewish violence in the city during the governorship of *Flaccus, when the Jewish community was forced to fight for its rights and even its existence, Apion was evidently one of the leading rabble-rousers and the most popular with the Alexandrian mob. He tried to show that the Jews were foreigners and had no right to consider themselves citizens; that they were a dangerous element and had always acted to the detriment of the Egyptians. When the Alexandrian Jews sent a delegation to the emperor Caligula, headed by *Philo, Apion joined the opposing delegation. Even if it is assumed that he did not play a major role in these negotiations (Philo and the papyrological sources mentioning only Isidoros and Lampon), there can be no doubt that Apion played a leading role in spreading anti-Jewish propaganda and in provoking agitation, since otherwise Josephus would not have dealt with him at such length in his *Contra Apionem*.

[Abraham Schalit]

APOCALYPSE (Gr. ἀποκαλυψις; “revelation”), term which, strictly speaking, denotes the Jewish literature of revelations which arose after the cessation of prophecy and the Christian writings that derived from this Jewish literature.

The major purpose of apocalyptic writings is to reveal mysteries beyond the bounds of normal knowledge: the se-

crets of the heavens and of the world order, the names and functions of the angels, the explanation of natural phenomena, and the secrets of creation, the end of days, and other eschatological matters, and even the nature of God Himself.

The term "Apocalypse" as the title of a book first appears in the "Apocalypse of John" and from the second century C.E. Christians applied it to similar writings. In the *baraita*, the term *gillayon* apparently refers to apocalyptic writings: "These writings and the books of the heretics are not to be saved from a fire but are to be burnt wherever found, they and the Divine Names occurring in them" (Shab. 116a). But it is hardly credible that the *tannaim* had such an attitude to Jewish apocalyptic writings such as Syriac (11) Baruch or 1V Ezra, which abound in moral and religious piety and the reference is apparently to Christian and Gnostic apocalyptic works. The verb ἀποκαλύπτω is generally used in the Septuagint as a translation of the Hebrew *galeh* ("reveal"), which occurs in Daniel and in the Dead Sea Scrolls in passages where apocalyptic matters are under discussion, e.g., "to conduct themselves blamelessly each man toward his neighbor in all that has been revealed to them" (1QS 9:19). Daniel and the Dead Sea Scrolls also use *hazon* ("vision") in the same way (cf. 1QH 4:17f.). The classical period of Jewish apocalypse, a highly developed literary phenomenon in its own right, is from the second century B.C.E. to the second century C.E. Its basic assumption is that prophecy, which had ceased, would be renewed only at the end of days. Therefore, the apocalyptic authors generally attributed their teachings to men who had lived in the period of prophecy, i.e., from Adam to Daniel. The Dead Sea Scrolls, teaching that God made known to "the teacher of righteousness," the leader of the sect, "all the mysteries of the words of his servants the prophets" (1QP Hab. 7:4f.), are an exception to this view. The apocalypse came into being because of its authors' consciousness that theirs was "the last generation" (1QP Hab. 2:5ff.). Consequently, eschatology constitutes one of its central themes. Apocalyptic history divides itself into "this world," subject to the rule of wickedness ("the government of Belial"), and the "next world," in which "wickedness will be forever abolished and righteousness revealed as the sun." The "end of days" is conceived as a cosmic process accompanied by upheavals in nature, and the events on the earth in those days will be a mere echo of the final war between cosmic forces, when "the heavenly host will give forth in great voice, the foundations of the world will be shaken, and a war of the mighty ones of the heavens will spread throughout the world" (1QH 3:34ff.). Thus in the apocalyptic vision Israel's redemption assumes a form much further removed from historical reality than in the prophetic works. The Messiah, for example, often becomes a superhuman figure. Since the apocalyptic vision emphasizes the imminence of the "end," leaving little time for normal historical development, it does not allow for the possibility of the alteration of the course of history through repentance. Of course, a moral lesson is contained in the cosmic vision of the end of days, namely, the final victory of good over evil (the apocalyptic vision having come into being to

allay contemporary misfortunes), but this morality finds full expression only in the culmination of the process and not at any one of its earlier stages. This explains the fatalistic mood often manifest in the apocalyptic writings. The apocalyptic vision as a whole is not limited to questions concerning the end of days – rather, universal history becomes a process governed by its own special laws. It speaks not only of the future but also of the distant past. It conceives of world history as a chain of the histories of specific kingdoms, the spans of whose rule are predetermined. Moreover, in many cases it sees the end of days as a return to the events of creation.

In the apocalypses, mysteries are most often revealed by an angel, but occasionally the human hero himself is said to travel in the heavenly realm or to see it in a vision. The mysteries are revealed in the form of strange symbols, and historical personalities are not called by their own names. Some scholars have suggested the Persian influence on Jewish and Christian apocalypse; but basically the Jewish apocalypse is a unique phenomenon, integrally linked with the apocalyptic literature.

The only apocalyptic book included in the Bible is *Daniel. Its apocalyptic portions date from the early days of the Hasmonean revolt, and its visions and symbols became the prototype for all later Jewish and Christian apocalyptic writings. Enoch, Jubilees, and the Testaments of the Twelve Patriarchs (as well as the Dead Sea Scrolls) were apparently written from the time of John Hyrcanus onward. These works reflect the beliefs of a religious apocalyptic movement, which later found expression in the Qumran sect, which was identified by scholars with the *Essenes. Possessing a completely apocalyptic view of life, the movement gave a prominent place in its scheme of history to the war between good and evil (the demonic forces), and also seems to have formulated the myth of the fallen evil angels, and to have developed a psychology and moral code of its own. The works of this movement (particularly the Book of Enoch and the Testament of the Twelve Patriarchs) contain the earliest references to Jewish mysticism.

In the Roman period apocalyptic writings dealing especially with the question of national suffering and redemption appeared in increasing number. The Psalms of Solomon speak of the Romans, of Pompey and his death, and of the messianic kingdom in typical apocalyptic symbols. According to the Assumption of Moses, the Redeemer is none other than the God of Israel. 1V Ezra and 11 Baruch reflect the spiritual upheaval which followed the destruction of the Temple. Apart from those apocalypses, the chief intent of which is national and political, the first two centuries C.E. saw the composition of writings centered on the revelation of the secrets of God and the universe, such as the Slavonic book of Enoch. Similar also are the Greek Apocalypse of Baruch (apparently 150–200 C.E.), the Apocalypse of Abraham, the Testament of Abraham (first or second century C.E.), the Life of Adam and Eve, and the Testament of Job.

There are many points of contact between the apocalyptic and talmudic literatures. The apocalyptic historical and cosmic

dualism of this world and the next was accepted by all Israel. Many eschatological views are common to both the Talmud and the apocalypses. Thus the Talmud contains apocalyptic views on Paradise and Hell, the fate of the soul after death, the Messiah, and descriptions of the seven heavens with an angelology – all themes of apocalyptic eschatology. The divine mysteries (*ma'aseh merkavah*) and those of the creation (*ma'aseh bereshit*) became in time topics reserved for groups of mystics, who did not publicize their teachings. In I *Enoch there occurs the earliest description of the “throne of glory,” which played a central role in the Merkabah literature. In early Jewish mysticism Enoch himself became an angel and was later identified with Metatron. The *heikhalot* literature contains, beside its central theme, the *ma'aseh merkavah*, various descriptions of the “end of days,” the period of Redemption, and calculations of the “end” (see *Merkabah Mysticism). The central figures of these books are the *tannaim*, just as biblical figures were the heroes of earlier pseudepigraphic apocalypses. Apocalyptic works of the type of I Enoch, apparently through translations, exercised an influence on Midrashim, such as *Genesis Rabbati*, *Midrash Tadshah*, *Pirkei de-Rabbi Eliezer*, and *Midrash va-Yissa'u*. This influence was not restricted solely to apocalyptic matters, and it extended ultimately to the Zohar and the books based on it. (The Book of Enoch is mentioned several times in the Zohar.) The apocalypse is important, therefore, even for an understanding of Kabbalah and Hasidism.

APOCRYPHA AND PSEUDEPIGRAPHA

Definition

Apocrypha and Pseudepigrapha are two separate groups of works dating primarily from the period of the Second Temple. The name “Apocrypha” is applied to a collection of books not included in the canon of the Bible although they are incorporated in the canon of the Roman Catholic and Greek Orthodox churches. In the *Vulgate, in the versions of the Orthodox Church, and in the Septuagint before them, they are found interspersed with the other books of the Old Testament. The Protestant Church denied their sanctity but conceded that they were worthy of reading. Apart from Ecclesiasticus (Wisdom of *Ben Sira), there are no references to these books in talmudic literature.

The pseudepigraphal books, on the other hand, are not accepted in their entirety by any church, only individual books being considered sacred by the Eastern churches (particularly the Ethiopian). The Talmud includes both Apocrypha and

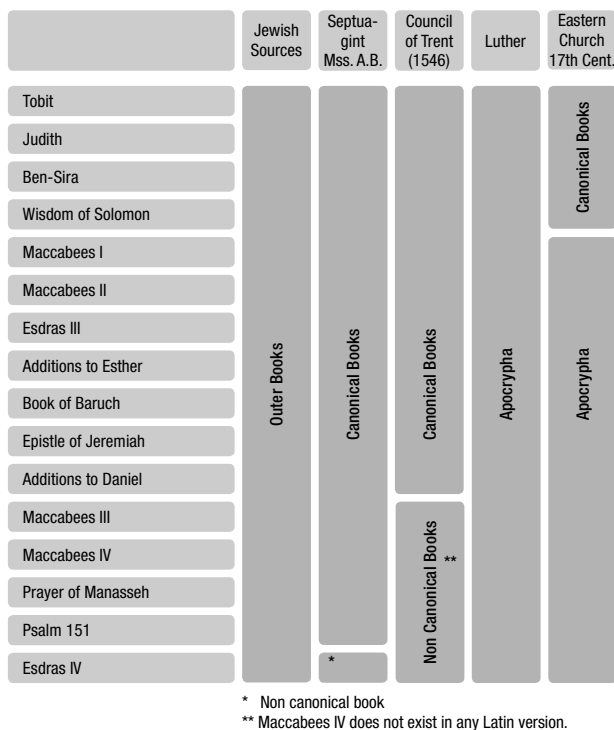

Diagram showing attitudes to the books of the Apocrypha.

Pseudepigrapha under the name *Sefarim Hizonim* (“extraneous books”). (See table: Diagram of the Apocrypha.) The Apocrypha, for the most part, are anonymous historical and ethical works, and the Pseudepigrapha, visionary books attributed to the ancients, characterized by a stringent asceticism and dealing with the mysteries of creation and the working out of good and evil from a gnostic standpoint.

Titles and Contents

The number of apocryphal works, unlike those of the Pseudepigrapha, is fixed. Though the church fathers give lists which include many pseudepigraphal works, it is doubtful whether their exact number will ever be known. (IV Ezra 14:46 mentions 70 esoteric books while the Slavonic Book of Enoch attributes 366 books to Enoch.) Many, whose existence was previously unsuspected, have recently come to light in the caves of the Judean Desert.

The books of the Apocrypha are (1) Esdras (alias Greek Book of *Ezra); (2) *Tobit; (3) *Judith; (4) additions to *Esther; (5) Wisdom of *Solomon; (6) Ecclesiasticus (Wisdom of Ben *Sira); (7) *Baruch, with the Epistle of Jeremiah; (8) The *Song of the Three Holy Children; (9) *Susanna; (10) *Bel and the Dragon; (11) The Prayer of *Manasseh; (12) I *Maccabees; (13) II *Maccabees. Esdras is a compilation from II Chronicles 35, 37, Book of Ezra, and Nehemiah 8-9, in an order differing from that of the traditional Bible text and with the addition of a popular story of a competition between youths, the most prominent of whom was Zerubbabel who waited upon Darius I. Tobit tells of a member of one of the ten tribes who was

exiled to Assyria, where, because of his merit in burying Sennacherib's victims, he was cured of the blindness which had afflicted him for many years, and saw his son married to one of his kin. Judith tells of a woman of Samaria who ventured into the camp of the soldiers besieging her city, and decapitated their commander, Holofernes, after making him drunk. The Wisdom of Solomon discusses the fate of the righteous and the wicked, with examples from the early history of Israel. Baruch and the Epistle of Jeremiah – additions to the Book of Jeremiah – attack idol worship and are in the form of letters addressed by the putative authors to the exiles in Babylonia. Susanna and the Elders, an addition to the Book of Daniel, is the popular story of a righteous woman who successfully resists the enticements of the city elders and is saved by the youthful Daniel from the death which, on the strength of their slander, had been decreed against her. Bel and the Dragon, which in the Septuagint is another addition to Daniel, is an account of Daniel's ministrations to Nebuchadnezzar, king of Babylon, and Darius the Mede, and of his success in demonstrating to them by various devices the futility of idol worship. The Prayer of Manasseh, an addition to II Chronicles 34:18, is a prayer supposedly recited by King Manasseh while in exile. From the historical point of view, the most important book of the Apocrypha is I Maccabees, the historical account of the *Hasmoneans from the uprising of Mattathias to the death of *Simeon, the first of the Hasmoneans to establish the independence of Judea. II Maccabees confines itself to the wars of *Judah the Maccabee, dealing with them in greater detail. From the literary point of view, by far the most important book in the Apocrypha is the Wisdom of Ben Sira, a book of hymns and proverbs (in the spirit of Proverbs); this work includes an interesting historical sketch down to *Simeon the Just, who lived during the author's youth. The editions of the Vulgate usually append at the end of the book the Apocalypse of *Ezra (or II Esdras), i.e., Salathiel, which contains a theological exposition, in the form of a conversation with an angel, on the fate of Israel.

The books of the Pseudepigrapha are more numerous than those of the Apocrypha, and only the better known will be mentioned here. Probably the most important work in pseudepigraphal literature deals with *Enoch the son of Jared, whom, according to Genesis 5:24, "God took" (i.e., he ascended to heaven). The Book of *Enoch is an account, mainly in the first person, of the visions revealed to him in the heavens. It deals in part with astronomical phenomena, establishing the "correct" calendar at 364 days comprising 52 weeks, and contains some *eschatology on the subject of the preexistent Messiah. Intermingled with the above are stories of how the fallen angels brought evil into the world. The book most similar to it, *Jubilees, is in the form of a conversation between the Angel of the Presence and Moses on Mount Sinai. Unlike Enoch it is a mixture of *halakhah* and *aggadah*, but in a spirit completely different from that of the Talmud. Its *halakhah* is far more stringent than that of the Talmud. The fundamental basis both of the *halakhah* and *aggadah* in the book

is its historicism: everything is predetermined in the "heavenly tablets," and was revealed much earlier than the time of Moses, to the patriarchs and even to their predecessors, Noah, Lamech, and the like. The book is presented within a framework of exact dates, reckoned by sabbatical periods and jubilees. It lays special emphasis (even more than Enoch) upon the solar calendar and upon ensuring (as did the Boethusians) that Shavuot always fall on a Sunday. The remaining books are smaller: The Ascension of *Isaiah is an account (also found in the Talmud) of the unnatural death of the prophet. The Assumption of *Moses is a history in retrospect of the Jews, from Moses to the death of Herod and his son. The Book of *Adam and Eve is an *aggadah* concerning their sin and the death of Adam, who is the handiwork of God. The Testaments of the Twelve *Patriarchs is a valuable ethical work in which each of Jacob's sons exhorts his children, particularly against the sin in which he himself has been ensnared. This book is important because of the idea, most fully developed in the *Dead Sea Scrolls, of the coming of two messiahs, one from the tribe of Judah and one from Levi. In addition to these there once existed another large series of books, attributed to Adam, Lamech, Abraham, Joseph, Eldad, Moses, Solomon, Elijah, Zechariah, Ezra, and others.

The Supposed "Canon" of Alexandria

In the old manuscripts of the Septuagint it was the custom to place the books of the Apocrypha, and at times of the Pseudepigrapha, among the Holy Scriptures. In consequence of this and of quotations by the early church writers, who mention details from these books, there arose in the 19th century the theory that at one time – at least in Alexandria – these books were considered part of the canon. There are those who assume that even in Erez Israel the Apocrypha was for a certain period (until the destruction of the Temple in 70 C.E.) considered part of the canon, and that the canon as known later was fixed only in the days of the synod of Jabneh (first century C.E.). All these views, however, are erroneous, based as they are upon a series of faulty premises. Moreover, those scholars were of the opinion that the talmudic discussions about certain books that had to be "hidden away" (Shab. 13b), or about books that do not "render the hands unclean," or Akiva's extreme pronouncement that he who reads *Sefarim Hizonim* forfeits his share in the world to come (Sanh. 10:1), all indicate that only during their period – following the destruction of the Second Temple – was the traditional canon of 24 books finalized. Against this, however, it may be maintained that the talmudic discussions about "hiding away," and about books that "render the hands unclean" refer to books all of which are in the known canon. Indeed, according to talmudic tradition (BB 14b) the canon was already fixed at the end of the Persian period. This tradition is clearly repeated by *Josephus (Apion, 1:40–41): "From the death of Moses until Artaxerxes... the prophets wrote the events of their time. From Artaxerxes to our own time [i.e., the first century C.E.] the complete history has been written, but has not been deemed worthy of equal credit with

the earlier records, because of the failure of the exact succession of the prophets.” Indeed, as far as is known, apart from the final Hebrew chapters of the Book of Daniel (which may have been added during the disturbances preceding the Hasmonean uprising), all the scriptural books antedate the Hellenistic period. Furthermore, from the prologue of Ben Sira’s grandson to his Greek translation of his grandfather’s work, it is clear that the Scriptures had already been translated into Greek in the first generation of the Hasmoneans and that by then the traditional division into three sections – Pentateuch, Prophets, and Hagiographa – was accepted. Although Sira’s grandson does indeed speak of “the other books,” scholars failed to recognize this term as an alternate name for the Hagiographa. Philo too was acquainted with this division (Cont. 25) as was Luke (24:44) after him. The testimony of Ben Sira’s grandson, and that, in particular, of Philo and Josephus (who mentions a fixed number of 22 books, Apion 1:38), who used the Septuagint, shows (1) that the Greek-reading Jews knew no other division of the Bible, and (2) that the canon of that time is identical with the present canon. Philo also draws a clear distinction between the Holy Scriptures and the books written by the *Therapeutae and peculiar to them. It follows that the Apocrypha and Pseudepigrapha were always *Sefarim Hizonim*, i.e., extraneous to the accepted books (βιβλία), i.e., the Scriptures. It should be added that the authors of the Dead Sea Scrolls wrote a *Peshet (“interpretation”) only on the works comprised in the known canon.

History of the Apocrypha and Pseudepigrapha

Literary activity continued to flourish during the Persian era (probably Tobit, Judith, the additions to Daniel, Song of the Three Children, and III Esdras, for example, can be ascribed to this time) and, more so, during the Hellenistic period. It was during this period that the books of the Apocrypha were composed. The common thread linking all of these works is their concern with Israel as a whole, and their complete ignoring of sectarian schisms. Only later, after the sectarian schism in the beginning of the Hasmonean period (Ant., 13:171 ff.), did the composition of the pseudepigraphical works begin to appear. The Book of Jubilees was written (as is indicated by its historical allusions to the conquest of the cities of “Edom” and the coastal region) in the reign of *John Hyrcanus, the essence of Enoch (alluded to in the Book of Jubilees) a little before it, and the Testaments of the Twelve Patriarchs sometime after the above works. In any event, most of the known Pseudepigrapha (both those in Greek or Ethiopian translation, and those from the Qumran caves) originated between this period and the destruction of the Temple. Philo’s characterization of the books of the Therapeutae as “allegorical” interpretations, or “psalms” to God, apply in equal measure to the books of the Qumran community.

A fundamental difference between the Apocrypha and the Pseudepigrapha is that whereas the Apocrypha deal mainly with the struggle against idolatry, believing prophecy to have come to an end (cf. Judith 11:17), the pseudepigraphists be-

lieved that prophecy continued and that through its agency they could make laws (see *Jubilees) and know the past and future. Because it was generally maintained among the people, however, that prophecy had come to an end, the visionaries attribute their works to the ancients, or feature themselves as permitted to “interpret,” to reveal the true meaning of verses which apply to the “end of the days” (the period in which they lived). Past and present are written in the “heavenly tablets.” The apocalypticist “reads” them and divulges in his book what he has read. Convinced of their knowledge of the future, they also occupied themselves to a considerable extent with the advent of the Messiah, whom they regarded as preexistent (see *Enoch). At the outset, then, the Apocrypha and Pseudepigrapha were differentiated; the former was a collection for Jews, generally, and the latter sectarian. Since the Essenes, from whom much of the Pseudepigrapha may derive, had many devotees both in Israel and in the Diaspora, some of their scriptures too were translated and disseminated. However, it was precisely the importance attached to these prophecies within the sect and their circulation at times of political crisis during the days of Hyrcanus and of the Roman procurators that caused the Pharisee sages to erect a barrier between the Scriptures and everything extraneous to them, even works (like the Wisdom of Ben Sira) which they themselves valued. It is for this reason that the sages decreed that only the canonized Holy Scriptures “render the hands unclean” (Yad. 4:6). These discussions gave rise to the question of whether there might not be books in the Scriptures themselves, which might be exploited for sectarian purposes (e.g., Ezekiel), or which might not accord with the concepts of reward and punishment in the Pentateuch and Prophets (Ecclesiastes). However, though all books outside the canon were rejected outright, the old distinction between books applying to Israel as a whole and sectarian books remained and was taken over by the church. With only a few isolated exceptions all churches rejected the Pseudepigrapha, the difference between the Eastern and Western church consisting only in their official attitude to the Apocrypha. As may be seen from the lists of Melito, Origen, Cyril of Jerusalem, Pseudo-Athanasius, Dialogue of Timotheus and Aquila, etc., the canon of the Eastern church usually numbers (following Josephus) 22 books (although Baruch and the Epistle of Jeremiah are sometimes included in the Book of Jeremiah). The “other” books (τὰ λοιπά) are either presented as “extraneous” (“Ἐξ δὲ τούτων, Ἐκτὸς δὲ τούτων, etc.), “contradicted” (ἀντιλεγόμενα), or called “all the concealed books that are contradicted” (ἀποκρυφα ὅσα ἀντιλέγονται; Dialogue of Timotheus and Aquila; Nicephorus’ *Stichometry*). In the Roman Church, on the other hand, the apocryphal works are, as a rule, placed at the end, with no visible distinction between them and the canonical books. But lists should not be confused with facts. Even Jerome, who explicitly differentiates between the Holy Scriptures – those in the Hebrew canon – and Apocrypha, translated both. In fact according to the testimony of Augustine these books were accepted by most of the churches (as confirmed by the Latin

lists of Ruffinus, Cassiodorus, Innocent I, Isidore of Pelusium, Liber Sacramentorum, etc.). Under the influence of Augustine the councils of Rome (382), Hippo (392), and Carthage (397) officially included the Apocrypha in the canon. The Pseudepigrapha, however, was not accorded great status. Augustine expresses his doubts about Enoch, and in the list of 60 books (of Old and New Testaments), where the Apocrypha is called “extraneous” (Εξω), the Pseudepigrapha is referred to as ἀπόκρυφα and so in Pseudo Athanasius, *Stichometry* of Nicephorus, Gelasian Decree, and thus as a completely separate group. This too is the cause of the latter’s becoming completely lost in the course of time. The final change took place with the *Reformation. This again excluded all books which, according to Jerome, are not part of the canon (i.e., everything not in the Hebrew Scriptures), assigning to them a name and a place outside the books of the Bible.

[Yehoshua M. Grintz]

In Medieval Hebrew Literature

From the first century to the sixth, Hebrew literature (talmudic and midrashic) developed as if the Apocrypha and Pseudepigrapha did not exist. Only very few motifs from this literature were used by the talmudic sages, often in a way far removed from the original context. Even the sayings of Ben Sira were mostly forgotten. Few survived in talmudic literature, but to them were added many popular epigrams, which were quoted as the sayings of Ben Sira, though they are not to be found in the original work.

Only in the Middle Ages did the revival of the apocryphal and pseudepigraphical literature begin within the body of Hebrew literature. This revival was mainly a revival of the contents of that literature, and not of its original form. Thus, there are several medieval versions of the stories of Tobit and Judith, none of which even approaches the original works in length and scope; only the bare skeleton of the plot was preserved, told, and retold by medieval Jewry in various versions. Attempts made by some scholars, especially M. Gaster, to discover in these medieval stories the Hebrew originals of the Greek works utterly failed. Another popular medieval Hebrew story was the *Scroll of Antiochus (*Megillat Antiochus*), which included some of the better-known sections of the Books of Maccabees, but no full translation of these works was known in medieval Hebrew literature. However, the story of the woman whose seven sons refused to worship idols and were martyred, found its way into the Talmud (Git. 57b) and remained as an independent Hebrew tale, and was included in almost every Hebrew medieval collection of stories (see *Hannah and her Seven Sons).

The vast theological and cosmological as well as narrative material included in works like the Books of Enoch and Jubilees reentered Hebrew literature about the time of the conquests of Islam. The first Hebrew work to make use of such material was the **Pirkei de-Rabbi Eliezer*, a work written in the form of a Midrash, but which is, in fact, a retelling of the stories of Genesis, making use both of midrashic ma-

terial and ideas included in the apocryphal works connected with the Book of Genesis. Some parts of these works survived also independently; thus, the story of the fallen angels from the Book of Enoch was told by medieval Jewry as the story of *Uzza and Azazel. To the old Ben Sira which survived until the 13th century, at least with the Eastern Jews, was added a new pseudepigraphic work, the *Alphabet de-Ben Sira*, which, besides a few sayings, has nothing in common with the original work, preserved in Greek.

Only in the Renaissance period did Jewish scholars come into direct contact with the original works of the Apocrypha and Pseudepigrapha. The most important step was made by Azariah dei *Rossi, who translated the Letter of Aristeas into Hebrew, and thus began modern Hebrew scholarship and interest in this field. From then on, increasing numbers of Jewish scholars turned to this material in their quest for Jewish historical and literary material. A new translation of the Apocrypha was made into Hebrew at the beginning of the 16th century but was lost until recently.

APOLLONIA, city on the coast of Erez Israel about 9½ mi. (15 km.) N. of Jaffa. Apollonia was apparently founded by Seleucus IV (186–174 B.C.E.). It is today the ruined site of Tel Arshaf (Arsuf). Named after the Greek god Apollo Soter (“Savior”), Apollonia was also known in the Byzantine period as Sozusa (“City of the Savior,” in reference to Jesus). The assumption that Apollonia was built on the site of the Canaanite city of Rishpon has not been sustained by archaeological findings. Rishpon was named after the Canaanite deity *Resheph, whom the Hellenized Canaanites presumably identified with Apollo. Apollonia is first mentioned among the cities held by Alexander *Yannai (Jos., Ant., 13:395), but it was probably captured earlier by John *Hyrcanus. In 63 B.C.E., *Pompey detached Apollonia from the territory of Judea. It was one of the cities rebuilt by the Roman governor *Gabinus. After forming part of the realms of Herod and Agrippa I, it became an independent city in the province of Judea (and later, of Syria Palaestina). In the Arab period Apollonia was known as Arsuf (= Resheph). The Crusader king Baldwin captured it in 1101 and under Crusader rule the city (then called Arsuf, a cor-

ruption of Arsuf) served as a commercial center, especially for the Genoese. Taken by Saladin in 1187, it was recaptured and restored to the Crusaders four years later by Richard the Lion-Hearted. The Egyptian Mamluk sultan, Baybars, captured and destroyed the city in 1265. The remains of a Crusader fortress, castle, and port are visible on the seashore, about 2½ mi. (4 km.) northwest of Herzliyyah. South of these are the ruins of the Greco-Roman city where two Greco-Jewish inscriptions and traces of an ancient glass factory have been discovered. In the 1990s a number of people, mostly well-to-do, built homes near the archeological site, under the name of Arsuf. However, the government did not formally recognize the settlement and did not approve further building in the area, which was planned as a park. In 2002 Arsuf's population was 104.

°**APOLLONIUS** (third century B.C.E.), finance minister of *Ptolemy II Philadelphus, king of Egypt (285–246 B.C.E.). Apollonius was one of the most efficient administrators of the period. Considerable material on his activities is furnished by the Zeno papyri, particularly on his activities as the owner of estates in the Fayyum. He owned vineyards in Beth-Anath in Judea and also engaged in commerce and manufacture. Several of his agents were stationed in Judea in order to foster trade with Egypt.

°**APOLLONIUS MOLON** (first century B.C.E.), Greek rhetorician and anti-Jewish writer. According to Plutarch (Caesar 3; Cicero 4; cf. Josephus, Apion 2:79) Apollonius settled on the island of Rhodes where he became head of the school of rhetoric. Apollonius criticized the Jews in a pamphlet quoted by Eusebius ("Praeparatio Evangelica") and mentioned by Josephus (Josephus, Apion, 2). He claimed that the Jews were "the worst among the barbarians," lacked any creative talent, did nothing for the welfare of mankind, believed in no divinity, and were commanded by their religion to hate the human race. According to Apollonius, Moses was "an imposter and deceiver." From *Manetho, he borrowed the myth that the children of Israel were banished from Egypt because they were lepers. Apparently, the majority of Apollonius' accusations were not original, but repeated from the writings of antisemites who preceded him.

In the 19th and 20th Centuries

Introduction

Apologetics in Judaism is that literature which endeavors to defend Jews, their religion, and their culture in reply to adverse criticism. The demarcation between apologetics and *disputation is often difficult to draw. The history of Jewish apologetic literature reflects the complicated pattern of relationships between Jews and Gentiles through the generations, and originated in response to the challenges of pagans and subsequently of Christianity. In the Middle Ages Jewish apologetics, termed by Jewish scholars *hitnazzelut*, were intended to defend the spheres of both Jewish religion and Jewish social and national life, past and present, against direct attack and internal doubts arising from comparisons of respective cultures and ways of life. They were also written in the hope of proving to the Gentiles the virtues of the Jewish religion and thereby influencing their outlook on, and attitudes toward, Judaism. In the modern age a new type of Jewish secular apologetics aim at justification of Jewish social and economic conditions in the gentile world. The nonconformist stand adopted by Jewish monotheism against the surrounding polytheism in the ancient world gave rise to aggressive apologetics by the prophets when asserting the supremacy of their faith over "the vanities of the nations" (e.g., Isa. 40:17–21; 42:5–8; 44:6–20; 45:5–7, etc.; Jer. 10:2–5; 14:22; Zech. 8:20–23; 14:9, 16–21).

Against Hellenism

The authors of the Jewish-Hellenistic literature in Greek in the first half and the middle of the third century B.C.E. regarded as their major task the defense of the ideas of Judaism and its historical role. Jewish-Hellenistic historiographers set out to establish argumentation along these lines. *Demetrius, *Eupolemus, and *Artapanus place the Jewish people and Erez Israel at the core of human history. Several Jewish poets expressed these ideas, as attested by extant fragments from compositions of the epic poets Philo the Elder and the Samaritan *Theodotus, while the drama *Exodus* by *Ezekiel the Poet (second century B.C.E.) hints that the dream of Moses beside Mount Sinai and Jethro's interpretation of it relate to

the dominion of Israel over the world. The vision of the burning bush, according to this author, symbolizes the historical-universal value of the Revelation at Mount Sinai. Jewish-Hellenistic philosophers interpreted Judaism allegorically as containing all the best in the systems of the great Greek philosophers. The intellectual and material basis of universal civilization was also pioneered by Jews, according to Jewish-Hellenistic writers. Abraham discovered astronomy and astrology and taught these sciences to the Babylonians and the Egyptians. Joseph introduced a well-ordered society in Egypt. Moses invented writing. Jews were the founders of philosophy. According to the philosopher *Aristobulus of Paneas (2nd century B.C.E.), not only Plato but even Homer and Hesiod were influenced by Judaism because parts of the Torah had been translated into Greek before their time. Many of these postulates were later utilized by Christian apologists in their argumentation against the pagans. In the Middle Ages they became Christian axioms and were accepted by Christians as historical truth.

Concomitantly with the general apologetic trend in Jewish-Hellenistic literature, specific apologetic works were also written. Two works of this type are known: *Philo's "Apology on behalf of the Jews" (Ἀπολογία ὑπὲρ Ἰουδαίων, first century C.E.), of which fragments are preserved in the works of *Eusebius, and *Josephus' *Against Apion* (first century C.E.), which summarizes the argumentation used by Jewish-Hellenistic apologetics. The major theme in *Against Apion* is a defense of the refusal of the Jews to participate in the local cults (λείτουργία) in the cities and provinces in which they were living and enjoying rights as citizens. This abstention was considered by their gentile neighbors to constitute either disrespect for religion in general or atheism (ἀθεότης), i.e., denial of the existence of gods. The accusation was repeated by anti-Jewish polemicists from the days of *Apollonius Molon (in the first century B.C.E.) to *Pliny and *Tacitus some two centuries later. Jewish apologists countered by explaining the Jewish belief in one God and the preferability of monotheism, citing Greek philosophers in support (Jos., *Apion*, 2:22). The apologists continued to denounce idolatry in the prophetic tradition, stressing the baseness of animal and image worship (cf. Arist., 134–9; Wisd., 13–16; Oracula Sibyllina, 3:29–34; Jos., *Apion*, 2:33–34). The refusal of the Jews to take part in the cult of the Roman emperor was viewed as *lèse majesté* by those antagonistic toward the Jews. In defense, Jewish apologists pointed out that sacrifices were regularly offered in the Temple in Jerusalem for the health of the emperor and that the emperors, satisfied with this arrangement, had granted the Jews special privileges (Philo, *De Legatione ad Caium*, 45; Jos., *Apion*, 2:6).

Jewish apologists emphasized the humane character of the precepts in the Torah regarding proselytes and Gentiles to counter the widespread accusations that these injunctions demonstrate pride, contempt, and hatred of mankind (Jos., *Apion*, 2:28–29). They explained reasons for the ceremonial *mitzvot* by way of allegory (see, e.g., Philo's statements on cir-

cumcision, Mig., 16); they also pointed out the cruel attitude to strangers and children common in pagan societies (e.g., Philo, *Spec.*, 3:20). Jewish apologetics, although composed in the language of anti-Jewish publicists and adopting their style and mode of thought, contributed little to the understanding of Judaism among the groups who attacked Jews and Jewish law. However, this activity helped to undermine the religious principles of the pagan world, preparing the ground for conversion to Judaism and later on a large scale to Christianity.

In the Talmud and Midrash

The apologetic argumentation found in Hebrew and Aramaic sources is mainly intended to combat Hellenistic influences within the Jewish camp or that of Jewish "Hellenizers" or to oppose heretical sectarians. The Midrash reveals knowledge of the allegation made by ancient authors that the Jews were expelled from Egypt because they were lepers, and in reply demonstrates that leprosy was prevalent among all nations (Gen. R. 88:1). Similarly, the Talmud and Midrash are familiar with the charge that Jews had not contributed to the creation of human cultures, that they were misanthropes, and disregarded the authority of the state (*Beit ha-Midrash*, ed. by A. Jellinek, 1 (1938²), 9). Consequently, the sages stress the concept that the world was created for Israel's sake and exists thanks to its merit (Shab. 88a; Gen. R. 66:2). On the other hand, they put the blame for Jewish separation on idol worship, to which the Gentiles were addicted, while Jews were enjoined to keep at a distance the customs and cult associated with it.

Apologetics in the Talmud and Midrash take the form of tales, discussions, or exchanges of questions and answers between Jewish sages and Gentiles – philosophers, heretics, matrons, and Roman officials. The opponents of the Jews draw attention to contradictions in Scripture and take issue with anthropomorphic expressions found in the Bible; they censure several principles in the Jewish concept of God and express hostility to the *mitzvot* and laws which appear strange to them. The sages considered it their duty to "know how to answer an *Apikoros" (a heretic; Avot 2:14). Prominent sages are reported to have participated in these apologetic endeavors, e.g., *Johanan b. Zakkai (TJ, Sanh. 1:4, 19d), *Joshua b. Hananiah (Hul. 59b; Nid. 70b), *Gamaliel II, c. 95 C.E. (Sanh. 39a; Av. Zar. 54b), and *Yose b. Halafta (Gen. R. 17:7; Tanḥ. B., Gen. 2). They employ the homiletical method of reasoning (*derush*). Sometimes, however, they did not take the exchanges seriously, and disciples are found asking, "Rabbi, you put him [your opponent] off with a straw, but what will you answer us?" (e.g., TJ, Shab. 3:5, 6a; Hul. 27b; Tanḥ. Hukkat 8).

In Relation to Christianity

The appearance of a new adversary – the church, which developed and spread its influence through advocating progressive separation from the Jewish fold, inevitably introduced new problems in apologetic argumentation. The pagan polemicist Celsus quotes Jewish opinions in his critique of Christianity, according to *Origen in 231–33 (*Contra Celsum*, 1:28). His statements are repeated by Eusebius and Epiphanius. The

Jews were certain of their ground in understanding Scripture, and asserted that “in all the passages which the *minim* [i.e., Christians] have taken [as grounds] for their [Christian] heresy, their refutation is to be found near at hand” (Sanh. 38b). Therefore, where a verse from Scripture was given a Christological interpretation by exponents of the nascent church, the Talmud supplies an opposing, distinctly anti-Christological exegesis of the continuation of the text. Thus, Simeon bar Yoḥai interprets “sons of God” (Gen. 6:2) as “sons of nobles,” as in the old Aramaic versions, and execrated “all who called them the sons of God” (Gen. R. 26:5). Until the beginning of the fourth century the concept of the Trinity was not yet fully accepted in the church. Many statements in Jewish literature recorded from the preceding period, therefore, which appear to some scholars as being directed against the opinions of the Gnostics, or even of the Persian concept of dualism, were in reality formulated against the Christian belief in the Father and Son. Abbahu, unmistakably in reference to Christian beliefs about Jesus, said: “If someone will tell you, ‘I am God,’ he is a liar; ‘I am the son of man,’ his end is that he will regret it; that ‘I am going to Heaven,’ he says this but will not fulfill it” (TJ, Ta’an. 2:1, 65f; see also Ex. R. 29:5). The following homily may be directed against the Christian concept of the divinity of Jesus: “R. Aḥa said: ‘God was angry with Solomon when he uttered the verse [“meddle not with them that are given to change” (Prov. 24:21)] which by a play on the Hebrew words was interpreted as meaning “with them that have two gods.” God said to Solomon, “Why do you express a thing that concerns the sanctification of My Name by an obscure reference [*notarikon*], in the words ‘And meddle not with them that are given to change?’” Thereupon immediately Solomon expressed it more clearly [in the words], “There is one that is alone, and he hath not a second; yea, he hath neither son nor brother” (Eccles. 4:8); “He hath neither son nor brother,” but “Hear, O Israel, the Lord our God, the Lord is one”” (Deut. R. 2:33).

The election of Israel by God also became a topic for apologetics against insistent claims by the church to be the true heir to the election. The sufferings of the Jews, the destruction of the Temple (70 C.E.), and the suppression of the Bar Kokhba revolt (135 C.E.), in contrast to the growth and spread of Christianity, added the elements of visible rejection and punishment of the Jewish nation, while the church was prospering. The same message was repeated by the Church Fathers (second to third centuries) in different forms (Justin, *Dialogus*, 16; Origen, *Contra Celsum*, 4:22; Eusebius, *Historia Ecclesiae*, 2:26). In their attack on the Jews the Christians did not refrain from utilizing arguments used by pagans such as Apion (Jos., Apion, 2:11) and Cicero (*Pro Flacco*, 28). The “abandonment” of the Jews by God was presented to the Jews with proofs from the Bible. “A certain *min* [Christian] once said to R. Gamaliel: ‘You are a people with whom its God has performed *ḥalīzah* [severed his connections from his sister-in-law], for it is said in Scripture, “with their flocks and with their herds they shall go to seek the Lord, but they shall not find

Him; He hath withdrawn from them”’ (Hos. 5:6). The other replied: ‘Fool, is it written “He hath drawn off for them”? It is written “He hath drawn off from them”; now in the case of a sister-in-law from whom the brother drew off the shoe could there be any validity in the act?’” since the act of *ḥalīzah* was not valid unless the sister-in-law had removed the shoe of her brother-in-law. Here the image is of God drawing off the shoe, i.e., such a *ḥalīzah* would be invalid (Yev. 102b; see also Ber. 10a; Sanh. 39a; Av. Zar. 10b). In response to Christian claims that the Old Testament has passed to the church and that Jews have no right to it (Justin, *Apologia*, 1:53; Origen, *Contra Celsum*, 7:26), there is an allusion by the rabbis that the Oral Law alone affirms the truth of the claims of those who uphold the Written Law: “Judah bar Solomon stated that when God said to Moses, ‘Write!’ Moses also requested that the Mishnah (i.e., the Oral Law) should be given in writing. But God anticipated that the Gentiles would translate the Torah, read it in Greek, and say: We are Israel, and we are the children of God, and henceforth, the scales are balanced. God said to the Gentiles: ‘You say that you are My children. I only know that who possess My secret writings are My children. And what are these writings? – the Mishnah’” (Tanḥ. Va-Yera 5; *ibid.* Ki-Tissa 34). In explaining the actions of Jonah who had been sent to gentile Nineveh, it is stressed that he refused to go there (unlike the Christian apostles); this refusal is seen by the *aggadah* as a sign of His love for Israel; Jonah saw that the Gentiles were more inclined to repent “and he did not want to lay his own people open to condemnation. Thus he behaved like the rest of the patriarchs and prophets who offered themselves on behalf of Israel” (Mekh. of Rabbi Ishmael, Pasha, 1). The repentance of the Nineveh Gentiles was in reality “a feigned repentance” (TJ., Ta’an. 2:1, 65b). The interpretation served as an answer to the statements of the Church Fathers who stressed that the Gentiles in the time of Jonah obeyed the prophet sent to them, just as the Gentiles in their own time answered the call of the apostles. In contrast, the Jews had refused to obey then, and refuse to do so now, and as a result they are punished (Luke 11:29–30, 32; Justin, *Dialogus*, 107).

Medieval Apologetics

With the predominance of the church and humiliation of the Jews in the Middle Ages, Jewish apologetics had to assume a new character. The religious disputations held between Christians and Jews became acrimonious. The lack of any kind of recognized Jewish statehood or sovereignty had to be explained. The Jews claimed, inter alia, that there still existed a sovereign Jewish state in the East, a claim put forward as early as 633 (Isidore of Seville, *De fide catholica contra Judaeos*, 1:8, para. 2, in: PL, 83 (1862), 464). Medieval Hebrew apologists in the Mediterranean countries also took issue with Jewish sects, such as the *Karaites. Recognizing that Jewish sectarian movements in part drew their inspiration from Christianity and Islam (several Karaite scholars, for instance, accepted the view that Jesus and Mohammed were prophets), Jewish authors felt the necessity of protecting Judaism from within

by pointing out the weaknesses of these religions. Apologetics of this type were often combined with presentation of a general philosophical system of Jewish thought. Fragments from the Cairo **Genizah* attest to the polemics directed in this period against the Samaritans, Christianity, and Islam, as well as Jewish schismatic sects, apparently from the beginning of the tenth century (Mann, in *HUCA*, 12 (1938), 427ff.).

David *Al-Mukammiṣ (ninth to tenth centuries), who became converted to Christianity and lived briefly at Nisibis as a Christian, wrote two tractates against Christianity after his return to Judaism, which served as sources for the Karaite scholar al-*Kirkisānī and apparently for *Saadia Gaon (fragments in *JQR*, 15 (1903), 684ff.). The latter also directed polemics against Christian philosophers in his *Emunot ve-De'ot*. Concerning the Trinity, Saadia states, "When I present this refutation I do not have in mind the uneducated among them [the Christians] who profess only a crass corporeal Trinity. For I would not have my book occupy itself with answering such people, since that answer must be quite clear and the task simple. It is rather my intention to reply to the learned who maintain that they adopted their belief in the Trinity as a result of rational speculation and subtle understanding" (*Emunot ve-De'ot*, trans. by S. Rosenblatt (1948), 103). Regarding proofs adduced by Christians in support of the concept of the Trinity from the Bible, Saadia states: "The misinterpretation of these terms on the part of these individuals who cite them as proof of their theory, is, then, due to unfamiliarity with the Hebrew language" (*ibid.*, 105). In the third section of the work, Saadia rejects all the arguments adduced by Christians to show that the *mitzvot* and Torah had been abolished with the advent of the New Covenant.

SEFER HA-KUZARI. *Sefer ha-Kuzari* of *Judah Halevi is structured as a work of apologetics, with the subtitle *A Composition in Argumentation and Proof in the Defense of the Despised Faith*. In this work Judah Halevi sets his theory in an historical framework; the conversion of the king of Khazaria and many of his subjects to Judaism, the religion despised by the Gentiles. The Khazars adopted Judaism despite the strictness of its requirements regarding new converts. Judah Halevi elevates the values of human faith in the revealed religion and of Jewish law above those of philosophy, ultimately also opposing the latter. At the basis of his defense of Judaism, he places the history of the Jewish nation and its election by God. The present debased condition of the Jewish people constitutes no reflection on the value of its faith "because the light of God falls only upon humble souls"; humiliation and martyrdom are considered valid signs of proximity to God by all monotheistic religions, even Christianity and Islam, at present powerful in this world. Ultimately, all nations will accept the Torah adhered to by the suffering Jewish people. The religions in which the Gentiles believe at present are merely "a suggestion and an introduction to the anticipated Messiah" (4:22–23).

ISLAM. Comparatively little Jewish apologetic literature is directed specifically against Islam. As *Maimonides states, the

claim of Muslim scholars that the Jews have corrupted the text of the Torah, abolishes the common ground on which any effort to explain the Jewish interpretation of the text to Muslims may be based. Muslims taunted Jews less than Christians about the situation implicit in exile. The Islamic conception that Judaism had simply been superseded by Mohammed's message and the law prescribed by him, lacking the element of internal contradiction, also diminished the requirement for apologetics in this sphere. Polemical allusions to Islam appear in the *piyyutim*, late Midrashim (e.g., *Pirkei de-R. Eliezer*), and exegetical and philosophical works, such as those of Saadia Gaon, the *Emunah Ramah* of Abraham ibn Daud, and Maimonides' *Guide of the Perplexed* (2:32, 39). Identification of the Arabs with various biblical peoples such as *Kedar, Hagarites, or Nebaioth (Gen. 25:13; 28:9; 36:3; Isa. 60:7; Jer. 49:28; 1 Chron. 1:29) helped Jewish commentators to relate tales disparaging to the Muslims. Derogatory allusions are made to the personality of Muhammad and his actions: he is frequently described as "the madman." A work directed specifically against Islam was the "Treatise on Ishmael" (*Ma'amar al Ishma'el*, 1863) by Solomon b. Abraham *Adret, which rejects the arguments of a Muslim who disparaged inclusion of the stories of Reuben and of Tamar and Judah in the Bible and attacked the Jews for observing *mitzvot* which merited abolition. A detailed critique of Islam is also included in the *Keshet u-Magen* of Simeon b. Zemah *Duran. The writer discourses on the attitude in the Koran to Judaism and criticizes the legends related there and its principles of faith and commandments; he points out contradictions found in the Koran, its ignorance of the principles of natural science and philosophical doctrine of the soul, and complains about its obscure style.

SPAIN AND SOUTHERN FRANCE. One of the first works to show the influence of the philosophical method of apologetics employed in Spain and southern France is the *Sefer Milḥamot Adonai* ("Book of the Wars of the Lord," 1170) of *Jacob b. Reuben, where reference is made to Saadia Gaon, *Abraham b. Ḥiyya, and Abraham *Ibn Ezra. It was written to counter the arguments of an erudite Catholic priest whom the author held in high esteem, and its 12 sections include an imaginary debate between a "monotheist" and a "dissenter." The *Sefer ha-Berit* ("Book of the Covenant") by Joseph *Kimḥi, in similar dialogue form, not only defends the Jewish faith, but also demonstrates the morality and excellence of the Jewish way of life as regulated by the law. The case put by the Jew is as follows:

I shall now enumerate their good works and you [i.e., the Christian] cannot deny them. To begin with the Ten Commandments... The Jews do not make idols..., there is no people in the world to compare with them in refraining from perjury; none keeps the Sabbath apart from the Jews. "Thou shalt honor thy [father and mother]"; likewise, "Thou shalt not kill; Thou shalt not commit adultery"; likewise, neither murders nor adulterers are found among them [the Jews]. It is known that you will not find robbery and banditry among the Jews as it is among Christians who rob people on the highways, and hang them, and sometimes put out their eyes; these things cannot be said

of the Jews. The pious Jews and Jewesses... educate their children... in the study of the Torah; when they hear them utter an indecent word they punish them... Their daughters grow up in chastity, you will not see them on the streets, like the daughters of the Christians... Moreover, I tell you that when a Jew stays with a fellow Jew, whether for a day or two or for a year, his host will take no money from him for his board... Thus in every way the Jews in every land behave compassionately toward their brethren. If a Jew sees that his brother is taken captive, he will ransom him; naked – he will clothe him (*Milḥemet Hovah*, Constantinople, 1710).

*Meir b. Simeon of Narbonne in the 13th century defended Jewish faith, life, legal status, and economic activity. Thus he justified Jewish moneylending (trans. in *JJS*, 10 (1959), 51–57). In the draft of a memorandum to the king of France, Meir argues for better treatment of Jews, quoting the Bible on the brotherhood and equality of all men: “Hear me, my Lord King, and all his counselors, sages, and wise men, and all the heads of the Roman faith and its leaders, and follow in the footsteps of the patriarchs, who walked in the ways of the Almighty, for it is His way to hearken to the complaint and outcry of the poor... that all men shall understand that one Creator has created them, of one and same nature and one way of life” (*Milḥemet Mitzvah*, Ms. Parma, 155; Dinur, *Golah*, 2, pt. 1 (1965), 285–6).

NORTHERN FRANCE. The biblical exegetes in northern France introduced into their commentaries defenses of Jewish law and refutations of the claims of Christians in the homiletical spirit of midrashic apologetics. The commentaries of *Rashi are sometimes intended to refute Christological interpretations of biblical passages (e.g., Isa. 53; Jer. 31, 39; Ps. 2, etc.). In particular, the commentaries of *Samuel b. Meir, Joseph b. Isaac *Bekhor Shor, and *Eliezer of Beaugency contain apologetic explanations for almost all the verses to which Christians gave Christological or figurative interpretations. These explanations in part were prompted by the points raised at the religious disputations. The methods of hermeneutics employed range from literal exegesis of the text (**peshat*) to casuistic interpretation, including the hermeneutical methods of numerology (**gematria*) and abbreviation (*notarikon*), which all the schoolmen used in debate. While some of the disputants on behalf of Christianity were apostates from Judaism, those who replied to the Christian arguments included converts to Judaism or their descendants. Abraham the Proselyte from Hungary studied under Jacob b. Meir *Tam and was familiar with the New Testament and Christian liturgy. The French apologist Joseph ben Nathan Official, a descendant of a family of apologists composed c. 1260 the polemical book *Yosif ha-Mekanneh* (or *Teshuvot ha-Minim*) in the form of a commentary on the Bible. Its main purpose was to refute all Christological interpretations of the church. The book is a collection of such refutations of the French scholars until its own days. The book contains also a detailed criticism of the New Testament. This book, as well as other books patterned after it such as the *Nizzahon Vetus* (published by *Wagenseil

in his *Tela ignea Satanae*), reflect the increased missionary activity of the church as well as the courageous response of Jewish religious leadership.

14TH- AND 15TH-CENTURY SPAIN. Jewish apologists in 14th-century Spain attempted to protect Judaism from apostates with mystic leanings. Isaac Policar (*Pollegar) came out against *Abner of Burgos in his *Iggeret ha-Harafot* (“Epistle of Blasphemies”), which circulated throughout the Spanish communities. It contains a brief survey of the principles of the “true faith,” which are also the principles of rationalism, and an explanation of the Jewish belief in the Messiah who would redeem Israel in the future. At greater length, he discusses these topics in the five dialogues in his *Ezer ha-Dat*. Another apologetic work to counter the influence of apostates was written by Moses (ha-Kohen) of Tordesillas, *Ezer ha-Emunah* (1375). Shem Tov b. Isaac ibn Shaprut’s *Even Boḥan* (1385) may be considered a summation of Jewish apologetics in 14th-century Spain. In addition to 14 chapters which include answers to all the arguments raised by Christians, he adds a further chapter specifically directed against the doctrines propounded by Abner of Burgos. One result of the mass conversions of Jews to Catholicism in Spain, which began during the persecutions of 1391 and continued for a considerable time afterward, was the appearance of sharp literary polemics between converts to Christianity and the leaders of Spanish Jewry. Jewish apologetics then revealed outstanding literary talent and expressed new and daring ideas. The leader of Spanish Jewry during this period, the philosopher Ḥasdai *Crescas, wrote an apology in Spanish (translated into Hebrew in 1451 as *Bittul Ikkarei ha-Nozerim*, “Negation of the Principles of the Christians,” and published in Salonika in 1860), in which he turned to gentile intellectuals and demonstrated the grounds for negating the claims made by the Jewish converts to Christianity. A defense of Judaism is also included in his major work *Or Adonai*. Crescas tried to invalidate the view spread by converts, and held by rationalist Jewish apologists, that Judaism is almost identical with philosophical rationalism. He also fought against those who followed the doctrines of *Averroism denying individual providence and free will, the value of fulfilling the *mitzvot*, and the testimony of Jewish history. Ḥasdai set out to prove that Judaism in its original pure form had the power to redeem man through belief and observance of the *mitzvot*.

A colleague and disciple of Ḥasdai Crescas, Profiat *Duran, dedicated himself to the defense of Judaism (see *Disputations). His celebrated satire *Al Tehi ke-Avotekha* (“Be Not Like Your Fathers”) is composed in the form of a letter to a friend, Bonet Bonjorn, who became converted to Christianity under the influence of *Pablo de Santa Maria (Solomon ha-Levi of Burgos). Profiat Duran’s refined sarcasm, his profound learning, and polished style, were so successful that some Christian apologists took the work seriously as a defense of Christianity. Duran formulates the tenets of Christianity in this epistle with biting irony, using a critical historical method. The disputation of *Tortosa (1413–14) and the difficult circumstances

surrounding and following it brought further Jewish apologetics in its wake. Both Joseph *Albo, one of the participants in the disputation, and Simeon b. Zemaḥ Duran, wrote works which were to a large degree influenced by the Tortosa disputation. Albo's *Sefer ha-Ikkarim* (1485) includes in its dogmatic formulations much apologetic argumentation on a rationalist basis. Simeon b. Zemaḥ Duran's *Keshet u-Magen* (1423) is explicitly an anti-Christian polemical work.

ITALY. The defense of Judaism by the Jewish scholars in Spain influenced the apologetic literature in other countries. In Italy, where there was constant social contact between Christians and Jews, debates on religious matters were held even in the early Middle Ages. The traditions of Jewish apologetic literature in Spain were continued by Jews in Italy in the 16th century after the expulsion from Spain, and included many of the exiles among its proponents. The Renaissance, humanism, and the religious ferment in the Christian world also gave a new impetus to Jewish apologetic literature. In the 16th century Jewish apologists tended to write in languages other than Hebrew to enable their arguments to reach Christian intellectuals. In his *Apologia Hebraeorum* (Strasbourg, 1559), David d'Ascoli challenged the restrictive legislation of Pope Paul IV and was imprisoned for his views. When in 1581 Pope *Gregory XIII renewed the order prohibiting Jewish physicians from treating Christian patients, David de Petals defended the integrity of Jewish doctors in his *De medico Hebraeo enarratio apologetica* (Venice, 1588), at the same time defending the Jewish laws regarding the taking of interest. Leone *Modena, who had frequent discussions with Christians, also engaged in apologetics. He wrote in 1644 the polemical book *Magen va-Herev* ("Shield and Sword"). Modena was probably the first Jew to attempt a historical approach to the personality of Jesus, who was according to him close to the Pharisees. Jesus did not consider himself to be the Son of God. The main tenets of Christianity were crystallized in later centuries as a result of contacts with the pagan world and its beliefs and customs. Simḥah (Simone) *Luzzatto, in his *Discorso circa il stato degli Ebrei* (1638), discusses the character and conduct of the Jews, adverting not only to their positive virtues but also to their weaknesses. Luzzatto's main theme is the role filled by Jews in the economy of the Venetian Republic. He tries to demonstrate that the Jews formed a desirable element of efficient and loyal merchants without other loyalties to distract them from allegiance to a principality that treated them well. Luzzatto also attempts to invest Judaism with certain Catholic attributes.

THE REST OF EUROPE. A new aspect of Jewish apologetics was opened with the beginning of the settlement in Western Europe of Marranos who had left Spain and Portugal because of the pressure of the Inquisition, and their own unsettled religious views, but had not yet found their way to normative Judaism. Jewish scholars of Marrano origin now began propaganda among them to convince them of the truth of Judaism and the moral excellence of the Jews. Among these were, for example, the physician Elijah Montalto in a series

of letters addressed to an acquaintance (published in REJ, 87 (1927), 137–65). Similarly, Immanuel *Aboab addressed an appeal couched along these lines to a kinsman in the south of France, replete with historical demonstrations which he used in his *Nomologia* (162. JQR, 23 (1932), 121–62), and were taken over subsequently by *Manasseh Ben Israel in his writings to be described below. Isaac *Cardozo in his *Las excelencias y calunias de los Hebreos* (Amsterdam, 1678) explains the election of the Jews and their mission as the bearers of a universal religion.

In the manner of the Jewish apologetic literature in Italy, there was also literature of this genre among the ex-Marrano Sephardi community in Holland. The most important Dutch-Jewish apologetic work was produced during his mission to England by Manasseh Ben Israel, whose *Vindiciae Judaearum* was published in London in 1656. In this, Manasseh brings historical evidence in refutation of anti-Jewish libels, primarily of the *blood libel. Also emphasized are the material advantages likely to accrue by accepting the Jews into a state: "Hence it may be seen that God has not abandoned us; for if one persecutes us, another receives us civilly and courteously; and if this prince treats us ill, another treats us well; if one banishes us out of his country, another invites us by a thousand privileges, as various princes of Italy have done, and the mighty duke of Savoy in Nice. And do we not see that those republics which admit the Israelites flourish and much increase in trade?" (*Vindiciae*, sect. 33). His *Esperança de Israel* (1650) discusses the prerequisites for the advent of the Messiah and the return of the Jews to their land. Common to all apologetic compositions of this type are their efforts to achieve the amelioration of the present Jewish status by clarifying the essentials of the Jewish faith and explaining the way of life and character of the Jewish people. Many elements in the *Weltanschauung* of the later Enlightenment (see *Haskalah) movement in the period of Emancipation derive from this apologetic literature.

In Poland and Germany Jewish apologetics developed along different lines. In 1394 a German Jewish convert to Christianity, Pesah-Peter, charged that the content of the prayer **Aleinu* (in its original form) – "They bow to vanity and emptiness and pray to a god that does not bring salvation" – was aimed at Christians. Among the Jews consequently imprisoned was Yom Tov Lipmann *Muelhausen. His *Sefer ha-Nizzahon*, written on this occasion, is a defense of Jewish ethics, and of the Bible and Talmud. The work made a profound impact and brought forth responsa by the bishop of Brandenburg, Stephan Bodecker, in 1459. The anti-trinitarian movement which arose in Poland in the 16th century also affected the Jews. Some sectarian leaders were interested in proving to their Catholic opponents who taunted them as being *semi-iudei* the difference between them and the Jews. The Jews in general avoided contacts with the sectarians; but some accepted the challenge. There was a disputation between the Polish Unitarian leader, Marcin Czechowic and the Jew, Jacob of Belzyce. The arguments of Jacob are preserved in the

book of answers by Marcin. Of greater importance is the book *Hizzuk Emunah* by the Karaite scholar Isaac of *Troki, which was translated into European languages (also into Latin by Wagenseil in his *Tela ignea Satanae*) and exerted an influence on the French encyclopedists in the 18th century. It is a well-organized and clearly written book. Isaac shows a profound knowledge of Christianity and its sources. He was also familiar with contemporary Catholic and sectarian literature. The book contains a thorough and systematic criticism of the New Testament. The main purpose of the book was to prove why Jews refuse to believe in the divinity of Jesus and accept Christianity. In 1759 Jewish representatives in Poland were compelled to defend the Talmud in a public disputation with the *Frankists. Dov Ber *Birkenthal of Bolechov wrote an apology entitled *Divrei Binah* (published by A. Brawer in *Ha-Shilo'ah*, 33 (1917), 146ff.). Jacob *Emden countered the charges of the Frankists in *Sefer Shimmush*, which includes a positive evaluation of Jesus and his activity. Emden also acknowledges that Christianity drove out paganism and obliged its adherents to observe the seven *Noachide laws. He emphasizes that Christians are of good character. They are not bound to observe the *mitzvot* and will not be punished for their belief in the Trinity, but will be rewarded for spreading belief in God among Gentiles who had no knowledge of the God of Israel.

In the 18th Century

Evaluation of Judaism became a factor in the struggle between the old and new in the philosophy of Enlightenment. Despite the anti-Judaic stand taken by many rationalist and deist thinkers (e.g., *Voltaire), there were others who defended Judaism and Jews, such as Roger Williams and John *Toland. The German Christian Wilhelm *Dohm, while insisting in 1781 that Jewish mores and culture must be improved, praised the basic traits in the Jewish character. Gradually Jewish apologetic literature furnished the arsenal and became the battlefield in the struggle to attain Jewish emancipation. Non-Jews increasingly joined Jews in their efforts. Gotthold Ephraim *Lessing and Moses *Mendelssohn frequently turned to apologetics to state the Jewish case. In 1782 Mendelssohn wrote an introduction to Manasseh Ben Israel's *Vindiciae Judaeorum* (in the German translation by Marcus Hertz) in which he advocated Jewish rights. In his *Jerusalem, oder ueber die religioese Macht und Judentum* (1783), he explains Jewish law according to his views, his exposition having an apologetic edge: Mendelssohn here denies the Church the right to use coercion by the arm of the state and argues that no state is justified in withholding civil rights from a group of people because of their religious views.

With the weakening of the influence of religion in the West, the religious grounds for antisemitism were replaced by national, social, and economic arguments. Pro-Jewish apologists therefore had to prove that the Jews constituted an advantageous element from an economic standpoint; that any faults with adverse social consequences, such as the practice of usury, were the result of the economic position into which

they had been forced by medieval laws; and that they were loyal to the countries whose national culture they wished to adopt. Preeminent in power and feeling among the defenders of the Jews is the English historian Thomas Babington Macaulay. In his speech in parliament of April 17, 1833, on Jewish disabilities, he dealt with arguments against granting full rights to the Jews, summing up in what may be termed a crescendo of Liberal-Protestant Christian apologetics on behalf of the Jews and their past.

Such, Sir, has in every age been the reasoning of bigots. They never fail to plead in justification of persecution the vices which persecution has engendered. England has been to the Jews less than half a country and we revile them because they do not feel for England more than half patriotism. We treat them as slaves, and wonder why they do not regard us as brethren. We drive them to mean occupations, and then reproach them for not embracing honorable professions. We long forbade them to possess land and we complain that they chiefly occupy themselves in trade. We shut them out of all the paths of ambition, and then we despise them for taking refuge in avarice. But were they always a mere money-changing, money-getting, money-hoarding race?... In the infancy of civilizations, when our island was as savage as New Guinea, when letters and arts were still unknown to Athens, when scarcely a thatched hut stood on what was afterwards the site of Rome, this condemned people had their fenced cities, their splendid Temple.

In the 19th and 20th Centuries

Jewish apologists in emphasizing the contribution made by Jews to civilization, transformed the conception of *am segullah* ("election") to the concept of *te'udah* ("mission"). They progressively emphasized the universal character of Judaism. Abraham *Geiger defended Judaism in this spirit; he also made a scholarly investigation of apologetics, and published selections from the medieval Jewish apologists in *Proben juedischer Verteidigung des Mittelalters*. An apologist in a similar vein was the historian Isaac Marcus *Jost (1793–1860). Gabriel *Riesser (1806–1863), while advocating Jewish emancipation, compared the subjugation of Jews by Christians to that of the Third Estate by the nobility and of the blacks by whites. When the Protestant theologian E.G. Paulus argued that Jews would have to become converted to Christianity in order to become good citizens, Riesser defended the Jews and Judaism in his *Verteidigung der buergerlichen Gleichstellung der Juden* (1831). Riesser's periodical, *Der Jude*, was of great importance in the arena of apologetics. Leopold *Zunz stated in his introduction to his *Die gottesdienstlichen Vortraege der Juden* that "the Jews in Europe, and especially those in Germany, should be given freedom instead of being granted rights." The Jewish situation in the 19th century continued to stimulate apologetics preoccupied with questions relating to emancipation.

Although the concern of Western Jewry with apologetics considerably diminished with the attainment of emancipation, the recrudescence of antisemitism in Europe during the second half of the 19th century again evoked a renewal of apologetic literature, especially in response to the recurrent

blood libels. Joseph Samuel *Bloch (1850–1923) contributed signally to the defense of Jews and Judaism before meetings of workmen in Vienna and in his activities to combat the accusations made by the Catholic theologian and antisemite, August *Rohling, at the time of the *Tisza-Eszlár blood libel case. In 1884 Bloch founded a periodical *Oesterreichische Wochenschrift*, dedicated to the struggle against antisemitism. His apology *Israel und die Voelker* was published posthumously in 1923.

Adolf *Jellinek (1820–1892), the chief rabbi of Vienna, was active in Jewish defense. His successor Moritz *Guedemann not only combated the bias shown by many scholars on Jewish problems but also prompted a widespread information campaign to defend Judaism in the Viennese press and in public gatherings. Guedemann also wrote a basic study of Jewish apologetics, *Juedische Apologetik* (1906). Among scientists who felt compelled to defend the Jews in the face of contemporary antisemitism was the alienist and criminologist Cesare *Lombroso, an Italian Jew, whose *L'anti-Semitismo e le scienze moderne* (1894) was intended for this purpose.

In Eastern Europe also, Jewish apologetics entered the lists in the struggle for civil rights. Notable among the Jewish apologists active in Poland during the first half of the 19th century were Samuel Baum and Jacob *Tugendhold. The latter followed the model of German Jewish apologetic literature. His *Obrona Izraelitów* ("Defense of the Jews") is a refutation of the blood libel, while he also attacked the manner in which antisemites presented the political and social aspects of the Jewish problem. Among apologists in Russia, Isaac Ber *Levinsohn was prominent. In his *Ahiyyah ha-Shiloni* (1864) he even renewed apologetics as a form of Christian-Jewish dialogue. *Tàar ha-Sofer* (1892), a defense of the Talmud, is directed against the Karaites, and *Efes Damim*, a confutation of the blood libel, was written during the Zaslavl case. In Russia, Jewish apologetics were directed, inter alia, to abolition of the restrictions on Jewish residence outside the Pale of Settlement. They thus emphasized the role of the Jewish merchant in the economy as well as cultural factors. In the 1880s, when individual Jews were accused of taking part in the revolutionary movements, Jewish apologists argued that the overwhelming majority of Jews were conservative in character.

An important turning point in Jewish apologetics was the rise of Jewish nationalism. A conflict developed between Zionists and apologists of the conventional type who still used the arguments employed by the advocates of emancipation, and in countering the humiliating propaganda of the antisemites stressed the merits of the Jews. In contrast, the general tendency of Zionists was to present the Jews as a people like any other nation. Zionism, however, developed its own arguments, including the historic right of the Jews to Erez Israel, which had already been a controversial subject between Jews and Gentiles during the Second Temple period.

The 19th and 20th centuries saw the growth of a specific internal apologetics with the object of bringing Jews back to Judaism. Jewish apologists of this type included spokes-

men of neo-Orthodoxy, Samson Raphael *Hirsch (e.g., in *Iggeret Zafon*) and Isaac *Breuer (*Der Neue Kusari*, and other works). Of this intention, although in another spirit, were non-Orthodox writers, such as Max *Brod (*Heidentum, Christentum, Judentum*, 1921), Franz *Rosenzweig (*Apologetisches Denken*), Hermann *Cohen, Edmond *Fleg, Leo *Baeck, and others, who advocated a return to Jewish values out of the conviction that these include an original and complete *Weltanschauung* by which a man can live a noble life. Jews in Germany stressed the honorable part they had taken in the German armed forces in World War I. Jewish bodies, such as the Anti-Defamation League (see *B'nai *B'rith), the *Alliance Israélite Universelle, and the *Central-Verein Deutscher Staatsbuerger juedischen Glaubens, devoted themselves to issuing publicity of an apologetic nature. During the Nazi assault on Jewish existence, there developed an anti-racist scientific literature which furnished Jewish apologists with arguments against racism as well as works stressing the prominent role played by Jews in world culture. After the *Holocaust, Jews such as Jules *Isaac went over to the attack and stressed the Christian historic guilt in the annihilation. One of the central problems confronting Jewish apologists, mainly in the modern age, is of a psychological nature. The anti-Jewish calumniator is able to rouse his public by alleging that Jews and Jewish influence are a cause of social evils. Jewish defense, on the other hand, has stressed that Jews are not responsible. By the very negativeness of its argumentation, therefore, modern Jewish apologetics has often failed to demonstrate positive Jewish values to the public.

APOSTASY, term applied by members of the deserted faith for the change of one faith, set of loyalties, and worship for another. The conception of apostasy could not arise in the atmosphere of polytheism practiced in antiquity before the advent of *Hellenism. The Bible frequently condemns those worshipping other gods, but though this is conceived as a heinous transgression it still lacks the totality of apostasy-conversion.

A product of the spread of Hellenistic culture in Erez Israel was the group of *Mityavvenim* (hellenizers), who according to Jewish sources adopted Hellenistic ways of life and religious worship during the reign of *Antiochus IV Epiphanes in the second century B.C.E. Some scholars take these to be the instigators of his persecution of the Jewish faith. In the Books of the *Maccabees, the Jews who abetted the officials of the Seleucids or joined their armies are described as renegades and apostates. The Tosefta (Suk. 4:28) has preserved the tale of “Miriam of the House of Bilga [a priestly house] who apostatized (שגשת מזרה) and married an official of one of the kings of Greece. As the Greeks entered the Temple, Miriam came and struck the top of the altar, saying... ‘You have destroyed the property of Israel and did not come to their help in their trouble.’” The woman appears to express disillusionment with the Jewish God. Because of her apostasy, her family was disqualified from certain privileges and symbols of priestly status. *Tiberius Julius Alexander, the nephew of the philosopher *Philo Judaeus, went to the extreme of commanding some of the Roman units during the siege and subsequent destruction of Jerusalem and the Temple. As described in the Talmud, the figure of the second-century scholar and teacher Elisha b. Avuyah, who joined the pagan-philosophic camp, disputed with Jewish scholars, and ridiculed the Jewish religion, has a certain grandeur and is accorded a grudging respect.

After the rise of Christianity apostasy became an accompanying phenomenon of Jewish life, a problem between Jews and their neighbors, and a constant source of irritation to the various religious camps as well as to the apostates themselves. The forlorn hope of Judeo-Christians (see *Jewish-Christian sects) of reconciling the Law with the Cross petered out. By the latter half of the second century it had been rejected both by the vast majority of Christians and by Jews. The parting of the ways between church and synagogue had been reached. Acceptance of Christianity that had forsaken the Law was regarded by Jews as apostasy in the fullest sense. The Christian dogmas of Incarnation and Trinity gave to the acceptance of Christianity an idolatrous character (*avodah zarah*).

The history of ferocious persecutions and systematic humiliations which the Jews subsequently endured for their religion (see *History, Jewish; Church, *Catholic; Jewish *Badge; *Blood Libel; Desecration of the *Host) combined to invest apostasy from Judaism with the character of desertion from the persecuted and a crossing over to the persecuting ruling power. This attitude was enhanced by the fundamental divergence between Jewish and Christian approaches to conversion to the respective faiths, which led Jews to draw a strong moral distinction between apostasy and *proselytism, regarding the two in an entirely different light. As developed in Jewish theory and practice, proselytism to Judaism was made dependent on full and deliberate acceptance of partnership in the Jewish fate and historical consciousness, as well as of belief in its faith and hopes. The attitude to apostasy, however, was conditioned by the Christian missionary approach, which, even when abstaining from the use of threats or forcible coercion, still set

out to gain converts by compelling Jews to attend missionary *sermons and involved automatic betterment of the social and legal status of the apostate. This therefore appeared in the Jewish view as a vulgar and essentially nonspiritual attempt to harm souls through moral pressure and promise of material gain. The fear of expulsion or massacre, which always loomed in the background, very often was the root cause of apostasy. Even an apostate whose sincerity was beyond all doubt, like *Abner of Burgos, stated in the 14th century that the starting point for his apostasy was the “revelation” he experienced, in which “I saw the poverty of the Jews, my people, from whom I am descended, who have been oppressed and broken and heavily burdened by taxes throughout their long captivity – this people that has lost its former honor... and there is none to help or sustain them... when I had meditated on the matter, I went to the synagogue weeping sorely and sad at heart. And I prayed... And in a dream, I saw the figure of a tall man who said to me, ‘Why dost thou slumber? Harken unto these words... for I say unto thee that the Jews have remained so long in captivity for their folly and wickedness and because they have no teacher of righteousness through whom they may recognize the truth’ (Baer, Spain, 1 (1961), 328–9). To those who gloried in shouldering the burden of the Jewish fate and history, were imbued with love of Jewish culture and way of life, and continued to hope for salvation and the establishment of God’s kingdom in the future, such a motivation inevitably appeared the outpourings of a weakling and the self-justification of a traitor. This attitude was strengthened in regard to many apostates who became willing and active virulent enemies of Judaism, like Abner of Burgos himself.

Naturally, apostasy was not always motivated by debased considerations, the historical situation, or meditations of this nature. The autobiography of an apostate of the first half of the 12th century (*Hermannus quondam Judaeus, opusculum de conversione sua*, ed. by G. Niemeyer, 1963; see *Hermanus Quondan Judaeus) demonstrates the effect of gradual absorption of Christian ideas and acclimatization to the Christian mode of life through everyday contacts and conversation. It brought the author, Judah ha-Levi of Cologne, to convert to Christianity and become a Premonstratensian monk.

In the Islamic environment the problems were much the same; some apostates attained prominent positions in Islamic states and society, the outer expressions of tension caused by apostasy being on a smaller scale (see below Apostasy in Islam). In the perpetual conflict and tensions that existed between Jews and Christians in medieval Europe, conversion from one faith to another, although rare, was still more frequent than either side cared to admit clearly. Thus, on the occasion of a halakhic deliberation in the 12th century, the talmudist Jacob b. Meir *Tam reported: “More than 20 letters of divorce from apostates have been written in Paris and France... and also in Lorraine... I have also seen myself the letter of divorce given by the son-in-law of the late noble R. Jacob the Parnas who has apostatized” (*Sefer ha-Yashar*, ed. by S. Rosenthal (1898), 45, no. 25).

Some apostates founded influential families whose Jewish origin was well known among Christians, such as the *Pierleoni family in Rome, the patrician Jud family in Cologne, and the *Jozefowicz family in Poland-Lithuania. Certainly not all apostates from Judaism attempted to injure their brethren. When a number of apostates were asked in 1236 whether there was truth in the blood libel, they denied it categorically. Prominent among the apostates who deliberately set out to attack Judaism were Nicholas *Donin in France, Pablo *Christiani, and Hieronymus de Sancta Fide (Joshua *Lorki) in Spain, and Petrus *Nigri (Schwarz) in Germany. These in the 13th to 15th centuries led the attack on Judaism in the theological *disputations, preached against Judaism, and proposed coercive measures to force Jews to adopt Christianity. Other converts who achieved high rank in the church, like Pablo de Santa Maria (Solomon ha-Levi), who became archbishop of Burgos, did everything in their power to combat Judaism. The most virulent representative of anti-Jewish animus was Abner of Burgos, who initiated the intensified persecution of the Jews in Christian Spain during the 14th and 15th centuries by formulating a complete theory that subsumes the necessity for, and justification of, such persecution. He advised the abolition of Jewish *autonomy, arguing with vicious irony that the Messiah would not come to the Jews “until the Jews possess no authority, not even such petty authority as is exercised over them by their rabbis and communal wardens, those coarse creatures who lord it over the people like kings. They hold out vain promises to them in order to keep them under constant control. Only with the elimination of these dignitaries and judges and officers will salvation come to the masses” (polemical tract, Baer, *op. cit.*, 350). In the name of “many discerning Jews,” Abner blamed the pope and Christian monarchs for failing to oppress the Jews adequately. The conditions of salvation for the Jews would come only “when many Jewish communities are massacred and the particular generation of Jews is thereby reduced in numbers, some Jews immediately convert to the dominant Christian faith out of fear, and in that way a handful are saved. . . and the pain of impoverishment will lead to an increase of shamelessness among them, that is, they will no longer be ashamed to profess the truth openly and convert to Christianity” (Baer, *op. cit.* 353–4). By this means this apostate tried to reinforce his own experience of Jewish weakness and convert it into a terrible reality that would force many more Jews to relinquish their faith.

At the time of the expulsions from Spain and Portugal at the end of the 15th century, a sharp distinction was made by Jews between the renegade apostates, whom they considered an evil and the root cause of the wave of persecutions, and the mass of forced converts, the *anusim or *Marranos, whom they still regarded as brethren, though obliged to practice Judaism clandestinely. However, in realization, the program promoted by Abner of Burgos and others like him created a strong revulsion in Christian society against both the Marranos and genuine converts alike. Political events and social attitudes in Christian Spain in the 15th to 16th centuries fo-

mented the concept whereby the “New Christians” were not to be equated with, and trusted as, the “Old Christians” of “pure Christian blood.” Thus it could happen that the second general of the Jesuit order, Diego Lainez, had to face opposition within the order because of his Jewish blood.

In the Renaissance and *Reformation environment apostasy occurred in various circumstances. One type of apostate was the rootless intellectual like Flavius *Mithridates, a translator from Hebrew and an influential expositor of Hebrew works. Others were led to convert to Christianity by their superficial contacts with Renaissance circles and the new importance attached by humanists like Johannes *Reuchlin and *Pico della Mirandola to learning Hebrew from Jewish teachers. The impoverished conditions of late medieval Germany gave rise to the opportunist who could change over at least three times from Judaism to Christianity and back again, and who on one occasion of reconversion quoted a proverb he had heard: “*lasse dich taufen, ich will dir vil Gulden schaffen*” (“Become baptized: I will get you plenty of money”; R. Strauss, *Urkunden und Aktenstuecke zur Geschichte der Juden in Regensburg* (1960), 64–66). The basic attitude of both Jews and Christians toward apostates did not change with the Reformation. Many of the teachers of Hebrew to Christians were Jews, most of them apostates. They also cooperated in bringing out Reformation translations of the Bible. In his later days, Martin *Luther displayed marked distrust of apostates from Judaism. The attacks on the Talmud made by Johann *Pfefferkorn on the eve of the Reformation and the denunciation poured by Anton *Margarita on Jewish ritual practices and way of life continued in new circumstances the tradition of virulent anti-Jewish hatemongering by apostates.

The stimulus provided by 18th-century Enlightenment, stirrings toward *assimilation on the cultural and social plane, and aspirations to attain *Emancipation, inaugurated a trend toward apostasy in the upper circles of Jewish society in Central and Western Europe. A number of Jews opted for Christianity as the basis of European culture and its most sublime expression, despising their Jewish background and traditional way of life as debased and degraded. Typical was a society intellectual like Rachel *Varnhagen von Ense. Others considered apostasy the most facile and ready way of attaining civil equality as an individual before the Jews as such had achieved emancipation. Moses *Mendelssohn was publicly challenged to become converted if he did not refute the testimony advanced in proof of Christianity (see *Disputations). David *Friedlaender proposed in the name of several “Jewish heads of families” to be permitted to accept Christianity without having to subscribe to its “historical dogmas.” Jews also left Judaism because they did not find communal obligations or activity to their taste.

Isaac *D’Israeli stated in 1813 to the board of the Bevis Marks congregation in London, as a reason for his refusal to act as warden, that he was “a person who has always lived out of the sphere of your observation; of retired habits of life; who can never unite in your public worship, because, as now

conducted, it disturbs, instead of exciting, religious emotions, a circumstance of general acknowledgment; who has only tolerated some part of your ritual, willing to concede all he can in those matters which he holds to be indifferent.” This indifference led him to baptize his illustrious son Benjamin in 1817 while formally remaining a Jew himself, a path taken by many others of a similar frame of mind who had their children baptized at the end of the 18th and beginning of the 19th centuries. The attitude of indifference was reinforced by the view that relegated religion to the status of an element in the universal culture or a cell in the social structure.

From the second half of the 18th century the ties linking the individual with the social unit became loosened in the upper strata of European society. Jews then increasingly absorbed the culture and adopted the language of their environment. Baptism was submitted as the visiting card demanded by Christian society for its price of admission. Many able young Jewish intellectuals, among them men outstanding in their field like the jurist Eduard *Gans, Ludwig *Boerne, and the poet Heinrich *Heine, who had first wanted to use their creative activity in the Jewish framework, left Judaism to be able to work within, and contribute to, European culture and society. In some communities, such as Berlin, more than half of the descendants of the old patrician Jewish families adopted Christianity, including the Mendelssohn family. The majority of these did not claim to be drawn by an essential attraction to Christianity or act under rigorous pressure. Apostasy was regarded as a social formality performed for the sake of culture, society, or career. Many of the sensitive among them bitterly regretted their action. Much of Heinrich Heine’s work is dominated by a pervasive longing for Judaism, and a biting irony against himself and his fellow apostates, their snobbery and social climbing by means of Christianity.

Karl *Marx, baptized as a child, later professed contempt for and revulsion against Judaism as the representative of Mammon. In his Christian environment Benjamin Disraeli developed a kind of pride in what he considered the destiny and genius of the Jewish “race.” The heroine of his novel *Tancred*, Eva, sarcastically asks Tancred: “Pray are you of those Franks who worship a Jewess; or of those others who revile her, break her images, and blaspheme her pictures?” When the Christian refers to the punishment of the Jews for crucifying Jesus, Disraeli’s Jewess answers with the ancient argument used by Jews in disputations: “Suppose the Jews had not prevailed upon the Romans to crucify Jesus, what would have become of the Atonement?” When the Christian answers that the Crucifixion was preordained, “Ah,” said the lady, “preordained by the creator of the World for countless ages! Where then was the inexpiable crime of those who fulfilled the beneficent intention? The holy race supplied the victim and the immolators.... Persecute us! Why if you believed what you profess, you should kneel to us! You raise statues to the hero who saves a country. We have saved the human race, and you persecute us for doing it.”

Benjamin Disraeli was representative of a group of apostates who considered themselves deeply Christian in a mythical and social sense and in consequence Jewish in a racial and spiritual sense. In the 19th century they were often active in missions to the Jews, like Bishop Michael Solomon *Alexander in Jerusalem, while at the same time being very responsive to Zionism and its aspirations.

With the granting of emancipation to Jews in most of Western and Central Europe the brutal social pressure for the “visiting card of baptism” moderated. On the other hand, many Jewish scholars and scientists, in particular in Germany and Austria, became baptized for the sake of a university career, which was usually closed to a professing Jew. Some deeply committed apostates like the *Ratisbonne brothers in the 19th century founded special religious orders or groups for the propagation of Christianity among Jews. According to statistics available there were 21,000 apostates in Poland in the 18th century, and 204,500 throughout the world in the 19th. However these figures are exaggerated since they include the Frankists in Poland and the *Cantonists in Russia.

In czarist Russia, up to 1917, there was relentless pressure for social acceptance through baptism. However, Jewish social and moral cohesion was strong and undeniable, and to a certain degree the Jewish cultural level was superior to that of the surrounding population. Here apostasy of a different type developed: people who accepted Christianity for the sake of a government or university career (a number of apostates were employed for *censorship of Hebrew books) but still retained their ties with Jewish society, and a pride in their Jewish origin, like the orientalist Daniel *Chwolson. Apostates like Jacob *Brafman, however, did much to bring discredit on the institutions of Jewish self-government and to provide fuel for antisemitism.

In the 20th century the phenomenon of apostasy became more complex, with deeper implications. While its effects were more subversive for Judaism, it aroused problems of Jewish nationality and culture which were less prominent previously. Boris *Pasternak is representative of the type of apostate who left Judaism because he rebelled against historical and social realities and obligations. After describing the beatings and humiliations to which the Jews were subjected by the Cossacks of the Christian Russian army in his novel *Dr. Zhivago*, he states concerning the incident he has described, “that, and other incidents like it – of course none of that is worth theorizing about.” Having disposed of pogroms and antisemitism by refusing to face them on the intellectual level, he continues that, in regard to “the Jewish question as a whole – there philosophy does enter.” The philosophy he perceived – his theory was formulated when World War II was raging and the Jewish people was being systematically destroyed in the *Holocaust – was that Jewish history is a self-inflicted punishment through refusal to heed that in “this new way of life and of communion, which is born of the heart and is called the Kingdom of God, there are no nations, only persons.” Having denied the existence of the question of nations and nationality around

the year 1941, Pasternak goes on to accuse “the ordinary run of politicians” who like to have “a nicely restricted group” so that they can deliberate and continue “settling and deciding and getting pity to pay dividends. Well now, what more perfect example can you have of the victims of the mentality than the Jews? Their national idea has forced them, century after century, to be a people and nothing but a people – and the extraordinary thing is that they have been chained to this deadening task all through the centuries when all the rest of the world was being delivered from it by a new force which had come out of their own midst... In whose interests is this voluntary martyrdom?... Why don't the intellectual leaders of the Jewish people ever get beyond facile *Weltschmerz* and irony? Why don't they – even if they have to burst like a boiler with the pressure of their duty – dismiss this army which is forever fighting and being massacred, nobody knows for what? Why don't they say to them: “That's enough, stop now. Don't hold on to your identity, don't all get together in a crowd. Disperse. Be with all the rest. You are the first and best Christians in the world. You are the very thing against which you have been turned by the worst and weakest among you” (*Dr. Zhivago* (1958), 116–8). Facile antisemitic allusions to the character of the Jewish intellectual, and his looking for gain, are mingled here with a self-righteous denial of Judaism as a religion and an imputation that nationalism is the original and abiding sin of Judaism. Pasternak's resentment toward the religion and community he has abjured is expressed in his poetry on the basis of ancient Pauline symbols, rejecting the “barrenness” of Judaism and substituting another tree for the fertile olive:

Near by stood a fig tree. Fruitless, nothing but branches and leaves. He said to it:

‘What joy have I of you?
Of what profit are you, standing there like a post?
‘I thirst and hunger and you are barren,
And meeting you is comfortless as granite.
How untalented you are, and how disappointing!
Such you shall remain till the end of time!’
The doomed tree trembled
Like a lightning conductor struck by lightning,
And was consumed to ashes.
If the leaves, branches, roots, trunk,
Had been granted a moment of freedom,
The laws of nature would have intervened.
But a miracle is a miracle, a miracle is God (*ibid.*, 497–8)

Like another apostate, Eugen *Rosenstock-Hussy (for his arguments, see *Disputations), a German of the generation of World War I, Pasternak expresses a categorical and hostile repudiation of Jewish nationalism as the evil archetype of all forms of nationalism. Both men are typical of the modern apostate who joins Christianity as an individual, rejecting communal solidarity as an unwonted yoke, and repudiating Jewish historical continuity, yearning for a mystic penetration of their individuum with the suffering Christian God. In his attitude to Jewish nationalism, Pasternak displays a consider-

ably greater hostility than his German fellow apostate, logical in a man who left Eastern European Jewry in a period of revolution, distress, and annihilation of order.

Another trend in apostasy from Judaism in its modern form is represented by Oswald Rufeisen, who as Brother Daniel entered the Carmelite order in 1945. Born in Poland in 1922, and in his youth an active Zionist, he worked in the wartime underground and saved Jews during the Holocaust. He became a Christian in 1942, but continued to consider himself a Jew. After he became a monk, he wrote to the Polish authorities applying for permission to leave Poland for Erez Israel: “I base this application on the ground of my belonging to the Jewish people, to which I continue to belong although I embraced the Catholic faith in 1942 and joined a monastic order in 1945. I have made this fact clear whenever and wherever it has been raised with me officially... I chose an Order and Chapter in Israel in consideration of the fact that I would receive the leave of my superiors to travel to the land for which I have yearned since my childhood when I was a member of the Zionist youth organization” (*High Court Application of Oswald Rufeisen v. The Minister of the Interior* (1963), 54–55). In 1962 Brother Daniel appealed to the Israel High Court to be recognized as a Jew under the terms of the Law of Return, which grants Jews settling in Israel automatic citizenship. This application raised the problem of “Who is a Jew?” in Israel in its full modern implications. For the majority, Judge Silberg refused his petition. The judge admitted that Brother Daniel was a Jew according to *halakhah*, but in rendering judgment stated that the Law of Return is not based on *halakhah* but on the Jewish national-historical consciousness and the ordinary secular meaning of the term “Jew” as understood by Jews. After referring to the “great psychological difficulty” facing the court due to the deep sympathy and sense of obligation felt for the petitioner, the spokesman for the majority stated: “I have reached the conclusion that what Brother Daniel is asking us to do is to erase the historical and sanctified significance of the term ‘Jew’ and to deny all the spiritual values for which our people were killed during various periods in our long dispersion. For us to comply with his request would mean to dim the luster and darken the glory of the martyrs who sanctified the Holy Name [*kiddush ha-Shem] in the Middle Ages to the extent of making them quite unrecognizable; it would make our history lose its unbroken continuity and our people begin counting its days from the emancipation which followed the French Revolution. A sacrifice such as this no one is entitled to ask of us, even one so meritorious as the petitioner before this court” (*ibid.*, 1–2). The court stated that in order to be declared a Jew from the point of view of the modern Jewish secular conception of Jewish nationality, adherence to the Jewish religion is not essential. At the same time apostasy to Christianity removes that person from this nationality.

Between the two wings representing current tendencies in apostasy exemplified by Pasternak and Rufeisen stands the middle-of-the-road attitude displayed by the Anglican bishop of Kingston, Hugh Montefiore. The bishop acknowledges loy-

alty to the memory of his fathers and maintains contact with Anglo-Jewish society without adhering to his Jewish national identity. He and others like him would seem to continue in an attenuated form the attitude of Disraeli. On the other hand one wonders if in the hostile attitude to Israel of other apostates there is not the direct continuation of the medieval Jew-hating figure of the apostate.

The issues raised by the Rufeisen decision remain very much at the heart of public deliberation in Israel. Essentially the present time marks a return to the core of the historical Jewish position on unity of faith and nation and to consideration of the apostate from this standpoint. Shortly before the expulsion of the Jews from Spain, Isaac b. Moses *Arama wrote that when "one of the gentile scholars, seeing that Jews were very eager for a letter of divorce to be given by an apostate and he refused... asked... 'Why do you want it from him? As he left his religion it would be proper for them to consider him as if he did not exist. Hence his wife should be considered a widow in every respect...' The answer was: 'Apostasy cannot be of the essence but only accidental, meaning only a change of name or the street where he lives. He cannot change his essence, for he is a Jew...' This answer is true according to our religion. This is the meaning of the saying of our Sages, 'Even if he has sinned, he remains of Israel'" (*Akedat Yizhak* (Venice, 1573), 258b no. 97, Ki-Teze). The Jewish sage adds that the Christian will not accept this definition since for him religion is the sole criterion. Prevailing halakhic opinion throughout the ages has always considered the apostate a Jew for all purposes of obligations, ties, and possibilities given to a Jew, but denying him some specific legal rights, in particular in the economic sphere, and in the performance of certain honorary or symbolic acts. In terms of conscience and consensus of opinion Jewish society regarded the apostate up to the 18th century as "dead," as proscribed from the Jewish community, considering him as the very essence of desertion and treason.

At the present time extreme individualism or mysticism are the main paths leading some people away from Judaism. Snobbery and careerism, missionary blandishments and promises, still play some role in bringing about apostasy, but this is diminishing. The passive attitude of the majority of believing Christians at the time of the Holocaust, and even more, the conception of many of the courageous minority who risked their lives to save Jews but insisted on "saving their souls" at the same time, often souls of children in their care, threw into relief the harsh and ugly implications in apostasy. The concept of a multi-religious Jewish nation now facing the people of the State of Israel is tied up with and intersected by the problems and phenomena of historical continuity, mutual toleration, and social cohesion of the unique concept of the people of Israel as "a kingdom of priests and a holy nation," forming the cohesive religio-national entity that has united Jews and carried their specific message through the ages.

[Haim Hillel Ben-Sasson]

Decrees of Religious Persecution and Forced Conversion in Jewish Communities in the Diaspora

The periods in history when Jewish communities were the victims of decrees of religious persecution and forced conversions engendered a host of halakhic questions concerning the attitude to Jews who had converted and subsequently returned, or wished to return to the Jewish fold. Jews who abandoned Judaism under duress often expressed a desire to return to their communities.

In Rashi's responsum, (*Teshuvot Rashi*, Y. Alphenbein ed. New York, 5703, s. 70), we find evidence that within the framework of excommunication edicts (*herem*) enacted by Rabbi *Gershom ben Judah Me'or ha-Golah in 11th-century Germany, excommunication was decreed for any individual who reminded a repentant apostate of his past. In the same responsum Rashi himself comments:

Repentance reaches as high as the Throne of Glory, and even the most righteous individuals do not reach the level of those who repent, as it is written: "peace, peace to the far and to the near" (Isaiah 50 7, 19).

Regarding the actual process of the repentance, divergent approaches may be found. The responsa of Rabbenu Asher (*Roshi*) (32, 8; Rabbi Asher ben Yehiel, Germany – France, 13th–14th centuries) reflects a strict approach. The case concerned a group of women forced into apostasy who subsequently escaped and returned to Judaism. Asheri declares that the act of apostasy committed during a period of religious persecution, i.e., at a time when edicts of forced conversion were imposed on Jews, is graver than the act of conversion when there is no such decree, "because it is considered an act committed in public". Accordingly it is insufficient for the offenders to only return to the community. Rather "they require greater remorse, repentance and acceptance of suffering than those who convert in the absence of such a decree".

Rabbi Israel *Isserlein of 15th-century Germany (*Terumat Haddeshen* 8. 198) adopts a more lenient position: He maintains that a penitent apostate should not be burdened with too many acts of penance and mortification, "because the inclination (of a former apostate) to transgress is greater than the inclination of those who commit other sins," and there is concern that he might "shun his repentance".

A question that gave rise to dispute between halakhic authorities was whether a kohen who became an apostate and subsequently repented, retains his sanctified status as a kohen, entitling him to administer the Priestly blessing and be the first to be called up to the Torah. R. Naturnai Gaon (*Otzar ha-Geonim*, Gittin, 327, 328) and R. Achai Gaon (*ibid.*, Sotah, 259) ruled that he cannot bless the community or be first to bless the Torah. On the other hand, Rabbenu Gershom (Resp. Rabbenu Gershom Me'or ha-Golah, 4) ruled that after his repentance his status was equivalent to that of all other priests, and that he was entitled to administer the priestly blessing and be the first to be called up to the Torah as a kohen. In explaining this ruling R. Gershom states that it is forbidden to

remind him of his past deeds, namely the period of his apostasy, due to the prohibition of affliction by words (*Ona'at de-varim* (see **Ona'ah*). If he is forbidden to bless the community, “these is no greater affliction than this”. Another reason given by R. Gershom is the desire to “avoid weakening the penitents’ motivation”. Following the ruling of R. Gershom, the Ashkenazic authorities also ruled leniently in this context. On the other hand, the Eastern authorities (Sephardic) tended to the stricter view. Hence Maimonides rules against a kohen performing the priestly blessing even after recanting (Yad, Hilkhot Nesi'at Kappaim, 15.3; see Haghaot Maimuniyyot, *ibid*).

With regard to a repentant *kohen*, Rabbi Jacob “Baal Ha-Turim” (Tur, Orah Hayyim 128) questions whether such individual can administer the priestly blessing. However, with regard to being called up to the Torah, he rules unequivocally that such a kohen may be called up first. Rabbi Joseph Karo rules that we may rely on the opinion of those authorities who permit a kohen who left the faith and subsequently repented to administer the priestly blessing, if only in order “to create an opening for those who would repent”. Regarding Maimonides’ aforementioned ruling prohibiting such a kohen from performing the priestly blessing even after he has repented, Rabbi Karo maintains that the prohibition does not apply to cases in which the apostasy of the kohen in question was coerced (Bet Yosef, *ibid.*; Sh. Ar. Oḥ 128, 37).

Support for this position can be found in an epistle written by Maimonides called “the Epistle of Apostasy.” This epistle was written at a time when the Muslim rulers of Spain forced Jews to declare the truth of Muhammad’s prophecy, under penalty of death.

Apostasy to Islam

Few of the Jews of Arabia embraced *Islam in the time of Muhammad. Among them *Abdallah ibn Salām was the most distinguished. They contributed to the exacerbation of relations between Jews and Muslims. In the next generation ‘Abdallah ibn Saba’, from Yemen, a noted partisan of Ali, is reported to have been a Jewish convert. Two other converts, *Ka’b al-Aḥbār (companion of ‘Umar b. al-Khaṭṭāb) and *Wahb ibn Munabbih, also from Yemen, were considered authorities on Jewish lore. The affinities of Jewish and Islamic tenets and lore, coupled with the fact that there were Jews among the early converts to Islam, gave rise, among Jews, to the cycle of legends on the Jewish teachers of Muhammad, and, among Muslims, to the allegation that Jewish converts plotted to undermine Islam from within by sowing deviations and heresies. Jews in later times were faced with the complex problem of how to treat the converts to Islam, especially if they claimed to cleave to Judaism in secret (cf. opinions of *Maimonides and his father *Maimon, e.g., in *Iggeret ha-Shemad*).

Substantial group conversions of Jews may have taken place in the era of expansion of Islam, especially in Babylonia, but no definite information seems available. Individual and small group conversions, and occasional forced ones, took place throughout the Islamic world over the centuries. It may

be assumed that the recurrent promulgation of sumptuary laws and the agitation against non-Muslims (mostly Christians) were accompanied by waves of conversion, as some people sought to escape the effect of persecution and humiliation, and experienced the disintegration of their ancestral loyalties. In Yemen in the 19th and 20th centuries Jewish orphans were often seized to be brought up as Muslims (i.e., in the “natural” religion of man, unobstructed by “misguided” parents). Some converts turned into denunciators and persecutors (see also *disputations). Certain distinguished figures in Islamic society were known to have been Jewish converts or of Jewish extraction (cf. *Ibn Killis, the poet *Ibn Sahl). *Al-Isrā’īlī* as a name component is a frequent indication of Jewish origin.

The 12th century was marked by a wave of forced conversions in the wake of the Almohad upheaval (1143) in North Africa and Spain. From the other end of the Islamic world the conversion of a distinguished trio was reported: the philosopher Hibat Allah Abu al-Barakāt, the poet Isaac (son of Abraham) ibn Ezra, and the physician-mathematician *Samau’al b. Judah ibn Abbas. In the 17th century the sect of Muslim crypto-Shabbateans developed (see *Doenmeh) when partisans of the pseudo-messiah *Shabbetai Zevi followed the leader’s example and embraced Islam. In 1839 the Jews of *Meshed (Iran) were forced to convert, with the result that they continued to live as Jews disguised as Muslims. During the *Damascus Affair (1840), terror and torture forced some to convert. Conversions were festive occasions celebrated inside and outside the mosque, especially if the convert happened to be a prominent person. Conversion stories often laid emphasis on divine intervention and visions as motivations.

[Moshe Perlmann]

In Jewish Law

In Jewish religious law, it is technically impossible for a Jew (born to a Jewish mother or properly converted to Judaism) to change his religion. Even though a Jew undergoes the rites of admission to another religious faith and formally renounces the Jewish religion he remains – as far as the *halakhah* is concerned – a Jew, albeit a sinner (Sanh. 44a). According to *Naḥmanides this attitude derives from the fact that the covenant between God and Israel was made “with him that standeth here with us today before the Lord our God and also with him that is not with us here today” (Deut. 29:14; Naḥmanides *ad loc.*). For the born Jew, Judaism is not a matter of choice and for the proselyte it ceases to be one once he has converted. However, persons who did assume another religion or formally renounced Judaism are treated differently by Jewish law from Jews who, even while sinning, have not taken such actions. These people are known in the *halakhah* as *mumar* (from the root meaning “to change”), or *meshummad* (from the root meaning “to persecute or force abandonment of faith”), or *apikoros* (“heretic”), or *kofer* (“denier”), or *poshe’a Yisrael* (“rebellious Jew”). Since in the technical halakhic sense, apostasy is impossible, the above terms are often used very loosely in rabbinic literature.

According to strict *halakhah* an apostate who reverts to Judaism requires no special ritual since technically he never left it. However, there are authorities who require some symbolic act. He is therefore required to confess his sins and repent of them before a collegium of three rabbis and pronounce that henceforth he will keep the laws of Judaism. Some authorities require ritual immersion in a *mikveh* as in the case of proselytes (Isserles to Sh. Ar., YD 268:12). The law is considerably more lenient with regard to the reversion of the Marranos and other *anusim* who were forced to assume another religion against their will or out of fear for their lives, and they are immediately and automatically reaccepted into the community when they express such a desire (Simeon b. Zemaḥ Duran, *Tashbez* (Amsterdam, 1738), 15a–b; Maimonides, *Epistle to Yemen*, ed. and tr. by A.S. Halkin, 1952).

MARRIAGE. A marriage, celebrated in accordance with Jewish law between two apostates or an apostate and a Jew, is valid and the parties are husband and wife according to Jewish law (Yev. 30b; Sh. Ar. EH 44:9; *Tashbez*, *loc. cit.*; see Mixed *Marriage). Hence, neither of them can contract another marriage with a Jew until their said existing marriage is dissolved by divorce, valid under Jewish law, or death (*ibid.*). If their marriage was celebrated according to the tenets of another faith, they are not considered married in Jewish law (even if they live together as husband and wife), and consequently they do not require a divorce. Nor, in this case, is there any room for applying the presumption that a person does not have licentious sexual intercourse which is the usual basis for the assumption that the cohabitation (*bi'ah*) constituted an act of *kiddushin*, since that presumption applies only in circumstances where there is reason to assume that the parties, in cohabiting together, intended a *kiddushin* to come about thereby in accordance with Jewish law, a possibility excluded in this case in view of the apostate's denial of the Jewish faith and his contracting the marriage according to the tenets of another faith (for differing views on this point, see Israel b. Pethahiah Isserlein, *Terumat ha-Deshen*, 1, 64–65, 83–84; Isaac b. Sheshet, Responsa, no. 11; PDR, 7:35, 39–44 as against 54–56).

STATUS. A child born of an apostate mother is a Jew, regardless of the stage at which she became an apostate, and if he marries a Jewess, even if she is an apostate, the marriage is valid (Maim. Yad, Ishut, 4:15).

DIVORCE. Although generally divorce is considered to be to a woman's detriment, since she is deemed to prefer the married state (Yev. 118b), this factor is disregarded when one of the parties is an apostate. Since an apostate wife is suspected as transgressing all the commandments of the Torah, including adultery, she becomes prohibited to her husband (see *Adultery); and, as a married woman, prohibited to any other man. It can therefore be only to her benefit to be released from the bonds of marriage. Similarly, when the husband becomes an apostate: his wife will prefer a divorce to living with an apostate (Isserles, Sh. Ar., EH 140:5; 154:1; Solomon b. Abraham Adret, Responsa,

1162). Hence, even though, generally, a divorce does not take effect until the *get* ("bill of divorcement") has been delivered to the wife personally, or to an agent appointed by her for this purpose, in accordance with the halakhic rule that "one cannot act to a person's disadvantage without his knowledge or consent" (lit., "in his absence"; Yev. 118b), in this case, however, once the *get* reaches the hands of the agent, appointed not by the wife, but by the court or by her husband, it takes immediate effect, on the grounds of the opposite rule that "one may confer a benefit upon a person without his knowledge or consent" (Sh. Ar., EH 140:5; Isserlein, *Terumat ha-Deshen*, 1, 209, 237; (for Levirate Marriage and *Ḥalīzah* with regard to an apostate – see *Levirate Marriage).

COMPETENCY AS A WITNESS. Jewish law holds the testimony of an apostate to be unreliable, since he disavows the whole of the Torah and is therefore liable to be untruthful, even though he is considered a Jew from the point of view of his personal status. However, in accordance with the regulations which aim at easing the lot of an **agunah* ("deserted wife"), who has to establish death of her husband in order to remarry, the *halakhah* provides that the testimony of an apostate is admissible for this purpose provided that he makes the relevant statement in the course of casual conversation ("*mesi'ah lefi tummo*") and not as formal evidence.

INHERITANCE. In strict law, a son is heir to his father by the mere fact of kinship (Num. 27:8; BB 108a and 111a; and Codes) and accordingly his right is retained by the apostate son and for the same reason his father inherits him. However, the apostate having sinned, the court is authorized, if it so sees fit, to penalize him, excluding him from his father's inheritance by way of his portion passing to heirs who have not apostatized on the strength of the rule of *Hefker bet din hefker* (i.e., the court has the power of expropriation) as well as in order to discourage apostasy (Kid. 18a; and Codes; Asher b. Jehiel, *Piskei ha-Rosh* to Kid. 22). A contrary opinion quoted by Solomon b. Abraham *Adret in the name of *Hai Gaon (Responsa 292) has not been adopted by the majority of the *posekim*.

MOURNING RITES. The general opinion of the codifiers is that mourning rites should not be observed at the death of an apostate (Sanh. 6,6; Sh. Ar., YD 345:5) unless, according to some authorities, he met a sudden death in which case it is assumed that he repented (Isserles to Sh. Ar., YD 340:5; cf. 157 and ḤM 266:2). It was however customary in some circles to observe the mourning rites at the apostasy of a child.

IN THE STATE OF ISRAEL. The foregoing rules are generally followed in the interpretation of laws with reference to the question of determining the legal status of an apostate, unless the context or the purpose of the law requires a different construction. The question of whether the term "Jew" in the "Law of Return, 1950," which entitled "every Jew" to enter Israel as an immigrant, included an apostate, or whether an apostate could be registered as being of Jewish national-

ity under the “Registration of Inhabitants Ordinance, No. 50 of 5709 – 1949” (replaced by the “Registration of Population Law, 5725 – 1965”), was decided in the negative by a majority opinion of the Supreme Court (sitting as the High Court of Justice, in the abovementioned case of *Rufeisen* (Brother Daniel); High Court Case 72/62, PD 16:2428–55).

Folklore

Legends of apostates abound in Jewish folktales concerning blood libels. Portrayed as a greater enemy to the Jewish people than the Gentile, the apostate is described as the cause of numerous antisemitic persecutions and Jewish communal disasters. In his attempt to prove his worth to the antisemites, he spreads calumnies against the Jews and leads the attacks on them. It was customary to spit three times on the ground when meeting an apostate, and to recite Isaiah 49:17. The figure of the apostate is also ridiculed in many tales which describe his dilemma in the bathhouse where the contrast between the sign of the circumcision and the cross which he wears in the form of a necklace, is revealed. The problem of the apostate's affinity is finally resolved by the decision that he “belongs to the devil.” Tales of the repenting apostate, whose conversion to Christianity was originally insincere, are the basis of the Yiddish proverb “A Jew does not abandon his religion.”

APOSTLE (Gr. “messenger”), in early Christian usage, term applied to the disciples of *Jesus whom he had sent out to preach his message, and occasionally also applied to other missionaries of the early period. Outside the New Testament the noun ἀπόστολος was not common in Greek, though the verb ἀποστέλλω was. The term is equivalent to the Hebrew *shali'ah* and some scholars have suggested that the early Christian apostolate was indebted to Jewish precedent (e.g., the custom of sending messengers not singly but in pairs). The alleged similarity between John 20:21 (“As my father has sent me, so I send you”) and the rabbinic rule (Ber. 5:5) “A person's messenger is as himself” is more apparent than real. The word “apostle” occurs 79 times in the New Testament. While in a few instances its meaning was an actual messenger, it mainly denoted a person of eminent position and capacity. But even in this latter sense, the precise import was not everywhere the same, and some of the ambiguities have led to scholarly differences of opinion. One of these difficulties was due to the fact that occasionally the term apostle was identical with that of disciple (equivalent to the Hebrew *talmid*). In Christian tradition, the immediate followers of Jesus number 12, most probably a symbolic number signifying the 12 tribes of Israel. The Gospels of Mark, Matthew, and John called these immediate followers disciples, but Mark and Matthew often called them apostles, though without any clear differentiation. In Luke, however, there is a clear distinction, attributing to Jesus countless disciples, of whom 12 were designated apostles. Luke, moreover, contains an account (10:1–17), absent from the other Gospels, that Jesus sent out 70 followers to heal the sick and proclaim the kingdom of God; some explained the number 70 as symbolic of the “nations of the world,” as in rabbinic sources. Luke, who thus clearly distinguished among disciples, apostles, and the 70, also emphasized the number 12, by his account of the death of Judas. Mark and John were silent about Judas' death; Matthew 27:5 related that he committed suicide by hanging. According to Luke, who wrote both his Gospel and the Acts of the Apostles, Judas died only after the crucifixion through falling head-long and splitting (Acts 1:17–18). In order to replace Judas and make up again the number 12, two out of the countless disciples were nominated and one of these was elected (Acts 1:23–26).

While many New Testament scholars consider the account in Acts as a somewhat tendentious and idealized portrait of the early Church rather than as an exact historical record, it is generally agreed that apostleship in the strict sense implied a special type of authority. This authority derived from the fact that the apostle was a witness to the life and resurrection of Jesus, and in the case of Paul (who did not know Jesus personally) from the inner experience of a direct calling.

The original association of “The Twelve” with the tribes of Israel, is held by some scholars to have had an eschatological significance (cf. Matt. 19:28: “When the son of man shall sit in the throne of his glory, ye also shall sit upon 12 thrones, judging the 12 tribes of Israel,” and Rev. 21:12) which seems to be related to the eschatological symbolism of the Qumran sect. But this eschatological dimension is no longer prominent in Acts which was more concerned with describing the early Church as guided, both in its inner affairs and in its outward expansion, by “apostles.” The office of apostle did not endure and the term was confined in Christian writings to the early period. No dignitaries of a later period were called apostles.

The Apostolic Age

The period immediately after Jesus was commonly referred to as the Apostolic Age. During that period the question of the admission of Gentiles to the Church (which still was a Jewish sect) and of the binding character of the Law came to a head. For male Gentiles accepting the Christian message, it was especially the problem of circumcision which required an authoritative ruling. To settle the disputes that had arisen on this subject the “apostles and elders” came together in Jerusalem in what is known as the “Apostolic Council.” The account of the meeting which discussed the question of the Jewish *mitzvah* is found in Acts 15, where Peter appears as the advocate of the admission of Gentiles. In Galatians, however, Paul represents himself as the advocate of the Gentiles, who is opposed by Cephas – Peter. James, the brother of Jesus, presided over the meeting and also announced its decision, which is known as the Apostolic Decree. The Decree by implication abrogated the *mitzvot* and enacted instead four prohibitions: food offered to idols, blood, things strangled, and fornication. This list of prohibitions is reminiscent of the rabbinic “seven Noachian laws,” but scholarly opinion is divided regarding the nature and significance of this similarity. Some New Testament scholars (see James Moffat, *Introduction to the Literature of the New Testament* (1918³), 307) completely rejected the historicity of the Council and of the Decree. Such a conclusion, if justified, increases the obscurity about the widening breach between Judaism and early Christianity. The traditional Christian conception of priesthood assumes “apostolic succession,” an unbroken continuity in the chain of ordination going back to the apostles and through them ultimately to Jesus. (The basic conception was similar to that underlying the juridical and non-sacerdotal Jewish *semikhah*.) Catholic scholars generally affirm the factual historicity of apostolic succession, but Protestants, except some Anglicans, do not.

[Samuel Sandmel]

APOSTOMOS, person mentioned in the Talmud, of uncertain identification. According to *Ta'anit* 6:6, on 17 Tammuz Apostomos (or Postemus) burned the Torah and set up (“*ve-he'emid*”) an idol in the sanctuary (“*heikhal*”). “*He'emid*” appears to be the preferable reading, not “*hu'amad*” (“was set up”), a variant suggested in the Jerusalem Talmud *Ta'anit* 4:5, 68d, but unknown to the Babylonian Talmud. (See, however, Epstein, *Mishnah*, 113–4.) The Jerusalem Talmud adds (*ibid.*) that this took place at the pass of Lydda or Tarlosa. Apostomos does not appear elsewhere in rabbinic literature. His identification has been the source of considerable controversy. The main opinions are as follows: (1) Josephus (Wars, 2:230) relates that in about 50 C.E., an unnamed Roman soldier burned a Torah near Beth-Horon and nearly incited a revolt. However, it seems unlikely that a common soldier would have had the authority to set up an idol in the Temple. (2) Hanina b. Teradyon was wrapped in a Torah scroll and burned, probably around 135 (Av. Zar. 18a). His executioner was a “philosophus” (Sif. Deut. 307). But he too is unlikely to have set up an idol in the Temple area. (3) Louis Ginzberg suggests on the basis of *Ta'anit* 28b that Apostomos refers to Antiochus IV Epiphanes, who set up a statue of Zeus Olympus in the Temple in 168 B.C.E. However, no source which describes the acts of Antiochus mentions a burning of the Torah. Moreover, the statue was set up in the month of Kislev, not Tammuz (1 Macc. 1:54). (4) Gedaliah Allon identifies Apostomos with the Syrian procurator Posthumius (see *Syria*, 20 (1939), 53–61) and relates these events to the period of Quietus (c. 116–17 C.E.). According to ancient Christian tradition preserved in *Bar-Saliba*, at that time idols were set up in the Temple area. However, there are chronological difficulties here, as Posthumius seems to have ruled c. 102–3. There have been other suggestions, but none is wholly convincing.

APOTROPOS (“Guardian”).

The Concept

The term *apotropos* (Heb. אַפּוֹטְרוֹפּוֹס) for guardianship in Jewish law is derived from the Greek ἀπότροπος and means the “father” of minors or the “guardian” or “custodian” of another’s affairs (see Maimonides to *Mishnah*, Bik. 1:5; Obadiah of Bertinoro, ad loc., and Git. 5:4). The need for an *apotropos* arises with persons who are unable to take care of their own affairs, such as minors and adults who are mentally defective or absentees (*ibid.*; *Sha'arei Uziel*, 1 (1944), 1, 2). Halakhic sources deal mainly with an *apotropos* charged with responsibility for the property of his ward, thus taking in activities that in modern times would be the function of the adminis-

trator of an estate (see *Succession) or executor of a *will, as well as the trusteeship of consecrated property (*ibid.*; PDR, 2:18, 25). In principle, however, there is nothing in the *halakhah* against appointing an *apotropos* also over the person of another (see PDR, 2:177 and 4:97, 108; Resp. Rosh 82:2; *Sha'arei Uziel*, 4, 1 (1944), 126, 173–6). The halakhic justification for the appointment of an *apotropos* over a person who has not expressed an opinion in the matter and is unable to do so owing to his being an absentee or a minor or incompetent, i.e., legally speaking, absent, is based on the principle that “a benefit may be bestowed on a person in his absence,” since the function of an *apotropos* is to act solely in the interests of his ward (PDR 2:181).

Guardianship over Minors

THE IDENTITY OF THE GUARDIAN. Some persons have the legal standing of guardians of others, even if not specifically appointed, such as a father with respect to his minor children (Resp. Rosh 87:1; 96:2; Isserles to Sh. Ar., ḤM 285:8; Resp. Maharashdam, ḤM 308; today the father usually is called natural guardian) or a person who undertakes responsibility for the care and welfare of minors who are dependent on him or who are members of his household, including small children and babes-in-arms (Git. 52a and Rashi, *ibid.*; *Maggid Mishneh* to Maim., Yad, Naḥalot 11:1; Resp. Rosh 87:1; Tur, ḤM 290:31; Sh. Ar., ḤM 290:24; PDR, 2:168–70, 172–3). Minors are boys under the age of 13 or girls under the age of 12 (PDR, 3:154, 156, 159). Guardianship over minors can also be established by an appointment by their fathers (Git., *loc. cit.*; Sh. Ar., ḤM 290:1) or if they have not done so, by the court, by virtue of its authority as the “father of orphans” (Git. 37a; Resp. Rosh 85:5, 6; 87, 1; Sh. Ar., ḤM 290:1–2).

A mother does not have the legal standing of guardian of her children, unless she is specifically appointed or stands in the same relationship toward them as a householder toward orphans formally part of his household, as mentioned above (Sh. Ar., ḤM 290:1, 24; PDR 2:162, 173). The court is also obliged to appoint a guardian over them if their own father, or the guardian appointed by him, is incapable of taking proper care of the minors, or for any other reason that may be in the interests of the minors (BK 37a; Isserles to Sh. Ar., ḤM 285:8; 290:5; PDR 2: 170, 171:4; 108).

Generally speaking, the court, if guided by the interests of the ward as the overriding consideration, is unrestricted in its choice of guardian. Therefore, the court will seek to appoint someone of personal integrity, who is competent in worldly affairs and able to handle the affairs of orphans (BM 70a; Ket. 109b; Tur and Beit Yosef to Tur, ḤM 290:4; Sh. Ar., ḤM, 2, 6). All other factors being equal, a relative of the ward is preferred over a stranger, he being presumed to take care of the minor's affairs better than a stranger (Beit Yosef and Darkhei Moshe 3 to Tur, ḤM 285:13; Isserles to Sh. Ar., ḤM 285:8, *Sha'arei Uziel*, 1 (1944), 108–9; Resp. Maharashdam, ḤM 312). Talmudic law disapproved of entrusting the immovable property of a minor to the stewardship of a relative who was

in line to inherit such property, lest at some future time, when it will be forgotten that the property came into his possession in his capacity as guardian only, he claim that it came to him by inheritance (i.e., by virtue of presumptive possession – see *Ḥazakah; BM 39a and Codes; Resp. Ribash 495), but modern systems of land registration, providing for registration of immovable property in the name of the real owner have rendered this fear groundless, and it is no longer considered a bar to the appointment of a relative as guardian (PDR, 2:364, 367–8; *Sha'arei Uziel*, *ibid.*).

Talmudic law was also opposed to appointing women as guardians, since they were not regarded as being sufficiently competent or experienced in business matters (Git. 52a and Rashi, *ibid.*, ad loc. Resp. Ribash 495; Sh. Ar., ḤM 290:2). However, some of the *posekim* express the opinion that there is no objection to the court appointing a woman who is experienced in business matters and accustomed to going about in public if the best interests of the minor would thereby be served (Baḥ to ḤM 290:3; Resp. Ribash 495; Sh. Ar., ḤM 285:9; *Sha'arei Uziel* 1 (1944), 109–11). All the authorities agree that the father may appoint a woman to serve as the guardian of his children (Sh. Ar., ḤM 290:1), and a woman may also hold the position of guardian, without being specifically appointed thereto, with respect to members of her household dependent upon her (see above) and, if necessary, such a woman may be appointed guardian expressly by the court (Resp. Ribash 495). These provisions apply particularly to a minor's mother (PDR, 2:172, 173, 177; Resp. Maharashdam, ḤM 236).

Two or more persons may be appointed to serve as co-guardians over a minor, or with a division of functions and powers between them, e.g., separate guardians may be appointed over his person and property respectively, as the best interests of the minor may dictate (Resp. Rosh 82:2). Similarly the court may appoint a guardian to serve together with the minor's father, in a case where the latter is considered incapable of fully discharging his duties toward the child (Resp. Rosh, 82:2; PDR, *ibid.*, *Sha'arei Uziel*, 1 (1944), 126). In case of disagreement, the majority opinion may be followed and, when opinions are divided equally, the court will decide the issue (Resp. Maharashdam, ḤM 434). A person must not be appointed guardian except with his own consent (Rashi, Git. 52b; *Maggid Mishneh* to Maim. Yad, Naḥalot 11:5).

POWERS AND FUNCTIONS. The functions of a guardian are generally defined on his appointment, and he is to be guided by the overriding consideration of the best interests of his ward according to the circumstances. When entrusted with guardianship over the person of his ward, he has the duty of directing the latter's upbringing and education, determining his place of abode, and generally taking care of him (Resp. Rosh, 82:2; Resp. Maharashdam, EH 123; PDR, 2:177; 4:108; *Sha'arei Uziel*, 1 (1944), 126, 173–6). Responsibility for the property of the ward entails careful investment thereof by the guardian, i.e., “near to benefit and far from loss,” so that the capital be preserved as far as possible and only the dividends used to de-

fray the minor's current expenses, including his maintenance (Git., *loc. cit.*; Sh. Ar., *ḤM* 290:8–11, 13). Since the guardian has authority only to act for the benefit of his ward, he is generally not entitled to represent the latter as a defendant in judicial proceedings, lest the claimant succeed and the debt be recovered from the minor's property. But when it is clear that the creditor is entitled to recover his debt from the property of the minor – e.g., when the testator had admitted such indebtedness, or if delaying legal proceedings until such time as the latter attains majority would be to his detriment, e.g., in the case of an interest-bearing debt or when the creditor is prepared to waive part of his rights if he will not have to wait with his claim until the minor's majority or in any other case where it is clearly to the benefit of the minor to be represented, as defendant in the proceedings, the guardian will have authority to represent him (Git. 52a and Rashi, *ad loc.*; Ar. 22a–b; Maim. Yad, *Naḥalot* 11:7; *Malveh ve-Loveh* 11:7; Sh. Ar., *ḤM* 110; 290:12, *Sha'arei Uziel*, 1 (1944), 182–6; PDR, 3:155, 160).

All guardians, including those who have the legal standing of guardians (see above) and including the father of a minor, are subject to supervision by the court (Git. 52a and Codes; *Sha'arei Uziel*, 1:170; PDR, 2:170–1), and the court may set aside any step taken by the guardian as not being in the best interests of his ward and therefore in excess of his powers (PDR, 2:181). In this event the guardian may be held personally liable for any damage suffered by his ward as a result of his actions (BK 39a and Tos. thereto; and Codes), a threat he may avert only by seeking the prior approval of the court to his proposed course of action (Tosef., BB 8:4; Nov. Rashba to Git. 52a; Isserles to Sh. Ar., *ḤM* 290:13; PDR, 2:180). At any rate, he has to obtain such approval when dealing with the minor's immovable property (Sh. Ar. and PDR, *ibid.*), or making gifts from the latter's property, or waiving any of his rights (Sh. Ar., *ḤM* 235:26), including also the effecting of any *compromise on his behalf (Isserles to *ḤM* 110:11).

Guardians are not entitled to any remuneration for their services unless specifically provided for in advance, such services being considered as the fulfillment of a religious duty (*mitzvah*) and therefore presumed to have been undertaken as a *mitzvah* and not for reward (PDR, 5:87–88). No act performed during the subsistence of the guardianship and affecting the rights of a minor is of any legal validity unless undertaken by, or with the approval of, his guardian (Ket. 70a, and Codes).

TERMINATION OF GUARDIANSHIP. A guardianship terminates automatically when the ward attains his majority, since guardians are generally appointed only over minors (BM 39a; Maim. Yad, *Naḥalot*, 10:8; Sh. Ar., *ḤM* 290:1, 26). If, however, the father has specifically appointed a guardian over his adult children, guardianship over them will come into force, but will terminate upon their demand (PDR, 3:154, 156–60). The guardian's appointment may also be terminated by his removal from office by the court, a step which will only be taken when deemed in the interests of the minor, e.g., if the guardian has

dealt prejudicially with the property of his ward or if his conduct – even in regard to the handling of his own affairs – casts doubt on his personal integrity (Git. 52b, and Codes; PDR, 1:353, 359). It is pursuant to this power that the court may order the removal of a minor from his parents' house and appoint a guardian over his person or property (Beit Yosef to *ḤM* 290:6; Isserles to Sh. Ar., *ḤM* 285:8; Resp. Maharashdam, EH 123; PDR, 1:170, 171).

A guardianship may also be terminated on the strength of an application to the court by the guardian asking to be relieved of his appointment, since he cannot be compelled to serve against his will (Beit Yosef, to Tur, *ḤM* 290:22). But explicit discharge by the court is required, for once undertaken the task of a guardian cannot be abandoned unilaterally (Tosef., BB 8:3; Sh. Ar., *ḤM* 290:23). The court will not release the guardian from his duties until it has appointed another in his place, so as not to leave the minor or his property without supervision.

Upon the termination of his appointment, the guardian is required to hand over to his successor all the minor's property, to submit a report of his activities and, on the minor's demand, he will also have to take an oath that he has not retained any of the minor's assets (Git. 52a; Beit Yosef, *ḤM* 290:22–23; Baḥ, *ibid.*, 23 *Sha'arei Uziel*, 1:192–5). When the termination arises because the ward attains majority, he is entitled – even if he is a prodigal – to take possession of his property, unless there is an express instruction to the contrary from his father or the testator (BM 39a; Sh. Ar., *ḤM* 290:26). Being a prodigal is not sufficient reason for subjecting him to guardianship (Resp. Ribash 20); only if his conduct stems from mental illness will a guardian be appointed over him (see above).

Guardianship over Adults

The court will appoint a guardian over an idiot who, because he is mentally defective or suffering from mental illness, is unable to manage his own affairs, a rule applying also to a *deaf-mute. To such a guardianship apply, generally, the laws of guardianship in respect to minors (Ket. 48a; Maim. Yad, *Mekhirah*, 29:4; *Naḥalot*, 10:8; Sh. Ar., *ḤM* 235:20; Isserles to *ḤM* 285:2; 290:27). Inability to take care of one's own affairs is also the basis for the court's authority to appoint a guardian (or custodian) over the property of an absentee person, i.e., one who has left his place of residence and whose whereabouts are unknown, if the court deem the appointment necessary for the preservation of his property (BM 39a–b; Maim. Yad, *Naḥalot* 7:4–10; Tur, Beit Yosef and Baḥ, *ḤM* 285; Sh. Ar., *ibid.*; *Sha'arei Uziel*, 1:13–23). In this case, unlike that of a minor, the court is not obliged to concern itself with seeking a suitable candidate for the appointment, but has authority to appoint the applicant's nominee, if suitable, as the appointment of a guardian over an adult of full capacity is not in fulfillment of a *mitzvah* (*Maggid Mishneh* to Maim. Yad, *Naḥalot* 7:5; Isserles to Sh. Ar., *ḤM* 285:2). However, the court will not appoint a guardian over the assets of an absentee un-

less his absence is due to duress – e.g., if he is forced to abandon his assets while fleeing for his life. Therefore, a guardian will not be appointed over property voluntarily left, without supervision by its owner – since, had he wanted it, he could have made the appointment himself – except in respect of property which came to him after his departure and without his knowledge, e.g., by way of inheritance (BM 38a–b, 39a–b; Maim. Yad, Naḥalot, 7:4–8; Sh. Ar., ҲМ 285:1–4 and Isserles, ad loc., 4; *Shaarei Uziel*, 1, 13–23).

In the State of Israel, guardianship is mainly governed by the following laws: The Women's Equal Rights Law, 1951; The Capacity and Guardianship Law, 1962; The Administrator General Ordinance, No. 37 of 1944 (as amended); and The Succession Law, 1965. The first of the abovementioned laws (sec. 3) provides that “both parents are the natural guardians of their children; where one parent dies, the other shall be the natural guardian” and further, in conformity with Jewish law, that the said provision does not affect the inherent power of the competent court to “deal with matters of guardianship over the persons or property of children with the interest of the children as the paramount consideration.” In the absence of any express provision to the contrary in any of the abovementioned laws, halakhic law is applied.

[Ben-Zion (Benno) Schereschewsky]

The subject of guardianship has been discussed in scholarship as well as in recent rulings of the rabbinic and civil courts in Israel, both substantively and in terms of its connection to the legal system as a whole.

The Explanatory Note to the Capacity and Guardianship draft law (Bill No. 5721–1961, p. 178) emphasized the similarity between the Capacity and Guardianship Law and Jewish Law, stating that: “In substance, its proposals are largely in accordance with Jewish legal rules.” In the Knesset debate over the Bill, Justice Minister Pinḥas Rosen explained “the duty and right to care for the needs of minors” (§15 of the Law) as follows:

From the point of view of the law, the essence of parenthood is the obligation to care for the children. As a practical matter, the parent-child relationship is primarily one that imposes obligations on the parents. This rule has been developed in a long line of Israeli court decisions, and is based upon the principles of Jewish Law.

Among the relevant sources of Jewish Law, the Justice Minister cited *inter alia* the talmudic passage (Kid. 29a, Rashi *ad loc.*) that enumerates the father's duties towards his son.

Section 67 of the Law provides that: “Where a person acts as a guardian, his duties and liabilities towards the ward shall be in accordance with the provisions of this chapter, even if he was not appointed or there was a defect in his appointment, or he has resigned or been dismissed or his guardianship has expired.” In explaining this principle, the minister of justice cited the provision (Sh. Ar., ҲМ 290:24) stating that a householder who supports minor orphans at their request is

bound to comply in all respects with the legal obligations incident to guardianship.

The law is also based on Jewish Law with respect to the institutions set up in order to deal with guardianship. The law authorized the courts to be assisted by the administrator general in discharging their supervisory role. As the minister of justice observed, this kind of office – the administrator general – is a well-known and venerable institution in Jewish Law and was given the sentimental title of “father of orphans.” This role has its source in the regulation enacted by the Council of Lithuania in 1623 (*Pinkas ha-Medinah bi-Medinat Lita* (1925) 9, Enactment §37).

Scholarly literature also cites another institution which is regarded as a kind of guardianship – that of the trustee in public law. In a responsa concerning the prerogatives of the communal leaders to perform legal actions with respect to property, Rashba (*Teshuvot* 1, §617) wrote: “The seven good citizens who are frequently mentioned are not seven people who excel in wisdom, wealth, or honor, but seven people chosen by the people and authorized to be administrators of the affairs of the town in general, who act as trustees for their brethren in their locality” (see also *ibid.* III, §443).

Regarding the guardian's right to file an action in the ward's name, as discussed above, the rabbinical court ruled that a father whose divorced wife exploited monies earmarked for the benefit of their daughters (who were in her custody) in a manner that violated their agreement was entitled to sue the wife in the name of the daughters, by virtue of his standing as their natural guardian (PDR 17:260, 289).

In Israel Supreme Court Case Law

The provisions of Jewish Law regarding guardianship were the source of the Israel Supreme Court's ruling in *Moberman* (CA 604/77 *Moberman v. Segal*, 32 (3) PD 83). The Court was required to rule on the validity of an agreement concluded between an executor and a person designated as a beneficiary of the estate. The substance of the agreement involved the beneficiary's waiver of her rights under the will in return for a fixed monthly payment by the executor. The Court found a number of legal defects that tainted the agreement, such as the suspicion of undue influence having been exercised by the executor, which preceded the beneficiary's signing the agreement. Nonetheless, the Supreme Court (Justice Menachem Elon) did not regard this as the only grounds for invalidating the agreement. Under Jewish Law, any act or transaction involving estate assets but performed by the executor for his own personal needs requires the Court's approval prior to its completion. If the executor fails to attain advance judicial approval for the act, then “at least after the agreement was concluded, an examination must be conducted in order to ascertain the reasonability and fairness of the transaction from the perspective of the estate and its beneficiaries” (*ibid.* 97).

The judgment cites various views in Jewish Law regarding the question of whether a guardian can perform a transaction in the estate for his own personal gain. The view of

Rabad (southern France, 12th century), cited in the *Tur* (פמ 290:15), is that “just as the guardian is permitted to deposit the monies [of the estate] in the hands of a trustee for business purposes, he is also permitted to take them for his own business purposes and take the profit that the other person would have taken, provided however that he gave notice to that effect to the court.”

However, the *Tur* (14th century) had reservations regarding this view, stating: “I think it inappropriate for him to take them [the monies] for business purposes, because it may lead to tale-bearing” (*ibid.*).

Rabad’s opinion was endorsed by the majority of the halakhic authorities (see *ibid.* 99). In his opinion, Justice Elon quotes the comments of R. Joseph Caro (Spain, 16th century) in *Bet Yosef*, related to the aforementioned view of the *Tur*: “As to the opinion of our Teacher of blessed memory that it is inappropriate for him to take them [the monies] for business purposes because it may lead to tale-bearing, this fear has no basis, inasmuch as he informed the court accordingly.” Justice Elon went on to cite R. Moses Isserles (Rema; Poland, 16th century – Sh. Ar., פמ 290:8).

Concluding its discussion of Jewish Law, the Court stated:

From all of the above it follows that, according to the [*Tur*] it is forbidden for the executor to personally conclude any transaction with the estate assets, even if he informed the court. This, despite the fact that the court’s approval of the case would obviate the suspicion that the estate’s interest would be prejudiced due to a possible conflict of interests on the executor’s part. Nonetheless, the situation may still give rise to “tale-bearing” and as such “it is inappropriate.” But according to the majority of authorities, among them R. Joseph Caro and the Rema [whose combined rulings comprise the *Shulhan Arukh*] this suspicion is too remote to warrant consideration, and if the court approved the transaction concluded by the executor with the estate assets, even if for his own purposes, then he is permitted to do so (*ibid.*).

Relying on the above, Justice Elon ruled that the validity of the transaction between the executor and the estate under his management is contingent upon the court’s prior approval. In the absence of such approval, the transaction is subject to the court’s judicial review, which requires the court to “examine the nature and the essence of the transaction from the perspective of the respondent’s best interests” (*ibid.*, 101).

It is interesting to note some other comments made in the judgment (*ibid.*, 97) regarding the interpretation of the law in accordance with Jewish Law: “I find support for this in the laws of estate management set out in the Jewish law. Section 150 of the Palestine Order in Council (the British Mandate legislation that predated Israeli Law) declared that, when there was no conflicting provision in the law itself, the Succession Law should be interpreted first and foremost in accordance with the sources of Jewish Law, thereby establishing its independence from §46 of the aforementioned Order in Council.” Indeed, this was also the position of the authors of the Bill,

who attested that the Bill was based inter alia “on Jewish Law, which is one of the central assets of our national culture, and we should renew it and continue it... We regard Jewish Law as being the main, but not the only or binding source ... regarding the substance of the rules, we attempted wherever possible to anchor our proposal in Jewish Law” (from the introduction to the Explanatory Note to the Bill of the Succession Law, Ministry of Justice, Tammuz 5712 – 1952, 6–7).

Another case in which the Supreme Court ruled in accordance with the guardianship rules of Jewish Law was the *Nagar* case (ST 1/81 *Nagar v. Nagar*, 38 (1) PD 365). Sitting as a Special Tribunal, the Supreme Court was required to decide a question of jurisdiction involving the respective powers of the civil court, on the one hand, and the rabbinical court, on the other, which has jurisdiction in matters of personal status, including guardianship (when both parties gave their consent). The civil court ruled that issue of determination of the minors’ education, being disputed by the divorced couple, is within its exclusive jurisdiction. Accordingly, it nullified the ruling of the rabbinical court on this matter, notwithstanding the agreement between the parties, which conferred jurisdiction to the rabbinical court. The civil court relied on the argument that “In fact, *halakhah* does not recognize the institution of guardianship in matters concerning minors, within the meaning of the Legal Capacity and Guardianship Law. Guardianship under Jewish Law exists exclusively with respect to assets, and in relation to a fatherless orphan, and in an exceptional case when the father is alive but caused a depreciation of the minor’s assets.” Relying on this assumption, the District Court concluded that “in our case the rabbinical court did not adjudicate the question of education as a derivative of guardianship, but rather as a parental right – the father’s right under the *halakhah* to fulfill the commandment of teaching Torah” (390–391 of judgment). As such, the matter does not fall within the jurisdiction of the rabbinical court.

The Supreme Court (Justice Elon) clarified that the concept of guardianship in Jewish jurisprudence is a general one, which encompasses both guardianship by appointment and natural guardianship, by virtue of parenthood:

The central principle in Jewish Law governing the laws of guardianship of children – of any child – derives from the basic rule that the court is the father of all orphans (Git. 37a; BK, 37a). This rule applies to every minor and child, and not just to orphans (*Teshuvot*, Radbaz, §§263, 360; *Sha’arei Uziel*, 1: §§4, 126). Both the parents and any person appointed as guardian of the children serve as quasi-representatives of the court, by virtue of its authority, and in accordance with its instructions, both in concern for the child’s health and welfare, in the protection of his property and assets, all in accordance with the meta-principle of the child’s best interests. A similar summary of these aspects is provided in the work of the late chief rabbi, and president of the Rabbinical Court, Rabbi Ben-Zion Ouziel, (*Sha’arei Uziel*, pt. 1):

This is the basis and purpose of guardianship in Israel, which is conferred to the judges of Israel and their courts. The guardianship of the court is the source of the guardianship of

the parents ... and they are obligated to guarantee the well-being of their children after them, both in body and in soul, in wisdom and education, and their education in the commandments and decency and the fear of God ... (*ibid.*, p. 8) [*ibid.*, pp. 396–97]

The court further added that, in Jewish Law, guardianship is not limited to the duty of preserving the minor's assets, but includes the duty to raise and educate him:

This guardianship too [guardianship of an appointee even if not a parent] in Jewish law, is applicable both with respect to preserving the minor's assets and property and with respect to his education and studies ... Its features are expounded upon in talmudic literature (Tosef., Zukerman: *Terumot* 1:10; BB 8:14; Git. 52a), and the *halakhah* was determined accordingly – that the guardians must “provide the minors with a *lulav* and *sukkah*, *zizit*, *shofar*, Torah scroll, *tefillin* and *mezuzot* ... they are appointed over them in order to educate them” (Maim. Yad, Nahalot, 11:9). This ruling was reaffirmed in the *Shulhan Arukh* (ḤM 290:15) – again, based on the consideration of “educating them,” and I will not elaborate this point here. Summing up, I will quote a passage from the *Talmudic Encyclopedia* (s.v. “Ḥinukh”[Education], Vol. 16, 166f.): “A guardian appointed over minor children is obligated to educate them ... it is incumbent upon the educator to educate them in the commandments, for he replaces the father.” This matter is quite clear, requiring no further explanation, and as noted by R. Jehiel Michal *Epstein (*Arukh ha-Shulhan*, ḤM 290:30), “who will educate them if not the guardian?” (*ibid.*).

In view of all the above, the Supreme Court ruled that the duty of education imposed on the parents pursuant to section 15 of the Capacity and Guardianship Law 5722–1962, is the same duty that Jewish law imposes on the parents as guardians. This being the case, when the rabbinical court adjudicates the parents' duty of education *vis-à-vis* their children, it does so within the framework of the aforementioned law, and the matter is within its jurisdiction.

It should be noted that the term *apotropos* was occasionally used in the responsa literature as an appellation for a person who had undertaken to plead in the name of the person he was representing – now known as a “lawyer” (*Resp. Mahar”h Or Zarua*, §222; M. Elon, *Ha-Mishpat ha-Ivri*, 616–20).

APPEAL.

The Problem of the Appeal in Jewish Law

Most modern legal systems comprise a number of judicial forums, organized hierarchically. A litigant dissatisfied with a decision in a lower forum thus has the right to appeal that decision in a higher judicial instance, in the hope that the decision will be altered in his favor. This right of appeal stems from the presumption that the lower forum may conceivably have erred in its ruling, and the aspiration for true justice requires that the litigant be given an additional opportunity to have his claims heard.

On the other hand, in Jewish law the existence of an appellate tribunal is by no means self-evident. Admittedly, according to Jewish law a *bet din* that has erred is duty bound to reexamine its decision and correct it (Sh. Ar. ḤM 25.1–2), and the litigant is entitled to return to the *bet din* after receiving its decision and to attempt to convince it that a mistake was made (Sh. Ar. ḤM 20.1). However, this is clearly not a satisfactory solution. In numerous cases the *bet din* is not convinced that its decision was mistaken. In such cases the litigant will ascribe its position, rightly or wrongly, to the stubbornness of the *dayyanim* who were unwilling to amend their ruling.

It has been claimed that the Sanhedrin itself was a quasi instance of appeal. However, it is highly doubtful whether this claim is substantiated by talmudic sources. An examination of classical halakhic literature indicates that it was indeed possible to submit a ruling for the review of a second *bet din*, but the *bet din* concerned was not officially constituted for the purpose of adjudicating appeals; rather, it was a regular *bet din* whose *dayyanin* were reputed to be of greater expertise than those of the first *bet din*. This law has its source in the Talmud (Sanhedrin 31b), where such a forum was known as the *Bet Va'ad* (“Place of Assembly”) or the *Bet Din ha-Gadol* (“High Court”), and it was codified in the *Shulhan Arukh* (ḤM 14.1). However, there are *posekim* who ruled that this law does not empower the second *bet din* to reverse or change the original ruling, but merely to express its opinion on its correctness. The power to reverse a ruling resides exclusively with the original *bet din* (for sources, see E. Shochetman, *Seder ha-Din*, 446). Moreover, some of the *posekim* stated that the institution defined as *bet din gadol* does not exist in our times (see Rema, ad loc). According to this view, there is no possibility of review by another court, even if not under the rubric of an appeal.

Instances of Appellate Review in the Past

It would therefore appear that the only means of establishing a permanent institution charged with appellate review of the rulings of other rabbinical courts (*batei din*) is by way of a *takkanah* (see entry on **Takkanah*). Indeed, when the Rabbinical Court of Appeals in Jerusalem was constituted, a con-

troverly ensued regarding the need and /or justification for such an institution (to be discussed below). In this context, R. Simḥa Assaf attempted to prove that appellate tribunals had operated in the past in a number of different times and places and that, “Not only did the Torah scholars of those times not see any prohibition in the matter, but they actually affirmed the regulations pertaining to the procedures for filing the appeal” (Assaf, *Battei Din*, 74–75). However, some of these proofs have been challenged (see Katz, *Masoret u-Mashber*, (Jerusalem, 1964) p. 160, n. 23. As stated, the accepted view in halakhic literature of recent generations is that there is no room for a forum of appeal, and the precedents adduced by R. Assaf did not persuade many of the opponents of such an institution.

Appellate Tribunals in the 20th Century

The establishment of appellate tribunals during the 20th century came about as the result of extrinsic circumstances, such as competition with external judicial institutions, particularly those of foreign governments. In Morocco, a rabbinical appellate court was established in 1918 as a result of the French government’s attempt to regulate the functioning of the Jewish rabbinical courts (see M. Amar et al, *Ha-Mishpat ha-Ivri be-Kehillot Morocco* (Jerusalem, 1986), 208, 452). However, the most prominent and influential appellate tribunal with respect to Jewish Law is the Rabbinical Court of Appeals of the Chief Rabbinate, established in Jerusalem in 1921. The establishment of such a tribunal was accompanied by stormy controversy among a number of rabbis in Israel and abroad, the main claim of its opponents being that such an institution was an innovation which contradicted traditional *halakhah*, and as such should be opposed.

Undoubtedly, the Rabbinical Court of Appeals would not have been established had the British rulers not demanded its establishment as a precondition for conferral of jurisdiction to the rabbinical courts in matters of personal status. There were in fact some rabbis who contended that the rule against establishing such an institution was so severe that it justified the waiver of jurisdiction altogether. On the other hand, the founder of the Chief Rabbinate, Rav Kook, chose to accede to the requirement. In his inaugural speech for the Chief Rabbinate he stated that the new tribunal could be established by way of a special enactment of the Torah authorities. Over the years a number of additional justifications were given for the authority of the Rabbinical High Court to hear appeals (see the remarks of Rav Avraham Shapira, 10 *PDR*, 180; Rav Avraham Sherman, “*Mekor ha-Samkhut shel Bet ha-Din ha-Gadol u-Misgeret Samkhuto*,” in: 3 *Shurat ha-Din* (1995), 211–220).

Nevertheless, to this day there are *dayyanim* who refuse, for halakhic reasons, to endorse the existence of the Rabbinical Court of Appeals, and by extension see no need to comply with its rulings, so long as they remain convinced that there was no error made in their original ruling. This manner of conduct led in turn to a number of petitions to the

High Court of Justice against the “rebellious” rabbinical courts that refused to comply with rulings of the Rabbinical Court of Appeals. The High Court of Justice ruled that, under Israeli law, the Rabbinical court system is a hierarchy in which the regional rabbinical courts are subordinate to the rulings of the Rabbinical Court of Appeals addressed to it (for a survey of these rulings, see Elon, *Jewish Law*, 4:1809–1818).

The establishment of a new appellate tribunal necessitated the creation of procedures regarding the manner of filing an appeal and the procedures for its hearing. To date, there have been three versions of the Rabbinical Courts Procedural Regulations (from the years 1953, 1960, 1993). These regulations and related rulings are discussed at length in *Sidrei ha-Din* (Shochetman, 450–470). It should be emphasized that the establishment of an appellate tribunal produced another innovation in the world of Jewish Law – namely the obligation for the *dayyan* to present the reasons for his judgment in writing, since it is clear that appellate review by another *bet din* is impossible without examining the reasons given by the former instance for its judgment (this practice is already found in the “Place of Assembly” discussed above). A system that confers the litigant a right of appeal against a judgment must also obligate its judges to record the reasons for their judgments. Nevertheless, here too there were *dayanim* who refrained from writing reasoned judgments

[Amichai Radzyner 2nd ed.]

APPEL, JUDAH LEIB (1857–1934), one of the first active members of the Ḥovevei Zion movement in Vilna. Appel, who was born in Viekišniai, Lithuania, served as secretary of the Ḥovevei Zion branch in Vilna for almost 25 years. He was also secretary of the *Benei Moshe chapter there. In 1902 Appel and Shealtiel *Graeber established a publishing house which published Zionist periodicals and propaganda literature. In 1921 he went to Palestine and became secretary to Isaac Leib *Goldberg and manager of his estate in Hartuv. Almost all of Appel’s valuable archives on Zionism were burned during the 1929 riots. Appel’s memoirs of various periods in the history of Ḥibbat Zion and of Zionism in Russia were published in his book, *Be-Tokh Reshit ha-Teḥiyah* (“In the Beginning of the Rebirth,” 1936).

[Yehuda Slutsky]

APPELBAUM (Appelboym, Apfelboym, Applebaum), MOSHE (Maurycy; 1887–1931), painter, graphic artist, and stage designer. Appelbaum was born in Mszonow in the Warsaw province of Poland and received a traditional Jewish education. His artistic gift manifested itself already in his early childhood. Seeing no way to fulfill his artistic ambitions in a traditional Jewish environment, Appelbaum ran away from home at the age of 15 and found a job in Kalish as an apprentice to a house painter who made signboards. At the same time, he underwent a process of self-education. Soon his work was in greater demand than his employer's. In 1903, he got a job at a local textile mill as a pattern designer. In 1905, he came to Vienna and was admitted to the Academy of Art. However, he had to interrupt his studies due to lack of livelihood. For over a year, he traveled around Germany and Holland on foot. In 1907, he arrived in England and was admitted to an art school in Liverpool, where he studied for two years. In 1910–16, he attended, off and on, the London Academy of Arts. At the end of 1918, his first solo exhibition was on display in London, which brought him recognition. Despite promising prospects of an artistic career in England, he returned to Poland in 1919. Settling in Warsaw, he became very active in Jewish artistic life. He was among the initiators of the Jewish Society for the Encouragement of Artists founded in 1921 and a permanent member of its exhibition committee. He collaborated with Yiddish theaters, among them the Warshawer Yiddisher Kammerspiel (WIKT), where he designed the settings for several productions staged by Zygmunt Turkow, a leading Jewish theatrical director. Appelbaum was one of the pioneers of the new stage design for the Jewish modernist theater in Poland, into which he incorporated elements of constructivism and expressionism. In the mid-1920s, he produced wall paintings for the synagogue prayer halls in Lomzha and Bedzin (the latter in collaboration with the artists Hayyim Hanft and Samuel Tzigler) and executed murals for the assembly hall in the building of the Union of Jewish Writers and Artists in Warsaw. He participated in many European and All-Poland art exhibitions. In the late 1920s, his solo exhibitions were on display in Warsaw, Łódź, Lvov, and Germany. Appelbaum was active in almost every genre (landscape, still life, portrait, etc.), mainly preferring to treat scenes of the Polish-Jewish *shtetl*. His manner features elements of cubism and expressionism and grotesque imagery of characters. In his monumental paintings, especially the synagogue murals, Appelbaum widely used motifs of traditional Jewish art. In the late 1920s, in an attempt to improve his difficult financial situation, he moved to Katowice with his family, where he died of tuberculosis.

[Hillel Krakovsky (2nd ed.)]

APPELFELD, AHARON (1932–), Hebrew writer. Appelfeld was born in the province of Bukovina, Romania, to a semi-assimilated Jewish family. In 1941, Germans, accompanied by Romanians, began the destruction of the Jews of Bukovina, killing Appelfeld's mother and grandmother and deporting Appelfeld to a concentration camp. He escaped and roamed through the Ukrainian countryside for years. In 1944, the Russian Army entered the Ukraine and Appelfeld joined them as a kitchen helper, immigrating to Israel after the war. A graduate of the Hebrew University of Jerusalem, Appelfeld served as professor emeritus of Hebrew literature at Ben Gurion University of the Negev. While best known as a prolific novelist, his essays have been published in the *New York Times*, the *New Yorker*, and elsewhere.

At the core of Appelfeld's highly-stylized narratives is the probing of the psyche of characters in a pre- and post-Shoah world. His tales frequently depict fragmented, torn, and sometimes mute people in a state of quest. In his earlier tales, Appelfeld consciously suspended any historical framework, raising his work to a mythic, timeless level while only depicting the Shoah directly in his later works. Throughout, Appelfeld is fascinated by the notion of the Jewish tribe and its various manifestations – Orthodox and converted and particularly the assimilated Jews of Central Europe. Appelfeld's fiction frequently has an autobiographical tone. In *Tzili* (1983), he tells the story of a young girl who like himself spends years in the forest separated from her family while fleeing the enemy. Eventually, like Appelfeld, she joins the hordes of refugees in their journey towards safety. Appelfeld's characters are constantly on the move. Movement is the essence of their being. They are rootless and in a constant quest to repair and to heal. In doing so, Appelfeld has expanded the archetype of the Wandering Jew to include the post-Shoah world of the European wasteland. However, movement does not bring change, instead the Jew continues as an "Other," a stranger hovering like a shadow over an extinct reality. Europe in the post-Shoah period, as Appelfeld has said, is the largest cemetery in history.

Appelfeld's work can roughly be divided into three periods. In the 1960s, he published surreal short fiction with strong fantastic elements. This fiction consists of five books of short stories. Appelfeld made his mark in his second period with the novels *Badenheim 1939* (1980) and *Tor ha-Pela'ot* ("Age of Wonders," 1978). In his third period, the novels of the 1990s and the first years of the new century, the actual Shoah is incorporated into his fiction.

While Appelfeld's narratives are often a fictional recasting of his own autobiography, the importance of the narrator as a chronicler and witness of events gains importance in his later work. His earlier protagonists were often devoid of

memory and consequently of historical awareness. In his latest works, a sense of history, continuity, and self-awareness is more apparent. This is clear in the novels *Katerina* (1989) and *Ad Alot ha-Shaḥar* (1995). Until his third period, Appelfeld's stories were geographically situated far from the war and the camps. We encounter the camp for the first time overtly in *The Iron Tracks*, a modern picaresque parable, where Irwin Ziegelbaum (Irwin is Appelfeld's given name) recounts in the 1980s his 40 years of wandering in post-Shoah Europe. A survivor, he continues to move in trains, from south to north and back. Haunted by memories, he nevertheless visits all the stations of his life and those of his parents. He maintains a yearly cycle, like the reading of the Torah in weekly portions, consisting of 22 stations parallel to the number of letters in the Hebrew alphabet. On his way, he redeems various Jewish holy artifacts and fulfills a personal quest by killing the German officer who murdered his parents. In a way Appelfeld transcends the historical limitations of the Holocaust. In a 1986 interview, he said: "I write Jewish stories, but I don't accept the label Holocaust writer. My themes are the uprooted, orphans, the war." An heir to *Kafka, *Celan, *Proust, and *Buber, Appelfeld's voice is at once immediate and removed, historical and transcendent, realistic and postmodern, but always essential.

Appelfeld was awarded the Israel Prize in 1983. Many of his works have been translated into English, including *To the Land of the Reeds* (1986), *Badenheim 1939* (1980), *Beyond Despair* (1993), *The Immortal Bartfuss* (1988), *For Every Sin* (1989), *Katerina* (1992), *The Retreat* (1984), *Age of Wonders* (1981), *The Healer* (1990), *The Iron Tracks* (1998), *Tzili* (1983), *Unto the Soul* (1994), *Lost* (1998), *A Table for One* (with drawings by Meir Appelfeld, 2004). Stories and novellas are included in the following English-language anthologies: G. Ramras-Rauch and J. Michman-Melkman (eds.), *Facing the Holocaust* (1985), G. Abramson (ed.), *The Oxford Book of Hebrew Short Stories* (1996), I. Stavans (ed.), *The Oxford Book of Jewish Stories* (1998), L. Raphael and M.L. Raphael (eds.), *When Night Fell: An Anthology of Holocaust Short Stories* (1999), G. Shaked (ed.), *Six Israeli Novellas* (1999). Mention should be made also of the following English books: E. Sicher, *Holocaust Novelists* (2004), M. Brown and S. Horowitz, *Encounter with Aharon Appelfeld* (2003), and Philip Roth, *Shop Talk: A Writer and His Colleagues and Their Work* (2001).

APPELMAN, HARLENE (1947–), U.S. Jewish educator. Appelman was born Harlene Winnick in Elmira, New York, where she received her early Jewish education from Rabbi James *Gordon and from *Young Judaea's Camp Tel Yehudah. She earned her B.A. from Northwestern University (1969) and, following three years spent teaching in Jerusalem, her M.A. from the University of California (Berkeley, 1978). Her career as a communal educator began in 1982, when she was appointed director of Family Life Education at Congregation Shaarey Zedek in Southfield, Michigan, where she developed such innovative programs as "Shabbat in a Box" and "So You Want to be a Jewish Parent." After serving as director of Family Programs for the Fresh Air Society of Detroit (1986–90), Appelman became the founding head of Jewish Experiences for Families, under the auspices of metropolitan Detroit's Jewish Community Centers. Under her creative leadership (1991–93), JEFF became a national model in the field of family programming and community building; its success led to Appelman's appointment as the director of Field Services for the Whizin Institute for the Family at the *University of Judaism (1992–95), which was interested in propagating the JEFF paradigm. She continued to serve as senior consultant to Detroit's Agency for Jewish Education (1993–95), introducing *L'Chayim*, A Monthly Jewish Family Supplement, distributed locally by the *Detroit Jewish News*. In 1995, she was named director of Community Outreach and Education for the Jewish Federation of Metropolitan Detroit, remaining with the Federation as executive director of its Alliance for Jewish Education (1999–2001) and Jewish Education Officer.

Appelman's additional accomplishments in Detroit – notably, her development of Shalom Street, a hands-on Jewish children's museum, and the establishment of the Hermelin Davidson Center for Congregation Excellence, a community-wide professional training initiative – gained her an international reputation. She was asked by *Hadassah to join the creative team for the women's organization's acclaimed family program *Al Galgalim* (Training Wheels), served on the board of directors of the Coalition for the Advancement of Jewish Education, and lectured widely throughout the Jewish world. In 1991, Appelman was the recipient of the first Covenant Award; she was invited to join the Covenant Foundation's Board of Directors in 1994, the same year she won the Madeleine and Mandell Berman Award for Outstanding Jewish Communal Professional. She wrote numerous articles on Jewish education and published *A Seder for Tu B'Shvat* (co-authored with Jane Shapiro, 1985). In 2005, she was named ex-

ecutive director of the New York-based Covenant Foundation, where inter alia she oversaw the funding of initiatives supported by the Jewish Education Service of North America.

[Bezalel Gordon (2nd ed.)]

°**APPIAN OF ALEXANDRIA** (second century C.E.), author of a general history of Rome. Appian mentions the Jews and Jewish history in several places, especially in his books on Syria, Mithridates, and those dealing with the civil wars in Rome. Though he himself shared in the general apprehension during the Jewish uprisings in Egypt in 116 C.E., Appian shows no animosity toward the Jews.

APPLE (Heb. תפוח), mentioned several times in the Bible. In the Song of Songs it is described as a shady tree bearing sweet fruit (2:3). The odor of the beloved is reminiscent of the delicate aroma of the apple (7:9). It was an important product of Palestinian agriculture, and is mentioned as one of the victims of the locust plague described in Joel (1:12). The shapeliness of the golden apple served as a model for artistic ornamentation (Prov. 25:11). The custom of sending apples to the sick is mentioned in rabbinic literature (Tosef., BM 7:4; TJ, Shev. 8:4, 38a). Several localities in Israel bore the name “Tappu’ah,” giving evidence, incidentally, of its widespread growth and popularity. The *tappu’ah* of the Bible has been variously identified as peach, citron, and even mandrake. Yet it undoubtedly refers to the apple – *Pirus malus (sylvestris)*. This is confirmed by the references to its characteristics in rabbinic literature, for instance, the season of its ripening, the trees on which grafting would be permitted, the preparation of applesauce and apple cider, etc. (see Tosef., Kil. 1:3; TJ, Ma’as. 1:4, 49a; TJ, Ter. 10:2, 47a; Tosef., Ber. 4:2). In Arabic the apple is called *tufah*. In ancient times the aromatic strains apparently were most widely cultivated, and the odor evoked high praise. The verse “the smell of my son is as the smell of a field which the Lord hath blessed” (Gen. 27:27) was interpreted as referring to the smell of an apple orchard (Ta’an. 29b). In art and in later literature the tree of knowledge in Genesis 1 was identified with the apple tree, and the Targum of the Song of Songs renders *tappu’ah* as “the aromatic apples of the Garden of Eden.” In the Kabbalah, “the orchard of holy apples” signifies the most sublime holiness. In recent times the apple was not cultivated extensively by the Arabs in Palestine. From the middle of the 20th century, however, apples of various strains were grown in many areas of Israel, and are even an export crop.

APPLE, MAX (1941–), U.S. writer. Apple was born in Grand Rapids, Michigan, received a Ph.D. from the University of Michigan in 1970, and taught creative writing at Rice University for 29 years. His fiction began appearing in the middle

1970s and was of that zany comic character that at the time characterized the work of Tom Robbins (*Another Roadside Attraction*, 1971), William Kotzwinkle (*The Fan Man*, 1974), and Gerald Rosen (*The Carmen Miranda Memorial Flagpole*, 1977). Packed with references to popular American culture, such as Howard Johnson Motels and Major League Baseball, Apple’s first stories (collected in *The Oranging of America*, 1976) played a wildly semiotic game with the icons of current life. Whereas Tom Robbins had alternately charmed and shocked readers with the notion of Jesus’ mummified body turning up in a hippie-like sideshow redolent of the 1960s, Max Apple offered such delights as Howard Johnson, Colonel Sanders, and other franchised figures rubbing elbows with actual poets (Robert Frost) and politicians (Fidel Castro).

Yet his first novel, *Zip* (1978), suggests how this writer’s career would develop, for among the countercultural zaniness of its context (a young radical financing his education as a boxer’s manager) and the manipulation of political images (in which Castro and J. Edgar Hoover settle their differences almost literally in the ring) are references to a family of Jewish immigrants making their way in a new world that seems as strange to them as Apple’s comic contortions of reality. By the end of the 1990s, readers would know this family as Apple’s own.

The stories in Apple’s second collection, *Free Agents* (1984), clarify this perspective, that of a young man of the 1960s and 1970s trying to sort out the turbulence of American culture as he has to explain it to his grandparents, who in helping to raise him cannot help but suggest what life was like in the old country. “The American Bakery” is a fiction, but draws on material that would eventually take shape as memoir. Following a novelistic expansion of his Walt Disney mythology in *The Propheteers* (1987), Apple fully embraced the stories of his grandfather and then his grandmother in two heartfelt yet still comic memoirs, *Roommates* (1994) and *I Love Gootie* (1998). Among everything else, Apple says, his grandmother “left me her recipe for stories. You start with a good person and you see what happens next. You listen and you watch. By the end it all adds up to something.”

APPLE, RAYMOND (1935–), Australian rabbi. Born in Melbourne, Australia, and educated there and in London, Apple was a rabbi in London before succeeding Israel *Porush at Sydney’s historic Great Synagogue in 1972, retiring in 2004. Apple was one of the leading exponents in Australia of moderate Orthodoxy in the Anglo-Jewish tradition and served as senior rabbi to the Australian Defence Forces and as a member of Sydney’s Beth Din. He was often in the public eye as an exponent of Judaism and for his notable interfaith activi-

ties, and he was president of the Jewish Historical Society of Australia.

APPLEBAUM, LOUIS (1918–2000), composer and conductor. Born in Toronto, Applebaum was a composer and conductor for the stage, radio, film, and television. He studied the piano with Boris Berlin, theory and composition with Healey Willan, Ernest MacMillan, and others. He was the musical director of the Canadian National Film Board and produced 250 film scores. In 1955 he established the Stratford Music Festival in Ontario, which he directed until 1960, and composed music for more than 50 productions. During the 1960s he was a musical consultant for the national television network (CBC) and chair of the planning committee for the National Arts Centre, Ottawa. He also served as an executive director of the Ontario Arts Council (during the 1970s) and in 1980 became co-chair of the Federal Cultural Review Committee. His honors include the Canadian Centennial Medal (1967) and appointment to the Order of Canada (1995). Among his works are the ballet suite *Dark of the Moon* (1953); *Suite of Miniature Dances* (1953); Revival Meeting and Finale of “Barbara Allen” (1964); *A Folio of Shakespearean Songs* (1954–87); *King Herod* for choir (1958); *The Last Words of David* for cantor and choir (1980); and *Two Nostalgic Yiddish Folk Songs* for choir (1987).

APT (Heb. אַפְּט or אָפּט), small town near Avignon, in southern France. Evidence of a Jewish community in Apt dates from a regulation of the second half of the 13th century prohibiting the sale to Christians of meat killed for Jews. In 1348, at the time of the *Black Death, many of the Jews were victims of an anti-Jewish riot. A synagogue existed there in 1416. The tax register of 1420 indicates that 15 Jewish families were then living in Apt, which was, apparently, fourth in order of importance among the Jewish communities in *Provence. The Jewish quarter began near the present-day Place du Postel. Possibly a second one was situated beside the Bouquerie quarter. The Apt community is mentioned by the poet *Isaac b. Abraham ha-Gorni (end of the 13th century). Samuel b. Mordecai of Apt corresponded with Solomon b. Abraham Adret.

[Bernhard Blumenkranz]

APTA, MEIR (1760?–1831), ḥasidic rabbi and kabbalist. He was born in Apta (now Opatow), Poland. Meir, a pupil of Isaac of Pinczow, served as rabbi in Stobnitsa at an early age, and later in Apta. He was a disciple of *Jacob Isaac ha-Ḥozeh

(“the seer”) of Lublin, and became his chief successor after his death. His views appear in *Or la-Shamayim* (1850). Meir’s doctrine was conservative and contains few innovations. Its main importance was his rejection of the teachings introduced by Jacob Isaac ha-Yehudi ha-Kadosh of *Przysucha and his school. In some respects Meir may be considered the prototype of the ḥasidic traditionalist. He emphasized the central role of the *zaddik, and stressed the principles of piety, reverence, unostentatious performance of religious precepts, and comradely cohesion within the movement, which he regarded as the most important aspects of Ḥasidism. Meir was succeeded by his son Phinehas (died 1837). Phinehas’ son, Isaac Menahem of Wolbrom, headed a large ḥasidic congregation; he was succeeded by his son, Alter Meir David (died 1911).

APTER, DAVID ERNEST (1924–), U.S. political scientist and expert on African political institutions. His book *The Gold Coast in Transition* (1955) received such wide acclaim that it has been reprinted several times as *Ghana in Transition*. Apter’s later work on Uganda, *The Political Kingdom in Uganda: A Study in Bureaucratic Nationalism* (1961), considers the nature of secular nationalism in Africa. He constructed a general theory of modernization forecasting changes in the political systems in the African continent and the direction in which they were likely to move.

Apter, who graduated from Princeton University in 1954, was one of the first American doctoral students to focus his research on the African independence movements; and under the Kennedy Administration, he was asked to head up the Peace Corps’ first program in Africa. He taught political science at Northwestern University (1955–57) and at the University of Chicago (1957–61). In 1961 he was appointed professor of political science at the University of California at Berkeley, where he served as associate professor (1961–62) and acting director (1964–66) and then director of the Institute of International Studies (1966–67). A fellow of the American Academy of Arts and Sciences, he joined the faculty of Yale University in 1969 and taught there until 2000. He served as director of the Division of Social Sciences (1978–82), chair of the Department of Sociology (1997–99), and chair of the Council on African Studies (1995–99).

During his teaching career, Apter was honored with visiting appointments at major universities in France, Britain, Holland, and Africa. As an international scholar, he also wrote about Latin America, Europe, China, and Japan. Many of his books have been reprinted numerous times and translated into various languages. His prize-winning contributions to social and political theory include his seminal work *The Politics of Modernization* (1965), which set the agenda for an entire generation in the study of comparative democratization. Other books include *Approaches to the Study of Moderniza-*

tion (1968); *Choice and the Politics of Allocation* (1971), winner of the Woodrow Wilson Award of the American Political Science Association for best book of the year in political science and international studies; *Anarchism Today* (1971); *Contemporary Analytical Theory* (1972); *Introduction to Political Analysis* (1977); *Rethinking Development* (1987); *Against the State* (1990); *Political Development and the New Realism in Sub-Saharan Africa* (1994); *Revolutionary Discourse in Mao's Republic* (1994); *Social Protest and Social Change* (1995); *The Legitimization of Violence* (1997); and *The Political Kingdom in Uganda* (1997).

Yale granted Apter emeritus status, naming him the Henry J. Heinz II Professor Emeritus of Comparative Political and Social Development. As such, he is an avid participant of the Henry Koerner Center for Emeritus Faculty. Established in 2003, the Center serves as a base for Yale's retired professors and administrators to bring them back into the mainstream life of the university. Apter believes that his generation of retired professors possesses qualities that other generations lack, as many of his colleagues came to academia after surviving the Depression and World War II. That generation of faculty members, he attests, also brought greater ethnic diversity to a teaching staff that had been "classically Ivy League."

[Ruth Beloff (2nd ed.)]

APTOWITZER, VICTOR (Avigdor; 1871–1942), rabbinic scholar. Aptowitz was born in Tarnopol, Galicia, and studied at the University and the Jewish Theological Seminary of Vienna where, from 1909 to 1938, he taught biblical exegesis, *aggadah*, and religious philosophy, as well as Talmud and Codes. From 1919 to 1938 he also taught Talmud at the Hebrew Teachers' College in Vienna. A confirmed Zionist, he gave his lectures in Hebrew. Although suffering from impaired vision, and completely blind at the end of his life, he remained a productive scholar, who made a strong impression on his students. He investigated, among other things, the biblical quotations in the Talmud and in the Midrash which vary from the masoretic text. Of particular importance in this field is his *Das Schriftwort in der Rabbinischen Literatur* (4 vols., 1906–15). Aptowitz also sought to clarify the content and literary form of the *aggadah* by comparing it with the Apocrypha and with the commentaries and homilies of the Church Fathers. He established criteria for distinguishing between legends of folk origin and legends created in the academies. He dealt with *aggadah* in his *Kain und Abel in der Agada* (1922), and with both *halakhah* and *aggadah* in his *Parteipolitik der Hasmonaerzeit im rabbinischen und pseudoepigraphischen Schrifttum* (1927; partly published in Hebrew in *Sefer Yovel... S.A. Poznański*, 1927). Aptowitz's investigations into the relationship between the legal writings of the Armenians and Syrians and those of the Jews are summed up in his *Beitraege zur mosaischen Rezeption im armenischen Recht* (1907) and *Die syrischen Rechtsbuecher und das mosaisch-talmudische Recht* (1909; Hebrew translation, 1923). In these two works

he traces Jewish influence present in these Christian codes. He published an edition of *Sefer Ravyah* by *Eliezer b. Joel ha-Levi, together with textual and explanatory notes (2 vols., 1913–35), with addenda and emendations (2 vols., 1936; new ed. 1965). His comprehensive introduction (1938) is an important source for biographies of medieval Jewish scholars of France and Germany. In 1938 Aptowitz settled in Jerusalem where, in addition to articles on the history of the *halakhah*, he published *Mehkarim be-Sifrut ha-Ge'onim* ("Studies in the Literature of the Geonim" (1941)). For many years he reviewed talmudic literature in the *Monatsschrift fuer Geschichte und Wissenschaft des Judentums*.

[Moshe Nahum Zobel / Moshe David Herr]

***APULEIUS, LUCIUS** (second century C.E.), Latin author from N. Africa. Apuleius is best known as the author of the *Metamorphoses*. In his *Apologia* (also known as *De Magia*) he mentions both Moses and Johannes (presumably *Jannes; cf. Numenius) among important magicians who were active after Zoroaster and Hostanes (*Apologia*, 90). In *Florida* 1:6, he refers to the Jews as believers in superstition (*superstitiosi*).

[Jacob Petroff]

APULIA, region in southern Italy, including Calabria until the late Middle Ages. According to an ancient tradition the communities in *Bari, *Oria, *Otranto, and *Taranto were established by captives deported from Judea by *Titus. The constitution of the Western Roman emperor Honorius of 398 confirms that the several Jewish communities in Apulia were liable to the civic burdens. The numerous tombstone inscriptions, many wholly or partly written in Hebrew, found in *Venosa, Taranto, Matera, Bari, Brindisi, Otranto, and Oria attest to the large number of Jews settled in the region, and the wide usage of Hebrew language and names. Inscriptions found in Venosa indicate a remarkable communal organization and Jewish participation in civil life. Emperor *Basil I (867–86) attempted to persuade, and then to force, the Jews of Apulia, then part of the Byzantine Empire, to adopt Christianity; according to the Chronicle of *Ahimaaz, *Shephatiah of Oria obtained the emperor's consent to exempt the Jews of Oria, and possibly also the whole of Apulian Jewry, from this order. Oria was occupied by the Arabs in 925. Many of the Jews there were killed or taken prisoner during the fighting while others escaped to Bari or Otranto. Emperor Romanus I Lecapenus (919–44) again tried to compel the Jews to adopt Christianity. Attacks by the populace to convert them forcibly lasted several days, and many Jews were massacred.

The situation of Apulian Jewry became less precarious in the 11th century, and it was a period of flourishing cultural life.

Distribution of Jews in southern Italy in the second half of the 12th century.

Jews in Apulia maintained regular contacts with the centers in Erez Israel. The Chronicle of Ahimaaz (1054) contains many details on Apulian Jewry, and relates both true and legendary tales of pilgrimages to Jerusalem and of Abu Aaron (*Aaron of Baghdad), a miracle-worker and teacher, who established a school and taught mystical lore in Apulia. Hebrew letters and poetry of a high standard were encouraged. Apulian poets of the period include *Silano in Venosa, Shephatiah and his son *Amittai in Oria. Scholars are mentioned from the middle of the tenth century in Oria, Bari, and Otranto. The *Josippon chronicle, composed in about the middle of the tenth century, is a product of the southern Italian Hebrew culture. The physician Shabbetai *Donnolo lived there in the tenth century. South Italian Jewry was the original fount of Ashkenazi culture (see *Ashkenaz). That the Jews of France and Germany recognized their debt to the Apulian center as late as the 12th century is acknowledged in the proverb quoted by the French tosafist Jacob b. Meir *Tam: "For out of Bari goes forth the Law and the word of the Lord from Otranto" (cf. Isaiah 2:3). Noteworthy in the 12th century was the mishnaic commentator *Isaac b. Melchizedek, from the famous academy of *Siponto.

The position of the Jews in Apulia continued to be tolerable until the last decade of the 13th century. Most of the communities were under episcopal jurisdiction. Jews in Apulia acquired land, were occupied in crafts, and practically monopolized the dyeing industry. Thomas *Aquinas, a native of southern Italy, is evidently referring to Jewish economic conditions in Apulia when advising the Duchess of Brabant in 1274 that "it would do better to compel the Jews to work for their

living, as is done in parts of Italy, than to allow them... to grow rich by usury." Scholars of the 13th century include *Isaiah b. Mali of Trani the Elder, his grandson *Isaiah b. Elijah di Trani, and Solomon b. ha-Yatom.

The period of toleration came to an end under Charles II of Anjou. Apulian Jewry was all but annihilated between 1290 and 1294 after he gave orders that all the Jews in his realm were to be forcibly baptized. Many fled from this persecution to the Orient; others who resisted were killed, while a large number accepted baptism. Most of the synagogues were converted into churches, and the schools were closed down. A considerable number of the converts led the existence of *anusim, adhering to the Jewish beliefs and practices in secret; they became known as the *neofiti* (neophytes; see *Crypto-Jews), officially recognized as a distinct group and dealt with accordingly by the authorities. To facilitate their supervision the *neofiti* were frequently forced to live in special quarters. They were regarded by the populace as faithless heretics. In 1311 King Robert directed that those who had relapsed to Judaism were to be severely punished; the order was renewed in 1343 by Joanna I. In the second half of the 15th century the new Christians of Manfredonia were still listed as such in official documents. Both *neofiti* and Jews, who again settled in Apulia in the 15th century, were frequently subjected to mob attacks; anti-Jewish outbreaks occurred in Bari and *Lecce in 1463. The invasion of Otranto by the Ottoman army in 1480 had disastrous consequences for the Jews, who were all killed by the Turks.

The second half of the 15th century saw Jewish immigration into Apulia from other countries. In particular the exiles from Spain and Portugal contributed to a short-lived renaissance of Jewish learning. Isaac *Abrabanel and others composed notable works while staying in Apulia. When in 1495 the French king Charles VIII occupied the kingdom of *Naples, however, the Jews of Apulia were again persecuted; looting and war levies dissipated their resources within a few months. The persecutions resulted in widespread conversions and "New Christians who converted since the coming of the French" are mentioned in the laws of 1498 of King Frederick of Aragon. After the return of the Aragonese dynasty to Naples the Jews enjoyed a few years of security, but the conquest of Naples by the Spaniards was followed by renewed suffering. In 1510–11 the Jews were expelled from Apulia and the entire kingdom of Naples, only 200 families being allowed to remain. In 1515 the *neofiti* were also expelled. The grant of limited residential and commercial rights to Jews throughout the Neapolitan provinces in 1520 led to the reestablishment of a few communities. A new decree of expulsion issued in 1533 was canceled shortly before its implementation, but was reissued and finally promulgated in 1540, obliging all Jews to leave Apulia the following year. Apulian Jewry as an historical entity thereby came to an end. Some of them migrated to central and northern Italy. Others settled in Constantinople, Adrianople, Salonika, Arta, Valona, and Corfu, where they founded separate Pugliese (Apulian; Heb. פוליאסי, פוליאסי)

congregations. The dialect long spoken by the Jews of Corfu contained words from old Apulian.

[Umberto (Moses David) Cassuto / Nadia Zeldes (2nd ed.)]

AQUILA, town in Abruzzi province, central Italy. The first record of Jews living in Aquila dates from 1294. In 1400, Ladislav, king of Naples, authorized two Jewish families to engage in pawnbroking and trade in Aquila and other towns in the Abruzzi. Queen Joanna II granted a similar license to other Jews in 1420 and in 1423. In 1427 the Franciscan John of *Capistrano obtained its revocation, but the right was restored after the Jews complained to Pope Martin V. However, their situation was precarious when Aquila became the scene of recurrent anti-Jewish preaching by the Franciscan *Bernardino da Siena in 1438, Giacomo della Marca in 1466, and *Bernardino da Feltre in 1488. That year, as a result of the panic caused by renewed preaching by Bernardino da Feltre, only two Jewish families remained in Aquila. The Jews were expelled from the kingdom of Naples, in which Aquila was included, in 1510–11. A few individuals may have returned, but attempts to reside there were finally terminated with the second expulsion of the Jews from the kingdom in 1540–41. A few Jewish families settled there in the 20th century but there was no organized Jewish life.

AQUILEIA, town in Friuli, northern Italy. The earliest evidence of a Jewish presence in Aquileia is an epitaph in Latin, of a certain “Lucius Aiadius Dama, freedman of Publius, a Jew,” dated to the late first century B.C.E. There is no other evidence

of Jewish settlement in Aquileia until Late Antiquity, with the exception of an epitaph of a Jew, born in Aquileia but living in Rome, dated to the third century C.E. An ancient tradition relates that the Christians set fire to the synagogue in Aquileia in the presence of Ambrose, bishop of Milan in 388. Three African-type lamps decorated with the *menorah* indeed attest the presence of Jews in Late Antiquity.

Excavations conducted in 1948–50 brought to light a place of worship, later transformed into a three-aisled church, with polychrome mosaic flooring, as well as 36 inscriptions. The excavators identified the building as a synagogue, because some inscriptions could be identified as Jewish. However, most scholars today identify the building as a church owned by Syrian Christians.

Jews continued to live in Aquileia in the Middle Ages. A tombstone with a Hebrew epitaph is dated 1140 and another one is undated. R. Menahem, a pupil of *Eleazar b. Judah of Worms (13th century), originated from Aquileia, as did the family of the 18th-century Italian scholar and poet David b. Mordecai *Abulafia.

AQUINAS, THOMAS (1225–1274), most important of the Christian medieval philosophers. Born near Aquino, the son of a count, Aquinas entered a Dominican order at the age of 19 against the will of his family. He studied under the Dominican scholar Albertus Magnus in Cologne and Paris, where he later taught; from 1272 he taught in Naples. His main work, the *Summa theologica* (ST), was designed as an introduction to all problems of doctrine and morals that a friar might meet in his studies for pastoral duties. It shows an intimate knowledge of the works of Jewish philosophers, particularly of Avicbron (Ibn *Gabirol) and *Maimonides. Most of the proofs he adduced for the existence of God may be traced to Jewish sources. A similar systematic exposition, this one addressed to the non-Christian, is contained in his *Summa contra gentiles* (SCG, 1259–64). Aquinas often expressed his opinion about what should be the Christian attitude toward the Jews. In about 1270–71 he wrote a detailed reply, constituting the small treatise *De regimine Judaeorum* (cf. the different editions in E. Gilson, *Christian Philosophy ...* [1956], 422), to a series of questions posed by a duchess of Brabant (probably Margaret, daughter of Louis IX and wife of Jean I of Brabant). These ask whether it is lawful for a Christian prince to exact money from the Jews by means of taxes and fines since this money was the result of usury. Aquinas answered: “It is true, as the Law declares, that Jews in consequence of their sin, are or were destined to perpetual slavery: so that sovereigns of states

may treat their goods as their own property, with the sole proviso that they do not deprive them of all that is necessary to sustain life.” He did not, however, recommend imposing an overly harsh fiscal policy on the Jews. In addition, since “the Jews in your country appear to possess nothing but what they have acquired by the evil practice of usury,” Aquinas advised returning the money to its true owners, the injured Christian borrowers. If these could not be traced, it might be spent on acts of piety or works in the general interest. In Aquinas’ view it was preferable “to compel the Jews to work for their living, as is done in parts of Italy, rather than that they should live in idleness and grow rich by usury.” They should also be compelled to wear a distinguishing *badge that would make them clearly recognizable from Christians.

Aquinas vehemently condemned the baptism of Jewish and other non-Christian infants against their parents’ wishes as violating natural justice (*Summa theol.* 2a, 2ae, qu. 10, c. 12). He considered that the natural order requires that parents should have charge of their children until they reach the age of reason, and only then are they entitled to choose for themselves. Aquinas points out that when children baptized against the wishes of their parents had reached this age, the parents might succeed in convincing them to abandon the faith they had unwittingly received; their apostasy would then certainly be detrimental to the church. He also opposed the argument put forward in Christian circles that as the Jews were legally the slaves of the secular sovereign (see *servi camerae), the latter was therefore entitled to treat the Jews as he wished; Aquinas emphasized that in common law the slave is protected by the moral, natural law and is thus shielded from exaggerated claims by princes. He interdicted, as a general principle, the use of force against non-Catholics to convert them to Christianity. Citing *Augustine, he declared that man is capable of doing certain things against his will, but that faith is given only to him who desires it.

[Bernhard Blumenkranz]

Philosophy

Maimonides has a recognized place among those whose doctrines Aquinas draws on; all attempts to camouflage Maimonides’ doctrines, such as the attempts of *William of Auvergne and *Alexander of Hales, have been put aside. “Rabbi Moyses” (Maimonides) appears as a master who has brought together the voluntarism of biblical theology and the Aristotelian theories on the cosmogonic process. Aquinas seems to have been influenced by Maimonides in his account of the relation of faith and reason (SCG, 1:4) and in his proofs of the existence of God (ST, I, qu. 2., a. 3), and he accepts the proposition of Maimonides that the temporal creation of the world cannot be demonstrated or refuted by philosophical argument, but only on the basis of revealed text (ST, I, qu. 46, a. 2). On the other hand, Aquinas opposes Rabbi Moyses’ radical denial of all divine attributes, by which humans attempt to explain God’s being from their experience in the created world. For Aquinas, analogy remains a means of theological approach to

the secrets of divinity (ST, I, qu. 13, 2). Parts of Aquinas’ works were translated into Hebrew and some of his views influenced late medieval Jewish philosophers, such as *Hillel of Verona. Aquinas shares the usual ecclesiastical view that the Old Testament is a preparatory stage of revelation. The Mosaic legislation, however, aroused his special interest; it was a source of a type of concrete solution not offered by the New Testament (ST, I–II, qu. 108, a. 2, ad 3). He understood the Sinaitic order of society as a constitution perfectly designed for the preservation of the Hebrew people under given circumstances. For this rationalization he used concepts from Aristotle’s *Politics*, which had just been translated from the Greek. Aquinas was also very much stimulated in this task by Maimonides’ reflection on the meaning of *mishpatim* (general moral laws); the Latin translation of this term, *praescripta iudicialia*, defined for him all biblical rules that he considered politically or socially relevant. Thus, Aquinas found in the Sinaitic legislation on agrarian property a realization of the Aristotelian theory that private ownership must be justified by responsibility for social cohesion (ST, I–II, qu. 105, a. 2 ad 3). For Aquinas this model constitution was created by divine providence; its appreciation as a product of the Hebrew mind was, of course, quite outside his consideration. Treaties and extracts from the works of Aquinas were translated into Hebrew, notably by Judah *Romano, Eli Habillo, Abraham Nehemiah b. Joseph, and others. Isaac *Abrabanel, who apparently intended to translate one of Aquinas’ works, was well acquainted with his writings. The influence of Aquinas is noticeable in medieval and later Jewish works.

‘ARA, Muslim-Arab village near the western entrance of the Iron Valley, on the Haderah–Afulah highway. In antiquity the valley was a vital stretch of the Via Maris. In 1967 ‘Ara had 1,970 inhabitants. Its economy was based on intensive farming. The village is assumed to be located on the site of Iron, a Canaanite town of the second millennium B.C.E. (“Irn” in the Egyptian reports of Thutmose III’s campaign against Megiddo.).

[Efraim Orni]

ARABA (or Gabara), place in Israel. It is mentioned by Josephus as one of the three foremost cities in Galilee (after Tiberias and Sepphoris) and as the center of a district (Wars, 3:7, 132). The sages R. Johanan b. Zakkai and R. Hanina b. Dosa taught there, and the latter’s tomb is said to be at Araba. The Muslim-Arab village of Araba (‘Arrābat al-Baṭṭūf) is located

in central Lower Galilee, north of the Bet Netofah Valley. In 1965 it received municipal council status. The town's population was 4,760 in 1967 and 17,900 in 2002, contained within an area of 3.3 sq. mi. (8.5 sq. km.).

[Efraim Orni]

ARABAH, THE (Heb. אֲרָבָה, *Aravah*, Ar. al-^c*Araba*; “[arid] steppe,” “desert”), name of two stretches of depressed ground extending north and south of the Dead *Sea. The biblical Arabah, except in one instance, refers to the northern Arabah, i.e., the Jordan Valley from the Sea of Galilee to the Dead Sea (which is also known as the “Sea of the Arabah”). Thus the land conquered by Moses in Transjordan included “the Arabah also, the Jordan being the border thereof, from Chinnereth even unto the sea of the Arabah, the Salt Sea, under the slopes of Pisgah eastward” (Deut. 3:17); or more simply, “and all the Arabah beyond the Jordan eastward, even unto the sea of the Arabah, under the slopes of Pisgah” (Deut. 4:49). It was left to Joshua to conquer “the Arabah” on the other side of the Jordan (Josh. 11:16). Within the northern Arabah, the plains of Jericho are called “the Araboth [plural of Arabah] of Jericho” and those across the stream “the Araboth of Moab.” Only in Deuteronomy 2:8 does the Arabah refer to the Rift Valley south of the Dead Sea, but in the course of time the term was applied only to this southern area. It is a deep cleft, 112 mi. (180 km.) long, divided into two parts by a watershed 797 ft. (243 m.) high. The *Negev valleys have created wide deltas of eroded soil in the Arabah. In its center it contains alluvial soil, to a height of 492 ft. (150 m.) below sea level, with Cenomanian-Turonian white cretaceous rocks on the west (except for its southern portion) and pre-Cambrian rocks (including granite and porphyry) on the east and on the west near Elath. The Arabah is now mainly a sandy desert with an average yearly rainfall of up to 1 in. (25 mm.). Oases are few and far between (see *Hazevah, Gerofit, *Timna, *Yotvatah). The water has a salt content of up to 17% and vegetation is restricted to hardy desert plants such as the tamarisk and acacia. Temperatures vary from 57° F to 93° F (14° C to 34° C) with an average of 73°–75° F (23°–24° C). Traces of ancient agriculture are especially abundant in its northern portion, where the Nabateans irrigated and cultivated large areas near Zoar (Ghawr al-Şafiya), Toloha (Qaşr al-Tilāh or al-Tilāh), and other places. The cultivation of sections of the Arabah continued into Byzantine times. The copper mines of the Arabah (especially of the Punon (Feinan) region) were exploited as early as the Chalcolithic period (fourth millennium B.C.E.) and were perhaps one of the reasons why the kings of Israel and Judah so often fought over this barren wasteland with the kings of Edom. Another reason was to obtain domination of the Red Sea harbor of Eilat (*Elath) at the southern end of the Arabah. Exploitation of the copper mines was resumed in the Roman and Byzantine periods. The Arabah is now divided between Israel and Jordan; the Sodom-Eilat road passes through its western side. At the beginning of the 21st century, the Arabah area had a population of 4,500, living in

five moshavim, ten kibbutzim, and three urban communities. Residents developed special farming techniques suitable to the area's climate and also operated fisheries.

[Michael Avi-Yonah / Shaked Gilboa (2nd ed.)]

ARABIA, the Arabian Peninsula. Arabia attained a high level of civilization and culture continuing from antiquity until the rise of Islam in the seventh century C.E. In its southwestern part several developed states existed (see *Himyar); the northern part however was inhabited by a variety of peoples who, whenever circumstances were favorable, raided the countries of the Fertile Crescent – Erez Israel, Syria, and Mesopotamia. There is a theory that northern Arabia was the cradle of the Semitic peoples. The peninsula declined when the majority of the inhabitants left to take part in the great Arab conquest following the rise of Islam in the seventh century. Only Mecca, the birthplace of *Muhammad the Prophet of Islam and the place from where he spread his teachings, maintained its special position – one of the five fundamental duties of the Muslim faith is a pilgrimage to Mecca at least once in a lifetime. *Medina, to which Muhammad fled in 622 and where he was buried in 632, also acquired the status of a holy place. In the 20th century, geopolitical and economic factors restored to the peninsula its historical importance.

The Bible deals extensively with the Arabian Peninsula and its inhabitants. There are lengthy accounts of family ties, relations in war and peace, and trade between the Israelites and the various tribes of the Arabian steppe and the inhabitants of the Red Sea ports, beginning with the era of the patriarchs. In genealogical lists of the sons of Joktan (Gen. 10:26–29), the sons of Abraham (25:1–5) and Ishmael (25:13–16), Esau-Edom (36:11–12), in biblical stories (1 Kings 9:26–28; 10:1–13, the stories of the *Queen of Sheba), and in Job 2:11, the names of nomadic tribes, countries, and settlements can be identified, which local sources (inscriptions) and external sources (Assyrian, Babylonian, and Greek) show existed at that time in both the north and south of the peninsula. The relations between the Jews and the Arabs are reflected in the literature of the Second Temple period and the Talmuds. At that time most of the Jews lived in Babylonia, largely in the vicinity of the Arab country of the Lakhmites in northeastern Arabia. Owing to prevailing circumstances many of the Jewish inhabitants of Erez Israel were transferred to wilderness areas in the Negev and in Transjordan, ruled by the *Nabateans and near-Bedouin Arabs.

Any survey of the history of the Jews in the Arabian Peninsula must take into account the great geophysical, anthropological, sociological, and political differences which have always existed between the north – called from the early Muslim period Hījāz *(Hejaz), and the southwest – known in the late pre-Islamic period as Himyar and since then as *Yemen.

Pre-Islamic Jewish settlement in the Arabian peninsula.

These differences also made their mark on the history of the Jewish communities, and the regional division between north and south is a valid factor in a survey of Jewish history in the peninsula. The north (which for simplicity's sake will be called Ḥijāz) must therefore be discussed separately from the south.

The Jews in Ḥijāz

Arabic historical literature and commentaries (which were written much later) contain many legends about the settlement of the Israelites and the Jews in Ḥijāz. One story dates this settlement as early as Moses' war against the Amalekites (Ex. 17:8–16), while another relates that King David fought against the idol worshippers in Yathrib (Medina). It is related that after the destruction of the First Temple, 80,000 priests who were saved made their way to Arabia and joined those who had settled there previously. Some inscriptions of Nabonidus, king of Babylon (555–539 B.C.E.) – several of which were discovered in 1956 – in which he described the establishment of his capital in Taymā' (552–542) from where he conducted his campaigns as far as Yathrib, combined with Nabonidus' Prayer (discovered among the Qumran (Dead Sea) Scrolls) and in which he mentions a Jewish priest and visionary from the Babylonian Diaspora who accompanied him, suggest that some of the Babylonian Jewish exiles settled with him in Taymā' and in Ḥijāz. Charles C. *Torrey (*The Jewish Foundation of Islam* (1933), 10, 17–18) thinks that even before that time Jewish traders began to settle in the oases of Ḥijāz. However, definite confirmation of Jewish settlement here appears only with the advent of people who had distinctly Jewish names or were designated as Jews in Aramaic, Nabatean, and Liḥyān inscriptions beginning from the first century B.C.E. or C.E. These tomb inscriptions or *grafitti* were found for the most part in al-'Ulā (formerly Dīdān: Dedan), Madā'in Šālih (al-Ḥijr), and their environs. Most interesting is the inscrip-

tion published in 1968: "This was dedicated by 'Adnōn bar [son of] Ḥani bar Samaw'al resh Ḥijra to his wife Mūnā [the daughter of] 'Amrū bar Samaw'al resh Taymā', who died in the month of Av 251 [355/56 C.E.] at the age of 38." This Nabatean inscription appears to be the latest dated of those discovered so far. Among the finds at al-Ḥijr there is a sundial with the inscription, "Menashā bar Nathan Shelam." This may have been the name of the craftsman who set up the sundial, or possibly that of the astronomer. The names in these inscriptions are worthy of attention. Among them are the purely biblical Manasseh, Nathan, Zadok, Samuel, Simeon, and Shalom, but several names have changed under the influence of Aramaic (or Arabic?) into forms like Ishaq and Ismā'il (b. Zadok). There are also pre-classical Arabic names such as Shabī(o), Ha-Yehudi ("The Jew"), Yaḥ'yā (b. Simeon), and Na'im (b. Ishaq). Though there are only a few of these inscriptions, they reveal a great deal about Jewish life in Ḥijāz.

When Aelius Gallus set out to conquer Yemen in 25 B.C.E. and was delayed in al-Ḥijr, Jews were living there. The task of the auxiliary Jewish contingent sent by Herod as part of this expedition was to act as a link between the Roman army and the Jewish communities in Arabia. Apparently, al-Ḥijr was then an important center and therefore was known in Erez Israel and Babylonia. The Talmud mentions al-Ḥijra a number of times; although there were several places of this name, some of these references undoubtedly mean al-Ḥijr in Ḥijāz (e.g., Anan b. Ḥiyya of Ḥijra; Yev. 116a).

At the end of the fourth century the history of the Jews in Ḥimyar intersects with that of the Jews of Yathrib. According to Arab traditions, Abkarib As'ad (c. 385–420) embarked on widespread conquests. After Ḥimyar had rid itself of Ethiopian domination during his father's reign, Abkarib conquered Ḥijāz among other places, and laid siege to Yathrib (known as Medina after Muhammad settled there). However, under rabbinical influence he became converted to Judaism. He returned to his country with two sages and began to spread Judaism there. Historians tend to accept these traditions as authentic in the main, but doubts have been aroused by certain Liḥyān inscriptions containing allusions to Jewish scholars and therefore suggesting that a Jewish or proselyte kingdom existed at that time in Ḥijāz.

The names and works of Jewish poets who lived in Arabia a generation before Muhammad and in his day have been preserved in classical Arabic poetry. The most famous of them is *Samuel b. Adiya, called the king of Taymā'. Other poets are mentioned in connection with events in Medina. Jewish tribes had lived for generations in this important area. Arab historians mention about 20 tribes who lived in the region, among them the well-known Banu-Naḍir and Banu Qurayza who were called al-Kāhinān, i.e., "Two Tribes of Priests," and the Banu Qaynuqā'. Many Jews also lived in Khaybar and in other oases of Wadi al-Qurā ("Valley of the Villages"), such as al-'Ulā (Dīdān), Madā'in Šālih, al-Ḥijr, Fadak, the Transjordanian plains of Adhruh, Jarba, Edrei, and the port of Maqna on the Gulf of Eilat. Apparently, Jewish refugees from south Arabia

also settled in the environs of Tā'if after the war of *Yūsuf Dhū Nuwās. The reports from Medina attracted many Arab tribes who settled in this area, in particular two tribes from south Arabia, Banu al-Aws and Banu Khazraj, who from the start were vassals of the Jewish tribes. In the early seventh century they became stronger and the Jews were compelled to seek their protection. This situation is reflected in the pact which Muhammad made with the *al-muhājirūn* ("the emigrants": his first Meccan followers who migrated with him from Mecca to Medina in 622), the Banu al-Aws, Banu Khazraj, and Jewish tribes, and also with his "helpers" (*ansār*), i.e., those men in Medina who supported him on his arrival.

Muhammad's hopes of converting the Jews of Medina to Islam were disappointed, and at the end of his second year in Medina relations between them began to deteriorate. One after another, Muhammad expelled the Banu al-Aws, Banu Qaynuqā', and the Banu Naḍir tribes, and had the males of the Banu Qurayza put to death. The lands of these tribes were distributed among the *muhājirūn*, thus solving the problem of their livelihood. After the oases of Medina had been acquired by the Muslims, Muhammad was ready to compromise with the Jews living in northern Ḥijāz – Khaybar, Fadak, Taymā', and the other Jewish settlements – and all surrendered to him. The settlers were obliged by contract to set aside a sizeable portion of their agricultural yield or produce for Muhammad and his colleagues. In practice they remained tenants on their lands. These contracts later served as a model for other agreements negotiated with residents of conquered territories who surrendered willingly to the Arabs (see *Kharāj and Jizya).

During the rule of Omar ibn al-Khaṭṭāb (634–44) the conditions of the inhabitants of Ḥijāz took a turn for the worse. At that time, Muhammad's hitherto-unknown will was suddenly discovered, and stated "there must not be two religions in Ḥijāz." On the basis of this spurious will all Jews and Christians were allegedly expelled from the Ḥijāz. But as attested by Arab authors and in the *Genizah* sources, many Jews in fact lived in Wadi al-Qurā, Taymā', and other regions in the 10th and 11th centuries. From the 12th century, concrete information about them disappears and from that time Jews are found only in *Yemen. Like its beginnings, the end of Ḥijāz Jewry is shrouded in legend. Travelers such as *Benjamin of Tudela (12th century); David *Reuveni (early 16th century); the Italian, Ludovico di Varthema (early 16th century), who was converted to Islam and therefore allowed to visit Ḥijāz, and others, have much to tell about the tribes of Israel, and especially the people of Khaybar still inhabiting the Arabian Desert, who were skilled in warfare and courageous. Izhak *Ben-Zvi, the second president of the State of Israel, devoted considerable time to tracing these stories and investigating the kernel of truth they contain.

South Arabia

The history of the Jews in south Arabia from the pre-Islamic period, including isolated information on the Islamic period which in time and source material is related to the history of

Ḥijāz, is surveyed below. Because of its essentially different nature, the history from the 12th century to the present day is covered in the article on *Yemen. Various legends, resembling those on the origin of Ḥijāz Jewry, circulated about the beginnings of Jewish settlement in south Arabia. Bible stories of the Queen of Sheba and the ships of Ophir served as a basis for legends about the Israelites traveling in the Queen of Sheba's entourage when she returned to her country to bring up her child by Solomon. Large groups arrived before the destruction of the First Temple and others came afterward. Since the Jews of Yemen ignored Ezra's call to immigrate to Erez Israel, he cursed them; they repaid him by refusing to name their sons Ezra. It may be assumed that Jews reached south Arabia at the latest during the reigns of Ḥimyar, i.e., in the first century B.C.E., some for reasons of trade, others with the legions of Aelius Gallus (25 B.C.E.). Although incontrovertible evidence exists from the early fourth century C.E. at the latest, it serves as a definite proof of the existence of Jewish communities in south Yemen for many decades and even centuries beforehand.

The excavations in 1936 of the central cemetery in *Bet She'arim (near Haifa) of Jews from Erez Israel and the Diaspora from the amoraic period, revealed a series of graves of "the people of Ḥimyar." According to a Greek inscription in one of the chambers, Ḥimyar was the name of south Arabia in the classical world of that time. In another room a Ḥimyarite monogram was drawn, reading: "Menahem the Ḥimyarite Qawl" (classical Ar. Qayl), "the head of a south Arabian tribe." In the same room, the Greek inscription *Menaē presbyteros* (i.e., "Menahem, elder of the community,") was discovered. Whether bodies buried in the Ḥimyarite graves in Bet She'arim were brought from south Arabia or from one of the settlements established by these Jews in northern Arabia, Transjordan, or the Negev is of secondary importance from the point of view of the antiquity of the Jewish community in south Arabia. In any case it is clear that they originated from south Arabia: there is no reason to conjecture that immediately after their arrival in south Arabia the Jews began to wander north to establish settlements. It may be assumed that their settlement there preceded the dates on the graves in Bet She'arim by at least one to two hundred years.

According to Philostorgios, the fourth-century author of a history of the Christian church, the Byzantine emperor Constantine sent Theophilus to south Arabia in the middle of the fourth century to bring Christianity to its inhabitants. Theophilus built two churches, one in Zafār and one in Aden, but he did not succeed in converting either the Ḥimyarites or their king. The Jews in the country then conducted propaganda against the Christian missionaries. Theodor Lector states that Christianity gained no converts in Ḥimyar until as late as the reign of the Byzantine emperor Anastasius (491–518), and in fact the majority of the monotheistic inscriptions discovered in Ḥimyar attest to Jewish influence; and only two or three of the latest ones, the work of Ethiopian-Christians (Copts), are of a Christian type. Several of the monotheistic inscriptions

were placed there by the kings of Ḥimyar and hence it was concluded that they were converts to Judaism. In other inscriptions the following phrase figures: “The *Raḥmān* [“Merciful One”] who is in the heavens, and Israel and their God, the lord of Judah.” One of the tombstone inscriptions includes the characteristically Jewish name Meir (CIS, vol. 4, no. 543).

The last independent king of Ḥimyar, Yūsuf Musuf As‘ar – known by his epithet Dhu Nuwās – was converted to Judaism and waged a prolonged war against his Ethiopian enemies. The Christian communities in Ḥafār and Najrān acted as an Ethiopian fifth column; when Dhu Nuwās was defeated and fell in battle in 525, the country came under Ethiopian rule. At first a native Christian viceroy was appointed, but later a viceroy was sent from Ethiopia. The Jewish community suffered hardship until the Persian conquest of south Arabia in 575. The Jews then prospered and were able to maintain contact with their brethren in Babylonia. In 628 Ḥimyar turned Muslim. In one of his letters to Yemen, Muhammad warned that it is forbidden to force a Jew or a Christian to accept Islam. The spurious will of Muhammad partly enforced in Ḥijāz by the caliph Omar ibn al-Khaṭṭāb (see above) did not include the Jews of Yemen although it severely affected the Christians in Najrān. However, it seems that at that time many of the converts to Judaism of south Arabian origin accepted Islam, and apparently more than a few Jews who were descendants of the exiles. Noteworthy among the converts to Islam are *Ka‘b al-Aḥbār, a contemporary of Omar, and later *Wahb ibn Munabbih.

From Omar’s reign on, south Arabian Jewry was not mentioned for several hundred years. Neither Jews nor Christians were permitted to live in Ḥijāz until the discovery of oil in Saudi Arabia in the 20th century. At that time the prohibition against Christians employed in the oil fields was lifted, though it remained in force for Jews.

[Haïm Zew Hirschberg]

Modern Period

In 1948, about 54,000 Jews lived in hundreds of small communities in the southern Arabian Peninsula, most of them in Yemen. There were also communities in the British colony of Aden, the Aden Protectorate (including Hadramaut), *Bahrain, Saudi Arabia, and Kuwait. In 1949, 154 Jews gathered in the Najran area in southern Saudi Arabia, near the Yemeni border, and moved to Israel within a year. Kuwait’s Jewish population of several dozen was expelled in 1948 and Jews were prohibited to enter the country. In 1968 there were a few hundred Jews left in the entire peninsula area. For Jewish settlements in other areas of Arabia, see by name of area; for relations with Israel, see *Saudi Arabia.

ARABIC LANGUAGE. According to the generally accepted division of the *Semitic languages, Arabic (also called, more appropriately, North Arabic) belongs to the southwest Semitic branch, although some scholars affiliate it with central Semitic. The affinity between Arabic and Hebrew (which belongs to the northwest Semitic branch) is conspicuous and finds its reflection also in the genealogical tables of the Bible.

Old Arabic (Early Arabic)

Though the Arabs are mentioned in early non-Arabic sources, very little is known of the early Arabic language. While many inscriptions from an earlier period are extant, their limited content conveys only a partial picture of their language. In their epigraphy these inscriptions, mostly graffiti, apparently represent different byforms of the South Arabian alphabet. Their language, however, called Early Arabic, is North Arabic, *prima facie* differing only slightly from classical Arabic. Yet the method of elucidating them by reference to the Arabic lexicon may make them appear more similar to classical Arabic than they really are. These inscriptions fall into three divisions: the *Thamūdic*, the *Lihyānite*, and the *Ṣafāitic*.

Talmudic literature presents a number of Arabic glosses, *viz.*, statements about the names of various objects in Arabic; most of them written by the Palestinian *amora* Levi b. Laḥma of the third century C.E. Only a part of them, however, can be explained by Arabic; the others belong to Aramaic, which at this period already influenced the Arabic lexicon, and may represent Aramaic loanwords in Arabic.

Classical Arabic

UP TO THE CREATION OF THE ARAB EMPIRE (632 C.E.). The Arabs of the pre-Islamic period, a thinly scattered population in the wide areas of the Arabian Peninsula, no doubt spoke different dialects, as can be deduced from Arabic sources. There is not sufficient evidence for solving the problem as to whether classical Arabic emerged as the language of a particular tribe or was from the beginning an intertribal tongue. The earliest evidence, from the end of the fifth century C.E., shows that classical Arabic was already a supratribal language. Moreover, the differences between the tribal dialects or even between classical Arabic and the tribal vernaculars must not be overestimated. Typologically, it seems they were closely akin, all of them being languages of the synthetic type, tending to express several concepts in a single word, and possessing similar systems of declension and conjugation, so that it was relatively easy to switch from one dialect to another. Nor, presumably, was the speech of the Jews in pre-Islamic Arabic very different. Jewish pre-Islamic poetry, at any rate, did

Arabic alphabet with Hebrew and English transliteration.

not differ from that of heathen contemporaries. Some scholars, however, claim that the more analytic Neo-Arabic lingual type, as characteristic of modern dialects, had already arisen in this period. Sources for the investigation of ancient classical Arabic are pre-Islamic poetry; narrative material, notably on war, as well as proverbial phrases; and the Koran.

The Arabs were almost completely isolated from outer influences, living in the Arabian Peninsula under the same primitive conditions as their ancestors. The absence of any upheaval that might have led to rapid changes accounts for the prima facie astonishing fact that Arabic, though appearing on the stage of history hundreds of years after Hebrew, has in some respects a more archaic character. Thus classical Arabic has preserved almost entirely the Old Semitic stock of phonemes, only *samekh* and *shin* having merged into *s*. As a rule, short vowels have been preserved in every position, including the final ones, which denoted the cases and moods, and the synthetic character of the language has been maintained. On the other hand, the morphology of Hebrew is in many respects more archaic than that of classical Arabic since in the latter, analogic rebuilding is in many aspects much more widespread. While in Hebrew many verbal forms seem to have been derived from roots containing two radical consonants, in Arabic, through analogy, most of the verbal forms are rebuilt according to the pattern of three-radical verbs. Nouns, too, frequently are transferred to the pattern of three-radical

nouns, especially in the so-called broken plural. On the other hand, Arabic also preserved archaic features: the use of the dual is much wider than in Hebrew. The chief characteristic of Arabic syntax is the restriction of the large choice of Semitic constructions to a few standardized types, often limiting one construction to one special meaning.

AFTER THE CREATION OF THE ARAB EMPIRE. The creation of the Arab Empire had far-reaching consequences for the development of classical Arabic. In the towns of the new empire, analytic Neo-Arabic dialects soon emerged. Nevertheless, classical Arabic remained the ideal of the Arab society. Since classical Arabic was used in conversation in high society until the beginning of the tenth century, it soon became necessary for the urban population to train themselves in the classical language, and thus an impetus for the beginnings of grammatical studies was given. As a result, the philologists of Basra and Kufa standardized classical Arabic.

Nevertheless, the new Islamic culture with its new scope of ideals changed even classical Arabic. Though the literature, so far as it dealt with pre-Islamic topics, remained unchanged, the language of the classical secular prose writers of the early Abbasid period is different. Its vocabulary avoids the plethora of special Bedouin words, and instead uses general designations, adding the special characteristic by way of circumlocution. In syntax, the new style avoids exclamations and parataxis, instead developing the tendency already found in pre-Islamic Arabic to limit one type of expression to one sense. Through this restriction the Arabic sentence structure becomes admirably accurate and capable of expressing the most complicated range of ideas concisely.

With the lowering of the standard of education and the changes that affected the Bedouin tribes, who were no longer regarded as the best representatives of Arabic speech, classical Arabic ceased to be used in high society conversation after the beginning of the tenth century. From the mid-13th century, after the Mongol invasion and the establishment of Mamluk Egypt, the impact of Middle Arabic, including its Neo-Arabic layer, on literary language increased, and from the 14th century a period of stagnation and decay began, which lasted until the beginning of the 19th century.

NEO-ARABIC, MIDDLE ARABIC AND JUDEO-ARABIC. Neo-Arabic arose as the linguistic consequence of the Arab conquests of the seventh century C.E. As a result of the changes of place and culture and the influence of the indigenous population, this new language type arose in towns as early as 700 C.E.

The language of texts in which classical and post-classical features alternate with Neo-Arabic elements, as well as with pseudocorrections including hypercorrections and hypocorrections, is called Middle Arabic. The study of Neo-Arabic as contained in Middle Arabic texts cannot exclusively be based on documents of Muslim provenance. The tremendous influence which classical Arabic as an ideal exerted, as it still does,

on Muslim authors meant that their writings did not, until a relatively late date, reflect decisive changes in the character of the language to any marked degree (with the sole exception of early papyri). Consequently, investigation has to concentrate upon the religious minorities of the Arab Empire, who were less devoted to the ideal of classical Arabic than the Muslims. Accordingly, the sources of Neo-Arabic proper are (a) Judeo-Arabic, mainly from the second millennium C.E., written as a rule in Hebrew characters; texts written in phonetic spelling from the second half of the first millennium have been preserved. Jews often preferred writing Arabic rather than Hebrew, even when dealing with the most sacred matters of Judaism. Only poetry was written in Hebrew almost consistently. (b) Christian Arabic texts, especially from southern Palestine, preserved in the Monastery of St. Catherine in Sinai, including the only dated texts from as far back as the ninth century C.E. (c) Middle Arabic translators: As the most important translators were non-Muslims, their works exhibit Neo-Arabic peculiarities, though to a lesser degree.

The linguistic character of ancient Neo-Arabic clearly exhibits all the structural peculiarities that characterize modern Arabic dialects. Since ancient Neo-Arabic and the modern dialects are structurally closely akin, a very short description of the principal features of Judeo-Arabic as compared with classical Arabic may also serve as a summary of the main differences between classical Arabic and the Neo-Arabic as contained both in the other branches of Middle Arabic and the modern dialects (especially the sedentary vernaculars). These ancient Neo-Arabic features must be carefully deduced from Middle Arabic texts full of classical and pseudocorrect elements, since no texts written in pure Neo-Arabic are extant. Before the exploitation of these Middle Arabic texts, Neo-Arabic was only known from modern dialects. The reconstruction of early Neo-Arabic from Middle Arabic texts bridges the gap of more than one thousand years that separated the emergence of the Neo-Arabic lingual type from modern dialects.

Perhaps the most important event in the field of phonetics, an event which determined the very nature of Middle as contrasted with classical Arabic, was the change in the nature of the vowels, caused at least partly by the accent becoming strongly centralized: the vowels were weakened, thus becoming liable to change and elimination. Final short vowels disappeared (this being one, though not the sole, reason for the disappearance of cases and moods), and even in the interior of the word short vowels in open unstressed syllables have been elided. The phonemic structure of the vowels changed, at least in some dialects. Further, the quality of the short vowels has become variable. Diphthongs, it seems, have become simple vowels. In the sphere of the consonants the most important change is the weakening and disappearance of the glottal stop. A great number of assimilations occur and whole words are pronounced in *tafkhim* (velarized) or *tarqiq* (non-velarized).

As to the linguistic structure of Judeo-Arabic, so far as such different and intricate features may be reduced to a

common denominator, the most conspicuous deviation from classical Arabic was that Neo-Arabic detached itself from the synthetic type and approached the analytic type, which generally indicates one concept by one word. The most striking outward sign of this phenomenon is the disappearance of the mood and case endings. The place of the lost flexion is taken by new features: as is general in analytic languages, the subject tends to precede the verb, the direct object to follow it. The verb agrees even with its following subject, thus making distinction between subject and direct object possible (if they are of different gender or number). Apparently under the influence of Aramaic, the direct object is often indicated by *li* and sometimes also referred to by an anticipative pronominal suffix. A further analytic feature is the partial discarding of *status constructus*, while in order to indicate a similar relation not only prepositions, but sometimes also *mataʿ*, *bataʿ* are used. *Status constructus* has greatly changed: two nouns in *status constructus* may govern one noun, the *nomen regens* in the dual or sound masculine plural preserves its *nūn*, thus becoming identical with the *status absolutus*, and words which in classical Arabic as a rule occur in *status constructus* are to be met with in *status absolutus*. The differences between *an*, *anna* ("that"), and *inna* ("behold") have been blurred, and each may occur in syntactical positions proper, according to classical usage, to the others. The *b*-imperfect is rather rare, although it may be found in some early texts. The dual is often replaced by the plural, and the relative pronoun *alladhī* has become invariable (in many cases apparently being a "classical" spelling for vernacular *illi*, which, however, is very rare in Middle Arabic texts). The differences between relative clauses after determinate and indeterminate antecedents, strictly maintained in classical Arabic, are sometimes blurred. Asyndetic clauses occur in every syntactic environment, both in coordination, especially after verbs indicating movement, and in subordination, particularly in object clauses. Indirect questions often take the form of conditional clauses (as in Hebrew and English). The most frequent negation is *mā*, occurring much more often than in classical Arabic. The feminine plural is widely replaced by the masculine, and the passive, formed in classical Arabic by internal vowel change, by reflexive verbal forms. The most far-reaching changes have affected the numerals. Moreover, the fixed and accurate style of classical Arabic is largely replaced by an inconstant and careless language.

Despite the basic linguistic similarity of Judeo-Arabic and other branches of Middle Arabic, there were important differences between them, though mostly not linguistic distinctions proper: Jews, as a rule, wrote Arabic in Hebrew characters, dealt almost exclusively with Jewish topics, and made use of Hebrew (and Aramaic) phrases, thus making their literature virtually unintelligible to Gentiles. One has the feeling that Jews themselves regarded Judeo-Arabic as distinct from other forms of Middle Arabic, as one may infer from special literary traditions in Judeo-Arabic literature.

Modern Literary Arabic

The history of modern literary Arabic, like the modern history of the Arabs, begins with the expedition of Napoleon to Egypt in 1798. The problems confronting Arabic were even greater than those of ordinary living languages facing Westernization. In some respects, classical Arabic had a status comparable to that of Hebrew before its revival in Israel (see *Hebrew Language): both were artificial languages of time-honored civilizations, in which religion occupied a central position. The difficulties which Hebrew had to overcome, were, it is true, even greater than those facing Arabic. Classical Arabic was the language of a coherent population, speaking dialects which, though differing from each other, and all exhibiting a structure different from that of classical Arabic, were nevertheless related to each other and with classical Arabic, and felt as such. By contrast, Hebrew was used by Jews scattered all over the world. On the other hand, since the revival of Hebrew in Erez Israel, the status of Hebrew has become almost "normal" and the Jewish population of Israel is becoming increasingly unilingual. The only important trait distinguishing it from "normal" languages is that it is "open" to a certain degree to classical Hebrew. With the adaptation of classical Arabic to the demands of Western culture, the position of modern literary Arabic has been much less normalized. Its relation to its classical predecessor is, to be sure, similar to that of modern Hebrew to classical Hebrew: modern literary Arabic is open to classical Arabic. The language situation of Arabic, however, is complicated by the existence of the dialects. Whereas the Hebrew linguistic situation is characterized by dichotomy, modern Hebrew versus classical Hebrew, the Arabic linguistic structure is tripartitive at least, consisting of classical Arabic, modern literary Arabic, and the dialects.

The guiding idea of the whole Arabic language movement was the dogma of classical Arabic being the highest authority for linguistic correctness. Later, the emergence of Arabic nationalism conveyed to it additional significance: it was no longer merely a monument of the glorious past, but also the tie binding the Arabs in their various countries into one unit.

The Arabic Dialects

Arabic dialects are spoken by approximately 100 million people. The basic structure of the Arabic dialects, especially of the sedentary vernaculars, is identical with that of ancient Neo-Arabic. The main difficulty of classifying the dialects arises from the necessity of basing classification on both sociological and geographical criteria, though these overlap. According to sociological criteria, the Arabic dialects fall into Bedouin and sedentary vernaculars. According to geographical criteria, the following divisions emerge:

- (1) Saudi Arabia, the Syro-Iraqi-Jordanian Gulf;
- (2) South Arabic: Yemen, Oman, and Zanzibar;
- (3) Iraq;
- (4) Syria-Lebanon-Israel-Jordan;
- (5) Egypt (excluding Alexandria and certain parts of

the population of the Delta, which belong to the Maghrebine dialects);

(6) Sudan and Central Africa; and

(7) Maghrebine Dialects, including Malta. The characteristic of this dialect group is the use of *nqtl* and *nqtlu* for the first person singular and plural respectively of the imperfect.

[Joshua Blau]

ARAB LEAGUE, league of Arab states comprising 22 members. The League was founded in March 1945 in Cairo as a regional organization by the then seven independent or almost independent Arab states (Egypt, Iraq, Transjordan, Syria, Lebanon, Saudi Arabia, and Yemen). Its foundation was a result of two conflicting processes. One was the Pan-Arab ideal, which had gained immense popularity since the 1920s and called for political unity of all Arabic-speaking peoples. The second was the formation and perpetuation of the state system (a "Westphalian order") in the Middle East and the struggle for regional hegemony among these states. Thus, despite the fact that Arab nationalism was the ideological force behind the process that led to the establishment of the League, in practice the League sanctified the existence and sovereignty of the Arab states. Hence, the term "Arab unity" was not even mentioned within the League's charter and decisions did not have binding force among the League's members. It reflected the fact that member-states had conflicting interests which impaired their ability to cooperate politically within the framework of the Arab League and forced them to find the lowest common denominator as grounds for cooperation.

At first the League enjoyed respect. Yet with time and as a result of its inability to coordinate any serious pan-Arab action, it gradually lost prestige. From 1964 the League served as an organizational framework for Arab summit meetings. Although the Council of the Arab League, headed by the member-states' foreign ministers, was scheduled to meet twice a year, Arab summit meetings were irregular and dependent on the problems of the day.

Since its foundation, the League has made Palestine and the Arab-Israeli conflict its most important axis of engagement. The Charter of the League contains a special appendix relating to Palestine, committing its members to support the Palestinians in their national struggle for independence. The League was also involved in coordinating the Arab front in the 1948 war. The Arab defeat in that war symbolized the poor performance of the League and the inability of the Arab states to cooperate successfully even for the Palestinian cause. Palestine remained the most important issue on the League's agenda. Nevertheless, the League was never able to translate its preoccupation with this subject into an effective political agenda.

The attitude of the Arab League towards the Palestinian problem and Israel reflected the changes these two related issues underwent. Until the 1970s the League officially did not recognize the State of Israel and advocated the resolution of the Palestinian problem only within the context of Israel's annihilation. Yet, after the 1967 war and the gradual change in the dynamics of the conflict that led to a slow implicit recognition of Israel, the League started to change its tone as well. Thus, when Egypt signed a peace treaty with Israel in 1979, the League's headquarters were moved from Cairo to Tunisia, and Egypt was stripped of its membership. Yet gradually the League's members reestablished their ties with Egypt and by 1990 the League's headquarters returned to their original location. In addition, the League's official declarations, as manifested in the 2002 Beirut summit, even offered an official Arab peace plan which recognized Israel within its pre-1967 borders in exchange for the establishment of a Palestinian state and a solution to the refugee problem based on UN Resolution 194.

The May 2004 Tunis Arab summit reflected the challenges the League's member-states faced after the American occupation of Iraq. The summit's resolutions reiterated the call for a comprehensive Israeli-Arab peace based on the 1967 borders. They also called for amending the League's charter to improve its effectiveness and to conduct internal political reforms in each state based on universal democratic values. Although the wording of these resolutions was promising, in reality they did not produce major changes either in the League's structure or in the political systems of its member-states.

[Asher Kaufman (2nd ed.)]

ARAB WORLD, 1945–2006. The Arab world is divided into four subregions: the Maghreb (*Morocco, *Tunisia, *Algeria, *Libya, Mauritania), the Nile Valley (*Egypt and Sudan), the Fertile Crescent (*Syria, *Lebanon, *Iraq, *Jordan, and the *Palestinian Authority), and the Arabian Peninsula (*Saudi Arabia, *Yemen, *Kuwait, Qatar, Bahrain, Oman, and the United Arab Emirates). Between 1932 and 1971 these countries became independent nation-states, with the exception of the *Palestinian Authority.

The Maghreb was largely made up of Sunni Arab and *Berber Muslims. Until its independence from European colonialism, aside from a large European settlement (French, Italian, and Spanish), it had sizeable Jewish communities. Morocco gained independence from France and Spain in 1956; Tunisia from France in 1956; Algeria from France in 1962; Libya from Britain in 1951; and Mauritania from France in 1960. Algeria emerged as a presidential republic in 1962, while Tunisia, ruled since 1705 by the Husaynid beylicate, became a republic in 1957. Libya became a monarchy under the Sanusi dynasty in the 1950s and a republic in 1969. Governed by successive military regimes since the 1960s, Mauritania, in the 21st century, is undergoing a process of democratization. Morocco continues to be a monarchy under the Sharifian Alawite dynasty. Authority is vested in the king along with a constitutional government headed by a prime minister and a legislative parliament. The Maghreb's population includes 32 million Algerians; 31 million Moroccans; 8.5 million Tunisians; 4 million Libyans; and 2 million Mauritians.

Egypt of the post-1945 period comprised a relatively homogeneous population with a Sunni Muslim majority and a sizable Christian Coptic minority estimated at approximately six percent of the total population. The small religious and foreign national minorities, including Jews, Armenians, Italians, British subjects, Syrian Christians, and Greeks departed from the scene during the 1950s and 1960s in the aftermath of Britain's departure. The political system in Egypt until the July 23, 1952, Revolution consisted of a hereditary monarchy (House of Muhammad Ali), a constitutional government, and a parliament. Following the 1952 Revolution, Egypt became a republic (1953) and a one-party state headed by Gamal Abdel *Nasser, the latter having become president in 1956. After Nasser's death (1970), under the presidency of Anwar al-*Sadat (1970–81) and Husni *Mubarak (from 1981), steps were taken to partially democratize the political system, revive the pre-1952 multi-party system, permit the activity of non-governmental organizations, and diversify the press and electronic media. The population grew from 19 million in the 1940s to 70 million in 2005.

Sudan has more than 50 ethnic groups subdivided into at least 500 tribes. While southern Sudan is Christian and pagan black, the main group in the north are Muslims. Nearly half of the population identifies itself as Arab, generally meaning peoples who speak Arabic and reflect its cultural heritage. Half the population speaks Arabic as its native language. Sudan's total population in 2000 was 40 million. The country gained its independence in 1956 after the British and Egyptians had

dominated the country for some 57 years. It has been a republic ruled mostly by the army. Since 1989, the military in coalition with Islamist elements have been in control. Sudan has been plagued by civil wars fought between the Muslim north and the Christian south. In January 2005 an agreement was reached to halt the violence.

The Fertile Crescent includes Syria, Lebanon, Iraq, the Hashemite Kingdom of Jordan, and the Palestinian Authority. The combined population of these entities in 2000 was about 45 million. The populations are heterogeneous. With 13 million, Syria is made up of an Arab Sunni majority, different Shiite minorities, the Druze, Christians, and, until recent years, Jews. After independence from the French in 1946, Syria was a republic initially governed by a nationalist bloc. Its leaders were replaced in 1949 by army officers in reaction to the military defeat in the 1948 war against Israel. The traditional politicians returned to power following elections in 1954, but four years later political life in Syria was again dominated by the military and the Syrian-Egyptian Union (United Arab Republic). In the aftermath of the Union's collapse in 1961, the military remained in control of the country. The rise of the leftist nationalist Ba'ath (Renaissance) Party in a military-civilian coalition in 1963, to be followed, after another military coup d'état in 1966, by a yet more radical wing of the same political party controlled by the Alawi minority, only solidified the dominance of the army.

Lebanon, a constitutional republic with a population of three million, won its independence from France in 1943. The population is diverse with a large Shiite community (the single largest group), an important Sunni element, several Christian communities, and the Druze. Until the 1970s, a Jewish community existed. The president of the republic is traditionally a Maronite Christian, the prime minister a Sunni, and the speaker of the Parliament a Shiite.

Iraq, with 20 million people, also enjoys population diversity with a substantial Shiite majority (60 percent), though dominated politically by Arab Sunni Muslims until 2003. It won independence from Britain in 1932 and was ruled by the Hashemite monarchy. The latter was removed from power in July 1958 by a group of army officers who transformed Iraq into a republic. Until 2003, the republic's political leadership was vested in the hands of successive administrations propped up by military men belonging mostly to the Sunni Arab minority. This subsequently changed, when the Shiites emerged as the dominant force in local politics after the overthrow of Saddam Hussein's regime by U.S. and western coalition forces. Less than 20 percent are Sunni Arabs; another 20 percent are Sunni Kurds. The Kurds are not Arabs and speak Kurdish. Small minorities include Assyrian Christians, Turkic elements, Marsh Arabs, and a few Jews.

The Hashemite Kingdom of Jordan's population of four million lives largely in the fertile highlands of the *Transjordan Plateau and the Jordan Valley. About 50 percent of the people are Jordanian Sunni Muslim Arabs originating from the land east of the Jordan River. Most of the rest had their

roots in *Palestine. Many arrived as refugees during the 1948 war or in the aftermath of the Six-Day War of 1967. In terms of minorities, five percent are Arab Christians, mostly Greek Orthodox. Other ethnic minority groups are even smaller, mainly Armenian Christians and Circassian Muslims.

The Palestinian Authority (PA) was created in the summer of 1994 following the Oslo Declaration of Principles (1993) and the subsequent implementation of the Oslo peace accords. Dominated by the *Palestine Liberation Organization (PLO) and the *Fatah*, until the January 2006 * Hamas parliamentary election victory, the Palestinian Authority governs the towns on the West Bank of the Jordan River, many of the villages surrounding these towns, and *Gaza. The majority of the people are Sunnis.

The Arabian Peninsula countries emerged around family power centers and Western-protected interests. State capabilities have developed in conjunction with oil wealth and the involvement of Western powers. Saudi Arabia, a hereditary monarchy since the mid-1920s, is governed according to the *Shari'a* (Islamic Law). Its population at the beginning of the 21st century exceeded 25 million. Yemen, with a population of 20 million, gained its independence in 1918 from the crumbling Ottoman Empire. It was governed by a monarchy until its overthrow in September 1962. In 1967, after a five-year civil war, in which Egypt committed troops to prop up the republican anti-monarchic forces, two separate Yemeni entities emerged: the Yemen Arab Republic; and the Marxist-dominated People's Democratic Republic of Yemen (PDRY). It was only in 1990 that both Yemens merged once again into one nation as the Republic of Yemen. The population in the nominally constitutional monarchy of Kuwait consisted of 2.2 million in 2004, 85 percent of which are Sunni Arab, 30 percent Shiite Arab, while the rest are Hindus and Christians. Qatar, a traditional monarchy, had a population of some 850,000 in 2004, consisting of 40 percent Sunni Arabs, 18 percent Pakistanis, 18 percent Indians, 10 percent Shiite Iranians, and 14 percent classified as "others." Ninety-five percent of the people of Qatar are Sunnis. Bahrain, a constitutional hereditary monarchy, had a population of approximately 680,000 in 2004 that included local Bahraini Arabs, Asians, and Iranians. Seventy percent of the population are Shiite and 30 percent are Sunnis. The Sultanate of Oman had a population of 2.9 million in 2004, made up of Arabs, Beluchis, South Asians, and Africans. Omanis are mostly Sunni with small Shiite and Hindu minorities. The United Arab Emirates (UAE), inhabited by 2.4 million in 2004, is governed by a local hereditary sultanate. Its population consists of 61 percent Sunni Arabs, 22 percent South Asian Muslims and Hindus, and the rest mostly Iranian Shiites.

Inter-Arab Political Rivalries and Efforts toward Unity: 1945–1963

Since 1945, popular political sentiment in the Arab world has been dominated by urgent appeals for Arab unity under the trauma of the military defeat in Palestine, the establishment of the State of Israel, and the exodus of the Palestinian refugees

and their resettlement in Arab states. One major manifestation of unity was to be achieved through the creation – with British support – of the League of Arab States (*Arab League) in March 1945. With the exception of the years 1979–90, League headquarters were in Cairo. Sixty years later the League was composed of 22 independent Arab states; Palestine was included as an independent entity. Its multipurpose functions were to strengthen relations between member-states; enhance member-state cooperation and the preservation of Arab sovereignty in the post-colonial era; and promote general Arab interests. The League promotes economic, social, military, and development cooperation among its members. It has been united in its support for Palestine vis-à-vis Israel, though deep divisions existed as to how to deal with Israel. Moreover, all talks of Arab unity and the notion of Pan-Arabism did not translate into reality over many decades. Relations between governments and parties have been dominated by bitter rivalry. Well into the 1960s the idea of Pan-Arabism was inextricably bound up with two concepts: anti-colonialism and revolutionary socialism – the two often overlapping.

Between 1945 and the mid-1950s, the center of the contest for influence in the Arab world was Syria while the main protagonists were Iraq and Egypt. The Arabian Peninsula, the Persian Gulf, and the Maghreb were then either on the margins of Arab affairs, or were still under foreign domination. This competition for power began well before the Egyptian revolution of July 23, 1952, with the decline of European colonialism, and had little to do with ideology. It was geopolitical in nature. With the termination of French domination, Syria had become free to choose her alignment within the Arab world, and other Arab states were free to try and influence her. For sentimental reasons and out of dynastic ambition, as well as the desire to promote Iraqi leadership among the Arabs, the principal Iraqi leaders, the regent, Prince Abdallah, and the powerful prime minister, Nuri al-Sa'îd, sought repeatedly to bring about either a Syrian-Iraqi union under the Hashemite monarchy, or at the very least a close alliance. The Egyptians steadfastly opposed them.

Syria was easy prey for the Egyptians and Iraqis, for it lacked political stability from the late 1940s, following the first Arab-Israeli war, and well into the 1950s. A series of domestic and international crises during this period provided the occasions for efforts in and out of Syria to push the country in one direction or the other. A staple ingredient in this process was the chronic involvement of the Syrian army in politics, beginning with three consecutive military coups in 1949. Further coups occurred in the early 1950s. At other times, between 1954 and 1957, military cliques among army officers espousing diverse nationalist ideologies intervened in the affairs of state or carried on struggles against each other to determine which would more successfully manipulate the civilian politicians. At the same time, competing politicians cultivated friends in the army and occasionally encouraged military intervention in support of their own factional interests.

A dominant factor that affected Syria, but equally or more so the domestic and regional politics of the rest of the Fertile Crescent and Egypt, was the effort by Britain and the U.S. to bolster their strategic interests in the Middle East through defense treaties. This was part and parcel of West European and American efforts to block Soviet expansion into the region. Although each of these efforts failed, it exacerbated anti-Western sentiments. In 1951 came the proposal for a combined British, French, American, Turkish, and Egyptian Middle East Defense Organization (MEDO), into which Syria, Iraq, and others would presumably be drawn. The plan came to naught when the Egyptian government rejected it. Four years later, in 1955, Britain, Iraq, *Turkey, *Iran, and *Pakistan created the Baghdad Pact for the purpose of regional defense. Israel was not invited to join the Pact: The British and the Americans did not wish to alienate Iraq since it was impossible for the latter to go along with such an invitation, for this would have meant recognizing the Jewish State. The chief British interest in the Pact was to provide a substitute for the expiring Anglo-Iraqi treaty. The Iraqi authorities were eager to renew their British ties, but they faced the prospect of isolation within the Arab League and condemnation by Arab opinion unless other Arab partners could be brought in. Egypt refused to join the Pact from the outset, claiming to spearhead the notion of non-alignment in the Cold War. Egyptian leader Gamal Abdel Nasser believed that the Pact meant to challenge his leadership in the Arab arena and not thwart Soviet ambitions in the region. Moreover, once it became apparent that the U.S. would not sell fighter planes, heavy artillery, tanks, and light weapons to the Egyptians, Nasser deviated from his non-aligned policy and signed an arms deal with the Soviet Bloc in September 1955. This move weakened the Western strategy of forging defense alliances with Arab states and opened the door to deeper Soviet involvement in the Middle East.

Relentless pressure from the Nasserist regime in Cairo on the Syrians and Jordanians to refrain from joining the Baghdad Pact left Iraq the only Arab country that joined it along with pro-Western Pakistan, Iran, and Turkey. The Sinai-Suez expedition of October–November 1956, when Britain, France, and Israel attacked Egypt following Nasser's nationalization of the Suez Canal, and owing to his support for the Gaza-based Palestinian incursions (against Israel) as well as for the Algerian rebels (against France), reduced prospects for pro-Western defense arrangements with Syria and Jordan even further. The Eisenhower Doctrine of 1957, in which the U.S. declared that the need of the hour was to defend the Middle East against the aggression of "states controlled by international Communism," emerged as a futile attempt after the 1956 war to attract Arab states into the Western fold. The Lebanese, Jordanian, and Saudi governments allowed themselves to become open allies of the U.S. and condemned Cairo and Damascus for allegedly opening the door to the spread of Communism in the area. They were rewarded with American arms and money, but both they and their patrons paid the price of widespread protests. They paved the way for the armed insurrection that

plunged Lebanon into anarchy beginning in May 1958 and the army coup that liquidated the Iraqi Hashemite monarchy two months later.

Though Syria did not witness in 1957–58 open unrest like its Lebanese, Jordanian, and Iraqi neighbors, there had been covert signs that both radical leftist and right-wing politicians were undermining its stability. Syria's problems were temporarily solved, or so it seemed at the time, by its union with Egypt in February 1958, in the new framework of the United Arab Republic (UAR). The initiators of the UAR were Egyptian President Gamal Abdel Nasser and the Syrian Ba'ath Party. The latter was founded in 1947 by Salah al-Din Bitar and Michel 'Aflaq, two Paris-educated Syrian intellectuals who joined with Akram al-Hawrani, an astute politician who led the Syrian Socialist Party. Together they formed the Syrian Arab Socialist Ba'ath Party. By the late 1950s, Ba'athist appeal was not confined to Syria; it branched into Lebanon, Jordan, and Iraq.

Although Nasser agreed to enter into the union with Syria, he laid down his conditions. The UAR should not be a federal but a centralized union. The military had to renounce further involvement in politics. All political parties were to be dissolved. Only the National Union, the sole political party in Egypt, was to serve as an umbrella for guiding the UAR. There were to be two parliaments: one in Cairo and another in Damascus, and one central government, in Cairo, headed by Nasser. These terms were accepted by the Syrian Ba'athists.

Nasser and the Ba'ath supported state socialist programs. In Egypt, socialism evolved in the 1950s and early 1960s as a series of improvised programs rather than as an ideology. The military leaders had decreed agrarian, labor, educational, and other reforms in response to specific needs and generally in order to win public support for themselves. The first state incursions into the management of the industrial and commercial economy came as by-products of the international crisis of 1956: the regime found itself in control of the Suez Canal administration and a large number of enterprises sequestered from their British and French owners. In the wake of this experience, Nasser's regime developed a taste for state ownership. When the UAR was created, Nasser felt that state socialism needed to be implemented in Syria too.

Unlike Nasser's socialism, the Ba'ath was a mixture of ardent Arab nationalism and Marxist doctrines. Like Nasser, the Ba'athists called for a united socialist Arab nation. The formation of the UAR reduced the pressures of Britain and the U.S. on Syrian domestic affairs. The subsequent Iraqi revolution of July 14, 1958, transforming the country into a military republic, considerably weakened Britain's position in the Fertile Crescent. The landing of American and British troops in Lebanon and Jordan, respectively, soon thereafter, to prevent the possible overthrow of the regimes in those countries, was the last major Western effort to play a vital role in inter-Arab politics for some time.

Once the union was set up, the centralization of Nasser's authority became a reality and the Ba'ath soon played second fiddle to him. As time passed, they were further marginalized.

Nasser relieved them of ministerial posts. Key Ba'ath leaders – notably Akram al-Hawrani, Salah al-Din Bitar, Mustafa Hamdun, and Abd al-Ghani Qannut – resigned at the end of December 1959, thus ending Ba'ath collaboration with Egypt. Power now passed in Syria to the pro-Egyptian chief of intelligence, Abd al-Hamid Sarraj.

Tensions gradually brewed within the UAR between Nasser and the Syrians, the latter increasingly resenting Cairo's aggressive meddling in their domestic affairs. Moreover, other Arab states shunned Cairo's efforts to join the union's bandwagon. Iraq, which seemed ripe to join it in the wake of the July 1958 revolution, not only shied away but in effect evinced hostility toward Nasser. The coalition of which the new regime was composed soon faced a struggle in which the Arab nationalists, including the Iraqi branch of the Ba'ath Party, lost out to Communists and radical nationalists. The leading Iraqi pro-Nasser Arab nationalist, Colonel Abd al-Salam Arif, found himself in a Baghdad prison under a sentence of death. Nasser reacted and accused Abd al-Karim Qasim, Iraq's commander-in-chief and prime minister, as a traitor to Arab nationalism and a protégé of international Communism. From that time onwards, until February 1963, the situation settled into a tense cold war between Cairo and Baghdad. The problem for Cairo and Damascus was that Qasim was a revolutionary whose behavior defied conventional expectations. On the one hand, he failed to cooperate with the UAR in the march toward Arab unity; on the other hand, he emerged as a hero to the poverty-stricken dwellers of Baghdad.

Iraq's behavior toward Egypt was a slap in the face to Nasser but far worse was the collapse of the union with Syria. By then deep discontent and resentment permeated broad segments of Syria over Egypt's involvement in Syrian politics, economy, and society. On September 28, 1961, this prompted secessionist army officers to overthrow the pro-Egyptian political order and announce Syria's breakaway from the UAR. According to Cairo, the union had been stabbed in the back by Syria's wealthy class, which had been affected by the socialist legislation that Nasser had decreed in summer 1961. These "reactionaries" colluded with the imperialists and the Arab monarchs, then bribed and subverted an opportunistic clique of military officers in order that the *ancien régime* might be restored in Syria.

After the collapse of the union it seemed as if Nasser would attend solely to domestic goals in Egypt in order to enhance his socialist program and the new Arab Socialist Union (ASU), which replaced the previous one-party regime of the Nationalist Union. But Nasser did not detach himself from Arab politics. Egypt's relations with Syria, Saudi Arabia, and Jordan were suspended. No diplomatic ties were maintained between Cairo and Damascus until November 1966. On the other hand, the Yemeni revolution of September 1962 that toppled the Imamate resuscitated in the Egyptian regime a desire for a fresh involvement in a hitherto unknown war. Egypt felt obliged to be drawn into it in the role of the champion of revolutionary progress and committed thousands of

troops toward achieving this aim. For their part, the Saudis and Jordanians felt compelled to support the Yemeni Royalists, out of dynastic solidarity. Egypt was thenceforth caught in the complex web of a protracted war (until 1967), facing the anger of a Saudi monarchy that was suspicious of Nasserist hegemonic aims in the Arabian Peninsula. Since the early or mid-1960s, King Faisal also contended that Nasser's agents and supporters had attempted to undermine Saudi monarchical institutions from within.

A major and bloody coup d'état, on February 8, 1963, eliminated Qasim and his regime, bringing to power the Iraqi branch of the Ba'ath in a coalition with Nasserists. The Egyptians welcomed the downfall of Qasim, hoping that the new Ba'ath-Nasserite regime would demonstrate a commitment to Pan-Arab causes and to socialism. A month later a coup occurred in Syria. The Egyptians hoped that, unlike the secessionist government of 1961–63, the new government, based on a Ba'ath-Nasserist coalition backed by the army, would help revive Arab unity. Israel, which had benefited from the inter-Arab rivalries of 1961–62, watched the new developments with some anxiety.

Subsequent to the dramatic political changes in Baghdad and Damascus, Nasser hosted unity talks in Cairo between mid-March and mid-April 1963. When the issue of a new Arab union beginning with Egypt, Syria, and Iraq as the pilot experiment was deliberated, Nasser proposed that it be formed in two stages: first Egypt and Syria for a trial period of four months; and then, if successful, with Iraq as third partner. But the search for a unification formula of political leadership was unattainable. It boiled down to the issue of mistrust among leaders, particularly the deep mistrust of Egypt by the Syrian Ba'ath. The latter remained bitter over its past experience with Nasser.

In mid-July 1963, the Syrian Ba'ath expelled the Nasserists from the government; four months later the Nasserists in Iraq, led by Colonel Abd al-Salam Arif, removed the Ba'athists. The Arab cold war among radical regimes wreaked havoc to the cause of Arab unity and rendered efforts toward a new Arab union obsolete. At the end of 1963 more Arab states were at each other's throats than ever before. Egypt and Saudi Arabia were locked in a struggle for the future of Yemen, where 40,000 Egyptian troops had failed to win a final victory for the republican revolution. Nasser had seized on the revolution in Yemen in September 1962 as an opportunity to break out of his isolation in the wake of Syria's secession from the UAR and regain the initiative in Arab affairs for Egypt on the basis of revolutionary leadership. The struggle with the Yemeni Royalist forces, backed by Saudi Arabia, was soon deadlocked. The longer the Egyptian army remained in Yemen, and the more the Egyptian commitment to consolidate the Yemeni revolution was reiterated, the more difficult it became to disengage. Meanwhile Algeria under the presidency of Ahmad Ben Bella and the regime of the Front de Libération Nationale (FLN) had been involved with Morocco over a border dispute (October 1963) and had another dispute with Tunisia. Tunisia and Mo-

rocco had been cool to each other ever since Tunisia had recognized the independence of Mauritania. Moreover, Tunisian President Habib Bourguiba attacked Nasser's Pan-Arab policies. Egypt was hostile to Jordan, and Syria deemed it to be unfriendly to both Jordan and to Morocco. These quarrels pitted revolutionary against conservative or moderate regimes. It left the Arab League ever more powerless.

Toward the end of 1963, at the zenith of Arab disunity, a sudden, albeit temporary, relaxation occurred. The catalyst on this occasion was Israel, which was approaching the completion of its project to divert the waters of the Jordan River for its own needs. Any act by Israel to divert these waters was considered by all Arab states as an act of aggression. Syria seized upon the Israeli initiative to awaken sentiments of Arab unity. Yet nothing materialized from the gestures of solidarity expressed by both conservative and radical Arabs. The disinclination of Egypt and Syria to go to war over Israel's water diversion schemes encouraged the Jewish state to resume its policies.

The Arab Arena: 1964–1970

The year 1964 was a turning point in inter-Arab politics. Added to the role of the Arab League as an all-Arab forum for coordinating economic, social, political, and military endeavors, the Arab states with Egypt at the helm established the Arab Summit Conference. It was meant to iron out differences and solve serious problems in a more efficient way than the League meetings could achieve. The first Arab summit in this spirit was held in Cairo in January. The key issues on its agenda were a negotiated compromise settlement in Yemen after Egypt committed troops and military hardware there and the creation of the *Palestine Liberation Organization (PLO).

As for the first issue, immediate success was achieved. For Nasser, Yemen was not merely a symbol of "revolutionary inevitability" but a foothold in the Peninsula, strategically bordering on both the British-protected South Arabian Federation and the Saudi Kingdom. It was only in August 1965 that Egypt backed down from total commitment to Yemen after Nasser had reluctantly signed an agreement in Jidda, Saudi Arabia, with Saudi King Faisal. The agreement stipulated that the two Yemeni sides – Royalists and Republicans – would convene at the end of the year to arrange for the formation of a mutually acceptable provisional government. The Egyptians and Saudis were to supervise a truce between the two Yemeni forces. But the arrangement did not work out and the Egyptian army remained in the area until 1967. In agreement with the Saudis, and six months after the June 1967 Arab-Israeli war, Egypt withdrew all of its troops and other personnel from Yemen. The Royalists lost out in the end and the Yemen Arab Republic emerged. In 1967, as Nasser was withdrawing his troops from the new Yemeni republic, a second Yemeni republic was established in the former Protectorate of Aden: the People's Democratic Republic of Yemen (PDRY). Once the Egyptians were gone the Saudis were less concerned with the type of regimes in the two Yemens.

As for the PLO and the decision to enable it to create a military unit of its own, most Arab leaders offered their support but with little enthusiasm. They regarded the PLO cynically as a device to enable them to leave the task of confronting Israel to the Palestinians and thereby avoid bearing this responsibility themselves. Even an avid supporter of Palestinian resistance like Nasser believed that tight surveillance had to be imposed on the activity of the PLO throughout the region. Once the PLO was formed, King Hussein's main worries centered on the potential challenges the new organization would pose to the sovereignty of the Jordanian state, almost two-thirds of whose population was Palestinian and whose frontier with Israel was long and difficult to patrol. It was clear that, of all Arab states, Jordan would emerge as the center for PLO activities. In fact, the secret ties forged between the Jordanian king and Israel after 1964 and his meetings with key Israeli diplomats in London were largely related to this mutual concern. Hussein's worries were justified in the course of 1964–65. PLO leader Ahmad Shukeiri expected Jordan to approve the collection of special taxes in the country in order to finance the organization's military activities against Israel. Shukeiri also sought to conscript Jordanian Palestinians into the new Palestine Liberation Army (PLA) and to distribute arms to border villagers.

If tensions arose over Yemen and the status of the PLO, another major difficulty came to the fore: On March 6, 1965, during his trip to the Middle East, Tunisian President Bourguiba, an opponent of Pan-Arabism and an advocate of Arab "state particularism," posed a genuine challenge to Arab leaders in a speech delivered in the Old City of Jerusalem. He publicly urged them to recognize Israel in return for negotiations in the spirit of UN Resolution 181 of November 29, 1947 (partitioning Palestine into two separate states – one Arab and one Jewish) and Resolution 194 of December 1948 (which called for the return to their homes of Palestinian Arab refugees who had fled upon Israel's creation). The next day Bourguiba reiterated these pleas in Jericho before an audience consisting of Palestinian refugees. Yet he neither produced a written proposal nor offered himself as a peace mediator. In 1965 and 1966, his proposals, which were directed more to Arab leaders than to Israel, outlined the following eight major points: (1) the policies of denunciation and rejection embraced by Arab leaders had only led to military confrontations and always ended in Arab defeat at the hands of the Israelis; (2) if Egypt developed a nuclear option, the world would prevent Nasser from using it against Israel; (3) not only was war immoral and counterproductive, but the U.S. would never allow the Arab states to defeat or decimate Israel; (4) prudence and wisdom had to prevail over emotionalism and hatred, for these only made Israel more powerful; (5) the Arabs needed to rid themselves of their feelings of humiliation resulting from past wars, while the Israelis must free themselves from the complex of embattlement and a garrison state mentality; (6) the Arabs would reap far greater benefits if they concentrated their efforts on reaching a negotiated solution to the Arab-Israeli conflict; (7)

coexistence with Israel, even de facto recognition, would result in regional stability for all parties involved in the conflict; and (8) negotiations with Israel necessitated direct contacts, with Palestinian representatives leading the process from the Arab side. But Arab leaders would not hear of this. They boycotted Bourguiba and isolated him for some time.

The secret meetings between Israelis and Jordanians, mentioned above, were not unique although they enjoyed continuity into the 1970s and 1980s. Several Arab leaders, including Jordan's King Abdullah I (Hussein's grandfather), had engaged in back channel contacts with Israel. Even Egypt had had occasional contacts, most of which led nowhere. Egyptian diplomatic emissaries of the Nasser era (like their pre-1952 predecessors) had met Israeli diplomats in Europe or at the UN in New York to discuss various aspects of territorial issues or the implementation of UN resolutions. On a more active level, Israel had maintained secret links with minorities in the Arab world as well as with forces opposed to Nasser's and the Ba'ath's Pan-Arab unity ambitions. Thus, in the 1960s and after, Israel's intelligence apparatus, the Mossad, had reportedly assisted the Iraqi Kurds seeking internal regional autonomy against the pro-Nasserist Baghdad regime militarily. Israel apparently offered logistical and other assistance to the Christians in southern Sudan against the Arab regime in the north which was supported by Cairo. Assistance was also supplied to the Maronite Christians in Lebanon. Israel thought that by helping the Lebanese Christians it would help loyal allies to consolidate their political power base in what would become a pro-Western and pro-Israel nation.

More importantly, since the early 1960s, Israel had cultivated ties with Morocco, which opposed Nasserism and Pan-Arab unity and searched for discrete alignments against Cairo. As part of its government's "Periphery Doctrine," in search of allies geographically remote from the Arab-Israeli conflict, such as non-Arab pro-Western Iran and Turkey, Israel also looked for Arab allies with whom to cooperate behind the scenes. It was part and parcel of Israel's efforts to benefit from inter-Arab rivalries and misunderstandings as well as to ease its isolation in the region. Morocco fit neatly into this context. After the death of King Muhammad V in March 1961, Morocco's new king, Hasan II, and the Mossad developed special ties whereby Israel provided intelligence and military assistance and helped stabilize the monarchy, which then encountered strong leftist opposition from the Union Nationale des Forces Populaires (UNFP). Morocco, in turn, provided Israel with vital intelligence data about developments in the Arab arena. These special ties endured for several decades and became diversified in other areas. As Algeria's FLN regime was hostile to Israel, contacts were established with Tunisia's Neo-Destour regime, particularly with President Bourguiba, his son, and diplomatic representatives in Paris and London. After Bourguiba presented his peace plea, the World Jewish Congress, the Israeli embassy in Paris, and the Mossad kept up contacts with the Tunisians. Discussions revolved around discreet joint business ventures, agricultural cooperation, and Jewish tourism. How-

ever, Israeli hopes for relations with Tunisia that might become nearly identical to the ties nurtured with Morocco failed to materialize. Bourguiba was unwilling to commit himself as had Hasan of Morocco. Furthermore, in the 1970s Bourguiba seemed to have had a change of heart and espoused strong pro-Palestinian and anti-Israel rhetoric and policies.

Syria in the mid-1960s witnessed far-reaching internal change. There appeared cracks in the Ba‘th leadership. A young generation of civilian and military Ba‘th-oriented elements had made their appearance on the political scene. Most of them did not belong to the Sunni Muslim majority but rather to the Alawi and Druze religious minorities (formerly Shiite) which together did not constitute more than 15 percent of the Syrian population. Prominent among them within the military were Salah Jadid and Hafez al-Asad; among the civilians there were three physicians: Nur al-Din al-Atasi, Ibrahim Makhus, and Yusif Zu‘ayyin. All of them considered the old-style Ba‘thi leadership, especially the military dictator, Amin al-Hafiz, as being “too soft” on Israel and insufficiently critical of Arab conservative monarchical regimes. On February 23, 1966, the Syrian government was overthrown by these Neo-Ba‘thists. The coup not only forced the old leaders to flee Syria but also shattered the party in other Arab states. The new leadership had injected a heavy dose of Marxist ideology into their political programs, some were even Maoists. Though critical of Cairo for not doing enough to prepare for an Arab military confrontation with Israel, their desire to prevent any coexistence with Arab “reactionary” monarchs propelled them to try and push Egypt into an alliance against the latter. Unlike the previous leadership, the new rulers actively backed a major Palestinian guerilla raid into Israel (November 1966) and engaged their army in skirmishes with Israel along the 1949 armistice line. These moves caused consternation in Cairo. Nasser never ruled out a confrontation with Israel when the propitious moment arose. But 1966 hardly seemed to be a timely occasion. Hoping to restrain the Syrians from dragging themselves along with other Arab states into war and wishing to have a “supervisory role” over Syrian military designs, Nasser invited to Cairo Prime Minister Zu‘ayyin on November 7, 1966, to sign a treaty of mutual defense. Diplomatic relations, severed three years earlier, were renewed.

Unlike Syria, which in 1963 ousted the Nasserists from the government, Iraq’s leadership was largely Nasserist-oriented under the leadership of President Abd al-Salam Arif and subsequently his brother, Abd al-Rahman. For Nasser this proved vital, given Iraq’s strategic position alongside Syria and its major oil reserves. Support for Nasser also came from Algeria, which was geographically remote from the scene. The overthrow of President Ahmad Ben Bella in June 1965, however, and his replacement by Houari Boumedienne at the FLN’s helm, was a blow to Egyptian prestige.

Iraq’s major problem at the time was the Kurdish struggle for internal autonomy in the northern part of the country, a challenge that kept the Iraqi army on constant alert and weakened its prestige. The Kurdish problem had plagued the

economy and contributed to the already tense ethnic and religious rivalries between Sunni Arabs, Shiite Arabs, and Sunni Kurds. In May 1964, Iraq and Egypt had agreed to work toward unification over a two-year period. As time elapsed, this goal proved unattainable owing to Iraq’s inability to achieve stability at home. To emulate Egypt’s model, the Iraqi government nationalized the private sector of the economy and introduced a charter for the creation of an Iraqi Arab Socialist Union, which would replace existing political parties. But neither of these efforts made much headway.

Changes of Arab regimes occurred after 1967. In July 1968 the pro-Nasser regime was overthrown in Iraq by a military clique led by General Hasan al-Bakr and a group of his fellow Ba‘thists, including Saddam Hussein. These were “right-wing” Ba‘thists, hostile to the Syrian Neo-Ba‘th. In May 1969, a coup was carried out by officers in Sudan led by Ja‘afar Numeiri. The former South Arabian Federation received independence from Britain in 1967 and adopted the title of People’s Republic of South Yemen. In September 1969 a coup in Libya deposed King Idris al-Sanusi. A Libyan republic was proclaimed by military officers, headed by Colonel Mu‘ammar al-Qadhafi. In November 1970, Defense Minister Hafez al-Asad overthrew the Neo-Ba‘thists, establishing his own Ba‘thi regime. In October 1970, Libya joined with Egypt, Sudan, and Syria in an abortive attempt to form an Arab union.

The Arab-Israeli Conflict: 1948–1970

The Arab-Israel conflict had its origins in Palestine at the end of the 19th century. It gained momentum in the 1890s over Arab opposition to the sale of land to Jews for agricultural settlements and gradually led to violent clashes between Arabs and Jews. The crux of the conflict was the competition between Jewish nationalism (Zionism) and Palestinian Arab nationalism for political control over the area that, in the peace settlement after World War I, became the League of Nations mandated territory of Palestine, held by Britain from 1922 to May 1948. The first major clash occurred in Jaffa in March 1908. Violence escalated in 1920–21, 1929, and 1936–39. Both Arabs and Jews rejected proposals by the 1937 British Royal Commission under Lord Peel to partition Palestine between the two communities, although some Zionist leaders accepted the partition in principle. When Israel was created, the struggle became known as the Arab-Israeli conflict.

With post-1945 international pressure on Britain to remove restrictions on Jewish immigration and land purchases in Palestine (enforced in 1939) following the Holocaust, and for the creation of a Jewish commonwealth, Arab-Jewish tensions brought Palestine to the boiling point. Britain appealed to the UN, which recommended, in the spirit of its General Assembly’s Resolution 181 (November 1947), that Palestine be partitioned into Arab and Jewish states with an international enclave containing Jerusalem. The mainstream Zionists accepted the proposal, but a nationalist minority advocated a Jewish state on both banks of the Jordan River.

Palestine Arabs, supported by leaders throughout the

Arab world, rejected partition. The only Arab leader who maintained discreet ties with the Zionist leadership with the aim of resolving the conflict was King Abdullah of Jordan. Clashes then occurred between Palestinians demonstrating against violation of their right to self-determination and Jews celebrating their coming independence; these soon turned into full-scale civil war. Since Britain's mandate was to end on May 14, 1948, a rather disorderly withdrawal of British troops began from disputed areas. By May 1948, as the Jewish community organized its military force, Palestinian Arabs retreated, fled, or were expelled from Israel despite military assistance from several Arab states. Their defeat, uprooting, and dispersion is known as the *nakba* ("catastrophe").

The first Arab-Israeli war lasted until Egypt, Lebanon, Jordan, and Syria signed armistice agreements with Israel in 1949. Iraq refused to sign such an agreement. As a result of the war, Israel extended its frontiers approximately 2,000 square miles beyond the UN partition borders to those of the armistice agreement. The eastern part of Jerusalem fell into Jordanian hands; the Gaza Strip was held by the Egyptians over the next 18 years; and the lines separating Israeli from Syrian territory included several de-militarized zones. Over 700,000 Palestinians became refugees, unable to return to Israel; many lived in refugee camps in the surrounding Arab states, but some moved to the Maghreb, the Gulf states, Europe, or immigrated to the Americas. Territory intended as part of the Arab Palestinian state in the UN Partition Plan, including the West Bank of the Jordan River, came under the control of Israel, Jordan, and Egypt. In July 1951, after King Abdullah of Jordan annexed the West Bank of the Jordan to his kingdom (April 1950), he was assassinated by a Palestinian nationalist. Since the end of the first Arab-Israeli war the issues of the Palestinian refugees' rights to return or to compensation, and the status of Jerusalem, along with Arab recognition of Israel, remained unresolved. To grapple with these problems the UN established the United Nations Truce Supervision Organization (UNTSO) to oversee the 1949 agreements between Israel and Egypt, Lebanon, Jordan, and Syria. In 1948 the UN Palestine Conciliation Commission was set up to achieve a peaceful settlement by addressing itself to Middle East economic development and equitable distribution of water between Israel, Jordan, Syria, and Lebanon. For a fuller discussion of the Palestinian refugees, see "Arab Refugees" under *Israel, State of: Historical Survey; and *Intifada.

The birth of modern Israel and her military victories in 1948 led to turmoil in the surrounding Arab states and sparked antigovernment acts. Syria's and Egypt's military setbacks contributed to the army coups of 1949 and 1952, respectively. In Israel, tensions heightened when Egypt's Nasser, who had ended the Egyptian monarchy of King Farouk, was perceived as a growing threat. There was an increase of infiltration into Israel by Palestinian fighters (*fedayeen*) from Egyptian-occupied Gaza across the armistice line. The situation triggered an arms race in the mid-1950s. As noted, Egypt acquired military hardware from the Soviet Bloc. Israel, in turn, obtained aircraft

and tanks from the French. Relations between Egypt and Israel also became an integral part of the larger conflict between Egypt, France, and Britain over control of the Suez Canal.

Israel formed a secret alliance with France and Britain to overthrow, or, at the very least, destabilize the Nasser regime after the latter nationalized the Suez Canal Company – dominated largely by European stockholders – on July 26, 1956. After Israel attacked Egypt on October 29, Britain and France occupied the northern Canal Zone and the city of Port Said. In fact, apparently behind the back of the British, Israel and France reached a separate understanding whereby French pilots flew over Israel to prevent possible Egyptian aerial attacks on inland cities, a strategy that would enable Israeli jets to concentrate fully on the war front. The tripartite scheme was stymied by U.S. and Soviet threats of military intervention should the parties fail to pull out their troops from Egypt. In November 1956, the UN General Assembly established the United Nations Emergency Force (UNEF) to supervise the withdrawal of these forces and to act as a peacekeeping apparatus between Israel and Egypt. Anglo-French forces withdrew in December; Israel maintained troops in Egypt until March 1957.

Incidents erupted along other Israeli borders. Palestinian refugee infiltration and guerrilla attacks from Jordan plus clashes with Syria over Israeli projects to divert the Jordan River added obstacles to a peace settlement. The tensions over the use of water reached the boiling point in 1963–64 and resulted in Israeli military actions against Lebanon. Although the Israeli-Egyptian frontier was quiet between 1957 and the decade that followed, the tensions caused by the Jordan River dispute, the escalation of border incidents, especially with Syria and Jordan, and bitter verbal disputes set the stage for the June 1967 War: the third armed Arab-Israeli conflict.

In the aftermath of the signing of the aforementioned November 1966 Syrian-Egyptian defense agreement, achieved through Soviet mediation, and the reestablishment of diplomatic ties between these two states, Israeli-Syrian tensions had heightened. Throughout the early months of 1967 the Soviets and Syrians claimed that Israel had amassed troops along the demilitarized border. Egyptian observers arrived to confirm these developments and found no evidence of such actions. In retrospect, either the Soviets or the Syrians, or both, apparently sought to drag Egypt into a confrontation with Israel.

While many political observers believed that Nasser wished to put Israel's military capabilities to the test, others believed that he did not think that the opportune moment had arrived for him to enter into an armed conflict. Some even pointed out the back channel contacts between Israel's Mossad and General Mahmud Khalil, a close confidant of Nasser, over possible ways of ironing out Egyptian-Israeli differences. Others note that Nasser preferred that the liberation of Palestine be placed on the back burner in favor of the unification of the Arab states and the spread of the socialist revolution. With major units of his army bogged down in Yemen, his treasury empty, and the Anglo-Americans and the Arab monarchs challenging his authority, his primary goal was to

consolidate his power base: in Egypt, the Soviet partnership, and his leadership of Arab socialism.

Yet when tensions rose in spring 1967 between Israel and Syria, Nasser's new understanding with the Neo-Ba'ath regime placed him in a serious dilemma. If he challenged Israel with a threat of Egyptian military action in response to any move against Syria, he risked war. If he left the Syrians unprotected he would be portrayed in Arab eyes as a weakling. Nasser chose the path of deterrence and embroiled himself, Egypt, Syria, Jordan, and Iraq in the third and most catastrophic Middle East war. To pose a serious deterrent threat he expelled the UNEF from Sinai. He then blockaded Israel's passage through the Straits of Tiran at the southeast edge of the Sinai Peninsula and massed his troops on the border. Once Nasser had got that far, it hardly mattered what his initial purpose had been. His objective now went beyond simply deterring Israel: it was to score a clear political or military victory and then to receive the acclaim of the Arab world.

Israeli leaders responded with a preemptive strike on June 5, 1967, against Egypt and its Syrian, Iraqi, and Jordanian allies which had joined the fighting. After six days of fighting, Israel remained in full control of the military situation and emerged as the dominant power in the region. The Arab states were now thrown into complete disarray, surpassing the disunity of 1961–64. Israel had conquered the Sinai Peninsula up to the east bank of the Suez Canal and the Gaza Strip from the Egyptians; the Golan Heights from the Syrians; and the West Bank and East Jerusalem from the Jordanians. The war aggravated the tensions among the superpowers: the Soviet Union aligned itself with Egypt, Syria, and Iraq more than before, while the U.S. increased its support of Israel. King Hussein lost half his kingdom, whereas the Suez Canal remained closed with Israeli soldiers entrenched on its east bank. While in 1948 some 700,000 Palestinians had become refugees, an additional 300,000 uprooted themselves in an exodus from the West Bank and resettled in Jordan and Syria. Israeli Jewish settlers, mainly religious, created the infrastructure for dotting the West Bank and Gaza Strip with settlements.

Although defeated, the Arab states refused to enter into negotiations with Israel. They demanded that Israel demonstrate largesse by withdrawing to the 1949 (pre-June 5, 1967) lines and allowing the return of the Palestinian refugees to their homes in Israel. At their post-war summit in Khartoum, Arab leaders voted against negotiations, peace, or recognition of Israel. Israel and its U.S. ally advocated direct negotiations with the Arab states in return for which territorial concessions would be forthcoming.

An initiative with long-range implications was UN Security Council Resolution 242, on November 22, 1967, calling for the “withdrawal of Israeli armed forces from territories” conquered in the 1967 war, the end to hostilities, a “just settlement of the [Palestinian] refugee problem,” and the “need to work for a just and lasting peace.” To implement the Resolution, the UN chose a special envoy, Dr. Gunnar Jarring, to mediate between the parties. Syria, Iraq, and Algeria rejected the Resolu-

tion outright. Jordan and Egypt disagreed over its interpretation. They insisted it meant that Israel had to withdraw from *all* territories occupied in the war. At the same time, Nasser and Hussein became close allies. Both were preoccupied with the same need for political survival and the recovery of lost territory through diplomatic channels. The hostility that had divided them in the late 1950s and early 1960s seemed forgotten. Israel argued that withdrawal should be made “from territories” but not to the armistice lines. Most Arabs, except the Palestinians, no longer expected Israel to withdraw to the 1947 lines. The PLO and the organizations connected to it dismissed Resolution 242 as a sellout. For them it signified Arab acceptance of Israel and relegated the claims of the Palestinians to the level of “a just settlement of the refugee problem.”

A new war broke out in March 1969, known as the “War of Attrition.” It was initiated by Nasser to try and break the stalemate and force Israel to withdraw from Egyptian territories. The war lasted 17 months. Egypt bombarded Israeli positions on the east bank of the Suez Canal and was supported by Soviet advisers and pilots. Israel retaliated by bombarding targets inside Egypt – demonstrating the might of its air force – including oil refineries and industrial infrastructure. Casualties mounted on both sides. On December 9, 1969, U.S. secretary of state, William Rogers, presented a plan for a comprehensive Middle East peace based on UN Resolution 242. It called for Israel's withdrawal to the pre-June 1967 borders with certain modifications in return for mutual Arab-Israeli security and a solution to the Palestinian refugee problem. Both the Arab and Israeli sides rejected the plan. In light of the escalation of the fighting between April and June 1970, however, Secretary Rogers renewed his efforts. Under a revived plan, the U.S. called for a three-month ceasefire on the Egyptian front, including a plea to all sides to accept UN Resolution 242 as a basis for future negotiations and an immediate request from Israel to negotiate with Egypt and Jordan via the mediation of special envoy Jarring. The Israelis, Egyptians, and Jordanians accepted the terms of the ceasefire, which was implemented in August 1970. For the next three years the potential war arenas in the Middle East remained quiet.

The Palestinians, however, kept fighting, keeping the region in constant tension. As noted above, the PLO, created at the Arab Summit in January 1964, was gradually becoming a potent force by the mid-1960s. In the aftermath of the June 1967 war and Israel's occupation of the West Bank and Gaza, a new Palestinian leadership emerged within that organization. Yahya Hamuda ousted Ahmad Shukeiri. The various guerrilla groups operating at the time with links to the PLO moved in to fill the vacuum created by the military defeat of the Arab states by intensifying their attacks on Israel. Such was the case as early as March 1968 at Karama, Jordan, where Israeli soldiers faced stiff resistance from Palestinian fighters. Karama became a symbol of the struggle against Israel, which many had regarded invincible. These guerrilla groups, especially *al-Fatih* (“Triumph”), now won control of the PLO. The PLO Char-

ter was revised in July 1968 to underscore the rejection of the Arab states' interference in Palestinian affairs, the complete liberation of Palestine by Palestinians through armed resistance, and the establishment of a democratic secular state in much of historic Palestine.

The psychological lift the guerrilla fighters received at Karama also paved the way for *al-Fatih's* leader, Yasser *Arafat, to seize control of the PLO. The Fatah was the largest fighting group within the PLO, the Palestine Liberation Army, and the Palestine National Council (PNC). The key rivals within the PLO to Fatah consisted of the Popular Front for the Liberation of Palestine (PFLP), the Democratic Front for the Liberation of Palestine (DFLP), the Popular Front for the Liberation of Palestine-General Command (PFLP-GC), and *al-Sā'iqa* ("Thunderbolt"). These operated mainly out of Lebanon, Jordan, and Syria. In the years 1969–73, they caused considerable havoc in Lebanon, contributing to its political and religious instability. The Marxist-oriented PFLP was bent on overthrowing conservative regimes. It challenged King Hussein's authority in September 1970 and ignited a civil war in Jordan that resulted in the death of nearly 4,000 Palestinians, the PLO's defeat, and the relocation of its headquarters to Lebanon.

Inter-Arab Politics in the 1970s

The civil war in Jordan came to a halt thanks to Nasser's mediation between King Hussein and PLO's Arafat. Just as Nasser succeeded in calming tensions temporarily between Palestinians and the government of Lebanon through an emergency summit in November 1969, he was able to arrange for an end to the violence in Jordan, although it was contingent on the PLO's evacuation of the Hashemite kingdom. This was to be Nasser's last initiative on behalf of Arab causes. On September 28, 1970, he succumbed to a massive heart attack. The irony of Nasser's career was that he died while shielding his old enemy Hussein, at the expense of his old clients the Palestinians. Yet Jordan did pay a price for the repression of the Palestinians. The kingdom was ostracized by the all-Arab family well into 1973.

Nasser was succeeded by his vice president, Anwar al-*Sadat, who assumed full authority only in May 1971 after defeating the opposition made up of Nasser's former allies in the government, the heads of the Arab Socialist Union Party, and the military. Sadat then moved to cultivate public support for his presidency. He formulated a new permanent constitution (September 1971) stipulating that the *Shari'a* (Islamic Law) is a source of legislation (in contradistinction to Nasser's secular policies), pardoned most of the nation's political prisoners, and returned major assets nationalized during the socialist era to their original owners. Simultaneously, he undermined leftist and Nasserist influences by according benefits to the Muslim Brotherhood, a major Islamist movement that had been repressed between the late 1940s and the mid-1950s. The Brotherhood advocated the creation of a universal Islamic nation, beginning with Egypt, in which Islamic Law would be the single source of legislation. Under Nasser they were the

main opponents of the regime. They were to become Sadat's counterweights to his secular opponents.

Sadat disengaged himself and his new regime from Nasser's Pan-Arab policies at home and throughout the region. He changed the country's name from the United Arab Republic to the Arab Republic of Egypt, indicating a shift toward state particularism. In July 1972 he ordered all Soviet military advisers and personnel out of Egypt. This was a critical turning point in Egyptian history: the attempt to reverse Nasser's pro-Soviet policies and reduce the dependence on the Kremlin. Sadat also made known his desire to improve ties with Washington, badly damaged during the June 1967 war. After renewing the ceasefire agreement in November 1970 and February 1971, he sought a compromise with Israel. He sent a message to Prime Minister Golda *Meir through Jarring asking for a partial Israeli withdrawal from the Suez Canal to the Ras al-Muhammad line in order to reopen the Canal for navigation. Sadat hinted that a positive gesture from Israel could well constitute a decisive step toward implementing UN Resolution 242. Golda Meir publicly responded in favor of Sadat's approach. Nevertheless, the Egyptian request was finally rejected, apparently due to Sadat's subsequent demands from Israel to return to all pre-June 1967 borders. This was something Israel was unwilling to accept. Realizing that a compromise was not near, Sadat began to consider a limited war, possibly in collaboration with Syria, to regain occupied territories and bring the Suez Canal into operation. In November 1972 he instructed his war minister to begin military preparations for war. Despite the fluctuations in Soviet-Egyptian relations in the wake of the expulsion of Russian military advisers, in spring 1973 a major new arms deal was concluded between Moscow and Cairo, the cost of which was covered by the Saudis and other conservative Arab regimes.

Sadat departed from Nasser's policy of undermining conservative monarchies and republican regimes that disapproved of Pan-Arabism and Egypt's past relations with the Soviet Union. These regimes rewarded Sadat with generous financial assistance. A year later, during and following the October 1973 Arab-Israeli war, the oil-producing monarchies provided Sadat with important leverage: the oil embargo on the West, which was intended to prod the U.S. and Western Europe to pressure Israel into making territorial concessions.

Domestically, in 1974, the Sadat regime implemented economic programs meant to attract considerable foreign investments to Egypt, revive the public sector that had remained dormant under Nasser, and offer significant opportunities for local businessmen. This policy came to be known as *siyāsāt al-infitāh* – the open door policy to free enterprise. By the late 1970s Sadat allowed formerly outlawed political parties to resume their activity for the first time since 1953. New parties were invited to join in the system under the revised constitution of September 1971. Sadat expected political parties to constitute a loyal opposition and a counterweight to his opponents. With time passing, his harsh treatment of "disloyal" parties and his refusal to permit the Muslim Brotherhood to

become a party, with the argument that no religious party had a monopoly over Islam, stirred discontent. Real progress in granting greater political freedom was achieved under Husni Mubarak, Sadat's successor to the presidency. By the late 1970s, dissatisfaction over Sadat's capitalist policies and the cutting of government subsidies of basic necessities such as foodstuffs also became widespread.

Since 1970 Libya under the radical regime headed by Colonel Qadhafi had become active in inter-Arab affairs. Libyan "socialism" was contradictory: both leftist and Islamic, anti-Communist yet allied with the Soviet Union. Qadhafi pressed for an inter-Arab union in the spirit of Nasserist Pan-Arabism and adopted a militant anti-Israel and pro-Palestinian stance. The British and American military bases that had survived under the Sanusi monarchy were closed, the tiny Italian community was expelled, alcohol was forbidden as were nightclubs, and Christian churches were closed. By the mid-1970s, disappointed with the failure of other Arab rulers to support his pleas for unity, and declining relations with Egypt, Qadhafi plunged into domestic affairs and proclaimed a Libyan Cultural Revolution. The General People's Congress had been created, the country's administration was taken over by committees, and Libya was declared a *Jamāhīriyya*, or "the state of the masses."

Ba'athi Iraq of the post-July 1968 coup under the Hasan al-Baqr and Saddam Hussein regime was active in the inter-Arab arena and the Arab-Israeli conflict. Iraq was in serious contention with Syria for the leading position in the progressive socialist-leftist camp and in the Fertile Crescent. Syria since 1970, under the presidency of Hafez al-Asad, also played a leading role on the inter-Arab scene, though Asad adopted a somewhat more flexible, responsible, and pragmatic stance in the Arab-Israeli conflict by not advocating an immediate war, he opposed UN Resolution 242.

Several inter-Arab rivalries were resolved. Saudi Arabia and Kuwait agreed in 1969 to resolve border disputes between them. Saudi Arabia conceded to Abu Dhabi the disputed Buraimi oasis (1974), obtaining instead an outlet to the sea between Abu Dhabi and Qatar. Other inter-Arab disputes persisted. South Yemen (PDRY) clashed with the Yemen Arab Republic in warlike operations in 1972 and 1979. The PDRY was also in conflict with Oman, where it supported a rebellion in Dhofar. Iraq's border disputes with Kuwait led to clashes in 1973 and 1976. Libya, too, was in conflict with her neighbors: Chad (non-Arab) disputed Libya's annexation of Chadi territory since 1973 and resented Qadhafi's support for rebels. Libya claimed territorial rights from Niger and was frequently accused of meddling in that country's internal affairs. Libya's relations with other West African countries – Mali, Senegal, and Gambia – were tense, as those nations accused Qadhafi of conspiring against their governments. Tensions ran high between Libya and Tunisia. The latter accused Libya of hatching plots and stirring subversion within her borders. In 1977, Libya and Egypt were on the verge of total war following Sadat's accusation that Qadhafi had plotted to assassinate leading

Egyptian government officials. Qadhafi's radical actions were also apparent in the assistance he offered the Irish Republican Army in Northern Ireland, Europe's terrorists – rightist and leftist – as well as Muslim rebels in the Philippines and Thailand. Finally, in the Maghreb, border disputes flared throughout the 1970s. A border dispute between Morocco and Algeria was patched up in agreements, mediated by African states. Moroccan-Algerian relations deteriorated once again over Western (formerly Spanish) Sahara. Algeria refused to accept the partition and annexation of that territory by Morocco and Mauritania in 1975. Thus it supported the Saharan rebels (the POLISARIO) and the republic they proclaimed. Algeria offered military aid whereas Israel assisted Morocco.

The Arab-Israeli Conflict in the Early and Mid-1970s

As noted, in 1972 the Egyptians began to lay the groundwork for the fourth major Arab-Israeli war. The war that finally broke out in October 1973 resulted from failure to resolve the territorial disputes arising from the previous conflict. UN Resolution 242 notwithstanding, little progress had been made in its implementation and Israel remained in control of the occupied territories. When Sadat decided to go to war he contacted Syrian President Hafez al-Asad to arrange for a two-front attack on Israel: in the Sinai and the Golan Heights. Despite Sadat's expulsion of Soviet military personnel in summer 1972, he was still dependent on the Russians. Thus, when he approached them for military supplies they stepped up arms deliveries to both Egypt and Syria. The Iraqis entered the war at its inception, as did volunteer fighters from the Maghreb, Kuwait, Sudan, and Saudi Arabia. Jordan dispatched a token military force. The oil-rich monarchies offered financial and diplomatic assistance. In contrast to what had transpired in 1967, Egypt and Syria were reluctant to share precise military plans with King Hussein. The latter visited Israel secretly on September 25, 1973, and, at the Mossad's compound, briefed Prime Minister Golda Meir about Syrian and Egyptian war plans. What he could not do was to pinpoint the exact date of an attack.

The two-front war broke out on October 6, 1973, the Jewish Day of Atonement. It was also the Muslim month of Ramadan and hence the conflict was regarded by the Arabs as the "Ramadan War." Egyptian forces crossed the Suez Canal to the east bank and overran the Bar-Lev Line, built several years earlier to thwart all potential military assault. On the northern front, the Syrians rushed into the Golan Heights and came very close to reaching the June 4, 1967, border with Israel. The war caught Israel completely unprepared, for until then the Israel Defense Forces believed that Egypt and Syria were ill prepared for war and thus would desist from waging it.

On October 10 Sadat requested that the Saudis use the oil weapon as a countermeasure to the American airlift to Israel. On October 16, Arab oil ministers convened in Kuwait and proclaimed an embargo on petroleum shipments to the U.S. and Holland. They said the restrictions would be lifted once

Israel retreated from Arab territories occupied in the 1967 war. The oil ministers then put pressure on other Western governments by reducing oil shipments by five percent a month until the Arabs' terms were met. Algeria, Saudi Arabia, the United Arab Emirates, Qatar, and other Gulf states supported the war effort financially. Algerian President Houari Boumediene provided the Kremlin with \$200 million to finance military assistance to Egypt and Syria.

The fighting was the heaviest since 1948, with major losses of men and war material on both sides. Over 2,800 Israeli and 8,500 Arab soldiers were killed during the battles in the Sinai and the Golan Heights. Israel lost over 100 aircraft and more than 800 tanks while the Arabs lost nearly 400 aircraft and at least 2,500 tanks. Each side was rearmed during the fighting – Egypt by the Soviet Union and Israel by the U.S. Within several days, recovering from the surprise attack, the Israelis launched their counteroffensive. By October 9, the Syrians had been pushed back to their starting point. The Israel Defense Forces then entered Syrian territory and positioned themselves 20 miles outside Damascus. On the Egyptian front, Israeli forces crossed to the west bank of the Suez Canal in mid-October, cutting off the Egyptian Third Army and surrounding it.

The war precipitated an international crisis when the Soviet Union responded to an urgent appeal from Egypt to save its Third Army. Despite the UN Security Council ceasefire resolution, Israeli troops continued to attack. Once the Soviet Union revealed its intentions to dispatch troops to Egypt, Washington called for a worldwide military alert. The crisis subsided after all parties agreed to negotiate an honorable retreat of the Egyptian Third Army. When the belligerents accepted the ceasefire, on October 22, Israel had regained its control of Sinai and its forces were positioned 60 miles from Cairo, though Egyptian forces were still entrenched on the east bank of the Suez Canal. It was then that UN Resolution 338 was passed, calling for the termination of all war activity and the implementation of Resolution 242. Thenceforth, Resolution 338 became an adjunct to 242.

In December 1973 a Middle East peace conference convened in Geneva under the auspices of the U.S., the Soviet Union, and the UN. Israel, Egypt, and Jordan attended it while Syria boycotted it. Apart from opening speeches and brief deliberations over technical matters, the conference failed to reconvene. The U.S. decided to work directly with the Israelis and Egyptians without involving the UN and the Russians. Owing to the mediation efforts of Secretary of State Henry *Kissinger a disengagement agreement was hammered out on January 18, 1974, between Israel and Egypt. Israel withdrew across the Suez Canal and enabled Sadat to reopen and operate it. A second phase of the Israeli pullout from the Sinai, signed on September 4, 1975, entailed, inter alia, an Israeli withdrawal to the east of the Mitla and Gidi Passes and return of the Abu Rudais oil fields to Egypt.

It was far more complicated to work out a disengagement agreement between Israel and Syria. Kissinger was at pains to

convince Israel to withdraw its forces from Syrian territory occupied in the 1973 war as well as from the Quneitra area in the Golan Heights that had remained under Israeli control after 1967. A buffer zone was established in the Golan Heights under UN supervision while Damascus agreed to prevent Palestinian fighters from launching attacks into Israel through Syrian territory. The disengagement agreement was signed on May 31, 1974, and remained in place.

The Road to Egyptian-Israeli Peace: 1976–1979

Intertwined with these disengagement agreements, an Arab summit convened in Rabat on October 26, 1974, which only Qadhafi of Libya and President Hasan al-Bakr of Iraq chose to boycott. The outcome amounted to a four-point resolution: (1) extending greater financial assistance to the confrontation states and the PLO; (2) working for a comprehensive peace settlement in the Middle East and opposing separate agreements; (3) recognizing the PLO as “the sole legitimate representative of the Palestinian people,” thus stripping Jordan’s King Hussein of any real political influence within the West Bank and over its Palestinian population; and (4) offering suggestions for resolving all major political differences that had clouded relations between Arafat and Hussein since 1970, when the PLO was forced out of Jordan.

Meanwhile, President Asad sought to increase his influence in the Middle East by extending Syrian political and military influence into neighboring Lebanon. Some of this related to his claim that Lebanon was an integral part of Greater Syria. The civil war that broke out in Lebanon in April 1975 and lasted into 1990 – resulting from internal ethnic tensions, the PLO’s meddling in the country’s domestic politics, and its use of Lebanese territory as a launching pad for terrorist actions inside Israel – proved to be timely and advantageous for Asad. The Palestinian issue held dangers for Lebanese religious and political stability, as did the mounting animosities between Shiites, Maronite Christians and their right-wing militias (especially the Phalange), Sunni Muslims, and Druze. These factors were in effect interconnected. While the Lebanese government tried to curb the Palestinian armed presence on its soil, as did right-wing Christian militias, leftist Sunnis expected Lebanon to assist the Palestinians in Beirut as well as in the south, where the latter directed their attacks on Israel. The Sunnis called on the authorities to dispatch the national army to protect southern Lebanon against Israeli retaliatory raids.

The Lebanese civil war led to close collaboration between Israel and Bashir Jumayyil, leader of the Phalange, against the PLO. Simultaneously, Syria seized the opportunity to consolidate her own position by backing the Sunni leftist-Palestinian alliance, though at times she had to restrain the Palestinians, even to the point of military action. Between 1976 and 1984, Syria emerged as the dominant force in the military control of parts of Lebanon and imposed its authority on local politics. Iraq and Libya, too, meddled in Lebanese politics, supplying their radical allies with weaponry and funds.

As these developments occurred, the U.S. encouraged the parties to the Arab-Israeli conflict to convene in Geneva for a Middle East international peace conference. Syria's position on the conference was hazy, but nothing came of the American initiative because both Israel and Egypt expressed misgivings about it. Israel refused to be dragged into a forum where the Soviet Union and Arab leaders might seek to force major territorial and political concessions that would not be acceptable to it. Egypt doubted Syrian flexibility and mistrusted the Soviets. Besides, Sadat concluded that peace ought to be achieved only through direct negotiations with Israel.

It appears that both Egypt and Israel looked for creative solutions to the conflict, with the Americans brought later into the picture. In September 1977, a secret meeting took place in Morocco between Egyptian Deputy Prime Minister Hasan al-Tuhami and Israeli Foreign Minister Moshe Dayan. It was held in the presence of Moroccan King Hasan. The two men, who met each other with the prior knowledge of their heads of state, discussed the idea of Israel's withdrawal from all occupied Arab territories in return for peace. Much attention, however, was focused on the question of whether Israel would be prepared to return all the rest of the Sinai still under its control. It is difficult at this point to discern what Dayan and the Likud government headed by Prime Minister Menahem Begin could have offered the Egyptians – whether the whole of the Sinai would be returned in return for negotiations and recognition of Israel, or whether the meeting was merely a test of good will and a “warming up session” for future discussions. Apparently, Sadat saw in the event a “green light,” an opportune moment for a diplomatic initiative on his part.

In late October and early November 1977 Sadat secretly developed a plan to visit Jerusalem. On November 9, in the course of a speech to the Egyptian People's Assembly, he announced his readiness to go “to the ends of the earth” in order to prevent the outbreak of another war. He then added a sentence, not part of the prepared speech, about his willingness to go to Israel and speak before the Knesset. Yasser Arafat, who was present in the Parliament as a guest during Sadat's speech, was astounded, as was the Carter administration. It took the U.S. two weeks to endorse Sadat's initiative – after he had already visited Jerusalem – and abandon or shelve plans for an international conference.

Sadat's speech drew attention in the Arab world only when Prime Minister Begin responded with a public invitation to Sadat to visit Jerusalem. Before reaching his decision to go to Israel, Sadat visited Asad in an effort to garner wider Arab support for the initiative. When Asad was unable to talk Sadat out of his plan, he even considered arresting him. But Sadat would not budge and visited Jerusalem. He had once again put Egypt's interests above Arab solidarity, as had been the case when he signed the 1974 and 1975 disengagement agreements, setting a precedent for separate initiatives. Sadat spoke in the Knesset on November 20, 1977. While refraining from mentioning the PLO, he urged Israel to evacuate the ter-

ritories occupied in 1967 and to seek an honorable solution to the plight of the Palestinian people.

Support for Sadat's move was initially forthcoming mostly from Morocco, Sudan, and Oman. Syria and Iraq were furious about it. With Egypt pulling out as an active participant in the Arab-Israeli conflict, the eastern front against Israel, of which Damascus and Baghdad were part, weakened considerably. No large-scale war could now be fought by the Arab states. Algeria, PDRY, and the PLO branded Sadat a traitor to the Arab cause. For the PLO, Sadat's move was most damaging. As far as the Palestinians were concerned, he had backtracked from the formula of an independent Palestinian state, tracking forward the concept of Palestinian self-determination as part of a peace settlement with Israel. Libya reacted to the Jerusalem visit by calling for a meeting in Tripoli – without Egyptian participation. The Saudis, backed by Kuwait, Jordan, and Morocco, pressed for Egypt to be invited in order to bring it back into the Arab fold. Only Syria, Iraq, Algeria, PDRY, and the PLO attended the Tripoli meeting on December 5, 1977, and decided to freeze their ties with Egypt, considering moving the Arab League headquarters out of Cairo and reviewing Egypt's membership.

From Israel's point of view a separate peace settlement with Sadat was the preferred solution. The Begin government was not well disposed toward any concessions to the Palestinians and thought that negotiations, even with moderate states like the Kingdom of Jordan, were still premature. Dayan was especially hostile to any concessions to the PLO and made this point plain to Hasan al-Tuhami during their deliberations in Morocco. It was argued in Israel that a separate settlement would reduce significantly the potential of a wide Arab war against the Jewish state, while the status quo in the West Bank and Gaza would be preserved, rendering the thorny issues of Palestinian sovereignty less relevant for some time.

After months of Egyptian-Israeli meetings to overcome political hurdles, top Israeli and Egyptian leaders met at Camp David in September 1978. Under American patronage and mediation an Egyptian-Israeli agreement, known as the Camp David Accords, was signed on September 17, 1978. Like Sadat's visit to Jerusalem the previous year, this development wreaked havoc among Arab leaders. As far as they were concerned, what Sadat had done was to make a separate deal with the Israelis, contrary to the idea of a comprehensive peace settlement agreed upon in October 1974 at the Arab summit in Rabat. In reaction, Iraq convened a summit conference in Baghdad (November 1978) to probe the possibility of imposing sanctions on Egypt. Yet the rivalries that plagued the Arab political scene made it impossible to agree on the sanctions. Iraq, Syria, Algeria, the PLO, and PDRY wanted to isolate Egypt, while the Saudis, Moroccans, and Kuwaitis felt that Egypt was vital to the Arab world. They argued that an attempt to convince Sadat to avoid signing a formal agreement with Israel would perhaps prove more prudent.

But Sadat refused to have anything to do with the radicals and turned down the moderate states' pleas. Thus, Mo-

rocco's support for Sadat diminished, and outwardly, at least, King Hasan finally toed the radical Arab line. On March 26, 1979, the Israeli-Egypt peace treaty was signed formally in Washington in the presence of President Jimmy Carter. In April 1982, Israel returned the rest of Sinai to Egypt, and by 1985 the disputed Taba area.

The Arab World and Israel: The 1980s to the Early 1990s

The Israel-Egypt peace treaty of March 26, 1979, and the Islamic revolution in Iran that had toppled the pro-Western Shah Muhammad Reza Pahlavi only several weeks earlier affected the Arab world radically throughout the 1980s. Egypt was expelled from the Arab League, whose headquarter moved from Cairo to Tunis. It is ironic that Tunisian President Bourguiba, who in the 1950s and 1960s had been regarded as the Arab League's most bitter critic, now served as its host. Egypt was further isolated as most Arab states severed their ties with Cairo, which were renewed only in 1987. Meanwhile President Sadat was assassinated by a fanatical Islamist army officer on October 6, 1981, and replaced by his vice president, Husni Mubarak. In the absence of Egyptian leadership in Arab forums, the Arab world fell into disarray and ever-deepening disunity. Iraq, perhaps the most influential Arab country at the time, launched a war against Islamist Iran in September 1980. Iraq's new leader, President Saddam Hussein, having ousted President Hasan al-Bakr in July 1979, took advantage of Iran's difficult internal transition from monarchy to republic in an attempt to weaken it. It is still unclear what motivated the Iraqis to go to war. The standard explanations ranged from the occupation of Iranian territory (the Shatt al-Arab waterway and the oil-rich province of Khuzistan) to the infliction of a decisive defeat on the Iranian revolution and the desire to make Iraq the preeminent Arab and Persian Gulf state. Another plausible explanation is the fear of the predominantly Sunni Arab regime in Iraq that the Iranian Revolution might back the Iraqi Shiite majority and local Kurdish nationalists in an effort to destabilize it. Although caught unprepared, the Iranians demonstrated resilience and fought well into 1988, when the war finally ended with no clear victors.

If Iraq was concerned about the potential of a Shiite-Iranian-Islamist threat in the post-1979 period, the Persian Gulf Arab monarchies were equally anxious. Beside the concern in Bahrain and Qatar, where the Shiites accounted for more than half the general population, that Iran's propaganda efforts would incite them against the political regime, the Gulf monarchies feared possible Iranian territorial expansion into their domain. Syria, on the other hand, improved its relations with Iran, economically and militarily, moving the Gulf states and Saudi Arabia to improve their ties with Iraq.

The Iran-Iraq war proved beneficial to Israel in the short term. Iraq was too busy on the Iranian front to render assistance to radical forces in their struggle against the Jewish state. Two developments support this view. First, during the course of the war Israel managed to carry out prolonged military operations inside Lebanon – especially “Operation Peace

for Galilee” – and to challenge Syria and the PLO militarily on Lebanese soil with little external interference. Second, Israel hardly encountered Arab opposition when the Knesset approved the Golan Law of December 14, 1981, extending Israeli law to the occupied Golan Heights, which for all intents and purposes signified territorial annexation. Syria itself was in no position to challenge Israel effectively owing to internal upheavals organized by the Syrian Muslim Brotherhood. The latter launched terrorist attacks in the northern part of the country in 1980–82 against the secularist Ba'ath and its Alawi leadership elite, prompting Asad to adopt far-reaching repressive measures to quell the unrest.

The aforementioned “Operation Peace for Galilee” represented the clearcut Arab weakness since 1978–80. Throughout the 1978–82 period, the Israel Defense forces were fighting PLO terrorist activity originating from Lebanon inside Israeli territory. The Palestinians also fired Katyusha rockets from Lebanon at Israel's Galilee region. These attacks served as an incentive for the Begin government to decimate the PLO's infrastructure, expel its fighters, eliminate Syria's presence, and implant a Maronite-dominated government led by the Phalange party – Israel's foremost Lebanese ally.

The invasion that was part of “Operation Peace for Galilee,” commencing on June 6, 1982, was triggered not by a border incident but by the attempted assassination of the Israeli ambassador in London three days earlier. This was a pretext, though, because the would-be assassin belonged to the anti-PLO Abu Nidal group, which also targeted PLO officials. Initially, “Operation Peace for Galilee” was intended to be limited to a 25-mile security belt south of the Litani River, as Defense Minister Ariel Sharon had declared. Yet once the operation began and PLO strongholds were eliminated, Sharon and military Chief of Staff Rafael Eitan instructed the army to proceed to the outskirts of Beirut, a task completed by mid-June. As the Israel Defense Forces were surrounding the Lebanese capital, shelling West Beirut, and engaging in aerial bombardments, they were joined by the Phalange. The pressure was now on the PLO's fighting forces to abandon their West Beirut headquarters and leave the country. The pressure was also directed at the Lebanese government to help carry out the expulsion.

In the aftermath of U.S. diplomatic involvement, the PLO agreed to leave Lebanon in an orderly fashion while an accord was reached wherein a multinational force, including U.S. Marines, would supervise the evacuation procedure. Syria was also required to reduce its military presence in the country. By September 1, over 14,000 PLO fighters and their leaders had left West Beirut for different Arab countries, mainly Tunisia, where Tunis became the PLO's new headquarters. That same day, the Reagan administration announced the Reagan Plan calling for the implementation of UN Resolution 242 and a freeze on building new Israeli settlements in the West Bank and Gaza Strip. The plan refrained from supporting the establishment of an independent Palestinian state but advocated Palestinian autonomy in association with Jordan. Most

Arab states and the PLO rejected the plan outright. Israel, too, regarded it with little enthusiasm.

“Operation Peace for Galilee,” Minister of Defense Ariel Sharon’s grand plan for a stable Lebanon, turned out to be a tragic illusion. On the one hand, Bashir Jumayyil, leader of the Phalange and Israel’s main ally, was elected president of Lebanon on August 23 against Syria’s wishes. On the other hand, the longer Israel maintained a military presence in the country, the more the support it initially enjoyed from various segments of the population eroded. This was very much the case with the Shiites in southern Lebanon. In the past they had resented the Palestinians for carrying out terrorist acts against Israel from their territory, for they often paid the price of Israeli retaliatory raids on the ground and from the air. Yet the Israeli entrenchment on Lebanese soil gradually turned the Shiites against them. Then, on September 14, Jumayyil was assassinated, possibly by pro-Syrian elements, shattering any remaining hope for normal life in Lebanon. Israeli forces reacted to the event by taking control of West Beirut and allowing Phalange militiamen to enter the Sabra and Shatila Palestinian refugee camps. The Phalange, seeking revenge for the death of their leader, carried out a horrible massacre among its inhabitants, causing outrage in Israel and throughout the world. A top-level investigative committee was created in Israel to determine the extent of responsibility for the massacre by the government and military. Ariel Sharon was forced to resign from his defense ministry post in February 1983.

Amin Jumayyil succeeded his late brother as Lebanon’s president. Following extensive negotiations between Lebanese and Israeli officials under American patronage, a security and peace agreement was concluded on May 17, 1983. It provided Israel with important concessions such as the use of much of Lebanon’s air and ground space in the south. It also laid the groundwork for future commercial and tourist activity. In fact, affluent Lebanese families visited Israel in summer 1983. The agreement contained guarantees from Israel to the Reagan administration of a gradual pullout from Lebanon in parallel to the withdrawal of the remaining Syrian armed forces.

An agreement which ignored Syria’s interests in Lebanon could not hold up, however. In early fall 1983 Israel did commence a phased evacuation of its forces from Beirut as well as the Shuf area, withdrawing south of the Awali River. Nevertheless, this move and the U.S. and multinational military presence could not maintain the peace. The opposition to the agreement of May 17, 1983, gained momentum. The Lebanese army was torn by factions while small armies consisting of Sunni and Shiite Muslims gained strength and posed serious threats to the continued foreign presence and to Maronite political primacy. They included the Shiite Amal (“Hope”) movement and the *Hizbollah (“Party of God”). The latter was founded in 1982 with the help of Iranian agents and gradually became the most potent political and military force in southern Lebanon and the Biqa’ Valley. It enjoyed financial

and logistical assistance from Iran and Syria. Whereas Amal sought to improve the conditions of the Shiites in south Lebanon within the political realm, Hizbollah sought to establish there an Islamic state on the Iranian model. Both supported a strong Syrian presence in the country (as did the Druze at the time). Hizbollah evinced strong antagonism vis-à-vis Israel, the U.S., and the Lebanese government. It was apparently responsible for the suicide car bomb attacks on Israeli bases, the U.S. embassy in Beirut, and the October 23, 1983, assault on the Marine naval barracks, killing 241 Marines. Hizbollah’s actions hastened the withdrawal of multinational forces from Lebanon at the beginning of 1984. For the U.S., sinking in the Lebanese quicksand was perhaps as tragic as for Israel. Syria emerged as the principal beneficiary. Asad seized on these developments to reverse Israel’s earlier achievements.

On March 5, 1984, the Israeli-Lebanese agreement was annulled. When Israel withdrew from Lebanon in 1985 – after establishing a six-mile security zone in the south patrolled by local Christian allies – Asad was able to bolster his hegemony over Lebanon. Israel may have eliminated much of Palestinian militancy in Lebanon but gained a more formidable enemy in the radical Islamist Shiites.

Although an Israeli-Lebanese peace agreement could not be implemented in 1983–84, and the Egyptian-Israeli peace treaty did not extend to include other states, there were efforts by several Arab leaders and non-official Israelis and Jews outside Israel, before and after 1983, to initiate peace plans. Attempts had been made by Palestinian leader ‘Isam Sartawi and Israeli public figures such as Ury ‘Avneri, Matti Peled, and Ya‘akov Arnon to meet secretly and discuss ideas as to how to implement UN Resolution 242 and create an independent Palestinian state alongside Israel. The first meeting over these issues took place in Morocco in the presence of King Hasan and his closest advisers. Nothing came of these meetings. Moreover, Sartawi was assassinated in April 1983, and Avneri and his group wielded little influence inside Israel, as they were politically marginal. A group of Moroccan Jews (Israelis and those living in Morocco and elsewhere) formed in the late 1970s an organization called Identité et Dialogue whose aim was to engage Moroccan Muslims, as well as Israeli and Arab politicians, in peace dialogues. They felt they could serve as a bridge toward Arab-Israeli understanding. They were led by André Azoulay, an economist who served later as chief economic adviser to King Hasan, and later worked in the same capacity under King Muhammad VI. Despite Hasan’s support for these efforts, the group accomplished little and by the mid-1980s became invisible.

Of greater significance and seriousness was the effort by the then Saudi Prince Fahd bin Abd al-Aziz ibn Sa‘ud to revive the Middle East peace process. Two months prior to Sadat’s assassination, Fahd proposed a comprehensive settlement to include full Israeli withdrawal from all occupied territories, and dismantling of all the Israeli settlements in the West Bank and Gaza Strip; establishing a Palestinian state with

East Jerusalem as its capital; affirming the right of all nations in the Middle East to coexist peacefully; and guaranteeing the Palestinian rights, with compensation for those refugees and their descendants not interested in returning to their homes inside Israel. The new plan was meant to provide an alternative framework to the Camp David Accords in the hope it might enjoy Arab and international support. King Hasan emerged as the staunchest promoter of the plan.

Hoping to secure some credit from the Saudi plan for himself, Hasan volunteered to host an Arab summit where its contents would be scrutinized. Such a summit did in fact take place in Fez on November 25, 1981. Aside from the affirmation that all states in the region were to coexist in peace, the plan remained fuzzy over the official ending of the Arab-Israeli conflict once the Israelis fulfilled their part of the bargain. It also left out the question of recognition of Israeli sovereignty and the problem of the Palestinian claim of the right of return. The latter was a thorny issue for Israel and would remain so. Excepting Hasan's unequivocal support of the plan and the Gulf states' initial cautious support, in the final analysis the summit's participants studiously avoided any serious discussion of its contents. They focused instead on the issue of extending financial support for Lebanon, ravaged by violence. Not least problematic was the absence at the summit of the presidents of Libya, Syria, Algeria, Sudan, and Tunisia. The banishing of Egypt from the Arab consensus was also a major impediment.

To save face as the summit's host, as well as his personal prestige, and at the same time cover up any possible damage that could be caused to Arab solidarity over the Israeli-Palestinian conflict, Hasan suggested that the plan not be written off completely. The opponents of the plan could not be disregarded either, he averred, and thus the summit should be suspended and reconvened to discuss this issue later on. Arab leaders accepted the compromise. The Fahd plan resurfaced at the second Fez Arab summit of September 1982, which was convened in the aftermath of Israel's "Peace for Galilee" incursion into Lebanon. It also followed the aforementioned Reagan's Middle East proposals of September 1, 1982, calling for the implementation of Resolutions 242 and 338. This time, Syria's Asad attended, as did Iraq's Saddam Hussein, Jordan's King Hussein, and Fahd (now the Saudi king), the rulers of the Gulf emirates, and PLO Chairman Yasser Arafat. Despite Hasan's energetic lobbying among Arab leaders in favor of the Fahd plan, his efforts were only marginally rewarded. The summit did back an Arab peace plan, but it was a considerably altered version of the Saudi initiative that accentuated unequivocally the right of the Palestinians to return to pre-1948 Palestine. Hasan could at least be consoled by his ability to host a relatively widely based Arab forum that debated an issue of such magnitude. In March 2002, after the Saudis laid out a new peace plan at an Arab summit in Beirut, the Moroccan press boasted that the original 1981–82 Fahd plan had been fully endorsed by only one Arab leader: the late King Hasan, a man of "visionary and prophetic" attributes.

In July 1985, Morocco called for a summit meeting in Morocco in order to review once again the contents of the Fahd plan. Syria rejected the proposal while most of the radical Arab states boycotted the summit. So did the PLO leadership in Tunis, which was still steadfastly opposed to U.S. and Israeli demands of direct negotiations, opting instead for the convening of an international conference through which a settlement would be imposed on Israel. Hasan did not give up, however. Trying to break the ice, toward the end of 1985 he invited then Israeli Prime Minister Shimon Peres to Morocco to further the cause of a comprehensive settlement. At the time the Israeli government consisted of a coalition between the Labor Party and Likud.

On July 22–23, 1986, Hasan hosted Israel's Shimon Peres at his palace in Ifrane, causing considerable consternation in Arab countries. The much publicized meeting produced meager results. Hasan expressed his disappointment that Peres had not been more forthcoming on the Palestinian question. The king posed two questions. First, in return for peace with the Arab world, would Israel agree to withdraw from all Arab territories captured in 1967? Second, would the Israeli government agree to negotiate with the PLO? By asking these questions, Hasan placed his dialogue with Peres within the framework of the Fahd principles of 1981–82. He asserted that the Fahd principles endorsed the Palestinians' right to independence and the PLO as their only legitimate representative body. Peres responded negatively to both questions, for to do otherwise would be unacceptable to both his right-wing Likud partners and to large segments of Israeli public opinion.

In the latter half of 1986, Peres turned over the post of prime minister to Yitzhak Shamir, becoming Israel's foreign minister in the coalition's rotation agreement. He continued to oppose the creation of a Palestinian state under the aegis of the PLO, favoring instead the "Jordanian option": Palestinian autonomy in parts of the West Bank under the leadership of moderate local forces subordinate to the Kingdom of Jordan. Attempting to implement this policy, Peres met King Hussein secretly in London in April 1987. Shamir was apprised of the meeting a priori but in the final analysis refused to endorse it.

Given the standstill in solving the Palestine problem, and despite the fact that the senior leadership of the PLO was in exile in Tunis, a younger generation of Palestinians in the West Bank and Gaza Strip decided to rise up actively against the 20-year Israeli presence. The uprising, known as the Intifada, commenced on December 9, 1987. It prompted King Hussein to relinquish his political ambitions in the West Bank and to maintain a low profile as a potential facilitator between Israel and the Palestinians. The uprising did not include the use of weaponry. Those who protested against the ongoing Israeli occupation threw rocks at Israeli soldiers, burned tires in the street, disseminated literature, and engaged in demonstrations. Supporters of the Islamist-oriented Palestinians, known as the *Ḥamās* (*Ḥarakat al-Muqāwama al-Islāmiyya* = the Islamic Resistance Movement) and the Islamic Jihād organiza-

tion, as well as the secular supporters of the PLO sub-organizations, were separately involved in the protests. Whereas the senior Islamist leadership was active locally, the pro-PLO protesters lacked leaders, as they had been exiled. Within several months the PLO in Tunis seized control of the pro-PLO protests by remote control.

In spring 1990, an exclusively right-wing government rose in Israel, led by the Likud, which included circles who had little inclination for negotiation. Labor remained now in opposition until the general elections of June 1992. The efforts by President Bush to break the deadlock by pressuring Israel to offer concessions were thwarted by Shamir and proved ineffectual.

Another major event in the Middle East of major proportions that encouraged the Bush administration to seek stability for the region and a solution to the wider Arab-Israeli conflict was the invasion of Kuwait by Iraqi forces on August 2, 1990. Iraq had had long-standing claims to Kuwait since the days the Ottoman Empire ruled over the area. Iraqi-Kuwaiti border disputes and financial disputes over the price of oil aggravated the relationship and contributed to the Iraqi decision to attack. The U.S. opposed the Iraqi-initiated war. President Bush finally gave Saddam Hussein until January 15, 1991, to end it. When Iraq failed to comply, the U.S. and its allied forces, including several Arab armies, began an air attack on Iraq and on Iraqi positions in Kuwait in "Operation Desert Storm." In retaliation Iraq launched SCUD missiles against Israel, damaging many buildings in the Tel Aviv area. Owing to American pressure Israel did not retaliate against Iraq and left the U.S. and its allies to conduct the war against the Iraqis. On February 23, 1991, allied ground forces entered Iraq. On February 27, Kuwait was liberated. During the war, Iraq's national infrastructure was badly damaged while tens of thousands of Iraqi soldiers and civilians were killed, as were hundreds of Kuwaitis. After their liberation, the Kuwaiti authorities vented their anger against the Palestinians residing in their country, accusing them of supporting the Iraqi occupation. The Palestinian community was then reduced through expulsion from 300,000 to 30,000, with many of the new refugees resettling in Jordan.

The Gulf War and the Intifada led to the U.S.- and Russian-sponsored Middle East Peace Conference that convened in Madrid on October 30, 1991. All Arab states were invited to the conference and most attended. The conference outlined a series of bilateral and direct negotiations between Israel and the Syrians, Lebanese, and Jordanian-Palestinian delegations, with multilateral discussions on Middle Eastern refugees, environment, economic development, and water rights. Politically, in 1991 cracks began to appear in Algerian and Libyan hostility toward Israel. In the immediate aftermath of the 1991 Gulf War, Hasan convened a Maghrebi summit in Casablanca, attended by the heads of state of Morocco, Algeria, Tunisia, and Libya. These states, together with Mauritania, had recently founded the new Maghreb Arab Union (AMU), an organization that worked toward coordinating regional and economic development policies and other joint projects.

The AMU member states were eager to play a decisive role in Israeli-Palestinian politics. Thus, the Arab-Israeli peace issue dominated the Casablanca summit, beginning with Hasan's welcoming address and following a speech delivered by Tunisia's President Zayn Abidine Ben Ali. The Tunisian president was most explicit regarding the importance of reaching a settlement, saying that a stable Arab world and a stable Maghreb depended on it.

By then, Egypt had already returned to the Arab fold. Most Arab states had renewed ties with Cairo. President Husni Mubarak successfully walked a tightrope. He stuck to Sadat's policy of preserving the peace with Israel (albeit a cold peace) and Cairo's cooperation with the U.S., but, unlike Sadat, he pursued a policy of reconciliation with the Arab world. As Egypt was then receiving financial and military assistance from Washington, renegeing on the peace treaty of 1979 with Israel would most certainly have resulted in the loss of U.S. support. Moreover, Egypt was now applying pressure on the Syrians, Israelis, and Palestinians to resolve their age-old conflicts.

Throughout 1992, however, these gestures of goodwill and the post-Madrid Conference Arab-Israeli bilateral/multilateral negotiations, which were moved to Washington, showed little progress. Israel negotiated with the Palestinians as long as they avowed that they were part of the Jordanian delegation, and not the PLO. Yet, the Palestinians who were with the Jordanian delegation were in fact very much part of the PLO. They contacted Tunis regularly for instructions, much to Israel's displeasure, bringing the bilateral Israeli-Palestinian negotiation track to a virtual standstill.

Further, the Syrians were willing to negotiate with Israel bilaterally about occupied territories. Yet when it came to the multilateral talks they shied away, perhaps suggesting to the Israelis they had little inclination of pursuing matters related to the normalization of ties. Little, then, could be accomplished on the Israel-Syria track. In summer 1992, when the Labor Party replaced the Likud in power, Prime Minister Yitzhak Rabin was prepared to offer generous territorial concessions to the Syrians in return for extensive negotiations. Syria expected Israel to withdraw completely from the Golan Heights to the June 4, 1967 lines. Israel, however, only agreed to a Syrian presence along the international border that had been agreed on between Britain and France in 1923. Though the difference between the two borders was insignificant in terms of territory, for Israel to return to the June 4, 1967 lines meant tolerating Syrian presence along the northeastern shore of the Sea of Galilee and control over al-Hamma south of the lake. Moreover, as before, Syria was unwilling to establish full ties with Israel. Only the Jordanian-Israeli talks made progress.

Israel, the Palestinians, Jordan, Syria, and the Oslo Accords: 1993–2006

From late 1992 or the beginning of 1993, behind-the-scenes discussions were held in Oslo, Norway, in the shadow of the

bilateral and multilateral talks that followed the Madrid Conference. Prime Minister Rabin agreed to open a second, secret channel, alongside the other discussions in Washington, insofar as Israeli-Palestinian talks were concerned. By early fall 1993 the Oslo channel became known to the wider public and replaced the deliberations in Washington as the only option for Israeli-Palestinian negotiations. Israel now expressed readiness to negotiate with the PLO and the representatives of its exiled leadership in Tunis. Until then successive Israeli governments had taken legal action against official and non-official Israelis meeting with PLO representatives anywhere. On its part, the PLO had gradually modified its stance toward Israel, a process that had begun at the end of 1988, and gained momentum in the early 1990s following the Madrid Conference. It now claimed to adhere to UN Resolution 242, renounce terrorism, and recognize the State of Israel. The Intifada was over.

On September 13, 1993, Israel and the PLO signed the Oslo Declaration of Principles (DOP) in Washington in the presence of U.S. President Bill Clinton. It outlined a five-year plan for Palestinian self-government, starting with Israel's withdrawal of troops from the West Bank town of Jericho and the Gaza Strip, and the transfer of authority for economic development, education, culture, tourism, tax collection, and welfare. It was agreed that Chairman Arafat and the PLO's exiled leadership in Tunis would be permitted to set up their headquarters in Gaza, a decision implemented in July 1994. The road was paved for the creation of the Palestinian Authority. This was to be followed by the election in 1996 of an interim governing council. Negotiations would then commence (on May 4, 1996) toward a final status agreement on the future of Jerusalem, the 1948 refugees, Jewish settlements in the West Bank and Gaza, and the demarcation of clearly defined borders.

A majority of Israelis and Palestinians were at first favorably disposed to the new accords, even though the Oslo DOP was a peace process, not a peace treaty. The Palestinians were not offered an independent state, in any case not in the initial phases of the process. Most Palestinians were dissatisfied because the hard issues of refugee status, the question of Jerusalem, and the fate of the Jewish settlements were deferred. In Israel, right-wing political figures said they would either work to abrogate the DOP or not honor it. Palestinian radicals, notably Islamists of the Hamas and Jihad movements, as well as secularly oriented radicals within the PLO's Fatah and PFLP, carried out violent actions in the West Bank and Gaza against Jewish settlers and soldiers. Among the Arab states, Syria spearheaded the opposition to the Oslo accords less out of concern about the contents of the DOP than as a protest against the PLO's decision to reach a separate agreement with Israel. The Gulf emirates supported the process as did Egypt, which was active in pushing forward the implementation of the accords. King Hussein not only backed Oslo: on October 26, 1994, he signed a peace agreement with Israel in the Arava Desert region in the presence of official Israeli,

Jordanian, U.S., and Russian delegations. The thorniest problem was border demarcation because Israel had expanded its eastern frontier in the late 1960s by an estimated 350 square kilometers, some of which had become farmland. Rabin and Hussein worked out the whole line from Eilat and Aqaba in the south to the point of convergence with Syria in the north. In some areas they agreed to land exchanges. In other areas Hussein allowed Israeli farmers to continue to use the land they had been cultivating after it reverted to Jordanian sovereignty. As for the water, it was decided that Jordan would get 50 million cubic meters a year from Israel. The two countries agreed to cooperate to overcome water shortages by developing new water resources.

Israeli-Palestinian negotiations over the further implementation of the interim process were delayed until the signing in Cairo of Oslo I (May 1994). It was then that Israeli troops withdrew and Palestinian police took control in Jericho and the Gaza Strip. Violence by both sides and postponements diminished support for the accords. Yet the parties reached a number of understandings, including Oslo II, signed at the White House on September 28, 1995, which led to more Israeli concessions in the West Bank.

The Oslo II accord provided for elections to a Palestinian council, the transfer of legislative authority to this council, the withdrawal of Israeli forces from the Palestinian centers of population, and the division of the West Bank into three areas: A, B, and C. Area A consisted of Palestinian towns and cities. Area B referred to Palestinian villages (68 percent of the total Palestinian population in the West Bank). Area C covered areas taken over by Israel for roads and settlements. Area A was placed under exclusive Palestinian control and area C under exclusive Israeli control. In Area B the Palestinians exercised civilian authority while Israel remained in charge of security. Under the terms of Oslo II, Israel conceded to the Palestinian Authority civilian control over one-third of the West Bank. Four percent of the West Bank, mainly the towns of Bethlehem, Hebron, Jenin, Nablus (Shechem), Tulkarem, and Kalkilya, was turned over to full Palestinian control and another 25 percent to administrative-civilian control. In the Gaza Strip, Israel retained control over 35 percent of the land, notably Jewish settlements (*Gush Katif) and roads leading to them. The rest became the responsibility of the Palestinians.

Some setbacks on the Palestinian track loomed large on the horizon following Oslo II. This was several months before the May 4, 1996 deadline for the negotiations over the final status of the occupied territories. Arafat envisaged wresting from Israel in these negotiations a Palestinian state with East Jerusalem as its capital. Israel had reservations regarding Arafat's maximalist approach and, simultaneously, approved the expansion of existing Jewish settlements in the West Bank. But there were other reasons for the indefinite postponement of the final status deliberations. On November 4, 1995, Yigal Amir, a young religious extremist, assassinated Rabin at a Tel Aviv peace rally. Throughout 1995 certain religious elements whose worldview was imbued with messianic tendencies and

other ultra-right circles had spearheaded criticism of the government for its decision to concede territories. They insisted that all of the Land of Israel had been promised to the Jews by God and no living person could give up any part of it to foreigners. As far as they were concerned, the Palestinians were aliens. Those who betrayed the Jewish people must be punished and their plans thwarted.

Peres, then foreign minister, succeeded Rabin and vowed to resume the peace process on all fronts, including Syria. To help expedite Israeli-Syrian contacts, the U.S. initiated direct negotiations between the parties at the end of December 1995 at Wye Plantation in Maryland. The Israelis and Syrians focused their attention on issues related to permanent borders, security matters, diplomatic ties, and water. The negotiators met once again toward the end of January 1996 but were deadlocked on most issues. Though secret Israeli-Syrian contacts took place during the Likud's new term in government (May 1996–May 1999), the parties did not meet publicly until 2000.

Peres had no better success with the Palestinians. On February 25, 1996, a Hamas terrorist blew himself up on a bus in Jerusalem, killing all the passengers; suicide bomber attacks followed in Ashkelon, Jerusalem, and Tel Aviv, with more than 60 Israelis killed. The suicide bombings convinced large segments of the Israeli public that Oslo had only wrought havoc. The support that Peres had enjoyed soon eroded. With national elections scheduled for May 29, 1996, the Likud's candidate, Binyamin Netanyahu, surged ahead of Peres in public opinion polls.

Meanwhile Hizbollah launched Katyusha rockets from Lebanon at settlements in northern Galilee. They also attacked Israeli units and the pro-Israel Christian militias inside the security zone in southern Lebanon. The unwritten agreement brokered by the U.S. in 1993 stipulating that Hizbollah would cease rocket attacks against Israel had been violated. Israel blamed Iran and Syria for backing Hizbollah and took drastic steps to curb the attacks. The Peres government carried out "Operation Grapes of Wrath" in April 1996. It aimed at restoring peace to Galilee and included aerial bombings of Hizbollah guerrilla strongholds in southern Lebanon, the Biqa' Valley, and Beirut. Several hundred thousand people fled Lebanese towns and villages and became refugees. Despite the use of sophisticated weaponry, "Grapes of Wrath" failed to achieve the desired results of subduing Hizbollah. On April 18, due to human error, Israeli shells killed over 100 refugees in the UN base in Qana. Israel now faced condemnation internationally. "Grapes of Wrath" diminished Peres's prospects of retaining his position as prime minister. A month later, Binyamin Netanyahu was elected prime minister, winning by a narrow margin of 30,000 popular votes.

During Netanyahu's first year in office relations with the Arab world reached a new low. Israeli-Syrian relations were characterized by intermittent tensions. Hizbollah became a powerful fighting force in southern Lebanon, capable of operating inside the security zone and killing Israeli and Christian

militia soldiers. As before, the Palestinians posed the most difficult challenge to Netanyahu. A crisis of major proportions unfolded in October 1996 over an Israeli government decision to blast open a tunnel in the vicinity of the al-Aqsa Mosque in order to open a second entrance to the tunnel used by the Hasmoneans in the second century BCE. The project was meant to facilitate the flow of tourists to this site. For the Palestinians the move was interpreted as a ploy to create new facts in East Jerusalem unilaterally, disregarding their interest. An outburst of uncontrollable rioting broke out throughout the West Bank to the point where Palestinian police in the area opened fire on Israeli soldiers. More than a dozen Israeli soldiers and 80 Palestinians were killed.

Anti-Israeli sentiments became more widespread in the Arab world, and even the Clinton Administration did not spare its criticism of Netanyahu's policies. U.S. and international pressure on Israel prompted Netanyahu to offer concessions and return to the spirit of Oslo. The concession came in the context of the Hebron Protocol, signed on January 15, 1997, which divided Hebron into two zones governed by security arrangements. The Palestinian zone (H1) covered 80 percent of Hebron, while the Jewish zone (H2) covered the other 20 percent. In the Jewish zone Israel was to maintain full security control over the hundreds of Jewish settlers and their property until the final status of the territories would be decided. From Oslo 1 through the Hebron agreement, Israel had maintained complete control of 70 percent of the West Bank (Area C) and still exercised security control over another 23 percent (Area B); the Palestinian Authority exercised full control over only 6 percent (Area A).

Tensions did not abate, however. During 1997 the Netanyahu government resumed its efforts to consolidate Israel's influence within East Jerusalem. The aim was to build housing units for 30,000 Israelis in East Jerusalem's Har Hōmah district. The Palestinians organized a general strike to oppose the project, which turned violent and exacerbated the already unsteady relations between Israel and the Palestinian Authority. To alleviate tensions, the Clinton Administration invited Netanyahu and Arafat to a summit at Wye Plantation in October 1998. In a two-day period, Clinton brokered an important deal: exchanging Israeli-occupied territory on the West Bank for Palestinian antiterrorist measures to be monitored by the CIA. Jordan's King Hussein, then undergoing treatment for cancer in the U.S., participated in the summit. This was his final involvement in peacemaking. He died several weeks later. The summit's memorandum, signed in Washington on October 23, 1998, sought to invigorate the Israeli-Palestinian Oslo peace process and stimulate intensive negotiations toward permanent peace. Israel agreed to pull back its forces from an additional 13 percent of the West Bank in three stages over a three-month period. This would have given the Palestinians full or partial authority over 40 percent of the West Bank. Arafat agreed to revise the 1968 Palestinian National Covenant by removing all clauses pertaining to Israel's destruction. He carried out the revision reluctantly.

The Israeli pullout as stipulated by the summit memorandum did not take place. Opposition to Netanyahu came from the Likud's coalition partners in the religious and nationalist parties. Netanyahu barely succeeded in getting approval of the agreement in his ruling cabinet. The Knesset, on the other hand, approved it on November 15 by 75 votes to 19, with 19 abstentions. Despite the official decision to honor the agreement, Netanyahu bowed to religious and nationalist lobbyists a month later. He also justified this by blaming the Palestinian Authority for not honoring the security arrangements set forth in the memorandum. The policy of backing away from Wye provoked a crisis in Israel and paved the way for new elections on May 17, 1999.

In the aftermath of a tense election campaign, Ehud Barak, head of the Labor Party and a former chief of staff in the Israel Defense Forces, was elected prime minister. He formed a coalition government consisting of religious and secular parties before proceeding to continue the peace process with the Palestinians and the Syrians from the point Rabin and Peres had left off. On May 24, 2000, Israel pulled its forces out of the military zone in southern Lebanon and dismantled the local pro-Israeli militia. At that time Barak offered Asad a return to the de facto border of June 4, 1967, along the Jordan River and almost to the shoreline at the northeastern end of the Sea of Galilee. In March 2000, Barak met with Syrian Foreign Minister Faruq al-Sharaḥ in the U.S. in the presence of President Clinton. He then made known his generous offer for territorial concessions to Damascus. The mini-summit was a complete failure. According to Barak, Asad wanted Israel to capitulate a priori to all his demands and then, and only then, would Syria engage in serious negotiations. Some observers thought that Asad was then near death and ill prepared for accepting or providing any political concessions. Others believed that Barak had pushed the Syrians too hard to establish full normal relations with Israel and to withdraw their troops from Lebanon.

As to the Palestinians, an Israeli-Palestinian summit was initiated by Clinton in July 2000 at Camp David. It followed Israel's withdrawal from southern Lebanon. The purpose of the summit was to reach a framework agreement for a permanent settlement. Barak was prepared to grant the Palestinian territorial and political concessions that no previous Israeli prime minister had dared to offer. The summit was attended by Israeli and Palestinian delegations, led by Barak and Arafat, respectively. Barak made an unprecedented offer envisaging a Palestinian state on over 90 percent of the West Bank and all of the Gaza Strip; the establishment of the Palestinian capital in East Jerusalem where some Arab neighborhoods would become sovereign Palestinian territory and others would enjoy "functional autonomy"; Palestinian sovereignty over half the Old City of Jerusalem (the Muslim and Christian quarters) and custodianship – short of sovereignty – over the Temple Mount; and a return of refugees to the Palestinian state, yet with no "right of return" to Israel proper.

Arafat turned down these concessions. He now expected Israel to agree unconditionally to the right of return of all Palestinian refugees who so desired and vehemently opposed Israeli sovereignty over the Western (Wailing) Wall of the Temple Mount. According to Barak, Arafat rejected the two-state solution, which meant putting into question the viability of the State of Israel. After two weeks of talks Clinton ended the summit, placing the blame for its failure squarely on Arafat's shoulders.

The stalemate on the Palestinian track, Arafat's deviation from Oslo, and, perhaps, the feeling in Palestinian political circles that territorial concession could be wrested through violence (e.g., Israel's withdrawal from southern Lebanon was viewed as a sign of weakness) – may have contributed to the outbreak of the second Intifada (*Intifāḍat al-Aqsa*). Some attribute the new Palestinian uprising to the visit to the Temple Mount by Likud party leader Ariel Sharon on September 28, 2000. But this is not what caused it. Sharon's visit had been coordinated in advance with the Palestinian Authority's security apparatus. Sharon's visit was directed against the Barak government – not the Palestinians – to demonstrate that the Likud cared more about Jerusalem than Barak. The visit merely played into Arafat's hand as a pretext for the uprising.

The al-Aqsa Intifada spurred more terrorist attacks against Israel than ever before, directed with equal intensity against the West Bank and Gaza Strip Jewish settlers. These included massive suicide attacks launched by the Hamas and Islamic Jihad movements. Barak was now viewed by Israeli public opinion as a political failure, a leader unable to curb terrorism. Early general elections took place in February 2001. Likud leader Ariel Sharon won a landslide victory and remained in office after a second election victory in February 2003. He was also instrumental in achieving greater security and weakening the Intifada. A good example of his approach could be seen after a devastating terrorist attack in 2002 on Jews attending a Passover *seḏer* at a hotel in the city of Netanya, with 28 people killed. Sharon responded by ordering a massive military incursion, known as "Operation Defensive Wall," into Nablus, Jenin, Bethlehem, Ramallah, Kalkilya, and Tulkarem. Israeli forces occupied these Palestinian cities for the first time since withdrawing from them under Oslo. Sharon did not stop there. He confined Arafat to his Ramallah compound, virtually placing him under house arrest. Hence, the Palestinian leader became politically irrelevant and isolated from both Arab leaders and the international community until his death in November 2004. Further, Israel began building a wall around the West Bank to prevent the infiltration of Palestinian terrorists into the country.

In 2003, Sharon surprised his leftist critics and rightist supporters when he made it plain that Israel would have to make painful concessions to the Palestinians. While he expressed skepticism regarding overtures made by Bashar al-Asad, who had succeeded his father (who died in June 2000) as president of Syria, regarding a Syrian-Israeli settlement, he

made the Palestinian track his first order of priority; he also improved relations with Cairo and Amman.

During the 2002–04 period new proposals for a comprehensive peace settlement emerged. One such proposal was made by Saudi Crown Prince Abdullah bin Abd al-Aziz ibn Sa‘ud at the Beirut Arab summit of March 2002. The plan called upon Israel to withdraw from all territories occupied in the 1967 war; agree to a “just solution of the Palestinian refugee problem,” without specifically mentioning the refugees’ right to return or indemnities as stated in UN Resolution 194; and make Arab Jerusalem the capital of a Palestinian state. In return, all the Arab states would agree to end the Arab-Israeli conflict and implement full and normal relations with Israel. The Israelis would have access to the Western Wall but would have to withdraw from East Jerusalem. The plan also advocated the two-state solution and mutual Israeli-Palestinian recognition of the two states in the context of UN Resolutions 242 and 338. At the Algiers summit in March 2005, the Saudi plan resurfaced. King Abdullah of Jordan went so far as to suggest a revision of the plan, whereby the Arab states would grant Israel full recognition prior to the finalizing of Palestinian-Israeli negotiations. The proposal was rejected.

Although Sharon would not go as far as Barak in offering the Palestinians most of the West Bank, and considered negotiations over East Jerusalem as premature, he laid the groundwork for a unilateral Israeli withdrawal from the Gaza Strip, where Jewish settlements still existed, advocating their dismantlement. This policy coincided with a new initiative similar to the Saudi plan, backed by the Quartet (official representatives of the European Union, the UN, Russia, and the U.S.) and known as “the road map.” Despite opposition inside his government from right-wing ministers, Sharon accepted major portions of the plan.

The road map as envisaged by the Quartet had been reworked by the U.S. administration of George W. Bush. The revised and more detailed road map was made public in April 2003. It stated that a two-state solution to the Israeli-Palestinian conflict could be achieved only through an end to violence and once the Palestinian people acquired a leadership that acted decisively against terror, willing and able to build a democracy based on tolerance. The settlement would bring about the termination of the Israeli occupation based on the Madrid Conference, UN resolutions, Oslo, and the Saudi plan. This result would promote international efforts to achieve a comprehensive peace on the Syrian-Israeli and Lebanese-Israeli tracks. Specifically, if implemented, the Israeli-Palestinian road map was to consist of three phases according to an as yet unspecified timetable:

Phase One: Ending terror and violence, and building Palestinian institutions; Israeli withdrawal from Palestinian areas occupied from the start of the second Intifada; drafting a Palestinian constitution leading to free and open elections; reforming the Palestinian Authority security apparatuses; nurturing U.S.-Palestinian security cooperation in collaboration with overseers (U.S., Egypt, Jordan); establish-

ing Israeli-Palestinian security cooperation; forming a Palestinian civil society.

Phase Two: Creating an interim Palestinian state under a new leadership as a way station on the road to a permanent status settlement – a phase that would begin after the Palestinian elections. The ties maintained by several Arab states with Israel in the pre-Intifada period (1994–2000) through tourism, trade, and liaison offices (Morocco, Tunisia, and several Gulf states), which were all but severed during the upheavals, would be renewed. Negotiations relating to multilateral engagement on issues including regional water resources, environment, economic development, refugees, and arms control issues would be resumed. The new constitution for a democratic and an independent Palestinian state would be finalized and approved.

Phase Three: Achieving a permanent Israeli-Palestinian status agreement (with final borders) and a fully independent Palestinian state based on UN Resolutions 242, 338, 1397, and a “realistic solution” to the refugee issue, one, however, that excluded the “right of return” to Israel. President Bush highlighted this stipulation in his letter to Sharon from June 2004. The negotiated solution to the status of Jerusalem would take into account the political and religious interests of Jews, Christians, and Muslims. In this phase the vision of two states – Israel and Palestine – living side by side in peace and security would be fulfilled. Henceforth, the Arab states would accept full normal relations with Israel – not mere liaison offices – in the context of a comprehensive Arab-Israeli peace.

Only with the passage of time will one be able to determine if the road map will be implemented and honored. In the early years of the 21st century the Palestinian Authority found itself in the immediate post-Arafat era under the leadership of Chairman Abu Mazin and Prime Minister Abu Ala, both among the architects of the Oslo DOP. Abu Mazin was elected president of the Authority in a democratically held election in January 2005, under the scrutiny of international observers including former U.S. President Jimmy Carter. However, with the victory of Hamas in the January 2006 parliamentary elections and the installation of Ismail Haniyeh as prime minister, Abu Mazin’s position was considerably undermined, and the future of the peace process suddenly became highly problematic.

The Maghreb and Israel: A Unique and Fluctuating Relationship

The signing of the Oslo accords in 1993 inspired King Hasan II of Morocco to once again encourage a broader peace between Israel and its Arab neighbors. Moreover, he saw in the revived peace process an opportunity to improve the ailing Moroccan economy through extensive tourism, which would include numerous Moroccan Jews living in Israel, France, and the Americas. This is one of the reasons Hasan appointed the Moroccan-Jewish entrepreneur Serge Bardugo as Morocco’s minister of tourism. Hasan then invited Prime Minister Rabin

and Foreign Minister Peres to Morocco on their way back from the signing ceremony for the Oslo DOP in Washington. On June 2, 1994, Hasan convened a special session of his cabinet. The ministers who arrived at the meeting were surprised to find Israeli Foreign Minister Peres there, together with Uri Savir (then the Foreign Ministry's director general), Avi Gil (director of the foreign minister's office), and David Dadon – then director of the Middle East Department at the Foreign Ministry and later head of Israel's liaison office in Rabat.

Hasan made known to the visitors his intentions to improve relations between the two nations. Peres also pushed for a Middle Eastern/Maghrebi economic summit in Casablanca, direct telephone connections between the two countries, and liaison offices as the first steps toward full diplomatic relations. It was evident that most Moroccan cabinet members were reluctant to agree to the opening of liaison offices, arguing that the time was not yet ripe for such decisive measures. Yet when the meeting ended, Hasan promised Peres that liaison offices would be established. The opening of the liaison offices in Tel Aviv and Rabat was carried out in November 1994. The *raison d'être* for establishing liaison offices in Rabat and Tel Aviv was to advance tourism and trade between the two countries. These offices were also to promote cultural and economic exchanges that hitherto had been low-keyed. For the next several years, the liaison office in Tel Aviv busily engaged in issuing tourist visas to Morocco. Postal relations between the two countries, severed on September 22, 1959, had already been established as early as September 1, 1994. The first annual Middle East and North Africa Economic Summit involving senior officials from Israel, numerous Arab states, the United States, Europe, and Japan, as well as representatives of the private business sector, convened toward the end of October 1994 in Casablanca. Leading Moroccan Jews promoted it, while Hasan seized the opportunity to put himself forward as an architect of regional planning. From his standpoint, the summit was a stepping stone for securing aid from the industrialized nations for the Moroccan economy and elevating his own status among Arab leaders. The summit was short on substance, however.

Already before 1995, a number of experimental agricultural farms were launched by Israel in Morocco in conjunction with the U.S. Agency for International Development (USAID) to promote higher yields in Moroccan agriculture. In October 1994, the Israeli Export Institute reported that Israel's export potential to Morocco for the years 1994–97 was estimated at \$220 million annually and could include such sectors as agricultural products, irrigation equipment, the building trade, high-tech electronics, processed foods, and professional services for infrastructure development. In 1994–96, the number of Israeli tourists who visited Morocco annually was estimated at approximately 20,000.

The post-Rabin era and the subsequent escalation in Palestinian terrorism inside Israel marked the gradual decline of the more open relationships in several domains. Like the hardships faced by Israeli diplomats in the rest of the Arab

world, including Egypt and Jordan, their counterparts in Morocco faced many challenges and limitations, some of which had their inception during Peres' term as prime minister. The Israeli flag was not raised outside the liaison office but was placed inside the building owing to criticism of Israel by Islamic fundamentalist groups and other elements opposed to any kind of Moroccan normalization with the Jewish state.

Following Binyamin Netanyahu's accession to power there were manifestations of pessimism in Morocco. The complaints emanating from Rabat suggested that the Oslo process was in peril, and progress in the Syrian-Israeli negotiations had reached a dead end. But despite the ups and downs, Moroccan-Israeli relations, particularly in the intelligence and defense domains, remained undisturbed. Following his visit to Morocco in late summer 1996, Peres, now the Labor opposition leader, heard from Hasan that Netanyahu's reported "no to Jerusalem," "no to a Palestinian state," and "no to a settlement in the Golan Heights" was reminiscent of the 1967 Arab summit in Khartoum with its own famous three noes.

The 1996 tunnel crisis and the opposition to Netanyahu in the Arab world had a profound effect on Moroccan-Israeli ties. From that time until 1998, the work of the Israelis at the Rabat liaison office was made more difficult owing to media attacks and other obstacles. David Dadon, who headed the office, suffered the same indignity as his counterpart in Egypt, Ambassador Zvi Mazel, by being forced to reduce his visibility. In 1997, to silence mounting opposition locally and in different parts of the Arab world against the ongoing relations with Israel, Hasan canceled the invitation he had extended to Netanyahu and his foreign minister, David Levy, to visit Morocco. Hasan could ill afford to act otherwise, for he chaired the Islamic Conference Organization's Jerusalem Committee for the Glorification of Arab Jerusalem. Morocco, it was said, could not cooperate with an Israeli government that considered Jerusalem as indivisible and ruled by Jews.

As a result of the new political realities, many of the economic projects planned in the early and mid-1990s by Morocco and Israel were later frozen, except perhaps the flow of tourists, which, in any case, remained overwhelmingly one-sided: from Israel to Morocco. Some of the obstacles to large-scale economic cooperation were equally attributable to bureaucratic red tape intermixed with official bias. Certain forces in official Morocco opposed Israel's aspiration to open and fast-paced joint activity.

On May 5, 1999, less than two weeks before the Israeli elections, Hasan called on Moroccan Israelis to make the "choice of peace" and vote for the Labor Party headed by Ehud Barak. Hasan was aware that the majority of Moroccan Jews in Israel remained loyal to the Likud and had played, like the new Russian immigrants, a pivotal role in unseating Peres in 1996. On May 17, 1999, the Moroccan media rejoiced over Barak's election victory. King Hasan passed away on July 23, 1999. The early phase of Muhammad VI's rule did not raise major problems for the relationship. Israeli tourists contin-

ued to enter Morocco, as did agronomists and other professionals involved in special agricultural and industrial projects. While Israeli exports to Morocco since 1999 amounted to only several million dollars annually, Moroccan exports to Israel rose markedly at the end of the Hasan era and immediately after Muhammad VI's ascendance to the throne. In the first half of 2000, Israel imported \$830 million worth of Moroccan agricultural and textile products, an unprecedented sum for Israel to spend in trade transactions with an Arab state. These figures were to decrease in the wake of renewed Israeli-Palestinian hostilities. To spare the Moroccans embarrassment, from the early 1990s onward Israeli firms – including those specializing in agricultural development, irrigation equipment, and medical products – agreed to be registered by the authorities as foreign companies or worked under the guise of foreign concerns.

The second Intifada, the spate of anti-Israel editorials in the pro-government, independent, and Islamist organs, and pressure attributed to the Arab League and Palestinian Authority forced Morocco, on October 24, 2000, to close the Israeli liaison office in Rabat and recall its diplomats from Tel Aviv. Israeli tourists who thenceforth wished to visit Morocco could only obtain visas at Moroccan consulates in Europe. The Foreign Ministry in Rabat said the decision was justified by the failure of the Middle East peace process following “inhuman acts perpetrated for weeks by Israeli forces against Palestinian civilians.” It emphasized that closing down the Israeli liaison office was also related to Morocco's responsibilities to the Jerusalem Committee presided over by King Muhammad VI.

At the end of October 2000, hundreds of thousands of Moroccans marched in the streets of Rabat to show their support for the Palestinians. The marchers included Prime Minister Abd al-Rahman Yussufi and his political party, the Union Socialiste des Forces Populaires (USFP). A competing anti-Israeli rally was organized in Casablanca by the Islamist Parti de la Justice et du Développement (PJD). The rally swelled to 25,000 participants and quickly degenerated into a riot that had to be dispersed with water cannons. This form of protest was repeated on April 7, 2002, in the largest pro-Palestinian demonstrations ever to take place in the Arab world, with nearly half a million demonstrators filling the streets of Rabat.

The Moroccan government did nothing to stop the attacks against Ariel Sharon in public and in the media. Nor did it discourage the publication of press editorials that found a certain justification for the terrorist attacks of 9/11. The Istiqlal Party, represented in the coalition government headed by Yussufi, allowed its press to claim that the crimes of several Muslim terrorists against the U.S. could not be divorced from Israeli arrogance toward the Palestinians. The Bush administration should have taken seriously the warnings by Arab leaders who spoke out against Sharon's policies. Instead the U.S. chose to turn a deaf ear and thus shared the responsibility for the deaths of Americans.

Albeit damaged, Israel's relations with Morocco survived. Particularly intriguing in these troubled times was the decision in 2001 to collaborate in planning and constructing a large casino at Tetuan, a city in northern Morocco. An affluent Jewish family of Moroccan origin living in Barcelona who owned a large tract of land near Tetuan's Mediterranean coast, offered it as a site for the casino. Beside the casino, the \$150 million raised by Morocco for the project was also earmarked for a 400-room five-star hotel and a vacation resort. Construction of the casino and resort complex began in 2001 after two leading Moroccan entrepreneurs, the Ligad Group (a private Israeli construction firm), and Sammy Tito, an Israeli architect, signed agreements.

Mauritania, on the margin of the Arab-Israeli conflict and Arab politics, established relations with Israel in 1995 and opened liaison offices in Tel Aviv. It did not sever ties with Israel in the aftermath of the second Intifada.

Algerian-Israeli relations in the Oslo and post-Oslo eras are no less intriguing. During the early and mid-1980s, in the post-Boumediene period under the presidency of Shadli Ben Jadid, Algeria's FLN regime did not miss any opportunity to discredit Arab-Israeli peace efforts and took an active part in the effort to muster consensual support to isolate Egypt from every Arab forum. It opposed the Saudi peace initiative of 1981–82 and the abortive Lebanese-Israeli peace agreement of 1983. Nonetheless, the FLN no longer displayed the sort of radical zealotry reminiscent of the 1960s and 1970s.

Beginning in summer 1990, Algeria faced deep political divisions and instability, especially as it was striving toward democracy in line with its new constitution, approved on February 23, 1989, which opened the way to a multiparty political system. On June 12, 1990, the country's first free municipal elections took place. Eleven political parties participated in this historic event, among which were the regime's FLN; the religious Islamist Front Islamique du Salut (FIS); the Front des Forces Socialistes (FFS); and the Rally for Culture and Democracy (RCD). The results were stunning: the FIS won a majority of the municipal seats in the country's largest cities – Algiers, Oran, Constantine, and Annaba. The backing of FIS came from the Arab majority; the Berbers boycotted the FIS and supported the secular FFS and RCD. The vote for the Islamists was less an outpouring of massive support for the FIS than a reaction against the FLN's record of authoritarianism and mismanagement. At the end of 1991, the first round of parliamentary elections took place. They delivered a solid victory to the Islamists and raised the possibility of their control of the parliament in a second round. The army canceled the second round and key Islamists were arrested, with the FIS made illegal. In January 1992, Ben Jadid resigned from the presidency, to be replaced by Muhammad Boudiaf. This development ended the domination of the FLN for some time. Violence erupted soon afterwards. In June 1992, after exhibiting an autonomy that the Algerian military had clearly not expected, Boudiaf was gunned down by assassins. In the mid-1990s, under the presidency of Liamine Zeroual and the new

government party, the National Democratic Rally (RND), supporters of the FIS and other militant Islamic groups – such as the Groupe Islamique Armé (GIA) – engaged the central government in incessant violence. The upheavals that soon turned into a civil war continued throughout the 1990s and led to Zeroual's resignation in 1999 and to presidential elections.

Abd al-Aziz Bouteflika won the presidency in the April 1999 elections and within two years ended the civil war. His attitude toward Israel was devoid of hostility. In July 1999, Bouteflika met openly with Prime Minister Barak in Rabat during King Hasan's funeral. He promised to mediate between Israel and its Arab neighbors. This unique promise was apparently a result of previous behind-the-scenes contacts. Rumors then circulated that Israel had offered military hardware to Algeria and a deal was in the making. Bouteflika declared that Algeria would be prepared to establish ties with Israel, contingent upon the Israeli withdrawal from all occupied territories, dismantling settlements, and cooperation in creating a Palestinian state.

Contacts between Algeria and Israel had had their roots in the 1980s. Between 1986 and 1988, a close confidant of Ben Jadid and Israeli Foreign Minister Shimon Peres met on several occasions in Paris. Ovadiah Sofer, Israel's ambassador to France, apparently mediated the initiative. For Israel, the contacts seemed important because Algeria was regarded as a key Arab and African state with ample influence at the UN. Israel had hoped that Algeria would tone down its criticism of Israel in Third World forums and thus reduce the hostility against Israeli policies toward the Palestinians. Once Israel rejected the Algerian demand that, in return for continued discreet ties, it should recognize the PLO, the contacts were discontinued.

The secret Algerian-Israeli contacts were revived under Zeroual's presidency, this time in the area of much-needed medical and pharmaceutical supplies from Israel. The Algerians were eager to pursue the contacts following the signing of the Oslo accords, once it seemed as though a major hurdle in the Arab-Israeli conflict had been eliminated. An Israeli delegation led by the minister of health arrived in Algiers to sign the first secret Israeli-Algerian agreement for medical supplies. Thus began the quiet flow of shipments from Israel to Algeria that, as early as July 1994, included 10,000 pregnancy test kits at a cost of \$11.34 per unit. These supplies reached Algeria under the fictitious name of *Prélude* to look like a French product. The Algerian authorities were worried that, in the heat of the civil unrest launched by the Islamists, this form of cooperation would be exposed and subsequently used against the government.

The Israeli-Algerian medical ties endured for several years and included antibiotics, scanners, medications for serious wounds inflicted on victims of Algeria's civil war, and even assistance in hospitalization in parts of rural areas. Algerian medical personnel arrived in Israel to learn techniques of identifying corpses. Moreover, between October 15 and 25, 1999, a high-ranking Israeli delegation visited Algeria secretly

in order to reach an undeclared rapprochement between the two countries. The delegation included five Israelis, who were received in Sidi Bel-Abbes, Constantine, and Algiers; they held talks with two of Bouteflika's top aides and discussed bilateral trade and military cooperation and ways to establish liaison offices in Tel Aviv and Algiers. Shortly thereafter Bouteflika reiterated his demand for a full Israeli withdrawal from the territories occupied in the 1967 war.

Although we have no knowledge of what was initially agreed upon behind closed doors, Bouteflika's public declarations did not lead to anything and the various contacts were later broken off. This change was conditioned by the second Intifada. Yet to attribute it only to this is to oversimplify matters. Long before this crisis, Israel had pulled its troops out of Lebanon (May 2000), attempted to negotiate an agreement with the Syrians on the Golan Heights, and, as late as July 2000, the Oslo channel remained viable. It soon became obvious that Bouteflika's domestic political opponents and the intervention of several Arab states, especially Syria, had influenced his policies. One sign of this pressure is evinced by the creation, in November 1999, of the Committee of National Organizations against Normal Ties with Israel. Consisting of representatives of most political parties, it included the Islamist movements *Ḥarakat Mujtama' al-Silm* (Movement of the Society for Peace), *Mouvement Démocratique et Social*, and the banned FIS. One FIS leader, Abd al-Qadir Bu Khamkham, addressed a message to Bouteflika in which he advised strongly against "possible recognition of the Jewish Zionist identity on the Arab land of Palestine."

Some attitudes toward Israel changed after the Algerian presidential elections of April 2004, giving Bouteflika a strong majority. Hosting in March 2005 the Algiers Arab summit, Bouteflika openly urged Arab leaders to consider the strategy of recognizing Israel as a top priority in return for an Israeli withdrawal from all occupied territories.

Tunisian-Israeli relations were marred by inconsistencies. The transfer of the Arab League headquarters to Tunis, soon after the signing of the Egyptian-Israeli peace treaty, brought Tunisia into the limelight and bestowed upon its government an aura of importance it had never enjoyed before. Until the mid-1980s, Tunisia joined Algeria in the campaign to ban Egypt from the Arab fold. After the 1982 "Operation Peace for Galilee," Tunisia became an almost permanent sanctuary for PLO headquarters. While the Tunisians appeared outwardly hospitable to the PLO, they were concerned that the presence of the old-time Palestinian leaders in their midst could invite trouble. Bourguiba and his successor, Zayn Abidin Ben Ali, understood what might be at stake: a large Palestinian concentration on Tunisian soil could pose a threat to internal stability, as had been the case with Jordan until 1970 and Lebanon afterwards.

From the inception of the PLO's presence in Tunisia, Israel considered it vital to make every possible effort to counter Palestinian activities there. This was very much the case on October 1, 1985, when Israeli fighter jets strafed PLO head-

quarters in Tunis. This operation left a number of Tunisians as well as Palestinians dead. Israel claimed that Tunisia conveniently overlooked the PLO's terrorist actions against Israel, purposely ignoring the fact that Palestinian fighters, enjoying sanctuary in Tunisia, were crossing into Algeria, where they underwent military training in the region of Tbessa. Israel arrested many such Palestinian fighters who had sailed to Israel via Tunis and Greece.

As noted, although the first Intifada in the West Bank and Gaza, which began in December 1987, is rightly regarded as a locally inspired Palestinian uprising against Israel's occupation of 20 years, it was soon thereafter aided and partly guided by the exiled leadership in Tunis. Similar to its actions in 1985, Israel once again reacted against the Palestinians in Tunisia. In April 1988, after learning that Palestinian leader Khalil al-Wazir (Abu Jihad) had, from his sanctuary in Tunis, taken command of the PLO's supporters in the Intifada, Israel dispatched a special military commando unit to Tunis and killed al-Wazir in his home.

Bourguiba's removal from power in November 1987 and his replacement by President Zayn Abidine Ben Ali led Tunisia to adopt a more sober attitude toward Israel from the late 1980s. In 1988 and throughout 1989, Tunis was to become an active arena, this time for a diplomatic process to bring the Israelis and the Palestinians to the negotiating table. This materialized after Arafat endorsed the establishment of an independent Palestinian state and UN Resolution 242. Though the Israelis hardly concealed their skepticism over Arafat's declarations at the time, the U.S. entered into talks with the PLO in Tunis through Ambassador Robert H. Pelletreau. The negotiations eventually led to American recognition of the PLO and helped lay the groundwork for the October 1991 Madrid Peace Conference. Arafat's return to Gaza in 1994 and a partial Israeli withdrawal from the West Bank and Gaza served as a stimulant for Tunisia to reassess policies toward Israel.

By endorsing Oslo, however, Tunisia faced double-edged pressure, from local Islamic circles against serious steps toward achieving normalization of ties with Israel and unremitting official Israeli pressure for large-scale joint economic ventures. As to the latter, Tunisian officials preferred that a low profile be maintained in initial trade and other collaborative projects. The sole exception was Israeli and Jewish tourism. After considerable reflection and procrastination, the Ben Ali government finally followed Morocco's initiative and, in April 1996, opened a semiofficial liaison office in Tel Aviv. Its primary function was to promote tourism and arrange for visas. Ben Ali was keenly aware of the benefits his country's tourist industry would reap from this. Israel reciprocated the move by opening a liaison office in Tunis.

Yet as the two countries were on the brink of entering into an era of more serious cooperation, the Israeli elections of May 1996 reduced these prospects radically. According to Muhammad Berreheb, a high-ranking official at the Tunisian Foreign Ministry, the Netanyahu government's decision to dig the tunnel in the proximity of the Al-Aqsa Mosque aroused

as much anger among Tunisians as it did among Palestinians and Muslims generally. As the Oslo process came to a virtual standstill in the first half of 1997, Tunisia recalled its liaison officer from Israel without closing the office altogether. The return of Labor to power in May 1999 led the Tunisians to dispatch a new liaison director to Tel Aviv. On February 6, 2000, Israel's Foreign Minister David Levy met in Tel Aviv with Tahar Sioud, Tunisia's secretary of state. This was the first ever visit to Israel of a high-ranking Tunisian. The two ministers decided to establish a joint committee to study future trade and tourism. Levy assured Sioud that Israel had an unequivocal commitment to the Palestinian track, but advised that it would be pointless for Tunisia to turn every dispute between Israel and the Palestinian Authority into a crisis.

Renewed Israeli-Palestinian hostilities in October 2000 resulted in the complete closure of Israel's liaison office in Tunis and the Tunisian office in Tel Aviv. Tunisia condemned the outgoing Clinton and the new Bush administrations for supporting Israel blindly, while it commended the European Union for backing the Palestinians. At the same time, Tunisia supported the peace plan outlined at the Arab summits of 2002 and 2005. In spring 2005, following seemingly improved ties between Israelis and Palestinians, Tunisia again contemplated reopening the liaison office in Tel Aviv and permitting Israel to do the same in Tunis.

Opposition to Cultural and Economic Globalization: Islamists and Nasserists

Since the Islamic Revolution in Iran (February 1979), the terrorist attack against the World Trade Center in New York and the Pentagon on September 11, 2001, and the following period, radical Islamist movements and political parties sprang up throughout the Arab world. Iran has helped finance both Shiite and Sunni Islamists in the Middle East. Islamic radicalism encouraged blind hatred of Israel as the Jewish state and Zionist entity. It emerged as the foremost enemy of economic and cultural globalization, reforms favoring women's rights, civil society, and secularization, seeing them as modes of "Americanization." In the forefront of the attack against globalization alongside Iran – though separate from it – is the "World Jihad Movement," or *al-Qa'ida* ("Basis"), led by Osama bin Laden and the Egyptian Iman Zawahiri. The latter was in some ways connected with the elements responsible for Sadat's assassination. Not only has al-Qa'ida supported Islamic militancy in different parts of the Muslim world, cultivated terrorists in training camps in Afghanistan (while it was allied there with the Afghani Taliban regime until the latter's overthrow by U.S. forces in 2001) and Sudan, but it also claimed responsibility for 9/11. In a sense, Iran and al-Qa'ida, each on its own, have promoted "Islamist globalization," challenging "modern U.S.-sponsored globalization."

Radical Islam is by no means one-dimensional, but a movement with political ambitions. Its proponents fear that Islam is threatened by Western, mostly American, economic and cultural globalization. Islamists contend that the "trans-

nationalism” of modern global capitalist economy, the power of the Internet, and the implantation of multinational corporations in Arab lands would lead to the loss of Islamic identity. Because Arab regimes are eager to sign free-trade agreements with the U.S. and nurture trade and cultural ties with the European Union, the “abode of Islam” could well be overwhelmed by decadence. They believe the external influences will cause a resurgence of *Jāhiliyya* (pre-Islamic barbarism). Most of them define globalization as neo-colonialism spearheaded by the U.S., the World Bank, the International Monetary Fund, the World Trade Organization (WTO), and Zionism.

Most radical currents draw their inspiration from leading Islamist ideologues, among them Hasan al-Banna and Sayyid Qutb (both Egyptians) as well as India’s Abu al-Ala Mawdudi. The largest movements became political parties dreaming of a society and government based on the rules of the *Shari‘a* (Law of Islam). These include Lebanon’s Hizbollah; al-Jabha al-Islāmiyya al-Sūriyya (the Syrian Islamic Front); the Algerian FIS; the Jordanian Islamic Action Front; Morocco’s al-‘Adāla wa’l Tanmiya (Justice and Development) and al-‘Adl wa’l Ihsān (Justice and Beneficence); and Tunisia’s al-Nahda (Renaissance) Party. The Tunisian party successfully pressured the regime to build more mosques and allot ample time for media programs on Islam, in a country that already in the 1960s prohibited polygamy and improved women’s rights. Of these large entities the Muslim Brotherhood of Egypt is still denied the status of a political party. Egyptian law opposes the formation of political parties that claim a monopoly over religion. Most political movements in Egypt, even secular ones, state in their program that the *Shari‘a* is an acceptable source for legislation. The large political parties of the Arab world include those that advocate the eventual expansion of the abode of Islam from one nation-state to a universal Islamic nation. Others are content with the transformation of their particular society into a state based on Islamic Law. Only a few of these parties wish to accomplish these goals through violence, while others prefer to augment their power base in the society through electoral gains, or by preaching on behalf of Islamic principles (*da‘wa*) and spreading Islamic education. Indeed, not all Islamist parties are opposed to Western-style democratization as a temporary arrangement, for, after all, it could serve their purpose as a stepping-stone to usurp political authority. All of them disapprove of the concept of the secular nation-state as conceived by the colonial power or by regimes in Algeria, Egypt, Syria, Iraq, Lebanon, and the PLO. They see the nation-state as a passing episode in the transition toward the emergence of the Islamic nation. They are also at odds with wide segments of the officially established religious elite (*‘ulamā’*), as the latter usually grants religious legitimacy to secular government policies, such as birth control and family planning as a way to combat large-scale demographic growth. The Islamist parties are vehemently opposed to ending the age-old practice of circumcising girls in Egypt or lifting the veil. Thus far, excepting Iran and Afghanistan (which are be-

yond the scope of this survey), only in Sudan did an Islamist regime emerge following a military coup in 1989.

In addition to large Islamist parties, there exist two types of Islamist underground currents that consider violence as an avenue to realize their aims: the *jihād*- and *takfir*-oriented organizations. The first of the two component include the Jihad organization involved in Sadat’s assassination, and the Egyptian al-Jamā‘a al-Islāmiyya (Islamic Group) – responsible for the killing of tourists and government officials as a strategy to delegitimize and undermine the National Democratic Party regime. Included in this category are Morocco’s Salafiyya Jihādiyya (Salafi Combat) and al-Sirāt al-Mustaqīm (The Right Path) with ties to al-Qa‘ida. The latter were responsible for the suicide bombings in Casablanca on May 16, 2003, where Jewish institutions and personalities were also targeted, and for the March 2004 terrorist attacks in Madrid. The same applies to the Algerian GIA. Similar to the large Islamist political parties, they, too, hope to establish a religious state in lieu of the nation-state, with the law of the land based on the *Shari‘a*, *Sunna* (oral tradition), and the Koran. Some cherish the thought of reviving the Arab caliphate as a source of religious and political power.

Though instrumental in killing government officials and members of the *‘ulamā’*, the *takfir* organizations have a somewhat different outlook on Islam. They are best known under the name al-Takfir wa’l Hijra. Unlike the Jihad movements, which accuse only the secular Arab leaders of being infidels, the *takfir* regard much of contemporary Muslim society as deviants from the original Islam in its pristine forms. Their followers point to the Prophet Muhammad and his supporters, who emigrated from Mecca to Medina to create a separate society of true believers. The goal was to augment the number of Islamic adherents and some day return to Mecca victorious and popular. They also identify with the seventh-century *Khawārij* radicals who seceded from the camp of the Caliph Ali because in their eyes he deviated from the right path and exercised authority that had been reserved only to God. The *Khawārij* departed from their milieu and settled in segregated communities in parts of Iraq, Iran, and the Maghreb. They married among themselves and punished by death those suspected of adultery and violation of sacred Islamic principles. Movements espousing such notions operated in Egypt from the 1970s until the 1990s. Originally, members of al-Takfir wa’l Hijra had planned to immigrate to northern Yemen. But the most that could be realized was the formation of segregated strongholds in Upper Egypt. Eventually they succumbed to government repression. The Moroccan government uncovered a similar movement, but information about it is sketchy. The *takfir* highlight the notion of *hākimiyya*: the rule of God and the rejection of the sovereignty of man. They question the validity of the *Shari‘a* as a reliable religious source but extol the Koran and *Sunna*.

The Pan-Arab Nasserists have been on the defensive in Egypt, Lebanon, Jordan, and Israel’s Arab sector, where they still possess influence. Thirty-five years after his death, Nass-

er's followers are as hostile to globalization as the Islamists; some are in fact more critical of Western democracy. Like the Islamists they regard globalization as a form of American neo-colonialism out to obliterate economic and political nationalism. They insist that Arab identity and Arab culture must be protected against the unrestricted marketing of Americanism as a model for global culture over international communications networks. The Nasserists fear that the encroachment of the forces of globalization on the nation-state will transfer the decision-making process from Arab states to foreign elements and multinational corporations. Hence, to counter these influences would require the formation of a united Arab bloc reminiscent of the Syrian-Egyptian Union of 1958–61.

This latter view has encountered the opposition of most Arab regimes who are opposed to centralized Pan-Arab schemes and prefer local unions, or "common markets," like the Maghreb's AMU. The Gulf states are planning to form an economic union under one currency and lift trade barriers through lowering or eliminating tariffs. They encourage multinational corporations to penetrate their economies and invest. Indeed, it is not unlikely that several separate common markets will emerge in which Israel could participate.

The Struggle for Democracy and the Collapse of Saddam Hussein's Regime

An issue raised frequently since 2000 is the compatibility of democracy with mainstream Islam. It has been said that democratic concepts do not appear in the Koran, or that Western-style democracy is an alien phenomenon to most Muslims. Both arguments are irrelevant to modern-day democracy. Besides, the Koran points to the *shūrā* (consultation) that promotes modes of political coordination as well as some political debate. There are encouraging signs, however, that democratic changes are gradually occurring in the Arab and Muslim world. Changes in the Arab world are not necessarily attributed to visionary leadership. They are often the result of U.S. pressure, a sort of "American visionary approach." The democratic presidential elections in Algeria (April 2004), which had weakened the radical Islamists and gave Bouteflika a second term as president, were encouraged by the U.S. and the Europeans. Bouteflika and the Algerian army generals are eager to purchase American weapons and to mend cultural and economic fences with Washington. Kuwait's decision, in April 2005, to enable women to participate in elections and to be elected to parliament is also a case in point.

The Bush Administration and the Europeans have "nudged" King Muhammad VI to organize freer elections in Morocco, as illustrated by the parliamentary and municipal elections (2002–3). They also encouraged him to grant greater freedom to non-governmental organizations and women's rights, including an end to polygamy and equal rights in financial arrangements relating to divorce and inheritance. Morocco is becoming economically dependent on the U.S. following the signing in April 2004 of a free trade agreement

with Washington that would lift tariffs on 95 percent on all import-export products.

The January 2005 elections in the Palestinian Authority after Arafat's death raised some prospects for cautious optimism. The same is to be said of the pro-democracy manifestations in Beirut, seen in the hundreds of thousands of young Christian, Sunni Muslim, and Druze demonstrators in the wake of the assassination, in February 2005, of former Lebanese Prime Minister Rafiq al-Hariri. The demonstrators blamed Syria for the assassination. Al-Hariri, a Lebanese Sunni Muslim billionaire with close political and financial ties to the U.S. and France, was for long an advocate of Lebanese democratization and an avowed opponent of the Syrian military presence. He invested substantial funds to rebuild Beirut after the 1975–90 civil war and won the respect of wide segments of the population, save the Syrian- and Iranian-backed Hizbollah. Hariri and French President Jacques Chirac helped promote UN Security Council Resolution 1559 calling for the evacuation of all "foreign" military forces from Lebanon. Because Israel had pulled out of the southern security zone in 2000, Syria was singled out as the other major foreign force occupying the country. The mass demonstrations after al-Hariri's assassination, combined with U.S. and French insistence on a complete Syrian pullout, intensified. Damascus caved in to the pressure. On April 26, 2005, the last Syrian soldier left Lebanon, though Syrian intelligence personnel stayed behind. On May 29, 2005, national democratic elections were held in Lebanon.

On February 26, 2005, another important development was Husni Mubarak's statement to the French daily *Le Figaro* that, in the Egyptian presidential elections scheduled for fall 2005, more than one candidate will be able to run. Until now only Mubarak had offered his candidacy after being nominated by parliament with the support of the government's powerful National Democratic Party. He was elected through a national referendum whereby Egyptians simply voted "yes" or "no." The 2005 elections were to be conducted through secret ballots and direct elections with international observers supervising them, as had been the case with the Palestinian elections in January the same year. Mubarak acted to implement the reform, particularly by amending Article 76 of the Egyptian Constitution. This revision provides for direct elections via secret ballots and allows an unlimited number of candidates to run for presidential office. There are pressures on Mubarak to amend Article 77 as well, which currently sets no limits on the number of times a president may run for office. Several candidates entered the race, among them Professor Sa'd al-Din Ibrahim, a key civil rights activist who spent time in prison for his advocacy of drastic democratic reforms, and Dr. Nawwal al-Sa'dawi, a leading feminist who strongly favors the separation of religion and state. It appears that a good number of the candidates have no military background, signaling perhaps a departure from a tradition that began in 1952 whereby former army officers held the supreme leadership post. While the reform may be regarded as an evolution-

ary step toward democracy in Egypt that began after Nasser's death, pressure brought to bear on Mubarak by the Bush administration should not be overlooked. Only several weeks prior to the announcement of the reform initiative, President Bush publicly challenged Mubarak: "The great and proud nation of Egypt, which showed the way toward peace ... can now show the way toward democracy in the Middle East."

There were two fundamental reasons for the second war between the U.S.-led Western coalition and Saddam Hussein's Iraq. First, there was the lingering tension and hostility left over from the Gulf War of 1991, in which Iraqi occupation troops were forced out of Kuwait. As a result of this war, the Iraqi government agreed to turn over or destroy different types of weapons, including SCUD missiles fired at Israel and Weapons of Mass Destruction (WMD). The UN was allowed to send weapons inspectors to confirm the destruction of Iraqi weapons and also to uncover prohibited weapons believed to be hidden. Moreover, "No Fly Zones" were established over northern and southern Iraq for the protection of Iraqi minority groups in opposition to the Ba'ṯhi regime. Over these two zones, Allied aircraft patrolled the skies to prevent Iraqi aircraft from attacking northern Kurds and southern Shiites. As time passed, Iraqi air defense forces fired missiles at U.S. and British planes. In response, Allied planes bombed the air-defense sites and radar installations deep inside Iraq. In 1998, under Iraqi pressure, the UN weapons inspectors left Iraq, angering the U.S. Further, following the terrorist attacks on the U.S. on 9/11, President Bush implied – yet to be proven – that Iraq had intimate ties with al-Qa'ida. Using the potential threat of Iraq's supplying WMD to Islamist terrorists, the U.S. insisted on total Iraqi disarmament. Iraq relented to pressures in 2002 to allow the return of UN weapons inspectors. By early 2003, however, the U.S. and British governments suggested that Iraq was not cooperating with the UN inspectors. On March 17, 2003, Bush issued an ultimatum to Saddam Hussein and his two sons to enter into voluntary exile within two days or face military occupation. The Iraqi leader would not surrender his power.

On March 19, 2003, the U.S. and its Western coalition partners attacked Iraq and occupied it. Saddam Hussein's regime quickly collapsed. Leading military and civilian Ba'ṯhi leaders were later rounded up. Saddam was imprisoned and held for trial. His two sons were killed by Allied forces. Until mid-2004, a representative of the U.S. government governed Iraq. From then until the democratic elections of January 30, 2005, an interim Iraqi government was formed that excluded the Ba'ṯh party. During this time the Allied forces failed to uncover chemical and biological weapons of mass destruction, resulting in major criticism throughout the world of the U.S.-led war and its *raison d'être*.

On the eve of the U.S.-backed Iraqi democratic elections neighboring nations, especially Syria, Saudi Arabia, and the Gulf states, feared that the changes in Iraq would stir sectarian violence there and spread instability in the region. Kuwait, Jordan, and Saudi Arabia – ruled by Sunni Muslim leaders –

were concerned that an Iraq dominated by a Shiite majority after decades of Sunni minority rule, with ties to Shiite Iran, would threaten them. A second Shiite-dominated state in the region, it was argued, might pose serious domestic problems for such countries as Saudi Arabia, Kuwait, and the United Arab Emirates, which have Shiite minorities, and Bahrain, where Shiites are a majority but have no political power under a Sunni government. At the same time, the dominance of the Saudi royal family is connected with the Wahhabi sect, which views Shiites as heretics. Finally, Jordan's King Abdullah feared that the elections might create a "crescent" of Shiite power: contiguous Shiite-controlled territory through Iran, Iraq, and Lebanon. Syria and Turkey fretted that Iraqi Kurds might press for independence, reviving separatist ideas among their own Kurdish populations. On the other hand, the outcome of the war in Iraq and U.S. pressure on Baghdad to commence a process of democratization of political institutions boded well for Israel. The latter became a major beneficiary of the war as the removal of Saddam Hussein eliminated the eastern military front.

The general elections of January 30, 2005 in Iraq and the drafting of a new constitution were seminal events. Doubtless, it is vital for the future evolution of democracies in other Middle Eastern countries. According to the Independent Elections Commission in Iraq, 8,500,000 of the 14 million registered voters including overseas Iraqis cast their ballots. The voters cast two ballots: one for the national assembly and one for one of the 18 provincial councils. The voters in the Kurdish provinces of Dahouk, Erbil, and Sulaymaniyya cast a third ballot for the autonomous 111-seat Kurdish parliament. There were over 100 lists of political parties, coalitions, or individuals, comprising a total of 7,471 candidates who competed for the 275 seats in the National Assembly. The Iraqi Shiite National Alliance consisting of Hizb al-Da'wa al-Islamiyya (Call for Islam Party), the Supreme Council of the Islamic Revolution in Iraq (SCIRI), and the Iraqi National Congress (INC) won over 48 percent of the vote. The Kurds, aligned with the Shiites, garnered 26 percent of the vote. They were able to tip the scales in favor of candidates amenable to meeting their demands. The Sunni Arabs, whose leaders had ruled Iraq until March 2003, got 25 percent of the vote. Many of them boycotted the elections. In April 2005, Iraq had a new Parliament. The speaker of the Parliament is a Sunni Arab; the Kurdish leader, Jalal Talabani, is president of Iraq. In April, Ibrahim Ja'afari of the Shiite Da'wa Party became prime minister and formed a coalition of Shiites, Sunni Arabs, and Sunni Kurdish ministers.

It is uncertain what directions the Arab world will take in the future. Women have made some headway and were elected in significant numbers to the Moroccan parliament (September 2002). Morocco undertook important reforms and Egypt as well as several Gulf emirates introduced legislative measures to do the same. More educated women join the Arab work force. While the struggle for freedom of the press and electronic media, and the empowerment of non-govern-

ment organizations, has only begun, there is cable and satellite television in several Arab states that enjoy some freedom. Gone are the days when a regime like Nasser's could thrive on government-controlled media alone. The al-Jazeera satellite television channel in Qatar emerged as a critical media tool through its many correspondents stationed in the region. There are independent newspapers throughout the Arab world maintaining ideological party lines and independent thinking, usually privately owned. The newspaper *al-Hayāt*, published in London since 1988, is a forum for Arab intellectuals who wish to promote reforms in Arab society. There are overseas Arab television stations (e.g., MBC in London) that offer revolutionary programs for young men and women which are aired in the Arab world. Notwithstanding, the road is still long until freedom of the press and the general media prevails and they have progressive contents. Government-controlled newspapers and television networks in the Palestinian Authority, Saudi Arabia, and Egypt still disseminate antisemitic and not merely anti-Israel propaganda in the spirit of the *Protocols of the Elders of Zion*. There are other outstanding challenges, among them tribal tensions and Arab-Berber confrontations in Algeria and Morocco, with the Berbers struggling for cultural autonomy. Although demographic growth is moderate in most Arab states, this is not the case in Egypt, Algeria, Morocco, Sudan, and the Palestinian Authority. Family planning and reduced birth rates should receive top priority in domestic reforms. This may ease chronic unemployment in these countries. Unemployment will be reduced also through effective economic globalization and industrialization. Rural-agricultural reforms with the help of the West may put an end, or slow down considerably, the waves of rural migration to the urban agglomerations.

It is noteworthy that most Arab states have come a long way in dealing with Israel. This includes post-Saddam Hussein Iraq. They are prepared to recognize Israel and establish full ties with it, including trade relations. Some are in fact cooperating with Israel via back channels. The main stumbling blocks to formalizing ties are the Palestinian crisis and the yet to be implemented UN Resolution 242 in regard to Syria. Shimon Peres envisioned in the early 1990s a "New Middle East" enriched by science and information technology. For many, this seems far-fetched. However, the continued exposure of the Arabs states to globalization, democratization, and demographic reforms is the only viable option. The alternatives offered by Islamists and other extremists can only perpetuate regression and violence: a tragedy of enormous consequences for the Arabs and Israel, as evidenced by the violent fighting in Lebanon between *Hizbollah and Israel in summer 2006.

[Michael M. Laskier (2nd ed.)]

ARAD (Heb. אֲרָד), an important biblical city in the eastern Negev which controlled the main road to Edom and Elath.

Ancient Arad

"The Canaanite, the king of Arad, who dwelt in the South [Negev]" prevented the Israelite tribes from penetrating into Canaan directly from Kadesh-Barnea "by the way of Atharim" (Num. 21:1; 33:40) and he defeated them at neighboring Hormah (Num 14:44–45; Deut. 1:44). Another biblical tradition, however, recounts a second battle between the Israelites and the king of Arad near Hormah. This time the Canaanites were defeated and the victorious Israelites "utterly destroyed them and their cities." The name Hormah ("utter destruction") is derived from this event (Num. 21:2–3). In the list of defeated Canaanite kings in Joshua 12:14, which follows the latter tradition, the kings of Arad and Hormah appear side by side. It is further recorded in the Bible (Judg. 1:16) that "the children of the Kenite, Moses' father-in-law [the Septuagint reads "the children of Hobab the Kenite"] went up out of the city of palm-trees with the children of Judah into the wilderness of Judah, which is in the south [Negev] of Arad, and they went and dwelt with the people" (Heb. *ha-am*; but the Septuagint reads the "Amalekite"; cf. 1 Sam. 15:6). This account of the settlement of the important Kenite family in the vicinity of Arad acquired special significance after the modern discovery of the sanctuary at Arad. Pharaoh Shishak in listing cities conquered by him in Erez Israel (c. 920 B.C.E.) records the capture of two places in the Negev with the name Arad (No. 107–112), i.e., "the fortresses of Arad Rabbat [Arad the Great] and Arad of the House of Yeroḥam." It seems, therefore, that in the days of Solomon there were two fortresses with the name Arad: a large, main city and a second named for the family of Yeroḥam (probably the biblical Jerahmeelites; and cf. "the South [Negev] of the Jerahmeelites" and "the cities of the Jerahmeelites" in 1 Samuel 27:10 and 30:29). Eder (Heb.

אָרָד), which is mentioned as the second city in the Negev district of Judah (Josh. 15:21) is apparently a corruption of the name Arad. A village called Arad was still known to Eusebius in the fourth century C.E. (Onom. 14:2), 20 mi. from Hebron and four mi. from Malaatha (Moleatha), a description which fits Tell Arad, which is about 18½ mi. (30 km.) E.N.E. of Beersheba. On the *Madaba Map, Arad is erroneously placed south of Beersheba.

Excavations conducted by Y. Aharoni and R. Amiran at Tell Arad from 1962 to 1967 uncovered a large city from the Early Bronze Age II (c. 2900–2700 B.C.E.) which was built over a scattered, unfortified settlement from the Late Chalcolithic period. The Early Bronze Age city was surrounded by a stone wall, 8¼ ft. (2.50 m.) thick, which was strengthened at intervals by semicircular towers. It was a well-planned city which was divided into various quarters by narrow lanes. The houses were built according to a uniform architectural design and were of a typical “broad house” construction – a rectangular room with the entrance on one of the long sides. Of major importance was the discovery of imported pottery from Egypt as well as an abundance of decorated pottery which had previously been known mainly from first dynasty tombs in Egypt (Abydos ware). This pottery is of great chronological value and it proves that commercial ties between Egypt and Arad were already well-developed at that time.

The ancient town was destroyed not later than 2700 B.C.E. and the site remained deserted until some time in the 11th century B.C.E. when a small settlement rose. In the center of the village, a sacred precinct with a *bamah* (“high place”) and altar was built. This was undoubtedly the Kenite sanctuary whose priests traced their sacerdotal heritage back to Moses (Judg. 1:16). In the tenth century B.C.E., probably during Solomon’s reign, a strong citadel was built on the site which was in existence until close to the destruction of the First Temple. The citadel was destroyed six times during this period. It was followed by a succession of Persian, Hellenistic and Roman fortresses. The latest stratum at Arad dates to the beginning of the Arabic period.

The outstanding discovery at Arad was the temple which stood on the northwestern corner of the Israelite citadel. It is the first Israelite sanctuary to be uncovered in excavations. Its westward orientation, contents, and general layout in many ways recall Solomon’s temple in Jerusalem but the temple shows an even more striking resemblance to the biblical description of the Tabernacle in the desert. The sanctuary consists of a main hall from which three steps lead up to the Holy of Holies, in the entrance of which were found two incense altars. In the center of the Holy of Holies were a small *bamah* and a *mazzevah* (“stone stele”). Along the eastern side of the hall was a large courtyard which was divided by a stone sill into an outer courtyard and an inner one (porch). Flanking the entrance to the hall were two stone slabs which apparently served as bases of pillars similar to the Jachin and Boaz in the Jerusalem temple (cf. 11 Chron. 3:17). In the outer courtyard stood an altar for burnt offerings, which was a square of five

cubits, the exact measurement of the Tabernacle (Ex. 27:1; cf. 11 Chron. 6:13), and built of earth and unhewn field stones (cf. Ex. 20:22, 25). Among the various finds and ritual objects discovered in the temple, two ostraca (ink-inscribed sherds) are of interest. These bear the names of Pashhur and Meremoth – two priestly families known from the Bible. A third ostrakon contains a list of family names including, among others, “the sons of Korah.” The temple was built over the early Kenite high place at the same time as the first citadel, probably during the days of Solomon, and it was destroyed when the last Israelite citadel was erected in the days of Josiah. The destruction of the temple was certainly connected with Josiah’s concentration of the religious ritual in Jerusalem which is described in 11 Kings 22.

In addition to the ostraca found in the temple, numerous others inscribed in Hebrew and Aramaic were also uncovered and these considerably enrich knowledge of ancient Hebrew epigraphy. One group belongs to the archives of “Eliashib, son of Eshyahu,” who was a high-ranking official and perhaps the commander of the last Israelite citadel (c. 600 B.C.E.) Most of these contain orders to supply rations of wine and bread to travelers, including the “Kittim,” who were apparently a group of mercenaries of Aegean origin. One of the letters mentions Beersheba and another contains a reference to “the house of YHWH,” apparently the Temple in Jerusalem. Another ostrakon from the same period contains an order for the urgent dispatch of reinforcements from Arad to Ramat Negev (“Ramah of the South,” Josh. 19:8; 1 Sam. 30:27) to head off a threatening Edomite attack. This is possibly a reference to the Edomite invasion during the time of Nebuchadnezzar, hinted at in 11 Kings 24:2 (reading Edom instead of Aram).

The generally accepted theory that Tell Arad is Arad of the Canaanite period has been refuted by excavation of the site since no traces of settlement from the Middle or Late Bronze Ages were found. Its identification with Israelite Arad, on the other hand, was confirmed, the name even found inscribed on two ostraca. There are two possible solutions to this problem: (1) In the Canaanite period, Arad was the name of a region and not of a specific city; (2) The site of Canaanite Arad is Tell el-Milḥ (present-day Malḥata) 7½ mi. (12 km.) southwest of Tell Arad where strong fortifications dating from the Hyksos period (Middle Bronze Age) have been discovered. This identification is substantiated by the inscription of Pharaoh Shishak according to which it can be assumed that “Arad of the House of Yeroḥam” is the early Arad which was settled by the Jerahmeelite family (cf. 1 Sam. 27; 30:29) and “Arad Rabbat” (Arad the Great) was the strong citadel established in the days of Solomon in the Negev of Judah on the site of the Kenite sacred precinct.

[Yohanan Aharoni]

Since the writing of the above by one of the excavators of the site, Yohanan Aharoni, considerable research and a number of key publications have appeared furthering our understanding of the development of the Bronze Age and Iron Age

settlements at Arad. R. Amiran and her associates, notably O. Ilan, have concentrated their efforts in furthering the publication of the Bronze Age site. Bronze Age Arad is generally regarded as the southernmost bastion of Canaanite culture, although one scholar (Finkelstein) has suggested that it might actually be the other way around, i.e., the site should be viewed as the northernmost cultural manifestation of the desert peoples of the time. It is now clear that the Bronze Age site had five separate strata (I–V): Stratum V representing the remains of a scattered Chalcolithic settlement (c. 4000–3400 B.C.E.); Stratum IV representing an unfortified small hamlet dated to the Early Bronze IB (3200–3000 B.C.E.), with evidence that trade with Egypt had already begun by that time, and with the discovery of a jar fragment with the incised *serekh* of Narmer, the last king of Dynasty O, which provided important synchronism between the Canaanite and Egyptian chronologies; and Stratum III (destroyed in c. 2800 B.C.E.) representing the oldest urban level of the city, with the construction of the city wall, a palace and other public structures, as well as the reservoir. Stratum II, the uppermost urban phase of the Bronze Age city, was the main focus of Amiran's excavations, and seems to have been built not long after the destruction of Stratum III. The urban fabric of the Stratum II was studied in some detail by the excavators: the city was surrounded by a wall (a circumference of 3,858 ft. (1,176 m.) with semi-circular towers and at least two gates and a few posterns; numerous houses of broad room plan with a doorway in the long wall, with benches lining the interior walls and with a ceiling supported by a pillar – of a type now known as the “Arad House” type (a ceramic model of such a house was also found) – were excavated; public and elite areas were also investigated: notably, a market area, a palace, a sacred precinct, and reservoir district. Stratum I represented a sparse settlement (of squatters?) in the ruins of the former Stratum II city. There can be no doubt that Arad was a primary trading center in the Early Bronze Age and was the focal point for much of the region's economic activities.

New information regarding the Iron Age period site, formerly excavated by Y. Aharoni, has also come to light as a result of recent research activities. In addition to this, an important reassessment of the stratigraphy of the site was made by Z. Herzog, who undertook some excavations at the site in 1977. The continued identification of the site as that of biblical Arad (Num. 21:1; 33:40; Josh. 12:14, 15:21; Jud. 1:16) and as the place mentioned as *ʿArad n-bt* (i.e. “Greater Arad”) in the Egyptian Sheshonq's list of the cities he reached (925 B.C.E.) has also been strengthened by the discovery at the site of a potsherd inscribed with the name Arad four times. It is now clear that the Iron Age site had 12 strata (I–XII): Stratum XII representing the sparse remains of the early Iron Age village (11th century B.C.E.). The original excavator's identification of a cultic temenos with a *bamah* at the site has been reassessed and it would appear that they were ordinary domestic installations instead. Stratum XI (10th century B.C.E.) represents the first fortified fortress 180 × 165 ft. (55 × 50 m.), with a case-

mate wall and projecting towers, and with a gate on the east side. Strata X–VI represent the major changes that were made to the fortress: the casemate wall was replaced by a solid wall with a glacis reinforcement, and only two gate towers. The water system and the temple were both first constructed during this stage. The defensive wall and the water system continued to be used until the end of Stratum VI with few changes. The suggestion made by the original excavator that a casemate wall replaced the solid wall during Strata VII–VI, appears to be incorrect and the casemate actually represents portions of an unfinished Hellenistic tower. The abolition of the temple at Arad is attributed to the cultic reforms made by King Hezekiah in 715 B.C.E. (see II Kings 18:22). Strata V–I represent the later remains at the site from the Persian, Hellenistic, Roman, Early Islamic, and Ottoman periods. The site was substantially restored for visitors in conjunction with the National Parks Authority of Israel.
